US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

PFAS RCRA MANIFEST: PFAS Transfers Identified In the RCRA Database Listing

To work around the lack of PFAS waste codes in the RCRA database, EPA developed the PFAS Transfers dataset by mining e-Manifest records containing at least one of these common PFAS keywords: PFAS, PFOA, PFOS, PERFL, AFFF, GENX, GEN-X (plus the VT waste codes). These keywords were searched for in the following text fields: Manifest handling instructions (MANIFEST_HANDLING_INSTR), Non-hazardous waste description (NON_HAZ_WASTE_DESCRIPTION), DOT printed information (DOT_PRINTED_INFORMATION), Waste line handling instructions (WASTE_LINE_HANDLING_INSTR), Waste residue comments (WASTE_RESIDUE_COMMENTS).

PFAS NPDES: Clean Water Act Discharge Monitoring Information

Any discharger of pollutants to waters of the United States from a point source must have a National Pollutant Discharge Elimination System (NPDES) permit. The process for obtaining limits involves the regulated entity (permittee) disclosing releases in a NPDES permit application and the permitting authority (typically the state but sometimes EPA) deciding whether to require monitoring or monitoring with limits. Caveats and Limitations: Less than half of states have required PFAS monitoring for at least one of their permittees and fewer states have established PFAS effluent limits for permittees. New rulemakings have been initiated that may increase the number of facilities monitoring for PFAS in the future.

PFAS ECHO FIRE TRAINING: Facilities in Industries that May Be Handling PFAS Listing

A list of fire training sites was added to the Industry Sectors dataset using a keyword search on the permitted facilitys name to identify sites where fire-fighting foam may have been used in training exercises. Additionally, you may view an example spreadsheet of the subset of fire training facility data, as well as the keywords used in selecting or deselecting a facility for the subset. as well as the keywords used in selecting or deselecting a facility for the subset. These keywords were tested to maximize accuracy in selecting facilities that may use fire-fighting foam in training exercises, however, due to the lack of a required reporting field in the data systems for designating fire training sites, this methodology may not identify all fire training sites or may potentially misidentify them.

PFAS PART 139 AIRPORT: All Certified Part 139 Airports PFAS Information Listing

Since July 1, 2006, all certified part 139 airports are required to have fire-fighting foam onsite that meet military specifications (MIL-F-24385) (14 CFR 139.317). To date, these military specification fire-fighting foams are fluorinated and have been historically used for training and extinguishing. The 2018 FAA Reauthorization Act has a provision stating that no later than October 2021, FAA shall not require the use of fluorinated AFFF. This provision does not prohibit the use of fluorinated AFFF at Part 139 civilian airports; it only prohibits FAA from mandating its use. The Federal Aviation Administration?s document AC 150/5210-6D - Aircraft Fire Extinguishing Agents provides guidance on Aircraft Fire Extinguishing Agents, which includes Aqueous Film Forming Foam (AFFF).

CHROME PLATING: Chrome Plating Facilities Listing

This listing represents chrome plating facilities the California State Water Resources Control Board staff identified as possibly being a source of Per- and polyfluoroalkyl substance (PFAS) contamination. Sites and locations were identified by staff with the Division of Water Quality in the California State Water Board. Data was collected from the CA Air Resources Board 2013 and 2018 - Cr VI emission survey, CA Emission Inventory, CA HAZ Waste discharge database and by reviewing storm water permits. Former chrome plating sites are also included that are open site investigation or remediation cases with the Regional Water Quality Control Boards and the Department of Toxic Substances Control.

HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

WASTEWATER PITS: Oil Wastewater Pits Listing
Water officials discovered that oil producers have been dumping chemical-laden wastewater into hundreds of unlined pits that are operating without proper permits. Inspections completed by the Central Valley Regional Water Quality Control Board revealed the existence of previously unidentified waste sites. The water boards review found that more than one-third of the region's active disposal pits are operating without permission.

WDR: Waste Discharge Requirements Listing
In general, the Waste Discharge Requirements (WDRs) Program (sometimes also referred to as the "Non Chapter 15 (Non 15) Program") regulates point discharges that are exempt pursuant to Subsection 20090 of Title 27 and not subject to the Federal Water Pollution Control Act. Exemptions from Title 27 may be granted for nine categories of discharges (e.g., sewage, wastewater, etc.) that meet, and continue to meet, the preconditions listed for each specific exemption. The scope of the WDRs Program also includes the discharge of wastes classified as inert, pursuant to section 20230 of Title 27.

CERS: CalEPA Regulated Site Portal Data

The CalEPA Regulated Site Portal database combines data about environmentally regulated sites and facilities in California into a single database. It combines data from a variety of state and federal databases, and provides an overview of regulated activities across the spectrum of environmental programs for any given location in California. These activities include hazardous materials and waste, state and federal cleanups, impacted ground and surface waters, and toxic materials

UST FINDER: UST Finder Database

EPA developed UST Finder, a web map application containing a comprehensive, state-sourced national map of underground storage tank (UST) and leaking UST (LUST) data. It provides the attributes and locations of active and closed USTs, UST facilities, and LUST sites from states and from Tribal lands and US territories . UST Finder contains information about proximity of UST facilities and LUST sites to: surface and groundwater public drinking water protection areas; estimated number of private domestic wells and number of people living nearby; and flooding and wildfires.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

EDR Hist Cleaner: EDR Exclusive Historical Cleaners

EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data
Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Date of Government Version: 11/06/2023
Date Data Arrived at EDR: 11/07/2023
Date Made Active in Reports: 01/31/2024

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:
Source: American Hospital Association, Inc.
Telephone: 312-280-5991
The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing
Source: Centers for Medicare & Medicaid Services
Telephone: 410-786-3000
A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes
Source: National Institutes of Health
Telephone: 301-594-6248
Information on Medicare and Medicaid certified nursing homes in the United States.
Public Schools
Source: National Center for Education Statistics
Telephone: 202-502-7300
The National Center for Education Statistics' primary database on elementary and secondary public education in the United States. It is a comprehensive, annual, national statistical database of all public elementary and secondary schools and school districts, which contains data that are comparable across all states.
Private Schools

GEOCHECK ®- PHYSICAL SETTING SOURCE ADDENDUM

TARGET PROPERTY ADDRESS

ARGONAUT - MLC HOLDINGS, INC.
95 ARGONAUT
ALISO VIEJO, CA 92656

TARGET PROPERTY COORDINATES

Latitude (North):	33.594593 - 33° 35' 40.53''
Longitude (West):	117.724449 - 117° 43' 28.02''
Universal Tranverse Mercator:	Zone 11
UTM X (Meters):	432780.4
UTM Y (Meters):	3717248.8
Elevation:	397 ft. above sea level

USGS TOPOGRAPHIC MAP

Target Property Map:	50006201 SAN JUAN CAPISTRANO, CA
Version Date:	2022

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

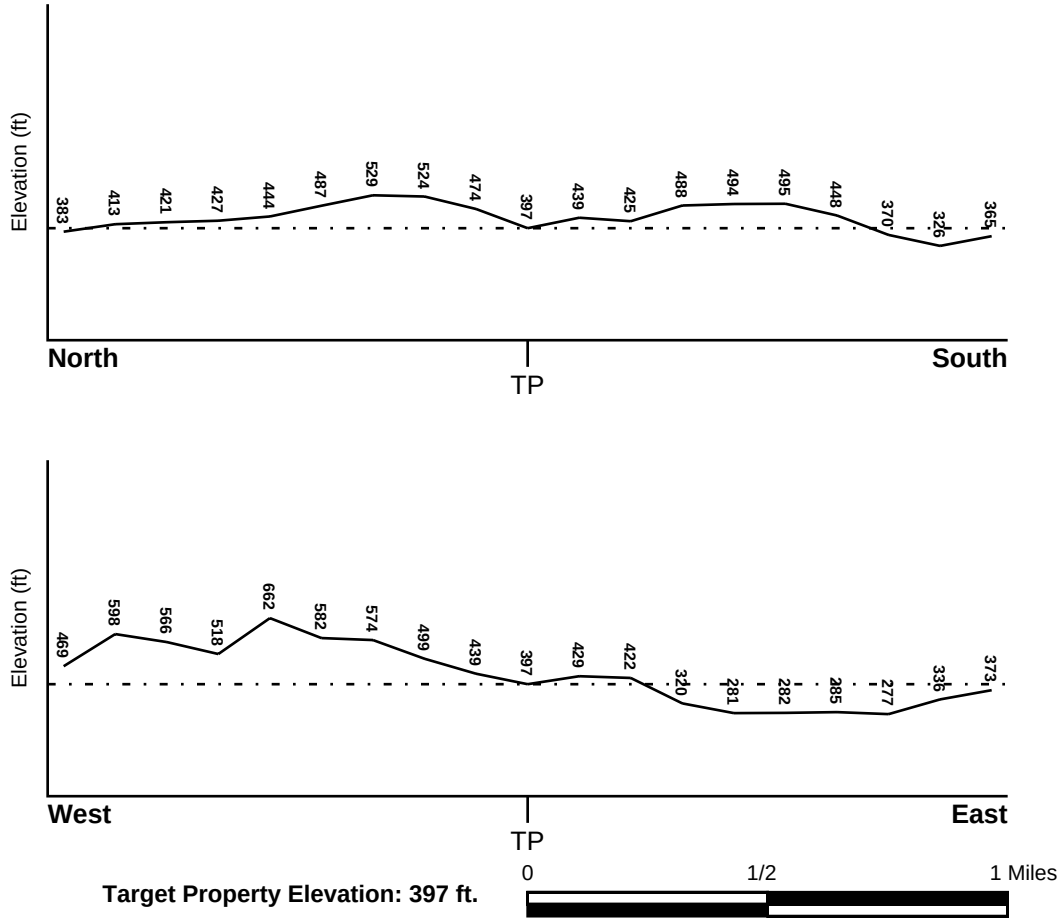
1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).



TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General SE

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Flood Plain Panel at Target Property	FEMA Source Type
06059C0426J	FEMA FIRM Flood data

Additional Panels in search area:	FEMA Source Type
06059C0427J	FEMA FIRM Flood data

06059C0429J	FEMA FIRM Flood data

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
SAN JUAN CAPISTRANO	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Status:	Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW

All of the information and opinions presented are those of the cited EPA report(s), which were completed under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: CALLEGUAS

Soil Surface Texture: clay loam

Hydrologic Group: Class D - Very slow infiltration rates. Soils are clayey, have a high water table, or are shallow to an impervious layer.

Soil Drainage Class: Well drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	14 inches	clay loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	Not reported	Max: 1.4 Min: 0	Max: Min:
2	14 inches	18 inches	weathered bedrock	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	Not reported	Max: 1.4 Min: 0	Max: Min:

Soil Map ID: 2

Soil Component Name: CAPISTRANO

Soil Surface Texture: sandy loam

Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.

Soil Drainage Class: Well drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Low

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	27 inches	sandy loam	Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 42 Min: 14	Max: 7.3 Min: 5.6
2	27 inches	64 inches	fine sandy loam	Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 42 Min: 14	Max: 7.3 Min: 5.6

Soil Map ID: 3

Soil Component Name: BALCOM

Soil Surface Texture: clay loam

Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.

Soil Drainage Class: Well drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Moderate

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	33 inches	clay loam	Not reported	Not reported	Max: Min:	Max: Min:
2	33 inches	38 inches	weathered bedrock	Not reported	Not reported	Max: Min:	Max: Min:

Soil Map ID: 4

Soil Component Name: CIENEBA

Soil Surface Texture: sandy loam

Hydrologic Group: Class C - Slow infiltration rates. Soils with layers impeding downward movement of water, or soils with moderately fine or fine textures.

Soil Drainage Class: Somewhat excessively drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Low

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	7 inches	sandy loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	Not reported	Max: 0.42 Min: 0	Max: Min:
2	7 inches	11 inches	weathered bedrock	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	Not reported	Max: 0.42 Min: 0	Max: Min:

Soil Map ID: 5

Soil Component Name: BOSANKO

Soil Surface Texture: clay

Hydrologic Group: Class D - Very slow infiltration rates. Soils are clayey, have a high water table, or are shallow to an impervious layer.

Soil Drainage Class: Well drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	20 inches	clay	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	Not reported	Max: 0.42 Min: 0	Max: Min:
2	20 inches	31 inches	clay	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	Not reported	Max: 0.42 Min: 0	Max: Min:
3	31 inches	35 inches	weathered bedrock	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	Not reported	Max: 0.42 Min: 0	Max: Min:

Soil Map ID: 6

Soil Component Name: BALCOM

Soil Surface Texture: clay loam

Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.

Soil Drainage Class: Well drained

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Moderate

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map
Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.
Source: FEMA
Telephone: 877-336-2627
Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005, 2010 and 2015 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Wetland Inventory
Source: Department of Fish and Wildlife
Telephone: 916-445-0411

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)
This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

OTHER STATE DATABASE INFORMATION

Groundwater Ambient Monitoring & Assessment Program
State Water Resources Control Board
Telephone: 916-341-5577
The GAMA Program is Californias comprehensive groundwater quality monitoring program. GAMA collects data by testing the untreated, raw water in different types of wells for naturally-occurring and man-made chemicals. The GAMA data includes Domestic, Monitoring and Municipal well types from the following sources, Department of Water Resources, Department of Heath Services, EDF, Agricultural Lands, Lawrence Livermore National Laboratory, Department of Pesticide Regulation, United States Geological Survey, Groundwater Ambient Monitoring and Assessment Program and Local Groundwater Projects.

Water Well Database
Source: Department of Water Resources
Telephone: 916-651-9648

California Drinking Water Quality Database
Source: Department of Public Health
Telephone: 916-324-2319
The database includes all drinking water compliance and special studies monitoring for the state of California since 1984. It consists of over 3,200,000 individual analyses along with well and water system information.

Geothermal Wells Listing
Department of Conservation
Telephone: 916-445-9686
Geothermal well means a well constructed to extract or return water to the ground after it has been used for heating or cooling purposes. Geothermal wells in California (except for wells on federal leases which are administered by the Bureau of Land Management) are permitted, drilled, operated, and permanently sealed and closed (plugged and abandoned) under requirements and procedures administered by the Geothermal Section of the Department of Conservations Geologic Energy Management Division (CalGEM, formerly DOGGR).

California Oil and Gas Well Locations
Source: Dept of Conservation, Geologic Energy Management Division
Telephone: 916-323-1779
Oil and Gas well locations in the state.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

California Earthquake Fault Lines
Source: California Division of Mines and Geology
The fault lines displayed on EDR's Topographic map are digitized quaternary fault lines prepared in 1975 by the United State Geological Survey. Additional information (also from 1975) regarding activity at specific fault lines comes from California's Preliminary Fault Activity Map prepared by the California Division of Mines and Geology.

RADON

State Database: CA Radon
Source: Department of Public Health
Telephone: 916-210-8558
Radon Database for California

Area Radon Information
Source: USGS
Telephone: 703-356-4020
The National Radon Database has been developed by the U.S. Environmental Protection Agency (USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

EPA Radon Zones
Source: EPA
Telephone: 703-356-4020
Sections 307 & 309 of IRAA directed EPA to list and identify areas of U.S. with the potential for elevated indoor radon levels.

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

EDR Topographic Map Library has been searched by EDR and maps covering the target property location as provided by Hillmann Environmental Co. were identified for the years listed below. EDR's Historical Topo Map Report is designed to assist professionals in evaluating potential liability on a target property resulting from past activities. EDRs Historical Topo Map Report includes a search of a collection of public and private color historical topographic maps, dating back to the late 1800s.

Disclaimer - Copyright and Trademark Notice

This Report contains certain information obtained from a variety of public and other sources reasonably available to Environmental Data Resources, LLC. It cannot be concluded from this Report that coverage information for the target and surrounding properties does not exist from other sources. This Report is provided on an "AS IS", "AS AVAILABLE" basis. **NO WARRANTY EXPRESS OR IMPLIED IS MADE WHATSOEVER IN CONNECTION WITH THIS REPORT. ENVIRONMENTAL DATA RESOURCES, LLC AND ITS SUBSIDIARIES, AFFILIATES AND THIRD PARTY SUPPLIERS DISCLAIM ALL WARRANTIES, OF ANY KIND OR NATURE, EXPRESS OR IMPLIED, ARISING OUT OF OR RELATED TO THIS REPORT OR ANY OF THE DATA AND INFORMATION PROVIDED IN THIS REPORT, INCLUDING WITHOUT LIMITATION, ANY WARRANTIES REGARDING ACCURACY, QUALITY, CORRECTNESS, COMPLETENESS, COMPREHENSIVENESS, SUITABILITY, MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE, TITLE, NON-INFRINGEMENT, MISAPPROPRIATION, OR OTHERWISE. ALL RISK IS ASSUMED BY THE USER. IN NO EVENT SHALL ENVIRONMENTAL DATA RESOURCES, LLC OR ITS SUBSIDIARIES, AFFILIATES OR THIRD PARTY SUPPLIERS BE LIABLE TO ANYONE FOR ANY DIRECT, INCIDENTAL, INDIRECT, SPECIAL, CONSEQUENTIAL OR OTHER DAMAGES OF ANY TYPE OR KIND (INCLUDING BUT NOT LIMITED TO LOSS OF PROFITS, LOSS OF USE, OR LOSS OF DATA), ARISING OUT OF OR IN ANY WAY CONNECTED WITH THIS REPORT OR ANY OF THE DATA AND INFORMATION PROVIDED IN THIS REPORT.** Any analyses, estimates, ratings, environmental risk levels, or risk codes provided in this Report are provided for illustrative purposes only, and are not intended to provide, nor should they be interpreted as providing any facts regarding, or prediction or forecast of, any environmental risk for any property. Only an assessment performed by a qualified environmental professional can provide findings, opinions or conclusions regarding the environmental risk or conditions in, on or at any property.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at approximately five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1920 through current. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 1320 feet of the target property.

Summary information obtained is provided in the text of this report.

RECORD SOURCES

The EDR City Directory Report accesses a variety of business directory sources, including Haines, InfoUSA, Polk, Cole, Bresser, and Stewart. Listings marked as EDR Digital Archive access Cole and InfoUSA records. The various directory sources enhance and complement each other to provide a more thorough and accurate report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer.

RESEARCH SUMMARY

Certified Sanborn® Map Report

04/04/24

Site Name:

Argonaut - MLC Holdings, Inc.
95 Argonaut
Aliso Viejo, CA 92656
EDR Inquiry # 7614512.3

Client Name:

Hillmann Environmental Co.
1745 W Orangewood Avenue
Orange, CA 92868-0000
Contact: Vivianne Bisson

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Hillmann Environmental Co. were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

Certified Sanborn Results:

Certification # 0C9D-4EAD-B4F7

PO # C3-9987

Project Argonaut - MLC Holdings, Inc.

UNMAPPED PROPERTY

This report certifies that the complete holdings of the Sanborn Library, LLC collection have been searched based on client supplied target property information, and fire insurance maps covering the target property were not found.

Sanborn® Library search results

Certification #: 0C9D-4EAD-B4F7

The Sanborn Library includes more than 1.2 million fire insurance maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow and others which track historical property usage in approximately 12,000 American cities and towns. Collections searched:

- ☑ Library of Congress
- ☑ University Publications of America
- ☑ EDR Private Collection

The Department of Toxics Substances Control (DTSC) takes every precaution to ensure the accuracy of data in the Hazardous Waste Tracking System (HWTS). However, because of the large number of manifests handled, inaccuracies in the submitted data, limitations of the manifest system and the technical limitations of the database, DTSC cannot guarantee that the data accurately reflect what was actually transported or produced.

Sherry Wanninger
DIRECTOR

Dear Moulton Niguel Customer,

Reliable access to safe water is Moulton Niguel's highest priority.

To deliver on that commitment, Moulton Niguel conducts extensive water quality tests throughout the year. State-of-the-art laboratories independently analyze the tests to ensure we strictly adhere to the Environmental Protection Agency and the State Water Resources Control Board standards.

On behalf of the Moulton Niguel Board of Directors, I am pleased to report:

Moulton Niguel's drinking water continues to meet all federal and state water quality standards and safety regulations.

This annual Consumer Confidence Report covers water quality testing for the 2022 calendar year, summarizing everything you need to know about your water. It includes detailed results of water quality tests conducted at each stage of treatment and delivery and information about the required safety regulations for public drinking water providers.

Moulton Niguel takes great pride in providing you safe, clean, and reliable drinking water at one of the lowest water rates in South Orange County.

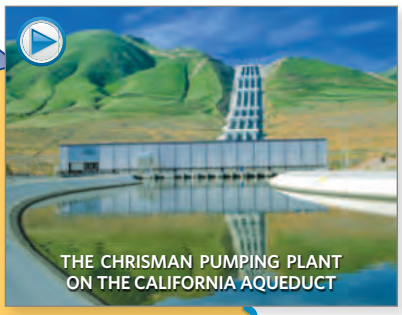
We are here to serve you. Please call us anytime you need help at **(949) 831-2500** or email **customerservice@mnwd.com**.

Sincerely,

JOONE KIM-LOPEZ
General Manager & CEO, Moulton Niguel Water District

2057

Where Our Water Comes From



Have you ever wondered where your water comes from? Here in the Moulton Niguel Water District, our water is imported from both Northern California and the Colorado River.

Water from Northern California travels to us through a complex delivery system known as the California State Water Project. Designed and built in the 1960s, the State Water Project is one of the largest public water and power utilities in the world, providing drinking water for more than 27 million people statewide.

Managed by the California Department of Water Resources (DWR), the project stretches over 700 miles, from Lake Oroville in the north to Lake Perris in the south. Water stored in Lake Oroville, Folsom Lake, and other tributaries are fed by snow melt from the Sierra Mountains. All of which flow into the Sacramento and San Joaquin rivers, and from there into reservoirs in the Bay-Delta region.

From the Bay-Delta, giant pumps lift the water into the 444-mile-long California Aqueduct, there to flow southward to cities and farms in central and Southern California. Composed mainly of concrete-lined canals, the Aqueduct also includes over 20 miles of tunnels and nearly 160 miles of pipelines. Along the way, the water is pumped 2,882 feet over the Tehachapi Mountains. The Edmonston Pumping Plant alone lifts millions of gallons a day up 1,926 feet, the highest single water lift in the world.

Managed by the Metropolitan Water District of Southern California (MWD), the Colorado River Aqueduct begins near Parker Dam on the Colorado River. There, the Gene Pumping Station lifts the water over 300 feet and begins its 242 mile journey to Lake Mathews, just outside the City of Corona. Along the way, the water passes through two reservoirs, five pumping stations, 62 miles of canals, and 176 miles of pipelines. All told, the water is lifted four times, a total of more than 1,300 feet.

After its journey across the Mojave Desert, the water descends into the Coachella Valley and through the San Gorgonio Pass. Near Cabazon, the aqueduct flows underground, passing beneath the San Jacinto Mountains and continuing until it reaches its terminus at Lake Mathews. From there, 156 miles of distribution lines and eight more tunnels, delivers the water throughout Southern California.

2058

Water Quality

Sources of Our Water Supply

Moulton Niguel relies on imported water from MWD, which sources its water supply from the Colorado River and the State Water Project. MWD delivers an average of 1.5 billion gallons of water per day to a 5,200-square-mile service area of nearly 19 million people in parts of Los Angeles, Orange, Riverside, San Bernardino, San Diego, and Ventura counties.

Colorado River

Importing water from hundreds of miles away is only the start to providing you clean, fresh water. Once the water is in the southland, MWD pumps the water to individual cities throughout Orange County.

Your water is treated at the Diemer Water Treatment Plant in Yorba Linda and the Baker Water Treatment Plant in Lake Forest, which is then delivered to Moulton Niguel Water District. Your water is a blend of both treatment plants.

This water meets all state and federal regulations and it is kept safe from the treatment plant to your tap by regular testing throughout the distribution network. Moulton Niguel's pipelines, pump stations, and reservoirs are used to deliver this water to you when and where it is needed.

Moulton Niguel Water District monitors the water quality at all sources, reservoirs, and various points in the distribution system. All told, between the many agencies responsible for providing your water, it is tested more times, and for more compounds, than is required by state and federal laws and regulations. This vigilant monitoring ensures your drinking water stays within the requirements mandated by the federal Safe Drinking Water Act.

Basic Information about Your Drinking Water

Drinking water, both tap and bottled, may reasonably be expected to contain trace amounts of some contaminants. The presence of trace contaminants does not indicate that the water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the United States Environmental Protection Agency (USEPA) Safe Drinking Water Hotline at **(800) 426-4791** or visiting **www.epa.gov/your-drinking-water**.

The sources of both tap and bottled drinking water include rivers, lakes, streams, ponds, reservoirs, springs, and wells. As water travels over the surface of land or through the ground, it can dissolve naturally occurring minerals and can pick up substances resulting from the presence of animals or from human activity.

Contaminants that may be present in source water include:

- **Microbial contaminants**, such as viruses, protozoa, and bacteria that may come from septic systems, agricultural livestock operations, and wildlife
- **Inorganic contaminants**, such as salts and metals, that can be naturally occurring or result from urban stormwater runoff, industrial or domestic wastewater discharges, oil and gas production, mining, or farming
- **Pesticides and herbicides** that may come from a variety of sources such as agriculture, urban stormwater runoff, and residential uses
- **Organic chemical contaminants**, including synthetic and volatile organic chemicals that are by-products of industrial processes and petroleum production, and can also come from gas stations, urban stormwater runoff, agricultural application, and septic systems
- **Radioactive contaminants** that can be naturally occurring or be the result of oil and gas production and mining activities

In order to ensure that tap water is safe to drink, the USEPA and the State Water Resources Control Board, Division of Drinking Water (DDW) prescribe regulations that limit the amounts of certain contaminants in water provided by public water systems. DDW and U.S. Food and Drug Administration regulations establish limits for contaminants in bottled water that provide similar protection for public health.

Water Quality Tests

Lead

Moulton Niguel meets all required standards for lead in the USEPA Lead and Copper Rule. Elevated levels of lead can cause serious health problems, especially for pregnant women and young children. Lead in drinking water is primarily from materials and components associated with home plumbing.

Moulton Niguel is responsible for providing high quality drinking water to your property, but cannot control the variety of materials used in various plumbing components within your home or business.

When your water has been sitting for several hours, you can minimize the potential for lead exposure by flushing your tap for 30 seconds to two minutes before using water for drinking or cooking. However, please follow this practice carefully to reduce any potential water waste.

Moulton Niguel participates in the State Water Resources Control Board's Lead Testing in Schools Program. To date, all samples collected at schools in the District have met drinking water standards set by the State and Federal regulatory agencies.

For questions about your water quality, please call Moulton Niguel Customer Service at **(949) 831-2500**.

Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available from the Safe Drinking Water Hotline, **(800) 426-4791**, or at **www.epa.gov/lead**.

Cryptosporidium

Cryptosporidium is a microbial pathogen that originates from animal or human waste and is found in surface waters throughout the United States. When ingested, it can cause diarrhea, fever, and other gastrointestinal symptoms.

MWD tested but did not detect *Cryptosporidium* in the source and treated surface waters during 2022. If detected, *Cryptosporidium* is eliminated by an effective treatment combination including sedimentation, filtration, and disinfection.

The USEPA and Federal Centers for Disease Control guidelines on appropriate means to lessen the risk of infection by *Cryptosporidium* and other microbial contaminates are available from the USEPA Safe Drinking Water Hotline at **(800) 426-4791** or visit **www.epa.gov/safewater**.

Water Hardness

Levels of calcium and magnesium, which occur naturally in water, are the primary substances that determine whether water is hard or soft.

Water from the Colorado River, one of Moulton Niguel's sources of water, contains fairly high levels of these minerals and is considered "hard."

Water hardness does not negatively affect your health; however, hard water does require more soap than soft water and will leave mineral deposits on plumbing fixtures over time.

Water hardness is measured in grains per gallon. In 2022, the hardness found in your water had an average of 16.65 grains per gallon.

Immunocompromised People

Some people may be more vulnerable to contaminants in drinking water than the general population.

Immunocompromised persons, such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, or have HIV/AIDS or other immune system disorders, some elderly, and infants can be particularly at risk from infections. These individuals should seek advice about drinking water from their health care providers.

Additional Information

Drinking Water Fluoridation

Fluoride has been added to drinking water supplies in the United States since 1945. Of the 50 largest cities in the United States, 43 fluoridate their drinking water. In December 2007, MWD joined a majority of the nation's public water suppliers in adding fluoride to drinking water in order to prevent tooth decay.

MWD is in compliance with all provisions of the State's fluoridation system requirements. Fluoride levels in drinking water are limited under California State regulations to a maximum dosage of two (2) parts per million.

Chloramines

All of Moulton Niguel's drinking water is imported from MWD and is disinfected at the Diemer Water Treatment Plant and the Baker Water Treatment Plant with chloramines, which is a combination of chlorine and ammonia. In addition, Moulton Niguel maintains disinfection levels in stored water through the addition of chloramines, as needed.

Chloramines are effective killers of bacteria and other micro-organisms that may cause disease. Compared to chlorine alone, chloramines last longer in the distribution system, minimize byproduct formation, and have minimal odor.

Individuals who use kidney dialysis machines may want to take special precautions and consult their health care providers for the appropriate type of supplementary water treatment, if required.

Customers who maintain fish ponds, tanks, or aquariums should also make necessary adjustments in water quality treatment, as these disinfectants may be harmful to fish.

For more information about your water quality, please call Moulton Niguel Customer Service at **(949) 831-2500**.

Potassium (ppm)	Not Regulated	n/a	5.14	4.82 – 5.46	n/a	Runoff or Leaching from Natural Deposits
Sodium (ppm)	Not Regulated	n/a	98.8	95.5 – 102	n/a	Runoff or Leaching from Natural Deposits
Total Organic Carbon (ppm)	TT	n/a	2.05	2.00 – 2.10	n/a	Various Natural and Man-made Sources

ppb = parts-per-billion; **ppm** = parts-per-million; **pCi/L** = picoCuries per liter; **µmho/cm** = micromhos per centimeter; **ND** = not detected; **n/a** = not applicable; **NL** = Notification Level; **TT** = treatment technique

MCL = Maximum Contaminant Level; **(MCLG)** = federal MCL Goal; **PHG** = California Public Health Goal; **MRDL** = Maximum Residual Disinfectant Level; **MRDLG** = Maximum Residual Disinfectant Level Goal

*Chemical is regulated by a secondary standard.

Clarity – combined filter effluent Baker Water Treatment Plant	Treatment Technique	Turbidity Measurements	TT Violation?	Typical Source of Chemical
1) Highest single turbidity measurement	0.1 NTU	0.03	No	Soil Runoff
2) Percentage of samples less than or equal to 0.3 NTU	95%	100%	No	Soil Runoff

Turbidity is a measure of the cloudiness of the water, an indication of particulate matter, some of which might include harmful microorganisms. **NTU** = nephelometric turbidity units

Low turbidity in Baker's treated water is a good indicator of effective filtration. Filtration is called a "treatment technique" (TT).

A treatment technique is a required process intended to reduce the level of chemicals in drinking water that are difficult and sometimes impossible to measure directly.

Water Quality Charts Legend

What are Water Quality Standards?

Drinking water standards established by USEPA and DDW set limits for substances that may affect consumer health or aesthetic qualities of drinking water. The tables in the report show the following types of water quality standards:

- **Maximum Contaminant Level (MCL):** The highest level of a contaminant that is allowed in drinking water. Primary MCLs are set as close to the PHGs (or MCLGs) as are economically and technologically feasible. Secondary MCLs are set to protect the odor, taste, and appearance of drinking water.
- **Maximum Residual Disinfectant Level (MRDL)**: The highest level of a disinfectant allowed in drinking water. There is convincing evidence that addition of a disinfectant is necessary for control of microbial contaminants.
- **Secondary MCLs:** Set to protect the odor, taste, and appearance of drinking water.
- **Primary Drinking Water Standard:** MCLs for contaminants that affect health along with their monitoring and reporting requirements, and water treatment requirements.
- **Regulatory Action Level (AL):** The concentration of a contaminant which, if exceeded, triggers treatment or other requirements that a water system must follow.

How are Contaminants Measured?

Water is sampled and tested throughout the year. Contaminants are measured in:

- Parts per million (ppm) or milligrams per liter (mg/L)
- Parts per billion (ppb) or micrograms per liter (µg/L)
- Parts per trillion (ppt) or nanograms per liter (ng/L)

Source Water Assessment

Metropolitan Water District

Every five years, MWD is required by DDW to examine possible sources of drinking water contamination in its State Water Project and Colorado River source waters.

The most recent surveys for MWDSC's source waters are the Colorado River Watershed Sanitary Survey – 2020 Update, and the State Water Project Watershed Sanitary Survey – 2016 Update. Both source waters are exposed to stormwater runoff, recreational activities, wastewater discharges, wildlife, fires, and other watershed-related factors that could affect water quality.

Water from the Colorado River is considered to be most vulnerable to contamination from recreation, urban and stormwater runoff, increasing urbanization in the watershed, and wastewater. Water supplies from Northern California's State Water Project are most vulnerable to contamination from urban and stormwater runoff, wildlife, agriculture, recreation, and wastewater.

USEPA also requires MWD to complete one Source Water Assessment (SWA) that utilizes information collected in the watershed sanitary surveys. MWD completed its SWA in December 2002. The SWA is used to evaluate the vulnerability of water sources to contamination and helps determine whether more protective measures are needed.

A copy of the most recent summary of either Watershed Sanitary Survey or the SWA can be obtained by calling MWD at **(800) CALL-MWD (225-5693)**.

What is a Water Quality Goal?

In addition to mandatory water quality standards, the USEPA and the DDW have set voluntary water quality goals for some contaminants. Water quality goals are often set at such low levels that they are not achievable in practice and are not directly measurable. Nevertheless, these goals provide useful guidelines and direction for water management practices. The tables in this report include three types of water quality goals:

Maximum Contaminant Level Goal (MCLG): The level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs are set by the USEPA.

Maximum Residual Disinfectant Level Goal (MRDLG): The level of a drinking water disinfectant below which there is no known or expected risk to health. MRDLGs do not reflect the benefits of the use of disinfectants to control microbial contaminants.

Public Health Goal (PHG): The level of a contaminant in drinking water below which there is no known or expected risk to health. PHGs are set by the California Environmental Protection Agency.

Contaminants Not Detected (2022)

The water delivered to your home is safe, clean and continues to surpass every state and federal water quality standard. The contaminants listed here were *NOT DETECTED* in Moulton Niguel's water.

- 1,1,1-Trichloroethane
- 1,1,2,2-Tetrachloroethane
- 1,1,2-Trichloroethane
- 1,1-Dichloroethane
- 1,2-Dichloroethane
- 1,2,3-Trichloropropane
- 1,2,4-Trichlorobenzene
- 1,2-Dichlorobenzene
- 1,2-Dichloropropane
- 1,4-Dichlorobenzene
- Atrazine
- Benzene
- Beryllium
- Cadmium
- Carbon Tetrachloride
- Chromium
- Chromium-6
- *Cryptosporidium*
- Cyanide
- Dichlorofluoromethane
- Ethylbenzene
- Fecal Coliform & *E. coli*
- Giardia
- Mercury
- Methyl-t-butyl ether (MTBE)
- Nickel
- Perchlorate
- Perfluorooctane sulfonate (PFOS)
- Perfluorooctanoic Acid (PFOA)
- Radium
- Radon
- Simazine
- Strontium – 90
- Styrene
- Thallium
- Thiobencarb
- Toluene
- Trans-1,2-Dichloroethane
- Trichlorofluoromethane (Freon-11)
- Tritum
- Vinyl Chloride
- Xylenes

Baker Water Treatment Plant

The Baker Water Treatment Plant receives untreated surface water from MWD (see MWD water assessment left) and untreated surface water from Irvine Lake (Santiago Reservoir). The surface water assessment of Santiago Reservoir is provided by Serrano Water District, which also uses source water from Santiago Reservoir.

The most recent watershed sanitary survey for Santiago Reservoir was updated in 2014. Water supplies from Santiago Reservoir are most vulnerable to septic tank, landfill and dump activities. The Source Water Assessment (SWA) for Santiago Reservoir was completed in April 2001. The assessment was conducted for the Serrano Water District by Boyle Engineering Corporation (Boyle) with assistance from the District's staff and management.

A copy of the complete assessment may be viewed at the IRWD Water Quality Department, 3512 Michelson Drive, Irvine. You may request a summary of the assessment by writing to District Secretary, Irvine Ranch Water District, 15600 Sand Canyon Avenue, Irvine, California 92618.

Connect with Moulton Niguel

Federal and State Water Quality Regulations

The United States Environmental Protection Agency (USEPA) and the State Water Resources Control Board, Division of Drinking Water (DDW) are the agencies responsible for establishing drinking water quality standards. The Metropolitan Water District of Southern California (MWD), which supplies imported water to Moulton Niguel, tests for unregulated chemicals in our water supply. Whenever possible, MWD goes beyond what is required by testing for unregulated chemicals that do not have drinking water standards. Unregulated chemical monitoring helps USEPA and DDW determine where certain chemicals may be present and whether new standards need to be established to protect public health.

Through drinking water quality testing programs carried out by MWD for imported water and Moulton Niguel for our local distribution system, your drinking water is monitored from source to tap for regulated and unregulated constituents.

The State allows monitoring for some contaminants less than once per year because concentrations of these contaminants do not change frequently. Some data, though representative, is more than one year old.

Total Coliform Rule

This Consumer Confidence Report (CCR) reflects changes in drinking water regulatory requirements during 2021. These revisions add the requirements of the federal Revised Total Coliform Rule, effective since April 1, 2016, to the existing state Total Coliform Rule.

The revised rule maintains the purpose to protect public health by ensuring the integrity of the drinking water distribution system and monitoring for the presence of microbials (i.e., total coliform and *E. coli* bacteria). The USEPA anticipates greater public health protection as the rule requires water systems that are vulnerable to microbial contamination to identify and fix problems. Water systems that exceed a specified frequency of total coliform occurrences are required to conduct an assessment to determine if any sanitary defects exist. If found, these must be corrected by the water system. The state Revised Total Coliform Rule became effective July 1, 2021.

Moulton Niguel: No PFOA or PFOS Chemicals Detected in Our Water

The State of California has established regulations for two specific PFAS chemicals: perfluorooctanoic acid (PFOA) and perfluorooctane sulfonate (PFOS). Moulton Niguel's water has been tested for these chemicals and does not have any known or reportable levels of PFOA or PFOS. Additional PFAS information is available at: www.waterboards.ca.gov/pfas/.

WITH HILLMANN SINCE 2024

PROFESSIONAL EXPERIENCE

As a Senior Project Manager, Ms. Bisson plays a pivotal role in advising both private and public sector clients on a diverse range of environmental projects. Her expertise spans various areas, including due diligence (Phase I and II), regulatory compliance, HSE audits, soil and groundwater remediation, and mold investigations, as well as asbestos surveys. She collaborates with the Hillmann team, ensuring a comprehensive environmental review process, even navigating complex compliance steps for fund release. Ms. Bisson is highly knowledgeable about the requirements set forth by regulatory bodies such as the Occupational Safety and Health Administration (OSHA), the Environmental Protection Agency (EPA), the National Institute for Occupational Safety and Health (NIOSH), and numerous other federal, state, and local regulations impacting environmental health and safety.

RELEVANT EXPERIENCE

Independent Contractor | San Diego, CA
As an Independent Contractor, Ms. Bissan excelled in a multifaceted role as an Environmental Consultant, Technical Writer, and Project Manager. She conducted complex Phase I Environmental Site Assessments for national clients, managing numerous projects simultaneously. Ms. Bissan's responsibilities included due diligence, pre-site preparation, and field investigations, where she interviewed tenants, documented chemical storage, and ensured compliance with regulations. She compiled data for Zoning Reports, Asbestos/Lead/Mold Surveys, and Soil/Groundwater Remediation, interpreting federal and state regulatory sources. Her expertise extended to researching property history, and she skillfully synthesized field inspection findings, regulatory data, and historical records into comprehensive reports, offering valuable recommendations for further investigation.

WITH HILLMANN SINCE 1988

PROFESSIONAL EXPERIENCE

Mr. Rutherford currently serves as Hillmann's Technical Director for Due Diligence services. Previously, Mr. Rutherford served as the Quality Management Director, and Director of Environmental Due Diligence. He has over 35 years of experience in the consulting industry, specifically in managing and performing environmental and construction risk property assessments, property condition assessments including USEPA and NJDEP Preliminary Assessments.

As the Technical Director for Due Diligence services, Mr. Rutherford is responsible for development of standard protocols, report content/templates, and providing technical support to operational staff. He has managed large national accounts for real estate due diligence services including a desktop review service that handled nearly 500 properties per year.

Additionally, Mr. Rutherford has performed and/or managed Phase II Environmental Site Assessments (ESAs), Underground Storage Tank (UST) investigations/closures, Property Condition Assessments (PCA), Construction Monitoring inspections, Asbestos surveys, Asbestos Abatement Project Monitoring services, Indoor Air Quality (IAQ) surveys, NPDES Discharge Monitoring, Community Right-to-Know surveys, and Environmental Risk Analysis for compliance with the Sarbanes-Oxley act.

RELEVANT PROJECT EXPERIENCE

TD Bank, N.A. | Various Locations
Hillmann has performed phase I ESAs at several properties on behalf of TD Bank. Mr. Rutherford previously managed the group that conducts the assessments for this contract, which is ongoing.

HSBC Bank | NYC Metro
Hillmann provided complete environmental program including phase I ESAs, asbestos surveys, air monitoring, bid administration, O&M programs, industrial hygiene, and indoor air quality programs.

Peapack Gladstone Bank | NY, NJ, and PA
Hillmann has performed phase I ESAs at numerous properties on behalf of Peapack Gladstone Bank since 2013. Mr. Rutherford

HILLMANN
CONSULTING

previously managed the team that conducts the assessments for this contract, which is ongoing.

The Davis Companies | Norwalk, CT
On behalf of The Davis Companies, Hillmann provided an Advisory Report of analysis and opinion regarding the potential electromagnetic fields (EMF) health risks that may be associated with a newly constructed sub-station on an adjacent property.

Multi-Family Portfolio | New York, NY
Hillmann conducted environmental due diligence services and a construction plan and cost review for a rehabilitation project of 45 low-income multi-family apartment buildings in upper Manhattan. Mr. Rutherford coordinated and oversaw the completion of 45 phase I ESA reports and 5 phase II site investigations associated with this project.

MBD Community Housing Corporation | Bronx, NJ
Hillmann conducted environmental due diligence services for various multi-family apartment buildings located throughout New York City; including a portfolio of 11 buildings in Bronx, NY.

International Portfolio of Industrial Properties
Mr. Rutherford was the Project Manager for a multi-level environmental due diligence assessment for a portfolio of 113 light industrial properties located throughout the United States and Mexico.

Confidential Client | Various Locations
Mr. Rutherford was responsible for conducting multiple risk assessments for a confidential client. The purpose for conducting the assessments was to project a cost estimate for potential environmental liabilities associated with over 3,700 former drug store facilities in compliance with the Sarbanes-Oxley act.

JOHN "RYAN" TERWILLIGER

Principal | Regional Manager
Building Sciences & Industrial Hygiene

PROFESSIONAL EXPERIENCE

Mr. Terwilliger is responsible for business operations, fiscal management, and field staff management for Hillmann's Orange, CA office. He also performs asbestos surveys and investigations to identify asbestos and lead materials associated with occupational hazards. He supervises work practices and controls in accordance with job specifications, current EPA, OSHA, and State Regulations for asbestos remediation projects in commercial, industrial and multi-family residential buildings. Mr. Terwilliger also performs IAQ and mold and moisture investigations in commercial, industrial, and residential settings nationwide. Additionally, he conducts awareness training on building science topics such as asbestos, lead and mold and provides litigation support consultation.

RELEVANT PROJECT EXPERIENCE

Tishman Speyer Properties | Various Locations
Hillmann has provided the complete building sciences program for Tishman Speyer properties since 1987. Our services include environmental health and safety, industrial hygiene, phase I environmental site assessments, asbestos surveys, air monitoring, bid administration, O&M programs and indoor air quality programs on various commercial, industrial and multi-family residential properties.

Westfield | Various Locations
Since 2000, Hillmann has been providing an building sciences program encompassing phase I environmental site assessments, asbestos and lead surveys, air monitoring, bid administration and O&M programs, industrial hygiene and indoor air quality programs, and hazardous materials assessments on their mall properties throughout the county.

Brookfield Office Properties | Various Locations
Hillmann has been providing hazardous materials surveys, development abatement specifications, and managing the oversight activities during the abatement activities at various Brookfield sites throughout California.

Verizon | Various Locations
Hillmann conducted hazardous materials surveys, development abatement specifications, and project monitoring during abatement at various Verizon locations throughout California.

HILLMANN
CONSULTING

RELEVANT PROJECT EXPERIENCE CONTINUED

California Department of Transportation | Central Valley & Northern California

Hillmann has been performing asbestos and lead-based paint surveys for the California Department of Transportation (DOT). IN doing so, we perform comprehensive asbestos containing materials and lead-based paint surveys of residential and commercial buildings that are slated for demolition and generated a report of findings in order to aid the DOT in facilitating the road improvement programs and building renovations throughout the Central Valley and Northern California areas. Also, during the abatement of asbestos from DOT-owned buildings, we provide contractor oversight and air monitoring services for regulatory compliance.

Public Storage | Los Angeles, CA

Hillman preformed comprehensive asbestos, lead-based paint, and universal waste materials survey of commercial and industrial buildings throughout Southern California. Hazardous materials surveys were conducted prior to renovation. Mr. Terwilliger developed abatement specifications and managed the abatement oversight during the renovation of the buildings.

Appendix E: Geotechnical Report

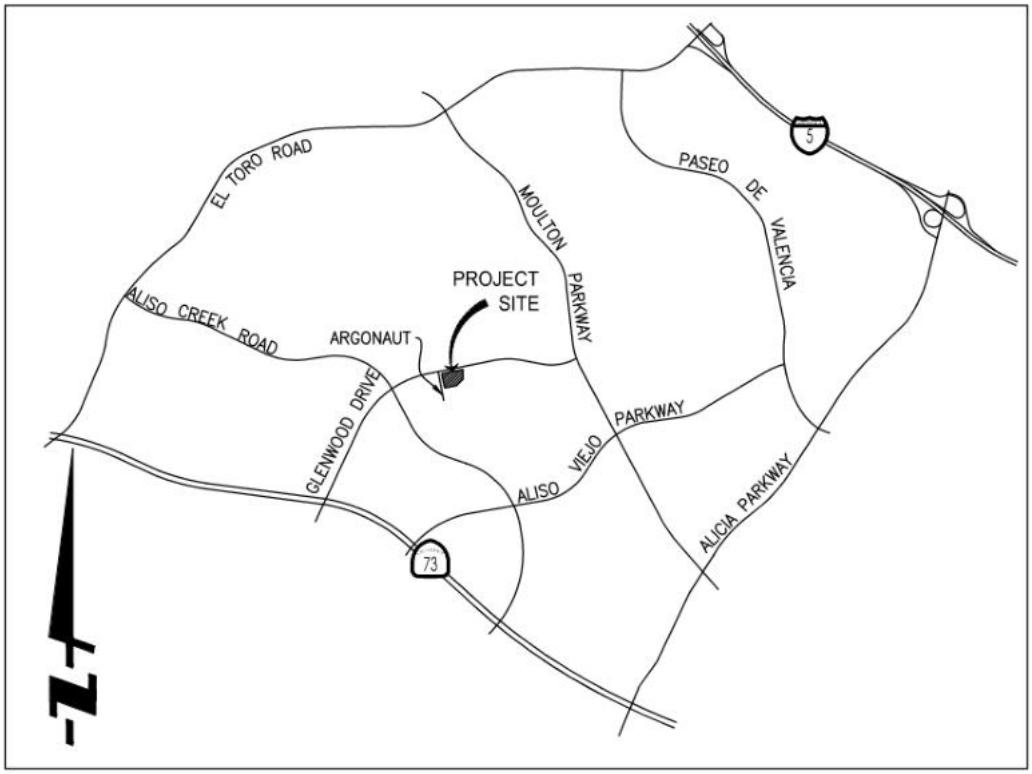
I. INTRODUCTION

A. PROJECT SITE DESCRIPTION

The project site is located at 95 Argonaut, in the City of Aliso Viejo, California in South Orange County and covers 2.77 acres. The site is described in the County tax assessor maps as APN 623-091-01and is bounded by Glenwood Drive to the north, Argonaut to the west and south, a commercial property 85 Argonaut to the south, and two aboveground water tanks owned by Moulton Niguel Water District to the east. A singular driveway access is located at the south boundary of the site at the Argonaut knuckle. See Vicinity Map in **Section I.C.**

The existing site is occupied with a single two-story, concrete and glass office building, parking lot, and landscaping. Development of the site occurred in approximately 1986. The existing building and parking lot will be demolished and redeveloped into a residential development with 61 3-story townhomes comprised of 7- and 8-plex buildings. The present zoning and General Plan land use will be changed to accommodate the new use.

Based on the FEMA flood map revised December 3, 2009, FIRM panel 06059C0426J, the site is in Flood Zone X, areas of minimal flood hazard.



B. PURPOSE AND SCOPE

The purpose of this preliminary study is to analyze the pre- and post-development drainage conditions in order to provide adequate drainage facilities for the proposed development project.

The scope of this study includes:

1. Determination of existing and proposed drainage patterns
2. Peak flow analysis of the downstream discharge points for both existing and proposed drainage conditions
3. Validation of the proposed drainage facility design
4. Performance of hydrograph routing calculations

C. PROJECT VICINITY MAP

VICINITY MAP

N.T.S.

II. EXISTING TOPOGRAPHIC AND HYDROLOGIC CONDITIONS

A. EXISTING TOPOGRAPHY

The existing topography is sloped approximately 1% to 2% from north to south with elevations ranging between 445' and 441'. Per the soils report dated May 2024 by SA Geotechnical, the site is underlain by an approximately 25 to 75-foot silty clayey artificial fill material overlying bedrock. Artificial fill in the region is from the result of the original mass grading in the 1980s. Groundwater was encountered at a depth of 55-feet below ground surface (bgs). Historic high groundwater in the region indicates high groundwater is greater than 20 feet bgs. However, historic groundwater measurements are indicative of being below original grades prior to mass grading. Soils in this region are categorized as Hydrologic Soils Group (HSG) class D (see **Appendix C** for soils map).

B. EXISTING DRAINAGE PATTERN

The project site is located within the Aliso Creek Watershed and is subject to hydromodification mitigation requirements, which are discussed separately in the Project's Water Quality Management Plan.

Site drainage generally is broken into two main watershed subareas in the existing condition shown in **Figure 1**. Drainage originates from overland flow of sloped landscaping

and roof runoff that sheet flows east and west into perimeter gutters at the edge of the parking lot. Gutter flow drains into two curb outlets on either side of the driveway aisle located at the present-day driveway access to Argonaut. Stormwater flows into the gutter along Argonaut and to an existing catch basin approximately 250 feet south of the site. This catch basin collects stormwater into a 39-inch reinforced concrete pipe (RCP) that eventually increases up to a 78-inch R.C.P downstream. The 78-inch R.C.P. drains along a rip rap energy dissipation structure at Aliso Creek, where stormwater is conveyed to the Pacific Ocean at South Laguna Beach.

C. EXISTING STORM DRAIN FACILITIES

Existing storm drain facilities are identified in the OCFCD Base Map of Drainage Facilities in Orange County, Sheet 64 Appendix **B2** and shown in **Figure 1**. Apart from minor landscape drains that outlet to parking lot curb face, there are no known underground storm drain facilities onsite.

III. HYDROLOGIC ANALYSIS

A. STORM FREQUENCY

This report includes hydrology analysis for the existing and proposed project conditions based on a 25-year frequency storm event. This storm frequency is chosen as a more conservative parameter than the required 20-year storm frequency by the City of Aliso Viejo. The hydrologic parameters used for the analysis are in accordance with the 1986 County of Orange Hydrology Manual and its 1996 Addendum.

B. METHODOLOGY

The City of Aliso Viejo is an incorporated city within Orange County. Accordingly, the City of Aliso Viejo accepts methodologies and practices as described in the 1986 Orange County Hydrology Manual and its 1996 Addendum.

The rational method, as described in Section D of the County's hydrology manual, is used for determining all peak runoff rates and times of concentration for this study. The rational method is implemented using CivilDesign software, 2018 version, developed by Civil Design Corporation and Joseph E. Bonadiman and Associates, Inc, and is accepted by the County of Orange for hydrologic study purposes.

C. EXISTING CONDITION

As described in Section II.B., drainage areas of the existing project site are depicted in **Figure 1** in **Appendix A**.

Peak flow originates as overland flow from a highpoint in subarea A-1 (node 101). Stormwater flow from subareas A-2 and A-3 are conveyed by perimeter gutters to drainage curb outlets at node 103. Stormwater flow exits the site and is conveyed in a

gutter on Argonaut flowing south into a catch basin approximately 250-feet south of the site.

Table III.1 Existing Onsite Runoff

Area	Existing Condition 25-Year Storm		
	QPEAK (cfs)	Area (AC)	CivilD file name
Area A	7.7	2.77	117010Ex25v2
Total Project	7.7	2.77	

See **Appendix B** for detailed hydrologic calculations.

D. PROPOSED CONDITION

The proposed drainage patterns are depicted in **Figure 2** in **Appendix A**.

Per the MS4 Permit requirements for redevelopment, this project will also incorporate low impact development (hereafter, LID) elements into the site design as well as implementation of the structural best management practices (hereafter, BMP). Stormwater for the project will be routed through the BMPs before discharging offsite.

The proposed condition peak flow drainage will mimic the existing condition to the maximum extent possible as described in **Section III.C**. Runoff originating as overland flow along the site boundary and from the proposed buildings will be conveyed into area drains placed throughout the development.

All project drainage will be routed to two proposed modular wetland systems (MWS) for water quality treatment prior to entering a proposed subsurface detention basin in the southeasterly portion of the project. The detention system is designed for hydromodification management as well as peak flow mitigation. Peak flows from the site will ultimately discharge through a proposed 18-inch pipe connection into an existing 24-inch R.C.P storm drain downstream.

The proposed peak flow drainage for the project is described in **Table III.2**:

Table III.2 Proposed Project Runoff (Unmitigated)

Subarea	Final Node	Proposed Unmitigated Condition 25-Year Storm		
		QPEAK (cfs)	TArea (AC)	CivilD file name
A-1	102	1.5	0.38	117010Prop25v2
A-2	103	1.4	0.39	117010Prop25v2
A-3	103	0.4	0.13	117010Prop25v2
A-4	105	2.1	0.58	117010Prop25v2
A-5	106	1.5	0.50	117010Prop25v2
A-6	106	1.5	0.44	117010Prop25v2
A-7	107	0.2	0.13	117010Prop25v2
A-8	107	0.5	0.15	117010Prop25v2
B-1		0.3	0.07	117010Prop25B
Total Project		**9.0**	**2.70 (2.77)**	

It is noted that the proposed condition has a reduction of tributary area by 0.07-acres. This region drains offsite in the proposed condition at the northwest corner of the site. Flow

passes through landscaping and into the gutter at Glenwood Drive and Argonaut and is deemed to be negligible.

Comparing the existing condition peak flows from **Table III.1** and the proposed unmitigated condition peak flows in **Table III.2**, the unmitigated proposed condition peak flows exceed the existing condition peak flows. Because of this condition, the project is proposing a basin to reduce the proposed 25-year storm flow rate from the project.

IV. PROPOSED ONSITE DRAINAGE FACILITIES

A. PROPOSED STORM WATER FACILITIES

As described in Section III.D, this project will implement structural BMPs that meet water quality and hydromodification management objectives as required by the MS4 Permit.

All existing storm drainage structures (i.e. curb and gutter) within the site will be demolished. Stormwater from the proposed site will be intercepted by roof downspouts, new area drains, gutters, and catch basins and conveyed to the water quality treatment system paired with a downstream detention system. The detention system serves to mitigate hydromodification (HMP), and peak storm flows. Storm water flows through the subsurface detention system were analyzed in two scenarios:

1. HMP scenario:
   This will be the scenario for the more frequent storm events (i.e. 10% of the 2-year through 10-year storms). Stormwater is routed through the paired MWS units and enters the subsurface detention vault. Stormwater then flows through a riser, exits through a 2-inch low-flow orifice at the bottom of the riser as well as a 0.65 foot wide by 0.8 foot height notch (Section A detail **Figure 2)**, and to the 24-inch R.C.P. storm drain to the south along Argonaut. Placement and sizing of the orifice is designed to meet hydromodification objectives detailed in the project's WQMP.

2. Peak storm:
   During less frequent and more intense storm events (i.e. the 25 year storm), stormwater will flow over an internal bypass weir in the MWS units, through the detention vault, through the 2 inch orifice at the system invert and over the downstream weir plate. Stormwater then flows underground to the existing 24 inch RCP in Argonaut.

B. MITIGATED PEAK STORM FLOWS

As described in Section III.D, the proposed drainage patterns are depicted in **Figure 2** in **Appendix A.**

The proposed subsurface detention system has been sized accordingly to accommodate hydromodification management and peak flow attenuation. The proposed condition unmitigated peak flows exceed the existing condition peak flows by 1.3 cfs. Results from the existing and proposed condition studies are in Table III.1 and Table III.2 respectively.

As described in the project WQMP, the detention facility was sized for hydromodification and peak flow mitigation by routing the 25 year, 24-hour peak storm hydrograph through

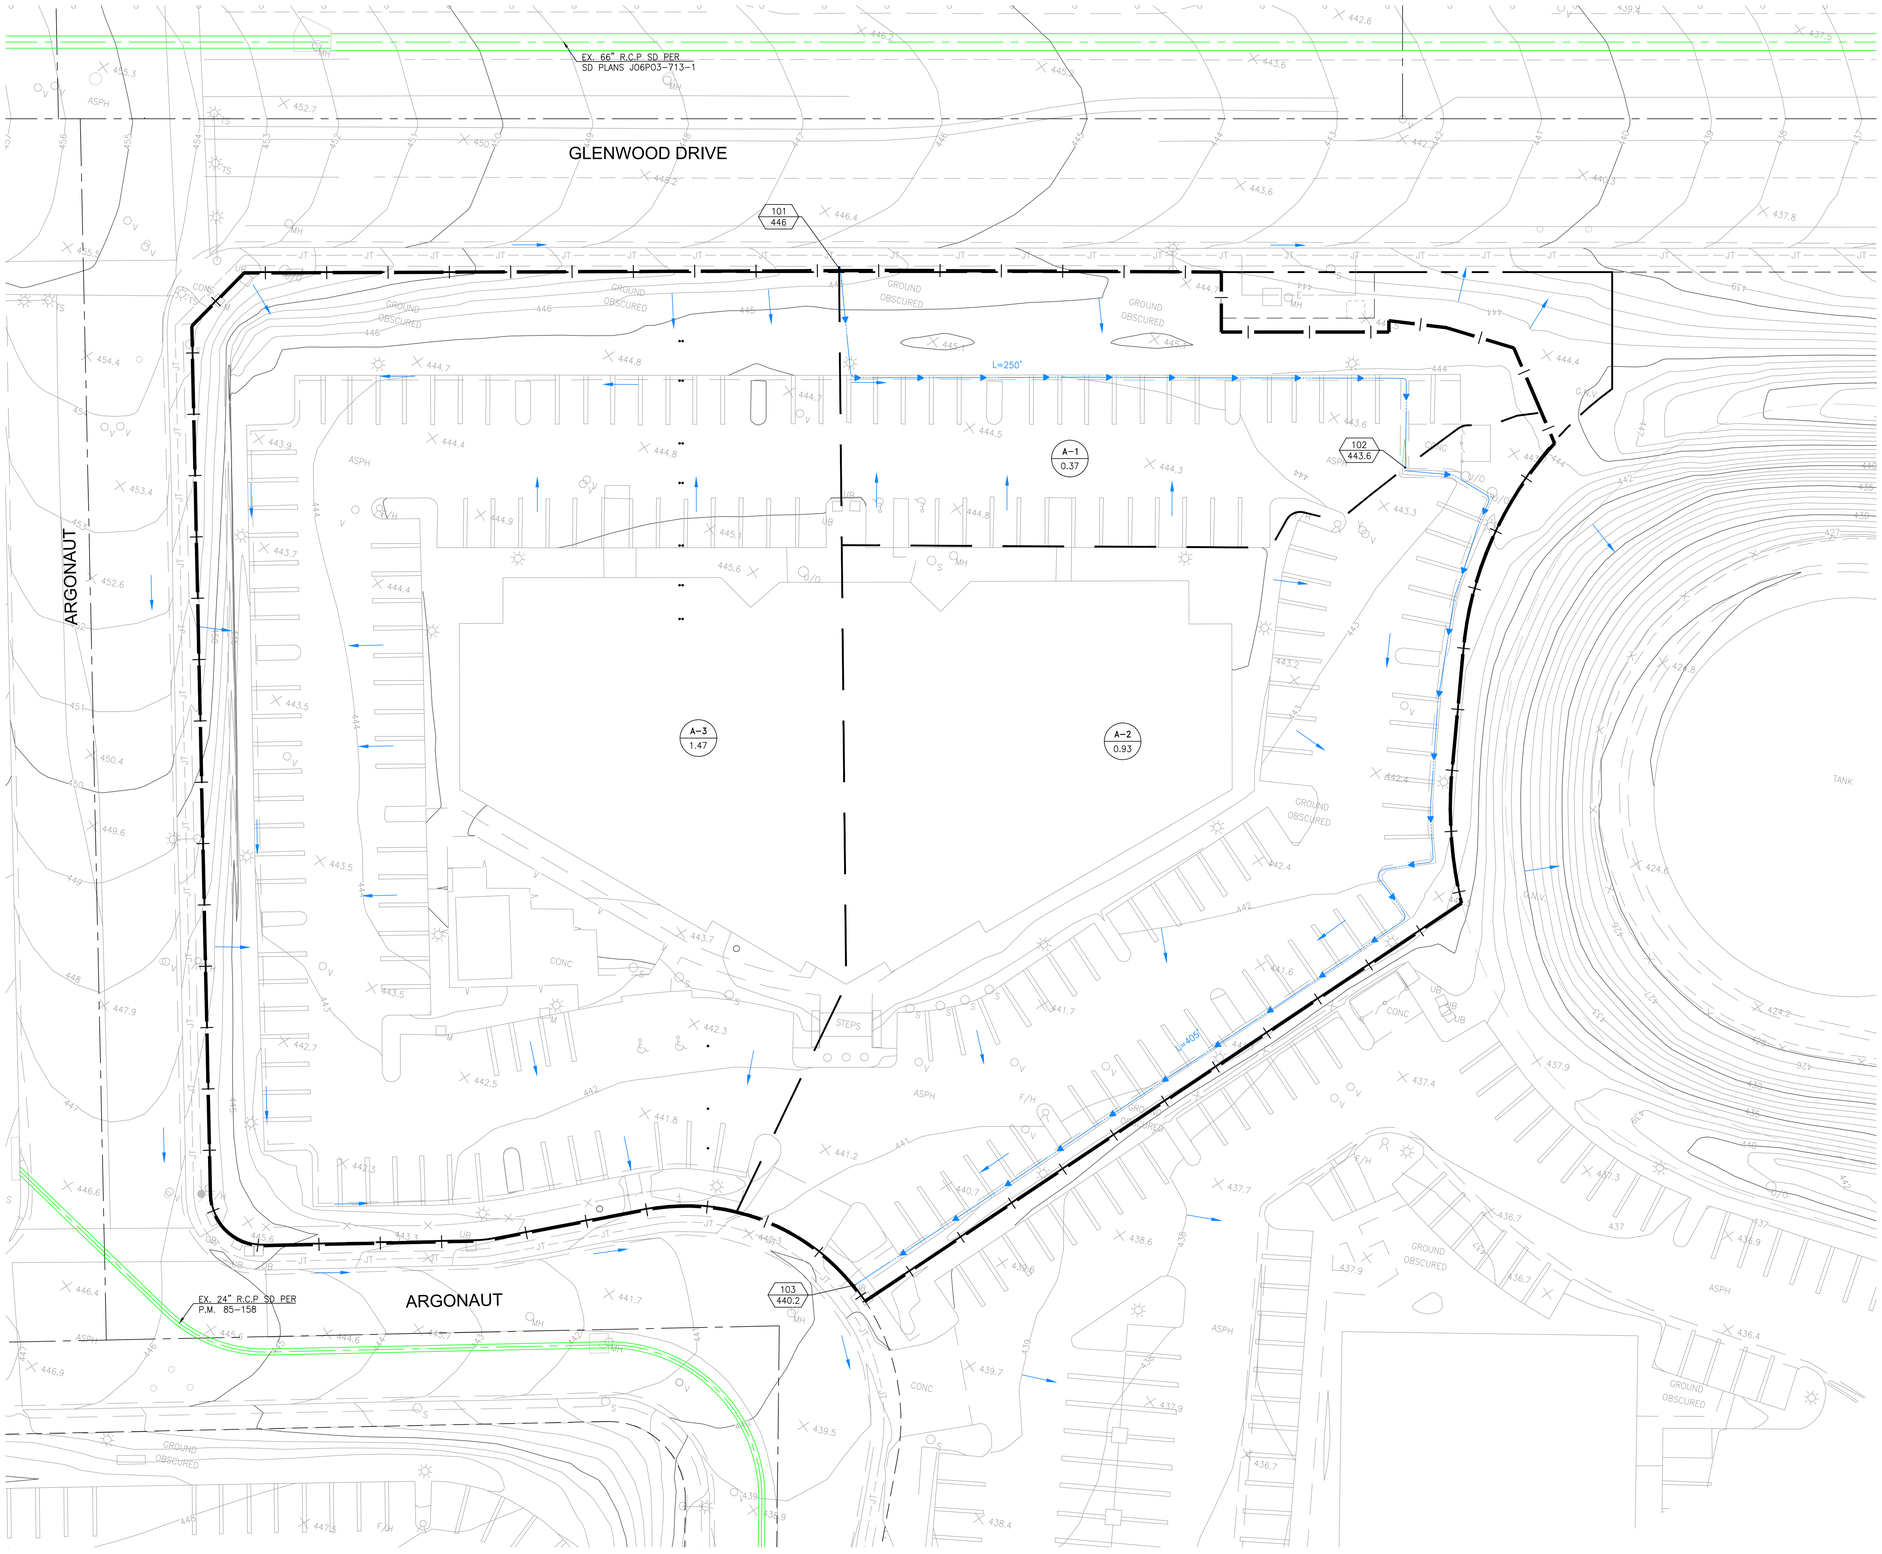
the detention system. Basin routing was accomplished using Flood Hydrograph routing of the peak storm hydrograph with modified puls routing in CivilDesign software, 2018 version, developed by Civil Design Corporation and Joseph E. Bonadiman and Associates, Inc. All routing calculations are provided in **Appendix B**.

Table IV.1 Proposed Onsite Runoff (Mitigated)

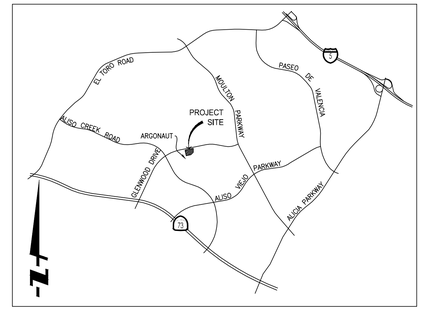
Existing Condition	Proposed Unmitigated Condition	Proposed Mitigated Condition	
QPEAK (cfs)	QPEAK (cfs)	QPEAK (cfs)	CivilD file name
7.7	**9.0**	**7.13**	117010Argonautrte11

C. PROPOSED OFFSITE STORMWATER FACILITIES

As part of the improvements to 95 Argonaut, a new 18 inch RCP storm drain connection will be made on the existing 24 inch RCP storm drain. This connection is approximately 110 feet south of the project along Argonaut. A hydraulic study was performed on the existing 24 inch storm drain serving Argonaut (**Appendix C**). This was to demonstrate the project flow would not negatively impact the present capacity of the storm drain. The proposed attenuated peak flow of 7.1 cubic feet per second (cfs) was shown to not have an adverse effect on the existing storm drain.



V. CONCLUSION



Based upon the analyses completed in this preliminary study, the proposed condition project has been adequately designed to convey the 25-year storm flow to ensure flood protection for the onsite areas as well as for the surrounding neighbors, and no adverse impacts to the storm drain system.

********* Hydrology Study Control Information **********

Rational hydrology study storm event year is 25.0

Decimal fraction of study above 2000 ft., 600M = 0.0000
English Units Used for input data

++

Process from Point/Station 101.000 to Point/Station 102.000
**** INITIAL AREA EVALUATION ****

COMMERCIAL subarea type
Decimal fraction soil group A = 0.000
Decimal fraction soil group B = 0.000
Decimal fraction soil group C = 0.000
Decimal fraction soil group D = 1.000
SCS curve number for soil(AMC 2) = 75.00
Pervious ratio(Ap) = 0.1000 Max loss rate(Fp)= 0.200(In/Hr)
Max Catchment Loss (Fm) = 0.020(In/Hr)
Initial subarea data:
Initial area flow distance = 250.000(Ft.)
Top (of initial area) elevation = 446.000(Ft.)
Bottom (of initial area) elevation = 443.600(Ft.)
Difference in elevation = 2.400(Ft.)
Slope = 0.00960 s(%)= 0.96
TC = k(0.304)*[(length^3)/(elevation change)]^0.2
Initial area time of concentration = 7.008 min.

```
Rainfall intensity =      3.985(In/Hr) for a    25.0 year storm
Effective runoff coefficient used for area (Q=KCIA) is C = 0.895
Subarea runoff =      1.320(CFS)
Total initial stream area =        0.370(Ac.)

++++++++++++++++++++++++++++++++++++++++++++++++++++++++++++++++++++++++
Process from Point/Station      102.000 to Point/Station      103.000
**** STREET FLOW TRAVEL TIME + SUBAREA FLOW ADDITION ****
________________________________________________________________________
Top of street segment elevation =   443.600(Ft.)
End of street segment elevation =   440.200(Ft.)
Length of street segment  =   405.000(Ft.)
Height of curb above gutter flowline  =    6.0(In.)
Width of half street (curb to crown)  =  12.000(Ft.)
Distance from crown to crossfall grade break  =   0.500(Ft.)
Slope from gutter to grade break (v/hz) =   0.020
Slope from grade break to crown (v/hz)  =   0.020
Street flow is on [2] side(s) of the street
Distance from curb to property line  =  10.000(Ft.)
Slope from curb to property line (v/hz) =   0.025
Gutter width =   2.500(Ft.)
Gutter hike from flowline =  2.000(In.)
 Manning's N in gutter =  0.0150
 Manning's N from gutter to grade break =  0.0150
 Manning's N from grade break to crown =  0.0150
Estimated mean flow rate at midpoint of street =      2.549(CFS)
Depth of flow =   0.265(Ft.), Average velocity =   1.830(Ft/s)
Streetflow hydraulics at midpoint of street travel:
Halfstreet flow width =   7.420(Ft.)
Flow velocity =   1.83(Ft/s)
Travel time =    3.69 min.     TC =   10.70  min.
 Adding area flow to street
COMMERCIAL subarea type

**** PIPEFLOW TRAVEL TIME (Program estimated size) ****
----------------------------------------------------------------------------
Upstream point/station elevation =   436.330(Ft.)
Downstream point/station elevation =   433.600(Ft.)
Pipe length  =    95.00(Ft.)   Manning's N = 0.013
No. of pipes = 1  Required pipe flow  =     9.031(CFS)
Nearest computed pipe diameter  =     15.00(In.)
```

Calculated individual pipe flow =   9.031(CFS)
Normal flow depth in pipe =   10.38(In.)
Flow top width inside pipe =   13.85(In.)
Critical Depth =   13.88(In.)
Pipe flow velocity =   9.97(Ft/s)
Travel time through pipe =   0.16 min.
Time of concentration (TC) =   7.35 min.
End of computations, total study area =   2.70 (Ac.)
The following figures may
be used for a unit hydrograph study of the same area.
Note: These figures do not consider reduced effective area
effects caused by confluences in the rational equation.

Area averaged pervious area fraction(Ap) = 0.195
Area averaged SCS curve number (AMC 2) = 75.0

**** INITIAL AREA EVALUATION ****

SCS curve number for soil(AMC 2) = 84.00
Pervious ratio(Ap) = 1.0000 Max loss rate(Fp)= 0.200(In/Hr)
Max Catchment Loss (Fm) = 0.200(In/Hr)
Initial subarea data:
Initial area flow distance = 15.000(Ft.)
Top (of initial area) elevation = 452.640(Ft.)
Bottom (of initial area) elevation = 451.920(Ft.)
Difference in elevation = 0.720(Ft.)
Slope = 0.04800 s(%)= 4.80
TC = k(0.706)*[(length^3)/(elevation change)]^0.2
Initial area time of concentration = 3.828 min.
Rainfall intensity = 5.611(In/Hr) for a 25.0 year storm
Effective runoff coefficient used for area (Q=KCIA) is C = 0.868
Subarea runoff = 0.341(CFS)
Total initial stream area = 0.070(Ac.)
End of computations, total study area = 0.07 (Ac.)
The following figures may

be used for a unit hydrograph study of the same area.
Note: These figures do not consider reduced effective area
effects caused by confluences in the rational equation.

Area averaged pervious area fraction(Ap) = 1.000
Area averaged SCS curve number (AMC 2) = 84.0

++
Process from Point/Station 101.000 to Point/Station 108.000
**** RETARDING BASIN ROUTING ****
_____

User entry of depth-outflow-storage data

Total number of inflow hydrograph intervals = 292
Hydrograph time unit = 5.000 (Min.)
Initial depth in storage basin = 0.00(Ft.)

Initial basin depth = 0.00 (Ft.)
Initial basin storage = 0.00 (Ac.Ft)
Initial basin outflow = 0.00 (CFS)

Depth vs. Storage and Depth vs. Discharge data:

Basin Depth (Ft.)	Storage (Ac.Ft)	Outflow (CFS)	(S-O*dt/2) (Ac.Ft)	(S+O*dt/2) (Ac.Ft)
0.000	0.000	0.000	0.000	0.000
1.000	0.023	0.109	0.023	0.023
1.850	0.042	0.152	0.041	0.043
2.500	0.058	1.584	0.053	0.063
3.000	0.069	6.417	0.047	0.091
4.000	0.091	10.290	0.056	0.126

Hydrograph Detention Basin Routing

Graph values: 'I'= unit inflow; 'O'=outflow at time shown

NOTICE

This drainage map has been prepared for information purposes only. The location and ownership of facilities have been determined from available information provided by public agencies, but may not be exact. The user of this map is responsible for verifying exact location, ownership and regional versus local character of drainage facilities.
Additional information may be obtained from public plans and recorded deeds.
Character designations shown on this map are for convenience only and are not controlling. Neither the County of Orange nor The Orange County Flood Control District (OCFCD) assume any liabilities for inaccuracy of this map.

Call Alan Vu at (714) 834-5986 to notify Public Facility and Resources Department (PFRD) of additions or corrections.

SA GEOTECHNICAL
OPTIMIZED SOIL ENGINEERING

May 31, 2024

Project No. 24059-01

To: Meritage Homes
5 Peters Canyon Road, Suite 310
Irvine, California 92606

Attention: Ms. Emma Hill

Subject: Geotechnical Subsurface Exploration, Due Diligence Study, and Preliminary Geotechnical Recommendations, Proposed Residential Development, 95 Argonaut, City of Aliso Viejo, California

At your request, SA Geotechnical, Inc. (SA GEO) has conducted subsurface exploration and geotechnical due diligence study for the proposed residential development located at 95 Argonaut in the City of Aliso Viejo, California (Figure 1). The purpose of this study was to evaluate the geotechnical site conditions in light of the proposed grading and improvements in order to provide a geotechnical summary of conditions and preliminary geotechnical recommendations for project design, grading, and construction. Our evaluation included review of collected geologic and geotechnical engineering reports and maps pertinent to the subject site; a site-specific subsurface exploration; laboratory testing; geotechnical analysis; and preparation of this report.

The subject site is currently developed with a 2-story office building, retaining wall along the westerly property line, at-grade asphalt concrete paved parking lot and associated drive aisles, and hardscape/landscape improvements, all of which will be demolished as part of the proposed project. An approximately 20-foot-high descending slope is present along the easterly property boundary. Based on our review and field exploration, the primary geotechnical constraints include the presence of highly expansive silty/clayey soil that is diatomaceous and seismic shaking during a strong seismic event. The subsurface artificial fill soils at the site are primarily highly plastic silt/clay with minor interlayered clayey/silty sands. The artificial fill soils are generally diatomaceous and derived from Monterey Formation bedrock. Bedrock of the Monterey and Niguel Formations underlie the site at depth. Groundwater was encountered in one boring (H-4) during drilling, at a depth of 55 feet below ground surface. Onsite stormwater infiltration is not feasible considering that the site is underlain by relatively thick artificial fill, which are predominantly silty/clayey, overlying bedrock.

This report presents our findings, conclusions, and preliminary design recommendations for the subject residential development. Based on our review, the proposed grading and development is considered geotechnically feasible provided the recommendations in this report are implemented during design, grading, and construction. Additional evaluation and analysis may need to be performed once the project plans for grading and foundations are developed.

References pertinent to the site are included in Appendix A. Boring and laboratory test data are included in Appendix B and C, respectively. Seismic design parameters are presented in Appendix D. Slope stability analysis is presented in Appendix E. General earthwork and grading specifications are presented in Appendix F.

If you have any questions regarding this report, please contact our office. We appreciate the opportunity to provide our services.

Respectfully submitted,

EXECUTIVE SUMMARY

The subject site is underlain by relatively thick artificial fill material as a result of mass grading and development that occurred in the 1980s. Approximately 25 to 75 feet of fill was encountered in all borings which generally consisted of olive gray, olive brown, bluish gray, brown, and black clayey silt, clay, silty/sandy clay, clayey sand, and silty sand that was moist to wet and medium stiff to hard/medium dense to dense. The fine-grained fill materials are derived from the Monterey Formation and were found to be diatomaceous. Bedrock of the Monterey and Niguel Formations were encountered during drilling, underlying the artificial fill at depth.

The primary geotechnical constraints at the site include the following:

- Presence of highly expansive silty/clayey soils that are diatomaceous; and
- The potential for seismic shaking during an earthquake event.

Remedial grading for the site should consist of the removal and re-compaction of all weathered/disturbed fill materials. Remedial removals are anticipated to be on the order of 3 to 4 feet below existing grades within the proposed building pads. Remedial grading within the proposed drive areas may be limited to removal and re-compaction of the soils in the upper 1 to 2 feet. Deeper removals may be required where existing trees, utility lines, structures, and foundations are to be abandoned/removed. Considering that the onsite soils predominately consist of silty/clayey soils that are diatomaceous, achieving adequate compaction at acceptable moisture contents during fill placement may require additional mixing and compaction effort.

Groundwater was encountered in one boring (H-4) during our exploration, at a depth of 55 feet bgs (within Niguel Formation). Historic high groundwater is mapped 20 feet below original grades; however, this does not account for the mass grading and fill placement that occurred onsite. In general, we anticipate groundwater to remain at least 20 feet below existing grades upon the completion of grading. However, seepage/groundwater may be present at shallower depth locally and can fluctuate on an annual and seasonal basis.

Considering the relatively minor grading anticipated to achieve design grades, the laboratory test data, building foundations and slabs should be designed to tolerate a total settlement of 2 inches and a differential settlement of 1-inch over a span of 40 feet. Onsite soils are anticipated to have "High" expansion potential at the completion of grading and are considered corrosive to concrete ("S2").

Based on our findings, we conclude that the proposed residential development is feasible from a geotechnical viewpoint, provided it is designed and constructed in accordance with the recommendations presented in this report and the future design/plan review report(s). The site is not considered suitable for infiltration of storm water.

1.0 INTRODUCTION

1.1 Introduction and Scope of Services

At your request, SA Geotechnical, Inc. (SA GEO) has conducted subsurface exploration and geotechnical due diligence study for the proposed residential development located at 95 Argonaut in the City of Aliso Viejo, California (Figure 1). The purpose of our study was to assess the onsite geologic and geotechnical conditions and provide preliminary recommendations for design, grading, and construction of the proposed residential development. A Topographic Survey by X Engineering & Consulting, received on May 15, 2024, has been utilized as the base for our Geotechnical Map (Plate 1).

Our scope of services for this due diligence study included the following tasks:

- Review of available published geologic and geotechnical maps, reports, and data for the subject site and surrounding area, including an archive search of City of Aliso Viejo records. A list of references is included in Appendix A.
- Historic aerial photograph review, dating back to 1931.
- Notification and coordination with DigAlert to identify and clear boring locations of underground utilities.
- Subsurface exploration consisting of excavation, sampling and logging of four hollow-stem auger borings (H-1 through H-4) to depths ranging from 41.5 to 81.5 feet below ground surface (bgs). Boring logs are included in Appendix B.
- Laboratory testing of selected samples to determine engineering properties of onsite soils, including in-situ moisture and density, grain size distribution, Atterberg limits, maximum density and optimum moisture content, consolidation/collapse, shear strength, expansion potential, and soluble sulfate content. Laboratory test results are included in Appendix C.
- Geotechnical evaluation and analysis of the compiled data regarding the proposed grading and development.
- Evaluation of faulting, seismicity, and seismic and static settlement in accordance with the 2022 California Building Code (CBC).
- Preparation of this report including our findings, conclusions, preliminary recommendations, and accompanying illustrations.

SA GEO's expertise and scope of services do not include assessment of potential subsurface environmental contaminants or environmental health hazards.

1.2 Site Condition and History

The subject site is located at 95 Argonaut, Aliso Viejo, California (see Figure 1), and is legally described as Parcel 1 of Parcel Map No. 85-158, Assessor's Parcel Number (APN) 141-521-48. The approximately 2.85-acre site is bound by Glenwood Lane to the north, Argonaut Street to the west and south, a Moulton Niguel Water District reservoir/tank to the east, and other commercial properties to the southeast. The site is currently developed with an approximately 24,879 square-foot two-story commercial building with at-grade asphalt-paved parking lot, drive aisles, and

associated landscaping/hardscaping. The site is primarily flat, with elevations ranging from 440 to 448 feet above mean sea level. A retaining wall is present along the western property line, approximately 3 to 6 feet in height, with an ascending 3- to 4-foot-high 2H:1V slope above. There is an approximately 20-foot-high descending 2H:1V slope along the easterly property line extending offsite to the adjacent water reservoir/tank.

Based on our review of available historic aerial photographs dating back to 1931, the earliest land use at the subject site and surrounding areas were for agricultural purposes (ranching). Development of the surrounding area for commercial use began in the early 1980s, although the subject site remained an undeveloped natural drainage/swale. The site was mass graded between 1985 and 1987, concurrent with the construction of the water tank to the east. This mass grading appears to have occurred concurrent with the adjacent geotechnically-observed mass grading (Jack G. Raub Company, 1987), although no documents pertaining to the grading of the subject site were recovered during our archive search of City/County records. The geotechnical maps/report associated with the adjacent graded commercial lots overlap with the western portion of the subject site and detail a historical (pre-grading) topography ranging from 390 to 412 feet above sea level (Jack G. Raub Company, 1987); however, topography for the eastern and southern portion of the subject site were not included. This suggests a minimum of 30 to 60 feet of design fill associated with mass grading, although this does not account for any remedial grading/removal of alluvium during grading. The streets in the industrial complex were constructed by 1988, along with some of the other commercial buildings in the area. The existing two-story commercial building at the subject site was constructed by 1990. No significant changes were observed on the subject site since initial development and construction of the existing commercial building.

1.3 Proposed Grading and Improvements

Prior to any site development or grading, the existing structures, pavements, utilities, and hardscape will be demolished. Considering the site is relatively flat, we anticipate design grading to consist of cuts and fills on the order of 1 to 3 feet to reach pad grades and provide proper site drainage. Locally, deeper cuts/fills may be required were retaining structures are proposed.

The proposed project is anticipated to include grading/construction for residential development. Based on our review of the Site Plan provided by you, dated March 2024, we understand that the proposed project will consist of 8 multifamily buildings totaling 62 residential units. We anticipate the proposed structures will be 3- to 4-story and consist of wood-framed construction. The development will also include infrastructure improvements, parking/drive aisles, stormwater filtration devices and landscape/hardscape improvements.

1.4 Subsurface Exploration

Our field exploration was performed on April 22, 2024, and included excavation of four hollow stem auger borings (H-1 through H-4) to depths ranging from 41.5 to 81.5 feet bgs.

The borings were geologically logged, and samples were obtained at selected intervals. After completion of drilling, the excavations were backfilled with soil cuttings and tamped. Pavement at the boring locations was repaired with cold patch asphalt. The approximate boring locations are shown on Plate 1 (Geotechnical Map). Boring logs are included in Appendix B.

Soil sampling was performed using a Modified California ring sampler. Relatively undisturbed ring samples were obtained from the borings at various depths with a 2.5-inch inside-diameter, split-barrel sampler. The sampler was driven with a 140-pound, automatic trip hammer, free falling 30 inches. The sampling was used to assess the soil beneath the site as well as to obtain a measure of resistance of the soil to penetration (recorded as blows-per-foot on the geotechnical boring logs). Representative bulk samples of onsite soils were also collected from soil cuttings and used for additional soil identification purposes and laboratory testing.

1.5 Laboratory Testing

Representative samples of onsite soils collected during our field exploration were tested to characterize the engineering properties. Laboratory tests performed on selected relatively undisturbed and bulk soil samples included:

- Moisture content and dry density;
- Grain size analysis;
- Atterberg limits;
- Direct shear;
- Consolidation;
- Maximum density and optimum moisture content;
- Expansion potential; and
- Soluble sulfate.

Laboratory tests were conducted in general conformance with applicable ASTM International standards. The laboratory test results are provided in Appendix C.

2.0 GEOTECHNICAL FINDINGS

2.1 Geologic Setting and Earth Units

The subject site is located in the eastern foothills of the San Joaquin Hills, within the Peninsular Ranges geomorphic province of Southern California. The site is mapped by the U.S. Geological Survey (USGS, 2006) as underlain by sedimentary bedrock of the Monterey and Niguel Formations that is successively overlain by unconsolidated alluvium. Based on our subsurface exploration and understanding of the site history, the subject site was mass graded in the 1980's resulting in thick artificial fill materials placed over bedrock. No alluvium was encountered in any of our borings and is assumed to have been removed during mass grading. The earth unit distribution and our interpretation of the subsurface conditions are shown on the Geotechnical Map (Plate 1) and Geotechnical Cross-Sections A-A' and B-B' (Plates 2 and 3).

Our subsurface exploration encountered compacted **Artificial Fill (Af)** underlying the site as a result of original mass grading. Approximately 25 to 75 feet of artificial fill was encountered in all borings which generally consisted of olive gray, olive brown, bluish gray, brown, and black clayey silt, clay, silty/sandy clay, clayey sand, and silty sand that was moist to wet and medium stiff to hard. The fine-grained fill materials appear to be derived from the Monterey Formation and were found to be diatomaceous.

We encountered sedimentary bedrock of the **Monterey Formation (Tm)** and **Niguel Formation (Tn)** underlying the fill materials in all borings. Based on our review of the regional geologic mapping, the earth units are in fault contact below the site (see Figure 2). The fault is inactive/pre-Quaternary. The **Monterey Formation** bedrock generally consisted of olive gray, olive brown, brown, pale yellow, and white siltstone that was very moist to wet, very stiff to hard, and highly diatomaceous. Bedding was observed to be massive to well bedded with thin to laminated bedding.

The **Niguel Formation** was encountered in one boring (H-4) and the bedrock generally consisted of yellowish brown to yellowish gray sandstone that was saturated and very dense. The sandstone was observed to be massive, weakly indurated, and slightly friable.

2.2 Geotechnical Conditions

Based on our geotechnical exploration and laboratory testing, the site geotechnical conditions are generally as follows:

Soil Moisture Content and Dry Density: Onsite artificial fill materials had in-situ moisture contents and dry densities ranging from 10.9 to 84.2 percent and 50.6 to 117.9 pounds per cubic foot (pcf), respectively. Bedrock of the Monterey Formation had in-situ moisture contents ranging from 26.7 to 86.7 percent and dry densities ranging from 51.1 to 96.9 pcf. Please note that the high moisture contents and low densities in the artificial fill and Monterey Formation are typical of diatomaceous materials. Niguel Formation bedrock had in-situ moisture contents ranging from 15.4 to 23.8 percent and dry densities ranging from 96.6 to 115.2 pcf.

Blow counts (blows-per-foot of penetration) in the artificial fill generally ranged from 11 to 66 blows per foot. Blow counts in bedrock ranged from 22 blows per foot to 50 blows for 3.5 inches.

Soil Properties: Grain-size distribution tests were conducted on three bulk samples collected from the uppermost 5 feet. The samples were classified in accordance with the Unified Soil Classification System (USCS) as highly plastic silt (MH) with fines contents (passing No. 200 sieve) ranging from 64 to 73 percent.

Soil plasticity testing was performed on three bulk samples collected from the uppermost 5 feet. The samples were classified as highly plastic silt (MH) with Plasticity Indices ranging from 31 to 37 and Liquid Limits ranging from 70 to 83 percent.

Maximum dry density testing of one near surface sample (collected from the uppermost 5 feet) indicates that the silty soil (MH) has a maximum dry density of 94.1 pcf at optimum moisture content of 20.5 percent.

Shear Strength: Two direct shear tests (relatively undisturbed samples) were performed on samples collected at depths of 2.5 and 5 feet, representative of existing fill materials. The undisturbed direct shear test results indicate that the samples had ultimate internal friction angles of 24 and 26 degrees at cohesions of 400 and 450 pounds per square foot (psf), respectively. The peak internal friction angles were 28 and 29 degrees with cohesions of 450 and 775 psf, respectively.

Consolidation: Tests were performed on four samples collected at depths ranging from 2.5 to 15 feet, representative of existing fil materials. The testing showed that the diatomaceous fill materials are moderately compressible. However, the pre-consolidation pressures are relatively high (higher than 5 ksf). The samples generally had negligible collapse and swell upon the addition of water at a load of 3.2 ksf.

Expansion Potential: Expansion index testing was performed on two samples collected in the upper 5 feet. The results indicate a "High" expansion potential (EI = 91 and 104).

Soluble Sulfate: Soluble sulfate testing was performed on two bulk samples collected from the uppermost 5 feet. The results indicate negligible soluble sulfate content; however, per our experience with the Monterey Formation and review of the laboratory testing from the adjacent development (Jack G. Raub Company, 1987), we anticipate the soluble sulfate content of the onsite soils to be classified as "S2" per Table 19.3.1.1 of ACI-318-14.

2.3 Groundwater

Groundwater was encountered during our subsurface exploration in one boring (H-4) at a depth of 55 feet below ground surface (bgs) within the Niguel Formation. Groundwater was not encountered in boring drilled within the Monterey Formation to a depth of 81.5 feet bgs. The presence of the fault contact between Monterey and Niguel formations may act as a barrier for groundwater migration.

Historic high groundwater mapping indicates high groundwater is greater than 20 feet bgs (CDMG, 2001a). Please note that this is below original grades prior to mass grading and significantly raising grade across the site. Groundwater is anticipated to fluctuate both seasonally and annually, but it is expected to remain deep below the site.

2.4 Regional Faulting and Seismicity

Regional Faults: The site is not located within a fault-rupture hazard zone as defined by the Alquist-Priolo Special Studies Zones Act (CGS, 2018). Also, based on mapping by the State (Jennings and Bryant, 2010), there are no active faults mapped at the site. As discussed previously, the Monterey and Niguel Formations are in fault contact deep below the site; however, the fault is considered inactive (Pre-Quaternary). Regional Faults are presented on Figure 3.

Seismicity: Properties in southern California are subject to seismic hazards of varying degrees depending upon the proximity, degree of activity, and capability of nearby faults. These hazards can be primary (i.e., directly related to the energy release of an earthquake) or secondary (i.e., related to the effect of earthquake energy on the physical world). Since there are no active faults at the site, the potential for primary ground rupture is considered very low. The primary seismic hazard for this site is ground shaking during a future earthquake.

Using the USGS deaggregation computer program (USGS, 2024) and the site coordinates of 33.5946 north latitude and –117.7243 west longitude, the closest major active faults include the Newport-Inglewood and San Joaquin Hills Faults. The maximum moment magnitude for the controlling fault is 7.1 M_W, which would be generated from the San Joaquin Hills Fault; however, numerous other regionally active faults could also produce ground shaking at the site during an earthquake.

The site is not located within a mapped potential liquefaction hazard zone, as defined by the State's Seismic Hazard Mapping (CDMG, 2001b). Other secondary seismic hazards, such as tsunami and seiche are considered nil due to site elevation and distance from the ocean or other confined body of water (CGS, 2021).

2.5 Slope Stability

The site geologic/geotechnical conditions are generally favorable for overall stability of the existing slope along the eastern perimeter. The existing fill slope is approximately 20 feet in total height at an inclination of 2H:1V (horizontal:vertical). We prepared cross-section B-B' (Plate 3) depicting the existing descending slope at the site. Slope stability analysis was performed for a 2H:1V slope with a maximum height of 25 feet, using artificial fill soil strength parameters that were developed during this study and based on the direct shear test results. For our analysis, we used an internal friction angle of 24 degrees and a cohesion of 400 psf. For pseudo-static analysis, we applied a seismic horizontal coefficient (k_h) of 0.29 in accordance with Special Publication 117A, Guidelines for Evaluating and Mitigating Seismic Hazards in California (CGS, 2008).

The results of the slope stability analysis are presented in Appendix E. The existing fill slope at the site was found to be grossly stable with a factor of safety of well over 1.5 under static conditions and a factor of safety of over 1.1 for pseudo-static conditions.

2.6 Settlement and Foundation Considerations

In general, the anticipated settlements depend upon the building loads, type of foundations, and the geotechnical properties of the supporting subgrade. Considering the subsurface soil conditions and laboratory test data, and relatively lightly loaded residential structures, we estimate the total static settlement to be on the order of 2 inches and the differential static settlement to be on the order of 1-inch over a 40-foot span. This assumes remedial grading measures recommended in Section 3.2 of this report are implemented during site grading.

2.7 Stormwater Infiltration Feasibility

The site is underlain by thick (25 to 75 feet) silty/clayey artificial fill materials overlying bedrock. In accordance with County of Orange WQMP guidelines, stormwater infiltration should not be performed in compacted artificial fill and bedrock (OCPW, 2013). Furthermore, the fine-grained soils will not be conducive to infiltration. Also, considering the presence of slopes along the property boundaries and deep canyon fill, infiltration of stormwater can result in seepage or springs in locations where previously none existed, potentially impacting offsite properties and slopes. Stormwater infiltration is not considered feasible from a geotechnical viewpoint.

2.8 Shrinkage and Bulking

The shrinkage and bulking (reduction or increase in volume of excavated materials on recompaction as fill) varies by soil type and location. The volume change primarily depends on in-situ density and the maximum dry density of the soil type. Considering the site is underlain by compacted fill materials, we anticipated that shrinkage of site soils will be relatively low and less than 5 percent. Ground subsidence at the site is estimated to be on the order of 0.1 foot. These values exclude losses due to removal of pavement, vegetation and debris and are dependent on the accuracy of the site topographic survey and type of equipment and compaction method used by the contractor.

2.9 Existing Utilities and Pavement Section

Existing onsite utilities consisting of sewer, water, and gas/electric lines are present onsite supporting the existing office building and associated improvements. We anticipate that the existing utilities will be demolished as part of the proposed improvements and that new utilities and service connections will be established.

The existing pavement section was measured in Borings H-1 through H-4 excavated during this study. The pavement section consisted of 4 inches of asphalt concrete (AC) over 6 to 8 inches of aggregate base (AB).

3.0 CONCLUSION AND PRELIMINARY RECOMMENDATIONS

3.1 General Conclusion and Recommendation

Based on our review, construction of the proposed residential development, as described herein, is considered geotechnically feasible provided the preliminary recommendations in this report are implemented during design, grading, and construction. Grading, foundation, structural and wall plans for the project should be reviewed by the geotechnical consultant during the design phase. Updated recommendations should be provided once the project plans are finalized and as needed.

The recommendations in this report should be considered minimum and may be superseded by more restrictive requirements of others. In addition to the following recommendations, General Earthwork and Grading Specifications are provided in Appendix F.

3.2 Site Preparation and Earthwork

Site preparation and grading should be performed in accordance with the recommendations herein and the requirements of the City of Aliso Viejo/County of Orange.

3.2.1 Site Demolition and Clearing

Prior to remedial grading, the existing structures, foundations, hardscape/landscape, and utilities to be abandoned should be demolished and removed. Deleterious materials and debris should be cleared from the site and disposed of offsite. Concrete material may be mixed with onsite soils and placed as compacted fill provided it is broken into pieces that are smaller than 6 inches in the largest diameter. Asphalt concrete may also be used in compacted fill materials; however, it should not be placed under the residential pads. Placement of concrete and asphalt as compacted fill should be approved by the project environmental consultant. Excavations for the removal of existing foundations, utilities, and vegetation, including onsite trees, should be observed by the geotechnical consultant. Large roots, highly organic soils, and existing utilities should be removed and should not be incorporated into new fills.

Soil that is disturbed as part of excavations or removal of trees or underground utilities should be evaluated by the geotechnical consultant. Excavations that require backfill should be properly documented and compacted under the observation and testing of the geotechnical consultant in accordance with the recommendations provided in Section 3.2.4.

3.2.2 Protection of Existing Improvements and Utilities

Existing improvements, and utilities on or adjacent to the site that are to be protected in place should be located and visually marked prior to grading operations. Excavations adjacent to improvements to be protected in-place or any utility easement should be performed with care, so as not to undermine existing foundations or destabilize the adjacent ground.

Stockpiling of soils more than 5 feet in height at or near existing structures and over utility lines should not be allowed. If deeper removals are required, shoring or other special measures (i.e., setback or laybacks) to provide safety and mitigate the potential for lateral/vertical movements may be required.

3.2.3 Remedial Grading Measures

Remedial grading at the site should consist of removal of weathered/unsuitable fill materials. In general, we recommend that remedial grading for the proposed building pads consist of removal and recompaction of soils in the upper 3 to 4 feet (from existing grade) to remove any unsuitable/disturbed artificial fill material. The removals for building pads should extend a minimum of 4 feet laterally, beyond the building footprint. Removals within the proposed drive areas may be limited to removal and re-compaction of the upper 1 to 2 feet, below existing grades. Where deeper unsuitable material is encountered, the removals should be extended to the bottom of unsuitable materials to competent, unweathered/undisturbed artificial fill.

The geotechnical consultant should review and approve the removal bottoms prior to fill placement and should provide additional specific recommendations based on actual conditions, if necessary.

Excavations deeper than 4 feet will need to be laid back at a minimum inclination of 1:1 or provided with shoring. Shallow, unconfined excavations (4 feet or less) may consist of near-vertical excavation, locally, and upon review by the geotechnical consultant. Trench excavations should be performed in accordance with Cal/OSHA requirements for Soil Type "B". The contractor's qualified person should verify compliance with Cal/OSHA requirements. Excavations near existing structures (within a 1:1 projection) should be provided with shoring that is designed to support the surcharge load of the existing structure. Otherwise, excavations may need to be performed in sections (A/B/C slot cuts). Slot cuts should not exceed more than 20 feet in length. The conditions should be reviewed in the field by the project geotechnical consultant. Additional recommendations should be provided based on the actual conditions encountered during excavation and grading, as needed.

3.2.4 Fill Placement

Upon the completion of remedial grading measures, the approved removal bottoms should be scarified a minimum of 6 inches. The removal bottoms and fill materials should be compacted to at least 90 percent of the maximum dry density, as determined by ASTM Test Method D1557. Fill materials should be placed in loose lifts no thicker than 8 inches.

Fill materials should be relatively free of deleterious material. The existing fill materials are considered suitable for re-use as compacted fill provided any deleterious material is removed. Considering that the onsite soils predominately consist of silty/clayey soils that are diatomaceous, achieving adequate compaction at acceptable moisture contents during fill placement may require additional effort. The moisture content of the fill materials should be above the optimum moisture content but within the compactable levels.

Concrete material may be mixed with onsite soils and placed as compacted fill if it is broken into pieces that are smaller than 6 inches in the largest diameter. Asphalt concrete may also be used in compacted fill materials; however, it should not be placed under the residential pads. Placement of concrete and asphalt as compacted fill should be approved by the project environmental consultant.

3.2.5 Import

The geotechnical consultant should evaluate and accept any import soils prior to transportation to the subject site. We recommend that import soils have similar or better engineering properties to onsite soils. At minimum, the import materials should have an Expansion Index of less than 90 and a Plasticity Index of less than 25.

3.3 Settlement Potential

The amount of settlement will depend upon the type of foundation(s) selected and future loading by additional fill and structures. Based on our review of the subsurface data, considering the remedial grading recommendations provided in this report are implemented during grading, and structural loads typically associated with the anticipated 3- to 4-story residential units, we estimate that total and differential post-construction settlement will be on the order of 2 inches and 1-inch over a span of 40 feet, respectively.

SA GEO should be provided with the foundation plans and structural loads, once available, in order to further evaluate the potential for post-construction settlement of the proposed buildings and associated improvements. The parameters provided herein will then be confirmed/updated based on the planned foundations and loads and additional testing and/or analysis.

3.4 Foundation Design

The slab and foundations should be designed by the project structural engineer based on the proposed structure type and the anticipated loading conditions. The foundation soils are anticipated to have expansive soil conditions ("High" expansion potential) and will be subject to climatic and landscape moisture fluctuations. Post-tensioned slab should be anticipated for the proposed residential buildings. The following foundation recommendations are provided with the assumption that the recommendations included in Section 3.2 of this report are implemented during site grading. Caisson design parameters are provided in Section 3.5 of this report.

The recommended net allowable bearing capacity for continuous and isolated footings may be calculated based on the following equation:

$q_{all} = 500\ D + 150\ B + 1{,}500$ (but not to exceed 3,500 psf, see below for post-tensioned/mat slabs)

where:
D = embedment depth of footing, in feet
B = width of footing, in feet

Also, the following parameters may be used for design of foundation and slabs:

- Soil unit weight = 110 pcf
- Soil internal friction angle = 25 degrees
- Coefficient of Friction = 0.30
- Subgrade modulus (k) of 50 pci (corrected for large slabs)
- Soil elastic modulus (Es) of 1,000 psi
- Effective Plasticity Index (upper 15 feet) = 35

The allowable bearing capacity of 1,000 psf may be used for design of post-tensioned/mat foundation.

The dead load of concrete below adjacent grades (buried concrete foundations) may be neglected. The allowable bearing pressure and friction coefficient may be increased by one-third for wind and seismic loading.

