BOARD AGENDA

April 20, 2026 – 9:30 AM

BUDGET WORKSHOP AND REGULAR MEETING

OPEN TO THE PUBLIC

PUBLIC COMMENT
The Tampa Bay Water Board of Directors welcomes comments from the public about any issue of concern. Opinions provide valuable input to the board members. However, we request that public comments be directed to issues and not directed personally against any board member or staff member. This provides a mutual respect between the board members and the public.

Public comment may be provided in person, via teleconference during the public comment portion of the meeting, or by submitting written comments for the record and distribution to the Board. Anyone wishing to speak in person must submit a completed speaker card to the Agency Clerk prior to the beginning of the meeting. To submit written comment or to participate via teleconference, please contact Krista Simon at 727-791-2347 or ksimon@tampabaywater.org. by 4:00 p.m. on April 17, 2026. Each speaker shall have a maximum of three (3) minutes to address any matter on the agenda.

The next meeting will be a Budget Public Hearing and Regular Meeting on Monday, May 18, 2026 at 9:30 a.m.

ACCOMMODATIONS
Anyone requiring reasonable accommodations for this meeting as provided for in the Americans with Disabilities Act should contact the Records Department at 727-249-0146 at least three working days prior to the public meeting. If a person decides to appeal any decision made by the Board, with respect to any matter considered at this meeting, he/she will need a record of the proceedings, and for such purposes, he/she may need to ensure that a verbatim record of the proceedings is made, such record includes the testimony and evidence upon which the appeal is to be based.

BUDGET WORKSHOP AGENDA ITEM

DATE: April 1, 2026

TO: Board of Directors

THRU: Charles H. Carden, General Manager

FROM: Christina Sackett, Chief Financial Officer

SUBJECT: Proposed Fiscal Year 2027 Budget - *Presentation*

SUMMARY

Following the budget development schedule for Fiscal Year 2027, a recommended proposed budget was prepared and will be presented. The proposed operating budget total is $223,809,140, with net revenue requirements from water sales of $206,588,228, to supply 212.84 million gallons a day for Fiscal Year 2027. The Uniform Rate for the proposed budget is $2.6593/1,000 gallons.

An overview of the Fiscal Year 2027 Capital Improvements Program Plan details will also be presented. The Capital Improvements Program proposed expenditures for Fiscal Year 2027 are $291,424,776.

SUGGESTED ACTION

Presentation and discussion.

COST/FUNDING SOURCE

Uniform Rate, interest income, grant income, year-end balance forward plus other funding sources.

DISCUSSION

Staff is pleased to present the proposed Tampa Bay Water annual budget for Fiscal Year 2027 (FY

2027) in accordance with Section 2.08 of the Amended and Restated Interlocal Agreement. This budget balances the Board's three overarching goals of maintaining a reliable water supply system, being good stewards of the environment, and maintaining cost-effective rates.

In addition, the proposed operating budget was prepared while taking into consideration the increase in the agency's annual debt service and the need to reduce costs elsewhere and use reserve funding to keep the uniform rate affordable.

Staff will present information to the Board on the contents of the FY 2027 Annual Operating Budget and provide the opportunity for discussion. The proposed operating budget document was shared with each of the six-member governments' staff in late March.

The proposed operating budget total is $223,809,140, with net revenue requirements from water sales of $206,588,228, to supply 212.84 million gallons a day (mgd) for FY 2027. The Uniform Rate for the Proposed Operating FY 2027 Budget is $2.6593/1,000 gallons, which is an increase of $0.0204 or 0.78% of the current uniform rate, with a variable rate of $0.6217/1,000 gallons, which is an increase of 1 cent over the current variable rate. The proposed budget includes the agency's cost of living adjustment (COLA) and merit program, based upon a COLA of 3% and up to a 3% merit. The proposed budget does not include funding the Renewal and Replacement Fund or the Capital Improvement Fund, but does include the using $4 million from the Rate Stabilization Account to minimize the increase in the Uniform Rate.

At the April 20, 2026 workshop, staff will discuss the agency's operations in the fiscal year 2027 and the detail the agency's spending plan in the upcoming fiscal year.

Tampa Bay Water's Capital Improvements Program (CIP) is a comprehensive plan and portfolio of previously approved and newly proposed capital projects. The CIP is updated annually to include newly requested capital projects and to update the scope, capital costs, and timing for previously identified projects. The updated plan includes 43 projects at various stages of the project life-cycle, including active construction, design, and bidding, planned capital projects, and feasibility studies to further assess potential projects that are ongoing or will start in FY 2027. The Capital Improvements Program proposed expenditures for FY 2027 are $291,424,776, with the Surface Water Treatment Plant expansion and the South Hillsborough Pipeline accounting for 67% of these expenditures.

The Board will be presented with final FY 2027 budget documents for approval at the May 18, 2026 Public Hearing before the regular Board meeting.

BACKGROUND

Tampa Bay Water is required by the Amended and Restated Interlocal Agreement to adopt its annual operating budget for the upcoming fiscal year prior to August 1st of each year. The budget development schedule for Fiscal Year 2027 depicts a Budget Workshop at the April meeting and final approval of the

budget is anticipated at Public Hearing in May prior to the regular Board meeting. Adoption of the budget in May allows the Board to remain in compliance with the August 1st deadline.

FISCAL YEAR 2027

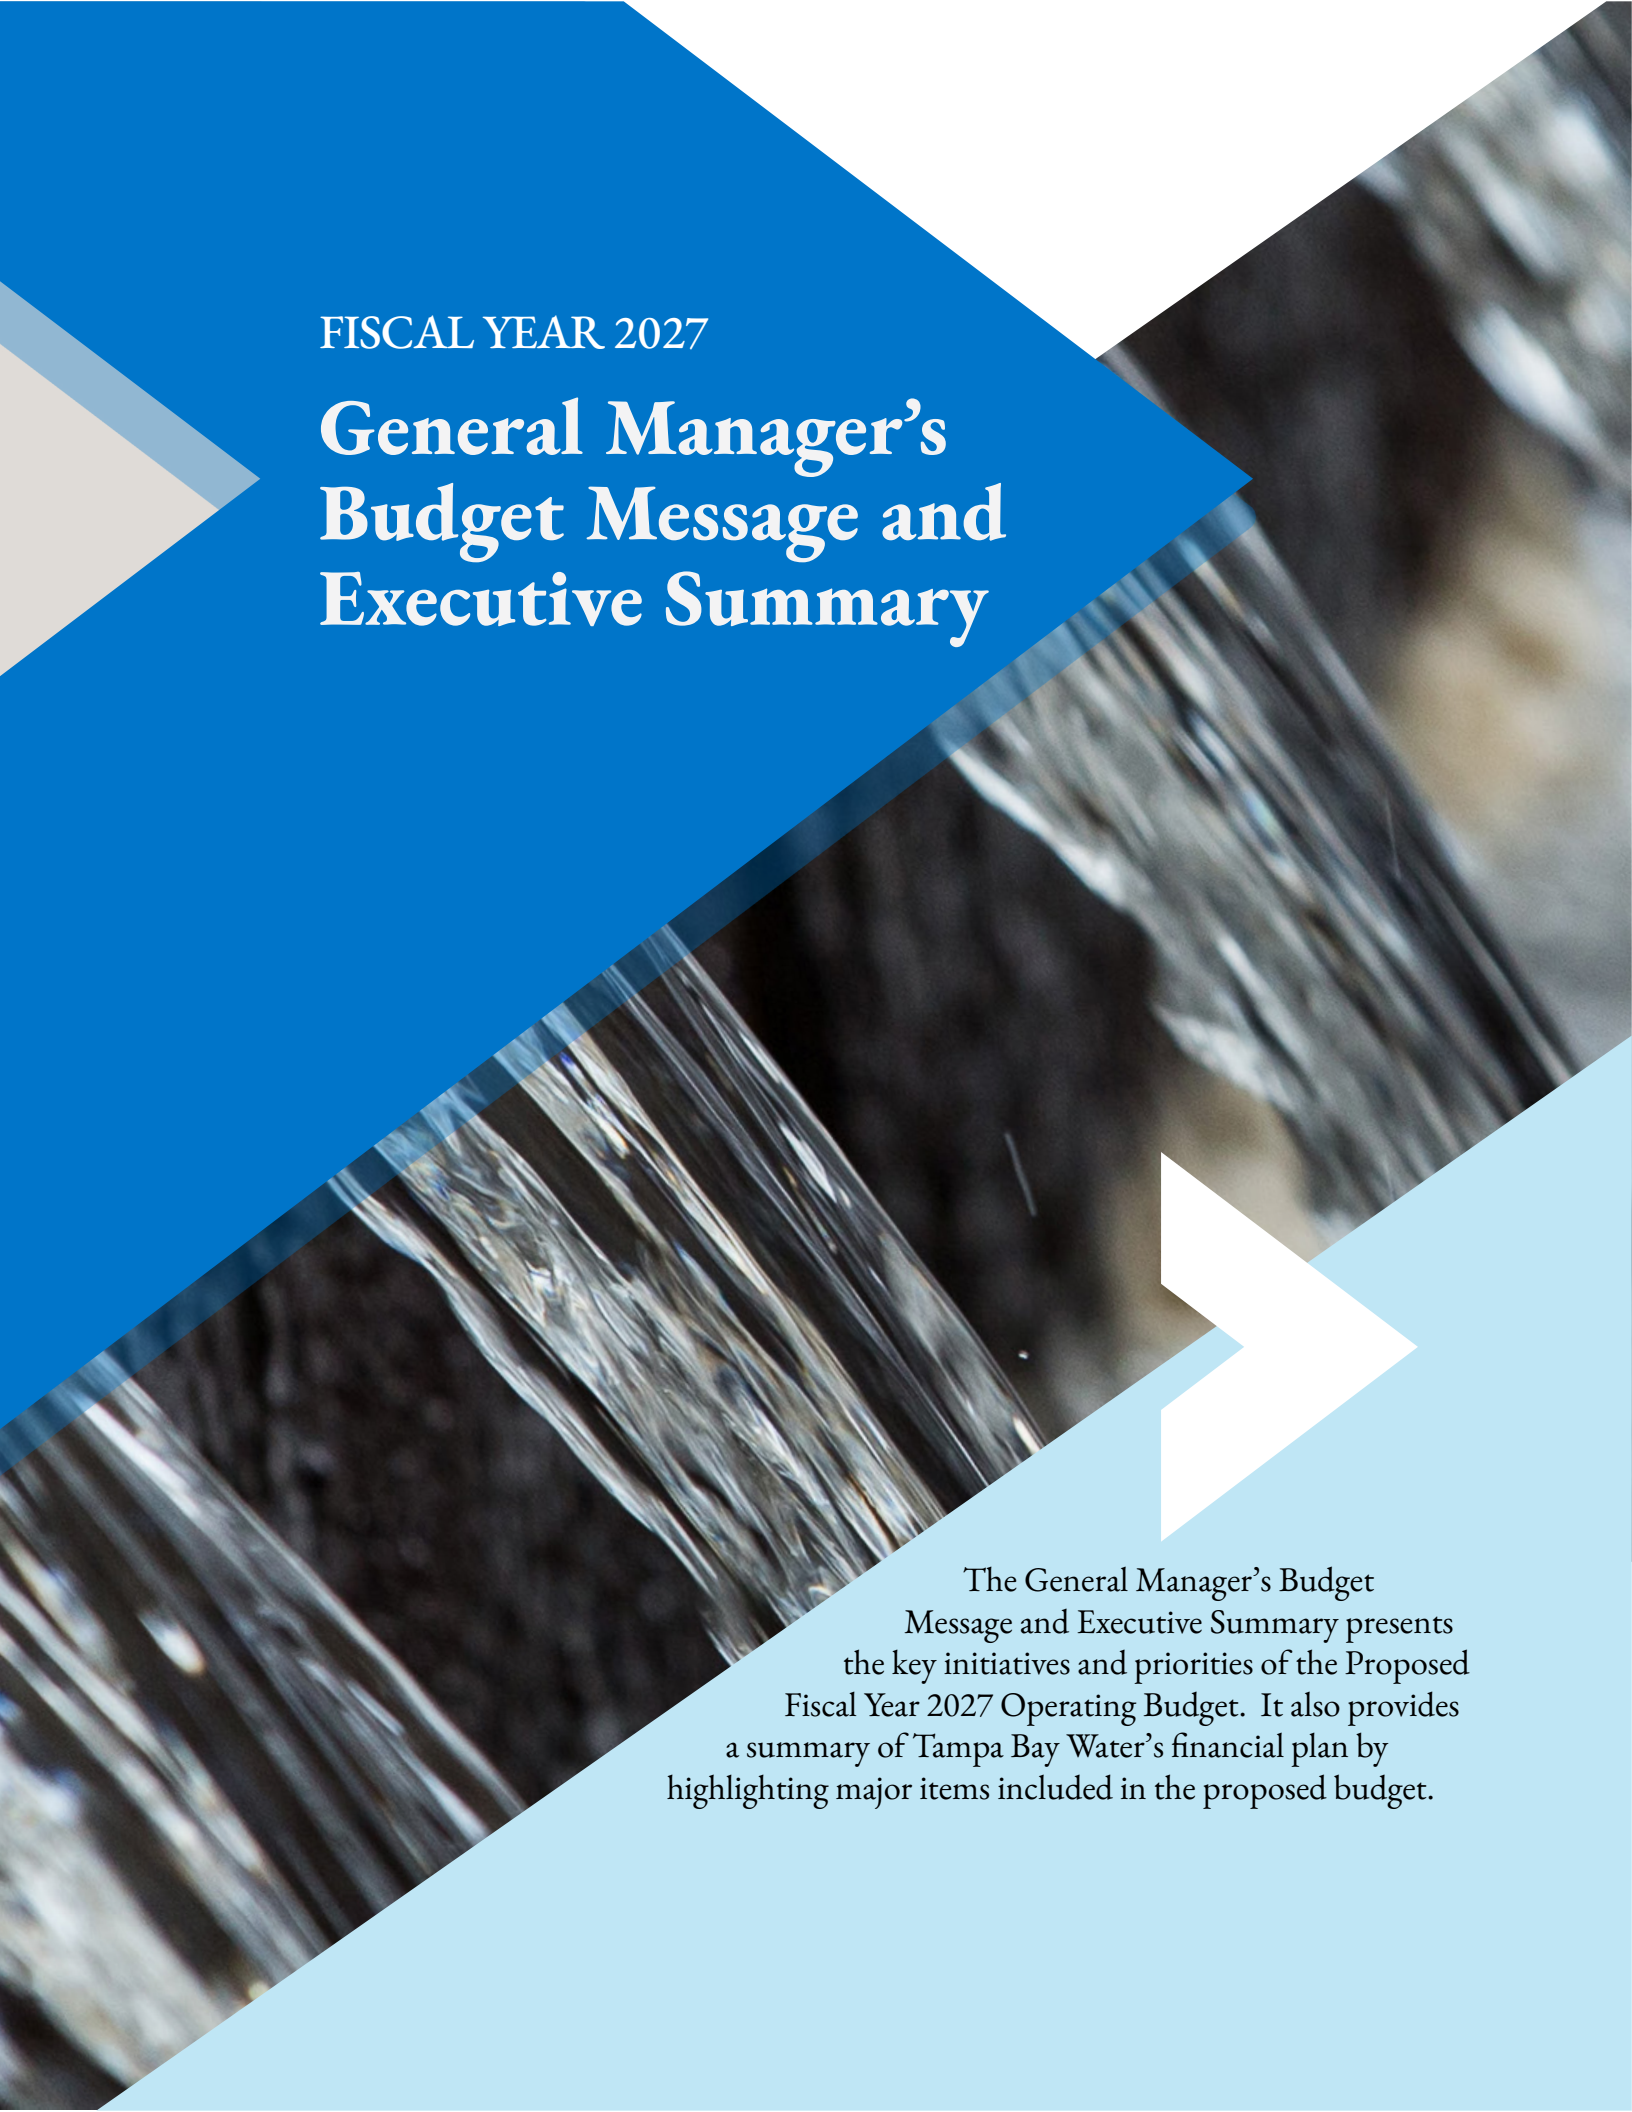
General Manager's Budget Message and Executive Summary



The General Manager's Budget Message and Executive Summary presents the key initiatives and priorities of the Proposed Fiscal Year 2027 Operating Budget. It also provides a summary of Tampa Bay Water's financial plan by highlighting major items included in the proposed budget.

TAMPA BAY WATER

Supplying Water To The Region

Policy Goals Used in Fiscal Year 2027 Budget Development

The Fiscal Year 2027 budget was put together with important agency policy goals in mind. Those goals included:

- Meeting the performance requirements of the Master Water Supply Contract to provide high quality water to our six-member governments.
- Operating our water supply facilities to improve supply delivery while also maintaining full compliance with regulatory permits.
- Achieving the goals specified in the Agency's updated strategic plan.
    - Enhance System Reliability and Sustainability
    - Continuously Improve Agency Operations
    - Optimize Future Financial Stability
    - Enhance Our Relationships with Stakeholders
    - Ensure an Engaged, Skilled and Adaptable Workforce
    - Safeguard Agency Infrastructure
- Addressing recommendations from the 2025 Performance and Management Audit Report and allocating our staff and financial resources to meet the board's objectives for a sustainable and affordable water supply system.
- Continuing to balance and blend our multiple supplies of water sources to deliver high-quality, affordable water to our member governments.
- Continuing to work on the South Hillsborough Pipeline to meet the growing water needs of South Hillsborough County.
- Continuing to work on the Surface Water Treatment Plant Expansion Project to meet water demands by the year 2028.
- Performing the feasibility studies on the short-listed projects in the 2023 Long-Term Master Water Plan Update.
- Refining the models used to accurately predict the need for new water supplies in the future.
- Safeguarding the public's investment in the region's water supply and delivery system to ensure that both the water quality and water quantity meet the needs of the more than 2.6 million people in our region. Protecting that investment includes:
    - Focusing on the safety and security of our employees and our water supply facilities.
    - Renewing and replacing existing infrastructure to ensure the optimal operation of our facilities over time.
    - Continuing to engage with community, environmental and educational organizations on projects that promote the protection of our drinking water sources through the Water Conservation and Protection Mini-Grant Program.

- Managing the Agency's 2025 Succession Plan designed to proactively respond to shifts in staff attrition, address emerging recruitment challenges, and capitalize on development opportunities in a way that ensures business continuity and supports both immediate and long range agency priorities.
- Continuing to administer the agency's cost-of-living adjustment and performance-based merit programs.
- Addressing the safety and security of both physical assets and information technology systems.
- Expanding the agency's outreach and education program to underscore the importance of a reliable, sustainable water supply for economic and regional growth and development.
- Working with our member governments on the coordination and sharing of utility best management practices.
- Creating a framework and implementing a continuous improvement program throughout the agency.
- Working with our colleagues around the country on continuing research into changes in weather patterns and the impact of climate change upon the surface water systems serving our area.
- Maintaining a strong relationship with the Southwest Florida Water Management District, the Florida Department of Environmental Protection, and other regulatory agencies to ensure open and honest communication on regulatory, planning, and financial matters.

Key Factors Affecting the Fiscal Year 2027 Budget

Increase in Annual Water Sales

To account for regional expansion, the agency is projecting an increase in water sales to our member governments to 212.84 million gallons per day (mgd). This 3.14 mgd increase over the 2026 budgeted water sales is based on normal weather conditions and a steady, long-term upward trend in member government demand.

Personnel Services

Starting in fiscal year 2023 the agency's personnel services budget includes a cost-of-living adjustment alongside a performance-based merit program. The Fiscal Year 2027 budget contains a 3% cost-of living adjustment and a performance-based merit of up to 3%. The proposed budget also includes the request for four positions - an IT Network Engineer, a Mechanical Technician I, and two Mechanical Technician Trainees.

Annual Bond Debt Costs

In July 2025, the agency issued Utility System Refunding Revenue Bonds, Series 2025, which included $158.825 million of principal along with an issuance premium of $14.99 million. These proceeds less issuance costs were used to refund a portion of the outstanding Series 2015A Bonds.

The annual bond debt service for fiscal year 2027 of $81,160,446 reflects a savings of $2,437,119, resulting from the Utility System Refunding Revenue Bonds, Series 2024B/C and Series 2025. In late fiscal year 2026, the

agency will be seeking board approval on the next bond issuance, estimated at $292 million, that will be needed to fund the Capital Improvement Program contracts in fiscal years 2027 and 2028. The fiscal year 2027 annual debt service amount does not reflect an impact from the Series 2026 bonds as it is anticipated they will be issued with at least one year of capitalized interest.

Net Revenue Required from Water Sales

The primary source of revenue for the Agency is the net revenue required from water sales and is a key factor in calculating the Uniform Rate. The net revenue required from water sales, along with other funding sources, must cover the agency's total costs: debt service, variable costs, contracted costs, and other operating fixed costs. Management focused on improving operational efficiencies and minimizing increases in fixed costs, while maintaining our reliable water supply system, to minimize the impact on the net revenue required from water sales. In addition, the agency used reserve funds to minimize the increase in the net revenue required from water sales.

Uniform Rate Increase

Due to the above factors, the Fiscal Year 2027 budget includes an increase in the Uniform Rate for Tampa Bay Water's customers. The proposed rate of $2.6593 per 1,000 gallons is an increase of $0.0205 or 0.78% over the Fiscal Year 2026 uniform rate and is $0.0088 less than the Fiscal Year 2027 rate projected in the Fiscal Year 2026 budget.

Water Demand Used in the Fiscal Year 2027 Budget

The projected water sales to the six-member governments are based on a multi-step process that considers the total water demand for each member government and for the region reflected in the Agency's long-term water demand forecasting models. These models produce retail and wholesale water demands for each of the seven water demand planning areas served by our member governments based on annually updated projected socio-economic data and normal weather (rainfall and temperature conditions). The annual update of projected member government water demands is presented to the Board at the end of each year. These demand projections are also compared with each member government's annual report.

The Fiscal Year 2027 budget was developed to reflect demand with average annual rainfall. The City of Tampa, Pasco County and the City of New Port Richey supply some water through their own facilities to meet a portion of their total water needs. The total regional water demand is reduced by the amount of water these members supply to themselves, resulting in the aggregate expected water demand for budget and planning purposes. The projected annual delivery to the member governments is significantly affected by the amount of water purchased by the City of Tampa, an uncertainty that is directly related to the amount of rainfall that may be experienced. For budgeting purposes, the City of Tampa's demand is budgeted at 5.04 million gallons per day (mgd) for fiscal year 2027. This 5.04 mgd is included in the total amount of water expected for delivery to the member governments. This projected total value of 212.84 mgd forms the basis of the budgeted uniform rate for fiscal year 2027. This is an increase of 3.14 mgd in projected demand over the fiscal year 2026 projected demand of 209.7 mgd and accounts for regional growth expected in fiscal year 2027.

The Agency's budget is developed each year with a focus on the expected rainfall for the year. Scenarios for operating the system are developed to maximize the use of available river water and manage groundwater resources to achieve environmental recovery around our wellfields and meet permit requirements. Source selection for fiscal year 2027 includes use of the desalination facility at an annual average rate of 13.0 mgd.

The Agency maintains strong reserve balances to avoid mid-year rate increases due to unexpected changes in demand or increased costs. The Agency is proactive in funding reserve accounts for both the short and long term, allowing the Agency to maintain moderate rate increases year to year, implement the renewal and replacement program, implement a comprehensive asset management program, and retain excellent credit ratings on debt service.

Operational Highlights for Fiscal Year 2027

The amount of funding required to meet the Agency's proposed fiscal year 2027 expenditures is $223,809,140. The total expenditures include $48,297,346 for variable costs and $175,511,794 for fixed costs components such as debt, operations, and the operations and maintenance agreements associated with contracted water plant operations. Overall, this is a $4.4 million increase over the approved Fiscal Year 2026 Budget, with variable costs increasing by $1.4 million, debt service decreasing by $2.4 million, and other fixed costs increasing by $5.4 million.

Some of the key features of the Fiscal Year 2027 Budget include:

- Operation of the Tampa Bay Seawater Desalination Plant at an annual average of 13.0 mgd, production at the plant will fluctuate monthly to increase efficiency and decrease maintenance costs.
- Full use of the C.W. Bill Young Regional Reservoir, the region's water savings account.
- An annual average production of 79.00 mgd at the Regional Surface Water Treatment Plant, using flows from the Hillsborough and Alafia rivers and the Tampa Bypass Canal, as well as water stored in the regional reservoir. The Plant production is managed to maximize the seasonally available higher river flows during wet-weather months. Like production at the desalination facility, Surface Water Treatment Plant production may be increased proportionately when river flows are available, to maintain the agency's groundwater pumping permitted levels.
- Use of 86.34 mgd on an annual average basis from the consolidated permit wellfields, which is 3.66 mgd less than the permit limit of 90 mgd, in recognition that we may need to increase groundwater production if we have a drier than normal year. Plus, an additional 34.5 mgd will come from other groundwater sources that are not part of the consolidated water permit.

The total budget of $223.8 million, includes variable operating costs of $48.3 million and fixed operating costs of $175.5 million, 22% and 78% of the Agency's budget respectively. The $175.5 million includes $81.2 million for debt service, $10.3 million for acquisition and water quality credits to the Members, and $84.1 million in fixed operating costs, inclusive of $17.0 million in professional services for the operations and maintenance agreements associated with the contracted water plant operations.

The Fiscal Year 2027 budget includes the following $17.2 million in other funding sources that reduce the amount needed in net revenue from water sales.

- $6.1 million in unencumbered funds from FY 2026 to be carried over to FY 2027.
- $5.4 million in Investment Revenue.
- $1.1 million of revenue from surplus water sales at Tampa Bypass Canal.
- $75 thousand for an Operation & Maintenance contract agreement with Pasco County at the Lake Bridge Facility.
- $540 thousand of grant revenue from the Southwest Florida Water Management District
- $4.0 million of Rate Stabilization Funds

The total expenditures are adjusted by the other funding sources to provide the net revenue required from water sales. The net revenue required for the proposed Fiscal Year 2027 budget is $206,588,228 resulting in a uniform rate of $2.6593 per 1,000 gallons.

Fiscal Year 2027 Budget Timing

To provide our member governments and the public with a budget document for use as information and for planning, the budget schedule requires final approval of the budget prior to August 1st each year.

Prior to the April 15th requirement, the abbreviated proposed Fiscal Year 2027 budget will be distributed to the member governments for review. This will be followed with meetings between Tampa Bay Water staff and member governments for discussion of the proposed budget. The abbreviated proposed Fiscal Year 2027 budget will be reviewed by the Board at a budget workshop held on April 20, 2026.

A public hearing for the proposed Fiscal Year 2027 Operating Budget will be held on May 18, 2026. A notice of the Board's intended adoption of the proposed Fiscal Year 2027 Budget will be published in compliance with budget approval requirements in the Amended and Restated Interlocal Agreement. Following the public hearing, the Board will be asked to approve the Operating Budget and Capital Improvement Program for Fiscal Year 2027 via approval of Resolution 2026-003.

Budget Communication

An electronic version of Tampa Bay Water's Abbreviated Proposed Fiscal Year 2027 Operating Budget can be found on the Agency's website.

https://www.tampabaywater.org/agency/tampa-bay-water-budget-and-financial-information/

For other budget communications, type "budget" in the search field and Tampa Bay Water blogs, news releases and other site pages will be displayed.

Projected Water Demand (mgd)	209.70	212.84	3.14	
Projected Uniform Water Rate ($/1000 gal.)	$ 2.6388	$ 2.6593	$ 0.0205	

Note 1 – Fiscal Year 2027 unencumbered funds from prior year, are estimated at 3% of the fiscal year 2026 revenue from water sales. Funds transfer through the rate stabilization account at year-end.

Note 2 – The projected Series 2026 bond issuance is estimated to have one year of capitalized interest and will not impact bond debt service for fiscal year 2027.

FISCAL YEAR 2027

Financial Plan

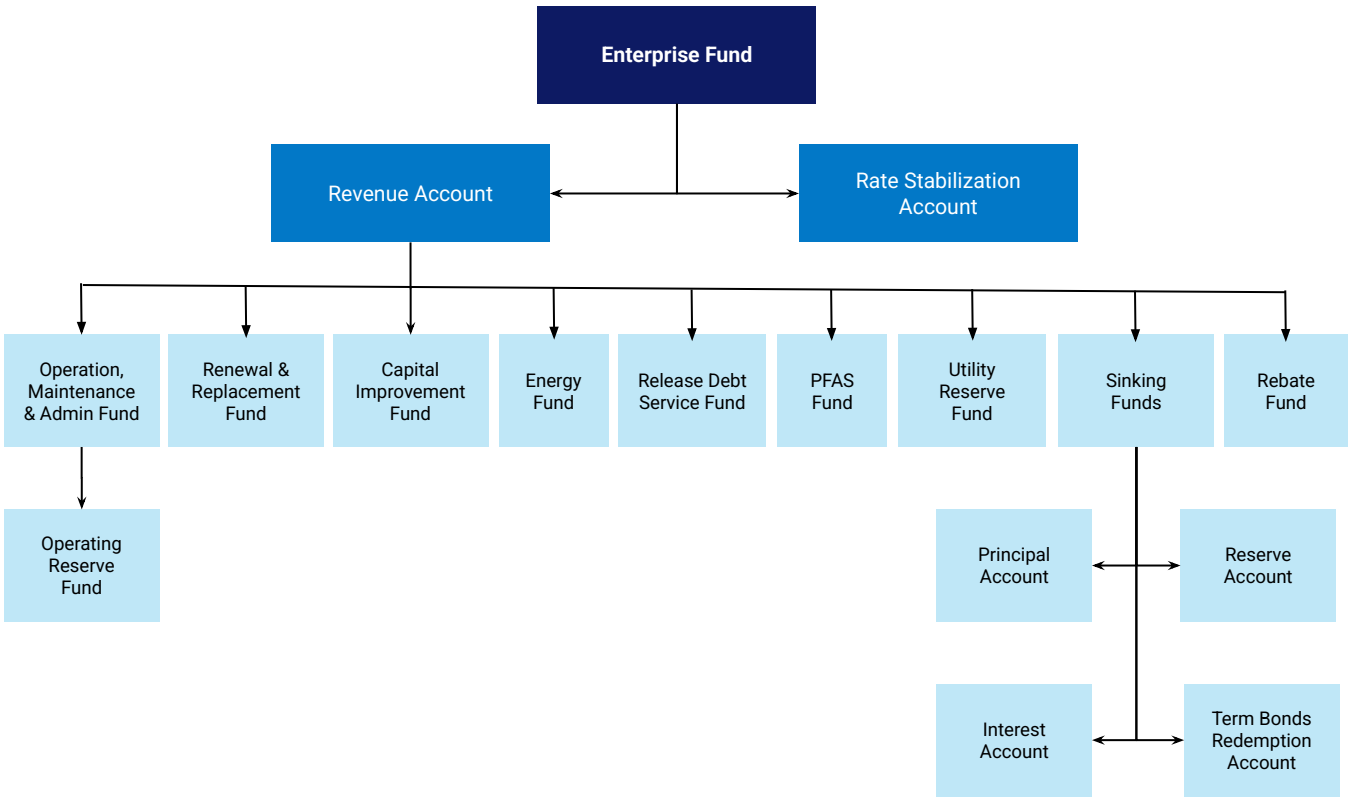
The Financial Plan section provides an overview of Tampa Bay Water's budgetary fund structure and information on revenue and expenditures, as well as capital spending for the budget year.

TAMPA BAY WATER

Supplying Water To The Region

Funds Structure Overview

Tampa Bay Water consists of one major Enterprise Fund, which is further broken down into additional funds and accounts for accounting purposes.



- The **Revenue Account** is the initial depository for all Agency revenue. Revenue is transferred to other funds as required.
- The **Rate Stabilization Account** is funded and used by the annual budget and/or Board approved transfers, including funding of the Revenue Account.
- The **Operation, Maintenance, and Administration Fund** is used to pay all operating and administrative costs of the Agency. The Operation, Maintenance and Administration Fund includes the ***Operating Reserve Fund***.
- The **Renewal and Replacement Fund** is used for repairs and replacement of the System as the need arises and as approved by the Board.
- The **Capital Improvement Fund** is used to pay costs of various capital projects as designated and approved by the Board.
- The **Energy Fund** is used for various energy projects as designated and approved by the Board.

- The **Released Debt Service Fund** is used to pay costs of various capital projects as designated and approved by the Board.
- The **PFAS Fund** shall be used to finance and support Board approved projects, programs, studies, remediation efforts, and other initiatives related to polyfluoroalkyl substances ("PFAS") chemicals. Expenditures from this fund are intended to address the identification, assessment, mitigation, treatment, monitoring, and management of PFAS related impacts, consistent with applicable regulatory requirements and Board directives.
- The **Utility Reserve Fund** is used for transfers of any unexpended funds remaining at the end of a fiscal year. The fund balance is maintained at a balance sufficient to meet bond coverage requirements and operating capital needs. The Utility Reserve may be used for any lawful purpose relating to the System, including funding of the Rate Stabilization Account.
- The **Sinking Funds** holds all Agency funds restricted to payment of Agency debt. The Sinking Funds consists of four (4) accounts: ***Interest Account, Principal Account, Reserve Account and Term Bonds Redemption Account.*** The Interest, Principal, and Redemption Accounts are funded annually from Revenues and are used annually to pay debt service. The Reserve Account is fully funded from bond proceeds and generally changes only when new debt is issued, or an outstanding bond issue is redeemed.
- The **Rebate Fund** is used for rebatable arbitrage to the IRS, whenever interest on tax-exempt bond construction funds exceeds allowable earnings under IRS arbitrage regulations.

Reserves and Restricted Funds

Tampa Bay Water maintains the following funds and accounts to comply with requirements of the financing documents and the Master Water Supply Contract.

Operating Reserve

Tampa Bay Water maintains Operating Reserve Funds. The amount of Operating Reserve Funds shall not exceed an amount equal to two times the monthly average Variable Costs as provided in Tampa Bay Water's annual budget. Investment earnings on the Operating Reserve remain in the account until the funding requirement is fully met and then may be used for any lawful purpose.

The Operating Reserve balance on October 1, 2026, is estimated to be $7,064,843. This is just under two months of the fiscal year 2027 estimated variable costs of $48,297,346.

Renewal and Replacement Fund

Tampa Bay Water is required to maintain an amount equal to five (5) percent of the prior fiscal year's Gross Revenues or such other amount as is certified by the Consulting Engineer. Five percent of the projected gross revenues for fiscal year 2026 is $10,971,457. These funds are available to be used for repair and/or replacement of the System as the need arises. Investment earnings in the Renewal and Replacement Fund remain in the fund

until the funding requirement is met. Investment earnings more than the funding requirement are deposited into the Revenue Fund and are available for any lawful purpose.

The Renewal and Replacement fund balance on October 1, 2026, is estimated at $17,285,909. Tampa Bay Water has developed a Renewal and Replacement Program that identifies all critical components of the water delivery system and assists in developing a schedule for replacing or improving components to maintain the reliability of the system. The current estimated expenditures scheduled during 2027 is $3,458,217, which is about 20% of the beginning fund balance.

Capital Improvement Fund

Capital Improvement charges collected, or other funds received which are designated by the Board as Capital Improvement Funds are deposited to this fund. Investment earnings are deposited into the Revenue Fund and are available for any lawful purpose. The Capital Improvement Fund balance on October 1, 2026, is estimated at $3,892,047. The current estimated expenditures scheduled during 2027 is $3,799,266, which is about 98% of the beginning fund balance.

Energy Fund

Funds generated from an agreement with Tampa Electric's (TECO) Commercial Demand Response Program Provider, Enel X, and reimbursement from Withlacoochee River Electric Cooperative (WREC) are used to fund projects which result in energy savings to Tampa Bay Water. Investment earnings are deposited into the Revenue Fund and are available for any lawful purpose. The Energy Fund balance on October 1, 2026, is estimated at $2,070,877. The current estimated expenditures scheduled during 2027 is $105,649, which is about 5% of the beginning fund balance.

Released Debt Service Fund

Upon the issuance of the Series 2022 Bonds, the maturity of the agency's total outstanding bonds was extended to Fiscal Year 2053. Therefore, the Debt Service Reserve account requirement changed from the Maximum Annual Debt Service for all outstanding bonds to 125% of the average Annual Debt Service for all outstanding bonds, reducing the required balance of the Debt Service Reserve Fund and releasing reserve funds for funding the Capital Improvement Program. The Released Debt Service Fund balance on October 1, 2026, is estimated at $6,825,265. The current estimated expenditures scheduled during 2027 is $3,473,585, which is about 51% of the beginning fund balance.

PFAS Fund

The PFAS Fund resulted from settlements reached with several defendants in the class action lawsuit against several manufacturers and sellers of polyfluoroalkyl substances or "PFAS" chemicals. The funds shall be used to finance and support Board approved projects, programs, studies, remediation efforts, and other initiatives related to polyfluoroalkyl substances. The PFAS Fund balance on October 1, 2026, is estimated at $13,184,591.

The current estimated expenditures scheduled during 2027 is $3,053,353, which is about 23% of the beginning fund balance.

Utility Reserve Fund

Tampa Bay Water is required to transfer any unexpended funds remaining at the end of each fiscal year to the Utility Reserve Fund. The fund balance must be sufficient to cover 10% of the yearly budgeted Gross Revenues and is maintained at balances sufficient to meet bond coverage requirements. The Utility Reserve Fund may be used for any lawful purpose relating to the System. Investment earnings more than the reserve requirement are deposited into the Revenue Fund and are available for any lawful purpose. The estimated account balance on October 1, 2026, is $31,580,709.

Sinking Fund – Interest and Principal Accounts

Funds collected to pay annual interest and principal on debt are deposited into the accounts and expended for debt service payments as they come due. Investment earnings more than the funding requirement are deposited into the Revenue Fund and are available for any lawful purpose. Funds in the account at the end of the fiscal year are used to pay debt due on October 1st of the new fiscal year. The estimated account balance on October 1, 2026, is $58,245,832.

Sinking Fund Debt Service Reserve Account

Tampa Bay Water is required to fund and maintain an amount equal to the lesser of maximum annual aggregate debt service coming due in any fiscal year or 125% of the average annual debt service over the life of the Bonds outstanding. These funds may be used only to satisfy an insufficiency in the Debt Service Reserve until such time as the Bonds are paid off. When the amount of cash in the Reserve Account, together with other amounts in the Debt Service Accounts are sufficient to fully pay all outstanding Bonds in accordance with their terms, the funds on deposit in the Reserve Account may be used for payment of the Bonds. Investment earnings that exceed the reserve requirement are deposited into the Revenue Fund and are available for any lawful purpose. Upon the issuance of the Series 2025 Bonds, the Reserve Account Requirement for the Outstanding Bonds, including the Series 2025 Bonds, under the Bond Resolution 2025-010, equals 125% of the average Annual Debt Service for all Outstanding Bonds, totaling $79,391,345. The Reserve account is currently funded with cash, investments and a Reserve Account Insurance Policy, issued by Assured Guaranty Inc., in the amount of $31,308,385.

Rebate Fund

Interest earned on Construction Funds which exceeds allowable earnings under IRS arbitrage regulations may result in a rebate liability to the IRS. When a liability for arbitrage rebate is incurred, funds owing to the IRS are placed in the Rebate Fund. These funds and interest earned remain in the fund until the liability to the IRS is satisfied.

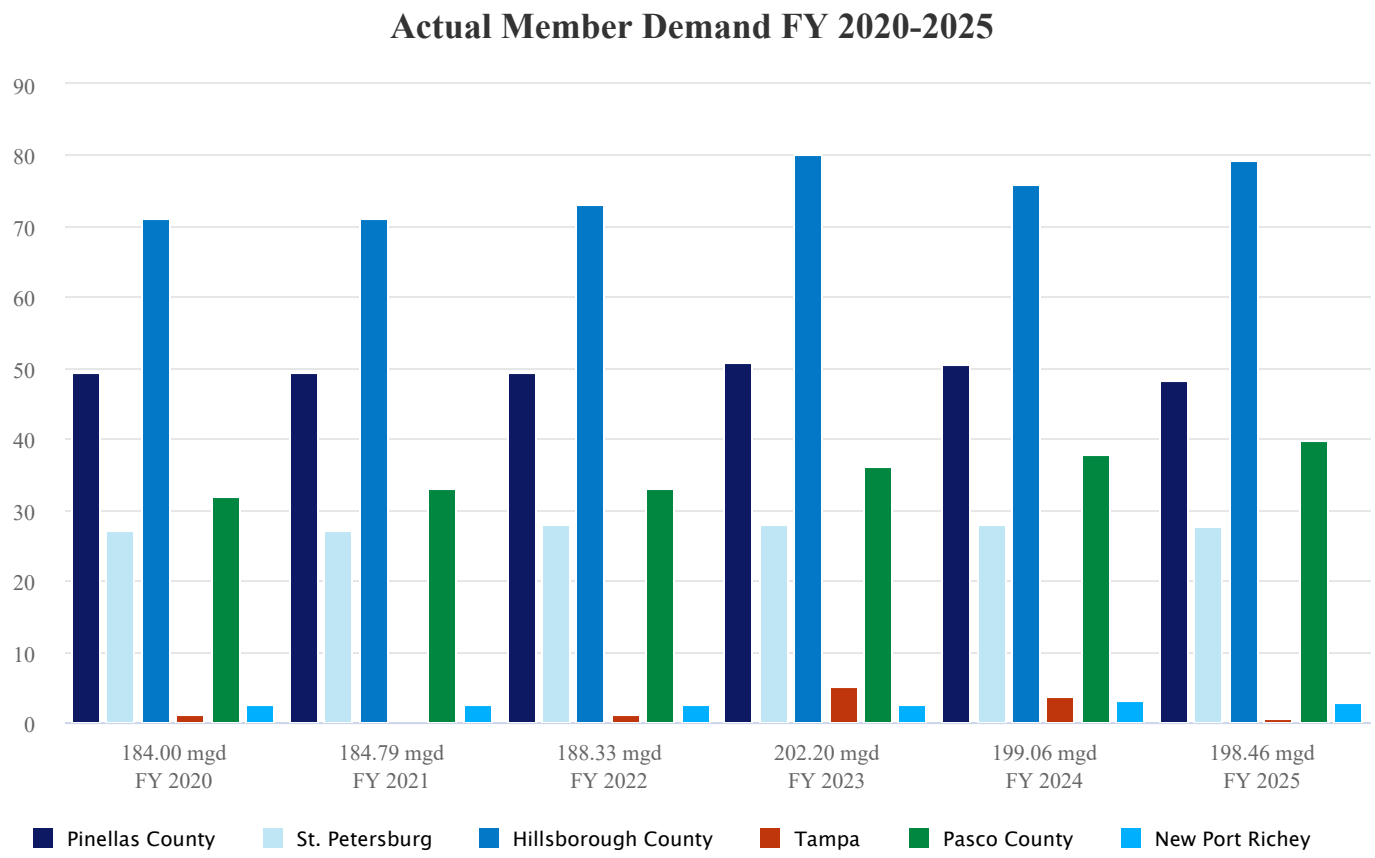
Rate Stabilization Account

The Rate Stabilization Account is funded from amounts established by the annual budget or approved by the Board. The fund is used to maintain changes in the Uniform Rate at more consistent levels. Investment earnings are deposited into the Revenue Fund and are available for any lawful purpose.

The Rate Stabilization account balance on October 1, 2026, is estimated at $42,819,976 and is available for reduction of current and future year rates to the extent that it has not been designated by the Board for specific purposes including unanticipated legal and mitigation costs. A withdrawal of $6,059,335, equal to the estimated amount of unexpended 2026 funds, will be withdrawn from the account and will carry-forward into fiscal year 2027. In addition, $4,000,000 is proposed to be transferred from the Rate Stabilization account into fiscal year 2027, as approved by the Board. The estimated fiscal year 2027 year-end unencumbered funds of $6,197,647 will be transferred into the Rate Stabilization fund to be carried forward into fiscal year 2028. Unexpended funds available for carryforward are deposited into the Rate Stabilization account at year-end and then withdrawn from the account the following fiscal year.

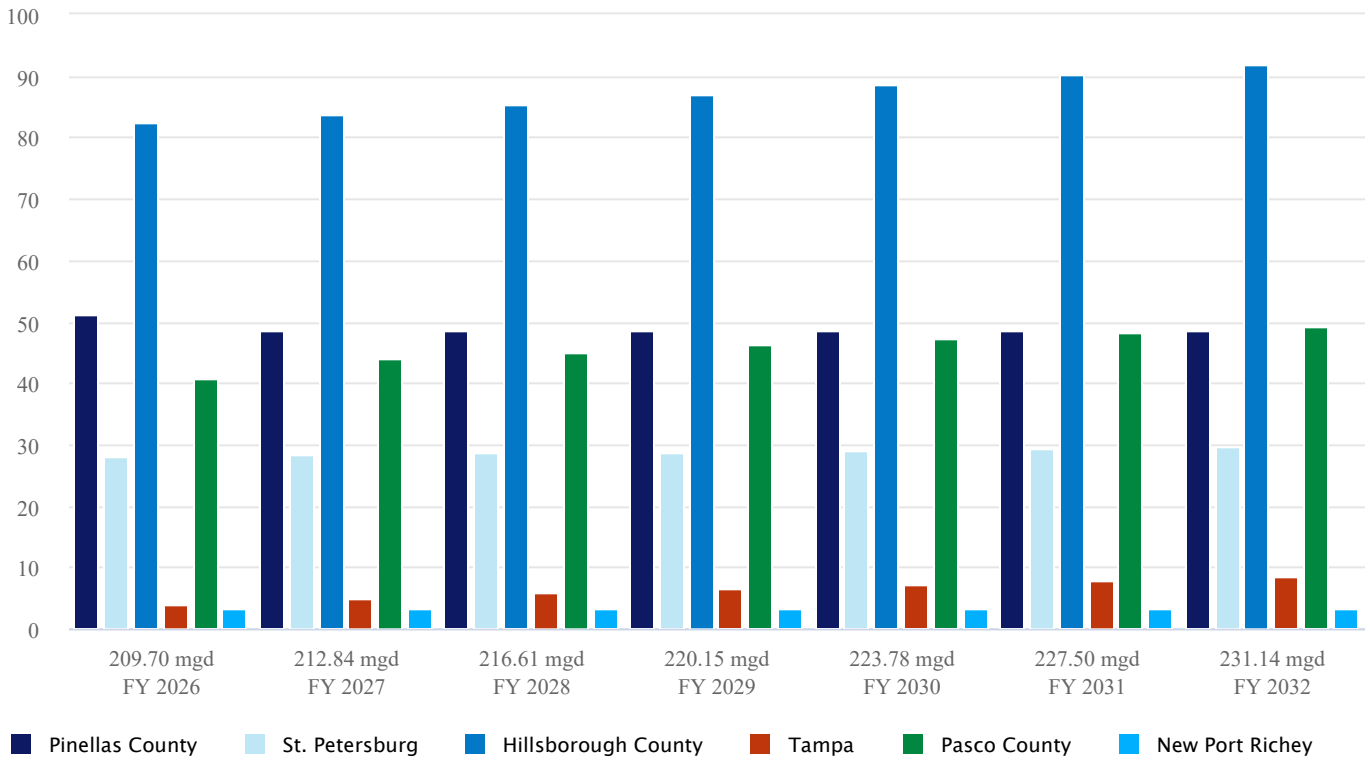
Financial Planning and Trends

The Master Water Supply Contract requires Agency Members to annually provide a five-year estimate of projected water service demand for their respective service areas. Additionally, the Agency utilizes various demand forecasting tools to provide five-year water service demand projections for its Members' service areas. These projections take into consideration relevant factors such as historical rainfall patterns, demographics, population growth, and conservation measures. This information is utilized by management in developing the annual budget and five-year budget projections.



The Tampa Bay Region began to see an upturn in growth starting in 2016, largely within Hillsborough and Pasco County's service areas. Pinellas County's demand decreased slightly when the county lost wholesale water customers. In the past five years, the City of Tampa purchased an average of 2.05 million gallons per day from Tampa Bay Water.

A Look Ahead...
Projected Member Demand FY 2026-2032



Tampa Bay Water provides regional water demand forecasts for its six-member governments to project the amount of water supply needed within Tampa Bay Water's service area. The agency's Long- term Demand Forecasting models are designed primarily for the purpose of long-term planning and forecasting over a 20-30-year horizon.

Member demand for fiscal year 2026 and future demand projections are based on average rainfall years. It is also projected that economic growth will be moderate resulting in gradual population growth and economic development for the Tampa Bay Region.

Below is the projected member government demands for fiscal year 2026 through fiscal year 2032 in million gallons per day (mgd) and in percentage of overall demand for the fiscal year.

	Hillsborough Co.	Tampa	Pasco Co.	New Port Richey	Pinellas Co.	St. Petersburg	Total

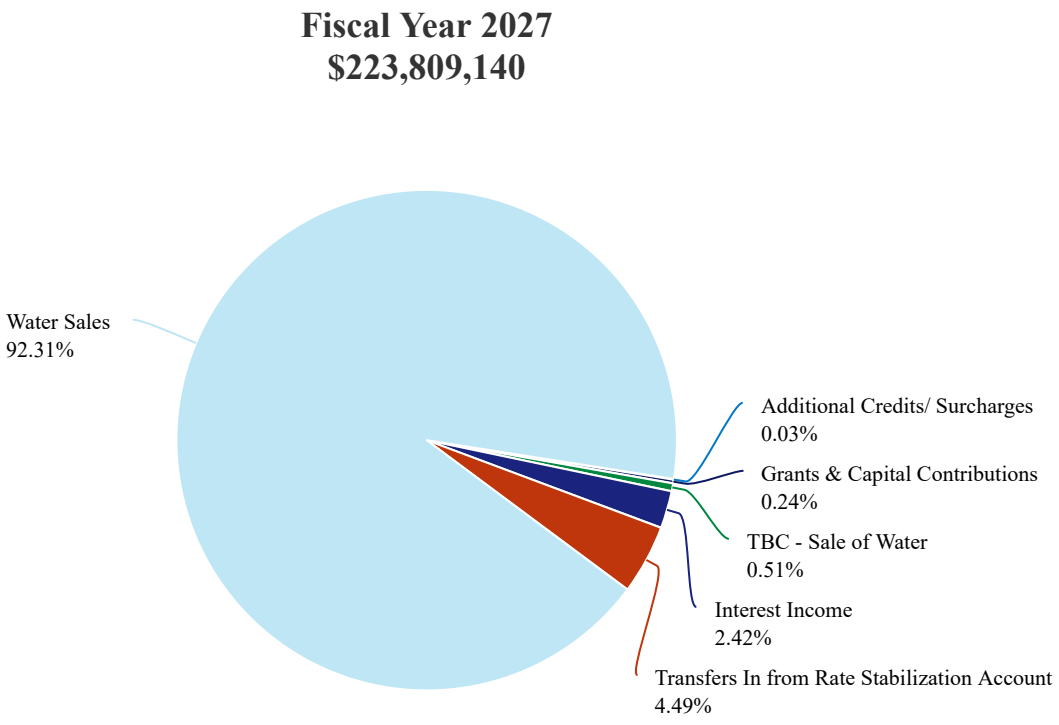
Revenues

The Agency's primary revenue source is sale of water to its six-member governments. The Master Water Supply Contract establishes a budget process through which the Agency establishes an annual Uniform Rate which is charged to the Members. A fixed cost component of the rate is established and billed monthly to recover the defined fixed costs of the Agency based on the Members' pro rata share of production. A variable cost component of the rate is established and billed monthly based on the current month's production to recover the defined variable operating costs: primarily power, chemicals, and purchased water. Contract terms require that rates collected be sufficient to pay the annual water system operating and maintenance costs, annual debt service, and purchase of operating equipment, net of other available revenue sources. Rates must also be sufficient to fund required reserves and to provide adequate levels of working capital through the Utility Reserve and Operating Reserve Funds.

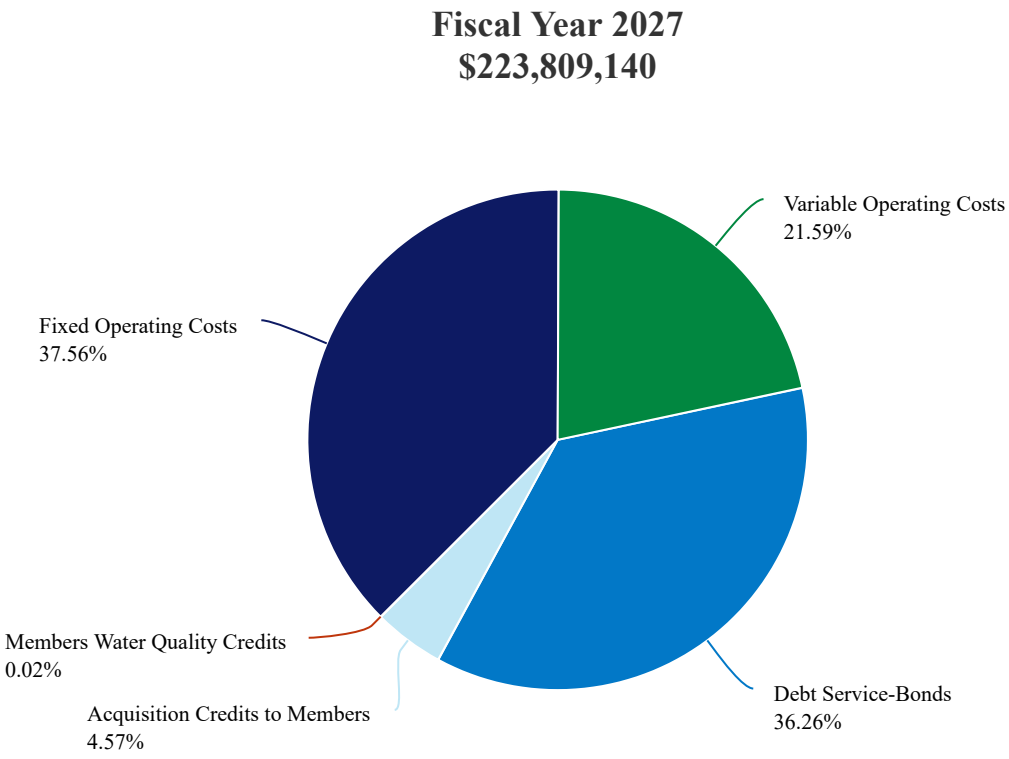
Where the Money Comes From ...



Expenditures

Expenditure levels are established annually for operating and maintenance costs based on projected water service demands, permit and compliance requirements, and equipment needs. Expenditures are also budgeted to make debt service payments, to satisfy bond covenant and reserve funding requirements, and to fund capital improvement costs not funded by borrowing or grants. Purchasing is conducted in accordance with the Agency's purchasing policies which prescribe procedures to obtain competitive pricing when appropriate.

Where the Money Goes ...



Balanced Budget

Tampa Bay Water's annual budget is balanced. Our projected revenue covers projected operating costs and other financial requirements for the ensuing fiscal year.

Sources and Uses of Funds - Actual 2025, Approved 2026 and Proposed 2027

Transfer to Rate Stabilization Account	-	-	-	-	-
Total Uses	**$ 238,141,671**	**$ 233,428,023**	**$ 254,470,919**	**$ 259,257,557**	**$ 266,141,477**

Note 1: Unencumbered funds from prior year are estimated at 3.0% of prior year revenue from water sales. Funds transfer through the rate stabilization account at year end.

Note 2: An inflation rate range of 3.3% to 5.5% is used for future cost projections where staff believes this is appropriate. Cost projections are also modified to include first year and subsequent year operating costs of new facilities currently under construction. No operating cost provision is made for those projects which have not been selected by the Board for construction. Projections for Debt Service-Bonds includes anticipated future debt issuances when appropriate.

Explanation of Significant Operating Expenditures Variances

Budget Category	Approved 2026	Proposed 2027	Variance +/-	Explanation
Personnel Services	$ 27,964,100	$ 29,039,530	$ 1,075,430	Health Insurance & FRS increase, 4 new FTE, 3% COLA & up to 3% merit increase
Materials & Supplies	3,063,969	2,999,448	(64,521)	
Professional Services	32,364,630	35,846,321	3,481,691	Demand management program funding, permit compliance cost increases, O&M agreement increases & increased software maintenance
Repairs & Other Services	9,433,385	9,632,758	199,373	Communication costs increase & sludge removal increase
Rent & Insurance	4,018,272	4,191,733	173,461	Agency insurance increases
Legal Services	600,000	600,000	-	
Capital Expenditures	1,197,500	1,762,000	564,500	Clearwater office roof replacement
Debt Service-Bonds	83,597,565	81,160,446	(2,437,119)	Refunding & restructuring of debt service
Member's Acquisition Credits	10,231,558	10,231,558	-	
Member's Water Quality Credits	48,000	48,000	-	
Water Treatment Chemicals -Variable Cost	26,194,508	28,810,527	2,616,019	Price increases and increased demand
Power / Electricity – Variable Cost	20,071,653	18,886,619	(1,185,034)	Prices maintaining or decreasing
Water for Resale – Variable Cost	644,000	600,200	(43,800)	
Total Operating Expenses	**$ 219,429,140**	**$ 223,809,140**	**$ 4,380,000**	

The proposed budget for 2027 operating expenses increased $4,340,000 from the approved 2026 budget.

The proposed $1.1 million increase in Personnel Services is due to increases in health insurance and Florida Retirement System contributions, 3% cost-of-living adjustments (COLA), and performance-based merits of up to 3%, plus the request for four additional positions.

Professional Services increased by $3.5 million largely due to funding the demand management program, but also increased costs for permit compliance, operations and maintenance agreements and software maintenance.

Repairs and Other services increased by $0.2 million due to increased communication costs and sludge removal at the Desalination Facility.

Capital expenditures increased by $0.6 million largely due to the replacement of the roof at the Clearwater office. The capital purchases for fiscal year 2027 are detailed in the chart below.

Debt Service-Bonds decreased by $2.4 million due to the savings provided from the issuance of the Series 2025 Refunding Bonds and debt service restructuring from the Series 2024B and Series 2024C Refunding Bonds.

Water Treatment Chemicals increased by $2.6 million due to cost increases and increased demand.

Electricity decreased by $1.2 million due to utility prices maintaining or decreasing.

Capital Expenditures

It is Tampa Bay Water's policy to capitalize property and equipment having an original cost greater than $5,000 and an estimated useful life longer than one year. Property and equipment routinely capitalized includes land, buildings and their structural components, vehicles, machinery, electronic and communication equipment, tools, office equipment, and furniture.

The 2027 operating budget includes $1,762,000 for Capital Expenditures.

The following chart summarizes capital expenditures budgeted for fiscal year 2027 through the Uniform Rate.

FY 2027 Proposed Capital Expenditures - $1,762,000

Category	Amount
Analytical Equipment	100,000
Audio Visual Equipment	15,000
Building Improvements	486,000
Inductively Coupled Plasma-Optical Emission Spectroscopy	200,000
HVAC Capital Equipment	165,000
Land	40,000
Maintenance Equipment	25,000
Network Equipment	10,000
Source Water Quality Monitoring Field Equipment	25,000
Surveying Equipment	26,000

TAMPA BAY WATER

Supplying Water To The Region

FISCAL YEAR 2027

Annual Rate Setting & Member Costs

The Annual Rate Setting and Member Costs section provides summarized information and schedules including current and projected rates and Member costs. Charts and graphs are provided that depict the components of the budget and the rate impacts. Separate charts and schedules are provided for each Member Government to assist them in the planning and coordination of their budgets and financial obligations associated with Tampa Bay Water's contracts.

TAMPA BAY WATER

Supplying Water To The Region

This section presents a summary of the budgeted components which make up the proposed Uniform Rate and the way each Member will be invoiced for water purchased in 2027.

Overview

The "Uniform Rate" is the uniform dollars per 1,000 gallons wholesale rate charged to the Member Governments for the supply of water through a Fixed Cost and Variable Cost component. The Uniform Rate is based upon the annual estimate and the projected quantity of water expected to be delivered to customers. The only exception to the Uniform Rate for water supply is the rate charged to the City of Tampa for water supplied from the Tampa Bypass Canal. The annual True-up required by the Master Water Supply Contract provides for a year end adjustment in the Fixed Costs component of bills paid during the fiscal year. Each member's pro-rata share of the Annual Estimate of Fixed Costs in effect during the fiscal year is adjusted based on the actual quantity of Quality Water delivered. Any adjustments are payable within sixty days of determination.

The Amended and Restated Interlocal Agreement includes provisions for two credits which are currently being applied against charges to Member Governments for water service. The annual credit for the debt service amortization for Tampa Bay Water's purchase of the Members' water supply facilities is the most significant credit. This credit is applied to the Member Governments' water bills. The credit is reflected in the budget as an annual debt service cost and is also reflected as a credit against the member's cost to purchase water. The annual debt service/credit is computed on a 30-year amortization of the net purchase price, compounded semiannually at 4.865%. The aggregate annual debt service cost/credit is $10,231,558. Additional annual credits consist of a credit for the actual direct costs of water treatment. In the event water delivered to Member Governments does not meet specifications for quality water in relation to hydrogen sulfide removal, a credit for hydrogen sulfide treatment is applied. Hydrogen sulfide was and remains an issue for the existing groundwater system, but not for the new supply sources. The water quality credit for hydrogen sulfide treatment affects the City of New Port Richey, and Hillsborough County. The total annual Water Quality credit for hydrogen sulfide for fiscal year 2027 is $48,000.

The primary source of revenue to Tampa Bay Water is the sale of quality water to our members. The projected revenue requirements must cover operation and maintenance expenses, debt service payments, bond coverage, required deposits to reserves, and capital expenditures. Revenue from sale of water and unrestricted interest income fund the operating and maintenance costs of Tampa Bay Water. Water sales for fiscal year 2027 are budgeted at $206,588,228. Interest income available for operations is estimated to be $5,415,737. It is estimated that $6,059,335 of unencumbered monies from fiscal year 2026 will be transferred through the Rate Stabilization account for use in fiscal year 2027. The proposed budget does include the use of $4 million from the Rate Stabilization Account to minimize the increase to the uniform rate. The Tampa Bypass Canal sale of water represents the estimated billing to the City of Tampa for its water needs at the Tampa Bypass Canal facility at a rate of .3719 per 1,000 gallons for 2027.

Rate Setting

Pursuant to the Master Water Supply Contract, Tampa Bay Water establishes an Annual Estimate based on Tampa Bay Water's budget for the ensuing fiscal year, which sets forth the expected cost of providing water service to Member Governments. Tampa Bay Water is required to develop the Rate ($/1,000 gallons), based on the Annual Estimate and the projected quantity of Quality Water to be delivered to Member Governments during the ensuing fiscal year. In accordance with the provisions of the Interlocal Agreement, a separate rate, based on actual costs incurred and allocated overhead, is charged to the City of Tampa for water supplied from the Tampa Bypass Canal.

The Uniform Rate to be charged in a fiscal year to the Member Governments for water service may include the following components:

Operation, Maintenance and Administrative Costs – These costs are the costs of operating, maintaining, and administering the system in such a fiscal year.

Debt Service Charges – Debt Service Charges relating to any of Tampa Bay Water's Obligations are based on principle, redemption premium, if any, and interest coming due on debt in the fiscal year.

Renewal and Replacement Fund – Tampa Bay Water is required to maintain an amount equal to five (5) percent of the prior fiscal year's Gross Revenues or such other amount as is certified by the Consulting Engineer. These funds are available to be used for repair and replacement of the System.

Capital Improvement Charges – These charges are based on the amount identified for capital improvement charges in Tampa Bay Water's Annual Estimate for the fiscal year.

Operating Reserve Funds – These funds are provided in the annual budget to maintain a reserve balance equal to two times the monthly average variable costs as provided in the budget.

Rate Stabilization Fund – Operation, Maintenance and Administrative Costs may be utilized to fund a rate stabilization fund.

Uniform Rate Elements

The Uniform Rate consists of two components: a Fixed Cost component and a Variable Cost component. The Fixed Cost component is designed to recover annual costs and expenses associated with the operation, maintenance, management, security, development, and financing of the System, other than those included as part of the Variable Cost component. The Variable Cost component is designed to recover costs and expenses for the operation, maintenance and management of the System that change in direct proportion to changes in the volume of Quality Water produced by Tampa Bay Water. The Variable Cost component includes, but is not limited to, the costs of power, chemicals, and water purchases.

Fixed Costs

The Uniform Rate calculation is based on the total Net Annual Revenue Requirement for the fiscal year for which the rate is established and the projected amount of Quality Water, in millions of gallons per day, to be

delivered to Member Governments during such fiscal year. For the purposes of the Uniform Rate calculation, the Fixed Costs for the fiscal year selected are defined as:

Fixed Costs = Net Annual Revenue Required – Budgeted Variable Costs

The Net Annual Revenue Requirement for the fiscal year selected (also referred to as Annual Estimate for purposes of rate computation) is calculated by making the necessary adjustments to the annual budget requirement. Such adjustments include, but are not limited to, estimated interest income, budgeted transfers from various funds (i.e., Rate Stabilization Account, Operating Reserve Fund, etc.), capitalized interest available for debt service, potential funding assistance from SWFWMD/EPA, and estimated revenues from the sale of surface water to the City of Tampa.

Variable Costs

Pursuant to the Master Water Supply Agreement, Tampa Bay Water is required to establish a variable rate to cover costs associated primarily with power, chemicals, and water purchases. The variable rate ($/1,000 gallons) is defined as the ratio of the total budgeted Variable Costs to the total Net Annual Revenue Requirement, applied to the Uniform Rate.

Variable Rate = (Budgeted Variable Costs/Net Annual Revenue Required) x Uniform Rate

Rate for City of Tampa from Tampa Bypass Canal (TBC)

Pursuant to Section 3.08(D) of the Interlocal Agreement, the rate charged for water delivered to the City of Tampa from the Tampa Bypass Canal (TBC) facility should be equal to Tampa Bay Water's direct cost of operating the TBC and allocated overhead. As part of its annual budget development process, Tampa Bay Water prepares an estimate of direct cost and allocated overhead associated with the Tampa Bypass Canal facility using the projected quantity of water to be delivered to the City of Tampa from the facility during the ensuing fiscal year.

TBC Rate = (Allocated Overhead + Direct Costs) / Quantity of Surface Water (to be delivered)

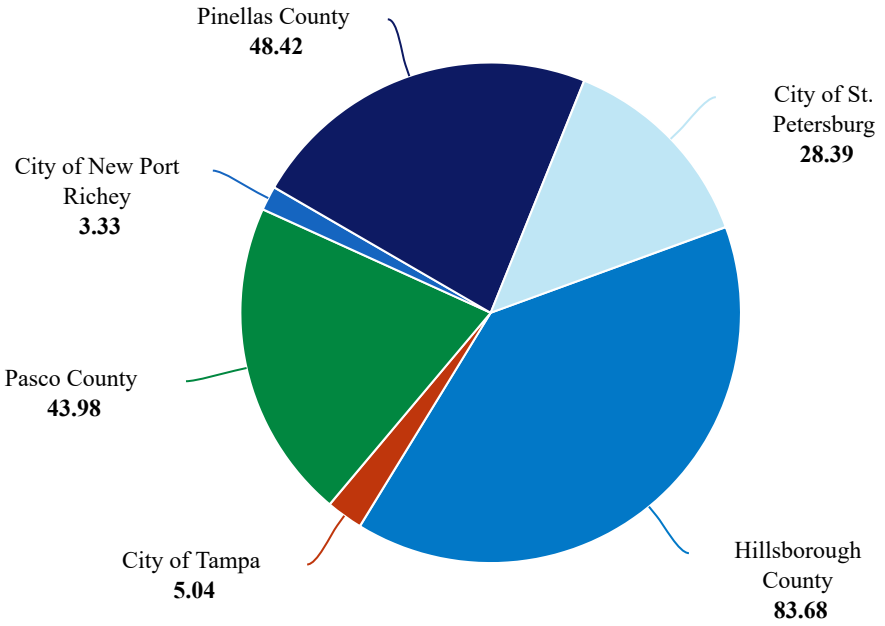
The unit rate for delivery of water to the City of Tampa from the Tampa Bypass Canal facility is presented to the Board for approval as part of the annual budget approval process for the ensuing fiscal year. The rate for 2027 is $.3719 ($/1,000 gallons).

$$\$0.3719 \text{ per } 1{,}000 \text{ gallons} = \frac{\text{Allocated Overhead}}{994{,}412} + \frac{\text{Direct Costs}}{136{,}428} = \frac{\text{Estimated MGD}}{8.33 \text{ mgd} \times 365 \times 1{,}000}$$

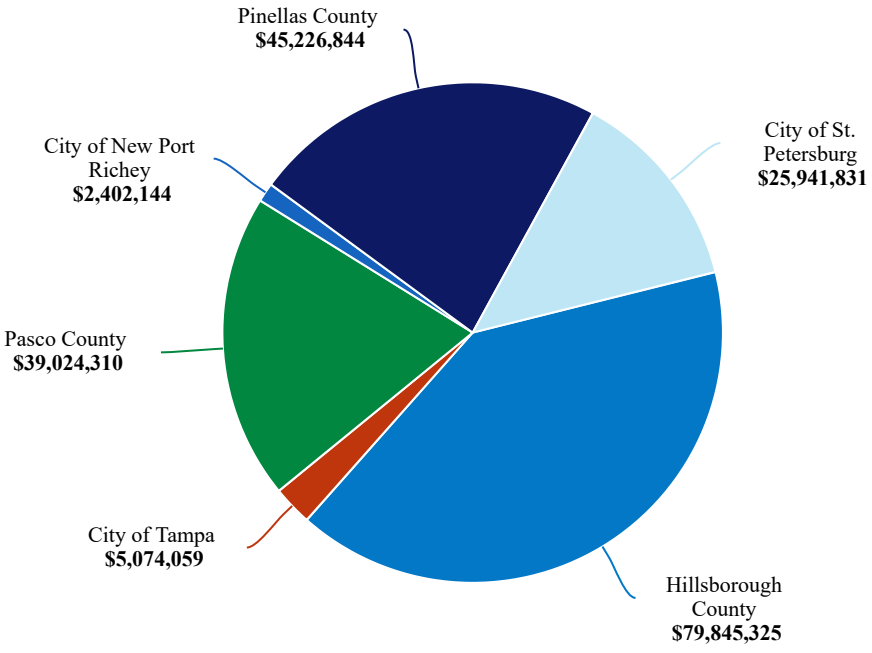
Other Budget Factors

- For fiscal year 2027, $5,415,737 has been estimated for interest income. Interest income will be applied to offset projected expenditures, to the extent permitted.
- Use of reserve funds are included in this budget to minimize the increase to the uniform rate, with $4 million from the Rate Stabilization Account being transferred into the fiscal year 2027 operating budget.
- The Uniform Rate is segregated into Fixed Costs (do not vary because of water production) and billed at 1/12 of total Fixed Costs monthly per Member. The Variable Costs (vary with water production); electricity, chemicals, and water for re-sale; are billed monthly based on actual production.
- Acquired Member facilities are included in this budget as Tampa Bay Water owned supply systems and are being paid for through debt issuance and facility acquisition credits back to Members.
- Water quality standards are established, and costs are budgeted to sustain the standards. Water Quality Credits related to hydrogen sulfide removal for fiscal year 2027 have been established and will be credited to Hillsborough County, and New Port Richey.

Projected Member Water Demand FY 2027
212.84 MGD



Estimated Net Member Costs FY 2027
$197,514,512



Uniform Rates

Please review the notes below the table for important parameters regarding the budget projection amounts.

Cost Category	Proposed 2027	Budget Projections 2028*	2029	2030	2031	2032*
Fixed Operating Costs	$ 84,071,790	$ 86,173,585	$ 88,327,924	$ 90,536,122	$ 92,799,526	$ 95,119,514

* - Leap Year - uniform rate calculated using 366 days

Note 1 - Debt service reflects the current annual payment structure and does not include refunding or restructuring debt options that may be utilized.

Note 2 - Based upon issuance of $292M in 2026, $301M in 2028, and $36.25M in 2030, with each issuance having 5% interest, one year of capitalized interest, followed by several years of interest only payments.

Note 3 - Staff and consultants continually look at options to reduce existing and future debt service impacts on the uniform rate.

Note 4 - The Unencumbered Funds from Prior Years are calculated at 3% of the prior year revenue from water sales and transfer through the rate stabilization account at year end.

Note 5 - Transfers in from the Rate Stabilization Account in fiscal years 2027-28, and 2030-32 are to minimize the impact of the estimated future debt service, amounts may change based upon changes in bond debt service.

Note 6 - Projected water demand is based on information obtained from the Member Governments and the Tampa Bay Water Demand Forecasting Model.

TAMPA BAY WATER

Supplying Water To The Region

FISCAL YEAR 2027

Debt Service

The Debt Service section provides a listing of the outstanding debt of the Agency, the Agency's bond ratings, and the details of the debt requirements shown in the Financial Plan section. The section also provides information on debt coverage requirements and future Debt Service.

TAMPA BAY WATER

Supplying Water To The Region

Bonds

At the time of its reorganization in 1998, Tampa Bay Water issued the 1998A Bonds to refund all existing debt. In addition, the 1998B Bonds were issued to finance the cash component of the purchase of the members' wellfields. Of those proceeds, $71.8 million, $92.4 million, $31.7 million, and $3 million were paid to Pinellas County, City of St. Petersburg, City of Tampa and Pasco County, respectively. To address the increasing need to develop new water supplies, Tampa Bay Water and its member governments worked collectively to develop a Capital Improvement Program that would identify and develop new water sources capable of producing 111 million gallons per day (mgd) by December 31, 2007. With the development of the Capital Improvement Program came the necessity to incur debt as a means of financing the Board approved program. Accordingly, Tampa Bay Water adopted a long-term plan to accomplish the financing of the Capital Improvement Program. In furtherance of this plan, Tampa Bay Water has issued its revenue bonds Series 1999, 2001B, 2002, 2008, 2013, 2022 and 2024A. Additional funds for the Capital Improvement Program were obtained from the Series 2001A and 2005 bond issues. Series 2011A, 2015A, 2015B, 2016A, 2016B, 2016C, Master Bond: Tranche 1 (2020), Tranche 2 (2021) and Tranche 3 (2023), 2024B, 2024C and 2025 were only refunding bonds.

Tampa Bay Water's projected outstanding bonds at 9/30/27 will consist of the following.

Original Issue	Series	Projected Outstanding 9/30/27	All-In True Interest Cost	Final Maturity	Purpose
96,630,000	Refunding Revenue Bonds, Series 2016A	96,630,000	3.52%	10/1/38	Defeasance of 2008 Bonds
55,345,000	Refunding Revenue Bonds, Series 2016C	19,240,000	2.12%	10/1/27	Partial defeasance of 2010 Bonds

Rate Covenant

The Bond Resolution requires Tampa Bay Water to take all actions to collect Net Revenues in each fiscal year so that, together with Fund Balance, they equal at least 125% of the Annual Debt Service coming due in such fiscal year. Such Net Revenues must also be adequate in each fiscal year to pay at least 100% of:

- The Annual Debt Service coming due in such fiscal year;
- Any amounts required by the terms of the Bond Resolution to be deposited in the Reserve Account or with any issuer of a Reserve Account Letter of Credit or Reserve Account Insurance Policy;
- Any amounts to be deposited in the Renewal and Replacement Fund in such fiscal year; and
- Any amounts to be repaid to the Capital Improvement Fund in such fiscal year.

For the purposes of the Rate Covenant compliance calculations, the Total Debt Service is calculated, in accordance with the Bond Resolution, net of any Capitalized Interest and release of Debt Service Reserve. The Finance and Administration Division is responsible for making sure that the Uniform Rate adopted for any fiscal year complies with the Rate Covenants.

For the purposes of calculating the Rate Coverage test, Debt Coverage test and the Renewal and Replacement Fund (R&R) coverage requirements, the Net Revenues are determined as shown below.

Net Revenues = Gross Revenues - Operating Expenses

Rate Coverage Test

The minimum requirement for the Rate Coverage Test is 125% (i.e., the sum of Net Revenues and the Utility Reserve Fund Balance, on the preceding September 30th, shall be greater than or equal to 125% of the total Debt Service due for the Fiscal Year).

Rate Coverage Test = Net Revenues + Utility Reserve Fund Balance/Total Debt Service

Debt Coverage Test

The minimum requirement for the Debt Coverage Test is 100% (i.e., the Net Revenues shall be equal to or greater than the sum of Total Debt Service + Required Annual Contribution to the Capital Improvement Fund + Required Annual Contribution to the Renewal and Replacement Fund for the fiscal year).

Debt Coverage Test = Net Revenues/Total Debt Service + Required Contribution to Capital Improvement Fund + Required Contribution to Renewal & Replacement Fund

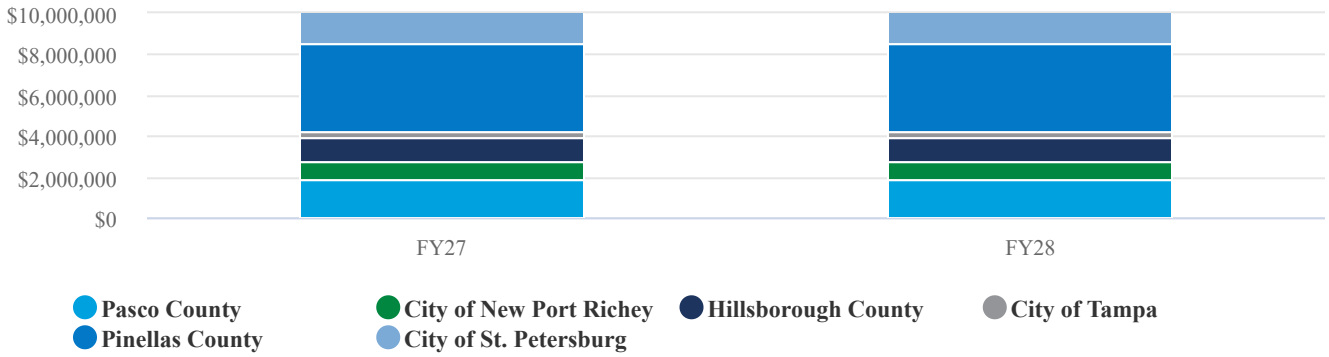
Facility Acquisition Credits

In 1998, pursuant to the Interlocal Agreement, the Member Governments sold certain wellfield and transmission facilities to Tampa Bay Water. A portion of the purchase price is being paid in the form of "Facility Acquisition Credits" payable over 30 years. The credits are applied to the Members' monthly bills.

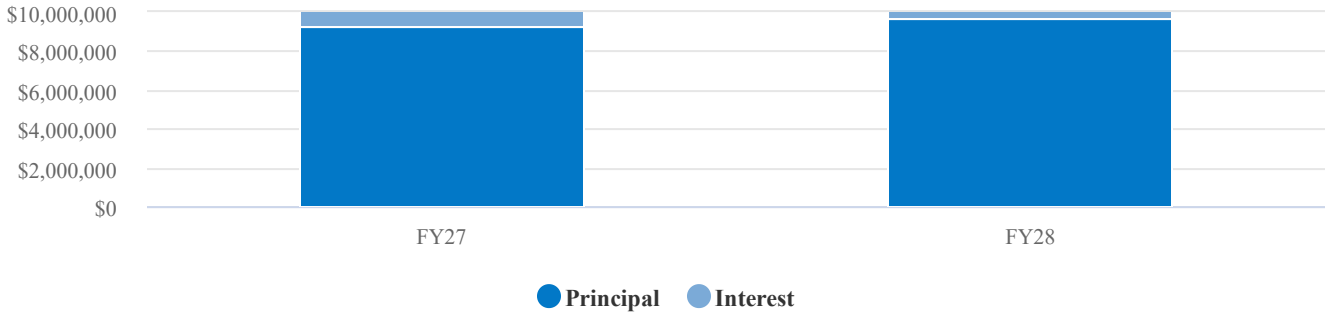
Member Government's Projected Outstanding Facility Acquisition Credit Balances

Member	Projected at 10/1/26	Projected at 9/30/27
Pasco County	$ 3,482,149	$ 1,783,788
City of New Port Richey	1,575,327	806,987
Hillsborough County	2,301,842	1,179,156
City of St. Petersburg	3,110,910	1,593,615
Pinellas County	8,137,775	4,168,710
City of Tampa	408,577	209,301
	$ 19,016,581	**$ 9,741,557**

The chart below shows Tampa Bay Water's annual acquisition credits by Member Government for the outstanding facility acquisition credits at 9/30/27.



The chart below shows the principal and interest breakdown of the annual acquisition credits for the outstanding facility acquisition credits at 9/30/27.



Summary of Fiscal Year 2027 Debt Service

Total Debt Service FY 2027	**$ 42,777,024**	**$ 48,614,980**	**$ 91,392,004**

Rating Agency Analysis

Rating agencies provide an independent assessment of the relative credit worthiness of a municipal security. These agencies provide a letter grade that conveys their assessment of the ability of the borrower to repay the debt. These ratings are also a factor that is considered by the municipal bond market when determining the cost of borrowed funds (interest rate). The three nationally recognized rating agencies (Moody's Investor Services, Fitch Ratings, and Standard and Poor's) consider the following key factors when evaluating a debt offering:

- Economic environment - trend information/revenue to support debt
- Debt history - previous debt issued and current debt outstanding
- Debt management - debt planning and policies
- Administration - quality of Tampa Bay Water management and organizational structure
- Financial performance - Tampa Bay Water's current and historical operations

The rating agencies each utilize a different system to rate debt. Moody's uses modifiers 1 (higher end), 2 (mid-range) and 3 (lower end) to indicate ranking within each rating category. Both Fitch and Standard and Poor's use a plus (+) and minus (-) modifier to indicate status within rating category. The table below provides a comparison of their rating systems:

Description	Moody's	Fitch	Standard & Poor's
Highest Quality	Aaa	AAA	AAA
Very High Quality	Aa	AA	AA
High Quality	A	A	A
Medium Quality	Baa	BBB	BBB
Speculative Quality	Ba	BB	BB
Highly Speculative Quality	B	B	B
Substantial Risk	Caa	CCC	CCC
Very High Levels of Risk	Ca	CC	CC
Exceptionally High Levels of Risk	C	C	C
Default	N/A	D	D

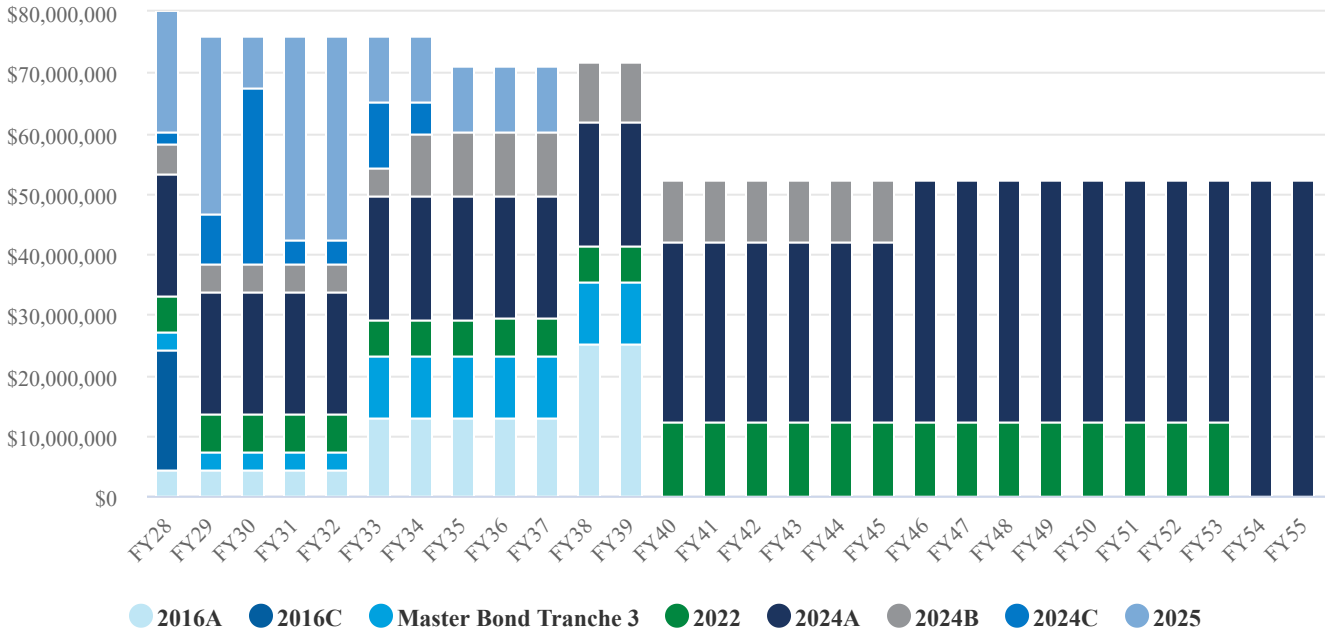
The following table summarizes the underlying ratings assigned to Tampa Bay Water's debt by the rating agencies at time of issuance based on the agency's credit. The agency will obtain a CUSIP number and credit rating for the Master Bond if requested by the lender. All outstanding bond issues are uninsured.

Outstanding Bond Issue	Moody's	Fitch	Standard & Poor's
2016A Bonds	Aa1	AA+	AA+
2016C Bonds	Aa1	AA+	AA+
Master Bond Tranche 3-2023	Not Yet Rated	Not Yet Rated	Not Yet Rated
Series 2022	Aa1	AA	AA+
2024A Bonds	Aa1	*	AA+
2024B Bonds	Aa1	*	AA+
2024C Bonds	Aa1	*	AA+
2025 Bonds	Aa1	*	AA+

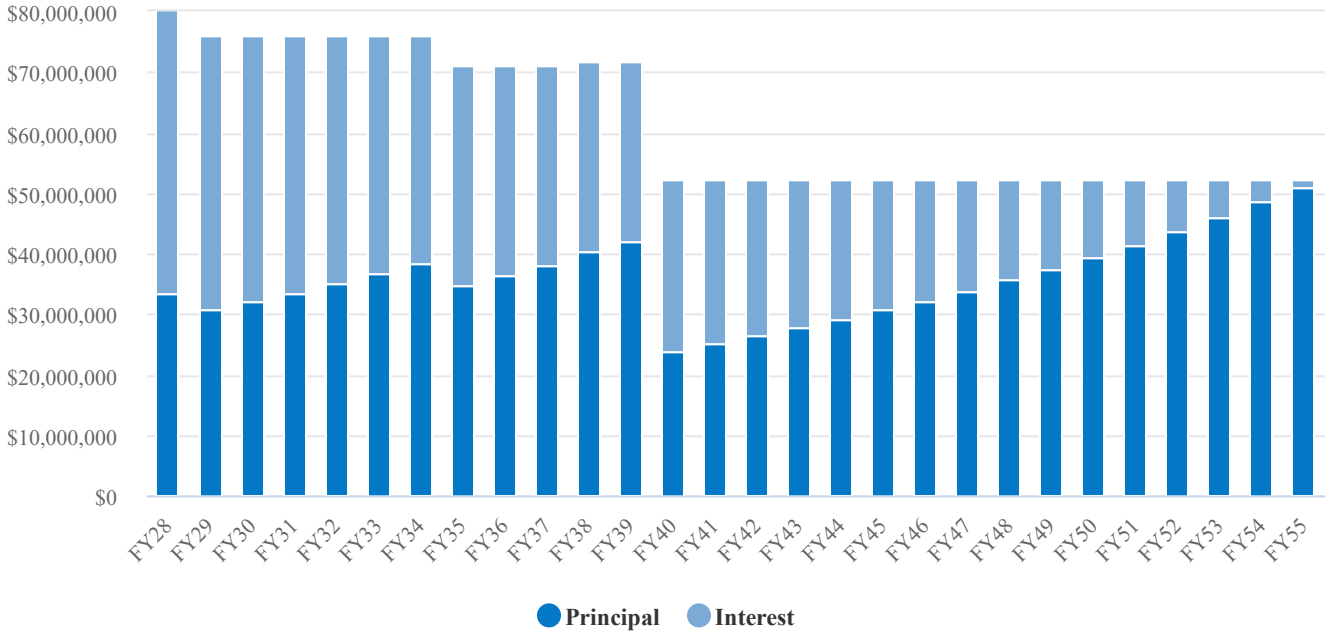
* The ratings for the Series 2024 A / B / C Bonds and Series 2025 were unsolicited by Tampa Bay Water and have not been actively pursued.

Outstanding Debt Service

The chart below shows Tampa Bay Water's annual debt service payments by Bond Series for the existing outstanding bonds at 9/30/27.



The chart below shows the principal and interest breakdown of Tampa Bay Water's annual debt service payments for the existing outstanding bonds at 9/30/27.

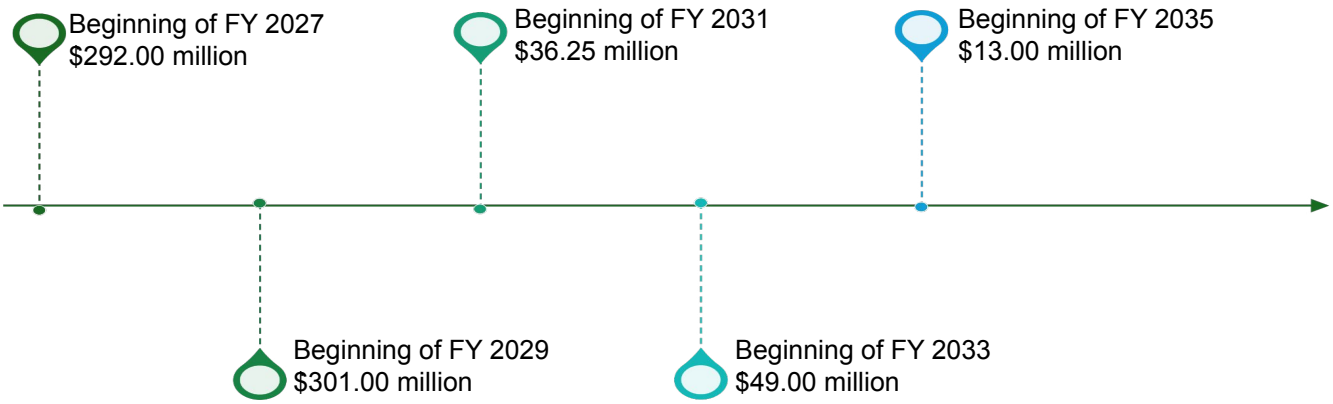


Future Borrowing

The Fiscal Year 2027 to Fiscal Year 2036 Capital Improvement Program includes 91 projects with an estimated $1.7 billion in total expenditures. This total includes four projects for per- and polyfluoroalkyl substances (PFAS) treatment that total $187.8 million, and two water quality improvement projects designed to reduce total organic carbon (TOC) to 2.0mg/L that total $51.2 million.

All 91 projects reflect a need for an estimated additional funding of $691.25 million by the end of 2034. The agency is anticipating issuing debt every couple of years to minimize the impact on the agency's annual debt service and uniform rate. An estimated $292 million by fiscal year 2027, will be largely needed for the South Hillsborough Wellfield, water quality treatment and wellfield improvements, and design phase of the PFAS treatment projects and TOC treatment projects. Additional funding needed for completing the PFAS and TOC (2.0 mg/L) treatment projects, maintaining the agency's infrastructure, providing reliability and level of service projects, and the long-term master water planning is estimated at $301 million by fiscal year 2029, $36.25 million by fiscal year 2031, $49 million by fiscal year 2033 and $13 million by 2035.

Estimated Timeline & Amounts of Future Borrowing



The Fiscal Year 2027 to Fiscal Year 2036 Capital Improvement Program does include the South Hillsborough Wellfield project which may push out the timing of when the next future water supply project is needed to meet the region's increased demands past 2033. The timing and amounts of the future funding needs will likely change based upon future Board decisions related to water quality projects and the need for future water supply projects; as the Board makes these decisions the Capital Improvement Program will be updated. Tampa Bay Water will continue to evaluate various funding strategies, such as bonds, loans, grants and other state and federal programs to address the future funding needs of the Agency.

FISCAL YEAR 2027

Capital Improvement Program

The Capital Improvement Program section provides summary information about the Agency's current capital projects. This includes projects that are scheduled to be in the feasibility, design, and construction phases during fiscal year 2027.

TAMPA BAY WATER

Supplying Water To The Region

Capital Improvement Planning and Financing

Planning

New water supply projects are developed through the long-term water supply planning process, which is performed to ensure that (1) the public has sufficient water supplies to meet its needs in an environmentally sustainable and cost-effective manner, and (2) Tampa Bay Water is compliant with its obligations under the Amended and Restated Interlocal Agreement. It can take as long as 10 years to plan, permit, design, and build drinking water facilities. Tampa Bay Water develops its Master Water Supply Plans through this long-term planning effort. This process is a multi-step process including determination of need, identification of potential projects, feasibility studies, review, and selection by the Board of projects to be studied further through preliminary design, and final selection by the Board of projects to be constructed. Long-term water supply planning is conducted at least every five years. As part of the planning process, demand projections are updated annually to identify the need for and timing of the development of new water sources. It is the Agency's goal to bring new water supplies on-line in a timely manner based on need, but not so far in advance as to unnecessarily burden the cost of water by overbuilding supply capacity. Projects identified through the Long-term Master Water Supply Plan (LTMWP) and selected for implementation become part of the Agency's Capital Improvement Program Plan.

Financing

Tampa Bay Water primarily finances its capital improvements program through the issuance of tax-exempt and taxable bonds. Bond proceeds are placed in a restricted Construction Fund until disbursed for their intended purpose. The remainder of the capital improvements program is funded with pay-as-you-go type accounts, joint project agreements with member governments and grant funding. The pay-as-you-go type accounts include the Uniform Rate, the Capital Improvement Fund, the Renewal and Replacement Fund, the Energy Fund, the Released Debt Service Fund, and the PFAS Fund. The funds are retained in these accounts until disbursed for Board approved purposes. Some Member Government requested projects may be fully or partially funded by the requesting member government through a joint project agreement. These funds are retained in a Joint Project Agreement Fund and reconciled throughout the length of the project. The Agency also seeks and obtains available grant funding for its projects from SWFWMD, the State of Florida and the federal Environmental Protection Agency.

The Capital Improvement, the Released Debt Service, and the PFAS Funds may be used to fund any Board approved Capital Project. The Renewal and Replacement Fund can fund projects where major repairs or replacement of specific components are needed to maintain the service level of the system. The Energy Fund can fund projects which result in energy savings. The Uniform Rate generally funds projects that improve existing facilities.

Capital Improvement Program Definition

A capital project is defined as planned activities that result in

- a new capital asset or improvements to an existing asset.
- major renovations or expansions that extend an existing asset's useful life and/or result in a significant improvement in its functionality or capacity.

Capital projects are recorded in Tampa Bay Water's financial records in accordance with generally accepted accounting principles and applicable Florida State statutes.

Approved projects can include projects constructed for the benefit of member governments or other government agencies. If Tampa Bay Water does not retain ownership of the completed project, it is accounted for as a contribution to the respective entity.

Tampa Bay Water's Capital Improvement Program (CIP) is a comprehensive ten-year plan and portfolio of previously approved and new proposed capital projects. The CIP is updated annually as the scope, needs and timing for specific projects change. The following goals are used by agency staff to update the Capital Improvements Program Plan:

- Identify and prioritize capital projects through a coordinated departmental effort that integrates planning and development, engineering, construction, financing requirements, and future operating and maintenance costs.
- Develop a timeline and budget for each project.
- Develop a funding scenario for each project that identifies a funding source, a projected cash flow, and future operating and maintenance costs estimates.

The Fiscal Year 2027-2036 Capital Improvement Program Plan includes 43 active projects in fiscal year 2027, from planning to close-out. The total estimated expenditures for Fiscal Year 2027 are $291,424,776, with an estimated $20.1 million being reimbursed with district co-funding and grants. The Surface Water Treatment Plant expansion accounts for roughly 25% of the estimated fiscal year 2027 expenditures and around 42% is attributable to the South Hillsborough Pipeline.

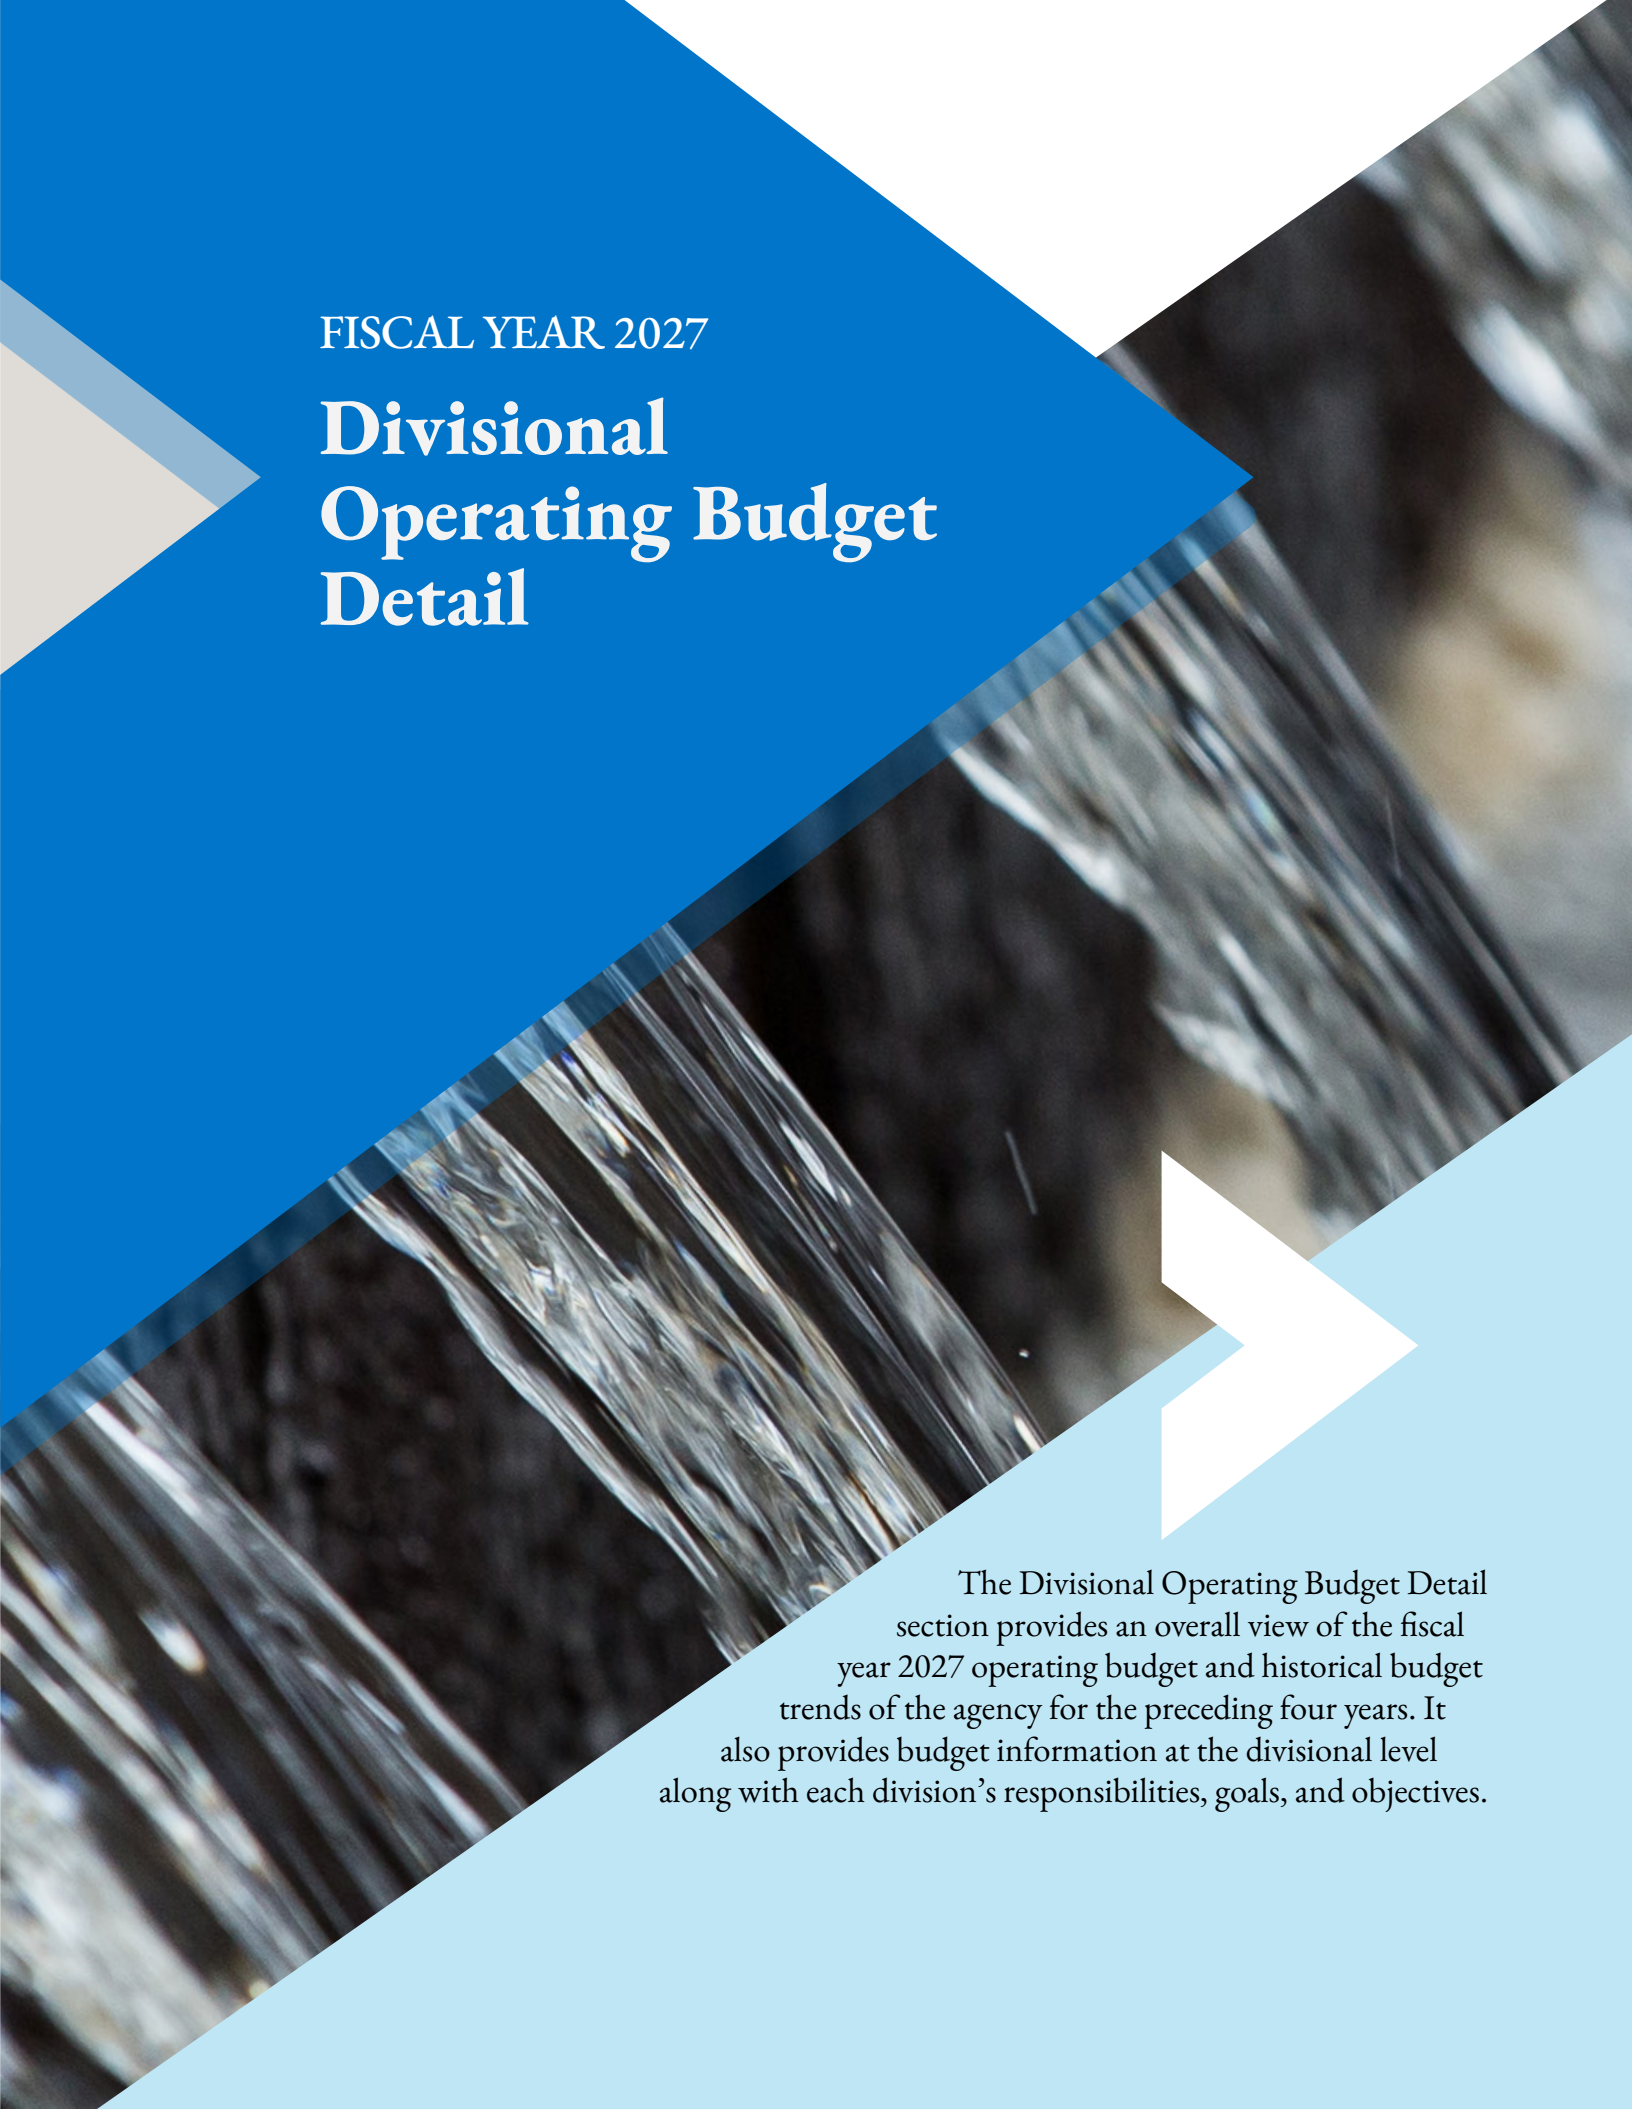
FISCAL YEAR 2027

Divisional Operating Budget Detail



The Divisional Operating Budget Detail section provides an overall view of the fiscal year 2027 operating budget and historical budget trends of the agency for the preceding four years. It also provides budget information at the divisional level along with each division's responsibilities, goals, and objectives.

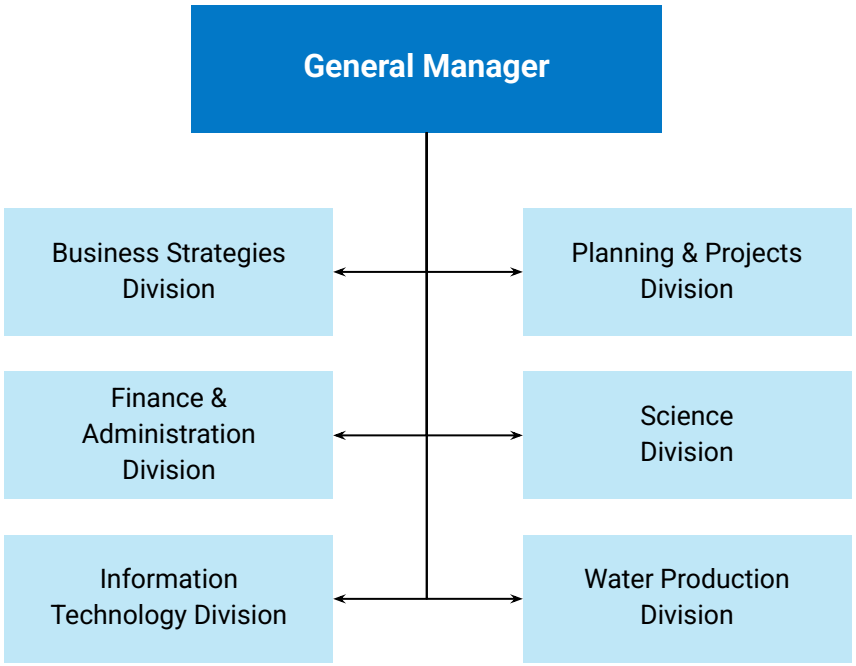
TAMPA BAY WATER

Supplying Water To The Region

Tampa Bay Water's Divisional Organization

This section provides summaries of Tampa Bay Water's divisional organizations, mission, and responsibilities, as well as historical budget trends.

As the Agency continues to focus on the efficient operation and timely maintenance of its robust and integrated regional supply system, it also concentrates on strategic business planning, plus the planning, design, and construction of new supplies and new delivery systems. The organizational design consists of six divisions: Business Strategies, Finance & Administration, Information Technology, Planning & Projects, Science and Water Production, which report directly to the General Manager. Each division focuses on the Agency's Mission, Vision and Value statements and better positions the agency to implement the Board's strategic Plan.



Staffing

Staffing - Historical

The table below shows the number of agency full-time employees by area for fiscal years 2022 through 2026.

Area - Division	Approved FY 2022	Approved FY 2023	Approved FY 2024	Approved FY 2025	Approved FY 2026
General Manager	2	2	2	2	2
General Counsel [1]	-	-	-	-	-
Business Strategies [2]	6	6	12	15	15
Finance & Administration	30	18	18	19	19
Information Technology [3]	-	13	13	13	13
Planning & Projects [4]	-	-	18	21	21
Science	41	40	34	31	31
Water Production	78	79	63	62	62
Full-time Employees	**157**	**158**	**160**	**163**	**163**

Note 1 – General Counsel has been outsourced since May 2012.

Note 2 – Business Strategies includes Public Affairs, Human Resources, Continuous Improvement & Safety Services starting in FY 2025

Note 3 – Information Technology was part of Finance & Administration in FY 2022.

Note 4 – Planning & Projects includes Engineering, Construction, Surveying, Real Estate, and Planning & Projects, in FY 2022 through FY 2023 these departments were part of the Science Division and the Water Production Division.

Staffing - Proposed

In fiscal year 2027, proposed personnel services equal $29,039,530 and are approximately 13% of the Operating Budget. Personnel Services includes the Agency's expenses for wages, payroll taxes, retirement contributions, employees' insurance, workers' compensation, unemployment compensation, other post-employee benefits, and the GASB Statement No. 68 retirement reporting requirements for the existing 163 full-time employees, 12 part-time co-op positions, plus 4 full-time equivalent positions requested in the Fiscal Year 2027 Proposed Budget.

Position Requests for Fiscal Year 2027

The Agency follows a formal succession strategy designed to proactively respond to shifts in its staff attrition, address emerging recruitment challenges, and capitalize on development opportunities in a way that ensures its business continuity and supports both immediate and long-range agency priorities.

As Tampa Bay Water faces retirements, promotions, and other staff turnovers, the Executive Team analyzes if any organizational changes may be needed to address succession planning and knowledge retention. This provides the Agency with an opportunity to better organize and continue to meet the agency's strategic planning and operational needs while maintaining the current number of budgeted full-time equivalent positions.

Four full-time equivalent positions are being requested in the Fiscal Year 2027 proposed budget to bring in-house some currently outsourced services, address increased activities, and improve overall department function.

The following four positions are being requested for fiscal year 2027.

Staffing

Information Technology Division - 1

Network Engineer: This position will bring outside consultant services in-house and provide the agency with multiple benefits, including cost savings. This position will design, implement, and maintain secure, reliable network infrastructure for both enterprise and SCADA environments. This includes planning and deploying modern network solutions, ensuring compliance with cybersecurity standards, and supporting strategic initiatives for network modernization. The role provides advanced troubleshooting and operational support to maintain 24/7 availability, monitors performance, and implements risk mitigation strategies such as redundancy and failover. Additional responsibilities include maintaining accurate documentation, collaborating with IT and SCADA teams, and ensuring resilience and security across all communications systems.

Water Production Division - 3

Mechanical Technician I: This position will help the maintenance department begin reducing reactive maintenance, improve schedule efficiency, and align labor deployment with industry standards. A utility maintenance department best management practice is to balance planned versus unplanned work activities at a ratio of 80% to 20%. Currently the agency is performing below the industry target, with much of the workload taking the form of corrective/emergency work or unplanned maintenance/project support activities. One of the main contributors, for performing below the industry target, is related to the amount of routine/planned work needed for a utility the size of the agency and the lean nature of staffing in the maintenance department.

Mechanical Technician Trainees (2): These positions will provide opportunities to further develop trainee programs for technical roles. With continued retirement of long-tenured employees on the horizon and difficulty hiring for many entry level technical positions, offering a trainee program will further support the agency's goal of "Ensure an Engaged, Skilled and Adaptable Workforce." Adding these two positions also aligns with Recommendation 5 from the 2025 Performance and Management Audit.

Tampa Bay Water's Board of Directors

April 2026

Tampa Bay Water is often cited as a model of regional cooperation, thanks to the spirit of regionalism that created the utility as well as the continuous regional efforts of our board of directors. Each elected official on our nine-member board represents an individual city or county that we serve, but at the dais, each also represents the Tampa Bay region. The policy decisions and directives of our board ensure our region has adequate and sustainable drinking water to support our economy, environment, and way of life.

Lisset Hanewicz
- Chairman
- Council Member, City of St. Petersburg

Seth Weightman
- Vice Chairman
- Commissioner, Pasco County

Harry Cohen
- Commissioner, Hillsborough County

Chopper Davis
- Mayor, City of New Port Richey

Dave Eggers
- Commissioner, Pinellas County

Charlie Miranda
- Council Member, City of Tampa

Ron Oakley
- Commissioner, Pasco County

Kathleen Peters
- Commissioner, Pinellas County

Joshua Wostal
- Commissioner, Hillsborough County

Tampa Bay Water's Executive Team

Charles H. Carden, General Manager

Kelly Fernandez, General Counsel, Persson, Cohen, Mooney, Fernandez & Jackson, P.A.

Michelle L. Stom, MPA, APR, Chief of Staff/Chief Strategy Officer

Paul Stanek, Chief Operating Officer

Warren Hogg, P.G., Chief Science Officer

Christina Sackett, MBA, Chief Financial Officer

Casey LaLomia, Information Technology Director

Maribel Medina, P.E, PMP, Planning and Projects Director

Shane Johnson, Continuous Improvement Director

Tampa Bay Water's Mission and Vision

MISSION

Tampa Bay Water's mission is to reliably provide clean, safe water to the region now and for future generations.

VISION STATEMENT

Tampa Bay Water's vision is to be the leader in supplying sustainable, quality water.

Tampa Bay Water's Overview

Tampa Bay Water, A Regional Water Supply Authority (the Agency), formerly West Coast Regional Water Supply Authority, was created on October 25, 1974, by enabling state legislation under Florida Statute Sections 163.01, 373.1962, and 373.1963. Tampa Bay Water is comprised of six member governments including: Hillsborough, Pasco, and Pinellas counties and the cities of St. Petersburg, Tampa, and New Port Richey. A Governance Study was adopted by the Florida Legislature in 1997 (the 1997 Legislation) amending Section 373.1963, Florida Statutes.

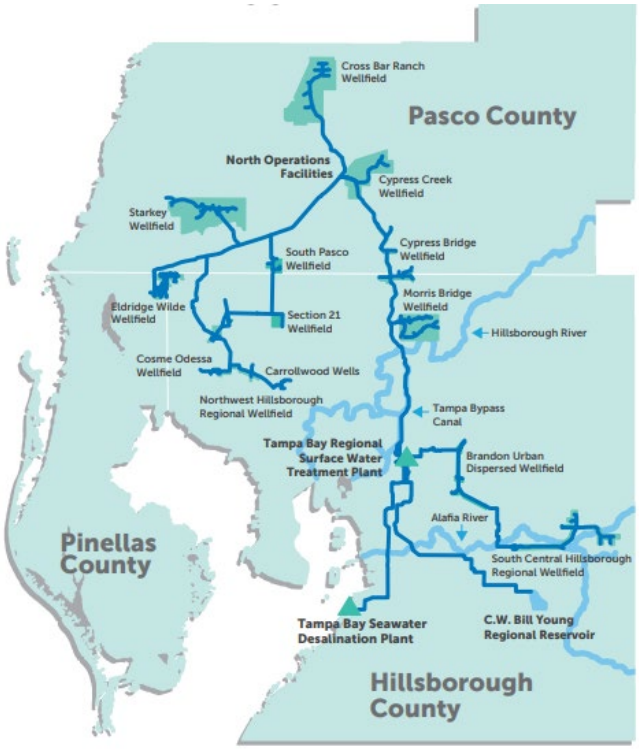

Figure 1: Tampa Bay Water Facilities

As part of the 1997 Legislation, the member governments entered into an Interlocal Agreement and a Master Water Supply Contract in 1998 for a term of 40 years creating Tampa Bay Water. Pursuant to the Amended and Restated Interlocal Agreement and Master Water Supply Contract, the Agency is required to meet the Quality Water needs of the member governments and to charge a uniform per-gallon wholesale rate to member governments for the wholesale supply of drinking water; with one exception for the City of Tampa. The Agency charges a separate rate to the City of Tampa for raw water delivered from the Tampa Bypass Canal to augment the City's reservoir.

Tampa Bay Water is governed by a nine-member board of directors from our six-member governments. The board includes two commissioners from each member county and the Mayor or a city-council representative from each member city.

The Agency provides quality drinking water to its six-member governments whose water service areas serve more than 2.6 million residents in the Tampa Bay region. Water sources include groundwater, surface water, and desalinated seawater.

Tampa Bay Water is regulated by the Florida Department of Environmental Protection and the United States Environmental Protection Agency for matters related to drinking water quality and the operation and construction of its facilities. In addition, the Southwest Florida Water Management District (SWFWMD) regulates consumptive uses of water.

Figure 1 shows the location of Tampa Bay Water's major Facilities and **Table 1** provides a list of Tampa Bay Water's major facilities, by water source.

Table 1: Tampa Bay Water's Major Facilities

Facility Type by Water Source	Facility Name
Surface Water	• Alafia River Pump Station • C.W. Bill Young Regional Reservoir • Brandon Booster Station • Reservoir Off Stream Pump Station • South-Central Hillsborough Intertie Transmission Main • South-Central Hillsborough Booster Pump Station • Tampa Bay Regional Surface Water Treatment Plant • Tampa Bypass Canal Pump Station
Desalination	• Tampa Bay Seawater Desalination Plant
Groundwater	• Brandon Urban Dispersed Wells and Water Treatment Plants • Carrollwood Wells • Cosme-Odessa Wellfield • Cross Bar Ranch Wellfield • Cypress Bridge Wellfield • Cypress Creek Wellfield and Water Treatment Plant • Eldridge-Wilde Wellfield and Hydrogen Sulfide Treatment Facility • Lake Bridge Water Treatment Plant • Morris Bridge Wellfield and Water Treatment Plant • Northwest Hillsborough Regional Wellfield • Section 21 Wellfield • South Pasco Wellfield and Water Treatment Plant • South-Central Hillsborough Regional Wellfield and Lithia Ozone Treatment Facility • Starkey Wellfield
Other Facilities	The water system also includes booster stations and approximately 100 miles of raw water collection mains and 150 miles of large-diameter potable water transmission mains.

CIP Planning Process

Purpose

Tampa Bay Water's Capital Improvements Program (CIP) is a comprehensive ten-year plan and portfolio of previously approved and newly proposed projects. The CIP is updated annually as the scope, needs and timing for specific projects change. Tampa Bay Water's Board of Directors annually accepts the CIP for implementation by agency staff.

The main objectives of the Capital Improvements Program Plan are:

- To improve Tampa Bay Water's financial stability by identifying capital improvements needs and estimating funding needs including future debt/bonds issuances.
- To maintain and improve Tampa Bay Water's infrastructure through the maintenance, repair, and replacement of existing assets; and
- To identify, evaluate and deliver short- and long-term infrastructure needs/projects to meet the region's future water demands.

Capital Project Definition

Capital projects are those activities that will result in:

1. A capital asset owned by Tampa Bay Water, and/or
2. Major repairs, improvements, renovations, or expansions that extend an existing asset's useful life, and/or
3. A significant change in a facility's functionality or capacity.

Capital assets owned by Tampa Bay Water are recorded in Tampa Bay Water's financial records in accordance with accepted accounting principles and applicable Florida State Statutes.

The Capital Improvements Program also includes capital projects that are:

1. Funded by Tampa Bay Water and/or others, for assets owned and operated by another entity.
2. Constructed by Tampa Bay Water for the benefit of member governments or other government agencies.

If Tampa Bay Water does not retain ownership of the completed project, the cost of the project is accounted as a contribution to the respective entity.

Identifying Projects

Projects in the Capital Improvements Program includes projects regardless of costs. Typical capital projects:

- Change the functionality and/or changes the capacity of an existing asset; and/or
- Are identified in the Agency's Mitigation Phase 1 or the Long-term Master Water Plan; and/or
- Require property acquisition, easements, license agreements, and/or fee purchase; and/or
- Require a Primary Environmental Permit or permit modification as defined in the Amended and Restated Interlocal Agreement such as:
    - National Pollutant Discharge Elimination System Permit (NPDES)
    - Environmental Resource Permit (ERP)
    - Water Use Permit (WUP)

Tampa Bay Water's Capital Improvements Program also includes non-capital projects that may lead to capital projects, including assessments, evaluations, feasibility studies and related program management efforts.

CIP Development

The Fiscal Years (FYs) 2027-2036 CIP Plan is an update to the FYs 2026-2035 CIP Plan accepted by the Board of Directors in May 2025.

Goals

The following goals are used by agency staff to update the Capital Improvements Program Plan:

- Identify and prioritize capital projects through a coordinated departmental effort that integrates planning, project management, engineering, construction delivery strategies, financing requirements, and future operating and maintenance costs.
- Develop a duration-based schedule and budget for each project.
- Develop a funding scenario for each project that identifies a funding source, projected planned expenditures cash flow, and future operating and maintenance costs estimates.

Update Schedule

The CIP Program Manager has the responsibility of managing the annual update of Tampa Bay Water's CIP Plan. The CIP update process runs from June through May as shown below.

Figure 2: CIP Update Timeline

Capital Projects Evaluation Criteria & Process Framework

Tampa Bay Water utilizes a Multi-Attribute Utility Analysis (MUA) to determine a benefit score for each capital project. The benefit scores allows Tampa Bay Water to prioritize projects, allocate funding sources, assign staff, and determine project schedules. The evaluation criteria themselves are evaluated every two to three years by staff and if needed, updated to reflect the Agency's current Strategic Goals. Projects are re-evaluated every year until they reach the bidding or construction phases. The key features of the Evaluation Process are:

- Each criterion is defined and assigned a weight in a scale from zero (0) to one hundred (100).
- Each criterion is assigned a set of performance measures to assess the contribution of a project to meeting the identified criterion.

- Each performance measure is defined and receives a score on a scale from zero (0) to ten (10).
- A Benefit Score using the evaluation criteria and performance measures is calculated for each project.

The following equation is used to calculate the Benefit Score of each capital project.

$$\textbf{\textit{Benefit Score}} = \frac{10}{Total\ CW} \times \sum [CW \times PM]$$

Where:

CW= Criterion Weights, **PM**= Performance Measure Score, **Total CW**= Total of Criterion Weights

The following sections and **Tables 2-8** provide criteria attributes and their Performance Measures.

Table 2: Evaluation Criteria Weights

Evaluation Criteria	Weight
Compliance	100
Level of Service	82
Health & Safety	82
Costs & Efficiencies	61
Environmental Enhancement	32

Compliance

Attributes of Compliance include regulatory compliance/permits and contractual obligations. Compliance obligations include permit or regulatory agency requirements (e.g., consent order, administrative order, etc.) Contractual obligations include legal settlements; property agreements; Memoranda of Understanding (MOU); Joint Project Agreement (JPA); and agency's governance documents (Master Water Supply Contract & Reinstated and Amended Interlocal Agreement).

Table 3: Compliance Performance Measures

Performance Measure	Score
Project does not contribute to compliance.	0
Project provides a minor level of support for compliance. *Will address obvious short-term or acute impacts.*	3
Project provides a moderate level of support for compliance. *Will reduce obvious short-term acute or chronic impacts.*	5
Project provides a significant level of support and improves compliance. *Will reduce short-term and addresses some chronic long-term impacts.*	7
Project is required for immediate known compliance issues. *Will reduce major factor(s) related to chronic long-term impacts.*	10

Level of Service

Attributes of Level of Service include water quantity, water pressure, and water quality enhancement, raw water vs. finished water system (system priority/criticality), time without service, number of complaints, and public image.

Table 4: Level of Service Performance Measures

Performance Measure	Score
Project does not address customer level of service.	0
Project maintains customer level of service on a small scale. *Addresses less than 10% of system demands. Meeting Demand less than 10 MGD.*	3
Project maintains customer level of service on a sub-regional scale. *Addresses 10 to 25% of system demands. Meeting Demand equal or greater than 10 MGD to less than 20 MGD.*	5
Project maintains customer level of service on a system-wide scale. *Addresses greater than approximately 25% of system demands. Meeting Demand equal or greater than 20 MGD to less than 40 MGD.*	7
Project improves or increases customer level of service on a system-wide scale. *Addresses greater than approximately 50% of system demands. Meeting Demand equal or greater than 40 MGD.*	10

Health & Safety

Attributes of Health & Safety include safety of the public and agency employees (OSHA equivalent) and physical and cyber security.

Table 5: Health & Safety Performance Measures

Performance Measure	Score
Project does not address safety.	0
Project provides a minor level of reduction in risks to public or employee safety.	3
Project provides a moderate reduction in risks to public or employee safety, including possible lost time accident potential.	5
Project provides a significant reduction in risks to public or employee safety, including lost time accident potential.	7
Project addresses an immediate known risk to public or employee safety for lost time potential.	10

Cost & Efficiencies

Attributes of Cost and Efficiencies include operations and maintenance (O&M) savings potential (staff time, money), O&M flexibility, and coordination with other internal projects.

Table 6: Cost & Efficiencies Performance Measures

Performance Measure	Score
Project causes an increase in net O&M costs.	0
Project has a neutral effect on net O&M costs.	3
Project provides a moderate reduction in net O&M costs OR creates opportunities for O&M efficiency/performance. *Reduction/Opportunity benefit less than 10%.*	5
Project provides a moderate reduction in net O&M costs AND creates opportunities for O&M efficiency/performance. *Reduction/Opportunity benefit less than 10%.*	7
Project provides a significant reduction in net O&M costs OR creates opportunities for O&M efficiency/performance. *Reduction/Opportunity benefit greater than 10%.*	10

Environmental Enhancement

Attributes of Environmental Enhancements include going above and beyond regulatory requirements, source water protection, minimizing carbon footprint, achieving energy efficiency, and includes a renewable energy component.

Table 7: Environmental Enhancement Performance Measures

Performance Measure	Score
Project does not provide environmental enhancement.	0
Project makes a minor contribution towards environmental enhancements.	3
Project makes a moderate contribution towards environmental enhancements.	5
Project makes a significant contribution towards environmental enhancements.	7
Project makes a significant contribution towards environmental enhancements beyond anticipated regulations.	10

Capital Projects Sources

Tampa Bay Water's CIP includes projects from various sources, including:

Tampa Bay Water

- Long-Term Master Water Supply Planning
- System Hydraulic and Emergency Scenario Analysis
- Energy Management Program
- Asset Master Plans
- Renewal and Replacement Program
- Property Redress
- Vulnerability Assessment
- Information Technology

Member Governments

- Joint Project Agreements
- Memoranda of Understanding

Regulatory/Compliance Requirements and other Commitments

- The Amended and Restated Interlocal Agreement
- The Master Water Supply Contract
- The Southwest Florida Water Management District (e.g., Phase 1 Mitigation)
- Florida Department of Environmental Protection
- Utility Acquisition(s)
- Utility Conflicts

Capital Projects Project Sources Highlights

Long-Term Master Water Supply Planning

The Amended and Restated Interlocal Agreement (referred to as the Interlocal Agreement) requires the Long-Term Master Water Plan be updated every five years. New water supply projects are developed through the long-term master water supply planning process, which is performed to ensure:

- The public has sufficient water supplies to meet its needs in an environmentally sustainable and cost-effective manner.
- Tampa Bay Water has sufficient water supply options in its Plan to meet the member governments' needs for at least 10 years; and
- Tampa Bay Water meets its unequivocal obligation to meet member governments' needs. It takes over 10 years to plan, permit, design, and build drinking water facilities.

Long-term water supply planning is conducted every five years, evaluating new water supply concepts as needed, and is the pool from which Long-Term Master Water Plan projects are drawn for further evaluation. As part of the planning process, demand projections are annually updated to facilitate new supplies are on-line in a timely manner, but not so far in advance as to unnecessarily burden the cost of water by overbuilding capacity.

The most recent Long-Term Master Water Plan update was approved by the Board in November 2023. Along with the Plan, the Board approved recommendations to pursue further feasibility evaluations on the top seven-ranked potential water supply capital projects including:

- Eastern Pasco Wellfield (with brackish and/or fresh groundwater)
- Consolidated Water Use Permit Increase
- North Pinellas Surface Water Treatment Plant and Reservoir

- Tampa Bay Seawater Desalination Expansion (with either seawater* or brackish groundwater)
- C.W. Bill Young Regional Reservoir Surface Water Treatment Plant
- New South Hillsborough Surface Water Treatment Plant and Reservoir
- South Hillsborough Wellfield *

* This concept was evaluated in 2021 and does not require additional study.

This CIP plan includes a Feasibility Program for the evaluation of new water supply concepts projects to meet water supply needs by 2033 or sooner and includes a Developmental Alternatives Program for the identifications and evaluation of new water supply options that may require sophisticated technologies or require more long-term study.

System Hydraulic and Emergency Scenarios

Tampa Bay Water completes a comprehensive evaluation of its Regional Water Transmission System every 10 years to proactively identify system capacity and reliability improvements needed over a 20-year planning horizon. The system is analyzed to determine the improvements needed for the water transmission system infrastructure (e.g., pipelines and pumping stations) to maintain a reliable water delivery capacity to each Member Government Point of Connection from the Tampa Bay Water system. The evaluation considers both normal operating conditions as well as resiliency of the water delivery system under "emergency" type conditions, such as a planned or unplanned outage of a pipeline or pump station facility. The Agency's first System Hydraulic and Emergency Scenario Analysis Report was completed in 2005 and considered future water demand projections through year 2025, hence known as the "2025 System Hydraulic and Emergency Scenario Analysis Report". The second update of the report was completed in 2015 and considered a 20-year planning horizon through year 2035. The third updated to the report "2045 System Hydraulic and Emergency Scenario Analysis Report" was completed in 2025 and considers a 20-year planning horizon through year 2045.

Energy Management Program

Tampa Bay Water developed an Energy Management Program roadmap with a programmatic approach to improve energy efficiency through the implementation of several individual energy-saving and renewable projects, emerging technologies, and operational changes.

Renewal and Replacement Program

Tampa Bay Water's Renewal and Replacement Program includes a prioritized long-term plan for the renewal, repair, or replacement of assets that will result in sustainable infrastructure. The Program identifies the required projects, and their timing based on a risk-based approach that considers criticality, remaining useful life, and risk.

Phase 1 Mitigation Projects

The Phase 1 Mitigation Plan is an on-going program required by Tampa Bay Water's Consolidated Water Use Permit. Its purpose is to provide long-term mitigation at wetland and lake sites that were impacted by historical groundwater pumpage at the central system wellfields and are predicted to not fully recover after the mandated groundwater pumpage cutback to 90 mgd. The Phase 1 Mitigation Plan currently includes a list of 21 mitigation projects.

Funding Overview

Tampa Bay Water capital projects are funded through one or more funding sources. Funding is determined based on the type of project and funds availability.

Revenue Bonds

Tampa Bay Water's current CIP is funded primarily through the issuance of Revenue Bonds for specific projects. Bond proceeds are placed in a restricted Construction Fund until disbursed for the intended purpose.

Capital Improvements Fund

The Capital Improvements Fund (CIF) is funded by charges collected or other funds received, such as proceeds from the sale of surplus property. The Capital Improvements Fund may be used to fund any Board-approved Capital Project.

Renewal and Replacement Fund

Tampa Bay Water is required to maintain a Renewal and Replacement Fund in an amount equal to five (5) percent of the prior fiscal year's Gross Revenue or such other amount as is certified by the Consulting Engineer in the Renewal and Replacement Fund. Funds used in the current year are collected the following year through the Uniform Rate. These funds are used to fund projects resulting from the Renewal and Replacement Program where major repairs or replacement of specific components are needed to maintain the service level of the water supply, treatment, and/or distribution system.

Energy Program Fund

The Energy Fund Program receives revenue generated from an agreement with Tampa Electric's (TECO) Commercial Demand Response Program provider Enel X. The Program helps manage peak demand to reduce seasonal electricity demand peaks. Tampa Bay Water earns revenue quarterly by agreeing to reduce electricity consumption when TECO calls for a demand response event, i.e., the reduction of energy usage to lower peak demand. Projects funded with this funding source include projects that result in energy savings.

Other Funding Sources

Tampa Bay Water also seeks and obtains available grant funding for its projects from the Southwest Water Management District (SWFWMD), the State of Florida, the U.S. Environmental Protection Agency, and other Federal grant programs, as well as Joint Project Agreements with member governments and other cooperative funding entities.

Uniform Rate Funds

Uniform Rate Funds generally are allocated to project evaluations, assessments, feasibility studies, program management services, and Phase 1 Mitigation projects. These funds are collected through the Uniform Rate.

Released Debt Service Fund

Upon the issuance of the Series 2022 Bonds, the maturity of the agency's total outstanding bonds was extended to Fiscal Year 2053. Therefore, the Debt Service Reserve account requirement changed from the Maximum Annual Debt Service for all outstanding bonds to 125% of the average Annual Debt Service for all outstanding bonds reducing the required balance of the Debt Service Reserve Fund and releasing these reserve funds for funding projects within the Capital Improvement Program.

Funding Overview, Continued

Tampa Bay Water capital projects are funded through one or more funding sources. Funding is determined based on the type of project and funds availability.

PFAS Settlement Fund

In fiscal year 2025, Tampa Bay Water started receiving settlement payments from defendants in the class action lawsuit against several manufacturers and sellers of polyfluoroalkyl substances or "PFAS" chemicals. If Tampa Bay Water is required to implement additional treatment systems to meet the U.S. Environmental Protection Agency's national standards for PFAS in drinking water, under the Safe Drinking Water Act, these funds will be used to fund the PFAS treatment projects in the Capital Improvement Program, or any Board-approved Capital Project.

Grant/Funded Projects

Table 8 identifies projects with current grants and co-funding agreements. The table identifies the grant/co-funding entity, the expected funds to be received, and funds received to date. Tampa Bay Water typically applies for State of Florida Grant Assistance through the General Appropriations Act and these grants received are managed by the Florida Department of Environmental Protection. Also, Tampa Bay Water applies for Federal funding initiatives, the Southwest Water Management District (SWFWMD) Cooperative Funding Initiative (CFI), and the Florida Department of Transportation (FDOT).

Table 8: Grant Funded Projects

Project No.	Project Name	Funding Entity	Grant Maximum Total [1]	Reimbursed through 12/31/2025
01610/01616	South Hillsborough Pipeline (Segments A & B)	SWFWMD[2]	$147,954,000.00	$3,536,729.76
01014	Surface Water Treatment Plant Expansion	State-FDEP	$1,650,000.00	$736,568.24
01014	Surface Water Treatment Plant Expansion	Federal-EPA	$1,016,667.00	$0
06912	Surface Water Treatment Plant SCADA System Upgrade	State-FDEP	$1,000,000	$0
07153	Cross Bar Ranch Wellfield Water Transmission Main – Utility Conflict	State-FDOT	$2,037,225	$0
50016	Eldridge-Wilde WF Pumps & Motors Replacement	State-FDEP	$750,000.00	$735,135.82
50021	Morris Bridge Wellfield Improvements	Federal-EPA	$1,000,000	$0
Totals			**$155,407,892.00**	**$5,008,433.82**

Notes:

1. Grant Maximum Total is the total funds awarded or requested to the funding entity. The total amount to be received could be less depending on the project's actual expenses for the awarded construction contract.
2. Includes Florida Department of Environmental Protection funding received by the SWFWMD.

Projected Capital Improvements Program Expenditures

The updated 10-year CIP includes a total of **89** projects at different phases with total projected future expenditures of **$1,534,394,194**. **Figure 3** summarizes the planned expenditures for each funding source by Fiscal Year. Future expenditures include planned expenditures for projects starting within the 10-year plan.

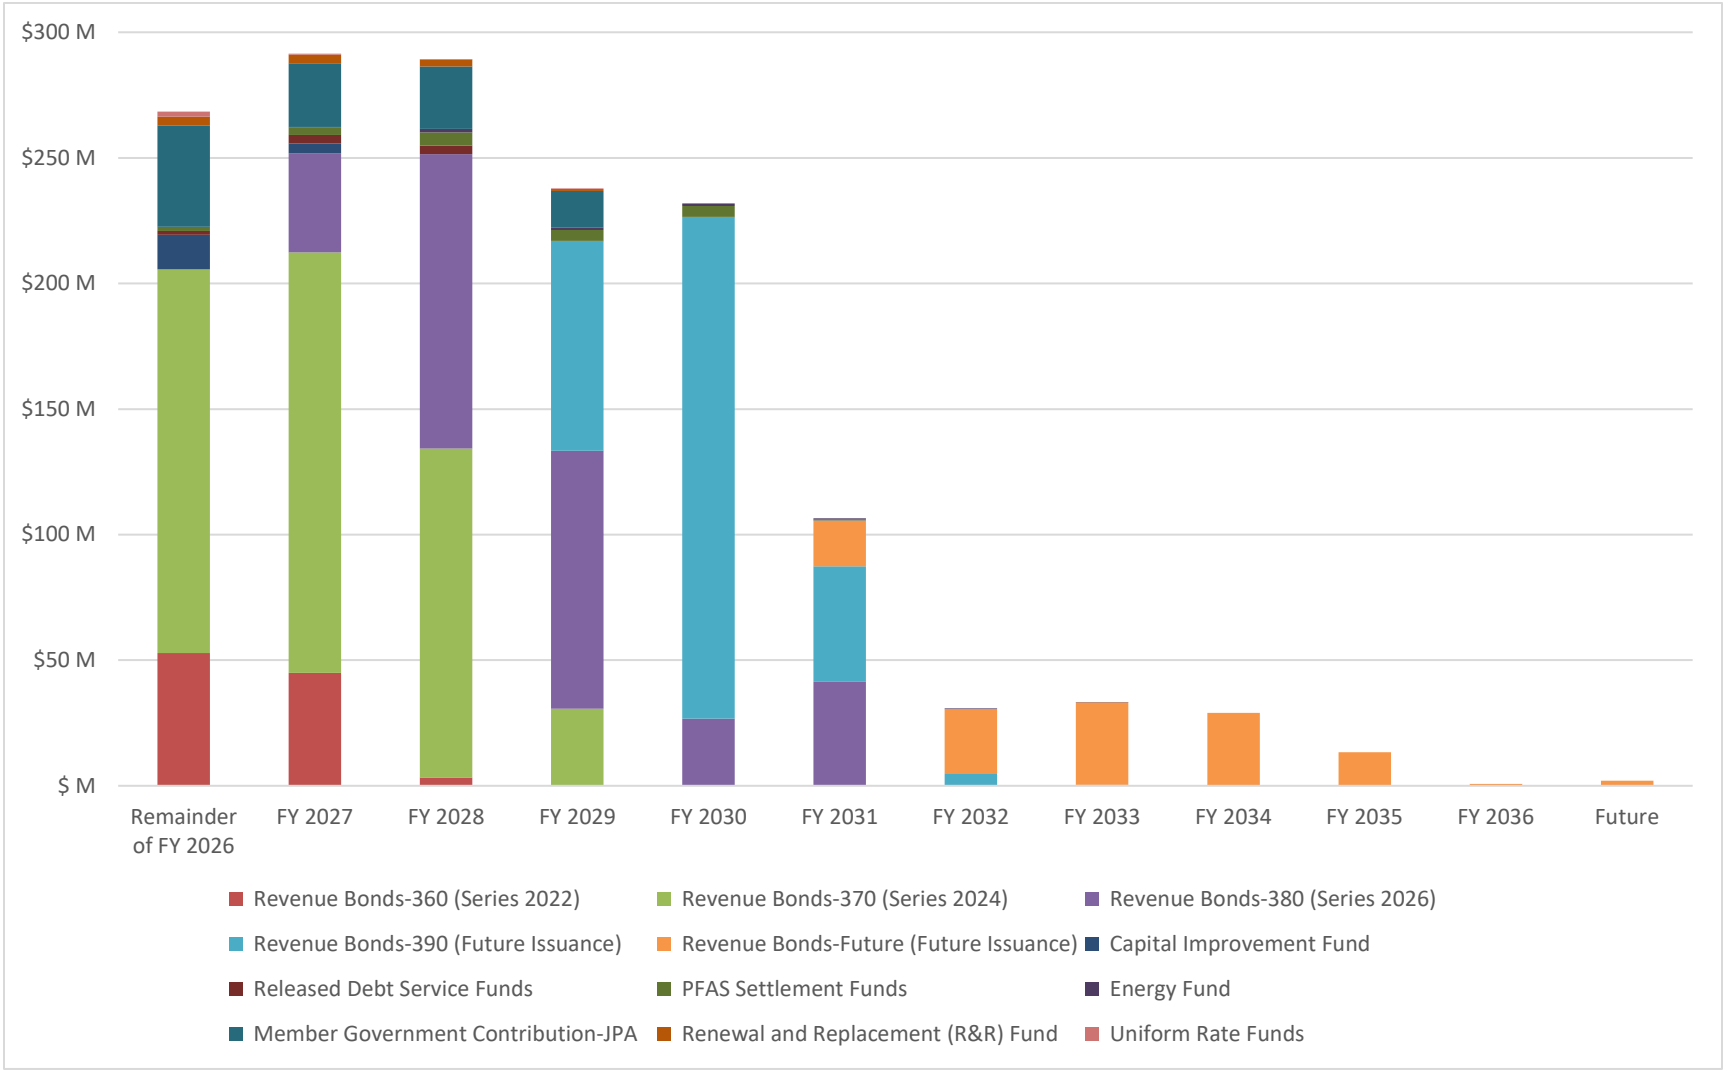

Figure 3: Planned Expenditures

Project Details

A total of 89 projects are included in the updated Capital Improvements Program. This section provides a description of the projects included in the FYs 2027-2036 Capital Improvements Program and includes the projects' general information.

- Project Name and Number
- Project Manager and Construction Manager (if known, as of date of this update and subject to change)
- Project Description and General Location
- General Project Schedule (subject to change)
- Project Budget by Project Phase

Projects are grouped based on their project phase as of March 29, 2026.

- Close-Out: This phase includes projects that have reached substantial completion and are pending final payments or Board approved close-out.
- Execution Construction: This phase includes projects that are actively in construction.
- Execution Study: This phase includes projects that are actively in the study, assessment, or feasibility phase and program management services.
- Bidding: This phase includes projects with on-going procurement or bidding for construction or design-build services.
- Design: This phase includes projects with on-going design and/permitting activities.
- Professional Services Selection: This phase includes projects with on-going selection of engineering or other professional services, either through the available continuing services contracts or through Florida's Consultants Competitive Negotiation Act (CCNA.)
- Planning: This phase includes projects with on-going in-house or outsourced planning/feasibility activities.
- Not Yet Started: Projects that have not started or have been placed on-hold.

Close-Out Phase Projects

Project No. **Project Name**

07033 : Tampa Bay Desalination Facility Intake Connection Improvements-Phase 2

07131 : Cosme Water Treatment Plant Yard Piping Improvements

07033: Tampa Bay Desalination Facility Intake Connection Improvements-Phase 2

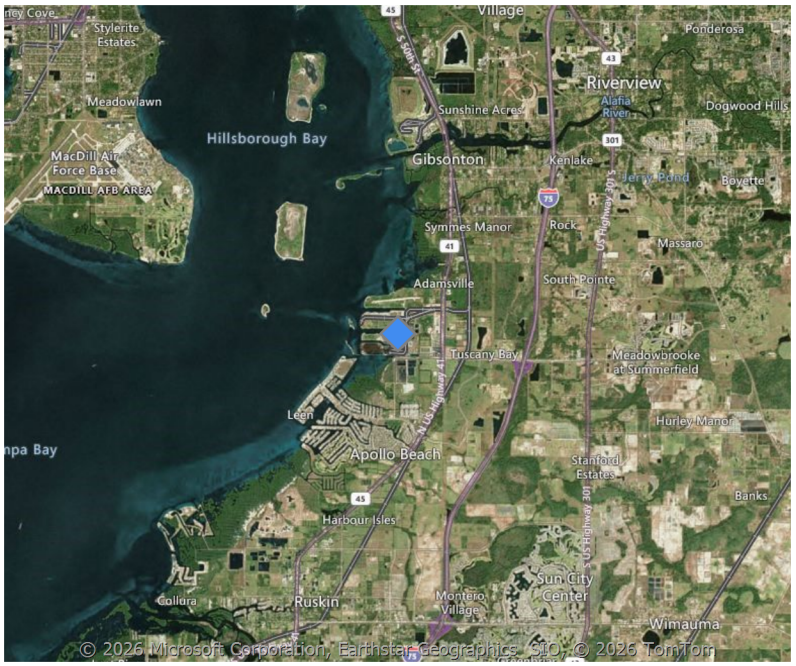
Project Manager	Danielle Keirsey
Construction Manager	Anthony Feria
Status	Close-Out

Project Description

This project is located at the Tampa Bay Seawater Desalination Water Treatment Plant (Desal Plant). This project includes the installation of a new pipeline and pump station at Tampa Electric Company's (TECO's) Big Bend power plant. The new pipeline will connect the Tunnel 1 intake pipeline connection and isolation valve, installed in Phase 1, to the existing Desal Intake Pump Facility.

Project Location

Hillsborough County



Project Schedule

Project Phase	Start Date	End Date
Planning	3/1/2021	9/20/2021

07131: Cosme Water Treatment Plant Yard Piping Improvements

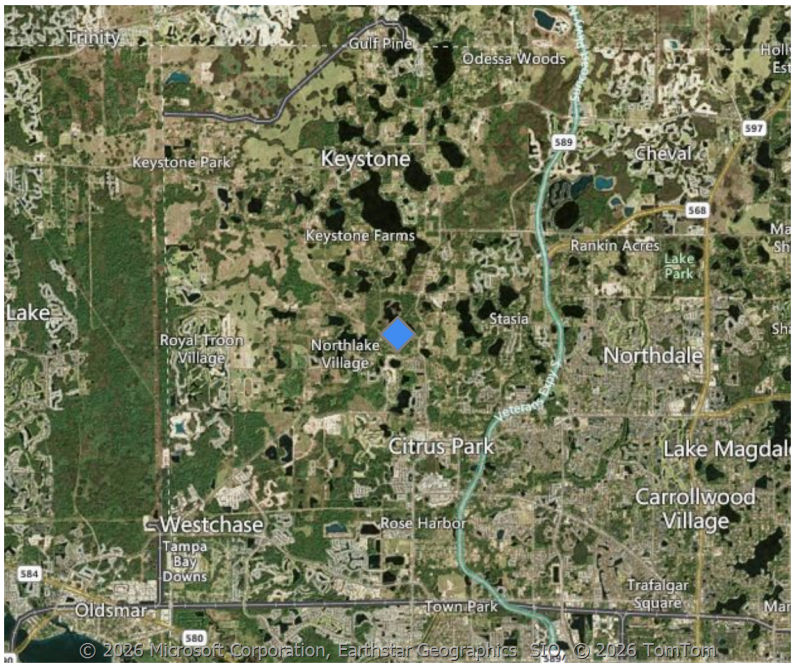
Project Manager	James Smith
Construction Manager	Anthony Feria
Status	Close-Out

Project Description

This project is located at the Cosme Water Treatment Plant (WTP) and includes new yard piping to permanently connect the South Pasco Transmission Main (TM) to the Northwest Hillsborough TM. The connection between the two transmission mains upstream of the Cosme WTP will allow the South Pasco TM to be kept fresh while the Cosme Bypass piping is being utilized. This project is being constructed by an as needed contractor.

Project Location

Hillsborough County



Project Schedule

Project Phase	Start Date	End Date

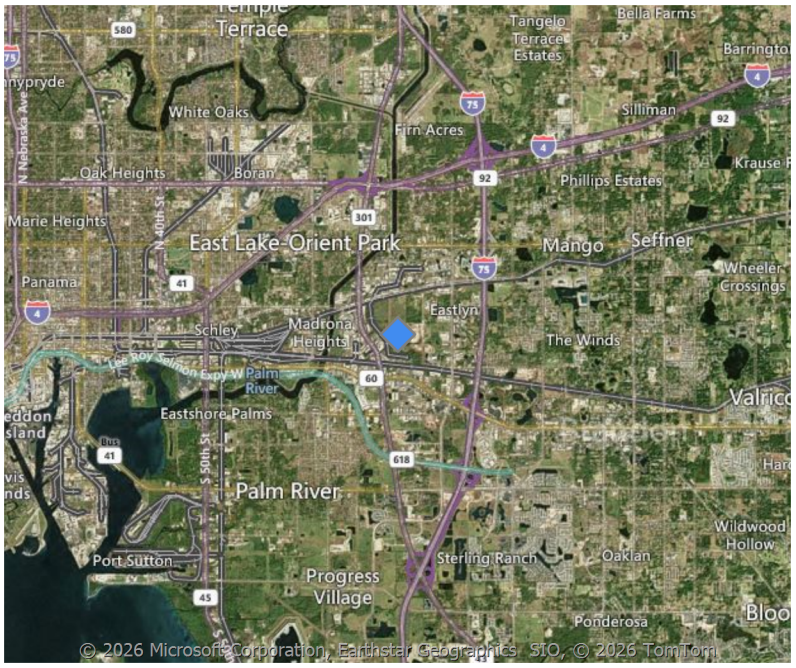
01014: Surface Water Treatment Plant Expansion

Project Manager	Karim Molina-Oyola
Construction Manager	Lucas Parmer
Status	Construction

Project Location

Hillsborough County



Project Description

This project consists of an expansion to the Regional Surface Water Treatment Plant by adding a fifth treatment process train. The fifth treatment train will be identical to the existing Treatment Plant process trains which includes an actiflo ballasted-flocculation process, ozonation, biological Granular Activated Carbon filters, solids handling, chemical feed systems, finished water pumping, and control systems. Additionally, several improvement concepts were also assessed during the 2021 Surface Water Treatment Plant Expansion Feasibility Study to improve reliability and increase sustainability and will be included in the expansion effort.

This project will increase Tampa Bay Water's annual average yield of existing surface water supplies by 10 to 12.5 million gallons per day (mgd) with a 20 or 30 mgd rated treatment capacity train. A decision will be made on the total treatment capacity at preliminary design.

01610: South Hillsborough Pipeline (Segment A)

Project Manager	Soli Rojas
Construction Manager	Soli Rojas
Status	Construction

Project Description

This project includes the construction of a new transmission main “Segment A” of the South Hillsborough Pipeline. Segment A is anticipated to be mostly a 66-inch diameter, 18 -mile-long pipeline from the Tampa Bay Water’s Regional Facilities Site to the existing Lithia Point of Connection at Lithia Water Treatment Facility. The project when completed will be able to provide an additional 65 MGD of new supply to SE Hillsborough County.

Note:
This project is partially co-funded by the Southwest Florida Water Management District (District) through the District’s Cooperative Funding Initiative and additional funding the District receives from the Florida Department of Environmental Protection. Total funding commitment for both Segments (A and B) of the South Hillsborough Pipeline is $147,954,000. The amount to be applied to Segment A is $103,567,800 (70%) of the total agreement.

Project Location

01616: South Hillsborough Pipeline (Segment B)

Project Manager	Soli Rojas
Construction Manager	Soli Rojas
Status	Construction

Project Description

This project includes the construction of a new transmission main “Segment B” of the South Hillsborough Pipeline. Segment B is anticipated to be mostly a 60-inch diameter, 8-mile-long pipeline from an interconnection point along Segment A or at Lithia Water Treatment Facilities site to a new Point of Connection to Hillsborough County at their South County Drinking Water Facility in the Balm-Riverview area. The project when completed will be able to provide an additional 60 MGD of new supply to SE Hillsborough County. Project is a result of the signed Memorandum of Understanding and a Joint Project Agreement with Hillsborough County in 2020. This project will receive co-funding from the SWFWMD's Cooperative Funding Initiative.

50016: Eldridge-Wilde WF Pumps and Motors Replacement

Project Manager	Danielle Keirsey
Construction Manager	Lucas Parmer
Status	Construction

Project Description

This project is located at the Eldridge-Wilde Wellfield and includes: replacement of the pumps, motors, well houses, electrical service, flow measurement and isolation piping at 24 well sites. Access roads and drives will be repaired. 10 existing wells will not be upgraded and will be removed from service per the Wellfield Right-Sizing Analysis completed in September 2016. New pumps and motors will be sized to optimize efficiency for the varying specific capacity at each well. The project includes work in both Hillsborough and Pinellas Counties.

Note: This project will receive up to $750,000 of State funding from the 2019 Legislative Session. The Funding will be managed by the Florida Department of Environmental Protection

50055: Tampa Bay Desalination VFDs Replacement

Project Manager	Indigo Dunn
Construction Manager	Anthony Feria
Status	Construction

Project Description

This project is located at the Tampa Bay Desalination Facility and includes the replacement of the existing Medium and Low Voltage Variable Frequency Drives (VFD). There are a total of twenty one (21) VFDs and three Reduced Voltage Soft Starters (RVSS).

In addition, existing cabling may have to be replaced due to the existing cable lengths not being of sufficient lengths.
The Planning Phase included the repairs and/or replacement of five VFDs that failed. This phase is complete. The remainder of the VFDs included in this project will be replaced in future years as scheduled.

Project Manager	Maribel Medina
Construction Manager	Maribel Medina
Status	Construction

Project Description

This project includes Phase 1 of the evaluation of developmental alternatives such as indirect and direct potable reuse options as recommended in the 2023 Long-term Master Water Plan. Developmental alternatives are water supply sources or options that require more long-term analysis and study. The purpose of Phase 1 is to more comprehensively evaluate the potential role of reclaimed water for beneficial reuse in regional water resource management in parallel to Tampa Bay Water's established Long-term Master Water Plan process.

11022: Feasibility Study for New Groundwater Sources

Project Manager	Danielle Keirsey
Construction Manager	Lucas Parmer
Status	Construction

Project Description

This feasibility study project includes the groundwater source short-listed concepts identified as a part of the 2023 Long-term Master Water Plan (LTMWP) top-ranked option for further study and consideration to meet the region's water needs by 2033. This feasibility study will provide a more detailed technical and economic analysis to determine the yield, water quality, and costs of the project. Additionally, it will also identify the potential roadblocks to determine the viability of the project.
This study will evaluate the following concepts:
-Consolidated Water Use Permit Increase
-Eastern Pasco Wellfield (with brackish and/or fresh groundwater)
-Desalination Plant Expansion (with brackish groundwater)

11023: 2045 System Hydraulic and Emergency Scenario Analysis Report

Project Manager	Eliana Lara
Construction Manager	Eliana Lara
Status	Construction

Project Description

Tampa Bay Water is a regional water supply authority that provides wholesale water for its six Member Governments: Hillsborough, Pasco and Pinellas counties, and the cities of New Port Richey, St. Petersburg and Tampa. Providing a reliable, cost effective and environmentally sustainable water supply requires planning for a range of future growth conditions.

An evaluation of Tampa Bay Water's system performance during a range of pipeline, power, supply, or other facility outage scenarios was performed in 2006 and 2015 (the 2025 and 2035 System Analysis documents) to help prepare for emergencies and determine where improvements can be completed to make the Tampa Bay Water system more reliable. Similar to the 2025 and 2035 analysis, the 2045 System Analysis will include: :
a. Projected Water Demands for Water Year 2045
b. Level of Service Requirements
c. Transmission System Hydraulic Analysis
d. Facility Reliability
e. Standby Power Capacity
f. Commercial Power Availability

Project Description

This feasibility study project includes three of the seven short-listed concepts identified as a part of the 2023 Long-term Master Water Plan (LTMWP) top-ranked options for further study and consideration to meet the region's water needs by 2033. This study will provide a more detailed technical and economic analysis to determine the yield, water quality, and costs of the project. Additionally, it will also identify any potential roadblocks and determine the viability of the project concepts.

This study includes evaluating the following concepts:
-North Pinellas Surface Water Treatment Plant (SWTP) and Reservoir via excess surface water from the Lake Tarpon outfall canal.
-C.W. Bill Young Regional Reservoir Surface Water Treatment Plant via increased Alafia River withdrawals; and
-New South Hillsborough Surface Water Treatment Plant and Reservoir via new surface water sources such as Little Manatee River or Bullfrog Creek.

09108: Cypress Creek Wellfield Surface Water Improvements-Phase 3

Project Manager	Indigo Dunn
Construction Manager	Anthony Feria
Status	Bidding

Project Description

Wetland enhancements were previously constructed within the Cypress Creek Wellfield in 2007 and 2015. The original project aimed to change surface water drainage patters on the CCWF to rehydrate wetlands which were affected by ground water withdrawal, and to help reduce nuisance flooding in two nearby residential developments. Additional improvements were made in 2015 to further enhance hydrology in several wetlands. Monitoring of wetlands has shown that these enhancements have been successful. In 2020, a feasibility was completed which evaluated and recommended several additional improvements to further enhance target wetlands. This project includes the design, permitting and post design services needed to finalize the design, obtain necessary permits, assist Tampa Bay Water with construction contractor selection, and provide additional assistance throughout the construction process.

50073: Cypress Creek Water Treatment Plant 72-Inch Valve

Project Manager	Danielle Keirsey
Construction Manager	Lucas Parmer
Status	Bidding

Project Description

This project is located at the north side of the Cypress Creek Water Treatment Plant (CCWTP) in Pasco County, Fl. The project includes the replacement of a 72-inch butterfly valve located in the 72-in steel transmission main on the post side of the CCWTP, the relocation of the chemical injection points and post node analyzer building. A temporary bypass will be required during the repairs.

01617: Regional Facilities Site-Alkalinity Adjustment Facility

Project Manager	Soli Rojas
Construction Manager	Soli Rojas
Status	Design

Project Description

The project involves designing and constructing a new Alkalinity Adjustment Facility (AAF) at the Regional Facilities Site (RFS) to treat up to 65 million gallons per day (mgd) for water conveyed through the South Hillsborough County Pipeline (SHP). The scope includes installing caustic and carbon dioxide feed systems, upgrading the sodium hypochlorite system, and adding chemical injection points with bypass piping for the SHP. The design also incorporates electrical and control systems for chemical feed operations, a new generator, and an analyzer building to ensure reliability and monitoring.

06912: Surface Water Treatment Plant SCADA System Upgrade

Project Manager	Karim Molina-Oyola
Construction Manager	Richard Menzies
Status	Design

Project Description

This project replaces the existing Supervisory Control and Data Acquisition (SCADA) system hardware and software at the Regional Surface Water Treatment Plant (SWTP). The SCADA upgrade will include the replacement of Programmable Logic Controllers (PLCs) in use throughout the facility and replacement and upgrade of the SCADA servers and other equipment and instrumentation. The project will also update the human-machine interface (HMI) project to a current version of AVEVA System Platform.

06914: Cosme Collection Main - Utility Conflict

Project Manager	Indigo Dunn
Construction Manager	Lucas Parmer
Status	Design

Project Description

The Cosme 24-inch Collection Main and the fiber optic line, between Wells 8 and 10, are in conflict with a project area on North Mobley Road in Hillsborough County that is identified in a pedestrian safety and mobility enhancement project for the county. Roughly 300 feet of collection main and fiber optic line are currently located in an area where the existing roadway is to be expanded. This project will re-route a section of the Cosme wellfield collection main and fiber optic line to alleviate any conflict during construction for the pedestrian safety and mobility enhancement project to be completed by the county. This will eliminate the current conflict.

08304: Hillsborough County-Lithia WTP Yard Piping

Project Manager	Soli Rojas
Construction Manager	Soli Rojas
Status	Design

Project Description

This project is the result of the Amended and Restated Joint Project Agreement between Hillsborough County and Tampa Bay Water executed in February 2025. Tampa Bay Water will manage the design and construction of county requested infrastructure including a tee connection along Segment A of the South Hillsborough Pipeline (Project No. 01616) and yard piping improvements at the Hillsborough County Lithia Water Treatment Plant.

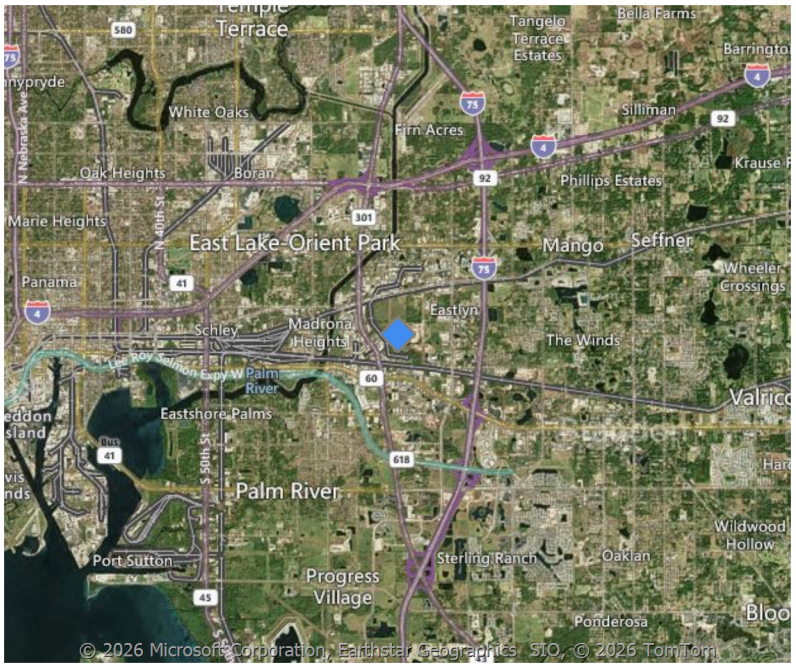
03511: Surface Water Treatment Plant Water Quality Pilot Study

Project Manager	Karim Molina-Oyola
Construction Manager	
Status	Professional Services Selection

Project Location

Other



Project Description

The project is located at the Surface Water Treatment Plant (SWTP) (Identified as criticality level 1) and involves the design of a new pilot plant and the immediate need to evaluate additional technologies for per- and polyfluoroalkyl (PFAS) compliance. Technologies that could reduce Total Organic Carbon (TOC) in the supply sources, or potential optimize performance of PFAS removal technologies may be studied as a secondary benefit. The technologies identified for this study include Ion Exchange (IX) and Granular Activated Carbon (GAC) for PFAS reduction downstream of the biological filters and the potential of Suspended Ion Exchange (SIX) for Total Organic Carbon (TOC) reduction at the headworks of the treatment processes.