We recommend that strip and isolated footings for the buildings have a minimum embedment depth of 18 inches below the lowest adjacent grade. Continuous footings should be at least 12 inches wide and isolated column footings should be at least 24 inches wide. The footings of freestanding and isolated structures, such as walls and pilasters, should have a minimum embedment depth of 18 inches into approved soils.

The following table provides our general guidelines and preliminary recommendations for design of post-tensioned foundations and slabs on expansive soil in accordance with the 2022 California Building Code (CBC) and Post-Tension Institute (PTI) DC 10.5 Edition provisions.

GEOTECHNICAL GUIDELINES
FOR DESIGN OF POST-TENSIONED SLABS

Parameter	Recommendation
Center Lift	
Edge Moisture Variation Distance, e_m	7.50 feet
Center Lift, y_m	0.90 inches
Edge Lift	
Edge Moisture Variation Distance, e_m	4.00 feet
Edge Lift, y_m	1.25 inch
Presaturation, as needed, to obtain the minimum moisture down to the minimum depth	1.3 x optimum down to 18 inches

We recommend that post-tensioned slabs have a thickened edge such that the slab is embedded a minimum of 18 inches below the lowest adjacent grade.

In addition, as indicated in the DC 10.5 Edition of PTI, shape factor calculations should be performed by the project structural engineer in order to determine if strengthening/modification of foundations are necessary. Per PTI guidelines, modifications to the foundations design should be considered if the shape factor (ratio of square of foundation perimeter over foundation area) exceeds 24.

If non-post-tensioned slabs-on-grade and foundations are considered at the site, an effective Plasticity Index of 35 is considered appropriate for the upper 15 feet of soil materials, in accordance with Wire Reinforcement Institute (WRI) method (per the 2022 California Building Code). For non-post-tensioned slabs, we recommend a minimum embedment of 18 inches below the lowest adjacent grade for the perimeter footings. Also, the upper 18 inches of subgrade soil should be pre-saturated to 130 percent of optimum moisture content prior to placement of moisture barrier and concrete.

The foundations and slabs should also be designed to tolerate the total and differential settlements discussed in Section 3.3 of this report.

For the design of pole-type foundations (i.e., light poles, shade structures, etc.), an allowable soil-bearing pressure ($_{S1}$) of 290 psf/ft may be used for Equation 18-1 (the "pole" equation) of the 2022 California Building Code (CBC) Section 1807.3.2.1 to determine the depth of embedment for the footings, considering level ground conditions. The equation is applicable for designed embedment depths of less than 12 feet for the purpose of computing lateral pressure. Also, for vertical loads on pole-type foundations, an allowable skin friction of 250 pounds per square foot may be used. Pole foundations should have a minimum embedment of 30 inches below adjacent grades. For cast-in-place pole-type foundations, the vertical end bearing pressure should be neglected.

3.5 Caisson Design

All caissons, if any, should have a minimum of 5 feet embedment into competent fill materials. An average skin friction value of 250 pounds per square foot may be utilized to calculate the axial capacity of caissons. The lateral capacity of caissons may be computed using a value of 290 psf/ft but should not exceed 4,400 psf/ft for level conditions. For caissons near the existing descending slope with passive envelope impacted by the slope, the passive pressure should be limited to 170 psf/ft. Passive resistance may be doubled for isolated piles/caissons spaced a minimum of 3 diameters apart center-to-center. The allowable bearing pressure (both axial and lateral) may be increased by one-third for wind or seismic loading. Other minimum footing dimensions should be provided by the Structural Engineer and should comply with Table 1809.7 of the 2022 CBC.

Caissons should be designed in accordance with ACI recommendations and applicable building code requirements. The accepted criteria for caisson installation are detailed below:

- Caissons should be constructed as pre-drilled cast-in-place elements. A representative of the geotechnical consultant should be present during drilling of all caisson excavations in order to verify proper embedment and to geotechnically review appropriate drilling methods.
- Caisson excavations should be cleaned of loose soil, cuttings and groundwater and should be reviewed by the project geologist prior to placement of steel or concrete.
- No caisson boring shall be excavated within 6 feet from the nearest edge of a completed caisson unless the completed caisson has been filled with concrete for more than 24 hours.

3.6 Retaining Walls Design and Lateral Earth Pressures

Recommendations for lateral earth pressures for permanent retaining walls and structures with approved onsite drained soils and above the groundwater table are as follows:

Conditions	*Level (pcf)*	*2:1 Sloping*
Active	40	60
At-Rest	65	85
Passive	290	170 (sloping down)

These parameters are based on a soil internal friction angle of 25 degrees, a cohesion of 100 pounds per square foot (psf) and soil unit weight of 110 pcf.

To design an unrestrained retaining wall, such as a cantilever wall, the active earth pressure may be used. For a restrained retaining wall, the at-rest pressure should be used. Passive pressure is used to compute lateral soils resistance developed against lateral structural movement. The passive pressures provided above may be increased by one-third for wind and seismic loads. The passive resistance is taken into account only if it is ensured that the soil against embedded structure will remain intact with time. Future landscaping/planting and improvements adjacent to the retaining walls should also be taken into account in the design of the retaining walls. Excessive soil disturbance, trenches (excavation and backfill), future landscaping adjacent to footings and over-saturation can adversely impact retaining structures and result in reduced lateral resistance.

For sliding resistance, the friction coefficient of 0.30 may be used at the concrete and soil interface. The coefficient of friction may be increased by one-third for wind and seismic loading. The retaining walls may also need to be designed for additional lateral loads if other structures or walls are planned within a 1H:1V projection.

If slopes above the retaining walls are relatively minor (in height), the additional load associated with the soil above the retaining wall and within the active wedge may be calculated as a **surcharge load** and applied to the retaining wall using a coefficient of active pressure (k_a) of 0.48.

The seismic lateral earth pressure for walls retaining more than 6 feet of soil may be estimated to be an additional 16 pcf for active and at-rest conditions. The earthquake soil pressure has a triangular distribution and is added to the static pressures. For the active and at-rest conditions, the additional earthquake loading is zero at the top and maximum at the base. The seismic lateral earth pressure does not apply to walls retaining less than, or equal to, 6 feet of soil (2022 CBC Section 1803.5.12).

Drainage behind walls retaining more than 30 inches of soil should also be provided in accordance with the attached Figure 4. Specific drainage connections, outlets and avoiding open joints should be considered for the retaining wall design.

3.7 Seismic Design Parameters

The following table summarizes the seismic design criteria for the subject site. The seismic design parameters are developed in accordance with ASCE 7-16 and 2022 CBC. Please note that, considering the proposed structures and anticipated structural periods, site-specific ground-motion hazard analysis was not performed for the site. Per Supplement 3 of ASCE 7-16, the value of S_{M1}, and therefore S_{D1}, have been increased by 50 percent. The seismic response coefficient, Cs, should be determined per the parameters provided below and using equation 12.8-2 of ASCE 7-16.

Selected Seismic Design Parameters from 2022 CBC/ASCE 7-16	*Seismic Design Values*	*Reference*
Latitude	33.5946 North	
Longitude	-117.7243 West	
Controlling Seismic Source	San Joaquin Hills	USGS, 2024
Site Class per Table 20.3-1 of ASCE 7-16	D	
Spectral Acceleration for Short Periods (Ss)	1.218 g	SEA/OSHPD, 2024
Spectral Accelerations for 1-Second Periods (S_1)	0.438 g	SEA/OSHPD, 2024
Site Coefficient F_a, Table 11.4-1 of ASCE 7-16	1.013	SEA/OSHPD, 2024
Site Coefficient F_v, Table 11.4-2 of ASCE 7-16	1.862	
Design Spectral Response Acceleration at Short Periods (S_{DS}) from Equation 11.4-4 of ASCE 7-16	0.822 g	SEA/OSHPD, 2024
Design Spectral Response Acceleration at 1-Second Period (S_{D1}) from Equation 11.4-4 of ASCE 7-16 (Includes 50% increase per Supplement 3)	0.816 g	
T_S, S_{D1} /S_{DS} 11.4.6 of ASCE 7-16	0.992 sec	
T_L, Long-Period Transition Period	8 sec	SEA/OSHPD, 2024
Peak Ground Acceleration Corrected for Site Class Effects (PGA_M) from Equation 11.8-1 of ASCE 7-16	0.566 g	SEA/OSHPD, 2024
Seismic Design Category, Section 11.6 of ASCE 7-16	D	SEA/OSHPD, 2024

3.8 Slope Stability and Slope Setback

No significant modifications to the existing fill slope along the eastern property line are planned as part of this project. The existing slope is composed of compacted artificial fill materials and the proposed improvements are not anticipated to adversely impact the slope. Based on our slope stability analysis (Appendix E), the existing slope was found to be grossly stable. In general, slopes are considered susceptible to surficial instability in the form of erosion, raveling, and slumping. Special care should be taken to ensure that onsite runoff is controlled and directed offsite in a non-erosive manner and that site drainage, and slopes are maintained over the life of the project.

Footings for structures located above descending slopes should be set back from the slope face in accordance with the minimum requirements of the City of Aliso Viejo and section 1808.7.1 of the 2022 CBC, whichever is greater. The setback distance is measured from the outside edge of the footing bottom along a horizontal line to the face of the slope.

The tables below summarize the minimum setback criteria for structures above descending slopes:

Case A – Building and Retaining Wall Footings Above Descending Slopes	
Slope Height [H] (feet)	*Minimum Setback from Slope face (feet)*
Less than 10	5
10 to 20	½ * H
20 to 30	10
Greater than 30	⅓ * H (maximum of 40')

Case B – Freestanding Wall Footings Above Descending Slopes	
Slope Height [H] (feet)	*Minimum Setback from Slope face (feet)*
Less than 10	5
10 to 20	½ * H
Greater than 20	Maximum of 10

For freestanding walls and other structures that are sensitive to lateral movement (e.g., smooth stucco finish, glass screens, etc.), SA GEO recommends that the structural setback requirements in accordance with Case A above be followed or that additional design measures be used to help control the potential for cracking and displacements. Otherwise, typical freestanding walls may have a setback in accordance with Case B.

3.9 Corrosivity

Soluble sulfates exposure in the onsite soils should be classified as "S2" per Table 19.3.1.1 of ACI-318-14. Structural concrete elements in contact with soil include footings and building slabs-on-grade. The flatwork and sidewalk concrete are typically not considered structural elements. Concrete mix for structural elements should be based on the "S2" soluble sulfate exposure class of Table 19.3.2.1 in ACI-318-14. Other ACI guidelines for structural concrete are recommended. Also, onsite soils are anticipated to be corrosive to metals.

3.10 Expansion Potential

At the completion of grading, we anticipate that onsite soils will have "High" expansion potential. The geotechnical recommendations provided in this report including the design parameters for foundations, slab-on-grade and flatwork improvement should be implemented during design and construction. Updated recommendations will be provided upon additional testing at the completion of grading at the site and as needed.

Homeowners and their design/construction team should be familiar with the recommendations in this report as well as principles described in a useful reference published by the California Geotechnical Engineers Association (CalGeo), titled, "Coexisting with Expansive Soil: An Informational Guide for Homeowners." This free booklet can be downloaded at www.calgeo.org.

3.11 Interior Slab Moisture Mitigation

In addition to geotechnical and structural considerations, the project owner should also consider interior moisture mitigation when designing and constructing slabs-on-grade.

The intended use of the interior space, type of flooring, and the type of goods in contact with the floor may dictate the need for, and design of, measures to mitigate potential effects of moisture emission from and/or moisture vapor transmission through the slab. Typically, for human occupied structures, a vapor retarder or barrier is recommended under the slab to help mitigate moisture transmission through slabs. The most recent guidelines by the American Concrete Institute (ACI 302.1R-04) suggest that the vapor retarder be placed directly under the slab (no sand layer). However, the location of the vapor retarder may also be subject to the builder's past successful practice. Placement of 1 or 2 inches of sand over the moisture retardant has been common practice by builders in southern California. Specifying the strength of the retarder to resist puncture and its permeance rating is important. These qualities are not necessarily a function of the retarder thickness. A minimum of 10-mil is typical but some materials, such as 10-mil polyethylene ("Visqueen"), may not meet the desired standards for toughness and permeance.

Vapor retarders, when used, should be installed in accordance with standards such as ASTM E 1643 and/or those specified by the manufacturer.

Concrete mix design and curing are also significant factors in mitigating slab moisture problems. Concrete with lower water/cement ratios results in denser, less permeable slabs that also "dry" faster with regard to when flooring can be installed (reduced moisture emissions quantities and rates). Rewetting of the slab following curing should be avoided since it can result in additional drying time required prior to flooring installation. Proper concrete slab testing prior to flooring installation is also important.

Concrete mix design, the type and location of the vapor retarder should be determined in coordination with all parties involved in the finished product, including the project owner, architect, structural engineer, geotechnical consultant, concrete subcontractors, and flooring subcontractors.

3.12 Exterior Concrete

The sidewalk, patio slabs, driveways and other flatwork elements should be at least 4 inches thick. Driveway approaches should be a minimum of 6 inches thick. We recommend that the concrete flatwork be reinforced with No. 3 bars be placed at 24 inches on center both ways. Concrete slabs should be provided with construction or weakened plane control joints at a maximum spacing of 6 feet. The control joints should have a thickness that is ¼ of the total concrete thickness. Upon the placement and compaction of subgrade soils (per Section 3.2 of these recommendations), the upper 18 inches of the subgrade soils should be pre-saturated to 130 percent of optimum moisture content prior to placement of concrete and reinforcement. We also recommend that 2 to 4 inches of granular materials/aggregate base be placed over the compacted subgrade prior to placement of reinforcement and concrete.

For exterior slabs, the use of a granular sublayer is primarily intended to facilitate presaturation and subsequent construction by providing a better working surface over the saturated soil. It also helps retain the added moisture in the native soil in the event that the slab is not placed immediately.

Exterior concrete elements such as curb and gutter, driveways, sidewalks, and patios are susceptible to lifting and cracking when constructed over expansive soils. With expansive soils, the impacts to flatwork/hardscape can be significant, generally requiring removal and replacement of the affected improvements. Please also note that reducing concrete problems is often a function of proper slab design, concrete mix design, placement, and curing/finishing practices. Adherence to guidelines of the American Concrete Institute (ACI) is recommended. Also, the amount of post-construction watering, or lack thereof, can have a very significant impact on the adjacent concrete flatwork.

On projects with expansive soils, additional measures such as thickened concrete edges/footings, subdrains and/or moisture barriers should be considered where planter or natural areas with irrigation are located adjacent to the concrete improvements. Design and maintenance of proper surface drainage is also very important. If the concrete will be subject to heavy loading from cars/trucks or other heavy objects, thicker pavement section will be required the design of which should be performed by the geotechnical consultant, as needed.

The above recommendations typically are not applied to curb and gutter but should be considered in areas with highly expansive soils.

3.13 Preliminary Asphalt Concrete Pavement Design

Final structural pavement sections should be based on R-value testing after the completion of grading and in accordance with city of Aliso Viejo requirements. Based on an R-value of 5 and estimated traffic indices (TIs), we recommend the following preliminary pavement sections:

Street Location	***Estimated TIs***	***Pavement Section***
Parking Stalls	TI – 4.0	3 inches of AC / 6 inches of AB
General Drives	TI – 5.5	4 inches of AC / 10 inches of AB
AC = Asphalt Concrete, AB = Aggregate Base		

Please note that for two-stage paving operations, we recommend that the final AC cap be a minimum of 0.10 foot thick and the base AC course have a minimum thickness of 0.25 foot.

If pavement repair is needed within the adjacent streets, the section should match the existing section and follow standard City/County guidelines for trench/pavement repair. The new pavement section should at minimum consist of 4 inches of AC over 10 inches of AB.

Asphalt concrete pavement should be placed in accordance with the requirements of Sections 301 and 302 of the Standard Specifications of Public Works Construction (the Greenbook). Prior to construction of pavement sections, the subgrade soils should be scarified to a minimum depth of 6 inches, moisture-conditioned as needed, and recompacted in-place to a minimum of 90 percent relative compaction (per ASTM D1557). Subgrade should be firm prior to AB placement.

AB materials can be crushed aggregate base or crushed miscellaneous base in accordance with the Greenbook (Section 200-2). The materials should be free of any deleterious materials. Aggregate base materials should be placed in 6- to 8-inch-thick loose lifts, moisture-conditioned as necessary, and compacted to a minimum of 95 percent relative compaction (per ASTM D1557). Asphalt concrete should also be compacted to a minimum relative compaction of 95 percent.

Unpaved median and parkway areas should be provided with vertical moisture barriers.

3.14 Vehicular PCC Pavements

For trash enclosures, we recommend 6 inches of PCC reinforced with No. 4 rebar at 18 inches on-center, both ways, over 4 inches of aggregate base placed over compacted subgrade. For parking stalls, the section may consist of 4 inches of PCC reinforced with No. 4 rebar at 18 inches on-center, both ways, over 4 inches of aggregate base over compacted subgrade.

The subgrade soils should be scarified to a minimum depth of 6 inches, moisture-conditioned as needed, and recompacted in place to a minimum of 90 percent relative compaction (per ASTM D1557).

Aggregate base materials can be crushed aggregate base or crushed miscellaneous base in accordance with the Greenbook (Section 200-2). The materials should be free of any deleterious materials. Aggregate base materials should be placed in 6- to 8-inch-thick loose lifts, moisture-conditioned as necessary, and compacted to a minimum of 95 percent relative compaction (per ASTM D1557).

3.15 Concrete Paver Section

For concrete pavers within **pedestrian** walkways, we recommend 60-millimeter-thick concrete pavers over approximately 1 inch of sand, over a minimum of 6 inches of AB, over compacted subgrade. This should also accommodate the rare maintenance cart or light truck that might drive up on these areas.

For concrete pavers within **vehicular** drive areas, if any, we recommend 80-millimeter-thick concrete pavers over 6 inches of concrete reinforced with No. 3 rebar at 24 inches on-center, over 4 inches of AB. Alternatively, the concrete low pour slab may be replaced with a minimum of 15 inches of AB over compacted subgrade; or 12 inches of AB over a layer of geotextile (e.g., Mirafi 600X or equivalent), over compacted subgrade.

A concrete band along the perimeter of the pavers should be provided for lateral restraint. The concrete band should, at minimum, be 12 inches deep and deepened to below the depth of disturbed soil, if adjacent to landscape/planter areas.

Also, a drainage system consisting of a 2-inch PVC drainage pipe should be installed at the low end of the concrete low pour at 10-foot intervals through the slab and filled with pea gravel. The PVC drainage pipe should drain to a minimum of 6-inch-diameter by 12-inch-deep drain pit filled with pea gravel below the pipe. The paver surfaces should slope away from structures a minimum of 2 percent. The concrete underlayment for the drive areas should be provided with weakened plane joints at maximum 6-foot intervals. If the pavers are to be set in mortar or are underlain with AB, this drainage system is not required.

Prior to construction of the paver sections, the subgrade soils should be scarified to a minimum depth of 6 inches, moisture conditioned as needed, and recompacted in place to a minimum of 90 percent relative compaction (per ASTM D1557). The upper 18 inches of subgrade for pedestrian walkway and patio areas should then be presaturated to 130 percent of optimum moisture content. Subgrade for vehicular pavers need not be pre-saturated.

Aggregate base materials can be crushed aggregate base or crushed miscellaneous base in accordance with the Greenbook (Section 200-2). The materials should be free of deleterious materials. Aggregate base materials should be placed in 6- to 8-inch-thick loose lifts, moisture-conditioned as necessary, and compacted to a minimum of 95 percent relative compaction (per ASTM D1557).

3.16 Trench Excavation and Backfill

Excavations should be performed in accordance with the requirements set forth by Cal/OSHA Excavation Safety Regulations (Construction Safety Orders, Section 1504, 1539 through 1547, Title 8, California Code of Regulations). In general, onsite soils may be classified as Type "B". Cal/OSHA regulations indicate that, for workmen in confined conditions, the steepest allowable slopes in Type "B" soils are 1:1. Locally, Type "C" soils may be encountered (saturated soils, seepage) and require slope layback of 1.5H:1V (horizontal:vertical). These laybacks apply to excavations 20 feet deep or less. Where there is no room for these layback slopes, we anticipate that shoring will be necessary. Adequate shoring (i.e., shields) should be provided, as deemed necessary. The soils within the adjacent streets are anticipated to be similar to onsite soils. Excavations should be reviewed periodically by the contractor's qualified person to confirm compliance with Cal/OSHA requirements.

Onsite soils should be suitable for use as trench backfill with the exception of wet/saturated materials, if encountered. Utility trench backfill should be in accordance with City of Aliso Viejo, County of Orange and/or the governing jurisdiction's specifications. Backfill materials should be compacted to a minimum of 90 percent relative compaction (per ASTM D1557). Rocks greater than 3 inches in largest diameter should generally not be used as trench backfill unless approved by the agency and geotechnical consultant of record. Excavation and backfilling of HDPE pipes (if any) should be in accordance with the manufacturer’s requirement and the Greenbook. Select granular backfill (i.e., clean sand with SE 30 or better) may be used in lieu of native soils but should also be compacted or densified with water jetting and flooding.

Trenches excavated next to structures and foundations should also be properly backfilled and compacted to provide full lateral support and reduce settlement potential.

3.17 Groundwater

Groundwater was encountered during our subsurface exploration at a depth of 55 feet in Boring H-4 (within Niguel Formation). While some saturated soil may be encountered during grading and/or utility trench excavation, we do not anticipate significant seepage or that mitigation measures will be necessary. In general, groundwater is anticipated to remain more than 20 feet below the proposed building foundations. However, shallow, perched water/seepage may occur on an annual and seasonal basis as a result of rainfall, irrigation and/or seepage from adjacent properties.

3.18 Stormwater Infiltration

As discussed previously (Section 2.7), considering the artificial fill thickness, and bedrock directly below the fill materials, and presence of fine-grained expansive soils, stormwater infiltration at the site is not feasible from a geotechnical viewpoint. Other methods of filtration/treatment should be evaluated by the project civil engineer.

3.19 Surface Drainage and Irrigation

Maintaining adequate surface drainage, proper disposal of run-off water, and control of irrigation will help reduce the potential for future moisture-related problems and differential movements from soil heave/settlement.

Surface drainage should be carefully taken into consideration during grading, landscaping, and building construction. Positive surface drainage should be provided to direct surface water away from structures and slopes and toward the street or suitable drainage devices. Ponding of water adjacent to the structures should not be allowed. Buildings should have roof gutter systems and the run-off should be directed to parking lot/street gutters by area drainpipes or by sheet flow over paved areas. Paved areas should be provided with adequate drainage devices, gradients, and curbing to prevent run-off flowing from paved areas onto adjacent unpaved areas.

Considering the climatic conditions in southern California and provided that the recommendations included in this report are implemented during grading and construction, a minimum two-percent slope away from structures is considered acceptable and in substantial compliance with the 2022 CBC. Also, swales with one-percent slopes are acceptable from a geotechnical standpoint and are common practice in this locale.

Construction of planter areas immediately adjacent to structures should be avoided if possible. If planter boxes are constructed adjacent to or near buildings, the planters should be provided with controls to prevent excessive penetration of the irrigation water into the foundation and flatwork subgrades. Provisions should be made to drain excess irrigation water from the planters without saturating the subgrade below or adjacent to the planters. Raised planter boxes may be drained with weepholes. Deep planters (such as palm tree planters) should be drained with below-ground, water-tight drainage lines connected to a suitable outlet. Moisture barriers should also be considered.

It is also important to maintain a consistent level of soil moisture, not allowing the subgrade soils to become overly dry or overly wet. Properly designed landscaping and irrigation systems can help in that regard.

3.20 Slope Maintenance, Lot Drainage, and Erosion Control

Maintenance of proper pad drainage, the design and construction of property improvements in accordance with sound engineering practices, and proper maintenance of landscaping, including regular pad and slope irrigation, should be performed. Irrigation should not be excessive or sporadic; maintaining a relatively constant level of soil moisture around structures and improvements is important. Oversteepening of slopes should be avoided.

Planters and landscape areas adjacent to structures should be avoided or provided with measures to mitigate the potential for water getting under the foundations and slabs. Water should not be allowed to pond and drainage should be maintained away from structures and tops of slopes.

Establishing and maintaining a rodent-control program is also recommended to reduce surficial slope deterioration often associated with rodent burrowing. The improvements at or near the tops of slopes may be subject to varying degrees of slope-creep related movements and should be designed with that in mind, meeting the setback criteria discussed in this report.

3.21 Additional Subsurface Exploration and Laboratory Testing

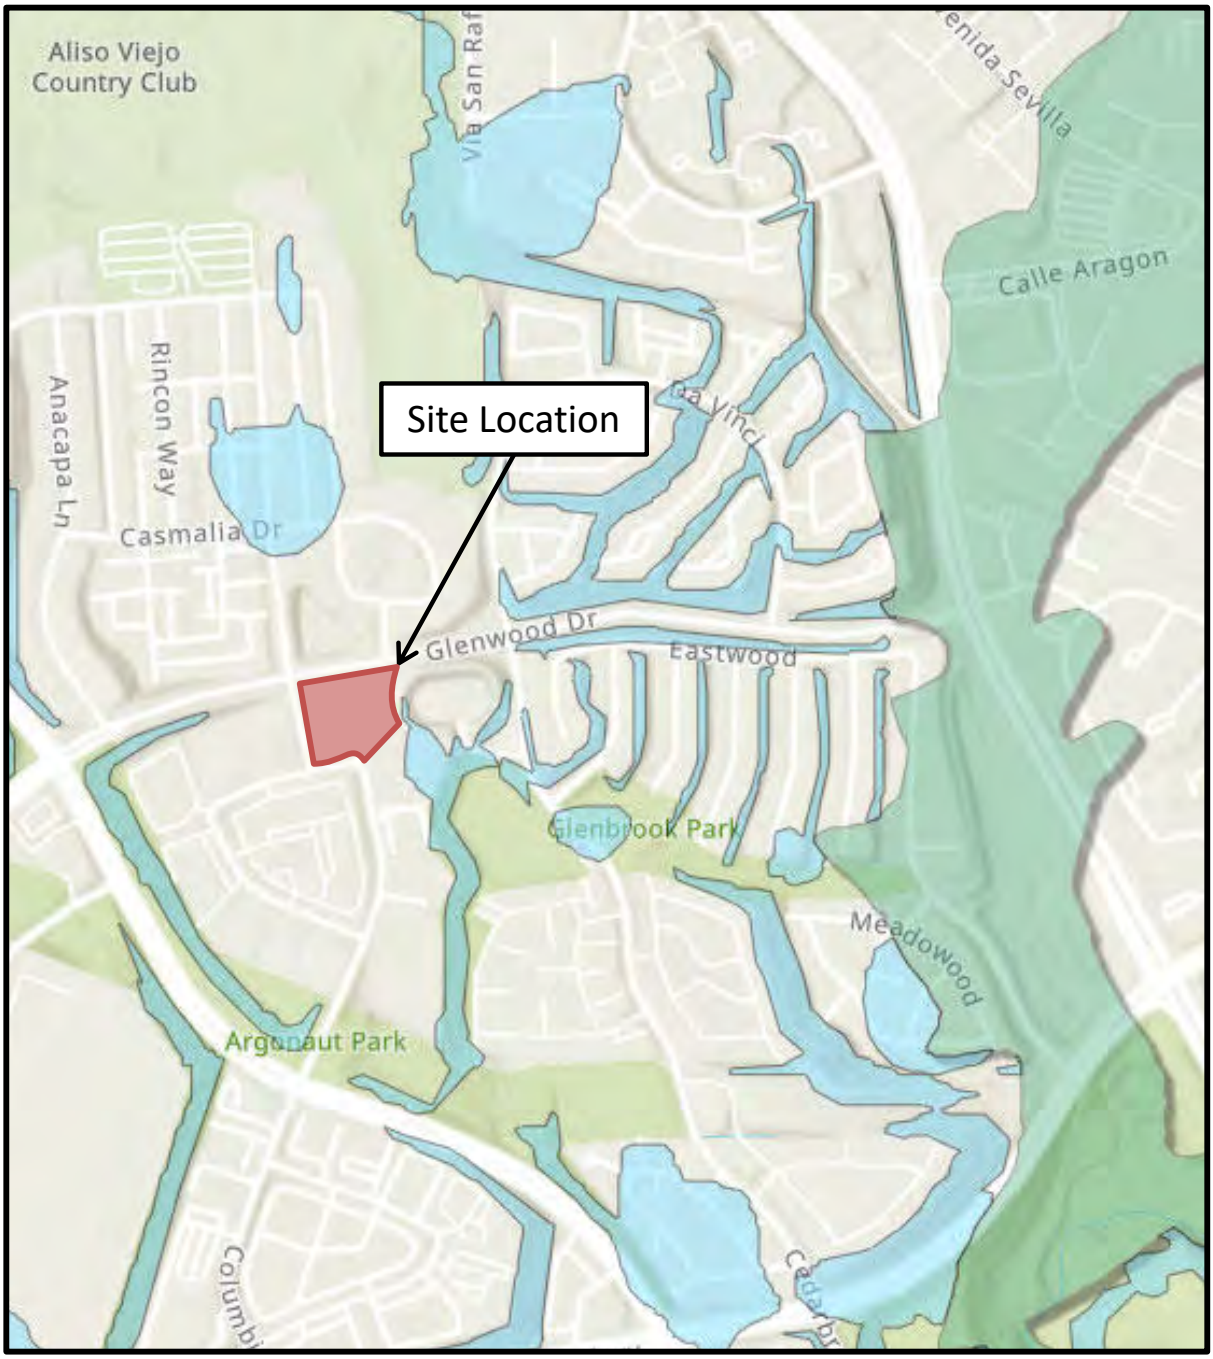
Additional subsurface exploration during the design phase of the project is not considered necessary unless significant plan changes occur. Additional laboratory testing should be performed during and upon completion of the grading to confirm/update the design parameters provided herein.

3.22 Review of Future Plans

The project grading, foundation, street improvement, wall, and landscape plans should be reviewed and accepted by the geotechnical consultant prior to grading and construction. Additional recommendations should be provided upon the review of the project plans and as needed.

3.23 Observation and Testing during Grading and Construction

Geotechnical observation and testing should be performed by SA GEO during the following phases of grading and construction:



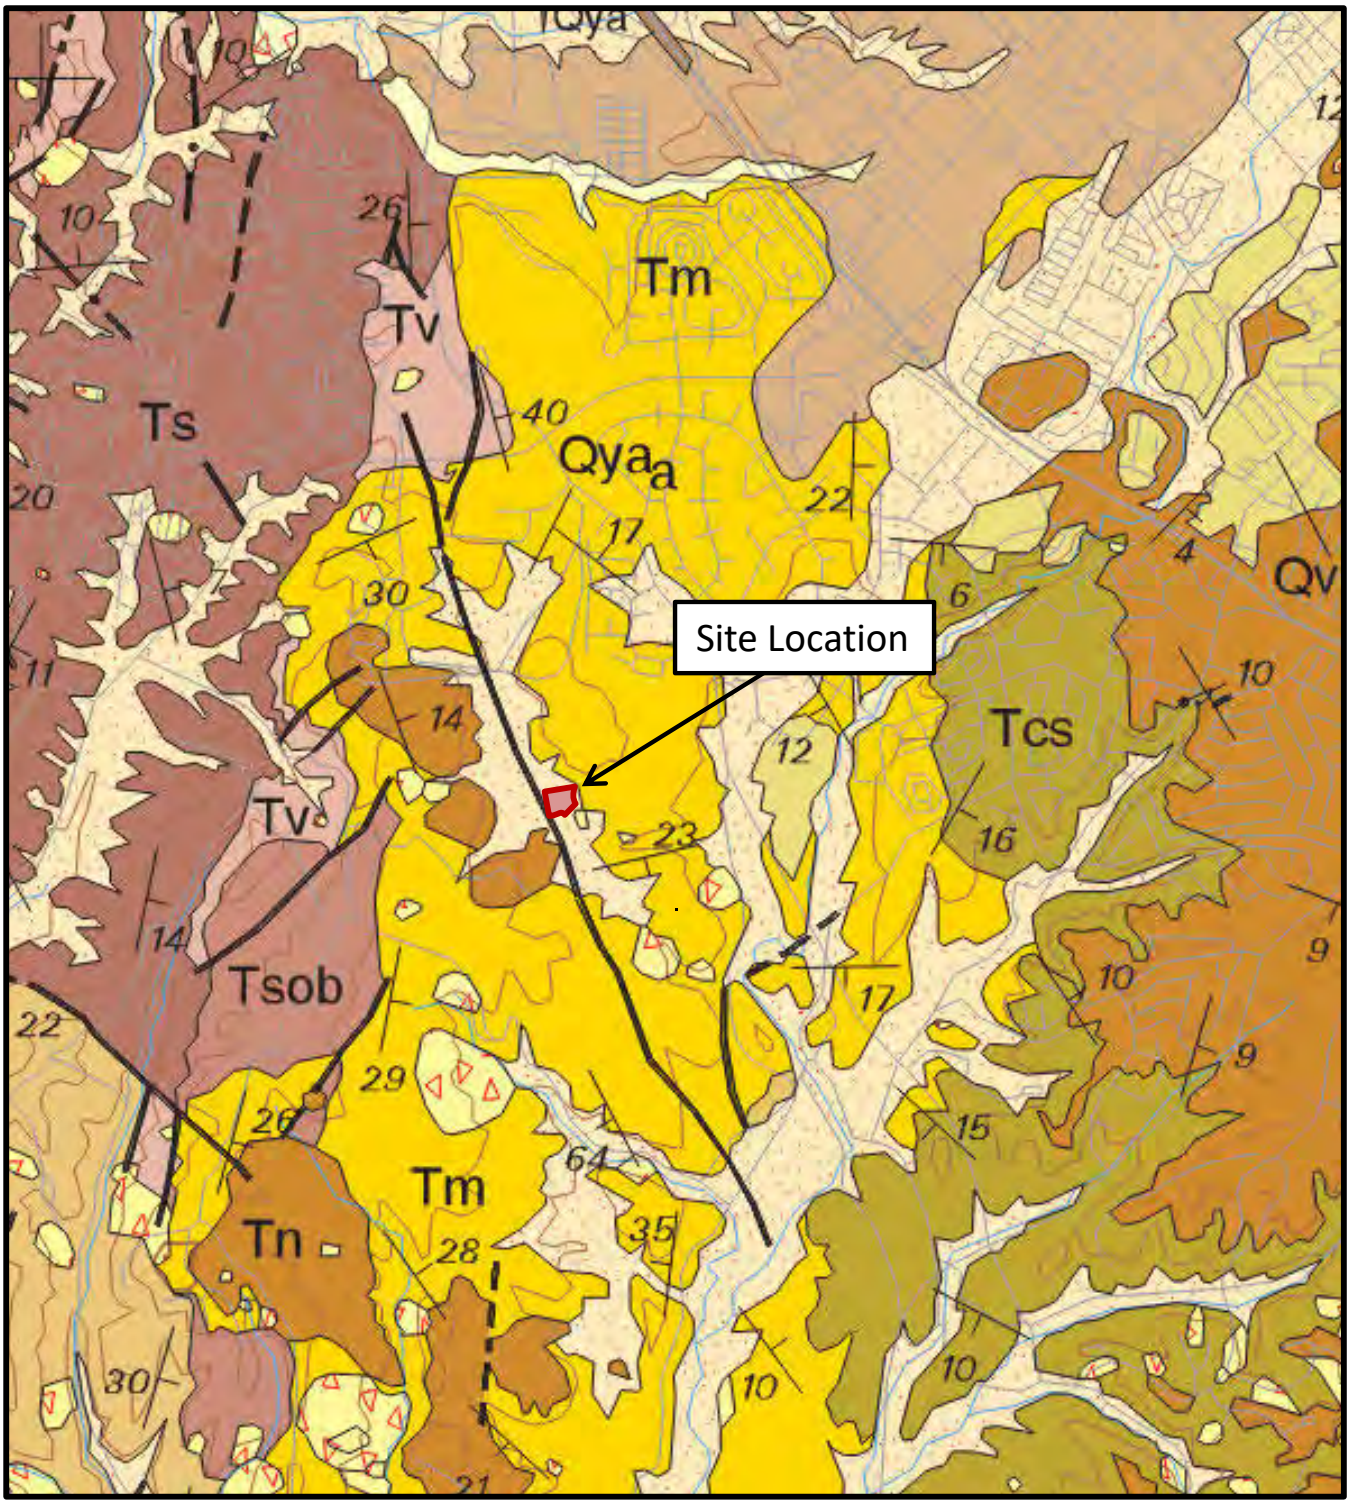
- During site demolition, preparation and clearing;
- During excavations performed for the remedial grading and to relocate or remove existing underground improvements;
- During earthwork, including observation and acceptance of remedial removal bottoms and fill placement, including import material (if any);
- Following the completion of grading, in order to verify soil properties for foundations, slab-on-grade and pavements;
- Upon completion of any foundation or structural excavation, prior to pouring concrete;

- During slab and flatwork subgrade preparation prior to pouring of concrete;
- During placement of backfill for utility trenches;
- During construction of stormwater filtration devices;
- During placement of backfill for retaining structures;
- During installation and backfill of subdrainage systems; and
- When any unusual soil conditions are encountered.

4.0 LIMITATIONS

This report has been prepared for the exclusive use of our client, Meritage Homes, within the scope of services requested for the subject property described herein. This report or its contents should not be used or relied upon for other projects or purposes, or by other parties without the acknowledgement of SA GEO and the consultation of a geotechnical professional. The means and methods used by SA GEO for this study are based on local geotechnical standards of practice, care, and requirements of governing agencies. No warranty or guarantee, expressed or implied, is given.

Our findings, conclusions, and recommendations are professional opinions based on interpretations and inferences made from geologic and engineering data from specific locations and depths, observed or collected at a given time. By nature, geologic conditions can vary from point to point, can be very different in-between exploration points, and can also change over time. Our conclusions and recommendations are, by nature, preliminary and subject to verification and/or modification during grading and construction when more subsurface data is exposed.



Source: Seismic Hazard Zones, San Juan Capistrano Quadrangle (CDMG, 2001b)

Liquefaction
Areas where historic occurrence of liquefaction, or local geological, geotechnical and groundwater conditions indicate a potential for permanent ground displacements such that mitigation as defined in Public Resource Code Section 2693(c) would be required.

Earthquake-Induced Landslides
Areas where previous occurrence of landslide movement, or local topographic, geological, geotechnical and subsurface water conditions indicate a potential for permanent ground displacements such that mitigation as defined in Public Resource Code Section 2693(c) would be required.

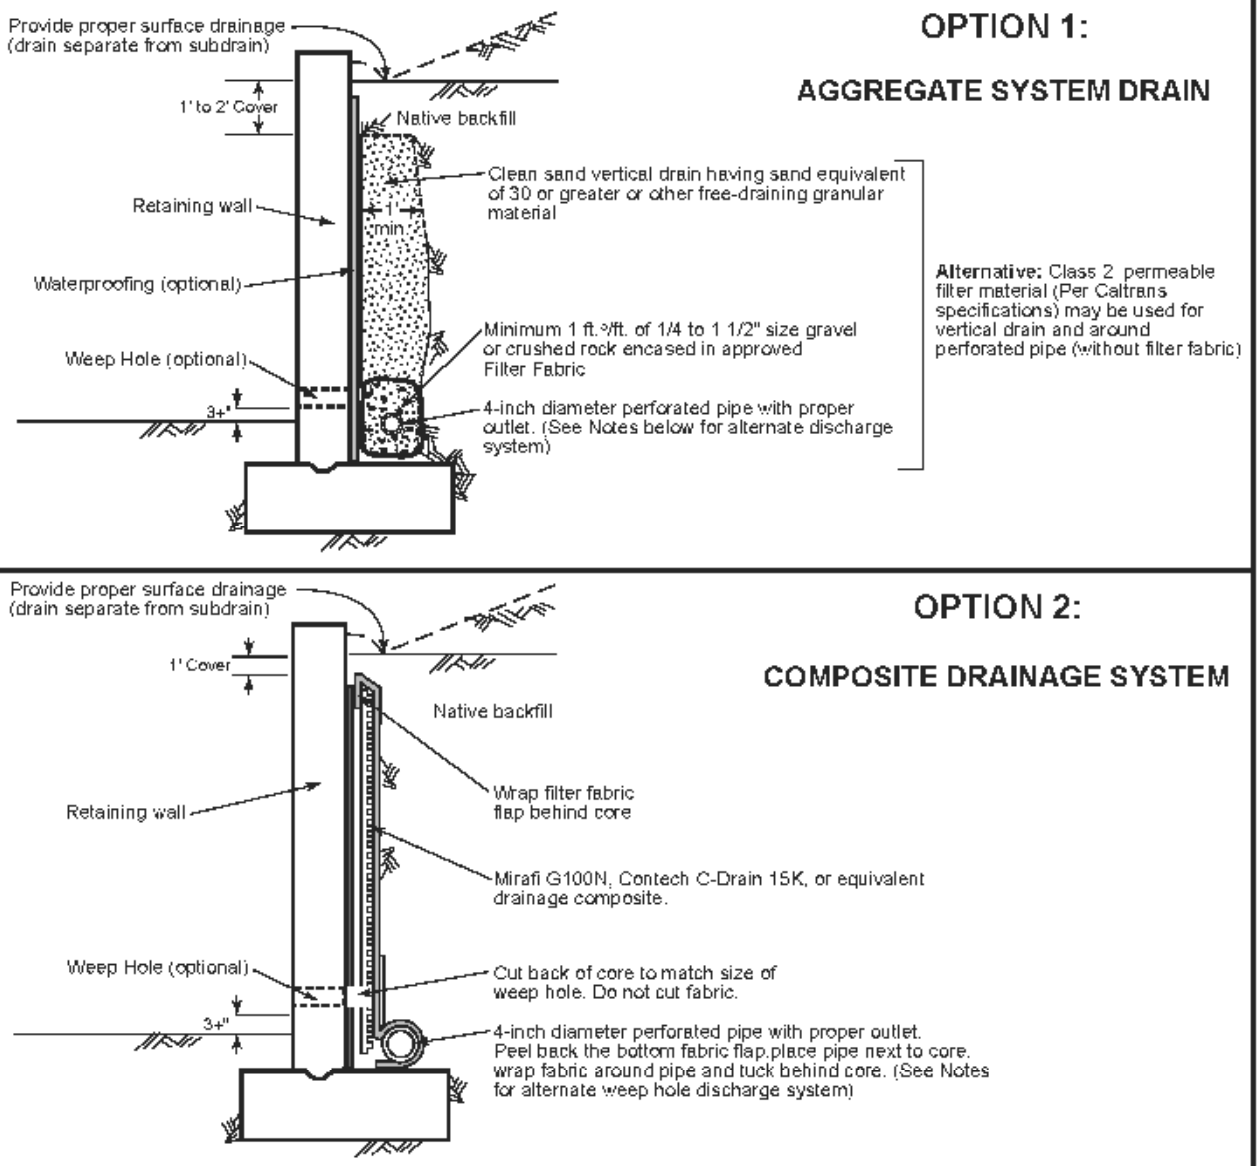
Source: Fault Activity Map of California (Jennings and Bryant, 2010)



Holocene fault displacement (during past 11,700 years) without historic record. Geomorphic evidence for Holocene faulting includes sag ponds, scarps showing little erosion, or the following features in Holocene age deposits: offset stream courses, linear scarps, shutter ridges, and triangular faceted spurs. Recency of faulting offshore is based on the interpreted age of the youngest strata displaced by faulting.

Late Quaternary fault displacement (during past 700,000 years). Geomorphic evidence similar to that described for Holocene faults except features are less distinct. Faulting may be younger, but lack of younger overlying deposits precludes more accurate age classification.

Quaternary fault (age undifferentiated). Most faults of this category show evidence of displacement sometime during the past 1.6 million years; possible exceptions are faults which displace rocks of undifferentiated Plio-Pleistocene age. Unnumbered Quaternary faults were based on Fault Map of California, 1975. See Bulletin 201, Appendix D for source data.

Pre-Quaternary fault (older that 1.6 million years) or fault without recognized Quaternary displacement. Some faults are shown in this category because the source of mapping used was of reconnaissnce nature, or was not done with the object of dating fault displacements. Faults in this category are not necessarily inactive.

NOTES:

1. PIPE TYPE SHOULD BE PVC OR ABS, SCHEDULE 40 OR SDR35 SATISFYING THE REQUIREMENTS OF ASTM TEST STANDARD D1527, D1785, D2751 , OR D3034.
2. FILTER FABRIC SHALL BE APPROVED PERMEABLE NON-WOVEN POLYESTER, NYLON, OR POLYPROPYLENE MATERIAL.
3. DRAIN PIPE SHOULD HAVE A GRADIENT OF 1 PERCENT MINIMUM.
4. WATERPROOFING MEMBRANE MAY BE REQUIRED FOR A SPECIFIC RETAINING WALL (SUCH AS A STUCCO OR BASEMENT WALL).
5. WEEP HOLES MAY BE PROVIDED FOR LOW RETAINING WALLS (LESS THAN 3 FEET IN HEIGHT) IN LIEU OF A VERTICAL DRAIN AND PIPE AND WHERE POTENTIAL WATER FROM BEHIND THE RETAINING WALL WILL NOT CREATE A NUISANCE WATER CONDITION. IF EXPOSURE IS NOT PERMITTED, A PROPER SUBDRAIN OUTLET SYSTEM SHOULD BE PROVIDED.
6. IF EXPOSURE IS PERMITTED, WEEP HOLES SHOULD BE 2-INCH MINIMUM DIAMETER AND PROVIDED AT 25-FOOT MAXIMUM SPACING ALONG WALL. WEEP HOLES SHOULD BE LOCATED 3+ INCHES ABOVE FINISHED GRADE.
7. SCREENING SUCH AS WITH A FILTER FABRIC SHOULD BE PROVIDED FOR WEEP HOLES/OPEN JOINTS TO PREVENT EARTH MATERIALS FROM ENTERING THE HOLES/JOINTS.
8. OPEN VERTICAL MASONRY JOINTS (I.E., OMIT MORTAR FROM JOINTS OF FIRST COURSE ABOVE FINISHED GRADE) AT 32-INCH MAXIMUM INTERVALS MAY BE SUBSTITUTED FOR WEEP HOLES.
9. THE GEOTECHNICAL CONSULTANT MAY PROVIDE ADDITIONAL RECOMMENDATIONS FOR RETAINING WALLS DESIGNED FOR SELECT SAND BACKFILL.

Appendix B

SOIL CLASSIFICATION CHART

MAJOR DIVISIONS			SYMBOLS	TYPICAL DESCRIPTIONS
COARSE GRAINED SOILS MORE THAN 50% OF MATERIAL IS LARGER THAN NO. 200 SIEVE SIZE	*GRAVEL AND GRAVELLY SOILS* MORE THAN 50% OF COARSE FRACTION RETAINED ON NO. 4 SIEVE	*CLEAN GRAVELS* (LITTLE OR NO FINES)	**GW**	WELL-GRADED GRAVELS, GRAVEL - SAND MIXTURES, LITTLE OR NO FINES
			GP	POORLY GRADED GRAVELS, GRAVEL - SAND MIXTURES, LITTLE OR NO FINES
		GRAVELS WITH FINES (APPRECIABLE AMOUNT OF FINES)	**GM**	SILTY GRAVELS, GRAVEL - SAND - SILT MIXTURES
			GC	CLAYEY GRAVELS, GRAVEL - SAND - CLAY MIXTURES
	SAND AND SANDY SOILS MORE THAN 50% OF COARSE FRACTION PASSING NO. 4 SIEVE	*CLEAN SANDS* (LITTLE OR NO FINES)	**SW**	WELL-GRADED SANDS, GRAVELLY SANDS, LITTLE OR NO FINES
			SP	POORLY GRADED SANDS, GRAVELLY SANDS, LITTLE OR NO FINES
		SANDS WITH FINES (APPRECIABLE AMOUNT OF FINES)	**SM**	SILTY SANDS, SAND - SILT MIXTURES
			SC	CLAYEY SANDS, SAND - CLAY MIXTURES
FINE GRAINED SOILS MORE THAN 50% OF MATERIAL IS SMALLER THAN NO. 200 SIEVE SIZE	*SILTS AND CLAYS*	LIQUID LIMIT LESS THAN 50	**ML**	INORGANIC SILTS AND VERY FINE SANDS, ROCK FLOUR, SILTY OR CLAYEY FINE SANDS OR CLAYEY SILTS WITH SLIGHT PLASTICITY
			CL	INORGANIC CLAYS OF LOW TO MEDIUM PLASTICITY, GRAVELLY CLAYS, SANDY CLAYS, SILTY CLAYS, LEAN CLAYS
			OL	ORGANIC SILTS AND ORGANIC SILTY CLAYS OF LOW PLASTICITY
	SILTS AND CLAYS	LIQUID LIMIT GREATER THAN 50	**MH**	INORGANIC SILTS, MICACEOUS OR DIATOMACEOUS FINE SANDY OR SILTY SOILS, ELASTIC SILTS
			CH	INORGANIC CLAYS OF HIGH PLASTICITY
			OH	ORGANIC CLAYS OF MEDIUM TO HIGH PLASTICITY, ORGANIC SILTS
HIGHLY ORGANIC SOILS			**PT**	PEAT, HUMUS, SWAMP SOILS WITH HIGH ORGANIC CONTENTS

NOTE: Dual symbols are used to indicate gravels or sand with 5-12% fines and soils with fines classifying as CL-ML. Symbols separated by a slash indicate borderline soil classifications.

Sampler and Symbol Descriptions

- Modified California sample (D-#)
- Standard Penetration Test (S-#)
- Shelby tube sample (T-#)
- Large bulk sample (B-#)
- Small bulk sample (SB-#)
- Approximate depth of groundwater during drilling
- Approximate depth of static groundwater

Note: Number of blows required to advance driven sample 12 inches (or length noted).

Laboratory and Field Test Abbreviations

AL	Atterberg limits (plasticity)
CC	Chemical Testing incl. Soluble Sulfate
CN	Consolidation
DS	Direct Shear
EI	Expansion Index
GS	Grain Size Analysis (Sieve, Hydro. and/or -No. 200)
MD	Maximum Density and Optimum Moisture
RV	Resistance Value (R-Value)
SE	Sand Equivalent
UU	Unconsolidated Undrained Shear Strength

Notes:

1. Soil classifications are based on the Unified Soil Classification System and include color, moisture, and relative density or consistency. Field descriptions have been modified to reflect results of laboratory tests where deemed appropriate. Bedrock descriptions are based on visual classification and include rock type, moisture, color, grain size, strength, and weathering.
2. Descriptions on these boring logs apply only at the specific boring locations and at the time the borings were drilled. They are not warranted to be representative of subsurface conditions at other locations or times.

KEY TO LOG OF BORING

Date(s)Drilled: 4-22-2024	**Logged By:** AZ/AC
Drilling Method: Hollow Stem	**Drill Bit Size/Type:** 10"
Drill Rig Type: CME 75	**Hammer Type:** Auto (140lbs @ 30")
Sampling Method(s): Modified California, Bulk	
Approximate Groundwater Depth: Groundwater Not Encountered.

Project Name:	95 Argonaut	*Tested by:*	KL
Project Number:	24059-01	*Checked by:*	MV
Boring No.:	H-4	*Date:*	05/06/24
Sample No.:	D-4		
Type of Sample:	Undisturbed ring		
Depth (ft):	10		
Soil Description:	Olive Gray, Elastic Silt with Sand (MH)		

Soil Analysis Lab Results

Client: HAI
Job Name: 95 Argonaut
Client Job Number: SAG-24-018-2 / 24059-01
Project X Job Number: S240515F
May 17, 2024

	Method	ASTM D4327		ASTM D4327	
Bore# / Description	**Depth**	**Sulfates** SO_4^{2-}		**Chlorides** Cl^-	
	(ft)	**(mg/kg)**	**(wt%)**	**(mg/kg)**	**(wt%)**
H-1 B-1	0-5	768.4	0.0768	156.2	0.0156
H-4 B-1	0-5	713.1	0.0713	82.9	0.0083

Cations and Anions, except Sulfide and Bicarbonate, tested with Ion Chromatography
mg/kg = milligrams per kilogram (parts per million) of dry soil weight
ND = 0 = Not Detected | NT = Not Tested | Unk = Unknown
Chemical Analysis performed on 1:3 Soil-To-Water extract
PPM = mg/kg (soil) = mg/L (Liquid)

Note: Sometimes a bad sulfate hit is a contaminated spot. Typical fertilizers are Potassium chloride, ammonium sulfate or ammonium sulfate nitrate (ASN). So this is another reason why testing full corrosion series is good because we then have the data to see if those other ingredients are present meaning the soil sample is just fertilizer-contaminated soil. This can happen often when the soil samples collected are simply surface scoops. This is why it's best to dig in a foot, throw away the top and test the deeper stuff. Dairy farms are also notorious for these items.

If one sample pops up much more corrosive than all others, we would recommend collecting more samples surrounding the problem sample location to determine if the peak is isolated to it. This allows us to conclude it was a contaminated sample and able to declare it an outlier.

Appendix D

USGS web services were down for some period of time and as a result this tool wasn't operational, resulting in *timeout* error.
USGS web services are now operational so this tool should work as expected.

95 Argonaut, Aliso Viejo, CA 92656, USA

Latitude, Longitude: 33.5945973, -117.7242937

Date	4/26/2024, 3:23:29 PM
Design Code Reference Document	ASCE7-16
Risk Category	II
Site Class	D - Stiff Soil

Type	Value	Description
S_S	1.218	MCE_R ground motion. (for 0.2 second period)
S_1	0.438	MCE_R ground motion. (for 1.0s period)
S_{MS}	1.233	Site-modified spectral acceleration value
S_{M1}	null -See Section 11.4.8	Site-modified spectral acceleration value
S_{DS}	0.822	Numeric seismic design value at 0.2 second SA
S_{D1}	null -See Section 11.4.8	Numeric seismic design value at 1.0 second SA

Type	Value	Description
SDC	null -See Section 11.4.8	Seismic design category
F_a	1.013	Site amplification factor at 0.2 second
F_v	null -See Section 11.4.8	Site amplification factor at 1.0 second
PGA	0.515	MCE_G peak ground acceleration
F_{PGA}	1.1	Site amplification factor at PGA
PGA_M	0.566	Site modified peak ground acceleration
T_L	8	Long-period transition period in seconds
SsRT	1.218	Probabilistic risk-targeted ground motion. (0.2 second)
SsUH	1.304	Factored uniform-hazard (2% probability of exceedance in 50 years) spectral acceleration
SsD	2.489	Factored deterministic acceleration value. (0.2 second)
S1RT	0.438	Probabilistic risk-targeted ground motion. (1.0 second)
S1UH	0.468	Factored uniform-hazard (2% probability of exceedance in 50 years) spectral acceleration.
S1D	0.82	Factored deterministic acceleration value. (1.0 second)
PGAd	1.017	Factored deterministic acceleration value. (Peak Ground Acceleration)

Type	Value	Description
PGA_{UH}	0.515	Uniform-hazard (2% probability of exceedance in 50 years) Peak Ground Acceleration
C_{RS}	0.934	Mapped value of the risk coefficient at short periods
C_{R1}	0.934	Mapped value of the risk coefficient at a period of 1 s
C_V	1.344	Vertical coefficient

Point No.	X-COORD	Y-COORD

PROFILE BOUNDARY SLOPES AND ANGLES

BND No.	Slope	Angle(Deg.)
1	0.000	0.000
2	0.500	26.565
3	0.000	0.000

MOHR-COULOMB SOIL PARAMETERS

1 Type(s) of Soil Defined

Soil Number and Description	Moist Unit Wt. (pcf)	Saturated Unit Wt. (pcf)	Cohesion Intercept (psf)	Friction Angle (deg)	Pore Pressure Ratio(ru)	(-Uw) Fact.	Water Surface No.	Water Option
1 Fill	110.0	110.0	400.00	24.00	0.000	0.0	1	0

TRIAL FAILURE SURFACE DATA

Circular Trial Failure Surfaces Have Been Generated Using A Random Procedure.

2000 Trial Surfaces Have Been Generated.

2000 Surfaces Generated at Increments of 0.0600(in) Equally Spaced Within the Start Range

Along The Specified Surface Between X = 55.00(ft)
and X = 65.00(ft)

Each Surface ends within a Range Between X = 110.00(ft)
and X = 140.00(ft)

All surfaces are generated left to right for both a left and right sliding slope.

Unless XCLUDE Lines Were Specified, The Minimum Elevation
To Which A Surface Extends Is Y = 400.00(ft)

Specified Maximum Radius = 100000.000(ft)

3.000(ft) Line Segments Were Used For Each Trial Failure Surface.

The Spencer Method Was Selected for FS Analysis.

Selected fx function = Constant (1.0)

```
SELECTED CONVERGENCE PARAMETERS FOR SPENCER METHOD:
Initial estimate of FS =  1.500
FS tolerance =  0.000001000
Initial estimate of theta(deg) =  15.00
Theta tolerance(radians) =  0.0001000
Minimum theta(deg) = -45.00 ; Maximum theta(deg) =  45.00
Theta convergence Step Factor = 5000.00
Maximum number of iterations = 50
Allowable negative side force = -1000.0(lbs)
Maximum force imbalance  = 100.000000(lbs)
Maximum moment imbalance = 100.000000 (ft/lbs)

Selected Lambda Coefficient =  1.00

Specified Tension Crack Water Depth Factor =   0.000

Total Number of Trial Surfaces Attempted = 2000

WARNING! The Factor of Safety Calculation for one or More Trial Surfaces
Did Not Converge in 50 Iterations.

Number of Trial Surfaces with Non-Converged FS = 242

Number of Trial Surfaces With Valid FS = 1758

Percentage of Trial Surfaces With Non-Converged and/or
Non-Valid FS Solutions of the Total Attempted =  12.1 %

Statistical Data On All Valid FS Values:
   FS Max =   7.876   FS Min =   2.381   FS Ave =   2.890
   Standard Deviation =    0.400   Coefficient of Variation =   13.85 %

Critical Surface is Sequence Number     860 of Those Analyzed.

*****BEGINNING OF DETAILED GEOSTASE OUTPUT FOR CRITICAL SURFACE FROM A SEARCH*****
```

BACK-CALCULATED CIRCULAR SURFACE PARAMETERS:

Circle Center At X = 73.583338(ft) ; Y = 471.872496(ft); and Radius = 51.705663(ft)

Circular Trial Failure Surface Generated With 25 Coordinate Points

Point No.	X-Coord. (ft)	Y-Coord. (ft)

Factor Of Safety For The Preceding Specified Surface = 2.381
Theta (fx = 1.0) = 17.25 Deg Lambda = 0.311

The Spencer Method Has Been Selected For Analysis.

Selected fx function = Constant (1.0)

SELECTED CONVERGENCE PARAMETERS FOR ANALYSIS METHOD:
Initial estimate of FS = 1.500
FS tolerance = 0.000001000
Initial estimate of theta(deg) = 15.00
Theta tolerance(radians) = 0.0001000
Minimum theta(deg) = -45.00 ; Maximum theta(deg) = 45.00
Theta convergence Step Factor = 5000.00
Maximum number of iterations = 50
Maximum force imbalance = 100.000000(lbs)
Maximum moment imbalance(if Applicable) = 100.000000 (ft/lbs)

Selected Lambda Coefficient = 1.00

Tension Crack Water Force = 0.00(lbs)

Specified Tension Crack Water Depth Factor = 0.000 (0.00% Filled)

Depth of Tension Crack (zo) at Side of Last Slice = 0.000(ft)

Depth of Water in Tension Crack = 0.000(ft)

Theoretical Tension Crack Depth = 11.199(ft)

NOTE: In Table 1 following, when a tension crack with water is present on the first slice (right facing slope) or on the last slice (left facing slope), the "side force" in the tension crack is set equal to the water pressure resultant.

*** Table 1 - Line of Thrust(if applicable) and Slice Force Data ***

Slice No.	X Coord.	Y Coord.	h/H	Side Force (lbs)	fx	Force Angle (Deg)	Vert. Shear Force(lbs)

SOIL OPTIONS:
A = ANISOTROPIC SHEAR STRENGTH
C = CURVED STRENGTH ENVELOPE (TANGENT PHI & C)
F = FIBER-REINFORCED SOIL (FRS)
M = INDEPENDENT MULTI-STAGE SHEAR STRENGTH

N = NONLINEAR UNDRAINED SHEAR STRENGTH
R = RAPID DRAWDOWN OR RAPID LOADING (SEISMIC) SHEAR STRENGTH
S = SHANSEP UNDRAINED SHEAR STRENGTH
NOTE: Phi and C in Table 4 are modified values based on specified
Soil Options (if any).

TABLE 5 - Total Base Stress Data on the 26 Slices

DESCRIPTION: Global Stability of 25' High Slopes (Pseudo-Static)

PROFILE BOUNDARY DATA

3 Surface Boundaries
3 Total Boundaries

Boundary No.	X - 1 (ft)	Y - 1 (ft)	X - 2 (ft)	Y - 2 (ft)	Soil Type Below Bnd
1	0.000	422.000	60.000	422.000	1
2	60.000	422.000	110.000	447.000	1
3	110.000	447.000	160.000	447.000	1

User Specified X-Origin = 0.000(ft)

User Specified Y-Origin = 400.000(ft)

SURFACE BOUNDARY POINT COORDINATES
(Information Only-Not Used Directly)

Point No.	X-COORD	Y-COORD
1	0.000	422.000
2	60.000	422.000
3	110.000	447.000
4	160.000	447.000

SUBSURFACE BOUNDARY POINT COORDINATES
(Information Only-Not Used Directly)

Point No.	X-COORD	Y-COORD

PROFILE BOUNDARY SLOPES AND ANGLES

BND No.	Slope	Angle(Deg.)
1	0.000	0.000
2	0.500	26.565
3	0.000	0.000

MOHR-COULOMB SOIL PARAMETERS

1 Type(s) of Soil Defined

Soil Number and Description	Moist Unit Wt. (pcf)	Saturated Unit Wt. (pcf)	Cohesion Intercept (psf)	Friction Angle (deg)	Pore Pressure Ratio(ru)	(-Uw) Fact.	Water Surface No.	Water Option
1 Fill	110.0	110.0	400.00	24.00	0.000	0.0	1	0

SEISMIC (EARTHQUAKE) DATA

Specified Peak Ground Acceleration Coefficient (PGA) = 0.290(g)
Default Velocity = 1.450(ft) per second
Specified Horizontal Earthquake Coefficient (kh) = 0.29000(g)
Specified Vertical Earthquake Coefficient (kv) = 0.000(g)
(NOTE:Input Velocity = 0.0 will result in default Peak
Velocity = 2 times(PGA) times 2.5 fps or 0.762 mps)
Specified Seismic Pore-Pressure Factor = 0.000
Horizontal Seismic Force is Applied at Center of Gravity of Slices

TRIAL FAILURE SURFACE DATA

Circular Trial Failure Surfaces Have Been Generated Using A Random Procedure.

2000 Trial Surfaces Have Been Generated.

2000 Surfaces Generated at Increments of 0.0600(in) Equally Spaced Within the Start Range

Along The Specified Surface Between X = 55.00(ft)
and X = 65.00(ft)

Each Surface ends within a Range Between X = 110.00(ft)
and X = 140.00(ft)

All surfaces are generated left to right for both a left and right sliding slope.

Unless XCLUDE Lines Were Specified, The Minimum Elevation
To Which A Surface Extends Is Y = 400.00(ft)

Specified Maximum Radius = 100000.000(ft)

3.000(ft) Line Segments Were Used For Each Trial Failure Surface.

The Spencer Method Was Selected for FS Analysis.

Selected fx function = Constant (1.0)

SELECTED CONVERGENCE PARAMETERS FOR SPENCER METHOD:
Initial estimate of FS = 1.500
FS tolerance = 0.000001000
Initial estimate of theta(deg) = 15.00
Theta tolerance(radians) = 0.0001000
Minimum theta(deg) = -45.00 ; Maximum theta(deg) = 45.00
Theta convergence Step Factor = 5000.00
Maximum number of iterations = 50
Allowable negative side force = -1000.0(lbs)
Maximum force imbalance = 100.000000(lbs)
Maximum moment imbalance = 100.000000 (ft/lbs)

Selected Lambda Coefficient = 1.00

Specified Tension Crack Water Depth Factor = 0.000

Total Number of Trial Surfaces Attempted = 2000

WARNING! The Factor of Safety Calculation for one or More Trial Surfaces
Did Not Converge in 50 Iterations.

Number of Trial Surfaces with Non-Converged FS = 1779

Number of Trial Surfaces With Valid FS = 221

Percentage of Trial Surfaces With Non-Converged and/or

Non-Valid FS Solutions of the Total Attempted = 89.0 %

Statistical Data On All Valid FS Values:
FS Max = 1.907 FS Min = 1.458 FS Ave = 1.673
Standard Deviation = 0.100 Coefficient of Variation = 5.97 %

Critical Surface is Sequence Number 8 of Those Analyzed.

*****BEGINNING OF DETAILED GEOSTASE OUTPUT FOR CRITICAL SURFACE FROM A SEARCH*****

BACK-CALCULATED CIRCULAR SURFACE PARAMETERS:

Circle Center At X = 79.072422(ft) ; Y = 461.584595(ft); and Radius = 46.189706(ft)

Circular Trial Failure Surface Generated With 29 Coordinate Points

Factor Of Safety For The Preceding Specified Surface = 1.458
Theta (fx = 1.0) = 26.65 Deg Lambda = 0.502

The Spencer Method Has Been Selected For Analysis.

Selected fx function = Constant (1.0)

SELECTED CONVERGENCE PARAMETERS FOR ANALYSIS METHOD:
Initial estimate of FS = 1.500
FS tolerance = 0.000001000
Initial estimate of theta(deg) = 15.00
Theta tolerance(radians) = 0.0001000
Minimum theta(deg) = -45.00 ; Maximum theta(deg) = 45.00
Theta convergence Step Factor = 5000.00
Maximum number of iterations = 50
Maximum force imbalance = 100.000000(lbs)
Maximum moment imbalance(if Applicable) = 100.000000 (ft/lbs)

Selected Lambda Coefficient = 1.00

Tension Crack Water Force = 0.00(lbs)

Specified Tension Crack Water Depth Factor = 0.000 (0.00% Filled)

Depth of Tension Crack (zo) at Side of Last Slice = 0.000(ft)

Depth of Water in Tension Crack = 0.000(ft)

Theoretical Tension Crack Depth = 11.199(ft)

NOTE: In Table 1 following, when a tension crack with water is present on the first slice (right facing slope) or on the last slice (left facing slope), the "side force" in the tension crack is set equal to the water pressure resultant.

*** Table 1 - Line of Thrust(if applicable) and Slice Force Data ***

SOIL OPTIONS:
A = ANISOTROPIC SHEAR STRENGTH
C = CURVED STRENGTH ENVELOPE (TANGENT PHI & C)
F = FIBER-REINFORCED SOIL (FRS)
M = INDEPENDENT MULTI-STAGE SHEAR STRENGTH
N = NONLINEAR UNDRAINED SHEAR STRENGTH
R = RAPID DRAWDOWN OR RAPID LOADING (SEISMIC) SHEAR STRENGTH
S = SHANSEP UNDRAINED SHEAR STRENGTH
NOTE: Phi and C in Table 4 are modified values based on specified
Soil Options (if any).

Appendix F

APPENDIX E

GENERAL EARTHWORK AND GRADING SPECIFICATIONS

1.0 GENERAL

1.1 **Intent:** These General Earthwork and Grading Specifications are for the grading and earthwork shown on the approved grading plan(s) and/or indicated in the geotechnical report(s). These Specifications are a part of the recommendations contained in the geotechnical report(s). In case of conflict, the specific recommendations in the geotechnical report shall supersede these general Specifications. Observations of the earthwork by the project Geotechnical Consultant during grading may result in new or revised recommendations that could supersede these specifications or the recommendations in the geotechnical report(s).

1.2 **Geotechnical Consultant:** Prior to commencement of work, the project owner shall employ a geotechnical consultant. The geotechnical consultant shall be responsible for reviewing the approved geotechnical report(s) and accepting the adequacy of the preliminary geotechnical findings, conclusions, and recommendations prior to the commencement of grading.

Prior to commencement of grading, the Geotechnical Consultant shall review the "work plan" prepared by the Earthwork Contractor (Contractor) and schedule sufficient personnel to perform the appropriate level of observation, mapping, and compaction testing.

During grading and earthwork operations, the Geotechnical Consultant shall observe, map, and document the subsurface exposures to verify the geotechnical design assumptions. If the observed conditions are found to be significantly different than the interpreted assumptions during the design phase, the Geotechnical Consultant shall inform the owner, recommend appropriate changes in design to accommodate the observed conditions, and notify the review agency where required. Subsurface areas to be geotechnically observed, mapped, elevations recorded, and/or tested include natural ground after it has been cleared for receiving fill but before fill is placed, bottoms of all "remedial removal" areas, all keyway bottoms, and benches made on sloping ground to receive fill.

The Geotechnical Consultant shall observe the moisture-conditioning and processing of subgrade and fill materials and perform adequate relative compaction testing of fill to determine the attained level of compaction and assess if, in their opinion, if the work was performed in substantial compliance

with the geotechnical report(s) and these specifications. The Geotechnical Consultant shall provide test results to the owner on a routine and frequent basis.

1.3 The Earthwork Contractor: The Earthwork Contractor (Contractor) shall be qualified, experienced, and knowledgeable in earthwork logistics, preparation and processing of ground to receive fill, moisture-conditioning and processing of fill, and compacting fill. The Contractor shall review and accept the plans, geotechnical report(s), and these Specifications prior to commencement of grading. The Contractor shall be solely responsible for performing the grading in accordance with applicable grading codes, the project plans, and these specifications.

The Contractor shall prepare and submit to the owner and the Geotechnical Consultant a work plan that indicates the sequence of earthwork grading, the number of "spreads" of work and the estimated quantities of daily earthwork planned for the site prior to commencement of grading. The Contractor shall inform the owner and the Geotechnical Consultant of changes in work schedules and updates to the work plan at least 24 hours in advance of such changes so that appropriate observations and tests can be planned and accomplished. The Contractor shall not assume that the Geotechnical Consultant is aware of all grading operations.

The Contractor shall have the sole responsibility to provide adequate equipment and methods to accomplish the earthwork in accordance with the applicable grading codes and agency ordinances, these Specifications, and the recommendations in the approved geotechnical report(s) and grading plan(s). If, in the opinion of the Geotechnical Consultant, unsatisfactory conditions, such as unsuitable soil, improper moisture condition, inadequate compaction, insufficient buttress key size, adverse weather, etc., are resulting in a quality of work less than required in these specifications, the Geotechnical Consultant shall reject the work and may recommend to the owner that construction be stopped until the conditions are corrected.

2.0 PREPARATION OF FILL AREAS

2.1 Clearing and Grubbing: Areas to be excavated and filled shall be cleared and grubbed. Vegetation, such as brush, grass, roots, and other deleterious material, man-made structures, and similar debris shall be sufficiently removed and properly disposed of in a method acceptable to the owner, governing agencies, and the Geotechnical Consultant. Borrow areas shall be cleared and grubbed to the extent necessary to provide a suitable fill material.

Concrete fragments that are free of reinforcing street may be placed in fills, provided they are placed in accordance with Section 3 and 4. Earth fill material

shall not contain more than 1 percent of organic materials (by volume). No fill lift shall contain more than 5 percent organic matter. Nesting of organic materials shall not be allowed.

If potentially hazardous materials are encountered, the Contractor shall stop work in the affected area, and a hazardous material specialist shall be informed immediately for proper evaluation and handling of these materials prior to continuing to work in that area. As presently defined by the State of California, most refined petroleum products (gasoline, diesel fuel, motor oil, grease, etc.) have chemical constituents that are considered hazardous waste. As such, the indiscriminate dumping or spillage of such fluids may constitute a misdemeanor, punishable by fines and/or imprisonment, and shall not be allowed.

The Geotechnical Consultant shall not be responsible for the identification or analysis of potentially hazardous materials; however, if observations, odors, or soil discoloration are suspect, the Geotechnical Consultant may request from the owner the termination of grading operations until such materials are deemed not hazardous as defined by applicable laws and regulations.

2.2 **Evaluation/Acceptance of Fill Areas:** All areas to receive fill, including removal and processed areas, key bottoms, and benches, shall be observed, mapped, elevations recorded, and/or tested prior to being accepted by the Geotechnical Consultant as suitable to receive fill. The Contractor shall obtain a written acceptance from the Geotechnical Consultant prior to fill placement. A licensed surveyor shall provide the survey control for determining elevations of processed areas, keys, and benches.

2.3 **Processing:** Ground that has been declared satisfactory for support of fill by the Geotechnical Consultant shall be scarified to a minimum depth of 6 inches. Ground that is not satisfactory shall be removed/overexcavated as specified in the following section. Scarification shall continue until soils are broken down and free of large clay lumps or clods and the working surface is reasonably uniform, flat, and free of uneven features that would inhibit uniform compaction. After scarification, the surface should be moisture conditioned, as necessary, to achieve the proper moisture content and compacted in accordance with Section 4 of these specifications.

2.4 **Overexcavation:** In addition to removals and overexcavations recommended in the approved geotechnical report(s) and the grading plan, soft, loose, dry, saturated, spongy, organic-rich, highly fractured, or otherwise unsuitable ground shall be overexcavated to competent ground as recommended by the Geotechnical Consultant during grading.

2.5 **Benching:** Fills to be placed on ground sloping steeper than 5H:1V (horizontal to vertical units) shall be stepped or benched. The lowest bench or key shall be a minimum of 15 feet wide and at least 2 feet deep, into competent material as evaluated by the Geotechnical Consultant. Other benches shall be excavated a minimum height of 4 feet into competent material or as otherwise recommended by the Geotechnical Consultant. Fill placed on ground sloping flatter than 5:1 shall also be benched or otherwise overexcavated to provide a flat subgrade for fill placement.

3.0 FILL MATERIAL

3.1 **General:** Material to be used as fill shall be essentially free of organic matter and other deleterious substances evaluated and accepted by the Geotechnical Consultant prior to placement. Soils of poor quality, such as those with unacceptable gradation, high expansion potential, or low strength shall be placed in areas acceptable to the Geotechnical Consultant or mixed with other soils to achieve satisfactory fill material.

3.2 **Oversize:** Oversize material defined as rock, or other irreducible material with a maximum dimension greater than 12 inches, shall not be buried or placed in fill unless location, materials, and placement methods are specifically accepted by the Geotechnical Consultant. Placement operations shall be such that nesting of oversized material does not occur and that oversize material is completely surrounded by compacted or densified fill. Oversize material shall not be placed within 10 vertical feet of finish grade or within 2 feet of future utilities or other underground construction.

3.3 **Import:** If importing of fill material is required for grading, proposed import material shall meet the requirements of Section 3.1 and/or requirements defined in the project geotechnical report(s). The potential import source shall be given to the Geotechnical Consultant at least 48 hours (2 working days) before import begins so that suitability can be determined, and appropriate laboratory tests performed.

4.0 FILL PLACEMENT AND COMPACTION

4.1 **Fill Layers:** Approved fill material shall be placed in areas prepared to receive fill (per Section 3.0) in near-horizontal layers not exceeding 8 inches in loose thickness. The Geotechnical Consultant may accept thicker layers if testing indicates the grading procedures can adequately compact the thicker layers. Each layer shall be spread evenly and mixed thoroughly to attain relative uniformity of material and moisture throughout.

4.2 **Fill Moisture Conditioning:** Fill soils shall be watered, dried back, blended, and/or mixed, as necessary to attain a relatively uniform moisture content at or slightly over optimum. Maximum density and optimum soil moisture content tests shall be performed in accordance with ASTM International (ASTM Test Method D1557).

4.3 **Compaction of Fill:** After each layer has been moisture-conditioned, mixed, and evenly spread, it shall be uniformly compacted to not less than 90 percent of maximum dry density (ASTM Test Method D1557). Compaction equipment shall be adequately sized and be either specifically designed for soil compaction or of proven reliability to efficiently achieve the specified level of compaction and uniformity.

Compaction of Fill Slopes: In addition to normal compaction procedures specified above, compaction of slopes shall be accomplished by backrolling of slopes with sheepsfoot rollers at increments of 3 to 4 feet in fill elevation, or by other methods producing satisfactory results acceptable to the Geotechnical Consultant. Upon completion of grading, relative compaction of the fill, out to the slope face, shall be at least 90 percent of maximum density per ASTM Test Method D1557.

4.4 **Compaction Testing:** Field tests for moisture content and relative compaction of the fill soils shall be performed by the Geotechnical Consultant. Location and frequency of tests shall be at the Consultant's discretion based on field conditions encountered. Compaction test locations will not necessarily be selected on a random basis. Test locations shall be selected to verify adequacy of compaction levels in areas that are judged to be prone to inadequate compaction (such as close to slope faces and at the fill/bedrock benches).

4.5 **Frequency of Compaction Testing:** Tests shall be taken at intervals required by the governing agency and as deemed necessary by the Geotechnical Consultant in order to adequately qualify the fill material. In general, it should be anticipated that tests will be taken at intervals not exceeding 2 feet in vertical rise and/or 1,000 cubic yards of compacted fill, unless recommended otherwise by the Geotechnical Consultant. In addition, test(s) shall be taken on slope faces and/or each 10 feet of vertical height of slope as deemed necessary by the Geotechnical Consultant. The Contractor shall assure that fill construction is such that the testing schedule can be accomplished by the Geotechnical Consultant. The Contractor shall stop or slow down the earthwork construction if these minimum standards are not met.

4.6 **<u>Compaction Test Locations</u>:** The Geotechnical Consultant shall document the approximate elevation and location of each compaction test. The Contractor shall coordinate with the project surveyor to assure that sufficient grade stakes are established so the Geotechnical Consultant can determine the test locations with sufficient accuracy. At a minimum, two grade stakes within a horizontal distance of 100 feet and vertically less than 5 feet apart from potential test locations shall be provided. Alternatively, GPS units may be used to determine the approximate location/coordinates of the field density tests.

5.0 SUBDRAIN INSTALLATION

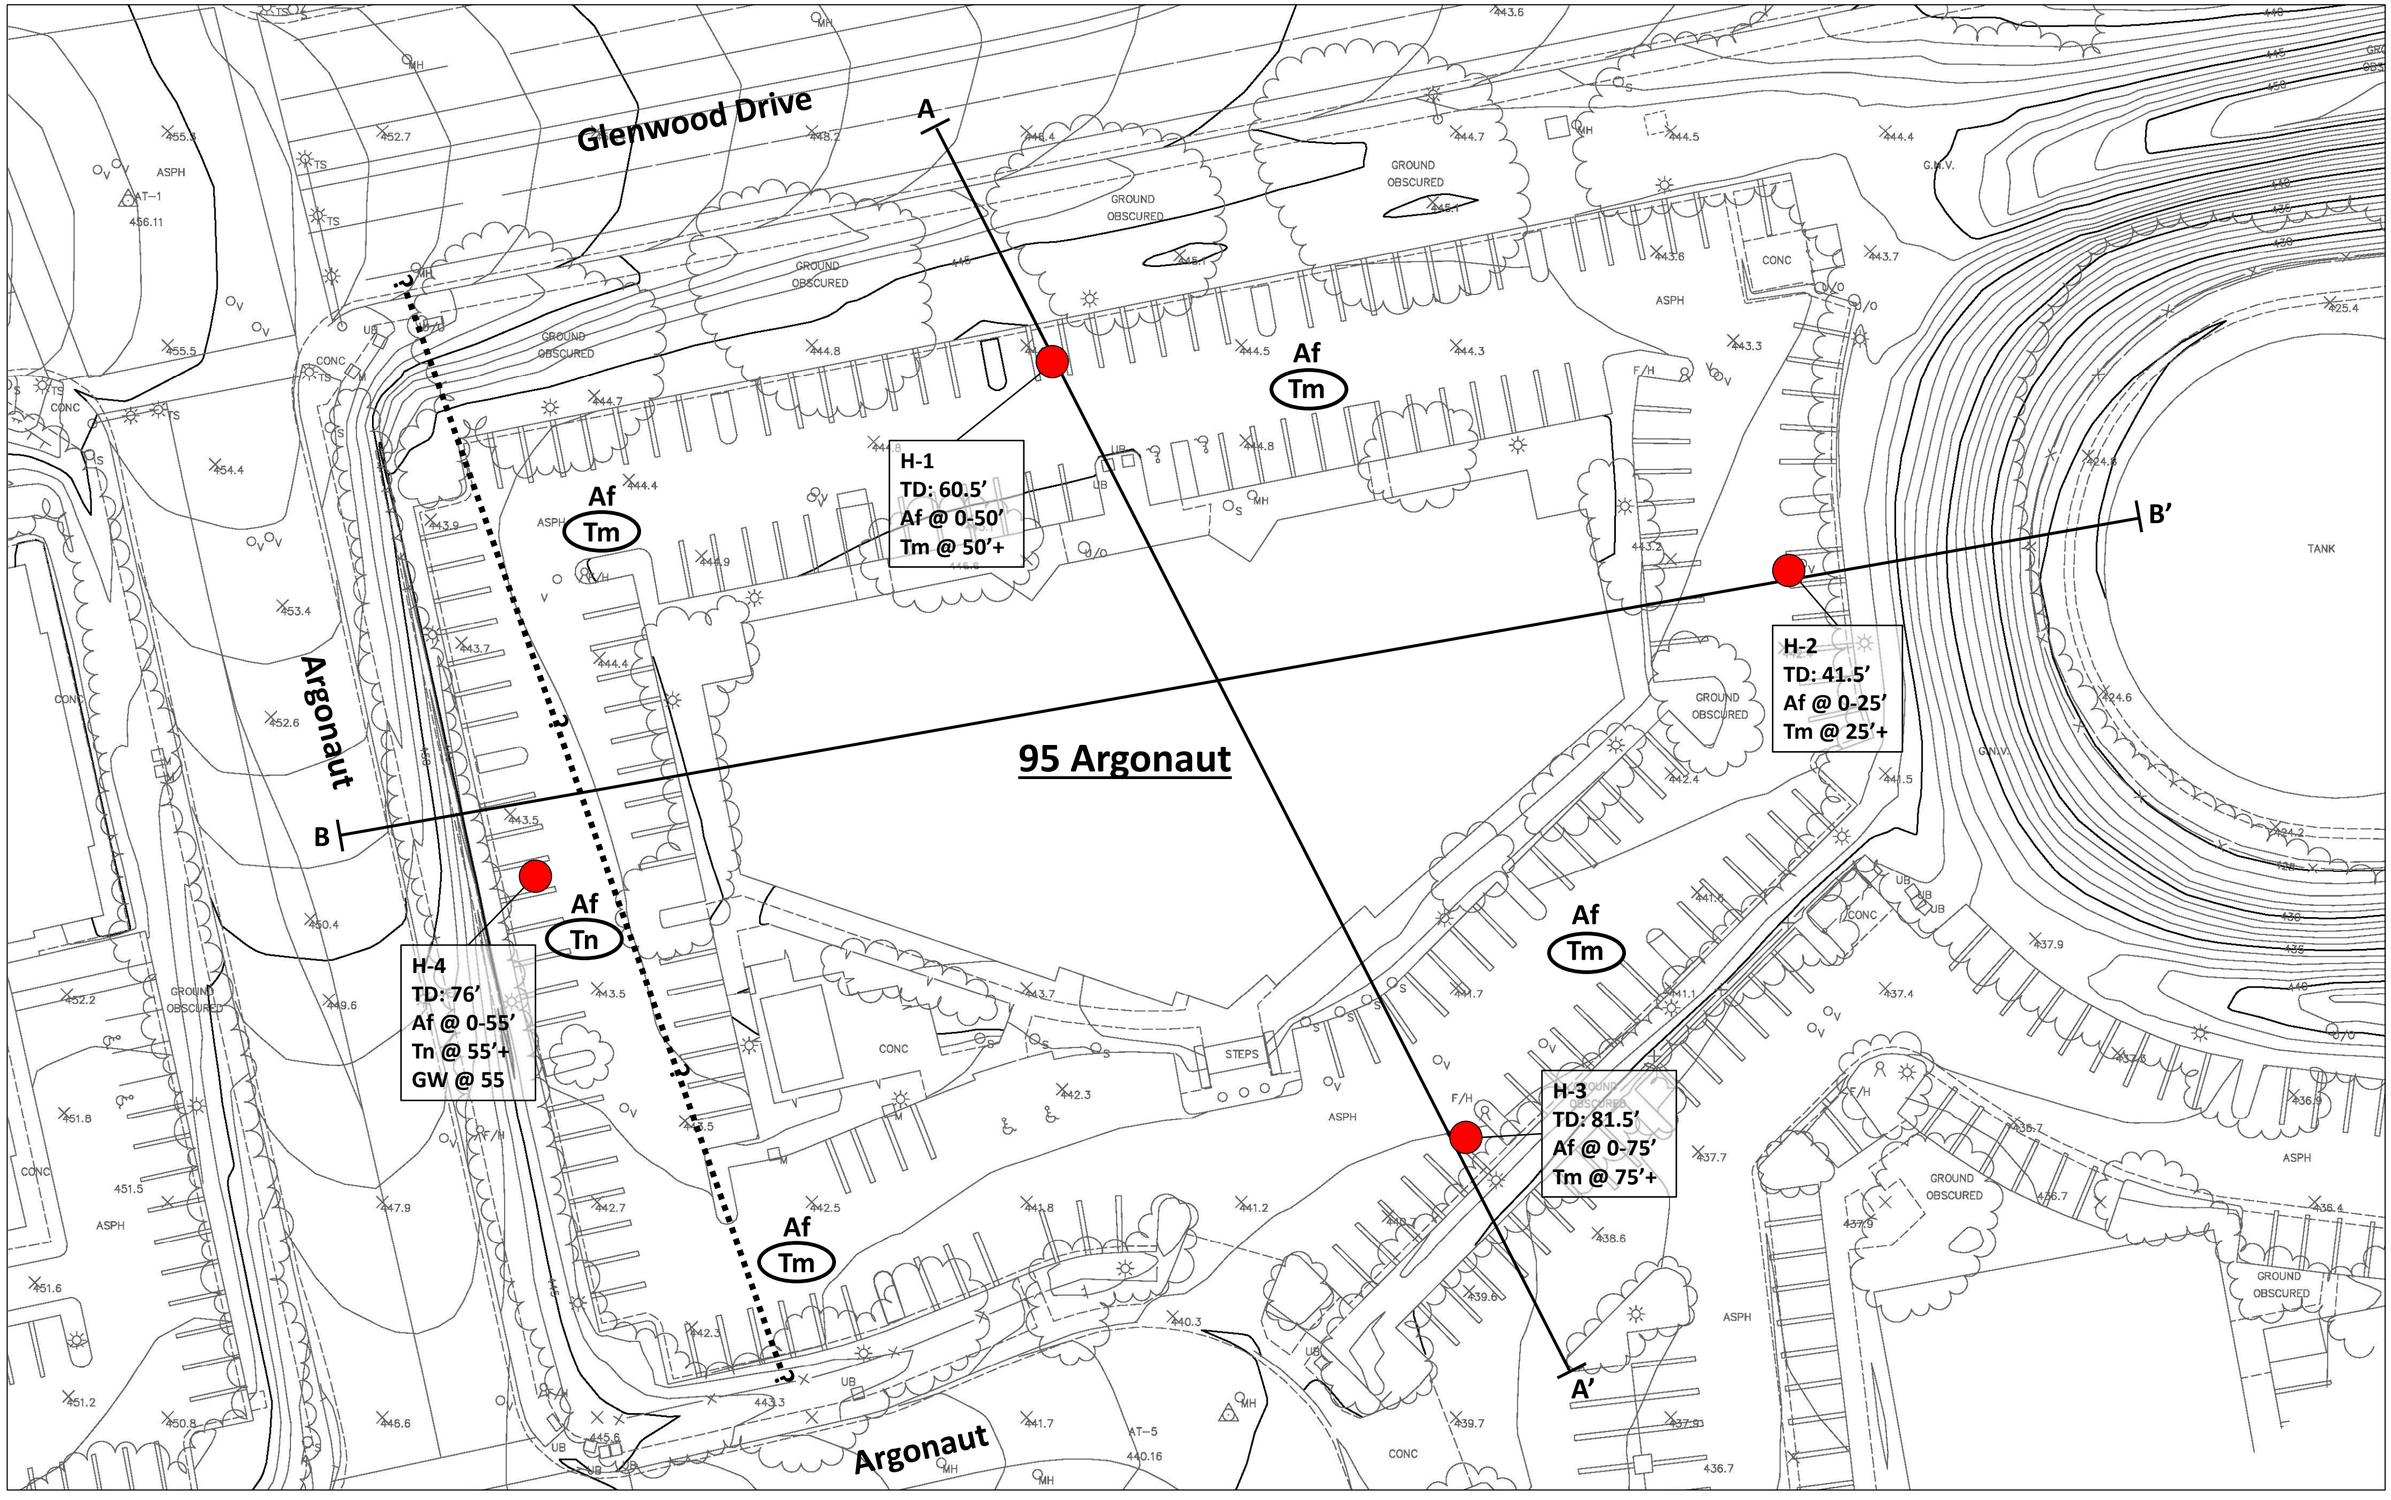
Subdrain systems shall be installed in accordance with the approved geotechnical report(s), the grading plan, and standard details. The Geotechnical Consultant may recommend additional subdrains and/or changes in subdrain extent, location, grade, or material depending on conditions encountered during grading. All subdrains shall be surveyed for line and grade after installation and prior to burial. Sufficient time should be allowed by the Contractor for these surveys. The Contractor should consider videoing the subdrains shortly after burial to check proper installation and functionality. The Contractor is responsible for the performance of subdrains.

6.0 EXCAVATION

Excavations, including over-excavation for remedial purposes, shall be evaluated by the Geotechnical Consultant during grading. Remedial removal depths shown on geotechnical report(s) and plans are estimates. The actual extent of removal shall be determined by the Geotechnical Consultant based on the field evaluation of exposed conditions during grading. Where fill-over-cut slopes are to be graded, the cut portion of the slope shall be made, evaluated, and accepted by the Geotechnical Consultant prior to placement of materials for construction of the fill portion of the slope, unless otherwise recommended by the Geotechnical Consultant.

7.0 TRENCH BACKFILLS

7.1 Contractor shall follow all OHSA and Cal/OSHA requirements for safety of trench excavations.



7.2 Bedding and backfill of utility trenches shall be done in accordance with the applicable provisions of Standard Specifications of Public Works Construction. Bedding material shall have a Sand Equivalent greater than 30 (SE>30). The bedding shall be placed to 1 foot over the top of the conduit and densified by jetting. Backfill shall be placed and densified to a minimum 90 percent of maximum from 1 foot above the top of the conduit to the surface, except in traveled ways (see Section 7.6 below).

7.3 Jetting of the bedding around the conduits shall be observed by the Geotechnical Consultant.

7.4 Geotechnical Consultant shall test the trench backfill for relative compaction. At least one test should be made for every 300 feet of trench and 2 feet of fill, unless required differently by the governing agency or the Geotechnical Consultant.

7.5 Lift thickness of trench backfill shall not exceed those allowed in the Standard Specifications of Public Works Construction unless the Contractor can demonstrate to the Geotechnical Consultant that the fill lift can be compacted to the minimum relative compaction by his alternative equipment and method.

7.6 Trench backfill in the upper foot measured from finish grade within existing or future traveled way, shoulder, and other paved areas (or areas to receive pavement) should be placed to a minimum 95 percent relative compaction.

This Water Quality Management Plan (WQMP) has been prepared for Meritage Homes by X Engineering & Consulting, Inc. The WQMP is intended to comply with the requirements of the local NPDES Stormwater Program requiring the preparation of the plan.

The undersigned, while it owns the subject property, is responsible for the implementation of the provisions of this plan and will ensure that this plan is amended as appropriate to reflect up-to-date conditions on the site consistent with the current Orange County Drainage Area Management Plan (DAMP) and the intent of the non-point source NPDES Permit for Waste Discharge Requirements for the County of Orange, Orange County Flood Control District and the incorporated Cities of Orange County within the San Diego Region (South Orange County). Once the undersigned transfers its interest in the property, its successors-in-interest shall bear the aforementioned responsibility to implement and amend the WQMP. An appropriate number of approved and signed copies of this document shall be available on the subject site in perpetuity.

Section 2 Project Description

2.1 General Description

Description of Proposed Project				
Site Location	95 Argonaut, Aliso Viejo, CA 92656			
Project Area (ft^2): _____	Number of Dwelling Units: __62_____		SIC Code: _____	
Narrative Project Description:	This priority redevelopment project consists of the removal of an existing commercial building for the construction of a housing development. The completed project will consist of 61 dwelling units in 8 separate buildings within the property. There will be 140 parking spaces including 124 for garage parking. 20,945-square feet of open space is provided in this development. This project qualifies as a priority project due to the creation and replacement of more than 10,000-square feet of impervious surface.			
Project Area	Pervious		Impervious	
	Area (acres or sq ft)	Percentage	Area (acres or sq ft)	Percentage
Pre-Project Conditions	28,749	24	88,863	76
Post-Project Conditions	24,585	21	93,027	79

2.2 Post Development Drainage Characteristics

The proposed condition drainage will mimic the existing condition drainage to the maximum extent possible. Runoff generally flows from north to south. Proposed condition drainage generally concentrates sheet flow into drainage inlets, catch basins, and routes it into subsurface storm drainage pipes. Runoff is conveyed to dual MWS-L-8-16-V units for water quality treatment of the 85th percentile, 24-hour storm event. Stormwater flows exceeding this value, including flows from the MWS will then be routed into a subsurface detention facility with a flow control outlet orifice suitable for mitigating hydromodification and peak stormwater flows.

The project is not covered by an existing WQMP and is not subject to cross-lot drainage. There are no existing stormwater BMPs onsite.

2.3 Property Ownership/Management

This project is owned by Meritage Homes.

Section 3 Site & Watershed Characterization

3.1 Site Conditions

3.1.1 Existing Site Conditions

The existing condition is fully developed as a commercial site. It consists of one large commercial building with a parking lot and surrounding landscape planters. The existing site drainage is split into stormwater flowing east and west essentially down the middle of the property. Stormwater sheet flows in both directions at an approximately 1 to 2% slope into perimeter gutters along the edge of the existing parking lot. Gutter flow concentrates into two culverts at the south end of the property on each side of the entry driveway. Stormwater enters the gutter at the knuckle of Argonaut and flows south until reaching a catch basin approximately 250-feet south of the site.

In the existing condition, approximately 0.07 acres located at the northeast corner of the site, drains into the project area. In the proposed condition, this region is graded towards the sidewalk away from the site and to the gutter. It drains through a self-treating landscaping area. The flow contributing to the gutter is deemed negligible.

Stormwater enters an existing 39-inch storm drain flowing southeast which eventually becomes a 78-inch storm drain. The 78-inch storm drain then drains at a rip rap energy dissipation structure before entering Aliso Creek. Aliso Creek flows southwest and enters the Pacific Ocean in South Laguna Beach.

This project is not covered by an existing WQMP. No cross-lot drainage or stormwater run-on flows enter the site. There are no existing stormwater BMPs in place onsite.

Existing Land Uses

Land Use Description	Total Area (acres)	Impervious Area (acres)	Pervious Area (acres)	Imperviousness (%)
Commercial	2.77	2.01	0.76	73%
Total	2.77	2.01	0.76	73%

3.1.2 Infiltration-Related Characteristics

3.1.2.1 Hydrogeologic Conditions

Groundwater was encountered during subsurface exploration by SA Geotechnical at a depth of 55-feet below ground surface (bgs). Historic high groundwater has been measured at 20-feet bgs.

However, it is noted that the historic high groundwater measurements were measured below original grades prior to mass grading in the 1980s. It is expected that groundwater will remain deep below the site (SA Geotechnical 2024).

3.1.2.2 Soil and Geologic Infiltration Characteristics

The SA Geotechnical report indicates that stormwater infiltration is not recommended for this project. The site is underlain by silty/clayey engineered fill up to 75 feet thick overlying bedrock. Additionally, the native hydrologic soil classification is HSG D (**Attachment D1**).

3.1.2.3 Geotechnical Conditions

The project is not within a potential liquefaction hazard zone. The site is located on flat terrain that has no slope stability concerns. However, onsite soils are anticipated to have high expansion potential at grading completion.

3.1.2.4 Summary of Infiltration Opportunities and Constraints of Existing Site

Due to the geotechnical constraints previously mentioned, infiltration is not recommended onsite. The presence of compacted silty/clayey engineered fill, HSG D soil group, and deep groundwater suggest that infiltration is not suitable at this site.

3.2 Proposed Site Development Activities

3.2.1 Overview of Site Development Activities

The housing redevelopment project will construct 8 new buildings, new landscaping, and private streets. The proposed construction is replacing the existing single 2-story commercial building and parking lot.

3.2.2 Project Attributes Influencing Stormwater Management

The proposed residential development will retain the same drainage pattern of the existing condition with stormwater flowing north to south. Slope and grade changes will be minimal. 61 dwelling units are planned for the community within 8 buildings. The proposed landscaping will be California friendly, drought resistant plants. The overall pervious landscape will be slightly reduced from the existing condition (27 % pervious) to the proposed condition (20 % pervious).

No SIC codes have been applied to the site. Waste generated from the site will be general household waste, not including any hazardous waste.

Proposed Land Uses

Land Use Description	Total Area (acres)	Impervious Area (acres)	Pervious Area (acres)	Imperviousness (%)
Residential	2.7	2.15	0.55	79.6

3.2.3 Effects on Infiltration and Harvest and Use Feasibility

Infiltration is not recommended for the site due to low infiltration rates of existing compacted engineered fill and the presence of HSG class D soil. Harvest and use for the planned community is not feasible due to lack of space.

3.3 Receiving Waterbodies

The project drains to the public storm drain which in turn drains to Aliso Creek prior to discharge into the Pacific Ocean. 303(d) listings associated with Aliso Creek along with the SWRCB decision ID are phosphorous (111092), nitrogen (127601), selenium (111093), benthic community effects (125926), toxicity (111095), indicator bacteria (79858), and malathion (81901).

3.4 Stormwater Pollutants or Conditions of Concern

Pollutants or Conditions of Concern

Pollutant	Expected from Proposed Land Uses/Activities (Yes or No)	Receiving Waterbody Impaired (Yes or No)	Priority Pollutant from WQIP or other Water Quality Condition? (Yes or No)	**Pollutant of Concern (Primary, Other, or No)**
Suspended-Solids	Yes	No	No	Other
Nutrients	Yes	Yes	No	Primary
Heavy Metals	Yes	No	No	Other
Bacteria/Virus/Pathogens	Yes	Yes	Yes	Primary
Pesticides	Yes	No	No	No
Oil and Grease	Yes	No	No	Other
Toxic Organic Compounds	Yes	No	No	Other
Trash and Debris	Yes	No	No	Other
Dry Weather Runoff	Yes	No	Yes	Primary

3.5 Hydrologic Conditions of Concern

Does a hydrologic condition of concern exist for this project?

☐ No – An HCOC does not exist for this receiving water because *(select one)*:

- ☐ Project discharges directly to a protected conveyance (bed and bank are concrete lined the entire way from the point(s) of discharge to a receiving lake, reservoir, embayment, or the Ocean
- ☐ Project discharges directly to storm drains which discharge directly to a reservoir, lake, embayment, ocean or protected conveyance (as described above)
- ☐ The project discharges to an area identified in the WMAA as exempt from hydromodification concerns

☒ Yes – An HCOC does exist for this receiving water because none of the above are applicable.

Repeat this checklist for each different receiving water to which the project would discharge.

3.6 Critical Course Sediment Yield Areas

Critical coarse sediment provisions do not apply to this project (redevelopment of an existing developed site). Site is also not listed within the Potential Coarse Sediment area on the OCPW Potential Coarse Sediment Map of Aliso Creek (**Attachment D2**).

Section 4 Site Plan and Drainage Plan

4.1 Drainage Management Area Delineation

One DMA is designated for this project. See attached **DMA Exhibit**.

The site DMA consists of 8 new two-story buildings containing 61 dwelling units, hardscape, and drought resistant landscaping. All drainage is intercepted by inlet drains, roof drains, catch basins and conveyed through subsurface storm drains. Drainage is directed to the southeast portion of the site to be treated in two MWS-L-8-16-V modular wetland systems (MWS). Any water flowing through the MWS as well as stormwater peak flows exceeding the 85th percentile water quality design volume will be routed through a subsurface detention vault.

4.2 Overall Site Design BMPs

Minimize Impervious Area - Impervious areas will be minimized through provision of landscaped areas to the maximum extent possible.

Maximize Natural Infiltration Capacity - Infiltration is not recommended on site as referenced in the geotechnical report. However, natural infiltration is maximized in landscaped areas to the maximum extent possible.

Preserve Existing Drainage Patterns and Time of Concentration - Existing drainage patterns are preserved with routing stormwater flows from north to south. The proposed condition will use a subsurface detention/hydromodification vault that will increase the time of concentration comparable to the existing condition.

Disconnect Impervious Areas - Runoff from impervious areas will be dispersed to landscaped areas to the maximum extent possible.

Protect Existing Vegetation and Sensitive Areas - Existing vegetation will be preserved to the maximum extent possible. The remaining areas will be replaced by drought tolerant vegetation. There are no sensitive areas for this project.

Revegetate Disturbed Areas - Disturbed areas will be hardscaped and landscaped.

Soil Stockpiling and Site Generated Organics – No organic wastes are anticipated for the project. Soil stockpiling is to be managed through erosion and sediment control plans.

Firescaping - Drought resistant landscaping and firescaping measures will be incorporated to the maximum extent possible.

Water Efficient Landscaping - Water-efficient irrigation methods will be implemented on proposed landscaping.

Slopes and Channel Buffers - Not applicable for this project as the proposed project area is very flat with slopes between 1 to 2 %.

4.3 DMA Characteristics and Site Design BMPs

4.3.1 DMA 1

The entire residential community has been graded to drain to two LID BMPs located in the southeast corner of the project. Stormwater peak flows will be conveyed to a Modular Wetland System MWS-L- 8-16-V for water quality treating the 85th percentile 24-hour storm event. Overflow during heavy storm events will be bypassed through an internal weir within each MWS. Treated stormwater and bypassed flow will be routed to the subsurface detention basin for hydromodification management and attenuating peak flows before exiting to the public 24-inch storm drain along Argonaut.

The site will be developed as a residential property with approximately 80% imperviousness (2.15-acres) and 25% perviousness (0.55-acres). The DMA is very flat with average slopes between 1-2%. Anticipated pollutants generated from this site are suspended solids/sediments, nutrients, pathogens (bacteria and viruses), oils/grease, trash, and debris.

4.3.X DMA Summary

Drainage Management Areas				
DMA (Number/Description)	Total Area (acres)	Imperviousness (%)	Infiltration Feasibility Category (Full, Partial, or No Infiltration)	Hydrologic Source Controls Used
DMA 1	2.7	80	No Infiltration	Not applicable

4.4 Source Control BMPs

S14	Community car wash racks	☒	☐	

Section 5 Low Impact Development BMPs

5.1 LID BMPs in DMA 1

Due to the site's infeasibility for infiltration, the LID BMP used in DMA 1 is a proprietary biofiltration BMP with no infiltration. Harvest and use BMP is not feasible due to the project's lack of demand for harvest stormwater.

5.1.1 Hydrologic Source Controls for DMA 1

Hydrologic source control BMPs are not practical for this project and are not used. The site's soil characteristics are not suitable for stormwater retention to achieve volume reduction.

5.1.2 Structural LID BMP for DMA 1

The LID BMPs utilized in DMA 1 are two Modular Wetland Systems (MWS) for pollutant control. The MWS units are WA TAPE (Washington State Technology Acceptance Protocol-Ecology) approved proprietary biofiltration (BIO-5) device that provides biofiltration via horizontal flow. The MWS are used as compact LID BMPs to accommodate the tight space constraints of the project and to receive subsurface pipe flows for treatment.

The MWS' are paired with a downstream subsurface detention vault for HMP compliance and attenuation of peak flows. This MWS' have been sized to accommodate 150% of the 85th percentile, 24-hour storm for water quality treatment per Appendix E.3.5 and Worksheet 9. Stormwater flows exceeding the water quality flows will be bypassed through an internal weir within each MWS and discharge into the detention vault. Both the runoff treated by the MWS, and bypassed flows are routed through the detention vault.

The vault is capable of regulating hydromodification events from 10% of the 2-year through the 10-year storms with a riser. Equipped with a 2 inch low-flow diameter orifice at the bottom of the structure as well as a rectangular notch at the top, this riser controls the hydromodification events. and attenuates peak flows. Stormwater flows exceeding the hydromodification events will pass through the 18 inch diameter opening at the top of the riser. Stormwater then travels from the vault to the 24-inch R.C.P storm drain along Argonaut through a proposed reinforced concrete pipe (R.C.P.) 18-inch storm drain.

See the attached DMA Exhibit in the preceding section for details.

5.2 Summary of LID BMPs

Water quality requirements for the project are met by use of two MWS'. The following table summarizes the total water quality flow by the drainage area. See Attachment C, Worksheet 9 for detailed calculations. Each 8x16 MWS unit will treat half of the design flow (0.365 cfs per MWS) shown in the table below.

LID BMP Design Parameters					
Drainage Area (ac)	IMP %	C	$I_{design, 80\%}$ (in/hr)	$Q_{80\%}$ (cfs)	Q_{design} (cfs)
2.7	80	0.825	0.24	0.486	0.729

Section 6 Hydromodification BMPs

6.1 Points of Compliance

The POC for the project is located downstream of the MWS and subsurface detention vault (see **DMA Exhibit**). This location accounts for the stormwater treatment and detention for meeting hydromodification requirements.

6.2 Pre-Development (Natural) Conditions

The natural pre-development condition of the site consisted of very steep slopes. This was determined through use of a USGS topographic quadrangle map (1949) and historical aerial photograph (1938) courtesy of Historical Aerials. Historical information pertaining to the land cover was limited to the use of the 1939 historical photograph. However, it could be reasonably deduced from the photograph that the land cover existing before development was open brush, most likely native grasses and shrubs. The pre-development condition utilized in the SOHM model was HSG class D soils, with open brush and very steep slopes. Refer to **Attachment D5 and D6** for historical photograph (1938) and topographic map (1949).

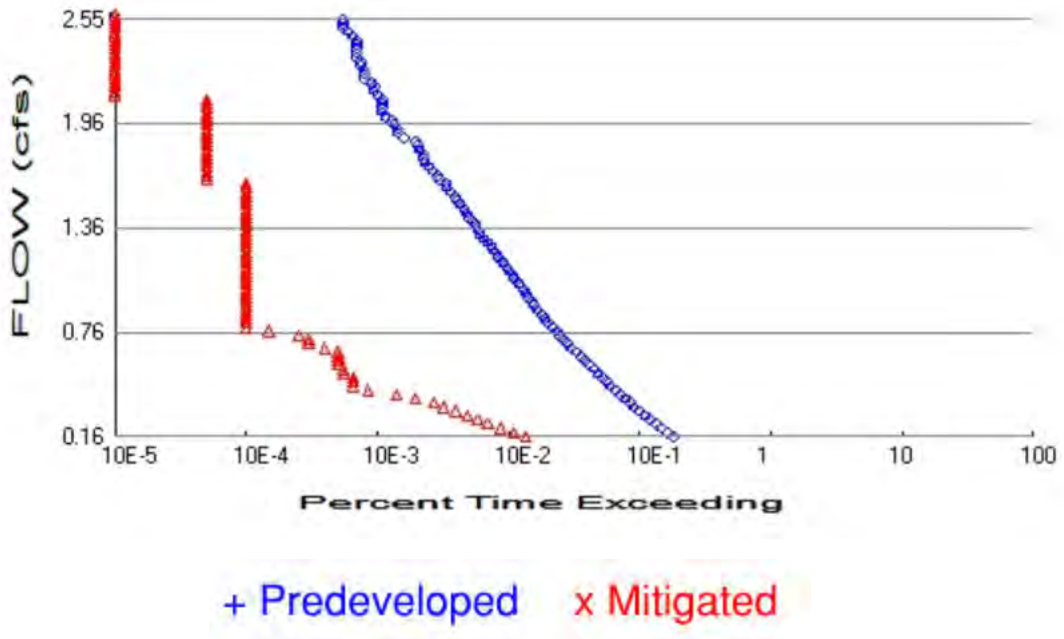
6.3 Post-Development Conditions and Hydromodification BMPs

In the post-development condition, the land cover is urban/commercial with flat slopes. The subsurface detention vault serves as a HM BMP. The stormwater flow exiting the system at the POC is controlled by an orifice plate.

6.4 Measures for Avoidance of Critical Coarse Sediment Yield Areas

The project is a redevelopment project and thus not subject to critical coarse sediment provision. Additionally, the project does not lie in a critical coarse sediment region (**Attachment D2**)

6.5 Hydrologic Modeling and Hydromodification Compliance

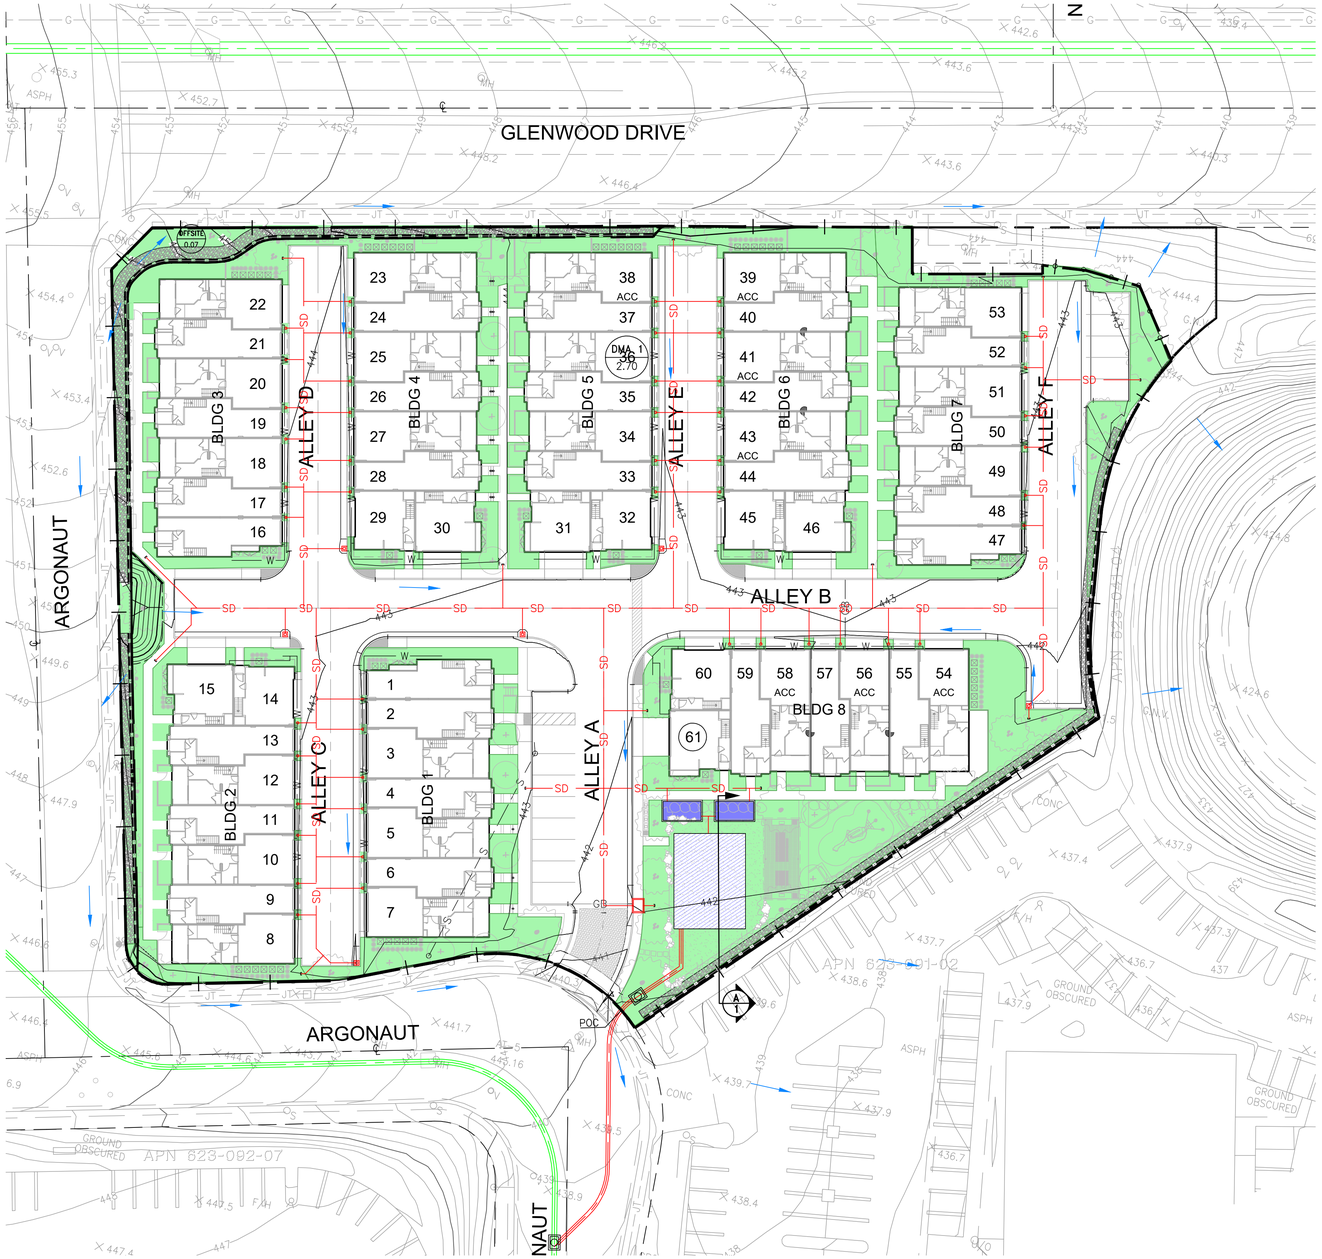


The South Orange County Hydrologic Model (SOHM) was utilized to design and size hydromodification mitigation BMPs. SOHM is an HSPF-based (Hydrological Simulation Program FORTRAN) watershed model that has been specifically calibrated to natural and developed condition subwatersheds in southern Orange County. More than 48 years of 15-minute precipitation, evapotranspiration, and irrigation data is used in the model. The Laguna Beach meteorological station is the station utilized in the study. SOHM defines the pre-developed (natural) condition as predevelopment and post-developed condition as mitigated.

Areas of the predevelopment condition were broken down by land use and soil type and entered into SOHM. In the predeveloped conditions, the area acts as one watershed which is selected as the Point of Compliance (POC). Areas of the mitigated condition were broken

down likewise. BMPs were connected downstream of the mitigated condition. The POC of the mitigated condition was selected immediately downstream of the subsurface detention vault. The vault contains an outlet structure, which is configured with an orifice plate with openings to control flow rate. Next, an analysis was performed at the POC for the predevelopment and mitigated scenarios. The analysis compares flow durations for each scenario with the specific flow values and the number of times predevelopment and mitigated flows exceeded those flow values. A percentage is calculated to determine when the system passes or fails if the percentages exceed the allowable 110%. A summary table for the key hydromodification BMP design parameters and the drawdown time is provided as follows. Full details are available in the SOHM reported included in Attachment C6.**Summary for hydromodification compliance**

BMP Elements	Size	Elevation	Drawdown time
Detention system (StormTrap)	20' x 50' x 4' (3,200 cf)*	433.45 (bottom of vault)	3.03 hours**
Orifice on weir plate	2" ∅	433.45	
Top of weir plate	0.65' width	435.95	



*BMP is used for hydromodification management only, not for LID requirements. Thus, required volume criterion is not applicable. See flow-duration plot for Predevelopment and Mitigated Flow below for hydromodification compliance.
** Drawdown time per SOHM report result. See Attachment C.

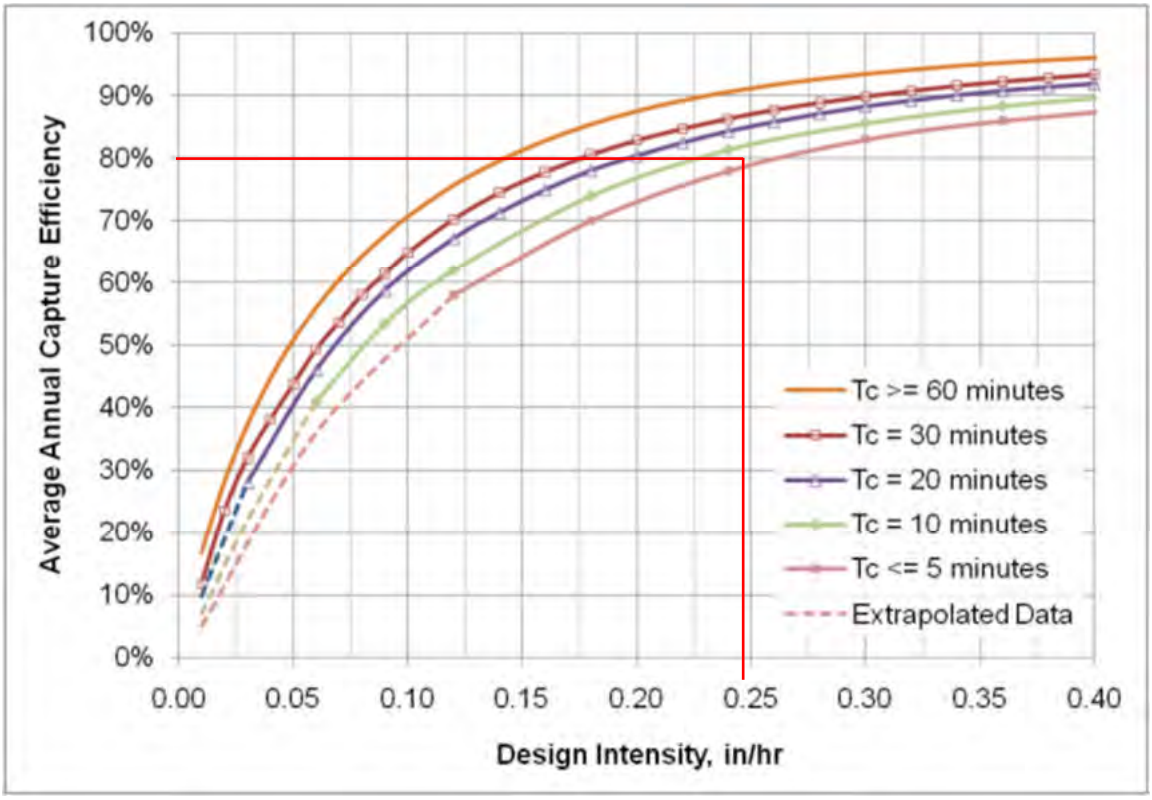
Worksheet 1: Infiltration Feasibility Categorization

Categorization of Infiltration Feasibility Condition			*Page 1 of 5*
Part 1: Physical Limitations of Infiltration Based on the criteria for physical limitations of infiltration described in Section 4.2.2.2, what level of physical feasibility of infiltration is the maximum that the BMP location will support?			
	Physical Infiltration Feasibility Category	**Mark applicable category**	**Next step**
1	Full Infiltration of the DCV		Continue to Part 2
	Biotreatment with Partial Infiltration		Continue to Part 3
	Biotreatment with No Infiltration	x	Select and Utilize Biotreatment without Infiltration
Provide summary of basis: The site is underlain by engineered fills (5 to 75-feet) that are silty and clayey in nature, which are not conducive to infiltration. In addition, the presence of slopes along the property boundaries and deep canyon fill, infiltration of stormwater can result in seepage or springs in locations where none previously existed. Thus, infiltration is not recommended for the site. See SA Geotechnical Infiltration report (May 2024) in Attachment C for more information.			

Categorization of Infiltration Feasibility Condition		*Page 2 of 5*	
Part 2: Risks Limiting Full Infiltration of the DCV –*Would infiltration of the full DCV introduce risks of undesirable consequences that cannot reasonably be mitigated?*		***Yes***	***No***
2	**Would infiltration of the DCV pose significant risk for groundwater related concerns?** Use criteria described in Section 4.2.2.3 and results from **Worksheet 2** (Appendix C) to describe groundwater-related infiltration feasibility criteria.		x
Provide basis: Groundwater was discovered at 55-feet at the time of the subsurface exploration. See SA Geotechnical Infiltration report (May 2024) in Attachment C for more information.			
3	**Would infiltration of the full DCV pose significant risk of increasing risk of geotechnical hazards that cannot be mitigated to an acceptable level**? Use criteria described in Section 4.2.2.4.	x	
Provide basis: Infiltration of stormwater can result in seepage or springs in locations where none previously existed due to the presence of slopes along the property boundary and deep canyon fill. See SA Geotechnical Infiltration report (May 2024) in Attachment C for more information.			
4	Would infiltration of the DCV cause an increase in groundwater flow or decrease in surface runoff over predevelopment conditions that would cause **impairment to downstream beneficial uses, such as change of seasonality of ephemeral washes or increased discharge of contaminated groundwater to surface waters?** Use criteria in Section 4.2.2.5		x
Provide basis: Not applicable to the site nor project of this scale.			



Categorization of Infiltration Feasibility Condition		***Page 3 of 5***	
Part 2 (continued): Risks Limiting Full Infiltration of the DCV –*Would infiltration of the full DCV introduce risks of undesirable consequences that cannot reasonably be mitigated?*		***Yes***	***No***
5	Is there substantial evidence that infiltration of the DCV would **result in a significant increase in I&I to the sanitary sewer** that cannot be sufficiently mitigated?		x
Provide basis: Not applicable to this site.			
6	Would infiltration of the DCV **violate downstream water rights**?		x
Provide basis: Not applicable to the project.			
Part 2 Result	If the answer to all questions 2-6 are "No", then the DMA is categorized as "Full Infiltration" for the purposes of LID BMP type selection. Describe finding. At the Preliminary/Conceptual WQMP phase, describe the additional design-phase testing required to confirm this determination and identify contingencies for final design. At the Final Project WQMP phase, identify any required construction-phase testing and identify the design contingencies that should result based on construction-phase testing. If the answer to any of questions 2-6 is "Yes" then the site cannot be categorized as "Full Infiltration". Continue to Part 3: Partial Infiltration Feasibility		
Categorization of Infiltration Feasibility Condition		***Page 4 of 5***	
Part 3: Partial Infiltration Feasibility Criteria –*Would infiltration of any appreciable volume of stormwater result in risks of undesirable consequences that cannot reasonably be mitigated?*		***Yes***	***No***
8	**Would use of biotreatment BMPs with partial infiltration pose significant risk for groundwater related concerns?** Refer to criteria in Section 4.2.2.3 and Worksheet 1 (Appendix C) for guidance on groundwater-related infiltration feasibility criteria.		x

Provide basis: Groundwater was observed at 55-feet at the time of the subsurface exploration. Historic high groundwater mapping indicates high groundwater greater than 20 bgs. This is prior to significant mass grading in the 1980s. Groundwater is expected to remain deep below the site. See SA Geotechnical Infiltration report (May 2024) in Attachment C for more information.			
9	**Would the use of biotreatment BMPs with partial infiltration pose elevated risks of geotechnical hazards that cannot be mitigated to an acceptable level**? Refer to Section 4.2.2.4.	x	
Provide basis: Infiltration of stormwater can result in seepage or springs in locations where none previously existed due to the presence of slopes along the property boundary and deep canyon fill. See SA Geotechnical Infiltration report (May 2024) in Attachment C for more information.			
10	**Would the use of biotreatment BMPs with partial infiltration elevate risks or introduced conflicts related to groundwater balance, inflow and infiltration, or water rights?** Refer to Section 4.2.2.5. Note: this is uncommon and must be supported by site-specific analysis if it is used as a basis to reject biotreatment with partial infiltration.		x
Provide basis: Not applicable to the project.			
Categorization of Infiltration Feasibility Condition			***Page 5 of 5***
Part 3 Result	If the answer to all questions 8-10 are “No”, then the DMA is categorized as “Biotreatment with Partial Infiltration” for the purposes of LID BMP type selection. If the answer to any of questions 8-10 is “Yes” then the site is categorized as “Biotreatment with No Infiltration” for the purposes of LID BMP type selection.		

Worksheet 9: Flow-Based Compact Biofiltration with Supplemental Retention Method

Part 1: Determine the design storm intensity of the compact biofiltration BMP				
1	Enter the time of concentration, T_c (min) (See E.2.3) (account for upstream detention by increasing Tc to a maximum 60 minutes per Section E.3.5.2 if detention is provided)	T_c=	8	min
2	Using Figure E-7 or the figure included in the worksheet, determine the design intensity at which the estimated time of concentration (T_c) achieves 80% capture efficiency, I_1	I_1=	0.24	in/hr
3	Enter capture efficiency corresponding to upstream HSCs and/or upstream BMPs, Y_2. Attach associated calculations.	Y_2 =	0	%
4	Using Figure E-7, determine the design intensity at which the time of concentration (T_c) achieves the upstream capture efficiency(Y_2), I_2	I_2=	0	in/hr
5	Determine the design intensity that must be provided by BMP to achieve 80 percent capture, $I_{design}= I_1-I_2$	$I_{design_80\%}$ =	0.24	in/hr
Part 2: Calculate the design flowrate of the compact biofiltration BMP (Section E.2.6)				
6a	Enter DMA area tributary to BMP (s), *A* (acres)	A=	2.7	acres
6b	Enter DMA Imperviousness, imp (unitless)	imp=	0.8	
6c	Calculate runoff coefficient, *c= (0.75 x imp) + 0.15*	c=	0.75	
6d	Calculate flowrate to achieve 80 percent capture, $Q_{80\%}$= *(c x* I_{design} *x A)*	$Q_{80\%}$=	0.486	cfs
7	Calculate design flowrate, $Q_{design}= Q_{80\%}$ *x 150%*	Q_{design}=	0.729	cfs
Part 3: Demonstrate that Supplemental Retention BMPs Conform to Volume Reduction Targets (Only DMAs Categorized as "Biotreatment with Partial Infiltration")				
8	Describe system, including features to maximize volume reduction (if applicable): N/A (no infiltration)			
9	Summarize calculations to demonstrate that volume reduction targets are met, where feasible and applicable. N/A (no infiltration)			

Worksheet 9: Flow-Based Compact Biofiltration with Supplemental Retention Method

Supporting Calculations	
Provide time of concentration assumptions: Time of concentration taken from CivilD calculations, approved hydrologic software.	
Graphical Operations	
	
Provide supporting graphical operations in figure above.

BIO-5/BIO-7: PROPRIETARY BIOTREATMENT

Category: Biotreatment with Partial Infiltration (when accompanied by supplemental retention)

Biotreatment with No Infiltration (when used without supplemental retention)

Proprietary biotreatment BMPs are proprietary devices that are manufactured to treat stormwater. **Acceptance criteria for proprietary biotreatment BMPs are defined in Appendix J**. Proprietary BMPs that do not meet these acceptance criteria are not permitted. In addition, proprietary biotreatment BMPs must meet the definition of biofiltration in order to be used as LID biotreatment BMPs. There are two configurations of proprietary biotreatment, as explained in the following subsections.

BIO-5: Proprietary Biotreatment with Enhanced Retention Configuration

As standalone systems, proprietary biotreatment BMPs typically provide negligible volume reduction. To be used as a "biotreatment BMP with partial infiltration," these BMPs must be accompanied by a retention compartment. This could consist of several options:

- Permeable pavement upstream of the proprietary BMPl
- Shallow infiltration gallery or chambers downstream of the BMP, connected to underdrains.
- Proprietary biotreatment downstream of a cistern for harvest and use.
- Use of adequate hydrologic source controls in the watershed to meet volume reduction targets (see Sizing section of this Fact Sheet).
- Other configurations that are determined to be appropriate to maximize the feasible volume reduction for the DMA.

Guidance for retention compartments is provided in other fact sheets, such as INF-5 (Permeable Pavement) and INF-6 (Underground Infiltration).

BIO-7: Standard Configuration without Supplemental Retention

For conditions that do not require partial infiltration, volume retention is not a performance goal. Acceptable proprietary biotreatment BMPs may be used as standalone systems. Guidance related to complementary retention can be disregarded.

Pollutant Removal Considerations

BMPs that meet the acceptance criteria in **Appendix J** are considered to provide adequate treatment for pollutants of concern. According to these critera, there are different levels of treatment certification needed for different pollutants of concern.

Recommended Design Criteria and Considerations

	Design Criteria	Intent/Rationale
☐	Sediment sources should be controlled prior to operation of the system.	Proprietary systems are susceptible to clogging similar to other BMPs. Systems should not be used in areas that will continue to receive elevated sediment loading following construction, such as from open space area.
☐	When accompanied by infiltration compartments, the ponding should not be higher than the underdrain elevation of the proprietary BMP.	This is intended to ensure that the complementary retention compartment does not reduce the hydraulic capacity of the proprietary biotreatment BMP.
☐	When accompanied by infiltration compartments, these infiltration BMPs must adhere to siting guidance found in the respective fact sheet for the BMP	Specific siting considerations apply to infiltration BMPs.
☐	Proprietary biotreatment systems typically do not require separate pretreatment	These BMPs typically include integrated mechanisms for pretreatment.
☐	Proprietary BMPs must be designed in a manner consistent with manufacturer recommendations and consistent with the design configuration that was tested as part of the BMP certification	Proprietary devices have device-specific design, installation, and maintenance details which must be followed for proper treatment results.
☐	In right of way areas, plant selection should not impair traffic sightlines or vehicle access.	Vegetation must not be prohibitive for typical vehicular movement and parking access needs.
☐	Manufacturer guidance on vegetation selection and establishment should be followed	Manufacturers have experience with plant survival in specific climates for the BMP-specific conditions.

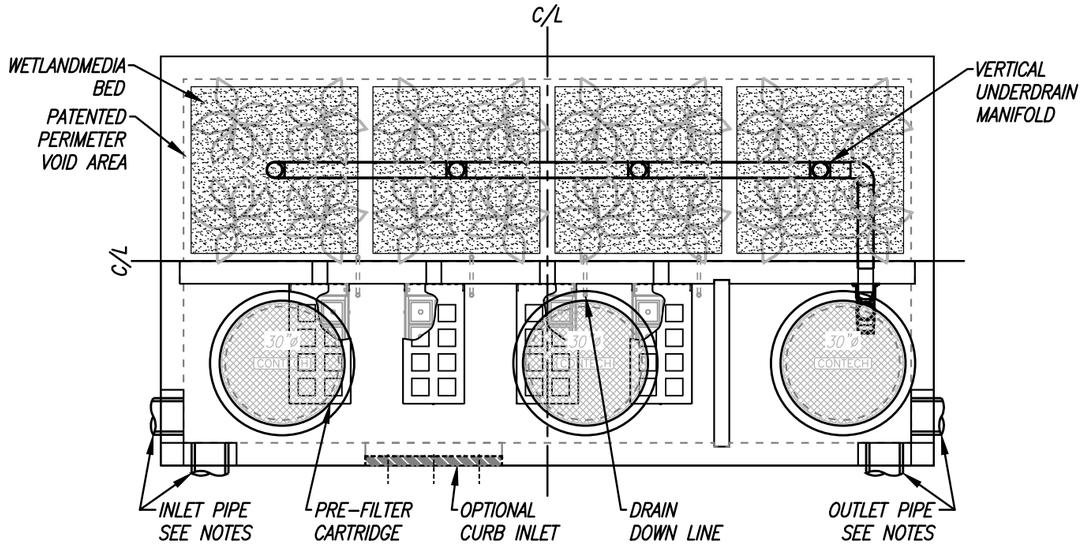
Calculations and Sizing Method

Proprietary Biotreatment BMPs are flow-based BMPs. See **Appendix E** for acceptable sizing methods.

Supplemental retention elements (for BIO-5 configuration) should be sized for one of the following targets, where possible:

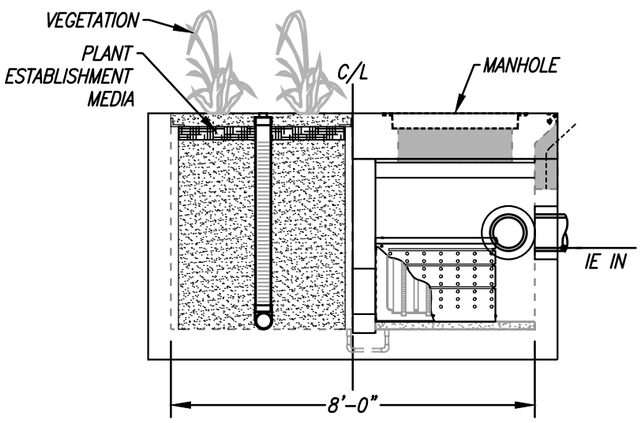
- Approximately 40 percent long term volume reduction.
- Retention storage provided for approximately one-third of the DCV.
- Infiltration footprint (collective of all infiltrating elements of the project design) meeting target defined in **Section E.4.2**.

Construction Guidance



Construction Guidance	Intent/Rationale
☐ Plans should include a construction sequence for the BMP. Revisions proposed by the contractor should be reviewed by the engineer. The construction sequence should address erosion control, utilities, BMP installation, inspections, testing and certifications, vegetation, stabilization, and post-construction monitoring.	Construction sequencing is critical to avoid issues/damage and allow appropriate inspections, testing, and certifications to be performed.
☐ Provide for inspection of buried infrastructure (e.g., underdrain, filter course) before it is buried.	It is impractical to inspect buried elements once they are covered.
☐ Fully stabilize sources of sediment within the tributary area (i.e., no exposed soil) prior to placing the finished BMP into service.	Sediment loading can seriously impair the capacity of the BMP.
☐ Allow plants and mulch to stabilize for as long as practicable (preferably several months) prior to placing the finished BMP into service.	Stabilization of the system allows plants to mature before stressing the system with stormwater loading.

O&M Activities and Frequencies



Activity	Frequency
GENERAL INSPECTIONS	
Remove trash and debris	Four times per year during wet season, including inspection just before the wet season and within 24 hours after at least two storm events ≥ 0.5 inches.
Identify excess erosion or scour	
Identify sediment accumulation that requires maintenance	
Inspect during storm event, when possible, to estimate treatment capacity and determine if premature bypass is occurring	
Evaluate plant health and need for corrective action	
Identify any needed corrective maintenance that will require site-specific planning or design	
OPERATION AND MAINTENANCE	
• O&M of proprietary BMPs must follow established manufacturer guidelines • O&M of accompanying retention BMPs should follow the guidelines established in the associated fact sheet for that BMP.

INSTALLATION NOTES

1. CONTRACTOR TO PROVIDE ALL LABOR, EQUIPMENT, MATERIALS AND INCIDENTALS REQUIRED TO OFFLOAD AND INSTALL THE SYSTEM AND APPURTENANCES IN ACCORDANCE WITH THIS DRAWING AND THE MANUFACTURER'S SPECIFICATIONS, UNLESS OTHERWISE STATED IN MANUFACTURER'S CONTRACT.
2. UNIT MUST BE INSTALLED ON LEVEL BASE. MANUFACTURER RECOMMENDS A MINIMUM 6" LEVEL ROCK BASE UNLESS SPECIFIED BY THE PROJECT ENGINEER. CONTRACTOR IS RESPONSIBLE FOR VERIFYING PROJECT ENGINEER'S RECOMMENDED BASE SPECIFICATIONS.
3. CONTRACTOR TO SUPPLY AND INSTALL ALL EXTERNAL CONNECTING PIPES. ALL PIPES MUST BE FLUSH WITH INSIDE SURFACE OF CONCRETE (PIPES CANNOT INTRUDE BEYOND FLUSH). INVERT OF OUTFLOW PIPE MUST BE FLUSH WITH DISCHARGE CHAMBER FLOOR. ALL PIPES SHALL BE SEALED WATERTIGHT PER MANUFACTURER'S STANDARD CONNECTION DETAIL.
4. CONTRACTOR RESPONSIBLE FOR CONTACTING CONTECH FOR ACTIVATION OF UNIT. MANUFACTURER'S WARRANTY IS VOID WITHOUT PROPER ACTIVATION BY A CONTECH REPRESENTATIVE.
5. VERTICAL HEIGHT VARIES BASED ON SITE SPECIFIC REQUIREMENTS.

GENERAL NOTES:

1. STRUCTURE PROXIMITY LOADING DISCLAIMER:

STORMTRAP MODULES AND FOUNDATION ARE NOT DESIGNED TO ACCEPT ANY ADDITIONAL LOADING FROM ANY NEARBY STRUCTURES NEXT TO OR OVER THE TOP OF STORMTRAP. EXAMPLES OF NEARBY STRUCTURES MAY INCLUDE BUT ARE NOT LIMITED TO BUILDINGS, FOUNDATION ELEMENTS, RETAINING WALLS, LIGHT POLES, BOLLARDS, SIGNPOSTS, FENCES. ADDITIONALLY, STORMTRAP IS NOT RESPONSIBLE FOR INSTALLATION CONFLICTS ARISING FROM ANY OF THESE NEARBY STRUCTURES. IF ADDITIONAL LOADING CONSIDERATIONS ARE REQUIRED FOR STRUCTURAL DESIGN OF STORMTRAP, PLEASE CONTACT STORMTRAP IMMEDIATELY. FOR LIGHT POLES SHOWN OVER THE TOP OF THE SYSTEM, STORMTRAP WILL PROVIDE A 5'-0" LATERAL DISTANCE CAVITY AROUND THE LIGHT POLE TO ACCOMMODATE IT. THE EOR TO TAKE RESPONSIBILITY FOR ENSURING THE LIGHT POLE IS NOT INFLICTING ANY LOADING ON THE STORMTRAP MODULES AND FOUNDATION.

2. TREE LOADING DISCLAIMER:

THE NUMBER OF TREES OR WEIGHT OF TOTAL PLANT MATERIAL PRESENT ON TOP OF A SINGLE STORMTRAP MODULE SHALL NOT EXCEED 16,000 LBS. THE REQUIREMENTS LISTED HERE APPLY AT BOTH THE TIME OF INSTALLATION AND FOR THE LIFE OF THE TREES AND PLANTS IN QUESTION. THE EOR AND LANDSCAPE ARCHITECT ARE RESPONSIBLE FOR ENSURING THAT TREE AND OTHER PLANT ROOTS DO NOT INTERFERE WITH OR COMPROMISE THE FUNCTIONAL AND STRUCTURAL INTEGRITY OF STORMTRAP'S UNDERGROUND MODULES. APPROPRIATE MEASURES SHOULD BE TAKEN TO PREVENT ROOT GROWTH INTO THE STORMTRAP SYSTEM FROM ADJACENT OR OVERHEAD TREES. FURTHERMORE, THE ROOTS OF THE TREES MUST BE CONTAINED TO PREVENT FUTURE DAMAGE TO THE STORMTRAP SYSTEM. STORMTRAP ACCEPTS NO LIABILITY FOR DAMAGES CAUSED BY TREES OR OTHER VEGETATION PLACED AROUND OR ON TOP OF THE SYSTEM.

3. PRE-TREATMENT/SEDIMENT/FILTER CHAMBER DISCLAIMER:

FOR SYSTEMS CONTAINING PRE-TREATMENT, SEDIMENTATION AND/OR FILTER CHAMBERS; IF REQUIRED TO BE SEALED TO PREVENT SAND AND/OR PRE-TREATED WATER FROM MIGRATING INTO ADJOINING MODULES, IT IS THE SOLE RESPONSIBILITY OF THE INSTALLING CONTRACTOR TO ENSURE THAT THOSE MODULES ARE SEALED.

4. OUTLET CONTROL STRUCTURE DISCLAIMER (IF SHOWN ON THESE PLANS):

IF A WATERTIGHT SOLUTION IS REQUIRED FOR AN OUTLET CONTROL STRUCTURE, ALL EXTERIOR COLD JOINTS, INCLUDING JOINT BETWEEN TOP AND BASE MODULES, BETWEEN TOP AND BASE OF ADJOINING SYMONS WALLS, AND JOINTS BETWEEN MODULE AND ADJACENT END PANELS WILL BE THE SOLE RESPONSIBILITY OF THE INSTALLING CONTRACTOR TO PROVIDE AND INSTALL THE WATERTIGHT APPLICATION PER THE EOR'S SPECIFICATION.

STORMTRAP INSTALLATION SPECIFICATION

1. STORMTRAP SHALL BE INSTALLED IN ACCORDANCE WITH ASTM C891 (STANDARD PRACTICE FOR INSTALLATION OF UNDERGROUND PRECAST CONCRETE UTILITY STRUCTURES). THE FOLLOWING ADDITIONS AND/OR EXCEPTIONS ARE PROVIDED FOR EMPHASIS. THE MENTION OF THESE ITEMS DOES NOT PRECLUDE THE INSTALLING CONTRACTOR FROM FOLLOWING ASTM C891 IN ITS ENTIRETY AND IMPLEMENTING ALL APPROPRIATE MEASURES. THE INSTALLING CONTRACTOR OWNS AND IS RESPONSIBLE FOR THE STORMTRAP SYSTEM UPON REMOVAL OF THE MODULES FROM THE DELIVERY TRUCK THROUGH 'FINAL CONSTRUCTION'. FINAL CONSTRUCTION IS ACHIEVED WHEN ALL MODULES ARE SET, FULLY BACKFILLED, AND WHEN FINAL FINISHED GRADES ARE REACHED. THE CONTRACTOR IS RESPONSIBLE FOR ANY COUNTERMEASURES NECESSARY TO RESIST UPLIFT/BUOYANCY BEFORE 'FINAL CONSTRUCTION' IS ACHIEVED.

2. IT IS THE RESPONSIBILITY OF THE INSTALLING CONTRACTOR TO ENSURE THAT PROPER/ADEQUATE EQUIPMENT IS USED TO SET/INSTALL THE MODULES.

3. STORMTRAP MODULES SHALL BE PLACED ON A LEVEL CONCRETE FOUNDATION (SEE SHEET 2.1) WITH A 1'–0" OVERHANG ON ALL SIDES THAT SHALL BE POURED IN PLACE BY INSTALLING CONTRACTOR. A QUALIFIED GEOTECHNICAL ENGINEER WILL BE EMPLOYED, BY OWNER, TO PROVIDE ASSISTANCE IN EVALUATING THE EXISTING SOIL CONDITIONS TO ENSURE THAT THE SOIL BEARING PRESSURE MEETS OR EXCEEDS THE STRUCTURAL DESIGN LOADING CRITERIA AS SPECIFIED ON SHEET 1.1.

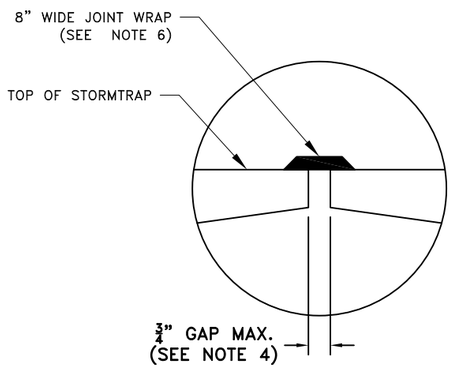
4. THE STORMTRAP MODULES SHALL BE PLACED SUCH THAT THE MAXIMUM SPACE BETWEEN ADJACENT MODULES DOES NOT EXCEED ¾" (SEE DETAIL 2). IF THE SPACE EXCEEDS ¾", THE MODULES SHALL BE RESET WITH APPROPRIATE ADJUSTMENT MADE TO LINE AND GRADE TO BRING THE SPACE INTO SPECIFICATION.

5. THE PERIMETER HORIZONTAL JOINT BETWEEN THE STORMTRAP MODULES AND THE CONCRETE FOUNDATION SHALL BE SEALED TO THE FOUNDATION WITH PRE–FORMED MASTIC JOINT SEALER ACCORDING TO ASTM C891, 8.8 AND 8.12 (SEE DETAIL 1). THE MASTIC JOINT TAPE DOES NOT PROVIDE A WATERTIGHT SEAL.

6. ALL EXTERIOR ROOF AND EXTERIOR VERTICAL WALL JOINTS BETWEEN ADJACENT STORMTRAP MODULES SHALL BE SEALED WITH 8" WIDE PRE–FORMED, COLD–APPLIED, SELF–ADHERING ELASTOMERIC RESIN, BONDED TO A WOVEN , HIGHLY PUNCTURE RESISTANT POLYMER WRAP, CONFORMING TO ASTM C891 AND SHALL BE INTEGRATED WITH PRIMER SEALANT AS APPROVED BY STORMTRAP (SEE DETAILS 2, 3, & 4). THE JOINT WRAP DOES NOT PROVIDE A WATERTIGHT SEAL. THE SOLE PURPOSE OF THE JOINT WRAP IS TO PROVIDE A SILT AND SOIL TIGHT SYSTEM. THE ADHESIVE EXTERIOR JOINT WRAP SHALL BE INSTALLED ACCORDING TO THE FOLLOWING INSTALLATION INSTRUCTIONS:

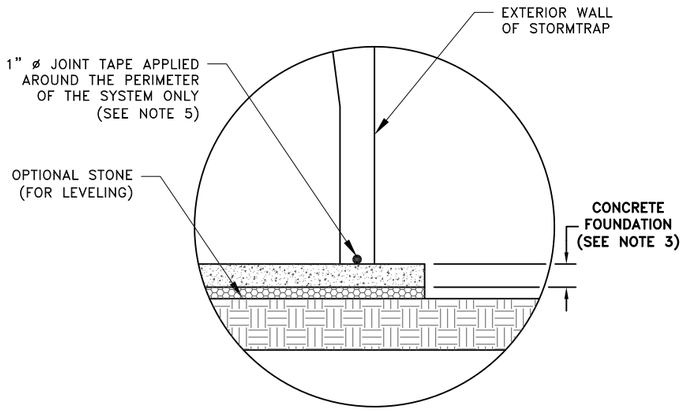
   6.1. USE A BRUSH OR WET CLOTH TO THOROUGHLY CLEAN THE OUTSIDE SURFACE AT THE POINT WHERE JOINT WRAP IS TO BE APPLIED.

   6.2. A RELEASE PAPER PROTECTS THE ADHESIVE SIDE OF THE JOINT WRAP. PLACE THE ADHESIVE TAPE (ADHESIVE SIDE DOWN) AROUND THE STRUCTURE, REMOVING THE RELEASE PAPER AS YOU GO. PRESS THE JOINT WRAP FIRMLY AGAINST THE STORMTRAP MODULE SURFACE WHEN APPLYING.



7. IF THE CONTRACTOR NEEDS TO CANCEL ANY SHIPMENTS, THEY MUST DO SO 48 HOURS PRIOR TO THEIR SCHEDULED ARRIVAL AT THE JOB SITE. IF CANCELED AFTER THAT TIME, PLEASE CONTACT THE PROJECT MANAGER.

8. IF THE STORMTRAP MODULE(S) IS DAMAGED IN ANY WAY PRIOR, DURING, OR AFTER INSTALL, STORMTRAP MUST BE CONTACTED IMMEDIATELY TO ASSESS THE DAMAGE AND DETERMINE WHETHER OR NOT THE MODULE(S) WILL NEED TO BE REPLACED. IF ANY MODULE ARRIVES AT THE JOBSITE DAMAGED DO NOT UNLOAD IT; CONTACT STORMTRAP IMMEDIATELY. ANY DAMAGE NOT REPORTED BEFORE THE TRUCK IS UNLOADED WILL BE THE CONTRACTOR'S RESPONSIBILITY.



9. STORMTRAP MODULES CANNOT BE ALTERED IN ANY WAY AFTER MANUFACTURING WITHOUT WRITTEN CONSENT FROM STORMTRAP.

ZONE CHART		
ZONES	ZONE DESCRIPTIONS	REMARKS
ZONE 2	BACKFILL	UNIFIED SOILS CLASSIFICATION (GW, GP, SW, SP) OR SEE BELOW FOR APPROVED BACKFILL OPTIONS
ZONE 3	FINAL COVER OVERTOP	MATERIALS NOT TO EXCEED 120 PCF

APPROVED ZONE 2 BACKFILL OPTIONS	
OPTION	REMARKS
¾" STONE AGGREGATE	THE STONE AGGREGATE SHALL CONSIST OF CLEAN AND FREE DRAINING ANGULAR MATERIAL. THE SIZE OF THIS MATERIAL SHALL HAVE 100% PASSING THE 1" SIEVE WITH 0% TO 5% PASSING THE #8 SIEVE. THIS MATERIAL SHALL BE SEPARATED FROM NATIVE MATERIAL USING GEOFABRIC AROUND THE PERIMETER OF THE BACKFILL (ASTM SIZE #57) AS DETERMINED BY THE GEOTECHNICAL ENGINEER.
SAND	IMPORTED PURE SAND IS PERMITTED TO BE USED AS BACKFILL IF IT IS CLEAN AND FREE DRAINING. THE SAND USED FOR BACKFILLING SHALL HAVE LESS THAN 40% PASSING #40 SIEVE AND LESS THAN 5% PASSING #200 SIEVE. THIS MATERIAL SHALL BE SEPARATED FROM NATIVE MATERIAL USING GEOFABRIC AROUND THE PERIMETER OF THE SAND BACKFILL.
CRUSHED CONCRETE AGGREGATE	CLEAN, FREE DRAINING CRUSHED CONCRETE AGGREGATE MATERIAL CAN BE USED AS BACKFILL FOR STORMTRAP'S MODULES. THE SIZE OF THIS MATERIAL SHALL HAVE 100% PASSING THE 1" SIEVE WITH 0% TO 5% PASSING THE #8 SIEVE. THIS MATERIAL SHALL BE SEPARATED FROM NATIVE MATERIAL USING GEOFABRIC AROUND THE PERIMETER OF THE BACKFILL.
ROAD PACK	STONE AGGREGATE 100% PASSING THE 1–1/2" SIEVE WITH LESS THAN 12% PASSING THE #200 SIEVE (ASTM SIZE #467). GEOFABRIC AS PER GEOTECHNICAL ENGINEER RECOMMENDATION.

STORMTRAP ZONE INSTALLATION SPECIFICATION/PROCEDURE

1. THE FILL PLACED AROUND THE STORMTRAP MODULES MUST BE DEPOSITED ON BOTH SIDES AT THE SAME TIME AND TO APPROXIMATELY THE SAME ELEVATION. AT NO TIME SHALL THE FILL BEHIND ONE SIDE WALL BE MORE THAN 2'–0" HIGHER THAN THE FILL ON THE OPPOSITE SIDE. BACKFILL SHALL EITHER BE COMPACTED AND/OR VIBRATED TO ENSURE THAT BACKFILL AGGREGATE/STONE MATERIAL IS WELL SEATED AND PROPERLY INTER LOCKED. CARE SHALL BE TAKEN TO PREVENT ANY WEDGING ACTION AGAINST THE STRUCTURE, AND ALL SLOPES WITHIN THE AREA TO BE BACKFILLED MUST BE STEPPED OR SERRATED TO PREVENT WEDGING ACTION. CARE SHALL ALSO BE TAKEN AS NOT TO DISRUPT THE JOINT WRAP FROM THE JOINT DURING THE BACKFILL PROCESS. BACKFILL MUST BE FREE–DRAINING MATERIAL. SEE ZONE 2 BACKFILL CHART ON THIS PAGE FOR APPROVED BACKFILL OPTIONS. IF NATIVE EARTH IS SUSCEPTIBLE TO MIGRATION, CONFIRM WITH GEOTECHNICAL ENGINEER AND PROVIDE PROTECTION AS REQUIRED (PROVIDED BY OTHERS). ALL MODULES MUST BE SET AND ALL SIDES MUST BE FULLY BACKFILLED BEFORE TRAVEL OVERTOP THE SYSTEM IS PERMITTED. SEE NOTE 2 FOR EXCEPTIONS AND LIMITATIONS.
2. THE FILL PLACED OVERTOP THE SYSTEM SHALL BE PLACED IN MINIMUM 6" LIFTS. AT NO TIME SHALL MACHINERY OR VEHICLES GREATER THAN THE DESIGN LIVE LOAD LISTED ON SHEET 1.0 TRAVEL OVERTOP THE SYSTEM. IF TRAVEL OVER THE SYSTEM OCCURS BEFORE THE MINIMUM DESIGN COVER IS ACHIEVED, IT MAY BE NECESSARY TO REDUCE THE ULTIMATE LOAD/BURDEN OF THE OPERATING MACHINERY SO AS TO NOT EXCEED THE DESIGN CAPACITY OF THE SYSTEM. VEHICLES AND MACHINERY USED TO PLACE FILL MATERIAL ON TOP OF THE SYSTEM SHALL TRAVEL PARALLEL TO THE LONGITUDINAL AXIS OF THE STORMTRAP MODULES WHENEVER POSSIBLE.
3. THE VIBRATORY FUNCTION OF ANY ROLLER, COMPACTOR, VEHICLE, ETC. SHALL NOT BE USED OVERTOP THE SYSTEM WITHOUT PRIOR APPROVAL FROM STORMTRAP. IN SOME CASES, HAND COMPACTION MAY BE NECESSARY TO ENSURE THAT THE ALLOWABLE DESIGN LOADING IS NOT EXCEEDED.

SINGLETRAP BACKFILL SPECIFICATION

SHEET NUMBER:

4.0

ACCESS OPENING SPECIFICATION

1. A TYPICAL ACCESS OPENING FOR THE STORMTRAP SYSTEM ARE 2'–0" IN DIAMETER. ACCESS OPENINGS LARGER THAN 4'–0" IN DIAMETER NEED TO BE APPROVED BY STORMTRAP. ALL OPENINGS MUST RETAIN AT LEAST 2'–0" OF CLEARANCE FROM THE END OF THE STORMTRAP MODULE UNLESS NOTED OTHERWISE. ALL ACCESS OPENINGS TO BE LOCATED ON INSIDE LEG UNLESS OTHERWISE SPECIFIED. SEE SHEET 2.0 FOR SIZES AND LOCATIONS.

2. UNLESS OTHERWISE SPECIFIED, PLASTIC COATED STEEL STEPS PRODUCED BY M.A. INDUSTRIES PART #PS3–PFC OR APPROVED EQUAL (SEE STEP DETAIL) ARE PROVIDED INSIDE ANY MODULE WHERE DEEMED NECESSARY. THE HIGHEST STEP IN THE MODULE IS TO BE PLACED A DISTANCE OF 1'–0" FROM THE INSIDE EDGE OF THE STORMTRAP MODULES. ALL ENSUING STEPS SHALL BE PLACED AT A DISTANCE BETWEEN 10" MIN AND 14" MAX BETWEEN THEM. STEPS MAY BE MOVED OR ALTERED TO AVOID OPENINGS OR OTHER IRREGULARITIES IN THE MODULE.

3. STORMTRAP LIFTING INSERTS MAY BE RELOCATED TO AVOID INTERFERENCE WITH ACCESS OPENINGS OR THE CENTER OF GRAVITY OF THE MODULE AS NEEDED.

4. STORMTRAP ACCESS OPENINGS MAY BE RELOCATED TO AVOID INTERFERENCE WITH INLET AND/OR OUTLET PIPE OPENINGS SO PLACEMENT OF STEPS IS ATTAINABLE.

5. ACCESS OPENINGS SHOULD BE LOCATED IN ORDER TO MEET THE APPROPRIATE MUNICIPAL REQUIREMENTS. STORMTRAP RECOMMENDS AT LEAST TWO ACCESS OPENINGS PER SYSTEM FOR ACCESS AND INSPECTION.

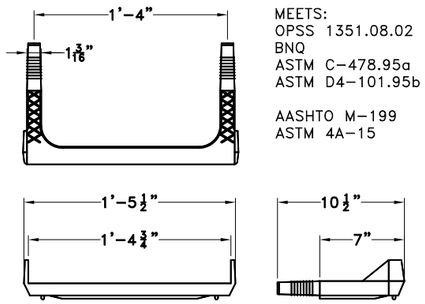
6. USE PRECAST ADJUSTING RINGS AS NEEDED TO MEET GRADE. STORMTRAP RECOMMENDS FOR COVER OVER 2' TO USE PRECAST BARREL OR CONE SECTIONS. (PROVIDED BY OTHERS)

PIPE OPENING SPECIFICATION

1. MINIMUM EDGE DISTANCE FOR AN OPENING ON THE OUTSIDE WALL SHALL BE NO LESS THAN 1'–0".

2. CONNECTING PIPES MAY BE INSTALLED WITH A 1'–0" CONCRETE COLLAR AND AN AGGREGATE CRADLE (AS REQUIRED) FOR AT LEAST ONE PIPE LENGTH (SEE PIPE CONNECTION DETAIL). A STRUCTURAL GRADE CONCRETE OR HIGH STRENGTH, NON–SHRINK GROUT WITH A MINIMUM 28 DAY COMPRESSIVE STRENGTH OF 3000 PSI MAY BE USED.

3. THE ANNULAR SPACE BETWEEN THE PIPE AND THE HOLE SHALL BE FILLED WITH HIGH STRENGTH NON–SHRINK GROUT.



PIPE INSTALLATION INSTRUCTIONS

1. CLEAN AND LIGHTLY LUBRICATE ALL OF THE PIPE TO BE INSERTED INTO STORMTRAP.

2. IF PIPE IS CUT, CARE SHOULD BE TAKEN TO ALLOW NO SHARP EDGES. BEVEL AND LUBRICATE LEAD END OF PIPE.

3. ALIGN CENTER OF PIPE TO CORRECT ELEVATION AND INSERT INTO OPENING.

NOTE: ALL ANCILLARY PRODUCTS/SPECIFICATIONS RECOMMENDED AND SHOWN ON THIS SHEET INCLUDING BUT NOT LIMITED TO CONCRETE COLLARS, AGGREGATE CRADLES, GRADE RINGS, RISER SECTIONS, ETC., ARE RECOMMENDATIONS ONLY AND SUBJECT TO CHANGE PER THE INSTALLING CONTRACTOR AND/OR PER LOCAL MUNICIPAL CODE/REQUIREMENTS.

SA GEOTECHNICAL
OPTIMIZED SOIL ENGINEERING

May 31, 2024

Project No. 24059-01

To: Meritage Homes
5 Peters Canyon Road, Suite 310
Irvine, California 92606

Attention: Ms. Emma Hill

Subject: Geotechnical Subsurface Exploration, Due Diligence Study, and Preliminary Geotechnical Recommendations, Proposed Residential Development, 95 Argonaut, City of Aliso Viejo, California

At your request, SA Geotechnical, Inc. (SA GEO) has conducted subsurface exploration and geotechnical due diligence study for the proposed residential development located at 95 Argonaut in the City of Aliso Viejo, California (Figure 1). The purpose of this study was to evaluate the geotechnical site conditions in light of the proposed grading and improvements in order to provide a geotechnical summary of conditions and preliminary geotechnical recommendations for project design, grading, and construction. Our evaluation included review of collected geologic and geotechnical engineering reports and maps pertinent to the subject site; a site-specific subsurface exploration; laboratory testing; geotechnical analysis; and preparation of this report.

The subject site is currently developed with a 2-story office building, retaining wall along the westerly property line, at-grade asphalt concrete paved parking lot and associated drive aisles, and hardscape/landscape improvements, all of which will be demolished as part of the proposed project. An approximately 20-foot-high descending slope is present along the easterly property boundary. Based on our review and field exploration, the primary geotechnical constraints include the presence of highly expansive silty/clayey soil that is diatomaceous and seismic shaking during a strong seismic event. The subsurface artificial fill soils at the site are primarily highly plastic silt/clay with minor interlayered clayey/silty sands. The artificial fill soils are generally diatomaceous and derived from Monterey Formation bedrock. Bedrock of the Monterey and Niguel Formations underlie the site at depth. Groundwater was encountered in one boring (H-4) during drilling, at a depth of 55 feet below ground surface. Onsite stormwater infiltration is not feasible considering that the site is underlain by relatively thick artificial fill, which are predominantly silty/clayey, overlying bedrock.

This report presents our findings, conclusions, and preliminary design recommendations for the subject residential development. Based on our review, the proposed grading and development is considered geotechnically feasible provided the recommendations in this report are implemented during design, grading, and construction. Additional evaluation and analysis may need to be performed once the project plans for grading and foundations are developed.

References pertinent to the site are included in Appendix A. Boring and laboratory test data are included in Appendix B and C, respectively. Seismic design parameters are presented in Appendix D. Slope stability analysis is presented in Appendix E. General earthwork and grading specifications are presented in Appendix F.

If you have any questions regarding this report, please contact our office. We appreciate the opportunity to provide our services.

Respectfully submitted,

EXECUTIVE SUMMARY

The subject site is underlain by relatively thick artificial fill material as a result of mass grading and development that occurred in the 1980s. Approximately 25 to 75 feet of fill was encountered in all borings which generally consisted of olive gray, olive brown, bluish gray, brown, and black clayey silt, clay, silty/sandy clay, clayey sand, and silty sand that was moist to wet and medium stiff to hard/medium dense to dense. The fine-grained fill materials are derived from the Monterey Formation and were found to be diatomaceous. Bedrock of the Monterey and Niguel Formations were encountered during drilling, underlying the artificial fill at depth.

The primary geotechnical constraints at the site include the following:

- Presence of highly expansive silty/clayey soils that are diatomaceous; and
- The potential for seismic shaking during an earthquake event.

Remedial grading for the site should consist of the removal and re-compaction of all weathered/disturbed fill materials. Remedial removals are anticipated to be on the order of 3 to 4 feet below existing grades within the proposed building pads. Remedial grading within the proposed drive areas may be limited to removal and re-compaction of the soils in the upper 1 to 2 feet. Deeper removals may be required where existing trees, utility lines, structures, and foundations are to be abandoned/removed. Considering that the onsite soils predominately consist of silty/clayey soils that are diatomaceous, achieving adequate compaction at acceptable moisture contents during fill placement may require additional mixing and compaction effort.

Groundwater was encountered in one boring (H-4) during our exploration, at a depth of 55 feet bgs (within Niguel Formation). Historic high groundwater is mapped 20 feet below original grades; however, this does not account for the mass grading and fill placement that occurred onsite. In general, we anticipate groundwater to remain at least 20 feet below existing grades upon the completion of grading. However, seepage/groundwater may be present at shallower depth locally and can fluctuate on an annual and seasonal basis.

Considering the relatively minor grading anticipated to achieve design grades, the laboratory test data, building foundations and slabs should be designed to tolerate a total settlement of 2 inches and a differential settlement of 1-inch over a span of 40 feet. Onsite soils are anticipated to have "High" expansion potential at the completion of grading and are considered corrosive to concrete ("S2").

Based on our findings, we conclude that the proposed residential development is feasible from a geotechnical viewpoint, provided it is designed and constructed in accordance with the recommendations presented in this report and the future design/plan review report(s). The site is not considered suitable for infiltration of storm water.

1.0 INTRODUCTION

1.1 Introduction and Scope of Services

At your request, SA Geotechnical, Inc. (SA GEO) has conducted subsurface exploration and geotechnical due diligence study for the proposed residential development located at 95 Argonaut in the City of Aliso Viejo, California (Figure 1). The purpose of our study was to assess the onsite geologic and geotechnical conditions and provide preliminary recommendations for design, grading, and construction of the proposed residential development. A Topographic Survey by X Engineering & Consulting, received on May 15, 2024, has been utilized as the base for our Geotechnical Map (Plate 1).

Our scope of services for this due diligence study included the following tasks:

- Review of available published geologic and geotechnical maps, reports, and data for the subject site and surrounding area, including an archive search of City of Aliso Viejo records. A list of references is included in Appendix A.
- Historic aerial photograph review, dating back to 1931.
- Notification and coordination with DigAlert to identify and clear boring locations of underground utilities.
- Subsurface exploration consisting of excavation, sampling and logging of four hollow-stem auger borings (H-1 through H-4) to depths ranging from 41.5 to 81.5 feet below ground surface (bgs). Boring logs are included in Appendix B.
- Laboratory testing of selected samples to determine engineering properties of onsite soils, including in-situ moisture and density, grain size distribution, Atterberg limits, maximum density and optimum moisture content, consolidation/collapse, shear strength, expansion potential, and soluble sulfate content. Laboratory test results are included in Appendix C.
- Geotechnical evaluation and analysis of the compiled data regarding the proposed grading and development.
- Evaluation of faulting, seismicity, and seismic and static settlement in accordance with the 2022 California Building Code (CBC).
- Preparation of this report including our findings, conclusions, preliminary recommendations, and accompanying illustrations.

SA GEO's expertise and scope of services do not include assessment of potential subsurface environmental contaminants or environmental health hazards.

1.2 Site Condition and History

The subject site is located at 95 Argonaut, Aliso Viejo, California (see Figure 1), and is legally described as Parcel 1 of Parcel Map No. 85-158, Assessor's Parcel Number (APN) 141-521-48. The approximately 2.85-acre site is bound by Glenwood Lane to the north, Argonaut Street to the west and south, a Moulton Niguel Water District reservoir/tank to the east, and other commercial properties to the southeast. The site is currently developed with an approximately 24,879 square-foot two-story commercial building with at-grade asphalt-paved parking lot, drive aisles, and

associated landscaping/hardscaping. The site is primarily flat, with elevations ranging from 440 to 448 feet above mean sea level. A retaining wall is present along the western property line, approximately 3 to 6 feet in height, with an ascending 3- to 4-foot-high 2H:1V slope above. There is an approximately 20-foot-high descending 2H:1V slope along the easterly property line extending offsite to the adjacent water reservoir/tank.

Based on our review of available historic aerial photographs dating back to 1931, the earliest land use at the subject site and surrounding areas were for agricultural purposes (ranching). Development of the surrounding area for commercial use began in the early 1980s, although the subject site remained an undeveloped natural drainage/swale. The site was mass graded between 1985 and 1987, concurrent with the construction of the water tank to the east. This mass grading appears to have occurred concurrent with the adjacent geotechnically-observed mass grading (Jack G. Raub Company, 1987), although no documents pertaining to the grading of the subject site were recovered during our archive search of City/County records. The geotechnical maps/report associated with the adjacent graded commercial lots overlap with the western portion of the subject site and detail a historical (pre-grading) topography ranging from 390 to 412 feet above sea level (Jack G. Raub Company, 1987); however, topography for the eastern and southern portion of the subject site were not included. This suggests a minimum of 30 to 60 feet of design fill associated with mass grading, although this does not account for any remedial grading/removal of alluvium during grading. The streets in the industrial complex were constructed by 1988, along with some of the other commercial buildings in the area. The existing two-story commercial building at the subject site was constructed by 1990. No significant changes were observed on the subject site since initial development and construction of the existing commercial building.

1.3 Proposed Grading and Improvements

Prior to any site development or grading, the existing structures, pavements, utilities, and hardscape will be demolished. Considering the site is relatively flat, we anticipate design grading to consist of cuts and fills on the order of 1 to 3 feet to reach pad grades and provide proper site drainage. Locally, deeper cuts/fills may be required were retaining structures are proposed.

The proposed project is anticipated to include grading/construction for residential development. Based on our review of the Site Plan provided by you, dated March 2024, we understand that the proposed project will consist of 8 multifamily buildings totaling 62 residential units. We anticipate the proposed structures will be 3- to 4-story and consist of wood-framed construction. The development will also include infrastructure improvements, parking/drive aisles, stormwater filtration devices and landscape/hardscape improvements.

1.4 Subsurface Exploration

Our field exploration was performed on April 22, 2024, and included excavation of four hollow stem auger borings (H-1 through H-4) to depths ranging from 41.5 to 81.5 feet bgs.

The borings were geologically logged, and samples were obtained at selected intervals. After completion of drilling, the excavations were backfilled with soil cuttings and tamped. Pavement at the boring locations was repaired with cold patch asphalt. The approximate boring locations are shown on Plate 1 (Geotechnical Map). Boring logs are included in Appendix B.

Soil sampling was performed using a Modified California ring sampler. Relatively undisturbed ring samples were obtained from the borings at various depths with a 2.5-inch inside-diameter, split-barrel sampler. The sampler was driven with a 140-pound, automatic trip hammer, free falling 30 inches. The sampling was used to assess the soil beneath the site as well as to obtain a measure of resistance of the soil to penetration (recorded as blows-per-foot on the geotechnical boring logs). Representative bulk samples of onsite soils were also collected from soil cuttings and used for additional soil identification purposes and laboratory testing.

1.5 Laboratory Testing

Representative samples of onsite soils collected during our field exploration were tested to characterize the engineering properties. Laboratory tests performed on selected relatively undisturbed and bulk soil samples included:

- Moisture content and dry density;
- Grain size analysis;
- Atterberg limits;
- Direct shear;
- Consolidation;
- Maximum density and optimum moisture content;
- Expansion potential; and
- Soluble sulfate.

Laboratory tests were conducted in general conformance with applicable ASTM International standards. The laboratory test results are provided in Appendix C.

2.0 GEOTECHNICAL FINDINGS

2.1 Geologic Setting and Earth Units

The subject site is located in the eastern foothills of the San Joaquin Hills, within the Peninsular Ranges geomorphic province of Southern California. The site is mapped by the U.S. Geological Survey (USGS, 2006) as underlain by sedimentary bedrock of the Monterey and Niguel Formations that is successively overlain by unconsolidated alluvium. Based on our subsurface exploration and understanding of the site history, the subject site was mass graded in the 1980's resulting in thick artificial fill materials placed over bedrock. No alluvium was encountered in any of our borings and is assumed to have been removed during mass grading. The earth unit distribution and our interpretation of the subsurface conditions are shown on the Geotechnical Map (Plate 1) and Geotechnical Cross-Sections A-A' and B-B' (Plates 2 and 3).

Our subsurface exploration encountered compacted **Artificial Fill (Af)** underlying the site as a result of original mass grading. Approximately 25 to 75 feet of artificial fill was encountered in all borings which generally consisted of olive gray, olive brown, bluish gray, brown, and black clayey silt, clay, silty/sandy clay, clayey sand, and silty sand that was moist to wet and medium stiff to hard. The fine-grained fill materials appear to be derived from the Monterey Formation and were found to be diatomaceous.

We encountered sedimentary bedrock of the **Monterey Formation (Tm)** and **Niguel Formation (Tn)** underlying the fill materials in all borings. Based on our review of the regional geologic mapping, the earth units are in fault contact below the site (see Figure 2). The fault is inactive/pre-Quaternary. The **Monterey Formation** bedrock generally consisted of olive gray, olive brown, brown, pale yellow, and white siltstone that was very moist to wet, very stiff to hard, and highly diatomaceous. Bedding was observed to be massive to well bedded with thin to laminated bedding.

The **Niguel Formation** was encountered in one boring (H-4) and the bedrock generally consisted of yellowish brown to yellowish gray sandstone that was saturated and very dense. The sandstone was observed to be massive, weakly indurated, and slightly friable.

2.2 Geotechnical Conditions

Based on our geotechnical exploration and laboratory testing, the site geotechnical conditions are generally as follows:

Soil Moisture Content and Dry Density: Onsite artificial fill materials had in-situ moisture contents and dry densities ranging from 10.9 to 84.2 percent and 50.6 to 117.9 pounds per cubic foot (pcf), respectively. Bedrock of the Monterey Formation had in-situ moisture contents ranging from 26.7 to 86.7 percent and dry densities ranging from 51.1 to 96.9 pcf. Please note that the high moisture contents and low densities in the artificial fill and Monterey Formation are typical of diatomaceous materials. Niguel Formation bedrock had in-situ moisture contents ranging from 15.4 to 23.8 percent and dry densities ranging from 96.6 to 115.2 pcf.

Blow counts (blows-per-foot of penetration) in the artificial fill generally ranged from 11 to 66 blows per foot. Blow counts in bedrock ranged from 22 blows per foot to 50 blows for 3.5 inches.

Soil Properties: Grain-size distribution tests were conducted on three bulk samples collected from the uppermost 5 feet. The samples were classified in accordance with the Unified Soil Classification System (USCS) as highly plastic silt (MH) with fines contents (passing No. 200 sieve) ranging from 64 to 73 percent.

Soil plasticity testing was performed on three bulk samples collected from the uppermost 5 feet. The samples were classified as highly plastic silt (MH) with Plasticity Indices ranging from 31 to 37 and Liquid Limits ranging from 70 to 83 percent.

Maximum dry density testing of one near surface sample (collected from the uppermost 5 feet) indicates that the silty soil (MH) has a maximum dry density of 94.1 pcf at optimum moisture content of 20.5 percent.

Shear Strength: Two direct shear tests (relatively undisturbed samples) were performed on samples collected at depths of 2.5 and 5 feet, representative of existing fill materials. The undisturbed direct shear test results indicate that the samples had ultimate internal friction angles of 24 and 26 degrees at cohesions of 400 and 450 pounds per square foot (psf), respectively. The peak internal friction angles were 28 and 29 degrees with cohesions of 450 and 775 psf, respectively.

Consolidation: Tests were performed on four samples collected at depths ranging from 2.5 to 15 feet, representative of existing fil materials. The testing showed that the diatomaceous fill materials are moderately compressible. However, the pre-consolidation pressures are relatively high (higher than 5 ksf). The samples generally had negligible collapse and swell upon the addition of water at a load of 3.2 ksf.

Expansion Potential: Expansion index testing was performed on two samples collected in the upper 5 feet. The results indicate a "High" expansion potential (EI = 91 and 104).

Soluble Sulfate: Soluble sulfate testing was performed on two bulk samples collected from the uppermost 5 feet. The results indicate negligible soluble sulfate content; however, per our experience with the Monterey Formation and review of the laboratory testing from the adjacent development (Jack G. Raub Company, 1987), we anticipate the soluble sulfate content of the onsite soils to be classified as "S2" per Table 19.3.1.1 of ACI-318-14.

2.3 Groundwater

Groundwater was encountered during our subsurface exploration in one boring (H-4) at a depth of 55 feet below ground surface (bgs) within the Niguel Formation. Groundwater was not encountered in boring drilled within the Monterey Formation to a depth of 81.5 feet bgs. The presence of the fault contact between Monterey and Niguel formations may act as a barrier for groundwater migration.

Historic high groundwater mapping indicates high groundwater is greater than 20 feet bgs (CDMG, 2001a). Please note that this is below original grades prior to mass grading and significantly raising grade across the site. Groundwater is anticipated to fluctuate both seasonally and annually, but it is expected to remain deep below the site.

2.4 Regional Faulting and Seismicity

Regional Faults: The site is not located within a fault-rupture hazard zone as defined by the Alquist-Priolo Special Studies Zones Act (CGS, 2018). Also, based on mapping by the State (Jennings and Bryant, 2010), there are no active faults mapped at the site. As discussed previously, the Monterey and Niguel Formations are in fault contact deep below the site; however, the fault is considered inactive (Pre-Quaternary). Regional Faults are presented on Figure 3.

Seismicity: Properties in southern California are subject to seismic hazards of varying degrees depending upon the proximity, degree of activity, and capability of nearby faults. These hazards can be primary (i.e., directly related to the energy release of an earthquake) or secondary (i.e., related to the effect of earthquake energy on the physical world). Since there are no active faults at the site, the potential for primary ground rupture is considered very low. The primary seismic hazard for this site is ground shaking during a future earthquake.

Using the USGS deaggregation computer program (USGS, 2024) and the site coordinates of 33.5946 north latitude and –117.7243 west longitude, the closest major active faults include the Newport-Inglewood and San Joaquin Hills Faults. The maximum moment magnitude for the controlling fault is 7.1 M_W, which would be generated from the San Joaquin Hills Fault; however, numerous other regionally active faults could also produce ground shaking at the site during an earthquake.

The site is not located within a mapped potential liquefaction hazard zone, as defined by the State's Seismic Hazard Mapping (CDMG, 2001b). Other secondary seismic hazards, such as tsunami and seiche are considered nil due to site elevation and distance from the ocean or other confined body of water (CGS, 2021).

2.5 Slope Stability

The site geologic/geotechnical conditions are generally favorable for overall stability of the existing slope along the eastern perimeter. The existing fill slope is approximately 20 feet in total height at an inclination of 2H:1V (horizontal:vertical). We prepared cross-section B-B' (Plate 3) depicting the existing descending slope at the site. Slope stability analysis was performed for a 2H:1V slope with a maximum height of 25 feet, using artificial fill soil strength parameters that were developed during this study and based on the direct shear test results. For our analysis, we used an internal friction angle of 24 degrees and a cohesion of 400 psf. For pseudo-static analysis, we applied a seismic horizontal coefficient (k_h) of 0.29 in accordance with Special Publication 117A, Guidelines for Evaluating and Mitigating Seismic Hazards in California (CGS, 2008).

The results of the slope stability analysis are presented in Appendix E. The existing fill slope at the site was found to be grossly stable with a factor of safety of well over 1.5 under static conditions and a factor of safety of over 1.1 for pseudo-static conditions.

2.6 Settlement and Foundation Considerations

In general, the anticipated settlements depend upon the building loads, type of foundations, and the geotechnical properties of the supporting subgrade. Considering the subsurface soil conditions and laboratory test data, and relatively lightly loaded residential structures, we estimate the total static settlement to be on the order of 2 inches and the differential static settlement to be on the order of 1-inch over a 40-foot span. This assumes remedial grading measures recommended in Section 3.2 of this report are implemented during site grading.

2.7 Stormwater Infiltration Feasibility

The site is underlain by thick (25 to 75 feet) silty/clayey artificial fill materials overlying bedrock. In accordance with County of Orange WQMP guidelines, stormwater infiltration should not be performed in compacted artificial fill and bedrock (OCPW, 2013). Furthermore, the fine-grained soils will not be conducive to infiltration. Also, considering the presence of slopes along the property boundaries and deep canyon fill, infiltration of stormwater can result in seepage or springs in locations where previously none existed, potentially impacting offsite properties and slopes. Stormwater infiltration is not considered feasible from a geotechnical viewpoint.

2.8 Shrinkage and Bulking

The shrinkage and bulking (reduction or increase in volume of excavated materials on recompaction as fill) varies by soil type and location. The volume change primarily depends on in-situ density and the maximum dry density of the soil type. Considering the site is underlain by compacted fill materials, we anticipated that shrinkage of site soils will be relatively low and less than 5 percent. Ground subsidence at the site is estimated to be on the order of 0.1 foot. These values exclude losses due to removal of pavement, vegetation and debris and are dependent on the accuracy of the site topographic survey and type of equipment and compaction method used by the contractor.

2.9 Existing Utilities and Pavement Section

Existing onsite utilities consisting of sewer, water, and gas/electric lines are present onsite supporting the existing office building and associated improvements. We anticipate that the existing utilities will be demolished as part of the proposed improvements and that new utilities and service connections will be established.

The existing pavement section was measured in Borings H-1 through H-4 excavated during this study. The pavement section consisted of 4 inches of asphalt concrete (AC) over 6 to 8 inches of aggregate base (AB).

3.0 CONCLUSION AND PRELIMINARY RECOMMENDATIONS

3.1 General Conclusion and Recommendation

Based on our review, construction of the proposed residential development, as described herein, is considered geotechnically feasible provided the preliminary recommendations in this report are implemented during design, grading, and construction. Grading, foundation, structural and wall plans for the project should be reviewed by the geotechnical consultant during the design phase. Updated recommendations should be provided once the project plans are finalized and as needed.

The recommendations in this report should be considered minimum and may be superseded by more restrictive requirements of others. In addition to the following recommendations, General Earthwork and Grading Specifications are provided in Appendix F.

3.2 Site Preparation and Earthwork

Site preparation and grading should be performed in accordance with the recommendations herein and the requirements of the City of Aliso Viejo/County of Orange.

3.2.1 Site Demolition and Clearing

Prior to remedial grading, the existing structures, foundations, hardscape/landscape, and utilities to be abandoned should be demolished and removed. Deleterious materials and debris should be cleared from the site and disposed of offsite. Concrete material may be mixed with onsite soils and placed as compacted fill provided it is broken into pieces that are smaller than 6 inches in the largest diameter. Asphalt concrete may also be used in compacted fill materials; however, it should not be placed under the residential pads. Placement of concrete and asphalt as compacted fill should be approved by the project environmental consultant. Excavations for the removal of existing foundations, utilities, and vegetation, including onsite trees, should be observed by the geotechnical consultant. Large roots, highly organic soils, and existing utilities should be removed and should not be incorporated into new fills.

Soil that is disturbed as part of excavations or removal of trees or underground utilities should be evaluated by the geotechnical consultant. Excavations that require backfill should be properly documented and compacted under the observation and testing of the geotechnical consultant in accordance with the recommendations provided in Section 3.2.4.

3.2.2 Protection of Existing Improvements and Utilities

Existing improvements, and utilities on or adjacent to the site that are to be protected in place should be located and visually marked prior to grading operations. Excavations adjacent to improvements to be protected in-place or any utility easement should be performed with care, so as not to undermine existing foundations or destabilize the adjacent ground.

Stockpiling of soils more than 5 feet in height at or near existing structures and over utility lines should not be allowed. If deeper removals are required, shoring or other special measures (i.e., setback or laybacks) to provide safety and mitigate the potential for lateral/vertical movements may be required.

3.2.3 Remedial Grading Measures

Remedial grading at the site should consist of removal of weathered/unsuitable fill materials. In general, we recommend that remedial grading for the proposed building pads consist of removal and recompaction of soils in the upper 3 to 4 feet (from existing grade) to remove any unsuitable/disturbed artificial fill material. The removals for building pads should extend a minimum of 4 feet laterally, beyond the building footprint. Removals within the proposed drive areas may be limited to removal and re-compaction of the upper 1 to 2 feet, below existing grades. Where deeper unsuitable material is encountered, the removals should be extended to the bottom of unsuitable materials to competent, unweathered/undisturbed artificial fill.

The geotechnical consultant should review and approve the removal bottoms prior to fill placement and should provide additional specific recommendations based on actual conditions, if necessary.

Excavations deeper than 4 feet will need to be laid back at a minimum inclination of 1:1 or provided with shoring. Shallow, unconfined excavations (4 feet or less) may consist of near-vertical excavation, locally, and upon review by the geotechnical consultant. Trench excavations should be performed in accordance with Cal/OSHA requirements for Soil Type "B". The contractor's qualified person should verify compliance with Cal/OSHA requirements. Excavations near existing structures (within a 1:1 projection) should be provided with shoring that is designed to support the surcharge load of the existing structure. Otherwise, excavations may need to be performed in sections (A/B/C slot cuts). Slot cuts should not exceed more than 20 feet in length. The conditions should be reviewed in the field by the project geotechnical consultant. Additional recommendations should be provided based on the actual conditions encountered during excavation and grading, as needed.

3.2.4 Fill Placement

Upon the completion of remedial grading measures, the approved removal bottoms should be scarified a minimum of 6 inches. The removal bottoms and fill materials should be compacted to at least 90 percent of the maximum dry density, as determined by ASTM Test Method D1557. Fill materials should be placed in loose lifts no thicker than 8 inches.

Fill materials should be relatively free of deleterious material. The existing fill materials are considered suitable for re-use as compacted fill provided any deleterious material is removed. Considering that the onsite soils predominately consist of silty/clayey soils that are diatomaceous, achieving adequate compaction at acceptable moisture contents during fill placement may require additional effort. The moisture content of the fill materials should be above the optimum moisture content but within the compactable levels.

Concrete material may be mixed with onsite soils and placed as compacted fill if it is broken into pieces that are smaller than 6 inches in the largest diameter. Asphalt concrete may also be used in compacted fill materials; however, it should not be placed under the residential pads. Placement of concrete and asphalt as compacted fill should be approved by the project environmental consultant.

3.2.5 Import

The geotechnical consultant should evaluate and accept any import soils prior to transportation to the subject site. We recommend that import soils have similar or better engineering properties to onsite soils. At minimum, the import materials should have an Expansion Index of less than 90 and a Plasticity Index of less than 25.

3.3 Settlement Potential

The amount of settlement will depend upon the type of foundation(s) selected and future loading by additional fill and structures. Based on our review of the subsurface data, considering the remedial grading recommendations provided in this report are implemented during grading, and structural loads typically associated with the anticipated 3- to 4-story residential units, we estimate that total and differential post-construction settlement will be on the order of 2 inches and 1-inch over a span of 40 feet, respectively.

SA GEO should be provided with the foundation plans and structural loads, once available, in order to further evaluate the potential for post-construction settlement of the proposed buildings and associated improvements. The parameters provided herein will then be confirmed/updated based on the planned foundations and loads and additional testing and/or analysis.

3.4 Foundation Design

The slab and foundations should be designed by the project structural engineer based on the proposed structure type and the anticipated loading conditions. The foundation soils are anticipated to have expansive soil conditions ("High" expansion potential) and will be subject to climatic and landscape moisture fluctuations. Post-tensioned slab should be anticipated for the proposed residential buildings. The following foundation recommendations are provided with the assumption that the recommendations included in Section 3.2 of this report are implemented during site grading. Caisson design parameters are provided in Section 3.5 of this report.

The recommended net allowable bearing capacity for continuous and isolated footings may be calculated based on the following equation:

$q_{all} = 500\ D + 150\ B + 1{,}500$ (but not to exceed 3,500 psf, see below for post-tensioned/mat slabs)

where:
D = embedment depth of footing, in feet
B = width of footing, in feet

Also, the following parameters may be used for design of foundation and slabs:

- Soil unit weight = 110 pcf
- Soil internal friction angle = 25 degrees
- Coefficient of Friction = 0.30
- Subgrade modulus (k) of 50 pci (corrected for large slabs)
- Soil elastic modulus (Es) of 1,000 psi
- Effective Plasticity Index (upper 15 feet) = 35

The allowable bearing capacity of 1,000 psf may be used for design of post-tensioned/mat foundation.

The dead load of concrete below adjacent grades (buried concrete foundations) may be neglected. The allowable bearing pressure and friction coefficient may be increased by one-third for wind and seismic loading.

We recommend that strip and isolated footings for the buildings have a minimum embedment depth of 18 inches below the lowest adjacent grade. Continuous footings should be at least 12 inches wide and isolated column footings should be at least 24 inches wide. The footings of freestanding and isolated structures, such as walls and pilasters, should have a minimum embedment depth of 18 inches into approved soils.

The following table provides our general guidelines and preliminary recommendations for design of post-tensioned foundations and slabs on expansive soil in accordance with the 2022 California Building Code (CBC) and Post-Tension Institute (PTI) DC 10.5 Edition provisions.

GEOTECHNICAL GUIDELINES
FOR DESIGN OF POST-TENSIONED SLABS

Parameter	Recommendation
Center Lift	
Edge Moisture Variation Distance, e_m	7.50 feet
Center Lift, y_m	0.90 inches
Edge Lift	
Edge Moisture Variation Distance, e_m	4.00 feet
Edge Lift, y_m	1.25 inch
Presaturation, as needed, to obtain the minimum moisture down to the minimum depth	1.3 x optimum down to 18 inches

We recommend that post-tensioned slabs have a thickened edge such that the slab is embedded a minimum of 18 inches below the lowest adjacent grade.

In addition, as indicated in the DC 10.5 Edition of PTI, shape factor calculations should be performed by the project structural engineer in order to determine if strengthening/modification of foundations are necessary. Per PTI guidelines, modifications to the foundations design should be considered if the shape factor (ratio of square of foundation perimeter over foundation area) exceeds 24.

If non-post-tensioned slabs-on-grade and foundations are considered at the site, an effective Plasticity Index of 35 is considered appropriate for the upper 15 feet of soil materials, in accordance with Wire Reinforcement Institute (WRI) method (per the 2022 California Building Code). For non-post-tensioned slabs, we recommend a minimum embedment of 18 inches below the lowest adjacent grade for the perimeter footings. Also, the upper 18 inches of subgrade soil should be pre-saturated to 130 percent of optimum moisture content prior to placement of moisture barrier and concrete.

The foundations and slabs should also be designed to tolerate the total and differential settlements discussed in Section 3.3 of this report.

For the design of pole-type foundations (i.e., light poles, shade structures, etc.), an allowable soil-bearing pressure (s_1) of 290 psf/ft may be used for Equation 18-1 (the "pole" equation) of the 2022 California Building Code (CBC) Section 1807.3.2.1 to determine the depth of embedment for the footings, considering level ground conditions. The equation is applicable for designed embedment depths of less than 12 feet for the purpose of computing lateral pressure. Also, for vertical loads on pole-type foundations, an allowable skin friction of 250 pounds per square foot may be used. Pole foundations should have a minimum embedment of 30 inches below adjacent grades. For cast-in-place pole-type foundations, the vertical end bearing pressure should be neglected.

3.5 Caisson Design

All caissons, if any, should have a minimum of 5 feet embedment into competent fill materials. An average skin friction value of 250 pounds per square foot may be utilized to calculate the axial capacity of caissons. The lateral capacity of caissons may be computed using a value of 290 psf/ft but should not exceed 4,400 psf/ft for level conditions. For caissons near the existing descending slope with passive envelope impacted by the slope, the passive pressure should be limited to 170 psf/ft. Passive resistance may be doubled for isolated piles/caissons spaced a minimum of 3 diameters apart center-to-center. The allowable bearing pressure (both axial and lateral) may be increased by one-third for wind or seismic loading. Other minimum footing dimensions should be provided by the Structural Engineer and should comply with Table 1809.7 of the 2022 CBC.

Caissons should be designed in accordance with ACI recommendations and applicable building code requirements. The accepted criteria for caisson installation are detailed below:

- Caissons should be constructed as pre-drilled cast-in-place elements. A representative of the geotechnical consultant should be present during drilling of all caisson excavations in order to verify proper embedment and to geotechnically review appropriate drilling methods.
- Caisson excavations should be cleaned of loose soil, cuttings and groundwater and should be reviewed by the project geologist prior to placement of steel or concrete.
- No caisson boring shall be excavated within 6 feet from the nearest edge of a completed caisson unless the completed caisson has been filled with concrete for more than 24 hours.

3.6 Retaining Walls Design and Lateral Earth Pressures

Recommendations for lateral earth pressures for permanent retaining walls and structures with approved onsite drained soils and above the groundwater table are as follows:

Conditions	*Level (pcf)*	*2:1 Sloping*
Active	40	60
At-Rest	65	85
Passive	290	170 (sloping down)

These parameters are based on a soil internal friction angle of 25 degrees, a cohesion of 100 pounds per square foot (psf) and soil unit weight of 110 pcf.

To design an unrestrained retaining wall, such as a cantilever wall, the active earth pressure may be used. For a restrained retaining wall, the at-rest pressure should be used. Passive pressure is used to compute lateral soils resistance developed against lateral structural movement. The passive pressures provided above may be increased by one-third for wind and seismic loads. The passive resistance is taken into account only if it is ensured that the soil against embedded structure will remain intact with time. Future landscaping/planting and improvements adjacent to the retaining walls should also be taken into account in the design of the retaining walls. Excessive soil disturbance, trenches (excavation and backfill), future landscaping adjacent to footings and over-saturation can adversely impact retaining structures and result in reduced lateral resistance.

For sliding resistance, the friction coefficient of 0.30 may be used at the concrete and soil interface. The coefficient of friction may be increased by one-third for wind and seismic loading. The retaining walls may also need to be designed for additional lateral loads if other structures or walls are planned within a 1H:1V projection.

If slopes above the retaining walls are relatively minor (in height), the additional load associated with the soil above the retaining wall and within the active wedge may be calculated as a **surcharge load** and applied to the retaining wall using a coefficient of active pressure (k_a) of 0.48.

The seismic lateral earth pressure for walls retaining more than 6 feet of soil may be estimated to be an additional 16 pcf for active and at-rest conditions. The earthquake soil pressure has a triangular distribution and is added to the static pressures. For the active and at-rest conditions, the additional earthquake loading is zero at the top and maximum at the base. The seismic lateral earth pressure does not apply to walls retaining less than, or equal to, 6 feet of soil (2022 CBC Section 1803.5.12).

Drainage behind walls retaining more than 30 inches of soil should also be provided in accordance with the attached Figure 4. Specific drainage connections, outlets and avoiding open joints should be considered for the retaining wall design.

3.7 Seismic Design Parameters

The following table summarizes the seismic design criteria for the subject site. The seismic design parameters are developed in accordance with ASCE 7-16 and 2022 CBC. Please note that, considering the proposed structures and anticipated structural periods, site-specific ground-motion hazard analysis was not performed for the site. Per Supplement 3 of ASCE 7-16, the value of S_{M1}, and therefore S_{D1}, have been increased by 50 percent. The seismic response coefficient, Cs, should be determined per the parameters provided below and using equation 12.8-2 of ASCE 7-16.

Selected Seismic Design Parameters from 2022 CBC/ASCE 7-16	*Seismic Design Values*	*Reference*
Latitude	33.5946 North	
Longitude	-117.7243 West	
Controlling Seismic Source	San Joaquin Hills	USGS, 2024
Site Class per Table 20.3-1 of ASCE 7-16	D	
Spectral Acceleration for Short Periods (Ss)	1.218 g	SEA/OSHPD, 2024
Spectral Accelerations for 1-Second Periods (S_1)	0.438 g	SEA/OSHPD, 2024
Site Coefficient F_a, Table 11.4-1 of ASCE 7-16	1.013	SEA/OSHPD, 2024
Site Coefficient F_v, Table 11.4-2 of ASCE 7-16	1.862	
Design Spectral Response Acceleration at Short Periods (S_{DS}) from Equation 11.4-4 of ASCE 7-16	0.822 g	SEA/OSHPD, 2024
Design Spectral Response Acceleration at 1-Second Period (S_{D1}) from Equation 11.4-4 of ASCE 7-16 (Includes 50% increase per Supplement 3)	0.816 g	
T_S, S_{D1} /S_{DS} 11.4.6 of ASCE 7-16	0.992 sec	
T_L, Long-Period Transition Period	8 sec	SEA/OSHPD, 2024
Peak Ground Acceleration Corrected for Site Class Effects (PGA_M) from Equation 11.8-1 of ASCE 7-16	0.566 g	SEA/OSHPD, 2024
Seismic Design Category, Section 11.6 of ASCE 7-16	D	SEA/OSHPD, 2024

3.8 Slope Stability and Slope Setback

No significant modifications to the existing fill slope along the eastern property line are planned as part of this project. The existing slope is composed of compacted artificial fill materials and the proposed improvements are not anticipated to adversely impact the slope. Based on our slope stability analysis (Appendix E), the existing slope was found to be grossly stable. In general, slopes are considered susceptible to surficial instability in the form of erosion, raveling, and slumping. Special care should be taken to ensure that onsite runoff is controlled and directed offsite in a non-erosive manner and that site drainage, and slopes are maintained over the life of the project.

Footings for structures located above descending slopes should be set back from the slope face in accordance with the minimum requirements of the City of Aliso Viejo and section 1808.7.1 of the 2022 CBC, whichever is greater. The setback distance is measured from the outside edge of the footing bottom along a horizontal line to the face of the slope.

The tables below summarize the minimum setback criteria for structures above descending slopes:

Case A – Building and Retaining Wall Footings Above Descending Slopes	
Slope Height [H] (feet)	*Minimum Setback from Slope face (feet)*
Less than 10	5
10 to 20	½ * H
20 to 30	10
Greater than 30	⅓ * H (maximum of 40')

Case B – Freestanding Wall Footings Above Descending Slopes	
Slope Height [H] (feet)	*Minimum Setback from Slope face (feet)*
Less than 10	5
10 to 20	½ * H
Greater than 20	Maximum of 10

For freestanding walls and other structures that are sensitive to lateral movement (e.g., smooth stucco finish, glass screens, etc.), SA GEO recommends that the structural setback requirements in accordance with Case A above be followed or that additional design measures be used to help control the potential for cracking and displacements. Otherwise, typical freestanding walls may have a setback in accordance with Case B.

3.9 Corrosivity

Soluble sulfates exposure in the onsite soils should be classified as "S2" per Table 19.3.1.1 of ACI-318-14. Structural concrete elements in contact with soil include footings and building slabs-on-grade. The flatwork and sidewalk concrete are typically not considered structural elements. Concrete mix for structural elements should be based on the "S2" soluble sulfate exposure class of Table 19.3.2.1 in ACI-318-14. Other ACI guidelines for structural concrete are recommended. Also, onsite soils are anticipated to be corrosive to metals.

3.10 Expansion Potential

At the completion of grading, we anticipate that onsite soils will have "High" expansion potential. The geotechnical recommendations provided in this report including the design parameters for foundations, slab-on-grade and flatwork improvement should be implemented during design and construction. Updated recommendations will be provided upon additional testing at the completion of grading at the site and as needed.

Homeowners and their design/construction team should be familiar with the recommendations in this report as well as principles described in a useful reference published by the California Geotechnical Engineers Association (CalGeo), titled, "Coexisting with Expansive Soil: An Informational Guide for Homeowners." This free booklet can be downloaded at www.calgeo.org.

3.11 Interior Slab Moisture Mitigation

In addition to geotechnical and structural considerations, the project owner should also consider interior moisture mitigation when designing and constructing slabs-on-grade.

The intended use of the interior space, type of flooring, and the type of goods in contact with the floor may dictate the need for, and design of, measures to mitigate potential effects of moisture emission from and/or moisture vapor transmission through the slab. Typically, for human occupied structures, a vapor retarder or barrier is recommended under the slab to help mitigate moisture transmission through slabs. The most recent guidelines by the American Concrete Institute (ACI 302.1R-04) suggest that the vapor retarder be placed directly under the slab (no sand layer). However, the location of the vapor retarder may also be subject to the builder's past successful practice. Placement of 1 or 2 inches of sand over the moisture retardant has been common practice by builders in southern California. Specifying the strength of the retarder to resist puncture and its permeance rating is important. These qualities are not necessarily a function of the retarder thickness. A minimum of 10-mil is typical but some materials, such as 10-mil polyethylene ("Visqueen"), may not meet the desired standards for toughness and permeance.

Vapor retarders, when used, should be installed in accordance with standards such as ASTM E 1643 and/or those specified by the manufacturer.

Concrete mix design and curing are also significant factors in mitigating slab moisture problems. Concrete with lower water/cement ratios results in denser, less permeable slabs that also "dry" faster with regard to when flooring can be installed (reduced moisture emissions quantities and rates). Rewetting of the slab following curing should be avoided since it can result in additional drying time required prior to flooring installation. Proper concrete slab testing prior to flooring installation is also important.

Concrete mix design, the type and location of the vapor retarder should be determined in coordination with all parties involved in the finished product, including the project owner, architect, structural engineer, geotechnical consultant, concrete subcontractors, and flooring subcontractors.

3.12 Exterior Concrete

The sidewalk, patio slabs, driveways and other flatwork elements should be at least 4 inches thick. Driveway approaches should be a minimum of 6 inches thick. We recommend that the concrete flatwork be reinforced with No. 3 bars be placed at 24 inches on center both ways. Concrete slabs should be provided with construction or weakened plane control joints at a maximum spacing of 6 feet. The control joints should have a thickness that is ¼ of the total concrete thickness. Upon the placement and compaction of subgrade soils (per Section 3.2 of these recommendations), the upper 18 inches of the subgrade soils should be pre-saturated to 130 percent of optimum moisture content prior to placement of concrete and reinforcement. We also recommend that 2 to 4 inches of granular materials/aggregate base be placed over the compacted subgrade prior to placement of reinforcement and concrete.

For exterior slabs, the use of a granular sublayer is primarily intended to facilitate presaturation and subsequent construction by providing a better working surface over the saturated soil. It also helps retain the added moisture in the native soil in the event that the slab is not placed immediately.

Exterior concrete elements such as curb and gutter, driveways, sidewalks, and patios are susceptible to lifting and cracking when constructed over expansive soils. With expansive soils, the impacts to flatwork/hardscape can be significant, generally requiring removal and replacement of the affected improvements. Please also note that reducing concrete problems is often a function of proper slab design, concrete mix design, placement, and curing/finishing practices. Adherence to guidelines of the American Concrete Institute (ACI) is recommended. Also, the amount of post-construction watering, or lack thereof, can have a very significant impact on the adjacent concrete flatwork.

On projects with expansive soils, additional measures such as thickened concrete edges/footings, subdrains and/or moisture barriers should be considered where planter or natural areas with irrigation are located adjacent to the concrete improvements. Design and maintenance of proper surface drainage is also very important. If the concrete will be subject to heavy loading from cars/trucks or other heavy objects, thicker pavement section will be required the design of which should be performed by the geotechnical consultant, as needed.

The above recommendations typically are not applied to curb and gutter but should be considered in areas with highly expansive soils.

3.13 Preliminary Asphalt Concrete Pavement Design

Final structural pavement sections should be based on R-value testing after the completion of grading and in accordance with city of Aliso Viejo requirements. Based on an R-value of 5 and estimated traffic indices (TIs), we recommend the following preliminary pavement sections:

Street Location	***Estimated TIs***	***Pavement Section***
Parking Stalls	TI – 4.0	3 inches of AC / 6 inches of AB
General Drives	TI – 5.5	4 inches of AC / 10 inches of AB
AC = Asphalt Concrete, AB = Aggregate Base		

Please note that for two-stage paving operations, we recommend that the final AC cap be a minimum of 0.10 foot thick and the base AC course have a minimum thickness of 0.25 foot.

If pavement repair is needed within the adjacent streets, the section should match the existing section and follow standard City/County guidelines for trench/pavement repair. The new pavement section should at minimum consist of 4 inches of AC over 10 inches of AB.

Asphalt concrete pavement should be placed in accordance with the requirements of Sections 301 and 302 of the Standard Specifications of Public Works Construction (the Greenbook). Prior to construction of pavement sections, the subgrade soils should be scarified to a minimum depth of 6 inches, moisture-conditioned as needed, and recompacted in-place to a minimum of 90 percent relative compaction (per ASTM D1557). Subgrade should be firm prior to AB placement.

AB materials can be crushed aggregate base or crushed miscellaneous base in accordance with the Greenbook (Section 200-2). The materials should be free of any deleterious materials. Aggregate base materials should be placed in 6- to 8-inch-thick loose lifts, moisture-conditioned as necessary, and compacted to a minimum of 95 percent relative compaction (per ASTM D1557). Asphalt concrete should also be compacted to a minimum relative compaction of 95 percent.

Unpaved median and parkway areas should be provided with vertical moisture barriers.

3.14 Vehicular PCC Pavements

For trash enclosures, we recommend 6 inches of PCC reinforced with No. 4 rebar at 18 inches on-center, both ways, over 4 inches of aggregate base placed over compacted subgrade. For parking stalls, the section may consist of 4 inches of PCC reinforced with No. 4 rebar at 18 inches on-center, both ways, over 4 inches of aggregate base over compacted subgrade.

The subgrade soils should be scarified to a minimum depth of 6 inches, moisture-conditioned as needed, and recompacted in place to a minimum of 90 percent relative compaction (per ASTM D1557).

Aggregate base materials can be crushed aggregate base or crushed miscellaneous base in accordance with the Greenbook (Section 200-2). The materials should be free of any deleterious materials. Aggregate base materials should be placed in 6- to 8-inch-thick loose lifts, moisture-conditioned as necessary, and compacted to a minimum of 95 percent relative compaction (per ASTM D1557).

3.15 Concrete Paver Section

For concrete pavers within **pedestrian** walkways, we recommend 60-millimeter-thick concrete pavers over approximately 1 inch of sand, over a minimum of 6 inches of AB, over compacted subgrade. This should also accommodate the rare maintenance cart or light truck that might drive up on these areas.

For concrete pavers within **vehicular** drive areas, if any, we recommend 80-millimeter-thick concrete pavers over 6 inches of concrete reinforced with No. 3 rebar at 24 inches on-center, over 4 inches of AB. Alternatively, the concrete low pour slab may be replaced with a minimum of 15 inches of AB over compacted subgrade; or 12 inches of AB over a layer of geotextile (e.g., Mirafi 600X or equivalent), over compacted subgrade.

A concrete band along the perimeter of the pavers should be provided for lateral restraint. The concrete band should, at minimum, be 12 inches deep and deepened to below the depth of disturbed soil, if adjacent to landscape/planter areas.

Also, a drainage system consisting of a 2-inch PVC drainage pipe should be installed at the low end of the concrete low pour at 10-foot intervals through the slab and filled with pea gravel. The PVC drainage pipe should drain to a minimum of 6-inch-diameter by 12-inch-deep drain pit filled with pea gravel below the pipe. The paver surfaces should slope away from structures a minimum of 2 percent. The concrete underlayment for the drive areas should be provided with weakened plane joints at maximum 6-foot intervals. If the pavers are to be set in mortar or are underlain with AB, this drainage system is not required.

Prior to construction of the paver sections, the subgrade soils should be scarified to a minimum depth of 6 inches, moisture conditioned as needed, and recompacted in place to a minimum of 90 percent relative compaction (per ASTM D1557). The upper 18 inches of subgrade for pedestrian walkway and patio areas should then be presaturated to 130 percent of optimum moisture content. Subgrade for vehicular pavers need not be pre-saturated.

Aggregate base materials can be crushed aggregate base or crushed miscellaneous base in accordance with the Greenbook (Section 200-2). The materials should be free of deleterious materials. Aggregate base materials should be placed in 6- to 8-inch-thick loose lifts, moisture-conditioned as necessary, and compacted to a minimum of 95 percent relative compaction (per ASTM D1557).