01605: Morris Bridge Underground Powerline

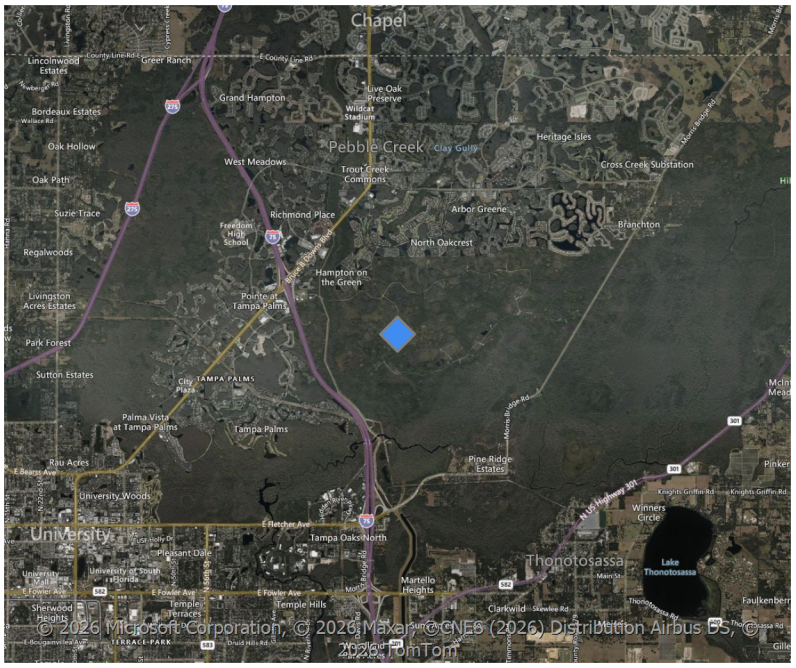
Project Manager	
Construction Manager	
Status	Not Yet Started

Project Description

This project will replace approximately 15,000 linear feet of damage distribution cabling at the Morris Bridge Wellfield. The project will also replace the switchgear, SCADA, and medium voltage switch.

Project Location

Hillsborough County



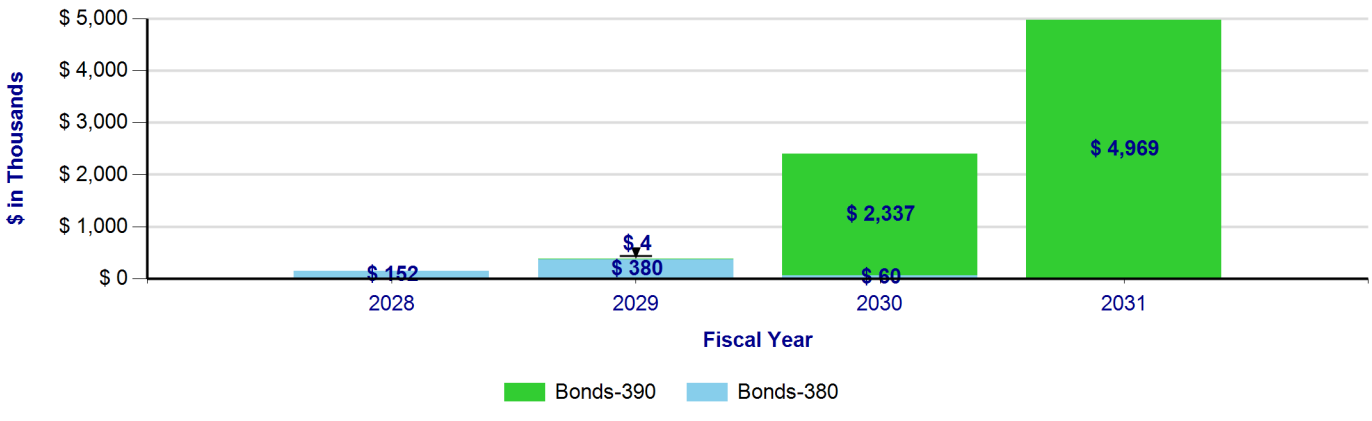
Project Schedule

Project Phase	Start Date	End Date
Planning	8/2/2027	11/5/2027
Professional Services Selection	11/8/2027	5/29/2028
Design	5/29/2028	7/19/2029
Bidding	7/20/2029	3/4/2030
Construction	3/5/2030	5/13/2031
Close-Out	5/14/2031	9/15/2031

Project Budget by Project Phase

Project Phase	Amount
Design	$504,000
Bidding	$101,000
Construction	$6,138,000
Close-Out	$1,159,000
Total Budget	$7,902,000

Expenditure Plan by Fiscal Year and Funding Source

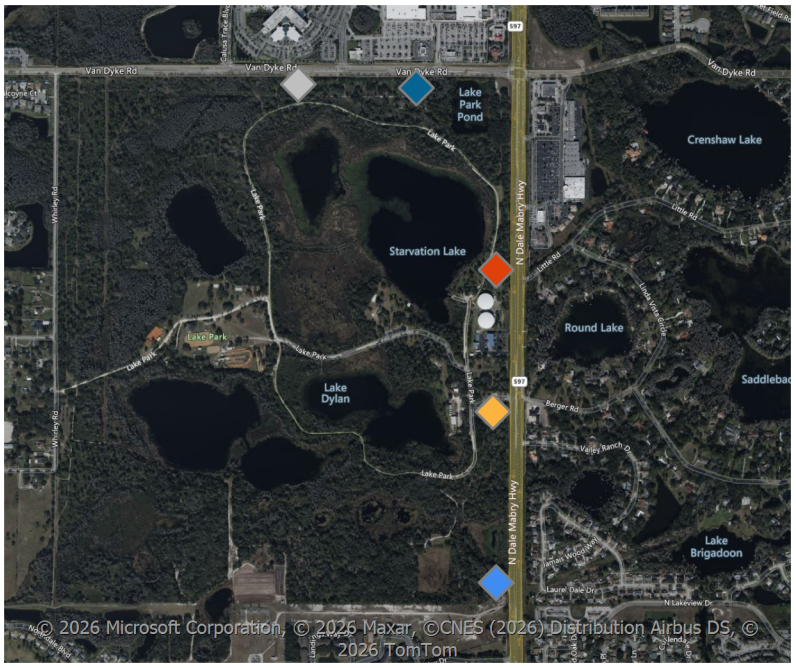


01606: Section 21 Wellfield Pumps and Motors

Project Manager	
Construction Manager	
Status	Not Yet Started

Project Location

Hillsborough County



Project Description

This project will replace pumps and motors of five wells within the Section 21 wellfield, in Lake Park. The pumps were originally built to pump to the Cosme Water Treatment Plant, but now pump to Lake Park. This reduces the required discharge head on the pumps, so motors will be downsized to account for these new operating conditions. The improvements will strengthen system reliability while reducing energy consumption and maintenance.

Project Schedule

Project Phase	Start Date	End Date
Planning	8/2/2027	11/5/2027
Professional Services Selection	11/8/2027	3/6/2028

01608: Tampa Bay Desalination Plant Concentrate Disposal

Project Manager	
Construction Manager	
Status	Not Yet Started

Project Description

The project is located at Tampa Bay Seawater Desalination Plant located approximately 500 yds north of the Tampa Electric Company (TECO) Big Bend Power Station and involves construction of an alternative or supplemental reverse osmosis (RO) concentrate disposal system, including consideration of a Deep Injection Well (DIW) system or the addition of a new concentrate discharge pipeline and outlet into the bay (Ocean Outfall Diffuser/Bay Discharge System).

Note: This project is a placeholder.

07005: South Pasco Water Quality Treatment, Storage and Pumping, Improvements

Project Manager	Karim Molina-Oyola
Construction Manager	Lucas Parmer
Status	Not Yet Started

Project Description

This project at the South Pasco Wellfield and Water Treatment Plant includes the design, permitting, and construction of facility upgrades. Improvements include Renewal and Replacement (R&R) of wellfield pumps, motors, chemical storage and feed systems, piping, and instrumentation, as well as enhancements to existing treatment processes. Process upgrades include a new finished water storage tank with blending capability, new high□service pumps for normal and emergency operations, and an energy recovery device. The project also proposes Fixed Bed Ion Exchange (FBIX) pressure filters and supporting systems to reduce Total Organic Carbon (TOC) levels, pending Board approval.

Expenditure Plan by Fiscal Year and Funding Source

52003: Lake Bridge Pumps and Motors

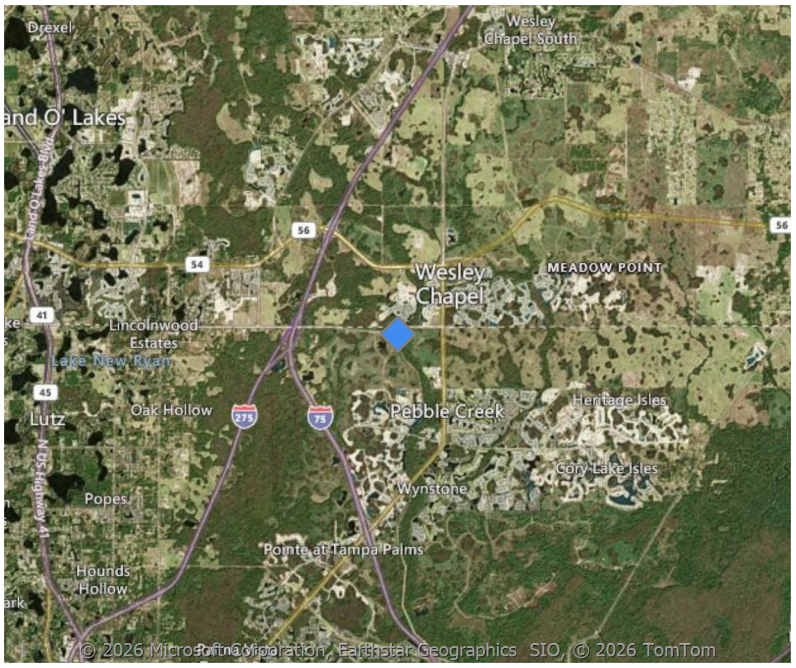
Project Manager	
Construction Manager	
Status	Not Yet Started

Project Description

This project is located at the Lake Bridge WTP in Hillsborough County and entails reconditioning the pump and motor of two 250 HP axial split case centrifugal pumps. The VFDs will also be evaluated for refurbishment or replacement if needed. Services to include retrofitting the pumps packing seals to mechanical seals. One pump will be refurbished per year and preferably during the rainy season.

Project Location

Hillsborough County



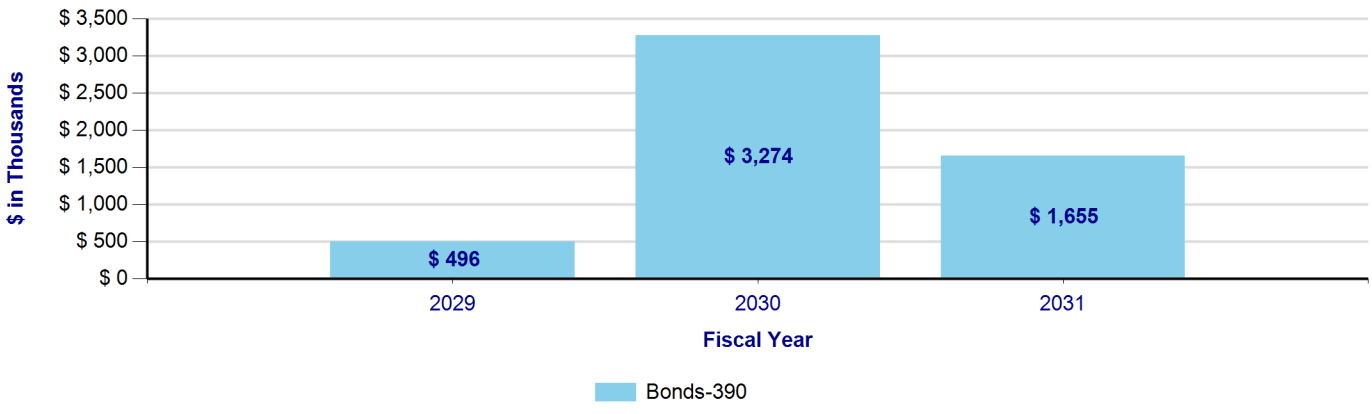
Project Schedule

Project Phase	Start Date	End Date
Planning	6/1/2028	5/19/2031
Professional Services Selection	9/7/2028	1/1/2029
Design	1/2/2029	6/19/2029
Bidding	4/11/2029	11/12/2029
Construction	10/17/2029	3/5/2031
Close-Out	3/6/2031	5/19/2031

Project Budget by Project Phase

Project Phase	Amount
Design	$496,000
Construction	$4,929,000
Total Budget	$5,425,000

Expenditure Plan by Fiscal Year and Funding Source



Proposed Fiscal Year 2027 Operating Budget and Capital Improvements Program

Budget Workshop
April 20, 2026

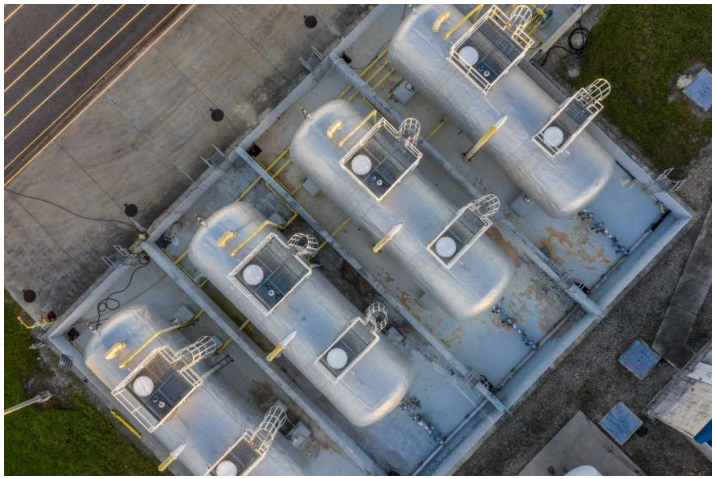
Christina Sackett, MBA
Chief Financial Officer
Tampa Bay Water

Overarching Responsibilities

- Reliable water supply
- Environmental stewardship
- Uniform rate

Uniform Rate Process

- Fixed Costs
  - Previous fiscal year percent of delivered water
  - 1/12 billed monthly
- Variable Costs
  - Prior month consumption
  - Variable rate
    - Piece of the Uniform Rate
- Annual True-Up
  - End of fiscal year



Budget Key Factors

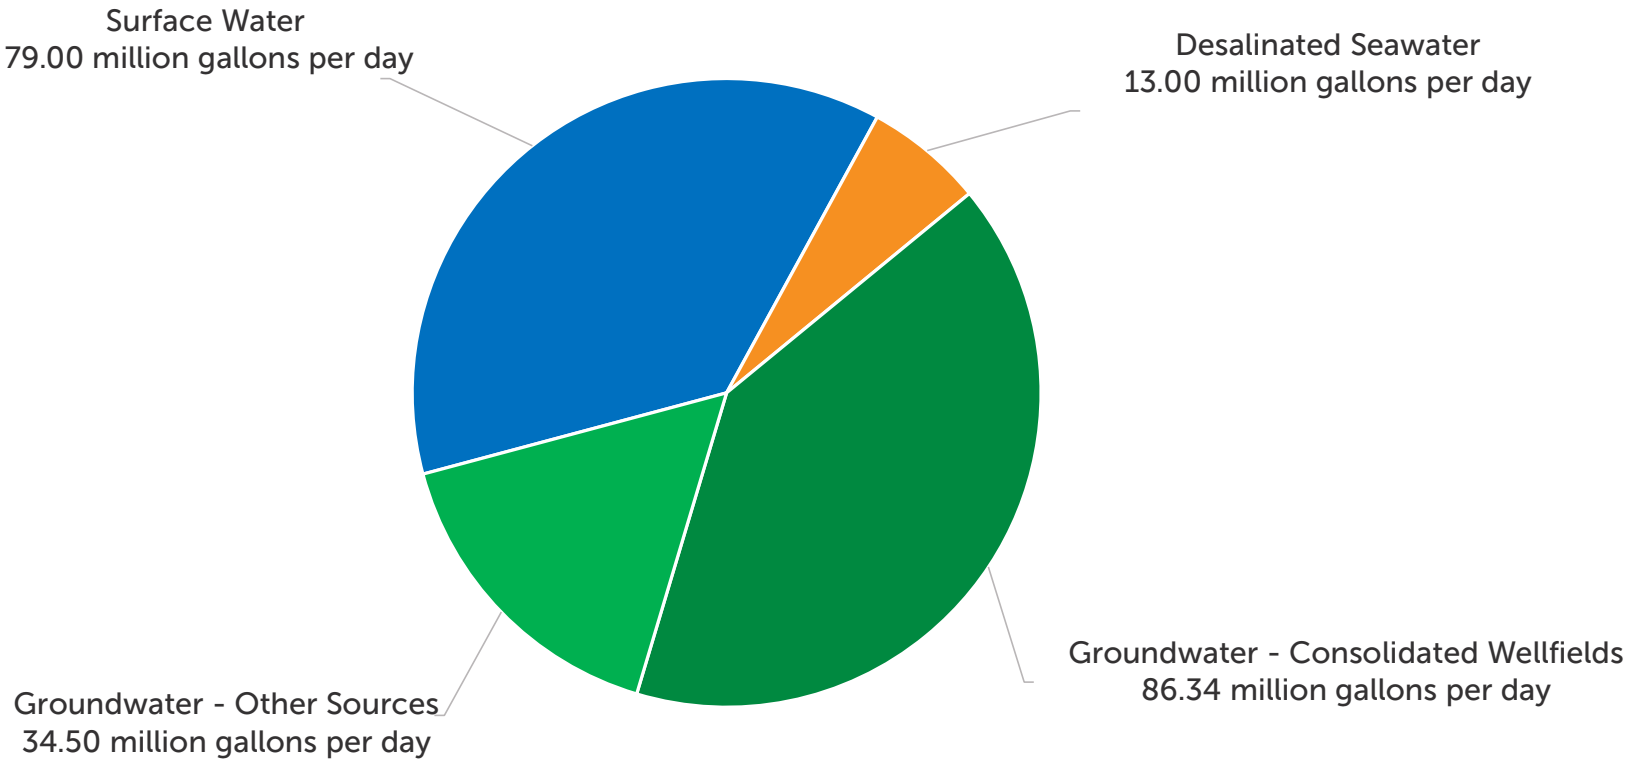
- Forecasted water demand
- Agency Strategic Plan
- Inflation impact on costs
- Reserve funds

- Large capital projects
- Future funding needs
- Net revenue required impact
- Future budgets

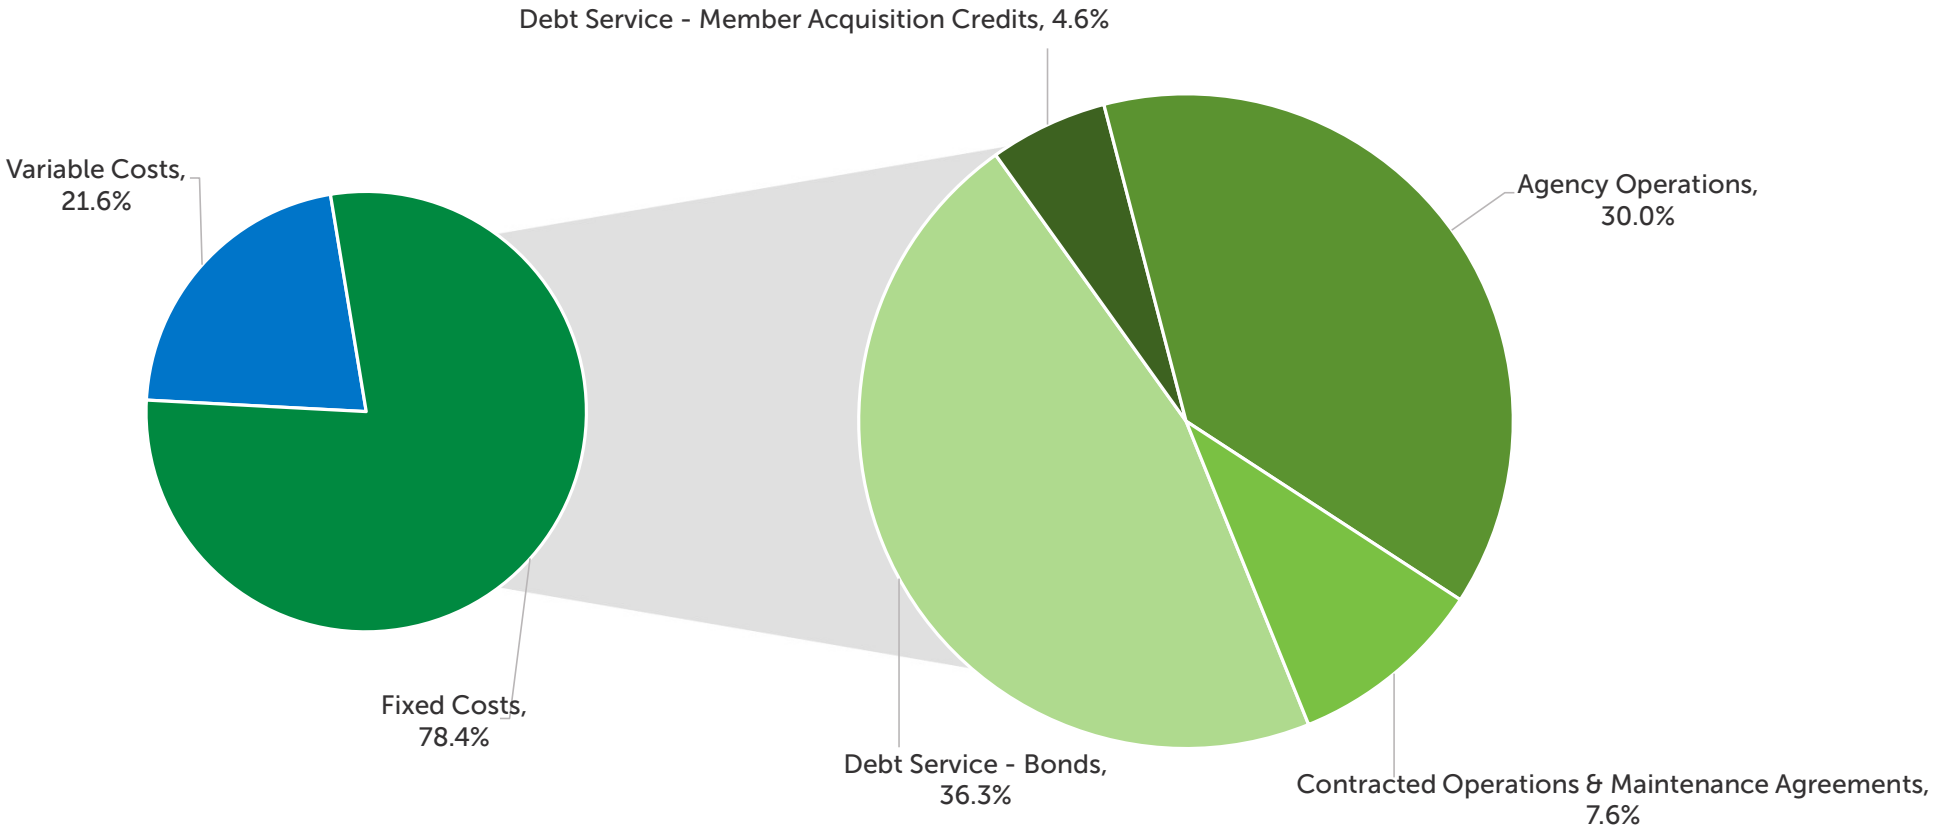
Proposed Uniform Rate

- Uniform Rate - $2.6593/1,000 gallons
  - Up $0.0205 (0.78%)
  - Variable Rate - $0.6217/1,000 gallons
    - $0.0088 increase
- Use of Reserves
  - Rate Stabilization - $4 million
  - Lowered uniform rate increase by $0.05
- Funding Pay-as-you-go Funds

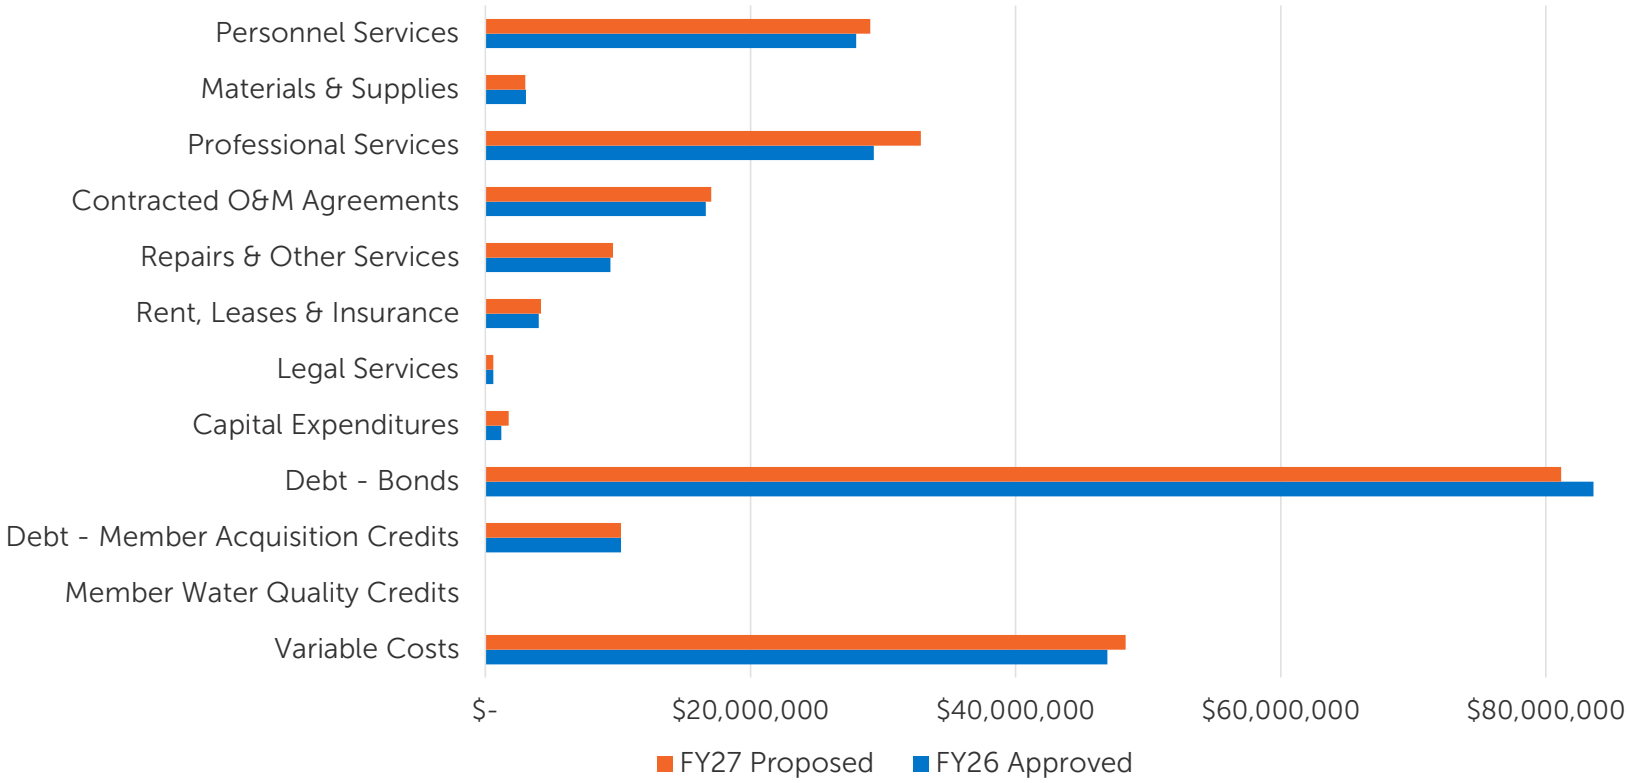
Budgeted Supplies – 212.84 million gallons per day



Total Costs Components



Fiscal Year 2027 Total Costs - $223.8 Million



Category Variances

Variable Costs — $1.4 million ↑

- Demand
- Water treatment chemicals

Fixed Costs Variances

- Personnel Services — $1.1 million ↑
  - Employee Insurance
  - Cost of Living Adjustment – 3%
  - Performance-based Merit – up to 3%
  - Overlapping employment strategy
  - 4 new positions
    - 1 IT Network Engineer
    - 1 Mechanical Technician I
    - 2 Mechanical Technician Trainees

Category Variances

Fixed Costs Variances

– Professional Services	$3.1 million
– Capital Expenditures	$565 thousand
– Operations & Maintenance Agreements	$417 thousand
– Repairs & Other Services	$199 thousand
– Rent, Leases & Insurance	$173 thousand
– Legal Services	No change
– Materials & Supplies	$65 thousand

Annual Bonds Debt Service – Decreased

Debt Service Refundings

- Series 2024B/C Refunding Bonds
- Series 2025 Refunding Bonds
  - Annual debt service savings
  - Reduced volatility
  - Financial stability

Total Costs to Water Sales

Total Costs	$223,809,140
Adjustments	
Estimated Unencumbered Funds From Prior Year	($6,059,335)
Interest Income	(5,415,737)
Revenues From Tampa Bypass Canal	(1,130,840)
Surcharges	($75,000)
Grant Revenue	($540,000)
Total Adjustments	($13,220,912)
Use of Reserves	
Rate Stabilization Account Transfer	($4,000,000)
Net Revenue Required (Water Sales)	$206,588,228

Estimated Net Member Costs - $197,514,512

Warren Hogg, Chief Science Officer

DRAFT

Chairman Cohen called the meeting to order at 9:30 a.m. The meeting was properly noticed in the Florida Administrative Register and a quorum was present.

PUBLIC COMMENT - (3 Minutes per speaker)

Chairman Cohen opened the Regular Board meeting to public comment. The following speaker made public comment to the Board of Directors:

David Ballard Geddis, Jr

Public comment was duly recorded and is filed in the permanent records of Tampa Bay Water.

AGENDA

A) CONSENT ITEMS

A.1 January 26, 2026 - Regular Meeting - Draft Agenda Minutes
Approve Minutes.

A.2 Tampa Bay Water Performance Dashboard Update
Receive Report.

A.3 Regional Water Supplies, Member Demands and Environmental Conditions
Receive Report.

A.4 Tampa Bay Water Wise Program Update
Receive Status Report.

A.5 South Hillsborough County Program Update
Receive Status Report.

A.6 Long-term Master Water Plan Feasibility Program and Developmental Alternatives Study Status Report
Receive Status Report.

A.7 Capital Improvements Program Executive Quarterly Report
Receive Fiscal Year 2026 First Quarter Capital Improvements Program Executive Report.

A.8 Capital Improvement Program - Task Order Authorization
Approve Task Orders.

A.9 Capital Improvement Program - Projects Closeout
Approve Project Closeout.

A.10 Surface Water Treatment Plant Expansion, Project No. 01014, Project Status Report
Receive Status Report.

A.11 South Hillsborough Pipeline, Projects 01610 and 01616 - Property Acquisition Status Report

Receive Status Report.

A.12 Land Exchange Agreement with Hillsborough County for property located along Regional Water Lane and Easements on the South Hillsborough Pipeline-Segment A, Project No. 01610
(1) Declare surplus a 2.6 acre vacant parcel located south of Columbus Drive and west of Regional Water Lane; (2) Approve the Land Exchange Agreement with Hillsborough County for a parcel located south of Columbus Drive and west of Regional Water Lane and nine (9) easements on the South Hillsborough Pipeline project; (3) Delegate authority to the General Manager to execute all parcels exchange to complete the transaction and actions required to comply with the terms of said agreements; and (4) allocate up to $20,000 toward due diligence, transaction and closing costs.

A.13 Real Property Donation Agreement with Pinellas County and Transfer of Augmentation Water Use Permit No. 20000345.006 from Pinellas County
Approve the Donation Agreement and delegate authority to the General Manager to execute any other documents needed to close this and related transactions, including acceptance of the Water Use Permit transfer which will occur after the closing of the parcel donation transaction.

A.14 Lease for Multi-Functional Copying and Printing Equipment
Approve 60-month lease with Ricoh USA, Inc.

A.15 Third Amendment to Contract No. 2022-008 for As-Needed Hydrogeological Services with Wise Consulting Group, LLC
Approve the Third Amendment to Contract No. 2022-008 with Wise Consulting Group, LLC to increase the not-to-exceed contract amount by $50,000.

A.16 As Needed Tree Trimming and Fence Line Maintenance Services, Award Contract Nos. 2026026, 2026027, 2026028, and 2026029 to the lowest, responsive, responsible bidders
Approve Contracts to the lowest responsive, responsible bidders, Paff Services LLC (2026026), Rick Richards, Inc (2026027), Wright Tree Service, Inc. (2026028), and Tucker Enterprise Services, Inc. (2026029), in an amount not to exceed annually budgeted funds.

A.17 Second Amendment to Liquid Oxygen Supply Services, Contract No. 2025-017 with Matheson Tri-Gas, Inc.
Approve Second Amendment to Contract No. 2025-017 with Matheson Tri-Gas, Inc. to increase the unit price.

A.18 Second Amendment to Contract No. 2022-029 for As-Needed Ecological Services with Verdantas LLC, formerly Flatwoods Consulting Group, Inc.
Approve the Second Amendment to Contract No. 2022-029 with Verdantas LLC to reflect a change in corporate ownership and exercise the second and final one-year contract renewal option.

A.19 Third Amendment to As-Needed Land Management Services Contract No. 2022-043 with Quest Ecology, Inc.

Approve the Third Amendment to Contract No. 2022-043 with Quest Ecology, Inc. to incorporate a revised rate schedule for the final contract year.

A.20 Local Road Resurfacing Contract No. 2026703 with Ajax Paving Industries of Florida, LLC
Approve Contract No. 2026703 with Ajax Paving Industries of Florida, LLC in a not to exceed value of $800,000.

A.21 Fence and Gate Installation and Repair Services Contract No. 2026038 with Cardinal Fence LLC
Approve Contract No. 2026038 to the lowest responsive, responsible bidder, Cardinal Fence LLC, in an amount not to exceed annually budgeted funds.

A.22 Contract Renewals
Approve contract renewals.

A.23 Fiscal Year 2025 Year-end Reporting of Encumbered and Unencumbered Funds Transfers
Receive Report.

A.24 Fiscal Year 2026 Summary Category Level Budget Transfer
Approve summary category level budget transfer.

A.25 Approval of Board Policies for Domestic Well Mitigation and the Ranch Operators Assistance Program
Approve Policies.

Motion: Mayor Davis moved to Approve Consent Items. Vice Chair Hanewicz seconded the motion.

Vote: The motion CARRIED by a vote of 8 - 0.

REGULAR AGENDA

B) GENERAL MANAGER & GENERAL COUNSEL

B.1 General Manager's Report
Receive Report.

Chuck Carden, General Manager, provided an update on monthly water supply, regional drought conditions, the Surface Water Treatment Plant Expansion groundbreaking and the 3-year pay and class study. He also presented information on upcoming public events including industry open houses and local outreach and education efforts with community partners and member governments.

A full copy of the report can be found in the agency's Records Department.

No Board action was required on this item.

B.2 Legislative and Grant Funding Program Update
Receive Report.

Brant Bartlett, Government Affairs Program Manager, presented this item. Members of the agency legislative team including Pete Dunbar, legislative counsel from Jones Walker, Matthew Blair, state and grant funding consultant from Corcoran Partners, and Mary Beth Nassif, federal consultant from Jones Walker, provided updates on the current Florida and federal legislative sessions, legislation with implications to the agency, and 2026 appropriation requests.

The team fielded questions from board members regarding legislation on municipalities offering services outside their boundaries and property tax reform.

No Board action was required on this item.

B.3 2025 Performance Audit and Management Study Final Report
Receive Report.

Caitlin Humrickhouse and Isaac Bales from Baker Tilly Advisory Group presented an overview of the 2025 Performance Audit and Management Study Final Report and discussed future recommendations for the agency, including the areas of continuity and succession planning, shared service agreements, asset management and technology integration.

The consultants fielded questions from board members regarding technology, cost-savings, artificial intelligence, and knowledge retention. Board members also requested information on next steps and implementation and reporting on progress of the recommendations. The general manager responded that he was pleased with the report and that several of the recommendations were already in progress, and others would be included in the next strategic plan. Agency staff will make a presentation on a timeline for implementing the recommendations at a future board meeting.

A full copy of the report can be found in the agency's Records Department.

No Board action was required on this item.

B.4 Request for an Attorney-Client Sessions between the Board of Directors and legal counsel pursuant to Section 286.011(8), F.S., pertaining to Polk Regional Water Cooperative v. Southwest Florida Water Management District and Tampa Bay Water (Florida Division of Administrative Hearings Case No.: 25-005480)
Approve request for Attorney-Client Sessions to be held on February 23, 2026, and April 20, 2026.

David Jackson, Deputy General Counsel, explained the reason for the two Attorney-Client sessions was to discuss settlement negotiations and/or strategy related to the litigation.

Motion: Commissioner Peters moved to Approve the request for Attorney-Client Sessions. Vice Chair Hanewicz seconded the motion.

Vote: The motion CARRIED by a vote of 8 - 0.

C) ACTION ITEMS

No items to report.

D) PRESENTATIONS & REPORTS

D.1 Member Government Report - Hillsborough County
Receive Presentation.

Lisa Rhea, Director of Water Resources for Hillsborough County, presented an overview on the county's water system, population and water demand growth in south Hillsborough, and community engagement and outreach conducted by department staff.

A full copy of the report can be found in the agency's Records Department.

No Board action was required on this item.

D.2 Reports of Certified Public Accountants Regarding Financial Statements for the Year Ended September 30, 2025
Receive Report.

Garrett Marlowe, Senior Manager from Mauldin & Jenkins, provided a presentation on the annual audit of financial statements for the fiscal year ended September 30, 2025, and reported no adverse audit findings or current year recommendations. He fielded questions and comments regarding the uniform rate and the debt to capital asset ratio.

A full copy of the report can be found in the agency's Records Department.

No Board action was required on this item.

D.3 Water Quality Update
Receive Presentation.

Steve Fleischaker, Water Quality Services Senior Manager, presented a review of the updated Regional Water Quality Study recommendations for Total Organic Carbon (TOC) and per- and polyfluoroalkyl substances (PFAS) reduction treatment and introduced cost estimates associated with implementation and compliance with evolving Environmental Protection Agency (EPA) limits.

The Board commented and asked questions regarding the vendors for TOC reduction, the cost of the projects and phases, and previous regulatory limits.

A full copy of the report can be found in the agency's Records Department.

No Board action was required on this item.

D.4 Annual Demand Forecast Update and Evaluation
Receive Report.

Warren Hogg, Chief Science Officer, presented information on the annual demand forecast and its impacts on annual budget preparation, changes to the uniform rate, and long-range planning in the Master Water Plan. Population and demand continue to increase, particularly in new service areas in south Hillsborough County and east Pasco County. In response to a Board question, Mr. Hogg confirmed that the completion of the Surface Water Treatment Plant Expansion project is scheduled for 2028 and that the agency seeks to use existing resources to increase supply through new efficiencies and partnerships.

A full copy of the report can be found in the agency's Records Department.

No Board action was required on this item.

E) OTHER ADMINISTRATIVE MATTERS AND OLD BUSINESS

E.1 Election of Officers - Board Organizational Action
Elect a Chairman and Vice-Chairman to serve for a one-year term of office.

Chairman Cohen opened the nominations for the position of Chair of the Tampa Bay Water Board of Directors. Commissioner Oakley nominated Vice Chair Hanewicz as Chair. Cohen opened the nominations for Vice Chairman of Tampa Bay Water Board of Directors. Commissioner Oakley nominated Commissioner Weightman as Vice Chairman.

Following clarification on the traditional rotation of board leadership and length of services, the board voted.

Vote: Vice Chair Hanewicz was elected Chair by a vote of 8 - 0.

Vote: Commissioner Weightman was elected Vice Chairman by a vote of 8 - 0.

F) RECEIVE & FILE

F.1 Agency Division Activity Reports for January 2026
Receive and File.

F.2 Legal Services Activity Report for January 2026
Receive and File.

F.3 Legal Services Budget Report for January 2026
Receive and File.

F.4 Comprehensive Check List with Delegated Check Approval Items for January 2026
Receive and File.

F.5 Disposition of Fixed Assets for January 2026

Receive and File.

F.6 Financial Statements - January 2026
Receive and File.

F.7 Investment Schedules for January 2026
Receive and File.

F.8 True-Up of Fixed Costs between Member Governments through January 2026
Receive and File.

F.9 Vendor's Status Report for January 2026
Receive and File.

Motion: Commissioner Wostal moved to Approve Receive and File. Vice Chair Hanewicz seconded the motion.

Vote: The motion CARRIED by a vote of 8 - 0.

G) ATTORNEY-CLIENT SESSION

G.1 Attorney-Client Session between the Board of Directors and legal counsel pursuant to Section 286.011(8), F.S., pertaining to Polk Regional Water Cooperative v. Southwest Florida Water Management District and Tampa Bay Water (Florida Division of Administrative Hearings Case No.: 25-005480)
Action arising out of the briefing session may be taken by the Board upon reconvening the regular Board meeting.

The Board adjourned for the closed-door meeting at 11:36 a.m. and reconvened at 12:21 p.m. taking no further action.

ADJOURNMENT

The meeting was adjourned at 12:23 p.m.

TAMPA BAY WATER
Supplying Water To The Region

AGENDA ITEM A.2

DATE: April 8, 2026

TO: Board of Directors

THRU: Charles H. Carden, General Manager

FROM: Shane Johnson, Continuous Improvement Director

SUBJECT: Tampa Bay Water Performance Dashboard Update - *Receive Report*

SUMMARY

Tampa Bay Water's performance dashboard measures key performance indicators against Tampa Bay Water's internal benchmarks and policies and the American Water Works Association's water utility industry benchmarks. The attached performance dashboard provides a snapshot of overall agency performance to the Board of Directors.

SUGGESTED ACTION

Receive Report.

COST/FUNDING SOURCE

N/A

DISCUSSION

Tampa Bay Water staff updated the Board Performance Dashboard to measure key performance indicators identified in the strategic plan and established by agency staff. Regular reports on performance are provided to the Board of Directors with the agenda package. The Board Performance Dashboard has been updated to include metrics aligned with the updated strategic plan, and the most recent benchmarks from the 2024 American Water Works Association Utility Benchmarking Study. These metrics are intended to provide the Board of Directors with a snapshot of the Agency's current

performance.

BACKGROUND

Tampa Bay Water strives to continually improve and become more efficient in operating and maintaining the water supply system and planning for the region's future drinking water needs. In 2023, the Agency's Board of Directors approved the current strategic plan. The Agency assigned key performance indicators to the strategic plan goals for measuring against Tampa Bay Water's internal benchmarks and policies, and the American Water Works Association's water utility industry benchmarks using a performance dashboard. The dashboard uses key performance indicators created as part of the update to the strategic plan and established by agency staff.

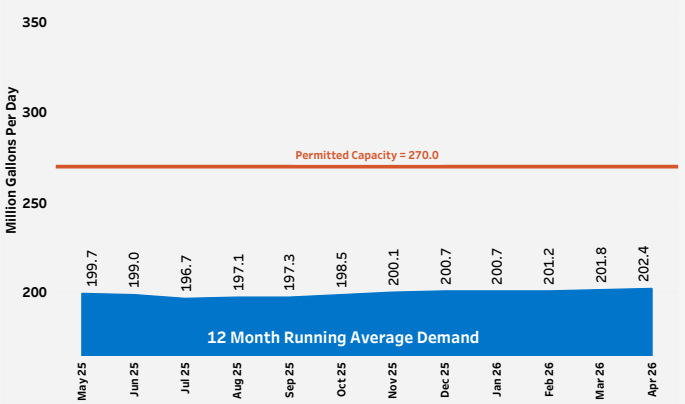
Attachment (1)

Tampa Bay Water Overall Performance Dashboard April, 2026

Tampa Bay Water Overall Performance Dashboard

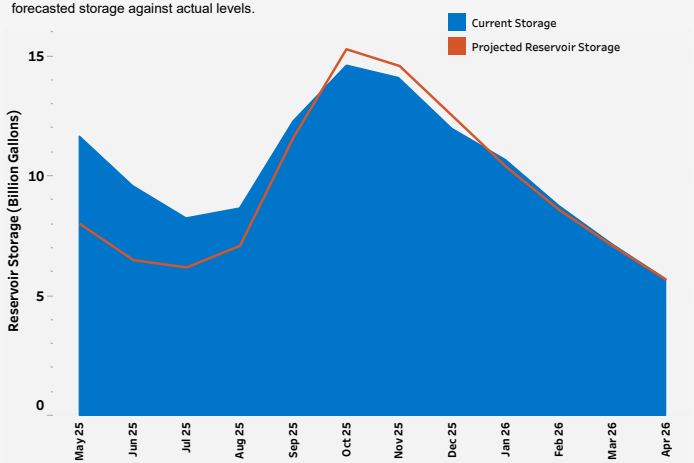
Available Capacity

This indicator shows how much water the utility is permitted to use and the 12 month running average demand. Average demand should not exceed permitted capacity.



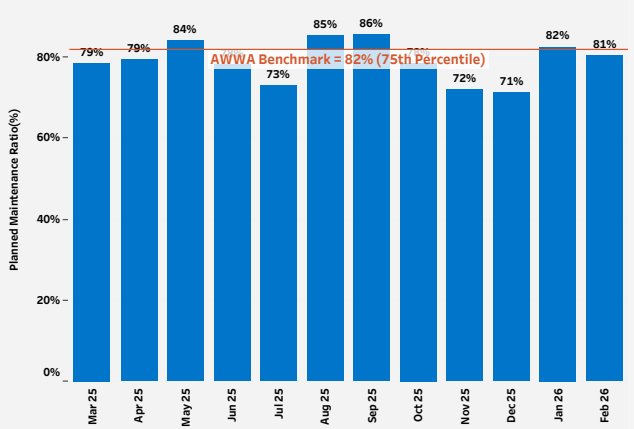
Meeting Projected Reservoir Storage Volume

This indicator provides a measure of the reliability of the utility's forecasted reservoir use by comparing forecasted storage against actual levels.



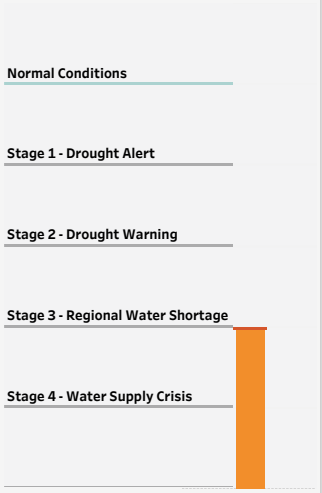
Planned Maintenance Time

This indicator provides a measure of the time spent on planned maintenance shown as a percent of total maintenance time. Utilities should strive to be above the AWWA 2024 benchmark.



Water Shortage Mitigation

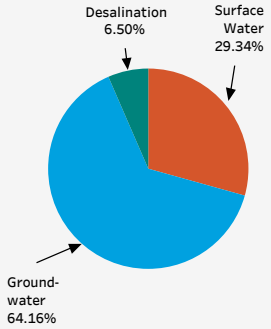
This chart highlights the current stage of Water Shortage Mitigation Plan of Tampa Bay Water.



Water Sources / Water Use Permits / Water Quality

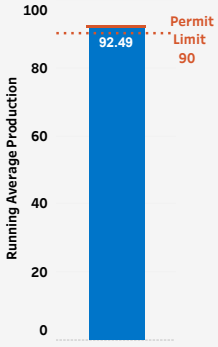
Total Production by Sources Fiscal Year To Date

This chart provides the percentage distribution of sources used to supply water.



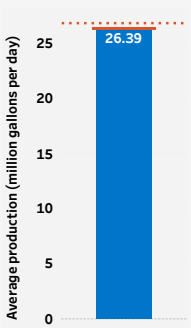
Consolidated Water Use Permit

This indicator provides the 12-month running average for groundwater pumping rate from 10 wellfields and corresponding permit limit.



South-Central Hillsborough Wellfield Permit

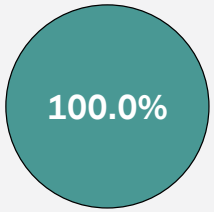
This indicator provides the 12-month running average for groundwater pumping rate from the South-Central Hillsborough Wellfield against its approved pumping limit.



Safe Drinking Water Act Compliance

This indicator quantifies the percentage of time each year that the utility meets all standards in the Safe Drinking Water Act National Primary Drinking Water Regulations averaged over the previous 12 months.

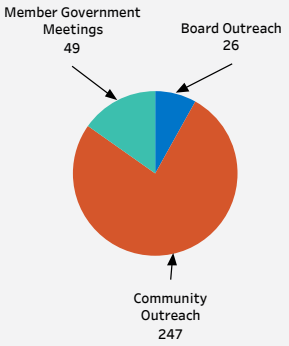
AWWA Benchmark: **100%**



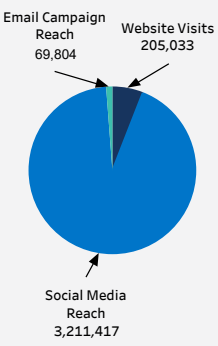
Stakeholder Outreach Fiscal Year To Date

These charts show stakeholder outreach activities of the agency by digital means and through other engagements.

Engagement and Outreach



Digital Reach

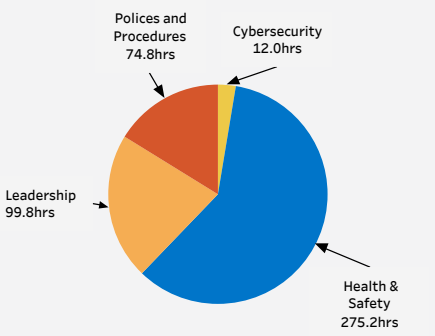


American Water Works Association (AWWA) benchmarks are based on results from participating utilities in the 2024 Utility Benchmarking Study. Participating utilities include retail entities with factors not relevant to wholesale utilities like Tampa Bay Water.

Tampa Bay Water Overall Performance Dashboard

Employee Training Fiscal Year To Date

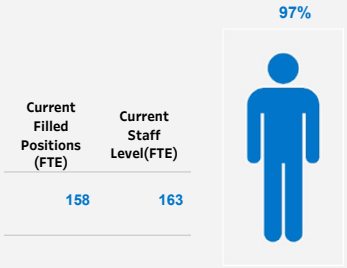
This chart shows the categories of training provided to Tampa Bay Water employees and the total number of hours of training for each category to date in Fiscal Year. (Source: NeoGov).



Optimized Staffing Levels

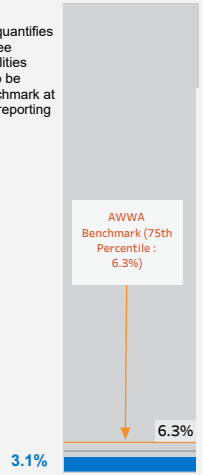
Current Filled Positions

This indicator provides a measure of filled, full-time positions shown as a percentage of total positions for the fiscal year to date.



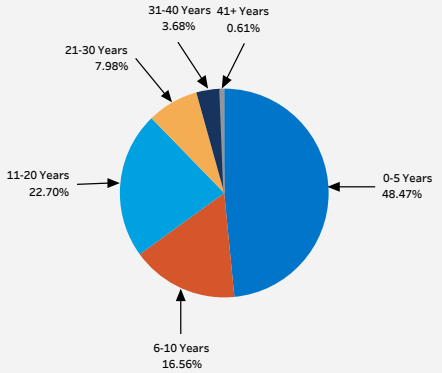
Employee Turnover For The Fiscal Year

This indicator quantifies rate of employee departures. Utilities should strive to be below the benchmark at the end of the reporting period.



Employee Experience Distribution

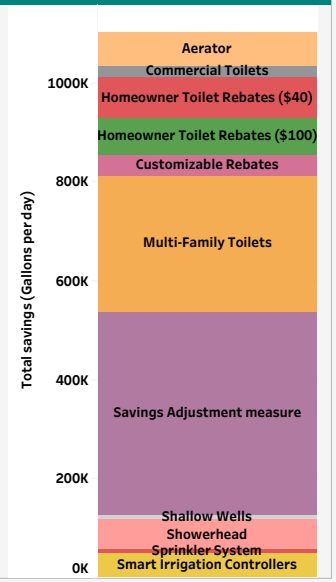
This chart shows relative distribution (percentage) of number of employees based on their total years of experience across all departments for fiscal year to date (Source: Munis).



Tampa Bay Water Wise Program Savings

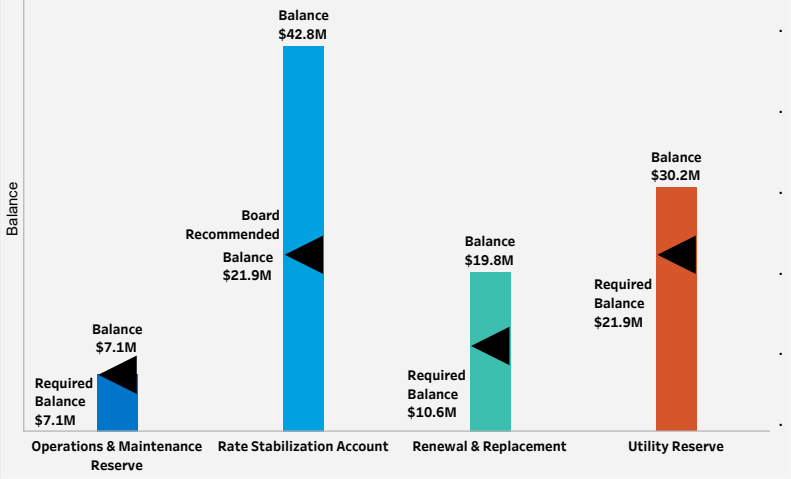
This chart shows the rebate program savings (gallons per day) for all programs since its inception on March 30, 2020.

(Source: Tampa Bay Water Wise Dashboard)



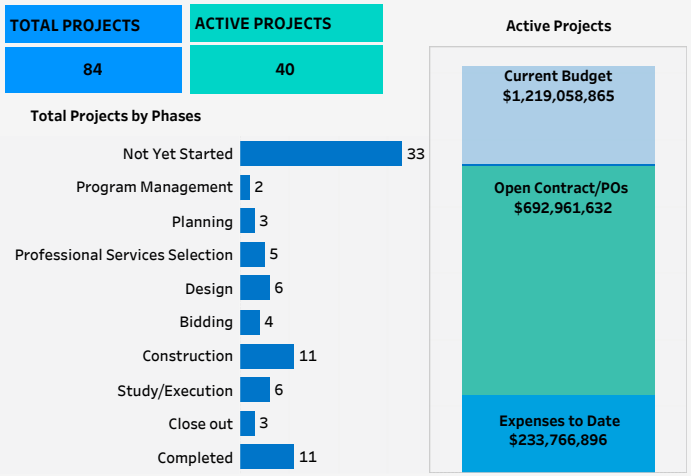
Reserve Funds Balance

This chart tracks the utility's total reserve fund balance across all types against its total contractual or policy based minimums (data is current as of March 2026).



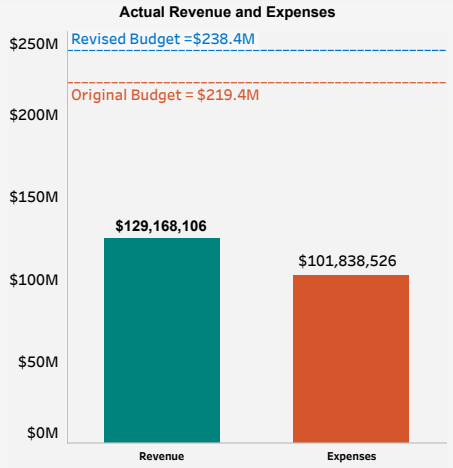
Capital Improvement Program

This chart shows the project details by phases for the current fiscal year and also presents current budget, open contracts, and actual expenses for the active projects (Source: Masterworks/Munis).



Operating Within Budgets As Forecasted

This indicator provides a measure of the utility's ability to operate within budget forecasts for Fiscal Year (data current as of March 2026).



American Water Works Association (AWWA) benchmarks are based on results from participating utilities in the 2024 Utility Benchmarking Study. Participating utilities include retail entities with factors not relevant to wholesale utilities like Tampa Bay Water.

TAMPA BAY WATER
Supplying Water To The Region

AGENDA ITEM A.3

DATE: April 8, 2026

TO: Board of Directors

THRU: Charles H. Carden, General Manager

FROM: Michelle Stom, Chief of Staff/Chief Strategy Officer

SUBJECT: Legislative and Grant Funding Program Update - *Receive Report*

SUMMARY

The Board approves legislative goals and priorities each year to guide the work of the agency's grant funding and legislative team. The team is operating under the 2026 Legislative Program Goals and Priorities approved by the Board at its October 2025 meeting. This item provides an update on state and federal legislation and state and federal appropriations requests.

SUGGESTED ACTION

Receive Report.

COST/FUNDING SOURCE

N/A

DISCUSSION

Federal and state legislation can significantly impact the cost of water production and regulatory compliance. As Tampa Bay Water continues to prioritize efficient and cost-effective operations, providing input on potential legislation and regulations remains essential.

State Update

The legislative team continues to advance Tampa Bay Water's legislative and grant funding priorities through proactive engagement and coordination. The 2026 Legislative Session concluded on March 13, 2026. Lawmakers did not reach agreement on a final budget and concluded the 60-day session with a "sine die" adjournment, making special sessions necessary to resolve the stalemate. As the chambers continue negotiating overall spending levels, lawmakers are expected to return to Tallahassee in April to complete the budget, although a specific date for the budget session has not yet been announced. Tampa Bay Water's appropriations requests remain viable, with funding for SCADA improvements included in the House budget proposal and the Surface Water Treatment Plant expansion retained in the Senate budget proposal. The legislative team will continue advocating for these requests as budget negotiations resume.

Below are the projects submitted to the State Legislature for appropriation requests. Our sponsors in the House are Rep. Danny Alvarez and Rep. Randy Maggard, respectively. In the Senate, Sen. Danny Burgess is sponsoring both appropriation requests.

- **Regional Surface Water Resilience and Expansion Initiative**
  Requested amount: $2 million
  Project description: This project expands the Regional Surface Water Treatment Plant with a fifth treatment process train, identical to existing units, including advanced ozonation and granular activated carbon filtration. The expansion will increase the system's annual average yield by 10–12.5 million gallons per day, ensuring reliable supply for more than 2.6 million residents.
- **SCADA SecureOps: Modernizing & Securing Critical Technology Infrastructure**
  Requested amount: $1 million
  Project description: This project strengthens the resilience and security of the Supervisory Control and Data Acquisition (SCADA) system at the Regional Surface Water Treatment Plant by replacing its aging infrastructure. The modernization effort will replace outdated hardware and software with more robust, secure, and reliable technology to protect against cyber and operational threats.

These selections align with both the agency's strategic goals and previously secured funding commitments to ensure continued system reliability, operational efficiency, and capacity growth.

Federal Update

At the federal level, the team advanced Tampa Bay Water's goals and priorities, specifically tracking developments related to the Water Resources Development Act and federal community project funding requests. Tampa Bay Water, in conjunction with our consultants at Jones Walker LLP, submitted language under the Environmental Infrastructure section of the Water Resources Development Act to position the agency for additional project funding. The proposed language has been submitted as a request to members of the Tampa Bay Congressional Delegation to be included in the House and Senate Water Resources and Development Act (WRDA) 2026 bill.

In addition to the WRDA authorization, Tampa Bay Water has submitted federal Community Project Funding requests to support key regional water supply initiatives. Specifically, the agency is seeking $5 million for the Surface Water Treatment Plant Expansion to help advance additional treatment capacity and system resiliency improvements, and $5 million for the South Hillsborough Wellfield project to support development of new groundwater supply infrastructure and associated transmission components.

Regional Surface Water Resilience and Expansion Initiative
Requested amount: $5 million

Project description: This project expands the Regional Surface Water Treatment Plant with a fifth treatment process train, identical to existing units, including advanced ozonation and granular activated carbon filtration. The expansion will increase the system's annual average yield by 10–12.5 million gallons per day, ensuring reliable supply for more than 2.6 million residents.

South Hillsborough Water Initiative: Securing Reliable Supply for Growing Communities
Requested amount: $5 million

Project Description: This project will bring a new, reliable freshwater source to southern Hillsborough County by designing and constructing a modern groundwater wellfield and treatment plant. The project uses a sustainable approach through the South Hillsborough Aquifer Recharge Program (SHARP), that allow us to responsibly withdraw freshwater while protecting the aquifer.

These selections align with both the agency's strategic goals and previously secured funding commitments to ensure continued system reliability, operational efficiency, and capacity growth.

The legislative team has continued to make strong progress on its federal Community Project Funding requests. To date, the agency has successfully secured three congressional project sponsorships, reflecting continued positive momentum and strong delegation support for our priorities:

- Rep. Laurel Lee -$2.5 million for the Surface Water Treatment Plant Expansion
- Rep. Kathy Castor -$3 million for the South Hillsborough Wellfield
- Rep. Vern Buchanan -$3 million for the South Hillsborough Wellfield

While these requests must still advance through the congressional appropriations committee process, the current level of support is an encouraging step forward and we will continue working closely with congressional offices and stakeholders to help move these requests successfully through the remaining federal process.

BACKGROUND

The Tampa Bay Water Board created a unique water system that includes three diverse water sources. Tampa Bay Water's story is a model for other regional water systems. The agency continues to reach out to stakeholders such as the Florida Legislature and the Federal Congressional Delegation to provide

knowledge and assistance on water policy. Staff also provides input and assistance to state and regional officials and regulatory agencies by providing expertise on water supply policies, water management history and needs, and technical topics.

MEMORANDUM

TO: Chuck Carden, Michelle Stom, Brant Bartlett, Kelly Fernandez, and David Jackson
Tampa Bay Water

FROM: Pete Dunbar, French Brown, Andres Malave and Marc Dunbar

DATE: March 13, 2026

RE: Initial 2026 Post Session Report

The initial post session report and the status of the legislation follows below. The report summarizes the measures that we have been tracking for Tampa Bay Water that have passed the Legislature. The report concludes with items of interest that did not pass in 2026.

The Governor has now taken final action on all measures, and the appropriate Session Law number follows the summary of the bill and it appears in **bold type**. The full texts of each enrolled bill, as well as applicable legislative staff reports, are available on the legislative web sites (www.flsenate.gov; www.myfloridahouse.com; and www.leg.state.fl.us.). A summary of each measure that passed appears below by category in numerical bill order.

Initial 2026 POST SESSION REPORT

NUMERICAL INDEX SUMMARY OF 2026 LEGISLATIVE ISSUES

Pete Dunbar, Andres Malave and Marc Dunbar
Legislative Counsel

Water Related Legislation

PFAS Substances: CS/CS/HB 1019 by Representative Conerly will provide for the prohibition of the sale and distribution of aqueous film forming foam; require the submission of aqueous film forming foam inventories to DEP; and prohibit the use of aqueous film forming beginning on a specified date. **CS/CS/HB 1019 has passed the Legislature and is pending action by the Governor. (Chapter 2026-____, *Laws of Florida*.)**

Utility Services: CS/HB 1451 by Representative Busatta will require public meetings as a condition precedent to agreements where a municipality proposed to provide services to other municipalities or unincorporated areas. The legislation also limits the use of utility revenues for general governmental functions and requires annual reporting to the Public Service Commission. **CS/HB 1451 has passed the Legislature and is pending action by the Governor. (Chapter 2026-____, *Laws of Florida*.)**

Appropriation Requests

Resilience and Expansion Initiative: The $2 million appropriations request to expand the capacity of the TBW Surface Water Treatment Plant was timely filed by Representative Alvarez in the House and Senator Burgess in the Senate. The request remains pending in the appropriation process in both Houses.

SCADA Upgrade: The $1 million appropriations request for the upgrade and strengthening the resilience and security of the Supervisory Control and Data Acquisition system was timely filed by Representative Maggard in the House and Senator Burgess in the Senate. The request remains pending in the appropriation process in both Houses.

Other Legislation of Interest

Sovereign Immunity: HB 145 by Representative McFarland will raise the level of the waiver of sovereign immunity for governmental entities from 200,000 to $350,000 effective as of October 1, 2026. The legislation also provides that insurance policies maintained by a governmental entity may not be conditioned by the enactment of a claims bill. **HB 145 has passed the Legislature and is pending action by the Governor. (Chapter 2026-____, *Laws of Florida*.)**

Special District Funding: CS/HB 273 by Representative Johnson will limit how downtown development district boundaries can be modified; and it will provide a funding option for an independent special district that provides water and wastewater service with a rural area of opportunity as defined in s. 288.0656 (2) of the Florida Statutes. **CS/HB 273 has passed the Legislature and is pending action by the Governor. (Chapter 2026-____, *Laws of Florida*.)**

Approval of Data Center Facilities: CS/CS/SB 484 by Senator Avila will require information disclosures for applications for data centers, will place certain restrictions on pending applications, will prohibit WMDs from issuing permits for the consumptive use of water under certain circumstances, and will require the Department of Environmental Protection to adopt implementing rules. **CS/CS/SB 484 has passed the Legislature and is pending action by the Governor. (Chapter 2026-____, *Laws of Florida*.)**

Public/Private Meetings: CS/CS/HB 655 by Representative Duggan will permit the boards and commissions of a public agency to meet in private with counsel during a 90-day notice period specified in s. 70.001 (4) to discuss claims submitted by a property owner against the public agency. **CS/CS/HB 655 has passed the Legislature and is pending action by the Governor. (Chapter 2026-___, *Laws of Florida*.)**

Local Government Cybersecurity: CS/CS/HB 1085 by the Representative Miller will create the Local Government Cybersecurity Protection Program to assist eligible local governments in mitigating and defending against cybersecurity threats, including, but not limited to, ransomware incidents. **CS/CS/HB 1085 has passed the Legislature and is pending action by the Governor. (Chapter 2026-___, *Laws of Florida*.)**

OGSR/Cybersecurity and Technology Information: SB 7024 by the Senate Governmental Oversight and Accountability Committee will provide an exemption from public records requirements for cybersecurity, information technology, and operational technology information in the possession of an agency. **SB 7024 has passed the Legislature and is pending action by the Governor. (Chapter 2026-___, *Laws of Florida*.)**

Initiatives of Interest that Failed

Special Districts: HB 123 by Representative Overdorf is a comprehensive bill dealing with independent special districts. Among its provisions, the legislation provides a definition of "district lands or water areas"; limits liability when public access is provided by the district; and extends purchasing privileges to special districts under state purchasing contracts. HB 123 received 3 committee referrals. The bill has not been heard in committee and died when the Session concluded.

Employee Protections: CS/CS/SB 92 by Senator Gaetz and CS/HB 139 by Representative Maney are similar measures that prohibit certain actions against public employees for disclosing certain information to the Commission on Ethics. The legislation also requires specific conditions on the disclosures; it prohibits an agency from taking action against the employee disclosing information; and it provides protections for employees who submit the information. CS/SB 92

has been amended and passed by its committees of reference and is pending on the Senate Calendar. This measure died on the House Calendar when the Session concluded.

Special Districts: HB 123 by Representative Overdorf is a comprehensive bill dealing with independent special districts. Among its provisions, the legislation provides a definition of "district lands or water areas"; limits liability when public access is provided by the district; and extends purchasing privileges to special districts under state purchasing contracts. HB 123 received 3 committee referrals. The bill was not heard in committee and died when the Session concluded.

Utility Rates: HB 225 by Representative F. Robinson and SB 940 by Senator McClain are similar measures that will require a municipality to impose the same rates and charges on customers within its boundaries and boundaries of a recipient municipality and prohibit surcharging customers within a recipient municipality unless certain conditions have been met. HB 225 received 3 committee referrals. SB 940 received 3 committee referrals. Neither bill was heard in committee and this issue died when the Session concluded.

Carrying Weapons and Firearms: HB 321 by Representative Hunschofsky and SB 406 by Senator Polsky are companion measures that restrict a person's right to carry a weapon or firearm in specified locations, including at a meeting of the governing body of a special district. HB 321 received 2 committee referrals by the Speaker. SB 406 received 3 committee referrals by the President. Neither bill has been heard in committee and this issue died when the Session concluded.

Display of Flags by Governmental Entities: HB 347 by Representative Borrero and SB 426 by Senator Yarborough are companion measures that will prohibit governmental entities from erecting or displaying flags that represent a political viewpoint, including, but not limited to, a politically partisan, racial, sexual orientation or gender, or politically ideology viewpoint. It will also require a governmental entity that displays the United States flag to display that flag in a prominent position that is superior to any other flag that is also being displayed. HB 347 received 2 committee referrals by the Speaker. SB 426 received 3 committee referrals by the President. Neither bill has been heard in committee and this issue died when the Session concluded.

Special District Performance Measures: SB 378 by Senator Truenow and HB 6005 by Representative Greco are companion measures that will repeal s. 189.0694 that requires performance measures and standards by special districts. SB 378 received 3 committee references. HB 6005 received 2 committee references. Neither bill was in committee and this issue died when the Session concluded.

Legal Notices: CS/CS/SB 380 by Senator Trumbull and CS/CS/HB 1009 by Representative Griffitts are similar measures that will require the publication of certain legal notices and will authorize a governmental agency to use its own website or the website of the county to publish the required notices. CS/CS/SB 380 received 3 committee referrals and has been amended and passed by the first 2 committees of reference. CS/CS/HB 1009 was amended and passed

its committees of reference and was pending passage on the House Special Order Calendar. This measure died on the Calendar when the Session concluded.

Land and Water Management: CS/HB 479 by Representative Maggard and SB 718 by Senator McClain are related bills that will prohibit counties and municipalities from adopting laws and regulations relating to water quality or quantity, pollution control, discharge prevention or wetlands delineation; and it preempts such regulation exclusively to the state. CS/HB 479 received 3 committee referrals and has been amended and passed by its first committee of reference. SB 718 received 3 committee referrals but did not receive a hearing. This measure died when the Session concluded.

PFAS Substances: HB 855 by Representative Long and SB 1058 by Senator Berman are companion measures that will provide for the ratification of rules for the cleanup target levels for PFAS compounds and authorizes DEP to update statewide cleanup target levels. HB 855 received 4 committee referrals. SB 1058 received 3 committee referrals. Neither bill was heard in committee and this issue died when the Session concluded.

Advanced Wastewater Treatment: HB 1167 by Representative Cross and SB 1468 by Senator Berman are companion measures that will impose new reporting requirements on sewage disposal facility with a permitted capacity of 1 million gallons per day or more with the objective to eliminate the discharge of inadequately treated wastewater and aging sewage. SB 1468 received 3 committee referrals and has passed by its first committee of reference. HB 1167 received 3 committee referrals but did not receive a hearing. This measure died when the Session concluded.

MEMORANDUM

TO: Chuck Carden, Michelle Stom, Brant Bartlett, Kelly Fernandez & David Jackson
Tampa Bay Water

FROM: Paul Cambon and Marybeth Nassif

DATE: April 7, 2026

RE: Updated Federal Governmental Affairs Reporting

Attached is the monthly report on legislation and related Federal governmental activities. The summary and tracking items include activities through the close of business on **April 4, 2026**.

Future reports will update the progress of pending activities, identified legislative measures, and will include new relevant matters and legislative filings. Changes and additions from the prior report under the "Federal Bills of Importance" will appear in **bold type**.

TAMPA BAY WATER FEDERAL STATUS REPORT

The matters involving Tampa Bay Water appear first in the summary, and the other legislative matters of interest follow.

Appropriations

The Department of Homeland Security (DHS) is currently facing a shutdown, which has impacted its operations and workforce. While essential services have continued with funding from the "One Big Beautiful Bill," many employees, including Transportation Security Administration (TSA) agents, have gone weeks without pay, resulting in significant disruptions at airport security checkpoints and prompting approximately 500 TSA agents to resign. The President through executive action restored pay for TSA workers and many have received back pay. However, discussions among lawmakers continue regarding full year funding for DHS. Congress has focused on the possibility of resolving the funding impasse through a reconciliation bill, which would allow lawmakers to approve necessary appropriations with a simple majority vote, bypassing the threat of filibuster. If adopted, this approach could quickly restore full funding to DHS and stabilize operations.

FY 2027 President's Budgets

On Friday, April 4, President Trump released the FY 2027 President's Budget Request for all federal agencies. These budgets outline the Administration's FY 2027 plan.

The FY 2027 President's Budget Request proposes an increase over current spending levels driven primarily by a significant expansion in defense and national security funding, while reducing base non-defense discretionary spending by roughly 10 percent ($73 billion). The request emphasizes discretionary funding and supplemental mandatory funding through reconciliation, rather than a full long-term fiscal framework. The most significant increases are concentrated in national defense, which rises to $1.5 trillion (a 42–44 percent increase over FY 2026); law enforcement and public safety, including a 13 percent increase for the Department of Justice; and transportation and infrastructure, with the Department of Transportation receiving a 6 percent increase, including targeted investments in aviation safety and infrastructure modernization.

The request includes deep reductions to the Clean Water and Drinking Water State Revolving Funds (SRFs), the primary federal tools supporting wastewater, drinking water, and stormwater infrastructure, proposing a combined SRF total of roughly $305 million, well below prior-year enacted levels. The Administration justifies these reductions by arguing that states should assume greater responsibility for funding water infrastructure and that prior investments under the Infrastructure Investment and Jobs Act reduced the need for ongoing federal support. While EPA's core drinking water regulatory and emergency response functions receive modest protection, including $122 million for drinking water programs, most capital-oriented assistance that directly supports local utility plant upgrades faces sharp proposed cuts.

Impact on local water utilities

- Substantial loss of federal capitalization grants for wastewater and drinking water projects, increasing pressure on ratepayers and municipal debt financing.

- Reduced flexibility for utilities to address Clean Water Act compliance, nutrient removal, PFAS treatment, and aging infrastructure needs.
- Heightened reliance on congressional appropriations outcomes, as Congress has historically rejected similar proposed cuts and restored SRF funding.

Department of the Interior (DOI)
The FY 2027 budget requests $15.9 billion for the Department of the Interior, a 12.9 percent decrease from FY 2026 enacted levels, with funding largely refocused on core resource management and energy priorities rather than new water grant programs. Within Interior, the Bureau of Reclamation, a critical federal partner for western municipal and regional water suppliers, would receive approximately $1.3 billion, including $1.1 billion for Water and Related Resources to support operations, maintenance, and selected infrastructure projects tied to existing federal water systems.

FY 2027 Community Project Funding and Congressionally Directed Spending:
In March, we submitted Community Project Funding (CPF) requests for the Surface Water Treatment Plant Expansion and South Hillsborough Wellfield, $5 million each, to Representatives Castor, Luna, Lee, Bilirakis, and Buchanan. Each Congressman/woman may put forward 20 CPFs. To date, we have heard back from Representatives Buchanan, Castor, and Lee. Representative Buchanan has agreed to submit a CPF for the South Hillsborough Wellfield project for $3 million and Representative Laura Lee has agreed to put forward a CPF for the Surface Well Expansion, and Representative Castor has put forward a $3 million CPF for the South Hillsborough Wellfield project. More details will be available in the upcoming months and we are waiting to hear back from the other offices.

Committee markups are earlier than expected beginning as early as April 17. The Interior bill that includes the CPFs won't be marked up until June 4. This is the anticipated date for the subcommittee markup, and dates often slip.

Florida Senators Rick Scott and Ashley Moody are not accepting FY 2027 congressionally directed spending requests.

WRDA – We submitted the Tampa Bay Water WRDA request for $100 million to the following Representatives: Castor, Luna, Lee, Bilirakis, and Buchanan. On the Senate side, the request went to Senators Rick Scott and Ashley Moody. We are waiting to see when the House and Senate will mark up the bill. The status remains the same: we have no real update. We continue to check in with Hill staff for any updates on the process, and we will continue to report to you all on any progress the Committee has made on this bill.

Recent Hearing or Items of Importance:

EPA eyes tracking microplastics, medicines in tap water. EPA has taken an initial, procedural step toward potentially regulating microplastics and pharmaceuticals in drinking water by adding them to a new draft Contaminant Candidate List under the Safe Drinking Water Act. The action, promoted by the Trump administration as aligned with the "Make America Healthy Again" agenda, does not impose

monitoring or treatment requirements on water utilities but signals future research and possible regulation. The draft list also includes certain PFAS, disinfectant byproducts, microbes, and various drugs (e.g., antidepressants, hormones, antibiotics). EPA officials emphasized the move is preliminary and intended to advance health risk research, following political pressure from MAHA activists and prior requests by Democratic governors for microplastics monitoring. For water suppliers, the immediate impact is limited, but the listing indicates growing federal scrutiny and a potential longer-term path toward standards affecting monitoring, treatment, and compliance costs.

Presidential Executive Order - March 13, 2026 / *Removing Regulatory Barriers to Affordable Home Construction*

The executive order directs federal agencies to reduce and streamline environmental, water, energy, and permitting regulations that affect housing construction, with the goal of lowering housing costs and accelerating residential development. It specifically targets stormwater, wetlands, water-quality, and infrastructure permitting requirements, while encouraging states and localities to limit fees, mandates, and reviews that could slow or increase the cost of new housing.

Stormwater and Water Quality Regulation

Relevant EO Section: **Section 2(a)**

The EO directs EPA and the Army Corps to reduce or streamline stormwater, wetlands, and water-quality rules tied to housing development. This could mean looser federal requirements for construction runoff, MS4 permits, and TMDLs, which may increase pollution entering local systems and shift more water-quality responsibility to utilities and states.

Permitting and Infrastructure Approvals

Relevant EO Sections: **Section 3(a) and Section 3(b)**

The EO pushes federal agencies to speed up environmental and historic reviews for infrastructure that supports housing, including water and sewer projects. Tampa Bay Water may be able to build or expand facilities faster, but with fewer federal reviews, they may face higher legal or community challenges if impacts are disputed.

Water Use and Conservation Standards

Relevant EO Section: **Section 2(c)**

The EO calls for reviewing and potentially eliminating federal water-efficiency requirements in housing. If efficiency standards are weakened, Tampa Bay Water could see higher water demand per household, requiring larger systems, higher operating costs, and updates to long-term supply and capacity planning.

Growth, Fees, and Cost Recovery

Relevant EO Sections: **Section 4(a) and Section 4(b)**

The EO encourages states and local governments to reduce fees, mandates, and permitting delays that increase housing costs. This could put pressure on Tampa Bay Water's connection fees, impact fees, and conditions placed on new development, making it harder for utilities to fully recover the cost of new infrastructure needed to serve growth.

Accelerated and Dispersed Development
Relevant EO Sections: **Section 4(a)(iv) and Section 5**

By promoting suburban and exurban housing and incentivizing construction in Opportunity Zones, the EO may drive faster and more spread-out development. Tampa Bay Water may need to extend water, sewer, and stormwater systems over larger areas, increasing capital and maintenance costs while facing tighter limits on regulatory controls.

Senate Energy and Natural Resources Subcommittee on Water and Power
March 17, 2026

Bipartisan leaders emphasized that reliable, affordable drinking water is a core economic and public-health necessity, with Western drought, low snowpack, and aging infrastructure driving urgency for federal action. Opening statements and agency testimony highlighted strong support for accelerating federal investment in regional and rural water supply systems, expanded recycling, reuse, conveyance, and conservation programs, and greater use of programmatic authorizations to shorten timelines and reduce administrative barriers for local and regional water suppliers.

The Bureau of Reclamation underscored WaterSMART, large-scale recycling, agricultural efficiency, and navigator programs as key tools to help communities access funding and build drought-resilient supplies, while multiple senators stressed protecting local utilities from unfunded mandates and shifting costly infrastructure responsibilities to the federal government. Hydropower permitting reform and watershed-scale, results-based funding were framed as complementary efforts to reduce costs and improve reliability, though PFAS was not directly addressed.

Overall, the hearing signals continued momentum toward faster approvals, expanded federal cost-sharing, and long-term resilience investments that directly benefit municipal, rural, and regional water providers.

Federal Bills of Importance:

Clean Water Standards for PFAS Act: HR 6668 and S 3457 was reintroduced on April 7, 2026 by Rep. Chris Pappas and Sen. Kirsten Gillibrand as part of a broader clean water agenda to establish effluent limitations guidelines and standards and water quality criteria for perfluoroalkyl and polyfluoroalkyl substances under the Federal Water Pollution Control Act, and for other purposes.

Drought Relief Obtained Using Government Help Today (DROUGHT) Act: HR 7845 was introduced on March 5, 2026, by Scott Peters with eight co-sponsors all from California. The DROUGHT Act expands federal support to help drought-stricken communities build and finance essential water infrastructure, improving access to safe, reliable water now and for the future. Introduced to help Western communities respond to severe drought, particularly impacts on the Colorado River system. The bill focuses on strengthening local water infrastructure and improving access to federal financing for drought-impacted and underserved areas by allowing qualifying projects to receive up to 90% federal assistance (up from 80%) while remaining eligible for low-interest WIFIA loans. This bill applies to projects in extreme drought areas, projects of regional or national significance, and those serving historically disadvantaged communities. It will not affect or change the loan repayment obligations, timelines, or interest rates. Currently, federal funding caps delay or limit critical water projects. This bill aims to speed construction of resilient, equitable water systems as climate change worsens drought conditions.

Data Center Transparency Act: HR 6984 – HR 6984 was introduced on January 8, 2026, by Rob Menendez (NJ-08). The bill requires the Environmental Protection Agency and the Energy Information Administration to regularly report on data center impacts, including water usage, water quality effects, greenhouse gas emissions, and electricity consumption by state.

Determination of NEPA Adequacy Streamlining Act: H.R. 6163 – HR 6163 was introduced on December 18, 2025 by David Valadao (CA-22). This bipartisan bill streamlines the approval process to advance essential water, transportation, energy, infrastructure, forest management, and flood-control projects by allowing federal agencies to use previously conducted Environmental Assessments or Environmental Impact Statements under the National Environmental Policy Act (NEPA) for the approval of projects with similar impacts. A portion of Congressman Valadao 's Determination of NEPA Adequacy Streamlining Act (H.R. 6163) was included in the SPEED Act.

NEPA is a procedural statute that establishes parameters for assessing and disclosing the environmental impact of all major federal actions. Originally intended to ensure an appropriate balance between protecting the environment and economic development, the NEPA process has become increasingly complex, resulting in massive NEPA documents approaching thousands of pages, drawn-out project timelines, and excessive litigation.

Special Districts: H.R. 2766 - Special District Fairness and Accessibility Act (2025) was introduced on April 9, 2025 by Pat Fallon (R-TX) and Brittany Pettersen (D-CO). The bill has 21 co-sponsors. The bill seeks to establish a first-ever formal definition of “special district” in federal law. The bill would direct the White House Office of Management and Budget to issue guidance to federal agencies requiring special districts to be recognized as local governments for purposes of ensuring that districts have access to all appropriate forms of federal financial assistance. The bill is identical to legislation that was overwhelmingly approved by the House of Representatives in the 118th congress. **ACTION: March 18, 2026, Ordered to be Reported (Amended) by the Yeas and Nays: 32-8.**

Special Districts: S.2014 - Special District Fairness and Accessibility Act (2025) was introduced on June 10, 2025 by John Cornyn (R-TX). The bill has three cosponsors.

PERMIT Act: HR 3898 – Promoting Efficient Review for Modern Infrastructure Today Act or the PERMIT Act was introduced by Mike Collins (R-GA) with others on June 11, 2025. HR 3989 was placed on the Rules calendar for **December 9, 2025, and passed on a roll call vote 221-205 and sent to the Senate. Seven amendments passed and H. Amdt.128 codifies the dredge and fill permitting programs administered by the States of Florida, Michigan, and New Jersey and clarifies the law so that other states may successfully navigate the process to assume this authority.** The bill limits the scope of the Clean Water Act by redefining *navigable waters* to exclude (1) waste treatment systems, (2) ephemeral features that flow only in direct response to precipitation, (3) prior converted cropland, (4) groundwater, or (5) any other features determined to be excluded by the U.S. Army Corps of Engineers.

Clean Water and Threat Preparedness: HR 2344 – Water ISAC Threat Protection Act was introduced March 25, 2025 by Janice Schakowsky (D-IL). The bill establishes a program / grant funding to help drinking water and wastewater systems (utilities) improve threat preparedness and resilience (including cyber / physical threats) for water infrastructure. There has been no further action since the bill was introduced.

The Futureproofing Local Operations for Water Systems (FLOWS) Act of 2026: S.3967 This Act establishes a new EPA-administered grant program to help small, rural drinking water and wastewater systems modernize through digital infrastructure technologies, including real-time monitoring, leak detection, SCADA, AI-enabled optimization, digital modeling, and cybersecurity tools. The bill prioritizes community-owned systems serving fewer than 3,300 people and allows grant funds to cover both acquisition and ongoing maintenance of software, as well as workforce training and cyber risk mitigation. Authorized at $50 million annually for FY 2027–2031, the program is designed to reduce water loss, improve operational efficiency and resilience, lower long-term project costs, and support affordability in rural communities, while preserving all existing federal and state regulatory requirements.

Water Project Navigators Act: S. 3792 This Bill would establish a new Water Project Navigators Program within the Department of the Interior (Bureau of Reclamation) to help States, Tribes, water suppliers, local governments, and nonprofits—particularly those serving disadvantaged, rural, and Tribal communities—develop and implement multi-benefit water projects. The bill authorizes grants and cooperative agreements to fund dedicated “navigator” positions that provide hands-on capacity support such as grant writing, project management, technical and engineering assistance, and early environmental review, with the goal of accelerating projects that improve water supply reliability, drought and climate resilience, water quality, ecosystem health, and community economic outcomes. Awards would generally cover up to 75% of costs (with waiver authority for hardship communities), run for up to three years with possible extensions, prohibit funding for existing compliance obligations, and require coordination with other federal programs. The legislation authorizes $15 million annually for FY2027–FY2032 and directs Interior to report to Congress on program outcomes, including reductions in water supply–demand imbalances and benefits delivered to underserved communities.

The More Water Act: S.3738 This Act amends the Infrastructure Investment and Jobs Act to significantly expand federal support for water supply reliability in Reclamation States by reauthorizing and scaling large-scale water recycling and reuse programs, establishing a new Water Conveyance Improvement

Program, and increasing funding for environmental restoration. The bill authorizes $450 million (FY2028–2032) for large-scale recycling and reuse projects, $500 million for water conveyance improvements, and $550 million for additional recycling and reuse projects, with enhanced federal cost-share flexibility (up to 50%) and strong emphasis on multi-benefit projects that deliver safe drinking water to low-income communities and measurable environmental benefits. It prioritizes infrastructure that improves operational flexibility, drought resilience, and water delivery efficiency, while expanding eligibility for states, Tribes, municipalities, and water districts. The legislation also updates cost caps, funds habitat and endangered species restoration linked to Reclamation operations and creates a structured process to deauthorize long-inactive Reclamation projects to offset new spending—collectively positioning the bill as a major Western water infrastructure and resilience package.

Weather Research and Forecasting Innovation Reauthorization Act of 2026: S.3923 – Senator Ted Cruz introduced S. 3923 on February 25, 2026 to improve the weather research of the National Oceanic and Atmospheric Administration, support improvements in weather forecasting and prediction, and expand commercial opportunities for the provision of weather data. Of note is Section 402 hazardous weather or water event risk communication which addresses identifying, eliminating, or modifying unnecessary, redundant, or confusing terms for hazardous weather and water event communications and add new terminology, as appropriate.

PFAS: S.4153 - Forever Chemical Regulation and Accountability Act of 2026. On March 19, 2026, Rep. Betty McCollum and Sen. Dick Durbin reintroduced the Forever Chemical Regulation and Accountability Act (H.R. 8016 / S. 4153), a comprehensive PFAS bill aimed at eliminating non-essential PFAS uses across the U.S. supply chain. The legislation would launch a National Academies (NASEM) study to assess PFAS risks and define "essential vs. non-essential" uses, require all PFAS manufacturers and users to disclose PFAS use and submit 10-year phase-out plans, and direct EPA to prohibit releases of PFAS and phase out non-essential production within a decade. It sets product-specific deadlines (e.g., rugs, furniture, children's products), establishes regional PFAS rapid-response hubs, funds EPA oversight through fees, and strengthens accountability by limiting bankruptcy shields for PFAS claims. The bill also amends CERCLA to toll state statutes of limitations for newly designated hazardous substances like PFAS. Companion versions were previously introduced in April 2024.

PFAS: H.R. 6686 - Clean Water Standards for PFAS Act of 2025 was introduced by Rep. Pappas (D-NH) along with Brian Fitzpatric (R-PA) on December 12, 2025 and was referred to the Committee on Transportation and Infrastructure. The bill establishes effluent limitations guidelines and standards and water quality criteria for perfluoroalkyl and polyfluoroalkyl substances under the Federal Water Pollution Control Act, and for other purposes. Note that the requirement is no later than three years after enactment of the Act.

PFAS: H.R. 6626 - PFAS Accountability Act of 2025 was introduced by Rep. Madeleine Dean (E- PA) along with co-sponsors: Reps. Dingell, Nadler and Tlaib) on December 11, 2025. The bill is to amend the Toxic Substances Control Act to codify a Federal cause of action and a type of remedy available for individuals significantly exposed to per- and polyfluoroalkyl substances, to encourage research and

accountability for irresponsible discharge of those substances, and for other purposes. The bill was referred to the Committee on Energy and commerce and the committee on Judiciary.

PFAS: H.R. 1267 - Water Systems PFAS Liability Protection Act (2025) was introduced by Marie Gluesnkamp Perez (D- WA) but with heavy Republican co-sponsorship (including Rep. Celeste Maloy, Rep. Darin LaHood, Rep. Neal Dunn, Rep. Brian Fitzpatrick, among others) on February 12, 2023. The bill seeks to limit CERCLA (Superfund) liability for certain water entities handling PFAS (important for utilities managing PFAS pass-through) to shield community water systems from CERCLA liability for contamination caused by upstream sources. There has been no further action since the bill was introduced.

PFAS National Drinking Water: H.R. 4168 - PFAS National Drinking Water Standard Act of 2025 was introduced by Brian Fitzpatick (R-PA) on June 26, 2025, with eight co-sponsors. The bill codifies national PFAS drinking-water standards in statute, potentially locking key elements of the rule and timelines. There has been no further action since the bill was introduced.

PFAS and SDWA: H.R. 4880 - Primacy Certainty Act of 2025 was introduced by Dan Crenshaw (R-TX) on August 5, 2025. The bill amends the Safe Drinking Water Act (SDWA) to impose strict timelines on EPA for deciding whether to approve or deny a state Underground Injection Control (UIC) program for Class VI wells (CO_2 sequestration). While not PFAS-specific, it directly amends SDWA and affects how underground injection, which can impact groundwater and drinking water sources, is regulated. It is a key Republican water-infrastructure / SDWA bill in this Congress, often discussed alongside broader "permitting reform" debates that also affect water projects. The bill was referred to the House Committee on Energy and Commerce.

PFAS and SDWA: S. 2505 - Primacy Certainty Act of 2025 was introduced Dan Sullivan (R-AK) on July 29, 2025 and is the companion bill of HR 4880. The bill was read twice and referred to the Committee on Environment and Public Works.

Clean Water SRF: H.R. 3902 - Clean Water State Revolving Fund (SRF) Parity Act of 2025 was introduced by Jimmy Patrons (R-FL) on June 13, 2025. The bill proposes additional CWA permitting changes. There has been no further action since the bill was introduced.

Clean Water SRF:H.R 3862 - Clean Water SRF Parity Act of 2025 was introduced by Mike Bost (R-IL) on June 10, 2025. The bill aims to change how the federal government and states share responsibility under the Federal Water Pollution Control Act (often called the Clean Water Act), particularly Section 404 (which deals with permits for dredge or fill activities in waters). It shifts more permitting responsibility toward states and aims to make it faster and less burdensome for states to get approval to run their Section 404 programs. The bill has been referred to the House Committee on Transportation & Infrastructure and its Subcommittee on Water Resources & Environment.

Cybersecurity: H.R. 5079 - Widespread Information Management for the Welfare of Infrastructure and Government Act was introduced by Mike Garbarino (R-NY) on September 3, 2025. The bill reauthorizes the 2015 Cybersecurity Information Sharing Act for 10 years, keeps liability protections for private entities

sharing threat intel with the federal government, adds oversight/AI language, and requires the Department of Homeland Security outreach to small/rural critical infrastructure owners (which includes water utilities). The bill was referred to the House Committees on Homeland Security, Oversight & Government Reform, Intelligence (Permanent Select), Energy & Commerce, Armed Services, and Judiciary.

Cybersecurity: H.R. 2594 - Water Risk and Resilience Organization was introduced by Eric Crawford (R-AR) on April 2, 2025. The bill aims to set up a new organization and regulatory framework focused on boosting the cybersecurity and resilience of large water systems. A key element is that the bill creates a Water Risk and Resilience Organization to develop cybersecurity risk and resilience requirements for those covered water systems. The bill was referred to the House Committee on Transportation & Infrastructure and also to the Committee on Energy & Commerce.

In addition to the above we are tracking updates to the Water Resources and Development Act, Clean Water Act, and Safe Drinking Water Act.

2026 Florida Legislative

SESSION REPORT

CORCORAN | PARTNERS

EXECUTIVE SUMMARY

On January 13, the legislature gaveled in for the 60-day legislative session, with each house moving quickly out of the gate to pass some of their top priorities. The Senate President's Rural Renaissance package and a bill to repair the troubled school voucher system were sent to the House in the first week. At the same time, the House sent the Senate measures to lower the age limit to buy a gun from 21 to 18 and expand wrongful death actions to include unborn children. By session midpoint, however, neither chamber had moved the other's priority bills.

This stalemate left key policy issues -- including property tax reform -- in limbo as the session moved into the final stretch. After the Governor announced in January that a special session would be held on April 20-24 to address Congressional Redistricting, he suggested that another special session could be needed on property taxes if the legislature did not address the issue during the regular session. While the House had been developing its proposals since it formed a Select Committee last year to study the issue, no concrete plan emerged from the Senate or Governor as the session drew to a close.

The stasis deepened as it became apparent that the budget would be delayed over a standoff between the chambers. It began with the question of who would release its budget first. The House, which "hosted" the budget this year, eventually put forward its bill at the end of Week 5, leading to the immediate release of the Senate budget and each chamber's approval of their respective proposals at the end of the following week. Along with the House budget, the lower chamber sent the Senate a bill proposing a constitutional amendment to gradually eliminate the non-school portion of homestead property taxes over 10 years.

As a result of ongoing concerns about out-year spending that had reached record highs in the aftermath of the COVID-19 pandemic, legislators reigned in discretionary spending for a second consecutive year to avoid a budget shortfall over the next two-to-three years. The House proposed a $113.6 billion budget while the Senate passed a $115 billion spending plan, a $1.4 billion difference. Both budgets were below the $115.1 billion lawmakers allotted for the current fiscal year and lower than the $117.35 billion the Governor had called for in his proposed budget for FY 2026-27.

By the end of Week 8, however, lawmakers had yet to begin formal budget conference negotiations. House leadership acknowledged a fundamental disagreement about overall spending, with the House pushing for a smaller budget and the Senate supporting higher funding levels. While negotiations over how much to allocate to each budget silo continued, the budget impasse made it inevitable that the budget would not be completed on time.

On the eve of the final day of session, chamber leaders announced that the legislature would adjourn the regular session on March 13 and return to Tallahassee in mid-April for a Special Session to finish negotiations on the spending plan, although no date for the budget special session has yet been announced. In addition to the budget, Senate leadership announced that property tax relief will also be addressed during the budget special session.

EXECUTIVE SUMMARY (CONTINUED)

Entering the final week, only 53 bills had passed both chambers. A flurry of legislation passed in the final days of the session, with the legislature ultimately clearing 237 measures of 1,926 filed (32 bills fewer than the 269 bills passed last session and almost 100 bills shy of the 325 bills passed in 2024) before adjourning in the afternoon of March 13.

Major legislation that did not make it across the finish line included bills proposing to: lower the gun-buying age; overhaul the school voucher system; expand the use of the E-Verify employee verification system to all businesses regardless of size; eliminate Florida's no-fault motor vehicle insurance law; allow parents to file wrongful death lawsuits over the loss of an unborn child and assert a conscience-based objection to school vaccination requirements; establish a bill of rights for human interactions with artificial intelligence; and provide a "rural renaissance" through funding and support to rural communities. Some of these issues may be revived during the budget special session.

The following provides an overview of the budget and tax package as they stood at the end of the regular session on March 13, as well as some of the major bills passed by both chambers during this legislative session.

MAJOR BILLS

FY 2026-2027 BUDGET

HB 5001 – General Appropriations Act
SB 2500 – Appropriations

The House and Senate General Appropriations Act (GAA) and related implementing and conforming bills remained unresolved by the end of the regular session on March 13. With the chambers continuing to negotiate top-line spending levels, lawmakers are expected to return to Tallahassee in April to finalize the budget. Major differences between the two chambers in the education silo include whether $4.5 billion in private school scholarship costs should be included in the public-school funding formula, and whether to accept the Senate's plan include a 3% across-the-board raise for state employees with additional increases for law enforcement and other public safety workers or the House's more targeted pay raises and changes to the state employee health plan to address a projected $362 million shortfall. On the environment, the Senate has proposed $35 million for the Florida Forever land conservation initiative, while the House provides no funding and instead allocates $300 million to the Rural and Family Lands Protection Program. The House and Senate also differ on funding for disaster preparedness and immigration enforcement, with the Senate proposing $250 million and the House $100 million with tighter oversight. Similarly, the Senate has allocated more than $510 million for affordable housing programs, including funding for the Hometown Heroes Housing Program and the State Housing Initiatives Partnership Program, while the House proposes significantly less. In addition, the Senate includes $50 million for the Florida Job Growth Grant Fund which the House does not fund, and the Senate proposes $204.5 million to support the citrus industry compared with just $4 million in the House plan.

APPROPRIATIONS BREAKDOWN

HOUSE BREAKDOWN

	Count	% of Projects Reaching Stage		Funds	% of Funds Reaching Stage

TAXATION

HB 7031 – Taxation

While the tax package will need to be considered and passed during the upcoming special session on the budget, when it became clear that no deal would be reached between the House and Senate on budget allocations, the legislature passed a tax compliance bill that updates the state's corporate income tax statute to align with federal law, but rejects two corporate tax cuts in the Big Beautiful Bill Congress passed last summer. The bill "decouples" Florida law from federal law regarding two federal provisions -- Internal Revenue Code §168(n) and §174A -- maintaining the state's current posture on special accelerated depreciation for certain domestic production facilities and a new deduction relating to domestic research and experimental expenditures research and experimental (R&E) expenses, respectively. The change is estimated to save the state an estimated $3.5 billion in lost corporate tax revenues. Subject to the governor's veto powers, the bill is effective upon becoming law and applies retroactively to January 1, 2026.

AFFORDABLE HOUSING

CS/CS/HB 1389 - Affordable Housing

The legislature revamped the Live Local Act for a third time to incentivize affordable housing development. The bill expands Florida's affordable housing preemptions on local governments by requiring counties and cities to allow multifamily and mixed-use developments in areas zoned for commercial, industrial or mixed use if at least 40% of the units are offered at affordable rates for 30 years minimum. The bill also expressly permits affordable housing development on property owned by a religious institution that is more than 3 acres in size and has contained a house of public worship for at least 10 years. In addition, the bill adjusts property-tax rules for affordable housing projects, waives sovereign immunity for housing discrimination lawsuits, and requires a state analysis of using tiny homes to increase housing supply. A provision requiring local governments to streamline approval of accessory dwelling units (known as "granny flats") was removed from the bill. The bill is effective July 1, 2026, if approved by the Governor.

AGRICULTURE

CS/CS/CS/SB 290 – Department of Agriculture and Consumer Services

This wide-ranging agriculture and consumer protection package expands legal protections for farmers while preempting certain local regulations and updating multiple statutes administered by the Department of Agriculture and Consumer Services. The bill extends Florida's agricultural disparagement law beyond just perishable foods, allowing food producers to sue individuals or the media for making false, non-scientific claims that any agricultural products or practices are unsafe. Supporters say this will protect producers from harmful misinformation while critics warn it could chill public debate. The bill also preempts local government from restricting gas-powered equipment such as leaf blowers and farm equipment, allows homeowners to prohibit commercial (not political or religious) door-to-door solicitation through posted signage, and updates licensing, enforcement authority, and consumer protection programs. If signed by the Governor, the bill takes effect July 1, 2026.

ANIMAL WELFARE

CS/HB 559 – Animal Welfare
CS/SB 1004 – Domestic Animals

CS/HB 559 creates a third-degree felony offense for adults who cause or entice a minor to commit, or commit in the presence of a minor, aggravated animal cruelty, fighting/baiting an animal, or engaging in sexual activities involving animals. A juvenile court must order a minor who commits an animal cruelty offense to undergo a psychological evaluation and, if recommended, receive counseling or treatment. A minor's parent or guardian can be held in contempt if they willfully refuse to follow the recommended treatment for the minor. CS/SB 1004 expands animal cruelty offender reporting, strengthens consumer protections in pet sales, and establishes voluntary best management practices for dog breeders. Among other provisions, the bill requires the Florida Department of Law Enforcement to create a website listing the personal identifying information of convicted animal abusers, provides a three-day waiting period for financed pet purchases, and requires pet dealers to provide an animal's medical records and written notice to the consumer before purchase that an animal can be returned for a refund, exchange or reimbursement for veterinary expenses. Pet dealers who violate these requirements can be sued for deceptive practices. The bill also requires the Department of Business and Professional Regulation to develop a list of best management practices that dog breeders may voluntarily adopt, including minimum standards of care, facility operations, and breeding practices to protect animal welfare. CS/HB 559 takes effect on October 1, 2026, and CS/SB 1004 takes effect July 1, 2026, if approved by the Governor.

ATHLETICS

CS/CS/SB 178 – Athletics in Public K-12 Schools
CS/CS/CS/SB 538 – Extracurricular Activities

CS/CS/SB 178 allows head coaches to use personal funds for items such as food, transportation, or recovery services to a student they coach, provided the assistance is given in good faith, the student's parent provides written consent, and the coach reports the expenditure to the association. The bill establishes a presumption that such support is not an impermissible athletic benefit, unless it is unreported, determined by the FHSAA to be in bad faith, or used for recruiting purposes. The legislation also caps the amount a head coach may spend at $15,000 per athletic team per year and limits the practice to one head coach per team. CS/CS/CS/SB 538 establishes that students across educational settings -- including public, charter, private, home education, and virtual school -- can participate in extracurricular activities at schools other than the one they attend, provided their current school does not offer the activity. It also allows schools to charge participation fees (generally capped at $400 per activity) and makes parents responsible for student transportation to activities when participating at another school. If signed by the Governor, both bills go into effect July 1, 2026.

CIVIL JUSTICE

HB 145 – Suits Against the Government

HB 145 increases the caps on the recovery of civil damages against a state or local governments from $200,000 to $350,000 for a single person injured by a government entity

and from $300,000 to $500,000 for multiple claims or judgments arising out of the same incident. A subdivision of the state is allowed to settle a claim or judgment above the caps without requiring the subdivision to seek further action by the Legislature. The bill also revises certain statutes of limitation and presuit procedures for certain types of claims against government entities and allows claims arising from sexual battery involving a victim who was younger than 16 years of age at the time of the act to be brought at any time. If signed by the Governor, the bill takes effect October 1, 2026.

CRIMINAL LAW

CS/CS/HB 1471 – Systems of Law and Terrorist Organizations
HB 1471- Systems of Law and Terrorist Organizations

CS/CS/HB 1471 creates a new state framework addressing the use of foreign or religious law in Florida courts and expands Florida's criminal and administrative laws related to terrorist organizations. Courts are prohibited from applying foreign or religious law if doing so would violate rights guaranteed by the U.S. or Florida Constitutions. The State's Chief of Domestic Security is authorized to designate and publish a list of domestic or foreign terrorist organizations, subject to review by the Governor and Cabinet. The bill criminalizes membership in, knowingly providing material support to, or receiving military-type training from such groups with intent to harm others. The State is also authorized to administratively dissolve corporations tied to designated terrorist organizations. Public entities -- including school districts and public colleges and universities -- are prohibited from funding or contracting with designated groups, while students who promote the organizations are subject to expulsion and loss of financial aid. CS/CS/HB 1473 exempts from disclosure certain sensitive information relating to the designation of terrorist organizations to protect state and national security. The bills take effect July 1, 2026, if approved by the Governor.

DOMESTIC VIOLENCE

CS/CS/HB 277 – Domestic Violence and Protective Injunctions
CS/SB 296 – Victims of Domestic Violence and Dating Violence
CS/CS/HB 397 – Violations of Pretrial Release Conditions for Violent Crimes

CS/CS/HB 277 increases penalties for repeat domestic violence offenders, boosts the victim-relocation allowance from $1,500 to $2,500, allows threats and cruelty to pets and service animals to be included in protective injunctions, and creates a pilot program in Pinellas County allowing courts to require electronic monitoring for certain offenders on probation. CS/SB 296 defines "dating violence" and allows a victim of dating violence to apply to participate in the Attorney General's address confidentiality program. The bill also requires a feasibility study on a specialized web-based 911 alert system designed to provide faster and more discreet access to law enforcement. CS/CS/HB 397 creates a new criminal offense for willfully violating an order of no contact imposed by a court as a condition of pretrial release after a person was arrested for committing specified violent offenses, including domestic violence. If approved by the Governor, CS/CS/HB 397 takes effect October 1, 2026, with the remaining two bills effective July 1, 2026.

EDUCATION

CS/CS/HB 757 - School Safety
CS/CS/HB 1279 – Education
CS/HB 1115 – Grants for Genetic Counseling Education
CS/SB 1246 – Linking Industry to Nursing Education Fund
CS/CS/CS/SB 1690 – Child Care and Early Learning Services

CS/CS/HB 757 allows public colleges and universities to appoint trained faculty and employees to carry firearms for protection purposes and requires sheriff's offices to help institutions that choose to participate in setting up "guardian" programs and provide safety training. CS/CS/HB 1279 makes changes across K-12, career education, and higher education. The bill revises rules for vocational rehabilitation services, updates dual enrollment and virtual instruction requirements, changes standards affecting Florida College System institutions, state universities, and career centers, and authorizes students to carry FDA-approved epinephrine delivery devices rather than only auto-injectors. CS/HB 1115 establishes a new Genetic Counseling Education Enhancement Grant Program within the State University System, while CS/SB 1246 expands Florida's Linking Industry to Nursing Education (LINE) Fund to create new opportunities for collaboration between nursing education programs and health care partners to increase the number of nurses entering the workforce. CS/CS/CS/SB 1690 updates licensing standards, definitions, and minimum safety requirements for early childhood education and child care, including applying baseline standards to certain previously exempt providers. If signed by the Governor, CS/CS/HB 757 is effective upon becoming law, and the remaining bills would go into effect July 1, 2026.

ELECTIONS

CS/HB 91 – Candidate Qualification
CS/CS/HB 991 – Elections

CS/HB 91 requires candidates to maintain a consistent party affiliation or no affiliation, and refrain from name changes (other than for marriage, divorce or adoption) for 365 days before qualifying. CS/CS/HB 991—which is effective after the upcoming elections--expands citizenship verification for voter registration, tightens candidate qualification rules and revises what forms of identification voters may present at the polls. Acceptable documents for voter registration include a passport, birth certificate, naturalization records, or other specified federal or state identification. DHSMV must include a person's legal citizenship status on Florida driver licenses and identification cards beginning January 1, 2027. Florida's online voter registration system would compare applicants' IDs against DHSMV records and record the applicant's citizenship status in the statewide voter registration system. If proof of citizenship is not on file, the application is forwarded to the county Supervisor of Elections to verify citizenship status using available state and federal records and document the type of evidence used to confirm eligibility. Beyond voter registration, the legislation revises the types of identification voters may present at polling places. Current Florida law allows voters to use student identification cards and retirement facility identification cards as photo ID. The bill removes both from the list of acceptable identification. CS/HB 91 is effective upon the Governor's approval, while CS/CS/HB 991 is effective January 1, 2027, if approved by the Governor.

EMPLOYMENT

CS/CS/SB 1296 – Public Employees Relations Commission

CS/CS/SB 1296 increases regulatory oversight of public employee unions and updates the framework governing collective bargaining and union certification for public employees. Under the revised framework, unions must submit detailed membership data and may be required to seek recertification through a new election. For most bargaining units (except for many public-safety units), the election requires at least 50% of all employees in the bargaining unit to participate in the election, and the union must receive a majority of the votes cast to remain certified. If turnout falls below 50%, the union is not recertified, even if it wins a majority of the votes actually cast. The legislation establishes procedures for recertification elections, requires unions to maintain records of membership authorizations and revocations, and restricts public employer involvement in collecting union dues except in certain public safety bargaining units. The bill also expands the PERC's authority to conduct investigations, issue subpoenas, and manage certification and dispute proceedings. The bill is effective July 1, 2026, if approved by the Governor.

ENVIRONMENT

CS/CS/SB 302 – Coastal Resiliency
CS/CS/HB 1019 – Perfluoroalkyl and Polyfluoroalkyl Substances
CS/CS/HB 1245 – Biosolids Management
CS/HB 1217 – Prohibited Governmental Policies Regulating Greenhouse Gas Emissions

CS/CS/SB 302 expands nature-based coastal protection while strengthening safeguards for sensitive aquatic preserves. The bill directs the Florida Department of Environmental Protection to develop clearer statewide standards by 2027 for nature-based coastal protection methods and includes protections for the Terra Ceia Aquatic Preserve in Manatee County and the Biscayne Bay Aquatic Preserve in Miami. CS/CS/HB 1019 bans the use of firefighting foam containing "forever chemicals," including perfluoroalkyl and polyfluoroalkyl (PFAS) chemicals linked to cancer and other health risks, except for airports and military applications or emergency firefighting situations where alternatives do not exist. CS/CS/HB 1245 limits how certain waste-derived fertilizers can be distributed and applied, restricting the land application of bulk Class AA biosolids to appropriate agronomic rates. CS/HB 1217 prohibits state and local governments from adopting or enforcing "net-zero" or greenhouse gas reduction policies, marking a significant shift in how climate-related initiatives can be pursued at the local level. If signed by the Governor, CS/CS/HB 1245 would be effective November 1, 2026, and the remaining three bills would go into effect July 1, 2026.

FOREIGN INFLUENCE

CS/CS/CS/HB 905 – Foreign Influence

The legislation expands ethics restrictions and transparency requirements aimed at preventing foreign governments of concern, or their proxies, from influencing Florida officials and institutions. The bill targets governments classified in Florida law as "foreign countries of concern," including China, Russia, Iran, North Korea, Cuba, Venezuela under the Nicolás

Maduro regime and Syria. The bill restricts government participation in sister-city relationships with foreign countries of concern, and repeals the Florida-China Institute, a state linkage program connecting Florida universities with Chinese institutions. It also authorizes tax collectors and local governments to revoke or refuse to renew business tax receipts for companies doing business with Cuba in violation of federal law. In addition, the bill as amended bans preplanned adoption agreements or gestational surrogacy contracts if the surrogate or parents are citizens or residents of a foreign country of concern. The bill is effective July 1, 2026, if approved by the Governor.

HEALTH CARE

CS/HB 355 – Health Care Patient Protection
CS/HB 697 – Drug Prices and Coverage
CS/HB 809 – Temporary Certificates for Practice in Areas of Critical Need

CS/HB 355 requires AHCA to work with the Florida Emergency Medical Services for Children program to establish minimum standards for pediatric emergency care and collect and publish hospital pediatric readiness scores to increase transparency and accountability in emergency care for children. It also requires hospitals to adopt evidence-based policies and procedures for pediatric emergency care, including standards for triage, vital signs, weight measurement in kilograms, medication dosing, and the use of pediatric equipment. Hospitals must also conduct annual training and emergency simulation drills for staff and designate a pediatric emergency care coordinator responsible for implementing and overseeing these policies.

CS/HB 697 bars Pharmacy Benefit Managers (PBMs) from reimbursing affiliated pharmacies more than non-affiliated pharmacies for the same services and prohibits PBMs from forcing pharmacies to dispense medication if reimbursement is below the drug's acquisition cost. A controversial provision to establish a most-favored-nation upper payment limit for prescription drugs based on an international market index was removed from the bill. The bill also provides bridge funding to DHS for the AIDS Drug Assistance Program (ADAP) through June 30, 2026. CS/HB 809 authorizes allopathic physicians and physician assistants (Chapter 458), osteopathic physician and physician assistants (Chapter 459), and advanced practice registered nurses (Chapter 464) to continue to provide services to existing primary care patients if an area of critical need loses its designation, allowing continuity of care for primary care patients in these areas. If approved by the Governor, CS/HB 355 and CS/CS/697 are effective July 1, 2026, and CS/HB 809 is effective upon becoming law.

LAND USE DEVELOPMENT

CS/CS/CS/HB 399 – Land Use and Development Regulations
CS/CS/HB 803 – Building Permits and Inspections
CS/CS/CS/HB 927 – Local Land Planning & Development

CS/CS/CS/HB 399 makes broad changes to Florida's land use and development laws, with lawmakers targeting local permitting, housing siting, and development review standards. The bill requires application fees for development permits and orders to be tied to review costs, directs local governments to administratively approve certain minor special exceptions and

variances for qualifying large destination resorts, and requires local land development regulations to be reasonable and uniformly enforced. The measure also expands housing-related provisions by preventing residential manufactured buildings from being denied permits on certain lots, requiring some off-site constructed homes to be allowed as of right in certain zoning districts, and adding compatibility standards for certain residential uses.

CS/CS/HB 803 overhauls Florida's building permit and inspection process to speed up approvals and standardize requirements across local governments. The bill revises timelines for issuing permits, requires more uniform application forms, and expands the use of private providers to conduct building inspections. The measure also limits when local governments can require permits, including prohibiting permits for certain minor structures, and prevents associations from requiring permits as a condition of architectural review. It further directs the Florida Building Commission to create statewide standardized permit applications for residential and commercial projects. CS/HB 927 requires counties with a population of 75,000 or more and municipalities with a population of 10,000 or more to establish a qualified contractor registry by January 1, 2027, to conform to an expedited pre-application review process of plans, permits, or plats submitted as part of compliance with a local government's land development regulations. If signed by the Governor, CS/CS/CS/HB 399 goes into effect upon becoming law, and CS/CS/HB 803 and CS/CS/CS/HB 927are effective on July 1, 2027.

LOCAL GOVERNMENT

CS/HB 967 – Electronic Payments Made to Units of Local Governments
CS/CS/HB 1103 – Local Administration of Vessel Restrictions
CS/CS/SB 1134 – Official Actions of Local Governments

CS/HB 967 requires local governments to accept credit cards, debit cards and other electronic funds transfers for obligations such as taxes, license fees, fines, civil penalties and court-ordered payments and add a processing surcharge. CS/CS/HB 1103 allows local government to issue citations for non-criminal infractions related to derelict vessels and long-term anchoring permits, and allows cities and counties to regulate vessel speed and operation within 300 feet of a confluence of water bodies presenting a blind corner, up to a distance of 1,000 feet, if the extended area is necessary to ensure safe navigation and visibility for approaching vessels. CS/CS/SB 1134 prohibits counties and municipalities from funding or implementing diversity, equity, and inclusion (DEI) programs and creates enforcement provisions allowing legal action against noncompliant local governments. If approved by the Governor, CS/HB 967 and CS/CS/SB 1134 would go into effect on January 1, 2027, and HB 1103 would be effective July 1, 2026.

NON-PROFIT GOVERNANCE

CS/CS/HB 797 – Nonprofit Corporations

The bill revises Florida statutes governing nonprofit corporations to conform to the Model Nonprofit Corporation Act and align with related provisions of the Florida Business Corporation Act. The update is largely technical but designed to clarify governance standards and provide

nonprofits with more modern operating tools. The bill provides structural changes affecting nonprofit boards and membership organizations, including clearer fiduciary duties for officers and directors, updated liability protections for nonprofit leadership, revised rules governing board vacancies and meetings, and modernized provisions allowing remote participation in board meetings. It also clarifies voting procedures, proxy rules, and record-inspection rights for members and directors. In addition, the bill establishes that the Department of Legal Affairs may bring an action to prevent a foreign nonprofit corporation from illegally conducting business in the state. The bill is effective July 1, 2026, if approved by the Governor.

PERSONS WITH DISABILITIES

SB 418 – Law Enforcement Officer Interactions with Individuals with Autism Spectrum Disorder
CS/HB 915 – Medical Assistance Eligibility for Working Individuals with Disabilities
HB 1405 – Statewide Project for Missing Persons with Special Needs

SB 418 Creates a blue envelope and blue card program or individuals with autism spectrum disorder to facilitate improved communication with law enforcement during traffic stops or any law enforcement interaction. The envelope holds identification and vehicle documents and includes guidance for officers, while the blue card is a portable digital or wallet-sized option that contains the same information as the envelope. The bill also requires law enforcement training on how to recognize autism and safely interact with people on the spectrum. CS/HB 915 codifies the Working People with Disabilities Program (Program) created by the 2019-2020 General Appropriations Act to allow working individuals with disabilities to maintain Medicaid benefits while earning additional income. HB 1405 bill revives and expands a statewide program that expired in 2019— the Missing Persons with Special Needs Statewide Project, known as Project Leo -to provide personal search-and-rescue devices to help locate persons with special needs if they wander from care. If approved by the Governor, SB 418 and HB 1405 are effective July 1, 2026, and CS/HB 915 is effective upon becoming law.

TRANSPORTATION

SB 488 – Transportation

SB 488 streamlines licensing for motor carriers, revises fuel tax requirements, updates definitions affecting vehicles and drivers, and modernizes regulations for e-mail notifications, crash reporting, license plate frames, and franchise agreements. Specifically, the bill requires motor carriers to obtain licenses rather than simple registrations, replaces identifying devices with fuel tax decals, and requires tax filings, decal renewals, and other reporting to be submitted electronically through a state system beginning in 2026. SB 488 also revises reporting periods for fuel-use tax returns, establishes penalties for counterfeiting or altering fuel tax licenses or decals, and updates enforcement provisions related to motor carriers operating without proper authorization.

The bill also makes numerous vehicle and transportation policy changes. These include increasing the property-damage threshold requiring drivers to report crashes to law

enforcement from $500 to $2,000, clarifying that license plate frames are allowed if they do not obscure plate numbers or registration stickers, allowing certain driver license and vehicle registration notices to be sent by email, and updating several vehicle dealer franchise rules and vehicle registration procedures. It also limits certain local government requirements affecting communications infrastructure placed in rights-of-way and updates various definitions and administrative procedures throughout Florida transportation statutes. If approved by the Governor, SB 488 is effective October 1, 2026.

UTILITIES

SB 288 – Rural Electric Cooperatives
CS/CS/SB 484 – Data Centers
CS/CS/HB 1451 – Utility Services

SB 288 prevents rural electric cooperatives that sell electricity at retail from imposing financial or regulatory barriers that limit consumer choice regarding energy sources or appliances permitted under state law. CS/CS/SB 484 creates regulatory guardrails to manage the energy, water, and infrastructure impacts of data centers while protecting other utility customers and preserving local land-use authority. The bill seeks to ensure that residents do not pay more for utilities because these data centers - which house computers that store and process large amounts of data - use a large amount of these resources. Before passing the bill, lawmakers eliminated a provision that would have restricted nondisclosure agreements between governments and data center companies. CS/CS/HB 1451 requires more transparency and public input for utility services provided outside municipal boundaries and limits rate differential to 25% above in-city rates for out-of-city customers, with any existing surcharges phased out by 2029 or upon satisfaction of associated debt. If signed by the Governor, SB 288 and CS/CS/SB 484 are effective July 1, 2026, and CS/CS/HB 1451 is effective July 1, 2027.

TAMPA BAY WATER
Supplying Water To The Region

AGENDA ITEM A.4

DATE: April 1, 2026

TO: Board of Directors

THRU: Charles H. Carden, General Manager

FROM: Warren Hogg, Chief Science Officer

SUBJECT: Regional Water Supplies, Member Demands and Environmental Conditions - *Receive Report*

SUMMARY

This item provides the status of Tampa Bay Water's water demand and water supply conditions including hydrologic conditions, climate, surface water and reservoir management, and source rotation. Water Shortage Mitigation Plan status and an outlook for the spring and summer seasons are also included. Tampa Bay Water continues to work with Hillsborough County to implement supply and demand management measures in the South Hillsborough County service area. Extended drought conditions triggered a Stage III Regional Supply Shortage on March 1, based on Tampa Bay Water's approved Water Shortage Mitigation Plan. The Southwest Florida Water Management District implemented a modified Phase III Extreme Water Shortage condition for their 16-county region, including the Tampa Bay area, on March 24, 2026, limiting outdoor irrigation to one-day-per-week along with other restrictions through July 1, 2026. Staff will closely monitor the drought conditions in our region and manage the potential constraints on our supply sources as we move through the annual dry season.

DISCUSSION

A summary of our current water supply conditions is presented in the following sections. Staff are closely monitoring the drought conditions that currently exist as our region continues through the annual dry season. These drought conditions triggered a Stage III Regional Supply Shortage on March 1, based on Tampa Bay Water's approved Water Shortage Mitigation Plan. The Southwest Florida Water Management District (District) declared a Modified Phase III "Extreme" Water Shortage with outdoor water use restrictions beginning April 3, 2026, through July 1, 2026. Regular updates on our water supplies and member demands will be provided to the Board and member governments in the coming months.

Summary Highlights

Since the beginning of this fiscal year through March 31, 2026, the Agency delivered an average of 203.11 million gallons per day (mgd) to meet the member government demands. This is 7.94 mgd (4.1%) more water delivered than for the same period last year. The service area received an average of 1.36 inches and 2.18 inches of rainfall in February 2026 and March 2026, respectively. Monthly average flow in the Hillsborough River was at the low end of the normal range, at the 35th percentile and 46th percentile in February 2026 and March 2026, respectively. Monthly average flow in the Alafia River was below normal for the past two months, at the 11th percentile and 23rd percentile for February 2026 and March 2026, respectively. A summary of demand and hydrologic conditions are highlighted below:

- The region received an average of 1.36 inches of rainfall in February 2026, approximately 1.4 inches below the long-term average for February.
- The region received an average of 2.18 inches of rainfall in March 2026, approximately 1.3 inches below the long-term average for March.
- The Regional Reservoir storage volume was 5.77 billion gallons as of March 31, 2026 (about 37% full).
- The Tampa Bay Seawater Desalination Facility average production was 12.17 mgd and 15.12 mgd in February and March 2026, respectively.
- The 12-month running average pumping rate for the Consolidated Permit Wellfields was 92.49 mgd at the end of March 2026.
- The 12-month running average pumping rate for the South-Central Hillsborough Regional Wellfield was 26.39 mgd at the end of March 2025, which is below the new permit limit of 26.82 mgd.

Climate Outlook

The climate outlook issued by the National Oceanic and Atmospheric Administration (NOAA) on March 30, 2026, was a La Niña Advisory. La Niña climate conditions are now present and a transition from La Niña to a neutral condition is expected from May through early to mid-summer. This summer, an El Niño climate condition is predictd to emerge and persist through at least the end of 2026. An El Niño climate condition typically brings cooler and wetter conditions to the southeast United States in

the winter months. The 90-day climate outlook issued by NOAA on March 1, 2026, predicts average precipitation and above-normal temperatures in Florida for the period of April 2026 to June 2026.

Hydrologic Conditions

The Tampa Bay region received an average of 1.36 inches of rainfall in February 2026, approximately 1.4 inches below the long-term average for February. The region received an average of 2.18 inches of rainfall in March 2026, approximately 1.3 inches below the long-term average for March, based on average rainfall from all gauges throughout the service area (Figure 1). Below-average rainfall in consecutive months (September through November 2025) and in January through March 2026 led to substantial decreases in flow in both the Alafia River and Hillsborough River (Figure 2). Compared to March streamflow in historical years, river flows were at approximately the 46th percentile (normal) and the 23rd percentile (below normal) for the Hillsborough River and Alafia River, respectively.

- Average monthly flow in the Alafia River was 40 mgd and 46 mgd for February and March 2026, respectively.
- Average monthly flow in the Hillsborough River was 53 mgd and 51 mgd for February and March 2026, respectively.

Water Demand and Supply Summary

The Water Year 2026 budgeted annual delivery to Tampa Bay Water's member governments is 209.7 mgd. The budgeted water delivery is based on the Agency's long-term demand forecasting models and a planned annual average delivery of 4.0 mgd to the City of Tampa during the Water Year. Since the beginning of this fiscal year through March 31, 2026, the Agency delivered an average of 203.11 million gallons per day (mgd) to meet the member government demands (Figure 3). This is 7.94 mgd (4.1%) more water delivered than for the same period last year. Treated surface water primarily sourced from the Reservoir averaged 59.52 mgd and 49.68 mgd in February 2026 and March 2026, respectively. Surface water withdrawals and supply conditions for February and March 2026 were as follows:

- Average regional water withdrawal from the Alafia River was 1.74 mgd and 3.78 mgd in February 2026 and March 2026, respectively.
- No withdrawal from the Tampa Bypass Canal for regional supply occurred in February 2026 and March 2026.
- Average water diversion from the Regional Reservoir to support Regional Surface Water Treatment Plant production (net change in reservoir water storage) was 57.60 mgd and 45.90 mgd in February 2026 and March 2026, respectively.
- The City of Tampa's Hillsborough River Reservoir was at an elevation of 21.0 ft. at the end of March 2026.
- Average Harney Canal augmentation was 23.68 mgd and 23.09 mgd for February and March 2026, respectively.
- Average delivery of finished water to the City of Tampa at the Morris Bridge Point of Connection was 6.28 mgd and 8.92 mgd in February 2026 and March 2026, respectively.
- The Tampa Bay Seawater Desalination Facility average production was 12.17 mgd and 15.12 mgd in February 2026 and March 2026, respectively.

- The Regional Reservoir stored volume was 5.77 billion gallons at the end of March 2026 (about 37% full).
- Aggregate groundwater production from the 13 Tampa Bay Water wellfields averaged 129.25 mgd and 139.46 mgd in February 2026 and March 2026, respectively.
- Production from the Consolidated Permit Wellfields averaged 94.96 mgd and 106.93 mgd in February 2026 and March 2026, respectively.
- The 12-month running average withdrawal rate from the Consolidated Permit Wellfields was 92.49 mgd through March 31, 2026 (Figure 4).
- The 12-month running average water production rate from the South-Central Hillsborough Regional Wellfield was 26.39 mgd through March 31, 2026 (Figure 5). This is below the new permit limit of 26.82 mgd.

Comparison of total water production from different supply sources through the end of March between Water Year 2025 and Water Year 2026 is shown in Figure 6. Tampa Bay Water continues to work with Hillsborough County to implement supply and demand management measures in the South Hillsborough County service area. Additional regional water supply delivery to the Lithia Point of Connection through the Brandon Booster Station continues based on regional water availability. The South-Central Hillsborough Regional Wellfield Water Use Permit limit was increased in November 2025 to an annual average quantity of 26.82 mgd through a net-benefit transfer of groundwater credits acquired from two nearby donor water use permits. The 12-month running average pumping rate from the South-Central Hillsborough Regional wellfield is expected to approach the new permit limit late in the fiscal year due to the continued growth in water demand in the service area.

Environmental Conditions

Tampa Bay Water closely monitors the environmental conditions around Agency wellfields and this data is used to guide production and wellfield management decisions. Water levels in area lakes and wetlands have a strong relation to rainfall conditions and are currently lower than expected for this time of year due to the below-average rainfall and record-high temperatures in the spring and summer months of 2025 and the drought conditions that began in September 2025. General water level changes are summarized as follows:

- Groundwater levels generally decreased by about 1.1 feet during February 2026.
- Groundwater levels generally increased by about 0.6 foot during March 2026.
- Groundwater levels in February 2026 were generally 4.7 feet lower than in February 2025.
- Groundwater levels in March 2026 were generally 3.6 feet lower than in March 2025.
- Average water levels in the 10 indicator lakes and wetlands located on and near Consolidated Permit Wellfields decreased by about 5.7 inches through February 2026 (based on data collected throughout the month, not necessarily end-of-month).
- Average water levels in the 10 indicator lakes and wetlands located on and near Consolidated Permit Wellfields decreased by about 2.5 inches through March 2026 (based on data collected throughout the month, not necessarily end-of-month).
- Average water levels in the 10 indicator lakes and wetlands in February 2026 were about 35.1 inches lower than water levels in February 2025.

- Average water levels in the 10 indicator lakes and wetlands in March 2026 were about 28.4 inches lower than water levels in March 2025.

Water Shortage Mitigation Plan

The Board approved the updated Water Shortage Mitigation Plan (WSMP) in April 2017. The WSMP uses rainfall, stream flow, and reservoir storage as indicators of the health of the region's water supplies. Figure 7 shows the surplus/deficit for regional rainfall and Hillsborough River flow for the past year.

- The Tampa Bay Water service area is currently under a Stage III Regional Supply Shortage beginning March 1, 2026, based on deficit rainfall in the region, river flow deficit in the Hillsborough River, and forecast reservoir elevation at the end of May.
- Cumulative rainfall in the region was at an 11.0-inch deficit through March 2026.
- Stream flow was at a 25.0-mgd deficit through March 2026.
- The storage volume in the Regional Reservoir was 5.77 billion gallons (about 37% of full storage) on March 31, 2026.
- To exit the Stage III Regional Supply Shortage, the 12-month river flow deficit must be relieved to 5 mgd or less OR both current and forecasted reservoir levels must be above the Stage III exit levels. The region would then be in a Stage II Drought Warning condition.

Staff continue to work with the members in collecting watering restriction and conservation information, discussing and exploring various short-term and long-term demand management alternatives, implementing a consistent public awareness campaign throughout the region, and identifying additional opportunities to optimize existing water resources.

BACKGROUND

Data collection, analysis, and interpretation as well as decision-making are ongoing for a multitude of factors that influence and constrain Agency operations. These include hydrologic and environmental conditions, supply and demand conditions, treatment plant parameters, water quality constituents, along with equipment/machinery and infrastructure variables. A summary of monthly information is compiled and provided to the Board in each Agenda Packet and is supplemented as necessary. A summary of highlights is presented annually.

Supplying Water To The Region

AGENDA ITEM A.5

DATE: April 6, 2026

TO: Board of Directors

THRU: Charles H. Carden, General Manager

FROM: Maribel Medina, Planning and Projects Director

SUBJECT: South Hillsborough County Program Update - *Receive Report*

SUMMARY

Tampa Bay Water and Hillsborough County staff continue to develop additional pumping and transmission (pipeline) capacity to increase supply to rapidly growing South Hillsborough County through the August 2020 Memorandum of Understanding. A status report is provided at each regular meeting of the Tampa Bay Water Board of Directors until the projects are operational.

SUGGESTED ACTION

Receive Status Report.

COST/FUNDING SOURCE

N/A

DISCUSSION

Tampa Bay Water continues to meet with Hillsborough County staff to coordinate activities to increase wholesale system capacity to serve South Hillsborough County. Wholesale facilities under development or completed include: Brandon Booster Station - a new booster pump station on the existing Brandon Transmission Main to increase its capacity by at least 5 million gallons per day (mgd) (now fully operational). South Hillsborough Pipeline - a new pipeline system to deliver up to an additional 65 mgd of water supply. Acquisition of permitted quantities for transfer to existing and future Tampa Bay

Water wellfields. South Hillsborough Wellfield - a new freshwater wellfield located in the Balm area to deliver new water supplies to south Hillsborough County. The attached status report summarizes the status of the infrastructure projects, water supply projects and the current South-Central Hillsborough Regional Wellfield pumping rate.

BACKGROUND

Tampa Bay Water and Hillsborough County staff continue to develop additional pumping and transmission capacity to increase supply to rapidly growing South Hillsborough County. The August 2020 Memorandum of Understanding provides for a status report at each regular meeting of the Tampa Bay Water Board of Directors until the projects are operational.

In the 1980's, the West Coast Regional Water Supply Authority (the predecessor agency to Tampa Bay Water) constructed temporary supply, treatment and pumping facilities to maintain pressure on behalf of the County and constructed the South-Central Hillsborough Regional Wellfield, the Lithia Treatment Plant, the 42, 36 and 24-inch diameter south county transmission mains and Brandon Transmission mains. The agency retained the wellfield but turned over the treatment, pumping, and transmission facilities to the County.

Again, in the early 2000's, some of the facilities built in the 1980's were nearing capacity, and Tampa Bay Water constructed temporary pumping and treatment facilities under a joint project agreement for the County's use while the County completed construction of its Central Water Treatment and Pumping Facility.

April 2026-South Hillsborough County Program Update

South Hillsborough County Program Status Report

April 2026

Completed Projects:

- High Service Pump Station Expansion: 10 to 12 million gallons per day (mgd) average pumping capacity
- Lithia Control Valve Replacement: 1 mgd
- Brandon Booster Station: 5 to 7 mgd

Ongoing Projects:

South Hillsborough Pipeline (Project Nos. 01610/01616)

This project includes the design and construction of a new regional transmission main to serve the South Hillsborough County area. Upon completion, the pipeline will be capable of delivering up to an additional 65 mgd of new supply to South Hillsborough County.

The project is being cooperatively funded by the Southwest Florida Water Management District's (District) Cooperative Funding Initiative, with up to $147,954,000 allocated for eligible project costs.

Hillsborough County and Tampa Bay Water entered into a Joint Project Agreement (JPA) in October 2021 to fund Segment B. A Restated and Amended Joint Project Agreement was approved by Hillsborough County Board of County Commissioners (BOCC) and Tampa Bay Water Board in February 2025.

Completed and Ongoing Activities

Design and Project Management

- Pre-Issued for Construction (IFC) design documents for 2026 for Guaranteed Maximum Price (GMP) No. 3 were approved in January 2026. A final IFC design package is anticipated to be issued in March–April 2026.
- Construction costs and the project schedule will be updated upon issuance of the final IFC design documents and GMP No. 4, which includes all the points of connection for the pipeline.
- Risk Management efforts are ongoing, with the Risk Register updated I conjunction with GMP No.4.
- The 90% design submittal for the Regional Facilities Site-Alkalinity Adjustment Facility (Project No. 01617) was received on January 9, 2026, and review comments were provided to the consultant in February 2026. Due to significant electrical design changes, the design

was reverted to 75% level to incorporate the revised electrical scope. Final design submittal is anticipated in May 2026.

Construction

- Construction activities are currently underway at four (4) of the 17 PLANNED trenchless crossings.
- GMP No. 4, which covers work at the points of connection at the Regional Facilities Site-Alkalinity Adjustment Facility (Project No. 01617), the Lithia Water Treatment Plant, and the new Balm site is scheduled to be presented to the Board for approval in July 2026.

Permitting

- The following permits have been obtained:
    - Florida Department of Environmental Protection (FDEP) Environmental Resource Program (ERP)
    - U.S. Army Corps of Engineers (USACE)
    - Environmental Protection Commission (EPC)
    - Natural Resources (partial approval)
    - Right of Way
- Pending permits include:
    - FDEP Environmental Resource Program (ERP) for the Regional Facilities Site-Alkalinity Adjustment Facility (Project No. 01617), anticipated to be submitted to the Board in May 2026.
    - Florida Fish and Wildlife Conservation Commission permits

Public Information

Now that construction has started, outreach efforts have increased as the outreach team continues to keep the public, businesses along the route, the media and local officials apprised of construction activities and traffing impacts. Following are efforts for February and March 2026.

February 2026

- **Public engagement:** Created and sent six email blasts (five regarding construction and schedule, one encouraging residents to shop local) and emailed Hillsborough County Public Schools (HCPS), HART, Hillsborough County Fire Rescue and the local schools in the vicinity of the construction each time an alert regarding traffic changes was issued; hand-delivered mobilization start letter to 115 homes on the north side of the Alafia River and placed construction signs in the area; took photos and video of the Fishhawk HDD pullback and Kings/Bloomingdale microtunnel launch, created and posted a video reel on social media for the HDD pullback; created and distributed an article for homeowners' associations near tunnel sites to use in their member communications; communicated with

HCPS about refining our notification process for them; conducted a student sidewalk count in the vicinity of sidewalk closure on Fishhawk Boulevard and met twice with HCPS Transportation and Safety departments regarding the closure; placed signs and door hangers in the vicinity of the Lumsden crossing, created a leave-behind flyer for nearby businesses and conducted 15 in-person visits in advance of this lane closure detour; contacted HCA Brandon Hospital in advance of the closure; updated the Spanish version of the project fact sheet and posted it on the website; conducted a personal visit with one resident adjacent to Alafia construction; conducted a personal visit with the owners of the Mobil station on South Kings; in addition to in-person meetings, the team fielded 33 incoming stakeholder calls and emails, plus two complaints, for a total of 59 interactions.

- **Business Outreach:** Developed a leave-behind informational flyer and conducted in-person outreach to 15 businesses located near the upcoming Lumsden microtunnel construction area to provide advance notice of the work, explain traffic pattern changes, and detour routes to ensure businesses clearly understood how customers could continue to access their locations. Continued periodic check-ins with these businesses throughout to monitor any concerns and ensure they remain informed and supported during the project. Drafted promotional materials for the Mobil Station located at South Kings Avenue to help reinforce customer access during nearby construction activity. Created an informational flyer outlining the upcoming access road construction on Limona Road to support business awareness and provide clear communication regarding anticipated impacts and access routes.
- **Media Outreach:** Media outreach was conducted in advance of each construction milestone, including proactive coordination with traffic reporters to ensure accurate and timely public information. These efforts resulted in seven earned media stories, generating 58,175 impressions and nearly $6,000 in advertising value equivalency. Importantly, coverage extended beyond local outlets. *Underground Construction*, a national trade publication, featured the launch of tunneling operations for the South Hillsborough Pipeline, elevating the project's profile within the infrastructure and engineering community. Coverage helped reinforce transparency, highlight the project's technical complexity, and position Tampa Bay Water as a responsible steward of regional water infrastructure.

March 2026

- **Public Outreach:** Created and sent nine email blasts and emailed Hillsborough County Public Schools (HCPS), HART, Hillsborough County Fire Rescue and the local schools in the vicinity of the construction each time an alert regarding traffic changes was issued; emailed Hillsborough County Communications each time an alert was issued regarding a major traffic change; placed four image posts in Nextdoor and Facebook; delivered 16 door hangers regarding temporary parking and 28 door hangers regarding open-trench construction starting on South Kings Avenue, and placed 13 yard signs along South Kings

Avenue from Greenbriar to Alafia Boulevard; placed three yard signs in the Buckhorn Creek neighborhood; sent sidewalk closure copy regarding Fishhawk sidewalk closure to Newsome High School, Randall Middle, Barrington Middle and Bevis Elementary for distribution to parents/guardians; created and distributed an article for homeowners' associations in the Fishhawk area regarding the sidewalk closure; created and posted a video reel on social media on the benefits if tunneling under major roadways and waterways; conducted a personal visit with one resident adjacent to Alafia construction; conducted a personal visit with the owner of Bacon Egg & Cheese food truck; fielded 63 incoming stakeholder calls and emails, plus six complaints, for a total of 109 interactions. Additionally, members of the project team attended training on the one.network system to support Hillsborough County Transportation with detour information.

- **Business outreach:** Created an access road flyer for Limona Road/CSX tunnel location and distributed to two adjacent businesses ahead of the access road installation; spoke to both business owners; placed three 3-foot by 4-foot business signs, three additional feather flags, and five yard signs near the Limona Road/CSX tunnel location at the request and placed two additional yard signs at the request of the businesses. Created construction notice flyers using the Tampa Bay Water alert for Phase 1 of the South Kings Avenue closure and distributed to the businesses located in the lot south of the Mobil Station (area is home to three food trucks & one market) and Pediatric Dentistry of Brandon. Assisted in coordinating additional parking for Pediatric Dentistry of Brandon. Created updated construction notice flyers using the Tampa Bay Water alert and returned to the businesses affected by South Kings Avenue Phase 1 closure to update and inform them of the new start date and detours for the work. Created a construction notice flyer using the Tampa Bay Water alert for the median work that occurred along Boyette Road and informed 21 businesses near the construction site. Coordinated communications with a business on the route regarding a power line relocation and temporary power outage.
- **Media outreach:** In March, media outreach focused on proactive coordination with traffic reporters to clearly communicate lane closures and minimize commuter disruption, ensuring accurate, real-time information reached the public. At the same time, broader storytelling highlighted the project's critical role in meeting the region's growing water demand, including a feature package from Tampa Bay 28. Additional coverage reflected feedback from local businesses impacted by construction near the South Kings and Bloomingdale construction site. These combined efforts resulted in 50 total stories, generating a potential reach of 14,765,908 and an advertising value equivalency of $419,140.

Property Acquisition

- All parcels, except those owned by Hillsborough County and State agencies, have been turned over to legal counsel for negotiation and filing. A litigation schedule has been

prepared in alignment with the construction schedule. A detailed property acquisition status report is provided as a separate item in this agenda packet.

- Tampa Bay Water acquired nine (9) easements through an exchange of Lot 9 of Eastshore Commerce Park.
- Closed on three (3) Hillsborough County Water Resource Department easements.
- The Florida Communities Trust (FCT) application for easements co-funded with Hillsborough County Environmental Lands Acquisition and Protection Program (ELAPP) has been submitted. Additional supporting documentation was provided, and the application remains under FCT review.
- Final compensation values were negotiated with Hillsborough County ELAPP for acquisition of temporary and permanent easements. The Purchase and Sale Agreement and easements are under review by engineering and general counsel.

Joint Project Agreement

- The Amended and Restated Joint Project Agreement (JPA) was approved by the County's Board of County Commissioners on February 19, 2025, and by Tampa Bay Water's Board on February 24, 2025.
- A Second Amendment to the Amended and Restated JPA is anticipated to be presented for Board approval at the July 2026 Board meeting to update cost estimates based on final GMPs No. 3 and No. 4.

Southwest Florida Water Management District (District) Cooperative Funding Agreement

- Board approval of the Second Amendment to the District Cooperative Funding Agreement was obtained at the May 2025 Board meeting.
- Submitted the FY 2027 Cooperative Funding Initiative application.
- Reimbursements received to date: $11,456,102.90

South Hillsborough Wellfield (Project No. 01612)

In October 2025, the Board approved the South Hillsborough Wellfield for implementation as a new water supply by 2033. The project includes the design and construction of a fresh groundwater wellfield and associated treatment facilities, including ozone treatment for hydrogen sulfide removal. The wellfield could deliver between 3 and 12 million gallons per day (mgd) to southern Hillsborough County.

Below is a list of completed and ongoing activities:

Professional Services Selection

- Developed and advertised professional services request for proposals for design and construction administration services.

- Developing request for proposals for a Construction Manager at Risk (CMAR) for pre-construction/design phase services.

Water Use Permit Quantity Acquisition

A Water Use Permit can be obtained for up to 6 mgd, contingent on demonstrating a net benefit to the aquifer through Hillsborough County's long-term operation of their aquifer recharge system located west of the proposed wellfield.

Additional water supply capacity of approximately 3.1 mgd of additional water supply capacity is being obtained by acquisition of permitted quantities from private landowners. These permitted quantities are anticipated to be transferred to Tampa Bay Water by early/mid-2026 and the final transfer quantities will be determined by the District during permitting.

- The Board approved an agreement with Suburban Land Reserve, Inc. in February 2024 to acquire 590,100 gallons per day of permitted groundwater quantities in southern Hillsborough County. The acquired permitted capacity was transferred to Tampa Bay Water's Balm Farm Water Use Permit on the AgMart property and resulted in an additional 550,000 gallons per day (gpd) of permit quantity; the Balm Farm permit has been increased to an annual average quantity of 775,000 gpd. This quantity can be used to supplement the permit quantities that can be obtained through the long-term aquifer recharge credits from Hillsborough County.
- A subsequent agreement with Land Reserve, Inc. (formerly Suburban Land Reserve, Inc.) and their sister entity, Farmland Reserve, Inc., was approved by the Board in January 2025 to acquire between 3,121,803 gpd and 5,109,300 gpd of permitted quantities. A permit application to modify the Balm Farm Water Use Permit was approved by the Board in January 2025 and was filed with the District in June 2025. Staff are currently responding to District questions on our permit application. This permit modification is expected to be issued by the District by summer 2026. The Balm Farm Water Use Permit annual average quantity depends on the final quantity approved by the District for the pending transfer of permitted quantities.

Property

<u>Cone Ranch/Lower Green Swamp Preserve Exchange:</u>

- Finalize and obtain Board approval of an Interlocal Agreement with the Environmental Lands Acquisition and Protection Program (ELAPP) to exchange water rights from Cone Ranch/Lower Green Swamp Preserve for permanent and temporary easements. These easements will support four production well sites and associated infrastructure on the Stacy R. White Nature Preserve (formerly Ag-Mart property).
- This agreement was last presented at the June 2021 Board Meeting (Agenda Item D.2) and summarized at the October 20, 2025, Board Meeting.
- Scheduled for Board approval in July 2026.

Ag-Mart Balm Water Campus Property:

- Acquire property from Hillsborough County, including access agreements, permanent and temporary easements and/or in fee for three production wells, monitoring wells, wellfield collection main, water treatment facilities and wellfield Point of Connection.

Long-term Agreement for the operation of Hillsborough County's Aquifer Recharge Program

- A long-term agreement with Hillsborough County is being pursued to secure aquifer recharge credits through the County's South Hillsborough Aquifer Recharge Program (SHARP). This agreement could generate up to **6 mgd** of groundwater credits to be incorporated into the South Hillsborough Wellfield Water Use Permit.
- Staff have drafted a term sheet, which is currently under review by County staff.

Demand Management

Tampa Bay Water and Hillsborough County staff continue to coordinate activities for demand management in the South Hillsborough County area. Agency and County staff resumed monthly meetings in October 2023 to address high demands and drought conditions in this service area. The main objective of these meetings is to coordinate work for the variety of activities undertaken by the County, Agency and Florida Friendly Landscaping TM agents, and to explore opportunities for collaboration. Agency staff continue to promote the Tampa Bay Water Wise Program and work with multi-family residential communities on rebate programs. The County continues to promote outdoor water conservation practices and the Tampa Bay Water Wise rebate program directly to Hillsborough County customers. Staff of both agencies are exploring additional public information strategies to promote water conservation in this service area.

South-Central Hillsborough Regional Wellfield Supply

Tampa Bay Water continues to work with Hillsborough County to sustain the increase in the quantity of water the County is taking through the existing Central Point of Connection within this service area. Since late June 2023, the County has taken an average of 12.7 mgd through the Central Point of Connection, an increase of about 3 mgd. This increased flow has allowed an equal reduction in the pumping rate of the South-Central Hillsborough Regional Wellfield.

The South-Central Hillsborough Regional Wellfield Water Use Permit was modified to increase the annual average permit limit from 24.1 to 24.95 mgd on July 26, 2022. The increase in the annual average quantity will revert back to 24.1 mgd when the new regional transmission main is placed in service as specified in the current Water Use Permit. The Board approved an agreement with the Tampa Electric Company (TECO) at the November 2024 meeting to acquire 590,500 gpd of permitted quantity no longer used on their property located east of the South-Central Hillsborough Regional Wellfield. The Board also approved an agreement with Hillsborough County at the January meeting to acquire 344,800 gpd of unused quantities from property owned by the County south of the wellfield. The Board approved the application to increase the annual

average quantity of the South-Central Hillsborough Regional Wellfield Water Use Permit to receive the quantities acquired from TECO and Hillsborough County at the January 2025 meeting. The modified permit was issued by the District on November 18, 2025, with a new annual average quantity of 26.821 mgd. The 12-month running average pumping rate from the wellfield was 26.41 mgd at the end of March 2026.

TAMPA BAY WATER
Supplying Water To The Region

AGENDA ITEM A.6

DATE: March 30, 2026

TO: Board of Directors

THRU: Charles H. Carden, General Manager

FROM: Maribel Medina, Planning and Projects Director

SUBJECT: Long-term Master Water Plan Feasibility Program and Developmental Alternatives Study Status Report - *Receive Report*

SUMMARY

The 2023 Long-term Master Water Plan was approved by the Board of Directors in November 2023. This item provides an update on the on-going feasibility studies and the Developmental Alternatives Study.

SUGGESTED ACTION

Receive Status Report.

DISCUSSION

In November 2023 the Board of Directors (Board) approved the 2023 Long-term Master Water Plan (2023 Plan). The 2023 Plan included several recommendations including further study of seven top-ranked water supply projects to meet the region's future water supply needs and the initiation of the Developmental Alternatives study. The seven projects that will be further studied (if needed) include:

- **Eastern Pasco Wellfield:** This project will evaluate a new fresh groundwater wellfield located in northeast Pasco County with an estimated yield of 4 million gallons per day (mgd).
- **Consolidated Water Use Permit Increase:** This project consists of increasing the permitted capacity of the existing Consolidated Water Use Permit by an estimated 10 mgd.
- **Tampa Bay Seawater Desalination Expansion:** The expansion of the existing Desalination Plant has an estimated yield of 11 mgd and considers expansion with either seawater or brackish groundwater. The study will evaluate the expansion with brackish groundwater only as the seawater expansion was evaluated in 2021.
- **North Pinellas Surface Water Treatment Plant and Reservoir:** This concept has an estimated yield of 4 mgd and includes a new surface water treatment plant and reservoir withdrawing water from the outfall canal downstream of Lake Tarpon.
- **Surface Water Treatment Plant at the C.W. Bill Young Regional Reservoir:** This project has an estimated yield of 6 mgd and consists of a new surface water treatment plant at the existing C.W. Bill Young Regional Reservoir using increased withdrawals from the Alafia River.
- **South Hillsborough Surface Water Treatment Plant and Reservoir:** This project has an estimated yield of 4 mgd and consists of a new surface water treatment plant and reservoir withdrawing water from the Little Manatee River and Bull Frog Creek.
- **South Hillsborough Wellfield:** This project consists of a new wellfield in Southern Hillsborough County via aquifer recharge with an estimated yield of 6 mgd. This concept does not require additional study as it was evaluated in 2021. This project was selected in October 2025 for implementation by the Board.

The projects requiring studies have been grouped into two projects due to scope similarities. Below is a summary of each project, work completed to date, and future activities.

Feasibility Study for New Groundwater Sources (Project No. 11022):

This feasibility study project includes three groundwater source short-listed projects including:

- Eastern Pasco Wellfield
- Consolidated Water Use Permit Increase
- Tampa Bay Seawater Desalination Expansion with Brackish water

Eastern Pasco Wellfield

Work Completed to Date:

- Completed construction of one surficial and one Upper Floridan Aquifer monitor wells.
- Finalized Citrus Springs Aquifer Performance Test Data Analysis Report

Work in Progress:

- Core hole and drilling activities are underway.
- Drilling of Upper Floridan Aquifer test production well is underway.

- Modeling activities are on-going.

Upcoming Work:

- Continue public outreach.

Consolidated Water Use Permit Increase

Work Completed to Date:

- Completed GIS Mapping/Interpretation of Recovery Assessment and Xeric metric.
- Completed exploratory data analysis on recovery by wetland type.

Work in Progress:

- Developing stakeholder database.
- INTB/SWRE modeling scenarios are on-going.
- Monte Carlo INTB modeling efforts are underway.
- Develop Recovery Assessment Results Interpretation Report
- Develop draft report for the Reevaluation of the Xeric-associated Metric.

Upcoming Work:

- Continue public outreach.

Tampa Bay Desalination Plant Expansion with Brackish Water:

Work Completed to Date:

- Finalized technical memorandum recommending the project scope be reduced.

Work in Progress:

- Updating public outreach fact sheets.

Upcoming Work:

- N/A

Feasibility Study for Surface Water Sources (Project No. 11025):

This feasibility study project includes three surface water source short-listed projects including:

- North Pinellas Surface Water Treatment Plant and Reservoir
- Surface Water Treatment Plant at the C.W. Bill Young Regional Reservoir
- South Hillsborough Surface Water Treatment Plant and Reservoir

Work Completed to Date:

- Water quality sampling has been ongoing, with five months of samples taken.
- All initial Integrated Northern Tampa Bay (INTB) and System-Wide Reliability Evaluation (SWRE) data has been processed.

Work in Progress:

- Continue to collect and analyze surface water samples.
- Yield evaluations for INTB and SWRE data are underway for the North Pinellas SWTP and Reservoir project.
- Continue updates to PowerBI dashboard with water quality sampling results and complimentary, public facing data (Hillsborough County, United States Geological Survey) .

Upcoming Work:

- Continue surface water sampling.
- Finalize yield evaluation for North Pinellas SWTP and Reservoir project.
- Conduct yield evaluations for SWTP at the C.W. Bill Young Regional Reservoir project and the South Hillsborough SWTP and Reservoir project.
- Complete reference SWRD modeling.

Overall Feasibility Program and Water Selection Schedule

- Complete Feasibility Studies: *September 2024 through April 2027*
- Initiate the Water Supply Selection Process: *June 2026 through October 2027*
- Select the next water supply configuration: *November 2027*

Developmental Alternatives-Phase 1 (Project No. 11021)

Developmental Alternatives are water supply options that may require sophisticated technologies, which do not have a current regulatory framework for permitting, or that require more long-term analysis and study. As technology advances and processes develop, these alternatives may become more cost-effective or permitting uncertainties may be resolved. This first phase includes defining the goals and objectives of the study, identifying potential water supply concepts, engaging member governments to confirm availability of reclaimed water as potential water supply option, and workshops with the members.

Work Completed to Date:

- Kickoff and engagement meetings with Member Governments.
- Collected reclaimed water availability data.
- Conducted brainstorming sessions with technical staff and utilities.
- Finalized summary of workshop results developed and shared with Member Governments.
- Received draft of conceptual alternatives.

- Held virtual and in-person workshops with Member Governments to define conceptual alternatives on January 12 and January 26, 2026, respectively.

Upcoming Work:

- Status presentation to the Board-*Summer* 2026

BACKGROUND

Tampa Bay Water is the sole and exclusive wholesale water provider to its six Member Governments and has the unequivocal obligation to meet the Quality Water needs of all Member Governments. Tampa Bay Water's 2023 Long-term Master Water Plan, approved at the November 2023 Board meeting, documents how Tampa Bay Water meets its unequivocal obligation to provide Quality Water to meet all Member Government demands through the 2043 planning horizon.

The 2023 Plan identifies when new supplies will need to be built by considering demand forecasts, water shortage mitigation strategies and demand management and what to build by identifying and evaluating new water supply projects, optimization of existing assets, where to deliver and how, and public input.

The 2023 Plan made several recommendations including further study of seven top-ranked water supply projects to meet the region's future water supply needs and to initiate the Developmental Alternatives Study. Once the seven project feasibility studies are completed these projects will be evaluated using Board approved criteria to develop a recommendation for the selection and construction timing of one or more projects. The Developmental Alternatives Study recommended projects concepts may be added to future Long-term Master Water Plans for further evaluation.

AGENDA ITEM A.7

DATE: April 3, 2026

TO: Board of Directors

THRU: Charles H. Carden, General Manager

FROM: Maribel Medina, Planning and Projects Director

SUBJECT: Capital Improvement Program - Task Order Authorization - *Approve*

SUMMARY

The Tampa Bay Water Board of Directors (Board) accepted the Fiscal Years 2026-2035 Capital Improvements Program (CIP) in May 2025. Subsequent Board approval of individual project activity is required during the project's life cycle. This monthly report lists proposed task assignments and dollar amounts recommended by staff for Board approval. There is no task assignment scheduled for approval this month.

SUGGESTED ACTION

Approve Task Orders.

COST/FUNDING SOURCE

N/A

DISCUSSION

As identified to the Board on May 4, 2017, Board acceptance of the annual Capital Improvements Program document is an acceptance of the capital projects roadmap. Subsequent Board approvals of individual capital project activity is sought for planning, design and/or construction contracts and/or

task authorizations under existing contracts for project fees and assigned funding source. There are no task authorizations scheduled for this period of April 2026 through May 2026.

BACKGROUND

Tampa Bay Water's CIP Plan is a comprehensive ten-year plan of approved and proposed capital projects. The CIP is updated annually and is subject to changes as the needs for specific projects become more defined and as final approval of individual projects is provided by the Board.

DATE: April 3, 2026

TO: Board of Directors

THRU: Charles H. Carden, General Manager

FROM: Maribel Medina, Planning and Projects Director

SUBJECT: Capital Improvement Program - Projects Closeout - *Approve*

SUMMARY

In May 2025, the Board accepted the Fiscal Years 2026–2035 Capital Improvements Program (CIP). In accordance with the Agency's Project Management Methodology, a final Board item is required to formally close out capital projects. This item provides closeout documentation for one recently completed capital project.

SUGGESTED ACTION

Approve Project Closeout.

COST/FUNDING SOURCE

N/A

DISCUSSION

This item provides individual reports for completed capital projects. Each report includes the final project schedule, projects description, funding sources and spent amounts, unspent budget, list of purchase orders/contracts and actual expenditures, and a final closeout summary. Staff recommends the

Board approve closeout of the following capital project:

- 07131 - Cosme Water Treatment Plant Yard Piping Improvements

BACKGROUND

Tampa Bay Water's Capital Improvements Program Plan is a comprehensive ten-year plan of approved and proposed capital projects. The CIP is updated annually and is subject to changes as the needs for specific projects become more defined and as the Board approves individual projects.

Project 07131 Project Close-Out Report

Project Closeout Report - February 2026

Project Number	07131
Project Name	Cosme Water Treatment Plant Yard Piping Improvements
JPA Participant	None
Project Manager	James Smith
Construction Manager	Anthony Feria

Final Schedule		
Phase	**Start Date**	**End Date**
Planning	5/1/2007	8/21/2015
Design	7/23/2015	11/29/2018
Bidding	11/30/2018	3/21/2025
Construction	3/24/2025	4/20/2026

Project Description

This project is located at the Cosme Water Treatment Plant (WTP) and includes new yard piping to permanently connect the South Pasco Transmission Main (TM) to the Northwest Hillsborough TM. The connection between the two transmission mains upstream of the Cosme WTP will allow the South Pasco TM to be kept fresh while the Cosme Bypass piping is being utilized. This project is being constructed by an as needed contractor.

Final Funding Summary*	
Funding Source	**Total**
Capital Improvement Fund	$504,978.17
Revenue Bonds	$35,296.78
Uniform Rate Funds	$900.00
Totals	**$541,174.95**

Financial Summary	
Highest Approved Budget	**$1,609,681.00**
Total Expenses	**$541,174.95**

20250482	2021046	Construction	AMICI ENGINEERING CONTRACTORS, LLC	$468,103.17
			Totals	**$541,174.95**

*Funding Sources have been adjusted to match expenses. Unspent funds have been returned to applicable funding source. All Purchase Orders have been closed.

Project Closeout Report - February 2026

Closeout Summary
The project's goal and objectives were achieved within the approved budget and schedule. The project is located at the Cosme Water Treatment Plant (WTP) and included installation of new yard piping to permanently connect the South Pasco Transmission Main (TM) to the Northwest Hillsborough TM. This upstream connection provides operational flexibility by allowing the South Pasco TM to remain fresh while the Cosme Bypass piping is in service. Construction was completed by an as-needed contractor. The scope of work included demolition of existing high-density polyethylene (HDPE) piping, modifications to existing above-grade piping, removal of the 48-inch check valve flapper, and pipeline disinfection. In addition, new stairs were installed to maintain access beyond the newly installed piping. All construction activities and punch list items have been completed. Final invoices have been processed and paid, and the purchase order has been closed.

TO: Board of Directors

THRU: Charles H. Carden, General Manager

FROM: Maribel Medina, Planning and Projects Director

SUBJECT: South Hillsborough Pipeline, Project Nos. 01610 and 01616 - Property Acquisition Status Report - *Receive Report*

SUMMARY

This item provides an update to the Board of Directors on property acquisition activities through the end of March 2026 per policy ADM-BD-0009 for property acquisition for the South Hillsborough Pipeline, Projects 01610 and 01616. A total of twenty-one (21) parcels were closed in February/March 2026.

SUGGESTED ACTION

Receive Status Report.

COST/FUNDING SOURCE

$751,518.25/Revenue Bonds and $264,995.45/Hillsborough County

DISCUSSION

Tampa Bay Water is currently engaged in property acquisition activities with property owners along the approved South Hillsborough Pipeline route. Property Acquisition Policy ADM-BD-009 for the South Hillsborough Pipeline, Project Nos. 01610 and 01616, approved by the Board at the May 2024 Board meeting and updated by the Board at the November 2025 Board meeting authorizes the General Manager:

- To acquire property rights valued in an amount not to exceed $400,000 per parcel.
- To execute and sign agreements and other required documents to complete transactions for projects previously approved by the Board.
- To secure fee simple title, easements, licenses, leases, mutual use agreements, and rights of entry; and
- To update existing licenses, grant licenses, sign permit applications, sign variance requests.

The Policy requires that:

- Documents associated with these transactions are reviewed and approval by the General Counsel or the General Counsel's designee prior to execution by the General Manager.
- Any purchase of property rights valued up to and including $100,000 may be based on an Opinion of Value.
- Any purchase of property rights valued over $100,000 requires a certified real estate appraisal report prepared by a M.A.I. designated appraiser in accordance with current Uniform Standards of Professional Appraisal Practice.
- The General Manager, or the General Manager's designee, will provide a list of completed transactions approved pursuant to this Policy at the next Board meeting.
- The purchase of property rights valued above $400,000 requires Board approval.

The attached report includes the following:

- Table No. 1: Number of Parcels Needed, Parcels with executed Purchase and Sale Agreements (PSA), Stipulated Order of Takings (OT), or Closed, and Pending Parcels through end of reporting month(s).
- Table No. 2: Costs associated with Parcels closed through end of reporting months, twenty-one (21) parcels were closed in February/March.
- Table No. 3: Overall property acquisition budget, actuals to date, and remaining budget.

The General Manager has executed necessary documents to complete the transactions listed on the attached Table No.2. Title insurance, survey and opinions of value were ordered as part of the due diligence process prior to closing.

BACKGROUND

Tampa Bay Water and Hillsborough County staff continue to develop additional pumping and transmission (pipeline) capacity to increase supply to rapidly growing South Hillsborough County. A new pipeline system is needed to provide the increased capacity required. The new system will expand delivery of water supplies to both the County's existing Lithia Point of Connection and a new Point of Connection farther south. The South Hillsborough Pipeline will be constructed in two segments. It requires the acquisition of approximately 215 parcels, a reduction from the originally anticipated 234 parcels, including permanent and temporary construction easements. Approximately 80 percent of the necessary parcels are in Segment A and approximately 20 percent of the necessary parcels are in Segment B. Segment A will convey alternative water supplies from the existing High Service Pump

Station to Hillsborough County's Lithia Water Treatment facility. Pipeline Segment B will connect to Pipeline Segment A and provide alternate water supplies to the new Hillsborough County Point of Connection south of Hillsborough County's Lithia Water Treatment facility as approved by the Hillsborough County Board of County Commissioners in June 2021 and by the Tampa Bay Water Board of Directors in July 2021. Both segments will be planned, designed, and constructed by Tampa Bay Water and partially funded by the Southwest Florida Water Management District for eligible capital costs. The parties agreed through a Joint Project Agreement that Tampa Bay Water is responsible for the remaining share of capital costs for Segment A and Hillsborough County is responsible for the remaining share of capital costs for Segment B.

SUBJECT: Surface Water Treatment Plant Expansion, Project No. 01014, Project Status Report - *Receive Report*

SUMMARY

The Surface Water Treatment Plant Expansion, Project No. 01014, was approved by the Board of Directors as the next water supply project to meet the region's needs by 2028. A monthly status report is provided to keep the Board informed of progress.

SUGGESTED ACTION

Receive Status Report.

COST/FUNDING SOURCE

N/A

DISCUSSION

In August 2022, the Tampa Bay Water Board of Directors selected the Surface Water Treatment Plant Expansion, Project No. 01014, as the next water supply configuration for implementation by 2028.

The project is being delivered through an amendment to Veolia Water North America Operating Services, LLC's Design, Construction, and Operation Agreement (Contract No. 2000-028) and is currently under construction. This report summarizes completed work since the last reporting period, ongoing tasks, and upcoming milestones.

Current Work Activities

- Ground stabilization work has been completed in the filter area and near the Dry Chemical Building #3. The sub-contractor has demobilized in accordance with the plan and is scheduled to return in April to complete similar work in the Train 5 area.
- Temporary filter equipment has arrived and is scheduled to be installed and energized by the end of March.
- Most of the large-diameter piping required for the current phase of construction is now on site and staged in the designated laydown area.
- Site grading and preparation activities are underway to support installation of platforms over the completed ground stabilization areas.
- The project team continues to identify existing underground utilities in the Train 5 area to support safe relocation in advance of construction activities.

Upcoming Work Activities

- Continued installation of monitoring instrumentation, including equipment used to measure ground pressure and detect cracking.
- Veolia will operate the temporary filter units. Pending stable operation with no identified issues, formal operator training will be completed.
- Upon completion of training, Veolia will initiate removal of the existing filter presses.

Overall Schedule (Remaining Activities)

- Complete Construction & Commissioning: **Spring 2028**

BACKGROUND

At the August 2022 Board Meeting, the Board of Directors selected the Surface Water Treatment Plant Expansion, Project No. 01014, as the next water supply project to support the region's future water needs. This project will increase Tampa Bay Water's annual average yield from existing surface water sources by 10 to 12.5 million gallons of water per day and is included in the agency's Capital Improvements Program.

SUBJECT: Cypress Creek Wellfield Surface Water Improvements-Phase 3, Project No. 09108, Contract No. 2026-006 Task Authorization - *Approve*

SUMMARY

A scope of work has been negotiated with Moreno Industrial Services, Inc., retained under an On-Call General Civil Contractor Services Contract No. 2026-007, to construct the Cypress Creek Wellfield Surface Water Improvements-Phase 3, Project No. 09108.

SUGGESTED ACTION

Approve negotiated task assignment with Moreno Industrial Services, Inc. under Contract No. 2026-006.

COST/FUNDING SOURCE

$594,129.24/FY 2026 Uniform Rate Funds

DISCUSSION

Tampa Bay Water staff evaluated the On-Call General Civil & Large Pipeline Contractors approved by the Board of Directors at its August 18, 2025, meeting for construction services for the Cypress Creek Wellfield Improvements-Phase 3, Project No. 09108. Based on this evaluation, staff determined that the project's construction scope can be effectively delivered through Tampa Bay Water's On-Call General

Civil & Large Pipeline Contract with Moreno Industrial Services, Inc., Contract No. 2026-006.

The scope of work includes construction of the completed design for the third phase of surface water and drainage improvements throughout the Cypress Creek Wellfield. A task assignment has been negotiated in the amount of $594,129.24, which includes an owner's allowance of $77,495.

Staff recommends Board approval of the negotiated task assignment with Moreno Industrial Services, Inc. under Contract No. 2026-006.

BACKGROUND

Tampa Bay Water's Capital Improvements Program Plan (CIP) is a comprehensive ten-year plan of approved and proposed capital projects. The CIP is updated annually and is subject to changes as the needs for specific projects become more defined and as final approval of individual projects is provided by the Board. The Cypress Creek Wellfield Surface Water Improvements-Phase 3, Project No. 09108, is identified in the CIP. This project includes the third phase of improvements aimed to change surface water drainage patters in the Cypress Creek Wellfield to rehydrate wetlands which were affected by ground water withdrawal, and to help reduce nuisance flooding in two nearby residential developments.

TAMPA BAY WATER
Supplying Water To The Region

AGENDA ITEM A.12

DATE: April 8, 2026

TO: Board of Directors

THRU: Charles H. Carden, General Manager

FROM: Paul Stanek, Chief Operating Officer

SUBJECT: Surplus Water Agreement with the City of Tampa - *Approve*

SUMMARY

Tampa Bay Water can receive supply from the City of Tampa at the Tampa/Hillsborough interconnection and US 301 interconnection locations. This new agreement will replace the 2012 Surplus Water Agreement (and amendments) to purchase water from the City of Tampa at designated interconnections, if needed.

SUGGESTED ACTION

Approve the Surplus Water Agreement with the City of Tampa.

COST/FUNDING SOURCE

N/A

DISCUSSION

Tampa Bay Water can receive supply from the City of Tampa at the Tampa/Hillsborough interconnection and US 301 interconnection locations. The current Third Amendment to the Surplus Water Agreement (2012) between Tampa Bay Water and the City of Tampa expired September 30, 2025. This agreement may be terminated by either party for any reason by providing ninety (90) days' written notice to the other party, or on any other date mutually agreeable to the parties. The agreement

does not obligate Tampa Bay Water to purchase any water, only provides the framework for the purchase if necessary.

The Agreement has been reviewed by Tampa Bay Water's General Counsel.

Staff recommends approval of the proposed Surplus Water Agreement with the City of Tampa.

BACKGROUND

Tampa Bay Water has purchased treated surplus water from the City of Tampa since 1997 when the Tampa/Hillsborough Interconnect was first placed into service. The first five-year agreement expired in 2002. A second Surplus Water Agreement was executed on July 2, 2002, and amended on April 7, 2003. A third agreement was executed in September 2012 and subsequently amended three times.

Historically, this interconnection provided a constant supply of approximately 1.2 million gallons per day (MGD) to Hillsborough County's Northwest service area; however, flow can be increased to 10 MGD if appropriate piping modifications are made at the Tampa/Hillsborough Interconnect. Currently the interconnect is not in use and has been air gapped since 2018. The City of Tampa can also provide supply to Tampa Bay Water via the 301 interconnection at the Regional Facilities Site when available.

Attachment (1)

Surplus Water Agreement with the City of Tampa (2026)

SURPLUS WATER AGREEMENT

BETWEEN

CITY OF TAMPA AND TAMPA BAY WATER

THIS SURPLUS WATER AGREEMENT (the "2026 AGREEMENT") is entered into this _____ day of _____, 2026, by and between TAMPA BAY WATER, a Regional Water Supply Authority, a special district of the State of Florida ("TAMPA BAY WATER"), acting by and through its Board of Directors, and the CITY OF TAMPA, a municipal corporation of the State of Florida ("TAMPA"), acting by and through its Mayor and City Council.

WITNESSETH:

WHEREAS, TAMPA BAY WATER was created to develop, recover, store and supply water at wholesale to its Member Governments which include the Counties of Hillsborough, Pinellas, and Pasco and the Cities of Tampa, St. Petersburg, and New Port Richey; and

WHEREAS, TAMPA BAY WATER desires to enhance its ability to supply water to its Member Governments through the installation of interconnects and the purchase of Surplus Water; and

WHEREAS, TAMPA BAY WATER and TAMPA entered into a Surplus Water Agreement (the "2002 AGREEMENT") on July 2, 2002, which was subsequently amended on April 7, 2003, by the First Amendment to Tampa Surplus Water Agreement and in June 2012 by the Second Amendment to Tampa Surplus Water Agreement; and

WHEREAS, the 2002 AGREEMENT terminated on September 30, 2012; and

WHEREAS, TAMPA BAY WATER and TAMPA entered into another Surplus Water Agreement (the "2012 AGREEMENT") on July 9, 2012, which was subsequently amended on October 17, 2022, by the First Amendment to Surplus Water Agreement, on August 21, 2023, by the Second Amendment to Surplus Water Agreement, and on February 10, 2025, by the Third Amendment to Surplus Water Agreement; and

WHEREAS, the 2012 AGREEMENT terminated on September 30, 2025; and

WHEREAS, TAMPA and TAMPA BAY WATER desire to enter into a new Surplus Water Agreement,

NOW, THEREFORE, in consideration of the foregoing premises, which shall be deemed an integral part of this 2026 AGREEMENT, TAMPA BAY WATER and TAMPA, intending to be legal bound hereby, agree as follows:

1. DEFINITIONS. Unless the context clearly requires otherwise, all capitalized words and terms not otherwise defined herein shall have the meanings set forth in the Amended and Restated Interlocal Agreement and the Master Water Supply Contract. The following terms used in this 2026 AGREEMENT are defined as follows:
    a. SURPLUS WATER. Water that is delivered to TAMPA BAY WATER not needed to meet TAMPA's own demand or environmental requirements for water. Surplus Water shall be available for purchase by TAMPA BAY WATER in such quantities as are determined by TAMPA.
    b. EXCHANGED WATER (to TAMPA BAY WATER). Water that is delivered from TAMPA to TAMPA BAY WATER that is offset by water that has been delivered from TAMPA BAY WATER to TAMPA in the same billing month.

c. EXCHANGED WATER (to TAMPA). Water that is delivered from TAMPA BAY WATER to TAMPA that is offset by water that has been delivered from TAMPA to TAMPA BAY WATER in the same billing month.

d. NET WATER. The Quality Water TAMPA purchases from TAMPA BAY WATER at the Points of Connection.

2. DESCRIPTION OF INTERCONNECTS. TAMPA will provide Surplus Water and/or Exchanged Water (to TAMPA BAY WATER) at a delivery point(s) acceptable to TAMPA and TAMPA BAY WATER, and as generally identified in Exhibit A.

3. TERM AND TERMINATION. The term of this 2026 AGREEMENT shall begin upon the full execution of this 2026 AGREEMENT by both parties, and shall remain in effect until terminated as provided for herein. This 2026 AGREEMENT may be terminated by either party for any reason by providing ninety (90) days' written notice to the other party, or on any other date mutually agreeable to the parties.

4. WATER DELIVERY. TAMPA shall use its best efforts to deliver Surplus Water and/or Exchanged Water (to TAMPA BAY WATER) at the delivery point(s), when Surplus Water and/or Exchanged Water (to TAMPA BAY WATER) is available and requested by TAMPA BAY WATER. For purposes of this 2026 AGREEMENT, the parties agree that the quantity of Surplus Water and/or Exchanged Water (to TAMPA BAY WATER) to be delivered shall be determined by TAMPA, and that TAMPA BAY WATER shall use its best efforts to purchase Surplus Water and/or Exchanged Water (to TAMPA BAY WATER) when available.

5. WATER QUALITY. TAMPA agrees to use its best efforts to deliver water meeting the quality parameters identified in Exhibit B. TAMPA and TAMPA BAY WATER

agree that water not meeting Exhibit B parameters can be refused by TAMPA BAY WATER.

6. PAYMENT OF WATER CHARGES.

   a. Monthly Billing. TAMPA will be charged for Exchanged Water (to TAMPA) and Net Water shall be credited for Exchanged Water (to TAMPA BAY WATER) at a rate equal to the portion of the Uniform Rate that is comprised of Variable Costs. Surplus Water shall be credited to TAMPA at a rate of either eighty-five (85) percent of TAMPA's All Other Customer Classes – Outside City rate as set forth and adopted by TAMPA from time to time by Resolution, or the current TAMPA BAY WATER Uniform Rate, whichever is greater. The quantities of Exchanged Water (to TAMPA) and Exchanged Water (to TAMPA BAY WATER) shall be equal.

   b. Annual True-Up. In the determination of the annual true-up provided in Section 13(E) of the Master Water Supply Contract, the calculation of TAMPA's pro rata share of the Fixed Costs shall not include the quantity of Exchanged Water (to TAMPA).

7. ACCOUNTING, AUDIT AND RECORDS. TAMPA BY WATER shall maintain accounts and records for a period of three (3) years following the expiration of this 2026 AGREEMENT for all funds received and disbursed by it with respect to costs incurred by TAMPA under this 2026 AGREEMENT. TAMPA, at its sole discretion and cost, may complete an audit of these accounts and determine any overpayments or underpayments by TAMPA, and shall adjust or credit TAMPA BAY WATER based on this audit. TAMPA's audit shall be provided to TAMPA BAY WATER for review and comment prior to any such adjustment or credit.

8. ENVIRONMENTAL PERMITS. TAMPA shall apply for, and obtain, all Environmental Permits necessary for the sale of Surplus Water and/or Exchanged Water (to TAMPA BAY WATER). TAMPA BAY WATER shall cooperate and assist TAMPA in obtaining any and all Environmental Permits necessary for provision of Surplus Water and/or Exchanged Water (to TAMPA BAY WATER).

9. WATER MEASUREMENT. TAMPA BAY WATER shall measure all Surplus Water and/or Exchanged Water (to TAMPA BAY WATER) delivered at the delivery point(s) with measuring devices and equipment acceptable to TAMPA, and shall maintain complete and accurate records of its water measurements for inspection by TAMPA. The measuring devices, equipment, and records installed and maintained by TAMPA BAY WATER shall be available for inspection by TAMPA upon reasonable notice.

10. LIMITATION OF SERVICE. The delivery of Surplus Water and/or Exchanged Water (to TAMPA BAY WATER) under the terms of this 2026 AGREEMENT shall in every case be subject to the paramount right and obligation of TAMPA to discontinue delivery, in whole or in part, when required to satisfy its own demand for water and its duty to provide water to its residents and water customers and of TAMPA BAY WATER to determine whether it has a need to purchase Surplus Water and/or Exchanged Water (to TAMPA BAY WATER) from TAMPA.

11. EXHIBITS. Exhibits "A" and "B" attached hereto are incorporated and made by reference an integral part of this 2026 AGREEMENT.

12. FILING. A copy of this 2026 AGREEMENT shall be recorded in the public records of Hillsborough and Pinellas Counties by TAMPA BAY WATER.

13. NOTICES. Any notices or other writings permitted or required to be delivered pursuant to this 2026 AGREEMENT shall be delivered to TAMPA BAY WATER at its General Manager's office, and to TAMPA at its Water Department Director's office.

14. COUNTERPARTS. This Agreement may be executed in counterparts, all of which together shall constitute one and the same instrument.

Supplying Water To The Region

AGENDA ITEM A.13

DATE: April 3, 2026

TO: Board of Directors

THRU: Charles H. Carden, General Manager

FROM: Paul Stanek, Chief Operating Officer

SUBJECT: Sole Source Procurement No. 2026-509 for Ozone Generation Systems Service, Equipment, Replaceable Parts, and Consumable Supplies from Fin-Tek Corporation. - *Approve*

SUMMARY

Tampa Bay Water utilizes Mitsubishi ozone generation equipment at the Lithia Hydrogen Sulfide Removal Facility. Fin-Tek is the exclusive service provider for Mitsubishi equipment and parts. The Agency's Purchasing Policy was followed to receive approval of Sole Source Posting 2026-509 for Fin-Tek purchases during FY's 2026 and 2027. The total purchase amount requires Board approval.

SUGGESTED ACTION

Approve Sole Source Procurement No. 2026-509 for Ozone Generation Systems Service, Equipment, Replaceable Parts, and Consumable Supplies from Fin-Tek Corporation

COST/FUNDING SOURCE

$500,000.00 not to exceed Fiscal Year 2026 and 2027 budgeted funds.

DISCUSSION

A Sole Source for Ozone Generation Systems Service, Equipment, Replaceable Parts, and Consumable Supplies was advertised on February 4, 2026, on Tampa Bay Water's e-procurement platform, Euna Procurement (Euna), and the Tampa Bay Water website. No objections or protests were received.

Tampa Bay Water posted its Declaration of Sole Source Purchase on February 26, 2026.

The sole source has been reviewed and approved by Tampa Bay Water General Counsel's Office.

BACKGROUND

Fin-Tek Ozone is the exclusive service provider authorized by Mitsubishi Electric Company to supply factory parts and service for the United States market. Mitsubishi Electric Ozone Generation Equipment is highly technical and requires an advanced level of training to maintain. Fin-Tek is the only maintenance provider with technicians specifically trained by the manufacturer to perform the required maintenance. By using Fin-Tek for the proposed maintenance services, the Agency will ensure the equipment is properly maintained and extend the expected useful life. It is best industry practice to use the manufacturer authorized agent on equipment like this to perform regular maintenance. Fin-Tek is also the only supplier for main components, replacement parts, and consumable supplies of the Lithia ozone generation system.

NOTICE OF INTENT TO SOLE SOURCE PURCHASE

Date: February 4, 2026
Subject: Sole Source No. 2026509- Fin-Tek Corporation – Ozone Generation Systems Service, Equipment, Replacement Parts and Consumable Supplies.

Tampa Bay Water, A Regional Water Supply Authority, gives notice of its intent to procure Ozone Generation Systems Service, Equipment, Replacement Parts and Consumable Supplies from Fin-Tek Corporation through a Sole Source method.

Prospective Vendors able to provide Ozone Generation Systems Service, Equipment, Replacement Parts and Consumable Supplies are requested to provide information by February 25, 2026. Information should be forwarded to Lynn Lozano at Tampa Bay Water, 2575 Enterprise Road, Clearwater, Florida 33763-1103 or by email at llozano@tampabaywater.org.

Memorandum

TO: Paul Stanek, Chief Operating Officer

FROM: Laila Martin, Regional Operations and Maintenance Senior Manager

DATE: January 29, 2026

SUBJECT: Sole Source Request #2026509
Fin-Tek – Ozone Generation Systems Service, Equipment, Replacement Parts and Consumable Supplies

---

As per Section 2.4.2.1 of Tampa Bay Water's Purchasing Procedures Manual, approved by the Board of Directors on April 21, 2014, the South Maintenance Department is requesting "sole source" designation for the vendor Fin-Tek Ozone for the purchase of parts and service for following reason:

REASON:

☐ The commodity or service is wanted for experimental trials, pilots, and/or testing.

☐ Additional unanticipated commodities or services are needed to complete an ongoing task.

☐ The commodity is identical to existing equipment installed at other agency locations for the same purpose.

☒ The commodity is a component, repair, or replacement part of existing equipment for which no commercially available substitute exists, and the purchase can only be made from the manufacturer or sole distributor.

☐ Exigent circumstances exist that dictate delivery is a critical factor and only one vendor is able to meet the time constraints.

☐ Manufacturer's warranty requires any maintenance, parts and/or support performed on or provided for instruments/equipment be provided by factory trained and authorized representative only.

☐ Other reasons not listed above. Requestor must explain below in Due Diligence.

DUE DILIGENCE:

Fin-Tek Ozone is the exclusive service provider authorized by Mitsubishi Electric Company to supply factory parts and service for the United States market. Mitsubishi Electric Ozone Generation Equipment is highly technical and requires an advanced level of training to maintain. Fin-Tek is the only maintenance provider with technicians specifically trained by the manufacturer to perform the required maintenance. By using Fin-Tek for the proposed maintenance services, the Agency will ensure the equipment is properly maintained and extend the expected useful life. It is best industry practice to use the manufacturer authorized agent to perform regular maintenance on specialty equipment. Fin-Tek is also the only supplier for Mitsubishi Electric Company ozone generation

equipment components, replacement parts and consumable supplies for the Lithia ozone generation system.

ESTIMATED COST: $500,000

Please indicate your approval for the sole source designation for Fin-Tek Ozone by signing below:

Fin-Tek Ozone

Putting Ozone to Work

January 28, 2026

Tampa Bay Water
Clearwater, FL:

Fin-Tek is an Ozone Engineering Service company which provides aftermarket service, parts, equipment, and design-build engineering services to water and wastewater processing facilities using ozone as a disinfectant. We engineer, design, install and service equipment by others as well as the systems we provide across the globe.

To this date there is no other company which provides these services for all makes, models, and manufacture of Ozone generating, application, and distribution equipment. Fin-Tek is the exclusive service provider for several manufacturers. Fin-Tek has developed robust predictive maintenance programs designed to reduce the incidence of equipment failure and breakdown. Fin-Tek uses customers inventory for proprietary parts sourcing to reduce cost and the time between equipment failure and restored operation.

As of this date there is no other professional services company which provides hands on Engineering services for this market relative to their Ozone dosing equipment*. Fin-Tek also is the only company which has procedures for Generator cleaning which comply with the Compressed Gas Association standard- Oxygen Clean per CGA-4.1 (Clean for Oxygen = Clean for Ozone), along with proper passivation for Stainless for use in an oxygen environment. Fin-Tek has created Smart Boost* (Patent Pending) which provides significant operational savings over existing nitrogen boost systems.

OEM's of some of this equipment provide parts and start-up services but only a few on a continuous supportive basis. OEM's will respond to upset conditions as they occur but do not work with the plant on a regular basis to understand the process. Most OEM's provide skilled labor that will only provide support on the equipment they sell. Fin-Tek is the only company which employs degreed engineers with 5+ years of experience in ozone equipment maintenance and engineering and dispatches those engineers to customer job sites. No other company provides the comprehensive services Fin-Tek provides.

For this reason, Fin-Tek is a sole source for all ozone related equipment and service in drinking and wastewater treatment plants.

Sincerely,

Mary Finnegan
Business Development
Fin-Tek Corporation

*is inclusive of Ozone generators, Nitrogen boost systems, eductors, diffusers, contact tanks, degas systems, Ozone destruct systems, Control monitors, Power supplies, PLC's, PSU's, and Ozone health and safety monitors
*Power boost is exclusive design upgrade for N2 Boost systems by Fin-Tek Corporation.

TAMPA BAY WATER
Supplying Water To The Region

AGENDA ITEM A.14

DATE: April 8, 2026

TO: Board of Directors

THRU: Charles H. Carden, General Manager

FROM: Paul Stanek, Chief Operating Officer

SUBJECT: Emergency Generator Purchase through the Florida Sheriff's Association Contract #FSA23-EQU21.1 - *Approve*

SUMMARY

Staff identified the need for additional emergency generators after the 2024 storm season and budgeted for the purchase of portable generators. Staff will purchase those units via the Florida Sheriff's Association (FSA) contract, utilizing funds allocated in the Board approved Fiscal Year 2026 budget.

SUGGESTED ACTION

Approve purchase of two – 200kW Generators with funds allocated within the existing Board approved FY 2026 Budget.

COST/FUNDING SOURCE

Not to exceed $350,000.00 - Approved FY 2026 Uniform Rate

DISCUSSION

During the 2024 hurricane season and in lessons learned meetings, staff identified a need for portable emergency generators to move to locations in the system that experience power failures. The Board approved funding in the fiscal year 2026 budget to purchase additional generators. Staff researched vendors available through the Florida Sheriffs Association Equipment Contract and found units that

meet the agency's needs and cost parameters. Staff requests Board approval to purchase two-200kW portable Trailer Mounted Generators utilizing the Florida Sheriff's Association Contract #FSA23-EQU21.1.

This purchase is a Competitive Bidding Exception per Tampa Bay Water Purchasing Procedures Manual, Revision Five 2025, (Resolution 2025-012, Board Approval August 18, 2025, Item C1.), using an existing State Contract in lieu of conducting a competitive procurement, pursuant to Section 287.056, Florida Statutes.

BACKGROUND

After reviewing the lessons learned during the 2024 storm season, staff budgeted for additional portable emergency generators. These generators will increase generation capacity and agency resiliency.

2	**T200-M-FS Upgrade -** Upgrade to a 200kW mobile generator package, current emission compliant 1800 rpm diesel engine; Aluminum sound insulated weather enclosure, powder coated; 120/240 1 ph., 120/240-120/208-277/480 3 ph., 3 position, single output changeover switch, single camlocks connection box; 800 A main breaker; 300 gal double wall in base fuel tank street legal trailer with hydraulic brakes, lunette. Unit non-proprietary.	4,402	8,804
	200 KW (250 KVA) Standby, 181 KW (226 KVA) Prime Power 120/208 Volts, 60 Hz, Three Phase, 0.8 P.F. Amp Load Capacity: 693 Load Bank tested. 277/480 Volts, 60 Hz, Three Phase, 0.8 P.F. Amp Load Capacity: 300 Load Bank tested. 120/240 Volts, 60 Hz, Three Phase, 0.8 P.F. Amp Load Capacity: 601 Load Bank tested. 120/240 Volts, 60 Hz, Single Phase, 1.0 P.F. Amp Load Capacity: 620 Load Bank tested.		
•	Perkins Diesel engine, Model 1206F-E70TTAG4TIER 4 Final @ 1800 RPM, 4 cylinder, water cooled, 12 VDC.		
•	AC alternator, 4 Pole, brushless exciter, Single Bearing, insulation Class 'H' UL1446.		
•	Permanent Magnet (PMG) Excitation providing 300% short circuit support for ten seconds to support non-linear loads and start motors with minimal voltage dip. DR2400 voltage regulator. 0.25 % voltage regulation, (EMI) and RFI filtering. CAN Bus communication		
2	**TUPALT-FS** - Net Cost Adder - Upsized alternator.	1,740	3,480
•	Tradewinds Digital Control panel 2020 series, microprocessor-based controller, manual or remote start capability. Emergency stop push button. 0-60 min. timers for internal and external service lights. NEMA box customer interface panel for remote annunciator panel and shunt trip. Readings for low coolant and oil, fuel level indication and leak detection; Volts, Amps, Hz, Watts, VA, PF. Oil pressure, coolant temperature, RPM, DC volts, hourmeter. Generator set emergency protection shutdowns. Programmable for pre-alarms and alarms. Automatic transfer switch control (mains failure). USB port; ECU communication via SAE J1939. BESTCOMSPlus, MODBUS communication via RS485 port, UL6200.		
	Optional Equipment included in above pricing:		
•	800A 3P 600V 250Vdc UL 489 circuit breaker, 80 percent rated. Installed shunt trip for remote controlled tripping. Cu/AL lugs rated up to 600V AWG wire range 14-1/0. The wire is EPDM insulated, 600V 150 degrees Celsius. A neutral to bonding conductor mounted on a standoff insulator.		
•	Three position voltage change over switch mounted in the generator can, wired to the mainline circuit breaker. Breaker leads are connected to the rear of the generator to separate female camlock connectors, clearly identifying L1, L2, L3, N, G.		
•	Distribution panel to include Two (2) 20A GFI duplex receptacles, Two (2) 20A NGFI duplex receptacles, Three (3) 50amp, 240vac receptacle, all with breaker protection. 120V 20A DC input for battery charger. Two Thumb screws are provided for remote start stop contacts of Transfer Switch. Two Thumb screws are provided for remote alarm indication.		
•	The rear side docking station has a lockable lifting gate with snap acting disconnect protection, and LED service light.		
•	Weather protective marine grade aluminum enclosure sound insulated; white powder extra coat, electrostatically applied; 175 mph wind load certified in compliance to ASCE 7-08 Florida Building Code. Control panel door access with locks. Designed with removable doors to ease the generator maintenance; All doors are hinged and keyed alike. Weather protective seals around all doors. Rear removable plate for the maintenance of the AC alternator.External drain ports for coolant and oil with brass ball shut-off valves and SS bulkhead plugs. All stainless-steel hardware. Estimated noise reduction : 72 dBA @ 21 ft.		
•	Exhaust compartment enhanced with noise reduction and heat dissipation insulation. Installed SS Exhaust Flex with ceramic wrap, 25dBA exhaust muffler and cast aluminum rain cap.		
2	**T-SOLAR-FS** Net Cost Adder - Solar panel 140W 12V.	1,759	3,518
2	**BEACON-FS Net Cost Adder -** Amber beacon LED lights, flush mounted on the enclosure perimeter	2,061	4,122
•	12000lb dual axle street legal, **trailer with electric brakes**, round lunette hitch, chains, lights, heavy duty fenders, one (1) front jack, collapsible two bar to reduce overall foot print and will have a corrosive resistive finish to cover the steel frame. 330 gallon in base fuel tank with a mechanical fuel level gauge and standard fuel signal that will be read in control panel. Unit will alarm with low fuel and shut down up critically low fuel. Tank will have lockable fuel cap, drain, and necessary fittings.		
2	**T-TBX3-FS** Net Cost Adder - Tool box 19.5 cu.ft.(12 extensions of 50ft L) in diamond plated aluminum, reinforced beveled edge. B and C trailers.	7,370	14,740
•	12Vdc 31PMH series starting batteries installed on metal support, secured with ¡ bolts and hold downs.		
•	Battery Charger 6 Amp, 12 VDC, 90-265A AC 50/60Hz 115 VAC, compact type, UL Listed.		
•	Two (2) 120V receptacles, one GFI and one NGFI with clear cover, for battery charger and coolant block heater.		
•	Coolant block heater, 1500W 120V 1Ph. 100F degrees ON - 120F degrees OFF. IP41 protection rating to IEC 529. Shut-off valves for easy maintenance.		
•	Low coolant level signal alarm switch, antifreeze, and radiator overflow bottle. Freezing protection to –34 degrees Fahrenheit (-37 degrees Celsius) and boiling protection to 256 degrees Fahrenheit (129 degrees Celsius).		
2	**TPRI-STBY-C-FS** Net Cost Deduction - Change to Emergency Standby application, 150-200kw.	-49,420	-98,840

TAMPA BAY WATER
Supplying Water To The Region

AGENDA ITEM A.15

DATE: April 1, 2026

TO: Board of Directors

THRU: Charles H. Carden, General Manager

FROM: Warren Hogg, Chief Science Officer

SUBJECT: First Amendment to Contract No. 2025001 with KELLER Pressure, Inc., formerly Keller America, Inc. - *Approve*

SUMMARY

Contract No. 2025001 was issued to Keller America, Inc. on August 19, 2024 for the purchase of environmental monitoring equipment. Keller America, Inc. changed its corporate name to KELLER Pressure, Inc., effective January 1, 2026. This First Amendment to Contract 2025001 is required for the continued purchase of necessary environmental monitoring equipment.

SUGGESTED ACTION

Approve the First Amendment to Contract No. 2025001 with KELLER Pressure, Inc. to reflect a change in their corporate name.

COST/FUNDING SOURCE

N/A

DISCUSSION

Contract No. 2025001 for the purchase of environmental monitoring equipment (pressure transducers) was competitively procured and awarded to Keller America, Inc. at the August 19, 2024 Board

Meeting. Contract No. 2025001 was issued for a three-year term with a not to exceed total of $226,224.60. Tampa Bay Water received notification on December 15, 2025 that Keller America, Inc. would officially change its legal name to KELLER Pressure, Inc., effective January 1, 2026, and that all existing contracts, previously entered under the name Keller America, Inc., would remain in effect under their new corporate name.

This First Amendment to Contract 2025001 is necessary to recognize the new corporate name and allow for the continued purchase of environmental monitoring equipment necessary for permit compliance. Staff recommend approval of the First Amendment to Contract No. 2025001 with KELLER Pressure, Inc. The attached contract amendment has been approved as to form by Tampa Bay Water's General Counsel.

BACKGROUND

The Agency monitors aquifer, lake, and wetland water levels for permit compliance and to assess the health of the environment surrounding our water supply facilities. Pressure transducers provide a water level accuracy of 0.05% and serve as a reliable means to obtain vital environmental water level data. Currently, there are 345 of these sensors deployed throughout the area we serve. The overall longevity of these sensors is three to five years. Data generated from these sensors is collected by data logging equipment, transferred wirelessly to the Tampa Bay Water database and ultimately used to determine and maintain overall environmental health and guide the operation of agency water supply facilities as required by multiple Water Use Permits.

Attachment (1)

2025001 Keller Pressure Amendment One

FIRST AMENDMENT TO CONTRACT NO. 2025001

This First Amendment is made and entered into this __ day of_____, 202__, by and between **Tampa Bay Water, A Regional Water Supply Authority**, an interlocal governmental agency created and existing pursuant to Sections 163.01, 373.713 and 373.715, Florida Statutes, acting by and through its Board of Directors, the governing board thereof ("Tampa Bay Water"), and KELLER Pressure, Inc., formerly known as Keller America, Inc., a corporation in the State of Virginia and authorized to conduct business in the State of Florida, ("Contractor").

WHEREAS, Tampa Bay Water retained Contractor for Pressure Transducer goods and/or services under Contract No. 2025001, hereinafter "the Contract"; and

WHEREAS, Tampa Bay Water and Contractor, entered into a contract for Pressure Transducer goods and/or services and it was approved by the Board of Directors on August 19, 2024; and

WHEREAS, Contractor changed its name and now operates under KELLER Pressure, Inc. as shown in Exhibit A; and

WHEREAS, Tampa Bay Water desires to continue to utilize Contractor for additional services based upon the terms and conditions set forth in the Contract, as hereby amended.

NOW, THEREFORE, in consideration of the foregoing premises, which shall be deemed an integral part of this First Amendment to the Contract, and for other good and valuable consideration, the sufficiency and adequacy of which are hereby acknowledged, Tampa Bay Water and Contractor, intending to be legally bound, agree as follows:

1. Contract No. 2025001 is hereby amended to reflect that Keller America, Inc. changed its name and now operates under the name of KELLER Pressure, Inc., as described in the letter from KELLER Pressure, Inc., attached hereto as Exhibit A.

2. This First Amendment is hereby made a part of, and incorporated in its entirety, into the Contract.

3. In all other respects, the Contract, is hereby reaffirmed by the parties and remains in full force and effect.

THE REMAINDER OF THIS PAGE IS INTENTIONALLY LEFT BLANK

IN WITNESS WHEREOF, the parties hereto have caused these presents to be executed by their duly qualified representatives.

4. I am authorized by KELLER PRESSURE, INC. to make this Affidavit on behalf of Contractor.

E-Verify

1. Contractor acknowledges that Section 448.09, Florida Statutes, makes it unlawful for any person to knowingly employ, hire, recruit, or refer, for private or public employment, an alien who is not duly authorized to work in the United States.
2. Contractor acknowledges that Section 448.095, Florida Statutes, prohibits public employers, Consultants/Contractors, and subcontractors from entering into a contract unless each party to the contract registers and uses E-Verify.
3. Contractor is in compliance with the requirements of Sections 448.09 and 448.095, Florida Statutes.
4. Contractor understands it shall remain in compliance with the requirements of Sections 448.09 and 448.095, Florida Statutes, during the term of any contract with Tampa Bay Water.
5. Consultant's/Contractor's subcontractors are in compliance with the requirements of Sections 448.09 and 448.095, Florida Statutes.
6. Contractor shall ensure compliance with the requirements of Sections 448.09 and 449.095, Florida Statutes, by any and all of its subcontractors.
7. Neither the Contractor nor any subcontractor of Contractor has had a contract terminated by a public employer for violating Section 448.095, Florida Statutes, within the year preceding the date of this Affidavit.
8. If the Contractor or any subcontractor of Contractor has a contract terminated by a public employer for any such violation during the term of any contract with Tampa Bay Water, it shall provide immediate notice thereof to Tampa Bay Water.

Anti-Human Trafficking

In accordance with Section 787.06(13), Florida Statues, the undersigned, on behalf of the entity listed below ("Entity"), hereby attests under penalty of perjury that Entity does not use coercion for labor or services as defined in Section 787.06, Florida Statutes, entitled "Human Trafficking".

Scrutinized Companies

A. Pursuant to Subsections 287.133(2) and (3), Florida Statutes, Respondent acknowledges that a person or affiliate who has been placed on the convicted vendor list following a conviction for a public entity crime may not submit a proposal on a Contract provide any goods or services to a public entity, may not submit a Proposal on a Contract with a public entity for the construction or repair of a public building or public work, may not submit Proposals on leases of real property to a public entity, may not be awarded or perform work as a Contractor, supplier, subcontractor, or consultant under a Contract with any public entity, and may not transact business with any public entity in excess of the threshold amount provided in Section 287.017 Florida Statutes, for CATEGORY TWO for a period of 36 months from the date of being placed on the convicted vendor list.

B. Pursuant to Subsection 287.134(2)(a), Florida Statutes, Respondent acknowledges that an entity or affiliate who has been placed on the discriminatory vendor list may not submit a bid, proposal, or reply on a contract to provide any goods or services to a public entity; may not submit a bid, proposal, or reply on a contract with a public entity for the construction or repair of public building or public work; may not submit bids, proposals, or replies on leases of real property to a public entity; may not be awarded or perform work as

a Contractor, supplier, subcontractor, or consultant under a contract with any public entity; an may not transact business with any public entity.

C. Pursuant to Section 287.135, Florida Statutes, Respondent acknowledges that a company that has been placed on the Scrutinized Companies with Activities in Sudan List; the Scrutinized Companies with Activities in the Iran Petroleum Energy Section List; or the Scrutinized Companies that Boycott Israel List or a company that engages in a boycott of Israel, is ineligible and may not submit a bid, proposal, or enter into or renew a contract with an agency for goods or services of $1 million or more. At the time of submission of a proposal for a contract or contract renewal for goods or services of $1 million or more, the company must certify that it is not on either such List and further that it does not have business operations in Cuba or Syria as required by Section 287.135(5), Florida Statutes.

D. Pursuant to Section 287.135, Florida Statutes, Respondent acknowledges that Tampa Bay Water has the option to terminate any contract for goods or services of $1 million or more if the awarded company is found to have submitted a false certification as provided under Section 287.135(5), been placed on the Scrutinized Companies with Activities in Sudan List or the Scrutinized Companies with Activities in the Iran Petroleum Energy Sector List, or been engaged in Business operations in Cuba or Syria.

E. Pursuant to Section 287.135, Florida Statutes, Respondent acknowledges that Tampa Bay Water has the option to terminate any contract for good or services of any amount if the awarded company is found to have or been placed on the Scrutinized Companies that Boycott Israel List or is engaged in a boycott of Israel.

Foreign Countries of Concern

Pursuant to Section 287.138, Florida Statues, Tampa Bay Water may not enter into a contract with an entity that gives access to an individual's personal identifying information if the entity is owned, controlled or organized under the laws of a Foreign Country of Concern which includes the People's Republic of China, the Russian Federation, the Islamic Republic of Iran, the Democratic People's Republic of Korea, the Republic of Cuba, the Venezuelan regime of Nicolas Maduro, the Syrian Arab Republic, or any other entity or agency under the significant control of such Foreign Country of Concern.

Supplying Water To The Region

AGENDA ITEM B.1

DATE: April 6, 2026

TO: Board of Directors

FROM: Charles H. Carden, General Manager

SUBJECT: General Manager's Report - *Receive Report*

SUMMARY

The General Manager will provide an update on agency programs and activities.

SUGGESTED ACTION

Receive Report.

COST/FUNDING SOURCE

N/A

DISCUSSION

Regional System Update

- From the beginning of this fiscal year through March 31, 2026, the Agency delivered an average of 203.11 million gallons per day (mgd) to meet the member government demands. This is 7.94 mgd (4.1%) more water delivered than for the same period last year.
- The region received 2.18 inches of rainfall in March 2026 which is approximately 1.3 inches below the long-term average for March.
- Very low rainfall in September 2025 through March 2026 triggered a Stage III Regional Supply Shortage under the Water Shortage Mitigation Plan on March 1, 2026. The 12-month rainfall is at

a deficit of 11.0 inches and the 12-month median flow in the Hillsborough River is at a deficit of 25.0 mgd at the end of March 2026.

- The regional reservoir storage volume was 5.77 billion gallons as of March 31, 2026 (37% full).
- The 12-month running average pumping rate for the Consolidated Permit Wellfields was 92.49 mgd at the end of March 2026.
- The 12-month running average pumping rate for the South-Central Hillsborough Regional Wellfield was 26.39 mgd at the end of March 2026. The new annual average pumping limit for this wellfield was increased to 26.82 mgd at the end of November 2025.

	March 2026 Actual	**March 2026 Projected**	**Fiscal Year 2026 Actual**	**Fiscal Year 2026 Projected**
Total System Demand	203.16 mgd	218.2 mgd	203.11 mgd	202.48 mgd
City of Tampa Purchased Water	8.92 mgd	10.0 mgd	5.92 mgd	5.54 mgd
Consolidated Water Use Permit	106.93 mgd	103.0 mgd	97.31 mgd	82.70 mgd
South-Central Hillsborough Wellfield	25.77 mgd	32.40 mgd	27.15 mgd	26.58 mgd
Surface Water Treatment Plant	49.68 mgd	60.0 mgd	60.06 mgd	74.52 mgd
Seawater Desalination	15.12 mgd	16.0 mgd	13.28 mgd	13.72 mgd
Regional Reservoir	5.77 billion gallons	5.7 billion gallons	N/A	N/A
Rainfall	2.18 inch	3.5 inches	8.55 inch	16.80 inches
Note: March 2026 Projected and Fiscal Year 2026 Projected based on October 2025 forecast for Fiscal Year 2026.				

Drought Conditions and Public Outreach

The Tampa Bay area is currently in an extreme drought condition with two months remaining in the annual dry season. A 12-month rainfall deficit of 11 inches and a 12-month median flow deficit of 25 mgd in the Hillsborough River at the end of March 2026, along with a low Regional Reservoir storage volume projected for the end of May 2026 triggered a Stage III Regional Supply Shortage under the agency's Water Shortage Mitigation Plan on March 1, 2026 . The Southwest Florida Water Management District issued a Modified Phase III Water Shortage for its 16-county area effective April 3 through July 1 of this year. Landscape irrigation is allowed once per week with restricted irrigation hours during this period to conserve regional water supplies along with other outdoor water use limitations. Staff continue to actively balance production between our water supply sources and use of water from the Regional Reservoir to continue to meet the daily member demands and minimize the extent and duration of wellfield production above our withdrawal permit limits.

In an effort to promote conservation and lower water demands, Tampa Bay Water communications staff

have been increasing outreach efforts across the Tampa Bay region. In addition to increasing our paid outdoor and digital advertising we have earned a significant amount of news media coverage across all local broadcast and print media, including a guest appearance on Denis Phillips Live, and national coverage on the Weather Channel, Fox Weather and Newsweek. Efforts with news media have resulted in 255 stories.

Legislative Update

The 2026 Legislative Session concluded on March 13, 2026. Lawmakers did not reach agreement on a final budget prior to adjournment and have not yet scheduled a special session to address the budget. Although a specific date has not yet been announced, Tampa Bay Water's appropriations requests remain viable, with funding for SCADA improvements ($1 million) included in the House budget and the Surface Water Treatment Plant expansion ($2 million) retained in the Senate proposal. No action has occurred on the Federal funding requests, and our legislative team continues to monitor.

Performance and Management Audit Implementation Action Plan

At the February Board Meeting, consultants from Baker Tilly presented a report on the results of the Five-Year Performance and Management Audit. Later in March, they provided the agency with their recommended Implementation Action Plan. Staff will provide a presentation at the May Board Meeting with implementation steps, timelines and the reporting plan.

Tampa Bay Seawater Desalination Facility Reverse Osmosis Trains Project

Two years ago, five of the seven reverse osmosis racks at the Tampa Bay Seawater Desalination Water Treatment Plant were repaired and replaced. At the May Board Meeting, staff will request approval of a change order to the U.S. Water-Acciona Seawater Desalination Partners, LLC, contract to complete the design and re-construction of the final two racks. The project includes the fabrication and installation of Reverse Osmosis Racks 6 and 7, as well as the reconditioning or replacement of associated equipment. This project will increase the facility's redundancy and provide an additional 8 million gallons per day (mgd) of capacity.

2026 Top 100 Workplace

We're proud to share that Tampa Bay Water has been named a 2026 Top Workplace by the *Tampa Bay Times.* This is the second year in a row the agency has received this award which is meaningful because it's based entirely on confidential feedback gathered through an independent survey of our employees.

AGENDA ITEM B.2

DATE: April 1, 2026

TO: Board of Directors

THRU: Charles H. Carden, General Manager

FROM: Warren Hogg, Chief Science Officer

SUBJECT: Water Conservation Month Proclamation - *Approve*

SUMMARY

The State of Florida annually proclaims April as Water Conservation Month. The Florida Section of the American Water Works Association coordinates this effort to highlight the need for statewide conservation efforts during the driest months of the year. Tampa Bay Water is coordinating with members on the adoption of this proclamation and is presenting this proclamation for Board approval.

SUGGESTED ACTION

Approve Proclamation.

COST/FUNDING SOURCE

N/A

DISCUSSION

The month of April has been declared "Water Conservation Month" throughout Florida for the past 28 years to generate awareness of the need for water conservation in the driest months of the year. This effort is coordinated by the Florida Section of the American Water Works Association (FSAWWA), Florida's water management districts, and the Florida Department of Environmental Protection. The

Water Use Efficiency Division of FSAWWA works to have the Governor and Cabinet officially proclaim April as Water Conservation Month in late March or early April. The theme of this year's proclamation is "Rain Shutoff Devices" which are a necessary and required device for conserving water use outdoors.

Tampa Bay Water has adopted this proclamation many times in the past, and we do so alongside our member governments to promote awareness of water use and the role that water conservation should play during the peak of Florida's dry season in April and May. Tampa Bay Water has supported water conservation programming since the agency's inception and continues to do so through implementation of the Tampa Bay Water Wise program, coordination with members' conservation staff, and through the agency's support of the Florida Friendly Landscaping programs.

Staff recommends approval of the attached Proclamation that April is Water Conservation Month. The Proclamation has been reviewed and approved as to form by Tampa Bay Water's General Counsel.

BACKGROUND

Beginning in 1998, the Florida Water Wise Council worked with local governments and the State Department of Agriculture to adopt April as Water Conservation Month. In 2003, the Council became a part of the Florida Section of the American Water Works Association and was changed to the Florida Water Wise Committee. In 2004, thirty-eight municipalities, in addition to the Governor's Cabinet, adopted a resolution proclaiming April as Water Conservation Month. In 2005, the newly formed Water Use Efficiency Division was able to coordinate Water Conservation Month adoption by 75 entities, including both public and private entities (double the 2004 effort). Currently, well over 200 entities adopt the proclamation including Tampa Bay Water and its Member Governments.

The Water Use Efficiency Division is responsible for coordinating the Water Conservation Month proclamation effort statewide. Since Tampa Bay Water coordinates and promotes conservation efforts with its Member Governments, adoption of this resolution and promotion through its annual conservation awareness program will highlight the region's efforts to effectively conserve water.

Water Conservation Proclamation_2026
B.2 Water Conservation Month Proclamation

PROCLAMATION

Tampa Bay Water
Clearwater, Florida

WHEREAS, water is a basic and essential need of every living creature; and

WHEREAS, the State of Florida, Water Management Districts, Tampa Bay Water and its Member Governments and other parties are working together to increase awareness about the importance of water conservation; and

WHEREAS, Tampa Bay Water, its Member Governments, and the State of Florida have designated April, typically a dry month when potable water demands increase, as Florida's Water Conservation Month, to educate citizens about how they can help save Florida's precious water resources; and

WHEREAS, Tampa Bay Water has always encouraged and supported water conservation, through various planning and coordination of educational programs and special events; and

WHEREAS, every business, industry, school, and citizen can make a difference when it comes to conserving water; and

WHEREAS, each business, industry, school, and citizen can help save water by following Member Government Water Restriction ordinances and participate in conservation programs.

NOW, THEREFORE, be it resolved by the Tampa Bay Water Board of Directors that:

1. The month of April 2026 is hereby proclaimed "WATER CONSERVATION MONTH".

2. Tampa Bay Water and its Member Governments shall continue to highlight the need to help protect this precious resource by promoting the use of water efficient technologies and practices and increasing awareness of the need to save water.

SUBJECT: Community Water Wise Award - 2025 Regional Winner - *Presentation*

SUMMARY

The Community Water Wise Award is a regional program that recognizes homeowners and businesses who design and maintain landscapes that save water while remaining attractive and functional. Each year, the Best of the Region Award is presented to the best landscape among all Tampa Bay Community Water Wise Award winners for the year. The 2025 Regional Community Water Wise Award will be presented to Michele Burt and David Kulp of Pinellas County.

SUGGESTED ACTION

Present the 2025 Regional Community Water Wise Award.

COST/FUNDING SOURCE

N/A

DISCUSSION

The Community Water Wise Award is a regional program that recognizes homeowners and businesses for landscapes that save water while remaining attractive and functional. The program, offered in partnership with the University of Florida's Institute of Food and Agricultural Sciences Extension (UF/IFAS) and Florida Friendly Landscaping Program, recognizes excellence in water-wise landscapes in Hillsborough, Pasco and Pinellas Counties.

The annual awards celebrate landscapes that use efficient irrigation, Florida Friendly plants, and thoughtful design to reduce water use and protect the environment—without sacrificing curb appeal. Landscapes are evaluated by UF/IFAS County Extension staff and experts from local utilities. Winners are selected based on performance in the following categories:

- Retention of existing trees and vegetation
- Landscape design and plant selection
- Stormwater runoff prevention
- Efficient irrigation
- Aesthetic appeal

The 2025 Awards featured these three award categories:

- The Conservation Commendation: Recognizes landscapes that excel in one or more categories.
- The Tampa Bay Community Water Wise Award: Recognizes the best landscapes in a County or City that feature the right plants in the right place, minimize stormwater runoff, use water efficiently and offer aesthetic appeal.
- The Best of the Region Award: Recognizes the best landscape among all Tampa Bay Community Water Wise Award winners throughout the Hillsborough, Pasco and Pinellas County area.

The 2025 Best of the Region award goes to Michele Burt and David Kulp's landscape in Pinellas County. Their landscape was selected among all the winners for its overall design, selection of native and edible plants and trees, and its aesthetic appeal.

BACKGROUND

The Community Water Wise Award program has been coordinated by Tampa Bay Water for over a decade, in partnership with the University of Florida's Institute of Food and Agricultural Sciences Extension (UF/IFAS) and Florida Friendly Landscaping Program and with the local member governments. It is a regional program that recognizes homeowners and businesses for landscapes that save water while remaining attractive and functional.

Water-wise landscapes benefit homeowners and the environment by:

- Improving Drought Resistance: Florida-friendly plants suited to Florida's natural environment require less water than other plants. Native and Florida-friendly plants thrive in the local environment and can be drought tolerant.
- Reducing Water and Maintenance: Water-wise landscapes typically have less turf grass and feature plants that require less upkeep. When the right plants are planted in the right places and become established, the landscape requires less maintenance compared with turf.
- Protecting the Environment: By using plants suited to the location, water-wise landscapes minimize the need for fertilizers and pesticides that can be harmful to the environment and drinking water sources.

Award recipients receive a custom mosaic steppingstone created by a local artist and are recognized at local City Council or County Commission meetings. The Best of the Region Award is presented at a Tampa Bay Water Board meeting.

Supplying Water To The Region

AGENDA ITEM C.1

DATE: April 1, 2026

TO: Board of Directors

THRU: Charles H. Carden, General Manager

FROM: Warren Hogg, Chief Science Officer

SUBJECT: Cooperative Funding Agreement No. 26CF0004970 between the Southwest Florida Water Management District and Tampa Bay Water and an Update on the Tampa Bay Water Wise Program - *Approve*

SUMMARY

The Southwest Florida Water Management District has supported Tampa Bay Water's demand management program, Tampa Bay Water Wise, with cooperative funding since the program began in 2020. A new cooperative funding agreement (No. 26CF0004970) will continue to support rebates and related activities throughout calendar year 2026. This agenda item also provides a monthly status report of the Tampa Bay Water Wise program.

SUGGESTED ACTION

Approve Cooperative Funding Agreement No. 26CF0004970 which supports continued implementation of the Tampa Bay Water Wise program. Receive status update on the Tampa Bay Water Wise program.

COST/FUNDING SOURCE

N/A

DISCUSSION

Cooperative Funding Agreement with District

The Southwest Florida Water Management District has supported Tampa Bay Water's demand management program, Tampa Bay Water Wise, with cooperative funding since the program began in 2020. This year's Cooperative Funding Agreement No. 26CF0004970 will support rebate payments to customers and activities throughout calendar year 2026. The agency was awarded up to $528,000 in cooperative reimbursement for issuance of water-saving rebates to customers and for program administration and inspection costs. The agency will be providing an equal or greater amount in project funding as included in the approved FY 2026 agency budget.

Staff recommends Board approval of the attached Cooperative Funding Agreement No. 26CF0004970 with the District to support continued demand management implementation through the Tampa Bay Water Wise program. This agreement has been approved as to form by Tampa Bay Water's General Counsel.

Tampa Bay Water Wise Update

The following is a status report on the Tampa Bay Water Wise program and other demand management activities in the region.

Rebates and Water Savings

The Tampa Bay Water Wise program has saved 1,102,651 gallons per day cumulatively from March 2020 through March 20, 2026. The majority of water savings come from multi-family retrofits of bathroom fixtures, and the remainder comes from indoor and outdoor measures implemented by homeowners and commercial properties.

The regional dashboard, attached to this item, shows total water saved across the region as well as savings by member. The dashboard is also available at the following link:
https://tbw.conservationrebates.com/dashboard/public/regional_dashboard/regional_dashboard.pdf

Program Updates

Agency staff manage the program, and EGIA is the third-party rebate administrator who also manages the program marketing. Member government staff actively participate in the program by approving any rebate changes, promoting rebates to their customers, and by participating in the monthly Working Group meetings.

To achieve the high savings target for FY 2026, the program has enhanced the rebate offerings over the past few months. The enhanced toilet rebates adopted temporarily in 2025 appear to have successfully driven more participation in the program in the multi-family sector. The impact of homeowner response to this rebate increase is still under review; however, the impact is not nearly as pronounced as in the

multi-family sector. In addition, the program recently enhanced the commercial irrigation rebate offering to cover up to 50% of efficiency improvement projects. Lastly, the working group is reviewing changes to the residential Sprinkler System rebate to enhance water saving opportunities for customers and contractors.

Additional Regional Demand Management Activities

The collective and coordinated efforts of the member governments and the Florida Friendly Landscaping programs have an impact on regional water demand. These activities have been coordinated by the Agency for years and play a key role in educating residents about the best ways to save water. These efforts are complementary to the Tampa Bay Water Wise rebate program. The individual activities of member governments are summarized in the attached monthly conservation report.

Florida Friendly Landscaping agents educate residents and businesses about best landscaping management practices. The agents also help with the Tampa Bay Water Wise program by conducting site visits and promoting rebate opportunities to their contacts.

Once per month, staff from member governments, the Florida Friendly Landscaping program, Tampa Bay Water, the District, and other conservation professionals from the greater area meet to provide information about upcoming activities, current efforts, and conservation messaging. This group, called the Conservation Coordination Consortium (CCC), also coordinates and implements the Community Water Wise awards program. This is an annual awards program that aims to inspire outdoor water conservation by highlighting landscapes that are Florida Friendly and water wise. This year, two new award categories have been added: a Conservation Commendation award to acknowledge landscapes that achieve excellence in at least one judging category, as well as a Best of the Region award to highlight the best landscape among all the winners across the three counties, which will be presented at the April 20, 2026 Tampa Bay Water board meeting.

BACKGROUND

Tampa Bay Water Wise is a regional water conservation rebate program which aims to save up to 3.8 million gallons of water per day (mgd) by 2030 through 12 rebate components. This program is intended to cost-effectively defer the need for new water supplies through improved water-use efficiency which will save the Member Governments and their customers money. The program is managed by Tampa Bay Water and guided by the Member Governments through a Working Group made up of Member Government and District staff which meet monthly. The program is administered by a third-party contractor, Electric and Gas Industries Association (EGIA).

In August 2018, Agency staff developed a list of potential demand management best practices that could save up to 11 mgd by 2030 at about one-fifth of the cost of developing new water supplies. This approach optimizes the use of existing water resources and could defer the need to develop new supplies to a later date, all within a cost-effective strategy. The plan was approved by the Board in

December 2018 as part of the Long-term Master Water Plan update. On August 20, 2018, the Board approved funding of demand management actions through the annual budget process and applying for matching cooperative funding from the District.

The Tampa Bay Water Wise program was officially launched and open to the public via tampabaywaterwise.org on March 30, 2020. The Working Group that was established at the outset of this program currently meets on a monthly basis and is comprised of representatives from each Member Government, Tampa Bay Water, and the District. The water saving goal was revised in 2023, aiming to save 3.8 million gallons per day by 2030.

Subject: TBW Demand Management Plan Implementation-Phase 6
Project No. Q414
Agreement No. 26CF0004970

Dear Amelia:

Enclosed are two originals of the agreement between the Southwest Florida Water Management District (District) and Tampa Bay Water for the subject project. Please have all originals signed and dated, then return them to the following address:

Southwest Florida Water Management District
Attn: Meagan Finneran
2379 Broad Street
Brooksville, FL 34604

One fully executed originals will be sent to you for your files after the District's executive director or designee has signed the agreements.

Please contact the procurement section if you are unable to have the referenced agreement signed and returned to the District within 90 calendar days from the date on this letter. Delayed execution of this agreement may affect the ranking of future cooperative funding requests.

If you have any questions or want to make any changes to the agreement, please contact me directly at Meagan.Finneran@watermatters.org, or (352) 415-1138.

Sincerely,

Meagan Finneran
Contract Specialist

Name: _____ Date: _____

Title: _____

Exhibit A
Southwest Florida Water Management District
Standard Terms and Conditions
Public Cooperator

1. Project Contacts and Notices.
The individuals identified in the CFI Project Agreement are the prime contacts for matters relating to this Agreement. Each party shall provide notice to the other party of any changes to the prime contact information. All notices under this Agreement shall be in writing to the other party's prime contact and shall be sent by email or overnight mail, except for cure and default notices which shall be sent by certified mail. Unless otherwise indicated in this Agreement, reports may be provided by email. Notices and reports are effective upon receipt. Any notice or report delivered by email shall request a receipt thereof confirmed by email or in writing by the recipient and the effective date shall be the date of receipt, provided such receipt has been confirmed by the recipient.
2. Contact Authority.
The Cooperator's Project Manager is authorized to affirm the invoice certification required by this Agreement. The District's Contract Manager is authorized to approve requests to extend a Project task deadline or to adjust a line item amount of the Project Budget. The District's Contract Manager is not authorized to approve any time extension that will extend a Project task beyond the expiration date of this Agreement, or which will result in a change to the total project cost or the parties' funding shares as identified in the CFI Project Agreement. Changes authorized by this Paragraph do not require a formal written amendment but must be in writing and signed in accordance with each party's signature authority.
3. Agreement Term.
The effective date of this Agreement is identified in the CFI Project Agreement. The expiration date is the date identified in the CFI Project Agreement, or upon the satisfactory completion of the Project and subsequent final reimbursement to the Cooperator, whichever occurs first. If Exhibit B requires the Cooperator to operate and maintain the Project after its completion, the operation and maintenance obligation shall survive the above-referenced expiration date for the duration of the O&M Period, beginning on the date provided in Exhibit B. The Cooperator is not eligible for reimbursement for any Project work conducted or costs incurred prior to the effective date of this Agreement.
4. Scope of Work.
The Cooperator shall perform the services necessary to complete the Project in accordance with Exhibit C, the Project Plan. The Cooperator shall commence and complete Project tasks in accordance with the Project Schedule, including any properly authorized extensions of time. Time is of the essence in the performance of each obligation under this Agreement. The Cooperator shall promptly advise the District of issues that arise that may impact the successful and timely completion of the Project. The Cooperator shall be solely responsible for managing and controlling the Project and its operation and maintenance, including the engagement and supervision of any consultants or contractors.
5. Funding.
   5.1. The anticipated total cost of the Project (Initial Board-Approved Project Amount) is identified in the CFI Project Agreement. The District's maximum funding share is identified in the CFI Project Agreement, subject to Paragraph 6 below. The Cooperator's funding match is identified in the CFI Project Agreement and cannot include state or federal appropriations, or grant monies, as provided in Subparagraph 5.2. The Cooperator agrees to provide all remaining funds necessary for the satisfactory completion of the Project.
   5.2. The Cooperator's funding match is based on the Initial Board-Approved Project Amount and cannot include state or federal appropriations, or grant monies. The District will not fund any

Project cost increases. State or federal appropriations, or grant monies, may be used to cover Project cost increases. Should those state or federal appropriations, or grant monies, exceed Project cost increases, the remaining funds will be used to equally reduce the District funding amount and the Cooperator's Board-approved match. If Project costs are equal to or less than the Initial Board-Approved Project Amount, state or federal appropriations, or grant monies, will equally reduce the District's funding amount and the Cooperator's Board-approved match. The Cooperator shall provide written notice to the District if a) it intends to use state or federal appropriations, or grant monies to fund Project costs, indicating the amount and funding source, and b) Project costs are expected to increase, indicating the increased amount and the funding source to cover the cost increase. If the District provides funding for the Project in excess of the amount required by this Agreement, after all state or federal appropriations, or grants monies have been applied, the Cooperator will promptly refund such overpaid amounts to the District. This Subparagraph shall survive the expiration or termination of this Agreement.

5.3. Reimbursement for expenditures of contingency funds is contingent upon the District's approval and determination, in its sole discretion, that the expenditures were necessary to achieve the resource benefit of the Project and were not in excess of what was reasonably necessary to complete the Project. The term "contingency funds" shall include funds that are allocated for unanticipated or extra work needed to the complete the Project. Items not considered for reimbursement include those unrelated to the resource benefit or resulting from design errors and defects in the work. The Cooperator may submit up to 5% of the Initial Board-Approved Project Amount for contingency reimbursement. The District's total reimbursement obligation of contingency expenses is limited to its funding percentage of the Initial Board-Approved Project Amount. If an invoice includes expenditures of contingency funds, the Cooperator shall complete and submit the Unanticipated Contingency Funds Justification Form attachment to explain the basis of each line item expenditure.

5.4. Costs associated with in-kind services provided by the Cooperator are not reimbursable by the District and may not be included in the Cooperator's share of Project funding.

6. Funding Contingency.

The District's performance and payment pursuant to this Agreement are contingent upon the District's Governing Board appropriating funds in its approved budget for the Project in each fiscal year of this Agreement. Accordingly, the District's funding amount is subject to change due to subsequent Governing Board approvals. However, once funds are appropriated for the Project in a given fiscal year and the Cooperator has expended allowable Project costs, the appropriated amount will not be reduced. If the District does not approve additional funds needed for the Project in a future fiscal year, the District is obligated to reimburse its share of Cooperator expenses incurred in the amount of funds the District appropriated as of the date of the District's non-appropriation. In this event, the District and the Cooperator, by mutual agreement, may reduce the Project scope. The Cooperator's performance and payment pursuant to this Agreement are contingent on the Cooperator's governing body or the Florida Legislature, as applicable, lawfully appropriating legally available funds.

7. Invoice and Payment.

7.1. The District shall reimburse the Cooperator for its share of allowable Project costs in accordance with the Project Budget, subject to its right to withhold funds as provided in this Agreement; however, at no point in time will the District's expenditure amounts under this Agreement exceed the District's funding percentage of the Initial Board-Approved Project Amount identified in the CFI Project Agreement.

7.2. Each invoice must include the following certification:

> "I certify that the costs requested for reimbursement and the Cooperator's matching funds are directly related to the performance under the Agreement between the Southwest Florida Water Management District and the Cooperator (Agreement No.

26CF0004970) are allowable, allocable, properly documented, and are in accordance with the approved Project Budget. This invoice includes $__ of contingency funds expenditures.

The Cooperator expects the total Project cost to be $1,056,000. The Cooperator received a total of $__in federal or state appropriations, or grant monies for the Project not passing through the District, at the time of this invoice. Written notice on how that funding has been allocated for the Project is included as a reference in accordance with subparagraph 2 of the Funding Paragraph: The Cooperator shall provide written notice to the District if a) it intends to use state or federal appropriations, or grant monies, to fund Project costs, indicating the amount and funding source, and b) Project costs are expected to increase, indicating the increased amount and the funding source to cover the cost increase."

7.3. With the exception of the payment of contingency funds, the District shall reimburse the Cooperator within 45 days of receipt of an invoice with adequate supporting documentation to satisfy auditing purposes and submitted in the manner prescribed by this Agreement. The District shall reimburse the Cooperator for expenditures of contingency funds within a reasonable time to accommodate the process provided for in Subparagraph 5.3. The Cooperator shall submit original invoices to the District every 3 months electronically at invoices@WaterMatters.org. If the Cooperator does not have the capability to submit invoices electronically, the invoices may be mailed to the Accounts Payable Section, Southwest Florida Water Management District, Post Office Box 15436, Brooksville, Florida 34604-5436. Copies of invoices may also be submitted to the District's Contract Manager to expedite the review process.

7.4. Any travel expenses authorized under this Agreement will be reimbursed in accordance with Section 112.061, Florida Statutes, as may be amended from time to time.

7.5. Surcharges added to third party invoices are not considered an allowable cost under this Agreement.

7.6. The Cooperator shall comply with applicable procurement laws when procuring consultants and contractors to accomplish the Project. The District shall only be obligated to reimburse the Cooperator for costs incurred under contracts for Project work that is included in the Project Plan and is necessary to achieve the resource benefits of the Project, to be determined by the District in its sole discretion. Additionally, the District shall only be obligated to reimburse the Cooperator for costs that are reasonable, to be determined by the District in its sole discretion. In order for the District to make the above determinations, the Cooperator shall provide all solicitations to the District prior to posting, and contracts prior to execution, unless the solicitation has been posted or contract has been executed before the parties' execution of this Agreement, in which case, the documents must be provided within 30 days of execution of this Agreement. The District shall provide a response to the Cooperator within 21 days of receipt of the solicitation or contract. Upon written District approval, the budget amounts for the Project work set forth in a contract will refine the Project Budget and be incorporated herein by reference. The District shall not reimburse the Cooperator for costs incurred under consultant and contractor contracts until the requirements of this Subparagraph are satisfied.

8. Dispute Resolution.

If an issue or dispute arises during the course of the Project, including whether expenses are reimbursable under this Agreement, the Cooperator shall continue to perform the Project work in accordance with the Project Plan. The Cooperator shall seek clarification and resolution of any issue or dispute by providing the details and basis of the issue or dispute to the District's Contract Manager no later than 10 days after the issue or dispute arises. If not resolved by the District's Contract Manager, in consultation with his or her Bureau Chief, within 10 days of receipt of notice,

the dispute will be forwarded to the District's Assistant Executive Director. The District's Assistant Executive Director in consultation with the District's Office of General Counsel will issue the District's final determination. The Cooperator's continuation of the Project work as required under this Paragraph will not constitute a waiver of any legal remedy available to the Cooperator concerning the dispute.

9. Force Majeure.

In the event of hurricanes, tornados, floods, acts of God, acts of war, or other such catastrophes, or other man-made emergencies such as labor strikes or riots which are beyond the control of the party obligated to perform the work, the party's obligation to meet the timeframes provided in this Agreement shall be suspended for the period of time the condition continues to exist. When the party is able to resume performance of its obligations under this Agreement, in whole or in part, it shall immediately give the other party written notice to that effect and shall resume performance no later than 2 days after the notice is delivered. The suspension of the party's obligations provided for in this Paragraph shall be the party's sole remedy for the delays set forth herein.

10. Project Records and Audit.

The Cooperator, upon request, shall permit the District to examine or audit all Project related records and documents during or following Project completion at no cost to the District. These records shall be available at all reasonable times for inspection, review, or audit. "Reasonable" shall be construed according to circumstances, but ordinarily shall mean normal business hours of 8:00 a.m. to 5:00 p.m., local time, Monday through Friday. The Cooperator shall similarly require its consultants and contractors to maintain and allow access to such records for inspection, review, or audit purposes. Payments made to the Cooperator under this Agreement shall be reduced for amounts found to be not allowable under this Agreement by an audit. If an audit is undertaken by the District, all required records shall be maintained until the audit has been completed and all questions arising from it are resolved. The Cooperator shall maintain all such records and documents for at least 5 years following completion of the Project. If an audit has been initiated and audit findings have not been resolved at the end of the 5 years, the records shall be retained until resolution of the audit findings, which would include an audit follow-up by the inspector general if the findings result from an external auditor, or any litigation. The Cooperator understands and will comply with its duty, pursuant to Section 20.055(5), Florida Statutes, to cooperate with the inspector general in any investigation, audit, inspection, review, or hearing. The Cooperator shall similarly require its consultants and contractors to comply with their duty, pursuant to Section 20.055(5), Florida Statutes to cooperate with the inspector general in any investigation, audit, inspection, review or hearing. This Paragraph shall survive the expiration or termination of this Agreement.

11. Reports.

11.1. The Cooperator shall provide the District with a quarterly report describing the progress of the Project tasks, adherence to the Project Schedule and any developments affecting the Project. Quarterly means the calendar quarters ending March 31, June 30, September 30 and December 31. The Cooperator shall submit quarterly reports to the District's Contract Manager no later than 30 days following the completion of the applicable quarter.

11.2. Upon request by the District, the Cooperator shall provide the District with copies of data, reports, models, studies, maps and other documents resulting from the Project. This Subparagraph shall survive the expiration or termination of this Agreement.

11.3. If required in the Project Plan, the Cooperator shall submit all water resource data collected under this Agreement to the District for upload to District databases, and to the Florida Department of Environmental Protection's (FDEP) database for water quality data in accordance with Rule 62-40.540, Florida Administrative Code. This Subparagraph shall survive the expiration or termination of this Agreement.

11.4. The Cooperator shall provide the documents referenced in this Paragraph at no cost to the District.

12. Risk, Liability, and Indemnity.

12.1. To the extent permitted by Florida law, the Cooperator assumes all risks relating to the Project and shall be solely liable for, and to indemnify and hold the District harmless from all claims, loss, damage and other expenses, including attorneys' fees and costs and attorneys' fees and costs on appeal, arising from the design, construction, operation, maintenance or implementation of the Project; provided, however, that the Cooperator shall not indemnify for that portion of any loss or damages proximately caused by the negligent act or omission of the District's officers, employees, contractors and agents. The acceptance of the District's funding by the Cooperator does not in any way constitute an agency relationship between the District and the Cooperator.

12.2. The Cooperator shall indemnify and hold the District harmless, to the extent allowed under Section 768.28, Florida Statutes, from all claims, loss, damage and other expenses, including attorneys' fees and costs and attorneys' fees and costs on appeal, arising from the negligent acts or omissions of the Cooperator's officers, employees, contractors and agents related to its performance under this Agreement.

12.3. This Paragraph, including all subparagraphs, shall not be construed as a waiver of the Cooperator's sovereign immunity or an extension of the Cooperator's liability beyond the limits established in Section 768.28, Florida Statute. Additionally, this Paragraph, including all subparagraphs, will not be construed to impose contractual liability on the Cooperator for underlying tort claims as described above beyond the limits specified in Section 768.28, Florida Statutes, nor be construed as consent by the Cooperator to be sued by third parties in any manner arising out of this Agreement.

12.4. Nothing in this Agreement shall be interpreted as a waiver of the District's sovereign immunity or an extension of its liability beyond the limits established in Section 768.28, Florida Statutes, nor be construed as consent by the District to be sued by third parties in any manner arising out of this Agreement.

12.5. This Paragraph, including all subparagraphs, shall survive the expiration or termination of this Agreement.

13. Default.

A party may terminate this Agreement upon another party's failure to comply with any term or condition of this Agreement, provided the terminating party is not in default of this Agreement at the time of termination. The terminating party shall provide the defaulting party with a written notice stating its intent to terminate and describing all terms and conditions with which the defaulting party has failed to comply (Notice of Termination). If the defaulting party has not remedied its default within 30 days after receiving the Notice of Termination, this Agreement shall automatically terminate. If a default cannot reasonably be cured within 30 days, then the cure time may be extended at the terminating party's discretion if the defaulting party is pursuing a cure of the default with reasonable diligence. The rights and remedies in this Paragraph are in addition to any other rights and remedies provided by law or this Agreement.

14. Release of Information.

The parties will not initiate any oral or written media interviews or issue press releases on or about the Project without providing notices or copies to the other party no later than 3 business days prior to the interview or press release. This Paragraph shall not be construed as preventing the parties from complying with the public records disclosure laws set forth in Chapter 119, Florida Statutes.

15. District Recognition.

The Cooperator shall recognize District funding in any reports, models, studies, maps or other documents resulting from this Agreement, and the form of said recognition shall be subject to District approval.

16. Permits and Real Property Rights.

The Cooperator shall obtain all permits, local government approvals and all real property rights necessary to complete and operate the Project prior to commencing any construction of the Project. The District shall not reimburse the Cooperator for allowable costs under this Agreement until the

Cooperator has obtained all permits, approvals, and property rights necessary to complete the Project. This Paragraph shall survive the expiration or termination of this Agreement.

17. Law Compliance.
The Cooperator shall comply with all applicable federal, state and local laws, rules, regulations and guidelines related to performance under this Agreement.

18. Assignment.
No party may assign any of its rights or obligations under this Agreement, including any operation or maintenance obligations, without the prior written consent of the other party. Any attempted assignment in violation of this Paragraph is void. This Paragraph shall survive the expiration or termination of this Agreement.

19. Miscellaneous.
Nothing in this Agreement shall be construed or implied to create any relationship between the District and any consultant or contractor of the Cooperator. Nothing in this Agreement shall be construed to benefit any person or entity not a party to this Agreement. This Agreement is governed by Florida law and venue for resolving disputes under this Agreement shall be exclusively in Hillsborough County, Florida. Unless otherwise stated in this Agreement, if a court of competent jurisdiction deems any term or condition of this Agreement to be invalid, illegal, or unenforceable, the remaining terms and conditions are severable and shall remain in full force and effect. This Paragraph shall survive the expiration or termination of this Agreement.

20. Lobbying Prohibition.
Pursuant to Section 216.347, Florida Statutes, the Cooperator is prohibited from using funds provided by this Agreement for the purpose of lobbying the Legislature, the judicial branch or a state agency.

21. Counterparts and Authority to Sign.
The signatures of all parties need not appear on the same counterpart. Unless otherwise indicated in the CFI Project Agreement, in accordance with the Electronic Signature Act of 1996, electronic signatures, including facsimile transmissions, may be used and shall have the same force and effect as a written signature. Each person signing this Agreement, or any amendment, warrants that he or she is duly authorized to do so and to bind the respective party to this Agreement.

22. Entire Agreement.
This Agreement, including the attached, referenced, and incorporated exhibit(s) and attachments, constitutes the entire agreement between the parties and, unless otherwise provided herein, may only be amended through a formal amendment, signed by all parties to this Agreement. In the event of a conflict of contract terminology, priority shall be given first to the CFI Project Agreement; the exhibits, in the order presented in the CFI Project Agreement, except that Exhibit B shall take precedence over Exhibit A, and then the attachments in the order presented in the CFI Project Agreement.

Exhibit B
Southwest Florida Water Management District
Special Terms and Conditions
Non-Construction
Study, Conservation, Watershed Management Plan

1. Project Funding.
   The District Governing Board approved the funding of this Project based upon the expectation that the Measurable Benefit as provided in the Project Plan would be achieved. The Cooperator is solely responsible for implementing the Project in such a manner that the Measurable Benefit is achieved. If at any point during the progression of the Project, the District determines that it is likely that the Measurable Benefit will not be achieved, the District shall provide the Cooperator with 15 days advance written notice that the District will withhold payments to the Cooperator until such time as the Cooperator demonstrates that the Project will achieve the Measurable Benefit.
2. Repayment.
   2.1. The Cooperator shall repay the District all funds the District paid to the Cooperator under this Agreement if: a) the Cooperator fails to complete the Project in accordance with the terms and conditions of this Agreement; b) the District determines, in its sole discretion, that the Cooperator has failed to maintain scheduled progress of the Project thereby endangering the timely completion of the Project; c) if the Cooperator is a public entity, the Cooperator fails to appropriate sufficient funds to meet the Project task deadlines; d) the District determines, in its sole discretion, that a permit, approval, or property right legal challenge has caused an unreasonable delay or cancellation of the Project; or e) any contractual requirement or expectation of the resource benefits resulting from the Project, including any requirement applicable to reclaimed water projects, is held to be invalid, illegal or unenforceable during the term of this Agreement, including any O&M Period. Should any of the above conditions exist that require the Cooperator to repay the District, this Agreement shall terminate in accordance with the procedure set forth in the Default Paragraph.
   2.2. Notwithstanding the above, if the Project fails to achieve the Measurable Benefit, the Cooperator may request the District Governing Board waive the repayment obligation, in whole or in part.
   2.3. If the Cooperator is obligated to repay the District under any Paragraph of this Agreement, the Cooperator shall repay the District within a reasonable time, as determined by the District in its sole discretion.
   2.4. The Cooperator shall pay attorneys' fees and costs incurred by the District, including appeals, resulting from the Cooperator's failure to repay the District as required by this Agreement.
   2.5. This Paragraph, including all subparagraphs, shall survive the expiration or termination of this Agreement.
3. Compensatory Treatment Mitigation.
   If the Project progresses into the construction phase, the project shall not be used by the Cooperator or any other entity as compensatory water quality treatment or wetland mitigation, or any other required mitigation due to impacts for any projects. The project shall not be used for water use permitting withdrawal credits. The project can be used for self-mitigation due to impacts specifically associated with the construction of the project. This Paragraph shall survive the expiration or termination of this Agreement.

4. Additional Clauses. *Checked paragraphs apply.*

☐ Feasibility Study Alternatives.

The parties acknowledge that the Project is a feasibility study. If, during the course of the Project, an alternative is determined not to be feasible due to cost, water quality, permitability, supply availability, or other pertinent considerations, the Cooperator shall notify the District and cease work on the infeasible alternative. The Cooperator may request reallocating funds to another alternative in accordance with this Agreement. The approval of such request for reallocation of funds shall be in the District's sole discretion.

☒ Ownership of Documents and Other Materials.

All documents and goods or products, including the associated intellectual property rights, developed in connection with this Agreement shall be the property of the District and the Cooperator, jointly. Notwithstanding the above, all Project infrastructure shall be the sole property of the Cooperator. This Paragraph shall survive the expiration or termination of this Agreement.

☐ Project Deliverables.

The Cooperator shall provide the District with each deliverable set forth under the Deliverables for District Comments section in the Project Plan, including any supporting documentation. The District shall provide a written response to the Cooperator within:

- ☐ 15 days of receipt.
- ☐ 30 days of receipt.

The Cooperator shall provide a written response to the District's questions and concerns within:

- ☐ 10 days of receipt.
- ☐ 20 days of receipt.

☐ Florida Single Audit Act.

Funding for this Agreement includes state financial assistance and is therefore subject to the Florida Single Audit Act (FSAA), Section 215.97, Florida Statutes. The Cooperator is a subrecipient of state financial assistance under this Agreement and therefore may be subject to audits and monitoring as described in the Special Audit Requirements exhibit. The Cooperator must also use the attached Florida Single Audit Act Checklist for Non-State Organizations – Recipient/Subrecipient vs. Vendor Determination to evaluate the applicability of the FSAA to non-state organizations to which the Cooperator provides State resources to assist in carrying out activities related to this Agreement. If the Cooperator has a question related to the grant or subgrant of State funding, contact the individual identified below:

Grants Compliance Accountant
Southwest Florida Water Management District
2379 Broad Street, Brooksville, Florida 34604
Phone: (352) 796-7211
GrantsAccounting@swfwmd.state.fl.us

The Cooperator shall provide the District with its grant contact information within 30 days of execution of this Agreement.

☐Federal Single Audit.

Funding for this Agreement includes federal financial assistance and is therefore subject to the Uniform Grant Guidance, 2 C.F.R. Part 200, (UGG) subpart F. The Cooperator is a subrecipient of federal financial assistance under this Agreement and therefore may be subject to audits and monitoring. If the Cooperator has a question related to the grant or subgrant of State funding, contact the individual identified below:

Grants Compliance Accountant
Southwest Florida Water Management District
2379 Broad Street, Brooksville, Florida 34604
Phone: (352) 796-7211
GrantsAccounting@swfwmd.state.fl.us

The Cooperator shall provide the District with its grant contact information within 30 days of execution of this Agreement.

☐ Grant Funding.

District funding for the Project includes grant funds identified in the CFI Project Agreement. The District's reimbursement obligation is contingent upon the District's receipt of the grant funds.

The parties acknowledge that pursuant to the FDEP Grant Agreement, authorization for continuation and completion of work and any associated payments may be rescinded, with proper notice, at the discretion of the FDEP if the Legislature reduces or eliminates appropriations. Extending the contract end date carries the risk that funds for this Project may become unavailable in the future. The Cooperator agrees to comply with the FDEP Grant Agreement Terms and Conditions exhibit.

☐ Reports. (Replaces Subparagraph 11.1 in Exhibit A)

As required by the FDEP Grant Agreement, the Cooperator shall submit quarterly progress reports utilizing the Progress Report Form attached as an exhibit, describing the work performed during the reporting period, problems encountered, problem resolutions, scheduled updates, and proposed work for the next reporting period, and attesting that site visits have been conducted, contractors and subcontractors have been paid, and that work continues to occur in accordance with this Agreement. Quarterly status reports are due no later than 14 days following the completion of the quarterly reporting period. For the purposes of this reporting requirement, the quarterly reporting periods end on March 31, June 30, September 30 and December 31.

☐ Retainage.

The District shall withhold a retainage of 10% of its funding amount from each invoice. Retainage will be released after all submittals and deliverables required by this Agreement have been provided and the District's Contract Manager verifies their compliance with this Agreement.

Exhibit C
Southwest Florida Water Management District
Project Plan

PROJECT DESCRIPTION

The Project is a water conservation incentive program that will make available cost effective conservation activities including but not limited to: high-efficiency plumbing fixtures, cooling tower optimization equipment, Florida Water Star (FWS) rebates, soil moisture sensors, evapotranspiration (ET) irrigation controllers, and other irrigation efficiency improvements. Also included are the program administrative costs to ensure the successful implementation of the program. Tampa Bay Water (TBW) member governments are collaborating with TBW to implement and oversee the Project.

The Project will conserve an estimated 100,000 to 450,000 gallons per day if the Project is fully implemented.

MEASURABLE BENEFIT

The implementation of the program and completion of the Cooperator's final report in accordance with the requirements of this Agreement.

PROJECT TASKS

Key tasks to be performed by the Cooperator:

1. TOILET AND URINAL FIXTURE REBATES/CREDITS – The Cooperator shall ensure new rebated fixtures meet the Environmental Protection Agency's (EPA) WaterSense criteria. Single-family, multi-family, commercial, and institutional properties are eligible for a range of rebate amounts from $40 to $100 depending on the flow rates of the fixtures. Rebates will only be issued when there is a reduction in flush rate from the old fixture to the new fixture. For residential units, a maximum of two toilets per home are eligible. Costs eligible for rebate include the replacement fixture, installation, and necessary components. The District will reimburse 50% of the rebate/credit with the maximum District share being $50 per fixture replaced.

2. EZ TOILET REBATE – The Cooperator shall ensure new rebated fixtures meet the EPA WaterSense criteria. Verification of the old fixture flow rate is not required. For residential units, a maximum of two toilets per home are eligible. Costs eligible for rebate include the replacement fixture and necessary components. The District will reimburse 50% of the rebate with the maximum District share being $20 per fixture replaced.

3. SHOWERHEAD AND AERATOR REBATES – The Cooperator shall provide rebates for WaterSense labeled showerhead and low flow aerators so long as there is a reduction in flow rate from the old fixture to the new fixture. These are available only at institutional, commercial, and multi-family properties. Flow rates and installation will be verified via an inspection. Costs eligible for rebate include the hardware, installation, and necessary components. The District will reimburse 50% of the rebated amount with the maximum District share being $7.50 per showerhead and $2.50 per aerator.

4. IRRIGATION EFFICIENCY IMPROVEMENTS - The Cooperator shall be responsible for: issuing rebates to either the homeowner or the homeowner's irrigation contractor for implementing an irrigation evaluation, subsequent rain shutoff device, and capping unnecessary irrigation heads. The evaluation shall include identification of leaks and inefficiencies as well as any adjustment of the existing irrigation controllers run times as appropriate (irrigation restrictions, etc.); these items will be communicated to, and acknowledged in writing by, the homeowner/tenant. Installed rain

shut-off devices (e.g. rain sensors, WaterSense labeled weather-based irrigation controllers) and capped heads will be enumerated, and proof of installation shall be provided by a paid invoice and the attestation of the contractor and homeowner. This documentation will be stored in an electronic database by the Cooperator. The District will reimburse 50% of the implementation cost with the District maximum payout being $25 per evaluation, $50 per rain shut off device, and $1.50 per capped irrigation head.

5. IRRIGATION CONTROLLERS AND SOIL MOISTRURE SENSORS – The Cooperator shall target high water users for irrigation controllers soil moisture sensors and be responsible for: 1) ensuring equipment installed is a WaterSense approved product; 2) ensuring controller and sensor function properly at the time of installation; 3) educating each homeowner on irrigation controller function with an emphasis on water conservation features for each controller installed to ensure long-term, effective equipment operation. Eligible costs for the rebate and/or direct install include the hardware, equipment, installation, labor and necessary components. The District will reimburse 50% of the implementation cost with the District maximum payout being $275 per sensor/controller.

6. COOLING TOWER OPTIMIZATION – The Cooperator shall provide rebates to incentivize cooling tower water use optimization. Inspections shall be performed for all rebates to ensure equipment such as, but not limited to, impulse water submeters, conductivity sensors, water softeners, filtration and treatment systems, and controllers are installed properly. Rebate recipients shall sign an agreement with the Cooperator that ensures proper operation and maintenance of the rebated equipment. Cooling tower rebate amounts will be based on the expected water savings, $1.25/kgal saved over 5 years, with the total rebate amount not to exceed the equipment/installation costs. The District will reimburse 50% of the rebate amount with the maximum District payout being $10,000 per cooling tower.

7. FLORIDA WATER STAR REBATES — The Cooperator shall be responsible for issuing rebates to home builders for each home certified to meet FWS criteria and working with builders to guide them through the program. The District will reimburse 50% of the rebate cost with the District maximum payout being $500 per single family home and for multifamily properties, $50 per residential unit and $425 per 6000 sq. ft. of landscaped area.

8. PROGRAM ADMINISTRATION/VERIFICATION – The Cooperator shall verify that toilets being replaced and newly installed toilets meet eligibility criteria per this Agreement. Verification may be performed via photographs or inspection and shall include the following: 1) verification the toilet being replaced meets the qualification requirements for replacement and rebate under this Agreement, 2) confirmation of EPA WaterSense certification and label of newly installed toilets. Location and quantity information shall be tracked for all conservation program activities. The District will reimburse 50% of the administration cost for the entire program at a rate of $20 per item rebated or installed except for showerheads and aerators, which will be at a rate of $2 per item, and capped irrigation heads which will be at a rate of $1 per item. The District will reimburse up to 50% of the inspection cost for the entire program at a rate of $30 for each toilet inspection. Inspection costs are only eligible if the property was successful in receiving a rebate.

9. TRACKING – The Cooperator shall track all program activity in an electronic database including addresses where the implementations occurred. Records of all receipts, verification documents, inspection reports, and invoices shall be compiled and maintained by the Cooperator and shall be made available upon request by the District.

10. SAVINGS ANALYSIS – For customer accounts associated with tasks 4, 5, and 6 the Cooperator shall be responsible for a water savings analysis based on one full year of pre-implementation

water use data and one full year of post-implementation water use data. For customer accounts associated with task 7, the Cooperator shall be responsible for a water saving analysis based on a comparison with non-FWS new homes that are otherwise comparable. This includes obtaining customer water use data and performing the subsequent data analysis.

11. DRAFT/FINAL REPORTS - The Cooperator shall provide a draft final report and final report. The report shall contain the following information: 1) number and location of the implementations/rebates performed; 2) a water savings calculation for indoor conservation items that is based on the number of participating properties multiplied by the expected savings rate (if available, the savings rates should be updated via pre vs post implementation water use analysis); 3) verification that fixtures and appurtenances have been inspected and/or verified as described in this Agreement; 4) a summary of program background, implementation, and methods used to promote the Project; 5) full accounting of all funds expended during and in relation to the funded portions of the Project; 6) customer surveys to determine the satisfaction with the various rebate activities; 7) water use data and water savings based on one full year of pre-implementation water use data and one full year of post-implementation water use data as described in Task 10; 8) all pertinent information regarding the program findings, associated conclusions and recommendations for future programs; 9) comparison of the number of proposed implementations and the actual number of implementations, and if the actual is less than the proposed an explanation of why.

DELIVERABLES

The Cooperator shall provide

- Draft final report
- Final report
- Contractor contracts (including program administrator, inspector, etc.)

PROJECT SCHEDULE

DESCRIPTION	COMMENCE	COMPLETE
Implementation of the program	12/31/2025	12/31/2026
Savings Analysis	12/31/2026	12/31/2027
Draft Final Report	01/01/2028	05/01/2028
Final Report	05/01/2028	06/01/2028

PROJECT BUDGET

DESCRIPTION	DISTRICT	COOPERATOR	TOTAL
Rebates/ Credits/ Installations	$364,341	$364,341	$728,682
Program Administration and Inspection	$163,659	$163,659	$327,318
TOTAL PROJECT COSTS	$528,000	$528,000	$1,056,000

The above costs and quantities are estimated pending vendor contract costs. In no instance will the District's reimbursement exceed 50% of the actual cost of the rebated item(s) and installation(s).

Agreement No.

Attachment 6
Southwest Florida Water Management District
Cooperative Funding Agreement Checklist

This checklist is to be used as a tool by the Cooperator and District Contract Manager to monitor and track Cooperative Funding Agreement terms throughout Project implementation.

Cooperator	District	
		For Studies, Design and Non-Construction Conservation Programs:
☐	☐	Copy of solicitation and contract with consultant. If not provided timely, items may not be eligible for reimbursement (Exhibit A, Subparagraph 7.6)
☐	☐	If applicable, design drawings (Exhibit B, Paragraph 4)
		For Construction:
☐	☐	Copy of solicitation, submitted bid form, and contract with contractor. If not provided timely, items may not be eligible for reimbursement (Exhibit A, Subparagraph 7.6)
☐	☐	Copy of Notice to Proceed to contractor (Exhibit B, Paragraph 1)
☐	☐	Owner Direct Purchase Statement (Exhibit A, Subparagraph 5.4)
☐	☐	Copy of construction permits (Exhibit A, Paragraph 16)
☐	☐	If land acquisition included, Property Appraisal and review and comment from District's Real Estate Services on appropriate land value (Exhibit A, Paragraph 16; and Exhibit B, Additional Clauses)
☐	☐	Draft signage (Exhibit B, Additional Clauses)
☐	☐	Any state or federal appropriations or grant funds received by the Cooperator for the Project will be applied to equally reduce each party's share (Exhibit A, Subparagraphs 5.2 and 7.2)
☐	☐	Copy of all required federal, state, and local environmental permit approvals and permitted drawings (Exhibit A, Paragraph 16)
☐	☐	Operational Plan (Exhibit B, Operation and Maintenance Paragraph)
		During Project Work:
☐	☐	Quarterly status reports (Exhibit A, Paragraph 11)
☐	☐	Invoices for reimbursement (Exhibit A, Paragraph 7)
☐	☐	Contingency Form for each contingency item (Exhibit A, Subparagraph 5.3)
☐	☐	Notices for changes to prime contacts (Exhibit A, Paragraph 1)
☐	☐	Requests to extend project task deadline and adjustment to line item budget (Exhibit A, Paragraph 2)
☐	☐	Requests to changes to scope, budget, and/or schedule requiring an amendment to the agreement
		Close Out:
☐	☐	All Deliverables listed in Exhibit C, Project Plan, as described in the tasks
		Survival of the Agreement:
☐	☐	The District, upon request, may review the biennial Operation and Maintenance Report (Exhibit B, Operation and Maintenance Paragraph)

Cooperative Funding Agreement between District and Tampa Bay Water and an Update on the Tampa Bay Water Wise Program

Agenda Item C.1

April 20, 2026

Amelia Brown
Demand Management Program Manager
Tampa Bay Water

TAMPA BAY WATER

TAMPA BAY water wise

- Save up to 3.8 million gallons per day (mgd) by 2030
- Cumulative savings are 1.1 mgd
- Fiscal Year 2026 high savings goal is ~560,000 gallons per day (gpd), low savings goal is ~200,000 gpd
- The high goal is a significant increase from each of the last two years' results, which were 300,000+ gpd

TAMPA BAY WATER

TAMPA BAY water wise

To achieve the high savings goal, the working group adopted these program changes this fiscal year:

- Increased toilet rebate amounts for all customers (now $100 - $200)
- Increased rebate amounts for commercial irrigation projects (now up to 50% of project costs)
- Reviewing changes to the residential sprinkler system rebate based on irrigation contractor feedback

TAMPA BAY WATER

TAMPA BAY water wise

Rebate Forecast:

Rebate Type	2025 Completed	2026 Completed and Projected
Multi-Family	13	21
Hotel	7	7
Commercial/Institutional	3	10
Residential Sprinkler Rebate	20	50
Residential toilets	1198	1100
Florida Water Star	0	900

TAMPA BAY WATER

TAMPA BAY water wise

Water Savings to date (FY26): 122,074 gpd

Water Saving Forecast: Potential to meet the high savings goal

Program Expenditures: On track with planned administrative, marketing, and rebate budgets

Cooperative Funding Agreement No. 26CF0004970 with District

Cooperative Funding Initiative (CFI) Agreement

- The District has co-funded the Tampa Bay Water Wise program since it launched in 2020.
- The District will reimburse up to $528,000 for program implementation costs in calendar year 2026.
- The agency will provide an equal or greater amount in project funding.

Recommendation

- Staff recommends Board approval of Agreement No. 26CF0004970 with the Southwest Florida Water Management District.

Supplying Water To The Region

AGENDA ITEM C.2

DATE: April 1, 2026

TO: Board of Directors

THRU: Charles H. Carden, General Manager

FROM: Warren Hogg, Chief Science Officer

SUBJECT: Water Quality Update and Recommendation to Implement Regional Water Quality Study Drinking Water Treatment Projects - *Approve*

SUMMARY

The updated Regional Water Quality Study completed by Carollo Engineers in January 2026 identifies targeted treatment actions to reduce per- and polyfluoroalkyl substances (PFAS) and total organic carbon (TOC) in finished drinking water. These treatment actions support long-term regulatory compliance and strengthen chloramine disinfectant residuals across the regional delivery and member government distribution systems, particularly during the summer months. The recommended treatment systems will be presented for board consideration. This agenda item also summarizes agency water quality compliance and water quality studies through March 2026, and member government distribution system performance through February 2026.

SUGGESTED ACTION

Staff requests Board approval of PFAS reduction treatment projects at the Regional Surface Water Treatment Plant and the two Brandon Urban Dispersed Wells Water Treatment Plants, and TOC reduction infrastructure at the Eldridge-Wilde and South Pasco Wellfields.

COST/FUNDING SOURCE

No funding requested at this time; individual projects will be brought for board consideration individually. The estimated capital costs for the recommended PFAS reduction and TOC reduction treatment systems at five locations is $239 million.

DISCUSSION

The Regional Water Quality Study Update report, which developed treatment concept designs and implementation plan recommendations based on PFAS bench-scale treatability studies and the current EPA PFAS maximum contaminant levels (MCLs), was finalized by Carollo Engineers, distributed to member governments, and presented to the Board in January 2026. The recommendations from the Carollo Engineer's report were reviewed and associated Capital Improvement Program (CIP) project cost estimates were presented to the Board in February 2026. Staff recommendations for PFAS reduction treatment and TOC reduction treatment at two locations, along with CIP cost estimates, are outlined below.

Recommended PFAS Reduction Treatment

To achieve compliance with the current regulatory MFLs for perfluorooctane sulfonic acid (PFOS) and perfluorooctanoic acid (PFOA), the updated Regional Water Quality Study recommended PFAS reduction treatment at three existing Tampa Bay Water treatment locations based on water quality sample data: the Regional Surface Water Treatment Plant (a suspended ion exchange pilot plant, interim period compliance measures using activated carbon and other options, with construction and operation of a full-scale pilot plant); Brandon Urban Dispersed Wells Water Treatment Plant 5 (fixed bed ion exchange); and Brandon Urban Dispersed Wells Water Treatment Plant 7 (fixed bed ion exchange). These three locations are recommended for implementation of PFAS reduction treatment between 2026 and 2031 to comply with current PFOS and PFOA drinking water limits. Interim measures would be implemented, if necessary, for short-term compliance if the EPA's compliance date is not extended from April 2029 to April 2031 and/or full-scale PFAS treatment options are not ready for service.

Recommended TOC Reduction Treatment

To strengthen disinfection stability in the regional system and member distribution systems, the original and updated Regional Water Quality Study reports recommended TOC reduction treatment at various Tampa Bay Water treatment locations to address this request of the member governments. Two existing treatment locations are recommended for implementation of additional water quality treatment. These two sites are at the Eldridge-Wilde Wellfield (granular activated carbon) and the South Pasco Wellfield (fixed bed ion exchange). These two locations are recommended for project implementation because the water from these two wellfields are among the highest TOC concentrations in the Tampa Bay Water

delivery system and the reduction of TOC at these two locations will assist the downstream member governments in maintaining disinfection residuals in their distribution systems, particularly in the warm summer months. CIP projects will be underway at both locations, and the implementation of TOC reduction at this time will amount to cost savings as compared to implementing this treatment technology at a later time. The remaining TOC reduction projects identified in the Regional Water Quality Study update are not recommended for implementation at this time. These treatment project designs may be revisited in the future based on future water quality conditions in the regional system or requests by member governments and would require subsequent board discussion and approval.

Recommended Implementation Strategy, Costs and Schedule Considerations

Based on CIP implementation scheduling, these recommendations (three PFAS reduction treatment projects and two TOC reduction treatment projects) are projected to be implemented between 2026 and 2031. These projects are individually listed in the agency's CIP that will be presented during the FY 2027 budget workshop in April 2026. As reported at the February 2026 board meeting, the capital costs of the PFAS reduction projects at the Regional Surface Water Treatment Plant and the two Brandon Urban Dispersed Well treatment sites total $187,771,000. The capital costs for the TOC reduction infrastructure at the Eldridge-Wilde and South Pasco Wellfields total $51,228,000.

Staff continue to monitor the EPA litigation associated with the PFOS and PFOA MCLs and compliance timeframe and will implement the PFAS reduction projects in a stepwise approach, if approved by the Board. The uncertainty with the MCLs and compliance timeframe will likely remain until later in calendar year 2026. Tampa Bay Water recommends proceeding with treatment based on the current PFOS and PFOA regulations, recognizing that PFAS treatment at appropriate locations, if approved by the Board, would likely still be in design phases and not the more costly construction phases if EPA is directed by the Court to reconsider and propose different PFOS and PFOA MCLs later this year. The EPA's intention to extend the deadline to comply with the current PFOS and PFOA MCLs is also being challenged by the litigants. If these third parties prevail, the April 2029 compliance deadline would remain. It is, therefore, critical to begin PFAS treatment design as soon as possible and as approved by the Board. Staff is working on contingency plans to achieve compliance with the existing PFAS regulations on an interim basis, if this becomes necessary.

Staff will present these recommendations and CIP cost estimates to the Board on April 20, 2026. Staff will request Board approval of the PFAS reduction treatment systems at the Regional Surface Water Treatment Plant and the two Brandon Urban Dispersed Wells Water Treatment Plants as well as the TOC reduction infrastructure at the Eldridge-Wilde and South Pasco Wellfields.

Drinking Water Quality Compliance

The agency monitors regional system water quality at member government regional delivery locations identified in the Comprehensive Regional Water Quality Monitoring Plan approved by the Florida Department of Environmental Protection (FDEP). Data are reported in accordance with the Master Water Supply Contract (Exhibit D) water quality compliance samples and state and federal requirements. **The agency is in compliance at all regional delivery locations during this reporting**

period.

PFAS Quarterly Compliance Monitoring

The existing EPA PFAS National Primary Drinking Water Regulations, which were finalized in April 2024, currently require an initial PFAS baseline monitoring program be completed on a quarterly basis during a 12 consecutive month period for all of Tampa Bay Water's active delivery locations by April 26, 2027. This monitoring includes points of connection (POCs) to member utilities and points of entry (POEs) into the regional transmission system. These locations are identified in the agency's Comprehensive Regional Water Quality Monitoring Plan that was approved by the Florida Department of Environmental Protection for finished drinking water. While the POCs were previously characterized during the UCMR5 and supplemental monthly sampling programs, the POEs did not require earlier sampling.

Three PFAS quarterly compliance monitoring events for finished drinking water (and individual untreated source water samples) were collected in August and November 2025 and February 2026. These results were consistent with all previous UCMR5 and PFAS supplemental monthly findings and expectations. The fourth (and final) quarterly monitoring event is scheduled for May 2026.

Regional Free Chlorine Maintenance Evaluation

Staff activities on a supplemental water quality characterization program involving TOC species that indicate potential changes in biological stability that lead to chloramines decay have been ongoing to gauge regional transmission system conditions since this past summer. This work is intended to provide potential early detection of water chemistry and biology changes in transmission mains that may be the cause for accelerated chloramines decay observed during summer months. Staff continue to evaluate online water quality monitoring equipment for use to continuously measure the size and number of bacteria to anticipate changes in advance of traditional water quality test methods. Staff is also evaluating alternative chemical delivery control methods coupled with other water quality monitoring technologies to optimize reduction of TOC with existing regional surface water treatment processes. The program goal is to use these data to develop interim operational strategies that could lessen the effects of seasonal chloramines decay until TOC reduction treatment can be implemented, if approved by the Board, per the updated Regional Water Quality Study recommendations. Data are presented and discussed at Water Quality Working Group/Operations Coordination Committee meetings.

Red Tide

Staff continues to review monitoring performed by others to remain current on red tide conditions in Tampa Bay. Red tide conditions have not been reported in the vicinity of the desalination plant intake structure. The desalination plant is currently online.

Water Quality Working Group/Operations Coordination Committee

Water Quality Working Group/Operations Coordination Committee (WQWG/OCC) meetings were held on February 12 and March 12, 2026. Discussion topics included Tampa Bay Water regional

system performance and project status reviews (described above). Member governments submitted their distribution system performance data that are provided in the attached graphs and Tables 1-4. The graphs show, by member government for March 2025 through February 2026, the total number of received complaints, the total distribution system water flushed (by volume), and the water distribution system water flushed (percent of total water delivered).

BACKGROUND

Fifth Unregulated Contaminant Monitoring Rule (UCMR5) and Supplemental PFAS Data Collection

Finished water quality monitoring of 29 PFAS and lithium, which was required by the EPA under UCMR5, began in the Tampa Bay region in January 2023 and ended in April 2024. Results for Tampa Bay Water's four UCMR5-related sampling events were presented to the Board in July 2024. Based on the analyses of quarterly UCMR5 samples and supplemental samples through December 2025, Tampa Bay Water confirmed PFOS at running annual average concentrations slightly greater than or near EPA's MCL at the same three delivery locations: Hillsborough County Lithia and Central WTPs and the Pasco County Lake Bridge Connection. Other PFAS running annual average concentrations at these and other agency delivery locations, which were sampled and analyzed by Tampa Bay Water, continued to be less than the EPA's MCLs or at non-detectable levels. The EPA MCLs for PFAS are based on running annual averages like most drinking water compliance requirements. A running annual average is calculated using drinking water quality data from the most recent 12 months of analytical data.

PFAS National Primary Drinking Water Regulations - Potential Revisions

The EPA final MCLs for six PFAS were adopted in April 2024 and became effective in June 2024. In May 2025, EPA announced their intent to change the April 2024 PFAS regulations by: (1) extending the compliance deadline from April 2029 to April 2031 for PFOS and PFOA; and (2) rescinding regulations for perfluorohexanesulfonic acid (PFHxS), perfluorononanoic acid (PFNA), hexafluoropropylene oxide dimer acid (HFPO-DA), and the Hazard Index standard for mixtures of these three PFAS and perfluorobutanesulfonic acid (PFBS).

EPA planned to propose these changes in new PFAS drinking water regulations in the fall 2025; however, the proposed rules have not yet been issued, and the EPA has not provided an updated publication schedule as of this writing. The delay is likely the result of recent legal briefings filed by third-party intervenors (Natural Resources Defense Council and Earth Justice) in the EPA's ongoing litigation with the American Water Works Association (AWWA) and others that focused on EPA's position to rescind the four PFAS limits (PFHxS, PFNA, HFPO-DA and the Hazard Index that includes PFBS). The proposed EPA rule changes align with part of the AWWA challenge and negotiations; however, the intervenors are in opposition to the rescinding of the existing regulations for the four PFAS limits.

As a result of this recent litigation activity, the litigation challenging the EPA's scientific basis and projected treatment costs used to develop the PFOS and PFOA MCLs has not advanced. In addition, the EPA's proposal to extend the existing PFOS and PFOA MCL compliance deadline has not been published in the Federal Register. Both actions (related to PFOS and PFOA) are of most interest to Tampa Bay Water and the member governments based on regional PFAS testing to date. The other PFAS (PFHxS, PFNA, HFPO-DA and the Hazard Index that includes PFBS) are of less interest to Tampa Bay Water and the member governments based on testing of our water supplies.

EXECUTIVE SUMMARY

Tampa Bay Water completed a Regional Water Quality Study (RWQS) in April 2023. The RWQS defined optimized solutions for reduction of primarily total organic carbon (TOC), among other parameters, as requested by the Member Governments at that time, and included an implementation plan to guide Tampa Bay Water and the Member Governments in the process of achieving enhanced water quality. In April 2024, the Environmental Protection Agency (EPA) promulgated the final National Primary Drinking Water Regulation (NPDWR) for per- and polyfluoroalkyl substances (PFAS). This study provides an update to the RWQS recommendations with inclusion of EPA's PFAS maximum contaminant levels (MCL) to the water quality goals.

Upon review of the available PFAS data, two source waters were identified as requiring a PFAS treatability study – surface water feeding the Regional Surface Water Treatment Plant (RSWTP) and groundwater feeding the Brandon Urban Dispersed (BUD) Wells. The EPA's three best available treatment technologies for PFAS treatment in drinking water were evaluated for each of these sites: granular activated carbon (GAC), ion exchange, and high-pressure membranes. Bench testing was conducted to evaluate short-listed treatment approaches including fixed bed ion exchange (FBIX) for the BUD Water Treatment Plants (WTPs) to reduce PFAS in these relatively low TOC waters as well as Suspended Ion Exchange (SIX) and GAC for the RSWTP to reduce PFAS and TOC in these relatively high TOC waters. TOC reduction using SIX, which also reduces PFAS, improves performance of downstream GAC to further reduce PFAS and consistently achieve EPA's MCLs.

Results from the bench testing informed updates to the recommended treatment approaches and associated planning-level study costs. The overall recommendations include adding treatment to the existing RSWTP and BUD-5 and BUD-7 WTP sites. Specifically for the BUD WTPs, it is recommended to install fixed bed ion exchange (FBIX) vessels for PFAS removal. With FBIX for PFAS treatment at these sites, it is recommended to also use FBIX for nitrate treatment to maintain like systems. A nitrate goal of 0.4 mg/L NO_3-N is listed in the 2023 RWQS and carried through in this RWQS Update. Nitrate concentrations at the BUD-5 and BUD-7 WTP sites are elevated above the goal, which is less than the NPDWR standard of 10 mg/L. To achieve the nitrate goal of less than 0.4 mg/L, it is recommended to install FBIX for nitrate treatment at the BUD WTP sites, but at a later time as a lower-priority, long-term project. In this way, Tampa Bay Water and the Member Governments have time to determine if nitrate treatment is desired at this level.

Of the treatment approaches bench tested for the RSWTP, SIX is the most cost-effective treatment option due to the downstream benefits of chemical and energy cost savings, reduced filter backwashing, and potentially increased water production resulting from lower TOC. SIX also significantly reduces the high operational cost associated with GAC media replacement for PFAS reduction in the presence of high TOC concentrations. Additionally, treatment at the RSWTP provides a reduction of PFAS concentrations to most of the Regional System. It is recommended to continue to prioritize a SIX and GAC demonstration at the RSWTP to collect design criteria data and refine operational parameters and costs for PFAS treatment under typically highly variable TOC and other source water quality conditions.

It is also recommended to continue to prioritize the three Phase 1 projects (RSWTP, BUD-5 WTP, and BUD-7 WTP) to comply with EPA's PFAS MCL requirements.

The remaining two Phase 1 projects (Eldridge Wilde ozone-GAC and South Pasco FBIX), while not required to satisfy a regulatory requirement, would achieve TOC reduction, as requested by Member Governments to achieve more stable chloramine residuals, particularly during summer months. These two locations are included in Phase 1 because these sites will be undergoing near-term design and construction improvements as existing Capital Improvements Program (CIP) projects, which would result in cost savings as part of ongoing activities (versus later and separate design and construction). By advancing these two sites, which use the two different technologies recommended for TOC reduction, FBIX and ozone-GAC, this would provide full-scale groundwater treatment operational data to better inform the five Phase 2 TOC reduction projects and the up to ten Phase 3 TOC reduction projects. In this way, Tampa Bay Water and the Member Governments have time and performance data to determine the full benefits of region-wide TOC treatment benefits.

The implementation plan has been updated since the RWQS to prioritize meeting PFAS compliance. For example, implementing SIX at the RSWTP was previously in Phase 2 and has been moved to Phase 1. BUD PFAS treatment is recommended for Phase 1 while nitrate treatment at the BUD sites remains in Phase 2. Capital costs for each recommended implementation phase and associated updates are provided in Table ES.1 through Table ES.4. In addition to the cost impacts due to re-prioritization of the implementation plan, other cost updates include changes to the recommended treatment (i.e., nitrate FBIX instead of Biottta and PFAS FBIX for BUD WTPs), as well as direct cost updates (i.e., $2022 to $2024 and updates to SIX costs based on information from the Tippin SIX demonstration). Note that costs presented are planning-level study costs that will be scheduled and programmed into the Tampa Bay Water CIP with appropriate escalations due to timing. These CIP costs, which will include potential changes to the Uniform Rate, are currently being developed and refined by Tampa Bay Water, and will be discussed with Member Governments in 2026, prior to the agency seeking Board action. In this way, Tampa Bay Water and the Member Governments have time for further discussion in the future on increases to the Uniform Rate versus overall system benefit of TOC reduction. Additional details on planning-level study costs are discussed in the Cost Analysis Assumptions section of this report.

Table ES.1 Recommended Implementation Phasing and Associated Capital Costs(1)

Phase	RWQS Update	2023 RWQS(2)	Years
Phase 1	$229.2M	$140.4M	1-6
Phase 2	$239.6M	$260.9M	7-12

Notes:
(1) Phase 3 implementation prioritization is unchanged from the 2023 RWQS.
(2) Cost estimates are provided in $2024 without escalation to mid-point of construction as planning-level estimates. CIP costs will be programmed and escalated accordingly.

INTRODUCTION

Background

Since its inception, Tampa Bay Water has continued to provide high quality water, meeting or exceeding federal and state standards to its Member Governments. Tampa Bay Water completed a Regional Water Quality Study (RWQS) in April 2023. The RWQS defined optimized solutions for reduction of primarily total organic carbon (TOC) and included an implementation plan that will guide Tampa Bay Water and the Member Governments in the process of achieving enhanced water quality. Reduction of TOC was a priority in the RWQS, along with other water quality parameters that included color, sulfide, iron, and nitrate.

Desktop, bench scale, and pilot testing were completed as part of the RWQS, along with regional system water quality blend modeling and a comparison of cost and non-cost considerations for individual treatment options to identify the recommended treatment technologies for each of the Tampa Bay Water treatment facilities.

Regulatory Overview

In April 2024, the Environmental Protection Agency (EPA) promulgated the final National Primary Drinking Water Regulation (NPDWR) for per- and polyfluoroalkyl substances (PFAS). The NPDWR identifies maximum contaminant levels (MCLs) and maximum contaminant level goals (MCLGs) for five individual PFAS and one PFAS mixture (PFAS HI) as listed in Table 1. These MCLG are non-enforceable public-health goals. For PFOS and PFOA the MCLG is 0. The MCL is enforceable and set as close to the MCLG as feasible, using best available treatment technology and considering costs.

The Hazard Index (HI) is calculated as a sum of the measured concentration of each of the four PFAS divided by its corresponding health reference value, as shown in the following equation. The rule requires compliance by April 26, 2029. On this date, the four-quarter running annual average (RAA) will be calculated using the previous four quarters' data; this implies that treatment must be in place by April 2028 to ensure the RAA is below the MCL by the compliance date.

$$HI = \frac{GenX}{10\ ng/L} + \frac{PFBS}{2000\ ng/L} + \frac{PFNA}{10\ ng/L} + \frac{PFHxS}{10\ ng/L}$$

In a May 2025 press release, the EPA indicated intent to rescind all but PFOS and PFOA MCLs and to extend the compliance deadline to 2031. While revised draft regulations are still pending as of the writing of this report, the extended deadline would provide some schedule flexibility but treatment would still be required to meet the updated compliance requirements.

Table 1 PFAS NPDWR Limits

Parameter	MCL (enforceable levels)	MCLG (health based, non-enforceable)
PFOA	4.0 ng/L	zero
PFOS	4.0 ng/L	zero
PFHxS	10 ng/L	10 ng/L
PFNA	10 ng/L	10 ng/L
HFPO-DA (GenX)	10 ng/L	10 ng/L
PFAS HI (mixture MCL)	1.0 (unitless)	1.0 (unitless)

General Notes:
Running annual average (RAA) from quarterly sampling.

This study provides an update to the RWQS recommendations with addition of PFAS to the water quality goals.

Objectives

The goal of this RWQS Update is to review the PFAS characterization and treatability study data, evaluate PFAS management strategies, and incorporate PFAS treatment, if needed, in the RWQS' previously identified treatment solutions. The specific objectives of the RWQS Update are to:

- Revisit and revise the previously defined treatment system design criteria for TOC to meet PFAS treatment goals (where needed, based on the available PFAS data).
- Provide an estimate of capital and operation and maintenance (O&M) costs for the treatment system refinement/ revision.

WATER QUALITY REVIEW

Historical PFAS Data

A robust review of all water quality data was undertaken for the RWQS. As water quality has aligned with historical trends, only water quality relevant to PFAS treatment performance is discussed herein. Of all active Tampa Bay Water regional water delivery locations or points of connection (POC), those associated with the Regional Surface Water Treatment Plant (RSWTP) sources and the Brandon Urban Dispersed (BUD) Wells were found to require a PFAS treatability study. Note that all PFAS data shown in this report have been analyzed by the Tampa Bay Water laboratory unless otherwise noted. Specifically, the August 2024 bench test results presented were analyzed by Pace Analytical Laboratory.

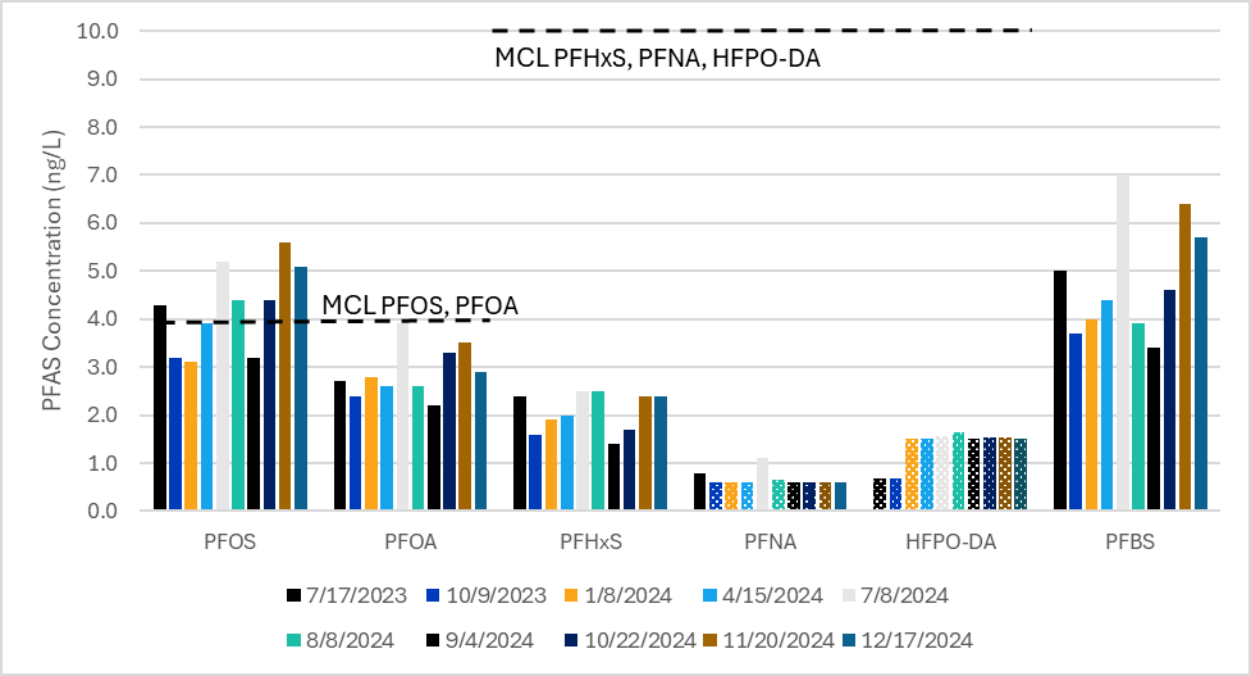
Regional Surface Water Treatment Plant

The RSWTP, which currently has a maximum day design capacity of 120 million gallons per day (mgd) and typically operates at an average 90 mgd, provides enhanced coagulation, intermediate ozone and biological activated carbon (BAC) filtration. The RSWTP receives raw water from three sources (Alafia River, Tampa Bypass Canal [TBC], and the C.W. Bill Young Regional Reservoir), and the finished water blends with the desalination product water when operational. The relative amount of each source impacts water quality at the plant, with significant seasonal variability. The RSWTP is currently undergoing expansion to meet growing demands.

PFAS was monitored in RSWTP finished water delivered to Member Governments at POCs by Tampa Bay Water, and at subsequent downstream point of entry locations by individual Member Governments during the Fifth Round Unregulated Contaminant Monitoring Rule (UCMR5) program. This sampling began in July 2023 and continued quarterly through April 2024, with a total of four sampling events. The UCMR5 data collected by Tampa Bay Water and the Member Governments are provided in Appendix A.

In July 2024, supplemental monthly sampling by Tampa Bay Water commenced. Of the 29 measured PFAS, the regulated PFAS levels from the sampling through December 2024 are summarized in Figure 1.

Of the regulated PFAS, PFOS and PFOA were the only compounds observed to be above the respective MCL of 4 ng/L. PFNA has been detected in the finished water three times above a detection limit of 0.6 ng/L by the Tampa Bay Water lab. PFHxS was detected below the MCL of 10 ng/L. PFBS does not have an MCL, and levels were found to be well below the health-based reference level (2,000 ng/L).

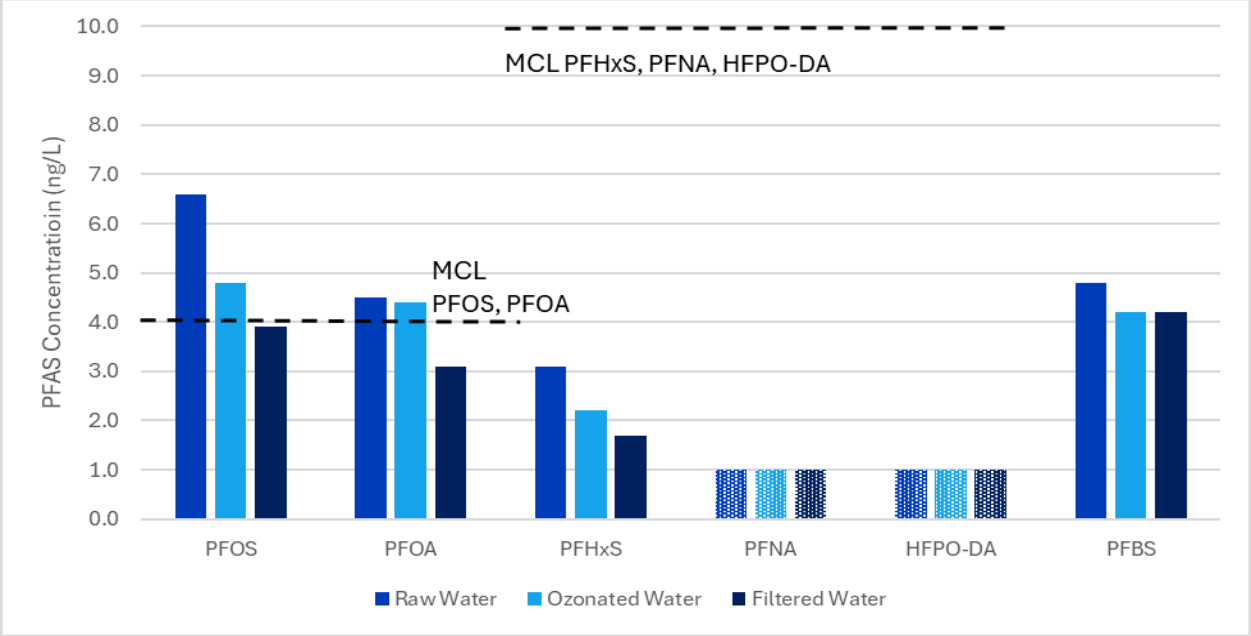


Note: Bars with hatching designate non-detect values.

Figure 1 301REGHILLS POC Regional Supply (Finished Water)

During the collection of bulk water (August 20, 2024) for PFAS benchtop treatability testing (described in a subsequent section of this RWQS Update report), samples were collected to capture PFAS concentrations in the raw water and fate through the treatment plant. These data were analyzed by a third-party laboratory (lab) (Pace Analytical) and shown in Figure 2.

The data are consistent with the finished water sampling to date with PFOS and PFOA being the only compounds detected near or in exceedance of the respective MCL in both the raw and ozonated effluent water. These data indicate that there is some removal of regulated PFAS through the existing treatment processes; however, this observation is limited to a single sample. It is recommended collect additional in-plant samples to better characterize the fate of PFAS through the plant, including waste streams, especially those recycled to the head of the plant. PFNA was not detected by the Pace lab during the in-plant sampling event (August 20, 2024, method detection limit [MDL] of 1 ng/L). HFPO-DA was found to be non-detect with an MDL max of 1.58 ng/L. PFBS was again found to be well below the health-based reference level.



Note: Bars with hatching designate non-detect values.

Figure 2 RSWTP Regulated PFAS (Sampled 8/20/24)

The RSWTP flow is driven by a variety of factors including short- and mid-term environmental climate conditions, surface water availability, and adherence with groundwater water use permit (WUP) compliance. UCMR5 sampling followed an unusually dry rainy season with corresponding RSWTP flow data (July 2023 through April 2024) suggesting an average plant flow of 87 mgd with the predominant source varying throughout the year (Figure 3). Supplemental monthly sampling beginning in July 2024 followed a more typical rainy season (Figure 4). The source water breakdown for the PFAS monitoring sampling events to date is summarized in Table 2. This data indicates slightly elevated PFOS and PFOA concentrations following a more typical rainy season when compared to the earlier UCMR5 data. It is important to continue to monitor PFAS in the source water(s) to better understand the impact of the sources on PFAS occurrence and trends at the RSWTP.

(2) All samples collected at 301REGHILLS POC during UCMR5 sampling unless otherwise noted.
(3) 8/20/2024 sample collected for PFAS Treatability Study. PFOS/PFOA from post-filtration, rather than FW.

BUD Wells

The BUD wells consist of a series of five wells being treated at two sites, the BUD-7 water treatment plant (WTP) and the BUD-5 WTP. BUD-7 WTP treats the flow from BUD-7. BUD-5 WTP treats the combined flow from BUD-2, 4, 5R, and 6. BUD-5R was offline for more than 1 year undergoing rehabilitation and maintenance during most of this study and was returned to service in December 2024.

The actively pumping BUD wells were individually sampled for PFAS and analyzed at the Tampa Bay Water laboratory on March 20, 2024 and April 15, 2024. Subsequently, monthly supplemental monitoring of the BUD wells commenced in July 2024 by Tampa Bay Water. The regulated PFAS results are shown in Figure 5 through Figure 9. PFOS and PFOA are in exceedance or near the MCL reference point of 4 ng/L for BUD-4, 6, and 7. Little detection of PFAS was observed at BUD-2. HFPO-DA and PFNA have not been detected at any BUD wells. PFBS has been detected, but well below the health-based reference level (2,000 ng/L). BUD-5R was offline for much of the sampling due to ongoing maintenance but was sampled December 17, 2024 when it was returned to service. Based on that single sample, BUD-5R has an exceedance of PFOS and lower PFOA than BUD-4, 6, and 7. Note that BUD-7 was not sampled April 15, 2024. BUD-4 and BUD-7 have the highest regulated PFAS detection from the data collected to date. Continued sampling of the BUD wells is recommended due to the variability observed.

PFAS Water Quality Goals

The goal of this RWQS Update is to identify an implementation plan to achieve MCL compliance for PFAS at all Tampa Bay Water POCs. As such, water quality goals are outlined in Table 3 to match the MCLs. This work updates the RWQS that previously established TOC targets of 1.0 to 2.0 milligrams per liter (mg/L) and a nitrate goal of 0.4 mg/L as N.

Table 3 PFAS Drinking Water Quality Goals

Parameter	Goal
PFOA	< 4.0 ng/L (MCL)
PFOS	< 4.0 ng/L (MCL)
PFHxS	< 10 ng/L (MCL)
PFNA	< 10 ng/L (MCL)
HFPO-DA (GenX)	< 10 ng/L (MCL)
PFAS HI	< 1.0 (MCL)

TREATMENT PROCESS ALTERNATIVES

PFAS treatment technologies have been evaluated for PFAS removal with considerations for both cost and efficacy. The EPA's identified best available technologies (BATs) that have been robustly tested for full-scale applications of PFAS treatment include the following:

1. Granular activated carbon (GAC).
2. Ion exchange (IX).
3. High pressure membranes, such as nanofiltration (NF) or reverse osmosis (RO).

High pressure membranes were eliminated as an option for these Tampa Bay Water sources identified to required PFAS treatment due to higher energy cost and volume of waste residuals (concentrate) combined with the low levels of PFAS detected (when compared to other utilities that are considering NF/RO). Novel adsorbent medias are also available for full-scale use, but limited full-scale implementation presents uncertainty regarding long-term reliability. Co-contaminant competition, namely organics, limits the applicability of IX resin for PFAS adsorption, which is typically applied for source water where TOC is less than approximately 2 mg/L. Furthermore, PFAS-IX resin is single-use and manufacturers also do not recommend that this resin be backwashed to avoid disturbing the mass transfer zone. Organic or TOC fouling of the media still occurs with the use of GAC, but the impact on PFAS treatment performance is lesser than IX resin. With elevated TOC concentration, GAC usage rates to achieve PFAS compliance will increase. Unlike PFAS-IX resin, GAC can be reactivated offsite and reused. While each of the three BATs have their benefits and tradeoffs, site-specific requirements and anticipated costs dictate which are best for Tampa Bay Water.

RSWTP

Due to the high level of organics present in the Tampa Bay Water surface water sources, fixed bed ion exchange (FBIX) is not suitable for PFAS adsorption at the RSWTP following the BAC process. However, TOC pretreatment in the form of suspended ion exchange (SIX) can provide TOC removal, among other water quality benefits previously discussed in the RWQS, and some PFAS removal. Although SIX is not a PFAS removal technology, the low PFAS occurrence in the surface water, the ability to meet the PFAS MCL, and the additional treatment plant benefits make SIX a viable alternative for PFAS treatment at the RSWTP. For the City of Tampa's Tippin Water Treatment Facility with similar source water quality and treatment train, benefits included a 70 percent reduction in coagulant demand, 30 percent reduction in ozone demand, at least 50 percent improvement in filter run volume, and the elimination of sulfuric acid at the plant as well as reduction in capital projects required for capacity expansion. Reduced coagulant results in less solids production, which means less solids handling required but also less product available for resale. Historically, the conventional regenerable IX process has not been seen as a PFAS removal technology, but it is theorized that SIX has such a higher regeneration frequency that PFAS removal occurs. Carollo Engineers (Carollo) has helped optimize conventional FBIX processes and increased the resin regeneration frequency at a full-scale water treatment plant in South Florida and similar PFAS removals to SIX were observed.

Alternatively, post-filter GAC adsorbers could be implemented to remove PFAS from the filtered water prior to disinfection. This GAC would be replaced once effluent or finished water PFAS treatment targets are exceeded. An even more robust approach to treat PFAS at the RSWTP would be to add both SIX pretreatment and GAC post-filter adsorbers. With the pretreatment of TOC, PFOS, and PFOA removal provided by SIX, the GAC is expected to last much longer. This scenario is not able to be evaluated reliably at the bench scale due to inability to produce representative process samples. A pilot would be required to fully test this scenario and quantify the impacts from seasonal variability in water quality and long-term O&M cost savings by pretreating TOC via the SIX process.

A potential short-term approach (or long-term addition to SIX) is to utilize the existing GAC filters for both filtration and adsorption. This is likely not a long-term solution alone due to the expected high GAC changeout rates induced by backwashing the media and disturbing the PFAS mass transfer zone, along with the larger GAC media (compared to adsorbers). However, some PFAS removal is possible without needing to build new infrastructure at full plant capacity (120 mgd). Although this approach will result in relatively shorter GAC service life during full-scale operation, there are other operational approaches to help mitigate the challenge regarding mass transfer zone disturbance, for example, minimizing backwash flowrates, and/ or reducing air scour. These operational approaches, however, could in turn adversely impact filter performance in terms of turbidity and and/ or TOC reduction. Piloting is therefore required to fully understand the implications of this approach. Depending on the piloting results, this approach could perhaps provide an interim solution, before a permanent PFAS treatment process is implemented at the RSWTP. Alternatively, it would serve as a secondary PFAS treatment barrier when combined with SIX.

In summary, the short-listed technologies for RSWTP include the following:

1. SIX for raw water PFAS treatment and additional plant benefits.
    a. TOC reduction.
    b. Other anion removal (i.e., sulfate, bromide, bicarbonate).
    c. Overall plant O&M savings and capital expansion reduction.
2. GAC post-filtration adsorbers for PFAS polishing.
3. Existing filter GAC adsorption for ozonated effluent PFAS treatment within the existing filters. This potential option requires further validation with pilot testing and is likely more viable when SIX pretreatment is installed.

RSWTP PFAS treatment solutions tested are summarized in Figure 10.

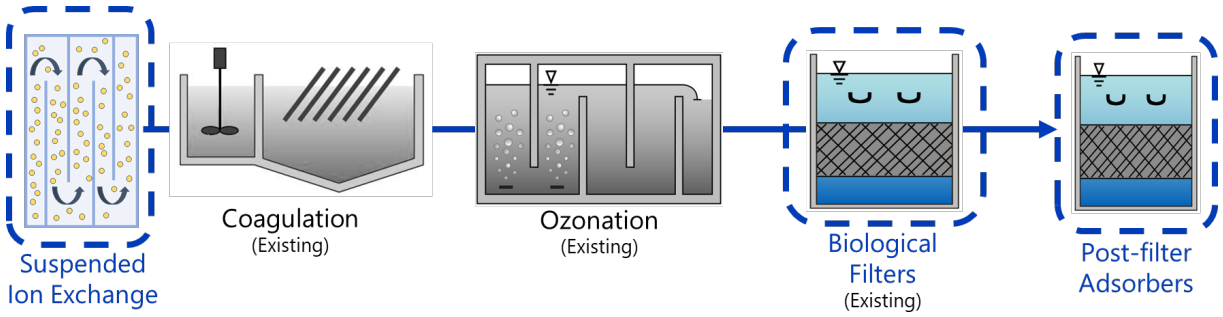

Figure 10 Locations Evaluated for PFAS Treatment at RSWTP

BUD Wells

Given there is lower TOC concentration in the groundwater source from the BUD wells (less than 2.0 mg/L) than the surface water sources, FBIX for PFAS adsorption (PFAS-FBIX) is the most suitable treatment approach for this application. The small site footprint at the BUD-7 WTP, previously identified in the RWQS, will pose a challenge. The BUD-5 WTP site has ample footprint to accommodate a PFAS treatment process if needed. Both the BUD-7 WTP and BUD-5 WTP sites were evaluated for PFAS-FBIX treatment.

All BUD well water is blended at the Regional Supply to Hillsborough County's Lithia WTP (SCHREG POC). As such, the regulatory RAA will be determined at the SCHREG POC and at the current BUD WTPs POEs. With non-steady state adsorptive technologies applied, treated concentrations will increase over time requiring a monitoring plan. Tracking spreadsheets can be developed to understand allowable PFAS concentration leaving respective BUD treatment sites given the respective flow blends at the SCHREG POC. Although blending does not allow for the avoidance of PFAS treatment of the BUD wells all together, tracking the concentrations can allow for optimizing resin replacement frequencies. This study has assumed treatment technologies will be operated to maintain PFAS compliance at each POE;, according to the Comprehensive Regional Water Quality Monitoring Plan (CRWQMP Revision 22, regulatory compliance must be met at both the POEs and POCs.

In the RWQS, the BUD WTPs were low in priority for treatment due to nitrate being the only contaminant needing to be addressed to meet water quality goals. However, given the PFAS detection, these sites rise in priority for treatment due to the need to meet the upcoming PFAS regulatory requirements. BUD well water nitrate exceeds the RWQS finished water goal of 0.4 mg/L as N at BUD-7 (2.4 mg/L), BUD-4 (1.8 mg/L), and BUD-6 (1.3 mg/L), but is below the NPDWR MCL of 10 mg/L. Although biottta® was recommended for nitrate reduction at the BUD WTPs in the RWQS, the incorporation of PFAS along with the required nitrate removal revises the feasible and recommended technology at the BUD sites to FBIX for nitrate removal (nitrate-FBIX). Nitrate-FBIX remains a low priority and can be sequenced after installing PFAS-FBIX, if still requested by the Member Governments. The PFAS-FBIX treatment at the BUD WTPs is a high priority project. However, given the PFAS detection, these sites rise in priority for treatment due to the need to meet the upcoming PFAS regulatory requirements.

BENCH SCALE TESTING

The objective of bench testing was to test the most promising treatment technologies for PFAS at the sites identified. Bench scale testing was completed for the three sites identified for PFAS treatment: BUD-5 WTP (BUD-2, 4, 6 online during sampling), BUD-7 WTP, and the RSWTP.

Bench Scale Testing Objectives

Water samples for the bench-testing were collected from the three sites discussed above: BUD-5 WTP, BUD-7 WTP, and the RSWTP. Bench-scale treatability testing for PFAS was conducted at Carollo's Water Applied Research Center (Water ARC®). The PFAS samples were analyzed at an external laboratory (Pace Analytical), as well as selected duplicate samples for PFAS analysis at Tampa Bay Water's in-house laboratory. Other pertinent and selected water quality analyses were performed at Water ARC® and at an external certified laboratory.

Rapid small-scale column tests (RSSCT) and SIX bench-testing were performed to provide an expedited evaluation of the GAC and IX technologies being considered as alternatives for meeting Tampa Bay Water's PFAS treatment goals. The key objectives of bench scale tests were to:

1. Inform PFAS treatment technology selection.
2. Determine critical design criteria.
3. Evaluate media use rates to estimate O&M costs associated with media changeout.

Appendices A through C contain additional bench-testing data.

Rapid Small-Scale Column Tests (RSSCT)

RSSCTs are used to simulate breakthrough curves of adsorptive media. By scaling down the media size, breakthroughs can be observed in the order of days rather than months. This testing analyzed four RSSCT designs summarized in Table 4. RSSCTs are designed to indicate full-scale conditions as best as possible, but actual full-scale media service life will differ from RSSCT results due to blending of treated effluent from various adsorbers and lower flow rate or longer empty bed contact times (EBCT) (i.e., operational flowrate is lower than design capacity).

RSSCT 1 and 2: For groundwater, FBIX vessel treatment was simulated. Two RSSCT columns with Purolite PFA694E IX media (designed and targeted for PFAS treatment) were tested at bench scale for BUD-7 WTP and BUD-5 WTP. The Purolite PFA694E media is a standard for PFAS treatment and has a good track record in terms of PFAS treatment performance in groundwater sources with similar water quality. Designs targeted 2 to 3 min EBCT and loading rates of 10 to 12 gallons per minute per square foot (gpm/ft^2), as are typical for PFAS adsorption.

RSSCT 3: Due to the low PFAS concentrations observed at the RSWTP to date, this surface water RSSCT used GAC media to test/ simulate a 'GAC cap' scenario whereby existing filter GAC media can be kept in an adsorptive state under normal filter operation and replaced at breakthrough. Media, loading rate, and EBCT were designed to match existing plant filters. It should be noted that this alternate used water from the existing WTP, and this alternative does not reflect SIX pretreatment.

RSSCT 4: A surface water RSSCT simulating, post-filter GAC adsorber for PFAS adsorption at the end of the treatment train (post-filtration and pre-chlorination) at the RSWTP. Calgon F400 GAC is a standard GAC media for PFAS treatment and has a good track record in PFAS treatment applications.

SIX Jar Testing

The SIX process was identified as one of the treatment alternatives to address high TOC in the raw surface water supply at the RSWTP in the RWQS. Previous testing with similar surface water sources has demonstrated some PFAS removal with the SIX process, with performance highly dependent on the water quality. As such, SIX jar testing was conducted on the RSWTP raw water to understand the SIX treatment performance in TOC and PFAS removal.

Three series of jar tests were conducted following the details outlined in Table 6. Two different regenerant concentrations were tested; generally, higher regenerant concentrations yield higher removals, but come at higher O&M costs associated with chemical use and might also result in design parameters outside of the normal ranges of the SIX process. The resin tested was Lanxess S5128 strong base anion (SBA) resin; this resin has typically been used in all full-scale SIX installations to date. Two resin doses were tested: 20 milliliters per liter (mL/L) and 30 mL/L. The resin used was 'seasoned resin' from a previous pilot study testing surface water of very similar water quality. Virgin resin was avoided for bench scale testing as it often yields unrealistic, overinflated results. Bench-scale tests were run with a 30-minute SIX contact time. Multiple SIX treatment/ regeneration cycles were performed to simulate steady state performance. In addition to PFAS and TOC, additional anions were measured to better understand the impact on downstream processes (Table 7).

Table 6 Summary of SIX Jar Test on RSWTP Raw Water

Bench-Scale Testing Results

Sample Baseline Water Quality

Water for bench testing was collected by Tampa Bay Water and Carollo on August 20, 2024. Sample locations included RSWTP raw water, ozonated effluent, filtered effluent, BUD-7 WTP raw water, and BUD-5 WTP raw water.

Samples were collected and shipped to Water ARC® for testing. Baseline water quality was characterized, and results are summarized in Table 8 through Table 11. As anticipated, the raw surface water contains a high concentration of TOC (25.7 mg/L) (Figure 11). Note that these samples were collected during flood conditions following Hurricane Debby and consisted of 100 percent TBC lower pool. Of the samples collected, not all were in exceedance of the PFAS MCL. PFAS exceedances of the samples collected are summarized in Table 12.

When BUD-5 WTP was sampled, relative individual well flows were as described in Table 11. Note that BUD-5R was not online at the time of sampling. Recent flow data from July 1, 2023, through August 1, 2024, indicate that this sample was relatively representative of the past year. However, BUD-4 flow was slightly underrepresented, and from the data collected to date, has the highest PFAS concentrations. Bringing BUD-5R online will change the blended flow water quality, especially if PFAS concentrations are significantly different from the BUD-2, 4, and 6.

Table 11 BUD-5 WTP Flow Distribution During Sampling Event

BUD Well No.	Sampled Flowrate (mgd)	Fraction of Blend	2023-2024 Average Flow (mgd)	2023-2024 Average Fraction of Blend
2	1.0	38%	1.97	47%
4	1.0	38%	1.40	33%
6	0.65	24%	0.86	20%
5R	OFFLINE	0%	OFFLINE	0%

Given the water quality data collected, Tampa Bay Water does not need to remove significant fractions of the PFAS detected to meet the regulatory limits.

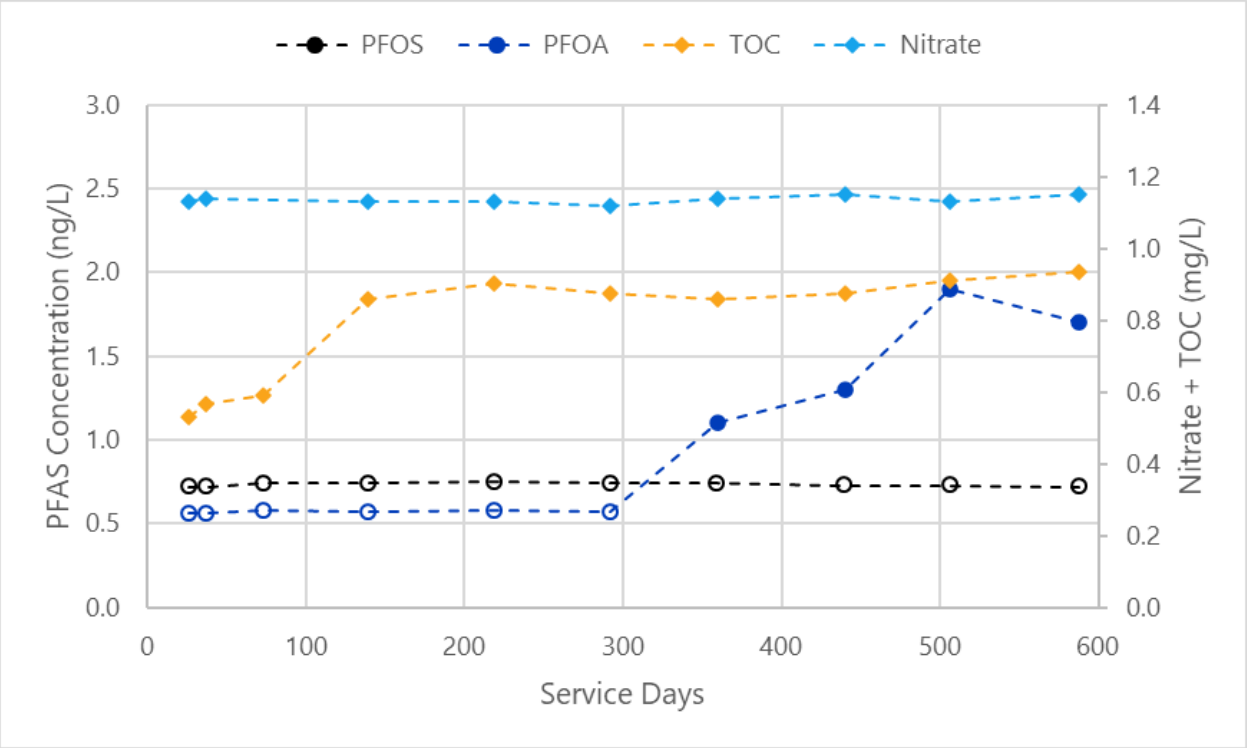
RSSCT Results

BUD-5 WTP

Treated PFOS remained non-detect in the RSSCT column effluent throughout the test (Figure 13). At the final data point (588 days), PFOA broke through, reaching 71 percent of the influent concentration (2.4 ng/L). In contrast, TOC broke through much earlier than PFOA, with a 100 percent breakthrough achieved between approximately 80 and 130 days of operation. It is clear from this data that PFOA breaks through faster than PFOS will therefore drive resin changeout but is also below the MCL in the feed. From this data, it is reasonable to expect this resin to last at least 588 days, or 1.6 years before needing to be replaced. No nitrate removal was observed in either of the BUD WTP RSSCTs, as expected. Nitrate control will require additional treatment to meet the current goal of 0.4 mg/L as N.

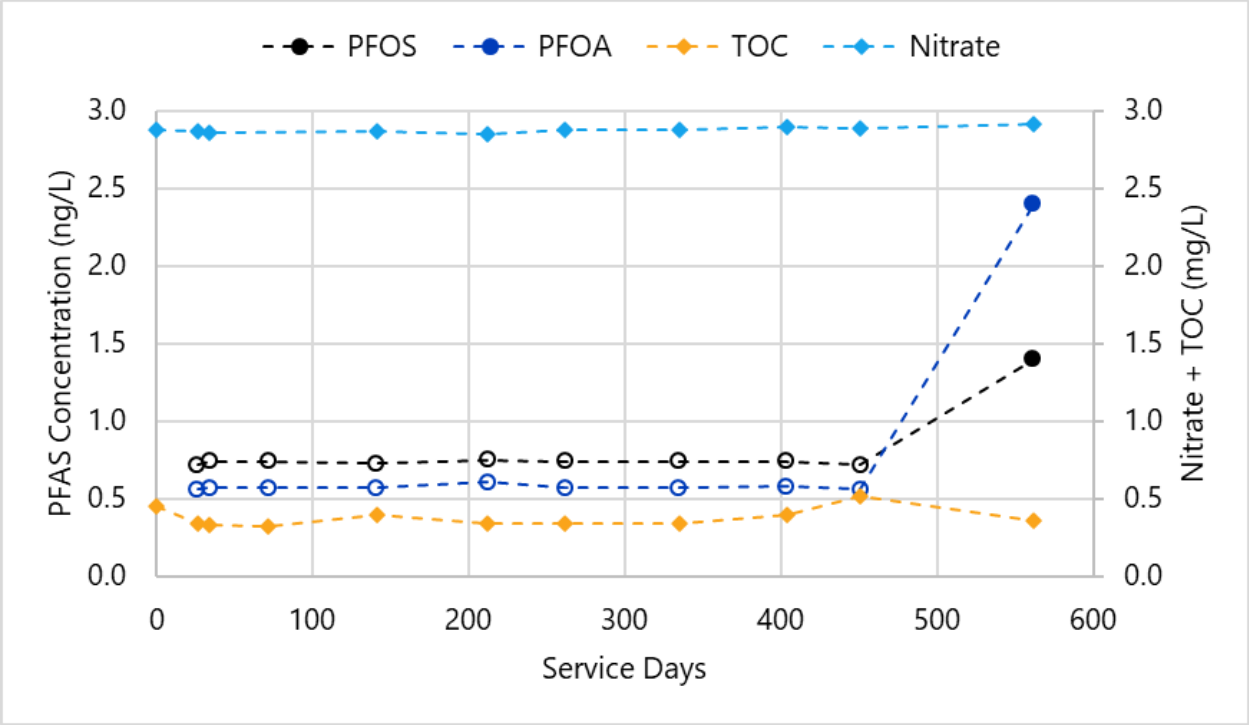


Note: Open circles indicate non-detect results and correspond to Lab MDLs.

Figure 13 PFOA, PFOS, TOC, and Nitrate Breakthrough Curves from FBIX RSSCT Column at BUD-5 WTP

BUD-7 WTP

BUD-7 WTP water quality is different from BUD-5 WTP in that it has higher PFAS but lower TOC (0.45 mg/L at BUD-7 WTP). The lower TOC allowed for more removal of PFAS mass over time, likely due to the lack of shielding or fouling of the resin sites; PFOA and PFOS remained non-detect until the last data point observed some breakthrough (Figure 14). Although TOC loading was lower, TOC broke through at 80 percent right away. Given the sample influent loading, PFOA would likely drive changeouts of media at this site. At the end of the test (562 days), PFOA and PFOS had broken through at 31 percent and 12 percent, respectively. From this data, it is reasonable to expect that media will last at least 562 days, or 1.5 years before needing to be replaced, but likely longer. As was the case for the BUD-5 WTP RSSCT, no nitrate removal was observed. Table 13 provides a summary of IX RSSCT findings for both BUD-5 WTP and BUD-7 WTP.



Notes: Open circles indicate non-detect results and correspond to Lab MDLs.

Figure 14 PFOA, PFOS, TOC and Nitrate Breakthrough Curves from FBIX RSSCT Column at BUD-7 WTP

Table 13 Bench-Scale FBIX RSSCT Performance

	BUD-5 WTP	BUD-7 WTP
Expected Service Life (at 95th percentile flowrate)	>1.6 years	>1.5 years
Compound Driving Breakthrough	PFOA	PFOA
Breakthrough at End of Test	71%	31%

Existing Filter GAC

The existing filter GAC scenario was tested to gain understanding of the potential to use existing full-scale filter GAC for PFAS treatment without disrupting or negatively impacting the filtration process. As such, GAC media was selected to match the existing plant (F816); this media is larger than what is typically used for PFAS adsorption (F400). Additionally, a hydraulic loading rate (HLR) was tested for this RSSCT (3.65 gpm/ft^2) that is in alignment with the design HLR for the full-scale filters. From the data, both PFOS and PFOA broke through at similar rates; PFOA would likely drive breakthrough (Figure 15). These data suggest service life of approximately 12.5 months; however, this RSSCT test does not take into account filter media backwashing which will significantly impact breakthrough (due to the disruption of the PFAS mass transfer zone). Additionally, these filters are historically run in biological mode; although PFAS adsorption and biological growth can occur on the GAC surface at the same time, biofilm development could physically block the GAC pores and limit the accessibility of active adsorption sites to PFAS and organics. Therefore, it is not expected for the media to last this long at full-scale; piloting would be needed to gain full understanding of media service life in the GAC filters.

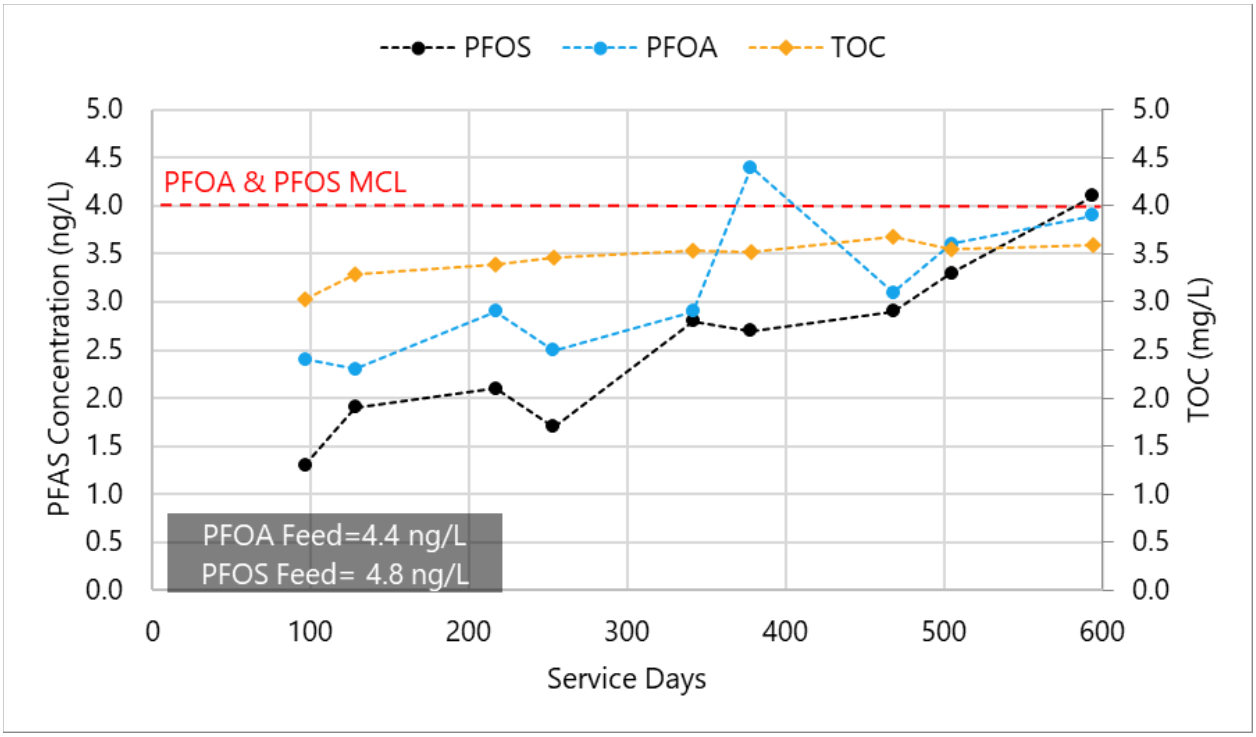


Figure 15 PFOA, PFOS, and TOC Breakthrough Curves from GAC RSSCT Column Simulating Existing Filter GAC at the RSWTP

GAC Post-Filter Adsorber

The GAC post-filter adsorber scenario represents the design of GAC adsorbers at the end of the treatment train at the RSWTP for PFAS removal. It is important to note that none of the PFAS were in exceedance from the filtered water sample collected; therefore, it is impossible to clearly know when exceedances would occur. PFOA is similarly likely to drive media changeouts when it exceeds the MCL in the feed water. PFOA breakthrough (100 percent) was observed at 41,000 BV (286 days) or about 9.5 months. Like all the RSSCTs, TOC broke through faster than PFAS (Figure 16). Table 14 provides a summary of GAC RSSCT findings.

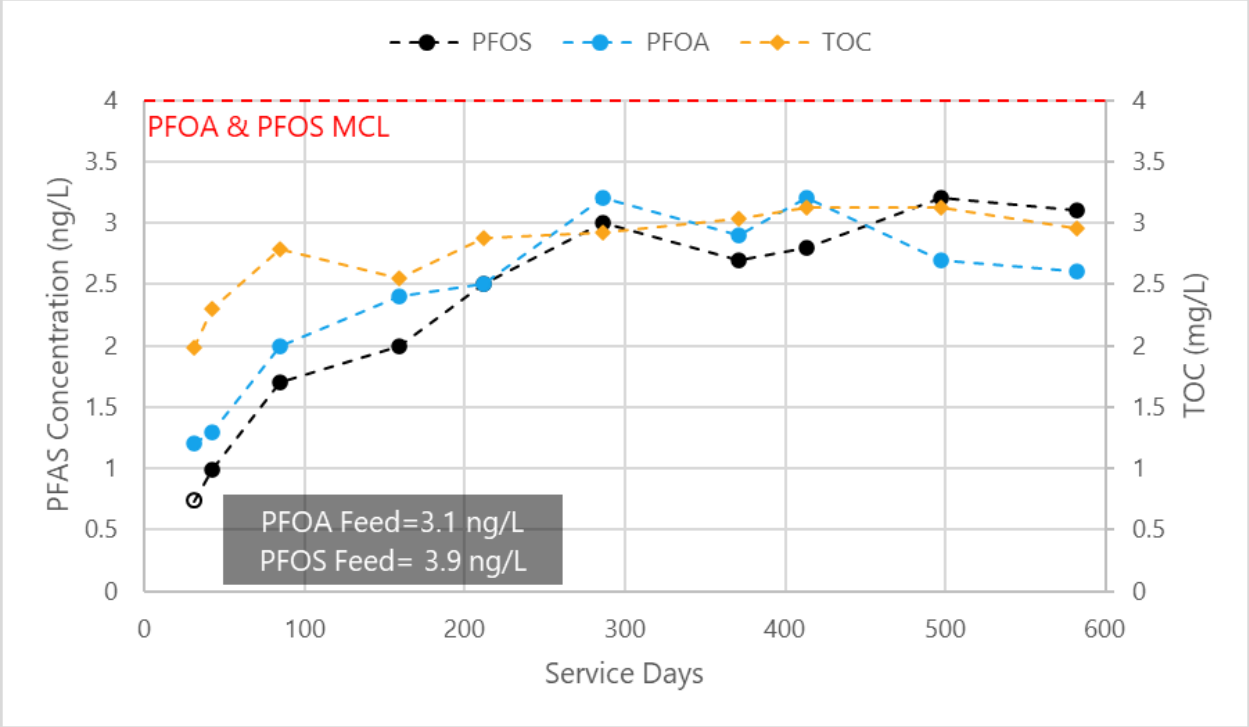

Figure 16 PFOA, PFOS, and TOC Breakthrough Curves from GAC RSSCT Column Simulating GAC Post-Filter Adsorber at the RSWTP

Table 14 Bench GAC RSSCT Performance

	Existing Filter GAC	Post-filter GAC Adsorber
Expected Service Life(1)	12.5 months(2)	9.5 months
Compound Driving Breakthrough	PFOA	PFOA
Service life at 100% breakthrough	377 days	286 days
Breakthrough at End of Test	71%	88%

Notes:
(1) Expected service life is based on breakthrough of PFOA.
(2) Existing filter GAC RSSCT service life will be impacted by filter backwashing and biology.

SIX Jar Test Results

PFAS Results

Of the regulated PFAS, only PFOS and PFOA are near or in exceedance of the respective MCLs. These two compounds will drive treatment needs for at the RSWTP. The results from the SIX bench tests are summarized in Table 15 and Table 16. PFOS is more easily removed than PFOA. Results indicate that higher resin dose (mL/L) provides more performance improvement than increasing regenerant concentration (g/L) at a typical contact time (30 minutes) due to the higher total adsorption capacity at higher resin doses. Given the configurations and raw water quality tested, each of the three conditions achieves the PFAS treatment goal of meeting the upcoming MCLs.

Table 15 PFOA Percent Removal by SIX

Test Condition	No. of SIX Regeneration Cycles					Average
	5	10	15	20	25	Removal
20 mL/L x 30 min x 20 g/L(1)	36%	44%	44%	24%	13%	32%
20 mL/L x 30 min x 30 g/L(1)	49%	22%	24%	31%	29%	31%
30 mL/L x 30 min x 30 g/L(1)	51%	51%	44%	38%	53%	48%

Notes:
(1) Resin dose x Contact time x Regenerant concentration.

20 mL/L x 30 min x 30 g/L	62%	65%	56%	67%	68%	64%
30 mL/L x 30 min x 30 g/L	68%	68%	71%	71%	76%	71%

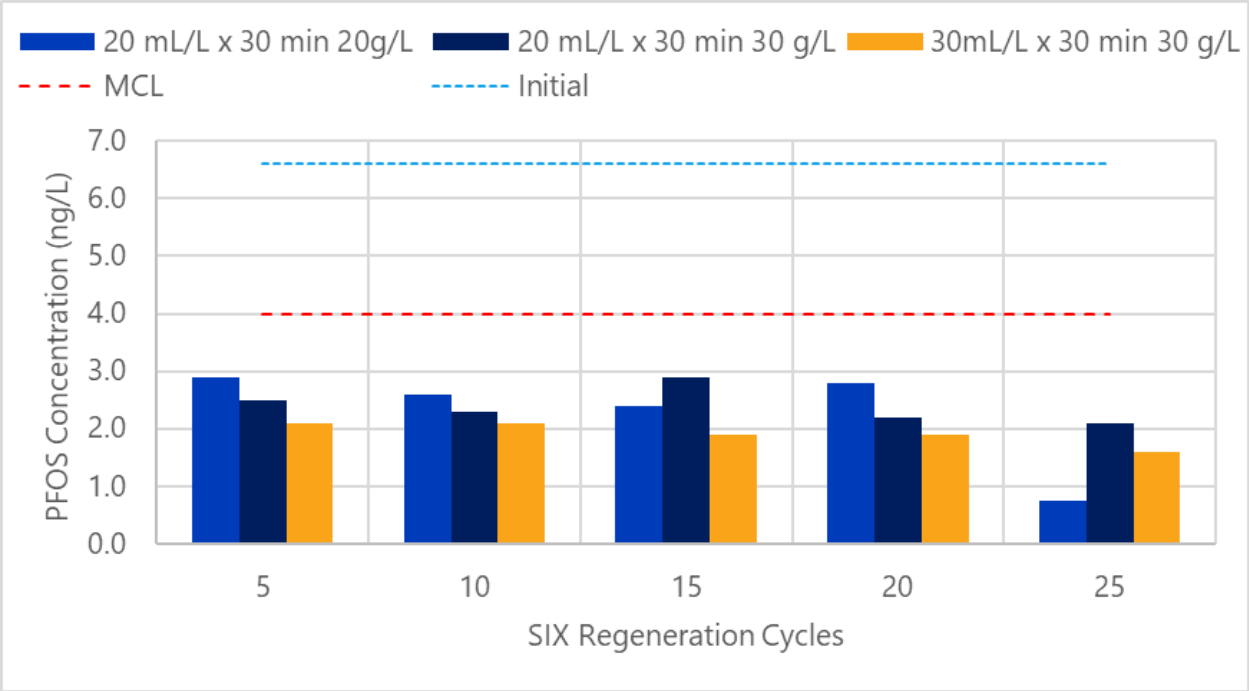

Figure 18 PFOS Removal by SIX

Other Water Quality Results

Additional water quality results are similar to previous testing of SIX at the bench scale performed during the RWQS. Organics are removed by about 50 percent, which is typical to SIX surface water performance (Figure 19). Additional anionic analytes were also tested to better understand the impact on downstream process performance. Color is not well removed given such high raw water color (Figure 20). Alkalinity removal was a bit more variable (Figure 21); bicarbonate is a low affinity anion so small process changes, such as increased concentration of sulfate or TOC, or changes to regenerant concentration, can have more of an impact on performance. Seasonal shifts in raw water alkalinity and TOC may result in operational changes to accommodate, i.e., during the dry season when TOC is low and alkalinity is high, SIX alkalinity removal will improve coagulation effects due to easier depression of pH. Conversely, during the rainy season when TOC is high and alkalinity is low, SIX alkalinity removal may result in need for finished water alkalinity addition. Bromide is well removed, which will likely result in lower bromate formation and disinfection byproduct (DBP) formation (Figure 22). Chloride is released through the SIX process when sodium chloride is used as a regenerant (Figure 23). See Section 2.2.3 in the RWQS for chloride upcycling considerations, estimated to be 35.5 mg/L. It is important to note that rinsing strategy will impact the SIX-treated chloride concentration and rinsing is not optimized at the bench. Sulfate is extremely well removed because sulfate is divalent and thus has high resin affinity (Figure 24). Due to the reduction of sulfate and increase in chloride, an increase in chloride-to-sulfate-mass (CSMR) ratio is expected, suggesting higher potential for lead release in the distribution system (although still lower than CSMRs from the Desal plant). This was previously discussed in the RWQS.