3.16 Trench Excavation and Backfill

Excavations should be performed in accordance with the requirements set forth by Cal/OSHA Excavation Safety Regulations (Construction Safety Orders, Section 1504, 1539 through 1547, Title 8, California Code of Regulations). In general, onsite soils may be classified as Type "B". Cal/OSHA regulations indicate that, for workmen in confined conditions, the steepest allowable slopes in Type "B" soils are 1:1. Locally, Type "C" soils may be encountered (saturated soils, seepage) and require slope layback of 1.5H:1V (horizontal:vertical). These laybacks apply to excavations 20 feet deep or less. Where there is no room for these layback slopes, we anticipate that shoring will be necessary. Adequate shoring (i.e., shields) should be provided, as deemed necessary. The soils within the adjacent streets are anticipated to be similar to onsite soils. Excavations should be reviewed periodically by the contractor's qualified person to confirm compliance with Cal/OSHA requirements.

Onsite soils should be suitable for use as trench backfill with the exception of wet/saturated materials, if encountered. Utility trench backfill should be in accordance with City of Aliso Viejo, County of Orange and/or the governing jurisdiction's specifications. Backfill materials should be compacted to a minimum of 90 percent relative compaction (per ASTM D1557). Rocks greater than 3 inches in largest diameter should generally not be used as trench backfill unless approved by the agency and geotechnical consultant of record. Excavation and backfilling of HDPE pipes (if any) should be in accordance with the manufacturer’s requirement and the Greenbook. Select granular backfill (i.e., clean sand with SE 30 or better) may be used in lieu of native soils but should also be compacted or densified with water jetting and flooding.

Trenches excavated next to structures and foundations should also be properly backfilled and compacted to provide full lateral support and reduce settlement potential.

3.17 Groundwater

Groundwater was encountered during our subsurface exploration at a depth of 55 feet in Boring H-4 (within Niguel Formation). While some saturated soil may be encountered during grading and/or utility trench excavation, we do not anticipate significant seepage or that mitigation measures will be necessary. In general, groundwater is anticipated to remain more than 20 feet below the proposed building foundations. However, shallow, perched water/seepage may occur on an annual and seasonal basis as a result of rainfall, irrigation and/or seepage from adjacent properties.

3.18 Stormwater Infiltration

As discussed previously (Section 2.7), considering the artificial fill thickness, and bedrock directly below the fill materials, and presence of fine-grained expansive soils, stormwater infiltration at the site is not feasible from a geotechnical viewpoint. Other methods of filtration/treatment should be evaluated by the project civil engineer.

3.19 Surface Drainage and Irrigation

Maintaining adequate surface drainage, proper disposal of run-off water, and control of irrigation will help reduce the potential for future moisture-related problems and differential movements from soil heave/settlement.

Surface drainage should be carefully taken into consideration during grading, landscaping, and building construction. Positive surface drainage should be provided to direct surface water away from structures and slopes and toward the street or suitable drainage devices. Ponding of water adjacent to the structures should not be allowed. Buildings should have roof gutter systems and the run-off should be directed to parking lot/street gutters by area drainpipes or by sheet flow over paved areas. Paved areas should be provided with adequate drainage devices, gradients, and curbing to prevent run-off flowing from paved areas onto adjacent unpaved areas.

Considering the climatic conditions in southern California and provided that the recommendations included in this report are implemented during grading and construction, a minimum two-percent slope away from structures is considered acceptable and in substantial compliance with the 2022 CBC. Also, swales with one-percent slopes are acceptable from a geotechnical standpoint and are common practice in this locale.

Construction of planter areas immediately adjacent to structures should be avoided if possible. If planter boxes are constructed adjacent to or near buildings, the planters should be provided with controls to prevent excessive penetration of the irrigation water into the foundation and flatwork subgrades. Provisions should be made to drain excess irrigation water from the planters without saturating the subgrade below or adjacent to the planters. Raised planter boxes may be drained with weepholes. Deep planters (such as palm tree planters) should be drained with below-ground, water-tight drainage lines connected to a suitable outlet. Moisture barriers should also be considered.

It is also important to maintain a consistent level of soil moisture, not allowing the subgrade soils to become overly dry or overly wet. Properly designed landscaping and irrigation systems can help in that regard.

3.20 Slope Maintenance, Lot Drainage, and Erosion Control

Maintenance of proper pad drainage, the design and construction of property improvements in accordance with sound engineering practices, and proper maintenance of landscaping, including regular pad and slope irrigation, should be performed. Irrigation should not be excessive or sporadic; maintaining a relatively constant level of soil moisture around structures and improvements is important. Oversteepening of slopes should be avoided.

Planters and landscape areas adjacent to structures should be avoided or provided with measures to mitigate the potential for water getting under the foundations and slabs. Water should not be allowed to pond and drainage should be maintained away from structures and tops of slopes.

Establishing and maintaining a rodent-control program is also recommended to reduce surficial slope deterioration often associated with rodent burrowing. The improvements at or near the tops of slopes may be subject to varying degrees of slope-creep related movements and should be designed with that in mind, meeting the setback criteria discussed in this report.

3.21 Additional Subsurface Exploration and Laboratory Testing

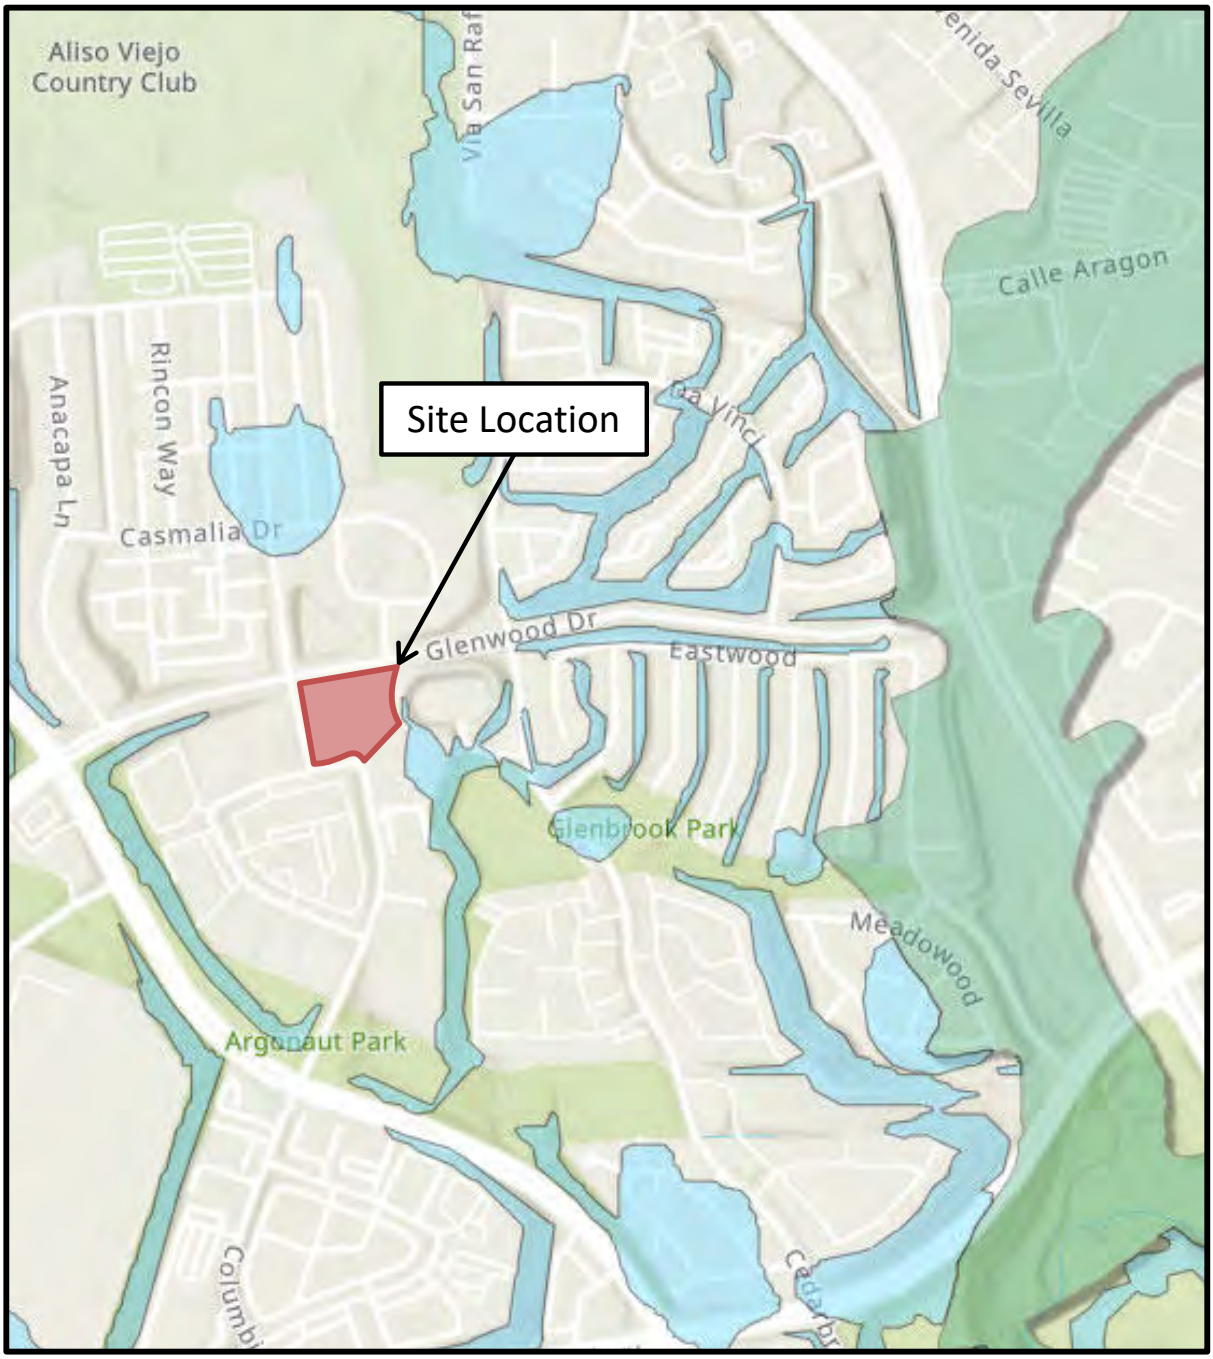
Additional subsurface exploration during the design phase of the project is not considered necessary unless significant plan changes occur. Additional laboratory testing should be performed during and upon completion of the grading to confirm/update the design parameters provided herein.

3.22 Review of Future Plans

The project grading, foundation, street improvement, wall, and landscape plans should be reviewed and accepted by the geotechnical consultant prior to grading and construction. Additional recommendations should be provided upon the review of the project plans and as needed.

3.23 Observation and Testing during Grading and Construction

Geotechnical observation and testing should be performed by SA GEO during the following phases of grading and construction:



- During site demolition, preparation and clearing;
- During excavations performed for the remedial grading and to relocate or remove existing underground improvements;
- During earthwork, including observation and acceptance of remedial removal bottoms and fill placement, including import material (if any);
- Following the completion of grading, in order to verify soil properties for foundations, slab-on-grade and pavements;
- Upon completion of any foundation or structural excavation, prior to pouring concrete;

- During slab and flatwork subgrade preparation prior to pouring of concrete;
- During placement of backfill for utility trenches;
- During construction of stormwater filtration devices;
- During placement of backfill for retaining structures;
- During installation and backfill of subdrainage systems; and
- When any unusual soil conditions are encountered.

4.0 LIMITATIONS

This report has been prepared for the exclusive use of our client, Meritage Homes, within the scope of services requested for the subject property described herein. This report or its contents should not be used or relied upon for other projects or purposes, or by other parties without the acknowledgement of SA GEO and the consultation of a geotechnical professional. The means and methods used by SA GEO for this study are based on local geotechnical standards of practice, care, and requirements of governing agencies. No warranty or guarantee, expressed or implied, is given.

Our findings, conclusions, and recommendations are professional opinions based on interpretations and inferences made from geologic and engineering data from specific locations and depths, observed or collected at a given time. By nature, geologic conditions can vary from point to point, can be very different in-between exploration points, and can also change over time. Our conclusions and recommendations are, by nature, preliminary and subject to verification and/or modification during grading and construction when more subsurface data is exposed.

Liquefaction
Areas where historic occurrence of liquefaction, or local geological, geotechnical and groundwater conditions indicate a potential for permanent ground displacements such that mitigation as defined in Public Resource Code Section 2693(c) would be required.

Earthquake-Induced Landslides
Areas where previous occurrence of landslide movement, or local topographic, geological, geotechnical and subsurface water conditions indicate a potential for permanent ground displacements such that mitigation as defined in Public Resource Code Section 2693(c) would be required.

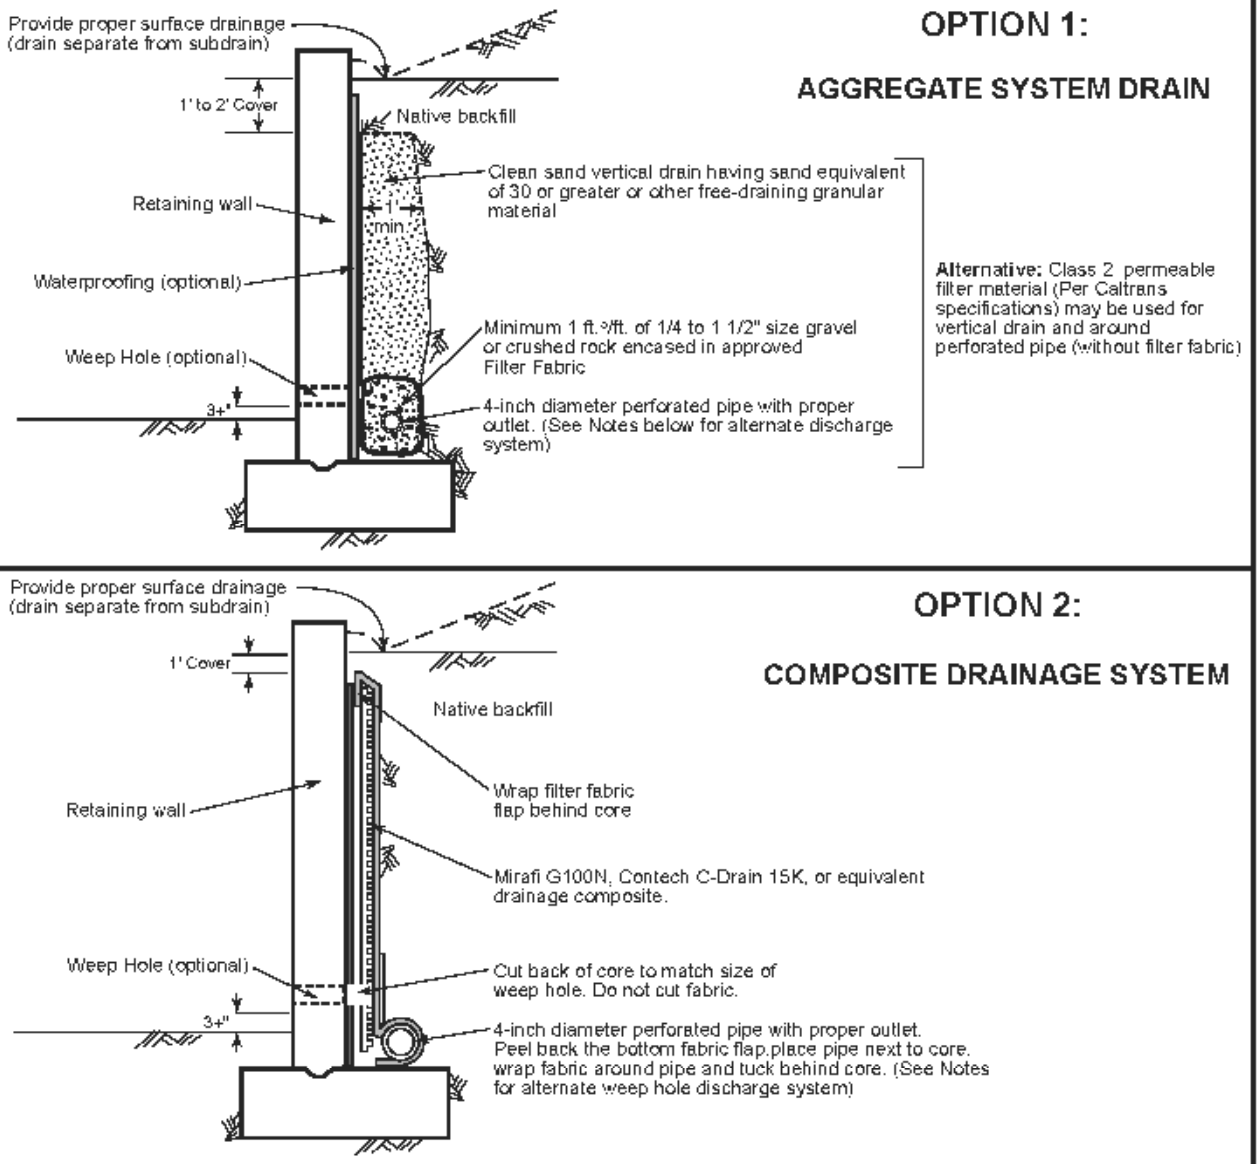
Source: Fault Activity Map of California (Jennings and Bryant, 2010)



Holocene fault displacement (during past 11,700 years) without historic record. Geomorphic evidence for Holocene faulting includes sag ponds, scarps showing little erosion, or the following features in Holocene age deposits: offset stream courses, linear scarps, shutter ridges, and triangular faceted spurs. Recency of faulting offshore is based on the interpreted age of the youngest strata displaced by faulting.

Late Quaternary fault displacement (during past 700,000 years). Geomorphic evidence similar to that described for Holocene faults except features are less distinct. Faulting may be younger, but lack of younger overlying deposits precludes more accurate age classification.

Quaternary fault (age undifferentiated). Most faults of this category show evidence of displacement sometime during the past 1.6 million years; possible exceptions are faults which displace rocks of undifferentiated Plio-Pleistocene age. Unnumbered Quaternary faults were based on Fault Map of California, 1975. See Bulletin 201, Appendix D for source data.

Pre-Quaternary fault (older that 1.6 million years) or fault without recognized Quaternary displacement. Some faults are shown in this category because the source of mapping used was of reconnaissnce nature, or was not done with the object of dating fault displacements. Faults in this category are not necessarily inactive.

NOTES:

1. **PIPE TYPE SHOULD BE PVC OR ABS, SCHEDULE 40 OR SDR35 SATISFYING THE REQUIREMENTS OF ASTM TEST STANDARD D1527, D1785, D2751 , OR D3034.**
2. **FILTER FABRIC SHALL BE APPROVED PERMEABLE NON-WOVEN POLYESTER, NYLON, OR POLYPROPYLENE MATERIAL.**
3. **DRAIN PIPE SHOULD HAVE A GRADIENT OF 1 PERCENT MINIMUM.**
4. **WATERPROOFING MEMBRANE MAY BE REQUIRED FOR A SPECIFIC RETAINING WALL (SUCH AS A STUCCO OR BASEMENT WALL).**
5. **WEEP HOLES MAY BE PROVIDED FOR LOW RETAINING WALLS (LESS THAN 3 FEET IN HEIGHT) IN LIEU OF A VERTICAL DRAIN AND PIPE AND WHERE POTENTIAL WATER FROM BEHIND THE RETAINING WALL WILL NOT CREATE A NUISANCE WATER CONDITION. IF EXPOSURE IS NOT PERMITTED, A PROPER SUBDRAIN OUTLET SYSTEM SHOULD BE PROVIDED.**
6. **IF EXPOSURE IS PERMITTED, WEEP HOLES SHOULD BE 2-INCH MINIMUM DIAMETER AND PROVIDED AT 25-FOOT MAXIMUM SPACING ALONG WALL. WEEP HOLES SHOULD BE LOCATED 3+ INCHES ABOVE FINISHED GRADE.**
7. **SCREENING SUCH AS WITH A FILTER FABRIC SHOULD BE PROVIDED FOR WEEP HOLES/OPEN JOINTS TO PREVENT EARTH MATERIALS FROM ENTERING THE HOLES/JOINTS.**
8. **OPEN VERTICAL MASONRY JOINTS (I.E., OMIT MORTAR FROM JOINTS OF FIRST COURSE ABOVE FINISHED GRADE) AT 32-INCH MAXIMUM INTERVALS MAY BE SUBSTITUTED FOR WEEP HOLES.**
9. **THE GEOTECHNICAL CONSULTANT MAY PROVIDE ADDITIONAL RECOMMENDATIONS FOR RETAINING WALLS DESIGNED FOR SELECT SAND BACKFILL.**

NOTE: Dual symbols are used to indicate gravels or sand with 5-12% fines and soils with fines classifying as CL-ML. Symbols separated by a slash indicate borderline soil classifications.

Sampler and Symbol Descriptions

- Modified California sample (D-#)
- Standard Penetration Test (S-#)
- Shelby tube sample (T-#)
- Large bulk sample (B-#)
- Small bulk sample (SB-#)
- Approximate depth of groundwater during drilling
- Approximate depth of static groundwater

Note: Number of blows required to advance driven sample 12 inches (or length noted).

Laboratory and Field Test Abbreviations

AL	Atterberg limits (plasticity)
CC	Chemical Testing incl. Soluble Sulfate
CN	Consolidation
DS	Direct Shear
EI	Expansion Index
GS	Grain Size Analysis (Sieve, Hydro. and/or -No. 200)
MD	Maximum Density and Optimum Moisture
RV	Resistance Value (R-Value)
SE	Sand Equivalent
UU	Unconsolidated Undrained Shear Strength

Notes:

1. Soil classifications are based on the Unified Soil Classification System and include color, moisture, and relative density or consistency. Field descriptions have been modified to reflect results of laboratory tests where deemed appropriate. Bedrock descriptions are based on visual classification and include rock type, moisture, color, grain size, strength, and weathering.
2. Descriptions on these boring logs apply only at the specific boring locations and at the time the borings were drilled. They are not warranted to be representative of subsurface conditions at other locations or times.

May 17, 2024

	Method	ASTM D4327		ASTM D4327	
Bore# / Description	**Depth**	**Sulfates** SO_4^{2-}		**Chlorides** Cl^-	
	(ft)	**(mg/kg)**	**(wt%)**	**(mg/kg)**	**(wt%)**
H-1 B-1	0-5	768.4	0.0768	156.2	0.0156
H-4 B-1	0-5	713.1	0.0713	82.9	0.0083

Cations and Anions, except Sulfide and Bicarbonate, tested with Ion Chromatography
mg/kg = milligrams per kilogram (parts per million) of dry soil weight
ND = 0 = Not Detected | NT = Not Tested | Unk = Unknown
Chemical Analysis performed on 1:3 Soil-To-Water extract
PPM = mg/kg (soil) = mg/L (Liquid)

Note: Sometimes a bad sulfate hit is a contaminated spot. Typical fertilizers are Potassium chloride, ammonium sulfate or ammonium sulfate nitrate (ASN). So this is another reason why testing full corrosion series is good because we then have the data to see if those other ingredients are present meaning the soil sample is just fertilizer-contaminated soil. This can happen often when the soil samples collected are simply surface scoops. This is why it's best to dig in a foot, throw away the top and test the deeper stuff. Dairy farms are also notorious for these items.

If one sample pops up much more corrosive than all others, we would recommend collecting more samples surrounding the problem sample location to determine if the peak is isolated to it. This allows us to conclude it was a contaminated sample and able to declare it an outlier.

Appendix D

USGS web services were down for some period of time and as a result this tool wasn't operational, resulting in *timeout* error.
USGS web services are now operational so this tool should work as expected.

95 Argonaut, Aliso Viejo, CA 92656, USA

Latitude, Longitude: 33.5945973, -117.7242937

Date	4/26/2024, 3:23:29 PM
Design Code Reference Document	ASCE7-16
Risk Category	II
Site Class	D - Stiff Soil

Type	Value	Description
S_S	1.218	MCE_R ground motion. (for 0.2 second period)
S_1	0.438	MCE_R ground motion. (for 1.0s period)
S_{MS}	1.233	Site-modified spectral acceleration value
S_{M1}	null -See Section 11.4.8	Site-modified spectral acceleration value
S_{DS}	0.822	Numeric seismic design value at 0.2 second SA
S_{D1}	null -See Section 11.4.8	Numeric seismic design value at 1.0 second SA

Type	Value	Description
SDC	null -See Section 11.4.8	Seismic design category
F_a	1.013	Site amplification factor at 0.2 second
F_v	null -See Section 11.4.8	Site amplification factor at 1.0 second
PGA	0.515	MCE_G peak ground acceleration
F_{PGA}	1.1	Site amplification factor at PGA
PGA_M	0.566	Site modified peak ground acceleration
T_L	8	Long-period transition period in seconds
SsRT	1.218	Probabilistic risk-targeted ground motion. (0.2 second)
SsUH	1.304	Factored uniform-hazard (2% probability of exceedance in 50 years) spectral acceleration
SsD	2.489	Factored deterministic acceleration value. (0.2 second)
S1RT	0.438	Probabilistic risk-targeted ground motion. (1.0 second)
S1UH	0.468	Factored uniform-hazard (2% probability of exceedance in 50 years) spectral acceleration.
S1D	0.82	Factored deterministic acceleration value. (1.0 second)
PGAd	1.017	Factored deterministic acceleration value. (Peak Ground Acceleration)

Type	Value	Description
PGA_{UH}	0.515	Uniform-hazard (2% probability of exceedance in 50 years) Peak Ground Acceleration
C_{RS}	0.934	Mapped value of the risk coefficient at short periods
C_{R1}	0.934	Mapped value of the risk coefficient at a period of 1 s
C_V	1.344	Vertical coefficient

SLOPE STABILITY ANALYSIS SOFTWARE (2D & 3D)

Simplified Bishop, Simplified Janbu, or General Equilibrium (GE) Options.

(Spencer, Morgenstern-Price, USACE, and Lowe & Karafiath)

Including Pier/Pile, Planar Reinf, Nail, Tieback, Line Loads

Applied Forces, Fiber-Reinforced Soil (FRS), Distributed Loads

Nonlinear Undrained Shear Strength, Curved Strength Envelope,

Anisotropic Strengths, Water Surfaces, 3-Stage Rapid Drawdown

2- or 3-Stage Pseudo-Static & Simplified Newmark Seismic Analyses.

****

Analysis Date: 5/ 28/ 2024

Analysis Time:

Analysis By: SA Geotechnical, Inc.

Input File Name: C:\Users\Reza Saberi\SA Geotechnical, Inc\SA Geotechnical - Projects\2024\24059-01 Meritage - 95 Argonaut, Aliso Viejo\Engineering\Sted\General Slope\01.gsd

Output File Name: C:\Users\Reza Saberi\SA Geotechnical, Inc\SA Geotechnical - Projects\2024\24059-01 Meritage - 95 Argonaut, Aliso Viejo\Engineering\Sted\General Slope\01.OUT

Unit System: English

PROJECT: 95 Argonaut. Aliso Viejo

DESCRIPTION: Global Stability of 25' High Slopes

PROFILE BOUNDARY DATA

3 Surface Boundaries
3 Total Boundaries

Boundary No.	X - 1 (ft)	Y - 1 (ft)	X - 2 (ft)	Y - 2 (ft)	Soil Type Below Bnd
1	0.000	422.000	60.000	422.000	1
2	60.000	422.000	110.000	447.000	1
3	110.000	447.000	160.000	447.000	1

User Specified X-Origin = 0.000(ft)

User Specified Y-Origin = 400.000(ft)

SURFACE BOUNDARY POINT COORDINATES

4	160.000	447.000

SUBSURFACE BOUNDARY POINT COORDINATES
(Information Only-Not Used Directly)

Point No.	X-COORD	Y-COORD

PROFILE BOUNDARY SLOPES AND ANGLES

BND No.	Slope	Angle(Deg.)
1	0.000	0.000
2	0.500	26.565
3	0.000	0.000

MOHR-COULOMB SOIL PARAMETERS

1 Type(s) of Soil Defined

Soil Number and Description	Moist Unit Wt. (pcf)	Saturated Unit Wt. (pcf)	Cohesion Intercept (psf)	Friction Angle (deg)	Pore Pressure Ratio(ru)	(-Uw) Fact.	Water Surface No.	Water Option
1 Fill	110.0	110.0	400.00	24.00	0.000	0.0	1	0

TRIAL FAILURE SURFACE DATA

Circular Trial Failure Surfaces Have Been Generated Using A Random Procedure.

2000 Trial Surfaces Have Been Generated.

2000 Surfaces Generated at Increments of 0.0600(in) Equally Spaced Within the Start Range

Along The Specified Surface Between X = 55.00(ft)
and X = 65.00(ft)

Each Surface ends within a Range Between X = 110.00(ft)
and X = 140.00(ft)

All surfaces are generated left to right for both a left and right sliding slope.

Unless XCLUDE Lines Were Specified, The Minimum Elevation
To Which A Surface Extends Is Y = 400.00(ft)

Specified Maximum Radius = 100000.000(ft)

3.000(ft) Line Segments Were Used For Each Trial Failure Surface.

The Spencer Method Was Selected for FS Analysis.

Selected fx function = Constant (1.0)

```
SELECTED CONVERGENCE PARAMETERS FOR SPENCER METHOD:
Initial estimate of FS =  1.500
FS tolerance =  0.000001000
Initial estimate of theta(deg) =  15.00
Theta tolerance(radians) =  0.0001000
Minimum theta(deg) = -45.00 ; Maximum theta(deg) =  45.00
Theta convergence Step Factor = 5000.00
Maximum number of iterations = 50
Allowable negative side force = -1000.0(lbs)
Maximum force imbalance  = 100.000000(lbs)
Maximum moment imbalance = 100.000000 (ft/lbs)

Selected Lambda Coefficient =  1.00

Specified Tension Crack Water Depth Factor =   0.000

Total Number of Trial Surfaces Attempted = 2000

WARNING! The Factor of Safety Calculation for one or More Trial Surfaces
Did Not Converge in 50 Iterations.

Number of Trial Surfaces with Non-Converged FS = 242

Number of Trial Surfaces With Valid FS = 1758

Percentage of Trial Surfaces With Non-Converged and/or
Non-Valid FS Solutions of the Total Attempted =  12.1 %

Statistical Data On All Valid FS Values:
   FS Max =   7.876   FS Min =   2.381   FS Ave =   2.890
   Standard Deviation =    0.400   Coefficient of Variation =   13.85 %

Critical Surface is Sequence Number     860 of Those Analyzed.

*****BEGINNING OF DETAILED GEOSTASE OUTPUT FOR CRITICAL SURFACE FROM A SEARCH*****
```

BACK-CALCULATED CIRCULAR SURFACE PARAMETERS:

Circle Center At X = 73.583338(ft) ; Y = 471.872496(ft); and Radius = 51.705663(ft)

Circular Trial Failure Surface Generated With 25 Coordinate Points

Point No.	X-Coord. (ft)	Y-Coord. (ft)

Factor Of Safety For The Preceding Specified Surface = 2.381
Theta (fx = 1.0) = 17.25 Deg Lambda = 0.311

The Spencer Method Has Been Selected For Analysis.

Selected fx function = Constant (1.0)

SELECTED CONVERGENCE PARAMETERS FOR ANALYSIS METHOD:
Initial estimate of FS = 1.500
FS tolerance = 0.000001000
Initial estimate of theta(deg) = 15.00
Theta tolerance(radians) = 0.0001000
Minimum theta(deg) = -45.00 ; Maximum theta(deg) = 45.00
Theta convergence Step Factor = 5000.00
Maximum number of iterations = 50
Maximum force imbalance = 100.000000(lbs)
Maximum moment imbalance(if Applicable) = 100.000000 (ft/lbs)

Selected Lambda Coefficient = 1.00

Tension Crack Water Force = 0.00(lbs)

Specified Tension Crack Water Depth Factor = 0.000 (0.00% Filled)

Depth of Tension Crack (zo) at Side of Last Slice = 0.000(ft)

Depth of Water in Tension Crack = 0.000(ft)

Theoretical Tension Crack Depth = 11.199(ft)

NOTE: In Table 1 following, when a tension crack with water is present on the first slice (right facing slope) or on the last slice (left facing slope), the "side force" in the tension crack is set equal to the water pressure resultant.

*** Table 1 - Line of Thrust(if applicable) and Slice Force Data ***

Slice No.	X Coord.	Y Coord.	h/H	Side Force (lbs)	fx	Force Angle (Deg)	Vert. Shear Force(lbs)

SOIL OPTIONS:
A = ANISOTROPIC SHEAR STRENGTH
C = CURVED STRENGTH ENVELOPE (TANGENT PHI & C)
F = FIBER-REINFORCED SOIL (FRS)
M = INDEPENDENT MULTI-STAGE SHEAR STRENGTH

N = NONLINEAR UNDRAINED SHEAR STRENGTH
R = RAPID DRAWDOWN OR RAPID LOADING (SEISMIC) SHEAR STRENGTH
S = SHANSEP UNDRAINED SHEAR STRENGTH
NOTE: Phi and C in Table 4 are modified values based on specified
Soil Options (if any).

PROJECT: 95 Argonaut. Aliso Viejo

DESCRIPTION: Global Stability of 25' High Slopes (Pseudo-Static)

PROFILE BOUNDARY DATA

3 Surface Boundaries
3 Total Boundaries

Boundary No.	X - 1 (ft)	Y - 1 (ft)	X - 2 (ft)	Y - 2 (ft)	Soil Type Below Bnd
1	0.000	422.000	60.000	422.000	1
2	60.000	422.000	110.000	447.000	1
3	110.000	447.000	160.000	447.000	1

User Specified X-Origin = 0.000(ft)

User Specified Y-Origin = 400.000(ft)

SURFACE BOUNDARY POINT COORDINATES
(Information Only-Not Used Directly)

Point No.	X-COORD	Y-COORD
1	0.000	422.000
2	60.000	422.000
3	110.000	447.000
4	160.000	447.000

SUBSURFACE BOUNDARY POINT COORDINATES
(Information Only-Not Used Directly)

Point No.	X-COORD	Y-COORD

PROFILE BOUNDARY SLOPES AND ANGLES

BND No.	Slope	Angle(Deg.)
1	0.000	0.000
2	0.500	26.565
3	0.000	0.000

MOHR-COULOMB SOIL PARAMETERS

1 Type(s) of Soil Defined

Soil Number and Description	Moist Unit Wt. (pcf)	Saturated Unit Wt. (pcf)	Cohesion Intercept (psf)	Friction Angle (deg)	Pore Pressure Ratio(ru)	(-Uw) Fact.	Water Surface No.	Water Option
1 Fill	110.0	110.0	400.00	24.00	0.000	0.0	1	0

SEISMIC (EARTHQUAKE) DATA

Specified Peak Ground Acceleration Coefficient (PGA) = 0.290(g)
Default Velocity = 1.450(ft) per second
Specified Horizontal Earthquake Coefficient (kh) = 0.29000(g)
Specified Vertical Earthquake Coefficient (kv) = 0.000(g)
(NOTE:Input Velocity = 0.0 will result in default Peak
Velocity = 2 times(PGA) times 2.5 fps or 0.762 mps)
Specified Seismic Pore-Pressure Factor = 0.000
Horizontal Seismic Force is Applied at Center of Gravity of Slices

TRIAL FAILURE SURFACE DATA

Circular Trial Failure Surfaces Have Been Generated Using A Random Procedure.

2000 Trial Surfaces Have Been Generated.

2000 Surfaces Generated at Increments of 0.0600(in) Equally Spaced Within the Start Range

Along The Specified Surface Between X = 55.00(ft)
and X = 65.00(ft)

Each Surface ends within a Range Between X = 110.00(ft)
and X = 140.00(ft)

All surfaces are generated left to right for both a left and right sliding slope.

Unless XCLUDE Lines Were Specified, The Minimum Elevation
To Which A Surface Extends Is Y = 400.00(ft)

Specified Maximum Radius = 100000.000(ft)

3.000(ft) Line Segments Were Used For Each Trial Failure Surface.

The Spencer Method Was Selected for FS Analysis.

Selected fx function = Constant (1.0)

SELECTED CONVERGENCE PARAMETERS FOR SPENCER METHOD:
Initial estimate of FS = 1.500
FS tolerance = 0.000001000
Initial estimate of theta(deg) = 15.00
Theta tolerance(radians) = 0.0001000
Minimum theta(deg) = -45.00 ; Maximum theta(deg) = 45.00
Theta convergence Step Factor = 5000.00
Maximum number of iterations = 50
Allowable negative side force = -1000.0(lbs)
Maximum force imbalance = 100.000000(lbs)
Maximum moment imbalance = 100.000000 (ft/lbs)

Selected Lambda Coefficient = 1.00

Specified Tension Crack Water Depth Factor = 0.000

Total Number of Trial Surfaces Attempted = 2000

WARNING! The Factor of Safety Calculation for one or More Trial Surfaces
Did Not Converge in 50 Iterations.

Number of Trial Surfaces with Non-Converged FS = 1779

Number of Trial Surfaces With Valid FS = 221

Percentage of Trial Surfaces With Non-Converged and/or

Non-Valid FS Solutions of the Total Attempted = 89.0 %

Statistical Data On All Valid FS Values:
FS Max = 1.907 FS Min = 1.458 FS Ave = 1.673
Standard Deviation = 0.100 Coefficient of Variation = 5.97 %

Critical Surface is Sequence Number 8 of Those Analyzed.

*****BEGINNING OF DETAILED GEOSTASE OUTPUT FOR CRITICAL SURFACE FROM A SEARCH*****

BACK-CALCULATED CIRCULAR SURFACE PARAMETERS:

Circle Center At X = 79.072422(ft) ; Y = 461.584595(ft); and Radius = 46.189706(ft)

Circular Trial Failure Surface Generated With 29 Coordinate Points

Point No.	X-Coord. (ft)	Y-Coord. (ft)
1	55.27014	422.00000
2	57.88998	420.53836

Factor Of Safety For The Preceding Specified Surface = 1.458
Theta (fx = 1.0) = 26.65 Deg Lambda = 0.502

The Spencer Method Has Been Selected For Analysis.

Selected fx function = Constant (1.0)

SELECTED CONVERGENCE PARAMETERS FOR ANALYSIS METHOD:
Initial estimate of FS = 1.500
FS tolerance = 0.000001000
Initial estimate of theta(deg) = 15.00
Theta tolerance(radians) = 0.0001000
Minimum theta(deg) = -45.00 ; Maximum theta(deg) = 45.00
Theta convergence Step Factor = 5000.00
Maximum number of iterations = 50
Maximum force imbalance = 100.000000(lbs)
Maximum moment imbalance(if Applicable) = 100.000000 (ft/lbs)

Selected Lambda Coefficient = 1.00

Tension Crack Water Force = 0.00(lbs)

Specified Tension Crack Water Depth Factor = 0.000 (0.00% Filled)

Depth of Tension Crack (zo) at Side of Last Slice = 0.000(ft)

Depth of Water in Tension Crack = 0.000(ft)

Theoretical Tension Crack Depth = 11.199(ft)

NOTE: In Table 1 following, when a tension crack with water is present on the first slice (right facing slope) or on the last slice (left facing slope), the "side force" in the tension crack is set equal to the water pressure resultant.

*** Table 1 - Line of Thrust(if applicable) and Slice Force Data ***

SOIL OPTIONS:
A = ANISOTROPIC SHEAR STRENGTH
C = CURVED STRENGTH ENVELOPE (TANGENT PHI & C)
F = FIBER-REINFORCED SOIL (FRS)
M = INDEPENDENT MULTI-STAGE SHEAR STRENGTH
N = NONLINEAR UNDRAINED SHEAR STRENGTH
R = RAPID DRAWDOWN OR RAPID LOADING (SEISMIC) SHEAR STRENGTH
S = SHANSEP UNDRAINED SHEAR STRENGTH
NOTE: Phi and C in Table 4 are modified values based on specified Soil Options (if any).

Appendix F

APPENDIX E

GENERAL EARTHWORK AND GRADING SPECIFICATIONS

1.0 GENERAL

1.1 **Intent:** These General Earthwork and Grading Specifications are for the grading and earthwork shown on the approved grading plan(s) and/or indicated in the geotechnical report(s). These Specifications are a part of the recommendations contained in the geotechnical report(s). In case of conflict, the specific recommendations in the geotechnical report shall supersede these general Specifications. Observations of the earthwork by the project Geotechnical Consultant during grading may result in new or revised recommendations that could supersede these specifications or the recommendations in the geotechnical report(s).

1.2 **Geotechnical Consultant:** Prior to commencement of work, the project owner shall employ a geotechnical consultant. The geotechnical consultant shall be responsible for reviewing the approved geotechnical report(s) and accepting the adequacy of the preliminary geotechnical findings, conclusions, and recommendations prior to the commencement of grading.

Prior to commencement of grading, the Geotechnical Consultant shall review the "work plan" prepared by the Earthwork Contractor (Contractor) and schedule sufficient personnel to perform the appropriate level of observation, mapping, and compaction testing.

During grading and earthwork operations, the Geotechnical Consultant shall observe, map, and document the subsurface exposures to verify the geotechnical design assumptions. If the observed conditions are found to be significantly different than the interpreted assumptions during the design phase, the Geotechnical Consultant shall inform the owner, recommend appropriate changes in design to accommodate the observed conditions, and notify the review agency where required. Subsurface areas to be geotechnically observed, mapped, elevations recorded, and/or tested include natural ground after it has been cleared for receiving fill but before fill is placed, bottoms of all "remedial removal" areas, all keyway bottoms, and benches made on sloping ground to receive fill.

The Geotechnical Consultant shall observe the moisture-conditioning and processing of subgrade and fill materials and perform adequate relative compaction testing of fill to determine the attained level of compaction and assess if, in their opinion, if the work was performed in substantial compliance

with the geotechnical report(s) and these specifications. The Geotechnical Consultant shall provide test results to the owner on a routine and frequent basis.

1.3 **The Earthwork Contractor:** The Earthwork Contractor (Contractor) shall be qualified, experienced, and knowledgeable in earthwork logistics, preparation and processing of ground to receive fill, moisture-conditioning and processing of fill, and compacting fill. The Contractor shall review and accept the plans, geotechnical report(s), and these Specifications prior to commencement of grading. The Contractor shall be solely responsible for performing the grading in accordance with applicable grading codes, the project plans, and these specifications.

The Contractor shall prepare and submit to the owner and the Geotechnical Consultant a work plan that indicates the sequence of earthwork grading, the number of "spreads" of work and the estimated quantities of daily earthwork planned for the site prior to commencement of grading. The Contractor shall inform the owner and the Geotechnical Consultant of changes in work schedules and updates to the work plan at least 24 hours in advance of such changes so that appropriate observations and tests can be planned and accomplished. The Contractor shall not assume that the Geotechnical Consultant is aware of all grading operations.

The Contractor shall have the sole responsibility to provide adequate equipment and methods to accomplish the earthwork in accordance with the applicable grading codes and agency ordinances, these Specifications, and the recommendations in the approved geotechnical report(s) and grading plan(s). If, in the opinion of the Geotechnical Consultant, unsatisfactory conditions, such as unsuitable soil, improper moisture condition, inadequate compaction, insufficient buttress key size, adverse weather, etc., are resulting in a quality of work less than required in these specifications, the Geotechnical Consultant shall reject the work and may recommend to the owner that construction be stopped until the conditions are corrected.

2.0 PREPARATION OF FILL AREAS

2.1 **Clearing and Grubbing:** Areas to be excavated and filled shall be cleared and grubbed. Vegetation, such as brush, grass, roots, and other deleterious material, man-made structures, and similar debris shall be sufficiently removed and properly disposed of in a method acceptable to the owner, governing agencies, and the Geotechnical Consultant. Borrow areas shall be cleared and grubbed to the extent necessary to provide a suitable fill material.

Concrete fragments that are free of reinforcing street may be placed in fills, provided they are placed in accordance with Section 3 and 4. Earth fill material

shall not contain more than 1 percent of organic materials (by volume). No fill lift shall contain more than 5 percent organic matter. Nesting of organic materials shall not be allowed.

If potentially hazardous materials are encountered, the Contractor shall stop work in the affected area, and a hazardous material specialist shall be informed immediately for proper evaluation and handling of these materials prior to continuing to work in that area. As presently defined by the State of California, most refined petroleum products (gasoline, diesel fuel, motor oil, grease, etc.) have chemical constituents that are considered hazardous waste. As such, the indiscriminate dumping or spillage of such fluids may constitute a misdemeanor, punishable by fines and/or imprisonment, and shall not be allowed.

The Geotechnical Consultant shall not be responsible for the identification or analysis of potentially hazardous materials; however, if observations, odors, or soil discoloration are suspect, the Geotechnical Consultant may request from the owner the termination of grading operations until such materials are deemed not hazardous as defined by applicable laws and regulations.

2.2 **Evaluation/Acceptance of Fill Areas:** All areas to receive fill, including removal and processed areas, key bottoms, and benches, shall be observed, mapped, elevations recorded, and/or tested prior to being accepted by the Geotechnical Consultant as suitable to receive fill. The Contractor shall obtain a written acceptance from the Geotechnical Consultant prior to fill placement. A licensed surveyor shall provide the survey control for determining elevations of processed areas, keys, and benches.

2.3 **Processing:** Ground that has been declared satisfactory for support of fill by the Geotechnical Consultant shall be scarified to a minimum depth of 6 inches. Ground that is not satisfactory shall be removed/overexcavated as specified in the following section. Scarification shall continue until soils are broken down and free of large clay lumps or clods and the working surface is reasonably uniform, flat, and free of uneven features that would inhibit uniform compaction. After scarification, the surface should be moisture conditioned, as necessary, to achieve the proper moisture content and compacted in accordance with Section 4 of these specifications.

2.4 **Overexcavation:** In addition to removals and overexcavations recommended in the approved geotechnical report(s) and the grading plan, soft, loose, dry, saturated, spongy, organic-rich, highly fractured, or otherwise unsuitable ground shall be overexcavated to competent ground as recommended by the Geotechnical Consultant during grading.

2.5 **Benching:** Fills to be placed on ground sloping steeper than 5H:1V (horizontal to vertical units) shall be stepped or benched. The lowest bench or key shall be a minimum of 15 feet wide and at least 2 feet deep, into competent material as evaluated by the Geotechnical Consultant. Other benches shall be excavated a minimum height of 4 feet into competent material or as otherwise recommended by the Geotechnical Consultant. Fill placed on ground sloping flatter than 5:1 shall also be benched or otherwise overexcavated to provide a flat subgrade for fill placement.

3.0 FILL MATERIAL

3.1 **General:** Material to be used as fill shall be essentially free of organic matter and other deleterious substances evaluated and accepted by the Geotechnical Consultant prior to placement. Soils of poor quality, such as those with unacceptable gradation, high expansion potential, or low strength shall be placed in areas acceptable to the Geotechnical Consultant or mixed with other soils to achieve satisfactory fill material.

3.2 **Oversize:** Oversize material defined as rock, or other irreducible material with a maximum dimension greater than 12 inches, shall not be buried or placed in fill unless location, materials, and placement methods are specifically accepted by the Geotechnical Consultant. Placement operations shall be such that nesting of oversized material does not occur and that oversize material is completely surrounded by compacted or densified fill. Oversize material shall not be placed within 10 vertical feet of finish grade or within 2 feet of future utilities or other underground construction.

3.3 **Import:** If importing of fill material is required for grading, proposed import material shall meet the requirements of Section 3.1 and/or requirements defined in the project geotechnical report(s). The potential import source shall be given to the Geotechnical Consultant at least 48 hours (2 working days) before import begins so that suitability can be determined, and appropriate laboratory tests performed.

4.0 FILL PLACEMENT AND COMPACTION

4.1 **Fill Layers:** Approved fill material shall be placed in areas prepared to receive fill (per Section 3.0) in near-horizontal layers not exceeding 8 inches in loose thickness. The Geotechnical Consultant may accept thicker layers if testing indicates the grading procedures can adequately compact the thicker layers. Each layer shall be spread evenly and mixed thoroughly to attain relative uniformity of material and moisture throughout.

4.2 **Fill Moisture Conditioning:** Fill soils shall be watered, dried back, blended, and/or mixed, as necessary to attain a relatively uniform moisture content at or slightly over optimum. Maximum density and optimum soil moisture content tests shall be performed in accordance with ASTM International (ASTM Test Method D1557).

4.3 **Compaction of Fill:** After each layer has been moisture-conditioned, mixed, and evenly spread, it shall be uniformly compacted to not less than 90 percent of maximum dry density (ASTM Test Method D1557). Compaction equipment shall be adequately sized and be either specifically designed for soil compaction or of proven reliability to efficiently achieve the specified level of compaction and uniformity.

Compaction of Fill Slopes: In addition to normal compaction procedures specified above, compaction of slopes shall be accomplished by backrolling of slopes with sheepsfoot rollers at increments of 3 to 4 feet in fill elevation, or by other methods producing satisfactory results acceptable to the Geotechnical Consultant. Upon completion of grading, relative compaction of the fill, out to the slope face, shall be at least 90 percent of maximum density per ASTM Test Method D1557.

4.4 **Compaction Testing:** Field tests for moisture content and relative compaction of the fill soils shall be performed by the Geotechnical Consultant. Location and frequency of tests shall be at the Consultant's discretion based on field conditions encountered. Compaction test locations will not necessarily be selected on a random basis. Test locations shall be selected to verify adequacy of compaction levels in areas that are judged to be prone to inadequate compaction (such as close to slope faces and at the fill/bedrock benches).

4.5 **Frequency of Compaction Testing:** Tests shall be taken at intervals required by the governing agency and as deemed necessary by the Geotechnical Consultant in order to adequately qualify the fill material. In general, it should be anticipated that tests will be taken at intervals not exceeding 2 feet in vertical rise and/or 1,000 cubic yards of compacted fill, unless recommended otherwise by the Geotechnical Consultant. In addition, test(s) shall be taken on slope faces and/or each 10 feet of vertical height of slope as deemed necessary by the Geotechnical Consultant. The Contractor shall assure that fill construction is such that the testing schedule can be accomplished by the Geotechnical Consultant. The Contractor shall stop or slow down the earthwork construction if these minimum standards are not met.

4.6 **Compaction Test Locations:** The Geotechnical Consultant shall document the approximate elevation and location of each compaction test. The Contractor shall coordinate with the project surveyor to assure that sufficient grade stakes are established so the Geotechnical Consultant can determine the test locations with sufficient accuracy. At a minimum, two grade stakes within a horizontal distance of 100 feet and vertically less than 5 feet apart from potential test locations shall be provided. Alternatively, GPS units may be used to determine the approximate location/coordinates of the field density tests.

5.0 SUBDRAIN INSTALLATION

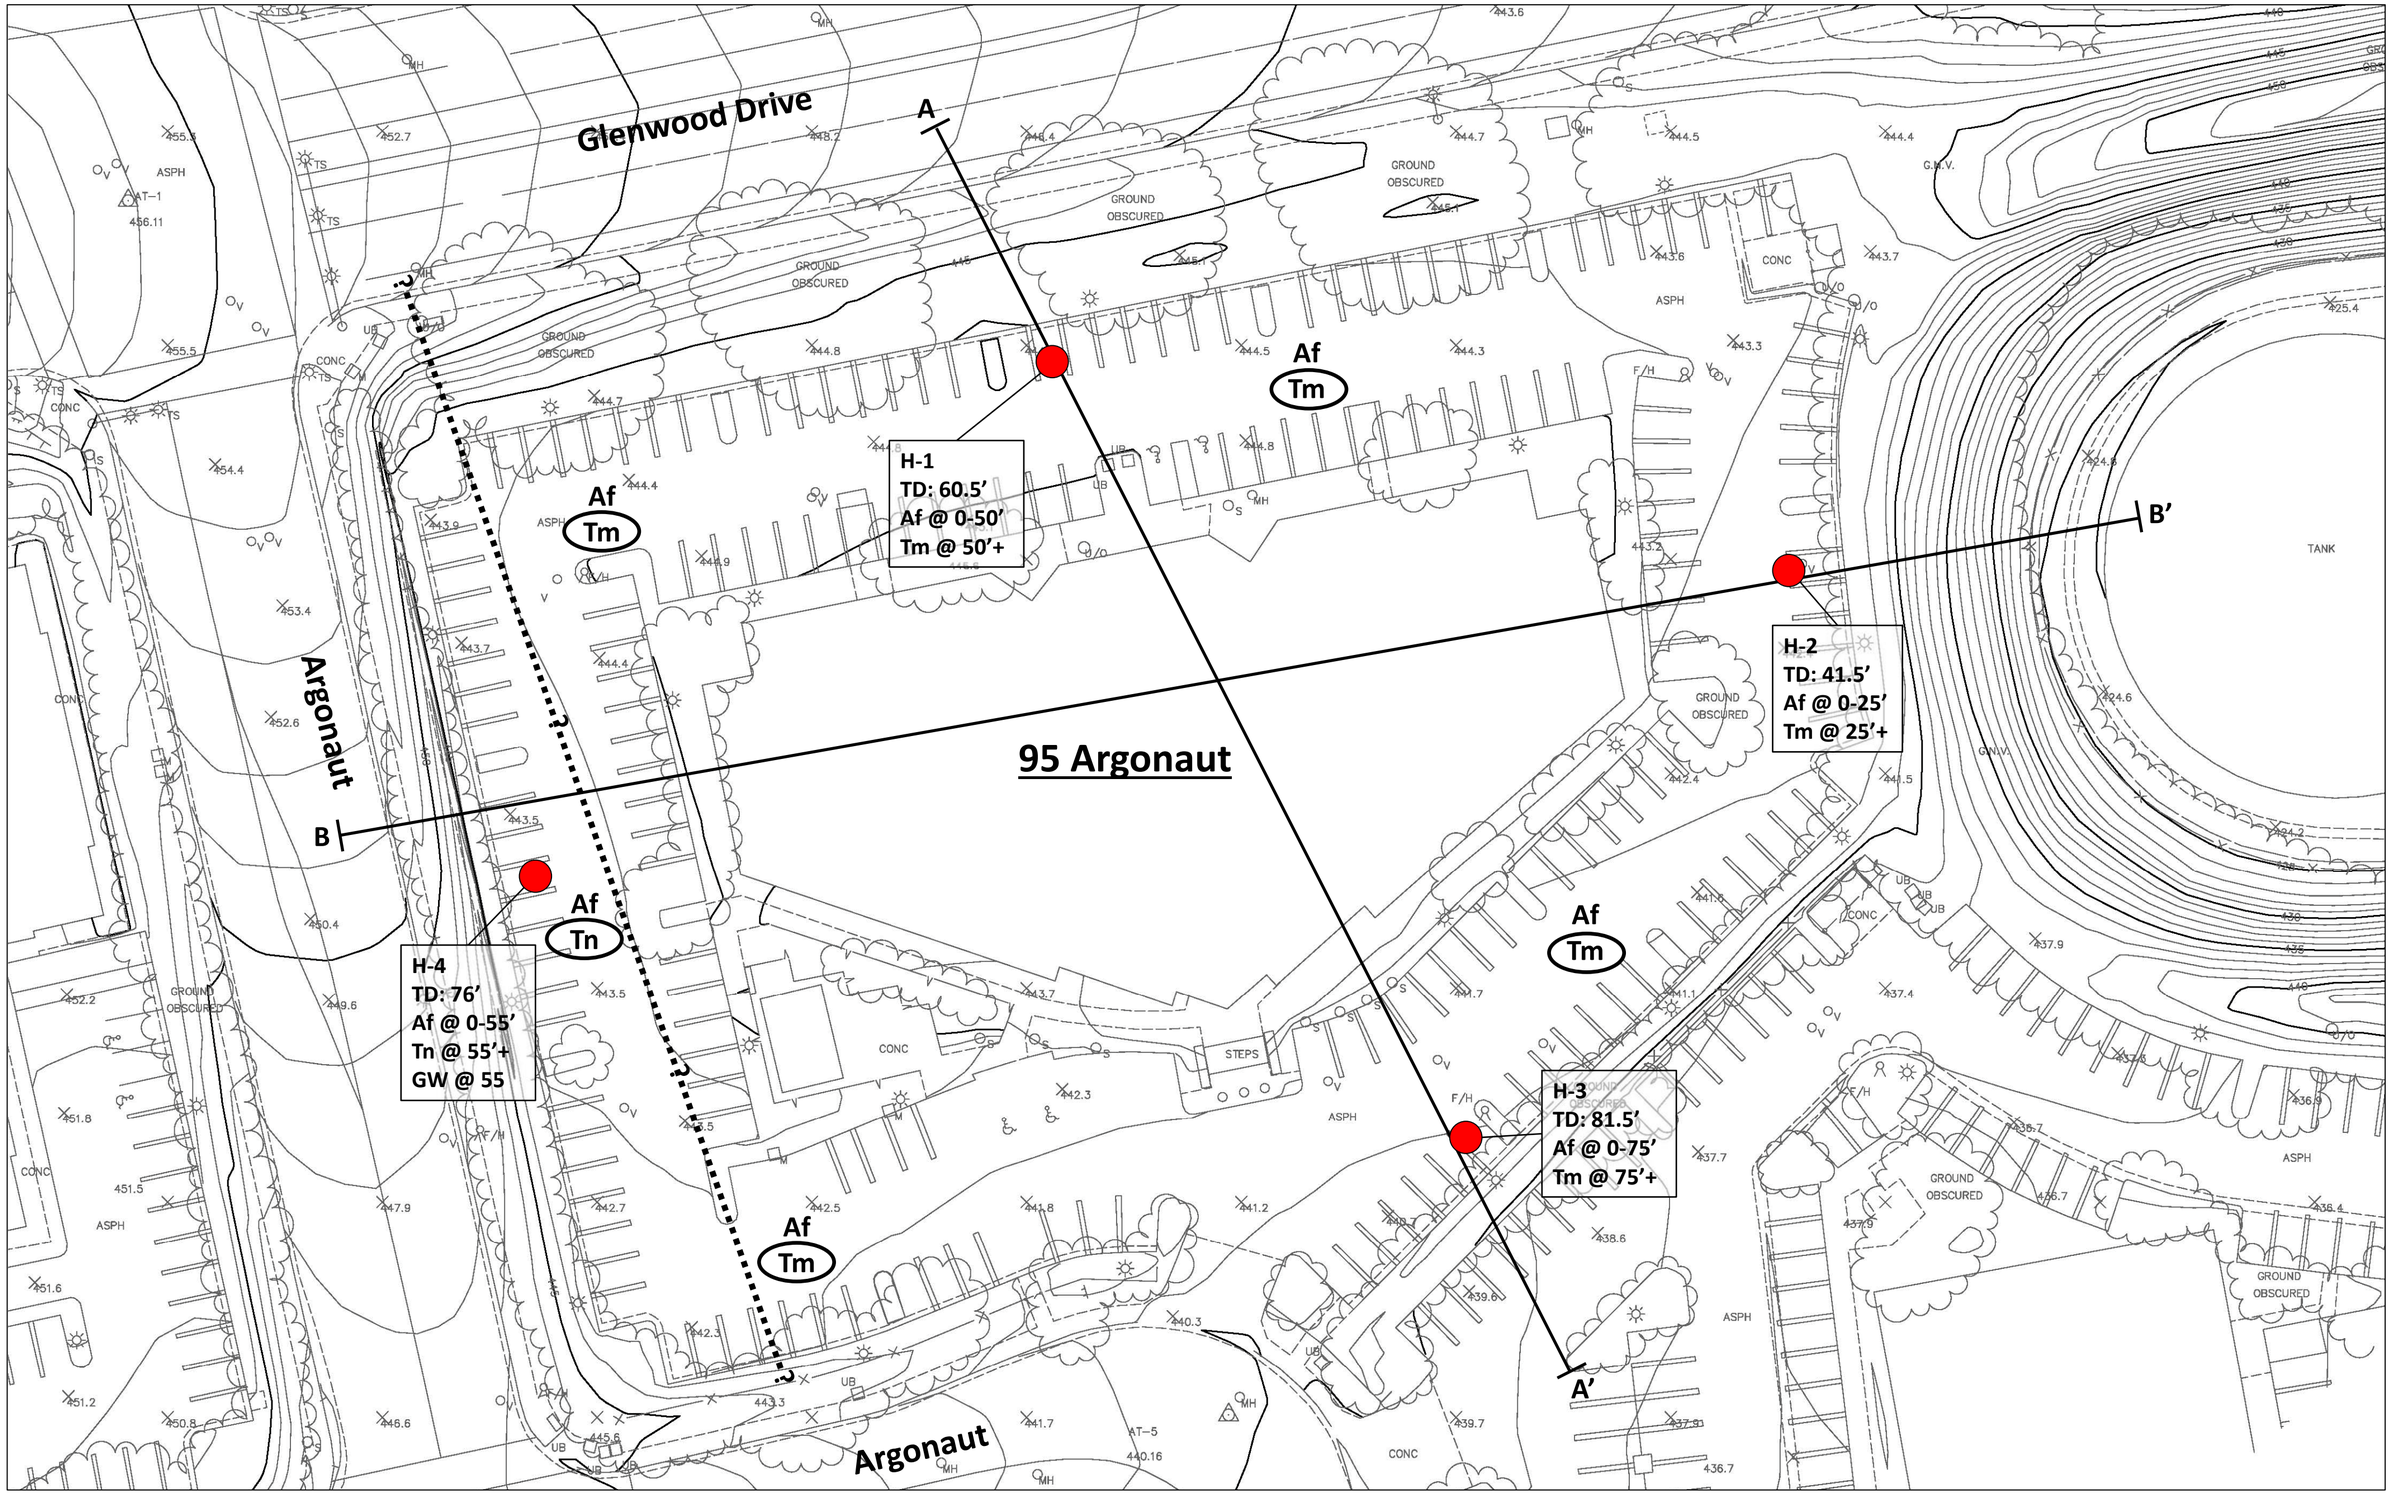
Subdrain systems shall be installed in accordance with the approved geotechnical report(s), the grading plan, and standard details. The Geotechnical Consultant may recommend additional subdrains and/or changes in subdrain extent, location, grade, or material depending on conditions encountered during grading. All subdrains shall be surveyed for line and grade after installation and prior to burial. Sufficient time should be allowed by the Contractor for these surveys. The Contractor should consider videoing the subdrains shortly after burial to check proper installation and functionality. The Contractor is responsible for the performance of subdrains.

6.0 EXCAVATION

Excavations, including over-excavation for remedial purposes, shall be evaluated by the Geotechnical Consultant during grading. Remedial removal depths shown on geotechnical report(s) and plans are estimates. The actual extent of removal shall be determined by the Geotechnical Consultant based on the field evaluation of exposed conditions during grading. Where fill-over-cut slopes are to be graded, the cut portion of the slope shall be made, evaluated, and accepted by the Geotechnical Consultant prior to placement of materials for construction of the fill portion of the slope, unless otherwise recommended by the Geotechnical Consultant.

7.0 TRENCH BACKFILLS

7.1 Contractor shall follow all OHSA and Cal/OSHA requirements for safety of trench excavations.



7.2 Bedding and backfill of utility trenches shall be done in accordance with the applicable provisions of Standard Specifications of Public Works Construction. Bedding material shall have a Sand Equivalent greater than 30 (SE>30). The bedding shall be placed to 1 foot over the top of the conduit and densified by jetting. Backfill shall be placed and densified to a minimum 90 percent of maximum from 1 foot above the top of the conduit to the surface, except in traveled ways (see Section 7.6 below).

7.3 Jetting of the bedding around the conduits shall be observed by the Geotechnical Consultant.

7.4 Geotechnical Consultant shall test the trench backfill for relative compaction. At least one test should be made for every 300 feet of trench and 2 feet of fill, unless required differently by the governing agency or the Geotechnical Consultant.

7.5 Lift thickness of trench backfill shall not exceed those allowed in the Standard Specifications of Public Works Construction unless the Contractor can demonstrate to the Geotechnical Consultant that the fill lift can be compacted to the minimum relative compaction by his alternative equipment and method.

7.6 Trench backfill in the upper foot measured from finish grade within existing or future traveled way, shoulder, and other paved areas (or areas to receive pavement) should be placed to a minimum 95 percent relative compaction.

Good afternoon Mr. Welch

Henry Welch
ES Analyst
hwelch@fcs-intl.com
Subject: Customer request for OCFA assistance / 95 Argonaut Aliso Viejo / Residential Project CEQA / EIR

Your email request for assistance was sent to me. OCFA will need to formally process and document your request for CEQA / EIR comments. Kim Gomi is our permit supervisor and will be handling the intake process, Todd Letterman is my Assistant Fire Marshal that will be reviewing your request and sending you a formal response. In advance, our comments are as follows:

1. OCFA has the ability to provide fire protection services to this site.
2. This project will require an OCFA Secured Fire Protection Agreement.

Kim Gomi / Permit Supervisor
714-573-6259
kimgomi@ocfa.org

Todd Letterman/ Assistant Fire Marshal / Plan Review Section
714-573-6102
toddletterman@ocfa.org

Respectfully,

Eric Evans
Deputy Fire Marshal – Planning & Development
Orange County Fire Authority
Office: 714.573.6101

In service of others!

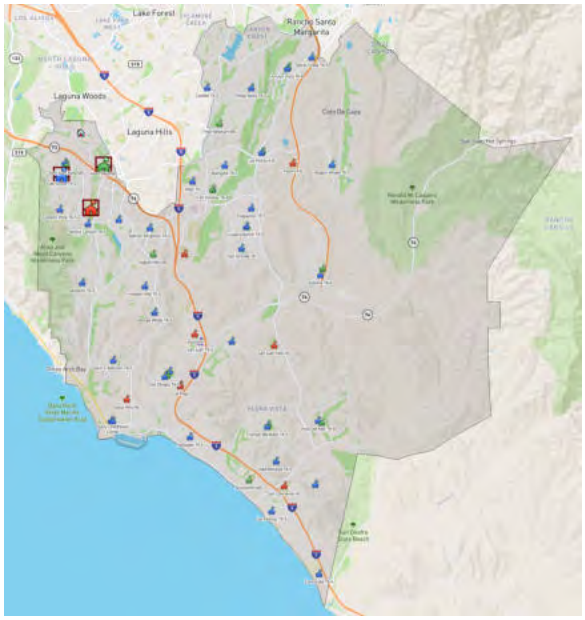
Re: 95 Argonaut Residential Project – School Services

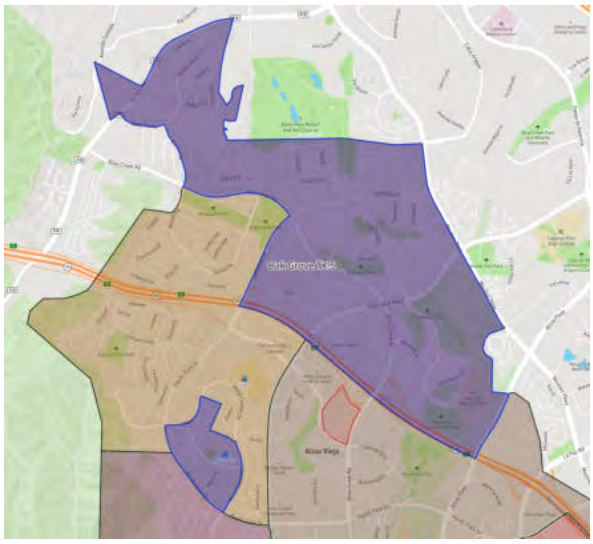
From Hampton, Clark D. <CDHAMPTON@capousd.org>
Date Tue 12/17/2024 1:06 PM
To Henry Welch <hwelch@fcs-intl.com>
Cc Alex Ortiz <aortiz@fcs-intl.com>

Caution: This is an external email and may contain suspicious subject or content. Please take care when clicking links or opening attachments. When in doubt, please contact your IT Department



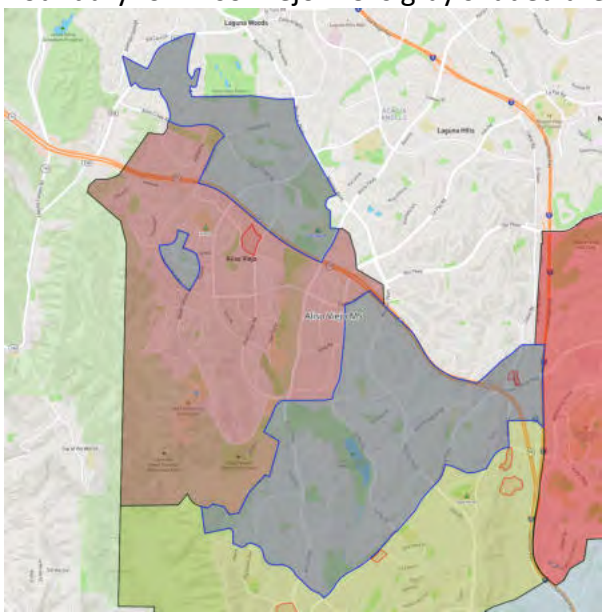
Mr. Welch,

I answered the service questions from the letter below. Please let me know if you have any questions.

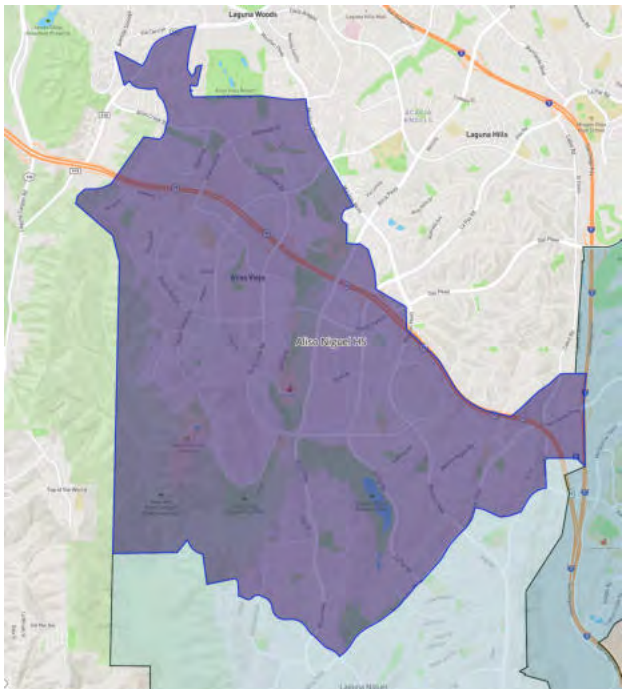


Service Questions

1. Please identify the Capistrano Unified School District's (CUSD) area of enrollment.



The entire CUSD district is shaded in below map:



The schools that serve the address (95 Argonaut) are:
Oak Grove Elementary School
Boundary for Oak Grove is purple shaded area

Aliso Viejo Middle School
Boundary for Aliso Viejo MS is gray shaded area

Aliso Niguel High School
Boundary for Aliso Niguel HS is purple shaded area

2. Please provide an estimate of the current standard student generation factors for elementary, middle, and high school students used by the CUSD and the target student enrollment that CUSD would like to achieve.

The student projections for the project are:
TK—5 13
6–8 4
9–12. 5
Total 23

3. Please describe concerns related to potential population growth associated with the Housing Development Project. Please describe any measures that you would recommend to reduce potential concerns/challenges.

CUSD can accommodate the number of students from the development. The developer will be required to pay Level 1 Developer Fees.

Thank you

Clark

| Clark Hampton | Deputy Superintendent, Business and Support Services |

| Capistrano Unified School District | 33122 Valle Road, San Juan Capistrano, CA 92675 | (949) 234-9211

"A school isn't only a building. It's an expression of beliefs and attitudes about ourselves and the generations of young people for whom it is planned. In its silent language of space, scale and shape, the structure stands for what we are, what we think

of ourselves and what we believe we can become."

Subject: RE: 95 Argonaut Residential Project – School Services

Dear Deputy Superintendent Clark Hampton,

FirstCarbon Solutions (FCS) is preparing a Draft Initial Study/Mitigated Negative Declaration (Draft IS/MND) to identify any potential environmental impacts that would result from implementation of the 95 Argonaut Residential Project in the City of Aliso Viejo, California that requires review under the California Environmental Quality Act (CEQA).

The attached pdf shows the full letter with project description as well as relevant exhibits maps showing the proposed rezoning areas. Inside you will find the Service Questions we have for School Services.

We greatly appreciate your expertise and assistance in this matter. Your responses will help us ensure that our analysis is accurate and complete. To ensure a timely completion of our analysis, please provide your response via e-mail no later than the End of December 2024. I understand the Holidays make for unusual schedules. If you have any questions, please contact me by email at hwelch@fcs-intl.com

Thank you again and I wish you the best during these Holidays.
Sincerely

Henry Welch
ES Analyst

FW: 95 Argonaut Residential Project – Park Services

From So Kim <SKim@avcity.org>
Date Tue 12/17/2024 5:08 PM
To Henry Welch <hwelch@fcs-intl.com>
Cc Lizzy Mendoza <LMendoza@AVCity.org>; Shaun Pelletier <spelletier@AVCity.org>

Caution: This is an external email and may contain suspicious subject or content. Please take care when clicking links or opening attachments. When in doubt, please contact your IT Department

Hi Henry,
Provided below are responses from the City.

1. Please identify the current parks and recreational facility centers of the Aliso Viejo Recreation & Community Services. Please describe the existing conditions of these parks and recreational facility centers. The City oversees the operations at the Aliso Viejo Ranch, Iglesia Community Center, the Aliso Viejo Aquatic Center, and the Aliso Viejo Center. The City owns and manages Iglesia Park and Vista Park. All these facilities and parks are in great condition.
2. Please identify current park and recreational facility center usage for the City. Aliso Viejo Ranch hosts all rental and recreational programs for the City. This facility is managed by the Recreation & Community Services Department. The Iglesia Community Center and Park is a space managed by the Boys & Girls Club of Capistrano Valley as an after-school program for youth in the community. The Aliso Viejo Aquatic Center is managed by Premier Aquatics for swimming lessons. The Aliso Viejo Center is managed by Wedgewood Weddings as a banquet center.
3. Please provide an estimate of the current park acres per 1,000 residents and the target ratio that the Aliso Viejo Recreation & Community Services would like to achieve. The City owns and manages Vista Park and Iglesia Park. The total acreage of these two parks is 7.4 acres. The Master Homeowners Association is responsible for 21 parks and 600 acres of landscape. The City's Conservation/Open Space Element states that as of 2003, the City had a ratio of 5.37 acres of parkland per 1,000 residents. It further states that the standard is 5 acres per 1,000 residents and that new development shall provide fees or dedicate land per the City's code.
4. Please describe concerns related to potential population growth associated with the proposed project. Please describe any measures that you would recommend to reduce potential concerns/challenges. The proposed project may have several concerns related to population rise, such as, potential increase to traffic/congestion, strain on infrastructure, change in character of the immediate and larger area, and other environmental impacts, etc. Examples of mitigation measures may include some type of improvement or upgrades to traffic management, infrastructure, police/fire services etc.

So Kim | Director of Community Development

Hello,

My name is Henry Welch and I had a quick question about the total square footage/acres of the 21 parks under the AVCA in Aliso Viejo . On the home page, I see that there is "21 parks and 600 acres of landscape", but I was curious in just park area itself.

I'm researching the current Parkland to resident ratio for the City.
Thank you so much for your assistance and I wish you a lovely Holiday Season.

Service Questions

1. Please identify the Aliso Viejo Library's current library membership for the City.

OC Public Libraries (OCPL) provides library services to the City of Aliso Viejo through its systemwide network of 32 branches across the county. Membership is not specific to individual branches, meaning that residents of Aliso Viejo have access to resources and services throughout the entire OCPL system.

Because the library closed in early 2024 for a tenant enhancement project, statistics provided are from the calendar year 2023. That year the Aliso Viejo Library had 140,931 visitors, with an average daily attendance of 470 people.

2. Please provide an estimate of the current Aliso Viejo Library services demand and the target ratio that the Aliso Viejo Library would like to achieve.

The site is currently closed for tenant enhancements but will reopen in 2025, with services targeting all ages from toddlers to seniors. Based on other remodel projects, upon reopening an increase in usage is expected as the space will be redesigned to include quiet study rooms, more electricity, seating available throughout the branch, and a new program room added for events.

3. Please describe concerns related to potential population growth associated with the project. Please describe any measures that you would recommend to reduce potential concerns/challenges.

The projected increase of 61 townhomes at an average resident count of 3 people per unit (estimate of 183 new residents) would not have a significant impact on the library and its services. The branch is two miles from the proposed project, and we would welcome those in the new community to visit the branch and see what OCPL has to offer.

Subject: RE: 95 Argonaut Residential Project – Library Services

Attention: This email originated from outside the County of Orange. Use caution when opening attachments or links.

Dear Aliso Viejo Library Staff,

FirstCarbon Solutions (FCS) is preparing a Draft Initial Study/Mitigated Negative Declaration (Draft IS/MND) to identify any potential environmental impacts that would result from implementation of the 95 Argonaut Residential Project in the City of Aliso Viejo, California that requires review under the California Environmental Quality Act (CEQA).

The attached pdf shows the full letter with project description as well as relevant exhibits maps showing the proposed rezoning areas. Inside you will find the Service Questions we have for Library Services.

We greatly appreciate your expertise and assistance in this matter. Your responses will help us ensure that our analysis is accurate and complete. To ensure a timely completion of our analysis, please provide your response via e-mail no later than the End of December 2024. I understand the Holidays make for unusual schedules. If you have any questions, please contact me by email at hwelch@fcs-intl.com

Thank you again and I wish you the best during these Holidays.
Sincerely

Henry Welch

JOB NO: 16039-01 VMT

ARGONAUT RESIDENTIAL VEHICLE MILES TRAVELED (VMT) SCREENING EVALUATION

Urban Crossroads, Inc. has completed a Vehicle Miles Traveled (VMT) Screening Evaluation for the Argonaut Residential development (**Project**), which is located at 95 Argonaut (on the southeast corner of Glenwood Drive and Argonaut) in the City of Aliso Viejo.

PROJECT OVERVIEW

The Project site is located at 95 Argonaut which is currently developed with a 49,975-square-foot office building. The existing office building is currently occupied. The Project includes demolition of the existing structures on-site for the development of 61 3-story (12 2-bedroom, 26 3-bedroom, and 24 4-bedroom units) townhomes on approximately 2.85 acres. A site plan for the proposed Project is found in Attachment A.

BACKGROUND

The California Environmental Quality Act (CEQA) requires all lead agencies to adopt VMT as the measure for identifying transportation impacts for land use projects. To comply with CEQA, the City of Aliso Viejo adopted Transportation Impact Guidelines for CEQA and General Plan Consistency (May 2022) (1) (**City Guidelines**). This VMT screening has been prepared based on the adopted City Guidelines.

VMT SCREENING

City Guidelines outline appropriate screening criteria for identifying when a proposed land use project is expected to have a less-than-significant impact, thus avoiding the need for a more detailed analysis.

The screening criteria are divided into the following:

- Step 1: Transit Priority Areas (TPA) Screening
- Step 2: Low VMT Area Screening

- Step 3: Project Type Screening

A land use project needs only to meet one of the above screening criteria to result in a less than significant impact.

STEP 1: TRANSIT PRIORITY AREAS (TPA) SCREENING

Consistent with guidance identified in the City Guidelines, projects located within a Transit Priority Area (TPA) or High-Quality Transit Area (HQTA) (i.e., within ½ mile of an existing "major transit stop"[1] or an existing stop along a "high-quality transit corridor"[2]) may be presumed to have a less than significant impact absent substantial evidence to the contrary. However, the presumption may not be appropriate if a project:

- Has a Floor Area Ratio (FAR) of less than 0.75;
- Is inconsistent with the applicable Sustainable Communities Strategy (as determined by the lead agency, with input from the Metropolitan Planning Organization); or
- Replaces affordable residential units with a smaller number of moderate- or high-income residential units.

Consistent with City Guidelines, Aliso Viejo does not have any TPAs within the City.

TPA screening criteria is not met.

STEP 2: LOW VMT AREA SCREENING

As noted in the City Guidelines, projects located in low VMT areas (below the City of Aliso Viejo General Plan Buildout average) are presumed to be less than significant. The sub-regional Orange County Transportation Analysis Model (OCTAM) version 5.1 was used to measure VMT performance within individual traffic analysis zones (TAZs) in the Orange County region. The Project's physical location in OCTAM was used to determine VMT generated by the existing TAZ as compared to the City's impact threshold of General Plan Buildout average VMT per service population. Based on the OCTAM model results, the City's General Plan Buildout average is 26.2 VMT per service population is shown in Table 1.

TABLE 1: CITY OF ALISO VIEJO VMT PER CAPITA

	General Plan Buildout
Service Population	73,056
Total VMT	1,914,152
Threshold VMT per Service Population	26.2

The TAZ containing the proposed Project (TAZ 1542) was selected, and the OCTAM base year (2019) and horizon year (2050) models were used to calculate the baseline (2025) VMT per service population measure using straight-line interpolation, as shown in Table 2.

[1] Pub. Resources Code, § 21064.3 ("'Major transit stop' means a site containing an existing rail transit station, a ferry terminal served by either a bus or rail transit service, or the intersection of two or more major bus routes with a frequency of service interval of 15 minutes or less during the morning and afternoon peak commute periods.").
[2] Pub. Resources Code, § 21155 ("For purposes of this section, a high-quality transit corridor means a corridor with fixed route bus service with service intervals no longer than 15 minutes during peak commute hours.").

TABLE 2: EXISTING TAZ 1542 VMT PER SERVICE POPULATION

	Baseline
Service Population	3,398
Total VMT	96,124
VMT per Service Population	28.3
City Threshold VMT per Service Population	26.2
Is TAZ 1542 in a Low VMT Area?	No

The Project's TAZ 1542 was shown to generate 28.3 VMT per service population, exceeding the General Plan buildout VMT per service population. Therefore, the Project is not located within a low VMT-generating area.

Low VMT Area screening criteria is not met.

STEP 3: PROJECT TYPE SCREENING

The City Guidelines state that local serving uses such as; day care centers, non-destination hotels, affordable housing, places of worship, municipal services, and other local essential services may also be presumed to have a less than significant impact as local serving in nature and would tend to shorten vehicle trips. The Project does not include any local serving uses.

The City Guidelines also consider small projects that generate fewer than 110 net new daily vehicle trips to have a less than significant VMT impact. The Argonaut Residential Trip Generation Assessment (Urban Crossroads, June 2025) estimates the Project to generate a net increase of 79 daily vehicle trips, which does not exceed the 110 daily vehicle trip threshold.

Small Projects screening criteria is met.

CONCLUSION

Based on our review of the City's VMT screening types, the Project meets the Project Type screening criteria and is considered to have a less than significant VMT impact; no additional VMT analysis is required.

If you have any questions, please contact me directly at aso@urbanxroads.com.

ARGONAUT RESIDENTIAL TRIP GENERATION ASSESSMENT

Urban Crossroads, Inc. is pleased to provide the following Trip Generation Assessment for the Argonaut Residential development (**Project**), located at 95 Argonaut (on the southeast corner of Glenwood Drive and Argonaut) in the City of Aliso Viejo. This trip generation assessment describes the proposed Project trip generation and determines whether any traffic operations analysis is required based on the City's Transportation Impact Guidelines for CEQA and General Plan Consistency (**City Guidelines**), dated May 2020. The purpose of the following trip generation assessment is to determine if any additional peak hour intersection operations analysis is required based on the City Guidelines.

PROPOSED PROJECT

The Project site is located at 95 Argonaut which is currently developed with a 49,975-square-foot office building. The existing office building is currently occupied (the occupancy rate at the time of the driveway counts in May 2024 was 45 percent). The Project includes demolition of the existing structures on-site for the development of 61 3-story (12 2-bedroom, 26 3-bedroom, and 24 4-bedroom units) townhomes on approximately 2.85 acres. A preliminary site plan for the proposed Project is shown in Exhibit 1. As indicated in Exhibit 1, access to the site will be accommodated via Argonaut.

EXHIBIT 1: PRELIMINARY SITE PLAN

TRIP GENERATION

Trip generation represents the amount of traffic which is both attracted to, and produced by, a development. Determining traffic generation for a specific project is therefore based upon forecasting the amount of traffic that is expected to be both attracted to, and produced by, specific land uses being proposed for a given development.

EXISTING USE

As noted previously, the site is currently developed with an occupied 49,975-square-foot office building. In an effort to understand the existing traffic associated with the existing uses, traffic counts were collected at all applicable driveways on Tuesday, May 7, 2024, through Thursday, May 9, 2024. Table 1 below summarizes the average existing trip generation based on the count data collected over the three consecutive days for the existing used located at 95 Argonaut. The existing site generates an average of 150 two-way trips per day, with 17 trips during the AM peak hour and 11 trips during the PM peak hour. A detailed summary of the count data collected at 95 Argonaut is provided in Attachment A.

TABLE 1: EXISTING OFFICE TRIP GENERATION SUMMARY (EMPIRICAL DATA)

	AM Peak Hour			PM Peak Hour			
Existing Surveyed Site	In	Out	Total	In	Out	Total	Daily
Existing Use: 95 Argonaut[1]							
Passenger Cars:	15	2	17	3	8	11	142
2-axle Trucks:	0	0	0	0	0	0	6
3-axle Trucks:	0	0	0	0	0	0	2
Average Total Trips (45% Occupancy)	**15**	**2**	**17**	**3**	**8**	**11**	**150**

[1] Average data presented based on driveway counts conducted on May 7th through May 9th, 2024.

At the time the driveway counts were conducted for the existing office use, the building was not fully occupied. The building was approximately 45 percent occupied at the time the driveway counts were conducted in May 2024. As such, in order to consider the by-right office use trip generation associated with the existing use, the trip generation in Table 1 was increased to account for the 55 percent vacancy. Table 2 summarizes the existing office use trip generation, which is anticipated to generate 333 two-way trips per day with 38 AM peak hour trips and 24 PM peak hour trips at full occupancy.

Table 2: Existing Office Trip Generation Summary (100% Occupancy)

	AM Peak Hour			PM Peak Hour			
Existing Surveyed Site	In	Out	Total	In	Out	Total	Daily
Existing Use: 95 Argonaut[1]							
Passenger Cars:	33	5	38	6	19	24	316
2-axle Trucks:	0	0	0	0	0	0	13
3-axle Trucks:	0	0	0	0	0	0	4
Average Total Trips (100% Occupancy)	**33**	**5**	**38**	**6**	**19**	**24**	**333**

[1] Average May 7th through May 9th, 2024 count data increased for full occupancy.

PROPOSED PROJECT

The proposed Project includes the redevelopment of the site to accommodate 62 3-story townhomes. Trip generation estimates for the proposed Project have been developed using data from the ITE Trip Generation Manual (11th Edition, 2021) for Multifamily (Low-Rise) Housing (ITE Land Use Code 220). Table 3 summarizes the ITE trip generation rates and the resulting Project trip generation. The proposed Project is anticipated to generate 418 two-way trips per day with 25 AM peak hour trips and 32 PM peak hour trips.

TABLE 3: PROPOSED PROJECT TRIP GENERATION SUMMARY

Land Use	ITE LU Code	Units[1]	AM Peak Hour In	AM Peak Hour Out	AM Peak Hour Total	PM Peak Hour In	PM Peak Hour Out	PM Peak Hour Total	Daily
Trip Generation Rates:[2]									
Multifamily Housing (Low-Rise)	220	DU	0.10	0.30	0.40	0.32	0.19	0.51	6.74

Land Use	Quantity	Units[1]	AM Peak Hour In	AM Peak Hour Out	AM Peak Hour Total	PM Peak Hour In	PM Peak Hour Out	PM Peak Hour Total	Daily
Trip Generation Summary:									
Multifamily Housing (Low-Rise)	61	DU	6	19	25	20	12	32	412

[1] DU = Dwelling Units

[2] Trip Generation Source: Institute of Transportation Engineers (ITE), Trip Generation Manual, Eleventh Edition (2021).

TRIP GENERATION COMPARISON

The trip generation for the proposed Project and the net change in trips as compared to the existing office use (assuming 100% occupancy) are summarized in Table 4. As shown in Table 4, the proposed Project is anticipated to result in a net increase of 79 two-way trips per day with a net reduction of 13 AM peak hour trips and a net increase of 8 PM peak hour trips as compared to the existing office use (per Table 2).

TABLE 4: TRIP GENERATION COMPARISON

	Quantity	Units[1]	AM Peak Hour In	AM Peak Hour Out	AM Peak Hour Total	PM Peak Hour In	PM Peak Hour Out	PM Peak Hour Total	Daily
Existing Use: Office (Table 2)	49.975	TSF	33	5	38	6	19	24	333
Proposed Project: Residential	62	DU	6	19	25	20	12	32	412
Net Change in Trips			**-27**	**14**	**-13**	**14**	**-7**	**8**	**79**

[1] TSF = Thousand Square Feet; DU = Dwelling Units

FINDINGS

The City Guidelines require a Traffic Impact Analysis (TIA) if a project generates more than 100 vehicle trips during either the AM or PM peak hours, generate more than 1,600 vehicles per day (ADT), or if a project adds more than 51 peak hour trips to either the AM or PM peak hours to any intersection. As shown in both Table 4, the Project is anticipated to generate fewer than 1,600 net new daily trips and fewer than 50 net new peak hour trips. As such, additional traffic analysis is not required for this Project based on the City Guidelines. The City reserves the right to require additional traffic analysis in the event there are safety concerns, a project is located in a sensitive area, access/operational issues, presence of nearby substandard intersection or roadway segment, and/or request from an affected agency.

If you have any questions or comments, I can be reached at cso@urbanxroads.com.

PREFACE

Section 21081.6 of the California Environmental Quality Act (CEQA) and CEQA Guidelines Section 15097 require a Lead Agency to adopt a Mitigation Monitoring and Reporting Program (MMRP) whenever it adopts a Mitigated Negative Declaration (MND) in conjunction with a project approval. The purpose of the MMRP is to ensure compliance with the mitigation measures occurs during project implementation.

The Draft IS/MND prepared for the proposed 95 Argonaut Street Residential Project (proposed project) concluded that project implementation could result in potentially significant effects on the environment, and mitigation measures were incorporated into the proposed project or are required as a condition of project approval that reduce these potential impacts to a less than significant level. This MMRP documents how and when the mitigation measures adopted by the Lead Agency will be implemented and confirms that potential environmental impacts are reduced to less than significant levels as identified in the Draft IS/MND.

This document does not discuss those subjects that the environmental analysis demonstrates would result in less than significant impacts and for which no mitigation was proposed or necessary.

Table 1: 95 Argonaut Residential Project Mitigation Monitoring and Reporting Program

Requirements	Method of Verification	Timing of Verification	Responsible for Verification	Verification of Completion	
				Date	Initial
2.4 Biological Resources					
MM BIO-1a: Nesting Bird Pre-construction Surveys If ground-disturbing or vegetation-removing construction activities or tree removal is proposed during the breeding/nesting season for migratory birds (February 1 through September 15), a qualified Biologist shall conduct pre-construction surveys for special-status birds and other migratory birds within the construction area, including a 300-foot survey buffer (where accessible), no more than 3 days prior to the start of ground-disturbing activities in the construction area.	Review and approval of pre-construction survey report prepared by a qualified Biologist	Prior to the start of ground-disturbing or vegetation-removing construction activities during the breeding/nesting season (February 1 to September 15)	City of Aliso Viejo Planning Department		
MM BIO-1b: Avoidance of Active Avian Nests If an active nest (i.e., occupied by eggs or fledglings) is located during pre-construction surveys or at any point during the construction phase of the proposed project, the City of Aliso Viejo shall be notified regarding the status of the nest. Furthermore, construction activities shall be restricted as necessary to avoid disturbance of the nest until the eggs or fledglings no longer are in the nest or a qualified Biologist deems disturbance potential to be minimal. Restrictions may include establishment of exclusion zones (no ingress of personnel or equipment at a minimum radius of 300 feet around an active raptor nest and a 50-foot radius around an active migratory bird nest) or alteration of the construction schedule.	Provide notification to the City of Aliso Viejo, establish exclusion zones on construction plans or alter the construction schedule; monitoring of construction site by a qualified Biologist; periodic site inspection	Prior to and during construction	City of Aliso Viejo Planning Department		
2.5 Cultural Resources					
MM CUL-1: Prior to the initiation of construction activities, all construction personnel conducting ground disturbance at the site	Verify retention of a qualified Archaeologist;	WEAP training shall occur prior to the	City of Aliso Viejo Planning Department		

Requirements	Method of Verification	Timing of Verification	Responsible for Verification	Verification of Completion	
				Date	Initial
shall be provided a Worker Environmental Awareness Program (WEAP) cultural resources "tailgate" training. The training shall include visual aids, a discussion of applicable laws and statutes relating to archaeological resources, types of resources that may be found within the project site, and procedures to be followed in the event such resources are encountered. The training shall be conducted by an Archaeologist who meets the Secretary of the Interior's Professional Qualification Standards for archaeology. An Archaeologist who meets the Secretary of the Interior's Professional Qualification Standards for archaeology shall conduct an updated survey of the site following demolition and exposure of native soils and prior to any project-related trenching or grading to check for the inadvertent exposure of cultural materials. This shall be followed by archaeological monitoring during the grading and trenching phase of the proposed project. At the completion of these phases, archaeological monitoring shall be reduced to periodic "spot checks." In the event exposed soils indicate cultural materials may be present, this may be followed by regular or full-time archaeological monitoring as determined by the Archaeologist.	Verify Worker Environmental Awareness Program (WEAP) training; Site inspection and submittal of documentation	initiation of construction activities; Updated site survey shall occur after demolition and exposure of native soils and prior to any project-related trenching or grading; Archaeological monitoring shall occur during grading and trenching			
MM CUL-2: In the event that buried archaeological resources are discovered during construction, operations shall stop within a 100-foot radius of the find and an Archaeologist who meets the Secretary of Interior's Professional Qualification Standards for archaeology shall be consulted to determine whether the resource requires further study. The qualified Archaeologist shall make recommendations to the Lead Agency on the measures that shall be implemented to protect the discovered resources, including but not limited to excavation of the finds and evaluation of the finds in	Site inspection; submittal of documentation; Submission of DPR forms; and incorporation of final Cultural Mitigation Measures, if any, into	During construction; upon discovery of buried archaeological resources	City of Aliso Viejo Planning Department		

Requirements	Method of Verification	Timing of Verification	Responsible for Verification	Verification of Completion	
				Date	Initial
accordance with Section15064.5 of the CEQA Guidelines. Potentially significant cultural resources consist of but are not limited to stone, bone, fossils, wood, or shell artifacts or features, including hearths, structural remains, or historic dumpsites. Any previously undiscovered resources found during construction within the project area shall be recorded on appropriate California Department of Parks and Recreation (DPR) forms and evaluated for significance in terms of CEQA criteria. If the resources are determined to be unique historic resources as defined under Section 15064.5 of the CEQA Guidelines, mitigation measures shall be identified by the monitor and recommended to the Lead Agency. Appropriate mitigation measures for significant resources could include avoidance or capping, incorporation of the site in green space, parks, or open space, or data recovery excavations of the finds. The Lead Agency, along with other relevant or Tribal officials, shall be contacted upon the discovery of cultural resources to begin coordination on the disposition of the find(s). Treatment of any significant cultural resources shall be undertaken with the approval of the Lead Agency. No further grading shall occur in the area of the discovery until the Lead Agency approves the measures to protect these resources. Upon coordination with the Lead Agency, any archaeological artifacts recovered shall be donated to an appropriate Tribal custodian or a qualified scientific institution where they would be afforded applicable cultural resources laws and guidelines.	future construction plans				
MM CUL-3: In the event of the accidental discovery or recognition of any human remains, CEQA Guidelines Section 15064.5, Health and Safety Code Section 7050.5, and Public Resources Code Sections 5097.94 and Section 5097.98 shall be followed. If during	Site monitoring; inclusion of notes on construction plans; submittal of documentation;	In the event of the discovery of human remains during ground-disturbing	City of Aliso Viejo Planning Department		

Requirements	Method of Verification	Timing of Verification	Responsible for Verification	Verification of Completion	
				Date	Initial
the course of project construction, there is accidental discovery or recognition of any human remains, the following steps shall be taken: 1. There shall be no further excavation or disturbance of the site where human remains are discovered and/or any nearby area reasonably suspected to overlie adjacent human remains until the County Coroner is contacted to determine whether the remains are Native American and if an investigation of the cause of death is required. If the Coroner determines the remains to be Native American, the Coroner shall contact the Native American Heritage Commission (NAHC) within 24 hours, and the NAHC shall identify the person or persons it believes to be the Most Likely Descendant (MLD) of the deceased Native American. The MLD may make recommendations to the landowner or the person responsible for the excavation work within 48 hours, for means of treating or disposing of, with appropriate dignity, the human remains, and any associated grave goods as provided in Public Resource Code Section 5097.98. 2. Where the following conditions occur, the landowner or his or her authorized representative shall rebury the Native American human remains and associated grave goods with appropriate dignity either in accordance with the recommendations of the MLD or on the project site in a location not subject to further subsurface disturbance: • The NAHC is unable to identify an MLD or the MLD failed to make a recommendation within 48 hours after being notified by the commission. • The descendant identified fails to make a recommendation.	Submission of correspondence with Coroner and NAHC,	activities or during project construction; NAHC notification shall occur within 24 hours after discovery			

Requirements	Method of Verification	Timing of Verification	Responsible for Verification	Verification of Completion	
				Date	Initial
• The landowner or his authorized representative rejects the recommendation of the descendant, and mediation by the NAHC fails to provide measures acceptable to the landowner.					
2.7 Geology and Soils					
Conditions of Approval					
COA GEO-1: In accordance with Municipal Code 13.08.170, Soil Engineering and Engineering Geology Reports, a soil engineering and engineering geology report shall be required for grading projects unless otherwise waived by the building official. The reports shall include information appropriate for the site including any information required by the building official. Recommendations included in the reports and approved by the building official shall be incorporated in the grading plans or specifications. Accordingly, prior to issuance of grading permit, the project applicant shall provide grading plans or specifications that include all recommendations from the proposed project's May 31, 2024, Geotechnical Subsurface Exploration Due Diligence Study prepared by SA Geotechnical, Inc., or from the latest geotechnical study for the proposed project.	Submission of soil engineering and engineering geology report and inclusion in project plans; site inspection; submission of plans	Prior to the issuance of a grading permit; during and following project construction	City of Aliso Viejo Planning Department		
Mitigation Measures					
MM GEO-1: The project applicant shall enlist a qualified Paleontologist (meeting the standards of the Society of Vertebrate Paleontology [SVP]) to prepare a Worker Environmental Awareness Program (WEAP) presentation for construction personnel. It will include information on paleontological resources,	Documentation of retention of a qualified Paleontologist; Verify WEAP training; site inspection; submittal of	Paleontologist retention and WEAP training shall occur prior to grading and construction;	City of Aliso Viejo Planning Department		

Requirements	Method of Verification	Timing of Verification	Responsible for Verification	Verification of Completion	
				Date	Initial
laws protecting them, types of fossils that could occur at the project site, and protocol for unanticipated discoveries. In the event that fossils are discovered during construction, excavations within 50 feet of the find shall be temporarily halted or diverted. The contractor shall notify the qualified Paleontologist to examine the discovery. The qualified Paleontologist shall document the discovery as needed in accordance with SVP standards, evaluate the potential resource, and assess the significance of the find under the criteria set forth in CEQA Guidelines Section 15064.5. Based on the significance of the find, the qualified Paleontologist shall determine procedures to be followed before construction is allowed to resume at the location of the find. If, in consultation with the qualified Paleontologist, it is determined that avoidance is not feasible, the qualified Paleontologist shall prepare a Paleontological Resources Impact Mitigation Program (PRIMP) to outline salvage and recovery procedures. If deemed necessary by the qualified Paleontologist, the PRIMP shall include construction monitoring requirements as well. The PRIMP shall be submitted to the City for review and approval and the approved plan shall be implemented.	documentation; Submission and city approval of PRIMP	Documentation shall be submitted after the discovery of paleontological resources during construction; If necessary, the PRIMP shall be approved by the City prior to resuming construction activities			
2.18 Tribal Cultural Resources					
Mitigation Measures					

MM TCR-1 :Retain a Native American Monitor Prior to Commencement of Ground-Disturbing Activities The project applicant shall retain a Native American Monitor from or approved by both the Gabrieleño Band of Mission Indians – Kizh Nation and the Juaneño Band of Mission Indians, Acjachemen Nation. The Monitor shall be retained prior to the commencement of any "ground-disturbing activity" for the subject project at all project locations (i.e., both on-site and any off-site locations included in the project description/definition and/or required in connection with the project, such as public improvement work). "Ground-disturbing activity" shall include, but is not limited to, demolition, pavement removal, potholing, auguring, grubbing, tree removal, boring, grading, excavation, drilling, and trenching. A copy of the executed monitoring agreement shall be submitted to the Director of Community Development prior to the earlier date of either: (1) the commencement of any ground-disturbing activity, or (2) the issuance of any permit required to commence any ground-disturbing activity. The Monitor shall complete daily monitoring logs that will provide descriptions of the relevant ground-disturbing activities, the type of construction activities performed, locations of ground-disturbing activities, soil types, cultural-related materials, and any other facts, conditions, materials, or discoveries of significance to the Tribes. Monitor logs shall identify and describe any discovered Tribal Cultural Resources (TCRs), including, but not limited to, Native American cultural and historical artifacts, remains, places of significance, etc., (collectively, Tribal Cultural Resources, or TCRs), as well as any discovered Native American (ancestral) human remains and burial goods. Copies of Monitor logs shall be provided	Retention of Tribal Monitor; submittal of copy of executed contract to City; Copies of monitor logs; inclusion of notes on construction plans; submittal of daily monitoring logs Submittal of written notice of completion from Monitor	Retention of a Native American Monitor shall occur prior to the commencement of ground-disturbing activity, and shall conclude upon written confirmation of the completion of ground-disturbing activities or confirmation that there is no potential for impacts to TCRs; Submittal of executed contract shall occur prior to the commencement of ground-disturbing activity or the issuance of any permit to commence ground-disturbing activity,	City of Aliso Viejo Community Development Director; City of Aliso Viejo Planning Department.		