Overall Conclusions from Bench-Testing

Although PFAS concentrations in surface and groundwater are not expected to vary significantly, the limited available PFAS data does not adequately capture potential seasonal variability, source water impact at the RSWTP, and BUD-5R well water quality. Given the available data, PFAS treatment solutions were tested at the bench scale to identify the best solutions to meet Tampa Bay Water's needs. The following section provides a summary of conclusions drawn.

RSWTP

Implementing SIX upstream of the existing unit processes achieved treated water PFAS goals at the bench scale. The potential benefits to the downstream treatment processes (e.g., reduced TOC, reduced chemical demand, reduced ozone demand, increased filter unit filter run volume, reduced DBP formation) make SIX a promising treatment process for PFAS at the RSWTP.

Conclusions from the GAC RSSCTs performed include the following:

- PFOA will drive GAC media changeout when PFOA is above the MCL in the feed water.
- GAC post-filter adsorbers may require frequent media changeout (estimated every 9.5 months) to meet prescribed PFAS goals due to organics fouling. Regardless of implementing GAC post-filter adsorbers for PFAS or not, it is critical to remove TOC upstream to make PFAS treatment more economically feasible.
- Utilizing existing filter GAC seems a promising secondary barrier for PFAS, but actual performance needs to be better evaluated at the pilot scale as filter operation (backwashing, conversion to BAC, etc.) can significantly impact GAC adsorption performance for PFAS.

The GAC adsorber scenario is a viable option for PFAS treatment at the RSWTP. This would require capital investment in 120 mgd of GAC contactors at the end of the treatment train prior to the addition of disinfectant to match current plant capacity. Replacing media at a frequency of more than once per year will result in significant O&M costs. For any PFAS adsorber treatment process, removing upstream TOC (via SIX or other means) improves GAC PFAS removal and extends anticipated GAC service life. Piloting is required to determine the extent of TOC reduction on extending media life at the RSWTP.

Although utilizing the existing filter GAC for PFAS adsorption is not likely a long-term solution alone, it could provide near-term PFAS removal. If GAC is replaced in any of the full-scale filters in the near-term, it is recommended to monitor PFAS regularly to understand the impact of backwashing and biological conversion on the GAC service life. This can also be piloted.

BUD Wells

Implementing PFAS-FBIX at the BUD WTPs is a viable option. Reasonable media changeout rates of more than 1.5 years are expected. Due to lack of data at the time of analysis, it was assumed that BUD-5R water quality is the average of BUD-4 and BUD-6 for conceptual design considerations. BUD-5R PFAS were found to be slightly lower when sampled in December 2024 so these estimates are conservative.

In the RWQS, nitrate treatment at the BUD WTPs was proposed for biological nitrate reduction with biottta®. To keep like systems at these sites, PFAS-FBIX and nitrate-FBIX are proposed in this study.

Conclusions from the PFAS-FBIX RSSCTs performed include the following:

- Among the six regulated PFAS, PFOA will drive PFAS-FBIX media changeout.
- BUD-5 WTP media changeout is estimated at every 1.6 years.
- BUD-7 WTP media changeout is estimated at every 1.5 years.

CONCEPTUAL DESIGN

The conceptual design is based on bench scale testing results and summarized in the following sections.

BUD Wells

Nitrate Removal

As previously mentioned in the RWQS, nitrate treatment at the BUD WTPs was proposed to be biological nitrogen removal with biottta®. Due to the need for PFAS treatment at these sites and to keep like systems at these sites, regenerable FBIX is proposed for nitrate treatment in place of biottta®.

Two alternatives were considered for treating nitrate at the BUD-5 WTP and BUD-7 WTP. These include the following:

- Addition of nitrate-FBIX at the BUD-5 WTP and the BUD-7 WTP.
- Addition of nitrate-FBIX at the BUD-5 WTP with a pipeline to connect BUD-7 to the BUD-5 WTP for treatment.

The design criteria for the two nitrate alternatives are presented in Table 17. Specific assumptions related to the O&M include the following:

- Waste volume is estimated at 0.3 percent of the annual average production capacity of the plant.
- Salt use for regeneration is estimated at 3,000 pounds per million gallons of annual average production capacity of the plant.
- Six-year resin life.

Table 17 Nitrate-FBIX Design Criteria

Description	Unit	BUD-5 WTP (individual site)	BUD-7 WTP (individual site)	Combined at BUD-5 WTP
Sustainable Capacity(1)	mgd	4.5	1.5	6.0
Annual Average Production	mgd	3.0	1.5	4.5
Number of Units	no.	2	1	3
Vessels per Unit	no.	10	10	10
Diameter of Vessels	feet	4	4	4
Resin Volume	cubic feet	1,200	600	1,800
Annual Waste Volume	gallons	3,285,000	1,642,500	4,927,500
Annual Salt Usage	tons	1,610	813	2,424
Pipeline Length	linear feet			21,374
Pipeline Diameter	inches			12

Notes:
(1) Sustainable capacity is defined by Tampa Bay Water as the production capacity achievable for greater than 5 days.

PFAS Removal

Similar to the nitrate removal alternatives, there are two alternatives that were considered for treating PFAS at the BUD-5 WTP and BUD-7 WTP. These include the following:

- Addition of PFAS-FBIX at the BUD-5 WTP and the BUD-7 WTP.
- Addition of PFAS-FBIX at the BUD-5 WTP with a pipeline to connect BUD-7 to the BUD-5 WTP for treatment.

The design criteria for the PFAS-FBIX are presented in Table 18. Specific assumptions related to the O&M include the following:

- PFAS resin is non-regenerable so there is not a liquid waste disposal or salt cost associated with the operation of treatment system, but there will be spent resin to dispose of.
- Resin replacement life is estimated at 1.6 years for the BUD-5 WTP and 1.5 years for the BUD-7 WTP, based on the results of the bench scale tests.

Table 18 PFAS-FBIX Design Criteria

Description	Unit	BUD-5 WTP (individual site)	BUD-7 WTP (individual site)	Combined at BUD-5 WTP
Sustainable Capacity(1)	mgd	4.5	1.5	6.0
Annual Average Production Capacity	mgd	3.0	1.5	4.5
Number of Units	no.	2	1	3
Vessels per Unit	no.	2	2	2
Diameter of Units	feet	12	12	12
Resin Volume	cubic feet	1,688	598	2,322
Annual Liquid Waste Volume	gallons	0	0	0
Annual Salt Usage	tons	0	0	0
Pipeline Length	linear feet			21,374
Pipeline Diameter	inches			12

Notes:
(1) Sustainable capacity is defined by Tampa Bay Water as the production capacity achievable for greater than 5 days.

RSWTP

As discussed previously, there are three recommended options for PFAS treatment at the RSWTP:

- SIX.
- Existing filter GAC.
- GAC post-filter adsorber.

The following sections detail the design criteria for each of the options. Although the RSWTP is undergoing expansion, design flow assumptions were kept the same as in the original RWQS for consistency.

SIX Design Criteria

The proposed SIX process for the RSWTP includes process basins, resin storage, and resin regeneration. Table 19 shows the design criteria for the proposed RSWTP SIX process.

Table 19 SIX Design Criteria

Description	Unit	RSWTP
Sustainable Capacity(1)	mgd	90
Annual Average Production Capacity	mgd	64
Footprint	feet by feet	135 x 157
Treatment Trains	no.	5

Notes:
(1) Sustainable capacity is defined by Tampa Bay Water as the production capacity achievable for greater than 5 days.

Existing Filter GAC Design Criteria

The existing filter GAC option uses existing infrastructure at the RSWTP, so no capital design criteria are needed. However, based on the results of the bench scale testing, 217,500 cf of GAC media will require replacement every 12.5 months. Note that 12.5 months is used for estimating GAC replacement frequency in this memo, but replacement could be significantly more frequent and will need to be confirmed with demonstration testing.

GAC Post-Filter Adsorber Design Criteria

Table 20 shows the design criteria for the GAC post-filter adsorber alternative.

Table 20 GAC Post-Filter Adsorber Design Criteria

Description	Unit	RSWTP
Sustainable Capacity(1)	mgd	90
Annual Average Production Capacity	mgd	64
Number of Units	no.	95
Diameter of Units	feet	12
Media Volume	cubic feet	126,667
Waste Volume per Regen and Unit	gallons	61,751
Annual Waste Volume	gallons	9,011,042
GAC Life	months	9.5

Notes:
(1) Sustainable capacity is defined by Tampa Bay Water as the production capacity achievable for greater than 5 days.

Cost Analysis

Assumptions

Cost estimates were developed for comparing the alternatives at each pertinent site in accordance with the guidelines established by the Association for the Advancement of Cost Engineering (AACE) Recommended Practice 18-R-97 Cost Estimate Classification System. Class 4 estimates were prepared for the conceptual designs. The cost estimates in this section are based on the design criteria developed and refined with the desktop and bench scale studies performed. Cost estimates are shown in 2024 dollars.

The following assumptions were made in developing the cost estimates:

- Capital costs include all major equipment required for operation of the given system; 10 percent adders for each site work, yard piping, site electrical, and instrumentation and controls; contractor overhead (7 percent); contractor profit (10 percent); contractor mobilization, bonds, and insurance (10 percent); contractor contingency (4 percent); project contingency (30 percent); and engineering, legal, and administrative expenses (25 percent).
- Operating costs include maintenance (1.5 percent of equipment cost), power at 10 cents per kilowatt hour, chemicals, media/ resin replacement, labor, and waste disposal.

- Waste disposal costs were estimated by assuming hauling of IX waste brine at $120 per 1,000 gallons and hauling of GAC backwash/ rinse water at $75 per 1,000 gallons. Potential alternative means of disposal (e.g., possible sewer discharge or deep injection well) are not included in these costs (capital or O&M).
- Lifecycle costs were estimated at 6 percent APR over 30 years.
- Salt and IX Resin unit costs of $113.30 per ton and $500.00 per cubic foot were assumed, respectively.
- GAC is reactivated. The cost of reactivated GAC is $2.0 per pound.
- Capital costs were calculated assuming equipment installed at the sustainable treatment capacity of the facility.
- O&M costs were calculated at the annual average production capacity of the facility.

Nitrate Removal

The nitrate treatment goal of 0.4 mg/L at all POCs can only be achieved by installing nitrate treatment for the BUD wells. The two alternatives considered include installing treatment at both the BUD-5 WTP and BUD-7 WTP, or due to site constraints at BUD-7 WTP, pipe the BUD-7 flow to BUD-5 WTP for combined treatment. The cost comparison of the two alternatives is shown in Table 21. Capital costs include the nitrate-FBIX equipment including vessels, regeneration system, and waste storage tanks and the associated adders defined in the assumptions above. O&M costs include maintenance, labor, power, salt for regeneration, hauling of brine waste, and resin replacement.

Table 21 Cost Comparison of Nitrate Removal Alternatives

Alternative	Capital Cost	O&M Cost	Life Cycle Cost
Treatment at individual sites	$12.9M	$1.6M/yr	$34.9M
Treatment at BUD-5 WTP with connecting pipeline	$24.9M	$1.3M/yr	$42.8M

Abbreviations: M – million; M/yr – million per year

Due to the cost difference, it is recommended to treat for nitrate at the individual BUD sites. Equipment is able to fit at the BUD-7 site but unsightliness may require additional costs to improve facility aesthetics to blend in with the neighborhood, as was done for the Brandon Booster station. Therefore, additional capital cost for building architecture is included in the BUD-7 WTP equipment presented.

Nitrate removal will remain a low priority for the implementation plan due to the existing levels of nitrate being well below regulatory requirements. (It is estimated that health benefits stop improving or begin to plateau at nitrate levels of 1 to 2 mg/L as N). In addition, removal of nitrate at the BUD sites helps to reduce the nitrate concentration at the SCHREG POC, but the treated BUD wells water is blended with water from the RSWTP, which approximately 15 percent of historical data suggests is over the 0.4 mg/L nitrate goal itself. Therefore, the SCHREG POC will likely have nitrate concentrations over 0.4 mg/L occasionally, even with treatment implemented at the BUD sites.

PFAS Removal

PFAS (specifically PFOS and PFOA) have been observed above the MCL at the SCHREG and 301REGHILLS POCs. To bring these POCs into future compliance by the April 2029 deadline and reduce overall PFAS levels for the Regional System, treatment is required at the BUD-5 WTP, BUD-7 WTP, and RSWTP sites.

Similar to nitrate removal, two alternatives were considered for treating PFAS at the BUD WTPs including installing treatment at both the BUD-5 WTP and BUD-7 WTP, or due to site constraints at BUD-7 WTP, pipe the BUD-7 flow to BUD-5 WTP for treatment. The cost comparison of the two alternatives is shown in Table 22. Due to the cost difference, it is recommended to treat PFAS at the individual BUD sites. Equipment is able to fit on the site and should have limited aesthetic impact on neighbors. Capital costs include the PFAS-FBIX vessels, and the associated adders defined in the assumptions above. O&M costs include maintenance, labor, power, and resin replacement. O&M costs account for resin replacement at frequency noted in bench scale tests; however, the O&M costs could be substantially lower if the blended concentration at the POCs remains within compliance by tracking source concentrations and optimizing operations.

Table 22 Cost Comparison of PFAS Removal Alternatives at the BUD Sites

Alternative	Capital Cost	O&M Cost	Life Cycle Cost
Treatment at individual sites	$7.0M	$1.3M/yr	$24.9M
Treatment at BUD-5 WTP site with connecting pipeline	$19.3M	$1.0M/yr	$33.1M

As previously described, three alternatives were tested for treating PFAS at the RSWTP including SIX, existing filter GAC, and GAC post-filter adsorber. Table 23 shows the cost comparison for the three alternatives. Capital costs for SIX include SIX equipment such as process basins, regeneration system, resin storage tanks, and a deep injection well for brine disposal and the associated adders defined in the assumptions above. Capital costs for the GAC post-filter adsorbers include the GAC vessels, backwash/ rinse pump station, and waste storage tanks and the associated adders defined in the assumptions above. GAC vessels were estimated for conservative cost estimating in this report, but GAC contactors would likely be more practical for implementation at the capacity of the RSWTP. O&M costs for SIX include maintenance, labor, power, salt for regeneration, and resin replacement. O&M costs for the existing filter GAC option only includes media replacement. O&M costs for the GAC post-filter adsorber include maintenance, labor, power, hauling for waste disposal, and media replacement.

Table 23 Cost Comparison of PFAS Removal Alternatives at the RSWTP

Alternative	Capital Cost	O&M Cost	Life Cycle Cost
SIX	$128.6M	$4.6M/yr	$191.9M
Existing Filter GAC	-	$14.2M/yr	$195.3M
GAC Post-Filter Adsorber	$83.8	$12.8M/yr	$259.9M

SIX is shown to be the most cost-effective option. Should PFAS removal by SIX be insufficient alone, Tampa Bay Water could consider using the existing filter GAC to provide additional removal. Utilizing existing filter GAC alone is only recommended as an interim solution after piloting is completed to confirm backwash rates can be modified to allow the filters to function for TOC, solids, and PFAS removal without negatively impacting plant production. The cost estimate shown for this scenario assumes GAC replacement every 12.5 months, which may be significantly reduced at demonstration and full-scale.

Given the other noted benefits of SIX which generates cost savings to the overall plant not captured in this estimate, it is recommended that Tampa Bay Water proceed with demonstration testing and implementing SIX for TOC removal, PFAS removal, and improved operations of the RSWTP.

Process Flow Diagrams and Site Plans

The following sections highlight the conceptual process flow diagrams and site plans for the recommended improvements at each site. The site plans are conceptual and will need to be refined and detailed during preliminary design.

RSWTP

Conceptual Process Flow for the RSWTP

The proposed improvement for the RSWTP is SIX. The PFD for the proposed treatment is included in Figure 25. SIX would treat raw surface water, prior to the existing treatment train. In the SIX process configuration, the IX resin is in suspension in a plug flow configuration where the exchange occurs. The resin and water mix then flow into a baffled tank to separate the resin from the treated water. The SIX treated water is then mixed with the bypass raw water and continues to the existing treatment process. The spent IX resin is regenerated onsite with a fresh salt brine. A tank houses the regenerated resin prior to addition to the contactor. The RSWTP site plan, including the proposed SIX treatment is shown in Figure 26.

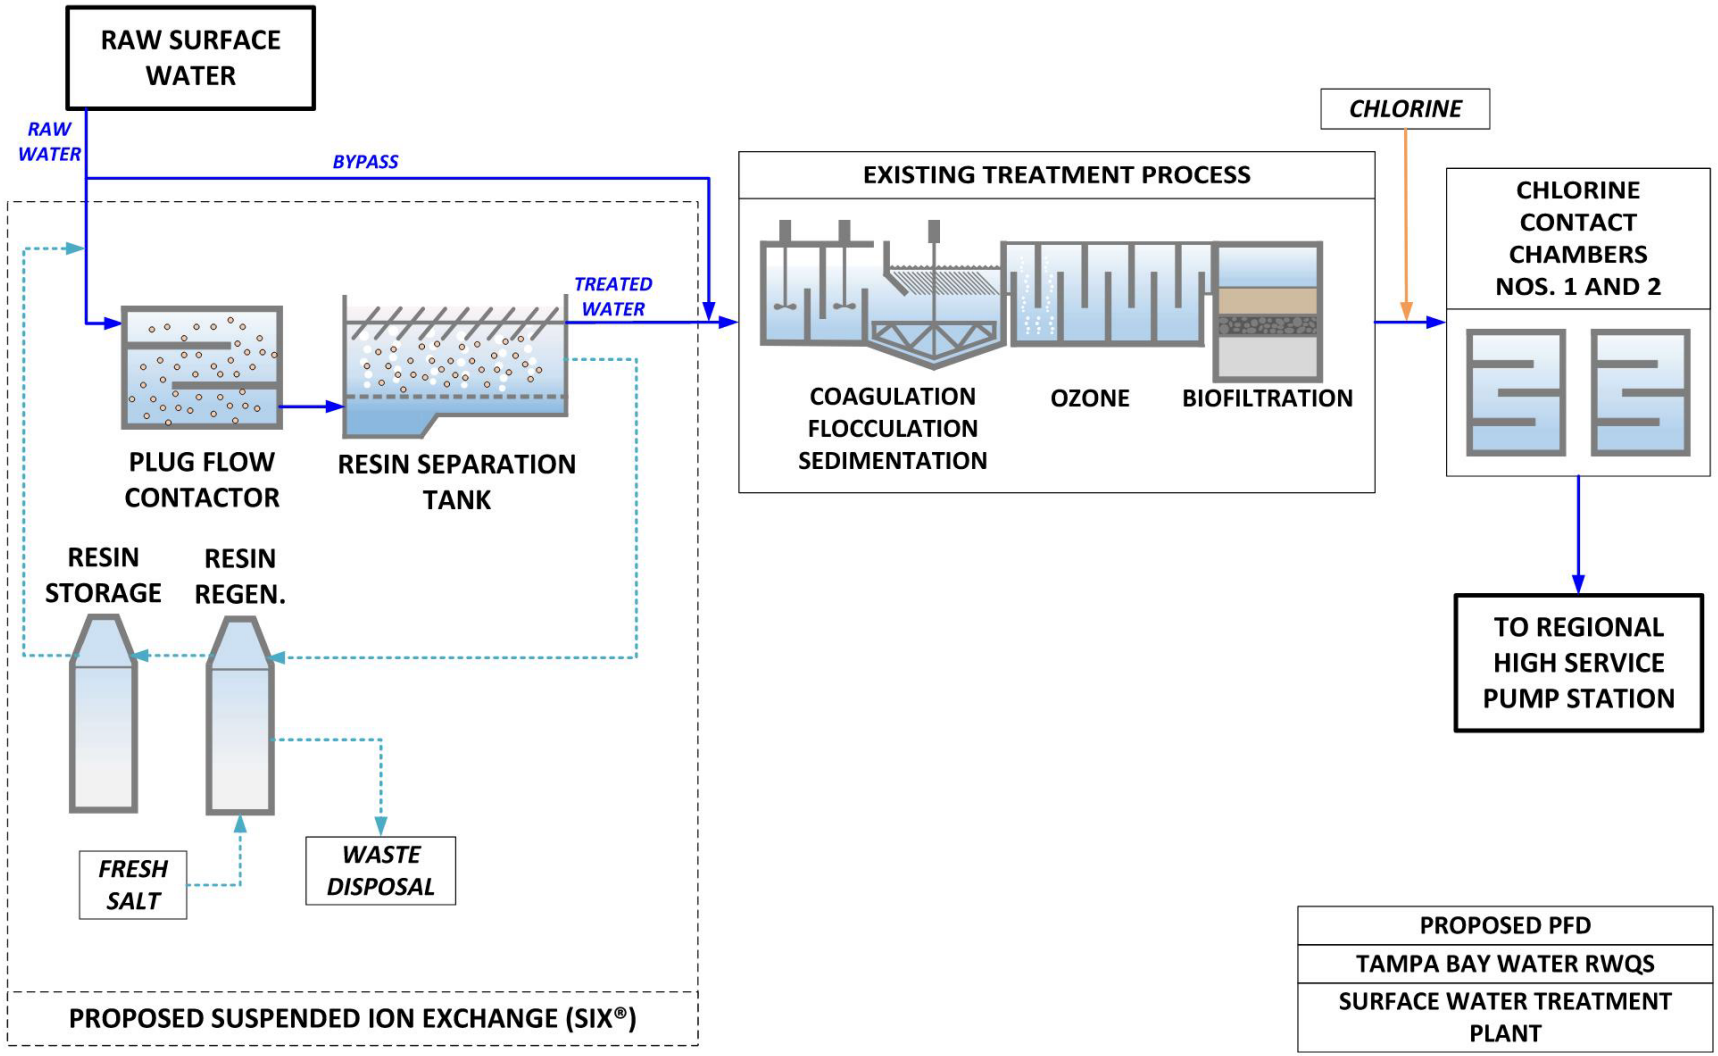

Figure 25 Process Flow Diagram for the Proposed SIX Treatment in the RSWTP

Figure 26 Site Plan for the RSWTP with the Proposed SIX

BUD Wells

Conceptual Process Flow for the BUD Wells

The PFDs for the proposed improvements for the BUD WTPs are included in Figure 27 and Figure 28. The proposed treatment processes for the BUD WTPs are nitrate-FBIX followed by PFAS-FBIX. The nitrate-FBIX treatment includes multiple vessels with the nitrate-FBIX resin, tanks for brine storage, brine pumps, and equalization tanks for the storage of regeneration waste. The PFAS-FBIX treatment is non-regenerable, so the only major equipment will be the vessels with PFAS-FBIX resin along with ancillary equipment. Note that only one vessel is shown schematically for simple representation of the set of vessels proposed.

Site Plan for the BUD Wells

The site plans for BUD-5 WTP and BUD-7 WTP with the proposed nitrate and PFAS treatment systems are shown in Figure 29 and Figure 30. These site plans incorporate the use of a low-profile nitrate-FBIX system, such as the SimPACK system from Envirogen Technologies, Inc., which houses most equipment within 10-foot-tall shipping containers. This type of solution may assist with minimizing aesthetic impact on neighbors (Figure 31).

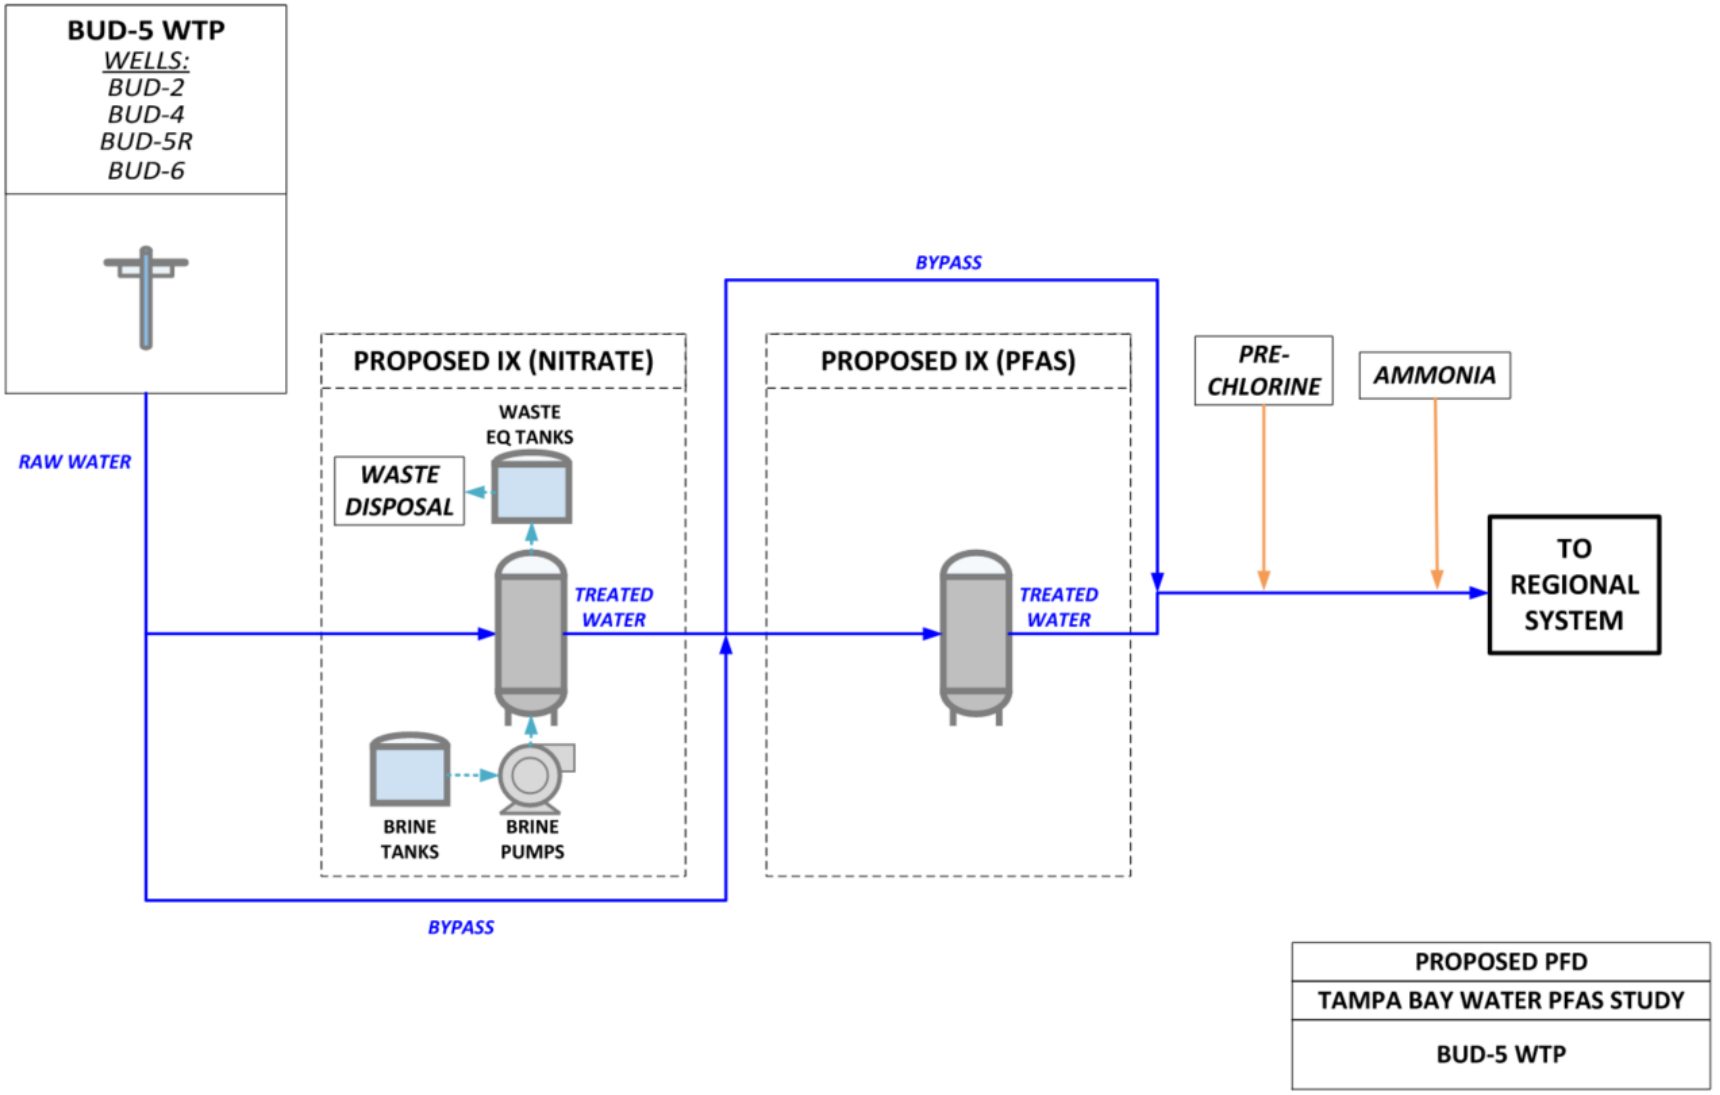

Figure 27 PFD for the Proposed FBIX in the BUD-5 WTP

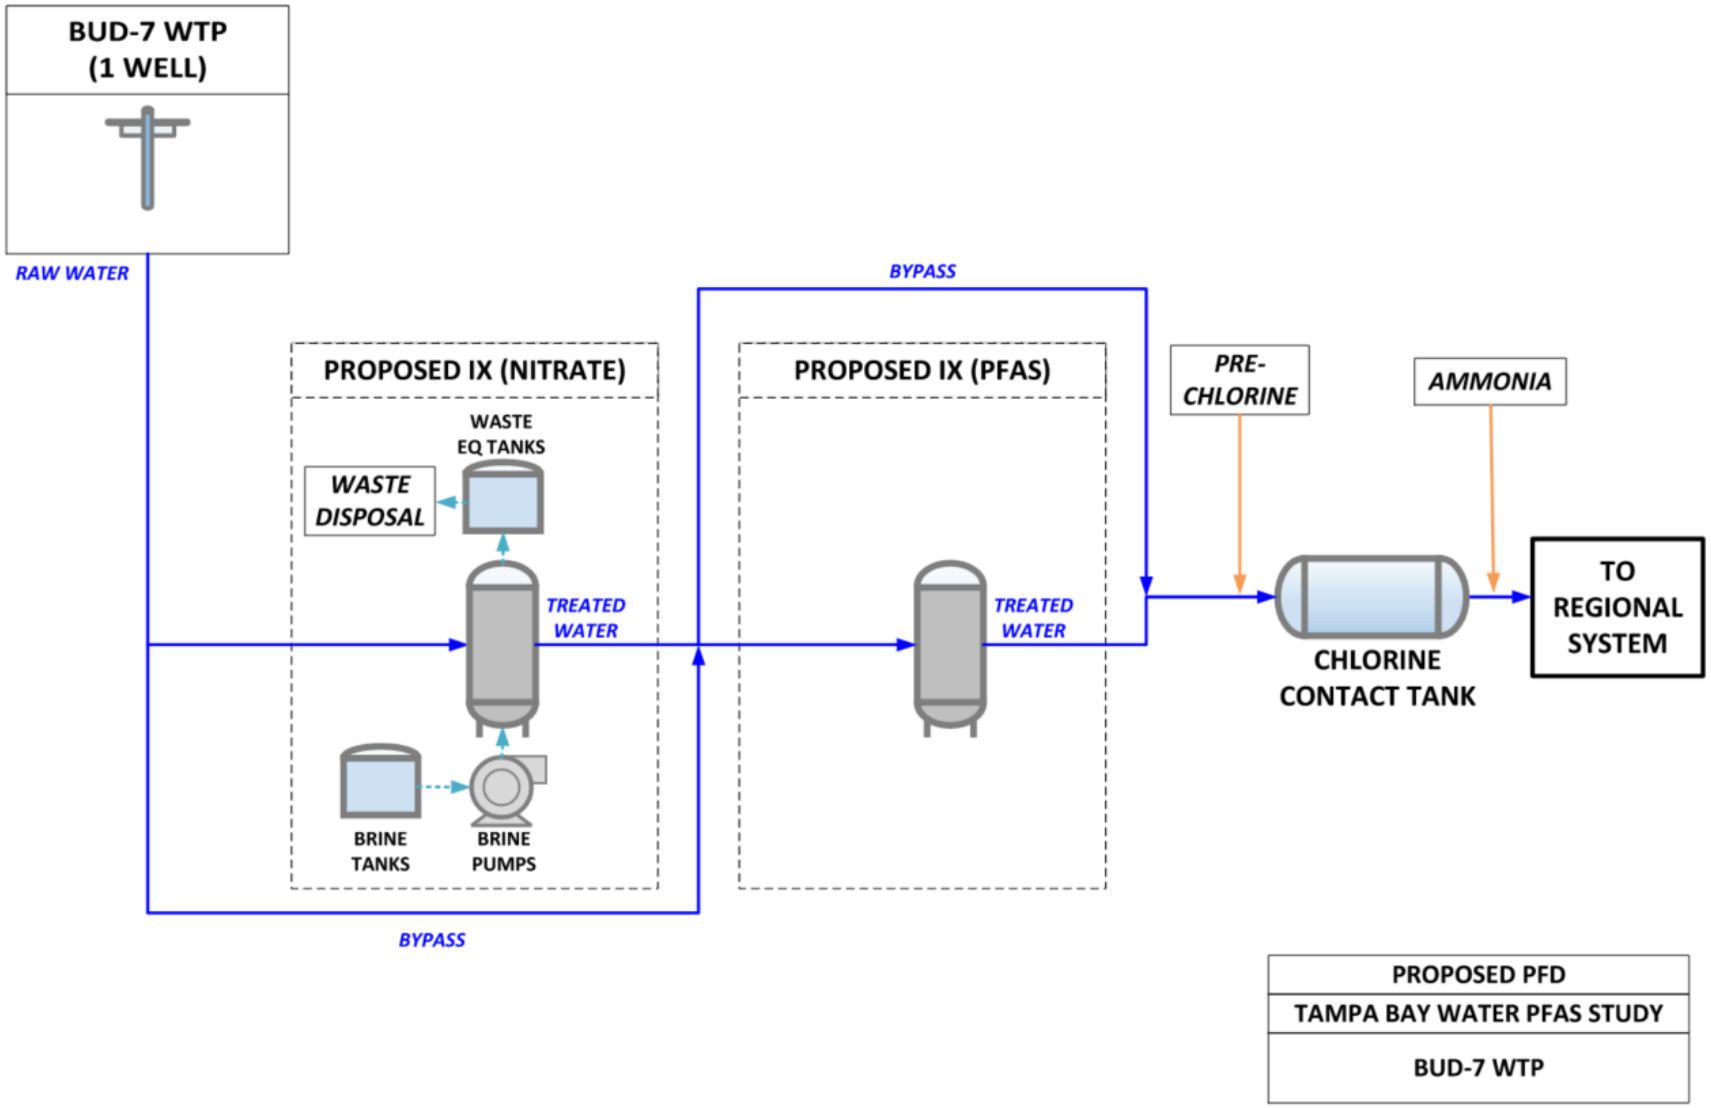

Figure 28 PFD for the Proposed FBIX in the BUD-7 WTP

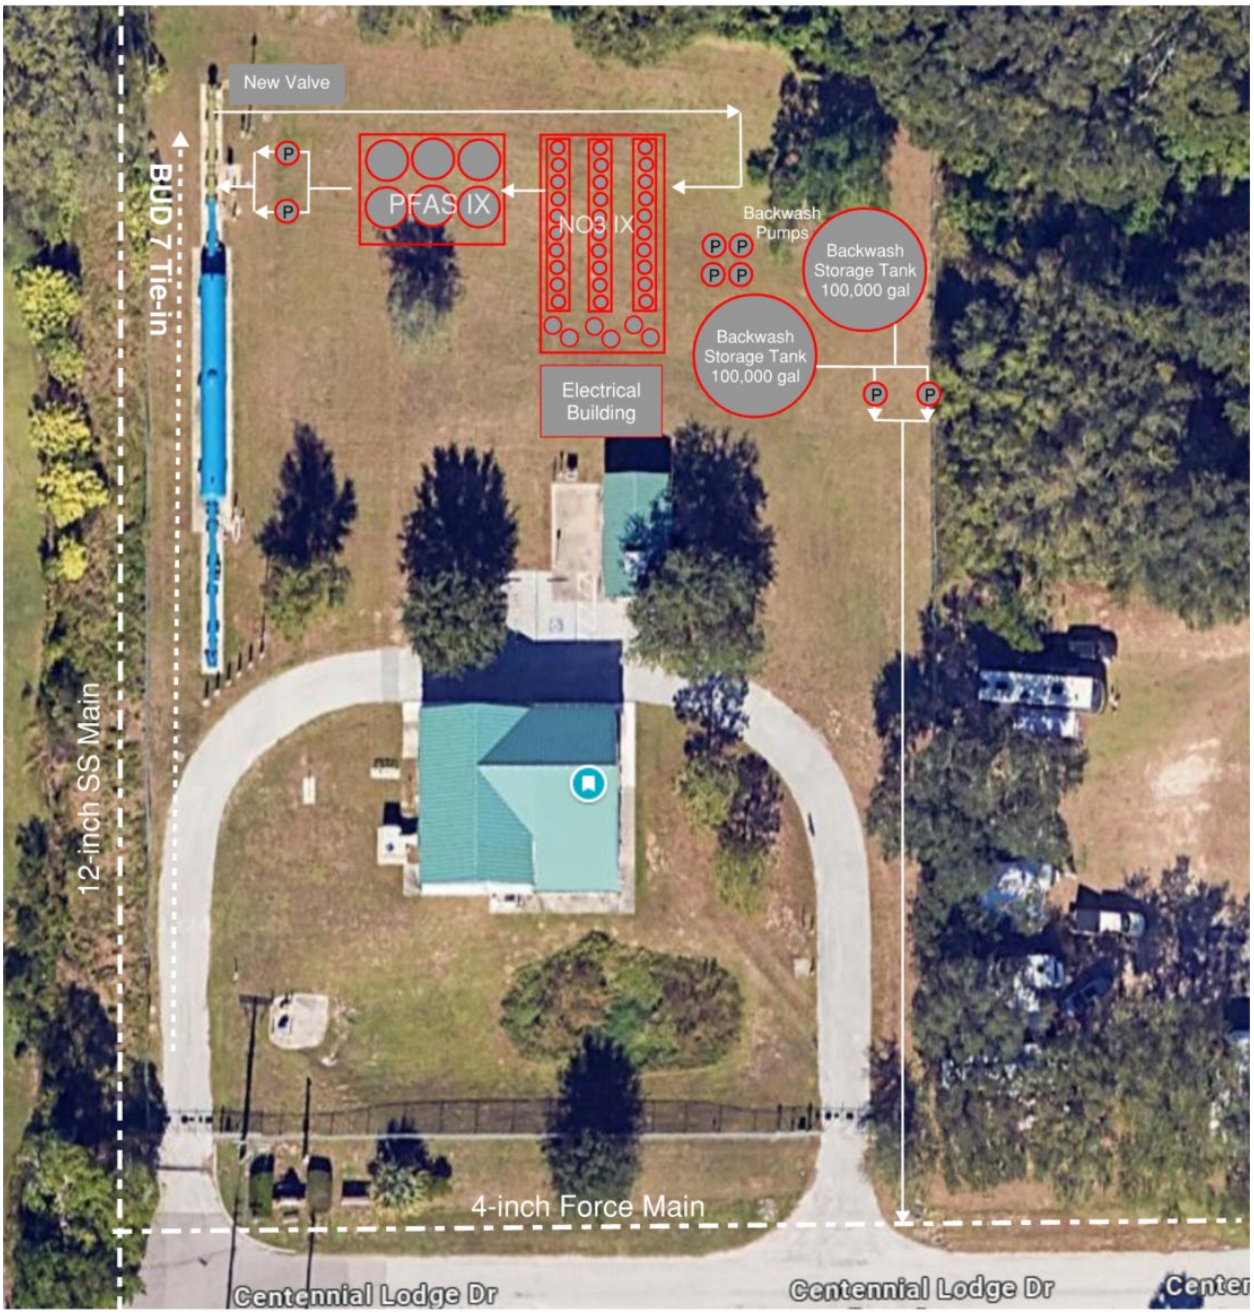

Figure 29 Site Plan for BUD-5 WTP with the Proposed FBIX Treatment

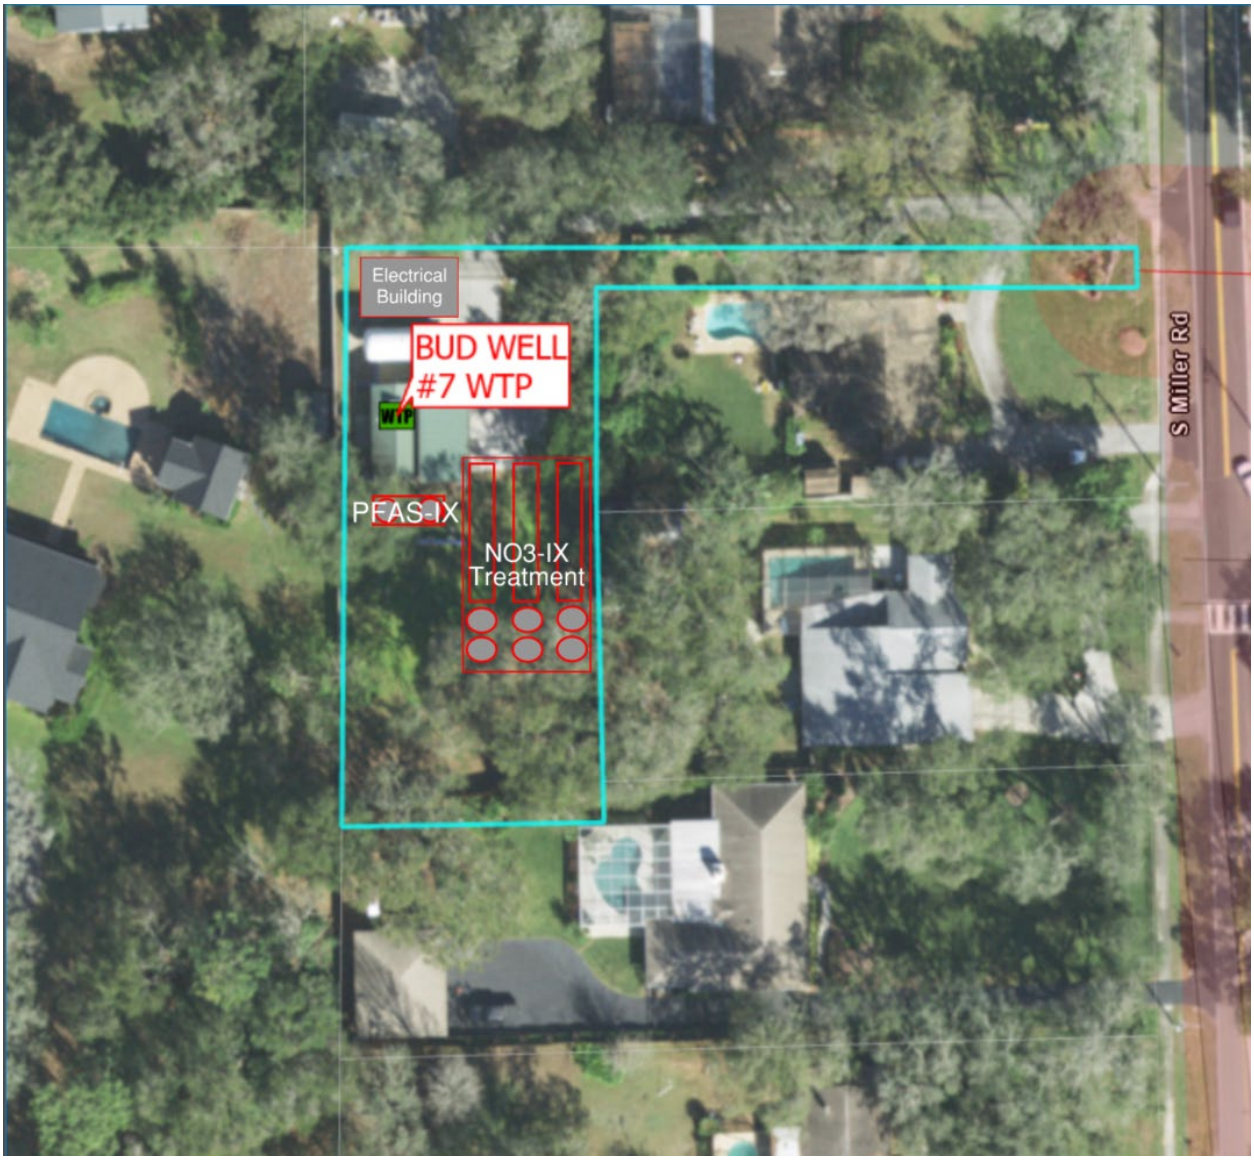

Figure 30 Site Plan for BUD-7 WTP with the Proposed FBIX Treatment

Figure 31 Packaged Nitrate-FBIX System (Envirogen Technologies, Inc.)

Site Assessments

The design criteria for the treatment technologies per supply source has been defined with the number of treatment units, diameter of these units, media volumes, EBCTs, and waste volume. Based on these criteria, each facility site was assessed for available property to support the respective treatment technology. Table 24 provides a brief summary of the property findings. An "*" indicates that property may be sufficient but may not be favorable for modifications because of outlying conditions.

Table 24 Available Property

Site Location	Treatment Technique	Acquire Nearby Property	Sufficient Facility Property	Comments
BUD-5 WTP	Nitrate-FBIX and PFAS-FBIX		X	Sufficient property available for proposed treatment.
BUD-7 WTP	Nitrate-FBIX and PFAS-FBIX	*	X	Sufficient property is available but in a residential area. Trees would need to be removed, which may not be favorable. Need detailed site visit.
RSWTP	SIX		X	Sufficient property is available on the north side of the treatment plant but would require tree removal and major raw water pipeline modifications. Assumes the land will not be sold.

Permitting

The permitting summary for the Tampa Bay Water sites with proposed improvements is provided in Table 25.

Table 25 Permitting Summary for Tampa Bay Water Treatment Sites

Permitting Entity	Permit Description	Items/Activity Potentially Requiring Permit	BUD-5 & 7 WTPs	RSWTP
Location of Treatment Infrastructure, Water Treatment Plant or Stand Alone			Stand Alone	RSWTP
Available Sewer System Description			Hillsborough County Sewer	Hillsborough County Sewer
Potential Residual Disposal Method			Hauling/ Deep Injection Well	Hauling/Deep Injection Well
City of Tampa Planning, Development, and Construction Services	Construction Plan Review and Building Permit	Infrastructure at WTP and/ or route and connection to sanitary sewer	N/A	N/A
Florida Department of State Division of Historical Resources	Minimum Documentation for State and Local Reviews	Infrastructure at WTP and/ or route and connection to sanitary sewer	30 percent; 1 month	30 percent; 1 month
Florida Department of Environmental Protection	National Pollutant Discharge Elimination System (NPDES) for Construction Activity; Notice of Intent (NOI)	Infrastructure at WTP and/ or route and connection to sanitary sewer	48 hours before construction	48 hours before construction
	Environmental Resource Permit; Possible Modification	Infrastructure at WTP and/ or route and connection to sanitary sewer	60 percent; 6 months	60 percent; 6 months
	Underground Injection Control; Well Construction Permit and Operation Permit	Disposal Method-Deep Injection	N/A	60 percent; 6 months
Florida Department of Transportation	Utility Permit	Route/Connection to Sanitary Sewer	N/A	N/A
Florida Fish and Wildlife Commission	Listed Species Incidental take, Migratory Bird Nest Removal, Listed Species Bird Depredation, Bald Eagle Disturbance, and Special Purpose	Infrastructure at WTP and/ or route and connection to sanitary sewer	30 percent; 3 months	30 percent; 3 months
Hillsborough County Planning, Development, and Construction Services	Construction Plan Review and Wetland Impact and Mitigation Agreement	Infrastructure at WTP and/ or route and connection to sanitary sewer	90 percent; 6 months	90 percent; 6 months
Hillsborough County Environmental Protection Commission	Construction Plan Review and Wetland Impact and Mitigation Agreement	Infrastructure at WTP and/ or route and connection to sanitary sewer	60 percent; 6 months	60 percent; 6 months
Pasco County Planning, Development, and Construction Services	Construction Plan Review and Building Permit	Infrastructure at WTP and/ or route and connection to sanitary sewer	N/A	N/A
Pinellas County Planning, Development, and Construction Services	Construction Plan Review and Building Permit	Infrastructure at WTP and/ or route and connection to sanitary sewer	N/A	N/A
Private Landowners	Utility Easement	Part of Applicable County Building Review Submittal for Sanitary Sewer Connection Route where it cannot be constructed in the right-of-way (ROW)	60 percent; 6 months	N/A
Southwest Florida Water Management District	WUP or WUP Modification	Infrastructure at WTP; wells	30 percent; 6-24 months	30 percent; 6-24 months
Tampa Bay Water	Concurrence	-	Concurrence	Concurrence
Tampa Electric Company	ROW Joint Use Permit	Route and connection to sanitary sewer	30 percent; 2 months	30 percent; 2 months
United States Army Corp of Engineers	Section 404 Dredge and Fill Permit	Infrastructure at WTP and/or route and connection to sanitary sewer within wetland	30 percent; 18 months	30 percent; 18 months

IMPLEMENTATION PLAN

The following sections update and reprioritize the implementation phasing plan developed for the RWQS.

Overview of Recommended Treatment Process Improvements

The recommended treatment technologies for each site from the RWQS and updated in this RWQS Update are summarized in Table 26 along with the sustainable operating capacity and annual average production capacity for each treatment facility site.

The sustainable capacity and annual average production capacity values shown in Table 26 were used to develop the calculations and cost estimates for this study to match the original RWQS for consistency. However, appropriate capacity needs to be determined during the predesign and implementation of the projects presented in this memorandum.

Table 26 Recommended Project by Supply Source

Site	Abbreviation	Sustainable Capacity (mgd)(1)	Annual Average Production Capacity (mgd)	Proposed Technologies
Brandon Urban Dispersed 5 WF	BUD-5 WTP	4.5	3.0	Nitrate IX, PFAS IX
Brandon Urban Dispersed 7 WF	BUD-7 WTP	1.5	1.5	Nitrate IX, PFAS IX
Cosme-Odessa WF	CO	17.5	10.0	Ozone, GAC
Cross Bar Ranch WF	CB	38.5	10.0	FBIX, Greensand
Cypress Bridge WF	CY	17.5	8.0	FBIX
Cypress Creek WF	CC	30.0	10.0	FBIX
Eldridge Wilde WF	ELW	25.0	11.0	Ozone, GAC
Morris Bridge WF	MB	17.5	10.0	FBIX
Northwest Hillsborough WF	NWH	15.8	4.0	Ozone, GAC
Section 21 WF	21	18.5	4.0	FBIX
South Pasco WF	SP	23.5	8.0	FBIX
Southcentral WF	SC	35.0	20.0	GAC
Starkey WF	ST	8.0	5.0	Ozone, GAC
RSWTP	RSWTP	90.0	64.0	SIX (existing GAC)

Abbreviations: WF – water facility

General Note:
All design costs assume sustainable capacity.
Notes:
(1) Sustainable capacity is defined by Tampa Bay Water as the production capacity achievable at the site for greater than 5 days. Values in this table were provided by Tampa Bay Water.

As summarized in Table 26, there are a variety of treatment process improvements proposed at multiple Tampa Bay Water facilities. It is recommended that Tampa Bay Water consider a phased implementation approach for these improvements.

Implementation Plan

This implementation provides an update to the implementation plan developed in the RWQS with revisions made based on the findings of this PFAS Treatability Study. The implementation plan for the improvements proposed to meet the water quality goals is proposed in three general phases.

- Phase 1 would focus on the implementation of PFAS removal processes where required and of new TOC removal processes at sites with elevated TOC and with existing capital improvement project plans. Anticipated timeline: 1 to 6 years.
- Phase 2 is proposed to expand the treatment process improvements to additional sites and size the system to meet a TOC goal of 2 mg/L at all POCs at the sustainable capacity. Anticipated timeline: 7 to 12 years.
- Phase 3 would involve expansion of the treatment systems at sites identified to achieve a TOC goal of less than 2 mg/L at all POCs and/ or consider higher treatment capacities (for example maximum day capacities). Anticipated timeline: 13 to 15 years.

Phase 1

Phase 1 is proposed to include design, construction, startup, and process optimization for the initial water treatment improvements at select sites for years 1 through 6. Timing can be adjusted as needed for funding, availability of resources, and project requirements. The sites selected for Phase 1 improvements were prioritized due to the elevated PFAS, high raw water TOC concentrations, variety of technologies for implementation, capacity, and overall regional benefits. It is recommended that the performance, costs, and impacts to the Tampa Bay Water facilities, Regional Transmission System, and the Member Governments' distribution systems be observed during Phase 1 to inform the design and implementation planning details for Phases 2 and 3. The treated water PFAS goal is within regulatory compliance, and the treated water TOC goal at facilities included in Phase 1 is 2 mg/L at the sustainable capacity. The following activities are recommended for Phase 1 of the implementation plan.

Phase 1A

- **Regional Surface WTP**: Consider the benefits of a demonstration at the RSWTP to document the SIX process as pretreatment to existing plant treatment processes with GAC polishing at the end for PFAS removal, TOC removal, and additional overall facility capacity. Concurrently, PAC should be tested as a near-term solution. During this demonstration, the existing filter GAC can be tested along with the expected service life of adding GAC polishing at the end of the RSWTP with SIX. Consider brine disposal options including an onsite deep injection well and/ or partnering with the City of Tampa for a disposal pipeline. Conduct demonstration testing in preparation for SIX implementation. Continue to observe progress and performance of the City of Tampa's SIX process and other facility improvements currently under design and construction.

Phase 1B

- **BUD-5 WTP**: Design, construction, startup, and commissioning of fixed bed ion exchange for PFAS removal at sustainable capacity. Sufficient property is available for the new treatment process.
- **BUD-7 WTP**: Design, construction, startup, and commissioning of fixed bed ion exchange for PFAS removal at sustainable capacity. Sufficient property is available for new treatment process, though tree removal may be required near residential property.
- **Regional Surface WTP**: Implement SIX if demonstration evaluations and testing show favorable results at the RSWTP. This may include implementing a brine disposal option including an onsite deep injection well and/ or partnering with the City of Tampa for a disposal pipeline.

Phase 1C Improvements

- **Eldridge Wilde WF**: Design, construction, startup, and commissioning of ozone system and two-stage GAC system sized to provide a firm treatment capacity at the sustainable operating capacity value of 25 mgd and a TOC treatment goal of 2.0 mg/L. Construction sequencing is anticipated to require installation of the ozone system first, followed by demolition of the existing forced draft aeration (FDA) system, and then the installation of the GAC system in the location of the existing FDAs. The costs provided in this study assume a two-stage GAC system will be installed. However, this system can be operated as a single-stage GAC to determine if performance and operating costs are acceptable. If not, alternatives such as two-stage GAC or FBIX upstream of ozone could be tested and considered for future implementation phases. Sufficient property appears to be available at the existing site for the new treatment processes. However, some property or easements may need to be obtained from Pinellas County for siting and constructing the improvements. A lift station to the Pinellas County sewer system is already available onsite but would need to be re-permitted and potentially resized for the GAC backwash waste stream. Additional property not under control or ownership of Tampa Bay Water may be needed for future phases, and these details will be evaluated during Phase 1. It will be important to coordinate and reassess projects in relation to existing CIP projects.
- **South Pasco WF**: Design, construction, startup, and commissioning of FBIX system at sustainable capacity. The treatment process improvements are recommended to be combined with the existing planned CIP project that involves wellfield, yard piping, storage, and pumping improvements at this site. Sufficient property appears to be available to site the proposed new treatment processes. Onsite lift stations and deep injection wells are not currently available onsite for brine waste disposal. Alternatives for hauling the brine waste stream or the potential to connect to the nearby sewer system will need to be refined and permitted. These brine disposal methods may be temporary if Tampa Bay Water constructs a deep injection well in the future for waste stream disposal. Similar to Eldridge Wilde WF projects, it will be important to coordinate and reassess projects in relation to existing CIP projects for South Pasco WF.
- **Deep Injection Well Investigations (Potential site: Cypress Creek WTP)**: Consider long-term benefits of installing a deep injection well system for disposal of multiple FBIX brine waste streams compared to hauling waste to wastewater treatment facilities or installing sewer connection in the northwest portion of the system. Begin hydrogeologic investigation and permitting.

Phase 2

Phase 2 includes design, construction, startup, and process optimization from years 7 through 12. Timing can be adjusted as needed for funding and project requirements. The remaining pertinent sites will be improved during this phase to achieve the treated water quality goal of 2 mg/L TOC at all the POCs. It is recommended that the performance, costs, and impacts to the Regional System Member Governments' systems be observed during Phase 2 to inform design criteria for Phase 3. The following activities are recommended for Phase 2.

Phase 2A

- **Cypress Creek WF**: Design, construction, startup, and commissioning of FBIX system sized to provide a firm treatment capacity at the sustainable capacity of 30 mgd. Sufficient property appears to be available for the new treatment process, though fencing and access roads would require modification. Onsite lift stations and deep injection wells are not currently available onsite for brine waste disposal. Alternatives for hauling locations or nearby suitable sewer will need to be refined and permitted until Tampa Bay Water installs a deep injection well (see discussion above in Phase 1A: Deep Well Investigations).
- **Cross Bar Ranch WF**: Design, construction, startup, and commissioning of FBIX and Greensand systems sized to provide a firm treatment capacity at the sustainable operating capacity of 38.5 mgd. Sufficient property appears to be available for the new treatment processes at the Cypress Creek WTP, though some tree removal would likely be required. Onsite lift stations and deep injection wells are not currently available onsite for brine and backwash waste disposal. Alternatives for hauling locations or nearby suitable sewer will need to be refined and permitted until Tampa Bay Water installs a deep injection well (see discussion above in Phase 1A: Deep Well Investigations). Phase 1 includes further review of the long-term plan to dispose of backwash effluent via deep injection.

Phase 2B

- **Cosme Odessa WF**: Design, construction, startup, and commissioning of ozone and GAC systems at sustainable capacity. The GAC system design (single-stage, two-stage, or alternate technology) should consider performance and operating data from Eldridge Wilde WF. Nearby property will need to be acquired for new treatment processes. Onsite lift stations are not currently available for GAC backwash waste. Refine and permit connecting to nearby sewer or hauling to a suitable location.
- **Starkey WF**: Design, construction, startup, and commissioning of ozone and GAC systems at sustainable capacity. The GAC system design (single-stage, two-stage, or alternate technology) should consider performance and operating data from Eldridge Wilde WF. Nearby property will need to be acquired for new treatment processes. Onsite lift stations are not currently available for GAC backwash waste. Refine and permit connecting to nearby sewer or hauling to a suitable location.
- **Section 21 WF**: Design, construction, startup, and commissioning of FBIX system at sustainable capacity. Sufficient property is available for the new treatment process, though tree removal near recreational area may be required. An onsite lift station is currently available onsite for facilitating brine waste disposal to sewer. However, if sewer disposal of the brine waste is not permittable, consider hauling to Tampa Bay Water's deep injection well (if available) or other suitable location.

- **Carrollwood/ Northwest Hillsborough WF**: Design, construction, startup, and commissioning of ozone and GAC systems at sustainable capacity. The GAC system design (single-stage, two-stage, or alternate technology) should consider performance and operating data from Eldridge Wilde WF. Nearby property will need to be acquired for new treatment processes. An onsite lift station is currently available for GAC backwash waste but would need to be re-permitted and potentially resized for GAC backwash waste.
- **Morris Bridge WF**: Design, construction, startup, and commissioning of FBIX system at sustainable capacity. Sufficient property is available for the new treatment process, though designated wetland area may require mitigation. Onsite lift stations and deep injection wells are not currently available onsite for brine waste disposal. Consider hauling to Tampa Bay Water's deep injection well (if available) or other suitable location.

Phase 2C

- **BUD-5 WTP**: Design, construction, startup, and commissioning of FBIX for nitrate removal at sustainable capacity. Sufficient property is available for the new treatment process. Refine and permit hauling waste stream to a suitable location.
- **BUD-7 WTP**: Design, construction, startup, and commissioning of FBIX for nitrate removal at sustainable capacity. Sufficient property is available for the new treatment process, though tree removal may be required near residential property. Refine and permit hauling waste stream to a suitable location.

Phase 3

Phase 3 includes design, construction, and startup from years 13 through 15. Timing can be adjusted as needed for funding and project requirements. If determined that the TOC goal of 2 mg/L is insufficient to meet water quality goals at all POCs, additional TOC removal can be implemented. The following activities are recommended for Phase 3.

- **South-Central Hillsborough WF**: Design, construction, startup, and commissioning of a GAC system at sustainable capacity downstream of the existing ozone system. The GAC system design (single-stage, two-stage, or alternate technology) should consider performance and operating data from other facilities. Sufficient property is available, though tree removal and access road modifications may be required. An onsite lift station is currently available for GAC backwash waste.
- **Cypress Bridge WF**: Design, construction, startup, and commissioning of FBIX system at sustainable capacity. Sufficient property is available for new treatment processes, though tree removal may be required. Onsite lift stations and deep injection wells are not currently available for brine waste disposal. Consider hauling to Tampa Bay Water's deep injection well (if available) or other suitable location or refine and permit connecting to a nearby sewer.
- All remaining sites: Expand if needed to meet lower TOC goals.

Implementation Schedule for Recommended Improvements

The recommended implementation schedule is summarized as follows.

- Phase 1 Design and Construction: Year 1 through 4.

- Phase 1 Operation: Year 5 through 6.
- Phase 2 Design and Construction: Year 7 through 10.
- Phase 2 Operation: Year 11 through 12.
- Phase 3 Design and Construction: Year 13 through 15.

Impact on PFAS Compliance Schedule

As previously mentioned, the NPDWR compliance date for PFAS is April 26, 2029. On that date, a four-quarter RAA will be calculated using the data collected from the previous four quarters (April 2028 through April 2029). In order to meet compliance, treatment must be in place in 2028. Although projects impacting PFAS compliance were prioritized first, the proposed implementation schedule will likely not meet the deadline, in particular at the RSWTP. Demonstration testing of SIX at the RSWTP is recommended to be conducted as soon as possible to collect design criteria. During demonstration testing, it is also recommended that powdered activated carbon (PAC) be tested. A PAC dosing system and PAC storage silo can be quickly designed and installed (estimated at less than 1 year) to start removing PFAS at the RSWTP prior to long-term solutions being implemented, i.e., SIX. PAC dosing can be easily turned off after long-term solutions are in place and used, as needed, in the future. Demonstration testing of SIX will also allow for optimization of existing filters configuration for PFAS without negatively impacting plant hydraulics as a near-term option prior to long-term solutions being in place.

Cost Estimates

The following tables summarize the capital costs for the projects outlined in each Phase. The assumptions previously described apply. Cost estimates for improvements identified in the RWQS have been updated to 2024 dollars using the Engineering News-Record Construction Cost Index (ENR CCI).

Table 27 Phase 1 Capital Costs

Project Description	Capital Cost ($M)
Phase 1A	
RSWTP SIX Demonstration	$2.3
Subtotal	**$2.3**
Phase 1B	
Brandon Urban 5 PFAS-FBIX	$5.1
Brandon Urban 7 PFAS-FBIX	$1.9
RSWTP SIX	$128.6
Subtotal	**$135.6**
Phase 1C	
Eldridge Wilde Ozone-GAC	$77.6
South Pasco FBIX	$13.7
Subtotal	**$91.3**
TOTAL	**$229.23**

Table 28 Phase 2 Capital Costs

Project Description	Capital Cost ($M)
Phase 2A	
Cypress Creek FBIX	$15.7
Cross Bar Ranch FBIX and Greensand	$39.0
Subtotal	**$54.7**
Phase 2B	
Cosme Odessa Ozone-GAC	$58.0
Starkey Ozone-GAC	$41.1
Section 21 FBIX	$13.4
Northwest Hillsborough Ozone-GAC	$46.3
Morris Bridge FBIX	$13.1
Subtotal	**$171.9**
Phase 2C	
Brandon Urban 5 Nitrate-FBIX	$8.3
Brandon Urban 7 Nitrate-FBIX	$4.6
Subtotal	**$12.9**
TOTAL	**$239.6**

Table 29 presents the capital costs for Phase 3. It is assumed that the sites identified in Phases 1 and 2 have been upgraded to provide sufficient treatment to meet the TOC goal of 2 mg/L at all POCs. The Phase 3 costs are presented as three options depending on if the selected alternative is to implement treatment for a TOC goal of 1.5, 1.25, or 1.0 mg/L at all POCs.

Table 29 Phase 3 Capital Costs

Project Description	Capital Cost ($M)
Option A – 1.5 mg/L TOC Target	
Cypress Bridge FBIX	$14.0
South Pasco FBIX	$2.9
Cypress Creek FBIX	$4.4
Cross Bar Ranch FBIX	$12.7
Section 21 FBIX	$2.4
Northwest Hillsborough Ozone-GAC	$2.7
Morris Bridge FBIX	$0.8
TOTAL	**$39.9**
Option B – 1.25 mg/L TOC Target	
South-Central Hillsborough GAC	$38.5
Cypress Bridge FBIX	$16.7
Eldridge Wilde Ozone-GAC	$0.2
South Pasco FBIX	$5.3
Cypress Creek FBIX	$4.4
Cross Bar Ranch FBIX	$13.5
Cosme Odessa Ozone-GAC	$0.2
Section 21 FBIX	$3.2
Northwest Hillsborough Ozone-GAC	$6.1
Morris Bridge FBIX	$3.7
TOTAL	**$91.8**
Option C – 1 mg/L TOC Target	
South-Central Hillsborough GAC	$47.0
Cypress Bridge FBIX	$19.2
Eldridge Wilde Ozone-GAC	$0.2
South Pasco FBIX	$11.9
Cypress Creek FBIX	$9.7
Cross Bar Ranch FBIX	$20.5
Cosme Odessa Ozone-GAC	$0.2
Section 21 FBIX	$6.4
Northwest Hillsborough Ozone-GAC	$7.8
Morris Bridge FBIX	$3.7
TOTAL	**$126.8**

					Hazard Index [3] -		0.0	0.0				0.0	0.0			

[1] All values are expressed in ppt (or ng/L), except LITHIUM in ppb (or ug/L).

[2] Suspected field or laboratory background contamination.

[3] Used "0.0" if sample result is less than the EPA PQL per PFAS NPDWR

CASRN = Chemical Abstracts Service Registry Number

MRL = Minimum Reporting Level = quantitation limit achieved with 95% confidence by 75% of labs nationwide.

MDL = Method Detection Limit = minimum measured and reported with 99 % confidence that analyte is greater than zero.

POC = Tampa Bay Water point of connection or regional water delivery location.

PQL = Practical Quantitation Level Note: EPA PQLs (per PFAS NPDWR) = EPA's MRLs (per PFAS UCMR5)

EPTDS$_1$ = Member utility entry point to their distribution system - duplicate sample analyzed by Tampa Bay Water.

EPTDS$_2$ = Member utility entry point to their distribution system - sample analyzed by member utility's UCMR5 Certified contract laboratory

I = Results between MDL and MRL or EPA PQL per PFAS NPDWR

U = Indicates that the compound was analyzed for but not detected

PFAS NPDWR = PFAS National Primary Drinking Water Regulation (April 2024)

					Hazard Index [3] -		0.0	0.0				0.0	0.0			

[1] All values are expressed in ppt (or ng/L), except LITHIUM in ppb (or ug/L).

[2] Suspected field or laboratory background contamination.

[3] Used "0.0" if sample result is less than the EPA PQL per PFAS NPDWR

CASRN = Chemical Abstracts Service Registry Number

MRL = Minimum Reporting Level = quantitation limit achieved with 95% confidence by 75% of labs nationwide.

MDL = Method Detection Limit = minimum measured and reported with 99 % confidence that analyte is greater than zero.

POC = Tampa Bay Water point of connection or regional water delivery location.

PQL = Practical Quantitation Level Note: EPA PQLs (per PFAS NPDWR) = EPA's MRLs (per PFAS UCMR5)

$EPTDS_1$ = Member utility entry point to their distribution system - duplicate sample analyzed by Tampa Bay Water.

$EPTDS_2$ = Member utility entry point to their distribution system - sample analyzed by member utility's UCMR5 Certified contract laboratory

I = Results between MDL and MRL or EPA PQL per PFAS NPDWR

U = Indicates that the compound was analyzed for but not detected

PFAS NPDWR = PFAS National Primary Drinking Water Regulation (April 2024)

					Hazard Index [3] -		0.0	0.0				0.0				

[1] All values are expressed in ppt (or ng/L), except LITHIUM in ppb (or ug/L).

[2] Suspected field or laboratory background contamination.

[3] Used "0.0" if sample result is less than the EPA PQL per PFAS NPDWR

CASRN = Chemical Abstracts Service Registry Number

MRL = Minimum Reporting Level = quantitation limit achieved with 95% confidence by 75% of labs nationwide.

MDL = Method Detection Limit = minimum measured and reported with 99 % confidence that analyte is greater than zero.

POC = Tampa Bay Water point of connection or regional water delivery location.

PQL = Practical Quantitation Level Note: EPA PQLs (per PFAS NPDWR) = EPA's MRLs (per PFAS UCMR5)

$EPTDS_1$ = Member utility entry point to their distribution system - duplicate sample analyzed by Tampa Bay Water.

$EPTDS_2$ = Member utility entry point to their distribution system - sample analyzed by member utility's UCMR5 Certified contract laboratory

I = Results between MDL and MRL or EPA PQL per PFAS NPDWR

U = Indicates that the compound was analyzed for but not detected

PFAS NPDWR = PFAS National Primary Drinking Water Regulation (April 2024)

					Hazard Index[3] -		0.0	0.0				0.0	0.0			

[1] All values are expressed in ppt (or ng/L), except LITHIUM in ppb (or ug/L).

[2] Suspected field or laboratory background contamination.

[3] Used "0.0" if sample result is less than the EPA PQL per PFAS NPDWR

CASRN = Chemical Abstracts Service Registry Number

MRL = Minimum Reporting Level = quantitation limit achieved with 95% confidence by 75% of labs nationwide.

MDL = Method Detection Limit = minimum measured and reported with 99 % confidence that analyte is greater than zero.

POC = Tampa Bay Water point of connection or regional water delivery location.

PQL = Practical Quantitation Level Note: EPA PQLs (per PFAS NPDWR) = EPA's MRLs (per PFAS UCMR5)

$EPTDS_1$ = Member utility entry point to their distribution system - duplicate sample analyzed by Tampa Bay Water.

$EPTDS_2$ = Member utility entry point to their distribution system - sample analyzed by member utility's UCMR5 Certified contract laboratory

I = Results between MDL and MRL or EPA PQL per PFAS NPDWR

U = Indicates that the compound was analyzed for but not detected

PFAS NPDWR = PFAS National Primary Drinking Water Regulation (April 2024)

APPENDIX D

LAB RESULTS – RSSCTs

Table 1 Lab Results Legend

Appendix	
Abbreviation	Meaning
ND	Non-Detect
RL	Reporting Limit
MDL	Method Detection Limit
J	Reported Concentration is considered estimated. Lower than RL but above the MDL.

Meeting Minutes

Water Quality Working Group/ Operations Coordination Committee

March 12, 2026 – Microsoft Teams Meeting

HANDOUTS - sent by email prior to meeting

a. Member Government monthly data

b. March 2026 WQWG-OCC Agenda Packet

A. WATER DELIVERY

1. SYSTEM UPDATES

a. **Surface Waters -steady state good**

i. RSWTP – supply from the Reservoir only with the exception of a two-day Alafia supply, approximately 50 MGD

ii. Reservoir – supply at 6.8 BG

iii. Desal – 15 to 17 MGD

b. **Groundwater** – all wellfields are operational and available pending system demands

c. **Transmission Mains** – nitrites are minimal due to cooler weather, chloramine residuals are normal

d. **Projects**

i. New South Hillsborough pipeline construction continues.

ii. South Pasco Wellfield delivery limited in response to Cosme Water Treatment Plant offline. Tampa Bay Water Operations has reconfigured transmission piping connections for delivery to Hillsborough County's Lake Park and Fawn Ridge Water Treatment Plants. Micro were completed and pipelines were being flushed from Lake Park to Cypress Creek WTPs. Laila will advise Hillsborough County in advance when pipe configuration and source blending begins.

iii. Upgrade/chemical piping at Cypress Creek Water Treatment Plant – new permanent chlorine and caustic systems are in service. A temporary ammonia feed system is operational. Residuals temporarily decreased due to changeover but nitrification has not been observed.

2. **UPDATES FROM MEMBER GOVERNMENTS**

a. **Hillsborough County**

i. February 2026 TCR Reporting North Service Area – 0 TCP out of 130 samples – 0%

ii. February 2026 TCR Reporting South Service Area – 0 TCP out of 219 samples – 0%

iii. February 2026 Complaint Report North Service Area – 16 complaints: mostly color, odor

iv. February 2026 Complaint Report South Service Area - 52 complaints: mostly odor and pressure

v. February 2026 Flushing Report North Service Area – 10.53 MG (2.20 MG from auto flushers)

vi. February 2026 Flushing Report South Service Area – 19.60 MG (7.0 MG from auto flushers)

vii. February 2026 Total Delivered Water Report North Service Area – 564 MG, 1.9 % flushed

viii. February 2026 Total Delivered Water South Service Area – 1,613.00 MG, 1.2 % flushed

b. **City of New Port Richey**

i. February 2026 TCR Reporting – 0 TCP out of 63 samples – 0%

ii. February 2026 Complaint Report – 0

iii. February 2026 Flushing Report – 1.372 MG (1.329 MG from auto flushers)

iv. February 2026 Total Delivered Water Report – 90.93 MG, 1.51% flushed

v. Cleaned their water tanks, drained and refilled them.

c. **Pinellas County**

i. February 2026 TCR Reporting – 0 TCP out of 210 samples – 0%

ii. February 2026 Complaint Report – 71 complaints: mostly premise issues and rusty water

iii. February 2026 Flushing Report – 19.71 MG (13.89 MG from auto flushers)

iv. February 2026 Total Delivered Water Report – 1,303.82 MG, 1.51% flushed

v. Most customer calls were related to home water softeners and lead and copper rule revision questions.

d. **Pasco County**

i. February 2026 TCR Reporting – 0 TCP out of 183 samples – 0%

ii. February 2026 Complaint Report – 28 complaints: mostly color, odor and customer issues

iii. February 2026 Flushing Report – 16.22 MG (13.99 MG from auto flushers)

iv. February 2026 Water Delivered Report – 1,220.91 MG, 1.33 % flushed

v. Kevin Jenkins invited several members of Pasco's water quality and water operations teams to participated in today's meeting for the opportunity to see how their work ties together with other member governments and Tampa Bay Water.

vi. Pasco achieved a record low flushing rate of 1.3% last month, which proved that operational adjustments are working along with better weather and chlorine distribution boosters (three are running and two are in progress).

e. **City of St. Petersburg**

i. February 2026 TCR Reporting – 2 TCP out of 186 samples – 1.08%

ii. February 2026 Complaint Report – 44 complaints: mostly premise issues; pressure issues on customer side

iii. February 2026 Flushing Report – 5.38 MG (3.77 MG from auto flushers)

iv. February 2026 Total Delivered Report – 776.95 MG, 0.69% flushed

v. Flushing is lower than last year at this time and is attributed to more efficient flushing practices.

f. **City of Tampa**

i. February 2026 TCR Reporting – 0 TCP out of 240 samples – 0%

ii. February 2026 Complaint Report – 21 complaints: mostly color, pressure and odor

iii. February 2026 Flushing Report – 7.84 MG (7.07 MG from auto flushers)

iv. February 2026 Total Delivered Water Report – 2,155.41 MG, 036% flushed

v. Nitrification is very low and residuals are good.

B. WATER QUALITY MONITORING/TREATMENT

1. **Exhibit D Performance**

i. Exhibit D performance met requirements in February 2026.

ii. Tampa Bay Water is now monitoring the COSBPASS point of connection because the Cosme Water Treatment Plant is out of service for an estimated 13-mo. construction project.

2. **Consumer Confidence Report Update**

    i. Draft CCR tables were sent to all members on March 5, 2026.

    ii. Received DEP approval on March 9, 2026 – no changes were needed to draft tables.

    iii. Tampa Bay Water is now finalizing the 2025 CCR, but DEP has not yet released the new template to the FRWA website.

    iv. If DEP fails to issue the template, Tampa Bay Water will provide the CCR before the compliance deadline of April 1, 2026.

3. **PFAS Quarterly Sampling**

    i. On March 5, DEP issued a memo, "Federal PFAS Initial Monitoring Requirements".

    ii. Thanks to the City of Tampa, Paula Lashuay, for providing a copy, which was emailed to the WQWG.

    iii. DEP is following EPA direction and initial quarterly monitoring must be done by April 26, 2027.

    iv. Even though EPA is pursuing elimination of four of six PFAS – all must be included for initial monitoring.

    v. EPA is being challenged by AWWA on PFOS/PFOA decisions likely later this year or next.

    vi. Tampa Bay Water began our initial PFAS monitoring last year and completed Q3 last month.

    vii. Our data has been consistent with all of our prior findings dating back to July 2023.

4. **Regional Water Quality Study Update**

    For the benefit of the Pasco County team in attendance today, an overview of the Regional Water Quality Study, from the beginning in 2017 to current day status was provided.

C. OTHER TOPICS

None

D. FUTURE MEETINGS

Next WQWG-OCC Meeting is online April 9, 2026 at 1:30 p.m.

WQWG-OCC March 2026 Meeting Attendees

Chris Wetz, Hillsborough County
Mark Lehigh, Hillsborough County
David Lundberg, Hillsborough County
Pedro Rodriquez, Hillsborough County
Zemberial Strong, Hillsborough County
Patti Holowecky, Pinellas County
Royce Rarick, Pinellas County
Wendy Tifft, Pinellas County
Greg Wikholm, City of New Port Richey
Paula Lashuay, City of Tampa
Mike Gilliam, Tampa Bay Water
Shawn Jones, Tampa Bay Water
Steve Fleischacker, Tampa Bay Water
Evelyn Dooley, Tampa Bay Water
Stephen Cantin, Tampa Bay Water
Laila Martin, Tampa Bay Water
Philip Matthews, Tampa Bay Water
Jim Kramer, City of St. Petersburg
John Clausen, City of St. Petersburg
Lauren Tersen, City of St. Petersburg
Sean Pitcher, Pasco County
Antonio Alverez, Pasco County
Kody James, Pasco County
Kevin Jenkins, Pasco County
Stephanie Summerbell, Pasco County
Jason Happle, Pasco County
Jason Adair, Pasco County
Spencer Horn, Pasco County
Carissa Dennison, Pasco County
Christian Villano, Pasco County
Karen Lewis, Pasco County
Tim Smith, SUNDT
Chris Owen, Hazen & Sawyer

Meeting Minutes

Water Quality Working Group/ Operations Coordination Committee

February 12, 2026 – Microsoft Teams Meeting

HANDOUTS - sent by email prior to meeting

a. Member Government monthly data

b. February 2026 WQWG-OCC Agenda Packet

A. WATER DELIVERY

1. SYSTEM UPDATES

a. **Surface Waters**

i. RSWTP – supply from the Reservoir only, approximately 60 MGD

ii. Reservoir – supply at 8.2 BG

iii. Desal – 14 to 15 MGD

b. **Groundwater** – all wellfields are operational and available pending system demands

c. **Transmission Mains** – nitrites are minimal due to cooler weather, chloramine residuals are normal

d. **Projects**

i. New South Hillsborough pipeline construction

ii. Site development work at RSWTP

iii. Upgrade/chemical piping at CCWTP

e. **Other**

i. City of Tampa started purchasing water at MBREGCOT

ii. Cosme WTP shut down for 13-month project, COSBPASS POC in use during this time

2. **UPDATES FROM MEMBER GOVERNMENTS**

a. **Hillsborough County**

i. January 2026 TCR Reporting North Service Area – 1 TCP out of 133 samples – 0.75%

ii. January 2026 TCR Reporting South Service Area – 0 TCP out of 219 samples – 0%

iii. January 2026 Complaint Report North Service Area – 20 complaints: mostly color and odor

iv. January 2026 Complaint Report South Service Area - 54 complaints: mostly odor and pressure

v. January 2026 Flushing Report North Service Area – 8.65 MG (2.20 MG from auto flushers)

vi. January 2026 Flushing Report South Service Area – 26.60 MG (5.0 MG from auto flushers)

vii. January 2026 Total Delivered Water Report North Service Area – 632.53 MG, 1.4 % flushed

viii. January 2026 Total Delivered Water South Service Area – 1,800.00 MG, 1.5 % flushed

ix. Heavier than routine flushing reported in non-residential areas last month.

b. **City of New Port Richey**

i. January 2026 TCR Reporting – 0 TCP out of 21 samples – 0%

ii. January 2026 Complaint Report – 2 color complaints

iii. January 2026 Flushing Report – 1.345 MG (1.329 MG from auto flushers)

iv. January 2026 Total Delivered Water Report – 101.01 MG, 1.33% flushed

v. The city reported color measurements higher than 15 color units for the past two months.

vi. Due to oversight in January, only 21 bacti samples were collected (instead of 42). DEP was notified and the samples have since been collected. A public notification was sent out.

c. **Pinellas County**

i. January 2026 TCR Reporting – 2 TCP out of 216 samples – 0.93%

ii. January 2026 Complaint Report – 111 complaints: mostly premise issues and rusty water

iii. January 2026 Flushing Report – 19.63 MG (13.44 MG from auto flushers)

iv. January 2026 Total Delivered Water Report – 1,412.20 MG, 1.39% flushed

v. More calls (65 ea.) than usual from customers about rusty water.

d. **Pasco County**

i. January 2026 TCR Reporting – 1 TCP out of 185 samples – 0.54%

ii. January 2026 Complaint Report – 28 complaints: mostly color, odor and customer issues

iii. January 2026 Flushing Report – 22.48 MG (18.74 MG from auto flushers)

iv. January 2026 Water Delivered Report – 1,303.27 MG, 1.73 % flushed

v. Pasco reported record low flushing last month, partially attributed to a new transmission main loop in the central part of the county that shortened chloramine decay residence time.

e. **City of St. Petersburg**

i. January 2026 TCR Reporting – 2 TCP out of 186 samples – 1.08%

ii. January 2026 Complaint Report – 39 complaints: mostly premise issues; pressure issues on customer side

iii. January 2026 Flushing Report – 9.95 MG (7.89 MG from auto flushers)

iv. January 2026 Total Delivered Report – 820.55 MG, 1.21% flushed

v. Flushing is lower than last year at this time.

f. **City of Tampa**

i. January 2026 TCR Reporting – 0 TCP out of 240 samples – 0%

ii. January 2026 Complaint Report – 12 complaints: mostly color and odor

iii. January 2026 Flushing Report – 10.95 MG (7.84 MG from auto flushers)

iv. January 2026 Total Delivered Water Report – 2,239.44 MG, 0.47% flushed

v. City is considering scheduling a chlorine maintenance event in March 2026.

vi. City noted that the number of complaints were very low this month.

B. WATER QUALITY MONITORING/TREATMENT

1. **Exhibit D Performance**

Exhibit D performance met requirements in January 2026.

2. **Regional Water Quality Study Update – Final Report Issued on January 9, 2026**

   a. Recommendations

      i. Tampa Bay Water's Planning & Projects Division completed their CIP cost projections in January 2026 for the RWQS Update recommended treatment projects.

      ii. Tampa Bay Water provided a Board presentation on January 26, 2026 that was largely a review of previously presented information.

      iii. Phase 1 recommendations include PFAS reduction treatment at the existing Regional Surface Water Treatment Plant and BUD5 and BUD7 Water Treatment Plants locations (i.e., not at the points of connection).

      iv. Phase 1 recommendations also include TOC reduction treatment at the Eldridge Wilde Water Treatment Plant and the South Pasco Water Treatment Plant.

      v. Phase 2 recommendations for TOC reduction treatment at wellfield water treatment locations at Cosme-Odessa, Carrollwood-Northwest Hillsborough, Cypress Creek/ Cross Bar, Morris Bridge, Section 21 and Starkey.

      vi. Phase 3 recommendations (i.e., further reducing TOC to less than two mg/L), if necessary, will be determined at a later date using full-scale treatment performance data.

      vii. CIP cost projections for the above-described recommendations were presented to member utility directors and others after the Board meeting on January 26, 2026.

   b. Next Steps

      i. A Board presentation will made in February 2026 that will review the recommended treatment locations and provide CIP cost estimates for Phase 1 and Phase 2 projects.

      ii. Seek Board approval for the Phase 1 projects at the April 2026 Board meeting.

3. **PFAS Quarterly Compliance Sampling**

   a. PFAS Q3 compliance sampling was underway and scheduled to be completed in February 2026.

   b. PFAS Q4 compliance sampling is planned for May 2026.

C. OTHER TOPICS

UPDATE: AWWA LITIGATION – EPA PFAS MCLs CHALLENGE

a. The Court ruled against EPA's proposal for the Court to rescind the four PFAS. EPA must now follow the full regulatory process with appropriate public notification procedures.

b. EPA has not yet issued proposed regulation formally extending the PFOS and PFOA compliance date from April 2029 to April 2031. To date only EPA's intent to extend the date has been announced.

c. EPA issued a memo to state agencies with drinking water primacy, asking them to request an extension from EPA for PFAS NPDWRs.

D. FUTURE MEETINGS

Next WQWG-OCC Meeting is online March 12, 2026 at 1:30 p.m.

WQWG-OCC February 2026 Meeting Attendees

Chris Wetz, Hillsborough County
Mark Lehigh, Hillsborough County
Luke Mulford, Hillsborough County
David Lundberg, Hillsborough County
Pedro Rodriquez, Hillsborough County
Ray Harmon, Hillsborough County
Zemberial Strong, Hillsborough County
Trevor Bridge, Pinellas County
Michele Duggan, Pinellas County
Patty Holowecky, Pinellas County
Royce Rarick, Pinellas County
Wendy Tifft, Pinellas County
Greg Wikholm, City of New Port Richey
Michael Stein, City of New Port Richey
Colin Eichenmuller, City of New Port Richey
Paula Lashuay, City of Tampa
Mike Gilliam, Tampa Bay Water
Shawn Jones, Tampa Bay Water

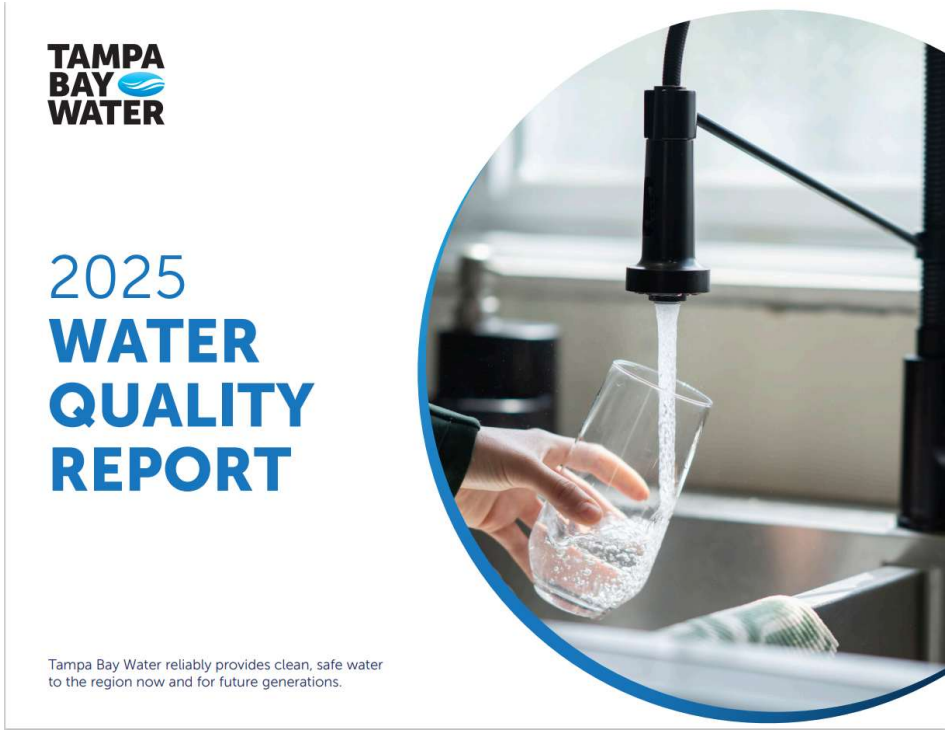
Water Quality Update and Recommendation to Implement Water Quality Treatment

Agenda Item C.2
April 20, 2026

Warren Hogg, P.G.
Chief Science Officer
Tampa Bay Water

Compliance

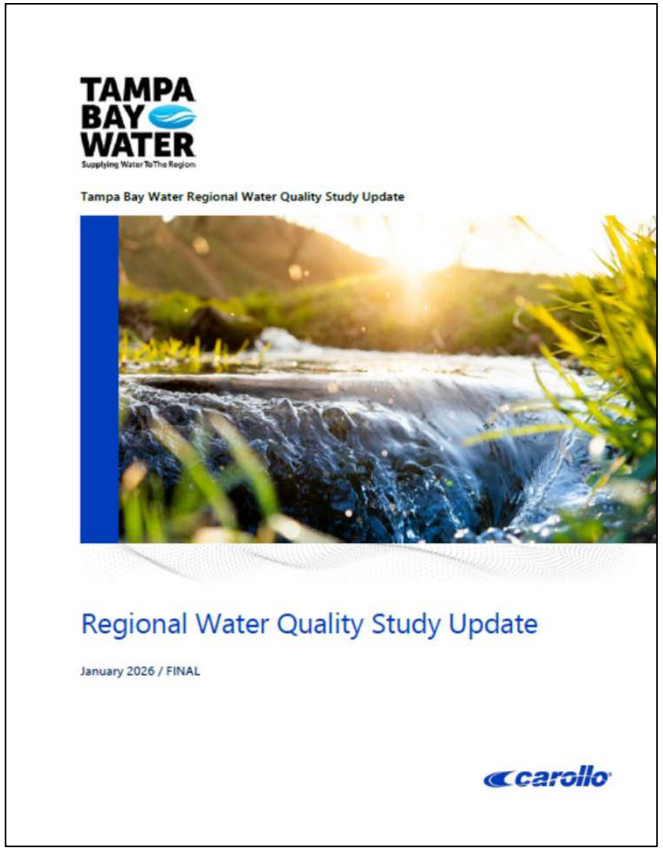
- Meets or is better than state and federal requirements
  - Safe Drinking Water Act National Primary Drinking Water Standards
  - 62-550, Florida Administrative Code
- Meets or is better than Exhibit D requirements



Regional Water Quality Study - Timeline

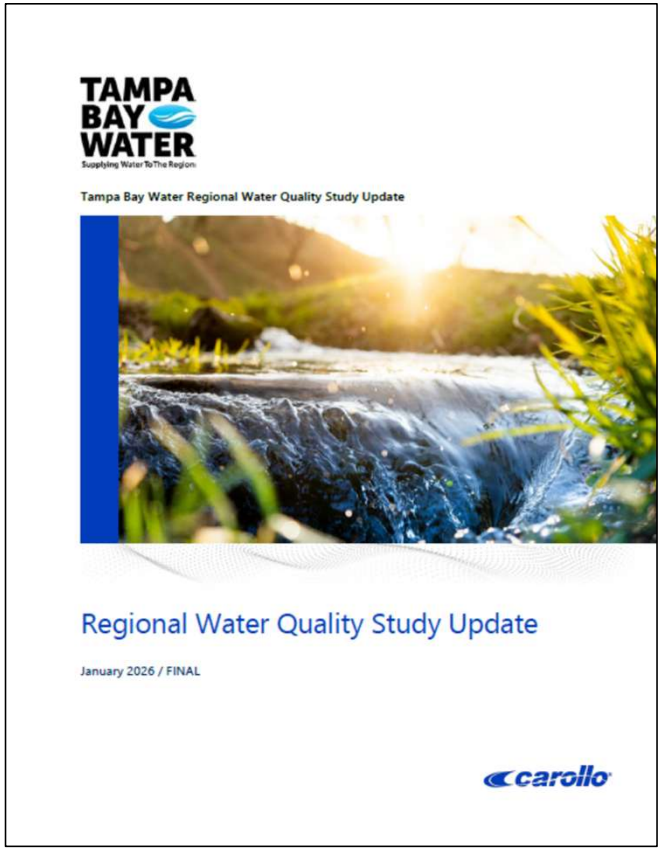
- Total Organic Carbon (TOC) reduction
  - Member utility director requests 2017-2018
  - Desktop evaluations 2018-2019
  - Benchtop and pilot treatability 2020-2022
  - Reports with recommendations 2022-2023

- PFAS reduction treatment
  - Member utility director requests 2023 (January)
  - Treatability studies 2023-2024
  - EPA final drinking water limits 2024 (April)
  - EPA limits challenged by AWWA 2024 (June)
  - EPA intent to change limits 2025 (May)
  - Report with recommendations 2025-2026



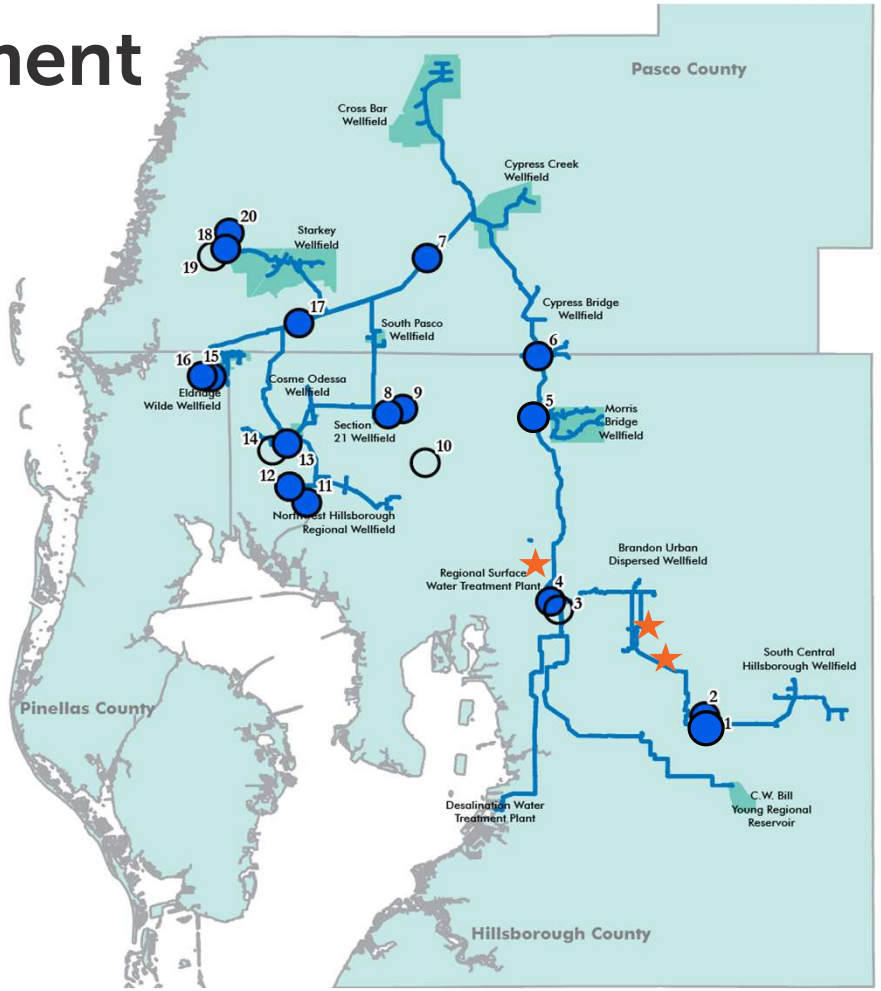
Regional Water Quality Study – January 2026

- PFAS reduction treatment
  - Long-term regulatory compliance with EPA PFAS drinking water limits
- TOC reduction treatment
  - Strengthen disinfectant stability



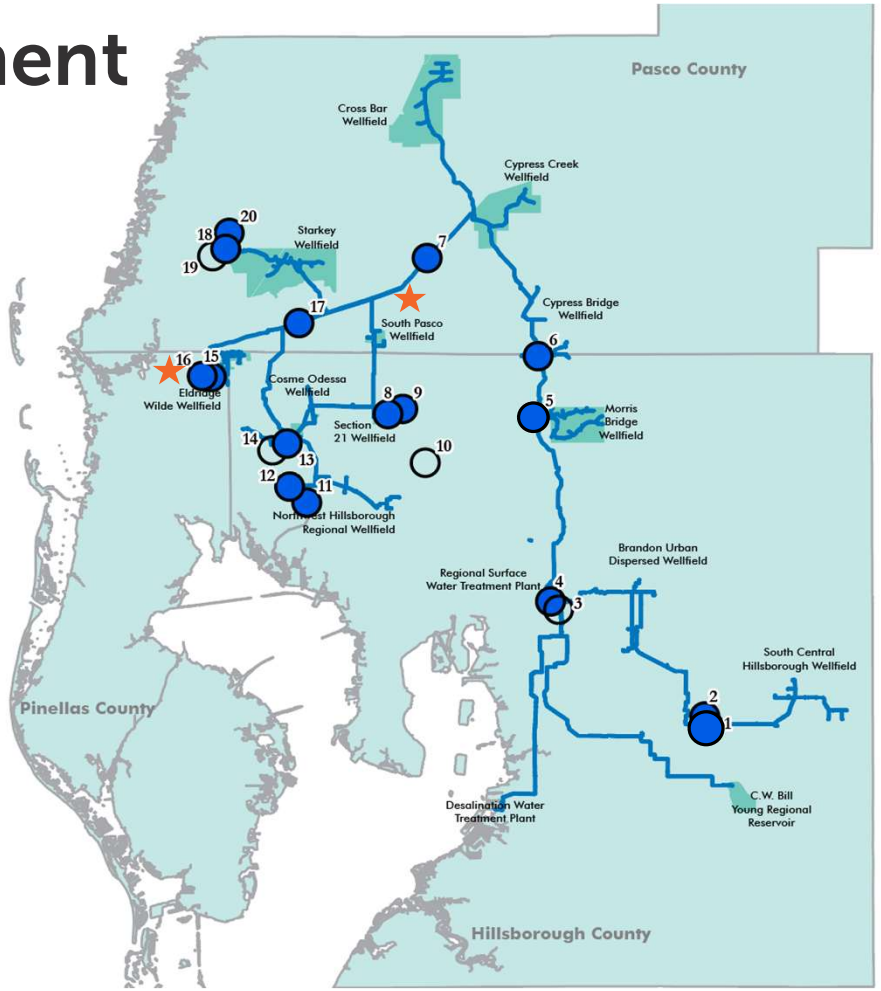
PFAS Reduction Treatment

- Regional Surface Water Treatment Plant
  - Suspended Ion Exchange Pilot Plant
  - Interim Period Compliance Measures
  - Full-scale Plant Construction and Operation
- Brandon Urban Dispersed Wells Water Treatment Plant 5
  - Fixed Bed Ion Exchange
- Brandon Urban Dispersed Wells Water Treatment Plant 7
  - Fixed Bed Ion Exchange



TOC Reduction Treatment

- Two Locations:
  - Eldridge Wilde Wellfield
    - Granular Activated Carbon
  - South Pasco Wellfield
    - Fixed Bed Ion Exchange
- Among highest TOC levels in the region
- Will help reduce additional treatment and flushing in member systems
- Cost savings to implement now



Implementation Strategy, Costs and Schedule

- Implementation strategy
  - Monitor EPA litigation, future rulemaking and compliance timeframe
  - Critical to begin design as soon as possible to meet EPA compliance timeframe
  - Construction not likely to begin before regulatory clarity from EPA

- Costs and Schedule
  - PFAS reduction treatment capital costs (3 locations) = $187,771,000
  - TOC reduction treatment capital cost (2 locations) = $51,228,000
  - Implementation period from 2026 through 2031

Recommendations

Staff recommends:

- Board approval of PFAS reduction treatment projects at the Regional Surface Water Treatment Plant and the two Brandon Urban Dispersed Wells Water Treatment Plants

- Board approval of Total Organic Carbon reduction projects at the Eldridge-Wilde And South Pasco wellfields

TAMPA BAY WATER

Questions?

Phase 1 Recommendations

	Capital, $	O&M
Regional Surface Water Treatment Plant	$171,590,000	$ 2,463,000
Brandon Urban Dispersed Wells WTPs 5 & 7	16,181,000	654,000
PFAS Reduction Treatment:	$ 187,771,000	$ 3,117,000
Eldridge Wilde Water Treatment Plant (GAC)	$ 29,280,000	$ 3,136,000
South Pasco Water Treatment Plant (FBIX)	21,948,000	872,000
TOC Reduction Treatment:	$ 51,228,000	$ 4,008,000
Phase 1 (2026 – 2031):	**$238,999,000**	**$ 7,125,000**

Phase 2 Recommendations

	Capital, $	O&M
Cosme-Odessa (0_3 - GAC)	$ 71,253,000	$ 4,163,000
Carrollwood-Northwest Hillsborough (0_3 - GAC)	73,497,000	1,363,000
Cypress Creek and Cross Bar (FBIX - Greensand)	89,191,000	4,001,000
Morris Bridge (FBIX)	28,747,000	608,000
Section 21 (FBIX)	26,110,000	440,000
Starkey (0_3 - GAC)	49,893,000	3,077,000
TOC Reduction Treatment		
Phase 2 (2032 – 2039):	**$338,691,000**	**$ 13,652,000**

TAMPA BAY WATER
Supplying Water To The Region

AGENDA ITEM C.3

DATE: April 6, 2025

TO: Board of Directors

THRU: Charles H. Carden, General Manager

FROM: Maribel Medina, Planning and Projects Director

SUBJECT: Surface Water Treatment Plant Water Quality Pilot Study, Project No. 03511, Amendment 2026-19 for Design Services of Agreement No. 2000-028 with Veolia Water North America - South, LLC - *Approve*

SUMMARY

The Surface Water Treatment Plant Water Quality Pilot Study, Project No. 03511, includes the design and construction of a new pilot plant and the study of water treatment technologies to support compliance with PFAS regulations. An agreement amendment in the amount of $1,827,688.04, inclusive of $135,000 of Owner's Allowance, has been negotiated with Veolia Water North America - South, LLC, for design services.

SUGGESTED ACTION

Approve Amendment 2026-19 of Agreement 2000-028 with Veolia Water North America - South, LLC.

COST/FUNDING SOURCE

$1,827,688.04 / PFAS Recovery Funds

DISCUSSION

In April 2024, the United States Environmental Protection Agency (EPA) issued new drinking water regulations establishing maximum contaminant levels (MCLs) for six per- and polyfluoroalkyl

substances (PFAS) compounds and mixtures. These regulations require public water systems to comply

with PFAS MCLs by April 2029. In May 2025, the EPA announced its intent to revise the regulations by extending the compliance deadline from April 2029 to April 2031; however, the PFAS MCLs and implementation timeframe are the subject of ongoing litigation and the change in the compliance deadline date at this time is uncertain.

The recently completed Regional Water Quality Study Update report (Report) evaluated treatment concept designs, estimated costs, and implementation plan recommendations based on PFAS bench-scale treatability studies and the current EPA PFAS MCLs. The Report recommends targeted water treatment technology upgrades to reduce PFAS levels and achieve regulatory compliance.

To support compliance with these requirements, the Surface Water Treatment Plant Water Quality Pilot Study (Project No. 03511) will be implemented using a structured approach. This scope of work, covered under agreement Amendment 2026-19, focuses on the design and development of pilot testing strategy. Construction-related services will be addressed separately and brought to the Board for approval at a later date.

The scope of work under agreement Amendment 2026-19 consists of two parallel design tracks. Track 1, known as the Interim Pilot, focuses on the evaluation of near-term PFAS treatment options using post-treatment granular activated carbon (GAC) and ion exchange (IX) under existing plant conditions. These near-term options will be essential for compliance with the existing PFAS regulations, particularly if the compliance date remains April 2029. Track 2 will develop the design for a permanent pilot plant to assess continuing performance and optimization opportunities for both existing and new treatment technologies.

Staff requests Board approval of the Contract Amendment 2026-19 with Veolia Water North America - South, LLC under Agreement 2000-028, in the amount of $1,827,688.04. This amount includes $135,000 for Owner's Allowance. The Owner's Allowance will be used, as needed, for additional professional services such as surveying and geotechnical services. Additionally, the proposal includes $865,000 for the early purchase of Actiflo pilot system which is a long lead-time purchase.

The proposal and contract amendment are attached. The proposed contract amendment has been reviewed and approved as to form by Tampa Bay Water's General Counsel's Office.

BACKGROUND

The Surface Water Treatment Plant (SWTP), in service since 2002, is currently undergoing construction to add a fifth treatment train to support the region’s future water demands. The SWTP receives surface water from the Tampa Bypass Canal, Hillsborough River, Alafia River, and the C.W. Bill Young Regional Reservoir. Once expanded in 2028, the facility will have a sustainable capacity of 110 million gallons per day (MGD) of treated water.

The Surface Water Treatment Plant Water Quality Pilot Study Project has been identified in the Capital Improvements Program and the Regional Water Quality Study. The total budget for this project is $5.4 million, which includes both design and construction of the pilot facilities covered by this Contract Amendment.

General Manager
Tampa Bay Water
2575 Enterprise Road
Clearwater, FL 33763

Subject: **Surface Water Treatment Plant Water Quality Pilot Study - 03511**
Amendment No. 2026-19 for Interim and Permanent Pilot Plant Design

Dear Mr. Carden:

Veolia Water North America - South, LLC (Veolia), your current Operations, Maintenance and Management (OM&M) services partner for the Regional Surface Water Treatment Plant (SWTP), is pleased to present Amendment No. 2026-19 to the Surface Water Treatment Facility Design, Construction and Operation Agreement dated March 20, 2000.

Amendment No. 2026-19 pertains to the Tampa Bay Water Surface Water Treatment Plant Water Quality Pilot Study - 03511, specifically addressing Interim and Permanent Pilot Plant Design.

Construction and Piloting Services will, at Tampa Bay Water's discretion, be covered under separate future amendments, with Interim and Permanent Pilot Plant Design completion being critical to defining the subsequent scopes of work. The design services will include determination of equipment selection, equipment location, review of existing data, Pilot Protocol development, construction cost estimation, early-stage permitting efforts, final design, evaluation of potential treatment options to achieve compliance before full scale implementation is complete and early procurement of long lead items (at Tampa Bay Water's discretion). The final design may be modified in future efforts based on Tampa Bay Water's direction and/or additional regulatory requirements.

Regulatory Consideration

On April 10, 2024, the US EPA (Environmental Protection Agency) issued drinking water regulations for six PFAS (Per- and Polyfluoroalkyl substances) compounds and mixtures. Public water systems must monitor for these compounds and provide information on the levels starting in 2027. However, according to a May 2025 EPA announcement, the deadline for implementing treatment solutions to reduce PFOS (Perfluorooctanesulfonic acid) and PFOA (Perfluorooctanoic acid) levels in drinking water that exceed maximum contaminant levels is expected to be extended to 2031.

Objectives and Design

Tampa Bay Water provided an objectives document that was refined through document exchanges and meetings including Tampa Bay Water, Veolia and Black & Veatch. The result was a set of objectives used to develop the scope of work. Interim and Permanent Pilot Plant Design will center on the design for water treatment process pilot testing to include treatment technologies for PFAS removal and Total Organic Carbon (TOC) optimization, including: granular activated carbon (GAC), ion exchange (IX), and Suspended Ion Exchange (SIX). Included with the design is development of protocols for use in pilot testing.

Docusign Envelope ID: 6B08F451-5BB0-42CF-8807-B6C979CECBB8

Delivery

This Interim and Permanent Pilot Plant Design effort is anticipated to be the first step in the progression toward installation of full-scale PFAS treatment at the SWTP. At this time, it is anticipated that the progression to achieve full scale treatment will be as follows:

- Interim and Permanent Pilot Plant Design
  (Amendment No. 2026-19)
  - Track 1 - For existing plant effluent: Design "interim" pilot facility, select equipment, develop pilot protocol, provide cost estimate, and make efforts to identify potential treatment options to achieve compliance before full scale implementation is complete
  - Track 2 - For new "permanent pilot plant": Design permanent pilot plant, provide construction cost estimate, develop pilot protocol, select equipment and make early purchase of long lead equipment (at Tampa Bay Water's discretion)
- Bid, Construct Interim Pilot Facility, Piloting and Basis of Design for Full Scale PFAS Treatment
  (Future Amendment) (Preceded by Interim and Permanent Pilot Plant Design, Track 1)
  - Procure construction contractor, construct interim pilot facility, conduct piloting and develop full scale PFAS treatment basis of design
  - Make efforts to identify potential treatment options to achieve compliance before full scale implementation is complete (if required based upon regulatory requirements and/or project schedule compared to compliance date)
  - It is recommended that this effort be started prior to Bid, Construct Permanent Pilot Plant, Piloting and (optional) Basis of Design for Full-Scale Treatment, as designing the interim pilot facility at the existing plant effluent will require less time than designing the new permanent pilot plant facility. This approach enables full-scale PFAS treatment to be completed in the shortest timeframe. Preliminary schedules indicate that even by expediting this pathway through existing plant effluent piloting, the full-scale PFAS treatment system will likely be completed after the anticipated 2031 compliance deadline. Therefore, it may be preferred to separate this pathway from the new permanent pilot plant pathway to not hold back the implementation of full-scale PFAS treatment.
- Bid, Construct Permanent Pilot Plant, Piloting and (optional) Basis of Design for Full-Scale Treatment

  (Future Amendment) (Preceded by Interim and Permanent Pilot Plant Design, Track 2)
  - Procure construction contractor, construct permanent pilot facility, conduct piloting and develop full scale basis of design
  - The decision to develop a basis of design for full-scale treatment will depend on the results of piloting, as well as other factors that may arise, making this portion of this effort optional at this time.
- Design-Build of Full Scale PFAS Treatment Facility
  (Future Amendment) (Preceded by Bid, Construct Interim Pilot Facility, Piloting and Basis of Design for Full Scale PFAS Treatment)
  - Procure Design-Builder, design and construct full scale PFAS treatment facility

Docusign Envelope ID: 6B08F451-5BB0-42CF-8807-B6C979CECBB8

- Implement interim options, if viable options are identified, for achieving compliance before full scale implementation is complete (if required)

- <u>(Optional) Design-Build of Full Scale TOC Treatment Facility</u>

  (Future Amendment) (Preceded by Bid, Construct Permanent Pilot Plant, Piloting and Basis of Design for Full-Scale Treatment)

  - Procure Design-Builder, design and construct full scale TOC treatment process and/or other processes selected through piloting efforts conducted at the new permanent pilot plant
  - This effort is considered optional, as the outcomes of the preceding effort remain unknown, along with other potential factors that may influence the decision to execute it in the future

As currently envisioned, each effort listed above will be subject to a separate contract amendment process, Tampa Bay Water staff review, and will require approval by the Tampa Bay Water Board of Directors. A draft contract amendment for each will be submitted to Tampa Bay Water near to, or following, completion of the preceding effort. The reason we need to do these separately is each builds the basis for another and results in the shortest timeframe for implementation of full scale PFAS treatment. Tampa Bay Water has the option to not perform future efforts and/or to change details, such as combining efforts. This may be desirable if regulatory requirements change during the course of work.

Key Dates

Amendment No. 2026-19 contains the following key target milestone dates:

● Notice to Proceed Issued by Tampa Bay Water	May 4, 2026
● Pilot Study Kickoff Meeting	May 19, 2026
● Draft Natural Resources Permit Application	June 15, 2026
● Final Interim Pilot System Protocol Development	August 4, 2026
● Final Permanent Pilot System Protocol Development	August 18, 2026
● Draft ERP Permit Application	October 27, 2026
● Final Design Permanent Pilot Plant	November 18, 2026
● Opinion of Probable Construction Cost for Permanent Pilot Plant	November 23, 2026
● Draft Site Development Permit Application	December 30, 2026

Veolia Staffing

The cost for performing Interim and Permanent Pilot Plant Design includes part-time coverage by Todd Petrie, P.E., Depin Chen, P.E., and an Administrative Assistant. Mr. Petrie will perform project management, stakeholder coordination, technical review, cost estimating review, and general project oversight. Mr. Chen will perform in a technical review role. An Administrative Assistant will primarily be tasked with addressing responsibilities related to Masterworks. Additional Veolia resources will be involved with the project, but are not included as a cost to the project. This includes additional

Docusign Envelope ID: 6B08F451-5BB0-42CF-8807-B6C979CECBB8

technical support resources, operations and maintenance resources, administrative resources and construction group (Capital Program Management, or CPM) resources.

The Facility Expansion Work (expansion of the SWTP) project is in progress and is being led by Veolia's CPM group. Coordination with both Veolia Operations and Veolia CPM groups will be necessary to complete the work. We will make these resources available as needed to support the Interim and Permanent Pilot Plant Design work at no additional cost.

Design Engineer

Black & Veatch (B&V) will serve as the Design Engineering firm (Engineer). Veolia will provide support through various resources as outlined in the previous section. Both Veolia and B&V are uniquely positioned to support this project. As Tampa Bay Water's Integrated Program Manager Consultant, B&V possesses in-depth knowledge of Tampa Bay Water's system and facilities.

Cost

The following is a summary of the cost as contained in Amendment No. 2026-19, Attachment D - Compensation for Interim and Permanent Pilot Plant Design.

Lump Sum Total:	$ 827,688.^{04}
Owner's Allowance for Additional Services:	$ 135,000.^{00}
Owner's Allowance for Early Procurement:	$ 865,000.^{00}
Total:	$1,827,688.^{04}

As a Principle of Veolia Water North America - South, LLC, I can attest that the contents of this Amendment No. 2026-19 were prepared with the intent of addressing Tampa Bay Water's objectives. Our point of contact for this project will be:

Michael Kuhn, MS, P.E., PO, BCEE
Director, Capital Program Management - Municipal & Commercial Business
Veolia Water North America - South, LLC
14055 Riveredge Drive, Suite 240, Tampa, Florida 33637
Telephone: 813-629-1870 Email: mike.kuhn@veolia.com

I invite you to contact Mr. Kuhn or I should you have any questions or require any additional information. We very much look forward to your review of this proposal and commencing with this project.

Very Truly Yours,

SURFACE WATER TREATMENT FACILITY
DESIGN, CONSTRUCTION AND OPERATION AGREEMENT
AMENDMENT NO. 2026-19

THIS AMENDMENT NO. 2026-19 to the Surface Water Treatment Facility Design, Construction and Operation Agreement (Contract 2000-028) is made and entered into this 20th day of April, 2026, by and between **TAMPA BAY WATER, A Regional Water Supply Authority**, an interlocal governmental agency created and existing pursuant to Sections 163.01, 373.713 and 373.715, Florida Statutes, acting by and through its Board of Directors, the governing board thereof ("Tampa Bay Water"), and **VEOLIA WATER NORTH AMERICA - SOUTH, LLC**, a limited liability company organized and existing under the laws of the State of Delaware and authorized to do business in the State of Florida (the "Company"), and **VEOLIA WATER NORTH AMERICA OPERATING SERVICES, LLC.**, formerly known as US FILTER OPERATING SERVICES, INC. a corporation organized and existing under the laws of the State of Delaware and authorized to do business in the State of Florida ("Veolia Operating"), hereinafter collectively referred to as the "Parties".

RECITALS:

A. Tampa Bay Water and US Filter Operating Services, Inc., subsequently known as Veolia Water North America Operating Services, LLC, entered into that certain Surface Water Treatment Facility Design, Construction and Operation Agreement dated as of March 20, 2000, as amended by Amendment #2000-1 dated as of July 25, 2000, Amendment #2000-2 dated as of August 25, 2000, Amendment #2001-3 dated as of December 17, 2001, that certain Chemical Purchase Sales & Use Tax Savings Agreement dated as of March 18, 2002 (Amendment #2002-4), Amendment #2002-5 dated as of May 20, 2002, that certain No-Cost Change Order dated as of September 30, 2002, Amendment #2003-6 dated as of April 21, 2003, Amendment #2003-7 dated as of May 19, 2003, Amendment #2004-8 dated as of June 28, 2004, Amendment #2005-9 dated as of August 15, 2005, Amendment #2007-10 dated as of April 16, 2007 which provided for Facility Modification Work to increase the firm production capacity for Treated Water from the Facility to 99 MGD and re-rate the Facility to 120 MGD unless otherwise rated by the Florida Department of Environmental Protection, Amendment #2008-11 which implemented an owner's direct purchase program, Amendment #2008-12 which modified insurance requirements, Amendment #2017-13 which provided for Tampa Bay Water's withdrawal of funds from the Granular Activated Carbon Reserve Fund, Amendment #2022-14 which extended the term of the Agreement to January 15, 2028, Amendment #2023-15 which provided for certain identified scopes of work related to Facility Expansion Work, Amendment #2024-16 which provided for amendments to Facility Expansion Work, Amendment #2025-17 which provided for the Facility Expansion Work SCADA System Design, Amendment #2025-18, authorizing the Construction Phase Services (Phase 2) for the Facility Expansion Work (hereinafter referred to collectively as the "Agreement") and this Amendment #2026-19 providing for a new pilot plant design (hereinafter referred to collectively as the "**Agreement**").

Docusign Envelope ID: 2975EEF2-3607-4AE4-B305-BA4965B58B04

B. The Parties desire that the Company perform work in support of Tampa Bay Water's Water Quality Pilot Study ("Project"), CIP #03511, at the Regional Surface Water Treatment Plant ("RSWTP"), as described in further detail in this Amendment; and

C. On April 20, 2026, the Board of Directors of Tampa Bay Water adopted the staff recommendation to approve this Amendment #2026-19 to authorize the Company to perform the work in support of Tampa Bay Water's Project as set forth in this Amendment.

NOW, THEREFORE, in exchange for the mutual promises contained herein and for other good and valuable consideration, the sufficiency of which is hereby acknowledged, and intending to be legally bound, the Parties agree as follows:

1. Recitals. The above Recitals are incorporated herein by reference.

2. Company shall perform work as described below in support of Tampa Bay Water's Water Project, CIP #03511. The objective for the Project is to provide for a pilot plant water treatment train that replicates the existing treatment approach at the facility, accommodates select processes focused on PFAS (Per- and Polyfluoroalkyl substances) treatment at: (1) the existing plant effluent prior to chlorination; and (2) at a pilot plant water treatment train that replicates the existing treatment approach at the facility. This includes required support processes and improvements as provided in this Amendment (collectively, the "Pilot Plant Work"). Efforts as part of this amendment represent the Interim and Permanent Pilot Plant Design and include design services, identification of equipment, drafting of pilot protocol, permitting, cost estimation and, possibly, early purchases of long lead items to benefit the future construction of the designed facilities. Additionally**,** interpretation of PFAS performance data from the existing full-scale biologically activated filters (BAF) during and following planned media changeouts will be performed. Construction is not included, and is anticipated to be addressed in a future amendment. The format for delivery of the Pilot Plant Work will include two distinct "Tracks" as follows:

   (1) **Track 1 – Interim Pilot Test (Slipstream):** A slipstream approach using a small flow drawn from the existing full-scale BAF (Biologically Active Filters) effluent and directed into a dedicated GAC (Granular Activated Carbon) and IX (Ion Exchange) skid.

   (2) **Track 2 – Permanent Pilot System:** A standalone pilot setup that replicates key elements of the existing treatment train (Actiflo, ozone, and BAF) to support continuous, long-term testing. The replicated "permanent" pilot infrastructure will remain on-site for ongoing evaluation, with a rental IX/GAC skid downstream for PFAS treatment evaluation and a rental SIX skid prior to the replicated treatment train to support PFAS treatment evaluation and TOC optimization objectives.

Docusign Envelope ID: 2975EEF2-3607-4AE4-B305-BA4965B58B04

3. Company has selected Black & Veatch (the "Engineer") to perform Interim and Permanent Pilot Plant Design in accordance with the Scope of Work described in ATTACHMENT A - ENGINEER SCOPE OF WORK FOR INTERIM AND PERMANENT PILOT PLANT DESIGN.

4. Company shall be compensated as provided in ATTACHMENT D - COMPENSATION FOR INTERIM AND PERMANENT PILOT PLANT DESIGN.

5. Termination

   Tampa Bay Water shall have the right to terminate this Amendment #2026-19 in whole or in part, at any time without cause upon written notice to Company. In the event of any such termination without cause, Company's sole and exclusive recovery against Tampa Bay Water shall be limited to that portion of Company's compensation earned to the date of termination, together with any costs reasonably incurred by Company that are directly attributable to the termination. The Company shall not be entitled to any other or further recovery against Tampa Bay Water, including, but not limited to, anticipated fees or profits on Services not required to be performed.

   Tampa Bay Water shall determine that portion of the compensation earned for any incomplete Services based upon the ratio of such part of the Services completed relative to the entire Services. Any such determination shall be made in the reasonable exercise of Tampa Bay Water's discretion.

   Upon any termination of this Agreement and payment by Tampa Bay Water as required above, Company shall deliver to Tampa Bay Water, within ten (10) days of such payment, all papers, drawings, models and other material prepared by and for Company with respect to this Amendment #2026-19.

3. The following Attachments are hereby adopted by the Parties and shall govern and apply to the performance of Services under this Amendment #2026-19:

   ATTACHMENT A - ENGINEER SCOPE OF WORK FOR INTERIM AND PERMANENT PILOT PLANT DESIGN CES

   ATTACHMENT B – ENGINEER LABOR RATES FOR INTERIM AND PERMANENT PILOT PLANT DESIGN

   ATTACHMENT C - COMPANY SCOPE OF WORK FOR INTERIM AND PERMANENT PILOT PLANT DESIGN

   ATTACHMENT D - COMPENSATION FOR INTERIM AND PERMANENT PILOT PLANT DESIGN

   ATTACHMENT E - SCHEDULE FOR INTERIM AND PERMANENT PILOT PLANT DESIGN

Docusign Envelope ID: 2975EEF2-3607-4AE4-B305-BA4965B58B04

4. Review of Amendment #2026-19. Tampa Bay Water has carefully read and understands the effect of this Amendment #2026-19. Tampa Bay Water had the assistance of separate legal counsel in reviewing, discussing, and considering all terms of this Amendment #2026-19.

5. Review of Amendment #2026-19. The Company and Veolia Operating have read and understand the effect of this Amendment. The Company and Veolia Operating had the assistance of separate legal counsel in reviewing, discussing and considering all terms of this Amendment #2026-19.

6. The Parties' obligations and responsibilities under the Agreement as amended through Amendment #2026-19 are hereby ratified and confirmed. All provisions of the Agreement as amended through Amendment #2026-19 shall apply to and be used by the Parties in construing and interpreting this Amendment #2026-19. However, in the event of any conflict or inconsistency between the Agreement as amended through Amendment #2026-18 and this Amendment #2026-19, this Amendment shall prevail; except that the Parties specifically agree that this Amendment #2026-19 does not amend or modify the Chemical Purchase Sales & Use Tax Savings Agreement dated as of March 18, 2002, as previously agreed to by the Parties.

8. Section 10.6.4 "Tampa Bay Water Payment Costs" of the Agreement shall be amended to read as follows:

   In the event of an early termination of the Service Agreement for any reason, other than a Company Event of Default, Tampa Bay Water, subject to Cost Substantiation, shall reimburse the Company for its actual costs in performing its post-termination responsibilities required under this Section, including all contract-related special order items, supplies, materials, machinery, equipment, order cancellation, order cancellation fees, and other property, ordered or delivered to or by the Company or any Subcontractor prior to early termination.

9. The effective date of this Amendment #2026-19 is April 20, 2026.

10. All terms of the Agreement and previous Amendments not specifically amended herein shall remain in full force and effect.

11. This Amendment #2026-19 shall be governed by, construed, and enforced in accordance with the laws of the State of Florida.

12. This Amendment #2026-19 may be executed in two or more counterparts, each of which shall be deemed an original, but all of which together shall constitute one and the same instrument.

[The remainder of this page is intentionally left blank]

Docusign Envelope ID: 2975EEF2-3607-4AE4-B305-BA4965B58B04

IN WITNESS WHEREOF and intending to be legally bound, the duly authorized representatives of the Parties have caused this Amendment #2026-19 to be executed as of the date first written above.

TAMPA BAY WATER
WATER QUALITY PILOT STUDY (CIP 03511)
ENGINEERING SERVICES SCOPE OF WORK – INTERIM AND PERMANENT PILOT PLANT DESIGN
March 24, 2026

BACKGROUND

Black & Veatch (Engineer) will partner with the Company (Veolia) to provide professional services in support of Tampa Bay Water's (Owner) Water Quality Pilot Study (Project), Project No. 03511, at the Regional Surface Water Treatment Plant (RSWTP). This scope of services is for a RSWTP pilot plant design and equipment procurement planning services. The pilot plant will be designed and constructed as a permanent facility that is intended to optimize long-term operations and take steps towards compliance with EPA's Per- and Polyfluoroalkyl Substances (PFAS) low-level parts per trillion (ppt) Maximum Contaminant Levels (MCLs) under raw water quality conditions that are highly variable from season to season and year to year. Presently, PFAS treatment concept design criteria are based on benchtop testing that used water samples collected at discrete time periods (Regional Water Quality Study Update, 2026). The pilot plant will allow testing under continuous flow conditions that will characterize treatment performance and operating variables under highly variable raw water quality (i.e., dynamic vs. static) conditions.

This project establishes the pilot program goals and objectives to support both near-term decision-making and long-term use of a permanent pilot platform. In the near term, pilot testing will be used to define full-scale treatment design criteria and confirm performance under representative plant conditions. Over the long term, the permanent pilot system will provide a smaller-scale platform for potential longer-term use beyond this scope to support operational optimization, such as defining response strategies for highly variable raw water quality and other anomalous conditions, while maintaining reliable water production to meet customer demand. In parallel with pilot program development and pilot plant design, efforts to evaluate existing plant performance and potential interim PFAS risk-reduction measures will be included. This includes the execution of a sampling plan to assess baseline PFAS and TOC removal performance through RSWTP and quantify the impacts of media changeout on existing biologically activated filters (BAF). This scope will also detail pilot protocol and design for end-of-pipe, pilot-scale testing using a slipstream of full-scale BAF effluent to evaluate adsorptive media as a post-treatment PFAS polishing option under existing plant operating conditions.

This water treatment process pilot will include a series of treatment technologies intended for PFAS removal, including granular activated carbon (GAC), ion exchange (IX), and suspended ion exchange (SIX). The project will also evaluate the existing treatment train at pilot scale (coagulation via Actiflo, ozonation, and BAF) for potential improvement or optimization recommendations related to their operation and performance with these new treatment technologies.

Docusign Envelope ID: 2975EEF2-3607-4AE4-B305-BA4965B58B04

Pilot Study Configurations
In this pilot study, two distinct Tracks will be evaluated:

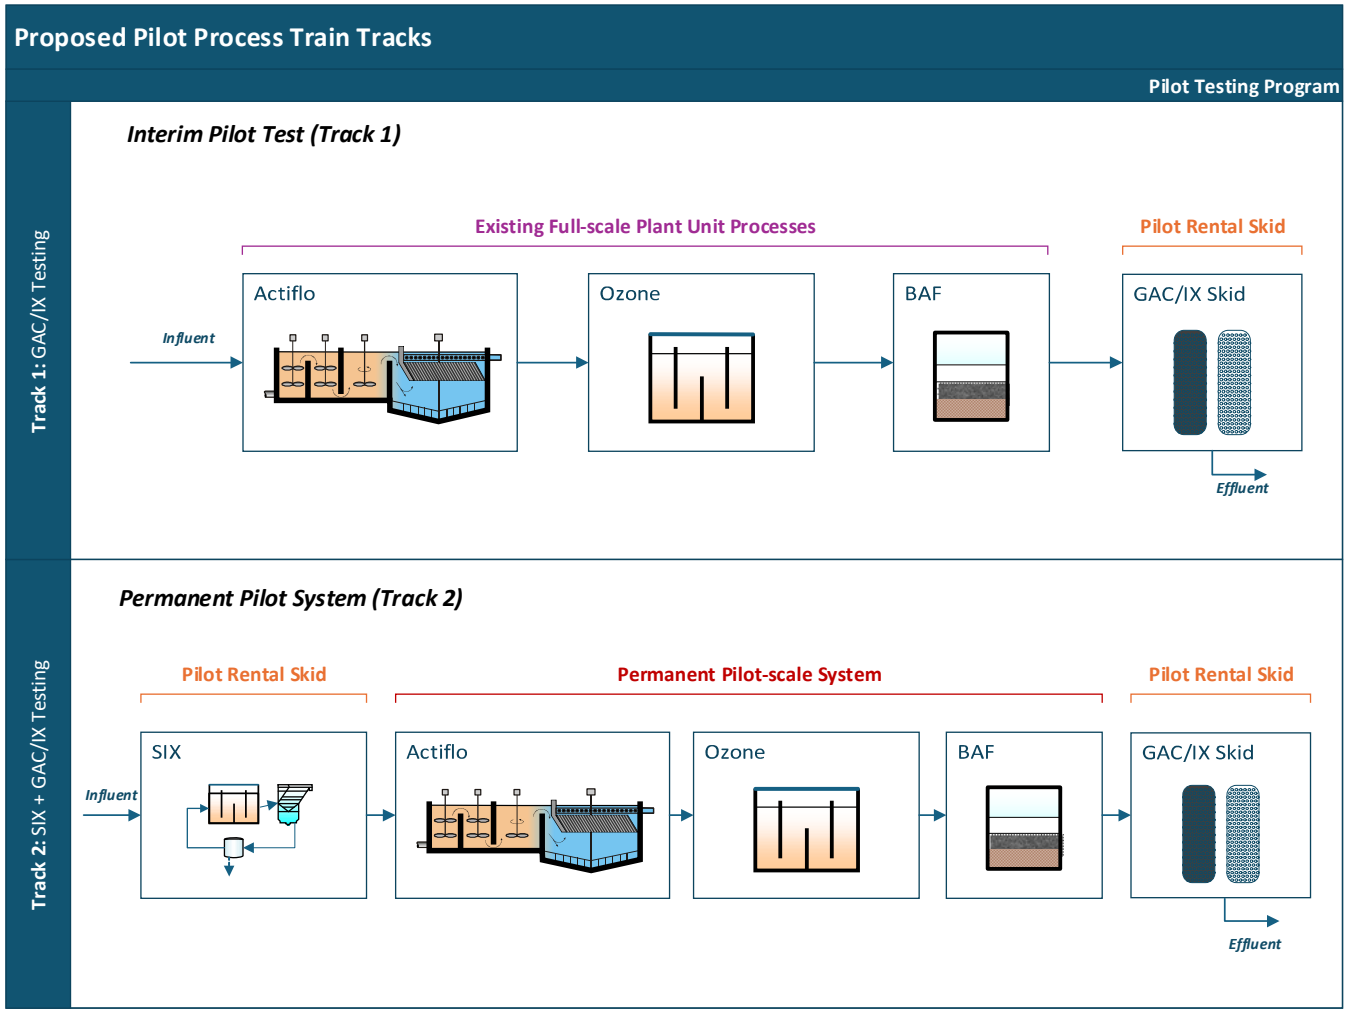
i. **Track 1 – Interim Pilot Test (Slipstream):** A slipstream approach using a small flow drawn from the full-scale BAF effluent and directed into a dedicated GAC and IX skid.
ii. **Track 2 – Permanent Pilot System:** A standalone pilot setup that replicates key elements of the existing treatment train (Actiflo, ozone, and BAF) to support continuous, long-term testing. The replicated "permanent" pilot infrastructure will remain on-site for ongoing evaluation, with a rental IX/GAC skid downstream for PFAS treatment and a rental SIX skid prior to the replicated treatment train to support PFAS treatment and TOC optimization objectives.

The main tasks proposed under this scope of services include the following:

i. Pilot Testing Program Development, which will establish:
ii. Pilot Protocol for the **Interim Pilot Test (Track 1)** –A written protocol defining the pilot treatment schemes, testing logistics (e.g., operation schedule, sampling plan, startup procedures), and key design criteria to support equipment rental/procurement planning.
iii. Other interim measures (Track 1) to support near-term PFAS compliance planning, such as evaluating the impact of existing filter media replacement and operations on achieving effluent water quality goals and identifying feasible temporary compliance strategies pending long-term improvements.
iv. Pilot Protocol for the **Permanent Pilot System (Track 2)** – A written protocol that will serve as the basis of design for the pilot plant, including the pilot treatment scheme(s), testing logistics, and monitoring approach to support full-scale design criteria development and enable potential longer-term operational optimization use beyond this scope, consistent with the goals and objectives described in the next section.
v. Pilot Plant Design – Including:
vi. Preliminary Design – developed to support early equipment procurement
vii. Final Design – issued-for-construction, signed-and-sealed design package to support permitting and development of construction pricing.
viii. Pilot Plant Permitting – as required to support pilot installation and operation.
ix. Equipment Procurement Planning Support

A subsequent effort is anticipated for bidding and constructing Track 1 and 2, to include, but not be limited to, the following: pilot system installation, engineering services during construction, startup and shakedown, continuous pilot operations, data collection, analysis, and reporting, waste stream handling and long term care protocol, and full scale facilities life-cycle cost analysis, conceptual (or preliminary) design drawings and basis of design document(s).

Figure 1 summarizes the two tracks to be evaluated under this project.



RSWTP Pilot Testing Goals & Objectives

The pilot testing goals & objectives, as well as pilot testing benefits are summarized below.

1. Collect and analyze influent, in-plant (partially treated), and treated waters to further characterize water quality variability (including seasonal changes and source blending conditions) and evaluate potential impacts on treatment of PFAS, total organic carbon (TOC), and other key water quality parameters relevant to treatment. Key benefits for TOC reduction in helping achieve PFAS compliance are detailed in the next section.
2. Provide the opportunity to optimize operation of the existing RSWTP unit processes (coagulation via Actiflo, ozonation, and filtration) for treatment of PFAS and TOC (e.g., replacing existing filter media) over the long-term.
3. Evaluate existing and alternative treatment technology combinations in terms of treatment performance and quantify key operational parameters and other requirements (e.g., media replacement, SIX dosage, resin regeneration, salt usage, waste brine generation/ characteristics/ disposal, resin loss, residuals generation, chemical usage). Evaluation will include:
    a. Post-treatment polishing using GAC and/or IX without SIX (Track 1), and
    b. Configurations evaluating SIX as pretreatment upstream of the existing Actiflo/ozonation/BAF processes, with post-treatment polishing (GAC and/or IX) downstream of the BAF as applicable

Docusign Envelope ID: 2975EEF2-3607-4AE4-B305-BA4965B58B04

(Track 2). SIX will be assessed both with and without downstream polishing to quantify incremental benefits and operational impacts.

Note: Pretreatment refers to new potential processes upstream of the existing Actiflo treatment. Post-treatment polishing refers to new potential processes downstream of the existing BAF treatment.

4. Characterize the quality and quantity of pilot plant recycle and residual streams (e.g., backwash, waste brine) to refine management and/or disposal options, with a focus on PFAS-laden residuals.
5. Assess the impact of influent source water and the SIX process on Alkalinity supplement needs for downstream coagulation (Actiflo) process, and the finished water corrosivity and distribution system lead/copper compliance due to higher CSMR (chloride-to-sulfate mass ratio). Refer to Task 4 for additional details.
6. Provide data to support evaluation of the impacts to RSWTP O&M costs for optimizing existing and alternative treatment technologies and operational strategies, as well as life-cycle cost evaluation and future capital planning for water quality improvements at the RSWTP. This includes developing and testing alternative treatment and operational strategies that target PFAS and TOC reduction (recognizing that TOC can interfere with PFAS removal), enhance finished water quality, and evaluate their impacts to overall RSWTP O&M costs.
7. Compare pilot plant data with full-scale RSWTP to confirm the pilot plant results are representative to the extent possible.

Key Considerations: TOC Relationship to PFAS Performance and Operational Co-Benefits

TOC can interfere with PFAS removal in the existing Regional Surface Water Treatment Plant unit processes, and as such, TOC reduction may be an important factor to evaluate in achieving PFAS compliance. A potential secondary benefit of TOC reduction is lower chlorine demand and improved stability of chloramine residuals in transmission mains and finished water delivery to member utilities. Accordingly, TOC can be a key parameter influencing PFAS treatment performance, particularly for adsorption-based processes (GAC/BAC and IX), and will be tracked alongside PFAS results to support data interpretation and compliance planning. Key considerations include:

1. Adsorption competition: TOC can compete with PFAS for adsorption sites on carbon media, potentially reducing PFAS removal capacity and accelerating breakthrough.
2. Media condition and variability: TOC may contribute to increased biological activity on carbon media (transition from GAC to BAC) and IX resin media fouling, which can negatively affect PFAS removal performance and contribute to performance variability over time.
3. Pilot interpretation and compliance support: Monitoring TOC (and TOC fractions/speciation where useful) helps distinguish water-quality-driven performance changes from operational effects and supports development of treatment and operating strategies to reliably achieve PFAS effluent goals under variable conditions.
4. Secondary operational co-benefit: TOC reduction may reduce disinfectant demand and support chloramine residual stability in transmission mains and finished water delivery. Note that Chloramine decay testing is not included unless specifically requested by the Owner and Company.

Docusign Envelope ID: 2975EEF2-3607-4AE4-B305-BA4965B58B04

RSWTP Pilot Testing Benefits:

1. Both short-term (Interim Pilot Test) and long-term (Permanent Pilot System) operation duration will be defined with the goal of capturing the seasonal variation in raw water quality and the associated impacts of changing demand patterns and facility operations.
2. Reduce risk by uncovering and identifying unforeseen water quality or operational conditions via continuous flow water quality monitoring that cannot be captured in bench-scale tests nor discrete grab samples, such as biological or particulate fouling, competing contaminants, seasonal shifts in organic character, or other interferences that may impact performance.
    a. Compared to collecting discrete samples at specific time points, a pilot plant enables the analysis of continuous flow streams over extended periods.
    b. This approach facilitates the implementation of continuous sampling using existing and new on-line monitoring equipment, as feasible, which is significantly more effective at detecting variability in sample results.
3. Confirm the treatment performance, robustness, and operational reliability of existing and alternative treatment process configurations for PFAS and interfering TOC removal under real-world plant conditions.
4. Gather real-world performance and operating data to inform more accurate capital, O&M, and life cycle cost estimates for potential future full-scale implementation.
5. Provide a basis to develop and confirm an optimized treatment train that achieves the desired water quality with respect to PFAS and interfering TOC removal at the lowest practical life cycle cost, and document potential co-benefits (e.g., chloramine stability and DBP formation potential) where supported by available data.
6. The purchase & installation of pilot equipment will provide means for long-term testing to evaluate water quality improvements and identify opportunities to optimize and reduce O&M costs for existing treatment processes.
    a. The portion of the pilot facility that represents the existing treatment technologies (Actiflo®, Ozonation, and BAC) will be designed and constructed as permanent to support future RSWTP process evaluations.
    b. The peripheral potential future technologies to be tested (GAC, IX and SIX), or possibly tested, will be temporary in nature.

.

Docusign Envelope ID: 2975EEF2-3607-4AE4-B305-BA4965B58B04

SCOPE OF SERVICES

Work shall begin upon execution of an agreement between the Company and Engineer, and work under any other recommendation or condition shall proceed only after the Company has authorized the Engineer in writing to proceed. The Company will not execute an agreement with the Engineer until an agreement between the Owner and Company is executed. Any work requested by Owner that is not included in the items listed in this document shall be classified as Supplemental Services and authorized via Owner's Allowance. It is anticipated that future progression of this work will be completed under an amendment to this contract or a separate agreement.

Task 1 – Project Management, Administration & Meetings

The project management task will include general project administration duties, development of a project execution plan, and preparation of project management documents (budget, schedule, and quality control). The following specific subtasks will be included:

i. Engineer will perform general administrative duties associated with the Project, including project set-up, resource management, progress monitoring, scheduling, QA/QC coordination, and general project correspondence. Engineer will maintain an accurate project documentation and project budget tracking system throughout the project.

ii. Develop a mutually agreed upon Schedule of Values with Company for invoicing purposes over the term of this scope within 10 (ten) business days of Notice to Proceed.

iii. Maintain a project filing system throughout life of project to use for storage and retrieval of project documents using agreed platforms (e.g., Masterworks).

iv. Prepare monthly project status reports that summarize the work completed during the previous invoice period and the project work anticipated for the next period. The project status reports will be submitted with each invoice.

v. Develop a Project Management Plan, including team roles, communication protocols, schedule, and QA/QC plan. The plan will include considerations for health, safety, and risk management.

vi. Conduct a hybrid Project Kickoff Meeting (in-person/virtual) with key project stakeholders.

vii. Participate in regular progress meetings with project team to review ongoing activities, monitoring the project schedule, and budget, reviewing current progress with Company on a regular basis, and discussing issues with Owner as they are noted.

1. Biweekly meetings with Company and Owner designated attendees. These meetings are assumed to be virtual, with 2 to 4 Engineer staff participating based on progress status or specific meeting content anticipated. Up to 20 biweekly meetings are included.
2. Monthly meetings with Company and Owner key project stakeholders. These meetings are assumed to be hybrid, with up to 4 Engineer staff participating based on progress status or specific meeting content anticipated. Up to 10 monthly meetings are included.

viii. Support Company in developing & maintaining a Project Risk Register, including Engineer's participation in hybrid Risk Management meetings throughout this scope.

Task 1 - Meetings and Deliverables

1. Schedule of Values (Interim and Permanent Pilot Plant Design)
2. Draft and Final Project Management Plan (pdf)
3. Monthly Project Status Reports (pdf)
4. Kickoff Meeting (including agenda & meeting minutes)
5. Biweekly PM Meetings (including agenda & meeting minutes)

Docusign Envelope ID: 2975EEF2-3607-4AE4-B305-BA4965B58B04

6. Monthly Project Progress Meetings (including agenda & meeting minutes)
7. Risk Management Meetings (3)

Engineer will provide all documents in draft form to the Company (within 3 business days of meetings for meeting minutes) for review prior to final issuance (no later than 3 business days after receipt of comments for meeting minutes). Results of resolving the Company's comments will be included in documents prior to final issuance.

Task 2 – Interim Pilot Testing Program Development (Track 1)

Subtask 2.1 - Preparation and Planning

i. Conduct a project initiation meeting to clarify Owner's requirements for piloting; review available data, project organization, and staffing; and present initial work plan and schedule.

ii. Field visit(s) to investigate options for location of the pilot and availability of post-BAF filtered pilot feed water and discharge location for pilot-treated water. No field services (geotech, survey, subsurface utility investigations) are anticipated to be required to support siting and proceeding with the interim pilot. If any such field services are deemed to be necessary, the cost of such will be covered by Owner's Allowance upon approval by the Company and Owner.

iii. Coordinate with vendors for equipment rentals, agreements to be executed by others in the bidding, construction and operations of the interim pilot facility.

Subtask 2.2 – Interim Pilot Testing Protocol

i. Engineer will develop a pilot testing protocol to assess performance of alternative PFAS treatment strategies. Alternatives to be evaluated on the interim pilot test include two GAC media and two AIX resins. The pilot testing protocol will outline the pilot approach, PFAS adsorption column design and configuration, startup and backwashing requirements, media selection, water quality monitoring (sampling plan), chemical feed as necessary (e.g., PFAS spiking), and installation plans. The pilot testing protocol will include a division of responsibilities between Engineer, Company, and Owner regarding pilot equipment procurement, installation, inspections, operations, maintenance, sample collection, analysis, and supply of chemicals and other consumables.

ii. A draft pilot testing protocol will be submitted to Owner and Company for review. The final pilot testing protocol will be submitted to Owner and Company within two weeks of receiving review comments.

iii. Engineer will develop a base Maintenance of Plant Operations (MOPO) plan that captures activities that warrant coordination and tie-ins with the existing facility. The plan will summarize anticipated preferred time of year / timeframes to avoid; potential impacts to production, estimated duration of work. The base plan can be leveraged by installation contractor to formulate detailed MOPOs during construction. Two hybrid workshops are considered to support definition of this plan.

<u>Task 2 - Meetings and Deliverables</u>

1) Project Initiation Meeting (including agenda & meeting minutes)
2) Initial Work Plan and Schedule
3) Interim Pilot Testing Protocol, (Draft and Final), including:
    a. Pilot Layout (Draft and Final)
    b. Waste Streams Management Plan (Draft and Final)
4) Base MOPO Plan (Draft and Final)
5) MOPO Workshops (2) (including agenda & meeting minutes)

Docusign Envelope ID: 2975EEF2-3607-4AE4-B305-BA4965B58B04

Engineer will provide all documents in draft form to the Company (within 3 business days of meetings for meeting minutes) for review prior to final issuance (no later than 3 business days after receipt of comments for meeting minutes). Results of resolving the Company's comments will be included in documents prior to final issuance.

Task 3 – Evaluate Full-Scale BAF (GAC Media) Changeout and Operations for PFAS Performance

This task will support interpretation of PFAS performance data from the existing full-scale biologically activated filters (BAF) during and following planned media changeout to (1) establish a consistent baseline of PFAS removal by filter, (2) understand performance variability associated with changeout events and operating conditions, and (3) inform an interim operating strategy to support near-term compliance while long-term solutions are developed (if applicable and feasible).

i. Leverage ongoing full-scale monitoring data (BAF influent and individual filter effluents) and associated operational records to evaluate post-changeout PFAS performance trends, using available datasets and planned/ongoing sampling results being executed by Owner.

ii. Coordinate sampling logistics and timing with Company and Owner to align with filter changeout sequencing and facility operations and to ensure sufficient Owner review time and preparedness.

iii. Evaluate PFAS removal performance and variability by filter (and over time) to identify key drivers affecting performance (e.g., time since changeout, operational conditions, and seasonal water quality).

iv. Estimate an interim media management approach, including indicative media changeout/reactivation frequency required to meet PFAS effluent goals during the interim period.

Task 3 - Meetings and Deliverables

1) Media Management Workshop, hybrid (including agenda & meeting minutes)

Engineer will provide all documents in draft form to the Company (within 3 business days of meetings for meeting minutes) for review prior to final issuance (no later than 3 business days after receipt of comments for meeting minutes). Results of resolving the Company's comments will be included in documents prior to final issuance.

Task 4 – Permanent Pilot Testing Program Development (Track 2)

The overall objective of this task is to develop a process pilot testing program to meet the water quality and operational goals established by Tampa Bay Water and the project team. This task will include a review of source water quality and existing operating conditions (e.g., coagulation via Actiflo, ozonation, filtration) at the existing treatment facility, site visits, a development of process pilot testing goals and protocol, definition of pilot testing logistics and pilot plant design & permitting. The existing treatment technologies (coagulation via Actiflo, ozonation, filtration) will be installed as a permanent pilot system, which is further detailed throughout the scope described in this task.

Subtask 4.1: Review & Characterization

The Engineer will review existing information to define representative and bounding conditions for treatment:

i. Characterize influent, in-plant (partially treated), treated waters, and recycle streams to capture water quality variability with regards to PFAS levels, TOC interference, and other key water quality parameters, as available. Engineer will evaluate historical water quality data spanning at least 3 years from October 1, 2022 to present. No additional water quality sampling is included by Engineer as part of this scope of services. Additional sampling to support pilot operations & performance analysis is anticipated as part of pilot operations. It is recognized, however, that the Owner plans to perform sampling and analysis at various RSWTP in-plant and recycle stream locations to initially characterize PFAS and TOC in 2026.

Docusign Envelope ID: 2975EEF2-3607-4AE4-B305-BA4965B58B04

Engineer will consider the additional Owner-provided 2026 PFAS and TOC sampling results for characterization purposes, subject to data availability.

ii. Review historical water quality data, including monthly operating report (MOR) data including raw water, intermediate process, and finished water quality, and existing treatment performance (e.g. Actiflo settled water, ozone residuals, filter influent (top of filter) and effluent, finished water compliance parameters).

iii. Refine baseline levels of PFAS and TOC in the raw and treated waters.

Subtask 4.2: Track 2 Pilot Protocol – Basis of Design Report Development

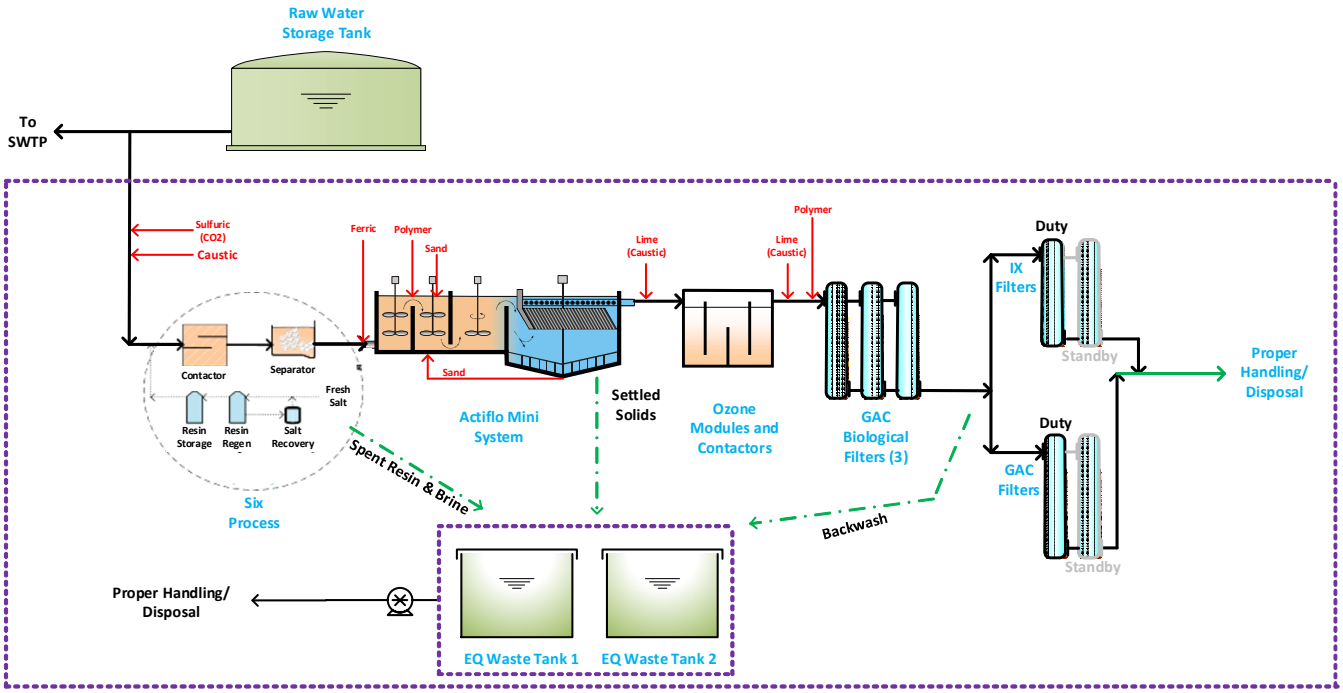
Engineer will prepare a written Pilot Protocol that defines how the pilot will be configured and operated. The Pilot Protocol will serve as the basis of design for the permanent pilot plant. This will include:

i. Develop a written pilot testing protocol covering logistics, sampling program, and operational procedures. The Pilot Protocol will address the Track 2 treatment train configuration described below. Protocol development for Track 1 is addressed separately under Task 2 of this scope.

Pilot System	Objectives
Track 1 (Task 2 – Interim Pilot Test**)** – Full-scale RSWTP Unit Processes + GAC/IX Columns	PFAS Treatment
Track 2 (Task 4) – SIX + Permanent Pilot System (scaled down version of existing full scale plant) + GAC/IX Columns	PFAS Treatment + TOC Optimization

ii. The pilot is anticipated to operate using a single pilot train, with selected pilot unit processes rotated as needed within Track 2 to evaluate planned testing conditions over the overall operating period. Refer to the set of schematics below for details on the different operating scenarios.

iii. The pilot protocol will contemplate opportunities to operate the SIX + Permanent Pilot System (scaled down version of existing full scale plant) + GAC/IX Columns configuration under different testing conditions, to the extent practicable and subject to pilot plant operating constraints.



Pilot Plant

iv. Define pilot objectives, treatment goals, and testing schedule to capture seasonal and operational variability.

v. Identify sampling locations, frequencies, and analytical methods for PFAS, TOC (where applicable), and other key water quality parameters (e.g., alkalinity, hardness, pH, select competing anions).

vi. Establish the basis of design for the various pilot processes.

vii. Develop detailed operational procedures to meet key measurements of success and the goals established in this Scope of Services.

viii. Evaluate the risk of unintended consequences on downstream treatment processes (e.g., settleability, filterability, stabilization, impacts on alkalinity, disinfection, corrosion control, and residuals disposal/handling).

ix. Define the approach and key metrics to evaluate the secondary benefits of various treatment trains (e.g., disinfection residual stability, DBP control) during pilot testing.

x. As applicable, the pilot protocol will address evaluation of impacts of variable influent source water and the SIX process on:

1. Alkalinity supplement needs for the downstream Actiflo® coagulation process; and
2. Finished water corrosivity and lead/copper compliance considerations in downstream distribution systems (e.g., potential changes to CSMR).

xi. Establish the division of responsibilities for the pilot plant, including roles of Owner, Company, Engineer, and external laboratories for equipment supply, installation, operation, maintenance, sampling, analysis, and data management.

xii. Identify chemical addition needs for pilot testing (e.g., PFAS spiking, if required, SIX regeneration) and ensure they are reflected in the Pilot Protocol and preliminary design. PFAS spiking may be considered to improve the resolution of removal data and help expedite decision-making using early performance datasets. Identify and, where practicable, align with existing plant chemical feed points (e.g., chlorine

Docusign Envelope ID: 2975EEF2-3607-4AE4-B305-BA4965B58B04

feed, coagulant dosing, ozone quenching) so that pilot operation is representative of full-scale treatment processes.

xiii. Evaluate and prepare a Draft Media and Waste Streams Management Plan for Company review to specify media selection criteria and identify suppliers, quantities, storage methods, removal, transportation and proper disposal of media and waste streams. Subsequent to addressing Company's review comments, the Engineer will prepare a Final Media and Waste Streams Management Plan.

xiv. Existing Treatment Optimization Study Approach (as part of protocol development). The pilot testing program will include evaluation and optimization of existing RSWTP processes to maximize PFAS and TOC removal while maintaining turbidity and other required water quality parameters compliance. Existing processes to be evaluated include Actiflo® (coagulation, injection, flocculation, maturation, and sedimentation), ozonation, and BAC filtration. Optimization studies may include, but are not limited to:

1. Varying Actiflo® operating parameters (e.g., zeta potential control), coagulant types, and/or coagulant dosages.
2. Varying BAC backwash scour velocities and/or backwash practices.
3. Evaluating media management strategies (e.g., more frequent media changeout/reactivation) to promote GAC adsorption of PFAS and limit conversion to BAC, as practicable.
4. Evaluating alternative BAC filter media, as appropriate.

xv. Engineer will facilitate up to two (2) Pilot Protocol review workshops with Company and Owner, allowing adequate Owner review time prior to each workshop. Comments received will be incorporated into a final Pilot Protocol.

Subtask 4.3: Pilot Plant – Site Investigations & Field Services

i. Engineer will reference existing record drawings relevant to the areas in which the permanent pilot plant will be constructed.

ii. Conduct as many site visits required to achieve the following:

1. Confirm and refine pilot facility layout options.
2. Identify and verify plant interconnects (e.g., raw water and filtered water)
3. Confirm availability and routing for potential effluent discharge, power, and internet/I&C connections.
4. Develop final recommendations for pilot plant locations

iii. Perform a geotechnical review of existing, available geotechnical information to evaluate suitability of the pilot pad and canopy/shelter foundation. Should additional geotechnical borings be required to support pilot facility foundation design, these field services would be requested from the Owner's Allowance.

iv. Perform a review of existing, available survey, mapping, and subsurface utility information to design pilot layout. Should additional survey investigations be required to supplement existing information, these field services would be requested from the Owner's Allowance.

v. Perform a natural resources survey of the proposed site to confirm absence of wetlands, surface waters, listed species, critical habitats, or other protected resources.

Subtask 4.4: Pilot Plant Design

i. Finalize pilot facility layout, raw water withdrawal points, wastewater/effluent discharge points, power connections, and interconnecting piping routes. A "Tie-In" drawing will be created to reflect connections to existing infrastructure. It will not include coordinates, but will provide sufficient detail to understand

Docusign Envelope ID: 2975EEF2-3607-4AE4-B305-BA4965B58B04

where connection points will be. Additionally, isolation elements that are required to make tie-ins will be identified (e.g. isolation valves, communication points and sources of energy).

ii. Coordinate with ongoing facility operations and parallel CIP projects to minimize operational impacts or maintenance of plan operations (MOPO) and avoid conflicts with future construction. Engineer will develop a base Maintenance of Plant Operations (MOPO) plan that captures activities that warrant coordination and tie-ins with the existing facility. The plan will summarize anticipated preferred time of year / timeframes to avoid; potential impacts to production, estimated duration of work. The base plan can be leveraged by installation contractor to formulate detailed MOPOs during construction. Two workshops are considered to support definition of this plan.

iii. **Preliminary Design** will consider and address the following:

1. Identify pilot discharge strategy and location, and confirm discharge capacity and quality requirements (including any applicable environmental targets).
2. Conduct a Hazard Analysis and Critical Control Points (HACCP) review to identify critical control points and critical operating points within the pilot system and to inform analyzer/instrument selection and operator/control response procedures.
3. Identify key monitors/analyzers for inclusion on the pilot. This may include multiple instruments for validation and data quality assurance.
4. Identify chemical addition strategy to achieve required stabilization, consistent with the Pilot Protocol.
5. Confirm footprint requirements of proposed pilot-scale equipment and site limitations.
6. Develop preliminary sizing and flow capacity for the proposed pilot equipment.
7. Define pilot-scale system requirements, including water supply, power, instrumentation, and waste streams requirement.
8. Engineer's Opinion of Probable Construction Cost Class IV
9. It is anticipated that this deliverable may be leveraged for Early Equipment Procurement, noted in Task 5.

iv. At the conclusion of this task, a Preliminary Design Review Workshop will be coordinated with Company and Owner to review the findings and incorporate feedback into final design deliverable.

v. **Final Design** – Finalize the preliminary layout and configuration of pilot facilities, including raw water supply source, treated water disposal approach, power source, and bypass piping. Sizing of metering pumps, chemical storage, or booster pumps will be included as part of this task. Schematics will be prepared to define the field assembly and will include:

1. P&ID
2. Main equipment sizing and specification (data sheets)
3. Chemical feed system layout and storage requirement.
4. Site Plan (including yard piping)
5. Shelter concept – A single concrete pad to secure the process equipment to the foundation, with a steel covering the concrete pad/equipment during the pilot test operations. A pre-engineering metal building is proposed to accommodate human working space, electrical elements & instruments.
6. Electrical – It is assumed that sufficient power is available and can be provided from the Repump building to the pilot plant.
7. SCADA I&C – remote data reporting and access

Docusign Envelope ID: 2975EEF2-3607-4AE4-B305-BA4965B58B04

8. Functional Description
9. Final operating instructions and manuals
10. Preventative maintenance plan and troubleshooting guides and contact information
11. Engineer's Opinion of Probable Construction Cost Class III
12. Engineer's estimate of construction schedule

vi. Drawings will be signed and sealed as required to support permitting efforts detailed in Subtask 4.5 and bidding efforts described in Subtask 5.2.

Subtask 4.5: Site Permitting

i. Engineer will prepare and maintain a Pilot Permitting Matrix to define the permits required for both design and construction periods. The Pilot Permitting Matrix will cite who prepares the application, who signs the application, who pays the application fee, approximate application preparation time, and what the anticipated regulatory review periods are. The Pilot Permitting Matrix will be updated bi-weekly ahead of the Biweekly PM Meetings for review at such meetings.

ii. Permits anticipated for this project are provided below. Engineer will facilitate permitting process, including preparation of permit package, coordination with regulating agency and responses to requests for additional information, in support of permit issuance.

1. Natural Resources permit from Hillsborough County: tree clearing anticipated to facilitate construction of the pilot system. This permit is anticipated to be sought early in the project schedule, to allow for clearing needed to confirm pilot siting. Cost to clear the trees is not included in Engineer's scope of services.
2. Environmental Resource Permit (ERP): to authorize the work associated with the Pilot Plant. It is anticipated that this work will warrant a modification to the facility's existing ERP with the Southwest Florida Water Management District (SWFWMD). All work and work products needed to support securing the permit (e.g. stormwater modeling, etc.), will be produced and provided by the Engineer.
3. Site Development permit from Hillsborough County: for the construction of the permanent pilot system.

iii. Engineer will coordinate with Florida Department of Environmental Protection (FDEP) for consideration of process chemicals (used with SIX) not used at the existing plant

iv. In securing the specified permits, the Engineer will produce and provide work and work products needed to secure such permits.

v. Company will provide support to the Engineer as requested in efforts to secure permits, but such will be limited to provision of available information.

vi. Updates required to the Pilot Design deliverable based on comments received from permitting agencies will be addressed by the Engineer as part of the Owner's allowance or a future amendment.

vii. Engineer will pay all permit application fees and will be reimbursed with application of the agreed upon markup through the Owner's Allowance for Permitting.

viii. Engineer will review and evaluate permitting requirements associated with discharge of pilot-generated waste streams to the headworks (e.g., settled solids, backwash flows) and to the sanitary sewer (e.g., brine regenerant, PFAS waste streams), and will identify appropriate handling, pretreatment, and disposal requirements for incorporation into the Pilot Design.

Docusign Envelope ID: 2975EEF2-3607-4AE4-B305-BA4965B58B04

Task 4 Meetings & Deliverables:

1. Draft and Final Pilot Protocol (word & pdf), including Media and Waste Streams Management Plan
2. Pilot Protocol Workshops (2) (including agenda & meeting minutes)
3. Preliminary Design (pdf)
4. Preliminary Design Review Workshop (including agenda & meeting minutes)
5. Final Design (pdf)
6. Base MOPO Plan (Draft and Final)
7. MOPO Workshops (2) (including agenda & meeting minutes)
8. Pilot Permitting Matrix (pdf, updated bi-weekly)
9. Draft and Final ERP Permit Application (pdf) and secure permit
10. Draft and Final Natural Resources Permit Application (pdf) and secure permit
11. Draft and Final Site Development Permit Application (pdf) and secure permit

Engineer will provide all documents in draft form to the Company (within 3 business days of meetings for meeting minutes) for review prior to final issuance (no later than 3 business days after receipt of comments for meeting minutes). Results of resolving the Company's comments will be included in documents prior to final issuance.