Requirements	Method of Verification	Timing of Verification	Responsible for Verification	Verification of Completion	
				Date	Initial
to the project applicant and the Director of Community Development upon written request to the Tribe. On-site Tribal monitoring shall conclude upon the latter of the following: (1) written confirmation to the Monitor and the Lead Agency that all ground-disturbing activities and phases that may involve ground-disturbing activities on the project site or in connection with the project are complete; or (2) a determination and written notification by the Monitor to the Director of Community Development that no future planned construction activity and/or development/construction phase at the project site possesses the potential to impact to TCRs.					
MM TCR-2: Unanticipated Discovery of Tribal Cultural Resource Objects (Non-funerary/Non-ceremonial) Upon discovery of any Tribal Cultural Resources (TCRs), all construction activities in the immediate vicinity of the discovery (i.e., not less than the surrounding 50 feet) shall cease. The City shall consult with the project Archaeologist and initiate Native American consultation procedures with the project's consulting Tribes (Gabrieleño Band of Mission Indians-Kizh Nation and the Juaneño Band of Mission Indians, Acjachemen Nation). The consultation effort is intended to be a meaningful and timely process of seeking, discussing, and considering carefully the views of others in a manner that is cognizant of all parties' cultural values and, where feasible, seeking agreement on the appropriate treatment and disposition of TCRs discovered. A Cultural Resources and Monitoring and Treatment Plan shall be created by the Archaeologist in coordination with the consulting Tribes (Gabrieleño Band of Mission Indians-Kizh Nation and the Juaneño	Site inspection and submittal of documentation; consultation with the project Archaeologist and NAHC; incorporation of final Cultural Mitigation Measures, if any, into future construction plans	Upon discovery of TCRs during demolition, grading, and excavation	City of Aliso Viejo Planning Department. NAHC Monitor		

Requirements	Method of Verification	Timing of Verification	Responsible for Verification	Verification of Completion	
				Date	Initial
Band of Mission Indians, Acjachemen Nation) and all subsequent finds shall be subject to this plan. Project construction shall not resume within the immediate vicinity of the discovery (i.e., not less than the surrounding 50 feet) until a Cultural Resources and Monitoring Treatment Plan is prepared and implemented. The plan may include, but would not be limited to, reburying, relocating, recording, and/or another culturally appropriate treatment. If it is determined that mutual agreement cannot be reached within 30 days of the initial consultation meeting, the TCR(s) under review shall be reinterred on-site in a location free from future ground-disturbing construction activities. This measure does not apply to the finding of human remains, which must comply with California Health and Safety Code Section 7050.5.					
MM TCR-3: Unanticipated Discovery of Human Remains and Associated Funerary or Ceremonial Objects A. Native American human remains are defined in PRC 5097.98 (d)(1) as an inhumation or cremation, and in any state of decomposition or skeletal completeness. Funerary objects, called associated grave goods in Public Resources Code Section 5097.98, are also to be treated according to this statute. B. If Native American human remains and/or grave goods are discovered or recognized on the project site, then Public Resource Code 5097.9 as well as Health and Safety Code Section 7050.5 shall be followed. C. Human remains and grave/burial goods shall be treated alike per California Public Resources Code Section 5097.98(d)(1) and (2).	Site monitoring. inclusion of notes on construction plans; submittal of documentation	During ground-disturbing activities	City of Aliso Viejo Planning Department. NAHC Monitor		

Requirements	Method of Verification	Timing of Verification	Responsible for Verification	Verification of Completion	
				Date	Initial
D. Preservation in place (i.e., avoidance) is the preferred manner of treatment for discovered human remains and/or burial goods. **E.** Any discovery of human remains/burial goods shall be kept confidential to prevent further disturbance.					
2.21 Mandatory Findings of Significance					
As described above: MM BIO-1a, MM BIO-1b, MM CUL-1, MM CUL-2, MM CUL-3, COA GEO-1, MM GEO-1, MM TCR-1, MM TCR-2, MM TCR-3.

THIS PAGE INTENTIONALLY LEFT BLANK

1 - INTRODUCTION

Although a lead agency is not required to provide written responses to comments on proposed Negative Declarations (NDs) or Mitigated Negative Declarations (MNDs) under the California Environmental Quality Act (CEQA), the City of Aliso Viejo has evaluated the comments received on the 95 Argonaut Residential Project (State Clearinghouse No. 2025100301) (proposed project) Draft Initial Study/Mitigated Negative Declaration (Draft IS/MND) and has elected to provide responses to the following significant environmental comments. None of the comments received results in the need to recirculate the Draft IS/MND or to prepare an Environmental Impact Report (EIR). Furthermore, no comments require revisions or clarifications to the Draft IS/MND.

The Final IS/MND includes the following contents:

- Draft IS/MND (provided under separate cover)
- Draft IS/MND appendices (provided under separate cover)
- Responses to Written Comments
- Mitigation Monitoring and Reporting Program (provided under separate cover)

2 - RESPONSE TO WRITTEN COMMENTS

A list of public agencies, organizations, and individuals that provided comments on the Draft IS/MND is presented below. Each comment has been assigned a code. Individual comments within each communication have been numbered so comments can be crossed-referenced with responses. Following this list, the text of the communication is reprinted and followed by the corresponding response.

RE: MITIGATED NEGATIVE DECLARATION FOR THE 95 ARGONAUT RESIDENTIAL PROJECT DATED OCTOBER 7, 2025, STATE CLEARINGHOUSE # 2025100301

Dear So Kim,

The Department of Toxic Substances Control (DTSC) reviewed the Mitigated Negative Declaration (MND) for the 95 Argonaut Residential Project (Project). The proposed Project involves the demolition of an existing two-story, approximately 48,000-square-foot office building, along with the associated surface parking lot and landscaping. The site would be redeveloped with a residential infill community consisting of up to 61 three-story townhomes distributed across eight buildings. The townhomes would range in size from approximately 1,210 to 1,765 square feet and would offer a mix of two-, three- and four-bedroom units, each with an attached private two-car garage. The Project would also include 28 guest parking areas, pedestrian walkways, landscaped open spaces, and a recreational amenity area. 1

DTSC recommends and requests consideration of the following comments:

1. When agricultural crops and/or land uses are proposed or rezoned for residential use, several contaminants of concern (COCs) can be present. The Lead Agency shall identify the amounts of Pesticides and Organochlorine Pesticides (OCPs) historically used on the property. If present, OCPs requiring further analysis are 2

dichloro-diphenyl-trichloroethane, toxaphene, and dieldrin. Additionally, any level of arsenic present would require further analysis and sampling and must meet approved local area baselines or thresholds. If they do not, remedial action must take place to mitigate them below those thresholds. Additional COCs may be found in mixing/loading/storage areas, drainage ditches, farmhouses, or any other outbuildings and should be sampled and analyzed. If smudge pots had been routinely utilized, additional sampling for Polycyclic Aromatic Hydrocarbons and/or Total Petroleum Hydrocarbons may be required. These recommendations should be adhered to and become part of the environmental document. Please refer to the DTSC's Human and Ecological Risk Office (HERO) webpage for the most recent guidance and screening levels.

2 Continued

2. DTSC recommends all imported soil/fill material be tested to ensure all COCs meet screening levels as outlined in DTSC's Preliminary Endangerment Assessment Guidance Manual. Furthermore, DTSC advises referencing the DTSC Information Advisory Clean Imported Fill Material Fact Sheet if importing fill is necessary. To minimize the possibility of introducing contaminated soil/fill material there should be documentation of the origins of the soil/fill material and, if applicable, sampling be conducted to ensure that the imported soil/fill material are suitable for the intended land use. The soil sampling should include analysis based on the source of the soil/fill and knowledge of prior land use.

3

3. The City of Aliso Viejo should consider soil testing as mentioned in comment #1. If, in the event any COC results are above DTSC residential screening levels, DTSC recommends the City of Aliso Viejo address the contaminations within the Project area through an Environmental Site Assessment and/or receive oversight from a self-certified local agency, DTSC or Regional Water Quality Control Board. If entering into one of DTSC's voluntary agreements, please note that DTSC uses a single standard Request for Lead Agency Oversight Application for all agreement types. Please apply for DTSC oversight using this link: Request for Agency Oversight Application. Submittal of the online application includes an agreement to pay costs incurred during agreement preparation. If you have any

4

questions about the application portal, please contact the relevant Regional Brownfield Coordinator for your Project. 4 Continued

DTSC would like to thank you for the opportunity to comment on the MND for the 95 Argonaut Residential Project. Thank you for your assistance in protecting California's people and environment from the harmful effects of toxic substances. If you have any questions or would like clarification on DTSC's comments, please respond to this letter or via our CEQA Review email for additional guidance. 5

Sincerely,

Dave Kereazis

Response to DTSC-1

The commenter states that they have reviewed the project and summarizes the project description. This comment is noted, and no response is necessary.

Response to DTSC-2

The commenter explains that former agricultural land may contain contaminants of concern (COC), such as pesticides and organochlorine pesticides, which may require sampling and remediation.

Previous agricultural uses were analyzed in the Draft IS/MND. The project site is currently a commercial lot and has been used for similar purposes since 1982. The project site has not had agriculture uses since 1981. A Phase I Environmental Site Assessment (Phase I ESA) performed by Hillman Consulting, which reviews concerns of hazardous substances, confirmed that the project site had no Historical Recognized Environmental Condition (HREC), Controlled Recognized Environmental Condition (CREC), or Recognized Environmental Condition (REC). As noted in Section 2.9, Hazards and Hazardous Materials, given the 43 years since any agricultural use as well as the grading activities of current development, any remaining pesticide contamination is unlikely and therefore this is not considered to be a REC in connection with the project site. As such, the Phase I ESA determined that the previous agricultural use is not considered a REC, and impacts would be less than significant. Additionally, the proposed project would be required to comply with applicable regulatory requirements. The issues raised in this comment have been fully addressed by the analysis in Section 2.9, Hazards and Hazardous Materials.

Response to DTSC-3

The commenter recommends all imported soil/fill be tested for COC, and that proper documentation be used to ensure soil is suitable for intended land use.

The geotechnical report by SA Geotechnical INC stated that the existing fill materials are considered suitable for reuse as compacted fill for the site. As noted in the response above, the Phase I ESA determined that the previous agricultural uses are not a REC. Should new fill be needed, per Condition of Approval GEO-1, recommendations included in the reports and approved by the building official shall be incorporated in the grading plans or specifications. This includes the recommendation that the geotechnical consultant evaluate and accept any import of soils prior to transportation to the subject site. With these conditions and the project's compliance with California Building Standards Code (CBC) requirements, impacts would be less than significant, and the issues raised in this comment have been fully addressed by the analysis provided in the Draft IS/MND.

Response to DTSC-4

The commenter recommends that the City of Aliso Viejo do the soil testing mentioned in DTSC-2. If, in the event results are above DTSC residential screening levels, the commenter recommends the City address the contaminations through an ESA and/or receive oversight from a self-certified local agency.

Draft

Please see Response to DTSC-2. The comment and recommendation will be noted and reviewed by the City.

Response to DTSC-5

This comment consists of concluding statements No further response is required.

draft

RESOLUTION NO. 2025-___

A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF ALISO VIEJO, CALIFORNIA, APPROVING AN AMENDMENT TO THE GENERAL PLAN LAND USE DESIGNATION AND ASSOCIATED LAND USE MAP FROM BUSINESS PARK TO HIGH DENSITY RESIDENTIAL FOR THE DEVELOPMENT OF A 61-UNIT RESIDENTIAL TOWNHOME COMMUNITY LOCATED AT 95 ARGONAUT (APN: 623-091-01)

WHEREAS, on October 24, 2024, MLC Holdings, Inc. ("Applicant") submitted a general plan amendment, zone change, vesting tentative tract map, site development permit, and a development agreement application to demolish an existing office building and accommodate the construction of a multi-family residential community at 95 Argonaut ("Project");

WHEREAS, pursuant to section 21067 of the Public Resources Code, and section 15367 of the State CEQA Guidelines (Cal. Code Regs., tit. 14, § 15000 et seq.), the City is the lead agency for the proposed Project and has prepared an Initial Study/Mitigated Negative Declaration (SCH#2025100301) ("IS/MND") and a Mitigation Monitoring and Reporting Program ("MMRP") for the Project;

WHEREAS, on November 6, 2024, the City Council held a duly noticed public review to receive and provide initial feedback on concept plans for the Project;

WHEREAS, on November 5, 2025, the City Council held a study session to discuss development agreements and impact fees;

WHEREAS, on November 19, 2025, the City Council held a duly noticed public hearing, discussed the parameters of the public benefit contributions of the Development Agreement, and continued the meeting to December 3, 2025, to allow the Applicant additional time to address easement encroachment issues with the Aliso Viejo Community Association;

WHEREAS, on October 30, 2025, the City gave public notice of the City Council public hearing for consideration of a Mitigated Negative Declaration, General Plan Amendment GPA-2025-00002, Zone Change ZC-2025-00002, Vesting Tentative Tract Map 19340 and Site Development Permit SDP-2024-00001, for the Project by advertising in a newspaper of general circulation; by posting notices at City Hall and the Project site; and by mailing notices to owners of property within 300 feet, to the project applicant, and to local agencies that provide water, sewage, electricity and schools;

WHEREAS, on December 3, 2025, the City Council held a public hearing as prescribed by law and considered written and verbal public testimony that was submitted prior to the hearing and during the hearing, and evidence and recommendations presented by staff in the agenda report and oral presentation; and

WHEREAS, all other legal prerequisites to the adoption of this Resolution have occurred.

NOW, THEREFORE, BE IT RESOLVED BY THE CITY COUNCIL OF THE CITY OF ALISO VIEJO AS FOLLOWS:

Section 1. **Incorporation of Recitals.** The City Council hereby finds and determines that all of the recitals set forth above are true and correct. The above recitals are hereby incorporated as substantive findings of this Resolution.

Section 2. **CEQA.** Pursuant to the California Environmental Quality Act (Public Resources Code, § 21000 et seq.) and the State CEQA Guidelines (California Code of Regulations, title 14, § 15000 et seq.) (Collectively, "CEQA"), the City Council adopted Resolution No._____, determining that there is no substantial evidence that the approval of the Project would result in a significant adverse effect on the environment, provided appropriate mitigation measures, as identified in the MMRP, are imposed on the Project.

Section 3. **Findings for General Plan Amendment GPA-2025-00002.** Pursuant to AVMC 15.78.020 (General Plan Amendments), the City Council hereby makes the following findings of fact and approves an amendment to the General Plan land use designation and associated land use map from Business Park to High Density Residential, as set forth in Exhibit "A", which is attached hereto and incorporated herein by reference.

1. Public Welfare. Approval of the amendment will not create conditions materially detrimental to the public health, safety and general welfare. While the Site is located within a larger business park, it is at an entry corner, providing a natural transition between the non-residential uses and the surrounding residential neighborhoods. Directly across from the site to the north are established multi-family and single-family residential communities. Notably, the adjacent multi-family development shares several characteristics with the Project, including large buildings, each composed of six attached units. The architectural style is also complementary, featuring stucco exteriors, tile roofing, wrought iron balconies, recessed entryways, and shared open space without private driveways. The single-family tract homes surrounding that multi-family community are also similar in architectural style in terms of color, exterior finish, design, and materials. Additionally, the Site is situated in an area with established infrastructure, including roads, utilities, and public services, that can adequately support residential development. As part of the environmental assessment, the Project required comprehensive studies addressing air quality, energy, greenhouse gas emissions, biological resources, cultural resources, geotechnical conditions, hydrology and water quality, noise, and transportation impacts. As discussed further in the Environmental Assessment section below, these studies concluded that the Project would result in less-than-significant impacts with the implementation of proposed mitigation measures. The Project plans also cleared preliminary review by the Orange County Fire Authority. Furthermore, the Project aligns with the City's

housing goals by facilitating the development of new housing opportunities. Future construction on the Project site will be subject to plan check review and inspection process to ensure full compliance with applicable building and safety standards.

2. Internal General Plan Consistency. The amendment is consistent with the goals and policies of the General Plan listed below in that it incorporates landscaping aligned with the City Council-approved plant palette, emphasizing low-water, drought-tolerant species; features building materials, colors, and architectural design that are compatible with the surrounding residential communities; includes a development impact fee that a portion of which is consistent the City's parkland ordinance; proposes three affordable housing units restricted to very low-income households, thereby enhancing housing diversity and affordability; and introduces rezoning to facilitate residential development that includes affordable units in support of the City's housing objectives. In the General Plan, 'COS' refers to Conservation and Open Space policies, 'H' for Housing policies and goals, and 'LU' for Land Use policies.

    - Policy COS-1.2 Reduce the amount of water used for landscaping and increase use of native and low water plants. Maximize use of native, low-water plants for landscaping of areas adjacent to sidewalks or other impermeable surfaces.
    - Policy COS-4.2 Encourage and maintain high-quality architectural and landscaping designs that enhance or complement the community's visual character.
    - Policy COS-7.5 Ensure that new development provides park land and/or improvements at a fair share ratio, pursuant to the City's Parkland Ordinance.
    - Goal H-1: Encourage a diversity of housing types and provide affordability levels within Aliso Viejo to meet the needs of community residents.
    - Policy H-1.1 Identify sites appropriate for the development of a variety of housing types and price ranges to meet the needs of all socioeconomic segments of the community through the disbursement of affordable units in projects.
    - Policy H-1.2 Encourage through the use of density bonuses and rezoning to allow for residential development, development of affordable housing opportunities throughout the community, as well as development of housing for elderly and low- and moderate-income households near public transportation services.
    - Policy H-1.4 Ensure that a portion of future residential development is affordable to low- and very-low-income households by designating certain sites as having the potential to be used for residential uses.
    - Policy H-3.8 Review existing zoning policies and explore zoning changes to facilitate the development of affordable housing.
    - Policy LU-12.2 As a condition upon new development, require payment of park fees and/or dedication and provision of parkland, recreation facilities and/or multi-use trails that improve the public and private recreation system.

3. Land Use Compatibility. In the case of amendments to the general plan land use policy map, the new designation is compatible with the designations on nearby properties. The Project site is located at the edge of a larger business park and directly across from established multi-family and single-family residential neighborhoods. The adjacent multi-family development shares several characteristics with the Project, including large attached-unit buildings, stucco exteriors, tile roofing, wrought iron balconies, recessed entryways, and shared open space without private driveways. These similarities ensure architectural and functional continuity between the Project and existing residential uses. Furthermore, the transition from non-residential uses within the business park to residential neighborhoods is reinforced by the Project site's location at a corner entry, creating a natural buffer.

4. Property Suitability. In the case of amendments to the general plan land use policy map, the new designation is suitable for the location, access, visual character and topography of the subject property. The property is located along established roadways with adequate vehicular and pedestrian access and is supported by existing infrastructure, including utilities and public services, sufficient to accommodate residential development. The Project site is generally level, with a slight descending slope from east to west, and sits several feet below the street elevations to the north and west. Proposed grading will consist primarily of recompaction and limited export to further level the Project site, resulting in finished elevations comparable to current conditions. Architecturally, the Project incorporates building styles, materials, and landscaping consistent with adjacent residential communities, ensuring visual compatibility with the surrounding neighborhood. The Site's position at the entry corner of the business park further enhances its suitability, providing a natural transition between non-residential and residential uses.

Section 4. **Severability**. If any provision of this Resolution or the application thereof to any person or circumstance is held invalid, such invalidity shall not affect other provisions or applications of this Resolution that can be given effect without the invalid provision or application, and to this end the provisions of this Resolution are severable. The City Council hereby declares that it would have adopted this Resolution irrespective of the invalidity of any particular portion thereof.

Section 5: **Location of Documents.** The administrative record for the Project is maintained at City Hall located at 12 Journey, Suite 100, Aliso Viejo, CA 92656. The custodian of records is the City Clerk.

Section 6: **Effective Date.** This General Plan Amendment shall not take effect unless and until Zone Change, Vesting Tentative Tract Map 19340, Site Development Permit SDP-2024-00001, and the Development Agreement are each approved by the City Council and have become effective, and the associated Development Agreement is approved by the City Council and executed by both parties thereto.

Section 7. **Execution of Resolution**. The Mayor shall sign this Resolution and the City Clerk shall attest and certify to the passage and adoption thereof.

PASSED, APPROVED AND ADOPTED this 3rd day of December 2025.

Exhibit "A"
Amendment to the General Plan Land Use Map
Case No. GPA-2025-00002

Property Location – 95 Argonaut (see red-circled area below)
Existing Land Use Designation – Business Park ("BP")
Proposed Land Use Designation – High Density Residential (Max. 50 units/acre) ("HDR")

ORDINANCE NO. 2026-___

AN ORDINANCE OF THE CITY COUNCIL OF THE CITY OF ALISO VIEJO, CALIFORNIA, APPROVING A ZONE CHANGE FROM BUSINESS PARK 2 TO HIGH DENSITY RESIDENTIAL DISTRICT FOR THE DEVELOPMENT OF A 61-UNIT RESIDENTIAL TOWNHOME COMMUNITY LOCATED AT 95 ARGONAUT (623-091-01)

WHEREAS, on October 24, 2024, MLC Holdings, Inc. ("Applicant") submitted a general plan amendment, zone change, vesting tentative tract map, site development permit, and a development agreement application to demolish an existing office building to accommodate the construction of a multi-family residential community at 95 Argonaut, which is comprised of 2.85 acres ("Project");

WHEREAS, pursuant to section 21067 of the Public Resources Code, and section 15367 of the State CEQA Guidelines (Cal. Code Regs., tit. 14, § 15000 et seq.), the City is the lead agency for the proposed Project and has prepared an Initial Study/Mitigated Negative Declaration (SCH #2025100301) ("IS/MND") and a Mitigation Monitoring and Reporting Program ("MMRP") for the Project;

WHEREAS, on November 6, 2024, the City Council held a duly noticed public review to receive and provide initial feedback on concept plans for the Project;

WHEREAS, on November 5, 2025, the City Council held a study session to discuss development agreements and impact fees;

WHEREAS, on November 19, 2025, the City Council held a duly noticed public hearing, discussed the parameters of the public benefit contributions of the Development Agreement, and continued the meeting to December 3, 2025, to allow the Applicant additional time to address easement encroachment issues with the Aliso Viejo Community Association;

WHEREAS, on October 30, 2025, the City gave public notice of the City Council public hearing for consideration of a Mitigated Negative Declaration, General Plan Amendment GPA-2025-00002, Zone Change ZC-2025-00002, Vesting Tentative Tract Map 19340 and Site Development Permit SDP-2024-00001, for the Project by advertising in a newspaper of general circulation; by posting notices at City Hall and the Project site; and by mailing notices to owners of property within 300 feet, to the project applicant, and to local agencies that provide water, sewage, electricity and schools;

WHEREAS, on December 3, 2025, the City Council held a duly noticed public hearing as prescribed by law and considered written and verbal public testimony that was submitted prior to the hearing and during the hearing, and evidence and recommendations presented by staff in the agenda report and oral presentation and introduced the Ordinance; and

WHEREAS, all legal prerequisites to the adoption of this Ordinance have occurred.

NOW, THEREFORE, THE CITY COUNCIL OF THE CITY OF ALISO VIEJO DOES ORDAIN AS FOLLOWS:

Section 1. **Incorporation of Recitals.** The City Council hereby finds and determines that all of the recitals set forth above are true and correct. The above recitals are hereby incorporated as substantive findings of this Ordinance.

Section 2. **CEQA.** Pursuant to the California Environmental Quality Act (Public Resources Code, § 21000 et seq.) and the State CEQA Guidelines (California Code of Regulations, title 14, § 15000 et seq.) (Collectively, "CEQA"), the City Council adopted Resolution No._____, determining that there is no substantial evidence that the approval of the Project would result in a significant adverse effect on the environment, provided appropriate mitigation measures, as identified in the MMRP, are imposed on the Project;

Section 3. **Findings for Zone Change ZC-2025-00002.** Pursuant to AVMC 15.78.040 (Zone Change and Prezoning), the City Council hereby makes the following findings of fact and approves the Zone Change ZC-2025-00002 from Business Park 2 to High Density Residential, as set forth in Exhibit "A", which is attached hereto and incorporated herein by reference.

1. Public Welfare. Approval of the amendment will not create conditions materially detrimental to the public health, safety, or general welfare. The Project site, located at a prominent entry corner within a larger business park, provides a natural transition between non-residential uses and surrounding residential neighborhoods, with established multi-family and single-family communities directly to the north. The area is further supported by existing infrastructure such as roads, utilities, and public services capable of accommodating residential development, and comprehensive environmental studies concluded that, with mitigation measures, the project would result in less-than-significant impacts. Preliminary review by the Orange County Fire Authority confirmed compliance with emergency access and fire protection standards. Additionally, the provision of affordable housing within the project creates greater opportunities for homebuyers, while the park in-lieu fee will contribute to the well-being and quality of life in the community. Future construction on the site will be subject to plan check review and inspection processes to ensure full compliance with applicable building and safety standards.

2. General Plan Consistency. The zone change is consistent with the goals, objectives, and policies of the general plan and any applicable specific plan. With the approval of the General Plan land use amendment, the zone change is consistent with the General Plan goals and policies listed below in that it incorporates landscaping aligned with the City Council-approved plant palette, emphasizing low-water, drought-tolerant species; features building materials,

colors, and architectural design that are compatible with the surrounding residential communities; includes a development impact fee that a portion of which is consistent the City's parkland ordinance; proposes three affordable housing units restricted to very low-income households, thereby enhancing housing diversity and affordability; and introduces rezoning to facilitate residential development that includes affordable units in support of the City's housing objectives. In the General Plan, 'COS' refers to Conservation and Open Space policies, 'H' for Housing policies and goals, and 'LU' for Land Use policies.

- Policy COS-1.2 Reduce the amount of water used for landscaping and increase use of native and low water plants. Maximize use of native, low-water plants for landscaping of areas adjacent to sidewalks or other impermeable surfaces.
- Policy COS-4.2 Encourage and maintain high-quality architectural and landscaping designs that enhance or complement the community's visual character.
- Policy COS-7.5 Ensure that new development provides park land and/or improvements at a fair share ratio, pursuant to the City's Parkland Ordinance.
- Goal H-1: Encourage a diversity of housing types and provide affordability levels within Aliso Viejo to meet the needs of community residents.
- Policy H-1.1 Identify sites appropriate for the development of a variety of housing types and price ranges to meet the needs of all socioeconomic segments of the community through the disbursement of affordable units in projects.
- Policy H-1.2 Encourage through the use of density bonuses and rezoning to allow for residential development, development of affordable housing opportunities throughout the community, as well as development of housing for elderly and low- and moderate-income households near public transportation services.
- Policy H-1.4 Ensure that a portion of future residential development is affordable to low- and very-low-income households by designating certain sites as having the potential to be used for residential uses.
- Policy H-3.8 Review existing zoning policies and explore zoning changes to facilitate the development of affordable housing.
- Policy LU-12.2 As a condition upon new development, require payment of park fees and/or dedication and provision of parkland, recreation facilities and/or multi-use trails that improve the public and private recreation system.

3. Land Use Compatibility. The zone change is compatible with the zoning and land use on nearby properties. The Project site is located at the edge of a larger business park and directly across from established multi-family and single-family residential neighborhoods. The adjacent multi-family development shares several characteristics with the Project, including large attached-unit buildings, stucco exteriors, tile roofing, wrought iron balconies, recessed entryways, and shared open space without private driveways. These similarities ensure architectural and functional continuity between the Project and existing residential uses. Furthermore, the transition from non-residential uses within the business park to

residential neighborhoods is reinforced by the Project site's location at a corner entry, creating a natural buffer.

4. Property Suitability. The zone change is suitable for the location, access, visual character and topography of the subject property. The property is located along established roadways with adequate vehicular and pedestrian access and is supported by existing infrastructure, including utilities and public services, sufficient to accommodate future residential development. The Project site is generally level, with a slight descending slope from east to west, and sits several feet below the street elevations to the north and west. The Project site's position at the entry corner of the business park further enhances its suitability, providing a natural transition between non-residential and residential uses.

Section 4. **Effective Date.** This Zone Change Ordinance shall not take effect unless and until General Plan Amendment, Vesting Tentative Tract Map 19340, Site Development Permit SDP-2024-00001 and the Development Agreement are each approved by the City Council and have become effective, and the associated Development Agreement is approved by the City Council and executed by both parties thereto.

Section 5. **Severability.** If any provision of this Ordinance or its application to any person or circumstance is held to be invalid by a court of competent jurisdiction, such invalidity has no effect on the other provisions or applications of the Ordinance that can be given effect without the invalid provision or application, and to this extent, the provisions of this Ordinance are severable. The City Council declares that it would have adopted this Ordinance irrespective of the invalidity of any portion thereof.

Section 6. **Location of Documents.** The administrative record for the Project is maintained at City Hall located at 12 Journey, Suite 100, Aliso Viejo, CA 92656. The custodian of records is the City Clerk.

Section 7. **City Clerk's Certification.** The City Clerk shall certify to the adoption of this Ordinance and cause a summary thereof to be published five days prior to the date of adoption of this Ordinance, and, within 15 days after adoption, the City Clerk shall cause to be published the aforementioned summary and shall post a certified copy of this Ordinance, together with the vote for and against the same, in the Office of the City Clerk.

Proposed Land Use Designation – High Density Residential (Max. 50 units/acre) ("HDR")

RESOLUTION NO. 2025-___

A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF ALISO VIEJO, CALIFORNIA, APPROVING VESTING TENTATIVE TRACT MAP 19340 FOR SUBDIVISION INTO CONDOMINIUM PURPOSES AND SITE DEVELOPMENT PERMIT (SDP-2024-00001) TO ALLOW THE DEVELOPMENT OF A 61-UNIT RESIDENTIAL TOWNHOME COMMUNITY LOCATED AT 95 ARGONAUT (623-091-01)

WHEREAS, on October 24, 2024, MLC Holdings, Inc. ("Applicant") submitted a general plan amendment, zone change, vesting tentative tract map, site development permit, and a development agreement application to demolish an existing office building to accommodate the construction of a multi-family residential community at 95 Argonaut ("Project");

WHEREAS, on November 6, 2024, the City Council held a duly noticed public review to receive and provide initial feedback on concept plans for the Project;

WHEREAS, pursuant to section 21067 of the Public Resources Code, and section 15367 of the State CEQA Guidelines (Cal. Code Regs., tit. 14, § 15000 et seq.), the City is the lead agency for the proposed Project and has prepared an Initial Study/Mitigated Negative Declaration (SCH#2025100301) ("IS/MND") and a Mitigation Monitoring and Reporting Program ("MMRP") for the Project;

WHEREAS, on November 19, 2025, the City Council held a duly noticed public hearing, discussed the parameters of the public benefit contributions of the Development Agreement, and continued the meeting to December 3, 2025, to allow the Applicant additional time to address easement encroachment issues with the Aliso Viejo Community Association;

WHEREAS, the public benefits include, among other things, park in-lieu fees, as authorized by law and the City's ordinances, to rehabilitate and improve existing open space and recreational facilities in the City, including but not limited to, the Aquatic Center, Iglesia Community Center and Park, and the Ranch ("Facilities") in order to maintain the City's high standard of recreation and community services while accommodating a growing population, including future residents of the proposed subdivision;

WHEREAS, residents throughout the City regularly use the Facilities due to the variety of programs and services offered. Although the Facilities are located outside of the subdivision, future residents of the subdivision will undoubtedly use and benefit from use of the Facilities as well;

WHEREAS, on October 30, 2025, the City gave public notice of the City Council public hearing for consideration of a Mitigated Negative Declaration, General Plan Amendment GPA-2025-00002, Zone Change ZC-2025-00002, Vesting Tentative Tract Map 19340 and Site Developer Permit SDP-2024-00001, for the Project by advertising in a

newspaper of general circulation; by posting notices at City Hall and the Project site; and by mailing notices to owners of property within 300 feet, to the project applicant, and to local agencies that provide water, sewage, electricity and schools;

WHEREAS, on December 3, 2025, the City Council held a public hearing as prescribed by law and considered written and verbal public testimony that was submitted prior to the hearing and during the hearing and evidence and recommendations presented by staff in the agenda report and oral presentation; and

WHEREAS, all legal prerequisites to the adoption of this Resolution have occurred.

NOW, THEREFORE, BE IT RESOLVED BY THE CITY COUNCIL OF THE CITY OF ALISO VIEJO AS FOLLOWS:

Section 1. **Incorporation of Recitals.** The City Council hereby finds and determines that all of the recitals set forth above are true and correct. The above recitals are hereby incorporated as substantive findings of this Resolution.

Section 2. **CEQA**. Pursuant to the California Environmental Quality Act (Public Resources Code, § 21000 et seq.) and the State CEQA Guidelines (California Code of Regulations, title 14, § 15000 et seq.) (Collectively, "CEQA"), the City Council adopted Resolution No. _____, determining that there is no substantial evidence that the approval of the Project would result in a significant adverse effect on the environment, provided appropriate mitigation measures, as identified in the MMRP, are imposed on the Project.

Section 3. **Findings for Vesting Tentative Tract Map 19340.** Pursuant to the requirements of the California Subdivision Map Act (Government Code Section 66410 *et. seq.)* and AVMC Title 14 (Subdivisions), the City Council hereby makes the following findings of fact and approves the Vesting Tentative Tract Map ("VTTM") 19340 as set forth in the Project plans as set forth in Exhibit "B", Sheets C1 to C-3 and subject to the conditions of approval as set forth in Exhibit "A", which are attached hereto and incorporated herein by reference.

A. The proposed map is consistent with the applicable General and Specific Plans. The Site has a General Plan land use designation of Business Park. The Applicant proposes a General Plan Amendment to re-designate the property for High Density Residential, which allows for residential development of 19 to 30 dwelling units per acre. The Vesting Tentative Tract Map proposes 61 multi-family homes on 2.85 acres, resulting in a density of 21.4 dwelling units per acre. As conditioned, the Vesting Tentative Tract Map will not take effect unless the General Plan Amendment, Zone Change, Site Development Permit, and Development Agreement take effect. Accordingly, the proposed map would be consistent with the applicable General Plan Land Use designation. There is no applicable Specific Plan for the Project site.

B. The design or improvement of the proposed subdivision is consistent with the General and Specific Plans. The Project is consistent with the goals and policies of the Conservation and Open Space, Housing, and Land Use element in that the Project promotes orderly growth, provides a compatible transition between non-residential and residential uses, supports housing objectives by creating new residential opportunities, and utilizes existing infrastructure in a manner consistent with the community's long-term vision and planning framework. The Project is also subject to mitigation measures and conditions of approval that address potential impacts related to traffic, noise, air quality, and emergency access. There is no applicable Specific Plan for the Project site.

C. The proposed subdivision conforms to all applicable zoning standards set forth in AVMC Title, as required by AVMC Section 14.08.050. The proposed subdivision is consistent with the permitted uses, development standards, and density provisions of the underlying zoning district, and the design and layout of lots, streets, and improvements comply with the requirements for subdivision and land development established in the AVMC.

D. The site is physically suitable for the type of development. The Project site is generally level, has adequate access from existing public streets, and is served by established infrastructure systems including water, sewer, storm drainage, and utilities. The site's size, configuration, and surrounding land use context are appropriate to accommodate the Project consistent with applicable zoning and General Plan designations. No unusual topographic, geologic, or environmental conditions have been identified that would render the site unsuitable for residential use.

E. The site is physically suitable for the proposed density of development. The Project includes a General Plan Amendment to re-designate the property to High Density Residential, which permits residential development at a range of 19 to 30 dwelling units per acre. The Vesting Tentative Tract Map proposes 61 multi-family homes on 2.85 acres, resulting in a density of approximately 21.4 dwelling units per acre. This proposed density falls within the allowable range for the High Density Residential designation.

F. The design of the subdivision and the proposed improvements are not likely to cause substantial environmental damage or substantial and avoidable injury to fish or wildlife or their habitat. The Project site is currently developed with an office building, surface parking lot, and landscaping. There is no fish, wildlife, or any habitat that would be affected by the Project.

G. The design of the subdivision or type of improvements is not likely to cause serious public health problems. The Project will be served by existing off-site infrastructure, with new on-site water, sewer, and storm drain facilities designed to connect to and extend those systems. All facilities have adequate capacity

to accommodate the proposed residential use. The subdivision design incorporates standard improvements, including paved streets, sidewalks, street lighting, and utility connections, that will be constructed in compliance with applicable building codes and City engineering standards. The Initial Study prepared for the Project did not identify any conditions that would result in significant public health impacts, and all potentially significant effects have been mitigated to less-than-significant levels.

H. The design of the subdivision or the type of improvements will not conflict with existing easements, acquired by the public at large, for access through or use of property within the subdivision. The Project as conditioned requires the Applicant to obtain easement holders' authorization for any improvements or encroachments prior to building permit issuance.

Section 4. **Findings for Site Development Permit SDP-2024-00001.** Pursuant to AVMC 15.74.020 (Site Development Permits), the City Council hereby makes the following findings of fact and approves the Site Development Permit SDP-2024-00001, subject to the conditions of approval as set forth in Exhibit "A" and Project plans as set forth in Exhibit "B", which are attached hereto and incorporated herein by reference.

A. Consistency with General Plan. The project is consistent with the general plan and any applicable specific plan. The Project with the General Plan Amendment to High Density Residential is consistent with the General Plan in that it incorporates landscaping aligned with the City Council-approved plant palette, emphasizing low-water, drought-tolerant species; features building materials, colors, and architectural design that are compatible with the surrounding residential communities; includes a development impact fee that a portion of which is consistent the City's parkland ordinance; proposes three affordable housing units restricted to very low-income households, thereby enhancing housing diversity and affordability; and introduces rezoning to facilitate residential development that includes affordable units in support of the City's housing objectives.

B. Consistency with Zoning Code. The land use and associated development conform to the permitted use provisions and development standards of this zoning code and is consistent with this code and any applicable specific plan. The proposed zone change to High Density Residential, together with the associated development, is compatible with surrounding land uses, providing a transition that complements the existing neighborhood character. The property is suitable for residential use based on its location, access, visual character, and topography, and existing infrastructure is adequate to support the proposed development. The Project incorporates reduced perimeter setbacks for buildings, landscaping, and mechanical equipment, which are expressly permitted as incentives under California's State Density Bonus Law, which requires cities to grant certain concessions and waivers or relaxed development standards when a project

includes a qualifying percentage of affordable housing units. Because the Project meets the threshold of 5% for very low-income households, it is eligible for the reduced building and landscape setbacks, and mechanical equipment placement in the front yard setback. In addition, the Project qualifies for a reduced parking ratio under the State Density Bonus Law. Based on this ratio, a total of 112 parking spaces is required for the Project. The law does not prescribe how these spaces must be allocated between private resident parking and guest parking; rather, the distribution is left to the Applicant. In this case, the Applicant is proposing 150 parking spaces, consisting of 122 private residential spaces and 28 guest spaces. Although the City does not permit tandem parking, and tandem stalls must therefore be counted as a single space, the Project would still provide a total of 117 spaces (89 private and 28 guest), which exceeds the required 112 spaces.

C. Compliance with CEQA. Processing and approval of the permit application are in compliance with the requirements of the California Environmental Quality Act. An Initial Study (“IS”) was prepared for the project, which identified potentially significant environmental impacts. However, these impacts can be mitigated to less than significant levels through revisions and implementation of mitigation measures. As such, a Mitigated Negative Declaration (“MND”) was prepared and circulated for a 20-day public review period from October 2 to October 22, 2025, with distribution to the State Clearinghouse, public agencies, nearby property owners, and interested parties. One comment was received from the California Department of Toxic Substances Control (DTSC), and its recommendations regarding imported fill material have been incorporated as conditions of approval. The IS determined that the project would not result in significant impacts to most resource areas, and identified mitigation measures for biological resources, cultural resources, tribal cultural resources, and geology and soils, which are included in the Mitigation Monitoring Program and Conditions of Approval.

D. Architectural Design. The architectural design of the project, including but not limited to the architectural style, scale, building mass, materials, colors, architectural details, and roof style, is compatible with surrounding development. The adjacent multi-family development to the north shares several defining characteristics with the proposed project, including similarly scaled buildings composed of six attached units. The architectural style is complementary, featuring stucco exteriors, tile roofing, wrought iron balconies, recessed entryways, and communal open space without private driveways. The surrounding single-family tract homes also reflect a consistent architectural design, with comparable color palettes, exterior finishes, and material selections. The Project further enhances this compatibility through the inclusion of framed windows, some accented with faux shutters, as well as a mix of hip and gable roof forms, which reflects the roof styles found in nearby residences. Collectively, these design elements ensure compatibility with the surrounding development.

E. Site Design. The site design of the project, including but not limited to project entries, interior circulation, pedestrian and bicycle access, pedestrian amenities, screening of equipment and trash enclosures, exterior lighting, and other site design elements, is compatible with surrounding development. The Project will retain the existing single-entry driveway at the southern end of the site along Argonaut. The internal private roadway system designed to provide two-way access to residential garages and guest parking spaces, emergency access, hydrant placement has been reviewed and conceptually approved by both the Building Division and the Orange County Fire Authority (OCFA). Each unit will include an enclosed private garage with dedicated space for trash bin storage. Approximately 32% of the site will be dedicated to open space, including a private park, shared yards, pedestrian walkways, and perimeter landscaping. Perimeter fencing and exterior mechanical equipment will be screened with additional landscaping, and the site entrance will be enhanced with decorative paving, signage, and accent trees. Lighting throughout the site, including streetlights, bollards, and shade structures, will be designed with recessed, downward-facing fixtures to minimize light spill. These design elements are compatible with surrounding residential communities.

F. Landscape Design. Project landscaping, including but not limited to the location, type, size, color, texture, and coverage of plant materials, has been designed so as to provide visual relief, complement buildings, visually emphasize prominent design elements and vistas, screen undesirable views, provide a harmonious transition between adjacent land uses and between development and open space, and provide an overall unifying influence to enhance the visual continuity of the project. The Project incorporates a landscape plan that enhances the overall visual continuity of the site and complements the architectural character of the development. Approximately 32% of the site is dedicated to open space, which includes a private park featuring a BBQ counter, shade structure, picnic tables, benches, and play equipment. In addition, approximately 35,000 square feet of shared yards, pedestrian walkways, and perimeter landscaping are distributed throughout the site to provide visual relief and promote connectivity. Landscaping will be provided around the exterior mechanical equipment and perimeter fencing to screen undesirable views. The site entrance is designed to create a welcoming and visually prominent focal point, enhanced with decorative paving, signage, and accent trees. The plant palette aligns with the City Council-approved plant palette, emphasizing low-water, drought-tolerant species.

Section 5. **Location of Documents.** The administrative record for the Project is maintained at City Hall located at 12 Journey, Suite 100, Aliso Viejo, CA 92656. The custodian of records is the City Clerk.

Section 6. **Severability**. If any provision of this Resolution or the application thereof to any person or circumstance is held invalid, such invalidity shall not affect other provisions or applications of this Resolution that can be given effect without the invalid provision or application, and to this end the provisions of this Resolution are severable. The City Council hereby declares that it would have adopted this Resolution irrespective of the invalidity of any particular portion thereof.

Section 7. **Effective Date.** This Vesting Tentative Tract Map 19340, Site Development Permit SDP-2024-00001 shall not take effect unless and until General Plan Amendment, Zone Change, and the Development Agreement are each approved by the City Council and have become effective, and the associated Development Agreement is approved by the City Council and executed by both parties thereto.

Section 8. **Execution of Resolution**. The Mayor shall sign this Resolution and the City Clerk shall attest and certify to the passage and adoption thereof.

PASSED, APPROVED AND ADOPTED this 3rd day of December 2025.

I, Kathy Bailor, City Clerk of the City of Aliso Viejo, California, DO HEREBY CERTIFY that the foregoing is the original of Resolution No. 2025-__ duly passed and adopted by the City Council of the City of Aliso Viejo at their regular meeting held on the 3rd day of December 2025, by the following roll call vote, to wit:

AYES:

NOES:

ABSENT:

_____
KATHY BAILOR,
INTERIM CITY CLERK

(SEAL)

Exhibit "A"
Conditions of Approval
Case Nos. GPA-2025-00002, ZC 2025-00002, VTTM 19340, and SDP-2024-00001

General

1. Indemnification. The Applicant shall indemnify, protect, defend, and hold the city, and/or any of its officials (appointed or elected), officers, employees, agents, departments, agencies, and instrumentalities thereof, harmless from any and all claims, demands, lawsuits, writs of mandamus, and other actions and proceedings (whether legal, equitable, declaratory, administrative or adjudicatory in nature), and alternative dispute resolution procedures (including, but not limited to arbitrations, mediations, and other such procedures), judgments, orders, and decisions (collectively 'Actions'), brought against the city, and/or any of its officials, officers, employees, agents, departments, agencies, and instrumentalities thereof, that challenge, attack, or seek to modify, set aside, void, or annul, any action of, or any permit or approval issued by the city and/or any of its officials, officers, employees, agents, departments, agencies, and instrumentalities thereof (including actions approved by the voters of the city) for or concerning the project, whether such Actions are brought under the Ralph M. Brown Act, California Environmental Quality Act, Planning and Zoning Law, Subdivision Map Act, Community Redevelopment Law, Code of Civil Procedure Sections 1085 or 1094.5, or any other federal, state, or local constitution, statute, law, ordinance, charter, rule, regulation, or any decision of a court of competent jurisdiction. It is expressly agreed the city shall have the right to approve, which approval will not be unreasonably withheld, legal counsel providing the city's defense, and that Applicant shall reimburse city for any costs and expenses directly and necessarily incurred by the city in the course of the defense. The city shall promptly notify the Applicant of any action brought, and city shall cooperate with the Applicant in defense of the action.

2. Other Agency Approvals. The Applicant shall comply with all applicable requirements of outside agencies having jurisdiction, including but not limited to the local fire authority, water district, and any other local, regional, State, or Federal agencies.

3. Public Works. If applicable, the Applicant shall apply for and obtain encroachment permits or other permits from the Public Works Department for any work or placement within the public right-of-way.

Development Agreement and Vesting Tentative Tract Map

4. **Prior to issuance of any building permit,** the Applicant shall execute the Development Agreement with the City. The Applicant shall comply with all terms and conditions of the agreement.

5. Payment of the full $213,850 City Fees and $824,802 Park in-lieu fee amounts shall be made to the City **prior to the issuance of any building permit** for the Project. No building permit shall be issued until the City has received the full payment and confirmed compliance with all applicable fee requirements. The City shall have no obligation to issue any building permit until and unless such payments and in-lieu fees are received in full, any delay resulting from non-payment shall be solely the responsibility of the Applicant.

6. The Applicant shall provide a minimum of 3 dwelling units on-site as for-sale housing, which shall be deed restricted to very low-income households. Each unit shall be designed and located in full compliance with the plans reviewed by the City Council on December 3, 2025. **Prior to issuance of any building permit,** the Applicant shall execute the Density Bonus Housing Agreement as provided in the Development Agreement. The Applicant shall comply with all terms and conditions of the Density Bonus Housing Agreement and the Development Agreement.

Vesting Tentative Tract Map

7. A final tract map shall be filed for approval and recordation pursuant to AVMC Chapter 14.18.

8. **Prior to approval of the Final Map**, the Applicant shall resolve any encroachments into the easements to the satisfaction of the City and all affected parties. No Final Map shall be approved for filing until documentation demonstrating resolution of the encroachment, whether by removal, relocation, or formal modification of the easement, has been reviewed and approved by the City. The Final Map shall reflect the corrected easement boundaries and conditions as approved.

9. **Prior to clearance of a Final Map or issuance of a permit,** the Applicant shall submit a Fire Master Plan to Orange County Fire Authority for review.

10. Street lighting shall be provided along, and at the intersections of, all arterial highways and local streets in accordance with the illumination levels specified in the city standards, except as otherwise approved by the city engineer.

11. Utility lines, including, but not limited to, electric, communications, street lighting, and cable television, shall be placed underground. The Applicant is responsible for making the necessary arrangements with the utility companies for the installation of such facilities. Appurtenances and associated equipment such as, but not limited to, surface-mounted transformers, pedestal-mounted terminal boxes, meter cabinets, and concealed ducts in an underground system may be placed above ground within the street right-of-way where sufficient right-of-way width exists so as not to pose a serious hazard to pedestrian traffic.

12. All lots shall be connected to a sanitary sewer system.

Construction

13. The approved project involves the demolition of an existing office building development and construction of a new 61-unit townhome complex with associated parking lot and open space amenities. The project shall be constructed and maintained in full compliance with the approved plans and specifications, including but not limited to all details regarding building height, setbacks, site layout, parking, circulation, architectural features, and other design elements, reviewed by the City Council on December 3, 2025. Any modifications or deviations from the approved plans shall require prior review and approval by the City pursuant to AVMC 15.74.110 (Modifications to discretionary permits).

14. The approved project shall comply with all applicable provisions of the Aliso Viejo Municipal Code, including but not limited to building codes and any conditions imposed as part of the approval process.

15. **Prior to issuance of any permits,** the Applicant shall submit and obtain City approval of a construction plan detailing the phasing and timing of demolition of the existing office building, site grading, infrastructure installation, landscape/open space installation and construction of the approved 61-unit townhome community. All work shall proceed in accordance with the approved construction plan, and any substantive changes to phasing or timing shall require prior written authorization from the City.

16. **Prior to issuance of any grading permit**, the Applicant shall submit a proposed haul route for the transport of earth, materials, and equipment to and from the site. The haul route shall be reviewed and approved by the City to ensure public safety, minimize traffic impacts, and protect adjacent properties. No grading or excavation shall occur until the haul route has received written approval, and any subsequent modifications shall require prior authorization by the City.

17. **Following completion of grading and prior to issuance of any building permits**, the Applicant shall submit a pad certification prepared and signed by a licensed civil engineer or geotechnical engineer, verifying that all building pads have been graded in accordance with the approved grading plans and are suitable for the intended construction. The certification shall be reviewed and approved by the City prior to any construction.

18. Construction activities shall be limited to the hours of 7:00 a.m. to 8:00 p.m., Monday through Saturday. No construction shall occur on Sundays or on Federal holidays. Use of rock crusher on site is prohibited.

19. **Prior to grading or building permit issuance,** the Applicant shall prepare and submit for approval a Project Specific Final Water Quality Management Plan (F-WQMP) for the subject project. The F-WQMP shall be consistent with the approved P-WQMP and in full conformance with the TGD.

20. During all grading and construction activities, the construction contractor shall post a clearly visible sign at the project site boundary listing a contact name and telephone number.

21. **Prior to building permit final of any unit,** perimeter fencing shall be installed. The use of chain link, barbed wire, razor wire or electrified fencing are prohibited.

22. Project identification sign is required. Prior to installation of this sign, the project name shall be approved by the City to ensure appropriateness, aid in identification for emergency services and to avoid duplication with other projects in the City. Placement of any permanent and temporary signs may be permitted pursuant to AVMC Chapter 15.34.

23. Uless determined infeasible by the City, streetlights shall be placed off of sidewalks; and irrigation controllers, power transformers, telephone and cable TV junction boxes, and other similar facilities shall be placed underground.

24. **Prior to building permit issuance,** the Applicant shall submit a lighting plan identifying the type, location and height of proposed lighting fixtures, with an associated photometric analysis showing lighting illumination levels and spillover. The lighting plan shall conform to the provisions of AVMC Zoning Code Appendix A (Requirements for Crime Prevention Through Environmental Design) and AVMC 15.62.070 (Outdoor Lighting) and shall be reviewed and approved by the Director of Community Development and the Police Services Department prior to issuance of a building permit. The Police Services Department shall also review address numbers, certain landscaping, and door strikes and jambs as part of this same review and approval process.

25. Screening of Equipment and Facilities. Mechanical equipment, ground-mounted utility, mechanical, and other similar equipment shall be screened pursuant to AVMC 15.62.080 (Nonresidential Site Planning).

26. Landscaping shall comply with AVMC 15.62.060 (Landscaping and screening). All landscaping and common areas on site shall be maintained in perpetuity by the Applicant or an established homeowners' association.

Temporary Use Permits

27. The temporary placement of a trailer, recreational vehicle or other relocatable building, or the temporary use of a permanent structure on an active construction or grading site to serve as a construction and/or guard office may be permitted subject to approval of a temporary use permit pursuant to AVMC 15.14.170 (Construction and Guard Offices).

28. Temporary model home complexes and real estate sales offices may be established subject to approval of a temporary use permit pursuant to AVMC 15.14.180 (Model Home Offices).

Permit Validity

29. Expiration. This approval shall expire and be of no further force or effect if:
    a. The permit is not established within two years of the permit's effective date or such other time period designated by the permit approval, by state law, or by this code; or
    b. After establishment, the use or activity for which the permit was approved is discontinued or abandoned for a period of one year.

30. Time Extensions. Upon application before expiration of the period of validity, the City Council may grant or conditionally grant an extension to the period of validity for up to one year per extension if it finds that such an extension is justified by the circumstances of the original findings for the project can still be made with, if necessary, the imposition of conditions not originally imposed on the project. The filing of an application for extension shall stay expiration of the permit until action is taken on the time extension by the decision-making authority. No more than two one-year extensions may be granted or conditionally granted.

31. Revocation of discretionary permits. Any discretionary permit may be revoked by the original decision-making authority pursuant to the provisions of AVMC 15.74.120 (Revocation of Discretionary Permits).

Orange County Fire Authority ("OCFA")

32. **Prior to building permit issuance,** submit plans for review and approval of the following: underground piping for private hydrants and fire sprinkler systems, and fire sprinkler systems.

33. **Prior to concealing interior construction**, submit plan for review and approval of the fire alarm system.

Department of Toxic Substances Control ("DTSC")

34. All imported soil/fill material shall be tested to ensure all COCs meet screening levels as outlined in DTSC's Preliminary Endangerment Assessment Guidance Manual. Furthermore, DTSC advises referencing the DTSC Information Advisory Clean Imported Fill Material Fact Sheet if importing fill is necessary. To minimize the possibility of introducing contaminated soil/fill material there should be documentation of the origins of the soil/fill material and, if applicable, sampling be conducted to ensure that the imported soil/fill material are suitable for the intended land use. The soil sampling should include analysis based on the source of the soil/fill and knowledge of prior land use.

35. If in the event any COC results are above DTSC residential screening levels are found in soil or fill material, all contaminations within the Project area shall be addressed through DTSC or Regional Water Quality Control Board.

Mitigation Measures

Biological Resources

36. MM BIO-1a: Nesting Bird Pre-construction Surveys If ground-disturbing or vegetation-removing construction activities or tree removal is proposed during the breeding/nesting season for migratory birds (February 1 through September 15), a qualified Biologist shall conduct pre-construction surveys for special-status birds and other migratory birds within the construction area, including a 300-foot survey buffer (where accessible), no more than 3 days prior to the start of ground-disturbing activities in the construction area

37. MM BIO-1b: Avoidance of Active Avian Nests If an active nest (i.e., occupied by eggs or fledglings) is located during pre-construction surveys or at any point during the construction phase of the proposed project, the City of Aliso Viejo shall be notified regarding the status of the nest. Furthermore, construction activities shall be restricted as necessary to avoid disturbance of the nest until the eggs or fledglings no longer are in the nest or a qualified Biologist deems disturbance potential to be minimal. Restrictions may include establishment of exclusion zones (no ingress of personnel or equipment at a minimum radius of 300 feet around an active raptor nest and a 50-foot radius around an active migratory bird nest) or alteration of the construction schedule.

Cultural Resources

38. MM CUL-1: Prior to the initiation of construction activities, all construction personnel conducting ground disturbance at the site shall be provided a Worker Environmental Awareness Program (WEAP) cultural resources “tailgate” training. The training shall include visual aids, a discussion of applicable laws and statutes relating to archaeological resources, types of resources that may be found within the project site, and procedures to be followed in the event such resources are encountered. The training shall be conducted by an Archaeologist who meets the Secretary of the Interior’s Professional Qualification Standards for archaeology. An Archaeologist who meets the Secretary of the Interior’s Professional Qualification Standards for archaeology shall conduct an updated survey of the site following demolition and exposure of native soils and prior to any project-related trenching or grading to check for the inadvertent exposure of cultural materials. This shall be followed by archaeological monitoring during the grading and trenching phase of the proposed project. At the completion of these phases, archaeological monitoring shall be reduced to periodic “spot checks.” In the event exposed soils indicate cultural materials may be present, this may be followed by regular or full-time archaeological monitoring as determined by the Archaeologist

39. MM CUL-2: In the event that buried archaeological resources are discovered during construction, operations shall stop within a 100- foot radius of the find and an Archaeologist who meets the Secretary of Interior's Professional Qualification Standards for archaeology shall be consulted to determine whether the resource requires further study. The qualified Archaeologist shall make recommendations to the Lead Agency on the measures that shall be implemented to protect the discovered resources, including but not limited to excavation of the finds and evaluation of the finds in accordance with Section15064.5 of the CEQA Guidelines. Potentially significant cultural resources consist of but are not limited to stone, bone, fossils, wood, or shell artifacts or features, including hearths, structural remains, or historic dumpsites. Any previously undiscovered resources found during construction within the project area shall be recorded on appropriate California Department of Parks and Recreation (DPR) forms and evaluated for significance in terms of CEQA criteria. If the resources are determined to be unique historic resources as defined under Section 15064.5 of the CEQA Guidelines, mitigation measures shall be identified by the monitor and recommended to the Lead Agency. Appropriate mitigation measures for significant resources could include avoidance or capping, incorporation of the site in green space, parks, or open space, or data recovery excavations of the finds. The Lead Agency, along with other relevant or Tribal officials, shall be contacted upon the discovery of cultural resources to begin coordination on the disposition of the find(s). Treatment of any significant cultural resources shall be undertaken with the approval of the Lead Agency. No further grading shall occur in the area of the discovery until the Lead Agency approves the measures to protect these resources. Upon coordination with the Lead Agency, any archaeological artifacts recovered shall be donated to an appropriate Tribal custodian or a qualified scientific institution where they would be afforded applicable cultural resources laws and guidelines.

40. MM CUL-3: In the event of the accidental discovery or recognition of any human remains, CEQA Guidelines Section 15064.5, Health and Safety Code Section 7050.5, and Public Resources Code Sections 5097.94 and Section 5097.98 shall be followed. If during the course of project construction, there is accidental discovery or recognition of any human remains, the following steps shall be taken: 1. There shall be no further excavation or disturbance of the site where human remains are discovered and/or any nearby area reasonably suspected to overlie adjacent human remains until the County Coroner is contacted to determine whether the remains are Native American and if an investigation of the cause of death is required. If the Coroner determines the remains to be Native American, the Coroner shall contact the Native American Heritage Commission (NAHC) within 24 hours, and the NAHC shall identify the person or persons it believes to be the Most Likely Descendant (MLD) of the deceased Native American. The MLD may make recommendations to the landowner or the person responsible for the excavation work within 48 hours, for means of treating or disposing of, with appropriate dignity, the human remains, and any associated grave goods as provided in Public Resource Code Section 5097.98. 2. Where the following conditions occur, the landowner or his or her authorized representative shall rebury

the Native American human remains and associated grave goods with appropriate dignity either in accordance with the recommendations of the MLD or on the project site in a location not subject to further subsurface disturbance:

a. The NAHC is unable to identify an MLD or the MLD failed to make a recommendation within 48 hours after being notified by the commission. •
b. The descendant identified fails to make a recommendation.
c. The landowner or his authorized representative rejects the recommendation of the descendant, and mediation by the NAHC fails to provide measures acceptable to the landowner.

Geology and Soils

41. COA GEO-1: In accordance with Municipal Code 13.08.170, Soil Engineering and Engineering Geology Reports, a soil engineering and engineering geology report shall be required for grading projects unless otherwise waived by the building official. The reports shall include information appropriate for the site including any information required by the building official. Recommendations included in the reports and approved by the building official shall be incorporated in the grading plans or specifications. Accordingly, prior to issuance of grading permit, the project applicant shall provide grading plans or specifications that include all recommendations from the proposed project's May 31, 2024, Geotechnical Subsurface Exploration Due Diligence Study prepared by SA Geotechnical, Inc., or from the latest geotechnical study for the proposed project.

42. MM GEO-1: The project applicant shall enlist a qualified Paleontologist (meeting the standards of the Society of Vertebrate Paleontology [SVP]) to prepare a Worker Environmental Awareness Program (WEAP) presentation for construction personnel. It will include information on paleontological resources, laws protecting them, types of fossils that could occur at the project site, and protocol for unanticipated discoveries. In the event that fossils are discovered during construction, excavations within 50 feet of the find shall be temporarily halted or diverted. The contractor shall notify the qualified Paleontologist to examine the discovery. The qualified Paleontologist shall document the discovery as needed in accordance with SVP standards, evaluate the potential resource, and assess the significance of the find under the criteria set forth in CEQA Guidelines Section 15064.5. Based on the significance of the find, the qualified Paleontologist shall determine procedures to be followed before construction is allowed to resume at the location of the find. If, in consultation with the qualified Paleontologist, it is determined that avoidance is not feasible, the qualified Paleontologist shall prepare a Paleontological Resources Impact Mitigation Program (PRIMP) to outline salvage and recovery procedures. If deemed necessary by the qualified Paleontologist, the PRIMP shall include construction monitoring requirements as well. The PRIMP shall be submitted to the City for review and approval and the approved plan shall be implemented.

Tribal Cultural Resources

43. MM TCR-1 :Retain a Native American Monitor Prior to Commencement of Ground-Disturbing Activities. The project applicant shall retain a Native American Monitor from or approved by both the Gabrieleño Band of Mission Indians – Kizh Nation and the Juaneño Band of Mission Indians, Acjachemen Nation. The Monitor shall be retained prior to the commencement of any "ground-disturbing activity" for the subject project at all project locations (i.e., both on-site and any off-site locations included in the project description/definition and/or required in connection with the project, such as public improvement work). "Ground-disturbing activity" shall include, but is not limited to, demolition, pavement removal, potholing, auguring, grubbing, tree removal, boring, grading, excavation, drilling, and trenching. A copy of the executed monitoring agreement shall be submitted to the Director of Community Development prior to the earlier date of either: (1) the commencement of any ground-disturbing activity, or (2) the issuance of any permit required to commence any ground disturbing activity. The Monitor shall complete daily monitoring logs that will provide descriptions of the relevant ground-disturbing activities, the type of construction activities performed, locations of ground-disturbing activities, soil types, cultural-related materials, and any other facts, conditions, materials, or discoveries of significance to the Tribes. Monitor logs shall identify and describe any discovered Tribal Cultural Resources (TCRs), including, but not limited to, Native American cultural and historical artifacts, remains, places of significance, etc., (collectively, Tribal Cultural Resources, or TCRs), as well as any discovered Native American (ancestral) human remains and burial goods. Copies of Monitor logs shall be provide to the project applicant and the Director of Community Development upon written request to the Tribe. On-site Tribal monitoring shall conclude upon the latter of the following: (1) written confirmation to the Monitor and the Lead Agency that all ground-disturbing activities and phases that may involve ground-disturbing activities on the project site or in connection with the project are complete; or (2) a determination and written notification by the Monitor to the Director of Community Development that no future planned construction activity and/or development/construction phase at the project site possesses the potential to impact to TCRs.

44. MM TCR-2: Unanticipated Discovery of Tribal Cultural Resource Objects (Non-funerary/Non-ceremonial) Upon discovery of any Tribal Cultural Resources (TCRs), all construction activities in the immediate vicinity of the discovery (i.e., not less than the surrounding 50 feet) shall cease. The City shall consult with the project Archaeologist and initiate Native American consultation procedures with the project's consulting Tribes (Gabrieleño Band of Mission Indians-Kizh Nation and the Juaneño Band of Mission Indians, Acjachemen Nation). The consultation effort is intended to be a meaningful and timely process of seeking, discussing, and considering carefully the views of others in a manner that is

cognizant of all parties' cultural values and, where feasible, seeking agreement on the appropriate treatment and disposition of TCRs discovered. A Cultural Resources and Monitoring and Treatment Plan shall be created by the Archaeologist in coordination with the consulting Tribes (Gabrieleño Band of Mission Indians-Kizh Nation and the Juaneño Band of Mission Indians, Acjachemen Nation) and all subsequent finds shall be subject to this plan. Project construction shall not resume within the immediate vicinity of the discovery (i.e., not less than the surrounding 50 feet) until a Cultural Resources and Monitoring Treatment Plan is prepared and implemented. The plan may include, but would not be limited to, reburying, relocating, recording, and/or another culturally appropriate treatment. If it is determined that mutual agreement cannot be reached within 30 days of the initial consultation meeting, the TCR(s) under review shall be reinterred on-site in a location free from future ground disturbing construction activities. This measure does not apply to the finding of human remains, which must comply with California Health and Safety Code Section 7050.5.

45. MM TCR-3: Unanticipated Discovery of Human Remains and Associated Funerary or Ceremonial Objects

    a. Native American human remains are defined in PRC 5097.98 (d)(1) as an inhumation or cremation, and in any state of decomposition or skeletal completeness. Funerary objects, called associated grave goods in Public Resources Code Section 5097.98, are also to be treated according to this statute.
    b. If Native American human remains and/or grave goods are discovered or recognized on the project site, then Public Resource Code 5097.9 as well as Health and Safety Code Section 7050.5 shall be followed.
    c. Human remains and grave/burial goods shall be treated alike per California Public Resources Code Section 5097.98(d)(1) and (2).
    d. Preservation in place (i.e., avoidance) is the preferred manner of treatment for discovered human remains and/or burial goods. E. Any discovery of human remains/burial goods shall be kept confidential to prevent further disturbance.

Street View and Neighborhood Context

Perimeter Retaining Wall and Fence
- Retaining wall to be screened to reduce visibility from street
- Perimeter fencing to be tube steel and screened with vegetation
- Frontage to be landscape with trees and shrubs. Existing trees to be preserved where possible

Perimeter Screening
- AC units and utility transfomers screened by landscape to reduce visual impact (as allowed by provider)
- Frontage to be landscape with trees and shrubs. Existing trees to be preserved where possible

Residential Townhomes
- Three-story Residential Townhomes
- 2-4 Bedrooms
- 2-Car Garage

Private Drive
- 24- foot private drive provides access to all homes
- 9' x 18' guest parking spaces distributed throughout community
- Meets OCFA turn-around and access requirements

Community Space
- ± 5,215 SF
- Landscaped paseos and sidewalks connect all homes
- Potential programming for lawn, BBQ grill, shade structure, picnic table, and tot lot

Primary Entry off Argonaut
- Maintains existing driveway location
- Enhanced with accent trees, enhanced paving and project community signage
- Centrally located guest parking

Community Frontage
- Front doors at community entry create a superior arrival experience while providing "eyes-on" safety
- Landscaping enhances public street while maintaining community privacy

Summary

Site Area: 2.83 acres (123,275 SF)

Total Homes: 61
- (12) Plan 2531: 1,268 SF 2 Bed 2.5 Bath, Tandem Garage
- (8) Plan 2532: 1,210 SF 2 Bed 2.5 Bath, Standard Garage
- (21) Plan 1633: 1,496 SF 3 Bed 3 Bath, Tandem Garage
- (20) Plan 1638: 1,765 SF 4 Bed 4 Bath, Standard Garage

Net Density: 21.6 du/ac

	Development Standards Required	Proposed
Maximum Density	30 du/ac	21.6 du/ac
Maximum Structure Height	45'	38'
Minimum Building Site Area (SF)	5,000 SF	123,275 SF
Maximum Building Site Coverage	60%	40%
Minimum Common Open Space	25% (30,819 SF)	32.7% (40,259.9 SF) (See Note 13 below)
Minimum Perimeter Setback [7]	20'	7'
Parking [8]	Townhomes: 2 spaces/ unit = 122 Guest: .5 spaces/unit = 31 Total Parking = 153	Garage: 2 per unit = 122 Guest= 28 Total= 150 (See Note 12 below)

Notes:
1. 95 Argonaut, Aliso Viejo, CA 92656
2. Assessor's Parcel Numbers: 623-091-01
3. Application Number: DRP-2024-00002
4. Type VB construction with either NFPA 13D automatic sprinkler system or NFPA 13R automatic sprinkler system. Refer to floor plans for specifics
5. Existing Zoning: Business Park 2
6. Proposed Zoning: Residential High Density
7. Existing General Plan: Business Park
8. Proposed General Plan: High Density Residential
9. 5% Affordable (3 Homes) at Very Low to be provided on site. Max wall heights & perimeter setbacks reduced per Density Bonus Law. The following units will be assigned as affordable:
   - One (1) - Plan 2532: 1,210 SF 2 Bed 2.5 Bath
   - Two (2) - Plan 2531: 1,268 SF 2 Bed 2.5 Bath
10. SB330: Pending
11. CEQA: IS/MND
12. CA Density Bonus Law (Gov Code:Section 65915-65918)
13. Refer to Sheet L-8 for Conceptual Common Open Space Calculation

BENCHMARK

DESIGNATION: 3X-47-83

DESCRIPTION: DESCRIBED BY OCS 2002 FOUND 3 3/4" OCS ALUMINUM BENCHMARK DISK STAMPED "3X-47-83", SET IN THE SOUTHEASTERLY CORNER OF A 4 FT. BY 15 FT. CONCRETE CATCH BASIN. MONUMENT IS LOCATED IN THE SOUTHEASTERLY CORNER OF THE INTERSECTION OF INDIAN CREEK\GLENWOOD AND MOULTON PARKWAY, 90 FT. SOUTHEASTERLY OF THE CENTERLINE OF INDIAN CREEK AND 60 FT. NORTHEASTERLY OF THE CENTERLINE OF MOULTON. MONUMENT IS SET LEVEL WITH THE SIDEWALK.

ELEVATION: 290.133 FT. (NAVD 88) LEVELED 1991

BASIS OF BEARINGS

THE BASIS OF BEARINGS FOR THIS SURVEY IS THE CALIFORNIA STATE PLANE COORDINATE SYSTEM CCS83, ZONE 6, BASED LOCALLY ON CONTROL STATIONS: "AF9686 BILL BILL GRM", AND "DG9736 P474 FALLBROOK_CS3004 CORS GRP", NAD83 (NSRS2011) EPOCH 2010.00 AS SHOWN HEREON.

ASSESSOR'S PARCEL NUMBER

623-091-01

LEGAL DESCRIPTION

PARCEL 1 OF PARCEL MAP NO. 85-158, AS SHOWN ON A MAP FILED IN BOOK 218, PAGES 27 TO 30 INCLUSIVE OF PARCEL MAPS, IN THE OFFICE OF THE COUNTY RECORDER OF ORANGE COUNTY, CALIFORNIA.

WATER EFFICIENT WORK SHEET

Maximum Applied Water Allowance (MAWA)
Total MAWA = (Eto x 0.50 x LA in Sq.ft. x 0.62)+(Eto x 1.0 x SLA in Sq.ft. x 0.62)= Gallons per year for LA + SLA

Hydrozone:	Eto:	KL	LA Sq. Ft.	Conversion	SLA Sq. Ft.	MAWA
Landscaped Area	49.6	0.55	31,244	0.62	NA	528,449

MAWA= Maximum Applied Water Allowance (gallons per year)
Eto= Reference Evapotranspiration from Appendix C (inches per year)
0.50= Evapotranspiration Adjustment Factor (ETAF)
1.0= ETAF for Special Landscaped Area
LA= Landscaped Area includes Special Landscape Area (square feet)
0.62= Conversion Factor (to gallons per square foot)
0.3= the additional ET adjustment Factor for Special Landscape Area (1.0- 0.7= 0.3)
SLA= Special Landscape Area (square feet)

Applicant to fill in boxes below:

Eto (Reference Evapotranspiration from Appendix C inches per year)	49.6
Landscaped Area includes Special Landscape Area (square feet)	31,244
Spsical Landscape Area (square feet)	0

Estimated Annual Water Use
Total EAWU = (Eto x KL x LA in Sq.ft. / IE)= Gallons per Year

Hydrozone:	Eto:	KL	Sq. Ft.	Conversion	IE	EAWU
Low Water Use	49.6	0.2	20,084	0.62	0.81	**152,500**
Medium Water Use S	49.6	0.5	9,534	0.62	0.81	**180,981**
High Water Use	49.6	0.8	1,626	0.62	0.73	**54,798**
Total EAWU:			31,244			**388,278**

EAWU= Estimated Applied Water Use (gallons per year)
Eto= Reference Evapotranspiration from Appendix C (inches per year)
KL= Landscape Coefficient
LA= Landscaped Area (square feet)
0.62= Conversion Factor (to gallons per square foot)
IE= Irrigation Efficiency= IME X DU (See definication in Appendix E for exmapline IE percentages)
IME= Irrigation Management Efficiency (90%)
DU= Distribution Uniformity of Irrigation Head
KL= KL x Kc x Kmc
Ks= species factor (range 1.0- 0.9) (see WUCOLS list for values)
Kd= density factor (range 0.5- 1.3) (see WUCOLS list for density value)
Kmc= microclimatic factor (range 0.5- 1.4) (see WUCOLS)

Table A- PF (Plant Factor)
Cool Season Turf= 0.8
Warm Season Turf= 0.7
High Water Use Plants= 0.7 (can be between 0.7-0.9)
Moderate Water Use Plants= 0.5 (can be between 0.4-0.6)
Low Water Use Plants= 0.2 (can be between 0.1-0.3)
Very Low Water Use Plants= 0.1

IE (Irrigation Efficiency)- Appendix E
Pop-up Stream Rotor= 0.73
Rotor Heads= 0.76
Microsprays= 0.76
Bubblers= 0.77
Drip Emitters= 0.81
Subsurface Irrigation= 0.81

Irrigation Note:

1. All planting areas shall have a fully automatic irrigation system. Utilization water conserving features such as low-precipitation rate heads; low-flow micro sprays or drip irrigation, water sensors and multi-program controllers with weather station capability and drip circuit features. "Water Efficient Landscapes" irrigation system, scheduling and water use WELO calculations shall be designed to meet the requirements of the specifications of the City of Aliso Viejo.

2. All utility infrastructure and other potential conflicts including off site and below-grade that could affect irrigation design considered.

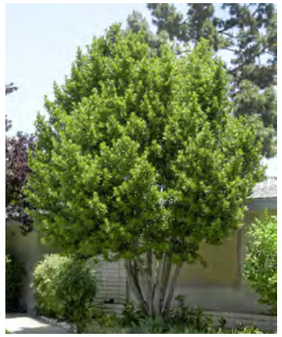
TREE SCHEDULE:

BOTANICAL NAME	COMMON NAME	SIZE	FORM
Agonis flexuosa	Australian Myrtle	24" box min.	STD
Albizia julibrissin	Silk Tree	24" box min.	STD
Arbutus 'Marina'	N.C.N.	24" box min.	STD
Cassia leptophylla	Gold Medallion Tree	24" box min.	STD
Chitalpa tashkentensis	Chitalpa	24" box min.	STD
Geijera parvifolia	Australian Willow	24" box min.	STD
Koelreuteria bipinnatta	Chinese Flame Tree	24" box min.	STD
Laurus nobilis	Sweet Bay	24" box min.	STD
Olea europae 'Wilsonii'	Fruitless Olive	24" box min.	STD
Pinus eldarica	Afghan Pine	24" box min.	STD
Pinus halepensis	Aleppo Pine	24" box min.	STD
Pinus spp	Pine	24" box min.	STD
Platanus acerifolia 'Columbia'	London Plane Tree	24" box min.	STD
Prosopis chilensis 'Phoenix'	Chilean Mesquite	24" box min.	STD
Quercus agrifolia	Coast Live Oak	24" box min.	STD
Quercus engelmannii	Engelmann Oak	24" box min.	STD
Quercus ilex	Holly Oak	24" box min.	STD
Quercus virginiana	Southern Live Oak	24" box min.	STD

GROUNDCOVER SCHEDULE:

BOTANICAL NAME	COMMON NAME	SIZE	SPACING
Acacia redolens 'Low Boy'	Prostrate Acacia	1 gal	24"o.c.
Baccharis pilularis	Coyote Bush	1 gal	24"o.c.
Ceanothus griseus horizontalis	Carmel Creeper	1 gal	18"o.c.
Cerastium tomentosum	Snow in summer	1 gal	24"o.c.
Cotoneaster parneyi	Red Clusterberry	1 gal	24"o.c.
Cotoneaster dammeri 'Lowfast'	Lowfast Clusterberry	1 gal	24"o.c.
Lantana Camara	Lantana	1 gal	18"o.c.
Lantana montevidensis	Creeping Lantana	1 gal	24"o.c.
Myoporum parvifolium	Creeping Myoporum	1 gal	24"o.c.
Rosmarinus officinalis 'Prostratus'	Creeping Rosemary	1 gal	24"o.c.
Senecio mandraliscae	Blue Chalk Sticks	1 gal	18"o.c.

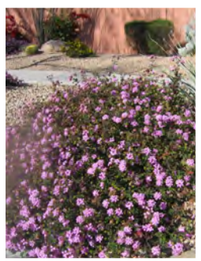
VINE SCHEDULE:



BOTANICAL NAME	COMMON NAME	SIZE	SPACING
Bougainvillea 'Barbara Karst'	Bougainvillea	15 gal	10'o.c.
Macfadyena unguis-cati	Yellow Trumpet Vine	15 gal	10'o.c.

Note: All plants in this list are derive from City of Aliso Viejo's Landscape Plant Palette of low water plants.

SHRUB SCHEDULE:



BOTANICAL NAME	COMMON NAME	SIZE	SPACING
Aeonium arboreum 'Atropurpureum'	N.C.N.	5 gal	36" 0.c.
Agave attenuata 'Nerva'	Agave	15 gal	36" 0.c.
Aloe barbadensis	N.C.N.	5 gal	30" 0.c.
Aloe striata	Coral Aloe	5 gal	30" 0.c.
Arbutus unedo 'Compacta'	Dwarf Strawberry Tree	15 gal	48" 0.c.
Baccharis pilularis 'Pigeon Point'	Dwarf Coyote Brush	5 gal	36" 0.c.
Bambusa multiplex 'Alphonse Karr'	Bamboo	5 gal	30" 0.c.
Ceanothus 'Heart's Desire' Heart's	Desire Ceanothus	5 gal	36" 0.c.
Ceanothus spp.	Ceanothus	5 gal	36" 0.c.
Cotoneaster parneyi	Red Clusterberry	5 gal	36" 0.c.
Dietes dicoler	Fortnight Lily	5 gal	24" 0.c.
Dudleya caespitosa	Dudleya	5 gal	36" 0.c.
Echium fastuosum	Pride of Madeira	5 gal	36" 0.c.
Elaegnus pungens	Silverberry	15 gal	48" 0.c.
Encelia californica	California Encelia	5 gal	36" 0.c.
Feijoa sellowiana	Pineapple Guava	15 gal	48" 0.c.
Festuca mairei	Atlas Fescue	5 gal	30" 0.c.
Festuca ovina 'Glauca'	Blue Fescue	5 gal	30" 0.c.
Hesperaloe parviflora	Red Yucca	5 gal	36" 0.c.
Heteromeles arbutifolia	Toyon	15 gal	48" 0.c.
Lantana montevidensis ' Alba'	Lantana	5 gal	30" 0.c.
Lavandula angustifolia 'Mustead'	English Lavender	5 gal	30" 0.c.
Leptospermum scoparium	New Zealand Tea Tree	5 gal	36" 0.c.
Leucophyllum F.	White Cloud Texas Ranger	5 gal	36" 0.c.
Mimulus hybrids	Monkey Flower	5 gal	36" 0.c.
Muhlenbergia rigens	Deergrass	5 gal	30" 0.c.
Myrsine Africana	African Boxwood	5 gal	30" 0.c.
Opuntia littoralis	Prickly Pear	5 gal	48" 0.c.
Phormium tenax 'Jack Sprat'	Flax	5 gal	36" 0.c.
Photinia fraseri	Photinia	15 gal	36" 0.c.
Prunus ilicifolia	Hollyleaf Cherry	15 gal	48" 0.c.
Pyracantha spp.	Firethorn	5 gal	36" 0.c.
Rhamnis californica	Coffeeberry	5 gal	36" 0.c.
Rhaphiolepis indica Indian	Hawthorne	5 gal	36" 0.c.
Rhus integrifolia	Lemonade Berry	5 gal	36" 0.c.
Romneya coulteri	Matilija Poppy	5 gal	30" 0.c.
Rosa floribunda 'Iceberg'	Iceberg Rose	5 gal	30" 0.c.
Rosa 'Flower Carpet'	Flower Carpet Rose	5 gal	30" 0.c.
Rosmarinus officinalis	Rosemary	5 gal	36" 0.c.
Salvia leucantha	Mexican Blue Sage	5 gal	30" 0.c.
Salvia sonomensis 'Dara's Choice'	Creeping Sage	5 gal	30" 0.c.
Salvia spp.	Sage	5 gal	30" 0.c.
Senecio mandraliscae	German Ivy	5 gal	24" 0.c.

NOTES:
1. Consult Factory For Lead Time. Consult Factory For 90 CRI Requests.
2. MPF Mid Pole Fixture. Consult Factory
3. Only Available When Ordering NLS Pole
4. Universal Voltage 120-277
5. 3000k or lower must be selected to meet International Dark-Sky Association certification.
6. Please contact Factory for Custom Control Integration requests (nLight, NX, WaveLinx, Crestron, DMX/RDM, Synapse, CasambI, Dali II, Avi-On, or other control systems)
7. Turtle Safe
8. Consult factory for all BAA/TAA/BABA requests
9. Consult Factory for Lead Time
10. Not Available above 700mA
11. FSP-211, 120V/277V, 230-240VAC (single phase), 50/60Hz
12. FSP-221, 100–347VAC (single phase) or 208/230/480VAC (phase-to-phase)

RISE™

OVERVIEW • SPECIFICATIONS • ORDERING | INTERIOR + EXTERIOR | **FO80 SINGLE**

DATE | PROJECT | FIRM | TYPE

RISE IS A SYSTEM OF BEAUTIFULLY DESIGNED OUTDOOR RATED LUMINAIRES THAT PROVIDE EFFICIENT AND POWERFUL LIGHT USING THE LATEST IN LED TECHNOLOGY. RISE FO80 SINGLE IS A POWERFUL AND COMPACT LED LIGHT FIXTURE, DELIVERING UP TO 1170 LUMENS, THAT CAN BE USED IN SPOT, ACCENT, LANDSCAPE AND FLOODLIGHT APPLICATIONS. ITS UNIQUE MACRO™ LOCK FEATURE ALLOWS FOR FULL 180 DEGREE TILT AND 360 DEGREE PAN AIMABILITY USING ONLY ONE TWIST.

FEATURES :

- POWERFUL CBCP
- EXTREMELY COMPACT
- POWERFUL OUTPUT UP TO 1170 LUMENS
- MACRO™ LOCK • 180° TILT AND 360° PAN
- 12 UNIQUE BEAM ANGLES
- MULTIVOLT (110 V-277 V)
- 8 CCTS: 2200K THROUGH 6500K
- 80+ AND 90+ CRI
- DIMMABLE TO 5%
- IP66 RATED

ORDINANCE NO. 2026-___

AN ORDINANCE OF THE CITY COUNCIL OF THE CITY OF ALISO VIEJO, CALIFORNIA, APPROVING A DEVELOPMENT AGREEMENT BETWEEN THE CITY AND MLC HOLDINGS, INC. FOR THE DEVELOPMENT OF A 61-UNIT RESIDENTIAL TOWNHOME COMMUNITY LOCATED AT 95 ARGONAUT (APN: 623-091-01)

WHEREAS, the City of Aliso Viejo ("City") has found that development agreements strengthen the public planning process, encourage private participation in comprehensive planning by providing a greater degree of certainty in that process, reduce the economic costs of development, allow for the orderly planning of public improvements and services, allocate costs to achieve maximum utilization of public and private resources in the development process, and ensure that appropriate measures to enhance and protect the environment are achieved;

WHEREAS, pursuant to California Government Code section 65864 et seq., the City of is authorized to enter into development agreements providing for the development of land under terms and conditions set forth therein;

WHEREAS, on October 24, 2024, MLC Holdings, Inc. ("Applicant") submitted a general plan amendment, zone change, vesting tentative tract map, site development permit, and a development agreement application to demolish an existing office building to accommodate the construction of a multi-family residential community at 95 Argonaut ("Project");

WHEREAS, because of the logistics, magnitude of the expenditure and considerable lead time prerequisite to planning and developing the Project, Developer has proposed to enter into a development agreement concerning the Project ("Development Agreement") to provide assurances that the Project can proceed without disruption caused by a change in the City's planning policies and requirements except as provided in the Development Agreement, which assurance will thereby reduce the actual or perceived risk of planning for and proceeding with development of the Project;

WHEREAS, the City Council has determined that by entering into the Development Agreement: (i) the City will promote orderly growth and quality development on the Property in accordance with the goals and policies set forth in the General Plan; (ii) significant benefits will be created for City residents and the public generally from increased housing, parks and or park improvements, and the public gathering opportunities created by the Project;

WHEREAS, it is the intent of the City and Applicant to establish certain conditions and requirements related to review and development of the Project which are or will be the subject of subsequent development applications and land use entitlements for the Project as well as the Development Agreement;

WHEREAS, the City and Applicant have reached mutual agreement and desire to voluntarily enter into the Development Agreement to facilitate development of the Project subject to the conditions and requirements set forth therein;

WHEREAS, the Development Agreement contains, including, without limitation, property owner's vested right to complete development of the Project with governing land use regulations applicable at the time of approval; defines the scope of the Project; and identifies the public benefit obligations of the Applicant;

WHEREAS, on November 6, 2024, the City Council held a duly noticed public review to receive and provide initial feedback on concept plans for the Project;

WHEREAS, on November 5, 2025, the City Council held a study session to discuss development agreements and impact fees;

WHEREAS, on November 19, 2025, the City Council held a duly noticed public hearing, discussed the parameters of the public benefit contributions of the Development Agreement, and continued the meeting to December 3, 2025, to allow the Applicant additional time to address easement encroachment issues with the Aliso Viejo Community Association;

WHEREAS, the public benefits include, among other things, park in-lieu fees, as authorized by law and the City's ordinances, to rehabilitate and improve existing open space and recreational facilities in the City, including but not limited to, the Aquatic Center, Iglesia Community Center and Park, and the Ranch ("Facilities") in order to maintain the City's high standard of recreation and community services while accommodating a growing population, including future residents of the proposed subdivision;

WHEREAS, residents throughout the City regularly use the Facilities due to the variety of programs and services offered. Although the Facilities are located outside of the subdivision, future residents of the subdivision will undoubtedly use and benefit from use of the Facilities as well;

WHEREAS, on December 3, 2025, the City Council held a duly noticed public hearing and introduced the Ordinance;

WHEREAS, on January 21, 2025, the City held a duly noticed public hearing, at which time all interested persons had the opportunity to appear and be heard; and

WHEREAS, all legal prerequisites to the adoption of this Ordinance have occurred.

NOW, THEREFORE, THE CITY COUNCIL OF THE CITY OF ALISO VIEJO DOES ORDAIN AS FOLLOWS:

Section 1: **Incorporation of Recitals.** The City Council hereby finds and determines that all of the recitals set forth above are true and correct. The above recitals are hereby incorporated as substantive findings of this Ordinance.

Section 2. **CEQA.** Pursuant to the California Environmental Quality Act (Public Resources Code, § 21000 et seq.) and State CEQA Guidelines (California Code of Regulations, title 14, § 15000 et seq.) (Collectively, "CEQA"), the City Council adopted Resolution No. _____, determining that there is no substantial evidence that the approval of the Project associated with the Development Agreement would result in a significant adverse effect on the environment, provided appropriate mitigation measures, as identified in the MMRP, are imposed on the Project.

Section 3. **Findings.** Pursuant to AVMC 15.82.010 (Development Agreement and Other Actions), the City Council determined that approving the Development Agreement is in the best interest of the City and for the common benefit of residents, and hereby makes the following findings of fact and approves the Development Agreement between the City and the Applicant as set forth in Exhibit "A", which are attached hereto and incorporated herein by reference.

1. Public Welfare. Approval of the development agreement will not create conditions materially detrimental to public health, safety and general welfare. The development agreement includes provisions to ensure compliance with applicable land use regulations, defines the scope of the Project, and identifies the public benefit obligations of the Applicant. The Project is compatible with adjacent multi-family and single-family communities in terms of layout, architectural style, materials, and open space; the site is served by existing infrastructure, including roads, utilities, and public services sufficient to support residential development; that the environmental assessment determined impacts would be less than significant with mitigation; the Project advances the City's housing goals by creating new housing opportunities; and future construction will be subject to plan check review and inspection to ensure compliance with all applicable building and safety standards.

2. General Plan Consistency. The development agreement is consistent with the goals, objectives, and policies of the general plan and any applicable specific plan. The Project is consistent with the goals and policies of the Conservation and Open Space, Housing, and Land Use element in that the Project promotes orderly growth, provides a compatible transition between non-residential and residential uses, supports housing objectives by creating new residential opportunities, and utilizes existing infrastructure in a manner consistent with the community's long-term vision and planning framework. The Project is also subject to mitigation measures and conditions of approval that address potential impacts related to traffic, noise, air quality, and emergency access. The Development Agreement incorporates, among other provisions, the scope of the Project, compliance with governing regulations, and the Applicant's public benefit obligations.

Section 4. **Minor Modifications.** The City Council hereby approves the Development Agreement attached hereto as Exhibit "A" and authorizes the Community Development Director to make any further minor, non-substantive changes and modifications thereto.

Section 5. **Effective Date.** This Ordinance shall not take effect unless and until General Plan Amendment GPA-2025-00002, Zone Change ZC-2025-00002, Vesting Tentative Tract Map 19340, and Site Development Permit SDP-2024-00001 are each approved by the City Council and have become effective, and the Development Agreement is executed by both parties.

Section 6. **Severability.** If any provision of this Ordinance or its application to any person or circumstance is held to be invalid by a court of competent jurisdiction, such invalidity has no effect on the other provisions or applications of the Ordinance that can be given effect without the invalid provision or application, and to this extent, the provisions of this Ordinance are severable. The City Council declares that it would have adopted this Ordinance irrespective of the invalidity of any portion thereof.

Section 7. **City Clerk's Certification.** The City Clerk shall certify to the adoption of this Ordinance and cause a summary thereof to be published five days prior to the date of adoption of this Ordinance, and, within 15 days after adoption, the City Clerk shall cause to be published the aforementioned summary and shall post a certified copy of this Ordinance, together with the vote for and against the same, in the Office of the City Clerk.

Section 8. The Mayor, City Manager, and City Clerk or their designees, are authorized to take such actions to affect execution, recordation, and enforcement of this Ordianance and the Development Agreement.

DEVELOPMENT AGREEMENT

between

THE CITY OF ALISO VIEJO,
a California municipal corporation

and

_____ WHICH WILL DO BUSINESS IN CALIFORNIA AS _____, A _____ LIMITED-LIABILITY COMPANY

THIS DEVELOPMENT AGREEMENT ("Agreement") is entered into by and between THE CITY OF ALISO VIEJO, a California municipal corporation ("City"), and _____. which will do business in California as _____, a _____limited-liability company ("Owner") with reference to the following facts:

RECITALS.

A. To strengthen the public planning process, encourage private participation in comprehensive planning and reduce the economic risk of development, the Legislature of the State of California adopted the "Development Agreement Statute," Sections 65864 et seq., of the Government Code. City, a general law city, is authorized by the Development Agreement Statute to enter into development agreements with persons and entities having legal or equitable interests in real property for the purpose of establishing predictability for both City and the property owner in the development process. Owner has requested that City enter into a development agreement for the development of the Property, as defined below. City enters into this Agreement pursuant to the provisions of the California Government Code, the City's General Plan, the City Municipal Code, and applicable City policies.

B. Owner has a legal or equitable interest in that certain real property consisting of approximately 2.85 acres of land located in the City of Aliso Viejo, County of Orange, State of California, more particularly described in Exhibit "A" (the "Property"). Owner desires to develop the Property for residential uses.

C. This Agreement is intended to ensure that Owner has provided funding sufficient to provide the adequate and appropriate public recreational facilities and services required by the development of the Property.

D. This Agreement also assures that the development will assist the City in meeting its goals for the provisions of affordable housing by contributing to the City's affordable housing stock.

E. This Agreement further assures that development of the Property may occur in accordance with City's General Plan, as amended by the General Plan Amendment and Zone Change. The development of the Property pursuant to the Existing Land Use Regulations, this Agreement, the Subsequent Land Use Regulations to which Owner has consented in writing, and Subsequent Development Approvals (as each of those terms and phrases is defined within this Agreement) shall be referred to as the "Development Plan."

F. This Agreement constitutes a current exercise of City's police powers to provide predictability to Owner in the development approval process by vesting the permitted use, density, intensity of use, and timing and phasing of development consistent with the Development Plan in exchange for Owner's commitment to provide significant public benefits to City (the "Public Benefits") as set forth in Section 9.

G. The provision by Owner of the Public Benefits allows the City to realize significant economic, recreational, park, open space, educational, social, and public

facilities benefits. The Public Benefits will advance the interests and meet the needs of Aliso Viejo's residents and visitors.

H. In return for Owner's participation and commitment to these significant contributions of private resources for public purposes, City is willing to exercise its authority to enter into this Agreement and to make a commitment of predictability for the development process for the Property. Absent City's willingness to make such a commitment, Owner would be unwilling to enter into this Agreement or make the significant investment of resources identified in this Agreement.

AGREEMENT

City and Owner agree as follows:

1. INTEREST OF OWNER. Owner represents that it has a legal or equitable interest in the Property and is authorized to enter into this Agreement.

2. PUBLIC HEARINGS. On December 3, 2025, after providing notice as required by law, the City Council held a public hearing on this Agreement and made the findings set forth in Section 3.

3. CITY COUNCIL FINDINGS. The City Council finds that:

   3.1 Subject to the approval of the General Plan Amendment and Zone Change becoming effective on or before the Effective Date, this Agreement is consistent with City's General Plan.

   3.2 This Agreement ensures a desirable and functional community environment, provides effective and efficient development of public facilities, infrastructure, and services appropriate for the development of the Project, enhances effective utilization of resources within the City, provides assurances to the developer in an effort to control the cost of housing and development to the consumer, and provides other significant benefits to the City and its residents.

   3.3 This Agreement provides public benefits beyond those which are necessary to mitigate the development of the Project.

   3.4 This Agreement strengthens the public planning process, encourages private participation in comprehensive planning, particularly with respect to the implementation of the City's General Plan, and reduces the economic costs of development and government.

   3.5 The best interests of the citizens of the City and the public health, safety, and welfare will be served by entering into this Agreement.

4. CONTINUING OBLIGATIONS. This Agreement binds the City now and in the future. By approving this Agreement, the City Council has elected to exercise

certain governmental powers at the time of entering into this Agreement rather than deferring its actions to some undetermined future date. The terms and conditions of this Agreement have undergone extensive review by the City staff and the City Council and have been found to be fair, just, and reasonable. City has concluded that the Project will serve the best interests of its citizens and that the public health, safety, and welfare will be best served by entering into this Agreement.

5. DEFINITIONS. In this Agreement, unless the context otherwise requires, the following terms and phrases shall have the following meanings:

5.1 "Agreement" shall mean this Development Agreement between the City and Owner. The term "Agreement" shall include any amendment properly approved and executed pursuant to Section 7.5.

5.2 "Approval Date" means the date on which the City Council conducted the first reading of the ordinance adopting this Agreement. That date is December 3, 2025.

5.3 "City" shall mean the City of Aliso Viejo, a California municipal corporation.

5.4 "City Council" shall mean the governing body of the City.

5.5 "City Municipal Code" shall mean the Aliso Viejo Municipal Code. However, changes to the Aliso Viejo Municipal Code occurring between the Approval Date and the Effective Date shall not be considered part of the City Municipal Code for purposes of this Agreement without Owner's prior written consent.

5.6 "Day" refers to a calendar day unless specifically stated as a "business day."

5.7 "Default" shall refer to a Major Default or Minor Default as defined herein.

5.8 "Development" shall mean the improvement of the Property for the purposes of completing the structures, improvements, and facilities comprising the Project including, but not limited to: grading; the construction of infrastructure and private facilities related to the Project whether located within or outside the Property; the construction of buildings and structures; the installation of landscaping; and other improvements.

5.9 "Development Approvals" shall mean all permits and other entitlements approved or issued by the City for the use of, construction upon, and/or development of the Property. For the purposes of this Agreement, Development Approvals shall be deemed to include, but are not limited to, the following actions, including revisions, addenda, amendments, and modifications to these actions:

a. this Agreement;

b. amendments to this Agreement;

c. amendments to the General Plan;

d. tentative and final subdivision and tract maps;

e. site development permit;

f. zoning;

g. grading and building permits;

h. certificates of compliance;

i. street, drainage, utility, stormwater, and landscape permits;

j. occupancy permits; and

k. environmental review documents for the Project.

5.10 "Development Impact Fees" shall mean all fees established and imposed upon the Project by the City and this Agreement.

5.11 "Development Plan" means the Existing Land Use Regulations, the Development Approvals, this Agreement, the Subsequent Land Use Regulations to which Owner has consented in writing, and Subsequent Development Approvals.

5.12 "Effective Date" shall mean the later of: (i) date the ordinance adopting this Agreement becomes effective; or (ii) expiration of the period provided by applicable law, including but not limited to Government Code Section 65009, for challenging the General Plan Amendment.

5.13 "Existing Land Use Regulations" means all Land Use Regulations in effect on the Effective Date, including the General Plan Amendment and Zone Change (including the range of Units approved for the Project by the General Plan Amendment). However, changes to Land Use and Zoning Regulations occurring between the Approval Date and the Effective Date shall not be considered part of the Existing Land Use or Zoning Regulations without Owner's prior written consent. Owner has consented to the General Plan Amendment and Zone Change, which shall be considered part of the Existing Land Use and Zoning Regulations.

5.14 "Final Map" refers to the final map which may be filed with respect to any Tentative Map, including the First Tentative Map, as set forth in Section 66456 et seq. of the Subdivision Map Act.

5.15 “First Tentative Map” shall mean the first Tentative Map for the Project which is approved by the City prior to or concurrent with the Effective Date of this Agreement. Owner may submit more than one Tentative Map to be considered concurrently as the First Tentative Map.

5.16 “First Tentative Map Submittal Package” shall mean the package of materials to be submitted with the Owner’s application for the First Tentative Map, which shall include the site development permit for the Project.

5.17 “General Plan” shall mean the general plan of the City.

5.18 “General Plan Amendment” shall refer to the amendment of the City’s General Plan on December 3, 2025, for the Property. A copy of the General Plan Amendment is attached as Exhibit “B”.

5.19 “Implementing Agreement” refers to any agreement entered into by Owner and the City for the implementation of obligations established in this Agreement.

5.20 “Land Use Regulations” shall mean all ordinances, resolutions, codes, rules, regulations and official policies of the City governing the development and use of land, including, without limitation, the permitted use of land, the density or intensity of use, subdivision requirements, timing and phasing of development, the maximum height and size of buildings, the provisions for reservation or dedication of land for public purposes, and the design, improvement, construction, and initial occupancy standards and specifications applicable to the Project. Land Use Regulations do not include any City ordinance, resolution, code, rule, regulation or official policy governing:

- The conduct or taxation of businesses, professions, and occupations applicable to all businesses, professions, and occupations in the City;

- Taxes and assessments of general application upon all residents of the City, provided that the taxes and assessments are not imposed for the purpose of taxing the right, power or privilege of developing or improving land (e.g., excise tax) or to directly finance the acquisition or dedication of open space or any other public improvement in respect of which the Owner is paying any fee (directly or through a Financing District) or providing any improvement pursuant to this Agreement;

- The control and abatement of nuisances.

5.21 “Major Default” refers to the material and substantial failure by (1) Owner to timely meet Owner’s Public Benefit obligations, or (2) City’s failure to issue Subsequent Development Approvals in accordance with its obligations

under this Agreement, or (3) either Party to provide the agreed upon cooperation needed to implement the Public Benefits and/or the development of the Property pursuant to the Development Plan, including but not limited to a failure to comply with the terms of any Implementing Agreement. This definition is not intended to expand or limit the legal definition of "materiality," but only to establish the agreement of the Parties as to the nature of a default which could lead to an early termination of this Agreement.

5.22 "Minor Default" means a failure by Owner or City to comply with the terms and conditions of this Agreement which is not a "Major Default" as defined herein.

5.23 "Mortgagee" means a mortgagee of a mortgage, a beneficiary under a deed of trust or any other security-device, a lender, and their successors and assigns.

5.24 "Owner" refers to _____., which will do business in California as _____, and Owner's successors and assigns as set forth in Section 14.14.

5.25 "Owner's Vested Right" refers to Owner's guaranteed right to develop the Property as set forth in this Agreement, with particular reference to Section 8.

5.26 "Paragraph" means a lettered or numbered paragraph of an Exhibit to this Agreement, unless specifically stated to refer to another document or matter. (Note below that "Section" means a lettered or numbered section of the main body of this Agreement.) A reference to a Paragraph includes all subparagraphs of that Paragraph.

5.27 The "Parties" means the City and Owner. A "Party" refers to either the City or the Owner.

5.28 "Per Square Foot" is a term used in calculating fees owed per Unit. The actual square footage of a Unit, excluding the garage, shown on the final approved construction plans shall be used in calculating the square footage of a Unit, provided such plans are consistent with all City Council approvals for the Project.

5.29 "Project" means the development of the Property as set forth in the Development Plan.

5.30 "Property" means the real property described in Exhibit "A".

5.31 "Public Benefits" refers to those benefits provided to the City and the community by Owner pursuant to Section 9 and Exhibit "C" below.

5.32 "Reservation of Authority" means the rights and authority specifically reserved to City which limits the assurances and rights provided to the Owner under this Agreement. The Reservation of Authority is described in Section 8.6.

5.33 "Section" refers to a numbered section of this Agreement, unless specifically stated to refer to another document or matter.

5.34 "Subsequent Development Approvals" means all Development Approvals and permits approved, granted, or issued after the Effective Date for the Project which are required or permitted by the Existing Land Use Regulations, the Subsequent Land Use Regulations to which Owner has consented in writing, and this Agreement. Subsequent Development Approvals include, without limitation, all development review approvals required under the Subdivision Map Act, the City's subdivision ordinance and/or other provisions of the City Municipal Code, site development permits, excavation, grading, building, construction, encroachment or street improvement permits, occupancy certificates, utility connection authorizations, drainage, landscape, or other permits or approvals necessary for the grading, construction, marketing, use and occupancy of the Project.

5.35 "Subsequent Land Use Regulations" means those Land Use Regulations which are both adopted and effective after the Approval Date and which are not included within the definition of Existing Land Use Regulations. "Subsequent Land Use Regulations" include any Land Use Regulations adopted by moratorium by initiative, City action, or otherwise

5.36 "Tentative Map" shall mean any tentative map, as defined in the Subdivision Map Act and the City Municipal Code, for the Project, including the First Tentative Map. With the approval of any Tentative Map, the City shall identify the conditions that shall be satisfied to process the map.

5.37 "Term" means the term of this Agreement as set forth in Section 7.2 of this Agreement.

5.38 "Unit" means a residential dwelling unit within the Project. This definition is provided solely for the purposes of determining the uses which may be built as a part of the Project and, if applicable, for calculating the City Fee described in Exhibit "C", and is not intended to allow for conversion of non-residential uses to residential uses.

5.39 "Very Low Income Household" means persons and families whose income does not exceed fifty percent (50%) of the then-current area median income of the County of Orange adjusted for family size by the State Department of Housing and Community Development in accordance with adjustment factors adopted and amended from time to time by the United States

Department of Housing and Urban Development pursuant to Section 8 of the United States Housing Act of 1937, as amended, and California Health and Safety Code Section 50105, as it may be amended from time-to-time. In no event, however, shall the maximum annual income for a Very Low Income Household be, for purposes of this Agreement, less than fifty percent (50%) of the then-current area median income of the County of Orange.

6. EXHIBITS. All exhibits attached to this Agreement are incorporated as a part of this Agreement. Those exhibits are:

Exhibit	Description
"A"	Legal Description of the Property
"B"	General Plan Amendment
"C"	Public Benefits
"D"	Density Bonus Housing Agreement
"E"	Assignment and Assumption Agreement

7. GENERAL PROVISIONS.

7.1 Binding Effect of Agreement. This Agreement shall be recorded against the Property and shall run with the land. The Development shall be carried out only in accordance with the terms of this Agreement. Until released or terminated pursuant to the provisions of this Agreement or until Owner has fully performed its obligations arising out of this Agreement, no portion of the Property shall be released from this Agreement.

7.2 Term of Agreement. The Term shall commence on the Effective Date. The Term shall continue for a period of ten (10) years from the Effective Date, subject to the following:

7.2.1 *Extensions of Term*. The Term shall be extended for periods equal to the time during which:

7.2.1.1 Litigation is pending which challenges any matter, including compliance with CEQA or any other local, state, or federal law, related in any way to the approval or implementation of all or any part of the Development Plan. Any such extension shall be equal to the time between the filing of litigation, on the one hand, and the entry of final judgment or dismissal, on the other. All such extensions shall be cumulative.

7.2.1.2 Any application by Owner for state or federal regulatory permits and/or approvals required for the Project has been pending more than one year after its submittal, beginning on the 366th day following its submittal for approval.

7.2.1.3 Any other delay occurs which is beyond the control of the Parties, as described in Section 14.10.

7.2.2 During the Term, certain portions of the Property may be released from this Agreement as provided elsewhere in this Agreement.

7.2.3 As provided in Section 7.3 and elsewhere within this Agreement, the Term may end earlier than the end of the Term specified in this Section.

7.3 Termination. This Agreement shall be deemed terminated and of no further effect upon the earlier occurrence of any of the following events:

7.3.1 Expiration of the Term as set forth in Section 7.2;

7.3.2 Entry of a final judgment setting aside, voiding, or annulling the adoption of the ordinance approving this Agreement;

7.3.3 The adoption of a referendum measure overriding or repealing the ordinance approving this Agreement;

7.3.4 Completion of the Project in accordance with the terms of this Agreement, including issuance of all required occupancy permits and acceptance, as required by state law, by City, or the applicable public agency, of all required dedications and the satisfaction of all of Owner's obligations under this Agreement; and

7.3.5 As may be provided by other specific provisions of this Agreement.

7.4 Effect of Termination. Subject to Section 8.9, upon any termination of this Agreement, the only rights or obligations under this Agreement which either Party shall have are:

7.4.1 The completion of obligations which were to have been performed prior to termination, other than those which are separately addressed by Section 12;

7.4.2 The performance and cure rights set forth in Section 12; and

7.4.3 Those obligations that are specifically set forth as surviving this Agreement, such as those described in Section 9 and in Sections 11.1 through 11.7 and Section 14.15.

7.5 Amendment or Cancellation of Agreement. This Agreement may be amended from time to time or canceled only by the written consent of both City and Owner in the same manner as its adoption, as set forth in California Government Code Section 65868. Any amendment or cancellation shall be in a form suitable for recording in the Official Records of Orange County, California. An amendment or other modification of this Agreement will continue to relate back to the Effective Date of this Agreement (as opposed to the effective date of the amendment or modification), unless the amendment or modification expressly states otherwise.

7.6 Release of Obligations With Respect to Individual Unit Upon Certification of Occupancy. Notwithstanding any other provision of this Agreement:

7.6.1 When any individual unit has been finally subdivided and sold, leased, or made available for lease to a member of the public or any other ultimate user, and a certificate of occupancy has been obtained for the building(s) on the lot, that unit and its owner shall have no further obligations under and shall be released from this Agreement.

7.6.2 Upon the conveyance of any lot, parcel, or other property, whether residential, commercial, or open space, to a homeowners' association, property owners' association, or public or quasi-public entity, that lot, parcel, or property and its owner shall have no further obligations under and shall be released from this Agreement, provided that this paragraph shall not be deemed to release any transferee (including a good faith purchaser) from obligations to pay assessments imposed in connection with a Financing District.

No formal action by the City is required to effect this release, but, upon Owner's request, City shall sign an estoppel certificate or other document to evidence the release.

7.7 Minor Changes. The provisions of this Agreement require a close degree of cooperation between the Parties and "Minor Changes" to the Project may be required from time to time to accommodate design changes, engineering changes, and other refinements related to the details of the Parties' performance. "Minor Changes" shall mean changes to the Project that are otherwise consistent with the Development Plan, and which do not result in a change in the type of use, an increase in density or intensity of use, significant new or increased environmental impacts that cannot be mitigated, or violations of any applicable health and safety regulations in effect on the Effective Date.

Accordingly, the Parties may mutually consent to adopting "Minor Changes" through their signing of an "Operating Memorandum" reflecting the Minor

Changes. Neither the Minor Changes nor any Operating Memorandum shall require public notice or hearing. The City Attorney and City Manager shall be authorized to determine whether proposed modifications and refinements are "Minor Changes" subject to this Section 7.7 or more significant changes requiring amendment of this Agreement. The City Manager may execute any Operating Memorandum without City Council action.

7.8 Term of Map(s) and Other Project Approvals.

7.8.1 Subdivision Maps. Pursuant to Government Code Section 66452.6, the term of all subdivision or tract maps that are approved for all or any portion of the Property shall be extended to a date coincident with the Term and, where not prohibited by State law, with any extension of the Term.

7.8.2 Site Development Permits. Site Development Permits for the Project shall have terms that coincide with the term of the subdivision or tract map for the portion of the Property to which a particular Site Development Permit pertains.

7.8.3 Other Development Approvals. Pursuant to Government Code Section 65863.9, any and all other Development Approvals for any portion of the Project shall automatically be extended for a term ending concurrently with the applicable tentative maps for the Project. Pursuant to Section 7.8.1, those terms shall be the same as the Term of this Agreement.

7.8.4 Decisions of Community Development Director. Any decision of the Community Development Director with respect to Subsequent Development Approvals may be appealed to the City's City Council pursuant to Section 15.70.080 of the Aliso Viejo Municipal Code.

7.9 Relationship of City and Owner. The contractual relationship between City and Owner arising out of this Agreement is one of independent contractor and not agency. This Agreement does not create any third-party beneficiary rights.

7.10 Notices. All notices, demands, and correspondence required or permitted by this Agreement shall be in writing and delivered in person, overnight delivery (e.g. Fedex) or mailed by first class and certified mail, return receipt requested, postage prepaid, addressed as follows:

If to City, to:
City of Aliso Viejo
12 Journey, Suite 100
Aliso Viejo, CA 92656

Attn: City Manager

With a copy to:
Scott C. Smith
18101 Von Karman Avenue
Suite 1000
Irvine, CA 92612

If to Owner, to:
_____. which will do business in California as _____, Inc., a _____ Corporation
[Address]

With a copy to:
Name
address

City or Owner may change its address by giving notice in writing to each of the other names and addresses listed above. Thereafter, notices, demands, and correspondence shall be addressed and transmitted to the new address. Notice shall be deemed given upon personal delivery or, notices shall be deemed given upon receipt as evidenced by the customary receipt provided by the delivery service.

7.11 Waiver of Right to Protest. Execution of this Agreement is made by Owner without protest. Owner knowingly and willingly waives any rights it may have under Government Code Section 66020 or any other provision of law to protest the imposition of any fees, dedications, reservations, or other exactions imposed on the Project as authorized by this Agreement.

8. DEVELOPMENT OF THE PROPERTY.

8.1 Owner's Vested Right. Owner shall have the vested right to complete Development of the Property in accordance with the Development Plan as provided in this Agreement ("Owner's Vested Right"). To enable Owner to complete the Project, Owner's Vested Right shall include, but not be limited to, the rights to (1) develop up to 58 market-rate for-sale residential Units and at least three (3) affordable for-sale units, all in accordance with the approved Project, (2) the timely issuance by the City of all Subsequent Development Approvals, and (3) the timely taking by the City of such other actions that are (i) requested by Owner, and (ii) consistent with the terms of this Agreement, including, but not limited, to the vested rights afforded pursuant to Section 8.9 of this Agreement. Where the Development Plan permits the development of some or all of the Property with a specified range of dwelling Units, Owner's Vested Right shall include the right to develop to the greater of: (i) the minimum number of dwelling Units

permitted by the General Plan Amendment; and (ii) any greater number of dwelling Units approved by City Council subsequent to the execution of this Agreement, provided that (i) Owner can comply with all applicable development standards contained in the Development Plan and (ii) the Project does not exceed the development limits set forth in the General Plan Amendment and Zone Change for the Property as a whole. Notwithstanding the foregoing, Owner shall develop at least three (3) affordable for sale units.

Owner's Vested Right shall be subject to the Reservation of Authority set forth in Section 8.6 and all provisions of this Agreement and may not be modified or terminated except as expressly provided by this Agreement.

8.2 Governing Land Use Regulations. The Land Use Regulations applicable to the Project and the Property shall be those contained in the Development Plan. An amendment or other modification of this Agreement will not change these applicable Land Use Regulations unless the amendment or modification expressly provides otherwise. Subsequent Land Use Regulations shall not apply to the Property except as authorized in Section 8.6 of this Agreement, unless the Owner and the City mutually agree in writing that the Project will be subject to one or more Subsequent Land Use Regulations. To the extent of any inconsistency between this Agreement and any provision of the City's subdivision ordinance (comprising Title 14 of the Aliso Viejo Municipal Code), this Agreement shall control.

Nothing contained in this Section shall be deemed to authorize City to withhold any building permit, approval, and/or certificate of occupancy based on Owner's failure to comply with any Land Use Regulation that is not applicable to the Project because of this Agreement.

8.3 Permitted Uses. Except as otherwise provided within this Agreement, the permitted uses on the Property shall be as provided in the Development Plan.

8.4 Density and Intensity; Requirement for Reservation and Dedication of Land. Except as otherwise provided within this Agreement, the density and intensity of use for all Development on the Property, and the requirements for reservation and dedication of land, shall be as provided in the Development Plan.

8.5 Unit Counts to be Determined with First Tentative Map Approval. The City Council will, concurrently with the approval of the First Tentative Map, determine the specific number of Units which may be built as part of the Project in accordance with Owner's Vested Right set forth in Section 8.1 of this Agreement. In order for the City to make this determination, Owner shall submit the First Tentative Map Submittal Package, concurrently with its application for the First Tentative Map.

8.6 Reservation of Authority. The following Land Use Regulations or Subsequent Land Use Regulations shall apply to the Property and the Project:

8.6.1 Processing fees and charges imposed by the City to cover the City's estimated or actual costs of reviewing and processing applications for the Project, providing inspections, conducting annual reviews, providing environmental analysis, or for monitoring compliance with this Agreement or any Development Approvals granted or issued, provided such fees and charges are in force and effect on a general basis on the date of filing such applications with the City. This Section shall not be construed to limit the authority of City to charge its then-current, normal and customary application, processing, and permit fees for Subsequent Development Approvals, building permits and other similar permits, which fees are designed to reimburse City's expenses attributable to such application, processing, and permitting and are in force and effect on a City-wide basis at such time as the Subsequent Development Approvals and permits are granted by City, notwithstanding the fact that such fees may have been increased by City subsequent to the Effective Date;

8.6.2 Procedural regulations relating to hearing bodies, petitions, applications, notices, findings, records, hearings, reports, recommendations, appeals, and any other matter of procedure;

8.6.3 The following, provided that (i) they are uniformly applied to all development projects within the City and (ii) are not applied retroactively to any Development Approval issued before their adoption or amendment:

8.6.3.1 Uniform codes governing engineering and construction standards and specifications adopted by the City pursuant to state law. Such codes include, without limitation, the City's Municipal Code, adopted version of the California Building Code, California Plumbing Code, California Mechanical Code, California Electrical Code, California Energy Code, California Green Building Standards Code, California Residential Code, and California Fire Code;

8.6.3.2 Local amendments to those uniform codes which are adopted by the City pursuant to state law, provided they pertain exclusively to the preservation of life and safety; and

8.6.3.3 The City's standards and procedures regarding the granting of encroachment permits and the conveyance of rights and interests which provide for the use of or the entry upon public property.

8.6.4 Regulations which may be in conflict with this Agreement, but which are objectively required (and there are no available reasonable alternatives) to protect the public health and safety in the event of a sudden, unexpected occurrence involving a clear and imminent danger, and demanding immediate action to prevent or mitigate loss of, or damage to, life, health, property, or essential public services within the immediate community. Such regulations must be a valid exercise of the City's police power and must be applied and construed so as to provide Owner, to the maximum extent possible, with the rights and assurances provided in this Agreement. To apply to the Property, such regulations must be adopted after a public hearing and must be based upon findings of necessity established by a preponderance of the evidence. Any regulations, including moratoria, enacted by City and imposed on the Property to protect the public health and safety in the circumstances described above shall toll the Term and any time periods for performance by Owner and City set forth in this Agreement;

8.6.5 Owner shall be issued building permits for the Project after permit applications are reviewed and approved by City in the City's customary fashion for such review and approval; and

8.6.6 The exercise of the power of eminent domain.

8.7 County-Mandated Impact Fees. Nothing in this Agreement shall relieve Owner of the responsibility to pay any impact fees established by the County of Orange or associated with any County program and for which Owner is legally responsible. Owner shall pay any such fees the City is required to collect or otherwise collects on behalf of the County of Orange. Owner understands and acknowledges that Exhibit "C" reflects only the City's estimate of fees paid and fees owed, and may not accurately reflect Owner's County fee obligations. The omission of any fee from Exhibit "C" which is due to the County or any other public agency shall not invalidate or otherwise affect Owner's obligation to pay that fee.

8.8 Adequacy of Required Infrastructure. The City acknowledges and agrees that there will be sufficient capacity to accommodate the Project in the infrastructure and services owned, operated, outsourced, controlled, and/or provided by the City, including, without limitation, traffic circulation, storm drainage, trash collection, and flood control. Where City renders or outsources such services or owns such infrastructure, City shall serve the

Project and there shall be no restrictions placed upon Owner concerning hookups or service for the Project, except for reasons beyond City's control. Notwithstanding the foregoing, City does not warrant the adequacy of, and City shall not be responsible or liable for any infrastructure or services that are not owned, operated, outsourced, controlled, and/or provided by City.

8.9 Vested Rights Upon Termination. Termination of the Agreement shall not invalidate any Land Use Regulations or terminate any Subsequent Development Approvals obtained prior to the date of termination. Upon any termination of this Agreement, Owner's vested rights, if any, shall be determined by this Agreement to the extent development has occurred hereunder, and as to the remainder of the Project, by state and federal statutes and case law and then current factual state of the Development. Subject to that determination of rights and all other applicable law, Owner's right to continue development of the Project pursuant to some or all of the Development Plan shall be subject to the ordinary exercise of the City's police power, including the adoption of a general plan amendment, zoning change, or other Land Use Regulations applicable to the Property. Owner acknowledges that following termination or expiration of this Agreement, except as to any development that has vested, City may amend the general plan designation of the Property and/or the zoning designation applicable to the Property.

8.10 Waiver of Density Bonus. While this Agreement is in effect, Owner waives any right Owner may have to a density bonus under Government Code Sections 65915 through 65917.5 or the Aliso Viejo Municipal Code. Densities vested hereunder include all densities available as density bonuses under the Aliso Viejo Municipal Code and Government Code Sections 65915 through 65917.5; Owner shall not be entitled to further density bonuses.

8.11 Staffing and Expedited Processing. City shall employ all lawful actions capable of being undertaken by City to (i) promptly receive and, when complete, accept all applications for Subsequent Development Approvals and related environmental analysis, if any (collectively, "Applications"), and (ii) expeditiously process and take action upon the Applications in accordance with applicable law.

8.12 Changes in Federal and State Law. The Property may be subject to subsequently enacted state or federal laws or regulations that preempt local regulations or mandate the adoption of local regulations that conflict with the Development Plan. Upon discovery of such a subsequently enacted federal or state law, City or Owner shall provide the other Party with written notice, a copy of the state or federal law or regulation, and a written explanation of the legal or regulatory conflict created. Within ten (10) days thereafter, City and Owner shall meet and confer in good faith in a reasonable attempt to modify this Agreement, as necessary, to comply with

such federal or state law or regulation. In such negotiations, City and Owner agree to preserve the terms of this Agreement and the rights of Owner and City as derived from this Agreement to the maximum feasible extent while resolving the conflict. City agrees to cooperate with Owner in resolving the conflict in a manner which minimizes any financial impact of the conflict upon Owner or City. City also agrees to process, in the same expedited manner as set forth for Applications in Section 8.11, Owner's proposed changes to the Development Plan as needed to comply with such federal or state law, and to process those changes in accordance with City procedures. Any delays caused by such changes in state or federal law shall toll the term of this Agreement and the time periods for performance by Owner and City set forth in this Agreement.

8.13 Cooperation in Securing Other Governmental Approvals and Permits. City agrees to make its staff available, at Owner's cost, to assist Owner in securing permits and approvals required by other governmental agencies to assure Owner's ability to (i) implement the Development Plan and (ii) perform its obligations under this Agreement in a timely manner. City does not warrant or represent that any other governmental permits or approvals will be granted.

8.14 Compliance with CEQA. Where the California Environmental Quality Act requires that an environmental analysis be performed in connection with a future discretionary approval granted by the City for the Project, the City, consistent with Section 8.13, shall provide the cooperation needed to expeditiously complete those actions.

8.15 Timing of Development. Because the California Supreme Court held in *Pardee Construction Co. v. City of Camarillo*, 37 Cal. 3d 465 (1984), that the failure of the parties in that case to provide for the timing of development resulted in a later-adopted initiative restricting the timing of development to prevail over the parties' agreement, it is the specific intent of the Parties to provide for the timing of the Project in this Agreement. To do so, the Parties acknowledge and provide that Owner shall have the right, but not the obligation, to complete the Project in such order, at such rate, at such times, and in as many development phases and sub-phases as Owner deems appropriate in its sole subjective business judgment but subject to Section 9.4 of this Agreement.

8.16 Conditions, Covenants and Restrictions. Owner shall have the ability to reserve and record such covenants, conditions, and restrictions ("CC&Rs") against the Property as Owner deems appropriate, in its sole and absolute discretion. Such CC&Rs may not conflict with this Agreement or the General Plan. Before recording any CC&Rs, Owner shall provide a copy of the CC&Rs to the City for review and approval by the City Attorney. The City Attorney's review shall be limited to determining if the CC&Rs substantially comply with this Agreement. Within forty-five (45) days after receiving a

copy of the proposed CC&Rs from Owner, the City Attorney shall provide Owner with either (i) a statement that the CC&Rs comply with this Agreement ("CC&R Approval") or (ii) written comments identifying each aspect of the CC&Rs which the City Attorney believes not to be in compliance with this Agreement (a "Statement of Non-Compliance"). If the City Attorney fails to provide Owner with either CC&R Approval or a Statement of Non-Compliance within forty-five (45) days following a written request by Owner, City shall be deemed to have approved the CC&Rs and Owner may record the CC&Rs against the Property. If the City Attorney provides a Statement of Non-Compliance, Owner shall have thirty (30) days in which to respond to the Statement of Non-Compliance. Upon submittal of Owner's response, the procedure described above for the initial submittal and City Attorney review of proposed CC&Rs shall again be followed. This procedure shall be followed until Owner either (1) receives CC&R Approval, (2) submits the compliance issues to binding arbitration pursuant to the rules of the American Arbitration Association, (3) files an action for declaratory relief in Orange County Superior Court seeking a judicial determination of the compliance of the proposed CC&Rs, or (4) agreement is otherwise reached between the Parties allowing for the recording of the CC&Rs. The CC&Rs may run with the land and bind Owner's successors and assigns. Except as provided above, any dispute between the Parties regarding the City's approval or rejection of the CC&Rs shall be subject to immediate and binding arbitration pursuant to the rules of the American Arbitration Association.

9. PUBLIC BENEFITS.

9.1 Intent. This Agreement is entered into by the City in consideration of, and in exchange for, Owner's agreement to contribute to the development and rehabilitation of public recreational facilities, affordable housing, and other services.

9.2 Public Benefits. Owner's development and financial obligations related to public benefits are set forth in this Section 9 and Exhibit "C". This Section 9 and Exhibit "C" shall survive the termination, cancellation, or expiration of this Agreement.

9.3 Independent Nature of Obligations. Owner's Public Benefit obligations are independent of the obligations of any other landowner or any other property which the City intends to participate in providing some or all of the Public Benefits. Provided that Owner satisfies its Public Benefit obligations and is not in Material Default, Owner's Vested Right to complete the full development of the Project shall not be limited, diminished, or otherwise adversely affected by the failure of any other landowner or property to participate in providing the Public Benefits as anticipated by the City. Similarly, the City's obligations to Owner and the Property are independent of the City's obligations to any other property or landowner. Owner

acknowledges that the provisions of this paragraph shall not apply to any fee the amount of which is not controlled by the City, including but not limited to fees paid to the Capistrano Unified School District, the County of Orange, and/or any other government agency.

9.4 Affordable Housing Obligations. Owner recognizes the policy stated in the Housing Element of the Aliso Viejo General Plan to encourage the provision of affordable housing in new development. Owner agrees to satisfy its obligation to provide for affordable housing by constructing at least three (3) units restricted to Very Low Income Households. All affordable housing Units must be developed on-site at the Property. The affordable Units shall be constructed concurrently with the market Units.

Owner shall enter into a Density Bonus Housing Agreement with the City, in the form attached hereto as Exhibit "D", which shall set forth the terms, conditions, and restrictions governing the development, affordability, and occupancy of the affordable housing Units. Execution of the Density Bonus Housing Agreement shall be completed prior to the issuance of any building permit for the Project. The City shall have no obligation to issue any building permit for the Project until the fully executed Density Bonus Housing Agreement has been submitted to and accepted by the City. Any delay in the issuance of building permits resulting from the Owner's failure to timely submit the executed agreement shall be solely the responsibility of the Owner.

10. ANNUAL REVIEW.

10.1 Timing of Annual Review. Pursuant to Government Code Section 65865.1, at least once during every twelve (12) month period of the Term, City shall review the good faith compliance of Owner with the terms of this Agreement ("Annual Review").

10.2 Standards for Annual Review. During the Annual Review, Owner shall be required to demonstrate good faith compliance with the terms of this Agreement. "Good faith compliance" shall be established if Owner is in compliance with every term and condition of this Agreement. If the City Council or its designee finds and determines, based on substantial evidence, that Owner is not in good faith compliance, then City may proceed in accordance with Section 12 pertaining to the potential Default of Owner and the opportunities for cure. Owner shall pay a reasonable fee to cover the costs incurred by City (*i.e*., staff time and necessary consultant costs) in connection with the Annual Review.

10.3 Procedures for Annual Review. The Annual Review shall be conducted by the City Council or its designee. Owner shall be given a minimum of thirty (30) days' notice of any date scheduled for an Annual Review. Owner shall not be limited in the information it presents to the City Council for the Annual

Review and may, if needed, provide information to the City Council in the first instance at the City Council hearing on the Annual Review. Should the City Council designate a party other than itself to conduct the Annual Review, these same notice and procedural requirements shall apply to the conduct by the designee of the Annual Review.

11. THIRD PARTY LITIGATION.

11.1 General Plan Litigation. City has determined that this Agreement is consistent with its General Plan. Owner has reviewed the General Plan and concurs with City's determination. Neither Owner nor City shall have any liability under this Agreement or otherwise for any failure of City to perform under this Agreement, or for the inability of Owner to develop the Property as contemplated by the Development Plan or this Agreement, if such failure or inability is the result of a judicial determination that part or all of the General Plan is invalid, inadequate, or not in compliance with law.

11.2 Third Party Litigation Concerning Agreement. Owner shall, at Owner's expense (including attorneys' fees), defend, indemnify, and hold City, its officials, officers, employees and independent contractors engaged in project planning or implementation, harmless from any third-party claim, action or proceeding against City, its agents, officials, officers or employees to attack, set aside, void, or annul the approval of this Agreement. City shall promptly notify Owner of any such claim, action or proceeding, and City shall cooperate in the defense at Owner's cost. City may in its discretion participate in the defense of any such claim, action or proceeding at City's cost. Owner reserves the right to withdraw its application for the Project or request that City revoke or rescind Project approvals in the event of third party litigation. If Owner requests such application withdrawal or Project revocation or rescission, Owner shall also pay City's costs related to processing those requests and bringing them to City Council for hearing. Notwithstanding the foregoing, Owner shall continue to pay for any and all litigation costs until such litigation has been resolved by a Court (*i.e*., obtaining a dismissal of the case), unless City expressly notifies Owner in writing that City wishes to continue to litigate the matter by itself, in which case City may in its discretion proceed at City's cost.

11.3 Indemnity. In addition to the provisions of Section 11.2, Owner shall indemnify and hold City, its officials, officers, agents, employees and independent contractors, engaged in project planning or implementation, free and harmless from any third-party liability or claims based or alleged upon any act or omission of Owner, its officers, agents, employees, subcontractors and independent contractors, for property damage, bodily injury or death (Owner's employees included) or any other element of damage of any kind or nature, relating to or arising from development of the Project, except for claims for damages arising through active negligence or willful misconduct of City, its officials, officers, agents, employees and

independent contractors. Owner shall defend, at Owner's expense, including attorneys' fees, City, its officials, officers, agents, employees and independent contractors in any legal action based upon such alleged acts or omissions of Owner. City may in its discretion participate in the defense of any such legal claim, action, or proceeding at City's cost.

11.4 Environmental Contamination. Owner shall indemnify and hold City, its officers, agents, and employees free and harmless from any liability, based or alleged, upon any act or omission of Owner, its officers, agents, employees, subcontractors, predecessors in interest, successors, assigns, and independent contractors, resulting in any violation of any federal, state or local law, ordinance or regulation relating to industrial hygiene or to environmental conditions on, under, or about the Property, including, but not limited to, soil and groundwater conditions, and Owner shall defend, at its expense, including attorneys' fees, City, its officials, officers, agents and employees in any action based or asserted upon any such alleged act or omission. City may in its discretion participate in the defense of any such claim, action, or proceeding. Notwithstanding anything to the contrary set forth in this Section, Owner shall not be responsible for clean-up and removal of groundwater contamination migrating to or from an adjacent property not owned by Owner.

11.5 City to Reasonably Approve Counsel; Conduct of Litigation. With respect to Sections 11.2 through 11.4, City reserves the right to reasonably approve the attorney(s) that Owner selects, hires, or otherwise engages to defend City, which approval shall not be unreasonably withheld or delayed To the extent that Owner withdraws its Project application or requests that the City rescind or repeal Project approvals, City reserves the right to reduce or abandon its defense of any litigation.

11.6 Processing During Third Party Litigation. The filing of any third party lawsuit(s) against City or Owner relating to this Agreement, the General Plan, any Development Approvals, including Subsequent Development Approvals, or other development issues affecting the Property shall not delay or stop the development, processing, or construction of the Project, approval of Subsequent Development Approvals, or issuance of "Ministerial Approvals," unless the third party obtains a court order preventing the activity or invalidating this Agreement or any provision thereof. City shall not stipulate to the issuance of any such order without Owner's prior written consent. For purposes of this Section, the term "Ministerial Approvals" shall mean the issuance of approvals or permits requiring the determination of conformance with Land Use Regulations and Development Approvals, including, without limitation, site plans, site development permits, area plans, design review, development plans, land use plans, grading plans, improvement plans, building plans and specifications, ministerial issuance or approval of one or more final maps, zoning clearances, grading permits, improvement permits, stormwater management plans, wall permits, building

permits, lot line adjustments, conditional and temporary use permits, certificates of use and occupancy, approvals, entitlements, and related matters as may be necessary for the completion of the Project.

11.7 Survival. The provisions of Sections 11.1 through 11.7 inclusive, shall survive the termination, cancellation, or expiration of this Agreement.

12. DEFAULTS AND REMEDIES.

12.1 Major Default Defined. A Major Default, as defined in Section 5.24 of this Agreement, may establish cause for early termination of this Agreement. This provision does not limit the right of either Party to pursue other non-termination remedies permitted by this Section 12 for Minor Defaults.

12.2 Notice and Termination. Before either Party may declare a Major Default or termination of this Agreement or bring a legal action to terminate this Agreement, the procedures of this Section must be followed. In the case of a Major Default arising from the conduct of an Annual Review, the procedures of this Section shall be strictly followed and shall constitute a second and independent review of the good faith compliance of Owner.

The Party asserting a Default (the "Non-Defaulting Party") may elect to do so by providing written notice to the Party alleged to be in Default (the "Defaulting Party") setting forth the nature of the Default and the actions, if any, required by the Defaulting Party to cure the Default. The Defaulting Party shall be deemed in Default if the Defaulting Party fails to cure the Default within thirty (30) business days after the date of such notice (for monetary defaults) or within sixty business (60) days after the date of such notice (for non-monetary defaults) ("cure periods"). If the nature of the alleged Default is such that it cannot reasonably be cured within the applicable cure period, the Defaulting Party shall not be deemed to be in Default if it has commenced efforts to cure the Default within the applicable cure period and continues to diligently pursue completion of the cure.

12.3 Default Remedies. A Party who complies with the notice of Default and opportunity to cure requirements of Section 12.2 may, at its option, institute legal action to cure, correct, or remedy the alleged Default, enjoin any threatened or attempted violation, enforce the terms of this Agreement by specific performance, or pursue any other legal or equitable remedy. These remedies shall be cumulative rather than exclusive, except as otherwise provided by law.

Furthermore, the City, after first following the procedures set forth in Section 12.2, may give notice of its intent to terminate or modify this Agreement for an uncured Major Default, in which event the matter shall be scheduled for consideration and review by the City Council, using the notice and procedure provisions set forth in Section 10.3 for an Annual Review. The

"preponderance of evidence" standard of review set forth in Section 12.4, however, shall be employed rather than the "substantial evidence" standard set forth in Section 10.2.

12.4 Standard of Review. Any determination by City that Owner is in Default shall be based on the preponderance of evidence before the City. In any legal action by Owner challenging the City's determination of Default, the court shall conduct a de novo review of Owner's compliance based on the administrative record and determine if the preponderance of evidence supports the City's determination.

12.5 Owner's and City's Exclusive Remedy. City and Owner acknowledge that neither City nor Owner would have entered into this Agreement if it were to be liable in damages under or with respect to all or any part of the Development Plan. Accordingly, except as stated below, neither Party shall sue the other for damages or monetary relief for any matter related to the Development Plan. City may, however, sue Owner for the payment of sums due from Owner to City under provisions of this Agreement which are expressly stated to survive termination of this Agreement. With these exceptions, Owner's and City's litigation remedies shall be limited to declaratory and injunctive relief, mandate, and specific performance.

12.6 Waiver; Remedies Cumulative. All waivers of performance must be in a writing signed by the Party granting the waiver. There are no implied waivers. Failure by City or Owner to insist upon the strict performance of any provision of this Agreement, irrespective of the length of time for which such failure continues, shall not constitute a waiver of the right to demand strict compliance with this Agreement in the future.

A written waiver affects only the specific matter waived and defines the performance waived and the duration of the waiver. Unless expressly stated in a written waiver, future performance of the same or any other condition is not waived.

A Party who complies with the notice of Default and opportunity to cure requirements of Section 12.2, where applicable, and elects to pursue a legal or equitable remedy available under this Agreement does not waive its right to pursue any other remedy available under this Agreement, unless prohibited by statute, court rules, or judicial precedent.

Delays, tolling, and other actions arising under Section 14.10 shall not be considered waivers subject to this Section 12.6.

12.7 Alternative Dispute Resolution. Any dispute between the Parties may, upon the mutual agreement of the Parties, be submitted to mediation, binding arbitration, or any other mutually agreeable form of alternative dispute resolution. While an alternative dispute process is pending, the statute of

limitation shall be tolled for any claim or cause of action which either of the Parties may have against the other.

13. ENCUMBRANCES, ASSIGNMENTS, AND RELEASES.

13.1 Discretion to Encumber. This Agreement shall not prevent or limit Owner, in any manner, at Owner's sole discretion, from encumbering some or all of the Property or any improvement on the Property by any mortgage, deed of trust, or other security device to secure financing related to the Property or the Project.

13.2 Mortgagee Protection. City acknowledges that the Lender(s) providing financing secured by the Property and/or its improvements may require certain Agreement interpretations and modifications. City shall, at any time requested by Owner or the lender, meet with Owner and representatives of such lender(s) to negotiate in good faith any such interpretation or modification. City will not unreasonably withhold or delay its consent to any requested interpretation or modification provided such interpretation or modification is consistent with the intent and purposes of this Agreement. Any Mortgagee of the Property shall be entitled to the following rights and privileges:

13.2.1 Neither entering into this Agreement nor a breach of this Agreement shall defeat, render invalid, diminish, or impair the lien of any mortgage or deed of trust on the Property made in good faith and for value.

13.2.2 If City timely receives a request from a Mortgagee requesting a copy of any notice of Default given to Owner under the terms of this Agreement, City shall provide a copy of that notice to the Mortgagee within ten (10) days of sending the notice of Default to Owner. The Mortgagee shall have the right, but not the obligation, to cure the Default during the remaining cure period allowed Owner under Section 12.2 of this Agreement.

13.2.3 Except as otherwise provided within this Agreement, any Mortgagee who comes into possession of some or all of the Property pursuant to foreclosure of a mortgage or deed of trust, or deed in lieu of such foreclosure or otherwise, shall:

13.2.3.1 Take that property subject to the terms of this Agreement and as Owner's successor;

13.2.3.2 Have the rights and obligations of an Assignee as set forth in Sections 13.3 and 13.4;

13.2.3.3 Have the right to rely on the provisions of Section 8 of this Agreement, provided that any development

proposed by the Mortgagee is in substantial conformance with the terms of this Agreement; and

13.2.3.4 Not be liable for any defaults, whether material or immaterial, or monetary obligations of Owner arising prior to acquisition of title to the Property by the Mortgagee, except that the Mortgagee may not pursue development pursuant to this Agreement until all delinquent and current fees and other monetary obligations due under this Agreement for the portions of the Property acquired by the Mortgagee have been paid to City.

13.3 Transfer or Assignment. Subject to Section 13.5, Owner shall have the right to sell, transfer, or assign its rights and obligations under this Agreement (collectively, an "Assignment") in connection with a transfer of Owner's interest in all, any portion of, or any interest in the Property (the "Transferred Property"). No Assignment shall be made unless made together with the sale, transfer, or assignment of all or any portion of Owner's interest in the Property.

Concurrent with any Assignment, Owner shall notify City in writing of the Assignment and shall provide City with an executed Assignment and Assumption Agreement, in a form substantially similar to Exhibit "E", executed by the purchaser, transferee, or assignee (collectively, the "Assignee") to expressly and unconditionally assume all duties and obligations of Owner under this Agreement remaining to be performed at the time of the Assignment. Any Assignment not made in strict compliance with the foregoing conditions shall constitute a default by Owner under this Agreement. Notwithstanding the failure of any Assignee to execute the agreement required herein this Subsection 13.3, the burdens of this Agreement shall be binding upon such Assignee, but the benefits of this Agreement shall not inure to such Assignee until and unless such agreement is executed.

13.4 Effect of Assignment. Subject to Section 13.5 and unless otherwise stated within the Assignment, upon an Assignment:

13.4.1 The Assignee shall be liable for the performance of all obligations of Owner with respect to Transferred Property, but shall have no obligations with respect to the portions of the Property, if any, not transferred (the "Retained Property").

13.4.2 The owner of the Retained Property shall be liable for the performance of all obligations of Owner with respect to the Retained Property, but shall have no further obligations with respect to the Transferred Property.

13.4.3 The Assignee's exercise, use, and enjoyment of the Transferred Property shall be subject to the terms of this Agreement to the same extent as if the Assignee were the Owner.

13.5 City's Consent. The City's consent shall not be required to a transfer between Owner and any other entity controlling, controlled by, or under common control with Owner, except an assignment and assumption agreement must be executed between the two entities in a form substantially conforming to Exhibit "E". Moreover, the City's consent shall not be required unless, at the time of the Assignment, Owner has been determined to be in Major Default pursuant to Section 12 and the Major Default has not been cured. If Owner is in Major Default, City shall consent to any Assignment which provides adequate security to City, in the reasonable exercise of City's discretion, to guarantee the cure of the Major Default upon completion of the Assignment.

14. MISCELLANEOUS PROVISIONS.

14.1 Rules of Construction. The singular includes the plural; the masculine gender includes the feminine; "shall" is mandatory; "may" is permissive.

14.2 Entire Agreement. This Agreement constitutes the entire understanding and agreement of City and Owner with respect to the matters set forth in this Agreement. This Agreement supersedes all negotiations or previous agreements between City and Owner respecting the subject matter of this Agreement including, without limitation, the Original City Agreement.

14.3 Recorded Statement Upon Termination. Upon the completion of performance of this Agreement or its cancellation or termination, a statement evidencing completion, cancellation, or termination signed by the appropriate agents of City, shall be recorded in the Official Records of Orange County, California.

14.4 Project as a Private Undertaking. It is specifically understood by City and Owner that (i) the Project is a private development; (ii) City has no interest in or responsibilities for or duty to third parties concerning any improvements to the Property unless City accepts the improvements pursuant to the provisions of this Agreement or in connection with subdivision map approvals; and (iii) Owner shall have the full power and exclusive control of the Property, subject to the obligations of Owner set forth in this Agreement.

14.5 Incorporation of Recitals. Each of the Recitals set forth at the beginning of this Agreement are part of this Agreement.

14.6 Captions. The captions of this Agreement are for convenience and reference only and shall not define, explain, modify, construe, limit, amplify,

or aid in the interpretation, construction, or meaning of any of the provisions of this Agreement.

14.7 Consent. Where the consent or approval of City or Owner is needed to implement Development under this Agreement, the consent or approval shall not be unreasonably withheld, delayed, or conditioned.

14.8 Covenant of Cooperation. City and Owner shall cooperate and deal with each other in good faith and assist each other in the performance of the provisions of this Agreement.

14.9 Execution and Recording. The City Clerk shall cause a copy of this Agreement to be signed by the appropriate representatives of the City and recorded with the Office of the County Recorder of Orange County, California, within six months following the effective date of Ordinance No. _____, the ordinance adopting this Agreement, or prior to building permit issuance, whichever comes first. The failure of the City to sign and/or record this Agreement shall not affect the validity of and binding obligations set forth within this Agreement.

14.10 Delay for Events Beyond the Parties' Control. Performance by either Party of its obligations under this Agreement shall be excused, and the Term shall be extended, for periods equal to the time during which (1) litigation is pending which challenges any matter, including compliance with CEQA or any other local, state, or federal law, related in any way to the approval or implementation of all or any part of the Development Plan. Any such extension shall be equal to the time between the filing of litigation, on the one hand, and the entry of final judgment or dismissal, on the other. All such extensions shall be cumulative; (2) any application by Owner for state or federal regulatory permits and/or approvals required for the Project has been pending more than one year after its submittal; or (3) a delay is caused by reason of any event beyond the control of City or Owner which prevents or delays performance by City or Owner of obligations under this Agreement. Such events shall include, by way of example and not limitation, acts of nature, enactment of new conflicting federal or state laws or regulations (example: listing of a species as threatened or endangered), judicial actions such as the issuance of restraining orders and injunctions, delay in the issuance of bonds or formation of any Financing Districts, and riots, strikes, or damage to work in process by reason of fire, mud, rain, floods, earthquake, or other such casualties.

If City or Owner seeks excuse from performance, it shall provide written notice of such delay to the other within thirty (30) days of the commencement of such delay. If the delay or default, whether material or immaterial, is beyond the control of City or Owner it shall be excused, and an extension of time for such cause shall be granted in writing for the period of the enforced delay, or longer as may be mutually agreed upon. Any

disagreement between the Parties with respect to whether this Section 14.10 applies to a particular delay or default is subject to the filing by either Party of an action for judicial review of the matter, including requests for declaratory and/or injunctive relief.

14.11 Interpretation and Governing Law. In any dispute regarding this Agreement, the Agreement shall be governed and interpreted in accordance with the laws of the State of California. Venue for any litigation concerning this Agreement shall be in Orange County, California.

14.12 Time of Essence. Time is of the essence in the performance of the provisions of this Agreement as to which time is an element.

14.13 Estoppel Certificate. Within ten (10) business days following a written request by either of the Parties, the other Party shall execute and deliver to the requesting Party a statement certifying that (i) either this Agreement is unmodified and in full force and effect or there have been specified (date and nature) modifications to the Agreement, but it remains in full force and effect as modified; and (ii) either there are no known current uncured Major Defaults under this Agreement or that the responding Party alleges that specified (date and nature) Major Defaults exist. The statement shall also provide any other reasonable information requested. The failure to timely deliver this statement shall constitute a conclusive presumption that this Agreement is in full force and effect without modification, except as may be represented by the requesting Party and that there are no uncured Major Defaults in the performance of the requesting Party, except as may be represented by the requesting Party. Owner shall pay to City all reasonable administrative costs incurred by City in connection with the issuance of estoppel certificates under this Section 14.13 prior to City's issuance of such certificates.

14.14 Successors and Assigns. This Agreement shall be binding upon and inure to the benefit of the Parties and their respective successors and assigns.

14.15 Future Litigation Expenses.

14.15.1 Payment to Prevailing Party. If either Party brings a legal or equitable proceeding against the other Party which arises in any way out of this Agreement, the prevailing Party shall be entitled to recover its reasonable attorneys' fees and all other reasonable costs and expenses incurred in that proceeding.

14.15.2 Scope of Fees. Attorneys' fees under this Section shall include attorneys' fees on any appeal and in any post-judgment proceedings to collect or enforce the judgment. The provisions in 14.15.1 through 14.15.3 are separate and several and shall survive the termination of this Agreement.

14.15.3 Limitation of Liability. Owner's obligations under this Agreement are solely those of Owner. In no event shall any present, past or future officer, director, shareholder, member, employee, partner, affiliate, manager, representative or agent of Owner (a "Related Party") have any personal liability, directly or indirectly, under this Agreement. Recourse in any way connected with or arising from this Agreement shall not be available against any Related Party.

Owner and City have executed this Agreement on the dates set forth below.

EXHIBIT "C"
PUBLIC BENEFITS

In addition to complying with the Project conditions of approval, Owner has committed by this Agreement to contribute to the City for, among other things, the development of certain "Public Benefits." Owner shall make contributions to the City, as follows:
Or

1. City Fiscal Impact Fee. Owner shall pay a one-time City Fiscal Impact Fee in the amount of Two Hundred Thirteen Thousand, Eight Hundred and Fifty Dollars ($213,850). Because this fee is an obligation arising from a Development Agreement, it is not subject to the Mitigation Fee Act. This Agreement does not limit the purposes for which the City may use City Fiscal Impact Fees, and the use and timing of such use of City Fiscal Impact Fees shall be entirely within the City's discretion.

2. Parks. Owner shall pay one-time park in-lieu fee under the Quimby Act and/or Aliso Viejo Municipal Code Chapter 14.16 in the amount of Eight Hundred Twenty Four Thousand Eight Hundred and Two Dollars ($824,802) that is required of the Owner as subdivider. The Parties agree that City's use of the park in-lieu fee for the development and rehabilitation of City recreational facilities, including but not limited to, AV Ranch, Aliso Viejo Aquatic Center, and Iglesia Park shall be deemed to serve the residents of the Property and Project area. City shall have sole discretion on the use of, and the timing of the use of the park in-lieu fees for park and recreation purposes.

Payment of the full City Fiscal Impact Fee and Park in-lieu fee amounts shall be made to the City prior to the issuance of any building permit for the Project. No building permit shall be issued until the City has received the full payments and has confirmed compliance with all applicable fee requirements. The City shall have no obligation to issue any building permit until and unless such payments and in-lieu fees are received in full, and any delay resulting from non-payment shall be solely the responsibility of the Owner.

EXHIBIT "E"
ASSIGNMENT AND ASSUMPTION AGREEMENT

ASSIGNMENT AND ASSUMPTION OF DEVELOPMENT AGREEMENT BETWEEN CITY OF ALISO VIEJO AND _____, WHICH WILL DO BUSINESS IN CALIFORNIA AS _____.,

THIS ASSIGNMENT AND ASSUMPTION OF DEVELOPMENT AGREEMENT BETWEEN CITY OF ALISO VIEJO AND _____ WHICH WILL DO BUSINESS IN CALIFORNIA AS _____.**("Assignment")** is made as of the ___ day of _____, 2025 (**"Effective Date"**), by and among [ENTITY] ("[ENTITY]") a [LEGAL DESIGNATION] and _____ ("**Assignee**") with reference to the following facts:

RECITALS

A. [ENTITY] has entered into that certain Development Agreement, dated _____, 2025, by and between the City of Aliso Viejo ("**City**"), on the one hand, and [ENTITY], on the other hand ("**Agreement"**) for certain real property consisting of approximately 2.85 acres of land located in the City, more particularly described in Exhibit "A" ("**Property**").

B. [ENTITY] desires to assign and delegate, and Assignee desires to accept and assume, all of [ENTITY'S] rights and obligations under the Agreement in accordance with the terms and conditions set forth herein.

C. City has approved the Assignment in accordance with the terms and conditions set forth herein and in the Agreement.

AGREEMENT

NOW, THEREFORE, for good and valuable consideration, the receipt and sufficiency of which are hereby acknowledged, [ENTITY] and Assignee do hereby agree as follows:

1. Assignment and Assumption. Effective as of the Effective Date, [ENTITY] hereby assigns, transfers, and conveys to Assignee all of [ENTITY'S] rights, interest, duties, liabilities, and obligations in, to, and under the Agreement, and Assignee hereby accepts and assumes all such rights, interests, duties, liabilities, and obligations under the Agreement from [ENTITY] for [the Property or a portion of the Property] ("Assigned Property") [, except to the extent [ENTITY] has retained a portion of the Property (the "Retained Property")].

2. City Consent to Assignment. Effective as of the Effective Date, City hereby consents to the Assignment and hereby fully releases and forever discharges [ENTITY] from any and all obligations to City under the Agreement for the Assigned Property, [except [ENTITY'S] obligations with respect to the Retained Property].

3. Entire Agreement. This Agreement represents the final and entire agreement between the parties in connection with the subject matter hereof, and may not be modified except by a written agreement signed by both [ENTITY] and Assignee.

4. Governing Law. This Agreement has been prepared, negotiated, and executed in, and shall be construed in accordance with, the laws of the State of California, without regard to conflict of law rules.

IN WITNESS WHEREOF, the parties hereto have executed this Agreement as of the date first above written.

DENSITY BONUS HOUSING AGREEMENT

(PROJECT NAME/ADDRESS)

This DENSITY BONUS HOUSING AGREEMENT ("**Agreement**"), is made and entered into this [date], by and between the City of Aliso Viejo ("**City**"), a California municipal corporation, and **[NAME AND ENTITY TYPE OF THE ENTITY THAT ACQUIRES TITLE TO THE PROJECT AT THE PENDING CLOSING TO BE INSERTED]** ("**Developer**"). City and Developer are sometimes referred to collectively as the "**Parties**" and individually as a "**Party**."

RECITALS

A. Developer owns that certain real property located within the Aliso Viejo, County of Orange, State of California, commonly known as 95 Argonaut, Aliso Viejo, CA 92656 (APN 623-091-01) and more particularly described in the legal description attached as Exhibit A and more particularly depicted in Exhibit B ("**Property**").

B. Developer is proposing construction of 61 units on the Property, with related amenities and improvements, as further set forth in [resolution/entitlement] approving the project ("**Project**").

C. The Project qualifies for a density bonus and/or certain concessions, incentives, and waivers under California Government Code section 65915 *et seq*. ("**State Density Bonus Law**"). Under the State Density Bonus Law, the Project is proposing a total number of three (3) residential units restricted for sale to Very Low Income Households, as set forth in this Agreement.

D. In accordance with State Density Bonus Law, Developer has requested, and City has granted, certain concessions, incentives, and waivers more particularly set forth herein.

E. This Agreement and the attached exhibits set forth the terms and conditions for implementing the Project's requirement to provide affordable housing units in exchange for receiving the concessions, incentives and waivers, as set forth herein.

NOW, THEREFORE, in consideration of the above recitals, which are incorporated herein by this reference, and of the mutual covenants contained herein, and for other good and valuable consideration, the receipt and sufficiency of which is hereby acknowledged, the Parties agree as follows:

1. DEFINITIONS AND EXHIBITS

1.1 Definitions. In addition to the terms that may be defined elsewhere in this Agreement, the following terms when used in this Agreement shall be defined as follows:

1.1.1 "**Adjusted for family size appropriate to the unit**" has the meaning provided in California Health and Safety Code section 50052.5(h).

1.1.2 "**Affordable Housing Cost**" means the purchase price which would result in a Monthly Housing Cost which does not exceed the price authorized for a Very Low Income Household pursuant to Health and Safety Code section 50052.5(b) and any implementing regulations published by HCD, including 25 C.C.R. section 6924, as applicable.

1.1.3 "**Affordable Unit**" means individually, and "Affordable Units" means collectively, the three (3) dwelling units within the Project to be sold by Developer to Eligible Households in accordance with this Agreement.

1.1.4 "**AMI**" means the Orange County, California, area median income, adjusted for family size appropriate to the unit pursuant to California Health and Safety Code section 50052.5(h), as periodically published by HCD.

1.1.5 "**City**" means the City of Aliso Viejo, California.

1.1.6 "**City Attorney**" means the City Attorney for the City.

1.1.7 "**City Council**" means the City Council of the City.

1.1.8 "**City Deed of Trust**" means a Deed of Trust and Security Agreement executed by a Qualified Purchaser and recorded as a lien against the Affordable Unit acquired by that Qualified Purchaser as required by the terms of the Equity Sharing Agreement, the form of which is attached to the Equity Sharing Agreement.

1.1.9 "**City Manager**" means the City Manager for the City.

1.1.10 "**Developer**" means **[NAME AND ENTITY TYPE OF THE ENTITY THAT ACQUIRES TITLE TO THE PROJECT AT THE PENDING CLOSING TO BE INSERTED]**, and its successors and assigns to all or any part of the Property, the Project, or this Agreement (but not homebuyers of the Units).

1.1.11 "**Effective Date**" means the date that City executes this Agreement, and then on, this Agreement shall be in full force and effect.

DRAFT

1.1.12 "**Equity Sharing Agreement**" means that certain Owner Occupancy and Equity Sharing Agreement to be entered into by and between City and each Qualified Purchaser that purchases an Affordable Unit, which shall be recorded against each Affordable Unit in the form attached hereto as Exhibit C.

1.1.13 "**HCD**" means the California Department of Housing and Community Development.

1.1.14 "**Household**" means all persons residing in a Unit.

1.1.15 "**Income Verification Materials**" means those materials specified in Section 4.5 to verify the income of a proposed purchaser of an Affordable Unit.

1.1.16 "**Market Rate Units**" means the Units within the Project to be sold by Developer to a Household without restriction.

1.1.17 "**Project**" means that certain residential development as more particularly described in the Recitals above and Section 2 below.

1.1.18 "**Project Approvals**" means the Project's approved entitlements pursuant to [resolution(s)], and all terms and conditions stated therein. The Project Approvals include, but are not limited to, that certain Development Agreement dated January 21, 2025 between Developer and City governing the development of the Project on the Property.

1.1.19 "**Property**" means that certain real property more particularly described in the legal description in Exhibit A and improvements thereon.

1.1.20 "**Qualified Purchaser**" means a person or family who complies with all Income Verification Requirements and qualifies as a Very Low Income Household.

1.1.21 "**State Density Bonus Law**" means Government Code section 65915 *et seq*., as of the Effective Date.

1.1.22 "**Unit**" means a residential dwelling unit within the Project to be constructed by Developer pursuant to this Agreement. The Project contains a total of sixty one (61) Units, with three (3) Affordable Units and fifty eight (58) Market Rate Units.

1.1.23 "**Very Low Income Household**" means persons and families whose income does not exceed 50 percent of the AMI, adjusted for household size, as determined in accordance with California Health and Safety Code section 50105, and implementing regulations published by HCD.

1.2 Exhibits. The following documents are attached hereto and incorporated herein by this reference:

Exhibit "A" – Legal Description of Property

Exhibit "B" – Map Showing Property and its Location

DRAFT

2. DEVELOPMENT OF THE PROPERTY

2.1 Project. Developer shall develop the Project on the Property in accordance with this Agreement and the Project Approvals.

2.2 No Increase in Density. Developer acknowledges and agrees that Developer has not requested, and the Project is not receiving, an increase in density under State Density Bonus Law.

2.3 Market Rate Units. The Project shall have no more than fifty-eight (58) Market Rate Units with unit sizes as may be determined by Developer in accordance with the Project Approvals. Developer may alter the unit distribution of the Market Rate Units in Developer's discretion, provided that the Project has the minimum number of Affordable Units and the minimum distribution thereof as specified in this Agreement.

2.4 Affordable Units. The Project shall have no less than three (3) Affordable Units pursuant to the terms and conditions of this Agreement. The Affordable Units shall be consistent in terms of type, design, and number of bedrooms with the Market Rate Unit types as depicted in the Project Approvals. The Affordable Units shall be located throughout the Project and not clustered in one area or building.

2.5 Minimum Development Standards for Affordable Units; Access and Restrictions. The Affordable Units shall be constructed with the same exterior appearance and standard interior features, fixtures, and amenities, and shall use the same type and quality of materials as provided for the Market Rate Units of the same model and size. City acknowledges that purchasers of Market Rate Units may elect to purchase optional upgrades and such optional upgrades may not be available for the Affordable Units. Except as otherwise authorized by City in writing, the Affordable Units shall be constructed concurrently with the Market Rate Units. The Affordable Units, and their occupants, shall have access to all common areas of the Project to the same extent as occupants of the Market Rate Units.

2.6 Development Concessions, Incentives, and Waivers. In accordance with State Density Bonus Law, the Project is hereby granted the following: one concession for reduced minimum perimeter setback up to 7' and waivers for reduced minimum boundary landscaping setback up to 7', and placement of mechanical units in front yard setbacks.

2.7 Parking Requirements. The Project's onsite parking shall be provided in compliance with Government Code sections 65915(p)(1)(A)-(B). The Project will provide 150 total onsite parking spaces.

2.8 No Further Concessions, Incentives, or Waivers. Developer acknowledges and agrees that the concessions, incentives, and waivers set forth in section 2.6 and section 2.7 above fully satisfy City's duty to grant a density bonus and any other incentive, concession, or waiver of any building, zoning, or other requirement in connection with a density bonus. By way of this Agreement, Developer releases any and all claims Developer may have against City in any way

DRAFT

relating to or arising from any density bonus request for the Project other than those expressly set forth above.

2.9 Permits and Processing; Compliance with Laws. Developer, at its sole cost and expense, or as otherwise set forth in a separate written agreement, shall secure or cause to be secured any and all permits that may be required for development of the Project by City or any other federal, state, or local governmental entity having or claiming jurisdiction over the Property or Project. Upon securing any and all permits, Developer shall carry out and perform the development of the Project, or cause the performance of the development of the Project, in conformity with all applicable federal, state, and local laws and regulations, and all conditions of approval issued by City, including the Project Approvals.

2.10 [intentionally omitted due to inapplicability]

2.11 Mechanic's Liens; Indemnification. Prior to the closing of the sale of an Affordable Unit, Developer shall take all actions necessary to remove any future mechanic's liens or other similar liens (including design professional liens) against such Affordable Unit by reason of work, labor, services, or materials supplied or claimed to have been supplied to Developer or caused by, at the direction of, or on behalf of Developer. Prior to the recording of this Agreement pursuant to Section 3.1 below, Developer shall provide evidence from a reputable title company of any new recordings against the Property or Project. City hereby reserves all rights to post notices of non-responsibility and any other notices as may be appropriate upon a filing of a mechanic's lien. In addition to any other indemnity provided by Developer under this Agreement, Developer shall indemnify, defend (with counsel of Developer's choosing and reasonably approved by City), and hold harmless City and all of its officials, officers, employees, representatives, volunteers and agents from any and all alleged or actual claims, causes of action, liabilities, and damages from any third party by reason of a mechanic's lien or work, labor, services, or materials supplied or claimed to have been supplied to Developer or caused by, at the direction of, or on behalf of Developer.

3. RECORDING OF AGREEMENT

3.1 Recording. Prior to the issuance of any building permit for the Project, Developer shall record or shall cause to be recorded in the Official Records for Orange County, California, an executed original of this Agreement. City shall cooperate with Developer in promptly executing in recordable form this Agreement.

4. SALE OF UNITS

4.1 Conveyance of Units. Developer may convey title to the Units at any time after the Effective Date, in accordance with this Agreement and any and all federal, state, and local laws and regulations. Developer may offer to sell some or all Units in phases or all at once in Developer's discretion, provided Developer's sale complies with applicable federal, state, and local laws and regulations. Developer shall convey title to each Affordable Unit through a purchase and sale agreement to be serviced through an escrow. Upon City's request, Developer shall deliver to City a copy of the purchase and sale agreement and preliminary title report for the conveyance of an Affordable Unit.

DRAFT

4.2 Notice to City. Developer shall provide City with no less than 60 days written notice prior to the date that Developer intends to commence activities to market, offer, or sell the Affordable Units.

4.3 Designation of Affordable Units. Prior to commencement of any activities to market, offer, or sell the Units, Developer shall designate the three (3) Units as Affordable Units. Developer's notice to City under Section 4.2 above shall disclose to City which Units Developer has designated as the Affordable Units.

4.4 Sale of Affordable Units. The sale price of each Affordable Unit shall be the Affordable Housing Cost. So that City may verify the amount is not more than the Affordable Housing Cost, Developer shall provide written notice to City of the sale price of each Affordable Unit prior to offering for sale the Affordable Unit. City verification shall be provided within 30 days of City's receipt of Developer's written notice of the proposed sale price. Developer shall sell each Affordable Unit only to those who qualify as a Qualified Purchaser, as determined pursuant to Sections 4.5 and 4.6. Developer shall not knowingly convey title to any Affordable Unit to a Household that does not qualify as a Very Low Income Household, and Developer shall not convey fee title to any Affordable Unit to a Very Low Income Household at a price that exceeds the Affordable Housing Cost for that Affordable Unit.

4.5 Income Verification. The proposed purchaser of an Affordable Unit shall provide and certify, for the purpose of City approval, the following information: the Social Security Number of the proposed purchaser; copies of the federal and state income tax returns filed by the proposed purchaser for the prior two calendar years; preceding six months of bank statements of the proposed purchaser; background documentation of any income (i.e. Social Security award letter, stock interest forms, court statement regarding support payments, retirement or pension benefit statement, etc.); copies of the two most current wage earning statements of the proposed purchaser; the purchase price that the proposed purchaser intends to pay for the Affordable Unit; and any other information that City may reasonably require to verify the income of the proposed purchaser. The proposed purchaser of an Affordable Unit shall also provide, for the purpose of City approval, a written statement signed by the proposed purchaser (in a form acceptable to City) that authorizes City to inspect, use, and rely on the information provided by the proposed purchaser, and waiving and releasing any right or claim that said proposed purchaser might otherwise have in the absence of such written authorization to maintain the privacy or confidentiality of such information. The information, statements, agreements, and other documents that a proposed purchaser is required to provide pursuant to this section 4.5 are collectively the "Income Verification Materials." Developer shall have the obligation to collect and compile all Income Verification Materials from a proposed purchaser of an Affordable Unit. Developer shall be responsible for working with the proposed purchaser to compile all required Income Verification Materials to be submitted to the City for approval, which may be accomplished by Developer contracting with a third-party consultant to provide such services.

4.6 City Verification. Developer shall not convey fee title to any Affordable Units to a proposed purchaser until such time as City has determined (i) the proposed purchaser intends to occupy the Affordable Unit as a principal residence; (ii) the proposed purchaser is a Very Low Income Household; (iii) the purchase price for the Affordable Unit does not exceed the Affordable Housing Cost; (iv) the proposed purchaser and City have executed the Equity Sharing Agreement

and City Deed of Trust, both in a recordable form; and (v) the proposed conveyance will not otherwise violate the terms and conditions of this Agreement. Developer shall reasonably cooperate with City in its determination of the matters set forth in clauses (i)-(v) herein and Developer shall be entitled to conclusively rely on any City determination regarding Developer's compliance with this Section 4.6. City shall respond to a request from Developer for verification of the matters in clauses (i)-(v) herein by written notice, which shall be delivered to Developer within 30 days of City's receipt of all Income Verification Materials for the proposed purchaser of the Affordable Unit. If City is unable to verify the proposed purchaser's income as provided herein, then the prospective purchaser's income shall be deemed to exceed the maximum allowable limit for a Very Low Income Household. If City determines a proposed conveyance would violate this Agreement, City shall specify the reasons for the violation. If the proposed violation is not corrected to the satisfaction of City within 30 days after the date of the notice specifying the violation, or within such further time as City determines in its sole and absolute discretion is necessary to correct said violation, Developer shall not convey title to the proposed purchaser. City may apply to a court of competent jurisdiction for specific performance of this Agreement, for a declaration that the proposed conveyance is void, or for any such relief as may be appropriate under law or equity.

4.7 Quality Standards for Affordable Units. At the time of conveyance of an Affordable Unit from Developer to a Qualified Purchaser, the physical condition and quality of the Affordable Unit shall be in the same physical condition and of the same quality (as to standard features, but not upgrades) as the other Market Rate Units of the same model and size that Developer has offered for sale.

4.8 Execution and Recording of Equity Sharing Agreement and City Deed of Trust. Prior to the close of escrow for each Affordable Unit, Developer shall coordinate the execution of the Equity Sharing Agreement by the City and the purchaser of the Affordable Unit and the execution of the City Deed of Trust by the purchaser of the Affordable Unit, with the Equity Sharing Agreement and City Deed of Trust executed in a recordable form. At the close of escrow, the escrow agent handing such close of escrow shall record or cause to be recorded the instruments effectuating the conveyance of the Affordable Unit in the Official Records for Orange County in the following order: (i) the grant deed conveying title to the Qualified Purchaser, (ii) the Equity Sharing Agreement, (iii) the City Deed of Trust, and (iv) any other required documents. Upon the date of recording, the terms and conditions of the Equity Sharing Agreement and the City Deed of Trust shall be binding upon and run with the Affordable Unit. City shall cooperate with Developer and each Qualified Purchaser to execute the Equity Sharing Agreement and City Deed of Trust and the attachments thereto for each Affordable Unit so that the Equity Sharing Agreement and City Deed of Trust may be recorded at the close of escrow for that particular Affordable Unit.

4.9 Sale of Units; Indemnification. In addition to any other indemnification provided in this Agreement, Developer shall indemnify, defend (with counsel of Developer's choosing and reasonably approved by City), and hold harmless City and its officials, officers, employees, representatives, agents, and volunteers (collectively, "Indemnitees") from and against any claims, liabilities, damages, or losses alleged or made against Indemnitees by any person or entity for any alleged or actual violation by Developer of any federal, state, or local law or regulation in connection with the sale by Developer of the Units or otherwise arising from any act or omission of Developer in violation of this Section 4, except in each instance to the extent caused by the

gross negligence or willful misconduct of any of the Indemnitees or caused by Developer's compliance with the express requirements of this Agreement.

4.10 Qualified Purchaser Marketing and Orientation. Developer shall be responsible for marketing the Affordable Units to potential Qualified Purchasers. Developer shall coordinate with designated City staff for the marketing plan of any Affordable Units. As part of the marketing plan, and in no event later than the close of escrow of an Affordable Unit, City shall provide to the Qualified Purchaser of the Affordable Unit an in-person, informational session that will explain, in plain and simple language, the resale restrictions and other provisions of the Equity Sharing Agreement. Upon completion of the informational session, City shall cause the Qualified Purchaser to execute an agreement, in a form approved by City, acknowledging the Qualified Purchaser's attendance at the informational session and providing for the Qualified Purchaser's waiver and release of Developer and City from any claims or causes of action related to the restrictions on the marketability of the Affordable Unit, provided that the Qualified Purchaser represents that he or she understands the restrictions on marketability.

4.11 Transfer to Qualified Nonprofit Housing Corporation. If, despite bona fide good faith documented marketing efforts, Developer is unable to locate a Qualifying Household to purchase an Affordable Unit within one hundred eighty (180) calendar days after the issuance of a certificate of occupancy for such Affordable Unit, Developer may sell or otherwise transfer such Affordable Unit to a qualified nonprofit housing corporation that meets all of the requirements set forth in Government Code section 65915(c)(2)(A)(ii) and any other applicable provisions of state law, which sale or transfer shall satisfy the requirements of this Agreement applicable to Developer.

5. TERM

5.1 Term. The term of this Agreement commences on the Effective Date and will continue until all of the Affordable Units have been conveyed to Very Low Income Households pursuant to this Agreement and each Qualified Purchaser has entered into an Equity Sharing Agreement with City, which has been executed by both City and the Qualified Purchaser, each Qualified Purchaser has executed a City Deed of Trust in favor of City, and all of the Equity Sharing Agreements and City Deeds of Trust for all Affordable Units have been recorded. Developer shall provide, upon City's request, evidence that Equity Sharing Agreements and Deeds of Trust have been recorded for all of the Affordable Units. Each and every Qualified Purchaser of an Affordable Unit, however, shall continue to be bound by the restrictions set forth in this Agreement despite the termination of this Agreement, and said Qualified Purchaser shall be bound by the terms and conditions of the Equity Sharing Agreement and City Deed of Trust.

6. DEFAULT AND TERMINATION; INDEMNIFICATION

6.1 Default. Failure or delay by any Party to perform any term or provision of this Agreement that is not cured within 30 days after receipt of notice from the other Party specifying the default (or such other period specifically provided herein) constitutes a default under this Agreement; provided, however, if such default is of the nature requiring more than 30 days to cure, the defaulting Party shall avoid default hereunder by commencing to cure within such 30 day period, and thereafter diligently pursuing such cure to completion within an additional 60 days

following the conclusion of such thirty 30 day period (for a total of 90 days). Except as required to protect against further damages, the injured Party may not institute proceedings against the Party in default until the time for cure has expired. Failure or delay in giving such notice shall not constitute a waiver of any default, nor shall it change the time of default.

6.2 Rights and Remedies Cumulative. The rights and remedies of the Parties are cumulative, and the exercise by either Party of one or more of its rights or remedies shall not preclude the exercise by it, at the same or different times, of any other rights or remedies for the same default or any other default by the other Party.

6.3 Indemnification. In addition to any other indemnity specifically provided in this Agreement, Developer agrees to defend (with counsel of Developer's choosing and reasonably approved by City), indemnify and hold harmless the Indemnitees from and against any loss, liability, claim, or judgment arising from or related to any act or omission of Developer in connection with its obligations under this Agreement, except to the extent caused by the gross negligence or willful misconduct of any of the Indemnitees or caused by Developer's compliance with the express requirements of this Agreement. The provisions of this Section 6.3 shall survive the termination of this Agreement.

7. ASSIGNMENT; COVENANTS RUN WITH THE LAND

7.1 [intentionally omitted]

7.2 Covenants Run with the Land. The Property shall be developed and sold subject to the covenants, conditions, and restrictions set forth herein. The covenants, conditions, restrictions, reservations, equitable servitudes, liens and charges set forth in this Agreement shall run with the Property and shall be binding upon Developer and all persons having any right, title or interest in the Property, or any part thereof, their heirs, and successive owners and assigns, shall inure to the benefit of City and its successors and assigns, and may be enforced by City and its successors and assigns. The covenants established in this Agreement shall, without regard to technical classification and designation, be binding for the benefit and in favor of City and its successors and assigns, and the parties hereto expressly agree that this Agreement and the covenants herein shall run in favor of City. City is deemed the beneficiary of the terms and provisions of this Agreement and of the covenants running with the land, for and in its own right and for the purposes of protecting the interests of the community and other parties, public or private, in whose favor and for whose benefit this Agreement and the covenants running with the land have been provided. Developer hereby declares its understanding and intent that the burden of the covenants set forth herein touch and concern the land and that Developer's interest in the Property may be rendered less valuable thereby. Developer hereby further declares its understanding and intent that this Agreement provides a public benefit in furtherance of benefit of such covenants touch and concern the land by enhancing and increasing the enjoyment and use of the Property by the citizens of City and by furthering the health, safety, and welfare of the residents of City. Notwithstanding anything in this Agreement to the contrary: (a) in the event that Developer transfers its interest in the Property to a successor, Developer shall have no further obligation or liability under this Agreement except to the extent arising out of an Event of Default by Developer under this Agreement that existed at the time of such transfer; and (b) this Agreement shall automatically terminate and be of no further force or effect, without any additional instrument

or other action required, as to each of the Market Rate Units upon the closing of the sale of each such Market Rate Unit to the initial purchaser thereof.

8. MISCELLANEOUS

8.1 Entire Agreement. This Agreement and all of its exhibits and attachments contains the Parties' entire understanding and agreement with respect to the matters set forth herein, and there are no oral or written representations, understandings or ancillary covenants, undertakings or agreements which are not contained or expressly referred to herein. No testimony or evidence of any such representations, understandings or covenants shall be admissible in any proceeding of any kind or nature to interpret or determine this Agreement's terms or conditions.

8.2 Notices.

8.2.1 Delivery. As used in this Agreement, "notice" includes, but is not limited to, the communication of notice, request, demand, approval, statement, report, acceptance, consent, waiver, appointment or other communication required or permitted hereunder. All notices shall be in writing and shall be considered given either: (i) when delivered in person to the recipient named below; or (ii) on the date of delivery shown on the return receipt, after deposit in the United States mail in a sealed envelope as either registered or certified mail with return receipt requested, and postage and postal charges prepaid, and addressed to the recipient named below; or (iii) on the date of delivery shown on the delivery receipt, after deposit with a known and reliable next-day document delivery service (such as FedEx), charges prepaid and addressed to the recipient named below. All notices shall be addressed as follows:

If to City: City of Aliso Viejo

18655 North Claret Drive, Suite 400
Scottsdale, AZ 85255

DRAFT

Attention: CA Regional Counsel
Email: [insert]

8.2.2 Courtesy Email Notice. The noticing Party shall make a good-faith effort to also send a courtesy copy of the notice to the other Party by email. Failure to receive a courtesy copy under this Section 8.2.2 is not a defect in notice.

8.2.3 Change of Address. Either Party may, by notice given at any time, require subsequent notices to be given to another person or entity, whether a party or an officer or representative of a party, or to a different address, or both. Notices given before actual receipt of notice of change shall not be invalidated by the change.

8.3 Severability. If any term, provision, covenant or condition of this Agreement shall be determined invalid, void or unenforceable by a court of competent jurisdiction, the remainder of this Agreement shall not be affected thereby to the extent such remaining provisions are not rendered impractical to perform, taking into consideration the purposes of this Agreement.

8.4 Interpretation and Governing Law. This Agreement and any dispute hereunder shall be governed and interpreted in accordance with the laws of the State of California without regard to conflict of law principles. This Agreement shall be construed as a whole according to its fair language and common meaning to achieve the objectives and purposes of the Parties hereto, and the rule of construction to the effect that ambiguities are to be resolved against the drafting Party shall not be employed in interpreting this Agreement, all Parties having been represented by counsel in the negotiation and preparation hereof.

8.5 Section Headings. All section headings and subheadings are inserted for convenience only and shall not affect any construction or interpretation of this Agreement.

8.6 Singular and Plural. As used herein, the singular of any word includes the plural, and vice versa, as context so dictates. Masculine, feminine, and neuter forms of any word include the other as context so dictates.

8.7 Joint and Several Obligations. If at any time during the term of this Agreement the Property or Project is owned, in whole or in part, by more than one party developing or selling the Units to the initial purchasers thereof, then all obligations of the Developer under this Agreement shall be joint and several as to such parties, and the default of any one of such Developers shall be the default of all such Developers.

8.8 Time of Essence. Time is of the essence in the performance of the provisions of this Agreement as to which time is an element.

8.9 Computation of Days. Unless otherwise specified in this Agreement or any exhibit attached hereto, use of the term "days" shall mean calendar days. For purposes of this Agreement and all exhibits attached hereto, "business days" means every day of the week except Saturdays, Sundays, official State holidays as recognized in Government Code section 19853(a) or successor statute, and any days in which City is closed for business.

DRAFT

8.10 Waiver. Failure by a Party to insist upon the strict performance of any of the provisions of this Agreement by the other Party, or the failure by a Party to exercise its rights upon the default of the other Party, shall not constitute a waiver of such Party's right to insist and demand strict compliance by the other Party with the terms of this Agreement thereafter.

8.11 Non-Discrimination. In performing its obligations under this Agreement, Developer shall not discriminate because of race, color, religion, sex, gender, gender identity, gender expression, sexual orientation, marital status, national origin, ancestry, familial status, disability, veteran or military status, source of income, or genetic information, as defined and prohibited by applicable law. Developer affirms that it is an equal opportunity employer and shall comply with all applicable federal, state and local laws and regulations.

8.12 Counterparts. This Agreement may be executed by the Parties in counterparts, which counterparts shall be construed together and have the same effect as if all of the Parties had executed the same instrument.

8.13 Jurisdiction and Venue. Any action at law or in equity under this Agreement or brought by a Party hereto for the purpose of enforcing, construing or determining the validity of any provision of this Agreement shall be filed and tried in the Superior Court of the County of Orange, State of California, and the Parties hereto waive all provisions of law providing for the filing, removal or change of venue to any other court.

8.14 Attorneys' Fees and Costs. If any party to this Agreement institutes any action, suit, counterclaim, appeal or arbitration for any relief against another party, declaratory or otherwise (collectively an "Action"), to enforce the terms hereof or to declare rights hereunder or with respect to any inaccuracies or material omissions in connection with any of the terms, conditions, representations or warranties on the part of the other party to this Agreement, then the prevailing party in such Action, whether by arbitration or final judgment, shall be entitled to have and recover from the other party all costs and expenses of the Action, including reasonable attorneys' fees and cost incurred in bringing and prosecuting such Action and/or enforcing any judgment, order, ruling or award (collectively, a "Decision") granted therein, all of which shall be deemed to have accrued on the commencement of such Action. For purposes of this section, costs shall include, without limitation, in addition to costs incurred in prosecution or defense of the underlying action, reasonable attorneys' fees, costs, expenses and expert fees and costs incurred in the following: (a) post judgment motions and collection actions; (b) discovery; and (c) appeals of any order or judgment. For the purposes of this Agreement the term "prevailing party" shall have the meaning set forth in California Code of Civil Procedure section 1032(a)(4).

8.15 Project as a Private Undertaking. It is specifically understood and agreed by and between the Parties hereto that the development of the Project is a private development, that neither Party is acting as the agent of the other in any respect hereunder, and that each Party is an independent contracting entity with respect to the terms, covenants and conditions contained in this Agreement. No partnership, joint venture or other association of any kind is formed by this Agreement. The only relationship between City and Developer is that of a government entity regulating the development of private property and the development of such property.

DRAFT

8.16 Further Actions and Instruments. Each of the Parties shall cooperate with and provide reasonable assistance to the other to the extent contemplated hereunder in the performance of all obligations under this Agreement and in the satisfaction of the Project and conditions of this Agreement. Upon the request of either Party at any time, the other Party shall promptly execute, with acknowledgment or affidavit if reasonably required, and file or record such required instruments and writings and take any actions as may be reasonably necessary under the terms of this Agreement to carry out the intent and to fulfill the provisions of this Agreement or the Project or to evidence or consummate the transactions contemplated by this Agreement. City hereby authorizes City Manager to take such other actions and negotiate and execute any additional agreements as may be reasonably necessary or proper to fulfill City's obligations under this Agreement. The City Manager may delegate their powers and duties under this Agreement to an authorized management level employee of City.

8.17 Amendment. Any alteration, change, or modification of or to this Agreement, in order to become effective, shall be made in writing and in each instance approved by the City Council and signed on behalf of each Party. Any requested alteration, change, or modification of this Agreement by Developer shall require the payment of fees or deposit by Developer to City, as applicable, for City's review of the request. Each alteration, change, or modification to this Agreement shall be recorded against the Property in the Official Records of Orange County, California.

OWNER OCCUPANCY AND EQUITY SHARING AGREEMENT (DENSITY BONUS UNIT)

Owner:	_____
Property:	_____
Purchase Price:	$_____
Original Fair Market Value:	$_____
City Subsidy Amount:	$_____

This Owner Occupancy and Equity Sharing Agreement ("**Equity Sharing Agreement**") is entered into as of this [date], by and between the City of Aliso Viejo, California, ("**City**") and [name(s)] (referred to herein as "**Buyer**" and sometimes as "**Owner**").

RECITALS

A. [developer name], a [entity type] applied for and received development entitlements from City for the development of a 61-unit residential project (three of which will be designated affordable units for very low income households ("**Affordable Units**")), with related amenities and improvements ("**Project**").

B. Pursuant to Government Code section 65915 *et seq*. ("**State Density Bonus Law**"), projects that include specified levels of affordable housing are entitled to receive certain density bonuses and other incentives to facilitate the economic feasibility of those projects.

C. In accordance with State Density Bonus Law, Developer has proposed to include five percent of the dwelling units in the Project for sale to persons or families of very low income and requested a [specify: density bonus, concession and waiver] in order to accommodate building a total development of 61 units.

D. On [date], City and Developer entered into that certain "**Density Bonus Housing Agreement**" pursuant to which Developer agreed to sell three of the Project's units to households of very low income.

E. Buyer intends to purchase the property located at 95 Argonaut in the City of Aliso Viejo, California, County of Orange more particularly described in Exhibit A-1 ("**Property**"), which Property contains one of the dwelling units that is to be sold by Developer to a household of very low income pursuant to the terms of the Density Bonus Housing Agreement.

F. To comply with the requirements of the Density Bonus Housing Agreement, Developer agrees to sell the Property to Buyer for a purchase price of $[insert] ("**Original Purchase Price**"). Buyer and City agree that the fair market value of the Property at time of purchase is $[insert] ("**Original Fair Market Value**"), which price is based on an appraisal conducted at the time of the purchase of the Property by Buyer, or such other method as agreed to by City and Buyer. The Original Purchase Price has been reduced from fair market value as a direct result of the requirements imposed by City on the Project pursuant to the Density Bonus Housing Agreement. City and Buyer acknowledge that the difference between the Original Fair Market Value and the Original Purchase Price, which is equal to $[insert], is a subsidy from City that has enabled Buyer to acquire the Property at an affordable price ("**City Subsidy**").

G. State Density Bonus Law requires City to enter into an agreement with the purchaser of any affordable dwelling unit constructed and sold in exchange for such density bonus that allows City to recapture any initial subsidy and its proportionate share of appreciation. Buyer has agreed to execute and comply with this Equity Sharing Agreement in compliance with such requirements in consideration of the opportunity to purchase the Property at an affordable price, which is below the fair market value of the Property.

H. The purpose of this Equity Sharing Agreement is to: (i) place controls on ownership and occupancy of the Property; (ii) provide City with a right of first refusal in the event Owner desires or is compelled to Transfer the Property; and (iii) require payment of the City Subsidy and a share of the Property's appreciation to City in accordance with the State Density Bonus Law. In accordance with the foregoing, Owner shall execute a promissory note in favor of City ("**City Note**") to ensure the repayment of the City Subsidy and the City Shared Appreciation, as defined in Section 8.a. The form of the City Note is attached hereto as Exhibit B-1.

I. Buyer is receiving a first mortgage loan ("**First Mortgage Loan**") from [lender name] ("**First Lender**"). The First Mortgage Loan is secured by a deed of trust dated [insert], executed by Buyer in favor of First Lender and recorded in the County of Orange concurrently herewith ("**First Mortgage Deed of Trust**").

J. This Equity Sharing Agreement and the City Note shall be secured by a deed of trust on the Property ("**City Deed of Trust**"). The form of the City Deed of Trust is attached hereto as Exhibit C-1. This Equity Sharing Agreement and the City Deed of Trust shall be subordinate to the lien of the First Mortgage Deed of Trust.

NOW, THEREFORE, in consideration of the benefits received by Buyer and City hereunder, Buyer and City agree as follows:

AGREEMENT

1. DEFINITIONS

The following terms are specially defined for this Equity Sharing Agreement and their definitions can be found in the sections indicated below:

a. "Affordable Housing Cost" — Same meaning as provided in the Density Bonus Housing Agreement.

b. "Buyer" or "Owner" — First sentence on page 1 of this Equity Sharing Agreement

c. "City" — First sentence on page 1 of this Equity Sharing Agreement

d. "City Deed of Trust" — Recital J

e. "City Note" — Recital H

f. "City Shared Appreciation" — Section 8.a

g. "City Subsidy" — Recital F

h. "Default" — Section 9

i. "Density Bonus Housing Agreement" – Recital D

j. "Eligible Capital Improvements" — Section 8.b

k. "Fair Market Value" — Section 6

l. "First Lender" — Recital I

m. "First Mortgage Deed of Trust" — Recital I

n. "First Mortgage Loan" — Recital I

o. "Original Fair Market Value" — Recital F

p. "Original Purchase Price" — Recital F

q. "Owner's Notice of Intent to Transfer" — Section 6

r. "Property" — Recital E and Section 2

s. "Transfer" — Section 5

2. DESCRIPTION OF PROPERTY

This Agreement concerns the real property commonly known as 95 Argonaut, Aliso Viejo, California 92656, which is more fully described in Exhibit A-1 ("**Property**").

3. BUYER CERTIFICATIONS; OWNER OCCUPANCY REQUIREMENT

a. Owner Occupancy Requirement. The purpose of the City assistance provided pursuant to this Equity Sharing Agreement is to provide Buyer with the opportunity to become a homeowner. Investment in real estate is not the primary purpose of this Equity Sharing Agreement. Therefore, Buyer shall occupy the Property as Buyer's principal place of residence residing in the unit for at least 10 months out of any 12-month period. City may grant a temporary waiver of this occupancy requirement for good cause in its sole discretion.

b. Buyer Certifications. Buyer certifies that the financial and other information previously provided in order to qualify to purchase the Property is true and correct as of the date first written above.

4. MAINTENANCE AND INSURANCE REQUIREMENTS

Buyer shall maintain a standard all risk property insurance policy equal to the replacement value of the Property (adjusted every five years by appraisal, if requested by City), naming City as an additional insured. Additional insurance requirements are set forth in Section 5 of the City Deed of Trust.

5. RESTRICTIONS ON RESALE OF THE PROPERTY

Any Transfer of the Property will be subject to the provisions of this Agreement. "**Transfer**" means any sale, assignment or transfer, voluntary or involuntary, of any interest in the Property, including, but not limited to, a fee simple interest, a joint tenancy interest, a life estate, a leasehold interest, an interest evidenced by a land contract by which possession of the Property is transferred and Owner retains title, or a deed of trust. Any Transfer without satisfaction of the provisions of this Agreement is prohibited and shall constitute a default by Owner for which City may exercise any and all remedies under this Agreement, the City Note and the City Deed of Trust. A Transfer shall not include a conveyance: (i) to an existing spouse or domestic partner; (ii) by an Owner to a spouse or domestic partner where the spouse or domestic partner becomes the co-owner of the Property; (iii) between spouses as part of a marriage dissolution proceeding; (iv) by Owner into an *inter vivos* trust in which Owner is the beneficiary; or (iv) refinance of the First Mortgage Loan meeting the requirements of Section 17; provided, however, that Owner shall provide written notice to City of all such conveyances within 30 days of the conveyance and Owner shall continue to occupy the Property as Owner's principal place of residence (except where the conveyance occurs pursuant to subsection (iii) above, in which event the new owner shall occupy the Property and affirmatively assume Owner's obligations under this Agreement, the City Note, and the City Deed of Trust).

6. NOTICE OF INTENDED TRANSFER; CITY'S RIGHT OF FIRST REFUSAL; PREPARATION OF PROPERTY FOR SALE

a. Notice of Intent to Transfer. If Owner intends to Transfer the Property, Owner shall promptly give City written notice of such intent ("**Owner's Notice of Intent to Transfer**"). Owner shall give City the Owner's Notice of Intent to Transfer prior to notifying real estate brokers or lenders of Owner's intent to Transfer the Property and prior to listing of the Property on the Multiple Listing Service. The Owner's Notice of Intent to Transfer shall be sent to City by certified mail, return receipt requested at the address provided in Section 22 below. The Owner's Notice of Intent to Transfer shall include the information necessary for City to determine the Shared Appreciation of the Property, including the following information:

(1) The address of the Property;

(2) The date of purchase of the Property by Owner;

(3) The Original Fair Market Value of the Property at the time of Owner's purchase as determined by City and Owner and set forth on the first page of this Equity Sharing Agreement;

(4) A copy of the HUD-1 Settlement Statement or equivalent document from the close of escrow on Owner's purchase of the Property;

(5) If Owner has made Eligible Capital Improvements to the Property that Owner wishes to include in the calculation of Shared Appreciation, a description of the improvements, the date the improvements were made, a copy of the letter granting prior City approval of the improvements (provided, however, if Owner did not obtain City approval of the Capital Improvements Owner may still include such Capital Improvements in the Notice of Intent to Transfer, however, it shall be within City's sole discretion to determine whether to accept these Capital Improvements as Eligible Capital Improvements and if so, their value), evidence of cost of the improvements, and an appraisal that documents the value added to the Property by the Eligible Capital Improvements. Acceptance shall not be unreasonably withheld.;

(6) The date the Property will be placed on the market; and

(7) The name and phone number of the person to contact to schedule inspection of the Property by City.

b. Fair Market Value Appraisal. Prior to the Transfer of the Property, the Fair Market Value of the Property at the time of Transfer shall be determined by a certified MAI or other qualified real estate appraiser approved in advance by City. If possible, the appraisal shall be based upon the sales prices of comparable properties sold in the market area during the preceding three month period. The cost of the appraisal shall be paid by Owner, unless the appraisal is obtained from a new purchaser. Further, in the event that Owner has made Eligible Capital Improvements, the value of which Owner wishes to retain, the appraisal shall determine the value of such Eligible Capital Improvements in accordance with Section 8.b below. Nothing in this section precludes

Owner and City from establishing the Fair Market Value of the Property at the time of Transfer by mutual agreement in lieu of an appraisal pursuant to this section.

c. City's Right of First Refusal. Upon receipt of an Owner's Notice of Intent to Transfer, City shall have the first right to purchase the Property at the price and terms determined by Owner but for not more than an Affordable Housing Cost purchase price as determined at such time of proposed sale. City shall have such right and option ("**First Option**") for 45 days after City receives Owner's Notice of Intent to Transfer, after which, if not exercised, such First Option shall terminate. If City exercises the First Option, Owner shall not be liable for payment of the City Subsidy or the City Shared Appreciation pursuant to Section 8 below.

7. SALE OF PROPERTY BY OWNER

a. Subject to Section 6.c above, Owner may Transfer the Property to a person of Owner's choosing at an unrestricted price (supported by an MAI or other qualified appraisal), and City shall reconvey the liens of this Equity Sharing Agreement and the City Deed of Trust from the Property, provided that Owner pays the full amount owed under the City Note to the City pursuant to Section 8 below. Owner shall provide City with the following documentation associated with such a Transfer:

(1) The name and address of the purchaser;

(2) The final sales contract and all other related documents which shall set forth all the terms of the sale of the Property, including a HUD-1 Settlement Statement. Said documents shall include at least the following terms: (a) the sales price; and (b) the price to be paid by the purchaser for Owner's personal property, if any, for the services of Owner, if any, and any credits, allowances or other consideration, if any.

(3) A written certification, from Owner and the purchaser in a form acceptable to City that the sale shall be closed in accordance with the terms of the sales contract and other documents submitted to and approved by City. The certification shall also provide that the purchaser or any other party has not paid and will not pay to Owner, and Owner has not received and will not receive from the purchaser or any other party, money or other consideration, including personal property, in addition to what is set forth in the sales contract and documents submitted to City. The written certification shall also include a provision that in the event a Transfer is made in violation of the terms of this Equity Sharing Agreement or false or misleading statements are made in any documents or certification submitted to City, City shall have the right to foreclose on the Property or file an action at law or in equity as may be appropriate. In any event, any costs, liabilities or obligations incurred by Owner and the purchaser for the return of any moneys paid or received in violation of this Equity Sharing Agreement or for any costs and legal expenses, shall be borne by Owner and/or the purchaser and they shall hold City and its designee harmless and reimburse

their expenses, legal fees and costs for any action they reasonably take in good faith in enforcing the terms of this Equity Sharing Agreement.

(4) A copy of the MAI or other qualified appraisal prepared for the Property in accordance with Section 6.b.

(5) Upon the close of the proposed sale, a copy of the final sales contract, HUD-1 Settlement Statement, escrow instructions, and any other documents which City may reasonably request.

8. PAYMENT TO CITY OF CITY SUBSIDY AND SHARED APPRECIATION

a. Upon a Transfer of the Property to a person other than City pursuant to Section 7, Owner shall pay to City the City Subsidy plus the City Shared Appreciation, less the value of any Eligible Capital Improvements as determined pursuant to Section 7.b below. The "**City Subsidy**," as defined in Recital F, is equal to the amount by which the Original Fair Market Value of the Property exceeds the Original Purchase Price of the Property. "**City Shared Appreciation**" shall be calculated pursuant to the City Note but by way of information the following sets forth the method for determining the City Shared Appreciation. If there is any inconsistency between the City Note and this Equity Sharing Agreement with respect to the determination of City Shared Appreciation, the City Note shall control. City Shared Appreciation shall be calculated by dividing the City Subsidy amount by the Original Fair Market Value of the Property. The resulting percentage, rounded to the closest one-tenth of a percentage point, shall be multiplied by the amount calculated by subtracting the Original Fair Market Value from the Fair Market Value at the time of the Transfer and the product of that calculation shall equal the City Shared Appreciation.

b. The value of any Eligible Capital Improvements shall be the value of any substantial structural or permanent fixed improvements which Owner has made to the Property after Owner's purchase of the Property, provided that such improvements are: (i) made or installed by Owner in conformity with applicable building codes at the time of installation; and (ii) approved in advance by City in writing. The value of such Eligible Capital Improvements which is retained by Owner shall be limited to appraised increases in value to the Property as a result of the improvements (as determined by the appraisal performed as described in Section 6.b, above), including any depreciation in value of the capital improvements since the time of installation, and not the cost of construction of the improvements to the Property.

c. The City Subsidy and the City Shared Appreciation, less the value of any Eligible Capital Improvements, shall be a debt of Owner to City, evidenced by this Equity Sharing Agreement and the City Note, and secured by the City Deed of Trust. Owner acknowledges that City shall have no obligation to cause reconveyance of this Equity Sharing Agreement or of the City Deed of Trust until the City Subsidy and the City Shared Appreciation are paid to City. City shall utilize the repayment of the City Subsidy and the City Shared Appreciation within five years of receipt of such funds for any of the purposes described in subdivision (e) of section 33334.2 of the Health and Safety Code that promote homeownership.

d. Notwithstanding the foregoing, in no event shall Owner be obligated to pay the City Subsidy and City Shared Appreciation in an amount that would result in the amount of sales proceeds available to Owner being less than the Original Purchase Price for the Property as set forth above unless Owner has made a Transfer in violation of this Agreement.

9. DEFAULTS

a. The following events shall constitute a "Default" by Owner under this Equity Sharing Agreement:

(1) City determines that Owner has made a misrepresentation to obtain the benefits of purchase of the Property or in connection with its obligations under this Equity Sharing Agreement;

(2) Owner fails to occupy the Property as required pursuant to Section 3 above;

(3) Owner makes a Transfer in violation of this Equity Sharing Agreement;

(4) Owner otherwise fails to comply with the requirements of this Equity Sharing Agreement, the City Note, or the City Deed of Trust and such violation is not corrected to the satisfaction of City within 10 days after the date of written notice by City to Owner of such violation;

(5) A lien is recorded against the Property other than the lien of a bone fide First Mortgage Loan;

(6) Owner places a mortgage on the Property in violation of Section 17 below;

(7) Owner declares a bankruptcy or makes an assignment of assets for the benefit of creditors.

b. Upon a declaration of Default by City under this Equity Sharing Agreement, City may pursue any or all of the following remedies:

(1) Declare the City Subsidy and City Shared Appreciation immediately due and payable without further demand, declare a default under the City Note, and invoke the power of sale under the City Deed of Trust;

(2) Apply to a court of competent jurisdiction for any such relief at law or in equity as may be appropriate including, but not limited to, the collection of damages from Owner, which damages shall include City's costs associated with administering City's affordable housing program and the cost to City of providing sufficient assistance to a very low income household to acquire a market rate home at an affordable housing cost as that term is defined in Health and Safety Code section 50052.5; and

(3) Declare a Default under the City Note and City Deed of Trust and pursue all City remedies thereunder.

10. NOTICE OF DEFAULT AND FORECLOSURE

a. A request for notice of default and any notice of sale under any deed of trust or mortgage with power of sale encumbering the Property shall be recorded by City in the Office of the Recorder of the County of Orange for the benefit of City. City may declare a Default under this Equity Sharing Agreement upon receipt of any notice given to City pursuant to Civil Code section 2924b, and may exercise its rights as provided in Section 9.

b. In the event of default and foreclosure, City shall have the same right as Owner to cure defaults and redeem the Property prior to the foreclosure sale. Nothing herein shall be construed as creating any obligation of City to cure any such default, nor shall this right to cure and redeem operate to extend any time limitations in the default provisions of the underlying deed of trust or mortgage.

c. If City failed to file the request for notice of default, City's right to purchase the Property shall commence from the date a notice of default is given by City to Owner.

11. NON-LIABILITY OF CITY

a. Non-liability for Negligence, Loss, or Damage. Owner acknowledges, understands and agrees that the relationship between Owner and City is solely that of an owner and an administrator of a City affordable housing program, and that City does not undertake or assume any responsibility for or duty to Owner to select, review, inspect, supervise, pass judgment on, or inform Owner of the quality, adequacy or suitability of the Property or any other matter. City owes no duty of care to protect Owner against negligent, faulty, inadequate or defective building or construction or any condition of the Property and Owner agrees that neither Owner, or Owner's heirs, successors or assigns shall ever claim, have or assert any right or action against City for any loss, damage or other matter arising out of or resulting from any condition of the Property and will hold City harmless from any liability, loss or damage for these things.

b. Indemnity. Owner agrees to defend, indemnify, and hold City harmless from all losses, damages, liabilities, claims, actions, judgments, costs, and reasonable attorney's fees that City may incur as a direct or indirect consequence of: (1) Owner's default, performance, or failure to perform any obligations as and when required by this Equity Sharing Agreement or the Deed of Trust; or (2) the failure at any time of any of Owner's representations to City to be true and correct.

12. RESTRICTIONS ON FORECLOSURE PROCEEDS

If a creditor acquires title to the Property through a deed in lieu of foreclosure, a trustee's deed upon sale, or otherwise, Owner shall not be entitled to the proceeds of sale except to the extent that such proceeds otherwise payable to Owner exceeds the amounts owed to City including the City Subsidy and City Shared Appreciation pursuant to the City Note. Owner shall instruct the

holder of such excess proceeds to pay such proceeds to City in consideration of the benefits received by Owner through purchase of the Property.

13. RESTRICTION ON INSURANCE PROCEEDS

If the Property is damaged or destroyed and Owner elects not to rebuild or repair the Property, Owner shall pay City the portion of any insurance proceeds received by Owner for such destruction or damage which is equal to the City Subsidy plus the City Shared Appreciation calculated pursuant to Section 8 above, with the total amount of insurance proceeds serving as the Fair Market Value upon Transfer of the Property, provided that in no event shall City receive insurance proceeds in an amount that results in the amount of insurance proceeds available to Owner being less than the Original Purchase Price for the Property as set forth above.

14. TERM OF AGREEMENT

All the provisions of this Equity Sharing Agreement, including the benefits and burdens, run with the Property and this Equity Sharing Agreement shall bind, and the benefit hereof shall inure to, Owner, Owner's heirs, legal representatives, executors, successors in interest and assigns, and to City and its successors, until the date of Transfer of the Property and payment to City of the City Subsidy and the City Shared Appreciation.

15. SUPERIORITY OF AGREEMENT

Owner covenants that Owner has not, and will not, execute any other agreement with provisions contradictory to or in opposition to the provisions hereof, and that, in any event, this Equity Sharing Agreement is controlling as to the rights and obligations between and among Owner and City and their respective successors.

16. SUBORDINATION

a. Notwithstanding any provision herein, this Equity Sharing Agreement shall not diminish or affect the rights of the First Lender under the First Lender Deed of Trust or any subsequent First Lender deeds of trust hereafter recorded against the Property in compliance with Section 17 below.

b. Notwithstanding any other provision hereof, the provisions of this Equity Sharing Agreement and the City Deed of Trust shall be subordinate to the lien of the First Mortgage Deed of Trust and shall not impair the rights of the First Lender, or such lenders' assignees or successors in interest to exercise their remedies under the First Mortgage Deed of Trust in the event of default under the First Mortgage Deed of Trust by Owner. Such remedies under the First Mortgage Deed of Trust include the right of foreclosure or acceptance of a deed or assignment in lieu of foreclosure. After such foreclosure or acceptance of a deed in lieu of foreclosure, this Equity Sharing Agreement and the City Deed of Trust shall be forever terminated and shall have no further effect as to the Property or any transferee thereafter; provided; however, if the holder of such First Mortgage Deed of Trust acquires title to the Property pursuant to a deed or assignment in lieu of foreclosure, this Equity Sharing Agreement and the City Deed of Trust shall automatically terminate upon such acquisition of title, only if (i) City has been given written notice of default

under such First Mortgage Deed of Trust with 60-day cure period and (ii) City shall not have cured the default within such 60-day period or commenced to cure and given its firm commitment to complete the cure in form and substance acceptable to the First Lender.

17. REFINANCE OF MORTGAGE LOAN

The outstanding principal on the City Note shall not be due upon prepayment and refinancing of the First Mortgage Loan, and this Agreement and the City Deed of Trust shall be subordinated to the refinanced First Mortgage Loan, provided that following such refinance, the principal amount of all debt secured by the Property will not exceed the original principal amount of the First Mortgage Loan unless some other amount is approved by City in writing, in City's sole and absolute discretion. Mortgage loans or equity lines of credit junior in lien priority to the City Deed of Trust are not permitted. City and Owner agree that the requirements of this Section 17 are necessary to ensure the continued affordability of the Property to Owner and to minimize the risk of loss of the Property by Owner through default and foreclosure of mortgage loans. Owner further acknowledges that violation of the provisions of this Section 17 shall constitute a Default under this Equity Sharing Agreement.

18. NONDISCRIMINATION

Owner covenants by and for itself and its successors and assigns that there shall be no discrimination against or segregation of a person or of a group of persons on account of race, color, religion, creed, age, disability, sex, sexual orientation, marital status, ancestry or national origin in the sale, transfer, use, occupancy, tenure or enjoyment of the Property, nor shall Owner or any person claiming under or through Owner establish or permit any such practice or practices of discrimination or segregation with reference to the use, occupancy, or transfer of the Property. The foregoing covenant shall run with the land.

19. INVALID PROVISIONS

If any one or more of the provisions contained in this Equity Sharing Agreement shall for any reason be held to be invalid, illegal or unenforceable by a court of competent jurisdiction, then such provision or provisions shall be deemed severable from the remaining provisions contained in this Equity Sharing Agreement, and this Equity Sharing Agreement shall be construed as if such invalid, illegal or unenforceable provision had never been contained herein.

20. CONTROLLING LAW

The terms of this Equity Sharing Agreement shall be interpreted under the laws of the State of California. The venue for any legal action pertaining to this Agreement shall be Orange County, California.

21. NO WAIVER

No delay or omission in the exercise of any right or remedy of City upon any default by Owner shall impair such right or remedy or be construed as a waiver. City's failure to insist in any one or more instance upon the strict observance of the terms of this Equity Sharing Agreement

shall not be considered a waiver of City's right thereafter to enforce the provisions of the Equity Sharing Agreement. City shall not waive its rights to enforce any provision of this Equity Sharing Agreement unless it does so in writing, signed by an authorized agent of City.

22. NOTICES

a. All notices required herein shall be sent by certified mail, return receipt requested or express delivery service with a delivery receipt and shall be deemed to be effective as of the date received or the date delivery was refused as indicated on the return receipt as follows:

b. The parties may subsequently change addresses by providing written notice of the change in address to the other parties in accordance with this Section.

23. INTERPRETATION OF AGREEMENT

The terms of this Equity Sharing Agreement shall be interpreted so as to avoid speculation on the Property and to insure to the extent possible that its sales price and mortgage payment remain affordable to [specify] income households.

24. EXHIBITS

Any exhibits referred to in this Equity Sharing Agreement are hereby incorporated herein by this reference.

25. ATTORNEYS FEES

If any action is filed in a court of competent jurisdiction related to this Equity Sharing Agreement, the prevailing party shall be entitled to recover reasonable attorneys' fees and costs from the non-prevailing party.

26. TAX RETURNS

Owner shall execute such documents as are necessary to provide City with access to Owners filed federal income tax returns.

27. ACKNOWLEDGEMENT OF TERMS

Owner hereby acknowledges that, prior to Owner's execution of this Equity Sharing Agreement, City provided Owner with an in-person, informational session during which City explained, in plain and simple language, the resale restrictions and other material provisions of this Equity Sharing Agreement.

28. ENTIRE AGREEMENT

This Equity Sharing Agreement (along with the City Note and City Deed of Trust) sets forth the entire understanding and agreement of City and Owner and any amendment, alteration or interpretation of this Equity Sharing Agreement must be in writing signed by both City and Owner.

IN WITNESS WHEREOF, the parties have executed this Equity Sharing Agreement on or as of the date first written above.

CITY OF ALISO VIEJO PROMISSORY NOTE

Secured by Deed of Trust

$_____ _____, 202_
And City Shared Appreciation

FOR VALUE RECEIVED, the undersigned [name(s)] ("**Borrower**") promises to pay to the City of Aliso Viejo, a California municipal corporation ("**City**"), at 12 Journey, Suite 100, Aliso Viejo, CA 92656-5335, or such other place as City may designate in writing: (i) a principal amount of $[amount] ("**City Subsidy**"), which amount constitutes a subsidy provided by City to Borrower pursuant to that certain Owner Occupancy and Equity Sharing Agreement entered into by and between Borrower and City dated [date] ("**Equity Sharing Agreement**") for purchase of the Property located at [address] in the City of Aliso Viejo, California ("**Property**"); and (ii) the City Shared Appreciation, as defined herein.