Task 5 – Equipment Procurement & Cost Estimation Development

Subtask 5.1 Equipment Procurement Planning Support

i. Engineer will provide a detailed list of required items for the assembly of the pilot plant. It is anticipated that procurement of long lead pilot testing equipment (e.g. Actiflo-Mini) will be provided through the Company utilizing Owner's Allowance or additional funding otherwise provided by the Owner. Procurement of minor equipment and materials, and items without long lead times, is not anticipated to be part of the Company's scope of work.

ii. Engineer will support Company and Owner in consideration of and potential implementation of the Owner Direct Purchase program for pilot equipment, such as Actiflo Mini and Ozone System – Mini. Equipment to be considered for Owner Direct Purchase will be indicated as such on the Pilot Equipment & Materials list noted above.

iii. Engineer will provide procurement services common to equipment procurement, such as provision of specifications, shop drawing reviews and approvals for equipment purchased during the Interim and Permanent Pilot Plant Design activities. The cost of such efforts will be negotiated, using established rates, and covered by Owner's Allowance for Early Procurement.

Subtask 5.2 Cost Estimation Development Support Services

i. Engineer will evaluate and consider options for delivery of the construction of the project via the Company, to include subcontractor pre-selection, hard bid or other. The preference for project delivery will be at the discretion of the Company and Owner.

ii. Engineer will develop a Project Cost Estimate for construction and operations services, to include, but not be limited to, engineering services during construction, requirements to procure equipment & materials, pilot construction and startup activities, pilot operations and maintenance, data collection, analysis, and reporting, waste stream handling, , pilot plant maintenance (including long term preservation of equipment), proper disposal of media and other requirements to achieve a fully functional and properly cared for pilot facility, pilot program and requisite deliverables. This applies to both Track 1 and Track 2.

Docusign Envelope ID: 2975EEF2-3607-4AE4-B305-BA4965B58B04

Task 5 Meetings & Deliverables

1. Pilot Equipment & Materials List
2. Project Cost Estimate (Track 1 and Track 2)

Engineer will provide all documents in draft form to the Company for review prior to final issuance. Results of resolving the Company's comments will be included in documents prior to final issuance.

Owner's Allowance

An Owner's Allowance is reserved for consideration of the following supplemental services and/or fees:

i. Geotechnical field services – should existing geotechnical information not be available or sufficient to support pilot design, 3 to 5 geotechnical borings may be needed. The work would be performed by a subconsultant to the Engineer and will be subject to approval by the Company.
ii. Survey or subsurface utility field services – should existing survey or Subsurface Utility Engineering (SUE) information not be available or sufficient to support pilot design, these services will be subcontracted by the Engineer. Subcontractors will be subject to approval by the Company.
iii. Permitting fees as described in Task 4.5
iv. Engineering support services for Early Procurement of equipment, such as shop drawing review.
v. Additional services requested by Company or Owner not detailed in the scope of work

PROJECT SCHEDULE

The estimated duration of tasks and schedule for completing this scope of services is summarized in the table below. The Engineer will commence work immediately upon receiving both an executed copy of an agreement with the Company and issuance of a Notice to Proceed (NTP) by Company.

Preliminary Project Schedule		
Scope Item	**Dates**	**Duration**
Task 1 – Project Management, Administration & Meetings	May 2026 to Feb 2027	10 months
Task 2 – Interim Pilot Testing Program Development	May 2026 to Aug 2026	4 months
Task 3 - Evaluate Full-Scale BAF (GAC Media) Changeout and Operations for PFAS Performance	May 2026 to Feb 2027	10 months
Task 4 – Permanent Pilot Testing Program Development	May 2026 to Feb 2027	10 months
Task 5 – Equipment Procurement & Cost Estimation Development	July 2026 to Feb 2027	8 months
Combined Overall Schedule	**May 2026 to Feb 2027**	**10 months**

Docusign Envelope ID: 2975EEF2-3607-4AE4-B305-BA4965B58B04

COMPENSATION

The not-to-exceed budget for tasks described for this scope of services is $666,049. For the performance of services described in Tasks 1 through 5 in this scope of services, Company agrees to compensate Engineer on a lump sum basis, consistent with the terms of the agreement between the Company and Engineer associated with this scope of services.

The table below provides a breakdown of the budget for each of the tasks described in the scope of services for this work assignment.

Project Budget	
Scope Item	**Fee**
Task 1 – Project Management, Administration & Meetings	$123,952
Task 2 – Interim Pilot Testing Program Development	$86,275
Task 3 - Evaluate Full-Scale BAF (GAC Media) Changeout and Operations for PFAS Performance	$45,938
Task 4 – Permanent Pilot Testing Program Development	$348,735
Task 5 – Equipment Procurement & Cost Estimation Development	$61,149
Sub Total	**$666,049**

Docusign Envelope ID: 2975EEF2-3607-4AE4-B305-BA4965B58B04

ATTACHMENT B
ENGINEER LABOR RATES
FOR INTERIM AND PERMANENT PILOT PLANT DESIGN

The following are the Engineer's unit labor costs to be utilized in determining Engineer's labor costs for change orders and application to calculating costs for Allowance(s) use.

BLACK & VEATCH
Building a world of difference.

ROBERT BURCHETT, PE, PROGRAM MANAGER
BLACK & VEATCH CORPORATION
1715 N WESTSHORE BLVD, SUITE 725
TAMPA, FLORIDA 33607
813-207-7927 | BURCHETTRY@BV.COM

Schedule B Attachment

Hourly Rate Schedule
2020-001 - Integrated Program Management Consulting Services – Black & Veatch
November 21, 2024

Labor Category	Hourly Billing Rate[1]	
	Min	Max
Project Manager I	$222	$242
Project Manager II	$251	$273
Sr Project Manager	$292	$318
Program Manager	$310	$338
Senior Program Manager	$329	$359
Engineering Intern	$98	$107
Staff Engineer I	$121	$132
Staff Engineer II	$137	$149
Design Engineer	$156	$170
Engineer (Global Workforce2)	$87	$95
Project/Planning Engineer I	$172	$187
Project/Planning Engineer II	$191	$208
Senior Engineer I	$203	$222
Senior Engineer II	$229	$249
Sr. Engineer (Global Workforce2)	$147	$160
Engineering Manager	$213	$232
Senior Engineering Manager	$263	$287
Principal-In-Charge	$354	$386
QA/QC Manager	$317	$345
Technical Writer	$134	$146
Graphic Designer	$150	$163
Senior Technical Writer	$172	$187
CADD Technician I	$126	$137
CADD Technician I	$140	$153
Technician (Global Workforce2)	$73	$80
Engineering Technician	$158	$172
Senior Engineering Technician	$184	$201
Accountant	$125	$136
Sr Accountant	$159	$174

Labor Category	Hourly Billing Rate[1]	
	Min	Max
Purchasing Specialist	$147	$160
Administrative Support I	$96	$105
Administrative Support II	$115	$125
Operations Specialist	$175	$191
Senior Operations Specialist	$269	$294
Project/Program Scheduler	$175	$191
Sr Project Controls Specialist	$199	$216
Risk/Construction Mgmt Director	$342	$372
Resident Inspector I[3]	$150	$163
Resident Inspector II[3]	$184	$201
Sr Resident Inspector[3]	$213	$232
Construction Manager[3]	$238	$259
Sr Construction Manager[3]	$266	$290
Construction Administrator[3]	$121	$132
Construction Advisor[3]	$288	$314
Construction Controls[3]	$225	$246
Cost Estimator	$230	$251
Senior Cost Estimator	$274	$299
Water Treatment Specialist	$260	$283
Sr. Water Treatment Specialist	$345	$376
Technical Specialist I	$247	$270
Technical Specialist II	$288	$314
Senior Technical Specialist	$310	$338
Management Consulting - Analyst	$158	$172
Mgmt Consulting - Senior Analyst	$194	$211
Mgmt Consulting - Consultant	$247	$270
Mgmt Consulting - Manager	$287	$313
Mgmt Consulting - Principal	$329	$359

[1] Hourly rates include all labor; overhead; margins and profit; customary expenses; and travel within the Tampa Bay area. Travel outside of the Tampa Bay area will be charged in accordance with Florida Statutes. Rates will be held firm for the next 3 years of the contract (November 2024 to September 2027).

[2] Black & Veatch Integrated Global Workforce professionals located in offices outside of the US.

[3] A 10% reduction in the billing rate will be applied to this billing category for staff on a full-time assignment in a construction/field office (or Tampa Bay Water office) for a duration of over 6 months.

[4] Subconsultant markup will be no more than 5% of the total subconsultant costs.

Docusign Envelope ID: 2975EEF2-3607-4AE4-B305-BA4965B58B04

ATTACHMENT C
COMPANY SCOPE OF WORK
FOR INTERIM AND PERMANENT PILOT PLANT DESIGN

Veolia (Company) has contracted with the Engineer (Black & Veatch) to perform the scope of work associated with the Interim and Permanent Pilot Plant Design as detailed in ATTACHMENT A - ENGINEER SCOPE OF WORK FOR INTERIM AND PERMANENT PILOT PLANT DESIGN.

Company's scope of work can be generally described as managing and facilitating the execution of the Interim and Permanent Pilot Plant Design, including oversight of the Engineer's efforts. Company will participate in collaborative efforts (e.g. workshops and meetings), and will review and solicit Owner's approval of the various work products generated by the Engineer. Meetings and workshops are included in ATTACHMENT A - ENGINEER SCOPE OF WORK FOR INTERIM AND PERMANENT PILOT PLANT DESIGN.

Company will provide ongoing project management services over the duration of the project, will oversee the work of the Engineer and will provide work products developed by Company and the Engineer to the Owner in accordance with the Engineer's scope of work and the Company's scope of work.

Task 1 - Company Interim and Permanent Pilot Plant Design Activities

Project Management activities performed by Company, unless otherwise noted, will include the following:

- Overall Project Management - Maintain responsibility for completion of the Interim and Permanent Pilot Plant Design services
- Oversee the Engineer's work
- Provide staff to perform Company's scope of work activities
- Facilitate exchange of information and general coordination among the Owner, Engineer and Company
- Facilitate coordination meetings among the stakeholders
- Maintain the project schedule (authored by Engineer and reviewed by Company)
- Participate in project meetings
- Coordinate Engineer's work with Company Operations staff (as needed)
- Coordinate Engineer's geotechnical and surveying activities (if needed and approved and funded by Owner)
- Coordinate Engineer's work with Owner
    - Conveyance of written information in common formats per request of Owner (e.g. Word, Excel, Adobe pdf)
    - Coordinate and facilitate meetings and communication
    - Coordinate and facilitate review activities (including aggregation of Owner and Company review comments)
- Participate in collaborative activities
- Facilitate decisions among stakeholders
- Interface among Owner, Engineer and Company Operations staff
- Prepare Monthly Invoice for issuance to Owner

Docusign Envelope ID: 2975EEF2-3607-4AE4-B305-BA4965B58B04

- Analyze and respond to request for changes in work from Owner
- Analyze and negotiate requests for change orders from Engineer
- Administration of change orders
- Review Engineer's Invoices
- Compensate Engineer in accordance with agreement between Company and Engineer
- Review deliverables provided by Engineer, including those for Pilot Protocol and each Design step (draft and final)
- Review cost estimate information provided by the Engineer

Task 2 – Company Interim and Permanent Pilot Plant Design Deliverables and Documentation

Both the Company and Engineer will provide deliverables and documentation in support of executing the Interim and Permanent Pilot Plant Design. Those listed below are inclusive of, but not necessarily limited to, deliverables and/or other documentation to be prepared and/or provided by Company during Interim and Permanent Pilot Plant Design (unless otherwise noted):

- Monthly Progress Status Report (updated monthly, prepared by Engineer)
- Monthly Invoice (Invoices will be processed through Masterworks Items Posting and Pay Estimates Modules)
- Schedule of Values
- Record of comments made as a result of reviews of deliverables
- Change Order Register
- Copies of change orders
- Allowance Register (to track Allowance spending and balance)
- Risk Register
- Project Schedule (Excel or pdf format at Owner's discretion, updated monthly, prepared by Engineer)
- Meeting agendas and minutes (prepared by Engineer)
- Decision Log
- Copies of Company Purchase Orders (if applicable)
- Project Management Plan (prepared by Engineer)
- Permitting Matrix (prepared by Engineer)
- Permitting documentation (prepared by Engineer in accordance with Engineer's scope of work)
- Site Investigations information (in accordance with Engineer's scope of work)
- Pilot Testing Protocol (prepared by Engineer)
- Preliminary Design (prepared by Engineer)
- Final Design (prepared by Engineer)
- Pilot Equipment and Materials List (prepared by Engineer)
- Cost Estimates (prepared by Engineer, based upon description in Attachment A – Engineer Scope of Work for Interim and Permanent Pilot Plant Design)
- Base MOPO Plan (prepared by Engineer)

Docusign Envelope ID: 2975EEF2-3607-4AE4-B305-BA4965B58B04

- Any other documentation requested by Owner as agreed to by the applicable party

Task 3 - Interface with Tampa Bay Water's Masterworks Project Management Software

Veolia will utilize Tampa Bay Water's, Masterworks Project Management Software, for the following activities:

- Invoices will be processed through Masterworks Items Posting and Pay Estimates Modules

The following will be uploaded to Masterworks:

- Monthly Reports
- Minutes of meetings in MS Word and/or Adobe pdf format
- Final versions of design documents following each design review
- Risk Register and updates of such
- Change Order Register (included in monthly invoice, so not individually uploaded)
- Allowance Register (included in monthly invoice, so not individually uploaded)
- Permit Matrix and updates of such, Permit Applications, Permit Documentation (e.g. Requests for Additional Information, etc.), and Registration Forms

Task 4 - Company Procurement Services (Optional)

Procurement and procurement services will be performed at the request of the Owner and related costs will be covered by Owner's Allowance, or additional funding otherwise provided by the Owner, via change order.

- Support procurement of equipment at Owner's request
- Support Owner in application of Owner's Direct Purchase Program

Docusign Envelope ID: 2975EEF2-3607-4AE4-B305-BA4965B58B04

ATTACHMENT D
COMPENSATION
FOR INTERIM AND PERMANENT PILOT PLANT DESIGN

1.00 COMPANY COMPENSATION

A. Company shall receive compensation for Interim and Permanent Pilot Plant Design as set forth in Table A. Table A includes the cost of performing the scope of work under Amendment #2026-19, not including any changes in the scope of work.

B. Owner and Company shall create a mutually agreed upon Schedule of Values and a mutually agreed upon invoice format.

C. Owner shall pay Company monthly for Interim and Permanent Pilot Plant Design services performed or furnished in accordance with Table A on a percentage of completion basis applied to a mutually agreed upon Schedule of Values. Company will submit an application for payment on or about the first (1st) day of each month and Owner will process applications for payment in accordance with the mutually approved invoice format. The Schedule of Values shall remain unchanged, except as changed by approved change orders, throughout the duration of Interim and Permanent Pilot Plant Design. No retainage will be withheld by the Owner.

1.01 CHANGES AND ADDITIONAL COMPENSATION

A. Owner or Company, may request changes to the scope of work (whether it be the Engineer's or Company's scope of work, hereinafter "Change Order" or "Extra Work Order"), including, but not limited to, increasing or decreasing the scope of work. No change shall be made by Company in the scope of work, or its manner of performance, without an Owner approved Change Order, specifying the changes and specifying whether there is to be an adjustment in the price for performance and how any such adjustment shall be determined.

Owner and Company shall negotiate, prior to the issuance of a Change Order, the amount of any charge for increases or decreases in the scope of work and/or schedule change related to the Change Order. Approved Change Order information will be added to the Schedule of Values and will be subject to payment by Owner as described herein.

Company agrees that all additional work performed without written authorization by Owner, shall be at its own risk.

B. For calculating the cost of changes, Company and Owner agree that Company will be paid a Fixed Fee of 5.5% to cover Company's overhead and a Margin Fee of 3.5%. These fees will be added to costs as described below.

Application of Fixed Fee and Margin Fee: Fixed Fee will be applied all costs with the exception of Company hourly labor and travel costs. Margin Fee will be applied to all costs.

Calculation of Fixed Fee and Margin Fee: The value of the Fixed Fee will be the applicable cost first divided by 0.945 followed by subtraction of the applicable cost. The value of the Margin Fee will be the applicable cost first divided by 0.965 followed by subtraction of the applicable cost.

Docusign Envelope ID: 2975EEF2-3607-4AE4-B305-BA4965B58B04

Example

Applicable Cost = $10,000

Fixed Fee = ($10,000 / 0.945) - $10,000 = $582.01

Margin Fee = ($10,000 / 0.965) - $10,000 = $362.69

Price (to Owner) = $10,000 + $582.01 + $362.69 = $10,944.70

C. Company's unit labor costs to be utilized in determining Company labor costs are as follows:

Start of Interim and Permanent Pilot Plant Design through September 30, 2027

Resource	Hourly Rate ($) [through Sep 30, 2026]	Hourly Rate ($) [Oct 1, 2026 through Sep 30, 2027]
Project Technical Advisor	$183.45	$189.87
Sr. Project Manager	$183.45	$189.87

If Interim and Permanent Pilot Plant Design services continue beyond September 30, 2027, hourly rates will be renegotiated. If other labor resources are needed to perform changes to the scope of work, the hourly rates will be negotiated by Company and Owner.

D. Engineer's unit labor costs to be utilized in determining Engineer's labor costs are provided in ATTACHMENT B - ENGINEER LABOR RATES FOR INTERIM AND PERMANENT PILOT PLANT DESIGN.

F. Other additional costs, such as necessary equipment and materials, needed to perform Change Order efforts will be included on a lump sum basis with backup to support the value and will be mutually agreed to by Company and Owner.

1.02 OWNER'S ALLOWANCE(S)

The Owner's Allowance(s) shall be separately administered and controlled by Owner. Company shall provide Owner with a written request for Owners' approval detailing the costs anticipated to be charged against the Owner Allowance(s). The use of any Owner's Allowance(s) shall be subject to Owner's review and approval, which shall not be unreasonably withheld. Establishing pricing for use of Owner's Allowance(s) will be the same as establishing pricing for a change order.

Upon the completion of Interim and Permanent Pilot Design, all remaining Allowance(s) values will remain property of the Owner.

Docusign Envelope ID: 2975EEF2-3607-4AE4-B305-BA4965B58B04

ATTACHMENT D
COMPENSATION
FOR INTERIM AND PERMANENT PILOT PLANT DESIGN

Table A – COMPENSATION

Amendment #2026-19 Tampa Bay Water SWTP Water Quality Pilot Study - CIP 03511 (Interim and Permanent Pilot Plant Design)

Pricing Breakdown	
Company Fixed Management Cost	$85,646.05
Engineer Fixed Cost	$666,049.00
Performance Bond (not required)	$0
General Liability (GL) Insurance	$9,104.57
Overhead Fee	$39,294.65
Margin Fee	$27,593.77
Lump Sum Total	$827,688.04
Owner's Allowance for Additional Services[1]	$135,000
Owner's Allowance for Early Procurement[2]	$865,000
Subtotal Allowances	$1,000,000
TOTAL	**$1,827,688.04**

[1] At a minimum the Owner's Allowance for Additional Services may be utilized for permit application fees, surveying activities, geotechnical activities and other activities related to the completion of Interim and Permanent Pilot Plant Design as approved by Owner.

[2] At a minimum the Owner's Allowance for Early Procurement may be utilized for procurement of the Actiflo Mini for the pilot plant due to anticipated long lead time. It will also be utilized for the related procurement support services by Company and Engineer.

Docusign Envelope ID: 2975EEF2-3607-4AE4-B305-BA4965B58B04

ATTACHMENT E
SCHEDULE
FOR INTERIM AND PERMANENT PILOT PLANT DESIGN

Achieving scheduled completion of the Target Milestones listed below is based on the Key Assumptions also listed below. Various delays, such as approval of deliverables, completing workshops as scheduled, permit review times, etc., may result in a revised schedule with updated Target Milestones. While the Key Assumptions identify the most readily recognized schedule risks, they do not represent an exhaustive list of potential factors that could impact the project schedule.

Key Assumptions:

- Notice to Proceed with the project is issued by May 4, 2026
- Pilot Study Kickoff Meeting occurs on May 19, 2026, or earlier
- Additional site survey or geotechnical study is not required. Such additional work may be completed through the Owner's Allowance; however, this could cause delays in the schedule.
- Workshops occur as scheduled, or earlier than scheduled
- Data is provided in a timely manner following request (reviewing existing data is key activity)
- Reviews of materials subject to review are completed within allotted timeframes
- Permit review and approval periods are not excessive
- Scope of Work changes are not significant enough to alter the overall schedule

Target Milestones:

Notice to Proceed Issued by Tampa Bay Water	May 4, 2026
Pilot Study Kickoff Meeting	May 19, 2026
Draft Natural Resources Permit Application	June 15, 2026
Final Interim Pilot System Protocol Development	August 4, 2026
Final Permanent Pilot System Protocol Development	August 18, 2026
Draft ERP Permit Application	October 27, 2026
Final Design Permanent Pilot Plant	November 18, 2026
Opinion of Probable Construction Cost for Permanent Pilot Plant	November 23, 2026
Draft Site Development Permit Application	December 30, 2026

Additional Schedule Information:

See Attachment A (Engineer Scope of Work for Interim and Permanent Pilot Plant Design) for additional project schedule information.

Surface Water Treatment Plant Water Quality Pilot Facility

Agenda Item C.3
April 20, 2026

Warren Hogg, P.G.
Chief Science Officer
Tampa Bay Water

Project Purpose

- Future Compliance
  - PFAS National Primary Drinking Water Regulations
  - Achieve current EPA PFAS limits/deadline
  - Compliance by April 2029
  - Expected extension to April 2031
- Future and continuous pilot testing to optimize long-term operations.

32532 Federal Register / Vol. 89, No. 82 / Friday, April 26, 2024 / Rules and Regulations

ENVIRONMENTAL PROTECTION AGENCY

[EPA–HQ–OW–2022–0114; FRL 8543–02–OW]

RIN 2040–AG18

PFAS National Primary Drinking Water Regulation

AGENCY: Environmental Protection Agency (EPA).

ACTION: Final rule.

SUMMARY: In March 2023, the U.S. Environmental Protection Agency (EPA) proposed and requested comment on the National Primary Drinking Water Regulation (NPDWR) and health-based Maximum Contaminant Level Goals (MCLGs) for six per- and polyfluoroalkyl substances (PFAS): perfluorooctanoic acid (PFOA), perfluorooctane sulfonic acid (PFOS), perfluorohexane sulfonic acid (PFHxS), perfluorononanoic acid (PFNA), hexafluoropropylene oxide dimer acid (HFPO–DA, commonly known as GenX Chemicals), and perfluorobutane sulfonic acid (PFBS). After consideration of public comment and consistent with the provisions set forth under the Safe Drinking Water Act (SDWA), the EPA is finalizing NPDWRs for these six PFAS. Through this action, the EPA is finalizing MCLGs for PFOA and PFOS at zero. Considering feasibility, the EPA is promulgating individual Maximum Contaminant Levels (MCLs) for PFOA and PFOS at 4.0 nanograms per liter (ng/L) or parts per trillion (ppt). The EPA is also finalizing individual MCLGs and is promulgating individual MCLs for PFHxS, PFNA, and HFPO–DA at 10 ng/L. In addition to the individual MCLs for PFHxS, PFNA, and HFPO–DA, in consideration of the known toxic effects, dose additive health concerns and occurrence and likely co-occurrence in drinking water of these three PFAS, as well as PFBS, the EPA is finalizing a Hazard Index (HI) of 1 (unitless) as the MCLG and MCL for any mixture containing two or more of PFHxS, PFNA, HFPO–DA, and PFBS. Once fully implemented, the EPA estimates that the rule will prevent thousands of deaths and reduce tens of thousands of serious PFAS-attributable illnesses.

DATES: This final rule is effective on June 25, 2024. The incorporation by reference of certain publications listed in the rule is approved by the Director of the Federal Register as of June 25, 2024.

ADDRESSES: The EPA has established a docket for this action under Docket ID No. EPA–HQ–OW–2022–0114. All documents in the docket are listed on the *http://www.regulations.gov* website. Although listed in the index, some information is not publicly available, *e.g.*, Confidential Business Information (CBI) or other information whose disclosure is restricted by statute. Certain other material, such as copyrighted material, is not placed on the internet and will be publicly available only in hard copy form. Publicly available docket materials are available electronically through *https://www.regulations.gov*.

FOR FURTHER INFORMATION CONTACT: Alexis Lan, Office of Ground Water and Drinking Water, Standards and Risk Management Division (Mail Code 4607M), Environmental Protection Agency, 1200 Pennsylvania Avenue NW, Washington, DC 20460; telephone number 202–564–0841; email address: *PFASNPDWR@epa.gov*.

SUPPLEMENTARY INFORMATION:

Executive Summary

The Environmental Protection Agency (EPA) is issuing an adaptive and flexible National Primary Drinking Water Regulation (NPDWR) under the Safe Drinking Water Act (SDWA) to manage risks of per- and polyfluoroalkyl substances (PFAS) in drinking water. The EPA is establishing drinking water standards for six PFAS in this NPDWR to provide health protection against these individual and co-occurring PFAS in public water systems. The EPA's final rule represents data-driven drinking water standards that are based on the best available science and meet the requirements of SDWA. For the six PFAS, the EPA considered PFAS health effects information, evidence supporting dose-additive health concerns from co-occurring PFAS, as well as national and state data for the levels of multiple PFAS in finished drinking water. SDWA provides a framework for the EPA to regulate emerging contaminants of concern in drinking water. Under the statute, the EPA must act based on the "best available" science and information. Thus, the statute recognizes that the EPA may act in the face of imperfect information. It also provides a mechanism for the EPA to update standards as more science becomes available. For the PFAS covered by this rule, the EPA concluded that the state of the science and information has sufficiently advanced to the point to satisfy the statutory requirements and fulfill SDWA's purpose to protect public health by addressing contaminants in the nation's public water systems.

PFAS are a large class of thousands of organic chemicals that have unique physical and chemical properties. These compounds are designed to be stable and non-reactive because of the applications in which they are used: certain industrial and manufacturing processes; stain and water repellants in clothing, carpets, and other consumer products, as well as certain types of fire-fighting foams. PFAS tend to break down slowly and persist in the environment, and consequently, they can accumulate in the environment and the human body over time. Current scientific research and available evidence have shown the potential for harmful human health effects after being exposed to some PFAS. Although some PFAS have been phased out of use in the United States, they are still found in the environment and in humans based on biomonitoring data.

Drinking water is one of several ways people can be exposed to PFAS. The EPA's examination of drinking water data shows that different PFAS can often be found together and in varying combinations as mixtures. Additionally, decades of research demonstrates that exposure to mixtures of different chemicals can elicit dose-additive health effects: even if the individual chemicals are each present at levels considered "safe," the mixture may cause significant adverse health effects. The high likelihood for different PFAS to co-occur in drinking water; the additive health concerns when present in mixtures; the diversity and sheer number of PFAS; and their general presence and persistence in the environment and the human body are reflective of the environmental and public health challenges the American public faces with PFAS, which poses a particular threat for overburdened communities that experience disproportionate environmental impacts. The final NPDWR includes:

1. Individual Maximum Contaminant Levels (MCLs)
   a. Perfluorooctanoic acid (PFOA) MCL = 4.0 nanograms per liter or parts per trillion (ng/L or ppt)
   b. Perfluorooctane sulfonic acid (PFOS) MCL = 4.0 ng/L
   c. Perfluorohexane sulfonic acid (PFHxS) MCL = 10 ng/L
   d. Perfluorononanoic acid (PFNA) MCL = 10 ng/L
   e. Hexafluoropropylene oxide dimer acid (HFPO–DA) MCL = 10 ng/L
2. A Hazard Index MCL to account for dose-additive health effects for mixtures that could include two or more of four

Project Overview

PFAS Pilot and Report (Interim & Permanent)

- Design via amendment to Veolia's Agreement No. 2026-19
- Construction and Pilot Testing

Project Budget

- Today's Requested Approval: $1.83 M
  - Design Services: $827,688
  - Early Equipment Procurement Allowance: $865,000
  - Additional Services Owner's Allowance: $135,000
- Future Request
  - Construction and Pilot Testing: $3.6M

Approach – Parallel Design Tracks and Early Equipment Purchase

Track 1 Interim Pilot	• Develop design concepts for near-term pilot configuration
Track 2 Permanent Pilot Plant	• Design a dedicated pilot facility to support long-term evaluation of emerging treatment technologies
Early Equipment Purchase	• Early Actiflo Mini procurement to mitigate long-lead time risk

Recommendation

- Approve the Amendment to Agreement 2026-19 with Veolia Water North America Operating Services, LLC for design services of the Surface Water Treatment Plant Water Quality Pilot Study Project, in the amount of $1,827,688.04, inclusive of $135,000 for Owner's Allowance.

TAMPA BAY WATER
Supplying Water To The Region

AGENDA ITEM C.4

DATE: March 31, 2026

TO: Board of Directors

THRU: Charles H. Carden, General Manager

FROM: Maribel Medina, Planning and Projects Director

SUBJECT: Morris Bridge Wellfield Improvements, Project No. 50021 - Contract No. 2026-020 with Southeast Drilling Services, Inc. - *Approve*

SUMMARY

An Invitation to Bid for Contract No. 2026-020 was conducted to obtain construction services for the Morris Bridge Wellfield Improvements, Project No. 50021. Southeast Drilling Services, Inc. was determined to be the lowest, responsive, responsible bidder.

SUGGESTED ACTION

Approve Contract No. 2026-020 to the lowest, responsive, responsible bidder, Southeast Drilling Services, Inc. in the amount of $16,299,600.00, inclusive of $895,000.00 in Owner's Allowances and $100 Indemnification.

COST/FUNDING SOURCE

$16,299,600.00 / Renewal & Replacement Funds and Bond Funds

DISCUSSION

On November 25, 2025, Tampa Bay Water posted an Invitation to Bid (ITB) for the Morris Bridge Wellfield Improvements, Project No. 50021. Over 20 contractors were notified through advertisement on EUNA and Tampa Bay Water's website. Tampa Bay Water added 20 known contractors as supplemental contractors and 67 contractors downloaded the bid plans. A non-mandatory pre-bid meeting and site visit was held on December 17, 2025, in which seven (7) contractors participated.

On February 18, 2026, two (2) sealed bids were received from the following contractors and publicly opened with the following results:

BIDDER	**TOTAL BASE BID**
Southeast Drilling Services, Inc.	$15,404,500.00
C&T Contracting Services	$19,248,540.00

* Total Bid amount does not include Owner's Allowances nor indemnification

Tampa Bay Water staff and Stantec Consulting Services, Inc., Tampa Bay Water's Engineer of Record, reviewed and evaluated the bids and determined that Southeast Drilling Services, Inc. is the lowest, responsive, responsible bidder.

Staff concurs with Stantec's evaluation and recommends that Contract No. 2026-020 be awarded to Southeast Drilling Services, Inc. in the amount of $15,404,500.00 plus $895,000 for Owner's Allowances and $100.00 for Indemnification for a total award amount of $16,299,600.00. This contract shall remain effective through the completion of this project.

The proposed contract has been reviewed and approved as to form by Tampa Bay Water's General Counsel. The proposed contract, Bid Price Form, and Stantec's recommendation letter are attached.

BACKGROUND

Tampa Bay Water's Capital Improvements Program Plan (CIP) is a comprehensive ten-year plan of approved and proposed capital projects. The CIP is updated annually and is subject to changes as the needs for specific projects become more defined and as final approval of individual projects is provided by the Board. The Morris Bridge Wellfield Improvements, Project No. 50021 is identified in the CIP and includes the replacement of 15 pumps, motors, associated appurtenances, and control and electrical equipment, including improved safety measures. In addition, this project includes placing five wells out-of-service as identified in the Wellfield Right-sizing Project (152, 157, 161, 162, & 163). Of the 5

abandoned wells, 2 will be completely demolished (152, 157) while the other 3 (161, 162, & 163) will be re-purposed and provided to Hillsborough County Parks and Recreation department for storage use in Flatwoods Conservation Park.

The Morris Bridge Wellfield in Hillsborough County supplies an average of 8 MGD with the current maximum of 45 MGD, after the improvements project the wellfield will produce up to a maximum of approximately 34 MGD to the Tampa Bay region.

CONTRACT

This Contract, made and entered into as of the _____day of _____, 2026, by and between Tampa Bay Water, A Regional Water Supply Authority ("Tampa Bay Water") and Southeast Drilling Services, Inc., a corporation of the State of Florida, or other business entity authorized to do business in the State of Florida ("Contractor"), with respect to that certain Project consisting of the Work to be performed in accordance with the Contract Documents, supplementary conditions, general conditions, Invitation To Bid ("ITB") documents, bid price form, technical specifications and all issued addenda for Tampa Bay Water's Morris Bridge Wellfield Improvements (Project 50021).

W I T N E S S E T H:

Tampa Bay Water and the Contractor in consideration of the mutual covenants and obligations contained herein, and for other good and valuable consideration, the sufficiency and adequacy of which are hereby acknowledged, agree as follows:

1.0 Work

1.1 The Contractor shall perform all of the Work in accordance with the Contract Documents (as that term is defined in the General Conditions which are attached to and made a part of this Contract).

1.2 Contractor shall perform the Work in accordance with generally accepted construction practice under the same or similar circumstances at the same time and in the same locality. Contractor shall have exclusive responsibility for all construction means, methods, techniques, sequences, and procedures necessary or desirable for the correct, prompt, and orderly prosecution and completion of the Work as required by this Contract and the Contract Documents.

1.3 The responsibility to provide the construction means, methods, techniques, sequences and procedures shall include, but not be limited to, the obligation of the Contractor to provide the following construction requirements, as applicable: temporary power and light; temporary offices and construction trailers; required design certifications; required approvals; weather protection; site clean-up and housekeeping; construction trade management; temporary parking; a construction safety plan; safety and first aid facilities; correction of or compensation for defective work or equipment; Subcontractors' insurance certificates; storage areas; workshops and warehouses; temporary fire protection; site security; temporary Utilities; including without limitations; potable water and water for use in performing the Work (in all cases, including a backflow preventer meeting ANSI A40.6); phone; sanitary; gas or fuel; Subcontractor and Supplier qualification; equipment and materials procurement and expediting; receipt and unloading and proper storage of delivered materials and equipment; erection rigging; temporary supports; submittal and shop drawings review and orderly filing system; construction and procurement critical path scheduling; construction coordination; and cooperation with Tampa Bay Water in implementation of Tampa Bay Water's owner's direct purchase sales tax savings program.

1.4 During the progress of the Work, Contractor shall at all times during normal working hours afford Tampa Bay Water and Engineer every reasonable opportunity for observing all Work. During any such observation, all representatives of Tampa Bay Water and Engineer shall comply with all safety and other rules and regulations applicable to presence in or at the Work site.

1.5 Contractor shall have full responsibility, to the extent applicable, for locating all underground Utilities in advance of excavation; scheduling excavation and uncovering in advance, unless it conflicts with Work already uncovered; shoring, blocking, and protecting underground

Utilities; repairing any damage done to the satisfaction of Tampa Bay Water and Engineer and the owners of those underground Utilities; promptly notifying Tampa Bay Water and Engineer of any newly discovered underground Utility; and the safety, protection and repairing of any damage done to any affected Work. Al1 costs involved and time required to perform these responsibilities shall be considered as having been included in the Contract Price.

1.6 Contractor shall use care and diligence, and shall take all appropriate precautions, to protect the Work and the Work site and the property of other persons (including any materials, equipment, or other items furnished by Tampa Bay Water) from damage due to the nature of the Work, the natural elements, carelessness of others, and from any cause, until final completion of the Work; and for such purpose, Contractor shall provide fencing, protective features (such as tarpaulins, boards, boxing, frames, canvas guards, and fireproofing), and other safeguards to the extent Contractor reasonably determines such are necessary and proper in the performance of the Work.

1.7 Contractor shall ensure that each employee, representative, Subcontractor, Supplier, and others acting for the Contractor use designated access roads and parking areas. Contractor shall employ watchmen on the Work site when necessary and shall also erect and maintain such strong and suitable barriers and such lights as shall effectively prevent the happening of any accident to health or to property or to any partially completed Work or to any materials stored on or adjacent to the Work site. Contractor shall employ any additional temporary fencing and gates to adequately protect the Work.

1.8 Stored materials shall be kept in a neat and orderly manner. Materials that are subject to deterioration by exposure to the sun, rain or other elements shall be kept adequately covered and protected. Contractor shall be responsible for protecting all stored materials and the Work site safe from theft and vandalism.

1.9 All costs involved and time required to perform these responsibilities shall be considered as having been included in the Contract Price.

1.10 Contractor shall notify owners of adjacent property (including underground Utility owners) not less than forty-eight (48) hours, or the time period required by Laws and Regulations, whichever period is longer, prior to commencing the Work, and shall coordinate and cooperate with them in the location, protection, removal, relocation, and/or replacement of their property. At least five (5) days prior to providing such notice to adjacent property owners, Contractor shall submit its proposed written notice to Tampa Bay Water for review and approval. All damage, injury or loss to property caused, directly or indirectly, in whole or part, by Contractor, any Subcontractor or Supplier or anyone for whose acts any of them may be liable, shall be remedied at Contractor's expense, which shall be considered to have been included in the Contract Price.

1.11 In case of damage or destruction to the Work, the Work site or adjacent properties resulting from any cause, and regardless of the extent thereof or the estimated cost of repair, replacement or restoration, and whether or not any insurance proceeds are sufficient or available for the purpose, Contractor shall immediately undertake and complete the repair, replacement and restoration of the damage or destruction to the character and condition existing immediately prior to the damage or destruction, all at Contractor's sole cost and expense, which shall be considered to have been included in the Contract Price, except in the event that such damage or destruction is caused by Tampa Bay Water, its employees, agents, representatives, including Engineer, or is the result of an Uncontrollable Circumstance.

1.12 Contractor shall notify Tampa Bay Water immediately of any damage or destruction to the Work, the Work site or any adjacent properties including, but not limited to, hazardous substance spills, damage to sensitive areas, permit or approval violations, fires and injuries. Additionally, Contractor shall notify the required Insurance carriers and Sureties of any damage or destruction to the Work, the Work site, or adjacent properties, or any accidents on

the Work site, as promptly as possible after Contractor learns of any such damage, destruction or accidents. As soon as practicable after learning of any such occurrence, Contractor shall submit a full and complete written report to Tampa Bay Water.

1.13 In case of an emergency which threatens loss or injury to persons or property, Contractor shall take appropriate remedial action, without previous instructions from Tampa Bay Water or Engineer, as the situation may warrant, and shall immediately provide Notice to Tampa Bay Water and Engineer of its action. Any claim for compensation by Contractor, together with substantiating documentation in regard to expense caused by emergency acts, shall be submitted to Tampa Bay Water and the amount of compensation if any, shall be determined by mutual contract, subject to cost substantiation.

2.0 Contract Time

2.1 Tampa Bay Water and the Contractor recognize that time is of the essence with respect to Contractor's performance of its obligations under the Contract Documents, and Tampa Bay Water shall suffer financial loss if Substantial Completion and Final Completion of the Work is not achieved within the Contract Time specified in Paragraph 2.2 below. Accordingly, if the Contractor fails to achieve Substantial Completion and Final Completion of the Work within the Contract Time, it shall pay Tampa Bay Water Liquidated Damages in accordance with the terms stated below in Section 3, Liquidated Damages.

2.2 The Contractor shall commence the Work within ten (10) days after the date specified for the commencement of the Work in the Notice to Proceed and shall complete all Work hereunder as follows:

a. All facilities shall be manually operational to provide Tampa Bay Water at its option the full time use of the Project as intended by the Contract Documents and the Contractor shall perform the Work to achieve Substantial Completion within seven hundred two (702) calendar days of issuance of Notice to Proceed as the commencement date of the Contract Time.

b. The Contractor shall perform the Work to achieve Final Completion within seven hundred thirty-two (732) calendar days of issuance of Notice to Proceed as the date of commencement of the Contract Time.

2.3 The completion deadlines in this Section 2 are subject to adjustment in accordance with the General Conditions.

3.0 Liquidated Damages

3.1 If the Contractor fails to achieve Substantial Completion of the Work within the Contract Time, as said time period may be adjusted pursuant to the terms of the Contract Documents, Contractor shall pay Tampa Bay Water Liquidated Damages in accordance with the following:

a. The Contractor shall pay Tampa Bay Water as Liquidated Damages, and not as a penalty, the amount of One Thousand, Five Hundred Dollars and Zero cents ($1,500.00) for each day that expires after the Contract Time specified above in Paragraph 2.2a. for Substantial Completion. These Liquidated Damages are Tampa Bay Water's sole and exclusive Substantial Completion delay related damages and represent a reasonable estimate of Tampa Bay Water's damages in the event Substantial Completion of the Work is delayed. The Contractor agrees that these Substantial Completion Liquidated Damages do not constitute a penalty or forfeiture.

b. The Contractor shall pay Tampa Bay Water as Liquidated Damages and not as a penalty, the amount of Five Hundred Dollars and Zero Cents ($500.00) for each day that expires after the time specified in Paragraph 2.2.b. for Final Completion. These Liquidated Damages are Tampa Bay Water's sole and exclusive Final Completion delay related damages and represent a reasonable estimate of Tampa Bay Water's damages in the event Final Completion of the

Work is delayed. The Contractor agrees that these Final Completion Liquidated Damages do not constitute a penalty or forfeiture. Also, Contractor agrees these Final Completion Liquidated Damages are in addition to, and not duplicative of, the Substantial Completion Liquidated Damages noted in Paragraph 3.1a. above.

4.0 Contract Price

4.1 Tampa Bay Water hereby agrees to pay to the Contractor in lawful money of the United States for the faithful performance of all of the Contractor's obligations under the Contract Documents, and the Contractor agrees to accept in full payment the Contract Price of: Sixteen Million, Two Hundred Ninety-Nine Thousand, Six Hundred Dollars and No Cents ($16,299,600.00), inclusive of the total Owner's Allowance subject to the conditions governing payments to the Contractor in the Contract Documents. If the Contract Price includes any Unit Price amounts and the actual quantity of Unit Price items installed is different than the estimated quantity, then the Contract Price shall be adjusted in accordance with the Contract Documents. The Contract Price includes, if applicable, only those Alternates accepted by Tampa Bay Water, as identified in Paragraph 4.3 below. The Contract Price includes, if applicable, only those Allowances established by Tampa Bay Water, as identified in Paragraph 4.4 below.

4.2 The Unit Prices and associated estimated quantities included within the Contract Price are attached hereto and made a part hereof as Schedule A.

4.3 The following Bid Options have been accepted by Tampa Bay Water and are included within the Contract Price:

ALTERNATE	Price
Not Applicable	Not Applicable

4.4 The following Allowances have been established by Tampa Bay Water and are included within the Contract Price:

ALLOWANCE	Price
Owner's Allowance	$875,000.00
Permit Allowance	$20,000.00
Indemnification	$100.00

Payment of Allowances shall only be authorized by issuance of Change Authorization signed by Tampa Bay Water in accordance with Article 7.2.1 of the General Conditions.

5.0 Payment

Payment procedures are outlined in the General Conditions, Article 7 Payment. All monies not paid when due shall bear interest at a rate not to exceed the interest rate allowed by law to be paid by governmental entities in Florida, provided that this does not exceed six percent per year simple interest.

Tampa Bay Water's payment to Contractor of any progress or final payment shall not release the Contractor of any liability and shall not be deemed evidence of performance or be construed as an acceptance of defective or improper Work, or Work that does not comply with the requirements of the Contract Documents.

6.0 Miscellaneous

6.1 All Contract Documents are hereby incorporated into and made a part of this Contract by this reference. The Contract Documents may only be amended, modified, or supplemented as provided in the Contract Documents.

The Contract Documents represent the final and entire integrated Contract between the parties with respect to the Work. The Contract Documents supersede all prior oral or written Contracts, if any, between the parties, and any statement, representation, promise or inducement not set forth in the Contract Documents is null and void and not binding on Tampa Bay Water or the Contractor. Except for the warranty and third party beneficiary rights of Tampa Bay Water set forth herein, the Contract Documents shall not in any way create a relationship of any kind between the Engineer and the Contractor or between Tampa Bay Water and a Subcontractor or Supplier, or between Tampa Bay Water and any other person.

If any provision(s) of the Contract Document is/are invalid, illegal, or unenforceable such provision(s) shall be considered divisible, and all other provisions of the Contract Documents shall nevertheless remain in full force and effect.

6.2 The Contractor shall not sell, assign, transfer or otherwise convey any of its rights and shall not delegate any of its duties under the Contract Documents without the prior and expressed written consent of Tampa Bay Water and the Surety. Any attempted sale, assignment, transfer, conveyance or delegation of the Contractor's rights under this Contract or the other Contract Documents in violation of the terms of this paragraph shall be void and shall relieve Tampa Bay Water of any further liability under the Contract Documents but shall not relieve the Contractor or the Contractor's Surety(ies) of any liability. If Tampa Bay Water consents in writing to an assignment, unless specifically stated to the contrary in the consent, the assignment shall not release or discharge the Contractor from any duty, responsibility or obligation set forth in the Contract Documents, and shall not release or discharge the Surety(ies) under the bonds required by the Contract Documents.

6.3 This Contract shall be binding on Tampa Bay Water, the Contractor, and all of their respective successors, heirs, legal representatives and, if Tampa Bay Water has consented to an assignment or delegation as provided in the previous paragraph, assigns and delegates.

6.4 Any waiver by Tampa Bay Water of any provision of the Contract Documents must be specific and in writing and shall apply only to the particular matter concerned and not to other similar or dissimilar matters. Any waiver of any breach of the Contract Documents shall not be held to be a waiver of any other or subsequent breach. Neither the failure of Tampa Bay Water to exercise any power given to Tampa Bay Water under the Contract Documents or to insist upon compliance by the Contractor with Contractor's obligations under the Contract Documents, nor any custom or practice of Tampa Bay Water and Contractor at variance with the terms of the Contract Documents, shall constitute a waiver of Tampa Bay Water's right to demand full and complete compliance by the Contractor with the terms and provisions of the Contract Documents.

6.5 Nothing contained in the Contract Documents shall in any manner authorize, empower or constitute the Contractor, its Subcontractors or Suppliers as agent(s) of Tampa Bay Water; authorize or empower the Contractor, its Subcontractors or Suppliers to assume or create any obligation or responsibility whatsoever, express or implied, on behalf of or in the name of Tampa Bay Water; or authorize or empower the Contractor, its Subcontractors or Suppliers to bind Tampa Bay Water in any manner or make any representation, warranty, covenant, contract or commitment on behalf of Tampa Bay Water. The Contractor shall perform all Work under the Contract Documents as an independent contractor. This Contract does not create, and shall not be construed as creating, any rights enforceable by any person not a party to the Contract.

6.6 This Contract and the Contract Documents shall be governed by and construed in accordance with the Laws and Regulations of the State of Florida without giving effect to any rules governing conflict of laws.

6.7 The parties agree that for any litigation arising under the Contract Documents, venue shall be only in the state courts in and for Pinellas County, Florida.

6.8 All documents prepared or produced by Contractor or any of its Subcontractors pursuant to this Contract are the property of and belong to Tampa Bay Water, provided that Contractor is allowed to reuse such documents with the approval of Tampa Bay Water. If Contractor claims that any such document is proprietary or protected by trade secret or otherwise, Contractor has the burden to establish the basis of any such protection but until judicially declared otherwise, Tampa Bay Water shall have all rights of ownership and use of such documents.

6.9 In no event shall Tampa Bay Water be liable to Contractor, nor shall Contractor be liable to Tampa Bay Water, for any incidental, consequential, or punitive damages based upon claims arising out of or in connection with the performance or non-performance of a party's obligations under this Contract, or the material inaccuracy of any representation made by a party in this Contract, whether such claims are based upon contract, tort, negligence, warranty or other legal theory. Contractor acknowledges and agrees, however, that claims, which are brought by third parties against Tampa Bay Water and for which, but for the application of this paragraph, Contractor would otherwise have an indemnification obligation under this Contract, shall not be considered consequential damages under this paragraph.

6.10 All express representations, indemnifications, or limitations of liability made in or given in this Contract will survive its completion or termination for any reason.

6.11 To the extent permitted by applicable law, contractor and Tampa Bay Water hereby acknowledge and agree that any and all claims arising out of, connected with, or relating to this Contract or the relationship created hereby are matters which, if adjudicated, should be adjudicated by a court without a jury. Therefore, the parties hereby waive a trial by a jury. Neither Tampa Bay Water nor contractor or any successor thereof shall seek a trial by jury in any action or proceeding (whether at law or in equity, whether direct or collateral, whether in contract or in tort) arising out of or related to this Contract or the relationship created hereby. Neither Tampa Bay Water nor Contractor shall seek to consolidate any action or proceeding in which trial by jury has been waived with any other action or proceeding in which a jury trial cannot be or has not been waived. The provisions of this paragraph cannot be and have not been waived. The provisions of this paragraph have been fully discussed by the parties and their respective attorneys and the provisions hereof shall be subject to no exceptions. Tampa Bay Water and contractor acknowledge and agree that no one, including, without limitation, Tampa Bay Water's agents or contractors, has represented that the provisions of this paragraph or of any other paragraph of this Contract will not be fully enforced.

6.12 Contractor warrants that it has not employed or retained any company or person, other than a bona fide employee working solely for the Contractor to solicit or secure this Contract and that Contractor has not paid or agreed to pay any person, company, corporation, individual, or firm, other than a bona fide employee working solely for Contractor any fee, commission, percentage, gift or other consideration contingent upon or resulting from the award or making of this Contract.

7.0 Public Records and Audit Rights

7.1 Contractor shall keep all books, records, files, drawings, plans and other documentation, including all electronically stored items, which concern or relate to the services required hereunder (collectively referred to as "Records"), for a minimum of three (3) years from the date of expiration or termination of this Contract, or as otherwise required by any applicable law,

whichever date is later. Tampa Bay Water, or any duly authorized agents or representatives of Tampa Bay Water, shall have the right to order, inspect and copy all such Records as often as they deem necessary during any such period of time. This right to audit, inspect and copy the Records shall include all of the Records of the Subconsultants.

7.2 IF THE CONTRACTOR HAS QUESTIONS REGARDING THE APPLICATION OF CHAPTER 119, FLORIDA STATUTES, TO THE CONTRACTOR'S DUTY TO PRIVDE PUBLIC RECORDS RELATING TO THIS CONTRACT, CONTACT THE AGENCY'S CUSTODIAN OF PUBLIC RECORDS VIA PHONE (727) 796-2355 OPTION 6; EMAIL RECORDS@TAMPABAYWATER.ORG; OR MAIL AT 2575 ENTERPRISE ROAD, CLEARWATER, FLORIDA 33763-1102.

7.3 Contractor must keep and maintain all public records required by the Agency in order to perform services under this Contract.

7.4 Upon request from the Agency's custodian of public records, Contractor shall provide the Agency with a copy of the requested public records or allow the records to be inspected or copied within a reasonable time at a cost that does not exceed the cost provide in Chapter 119, Florida Statutes, or as otherwise provided by law.

7.5 Contractor shall ensure that public records that are exempt or confidential and exempt from public records disclosure requirements are not disclosed except as authorized by law for the duration of the contract term and following completion of the contract if the Contractor does not transfer the records to the Agency.

7.6 Upon completion of the contract, Contractor shall transfer, at no cost, to the Agency all public records in the possession of the Contractor or keep and maintain public records required by the Agency to perform the service under this contract. If the Contractor transfers all public records to the Agency upon completion of the contract, the Contractor shall destroy any duplicate public records that are exempt or confidential and exempt from public records disclosure requirements. If the Contractor keeps and maintains public records upon completion of the Contract, the Contractor shall meet all applicable requirements for retaining public records. All records stored electronically must be provided to the Agency, upon request from the Agency's custodian of public records, in a format that is compatible with the information technology systems of the Agency.

8.0 Definitions

Defined terms used in this Contract have the intent and meanings assigned to them in the General Conditions, Article 1, Definitions.

9.0 Engineer

Tampa Bay Water has retained the firm of Stantec Consulting to act as the Engineer, assume all of the duties and responsibilities and have the rights and authority assigned to the Engineer in the Contract Documents with respect to completion of the Work in accordance with the Contract Documents.

10.0 Public Entity Crime Statement

10.1 Pursuant to subsections 287.133(2) and (3), Florida Statutes, a person or affiliate who has been placed on the convicted vendor list following a conviction for a public entity crime may not submit a bid, proposal or reply on a contract to provide any goods or services to a public entity;

may not submit a bid, proposal or reply on a contract with a public entity for the construction or repair of a public building or public work; may not submit bids, proposals or replies on leases of real property to a public entity; may not be awarded or perform work as a contractor, supplier, subcontractor, or consultant under a contract with any public entity; and may not transact business with any public entity in excess of the threshold amount provided in Section 287.017, Florida Statutes, for CATEGORY TWO, for a period of thirty-six (36) months following the date of being placed on the convicted vendor list.

10.2 Contractor hereby certifies and warrants that it has not been placed on any convicted vendor list for the past thirty-six (36) months and is in full compliance with the requirements of subsections 287.133(2) and (3), Florida Statutes.

11.0 Discrimination

Pursuant to Subsection 287.134(2)(a), Florida Statutes, an entity or affiliate who has been placed on the discriminatory vendor list may not submit a bid, proposal, or reply on a contract to provide any goods or services to a public entity; may not submit a bid, proposal, or reply on a contract with a public entity for the construction or repair of a public building or public work; may not submit bids, proposals, or replies on leases of real property to a public entity; may not be awarded or perform work as a contractor, supplier, subcontractor, or consultant under a contract with any public entity; and may not transact business with any public entity. Contractor hereby certifies and warrants that it has not been placed on any discriminatory vendor list and is in full compliance with the requirements of subsections 287.134(2)(a), Florida Statutes.

13.0 Scrutinized Companies and Foreign Countries of Concern

13.1 Contractor certifies that it is in compliance with Section 287.135, Florida Statutes, which provides that a company that has been placed on the Scrutinized Companies with Activities in Sudan List; the Scrutinized Companies with Activities in the Iran Petroleum Energy Section List; the Scrutinized Companies that Boycott Israel List or is engaged in a Boycott of Israel is ineligible and may not submit a bid, proposal, or enter into or renew a contract with an agency for goods or services of $1 million or more. At the time of submission of a bid or proposal for a contract or contract renewal for goods or services of $1 million or more, the company must certify that it

is not on either such List and further that it does not have business operations in Cuba or Syria as required by Section 287.135(5), Florida Statutes.

13.2 Pursuant to Section 287.135, Florida Statutes, Tampa Bay Water reserves the right to terminate any contract for goods or services of $1 million or more if the awarded Contractor:

a. Has been found to have submitted a false Scrutinized Vendor List certification as provided under Section 287.135 subsection (5); or
b. Has been placed on the Scrutinized Companies Scrutinized Companies with Activities in Sudan List or the Scrutinized Companies with Activities in the Iran Petroleum Energy Section List; or
c. Has been engaged in business operations in Cuba or Syria.

13.2 Pursuant to Section 287.135, Florida Statutes, Tampa Bay Water reserves the right to terminate any contract for goods or services of any amount if the awarded Contractor has been placed on the Scrutinized Companies that Boycott Israel List or is engaged in a boycott of Israel.

13.3 Foreign Countries of Concern. Pursuant to Section 287.138, Florida Statutes, Tampa Bay Water may not enter into a contract with an entity that gives access to an individual's personal identifying information if the entity is owned, controlled or organized under the laws of a Foreign County of Concern which includes the People's Republic of China, the Russian Federation, the Islamic Republic of Iran, the Democratic People's Republic of Korea, the Republic of Cuba, the Venezuelan regime of Nicolas Maduro, the Syrian Arab Republic, or any other entity or agency under the significant control of such Foreign County of Concern. Tampa Bay Water reserves the right to terminate any contract for goods or services of any amount if the awarded Contractor is in violation of Section 287.138, Florida Statutes

14.0 Employee Verification

In accordance with Section 448.095 Florida Statutes, the Contractor agrees to register with and utilize the U.S. Department of Homeland Security's E-Verify system to verify the employment eligibility of all new employees hired during the term of the award/contract for the services specified in the award/contract. The Contractor must also include a requirement in subcontracts that the subcontractor must register with and utilize the E-Verify system to verify the employment eligibility of all new employees hired by the subcontractor during the award/contract term. If the Contractor enters into a contract with a subcontractor, the subcontractor must provide the Contractor with an affidavit stating that the subcontractor does not employ, contract with, or subcontract with an unauthorized alien. The Contractor shall maintain a copy of such affidavit for the duration of the award/Contract. If Tampa Bay Water has a good faith belief that the Contractor has knowingly violated Section 448.09(1), Florida Statutes, Tampa Bay Water shall terminate the Contract with the Contractor, and the Contractor may not be awarded a Contract with Tampa Bay Water for at least 1 year after the date on which the award/Contract was terminated. The Contractor is liable for any additional costs incurred by Tampa Bay Water as a result of the termination of the award/contract. If Tampa Bay Water has a good faith belief that a subcontractor knowingly violated the law, but the Contractor has otherwise complied with the law, Tampa Bay Water shall promptly notify the Contractor and order the Contractor to immediately terminate the award/contract with the subcontractor.

15.0 Anti-Human Trafficking

In accordance with Section s.787.06, Florida Statutes, the Contractor must provide Tampa Bay Water with an affidavit regarding Human Trafficking. Affidavit included herein must be completed by Contractor to attest, under penalty of perjury, that Contractor does not use coercion for labor or services as defined in s. 787.06, Florida Statutes.

[THE REMAINDER OF THIS PAGE INTENTIONALLY LEFT BLANK.]

IN WITNESS WHEREOF, Tampa Bay Water and Contractor have signed two (2) copies of this Contract, and all parts of the Contract Documents have been identified by Owner and Contractor. This Contract will be effective on _____ (which is the Effective Date of the Contract). This Contract may be signed in several counterparts, each of which is an original and all of which constitute one and the same instrument.

SUPPLEMENTARY CONDITIONS

Supplementary Conditions to the General Conditions, Article 4*, The Contractor and Its Employees*.

The limits of liability for the following insurance required by the General Conditions, Article 4, The Contractor and Its Employees, as amended in the Supplementary Conditions, shall provide coverage for not less than the following amounts or greater where required by Laws and Regulations:

1. Commercial General Liability. The coverage(s) shall be no less than:
   (a) Minimum limits of $1,000,000 per occurrence combined single limit for all liability must be provided, with umbrella insurance making up the difference between the policy limits of underlying policies and the total amount of coverage required. The referenced limit shall be provided as a separate aggregate for the Work (Project Aggregate).
   (b) Minimum limits of $2,000,000 Aggregate single limit for all liability must be provided, with umbrella insurance making up the difference between the policy limits of underlying policies and the total amount of coverage required. The referenced limit shall be provided as a separate aggregate for the Work (Project Aggregate).

2. Business Automobile Liability. The coverage shall be no less than:
   (a) Minimum limits of $1,000,000 combined single limit for all liability must be provided.

3. Umbrella/Excess Liability. The coverage shall be no less than:
   (a) Minimum limits of $2,000,000 per occurrence must be provided.
   (b) Aggregate limits of $5,000,000 must be provided.

4. Worker's Compensation and Employer's Liability. The coverage shall include:
   (a) Coverage A:
   State: Statutory limits under the Laws of the State of Florida.
   Federal: Statutory limits under the Laws of the United State of America (e.g., Longshoremen's, etc.)
   (b) Coverage B:
   Employer's Liability, bodily injury, occupational sickness or disease, or death of Contractor's employees shall be no less than:
   1) $500,000 Each Accident
   2) $1,000,000 Each Disease
   3) $500,000 Each Employee

Tampa Bay Water requires Contractor employers to purchase workers compensation insurance for all their employees regardless of the number of employees they have and regardless of any other exemptions. Florida law permits employers who may be exempt from purchase of coverage to waive their exemptions and purchase the coverage. Tampa Bay Water requires the Contractor to purchase said coverage.

5. Builder's Risk "All Risk" or Installation Floater Insurance. Coverage shall be no less than the full insurable replacement value of the Work, including completed Work, Work in progress and all insurable building materials, structures, fences, lights, equipment, pumps, electrical components, and similar insurable property. Exceptions to insurable property include underground property (after installation), site work and road work.

6. Additional Requirements:

(a). Tampa Bay Water must be listed as an Additional Insured on General Liability, Auto Liability and Excess policies;
(b). Excess/Umbrella policies shall be written as "follow form";
(c.) The insurance provided for Tampa Bay Water as Additional Insured shall apply as primary and non-contributory insurance;
(d). The Additional Insured Endorsement utilized for General Liability must be form CG 20 10 (07/04) and CG 20 37 (07/04) or broader wording in Tampa Bay Water's favor as approved by Tampa Bay Water;
(e). Contractor shall maintain General Liability coverage for itself and all Additional Insureds for the duration of the Work and maintain completed operations coverage for itself and Additional Insureds for five (5) years after completion of the Work;
(f). All Contractor insurance policies will include a Waiver of Subrogation in favor of Tampa Bay Water;
(g). Each of Contractor's insurance policies shall be endorsed to provide Tampa Bay Water with at least thirty (30) days written notice prior to any material change or cancellation of the policy, to the fullest extent commercially available;
(h). Deductible amounts on Contractor policies shall not exceed $25,000 and shall require approval from Tampa Bay Water; and
(i). In the event Contractor breaches any provision of the Insurance Requirements of the Contract, Tampa Bay Water may deduct the cost of any insurance from any funds Payable to Contractor under the Contract Documents.

6	Progress of the Work	43
7	Payment	49

GENERAL CONDITIONS

1. Definitions

Wherever in the Contract Documents the following terms are used, the intent and meaning shall be as follows:

1.1. Addenda: Instruments issued by Engineer for Tampa Bay Water prior to the advertised time for receipt of Bids that modify the Contract Documents by additions, deletions, clarifications, corrections, or other revisions.

1.2. Contract: The written Contract between Tampa Bay Water and the Contractor covering the Work to be performed.

1.3. Allowances: A specified sum included in the Contract Price to be utilized only at the discretion of Tampa Bay Water.

1.4. Alternates: A specified portion of the Work listed on the Bid which has been added to or deducted from the Base Bid, at Tampa Bay Water's discretion, as identified in the Contract.

1.5. As Approved: The words "As Approved," unless otherwise qualified, shall be understood to be for conformance with the Contract Documents.

1.6. As-Built Contract Documents: A set of the Contract Documents marked up by the Contractor to show the Work as constructed with all modifications from the original Contract Document.

1.7. Base Bid: The sum total of the combined Unit Prices, Lump Sum Prices and Allowances in the Bid, excluding all Alternates.

1.8. Bidder: The person(s), partnership, firm or corporation submitting a Bid for the Work.

1.9. Bid Documents: The "Bid Documents" consist of the Instruction of Bidders, Information to Bidders, Request for Bids, Bid and the Contract Documents.

1.10. Bid Security: The Bid Bond, certified check or cashier's check provided pursuant to this ITB to protect Tampa Bay Water from the unauthorized withdrawal of Bid or refusal to execute the Contract Documents. Electronic Bids received through Bonfire must be accompanied by a copy of a certified check, or cashier's check drawn on a bank in good standing, or the Florida Bid Bond included herein. The Bid Bond must be issued by a surety authorized to issue such bonds in the State of Florida, in the amount of Five percent (5%) of the proposed total Contract Price of the Bid submitted. The Florida Bid Bond included herein shall be given as a guarantee that the Bidder will not withdraw its Bid for a period of One Hundred Twenty (120) days after the opening of Bids.

When submitting the electronic bid, a copy of the Bid Bond should be submitted in the electronic package. The original Bid Bond must be delivered to Tampa Bay Water physically via mail, delivery service or in-person. If submitting electronically, banking information may be redacted on copies of checks. Original checks must be delivered physically and unaltered.

1.11. Business Day: The term Business Day means each day occurring Monday through Friday.

1.12. Change Authorization: A written instrument which, when recommended by the Engineer and signed by Tampa Bay Water, authorizes and directs the Contractor to perform changes in the Work as described in the Change Authorization, and/or gives the basis, if any, for a subsequent adjustment in Contract Price or Contract Time. Upon receipt of a Change Authorization, the Contractor is authorized and required to perform the subject changes in the Work.

1.13. Change Order: A written instrument which, when recommended by the Engineer and signed by Tampa Bay Water and the Contractor, amends the Contract Documents to provide for changes in the Work, and/or Contract Price, and/or Contract Time.

1.14. Construction Directive: A written instrument issued by the Engineer pursuant to Paragraph 7.2.9.

1.15. Contract Documents: The "Contract Documents" consist of the Contract, Addenda, Supplementary Conditions, General Conditions, Specifications, Drawings, Change Order, Change Authorizations, and all other documents expressly incorporated by specific reference thereto. The Contract Documents are sometimes collectively referred to as the "Contract".

1.16. Contractor: The person(s), partnership, firm, or corporation that entered into and is (are) identified in the Contract.

1.17. Contractor's Representative: The Contractor's superintendent, project manager or other person at the location of Work authorized to direct the Work and receive communications from Tampa Bay Water or Engineer.

1.18. Contract Price: The total compensation payable by Tampa Bay Water to the Contractor for the performance of the Work by the Contractor in accordance with the requirements of the Contract Documents, as stated in the Contract and adjusted by all Change Order and Change Authorizations.

1.19. Contract Time: Unless otherwise specified, the Contract Time for all or a designated part of the Work is the period of time allowed, subject to Change Order and Change Authorizations, for completion of a specified part of the Work. The first Day of Contract Time shall be that date as specified on the Notice to Proceed as the date the Contract Time shall commence.

1.20. Correction Period: The period of time established in Paragraph 4.20.2 hereafter for the correction of Defective Work.

1.21. Day: Unless otherwise specifically stated, the term Day shall be understood to mean calendar day.

1.22. Defective: A term used to refer to Work that is faulty, unsatisfactory, deficient, damaged or does not conform to the requirements of the Contract Documents and all applicable Laws and Regulations.

1.23. Drawings: The term Drawings refers to the various drawings, profiles, cross sections, elevations, details, plans and other working drawings and supplementary drawings, or reproductions thereof, sealed by the Engineer, which show the location, character, dimensions, details of the Work to be performed, all as identified in the Contract. Drawings may either be bound in the same book as the balance of the Contract Documents or bound in separate sets, and are a part of the Contract Documents, regardless of the method of binding.

1.24. Engineer: The person or organization identified as such in the Contract that provided the technical design. The term "Engineer" means the Engineer or its authorized representatives.

1.25. Final Completion: The completion of all the Work in accordance with the Contract Documents.

1.26. Laws And Regulations: Federal, State, and Local Statutes, Judicial and Administrative Decisions, Laws, By-Laws, Codes, Rules, Regulations, Resolutions, Ordinances, and/or Orders applicable to the Project.

1.27. Lump Sum Price: The price paid for a specified quantity of Work, which when performed, is paid for on the basis of an agreed price for the completed Work.

1.28. Notice: The term "Notice" or the requirement to notify, as used in the Contract Documents or applicable Laws and Regulations, shall signify a written communication delivered in person; or by certified or registered mail, return receipt requested, to the individual, to a member of the firm, or to an officer of the corporation for whom it is intended.

1.29. Notice Of Award: The written notice of acceptance of the Bid by Tampa Bay Water to the successful Bidder stating that upon compliance by the Bidder, within the time specified, with the requisite conditions stated in this ITB, Tampa Bay Water will deliver the Contract to the successful Bidder for its execution.

1.30. Notice to Proceed: The written Notice issued by Tampa Bay Water to the Contractor, authorizing it to proceed with the Work in accordance with the Contract Documents, and fixing the date for which the Contract Time shall commence.

1.31. Or Equal: The term "or equal" shall be understood to indicate that the "equal" product is the same or better than the named product in function, performance, reliability, quality, and general configuration. Determination of equality in reference to the Project design requirements will be made by the Engineer.

1.32. Partial Utilization: Use by Tampa Bay Water of a portion of the Work (as designated by Tampa Bay Water) before reaching Substantial Completion for all the Work.

1.33. Payment Application: The forms provided by Tampa Bay Water which shall be used by the Contractor in requesting partial or final payment.

1.34. Permit Allowance: The Permit Allowance is for Tampa Bay Water's use in reimbursing the Contractor for the actual cost of permit fees required by Laws and Regulations necessary to perform the Work. This is a pass-through cost and no mark-ups are allowed on the Permit Allowance.

1.35. Progress Report: A written report(s) indicating progress of the Work, estimated date for delivery of materials, and proposed plan for recovery of any delays to the timing and sequence of Work set forth in the Progress Schedule and proposed plan for recovery of any delays to the timing and sequence of Work set forth in the Progress Schedule.

1.36. Progress Schedule: Schedule which shows the timing and sequence of Contractor's proposed execution of the Work and all subsequently issued updates thereto, after said updates have been reviewed and accepted by Tampa Bay Water.

1.37. Project : The name of the Project is as identified in the Contract.

1.38. Project Allowance: The Project Allowance is solely for Tampa Bay Water's use in the payment for changes in the Work, where such changes have been approved pursuant to the Contract Documents.

1.39. Project Representative: The authorized representative(s) of the Engineer who is (are) assigned to the Project or any part thereof.

1.40. Record Drawings: Drawings that are prepared by the Engineer reflecting as-built information provided by the Contractor on Contractor's As-Built Contract Documents.

1.41. Shop Drawings: All drawings, diagrams, illustrations, schedules, and other data prepared by or for the Contractor to illustrate some part of the Work and all illustrations, brochures, standard schedules, performance charts, instructions, diagrams, and other data prepared by a Supplier and submitted by the Contractor to illustrate items of material or equipment.

1.42. Specifications: The term "Specifications" refers to those written technical descriptions of materials, equipment, construction systems, standards and workmanship as applied to the Work, and certain administrative details applicable thereto, all as identified in the Contract. Where standard Specifications, common to the construction industry and to standard engineering practice, are referenced to or are otherwise applicable, the applicable portions of the most current versions of such standard Specifications shall become a part of these Contract Documents. If referenced standard Specifications conflict with Specifications contained herein, the requirements contained herein shall control unless contrary to Laws and Regulations.

1.43. Subcontractor: An entity having a Contract with the Contractor for performing labor on the Work on the Project, or for performing both labor on the Project and furnishing materials or equipment.

1.44. Submittal: The term Submittal includes shop drawings, tests, samples, Progress Schedules and other schedules, Progress Reports and other reports, and any other documents required for submission by the Contract Documents.

1.45. Substantial Completion: Substantial Completion shall be that degree of completion of the Work or specified portion of the Work in accordance with the Contract Documents, as specified in the General Conditions, Article 2, Contract Time of the Contract, certified by the Engineer and approved by Tampa Bay Water as evidenced by the Engineer's issuance of a Certificate of Substantial Completion, sufficient to provide Tampa Bay Water, at its discretion, the full-time use of the Work or Partial Utilization of a specified portion of the Work for the purposes for which it was intended.

1.46. Supplier: A manufacturer, fabricator, distributor, material man, or vendor having an Contract with the Contractor for furnishing materials or equipment for the Project.

Tampa Bay Water, A Regional Water Supply Authority/Owner: Tampa Bay Water, A Regional Water Supply Authority, is the Owner of the Work described in the Contract Documents. The term "Owner" and "Tampa Bay Water" are interchangeable

1.47. Uncontrollable Circumstance: Any act, event or condition affecting the Project, Contractor or Tampa Bay Water to the extent that it materially and adversely affects: (i) the ability of either party to perform any obligation hereunder (except for payment obligations); or (ii) the cost of such party's performance, if such act, event or condition is beyond the reasonable control and is not also the result of the willful or negligent act, error or omission or failure to exercise reasonable diligence on the party relying thereon as justification for not performing an obligation or complying with any condition required of such party under this Contract;

(1) *Inclusions*. Subject to the foregoing, such acts or events include the following:

(a) an act of God, hurricane, landslide, lightning, earthquake, fire, flood, plague, tornadoes, (but not including reasonably anticipated weather conditions for the geographic area of the Work site), explosion, sabotage or similar occurrence, acts of a public enemy, extortion, war, blockade or insurrection, riot or civil disturbance;

(b) a Change in Law;

(c) the failure of any appropriate governmental body or private utility having operational jurisdiction in the area in which the Project is located to provide and maintain Utilities to the Work site;

(d) any failure of title to the Work site or any enforcement of any encumbrance on the site or on any improvements thereon not consented to in writing by, or arising out of any action or Contract entered into by, the party adversely affected thereby;

(e) the preemption of materials or services by a governmental body in connection with a public emergency or any condemnation or other taking by eminent domain of any portion of the Project or Work site;

(f) the presence at the Work site of (i) subsurface structures, materials or conditions having archaeological significance; (ii) any habitat of endangered or similarly protected species; (iii) functioning subsurface structures at the site (to the extent not identified by Tampa Bay Water to Contractor); and (iv) subsurface conditions of which Contractor, through the exercise of reasonable diligence, could not reasonably be expected to have notice;

(g) strikes by an organized union of the Contractor's Subcontractors;

(h) the failure of Tampa Bay Water to obtain any permit or approval which is Tampa Bay Water's responsibility to obtain, on or prior to the dates set forth in the Project Schedule.

(2) *Exclusions*. It is specifically understood that none of the following acts or conditions shall constitute Uncontrollable Circumstances:

(a) general economic conditions, interest or inflation rates, or currency fluctuations or exchange rates;

(b) changes in the financial condition of Tampa Bay Water, Contractor or any Subcontractor affecting the ability to perform their respective obligations;

(c) the consequences of error, neglect or omissions by the parties and any Subcontractor in the performance of any Work or responsibilities under this Contract;

(d) any increase for any reason in premiums charged by the Contractor's insurers or the insurance markets generally for the required Insurance;

(e) the failure of Contractor to secure any patents or licenses in connection with the technology necessary to perform its obligations hereunder;

(f) the failure of any Subcontractor or Supplier to furnish labor, materials, services or equipment for any reason other than for acts or events specifically included herein as Uncontrollable Circumstances;

(g) equipment failure except when due to acts or events specifically enumerated herein as Uncontrollable Circumstances; or

(h) any Change in Law with respect to the issuance of any permit or approval, the enactment of any statute, or the promulgation of any regulation affecting the standards or requirements of performance, the terms and conditions of which do not impose more stringent or burdensome requirements on the Project or Contractor than in effect on the Effective Date of the Contract.

Unit Price: The price paid for units of Work which, when performed, is measured and paid for on the basis of units.

1.48 Work: The word "Work" within these Contract Documents shall include all material, labor, services, documentation, tools, equipment, fuel, utilities, temporary facilities and all appliances, machinery, transportation, and appurtenances necessary to perform and complete the Project in accordance with the Contract Documents, and such additional items not specifically indicated or described which can be reasonably inferred as belonging to the item described in the Contract Documents or indicated and as required by good practice to provide a complete and satisfactory system(s) or structure(s).

1.49 Working Hours: Working Hours shall mean the hours between 7:00 a.m. and 6:00 p.m., Monday through Friday, excluding legal holidays. Maintenance of equipment will be allowed outside of Working Hours.

1.50 Other terms not defined herein shall have the meanings assigned to them elsewhere in the Contract Documents, and if not assigned and where the context will permit, as used or defined in the Florida Statutes.

2. Contract Documents

2.1 Intent of Contract Documents

2.1.1. The Contract Documents comprise the entire Contract between Tampa Bay Water and the Contractor concerning the Work. The Contract Documents are complementary, and what is called for by one shall be as binding as if called for by all. The intent of the Contract Documents is to describe a functionally complete Project (or part thereof) to be constructed in accordance with the Contract Documents. Any work, materials, or equipment that may reasonably be inferred from the Contract Documents as being required to produce the indicated result shall be supplied whether or not specifically called for, with no increase in the Contract Price or extension of the Contract Time. When words which have a customary technical or trade meaning are used to describe work, materials, or equipment, such words shall be interpreted in accordance with that meaning, unless a contrary definition appears in the Contract Documents, in which case the Contract Documents shall control.

2.1.2. Whenever the terms "as ordered", "as directed", "as required", "as allowed", "As Approved", or terms of like effect, or the adjectives "reasonable", "suitable", "acceptable", "proper", or "satisfactory", or adjectives of similar effect, are used to describe a requirement, direction, review, or judgment of the Engineer or Tampa Bay

Water as to the Work, it is intended that the requirement, direction, review, or judgment will be to evaluate the Work for compliance with the Contract Documents.

2.1.3. No use of any provision of any standard Specifications, manual, or code (whether or not expressly incorporated by reference in the Contract Documents), or Suppliers' instructions, shall be effective to (a) change the duties and responsibilities of the Contractor, Tampa Bay Water, or Engineer, or any of their consultants, agents, or employees from those assigned in the Contract Documents; or (b) to assign to the Contractor, Tampa Bay Water, or Engineer, or any of their consultants, agents, or Tampa Bay Water employees, any duty or authority to supervise or direct the execution of the Work or to assume responsibility contrary to the provisions of the Contract Documents.

2.2 Priority of the Contract Documents

2.2.1. In resolving inconsistencies or apparent conflicts among the Contract Documents, the first listed below shall take precedence and control over those following:

a. Contract
b. Supplementary Conditions
c. General Conditions
d. Specifications / Drawings
e. Front-Ends

2.2.2. In resolving inconsistencies between Drawings and Specifications, Contractor shall be obligated to comply with the more costly or stringent requirement, as determined by Tampa Bay Water. Figure dimensions on Drawings shall take precedence over scale dimensions. Detailed Drawings shall take precedence over general Drawings.

2.3 Examination and Verification of Contract Documents

2.3.1. Before undertaking each part of the Work, the Contractor shall carefully study and compare the Contract Documents with each other, check and verify pertinent figures and all applicable field measurements, and compare and coordinate related requirements for Work (i.e. location, dimensions, fit, completeness, consistency, etc.).

2.3.2. The Contractor shall, immediately upon discovery, report in writing to the Engineer any conflict, error, omission, or ambiguity in the Contract Documents which the Contractor discovers, whether prior to or while performing the Work, and shall obtain a written interpretation or clarification from the Engineer before proceeding with any affected Work. The Engineer shall promptly investigate the matter and until such interpretation or clarification is obtained from the Engineer, any Work done by the Contractor which is directly or indirectly affected by same, will be at the Contractor's risk and the Contractor shall bear all resultant costs and delays.

2.4 Documents to be kept on the Project Site

The Contractor shall keep at least one copy of the Contract Documents on the Project site in good order, available to Tampa Bay Water and its representatives. The Contractor shall maintain on a daily basis at the Project site, and make available to the Engineer on request, one current set of As-Built Contract Documents which have been accurately marked by Contractor to indicate all modifications in the completed Work that differ from the original Contract Documents. As a condition precedent to Final Completion of the Work, the Contractor shall give the Engineer one complete set of these As-Built Contract Documents.

2.5 Additional Contract Documents

The Engineer will provide to the Contractor one electronic S&S files. Paper set(s) can be provided, if needed/requested.

2.6 Ownership of Contract Documents

All portions of the Contract Documents, and copies thereof furnished by the Engineer are the property of Tampa Bay Water. They are not to be used on other work and are to be returned

to the Engineer at the completion of the Work with the exception of the Contractor's record set. Any reuse or adaptation of these materials by Contractor without specific written permission by Tampa Bay Water is expressly prohibited and shall be at the risk of the Contractor and without liability or legal expense to Tampa Bay Water or Engineer. The Contractor shall hold Tampa Bay Water and Engineer harmless from any and all damages and claims, including reasonable attorneys' fees and legal assistants' fees, for such unauthorized use.

3. The Engineer

3.1 Authority of the Engineer

The Engineer shall be a representative of Tampa Bay Water during the Contract Time for performance of the Work. The Engineer shall have authority to reject Work which does not conform to the Contract Documents. However, the Engineer's authority shall not affect the Contractor's responsibility to perform the Work in accordance with the Contract Documents.

3.2 Duties and Responsibility of the Engineer

3.2.1. The Engineer shall make visits to the Project site at intervals appropriate to the various stages of construction to observe the progress and quality of the Work and to determine if the Work is proceeding in accordance with the Contract Documents. Visits and observations made by the Engineer are solely for the benefit of Tampa Bay Water and shall not relieve the Contractor of its obligations including, but not limited to, the Contractor's obligations to conduct comprehensive inspections of the Work and to furnish materials and perform acceptable work, and to provide adequate safety precautions, all in accordance with the Contract Documents.

3.2.2. The Engineer shall respond, in writing, within 21 days of receipt (unless more time is reasonably required for response), to all claims by Tampa Bay Water or the Contractor required for performance of the Work and requests for clarification or interpretation of the Contract Documents. The Engineer's response shall be of factual and/or technical nature, and shall not include the legal interpretation of the Contract Documents.

3.2.3. The Engineer may assign one or more Project Representatives to observe the Work. It is understood that such Project Representatives shall have authority to issue Notices of non-conformance and make decisions within the limitations of authority of the Engineer. The Contractor shall furnish all reasonable assistance required by the Engineer or Project Representative for proper observation of the Work. Observations by the Project Representative shall not relieve the Contractor of its obligations including, but not limited to, the Contractor's obligation to conduct comprehensive inspections of the Work and to furnish materials and perform work, and to provide adequate safety precautions, all in accordance with the Contract Documents.

3.2.4. On-site observations by the Engineer, Project Representatives and other assistants shall not relieve the Contractor from its obligation to perform the Work in accordance with the Contract Documents, nor constitute acceptance of Defective Work, nor give rise to any duty on their part to make the observations for the benefit of the Contractor.

3.2.5. The Engineer shall review Submittals within the times specified in the General Requirements, or if not specified, within 21 days of receipt (unless more time is reasonably required for review) for conformance with the design of the Project and for compliance with the Contract Documents. The Engineer's review shall not extend to means, methods, techniques, sequences, nor to procedures of construction (except where a specific means, method, technique, sequence, or procedure of construction is

indicated in or required by the Contract Documents), nor to safety precautions or programs incident thereto.

3.3 Rejected Work

3.3.1. The Engineer shall have authority to disapprove or reject Work at any time during the performance of the Work, which the Engineer believes to be Defective; or to require special inspection or testing of the Work, whether or not the Work is fabricated, installed, or completed. The Engineer's authority does not relieve the Contractor from its responsibility to perform in accordance with the Contract Documents. When the Contractor is notified by the Engineer of rejection of Defective Work, the Contractor shall take immediate action to correct same.

3.3.2. All Defective Work, whether discovered before or after Final Completion, shall be removed and replaced by the Contractor, without cost to Tampa Bay Water, with Work which shall conform to the Contract Documents. Failure on the part of the Engineer to condemn or reject Defective Work shall not be construed to imply acceptance of such Work. Tampa Bay Water shall reserve and retain all of its rights and remedies at law or equity against the Contractor and its Surety for correction of or damages arising from any and all Defective Work.

3.4 Lines and Grades

Lines and grades shall be established as provided in the Drawings or the Supplementary Conditions. All information, stakes or marks shall be carefully preserved by the Contractor, and if the information, stakes or marks are destroyed or removed, all such information, stakes or marks shall be replaced at the Contractor's expense.

3.5 Detail Drawings and Instructions

If required, the Engineer shall furnish within 21 days (unless more time is reasonably required), in writing, additional instructions by means of Drawings or otherwise, as required for the proper execution of the Work. All such Drawings and instructions shall be in writing and consistent with the Contract Documents.

4. The Contractor and Its Employees

4.1 Contractor

4.1.1. The Contractor shall independently perform all Work included in the Contract Documents and shall not be considered an agent of Tampa Bay Water or of the Engineer, nor shall the Contractor's Subcontractors, Suppliers, or employees be agents of Tampa Bay Water or of the Engineer.

4.1.2. The Contractor shall provide competent, suitably qualified and reliable personnel, Subcontractors, and Suppliers to survey and lay-out the Work and furnish and perform the Work in accordance with the Contract Documents.

4.2 Subcontractors and Suppliers

4.2.1. The Contractor shall be responsible and liable to Tampa Bay Water for the acts and omissions of Contractor's employees, agents, and Subcontractors and Suppliers and their respective employees.

4.2.2. The Contractor shall list each Subcontractor or Supplier whom the Contractor intends to award a subcontract, other than those Subcontractors or Suppliers previously listed in the Bid, by submitting to Tampa Bay Water in writing, for each additional Subcontractor and Supplier, the same information required to be set forth in the Bid.

4.2.3. Work performed by a Subcontractor or Supplier shall be through an appropriate written subcontract which expressly binds the Subcontractor or Supplier to the terms and conditions of the Contract Documents for the express benefit of Tampa Bay Water, and requires each of them to assume toward the Contractor all of the obligations which the Contractor assumes toward Tampa Bay Water.

4.2.4. The Contractor shall deliver to Tampa Bay Water a copy of each subcontract with a Subcontractor or Supplier within fifteen (15) Days after receiving the Notice to Proceed or the execution of the subcontract, as applicable.

4.2.5. The Contractor shall perform (with the Contractor's own employees) not less than fifty percent (50%) of the difference between the Contract Price minus the cost of materials for the Project.

4.2.6. Nothing contained in the Contract Documents or any subcontract shall create any contractual relationship between any Subcontractor or Supplier and Tampa Bay Water or Engineer. Provided, however, Tampa Bay Water shall be named an intended third party beneficiary under all such subcontracts.

4.3 Equal Opportunity

4.3.1. At all times during the performance of the Work, Contractor shall comply with Title VII of the Civil Rights Act of 1964 and the Florida Civil Rights Act of 1992. The Contractor shall not discriminate against any employee or applicant for employment because of race, color, religion, sex, national origin, age, handicap, or marital status. The Contractor shall take affirmative action to ensure that employment applications are used and that employees are treated without regard to their race, color, religion, sex, national origin, age, handicap or marital status for employment, upgrading, demotion, or transfer; recruitment advertising; layoff or termination; rates of pay, or other forms of compensation; and selection for training, including apprenticeship. The Contractor agrees to post in conspicuous places, available to employees and applicants for employment, notices setting forth the provisions of this non-discrimination clause.

4.3.2. The Contractor shall state in all solicitations or advertisements for employment placed by or on behalf of the Contractor that all qualified applicants will receive consideration for employment without regard to race, color, religion, sex, national origin, age, handicap, or marital status.

4.4 Indemnity

4.4.1. In consideration of One Hundred Dollars ($100.00) separately allocated from the first consideration paid hereunder, and other good and valuable consideration, including Tampa Bay Water's execution of the Contract, the sufficiency of which is hereby acknowledged by Contractor, Contractor shall indemnify and hold harmless Tampa Bay Water, its officers, employees, agents, representatives and consultants from and against all liabilities, costs, losses, and damages (including, but not limited to, all reasonable attorney's fees to the extent caused by the negligence, recklessness or intentional wrongful conduct of Contractor, any Subcontractor, or any individual or entity directly or indirectly employed or utilized by Contractor in the performance of the Work under this Contract. This indemnification shall also include all liabilities, damages, losses and costs including, but not be limited to, reasonable attorneys' fees arising out of any infringement of patents or copyrights incident to performing the Work by the Contractor, any Subcontractor or any person or organization employed by Contractor to perform or furnish any of the Work, or anyone for whose acts any of them may be liable.

4.4.2. With respect to all claims against Tampa Bay Water or the Engineer by any employee of the Contractor, the indemnification obligation under this Article shall not be limited in any way by any limitation on the amount or type of damages, compensation or benefits payable by or for the Contractor (or any Subcontractor or Supplier) under workers' compensation, disability benefit or other employee benefit acts.

4.4.3. The separate consideration recited in Paragraph 4.4.1 above is in consideration of the indemnification obligation set forth in this Paragraph 4.4, as well as any other indemnification provided by Contractor under the Contract Documents.

4.4.4 Contractor acknowledges and agrees its indemnification obligations under Paragraph 4.4.1 shall be effective and fully enforceable even if any party indemnified hereunder is partially at fault or responsible for the claim; provided, however, Contractor shall not be liable or responsible for indemnifying any claim which is the result of the sole negligence of Tampa Bay Water, Engineer or any other party indemnified under Paragraph 4.4.1.

4.5 Bonds and Insurance

A. Performance Bonds, Payment Bonds and Other Bonds

4.5.1. The Contractor shall furnish Performance Bonds and Payment Bonds, each in an amount at least equal to the Contract Price, in accordance with the requirements of Sections 255.05, Florida Statutes, as security for the faithful performance and payment of all Contractor's obligations under the Contract Documents. These Bonds shall be in the forms specified in the Contract Documents. The Contractor shall also furnish any other bonds required in the Supplementary Conditions. All bonds shall be executed by such sureties as are named in the current list of "Companies Holding Certificates of Authority as Acceptable Reinsuring companies" as published in Circular 570 (amended) by the Audit Staff Bureau of Accounts, U.S. Treasury Department. Attorneys-in-Fact who sign Bonds shall attach a certified copy of their Power of Attorney.

B. The Contractor's Insurance – General

4.5.2. The Contractor shall purchase and maintain the coverage specified in this Article and the Supplementary Conditions, and shall be written for not less than the limits of coverage specified in the Supplementary Conditions. The Contractor shall submit certificates to Tampa Bay Water itemizing the policies issued, limits of coverage, expiration dates and endorsements provided, using the form provided in the Contract Documents.

4.5.3. The Contractor shall not start or continue to perform any Work unless it has in full force and effect all required insurance as per the Contract Documents. The Contractor shall submit the insurance certificates provided with these Contract Documents for review by Tampa Bay Water prior to performing any Work. All Subcontractors and Suppliers performing Work on the Project shall provide the same types and limits of insurance as is required of the Contractor hereunder, unless otherwise expressly waived in writing by Tampa Bay Water.

4.5.4. Insurance shall be provided by insurance companies authorized to transact business and which have an agent for service of process in the State of Florida, having at least an "A-" Best's Rating and a Class VIII or better financial size category in accordance with the most current A.M. Best Company rating.

4.5.5. All the policies of insurance shall be endorsed to provide that any failure of the Contractor to comply with any provisions will not prejudice coverage for Tampa Bay Water. Deductible amounts shall be reduced or eliminated upon Tampa Bay Water's written request in which case Contractor shall be entitled to payment of any additional costs for such reduction or elimination of deductibles in accordance with Paragraph 7.2 of these General Conditions. The insurer's costs of providing the insured(s) a defense at trial in bankruptcy proceedings, and/or appeal, including attorneys' fees, and legal assistants' fees, shall not be included within the limits of the policy coverage, but shall remain the insurer's separate responsibility.

4.5.6. To the fullest extent commercially available, all the policies of insurance shall be endorsed to provide that the coverage afforded will not be cancelled, adversely changed or renewal refused until at least thirty (30) Days' prior written Notice has been given to Tampa Bay Water and the Engineer by certified mail, return receipt requested.

Should any coverage approach expiration during the period in which it is to remain in full force and effect, it shall be renewed prior to its expiration, and certificate filed with Tampa Bay Water at least thirty (30) Days prior to expiration. Tampa Bay Water and Engineer, their officers, agents, and employees shall be named as Additional Insured(s) on the Contractor's and any Subcontractor's commercial general liability, comprehensive automobile liability insurance, umbrella/excess liability and builder's risk policies for any claims arising out of work performed under the Contract Documents.

4.5.7. In case of the breach of any provision of this Article, Tampa Bay Water, at its option, may take out and maintain, at the expense of the Contractor, such insurance as Tampa Bay Water may deem proper and may deduct the cost of such insurance from any monies which may be due or become due the Contractor under the Contract Documents.

4.5.8. In carrying out any of the provisions of the Contract Documents or in exercising any authority granted by the Contract Documents, there will be no personal liability upon any board member, officer, employee or agent of Tampa Bay Water.

C. The Contractor's Liability Insurance

4.5.9. The Contractor shall purchase and maintain commercial general liability and other insurance appropriate for the Work, in the limits of at least those specified in the Supplementary Conditions, and which shall provide protection from claims itemized below which may arise out of or result from the Contractor's performance and furnishing of the Work and the Contractor's other obligations under the Contract Documents, whether the Work and the obligations be performed or furnished by the Contractor, Subcontractor or any Supplier, to wit:

a. Claims under workers' compensation, disability benefits, and other applicable similar employee benefits acts;

b. Claims for damages because of bodily injury, occupational sickness or disease, or death of the Contractor's employees; claims for damages because of bodily injury, sickness or disease, or death of any person other than the Contractor's employees; claims for damages insured by personal injury liability coverage sustained by any person as a result of an offense directly or indirectly related to the employment of such person by the Contractor, or by any other person for any other reason; claims for damages, other than to the Work itself, because of injury to or destruction of tangible property wherever located, including loss of use; claims arising by operation of Laws and Regulations for damages because of bodily injury or death of any person or for damage to property; and

c. Claims for damages because of bodily injury or death of any person, or property damage arising out of ownership, maintenance, operation, use of loading and unloading of any owned, hired or non-owned motor vehicle used in the Work, including employee non-ownership use.

4.5.10. The Contractor's liability insurance shall include contractual liability coverage sufficient to cover the Contractor's indemnification obligations under the Contract Documents. The Contractor agrees to pay on behalf of Tampa Bay Water, and to provide and pay for a defense for all claims covered by the Contractor's obligations under the indemnification provisions.

4.5.11. The Contractor's liability insurance shall be endorsed to include as additional insured: Tampa Bay Water, the Engineer, their consultants, any subsidiaries or affiliates, and each of their directors, officers, shareholders, agents, or employees. The insurance afforded to these additional insured shall be primary insurance, and neither the coverage nor the amount of insurance provided under the Contractor's policies shall

be reduced or prorated by the existence of any other insurance applicable to any loss they may have sustained. If the Subcontractors and Suppliers do not purchase and maintain the coverage specified in this Article or the Supplementary Conditions, they shall be included in the Contractor's policies as additional insured.

4.5.12. The Contractor's liability insurance shall remain in effect until three (3) years after Final Completion and at all times after that when the Contractor may be correcting or removing and replacing Defective Work. Evidence of insurance shall be furnished to Tampa Bay Water yearly.

4.5.13. These requirements shall not be construed to limit the liability of the Contractor or its insurers. Tampa Bay Water does not represent that the specified coverage or limits of insurance are sufficient to protect the Contractor's interests or liabilities.

D. Property Insurance

4.5.14. The Contractor shall purchase and maintain builder's risk "all risk" completed value insurance coverage for physical loss or damage upon the Work at the Project site to its full insurable value, including completed Work and Work in progress. This insurance shall list Tampa Bay Water as an additional insured and shall include the interests of the Contractor, Subcontractors and Suppliers, the Engineer, and Tampa Bay Water's and the Engineer's consultants in the Work, all of whom shall be listed as additional insured. At a minimum, and not by way of limitation, it shall insure against extended coverage, perils of fire, lightning, windstorm, flood, rain, hail, explosions, riot, tornado, hurricane, sink holes, theft, vandalism and malicious mischief, collapse and water damage and shall include damages, losses and expenses arising out of or resulting from any insured loss incurred in the repair or replacement of any insured property (including but not limited to fees and charges of engineers, architects, attorneys and other professionals). If not covered under the "all risk" insurance, the Contractor shall purchase and maintain similar property insurance on parts of the Work stored on and off the Project site or in transit whether or not such Work is included in a Payment Application. The policy shall be endorsed to permit use or occupancy by Tampa Bay Water prior to Final Completion. The property insurance may have a deductible amount, which shall be borne by the Contractor, not exceeding $25,000.00. The property insurance shall comply with the requirements of this Article.

E. Waiver of Subrogation Rights

4.5.15. Tampa Bay Water and the Contractor intend that all policies of insurance shall protect Tampa Bay Water, the Contractor, and the Engineer, provide primary coverage for all losses and damages caused by the perils covered. Accordingly, all such policies shall be endorsed to provide that in the event of payment of any loss or damage the insurer shall have no rights of subrogation or other recovery against any of the parties named as insured or additional insured, and if the insurers require separate waiver forms to be signed by the Engineer or Tampa Bay Water's and the Engineer's consultants, Tampa Bay Water will obtain separate waiver forms, and if such forms are required of any Subcontractor or Supplier, the Contractor will so obtain them.

4.6 Taxes and Charges

The Contractor shall pay any and all sales and use taxes and all withholding taxes, whether State or Federal, and pay all Social Security charges and also all State Unemployment Compensation charges, and pay or cause to be withheld, as the case may be, any and all taxes, charges, fees, or sums whatsoever, which are now required to be paid or withheld under any laws, unless otherwise modified in the Supplementary Conditions.

4.6.2. Tampa Bay Water reserves the right to implement an Owner's Direct Purchase sales tax savings program with respect to the Project. In such event, Contractor shall cooperate and assist Tampa Bay Water, at no additional cost, with respect to the

implementation of that sales tax savings program. Tampa Bay Water and Contractor shall work together to identify particular pieces of equipment and material that are suitable for direct purchase by Tampa Bay Water. As such items are identified, Tampa Bay Water shall issue purchase orders, in accordance with a schedule mutually acceptable to Tampa Bay Water and Contractor, to the appropriate Suppliers of such items for the direct purchase of those items by Tampa Bay Water. Tampa Bay Water shall pay the Supplier of such items directly and the title for such items shall pass directly from the Supplier to Tampa Bay Water. Notwithstanding the foregoing, Contractor shall remain responsible for the ordering, scheduling, coordinating, insuring, delivery, unloading, storage, installation, operation, and warranties of all such direct purchase items, as if Contractor had purchased the items itself for incorporation into the Work. In that regard, Tampa Bay Water shall assign to Contractor all contract and warranty rights Tampa Bay Water may have against any such Supplier, so as to permit Contractor to assert warranty or other contract claims for defective or nonconforming materials or equipment directly against the Supplier. As Tampa Bay Water issues purchase orders to the Suppliers of such items, Tampa Bay Water and Contractor shall execute a Change Order which deducts from the Contract Price the amount being paid by Tampa Bay Water, plus the amount of sales tax that otherwise would have been paid on such items. As an inducement to Contractor to more fully cooperate and facilitate this sales tax savings program, Contractor shall receive as a bonus, at the time final payment is to be made hereunder, a sum equal to ten percent (10%) of the total amount of sales tax saved by Tampa Bay Water as a result of these direct purchases.

4.7 Codes, Ordinances, Permits, and Licenses

4.7.1. The Contractor shall keep itself fully informed of all applicable Laws and Regulations, which in any manner affect the Work. All permits, licenses, inspection fees, impact fees, and other costs necessary for performance of, compliance with, and/or completion of the Work shall be obtained and paid for by the Contractor, unless otherwise modified in the Supplementary Conditions.

4.7.2. If Tampa Bay Water has obtained and paid for any permits or licenses applicable to the Work, the Contractor shall meet all requirements of those permits and licenses. The Contractor shall bear all costs arising from the Contractor's responsibilities under this Article.

4.7.3 All Work is to be performed by Contractor in accordance with the most current applicable Laws and Regulations. Provided, however, in the event of any changes to any applicable Laws and Regulations that take effect after the date Contractor submitted its Bid to Tampa Bay Water, and under the circumstances it is not reasonable to assume that Contractor was or should have been aware of such changes, and Contractor provides Notice to Engineer of the changes and Engineer thereupon directs Contractor in writing to perform the Work in accordance with such changes, and such changes impact the time and/or cost of Contractor's performance of the Work, a Change Order or Change Authorization shall be issued with respect to such changes.

4.8 Superintendence

4.8.1. The Contractor shall keep at the Project site supervisory personnel who shall direct the Work in a competent manner, applying the skills, expertise and attention necessary to perform the Work in accordance with the Contract Documents. The Contractor shall designate, in writing before starting Work, a competent Project superintendent who shall be an employee of the Contractor and shall have complete authority to represent and to act for the Contractor. The Contractor shall notify Tampa Bay Water

and Engineer in writing prior to any change in superintendent assignment. If Tampa Bay Water objects to the Contractor's superintendent, the Contractor shall submit a replacement superintendent at no increase in Contract Price nor extension in Contract Time. The Contractor shall be responsible for all construction means, methods, techniques, sequences, and procedures, and for providing adequate safety precautions and coordinating all portions of the Work.

4.8.2. If Tampa Bay Water or the Engineer object to any of the Contractor's personnel, by reason of being unfit, incompetent, unskilled, disorderly, intemperate, or otherwise hindering the Work, the Contractor shall promptly correct the problem and, if required by Tampa Bay Water or the Engineer, remove such personnel from the Work. Failure to comply with this provision shall constitute a material breach of the Contract and be grounds for withholding payment.

4.9 Reception of Engineer's Communications

4.9.1. The Contractor's Representative at the Project site shall have authority to act on behalf of and contractually bind the Contractor. All communications given to the Contractor's Representative shall be deemed given to the Contractor. Communications of major importance will be confirmed in writing upon request from the Contractor.

4.9.2. The Engineer may schedule Project meetings for the purposes of discussing and resolving matters concerning the various elements of the Work. The time and place for these meetings and the names of persons required to be present shall be determined by Tampa Bay Water and the Engineer. The Contractor shall comply with these attendance requirements and shall also require its Subcontractors and Suppliers to comply.

4.10 Safety

4.10.1. The Contractor shall be solely responsible for the condition of the Project site, including the safety of all persons and property during performance of the Work. This requirement shall apply continuously and not be limited to normal Working Hours. Safety provisions shall conform to U.S. Department of Labor (OSHA), and all other applicable Laws and Regulations, as well as all applicable safety rules and regulations promulgated by Tampa Bay Water from time to time. Where any of these are in conflict, the more stringent requirement shall be followed. The Contractor's failure to thoroughly familiarize itself with the aforementioned safety provisions shall not relieve it from compliance with the obligations and penalties set forth therein

4.10.2. The Contractor shall develop and maintain for the duration of this Project a safety program, and a written safety plan specific to the Project that will effectively incorporate and implement all safety provisions required by any Laws and Regulations. The Contractor shall appoint an employee assigned to the Work who shall be responsible to supervise and enforce compliance with the safety program.

4.10.3. The Contractor, as a part of its safety program, shall maintain at its office or other prominent place at the Project site, the written safety plan and safety equipment applicable to the Work as prescribed by the aforementioned authorities and all Articles necessary for giving first aid to the injured. The written safety plan shall establish the procedures for the immediate removal to a hospital or a doctor's care of persons (including employees) who may be injured on the Project site.

4.10.4. The Contractor must give Tampa Bay Water and the Engineer prompt Notice of all accidents or injuries whatsoever arising out of, or in connection with, the performance of the Work, whether on or adjacent to the Project site, giving full details in writing, including statements of witnesses. The prompt Notice required hereunder shall be

given within 24 hours with respect to any injuries, and within two (2) working days as to all other accidents.

4.10.5. If a claim is made by anyone against the Contractor or any Subcontractor for any reason including, but not limited to, any accident, the Contractor shall give Tampa Bay Water and the Engineer prompt Notice, giving full details of the claim.

4.11 Protection of Work and Property

4.11.1. The Contractor shall have full responsibility for locating all underground utilities in advance of excavation (whether they are indicated on the Contract Documents or indicated by visible markers); scheduling excavation and uncovering in advance, unless it conflicts with Work already uncovered; shoring, blocking, and protecting the underground utilities; repairing any damage done to the satisfaction of Tampa Bay Water or the owners of those underground utilities; giving prompt Notice to Tampa Bay Water and the Engineer of any newly discovered underground utility; and the safety, protection and repairing of any damage done to any affected Work. All costs involved and time required to perform these responsibilities shall be considered as having been included in the Contract Price and in the Progress Schedule for performing the Work within the Contract Time; except that in the case of newly-discovered underground utilities, those costs and times shall, upon proper documentation, be considered pursuant to the General Conditions, Article 6.8. Differing Site Conditions, for adjustment of the Contract Price and/or the Contract Time.

4.11.2. The Contractor shall at all times safely guard and protect from damage Tampa Bay Water's property, property on which the Project is located if not owned by Tampa Bay Water, adjacent property, and its own Work from injury or loss. The Contractor shall provide all facilities required for protection of the Work according to all Laws and Regulations and local conditions.

4.11.3. The Contractor shall protect its Work and materials from damage due to the nature of the Work, the natural elements, carelessness of others, or from any cause, until Final Completion of the Work.

4.11.4. The Contractor shall notify owners of adjacent property (including underground utility owners) not less than 48 hours, or the time period required by Laws and Regulations, whichever period is longer, prior to the Work affecting the property, and shall coordinate and cooperate with them in the location, protection, removal, relocation, and/or replacement of their property. All damage, injury or loss to property caused, directly or indirectly, in whole or part, by the Contractor, any Subcontractor or Supplier or anyone for whose acts any of them may be liable, shall be remedied at the Contractor's expense. The Contractor shall shore up, brace, underpin, and protect as may be necessary, all foundations and other parts of all existing structures adjacent to the Project site.

4.12 Responsibility of Contractor to Act in Emergency

In case of an emergency which threatens loss or injury to persons or property, the Contractor shall take appropriate remedial action, without previous instructions from Tampa Bay Water or Engineer, as the situation may warrant, and immediately provide Notice to Tampa Bay Water and the Engineer of its action. Any claim for compensation by the Contractor, together with substantiating documentation in regard to expense caused by emergency acts, shall be submitted to Tampa Bay Water and the Engineer and the amount of compensation if any, shall be determined by mutual Contract.

4.13 Materials and Appliances

4.13.1. Unless otherwise modified in the Supplementary Conditions, all materials to be incorporated into the Work shall be new. The Contractor shall furnish satisfactory evidence to the Engineer as to the kind and quality of materials.

4.13.2. In selecting and/or approving equipment and materials for installation in the Project, neither Tampa Bay Water nor the Engineer shall be responsible for injuries or claims resulting from failure of the equipment or material to comply with Laws and Regulations and applicable federal, state, and local safety codes or requirements, or other applicable safety requirements, or failure due to the Work being Defective.

4.14 Contractors' and Manufacturers' Compliance with State Safety Laws and Regulations, OSHA, and Other Code Requirements

The completed Work shall include all necessary permanent safety devices, such as machinery guards and similar safety items required by the state and federal (OSHA) industrial authorities and other Laws and Regulations. Further, any features of the Work subject to such safety regulations shall be fabricated, furnished, and installed (including installation of Tampa Bay Water-furnished equipment) in compliance with these requirements. Subcontractors and Suppliers shall be held responsible for compliance with the requirements included herein. The Contractor shall notify all Suppliers and Subcontractors of the provisions of this Article.

4.15 Submittals

4.15.1. After checking and verifying all field measurements and after complying with all applicable procedures, Contractor shall submit to the Engineer for its review all Submittals, which shall bear a stamp or specific written indication that the Contractor has satisfied Contractor's responsibilities under the Contract Documents with respect to Submittals. All Submittals shall be promptly submitted by Contractor so as to cause no delay to the completion of the Work. All Submittals shall be identified as Engineer may require. The data shown shall be complete with respect to quantities, dimensions, specified performance, and design criteria, materials, and similar data sufficient to enable Engineer to review the information.

4.15.2. All Submittals shall be identified clearly as to material, Supplier, pertinent data such as catalog numbers, and the use for which it is intended. The Contractor shall review all Submittals prior to submission, for compliance with the Contract Documents and shall provide specific written certification of compliance.

4.15.3. Before each submission, the Contractor shall have determined and verified all quantities, dimensions, specified performance criteria, installation requirements, materials, catalog numbers, and similar data with respect thereto and reviewed and coordinated each Submittal with other Submittals and with the requirements of the Work and for compliance with the Contract Documents. At the time of each submission, Contractor shall provide specific written Notice of each variation from the requirements of the Contract Documents, and in addition, shall cause a specific notation of each such variation to be made on each Submittal submitted for review and approval. In the absence of such notification, the approval of a Submittal shall not waive or alter the original requirements of the Contract Documents.

4.15.4. The Contractor shall make all corrections required by Engineer, and shall resubmit the required number of corrected copies of Submittals and new samples for review. The Contractor shall direct specific attention in writing to revisions other than the corrections called for by the Engineer on previous Submittals.

4.15.5. Where a Submittal or sample is required by the Contract Documents, any related Work performed prior to the Engineer's review and approval of the pertinent Submittal shall be at the Contractor's sole expense and responsibility.

4.15.6. Submittals are to demonstrate how the Contractor intends to conform with the design of the Project and the information given in the Contract Documents.

4.15.7. All costs incurred by Tampa Bay Water and the Engineer for the review of a particular Submittal after the Engineer's second review shall be borne by the Contractor, and shall be reimbursed by the Contractor to Tampa Bay Water. Tampa Bay Water may withhold such costs from payments to the Contractor.

4.15.8. The Contractor shall not be entitled to any claim for additional time or compensation caused by the review of any resubmittals.

4.16 Substitution of Materials

4.16.1. Whenever materials, equipment, type of construction, or process are described in the Contract Documents by using a brand name, make, manufacturer, supplier, patent, catalog number, or technique, the naming or Specifications of the item is intended to denote the standard of quality and essential characteristics of the item or process required by Tampa Bay Water. Unless words indicating that no substitution is permitted are used, items from prospective suppliers may be accepted by the Engineer if sufficient information is submitted by the Contractor in its written application for the substitution to allow the Engineer to determine whether the material or equipment proposed (1) will perform at least equally well, function, and achieve the results called for by the design, (2) is at least of equal materials of construction, quality and necessary essential design features, (3) is suited to the same use as that named or specified, (4) conforms to the desired detailed requirements for that item including, but not limited to, durability, strength, appearance, dimensions, aesthetics (where aesthetics are essential), safety, service, comparable usefulness, reliability, economy of operation, and ease of maintenance, (5) evidences a proven record of performance, and (6) will not extend the Contract Time or increase the Contract Price. Contractor shall be responsible for and shall pay all costs in connection with any inspection or testing required in connection with Tampa Bay Water's or Engineer's acceptance of a Supplier of materials or equipment proposed to be incorporated in the Work.

4.16.2. Each application for a substitution shall certify that the proposed substitute will meet each of the six criteria itemized in Paragraph 4.16.1., and that the evaluation and acceptance by the Engineer of the proposed substitute will not prejudice completion of the Work within the Contract Time. All variations of the substitute from the item named or specified shall be identified (operation, materials or construction finish, thickness or gauge of material dimensions, loads, tolerances, deleted/added features, etc.), and information regarding available maintenance, repair, and replacement service shall be indicated. The Contractor is solely responsible for verifying that substitutes are in accordance with the Contract Documents, and that dimensions, arrangement, design, and construction details, and all other features of substitutes are suited to the specified purpose.

4.16.3. A proposed substitute will be accepted as equivalent or "Or-Equal" to that named or specified if, in the Engineer's judgement, it meets the criteria in Paragraph 4.16.1. No substitute shall be utilized, ordered, or installed without the Engineer's prior written acceptance.

4.17 Tests, Samples, and Observations

4.17.1. The Contractor shall furnish, with no increase in Contract Price, the necessary test pieces and samples, including facilities and labor for obtaining the same, as required by the Contract Documents or requested by the Engineer. When required by the Contract Documents or requested by the Engineer, the Contractor shall furnish certificates of any designated tests of materials and equipment.

4.17.2. The Contractor shall establish a quality control system to ensure sufficient supervision, inspection and testing of all items of Work, including those of the Subcontractors and Suppliers, and to ensure conformance to the applicable Contract Documents with

respect to products, workmanship, construction, maintenance, finish, functional performance, and identification. The Contractor's quality control system shall include checking, approval, and coordination of Submittals and the surveillance of all specified tests.

4.17.3. Tampa Bay Water, the Engineer, authorized government agents and their representatives shall at all times be provided safe access to the Work whenever it is in preparation or progress, and the Contractor shall provide facilities for such access and for observations, including maintenance of temporary and permanent access.

4.17.4. If the Contract Documents, Laws and Regulations or any public authority requires any Work to be specially tested or approved, the Contractor shall give timely Notice to the Engineer of its readiness for testing or approval.

4.17.5. If any testing, inspection, or approval reveals failure of any part of the Work to conform to the Contract Documents, the Contractor shall not recover any costs made necessary by that failure, and shall reimburse Tampa Bay Water for all direct, indirect, and consequential costs made necessary by that failure including those of repeated procedures, and compensation for the Engineer's services. Such reimbursement may be withheld from payment to the Contractor.

4.17.6. If a portion of the Work is covered contrary to the Engineer's request or to requirements specifically expressed in the Contract Documents, it must, if required by the Engineer, be uncovered for the Engineer's examination and be recovered at the Contractor's expense without change to the Contract Time or Contract Price. If any Work should be covered up without approval or consent of the Engineer, re-examination of questioned Work may be ordered by the Engineer, and if so ordered, the Work shall be uncovered by the Contractor. If it is found that such Work is Defective, Contractor shall bear all direct, indirect, and consequential costs of such uncovering, exposure, observation, inspection, correction of the Defective Work, and testing and of satisfactory reconstruction, (including but not limited to fees and charges of engineers, architects, attorneys, and other professionals) and Tampa Bay Water shall be entitled to reimbursement or to deduct the costs from payment to the Contractor. If it is found that such Work is not Defective, Tampa Bay Water shall reimburse Contractor for the cost of uncovering, inspecting, and recovering such Work.

4.18 Royalties and Patents

The Contractor shall pay all royalty and patent fees unless otherwise specified. Pursuant to the indemnity provisions of the General Conditions, Article 4.4, Indemnity, the Contractor shall defend all suits or claims for infringement of any patent rights and shall save Tampa Bay Water and the Engineer harmless from any and all loss, including reasonable attorneys' fees and legal assistants' fees on account thereof.

4.19 Contractor's Right to Terminate Contract

If the Work is stopped under an order of any court or other public authority for a period of more than 3 months, through no act or fault of the Contractor, its Subcontractors, or their respective employees, or if Tampa Bay Water should fail to pay the Contractor within forty-five (45) Days after the time specified in the General Conditions, Article 7.1. Partial Payments, any sum recommended by the Engineer and approved by Tampa Bay Water, then the Contractor may, upon fifteen (15) Days written Notice to Tampa Bay Water and the Engineer, suspend Work. If Tampa Bay Water fails to correct the conditions, which under this Article justify the Contractor's suspension of the Work, the Contractor may, after fifteen (15) Days additional written Notice to Tampa Bay Water and the Engineer, terminate the Contract. Upon termination, the Contractor's sole and exclusive remedy shall be the same as and limited to those rights set forth in Paragraph 6.6.6 hereafter. Contractor shall not be entitled to any

additional rights or remedies against Tampa Bay Water, including loss profits and other damages, all such other remedies being expressly waived by Contractor.

4.20 Warranty and Guarantee; Correction of Defective Work During Correction Period

4.20.1. The Contractor warrants and guarantees to Tampa Bay Water that all Work will be in accordance with the Contract Documents and will not be Defective, including all Work performed or furnished by any Subcontractor or Supplier. This warranty and guarantee is in addition to and shall survive the Contractor's obligations under the Correction Period set forth in this Article.

4.20.2. The Contractor shall make, at its own expense, all repairs or replacements necessitated by Defective Work, and pay for any damage (whether to the Work itself or other property), including routine repairs resulting from such Defective Work, which becomes evident within the one (1) year after the date of Substantial Completion established by the Engineer for the entire Work or for specified items of Work, or within one (1) year after the date of Final Completion of the Work if Tampa Bay Water did not operate or use the entire facility between the Substantial Completion date and Final Completion, or within such longer period of time as may be prescribed by Laws and Regulations or by the terms of any applicable special guarantee required by the Contract Documents ("Correction Period"). After the Correction Period, Contractor shall remain liable to Tampa Bay Water, and its successors, for Defective Work and damage resulting from such Defective Work, but such liability shall not include an obligation to make routine repairs, unless otherwise agreed to in writing.

4.20.3. Contractor's subcontracts with its manufacturer(s) and the Supplier(s) of all other materials and equipment used in the Project which have a cost of more than $1,000.00 shall require an express warranty from the manufacturer(s) and the Supplier(s) to Tampa Bay Water that the materials (1) are new, (2) have been manufactured and supplied in accordance with the requirements of the Contract Documents, and (3) are not Defective. Such express warranty shall be for a period of not less than the Correction Period.

4.20.4. Defective Work identified for correction during the Correction Period but remaining Defective after its expiration shall be considered as part of the obligations of the warranty or guarantee.

4.20.5. The Contractor agrees to defend, indemnify and hold Tampa Bay Water and the Engineer harmless from liability of any kind arising from damage due to Defective Work. The Contractor shall make all repairs and replacements promptly upon receipt of written order for same from Tampa Bay Water or the Engineer. If the Contractor fails to make the repairs and replacements promptly, or in an emergency, where delay would cause serious risk, loss, or damage, Tampa Bay Water may have the Defective Work corrected or the rejected Work removed and replaced, and the Contractor and its Surety shall be liable for the cost thereof.

4.20.6. Contractor's subcontracts with its manufacturer(s) and the Supplier(s) of all materials shall permit the Contractor to assign to Tampa Bay Water all express and implied warranties from the manufacturer(s) and the Supplier(S). Contractor hereby assigns to Tampa Bay Water all express and implied warranties from the manufacturer(s) and the Supplier(S) of all materials used in the Work.

4.20.7. The specified warranties and guarantees and the Contractor's obligations for correction of Work specified in this Article are in addition to and not in limitation of any other specific remedies provided in the Contract Documents or by Laws and Regulations.

4.20.8. Tests, inspections or approvals shall not in any way relieve the Contractor from its obligations to perform the Work in accordance with the Contract Documents, or to warrant and guarantee the Work as provided in the Contract Documents.

4.20.9. These provisions shall not be construed to prohibit Tampa Bay Water from seeking damages or any remedy at law or equity against Contractor for breach of the Contract, Defective Work or the warranties provided herein.

4.21 Allowances

Contractor shall not proceed with any Allowance item unless and until it has received express written authorization from Tampa Bay Water. The Contract Price shall be adjusted by Change Order or Change Authorization based upon the actual cost of the Allowance items authorized in writing by Tampa Bay Water.

4.22 Contractor's Representations:

4.22.1. Contractor has examined and carefully studied the Contract and Contract Documents.

4.22.2. Contractor has visited the Work Site and become familiar with and is satisfied as to the general, local, and site conditions that may affect cost, progress, and performance of the Work.

4.22.3. Contractor is familiar with and is satisfied as to all federal, state and local Laws and Regulations that may affect cost, progress, and performance of the Work.

4.22.4. Contractor has carefully studied all: (1) reports of explorations and tests of subsurface conditions (if any) at or contiguous to the Work site and all drawings of physical conditions in or relating to existing surface or subsurface structures at or contiguous to the Work site which have been identified or made available by Tampa Bay Water; and (2) reports and drawings of Hazardous Environmental Conditions (if any) at the Work site which have been identified or made available by Tampa Bay Water.

4.22.5. Contractor is aware of the general nature of Work to be performed by Tampa Bay Water and others at the Work site that relates to the Work to the extent indicated in the Contract Documents.

4.22.6. Contractor has correlated the information known to Contractor, information and observations obtained from visits to the Site, reports and drawings identified in the Contract Documents, and all additional examinations, investigations, explorations, tests, studies and data with the Contract Documents.

4.22.7. Contractor has given Tampa Bay Water written notice of all conflicts, errors, ambiguities or discrepancies that Contractor has discovered in the Contract Documents and the written resolution thereof by Tampa Bay Water is acceptable to Contractor.

4.22.8. The Contract Documents are sufficient to indicate and convey understanding of all terms and conditions for performance and furnishing of the Work.

4.22.9. Contractor's execution of this Contract is not based upon their reliance upon any representation, understanding or Contract not expressly set forth herein. Tampa Bay Water has not made any representation to Contractor except as expressly set forth herein.

4.22.10. Contractor is organized and exists under the laws of the State of Florida and is in good standing in the State of Florida and is authorized to do business in the State of Florida.

4.22.11. Contractor has the full power and authority to execute and deliver this Contract and to incur and perform the obligations provided for herein and therein, all of which have been duly authorized by all proper and necessary action of the governing body of the Contractor. Contractor is in compliance with all laws and regulatory requirements to which they are subject.

4.22.12 Contractor executes this Contract as a free and voluntary act, without any duress, coercion, or undue influence exerted by or on behalf of Tampa Bay Water or any other party.

4.22.13 This Contract is a valid, binding and enforceable obligation of Contractor, and does not violate any law, rule, regulation, contract or Contract otherwise enforceable by or against Contractor, except as the same may be limited by bankruptcy, insolvency, reorganization or other similar laws affecting the rights of creditors generally.

5. Tampa Bay Water/Owner

5.1 General Provision

5.1.1. Written communications from Tampa Bay Water to the Contractor shall in general be issued through the Engineer, but if issued directly by Tampa Bay Water, a copy shall be provided to the Engineer.

5.1.2. Tampa Bay Water may issue without negotiation, and at its discretion, Change Authorizations, as provided in the Contract Documents. Only Tampa Bay Water is empowered under the Contract Documents to order changes in the Work that affect Contract Time or Contract Price or quality.

5.1.3. If the Work is Defective, or the Contractor fails to supply sufficiently skilled workers or suitable materials or equipment, or fails to furnish or perform the Work in a way that the completed Work will conform to the Contract Documents, Tampa Bay Water may order the Contractor to stop the Work, or any portion of the Work in question, until the cause for the stop order has been eliminated; however, this right of Tampa Bay Water to stop the Work shall not give rise to any duty on the part of Tampa Bay Water to exercise this right for the benefit of the Contractor or any other party. The Contractor shall not be allowed to recover any costs resulting from an order to stop the Work, and the Contractor shall reimburse Tampa Bay Water for all direct, indirect, or consequential costs attributable to an order to stop the Work; those costs to be documented as to reasonableness, and Tampa Bay Water shall be entitled to an appropriate decrease in Contract Price, or to withhold such decrease against any amounts recommended for payment. The Contractor shall remain responsible for maintaining and performing in accordance with the Progress Schedule and shall not be entitled to any extension in Contract Time or any increase in Contract Price.

5.1.4. Neither Tampa Bay Water, the Engineer, nor Tampa Bay Water's consultants will be responsible for the Contractor's means, methods, techniques, sequences, or procedures of construction, or the safety precautions, and programs related to safety, and neither Tampa Bay Water nor Engineer or any of their consultants shall be responsible for the Contractor's failure to perform or furnish the Work in accordance with Contract Documents.

6. Progress of the Work

6.1 Beginning of the Work

6.1.1. Prior to starting the Work, the Contractor shall prepare and submit to the Engineer, a Progress Schedule and a schedule for Submittals in a format acceptable to Tampa Bay Water and the Engineer and as specified in the General Requirements showing the dates on which each part or division of the Work is expected to be started and completed, and a schedule for Submittals.

6.1.2. No sooner than ten (10) Days before the Notice to Proceed is issued, a pre-construction conference shall be held to review the steps undertaken by the Contractor to comply with the schedule requirements; review the qualifications of the Contractor's on-site personnel; review the Contractor's plans for lay-down and staging

areas, construction traffic, and access to the Project site, parking, communications, procedures, and other similar matters.

6.2 Schedules and Progress Reports

6.2.1. The Progress Schedule or schedule recovery actions, once reviewed and accepted by Tampa Bay Water and Engineer, shall be utilized to report progress or schedule recovery actions, and to evaluate the Contractor's Payment Applications. The Contractor shall be required to keep Tampa Bay Water informed of the progress of the Work by delivering updated Progress Schedules prior to the seventh (7th) day of each month for Tampa Bay Water and Engineer' review and acceptance. Contractor's Submittal of acceptable monthly updates to the Progress Schedules is a condition precedent to Tampa Bay Water's obligation to make payments to Contractor hereunder. Notwithstanding anything in the Contract Documents to the contrary, it is expressly acknowledged and agreed that no review or acceptance of any Progress Schedule by Tampa Bay Water or Engineer shall be construed as an admission or acknowledgement by Tampa Bay Water or Engineer that any such Progress Schedule was either reasonable or achievable.

6.2.2. Prior to the seventh (7th) day of each month, the Contractor shall submit to the Engineer, an itemized Progress Report of the delivery status of purchased equipment and material, Shop Drawings and the status of shop and field fabricated Work. These Progress Reports shall indicate, but shall not be limited to, the dates of the purchase orders, the estimated delivery dates of any material and/or equipment, and cause(s) of delays, if any.

6.2.3. In addition to retainage, Tampa Bay Water shall have the right to withhold all or any portion of Progress Payments for the Work if the Contractor fails to update and submit the Progress Schedule(S) and Progress Reports as specified.

6.2.4. Neither Tampa Bay Water's nor the Engineer's review of the Contractor's Progress Schedule, or Tampa Bay Water's decision to raise or not to raise any objections about the Contractor's Progress Schedule, shall impose on Tampa Bay Water or the Engineer any responsibility for the timing, planning, scheduling, or execution of the Work, nor relieve Contractor of its obligation to complete the Work in a timely manner.

6.3 Prosecution of the Work

6.3.1. Tampa Bay Water and the Contractor agree that time is the essence with respect to Contractor's performance under the Contract Documents. The Contractor shall perform the Work at such time, and in or on such part(s) of the Project site as may be required to complete the Work as required by the Contract Documents.

6.3.2. If the Contractor desires to carry on Work at night or otherwise outside of the Working Hours, it shall give timely Notice to Tampa Bay Water and Engineer to allow satisfactory arrangements to be made for observing the Work in progress. The Contractor shall reimburse Tampa Bay Water for all of Tampa Bay Water's expenses associated with the Work performed outside of normal Working Hours.

6.3.3. The Contractor shall carry on the Work and adhere to the most recent approved Progress Schedule during all disputes or disagreements with Tampa Bay Water. No Work shall be delayed or postponed pending resolution of any disputes or disagreements. Upon receipt of a written order from the Engineer or Tampa Bay Water, the Contractor will immediately proceed with the Work regardless of whether a Change Order or Change Authorization has or has not been issued.

6.4 Tampa Bay Water's Right to Retain Imperfect Work

If any part or portion of the Work completed under the Contract Documents shall prove Defective, Tampa Bay Water shall have the right in its sole discretion, to retain such Work and may make such deductions in the payment due the Contractor as may be just and reasonable.

6.5 Tampa Bay Water's Right to do Work

Should the Contractor neglect to prosecute the Work in conformance with the Contract Documents or neglect or refuse at its own cost to remove and replace Work as shall have been rejected by the Engineer, then Tampa Bay Water may notify the Contractor and its Surety of the condition, and after seven (7) Days written Notice to the Contractor and its Surety, or without Notice if an emergency or danger to the Work or public exists, and without prejudice to any other right which Tampa Bay Water may have under the Contract Documents, take over that portion of the Work which has been improperly executed, and correct the deficiencies and deduct the cost thereof from the payments then or thereafter due the Contractor.

6.6 Tampa Bay Water's Right to Terminate

6.6.1. At any time, Tampa Bay Water may request the Contractor to provide adequate assurances of its ability to complete the Work in the manner and times designated in the Contract Documents. The types of adequate assurances shall be designated by Tampa Bay Water and shall consist of reasonable means for the Contractor to prove its ability to perform.

A. Termination for Cause

6.6.2. Tampa Bay Water, shall have full power and authority to terminate the services of the Contractor seven (7) Days after providing Notice to the Contractor and its Surety, or sooner if safety to persons or property is in question, because:

a. the Contractor refuses or fails to prosecute the Work, or separable part of the Work, with the diligence that will cause its completion within the corresponding Contract Time, including any authorized adjustments; supply sufficient skilled workers, materials or equipment in adherence with the Progress Schedule; or comply with the Progress Schedule requirements; or
b. the Contractor fails to complete the Work, or any separable part, within the corresponding Contract Time, including any authorized adjustments; or
c. the Contractor refuses or fails to make prompt payment to Subcontractors, disregards Laws and Regulations; refuses or fails to perform the Work in conformance with the Contract Documents; or violates any provision of the Contract Documents; or
d. the Contractor fails to provide Tampa Bay Water with adequate assurances in accordance with this Article, that the Contractor can complete the Work in accordance with the Contract Documents.

6.6.3. If, after the furnishing of said Notice, the Contractor and the Surety fail to cure or correct the default, Tampa Bay Water may terminate Contractor's right to perform the Work and take possession of the Project site and of all materials, tools, and appliances thereon, and require Contractor to assign to Tampa Bay Water any or all of Contractor's subcontracts with Subcontractors or Suppliers, as directed by Tampa Bay Water, and finish the Work by whatever method it may deem expedient and charge the cost thereof to the Contractor and Surety. In such case, the Contractor shall not be entitled to receive any further payment until the Work is finally completed. If the expense of completing the Work exceeds such unpaid balance of the Contract Price, the Contractor and its Surety shall pay the difference to Tampa Bay Water.

6.6.4. Where the Contractor's rights to perform the Work have been so terminated by Tampa Bay Water, the termination shall not affect any rights or remedies of Tampa Bay Water against the Contractor then existing or which may accrue after termination. Any retention or payment of monies due the Contractor by Tampa Bay Water shall not release the Contractor from its contractual liability or any other liability.

B. Termination for Convenience

6.6.5. Upon seven (7) Days written Notice to the Contractor and its Surety, Tampa Bay Water may, without cause and without prejudice to any other right or remedy, elect to terminate the Contractor's services under the Contract Documents in whole or in part. Upon receipt of such Notice, the Contractor shall immediately proceed in accordance with any specific provisions or instructions, to protect and maintain the Work, and make reasonable and diligent efforts to mitigate costs associated with the termination.

6.6.6. In any such termination for the convenience of Tampa Bay Water, the Contractor, as its sole and exclusive remedy, shall be entitled to payment for that portion of the Contract Price attributable to the Work completed, prior to receipt of the Notice of termination, in accordance with the Contract Documents, together with Contractor's reasonable and direct out-of-pocket termination expenses; provided, however, Contractor shall not be entitled to any further or additional recovery against Tampa Bay Water including, but not limited to, any lost profit on Work not performed or any other damages however categorized.

6.6.7. If, after Notice of termination for cause as provided in Paragraph 6.6.A above, it is determined the Contractor was not in default or that Tampa Bay Water was not entitled to the remedies set forth therein, the termination shall be deemed to have been for the convenience of Tampa Bay Water and Contractor's rights and remedies shall be the same as and limited to those set forth in Paragraph 6.6.6 above.

6.6.8. No waiver, express or implied, of any covenant, provision, right or remedy herein shall at any time thereafter be held to be a waiver of the terms and conditions of this Article.

6.7 Delays and Extensions of Time

6.7.1. If the Contractor is delayed in the progress of the Work by any act or neglect of Tampa Bay Water or the Engineer, or by any other contractor retained by Tampa Bay Water, or by strikes, lockouts, fire, adverse weather conditions not reasonably anticipated, or acts of nature, or any other cause beyond the fault and neglect of the Contractor, within 48 hours of the start of the occurrence, the Contractor shall provide Notice to Tampa Bay Water. Within seven (7) Days after the event which caused the delay has ended, the Contractor must provide full documentation of the impact of the delay. The Contract Time may be extended by Change Order or Change Authorization for such reasonable time as the Engineer and Tampa Bay Water determine. No extension of time will be granted to the Contractor for delays occurring to parts of the Work that have no measurable impact on the completion of the total Work. No extension of Contract Time will be considered for weather conditions reasonably anticipated for the area in which the Work is being performed. Reasonably anticipated weather conditions will be based on official records of monthly precipitation and other historical data. Adverse weather conditions, if determined by the Engineer to be of a severity that would impact progress of the Work, may be considered as cause for an extension of Contract Time. No request by the Contractor for an equitable adjustment to the Contract Time under this Article will be allowed, unless the Contractor has given the Notice and documentation within the times required.

6.7.2. Delays in delivery of equipment or material purchased by the Contractor or its Subcontractors or Suppliers shall not be considered as a cause for delay. The Contractor shall be fully responsible for the timely ordering, scheduling, expediting, delivery, and installation of all equipment and materials.

6.7.3. Within 21 days (unless a longer period of time is reasonably required) after the Contractor submits to Tampa Bay Water and the Engineer a written request for an extension of time, the Engineer will present its written opinion to Tampa Bay Water as to whether an extension of time is justified and, if so, its recommendation as to the

number of Days for time extension. Tampa Bay Water shall make the final decision on all requests for extensions to Contract Time.

6.7.4. The Contractor waives its right to file claims unless the claims are filed within the times specified in the Contract Documents. Tampa Bay Water's determination shall be final and binding on the Contractor unless the Contractor files suit within thirty (30) days after receipt of Tampa Bay Water's decision.

6.7.5. Notwithstanding anything in the Contract Documents to the contrary, no interruption, interference, inefficiency, suspension or delay in the commencement or the progress of the Work for any cause whatever, including those for which Tampa Bay Water or Engineer may be responsible, in whole or in part, shall relieve Contractor of its duty to perform or give rise to any right to damages or additional compensation from Tampa Bay Water. Contractor expressly acknowledges and agrees that it shall receive no damages for delay. Contractor's sole remedy, if any, against Tampa Bay Water will be the right to seek an extension to the Contract Time, in accordance with the procedures set forth in this Article 6.7; provided, however, the granting of any such time extension shall not be a condition precedent to the aforementioned "No Damage for Delay" provision. This paragraph shall expressly apply to claims for early completion, as well as to claims based on late completion. Notwithstanding the foregoing, if the Work is delayed due to the fault or neglect of Tampa Bay Water or Engineer, and such delays have a cumulative total of more than 30 calendar days, Contractor may make a claim, in accordance with the procedures set forth in Article 7.3, for its actual and direct delay damages accruing after said 30 calendar days.

6.8 Differing Site Conditions

6.8.1. The Contractor shall promptly, and before the conditions are disturbed, provide Notice to Tampa Bay Water and the Engineer of:

a. any subsurface or latent physical conditions at the Project site which differ materially from those (i) observed by Contractor prior to the Submittal of its Bid or (ii) indicated in the Contract Documents or the Existing Condition Documents referenced in the Information to Bidders,

or

b. any unknown physical conditions at the Project site, of an unusual nature, which differ materially from those ordinarily encountered and generally recognized as inherent in work of the character provided for in the Contract Documents.

6.8.2. The Engineer shall investigate the reported conditions promptly after receiving the Notice from the Contractor. If the conditions do materially differ and cause an increase or decrease in the Contractor's cost or time for performance of the work, an equitable adjustment shall be made in accordance with the procedures set forth in Articles 6.7 and 7.3 herein. Notwithstanding the provisions of this paragraph, if the reported condition in question would have been revealed by a thorough on-site inspection, Tampa Bay Water in its sole discretion shall have the right to deny any such claim for an adjustment in the Contract Price or Contract Time.

6.8.3. No request by the Contractor for an equitable adjustment to the Contract Price or Contract Time for differing site conditions will be allowed if made after the time periods set forth in Articles 6.7 or 7.3, or Final Completion, whichever first occurs.

6.9 Liquidated Damages

Should the Contractor fail to achieve Substantial Completion of the Work within the Contract Time, as that time may be adjusted pursuant to the terms of the Contract Documents, the Contractor shall pay to Tampa Bay Water the liquidated damages as set forth in the Contract. Tampa Bay Water shall have the right to deduct the liquidated damages from any amount due, or that may become due to the Contractor. If an insufficient amount of the Contract Price

remains, the amount of liquidated damages shall be due and collectible from the Contractor and its Surety, jointly and severally.

6.10 Other Contracts

6.10.1. Tampa Bay Water reserves the right to let other contracts in connection with the Project. The Contractor shall afford other contractors reasonable opportunity for the introduction and storage of their equipment and materials for the execution of their work and shall properly interface and coordinate its Work with theirs.

6.10.2. If the execution of any part of the Work depends on the performance of any other contractor, utility service company or Tampa Bay Water, the Contractor shall promptly provide Notice to the Engineer of any defects or deficiencies that render it incompatible with the intended results of these Contract Documents. The Contractor's failure to provide the required Notice shall constitute an acceptance of the work by others as being fit and proper for integration with the Work.

6.11 Use of Premises

6.11.1. The Contractor shall confine its equipment, the storage of materials, and the operation of its workers to the areas shown on the Contract Documents or indicated by Laws and Regulations, permits, easements, licenses or directions of Tampa Bay Water or the Engineer. The Contractor shall provide, at its own expense, any rights-of-way or access to the Work which it may require outside the limits of Tampa Bay Water's property interests or easements and shall furnish Tampa Bay Water and the Engineer copies of permits and Contracts for use of property outside that provided by Tampa Bay Water prior to entering said properties.

6.11.2. The Contractor shall not load nor permit any part of any structure to be loaded in any manner that will endanger the structure, nor shall the Contractor subject any part of the Work or adjacent property to stresses or pressures that will endanger it.

6.11.3. The Contractor shall take all precautions to minimize inconvenience to residents living adjacent to the Project site by maintaining access to driveways and providing dust control for the Project site and noise control devices for dewatering equipment. Contractor shall assume full responsibility for any damage to any such land or area, or to the owner or occupant thereof, or of any land or areas contiguous thereto, resulting from the performance of the Work.

6.12 Substantial and Final Completion Dates

6.12.1. When the Contractor considers that the entire Work or designated portion thereof has progressed to the point where it is sufficiently complete in accordance with the Contract Documents, and it has been proven to be ready for its intended use, the Contractor shall provide Notice to Tampa Bay Water and the Engineer that the Contractor considers the Work or designated portion thereof, Substantially Complete (except for listed items to be completed or corrected prior to Final Completion). The Contractor shall prepare an initial list of items of Work to be corrected or completed for Final Completion and attach that list to the above referenced Notice. Within a reasonable time after that, Tampa Bay Water, the Contractor, and the Engineer shall make an inspection to determine the status of completion.

6.12.2. If Tampa Bay Water and Engineer agree that Substantial Completion of the Work has been achieved, the Engineer shall issue a Certificate of Substantial Completion for the purpose of establishing the starting date for specific equipment warranties, and to establish the date that Tampa Bay Water shall assume the cost of operating such equipment. Said Certificate shall not be considered as Final Completion of any portion of the Work or relieve the Contractor from completing the remaining Work within the specified time and in compliance with the Contract Documents. The Engineer shall review and supplement the Contractor's initial list of items of Work to be corrected or

completed for Final Completion and such revised and supplemental list shall be attached to the Certificate of Substantial Completion. Provided, however, the failure to include any incomplete or Defective Work on said list shall not relieve or excuse the Contractor from completing all of the Work in accordance with the requirements of the Contract Documents.

6.12.3. When the Contractor considers the entire Work has progressed to the point where it is complete in accordance with the Contract Documents, the Contractor shall provide Notice to Tampa Bay Water and the Engineer that the Contractor considers the Work to have reached Final Completion.

6.13 Performance Testing

Operating equipment and systems shall be performance tested in accordance with the General Requirements and in the presence of the Engineer to demonstrate compliance with the Contract Documents. The Contractor shall schedule such testing with the Engineer at least one (1) week in advance of the planned date for testing.

6.14 Tampa Bay Water's Use of Portions of the Work

Following issuance of the Notice of Substantial Completion, Tampa Bay Water may occupy and operate the Work. Such occupancy and operation shall not be considered as Final Completion of any portion of the Work, nor shall such occupancy or use be considered as cause for an extension of the Contract Time.

6.15 Cutting, Patching, or Fitting

The Contractor shall do all cutting, patching, or fitting of its Work that may be required to make its several parts come together properly and fit the Work to receive or be received by work of other contractors shown in or reasonably implied by the Contract Documents.

6.16 Cleaning Up

The Contractor shall, at all times, keep property on which Work is in progress and the adjacent property free from accumulations of waste material or rubbish caused by employees or by the Work. Upon completion of the construction, the Contractor shall remove all temporary structures, rubbish caused by employees, Suppliers, Subcontractors, or the Work, and waste materials resulting from its operations.

6.17 Intoxicants

The Contractor and persons under its employ shall not bring onto, possess, sell, or use alcohol, narcotics, drugs (other than prescription drugs, provided the person in possession of the drug has a valid prescription in his or her name, or over-the-counter drugs which may be purchased legally by the person), or controlled substances while on the Project site, including parking lots, at any time, including all breaks and lunch periods. The Contractor and persons under its employ shall not report to, or commence, or continue to work while under the influence of alcohol or any drugs, regardless of whether those drugs were legally or illegally taken. The Contractor and persons under its employ shall not undertake any activities at the Project site which create a nuisance or improperly disturbs or interferes with Tampa Bay Water's operations at the Project site or the use and enjoyment of any adjacent properties by their respective owners. Gambling on the Project site is prohibited.

7. Payment

7.1 Partial Payments

A. General

7.1.1. Within ten (10) days after commencing the Work, but in any event prior to the Submittal of its first Payment Application, Contractor shall submit to Engineer, for Engineer's and Tampa Bay Water's review and approval, a proposed schedule of values which distributes the Contract Price among the various items and categories of Work to be performed. Said schedule of values shall be in such form and contain such detail

as may be required by Engineer and Tampa Bay Water. The final approved schedule of values shall serve as the basis for partial payments and shall be incorporated into the Payment Application form provided by Tampa Bay Water. Nothing contained in this Article shall be construed to affect the right of Tampa Bay Water or Engineer to reject, the whole or any part of the Work, should such Work be found to be Defective. All estimated quantities of Work for which partial payments have been made are subject to review and correction on the final Payment Application. Payment by Tampa Bay Water and acceptance by the Contractor of partial payments based on Unit Price Work, shall not in any way constitute acceptance of the estimated Unit Price Work by Tampa Bay Water.

7.1.2. The Contractor shall provide Tampa Bay Water with copies of its written daily reports at weekly intervals. Refusal of the Contractor to provide its daily reports shall be cause for Tampa Bay Water to withhold payments until the Contractor's daily reports have been provided.

B. Estimate

7.1.3. The Contractor shall not submit more than one Payment Application per month with respect to the Work. Within twenty-five (25) Business Days following submission of a complete and accurate Payment Application to the Engineer, approved by the Engineer, and acceptable to Tampa Bay Water, Tampa Bay Water shall make partial payments to the Contractor on the basis of Work performed during the preceding calendar month by the Contractor. The final working day of each month shall be used as the day for measurement of Work performed.

7.1.4. The Engineer shall, within twenty-five (25) Business Days after receipt of each Payment Application for payment, provide Notice to Tampa Bay Water recommending payment to the Contractor, or return the request to the Contractor providing Notice of the Engineer's reasons for refusing to recommend payment. In the latter case, the Contractor may make the necessary corrections and resubmit the request. Payment shall be made by Tampa Bay Water within ten (10) Business Days after a corrected payment request is received.

7.1.5. The Engineer may refuse to recommend and Tampa Bay Water may refuse to pay the whole or any part of any payment, if in the Engineer's or Tampa Bay Water's opinion, the Contractor is not entitled to any such payment. The Engineer may also refuse to recommend and Tampa Bay Water may refuse to pay any payment or, because of subsequently discovered evidence or the results of subsequent inspections or tests of any Work, retract any previous recommendation or payment to such extent necessary in the Engineer's or Tampa Bay Water's opinion to protect Tampa Bay Water from loss for reasons not limited to:

a. The Work is Defective, or completed Work has been damaged requiring correction or replacement;
b. The Contract Price has been reduced because of Change Order;
c. Tampa Bay Water has been required to correct Defective Work or complete all or portions of the Work;
d. The Contractor's unsatisfactory prosecution of the Work in accordance with the Contract Documents;
e. Written claims have been made against Tampa Bay Water or liens have been filed in connection with the Work;
f. The Contractor's failure to make payment to Subcontractors OR Suppliers for labor, materials, or equipment;
g. Amounts owed by Contractor to Tampa Bay Water as Liquidated Damages; or

h. Any other amounts which may be owed to Tampa Bay Water by Contractor pursuant to the terms of the Contract Documents.

C. Deduction from Estimate

7.1.6. Unless modified in the Supplementary Conditions, Tampa Bay Water shall withhold from each partial payment, five percent (5%) of the amount earned for Work completed. A deduction and retainage of five percent (5%) shall be made on the estimated amount earned for approved items of material delivered to and properly stored at the Project site but not incorporated into the Work. The retainage is to be withheld by Tampa Bay Water until all Work has been performed in accordance with the Contract Documents and until such Work has been accepted by Tampa Bay Water.

7.1.7. Tampa Bay Water may deduct from each Payment Application an amount equal to Tampa Bay Water's estimate of the amount of Liquidated Damages then due, or which may become due.

D. Reimbursement

7.1.8. For Tampa Bay Water's expenses as defined in the General Conditions, Article 4.15. Submittals, and for testing that is performed by Tampa Bay Water or the Engineer which indicates Work is Defective, or for any other cost for which Tampa Bay Water is entitled to reimbursement from Contractor under the Contract Documents, at Tampa Bay Water's election, such reimbursement shall be deducted from the Contractor's monthly partial payments or shall be paid by Contractor within 30 days after Tampa Bay Water makes demand for same upon Contractor.

E. Qualification for Partial Payment for Materials Delivered

7.1.9. Partial payments for materials delivered but not yet incorporated into the Work shall be as described below:

a. Materials, as used herein, shall be considered to be those items which are fabricated and manufactured material and equipment. No consideration shall be given to individual purchases of less than $200.00 for any one item.

b. To receive partial payment for materials delivered to the Project site, but not incorporated in the Work, it shall be necessary for the Contractor to include a list of such materials with the Payment Application, the utilization of Tampa Bay Water provided forms is required. At its sole discretion, Tampa Bay Water, with the Engineer's advice, may approve items for which partial payment is to be made. Partial payments shall be based on the Contractor's actual cost for the materials as evidenced by invoices from the Supplier. Proper storage and protection shall be provided by the Contractor, As Approved by the Engineer. Final payment shall be made only for materials actually incorporated in the Work and upon acceptance of the Work, all materials remaining for which partial payments had been made shall revert to the Contractor, unless otherwise agreed, and partial payments made for these items shall be deducted from the final payment for the Work.

c. Contractor warrants and guarantees that title to all items of Work requested in any Payment Application, whether incorporated in the Project or not, shall pass to Tampa Bay Water at the time of payment for such items, free and clear of all liens, claims, security interests, and encumbrances.

d. If requested by the Engineer, the Contractor shall provide, with subsequent Payment Applications, invoices receipted by the Subcontractor or Supplier showing payment in full has been made.

F. Payment

7.1.10. The amount of partial payment due the Contractor shall be equal to the current value of the Contract Price earned, less, any retainage, less any amounts previously paid, and any deductions for reimbursement as required by the Contract Documents.

7.2 Payment for Change Orders

7.2.1. Tampa Bay Water, without Notice to the Sureties, shall have the right to order changes to the Work. If the parties agree upon the terms for the change, including any appropriate adjustments to the Contract Price or Contract Time, a Change Order shall be issued. If the parties cannot agree upon the terms for the change, a Change Authorization may be issued by Tampa Bay Water. The terms of the Change Authorization shall be final and binding upon Contractor, unless Contractor makes a claim, within twenty-one (21) days of its receipt of the Change Authorization, challenging those terms it takes objection to, giving full details and supporting documentation for its specific objections. Any terms not specifically objected to within that twenty-one (21) day period shall be deemed final and accepted by Contractor. Regardless of whether or not Contractor files a timely claim with respect to any of the terms of the Change Authorization, Contractor shall proceed with the change to the Work, as set forth in the Change Authorization, as directed by Tampa Bay Water or Engineer.

7.2.2. At Tampa Bay Water's option, payment or credit for any changes covered by a Change Order or a Change Authorization, whether additive or deductive, shall be determined by one or a combination of the methods set forth in a, b, or c, below, as applicable:

a. Unit Prices

Those Unit Prices stipulated in the Contract shall be utilized where they are applicable. In the event the Change Order or Change Authorization results in a change in excess of twenty-five percent (25%) of the original Contract quantity, and the total dollar change in value of that item exceeds twenty-five percent (25%), Tampa Bay Water will review the Unit Price to determine if a new Unit Price shall be negotiated. Unit Prices for new unit items not listed in the Contract shall be negotiated and mutually agreed upon.

b. Lump Sum

A total lump sum amount for the Work negotiated and mutually acceptable to the Contractor and Tampa Bay Water. Lump Sum Price quotations for modifications to the Work shall include substantiating documentation with an itemized breakdown of Contractor and Subcontractor costs, including labor, material, rentals, approved services, overhead, and profit, all calculated as specified under "C" below.

c. Cost Reimbursement Work

The term "cost reimbursement work" shall be for changes to be compensated for on a time and expense basis, that is, on an accounting of the Contractor's forces, materials, equipment, and other items of direct cost as required for the change.

Tampa Bay Water, at its sole discretion, may direct the change to be accomplished on a cost reimbursement work basis, in which event the change will be priced based upon the labor, materials, equipment and other costs hereafter noted associated with such change. The cost items for cost reimbursement work shall be limited to the following items:

1. Labor, including superintendent and foremen, for those hours associated with the cost reimbursement work (actual payroll cost, including wages, fringe benefits as established by negotiated labor agreements, contracts, labor insurance and labor taxes as established by law). Expressly excluded from this item are all labor costs associated with negotiating the subject change. No other fixed labor burdens will be considered, unless approved in writing by Tampa Bay Water.

2. Material associated with the change, including sales tax, if paid for by the Contractor or its Subcontractor.
3. Rental, or equivalent rental cost of equipment, including necessary transportation for items having a rental value in excess of $100.00.
   Rental or equivalent rental cost shall be allowed for only those Days or hours during which the equipment is (or would have been for deductive changes) in actual use. Rental and transportation allowances shall not exceed the current rental rates prevailing in the locality. The rentals allowed for equipment shall, in all cases, be understood to cover all fuel, supplies, repairs, and renewals, and no further allowances shall be made for those items, unless specific Contract to that effect is made.
4. Additional bond as required and approved by Tampa Bay Water.
5. Additional insurance (other than labor insurance) as required and approved by Tampa Bay Water.
6. To the costs noted above, for net additive changes, there shall be added the following fixed fees for the Contractor or Subcontractor actually performing the change:
   A. A fixed fee of twenty-five percent (25%) of the cost of item 1 above. For costs incurred for Work performed by Subcontractors, the Contractor's fee shall not exceed ten percent (10%) and the Subcontractor's fee shall be the same as for the Contractor; and
   B. A fixed fee of ten percent (10%) added to the cost of items 2 and 3.

7.2.3. The fixed fees noted above in the previous paragraph shall be considered to be the full compensation for all cost of general supervision, overhead, profit, and any other general expense.

7.2.4. The Contractor's records shall make clear distinction between the direct costs of Work paid for on a cost reimbursement work basis and the costs of other Work. The Contractor shall furnish the Engineer report sheets in duplicate of each day's cost reimbursement work no later than the working day following the performance of said Work. The report sheets shall itemize the materials used, and shall cover the direct cost of labor and the charges for equipment rental, whether furnished by the Contractor, Subcontractor, or other forces. The report sheets shall provide names or identifications and classifications of workers, the hourly rate of pay and hours worked, and also the size, type, and identification number of equipment and hours operated.

7.2.5. Material charges shall be substantiated by valid copies of vendors' invoices. Such invoices shall be submitted with the daily reports or, if not available, they shall be submitted with subsequent daily report. Said daily report shall be signed by the Contractor or Contractor's Representative.

7.2.6. Tampa Bay Water reserves the right to furnish such materials and equipment as it deems expedient, and the Contractor shall have no claim for profit or added fees on the cost of such materials and equipment.

7.2.7. To receive partial payments and final payment for cost reimbursement work, the Contractor shall submit to the Engineer, in a manner approved by the Engineer and Tampa Bay Water, detailed and complete documented verification of the Contractor's and any of its Subcontractors' actual costs involved in the cost reimbursement work. Such costs shall be submitted within seven (7) Days after said Work has been performed.

7.2.8. Except for Change Authorizations and Change Order, no other written or oral order from Tampa Bay Water or the Engineer shall be treated as a change in the Work or entitle the Contractor to an adjustment to the Contract Price or Contract Time.

7.2.9. The Engineer, by issuing a Construction Directive, may order minor changes in the Work not involving extra cost, or additional times and not inconsistent with the purpose of the Project, but otherwise, except in an emergency endangering life or property, additions or deductions from the Work shall be performed only in pursuance of an approved Change Authorization or Change Order.

7.2.10. Any compensation paid in conjunction with the terms of a Change Order shall comprise the total compensation due the Contractor for the change defined in the Change Order. By signing the Change Order, the Contractor acknowledges that the stipulated compensation adjustment includes payment for alteration of the Work, payment for the interruption of schedules, extended overhead, delay, or any other impact claim or ripple effect, and by such signing specifically waives any reservation or claim for additional adjustment to compensation or time in respect to the subject Change Order.

7.2.11. Tampa Bay Water hereby delegates authority to its General Manager (and his/her designee) to approve any and all Change Order and Change Authorizations in its name, so long as each such Change Order or Change Authorization does not exceed $100,000.00, and further as long as the cumulative total of all Change Order or Change Authorizations does not exceed $100,000.00, unless otherwise approved by the Tampa Bay Water's Board. Each Change Order or Change Authorization over $100,000.00 or which cumulatively exceeds $100,000.00 must be expressly approved by Tampa Bay Water's Board before it shall be binding upon Tampa Bay Water.

7.3 Claims for Additional Compensation

7.3.1. In any case where the Contractor may seek additional compensation, except for an emergency threatening imminent property damage or personal injury, the Contractor shall provide Notice to Tampa Bay Water and the Engineer of its intent to make a claim for such compensation before it begins the Work on which it bases the claim, in order that such matter may be settled or other appropriate action promptly taken. If such notification is not given or the Engineer is not afforded proper facilities by the Contractor for keeping an accurate account of actual costs, the Contractor shall be deemed to have waived its claim for additional compensation.

7.3.2. The Contractor's written Notice, and the fact that the Engineer has kept account of the cost as aforesaid, shall not in any way be construed as proving the validity of the claim.

7.3.3. Claims for additional compensation shall be made in itemized detail and submitted in writing to Tampa Bay Water and Engineer within seven (7) Days following completion of that portion of the Work for which the Contractor bases its claim. If the claim is found to be acceptable by Tampa Bay Water and the Engineer, the Contractor shall be paid as provided in the General Conditions, Article 7.2. Payment for Change Orders. No request by the Contractor for an equitable adjustment to the Contract Price under this Article shall be allowed, unless the Contractor has given Notice within the times required.

7.3.4. The Contractor waives its right to file claims unless the claims are filed within the times specified in the Contract Documents. Tampa Bay Water's final determination shall be final and binding on the Contractor unless the Contractor files suit within thirty (30) days after receipt of Tampa Bay Water's decision.

7.4 Release of Liens or Claims

The Contractor shall indemnify and hold harmless Tampa Bay Water and the Engineer from all claims for labor and materials furnished under the Contract Documents. Prior to the final payment, the Contractor shall furnish to Tampa Bay Water, as part of its final Payment Application, a certification that all of the Contractor's obligations on the Project have been

satisfied and that all monetary claims and indebtedness have been paid. The Contractor shall furnish releases or waivers, satisfactory to Tampa Bay Water, from all Subcontractors and Suppliers and of all liens and notices arising out of or filed in connection with the Work. Tampa Bay Water may reduce the amount of retainage withheld upon receipt of an affidavit from Contractor identifying any amounts in dispute with Subcontractor or Suppliers, and provided the amount of retainage withheld continues to exceed the amount in dispute.

7.5 Final Payment

7.5.1. Upon completion of all of the Work, the Contractor shall provide Notice to the Engineer that it has completed its Work and shall request final payment. Upon receipt of such Notice, the Engineer, together with Tampa Bay Water, will inspect and, if acceptable, the Engineer will submit to Tampa Bay Water its recommendation as to acceptance of the Work and as to the final Payment Application of the Contractor. Within sixty (60) Days after the Contractor has submitted its final Payment Application, together with the Sureties' consent to final payment, and upon approval of this Payment Application request by Tampa Bay Water and compliance by the Contractor with provisions in the General Conditions, Article 7.4. Release of Liens or Claims, and all other provisions of the Contract Documents as may be applicable, Tampa Bay Water shall pay to the Contractor all monies due it under the provisions of these Contract Documents. Final payment is further subject to Tampa Bay Water's receipt from Contractor of all as-built DRAWINGs, certifications, maintenance manuals, operating instructions, written guarantees and warranties, and bonds relating to the Work, and assignment of all guarantees and warranties from Subcontractors, vendors, Suppliers or manufacturers, all as required by the Contract Documents.

7.5.2. Contractor and Tampa Bay Water agree that project closeout and release of retainage shall be in accordance with Chapters 218 and 255, Florida Statutes, as amended by Chapter 2023-134, Laws of Florida. Specifically, Contractor shall cooperate with Tampa Bay Water to prepare a punch-list with estimated costs of items to complete the Work. Within 20 business days of completion of said punch-list, Tampa Bay Water shall pay Contractor the remaining contract balance, including retainage previously withheld, less an amount equal to 150% of the estimated cost to complete the items on the punch-list, and also less any amounts that are subject to a good faith dispute made in writing to the Contractor by Tampa Bay Water.

7.6 No Waiver of Rights

Neither the inspection by Tampa Bay Water or the Engineer, nor any payment for or acceptance of the whole or any part of the Work by Tampa Bay Water or Engineer, nor any extension of time, nor any possession taken by Tampa Bay Water, shall operate as a waiver of any provision of the Contract Documents, or any right to damages, nor shall such waive any subsequent breach. Acceptance of final payment shall not release Contractor of any liability under the Contract Documents or otherwise, and shall not be deemed evidence of performance or be construed as acceptance of Defective or improper Work.

7.7 Acceptance of Final Payment Constitutes Release

The acceptance by the Contractor of the final payment shall release Tampa Bay Water and the Engineer from all claims and all liability to the Contractor for all things done or furnished in connection with the Work, and every act of Tampa Bay Water and others relating to or arising out of the Work except claims previously made in writing and identified by Contractor in its final Payment Application as still unsettled. No payment, however, final or otherwise, shall operate to release the Contractor or its Sureties from obligations under the Contract Documents and the Performance Bonds, Payment Bonds, and other bonds and warranties, as herein provided.

7.8 Record Maintenance and Auditing Rights

Contractor shall keep all books, records, files and other documentation, including all electronically stored items, which concern or relate to the Work hereunder (collectively referred to herein as the "Records"), for a minimum of three (3) years from the date of expiration or termination of this Contract or the date of Final Completion or as otherwise required by law, whichever date is later. Tampa Bay Water, or any duly authorized agents or representatives of Tampa Bay Water, shall have the right to audit, inspect and copy all such Records as often as they deem necessary during any such period of time. This right to audit, inspect and copy Contractor's Records shall include all of the Records of the Subcontractors and Suppliers.

7.9 Hazardous Materials

If Contractor encounters on the Project site any materials reasonably believed by Contractor to be petroleum or petroleum-related products, or other hazardous or toxic substances which have not been rendered harmless, Contractor immediately shall (i) stop Work in the area affected and (ii) report such condition to Tampa Bay Water in writing. If the Work is so stopped and hazardous material is found, the Work in the affected area shall not thereafter be resumed except by Change Order. Any such Change Order shall include, but not be limited to, an adjustment to the Contract Time as appropriate. If no hazardous material is found after the Work has stopped, no Change Order is required to resume the Work in the affected area. Further, if the hazardous material was generated or caused by the Contractor, or any of its employees, agents, Subcontractors or Suppliers, no Change Order will be required for an adjustment in the Contract Time, and Contractor shall indemnify Tampa Bay Water for any costs incurred by Tampa Bay Water with respect to such hazardous material.

ADDENDUM NUMBER ONE

TO

INVITATION TO BID

FOR

MORRIS BRIDGE WELLFIELD IMPROVEMENTS (PROJECT #50021)
CONTRACT NO. 2026020

RE: REMINDERS, CHANGES & QUESTIONS

This addendum consists of two (2) 8 ½ by 11 inch sheet(s).

The following changes, additions, deletions, reminders, and/or inquiry responses are hereby made a part of the Invitation To Bid for Tampa Bay Water's Morris Bridge Wellfield Improvements (Project#50021), Contract No. 2026020, as fully and completely as if the same were fully set forth therein.

REMINDERS: **SUBMITTAL DUE DATE: February 18, 2026, 2:00 P.M. EST.**

CHANGES:
Change 1: Part 3.0 Bid Preparation, Section 3.2 is hereby revised and now reads as follows.

- All Forms in Section 8.0
- Bid Security
- Evidence that the Bidder is qualified and capable to complete the work
- Any other information called for in this ITB

QUESTIONS:

Q1: For the demolition portion, will the General Contractor be involved?
A1: Yes. The General Contractor will need to include the full building and gear/equipment demolition for Wells 152 and 157. For Wells 161, 162, and 163 the demolition is for just the gear/equipment inside the building. The shell will remain intact.

Q2: Was the pre-bid meeting mandatory for bidders?
A2: No. The pre-bid meeting was not mandatory.

Q3: How many wells can be taken down at one time?
A3: No more than five wells can be down at one time.

Q4: Are the wellhouses all steel or brick?
A4: There are three types of buildings: 1, 2, and 3. All are concrete masonry unit (CMU) block walls, but Type 2 include integral reinforced grouted concrete columns (CMU grouted to 7'4" above the floor). Each building has reinforced concrete slab roof with overhangs.

Q5: Are you going from vertical turbine to submersible pumps and motors?

A5: Yes. Submersible pumps are what we want ordered and used, check specifications for approved brands and manufacturers.

Q6: When will the Notice to Proceed (NTP) be issued?
A6: The contract is currently scheduled to go to the Board for approval at the April 20, 2026 meeting. Tampa Bay Water anticipates issue of the NTP within a month after Board approval.

Q7: Is there any tree, brush, or land clearing involved in the project?
A7: Possibly, there could be trees or limbs in the way sporadically that will need to be removed or moved out of the way. Typically, wells have cleared area around them and some with fencing.

Q8: When will the addendum be posted?
A8: The addendum will be posted to Tampa Bay Water's e-procurement portal, Euna Procurement no later than January 23, 2026, at 5:00 p.m. (EST).

Q9: Section 11213 – 2.2 Manufacturers. Can "Simflo" be added as a manufacturer as good selections were provided during the initial design phase and Tampa Bay Water already have some of these pumps in operation?
A9: It is not possible to add Simflo as an approved manufacturer at this time.

END OF ADDENDUM ONE

ADDENDUM NUMBER TWO

TO

INVITATION TO BID

FOR

MORRIS BRIDGE WELLFIELD IMPROVEMENTS (PROJECT #50021)
CONTRACT NO. 2026020

RE: REMINDER & CHANGE

This addendum consists of one (1) 8 ½ by 11 inch sheet(s).