1. Purpose of Loan. Borrower is purchasing the Property, which is being sold by [developer name], a [entity type] ("**Developer**") pursuant to that certain Density Bonus Housing Agreement entered into by and between City and Developer to ensure that a certain number of the housing units being constructed by Developer are sold at an affordable housing cost to [specify] income households. The purchase price of the Property has been set substantially below the market value so that the Property will be affordable for purchase by [specify] income households. Because the purchase price has been set below the market value, Borrower is required and has agreed to enter into the Equity Sharing Agreement with City, which requires Borrower to pay the City Subsidy and the City Shared Appreciation to City. This Note evidences the obligation of Borrower to pay the City Subsidy and the City Shared Appreciation to City pursuant to the Equity Sharing Agreement.

2. Definitions. The terms set forth in this section shall have the following meanings in this Note.

a. "Borrower" has the meaning set forth in the first paragraph on page 1 of this Note.

b. "City" means the City of Aliso Viejo, California.

c. "City Deed of Trust" means the deed of trust and security agreement that secures the Equity Sharing Agreement and this Note on the Property.

d. "City Subsidy" has the meaning provided in the first paragraph on page 1 of this Note.

e. "City Shared Appreciation" means and shall be calculated by dividing the City Subsidy amount by the Original Fair Market Value of the Property. The resulting percentage, rounded to the closest one-tenth of a percentage point, shall be multiplied by the

amount calculated by subtracting the Original Fair Market Value from the Fair Market Value at the time of Transfer and the product of that calculation shall equal the City Shared Appreciation.

f. "Developer" has the meaning provided in Section 1 of this Note.

g. "Eligible Capital Improvements" has the meaning provided in Section 8.b of the Equity Sharing Agreement.

h. "Equity Sharing Agreement" has the meaning provided in the first paragraph on page 1 of this Note.

i. "Fair Market Value at the time of Transfer" has the meaning provided in Section 6.b of the Equity Sharing Agreement.

j. "First Mortgage Loan" has the meaning provided in Recital I of the Equity Sharing Agreement.

k. "First Option" has the meaning provided in Section 6.c of the Equity Sharing Agreement.

l. "Original Fair Market Value" has the meaning set forth in the Recital F of the Equity Sharing Agreement.

m. "Original Purchase Price" has the meaning set forth in Recital F of the Equity Sharing Agreement.

n. "Note" means this promissory note.

o. "Property" means the dwelling, and the real property on which the dwelling is located, which secure the City Deed of Trust executed in connection with this Note. The Property's location is provided in the first paragraph on page 1 of this Note.

p. "Transfer" has the meaning provided in Section 5 of the Equity Sharing Agreement.

3. Term. The term of this Note commences on the date of this Note and expires on the earlier of (i) the date of Transfer of the Property and the payment to City of the City Subsidy and the City Shared Appreciation; or (ii) upon City's exercise of the First Option in accordance with Section 6.c of the Equity Sharing Agreement.

4. Payment.

a. Subject to Subsections 4.b and 4.c below, the total amount of the City Subsidy and the City Shared Appreciation, less the value of any Eligible Capital Improvements, shall immediately become due and payable upon the occurrence of any of the following: (i) Borrower defaults under this Note, the Equity Sharing Agreement, the City Deed of Trust, or the

First Mortgage Loan; (ii) upon a Transfer of the Property as set forth in Section 8 of the Equity Sharing Agreement; or (iii) Borrower ceases to occupy the Property as the Buyer's principal place of residence as set forth in Section 3 of the Equity Sharing Agreement.

b. Unless Borrower has made a Transfer in violation of the Equity Sharing Agreement, in no event shall Borrower be obligated to pay the City Subsidy and the City Shared Appreciation in an amount that would result in the amount of sales proceeds available to Borrower being less than the Property's Original Purchase Price.

c. If City exercises the First Option in accordance with Section 6.c of the Equity Sharing Agreement, this Note shall immediately terminate and Borrower shall not be liable for payment of the City Subsidy or the City Shared Appreciation.

5. Security. This Note is secured by the City Deed of Trust, which also secures the Equity Sharing Agreement.

6. No Assumption of Note by Subsequent Buyers; Acceleration. Borrower acknowledges that this Note is given in connection with the purchase the Property as part of a City program to assist in the purchase of homes by [specify] income households. Consequently, this Note is not automatically assumable, but is subject to section 711.5 of the California Civil Code, which allows City to accelerate all amounts due under this Note if any subsequent sale or transfer of the Property of any kind does not comply with the provisions of the Equity Sharing Agreement.

7. Refinance of First Mortgage Loan. The outstanding principal on this Note shall not be due upon prepayment and refinance of the First Mortgage Loan, and the City Deed of Trust and Equity Sharing Agreement shall be subordinated, provided that such refinancing meets the requirements of Section 17 of the Equity Sharing Agreement.

8. Default. Borrower shall be in default under this Note if Borrower is in default under any mortgage loan on the Property (including the First Mortgage Loan) following the expiration of applicable cure periods, or if, after the notice and cure period provided by City to Borrower pursuant to the notice and cure provisions of the City Deed of Trust, Borrower (i) fails to pay any money when due under this Note; (ii) breaches any representation or covenant made in this Note or the Equity Sharing Agreement in any material respect; or (iii) breaches any provision of the City Deed of Trust or the Equity Sharing Agreement.

9. Acceleration. Upon the occurrence of a default under this Note, the Equity Sharing Agreement, the City Deed of Trust, or the First Mortgage Loan, City shall have the right to declare the City Subsidy and the City Shared Appreciation immediately due and payable.

10. Non-liability for Negligence, Loss, or Damage. Borrower acknowledges, understands and agrees that the relationship between Borrower and City is solely that of borrower and lender, and that City neither undertakes nor assumes any responsibility for or duty to Borrower to select, review, inspect, supervise, pass judgment on, or inform Borrower of the quality, adequacy or suitability of the Property or any other matter. City owes no duty of care to protect Borrower against negligent, faulty, inadequate or defective building or construction or any

condition of the Property and Borrower agrees that neither Borrower, or Borrower's heirs, successors or assigns shall ever claim, have or assert any right or action against City for any loss, damage or other matter arising out of or resulting from any condition of the Property and will hold City harmless from any liability, loss or damage for these things.

11. Indemnity. Borrower agrees to defend, indemnify, and hold City harmless from all losses, damages, liabilities, claims, actions, judgments, costs, and reasonable attorney's fees that City may incur as a direct or indirect consequence of:

a. Borrower's default, performance, or failure to perform any obligations as and when required by this Note, the City Deed of Trust, and the Equity Sharing Agreement; or

b. The failure at any time of any of Borrower's representations or warranties to be true and correct.

12. No Waiver by City. Failure by City to pursue its legal and equitable remedies upon Borrower's default shall not constitute a waiver of City's right to declare a default and exercise all of its rights under this Note, the City Deed of Trust and the Equity Sharing Agreement. Failure to declare amounts due shall not constitute a waiver on the part of City of the right to declare them due in the event of any subsequent Transfer. Nor shall acceptance by City of any payment provided for herein constitute a waiver of City's right to require prompt payment of any remaining principal owed. A waiver of any term of the Note must be made in writing, signed by an authorized agent of City, and shall be limited to the express written terms of such waiver.

13. Interest. Notwithstanding any other provision of this Note, or any instrument securing the obligations of Borrower under this Note, if, for any reason whatsoever, the payment of any sums by Borrower pursuant to the terms of this Note would result in the payment of interest which would exceed the amount that City may legally charge under the laws of the State of California, then the amount by which payments exceeds the lawful interest rate shall automatically be deducted from the principal balance owing on this Note, so that in no event shall Borrower be obligated under the terms of this Note to pay any interest which would exceed the lawful rate.

14. Attorney's Fees and Costs. Borrower agrees that if any amounts due under this Note are not paid when due, to pay in addition to the City Subsidy and City Shared Appreciation, all costs and expenses of collection and reasonable attorney fees paid or incurred by City in connection with the collection or enforcement of this Note, whether or not suit is filed.

15. Joint and Several Obligations. This Note is the joint and several obligation of all makers, sureties, guarantors and endorsers, and shall be binding upon them and their successors and assigns.

16. No Offset. Borrower hereby waives any rights of offset it now has or may hereafter have against City, its successors and assigns, and agrees to make the payments called for herein in accordance with the terms of this Note.

17. Borrower's Waiver. Borrower and any endorsers or guarantors of this Note, for themselves, their heirs, legal representatives, successors and assigns, respectively, severally waive diligence, presentment, protest, and demand, and notice of protest, notice of dishonor and notice of nonpayment of this Note, and expressly waive any rights to be released by reason of any extension of time or change in terms of payment, or change, alteration or release of any security given for the payments hereof, and expressly waive the right to plead any and all statutes of limitations as a defense to any demand on this Note or agreement to pay the same, and jointly and severally agree to pay all costs of collection when incurred, including reasonable attorneys' fees.

18. Notices. All notices required in this Note shall be sent by certified mail, return receipt requested, or express delivery service with a delivery receipt, or personally delivered with a delivery receipt obtained and shall be deemed to be effective as of the date shown on the delivery receipt as the date of delivery, the date delivery was refused, or the date the notice was returned as undeliverable as follows:

Aliso Viejo, CA 92656-5335
Attn: Mitzi Ortiz, City Manager

The parties may subsequently change addresses by providing written notice of the change in address to the other parties in accordance with this section.

19. Controlling Law. This Note shall be construed in accordance with and be governed by the laws of the State of California.

20. Assignment by City. City may assign its right to receive the proceeds under this Note to any person and upon notice to Borrower by City all payments shall be made to the assignee.

21. Severability. Any provision of this Note shall be invalid, illegal or unenforceable, the validity, legality and enforceability of the remaining provisions hereof shall not in any way be affected or impaired thereby.

22. Entire Agreement. This Note (along with the Equity Sharing Agreement and the City Deed of Trust) sets forth the entire understanding and agreement of City and Borrower and any amendment, alteration or interpretation of this Note must be in writing signed by both City and Borrower.

DEED OF TRUST
AND SECURITY AGREEMENT
(DENSITY BONUS UNIT)

Note to Borrower:
This Deed of Trust Contains
Provisions Restricting Assumptions

THIS DEED OF TRUST AND SECURITY AGREEMENT ("**Deed of Trust**") made this [date], among the trustor, [name(s)] ("**Borrower**"), whose address is [address], Aliso Viejo, California, [name] Title Company ("**Trustee**") and the City of Aliso Viejo, California ("**City**") as Beneficiary.

Borrower, in consideration of the promises herein recited and the trust herein created, irrevocably grants, transfers, conveys and assigns to Trustee, in trust, with power of sale, the property located in the City of Aliso Viejo, County of Orange, State of California, described in the attached Exhibit "1" and more commonly known as: [address], Aliso Viejo, California [zip code] ("**Property**").

TOGETHER with all the improvements now or hereafter erected on the Property, and all easements, rights, appurtenances, and all fixtures now or hereafter attached to the Property, all of which, including replacements and additions thereto, shall be deemed to be and remain a part of the Property covered by this Deed of Trust; and TOGETHER with all articles of personal property or fixtures now or hereafter attached to or used in and about the building or buildings now erected or hereafter to be erected on the Property which are necessary to the complete and comfortable use and occupancy of such building or buildings for the purposes for which they were or are to be erected, including all other goods and chattels and personal property as are ever used or furnished in operating a building, or the activities conducted therein, similar to the one herein described and referred to, and all renewals or replacements thereof or articles in substitution therefore, whether or not the same as, or shall be attached to said building or buildings in any manner; and all of the foregoing, together with the Property, is herein referred to as the "**Security**;"

To have and to hold the Security together with acquittances to Trustee, its successors and assigns forever;

TO SECURE to City the performance of the covenants and agreements of Borrower contained in the Owner Occupancy and Equity Sharing Agreement executed by and between Borrower and City ("**Equity Sharing Agreement**");

TO SECURE to City the repayment of the sums evidenced by a promissory note executed by Borrower and City dated [insert] ("**Note**"), which note provides for repayment of a City Subsidy in the amount of $[insert], and City's share of appreciation in the value of the Property, based on City's proportionate assistance to Borrower, as more particularly described in the Note and the Equity Sharing Agreement; and

TO SECURE the payment of all other sums, with interest thereon, advanced in accordance herewith to protect the security of this Deed of Trust; and the performance of the covenants and agreements Borrower herein contained.

BORROWER AND CITY COVENANT AND AGREE AS FOLLOWS:

1. Borrower's Estate. Borrower is lawfully seized of the estate hereby conveyed and has the right to grant and convey the Security, that other than this Deed of Trust, the Security is encumbered only by: (1) a deed of trust executed by Borrower in connection with a loan made to Borrower by [lender name] ("**First Lender**"), dated [date], executed by Borrower in favor of First Lender, securing a first mortgage loan ("**First Mortgage Loan**") to assist in the purchase of the Property ("**First Lender Deed of Trust**:); (2) the Note; (3) the Equity Sharing Agreement; and (4) any other deeds of trust or encumbrances approved by City. Borrower agrees to warrant and defend generally the title to the Security against all claims and demands, subject to any declarations, easements or restrictions listed in a schedule of exceptions to coverage in any title insurance policy insuring City's interest in the Security. As used in this Deed of Trust, the term "First Lender" shall include all successors and assigns of First Lender.

2. Repayment. Borrower will promptly repay, when due, all amounts due under the Note. The Note contains the following provisions concerning repayment under certain conditions:

> Borrower acknowledges that this Note is given in connection with the purchase of the Property as part of a City program to assist in the purchase of homes by [specify] income households. Consequently, this Note is not automatically assumable, but is subject to section 711.5 of the California Civil Code, which allows the City to accelerate all amounts due under this Note if any subsequent sale or transfer of the Property of any kind does not comply with the provisions of the Equity Sharing Agreement.

3. Equity Sharing Agreement. Borrower will observe and perform all of the covenants and agreements of the Equity Sharing Agreement.

4. Charges; Liens. Borrower will pay all taxes, assessments and other charges, fines and impositions attributable to the Security which may attain a priority over this Deed of Trust, by

making any payment, when due, directly to the payee thereof. Borrower will promptly furnish to City all notices of amounts due under this paragraph, and in the event Borrower makes payment directly, Borrower will promptly discharge any lien which has priority over this Deed of Trust; provided, that Borrower will not be required to discharge the lien of the First Lender Deed of Trust (securing the First Mortgage Loan) or any other lien described in this paragraph so long as Borrower will agree in writing to the payment of the obligation secured by such lien in a manner acceptable to City, or will, in good faith, contest such lien by, or defend enforcement of such lien in, legal proceedings which operate to prevent the enforcement of the lien or forfeiture of the Security or any part thereof.

5. Hazard Insurance. Borrower will keep the Security insured by a standard fire and extended coverage insurance policy in at least such amounts and for such periods as City may require, which amounts shall be the greater of (1) the sum of the loan amounts under the Note and the First Mortgage Loan or (2) the replacement cost of the Security, but in no event less than (3) the amount necessary to prevent Borrower from becoming a co-insurer under the terms of the policy.

The insurance carrier providing this insurance shall be licensed to do business in the State of California and be chosen by Borrower subject to approval by City; provided, that such approval will not be withheld if the insurer is also approved by the First Lender.

All insurance policies and renewals thereof will be in a form acceptable to City and will include a standard mortgagee clause with standard lender's endorsement in favor of the holder of the First Mortgage Loan and City as their interests may appear and in a form acceptable to City. City shall have the right to hold, or cause its designated agent to hold, the policies and renewals thereof, and Borrower shall promptly furnish to City, or its designated agent, the original insurance policies or certificates of insurance, all renewal notices and all receipts of paid premiums. In the event of loss, Borrower will give prompt notice to the insurance carrier and City or its designated agent. City, or its designated agent, may make proof of loss if not made promptly by Borrower. City shall receive 30 days advance notice of cancellation of any insurance policies required under this section.

Unless City and Borrower otherwise agree in writing, insurance proceeds, subject to the rights of the First Lender, will be applied to restoration or repair of the Security damaged, provided such restoration or repair is economically feasible and the Security of this Deed of Trust is not thereby impaired. If such restoration or repair is not economically feasible or if the Security of this Deed of Trust would be impaired, the insurance proceeds will be used to repay the loan under this Deed of Trust, with the excess, if any, paid to Borrower. If the Security is abandoned by Borrower, or if Borrower fails to respond to City, or its designated agent, within 30 days from the date notice is mailed by either of them to Borrower that the insurance carrier offers to settle a claim for insurance benefits, City, or its designated agent, is authorized to collect and apply the insurance proceeds at City's option either to restoration or repair of the Security or to repay the amounts due under the Note.

If the Security is acquired by City, all right, title and interest of Borrower in and to any insurance policy and in and to the proceeds thereof resulting from damage to the Security prior to

the sale or acquisition will pass to City to the extent of the sums secured by this Deed of Trust immediately prior to such sale or acquisition subject to the rights of First Lender.

6. Preservation and Maintenance of Security. Borrower will keep the Security in good repair and will not commit waste or permit impairment or deterioration of the Security.

7. Protection of City's Security. If Borrower fails to perform the covenants and agreements contained in this Deed of Trust or if any action or proceeding is commenced which materially affects City's interest in the Security, including, but not limited to, default under the First Lender Deed of Trust securing the First Mortgage Loan, eminent domain, insolvency, code enforcement, or arrangements or proceedings involving a bankrupt or decedent, then City, at City's option, upon notice to Borrower, may make such appearances, disburse such sums and take such action as it determines necessary to protect City's interest, including but not limited to, disbursement of reasonable attorneys' fees and entry upon the Security to make repairs.

Any amounts disbursed by City pursuant to this paragraph, with interest thereon, will become an indebtedness of Borrower secured by this Deed of Trust. Unless Borrower and City agree to other terms of payment, such amount will be payable upon notice from City to Borrower requesting payment thereof, and will bear interest from the date of disbursement at the rate payable from time to time on outstanding principal under the Note unless payment of interest at such rate would be contrary to applicable law, in which event such amounts will bear interest at the highest rate permissible under applicable law. Nothing contained in this paragraph will require City to insure any expense or take any action hereunder.

8. Inspection. City may make or cause to be made reasonable entries upon and inspections of the Security; provided that City will give Borrower reasonable notice of inspection.

9. Forbearance by City Not a Waiver. Any forbearance by City in exercising any right or remedy will not be a waiver of the exercise of any such right or remedy. The procurement of insurance or the payment of taxes or other liens or charges by City will not be a waiver of City's right to accelerate the maturity of the indebtedness secured by this Deed of Trust.

10. Remedies Cumulative. All remedies provided in this Deed of Trust are distinct and cumulative to any other right or remedy under this Deed of Trust or any other document, or afforded by law or equity, and may be exercised concurrently, independently or successively.

11. Successors and Assigns Bound. The covenants and agreements herein contained shall bind, and the rights hereunder shall inure to, the respective successors and assigns of City and Borrower subject to the provisions of this Deed of Trust.

12. Joint and Several Liability. All covenants and agreements of Borrower shall be joint and several.

13. Notice. Except for any notice required under applicable law to be given in another manner: (a) any notice to Borrower provided for in this Deed of Trust will be given by certified mail, addressed to Borrower at the address shown in the first paragraph of this Deed of Trust or

such other address as Borrower may designate by notice to City as provided herein; and (b) any notice to City will be given by express delivery, return receipt requested, to City at 12 Journey, Suite 100, Aliso Viejo, CA, 92656-5335, Attn: Mitzi Ortiz, City Manager, or to such other address as City may designate by notice to Borrower as provided above. Notice shall be effective as of the date received by City as shown on the return receipt.

14. Governing Law. This Deed of Trust shall be governed by the laws of the State of California.

15. Severability. If any provision or clause of this Deed of Trust, the Note, or the Equity Sharing Agreement conflict with applicable law, such conflict will not affect other provisions of this Deed of Trust, the Note, or the Equity Sharing Agreement which can be given effect without the conflicting provision, and to this end the provisions of the Deed of Trust, the Note, and the Equity Sharing Agreement are declared to be severable.

16. Captions. The captions and headings in this Deed of Trust are for convenience only and are not to be used to interpret or define the provisions hereof.

17. Acceleration; Remedies. Upon Borrower's breach of any covenant or agreement of Borrower in this Deed of Trust, including, but not limited to, the covenants to pay, when due, any sums secured by this Deed of Trust, City, prior to acceleration, will mail by express delivery, return receipt requested notice to Borrower specifying: (1) the breach; (2) the action required to cure such breach; (3) a date, not less than 30 days from the date the notice is received by Borrower as shown on the return receipt, by which such breach is to be cured; and (4) that failure to cure such breach on or before the date specified in the notice may result in acceleration of the sums secured by this Deed of Trust and sale of the Security. The notice will also inform Borrower of Borrower's right to reinstate after acceleration and the right to bring a court action to assert the nonexistence of default or any other defense of Borrower to acceleration and sale. If the breach is not cured on or before the date specified in the notice, City, at City's option, may: (a) declare all of the sums secured by this Deed of Trust to be immediately due and payable without further demand and may invoke the power of sale and any other remedies permitted by California law; (b) either in person or by agent, with or without bringing any action or proceeding, or by a receiver appointed by a court, and without regard to the adequacy of its security, enter upon the Security and take possession thereof (or any part thereof) and of any of the Security, in its own name or in the name of Trustee, and do any acts which it deems necessary or desirable to preserve the value or marketability of the Security, or part thereof or interest therein, increase the income therefrom or protect the security thereof. The entering upon and taking possession of the Security shall not cure or waive any breach hereunder or invalidate any act done in response to such breach and, notwithstanding the continuance in possession of the Security, City shall be entitled to exercise every right provided for in this Deed of Trust, or by law upon occurrence of any uncured breach, including the right to exercise the power of sale; (c) commence an action to foreclose this Deed of Trust as a mortgage, appoint a receiver, or specifically enforce any of the covenants hereof; (d) deliver to Trustee a written declaration of default and demand for sale, pursuant to the provisions for notice of sale found at California Civil Code Sections 2924, et seq., as amended from time to time; or (e) exercise all other rights and remedies provided herein, in the instruments by which Borrower acquires title to any Security, or in any other document or agreement now or hereafter

evidencing, creating or securing all or any portion of the obligations secured hereby, or provided by law.

City shall be entitled to collect all reasonable costs and expenses incurred in pursuing the remedies provided in this paragraph, including, but not limited to, reasonable attorney's fees and costs.

18. Borrower's Right to Reinstate. Notwithstanding City's acceleration of the sums secured by this Deed of Trust, Borrower will have the right to have any proceedings begun by City to enforce this Deed of Trust discontinued at any time prior to five days before sale of the Security pursuant to the power of sale contained in this Deed of Trust or at any time prior to entry of a judgment enforcing this Deed of Trust if: (a) Borrower pays City all sums which would be then due under this Deed of Trust and no acceleration under the Note has occurred; (b) Borrower cures all breaches of any other covenants or agreements of Borrower contained in this Deed of Trust; (c) Borrower pays all reasonable expenses incurred by City and Trustee in enforcing the covenants and agreements of Borrower contained in this Deed of Trust, and in enforcing City's and Trustee's remedies, including, but not limited to, reasonable attorney's fees; and (d) Borrower takes such action as City may reasonably require to assure that the lien of this Deed of Trust, City's interest in the Security and Borrower's obligation to pay the sums secured by this Deed of Trust shall continue unimpaired. Upon such payment and cure by Borrower, this Deed of Trust and the obligations secured hereby will remain in full force and effect as if no acceleration had occurred.

19. Reconveyance. Upon payment or forgiveness of all sums secured by this Deed of Trust, City will request Trustee to reconvey the Security and will surrender this Deed of Trust and the Note to Trustee. Trustee will reconvey the Security without warranty and without charge to the person or persons legally entitled thereto. Such person or persons will pay all costs of recordation, if any.

20. Substitute Trustee. City, at City's option, may from time to time remove Trustee and appoint a successor trustee to any Trustee appointed hereunder. The successor trustee will succeed to all the title, power and duties conferred upon the Trustee herein and by applicable law.

21. Superiority of First Lender Documents. Notwithstanding any provision herein, this Deed of Trust shall not diminish or affect the rights of First Lender under the First Lender Deed of Trust or any subsequent First Lender deeds of trust hereafter recorded against the Security in compliance with the requirements of Section 17 of the Equity Sharing Agreement.

Notwithstanding any other provision hereof, the provisions of this Deed of Trust shall be subordinate to the lien of the First Lender Deed of Trust and shall not impair the rights of the First Lender, or such lender's assignee or successor in interest, to exercise its remedies under its First Lender Deed of Trust in the event of default under its First Lender Deed of Trust by Borrower. Such remedies under the First Lender Deed of Trust include the right of foreclosure or acceptance of a deed or assignment in lieu of foreclosure. After such foreclosure or acceptance of a deed in lieu of foreclosure, this Deed of Trust shall be forever terminated and shall have no further effect as to the Property or any transferee thereafter; provided, however, if the holder of such First Lender Deed of Trust acquired title to the Property pursuant to a deed or assignment in lieu of foreclosure,

this Deed of Trust shall automatically terminate upon such acquisition of title, only if either a notice of default was recorded under the applicable First Lender Deed of Trust, or, if no notice of default was recorded (i) City has been given written notice of default under such First Lender Deed of Trust (which requirement shall be satisfied by notice of default required by California Civil Code Section 2924) and (ii) City elected not to cure the default within the period provided by law.

22. Request for Notice. Borrower requests that copies of the notice of default and notice of sale be sent to Borrower in accordance with Section 13 above.

IN WITNESS WHEREOF, Borrower has executed this Deed Of Trust as of the date first written above.

BORROWER:

EXHIBIT 1

Legal Description of Property

THE LAND REFERRED TO HEREIN BELOW IS SITUATED IN THE CITY OF ALISO VIEJO, IN THE COUNTY OF ORANGE, STATE OF CALIFORNIA, AND IS DESCRIBED AS FOLLOWS:

PARCEL A:

APN: 623-091-01

City of Aliso Viejo
AGENDA ITEM

DATE: December 3, 2025

TO: Mayor and City Council

FROM: Rose Rivera, Senior Planner
So Kim, Community Development Director

SUBJECT: CONSIDERATION OF AN URGENCY ORDINANCE AND A NON-URGENCY ORDINANCE AMENDING SECTION 15.14.080 REGARDING ACCESSORY DWELLING UNITS AND JUNIOR ACCESSORY DWELLING UNITS AND DETERMINE THE ORDINANCES TO BE EXEMPT FROM CEQA UNDER PUBLIC RESOURCES CODE § 21080.17

Recommended Actions:

1. Find that the adoption of the proposed urgency and non-urgency ordinance is statutorily exempt from review under the California Environmental Quality Act (CEQA) under Public Resources Code § 21080.17;

2. Adopt by title only an urgency ordinance entitled: AN URGENCY ORDINANCE OF THE CITY COUNCIL OF THE CITY OF ALISO VIEJO, CALIFORNIA, AMENDING SECTION 15.14.080 OF THE ALISO VIEJO MUNICIPAL CODE RELATING TO ACCESSORY DWELLING UNITS AND JUNIOR ACCESSORY DWELLING UNITS TO COMPLY WITH RECENT CHANGES IN STATE LAW AND FINDING THE ACTION TO BE STATUTORILY EXEMPT FROM CEQA UNDER PUBLIC RESOURCES CODE § 21080.17; and

3. Introduce for first reading by title only an ordinance entitled: AN ORDINANCE OF THE CITY COUNCIL OF THE CITY OF ALISO VIEJO, CALIFORNIA, AMENDING SECTION 15.14.080 OF THE ALISO VIEJO MUNICIPAL CODE RELATING TO ACCESSORY DWELLING UNITS AND JUNIOR ACCESSORY DWELLING UNITS TO COMPLY WITH RECENT CHANGES IN STATE LAW AND FINDING THE ACTION TO BE STATUTORILY EXEMPT FROM CEQA UNDER PUBLIC RESOURCES CODE § 21080.17.

Fiscal Impact:

There is no fiscal impact.

Background:

In recent years, the California Legislature has approved, and the Governor has signed into law, a number of bills to impose new limits on local authority to regulate ADUs and JADUs. In August of 2024, the City Council adopted Ordinance No. 2024-243 to comply with these regulations. In late 2025, four new bills were enacted that further amend state ADU law as summarized below. The proposed urgency ordinance and non-urgency ordinance will amend Section 15.4.080 of the Aliso Viejo Municipal Code to comply with recent changes to state law that impose new limits on local authority to regulate Accessory Dwelling Units (ADUs) and Junior Accessory Dwelling Units (JADUs). Both ordinances are identical, except that the urgency ordinance is being processed on an expedited basis as the new laws will take effect January 1, 2026.

Discussion:

To ensure the City's ADU ordinance remains valid and enforceable, it must be updated to comply with new state requirements. Failure to do so will render the existing ordinance null and void, leaving the City with no local regulations other than the minimal standards set forth in state law. Under those default provisions, ADUs and JADUs would be approved without local controls on height, setbacks, landscaping, architectural review, and other design standards and potentially impact neighborhood character, property values, privacy, and fire safety. Provided below is a summary of the proposed amendments to comply with state law.

1. Updated Government Code references.

2. Owner occupancy requirements for JADUs: Existing state law requires a property owner to reside in the JADU or the remaining portion of the single-family dwelling. This requirement now only applies when a JADU shares a bathroom with the main dwelling.

3. Certificate of Occupancy requirements: State law generally requires a Certificate of Occupancy (C of O) for the primary dwelling before one can be issued for an ADU. New state law creates exceptions for detached ADUs when a state of emergency has been declared, the primary dwelling was substantially damaged or destroyed, and the ADU has permits and passed inspections. In all other cases, the primary dwelling must still receive a C of O first.

4. Penalties for noncompliant ADU ordinances: Under existing law, local agencies are required to submit a copy of their ADU ordinance to the California Department of Housing and Community Development (HCD) within 60 days of adoption. New state law adds penalties for non-compliance by rendering null and void any local ordinance that is not submitted to HCD within 60 days of adoption or if the local agency fails to respond to HCD within 30 days of issuing findings.

5. ADU and JADU Size: New state law clarifies that the allowable square footage of the ADUs and JADUs only account for "livable interior space." Areas such as

closets, bathrooms, and hallways are not considered livable space and do not count toward the size limit.

6. Quantity of ADUs: Existing state law requires approval of four ADU types: converted and detached units on single-family lots, and converted and detached units on multifamily lots. New state law clarifies that these types can be combined, allowing both converted and detached ADUs on the same lot. A single-family property can now have a total of three types of ADUs, a converted ADU, a JADU, and a detached ADU. A multifamily property can now have both converted ADUs (up to 25% of the total units) and up to eight detached ADUs on the same lot.

7. Permitting Process: New state law requires local agencies to review application completeness within 15 business days, provide clear feedback, allow written appeals for denials or incompleteness, and issue a final decision on appeals within 60 business days.

Environmental:

Under California Public Resources Code section 21080.17, CEQA does not apply to the adoption of an ordinance by a city or county implementing the provisions of Chapter 13 of Division 1 of Title 7 of the California Government Code, which is California's ADU law. Therefore, the adoption of the proposed urgency Ordinance is statutorily exempt from CEQA in that it implements state ADU law.

Public Notice:

A public notice was published in the Orange County Register on November 20, 2025.

URGENCY ORDINANCE NO. 2025-___

AN URGENCY ORDINANCE OF THE CITY COUNCIL OF THE CITY OF ALISO VIEJO, CALIFORNIA, AMENDING SECTION 15.14.080 OF THE CITY OF ALISO VIEJO MUNICIPAL CODE RELATING TO ACCESSORY DWELLING UNITS AND JUNIOR ACCESSORY DWELLING UNITS TO COMPLY WITH THE RECENT CHANGES IN STATE LAW, AND FINDING THE ACTION TO BE STATUTORILY EXEMPT FROM CEQA UNDER PUBLIC RESOURCES CODE § 21080.17

WHEREAS, the City of Aliso Viejo, California ("City") is a municipal corporation, duly organized under the constitution and laws of the State of California; and

WHEREAS, state law authorizes cities to act by ordinance to provide for the creation and regulation of accessory dwelling units ("ADUs") and junior accessory dwelling units ("JADUs"); and

WHEREAS, in recent years, the California Legislature has approved, and the Governor has signed into law, numerous bills that, among other things, amend various sections of the Government Code to impose new limits on local authority to regulate ADUs and JADUs; and

WHEREAS, in 2025, the California Legislature approved, and the Governor signed into law, further amendments to state ADU law; and

WHEREAS, new updates to state ADU law take effect January 1, 2026, and for the City's ADU ordinance to remain valid, it must be amended to reflect the most recent changes to state law; and

WHEREAS, the City desires to amend its local regulatory scheme for the construction of ADUs and JADUs to reflect the most recent changes to state law; and

WHEREAS, there is a current and immediate threat to the public health, safety, or welfare based on the passage of bills updating state ADU law because if the City's ordinance does not comply with this legislation by January 1, 2026 and the City's ADU ordinance becomes null and void in its entirety, the City would be required to approve ADUs and JADUs in accordance with the few default standards that are imposed by Chapter 13 of Division 1 of Title 7 of the California Government Code, which is the state ADU law; and

WHEREAS, the approval of ADUs and JADUs based solely on the default statutory standards, without local regulations governing height, setback, landscape, and architectural review, among other things, would threaten the character of existing neighborhoods, and negatively impact property values, personal privacy, and fire safety. These threats to public safety, health, and welfare justify adoption of this Ordinance as an urgency ordinance, to be effective immediately upon adoption by a four-fifths vote of the City Council; and

WHEREAS, to protect the public safety, health, and welfare, the City Council may adopt this Ordinance as an urgency measure in accordance with Government Code section 36937, subdivision (b).

NOW, THEREFORE, THE CITY COUNCIL OF THE CITY OF ALISO VIEJO DOES ORDAIN AS FOLLOWS:

Section 1: Incorporation of Recitals. The recitals above are each incorporated by reference and adopted as findings by the City Council.

Section 2: CEQA. Under California Public Resources Code section 21080.17, the California Environmental Quality Act ("CEQA") does not apply to the adoption of an ordinance by a city or county implementing the provisions of Article 2 of Chapter 13 of Division 1 of Title 7 of the California Government Code, which is California's ADU law. Therefore, adoption of the urgency Ordinance is statutorily exempt from CEQA in that it implements state ADU law.

Section 3: General Plan. The City Council hereby finds that the adoption of the urgency Ordinance is consistent with the General Plan as a matter of law under Government Code section 66314(c).

Section 4: Code Amendment. Section 15.14.080 of the Aliso Viejo Municipal Code is hereby amended and restated to read in its entirety as provided in Exhibit "A," attached hereto and incorporated herein by reference.

Section 5: Effective Date. This Ordinance takes effect immediately upon its adoption.

Section 6: HCD Submittal. In accordance with Government Code sections 66326 and 66333.5, the City Clerk is directed to submit a copy of this Ordinance to the California Department of Housing and Community Development within 60 days after adoption.

Section 7: Publication. The City Clerk is directed to certify to the adoption of this Ordinance and post or publish this Ordinance as required by law.

Section 8: Custodian of Records. The custodian of records for this Ordinance is the City Clerk and the records comprising the administrative record are located at 12 Journey, Suite 100, Aliso Viejo, CA 92656.

Section 9: Severability. If any provision of this Ordinance or its application to any person or circumstance is held to be invalid by a court of competent jurisdiction, such invalidity has no effect on the other provisions or applications of the Ordinance that can be given effect without the invalid provision or application, and to this extent, the provisions of this Ordinance are severable. The City Council declares that it would have adopted this Ordinance irrespective of the invalidity of any portion thereof.

PASSED, APPROVED AND ADOPTED this 3rd day of December, 2025.

(follows this page)

ORDINANCE NO. 2026-___

AN ORDINANCE OF THE CITY COUNCIL OF THE CITY OF ALISO VIEJO, CALIFORNIA, AMENDING SECTION 15.14.080 OF THE ALISO VIEJO MUNICIPAL CODE RELATING TO ACCESSORY DWELLING UNITS AND JUNIOR ACCESSORY DWELLING UNITS AND FINDING THE ACTION TO BE STATUTORILY EXEMPT FROM CEQA UNDER PUBLIC RESOURCES CODE § 21080.17

WHEREAS, the City of Aliso Viejo, California ("City") is a municipal corporation, duly organized under the constitution and laws of the State of California; and

WHEREAS, state law authorizes cities to act by ordinance to provide for the creation and regulation of accessory dwelling units ("ADUs") and junior accessory dwelling units ("JADUs"); and

WHEREAS, in recent years, the California Legislature has approved, and the Governor has signed into law, numerous bills that, among other things, amend various sections of the Government Code to impose new limits on local authority to regulate ADUs and JADUs; and

WHEREAS, in 2025, the California Legislature approved, and the Governor signed into law, further amendments to state ADU law; and

WHEREAS, new updates to state ADU law take effect on January 1, 2026, and for the City's ADU ordinance to remain valid, it must be amended to reflect the most recent changes to state law; and

WHEREAS, the City desires to amend its local regulatory scheme for the construction of ADUs and JADUs to reflect the most recent changes to state law; and

WHEREAS, on December 3, 2025, the City Council held a duly noticed public hearing as prescribed by law and considered written and verbal public testimony that was submitted prior to the hearing and during the hearing, and evidence and recommendations presented by staff in the agenda report and oral presentation and introduced the Ordinance; and

WHEREAS, all legal prerequisites to the adoption of the Ordinance have occurred.

NOW, THEREFORE, the City Council of the City of Aliso Viejo does ordain as follows:

SECTION 1. Incorporation of Recitals. The recitals above are each incorporated by reference and adopted as findings by the City Council.

SECTION 2. CEQA. Under California Public Resources Code section 21080.17, the California Environmental Quality Act ("CEQA") does not apply to the adoption of an

ordinance by a city or county implementing the provisions of Chapter 13 of Division 1 of Title 7 of the California Government Code, which is California's ADU law. Therefore, adoption of the Ordinance is statutorily exempt from CEQA in that it implements state ADU law.

SECTION 3. General Plan. The City Council hereby finds that the adoption of the Ordinance is consistent with the General Plan as a matter of law under Government Code section 66314(c).

SECTION 4. Code Amendment. Section 15.14.080 of the Aliso Viejo Municipal Code is hereby amended and restated to read in its entirety as provided in Exhibit "A," attached hereto and incorporated herein by reference.

SECTION 5. Effective Date. This Ordinance takes effect 30 days after its adoption.

SECTION 6. HCD Submittal. In accordance with Government Code sections 66326 and 66333.5, the City Clerk is directed to submit a copy of this Ordinance to the California Department of Housing and Community Development within 60 days after adoption.

SECTION 7. Publication. The City Clerk is directed to certify to the adoption of this Ordinance and post or publish this Ordinance as required by law.

SECTION 8. Custodian of Records. The custodian of records for this Ordinance is the City Clerk and the records comprising the administrative record are located at 12 Journey, Suite 100, Aliso Viejo, CA 92656.

SECTION 9. Severability. If any provision of this Ordinance or its application to any person or circumstance is held to be invalid by a court of competent jurisdiction, such invalidity has no effect on the other provisions or applications of the Ordinance that can be given effect without the invalid provision or application, and to this extent, the provisions of this Ordinance are severable. The City Council declares that it would have adopted this Ordinance irrespective of the invalidity of any portion thereof.

EXHIBIT A

Amended ADU Regulations

(follows this page)

15.14.080 Accessory dwelling units.

A. **Purpose**. The purpose of this section is to allow and regulate accessory dwelling units (ADUs) and junior accessory dwelling units (JADUs) in compliance with Chapter 13 of Division 1 of Title 7 of the California Government Code. ~~Sections 66310 through 66342~~.

B. **Effect of Conforming**. An ADU or JADU that conforms to the standards in this section will not be:

1. Deemed to be inconsistent with the city's general plan and zoning designation for the lot on which the ADU or JADU is located.

2. Deemed to exceed the allowable density for the lot on which the ADU or JADU is located.

3. Considered in the application of any local ordinance, policy, or program to limit residential growth.

4. Required to correct a nonconforming zoning condition, as defined in subsection (C)~~(7)~~(8) of this section. This does not prevent the city from enforcing compliance with applicable building standards in accordance with California Health and Safety Code Section 17980.12.

C. **Definitions**. As used in this section, terms are defined as follows:

1. "Accessory dwelling unit" or "ADU" means an attached or a detached residential dwelling unit that provides complete independent living facilities for one or more persons and is located on a lot with a proposed or existing primary residence. An accessory dwelling unit also includes the following:

   a. An efficiency unit, as defined by California Health and Safety Code section 17958.1; and

   b. A manufactured home, as defined by California Health and Safety Code. Section 18007.

2. "Accessory structure" means a structure that is accessory and incidental to a dwelling located on the same lot.

3. "Complete independent living facilities" means permanent provisions for living, sleeping, eating, cooking, and sanitation on the same parcel as the single-family or multifamily dwelling is or will be situated.

4. "Efficiency kitchen" means a kitchen that includes all of the following:

a. A cooking facility with appliances;

b. A food preparation counter and storage cabinets that are of reasonable size in relation to the size of the JADU.

5. "Junior accessory dwelling unit" or "JADU" means a residential unit that satisfies all of the following:

a It is no more than 500 square feet of interior livable space in size.

b. It is contained entirely within an existing or proposed single-family structure; An enclosed use within the residence, such as an attached garage, is considered to be a part of and contained within the single-family structure.

c. It includes its own separate sanitation facilities or shares sanitation facilities with the existing or proposed single-family structure.

d. If the unit does not include its own separate bathroom, then it contains an interior entrance to the main living area of the existing or proposed single-family structure in addition to an exterior entrance that is separate from the main entrance to the primary dwelling.

~~e. It includes an exterior extrance that is separate from the main entrance to the primary dwelling.~~

ef. It includes an efficiency kitchen, as defined in subsection (C)(4) of this section.

6. "Livable space" means a space in a dwelling intended for human habitation, including living, sleeping, eating, cooking or sanitation.

7.~~6.~~ "Living area" means the interior habitable area of a dwelling unit, including basements and attics, but does not include a garage or any accessory structure.

8~~7~~. "Nonconforming zoning condition" means a physical improvement on a property that does not conform with current zoning standards.

9~~8~~. "Passageway" means a pathway that is unobstructed clear to the sky and extends from a street to one entrance of the ADU or JADU.

10~~9~~. "Proposed dwelling" means a dwelling that is the subject of a permit application and that meets the requirements for permitting.

11~~10~~. "Public transit" means a location, including, but not limited to, a bus stop or train station, where the public may access buses, trains, subways, and other

forms of transportation that charge set fares, run on fixed routes, and are available to the public.

12~~11~~. "Tandem parking" means that two or more automobiles are parked on a driveway or in any other location on a lot, lined up behind one another.

D. **Applications.**

1. An application for an ADU that is subject only to a building permit under subsection (E) of this section shall be submitted to the building division. Site plans, floor plans, and elevations shall be submitted with the application and documents required for submittal to the building division.

2. An application for a development review permit (DRP) under subsection (F) of this section shall be submitted to the planning division. Site plans, floor plans, elevations, a project narrative, draft deed restrictions, and evidence of having given notice to the HOA, if applicable, shall be submitted with the application.

3. Upon receipt of an application for a DRP, the city will provide written notice via email to the applicable HOA on record, if any, that includes the project address and description. Irrespective of this notification requirement, all applications to create an ADU or JADU will be considered and approved ministerially, without discretionary review or a hearing.

E. **Approvals – Building-Permit Only**. If any ADU or JADU complies with each of the general requirements in subsection (G~~H~~)(1) below, it is allowed with only a building permit. ~~in the following scenarios:~~

~~1. Converted on Single-family Lot. One ADU as described in this subsection (E)(1) and one JADU on a lot with a proposed or existing single-family dwelling on it, where the ADU or JADU:~~

~~a. Is either: within the space of a proposed single-family dwelling; within the existing space of an existing single-family dwelling; or (in the case of an ADU only) within the existing space of an accessory structure, plus up to 150 additional square feet if the expansion is limited to accommodating ingress and egress; and~~

~~b. Has exterior access that is independent of that for the single-family dwelling; and~~

~~c. Has side and rear setbacks sufficient for fire and safety, as dictated by applicable building and fire codes.~~

~~d. The JADU complies with the requirements of Government Code sections 66333 through 66339.~~

~~2. Limited Detached on Single-family Lot. One detached, new construction ADU on a lot with a proposed or existing single-family dwelling (in addition to any JADU that might otherwise be established on the lot under subsection (E)(1) of this section), if the detached ADU satisfies each of the following limitations:~~

~~a. The side- and rear-yard setbacks are at least four feet;~~

~~b. The total floor area is 800 square feet or smaller; and~~

~~c. The peak height above grade does not exceed the applicable height limit in subsection (H)(2) below.~~

~~3. Converted on Multifamily Lot. One or more ADUs within portions of existing multifamily dwelling structures that are not used as livable space, including but not limited to storage rooms, boiler rooms, passageways, attics, basements, or garages, if each converted ADU complies with state building standards for dwellings. Under this subsection (E)(3), at least one converted ADU is allowed within an existing multifamily dwelling, up to a quantity equal to 25 percent of the existing multifamily dwelling units.~~

~~4. Limited Detached on Multifamily Lot. No more than two detached ADUs on a lot that has an existing or proposed multifamily dwelling if each detached ADU satisfies both of the following limitations:~~

~~a. The side- and rear-yard setbacks are at least four feet. If the existing multifamily dwelling has a rear or side yard setback of less than four feet, the city will not require any modification to the existing setbacks as a condition of approving the ADU; and~~

~~b. The peak height above grade does not exceed the applicable height limit provided in subsection (H)(2) of this section.~~

F. **Approvals - Development Review Permit (DRP)**.

1. ADU may be created without both a building permit and a Development Review Permit in compliance with the standards set forth in subsections (H) and (I) of this section.

2. The city may charge a fee to reimburse it for costs incurred in processing DRP permit, including the costs of adopting or amending the city's ADU ordinance. The DRP permit processing fee is set in accordance with a resolution adopted by the City Council.

3. Processing and Timing.

a. Completeness.

i. Determination in 15 days. The city will determine whether an application to create or serve an ADU or JADU is complete and will provide written notice of the determination to the applicant within 15 business days after the city receives the application submittal.

ii. ~~b~~Incomplete items. If the city's determination under subsection (d)(3)(A)(i) above is that the application is incomplete, the city's notice must list the incomplete items and describe how the application can be made complete.

iii. Cure. After receiving a notice that the application is incomplete, the applicant may cure and address the items that were deemed by the city to be incomplete.

iv. Subsequent submittals. If the applicant submits additional information to address incomplete items, within 15 business days of the subsequent submittal the city will determine in writing whether the additional information remedies all the incomplete items that the city identified in its original notice. The city may not require the application to include an item that was not included in the original notice.

v. Deemed complete. If the city does not make a timely determination as required by this subsection (A), the application or resubmitted application is deemed complete for the purposes of subsection (D)(3)(c) below.

~~iv.~~vi. Appeal of incompleteness. An applicant may appeal the city's determination that the application is incomplete by submitting a written appeal to the city clerk. The city council will review the written appeal and affirm or reverse the completeness determination and provide a final written determination to the applicant within 60 business days after receipt of the appeal.

vii. No discretion or hearing. Ministerial permits for an ADU or JADU are considered and approved without discretionary review or a hearing.

~~v.~~viii. Deadline to approve or deny ministerial approvals. The city must approve or deny an application to create an ADU or JADU within

60 days from the date that the city receives a complete application. If the city has not approved or denied the complete application within 60 days, the application is deemed approved unless either:

1. The applicant requests a delay, in which case the 60-day time period is tolled for the period of the requested delay, or

2. When an application to create an ADU or JADU is submitted with a permit application to create a new single-family or multifamily dwelling on the lot, the city may delay acting on the permit application for the ADU or JADU until the city acts on the permit application to create the new single-family or multifamily dwelling, but the application to create the ADU or JADU will still be considered ministerially without discretionary review or a hearing.

ix. Denial. If the city denies an application to create an ADU or JADU, the city must provide the applicant with comments that include, among other things, a list of all the defective or deficient items and a description of how the application may be remedied by the applicant. Notice of the denial and corresponding comments must be provided to the applicant within the 60-day time period established by subsection (d)(3)(a) of this section.

x. Appeal of denial. An applicant may appeal the city's denial of the application by submitting a written appeal to the city clerk. The city council will review the written appeal and affirm or reverse the denial and provide a final written determination to the applicant within 60 business days after receipt of the appeal. Decisions by the city council are final and shall become effective immediately except as otherwise provided in the approving action and except for actions by ordinance.

~~vi.~~xi. Concurrent review of demolition. A demolition permit for a detached garage that is to be replaced with an ADU is reviewed with the application for the ADU and issued at the same time.

~~An application to create an ADU or JADU under this section will be considered and approved ministerially, without discretionary review or a hearing.~~

~~2. The city must approve or deny an application to create an ADU or JADU within 60 days from the date that the city receives a completed application if there is an existing single-family or multifamily dwelling on the lot. If the~~

~~city has not approved or denied the completed application within 60 days, the application is deemed approved unless either:~~

~~a. The applicant requests a delay, in which case the 60-day time period is tolled for the period of the requested delay; or~~

~~b. When an application to create an ADU or JADU is submitted with a permit application to create a new single-family or multifamily dwelling on the lot, the city may delay acting on the permit application for the ADU or JADU until the city acts on the permit application to create the new single-family or multifamily dwelling, but the application to create the ADU or JADU will still be considered ministerially without discretionary review or a hearing.~~

~~3. If the city denies an application to create an ADU or JADU, the city must provide the applicant with comments that include, among other things, a list of all the defective or deficient items and a description of how the application may be remedied by the applicant. Notice of the denial and corresponding comments must be provided to the applicant within the 60-day time period established by subsection (G)(2) of this section.~~

G. **Classes.**

1. Class 1: Statutorily Regulated. Class 1 ADUs and JADUs are approved under Government Code section 66323. If an ADU or JADU complies with each of the general requirements in subsection (H~~F~~) below, it is allowed in each of the scenarios provided in this subsection (G~~E~~)(1). An ADU and JADU approved under subsection (G~~E~~)(1~~1~~)(a~~a~~) may be combined with an ADU approved under subsection (G)(1)(b)~~Eb~~, and ADUs approved under subsection (G~~E~~)(1)(c) may be combined with ADUs approved under subsection (G~~E~~)(1)(d).

   a. Converted on Lot with Single-Family: One ADU as described in this subsection (G~~E~~)(1)(a) and one JADU on a lot with a proposed or existing single-family dwelling on it, where the ADU or JADU:

      i. Is either: within the space of a proposed single-family dwelling; within the existing space of an existing single-family dwelling; or (in the case of an ADU only) within the existing space of an accessory structure, plus up to 150 additional square feet if the expansion is limited to accommodating ingress and egress; and

      ii. Has exterior access that is independent of that for the single-family dwelling; and

iii. Has side and rear setbacks sufficient for fire and safety, as dictated by applicable building and fire codes;

iv. The maximum size of a detached or attached ADU subject to this subsection (I) is 850 square feet of interior livable space for a studio or one-bedroom unit and 1,000 square feet of interior livable space for a unit with two or more bedrooms.

v.~~i~~ The JADU complies with the requirements of Government Code sections 66333 through 66339.

b. Limited Detached on Lot with Single-Family: One detached, new-construction ADU on a lot with a proposed or existing single-family dwelling, if the detached ADU satisfies each of the following limitations:

i. The side- and rear-yard setbacks are at least four feet.

ii. The total floor area is 800 square feet of livable space or smaller.

iii. The peak height above grade does not exceed the applicable height limit in subsection (F)(2) below.

c. Converted on Lot with Multifamily: One or more ADUs within portions of existing multifamily dwelling structures that are not used as livable space, including but not limited to storage rooms, boiler rooms, passageways, attics, basements, or garages, if each converted ADU complies with state building standards for dwellings. Under this subsection (E)(1)(c), at least one converted ADU is allowed within an existing multifamily dwelling, up to a quantity equal to 25 percent of the existing multifamily dwelling units.

d. Limited Detached on Lot with Multifamily: No more than two detached ADUs on a lot with a proposed multifamily dwelling, or up to eight detached ADUs on a lot with an existing multifamily dwelling, if each detached ADU satisfies all of the following:

i. The side- and rear-yard setbacks are at least four feet. If the existing multifamily dwelling has a rear or side yard setback of less than four feet, the city will not require any modification to the multifamily dwelling as a condition of approving the ADU.

ii. The peak height above grade does not exceed the applicable height limit provided in subsection (F)(2) below.

iii. If the lot has an existing multifamily dwelling, the quantity of detached ADUs does not exceed the number of primary dwelling units on the lot.

2. Class 2: Locally Regulated. Class 2 ADUs are approved under Government Code sections 66314–66322. Except for Class 1 ADUs approved under subsection (E)(1) above, all ADUs are subject to the standards set forth in subsections (F) and (G) below.

H. General ~~ADU and JADU~~ Requirements. ~~The following requirements apply to all ADUs and JADUs that are approved under subsections (E) and (F) of this section:~~ The following requirements apply to all Class 1 and Class 2 ADUs and JADUs:

1. Zoning.

a. A Class 1 ADU approved under subsection (G~~E~~)(1) may be created on a lot in a residential or mixed-use zone.

b. A Class 2 ADU approved under subsection (G~~E~~)(2) above may be created on a lot that is zoned to allow single-family dwelling residential use or multifamily dwelling residential use.

c. In accordance with Government Code section 66333(a), a JADU may only be created on a lot zoned for single-family residences.

2. Height.

a. Except as otherwise provided by subsections (H)(2)(b) or (H)(2)(c) of this section, a detached ADU created on a lot with an existing or proposed single family or multifamily dwelling unit may not exceed 16 feet in height.

b. A detached ADU may be up to 18 feet in height if it is created on a lot with an existing or proposed single family or multifamily dwelling unit that is located within one-half mile walking distance of a major transit stop or a high quality transit corridor, as those terms are defined in Section 21155 of the Public Resources Code, and the ADU may be up to two additional feet in height (for a maximum of 20 feet) if necessary to accommodate a roof pitch on the ADU that is aligned with the roof pitch of the primary dwelling unit.

c. A detached ADU created on a lot with an existing or proposed multifamily dwelling that has more than one story may not exceed 18 feet in height.

d. An ADU that is attached to the primary dwelling may not exceed 25 feet in height or the height limitation imposed by the underlying zone that applies to the primary dwelling, whichever is lower. Notwithstanding the foregoing, ADUs subject to this subsection (H)(2)(d) may not exceed two stories.

e. For purposes of this subsection (H)(2), height shall be measured as defined in the California Building Code.

3. Fire Sprinklers.

a. Fire sprinklers, approved by Orange County Fire Authority (OCFA), are required in an ADU if sprinklers are required in the primary residence when constructed.

b. The construction of an ADU does not trigger a requirement for fire sprinklers to be installed in the existing primary dwelling.

4. Rental Term. No ADU or JADU may be rented for a term that is shorter than 30 days. This prohibition applies regardless of when the ADU or JADU was created.

5. No Separate Conveyance. An ADU or JADU may be rented, but, except as otherwise provided in Government Code section 66341, no ADU or JADU may be sold or otherwise conveyed separately from the lot and the primary dwelling (in the case of a single-family lot) or from the lot and all of the dwellings (in the case of a multifamily lot).

6. Septic System. If the ADU or JADU will connect to ~~an existing~~ on-site wastewater ~~water treatment~~ system ~~serving the property~~, the owner must include with the application a percolation test completed within the last five years or, if the percolation test has been recertified, within the last 10 years. ~~If the property on which the ADU or JADU is constructed does not utilize an on-site water treatment system, nothing in this section authorizes an ADU or JADU to utilize an on-site water treatment system.~~

7. Owner Occupancy.

a. JADUs are generally subject to an owner-occupancy requirement. A natural person with legal or equitable title to the property must reside on the property, in either the primary dwelling or JADU, as the person's legal domicile and permanent residence. ~~However, the owner-occupancy requirement of this subsection does not apply if the property is entirely owned by another governmental agency, land trust, or housing organization.~~

i. Exceptions. The owner-occupancy requirement in this subsection (H)(7)(a) does not apply in either of the following situations:

1. The JADU has separate sanitation facilities (i.e., does not share sanitation facilities with the existing primary dwelling unit structure).

~~1.~~2. The property is entirely owned by another governmental agency, land trust, or housing organization.

8. Deed Restriction. Prior to issuance of a ~~building permit~~certificate of occupancy for a JADU, a deed restriction must be recorded against the title of the property in the county recorder's office and a copy filed with the director. The deed restriction must run with the land and bind all future owners. The form of the deed restriction will be provided by the city and must provide that:

a. The JADU may not be sold separately from the primary dwelling.

b. The JADU is restricted to the approved size and to other attributes allowed by this section.

c. The deed restriction runs with the land and may be enforced against future property owners.

d. The deed restriction may be removed if the owner eliminates the JADU, as evidenced by, for example, removal of the kitchen facilities. To remove the deed restriction, an owner may make a written request of the director, providing evidence that the JADU has in fact been eliminated. The director may then determine whether the evidence supports the claim that the JADU has been eliminated. Appeal may be taken from the director's determination consistent with other provisions of this code. If the JADU is not entirely physically removed, but is only eliminated by virtue of having a necessary component of a JADU removed, the remaining structure and improvements must otherwise comply with applicable provisions of this code.

e. The deed restriction is enforceable by the director or his or her designee for the benefit of the city. Failure of the property owner to comply with the deed restriction may result in legal action against the property owner, and the city is authorized to obtain any remedy available to it at law or equity, including, but not limited to, obtaining an injunction enjoining the use of the JADU in violation of the recorded restrictions or abatement of the illegal unit.

9. Building & Safety.

a. Must comply with Building Code. Subject to subsection (H)(9)(b) of this section, all ADUs and JADUs must comply with all local building code requirements.

b. No change of occupancy. Construction of an ADU does not constitute a Group R occupancy change under the local building code, as described in Section 310 of the California Building Code, unless the building official or code enforcement division officer makes a written finding based on substantial evidence in the record that the construction of the ADU could have a specific, adverse impact on public health and safety. Nothing in this subsection (H)(9)(b) prevents the city from changing the occupancy code of a space that was uninhabitable space or that was only permitted for nonresidential use and was subsequently converted for residential use in accordance with this section.

10. Certificate of Occupancy Timing.

a. Generally. No certificate of occupancy for an ADU or JADU may be issued before the certificate of occupancy is issued for the primary dwelling unit.

b. Limited Exception for State-declared Emergencies. Notwithstanding subsection (F)(10)(A) of this section, a certificate of occupancy for an ADU may be issued before a certificate of occupancy for the primary dwelling if each of the following requirements are met:

(i) The county is subject to a proclamation of a state of emergency made by the California Governor on or after February 1, 2025.

(ii) The primary dwelling was substantially damaged or destroyed by an event referenced in the Governor's state of emergency proclamation.

(iii) The ADU has been issued construction permits and has passed all required inspections.

~~(i)~~(iv) The ADU is not attached to the primary dwelling.

~~I~~H. Specific DRP Requirements. The following requirements apply only to Class 2 ADUs that require a DRP permit under subsection (G~~F~~)(2) of this section. This subsection (I) does not apply to Class 1 ADUs or JADUs approved under subsection (G)(1) of this section.

1. Maximum Size.

   a. The maximum size of a detached or attached ADU subject to this subsection (I) is 850 square feet of interior livable space for a studio or one-bedroom unit and 1,000 square feet of interior livable space for a unit with two or more bedrooms.

   b. An attached ADU that is created on a lot with an existing primary dwelling is further limited to 50 percent of the floor area of the existing primary dwelling.

   c. Application of other development standards in this subsection (I), such as FAR or lot coverage, might further limit the size of the ADU, but no application of FAR, lot coverage, open space, or the percentage-based size limit in subsection (I)(1)(b) above may require the ADU to be less than 800 square feet of interior livable space.

2. Setback. ADUs subject to this subsection (I) shall comply with the following setbacks:

   a. ~~Front-yard s~~Setbacks.

      i. ~~Subject to subsection (I)(2)(a)(ii) below, no part of any ADU subject to this subsection (I) may be located within 10 feet of a front property line or have a front yard setback that is less than the primary dwelling.~~ ADUs that are subject to this subsection (I) must conform to 4-foot side and rear setbacks. ADUs that are subject to this subsection (I) must conform to 25-foot front setbacks, subject to subsection (I)(1)(c) above.

      iii. ~~If a front yard setback is the only location on the lot where an ADU may be lawfully constructed, then the ADU may encroach into a required front yard setback as necessary to enable the construction of an 800 square foot unit.~~

   ~~b. An ADU that is subject to this subsection (I) must conform to 4-foot side and rear yard setbacks.~~

      ii.~~c.~~ No setback is required for an ADU that is subject to this subsection (I) if the ADU is constructed in the same location and to the same dimensions as an existing structure.

3. Lot Coverage. No ADU subject to this subsection (I) may cause the total lot coverage of the lot to exceed 75 percent, subject to subsection (I)(1)(c) of this section.

4. Minimum Open Space. For multifamily residential projects, no ADU subject to this subsection (I) may cause the total percentage of open space of the development to fall below 25 percent, subject to subsection (I)(1)(c) of this section.

5. Passageway. No passageway, as defined in subsection (C)(9~~11~~) above, is required for an ADU.

6. Parking.

   a. Generally. One off-street parking space is required for each ADU or bedroom, whichever is less. The parking space may be provided in setback areas or as tandem parking, as defined in subsection (C)(12~~1~~) of this section. ~~No parking is required for a JADU~~.

   b. Exceptions. No parking under subsection (I)(6)(a) of this section is required in the following situations:

      i. The ADU is located within one-half mile walking distance of public transit, as defined in subsection (C)(11~~0~~) of this section.

      ii. The ADU is located within an architecturally and historically significant historic district.

      iii. The ADU is part of the proposed or existing primary residence or an accessory structure.

      iv. When on-street parking permits are required but not offered to the occupant of the ADU.

      v. When there is an established car share vehicle stop located within one block of the ADU.

      vi. When the permit application to create an ADU is submitted with an application to create a new single-family or new multifamily dwelling on the same lot, provided that the ADU or the lot satisfies any other criteria listed in subsections (I)(6)(b)(i) through (I)(6)(b)(v) of this section.

   c. No Replacement. When a garage, carport, ~~or~~ covered parking structure or uncovered parking space is demolished in conjunction with the construction of an ADU or converted to an ADU, those off-street parking spaces ~~for the primary residence~~ are not required to be replaced. ~~Parking for the ADU will apply under subsections (I)(6)(a) and (I)(6)(b) of this section.~~

7. Architectural Requirements.

a. The materials and colors of the exterior walls ~~and~~, roof, windows and doors must ~~match~~ be the same as those of the primary dwelling.

b. The roof slope must match that of the dominant roof slope of the primary dwelling. The dominant roof slope is the slope shared by the largest portion of the roof.

c. The exterior lighting must be llimited~~designed or shielded~~ to ~~direct~~down lights ~~downward~~ or as otherwise required by the building or fire code.

d. The ADU must have an independent exterior entrance, apart from that of the primary dwelling.

e. The interior horizontal dimensions of an ADU must be at least 10 feet wide in every direction, with a minimum interior wall height of seven feet.

f. No window or door of the ADU may have a direct line of sight to an adjoining residential property. Each window and door must either be located where there is no direct line of sight or screened using fencing, landscaping, or privacy glass to prevent a direct line of sight.

g. All windows ~~located~~ and doors in an ADU less than 30 feet from a property line that is not a public right-of-way line must either be (for windows) clerestory with the bottom of the glass at least six feet above the finished floor, or (for windows and for doors) utilize obscure glass, such as frosted, patterned, bubble effect, ribbed, or other similar design.

h~~f~~. Mechanical equipment may not be placed within four feet of an adjacent property.

8. Allowed Stories. No ADU subject to this subsection (g) may have more than one story, except that an ADU that is attached to the primary dwelling may have the stories allowed under subparagraph (F)(2)(D) of this section.

J. Fees. The following requirements apply to all Class 1 ADUs and JADUs and Class 2 ADUs that are approved under subsections (E) and (F) of this section.

1. Impact Fees.

a. No impact fee is required for a JADU or for an ADU that is less than 750 square feet ~~in size~~ of interior livable space.. For purposes of this

subsection (J)(1), "impact fee" means a "fee" under the Mitigation Fee Act (Gov. Code § 66000(b)) and a fee under the Quimby Act (Gov. Code § 66477). "Impact fee" here does not include any connection fee or capacity charge for water or sewer service.

b. A JADU or ADU with less than 500 square feet of interior livable space does not increase assessable space by 500 square feet for purposes of Education Code section 17620(a)(1)(C), and is therefore not subject to school fees under Education Code section 17620.

c. Any impact fee that is required for an ADU that is 750 square feet or ~~larger in size~~ more of interior livable space must be charged proportionately in relation to the square footage of the primary dwelling unit (E.g., the floor area of the ADU, divided by the floor area of the primary dwelling, times the typical fee amount charged for a new dwelling).

2. Utility Fees.

a. If an ADU or JADU is constructed with a new single-family home, a separate utility connection directly between the ADU or JADU and the utility and payment of the normal connection fee and capacity charge for a new dwelling may be~~are~~ required.

b. Except as described in subsection (J)(2)(a), JADUs and converted ADUs on a single-family lot that are created under subsection (E)(1) above are not required to have a new or separate utility connection directly between the JADU or the ADU and the utility. Nor is a connection fee or capacity charge required. Notwithstanding the rest of this paragraph, a direct utility connection is required for separate conveyance of an ADU when separate conveyance is allowed under this code.

c. Except as described in subsection (J)(2)(a), all ADUs not covered by subsection (J)(2)(b) may require a new, separate utility connection directly between the ADU and the utility for any utility that is provided by the city. All utilities that are not provided by the city are subject to the connection and fee requirements of the utility provider.

i. The connection is subject to a connection fee or capacity charge that is proportionate to the burden created by the ADU, based on either the floor area or the number of drainage-fixture units (DFU) values, as defined by the Uniform Plumbing Code, upon the water or sewer system.

ii. The portion of the fee or charge that is charged by the city may not exceed the reasonable cost of providing this service.

K. Nonconforming Zoning Code Conditions, Building Code Violations, and Unpermitted Structures.

1. Generally. The city will not deny an ADU or JADU application due to a nonconforming zoning condition, building code violation, or unpermitted structure on the lot that does not present a threat to the public health and safety and that is not affected by the construction of the ADU or JADU.

2. Unpermitted ADUs and JADUs constructed before 2020~~2018~~.

a. Permit to Legalize. As required by state law, the city may not deny a permit to legalize an existing but unpermitted ADU that was constructed before January 1, 2020~~2018,~~ if denial is based on either of the following grounds:

i. The ADU or JADU violates applicable building standards; or

ii. The ADU or JADU does not comply with the state ADU or JADU law or this ADU ordinance (~~this~~ section15.14.080).

b. Exceptions:

i. Notwithstanding subsection (K)(2)(a) above, the city may deny a permit to legalize an existing but unpermitted ADU or JADU that was constructed before January 1, 2020~~2018~~, if the city makes a finding that correcting a violation is necessary to ~~protect the health and safety of the public or of occupants of the structure~~ comply with the standards specified in California Health.and Safety Code section 17920.3.

ii. Subsection (K)(2)(a) above does not apply to a building that is deemed to be substandard in accordance with California Health and Safety Code section 17920.3.

L. Nonconforming ADUs and Discretionary Approval. Any proposed ADU or JADU that would otherwise be allowed under this section but that does not conform to the objective design or development standards set forth in subsections (A) through (K) of this section may be allowed by the city with a conditional use permit, in accordance with the other provisions of this title.

ALISO VIEJO

CONSIDERATION OF AN URGENCY ORDINANCE AND A NON-URGENCY ORDINANCE AMENDING SECTION 15.14.080 REGARDING ACCESSORY DWELLING UNITS AND JUNIOR ACCESSORY DWELLING UNITS

City Council

December 3, 2025

Background

- Numerous bills took effect which imposed limits on regulating ADUs and JADUs
- The City Council last adopted an ordinance in late 2024 to comply with these regulations
- Four new bills were enacted in late 2025 to further amend state ADU law

Key Changes

Updates to:

- Government Code references
- Owner occupancy requirements for JADUs
- Certificate of Occupancy requirements for ADUs
- Penalties for noncompliant ADU ordinances
- ADU and JADU Size
- Quantity of ADUs
- Permitting Process

Staff Recommendation to City Council:

1. Find that the adoption of the proposed urgency and non-urgency ordinance is statutorily exempt from review under the California Environmental Quality Act (CEQA) under Public Resources Code § 21080.17;

2. Adopt by title only an urgency ordinance entitled:

   AN URGENCY ORDINANCE OF THE CITY COUNCIL OF THE CITY OF ALISO VIEJO AMENDING SECTION 15.14.080 OF THE ALISO VIEJO MUNICIPAL CODE RELATING TO ACCESSORY DWELLING UNITS AND JUNIOR ACCESSORY DWELLING UNITS TO COMPLY WITH RECENT CHANGES IN STATE LAW AND FINDING THE ACTION TO BE STATUTORILY EXEMPT FROM CEQA UNDER PUBLIC RESOURCES CODE § 21080.17; and

3. Introduce for first reading by title only an ordinance entitled:

   AN ORDINANCE OF THE CITY COUNCIL OF THE CITY OF ALISO VIEJO AMENDING SECTION 15.14.080 OF THE ALISO VIEJO MUNICIPAL CODE RELATING TO ACCESSORY DWELLING UNITS AND JUNIOR ACCESSORY DWELLING UNITS TO COMPLY WITH RECENT CHANGES IN STATE LAW AND FINDING THE ACTION TO BE STATUTORILY EXEMPT FROM CEQA UNDER PUBLIC RESOURCES CODE § 21080.17.

City of Aliso Viejo
AGENDA ITEM

DATE: December 3, 2025

TO: Mayor and City Council

FROM: So Kim, Community Development Director

SUBJECT: CONCEPT PLAN REVIEW FOR A RESIDENTIAL COMMUNITY AT 1-5 POLARIS

Recommended Action:

Review and provide initial feedback on concept plans for a development proposal involving the demolition of five existing office buildings to accommodate the construction of a 405-unit, residential community at 1-5 Polaris ("Project").

Fiscal Impact:

None.

Background:

On November 10, 2025, Shea Homes ("Applicant") submitted a preapplication to demolish five existing office buildings to accommodate the construction of a 405-unit, residential community at 1-5 Polaris.

Discussion:

Existing Site: The existing site comprises five separate parcels, each developed with an office building and associated surface parking (see image to the right). Collectively, these properties total approximately 22.5 acres in size ("Site"). Access to the Site is provided via two driveways located along the northern property line facing Aliso Viejo Parkway. The General Plan designation for the Site is Professional Office use for both land use and zoning. Additionally, Lots 1, 4, and 5, highlighted in yellow, are located within the Mixed Use/Residential Overlay District, which permits a combination of residential and non-residential uses.

Proposed Project: The Applicant proposes to demolish the existing office development and redevelop the site as a gated residential community consisting of 405 for-sale units at an overall density of 18 dwelling units per acre. The Project will feature four three-story housing types: 105 duplexes, 108 townhomes, 100 back-to-back units (rear wall attached), and 92 rowtown units (side walls attached), with homes ranging from approximately 1,286 square feet for two-bedroom units to 2,484 square feet for four-bedroom units. Each unit will include an enclosed two-car garage, with rowtown units providing two tandem garage spaces, for a total of 810 private parking spaces. An additional 151 guest parking spaces will be distributed throughout the Site as street parking and in smaller parking lots, resulting in a total of 961 parking spaces for the Project. The Project will provide 6.5 acres of open space, representing 29% of the site, featuring a 56,200-square-foot pool and recreation complex near the primary entry. Additional amenities include a half-mile perimeter walking trail, multiple courtyards, and common open space areas throughout the community. A 30-foot landscaped buffer is proposed along the entire Aliso Viejo Parkway frontage to complement the existing buffer across the street.

Affordable Housing: The Project includes 405 units, with 21 units (5%) designated as affordable housing for very low-income households. This qualifies the Project for a density bonus along with associated incentives, concessions, waivers, and reduced parking requirements, allowing modified development standards such as lot coverage, heights, setbacks, and parking ratios. Although eligible for additional density under state law, the Applicant is not requesting any increase beyond the proposed 405 units, while certain development standard modifications are anticipated.

Required Entitlements: The Project requires a tentative tract map and amendments to the General Plan land use and zoning designations to Medium Density Residential (greater than 8 to 18 dwelling units per acre), which will permanently change permitted uses to residential. A site development permit will be required for new construction, along with a development agreement.

Environmental:

The Applicant anticipates less than significant environmental impacts with appropriate mitigation measures and is preparing an Initial Study/Mitigated Negative Declaration as part of the formal Project submittal.

Public Notice:

A public notice was published in the Laguna Niguel News and mailed to all property owners within 300 feet of the subject site.

So Kim
Community Development Director
City of Aliso Viejo
12 Journey, Suite 100
Aliso Viejo, CA 92656

Subject: Polaris Place Residential Development

Dear Ms. Kim,

On behalf of Derek Kegley of Lennar Homes of California, Inc. (Applicant) attached is an application for the Polaris Residential Development project located at 1 – 5 Polaris.

The project site consists of approximately 22.5 acres and is currently developed with office uses and associated infrastructure, as more specifically described below.

- 1 Polaris: APN 623-481-49 – approximately 3.081 acres – developed with approximately 26,356 square feet of office space and surface parking.
- 2 Polaris: APN 623-481-50 – approximately 4.831 acres – developed with approximately 23,676 square feet of office space and surface parking.
- 3 Polaris: APN 623-481-51 – approximately 4.824 acres – developed with approximately 24,794 square feet of office space and surface parking.
- 4 Polaris: APN 623-481-53 – approximately 4.832 acres – developed with approximately 23,710 square feet of office space and surface parking.
- 5 Polaris: APN 623-481-52 – approximately 4.075 acres – developed with approximately 26,763 square feet of office space and surface parking.

This letter provides a description of the proposed project.

Existing General Plan and Zoning Designations

The Project site has the current designations:

- General Plan – All properties - Professional Office (PO)
- Zoning – All properties – Professional Office (PO)

Proposed Entitlements

The project site currently has General Plan land use designation and zoning of Profession Office. Since the proposed Project consists entirely of residential uses, the following entitlements are requested.

- General Plan Amendment
  - PO to Residential High Density (RHD)
- Zone Change
  - PO to Residential High Density (RHD)
- Development Agreement
- Vesting Tentative Tract Map
- Site Development Permit
- Initial Study / Mitigated Negative Declaration

In addition, the Project proposes providing affordable housing in accordance with State Density Bonus Law (SDBL) and will be requesting waivers of development standards and concessions as provided by SDBL.

Proposed Project

The proposed project includes the demolition of the existing office buildings and surface parking lots and construction of 405 for-sale residential dwellings at an average density of 18 dwelling units per acre.

Site Plan

Key features of the proposed site plan include:

- Provide a main gated entry into the new community from the middle of the Project site at the same location as the existing driveway from AVP.
- Provide a secondary gated entry/exit from AVP at the northern boundary of the Project site.
- Provide a third emergency vehicle access (EVA) only near the southern boundary of the Project site.
- The frontage along AVP includes a 30-foot-wide landscape buffer.
- A 32,294 square foot private recreation amenity within an approximately 6.5 acres of open space area is provided at the entry to the community, including a pool, recreation

building, and park area. The recreation amenity will be open to the new residents of the community and privately maintained by the future homeowner's association.

- Internal streets without parking measure 26 feet wide. Streets with parallel parking on one side measure 35 feet wide and streets with parallel parking on both sides measure 42 feet wide. Alley's serving garages measure 24 feet wide with a minimum of 28 feet separation between garage doors.

- Proposed dwellings fronting onto AVP and Pacific Park will have enhanced architecture.

Housing Types

- Four housing products are being provided in a range of sizes to accommodate a range of buyers.

3-Story Duplex

Floor Plan	Sq. Ft.	Beds/Baths	Garage Spaces	No. of Units
P1	2484	4Bd/4.5Ba	2	51

Total				92

* The 4 P1 units will be designated affordable
** The 4 P2 units will be designated affordable

Recreation

- A pool and recreation complex is located at the front entry to the community. This facility includes a pool, restroom and recreation building, and grass turf park area. This amenity measures approximately 56,200 square feet, within approximately 6.5 acres of open space.

- Access to the front of the townhome and duplex residential units would occur from landscaped paseos. The paseos measure approximately 23 feet between townhomes and 22 feet between duplexes.

- A walking trail of approximately ½ mile in length around the perimeter of the Project site.

Engineering

- The Project proposes to connect to existing sewer, water and storm drain infrastructure within AVP.

- The Project proposes to use underground modular wetland systems as its water quality BMP and discharge storm water into existing storm drain within AVP.

- The Project will increase the amount of pervious surface, thereby reducing the amount of storm runoff compared to the existing conditions. Therefore, no detention is required.

- All dry utilities (electrical, cable, fiber, etc.) will be underground.

- All grading will balance on the Project site and no import or export will be required.

- Demolition of existing structures will be hauled off-site to a qualified recycling facility as appropriate.

Affordable Housing

- The Applicant proposes to satisfy its affordable housing requirement by constructing 21 Very Low Income units on the Project site (5%) and deed restricting future sale of those units in accordance with the City's affordable housing standards.

- The Applicant requests waivers and concessions in return for providing affordable housing, such as modifications to parking and setback standards. Waivers and concessions would be processed through SDBL and documented in the proposed Development Agreement.

Parking

- Each dwelling unit contains an enclosed 2-car garage. The 3-story Rowtowns have two tandem garage spaces. All other units have a two-car side by side garage. Enclosed garage parking totals 810 parking spaces.

- Guest parking is provided throughout the proposed community. A total of 151 guest spaces are provided.

- No parking off the Project site on AVP is permitted.

- The Applicant proposes a Parking Management Plan that will include numerous provisions to ensure adequate parking is provided. The CC&Rs will require garages to be kept open and available for parking. Guest and homeowner parking permits will be issued to control the number of guests and ensure residents do not park in guest spaces. The new homeowner's association will be responsible for enforcement.

Trash

- Each dwelling will have trash carts.

- Carts will be stored in the enclosed garages. Sufficient space is designed for cart storage within each garage.

- Residents will be responsible for pulling trash carts to the street. Trash trucks will not drive down the alleys, therefore residents would need to place the trash carts on the loop road.

CEQA

- The Applicant would like to begin the CEQA process as soon as possible, including notification under SB 18 and AB 52.

- The Applicant team will prepare all technical studies for City review, including:

    - Air Quality

- Cultural
- Geotechnical investigation
- Preliminary Hydrology Report
- Preliminary WQMP
- Phase I Environmental Site Assessment Report
- Noise
- Preliminary Sewer Report
- Preliminary Water Report
- Traffic and VMT Assessment Report
- Tribal Cultural Resources
- Fire Master Plan
- Preliminary Utility Assessment

- The Applicant anticipates the Project will not generate significant unavoidable impacts and will qualify for an Initial Study / Mitigated Negative Declaration. The Applicant Team will prepare a draft IS/MND for City review.

We look forward to working with you on the entitlement of this project. If you have any questions, please contact me at pcarlson@carlsonsls.com or 949-289-3625.

Sincerely,

Peter K. Carlson
President

Proposed Project

City of Aliso Viejo
AGENDA ITEM

DATE: December 3, 2025

TO: Mayor and City Council

FROM: Ann Eifert, Director of Financial Services

SUBJECT: FISCAL YEAR 2024-25 ANNUAL COMPREHENSIVE FINANCIAL REPORT

Recommended Action:

Receive and file the Annual Comprehensive Financial Report (ACFR) for the year ended June 30, 2025.

Fiscal Impact:

As of June 30, 2025, the City's combined fund balance for all funds increased by $8.9 million for a total of $54.5 million. Of this amount, $44.4 million is in the General Fund and $10.1 million is restricted (special revenue funds such as gas taxes, Measure M, grants, etc.).

Background:

The Annual Comprehensive Financial Report is prepared in conformity with Generally Accepted Accounting Principles (GAAP) and audited by independent certified public accountants at Davis Farr, LLP. The goal of the audit is to provide reasonable assurance that the City's financial statements are free from material misstatement.

As part of the audit, Davis Farr, LLP issued the following reports:

- Auditor's Communication With Those Charged With Governance
- Report on Internal Controls
- Report on Agreed-Upon Procedures Applied to the Appropriations Limit
- Report on Agreed-Upon Procedures for the City's Treasurer's Monthly Report

Discussion:

The annual audit of the financial statements was completed in November 2025 and prepared in accordance with all applicable accounting standards. The independent auditor has issued an unmodified opinion of the City's financial statements for the fiscal year (FY) ended June 30, 2025, which provides reasonable assurance that the financial

statements of the City are presented fairly, in all material respects, in accordance with generally accepted accounting principles.

In addition to reviewing and examining the City's financial records, the auditors also reviewed the internal control framework of the City. Internal control is a set of activities, rules, and procedures implemented by the City to ensure the integrity of financial and accounting information, promote accountability, and prevent fraud. The audit did not identify any errors, and no recommendations were provided regarding the City's internal controls. The auditors also issued their reports on the agreed upon procedures for the City's monthly treasurer's report and the City's appropriations limit worksheets. These reports are included as attachments 4 and 5.

Government-Wide Financials

As presented in the ACFR Statement of Activities, the City's total revenues from all sources were $39.2 million, while the total cost of all programs and services was $32.0 million. Some of the financial highlights at the government-wide level are:

- Assets and deferred outflows of resources of the City exceeded its liabilities and deferred inflows of resources at June 30, 2025, by $150.5 million. This amount is referred to as the net position of the City.
- The City increased its overall net position by $7.2 million or 5.0% higher compared to FY 2023-24.
- As of June 30, 2025, the City's overall fund balance increased by $8.9 million for a total of $54.5 million for all funds.

General Fund Highlights

The General Fund is the primary operating fund of the City and is 81.5% of the City's overall fund balance. General Fund operations include Administration and Support, Community and Economic Development, Recreation and Community Services, Public Safety, and Public Works. The General Fund also funds the City's debt service payment on the Certificates of Participation (COP) for the Aliso Viejo Ranch and capital projects at City facilities.

For FY 2024-25, General Fund revenues and transfers-in total $32.1 million and exceeded expenditures and transfers-out of $25.5 million, resulting in an increase to the General Fund balance by $6.6 million. Ending fund balance for the year increased by 17.3% to $44.4 million. This balance is comprised of assigned funds of approximately $35.1 million and $9.4 million of unassigned funds. Assigned funds include $4.0 million for contingencies, $1.0 million for insurance and/or benefit obligations, $14.3 million for asset replacement, and $15.7 million for emergencies. The unassigned portion is the part of fund balance that is available for use without constraints established by legal requirements totaling $9.4 million and meets the City's Fund Balance Policy target of 25-35% of the operating budget. The total fund balance at June 30, 2025, is equal to 160% of the FY 2025-26 adopted General Fund budget appropriations.

Actual revenues, transfers in, and other financing sources of $32.1 million exceeded the adopted budget projections of $26.8 million by $5.3 million, or 19.9% higher than budget estimates. This is primarily a result of unexpected growth in sales tax from EFuel, LLC, new businesses at The Commons at Aliso Viejo Town Center, and a greater share of the County pool. Investment earnings were higher by $1.6 million; however, this includes $0.6 million for unrealized gains in the City's portfolio and $0.2 million in accrued interest. Transfers-in exceeded budget estimates by $0.3 million and is a result of better-than-expected net income from operations at the Aliso Viejo Center and $0.1 million from grant reimbursements, such as, the Permanent Local Housing Allocation Program, LEAP, and CDBG. Table 1 provides a summary of the City's General Fund resources compared to FY 2023-24 actuals as well as the FY 2024-25 adopted budget.

Table 1: General Fund Resources

General Fund Resources	FY 2023-24 Actuals	FY 2024-25 Adopted Budget	FY 2024-25 Actuals	FY 2024-25 Budget Variance Over/(Under)
Property Tax	$ 9,911,102	$ 10,179,100	$ 10,287,203	$ 108,103
Sales Tax	8,359,623	8,900,000	11,154,921	2,254,921
TOT	1,570,575	1,600,000	1,699,738	99,738
Franchise Fees	1,793,611	1,661,670	1,738,860	77,190
Recreation	1,593,376	1,685,500	1,525,242	(160,258)
Building & Planning	1,240,630	1,100,000	1,353,812	253,812
Fines & Forfeitures	296,430	185,000	293,289	108,289
Investment Earnings[1]	708,216	495,000	2,138,091	1,643,091
Other[2]	2,700,363	944,049	1,870,143	926,094
Total Resources	**$ 28,173,926**	**$ 26,750,319**	**$ 32,061,299**	**$ 5,310,980**

[1] FY 24-25 Investment Earnings include $836,004 in accrued interest and market adjustments

[2] FY 24-25 Actuals include other financing sources for lease and SBITA acquisition per GASB 87 and 96 in the amount of $365,786

Actual expenditures and transfers out totaled $25.5 million and was $1.7 million under budget due to conservative spending across all departments. Administration and support costs were $0.7 million under budget primarily from salary savings due to new employees and partially vacant positions during the fiscal year. Public Safety costs were $0.9 million lower than budget primarily due to high vacancy levels within the Orange County Sheriff's Department. Savings of $0.4 million in Recreation and Community Services are from lower-than-expected operating costs at Gold Cost Farms, facility maintenance, instructor fees, and a vacant Recreation Coordinator position. Public Works was also under budget by $0.2 million from savings for permits, environmental compliance, and street maintenance. Lastly, $0.3 million in expected capital improvement costs were not expended due to project delays at the Aquatic Center. Savings across these areas offset the additional $0.6 million in economic development spending from increases in tax subsidy payments to EFuel. Table 2 provides a summary of the City's General Fund expenditures compared to FY 2023-24 actuals as well as the FY 2024-25 adopted budget.

Table 2: General Fund Appropriations

General Fund Appropriations	FY 2023-2024 Actuals	FY 2024-25 Amended Budget	FY 2024-25 Actuals	FY 2024-25 Budget Variance (Over)/Under
Admin & Support	$ 4,978,006	$ 4,976,449	$ 4,235,385	$ 741,064
Community Services	2,743,811	3,165,132	2,744,808	420,324
Comm & Econ Dev	3,982,795	4,136,826	4,785,189	(648,363)

City Hall	201,147	251,290	195,732	55,558
Debt Service	655,795	658,050	655,369	2,681
Transfers/Other	159,252	201,402	529,411	(328,009)
Total Operating	**$ 24,450,792**	**$ 26,635,936**	**$ 25,276,300**	**$ 1,359,636**
Capital Improvement	267,472	526,000	224,521	301,479
Total General Fund	**$ 24,718,264**	**$ 27,161,936**	**$ 25,500,821**	**$ 1,661,115**

Special Revenue Funds

The City's special revenue fund balances at the end of FY 2024-25 total $10.1 million and include transportation and street improvement funding, such as gas taxes, SB1, and Measure M, various federal and state grants, and other funds restricted for a specific purpose. Of the $10.1 million, approximately $7.9 million is restricted for street capital projects, $0.4 million for public safety, and $1.8 million for community development and other projects. Table 3 summarizes the balances for the City's special revenue funds at June 30, 2025.

Table 3: Special Revenue Funds

Fund	Beginning Balance	Total Revenues	Total Expenses	Ending Balance
202 - Traffic Congestion Relief Fund	$ 76,068	$ 3,362	$ -	$ 79,430

ALISO VIEJO

Annual Comprehensive Financial Report Fiscal Year Ended June 30, 2025 Aliso Viejo, California

ABOUT THE COVER:

The FY 2024-25 Annual Comprehensive Financial Report cover displays a view of Aliso Viejo City Hall, located at 12 Journey in the city of Aliso Viejo.

City Hall provides municipal services for the residents of Aliso Viejo. The building has housed the city's government offices and city council chambers since Aliso Viejo was incorporated on July 1, 2001 as Orange County's 34th city.

November 13, 2025

Honorable Mayor, Members of the City Council, and Residents of Aliso Viejo:

It is with great pleasure that we present the City of Aliso Viejo's Annual Comprehensive Financial Report (ACFR) for fiscal year (FY) ended June 30, 2025. This report has been prepared by the Department of Financial Services in conformity with Generally Accepted Accounting Principles (GAAP) and has been audited in accordance with Generally Accepted Auditing Standards (GAAS) by a firm of licensed Certified Public Accountants.

The report consists of management representations concerning the finances of the City of Aliso Viejo. Consequently, responsibility for both the accuracy of the data and the completeness and fairness of the presentation, including all disclosures, rests with the City. To provide a reasonable basis for making these representations, management has established a comprehensive internal control framework that is designed to protect the government's assets from loss, theft, or misuse and to compile sufficient reliable information for the preparation of the financial statements. Since the cost of internal controls should not outweigh their benefits, the City's comprehensive framework of internal controls has been designed to provide reasonable, rather than absolute, assurance that the financial statements are free from material misstatement. To the best of our knowledge and belief, the enclosed information is accurate in all material respects and reported in a manner designed to fairly present the financial position of the City. All disclosures necessary to enable an understanding of the City's financial activities are included.

Davis Farr, LLP, a firm of licensed Certified Public Accountants, has audited the City of Aliso Viejo's financial statements. The goal of the independent audit is to provide reasonable assurance that the City's financial statements for the fiscal year ended June 30, 2025, are free of material misstatement. The independent audit involved examining on a test basis, evidence supporting the amounts and disclosures in the financial statements, assessing the accounting principles used and significant estimates made by management, and evaluating the overall financial statement presentation. The independent auditor concluded, based upon the audit, that there was a reasonable basis for rendering an unmodified opinion that the City of Aliso Viejo's financial statements for the fiscal year ended June 30, 2025, are fairly presented in conformity with GAAP. The independent auditor's report is presented as the first component of the financial section of this report.

This ACFR includes the financial activity for all funds of the City. In addition to the fund-by-fund financial information presented in the City's financial statements, government-wide financial statements are also included. The government-wide financial statements include a Statement of Net Position that provides the total net equity of the city, including infrastructure, and the Statement of Activities which shows the cost of providing government services.

These statements were prepared using the accrual basis of accounting whereas the fund financial statements were prepared using the modified accrual method. A reconciliation report is provided as a key to understanding the changes between the two reporting methods. In addition, the Statement 34 standard includes an emphasis on the City's major funds as shown in the Governmental Fund Statements. These statements, combined with other information, are further analyzed in a narrative section called Management's Discussion and Analysis (MD&A). The MD&A provides "financial highlights" and interprets the financial reports by analyzing trends and explaining changes, fluctuations, and variances in the financial data. In addition, the MD&A is intended to disclose any known significant events or decisions that affect the financial condition of the City. This letter of transmittal is designed to complement the MD&A and should be read in conjunction with it.

PROFILE OF THE CITY

The City of Aliso Viejo was incorporated on July 1, 2001, as a general law city under the laws of the State of California. The City of Aliso Viejo encompasses approximately seven square miles in south Orange County and has a population of 50,213 per data provided by the California Department of Finance (DOF). Approximately 46 miles south of Los Angeles and 70 miles north of San Diego, the City is adjacent to the cities of Laguna Beach, Laguna Woods, Laguna Hills, and Laguna Niguel.

The City operates under the Council-Manager form of government. In June 2023, the City Council voted to adopt district-based elections, comprising of five districts elected for staggered four-year terms of office. The Mayor and Mayor Pro-Tem are selected by the Council from among its members to serve one-year terms. The Council acts as the legislative and policy-making body of the City, enacting all laws and directing such actions as required, to provide for the general welfare of the community.

The City Manager is appointed by the City Council and is responsible for overseeing the operations of the City and implementing the policy decisions made by the City Council. The City Council also appoints the City Attorney and City Treasurer. All other department heads and employees are appointed by the City Manager.

The City provides municipal services through a combination of in-house staffing and contract services. Police, fire, street maintenance, building, code enforcement, and legal services are all provided through contracts. The Aliso Viejo Community Association (AVCA), a Master Homeowners Association for the City of Aliso Viejo, owns and manages 21 parks within the City limits. AVCA also maintains 600 acres of landscaped slopes and parkways. The City owns and manages Iglesia Park, Vista Park, and the Aliso Viejo Ranch. The Orange County Library System provides public library services.

The legal level of budgetary control is the level at which management may not allocate resources without the City Council's approval. The level of budgetary control for the City is established at the fund level. Prior to the beginning of each fiscal year, the City Council adopts the annual budget, which serves as the foundation for the City's financial planning and control. All governmental funds are annually appropriated. The budget is arranged by fund, function, and department and presented to the Council by the City Manager. Transfers of appropriations within a fund can be made with the approval of the City Manager and Director of Financial Services. The City Council's approval is required for all budget amendments that result in a change to the total expenditure of a fund. The budget is reviewed mid-year in January by the City Manager and the Director of Financial Services to ensure compliance with City Council direction. The midyear budget is then presented to and

reviewed by the City Council and consideration is given to necessary changes for new programs, projects, and other adjustments to ensure that expenditures and revenues are in line with the budgeted projections.

The City maintains an encumbrance accounting system as an additional method of budgetary control. As demonstrated by the statements and schedules included in the financial section of this report, the City continues to meet its responsibility for sound fiscal management.

ECONOMIC CONDITION AND OUTLOOK

The U.S. economy during the fiscal year outperformed expectations with fears of a recession not materializing despite inflation, higher interest rates, and uncertainty regarding the new U.S. Administration's policies on tariffs, immigration, and other federal programs. According to the Bureau of Economic Analysis, Real Gross Domestic Product decreased by 0.6% in the first quarter of 2025; however, the second quarter bounced back with a 3.8% increase. Although the national unemployment rate continues to be low, job growth has slowed in recent months, increasing to 4.3% in August 2025 from 4.0% in January 2025.

Due to continued economic uncertainty, UCLA Anderson's Forecast in June 2025 expects economic growth to slow to near zero with only modest recovery anticipated through 2027. The forecast also expects inflation to rise as tariffs begin to affect supply chains, and unemployment is expected to reach 4.6%. UCLA does not anticipate a recession in 2025-26; however, international conflicts, tariffs, the impact of government shutdowns, immigration policy, higher unemployment, and continued high costs of insurance and housing, can dampen consumer confidence and push the national economy into a recession.

LOCAL ECONOMY

Although California's unemployment rate was estimated at 6.1% for July 2025, Orange County's rate has been consistently lower at 4.8%. Aliso Viejo's unemployment rate is lower than that of the County at 4.3%, according to data by the California Employment Development Department. Aliso Viejo is comprised of single-family homes, condominiums, and apartments as well as a mixture of retail, office, light industrial, and service entities, providing a diverse tax base for the City. Most retail and commercial businesses are oriented toward serving residents and visitors. The City is also home to regional and corporate headquarters in a variety of industries, particularly in the biomedical and healthcare industries, and is home to Soka University. The City is nearly built out, with limited future opportunities for new residential or commercial construction. However, efforts to revitalize existing sites, such as in the Aliso Viejo Town Center and The Commons at Aliso Viejo Town Center provide new opportunities and funding sources for the City.

The City's major revenue sources are property taxes, sales taxes, franchise fees, and transient occupancy taxes. General Fund resources, including transfers-in and other financing sources for FY 2024-25, totaled $32.1 million, compared to $28.2 million in the prior year. The revenue increase is primarily attributed to sales tax increasing year over year by 33.4%, or $2.8 million. The City benefitted from the unexpected growth of EFuel, LLC, which saw significant increases in sales tax revenue. Also contributing to the increase is the opening of the City's first and only car dealership, Tesla, along with 99 Ranch Market, and other businesses at The Commons. Furthermore, with the increase in the City's overall tax-base, the City's allocation of sales tax from the County Pool also increased by more than 37.0%. Property taxes remain stable, with modest increases of approximately $0.4 million, or 3.8% from growth in assessed values due to annual inflationary adjustments and higher

housing prices as low housing inventory continues to keep prices high. Transient occupancy taxes increased by $0.1 million or 8.2% from the City's two hotels, Homewood Suites and the Renaissance Clubsport. The Renaissance completed significant renovations, which had resulted in lower occupancy rates in the prior year. Franchise fees remained flat at $1.7 million.

Although revenues were higher compared to FY 2023-24, budgeted revenues for FY 2025-26 are lower than FY 2024-25 actuals by $5.3 million or 16.6%. Sales tax projections at the time of adoption had not anticipated growth with EFuel and were conservatively estimated to reflect lower consumer spending as consumers grapple with inflation, higher interest rates, and continued increases with housing and insurance costs. Property tax was also conservatively projected at $10.3 million and included only a 2% inflationary increase allowable under Prop 218. Estimates also factored in potential reductions in assessed values from appeals and lower transfer taxes as a result of a potentially slowing housing market. The reduction in overall revenue is also attributed to investment earnings as it excludes any market adjustments and unrealized gains.

The FY 2025-26 operating budget is balanced with General Fund resources and expenditures estimated at $26.8 million. General Fund reserves will fund $1.0 million in capital improvements at various City facilities. Budget reductions were made across all departments in an effort to control costs.

LONG TERM FINANCIAL PLANNING

As of June 30, 2025, the City has a General Fund balance of $44.4 million, which represents 160% of total FY 2024-25 General Fund appropriations. The balance includes $4.0 million for contingencies, $1.0 million for insurance and benefit obligations, $14.3 million for future replacement of City infrastructure assets, and $15.7 million for emergencies and unanticipated CIP projects. The unassigned fund balance is $9.4 million and is consistent with the City's adopted Fund Balance Policy, which strives to maintain an unassigned fund balance of 25-35% of budgeted operational expenditures. This provides a safety net that ensures government services are not impacted in the event of an unanticipated revenue shortfall or emergency. In addition, the City has $10.1 million in restricted special revenue funds for street and community development projects.

On August 13, 2019, the City issued $12,250,000 of tax-exempt Certificates of Participation (COP) to provide financing for the construction of the Aliso Viejo Ranch. The principal is due annually in amounts ranging from $230,000 to $635,000 on November 1 of each year commencing in 2020 through the year 2049. Interest is payable semi-annually in amounts ranging from $9,525 to $212,325 and is due on May 1 and November 1 of each year commencing on November 1, 2019. The interest payments have rates ranging from 0.96% to 3.09%. As of June 30, 2025, the principal remaining on the COP is $11,035,000.

City Council Goals and Priorities

Over the past few years, the City has undergone significant staffing changes, including directors, the appointment of a new City Manager, and newly elected Council Members. As a result of the changes, Staff considered it prudent to obtain the services of Baker Tilly Advisory Group, LP, to facilitate the development of a short-term strategic plan for the City. A strategic plan is a vital tool for cities to ensure that the City Council's goals and priorities are effectively communicated to employees and the community. This will also include the development of an action plan to align City resources towards achieving Council's goals.

On May 21, 2025, the City Council adopted the following three goals:

1. Financial Stability – Continue to ensure the City's financial stability through careful planning and evaluation of revenue and investment opportunities.
2. Infrastructure Investment – Maintain, replace, and fund the City's capital assets through infrastructure investment.
3. Aliso Viejo Ranch – Develop a plan to establish the Ranch as a prized community asset.

To accomplish these goals, the City Council also established the following priorities:

1. Identify and pursue alternative funding opportunities to support key City projects, the Capital Improvement Program, and goals.
2. Monitor and routinely review contracts and agreements to ensure the appropriate delivery of services, alignment with procurement policies and procedures, and to identify potential cost savings.
3. Prepare a master schedule to plan and budget future maintenance needs based on the recently completed asset evaluation.
4. Review expenditures and seek opportunities for cost savings at the Aliso Viejo Ranch.
5. Identify services and programs at the Ranch that will increase community participation.
6. Create a projection to increase cost recovery for the Ranch.

MAJOR INITIATIVES

The City's Economic Development program continued ongoing initiatives aimed at facilitating the retention and expansion of existing businesses, attracting new businesses to the community and promoting the City's "business friendly" environment.

During FY 2024-25, the City's first and only car dealership, Tesla, opened its doors at The Commons at Aliso Viejo Town Center. In addition, 99 Ranch Market, Daiso, MiniSo, and various restaurants also began operations within the City. In the next year, the City anticipates the continued revitalization of The Commons with the opening of new entertainment ventures such as Lucky Strike and Sender One Climbing, as well as additional dining options in Aliso Viejo Town Center. Lastly, new housing development projects are in various stages of development throughout the City.

In 2016, the City entered into an economic development subsidy agreement with EFuel, LLC, an on-site mobile fueling business. Under the agreement, the City provides sales tax payments of 50% for the first $800,000 of sales tax received and 70% for amounts above $800,000. EFuel expanded their business during the fiscal year resulting in total sales tax of $2.5 million. As a result, the City abated sales tax in the amount of $1.6 million to EFuel, resulting in net revenue of $0.9 million to the City.

In August 2023, the City entered into another economic development subsidy agreement with Hunt and Sons, LLC, which has a similar business model to EFuel. The agreement contained similar subsidy terms provided to EFuel. Based on reported sales tax revenue generation of approximately $2.8 million, payments to Hunt and Sons was estimated to total $1.8 million during the fiscal year, providing net income to the City of approximately $1.0 million.

RELEVANT FINANCIAL POLICIES

The City has made a practice of living within its means since incorporation. In the fiscal year 2005-06, the City Council formally adopted a Management and Budget policy to promote sound financial management which, in turn, led to improved bond ratings and lower cost of capital. The City continues to be conservative with expenditures while maintaining adequate reserves in accordance with City policies. General Fund surpluses, as well as outside funding sources when available, have been used to fund projects as directed by the City Council. To uphold the City's reputation of providing excellent amenities for residents and businesses, City staff continues to actively pursue outside grants and funding opportunities whenever possible. The City's Fund Balance Policy was approved in 2012 to establish procedures for reporting unrestricted fund balances in the City's financial statements. The policy authorizes the City Manager and Director of Financial Services to prepare financial reports which accurately categorize fund balance per GASB 54, *Fund Balance Reporting and Governmental Fund Type Definitions.* The City's long-term financial plans are also in accordance with these policies.

AWARDS AND ACKNOWLEDGMENTS

The Government Finance Officers Association (GFOA) offers a Certificate of Achievement for Excellence in Financial Reporting to cities for their Annual Comprehensive Financial Report (ACFR). This Certificate is a prestigious award, recognizing conformance with the highest standards of state and local government financial report preparation. In order to be awarded a Certificate of Achievement, a government unit must publish an easily readable and efficiently organized ACFR, whose contents conform to program standards. Such an ACFR must satisfy both generally accepted accounting principles and applicable legal requirements. The City submitted its FY 2023-24 ACFR and received the award for excellence in financial reporting from GFOA. The Certificate is valid for a period of one year. The City will also be submitting its FY 2024-25 ACFR to GFOA for review. We would like to recognize the assistance of the Financial Services staff in the preparation of the ACFR and our independent auditor, Davis Farr, LLP for their expertise and guidance in preparing the financial report. Through the team effort of the City Council and staff, the City has been able to maintain a sound financial base from which to operate and continue to provide a high level of service to the community.