The following changes, additions, deletions, reminders, and/or inquiry responses are hereby made a part of the Invitation To Bid for Tampa Bay Water's Morris Bridge Wellfield Improvements (Project#50021), Contract No. 2026020, as fully and completely as if the same were fully set forth therein.

REMINDER: **SUBMITTAL DUE DATE: February 18, 2026, 2:00 P.M. EST.**

CHANGE:
Change 1: Specification Section 17500, Instrumentation and Controls Systems, 1-2.06 is hereby revised and now reads as follows:

The Contractor shall utilize the services of a System Supplier to coordinate all control system related items, to approve installation, calibrate and commission field instruments, and to perform all testing, training, and startup activities specified to be provided. The System Supplier is required to have completed two projects of similar scope in the last five years.

END OF ADDENDUM TWO

ADDENDUM NUMBER THREE

TO

INVITATION TO BID

FOR

MORRIS BRIDGE WELLFIELD IMPROVEMENTS (PROJECT #50021)
CONTRACT NO. 2026020

RE: REMINDERS & QUESTIONS

This addendum consists of two (2) 8 ½ by 11 inch sheet(s).

The following changes, additions, deletions, reminders, and/or inquiry responses are hereby made a part of the Invitation To Bid for Tampa Bay Water's Morris Bridge Wellfield Improvements (Project#50021), Contract No. 2026020, as fully and completely as if the same were fully set forth therein.

REMINDERS: **SUBMITTAL DUE DATE: February 18, 2026, 2:00 P.M. EST.**

QUESTIONS:

Q1: Do you need a new road installed, and if so, should it be asphalt or gravel?
A1: No, roadwork is not included in this project. However, should the contractor damage any roads, they are responsible for repairing.

Q2: Do you require any masonry block / veneer to be removed and replaced?
A2: Only if that's the only way to repair, otherwise the plan is to patch/repair in place.

Q3: Do the concrete door pads, slabs or any other concrete need to be removed and replaced?
A3: When installing/adjusting the discharge piping and new flow meters, there may be concrete work required to bring the wellhouse floor back to a finished floor.

Q4: Do you need any fencing installed or removed and replaced?
A4: Existing fencing can be removed and re-installed if the contractor chooses.

Q5: Does the roof need to be removed and replaced?
A5: Please refer to architectural drawings and specifications for cleaning, veneer repairs, roofing repairs, and fascia repairs.

Q6: Do you require epoxy floor coatings?
A6: Yes.

Q7: Who will be providing the pumps, the owners or GC?
A7: The GC is required to order the pumps and motors; however Tampa Bay Water reserves the right/choice to use our ODP program for tax-savings.

Q8: Who is responsible for disposing of the existing pumps, the owners or GC?

A8: The GC is required to remove and dispose existing pumps, motors, equipment; all equipment and material removed is to be disposed of by the GC.

Q9: Do you need the roof hatch removed and replaced?
A9: Please refer to architectural drawings and specifications for cleaning, veneer repairs, roofing repairs, and fascia repairs.

Q10: Are the existing doors staying, or do they need to be removed and replaced?
A10: Doors and frames to be replaced per drawing GA-1. Refer to Door Schedule.

Q11: What is the liquidated cost per day?
A11: The liquidated damage cost per day for substantial completion is $1,500.00. For final completion, it's $500.00 per day.

Description: Tampa Bay Water, A Regional Water Supply Authority, is soliciting formal bids for this construction project. This project is located at the Morris Bridge Wellfield and includes replacing the pumps and motors, main disconnect switch; and ancillary power equipment and associated load panels for fifteen (15) of the Morris Bridge Wellfield Pumps and Motors. In addition, new over-current protection devices will be added to reduce the Arc Flash hazard.

Important Notice: Tampa Bay Water issues its solicitations electronically through its contracted vendor, Euna Procurement. All Addenda to such solicitations will be issued exclusively through Euna Procurement. If you have obtained this solicitation from a source other than Euna Procurement, you will not be listed on the plan holders list and may not receive notification of any Addenda issued. Failure to receive any issued Addenda shall not relieve the Bidder from any obligation(s) contained in the Addenda. To access Tampa Bay Water solicitations, any resulting Addenda and Bid results, go to: https://tampabaywater.bonfirehub.com. If you need assistance in registering with Euna Procurement send an email to: Support@GoBonfire.com or visit Euna Procurement's help forum at https://vendorsupport.gobonfire.com/hc/en-us.

1.0 INTRODUCTION

1.1 PURPOSE

The purpose of this Invitation to Bid (ITB) is to solicit Bids from qualified firms or individuals to replace the pumps and motors, main disconnect switch; and ancillary power equipment and associated load panels for fifteen (15) of the Morris Bridge Wellfield Pumps and Motors. In addition, new over-current protection devices will be added to reduce the Arc Flash hazard. This is Project #50021 under Contract #2026020 ("the Project"). The Project is located in Hillsborough County. The budget for this project is $15,736,180.00.

1.2 SCOPE

The scope of the work contemplated for this project includes replacing the pumps and motors, main disconnect switch; and ancillary power equipment and associated load panels for fifteen (15) of the Morris Bridge Wellfield Pumps and Motors. In addition, new over-current protection devices will be added to reduce the Arc Flash hazard. The scope of the work is more completely described in the Contract Documents, Specifications and Drawings.

1.3 GENERAL INFORMATION

1.3.1 Tampa Bay Water is Florida's largest provider of wholesale drinking water. Our mission is to reliably provide clean, safe water to the Tampa Bay region now and for future generations. We are a regional agency created by an inter-local agreement among our member governments through state enabling legislation. We have a nine-member Board of Directors made up of representatives from the three counties and three cities we serve: Hillsborough County, Pasco County, Pinellas County, New Port Richey, St. Petersburg, and Tampa.

1.3.2 Bidders can familiarize themselves with our agency at www.tampabaywater.org. Tampa Bay Water was recreated in 1998 as the outgrowth of a two-year negotiation process that changed the name, structure, and operations of the West Coast Regional Water Supply Authority. Our predecessor, the West Coast Regional Water Supply Authority, was created in 1974. Tampa Bay Water is now a multi-source provider of drinking water including groundwater, surface water, and desalinated seawater. Tampa Bay Water is a non-profit governmental agency funded through wholesale water rates by its member governments. Our member governments serve more than 2.5 million residents in the Tampa Bay area.

1.3.3 Tampa Bay Water has retained Stantec Consulting ("Engineer") as its Agency Representative for this Project. Stantec Consulting has responsibility for coordinating all activities associated with the design, construction, and commissioning of the Project. Tampa Bay Water and Stantec Consulting are working cooperatively to manage the ITB process, evaluate Bids, and support the negotiations of the Contract. Stantec Consulting shall also provide Project oversight, including reviews for contract compliance, construction monitoring, start-up assistance, and environmental compliance oversight.

1.4 DEFINITIONS

All definitions are either listed below or are included in the General Conditions in the attached Contract.

1.4.1 **AGENCY** is used interchangeably with Tampa Bay Water.

1.4.2 **AGREEMENT** or **CONTRACT** are used interchangeably and refer to the document, along with any amendments, that constitutes authorization for, and commitment by the Contractor to provide construction services to Tampa Bay Water.

1.4.3 **BASE BID** is the sum stated in the Bid for which Bidders offer to perform the work described in the Bidding Documents, to which work may be added or deleted by sums stated in Alternate Bids.

1.4.4 **BID** refers to a Bidder's response to the requirements of this ITB.

1.4.5 **BID OPTION** means a specified portion of the work identified in the scope of work that may be added to or deducted from the Base Bid at Tampa Bay Water's discretion and identified in the Contract. If required, Bid Options shall be evaluated along with the Base Bid and may be used at the discretion of Tampa Bay Water to determine the lowest bid.

1.4.6 **BIDDER** means a business that responds to this solicitation. If Bidder is a consortium, partnership, joint venture, or other organization, this definition shall include all partners, members, or participants.

1.4.7 **CONTRACTOR** means the Bidder who enters into a Contract to provide construction services for this Project.

1.4.8 **ENGINEER** is the licensed design professional of record responsible for designing the Project.

1.4.9 **PROJECT SITE** is Tampa Bay Water's Morris Bridge Wellfield (Hillsborough County Flatwoods Park) located in Hillsborough County at 14302 Morris Bridge Road, Thonotosassa, FL 33592, as shown in the Project Location Map provided in Article 7.0.

2.0 BID PROCESS INFORMATION

2.1 PRE-BID CONFERENCE AND SITE VISIT

A Pre-Bid Conference and Site Visit will be held for this ITB on December 17, 2025 at 10:00 a.m. Eastern Standard Time (EST), at Tampa Bay Water's Morris Bridge Wellfield (Hillsborough County Flatwoods Park), 14302 Morris Bridge Road, Thonotosassa, FL 33592. The Pre-Bid Conference and Site Visit are not mandatory; however, firms are highly encouraged to attend. This will be the only site visit tour offered. Bidders will need to drive to the location in their own vehicles and should dress in appropriate comfortable field tour attire (long pants and closed toe shoes). Tampa Bay Water reserves the right to cancel the site visit if inclement weather or wet/muddy road conditions warrant cancellation.

2.2 INQUIRIES AND ADDENDA

Tampa Bay Water is committed to a fair, open process for interested parties to receive information about the Project and the competitive procurement process that Tampa Bay Water is using for selection of a Contractor and award of the Contract. **Inquiries for additional information or clarifications must be submitted on Euna Procurement's project page for this ITB at https://tampabaywater.bonfirehub or via email to purchasing@tampabaywater.org no later than the Inquiry Deadline on the cover of this ITB**. Any general inquiries may be responded to directly. Any substantive inquiries resulting in information and changes deemed material to the ITB shall be provided in the form of a written addendum which will be published at least five (5) days prior to the Submittal Due Date on Euna Procurement and via link at Tampa Bay Water's web site at www.tampabaywater.org. Failure of any firm to receive any such addendum or interpretation shall not relieve said Bidders from any obligation contained therein.

2.3 BID SUBMISSION

2.3.1 Tampa Bay Water prefers and strongly encourages electronic submission of Bids through our e-procurement portal at https://tampabaywater.bonfirehub.com. Bidders should allow sufficient time and at least one (1) day before the Submittal Due Date to begin the uploading process and finalize submissions. To submit responses electronically, Bidders must register with Euna Procurement and follow the instructions in the portal. Minimum system requirements are Microsoft Edge, Google Chrome, Safari, or Mozilla Firefox. JavaScript and browser cookies must be enabled. Maximum upload file size is 1000 MB. Documents should not be embedded within uploaded files as the embedded files will not be accessible. Bidders will have the ability to modify their submissions up to the Submittal Due Date in Euna Procurement. Tampa Bay Water is not responsible for any technical problems with the electronic transmission and/or delay in receipt due to technical problems. Such electronic transmittal errors will not alter or affect the deadline date and time for receipt of Responses. If you require assistance, please contact Euna Procurement at Support@GoBonfire.com.

2.3.2 Bidders unable to submit electronically must deliver sealed Bids to the address provided on the cover of this document no later than the above-referenced Submittal Due Date. Include one clearly marked original and one digital copy on a flash drive enclosed in a sealed envelope or carton clearly marked with the name and Contract number and delivered in person, by carrier or messenger, or by certified U.S. Mail.

2.3.3 Late Bids will not be considered. No Bid can be withdrawn after the Submittal Due Date without the written permission of Tampa Bay Water.

2.4 BID WITHDRAWAL OR RESUBMISSION

Bidders may withdraw their Bids by notifying Tampa Bay Water in writing at any time prior to the Submittal Due Date. Such notice shall be in writing over the signature of the Bidder, and it shall be so worded as not to reveal the amount of the original Bid. Bids not so withdrawn shall, upon opening, constitute an irrevocable offer for a period of One-Hundred Twenty (120) calendar days to provide the services set forth in this solicitation, unless extended by mutual agreement. Failure to agree to an extension shall not constitute grounds for forfeiting any bid bond or other security. Withdrawal of a Bid, as prescribed in this paragraph, shall not prejudice the right of a Bidder to resubmit a Bid prior to the Submittal Due Date indicated on the cover of this ITB.

2.5 RIGHT OF REJECTION

Tampa Bay Water reserves the right to reject any or all Bids.

2.6 IN-PERSON PUBLIC BID OPENING

Bids will be publicly opened at Tampa Bay Water's Administrative Offices located at 2575 Enterprise Road, Clearwater, Florida 33763, on the date of the Bid Submittal Deadline, on February 18, 2026 at 2:30 p.m. EST.

3.0 BID PREPARATION

3.1 PROJECT UNDERSTANDING

3.1.1 Beginning on the Issue Date on the cover of this ITB, complete sets of the ITB documents may be obtained through our e-procurement portal at https://tampabaywater.bonfirehub.com. Any addenda shall be provided here as well. Prior to submission of its Bid, each Bidder must ascertain that it has received a complete and accurate set of ITB documents, including all addenda issued.

3.1.2 Bidders are expected to read and understand this ITB and associated documents in their entirety and inspect the project site to inform itself of the conditions related to the execution of the work. Failure to do so will not relieve a successful Bidder of its obligations to furnish the services necessary to carry out all the requirements and provisions set forth in the Contract. Bidders must be able to fully perform the tasks outlined herein, and in the timeline required.

3.1.3 Bidders shall, upon discovery of any conflict, ambiguity, error or omission in the ITB, the Project site or any other general, local or prevailing conditions, make a written request for interpretation or clarification in accordance with the inquiry process provided in the prior section.

3.1.4 If requested by a Bidder in writing within a reasonable time in advance of the date of the opening of the Bids, Tampa Bay Water will make a good faith attempt to provide or obtain access to the project site to allow the Bidder to conduct those reasonable explorations and tests the Bidder deems necessary for submission of a Bid (subject to a review by Tampa Bay Water and the Engineer). If access is granted, the Bidder shall clean up and restore any disturbed area to its former condition upon completion of such explorations and tests.

In consideration of Tampa Bay Water arranging and permitting access to the project site, Bidder acknowledges that by entering the project site, Bidder shall defend, indemnify and hold Tampa Bay Water, Engineer and their consultants harmless from any loss, expense, damage, injury, claim or suit arising out of or relating to Bidder's entry, exploration and testing upon the project site. As a condition to any Bidder being provided access to the project site, that Bidder shall execute and deliver to Tampa Bay Water a Release and Indemnification Agreement, which is available upon request.

3.1.5 Each Bidder shall have the responsibility to inform itself of, and if awarded the Contract shall comply with, all laws and regulations. Examples of such laws and regulations include, but are not limited to, those relating to minimum wages, nondiscrimination in employment, protection of public and employee safety and health, environmental protection, building codes, fire protection, airport operation and safety, grading and drainage, use of explosives, vehicular traffic, access to streets and highways, restoration of lands and property under the control of the State or a Political Subdivision, nuisance control, taxes, permits, licensing, and fees.

3.1.6 Any oral statement, interpretation, clarification, correction, addition or deletion to the ITB documents will be binding only if issued as a written Addendum. Failure to read or reference the addenda in its Bid will not relieve a Contractor of its obligations to comply with the addenda.

3.2 BID CONTENTS: Include the following items:

- All forms in Section 6.0
- Bid Security
- Evidence that the Bidder is qualified and capable to complete the work
- Any other information called for in this ITB.

3.3 QUALIFICATION OF BIDDER

3.3.1 Bidder and its key personnel to be assigned to the work must meet the following minimum qualifications:

- Firm must hold an active license in the State of Florida as a General Contractor.
- Firm must have performed one previous project of similar scope within the past five (5) years.
- Project Superintendent must have served as a Project Superintendent on at least one previous project of similar scope within the past five (5) years.
- Project Manager must have served as a Project Manager on at least one previous project of similar scope within the past five (5) years.
- Drilling/Well Contractor must have performed one previous project of similar well abandonment and well rehabilitation scope within the past five (5) years.
- Drilling/Well Contractor must hold active well driller/drilling license in the State of Florida.

3.3.2 The Bidder must have the authority to perform the type of work in this ITB in accordance with laws and regulations applicable to the Project and local, county and municipal licensing requirements, or the Bidder must provide a covenant describing specific licenses or permits to be obtained prior to award of the Contract.

3.4 RESPONSIVENESS AND RESPONSIBILITY

3.4.1 If any information required by these Bid Documents is missing or incomplete, the Tampa Bay Water Purchasing Department, in its sole discretion, may deem the Bidder non-responsive and reject the Bid, or may waive immaterial or minor deviations or request clarifications that do not alter the substance of the Bid and do not provide competitive advantage to a Bidder.

3.4.2 The Bidder shall provide all information, sufficient to Tampa Bay Water, to evidence its qualifications to perform the work for the price included on the Price Form, within the time stated within this ITB, and in accordance with the requirements of this ITB. The Tampa Bay Water Purchasing Department may request and consider any further information to make a responsibility determination that a Bidder can satisfactorily perform the work.

3.4.3 Failure to deliver information for responsiveness and responsibility required in this ITB or as requested by Tampa Bay Water, within the required period (or within a reasonable time thereafter if agreed to by Tampa Bay Water), may result in the rejection of that Bidder's Bid as either non-responsive or non-responsible and shall constitute proof that the Bidder has relinquished its rights and interests in the award.

3.5 BID COMPLETION

3.5.1 Any Bid may be deemed non-responsive which contains omissions, erasures, alterations, or additions of any kind, or prices not requested, or which may be obviously unbalanced, or which in any manner shall fail to conform to the requirements of this ITB.

3.5.2 Only one Bid from any individual, firm, partner, partnership, or corporation, under the same or different names, shall be considered. If any Bidder has an interest in more than one Bid for the work contemplated, as determined by Tampa Bay Water, all Bids in which such Bidder has an interest shall be rejected.

3.6 BID SECURITY

Bids must be accompanied by a certified check, or cashier's check drawn on a bank in good standing, or a Bid Bond issued by a Surety authorized to issue such bonds in the State of Florida, in the amount of **five percent (5%)** of the proposed total Contract price of the Bid submitted. This bid security shall be given as a guarantee that the Bidder will not withdraw its Bid for the period of time specified in 2.4 Bid Withdrawal or Resubmission, and if awarded the Contract, shall execute the Contract and comply with all its requirements. If the Bidder elects to furnish a Bid Bond, it shall use the Bid Bond form provided in this ITB. The Attorney-in-Fact who

executes these bonds on behalf of the Surety must attach a notarized copy of its power-of-attorney as evidence of its authority to bind the Surety on the date of execution of the bonds. Where laws and regulations require certification by a resident agent, it shall also be provided.

3.7 BID PRICING

3.7.1 Bidders must submit either unit prices or fixed prices or a combination of such, as required by the Price Form herein. All items required to complete the work, but not specifically included in the Price Form, shall be considered incidental and no additional costs for such items will be recognized or paid for by Tampa Bay Water.

3.7.2 Conflicts or Discrepancies found in bid prices stated both numerically and alphabetically shall have the alphabetical representation of the bid price take precedence over the numerical representation unless it is determined, at the sole discretion of Tampa Bay Water, that the conflict has led to a clearly erroneous or unreasonable result; in which case the amount stated numerically shall govern. However, in a case of a discrepancy between unit prices and extended totals, unit prices shall govern.

3.7.3 The estimate of quantities of items which are to be provided on a unit price basis are stated in the Price Form with as much accuracy as possible and is an approximation that shall be the basis for fair comparison of bids and upon which the award of the Contract shall be made. Payment to the Contractor for unit price work shall be made on the basis of units actually provided by the Contractor and accepted by Tampa Bay Water.

3.7.4 The Contractor shall pay all state and local sales and use taxes, as required by all laws and regulations. Tampa Bay Water reserves the right to implement an Owner's Direct Purchase sales tax savings program with respect to this Project

3.8 SUBCONTRACTORS AND SUPPLIERS

3.8.1 Each Bidder shall list, on the Subcontractor Form included in this ITB, the Subcontractors and Suppliers to whom that Bidder intends to award a subcontract in an amount of two percent (2%) or more of the total price on the Price Form. For each Subcontractor and Supplier identified, the Bidder shall provide all the information required by the forms.

3.8.2 If Tampa Bay Water has reasonable objection to any listed Subcontractor or Supplier, Tampa Bay Water may, after giving its intended Notice of Award, request the Bidder remove or replace that Subcontractor or Supplier, in which case that Bidder shall either perform the associated part of the work itself, if it holds a valid license for that classification and is so qualified, or nominate a substitute Subcontractor or Supplier, within the time period its Bid is to remain open, and without an increase in its price or time required to complete the work. If that Bidder declines, it shall not be awarded the Contract and its Bid shall be deemed withdrawn, but its declining to make the substitution will not constitute grounds for forfeiting its bid security. No Bidder shall be required to employ any Subcontractor or Supplier against whom it has reasonable objection.

3.9 TRADE SECRETS

Tampa Bay Water is subject to the Florida Public Records and Sunshine Laws. Each Bidder may clearly mark each page of the Bid that contains trade secrets or other confidential commercial or financial information which the Bidder believes should not be disclosed outside of the agency. Disclosure of requested information will be determined in accordance with Florida laws, rules and regulations.

4.0 EVALUATION AND AWARD PROCESS INFORMATION

4.1 EVALUATION

All Bids received will be reviewed and tabulated by Tampa Bay Water. The tabulation will be posted on Euna Procurement and on Tampa Bay Water's website.

During the Bid review, Tampa Bay Water reserves the right to seek additional relevant information and clarification regarding any Bidder's qualifications to perform the work and to determine whether a Bidder is deemed responsive and responsible based on that information.

4.2 BID SUPPLEMENTS

After receipt of Bids, Tampa Bay Water shall notify the apparent low Bidder that it must, within two (2) days following notification, provide the following to Tampa Bay Water:

- A preliminary progress schedule, without specific dates, that will be used to track the work;
- Bidder's three (3) most recent and current financial statements, certified by a Certified Public Accountant;
- Resumes for Bidder's project superintendent and other key personnel;
- Five references for recent and similar work performed by bidder; and
- Any additional information requested by Tampa Bay Water.

4.3 BASIS OF AWARD

4.3.1 The Notice of Award will be issued, if at all, by Tampa Bay Water on the basis of the Total Evaluated Bid Price provided by the lowest responsive, responsible Bidder. The Total Evaluated Bid Price is the adjusted amount of the Bidder's proposed total Contract price, as determined by Tampa Bay Water, based upon such line items within the Bid which Tampa Bay Water elects to include in the work.

4.3.2 In accordance with Section 287.05701, Florida Statutes, Tampa Bay Water may not consider a Bidder's social, political or ideological interest when determining if the Bidder is responsible.

4.3.3 Tampa Bay Water's Project Allowance and all other Allowances, as well as all Options as specified in the Bid, must be included in the total price on the Price Form.

4.4 AWARD OF CONTRACT

4.4.1 Tampa Bay Water shall have the right to investigate, among other things, the financial condition, experience record, and the equipment of each Bidder, and to determine to its satisfaction the competency of each to undertake the Project. Tampa Bay Water may request further and supplemental documentation from a Bidder. A Bidder's refusal to provide such documentation may result in the disqualification of its Bid. Tampa Bay Water shall have the sole discretion to determine which factors it deems significant.

4.4.2 The acceptance, if any, of a Bid will be by written Notice of Intent to Award which shall be posted on Euna Procurement in the project file. In the event of failure of the lowest responsive, responsible Bidder to sign the Contract and provide acceptable Performance Bonds and Payment Bonds, Tampa Bay Water may award the Contract to the next lowest responsive, responsible Bidder. Such an award, if made, will be made promptly after the failure of the first Bidder to comply with the award requirements.

4.4.3 Tampa Bay Water reserves the right to accept or reject all bids and to delay or cancel the Project prior to acceptance of any bid in the event Tampa Bay Water has failed to secure all the property or permits necessary for the Project. In addition, Tampa Bay Water reserves the right to include or exclude any Bid Options, and to waive any informalities or irregularities in Bids. Tampa Bay Water further reserves the right to seek clarification from any Bidder after the opening of the Bids and to award the Contract based on updated information obtained.

4.5 NOTIFICATION OF AWARD

Tampa Bay Water will select the lowest, qualified, responsive, responsible Bidder meeting the criteria and Specifications established herein to provide the services under this ITB. The awarded Contractor must be registered to do business in the State of Florida. Information regarding registration can be found at the Florida Department of State, Division of Corporations website at https://dos.myflorida.com/sunbiz. Notification of Tampa Bay Water's decision regarding this solicitation will be posted on Euna Procurement and via the link on Tampa Bay Water's website.

4.6 EXECUTION OF CONTRACT

The Notice of Award to a Bidder will be accompanied by two (2) unexecuted sets of the Contract documents. The successful Bidder shall within ten (10) days after receiving Notice of Award, sign and return to Tampa Bay Water the two (2) sets of Contract documents together with the Certificate of Insurance, Performance Bonds and Payment Bonds as required by the Contract documents. Within thirty (30) days after receiving the signed Contract documents including acceptable Performance Bonds and Payment Bonds from the successful Bidder, Tampa Bay Water's authorized agent will sign the Contract, whereupon Tampa Bay Water shall send the successful Bidder one fully executed copy of the Contract documents. Signature by both parties binds both parties to the Contract documents.

4.7 RIGHT TO PROTEST

Any person who is adversely affected by a Tampa Bay Water decision or intended decision may file a notice of protest in writing within 72 hours after the posting of the notice of decision or intended decision. The formal written protest shall be filed with the Purchasing Manager within ten (10) days after the date of the notice of protest is filed. Failure to file a timely notice of protest or failure to file a timely formal written protest shall constitute a waiver of proceedings. The formal written protest shall state with particularity the facts and law upon which the protest is based.

Failure to file a protest within the time prescribed in section 120.57(3), Florida Statutes, or failure to post a bond or other security required by law within the time allowed for filing a bond shall constitute a waiver of proceedings under Chapter 120, Florida Statutes. This includes, but is not limited to, any objection to or protest of this ITB, Notice of Award, and/or the actions of Tampa Bay Water.

4.8 NOTICE TO PROCEED

The Contract time shall begin on the day indicated in the Notice to Proceed. A Notice to Proceed may be given at any time within thirty (30) days after the date the Contract is executed by Tampa Bay Water. The Contractor shall begin the work no later than ten (10) days after the date specified for commencement of the work in the Notice to Proceed.

4.9 PERFORMANCE BONDS AND PAYMENT BONDS

The successful Bidder shall deliver to Tampa Bay Water a Performance Bond and a Payment Bond each on the forms set forth in this ITB. Each Bond shall be in the full amount of the total price on the Contract and in accordance with the requirements of Florida Statutes Section 255.05, as security for the faithful performance of the Contractor, and the payment of all persons supplying labor and/or materials for the construction of the work, and to cover all guarantees against defective workmanship or materials, or both, during the warranty period following the date of final completion of the work. The surety or sureties furnishing these bonds shall have a sound financial standing and a record of service satisfactory to Tampa Bay Water, shall be authorized to do business in the State of Florida, and shall be listed on the current U.S.

Department of Treasury Circular Number 570, or amendments thereto in the Federal Register, of acceptable Sureties for Federal Projects.

4.10 RETURN OF BID SECURITY

Within fifteen (15) days after the opening of the Bids, Tampa Bay Water will return the bid security to each Bidder whose Bid is not to be considered further in the award of the Contract. Retained bid securities shall be held until the Contract has been fully executed, after which time all bid securities other than those which have been forfeited, shall be returned to the respective Bidders.

5.0 SPECIAL TERMS AND CONDITIONS

5.1 SUBSTITUTES

The Contract shall be awarded, if at all, on the basis that the Bidder awarded the Contract shall furnish only items of material and equipment named or specified in the Contract documents. Each Bidder shall list the manufacturer and Supplier as required on the Major Equipment Manufacturers Form showing whom that Bidder intends to award a subcontract for furnishing each selected named or specified item. Substitutes shall not be considered until after the Notice of Award.

5.2 CHANGES IN QUANTITIES

Tampa Bay Water reserves the right to increase or decrease the quantity of any unit price work item shown in the bid that it may deem necessary, except that such increases or decreases in quantities of each item of unit price work awarded shall not affect the stated unit price rate if the quantity adjustment is not more than twenty-five percent (25%) of the total quantity shown on the bid for such item of unit price work. If the quantity is adjusted by more than twenty-five percent (25%), the unit price may be equitably adjusted by an appropriately issued change authorization or change order.

5.3 EMPLOYEE VERIFICATION

In accordance with Section 448.095, Florida Statutes, the Contractor agrees to register with and utilize the U.S. Department of Homeland Security's E-Verify system to verify the employment eligibility of all new employees hired during the term of the award/contract for the services specified in the award/contract. The Contractor must also include a requirement in subcontracts that the subcontractor must register with and utilize the E-Verify system to verify the employment eligibility of all new employees hired by the subcontractor during the award/contract term. If the Contractor enters into a contract with a subcontractor, the subcontractor must provide the Contractor with an affidavit stating that the subcontractor does not employ, contract with, or subcontract with an unauthorized alien. The Contractor shall maintain a copy of such affidavit for the duration of the award/contract. If Tampa Bay Water has a good faith belief that the Contractor has knowingly violated Section 448.09(1), Florida Statutes, Tampa Bay Water shall terminate the Contract with the Contractor, and the Contractor may not be awarded a contract with Tampa Bay Water for at least 1 year after the date on which the award/contract was terminated. The Contractor is liable for any additional costs incurred by Tampa Bay Water as a result of the termination of the award/contract. If Tampa Bay Water has a good faith belief that a subcontractor knowingly violated the law, but the Contractor has otherwise complied with the law, Tampa Bay Water shall promptly notify the Contractor and order the Contractor to immediately terminate the award/contract with the subcontractor.

5.4 FOREGIN COUNTRIES OF CONCERN

Pursuant to Section 287.138, Florida Statutes, Tampa Bay Water may not enter into a Contract with an entity that gives access to an individual's personal identifying information if the entity is owned, controlled or organized under the laws of a Foreign Country of Concern which includes the :People's Republic of China, the Russian Federation, the Islamic Republic of Iran, the Democratic People's Republic of Korea, the Republic of Cuba, the Venezuelan regime of Nicolas Maduro, the Syrian Arab Republic, or any other entity or agency under the significant control of such Foreign Country of Concern.

5.5 ANTI-HUMAN TRAFFICKING

In accordance with Section s.787.06, Florida Statutes, the Contractor must provide TAMPA BAY WATER with an affidavit regarding Human Trafficking. Affidavit included herein must be completed by Contractor to attest, under penalty of perjury, that Contractor does not use coercion for labor or services as defined in s. 787.06, Florida Statutes.

6.0 SUPPLEMENTAL INFORMATION FOR BIDDERS

6.1 The various reports, drawings and other documents listed in this section shall be collectively referred to as the "Existing Condition Documents". The Existing Condition Documents are made available solely to assist Bidders to make their own assessment of the Project. It is the responsibility of each Bidder, before submitting a Bid, to (a) examine the Existing Condition Documents thoroughly; (b) visit the Project site to become familiar with general, local and prevailing conditions; (c) familiarize itself with and consider all laws and regulations covering the work; (d) study and carefully correlate the Bidder's observations with this package of ITB documents; and (e) request written interpretations or clarifications promptly after discovering any conflicts, ambiguities, errors or omissions in the ITB documents or Existing Condition Documents.

6.2 The Property Stipulation/Schedule Summary in this section contains information pertaining to scheduling of construction in easements acquired by Tampa Bay Water for this Project.

6.3 Tampa Bay Water and Engineer make no representation or warranty about the accuracy, correctness, or completeness of the Existing Condition Documents. Also, neither Tampa Bay Water nor the Engineer warrants or assumes any responsibility for the accuracy, correctness, reliability or completeness of information or data relating to surface or subsurface conditions, contained in any reports not prepared by Tampa Bay Water, the Engineer or their consultants, including information about underground utilities owned by others at or contiguous to the Project site furnished by the owners of those underground utilities or others.

6.4 Finally, neither Tampa Bay Water nor Engineer assumes any responsibility for any conclusions or interpretations made by any Bidder based on the data, non-technical data, interpretations or opinions contained in the Existing Condition Documents. Notwithstanding the foregoing, Bidders should refer to the Contract documents (especially Paragraph 6.8 of the General Conditions) for provisions concerning changes that may be permitted due to materially different site conditions.

SECTION 01010

SUMMARY OF WORK

PART 1 - GENERAL

1-1. SUMMARY

1-1.01. The WORK described herein consists of improvements to the Morris Bridge Wellfield including well sites MBR-150, MBR-151, MBR-153, MBR-154, MBR-155, MBR-156, MBR-158, MBR-159, MBR-160, MBR-164, MBR-165, MBR-166, MBR-167, MBR-168, and MBR-169, the well abandonment and demolition of piping and equipment in well sites MBR-161, MBR-162, and MBR-163, and the well abandonment and complete demolition of well sites MBR-152 and MBR-157, as indicated on the CONTRACT DRAWINGS and specified herein. Each well site operates independently and remotely with its own building, electrical service, and control system. Each building houses the electrical motor starter, motor, pump, instrumentation, control system and miscellaneous lighting and ventilation equipment.

1-1.02. The project is located inside the Flatwoods Park in Northeast Hillsborough County, Florida, as shown on the CONTRACT DRAWINGS.

1-2. WORK DESCRIPTION

1-2.01. The WORK of this PROJECT consists of furnishing all labor, materials, equipment, testing and commissioning, supervision, and incidentals necessary for completing improvements at 15 of the existing 20 well sites, the decommissioning of 3 well sites, and the demolition of 2 well sites, as shown on the CONTRACT DRAWINGS and specified herein. The WORK is generally described as follows:

Demolition and Decommissioning: Demolition of all electrical, control, and mechanical equipment within each of the existing 20 well houses, as shown in the CONTRACT DRAWINGS. Additionally, for all existing well houses, except for the ones located at well sites MBR-161, MBR-162, and MBR-163, the demolition of the existing doors and frames as shown on the CONTRACT DRAWINGS.

Demolition of well house building structures at sites MBR-152 and MBR-157, as shown on the CONTRACT DRAWINGS.

Abandonment of the wells for sites MBR-152, MBR-157, MBR-161, MBR-162, and MBR-163. For these well sites, demolition of the discharge piping up to the isolation gate valve closest to the main collection header pipe, except where noted otherwise in the CONTRACT DRAWINGS.

For sections of the discharge pipe that will be abandoned in place, grouting of that section of pipe will be required as indicated in the CONTRACT DRAWINGS.

Electrical: Replacing the existing main service disconnect switches at all rehabilitated well sites; replacing all wiring, distribution equipment, surge protection devices, lighting, receptacles; replacement of outdoor transformers at sites MBR-151, MBR-158, MBR-167, MBR-168, MBR-169; furnishing and installing a new conventional style lightning protection system; furnishing and

installing new Reduced Voltage Solid-State (RVSS) Motor Controller soft starters at all well sites.

Instrumentation and Controls: Replacement of the existing RTUs in accordance with the latest OWNER standards; replacement of all existing instrumentation; furnishing and installing standard door intrusion switch and motion detector for security.

Specialties (Well Rehabilitation and Specific Capacity Testing): Rehabilitation of production wells that have lost specific capacity due to the precipitation of minerals (calcium carbonate) or biofouling caused by slime-producing bacteria that reduce the porosity and permeability of a well's production interval. These wells typically require mechanical brushing of the casing and jet development of the open hole to remove sediment or organic debris, disinfection and stimulation (acidization) using high concentration acid and well development. Section 10050 describes requirements for rehabilitation, pre- and post-rehabilitation specific capacity testing, as well as pre- and post-rehabilitation geophysical (video) log inspections.

Process Mechanical: Replacing the existing pumps and motors at MBR-150, MBR-151, MBR-153, MBR-154, MBR-155, MBR-156, MBR-158, MBR-159, MBR-160, MBR-164, MBR-165, MBR-166, MBR-167, MBR-168, and MBR-169 with new submersible vertical turbine pumps and motors per the requirements of Section 11213; replacement of the existing flow meters with new Venturi flow meters; new check valves, and isolation gate valves, air release valves, piping, fittings, couplings, and flexible joints, as shown in the CONTRACT DRAWINGS; and the modification of the existing pumps' pedestals to accommodate the installation of the new wellheads. A video logging is required for each well casing where a new pump will be installed in accordance with the requirements specified in Section 11213.

Building Mechanical: Replacement of the existing exhaust fans in kind at all 15 rehabilitated well sites.

Structural: The existing masonry and roof structural elements of the following 15 well house buildings will be used: MBR-150, MBR-151, MBR-153, MBR-154, MBR-155, MBR-156, MBR-158, MBR-159, MBR-160, MBR-164, MBR-165, MBR-166, MBR-167, MBR-168, and MBR-169.

Minor structural repairs uncovered during field investigations, as shown on the CONTRACT DRAWINGS and specified herein, for well sites MBR-150, MBR-151, MBR-153, MBR-154, MBR-155, MBR-156, MBR-158, MBR-159, MBR-160, MBR-161, MBR-162, MBR-163, MBR-164, MBR-165, MBR-166, MBR-167, MBR-168, and MBR-169.

Architectural: Installation of new impact rated doors with louvers, frames, and door hardware at 15 well house buildings (MBR-150, MBR-151, MBR-153, MBR-154, MBR-155, MBR-156, MBR-158, MBR-159, MBR-160, MBR-164, MBR-165, MBR-166, MBR-167, MBR-168, and MBR-169); aesthetic improvements to the building including cleaning and pressure washing exterior walls for the veneered wellhouses, repairing, and patching minor holes, providing overall interior painting to match adjacent finishes and exterior painting of the concrete block wellhouses; replacement of exterior wood trim and providing exterior paint coating for the well houses; replacement of exterior roof flashing where exterior wood trim is replaced.

Civil: Grouting of the 12-inch raw water pipeline that will be abandoned in place as indicated in the CONTRACT DRAWINGS; regrading of the corridors disturbed by the demolition of the electrical supply and discharge piping at sites MBR-152, MBR-157, MBR-161, MBR-162, and MBR-163, site restoration after excavations for installation of new buried piping for sites MBR-

150, MBR-151, MBR-153, MBR-154, MBR-155, MBR-156, MBR-158, MBR-159, MBR-160, MBR-164, MBR-165, MBR-166, MBR-167, MBR-168, and MBR-169; site restoration upon completion of demolition at sites MBR-152 and MBR-157, as shown on the CONTRACT DRAWINGS.

Construction sequencing and scheduling constraints shall be adhered to, to maintain the ability of the wellfield to continue sending water supply to the treatment plant throughout the construction duration, as described in Section 01313 Construction and Schedule Constraints and Section 01650 Startup and Commissioning.

1-2.02. All materials, equipment, skills, tools and labor which are necessary and incidental for the proper completion of the WORK, shall be furnished and installed by the CONTRACTOR at no additional cost to the OWNER, whether specifically indicated in the CONTRACT DOCUMENTS or not.

1-2.03. In carrying out the WORK, comply with all applicable basic materials and construction requirements specified in the CONTRACT DOCUMENTS.

1-2.04. Public utility installations or structures owned or controlled by the OWNER or other governmental body which are shown on the DRAWINGS to be removed, relocated, replaced or rebuilt by the CONTRACTOR shall be considered as a part of the general cost of doing the WORK. No separate payment shall be made therefore.

1-3. CONTRACT PRICE

1-3.01. Construct the WORK based on the Bid Schedule. The CONTRACTOR's compensation for all construction, materials, equipment, and installation shown on the CONTRACT DRAWINGS and included in the SPECIFICATIONS will be deemed to be included in the unit Bid Schedule.

1-3.02.

1-4. SUBSTANTIAL AND FINAL COMPLETION

1-4.01. Before substantial completion, inspect and take all necessary remedial measures of every portion of the WORK to ensure the overall performance is in compliance with the terms of the CONTRACT DOCUMENTS.

1-4.02. The WORK shall be complete including all incidental mechanical, electrical, testing and calibration, and disinfection and ready for the OWNER to resume operations.

1-4.03. SUBSTANTIAL and FINAL COMPLETION of the WORK shall be completed, tested and ready for operation in accordance with the dates as contained in the CONTRACT DOCUMENTS.

PART 2 - MATERIALS (NOT USED)

PART 3 - EXECUTION (NOT USED)

END OF SECTION

THIS PAGE LEFT BLANK INTENTIONALLY

SECTION 01015

PROJECT REQUIREMENTS

PART 1 – GENERAL

1-1.01. The Work to be performed under these CONTRACT DOCUMENTS consists of the furnishing of all labor, materials and equipment, and performance of all WORK included in these CONTRACT DOCUMENTS. The Work is generally described in Section 01010 - Summary of Work.

PART 2 – MATERIALS AND EQUIPMENT

2-1.01. Suppliers

The names of proposed SUPPLIERS who are to furnish materials, fixtures, equipment, appliances or other fittings shall be submitted to the ENGINEER for approval, in accordance with the General Conditions, to afford proper investigation and checking. Such approval shall be obtained before SHOP DRAWINGS will be reviewed by the ENGINEER. No SUPPLIER will be approved for any materials to be furnished unless it shall be of good reputation and the plant at which the items are to be manufactured is of ample capacity. The SUPPLIER shall, upon the request of the ENGINEER, be required to submit evidence that the SUPPLIER has manufactured a similar product to the one specified and that it has been previously used for a like purpose for a sufficient length of time to demonstrate its satisfactory performance.

Any two or more pieces of material or equipment of the same size, kind, type or classification, and being used for identical types of service, shall be made by the same SUPPLIER (manufacturer).

PART 3 – STORAGE

3-1.01. Storage of materials and equipment shall be onsite per the approved CONTRACTOR staging/laydown plan.

PART 4 – SUBSTITUTES AND "OR-EQUAL" ITEMS

4-1.01. Whenever a material or article is specified or described by using the name of a proprietary product or the name of a particular manufacturer or vendor, the specified item shall be understood as establishing the type, function, and quality desired. Requests for review of equivalency will not be accepted from anyone except CONTRACTOR, and such requests will not be considered until after the Contract has been awarded. Other manufacturers' products may be accepted, provided sufficient information is submitted to allow ENGINEER to determine that the products proposed are equivalent to those named. Such items shall be submitted for review by the procedure set forth in the Submittals Procedures section.

PART 5 – PREPARATION FOR SHIPMENT

5-1.01. All materials shall be suitably packaged to facilitate handling and protect against damage

during transit and storage. Painted surfaces shall be protected against impact, abrasion, discoloration, and other damage. All painted surfaces which are damaged prior to acceptance of equipment shall be repainted to the satisfaction of ENGINEER.

5-1.02 Each item, package, or bundle of material shall be tagged or marked as identified in the delivery schedule or on the Shop Drawings. Complete packing lists and bills of material shall be included with each shipment.

PART 6 – SALVAGE OF MATERIALS AND EQUIPMENT (NOT USED)

PART 7 – LAND FOR CONSTRUCTION PURPOSES (NOT USED)

PART 8 – OPERATION OF EXISTING FACILITIES

8-1.01. The sequence of well groupings and the expected sequence of construction is defined in Section 01650 Startup, Testing and Commissioning Section and construction constraints are in Section 01313 Construction and Schedule Constraints.

8-1.02. CONTRACTOR shall provide temporary facilities and make temporary modifications as necessary to keep the existing facilities in operation during the construction period – other than the approved outages.

8-1.03. CONTRACTOR shall notify, and obtain the written approval of, the OWNER and ENGINEER before executing any work that require any of the operational facilities to be placed out of service.

PART 9 – NOTICES TO OWNERS AND AUTHORITIES

9-1.01. CONTRACTOR shall, as provided in the General Conditions, notify OWNERS of adjacent property and utilities when prosecution of the WORK may affect them.

9-1.02. When it is necessary to temporarily deny access to property, or when any utility service connection must be interrupted, CONTRACTOR shall give notices sufficiently in advance to enable the affected persons to provide for their needs. Notices shall conform to any applicable local ordinance and, whether delivered orally or in writing, shall include appropriate information concerning the interruption and instructions on how to limit inconvenience caused thereby.

9-1.03. Utilities and other concerned agencies shall be notified at least 48 hours prior to cutting or closing streets or other traffic areas or excavating near underground utilities or pole lines.

PART 10 – LINES AND GRADES

10-1.01. Safeguarding Marks:

- The CONTRACTOR shall safeguard all existing and known property corners, monuments and marks adjacent to but not related to the WORK and, if required, shall bear the cost of reestablishing them if disturbed or destroyed.

- The CONTRACTOR shall notify the ENGINEER immediately upon disturbing or

destroying any reference marks.

PART 11 – CONNECTIONS TO EXISTING FACILITIES

11-1.01. Unless otherwise specified or indicated, CONTRACTOR shall make all necessary connections to existing facilities, including structures, drain lines, and utilities such as water, sewer, gas, telephone, and electric. In each case, CONTRACTOR shall receive permission from OWNER or the owning utility prior to undertaking connections. CONTRACTOR shall protect facilities against deleterious substances and damage.

11-1.02. Connections to existing facilities which are in service shall be thoroughly planned in advance, and all required equipment, materials, and labor shall be on hand at the time of undertaking the connections. Work shall proceed continuously (around the clock) if necessary to complete connections in the minimum time. Operation of valves or other appurtenances on existing utilities, when required, shall be by or under the direct supervision of the owning utility.

PART 12 – UNFAVORABLE CONSTRUCTION CONDITIONS

12-1.01. During unfavorable weather, wet ground, or other unsuitable construction conditions, CONTRACTOR shall confine its operations to work which will not be affected adversely by such conditions. No portion of the Work shall be constructed under conditions which would affect adversely the quality or efficiency thereof unless special means or precautions are taken by CONTRACTOR to perform the Work in a proper and satisfactory manner.

PART 13 – CUTTING AND PATCHING

13-1.01. As provided in General Conditions, CONTRACTOR shall perform all cutting and patching required for the Work and as may be necessary in connection with uncovering Work for inspection or for the correction of defective Work.

13-1.02. CONTRACTOR shall perform all cutting and patching required for and in connection with the Work, including but not limited to the following:

- Removal of improperly timed Work.
- Removal of samples of installed materials for testing.
- Alteration of existing facilities.
- Installation of new Work in existing facilities.

13-1.03. CONTRACTOR shall provide all shoring, bracing, supports, and protective devices necessary to safeguard all Work and existing facilities during cutting and patching operations. CONTRACTOR shall not undertake any cutting or demolition which may affect the structural stability of the Work or existing facilities without ENGINEER'S concurrence.

13-1.04. Materials shall be cut and removed to the extent indicated on the Drawings or as required to complete the Work. Materials shall be removed in a careful manner, with no damage to adjacent facilities or materials. ***Materials which are not salvageable shall be removed from the site by***

CONTRACTOR.

13-1.05. All Work and existing facilities affected by cutting operations shall be restored with new materials, or with salvaged materials acceptable to ENGINEER, to obtain a finished installation with the strength, appearance, and functional capacity required. If necessary, entire surfaces shall be patched and refinished.

PART 14 – HAZARDOUS ENVIRONMENTAL CONDITIONS AT SITE (NOT USED)

PART 15 – CLEANING UP

15-1.01. CONTRACTOR shall keep the premises free at all times from accumulations of waste materials and rubbish. CONTRACTOR shall provide adequate trash receptacles about the Site and shall promptly empty the containers when filled.

15-1.02. Construction materials, such as concrete forms and scaffolding, shall be neatly stacked by CONTRACTOR when not in use. CONTRACTOR shall promptly remove splattered concrete, asphalt, oil, paint, corrosive liquids, and cleaning solutions from surfaces to prevent marring or other damage.

15-1.03. Volatile wastes shall be properly stored in covered metal containers and removed daily.

15-1.04. Wastes shall not be buried or burned on the Site or disposed of into storm drains, sanitary sewers, streams, or waterways. All wastes shall be removed from the Site and disposed of in a manner complying with local ordinances and antipollution laws.

15-1.05. Adequate cleanup will be a condition for recommendation of progress payment applications.

PART 16 – APPLICABLE CODES

16-1.01. References in the CONTRACT DOCUMENTS to local codes mean the Florida Building Code, Latest Edition.

16-1.02. Other standard codes which apply to the Work are designated in the Specifications.

PART 17 – REFERENCE STANDARDS

17-1.01. Reference to standards, specifications, manuals, or codes of any technical society, organization, or association, or to the laws or regulations of any governmental authority, whether such reference be specific or by implication, shall mean the latest standard specification, manual, code, or laws or regulations in effect at the time of opening of Bids (or on the effective date of the Contract or Agreement if there were no Bids), except as may be otherwise specifically stated in the CONTRACT DOCUMENTS. However, no provision of any referenced standard, specification, manual, or code, or any instruction of a Supplier, shall be effective to change the duties or responsibilities of OWNER, CONTRACTOR, or ENGINEER, or any of their SUBCONTRACTORS, consultants, agents, or employees from those set forth in the CONTRACT DOCUMENTS, nor shall any such provision or instruction be effective to assign to OWNER, ENGINEER, or any of ENGINEER's Consultants, agents, or employees, any duty or authority to

supervise or direct the performance of the Work or any duty or authority to undertake responsibility inconsistent with the provisions of the CONTRACT DOCUMENTS.

PART 18 – PRECONSTRUCTION CONFERENCE

18-1.01. Prior to the commencement of WORK at the Site, a preconstruction conference will be held at a mutually agreed time and place. The conference shall be attended by the CONTRACTOR and its superintendent, Principal SUBCONTRACTORS, Representatives of principal suppliers and manufacturers as appropriate, ENGINEER and its resident Project Representative, Representatives of OWNER, government representatives as appropriate, Others as requested by CONTRACTOR, OWNER, or ENGINEER.

18-1.02. Unless previously submitted to ENGINEER, CONTRACTOR shall bring to the conference a preliminary schedule for each of the following:

a. Progress Schedule. Procurement schedule
b. Schedule of Values for progress payment purposes.
c. Schedule of Shop Drawings and other submittals.

18-1.03. The purpose of the conference is to designate responsible personnel and establish a working relationship. Matters requiring coordination will be discussed and procedures for handling such matters established. The agenda will include:

a. CONTRACTOR's preliminary schedules.
b. Transmittal, review, and distribution of CONTRACTOR's submittals.
c. Processing Applications for Payment.
d. Maintaining record documents.
e. Critical Work sequencing.
f. Field decisions and Change Orders.
g. Use of premises, office and storage areas, security, housekeeping, and OWNER's needs.
h. Major equipment deliveries and priorities.
i. CONTRACTOR's assignments for safety and first aid.

18-1.04. ENGINEER will preside at the conference and will arrange for keeping the minutes and distributing the minutes to all persons in attendance.

PART 19 – PROGRESS MEETINGS

19-1.01. CONTRACTOR shall schedule and hold regular progress meetings at least monthly and at other times as requested by ENGINEER, OWNER, or required by progress of the Work. CONTRACTOR may at its discretion request attendance by representatives of its Suppliers, manufacturers, and other SUBCONTRACTORS.

19-1.02. ENGINEER shall preside at the meetings. Meeting minutes shall be prepared and distributed by ENGINEER. The purpose of the meetings will be to review the progress of the Work, maintain coordination of efforts, discuss changes in scheduling, and resolve other problems which may develop.

PART 20 – SITE ADMINISTRATION

20-1.01. CONTRACTOR shall be responsible for all areas of the Site used by it, and by all SUBCONTRACTORS in the performance of the Work.

PART 21 – CONSTRUCTION LIMITS

21-1.01. The CONTRACTOR's use of OWNER property for storage of materials, parking of trailers, employee parking, and other uses, shall be as designated by the OWNER and/or ENGINEER. If no area is designated, the CONTRACTOR shall submit a staging plan to the ENGINEER for approval prior to mobilizing to the site. The ENGINEER and the OWNER will jointly approve this plan.

21-1.02. CONTRACTORS shall restrict operations to approved staging areas and parking areas. Use of unpaved areas for roadways and parking shall not be permitted, except if approved in writing by the ENGINEER.

21-1.03. No onsite temporary fuel storage will be allowed unless pre-approval of the method of storage is obtained from the ENGINEER and/or OWNER. All fuel storage is to be properly contained to prevent accidental spills from leaking into the surrounding environment.

PART 22 – FIRST AID

22-1.01. The CONTRACTOR shall keep upon the site, at each location where operations are in progress, a completely equipped first aid kit and shall provide ready access thereto at all times when individuals are employed on the WORK. The CONTRACTOR shall keep at the site a handbook containing all emergency phone numbers (i.e., fire, hospital, EMS, etc.).

PART 23 – PROTECTION OF WETLAND AREAS

23-1.01. The CONTRACTOR shall properly dispose of all surplus material, including soil, in accordance with LAWS AND REGULATIONS and all PROJECT permits.

23-1.02. Under no circumstances shall surplus material be disposed of in wetland areas as defined by the Florida Department of Environmental Protection, Southwest Florida Water Management District, U.S. Army Corps of Engineers or other applicable jurisdictional agencies.

PART 24 – USE OF CHEMICALS

24-1.01. All chemicals used during PROJECT construction or furnished for PROJECT operation, whether herbicide, pesticide, disinfection, polymer, reactant, or of other classification, shall show approval of either EPA or USDA. Use of all such chemicals and disposal of residues shall be in strict conformance with LAWS AND REGULATIONS and instructions.

PART 25 – COOPERATION WITH OTHER CONTRACTORS AND FORCES

25-1.01. During progress of the WORK, it may be necessary for other contractors and persons employed by the OWNER to work in or about the PROJECT.

25-1.02. The OWNER reserves the right to put such other contractors to work and to afford such access to the site of the WORK at such times as the OWNER deems proper.

25-1.03. The CONTRACTOR shall not impede or interfere with the work of and shall coordinate

with such other contractors engaged in or about the WORK and shall so arrange and conduct all WORK that such other contractors may complete their work at the earliest date possible.

PART 26 – MAINTENANCE OF TRAFFIC

26-1.01. General

- The CONTRACTOR shall be responsible for the proper maintenance control and detour of traffic in the area of construction during the course of construction. No claims for additional payment shall be considered for costs incurred in the proper maintenance, control, detour and protection of traffic.

- Traffic shall be maintained at all times where practical and as more particularly specified hereinafter. No traffic shall be detoured without prior knowledge and approval of the OWNER. The CONTRACTOR shall provide NOTICE to the ENGINEER a minimum of seven (7) DAYS in advance of such time as the traffic detour is proposed.

- All traffic control signs and devices, barricades, flashers, flambeaus and similar devices shall be furnished and maintained by the CONTRACTOR.

- Excavated or other material stored adjacent to or partially upon a roadway pavement shall be adequately marked for traffic and pedestrian safety at all times. Necessary access to adjacent property shall be provided at all times.

- Excavation shall be conducted in a manner to cause the least possible interruption to traffic. Where traffic must cross excavations, the CONTRACTOR shall provide suitable bridges at street intersections and driveways.

26-1.02. Traffic Lanes

- No traffic lane closures shall be allowed unless express written approval has been provided to the CONTRACTOR from the OWNER.

- Steel plate or bridging shall be furnished where required to maintain traffic as specified above and during the time required for curing of concrete slab pavement restoration.

PART 27 – EMPLOYEE DRESS AND APPEARANCE

27-1.01. All CONTRACTORS, subcontractors, and their employees, must be dressed in such standards as not to bring discredit to the OWNER. In all cases, all workers and employees working at the plant shall wear shoes, pants, shirts, and the required personal protective equipment (PPE). All persons shall be professionally dressed and act professionally while on OWNER property.

PART 28 – USE OF OWNER FACILITIES

28-1.01. Except as otherwise authorized, the CONTRACTOR shall not use OWNER’s telephones, restrooms, break rooms, or other facilities provided for OWNER

END OF SECTION

THIS PAGE LEFT BLANK INTENTIONALLY

SECTION 01025

MEASUREMENT AND PAYMENT

PART 1 - SCOPE

1-1.01. This section covers methods of measurement and payment for items of Work under this Contract. The LUMP SUM PRICE for the various items of the Bid Schedule, as further specified herein, shall include all compensation to be received by the CONTRACTOR and shall cover all Work required by the CONTRACT DOCUMENTS. These costs shall include all costs for permits and cost of compliance with the regulations of public agencies having jurisdiction, including Safety and Health Requirements of OSHA. All costs in connection with the proper and successful completion of the Work, including furnishing all materials, equipment, supplies, and appurtenances; providing all construction, equipment, and tools; and performing all necessary labor and supervision to fully complete the Work, shall be included in the unit and lump sum PRICEs bid. All Work not specifically set forth as a pay item in the Bid Form shall be considered a subsidiary obligation of CONTRACTOR and all costs in connection therewith shall be included in the PRICEs bid. The Bid Form and this Section are not intended to depict the construction sequencing, that is noted in other Sections of the CONTRACT DOCUMENTS.

PART 2 - ESTIMATED QUANTITIES

2-1.01. All estimated quantities stipulated in the Bid Form or other CONTRACT DOCUMENTS are approximate and are to be used only (a) as a basis for estimating the probable cost of the Work and (b) for the purpose of comparing the Bids submitted for the Work. The actual amounts of work done and materials furnished under unit PRICE items may differ from the estimated quantities. The basis of payment for work and materials will be the actual amount of work done and materials furnished. CONTRACTOR agrees that it will make no claim for damages, anticipated profits, or otherwise on account of any difference between the amounts of work actually performed and materials actually furnished and the estimated amounts therefor.

PART 3 - PAYMENT ITEMS

3.1. BID ITEM NO. 1 – MOBILIZATION/DEMOBILIZATION

3-1.01. Description. Under the Bid Item for Mobilization and Demobilization furnish all labor, materials, equipment, and services to perform those operations necessary for the movement of personnel, equipment, supplies and incidentals to and from the project site and for establishment of temporary offices, buildings, safety equipment, sanitary facilities and first aid supplies as required by the specifications and state and local law and regulations. The cost of assistance to the ENGINEER and his Resident Project Representative shall also be included under this Bid Item. The costs of bonds and any required insurance, and any other pre-construction or post-construction expense necessary to start or completion of the WORK, excluding the cost of construction materials, shall also be included under this Bid Item. The cost of all other WORK as shown and specified that is not specifically included under other Bid Items shall also be included under this Bid Item.

3-1.02. Payment. Payment for Mobilization and Demobilization will be made at the Bid LUMP SUM PRICE for Bid item 1 according to the following schedule:

Percent of Original Contract Amount Earned*	Allowable Percent of the LUMP SUM PRICE for Mobilization and Demobilization
0	Cost of Bonds and Insurance**
3	Balance of First 60
95	Remaining 40

*WORK installed and not including materials stored.
**As verified by receipted invoice.

Payment for Mobilization and Demobilization will be subject to retainage as described in these CONTRACT DOCUMENTS.

Payment for Mobilization and Demobilization will be limited to five percent (5%) of the original CONTRACT PRICE for the PROJECT.

3.2. BID ITEM NO. 2 – MBR-150 WELL SITE WORK

3-2.01. Description. Under this Bid Item furnish all materials, labor and equipment to construct, maintain and complete all WORK shown on CONTRACT DOCUMENTS. This WORK includes, but is not limited to the following: Demolition and proper disposal of all of the items noted in the Section 02050 Demolition and the Drawings, including but not limited to the pump and motor, pump discharge piping and associated flow meter, valves, and fittings, exhaust fan and associated louvers, doors and frames, electrical systems, and controls; video-logging the well, installation of new submersible pump and motor, instrumentation including a new Venturi flow meter; new check valves, and isolation gate valve, air release valves, discharge piping, fittings, and couplings; electrical improvements including replacing disconnect switches, replacing all wiring, distribution equipment, surge protection devices, lighting, receptacles; new reduced voltage solid-state motor controller soft starter; instrumentation and controls improvements including replacement of all existing instrumentation, replacement of existing RTUs, new standard door intrusion and motion detector; HVAC exhaust louvers, exhaust fans, and appurtenances; structural repairs as indicated on the CONTRACT DOCUMENTS; architectural improvements including the installation of new impact rated doors with louvers, frames, and door hardware; repairing and patching minor holes with finish to match adjacent wall texture and finish, cleaning and preparing interior walls and ceilings for interior painting to match adjacent finishes; cleaning and pressure washing exterior walls and roof system; providing exterior paint coating; civil site restoration after excavations for installation of new buried piping is completed.

3-2.02. Payment. Payment will be made at the CONTRACT LUMP SUM PRICE for Bid Item for MBR-150 Well Site Work.

3.3. BID ITEM NO. 3 – MBR-151 WELL SITE WORK

3-3.01. Description. Under this Bid Item furnish all materials, labor and equipment to construct, maintain and complete all WORK shown on CONTRACT DOCUMENTS. This WORK includes, but is not limited to the following: Demolition and proper disposal of all of the items noted in the noted in the Section 02050 Demolition and the Drawings, including but not limited to the pump and motor, pump discharge piping and associated flow meter, valves, and fittings, exhaust fan and associated louvers, doors and frames, electrical systems, and controls; video-logging the

well, installation of new submersible pump and motor, instrumentation including a new Venturi flow meter; new check valves, and isolation gate valve, air release valves, discharge piping, fittings, and couplings; electrical improvements including replacing disconnect switches, replacing all wiring, distribution equipment, surge protection devices, lighting, receptacles; replacement of outdoor transformer, new reduced voltage solid-state motor controller soft starter; instrumentation and controls improvements including replacement of all existing instrumentation, replacement of existing RTUs, new standard door intrusion and motion detector; HVAC exhaust louvers, exhaust fans, and appurtenances; structural repairs as indicated on the CONTRACT DOCUMENTS; architectural improvements including the installation of new impact rated doors with louvers, frames, and door hardware; repairing and patching minor holes with finish to match adjacent wall texture and finish, cleaning and preparing interior walls and ceilings for interior painting to match adjacent finishes; cleaning and pressure washing exterior walls and roof system; providing exterior paint coating; civil site restoration after excavations for installation of new buried piping is completed.

3-3.02. Payment. Payment will be made at the CONTRACT LUMP SUM PRICE for Bid Item for MBR-151 Well Site Work.

3.4. BID ITEM NO. 4 – MBR-152 WELL SITE WORK

3-4.01. Description. Under this Bid Item furnish all materials, labor and equipment to complete all WORK shown on CONTRACT DOCUMENTS. This WORK includes, but is not limited to the following: Demolition and proper disposal of all of the items noted in Section 02050 Demolition and the Drawings including, but not limited to, the existing concrete pump pedestal, the pump and motor, pump discharge piping and associated flow meter, valves, and fittings up to the point depicted on the CONTRACT DOCUMENTS, exhaust fan and associate louvers, superstructure and foundation, roof hatch, doors, electrical systems, and controls, demolition of the power supply between the main transmission line and the well house; civil site restoration at the well site and along corridor disturbed by the demolition of the electrical supply and discharge piping; as well as grouting of the discharge pipe left in place, and well abandonment.

3-4.02. Payment. Payment will be made at the CONTRACT LUMP SUM PRICE for Bid Item for MBR-152 Well Site Work.

3.5. BID ITEM NO. 5 – MBR-153 WELL SITE WORK

3-5.01. Description. Under this Bid Item furnish all materials, labor and equipment to construct, maintain and complete all WORK shown on CONTRACT DOCUMENTS. This WORK includes, but is not limited to the following: Demolition and proper disposal of all of the items noted in Section 02050 Demolition and the Drawings, including but not limited to the pump and motor, pump discharge piping and associated flow meter, valves, and fittings, exhaust fan and associated louvers, doors and frames, electrical systems, and controls; video-logging the well, installation of new submersible pump and motor, instrumentation including a new venturi flow meter; new check valves, and isolation gate valve, air release valves, discharge piping, fittings, and couplings; electrical improvements including replacing disconnect switches, replacing all wiring, distribution equipment, surge protection devices, lighting, receptacles; new reduced voltage solid-state motor controller soft starter; instrumentation and controls improvements including replacement of all existing instrumentation, replacement of existing RTUs, new standard door intrusion and motion detector; HVAC exhaust louvers, exhaust fans, and appurtenances;

structural repairs as indicated on the CONTRACT DOCUMENTS; architectural improvements including the installation of new impact rated doors with louvers, frames, and door hardware; repairing and patching minor holes with finish to match adjacent wall texture and finish, cleaning and preparing interior walls and ceilings for interior painting to match adjacent finishes; cleaning and pressure washing exterior walls and roof system; providing exterior paint coating; civil site restoration after excavations for installation of new buried piping is completed.

3-5.02. Payment. Payment will be made at the CONTRACT LUMP SUM PRICE for Bid Item for MBR-153 Well Site Work.

3.6. BID ITEM NO. 6 – MBR-154 WELL SITE WORK

3-6.01. Description. Under this Bid Item furnish all materials, labor and equipment to construct, maintain and complete all WORK shown on CONTRACT DOCUMENTS. This WORK includes, but is not limited to the following: Demolition and proper disposal of all of the items noted in Section 02050 Demolition and the Drawings, including but not limited to the pump and motor, pump discharge piping and associated flow meter, valves, and fittings, exhaust fan and associated louvers, doors and frames, electrical systems, and controls; video-logging the well, installation of new submersible pump and motor, instrumentation including a new venturi flow meter; new check valves, and isolation gate valve, air release valves, discharge piping, fittings, and couplings; electrical improvements including replacing disconnect switches, replacing all wiring, distribution equipment, surge protection devices, lighting, receptacles; new reduced voltage solid-state motor controller soft starter; instrumentation and controls improvements including replacement of all existing instrumentation, replacement of existing RTUs, new standard door intrusion and motion detector; HVAC exhaust louvers, exhaust fans, and appurtenances; structural repairs as indicated on the CONTRACT DOCUMENTS; architectural improvements including the installation of new impact rated doors with louvers, frames, and door hardware; repairing and patching minor holes with finish to match adjacent wall texture and finish, cleaning and preparing interior walls and ceilings for interior painting to match adjacent finishes; cleaning and pressure washing exterior walls and roof system; providing exterior paint coating; civil site restoration after excavations for installation of new buried piping is completed.

3-6.02. Payment. Payment will be made at the CONTRACT LUMP SUM PRICE for Bid Item for MBR-154 Well Site Work.

3.7. BID ITEM NO. 7 – MBR-155 WELL SITE WORK

3-7.01. Description. Under this Bid Item furnish all materials, labor and equipment to construct, maintain and complete all WORK shown on CONTRACT DOCUMENTS. This WORK includes, but is not limited to the following: Demolition and proper disposal of all of the items noted in Section 02050 Demolition and the Drawings, including but not limited to the pump and motor, pump discharge piping and associated flow meter, valves, and fittings, exhaust fan and associated louvers, doors and frames, electrical systems, and controls; video-logging the well, installation of new submersible pump and motor, instrumentation including a new venturi flow meter; new check valves, and isolation gate valve, air release valves, discharge piping, fittings, and couplings; electrical improvements including replacing disconnect switches, replacing all wiring, distribution equipment, surge protection devices, lighting, receptacles; new reduced voltage solid-state motor controller soft starter; instrumentation and controls improvements including replacement of all existing instrumentation, replacement of existing RTUs, new standard door intrusion and motion detector; HVAC exhaust louvers, exhaust fans, and appurtenances;

structural repairs as indicated on the CONTRACT DOCUMENTS; architectural improvements including the installation of new impact rated doors with louvers, frames, and door hardware; repairing and patching minor holes with finish to match adjacent wall texture and finish, cleaning and preparing interior walls and ceilings for interior painting to match adjacent finishes; cleaning and pressure washing exterior walls and roof system; providing exterior paint coating; civil site restoration after excavations for installation of new buried piping is completed.

3-7.02. Payment. Payment will be made at the CONTRACT LUMP SUM PRICE for Bid Item for MBR-155 Well Site Work.

3.8. BID ITEM NO. 8 – MBR-156 WELL SITE WORK

3-8.01. Description. Under this Bid Item furnish all materials, labor and equipment to construct, maintain and complete all WORK shown on CONTRACT DOCUMENTS. This WORK includes, but is not limited to the following: Demolition and proper disposal of all of the items noted in Section 02050 Demolition and the Drawings, including but not limited to the pump and motor, pump discharge piping and associated flow meter, valves, and fittings, exhaust fan and associated louvers, doors and frames, electrical systems, and controls; video-logging the well, installation of new submersible pump and motor, instrumentation including a new venturi flow meter; new check valves, and isolation gate valve, air release valves, discharge piping, fittings, and couplings; electrical improvements including replacing disconnect switches, replacing all wiring, distribution equipment, surge protection devices, lighting, receptacles; new reduced voltage solid-state motor controller soft starter; instrumentation and controls improvements including replacement of all existing instrumentation, replacement of existing RTUs, new standard door intrusion and motion detector; HVAC exhaust louvers, exhaust fans, and appurtenances; structural repairs as indicated on the CONTRACT DOCUMENTS; architectural improvements including the installation of new impact rated doors with louvers, frames, and door hardware; repairing and patching minor holes with finish to match adjacent wall texture and finish, cleaning and preparing interior walls and ceilings for interior painting to match adjacent finishes; cleaning and pressure washing exterior walls and roof system; providing exterior paint coating; civil site restoration after excavations for installation of new buried piping is completed.

3-8.02. Payment. Payment will be made at the CONTRACT LUMP SUM PRICE for Bid Item for MBR-156 Well Site Work.

3.9. BID ITEM NO. 9 – MBR-157 WELL SITE WORK

3-9.01. Description. Under this Bid Item furnish all materials, labor and equipment to complete all WORK shown on CONTRACT DOCUMENTS. This WORK includes, but is not limited to the following: Demolition and proper disposal of all of the items noted in Section 02050 Demolition and the Drawings including, but not limited to, the existing concrete pump pedestal, the pump and motor, pump discharge piping and associated flow meter, valves, and fittings up to the point depicted on the CONTRACT DOCUMENTS, exhaust fan and associate louvers, superstructure and foundation, roof hatch, doors, electrical systems, and controls, demolition of the power supply between the main transmission line and the well house; civil site restoration at the well site and along corridor disturbed by the demolition of the electrical supply and discharge piping; as well as grouting of the discharge pipe left in place, and well abandonment.

3-9.02. Payment. Payment will be made at the CONTRACT LUMP SUM PRICE for Bid Item for MBR-157 Well Site Work.

3.10. BID ITEM NO. 10 – MBR-158 WELL SITE WORK

3-10.01. Description. Under this Bid Item furnish all materials, labor and equipment to construct, maintain and complete all WORK shown on CONTRACT DOCUMENTS. This WORK includes, but is not limited to the following: Demolition and proper disposal of all of the items noted in Section 02050 Demolition and the Drawings, including but not limited to the pump and motor, pump discharge piping and associated flow meter, valves, and fittings, exhaust fan and associated louvers, doors and frames, electrical systems, and controls; video-logging the well, installation of new submersible pump and motor, instrumentation including a new venturi flow meter; new check valves, and isolation gate valve, air release valves, discharge piping, fittings, and couplings; electrical improvements including replacing disconnect switches, replacing all wiring, distribution equipment, surge protection devices, lighting, receptacles; replacement of outdoor transformer, new reduced voltage solid-state motor controller soft starter; instrumentation and controls improvements including replacement of all existing instrumentation, replacement of existing RTUs, new standard door intrusion and motion detector; HVAC exhaust louvers, exhaust fans, and appurtenances; structural repairs as indicated on the CONTRACT DOCUMENTS; architectural improvements including the installation of new impact rated doors with louvers, frames, and door hardware; repairing and patching minor holes with finish to match adjacent wall texture and finish, cleaning and preparing interior walls and ceilings for interior painting to match adjacent finishes; cleaning and pressure washing exterior walls and roof system; providing exterior paint coating; civil site restoration after excavations for installation of new buried piping is completed.

3-10.02. Payment. Payment will be made at the CONTRACT LUMP SUM PRICE for Bid Item for MBR-158 Well Site Work.

3.11. BID ITEM NO. 11 – MBR-159 WELL SITE WORK

3-11.01. Description. Under this Bid Item furnish all materials, labor and equipment to construct, maintain and complete all WORK shown on CONTRACT DOCUMENTS. This WORK includes, but is not limited to the following: Demolition and proper disposal of all of the items noted in Section 02050 Demolition and the Drawings, including but not limited to the pump and motor, pump discharge piping and associated flow meter, valves, and fittings, exhaust fan and associated louvers, doors and frames, electrical systems, and controls; video-logging the well, installation of new submersible pump and motor, instrumentation including a new venturi flow meter; new check valves, and isolation gate valve, air release valves, discharge piping, fittings, and couplings; electrical improvements including replacing disconnect switches, replacing all wiring, distribution equipment, surge protection devices, lighting, receptacles; new reduced voltage solid-state motor controller soft starter; instrumentation and controls improvements including replacement of all existing instrumentation, replacement of existing RTUs, new standard door intrusion and motion detector; HVAC exhaust louvers, exhaust fans, and appurtenances; structural repairs as indicated on the CONTRACT DOCUMENTS; architectural improvements including the installation of new impact rated doors with louvers, frames, and door hardware; repairing and patching minor holes with finish to match adjacent wall texture and finish, cleaning and preparing interior walls and ceilings for interior painting to match adjacent finishes; cleaning and pressure washing exterior walls and roof system; providing exterior paint coating; civil site restoration after excavations for installation of new buried piping is completed.

3-11.02. Payment. Payment will be made at the CONTRACT LUMP SUM PRICE for Bid Item for MBR-159 Well Site Work.

3.12. BID ITEM NO. 12 – MBR-160 WELL SITE WORK

3-12.01. Description. Under this Bid Item furnish all materials, labor and equipment to construct, maintain and complete all WORK shown on CONTRACT DOCUMENTS. This WORK includes, but is not limited to the following: Demolition and proper disposal of all of the items noted in Section 02050 Demolition and the Drawings, including but not limited to the pump and motor, pump discharge piping and associated flow meter, valves, and fittings, exhaust fan and associated louvers, doors and frames, electrical systems, and controls; video-logging the well, installation of new submersible pump and motor, instrumentation including a new venturi flow meter; new check valves, and isolation gate valve, air release valves, discharge piping, fittings, and couplings; electrical improvements including replacing disconnect switches, replacing all wiring, distribution equipment, surge protection devices, lighting, receptacles; new reduced voltage solid-state motor controller soft starter; instrumentation and controls improvements including replacement of all existing instrumentation, replacement of existing RTUs, new standard door intrusion and motion detector; HVAC exhaust louvers, exhaust fans, and appurtenances; structural repairs as indicated on the CONTRACT DOCUMENTS; architectural improvements including the installation of new impact rated doors with louvers, frames, and door hardware; repairing and patching minor holes with finish to match adjacent wall texture and finish, cleaning and preparing interior walls and ceilings for interior painting to match adjacent finishes; cleaning and pressure washing exterior walls and roof system; providing exterior paint coating; civil site restoration after excavations for installation of new buried piping is completed.

3-12.02. Payment. Payment will be made at the CONTRACT LUMP SUM PRICE for Bid Item for MBR-160 Well Site Work.

3.13. BID ITEM NO. 13 – MBR-161 WELL SITE WORK

3-13.01. Description. Under this Bid Item furnish all materials, labor and equipment to complete all WORK shown on CONTRACT DOCUMENTS. This WORK includes, but is not limited to the following: Demolition and proper disposal of all of the items noted in Section 02050 Demolition and the Drawings, including the pump and motor, pump discharge piping and associated flow meter, valves, and fittings up to the point depicted on the CONTRACT DOCUMENTS, exhaust fan, electrical systems, and controls, demolition of the power supply between the main transmission line and the well house; civil site restoration along corridor disturbed by the demolition of the electrical supply and discharge piping; as well as grouting of the discharge pipe left in place, and well abandonment.

3-13.02. Payment. Payment will be made at the CONTRACT LUMP SUM PRICE for Bid Item for MBR-161 Well Site Work.

3.14. BID ITEM NO. 14 – MBR-162 WELL SITE WORK

3-14.01. Description. Under this Bid Item furnish all materials, labor and equipment to complete all WORK shown on CONTRACT DOCUMENTS. This WORK includes, but is not limited to the following: Demolition and proper disposal of all of the items noted in Section 02050 Demolition and the Drawings including the pump discharge piping and associated flow meter, valves, and fittings up to the point depicted on the CONTRACT DOCUMENTS, exhaust fan, electrical systems, and controls, demolition of the power supply between the main transmission line and the well house; civil site restoration along corridor disturbed by the demolition of the electrical supply and discharge piping; as well as grouting of the discharge pipe left in place, and well

abandonment.

3-14.02. Payment. Payment will be made at the CONTRACT LUMP SUM PRICE for Bid Item for MBR-162 Well Site Work.

3.15. BID ITEM NO. 15 – MBR-163 WELL SITE WORK

3-15.01. Description. Under this Bid Item furnish all materials, labor and equipment to complete all WORK shown on CONTRACT DOCUMENTS. This WORK includes, but is not limited to the following: Demolition and proper disposal of all of the items noted in Section 02050 Demolition and the Drawings including the pump and motor, pump discharge piping and associated flow meter, valves, and fittings up to the point depicted on the CONTRACT DOCUMENTS, exhaust fan, electrical systems, and controls, demolition of the power supply between the main transmission line and the well house; civil site restoration along corridor disturbed by the demolition of the electrical supply and discharge piping; as well as grouting of the discharge pipe left in place, and well abandonment.

3-15.02. Payment. Payment will be made at the CONTRACT LUMP SUM PRICE for Bid Item for MBR-163 Well Site Work.

3.16. BID ITEM NO. 16 – MBR-164 WELL SITE WORK

3-16.01. Description. Under this Bid Item furnish all materials, labor and equipment to construct, maintain and complete all WORK shown on CONTRACT DOCUMENTS. This WORK includes, but is not limited to the following: Demolition and proper disposal of all of the items noted in Section 02050 Demolition and the Drawings, including but not limited to the pump and motor, pump discharge piping and associated flow meter, valves, and fittings, exhaust fan and associated louvers, doors and frames, electrical systems, and controls; video-logging the well, installation of new submersible pump and motor, instrumentation including a new venturi flow meter; new check valves, and isolation gate valve, air release valves, discharge piping, fittings, and couplings; electrical improvements including replacing disconnect switches, replacing all wiring, distribution equipment, surge protection devices, lighting, receptacles; new reduced voltage solid-state motor controller soft starter; instrumentation and controls improvements including replacement of all existing instrumentation, replacement of existing RTUs, new standard door intrusion and motion detector; HVAC exhaust louvers, exhaust fans, and appurtenances; structural repairs as indicated on the CONTRACT DOCUMENTS; architectural improvements including the installation of new impact rated doors with louvers, frames, and door hardware; repairing and patching minor holes with finish to match adjacent wall texture and finish; cleaning and preparing interior walls and ceilings for interior painting to match adjacent finishes; cleaning and pressure washing exterior walls and roof system; replacement of exterior wood trim; replacement and extension of exterior metal roof flashing where exterior wood trim is replaced; provide exterior clear water repellent on brick veneer; civil site restoration after excavations for installation of new buried piping is completed.

3-16.02. Payment. Payment will be made at the CONTRACT LUMP SUM PRICE for Bid Item for MBR-164 Well Site Work.

3.17. BID ITEM NO. 17 – MBR-165 WELL SITE WORK

3-17.01. Description. Under this Bid Item furnish all materials, labor and equipment to construct,

maintain and complete all WORK shown on CONTRACT DOCUMENTS. This WORK includes, but is not limited to the following: Demolition and proper disposal of all of the items noted in Section 02050 Demolition and the Drawings, including but not limited to the pump and motor, pump discharge piping and associated flow meter, valves, and fittings, exhaust fan and associated louvers, doors and frames, electrical systems, and controls; video-logging the well, installation of new submersible pump and motor, instrumentation including a new venturi flow meter; new check valves, and isolation gate valve, air release valves, discharge piping, fittings, and couplings; electrical improvements including replacing disconnect switches, replacing all wiring, distribution equipment, surge protection devices, lighting, receptacles; new reduced voltage solid-state motor controller soft starter; instrumentation and controls improvements including replacement of all existing instrumentation, replacement of existing RTUs, new standard door intrusion and motion detector; HVAC exhaust louvers, exhaust fans, and appurtenances; structural repairs as indicated on the CONTRACT DOCUMENTS; architectural improvements including the installation of new impact rated doors with louvers, frames, and door hardware; repairing and patching minor holes with finish to match adjacent wall texture and finish; cleaning and preparing interior walls and ceilings for interior painting to match adjacent finishes; cleaning and pressure washing exterior walls and roof system; replacement of exterior wood trim; replacement and extension of exterior metal roof flashing where exterior wood trim is replaced; provide exterior clear water repellent on brick veneer; civil site restoration after excavations for installation of new buried piping is completed.

3-17.02. Payment. Payment will be made at the CONTRACT LUMP SUM PRICE for Bid Item for MBR-165 Well Site Work.

3.18. BID ITEM NO. 18 – MBR-166 WELL SITE WORK

3-18.01. Description. Under this Bid Item furnish all materials, labor and equipment to construct, maintain and complete all WORK shown on CONTRACT DOCUMENTS. This WORK includes, but is not limited to the following: Demolition and proper disposal of all of the items noted in Section 02050 Demolition and the Drawings, including but not limited to the pump and motor, pump discharge piping and associated flow meter, valves, and fittings, exhaust fan and associated louvers, doors and frames, electrical systems, and controls; video-logging the well, installation of new submersible pump and motor, instrumentation including a new venturi flow meter; new check valves, and isolation gate valve, air release valves, discharge piping, fittings, and couplings; electrical improvements including replacing disconnect switches, replacing all wiring, distribution equipment, surge protection devices, lighting, receptacles; new reduced voltage solid-state motor controller soft starter; instrumentation and controls improvements including replacement of all existing instrumentation, replacement of existing RTUs, new standard door intrusion and motion detector; HVAC exhaust louvers, exhaust fans, and appurtenances; structural repairs as indicated on the CONTRACT DOCUMENTS; architectural improvements including the installation of new impact rated doors with louvers, frames, and door hardware; repairing and patching minor holes with finish to match adjacent wall texture and finish; cleaning and preparing interior walls and ceilings for interior painting to match adjacent finishes; cleaning and pressure washing exterior walls and roof system; replacement of exterior wood trim; replacement and extension of exterior metal roof flashing where exterior wood trim is replaced; provide exterior clear water repellent on brick veneer; civil site restoration after excavations for installation of new buried piping is completed.

3-18.02. Payment. Payment will be made at the CONTRACT LUMP SUM PRICE for Bid Item for MBR-166 Well Site Work.

3.19. BID ITEM NO. 19 – MBR-167 WELL SITE WORK

3-19.01. Description. Under this Bid Item furnish all materials, labor and equipment to construct, maintain and complete all WORK shown on CONTRACT DOCUMENTS. This WORK includes, but is not limited to the following: Demolition and proper disposal of all of the items noted in Section 02050 Demolition and the Drawings, including but not limited to the pump and motor, pump discharge piping and associated flow meter, valves, and fittings, exhaust fan and associated louvers, doors and frames, electrical systems, and controls; video-logging the well, installation of new submersible pump and motor, instrumentation including a new venturi flow meter; new check valves, and isolation gate valve, air release valves, discharge piping, fittings, and couplings; electrical improvements including replacing disconnect switches, replacing all wiring, distribution equipment, surge protection devices, lighting, receptacles; replacement of outdoor transformer, new reduced voltage solid-state motor controller soft starter; instrumentation and controls improvements including replacement of all existing instrumentation, replacement of existing RTUs, new standard door intrusion and motion detector; HVAC exhaust louvers, exhaust fans, and appurtenances; structural repairs as indicated on the CONTRACT DOCUMENTS; architectural improvements including the installation of new impact rated doors with louvers, frames, and door hardware; repairing and patching minor holes with finish to match adjacent wall texture and finish; cleaning and preparing interior walls and ceilings for interior painting to match adjacent finishes; cleaning and pressure washing exterior walls and roof system; replacement of exterior wood trim; replacement and extension of exterior metal roof flashing where exterior wood trim is replaced; provide exterior clear water repellent on brick veneer; civil site restoration after excavations for installation of new buried piping is completed.

3-19.02. Payment. Payment will be made at the CONTRACT LUMP SUM PRICE for Bid Item for MBR-167 Well Site Work.

3.20. BID ITEM NO. 20 – MBR-168 WELL SITE WORK

3-20.01. Description. Under this Bid Item furnish all materials, labor and equipment to construct, maintain and complete all WORK shown on CONTRACT DOCUMENTS. This WORK includes, but is not limited to the following: Demolition and proper disposal of all of the items noted in Section 02050 Demolition and the Drawings, including but not limited to the pump and motor, pump discharge piping and associated flow meter, valves, and fittings, exhaust fan and associated louvers, doors and frames, electrical systems, and controls; video-logging the well, installation of new submersible pump and motor, instrumentation including a new venturi flow meter; new check valves, and isolation gate valve, air release valves, discharge piping, fittings, and couplings; electrical improvements including replacing disconnect switches, replacing all wiring, distribution equipment, surge protection devices, lighting, receptacles; replacement of outdoor transformer, new reduced voltage solid-state motor controller soft starter; instrumentation and controls improvements including replacement of all existing instrumentation, replacement of existing RTUs, new standard door intrusion and motion detector; HVAC exhaust louvers, exhaust fans, and appurtenances; structural repairs as indicated on the CONTRACT DOCUMENTS; architectural improvements including the installation of new impact rated doors with louvers, frames, and door hardware; repairing and patching minor holes with finish to match adjacent wall texture and finish; cleaning and preparing interior walls and ceilings for interior painting to match adjacent finishes; cleaning and pressure washing exterior walls and roof system; replacement of exterior wood trim; replacement and extension of exterior metal roof flashing where exterior wood trim is replaced; provide exterior clear water repellent on brick veneer; civil site restoration after excavations for installation of new buried piping is completed.

3-20.02. Payment. Payment will be made at the CONTRACT LUMP SUM PRICE for Bid Item for MBR-168 Well Site Work.

3.21. BID ITEM NO. 21 – MBR-169 WELL SITE WORK

3-21.01. Description. Under this Bid Item furnish all materials, labor and equipment to construct, maintain and complete all WORK shown on CONTRACT DOCUMENTS. This WORK includes, but is not limited to the following: Demolition and proper disposal of all of the items noted in Section 02050 Demolition and the Drawings, including but not limited to the pump and motor, pump discharge piping and associated flow meter, valves, and fittings, exhaust fan and associated louvers, doors and frames, electrical systems, and controls; video-logging the well, installation of new submersible pump and motor, instrumentation including a new venturi flow meter; new check valves, and isolation gate valve, air release valves, discharge piping, fittings, and couplings; electrical improvements including replacing disconnect switches, replacing all wiring, distribution equipment, surge protection devices, lighting, receptacles; replacement of outdoor transformer, new reduced voltage solid-state motor controller soft starter; instrumentation and controls improvements including replacement of all existing instrumentation, replacement of existing RTUs, new standard door intrusion and motion detector; HVAC exhaust louvers, exhaust fans, and appurtenances; structural repairs as indicated on the CONTRACT DOCUMENTS; architectural improvements including the installation of new impact rated doors with louvers, frames, and door hardware; repairing and patching minor holes with finish to match adjacent wall texture and finish; cleaning and preparing interior walls and ceilings for interior painting to match adjacent finishes; cleaning and pressure washing exterior walls and roof system; replacement of exterior wood trim; replacement and extension of exterior metal roof flashing where exterior wood trim is replaced; provide exterior clear water repellent on brick veneer; civil site restoration after excavations for installation of new buried piping is completed.

3-21.02. Payment. Payment will be made at the CONTRACT LUMP SUM PRICE for Bid Item for MBR-169 Well Site Work.

3.22. BID ITEM NO. 22 – CONTRACT RECORD AND CLOSE OUT DOCUMENTATION

3-22.01 Description. Under Bid Item for Contract Record and Close Out Documentation, complete all the requirements of Specification Section 01720 Contract Record and Close Out Documentation.

3-22.02 Payment. Payment for Contract Record and Close Out Documentation will be made at the CONTRACT LUMP SUM for Bid Item Contract Record and Close Out Documentation.

3.23. BID ITEM NO. 23 – PERMIT ALLOWANCE

3-23.01 Description. The WORK under this Bid Item includes reimbursement for the actual cost of payment for permit fees required as authorized by OWNER and required by laws and regulations and necessary to perform WORK in accordance with the General Conditions. See Specification Section 01060 – Permits and Regulatory Requirements.

3-23.02. Payment. Include in the total bid PRICE an allowance of $20,000 for various permit fee costs. Fully document and obtain prior approval by OWNER of any amount of permit fees charged to the permit allowance before proceeding with the WORK associated with this BID ITEM.

3.24. BID ITEM NO. 24 – PROJECT ALLOWANCE

3-24.01. Description. The WORK under this Bid Item furnishing all labor, materials, equipment, and services required due to additional work authorized by OWNER.

3-24.02. Payment. Include in the total bid PRICE an allowance of $875,000 for various contingencies and environmental allowances. Fully document and obtain prior approval by OWNER of any amount of extra WORK and/or alterations to the WORK charged to the project allowance.

3.25. BID ITEM NO. 25 – INDEMNIFICATION

3-25.1. Description. The WORK under this Bid Item includes providing the Indemnity in accordance with Article 4.4 of the General Conditions.

3-25.02. Payment. In accordance with Article 4.4 of the General Conditions include with the total bid PRICE $100.00 separately allocated for the Indemnity requirements of the CONTRACT DOCUMENTS.

3.26. BID ITEM NO. 26 – WELL PRE-CONSTRUCTION/REPLACEMENT ASSESSMENT SPECIFIC CAPACITY TESTING

3-26.1. Description. All fifteen (15) active wells require specific capacity testing to be performed with the existing equipment according to Specification 10050. One (1) specific capacity test will be performed per well.

3-26.2 Payment. Payment will be made at the CONTRACT LUMP SUM PRICE for each pre-assessment specific capacity test.

3.27. BID ITEM NO. 27 – WELL PRE-CONSTRUCTION/REPLACEMENT GEOPHYSICAL (VIDEO) LOG INSPECTION

3-27.1. Description. The fifteen (15) active wells require flushing the well and 360-degree geophysical video log inspection after removal of existing pumps, and prior to installing the new pump and motor. The five (5) wells to be abandoned will not need geophysical log inspection.

3-27.2 Payment. Payment will be made at the CONTRACT LUMP SUM PRICE for each video log inspection (one (1) per well).

3.28.BID ITEM NO. 28 – WELL POST-CONSTRUCTION/REPALCEMENT SPECIFIC CAPACITY TESTING

3-28.1. Description. All fifteen (15) active wells require post-construction capacity testing to be performed with the new pump and motor equipment after installation according to Specification 10050.

3-28.2 Payment. Payment will be made at the CONTRACT LUMP SUM PRICE for each post-construction specific capacity test.

SECTION 01027

PAYMENT APPLICATIONS

PART 1 - GENERAL

1-1. REQUIREMENTS INCLUDED

1-1.01. The CONTRACTOR shall submit PAYMENT APPLICATIONS to the OWNER in accordance with the schedule established in the General Conditions of the CONTRACT DOCUMENTS.

1.2. FORMAT AND DATA REQUIRED

1-2.01. The CONTRACTOR shall submit PAYMENT APPLICATIONS to OWNER through MasterWorks. Access to this software will be setup by the OWNER and usernames and passwords provided to the CONTRACTOR and ENGINEER. Instructions on procedures for submitting payment applications will be provided after award of the CONTRACT, if this is the method of submitting payment applications chosen by the OWNER.

1-2.02. The CONTRACTOR shall provide itemized data on continuation sheet of format, schedules, line items, and values.

1-3. PREPARATION OF EACH PAYMENT APPLICATION

1-3.01. Application Form:

Complete required information, including that for CHANGE ORDERS executed prior to date of submittal of application.

Complete summary of dollar values to agree with respective totals indicated on continuation sheets.

Execute certification with signature of a responsible officer of CONTRACTOR.

1-3.02. Continuation Sheets:

Complete total list of all scheduled component items of work, with item number and dollar value for each item as specified in the finalized schedule of values as approved by the OWNER. All scheduled component items of work shall include a column with the Tampa Bay Water General Ledger codes provided to the CONTRACTOR.

Complete dollar value in each column for each scheduled line item when work has been performed or products stored on site.

List each CHANGE ORDER executed prior to date of submission, at the end of the continuation sheets. List by CHANGE ORDER Number, and description, as for an original component item of work.

Payment on component material stored on site shall be in accordance with the General Conditions.

1-4. SUBSTANTIATING DATA FOR PROGRESS PAYMENTS

1-4.01. When the OWNER requires substantiating data, the CONTRACTOR shall submit suitable information, with a cover letter identifying:

a. PROJECT

b. PAYMENT APPLICATION number and date.

c. Detailed list of enclosures.

d. For stored products: In accordance with the General Conditions.

1-4.02. The CONTRACTOR shall submit to electronic copies of data and cover letter.

1-4.03. The CONTRACTOR shall maintain an updated set of AS-BUILT DRAWINGS in accordance with Section 01720. As a prerequisite for monthly progress payments, the CONTRACTOR shall exhibit the updated AS-BUILT DRAWINGS for review and approval by the OWNER or the ENGINEER.

1-5. SUBMITTAL PROCEDURE

1-5.01. The CONTRACTOR shall submit electronic copies of the PAYMENT APPLICATION to the OWNER at the time stipulated in the General Conditions.

PART 2 - PRODUCTS (NOT USED)

PART 3 - EXECUTION (NOT USED)

END OF SECTION

THIS PAGE LEFT BLANK INTENTIONALLY

SECTION 01060

PERMITS AND REGULATORY REQUIREMENTS

PART 1 - GENERAL

1-1. REGULATORY AGENCIES:

1-1.01. General: The CONTRACTOR shall;

a. Obtain and pay for all permits and licenses required for the Performance of the WORK, except as otherwise specified herein.

b. Schedule all inspections and obtain all written approvals from respective agencies, as required by the permits and licenses.

c. Comply with all conditions specified in each of the permits and licenses.

d. A copy of the permits obtained by the OWNER will be furnished to the CONTRACTOR at the preconstruction conference or upon request.

1-2. PERMITS OBTAINED BY OWNER:

1-2.01. The following permits / approvals will be obtained by OWNER:

a. Florida Department of Environmental Protection (FDEP)

- Owner will complete application for a Specific Permit to Construct PWS Components during design. CONTRACTOR shall complete construction prior to the permit expiration date.
- Partial Certification of Construction Completion and request for clearance to place Permitted PWS Components into Operation for each well site prior to returning them to service. CONTRACTOR shall disinfect the PWS components and complete any required pressure testing per the permit requirements.
- Final Certification of Construction Completion and request for clearance to place Permitted PWS Components into Operation when the project is complete.
- Wetland Delineation – It was anticipated that the wetlands within the extent of the project drawings may need to be formally delineated. The wetlands have been flagged and surveyed. Per the pre-application meeting on January 31, 2023, the work should qualify for an exemption.
- Environmental Resource Permit – The project will not include new impervious area, no wetlands impacts, an impacts to the buffer areas will be temporary; based on the pre-application meeting with FDEP the project will not require a general permit and 404 permit; however, since the project area is greater than 5 acres a request for exemption will be filed.

b. Hillsborough County Environmental Protection Commission

- Wetland Delineation – There are wetlands within 200 feet of the well sites; the

requirements herein will be updated after the requirements are confirmed at pre-submittal conference in early 2023.

- Wetland Setback Variance – Activities will be within the wetland setbacks at well sites 150, 152, 161 and 162. A variance request will be submitted to Hillsborough County prior to issuing the project to bid.

1-3. PERMITS OBTAINED BY CONTRACTOR:

1-3.01. The CONTRACTOR shall be responsible for obtaining all other permits necessary in the performance of the WORK. Such permits / approvals include, but are not limited to:

a. Hillsborough County Building Department

- The CONTRACTOR shall be responsible for obtaining the required Hillsborough County Building Permits. OWNER will provide lead and asbestos sampling necessary for the demolition. CONTRACTOR shall prepare a draft application for OWNER review, sign and submit applications and shall be responsible for scheduling and paying for (from the permit allowance) all ancillary permits and for inspections required by various building trades such as mechanical, electrical, etc. ENGINEER shall provide signed and sealed documents for each well site and assist CONTRACTOR with design related Requests for Information. CONTRACTOR will include permit activities on the construction schedule and will provide OWNER with copies of all permits when obtained.
- The CONTRACTOR shall apply and pay for any permits required for the installation and use of temporary construction trailer(s).
- CONTRACTOR shall provide to the OWNER documentation the Hillsborough County Building Permit has been closed out in accordance with Section 01720 – Contract Record and Closeout Documentation.

b. Florida Fish and Wildlife Conservation Commission (FWCC)

- Gopher tortoise burrows have been identified near well sites 152, 154, 162, 163 and 168. Gopher tortoises within 30 feet of the project area will need to be relocated within the wellfield. The CONTRACTOR shall submit application for, and pay fees (from the permit allowance) associated with endangered species including, but not limited to, Gopher Tortoise Relocation Permit from the FWCC, and associated gopher tortoise relocation efforts where applicable. Additionally, the CONTRACTOR shall provide a survey and evidence if a known bald eagle nest is active and take necessary steps. CONTRACTOR shall prepare a draft application for OWNER review, sign and submit application(s). The CONTRACTOR shall be responsible for the relocation of gopher tortoises prior to any construction activities on the site and shall adhere to all requirements outlined in the FWCC permit. Additionally, the CONTRACTOR shall contact the FWCC and address any additional endangered species surveys required to permit the WORK at the site.

c. FDEP and the Environmental Protection Agency (EPA)

- The Contractor shall obtain any required NPDES Generic Permit for Stormwater Discharge During Construction Activities from FDEP and/or EPA prior to completing WORK onsite. CONTRACTOR shall prepare a draft application for OWNER review,

sign and submit application(s). CONTRACTOR shall prepare a draft Pollution Prevention Plan (PPP) for OWNER and ENGINEER to review.

d. Southwest Florida Water Management District (SWFWMD)

- The CONTRACTOR shall obtain Well Abandonment Permits for plugging and abandoning the five (5) production wells prior to performing the work. The CONTRACTOR is required to give SWFWMD a 24-hour notice prior to beginning abandonment procedures All wells abandoned, including completed and incomplete wells shall be plugged by filling them from bottom to top with grout. Use of clean aggregate to bridge cavernous or lost circulation zones shall be allowed if measurements indicate loss of grout within the borehole or screened portion does not connect two (2) or more aquifers of differing water quality. Prior approval to use aggregate or other material must be obtained from SWFWMD. Obstructions must be cleared from all wells prior to plugging and abandoning. Upon completion of well abandonment, the SWFWMD Well Grouting/Abandonment Form must be submitted and can be filed at no charge. One form is required per well. The permit is valid for 90 days once it is issued, the Contractor shall obtain and submit the forms prior to performing any well abandonment work during construction.

1-3.02. CONTRACTOR will be responsible for obtaining extensions to permits obtained by the OWNER if construction authorized by permits has not been completed by expiration date noted on these permits.

a. Permits may require that a representative of permitting agency be present at site during construction or prior to covering up of activity authorized by permit. CONTRACTOR will be responsible for notifying the respective permitting agency in compliance with requirements of such permits.

b. CONTRACTOR shall include time to obtain permits in his construction schedule.

c. CONTRACTOR will provide OWNER and ENGINEER with copies of approved permits and inspections, and ENGINEER will compile all correspondence in permit close-out documents as per Specification Section 01720.

ABBREVIATIONS AND ACRONYMS

1. LIST OF ABBREVIATIONS.

Abbreviations for standards and organizations used in the CONTRACT DOCUMENTS are defined as follows and on the DRAWINGS:

AA	Aluminum Association
AABC	Associated Air Balance Council
AAMA	Architectural Aluminum Manufacturers Association
AASHTO	American Association of State Highway and Transportation Officials
ABMA	American Bearing Manufacturers Association
ACI	American Concrete Institute
ACPA	American Concrete Pipe Association
AEIC	Association of Edison Illuminating Companies
AFBMA	Antifriction Bearing Manufacturers Association now recognized as the ABMA
AFPA	American Forest & Paper Association
AGA	American Gas Association
AGMA	American Gear Manufacturers Association
AHA	American Hardboard Association
AHRI	Air-Conditioning, Heating and Refrigeration Institute
AISC	American Institute of Steel Construction
AISI	American Iron and Steel Institute
AITC	American Institute of Timber Construction
AMCA	Air Movement and Control Association International
ANSI	American National Standards Institute
APA	Engineered Wood Association (formerly American Plywood Association)
API	American Petroleum Institute
AREMA	American Railway Engineers and Maintenance-of-Way Association
ASAHC	American Society of Architectural Hardware Consultants
ASCE	American Society of Civil Engineers
ASHRAE	American Society of Heating, Refrigerating, and Air- Conditioning Engineers
ASME	American Society of Mechanical Engineers
ASSE	American Society of Sanitary Engineers
ASTM	ASTM International
AWG	American Wire Gauge
AWI	Architectural Woodwork Institute
AWPA	American Wood-Preservers' Association
AWS	American Welding Society

AWWA	American Water Works Association
BHMA	Builders Hardware Manufacturers Association
BIA	Brick Institute of America (formerly SCPI)
CDA	Copper Development Association
CISPI	Cast Iron Soil Pipe Institute
CMAA	Crane Manufacturers Association of America
CRA	California Redwood Association
CRSI	Concrete Reinforcing Steel Institute
CS	Commercial Standard (U.S. Department of Commerce)
DHI	Door and Hardware Institute
DIPRA	Ductile Iron Pipe Research Association
EEI	Edison Electric Institute
EJCDC	Engineers' Joint Contract Documents Committee
EPA	Environmental Protection Agency
FBC	Florida Building Code
FCC	Federal Communications Commission
FCI	Fluid Controls Institute
FDEP	Florida Department of Environmental Protection
Fed Spec	Federal Specification
FGMA	Flat Glass Marketing Association
FHWA	Federal Highway Administration
FIA	Factory Insurance Association
FM	Factory Mutual
FSA	Fluid Sealing Association

SECTION 01200

PROJECT MEETINGS

PART 1 – GENERAL

1-1 REQUIREMENTS INCLUDED

1-1.01. The CONTRACTOR shall schedule and shall administer the preconstruction meeting, periodic progress meetings, and specially called meetings throughout the progress of the WORK. The ENGINEER shall prepare agenda for meetings, make physical arrangements for meetings, preside at meetings, and shall prepare and distribute meeting minutes.

1-1.02. Representatives of CONTRACTORS, SUBCONTRACTORS, and SUPPLIERS attending meetings shall be qualified and authorized to act on behalf of the entity each represents.

1-1.03. The CONTRACTOR shall attend meetings to ascertain that the WORK is expedited consistent with CONTRACT DOCUMENTS and PROGRESS SCHEDULE. The purpose of the meetings will be to review the progress of the Work, maintain coordination of efforts, discuss changes in scheduling, and resolve other problems which may develop.

1-2 PRECONSTRUCTION MEETING

1-2.01. The Preconstruction Meeting will be conducted no more than ten (10) days after the NOTICE TO PROCEED is issued, and before any WORK at the site is started.

1-2.02. The following shall be in attendance at the Preconstruction Meeting:

a. OWNER and OWNER'S representatives
b. ENGINEER and associated professional consultants.
c. CONTRACTOR'S PROJECT representatives

1-2.03 In addition to those identified in the Contract General Conditions, the following items may be addressed at the preconstruction meeting:

a. Distribution and discussion of:
    1. List of major SUBCONTRACTORS and SUPPLIERS
    2. PROGRESS SCHEDULE
    3. Proposed schedule of values

b. Critical work sequencing

c. Major equipment deliveries and priorities.

d. PROJECT coordination:
    1. Designation of responsible personnel
    2. Addresses and phone numbers

3. Emergency phone numbers

e. Procedures and processing of:
   1. CHANGE AUTHORIZATIONS
   2. PROPOSAL REQUESTS
   3. SUBMITTALS
   4. CHANGE ORDERS
   5. PAYMENT APPLICATIONS

f. Distribution of conformed CONTRACT DOCUMENTS.

g. Procedures for maintaining record documents.

h. Construction photographs and pre, during, and post construction audio-video.

i. Use of premises:
   1. Office, work, storage and staging areas
   2. OWNER'S and ENGINEER'S requirements

j. Submittal of shop drawings

k. Temporary utilities.

l. Housekeeping procedures.

m. Bond and Insurance certifications.

n. Progress meetings.

o. Working Hours.

p. Safety procedures and first aid.

q. Security.

1.3 PROGRESS MEETINGS

1-3.01. Unless directed otherwise by the OWNER and/or ENGINEER, progress meetings will be held every thirty (30) days or less with the first meeting thirty (30) days after the preconstruction meeting or thirty (30) days or less after the date of NOTICE TO PROCEED.

1-3.02. Progress meetings will be held at a location designated by the OWNER.

1-3.03. The following shall be in attendance:

a. OWNER'S representative(s).

b. ENGINEER and associated professional consultants as needed.
c. CONTRACTOR.
d. SUBCONTRACTORS and SUPPLIERS as appropriate to the agenda.
e. Others as required.

1-3.04. The following items may be discussed at the progress meetings:

a. Review of minutes of previous meeting.
b. Review of PROGRESS REPORT.
c. Field observations, problems, conflicts.
d. Problems and critical/long lead items which impede compliance with PROGRESS SCHEDULE.
e. Review of off-site fabrication, delivery schedules.
f. Corrective measures and procedures to maintain/regain PROGRESS SCHEDULE, if necessary.
g. Revisions to PROGRESS SCHEDULE.
h. PROGRESS during succeeding work period.
i. Review SUBMITTAL schedules; expedite as required.
j. Pending changes and substitutions.
k. Review proposed changes for effect on PROGRESS SCHEDULE and on completion date(s).
l. Other business.

A. The CONTRACTOR shall attend progress meetings and shall study previous meeting minutes and current agenda items, in order to be prepared to discuss pertinent topics as listed in 1-3.04.

B. The CONTRACTOR shall provide a current SUBMITTAL log at each progress meeting in accordance with Section 01300 - Submittals.

C. The CONTRACTOR shall provide a current three (3) week look ahead PROGRESS SCHEDULE and PROGRESS REPORT at each progress meeting in accordance with Section 01310 - Project Schedules.

PART 2 - PRODUCTS (NOT USED)

PART 3 - EXECUTION (NOT USED)

END OF SECTION

SECTION 01300

SUBMITTAL PROCEDURES

PART 1 - GENERAL

1-1. SHOP DRAWINGS AND ENGINEERING DATA.

1-1.01. General: The Project has been designed by ENGINEER and ENGINEER will perform design-intent reviews of submittals. This Section will define a protocol for the transmittal of shop drawings, samples, and other submittals.

1-1.02. Shop drawings and engineering data (SUBMITTALS) covering all equipment and all fabricated components and building materials which will become a permanent part of the Work under this CONTRACT shall be submitted to ENGINEER for review, as required. Submittals shall verify compliance with the CONTRACT DOCUMENTS and shall include DRAWINGS and descriptive information in sufficient detail to show the kind, size, arrangement, and the operation of component materials and devices; the external connections, anchorages, and supports required; the performance characteristics; and dimensions needed for installation and correlation with other materials and equipment.

1-1.03. Each submittal shall cover items from only one section of the specification unless the item consists of components from several sources. CONTRACTOR shall submit a complete initial submittal including all components. When an item consists of components from several sources, CONTRACTOR'S initial submittal shall be complete including all components.

1-1.04. All submittals, regardless of origin, shall be approved by CONTRACTOR and clearly identified with the name and number of this CONTRACT, CONTRACTOR'S name, and references to applicable specification paragraphs and CONTRACT DRAWINGS. Each copy of all submittals, regardless of origin, shall be stamped or affixed with an approval statement of CONTRACTOR. Each submittal shall indicate the intended use of the item in the Work. When catalog pages are submitted, applicable items shall be clearly identified, and inapplicable data crossed out. The current revision, issue number, and date shall be indicated on all DRAWINGS and other descriptive data.

1-1.05. CONTRACTOR shall be solely responsible for the completeness of each submittal. CONTRACTOR'S stamp or affixed approval statement of a submittal, per Figure 1-01300, is a representation to OWNER and ENGINEER that CONTRACTOR accepts sole responsibility for determining and verifying all field measurements, quantities, dimensions, specified performance and design criteria, installation requirements, materials, catalog numbers, and similar information with respect thereto, and that CONTRACTOR has reviewed and coordinated each submittal with other Shop DRAWINGS and with the requirements of the Work and the CONTRACT DOCUMENTS.

1-1.06. All deviations from the requirements of the CONTRACT DOCUMENTS shall be identified as deviations on each submittal and shall be tabulated in CONTRACTOR'S letter of transmittal using Figure 2-01300. Such submittals shall, as pertinent to the deviation, indicate essential details of all changes proposed by CONTRACTOR (including modifications to other facilities that may be a result of the deviation) and all required piping and wiring diagrams.

1-1.07. CONTRACTOR shall submit shop DRAWINGS electronically. All submittals shall be made with the selected method. Submittals made by any method other than that required, will be returned without review.

1-1.08. For electronic submittals, DRAWINGS and the necessary data shall be submitted electronically to ENGINEER as specified below. Submittal documents shall be in color to facilitate use of red line markups. All electronic files shall be in Portable Document Format (PDF) as generated by Adobe Acrobat Professional Version 7.0 or higher. The PDF file(s) shall be fully indexed using the Table of Contents, searchable with thumbnails generated. PDF images must be at a readable resolution. For most documents, they should be scanned or generated at 300 dots per inch (dpi). Use of higher resolution is acceptable. Optical Character Recognition (OCR) capture must be performed on these images so that text can be searched, selected and copied from the generated PDF file. The PDF documents shall have a bookmark created in the navigation frame for each major entry ("Section" or "Chapter") in the Table of Contents. Thumbnails shall be generated for each page or graphic in the PDF file. The opening view for each PDF document shall be as follows:

a. Initial View: Bookmarks and Page

b. Magnification: Fit In Window

c. The file shall open to CONTRACTOR'S transmittal letter, with bookmarks to the left. The first bookmark shall be linked to the Table of Contents.

d. PDF document properties shall include the submittal number for the document title and CONTRACTOR'S name for the author.

e. Electronic submittal file sizes shall be limited to 10 MB. When multiple files are required for a submittal the least number of files possible shall be created.

1-1.09. CONTRACTOR shall post submittals and retrieve ENGINEER's submittal review comments through Masterworks. Access to this software will be setup by the OWNER and usernames and passwords provided to the CONTRACTOR and ENGINEER. Instructions on procedures for posting and retrieving submittals will be provided after award of the CONTRACT, if this is the method of SUBMITTAL reviews chosen by the OWNER.

1-1.10 Submittals will not be accepted from anyone but the CONTRACTOR. Submittals shall be consecutively numbered in direct sequence of submittal and without division by SUBCONTRACTs or trades.

1-2. ENGINEER'S REVIEW OF SUBMITTALS.

1-2.01. ENGINEER's review of submittals covers only general conformity to the DRAWINGS and Specifications, external connections, and dimensions that affect the layout; it does not indicate thorough review of all dimensions, quantities, and details of the material, equipment, device, or item covered. ENGINEER's review shall not relieve CONTRACTOR of sole responsibility for errors, omissions, or deviations in the DRAWINGS and data, nor of CONTRACTOR'S sole responsibility for compliance with the CONTRACT DOCUMENTS.

1-2.02. ENGINEER's submittal review period shall be 21 consecutive calendar days and shall

commence on the first calendar day following receipt of the submittal or resubmittal in ENGINEER's office.

1-2.03. When the DRAWINGS and data are returned with review status "REVISE AND RESUBMIT" or “REJECTED” the corrections shall be made as instructed by ENGINEER. If submittals are made electronically, the corrected DRAWINGS and data shall be resubmitted through Masterworks. When the DRAWINGS and data are returned with review status “MAKE CORRECTIONS AS NOTED", "NO EXCEPTIONS TAKEN", or "FOR INFORMATION ONLY", no additional copies need be furnished unless specifically requested by ENGINEER.

1-3. RESUBMITTAL OF SHOP DRAWINGS AND DATA.

1-3.01. CONTRACTOR shall accept full responsibility for the completeness of each resubmittal. CONTRACTOR shall verify that all corrected data and additional information previously requested by ENGINEER is provided on the resubmittal. Resubmittals shall be in an organized and consistent format.

1-3.02. When corrected copies are resubmitted, CONTRACTOR shall direct specific attention to all revisions in writing and shall list separately any revisions made other than those called for by ENGINEER on previous submittals. Requirements specified for initial submittals shall also apply to resubmittals. Resubmittals shall bear the number of the first submittal followed by a letter (A, B, etc.) or a unique identification that indicates the initial submittal and correct sequence of each resubmittal.

1-3.03. If more than one resubmittal is required because of failure of CONTRACTOR to provide all previously requested corrected data or additional information, CONTRACTOR shall reimburse OWNER for the charges of ENGINEER for review of the additional resubmittals. This does not include initial submittal data such as shop tests and field tests that are submitted after initial submittal.

1-3.04. Resubmittals shall be made within 30 days of the date of the letter returning the material to be modified or corrected, unless within 14 days CONTRACTOR submits an acceptable request for an extension of the stipulated time period, listing the reasons the resubmittal cannot be completed within that time.

1-3.05. The need for more than one resubmittal, or any other delay in obtaining ENGINEER’s review of submittals, will not entitle CONTRACTOR to extension of the CONTRACT Times unless delay of the Work is the direct result of a change in the Work authorized by a Change Order or failure of ENGINEER to review and return any submittal to CONTRACTOR within the specified review period.

1-4. COLOR SELECTION.

1-4.01. CONTRACTOR shall submit samples of colors and finishes for all accepted products before ENGINEER will coordinate the selection of colors and finishes with OWNER. ENGINEER will prepare a schedule of finishes that includes the colors and finishes selected for both manufactured products and for surfaces to be field painted or finished and will furnish this schedule to CONTRACTOR within 60 days after the date of acceptance of the last color or finish sample.

1-5. MAJOR EQUIPMENT SHOP DRAWINGS, PIPE LAYING SCHEDULES, AND SURVEYING MANUAL.

1-5.01. Refer to Section 01720 CONTRACT Record and Close-Out Documentation for requirements regarding major equipment SHOP DRAWINGS, pipe laying schedules, and surveying manual; at the completion of construction. Section 01720 covers hard copy sets and an electronic file copy of these manuals.

1-6. OPERATION AND MAINTENANCE DATA AND MANUALS.

1-6.01. Adequate operation and maintenance information shall be supplied for all equipment requiring maintenance or other attention. The equipment Supplier shall prepare a Project specific operation and maintenance manual for each type of equipment indicated in the individual equipment sections or the equipment schedule.

1-6.02. Unless otherwise agreed by ENGINEER, the operation and maintenance manual for each type of equipment shall only be submitted for review following completion of review of all shop DRAWINGS and ENGINEERING data pertaining to that equipment.

1-6.03. Parts lists, and operating and maintenance instructions shall be furnished for other equipment not listed in the individual equipment sections or the equipment schedule.

1-6.04. Operation and maintenance manuals shall include the following:

a. Equipment function, normal operating characteristics, and limiting conditions.
b. Assembly, installation, alignment, adjustment, and checking instructions.
c. Operating instructions for startup, routine and normal operation, regulation and control, shutdown, and emergency conditions.
d. Lubrication and maintenance instructions.
e. Guide to troubleshooting.
f. Parts lists and predicted life of parts subject to wear.
g. Outline, cross section, and assembly drawings; engineering data; and wiring diagrams.
h. Test data and performance curves, where applicable.
i. Cover page that includes the phone number to call for service
j. Warranty information in accordance with the CONTRACT DOCUMENTS
k. As specified in other Sections.

1-6.05. The operation and maintenance manuals shall be in addition to any instructions or parts lists packed with or attached to the equipment when delivered, or which may be required by CONTRACTOR.

1-6.06. An electronic copy of each manual shall be submitted to ENGINEER prior to the date of shipment of the equipment. The manuals shall be submitted and ENGINEER's review comments retrieved, through the Project website or email accessible through the Internet. ***Procedures for submission of the electronic copy, and for retrieving and responding to review comments***

will be provided after award of the CONTRACT.

1-6.07. When the O&M manuals are returned with the review status "MAKE CORRECTIONS AS NOTED", the corrections shall be made as instructed by ENGINEER, and corrected manuals resubmitted to ENGINEER for review. ***When corrections are required, a corrected version of the electronic copy shall be resubmitted. When the electronic copy is approved by the ENGINEER three hardcopies of each O&M manual shall be delivered and one electronic copy shall be delivered on a flash drive or external drives to the ENGINEER. The final electronic copies of the O&M Manual shall be submitted no later than 30 days prior to placing the equipment in operation. Final hardcopies of the O&M Manual shall be submitted prior to project closeout.***

1-6.08. All material shall be marked with Project identification, and inapplicable information shall be marked out or deleted.

1-6.09. Shipment of equipment will not be considered complete until all required manuals and data have been received.

1-7. HARD COPY OPERATION AND MAINTENANCE MANUALS.

1-7.01. Hard copies submitted for review shall be temporarily bound in heavy paper covers bearing suitable identification. All manuals and other data shall be printed on heavy, first quality 8-1/2 x 11 inch paper, with standard three-hole punching. DRAWINGS and diagrams shall be reduced to 8-1/2 x 11 inches or 11 x 17 inches. Where reduction is not practicable, larger DRAWINGS shall be folded separately and placed in envelopes, which are bound into the manuals. Each envelope shall be suitably identified on the outside. Each volume containing data for three or more items of equipment shall include a table of contents and index tabs. The final hard copy of each manual shall be prepared and delivered in substantial, permanent, three-ring or three-post binders in heavy paper covers with a table of contents and suitable index tabs.

1-8. ELECTRONIC OPERATION AND MAINTENANCE MANUALS.

1-8.01. Electronic manuals shall be in Adobe Acrobat's Portable Document Format (PDF), and shall be prepared at a resolution between 300 and 600 dots per inch (dpi), depending on document type. Optical Character Recognition (OCR) capture shall be performed on these documents. OCR settings shall be performed with the "original image with hidden text" option in Adobe Acrobat Exchange.

1-8.02. File size shall be limited to 10 MB. A single PDF file greater than 10 MB may only be submitted if acceptable to OWNER. When multiple files are required the least number of files possible shall be created. File names shall be in the format OMXXXXX-YYYZ-V.pdf, where XXXXX is the five digit number corresponding to the specification section, YYY is a three digit O&M manual number, e.g. 001, Z is the letter signifying a resubmittal, A, B, C, etc., and V is a number used only when more than one 10 MB file is required for an O&M manual.

1-8.03. Documents prepared in PDF format shall be processed as follows:

1. Pages shall be searchable (processed for optical character recognition) and indexed when multiple files are required.

2. Pages shall be rotated for viewing in proper orientation.

3. A bookmark shall be provided in the navigation frame for each entry in the Table of Contents.

4. Embedded thumbnails shall be generated for each completed PDF file.

5. The opening view for PDF files shall be as follows:

   Initial View: Bookmarks and Page
   Page Number: Title Page (usually Page 1)
   Magnification: Set to Fit in Window
   Page: Single Page

6. Where the bookmark structure is longer than one page the bookmarks shall be collapsed to show the chapter headings only.

   When multiple files are required the first file of the series (the parent file) shall list every major topic in the Table of Contents. The parent file shall also include minor headings bookmarked based on the Table of Contents. Major headings, whose content is contained in subsequent files (children) shall be linked to be called from the parent to the specific location in the child file. The child file shall contain bookmark entries for both major and minor headings contained in the child file. The first bookmark of any child file shall link back to the parent file and shall read as follows "Return to the *Equipment Name* Table of Contents", e.g.
   Return to the Polymer Feed System Table of Contents.

7. DRAWINGS shall be bookmarked individually.

8. Files shall be delivered without security settings to permit editing, insertion and deletion of material to update the manual provided by the manufacturer.

1-9. LABELING.

1-9.01 As a minimum, the following information shall be included on all final O&M manual materials, including electronic and hard copy manuals:

a. Equipment name and O&M title spelled out in complete words.
b. Project Name.
c. OWNER Project/CONTRACT Number.
d. Specification Section Number. Example: “Section 15500” Manufacturer’s name.
e. File Name and Date.

For example:

Backwash Pump Operation and Maintenance Manual
Somewhere Plant Expansion
Project/CONTRACT No.
Specification Section 11110 Manufacturer
OM11110-001.pdf, 5/05/07

SECTION 01310

CONSTRUCTION PROGRESS SCHEDULE

1.1. GENERAL OVERVIEW.

1-1.01. A Progress Schedule shall be used to control the Work and to provide a definitive basis for determining project progress. The Progress Schedule shall be prepared, maintained, and updated by CONTRACTOR and historical dates agreed monthly with ENGINEER. CONTRACTOR shall submit a preliminary Progress Schedule and a Progress Schedule for acceptance by ENGINEER. These schedules shall be CONTRACTOR'S working schedules and shall be used to plan, organize, and execute the Work, record and report actual performance and progress, and show how CONTRACTOR plans to complete all remaining Work as of the end of each progress report period.

1-1.02. The Progress Schedule shall comprise all the detailed construction-related activities using the critical path method (CPM). The Progress Schedule shall provide sufficient detail and clarity to reflect the intricacies and interdependencies of activities so CONTRACTOR can plan, schedule, monitor, control, and report on the progress of his work. In addition, it shall provide ENGINEER and OWNER a tool to monitor and follow the progress for all phases of the Work.

1-2. PRE-CONSTRUCTION SCHEDULING CONFERENCE.

1-2.01. ENGINEER will conduct a pre-construction scheduling conference with CONTRACTOR to review requirements for the schedules including Schedule of Values, cost-loading and schedule configuration. The conference shall be conducted sufficiently early to allow CONTRACTOR to submit the preliminary Progress Schedule within ten days of the Effective Date of the AGREEMENT.

1-2.02. At this meeting, CONTRACTOR shall explain in detail the procedure to be used to develop the schedule activity cost-loading or Schedule of Values and cash flow. This procedure is subject to the review and acceptance of ENGINEER.

1-3. PRELIMINARY PROGRESS SCHEDULE.

1-3.01. Following the pre-construction scheduling conference but within ten calendar days after the Effective Date of the AGREEMENT, CONTRACTOR shall submit a preliminary Progress Schedule for review by ENGINEER. The preliminary Progress Schedule shall show detailed construction-related activities for the first 60 days of the project. The remainder of the CONTRACT activities shall be shown as summary bars within the milestones of the Work. If ENGINEER has comments on the preliminary Progress Schedule, CONTRACTOR shall make the necessary changes and resubmit it within ten calendar days. No progress payments will be made during the period specified above for the preliminary Progress Schedule until the preliminary Progress Schedule has been accepted by ENGINEER.

1-3.02. The preliminary Progress Schedule shall:

a. Illustrate a feasible schedule for completion of the Work within the CONTRACT Times and Milestones specified.

b. Provide an elementary example of the schedule in the format to be used for the Progress Schedule.

c. Include the activity code structure as described in Paragraph 19 of this specification.

1.4. PRELIMINARY PROGRESS SCHEDULE SUBMITTAL FORMAT.

1-4.01. CONTRACTOR shall submit two electronic copies of the schedule and enable the use of the schedule as an executable file as described herein. A brief narrative shall accompany the submittal, describing CONTRACTOR'S scheduling approach to the project. The narrative shall include a description of the CONTRACT milestones, approach for construction activities during the period of the preliminary Progress Schedule, description of the general approach of the activities for the work beyond the preliminary Progress Schedule period, a description of the project's critical path, identification of critical long-lead submittals, and planned outages. The narrative shall also incorporate activity codes, calendars, weather days, milestone constraints, and work breakdown structure in accordance with the requirements specified herein.

1.5. PROGRESS SCHEDULE.

1-5.01. The Progress Schedule comprises all the construction-related activities for the Work and shall show the order in which CONTRACTOR proposes to carry out the work. CONTRACTOR shall include milestones, coordination necessitated by limited access and available work areas, and the availability and use of manpower, material and equipment. CONTRACTOR shall use the Progress Schedule to plan, schedule and coordinate the Work including activities of SUBCONTRACTORs, equipment vendors, and suppliers.

1-5.02. The Progress Schedule shall be to the level of detail acceptable to ENGINEER, and shall include the following:

a. Organization and structural breakdown of the Project.
b. Milestones and completion dates.
c. Type of work to be performed and the labor trades involved.
d. Purchase, manufacture and delivery activities for major materials and equipment.
e. Preparation, submittal, and acceptance of shop drawings and material samples.
f. Deliveries of OWNER-furnished equipment and/or materials.
g. Acceptances required by regulatory agencies and/or other third parties.
h. Assignment of responsibility for each activity.
i. Access requirements to work areas.
j. Identification of interfaces and dependencies with preceding, concurrent and follow-on CONTRACTORs.
k. Tests, submittal of test reports and acceptance of test results.
l. Planning for phased or total acceptance by OWNER; including start up and commissioning.
m. Identification of any manpower, material, and equipment restrictions.
n. Sequence of construction to maintain plant operations.
o. Planned outages.

1-5.03. The activities included in the Progress Schedule shall be defined in work days. Durations shall be based on the labor (crafts), equipment, and materials required to perform each activity

on a normal workday basis. Activity durations shall be 20 working days or less except in the case of non-construction activities such as procurement of materials, delivery of equipment, and concrete curing. All durations shall be the result of definitive manpower and resource planning by CONTRACTOR to perform the Work, in consideration of contractually defined on-site work conditions and CONTRACTOR'S planned means and methods.

1-5.04. When the Progress Schedule is accepted by ENGINEER, ENGINEER will save a copy of the Progress Schedule as the baseline schedule and will use it for analysis of CONTRACTOR'S progress.

1-5.05. CONTRACTOR shall update the Progress Schedule monthly and submit a copy with each month's pay request.

1-6. ELECTRONIC PROGRESS SCHEDULE FORMAT AND REPORTING.

1-6.01. The Progress Schedule shall be created using Microsoft Project Management (MS Project) scheduling software.

1-6.02. CONTRACTOR shall use ENGINEER'S file-naming format throughout the project.

a. Schedule to be provided to OWNER in PDF file type.

b. Electronic schedule files shall be saved with .XML or .XER file extensions and provided to OWNER upon request.

c. MS Project settings for "Baseline Type" shall be used in the following manner:

    i. Select <None> as the baseline type for the preliminary Progress Schedule submittal.

    ii. Once the preliminary and Progress Schedule are accepted, the baseline type shall be named <Initial Plan>.

    iii. Each subsequent Progress Schedule update shall set the baseline type to <Last Performance Update>.

d. The data date for schedule calculation in the preliminary Progress Schedule and Progress Schedule shall be set as the date of the Notice to Proceed unless otherwise specified by ENGINEER.

1.7. COST-LOADING. Not used

1.8. RESOURCE-LOADING. Not used

1.9. COORDINATING PROGRESS SCHEDULE WITH OTHER CONTRACT SCHEDULES.

1-9.01. Where work is to be performed under this CONTRACT concurrently with or contingent upon work performed on the same facilities or area under other CONTRACTS, the Progress Schedule shall be coordinated with the schedules of the other CONTRACTS. OWNER will provide

the schedules of other CONTRACTS for preparation and updating of the Progress Schedule. CONTRACTOR shall revise the Progress Schedule as required by changes in schedules of other CONTRACTS.

1-9.02. In case of interference between the operations of different CONTRACTORS, OWNER will determine the work priority of each CONTRACTOR and the sequence of work necessary to expedite the completion of the entire project. In all such cases, the decision of OWNER shall be accepted as final.

1-10. SUBMITTALS.

1-10.01. The Progress Schedule and associated reports shall be submitted to ENGINEER for acceptance within the period of the preliminary Progress Schedule specified herein. If the Progress Schedule is not submitted, no progress payments will be made after the due date until the Progress Schedule has been submitted.

1-10.02. Printouts and electronic layouts required as part of the Progress Schedule submittal and monthly updates are as follows:

a. Summary Schedule: one page milestone and summary schedule, sorted by total Float, early-start, early-finish.

b. Detailed Project Schedule: organized by Work Breakdown Structure (WBS) or area of work; sorted by total Float, early-start, early-finish.

c. Critical Path Schedule: sorted based on the total Float, early-start, early-finish.

d. 60-Day Look Ahead Schedule: sorted by total Float, early-start, early-finish.

e. Activities in Progress: organized by WBS or area of work; sorted by total Float, early-start, early-finish.

f. Cash Flow Trending Report: presented in an S-Curve format based on original planned early start and late start forecasted expenditures. In addition, the historical actual data point(s) are to be graphed within the S-Curve graphic report.

g. Monthly payment projections.

h. Out-of-sequence Report: tabular report showing work performed out-of-sequence.

1-10.03. CONTRACTOR shall submit additional layouts if directed by ENGINEER. The submittal shall include the following:

a. Narrative report summarizing the milestones, critical path, project approach including phasing or use of crews, significant submittal and fabrication items, coordination or interface requirements, OWNER-provided items, and list of SUBCONTRACTORS and vendors.

b. Graphic reports including critical path report (longest path), summary schedule report, total Float report by early-start early- finish, look-ahead report grouped by

work breakdown structure or project phasing, and cash flow projection. Cash flow projections include estimated cumulative cost curves based on early and late start dates and projection of monthly payments over the life of the project

1-10.04. The schedule, critical path, and look-ahead schedules shall be submitted on E (34”x44”) size paper or 36” wide plots as well as PDF file type versions.

1-10.05. The Progress Schedule file shall be submitted in an executable format, using MS Project format on a read-write compact disk.

1-10.06. The narrative and graphic reports shall be provided on 8”x11” paper and E-size plots respectively.

1-10.07. CONTRACTOR shall submit 5 copies of each deliverable.

1-11. MONTHLY SCHEDULE UPDATES.

1-11.01. Monthly Progress Schedule updates shall be submitted for the duration of the CONTRACT on a date agreed to by OWNER, ENGINEER, and CONTRACTOR. If monthly Progress Schedule updates are not submitted by the due date, progress payments will be withheld until the required information is submitted.

1-11.02 The updated schedule shall be reviewed each month in a meeting with ENGINEER to verify:

a. Actual start dates.

b. Actual completion dates.

c. Activity percent completion.

d. Revised logic (as-built and projected) and changes in activity durations, cost assigned.

e. Cost influence of change orders, if any.

f. Revisions due to extension of time.

1-11.03. Prior to each meeting, CONTRACTOR shall prepare a complete and accurate report of current procurement and construction progress through the end of the update period, and a depiction of how CONTRACTOR plans to continue the Work to meet all CONTRACT completion dates. All network changes and status data agreed to during each update meeting shall be considered as accepted by both parties unless written notice of any exceptions is given within five calendar days after the meeting.

1-11.04. For major network changes that cannot be agreed to during an updating meeting, CONTRACTOR shall submit the proposed changes for ENGINEER’S acceptance prior to inserting such changes into the network. Submittals may be in the form of marked-up networks, fragnets, or schedule abstracts, provided they are submitted with a letter of transmittal. A fragnet is defined as a sequence of new activities and/or activity revisions that are proposed to be added

to the existing schedule to demonstrate how project events have an impact on the schedule.

1-12. DATA DATE.

1-12.01 The data date is the re-settable date that serves as the end of a reporting period. The reporting period will be recorded on a monthly basis, e.g., January 1st through January 31st with the 31st as the data date. If required for coordination purposes by OWNER, ENGINEER will provide specific data dates to be used by CONTRACTOR.

1-13. REVIEW PROCESS.

1-13.01. ENGINEER will review CONTRACTOR'S preliminary Progress Schedule and full Progress Schedule submittals within 15 calendar days after receipt of all required information.

1-13.02. At the request of OWNER or ENGINEER, CONTRACTOR shall participate in any meetings necessary to reach a mutual agreement and acceptance of the preliminary Progress Schedule, Progress Schedules, or Cash Flow Projections.

1-13.03. If any of the required submittals are returned to CONTRACTOR for corrections or revisions, they shall be resubmitted within ten calendar days after the return mailing date. Resubmittals shall include all information and media included in the first submittal. Review and response by ENGINEER will be given within 10 calendar days after receipt of each resubmittal.

1-13.04. Schedules shall show CONTRACT completion of the Work on the CONTRACT completion date and with zero or positive total Float even if CONTRACTOR plans to finish early. In no event shall acceptance of the Progress Schedule be a basis for a claim for delay against OWNER or ENGINEER by CONTRACTOR for an early finish. A Progress Schedule containing activities with negative Float or that extend beyond the date that the Work is completed and ready for final payment will not be acceptable.

1-13.05. Acceptance of the Progress Schedule by ENGINEER does not relieve CONTRACTOR of responsibility for accomplishing the Work by the CONTRACT completion date. Omissions and errors in the accepted Progress Schedule shall not relieve CONTRACTOR of obligations under the CONTRACT. Acceptance by ENGINEER in no way makes ENGINEER or OWNER an ensurer of the Progress Schedule's success or liable for time or cost overruns. ENGINEER and OWNER hereby disclaim any obligation or liability by reason of acceptance of the Progress Schedule by ENGINEER.

1-14. RESPONSIBILITY FOR SCHEDULE COMPLIANCE.

1-14.01. Whenever it becomes apparent from the current Progress Schedule that the critical path is delayed and the CONTRACT completion date will not be met, CONTRACTOR shall mitigate the delay by taking some or all of the following actions at no additional cost to OWNER.

a. Increase construction manpower in such quantities and crafts as will bring the project back on schedule within the completion dates and milestones.

b. Increase the number of working hours per shift, shifts per day, working days per week, and the amount of construction equipment, or any combination of the foregoing, to substantially eliminate the backlog of work.

c. Re-schedule activities to achieve maximum practical concurrence of activities and to comply with the schedule date(s).

1-14.02. Within ten calendar days of ENGINEER'S request, CONTRACTOR shall submit a recovery schedule and written statement of the steps intended to remove or arrest the delay to the critical path in the schedule. If CONTRACTOR fails to submit the required information or should fail to take measures acceptable to ENGINEER, ENGINEER with OWNER concurrence may direct CONTRACTOR to increase manpower, equipment and scheduled work hours to remove or arrest the delay to the critical path and CONTRACTOR shall promptly provide such level of effort at no additional cost to OWNER.

1-14.03. In the event CONTRACTOR fails to follow the updated or revised recovery schedule, OWNER may elect to withhold progress payments until CONTRACTOR complies with the revised schedule.

1-14.04. Should CONTRACTOR'S efforts not remove or arrest the delay to the critical path of the accepted schedule, then OWNER shall be entitled to supplement CONTRACTOR'S workforce and equipment to remove and arrest any delay, and shall be entitled to deduct all costs and expenses associated therewith from payments due to CONTRACTOR. If insufficient CONTRACT funds remain, OWNER may recover such funds from CONTRACTOR and its Surety.

1-15. CHANGES IN THE WORK, DELAYS, AND EXTENSIONS OF TIME.

1-15.01. When changes in the Work or delays are experienced by CONTRACTOR and CONTRACTOR requests an extension of time, CONTRACTOR shall submit a written time impact analysis to ENGINEER illustrating the influence of each change or delay to the current CONTRACT Times. Each time impact analysis shall include a fragnet incorporating the change or delay into the Progress Schedule to demonstrate how CONTRACTOR was delayed.

1-15.02. Each time impact analysis shall demonstrate the estimated time impact based on the events of the change or the delay; the date the change was given to CONTRACTOR or the delay incurred, the status of construction at that point in time, and the event time computation of all activities affected by the change or delay. The event times used in the analysis shall be those included in the latest update of the Progress Schedule or as adjusted for the events of delay.

1-15.03. Three copies of the time impact analysis and an electronic copy on compact disk shall be submitted within seven calendar days of delay occurrence or direction to proceed with a change is given to CONTRACTOR. No time extensions will be considered if the time impact analysis is not submitted within the specified time.

1-15.04. ENGINEER will review CONTRACTOR'S time impact analysis. CONTRACTOR shall furnish such justification and supporting evidence as ENGINEER deems necessary to determine whether CONTRACTOR is entitled to an extension of time. ENGINEER'S review of each time impact analysis will be made within five working days of receipt of the time impact analysis and additional information as required by ENGINEER, unless subsequent meetings and negotiations are necessary.

1-15.05. The CONTRACT Times will be adjusted only for causes specified in paragraph 15. Time extensions will be granted only to the extent that equitable time adjustments for the activity or

activities affected exceed the total or remaining Float along the critical path at the time of actual delay. Delays in activities which are not on the critical path and do not affect CONTRACT Times, will not be considered for an extension of time.

1-16. CAUSES FOR EXTENSIONS OF TIME

1-16.01. Additional positive total Float in the Progress Schedule generated by efficiencies of OWNER or CONTRACTOR is a shared commodity to be reasonably used by either party, and belongs exclusively to the Project. CONTRACTOR is not entitled to any additional compensation for completion of the project prior to expiration of the CONTRACT Times.

1-17. OWNER-Initiated Changes

1-17.01. OWNER-initiated changes to the Work that absorb Float time will not be considered for an extension of time. OWNER-initiated changes that affect the critical path of the Progress Schedule shall be grounds for extending or shortening completion dates. Use of Float time for CONTRACTOR initiated changes will require OWNER'S concurrence. CONTRACTOR'S changes, however, shall give way to OWNER-initiated changes competing for the same Float time.

1-18. Outside CONTRACTOR'S Control

1-18.01. Events outside of CONTRACTOR'S control that affect the critical path of the Progress Schedule will be considered for an extension or reduction of the CONTRACT Times.

1-19. WEATHER DELAYS

1-19.01. ENGINEER will obtain weather data during construction from a reputable source, and will maintain weather records.

1-19-.02. ENGINEER will determine CONTRACTOR'S entitlement to an extension of the CONTRACT Times as a result of weather delays, based on the flow chart in Figure 1-01310 and the data included in Tables 1 and 2. Extensions of time will be granted at the discretion of ENGINEER for circumstances not covered by the flow chart.

1-19.03. Any weather-related extension of CONTRACT Times shall be non-compensable. Efficiencies gained as a result of favorable weather within a calendar month, where the number of days of normally anticipated weather days is less than expected, shall contribute to the project Float and shall not affect the CONTRACT Times.

1-19.04. Application for a weather related extension of time shall be submitted to ENGINEER, and shall state the extension requested and be supported by the relevant weather data.

Table 1 Average Monthly Precipitation (inches) 10 year average 2007 – 2017 NOAA National Data Center, Annual Climatological Summaries

2	1	2	2	1	4	5	5	4	2	1	2

1-20. AS-BUILT SCHEDULE.

1-20.01. As a condition precedent to release of final payment, the last update to the Progress Schedule submitted shall be identified by CONTRACTOR as the “As-Built Schedule”. The “As-Built Schedule” shall reflect the exact manner in which the project was actually constructed (including actual start and completion dates, activities, sequences, and logic) and shall be signed and certified by CONTRACTOR’S project manager.

1-21. SCHEDULING SOFTWARE APPLICATION

1-21.01. Scheduling software shall be MS Project without exception. PDF copies shall be made available to OWNER upon request.

1-22. SCHEDULE SOFTWARE SETTINGS AND RESTRICTIONS: Not used.

1-23. ACTIVITY CODES

1-23.01. The MS Project activity codes and work breakdown structure (WBS) to be confirmed or revised by ENGINEER are listed below. Confirmation or revision of the activity codes and WBS will be provided to CONTRACTOR within three workdays of the Effective Date of the CONTRACT. Use of ENGINEER prescribed activity codes and WBS is mandatory.

1-23.02. “Project Codes” as defined by MS Project is reserved for OWNER. Only “Activity Codes” at Project Level will be permitted for CONTRACTOR use.

Activity Code	Code Value	Description
Phase	0005	Construction Phase
Construction Phase	A	Milestones
	BC	Administrative
	D	Submittals Construction
	E	Activities Closeout Phase Submittals
Submittals	SUB	Review & Approve
	R&A	Fabricate & Deliver
	F&D	

Other Codes to be prescribed by ENGINEER or requested by CONTRACTOR for project specific criteria.

1-24. ACTIVITY RELATIONSHIPS

1-24.01. Relationships between activities shall be identified with the following information:

a. Predecessor and successor activity ID.

b. Relationship types:

i. FS - Finish to start

ii. SS - Start to start

iii. FF - Finish to finish

iv. SF - Start to finish – This relationship is not allowed, unless authorized by ENGINEER.

1-25. PROJECT CALENDARS

1-25.01. Project Calendars shall use workdays and calendar days as the planning unit for the schedule. Use of Global Calendars is reserved for OWNER. Each calendar shall be set to start on Mondays with holidays in accordance with OWNER policy. The following calendars shall be used for each activity except as otherwise accepted by ENGINEER:

a. 5-Day x 8 Hour Workweek (with holidays) shall be used for 5-day 40-hour workweek activities: Monday through Friday. All holidays and non-work days shall be assigned to this calendar. This calendar shall be used for all normal work activities, submittals, and fabricate and delivery activities. This calendar shall be the default calendar for the project unless otherwise specified.

b. 5-Day x 10-Hour Workweek (with holidays) shall be used for 5-day 50-hour workweek

activities: Monday through Friday. All holidays and non-work days shall be assigned to this calendar.

c. 6-Day x 10-Hour Workweek (with holidays) shall be used for 6-day 60-hour workweek activities. Monday through Saturday. All holiday and non-work days shall be assigned to this calendar.

d. 7-Day Calendar (no holidays) shall be used for 7-day workweek activities. No non-work days shall be entered into this calendar.

e. Additional Calendars may be assigned depending on need. However, CONTRACTOR shall consult with ENGINEER before other calendars are entered and/or used in the Progress Schedule.

1-25.02. The work day to calendar day correlation shall be based on a single shift and 5- day work week with adequate allowance for holidays, adverse weather and all other special requirements of the Work. CONTRACTOR may, at his option, propose alternate baseline calendars to allow a second shift and/or a single shift on Saturdays subject to the concurrence and acceptance of OWNER. Under no circumstances will a schedule be accepted which allows regularly scheduled work on Sundays.

1-25.03. The holidays observed by OWNER are as follows:

New Year's Day
M.L. King Jr. Day
Memorial Day
July 4th
Labor Day
Veterans Day
Thanksgiving Day
Day after Thanksgiving Day
Christmas Day

1-25.04. FLOAT. CONTRACTOR shall not use Float suppression techniques, including preferential sequencing (arranging critical path through activities more susceptible to OWNER caused delay); lag logic restraints; zero total or free Float constraints; extended activity times; or imposing constraint dates other than as required by the CONTRACT. Float suppression will be cause for rejection of the preliminary Progress Schedule or full Progress Schedule and its updates.

1-25.05. MANDATORY MILESTONES. The CONTRACT duration shall be equal to the time period between the Notice to Proceed and the completion of the Work in readiness for final payment. The following milestones are mandatory.

a. Notice to Proceed.
b. Milestones, if any, as indicated in CONTRACTOR'S Bid.
c. Substantial Completion as indicated in CONTRACTOR'S Bid.
d. Completion and readiness for final payment, as indicated in CONTRACTOR'S Bid.

1-25.06. The following additional milestones are to be considered and incorporated into the

Progress Schedule in accordance with the CONTRACT, if applicable.

a. Permit constraints.
b. Facility shut down or outage milestone requirements.
c. Applicable phasing milestones.
d. Other milestones deemed appropriate by ENGINEER.

END OF SECTION

SECTION 01313

CONSTRUCTION AND SCHEDULE CONSTRAINTS

1-1. SCOPE

1-1.01 The WORK shall be scheduled, sequenced, and performed in a manner which minimizes disruption to the operation and maintenance of the existing Morris Bridge Wellfield and booster station.

1-1.02 The CONTRACTOR shall incorporate the construction and schedule constraints of this section in preparing the construction schedule required under Section 01310 – Construction Progress Schedule.

1-2. EXISTING INFRASTRUCTURE

1-2.01 The WORK shall be executed while the existing infrastructure is in operation, except authorized shutdowns. Operation of the existing infrastructure shall not be jeopardized nor shall the efficiency as a result of the execution of the WORK.

1-2.02 Unless indicated otherwise, temporary pumping, piping, power, lighting, controls, instrumentation, alarms, security devices, and safety devices shall be provided by the CONTRACTOR whenever its activity or interruption due to its activity affects the existing infrastructure.

1-2.03 The construction constraints in this Section do not include every item affecting the completion of the WORK but are intended to describe the sequence of critical events necessary to minimize disruption to the existing infrastructure operation. It shall be understood and agreed by the CONTRACTOR that the critical events described are not inclusive and that additional items of WORK not included may be required to minimize disruption and ensure compliance.

1-2.04 Deviation from or modification of these suggested sequences is permitted if techniques and methods known to the CONTRACTOR will result in less disruption, and if deviation is approved in advance by the ENGINEER.

1-3. OPERATION OF INFRASTRUCTURE

1-3.01 Operational functions (turning existing valves, turning off wells, etc.) or shutdowns required to facilitate CONTRACTOR'S operation will be done by the OWNER'S personnel only.

1-3.02 The OWNER’S operation and maintenance personnel will cooperate in every way that is practical in order to facilitate CONTRACTOR'S operation. However, certain shutdowns and connections may only be permissible at times other than normal working hours such as nights or weekends. No additional payment will be made to the CONTRACTOR for any night, weekend, or holiday premium or overtime payments.

1-3.03 If it becomes necessary for the proper operation or maintenance of portions of the infrastructure, the OWNER may require the CONTRACTOR to reschedule an approved shutdown.

The CONTRACTOR shall then reschedule its operations so there shall be no conflict with necessary operations or maintenance of the infrastructure. The CONTRACTOR shall, within two DAYS of notice by the OWNER that a rescheduled shutdown is necessary, furnish the ENGINEER a revised outage request and a plan for rescheduling the shutdown in accordance with the requirements of the construction schedule. No additional compensation will be given if the OWNER must cancel a scheduled shutdown.

1-4. OUTAGE REQUESTS

1-4.01 Modifications to existing infrastructure, the construction of new infrastructure, and the connection of new to existing infrastructure may require the temporary outage of existing infrastructure. In such cases, the CONTRACTOR shall coordinate WORK with the ENGINEER as described below. The CONTRACTOR shall submit a detailed outage plan and time schedule for construction activities which will make it necessary to remove a pipeline, electrical circuit, equipment, structure, road, or other infrastructure from service. CONTRACTOR shall coordinate with Florida authorities and state park personnel for power shutdowns.

1-4.02 The outage plans shall be submitted to the ENGINEER for acceptance a minimum of two weeks in advance of the time that such outages are required. The outage plans shall be coordinated with the construction schedule and shall meet the restrictions and conditions of this Section. The outage plan shall describe the length of time required to complete the operation; any necessary temporary power, controls, instrumentation, or alarms required to maintain control and monitoring, the amount of manpower, and equipment which the CONTRACTOR shall provide in order to ensure proper operation of associated infrastructure. Costs for preparing and implementing the outage plans shall be the responsibility of the CONTRACTOR as part of the WORK.

1-4.03 The CONTRACTOR shall not begin an alteration affecting existing infrastructure until specific written approval has been granted by the ENGINEER in each case.

1-4.04 The ENGINEER will coordinate the CONTRACTOR'S planned procedure with the OWNER’S personnel. The ENGINEER has the authority to modify any proposed shutdown procedures if such procedures would adversely impact the OWNER’S operations.

1-4.05 The ENGINEER shall be notified in writing at least two weeks in advance of the required outage if the schedule for performing the WORK has changed or if revisions to the outage plan are required. The CONTRACTOR shall provide written confirmation of the shutdown date and time two DAYS prior to the actual shutdown.

1-5. TEMPORARY CONNECTIONS

1-5.01 Making connections to existing infrastructure shall be thoroughly planned in advance, and required equipment, materials, and labor shall be on hand at the time of undertaking the connections. WORK shall be completed as quickly as possible and with as little delay as possible and shall proceed continuously (24 hours a DAY and seven DAYS a week) if necessary to complete modifications and/or connections in the minimum time.

1-5.02 The cost of any temporary facilities and night, weekend, or holiday activity and overtime payments required during process interruptions shall be included in the WORK.

1-5.03 Temporary facilities and piping shall be located to minimize interference with CONTRACTOR'S construction facilities and OWNER'S operation and maintenance of the existing infrastructure. Unless otherwise indicated, each temporary pipeline shall be of the same size as its connection to the existing or permanent facility at the downstream end of the pipeline. Piping materials shall be suitable for the material being conveyed and be as required in the CONTRACT SPECIFICATIONS.

1-5.04 When temporary electrical power, controls, instrumentation, or alarms are required for routine continuous operations of existing or new equipment, the CONTRACTOR shall provide the necessary equipment and appurtenances. Prior to installing said equipment and appurtenances, CONTRACTOR shall furnish a submittal on the proposed components and installation for ENGINEER'S review and approval.

1-5.05 A plan showing the size and location of the temporary facilities and piping shall be submitted to the ENGINEER at the same time as the outage plan required under this Section. Costs for design, provision, operation, and removal of temporary facilities and piping shall be part of the WORK.

1-6. PROJECT COMPONENTS REQUIRING CONSTRUCTION SEQUENCING AND SCHEDULE CONTRAINTS

1-6.01 The Morris Bridge Wellfield shall remain in service during the execution of this PROJECT. To achieve this objective, the CONTRACTOR shall execute the WORK in a sequence that has a maximum of five (5) wells out of service for PROJECT WORK, at any time during the PROJECT. Proposed grouping for wells out of service are:

- Group 1: MBR-153, MBR-154, MBR-155, MBR-156, MBR-158
- Group 2: MBR-150, MBR-151, MBR-159, MBR-160, MBR-164
- Group 3: MBR-165, MBR-166, MBR-167, MBR-168, MBR-169

1-6.02 CONTRACTOR is required to finish the WORK on the group of 5 wells before beginning the WORK on the group, which includes commissioning, testing and clearance to be put back in service, as further described in 1.7 below.

1-7. CONSTRUCTION SEQUENCING

1-7.01. Construction Sequencing. Construction activities shall be scheduled and sequenced to ensure continuous operation of the existing facilities, unless otherwise specifically allowed for in these CONTRACT DOCUMENTS and with written authorization from the OWNER. The CONTRACTOR'S scheduling shall develop construction sequencing so that the WORK will not adversely impact OWNER’S operations, which, as stated in 1.6 above, require that a maximum of five (5) wells are out of service for PROJECT WORK, at any time during the PROJECT. The CONTRACTOR shall be responsible for development of the construction sequencing in accordance with the sequence note above. In implementing the construction sequencing, the CONTRACTOR shall maintain the remaining ten (10) existing wells in service until new facilities are constructed and are operational to supplement the operational capacity. When new facilities are operational and accepted by the OWNER, an equal number of existing wells may be taken out of service for execution of the WORK.

1-7.02 Demolition of the five (5) wells which will be taken out of service can be scheduled to occur

at any time during the execution of the project.

1-7.03. The following general guidelines shall be used by the CONTRACTOR in planning the sequence of construction.

1-7.03.01 Safe working conditions for personnel shall be maintained during rehabilitation, modification, and demolition WORK. The foregoing includes at least the provision of temporary equipment guards, supports, warning signs, walkways, covers over openings, hand railing, protection of electrical equipment and power supply, and proper trench excavation, when required.

1-7.03.02. Temporary facilities shall be constructed in accordance with applicable codes and regulations to operate safely and properly.

1-7.03.03. Above-grade valves to be temporarily shut off during the WORK shall be tagged as such and shall be chained and padlocked. Buried valves shall have the valve box cover secured. Opening and closing of all existing valves shall be done by the OWNER.

1-7.03.04. Electrical and mechanical equipment shall be similarly shut down.

1-7.04. Specific Construction Sequencing Requirements. The following construction sequencing requirements are necessary to ensure that Tampa Bay Water can continuously meet water demands:

- ALL WELLS – No WORK shall commence on a new group of wells until all of the WORK on the previous group of five (5) wells has been completed and OWNER's acceptance is received for return to normal operation.

- All WELLS – Bacteriological clearance on the wells requires that for each well, 10 samples are taken over a 5-day period but at least 6 hours apart. The samples shall be taken and analyzed by the OWNER, unless specifically authorized otherwise by the OWNER on a case by case basis. This shall be per FDEP 62-550 and 62-555, F.A.C. requirements.

1-8. PERMITS

1-8.01. The CONTRACTOR shall abide by the conditions of permits and shall obtain proof of satisfaction of conditions from issuers of permits prior to acceptance of the WORK by the OWNER.

1-8.02. The CONTRACTOR is responsible for the gopher tortoise relocation and associated permits.

1-8.03. The CONTRACTOR is responsible for providing a survey reporting all eagle's nests near the project site, if any. If a nest is identified, the nest must be monitored throughout the entirety of the project, including during construction, startup, or testing activities, if the activities are within 660-feet of an active nest during the nesting season, October 1st through May 15th. The CONTRACTOR shall be responsible for any associated permits.

1-8.04. CONTRACTOR must comply with all permit conditions, but not limited to, those in the following permits. Copies of the permit conditions are contained in the permit notebook available for review and on file at the office of the ENGINEER.

1-8.05.01. The Florida Department of Environmental Protection (FDEP) Form 62- 555.900(1) Application for a Specific Permit to Construct PWS Components.

1-8.05.02. Hillsborough County Building Department – Building Permit(s).

1-9. SCHEDULE CONSTRAINTS.

1-9.01. General: It is the CONTRACTOR'S responsibility to coordinate and plan the construction activities to integrate each schedule constraint into performance of the overall WORK.

End of Section

THIS PAGE LEFT BLANK INTENTIONALLY

SECTION 01320

SCHEDULE OF VALUES

1-1. SCHEDULE OF VALUES

1-1.01. After review of the preliminary schedule at the preconstruction conference, and before submission of the first Application for Payment, CONTRACTOR shall prepare and submit to ENGINEER a Schedule of Values covering each lump sum item. The Schedule of Values, showing the value of each kind of work, shall be acceptable to ENGINEER before any Application for Payment is prepared.

1-1.02. The sum of the items listed in the Schedule of Values shall equal the CONTRACT PRICE. Such items as Bond premium, temporary construction facilities, and plant may be listed separately in the Schedule of Values, provided the amounts can be substantiated. Overhead and profit shall not be listed as separate items.

1-1.03. The Schedule of Values shall have sufficient detail such that partial completion of separable items of work can easily be calculated. The Schedule of Values shall have separate lines for manufacturer's field services, O&M manuals, and performance testing for each item of equipment requiring such services.

1-1.04. An unbalanced Schedule of Values providing for overpayment of CONTRACTOR on items of WORK which would be performed first will not be accepted. The Schedule of Values shall be revised and resubmitted until acceptable to ENGINEER. Final acceptance by ENGINEER shall indicate only consent to the Schedule of Values as a basis for preparation of applications for progress payments, and shall not constitute an agreement as to the value of each indicated item.

1-2. SCHEDULE OF PAYMENTS (NOT USED)

END OF SECTION

THIS PAGE LEFT BLANK INTENTIONALLY

SECTION 01380

CONSTRUCTION PHOTOGRAPHS

PART 1 - GENERAL

1-1. CONSTRUCTION PHOTOGRAPHS BY CONTRACTOR

1-1.01. CONTRACTOR shall be responsible for the production of construction photographs as provided herein. ENGINEER shall designate the subject of each photograph.

1-1.02. A minimum of 10 photographs of each of the well sites, photographs of the pump/motor work areas, photographs of structural, HVAC, and electrical improvements where applicable and other pertinent features thereof, shall be taken before the commencement of Work and promptly submitted to ENGINEER. The same views shall be re-photographed upon completion of all construction activities and submitted with CONTRACTOR's application for final payment. Additional photographs shall be taken each month throughout the progress of the Work at such times as requested by ENGINEER and submitted with CONTRACTOR's application for progress payment.

1-1.03. All photographs shall be color digital, produced by a competent professional photographer. CONTRACTOR shall submit the photographs electronically. Digital images shall be compiled on CD, DVD, or Flash drive and provided with a descriptive index of the images.

ENGINEER will transmit the digital files to OWNER.

END OF SECTION

THIS PAGE LEFT BLANK INTENTIONALLY

SECTION 01382

VIDEO MONITORING AND DOCUMENTATION

PART 1 - GENERAL

1-1. VIDEO MONITORING AND DOCUMENTATION BY CONTRACTOR

1-1.01. CONTRACTOR shall be responsible for the production of pre-construction and construction videos and video documentation as provided herein.

1-2. PRE-CONSTRUCTION VIDEO MONITORING.

1-2.01. Pre-construction videos shall be documented by CONTRACTOR prior to commencing any work and promptly submitted to ENGINEER. Videos of the same views shall be produced upon completion of all construction activities and submitted with CONTRACTOR'S application for final payment. Pre-construction videos shall include the entire project area to serve as a record of the site's pre-construction conditions.

1-2.02. Videos shall be submitted in MPEG format with a minimum video resolution of 12 megapixels. Video submittals shall be made in accordance with Section 01300 – Submittal Procedures. In addition to project information required by the Section 01300, each video submittal shall include the following additional information:

- Date video was taken.
- Text description of area where video was taken, including vantage point, direction of view and elevation of camera.
- Text or audio description of purpose of video.
- Text or audio narration of extents and content of video.

END OF SECTION

THIS PAGE LEFT BLANK INTENTIONALLY

SECTION 01400

QUALITY CONTROL

PART 1 - GENERAL

1-1. TESTING SERVICES

1-1.01. All tests to determine compliance with the CONTRACT DOCUMENTS shall be performed by an independent commercial testing firm acceptable to ENGINEER excluding testing as specified to be conducted directly by CONTRACTOR. The testing firm's laboratory shall be staffed with experienced technicians, properly equipped and fully qualified to perform the tests in accordance with the specified standards.

1-1.02. Testing services provided by OWNER are for the sole benefit of OWNER and/or as required by the governing building code; however, test results shall be available to CONTRACTOR. Testing necessary to satisfy CONTRACTOR'S internal quality control procedures shall be the sole responsibility of CONTRACTOR.

1-1.03. Testing Services provided by CONTRACTOR. Unless otherwise specified, CONTRACTOR shall provide all testing services in connection with the following:

a. Concrete materials and trial batch mixtures.

b. Concrete Moisture-density (Proctor) tests and relative density tests on embedment, fill, and backfill materials.

c. Asphaltic concrete materials and design mixtures.

d. Embedment, fill, and backfill materials.

e. In-place field density tests on embedments, fills, and backfill.

f. All other tests and engineering data required for ENGINEER’S review of materials and equipment proposed to be used in the Work.

g. Any inspections, tests, or approvals required for OWNER or ENGINEER acceptance of materials or equipment to be incorporated in the Work.

1-1.04. This includes any items required for acceptance of materials, concrete mix designs or equipment submitted for approval prior to CONTRACTOR’s purchase for incorporation in the Work.

1-1.05. Testing, adjusting, and balancing of mechanical, electrical, and other equipment and systems as specified to be incorporated into the Work. This includes services required by manufacturers of equipment or other products such as concrete repair products, pipe, coatings, linings and roof membranes furnished under the CONTRACT DOCUMENTS.

1-1.06. Any Work (or part thereof) required by the CONTRACT DOCUMENTS to be approved by OWNER or ENGINEER, including cleaning, disinfection, and all other aspects of clearing the system for use by any regulatory agencies.

1-1.07. Excluding those conducted directly by an Authority Having Jurisdiction, or expressly specified to be conducted directly by CONTRACTOR, inspections and tests shall be performed by independent inspectors, approved agencies, or other qualified individuals or entities acceptable to OWNER and ENGINEER.

1-1.08. Transmittal of Test Reports. Written reports of tests and engineering data furnished by CONTRACTOR for ENGINEER'S review of materials and equipment proposed to be used in the Work shall be submitted as specified for SHOP DRAWINGS.

1-2. OFFSITE INSPECTION

1-2.01. Inspection of materials or equipment during the production, manufacturing, or fabricating process, or before shipment, will be performed by ENGINEER or an independent testing firm or Approved Agency acceptable to ENGINEER as specified in the materials and equipment sections.

1-2.02. Except as otherwise specified in other sections, CONTRACTOR shall give appropriate written notice to ENGINEER not less than 10 days before offsite inspection services are required, and shall provide for the producer, manufacturer, or fabricator to furnish safe access and proper facilities and to cooperate with inspecting personnel in the performance of their duties.

1-2.03. The inspection organization will submit a written report to ENGINEER, with a copy to CONTRACTOR, at least once each week or as directed by the Statement of Special Inspections as applicable.

1-3. MANUFACTURER'S FIELD SERVICES.

1-3.01. Manufacturer's field services shall be as specified herein unless otherwise noted in the respective equipment sections.

END OF SECTION

SECTION 01500

TEMPORARY FACILITIES AND CONTROLS

1-1. OFFICE AT SITE OF WORK

1-1.01. During the performance of this CONTRACT, CONTRACTOR shall maintain a suitable office at the Site, in the location as noted on the DRAWINGS, which shall be the headquarters of its representative authorized to receive DRAWINGS, instructions, or other communication or articles. The CONTRACTOR's office space at the site shall include a meeting space sufficiently sized to hold regular project meetings and shall include tables and chairs for up to 15 people. Any communication given to the said representative or delivered at CONTRACTOR'S office at the Site in the representative's absence shall be deemed to have been delivered to CONTRACTOR.

1-1.02. Copies of the DRAWINGS, SPECIFICATIONS, and other CONTRACT DOCUMENTS shall be always kept at CONTRACTOR's office at the Site and available for use.

1-1.03. In addition, CONTRACTOR shall provide a suitable field office with at least 160 square feet of floor space, adjacent to his office at the Site, for use of the Resident Project Representative (RPR) and inspectors. The partitioning off of the CONTRACTOR's own office space for use by the RPR will not be permitted. The office shall be provided with two outside entrance doors having a substantial lock and stairs with handrail to access the office. A concrete stoop with boot scraper shall be provided at the foot of the stairs. Gravel shall be placed and maintained throughout the life of the project in a 10-foot-wide area around the office perimeter. Skirting shall be installed around the entire perimeter of the office, and the office shall be provided with the necessary tie downs. A pole mounted light shall be provided to adequately illuminate the area outside the office.

1-1.04. Windows for light and ventilation shall be provided in the RPR's office. All windows shall be equipped with blinds. Adequate indoor lighting and thermostatically controlled heating and air conditioning shall be provided.

1-1.05. CONTRACTOR shall pay all electricity and heating bills and shall provide voice and data services as specified herein.

1-1.06. The RPR's office shall be plumbed for both hot and cold-water service. A restroom located inside the office shall be provided and shall include a sink with hot and cold-water service and a toilet. There are no existing sanitary sewers at project site; therefore, CONTRACTOR shall provide an adequately sized holding tank designed for sanitary waste for RPR trailer restroom, or other provisions as necessary. The tank shall be located away from RPR's office and shall be properly anchored. CONTRACTOR shall be responsible for emptying the holding tank on a weekly basis. The RPR will not be required to use portable sanitary facilities on a regular basis, due to a lack of available facilities.

1-1.07. The office shall be furnished with a desk, a four-drawer filing cabinet, a worktable, two chairs, two plan racks, a 2'-6" wide X 6' high bookcase with six shelves, printer/company machines with associated supplies, such as printer ink, pens, and paper. Appliances to be provided shall include a 1.2 cubic foot, 1000-watt microwave oven and a 4.4 cubic foot refrigerator with freezer.

1-1.08. A cleaning service shall clean the RPR's office weekly throughout the project duration. All office cleaning fees shall be paid by CONTRACTOR.

1-1.09. Maintenance of the RPR's office shall be by CONTRACTOR throughout the duration of the project. Maintenance requests not resolved in 48 hours may be resolved by the RPR and the cost of such maintenance back charged to CONTRACTOR.

1-1.10. The general arrangement of the RPR's office and facilities provided shall be acceptable to ENGINEER.

2-1. WATER

2-1.01. There is no potable water available at the project site. The CONTRACTOR must provide water service to the restroom facilities in the RPR trailer, including hotwater to the sink. If piped water from a non-potable water source is used for the restroom, the restroom must have a sign displayed prominently that reads "NON-POTABLE WATER, DO NOT DRINK"; or similar. Additionally, the CONTRACTOR must provide drinking water in bottles, delivered to the trailer weekly or more frequently as needed. The water shall be provided with a commercial-grade top-load dispenser and include hot and cold waterspouts.

2-1.02. No separate payment for water used or required will be made and all costs in connection therewith shall be included in the BID.

3-1. POWER

3-1.01. Power for heating, lighting, and operation of CONTRACTOR's plant, all trailers and equipment in connection with the Work to be done under this Contract shall be provided by OWNER without charge to CONTRACTOR, subject to the following conditions:

a. CONTRACTOR at its own expense shall make authorized connections to the existing power sources and shall extend temporary service lines to the required areas. The CONTRACTOR is responsible for all temporary power distribution and equipment. Temporary wiring shall conform to Article 590 of the NEC.

b. CONTRACTOR shall at all times provide adequately against waste and needless use of power. Electrical power shall be used only in such quantities as will not interfere with OWNER's requirements, and care shall be taken not to overload the existing facilities. CONTRACTOR shall provide any additional or temporary electrical power or power of other voltages it may require for prosecution of the Work.

c. CONTRACTOR shall determine temporary power requirements prior to construction. CONTRACTOR shall coordinate temporary power requirements with the sequence of construction activities and the OWNER to confirm availability and limitations of identified sources. Power cannot be sourced from a well that is in service due to limited transformer capacity.

3-1.02. These provisions shall not be construed as a guarantee by OWNER of the uninterrupted continuation of power, and interruptions beyond the control of OWNER shall not be reason for claims for additional costs nor for extensions of time. CONTRACTOR shall provide, at no additional cost to OWNER, any necessary power required for prosecution of the Work during such interruptions.

4-1. VOICE AND DATA SERVICES

4-1.01. CONTRACTOR shall make all necessary arrangements and pay all installation charges cell phone and hotspot internet service.

4-1.02. CONTRACTOR's attention is called to the fact that no landline telephone or internet service is available at the site. As such, CONTRACTOR shall make such provisions by alternate means (cellular signal booster, radio repeaters, satellite, etc.).

5-1. SANITARY FACILITIES

5-1.01. CONTRACTOR shall furnish temporary sanitary facilities at the Site, as provided herein, for the needs of all construction workers and others performing work or furnishing services on the Project.

5-1.02. Sanitary facilities shall be of reasonable capacity, properly maintained throughout the construction period, and obscured from public view to the greatest practical extent. If toilets of the chemically treated type are used, at least one toilet will be furnished for each 20 persons. CONTRACTOR shall enforce the use of such sanitary facilities by all personnel at the Site.

6-1. FENCES

6-1.01. All existing fences affected by the Work shall be maintained by CONTRACTOR until completion of the Work. Fences which interfere with construction operations shall not be relocated or dismantled until written permission is obtained from the OWNER of the fence, and the period the fence may be left relocated or dismantled has been agreed upon. Where fences must be maintained across the construction easement, adequate gates shall be installed. Gates shall be kept closed and locked at all times when not in use.

6-1.02. On completion of the Work across any tract of land, CONTRACTOR shall restore all fences to their original or to a better condition and to their original locations, unless directed otherwise by OWNER's representative.

7-1. PROTECTION OF PUBLIC AND PRIVATE PROPERTY

7-1.01. Public utility installations and structures shall include all poles, tracks, pipes, wires, conduits, house service connections, vaults, manholes and all other appurtenances and facilities pertaining thereto whether owned or controlled by the OWNER, other governmental bodies or privately owned by individuals, firms or corporations, used to serve the public with transportation, traffic control, gas, electricity, telephone, telecommunications, cable television, sewerage, drainage, water or other public or private property that may be affected by the WORK.

7-1.02. CONTRACTOR shall protect, shore, brace, support, and maintain all underground pipes, conduits, drains, wires, manholes, vaults, and other underground construction uncovered or otherwise affected by its construction operations. All pavement, surfacing, driveways, curbs, walks, buildings, utility poles, guy wires, fences, and other surface structures affected by construction operations, together with all sod and shrubs in yards, parkways, and medians, shall be restored to their original condition, whether within or outside the easement. All replacements shall be made with new materials.

7-1.03. No trees shall be removed, except where authorized by the CONTRACT DOCUMENTS. Whenever practicable, CONTRACTOR shall tunnel beneath trees in yards and parking when on or near the line of trench. Hand excavation shall be employed as necessary to prevent injury to trees. Trees left standing shall be adequately protected against damage from construction operations.

7-1.04. CONTRACTOR shall be responsible for all damage to streets, roads, highways, shoulders, trails, ditches, embankments, culverts, bridges, trails, and other public or private property, regardless of location or character, which may be caused by transporting equipment, materials, or workers to or from the Work or any part or site thereof, whether by CONTRACTOR or its SUBCONTRACTORs.

7-1.05. CONTRACTOR shall make satisfactory and acceptable arrangements with the OWNER of, or the agency or authority having jurisdiction over, the damaged property concerning its repair or replacement, or payment of costs incurred in connection with the damage. The maintenance, repair, removal, relocation or rebuilding of public utility installations and structures, when accomplished by the CONTRACTOR as herein provided, shall be done by methods approved by the owners of such utilities.

7-1.06. The CONTRACTOR shall, at all times in performance of the WORK, employ approved methods and exercise reasonable care and skill so as to avoid unnecessary delay, injury, damage or destruction of public utility installations and structures; and shall, at all times in the performance of the WORK, avoid unnecessary interference with or interruption of public utility service, and shall cooperate fully with the owners thereof to that end.

8-1. DAMAGE TO EXISTING PROPERTY

8-1.01. CONTRACTOR will be held responsible for any damage to existing structures, Work, materials, or equipment because of his operations and shall repair or replace any damaged structures, Work, materials, or equipment to the satisfaction of, and at no additional cost to, OWNER.

8-1.02. CONTRACTOR shall protect all existing structures and property from damage and shall provide bracing, shoring, or other work necessary for such protection.

8-1.03. CONTRACTOR shall be responsible for all damage to streets, roads, curbs, sidewalks, highways, shoulders, trails, ditches, embankments, culverts, bridges, or other public or private property, which may be caused by transporting equipment, materials, or workers to or from the Work. CONTRACTOR shall make satisfactory and acceptable arrangements with the agency having jurisdiction over the damaged property concerning its repair or replacement.

9-1. TREE AND PLANT PROTECTION

9-1.01. All trees and other vegetation which must be removed to perform the Work shall be removed and disposed of by CONTRACTOR; however, no trees or cultured plants shall be unnecessarily removed unless their removal is indicated on the DRAWINGS. All trees and plants not removed shall be protected against injury from construction operations.

9-1.02. Trees considered by ENGINEER to have any significant effect on construction operations are indicated on the DRAWINGS and those which are to be preserved are so indicated.

9-1.03. CONTRACTOR shall take extra measures to protect trees designated to be preserved, such as erecting barricades, trimming to prevent damage from construction equipment, and installing pipe and other Work by means of hand excavation or tunneling methods. Such trees shall not be endangered by stockpiling excavated material or storing equipment against their trunks.

9-1.04. When injuring or removal of trees designated to be preserved cannot be avoided, or when removal and replacement is indicated on the DRAWINGS, each tree injured beyond repair or removed shall be replaced with a similar tree of the nearest size possible.

9-1.05. All trimming, repair, and replacement of trees and plants shall be performed by qualified nurserymen or horticulturists.

10-1. SECURITY

10-1.01. The site is enclosed with existing gates and security fencing; however the CONTRACTOR shall be responsible for protection of the Site, and all Work, materials, equipment, and existing facilities thereon, against vandals and other unauthorized persons.

10-1.02. No Claim shall be made against OWNER by reason of any act of an employee or trespasser, and CONTRACTOR shall make good all damage to OWNER's property resulting from CONTRACTOR’s failure to provide security measures as specified.

10-1.03. Security measures shall be at least equal to those usually provided by OWNER to protect OWNER’s existing facilities during normal operation, but shall also include such additional security fencing, barricades, lighting, and other measures as required to protect the Site.

11-1. PROTECTION OF WORK AND PUBLIC

11-1.01. The CONTRACTOR shall comply with all applicable LAWS AND REGULATIONS and all permit conditions in the execution of the WORK.

11-1.02. Barriers and Lights

- During the prosecution of the WORK, the CONTRACTOR shall put up and maintain at all times such barriers and lights as shall effectually prevent accidents.

- The CONTRACTOR shall provide suitable barricades, red lights, “danger” or “caution” or “street closed” signs and watchmen at all places where the WORK causes obstructions to the normal traffic or constitutes in any way a hazard to the public.

- The CONTRACTOR shall install temporary fencing in areas where fencing is removed or in areas accessed by livestock to protect the WORK, the public, and livestock.

11-1.03. Smoke Prevention

The CONTRACTOR shall use hard coal, coke, oil or gas as fuel for equipment generating steam. Strict compliance with LAWS AND REGULATIONS regulating the production and emission of

smoke shall be required.

11-1.04. Noise

The CONTRACTOR shall eliminate noise to as great an extent as practicable at all times. Air compressing plants shall be equipped with silencers and the exhaust of all gasoline motors or other power equipment shall be provided with mufflers. The CONTRACTOR shall strictly observe all LAWS AND REGULATIONS covering noise control.

11-1.05. Access to Public Services

Neither the materials excavated nor the materials or plant used in the construction of the WORK shall be so placed as to prevent free access to all fire hydrants, valves or manholes.

12-1. ACCESS ROADS

12-1.01. CONTRACTOR shall establish and maintain temporary access roads to various parts of the Site as required to complete the Project. Such roads shall be available for the use of all others performing Work or furnishing services in connection with the Project.

13-1. PARKING

13-1.01. CONTRACTOR shall provide and maintain suitable parking areas for the use of all workers and others performing work or furnishing services in connection with the Project, as required to avoid any need for parking personal vehicles where they may interfere with public traffic, OWNER's operations, or construction activities.

14-1. DUST CONTROL

14-1.01. CONTRACTOR shall take reasonable measures to prevent unnecessary dust. Earth surfaces subject to dusting shall be kept moist with water or by application of a chemical dust suppressant. When practicable, dusty materials in piles or in transit shall be covered to prevent blowing dust.

14-1.02. Buildings or operating facilities which may be affected adversely by dust shall be adequately protected from dust. Existing or new machinery, motors, instrument panels, or similar equipment shall be protected by suitable dust screens. Proper ventilation shall be included with dust screens.

15-1. TEMPORARY DRAINAGE PROVISIONS

15-1.01. CONTRACTOR shall provide for the drainage of storm water and such water as may be applied or discharged on the Site in performance of the Work. Drainage facilities shall be adequate to prevent damage to the Work, the Site, and adjacent property.

15-1.02. Existing drainage channels and conduits shall be cleaned, enlarged, or supplemented as necessary to carry all increased runoff attributable to CONTRACTOR's operations. Dikes shall be constructed as necessary to divert increased runoff from entering adjacent property (except in natural channels), to protect OWNER's facilities and the Work, and to direct water to drainage channels or conduits. Ponding shall be provided as necessary to prevent downstream flooding.

16-1. EROSION CONTROL

16-1.01. CONTRACTOR shall prevent erosion of soil on the Site and adjacent property resulting from its construction activities. Effective measures shall be initiated prior to the commencement of clearing, grading, excavation, or other operation that will disturb the natural protection.

16-1.02. Work shall be scheduled to expose areas subject to erosion for the shortest possible time, and natural vegetation shall be preserved to the greatest extent practicable. Temporary storage and construction buildings shall be located, and construction traffic routed, to minimize erosion. Temporary fast-growing vegetation or other suitable ground cover shall be provided as necessary to control runoff.

16-1.03. The CONTRACTOR, at no expense to the OWNER, shall remove any siltation deposits and correct any erosion problems as directed by the OWNER which results from construction operations.

17-1. POLLUTION CONTROL

17-1.01. CONTRACTOR shall prevent the pollution of drains and watercourses by sanitary wastes, sediment, debris, and other substances resulting from construction activities. No sanitary wastes shall be permitted to enter any drain or watercourse other than sanitary sewers. No sediment, debris, or other substance shall be permitted to enter sanitary sewers, and reasonable measures shall be taken to prevent such materials from entering any drain or watercourse.

END OF SECTION

SECTION 01505

MOBILIZATION

PART 1 - GENERAL

1.01 REQUIREMENTS INCLUDED

1-1.01. The WORK specified in this Section includes the preparatory work and operations in mobilizing for beginning work on the PROJECT including, but not limited to, those operations necessary for the movement of personnel, pumps, motors, other equipment, supplies and incidentals to the project site, tree protection, temporary buildings, other construction facilities/field offices, safety equipment and first aid supplies, demobilization, and any other items necessary for the proper performance and completion of the WORK in accordance with the CONTRACT DOCUMENTS and as required by State and Local LAWS AND REGULATIONS.

1-1.02. The cost of bonds and required insurance, and any other preconstruction expense necessary for the start of the WORK, excluding the cost of construction materials, shall also be included in this Section.

1-1.03. The cost of field engineering, permitting and permit fees, initial PROGRESS SCHEDULE, color photographs, pre- and post-construction records, research and detection of underground facilities, sanitary and other temporary utilities, are included in this Section.

PART 2 - PRODUCTS (NOT USED)

PART 3 - EXECUTION (NOT USED)

END OF SECTION

THIS PAGE LEFT BLANK INTENTIONALLY

SECTION 01540

SECURITY

PART 1 - GENERAL

1-1. DESCRIPTION

1-1.01. The CONTRACTOR shall require its personnel, and the personnel of its SUBCONTRACTORS and SUPPLIERS, to cooperate at all times with the OWNER's, CITY's, and COUNTY's security policies and personnel at Tampa Bay Water facilities, including, but not limited to, check-in and check-out when entering and leaving the site.

1-1.02. The CONTRACTOR shall ensure that each employee, representative, SUBCONTRACTOR, SUPPLIER, and others acting for the CONTRACTOR, uses designated access roads and parking areas.

1-1.03. The CONTRACTOR shall ensure that all personnel and personnel of its SUBCONTRACTORS meet the standard for the Jessica Lundsford Act while working on any agency property adjacent to a school.

1-1.04. The CONTRACTOR shall employ watchmen on the WORK when necessary and shall erect and maintain such strong and suitable barriers and such lights as shall effectually prevent the happening of any accident to health or to property or to any partially completed WORK or to any materials stored on or adjacent to the site of the WORK.

1-1.05. Materials shall be stored at the designated contractor's laydown area and shall be kept in a neat and orderly manner. Materials that are subject to deterioration by exposure to the sun, rain or other elements shall be kept adequately covered and protected. Materials at risk for theft shall be secured by the CONTRACTOR in a manner appropriate to the location.

1-1.06. The CONTRACTOR will be required to provide a copy of the driver's license for those receiving keys. Access materials must be returned to the owner upon final completion. It is the responsibility of the CONTRACTOR to safeguard access materials which are to be used by the assigned party and to notify the OWNER of lost or stolen keys.

1-1.07. All of the above shall be provided at no additional cost to the OWNER.

PART 2 - PRODUCTS (NOT USED)

PART 3 - EXECUTION (NOT USED)

END OF SECTION

THIS PAGE LEFT BLANK INTENTIONALLY

SECTION 01610

GENERAL EQUIPMENT STIPULATIONS

PART 1 - GENERAL

1-1. SCOPE

1-1.01. When an equipment specification section in this CONTRACT references this section, the equipment shall conform to the general stipulations set forth in this section, except as otherwise specified in other sections.

1-2. COORDINATION

1-2.01. CONTRACTOR shall coordinate all details of the equipment with other related parts of the Work, including verification that all structures, piping, wiring, and equipment components are compatible. CONTRACTOR shall be responsible for all structural and other alterations in the Work required to accommodate equipment differing in dimensions or other characteristics from that contemplated in the Drawings or Specifications.

1-3. MANUFACTURER'S EXPERIENCE

1-3.01. Unless specifically named in the Specifications, a manufacturer shall have furnished equipment of the type and size specified which has been in successful operation for not less than the past 5 years.

1-4. WORKMANSHIP AND MATERIALS

1-4.01. The CONTRACTOR shall provide and maintain modern plant, tools, and equipment as may be necessary, in the opinion of the OWNER, to perform in a satisfactory and acceptable manner all the WORK. Only equipment of established reputation and proven efficiency shall be used. The CONTRACTOR shall be solely responsible for the adequacy of the workmanship, materials and equipment, prior approval of the OWNER notwithstanding.

1-4.02. CONTRACTOR shall guarantee all equipment against faulty or inadequate design, improper assembly or erection, defective workmanship or materials, and leakage, breakage, or other failure. Materials shall be suitable for service conditions.

1-4.03. All equipment shall be designed, fabricated, and assembled in accordance with recognized and acceptable ENGINEERING and shop practice. Individual parts shall be manufactured to standard sizes and thicknesses so that repair parts, furnished at any time, can be installed in the field. Like parts of duplicate units shall be interchangeable. Equipment shall not have been in service at any time prior to delivery, except as required by tests.

1-4.04. Except where otherwise specified, structural and miscellaneous fabricated steel used in equipment shall conform to AISC standards. All structural members shall be designed for shock or vibratory loads. Unless otherwise specified, all steel which will be submerged, all or in part, during normal operation of the equipment shall be at least 1/4 inch thick. When dissimilar metal components are used, consideration shall be given to prevention of galvanic corrosion.

1-5. STRUCTURAL DESIGN REQUIREMENTS

1-5.01. All equipment, including non- structural components and non-building structures as defined in ASCE 7, and their anchorage, shall be designed and detailed in accordance with Section 01613 Structural Design, Support, and Anchorage.

1-6. LUBRICATION

1-6.01. Equipment shall be adequately lubricated by systems which require attention no more frequently than weekly during continuous operation. Lubrication systems shall not require attention during startup or shutdown and shall not waste lubricants.

1-6.02. Lubricants of the types recommended by the equipment manufacturer shall be provided in sufficient quantities to fill all lubricant reservoirs and to replace all consumption during testing, startup, and operation prior to acceptance of equipment by OWNER. Lubricants for equipment where the lubricants may come in contact with water before or during a potable water treatment process or with potable water, shall be food grade lubricants. This includes lubricants for equipment not normally in contact with water, but where accidental leakage of the lubricants may contaminate the water.

1-6.03. Lubrication facilities shall be convenient and accessible. Oil drains and fill openings shall be easily accessible from the normal operating area or platform. Drains shall allow for convenient collection of waste oil in containers from the normal operating area or platform without removing the unit from its normal installed position.

1-7. ELECTRIC MOTORS

1-7.01. Unless otherwise specified, motors furnished with equipment shall meet the requirements specified in Section 11213 Deep Well Submersible Vertical Turbine Pumps.

1-8. DRIVE UNITS

1-8.01. The nominal input horsepower rating of each gear or speed reducer shall be at least equal to the nameplate horsepower of the drive motor. Drive units shall be designed for 24 hour continuous service.

1-9. GEAR MOTORS

1-9.01. The use of gearmotors sharing an integral housing or cutgears into the motor output shaft, or that require removal of lubricant from the gear reducer to change out the motor will not be acceptable.

1-10. GEAR REDUCERS

1-10.01. Each gear reducer shall be a totally enclosed unit with oil or grease lubricated, rolling element, antifriction bearings throughout.

1-10.02. Unless superseded by individual specification requirements each helical, spiral bevel, combination bevel-helical, and worm gear reducers shall have a service factor of at least 1.50

based on the nameplate horsepower of the drive motor. Cycloidal gear reducers shall have a service factor of at least 2.0 based on the nameplate horsepower of the drive motor. Shaft-mounted and flange-mounted gear reducers shall be rated AGMA Class III. Helical gear reducers shall have a gear strength rating to catalog rating of 1.5. Each gear reducer shall be designed and manufactured in compliance with applicable most current AGMA standards, except the L10 bearing life shall be 200,000 hours.

1-10.03. The thermal horsepower rating of each unit shall equal or exceed the nameplate horsepower of the drive motor. During continuous operation, the maximum sump oil temperature shall not rise more than 100°F above the ambient air temperature in the vicinity of the unit and shall not exceed 200°F.

1-10.04. Each grease lubricated bearing shall be installed in a bearing housing designed to facilitate periodic regreasing of the bearing by means of a manually operated grease gun. Each bearing housing shall be designed to evenly distribute new grease, to properly dispose of old grease, and to prevent over greasing of the bearing. The use of permanently sealed grease lubricated bearings will not be acceptable in large sized reducers. In small reducers, similar to basin equipment, permanently sealed grease lubricated bearings rated L10 200,000-hour life may be provided at the manufacturer's option. An internal or external oil pump and appurtenances shall be provided if required to properly lubricate oil lubricated bearings. A dipstick or a sight glass arranged to permit visual inspection of lubricant level shall be provided on each unit.

1-10.05. Gear reducers which require the removal of parts or the periodic disassembly of the unit for cleaning and manual regreasing of bearings will not be acceptable.

1-10.06. Certification shall be furnished by the gear reducer manufacturer indicating that the intended application of each unit has been reviewed in detail by the manufacturer and that the unit provided is fully compatible with the conditions of installation and service.

1-11. ADJUSTABLE SPEED DRIVES (NOT USED)

1-12. V -BELT DRIVES (NOT USED)

1-13. SAFETY GUARDS

1-13.01. All belt or chain drives, fan blades, couplings, and other moving or rotating parts shall be covered on all sides by a safety guard. Safety guards shall be fabricated from 16 USS gage thick or thicker galvanized, aluminum-clad sheet steel, or stainless sheet steel or from 1/2 inch mesh galvanized expanded metal, or pultrusion molded UV resistant materials. Each safety guard shall be reinforced or shaped to provide suitable strength to prevent vibration and deflection and shall comply with OSHA. Each guard shall be designed for easy installation and removal. All necessary supports and accessories shall be provided for each guard. Supports and accessories, including bolts, shall be galvanized. All safety guards in outdoor locations shall be designed to prevent the entrance of rain and dripping water.

1-14. ANCHOR BOLTS

1-14.01. Equipment suppliers shall furnish suitable anchor bolts for each item of equipment. Anchor bolts, together with templates or setting drawings, shall be delivered sufficiently early to permit setting the anchor bolts when the structural concrete is placed. Anchor bolt materials shall comply with the Anchorage in Concrete and Masonry section, and sleeves shall be provided as indicated on the drawings. Unless otherwise specified, anchor bolts shall be at least 3/4 inch in diameter.

1-14.02. Unless otherwise indicated or specified, anchor bolts for items of equipment mounted on baseplates shall be long enough to permit 1-1/2 inches of grout beneath the baseplate and to provide adequate anchorage into structural concrete.

1-15. EQUIPMENT BASES

1-15.01. Unless otherwise indicated or specified, all equipment shall be installed on concrete bases at least 6 inches high. Cast iron or welded steel baseplates shall be provided for pumps, compressors, and other equipment. Each unit and its drive assembly shall be supported on a single baseplate of neat design. Baseplates shall have pads for anchoring all components, and adequate grout holes. Baseplates for pumps shall have a means for collecting leakage and a threaded drain connection. Baseplates shall be anchored to the concrete base with suitable anchor bolts and the space beneath filled with grout as specified in Section 03315 Grouting.

1-16. SPECIAL TOOLS AND ACCESSORIES

1-16.01. The CONTRACTOR shall, unless otherwise stated in the CONTRACT DOCUMENTS, furnish with each type, kind or size of equipment, one complete set of suitably marked high grade special tools and appliances which may be needed to adjust, operate, maintain or repair the equipment. Such tools and appliances shall be furnished in approved painted steel cases, properly labeled and equipped with good grade cylinder locks and duplicate keys.

1-16.02. Spare parts shall be furnished as specified herein and shall comply with one of the following requirements:

- Those spare parts not available to the OWNER within twenty-four (24) hours.
- Those spare parts identified by the SUPPLIER as critical.
- Those spare parts so specified.
- A list of all spare parts with manufacturer part numbers, descriptions, current costs, and models shall be provided with the spare parts.

1-16.03. Each piece of equipment shall be provided with a substantial nameplate, securely fastened in place and clearly inscribed with the SUPPLIER'S (manufacturer's) name, model name or number, year of manufacture, serial number, cost, supplier purchased from, and weight.

1-16.04. Equipment requiring periodic repair and adjustment shall be furnished complete with all special tools, instruments, and accessories required for proper maintenance. Equipment requiring special devices for lifting or handling shall be furnished complete with those devices.

1-17. SHOP PAINTING

1-17.01. All iron and steel surfaces of the equipment shall be protected with suitable protective coatings applied in the shop. Surfaces of the equipment that will be inaccessible after assembly shall be protected for the life of the equipment. Coatings shall be suitable for the environment where the equipment is installed. Exposed surfaces shall be finished, thoroughly cleaned, and filled as necessary to provide a smooth, uniform base for painting. Electric motors, speed reducers, starters, and other self-contained or enclosed components shall be shop primed or finished with an epoxy or polyurethane enamel or universal type primer suitable for top coating in the field with a universal primer and aliphatic polyurethane system.

1-17.02. Surfaces to be coated after installation shall be prepared for painting as recommended by the paint manufacturer for the intended service, and then shop painted with one or more coats of a universal primer.

1-17.03. Machined, polished, and nonferrous surfaces which are not to be painted shall be coated with rust-preventive compound as recommended by the equipment manufacturer.

1-18. PREPARATION FOR SHIPMENT

1-18.01. Equipment shall be prepared for shipment as specified in Section 01612 Product Delivery Requirements.

1-19. STORAGE

1-19.01. Handling and storage of equipment shall be as specified in Section 01614 Product Storage and Handling Requirements section.

1-20. INSTALLATION AND OPERATION

1-20.01. The CONTRACTOR shall have on hand sufficient proper equipment and machinery of ample capacity to facilitate the WORK and to handle all emergencies normally encountered in WORK of this character.

1-20.02. Equipment shall be erected in a neat and workmanlike manner on the foundations, at the locations and at the elevations shown on the DRAWINGS, unless directed otherwise by the OWNER during installation. All equipment shall be correctly aligned, leveled and adjusted for satisfactory operation and shall be installed so that proper and necessary connections can be made readily between the various units.

1-20.03. The CONTRACTOR shall furnish, install and protect all necessary anchor and attachment bolts and all other appurtenances needed for the installation of the devices included in the equipment specified. Anchor bolts shall be AS APPROVED by the ENGINEER and made

of ample size and strength for the purpose intended. Substantial templates and working drawings for installation shall be furnished by the CONTRACTOR.

1-20.04. Installation and operation shall be as specified in respective equipment sections and Section 01650 Startup, Testing, and Commissioning.

1-21. OBSERVATION OF PERFORMANCE TESTS

1-21.01. Where the Specifications require the presence of ENGINEER, initial tests shall be observed or witnessed by ENGINEER. OWNER shall be reimbursed by CONTRACTOR for all costs of subsequent visits by ENGINEER to witness or observe incomplete tests, retesting, or subsequent tests.

1-22. PROGRAMMING SOFTWARE

1-22.01. Programming software shall be provided for any equipment which includes a programmable logic controller (PLC) or other digital controller that is user-programmable. The software shall be suitable for loading and running on a laptop personal computer operating with a Windows- based operating system. A copy of the manufacturer's original operating logic program shall be provided for use in maintaining and troubleshooting the equipment. Where multiple pieces of equipment, from the same or different vendors, use the same programming software, only one copy of the software need be provided.

END OF SECTION

SECTION 01612

PRODUCT DELIVERY REQUIREMENTS

PART 1 – GENERAL

1-1. SCOPE

1-1.01. This section covers packaging and shipping of materials and equipment.

1-2. PREPARATION FOR SHIPMENT

1-2.01. All equipment shall be suitably packaged to facilitate handling and to protect against damage during transit and storage. All equipment shall be boxed, crated, or otherwise completely enclosed and protected during shipment, handling, and storage. All equipment shall be protected from exposure to the elements and shall be kept dry at all times.

1-2.02. Painted and coated surfaces shall be protected against impact, abrasion, discoloration, and other damage. Painted and coated surfaces which are damaged prior to acceptance of equipment shall be repainted to the satisfaction of Engineer.

1-2.03. Grease and lubricating oil shall be applied to all bearings and similar items.

1-3. SHIPPING

1-3.01. Before shipping, each item of equipment shall be tagged or marked as identified in the delivery schedule or on the Shop Drawings. Complete packing lists and bills of material shall be included with each shipment.

1-4. DELIVERY

1-4.01. The CONTRACTOR shall deliver materials in ample quantities to ensure the most speedy and uninterrupted progress of the WORK so as to complete the WORK within the CONTRACT TIME.

1-4.02. The CONTRACTOR shall also coordinate deliveries in order to avoid delay in, or impediment of, the progress of the WORK of any related CONTRACTOR.

1-4.03. The CONTRACTOR shall be solely responsible for delivery, receipt, inspection, loading, and unloading of materials and equipment. OWNER shall not receive, load, or unload deliveries. Materials and equipment shall not be delivered to OWNER warehouse(s).

END OF SECTION

THIS PAGE LEFT BLANK INTENTIONALLY

SECTION 01613

STRUCTURAL DESIGN, SUPPORT AND ANCHORAGE

PART 1 - GENERAL

1-1. THE REQUIREMENT

1-1.01. The Contractor shall provide calculations and details for structural and non-structural components, supports, and anchorages as required by the CONTRACT DOCUMENTS and the 7th Edition (2020) Florida Building Code (FBC). The CONTRACTOR shall furnish and install all such structural and non-structural components, supports, and anchorages in accordance with the calculations and details.

1-1.02. Where a conflict exists between the requirements of the CONTRACT DOCUMENTS and the 7th Edition (2020) FBC, the more stringent requirement shall apply.

1-1.03. Exemptions to this requirement that are permitted by the 7th Edition (2020) FBC, ASCE 7, or any other applicable Building Code or Reference Document, shall not apply unless the exemption is explicitly listed within this Specification Section.

1-1.04. Design parameters used to determine Wind design forces shall be as listed herein.

1-2. REFERENCES

1-2.01. FBC 7th Edition (2020) Florida Building Code

1-2.02. ASCE 7 American Society of Civil Engineers Standard 7-16 – Minimum Design Loads for Buildings and Other Structures.

1-2.03. ACI 318 Building Code Requirements for Structural Concrete (2014 edition)

1-2.04. TMS 402 Building Code Requirements for Masonry Structures (2016 edition)

1-2.05. TMS 602 Specifications for Masonry Structures (2016 edition)

1-3. CONTRACTOR SUBMITTALS

1-3.01. Furnish submittals in accordance with Section 01300 – Submittal Procedures.

1-3.02. Calculations and Details

1-3.02.1. Calculations and details are considered a Delegated Designs as defined in the Florida Administrative Code.

1-3.02.2. Calculations and details shall be complete, accurate, and in accordance with the requirements of the FBC and ASCE 7, and shall be signed and sealed by a Professional Engineer registered in the State of Florida.

1-3.02.3. Calculations shall be clear and concise and show equipment and other non-structural component anchorage forces and the capacities of the anchorage elements proposed by the CONTRACTOR. The calculations shall substantiate a complete load path from the component or equipment being anchored into the supporting structure or foundation.

1-3.02.3.1. The calculations and details shall demonstrate a complete lateral and vertical load path, and shall clearly indicate all forces imposed on the supporting structure.

1-3.02.3.2. Calculations and details are required for all Non-Structural components, supports, anchorages, and attachments.

1-3.02.3.3. Non-Structural components shall include all architectural, mechanical, and electrical components, equipment, piping, ductwork, and all other similar or related appurtenances necessary to produce the complete architectural, mechanical, and electrical systems.

1-3.02.3.4. When the CONTRACT DOCUMENTS require the CONTRACTOR to design structures or structural components, calculations and details for those structures and structural components, and their supports, anchorages, and attachments, are required.

1-3.02.3.5. When computer generated calculations and analyses are included as part (or as the whole) of the calculations, the calculations shall include, but not be limited to, the following: derivations of all input parameters; clear indication of the applicable load combinations and building code equations; diagrams of all members, geometry, loads, forces, reactions and deflections, for all components and connections; and output results demonstrating all stress, force, deflection and other CONTRACT DOCUMENT and building code requirements have been satisfied.

1-3.02.3.6. All calculations associated with anchorage into concrete or masonry shall be done using Strength Level forces, and shall be in accordance with the applicable provisions of ACI 318 and TMS 402, respectively.

1-3.02.3.7. Refer to Part 2 below for additional requirements.

1-04 - WIND DESIGN CRITERIA

1-4.01. DESIGN REQUIREMENTS

1-4.01.1. Design Parameters:

Risk Category: IV.

Ultimate Design Wind Speed, V_{ult}: 155 miles per hour.

Nominal Design Wind Speed, V_{asd}: 120 miles per hour.

Exposure Category: C.

Topographic Factor, K_{zt}: 1.0.

PART 2 - PRODUCTS

2-1. GENERAL

2-1.01. Non-Structural Component Supports and Anchors

2-1.01.1. Unless otherwise indicated, non-structural component supports, anchors, and restrainers shall be adequately designed for all applicable static, dynamic, operational, and wind loads.

2-1.01.2. Wall-mounted equipment weighing more than 250 pounds or which is within 18-inches of the floor shall be provided with fabricated steel supports. Pedestals shall be of welded steel or engineered framing support systems. If the supported equipment is a panel or cabinet or is enclosed with removable sides, the pedestal shall match the supported equipment in appearance and dimensions.

2-1.01.3. All equipment and all other non-structural components shall be supported and anchored in place by methods that satisfy the building code and the CONTRACT DOCUMENTS.

2-1.01.4. All equipment and all other non-structural components shall be supported and anchored in place by methods that satisfy the manufacturer's applicable wind certification requirements.

2-1.01.5. Component attachments shall be bolted, welded, or otherwise positively fastened without consideration of frictional resistance produced by the effects of gravity.

2-1.02. Non-Building Structures

2-1.02.1 Non-Building Structures shall be designed in accordance with ASCE 7 Chapter 15.

2-1.02.2 Non-Building Structures, foundations, supports, anchors, and restrainers shall be adequately designed for all applicable static, dynamic, operational, and wind loads.

2-1.03. Anchors – General

2-1.03.1. The CONTRACTOR shall determine the size, type, capacity, location, and other placement requirements of anchorage elements. Anchoring methods and leveling criteria in the manufacturer's literature shall be followed. Submit methods and criteria with the calculations and details.

2-1.03.2. Anchor bolt calculations shall clearly show that the capacity of the anchor and the capacity of the concrete or masonry that the anchor is embedded in are adequate to resist all applicable load combinations, including wind loads.

2-1.03.3. Reduction factors associated with edge distance, embed length, grout and base plate thickness, and bolt spacing shall all be considered and based on the actual dimensions of the concrete or masonry that resists the anchorage forces.

2-1.03.4. Where anchorage is required into or through equipment pads, the following requirements shall apply unless otherwise approved by the ENGINEER:

2-1.03.4.1. For tensile forces, the embed length and associated concrete failure zone shall be provided entirely within the structural slab. No portion of the equipment pad may be considered as effective in resisting tensile forces.

2-1.03.4.2. For shear forces, the edge distance and associated concrete failure zone shall be provided entirely within the equipment pad. No portion of the structural slab may be considered as effective in resisting shear forces.

2-1.03.4.3. Anchor bolt details shall include required bolt diameter, embed, spacing, and edge distances.

2-1.03.4.4. Where additional reinforcement is required to satisfy anchorage requirements, such reinforcement shall be included in the anchorage details, and shall be furnished and installed by the CONTRACTOR.

2-1.04. Mechanical and Electrical Equipment Foundations

2-1.04.1. Equipment foundations are indicated on Drawings. The CONTRACTOR, through the equipment manufacturer, shall verify the size and weight of the equipment foundation to ensure compatibility with equipment.

2-1.04.02. Equipment foundation dimensions shall be coordinated with the equipment base geometry and the edge distance and embed requirements of the equipment anchorage calculations.

2-1.05. Mechanical and Electrical Equipment Equipment (Housekeeping) Pads

2-1.05.1. General

2-1.05.1.1. Equipment, tanks, control cabinets, enclosures, and related equipment shall be mounted on concrete equipment pads, unless otherwise indicated. The top surface of the equipment pads shall be level, unless otherwise indicated, or otherwise required by the equipment manufacturer.

2-1.05.1.2. Equipment pads shall be sized to accommodate the bearing and anchorage requirements of the equipment, subject to the constraints listed below.

2-1.05.1.3. Final geometry of the equipment pads shall not result in a condition that violates applicable building code provisions, including but not limited to the provisions of the National Electric Code.

2-1.05.2. Mechanical Equipment Pads

2-1.05.2.1. Mechanical equipment pad heights shall be coordinated with process equipment and piping elevation requirements. Where no such elevation constraints exist, the equipment pad height shall be as shown on the drawings, or as indicated below when no specific height is provided.

2-1.05.2.2. Equipment pads for mechanical equipment shall be 3.5 inches tall (maximum) at the front of the equipment.

2-1.05.2.3. Mechanical equipment pads shall extend not more than 2 inches beyond the front, back, and sides of the equipment, except as indicated below, unless otherwise shown on the drawings.

2-1.05.2.4. Where necessary to meet wind anchorage requirements, the pads may be extended beyond the 2 inch limit indicated above. The pads shall extend not more than 6 inches beyond the front, back, and sides of the equipment.

2-1.05.3. Electrical Equipment Pads

2-1.05.3.1. Electrical equipment pads shall be 3.5 inches tall (maximum) at the front of the equipment.

2-1.05.3.2. Electrical equipment pads shall extend not more than 2 inches beyond the front, back, and sides of the equipment, except as indicated below, unless otherwise shown on the drawings.

2-1.05.3.3. Where necessary to meet anchorage requirements, the pads may be extended beyond the 2 inch limit indicated above. The pads shall extend not more than 6 inches beyond the front, back, and sides of the equipment.

SECTION 01614

PRODUCT STORAGE AND HANDLING REQUIREMENTS

PART 1 - GENERAL

1-1. SCOPE

1-1.01. This section covers delivery, storage, and handling of materials and equipment.

1-2. DELIVERY

1-2.01. CONTRACTOR shall bear the responsibility for delivery of equipment, spare parts, special tools, and materials to the site and shall comply with the requirements specified herein and shall provide required information concerning the shipment and delivery of the materials specified in this CONTRACT. These requirements also apply to any sub-suppliers making direct shipments to the Site.

1-2.02. CONTRACTOR shall, either directly or through contractual arrangements with others, accept responsibility for the safe handling and protection of the equipment and materials furnished under this CONTRACT before and after receipt at the port of entry. Acceptance of the equipment shall be made after it is installed, tested, placed in operation and found to comply with all the specified requirements.

1-2.03. All items shall be checked against packing lists immediately on delivery to the site for damage and for shortages. Damage and shortages shall be remedied with the minimum of delay.

1-2.04. Delivery of portions of the equipment in several individual shipments shall be subject to review of ENGINEER before shipment. When permitted, all such partial shipments shall be plainly marked to identify, to permit easy accumulation, and to facilitate eventual installation.

1-3. STORAGE

1-3.01. Upon delivery, all equipment and materials shall immediately be stored and protected until installed in the Work.

1-3.02. Stacked items shall be suitably protected from damage by spacers or load distributing supports that are safely arranged. No metalwork (miscellaneous steel shapes and reinforcing steel) shall be stored directly on the ground. Masonry products shall be handled and stored in a manner to hold breakage, chipping, cracking, and spalling to a minimum. Cement, lime, and similar products shall be stored off the ground on pallets and shall be covered and kept completely dry at all times. Pipe, fittings, and valves may be stored out of doors, but must be placed on wooden blocking. PVC pipe, geomembranes, plastic liner, and other plastic materials shall be stored off the ground on pallets and protected from direct sunlight.

1-3.03. Pumps, motors, electrical equipment, and all equipment with antifriction or sleeve bearings shall be stored in weathertight structures maintained at a temperature above 60°F. Electrical equipment, controls, and insulation shall be protected against moisture and water damage. All space heaters furnished in equipment shall be connected and operated continuously.

1-3.04. Equipment having moving parts, such as gears, bearings, and seals, shall be stored fully lubricated with oil, grease, etc., unless otherwise instructed by the manufacturer. Manufacturer's storage instructions shall be carefully followed by CONTRACTOR.

1-3.05. When required by the equipment manufacturer, moving parts shall be rotated a minimum of twice a month to ensure proper lubrication and to avoid metal to metal "welding". Upon installation of the equipment, CONTRACTOR shall, at the discretion of ENGINEER, start the equipment at one-half load for an adequate period of time to ensure that the equipment does not deteriorate from lack of use.

1-3.06. When required by the equipment manufacturer, lubricants shall be changed upon completion of installation and as frequently as required thereafter during the period between installation and acceptance. New lubricants shall be put into the equipment by CONTRACTOR at the time of acceptance.

1-3.07. Equipment and materials shall not show any pitting, rust, decay, or other deleterious effects of storage when installed in the Work.

1-3.08. In addition to the protection specified for prolonged storage, the packaging of spare units and spare parts shall be for export packing and shall be suitable for long-term storage in a damp location. Each spare item shall be packed separately and shall be completely identified on the outside of the container.

1-4. HANDLING.

1-4.01. Stored items shall be laid out to facilitate their retrieval for use in the Work. Care shall be taken when removing the equipment for use to ensure the precise piece of equipment is removed and that it is handled in a manner that does not damage the equipment.

1-4.02. During handling, carbon steel constructed material including chains, straps, and forks on lifting equipment shall not directly contact any equipment or material constructed of stainless steel. It shall be the CONTRACTOR'S responsibility to correct any carbon steel contamination of stainless steel.

END OF SECTION

SECTION 01615

EQUIPMENT AND VALVE IDENTIFICATION

PART 1 – GENERAL

1-1. SCOPE

1-1.01. This section covers the furnishing and installation of nameplates and tags for identification of equipment, valves, panels, and instruments.

1-2. GENERAL

1-2.01. Except as otherwise specified in equipment, valve, and instrumentation sections, nameplates and tags shall be as specified herein. Nameplates or tags shall be provided for all equipment, valves, operator interfaces, control and electrical panels, cabinets, instruments, and instrument racks that have been named and/or tagged on the Drawings.

1-3. SUBMITTALS

1-3.01. Drawings and data shall be submitted in accordance with the requirements of the Submittals Procedures section for each type of tag provided including materials, colors, sizes, letter sizes, and installation instructions.

PART 2 - PRODUCTS

2-1. EQUIPMENT NUMBER PLATES

2-1.01. All equipment tagged on the drawings, except for submerged equipment shall be provided with number plates bearing the equipment tag number identified on the Drawings. Number plates shall be beveled, 1/8th inch thick laminated black phenolic plastic engraving stock with white core. Lettering on number plates shall be capitalized block letters ¾ inch high. Number plate height shall be twice the letter height. Number plate length shall be as needed, with suitable margins all around. Lettering shall be placed in one row where practicable; however, where necessary due to excessive length, lettering shall be placed on more than one row and centered.

2-1.02. Number plates shall be attached with stainless steel panhead screws, rivets, or drive screws.

2-1.03. When a number plate cannot be installed due to the physical size, space, or mounting surface geometry of the equipment, the CONTRACTOR shall provide a 12-gauge stainless steel tag with engraved or imprinted equipment tag number. Lettering on tags shall be ¼ inch high. Tags shall be rectangular with smooth edges and shall be fastened to the equipment with stainless steel mechanical fasteners or with a stainless-steel chain.

2-2. EQUIPMENT INFORMATION PLATES

2-2.01. Equipment shall be provided with engraved or stamped equipment information plates securely affixed with mechanical fasteners to the equipment in an accessible and visible location.

Equipment information plates shall be in addition to the number plates specified.

2-2.02. Equipment information plates shall indicate the manufacturer's name, address, product name, catalog number, serial number, capacity, operating and power characteristics, labels of tested compliances, and any other pertinent design data. Equipment information plates listing the distributing agent only will not be acceptable.

2-3. VALVE AND GATE TAGS

2-3.01. Temporary Tags. Each valve and gate with an identifying number indicated on the Drawings or listed in the valve or gate schedule, shall be tagged or marked in the factory with the identifying number.

2-3.02. Permanent Tags. All valves and gates, except buried or submerged valves, that have been assigned a number on the Drawings or in the valve or gate schedule, shall be provided with a permanent number plate. Tags shall be permanently attached to valves and gates with stainless steel mechanical fasteners or with stainless steel chains. Numerals shall be ¾ inch high and shall be black baked enamel on an anodized aluminum plate.

All buried valves shall be tagged with a brass plate cast into a 6-inch by 6-inch concrete pad at grade next to the valve box. The valve number shall be engraved in the brass plate with lettering and numerals at least 1 inch high.

2-4. PANEL NAMEPLATES

2-4.01. Nameplates shall be provided on the face of each panel and cabinet. Panel identification nameplates shall be mounted at the top of the panel shall include the panel descriptive name and tag number as indicated on the Drawings, in two or three lines of text. Lettering shall be ¾ inch high.

2-4.02. Nameplates for devices mounted on or in the panel shall be inscribed with the text as indicated on the Drawings. Where nameplate information is not indicated on the Drawings, inscriptions shall be in accordance with information in the supplier's submittal drawings as guided by information in the relevant specification section. Panel device nameplates shall have engraved letters 3/16 inch high.

2-4.03. Nameplate material and size shall be as specified above for equipment number plates. Nameplates shall be secured to the panel with stainless steel panhead screws.

2-5. INSTRUMENT TAGS

2-5.01. Temporary Tags. Where instruments are not provided with permanent tags furnished from the factory, instruments shall be tagged or marked in the factory with the instrument tag number indicated on the Drawings.

2-5.02. Permanent Tags. Instruments shall be tagged with the instrument tag number indicated on the Drawings. Tags shall be 12-gauge stainless steel with engraved or imprinted symbols. Lettering on tags shall be ¼ inch high. Tags shall be rectangular with smooth edges and shall be fastened to the instrument with stainless steel mechanical fasteners or with a stainless steel chain.

PART 3 – EXECUTION (NOT USED)

END OF SECTION

SECTION 01631

PRODUCT SUBSTITUTIONS

PART 1 - GENERAL

1-1. SUMMARY

1-1.01. This Section specifies administrative and procedural requirements for handling requests for substitutions made after award of the Contract.

1-2. DEFINITIONS

1-2.01. Definitions used in this Section are intended not to change or modify the meaning of other terms used in the CONTRACT DOCUMENTS.

1-2.02. Substitutions: Request for changes in products, materials, equipment, and methods of construction required by CONTRACT DOCUMENTS proposed by the CONTRACTOR after award of the Contract are considered requests for “substitutions”. Request for substitutions prior to bids are not considered substitutions but as “Prior Approvals”. The following are not considered substitutions:

1. Substitutions requested by Bidders during the bidding period and accepted prior to award of Contract are considered as included in the Contract Documents. "Prior Approvals" shall meet the requirements specified in this Section for Substitution Request Submittal.

2. Revisions to CONTRACT DOCUMENTS requested by the OWNER or ENGINEER.

3. Specified options of products and construction methods included in CONTRACT DOCUMENTS.

1-2.03. Substitution Request Submittal: Requests for substitution will be considered if received within 60 days after commencement of the Work. Requests received more than 60 days after commencement of the Work may be considered or rejected at the discretion of the ENGINEER.

1-2.04. Submit 3 copies of each request for substitution for consideration. Submit requests in the form and in accordance with procedures required for Change Order proposals.

1-2.05. At the beginning of the request for substitution, clearly state the basis on which the request is made. Identify the product, or the fabrication or installation method to be replaced in each request. Include related Specification Section and Drawing numbers. Provide complete documentation showing compliance with the requirements for substitutions, and the following information, as appropriate:

1. Product Data, including Drawings and descriptions of products, fabrication, and installation procedures.

2. Samples of both the proposed substitution and the specified product, where applicable or requested.

3. A detailed comparison of significant qualities of the proposed substitution with those of the Work specified. Significant qualities may include elements such as size, weight, durability, performance and visual effect.

4. Coordination information, including a list of changes or modifications needed to other parts of the Work and to construction performed by separate CONTRACTORS, that will become necessary to accommodate the proposed substitution.

5. A statement indicating the substitution's effect on the CONTRACTOR'S Construction Schedule compared to the schedule without approval of the substitution. Indicate the effect of the proposed substitution on overall CONTRACT Time.

6. Cost information, including a proposal of the net change, if any in the Contract Sum.

7. Certification by the Contractor that the substitution proposed is equal-to or better in every significant respect to that required by the Contract Documents, and that it will perform adequately in the application indicated. Include the Contractor's waiver of rights to additional payment or time that may subsequently become necessary because of the failure of the substitution to perform adequately.

1-2.06. OWNER or ENGINEER's Action: Within one week of receipt of the request for substitution, the OWNER or ENGINEER will request additional information or documentation necessary for evaluation of the request. Within 2 weeks of receipt of the request, or one week of receipt of the additional information or documentation, whichever is later, the OWNER or ENGINEER will notify the CONTRACTOR of acceptance or rejection of the proposed substitution. If a decision on use of a proposed substitute cannot be made or obtained within the time allocated, use the product specified by name. Acceptance will be in the form of a CHANGE ORDER.

PART 2 – PRODUCTS

2-1. SUBSTITUTIONS

2-1.01. Conditions: The CONTRACTOR'S substitution request will be received and considered by the OWNER or ENGINEER when: extensive revisions to Contract Documents are not required; proposed changes are in keeping with the general intent of the CONTRACT DOCUMENTS; the request is timely, fully documented, and properly submitted; and when one or more of the following conditions are satisfied, as determined by the OWNER or ENGINEER; otherwise requests will be returned without action except to record noncompliance with these requirements.

1. The request is directly related to an "or equal" clause or similar language in the Contract Documents.

2. The specified product or method of construction cannot be provided within the CONTRACT Time. The request will not be considered if the product or method cannot be provided as a result of failure to pursue the Work promptly or coordinate activities properly.

3. The specified product or method of construction cannot receive necessary approval by a governing authority, and the requested substitution can be approved.

4. A substantial advantage is offered to the OWNER, in terms of cost, time, energy conservation or other considerations of merit, after deducting offsetting responsibilities the OWNER may be required to bear. Additional responsibilities for the OWNER shall include additional compensation to the ENGINEER for redesign and evaluation services, increased cost of other construction by the OWNER or separate CONTRACTORS, and similar considerations.

5. The specified product or method of construction cannot be provided in a manner that is compatible with other materials, and where the CONTRACTOR certifies that the substitution will overcome the incompatibility.

6. The specified product or method of construction cannot be coordinated with other materials, and where the Contractor certifies that the proposed substitution can be coordinated.

7. The specified product or method of construction cannot provide a warranty required by the CONTRACT DOCUMENTS and where the CONTRACTOR certifies that the proposed substitution provide the required warranty.

2-1.02. The Contractor's submittal and OWNER or ENGINEER's acceptance of Shop Drawings, Product Data or Samples that relate to construction activities not complying with the CONTRACT DOCUMENTS does not constitute an acceptable or valid request for substitution, nor does it constitute approval.

2-1.03. If a proposed substitution requires investigation, testing, or approval to determine its suitability for incorporation into the Work, the testing of the proposed substitution shall be determined by the ENGINEER. The CONTRACTOR shall bear all costs of such investigations or tests, including the ENGINEER's additional services made necessary by such substitutions.

PART 3 - EXECUTION (NOT USED)

END OF SECTION

THIS PAGE LEFT BLANK INTENTIONALLY

SECTION 01650

STARTUP, TESTING, AND COMMISSIONING

PART 1 - SUMMARY

1-1. SCOPE

1-1.01. This section includes the requirements for startup, testing, and commissioning of the wells and other PROJECT components defined in the CONTRACT DOCUMENTS which will require separate commissioning procedures to properly clear the components for service with the OWNER and regulatory agencies. The purpose of this section is to define the requirements for bringing the wells and other PROJECT components online and for obtaining OWNER and ENGINEER approval and FDEP partial clearances.

1-1.02. The section will define the requirements for bringing individual equipment online and providing proper operation and performance of that work.

1-1.03. The startup, testing and commissioning requirements contained herein represent the expectations of the OWNER and ENGINEER and shall be adhered to. However, the CONTRACTOR is required to develop, submit, and maintain detailed plans, including designation of management and staff, for these activities as specified herein. Deviations from this plan may be allowed but shall be approved in writing by the ENGINEER and OWNER prior to implementation of any deviations. Additional requirements such as cleaning, disinfection, and pressure and leakage testing are specified in other sections and must be accounted for in the planning of the WORK.

1-1.04. The startup, testing, and commissioning services referenced or specified herein addresses wells that will be improved as part of this PROJECT and require FDEP clearance before being returned to service.

1-1.05. Specific sequencing of the WORK is defined in the Construction and Schedule Constraints Section.

1-1.06. The startup, testing, and commissioning activities referenced herein include the following:

- Disinfection of wells
- Final flushing and neutralization of heavily chlorinated water
- Bacteriological tests (analysis by OWNER)
- Startup and testing of miscellaneous electrical, instrumentation, and HVAC equipment where applicable.
- Startup and Testing of new well pumps and motors
    - Equipment checkout
    - Startup checks
    - Functional testing
- Final acceptance testing of new well pumps and motors

1-2. DEFINITIONS

1-2.01. Startup and Testing is the transitional phase between completion of construction and start of commissioning and includes the following:

- Pre-Startup Activities and Checks - Inspections, tests and other activities necessary to determine that equipment, systems and subsystems have been properly manufactured and installed. Pre-startup activities shall include an audit of all factory testing of equipment and compiling the results for comparison to startup and commissioning testing.

- Functional Testing – Initial limited operation of equipment, to demonstrate capability of installed components to perform their intended functions, respond to controls, and safely interface with external systems, followed by operation of individual systems in manual and automatic mode to test full functionality of individual systems.

- Acceptance testing - Continuous testing of equipment under specified operating conditions in accordance with the technical SPECIFICATIONS and applicable regulations to demonstrate proper performance.

PART 2 – GENERAL

2-1.01. The CONTRACTOR shall be responsible for and furnish all labor, materials, instruments, incidentals, and equipment required for startup, testing, and commissioning. Temporary facilities required to carry out the specified testing, including temporary pipe, pumps, and other appurtenances, shall be furnished and installed, and removed when no longer required for startup, testing, and commissioning. Chemicals required for startup and testing shall be provided by the CONTRACTOR except as otherwise specified herein. Wastewater, including flushing water shall be disposed of at the expense of the CONTRACTOR, in a manner acceptable to the OWNER, and in accordance with all laws, regulations**,** and permits. Startup and testing shall be conducted during normal working hours during the workweek of Monday through Friday, unless otherwise approved by the OWNER.

2-1.02. Constraints. Startup and testing shall be conducted in a manner that does not compromise operation of the existing facilities or the quality of the water entering the facility. Any startup and testing activities affecting operation of the existing treatment facility shall be coordinated with the OWNER and shall be shown on the PROGRESS SCHEDULE. The OWNER will cooperate with the CONTRACTOR to the extent possible but will have sole authority in decisions affecting existing operations.

2-1.03. The minimum constraints for startup and testing are defined in the Construction and Schedule Constraints Section.

PART 3 – STARTUP MANAGER, STARTUP TEAM, AND MANUFACTURER'S FIELD SERVICES REPRESENTATIVES

3-1.01. The CONTRACTOR shall maintain a dedicated startup team led by a startup manager. The CONTRACTOR shall not change the startup manager throughout the full period of performance of the WORK without written permission of the OWNER. Once engaged in the PROJECT, the startup manager shall attend regular construction progress meetings. No startup activities shall begin until the startup manager has arrived at the jobsite.

3-1.02. The startup manager shall be on Site full time at least 5 days prior to any field startup and testing activities and shall remain on site until all startup, testing, and commissioning activities are complete and a final FDEP clearance has been received for the PROJECT.

3-1.03. The startup manager shall be a startup and testing expert with a minimum of 5 years of experience starting up equipment and systems of similar type, size, capacity, and complexity to the equipment and systems included in this PROJECT. The startup manager shall have the necessary experience to fully understand all startup requirements, to manage the CONTRACTOR'S resources providing the startup services, and to prepare all startup documentation, as specified. The startup manager's assigned duties and responsibilities are those specifically related to planning, supervising, and executing startup activities and shall include, but shall not be limited to the following:

- Coordinating all testing and startup activities.
- Preparing all startup and field-testing plans, documentation, and forms.
- Liaising between the CONTRACTOR, ENGINEER, and OWNER for all startup and testing activities.
- Developing a comprehensive schedule for all startup activities and providing regular schedule updates. The startup and testing schedule shall be incorporated into the PROGRESS SCHEDULE.
- Scheduling and leading startup, testing, and commissioning planning meetings.
- Conducting coordination meetings during startup, testing, and commissioning at least weekly.
- Coordinating manufacturers' services and their certification of proper installation and/or operation of equipment as required by the SPECIFICATIONS.
- Overseeing and administering all startup, testing, and commissioning activities, including either direct participation in the activities and/or oversight and monitoring of activities. It shall be the startup manager's responsibility to assure that all tests have been completed in accordance with accepted testing procedures.
- Ensuring readiness for and coordinating maintenance, repair, and adjustment of equipment and systems during startup testing, and commissioning.
- Conducting or overseeing pre-test checks to ensure readiness for testing. Verify all piping hydrostatic testing and flushing has been completed prior to field testing connected equipment.
- Ensuring all testing equipment is in proper working order and has been calibrated to appropriate standards.
- Developing safe work policies and procedures including lockout/tagout procedures and personal protective equipment policies, that will be followed during all field startup and testing activities. At a minimum, the CCONTRACTOR shall comply with OSHA and the OWNER'S established safety guidelines. It shall be the startup manager's responsibility to assure all safety procedures are followed at all times.
- Reviewing and approving all equipment training sessions prior to submission to ENGINEER, to assure that the training is compliant with the requirements of the SPECIFICATIONS and includes all applicable operation, maintenance, safety, functional, performance, and startup

and testing information.

- Organizing teams made up of qualified representatives of suppliers, SUBCONTRACTORS, and others, as appropriate, to efficiently and expeditiously startup and test the equipment and systems installed and constructed under this CONTRACT. The objective of this program shall be to demonstrate to the ENGINEER and OWNER that the structures, systems, and equipment constructed and installed under this CONTRACT meet all performance requirements and the facility is ready for operation as intended. In addition, the testing program shall produce baseline operating conditions for the OWNER to use in a preventive maintenance program.
- Ensuring the development and maintenance of records documenting all startup, testing, and commissioning activity. The records shall be organized by major process system into organized files/binders and turned over to the OWNER prior to applying for final payment. Testing records shall be accessible to the ENGINEER and OWNER at all times to allow monitoring of the progress.
- Ensuring the startup team is equipped and ready to make emergency repairs and adjustments to equipment installed and modified as part of the PROJECT.
- Scheduling and conducting a one-day workshop with the OWNER and ENGINEER to resolve SUBMITTAL review comments to the CONTRACTOR'S startup, testing, and commissioning plan SUBMITTAL.
- Notifying the OWNER and all respective equipment manufacturers at least 21 days prior to the date when each equipment system is scheduled for pre-startup activities and checks.
- Organize International Electrical Testing Association (NETA) acceptance testing in accordance with the Electrical Equipment Installation section.

3-1.04. Startup Team. The startup team shall include the startup manager and all staff deemed necessary for successful completion of startup, testing, and commissioning. This will typically include engineers, major equipment vendors, operators, and representatives from the Instrumentation and Control System supplier. Additional trade representatives may be included as PROJECT requirements dictate.

3-1.05. Manufacturer's Field Services Representative. The manufacturers shall provide a technically qualified field-service representative for the installation, startup, and testing of equipment furnished, as specified in the equipment sections. The manufacturer shall submit qualifications and experience records for all key personnel to be involved in startup activities.

3-1.06. The manufacturer's field services representative shall be employed full-time in installation, startup, and testing of similar equipment and facilities and work directly for the manufacturer. The representative shall have conducted startup activities like those required herein on at least two other projects of similar complexity. The OWNER or ENGINEER shall have the right to reject the manufacturer's field services representative at any time, for immediate replacement by the manufacturer, if the accepted qualifications are not representative of the actual experience or abilities of the representative, as determined by the OWNER or ENGINEER.

PART 4 – SUBMITTALS

4-1.01. CONTRACTOR shall submit the following information in accordance with the

requirements of Section 01300 Submittals Procedures.

4-1.02. Startup manager's qualifications and past project experience including contact names, addresses and current telephone numbers of OWNER representatives that can be used to verify the accuracy of the information. SUBMITTAL shall be made at the preconstruction conference.

4-1.03. Manufacturers' field services representative's qualifications and past project experience including contact names, addresses and current telephone numbers that can be used to verify the accuracy of the information.

4-1.04. Qualification SUBMITTALs shall be made 3 weeks before the manufacturer's representative is scheduled to be on Site.

4-1.05. Manufacturer's certification of proper installation of all equipment as specified in the equipment sections.

4-1.06. Manufacturer's certificate of proper operation of all equipment as specified in the equipment sections.

4-1.07. Equipment and system startup, testing, and commissioning plans and schedule in accordance with the requirements of this section. CONTRACTOR shall develop a flushing, disinfection and pressure testing plan prior to startup including the location for where flushing water is to be discharged. Startup manager shall coordinate with SUBCONTRACTORS and include their information in the startup and testing plan.

4-1.08. Unless otherwise specified in the equipment sections, preliminary copies of field calibration results. SUBMITTAL shall be made prior to the start of each test for associated systems.

PART 5 – STARTUP AND TESTING REQUIREMENTS

5-1.01. All water used in the following tests shall be from the wells, unless otherwise stated. Also, the water shall either be disposed of on the ground at the well house or sent into the system, as follows:

- Once the wells and piping have been disinfected and the proper bacteriological samples taken, all of the water used thereafter for startup checks and all functional tests may be sent into the system (provided all other required clearances and approvals have been obtained).

5-1.02. Startup Checks. Prior to field testing of all equipment, the CONTRACTOR shall perform the following:

- Inspect and clean equipment, devices, and connected piping so they are free of foreign material.
- Lubricate equipment in accordance with manufacturer's instructions. Turn rotating equipment by hand.
- Open and close new valves by hand and operate other new devices to check for binding, interference, or improper functioning.
- Test and commission related electrical system components in accordance with the requirements specified in the Electrical and the Electrical Equipment Installation sections.

- Calibrate all instruments associated with the equipment.
- Check for proper rotation, adjustment, alignment, balancing, mechanical and electrical connections, and any other conditions that may damage or impair equipment from functioning properly.
- Inspect and verify proper anchorage.
- Obtain manufacturer's certification of proper installation where specified in the equipment sections.

5-1.03. All equipment shall be confirmed ready to test by the ENGINEER based on the following**:**

- Acceptance of CONTRACTOR'S startup and testing plan.
- Notification in writing by the startup manager that each piece of equipment or system is ready for testing.
- Verification by the ENGINEER and OWNER that all lubricants, tools, maintenance equipment, spare parts and approved equipment operation and maintenance manuals have been furnished as specified.
- Cleanliness of equipment, devices, and connected work.
- Adequate completion of work adjacent to or interfacing with equipment to be tested.
- Confirmation of manufacturer's representative's availability to assist with testing, where specified, and satisfactory fulfillment of all other manufacturers' responsibilities as specified.
- ENGINEER'S inspection of all related civil construction, mechanical, and electrical installations.
- Confirmation of completion of acceptable testing of all adjacent piping, duct work and other affected Work.

5-1.04. Functional Testing. All startup checks shall be completed prior to functional testing. Functional testing shall be in accordance with relevant standards and in accordance with instructions of the manufacturers.

5-1.05. Ancillary and/or temporary facilities necessary to recycle, control, or discharge water, air, chemical, or gas from facilities being tested, shall be operational.

5-1.06. Functional testing shall include the functional operation of each piece of equipment. All moving parts of equipment and machinery shall be tested and adjusted so that they move freely and function satisfactorily. Functional testing shall demonstrate correct operation of all hardwired interlocks and controls.

5-1.07. Functional testing of valves shall include at least 4 full open-close operations. Testing shall demonstrate the proper installation of the valves and the proper functioning of the actuators.

5-1.08. Once functional testing of individual pieces of equipment is completed, individual systems functional testing shall commence. Individual system functional testing shall include startup of the complete system of mechanical, electrical, and instrumentation and control equipment as a functional process system. Field inspection prior to startup as specified in the Instrumentation and Control System section, other testing by the Instrumentation and Control System supplier required to verify readiness for automatic operation of the individual system, shall be completed before commencement of individual system functional testing.

5-1.09. Individual system functional testing shall include operation in manual and automatic modes, startup operation, and shutdown in normal and emergency modes. Individual systems shall be tested over their entire operating range and for sufficient time to demonstrate the intended functionality of each piece of equipment and the system. If any part of a system shows evidence of unsatisfactory or improper operation during the test period, correction or repairs shall be made and the functional testing shall be repeated until satisfactory results are obtained.

5-1.10. Functional testing of all process and pumping equipment and drive motors, including auxiliary equipment, shall be in accordance with the appropriate and approved test codes, such as those specified by the American Society of Mechanical Engineers, Hydraulic Institute Standards, and IEEE.

5-1.11. Qualified personnel from the electrical and mechanical trades responsible for installation of the equipment, shall be available during functional testing involving electrically operated equipment. Where appropriate, a representative of the Instrumentation and Control System supplier shall also be available.

5-2. STARTUP AND TESTING PROCEDURE

5-2.01. Specific requirements for individual system startups are as follows; each well site includes new well pumps and motors and shall follow the requirements below of the Startup and Testing Procedure for Equipment section below:

1. Each individual well shall be disinfected per the Florida Department of Environmental Protection (FDEP) Administrative Code 62-555.316 (6) and American Water Works Association (AWWA) standard C-654.

2. All well sites discharge, lateral and collector main piping shall be disinfected per FDEP Administrative Code 62-555.340 and AWWA standard C-651.

3. All wetted components of the well pumps and above grade discharge piping, valves, and fittings shall be swabbed/sprayed with a 5 percent chlorine solution prior to installation.

4. The well pump below grade connections (joints) to the lateral piping at each well house shall remain uncovered and a visual inspection for leaks be monitored with normal operating pressures.

5-2.02. Functional Acceptance Testing. Once the CONTRACTOR'S functional testing is complete and associated documentation has been submitted and accepted by the ENGINEER, the CONTRACTOR shall conduct functional acceptance testing of each well site, to demonstrate individual systems and group systems meet the specified requirements. Acceptance testing shall include the successful demonstration of all operating functions and conditions that are specified for the equipment, system, and controls.

5-2.03. The Functional Acceptance Testing shall include the following submissions prior to commencement:

- Prerequisite checklist, to be acknowledged by the ENGINEER prior to initiating the test, that demonstrates that all testing and other WORK required to be completed prior to the test is

complete.

- Listing of OWNER'S personnel necessary to operate the system and conduct any related monitoring of performance.
- A listing of CONTRACTOR'S personnel designated to supervise and direct the OWNER'S operators as required herein.
- Listing of standby personnel, equipment, and materials that will be available if needed during the test period.
- Step-by-step procedures for operation of the facility showing how local and remote control of equipment will be demonstrated.
- Description of all data and other information to be reported in support of the completed test. Include any blank data logs that may be used for recording results.
- Descriptions of all necessary calculations that must be completed to verify the specified results are being achieved, including formulas.
- Blank sign-off form for the test acknowledging the CONTRACTOR’S, ENGINEER’S, OWNER’S, and the equipment manufacturer’s acceptance of the test.

5-2.04. CONTRACTOR shall provide OWNER and ENGINEER 14 DAYS notice prior to testing of any individual system.

5-2.05. Well acceptance testing shall continue for 7 days under normal operating conditions and simulated emergency start and stops as initiated by the OWNER and with all parts operating satisfactorily in all respects under a range of conditions to simulate the full operating range of the equipment or system. Each well shall be run for a total run time of 100 hours in the 7 days.

5-2.06. The OWNER shall conduct the testing, but the CONTRACTOR is responsible for any issues noted by the OWNER during the testing.

5-2.07. If any part of a system shows evidence of unsatisfactory or improper operation during the testing period, correction or repairs shall be made and the test repeated until the test is successfully completed. Testing interrupted by power failure will not be required to be repeated, but the test shall be continued upon restoration of power and extended to the specified duration at no additional cost to the OWNER.

5-2.08. During this testing period the OWNER shall operate all equipment, manually, remotely and under all operating conditions to verify proper operation of the well site.

PART 6 – COMMISSIONING

6-1.01. Once startup and testing is complete, documentation of all startup and testing activities shall be submitted for reviewed and accepted by the ENGINEER. After acceptance, commissioning of the constructed facilities shall be conducted by the CONTRACTOR working with the OWNER and ENGINEER. The facility shall be operated in accordance with the operating permit, laws, and regulations. The CONTRACTOR shall provide mechanics, electricians, and controls technicians during commissioning as required for troubleshooting and repair.

PART 7 – STARTUP SCHEDULE AND STARTUP AND COMMISSIONING PLANS

7-1.01. Plans and schedules shall be developed to facilitate coordinated and efficient startup, testing, and commissioning of the PROJECT equipment and systems identified in Section 1 of this SPECIFICATION as the well sites.

7-1.02. The CONTRACTOR shall submit a startup, testing, and commissioning plan and schedule to the ENGINEER no later than 45 calendar days prior to the commencement of startup and testing. A minimum of 14 days shall be allowed for review by ENGINEER and OWNER. The schedule and plan must be accepted a minimum of 15 days prior to commencement of startup and testing. The schedule and plan shall include sections for startup checks, functional testing, functional acceptance testing, and commissioning where applicable.

7-1.03. Forms for startup, testing, and commissioning shall include identification of equipment or system, startup/test date, nature of startup/test, startup/test objectives, startup/test prerequisites, startup/test results, instruments employed for the startup/test and signature spaces for the ENGINEER'S witness (where applicable) and the CONTRACTOR'S startup manager.

7-1.04. Startup Schedule. This schedule shall serve as a companion to but shall not be a replacement for the startup plan. The startup schedule described in this section shall be integrated into the overall Progress Schedule and shall be prepared as specified for the Progress Schedule in the Construction Progress Schedule section. The Startup Schedule shall be updated weekly during the startup, testing, and commissioning period.

7-1.05. Startup Plan. The Startup Plan shall include the following:

- Introduction with a narrative description of the overall testing and startup program. The description shall include all contractual or regulatory treatment requirements to be demonstrated.
- A summary of the objectives and approach for startup checks, functional testing, functional acceptance testing, and commissioning.
- List of the instruments, equipment, and systems that will undergo startup and testing with references to the appropriate PIDs, equipment tags/identification numbers, SPECIFICATION number and standards for testing procedures.
- Schedule for startup and field testing for each instrument, piece of equipment (including redundant equipment), and system.
- Safety and emergency response plan including a list of emergency and non-emergency contacts (email and phone).
- Organization chart for CONTRACTOR'S startup and testing personnel with assigned responsibilities for each.
- Startup and testing record keeping plan.
- Plan for disposal of water/wastewater from startup, testing, commissioning including information on any required regulatory permits/approvals.
- Description of temporary facilities that will be provided.

7-1.06. Within 7 to 14 days of initial SUBMITTAL of the startup plan, the CONTRACTOR shall schedule a workshop with the OWNER and ENGINEER to present the plan. The CONTACTOR

shall submit minutes of the workshop, including action items and a schedule for updating the startup plan, to the ENGINEER within 3 days of the workshop.

7-1.07. Individual plans for each phase of startup, testing, and commissioning can be assembled as chapters in the startup plan or submitted as individual documents but should be correlated to ensure there is not disagreement between chapters or separate documents.

7-1.08. Startup Checks Plan. The startup checks plan shall be subdivided into plans for each system and major component. Each system/major component plan shall include but not be limited to the following:

- Identification of information for each component or piece of equipment to be inspected as part of the system. All applicable tag numbers shall be included.
- Specific activities to be completed on each component, piece of equipment, or system as required to demonstrate proper installation and connection.
- A tracking checklist of prerequisites for the checks and each step of the checking procedure, including any temporary facilities or utility requirements.
- Listing of manufacturer's representative(s) to be on site during the check. Sign off forms for the CONTRACTOR'S startup manager.

7-1.09. Functional Testing and Functional Acceptance Testing Plans. The functional testing plan shall include procedures and reporting for functional testing. The functional testing plan shall be subdivided into testing plans for each system. Each system test plan shall include but not be limited to the following:

- A narrative description of the purpose and goals of the test for each component, piece of equipment, or system, which should include all activities (including those required by vendors/suppliers) necessary to verify proper equipment and system functionality.
- Identification of each component or piece of equipment to be tested as part of the system. All applicable tag numbers shall be included.
- Schedule and duration for the tests.
- Prerequisites for each test, including any temporary facilities or utility requirements.
- Pass/fail criteria for the test.
- A checklist for tracking testing progress which includes prerequisites for the test and each step of the testing procedure. The check list shall include specified performance criteria that are to be met.
- A description of test apparatus required to conduct the test.
- Identification of all temporary facilities and chemicals require during startup.
- Listing of manufacturer's representative(s) to be on site during the test. Certificates of proper installation, as applicable to the test.
- Step-by-step detailed procedure of the test. The level of detail shall be sufficient for a witness to be able to follow the steps during the test and be confident that the test is being performed as planned. All steps required to proceed through the test in an orderly manner are considered significant and each of these steps shall be included in the procedure.
- Copies of the data recording forms that will be used during the test.
- Calculation methodologies to be used to evaluate the data and/or test criteria for the test.

- Sample computations or analyses for the test with results in the same format as the final report. This item is intended to demonstrate how data collected will be used to generate final results. A sample shall be included for each type of computation required for the test and analysis of results.
- Blank sign-off forms for the test acknowledging the startup manager's, ENGINEER'S, OWNER'S, and equipment manufacturer's acceptance of the test where applicable.
- Equipment manufacturer's certificated of proper operation of all equipment as specified in the equipment sections.

PART 8 – REPORTS AND RECORDS

8-1.01. Records of all startup and testing shall be compiled by the CONTRACTOR and submitted to the ENGINEER. Prior to being submitted to the ENGINEER, the startup manager shall certify that the results recorded, and the tested systems comply with the Contract requirements. Records shall include all documentation assembled for each piece of equipment or system involved in the startup and testing, including all certifications, forms, and check lists completed during the startup and test, and sign-off forms.

8-1.02. Records of all startup and testing shall be compiled as separate documents for each system tested and shall be submitted within 48 hours of completion of the startup and testing for each system. Testing samples that require analysis periods greater than 48 hours shall be clearly defined in the startup plan but shall not preclude delivery of the balance of the records within the 48-hour timeframe.

8-1.03. The CONTRACTOR shall provide formal reporting and documentation of failures, malfunctions or defects, and repairs made during the startup and/or testing activities. A "System Problem Report" form is included at the end of this section and shall be used by the CONTRACTOR to document problems that arise during these tests and their resolution. Records submitted shall include "System Problem Report" forms completed during testing.

SECTION 01710

CLEANING

PART 1 - GENERAL

1-1. DESCRIPTION

1-1.01. Scope of Work: The CONTRACTOR shall execute cleaning during progress of Work and at completion of the Work as required by the General Conditions.

1-2. DISPOSAL REQUIREMENTS

1-2.01. The CONTRACTOR shall conduct cleaning and disposal operations to comply with all applicable LAWS AND REGULATIONS.

PART 2 - MATERIALS

2-1. MATERIALS

2-1.01. The CONTRACTOR shall use only those cleaning materials which do not create hazards to health or property and which do not damage surfaces.

2-1.02. The CONTRACTOR shall use only those cleaning materials and methods recommended by the SUPPLIER of the surface material to be cleaned.

2-1.03. The CONTRACTOR shall use cleaning materials only on surfaces so recommended by cleaning material SUPPLIER.

PART 3 - EXECUTION

3-1. CLEANING DURING CONSTRUCTION

3-1.01. The CONTRACTOR shall execute daily cleaning to keep the WORK, the site and adjacent areas free from accumulations of waste materials, water, eroded material, rubbish, and windblown debris resulting from construction operations.

3-1.02. The CONTRACTOR shall provide suitable on-site containers for the daily collection of all waste materials, debris, and rubbish.

3-103. The CONTRACTOR shall remove waste materials, debris and rubbish from site containers periodically and dispose of at properly licensed and permitted disposal areas away from the site.

3-1.04. The CONTRACTOR shall schedule operations so that dust and other contaminants resulting from the cleaning process do not fall on wet or newly-coated surfaces.

3-1.05. The CONTRACTOR shall remove from the site all surplus materials and temporary structures when no further need therefore develops and as approved by the ENGINEER. The CONTRACTOR shall be responsible and liable for all spillage and shall incur all associated

costs including, but not limited to, costs related to repair and maintenance resulting from any such damage.

3-2. FINAL CLEANING

3-2.01. The CONTRACTOR shall employ skilled workmen for final cleaning.

3-2.02. The CONTRACTOR shall remove all grease, mastic, adhesives, dust, dirt, stains, fingerprints, labels and all other foreign materials from sight-exposed interior and exterior surfaces.

3-2.02. Prior to FINAL COMPLETION, the CONTRACTOR shall conduct an inspection of sight-exposed interior and exterior surfaces and all WORK areas, to verify that the entire WORK and the entire construction area of the WORK are clean.

END OF SECTION

SECTION 01720

CONTRACT RECORD AND CLOSE OUT DOCUMENTATION

PART 1 - GENERAL

1-1. SCOPE

1-1.01. This section addresses documentation items that are required to be delivered through the ENGINEER to the OWNER prior to final payment and close out of the CONTRACT. The CONTRACTOR will assist the ENGINEER in acquiring the material necessary to assemble and deliver the various documentation items. Requirements set forth in other sections of these specifications shall be coordinated with this section so that all documentation items required to close out the CONTRACT are delivered to the OWNER after it is reviewed and where required approved by the ENGINEER.

1-1.02. CONTRACT close out documentation items include:

- Permit Manual
- Major Equipment SHOP DRAWINGS, Pipe Laying Schedules, and Surveying Manual
- Operation and Maintenance Manual
- Warrantees, Guarantees, and Certificates Manual
- Construction Photographs / Videos
- Conformed to Construction Records DRAWINGS
- As-Built Schedule

1-1.03. The requirements for these CONTRACT close out documentation items are described in this section.

1-2. PERMIT MANUAL

1-2.01. This manual shall contain copies of all regulatory and government agency permits issued for the project during both the design and the construction phase of the PROJECT. The manual shall be divided into sections with each section dedicated to one particular regulatory agency. Agencies may include but are not limited to: United States Army Corps of Engineers; Southwest Florida Water Management District; Florida Department of Environmental Protection; the project's home County agencies such as Planning and Growth Management and Building Department, Environmental Protection Commission; and State Agencies such as Florida Fish and Wildlife Conservation Commission.

1-2.02. The CONTRACTOR shall submit to the ENGINEER any CONTRACTOR- obtained permit documents including all items described below.

1-2.03. Each section of the manual dealing with a regulatory permit shall contain:

- Permit application (as sent to the regulatory agency)
- All Requests for Additional Information (RAIs)
- All RAI responses

- Any other written communication pertaining to the permit received and/or sent to the regulatory agencies during the permit application process
- Permit as issued by the regulatory agency
- All close out documents associated with each permit. Examples include but are not limited to:

    - All drinking water system permit Requests for Clearance and copies of issued Clearances (with bacteriological and pressure test results, if applicable)
    - Completed Environmental Resource Permit Certificate of Completion
    - Transfer to Operation forms
    - Building Department Certificates of Occupancy/Completion/Compliance, with copies of completed inspection forms.

1-2.04. The manual shall also contain a checklist of all permit-related documents supporting each of the permits. Each permit checklist will include but is not limited to:

- Type of Permit
- Document Title (Type)
- Document Author
- Document Date

1-2.05. The manual shall also contain a section that summarizes all permit-required operational-phase actions and the schedule for their execution. Examples of operational phase actions include but are not limited to:

- System inspections
- Monitoring and/or sampling requirements
- Special conditions

1-2.06. This summary will include a timetable for the required actions.

1-2.07. Two hard copy sets of this manual and one electronic file copy are to be delivered to the OWNER. The requirements for hard copies and for electronic files are provided below in this section.

1-2.08. The two hard copy sets of the permit manual as described above shall contain all the items described, excluding:

- Permit application (as sent to the regulatory agency)
- All Requests for Additional Information (RAIs)
- All RAI responses
- Any other written communication pertaining to the permit received and/or sent to the regulatory agencies during the permit application process

1-3. MAJOR EQUIPMENT SHOP DRAWINGS

1-3.01. This manual shall contain a copy of the accepted SHOP DRAWINGS for the major materials and equipment associated with the project. The manual shall be divided into sections with each section dedicated to a particular SPECIFICATION section.

1-3.02. Two hard copy sets of this manual and one electronic file copy are to be delivered to the OWNER. The requirements for hard copies and for electronic files are provided below in this section.

1-4. OPERATION AND MAINTENANCE MANUAL

1-4.01. This manual shall contain operation and maintenance information on all equipment requiring maintenance and other attention.

1-4.02. Four hard copy sets of this manual and one electronic file copy are to be delivered to the OWNER. The requirements for hard copies and for electronic files are provided below in this section.

1-5. WARRANTIES, GUARANTEES, BONDS, AND CERTIFICATES MANUAL

1-5.01. This manual shall contain all warranties, guarantees, bonds, certificates, and similar documents, including those customarily provided by manufacturers and suppliers which cover a period greater than the one-year correction period. Show OWNER as beneficiary on these documents.

1-5.02. Two hard copy sets of this manual and one electronic file copy are to be delivered to the OWNER. The requirements for hard copies and for electronic files are provided below in this section.

1-6. CONSTRUCTION PHOTOGRAPHS

1-6.01. This manual shall contain construction photographs obtained from the CONTRACTOR, ENGINEER, and OWNER. All photographs are to be color digital compiled on a flash drive or external hard drive and provided with a descriptive index of the images with dates.

1-6.02. Two electronic file copies are to be delivered to the OWNER.

1-7. CONFORMED TO CONSTRUCTION RECORDS DRAWINGS

1-7.01. The CONTRACTOR is to maintain on a daily basis at the PROJECT site one current set of AS-BUILT CONTRACT DOCUMENTS which have been accurately marked by CONTRACTOR to indicate all modifications in the completed Work that differ from the original CONTRACT DOCUMENTS. The CONTRACTOR is to give the set of AS-BUILT CONTRACT DOCUMENTS to the ENGINEER who in turn will produce Conformed to Construction Record DRAWINGS.

1-7.02. Four full-size hard copies (34” x 22”) of DRAWINGS, or other size stated by the OWNER, each signed and sealed by the Engineer(s) of Record with wet stamp and signature, shall be delivered to the OWNER. In addition, one electronic file of each DRAWING in Win. OS - AutoCAD 2020 format, one PDF copy to match the size of the DRAWINGS, and one electronic file of each

drawing signed and sealed (seal must be inked) shall be scanned and saved as Win. OS - Tif 6.0 files with a resolution of 300 dpi, shall be provided to the OWNER on a USB drive. The files should be labeled by DRAWING title and page number.

1-8. REQUIREMENTS FOR MANUAL HARD COPIES

1-8.01. All manuals and other data shall be printed on heavy, first quality 8-1/2 x 11-inch paper, with standard three-hole punching. DRAWINGS and diagrams shall be reduced to 8-1/2 x 11 inches or 11 x 17 inches. Where reduction is not practicable, larger drawings shall be folded separately and placed in envelopes, which are bound into the manuals. Each envelope shall be suitably identified on the outside. Each volume containing data for three or more items of equipment shall include a table of contents and index tabs. Each manual shall be prepared and delivered in substantial, permanent, three-ring or three-post binders with a table of contents, suitable index tabs, and a label on the binder spine.

1-9. REQUIREMENTS FOR ELECTRONIC FILES

1-9.01. For all documents except Conformed to Construction Records Drawings, each electronic copy shall be delivered on a unique CD-ROM in Adobe Acrobat's Portable Document Format (PDF). The PDF file(s) shall be fully indexed using the Table of Contents, searchable with thumbnails generated and any extra blank pages removed.

1-9.02. Scanned images must be at a readable resolution. For most documents, they will be scanned at 300 dots per inch (dpi). Optical Character Recognition (OCR) capture must be performed on these images. OCR settings shall be performed with the "original image with hidden text" option in Adobe Acrobat Exchange.

1-9.03. One PDF document (PDF file) shall be created for each manual. The entire manual shall be converted to a single .PDF file via scanning or other method of conversion. Drawings or other graphics shall also be converted to .PDF format and included into the single PDF document. Pages that must be viewed in landscape format shall be rotated to the appropriate position for easy reading on screen.

1-9.04. The PDF documents shall have a bookmark created in the navigation frame for each major entry ("Section" or "Chapter") in the Table of Contents. Thumbnails shall be generated for each page or graphic in the PDF file.

1-9.05. The file shall open to the cover page of the manual, with bookmarks to the left, and the first bookmark shall be linked to the Table of Contents.

END OF SECTION

SECTION 01730

OPERATING AND MAINTENANCE DATA

PART 1 - GENERAL

1-1. OPERATION AND MAINTENANCE DATA AND MANUALS

1-1.01. Adequate operation and maintenance information shall be supplied for all equipment requiring maintenance or other attention. The equipment Supplier shall prepare a project specific operation and maintenance manual for each type of equipment indicated in the individual equipment sections or the equipment schedule.

1-1.02. Parts lists and operating and maintenance instructions shall be furnished for other equipment not listed in the individual equipment sections or the equipment schedule.

1-1.03. Operation and maintenance manuals shall include the following:

1. A description that clearly identifies the purpose of the equipment and how the equipment works. This description shall be specific to the project or facility that the equipment is being installed at.

2. Equipment function, normal operating characteristics, and limiting conditions.

3. Assembly, installation, alignment, adjustment, and checking instructions.

4. Operating instructions for startup, routine and normal operation, regulation and control, shutdown, and emergency conditions.

5. Lubrication and maintenance instructions.

6. Guide to troubleshooting.

7. Parts lists and predicted life of parts subject to wear.

8. Outline, cross section, and assembly drawings; engineering data; and wiring diagrams.

9. Test data and performance curves, where applicable.

1-1.04. The operation and maintenance manuals shall be in addition to any instructions or parts lists packed with or attached to the equipment when delivered, or which may be required by CONTRACTOR. The operation and maintenance manual shall include a copy of all material used for any training provided for the equipment, including any slide shows used during training.

1-1.05. Six preliminary copies of operation and maintenance manual shall be submitted to ENGINEER before shipment of the equipment. Preliminary copies shall be in hardcopy format.

1-1.06. After review by ENGINEER, six final copies of operation and maintenance manuals shall be delivered to ENGINEER not later than 30 days prior to placing the equipment in operation. Operation and maintenance manuals must be accepted by OWNER prior to placing equipment in operation. In addition, one electronic copy shall be included with each final operation and maintenance SUBMITTAL.

1-1.07. Shipment of equipment will not be considered complete until all required manuals and data have been received in format acceptable to OWNER.

1-2. HARD COPY OPERATION AND MAINTENANCE MANUALS

1-2.01. All manuals and other data shall be printed on heavy, first quality 8-1/2 x 11 inch paper, with standard three-hole punching. DRAWINGS and diagrams shall be reduced to 8-1/2 x 11 inches or 11 x 17 inches. Where reduction is not practicable, larger drawings shall be folded separately and placed in envelopes, which are bound into the manuals. Each envelope shall be suitably identified on the outside. Each volume containing data for three or more items of equipment shall include a table of contents and index tabs. Each manual shall be prepared and delivered in substantial, permanent, three-ring or three-post binders with a table of contents and suitable index tabs.

1-3. ELECTRONIC OPERATION AND MAINTENANCE MANUALS

1-3.01. Each electronic copy shall be delivered on a flash drive in Adobe Acrobat's Portable Document Format (PDF) and shall be prepared at a resolution between 300 and 600 dots per inch (dpi), depending on document type. Blank pages shall be removed from the electronic copy of the operations & maintenance manuals.

1-3.02. File size shall be limited to 10 MB. When multiple files are required the least number of files possible shall be created. File names shall be in the format OMXXXXX- YYYZ-V.pdf, where XXXXX is the five digit number corresponding to the specification section, YYY is a three digit O&M manual number, e.g. 001, Z is the letter signifying a resubmittal, A, B, C, etc., and V is a number used only when more than one 10 MB file is required for an O&M manual.

1-3.03. The PDF file(s) shall be fully indexed using the Table of Contents, searchable with thumbnails generated.

1-3.04. Scanned images must be at a readable resolution. For most documents, they should be scanned at 300 dots per inch (dpi). Optical Character Recognition (OCR) capture must be performed on these images. OCR settings shall be performed with the "original image with hidden text" option in Adobe Acrobat Exchange.

1-3.05. One PDF document (PDF file) shall be created for each equipment service manual. The entire manual shall be converted to a single .PDF file via scanning or other method of conversion. Drawings or other graphics shall also be converted to .PDF format and included into the single PDF document. Pages that must be viewed in landscape format shall be rotated to the appropriate position for easy reading on screen.

1-3.06. The PDF documents shall have a bookmark created in the navigation frame for each major entry ("Section" or "Chapter") in the Table of Contents. Thumbnails shall be generated for each page or graphic in the PDF file.

1-3.07. The opening view for each PDF document shall be as follows:

1. Initial View: Bookmarks and Page

2. Magnification: Fit In Window

3. The file shall open to the cover page of the manual, with bookmarks to the left, and the first bookmark shall be linked to the Table of Contents.

1-4. LABELING

1-4.01. As a minimum, the following information shall be included on all final O&M manual materials, including CD-ROM disks, jewel cases, and hard copy manuals:

1. Equipment name followed by “Operation and Maintenance Manual.”

2. Project Name.

3. Tampa Bay Water Contract No: Example: “Tampa Bay Water Contract No. XXXXX”

4. Specification Section Number. Example: “Section XXXXX”

5. Manufacturer’s Name.

6. File Name and Date. Example: “OMXXXXX_YYYZ-V.pdf”, “5-05-02”

SECTION 01740

WARRANTIES AND BONDS

PART 1 - GENERAL

1-1. DESCRIPTION

1-1.01. The CONTRACTOR shall compile specified warranties and bonds, as required by the General Conditions and as specified in these SPECIFICATIONS.

1-1.02. The CONTRACTOR shall co-execute SUBMITTALS when so specified.

1-1.03. The CONTRACTOR shall review SUBMITTALS to verify compliance with CONTRACT DOCUMENTS.

1-1.04. The CONTRACTOR shall submit required SUBMITTALS to the OWNER'S construction manager for review and transmittal to the ENGINEER for review.

1-1.05. Disclaimers and Limitations: SUPPLIER'S (manufacturer's) disclaimers and limitations on product warranties do not relieve the CONTRACTOR of the warranty of the Work that incorporates the products, nor does it relieve suppliers, SUPPLIERS (manufacturers), and SUBCONTRACTORS required to countersign special warranties with the CONTRACTOR.

1-2. DEFINITIONS

1-2.01. Standard Product Warranties are preprinted written warranties published by individual SUPPLIERS (manufacturers) for particular products and are specifically endorsed by the SUPPLIER (manufacturer) to the OWNER.

1-2.02. Special Warranties are written warranties required by or incorporated by the OWNER, either to extend time limits provided by standard warranties or to provide greater rights for the OWNER.

1-3. WARRANTY REQUIREMENTS

1-3.01. For all material, the CONTRACTOR shall submit an express warranty from the product SUPPLIER (manufacturer). The SUPPLIER'S warranty period shall be concurrent with the CONTRACTOR'S CORRECTION PERIOD, unless otherwise specified.

1-3.02. The CONTRACTOR shall be responsible for obtaining express certificates for material warranty for all major items for which the normal list price is more than $1,000. The ENGINEER reserves the right to request warranties for material not classified as major. The CONTRACTOR shall warrant material not considered to be "major" in the CONTRACTOR'S correction period even though specific certificates of warranty may not be required.

1-3.03. In the event that the material or equipment SUPPLIER (manufacturer) is unwilling to provide a one-year warranty coinciding with the CONTRACTOR'S CORRECTION PERIOD, the CONTRACTOR shall obtain from the SUPPLIER a two-year warranty commencing at the time of material or equipment delivery to the PROJECT site. This two-year warranty from the

SUPPLIER shall not relieve the CONTRACTOR of its responsibilities during the CORRECTION PERIOD.

1-3.04. The OWNER shall incur no labor or equipment cost during the CORRECTION PERIOD.

1-3.05. The warranty shall cover all necessary labor, and materials resulting from faulty or inadequate design, improper assembly or erection, defective workmanship and materials, leakage, breakage or other failure of all material and components furnished by the CONTRACTOR.

1-3.06. Related Damages and Losses: When correcting warranted Work that has failed, remove and replace other work that has been damaged as a result of such failure or that must be removed and replaced to provide access for correction of warranted Work.

1-3.07. Reinstatement of Warranty: When Work covered by a warranty has failed and been corrected by replacement or rebuilding; reinstate the warranty by written endorsement. The reinstated warranty shall be equal to the original warranty with an equitable adjustment for depreciation.

1-3.08. Replacement Cost: Upon determination that Work covered by a warranty has failed, replace or rebuild the WORK to an acceptable condition complying with requirements of the CONTRACT DOCUMENTS. The CONTRACTOR is responsible for the cost of replacing or rebuilding defective WorkK regardless of whether the OWNER has benefited from use of the Work through a portion of its anticipated useful service life.

1-3.09. Owner's Recourse: Written warranties made to the OWNER are in addition to implied warranties, and shall not limit the duties, obligations, rights, and remedies otherwise available under the law, nor shall warranty periods be interpreted as limitations on time in which the OWNER can enforce such other duties, obligations, rights, or remedies.

1-3.10. Rejection of Warranties: The OWNER reserves the right to reject warranties and to limit selections to products with warranties not in conflict with requirements of the CONTRACT DOCUMENTS.

1-3.11. The Owner reserves the right to refuse to accept Work for the PROJECT where a special warranty, certification, or similar commitment is required on such Work or part of the Work, until evidence is presented that entities required to countersign such commitments are willing to do so.

1-4. SUBMITTAL REQUIREMENTS

1-4.01. The CONTRACTOR shall assemble in one document all warranties, bonds and service and maintenance contracts, executed by each of the respective SUPPLIERS (manufacturers), and SUBCONTRACTORS.

1-4.02. Five (5) original signed copies of each warranty, bond, and contract are required.

1-4.03. A Table of Contents shall be provided and shall be neatly typed, in orderly sequence and shall provide complete information for each item including, at a minimum:

1. Product of work item.
2. Firm, with name of responsible principal, address and telephone number.
3. Scope of work item.
4. Date of beginning of warranty, bond, or service and maintenance contract.
5. Duration of warranty, bond, or service maintenance contract.
6. Other information for OWNER'S personnel including instances which might affect the validity of warranty or bond.
7. CONTRACTOR, name of responsible principal, address and telephone number.

1-4.04. Two (2) copies of the document shall be submitted to the OWNER'S construction manager.

1-5. FORM OF SUBMITTALS

1-5.01. Format:

1. Page size: 8-1/2 inches x 11 inches

    a. Sheets shall be punched for use in a standard three O-ring binder.
    b. Larger sheets shall be folded to 8-1/2 inches x 11 inches.

2. Cover: Each packet cover shall identify with typed or printed title "WARRANTIES AND BONDS" and the following information:

    a. PROJECT name and number.
    b. Name of CONTRACTOR.

1-5.02. Binder: Commercial quality, three O-ring binder, with durable and cleanable plastic covers and maximum ring size of two inches shall be used.

1-5.03. The CONTRACTOR shall also submit the warranties and bonds, after the review and approval by the OWNER and the ENGINEER, in electronic format as specified in Section 01300 of the SPECIFICATIONS.

Section 02050

DEMOLITION

PART 1 – GENERAL

1-1. SCOPE

1-1.01. This section covers the demolition of existing structures, piping, equipment, and sitework and the salvage of existing materials and equipment as indicated on the Drawings.

1-2. GENERAL

1-2.01. CONTRACTOR shall be responsible for all WORK under this section. CONTRACTOR shall provide 14 days written notice prior to beginning demolition activities.

1-2.02. Demolition and salvage WORK shall create minimum interference with OWNER'S operations and minimum inconvenience to OWNER. CONTRACTOR shall provide protection and safety of all roadways, sidewalks, and all accessible areas during demolition activities.

1-2.03. The Contractor shall be responsible for acquiring appropriate necessary permits for the work. Copies of the permits shall be submitted to the Owner prior to commencement of demolition.

1-2.04. The Work as indicated is not all-inclusive, and the CONTRACTOR shall be responsible to perform the reconstruction indicated plus that which can be reasonably inferred from the Contract Documents as necessary to complete the Project. The Specifications and Drawings identify the major facilities that shall be demolished and reconstructed, but auxiliary utilities such as water, air, chemicals, drainage, lubrication, fluid power, electrical wiring, controls, and instrumentation are not necessarily shown.

1-2.05. The CONTRACTOR shall note that the Drawings used to indicate demolition and reconstruction are based on survey of surface features, limited verification of buried utilities, record information, and site photographs provided describing the existing facilities. The record information has been reproduced in the Drawings to show existing conditions and to clarify the scope of Work. The information provided may not be complete or accurate. The Contractor shall conduct a comprehensive survey at the Site to verify the correctness and exactness of the Drawings, the scope of Work, and the extent of auxiliary utilities.

1-2.06. The Contractor shall be responsible for the offsite disposal of debris resulting from reconstruction in compliance with local, state, and federal codes and requirements.

1-2.07. Blasting will not be permitted.

1-3. CONTRACTOR SUBMITTALS

1-3.01. A demolition plan shall be submitted to the Engineer for review. The demolition plan shall detail demolition and reconstruction activities and procedures, including operational sequences, in accordance with Section 01300 – Submittal Procedures. The procedures shall provide for safe

conduct of the Work, careful removal and disposition of materials and equipment, protection of existing facilities which are to remain undisturbed, coordination with existing facilities to remain in service, and timely disconnection and reconnection of utility services. The procedures shall include a detailed description and time schedule of the methods and equipment to be used for each operation and the sequence of operation.

1-3.02. The Engineer's review shall be limited to a review of the scope and intent of demolition as required by the contract documents. The CONTRACTOR shall be responsible for the means and methods to ensure the work is conducted in a safe and proper manner. The Engineer's review of the demolition plan shall in no way alleviate the CONTRACTOR from this responsibility.

PART 2 – PRODUCTS (NOT USED)

PART 3 – EXECUTION

3-1. DEMOLITION

3-1.01. Removal of equipment or facilities shall include removal of all accessories, piping, wiring, supports, associated electrical starters and devices, baseplates and frames, and all other appurtenances, unless otherwise directed. Existing materials and equipment removed, and not indicated to be reused as a part of the WORK, shall become CONTRACTOR'S property unless otherwise specified, and shall be removed from the Site.

3-1.02. CONTRACTOR shall conduct demolition activities in a manner that prevents damage to existing facilities which are indicated to remain and shall provide all necessary protection for existing facilities. Any remaining facilities damaged during demolition shall be repaired by CONTRACTOR to a condition equal to or better than the original condition.

3-1.03. When demolition is complete, all debris shall be removed from the Site.

3-1.04. Structure Demolition. The following structures include demolition work, and the debris shall be removed from the jobsite:

- Well Site MBR-152
- Well Site MBR-157

3-1.05. Piping and Equipment Demolition. The following equipment shall be removed and shall become the property of CONTRACTOR. All such items shall be promptly removed from the jobsite. When existing pipe is removed, the CONTRACTOR shall plug the resulting open ends whether or not so indicated. Where removed piping is exposed, the remaining piping shall be blind-flanged or fitted with a removable cap or plug.

3-1.06. Pumps and motors and all electrical, control, and mechanical equipment within each well house, and associated structures, for wells MBR-150, MBR-151, MBR-152, MBR-153, MBR-154, MBR-155, MBR-156, MBR-157, MBR-158, MBR-159, MBR-160, MBR-161, MBR-162, MBR-163, MBR-164, MBR-165, MBR-166, MBR-167, MBR-168, and MBR-169, except as noted in the DRAWINGS.

3-1.07. Sitework Demolition: For the well sites that will be abandoned or demolished (MBR-152, MBR-157, MBR-161, MBR-162, and MBR-163), demolish discharge piping by excavation and removal up to isolation gate valve closest to the main collection header pipe, blow-off the power supply between the main transmission line and the well houses. Piping under and within 50-ff off wetlands will be abandoned in place according to section 3-3 of this specification.

3-2. SALVAGE

3-2.01. Items To Be Salvaged by OWNER. (NOT USED)

3-2.02. Items To Be Salvaged by CONTRACTOR for OWNER.

- Flow totalizer from each well site.

3-2.03. Existing materials and equipment removed, and not reused as a part of the WORK, shall become CONTRACTOR'S property unless otherwise specified, and shall be removed from the jobsite.

3-2.04. Contractor shall carefully remove, in a manner to prevent damage, all materials and equipment specified herein or indicated to be salvaged and to remain the property of OWNER. CONTRACTOR shall store and protect salvaged items specified or indicated to be reused in the WORK. Any items damaged in removal, storage, or handling shall be replaced by CONTRACTOR in kind or with new items.

3-2.05. Contractor may, at his option, furnish and install new items instead of those specified or indicated to be salvaged and reused, in which case such removed items will become CONTRACTOR'S property.

3-3. ABANDONMENT

3-3.01. Existing facilities to be abandoned shall be prepared as indicated. Where existing buried piping is to be abandoned, the CONTRACTOR shall remove the abandoned pipe for a distance of 5-feet from any connecting structures. Openings at the existing structures shall be repaired. The remaining pipe shall be capped at both ends prior to backfill. Buried piping, 12-inches diameter or greater shall be completely filled with sand or flowable fill prior to closure of the piping ends.

END OF SECTION

THIS PAGE LEFT BLANK INTENTIONALLY

SECTION 02220

EXCAVATING, BACKFILLING, AND COMPACTING

PART 1 - GENERAL

1.1. DESCRIPTION

1-1.01. Scope of Work: The CONTRACTOR shall perform all excavating, grading, and backfilling as required for construction as shown on the DRAWINGS and specified herein. The CONTRACTOR shall furnish all additional, approved fill material required in accordance with the SPECIFICATIONS.

1-1.02. Definitions:

a. Maximum Dry Density: Maximum dry weight in pounds per cubic foot of a specific material.

b. Optimum Moisture: Percentage of water in a specific material at which the material can be compacted to the maximum dry density for a given compactive effort.

c. Rock Excavation: Excavation of any hard natural substance which requires the use of special impact tools such as jack hammers, sledges, chisels or similar devices specifically designed for use in cutting or breaking rock, but exclusive of trench excavating machinery.

d. Suitable Materials: Suitable materials for fills shall be a non-cohesive, non-plastic granular local sand and shall be free from vegetation, organic material, marl, clay, silt, muck and deleterious debris. Hydric soils within wetland impact areas will be considered suitable material for the top 12-inches of backfill within the wetland impact areas.

e. Unsuitable Materials: Unsuitable materials are highly organic soil (peat or muck) classified as A-8 in accordance with AASHTO Designation M 145; clayey sands (Unified Soil Classification SC); plastic clays (United Soil Classification CL/CH); and organic debris. (This provision does not apply to the replacement of hydric soils in wetland impact areas.)

1-1.03. Plan For Earthwork: The CONTRACTOR shall be responsible for having determined the conformation of the ground, the character and quality of the substrata, the types and quantities of materials to be encountered, the nature of the groundwater conditions, the prosecution of the WORK, the general and local conditions and all other matters which can in any way affect the WORK. The CONTRACTOR shall consider, and the plan for earthwork shall reflect, the equipment and methods to be employed in the excavation, backfilling and compaction operations. No claims for extras based on soil or rock sub-strata or groundwater table conditions shall be allowed.

1-1.04. Trench Safety Act: The CONTRACTOR shall be responsible for complying with the

Trench Safety Act (90-96, Florida Law) and OSHA standards for Trenching and Excavation Safety, at a minimum.

1.2. QUALITY ASSURANCE

1-2.01. A Testing Laboratory employed by the OWNER shall make such tests as are determined required by the OWNER. The CONTRACTOR shall schedule the WORK so as to permit a reasonable time for testing before placing succeeding lifts and shall keep the laboratory informed of the progress. Costs for soil testing and re- testing shall be paid by the CONTRACTOR.

1.3. PROTECTION

1-3.01. Trench Cut Slopes: Trench cuts shall be sloped to guard against sidewall sloughing or collapse.

1-3.02. Pumping and Drainage:

a. The CONTRACTOR shall at all times during construction provide and maintain proper equipment and facilities to remove all water entering excavations.

1-3.03. Except where trees are indicated to be removed, trees shall be protected from injury during construction operations.

PART 2 – PRODUCTS

2.1. MATERIALS

2-1.01. General:

a. All fill material shall be subject to the approval of the ENGINEER.

b. All fill material shall be free of organic material, trash, deleterious debris, roots, clay balls, rubble or other objectionable material (except for hydric soils as detailed here-in).

c. Excess or unsuitable material shall be removed from the job site by the CONTRACTOR at no additional cost to the OWNER.

2-1.02. Common Fill: Common fill shall be sand and shall not contain stones, rock, concrete or other rubble larger than one-half (½) inch in diameter. It shall have physical properties which allow it to be easily spread and compacted. Additionally, common fill shall have no more than 12 percent by weight finer than the U.S. No. 200 mesh sieve.

2-1.03. Select Fill: Select fill shall be as specified above for common fill, except that the material shall contain no stones larger than ¼ inch in largest dimension, and shall be no more than 12 percent by weight finer than the U.S. No. 200 mesh sieve.

2-1.04. Crushed Stone: Crushed stone shall be FDOT #57 washed and graded stone.

PART 3 - EXECUTION

3-1. EXCAVATION

3-1.01 Excavating for Roadways/Structures/Utilities: Excavation shall be made to such dimensions as shall give suitable room for maintenance of traffic, building the foundations and the structures, for bracing and supporting, for pumping and draining, and for all other work required.

3-1.02 Pipeline: Excavation shall be to the design elevation as shown on the DRAWINGS unless unsuitable subgrade materials are encountered at the bottom of the pipeline excavation, in which case these unsuitable materials shall be undercut and removed a minimum of 24-inches below the bottom of the pipeline and shall be replaced with compacted approved select fill before placing the pipe. All organic laden sands or debris beneath the pipe bottom level shall be completely removed from beneath the pipe and replaced with compacted approved select fill.

3-1.03. Excavation for precast or prefabricated structures other than pipeline shall be carried to an elevation 2 feet lower than the proposed outside bottom of the structure to provide space for the bedding material. Prior to placing the bedding material, the excavation shall be surveyed to indicate to the satisfaction of the ENGINEER that the excavation has been carried to the proper depth and is reasonably uniform over the area to be occupied by the structure.

3-1.04. Excavation for structures constructed or cast in place in dewatered excavations shall be carried down to the bottom of the structure where dewatering methods are such that a dry excavation bottom is exposed and the naturally occurring material at this elevation is leveled and left ready to receive the WORK. Material disturbed below the foundation elevation in dewatered excavations shall be replaced with Class B concrete.

3-1.05. Footings: Cast-in-place concrete footing sides shall be formed immediately after excavation. Forming for footing sides is specified elsewhere.

3-1.06. The CONTRACTOR shall immediately document the location, elevation, size, material type and function of all new subsurface installations, and utilities encountered during the course of the WORK.

3-1.07. Excavation equipment operators and other concerned parties shall be familiar with subsurface obstructions as shown on the DRAWINGS and shall anticipate the encounter of unknown obstructions during the course of the WORK.

3-1.08. Encounters with subsurface obstructions shall be hand excavated and immediately brought to the attention of the ENGINEER.

3-1.09. Excavation and dewatering shall be accomplished by methods which preserve the undisturbed state of subgrade soils. Subgrade soils which become soft, loose, "quick" or otherwise unsatisfactory for support of pipes or structures as a result of inadequate dewatering or other construction methods, shall be removed and replaced with crushed stone as required by the ENGINEER at the CONTRACTOR'S expense.

3-1.10. All pavements shall be cut prior to removal, with saws or power tools approved by the ENGINEER.

3-1.11. Excavated material shall be stockpiled in such a manner as to prevent nuisance conditions. Surface drainage shall not be hindered.

3-1.12. All locations and elevations as required herein shall be permanently documented by the CONTRACTOR, on the AS-BUILT DRAWINGS.

3-1.13. Hydric soils within designated wetland impact areas shall be segregated and stockpiled separately during excavation. Excavation and stockpiling of hydric soils shall be in accordance with all appropriate permits.

3-2. UNDERCUT

3-2.01. If the bottom of any excavation is below that shown on the DRAWINGS or specified because of CONTRACTOR error, convenience, or unsuitable natural bedding material or subgrade due the CONTRACTOR'S excavation or dewatering methods, the excavation shall be refilled to the specified bottom of excavation grade with compacted approved select fill at no cost to the OWNER. Compaction method shall be as approved by the ENGINEER.

3-3. FILL AND COMPACTION

3-3.01. The CONTRACTOR shall compact and backfill excavations and construct embankment according to the following schedule. (Proctor Requirement shall be ASTM D-1557, modified Proctor):

Area	Material	Compaction
1. Pipe Bedding or Crushed Stone	Select Fill	95% of maximum dry density by modified Proctor method (in 12” loose lifts if additional bedding material is required).
2. Pipe Trench Backfill	Common Fill	12” loose lifts, 95% of maximum dry density by modified Proctor method (98% under roadways and drives). Note: Above the top of the pipe only, backfill material with a maximum fines content of 20% may be used.
3. Bedding Beneath Structures (other than pipeline) and Beneath Buried Valve	Select Fill or Crushed Stone	12” loose lifts, compacted to 98% of maximum dry density by modified Proctor method. Fill shall not be placed over any in-place soils until those deposits have been compacted to 98% modified Proctor.
4. Backfill Around Structures	Common Fill	8" loose lifts, 98% of (other than pipeline) maximum dry density by modified Proctor method.

3-3.02. Excavations shall be backfilled to the original grade or as indicated on the DRAWINGS. Deviation from this grade because of settling shall be corrected. Backfill

operation shall be performed to comply with all LAWS AND REGULATIONS and in such a manner that it does not create a nuisance or safety hazard. Care shall be used in operating compaction equipment to avoid damage to pipe or structures. Pipe bedding and trench backfill shall be firmly tamped under the pipe haunches along both sides of the pipe at the same time, taking care not to lift up the pipe off its bed. Backfilling shall continue by bringing the fill up equally on each side of the pipe to avoid displacing the pipe laterally.

3-3.03. After the pipe bedding has been compacted to the required density, tested and accepted by the ENGINEER; and prior to pipe placement, the pipe bedding materials shall be scarified or loosened (by a method and to a depth approved by the ENGINEER) to a depth of 6-9 inches for the entire width and length of the pipe to allow the pipe to be saddled by the loosened bedding. After the loosening method has been approved by the ENGINEER during initial pipe placement, the CONTRACTOR shall proceed with this approved procedure for the entire length of the pipeline, unless otherwise determined unacceptable by the ENGINEER.

3-3.04. Embankments shall be constructed true to lines, grades and cross sections shown on the DRAWINGS or ordered by the ENGINEER. Embankments shall be placed in successive layers of not more than 8 inches in thickness, loose measure, for the full width of the embankment. As far as practicable, traffic over the WORK during the construction phase shall be distributed so as to cover the maximum surface area of each layer.

3-3.05. If the CONTRACTOR requests approval to backfill utilizing lifts and/or methods other than those specified herein, such request shall be in writing to the ENGINEER. Approval will be considered only after the CONTRACTOR has performed tests, at the CONTRACTOR'S expense, to identify the material used and density achieved throughout the backfill area utilizing the method of backfill requested. The ENGINEER'S approval shall be in writing.

3-3.06. Hydric soils stockpiled during excavation shall be replaced within the top 12-inches of wetland impact areas and in accordance with all applicable permits.

3-4. DISPOSAL

3-4.01. The CONTRACTOR shall properly dispose of all excess or unsuitable material at no additional expense to the OWNER.

END OF SECTION

THIS PAGE LEFT BLANK INTENTIONALLY

SECTION 02270

EROSION AND SEDIMENTATION CONTROL

PART 1 - GENERAL

1.1. DESCRIPTION

1-1.01. The CONTRACTOR shall furnish all necessary labor, equipment, material and transportation necessary to provide temporary and permanent erosion and sediment control, stormwater pollution prevention and associated inspection, maintenance and reporting, all as required by appropriate government agency permits, the DRAWINGS and this SPECIFICATION.

1.2. SUBMITTALS

1-2.01. The CONTRACTOR shall submit a site-specific erosion control plan at least fifteen (15) DAYS prior to commencing the WORK for review by the ENGINEER.

1-2.02. Prior to commencing the WORK, the CONTRACTOR shall provide a detailed PROGRESS SCHEDULE to indicate dates of major grading activities and determine sequencing of soil disturbing activities on all portions of the site.

PART 2 - PRODUCTS

2.1. STABILIZATION CONTROLS

2-1.01. Stabilization shall consist of seeding and mulch, in accordance with the appropriate sections of the SPECIFICATIONS.

2-1.02. FABRIC

2-1.03. Fabric may be woven or non-woven, made from polypropylene, polyethylene, or polyamid, and shall contain sufficient UV inhibitors so that it will last for 2 years in outdoor exposure.

2-1.04. Fabric shall have the following properties:

Parameter	Standard Method	Value
Grab tensile strength	ASTM D 4632	100 lb
Burst strength	ASTM D 3786	200 psi
Apparent opening size	ASTM D 4751	Between 200 and 70 sieve size

2-1.05. Fabric Manufacturer, or equal

2-1.06. Mirafi

2.2. POSTS

2-2.01. Posts shall be wood, at least 2-inches by 2-inches, at least 6-feet long.

2.3. FENCING

2-3.01. Woven wire fabric fencing shall be galvanized, mesh spacing of 6-inches, maximum 14-gauge, at least 30-inches tall.

2.4. FASTENERS

2-4.01. Fasteners to wood posts shall be steel, at least 1-1/2 inches long.

PART 3 - EXECUTION

3.1. INSTALLATION

3-1.01. The CONTRACTOR shall install temporary erosion and sediment control items in the area where construction activities are to commence prior to WORK in said area.

3-1.02. Barrier systems shall be installed in such a manner that surface runoff will percolate through the system in sheet flow fashion and allow sediment to be retained and accumulated.

3-1.03. Attach the woven wire fencing to the posts that are spaced a maximum of 6 feet apart and embedded a minimum of 12-inches. Install posts at a slight angle toward the source of the anticipated runoff.

3-1.04. Trench in the toe of the filter fabric barrier with a spade or mechanical trencher so that the downward face of the trench is flat and perpendicular to the direction of flow. Lay fabric along the edges of the trench. Backfill and compact.

3-1.05. Securely fasten the fabric materials to the woven wire fencing with tie wires.

3-1.06. Reinforced fabric barrier shall have a height of 18-inches.

3-1.07. Provide the filter fabric in continuous rolls and cut to the length of the fence to minimize the use of joints. When joints are necessary, splice the fabric together only at a support post with a minimum 6-inch overlap and seal securely.

3-1.08. No disturbed area shall be denuded for more than thirty (30) calendar days unless otherwise authorized by the ENGINEER or OWNER. During construction, denuded areas shall be covered by mulches such as straw, hay, filter fabric, seed and mulch, sod, or other permanent vegetation.

3-1.09. The CONTRACTOR shall install temporary or permanent stabilization as soon as

possible for areas of the site where construction activities have ceased, but in no case shall the time be greater than fourteen (14) calendar days after the construction activity has temporarily or permanently ceased.

3-1.10. Off-site runoff shall be diverted away or through the construction area.

3-1.11. Stabilized Construction Entrance: The CONTRACTOR shall provide a stabilized construction entrance for vehicles entering or exiting onto public roads. Stabilized construction entrances shall be provided for both on site and off site locations of stockpiled material. The CONTRACTOR shall be responsible for monitoring the system and modifying the system or procedures as needed, with the written approval of the OWNER.

3-1.12. Dewatering: Installation of the pipeline may require temporary dewatering prior to construction. The CONTRACTOR shall be responsible for discharging the dewatering flow to a temporary settling basin such as areas created by staked hay bales in dry grassed swales or other similar settling areas, however at no time shall the CONTRACTOR discharge dewatering flow directly to wetland areas.

3-1.13. Protection and Stabilization of Soil Stockpiles: Fill material stockpiles shall be protected at all times by on-site drainage controls which prevent erosion of the stockpiled material. Control of dust from such stockpiles shall be required.

3-1.14. Sediment Trapping Measures: Sediment basins and traps, perimeter berms, filter fences, berms, sediment barriers (hay bales), vegetative buffers and other measures intended to trap sediment and/or prevent the transportation of sediment onto adjacent properties, or into existing water bodies; shall be installed prior to commencement of construction.

3.2. MAINTENANCE AND REPAIRS OF CONTROLS

3-2.01. The CONTRACTOR shall be responsible for maintenance and repairs of erosion and sediment control devices, and removal of erosion and sediment control devices after SUBSTANTIAL COMPLETION of the WORK.

3-2.02. Maintenance and repair of the controls for abatement of erosion and water pollution shall be included in the CONTRACT PRICE.

3-2.03. All control measures shall be maintained daily by the CONTRACTOR. All measures shall be maintained in good working order. If a repair is necessary, it shall be initiated within 24 hours.

3-2.04. Built-up sediment shall be removed from silt fences and staked turbidity barriers should it reach one-third the height of the fence.

3-2.05. Temporary and permanent seeding and planting shall be inspected for bare spots, washouts, and healthy growth.

3-2.06. Stabilized construction entrances shall be maintained to prevent clogging of rock bedding which may impede the usefulness of the structure.

3.3. OTHER CONTROLS

3-3.01. Waste Disposal: The CONTRACTOR shall provide litter control and collection during construction activities. All fertilizer, hydrocarbon, or other chemical containers shall be disposed of by the CONTRACTOR according to EPA's standard practices as detailed by the manufacturer. No solid materials including building and construction materials shall be discharged to wetlands or buried on-site.

3-3.02. Off-Site Vehicle Tracking: The CONTRACTOR shall control off-site vehicle tracking by covering loaded haul trucks with tarpaulins, removing excess dirt on roads daily and maintaining the stabilized construction accesses.

3-3.03. Sanitary Waste: The CONTRACTOR shall be responsible for all sanitary waste to be collected from portable units by a licensed sanitary waste management contractor as required by LAWS AND REGULATIONS.

3.4. INSPECTION

3-4.01. All erosion and water pollution abatement and control measures shall be inspected daily by the CONTRACTOR.

3-4.02. The cost of the CONTRACTOR'S inspections and reporting required for the control and abatement of erosion and water pollution shall be included in the proposed CONTRACT PRICE.

3.5. TRACKING AND REPORTING

3-5.01. The CONTRACTOR shall submit with the PROGRESS REPORT a report to the OWNER and the ENGINEER documenting the daily inspections, maintenance or repairs to the erosion and sediment control devices.

END OF SECTION

SECTION 03310

CAST-IN-PLACE CONCRETE

PART 1 -- GENERAL

1-1. THE SUMMARY

1-1.01. The CONTRACTOR shall provide cast-in-place concrete, joints in concrete, reinforcement steel and appurtenant work, formwork, bracing, shoring, supports, and shall design and construct falsework, complete and in place, in accordance with the Contract Documents.

1-2. CONTRACTOR SUBMITTALS

1-2.01. Furnish submittals in accordance with Section 01300 – Submittal Procedures.

1-2.02. Shop Drawings

1. Shop bending diagrams, placing lists, and drawings of reinforcing steel prior to fabrication.

2. Details of the concrete reinforcing steel and concrete inserts shall be submitted at the earliest possible date after receipt by the CONTRACTOR of the Notice to Proceed. Details of reinforcing steel for fabrication and erection shall conform to Concrete Reinforcing Steel Institute Manual of Standard Practice and the requirements herein. The shop bending diagrams shall show the actual lengths of bars, to the nearest inch measured to the intersection of the extensions (tangents for bars of circular cross section) of the outside surface. Include bar placement diagrams which clearly indicate the dimensions of each bar splice.

3. Where mechanical couplers are required or permitted to be used to splice reinforcing steel, submit manufacturer's literature which contains instructions and recommendations for installation for each type of coupler used; certified test reports which verify the load capacity of each type and size of coupler used; and Shop Drawings that show the location of each coupler with details of how they are to be installed in the formwork.

4. If reinforcement steel is spliced by welding at any location, submit mill test reports that contain the information necessary for the determination of the carbon equivalent per AWS D1.4 Structural Welding Code – Reinforcing Steel. The CONTRACTOR shall submit a written welding procedure for each type of weld for each size of bar which is to be spliced by welding; merely a statement that AWS procedures will be followed is not acceptable. The CONTRACTOR shall submit certifications of procedure qualifications for each welding procedure used and welder qualifications, for each welding procedure, and for each welder performing the WORK. Such qualifications shall be as specified in AWS D1.4.

5. Manufacturer's information demonstrating compliance with requirements of the following:

    a. Preformed joint filler

b. Bond breaker

c. Form ties and related accessories

d. Form gaskets

e. Form release agent

f. List of form materials and locations of use

g. Mill tests for cement

h. Admixture certification. Chloride ion content shall be included.

i. Aggregate gradation test results and certification

j. Materials and methods for curing

6. Placement drawings showing the location and type of joints for each structure.

1-2.03. Mix Designs: Prior to beginning the WORK, submit preliminary concrete mix designs which shall show the proportions and gradations of materials proposed for each class and type of concrete. The mix designs shall be checked by an independent testing laboratory acceptable to the ENGINEER. Costs related to such checking shall be the CONTRACTOR's responsibility. When a water reducing admixture is to be used, the CONTRACTOR shall furnish mix designs for concrete both with and without the admixture.

1-2.04. Delivery Tickets: Where ready-mix concrete is used, the CONTRACTOR shall furnish certified delivery tickets at the time of delivery of each load of concrete. Each ticket shall show the state certified equipment used for measuring, and the total quantities, by weight, of cement, sand, each class of aggregate, admixtures, the amounts of water in the aggregate, added at the batching plant, and the amount allowed to be added at the Site for the specific design mix. In addition, each certificate shall state the mix number, total yield in cubic yards, and the time of day to the nearest minute, corresponding to the time when the batch was dispatched, when it left the plant, when it arrived at the Site, when unloading began, and when unloading was finished.

1-3. QUALITY ASSURANCE

1-3.01. Testing of Reinforcing Steel

1. If requested by the ENGINEER, the CONTRACTOR shall furnish samples from each heat of reinforcing steel in a quantity adequate for testing. Costs of initial tests will be paid by the CONTRACTOR. Costs of additional tests, if material fails initial tests, shall also be the CONTRACTOR's responsibility.

2. If requested by the ENGINEER, the CONTRACTOR shall furnish samples of each type of welded splice used in the WORK in a quantity and of dimensions adequate for testing. At the discretion of the ENGINEER, radiographic testing of direct butt welded splices will be performed. The CONTRACTOR shall provide assistance necessary to facilitate testing. The CONTRACTOR shall repair any weld that fails to meet the requirements of AWS D1.4. The costs of testing will be paid by the CONTRACTOR.

1-3.02. Testing of Materials

1. Tests on component materials and for compressive strength of concrete will be performed as indicated herein. Tests for determining slump will be in accordance with the requirements of ASTM C 143 - Standard Test Method for Slump of Hydraulic Cement Concrete.

2. Testing for aggregate shall include sand equivalence, reactivity, organic impurities, abrasion resistance, and soundness in accordance with ASTM C 33 - Concrete Aggregates.

3. The cost of laboratory tests on cement, aggregates, and concrete, will be paid by the CONTRACTOR. The CONTRACTOR shall pay the cost of any additional tests and investigations on WORK that does not meet the Specifications. The laboratory will meet or exceed the requirements of ASTM C 1077 - Standard Practice for Laboratories Testing Concrete and Concrete Aggregates for Use in Construction and Criteria for Laboratory Evaluation.

4. Concrete for testing shall be furnished by the CONTRACTOR at no cost to the OWNER, and the CONTRACTOR shall assist the TESTING LAB in obtaining samples and disposal and cleanup of excess material.

1-3.03. Field Compression Tests

1. Compression test specimens shall be taken during construction from the first placement of each class of concrete herein and at intervals thereafter as selected by the ENGINEER to ensure continued compliance with these Specifications. Each set of test specimens will be a minimum of 4 cylinders.

2. Compression test specimens for concrete will be made in accordance with Section 9.2 of ASTM C 31 - Standard Practice for Making and Curing Concrete Test Specimens in the Field. Specimens will be 6-inches diameter by 12-inches high cylinders.

3. Compression tests will be performed in accordance with ASTM C 39 - Standard Test Method for Compressive Strength of Cylindrical Concrete Specimens. One test cylinder will be tested at 7 Days and 2 at 28 Days. The remaining cylinder will be held to verify test results, if needed.

1-3.04. Evaluation and Acceptance of Concrete

1. Evaluation and acceptance of the compressive strength of concrete will be according to the requirements of ACI 318 - Building Code Requirements for Reinforced Concrete, and as indicated herein.

2. If any concrete fails to meet these requirements, immediate corrective action shall be taken to increase the compressive strength for subsequent batches of the type of concrete affected.

3. Concrete that fails to meet the ACI requirements and these Specifications is subject to removal and replacement as part of the WORK.

1-3.05. Construction Tolerances: The CONTRACTOR shall set and maintain concrete forms and perform finishing operations so that the concrete is within the tolerances herein. Surface defects and irregularities are defined as finishes and are to be distinguished from tolerances. Tolerance is the permissible variation from lines, grades, or dimensions indicated. Where tolerances are not indicated, permissible deviations will be in accordance with ACI 117 - Standard Tolerance for Concrete Construction and Materials.

1. The variation from required lines or grades shall not exceed 1/4-inch in 10-feet and there shall be no offsets or visible waviness in the finished surface.

PART 2 -- PRODUCTS

2-1. FORM AND FALSEWORK MATERIALS

2-1.01. Except as otherwise expressly accepted by the ENGINEER, lumber for use as forms, shoring, or bracing shall be new material.

2-1.02. Materials for concrete forms, formwork, and falsework shall conform to the following requirements:

1. Lumber shall be Douglas Fir or Southern Yellow Pine, construction grade or better, in conformance with U.S. Product Standard PS 20 - American Softwood Lumber Standard.

2. Plywood for concrete formwork shall be new, waterproof, synthetic resin bonded, exterior type Douglas Fir or Southern Yellow Pine plywood manufactured especially for concrete formwork and shall conform to the requirements of PS 1 - Construction and Industrial Plywood for Concrete Forms, Class I, and shall be edge sealed.

3. Form materials shall be metal, wood, plywood, or other material that will not adversely affect the concrete and will facilitate placement of concrete to the shape, form, line, and grade required. Metal forms shall be an approved type that will accomplish such results. Wood forms for surfaces to be painted shall be Medium Density Overlaid plywood, MDO Ext. Grade.

2-1.03. Unless otherwise indicated, exterior corners in concrete members shall be provided with 3/4-inch chamfers or be tooled to a 1/2-inch radius. Re-entrant corners in concrete members shall not have fillets unless otherwise indicated.

2-1.04. Forms and falsework to support the roof and floor slabs shall be designed for the total dead load, plus a live load of 50 psf (minimum). The minimum design load for combined dead and live loads shall be 100 psf.

2-2. FORM TIES

2-2.01. Form ties shall be provided with a plastic cone or other suitable means for forming a conical hole to ensure that the form tie may be broken off back of the face of the concrete. The maximum diameter of removable cones for rod ties or other removable form-tie fasteners having a circular cross-section shall not exceed 1-1/2 inches; and such fasteners shall be such as to

leave holes of regular shape for reaming. Form ties shall be **Wrench Head Snap Ties** by **MeadowBurke, Snap Ties** by **Dayton/Richmond**, or equal.

2-2.02. Removable taper ties may be used when approved by the ENGINEER. Taper ties shall be **Taper Ties** by **MeadowBurke, Taper Ties** by **Dayton/Richmond**, or equal.

2-3. REINFORCEMENT STEEL

2-3.01. General: Reinforcement steel for cast-in-place reinforced concrete construction shall conform to the following requirements:

1. Bar reinforcement shall conform to the requirements of ASTM A 615 - Deformed and Plain Billet-Steel Bars for Concrete Reinforcement, for Grade 60 Billet Steel Reinforcement, unless otherwise indicated.

2. Welded wire fabric reinforcement shall conform to the requirements of ASTM A 1064 - Carbon-Steel Wire and Welded Wire Reinforcement, Plain and Deformed, for Concrete, and the details indicated. Welded wire fabric with longitudinal wire of W4 size wire and smaller shall be either furnished in flat sheets or in rolls with a core diameter of not less than 10-inches. Welded wire fabric with longitudinal wires larger than W4 size shall be furnished in flat sheets only.

3. Spiral reinforcement shall be cold-drawn steel wire conforming to the requirements of ASTM A 82 - Steel Wire, Plain, for Concrete Reinforcement.

2-3.02. Accessories

1. Accessories shall include necessary chairs, slab bolsters, concrete blocks, tie wires, dips, supports, spacers, and other devices to position reinforcement during concrete placement. Bar supports shall meet the requirements of the CRSI Manual of Standard Practice including special requirements for supporting epoxy coated reinforcing bars. Wire bar supports shall be CRSI Class 1 for maximum protection with a 1/8-inch minimum thickness of plastic coating which extends at least 1/2-inch from the concrete surface. Plastic shall be gray in color.

2. Concrete blocks (dobies) used to support and position reinforcement steel shall have the same or higher compressive strength than required for the concrete in which they are located. Where concrete blocks are used on concrete surfaces exposed to view, the color and texture of the concrete blocks shall match that required for the finished surface. Wire ties shall be embedded in concrete block bar supports.

2-3.03. Epoxy coating for reinforcing and accessories, where indicated, shall conform to ASTM A 775 - Epoxy Coated Reinforcing Steel Bars.

2-4. MECHANICAL COUPLERS

2-4.01. Mechanical couplers shall be provided where indicated and where approved by the ENGINEER. Couplers shall develop a tensile strength that exceeds 125 percent of the yield strength of the reinforcing bars being spliced at each splice.

2-5. WELDED SPLICES

2-5.01. Welded splices shall be provided where indicated and where approved by the ENGINEER. Welded splices of reinforcement steel shall develop a tensile strength exceeding 125 percent of the yield strength of the reinforcing bars that are connected.

2-5.02. Materials required to perform the welded splices to the requirements of AWS D1.4 shall be provided.

2-6. CONCRETE MATERIALS

2-6.01. Materials shall be delivered, stored, and handled so as to prevent damage by water or breakage. Only one brand of cement shall be used. Cement reclaimed from cleaning bags or leaking containers shall not be used. Cement shall be used in the sequence of receipt of shipments.

2-6.02. Materials for the WORK shall comply with the requirements of ACI 301- Structural Concrete for Buildings, as applicable.

2-6.03. Storage of materials shall conform to the requirements of ACI 301.

2-6.04. Materials for concrete shall conform to the following requirements:

1. Cement shall be standard brand portland cement conforming to ASTM C 150 - Portland Cement for Type I or Type II.

2. Water shall be potable, clean, and free from objectionable quantities of silty organic matter, alkali, salts, and other impurities. The water shall be considered potable, for the purposes of this Section only, if it meets the requirements of the local governmental agencies. Agricultural water with high total dissolved solids (over 1000 mg/l TDS) shall not be used.

3. Aggregates shall be obtained from pits acceptable to the ENGINEER, shall be non-reactive, and shall conform to ASTM C 33. Maximum size of coarse aggregate shall be as indicated. Lightweight sand for fine aggregate will not be permitted.

4. Ready-mix concrete shall conform to the requirements of ASTM C 94 - Ready-Mixed Concrete.

5. Air-entraining agent meeting the requirements of ASTM C 260 – Air Entraining Admixtures for Concrete shall be used. Concrete floors to receive a dry-shake floor hardener shall have an air content not to exceed 3 percent. The OWNER reserves the right, at any time, to sample and test the air-entraining agent. The air-entraining agent shall be added to the batch in a portion of the mixing water. The solution shall be batched by means of a mechanical batcher capable of accurate measurement. Air content shall be tested at the point of placement. Air entraining agent shall be **Micro-Air** by **Master Builders, Daravair** by **W.R. Grace, Sika AEA-15** by **Sika Corporation,** or equal.

6. Admixtures: Admixtures may be added at the CONTRACTOR's option to control the set, affect water reduction, and increase workability. In either case, the addition of an

admixture shall be at the CONTRACTOR's expense. The use of an admixture shall be subject to acceptance by the ENGINEER. Concrete containing an admixture shall be first placed at a location determined by the ENGINEER. If the use of an admixture is producing an inferior end result, the CONTRACTOR shall discontinue use of the admixture. Admixtures shall conform to the requirements of ASTM C 494 - Chemical Admixtures for Concrete. The required quantity of cement shall be used in the mix regardless of whether or not an admixture is used. Admixtures shall contain no free chloride ions, shall be non-toxic after 30 Days, and shall be compatible with and made by the same manufacturer as the air entraining admixture.

a. Concrete shall not contain more than one water-reducing admixture. Concrete containing an admixture shall be first placed at a location determined by the ENGINEER.

b. Set controlling admixture may be either with or without water-reducing properties. Where the air temperature at the time of placement is expected to be consistently over 80 degrees F, a set retarding admixture such as **Plastocrete 161 MR** by **Sika Corporation, Pozzolith 300R** by **BASF, Daratard** by **Grace Construction Products,** or equal shall be used. Where the air temperature at the time of placement is expected to be consistently under 40 degrees, a set accelerating admixture such as **Plastocrete 161FL** by **Sika Corporation, MasterSet FP 20** by **BASF, Polarset** by **Grace Construction Products,** or equal shall be used.

c. Normal range water reducer shall conform to ASTM C 494, Type A. It shall be **WRDA 79** by **Grace Construction Products, Pozzolith 322-N** by **BASF, Plastocrete 161** by **Sika Corporation,** or equal. The quantity of admixture used and the method of mixing shall be in accordance with the manufacturer's instructions and recommendations.

7. Calcium Chloride: Calcium chloride will not be permitted in concrete.

2-7. CURING MATERIALS

2-7.01. Materials for curing concrete shall conform to the following requirements and ASTM C 309 - Liquid Membrane-Forming Compounds for Curing Concrete:

1. Curing compounds shall be white-pigmented and resin-based. Sodium silicate compounds shall not be allowed. Concrete curing compound shall be **Kurez VOX White Pigmented** by **Euclid Chemical Company, Cure R-2** by **L&M Construction Chemicals, 1200-White** by **W.R. Meadows,** or equal. When curing compound must be removed for finishes or grouting, curing compounds shall be **Kurez DR VOX** by **Euclid Chemical Company, Masterkure-100W** by **ChemRex MBT, L&M Cure R** by **L&M Construction Chemicals, 1100-Clear** by **WR Meadows,** or equal. Curing compounds shall meet local VOC requirements.

2. Polyethylene sheet for use as concrete curing blanket shall be white and shall have a nominal thickness of 6-mils. The loss of moisture when determined in accordance with the requirements of ASTM C 156 - Standard Test Method for Water Retention by

Concrete Curing Materials, shall not exceed 0.055 grams per square centimeter of surface.

3. Evaporation retardant shall be a material such as MasterKure ER 50 by BASF/Master Builders, Eucobar by Euclid Chemical Company, E-CON by L&M Construction Chemicals, Inc., or equal.

2-8. JOINT MATERIALS

2-8.01. Materials for joints in concrete shall conform to the following requirements:

1. Joint filler material shall be of the preformed non-extruding type joint filler constructed of cellular neoprene sponge rubber or polyurethane of firm texture. Bituminous fiber type will not be permitted. Non-extruding and resilient-type preformed expansion joint fillers shall conform to the requirements and tests set forth in ASTM D 1752 - Preformed Sponge Rubber and Cork Expansion Joint Fillers for Concrete Paving and Structural Construction; for Type I, except as otherwise indicated.

2. Elastomeric joint sealer shall conform to the requirements of Section 07920- Sealants and Caulking.

3. Mastic joint sealer shall be a material that does not contain evaporating solvents; that will tenaciously adhere to concrete surfaces; that will remain permanently resilient and pliable; that will not be affected by continuous presence of water and will not in any way contaminate potable water; and that will effectively seal the joints against moisture infiltration even when the joints are subject to movement due to expansion and contraction. The sealer shall be composed of special asphalts or similar materials blended with lubricating and plasticizing agents to form a tough, durable mastic substance containing no volatile oils or lubricants and shall be capable of meeting the test requirements set forth hereinafter, if testing is required by the ENGINEER.

2-9. MISCELLANEOUS MATERIALS

2-9.01. Damp proofing agent shall be an asphalt emulsion such as Hydrocide 600 by ChemRex Sonneborn, Emulsified Asphalt by Euclid Chemical Company, Sealmastic by W. R. Meadows Inc., or equal.

2-9.02. Epoxy adhesives shall be the following products:

1. For bonding freshly mixed, plastic concrete to hardened concrete, Sikadur 32 Hi-Mod Epoxy Adhesive by Sika Corporation, MasterEmaco ADH 326 by BASF/Master Builders; BurkEpoxy MV by Burke by Edoco, or equal.

2. For bonding hardened concrete or masonry to steel, Sikadur 31 Hi-Mod Gel by Sika Corporation, BurkEpoxy NS by Burke by Edoco, Concresive Paste (LPL) by Chem Rex MBT; or equal.

2-9.03. Epoxy grout for grouting reinforcing bars shall be specifically formulated for such application, for the moisture condition, application temperature, and orientation of the hole to be filled. Epoxy grout shall meet the requirements in Section 03315 - Grouting.

2-10. CONCRETE DESIGN REQUIREMENTS

2-10.01. General

1. Concrete shall be composed of cement, admixtures, aggregates, and water of the qualities indicated. In general, the mix shall be designed to produce a concrete capable of being deposited so as to obtain maximum density and minimum shrinkage, and where deposited in forms, to have good consolidation properties and maximum smoothness of surface. The proportions shall be changed whenever necessary or desirable to meet the required results at no additional cost to the OWNER. Mix changes shall be subject to review by the ENGINEER.

2. The CONTRACTOR is cautioned that the limiting parameters below are NOT a mix design. Admixtures may be required to achieve workability required by the CONTRACTOR's construction methods and aggregates. The CONTRACTOR is responsible for providing concrete with the required workability.

2-10.02. Water-Cement Ratio and Compressive Strength: The minimum compressive strength and cement content of concrete shall be not less than the following tabulation.

Type of Work	**Class of Concrete Min 28-Day Compressive Strength, psi**	**Max Size Aggregate in**	**Cement Content Per cu yd, lbs**	**Max W/C Ratio (by weight)**
Structural concrete	4,000	1	564 to 600	0.45
Sitework concrete	3,000	1	470 (min)	0.50
Lean concrete	2,000	1	376 (min)	0.60

2-11. CONSISTENCY

2-11.01. Consistency of the concrete in successive batches shall be determined by slump tests in accordance with ASTM C 143. The slumps shall be as follows:

Part of Work	Slump (in
All concrete unless indicated otherwise	3-inches plus or minus 1-inch
Ductbank and pipe encasement	5-inches plus or minus 1-inch

2-12. MEASUREMENT OF CEMENT AND AGGREGATE

2-12.01. The amount of cement and of each separate size of aggregate entering into each batch of concrete shall be determined by direct weighing equipment furnished by the CONTRACTOR and acceptable to the ENGINEER; provided that, where batches are so proportioned as to contain an integral number of conventional sacks of cement and the cement is delivered at the mixer in the original unbroken sacks, the weight of the cement contained in each sack may be taken without weighing as 94 pounds.

2-13. MEASUREMENT OF WATER

2-13.01. The quantity of water entering the mixer shall be measured by a suitable water meter or other measuring device of a type acceptable to the ENGINEER and capable of measuring the water in variable amounts within a tolerance of one percent.

2-14. READY-MIXED CONCRETE

2-14.01. At the CONTRACTOR'S option, ready-mixed concrete may be used if it meets the requirements as to materials, batching, mixing, transporting, placing, the supplementary requirements as required herein, and is in accordance with ASTM C 94.

2-14.02. Ready-mixed concrete shall be delivered to the WORK, and discharge shall be completed within one hour after the addition of the cement to the aggregates or before the drum has been revolved 250 revolutions, whichever comes first. In hot weather, under conditions contributing to quick stiffening of the concrete, or when the temperature of the concrete is 85 degrees F or above, the time between the introduction of the cement to the aggregates and discharge shall not exceed 45 minutes.

2-14.03. Truck mixers shall be equipped with electrically actuated counters by which the number of revolutions of the drum or blades may be readily verified. The counter shall be of the resettable, recording type, and shall be mounted in the driver's cab. The counter shall be actuated at the time of starting the mixer at mixing speed.

2-14.04. Each batch of concrete shall be mixed in a truck mixer for not less than 70 revolutions of the drum or blades at the rate of rotation designated by the manufacturer of equipment. Additional mixing, if any, shall be at the speed designated by the manufacturer of the equipment as agitating speed. Materials including mixing water shall be in the mixer drum before actuating the revolution counter for determining the number of revolutions of mixing.

2-14.05. Each batch of ready-mixed concrete delivered to the WORK shall be accompanied by a delivery ticket furnished to the ENGINEER in accordance with the requirements above.

2-14.06. The use of non-agitating equipment for transporting ready-mixed concrete will not be permitted. Combination truck and trailer equipment for transporting ready-mixed concrete will not be permitted. The quality and quantity of materials used in ready-mixed concrete and in batch aggregates shall be subject to continuous inspection at the batching plant by the ENGINEER.

PART 3 -- EXECUTION

3-1. GENERAL FORMWORK REQUIREMENTS

3-1.01. Forms to confine the concrete and shape it to the required lines shall be used wherever necessary. The CONTRACTOR shall assume full responsibility for the adequate design of forms, and any forms that are unsafe or inadequate in any respect shall promptly be removed from the WORK and replaced. A sufficient number of forms of each kind shall be available to permit the required rate of progress to be maintained. The design and inspection of concrete forms, falsework, and shoring shall comply with applicable local, state, and federal regulations. Design, construction, maintenance, preparation, and removal of forms shall be in accordance with ACI 347 - Guide to Formwork for Concrete and the requirements herein.

3-1.02. Forms shall be true in every respect to the required shape and size, shall conform to the established alignment and grade, and shall be of sufficient strength and rigidity to maintain their position and shape under the loads and operations incident to placing and vibrating the concrete.

3-2. CONSTRUCTION

3-2.01. Vertical Surfaces: Vertical surfaces of concrete members shall be formed, except where placement of the concrete against the ground is indicated. Not less than 1-inch of concrete shall be added to the indicated thickness of a concrete member where concrete is permitted to be placed against trimmed ground in lieu of forms. Permission to do this on other concrete members will be granted only for members of comparatively limited height and where the character of the ground is such that it can be trimmed to the required lines and will stand securely without caving or sloughing until the concrete has been placed.

3-2.02. Construction Joints: Concrete construction joints will not be permitted at locations other than those indicated, except as may be acceptable to the ENGINEER. When a second lift is placed on hardened concrete, special precautions shall be taken in the way of the number, location, and tightening of ties at the top of the old lift and bottom of the new to prevent any unsatisfactory affect whatsoever on the concrete. Pipe stubs and anchor bolts shall be set in the forms where required.

3-2.03. Form Ties

1. Embedded Ties: Wire ties for holding forms will not be permitted. No form-tying device or part thereof, other than metal, shall be left embedded in the concrete. Ties shall not be removed in such manner as to leave a hole extending through the interior of the concrete members. The use of snap-ties which cause spalling of the concrete upon form stripping or tie removal will not be permitted. If steel panel forms are used, rubber grommets shall be provided where the ties pass through the form in order to prevent loss of cement paste. Where metal rods extending through the concrete are used to support or to strengthen forms, the rods shall remain embedded and shall terminate not less than 1-inch back from the formed face or faces of the concrete.

2. Removable Ties: Where taper ties are approved for use, after the taper tie is removed, the hole shall be thoroughly cleaned and roughened for bond. A precast neoprene or polyurethane tapered plug shall be located at the wall centerline. The hole shall be completely filled with non-shrink or regular cement grout. Exposed faces

of walls shall have at least the outer 2-inches of the exposed face filled with a cement grout which shall match the color and texture of the surrounding wall surface.

3-3. REUSE OF FORMS

3-3.01. Forms may be reused only if in good condition and only if acceptable to the ENGINEER. Light sanding between uses will be required wherever necessary to obtain uniform surface texture on exposed concrete surfaces. Exposed concrete surfaces are defined as surfaces which are permanently exposed to view.

3-4. REMOVAL OF FORMS

3-4.01. Careful procedures for the removal of forms shall be strictly followed, and this WORK shall be done with care so as to avoid injury to the concrete. No heavy loading on green concrete will be permitted. Members which must support their own weight shall not have their forms removed until they have attained at least 75 percent of the 28-Day strength of the concrete. Forms for vertical walls and columns shall remain in place at least 48 hours after the concrete has been placed. Forms for parts of the WORK not specifically mentioned herein shall remain in place for periods of time as recommended in ACI 347.

3-5. GENERAL REINFORCEMENT REQUIREMENTS

3-5.01. Reinforcement steel, welded wire fabric, couplers, and other appurtenances shall be fabricated, and placed in accordance with the requirements of the Building Code and the supplementary requirements indicated herein.

3-6. FABRICATION

3-6.01. General

1. Reinforcement steel shall be accurately formed to the dimensions and shapes indicated, and the fabricating details shall be prepared in accordance with ACI 315 and ACI 318, except as modified by the Drawings.

2. The CONTRACTOR shall fabricate reinforcement bars for structures in accordance with bending diagrams, placing lists, and placing drawings. Said drawings, diagrams, and lists shall be prepared by the CONTRACTOR.

3. Unless otherwise indicated, dowels shall match the size and spacing of the spliced bar.

3-6.02. Bending or Straightening: Reinforcement shall not be straightened or re-bent in a manner that will injure the material. Bars shall be bent or straight as indicated. Do not use bends different from the bends indicated. Bars shall be bent cold unless otherwise permitted by the ENGINEER. No bars partially embedded in concrete shall be field bent except as indicated or specifically permitted by the ENGINEER.

3-7. PLACING

3-7.01. Reinforcement steel shall be accurately positioned as indicated and shall be supported and wired together to prevent displacement, using annealed iron wire ties or suitable clips at

intersections. Reinforcement steel shall be supported by concrete, plastic or metal supports, spacers or metal hangers that are strong and rigid enough to prevent any displacement of the reinforcement steel. Where concrete is to be placed on the ground, supporting concrete blocks (or dobies) shall be used in sufficient numbers to support the bars without settlement, but in no case shall such support be continuous. Concrete blocks used to support reinforcement steel shall be tied to the steel with wire ties which are embedded in the blocks. For concrete over formwork, the CONTRACTOR shall provide concrete, metal, plastic, or other acceptable bar chairs and spacers.

3-7.02. The portions of accessories in contact with the formwork shall be made of concrete, plastic, or steel coated with a 1/8-inch minimum thickness of plastic which extends at least 1/2-inch from the concrete surface. Plastic shall be gray in color.

3-7.03. Tie wires shall be bent away from the forms in order to provide the required concrete coverage.

3-7.04. Bars additional to those indicated which may be found necessary or desirable by the CONTRACTOR for the purpose of securing reinforcement in position shall be provided by the CONTRACTOR as part of the WORK.

3-7.05. Unless otherwise indicated, reinforcement placing tolerances shall be within the limits specified in ACI 318 except where in conflict with the requirements of the Building Code.

3-7.06. The minimum spacing requirements of ACI 318 shall be followed for reinforcing steel.

3-7.07. Welded wire fabric reinforcement placed over horizontal forms shall be supported on slab bolsters having gray, plastic-coated standard type legs. Slab bolsters shall be spaced not more than 30-inches on centers, shall extend continuously across the entire width of the reinforcing mat, and shall support the reinforcing mat in the plane indicated.

3-7.08. Welded wire fabric placed over the ground shall be supported on wired concrete blocks (dobies) spaced not more than 3-feet on centers in any direction. The construction practice of placing welded wire fabric on the ground and hooking into place in the freshly placed concrete shall not be used.

3-8. SPLICING

3-8.01. General: Reinforcement bar splices shall only be used at locations indicated. When it is necessary to splice reinforcement at points other than where indicated, the character of the splice shall be reviewed and accepted by the ENGINEER.

3-8.02. Splices of Reinforcement

1. The length of lap for reinforcement bars, unless otherwise indicated, shall be in accordance with ACI 318 for a Class B splice.

2. Welded splices shall be performed in accordance with AWS D1.4.

3. Laps of welded wire fabric shall be in accordance with the ACI 318. Adjoining sheets shall be securely tied together with No. 14 tie wire, one tie for each 2 running feet. Wires shall be staggered and tied in such a manner that they cannot slip.

3-9. CLEANING AND PROTECTION

3-9.01. Reinforcement steel shall always be protected from conditions conductive to corrosion until concrete is placed around it.

3-9.02. The surfaces of reinforcement steel and other metalwork to be in contact with concrete shall be thoroughly cleaned of dirt, grease, loose scale and rust, grout, mortar, and other foreign substances immediately before the concrete is placed. Where there is delay in depositing concrete, reinforcing shall be reinspected and, if necessary recleaned.

3-10. PROPORTIONING AND MIXING

3-10.01. Proportioning: Proportioning of the concrete mix shall conform to the requirements of ACI 301.

3-10.02. Mixing: Mixing of concrete shall conform to the requirements of ACI 301.

3-10.03. Slump: Slumps shall be as indicated herein.

3-10.04. Retempering: Retempering of concrete or mortar which has partially hardened shall not be permitted.

3-11. PREPARATION OF SURFACES FOR CONCRETING

3-11.01. General: Earth surfaces shall be thoroughly wetted by sprinkling prior to the placing of any concrete, and these surfaces shall be kept moist by frequent sprinkling up to the time of placing concrete thereon. The surface shall be free from standing water, mud, and debris at the time of placing concrete.

3-11.02. Joints in Concrete: Concrete surfaces upon or against which concrete is to be placed, where the placement of the concrete has been stopped or interrupted so that, as determined by the ENGINEER, the new concrete cannot be incorporated integrally with that previously placed, are defined as construction joints. The surfaces of horizontal joints shall be given a compacted, roughened surface for good bonding. Except where the Drawings call for joint surfaces to be coated, the joint surfaces shall be cleaned of laitance, loose or defective concrete, and foreign material, and be roughened to a minimum 1/4-inch amplitude. Such cleaning and roughening shall be accomplished by hydroblasting. Pools of water shall be removed from the surface of construction joints before the new concrete is placed.

3-11.03. Placing Interruptions: When placing of concrete is to be interrupted long enough for the concrete to take a set, the working face shall be given a shape by the use of forms or other means, that will secure proper union with subsequent WORK; provided that construction joints shall be made only where acceptable to the ENGINEER.

3-11.04. Embedded Items

1. No concrete shall be placed until formwork, installation of parts to be embedded, reinforcement steel, and preparation of surfaces involved in the placing have been completed and accepted by the ENGINEER at least 4 hours before placement of concrete. Surfaces of forms and embedded items that have become encrusted with

dried grout from previous usage shall be cleaned before the surrounding or adjacent concrete is placed.

2. Reinforcement, anchor bolts, sleeves, inserts, and similar items shall be set and secured in the forms at locations indicated or by Shop Drawings and shall be acceptable to the ENGINEER before any concrete is placed. Accuracy of placement is the responsibility of the CONTRACTOR.

3-11.05. Casting New Concrete Against Old: Where concrete is to be cast against old concrete (defined as any concrete which is greater than 60 Days of age), the surface of the old concrete shall be thoroughly cleaned and roughened by hydroblasting (exposing aggregate) prior to the application of an epoxy bonding agent. Application shall be according to the bonding agent manufacturer's instructions and recommendations.

3-11.06. No concrete shall be placed in any structure until water entering the space to be filled with concrete has been properly cut off or has been diverted by pipes, or other means, and carried out of the forms, clear of the WORK. No concrete shall be deposited underwater nor shall the CONTRACTOR allow still water to rise on any concrete until the concrete has attained its initial set. Water shall not be permitted to flow over the surface of any concrete in such manner and at such velocity as will injure the surface finish of the concrete. Pumping or other necessary dewatering operations for removing ground water, if required, shall be subject to the review of the ENGINEER.

3-11.07. Corrosion Protection: Pipe, conduit, dowels, and other ferrous items required to be embedded in concrete construction shall be so positioned and supported prior to placement of concrete that there will be a minimum of 2-inches clearance between said items and any part of the concrete reinforcement. Securing such items in position by wiring or welding them to the reinforcement will not be permitted.

3-11.08. Openings for pipes, inserts for pipe hangers and brackets, and anchors shall, where practicable, be provided for during the placing of concrete.

3-11.09. Anchor bolts shall be accurately set and shall be maintained in position by templates while being embedded in concrete.

3-12. HANDLING, TRANSPORTING, AND PLACING

3-12.01. General: Placing of concrete shall conform to the applicable requirements of Chapter 8 of ACI 301 and the requirements of this Section. No aluminum materials shall be used in conveying any concrete.

3-12.02. Non-Conforming WORK or Materials: Concrete which during or before placing is found not to conform to the requirements indicated herein shall be rejected and immediately removed from the WORK. Concrete which is not placed in accordance with these Specifications or which is of inferior quality shall be removed and replaced.

3-12.03. Unauthorized Placement: No concrete shall be placed except in the presence of a duly authorized representative of the ENGINEER. The CONTRACTOR shall notify the ENGINEER in writing at least 24 hours in advance of placement of any concrete.

3-12.04. Placement in Wall and Column Forms

1. Concrete shall not be dropped through reinforcement steel or into any deep form nor shall concrete be placed in any form in such a manner as to leave accumulation of mortar on the form surfaces above the placed concrete. In such cases, some means such as the use of hoppers and, if necessary, vertical ducts of canvas, rubber, or metal shall be used for placing concrete in the forms in a manner that it may reach the place of final deposit without separation. In no case shall the free fall of concrete exceed 4-feet in walls and 8-feet in columns below the ends of ducts, chutes, or buggies. Concrete shall be uniformly distributed during the process of depositing and in no case after depositing shall any portion be displaced in the forms more than 6-feet in horizontal direction. Concrete in wall forms shall be deposited in uniform horizontal layers not deeper than 2-feet; and care shall be taken to avoid inclined layers or inclined construction joints except where such are required for sloping members. Each layer shall be placed while the previous layer is still soft. The rate of placing concrete in wall forms shall not exceed 5-feet of vertical rise per hour. Sufficient illumination shall be provided in the interior of forms so that the concrete at the places of deposit is visible from the deck or runway.

2. The surface of the concrete shall be level whenever a run of concrete is stopped. To ensure a level, straight joint on the exposed surface of walls, a wood strip at least

   3/4-inch thick shall be tacked to the forms on these surfaces. The concrete shall be carried about 1/2-inch above the underside of the strip. About one hour after the concrete is placed, the strip shall be removed and any irregularities in the edge formed by the strip shall be leveled with a trowel, and laitance shall be removed.

3-12.05. Conveyor Belts and Chutes: Ends of chutes, hopper gates, and other points of concrete discharge throughout the CONTRACTOR'S conveying, hoisting, and placing system shall be so designed and arranged that concrete passing from them will not fall separated into whatever receptacle immediately receives it. Conveyor belts, if used, shall be of a type acceptable to the ENGINEER. Chutes longer than 50-feet will not be permitted. Minimum slopes of chutes shall be such that concrete of the required consistency will readily flow in them. If a conveyor belt is used, it shall be wiped clean by a device operated in such a manner that none of the mortar adhering to the belt will be wasted. Conveyor belts and chutes shall be covered.

3-12.06. Temperature of Concrete: The temperature of concrete when it is being placed shall be not more than 90 degrees F nor less than 40 degrees F in moderate weather, and not less than 50 degrees F in weather during which the mean daily temperature drops below 40 degrees F. Concrete ingredients shall not be heated to a temperature higher than that necessary to keep the temperature of the mixed concrete, as placed, from falling below the required minimum temperature. If concrete is placed when the weather is such that the temperature of the concrete would exceed 90 degrees F, the CONTRACTOR shall employ effective means, such as precooling of aggregates and mixing water, using ice, or placing at night, as necessary to maintain the temperature of the concrete, as it is placed, below 90 degrees F. The CONTRACTOR shall be entitled to no additional compensation on account of the foregoing requirements.

3-12.07. Cold Weather Placement

1. Placement of concrete shall conform to ACI - 306.1 - Cold Weather Concreting, and the following.

2. Earth foundations shall be free from frost or ice when concrete is placed upon or against them.

3. Maintain the concrete temperature above 50 degrees F for at least 72-hours after placement.

3-13. PUMPING OF CONCRETE

3-13.01. General: If the pumped concrete does not produce satisfactory end results, the CONTRACTOR shall discontinue the pumping operation and proceed with the placing of concrete using conventional methods.

3-13.02. Pumping Equipment

1. The pumping equipment shall have 2 cylinders and be designed to operate with one cylinder only in case the other one is not functioning. In lieu of this requirement, the CONTRACTOR may have a standby pump on the Site during pumping.

2. The minimum diameter of the hose conduits shall be in accordance with ACI 304.2R - Placing Concrete by Pumping Methods.

3. Pumping equipment and hose conduits that are not functioning properly, shall be replaced.

4. Aluminum conduits for conveying the concrete shall not be permitted.

3-14. TAMPING AND VIBRATING

3-14.01. As concrete is placed in the forms or in excavations, it shall be thoroughly settled and compacted, throughout the entire depth of the layer which is being consolidated, into a dense, homogeneous mass, filling all corners and angles, thoroughly embedding the reinforcement, eliminating rock pockets, and bringing only a slight excess of water to the exposed surface of concrete. Vibrators shall be high speed power vibrators (8000 to 12,000 rpm) of an immersion type in sufficient number and with at least one standby unit as required.

3-14.02. Concrete in walls shall be internally vibrated and at the same time rammed, stirred, or worked with suitable appliances, tamping bars, shovels, or forked tools until it completely fills the forms or excavations and closes snugly against all surfaces. Subsequent layers of concrete shall not be placed until the layers previously placed have been worked thoroughly. Vibrators shall be provided in sufficient numbers, with standby units as required, to accomplish the required results within 15 minutes after concrete of the prescribed consistency is placed in the forms. The vibrating head shall not contact the surfaces of the forms. Care shall be taken not to vibrate concrete excessively or to work it in any manner that causes segregation of its constituents.

3-15. FINISHING CONCRETE SURFACES

3-15.01. General: Surfaces shall be free from fins, bulges, ridges, offsets, honeycombing, or roughness of any kind, and shall present a finished, smooth, continuous hard surface. Allowable deviations from plumb or level and from the alignment, profiles, and dimensions indicated are defined as tolerances and are indicated above. These tolerances are to be distinguished from irregularities in finish as described herein. Aluminum finishing tools shall not be used.

3-15.02. Formed Surfaces: No treatment is required after form removal except for curing, repair of defective concrete, and treatment of surface defects.

3-15.03. Unformed Surfaces: After proper and adequate vibration and tamping, unformed top surfaces of slabs, floors, walls, and curbs shall be brought to a uniform surface with suitable tools. Whenever the air temperature exceeds 85 degrees F or the wind speed exceeds 25 mph at the time of placement, the concrete shall be treated as follows. Immediately after the concrete has been screeded, it shall be treated with a liquid evaporation retardant. The retardant shall be used again after each WORK operation as necessary to prevent drying shrinkage cracks. The classes of finish for unformed concrete surfaces are designated and defined as follows:

1. Finish U1 - Sufficient leveling and screeding to produce an even, uniform surface with surface irregularities not to exceed 3/8-inch. No further special finish is required.

2. Finish U2 - After sufficient stiffening of the screeded concrete, surfaces shall be float finished with wood or metal floats or with a finishing machine using float blades. Excessive floating of surfaces while the concrete is plastic and dusting of dry cement and sand on the concrete surface to absorb excess moisture will not be permitted. Floating shall be the minimum necessary to produce a surface that is free from screed marks and is uniform in texture. Surface irregularities shall not exceed 1/4-inch. Joints and edges shall be tooled where indicated or as determined by the ENGINEER.

3. Finish U3 - After the Finish U2 surface has hardened sufficiently to prevent excess of fine material from being drawn to the surface, steel troweling shall be performed with firm pressure such as will flatten the sandy texture of the floated surface and produce a dense, uniform surface free from blemishes, ripples, and trowel marks. The finish shall be smooth and free of irregularities.

4. Finish U4 - Trowel the Finish U3 surface to remove local depressions or high points. In addition, the surface shall be given a light broom finish with brooming perpendicular to drainage unless otherwise indicated. The resulting surface shall be rough enough to provide a nonskid finish.

3-15.04. Unformed surfaces shall be finished according to the following schedule:

UNFORMED SURFACE FINISH SCHEDULE	
Area	Finish
Grade slabs and foundations to be covered with concrete or fill material	U1
Floors to be covered with grouted tile or topping grout	U2
Slabs to be covered with built-up roofing	U2
Interior slabs and floors to receive architectural finish	U3
Slabs	U4
Top surface of walls	U3

3-16. CURING AND DAMP PROOFING

3-16.01. **General:** Concrete shall be cured for not less than 7 Days after placing, in accordance with the methods indicated below for the different parts of the WORK.

Surface to be Cured or Dampproofed	Method
Unstripped forms	1
Construction joints between footings and walls, and between floor slab and columns	2
Encasement and ductbank concrete and thrust blocks	3
Concrete surfaces not specifically provided for elsewhere in this Paragraph	4
Buried slabs and backfilled walls	5

3-16.02. Method 1: Wooden forms shall be wetted immediately after concrete has been placed and shall be kept wet with water until removal. If steel forms are used, the exposed concrete surfaces shall be kept continuously wet until the forms are removed. If forms are removed within 7 Days of placing the concrete, curing shall be continued in accordance with Method 4 below.

3-16.03. Method 2: The surface shall be covered with burlap mats which shall be kept wet with water for the duration of the curing period, until the concrete in the walls has been placed. No curing compound shall be applied to surfaces cured under Method 2.

3-16.04. Method 3: The surface shall be covered with moist earth not less than 4 hours nor more than 24 hours after the concrete is placed. Earthwork operations that may damage the concrete shall not begin until at least 7 Days after placement of concrete.

3-16.05. Method 4: The surface shall be sprayed with a liquid curing compound.

1. It shall be applied in accordance with the manufacturer's printed instructions at a maximum coverage rate of 200 square feet per gallon and in such a manner as to cover the surface with a uniform film that will seal thoroughly.

2. Where the curing compound method is used, care shall be exercised to avoid damage to the seal during the 7 Day curing period. If the seal is damaged or broken before the expiration of the curing period, the break shall be repaired immediately by the application of additional curing compound over the damaged portion.

3. Wherever curing compound has been applied by mistake to surfaces against which concrete subsequently is to be placed and to which it is to adhere, compound shall be entirely removed by wet sandblasting just prior to the placing of new concrete.

4. Curing compound shall be applied as soon as the concrete has hardened enough to prevent marring on unformed surfaces, and within 2 hours after removal of forms. Repairs required to be made to formed surfaces shall be made within the said 2 hour period; provided, however, that any such repairs which cannot be made within the said 2 hour period shall be delayed until after the curing compound has been applied. When repairs are to be made to an area on which curing compound has been applied, the area involved shall first be wet sandblasted to remove the curing compound.

5. During the curing period, no traffic of any nature and no depositing of any materials, temporary or otherwise, shall be permitted on surfaces coated with curing compound. Foot traffic and the depositing of materials may be allowed after 3 Days if the surface is covered with 5/8-inch plywood placed over polyethylene sheets.

3-16.06. Method 5: This method applies to both buried slabs and walls to be backfilled.

1. The concrete shall be kept continuously wet by the application of water for a minimum period of at least 7 Days beginning immediately after the concrete has reached final set or forms have been removed.

2. Until the concrete surface is covered with the curing medium, the entire surface shall be kept damp by applying water through nozzles that atomize the flow so that the surface is not marred or washed.

3. Heavy curing mats shall be used as a curing medium to retain the moisture during the curing period. The curing medium shall be weighted or otherwise held substantially in contact with the concrete surface to prevent being dislodged by wind or any other causes. Edges shall be continuously held in place.

4. The curing blankets and concrete shall be kept continuously wet by the use of sprinklers or other means both during and after normal working hours.

5. Immediately after the application of water has terminated at the end of the curing period, the curing medium shall be removed, any dry spots shall be rewetted, and curing compound shall be immediately applied in accordance with Method 4 above.

6. The CONTRACTOR shall dispose of excess water from the curing operation to avoid damage to the WORK.

7. Damp proofing: The exterior surfaces of buried roof slabs and backfilled walls shall be dampproofed as follows.

   a. Immediately after completion of curing, the surface shall be sprayed with a damp proofing agent consisting of an asphalt emulsion. Application shall be in 2 coats. The first coat shall be diluted to one-half strength by the addition of water and shall be sprayed on so as to provide a maximum coverage rate of 100 square feet per gallon of dilute solution. The second coat shall consist of an application of the undiluted material, and shall be sprayed on so as to provide a maximum coverage rate of 100 square feet per gallon. Damp proofing material shall be as indicated above.

   b. As soon as the material has taken an initial set, the entire area thus coated shall be coated with whitewash. Any formula for mixing the whitewash may be used if it produces a uniformly coated white surface and remains until placing of the backfill. If the whitewash fails to remain on the surface until the backfill is placed, the CONTRACTOR shall apply additional whitewash

3-16.07. The CONTRACTOR may submit alternate methods of curing which maintain the concrete in a continuously wet condition for acceptance by the ENGINEER.

3-17. PROTECTION

3-17.01. The CONTRACTOR shall protect concrete against injury until final acceptance.

3-17.02. Fresh concrete shall be protected from damage due to rain, hail, sleet, or snow. The CONTRACTOR shall provide such protection while the concrete is still plastic and whenever precipitation is imminent or occurring.

3-18. CURING IN COLD WEATHER

3-18.01. Water curing of concrete may be reduced to 6 Days during periods when the mean daily temperature in the vicinity of the Site is less than 40 degrees F; provided that, during the prescribed period of water curing, when temperatures are such that concrete surfaces may freeze, water curing shall be temporarily discontinued.

3-18.02. Concrete cured by an application of curing compound will require no additional protection from freezing if the protection at 50 degrees F for 72 hours is obtained by means of approved insulation in contact with the forms or concrete surfaces; otherwise, the concrete shall be protected against freezing temperatures for 72 hours immediately following 72 hours protection at 50 degrees F. Concrete cured by water shall be protected against freezing temperatures for 72 hours immediately following the 72 hours of protection at 50 degrees F.

3-18.03. Discontinuance of protection against freezing temperatures shall be such that the drop in temperature of any portion of the concrete will be gradual and will not exceed 40 degrees F in 24 hours. In the spring, when the mean daily temperature rises above 40 degrees F for more than 3 Days, 72 hour protection at a temperature not lower than 50 degrees F may be discontinued for as long as the mean daily temperature remains above 40 degrees F; provided, that the concrete shall be protected against freezing temperatures for not less than 48 hours after placement.

3-18.04. Where artificial heat is employed, special care shall be taken to prevent the concrete from drying. Use of unvented heaters will be permitted only when unformed surfaces of concrete adjacent to the heaters are protected for the first 24 hours from an excessive carbon dioxide atmosphere by application of curing compound; provided, that the use of curing compound for such surfaces is otherwise permitted by these Specifications.

3-19. TREATMENT OF SURFACE DEFECTS

3-19.01. As soon as forms are removed, exposed concrete surfaces shall be carefully examined and any irregularities shall be immediately rubbed or ground in a satisfactory manner in order to secure a smooth, uniform, and continuous surface. Plastering or coating of surfaces to be smoothed will not be permitted. No repairs shall be made until after inspection by the ENGINEER. In no case will extensive patching of honeycombed concrete be permitted. Concrete containing minor voids, holes, honeycombing, or similar depression defects shall be repaired as indicated below. Concrete containing extensive voids, holes, honeycombing, or similar depression defects, shall be completely removed and replaced. Repairs and replacements shall be performed promptly.

3-19.02. Defective surfaces to be repaired shall be cut back from trueline a minimum depth of 1/2-inch over the entire area. Feathered edges will not be permitted. Where chipping or cutting tools are not required in order to deepen the area properly, the surface shall be prepared for bonding by the removal of laitance or soft material, plus not less than 1/32-inch depth of the surface film from hard portions by means of an efficient sandblast. After cutting and sandblasting, the surface shall be wetted sufficiently in advance of shooting with shotcrete or with cement mortar so that while the repair material is being applied, the surfaces underneath will remain moist but not so wet as to overcome the suction upon which a good bond depends. The material used for repair shall consist of a mixture of one sack of cement to 3 cubic feet of sand. For exposed walls, the cement shall contain such a proportion of Atlas white portland cement as is required to make the color of the patch match the color of the surrounding concrete.

3-19.03. Holes left by tie-rod cones shall be reamed with suitable toothed reamers so as to leave the surfaces of the holes clean and rough. These holes then shall be repaired in an approved manner with dry-packed cement grout. Holes left by form-tying devices having a rectangular cross-section, and other imperfections having a depth greater than their least surface dimension, shall not be reamed but shall be repaired in an approved manner with dry-packed cement grout.

3-19.04. Repairs shall be built up and shaped in such a manner that the completed WORK will conform to the requirements of this Section as applicable, using approved methods which will not disturb the bond, cause sagging, or cause horizontal fractures. Surfaces of repairs shall receive the same kind and amount of curing treatment as required for the concrete in the repaired section.

3-20. CARE AND REPAIR OF CONCRETE

3-20.01. The CONTRACTOR shall protect concrete against injury or damage from excessive heat, lack of moisture, overstress, or any other cause until final acceptance. Particular care shall be taken to prevent the drying of concrete and to avoid roughening or otherwise damaging the surface. Any concrete found to be damaged, or which may have been originally defective, which becomes defective at any time prior to the final acceptance of the completed WORK, which departs from the established line or grade, or which, for any other reason, does not conform to the requirements of the Contract Documents, shall be satisfactorily repaired or removed and replaced with acceptable concrete.

END OF SECTION

THIS PAGE LEFT INTENTIONALLY BLANK

SECTION 03315

GROUTING

PART 1 -- GENERAL

1.1. THE SUMMARY

1-1.01. The CONTRACTOR shall provide grout, complete and in place, in accordance with the Contract Documents. For concrete repair material and procedures, reference Section 03900 – Concrete Repair and Rehabilitation.

1-1.02. Grout provided as a base support for mechanical and electrical equipment shall conform to manufacturer's requirements and the requirements of this section.

1-1.03. The following types of grout are covered in this Section:

1. Non-Shrink Grout
2. High Strength Non-Shrink Grout
3. Non-Shrink Epoxy Grout
4. Topping Grout and Concrete/Grout Fill

1.2. REFERENCE SPECIFICATIONS, CODES AND STANDARDS

1-2.01. ASTM C109 - Standard Test Method for Compressive Strength of Hydraulic Cement Mortars (Using 2-in. or [50-mm] Cube Specimens).

1-2.02. ASTM C307 -- Standard Test Method for Tensile Strength of Chemical-Resistant Mortar, Grouts, and Monolithic Surfacings.

1-2.03. ASTM C531 – Standard Test Method for Linear Shrinkage and Coefficient of Thermal Expansion of Chemical-Resistant Mortars, Grouts, Monolithic Surfacings, and Polymer Concretes.

1-2.04. ASTM C579 – Standard Test Methods for Compressive Strength of Chemical-Resistant Mortars, Grouts, Monolithic Surfacings, and Polymer Concretes.

1-2.05. ASTM C580 – Standard Test Method for Flexural Strength and Modulus of Elasticity of Chemical-Resistant Mortars, Grouts, Monolithic Surfacings, and Polymer Concretes.

1-2.06. ASTM C827 – Standard Test Method for Change in Height at Early Ages of Cylindrical Specimens of Cementitious Mixtures.

1-2.07. ASTM C882 - Standard Test Method for Bond Strength of Epoxy-Resin Systems Used with Concrete by Slant Shear.

1-2.08. ASTM C1090 – Standard Test Method for Measuring Changes in Height of Cylindrical Specimens from Hydraulic-Cement Grout.

1-2.09. ASTM C1107 – Standard Specification for Packaged Dry, Hydraulic-Cement Grout (Nonshrink).

1-2.10. ASTM C1116 – Standard Specification for Fiber-Reinforced Concrete.

1-2.11. ASTM C1339 – Standard Test Method for Flowability and Bearing Area of Chemical-Resistant Polymer Machinery Grouts.

1.3. CONTRACTOR SUBMITTALS

1-3.01. Furnish submittals in accordance with Section 01300 - Contractor Submittals.

1. Certified testing lab reports for tests indicated herein.

2. Test results and service report from the field tests and the demonstration and training session verifying the requirements indicated herein.

3. Manufacturer’s literature containing instructions and recommendations on the mixing, handling, placement, curing, and appropriate uses for each type of grout used in the WORK, and location of use.

4. Documentation indicating that the grouts contain no chlorides or other chemicals that cause corrosion.

5. Manufacturer’s Safety Data Sheet documenting composition of grouts.

6. Submit manufacturer's written warranty as indicated herein.

7. Name and telephone number of grout manufacturer's representative who will give on-site service. The representative shall have at least one year of experience with the indicated grouts.

1.4. QUALITY ASSURANCE

1-4.01. Field Tests

1. Compression test specimens will be taken from the first placement of each type of grout, and at intervals thereafter selected by the ENGINEER. The specimens will be made by the ENGINEER or its representative.

2. Compression tests and fabrication of specimens for cement grout and cement based non-shrink grout will be performed in accordance with ASTM C1107 at intervals during construction selected by the ENGINEER.

3. Compression tests and fabrication of specimens for topping grout and concrete/grout fill will be performed in accordance with Section 03310 - Cast-in-Place Concrete at intervals during construction selected by the ENGINEER.

4. Compression tests and fabrication of specimens for epoxy grouts will be performed in accordance with ASTM C579, Method B, at intervals during construction selected

by the ENGINEER. A set of 3 specimens will be made for testing at 7 Days and each earlier time period as appropriate.

5. The cost of laboratory tests on grout will be paid by the CONTRACTOR. Where test results show the grout to be defective, the CONTRACTOR shall pay for the tests, removal and replacement of Defective Work, and re-testing, all as part of the WORK.

6. The CONTRACTOR shall assist the TESTING LAB in obtaining specimens for testing and shall furnish materials necessary for fabricating the test specimens.

1-4.02. Construction Tolerances: Construction tolerances shall be as indicated in Section 03310 unless indicated otherwise.

1-4.03. Pre-Installation Demonstration and Training.

1. Non-Shrink Grouts

   a. The grout manufacturer shall give a demonstration and training session for the cement based and epoxy non-shrink grouts to be used on the project before any installation of grout is allowed.

   b. The CONTRACTOR shall transport the test cubes to an independent test laboratory, obtain the test reports, and report these demonstration and training test cube strengths to the ENGINEER.

1.5. SPECIAL CORRECTION OF DEFECTS PROVISIONS

1-5.01. Manufacturer's Warranty

1. Furnish one year warranty for WORK provided under this section.

2. Manufacturer's warranty shall not contain a disclaimer limiting responsibility to the purchase price of products or materials.

PART 2 -- PRODUCTS

2.1. APPLICATION

2-1.01. Unless indicated otherwise, grouts shall be provided as listed below whether indicated on the Drawings or not.

Application	Type of Grout
Beam and column (1 or 2 story) base plates less than 16-inches in the least dimension.	Non-Shrink
Column base plates (greater than 2 story or larger than 16-inches in the least dimension)	High Strength Non-Shrink

Application	Type of Grout
Under precast concrete elements	High Strength Non-Shrink
Storage tanks and other non-motorized equipment or machinery under 30 horsepower	Non-Shrink
Motorized equipment over 30 horsepower and equipment under 30 horsepower but subject to severe shock loads and high vibrations	Non-Shrink Epoxy
Filling blockout spaces for embedded items such as railing posts, gate guide frames, etc.	Non-Shrink
Toppings and concrete/grout fill less than 3-inches thick	Topping Grout
Toppings and concrete/grout fill greater than 3-inches thick	Structural Concrete per 03310
Anchor bolts, anchor rods and reinforcing steel required to be set in epoxy or adhesive.	Post Installed Anchors in Concrete per Section 05519
Repair of holes and defects in concrete members.	Concrete Repair and Rehabilitation per Section 03900

2.2. NON-SHRINK GROUTS

2-2.01. General

1. All non-shrink grout shall be cement based unless otherwise noted.

2. Cement-based non-shrink grout shall be a prepackaged, inorganic, fluid, non-gas liberating, non-metallic, cement type grout requiring only the addition of water. Cement from kilns burning metal-rich hazardous waste fuel shall not be used.

3. Manufacturer's instructions shall be printed on each bag or other container in which the materials are packaged. The specific formulation for each non-shrink grout shall be as recommended by the manufacturer for the particular application.

4. The manufacturer’s product information shall state the acceptability of the non-shrink grout for the intended purpose and location.

5. Grout shall not contain chlorides or additives that may contribute to corrosion.

6. Grout placed in continuously wet environments or in exterior conditions shall not contain gypsum or calcium salt.

7. All cement-based non-shrink grout shall have the following general properties:

    a. Meet the requirements of ASTM C1107.

    b. Have a maximum early age height change of 4.0 percent expansion, and shall have no shrinkage (0.0 percent) in accordance with ASTM C827. The grout when tested shall not bleed or segregate at maximum allowed water.

    c. No shrinkage (0.0 percent) and a maximum of 0.3 percent expansion in the hardened state when tested in accordance with ASTM C1090.

    d. A minimum bond strength (concrete to grout) of 1900 psi per modified ASTM C882.

8. Environmental and ambient conditions shall be a factor in the selection of non-shrink grout. If a non-shrink grout is to be used in a high sulfate environment, marine environment, high temperature environment, or freeze/thaw environment, the manufacturer's product information shall state the acceptability for each environmental condition.

2-2.02. Non-Shrink Grout

1. Non-Shrink Grout shall have a minimum 28 Day compressive strength of 5000 psi when mixed at a fluid consistency and tested per ASTM C109.

2. Non-Shrink Grout shall be **Five Star Grout** by **Five Star Products, Five Star Fluid Grout 100** by **Five Star Products, Sikagrout 212** by **Sika Corporation,** or approved equal.

2-2.03. High Strength Non-Shrink Grout

1. High Strength Non-Shrink Grout shall have a minimum 28-Day compressive strength of 10,000 psi when mixed at a fluid consistency and tested per ASTM C109.

2. High Strength Non-Shrink Grout shall be **Five Star High Strength Grout** by **Five Star Products, Sikagrout 428 FS,** or approved equal.

2.3. NON-SHRINK EPOXY GROUT

2-3.01. Non-shrink epoxy grout shall be a flowable, non-shrink, 100 percent solids system. The epoxy grout system shall have 3 components: resin, hardener, and specially blended aggregate, each premeasured and prepackaged. The resin component shall not contain any non-reactive diluents.

2-3.02. The manufacturer's product information shall state the acceptability of the epoxy grout for the intended purpose and location.

2-3.03. Variation of component ratios is not permitted unless specifically recommended by the manufacturer. Manufacturer's instructions shall be printed on each container in which the materials are packaged.

2-3.04. Resins containing butyl glycidyl ether (BGE) or other highly volatile and hazardous reactive diluents are not acceptable.

2-3.05. Non-shrink epoxy grout shall have a negligible (less than 0.0006 in/in) length change after hardening, and a coefficient of thermal expansion less than 0.00003 in/in F when tested in accordance with ASTM C531.

2-3.06. Non-shrink epoxy grout shall develop a minimum compressive strength of 9000 psi in 24 hours and 13,000 psi in seven days when tested in accordance with ASTM C579, method B.

2-3.07. The effective bearing area shall be a minimum of 85 percent effective bearing area (EBA) in accordance with ASTM C1339, for bearing area and flow.

2-3.08. The chemical formulation of the non-shrink epoxy grout shall be that recommended by the manufacturer for the particular application. Do not reduce aggregate loading or add solvents to increase flowability.

2-3.09. Non-shrink epoxy grout shall have the following minimum properties when tested at 7 Days:

1. Minimum bond strength to concrete of 3000 psi per ASTM C882 modified.

2. Minimum bond strength to steel of 1700 psi per ASTM C882 modified.

3. Minimum flexural strength of 2500 psi per ASTM C580.

4. Minimum tensile strength of 2000 psi per ASTM C307.

2-3.10. Non-shrink epoxy grout shall be **Five Star DP Epoxy Grout** by **Five Star Products, Inc.**, **Masterflow 648** by **BASF Corporation**, **Sikadur 42 Grout-Pak** by **Sika Corporation**, or approved equal.

2.4. TOPPING GROUT AND CONCRETE/GROUT FILL

2-4.01. Where fill thickness is 3-inches or greater, structural concrete as indicated in Section 03310 - Cast-in-Place Concrete, may be used when accepted by the ENGINEER. Fiber reinforcing shall be as indicated below.

2-4.02. Grout for topping of slabs and concrete/grout fill for built-up surfaces of tanks, channels, and basin bottoms shall be composed of cement, fine aggregate, coarse aggregate, water, and admixtures proportioned and mixed as indicated. Materials and procedures indicated for structural concrete in Section 03310 - Cast-in-Place Concrete, shall apply unless indicated otherwise.

2-4.03. Topping grout and concrete/grout fill shall contain a minimum of 564 pounds of cement per cubic yard with a maximum water/cement ratio of 0.45.

2-4.04. Coarse aggregate shall be graded as follows:

U.S. Standard Sieve Size	Percent By Weight Passing
1/2 in	100
3/8 in	90-100
No. 4	20-55
No. 8	5-30
No. 16	0-10
No. 30	0

2-4.05. Final mix design shall be as determined by trial mix design as indicated in Section 03310 except that drying shrinkage tests are not required.

2-4.06. Topping grout and concrete grout/fill shall contain air-entraining agent per Section 03310.

2-4.07. Strength: Minimum compressive strength of topping grout and concrete/grout fill at 28 days shall be 4000 psi.

2.5. CURING MATERIALS

2-5.01. Curing materials shall be in accordance with Section 03310 and as recommended by the manufacturer of prepackaged grouts.

2.6. CONSISTENCY

2-6.01. The consistency of grout shall be as necessary to completely fill the space to be grouted for the particular application. Dry pack consistency is defined such that the grout is plastic and moldable but will not flow. Where "dry pack" is called for in the Contract Documents, it shall mean a grout of that consistency; the type of grout to be used shall be as indicated herein for the particular application.

2-6.02. The slump for topping grout and concrete/grout fill shall be adjusted to match placement and finishing conditions but shall not exceed 4-inches.

2.7. MEASUREMENT OF INGREDIENTS

2-7.01. Measurements for cement grout shall be made accurately by volume using containers. Shovel measurements shall not be allowed.

2-7.02. Prepackaged grouts shall have ingredients measured by means recommended by the manufacturer.

PART 3 -- EXECUTION

3.1. PRODUCT DELIVERY, STORAGE AND HANDLING

3-1.01. Grout shall be stored in accordance with manufacturer's recommendations.

3.2. GENERAL

3-2.01. CONTRACTOR shall arrange for the manufacturer of prepackaged grouts to provide on-site technical assistance within 72 hours of request, as part of the WORK.

3-2.02. Grout shall not be placed until base concrete or masonry has attained its design strength, unless authorized otherwise by the ENGINEER.

3-2.03. When cementitious grouts are used on concrete surfaces, the concrete surface shall be saturated with water for 24 hours prior to placement. Upon completion of the saturation period, excess water shall be removed with clean, oil free compressed air prior to grouting. Concrete substrate shall not be wet prior to placement of epoxy grouts.

3-2.04. Surface preparation, curing, and protection of cement grout shall be in accordance with Section 03310. The finish of the grout surface shall match that of the adjacent concrete unless otherwise indicated.

3-2.05. Surfaces that will be in contact with grout shall be free of dirt, loose rust, oil, wax, grease, curing compounds, laitance, loose concrete, and other deleterious materials.

3-2.06. Shade the WORK from sunlight for at least 24 hours before and 48 hours after grouting.

3-2.07. Contact the grout manufacturer's representative for assistance on hot and cold weather grouting techniques and precautions if applicable.

3.3. GROUTING PROCEDURES

3-3.01. General: Mixing, surface preparation, handling, placing, consolidation, curing, and other means of execution for prepackaged grouts shall be done according to the instructions and recommendations of the manufacturer.

3-3.02. Structural, equipment, tank, and piping support bases shall be grouted, unless indicated otherwise.

1. The original concrete shall be blocked out or finished off a sufficient distance below the plate to provide for a minimum one-inch thickness of grout or other thickness if indicated.

2. After the base plate has been set in position at the proper elevation by steel wedges or double nuts on the anchor bolts, the space between the bottom of the plate and the original pour of concrete shall be filled with non-shrink-type grout through a headbox of appropriate size. The mixture shall be of a fluid consistency and poured continuously into the space between the plate and the base concrete. Forms for grout shall be tight against retaining surfaces, and joints shall be sealed as recommended by the grout manufacturer to be liquid-tight. Forms shall be coated as recommended

by the grout manufacturer for easy form release. Where this method of placement is not practical or where required by the ENGINEER, alternate grouting methods shall be submitted by the CONTRACTOR for acceptance by the ENGINEER.

3. Concrete equipment pads for equipment bases that will be epoxy-grouted shall be sized so that, when the equipment base is fully grouted, the epoxy grout is stopped not less than 4-inches from the edge of the pad.

3-3.03. Topping Grout and Concrete/Grout Fill

1. Mechanical, electrical, and finish WORK shall be completed prior to placement of topping or concrete/grout fill. To ensure bonding to the base slab, the base slab shall be given an exposed aggregate finish. Alternatively, where accepted by the ENGINEER, the base slab shall be given a roughened textured surface by a close-spaced rake while the surface is green. After curing, high pressure washing shall expose the aggregates and produce not less than a 3/16-inch amplitude roughness. Jackhammers or chipping hammers shall not be used.

2. The minimum thickness of grout topping and concrete/grout fill shall be one-inch. Where the finished surface of concrete/grout fill is to form an intersecting angle of less than 45 degrees with the concrete surface it is to be placed against, a key shall be formed in the concrete surface at the intersection point. The key shall be a minimum of 3-1/2 inches wide by 1-1/2 inches deep.

3. The base slab shall be thoroughly cleaned and wetted to saturated surface dry (SSD) condition per the International Concrete Repair Institute (ICRI) -- Technical Guide for Selecting and Specifying Concrete Surface Preparation for Sealers, Coatings, and Polymer Overlays, prior to placing topping grout and grout fill. No topping grout shall be placed until the slab is completely free from standing pools or ponds of water. A thin coat of neat cement grout shall be broomed into the surface of the slab just before topping or fill placement. The neat cement grout shall not be allowed to dry before topping placement. If it does dry, it must be immediately removed using wet stiff brooms and reapplied. The topping and fill shall be compacted by rolling or thorough tamping, brought to established grade, and floated. Grouted fill for tank and basin bottoms where scraping mechanisms are to be installed shall be screeded by blades attached to the revolving mechanism of the equipment in accordance with the procedures outlined by the equipment manufacturer after the grout is brought to the established grade. Coat surface with evaporation retardant as needed to prevent plastic shrinkage cracks.

4. Topping grout placed on sloping slabs shall proceed uniformly from the bottom of the slab to the top, for the full width of the placement.

5. The surface shall be tested with a straight edge to detect high and low spots which shall be immediately eliminated. When the topping or fill has hardened sufficiently, it shall be steel troweled to a smooth surface free from pinholes and other imperfections. An approved type of mechanical trowel may be used as an assist in this operation, but the last pass over the surface shall be by hand-troweling. During finishing, no water, dry cement, or mixture of dry cement and sand shall be applied to the surface.

3.4. CONSOLIDATION

3-4.01. Grout shall be placed in such a manner, for the consistency necessary for each application, to assure that the space to be grouted is completely filled.

END OF SECTION

SECTION 03900

CONCRETE REPAIR AND REHABILITATION

PART 1 -- GENERAL

1.1. THE SUMMARY

1-1.01. Remove, repair, or rehabilitate existing concrete members and surfaces as indicated.

1-1.02. Provide all materials and equipment necessary to accomplish the WORK.

1-1.03. Repair damage to concrete and concrete surfaces which results from the removal of embedded items, from construction activities, or which existed previously in structures indicated to be repaired.

1.2. REFERENCE SPECIFICATIONS, CODES, AND STANDARDS

ACI 201.1R-08	Guide for Making a Condition Survey of Concrete in Service
ACI 546R-14	Concrete Repair Guide

1.3. CONTRACTOR SUBMITTALS

1-3.01. Furnish submittals in accordance with the requirements of Section 01300 – Contractor Submittals.

1-3.02. Shop Drawings

1. Submit Shop Drawings for strengthening required around new openings.

2. Submit detailed drawings showing proposed methods for supporting existing structures, equipment, and piping during demolition and repair activities.

1-3.03. Concrete Repair Products and Procedures

1. Submit a comprehensive plan for each repair method indicated within this Section, the plan shall include the following:

   a. Manufacturer's literature containing instructions and recommendations on the mixing, handling, placement, curing, and appropriate uses for each product.

   b. Curing products and procedures for each repair method for which curing is recommended by the manufacturer.

1.4. QUALIFICATIONS OF CONCRETE RESTORATION FIRMS

1-4.01. The concrete restoration WORK shall be performed by an experienced firm customarily engaged in performing similar repair work on cast-in-place concrete structures.

1-4.02. The restoration firm shall have completed at least 5 similar projects in the last 5 years.

1-4.03. The restoration firm shall be certified by the manufacturer of the repair materials.

1.5. QUALITY ASSURANCE

1-5.01. Field Tests of Cement Based Mortars and Grouts.

1. The ENGINEER may take compression test specimens during construction from the first placement of each type of mortar or grout, and at intervals thereafter as selected by the ENGINEER in order to ensure continued compliance with the indicated requirements.

2. The CONTRACTOR shall assist the ENGINEER in obtaining specimens for testing.

3. The compression tests and fabrication of specimens for repair mortar and non-shrink grout will be performed as specified in ASTM C 109.

4. A set of 5 specimens will be made for testing at 7 days, 28 days, and additional time periods as appropriate.

5. Any material, already placed, which fails to meet the indicated performance requirements is subject to removal and replacement as part of the WORK.

6. The cost of laboratory tests on mortar and grout will be paid by the CONTRACTOR, including the cost of any additional tests and investigation on the WORK that does not meet the indicated requirements.

7. The CONTRACTOR shall supply all necessary materials for fabricating the test specimens.

1-5.02. Repair Concrete: Repair concrete shall be tested as required in Section 03310 – Cast-in-Place Concrete.

1-5.03. Epoxy Grout: Epoxy grout shall be tested as required in Section 03315 – Grouting.

1-5.04. Construction Tolerances: Construction tolerances shall comply with the requirements of Section 03310 – Cast-in-Place Concrete, except as otherwise indicated.

PART 2 -- PRODUCTS

2.1. GENERAL

2-1.01. All products and materials in contact with potable water shall be certified as being in conformance with ANSI/NSF Standard 61 – Drinking Water System Components – Health Effects.

2.2. REPAIR MORTAR

2-2.01. Provide repair mortar as a pre-packaged, 2-component, polymer-modified, cementitious, non-sag mortar, specifically formulated for the repair of surface defects.

2-2.02. Provide the mortar with a penetrating corrosion inhibitor.

2-2.03. Repair mortar shall have the following properties:

Physical Property	Value	ASTM Standard
Compressive Strength (min.) at 7 days at 28 days	 6000 psig 7000 psig	C-109
Bond Strength (min.) 98% C-666 at 28 days	 2200 psig	C-882 (modified)
Freeze/Thaw resistance (min.) 300 cycles	 98 percent	C-666

2-2.04. a minimum repair thickness of 1/4 inch, unless otherwise indicated.

2-2.05. Repair Mortar shall be SikaTop 123 Plus, by Sika Corporation, or equal.

2.3. NON-SHRINK GROUT

2-3.01. Provide non-shrink grout conforming to the requirements of Section 03315 – Grouting.

2.4. CONCRETE MATERIALS

2-4.01. Cement

1. Use Type II Portland cement unless otherwise indicated.

2. Where repairs are to be made on wall surfaces open to view and above normal water surface elevations, blend white Portland cement with the Type II cement as needed in order to match the color of the adjacent existing concrete surface.

2-4.02. Structural Repair Grout

1. Where required, provide structural repair grout meeting the requirements of a Structural Concrete Mix design per Section 03310 – Cast-in-Place Concrete.

2. As an alternate to ready mix concrete, the contractor may use Five Star Structural Concrete ES-60 by Five Star Products Inc, or equal, and extended 60% by weight with 3/8", non-reactive, washed aggregate per the manufacturer's requirements.

3. Provide a minimum repair thickness of 3 inches.

2-4.03. Cement Grout

1. Provide cement grout that meets the requirements of Section 03315 – Grouting.

2. Provide a minimum repair thickness of one inch.

2-4.04. Miscellaneous Materials**:** For concrete construction materials not covered specifically in this Section, conform to the requirements of Section 03310 – Cast-in-Place Concrete.

2.5. AGGREGATE

2-5.01. Obtain the written permission of the manufacturer and ENGINEER before using aggregate to extend repair mortar and grout products.

2-5.02. If allowed and unless otherwise indicated, provide aggregate consisting of 3/8-inch clean, washed gravel or crushed stone as required in Section 03310 – Cast-in-Place Concrete.

2.6. BONDING AGENT AND ANTI-CORROSION COATING

2-6.01. Provide a bonding agent that is a solvent-free, moisture-tolerant, epoxy-modified, cementitious product, specifically formulated as a bonding agent and anti-corrosion coating.

2-6.02. Bonding Agent shall be **Armatec 110 EpoCem**, by **Sika Corporation**, or equal.

2.7. EPOXY GROUT

2-7.01. Provide an epoxy grout conforming to the requirements of Section 03315 – Grouting

2.8. EPOXY RESIN

2-8.01. Use epoxy resin for structural crack repair.

2-8.02. For crack injection, provide a 2-component, moisture-tolerant, low-viscosity, high-strength epoxy resin adhesive that is specially formulated for that usage.

2-8.03. Provide a minimum bond strength of 2900 psi when tested per ASTM C 882 at 14 days, moist cured.

2-8.04. Epoxy Resin shall be **Sikadur 35, Hi-Mod LV**, by **Sika Corporation**, **KEMKO 068 LoVis IR**, by **ChemCo Systems, Inc.**, or equal.

2.9. PROTECTIVE COATING

2-9.01. Waterproofing

1. Provide a 2-component, polymer-modified, cementitious waterproofing and protective slurry mortar for concrete.

2. Apply the material in 2 coats, with a coverage of 40 sq ft/gal/coat.

3. Waterproofing shall be **Sika Top Seal 107**, by **Sika Corporation**, or equal.

2.10. FORMWORK

2-10.01. Where needed, provide formwork that meets the requirements of Section 03310 – Cast-in-Place Concrete.

2.11. REINFORCEMENT STEEL

2-11.01. Where required, provide reinforcing steel that meets the requirements of Section 03310 – Cast-in-Place Concrete .

2.12. POLYURETHANE SEALANT

2-12.01. Provide a 2-part polyurethane, gun-grade sealant.

2-12.02. Polyurethane Sealant shall be **Sikaflex – 2C**, by **Sika Corporation**, or equal.

2.13. POLYURETHANE CHEMICAL GROUT

2-13.01. Use polyurethane chemical grout for non-structural crack repair.

2-14.02. Polyurethane Chemical Grout shall be **SikaFix HH**, by **Sika Corporation**, **Flex LV PURe**, by **WR Grace/De Neef**, **Flex SLV PURe**, by **WR Grace/De Neef**, or equal.

2.14. HYDROPHILIC WATERSTOP

2-15.01. Provide hydrophilic waterstop of the type which expands in the presence of water to form a watertight joint seal without damaging the concrete in which it is cast.

2-15.02. Provide hydrophilic waterstop that is bentonite-free, and manufactured from chloroprene rubber and modified chloroprene rubber with hydrophilic properties.

2-15.03. Hydrophilic Waterstop shall be **Hydrotite RSS-040 P**, by **Greenstreak Group, Inc.**, KM **4mm String**, by **Adeka Ultra Seal**, or equal.

2.15. HIGH STRENGTH EPOXY GEL

2-16.01. High-Strength Epoxy Gel for crack surface sealing shall be **Denepox Rapidgel**, by **WR Grace/De Neef**, or equal.

PART 3 -- EXECUTION

3.1. GENERAL

3-1.01. Repairs

1. Repair techniques will be reviewed during the pre-construction meeting between the CONTRACTOR, ENGINEER, and OWNER.

2. The CONTRACTOR shall be familiar with the cause of deteriorated concrete and shall choose the right equipment, repair materials and techniques to be used for each particular repair.

3. Choose repair materials to match the adjacent concrete surface in color and texture.

4. Apply repair materials in strict accordance with the manufacturer's printed instructions, including temperature and moisture requirements throughout application and curing.

5. Protect adjacent portions of the structure, including all valves, pipes, and mechanical equipment from debris generated by repair activities.

6. For portions of the structure that are not identified to be repaired, maintain in their original condition.

3-1.02. Structural Stability

1. Use caution not to weaken the structural capacity of a beam, column, wall, slab, walkway, or other concrete member during concrete removal.

2. For severely deteriorated concrete members, consult with the ENGINEER before removing a major portion of any structural member.

3. Shoring may be required in order to support the structure and to protect workers.

3-1.03. Provide off-site disposal of debris generated as a result of repair procedures.

3-1.04. Provide concrete construction procedures not specifically addressed in this Section in accordance with the requirements of Section 03310 – Cast-in-Place Concrete.

3.2. REPAIR SEQUENCING

3-2.01. Unless otherwise indicated, perform concrete repairs in the following sequence, with no activity in an area being started until previous activities in that area have been completed, including curing, cleanup, and the like:

1. Removal of equipment, miscellaneous metals, and other surface features that would interfere with the repair.

2. Removal of concrete sections which require complete replacement.

3. Surface preparation hydroblasting over the entire area to be repaired.

4. Embedded metal repair.

5. Crack repair.

6. Spalled and delaminated concrete repair.

7. Scaled concrete.

8. Pop-out repair, and repair of other surface damage, deterioration, or defects.

9. Patching of holes in concrete.

10. Replacement of concrete sections which require complete replacement.

11. New construction.

12. Application of protective coatings.

3-2.02. For areas which require combinations of spalled and delaminated concrete repair, scaled concrete, and pop-out repair, perform these repairs at the same time.

3-2.03. Limit the size of the repair area in order to permit the repairs to be performed together, without sacrificing the quality of the individual repairs.

3.3. EMBEDDED METAL REPAIR

3-3.01. Unless otherwise indicated, repair anchor bolts and other embedded metal, except rebar, that are exposed at the concrete surface and are showing signs of corrosion, as follows:

1. Cut off or otherwise remove corroded metal fastened at the surface.

2. Burn back embedded metals to a depth of at least 1.5 inches beyond the surface of sound concrete.

3. Chip away unsound concrete around the embedded metal.

4. Apply epoxy grout to the repair area until level with the surface of the surrounding sound concrete.

3-3.02. Unless otherwise indicated, repair embedded rebar that is exposed at the concrete surface following the procedures outlined in the appropriate concrete repair subsection, below.

3.4. CRACK REPAIR

3-4.01. Structural Cracks - Structural Cracks are defined as follows:

1. All cracks where reinforcing steel is passing across the crack, including erratic cracks, and cracks at construction joints.

2. Repair structural cracks with epoxy resin.

3-4.02. Non Structural Cracks - Non Structural Cracks are defined as follows:

1. Cracks occurring at flexible joints, contraction joints or expansion joints.

2. Repair non-structural cracks with polyurethane chemical grout.

3-4.03. Efflorescence

1. Prior to the crack repair, clean efflorescence from the cracks and the surrounding area.

2. Clean the efflorescence by light hydro-blasting or scrubbing.

3-4.04. Pressure Injection: Pressure Injection to be performed prior to leak testing and roof membrane installation.

1. General

   a. The indicated repair materials have been selected to minimize the loss of material during the injection process. The areas selected for crack repair are to be identified by the Contractor, Engineer or Construction Manager and be determined prior to leak tests and roof membrane installation. The injection of cracks may also be required as a result of the leak test.

   b. In order to avoid excessive loss of injected material at the lower exposed portions of the cracks, space the injection ports a distance no greater than the thickness of the wall being repaired.

2. Open through thickness structural cracks are to be repaired to deliver a watertight hydraulic structure passing the specified leakage test. All 3 foot long minimum or greater through thickness cracks greater than a minimum 15 mil thickness in the walls are to be injected unless they do not accept grout. All 2 foot long minimum through thickness cracks greater than 10 mil thickness in the foundation, water conduits, floor slabs and roof are to be injected unless they do not accept grout. Perform structural crack repairs by pressure injection in accordance with the manufacturer's directions, and in accordance with the following basic procedure:

   a. Remove unsound and foreign materials from the crack in a manner that does not trap debris in the crack and prevent the flow of repair materials.

   b. Remove any contamination by flushing with water or solvent, allowing adequate time for air-drying or blow out the solvent with compressed air. For potable water applications, any solvents must be fully flushed from the joint unless NSF/ANSI Standard 61 approved.

   c. Install the injection ports in accordance with the manufacturer's directions.

   d. Sealing

1) Seal the surface in order to keep the pressure injecting materials from leaking out before it has set or gelled.

2) Seal a surface by brushing an epoxy over the surface of the crack and allowing it to harden, or use high injection pressures to cut-out the cracks in a 'V' shape, fill with an epoxy, and strike off flush with the surface.

3) Surface patching or sealant shall be performed where needed to provide for complete penetration of the injected polyurethane grout and to prevent wastage. Seal surface of crack with fast setting hydraulic cement or high strength epoxy gel. The floor surface along the cracks shall be cleaned and all wasted grout and surface seal material shall be completely removed from the concrete surface following completion of the repair work

e. Inject the repair materials, with consideration of the following items:

1) Carefully select the pressure of the hydraulic pump or other device, because too much pressure can extend the existing cracks and cause more damage.

2) For vertical cracks, start by pumping material into the entry port at the lowest elevation until the material level reaches the entry port above, then cap the lower injection port and repeat the process at successively higher ports until the crack has been completely filled.

3) For horizontal cracks, start at one end of the crack and work to the other end, filling the crack until the pressure can be maintained.

4) For very fine cracks, start the injection of repair material at the widest end and proceed toward the thinner end, using low-viscosity repair material.

f. Cleanup

1) Remove the surface seal by grinding or other appropriate means.

2) Coat fittings and holes at injection ports with an epoxy patching compound.

3) If crack repairs are part of repair for surface defects, painting with epoxy is not necessary and surface preparation may be started after crack repairs have been completed.

3. Open through thickness non-structural cracks are to be repaired to deliver a watertight hydraulic structure passing the specified leakage test. Open through thickness cracks with lengths of at least 3 feet on each side of the wall and roof, at least 2 feet of length on the foundation or floor slab are to be injected unless they do not accept grout. All 3 foot long minimum or greater through thickness cracks greater than a minimum 15 mil thickness in the walls are to be injected unless they do not accept grout. All 2 foot long through thickness cracks greater than 10 mil thickness in the floors and roof are to be injected unless they do not accept grout. Perform non-structural crack repairs

in accordance with the manufacturer's directions, and in accordance with the following basic procedure:

a. Remove unsound and foreign materials from the crack in a manner that does not trap debris in the crack and prevent the flow of repair materials.

b. Remove contamination by flushing with water or solvent, allowing adequate time for air-drying or blow out the solvent with compressed air. Any solvents must be fully flushed from the joint unless NSF/ANSI Standard 61 approved.

c. Install the injection ports in accordance with the manufacturer's directions.

d. Moisture

    1) For non-structural cracks, moisture must be present for the chemical grout to react.

    2) Prior to injecting the repair materials, inject the crack with a small amount of water in order to completely moisten the crack.

e. Inject the repair materials, with consideration of the following items:

    1) Carefully select the pressure of the hydraulic pump or other device, because too much pressure can extend the existing cracks and cause more damage.

    2) For vertical cracks, start by pumping material into the entry port at the lowest elevation until the material level reaches the entry port above, cap the lower injection port and repeat the process at successively higher ports until the crack has been completely filled, and then, starting again at the lowest port, re-inject into all ports in order to ensure that all voids are properly sealed off.

    3) For horizontal cracks, start at one end of the crack and work to the other end, filling the crack until the pressure can be maintained.

    4) For very fine cracks, start the injection of repair material at the widest end and proceed toward the thinner end.

f. Cleanup

    1) Remove excess surface material by grinding or other appropriate means.

    2) Coat fittings and holes at injection ports with an epoxy patching compound.

    3) If crack repairs are part of repair for surface defects, painting with epoxy is not necessary and surface preparation may be started after crack repairs have been completed.

3.5. SPALLED AND DELAMINATED CONCRETE REPAIR

3-5.01. Repair spalls and delaminated concrete using repair mortar.

3-5.02. Surface Preparation

1. Remove all delaminated concrete and all unsound concrete beyond the spalled or delaminated area.

2. Boundaries

    a. Determine the boundaries of the patch by sawcuts to a depth of at least 1/4 inch up to one inch deep.

    b. Refer to the Structural Drawings for sawcut locations.

    c. Where the sawcut locations are not shown on the Drawings, the boundaries shall be layouts designed to reduce boundary edge length.

    d. Avoid excessive or complex edge conditions.

3. Sawcuts

    a. Perform sawcuts perpendicular to the surface or slightly undercut.

    b. Construct sawcuts in maximum 1/4-inch increments.

    c. After each incremental cut, inspect the cut surface in order to ensure that the existing reinforcement has not been cut.

    d. If at any depth the reinforcement becomes exposed, terminate the sawcut and notify the ENGINEER.

4. Chip away concrete within the repair area to a depth sufficient to expose sound concrete over the entire repair area, or to a minimum depth required by repair mortar, whichever is greater.

5. Base the selection of partial depth concrete removal equipment on the size of repair area, depth of concrete to be removed, and the location of the deteriorated concrete such as wall, slab-on-grade, underside or top of elevated slab.

6. Removal

    a. The maximum allowable pneumatic chipping hammer shall be a 30-lb class hammer.

    b. Hydroblast removal shall use a maximum pressure of 40,000 psig.

    c. Sand blasting is not permitted.

    d. Hydroblast concrete removal is recommended for large area of surface defects.

e. Remove water blasting debris daily in order to prevent it from setting up.

f. If a chipping hammer is used, ensure that the existing reinforcement is not damaged during the concrete removal operations.

g. Remove protrusions, such as mortar spatter or fins, by grinding or by striking with a hammer or other tool.

7. Reinforcement

a. Remove concrete from around reinforcement when the rebar is rusted, more than half the rebar perimeter is already exposed, the concrete bond around the rebar is broken, or if the concrete is unsound or honey-combed.

b. Remove concrete in order to provide a clear space of minimum one inch on all sides of the reinforcement, such that the rebar can be cleaned and the repair material will completely surround the rebar.

c. Clean exposed reinforcement by water blasting or wire brushing.

d. After fully exposing and cleaning the reinforcement, check for steel deterioration, and if the cross-sectional area of the steel has been reduced by more than 10 percent, whether by deterioration, surface preparation, or a combination of both, provide additional reinforcement.

e. Consult with the ENGINEER before adding or replacing rebar.

3-5.03. Repairing Surface Defects

1. Clean the concrete surface after removing unsound concrete, repairing cracks, and cleaning the reinforcement.

2. Ensure that the concrete surface and reinforcement are free of form-release agents, curing compounds, surface hardeners, oils, grease, food, chemicals, and other contaminants.

3. Remove dust, including new dust generated by surface preparation or scarifying.

4. Prior to application of the bonding agent, apply anti-corrosion coating to exposed rebar in accordance with the manufacturer’s recommendations, allow the coating to dry, reapply the coating, and allow to dry again.

5. Prior to applying the repair mortar, apply bonding agent in accordance with the manufacturer’s recommendations.

6. Repair Mortar

a. Apply repair mortar in accordance with the manufacturer’s recommendations.

b. The thickness of each lift of repair mortar shall be in accordance with the manufacturer's recommendations, with the minimum thickness being not less than 1/4 inch.

7. Fully consolidate the repair mortar, working the material into the substrate to completely fill all pores and voids in the area to be filled.

8. Bring the repair surface into alignment with the adjacent existing surfaces in order to provide a uniform, even surface.

9. Match the repair surface to adjacent existing surfaces in texture by applying necessary coatings and surface treatments.

10. Float-finish the repaired surface using wood or sponge floats.

11. For repaired surfaces to receive a protective coating, brush-finish the surface in order to produce a roughened substrate for the coating.

12. Minimum and maximum ambient and surface temperatures shall be as recommended by repair material manufacturer.

3-5.04. Curing

1. Curing of repair mortar to receive waterproofing shall be as follows:

a. Keep the mortar continuously wet by the application of water for a minimum period of at least 7 consecutive days, beginning immediately after the mortar has reached final set.

b. Weight the curing blankets or otherwise held them in place in order to prevent being dislodged by wind or other causes, and to be substantially in contact with the concrete surface.

c. Ensure that edges are continuously held in place; and,

d. Keep the curing blankets and concrete continuously wet by the use of sprinklers or other means, both during and after normal working hours.

2. If the repair mortar is not to receive waterproofing, provide curing in accordance with the manufacturer's recommendations except that the minimum cure period shall be 7 days.

3. During cold weather, maintain the repair material temperature above 50 degrees F for at least 3 days after placement.

3.6. SCALED CONCRETE REPAIR

3-6.01. Repair scaling and pop-outs using repair mortar.

3-6.02. Surface Preparation

1. Prior to repair, prepare the surface in accordance with the repair mortar manufacturer's recommendations with the following minimum requirement.

2. Remove unsound concrete from surfaces by high-pressure water blasting, using a minimum pressure of 10,000 psigg and maximum pressure of 40,000 psigg.

3. Clean exposed reinforcement by water blasting or wire brushing.

3-6.03. Repairing Surface Defects

1. Clean the concrete surface after removing unsound concrete, repairing cracks, and cleaning reinforcement.

2. Ensure that the concrete surface and reinforcement are free of form-release agents, curing compounds, surface hardeners, oils, grease, food, chemicals, and other contaminants.

3. Remove dust, including new dust generated by surface preparation or scarifying.

4. Prior to application of the bonding agent, apply anti-corrosion coating to exposed rebar in accordance with the manufacturer's recommendations, allow the coating to dry, reapply the coating, and allow to dry again.

5. Prior to applying the repair mortar, apply bonding agent in accordance with the manufacturer's recommendations.

6. Apply repair mortar in accordance with the manufacturer's recommendations, using a minimum repair material thickness of 1/4 inch.

7. Fully consolidate the repair material, working the material into the substrate to completely fill all pores and voids in the area to be filled.

8. Bring the repair surface into alignment with the adjacent existing surfaces in order to provide a uniform, even surface.

9. Match the repair surface to adjacent existing surfaces in texture by applying necessary coatings and surface treatments.

10. Float-finish the repaired surface using wood or sponge floats.

3-6.04. Provide strip joint in newly placed mortar at the location of repaired cracks.

3-6.05. Curing

1. Curing of repair mortar to receive waterproofing shall be as follows:

    a. Keep the mortar continuously wet by the application of water for a minimum period of at least 7 consecutive days, beginning immediately after the mortar has reached final set.

b. Weight the curing blankets or otherwise held them in place in order to prevent being dislodged by wind or other causes, and to be substantially in contact with the concrete surface.

c. Ensure that edges are continuously held in place; and,

d. Keep the curing blankets and concrete continuously wet by the use of sprinklers or other means, both during and after normal working hours.

2. If the repair mortar is not to receive waterproofing, provide curing in accordance with the manufacturer's recommendations except that the minimum cure period shall be 7 days.

3. During cold weather, maintain the repair material temperature above 50 degrees F for at least 3 days after placement.

3.7. POP-OUT REPAIR, AND REPAIR OF OTHER SURFACE DAMAGE, DETERIORATION, OR DEFECTS

3-7.01. Repair pop-outs and other surface damage, deterioration, and defects which are 1/4 inch deep or shallower, using the procedures described under "SCALED CONCRETE REPAIR," above.

3-7.02. Repair other pop-outs and surface damage, deterioration, and defects using the procedures described under "SPALLED AND DELAMINATED CONCRETE REPAIR," above.

3.8. REPLACEMENT OF CONCRETE SECTIONS WHICH REQUIRE COMPLETE REPLACEMENT

3-8.01. Refer to the Structural Drawings for locations where the level of concrete deterioration is such that complete removal and replacement of the deteriorated section is required.

3-8.02. At these locations, remove the deteriorated concrete in accordance with the details on the Structural Drawings and the requirements of this Section.

3-8.03. Limits

1. The limits of concrete removal shall be as indicated on the Structural Drawings.

2. If no limits of removal are indicated, determine the limits in accordance with the procedures described under "Boundaries – Spalled and Delaminated Concrete Repair."

3-8.04. Provide sawcuts in accordance with the procedures described under "Sawcuts – Spalled and Deliminated Concrete Repair."

3-8.05. After removal of the concrete, prepare the area and provide repair concrete in accordance with the details on the Structural Drawings and the requirements of this Section.

3-8.06. Unless otherwise indicated, match the finished cross-section of the repaired concrete to the cross-section of the adjacent undamaged concrete.

3.9. PATCHING OF HOLES IN CONCRETE

3-9.01. General

1. For the purposes of this Section, holes are defined as penetrations completely through the concrete member and with interior surfaces approximately perpendicular to the surface of the existing member.

2. Interior surface areas which are inclined and do not meet this criteria shall be chipped as needed to meet this requirement.

3. The perimeter of holes at the surface shall form a regular shape composed of curved or straight line segments.

4. Provide the minimum depth of placement for the material used; score the existing concrete by saw cutting, and chip as needed to meet this requirement.

5. Roughen the interior surface of holes less than 12 inches in diameter to a minimum of 0.125-inch amplitude, and roughen larger holes to a minimum of 0.25-inch amplitude.

6. At holes, coat the existing surface to be repaired with a bonding agent.

3-9.02. Patching Small Holes: For holes which are less than 12 inches in their least dimension and extend completely through concrete members, fill with non-shrink grout.

3-9.03. Patching Large Holes

1. Fill holes which are larger than 12 inches in their least dimension with structural repair grout.

2. Provide large holes which are normally in contact with water or soil with hydrophilic waterstop placed in a groove.

3. Alternatively, bond the hydrophilic waterstop to the surface using an epoxy grout which completely fills all voids and irregularities beneath the waterstop material.

4. Install the waterstop in accordance with the requirements of Section 03310 – Cast-in-Place Concrete.

5. Provide reinforcing steel in layers matching existing reinforcement location, size, spacing and cover requirements unless directed otherwise by the ENGINEER.

6. In locations where NSF/ANSI Standard 61 approval is required by the authority having jurisdiction, use one of the following procedures:

    a. Provide Product Data showing the proposed structural repair grout is NSF/ANSI Standard 61 approved.

    b. Complete the repair with structural repair grout. Coat all surfaces required to have NSF/ANSI Standard 61 approval completely with Sikadur 31, Tyfo S, or equal.

c. Place the structural repair grout to within 1 ½" of the finished surface of the repair. Complete the remainder of the repair with SikaTop123 Plus, or equal.

3.10. PATCHING OF LINED HOLES

3-10.01. General

1. This WORK applies to those openings which have embedded material over all or a portion of their inside edge.

2. The requirements for repairing holes in concrete, as indicated above, apply as modified herein.

3. The ENGINEER will determine whether the embedded material is allowed to remain.

3-10.02. Where embedded material is allowed to remain, trim it back a minimum of 2 inches from the concrete surface.

3-10.03. Roughen or abrade the embedded material in order to promote good bonding to the repair material.

3-10.04. Remove substances that interfere with good bonding.

3-10.05. Completely remove embedded items that are not securely and permanently anchored into the concrete.

3-10.06. Completely remove embedded items which are larger than 12 inches in their least dimension, unless they are composed of a metal to which reinforcing steel can be welded; where reinforcement is required, weld it to the embedded metal.

3-10.07. The following requirements shall apply to concrete members which are in contact with water or soil:

1. Using epoxy grout, fill lined openings which are less than 4 inches in their least dimension.

2. Using an epoxy bonding agent, coat lined openings which are greater than 4 inches but less than 12 inches in their least dimension, prior to being filled with non-shrink grout.

3. Using an epoxy bonding agent, coat lined openings which are greater than 12 inches in their least dimension, and provide a hydrophilic waterstop bonded to the interior of the opening with epoxy adhesive, prior to being filled with approved repair material.

3.11. APPLICATION OF PROTECTIVE COATINGS

3-11.01. Waterproofing

1. Apply waterproofing in accordance with the manufacturer's printed instructions.

2. Do not begin waterproofing WORK until repairs and new construction in the affected area have been completed and adequately cured.

END OF SECTION

SECTION 05500

MISCELLANEOUS METALWORK

PART 1 -- GENERAL

1.1 THE SUMMARY

1-1.01. Provide miscellaneous metalwork and appurtenances, complete and in place, as indicated in accordance with the Contract Documents.

1.2 REFERENCE SPECIFICATIONS, CODES, AND STANDARDS

1-2.01. Federal Specifications

MIL-G-18015 A (3)	(Ships) Aluminum Planks. (6063-T6)
MIL-PRF-907F	Antiseize Thread Compound, High Temperature

1-2.02. Commercial Standards

AA-M32C22A41	Aluminum Assn.
AASHTO HL-93	Truck Loading
AISC	Manual of Steel Construction
ASTM A 36	Carbon Structural Steel
ASTM A 48	Gray Iron Castings
ASTM A 53	Pipe, Steel, Black and Hot-Dipped, Zinc-Coated, Welded and Seamless
ASTM A 123	Zinc (Hot-Dip Galvanized) Coatings on Iron and Steel Products
ASTM A 153	Zinc Coating (Hot-Dip) on Iron and Steel Hardware
ASTM A 193	Alloy Steel and Stainless Steel Bolting Materials for High Temperature Service
ASTM A 194	Carbon and Alloy Steel Nuts for Bolts for High Pressure and High Temperature Service
ASTM A 307	Carbon Steel Bolts and Studs, 60,000 psi Tensile Strength
ASTM F 3125	High Strength Structural Bolts and Assemblies, Steel and Alloy Steel, Heat Treated, Inch Dimensions 120 ksi and 150 ksi Minimum Tensile Strength, and Metric Dimensions 830 MPa and 1040 MPa Minimum Tensile Strength

ASTM A 500	Cold-Formed Welded and Seamless Carbon Steel Structural Tubing in Rounds and Shapes
ASTM A 992	Steel for Structural Shapes for Use in Building Framing
ASTM F 1554	Standard Specification for Anchor Bolts, Steel, 36, 55 and 105-ksi Yield Strength
ANSI/AWS D1.1	Structural Welding Code - Steel
ANSI/AWS D1.2	Structural Welding Code - Aluminum
ANSI/AWS QC1	Qualification and Certification of Welding Inspectors

1.3 CONTRACTOR SUBMITTALS

1-3.01. Furnish submittals in accordance with the requirements of Section 01300 – Submittal Procedures.

1-3.02. Shop Drawings

a. Shop Drawings shall conform to AISC recommendations and specifications, and shall show holes, and the like, as may be required for other parts of the WORK.

b. Shop Drawings shall include complete details of members and connections, anchor bolt layouts, schedules for fabrication procedures, and diagrams for the sequence of erection.

1-3.03. Grating

a. Submit layout drawings for grating, showing the direction of span, type and depth of grating, size and shape of grating panels, seat angle details, and details of grating hold down fasteners.

b. Submit load and deflection tables for each style and depth of grating used.

1-3.04. Anchor Submittals

a. For post installed anchors in concrete other than powder-drive pins or impact anchors, refer to Section 05519 – Post Installed Anchors in Concrete.

b. For post installed anchors in concrete masonry units shall meet the requirements of the equipment manufacturer.

c. For powder-drive pins or impact anchors, complete structural calculations and anchorage details shall be prepared and submitted by the Contractor for all anchors and anchor groups that are shown but not completely detailed (type, size, location, spacing and embedment) on the Contract Documents. Calculations and anchorage details shall be signed and stamped by a Professional Engineer registered in the state in which the project is located.

1.4 QUALITY ASSURANCE

1-4.01. Weld procedures and welder qualifications shall be available in the CONTRACTOR's field office for review.

PART 2 -- PRODUCTS

2.1 GENERAL REQUIREMENTS

2-1.01. Steel

Wide Flange Shapes	ASTM A 992
Shapes, Plates, Bars	ASTM A 36
Pipe, Pipe Columns, Bollards	ASTM A 53, Type E or S, Grade B standard weight unless indicated otherwise
HSS	ASTM A 500 Grade B

2-1.02. Corrosion Protection

a. Unless otherwise indicated, fabricated steel metalwork which will be used in a corrosive environment and/or will be submerged in water or wastewater shall be coated in accordance with the requirements of Section 09940 - Protective Coating, and shall not be galvanized prior to coating.

b. Other miscellaneous steel metalwork shall be hot-dip galvanized after fabrication.

2-1.03. Stainless Steel

a. Unless otherwise indicated, stainless steel metalwork and bolts shall be fabricated from Type 316 stainless steel.

2-1.04. Aluminum

a. Unless otherwise indicated, aluminum metalwork shall be fabricated from Alloy 6061-T6.

b. Aluminum in contact with concrete, masonry, wood, porous materials, or dissimilar metals shall have contact surfaces coated in accordance with the requirements of Section 09960 - Protective Coating.

2-1.05. Cast Iron

a. Unless otherwise indicated, iron castings shall conform to the requirements of ASTM A 48, Class 50B, or better.

2.2 BOLTS AND ANCHORS

2-2.01. Standard Service (Non-Corrosive Application)

a. Bolts, anchor rods, anchor bolts, washers, and nuts shall be fabricated from steel as indicated.

b. Threads on galvanized bolts, rods and nuts shall be formed with suitable taps and dies such that they retain their normal clearance after hot-dip galvanizing.

c. Except as otherwise indicated, steel for bolt material, anchor rods, anchor bolts, and cap screws shall be in accordance with the following requirements:

    1. Structural Connections: ASTM A 307, Grade A or B, hot-dip galvanized.

    2. Headed Anchor Rods and Anchor Bolts: ASTM F1554, Grade 36, hot-dip or mechanically galvanized with Grade A matching nuts.

d. High-Strength Bolts, where indicated: ASTM F 3125, A325.

e. Pipe and Equipment Flange Bolts: ASTM A 193, Grade B-7.

2-2.02. Corrosive Service

a. Bolts, anchor rods, anchor bolts, nuts, and washers in the locations listed below shall be fabricated from stainless steel as indicated.

    1. Buried locations.

    2. Locations subject to seasonal or occasional flooding.

    3. Inside buried vaults, manholes, and structures that do not drain through a gravity sewer or to a sump with a pump.

    4. Locations indicated or designated by the engineer to be provided with stainless steel bolts.

2-2.03. Unless otherwise indicated, stainless steel bolts, nuts, anchor rods, and washers shall be fabricated from Type 316 stainless steel, Class 2, conforming to ASTM A 193 for bolts and to ASTM A 194 for nuts.

2-2.04. Buried pipe flange bolts and nuts on pipe of Class 275 and greater shall be in accordance with ASTM A193/A194, Grade B7.

2-2.05. Coating

a. Threads on stainless steel bolts and rods shall be protected with an antiseize lubricant suitable for submerged stainless steel bolts, meeting government specification MIL-A-907E.

b. Buried bolts in poorly drained soil shall be coated the same as the buried pipe.

c. Antiseize lubricant shall be classified as acceptable for potable water use by the NSF.

d. Antiseize lubricant shall be "PURE WHITE" by **Anti-Seize Technology,** Franklin Park, IL, 60131, **AS-470** by **Dixon Ticonderoga Company,** Lakehurst, NJ, 08733, or equal.

2-2.06. Bolt Requirements

a. The bolt and nut material shall be free-cutting steel.

b. The nuts shall be capable of developing the full strength of the bolts.

c. Threads shall be Coarse Thread Series conforming to the requirements of the American Standard for Screw Threads.

d. Bolts and cap screws shall have hexagon heads and nuts shall be Heavy Hexagon Series.

e. Bolts and nuts shall be installed with washers fabricated from material matching the base material of bolts, except that hardened washers for high-strength bolts shall conform to the requirements of the AISC Specification.

f. Lock washers fabricated from material matching the bolts shall be installed where indicated.

g. The length of each bolt shall be such that the bolt extends at least 1/8 inch beyond the outside face of the nut before tightening, except for anchor bolts which shall be flush with the face of the nut before tightening.

2.3 POWDER-DRIVEN PINS

2-3.01. Powder-driven pins for installation in concrete or steel shall be fabricated from heat-treated steel alloy.

2-3.02. If the pins are not inherently sufficiently corrosion-resistant for the conditions to which they will be exposed, they shall be protected in an acceptable manner.

2-3.03. Pins shall have capped or threaded heads capable of transmitting the loads the shanks are required to support.

2-3.04. Pins that are connected to steel shall be provided with longitudinal serrations around the circumference of the shank.

2.4 IMPACT ANCHOR

2-4.01. Impact anchors shall be an expansion-type anchor in which a nail-type pin is driven to produce the expansive force.

2-4.02. The pin shall be provided with a zinc sleeve with a mushroom-style head and stainless steel nail pin.

2-4.03. Anchors shall be Zinc Nailon Anchors, manufactured by Simpson Strong-Tie, Inc., Metal Hit Anchors, manufactured by Hilti, Inc., Rawl Zamac Nailin, manufactured by the Rawlplug Company, or equal.

PART 3 -- EXECUTION

3.1 FABRICATION AND INSTALLATION REQUIREMENTS

3-1.01. **Fabrication and Erection:** Except as otherwise indicated, the fabrication and erection of structural steel shall conform to the requirements of the American Institute of Steel Construction "Manual of Steel Construction."

3-1.02. Powder-Driven Pins

a. Powder-driven pins shall be installed by a craftsperson certified by the manufacturer as being qualified to install the manufacturer's pins.

b. Pins shall be driven in one initial movement by an instantaneous force that has been carefully selected to attain the required penetration.

c. Driven pins shall conform to the following requirements where "D" is equal to the pin shank diameter:

Material Penetrated by Pin	Material Minimum Thickness	Pin Shank Penetration in Supporting Material	Minimum Space From Pin's CL to Edge of Penetrated Material	Minimum Pin Spacing
Concrete	16D	6D minimum	14D	20D
Steel	1/4-inch	Steel thickness	4D	7D

3.2 WELDING

3-2.01. Method

a. Welding shall be performed by the metal-arc method or gas-shielded arc method as described in the American Welding Society "Welding Handbook" as supplemented by other pertinent standards of the AWS.

b. The qualification of the welders shall be in accordance with the AWS Standards.

3-2.02. Quality

a. In assembly and during welding, the component parts shall be adequately clamped, supported, and restrained in order to minimize distortion and for control of dimensions.

b. Weld reinforcement shall be as indicated by the AWS Code.

c. Upon completion of welding, remove weld splatter, flux, slag, and burrs left by attachments.

d. Welds shall be repaired in order to produce a workmanlike appearance, with uniform weld contours and dimensions.

e. Sharp corners of material that is to be painted or coated shall be ground to a minimum of 1/32 inch on the flat.

3.3 GALVANIZING

3-3.01. Structural steel plates shapes, bars, and fabricated assemblies required to be galvanized shall, after the steel has been thoroughly cleaned of rust and scale, be galvanized in accordance with the requirements of ASTM A 123.

3-3.02. Any galvanized part that becomes warped during the galvanizing operation shall be straightened.

3-3.03. Bolts, anchor rods, anchor bolts, nuts, and similar threaded fasteners, after being properly cleaned, shall be galvanized in accordance with the requirements of ASTM A 153.

3-3.04. Field Repairs

a. Field repairs to damaged galvanizing shall be performed by preparing the surface and applying a coating.

b. Surface preparation shall consist of removing oil, grease, soil, and soluble material by cleaning with water and detergent (SSPC SP1) followed by brush-off blast cleaning (SSPC SP7) over an area extending at least 4 inches into the undamaged area.

c. The coating shall be applied to at least 3 mils dry film thickness, and shall be **Zinc-Clad XI** by **Sherwin-Williams**, **Galvax** by **Alvin Products**, **Galvite** by **ZRC Worldwide**, or equal.

SECTION 05519

POST-INSTALLED ANCHORS IN CONCRETE

PART 1 -- GENERAL

1.1 THE SUMMARY

1-1.01. Provide post-installed anchors and appurtenances, complete and in place, as indicated in accordance with the Contract documents.

1-1.02. Unless otherwise indicated, drilled concrete anchors shall be adhesive anchors.

1-1.03. Section Includes:

1. Adhesive anchors
2. Expansion anchors
3. Screw anchors
4. Undercut anchors (dynamic loading)

1.2 REFERENCE SPECIFICATIONS, CODES AND STANDARDS

1-2.01. Definitions

1. Epoxy anchors are considered to be adhesive anchors.
2. Expansion anchors, screw anchors, and undercut anchors are considered to be mechanical anchors.

1-2.02. References

1. IBC 2018 – International Building Code
2. ACI 318 – Building Code Requirements for Structural Concrete (ACI 318-19) and Commentary
3. ACI 350 – Code Requirements for Environmental Engineering Concrete Structures and Commentary (ACI 350-06)
4. ACI 355.2 – Qualification of Post Installed Mechanical Anchors in Concrete and Commentary (ACI 355.2-07).
5. ASCE 7 – ASCE Standard ASCE/SEI 7-22 Minimum Design Loads for Buildings and Other Structures
6. ICC ES AC 193 – Mechanical Anchors in Concrete Elements

7. ICC ES AC 308 –Post Installed Adhesive Anchors in Concrete Elements

8. NSF 61 – NSF/ANSI 61-2016 Drinking Water System Components – Health Effects

1.3 SUBMITTALS

1-3.01. Furnish submittals in accordance with Section 01300 – Submittal Procedures.

1-3.02. Submit the following:

1. Product data and technical information

2. Safety Data Sheets (SDS) for adhesives

3. Manufacturer's literature containing installation instructions and appropriate uses for each type of post-installed anchor and location of use

4. Current ICC-ES or IAPMO-UES Evaluation Reports

5. Certification for each installer demonstrating that they have been qualified in accordance with the Quality Assurance requirements below

1-3.03. No substitution for the indicated anchors will be considered unless accompanied with an ICC-ES or IAPMO-UES report verifying strength and material equivalency.

1-3.04. Complete structural calculations and anchorage details shall be prepared and submitted by the Contractor for all anchors and anchor groups that are shown but not completely detailed (type, size, location, spacing and embedment) on the Contract Documents. Calculations and anchorage details shall be completed and submitted in accordance with Section 01300 – Structural Design, Support and Anchorage.

1. Where adhesive anchors are used for structural applications (such as dowels between new and existing concrete) and an embedment depth is not shown on the contract documents, the anchor shall be installed in accordance with Method 1 or Method 2 below:

   a. Method 1: The minimum depth of embedment shall be greater than or equal to the development length (l_d) determined in accordance with ACI 318 for a cast in place reinforcing bar of the same diameter and grade, unless it can be shown by calculation that the anchor spacing and edge distance is sufficient to develop the tensile strength of the anchor in a lesser depth of embedment. Calculations shall be submitted in accordance with Section 01300 – Submittal Procedures.

   b. Method 2: Adhesive anchors in concrete that cannot develop the tensile capacity of the steel element may be used to transfer forces, provided that the loads on the anchor are amplified by the system overstrength factor (Ω_o) in Table 12.2-1 of ASCE 7-16. Calculations shall be submitted in accordance with Section 01300 – Submittal Procedures.

1.4 QUALITY ASSURANCE

1-4.01. Special inspection for all post-installed anchor installations shall be provided:

1. As recommended or required by the ICC-ES or IAPMO-UES report.

2. As required by the enforceable building code.

3. As otherwise indicated in the Contract Documents.

1-4.02. The most stringent of the above requirements shall be used. The cost of Special Inspection of post-installed anchors shall be paid for by the CONTRACTOR.

1-4.03. Before installing adhesive anchors in the WORK, anchor installers shall be trained and qualified at the Site by the manufacturer's representative. Training and qualification for each installer shall include at least:

1. Hole drilling procedure, hole preparation and cleaning techniques, adhesive injection technique and dispenser training/maintenance, rebar dowel preparation and installation, and proof loading if required.

2. Each installer shall be re-qualified every 6 months for the duration of the project by the same qualifying procedure.

1-4.04. Before installing mechanical anchors in the WORK, anchor installers shall be trained and qualified at the Site by the manufacturer's representative. Training and qualification for each installer shall include at least:

1. Hole drilling procedure, hole preparation and cleaning techniques, and torqueing.

2. Each installer shall be re-qualified every 6 months for the duration of the project by the same qualifying procedure.

1-4.05. Defective anchors noted by the Special Inspector shall be replaced and re-installed by the CONTRACTOR without any additional compensation.

1.5 DELIVERY, STORAGE, AND HANDLING

1-6.01. Deliver products to job site in manufacturer’s or distributor’s packaging undamaged, complete with installation instructions.

1-6.02. Protect and handle materials in accordance with manufacturer’s recommendations to prevent damage or deterioration.

1-6.03. Anchoring adhesives shall be stored at temperatures prescribed by the manufacturer and must not be used beyond the expiration date.

1.6 SITE CONDITIONS

1-6.01. Post-installed anchors shall be installed in concrete having a minimum age of 21 days at time of anchor installation.

1-6.02. The anchor or fastener coating, plating, or steel type must provide suitable corrosion resistance for the environment in which the anchor or fastener is installed. Anchors, nuts, and washers in the locations listed below shall be fabricated from type 316 or 304 stainless steel:

1. buried locations

2. locations subject to seasonal or occasional flooding

3. inside buried vaults, manholes, and structures that do not drain through a gravity sewer or to a sump with a pump

4. locations indicated or designated by the ENGINEER to be provided with stainless steel anchors.

PART 2 -- PRODUCTS

2.1 ADHESIVE ANCHORS

2-1.01. General

1. The adhesive anchor system shall consist of: 1) adhesive product; and 2) threaded rod or reinforcing bar insert. The complete system shall be compatible as required by the adhesive manufacturer.

2. Adhesives shall be injectable, two-component, cartridge-type systems dispensed and mixed through a static mixing nozzle supplied by the manufacturer.

3. The evaluation report issued by ICC-ES or IAPMO-UES shall state the acceptability of the adhesive anchor for the intended purpose and location.

4. Adhesive anchors shall be permitted when regular ambient temperatures are consistent with manufacturer’s recommendation for long and short term temperatures.

5. Adhesive anchors shall not be used where anchors are subject to vibration or fire.

6. Adhesive anchors shall not be used in overhead applications.

7. Where required, adhesive shall be capable of being used in submerged applications once cured.

2-1.02. Adhesive Anchors in Concrete

1. Threaded rod inserts shall meet the requirements of Section 05500- Miscellaneous Metals.

2. Reinforcing dowel inserts shall meet the material requirements of Section 03310 – Cast-in-Place Concrete.

3. Adhesive for use in concrete adhesive anchors shall be certified for use in accordance with ICC-ES AC 308.

4. Where not detailed on the drawings, adhesive anchors shall be designed in accordance with ACI 318 as amended by the specific design provisions of ICC-ES AC 308.

5. Adhesive anchors shall have an evaluation report issued by ICC-ES or IAPMO-UES and shall have been tested and qualified for performance in cracked and uncracked concrete in accordance ICC-ES AC308 to resist static, wind, and earthquake (Seismic Design Categories A through F).

6. Adhesive anchors for concrete shall be HIT-RE 500 V3 by Hilti, or equal.

2.2 EXPANSION ANCHORS

2-2.01. General

1. Expansion anchors are post-installed torque-controlled mechanical expansion anchors used to resist structural loads.

2. Expansion anchors shall be an imperial sized, threaded stud with an integral cone expander, expansion clip, nut and washer.

3. Lead caulking anchors will not be permitted.

4. Non-embedded buried or submerged anchors shall be fabricated from stainless steel.

5. The evaluation report issued by ICC-ES or IAPMO-UES shall state the acceptability of the expansion anchor for the intended purpose and location.

6. Anchors subjected to dynamic or vibratory loading shall be suitable for the intended loading and location as indicated in the manufacturer's technical product data.

2-2.02. Expansion Anchors for Concrete

1. Anchors shall be designed in accordance with ACI 318, which requires post-installed mechanical anchors to be qualified according to ACI 355.2.

2. Anchors shall have an evaluation report issued by ICC-ES or IAPMO-UES and have been tested and qualified for performance in cracked and uncracked concrete in accordance with ACI 355.2 and ICC-ES AC193.

3. Expansion anchors shall be Kwik-Bolt TZ by Hilti, or equal.

2.3 SCREW ANCHORS

2-4.01. General

1. Screw anchors used in exterior and corrosive environments shall be fabricated from stainless steel.

2. The evaluation report issued by ICC-ES or IAPMO-UES shall state the acceptability of the screw anchor for the intended purpose and location.

3. Anchors subjected to dynamic or vibratory loading shall be suitable for the intended loading and location as indicated in the manufacturer's technical product data.

2-4.02. Screw Anchors for Concrete

1. Anchors shall be designed in accordance with ACI 318 as amended by the specific design provisions of ICC-ES AC193.

2. Anchors shall have an evaluation report issued by ICC-ES or IAPMO-UES and have been tested and qualified for performance in cracked and uncracked concrete in accordance with ICC-ES AC193.

3. Screw anchors for concrete shall be Kwik HUS-EZ (KH-EZ) by Hilti, or equal.

2.4 UNDERCUT ANCHORS

2-4.01. General

1. Undercut anchors are post-installed mechanical anchors that require pre-drilling and a special undercut notch configuration cut into the concrete before installation.

2. Self-undercutting anchors are post-installed torque-controlled mechanical anchors that cut their own undercut notch by application of a setting torque that forces a sleeve over a cone.

3. The evaluation report issued by ICC-ES or IAPMO-UES shall state the acceptability of the undercut anchor for the intended purpose and location.

4. Anchors subjected to dynamic or vibratory loading shall be suitable for the intended loading and location as indicated in the manufacturer's technical product data.

5. Undercut anchors used in exterior and corrosive environments shall be fabricated from stainless steel.

2-4.02. Undercut Anchors for Concrete

1. Anchors shall be designed in accordance with ACI 318 as amended by the specific design provisions of ICC-ES AC193.

2. Anchors shall have an evaluation report issued by ICC-ES or IAPMO-UES and have been tested and qualified for performance in cracked and uncracked concrete in accordance with ACI 355.2 and ICC-ES AC193.

3. Undercut anchors for concrete shall be HDA by Hilti, or equal.

PART 3 -- EXECUTION

3.1 INSTALLATION REQUIREMENTS

3-1.01. Post-installed anchors shall be installed in strict accordance with the manufacturer's instructions, the ICC-ES or IAPMO-UES report, and project specific design requirements indicated on the Contract Documents or in the design calculations provided by the CONTRACTOR per Section 1.3.D.

3-1.02. Where holes are drilled in concrete, holes shall be accurately and squarely drilled, and the holes shall be cleaned in accordance with the manufacturer's recommendations.

3-1.03. Post-installed anchors shall not be installed until the concrete has reached the required 21 days or per manufacturer's requirements, whichever is longer.

3-1.04. Acceptable installation and performance temperature ranges shall be verified with manufacturer's literature prior to installation. Minimum substrate temperatures shall be maintained during the full curing period as required by the manufacturer.

3-1.05. Adhesive anchors shall not be loaded until the adhesive has reached its indicated strength in accordance with the manufacturer's instructions.

3-1.06. The CONTRACTOR shall identify the position of reinforcing steel and other embedded items prior to drilling holes. Care shall be exercised in drilling to avoid damaging existing reinforcing or embedded items. The location of drilled holes shall be adjusted to avoid drilling through or cutting any existing reinforcing bars or embedded items. Notify the ENGINEER if reinforcing steel or other embedded items are encountered during drilling. Take precautions as necessary to avoid damaging prestressing tendons, electrical and communications conduit, and piping.

3-1.07. Core drilling of holes is not allowed.

3-1.08. Identification of reinforcing steel and/or embedded items, relocation of drilled holes and adjustments or modifications to anchored or fastened items shall be considered part of the WORK and shall be provided at no additional cost to the OWNER.

3-1.09. All abandoned drilled holes shall be repaired in accordance with Section 03900 Concrete Repair and Rehabilitation at no additional cost to the OWNER.

END OF SECTION

THIS PAGE LEFT INTENTIONALLY BLANK

SECTION 06100 - ROUGH CARPENTRY

PART 1 -- GENERAL

1.1 THE SUMMARY

1-1.01. The CONTRACTOR shall construct rough carpentry and appurtenant WORK, complete and in place, in accordance with the Contract Documents.

1-1.02. The WORK shall include, at least the following items:

1. Wood framing, including plates, studding, joists, rafters, purlins, and similar framing elements.

2. Wood blocking, furring, stripping, backing, and nailers, as indicated, or otherwise required for securing other WORK.

3. Plywood sheathing, board sheathing, sidings, and starter boards.

4. Rough hardware appurtenant to the WORK of this Section, as defined below.

1.2 REFERENCE SPECIFICATIONS, CODES, AND STANDARDS

2-1.01. Rough Carpentry shall be in accordance with the following standards, as applicable and as indicated:

1. Southern Pine Inspection Bureau

2. West Coast Lumber Inspection Bureau (WCLIB)

3. Western Wood Products Association

4. Redwood Inspection Service (RIS)

5. American Institute of Timber Construction (AITS)

6. American Plywood Association (APA)

7. American Hardboard Association (AHA)

8. ASTM International (ASTM)

1.3 CONTRACTOR SUBMITTALS

1-3.01. Furnish the following in accordance with Section 01300 – Submittal Procedures.

1. Manufacturers' catalogs showing rough hardware conforming to or equivalent to hardware indicated.

2. Fabrication and erection drawings for glued laminated beams and wood trusses or joists.

3. Certificates of compliance.

4. Certificate of Conformance indicating conformance and grade compliance with AITC A 190.1 - Structural Glued Laminated Timber, Production Requirements for Glulam, by the American Institute of Timber Construction.

PART 2 -- PRODUCTS

2.1 UNTREATED LUMBER

2-1.01. Grading: Lumber shall be graded in accordance with the rules of one of the following associations: "Grading Rules for Southern Pine Lumber" of the Southern Pine Inspection Bureau; "Standard Grading and Dressing Rules No. 17" of the West Coast Lumber Inspection Bureau (WCLIB); "Grading Rules for Western Lumber" published by Western Wood Products Association; or “Standard Specification for Grades of California Redwood Lumber” of the Redwood Inspection Service (RIS).

2-1.02. Grade Marking: Each piece of lumber shall bear the official grade mark of one of the above-mentioned grading rules. The association standards selected for grading and grade marking of the lumber shall be as acceptable to the ENGINEER.

2-1.03. Size Dressing: Lumber, except as otherwise indicated, shall be dressed to size in accordance with the standards of the association under which the lumber is graded. Lumber shall be S4S unless otherwise indicated.

2-1.04. Drying: Lumber incorporated in the WORK, except where otherwise indicated, shall be air or kiln dried to a moisture content of not more than 19 percent and not less than one percent.

2.2 TREATED LUMBER

2-2.01. Marking: Each piece of treated lumber shall bear the approval mark of an approved testing agency.

2-2.02. Kiln Drying: Kiln-dried lumber shall be treated with a water-borne preservative and shall have a maximum moisture content of 15 percent after treatment.

2-2.03. Pressure-Treated Lumber: Pressure-treat in accordance with AWPA C1 - Manual of Recommended Practice, Standard for Preservative Treatment by Pressure Process – All Timber Products. Preservative shall conform to American Wood Preservers Assn. P5 – Standard for Waterborne Preservatives. Creosote shall not be used.

2-2.04. Preservative: Two thorough coats of preservative, **Zehrung Zerpel, Sherwin Williams, Kemwood Penta**, or equal, shall be applied at least 2 hours before installation, to surfaces that come in contact with, or are set close to concrete and plaster, except lumber indicated to be pressure-treated. Tank dipping or pressure-treating may be used.

2-2.05. Cuts: Wherever necessary to cut, notch, dap, drill, or frame treated lumber, newly cut or bored surfaces shall be treated with 2 heavy coats of the same preservative used in the original treatment. The minimum penetration depth shall be 1/4-inch.

2.3 ROUGH HARDWARE

2-3.01. General: The term "rough hardware" shall include nails, screws, lag screws, bolts, nuts, washers, plates, metal fasteners, and framing anchors; anchor bolts which are to be embedded into concrete, concrete masonry, or brick masonry; and similar items employed in erection and construction of the rough carpentry WORK. Rough hardware shall be of standard manufacture, approved by a recognized agency for the intended applications and shall be provided with laboratory test results on capabilities when requested by the ENGINEER. Hardware items shall be steel unless otherwise indicated.

2-3.02. Anchors and Fasteners: Anchors and fasteners for securing wood items, unless otherwise indicated, shall be as follows:

1. Bolts, nuts, and studs shall conform to the following:

    a. ASME B18.5 - Round Head Bolts

    b. FF-N-836E – Nut: Square, Hexagon, Cap, Slotted, Castle. Knurled, Welding, and Single Ball Seat

    c. FF-S-1362 – Stud, Plain, General Purpose

    d. FF-B- 575C – Bolts, Hexagon and Square

2. Nails and staples shall conform to ASTM F1667 – Driven Fasteners - Nails, Spikes and Staples, and shall be the type and size best suited for the intended application. Nails shall be galvanized steel, aluminum, or stainless steel, as appropriate, where exposed to weather. Nails used for fastening plywood to nailers on steel beams shall be of wire gauge noted for common nails, but of 1/2 length. Nails used for exterior (exposed to view) plywood siding, siding, or trim shall be stainless steel.

3. Wood screws shall conform to the requirements of Federal Specification FF-S-111D(1) – Screw, Wood, for the style and material as indicated or be best suited for the purpose. Wood screws shall be galvanized where exposed to view or to weather.

4. Lag screws or lag bolts shall conform to the requirements of ASME B18.2.1 - Square and Hex Bolts and Screws, for the type and grade best suited for the purpose. Lag screws or lag bolts shall be galvanized where exposed to view or weather.

5. Toggle bolts shall conform to the requirements of Federal Specification FF-B-588D – Bolt, Toggle: and Expansion Sleeve, Screw, for the type and grade best suited for the purpose.

6. Expansion shields shall be in accordance with Section 05 50 00 - Miscellaneous Metalwork.

7. Power-driven pins shall be in accordance with Section 05 50 00 - Miscellaneous Metalwork.

2-3.03. Metal Framing Devices: Metal framing devices shall be specially-designed joist hangers, header hangers, framing anchors, post anchors, and structural framing connectors fabricated from steel, hot-dip galvanized after fabrication, and be designed to conform to code requirements. Documentation of load tests by an independent testing laboratory shall be submitted if requested by the ENGINEER. The framing devices shall be as manufactured by **Silver Metal Products, Inc., Easy Ardes Rib, Simpson Co., Heckmann Building Products**, or equal. The framing devices shall be equal or superior to those indicated as per design, friction, and loading. The framing device shall be provided complete with the proper sized nails, bolts, lag bolts, or other required fasteners called for in the design calculations for the framing devices.

2-3.04. Plyclips: Plyclips shall be extruded aluminum clips, manufactured from 6063-T6-aluminum alloy and be designed for intended use. Size shall be as required for plywood or shall be as indicated.

2.4 MISCELLANEOUS PRODUCTS

2-4.01. Building Paper: Building paper or felt shall be non-perforated, asphalt-saturated organic felt conforming to ASTM D 226 – Asphalt-Saturated Organic Felt Used in Roofing and Waterproofing, 15 lb/100 sq ft.

2-4.02. Termite Shields: Termite shields shall be not less than 26-gauge, zinc-coated steel or 30-gauge, terne steel coated with 40 lb of coating material per 100 square feet.

PART 3 -- EXECUTION

3.1 GENERAL

3-1.01. Preliminaries: Rough carpentry shall be as indicated and as necessary for complete WORK. The CONTRACTOR shall verify drawing dimensions with actual field conditions and shall inspect related WORK and adjacent surfaces, and shall report to the ENGINEER conditions that could prevent proper execution of this WORK.

3-1.02. Work Coordination and Performance: The CONTRACTOR shall coordinate the subcontractors and trades doing related work. Work of this section shall be carefully planned and laid out. WORK shall be performed under the direction of a capable, experienced supervisor.

3-1.03. Rough Hardware: Rough hardware not otherwise indicated that is necessary for the satisfactory execution of framing, including nails, spikes, dowels, fasteners, and similar incidentals shall be provided by the CONTRACTOR. Rough hardware shall be coordinated, furnished, installed, and embedded as indicated and as required for completeness.

3.2 FASTENERS AND FRAMING DEVICES

3-2.01. Nailing: Where nail spacing is not otherwise regulated by the Building Code, nails shall not be driven closer together than 1/2 their length unless driven in drilled holes, nor driven closer to the edge of a member than 1/4 of their length. Where necessary to prevent splitting, holes shall be drilled slightly smaller than nail diameters. The nails shall penetrate the second or farther member not less than 1/2 the nail length. Common nails shall be used unless otherwise indicated.

3-2.02. Bolts and Nuts: Malleable or cut-steel washers shall be provided under bolt heads and nuts except where bearing on steel plates or other steel attachments or where flat-head countersunk bolts are indicated. Bolt holes shall be drilled 1/32-inch to 1/16-inch larger diameter than the bolts they are to accommodate and shall be bored true-to-line. Members shall be clamped together and bolts shall be driven in place and nuts shall be drawn up tightly. Bolts shall be drawn tight again immediately prior to enclosing with finish or, if left exposed, upon completion of other WORK. Holes at anchor bolts embedded in concrete may be 1/16-inch larger than bolt diameter.

3-2.03. Screws: Lag and wood screws shall be screwed, not driven, into place. Holes to receive lag screws shall be bored first of the same diameter and depth as shank, then continued to depth equal to length of screw, with diameter equal to the base of the screw thread. Screws shall penetrate into the farther member a distance equal to a least 7 times the diameter of the screw shank. Washers shall be installed under each lag screw head bearing on wood.

3-2.04. Metal Framing Devices: Metal framing devices shall be provided where indicated. Nails for the framing devices shall be as furnished or recommended by the manufacturer of the anchor device. Nails shall be driven to their full depth at holes in anchors. Bolt and lag fasteners shall be drawn tight.

3.3 FRAMING

3-3.01. Strength Considerations: Structural wood framing members shall not be spliced between bearing points or supports. Approval shall be obtained from the ENGINEER before cutting of any wood members that may weaken the structure. Due care shall be exercised in placing framing so that structural and other important members do not require cutting for openings, pipes, vents, conduits, or ducts. Bearing surfaces on which wood structural members are to rest shall be finished to give full, true, and even support. Wedges or shims shall not be used to correct faulty WORK. Wood members that have been split or otherwise damaged to such an extent as to impair their strength shall be removed and replaced by the CONTRACTOR as part of the WORK.

3-3.02. Cutting and Notching: Only skilled workmen shall be used for cutting and framing of wood members required to accommodate structural members, for routing of piping, conduit, ducts, and for the installation of mechanical, electrical, or other apparatus or equipment. Members shall not be cut, notched, or bored more than 1/4 of their depth without adequate and approved reinforcing.

3-3.03. Blocking and Backing: Blocking and backing in walls and ceilings shall be nominal 2-inch thick material of a depth as needed and shall be accurately located around light fixtures, ceiling registers, grilles, and other required mechanical and electrical items. The blocking shall fit snugly and shall be spiked into the supporting framing members. Wood blocking (backing) to receive sheathing, siding, metal lath, and gypsum board shall be provided wherever necessary for securing the facing materials.

3-3.04. Backing for Specialties and Accessories: Backing shall be accurately located and installed for building specialties, toilet accessories, and finish hardware items as required.

3-3.05. Furring: Furring shall be 2-inch by 3-inch wood studs spaced at 16-inches on centers, laid flat to the wall. Light metal framing may be substituted at non-thermal wall conditions in accordance with Section 05 40 00 - Cold Formed Metal Framing. Other sizes and spacing of furring or stripping shall be as indicated.

3-3.06. Sand Blasting: Members required to be sandblasted shall be lightly sandblasted. Field sandblasting shall conform to requirements of governing authorities.

END OF SECTION

SECTION 07190

SURFACE APPLIED WATER REPELLENTS

PART 1 -- GENERAL

1.1 SUMMARY

1-1.01. The Contractor shall provide Surface Applied Water Repellants and appurtenant Work, complete and in place, in accordance with the Contract Documents.

1.2 REFERENCES

1-2.01. Where reference is made to any of the below, the revision in effect at the time of bid opening shall apply.

American Society of Testing and Materials (ASTM)	
ASTM C 140	Water Repellency in Water Absorption
ASTM D 3278	Standard Test Method for Flashpoint of Liquids by Small Sealed Closed-End Apparatus
ASTM E 514	Standard Test Method for Water Penetration and Leakage through Masonry
Environmental Protection Agency (EPA): Method 24	

1.3 CONTRACTOR SUBMITTALS

1-3.01. The Contractor shall furnish submittals in accordance with Section 01300 – Submittal Procedures.

1-3.02. Literature: Manufacturer's specifications, technical data, installation methods, and maintenance instructions.

1-3.03. Warranty: Submit a copy of the warranty.

1-3.04. Certifications:

1. Certification by the Surface Applied Water Repellant Manufacturer that the water repellant provided is suitable for, and compatible with, the required installation.

2. Certification by the Surface Applied Water Repellant Manufacturer that the water repellant is suitable for, and compatible with, the masonry veneer, mortar, and admixtures provided under Section 04816 – Masonry Veneer.

3. Certification of Manufacturer qualifications demonstrating compliance with the qualifications requirements indicated. Include a list of 5 similar completed projects with addresses of the project location, date of project completion, Manufacturer's products, and contact information of the consultant firm of record, general contractor and Owner.

4. Certification of installer qualifications demonstrating compliance with the qualifications requirements indicated. Include a list of 5 similar completed projects with addresses of the project location, date of project completion, and contact information of the consultant firm of record, general contractor and Owner.

5. Certification by the Manufacturer's field representative that surfaces have been prepared and the products have been applied in accordance with the Manufacturer's recommendations.

6. Certification by the Manufacturer that the products provided achieves a Class E rating, when tested in accordance with ASTM E 514.

7. Certification by the Manufacturer that the products supplied complies with local regulations controlling the use of volatile organic compounds (VOCs).

8. Certification by the Manufacturer's field representative that the products provided achieves a passing result when tested in accordance with RILEM Test Method II.4.

9. When requested by the Engineer, furnish other certifications as may be required to demonstrate compliance with the Contract Documents.

1-3.05. Application Schedule: Furnish a detailed and complete application schedule indicating location and detail of installation.

1-3.06. Samples: When requested by Engineer, submit samples of the materials proposed. Samples shall be clearly marked to show the Manufacturer's name, product identification, finish and color. New samples shall be resubmitted of each, as required, until approved by Engineer. Upon approval, the samples shall become the standard for acceptance for the project with regard to color, finish and quality of each item. Approval of samples shall not relieve Contractor from compliance with the Contract Documents.

1.4 QUALITY ASSURANCE

1-4.01. Single Source Responsibility: Surface Applied Water Repellants shall be provided by a single Manufacturer.

1-4.02. Manufacturer Qualifications:

1. Surface Applied Water Repellant Manufacturer shall have a minimum of 20 years of water repellant manufacturing experience.

2. Surface Applied Water Repellants Manufacturer shall have a minimum of 5 similar successful projects over the most recent 10 years, employing similar products, materials, applications, and performance requirements.

3. Manufacturers without these qualifications will not be accepted.

1-4.03. Installer Qualifications:

1. Installer shall have a minimum of 5 years' experience in the successful completion of at least 5 projects of similar size and scope, employing similar products, materials, applications, and performance requirements.

2. Installer shall be trained, certified, and authorized by the Manufacturer to install the Manufacturer's product, when applicable.

3. Installers without these qualifications will not be accepted.

1-4.04. Manufacturer's Technical Field Representative: The Contractor shall arrange for a Manufacturer's technical field representative to be on Site, at the beginning of water repellent application (and periodically throughout), to train the installers and to supervise the Work. The Manufacturer's technical field representative shall observe as necessary to certify in writing that the completed Work has been performed according to the Manufacturer's instructions.

1-4.05. Field Sample:

1. Coordinate field sample with other field samples required in other Sections.

2. Prior to installation, erect sample wall panel mock-up on Site using materials and joint details required for final Work. Provide special features as directed.

3. The field sample shall not exhibit any deterioration of color or finish of the substrate, including but not limited to discoloration, staining, streaking, and fading.

4. Apply material in accordance with the requirements in Part 3 – Execution, below.

5. Manufacturer's technical field representative shall be present to review technical aspects and conduct the field sample installation.

    a. Apply Surface Applied Water Repellant to 2-feet (.61 m) by 2-feet (.61 m) test panel area, in accordance with Manufacturer's written instructions, to determine coverage rates, effectiveness, aesthetics, and desired results.

    b. Allow 10 days or until test panels are thoroughly cured before evaluating final appearance and results.

    c. Conduct RILEM test method II.4 to evaluate water repellent performance.

    d. Do not begin full-scale application until test panels are inspected and approved by the Engineer.

    e. Do not begin full-scale application until test panels are inspected and approved.

6. Obtain the Engineer's acceptance of qualities of field sample before installation. Modify and/or reconstruct field sample at the direction of Engineer until acceptance. Retain field sample during construction as a standard for judging completed Work. Do not alter, move, or destroy field sample until directed by the Engineer.

7. Acceptance of field sample shall not relieve the Contractor from compliance with the Contract Documents.

1.5 SPECIAL WARRANTY PROVISIONS

1-5.01. The Contractor shall furnish Manufacturer's extended 10-year warranty to cover defects in materials, products, and manufacturing workmanship.

1-5.02. The Contractor shall furnish separate, but concurrently running, 5-year written warranty to cover defects in installation and associated later.

1-5.03. All warranty items shall be non-prorated for the entire warranty period.

1-5.04. The term of the warranty shall begin on the date of Substantial Completion.

PART 2 -- PRODUCTS

2.1 GENERAL

2-1.01. Surface Applied Water Repellant shall be a water-based, clear silane/siloxane sealer designed to provide protection for split-faced, lightweight and standard concrete masonry units.

2-1.02. Surface Applied Water Repellant shall be suitable for, and compatible with, masonry veneer, masonry mortar, and admixtures in Section 04816 – Masonry Veneer.

2.2 SURFACE APPLIED WATER REPELLANT

2-2.01. Manufacturer and Product, or Equal:

1. Subject to the requirements herein, provide Manufacturer and product listed below, or equal.

   a. Master Builders; MasterProtect H 177.

2. Description:

   a. Surface Applied Water Repellant shall comply with standard specification, ASTM D 3278 (>212 deg F [> 100 deg C]), ASTM C 140 (45 percent reduction in weight gain), ASTM E 514 (99 percent reduction in weight gain), and VOC content shall be less than 2.50 lb/gal (1.13 kg/liter) per EPA method 24.

PART 3 -- EXECUTION

3.1 DELIVERY, STORAGE, AND HANDLING

3-1.01. Deliver materials to Site in Manufacturer’s original, unopened packages, containers, or bundles with labels intact, which clearly identify contents.

3-1.02. Store materials carefully in accordance with the Manufacturer’s written instructions, in an area that is protected from deleterious elements, and in a manner that will prevent damage to the products.

3-1.03. Handle materials in strict accordance with Manufacturer's written instructions.

3.2 APPLICATION SCHEDULE

3-2.01. Surface Applied Water Repellant shall be applied to above grade, exterior masonry veneer, exposed concrete masonry blocks, and all precast sills and caps.

3-2.02. Surface Applied Water Repellant shall also be applied elsewhere, where indicated on the Contract Drawings.

3.3 PROJECT CONDITIONS

3-3.01. Comply with Manufacturer’s written instructions for environmental conditions before, during, and after installation.

3-3.02. Protect surrounding Work from damage that may result from operations under this Section.

3-3.03. Protect against uneven and excessive evaporation and from strong flows of dry air, both natural and artificial.

3.4 INSPECTION

3-4.01. The Contractor shall be totally responsible for the proper performance and completion of the Work under this Section.

3-4.02. Systems and components shall be inspected before installation.

1. Damaged or defective items shall be rejected and marked as such and shall be removed from the Site.

3-4.03. The Contractor shall verify coordination with adjacent Work.

1. Examine substrates, areas, and conditions where the product will be installed for compliance with the requirements for installation, taking into account tolerances, and other conditions affecting performance of installed the product.

a. Surfaces to receive the product shall be dry, free of oil, dirt, dust and other contaminants and loose materials, and shall be in the proper condition as indicated by the Manufacturer prior to the application of the Surface Applied Water Repellants materials.

b. Masonry, concrete, and cementitious products shall have been completely cured and the surface shall be dry and free from frost at the time of application.

2. Notify the Engineer in writing of conditions detrimental to the proper and timely completion of the Work. Do not proceed with the Work until unsatisfactory conditions have been corrected in an acceptable manner.

3. Commencement of the installation by the Contractor shall indicate Contractor's acceptance of the substrate, areas, and conditions.

3.5 SURFACE PREPARATION

3-5.01. Surface preparation shall be in compliance with the applicable references and with the Manufacturer's written instructions.

3-5.02. Coatings, including curing compounds, form release agents, and other substances shall be removed as recommended by the Surface Applied Water Repellant Manufacturer.

3-5.03. Substrate shall be swept to remove all loose materials prior to beginning application.

3.6 PREPARATION

3-6.01. Sequence installation properly with the installation and protection of other Work, so that neither will be damaged by the installation of the other.

3.7 INSTALLATION

3-7.01. Installation shall comply with the requirements of the Contract Documents, with applicable references, and with Manufacturer's written instructions. Where a conflict occurs among these requirements, the more stringent shall apply, as directed by the Engineer.

3-7.02. Surfaces shall receive complete coats and coverage rates as recommended in writing by the Manufacturer.

3.8 CLEANING, FINISHING, AND PROTECTION

3-8.01. Adhesive papers used for masking which become firmly bonded when exposed to heat and/or light shall not be used.

1. Remove masking film and temporary labels as soon as possible after installation. Films and labels left in place after installation shall be the responsibility of the Contractor.

2. Residue shall not be left on any surfaces.

3. The surfaces of materials adjoining the product shall be cleaned free of overspray and smears of the product or other soiling due to the installation of the product.

3-8.02. Upon completion of the application, the product and appurtenances shall be cleaned of dirt and other foreign matter to the satisfaction of the Engineer.

1. Cleaning shall be performed again immediately prior to acceptance of the WORK, as determined by the Engineer.

2. Cleaning shall be performed in accordance with the Manufacturer's written instructions.

3-8.03. The Contractor shall make adjustments required and retest until accepted.

3-8.04. The product shall be protected from damage from subsequent construction operations.

3-8.05. Damaged or defective items shall be removed and replaced at the direction of the Engineer.

3-8.06. When the product Work is completed, remove unused materials, containers, and equipment, and clean the Site of Surface Applied Water Repellant debris.

END OF SECTION

THIS PAGE LEFT BLANK INTENTIONALLY

SECTION 07630 - FLASHING AND SHEET METAL

PART 1 -- GENERAL

1.1. THE REQUIREMENT

1-1.01. The CONTRACTOR shall provide sheet metal and appurtenant WORK, complete and in place, in accordance with the Contract Documents.

1-1.02. The principal items of sheet metal WORK shall include sheet metal flashings, collars, pitch pockets (pans), equipment platforms, equipment (sleeper) supports at all roof penetrations which are not provided as part of the roofing system, and all other components necessary to make building weathertight.

1.2. CONTRACTOR SUBMITTALS

1-2.01. Furnish submittals in accordance with Section 01300 – Submittal Procedures.

1-2.02. **Product Data**: Manufacturer's specifications, literature, and published installation instructions, and maintenance instructions for all sheet metal products.

1-2.03. **Shop Drawings**: Show materials, gauges, finishes, layout, jointing, sizes, profiles, fabrication of special shapes, fasteners, and method of attachment to adjacent construction.

1-2.04. **Samples**: Color and other samples, where required for color selections and/or review by the ENGINEER.

PART 2 -- PRODUCTS

2.1. GENERAL

2-1.01. Sheet metal shall be aluminum, unless otherwise indicated. Sheet metal WORK in connection with roofing shall be in accordance with roofing manufacturer's published specifications. Sheet metal shall be finished with baked on factory-applied Kynar system having a minimum dry film thickness of 2-mils, unless otherwise indicated.

2-1.02. Material thickness shall be not less than thickness indicated. Where thicknesses are not indicated, the thickness shall be not less than that required by referenced standards found in AArchitectural Sheet Metal Manual (ASMM).

2.2. ALUMINUM PRODUCTS

2-2.01. Aluminum shall be 0.032-inch minimum thickness and shall conform to ASTM B 209 - Aluminum and Aluminum-Alloy Sheet and Plate, alloy 3003-H14, with clear anodized finish AA-C12-A41, unless indicated otherwise. Thickness of aluminum to be welded shall be as necessary for welding method being used.

2-2.02. Reglets shall be of extruded aluminum with protective coating such as manufactured by **Superior Concrete Accessories, Morrison and Company Cushion-Lock, Fry Reglet,** or equal.

2.3. FERROUS METALS

2-3.01. Galvanized steel shall be 24-gauge minimum thickness conforming to ASTM A 653 - Steel Sheet, Zinc-Coated (Galvanized) or Zinc-Iron Alloy-Coated (Galvannealed) by the Hot-Dip Process.

2-3.02. Stainless steel shall be 24-gauge minimum thickness conforming to ASTM A 176 - Stainless and Heat-Resisting Chromium Steel Plate, Sheet, and Strip, Type 304, dull No. 2D finish. Stainless sheet metal wainscots, workbench, top units, sinks, sinks and counters shall not be painted.

2-3.03. Terne metal for roofing and roofing products shall be not less than 40 lb weight conforming to Federal Specification QQ-T-201E - Terneplate, For Roofing and Roofing Products.

2.4. LEAD AND SOLDERING MATERIALS

2-4.01. Lead shall be 4 to 6 percent antimony and remainder shall be lead. Lead sheet shall be soft temper, except hard temper for flanges. Weight shall be not less than 4 lb/sq ft unless otherwise indicated.

2-4.02. Solder shall conform to ASTM B 32 - Solder Metal, Alloy Sn, 50 percent tin, 50 percent lead.

2-4.03. Soldering flux shall be of a type not injurious to metal surface being treated.

2.5. FASTENERS

2-5.01. Fastening devices shall be of the same material as the sheet metal being used or corrosion-resistant metal compatible with sheet metal being used. Fasteners exposed to the weather shall have neoprene washers of 0.04-in minimum thickness. A rubber-type washer shall be used beneath the aluminum washer or fastener head where weathertightness is required.

2.6. PLASTIC CEMENT

2-6.01. Plastic cement shall conform to ASTM D 2822 - Asphalt Roof Cement.

2.7. SEALING MATERIALS

2-7.01. Sealants shall be in accordance with Section 079213 - Sealants and Caulking or shall be of the silicone type. Colors shall be selected by the ENGINEER from manufacturer's full range of standard colors.

2-7.02. Sealer tape shall be polyisobutylene sealer tape specifically formulated for setting flanges on bituminous roofing.

2.8. COATING MATERIALS

2-8.01. Primer coat for galvanized steel shall conform to Federal Specification TT-P-641G(1) - Primer Coating, Zinc Dust-Zinc Oxide (For Galvanized Surfaces), Type II.

2-8.02. Asphaltic coating compound shall conform to ASTM D 1187 - Asphalt-Base Emulsions for Use as Protective Coatings for Metal.

2.9. SHOP FABRICATION REQUIREMENTS

2-9.01. All aluminum shall be welded where indicated. Welding shall conform to Reference Standards.

2-9.02. Galvanized steel corner joints shall be soldered. Other joints shall be as indicated, or as required by the Reference Standards.

2-9.03. Downspouts shall be of sizes indicated.

2-9.04. Elongated holes shall be provided where necessary for material expansion and where indicated in Reference Standards.

2-9.05. All WORK and finishes shall be protected from scratches and abrasions.

2-9.06. Flashing, reglets and counter-flashing and associated flashing shall be fabricated by the same manufacturer and be installed as a complete flashing system. Flashing shall be creased longitudinally or otherwise formed with sufficient spring action to hold bottom edges firmly against base flashing or similar material.

2-9.07. Intersecting corners of copings shall be accurately fitted and [welded] [soldered]. Corners may be shop-assembled, manufactured, or extruded units. Coping shall be per "Architectural Sheet Metal Manual" (ASMM; 5th ed. Chantilly, VA: Sheet Metal and Air Conditioning Contractors National Association (SMACNA), 1993), Figure 3-1, except modified as indicated, with Figure 3-2, Alternate 5 seams that allow for 1/4-inch expansion per each 10-ft of length.

PART 3 -- EXECUTION

3.1. PRODUCT DELIVERY, STORAGE, AND HANDLING

3-1.01. **Delivery of Materials:** Materials shall be delivered to Site in manufacturer's original, unopened packages or bundles with labels intact and clearly identifying products.

3-1.02. **Storage:** All materials shall be carefully stored in accordance with the manufacturer's instructions, in an area that is protected from deleterious elements, and in a manner that will prevent damage to the products.

3.2. GENERAL

3-2.01. The CONTRACTOR shall coordinate the flashing necessary with the different trades to make sure all items which penetrate the roof are provided with all necessary sheet metal items and WORK, such as pipes, ducts, support racks, equipment platforms or sleepers, and supports. Sheet metal shop manufactured curbs, equipment supports, and equipment platforms shall be provided where prefabricated curbs, supports, or platforms are not required to be provided under other Sections.

3-2.02. All WORK shall conform to Reference Standards. Flashing WORK shall be coordinated with roofing WORK. Sheet metal and roofing shall provide a weather-tight and watertight assembly.

3-2.03. Sheet metal WORK shall be accurately formed to dimensions and shapes indicated. WORK shall be fitted snugly, with straight, true lines with exposed faces aligned in proper plane, free from waves and buckles. Arises and angles shall have true and sharp lines, and surfaces shall be free from waves and buckles. Exposed edges shall be hemmed. Holes for fasteners within sheet metal WORK exposed to temperature changes shall be elongated holes for material expansion and movement.

3-2.04. Sheet metal WORK shall be furnished complete with supports, hangers, bracing, anchors, and other devices as required for reinforcement and proper attachment to adjacent construction. Fastenings shall be concealed wherever possible. Joints, fastenings, reinforcements, and supports shall be sized and located as required to preclude distortion or displacement due to thermal expansion and contraction.

3-2.05. Surfaces upon which sheet metal is to be placed shall be dry, smooth, even, and free of any projections and hollows. Sheet metal shall be laid with all joints true and even and firmly attached with all fastener heads flush with the top surface.

3-2.06. The underlayment shall be overlapped at least 2-inches so as to shed water and shall be secured along the lapped edges. Aluminum or stainless steel fasteners shall be used with aluminum sheet metal.

3-2.07. Dissimilar materials shall be isolated with 2 coats of asphaltic paint, asphaltic coating compound, or sealer tape. Only stainless steel fasteners shall be used to connect isolated dissimilar metals.

3-2.08. Joints shall be sized and spaced to permit sheet movement for thermal expansion and contraction of 1/4-inch per 10-ft length, on 100 degree F temperature difference. Holes for fasteners or anchors shall be elongated to provide for movement.

3-2.09. Roofing sheet metal items shall be built into the roofing in strict accordance with directions of roofing manufacturer.

3.3. INSTALLATION

3-3.01. Flashing at vertical surfaces shall be installed at intersections of roof with vertical surfaces and at projections through roof. Corner units shall be factory-fabricated and shall have mitered soldered or welded corner joints, and shall be installed with 3-inch (min) lap joint over flashing on each side.

3-3.02. Flanges of sheet metal items shall be set on continuous sealer tape on top edge envelope ply of roofing. Flanges shall be nailed through sealer tape at 3-inch (max) spacing or securely fastened per Reference Standards.

3-3.03. Stainless steel wainscots shall be set in waterproof adhesive. Bottom of wainscot shall be surface screwed into blocking with stainless steel countersunk flat head screws. Top and sides shall have concealed hemmed edge and be concealed cleat fastened. Stainless steel wainscots shall not be painted.

3.4. PROTECTIVE COATING

3-4.01. The CONTRACTOR shall provide protective coating, per Section 09940 - Protective Coatings, on all installed visible sheet metal products that are not provided with pre-finish coating system. Color shall match the adjacent surface materials color. The CONTRACTOR shall obtain final color approval from the ENGINEER prior to finish coat application. Colors may vary for each adjacent material.

- END OF SECTION -

THIS PAGE LEFT BLANK INTENTIONALLY

SECTION 07920 – SEALANTS AND CAULKING

PART 1 -- GENERAL

1.1. SUMMARY

1-1.01. Section Includes:

1. Sealants and caulking.

1-1.02. Related Requirements

01300 – Submittal Procedures

1.2. REFERENCE SPECIFICATIONS, CODES, AND STANDARDS

1. Where reference is made to any of the below, the revision in effect at the time of bid opening shall apply.

2. American Society for Testing and Materials (ASTM):

   a. ASTM C 920 - Elastomeric Joint Sealants

1-2.01. ASTM D 1752 - Preformed Sponge Rubber and Cork Expansion Joint Fillers for Concrete Paving and Structural Construction.

1. Sealant, Waterproofing, and Restoration Institute (SWRI).

1.3. SUBMITTALS

1-3.01. Furnish submittals in accordance with Section 01300 – Submittal Procedures.

1-3.02. The Contractor shall coordinate color samples with other Sections through the submittal process, as required by the Engineer.

1.4. ACTION SUBMITTALS

1-4.01. Product Data

1. Manufacturer’s specifications, technical data, installation methods, and maintenance instructions, and the following:

2. Joint width and depth tables.

3. Manufacturer’s full range color charts, indicating custom color availability, for color selection by Owner.

1-4.02. Certifications:

1. Certification of installer qualifications demonstrating compliance with the qualifications requirements indicated. Include a list of 5 similar completed projects with addresses of the project location, date of project completion, and contact information of the consultant firm of record, general contractor, and owner.

2. Certification by the Manufacturer's technical field representative that surfaces have been prepared and the products have been applied in accordance with the Manufacturer's recommendations.

3. Certification from an independent testing laboratory that the submitted materials meet the requirements of the references indicated.

1-4.03. Application Schedule

1. Furnish a detailed and complete application schedule indicating location and detail of installation.

1-4.04. Samples

1. When requested by the Engineer, submit samples of the materials proposed. Samples shall be clearly marked to show the Manufacturer's name, product identification, finish, and color. New samples shall be resubmitted of each, as required, until approved by the Engineer. Upon approval, the samples shall become the standard for acceptance for the project with regard to color, finish, and quality of each item. Approval of samples shall not relieve the Contractor from compliance with the Contract Documents.

1.5. QUALITY ASSURANCE

1-5.01. Single Source Responsibility

1. Sealants and Caulking shall be provided by a single Manufacturer, each.

1-5.02. Qualifications

1. Manufacturer

   a. Sealants and caulking Manufacturer shall have a minimum of 20 years of sealants and caulking manufacturing experience.

2. Installer

   a. Installer shall have a minimum of 5 years' experience in the successful completion of at least 5 projects of similar size and scope, employing similar products, materials, applications, and performance requirements.

1-5.03. Manufacturer's Technical Field Representative

1. The Contractor shall arrange for a Manufacturer's technical field representative to be on Site for at least 1 day, beginning at the start of surface preparation and continuing through application, to train the installers and to supervise the Work. The Manufacturer's technical field representative shall observe as necessary to certify in writing that the completed Work has been performed according to the Manufacturer's instructions.

1-5.04. Sealant and caulking Work shall comply with the following references:

1. SWRI.

2. ASTM C 920.

1.6. WARRANTY

1-6.01. Manufacturer

1. Furnish Manufacturer's 5-year written warranty to cover defects in materials, products, and manufacturing workmanship.

1-6.02. Special Warranty

1. The Contractor shall furnish separate, but concurrently running, 5-year written warranty to cover labor.

1-6.03. Warranties shall be non-prorated for the entire warranty period.

1-6.04. The term of the warranties shall begin on the date of Substantial Completion.

PART 2 -- PRODUCTS

2.1. GENERAL

2-1.01. Sealant and caulking, including compressible filler and joint backing, shall be recommended by the Manufacturer for the installation indicated.

2-1.02. Sealant and caulking, including compressible filler and joint backing, shall be suitable for, and compatible with, the required installation.

2-1.03. Sealant and caulking, including compressible filler and joint backing, shall be suitable for, and compatible with, the substrates and surfaces indicated.

2-1.04. Refer to Section 03 32 00 – Joints in Concrete for joint treatment in concrete hydraulic structures.

2-1.05. Refer to Section 07 84 00 – Fire Safing and Fire Stopping Sealants for fire-rated applications.

2-1.06. Colors for sealants and caulking above grade and exposed to view shall be selected by the Owner from Manufacturer's full color range, including custom colors.

2.2. INTERIOR AND EXTERIOR SEALANTS (HORIZONTAL OR SLOPED PLANES)

2-2.01. Manufacturer and Product, or Equal:

1. Subject to the requirements indicated, provide Manufacturer and product listed below, or equal:

    a. **MasterSeal SL2** by **BASF**, including primer as recommended by Manufacturer.

2-2.02. Description: Two part, pour grade polyurethane base, ASTM C 920, Type M, Grade P, Class 25, Use T, NT, M, A, and I.

2.3. INTERIOR AND EXTERIOR SEALANTS (VERTICAL PLANE)

2-3.01. Manufacturer and Product, or Equal:

1. Subject to the requirements indicated, provide Manufacturer and product listed below, or equal:

    a. **MasterSeal NP2** by **BASF**, including primer as recommended by Manufacturer.

2-3.02. Description: Multi-component, gun grade, polyurethane ASTM C 920, Type M, Grade NS Class 25, Use NT, T, M, A, G, and O.

2.4. COMPRESSIBLE FILLER

2-4.01. Manufacturer and Product, or Equal:

1. Subject to the requirements indicated, provide Manufacturer listed below, or equal:

    a. Hohmann & Barnard.

2-4.02. Description:

1. Compressible filler shall be an impregnated preformed compressible sealant, produced by combining permanently elastic, high density open cell, polyurethane foam with stabilizing acrylics. Compressible filler shall be supplied pre-compressed in a tape form with a PSA on one side.

2. Compressible filler shall be compatible with sealant Manufacturer's product and shall not stain the sealant nor the materials to which applied.

2.5. JOINT BACKING (BACKER ROD)

2-5.01. Description:

1. Joint backing for joints in superstructure shall be approved, resilient, closed cell polyethylene rods of diameters to suit joint conditions. Joint backing shall comply with ASTM D 1752, Type II or III.

2. Where joint depth will not allow for a rod and still provide 3/8-inch (9.5 mm) minimum depth of sealant, provide approved bond breaker tape at the bottom of the joint.

3. Joint backing shall be compatible with sealant Manufacturer's product and shall not stain the sealant nor the materials to which applied.

PART 3 -- EXECUTION

3.1. DELIVERY, STORAGE, AND HANDLING

3-1.01. Deliver materials to Site in Manufacturer's original, unopened packages, containers, or bundles with labels intact, which clearly identify contents.

3-1.02. Store materials carefully in accordance with the Manufacturer's written instructions, in an area that is protected from deleterious elements, and in a manner that will prevent damage to the products.

3.2. HANDLE MATERIALS IN STRICT ACCORDANCE WITH MANUFACTURER'S WRITTEN INSTRUCTIONS.

3.3. APPLICATION SCHEDULE

3-3.01. Joints noted as "caulk," "caulking," or "sealant" shall be caulked as specified herein.

3-3.02. Joints to be caulked or sealed include through-bolt holes, door frames, louver and ventilator frames, joints between openings where items pass through exterior walls, concrete masonry, or combination of these surfaces, and as otherwise indicated or required for watertightness, weatherproofing, or airtightness.

1. Sealants and caulking shall be provided at both exterior and interior surfaces of exterior wall penetrations.

3-3.03. Sealants and caulking shall be provided at exterior wall joints, between adjacent materials, joints between frames or louvers and adjacent materials, copings, caps, sills, masonry control joints, and other joints and penetrations indicated or required for the completion of the Work.

3-3.04. Sealants and caulking shall be provided at interior joints between frames and masonry, at tops of masonry walls, between masonry and structural concrete, floor joints in tile, joints in rooms to be airtight, and other joints and penetrations on the Contract Drawings or as required for the completion of the Work.

3-3.05. Sealants and caulking shall also be installed elsewhere, where indicated on the Contract Drawings.

3.4. PROJECT CONDITIONS

3-4.01. Comply with Manufacturer's written instructions, and referenced standards, for environmental conditions before, during, and after installation.

3-4.02. Protect surrounding Work from damage that may result from operations under this Section.

3.5. INSPECTION

3-5.01. The Contractor shall be totally responsible for the proper performance and completion of the Work under this Section.

3-5.02. Systems and components shall be inspected before installation.

1. Damaged or defective items shall be rejected and marked as such and shall be removed from the Site.

3-5.03. The Contractor shall verify dimensions, tolerances, and method of attachment with adjacent Work.

1. Examine substrates, areas, and conditions where sealants and caulking will be installed for compliance with the requirements for installation, taking into account tolerances, and other conditions affecting performance of installed sealants and caulking.

    a. Surfaces to receive sealants and caulking, including compressible filler and joint backing, shall be dry, free of oil, dirt, dust and other contaminants and loose materials, and shall be in the proper condition as indicated by the Manufacturer prior to the application of the sealant and caulking materials.

    b. Masonry, concrete, and cementitious products shall have been completely cured and the surface shall be dry and free from frost at the time of application.

    c. Joint shapes and sizes shall be as indicated. Where not indicated, joint shapes and sizes shall be as necessary for job conditions, as directed by the Engineer.

2. Notify the Engineer in writing of conditions detrimental to the proper and timely completion of the Work. Do not proceed with the Work until unsatisfactory conditions have been corrected in an acceptable manner.

3. Commencement of the installation by the Contractor shall indicate Contractor's acceptance of the substrate, areas, and conditions.

3.6. SURFACE PREPARATION

3-6.01. Surface preparation shall be in compliance with the applicable references and with the Manufacturer's written instructions.

3-6.02. Coatings, including curing compounds, form release agents, and other substances shall be removed as recommended by the sealant and caulking Manufacturer.

3-6.02. Protrusions, bumps, ridges, and loose substrate surface materials shall be removed by sanding or grinding.

3-6.03. Laitance, efflorescence, and loose mortar shall be removed from the joint cavity.

3-6.04. Ferrous metal surfaces shall be cleaned of rust, mill scale, and other coatings by wire brush, grinding, or sandblasting.

3-6.05. Protective coatings shall be removed from surfaces to receive sealants and caulking.

1. Solvents used to remove protective coating shall be as recommended by the sealant and caulking Manufacturer, shall be compatible with the adjacent materials and surfaces, shall not damage adjacent finishes, and shall be non-staining.

3-6.06. Bituminous or resinous materials shall be removed from surfaces to receive sealants and caulking.

3-6.07. Immediately before application of sealant and caulking materials, scrape surfaces to be covered free from foreign materials and brush clean.

3-6.08. Substrate shall be swept to remove all loose materials prior to beginning sealant and caulking installation.

3.7. PREPARATION

3-7.01. Sequence installation properly with the installation and protection of other WORK, so that neither will be damaged by the installation of the other.

3.8. INSTALLATION

3-8.01. Installation shall comply with the requirements of the Contract Documents, with applicable references, and with Manufacturer’s written instructions. Where a conflict occurs among these requirements, the more stringent shall apply, as directed by the Engineer.

3-8.02. Primer, if recommended by the Manufacturer for the application, shall be applied per the Manufacturer's recommended procedures.

1. Primer shall be used on concrete masonry units, wood, or other porous surfaces in accordance with instructions furnished with the sealant. Primer shall be applied to the joint surfaces to be sealed. Surfaces adjacent to joints shall not be primed.

3-8.03. Multi-component sealants shall be mixed according to Manufacturer’s printed instructions. Sealant in guns shall be applied with a nozzle of proper size to fit the width of joint. Sealant shall be installed to the required depth without displacing the backing. Unless otherwise indicated or recommended by the Manufacturer, the installed sealant shall be tooled so that the surface is uniformly smooth and free of wrinkles and to assure full adhesion to the sides of the joint. Sealants shall be installed free of air pockets, foreign embedded matter, ridges, and sags. Sealer shall be applied over the sealant if recommended by the sealant Manufacturer.

3-8.04. Sealant depth in joints shall be half of the width of joint, but not less than 1/8-inch (3.2 mm) deep and 1/4-inch (6.4 mm) wide nor more than 1/2-inch (12.7 mm) deep and one-inch wide (25.4 mm). For joints greater than 1-inch (25.4 mm) wide, provide sealant in a 2 to 1 width-to-depth ratio.

3-8.05. Joints shall have a rigid filler material installed to proper depth prior to application of sealant.

3-8.06. Masking film shall be placed on the finish surface on one or both sides of a joint cavity to protect adjacent finish surfaces from primer or sealant smears. Masking shall be removed as soon as possible after joint has been filled and tooled.

3-8.07. Backing shall be installed to provide the indicated sealant depth. The installation tool shall be shaped to avoid puncturing the backing.

3-8.08. Bond-breaker shall be applied to fully cover the bottom of the joint without contaminating the sides where sealant adhesion is required.

3-8.09. A full bead of sealant shall be applied into the joint under sufficient pressure, with the nozzle drawn across sealant, to completely fill the void space and to ensure complete wetting of contact area to obtain uniform adhesion. During application, the tip of the nozzle shall be kept at the bottom of the joint thereby forcing the sealant to fill from the bottom to the top. Sealants shall be tooled immediately after exposure with a caulking tool or soft bristled brush moistened with solvent. The finished sealant-filled joint shall be slightly concave unless otherwise indicated.

3.9. CLEANING, FINISHING, AND PROTECTION

3-9.01. Adhesive papers used for masking which become firmly bonded when exposed to heat and/or light shall not be used.

1. Remove masking film and temporary labels as soon as possible after installation. Films and labels left in place after installation shall be the responsibility of the Contractor.

2. Residue shall not be left on any surfaces.

3. The surfaces of materials adjoining caulked joints shall be cleaned free of smears of sealant or other soiling due to caulking operations.

3-9.02. Sealants and caulking shall be protected from damage from subsequent construction operations.

3-9.03. The Contractors shall make adjustments required until accepted.

3-9.04. Damaged or defective items shall be removed and replaced at the direction of the Engineer.

3-9.05. When sealant and caulking Work is completed, remove unused materials, containers, and equipment, and clean the Site of sealant and caulking debris.

END OF SECTION

THIS PAGE LEFT BLANK INTENTIONALLY

SECTION 08120 – ALUMINUM DOORS AND FRAMES

PART 1 -- GENERAL

1.1 THE SUMMARY

1-1.01. The CONTRACTOR shall provide aluminum doors and frames and appurtenant WORK, complete, in place, and operational in accordance with the Contract Documents.

1.2 REFERENCES

1-2.01. Where reference is made to any of the below, the revision in effect at the time of bid opening shall apply.

1-2.02. Aluminum Association.

1-2.03. American National Standards Institute (ANSI).

1-2.04. American Society for Testing and Materials (ASTM):

ASTM B 209	Aluminum and Aluminum-Alloy Sheet and Plate
ASTM B 221	Aluminum and Aluminum-Alloy Extruded Bars, Rods, Wires, Shapes and Tubes
ASTM E 84	Standard Test Method for Surface Burning Characteristics of Building Materials
ASTM E 330	Structural Load Test
ASTM E 1886	Impact Test Procedures
ASTM E 1996	Wind Load Test

1-2.05. Building Code: Refer to the Drawings to determine which Building Code applies. The applicable Building Code, defined by the Drawings, is referred to herein as “the CODE.”

1-2.06. Federal Specifications:

FS HH-I-529b	Insulation Board, Thermal (Mineral Aggregate).
FS HH-I-530	Insulation Board, Thermal (Urethane).

1.3 CONTRACTOR SUBMITTALS

1-3.01. Furnish submittals in accordance with Section 01300 – Submittal Procedures.

1-3.02. Literature: Manufacturer’s specifications, technical data, installation methods, and maintenance instructions.

1-3.03. Certifications:

A. Certification of compliance with the requirements of paragraph 2.1.A.

B. Certification of installer qualifications demonstrating compliance with the qualifications requirements indicated. Include a list of 5 similar completed projects with addresses of the project location, date of project completion, and contact information of the consultant firm of record, general contractor, and owner.

1-3.04. Shop Drawings: Complete Shop Drawings showing location and detail of installation.

A. Shop Drawings shall be drawn to sufficient scale and shall include dimensions, show elevations and details of construction of each door and frame type, schedule of doors and frames, frame elevations and details, location and installation requirements for hardware, thickness of materials, joints, provisions for expansion and contraction, connections, accessories, and trim. Shop Drawings shall show installation conditions at openings with various wall thickness and materials.

B. Include details of core and edge construction, through-door louvers, vision panels, and trim for openings.

1.4 QUALITY ASSURANCE

1-4.01. Single Source Responsibility: Aluminum doors and frames shall be provided by a single Manufacturer.

1-4.02. Manufacturer Qualifications:

A. Aluminum door and frame Manufacturer shall have a minimum of 5 similar successful projects over the most recent 10 years, employing similar products, materials, applications, and performance requirements.

1-4.03. Installer Qualifications:

A. Installer shall have a minimum of 5 years' experience in the successful completion of at least 5 projects of similar size and scope, employing similar products, materials, applications, and performance requirements.

PART 2 -- PRODUCTS

2.1 GENERAL REQUIREMENTS

2-1.01. Structural Requirements:

A. Aluminum doors and frames, including related assemblies, components, and attachment details shall comply with the CODE and shall be designed and installed for resistance to the structural design criteria indicated in the Contract Documents in accordance with the CODE. Where a conflict occurs between the requirements of this Section and the CODE, the more stringent shall apply.

B. The CONTRACTOR shall provide additional non-standard bracing, reinforcements, anchors, and heavier gauge materials if required to conform to the structural design criteria indicated and to other performance requirements indicated.

2-1.02. Aluminum Alloy for Doors and Frames: ASTM B 221, alloy 6063-T5 for extrusions. ASTM B 209, alloy and temper best suited for aluminum sheets and finish required.

2-1.03. Refer to Section 08710 – Finish Hardware, for door hardware to be provided for Aluminum Doors and Frames.

2.2 ACCEPTABLE MANUFACTURERS

2-2.01. Subject to the requirements indicated, provide Manufacturer and product listed below, with modifications by the Manufacturer for custom upgraded features as required to comply with the specification. Door and frame shall be hurricane rated louver doors with Florida Product Approval:

A. Cline Aluminum Doors; Series 100BE, FBC Approval Number FL6336.

2.3 ALUMINUM DOORS

2-3.01. Aluminum full louver doors shall be 1 3/4-inches thick, constructed with extruded aluminum alloy 6063-T5 tubular jamb rails 0.125-inch lock side, 0.190-inch (hinge side) and minimum 0.040-inch thick smooth aluminum alloy 5005-H34 face sheets.

2-3.02. Door Edge: Door edges shall have rigid aluminum subframe with integral edge caps. No snap-on or applied door edge at hinge or lock edge.

2-3.03. Sub-Frame: Aluminum sub-frame shall be 1 3/8-inches (35 mm) x 4 1/2-inches (114 mm) 6063-T5 tubular aluminum with a 1 3/4-inch (44.5 mm) integral edge cap at hinge and lock side with an applied edge cap top and bottom to ensure proper protection from the weather. Sub-frame shall be connected by a 3/8-inch (9.5 mm) cadmium plated steel tie rod top and bottom. Overall door tolerance shall be plus or minus 1/16-inch (1.6 mm). Extrusion tolerances shall be as set by the American Aluminum Manufactures Association.

2-3.04. Insulated core: All voids between sub-frames shall be filled with an isocyanurate rigid foam board with a minimum R-value of 9. Core shall be laminated between two sheets of 1/8-inch (3.2 mm) tempered hardboard for impact reinforcing. Tempered hardboard shall be the same size as face sheets.

2-3.05. Face Sheets: Face sheet shall be one piece 0.090” (2.3 mm) smooth aluminum of anodizing quality with a minimum tensile strength of 22,000 psi. Face sheets shall be concealed under 1/2-inch (13 mm) edge cap full perimeter.

2-3.06. Lamination: Sub-frame, insulated core, hardboard, and face sheets shall be bonded together with a thermosetting two-component epoxy adhesive under 110 lbs (49.9 kG) pressure to form a water, heat, and chemical resistant bond.

2.4 ALUMINUM FRAMES

2-4.01. Manufacturer and Product:

A. Subject to the requirements indicated, provide Manufacturer and product by the same Manufacturer as the door.

2-4.02. Description:

A. Material: Frame members shall be made of 6063-T6 extruded aluminum alloy with minimum yield strength of 28,750 pound per square inch (mm). All screws and miscellaneous fasteners shall be stainless steel, or other corrosion resistant material.

B. Frames shall be 0.125-inch (3.18 mm) minimum wall thickness, extruded tubular 5 aluminum with pile weather-stripped doorstops. For interior installations, punch single leaf frames to receive 3 silencers. Double leaf interior frames shall receive one silencer per leaf at head.

C. Aluminum door frames shall be 1 3/4-inches (44.5 mm) x 5 3/4- inches (146.1 mm) open back with an applied door stop.

D. Frame joints and components shall be factory milled and fitted to hairline cracks. Corners shall be mechanically joined with interlocking 3/16-inch (4.8 mm) wall, aluminum channel clips and flat head stainless steel screws.

E. Construction: Frame shall be squared cut to provide neat hairline joints. Jambs and header shall be fastened with stainless steel screws. All frames shall be mortise for hinges and lock strike plates. Surface mounted hardware shall be drilled and tapped in the field. Hinge, lock, and strike reinforcing plate shall be made of 1/4-inch (6.4 mm) aluminum plate.

F. Frames shall be completely fabricated and reinforced for hardware as specified in Section 08710 – Finish Hardware.

2.5 THROUGH-DOOR LOUVERS

2-5.01. Through-door louvers shall be sight proof, 2” inverted-Y type blades constructed of extruded aluminum 6063-T5 alloy and provide 50 percent free air flow. All fastenings shall be stainless steel or aluminum. Inside louver trim to be secured by counter sunk Jackson head screws. All frames and trim members to be mitered at corners and rigidly secured by corner brackets. Insect screen shall be 14-18 mesh, 0.011 diameter aluminum set in a 0.050-inch extruded aluminum 6063-T5 alloy frame.

2.6 PROVISIONS FOR HARDWARE

2-6.01. Hardware templates and hardware shall be delivered to the door manufacturer for use in fabrication of aluminum doors and frames. Cut, reinforce, drill, and tap down and frame in accordance with hardware manufacturer’s recommendations. Surface-applied hardware, push plates, kick plates, and mop plates shall be drilled and tapped in the field. Provide hinge reinforcements of 1/4-inch (6.4 mm) aluminum flat bar and secure to door edge or frames with stainless steel machine screws.

A. Coordinate additional requirements for required hardware with Specification Section 08710 – Finish Hardware.

B. Door Hardware Reinforcement:

1. Components shall be reinforced for hardware installation in accordance with ANSI.

a. Doors shall be completely reinforced for, and shop fabricated to receive all specified hardware. Reinforcement shall be 6061-T6 alloy, 0.250-inch (6.35 mm) thick, minimum.

2.7 FINISH AND COLOR

2-7.01. All exposed aluminum doors and frames shall be chemically cleaned of all fabricating oils and foreign materials and be given an anodic finish. Finish shall be 343 medium bronze anodize, designation AA-M12-C22-A34, Architectural Class II (0.4 Mil to 0.7 Mil).

2.8 FABRICATION

2-8.01. The CONTRACTOR shall field verify size, location, and placement of doors and frames, shall advise the ENGINEER in writing of any necessary adjustments, and shall make the necessary adjustments prior to fabrication. The CONTRACTOR shall coordinate field measurements and Shop Drawings with fabrication and shop assembly to minimize field adjustments.

2-8.02. Doors and frames shall be fabricated to be rigid, neat in appearance, and free from defects, including warping, cupping, buckling, or other defects. Metal shall be accurately formed to required sizes and profiles.

2-8.03. Doors and frames shall be fit and assembled in the Manufacturer's plant.

2-8.04. Doors and frames shall be prepared to receive mortised and concealed door hardware, including cutouts, reinforcing, drilling, and tapping in accordance with final Door Hardware Schedule and templates provided by hardware supplier, and as indicated in the Contract Documents.

A. Comply with applicable requirements of ANSI for preparation for hardware on doors and frames.

B. Include thru-bolting holes as required per hardware template.

C. Do not include unnecessary cutouts in door faces not required by hardware template.

2-8.05. Doors and frames shall be reinforced to receive surface-applied hardware. Drilling and tapping for surface-applied door hardware may be done at Site.

2-8.06. Fasteners: All screws and miscellaneous fasteners shall be stainless steel, or other corrosion resistant material.

PART 3 -- EXECUTION

3.1 DELIVERY, STORAGE, AND HANDLING

3-1.01. Deliver materials to Site in Manufacturer’s original, unopened packages, containers, or bundles with labels intact, which clearly identify contents.

A. Aluminum doors and frames shall be shipped and stored with temporary stiffeners and spacers in place to prevent distortion.

3-1.02. Store materials carefully in accordance with the Manufacturer's written instructions, in an area that is protected from deleterious elements, and in a manner that will prevent damage to the products.

3-1.03. Handle materials in strict accordance with Manufacturer's written instructions.

3.2 PROJECT CONDITIONS

3-2.01. Comply with Manufacturer's written instructions for environmental conditions before, during, and after installation.

3-2.02. Protect surrounding WORK from damage that may result from operations under this Section.

3.3 INSPECTION

3-3.01. The CONTRACTOR shall be totally responsible for the proper performance and completion of the WORK under this Section.

3-3.02. Systems and components shall be inspected before installation.

A. Damaged or defective items shall be rejected and marked as such and shall be removed from the Site.

B. Exposed surfaces that exhibit pitting, seam marks, roller marks, stains, discoloration, or other surface imperfections on the finished units shall be rejected.

3-3.03. The CONTRACTOR shall verify dimensions, tolerances, and method of attachment with adjacent WORK.

A. Examine substrates, areas, and conditions where doors and frames will be installed for compliance with the requirements for installation, taking into account tolerances, and other conditions affecting performance of installed doors and frames.

1. Provide inserts, backing, blocking, anchoring devices, and reinforcements that must be built into other WORK for the installation of aluminum doors and frames. Coordinate delivery with other WORK to avoid delay.

B. Notify the ENGINEER in writing of conditions detrimental to the proper and timely completion of the WORK. Do not proceed with the WORK until unsatisfactory conditions have been corrected in an acceptable manner.

C. Commencement of the installation by the CONTRACTOR shall indicate CONTRACTOR's acceptance of the substrate, areas, and conditions.

3.4 PREPARATION

3-4.01. Sequence installation properly with the installation and protection of other WORK, so that neither will be damaged by the installation of the other.

3.5 INSTALLATION

3-5.01. Installation shall comply with the requirements of the Contract Documents, with applicable references, with the requirements of the CODE, and with Manufacturer's written instructions. Where a conflict occurs among these requirements, the more stringent shall apply, as directed by the ENGINEER.

3-5.02. The CONTRACTOR shall provide corrosion resistant fasteners, anchors, and shims required for a complete installation, and shall be secure, plumb, level, straight, and true to line, allowing for required movement, including expansion and contraction.

3-5.03. The CONTRACTOR shall provide separation of dissimilar materials to ensure no galvanic action occurs.

A. Protection from Dissimilar Materials:

1. Dissimilar Metals:

a. Where aluminum surfaces come in contact with metals other than stainless steel, zinc, or small areas of white bronze, the CONTRACTOR shall protect from direct contact by one or a combination of the following methods:

1) Paint the dissimilar metal with one coat of heavy- bodied bituminous paint.

b. Apply a good quality caulking material between the aluminum and the dissimilar metal.

c. Use a non-absorptive tape or gasket in permanently dry locations.

2. Masonry and Concrete:

a. The CONTRACTOR shall provide aluminum surface in contact with mortar, concrete, or other masonry materials with one coat of heavy-bodied bituminous paint.

3-5.04. The CONTRACTOR shall block and reinforce walls as required to support the Aluminum Doors and Frames and appurtenances.

3-5.05. Setting Masonry Anchorage Devices: Provide masonry anchorage devices where required for securing frames to in-place concrete or to existing masonry construction. Set anchorage devices opposite each anchor location, in accordance with details on Shop Drawings and anchorage device Manufacturer's instructions.

3-5.06. Placing Frames: Set frames accurately in position, plumbed, aligned, and braced securely until permanent anchors are set. After wall construction is complete, remove temporary braces and spreaders leaving surfaces smooth and undamaged.

3-5.07. In new masonry construction, coordinate frame setting to occur after the building of masonry walls. Provide the required anchors.

3-5.08. At in-place concrete or masonry construction, set frames and secure in place with the required anchors.

3-5.09. Remove spreader bars only after frames or bucks have been properly set and secured.

3.6 CLEANING

3-6.01. Adhesive papers used for masking which become firmly bonded when exposed to heat and/or light shall not be used.

A. Remove masking film and temporary labels as soon as possible after installation. Films and labels left in place after installation shall be the responsibility of the CONTRACTOR.

B. Residue shall not be left on any surfaces.

3-6.02. Upon completion of the installation, doors, frames, and appurtenances shall be cleaned of dirt and other foreign matter to the satisfaction of the ENGINEER.

A. Cleaning shall be performed again immediately prior to acceptance of the WORK, when directed by the ENGINEER.

B. Cleaning shall be performed in accordance with the Manufacturer's written instructions.

3-6.03. Adjusting and cleaning shall consist of ensuring smooth operation, lubricating, and testing the doors and frames.

A. Doors and frames shall operate smoothly, quietly, and without squeaking and binding.

3-6.04. Doors and frames shall be protected from damage from subsequent construction operations.

3-6.05. The CONTRACTOR shall make adjustments required and retest until accepted.

3-6.06. The CONTRACTOR shall remove scratches and blemishes to the satisfaction of the ENGINEER.

3-6.07. Damaged or defective items shall be removed and replaced at the direction of the ENGINEER.

A. Remove and replace defective WORK, including doors or frames that are warped, bowed, or otherwise unacceptable.

3-6.08. When door and frame WORK is completed, remove unused materials, containers, and equipment, and clean the Site of door and frame debris.

END OF SECTION

SECTION 08710 –FINISH HARDWARE

PART 1 -- GENERAL

1.1 THE SUMMARY

1-1.01. The CONTRACTOR shall provide finish hardware and appurtenant WORK, complete, in place, and operational in accordance with the Contract Documents.

1.2 REFERENCES

1-2.01. Where reference is made to any of the below, the revision in effect at the time of bid opening shall apply.

1-2.02. Americans with Disabilities Act (ADA):

ADAAG	Americans with Disabilities Accessibility Guidelines

1-2.03. American National Standards Institute (ANSI):

ANSI A 117.1	Accessible and Usable Buildings and Facilities

ANSI A 156.18	Material and Finishes

1-2.04. Builders' Hardware Manufacturers' Association (BHMA).

1-2.05. Building Code: Refer to the Drawings to determine which Building Code applies. The applicable Building Code, defined by the Drawings, is referenced herein as "the CODE."

1-2.06. Door and Hardware Institute (DHI): Recommended Procedure for Processing Hardware Schedules and Templates" and "Architectural Hardware Scheduling and Format."

1-2.07. National Fire Protection Association (NFPA):

NFPA 80	Fire Doors and Windows
NFPA 101	Life Safety Code

1.3 CONTRACTOR SUBMITTALS

1-3.01. Furnish submittals in accordance with Section 01300 – Submittal Procedures.

1-3.02. Literature: Manufacturer's specifications, technical data, installation methods, and maintenance instructions.

1-3.03. Warranty: Submit a copy of the warranty.

1-3.04. Certifications:

A. Certification by the door hardware Manufacturer that the door hardware provided is suitable for, and compatible with, the required installation.

B. Certification of Manufacturer qualifications demonstrating compliance with the qualifications requirements indicated. Include a list of 5 similar completed projects with addresses of the project location, date of project completion, Manufacturer's products, and contact information of the consultant firm of record, general contractor and owner.

C. Certification of supplier's qualifications demonstrating compliance with the qualifications requirements indicated.

D. Certification of installer qualifications demonstrating compliance with the qualifications requirements indicated. Include a list of 5 similar completed projects with addresses of the project location, date of project completion, and contact information of the consultant firm of record, general contractor and owner.

E. Submit certification from a recognized testing agency that fire doors have passed tests to meet fire ratings indicated.

F. Certification that materials, construction requirements, and fire ratings will be met in the final installation.

G. Certification for hardware in fire rated openings indicating compliance with UL 10C and UBC 7-2.

H. When requested by the ENGINEER, furnish other certifications as may be required to show compliance with the Contract Documents.

1-3.05. Shop Drawings: Complete Shop Drawings showing location and detail of installation.

A. Furnish a complete, detailed hardware schedule. The hardware schedule shall indicate groups, type, style, function, Manufacturer's name, catalog number, location, and finish of each item to be provided, in accordance with the DHI "Architectural Hardware Scheduling Sequence and Format." The hardware schedule shall include the following additional information:

1. List each door opening, organized into "hardware sets" indicating complete designations of every item required for each door opening to function as intended.

2. Location of each hardware set cross-referenced to floor plans and schedules on the Drawings.

3. Door sizes shall be noted on the hardware schedule, and hardware shall be in strict accordance with height, width, and thickness requirements.

4. Special mounting instructions or requirements that vary from standard.

5. Handing and degree of swing of each door.

6. Keying information.

7. Fastenings and other pertinent information.

8. Explanation of all abbreviations, symbols, and codes contained in schedule.

9. The hardware schedule shall also include a complete template list showing template references and data for each item requiring preparation of doors and frames.

10. Submit separate detailed keying schedule for approval indicating clearly how the OWNER'S final instructions on keying of locks has been fulfilled.

1-3.06. Samples: When requested by the ENGINEER, submit samples of the materials proposed. Samples shall be clearly marked to show the Manufacturer's name, product identification, finish and color. New samples shall be resubmitted of each, as required, until approved by the ENGINEER. Upon approval, the samples shall become the standard for acceptance for the project with regard to color, finish, and quality of each item. Approval of samples shall not relieve the CONTRACTOR from compliance with the Contract Documents.

1.4 QUALITY ASSURANCE

1-4.01. Single Source Responsibility: Door hardware shall be provided by a single Manufacturer, each.

1-4.02. Manufacturer Qualifications:

A. Door hardware Manufacturer shall have a minimum of 20 years of door hardware manufacturing experience.

B. Door hardware Manufacturer shall have a minimum of 5 similar successful projects over the most recent 10 years, employing similar products, materials, applications, and performance requirements.

C. Manufacturers without these qualifications will not be accepted.

1-4.03. Supplier Qualifications:

A. Supplier shall be a recognized architectural door hardware supplier who has maintained an office and has been furnishing hardware in the project's vicinity for a period of at least 2 years.

B. Supplier shall employ at least one Architectural Hardware Consultant (AHC) who shall be responsible for the preparation and execution of the WORK of this Section and who shall be available to the OWNER, the ENGINEER, and the CONTRACTOR during business hours for consultation about the project's hardware and requirements.

C. Supplier shall be a certified direct distributor and be a full sales and service organization for the Manufacturers proposed.

D. Suppliers without these qualifications will not be accepted.

1-4.04. Installer Qualifications:

A. Installer shall have a minimum of 5 years' experience in the successful completion of at least 5 projects of similar size and scope, employing similar products, materials, applications, and performance requirements.

B. Installer shall be trained, certified, and authorized by the Manufacturer to install the Manufacturer's product.

C. Installers without these qualifications will not be accepted.

1.5 SPECIAL WARRANTY PROVISIONS

1-5.01. Furnish Manufacturer's written warranty to cover defects in materials, products, and manufacturing workmanship. The term of the warranty shall be as indicated below:

A. Mortise Locksets: 5 years.

B. Exit Devices: 5 years.

C. Door Closers: 10 years.

1-5.02. The CONTRACTOR shall furnish separate, but concurrently running, 5-year written warranty to cover labor.

1-5.03. Warranties shall be non-prorated for the entire warranty period.

1-5.04. The term of the warranties shall begin on the date of Substantial Completion.

PART 2 -- PRODUCTS

2.1 GENERAL

2-2.01. Door hardware shall be recommended by the Manufacturer for the installation indicated.

2-2.02. Door hardware shall be suitable for, and compatible with, the required installation. Coordinate hardware with door and frame Specification Section 08120 – Aluminum Doors and Frames.

2-2.03. Door hardware shall be best grade, entirely free from imperfections in manufacture and finish. Qualities, weights, and sizes specified herein are the minimum that will be accepted.

2-2.04. Hand of door shall be as indicated. If door handing changes prior to fabrication, the CONTRACTOR shall make necessary adjustments at the direction of the ENGINEER.

2-2.05. The WORK hereunder shall include fabrication and mounting templates as needed for fabricators and for control of application of hardware items.

A. In addition, thereto, the CONTRACTOR shall provide trim, attachments, and fastenings indicated or required for proper and complete installation.

2-2.06. Door hardware shall be coordinated with other WORK requiring door hardware or attaching to it. Copies of schedules, templates, etc., shall be furnished in ample time to avoid fabrication and construction delays. Each item of hardware shall be identified according to the approved list and schedule. Hardware shall be made to template.

2-2.07. The CONTRACTOR shall furnish the hardware supplier with Shop Drawings from other trades with which hardware must be coordinated. After checking these Shop Drawings, the CONTRACTOR shall promptly supply necessary template information to all concerned as may be required to facilitate the progress of the job.

A. Furnish all templates and schedules required by the Manufacturers of the doors and frames to enable the Manufacturers to make proper provision in their WORK to receive the door hardware. All locks, lock strikes, and flush bolts shall be made to ANSI standard dimensions.

B. Procedures for template information shall be in accordance with the handbook, “Recommended Procedure for Processing Hardware Schedules and Templates.”

2.2 HINGES

2-2.01. Manufacturer or Equal: Subject to the requirements indicated, provide products from the Manufacturer listed below, or equal.

A. McKinney.

B. Pemko.

2-2.02. Description:

A. Hinges shall conform to ANSI A 156.1/BHMA A 2111 and shall be 5-knuckle design, heavy weight (0.180-inch minimum (4.6 mm)), ball bearing type, with flush tips.

B. Two hinges shall be provided for each door leaf up to and including 5-feet (1.5 m) in height and an additional hinge shall be added for each 2½-feet (.76 m) or fractions thereof of additional door height.

C. Hinges shall be 4½ inches (114.3 mm) by 4½-inches (114.3 mm), except at doors exceeding 36-inches (914 mm) in width.

    1. Doors exceeding 36-inches (914 mm) in width shall have 5-inches (127 mm) by 4½-inches (114.3 mm) hinges.

D. Hinges on exterior doors shall be provided with non-removable pins (NRP).

E. Provide hinges with countersunk, Phillips flat-head screws unless otherwise indicated.

2.3 CYLINDERS AND KEYING

2-3.01. Manufacturer and Product, or Equal: Subject to the requirements indicated, provide Manufacturer and product listed below, or equal:

Sargent, Signature High Security Cylinders.

2-3.02. Description:

A. Locks and cylinders shall be master keyed to the OWNER'S requirements as directed by the ENGINEER.

B. The CONTRACTOR shall have the hardware supplier submit a keying schedule for approval prior to placing an order for the locks and keying of cylinders. The keying schedule shall be coordinated between the OWNER, the ENGINEER, the CONTRACTOR, and the hardware supplier.

2-3.03. Keying:

A. Locks and cylinders shall be construction master-keyed. Locks and cylinders to be master-keyed or grandmaster-keyed as directed by the OWNER. The factory shall key locks and cylinders. Furnish the following key amounts:

    1. Two (2) change keys per lock.

    2. Three (3) grand master keys.

    3. Six (6) master keys per master level.

    4. Six (6) construction/temporary keys.

B. Master keys and all high-security or restricted keyway blanks shall be sealed in tamper-proof packaged boxes when shipped from the factory. The boxes shall be shrink-wrapped and imprinted to ensure the integrity of the packaging.

2.4 SURFACE MOUNTED OVERHEAD CLOSERS

2-4.01. Manufacturer and Product, or Equal: Subject to the requirements indicated, provide Manufacturer and product listed below, or equal:

A. Sargent 351 Series.

2-4.02. Description:

A. Closers shall be ANSI A 156.4, Grade 1 Certified.

B. Closers shall have non-ferrous covers, one-piece, aluminum alloy bodies forged steel arms, and separate valves for adjusting and backcheck, closing and latching cycles, and adjustable spring to provide up to 50 percent increase in spring power.

C. Closers shall be furnished with parallel arm mounting on doors and shall be mounted to permit 180-degree door swing wherever wall conditions permit. Furnish without hold open arms unless otherwise indicated. Closers shall not be installed on exterior or corridor side of doors; install closers on door unless otherwise approved in writing by the ENGINEER.

D. Closers shall be powder coated to match door hardware with a special rust inhibitor (SRI) pretreatment, as recommended in writing by the Manufacturer, applied prior to the powder coating.

E. Where closers or other items have lever or similar arms, attachment to doors shall be with sex bolts only.

F. Closers for out-swinging exterior doors shall be top-jamb-mounted and furnished with adapter plates.

G. The CONTRACTOR shall be responsible to provide the correct arm with the closers.

H. Closers shall be provided with sex bolts for fastening through doors, frames and transoms.

2.5 MORTISE LOCKSETS AND LATCHSETS

2-5.01. Manufacturer and Product, or Equal: Subject to the requirements indicated, provide Manufacturer and product listed below, or equal:

A. Sargent 8200 Series.

2-5.02. Description:

A. Locksets shall be ANSI A 156.13 Series 1000 Grade 1. Functions shall be manufactured in a single sized case formed from minimum 12-gauge steel. Lockset shall have a field-adjustable, beveled armored front, with a 0.125-in (3.2 mm) minimum thickness and shall be reversible without opening the lock body. The lockset shall be 2¾-inch (69.9 mm) backset with a one-piece ¾-inch (19 mm) anti-friction stainless steel latch bolt. The deadbolt shall be a full 1-inch (25.4 mm) throw made of stainless steel and have two hardened steel roller inserts. To ensure proper alignment, all trim, shall be thru-bolted and fully interchangeable between rose and escutcheon designs.

B. Function of locksets shall be appropriate for doors use. Hardware supplier shall verify lock functions with the OWNER and the ENGINEER prior to ordering material.

C. Lock strikes shall be non-handed, boxed type of sufficient length and having curved lips to protect the trim and jambs and be so shaped as to avoid the possibility of tearing clothing. Strikes shall be provided with metal strike boxes.

D. Locks shall be provided with the same cylinder and keyway for master keying. They shall be the product of the same Manufacturer as the locksets unless otherwise indicated. The correct cylinders with necessary modifications and components such as cams, collars, rings, retainers, plates, fasteners, etc., shall be provided for other specialty hardware such as exit devices, store front locksets, and sliding door locks where the hardware manufacture specified is different than cylinder Manufacturer.

E. Exit doors shall be openable at all times from the inside without the use of key or any special knowledge or effort.

2.6 STRIKES

2-6.01. Manufacturer: To be provided by exit device and lockset and latch set device Manufacturer.

2-6.02. Description:

A. Strikes shall be compatible with the installation required.

B. All strikes shall be non-handed with a curved lip.

2.7 EXIT DEVICES

2-7.01. Manufacturer and Product, or Equal: Subject to the requirements indicated, provide Manufacturer and product listed below, or equal:

A. Sargent, 80 Series.

2-7.02. Description:

A. Exit devices shall be certified to meet ANSI A 156.3 Grade 1.

B. Exit devices shall be listed by Underwriters Laboratories and shall bear the UL label for life safety in full compliance with NFPA 80 and NFPA 101.

C. Mounting rails shall be formed from a solid single piece of stainless steel, brass, or bronze no less than 0.072-inch (1.83 mm) thick. Push rails shall be constructed of 0.062-inch (1.57 mm) thick material. Painted or anodized aluminum shall not be considered heavy duty and are not acceptable. Hex key dogging shall be standard for all life safety panic hardware. Lever trim shall be available in finishes and designs to match that of the specified locksets.

2.8 LOCK GUARDS

2-8.01. Manufacturer, or Equal: Subject to the requirements indicated, provide products from the Manufacturer listed below, or equal.

A. McKinney.

2-8.02. Description: Provide high security, corrosion resistant, surface mounted lock guards with concealed fasteners compatible with the installation, at each exterior door.

2.9 DOOR TRIM AND PROTECTIVE PLATES

2-9.01. Manufacturer, or Equal: Subject to the requirements indicated, provide products from the Manufacturer listed below, or equal.

A. McKinney.

B. Pemko.

2-9.02. Description:

A. Kickplates shall be 0.050-gauge, 2-inches (50.8 mm) less width of door, beveled on 3 sides, and 10-inches (254 mm) high, except where necessary to clear a louver in which case they shall be 8-inches (213 mm) high.

B. Push plates, pull plates, door pulls, and miscellaneous door trim shall be as indicated.

2.10 WALL MOUNTED DOOR STOPS

2-10.01. Manufacturer, or Equal: Subject to the requirements indicated, provide products from the Manufacturer listed below, or equal.

A. McKinney.

2-10.02. Description:

A. Where a door is indicated to open against a wall, wall mounted doorstops, in the form of wall bumpers, shall be provided. Provide convex or concave design as indicated.

B. Wall mounted doorstops shall be non-ferrous, and of the type given in the hardware schedule.

C. Provide door stops with the proper fasteners, as required by the substrate to which stops are to be secured.

2.11 OVERHEAD STOPS WITH HOLD OPEN FUNCTION

2-11.01. Manufacturer and Product, or Equal: Subject to the requirements indicated, provide Manufacturer and product listed below, or equal:

A. Rixson.

2-11.02. Description:

A. Overhead type door holders shall be of correct size for door, 90 degree openable and allowing for checkmating. Interior doors shall be provided with overhead stops if wall type stops cannot be used.

B. Track, slide, arm, and jamb bracket shall be constructed of extruded bronze and shock absorber spring shall be of heavy tempered steel.

C. Overhead stops shall be of non-handed design.

2.12 WEATHERSTRIPPING, GASKETING AND SEALS

2-13.01. Manufacturer, or Equal: Subject to the requirements indicated, provide products from the Manufacturer listed below, or equal.

A. McKinney.

B. Pemko.

2-13.02. Description:

A. Provide continuous weather seal on exterior doors.

B. Provide continuous light or sound seals on interior doors where indicated.

C. Provide UL rated fire and smoke seals on all fire rated doors. Provide intumescent seals as required to meet UL 10C and UBC 7-2. Provide only those units where resilient or flexible seal strip is easily replaceable and readily available from stocks maintained by Manufacturer.

2.13 THRESHOLDS

2-13.01. Manufacturer, or Equal: Subject to the requirements indicated, provide products from the Manufacturer listed below, or equal.

A. McKinney.

B. Pemko.

2-13.02. Description:

A. Provide threshold at each exterior door, and at other locations where indicated. Provided in size and configuration indicated, fabricated to accommodate door hardware and to fit door frames.

B. Thresholds shall be aluminum unless otherwise noted.

C. Threshold units shall comply with ADAAG and ANSI A 117.1.

D. At Fire Rated doors, provide UL rated thresholds.

E. Where adjacent floor material differs, provide threshold as appropriate.

F. Provide marble threshold at toilet rooms.

2.14 SILENCERS

2-14.01. Manufacturer and Product, or Equal: Subject to the requirements indicated, provide Manufacturer and product listed below, or equal:

A. McKinney.

B. Pemko.

2-14.02. Description: Interior door frames shall be provided with rubber silencers, 3 for each single door and 2 for each pair of doors.

2.15 FASTENERS

2-15.01. Provide necessary screws, bolts, and other fasteners of suitable size and type to secure the hardware into position. The fasteners shall match the hardware in material and finish.

2-15.02. The hardware provided, such as expansion bolts, sex bolts, toggle bolts and other approved anchorages shall be coordinated with the job and to each setting condition.

2-15.03. Phillips head screws shall be used at exposed conditions. Machine screws shall be used at metal doors and frames.

2-15.04. Required screws shall be supplied as necessary for securing door hardware in the appropriate manner. Thru-bolts shall be supplied for exit devices and door closers where required by the CODE and where the appropriate blocking or reinforcing is not present in the door to preclude their use.

2.16 FINISHES

2-16.01. Door hardware shall be 630/US 32D (stainless steel satin finish) unless otherwise indicated.

2-16.02. The designations used in schedules and elsewhere to indicate hardware finishes are those listed in ANSI A 156.18 including coordination with traditional U.S. finishes shown by certain Manufacturers for their products.

2-16.03. Provide quality of finish, including thickness of plating or coating (if any), composition, hardness, and other qualities complying with Manufacturer's standards, but in no case less than specified by referenced standards for the applicable units of hardware.

PART 3 -- EXECUTION

3.1 DELIVERY, STORAGE, AND HANDLING

3-1.01. Deliver materials to Site in Manufacturer’s original, unopened packages, containers, or bundles with labels intact, which clearly identify contents.

A. Locks, exit devices, door closers, overhead door holders, hinges, kickplates, pulls and push plates, thresholds, and other similar items shall be individually packed in separate, suitable, original, containers as furnished by the hardware Manufacturers. Each container shall be clearly marked with item numbers, article numbers, and names corresponding to those listed in the hardware schedule.

    1. Small miscellaneous items that would not require specific location identifications, such as wall mounted stops and silencers may be quantity packed if properly labeled with item numbers and other identification.

B. The CONTRACTOR shall check the hardware upon delivery with the aid of a representative of the hardware supplier's firm.

3-1.02. Store materials carefully in accordance with the Manufacturer's written instructions, in an area that is protected from deleterious elements, and in a manner that will prevent damage to the products.

3-1.03. Handle materials in strict accordance with Manufacturer's written instructions.

3.2 PROJECT CONDITIONS

3-2.01. Comply with Manufacturer's written instructions for environmental conditions before, during, and after installation.

A. The CONTRACTOR shall make certain that the building is secured and free from weather elements prior to installing interior door hardware.

3-2.02. Protect surrounding WORK from damage that may result from operations under this Section.

3.3 INSPECTION

3-3.01. The CONTRACTOR shall be totally responsible for the proper performance and completion of the WORK under this Section.

3-3.02. Systems and components shall be inspected before installation.

A. Damaged or defective items shall be rejected and marked as such and shall be removed from the Site.

B. Exposed surfaces that exhibit pitting, seam marks, roller marks, stains, discoloration, or other surface imperfections on the finished units shall be rejected.

3-3.03. The CONTRACTOR shall verify dimensions, tolerances, and method of attachment with adjacent WORK.

A. Examine substrates, areas, and conditions where door hardware will be installed for compliance with the requirements for installation, taking into account tolerances, and other conditions affecting performance of installed door hardware.

1. Provide inserts, backing, blocking, anchoring devices, and reinforcements that must be built into other WORK for the installation of door hardware. Coordinate delivery with other WORK to avoid delay.

B. Notify the ENGINEER in writing of conditions detrimental to the proper and timely completion of the WORK. Do not proceed with the WORK until unsatisfactory conditions have been corrected in an acceptable manner.