Respectfully submitted,

Mitzi Ortiz

Independent Auditor's Report

City Council
City of Aliso Viejo
Aliso Viejo, California

Report on the Audit of the Financial Statements

Opinions

We have audited the financial statements of the governmental activities, each major fund, and the aggregate remaining fund information of the City of Aliso Viejo (the City), as of and for the year June 30, 2025, and the related notes to the financial statements, which collectively comprise the City's basic financial statements as listed in the table of contents.

In our opinion, the accompanying financial statements present fairly, in all material respects, the respective financial position of the governmental activities, each major fund, and the aggregate remaining fund information of the City, as of June 30, 2025, and the respective changes in financial position for the year then ended in accordance with accounting principles generally accepted in the United States of America.

Emphasis of Matter

During the year ended June 30, 2025, the City implemented Governmental Accounting Standards Board (GASB) Statement No. 101: Compensated Absences. Our opinion is not modified with respect to this matter.

Basis for Opinions

We conducted our audit in accordance with auditing standards generally accepted in the United States of America (GAAS) and the standards applicable to financial audits contained in *Government Auditing Standards*, issued by the Comptroller General of the United States. Our responsibilities under those standards are further described in the Auditor's Responsibilities for the Audit of the Financial Statements section of our report. We are required to be independent of the City and to meet our other ethical responsibilities, in accordance with the relevant ethical requirements relating to our audit. We believe that the audit evidence we have obtained is sufficient and appropriate to provide a basis for our audit opinions.

Responsibilities of Management for the Financial Statements

The City's management is responsible for the preparation and fair presentation of the financial statements in accordance with accounting principles generally accepted in the United States of America, and for the design, implementation, and maintenance of internal control relevant to the preparation and fair presentation of financial statements that are free from material misstatement, whether due to fraud or error.

In preparing the financial statements, management is required to evaluate whether there are conditions or events, considered in the aggregate, that raise substantial doubt about the City's ability to continue as a going concern for one year after the date that the financial statements are issued.

Auditor's Responsibilities for the Audit of the Financial Statements

Our objectives are to obtain reasonable assurance about whether the financial statements as a whole are free from material misstatement, whether due to fraud or error, and to issue an auditor's report that includes our opinions. Reasonable assurance is a high level of assurance but is not absolute assurance and therefore is not a guarantee that an audit conducted in accordance with GAAS will always detect a material misstatement when it exists. The risk of not detecting a material misstatement resulting from fraud is higher than for one resulting from error, as fraud may involve collusion, forgery, intentional omissions, misrepresentations, or the override of internal control. Misstatements are considered material if there is a substantial likelihood that, individually or in the aggregate, they would influence the judgment made by a reasonable user based on the financial statements.

In performing an audit in accordance with GAAS, we:

- Exercise professional judgment and maintain professional skepticism throughout the audit.
- Identify and assess the risks of material misstatement of the financial statements, whether due to fraud or error, and design and perform audit procedures responsive to those risks. Such procedures include examining, on a test basis, evidence regarding the amounts and disclosures in the financial statements.
- Obtain an understanding of internal control relevant to the audit in order to design audit procedures that are appropriate in the circumstances, but not for the purpose of expressing an opinion on the effectiveness of the City's internal control. Accordingly, no such opinion is expressed.
- Evaluate the appropriateness of accounting policies used and the reasonableness of significant accounting estimates made by management, as well as evaluate the overall presentation of the financial statements.
- Conclude whether, in our judgment, there are conditions or events, considered in the aggregate, that raise substantial doubt about the City's ability to continue as a going concern for a reasonable period of time.

We are required to communicate with those charged with governance regarding, among other matters, the planned scope and timing of the audit, significant audit findings, and certain internal control–related matters that we identified during the audit.

Required Supplementary Information

Accounting principles generally accepted in the United States of America require that the *management's discussion and analysis, budgetary comparison information, capital assets – modified approach for infrastructure, and pension and other post-employment benefit schedules* be presented to supplement the basic financial statements. Such information is the responsibility of management and, although not a part of the basic financial statements, is required by the Governmental Accounting Standards Board who considers it to be an essential part of financial reporting for placing the basic financial statements in an appropriate operational, economic, or historical context. We have applied certain limited procedures to the required supplementary information in accordance with auditing standards generally accepted in the United States of America, which consisted of inquiries of management about the methods of preparing the information and comparing the information for consistency with management's responses to our inquiries, the basic financial statements, and other knowledge we obtained during our audit of the basic financial statements. We do not express an opinion or provide any assurance on the information because the limited procedures do not provide us with sufficient evidence to express an opinion or provide any assurance.

Supplementary Information

Our audit was conducted for the purpose of forming opinions on the financial statements that collectively comprise the City's basic financial statements. The *combining and individual nonmajor fund financial statements and schedules* are presented for purposes of additional analysis and are not a required part of the basic financial statements.

The *combining and individual nonmajor fund financial statements and schedules* are the responsibility of management and were derived from and relate directly to the underlying accounting and other records used to prepare the basic financial statements. Such information has been subjected to the auditing procedures applied in the audit of the basic financial statements and certain additional procedures, including comparing and reconciling such information directly to the underlying accounting and other records used to prepare the basic financial statements or to the basic financial statements themselves, and other additional procedures in accordance with auditing standards generally accepted in the United States of America. In our opinion, the *combining and individual nonmajor fund financial statements and schedules* are fairly stated, in all material respects, in relation to the basic financial statements as a whole.

Other Information

Management is responsible for the other information included in the Annual Comprehensive Financial Report. The other information comprises the *introductory section* and *statistical section* but does not include the financial statements and our auditor's report thereon. Our opinions on the financial statements do not cover the other information, and we do not express an opinion or any form of assurance thereon. In connection with our audit of the financial statements, our responsibility is to read the other information and consider whether a material inconsistency exists between the other information and the financial statements, or the other information otherwise appears to be materially misstated. If, based on the work performed, we conclude that an uncorrected material misstatement of the other information exists, we are required to describe it in our report.

Report on Summarized Comparative Information

We have previously audited the City's June 30, 2024, financial statements, and we expressed unmodified audit opinions on those audited financial statements in our report dated November 21, 2024. In our opinion, the summarized comparative information presented herein as of and for the year ended June 30, 2024 is consistent, in all material respects, with the audited financial statements from which it has been derived.

Other Reporting Required by Government Auditing Standards

In accordance with *Government Auditing Standards*, we have also issued our report dated November 13, 2025 on our consideration of the City's internal control over financial reporting and on our tests of its compliance with certain provisions of laws, regulations, contracts, and grant agreements and other matters. The purpose of that report is solely to describe the scope of our testing of internal control over financial reporting and compliance and the results of that testing, and not to provide an opinion on the effectiveness of internal control over financial reporting or on compliance. That report is an integral part of an audit performed in accordance with *Government Auditing Standards* in considering the City's internal control over financial reporting and compliance.

THIS PAGE INTENTIONALLY LEFT BLANK

The purpose of the management's discussion and analysis (MD&A) is to help City residents and other readers understand what the financial statements and notes in this financial report say about the City's financial health and why it has changed since last year. It contains information drawn from those other parts of the report, accompanied by explanations informed by the finance staff's knowledge of the City's finances. The MD&A also provides an overview of the City's financial activities for the year ended June 30, 2025. Please read it in conjunction with the transmittal letter at the front of this report and the accompanying basic financial statements which follow this section.

If you have any questions about this report or require further information, contact the Department of Financial Services at finance@avcity.org or (949) 425-2520.

Financial Highlights

- Assets and deferred outflows of resources of the City exceeded its liabilities and deferred inflows of resources at June 30, 2025, by $150.5 million. This amount is referred to as the net position of the City. Of this amount, $42.3 million is unrestricted.
- The City increased its overall net position by $7.2 million or 5.0% for a total net position of $150.5 million.
- General Fund resources, which include revenues, transfers-in, and other financing sources, total $32.1 million, exceeding expenditures and transfers out of $25.5 million, resulting in an increase to the General Fund balance by $6.6 million to $44.4 million. This balance is comprised of assigned funds of approximately $35.0 million and $9.4 million of unassigned funds. The estimated fund balance at the fiscal year ended June 30, 2025, is equal to 160% of the FY 2025-26 Adopted General Fund budget appropriations, including capital and debt service payments.
- As of June 30, 2025, the City's governmental funds reported combined ending balances of $54.5 million, an increase of $8.9 million from the prior year. Of this amount, $10.2 million is restricted or non-spendable and $44.3 million is unrestricted.

Overview of the Financial Statements

This annual report consists of a series of financial statements. The Statement of Net Position and the Statement of Activities provide information about the activities of the City as a whole and allow a longer-term view of the City's finances. Fund Financial Statements tell how City services were financed in the short-term as well as what remains for future spending. Fund financial statements also report the City's operations in more detail than the government-wide statements by providing information about the City's most significant funds.

Reporting the City as a Whole: The Statement of Net Position and the Statement of Activities

The Statement of Net Position and the Statement of Activities report information about the City as a whole and in a way that helps clarify the City's overall financial position. These statements include all assets and liabilities using the accrual basis of accounting, which is similar to the accounting method used by most private sector companies. All current year revenues and

expenses are taken into account, regardless of when cash is received or paid. These two statements report the City's net position and changes in them. Net position, which is the difference between assets and liabilities, is one way to measure the City's financial health, or financial position. Over time, increases or decreases in the City's net position is one indicator of whether its financial health is improving or deteriorating. Consideration should also be given to other non-financial factors, such as changes in the City's property tax base and the condition of the City's roads, to assess the overall health of the City.

All of the City's basic services are considered to be governmental activities. The Statement of Net Position and the Statement of Activities present information about these governmental activities, including general government, community development, community services, public safety, and public works. Property tax, sales tax, transient occupancy tax, and franchise fees finance over 78.1% of these activities.

Reporting the City's Most Significant Funds: Fund Financial Statements

The Fund Financial Statements provide detailed information about the most significant funds - not the City as a whole. In addition to the General Fund, the Aliso Viejo Center is included. Lesser funds are collectively reported as Nonmajor Governmental Funds. Some funds are required to be established by State law. However, the City Council establishes many other funds to help it control and manage money for particular purposes or to show that it is meeting legal responsibilities for using certain taxes, grants, and other money.

The City currently has just one type of fund - governmental - which uses the modified accrual accounting approach. Governmental funds focus on how money flows into and out of those funds and the balances left at year-end that are available for spending. Most of the City's basic services are reported in governmental funds. Under the modified accrual method of accounting, revenues are recognized in the accounting period in which they become measurable and available to finance expenditures of the current fiscal period while expenditures are recognized in the accounting period in which the liability is incurred.

The governmental fund statements provide a detailed short-term view of the City's general government operations and the basic services it provides. Governmental fund information helps the reader determine whether there are more or less financial resources that can be spent in the near future to finance the City's programs. The relationship and differences between governmental activities reported in the Statement of Net Position and the Statement of Activities and the governmental funds statements are detailed in the reconciliations immediately following each of the fund financial statements.

The City as Trustee: Reporting the City's Fiduciary Responsibilities

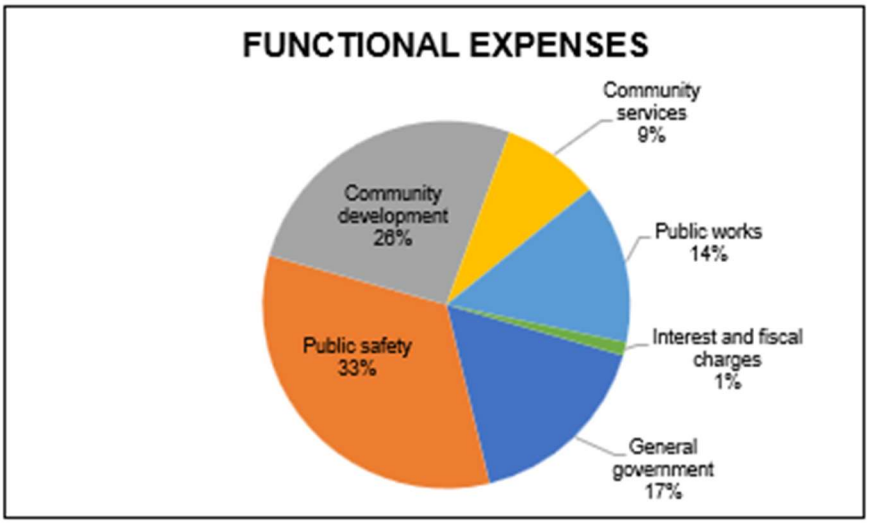
The City is the trustee, or fiduciary, for certain amounts held on behalf of developers, property owners, and others. The City's fiduciary activities are reported in the Statement of Fiduciary Assets and Liabilities. We exclude these activities from the City's other financial statements because the City cannot use these assets to finance its operations. The City is responsible for ensuring that the assets reported in these funds are used only for their intended purposes.

THE CITY AS A WHOLE

Our analysis focuses on the net position (Table 1) and change in net position (Table 2) of the City's governmental activities. The City has no business-type activities.

Table 1
Condensed Statement of Net Position

	Governmental Activities	
	2025	2024
Current and other assets	$ 59,734,443	$ 51,738,117
Capital assets, net	110,397,038	111,853,655
Total assets	**170,131,481**	**163,591,772**
Total deferred outflows of resources	**1,018,488**	**1,270,778**
Current liabilities	6,012,219	6,647,110
Non current liabilities	14,055,457	14,118,971
Total liabilities	**20,067,676**	**20,766,081**
Total deferred inflows of resources	**586,184**	**834,081**
Net Position:		
Net investment in capital assets	97,997,803	99,321,092
Restricted	10,222,546	7,522,162
Unrestricted	42,275,760	36,419,134
Total net position	**$ 150,496,109**	**$ 143,262,388**



Assets and deferred outflows of resources of the City exceeded its liabilities and deferred inflows of resources at June 30, 2025, by $150.5 million. Total assets increased by $6.5 million or 4.0% due to increases in cash and investments primarily in the General Fund and street improvement funds, such as Measure M, Gas Tax, and SB1. Total deferred outflows of resources decreased by $0.3 million or 19.9% as a result of lower pension related resources. Total liabilities decreased by $0.7 million or 3.4% due to a decrease in accounts payable and deposits payable. Total deferred inflows of resources decreased by approximately $0.3 million or 29.7% because the prior year included lease receivables for City Hall.

The City increased its overall net position by $7.2 million or 5.0% from the prior year. The largest portion of the City's net position reflects its investment in its buildings and infrastructure. Net investment in capital assets for FY 2024-25 total $98.0 million and represents 65.1% of the City's total net position. $10.2 million is restricted, representing special revenue resources that are subject to their funding stipulations, such as street improvements, specific public safety expenditures, and community development projects. Unrestricted net position totals $42.3 million and is an increase of $5.9 million, which is largely attributed to an increase in the General Fund balance.

Table 2
Change in Net Position

	2025	2024
Revenues		
Program Revenues:		
Charges for services	$ 7,205,235	$ 7,731,011
Operating contributions and grants	4,962,919	5,427,985
General Revenues:		
Taxes:		
Sales taxes	11,154,921	8,359,623
Property taxes	10,287,203	9,911,103
Franchise taxes	1,813,044	1,875,533

Use of money and property	1,621,512	1,207,332
Other	378,730	747,990
Total Revenues	$ 39,204,946	$ 36,895,196
Expenses		
General government	5,363,026	6,125,440
Public safety	10,585,244	10,147,491
Community development	8,399,470	7,679,606
Community services	2,755,431	2,730,921
Public works	4,500,614	5,310,206
Interest and fiscal charges	367,460	382,504
Total expenses	$ 31,971,245	$ 32,376,168
Increase (Decrease in net position)	**$ 7,233,701**	**$ 4,519,028**
Net position - beginning of year, as restated (note 18)	$ 143,262,388	$ 138,743,360
Net position - end of year	$ 150,496,089	$ 143,262,388

Total revenues for governmental activities amounted to $39.2 million during FY 2024-25 and reflect an increase of $2.3 million or 6.3% over the prior year. Significant sales tax increases due to the growth of EFuel, LLC, a fueling company based in Aliso Viejo, largely offset decreases in program revenues due to lower demand for facility rentals at the Aliso Viejo Ranch and Aliso Viejo Center. Functional expenditures totaled $32.0 million and decreased by $0.4 million or 1.3% compared to the prior year from lower expenditures in public works due to the deferral of the Glenwood street improvement project. Total revenues exceeded program expenses by $7.2 million in FY 2024-25.

Revenues

The City's major general revenue sources are property taxes, sales taxes, franchise fees, and transient occupancy taxes. Property taxes total $10.3 million, an increase of $0.4 million or 3.8% due to higher assessed property values from annual inflationary adjustment of 2%, the maximum allowed under Prop 13.

Transient occupancy taxes totaled $1.7 million, up by $0.1 million or 8.2%. This was primarily due to renovations at the Renaissance ClubSport in the prior year which hampered occupancy rates. Sales tax revenue saw a significant increase of $2.8 million or 33.4% from growth in one of the City's highest sales tax producers, EFuel, the opening of Tesla at The Commons at Aliso Viejo Town Center, and a higher allocation of the County's pool.

Franchise fees decreased by approximately $62,000 or 3.3%, which is attributable to lower receipts from gas and cable fees. The use of money and property, which includes investment and rental income at City Hall, increased by 34.3% to $1.6 million primarily as a result of higher interest rates.

Program revenues include charges for services, operating grants and contributions, and capital contributions and grants. Overall program revenues decreased by $1.0 million or 7.5%. Revenue from services decreased approximately $0.5 million or 6.8% from lower demand in facility rentals at the Aliso Viejo Ranch and Aliso Viejo Center. In addition, other contributions and grants decreased by $0.5 million or 8.6% from the end of CDBG-CV funding provided in response to the Covid epidemic.

Expenses

Total expenses for all City services, which include law enforcement, animal control, building and planning services, public works, engineering, environmental compliance, and administration decreased by $0.4 million or 1.3%. Expenditures for Community Development increased by $0.7 million due to increases in sales tax subsidy payments for the City's two sales tax sharing agreements with EFuel and Hunt and Sons, LLC. This was offset by a decrease in public works spending of $0.8 million from the delay of the Glenwood street rehabilitation project, which was rescheduled for FY 2025-26.

General Government expenses include City Council, City Manager, City Attorney, City Clerk, Human Resources, Financial Services, Information Technology, and other general expenses, such as insurance premiums, maintenance of City Hall, and community outreach. General Government expenses decreased by $0.8 million or 12.4% as a result of a one-time severance payment in the prior year and salary savings from positions that were vacant for part of FY 2024-25.

The County of Orange approved new labor agreements in 2023 resulting in increased wages and benefits for their employees, which increased costs for public safety by $0.4 million or 4.3%. Increases from the contract were offset with the freezing of one motor officer position and other vacancy credits within the Sheriff's Department.

Community Services expenditures were flat at $2.7 million given the effort to offset cost increases from salaries and inflation with various budget reductions.

Government Activities

Tables 3 and 3A present the cost of each of the City's programs: General Government (Administrative Services), Community Development, Community Services, Public Safety, and Public Works as well as each program's net cost (total cost less revenues generated by the activities). The total cost of all governmental activities in FY 2024-25 was $32.0 million. That cost is financed by program revenues of $12.2 million. Net cost of services is $19.8 million and is funded with general fund resources.

Table 3
Net Cost of Governmental Activities
Fiscal Year Ended June 30, 2025

	Total Cost of Services	Program Revenues	Net Revenue/Cost of Services
General government	$ 5,363,026	$ -	$ 5,363,026
Public safety	10,585,244	(614,500)	9,970,744
Community development	8,399,470	(5,374,046)	3,025,424

FINANCIAL ANALYSIS OF THE CITY'S FUNDS

Governmental Funds

At year-end, the City's Governmental Funds reported a combined Fund Balance of $54.5 million, an increase of 19.5% or $8.9 million from the prior year. Increases to the fund balances include $6.6 million in the General Fund and $2.3 million in restricted street improvement funds from gas taxes, SB1, Measure M, and AQMD. The fund balance includes $5,885 in non-spendable funds. Restricted funds of $10.1 million include approximately $1.9 million for community development projects, $7.8 million for capital projects, and $0.4 million for public safety. $35.1 million or 64.3% of the fund balance is assigned for contingencies, insurance obligations, asset replacement, and emergencies. The remaining $9.3 million or 17.0% of the fund balance is unassigned, which is available for spending at the City's discretion.

General Fund

The General Fund is the primary operating fund of the City and is 81.5% of the City's overall fund balance. General fund operations include Administration and Support, Community and Economic Development, Community Services, Public Safety, and Public Works. The General Fund also funds the City's debt service payment on the Certificates of Participation (COP) for the Aliso Viejo Ranch. General Fund capital improvement includes building improvements at City Hall and Aliso Viejo Ranch, as well as the Aquatic Center, Aliso Viejo Center, and the Iglesia Park and Community Center.

For FY 2024-25, General Fund revenues, transfers-in, and other financing sources totaled $32.1 million. Total resources exceeded expenditures and transfers out in the amount of $25.5 million, resulting in an increase to the General Fund balance of $6.6 million. Ending fund balance for the year increased by 17.3% to $44.4 million. This balance is comprised of assigned funds of $35.1 million and $9.4 million of unassigned funds. Assigned funds include $4.0 million for contingencies, $1.0 million for insurance and/or benefit obligations, $14.3 million for asset replacement, and $15.7 million for emergencies. The unassigned portion is the part of fund balance that is available for use without constraints established by legal requirements and totals $9.4 million and meets the City's Fund Balance Policy target of 25-35% of the operating budget. The total fund balance at the fiscal year ended June 30, 2025, is equal to 160% of the FY 2025-26 adopted General Fund budget appropriations.

The City's major revenue sources are property taxes, sales taxes, franchise fees, and transient occupancy taxes. Total General Fund resources for FY 2024-25 totaled $32.1 million, compared to $28.2 million in the prior year. Property taxes total $10.3 million, an increase of $0.4 million or 3.8%, due to higher assessed property values from the maximum 2% annual inflationary adjustment under Prop 13, as well as a continued strong housing market, despite higher interest rates. Transient occupancy taxes totaled $1.7 million, up by $0.1 million or 8.2%. This was primarily due to renovations at the Renaissance ClubSport in the prior year which hampered occupancy rates. Sales tax revenue saw a significant increase of $2.8 million or 33.4% from growth in one of the City's highest sales tax producers, EFuel, the opening of Tesla at The Commons at Aliso Viejo Town Center, and a higher allocation of the County's pool. Franchise fees decreased by $55,000 or 3.1%, which is attributable to lower receipts from gas and cable franchise fees. Revenue from Recreation decreased approximately $0.1 million or 4.9% from

lower demand in facility rentals at the Aliso Viejo Ranch and fewer participants in recreation classes. The use of money and property, which includes investment and rental income at City Hall, increased by $1.4 million primarily as a result of higher interest rates and a market adjustment of $0.6 million.

In addition, the General Fund saw a decrease in transfers in as a result of lower operating results at the Aliso Viejo Center. Net income at the Center totaled $0.8 million compared to $1.4 million in the prior year. Demand for facility rentals have normalized after a couple years of high demand as COVID restrictions ended.

General Fund expenditures and transfers out totaled $25.5 million and was $0.8 million higher than FY 2024-25 from increases in spending for economic development tax subsidy payments to the City's two tax-sharing agreements to EFuel and public safety.

Aliso Viejo Center

The Aliso Viejo Center provides facility rental and banquet services for large social gatherings, such as conferences and weddings. FY 2024-25 revenue totaled $3.2 million and was 12.8% or $0.5 million lower compared to the prior year. Expenditures increased by $0.1 million and totaled $2.4 million and reflected higher wages and additional marketing efforts to increase reservations. Although net income of $0.8 million was down from $1.4 million in the prior year, it exceeded budget expectations by $0.2 million.

General Fund Budgetary Highlights

Revenues: Actual revenues, transfers in, and other financing sources of $32.1 million exceeded the adopted budget projections of $26.8 million by $5.3 million, or 19.9% higher than budget estimates. This is primarily a result of unexpected growth in sales tax from EFuel, new businesses at The Commons at Aliso Viejo Town Center, and a greater share of the County pool. Investment earnings was higher by $1.6 million and included a $0.8 million market adjustment.

Transfers-in exceeded budget estimates by $0.3 million. This is primarily a result of better-than-expected net income from operations at the Aliso Viejo Center and $0.1 million from grant reimbursements, such as from the Permanent Local Housing Allocation Program, LEAP, and CDBG.

Expenditures: Actual expenditures and transfers out totaled $25.5 million and was $1.7 million under budget due to conservative spending across all departments. Administration and support costs were $0.7 million under budget from salary savings due to new employees and partially vacant positions during the fiscal year. Law enforcement contract costs were $0.9 million lower than budget due to high vacancy levels within the Orange County Sheriff's Department. Savings of $0.4 million in Community Services are from lower operating costs at Gold Cost Farms, facility maintenance costs, instructor fees, and a vacant Recreation Coordinator position. Public Works was also under budget by $0.2 million from lower-than-expected costs in environmental compliance and street maintenance. Lastly, $0.3 million in expected capital improvement costs were not expended due to project delays planned at the Aquatic Center. Savings across these areas offset the additional $0.6 million in economic development spending from increases in the tax subsidy payments to EFuel.

CAPITAL ASSET AND DEBT ADMINISTRATION

Capital Assets

As of June 30, 2025, the City had $110.4 million invested in a broad range of capital assets, including police equipment, buildings, land, park facilities, furniture and fixtures, and roads. (See Table 4 below). Additions to capital assets being depreciated were made in the amount of $0.6 million. This amount includes the purchase and replacement of a new HVAC unit at City Hall, new projectors at the Aliso Viejo Center, playground surface replacement at Vista Park, and renewal of software subscriptions for building and planning. Disposals of $1.4 million included the removal of a median between Aliso Creek and Pacific Park. Depreciation expense in the amount of $1.5 million was incurred in FY 2024-25. For additional information on capital assets, refer to Note 6 of Notes to the Financial Statements.

Table 4
Capital Assets at Year End
(Net of Depreciation)

Asset Type	2025	2024
Land	$ 14,315,978	$ 14,315,978
Buildings and improvements	36,046,837	36,627,939
Equipment, furniture and fixtures	162,720	270,940
Other infrastructure	5,274,581	6,201,107
Streets and highways	53,871,430	53,871,430
Construction in progress	-	-
Right-to-use assets	31,084	39,020
Right-to-use subscription assets	694,408	527,241
Total capital assets	$ 110,397,038	$ 111,853,655

Overall Pavement Network

The City of Aliso Viejo elected to use the modified approach in reporting their streets and roads network. Under the modified approach, infrastructure assets that are part of a network or subsystem of a network are not required to be depreciated if certain requirements are met, which are disclosed in the accompanying *Basic Financial Statements* and *Required Supplementary Information*. In March 2002, the City Council approved a condition level of 80 as the minimum acceptable Pavement Condition Index (PCI). The following schedule discloses a comparison between the City's assessed condition level of the streets and roads network as of May 2024, and the City's adopted target level of condition.

Actual Assessed Condition Level	Minimum Condition Level
82	80

Under the modified approach, GASB Statement No. 34 requires that condition assessments be performed every three years. Last completed in May 2024, the City traditionally performs an assessment every two years. It is the City's intention to have another complete assessment performed on or before fiscal year ending June 30, 2026.

During the year ended June 30, 2025, actual streets and roads maintenance project costs were $2.1 million compared to the estimate of $4.1 million. The amount of underspending was due to the delay of the Glenwood street rehabilitation project, which was rescheduled to be completed in FY 2024-25 but moved to FY 2025-26.

Debt

On August 13, 2019, the City issued $12,250,000 of tax-exempt Certificates of Participation to provide financing for the construction of the Aliso Viejo Ranch. The principal is due annually in amounts ranging from $230,000 to $635,000 on November 1 of each year commencing in 2020 through the year 2049 with a coupon rate ranging from 2% to 4%.

In March of 2014, staff coordinated the refinancing of the Community Facilities District (CFD) bonds issued in conjunction with the Glenwood development. Based on the final pricing of the CFD bonds, Glenwood property owners are saving an average of $899 per year. Subsequently, in December 2023, staff coordinated the refinancing of the 2014 bonds, providing savings of approximately $800 on average per year for residents within the CFD.

Non-Current Liabilities

Changes in non-current liabilities for the fiscal year ended June 30, 2025, are provided in Table 5. For additional information on non-current liabilities, refer to Note 7 of the Notes to the Financial Statements.

Table 5
Non-Current Liabilities

Total	$ 12,728,226	$ 471,286	$ (437,342)	$ 12,762,170	$ 631,668	$ 12,130,502

ECONOMIC FACTORS AND FISCAL YEAR 2025-26 BUDGET

Although the U.S. economy in FY 2024-25 outperformed expectations, forecasts expect growth to slow due to higher interest rates, inflation, as well as rising national and consumer debt. Recession forecasts continue to be mixed, with the effects of tariffs not yet fully known. Furthermore, the rising costs of insurance, food, fuel, consumer goods, and services may exacerbate an already slowing economy.

The FY 2025-26 budget includes appropriations for programs and projects necessary to provide essential services to the community. General Fund revenues are estimated to total $26.8 million. The General Fund operating budget is balanced totaling approximately $26.8 million. A General Fund operating surplus of approximately $40,000 is projected with General Fund reserves needed to fund $1.0 million in capital improvements, resulting in a net decrease to fund balance in the amount of $1.0 million. The estimated year-end General Fund balance will decrease by approximately $1.0 million to $43.4.

General Fund Revenues

Revenue forecasts for FY 2025-26 were prepared using estimates and projections provided by the State, other agencies, and City consultants. Due to continued uncertainty regarding the economy, General Fund resources were conservatively estimated to total $26.8 million and is approximately $5.2 million less than FY 2024-25 actuals. The conservative estimates at the time did not include any projected growth in sales tax from EFuel and include overall lower franchise fees, building and planning fees, parking fines, interest earnings, and transfers from the Aliso Viejo Center.

The City receives 82.2% of its General Fund revenue from taxes. This includes property tax, sales tax, transient occupancy tax (TOT), and franchise fees. Property tax is estimated at $10.3 million and is projected to remain relatively flat compared to the current year. Although Proposition 13 allows for a maximum of 2% increase annually in a property's assessed value, the additional revenue gained from the annual adjustment is offset by potential losses from valuation appeals and unpredictable transfer taxes.

Sales tax is conservatively estimated at $8.5 million, a decrease of $2.6 million or 25.3% from FY 2024-25 actuals and did not anticipate any growth that EFuel recently experienced. Mid-year adjustments will be presented to City Council if the growth in sales tax from EFuel is received from the California Department of Tax and Fee Administration and therefore requiring a corresponding budget appropriation for increases to sales tax subsidy payments.

TOT and franchise fees remain consistent year after year at approximately $1.6 million. The City has two hotels and therefore any significant growth is not anticipated. Franchise fees from the City's utilities and waste hauler are expected to increase slightly, however, these increases are offset by decreases in cable fees and the potential loss of approximately $50,000 annually from the County as a result of a new Waste Disposal Agreement, which is currently being negotiated.

Other revenue sources include recreation fees, building and planning, traffic and parking fines, investments earnings, and net income from the Aliso Viejo Center. Recreation fees total

approximately $1.6 million and include facility rentals at the Ranch, classes, and camps. Although the current year saw a decline in larger events hosted by non-residents, such as weddings, FY 2025-26 estimates are flat compared to FY 2024-25. Building and planning fees are estimated to decline because the current year includes one-time fees from the expansion of the Kaiser facility. Investment income is estimated at $0.9 million as a result of higher interest rates. Net income from the Aliso Viejo Center is estimated at $0.7 million and reflects a return to normal demand levels.

General Fund Appropriations

The General Fund operating budget totals $26.8 million and includes $0.2 million in transfers to the Aliso Viejo Aquatic Center Fund to bridge the operating gap at that facility. The operating budget includes salaries and benefits for 29 full-time positions, five elected officials, and part-time positions primarily in Community Services. Salary and benefit expenses include merit-based increases and cost-of-living adjustments (COLA) in accordance with the Classification and Compensation Plan approved by Council in 2018, which is based on the Annual Consumer Price Index, Urban Wage Earners and Clerical Workers, Los Angeles-Long Beach-Anaheim (CPI-W) of 3.1%.

In addition, appropriations include CalPERS pension costs of $0.4 million and $0.2 million in unfunded pension liability. As of the most recent CalPERS actuarial valuation, the City's accrued liability's funded ratio is above the required funding level of 80%, as established by Council policy in 2017.

The FY 2025-26 budget provides the necessary funding to continue essential services throughout the community. The operating budget reflects an increase of approximately 6.0%, or $1.5 million compared to the FY 2024-25 actuals. The year-over-year increase is primarily a result of $1.3 million more for public safety due to increases in the law enforcement contract with the Orange County Sheriff's Department, animal care services with the City of Mission Viejo, and crossing guard services.

Budget reductions were made across all departments to offset higher costs and balance the operating budget. Reductions include freezing of a motor officer position within the law enforcement contract and the conversion of a full-time Emergency Management Coordinator to part-time, as well as reductions for professional services in Administration and Support, Public Works, and Community Development. Costs were also reduced for recreation, classes, and training.

FY 2025-26 also includes a re-prioritization of City infrastructure spending and includes over $1.0 million in General Fund capital improvement at City facilities, as well as over $7.2 million in special-revenue funded street improvements.

Special Revenue Funds

In addition to the General Fund, the City uses "Special Revenue Funds" to fund various City expenditures. Special Revenue Funds are typically restricted funds, such as Gas Tax, SB 1, Measure M, Federal Grants, and Other Grants. These funds can only be used for specific purposes. Revenue and appropriations for all Special Revenue Funds for FY 2025-26 are approximately $9.8 million and $14.1 million, respectively.

At the end of FY 2025-26 operations, the estimated combined fund balance for all City funds will be approximately $49.2 million.

CONTACTING THE CITY'S FINANCIAL MANAGEMENT

This financial report is designed to provide our citizens, taxpayers, customers, investors, and creditors with a general overview of the City's finances and to show the City's accountability for the money it receives. If you have questions about this report or need additional financial information, contact the City's Department of Financial Services, City of Aliso Viejo, 12 Journey, Suite 100, Aliso Viejo, California, 92656, or call (949) 425-2520.

Major Governmental Funds

GENERAL FUND

The General Fund has been classified as a major fund and is used to account for revenues and expenditures that are not required to be accounted for in another fund.

SPECIAL REVENUE FUNDS

Special Revenue Funds are used to account for specific revenues that are legally restricted to expenditure for a particular purpose. The following fund have been classified as a major fund.

Aliso Viejo Center

This fund is used to account for the operations of the Aliso Viejo Center. The Aliso Viejo Center is a City owned facility that serves as an ideal venue to accommodate an array of functions, such as banquets, wedding celebrations, conferences, and corporate events.

Nonmajor Governmental Funds

Nonmajor Governmental Funds

These funds constitute all other governmental funds that do not meet the major 10% and 5% test of assets, liabilities, revenues, or expenditures for the governmental funds. These funds consist of other Special Revenue Funds, Capital Projects Funds and a Debt Service Fund for the City.

CITY OF ALISO VIEJO

RECONCILIATION OF THE BALANCE SHEET OF GOVERNMENTAL FUNDS TO THE STATEMENT OF NET POSITION JUNE 30, 2025

Fund Balances of Governmental Funds	$	54,505,093
Amounts reported for governmental activities in the Statement of Net Position are different because:		
Capital assets used in governmental activities are not current financial resources and, therefore, are not reported in the funds:		
Capital assets		139,013,914
Accumulated depreciation/amortization		(28,616,876)
Deferred inflows and outflows of resources related to pension and OPEB have not been reported in the governmental funds:		
Deferred outflows - Pension related items		970,976
Deferred outflows - OPEB related items		47,512
Deferred inflows - Pension related		(23,591)
Deferred inflows - OPEB related		(499,779)
Compensated absences that have not been included in the governmental fund activity.		(362,935)
Governmental funds report all pension contributions as expenditures, however, in the Statement of Net Position, the excess of the plan's proportionate share of the total pension liability over the proportionate share of the plan's fiduciary net position is reported as a net pension liability.		(1,682,414)
Governmental funds report all OPEB contributions as expenditures, however, in the Statement of Net Position, any excesses of the OPEB plan's total pension liability over the OPEB plan's fiduciary net position is reported as a net OPEB liability.		(562,557)
Revenues reported as unavailable revenue in the governmental funds are recognized in the Statement of Activities. These are classified as intergovernmental revenues in the Government-Wide Financial Statements.		106,001
Long-term liabilities are not due and payable in the current period:		
Bonds payable		(11,035,000)
Unamortized premium		(806,719)
Subscription liability		(526,549)
Lease liability		(30,967)
Net Position of Governmental Activities	$	150,496,109

See notes to financial statements

CITY OF ALISO VIEJO

RECONCILIATION OF THE STATEMENT OF REVENUES, EXPENDITURES, AND CHANGES IN FUND BALANCES TO THE STATEMENT OF ACTIVITIES FOR THE YEAR ENDED JUNE 30, 2025

Net Change in Fund Balances - Total Governmental Funds	$	8,883,455
Amounts reported for governmental activities in the Statement of Activities are different because:		
Governmental funds report capital outlays as expenditures. However, in the Government-Wide Statement of Activities, the costs of those assets are allocated over their estimated useful lives as depreciation expense.		
Capital outlay		816,222
Disposition of capital assets		(762,938)
Depreciation and amortization		(1,509,901)
Compensated absences expenses reported in the Statement of Activities do not require the use of current financial resources and therefore, are not reported as expenditures in governmental funds.		(105,500)
Pension obligation expenses, net of pension deferred related amounts, reported in the Statement of Activities do not require current financial resources and therefore, are not reported as expenditures in governmental funds.		(208,069)
OPEB obligation expenses, net of OPEB deferred related amounts, reported in the Statement of Activities do not require current financial resources and therefore, are not reported as expenditures in governmental funds.		(24,063)
Revenues reported as unavailable revenue in the governmental funds are recognized in the Statement of Activities. These are classified as program revenues in the Government-Wide Financial Statements.		72,959
The issuance of long-term debt provides current financial resources in the governmental funds, but issuance of debt increases the long-term liabilities in the Statement of Net Position, while the repayment of long-term liabilities consumes the current financial resources of governmental funds.		
Issuance of SBITAs		(365,786)
Bonds principal		260,000
Unamortized premium		32,269
Leases principal		7,408
Subscription principal		137,665
Change in Net Position of Governmental Activities	$	7,233,721

Note 1: Summary of Significant Accounting Policies

The accounting policies of the City of Aliso Viejo conform to generally accepted accounting principles as applicable to governments. The Governmental Accounting Standards Board (GASB) is the accepted standard-setting body for establishing governmental accounting and financial reporting principles.

a. Reporting Entity

The City of Aliso Viejo (the City) was incorporated July 1, 2001, under the general laws of the State of California. The City operates under the Council-Manager form of government.

The City provides the following services as authorized by its general laws: public safety, public works, community development and general administrative services.

Generally accepted accounting principles require that these financial statements present the City and its component units, entities for which the City is considered to be financially accountable. As of the end of the reporting period the City had one component unit as defined by the GASB.

Aliso Viejo Public Facilities Corporation

The Aliso Viejo Public Facilities Corporation (Corporation) was created on July 19, 2006, for the purpose of providing for the financing of the acquisition and improvement of a building to be used as City Hall through the issuance of Certificates of Participation (COP) by the Corporation and the lease-back of the building from the Corporation to the City. Members of the City Council and management of the City act as the Corporation's governing board and exerts significant influence over its operations. Separate financial statements are not prepared for this Corporation.

b. Measurement Focus, Basis of Accounting, and Basis of Presentation

The basic financial statements of the City are composed of the following:

- Government-wide financial statements
- Fund financial statements
- Notes to the basic financial statements

Government-Wide Financial Statements: Government-wide financial statements display information about the reporting government as a whole, except for its fiduciary activities. These statements include a single column for the governmental activities of the primary government. The City of Aliso Viejo has no business-type activities. Eliminations have been made in the Statement of Activities so that certain allocated expenses are recorded only once (by the function to which they were allocated). However, general government expenses have not been allocated as indirect expenses to the various functions of the City.

Note 1: Summary of Significant Accounting Policies (Continued)

Government-wide financial statements are presented using the economic resources measurement focus and the accrual basis of accounting. Under the economic resources measurement focus, all (both current and long-term) economic resources and obligations of the reporting government are reported in the government-wide financial statements. Basis of accounting refers to when revenues and expenses are recognized in the accounts and reported in the financial statements. Under the accrual basis of accounting, revenues, expenses, gains, losses, assets, and liabilities resulting from exchange and exchange-like transactions are recognized when the exchange takes place.

Program revenues include charges for services, special assessments, and program payments. Program revenues are netted with program expenses in the Statement of Activities, to present the net cost of each program.

Amounts paid to acquire capital assets are capitalized as assets in the government-wide financial statements, rather than reported as an expenditure. Proceeds of long-term debt are recorded as a liability in the government-wide financial statements, rather than as another financing source. Amounts paid to reduce long-term indebtedness of the reporting government are reported as a reduction of the related liability, rather than as an expenditure.

Fund Financial Statements: The underlying accounting system of the City is organized and operated on the basis of separate funds, each of which is considered to be a separate accounting entity. The operations of each fund are accounted for with a separate set of self-balancing accounts that comprise its assets, liabilities, fund balances, revenues, and expenditures or expenses, as appropriate. Governmental resources are allocated to and accounted for in individual funds based upon the purposes for which they are to be spent and the means by which spending activities are controlled.

Fund financial statements for the primary government's governmental, and fiduciary funds are presented after the government-wide financial statements. These statements display information about major funds individually and other funds in the aggregate for governmental funds. Fiduciary statements include financial information for fiduciary funds. Fiduciary funds of the City primarily represent assets held by the City in a custodial capacity for other individuals or organizations. Custodial funds use the economic resources measurement focus and the accrual basis of accounting.

Governmental Funds: In the fund financial statements, governmental funds are presented using the modified-accrual basis of accounting. Their revenues are recognized when they become measurable and available as net current assets. Measurable means that the amounts can be estimated, or otherwise determined. Available means that the amounts were collected during the reporting period or soon enough thereafter to be available to finance the expenditures accrued for the reporting period. The City uses an availability period of 60 days.

Sales taxes, property taxes, franchise taxes, gas taxes, motor vehicle license fee, transient occupancy taxes, grants, and interest associated with the current fiscal period are all considered to be susceptible to accrual and so have been recognized as revenues of the current fiscal period to the extent normally collected within the availability period. Other

Note 1: Summary of Significant Accounting Policies (Continued)

revenue items are considered to be measurable and available where cash is received by the government.

Revenue recognition is subject to the measurable and availability criteria for the governmental funds in the fund financial statements. Exchange transactions are recognized as revenues in the period in which they are earned (i.e., the related goods or services are provided). Locally imposed derived tax revenues are recognized as revenues in the period in which the underlying exchange transaction upon which they are based takes place. Imposed non-exchange transactions are recognized as revenues in the period for which they were imposed. If the period of use is not specified, they are recognized as revenues when an enforceable legal claim to the revenues arises or when they are received, whichever occurs first. Government-mandated and voluntary non-exchange transactions are recognized as revenues when all applicable eligibility requirements have been met. Revenues, expenses, gains, losses, assets, and liabilities resulting from non-exchange transactions are recognized in accordance with the requirements of GASB Statement No. 33 which requires that local governments defer grant revenue that is not received within 60 days after the fiscal year ends to meet the "available" criteria of revenue recognition.

In the fund financial statements, governmental funds are presented using the current financial resources measurement focus. This means that only current assets and current liabilities are generally included on their balance sheets. The reported fund balance (net current assets) is considered to be a measure of "available spendable resources." Governmental fund operating statements present increases (revenues and other financing sources) and decreases (expenditures and other financing uses) in net current assets. Accordingly, they are said to present a summary of sources and uses of "available spendable resources" during a period.

Non-current portions of long-term receivables due to governmental funds are reported on their balance sheets in spite of their spending measurement focus. Special reporting treatments are used to indicate, however, that they should not be considered "available spendable resources," since they do not represent net current assets.

Recognition of governmental fund type revenue represented by non-current receivables are deferred until they become current receivables. Non-current portions of other long-term receivables are classified as non spendable fund balance.

Because of their spending measurement focus, expenditure recognition for governmental fund types excludes amounts represented by non-current liabilities. Since they do not affect net current assets, such long-term amounts are not recognized as governmental fund type expenditures or fund liabilities.

Amounts expended to acquire capital assets are recorded as expenditures in the year that resources were expended, rather than as fund assets. The proceeds of long-term debt are recorded as another financing source rather than as a fund liability. Amounts paid to reduce long-term indebtedness are reported as fund expenditures.

When both, restricted and unrestricted resources, are combined in a fund, expenses are considered to be paid first from restricted resources, and then from unrestricted resources.

Note 1: Summary of Significant Accounting Policies (Continued)

c. Fund Classifications

The City reports the following major governmental funds:

General Fund: The General Fund is the general operating fund of the City. It is used to account for all financial resources except those required to be accounted for in another fund.

Aliso Viejo Center Special Revenue Fund: This fund is used to account for the operations of the Aliso Viejo Center. The Aliso Viejo Center is a City owned facility that serves as an ideal venue to accommodate an array of functions, such as banquets, wedding celebrations, conferences and corporate events. Revenues are generated from events held at the facility.

Additionally, the government reports the following fund types:

Special Revenue Funds: These funds are used to account for revenues which are legally restricted to expenditures for special purposes.

Capital Projects Funds: These funds are used to account for the financial resources used for the acquisition of capital assets and are funded by the General Fund, Gas Tax Fund, Measure M Fund, and the Federal Grants Fund.

Debt Service Funds: These funds is used to account for the City's debt payments as well as any additional debt amounts deemed to be advisable and necessary for any public or municipal purposes.

Custodial Funds: These funds are used to account for special assessments received for which the City acts as an agent for all Community Facilities District debt activity.

d. Cash and Investments

Investments are reported in the accompanying statement of net position at fair value. Changes in fair value that occur during a fiscal year are recognized as investment income reported for that fiscal year. Investment income includes interest earnings and changes in fair value. The City pools cash and investments of all funds. Each fund's share in this pool is displayed in the accompanying financial statements as cash and investments. Investment income earned by the pooled investments is allocated to the various funds based on each fund's average cash and investment balance, except for investment income associated with funds not legally required to receive pooled investment income which has been assigned to and recorded as revenue of the General Fund, as provided by California Government Code Section 53647.

The following is a description of the valuation methodologies used for assets measured at fair value. There have been no changes in the methodologies used:

Level 1: inputs are unadjusted quoted prices in active markets for identical assets; level 2: quoted prices for similar assets or liabilities in active markets; level 3: inputs to the valuation methodology are unobservable and significant to the fair value measurement.

Note 1: Summary of Significant Accounting Policies (Continued)

e. Prepaids

Certain payments to vendors reflect costs applicable to future accounting periods and are recorded as prepaid items in both, the government-wide and fund financial statements. Prepaid items are reported in the governmental funds under the consumption method and are offset by a reservation of fund balance to indicate that they are not spendable for appropriation and are not expendable financial resources.

f. Leases

The City is a lessor and lessee for leases as detailed in notes 4 and 7. The City recognizes a lease receivable, a deferred inflow of resources, and a lease payable in the financial statements.

At the commencement of the lease, the City initially measures the lease receivable at the present value of payments expected to be received and paid during the lease term. Subsequently, the lease receivable is reduced by the principal portion of lease payments received and the lease payable is reduced by the principal portion of lease payments made. The deferred inflow of resources is initially measured as the initial amount of the lease receivable, adjusted for lease payments received at or before the lease commencement date. Subsequently, the deferred inflows of resources is recognized as revenue over the life of the lease term.

Key estimates and judgments include how the City determines the discount rate it uses to discount the expected lease receipts and payments to present value, lease term and lease receipts.

- The City uses the estimated cost of capital rate as the discount rate for leases.
- The lease term includes the non-cancellable period of the lease.

The City monitors changes in circumstances that would require a remeasurement of its leases and will remeasure the lease receivable and deferred inflows of resources if certain changes occur that are expected to significantly affect the amount of the lease receivable.

g. Subscription-Based Information (IT) Arrangements

The City is a participant in subscription-based IT arrangements as detailed in note 7. The City recognizes a subscription-based IT payable and right to use IT assets in the financial statements. At the commencement of the arrangement, the City initially measures the payable at the present value of payments expected to be paid during the arrangement term. Subsequently, the payable is reduced by the principal portion of payments made. The right to use assets are initially measured at the initial amount of the subscription-based IT payable. Subsequently, the right to use assets are amortized over the life of the arrangement term.

h. Capital Assets

Capital assets (including infrastructure) are recorded at cost where historical records are available and at an estimated original cost where no historical records exist. Donated capital assets, donated works of art and similar items, and capital assets received in a

Note 1: Summary of Significant Accounting Policies (Continued)

service concession arrangement are reported at acquisition value rather than fair value. Generally, capital asset purchases in excess of $5,000 are capitalized if they have an expected useful life of three years or more.

Capital assets include public domain (infrastructure) general capital assets consisting of certain improvements including roads, streets, sidewalks, medians, and storm drains. The City has elected to include infrastructure capital assets in their entirety (e.g., prior to 1980) in compliance with requirements of GASB Statement No. 34.

Capital assets used in operations are depreciated over their estimated useful lives, except for streets, of which the City reports based on using the modified approach. The City uses the straight-line method in the government-wide financial statements for depreciating storm drains, park equipment, buildings, equipment and furniture, and leasehold improvements. Depreciation is charged as an expense against operations and accumulated depreciation is reported on the respective statement of net position. The range of lives used for depreciation purposes for each capital asset class are as follows:

Items	Useful Life
Buildings	100 years
Improvements	3-50 years
Equipment and furniture	5 years
Right-to-use assets	Life of lease
Infrastructure:	
Sidewalks	20-50 years
Curb and gutters	20-50 years
Medians	20-50 years
Traffic signals	15 years
Street signs	15 years
Storm drains	20-50 years
Park equipment	10-50 years

The City of Aliso Viejo met all the criteria required by GASB Statement No. 34 to report their streets and roads network using the modified approach, which allows those infrastructure assets to be non-depreciable. Hence, all expenditures made for the streets and roads asset network (except for additions and improvements) are expensed in the period incurred. Additions or improvements to the streets and roads network assets that increase the capacity or efficiency of those assets (rather than preserve the useful life) are capitalized. The City elected to set their minimum acceptable level of condition at 80 for all streets and roads network systems based on their pavement management system scale of 1 to 100. The City plans to test/assess the condition level at least every two years. See the accompanying Required Supplementary Information section for additional information.

i. Deferred Outflows/Inflows of Resources

In addition to assets, the statement of financial position will sometimes report a separate section for deferred outflows of resources. This separate financial statement element, deferred outflows of resources, represent a consumption of net assets that applies to

Note 1: Summary of Significant Accounting Policies (Continued)

future periods and so will not be recognized as an outflow of resources (expense/ expenditure) until then. The City has deferred outflows of resources related to pension and OPEB items.

In addition to liabilities, the statement of financial position will sometimes report a separate section for deferred inflows of resources. This separate financial statement element, deferred inflows of resources, represent an acquisition of net assets that applies to future periods and so will not be recognized as an inflow of resources (revenue) until that time. The City of Aliso Viejo has three types of items. Unavailable revenue is reported only in the governmental funds balance sheet. The governmental funds report unavailable revenues from various sources such as, grant revenue, taxes, and other special revenue. These amounts are deferred and recognized as an inflow of resources in the period that the amounts become available. The second item is deferred pension and OPEB related items. The third item is deferred inflows related to leases.

j. Pensions

For purposes of measuring the net pension liability, deferred outflows of resources and deferred inflows of resources related to pensions, pension expense, information about the fiduciary net position of the Plan, and additions to/deductions from the Plan's fiduciary net position have been determined on the same basis. For this purpose, benefit payments (including refunds of employee contributions) are recognized when currently due and payable in accordance with the benefit terms. Investments are reported at fair value.

GASB 68 requires that the reported results must pertain to liability and asset information within certain defined timeframes. For this report, the following timeframes are used.

Valuation Date (VD) June 30, 2023
Measurement Date (MD) June 30, 2024
Measurement Period (MP) July 1, 2023, to June 30, 2024

k. Other Post Employment Benefits (OPEB)

For purposes of measuring the net OPEB liability, deferred outflows of resources and deferred inflows of resources related to OPEB, and OPEB expense and information about the plan (OPEB Plan), have been determined by an independent actuary. For this purpose, benefit payments are recognized when currently due and payable in accordance with the benefit terms.

Generally accepted accounting principles require that the reported results must pertain to liability information within certain defined timeframes. For this report, the following timeframes are used:

Valuation Date (VD) June 30, 2023
Measurement Date (MD) June 30, 2024
Measurement Period (MP) July 1, 2023 to June 30, 2024

Note 1: Summary of Significant Accounting Policies (Continued)

l. Compensated Absences

In accordance with generally accepted accounting principles, an employee benefits payable liability is recorded for unused vacation and similar compensatory leave balances. The employee's entitlements to these balances are attributable to services already rendered and it is probable that virtually all of these balances will be liquidated by either paid time off or payments upon termination or retirement.

m. Property Taxes

Under California law, property taxes are assessed and collected by the counties up to 1% of assessed value, plus other increases approved by the voters. The property taxes go into a pool and are then allocated to the cities based on complex formulas. Accordingly, the City recognizes as revenue only those taxes which are received within 60 days after year end.

The property tax calendar is as follows:

Lien Date:	January 1
Levy Date:	July 1
Due Date:	First Installment - November 1
	Second Installment - February 1
Delinquent Date:	First Installment - December 10
	Second Installment - April 10

n. Use of Estimates

The preparation of basic financial statements in conformity with accounting principles generally accepted in the United States of America requires management to make estimates and assumptions that affect the reported amounts of assets and liabilities and disclosure of contingent assets and liabilities at the date of the financial statements and the reported amounts of revenue and expenditures during the reporting period. Actual results could differ from those estimates.

o. Net Position Flow Assumption

Sometimes the City will fund outlays for a particular purpose from both, restricted (e.g., restricted bond or grant proceeds) and unrestricted resources. In order to calculate the amounts to report as restricted – net position and unrestricted – net position in the government-wide, a flow assumption must be made about the order in which the resources are considered to be applied. It is the City's policy to consider restricted – net position to have been depleted before unrestricted – net position is applied.

p. Fund Balance Flow Assumption

Sometimes the City will fund outlays for a particular purpose from both, restricted and unrestricted resources (the total of committed, assigned, and unassigned fund balance). In order to calculate the amounts to report as restricted, committed, assigned, and unassigned fund balance in the governmental fund financial statements, a flow assumption must be made about the order in which the resources are considered to be applied. It is

Note 1: Summary of Significant Accounting Policies (Continued)

the government's policy to consider restricted fund balance to have been depleted before using any of the components of unrestricted fund balance. Further, when the components of unrestricted fund balance can be used for the same purpose, committed fund balance is depleted first, followed by assigned fund balance. Unassigned fund balance is applied last.

q. Fund Balance and Net Position

In the fund financial statements, government funds report the following fund balance classification:

Nonspendable include amounts that cannot be spent because they are either (a) not in spendable form or (b) legally or contractually required to be maintained intact.

Restricted include amounts that are constrained on the use of resources by either (a) external creditors, grantors, contributors, or laws of regulations of other governments or (b) by law through constitutional provisions or enabling legislation.

Committed include amounts that can only be used for specific purposes pursuant to constraints imposed by formal action of the government's highest authority, City Council. The formal action that is required to be taken to establish, modify, or rescind a fund balance commitment is a resolution.

Assigned include amounts that are constrained by the government's intent to be used for specific purposes but are neither restricted nor committed. The City Manager and/or Financial Services Director is authorized to assign amounts to a specific purpose, which was established by the governing through a resolution.

Unassigned include the residual amounts that have not been restricted, committed, or assigned to specific purposes.

An individual governmental fund could include nonspendable resources and amounts that are restricted or unrestricted (committed, assigned, or unassigned) or any combination of those classifications. Restricted or unrestricted amounts are to be considered spent when an expenditure is incurred for purposes for which both restricted and unrestricted fund balance is available and committed, assigned, then unassigned amounts are considered to have been spent when an expenditure is incurred for purposes for which amounts in any of those unrestricted fund balance classifications can be used.

The general fund is the only fund that reports a positive unassigned fund balance amount. In other governmental funds it is not appropriate to report a positive unassigned fund balance amount. However, in governmental funds other than the general fund, if expenditures incurred for specific purposes exceed the amounts that are restricted, committed, or assigned to those purposes, it may be necessary to report a negative unassigned fund balance in that fund.

Note 1: Summary of Significant Accounting Policies (Continued)

In the government-wide financial statements and fiduciary fund financial statements, net position is reported in three categories: net investment in capital assets, restricted net position and unrestricted. The restricted portion of net position represents net position restricted by parties outside of the City (such as creditors, grantors, contributors, and laws and regulations of over governments) and includes unspent proceeds of bonds issued to acquire or construct capital assets. The City's other restricted net position is temporarily restricted (ultimately expendable assets). All other net position is considered unrestricted.

r. Prior Year Data

The information included in the accompanying financial statements for the prior year has been presented for comparison purposes only and does not represent a complete presentation in accordance with generally accepted accounting principles. Certain minor reclassifications of prior year data have been made in order to enhance their comparability with current year figures.

Note 2: Cash and Investments

Cash and investments as of June 30, 2025, are classified in the accompanying financial statements as follows:

Statement of Net Position:	
Cash and investments	$ 55,665,590
Statement of Fiduciary Net Position:	
Cash and investments with fiscal agent	2,831,304
Total cash and investments	$ 58,496,894

Cash and investments as of June 30, 2025, consists of the following:

Cash on hand	$ 1,496
Deposits with financial institutions	6,555,036
Investments	51,940,362
Total cash and investments	$ 58,496,894

Investments Authorized by the California Government Code and the City's Investment Policy

The following table identifies the investment types that are authorized for the City by the California Government Code and the City's investment policy. The table also identifies certain provisions of the California Government Code (or the City's investment policy, if more restrictive) that address interest rate risk, credit risk, and concentration of credit risk. This table does not address investments of debt proceeds held by bond trustee that are governed by the provisions of debt agreements of the City, rather than the general provisions of the California Government Code or the City's investment policy. The City Treasurer may waive the collateral requirement for deposits that are fully insured up to $250,000 by the FDIC.

Note 2: Cash and Investments (Continued)

Investment Types Authorized by State Law	Authorized by Investment Policy	Maximum Maturity	Maximum Percentage of Portfolio	Maximum Investment in One Issuer*
U.S. Treasury Obligations	Yes	5 years	100%	None
U.S. Agency Securities	Yes	5 years	60%	35% per agency
Supernational Securities	Yes	5 years	20%	10% per issuer
Banker's Acceptances	Yes	180 days	20%	5% per issuer
Commercial Paper	Yes	270 days	20%	5%
Certificates of Deposit	Yes	5 years	30%	5%
Negotiable Certificates of Deposit	Yes	5 years	30%	250,000
Repurchase Agreements	Yes	92 days	20%	20%

Money Market Funds	N/A	None	None
Investment Agreements	None	None	None
Defeasance Obligations	None	None	None
Municipal Obligations	None	None	None
Local Agency Investment Fund	None	None	None

Interest Rate Risk

Interest rate risk is the risk that changes in market interest rates will adversely affect the fair value of an investment. Generally, the longer the maturity of an investment, the greater the sensitivity of its fair value is to changes in market interest rates. Information about the sensitivity of the fair values of the City's investments to market interest rate fluctuations is provided by the following table that shows the distribution of the City's investments by maturity:

Note 2: Cash and Investments (Continued)

Investment Type	Total	Remaining Maturity: 12 Months or Less	13 to 36 Months	37 to 60 Months
Negotiable Certificates of Deposit	$ 1,923,240	240,502	1,437,738	245,000
Federal Agency Securities	7,981,290	1,964,865	5,321,880	694,545
U.S. Treasury Securities	25,897,441	10,588,934	11,265,694	4,042,813
Medium-Term Corporate Notes	4,330,497	-	2,806,252	1,524,245
State Investment Pool (LAIF)	9,780,847	9,780,847	-	-
U.S. Treasury Money Market	2,027,047	2,027,047	-	-
Total	$51,940,362	24,602,195	20,831,564	6,506,603

Credit Risk

Generally, credit risk is the risk that an issuer of an investment will not fulfill its obligation to the holder of the investment. This is measured by the assignment of a rating by a nationally recognized statistical rating organization. Presented on the next page is the minimum rating required by (where applicable) the California Government Code, the City's investment policy, or debt agreements and the actual rating as of year-end for each investment type:

Investment Type	Total	Minimum Legal Rating	Ratings as of Year End: AAA	AA	A	Not Rated
Negotiable Certificates of Deposit	$ 1,923,240	N/A	-	-	-	1,923,240
Federal Agency Securities	7,981,290	N/A	-	7,981,290	-	-
U.S. Treasury Securities*	25,897,441	N/A	-	-	-	-
Medium-Term Corporate Notes	4,330,497	A	-	2,343,497	1,987,000	-
State Investment Pool (LAIF)	9,780,847	N/A	-	-	-	9,780,847
U.S. Treasury Money Market	2,027,047	AAA	2,027,047	-	-	-
Total	$51,940,362		2,027,047	10,324,787	1,987,000	11,704,087

* Exempt from rating

Concentration of Credit Risk

The investment policy of the City contains no limitations on the amount that can be invested in any one issuer beyond that stipulated by the California Government Code. Investments in any one issuer (other than U.S. Treasury securities, mutual funds and external investment pools) that represent 5% or more of the total City's investments are as follows:

Issuer	Investment Type	Reported amount	Percentage of portfolio
Federal Home Loan Bank	Federal Agency Securities	$ 3,173,390	6%

Note 2: Cash and Investments (Continued)

Custodial Credit Risk

Custodial credit risk for deposits is the risk that in the event of the failure of a depository financial institution, a government will not be able to recover its deposits or will not be able to recover collateral securities that are in the possession of an outside party. The custodial credit risk for investments is the risk that in the event of the failure of the counterparty (e.g., broker-dealer) to a transaction, a government will not be able to recover the value of its investment or collateral securities that are in the possession of another party. The California Government Code and the City's investment policy do not contain legal or policy requirements that would limit the exposure to custodial credit risk for deposits or investments, other than the following provision for deposits: The California Government Code requires that a financial institution secure deposits made by state or local governmental units by pledging securities in an undivided collateral pool held by a depository regulated under state law (unless so waived by the governmental unit). The fair value of the pledged securities in the collateral pool must equal at least 110% of the total amount deposited by the public agencies. California law also allows financial institutions to secure City deposits by pledging first trust deed mortgage notes having a value of 150% of the secured public deposits.

Investment in State Investment Pool

The City is a voluntary participant in the Local Agency Investment Fund (LAIF) that is regulated by the California Government Code 16429 under the oversight of the Treasurer of the State of California. The fair value of the City's investment in this pool is reported in the accompanying financial statements at an amount based upon the City's pro-rata share of the fair value provided by LAIF for the entire LAIF portfolio (in relation to the amortized cost of that portfolio). The balance available for withdrawal is based on the accounting records maintained by LAIF, which are recorded on an amortized cost basis. Currently, LAIF does not have an investment rating.

Fair Value Measurements

The City categorizes its fair value measurements within the fair value hierarchy established by generally accepted accounting principles. The hierarchy is based on the valuation inputs used to measure the fair value of the asset. Level 1 inputs are quoted prices in active markets for identical assets; Level 2 inputs are significant other observable inputs; Level 3 inputs are significant unobservable inputs.

Note 2: Cash and Investments (Continued)

The City has the following recurring fair value measurements as of June 30, 2025:

		Fair Value Measurement Using		
	Total	Level 1	Level 2	Level 3
Negotiable Certificates of Deposit	$ 1,923,240	-	1,923,240	-
Federal Agency Securities	7,981,290	-	7,981,290	-
U.S. Treasury Securities	25,897,441	-	25,897,441	-
Medium-Term Corporate Notes	4,330,497	-	4,330,497	-
Total investments by fair value level	40,132,468	-	40,132,468	-
Investments not subject to fair value:				
State Investment Pool	9,780,847			
U.S. Treasury Money Market	2,027,047			
Total	$51,940,362			

Note 3: Loans Receivable

Aliso Senior Apartments

The City executed a promissory note with a developer to assist in the development of 200 affordable rental units. The entire unpaid principal amount and accrued interest is due 55 years from the date of completion. Prepayment of the note will have no effect on the application of the agreement. As of June 30, 2025, the total outstanding principal balance was $6,670,000 and interest receivable was $948,159 . An allowance of $7,618,159 has been recorded to reflect the amount of the note and interest as not expected to be collected.

Note 4: Lease Receivable

City Hall Space - Suite 280

On August 1, 2021, the City entered into a 23-month lease as Lessor for the use of City Hall Space - Suite 280. On June 22, 2023, the lease was extended for an additional 24-months. During the fiscal year, the City recognized lease revenue of $105,074. The City extended the lease for an additional 36-months on July 1, 2025 which is reported as a subsequent event at June 30, 2025.

City Hall Space - Suite 201

On May 1, 2024, Aliso Viejo, CA entered into a 26-month lease as Lessor for the use of Suite 201. An initial lease receivable was recorded in the amount of $125,951. The lessee is required to make monthly fixed payments of $5,000. The lease has an interest rate of 3.0590%. The building's estimated useful life was 0 months as of the contract commencement. As of June 30, 2025, the City has total outstanding lease receivables of $59,018 and related deferred inflows of resources of $62,814. The City recognized lease revenue of $58,131 during the fiscal year. The lessee has 1 extension option for 24 months.

Note 5: Interfund Receivables, Payables and Transfers

Due To/From Other Funds

Interfund receivables and payables as of June 30, 2025, consisted of the following:

	Due To Other Funds			
Due From Other Funds	Aliso Viejo Center	Other Governmental Funds	Custodial Fund	Total
General Fund	$ 757,660	175,939	11,715	945,314

The amount due from the General Fund to other governmental funds was to cover negative cash and are expected to be repaid within one year. The amount due to the General Fund from the Aliso Viejo Center was to cover the operational profits for the fiscal year.

Transfers In and Out

Interfund transfers for the year ended June 30, 2025, consisted of the following:

	Transfers Out			
Transfers In	General Fund	Aliso Viejo Center	Other Governmental Funds	Total
General Fund	$ -	757,660	116,454	874,114
Other Governmental Funds	1,043,519	-	1,128,905	2,172,424
Total	$ 1,043,519	757,660	1,245,359	3,046,538

Transfers into the General Fund included funds from net income from the Aliso Viejo Center, and reimbursement for staff hours from various grants such as, CDBG, Senior Mobility, SB1383, LEAP, and the Permanent Local Housing Allocation. Transfers out of the General Fund to Other Governmental Funds includes capital improvement funding at City facilities, stormwater maintenance, debt service for the 2019 COPS, and funds to the Aquatic Center to cover the center's operating gap. Other Governmental Funds transfers in and out are for street and City Hall capital improvement projects. Street related funding sources include SB1 and Measure M for street rehabilitation projects along Aliso Creek Road and Aliso Viejo Parkway, as well as CDBG funding for Americans with Disability Act (ADA) sidewalk improvements. Other Grants transfers to other governmental funds include a CalTrans street rehabilitation grant and City Hall improvements with federal funds.

Note 6: Capital Assets

Capital asset activity for the year ended June 30, 2025, was as follows:

	Balance July 1, 2024	Additions	Deletions	Balance June 30, 2025
Capital assets, not being depreciated:				
Land	$ 14,315,978	-	-	14,315,978

Right-to-use subscription assets	(237,034)	(201,319)	26,064	(412,289)
Total accumulated depreciation/amortization	(27,906,007)	(1,509,901)	799,032	(28,616,876)
Total capital assets, being depreciated, net	43,666,247	(862,360)	(594,257)	42,209,630
Capital assets, net	$111,853,655	(862,360)	(594,257)	110,397,038

*Other infrastructure consisted of sidewalks, curbs and gutters, medians, traffic signals, street signs, storm drains, and park equipment.

Depreciation expense by function for the fiscal year ending June 30, 2025, is as follows:

General government	$ 869,729
Community development	133,688
Public safety	6,700
Public works	499,784
Total	$ 1,509,901

Note 7: Non-current Liabilities

Compensated Absences

Changes in compensated absences for the fiscal year ended June 30, 2025, were as follows:

	Balance July 1, 2024	Additions		Deletions	Balance June 30, 2025	Amount Due Within One Year
Compensated absences	$ 257,435	105,500	*	-	362,935	184,214

* The change in compensated absences liability is presented as a net change under Governmental Accounting Standards Board (GASB) Statement No. 101.

Changes in non-current liabilities for the fiscal year ended June 30, 2025, were as follows:

	Balance July 1, 2024	Additions	Deletions	Balance June 30, 2025	Amount Due Within One Year
Bonds payable	$ 11,295,000	-	(260,000)	11,035,000	270,000
Unamortized premium	838,988	-	(32,269)	806,719	32,269
Lease liability	38,375	-	(7,408)	30,967	7,606
Subscription liability	298,428	365,786	(137,665)	526,549	137,579
Total	$ 12,470,791	365,786	(437,342)	12,399,235	447,454

Bonds Payable – Direct Placement

On July 31, 2019, the City issued the 2019 Certificates of Participation (COP) in the amount of $12,250,000 in order to finance a portion of the construction of improvements to the Aliso Viejo Ranch and pay delivery costs incurred in connection with the execution, delivery and sale of the Certificates. The 2019 COP mature annually on November 1 through 2039 and bear interest ranging from 2.0% to 4.0%. In the event of default, the City waives all rights to any rentals received by the trustee through re-letting of the lease agreement. The City agrees to pay any and all costs, loss, or damage, howsoever occurring, as a result of any re-entry or re-letting. The annual debt service requirements for the 2019 COPs outstanding at June 30, 2025 are as follows:

Year Ending June 30,	Principal	Interest	Total
2026	$ 270,000	385,350	655,350
2027	280,000	374,550	654,550
2028	295,000	363,350	658,350
2029	305,000	351,550	656,550
2030	320,000	339,350	659,350
2031 - 2035	1,785,000	1,495,350	3,280,350
2036 - 2040	2,175,000	1,108,550	3,283,550
2041 - 2045	2,600,000	689,250	3,289,250
2046 - 2050	3,005,000	275,700	3,280,700
Total	$ 11,035,000	5,383,000	16,418,000

Note 7: Non-current Liabilities (Continued)

Lease Liability

On May 7, 2024, the City entered into a 60-month lease as Lessee for the use of Ricoh-Copiers 2024. An initial lease liability was recorded in the amount of $39,681. As of June 30, 2025, the value of the lease liability is $30,967. The City is required to make monthly fixed payments of $694. The lease has a discount rate of 2.6360%. The Equipment estimated useful life was sixty months as of the contract commencement. The value of the right to use asset as of June 30, 2025 is $39,681 with accumulated amortization of $7,936.

Estimated future debt service requirements are as follows:

Year Ending June 30,	Principal	Interest	Total
2026	$ 7,606	725	8,331
2027	7,808	522	8,330
2028	8,017	314	8,331
2029	7,536	100	7,636
Total	$ 30,967	1,661	32,628

Subscription-Based Information Technology Arrangements

In FY 2025, the City entered into 3 subscription-based IT arrangements for various software applications. As of June 30, 2025, the value of the existing lease liability is $526,549. The value of the right to use asset as of June 30, 2025 is $1,106,697 with accumulated amortization of $412,289.

Estimated future debt service requirements are as follows:

Year Ending June 30,	Principal	Interest	Total
2026	$ 137,579	3,358	140,937
2027	135,518	10,631	146,149
2028	77,975	6,940	84,915
2029	84,355	4,805	89,160
2030	91,122	2,495	93,617
Total	$ 526,549	28,229	554,778

Note 8: Debt Without Government Commitment Community Facilities District No. 2005-01

In December 2023, the City issued $23,430,000 in Special Refunding Bonds for Community Facilities District No. 2005-01 (Glenwood at Aliso Viejo). Interest payments commenced on March 1, 2024, and are paid semiannually thereafter on September 1 and March 1 of each year. Principal payments commence on September 1, 2024, and are paid annually in amounts ranging from $1,395,000 to $2,440,000 until September 1, 2038. The bonds were issued to refinance the outstanding 2007 Special Tax Bonds and the 2014 Special Tax Refunding Bonds and cause early redemption thereof on December 5, 2023. The principal outstanding at June 30, 2025 is $22,035,000.

Note 9: Pension Plan

A. General Information about the Pension Plan

Plan Description

All qualified permanent and probationary employees are eligible to participate in the Public Agency Cost-Sharing Multiple-Employer Defined Benefit Pension Plan (Plan or PERF C) administered by the California Public Employees' Retirement System (CalPERS.) The Plan consists of a miscellaneous pool and a safety pool (also referred to as "risk pools"), which are comprised of individual employer miscellaneous and safety rate plans, respectively. Plan assets may be used to pay benefits for any employer rate plan of the safety and miscellaneous pools. Accordingly, rate plans within the safety or miscellaneous pools are not separate plans under generally accepted accounting principles. Individual employers may sponsor more than one rate plan in the miscellaneous or safety risk pools. The City participates in two rate plans (both miscellaneous). Benefit provisions under the Plan are established by State statute and City resolution. CalPERS issues publicly available reports that include a full description of the pension plan regarding benefit provisions, assumptions and membership information that can be found on the CalPERS' website, at www.calpers.ca.gov.

Benefits Provided

CalPERS provides service retirement and disability benefits, annual cost of living adjustments, and death benefits to plan members, who must be public employees and beneficiaries. Benefits are based on years of credited service, equal to one year of full-time employment. Members with five years of total service are eligible to retire at age 50 with statutorily reduced benefits. All members are eligible for non-duty disability benefits after 5 years of service. The death benefit is one of the following: the Basic Death Benefit, the 1957 Survivor Benefit, or the Optional Settlement 2W Death Benefit. The cost-of-living adjustments for each plan are applied as specified by the Public Employees' Retirement Law.

The Plan operates under the provisions of the California Public Employees' Retirement Law (PERL), the California Public Employees' Pension Reform Act of 2013 (PEPRA), and the regulations, procedures and policies adopted by the CalPERS Board of Administration. The Plan's authority to establish and amend the benefit terms are set by the PERL and PEPRA and may be amended by the California state legislature and in some cases require approval by the CalPERS Board.

The Plan's provisions and benefits in effect at June 30, 2025 are summarized as follows:

Note 9: Pension Plan (Continued)

A. General Information about the Pension Plan (Continued)

	Miscellaneous	PEPRA Miscellaneous
Hire Date	And prior to January 1, 2013*	On or after January 1, 2013
Benefit formula	2% @ 55	2% @ 62
Benefit vesting schedule	5 years of service	5 years of service
Benefit payments	monthly for life	monthly for life
Retirement age	50 - 63	52 - 67
Monthly benefits, as a % eligible compensation	1.426% to 2.418%	1.0% - 2.5%
Required employer contribution rates	11.88%	7.87%

Contributions

Section 20814(c) of the California Public Employees' Retirement Law (PERL) requires that the employer contribution rates for all public employers be determined on an annual basis by the actuary and shall be effective on the July 1 following notice of a change in the rate. The total plan contributions are determined through CalPERS's annual actuarial valuation process. For public agency cost-sharing plans covered by either the Miscellaneous or Safety risk pools, the Plan's actuarially determined rate is based on the estimated amount necessary to pay the Plan's allocated share of the risk pool's costs of benefits earned by employees during the year, and any unfunded accrued liability. The employer is required to contribute the difference between the actuarially determined rate and the contribution rate of employees. Employer contribution rates may change if plan contracts are amended. Payments made by the employer to satisfy contribution requirements that are identified by the pension plan terms as plan member contribution requirements are classified as plan member contributions. Employer Contributions to the Plan for the fiscal year ended June 30, 2025 were $431,173. The actual employer payments made to CalPERS by the City during the measurement period ended June 30, 2024 was $395,636.

B. Net Pension Liability

The City's net pension liability for the Plan is measured as the total pension liability, less the pension plan's fiduciary net position. The net pension liability of the Plan is measured as of June 30, 2024, using an annual actuarial valuation as of June 30, 2023 rolled forward to June 30, 2024 using standard update procedures. A summary of principal assumptions and methods used to determine the net pension liability is as follows :

Note 9: Pension Plan (Continued)

Valuation Date	June 30, 2023
Measurement Date	June 30, 2024
Actuarial Cost Method	Entry Age Normal
Asset Valuation Method	Fair Value of Assets
Actuarial Assumptions:	
Discount Rate	6.90%
Inflation	2.30%
Salary Increases	Varies by entry age and service
Mortality Rate Table (1)	Derived using CalPERS membership data for all funds
Post Retirement Benefit Increase	The lesser of contract COLA or 2.30% until Purchasing Power Protection Allowance floor on purchasing power applies, 2.30% thereafter.

(1) The mortality table used was developed based on CalPERS' specific data. The probabilities of mortality are based on the 2021 CalPERS Experience Study for the period from 2001 to 2019. Pre-retirement and Post-retirement mortality rates include generational mortality using 80% of Scale MP-2020 published by the Society of Actuaries. For more details on this table, please refer to the CalPERS Experience Study and Review of Actuarial Assumptions report from November 2021 that can be found on the CalPERS website.

Actuarial Methods and Assumptions Used to Determine Total Pension Liability

All other actuarial assumptions used in the June 30, 2024 valuation were based on the results of an actuarial experience study for the period from 2001 to 2019, including updates to salary increase, mortality and retirement rates. The Experience Study report can be obtained at CalPERS's website at www.calpers.ca.gov.

Long-term Expected Rate of Return

The long-term expected rate of return on pension plan investments was determined using a building-block method in which expected future real rates of return (expected returns, net of pension plan investment expense and inflation) are developed for each major asset class.

In determining the long-term expected rate of return, CalPERS took into account both short-term and long-term market return expectations. Using historical returns of all the funds' asset classes, expected compound (geometric) returns were calculated over the next 20 years using a building-block approach. The expected rate of return was then adjusted to account for assumed administrative expenses of 10 Basis points. The expected rates of return by asset class are as follows:

Note 9: Pension Plan (Continued)

The expected real rates of return by asset class are as follows:

Asset Class[1]	Assumed Asset Allocation	Real Return Years 1 - 10[1,2]
Global Equity - Cap-weighted	30%	4.54%
Global Equity - Non-Cap-weighted	12%	3.84%
Private Equity	13%	7.28%
Treasury	5%	0.27%
Mortgage-backed Securities	5%	0.50%
Investment Grade Corporates	10%	1.56%
High Yield	5%	2.27%
Emerging Market Debt	5%	2.48%
Private Debt	5%	3.57%
Real Assets	15%	3.21%
Leverage	-5%	-0.59%

[1] An expected inflation of 2.30% used for this period.

[2] Figures are based on the 2021 Asset Liability Management study.

Discount Rate

The discount rate used to measure the total pension liability was 6.90%. The projection of cash flows used to determine the discount rate assumed that contributions from plan members will be made at the current member contribution rates and that contributions from employers will be made at statutorily required rates, actuarially determined. Based on those assumptions, the Plan's fiduciary net position was projected to be available to make all projected future benefit payments of current plan members. Therefore, the long-term expected rate of return on plan investments was applied to all periods of projected benefit payments to determine the total pension liability.

Pension Plan Fiduciary Net Position

Information about the pension plan's assets, deferred outflows of resources, liabilities, deferred inflows of resources, and fiduciary net position are presented in CalPERS's audited financial statements, which are publicly available reports that can be obtained at CalPERS's website at www.calpers.ca.gov. The plan's fiduciary net position and additions to/deductions from the plan's fiduciary net position have been determined on the same basis used by the pension plan, which is the economic resources measurement focus and the accrual basis of accounting. Benefits and refunds are recognized when due and payable in accordance with the terms of the plan. Investments are reported at fair value.

C. Proportionate Share of Net Pension Liability

The following table shows the Plan's proportionate share of the net pension liability over the measurement period.

Note 9: Pension Plan (Continued)

	Plan Total Pension Liability	Plan Fiduciary Net Position	Plan Net Pension Liability
Balance at 6/30/2023 (Valuation Date)	$ 10,152,988	8,467,820	1,685,168
Balance at 6/30/2024 (Measurement Date)	11,239,556	9,557,142	1,682,414
Net changes during 2023 - 2024	$ 1,086,568	1,089,322	(2,754)

The City's proportion of the net pension liability was determined by CalPERS using the output from the Actuarial Valuation System and the fiduciary net position, as provided in the CalPERS Public Agency Cost-Sharing Allocation Methodology Report, which is a publicly available report that can be obtained at CalPERS' website, at www.calpers.ca.gov. The City's proportionate share of the net pension liability for the miscellaneous Plan as of the June 30, 2024 and 2025 measurement dates was as follows:

Proportionate Share - June 30, 2024	0.03370%
Proportionate Share - June 30, 2025	0.03479%
Change - Increase (Decrease)	0.00109%

Sensitivity of the Proportionate Share of the Net Pension Liability to Changes in the Discount Rate

The following presents the City's proportionate share of the net pension liability of the Plan as of the measurement date, calculated using the discount rate of 6.90 percent, as well as what the net pension liability would be if it were calculated using a discount rate that is 1 percentage-point lower (5.90 percent) or 1 percentage-point higher (7.90 percent) than the current rate:

	Discount Rate - 1% (5.90%)	Current Discount Rate (6.90%)	Discount Rate + 1% (7.90%)
Plan's Net Pension Liability	$ 3,199,084	1,682,414	433,971

Amortization of Deferred Outflows and Deferred Inflows of Resources

Under GASB 68, gains and losses related to changes in total pension liability and fiduciary net position are recognized in pension expense systematically over time.

The first amortized amounts are recognized in pension expense for the year the gain or loss occurs. The remaining amounts are categorized as deferred outflows and deferred inflows of resources related to pensions and are to be recognized in future pension expense.

Note 9: Pension Plan (Continued)

The amortization period differs depending on the source of the gain or loss:

Difference between projected and actual earnings	5-year straight-line amortization
All other amounts	Straight-line amortization over the expected average remaining service lives of all members that are provided with benefits (active, inactive and retired) as of the beginning of the measurement period

The expected average remaining service lifetime (EARSL) is calculated by dividing the total future service years by the total number of plan participants (active, inactive, and retired) in the Public Agency Cost-Sharing Multiple-Employer Plan (PERF C).

The EARSL for PERF C for the measurement period ending June 30, 2024 is 3.8 years, which was obtained by dividing the total service years of 630,177 (the sum of remaining service lifetimes of the active employees) by 166,163 (the total number of participants: active, inactive, and retired) in PERF C. Inactive employees and retirees have remaining service lifetimes equal to 0. Total future service is based on the members' probability of decrementing due to an event other than receiving a cash refund.

D. Pension Expense and Deferred Outflows and Deferred Inflows of Resources Related to Pensions

For the measurement period ending June 30, 2024 (the measurement date), the City incurred a pension expense of $639,241.

As of June 30, 2025, the City has deferred outflows and deferred inflows of resources related to pensions as follows:

	Deferred Outflows of Resources	Deferred Inflows of Resources
Changes of assumptions	$ 43,242	-
Differences between expected and actual experience	145,460	5,676
Differences between projected and actual investments earnings	96,854	-
Differences between employer's contributions and proportionate share	31,473	17,915
Change in employer's proportion	222,774	-
Pension contributions made subsequent to measurement date	431,173	-
Total	$ 970,976	23,591

Note 9: Pension Plan (Continued)

Contributions subsequent to the measurement date of $431,173 reported with deferred outflows of resources will be recognized as a reduction of the net pension liability in the upcoming fiscal year. Other amounts reported as deferred outflows and deferred inflows of resources related to pensions will be recognized in future pension expense as follows:

Fiscal Year Ending June 30:	Deferred Outflows/(Inflows) of Resources
2026	$ 244,262
2027	274,241
2028	30,900
2029	(33,191)
Thereafter	-

Note 10: Other Post-Employment Benefits (OPEB)

Plan Description

The City has established a Retiree Healthcare Plan (HC Plan) and participates in a single-employer defined benefit retiree healthcare plan. Plan assets are not administered through a trust and there are no assets accumulated in a GASB-compliant trust. Medical coverage is currently provided through CalPERS as permitted under the Public Employees' Medical and Hospital Care Act (PEMHCA). This coverage requires the employee to satisfy the requirements for retirement under CalPERS: either (a) attainment of age 50 (age 52, if a miscellaneous employee new to PERS on or after January 1, 2013) with 5 years of State or public agency service or (b) an approved disability retirement.

The employee must begin his or her retirement benefit within 120 days of terminating employment with the City to be eligible to continue medical coverage through the agency and be entitled to the benefits described below. If an eligible employee is not already enrolled in the medical plan, he or she may enroll within 60 days of retirement, during any future open enrollment period or with a qualifying life event. In other words, it is the timing of initiating retirement benefits and not timing of enrollment in the medical program which determines whether or not a City retiree qualifies for lifetime medical coverage and any benefits defined in the PEMHCA resolution. Once eligible, coverage may be continued at the retiree's option for his or her lifetime. A surviving spouse and other eligible dependents may also continue coverage.

PEMHCA Benefits provided: As a PEMHCA employer, the City is obligated to contribute toward the cost of retiree medical coverage for the retiree's lifetime or until coverage is discontinued. The City maintains a resolution with CalPERS defining the level of the City's contribution toward the cost of medical plan premiums for employees and retirees to be the PEMHCA minimum employer contribution (MEC). The MEC is $157 per month in 2024 and $158 per month in 2025. A separate financial report is not prepared for the HC Plan.

Note 10: Other Post-Employment Benefits (OPEB) (Continued)

Employees Covered

As of the June 30, 2024, actuarial valuation, the following current and former employees were covered by the benefit terms under the HC Plan:

Active employees	34
Inactive employees or beneficiaries currently receiving benefits	4
Inactive employees entitled to but not yet receiving benefits	-
Total	38

Contributions

City contributions to the Plan occur as benefits are paid to or on behalf of retirees. Benefit payments may occur in the form of direct payments for premiums and taxes ("explicit subsidies") and/or indirect payments to retirees in the form of higher premiums for active employees ("implicit subsidies"). The City makes contributions to eligible retirees for their medical plan premiums when the retiree enrolls in a City sponsored health plan. For the fiscal year ended June 30, 2025, the City did not make any cash contributions. The City does not have any assets accumulated in a trust or other equivalent arrangement.

Total OPEB Liability

The City's total OPEB liability was measured as of June 30, 2024 and the total OPEB liability used to calculate the net OPEB liability was determined by an actuarial valuation dated June 30, 2023, based on the following actuarial methods and assumptions:

Actuarial Assumptions:	
Discount Rate	3.93%
Inflation	2.50%
Salary Increases	2.75%
Mortality Rate	2021 CalPERS Mortality for Miscellaneous and Schools Employees
Healthcare Trend Rate	4.00%

Discount Rate

The discount rate used to measure the total OPEB liability was 3.93% percent. The City is currently financing its OPEB liability on a pay-as-you-go basis. With the City's approval, the discount rate used in the valuation is based on the S&P Municipal Bond 20 Year High Grade Index. As of the beginning and end of the Measurement Period, use of this index results in discount rates of 3.65% on June 30, 2023 and 3.93% on June 30, 2024.

Changes of Assumptions

The discount rate increased from 3.65% to 3.93%.

Note 10: Other Post-Employment Benefits (OPEB) (Continued)

Changes in the Total OPEB Liability

The changes in the total OPEB liability for the HC Plan are as follows:

	Total OPEB Liability
Balance at June 30, 2024 (Measurement Date June 30, 2023)	$ 495,269
Changes recognized for the measurement period:	
Service Cost	80,002
Interest	19,402
Changes of assumptions	(24,724)
Plan experience differences	-
Benefit payments	(7,392)
Net Changes	67,288
Balance at June 30, 2025 (Measurement Date June 30, 2024)	$ 562,557

Sensitivity of the Total OPEB Liability to Changes in the Discount Rate

The following presents the total OPEB liability of the City if it were calculated using a discount rate that is one percentage point lower or one percentage point higher than the current rate, for measurement period ended June 30, 2024:

	1% Decrease 2.93%	Current Discount Rate 3.93%	1% Increase 4.93%
Total OPEB Liability	$ 656,351	562,557	487,471

Sensitivity of the Total OPEB Liability to Changes in the Health Care Cost Trend Rates

The following presents the total OPEB liability of the Authority if it were calculated using health care cost trend rates that are one percentage point lower or one percentage point higher than the current rate, for measurement period ended June 30, 2024:

	1% Decrease	Current Healthcare Cost Trend	1% Increase
Total OPEB Liability	$ 457,320	562,557	699,224

Note 10: Other Post-Employment Benefits (OPEB) (Continued)

Recognition of Deferred Outflows and Deferred Inflows of Resources

Gains and losses related to changes in total OPEB liability and fiduciary net position are recognized in OPEB expense systematically over time.

Amounts are first recognized in OPEB expense for the year the gain or loss occurs. The remaining amounts are categorized as deferred outflows and deferred inflows of resources related to OPEB and are to be recognized in future OPEB expense.

The recognition period differs depending on the source of the gain or loss:

Assumption changes and experience gains/losses	Expected average remaining service lifetime (EARSL) (12.25 Years)

OPEB Expense and Deferred Outflows/Inflows of Resources Related to OPEB

For the fiscal year ended June 30, 2025, the City recognized OPEB expense of $31,623. As of fiscal year ended June 30, 2025, the City reported deferred outflows of resources related to OPEB from the following sources:

	Deferred Outflows of Resources	Deferred Inflows of Resources
OPEB contributions subsequent to measurement date	$ 7,560	-
Changes of assumptions	35,829	265,590
Differences between expected and actual experience	4,123	234,189
Total	$ 47,512	499,779

Contributions subsequent to the measurement date of $7,560 reported with deferred outflows of resources will be recognized as a reduction of the net OPEB liability in the upcoming fiscal year. The amounts reported as deferred outflows and deferred inflow of resources related to OPEB will be recognized in future as expense as follows:

Fiscal Year Ended June 30	Deferred Outflows/(Inflows) of Resources
2026	$ (67,781)
2027	(60,193)
2028	(62,425)
2029	(9,124)
2030	(9,118)
Thereafter	(251,186)

Note 11: Risk Management

A. Description of Self-Insurance Pool Pursuant to Joint Powers Agreement

The City of Aliso Viejo is a member of the California Joint Powers Insurance Authority (Authority). The Authority is composed of 124 California public entities and is organized under a joint powers agreement pursuant to California Government Code §6500 et seq. The purpose of the Authority is to arrange and administer programs for the pooling of self-insured losses, to purchase excess insurance or reinsurance, and to arrange for group purchased insurance for property and other lines of coverage. The Authority began covering claims of its members in 1978. Each member government has an elected official as its representative on the Board of Directors. The Board operates through a nine-member Executive Committee.

B. Primary Self-Insurance Programs of the Authority

Each member pays an annual contribution at the beginning of the coverage period. A retrospective adjustment is then conducted annually thereafter, for coverage years 2012-13 and prior. Coverage years 2013-14 and forward are not subject to routine annual retrospective adjustment. The total funding requirement for primary self-insurance programs is based on an actuarial analysis. Costs are allocated to individual agencies based on payroll and claims history, relative to other members of the risk-sharing pool.

Primary Liability Program

Claims are pooled separately between police and general government exposures. (1) The payroll of each member is evaluated relative to the payroll of other members. A variable credibility factor is determined for each member, which establishes the weight applied to payroll and the weight applied to losses within the formula. (2) The first layer of losses includes incurred costs up to $100,000 for each occurrence and is evaluated as a percentage of the pool's total incurred costs within the first layer. (3) The second layer of losses includes incurred costs from $100,000 to $500,000 for each occurrence and is evaluated as a percentage of the pool's total incurred costs within the second layer. (4) Incurred costs from $500,000 to $50 million are distributed based on the outcome of cost allocation within the first and second loss layers.

The overall coverage limit for each member, including all layers of coverage, is $50 million per occurrence. Subsidence losses have a sub-limit of $50 million per occurrence. The coverage structure is composed of a combination of pooled self-insurance, reinsurance, and excess insurance. Additional information concerning the coverage structure is available on the Authority's website: https://cjpia.org/coverage/risk-sharing-pools/.

Primary Workers' Compensation Program

Claims are pooled separately between public safety (police and fire) and general government exposures. (1) The payroll of each member is evaluated relative to the payroll of other members. A variable credibility factor is determined for each member, which establishes the weight applied to payroll and the weight applied to losses within the formula. (2) The first layer of losses includes incurred costs up to $75,000 for each occurrence and is evaluated as a percentage of the pool's total incurred costs within the

Note 11: Risk Management (Continued)

first layer. (3) The second layer of losses includes incurred costs from $75,000 to $200,000 for each occurrence and is evaluated as a percentage of the pool's total incurred costs within the second layer. (4) Incurred costs from $200,000 to statutory limits are distributed based on the outcome of cost allocation within the first and second loss layers.

For 2024-25 the Authority's pooled retention is $1 million per occurrence, with reinsurance to statutory limits under California Workers' Compensation Law. Employer's Liability losses are pooled among members to $1 million. Coverage from $1 million to $5 million is purchased as part of a reinsurance policy, and Employer's Liability losses from $5 million to $10 million are pooled among members.

B. Purchased Insurance

Pollution Legal Liability Insurance

The City of Aliso Viejo participates in the pollution legal liability insurance program which is available through the Authority. The policy covers sudden and gradual pollution of scheduled property, streets, and storm drains owned by the City of Aliso Viejo. Coverage is on a claims-made basis. There is a $250,000 deductible. The Authority has an aggregate limit of $20 million.

Property Insurance

The City of Aliso Viejo participates in the all-risk property protection program of the Authority. This insurance protection is underwritten by several insurance companies. City of Aliso Viejo property is currently insured according to a schedule of covered property submitted by the City of Aliso Viejo to the Authority. There is a $10,000 deductible per occurrence except for non-emergency vehicle insurance which has a $2,500 deductible.

Crime Insurance

The City of Aliso Viejo purchases crime insurance coverage in the amount of $1,000,000 with a $2,500 deductible. The fidelity coverage is provided through the Authority.

Special Event Tenant User Liability Insurance

The City of Aliso Viejo further protects against liability damages by requiring tenant users of certain property to purchase low-cost tenant user liability insurance for certain activities on agency property. The insurance premium is paid by the tenant user and is paid to the City of Aliso Viejo according to a schedule. The City of Aliso Viejo then pays for the insurance. The insurance is facilitated by the Authority.

C. Adequacy of Protection

During the past three fiscal years, none of the above programs of protection experienced settlements or judgments that exceeded pooled or insured coverage. There were also no significant reductions in pooled or insured liability coverage in 2024-25.

Note 12: Joint Venture

Orange County Fire Authority

In July 2001, the City entered into a joint powers agreement with the cities of Buena Park, Cypress, Dana Point, Irvine, Laguna Hills, Laguna Niguel, Lake Forest, La Palma, Los Alamitos, Mission Viejo, Placentia, San Clemente, San Juan Capistrano, Seal Beach, Stanton, Tustin, Villa Park, Westminster, and Yorba Linda and the County of Orange to create the Orange County Fire Authority (Fire Authority). Since the creation of the Fire Authority, the Cities of Laguna Woods, Rancho Santa Margarita, Garden Grove and Santa Ana joined the Fire Authority as members eligible for fire protection services. The purpose of the Fire Authority is to provide for mutual fire protection, prevention and suppression services, and related and incidental services including, but not limited to, emergency medical and transport services as well as providing facilities and personnel for such services. The effective date of formation was March 1, 1995. The Fire Authority's governing board consists of one representative from each City and two from the County. The operations of the Fire Authority are funded with fire fees collected by the County through the property tax roll for the unincorporated area and on behalf of all member cities except for the Cities of Stanton, Tustin, San Clemente, Buena Park, Placentia, Seal Beach, Garden Grove and Santa Ana. The County pays all structural fire fees it collects to the Authority. The Cities of Stanton, Tustin, San Clemente, Buena Park, Placentia, Seal Beach, Garden Grove and Santa Ana are considered "cash contract cities" and accordingly, make cash contributions based on the Fire Authority's annual budget. The City of Aliso Viejo does not have an equity interest in the assets of the Orange County Fire Authority. Complete financial statements may be obtained from the Orange County Fire Authority, 1 Fire Authority Rd., Irvine, California, 92602.

Note 13: Contingent Liabilities

Various claims and suits have been filed against the City in the normal course of business. Although the outcome of these matters is not presently determinable in the opinion of legal counsel, the resolutions of these matters will not have a material adverse effect on the financial condition of the City.

Note 14: Tax Abatements

On July 1, 2016, the City entered into a sales tax abatement agreement under the Economic Development Subsidy under Government Code Section 53083. On August 1, 2023, the City entered into another sales tax abatement agreement under the Economic Development Subsidy under Government Code Section 53083. Under both agreements the City abates Sales Tax Revenue, an amount equal to the sum of fifty percent (50%) of the Sales Tax Revenues attributable to annual taxable sales for the fiscal year which includes such Computation Quarter up to eight hundred thousand dollars ($800,000) as determined on a cumulative basis for such fiscal year, and seventy percent (70%) of the Sales Tax Revenues attributable to annual taxable sales for the fiscal year which includes such Computation Quarter over eight hundred thousand dollars ($800,000) as determined on a cumulative basis for such fiscal year ending June 30. For the fiscal year ended June 30, 2025, the City abated sales taxes totaling $2,115,743 and $858,588 for abatement agreements entered into on July 1, 2016, and August 1, 2023, respectively.

Note 15: Reconciliation of Net Position

The net investment in capital assets as presented in the Statement of Net Position is calculated as follows:

Capital assets, net	$ 110,397,038
Less bonds payable	(11,035,000)
Less premium on bonds payable	(806,719)
Less lease liability	(30,967)
Less subscription liability	(526,549)
Net investment in capital assets	$ 97,997,803

Note 16: Stewardship, Compliance and Accountability

The following governmental funds reported a deficit fund balance at June 30, 2025:

Government Funds:		
Non-major Governmental Funds:		
Federal Grants	$	(87,028)

Note 17: Commitments and Contingencies

Renewable Farms

On July 1, 2023, the City entered into a new agreement with Renewable Farms, a non-profit corporation to operate agricultural and special event venue operations. The agreement is for 7 years with two renewal terms of two (2) years each. Each two-year renewal will automatically go into effect unless City or Licensee gives at least 180 days written notice of its intent not to extend. If intent not to extend is timely given, then this Agreement will terminate at the end of the then current term. The City should collect all revenues with the operations of the Farm and pay 90% of gross revenues collected from the preceding month. All costs incurred by the City in connection with the operation and maintenance of the Farm, including the actual cost of all utilities paid by the City for the Farm and all repair and maintenance work (including labor and materials) performed by the City or by any third party on behalf of the City pursuant to Section 10.4 will be reimbursed by the Renewable Farms.

Note 18 : Subsequent Event

On July 1, 2025, the City extended the lease agreement with Red Night Consulting for City Hall Space - Suite 280, for an additional period of 36 months. An initial lease receivable was recorded in the amount of $246,888. The lessee is required to make monthly fixed payments of $6,919 from July 1, 2025, through June 30, 2026, $ 7,126 from July 1, 2026, through June 30, 2027, and $7,342 from July 1, 2027, through June 30, 2028. The lease has an interest rate of 2.643%. The Lessee shall have the option to extend the term of the lease for one additional five-month period.

2024-25	431,173	(431,173)	-	3,374,995	12.78%

Notes to Schedule:

Changes in Benefit Terms: There were no changes to benefit terms that applied to all members of the Public Agency Pool.

Changes in Assumptions: There were no assumption changes in 2023 or 2024. Effective with the June 30, 2021 valuation date (June 30, 2022 measurement date), the accounting discount rate was reduced from 7.15% to 6.90%. In determining the long-term expected rate of return, CalPERS took into account long-term market return expectations as well as the expected pension fund cash flows. In addition, demographic assumptions and the price inflation assumption were changed in accordance with the 2021 CalPERS Experience Study and Review of Actuarial Assumptions. The accounting discount rate was 7.15% for measurement dates June 30, 2017, through June 30, 2021, and 7.65% for measurement dates June 30, 2015 through June 30, 2016.

CITY OF ALISO VIEJO

SCHEDULE OF CHANGES IN TOTAL OPEB LIABILITY AND RELATED RATIOS
LAST TEN FISCAL YEARS*

Measurement Period	2017	2018	2019	2020	2021
Total OPEB Liability

Budgetary Comparison Information

Budget Policies

Annual budgets are legal adopted or amended for all governmental funds on a basis consistent with generally accepted accounting principles, except for the following funds for which annual budgets were not adopted or amended:

Special Revenue Fund:
AV Ranch Foundation Fund

The City Manager shall prepare and submit the proposed annual budget to the City Council for its approval for all governmental funds. The agenda for the budget workshops and budget meetings are noticed in accordance with the Brown Act. After reviewing the same and making such revisions as it may deem advisable and public input the budget is then adopted annually by the Council at a regularly held meeting. The budget is adopted prior to the beginning of the fiscal year and serves as the foundation for the City's financial plan.

The level of budgetary control (the level at which expenditures cannot legally exceed the appropriated amount) is established at the fund level. Transfers of appropriations between funds can be made with the City Manager/Financial Services Director approval. The City Council's approval is required for all budget amendments that result in a change to the fund balances.

Appropriations lapse at the end of the fiscal year unless they are re-appropriated through the formal budget process. Encumbrances do not constitute expenditures or liabilities of the City.

Budgeted amounts are as originally adopted, or as amended in accordance with prescribed procedures throughout the fiscal year.

Excess of expenditures over appropriations are as follows:

Expenditures that exceeded appropriations for the year ended June 30, 2025 are as follows:

Government Funds:	Final Budget	Expenditures	Excess
Major Government Funds:			
Aliso Viejo Center:			
Community services	$ 2,398,579	2,435,485	(36,906)

CAPITAL ASSETS – MODIFIED APPROACH FOR INFRASTRUCTURE

The City elected to use the modified approach in reporting their street pavement infrastructure network.

Under the modified approach, infrastructure assets that are part of a network or subsystem of a network are not required to be depreciated as long as two requirements are met. First, the government manages the eligible infrastructure assets using an asset management system that has the following characteristics:

- Has an up-to-date inventory of eligible infrastructure assets
- Performs condition assessments of the eligible infrastructure assets and summarize the results using a measurement scale
- Estimates each year the annual amount to maintain and preserve the eligible infrastructure assets at the condition level established and disclosed by the government.

Second, the government documents that the eligible infrastructure assets are being preserved approximately at (or above) a condition level established and disclosed by the government. If eligible infrastructure assets meet all requirements and are not depreciated, all expenditures made for those assets (except for additions and improvements) are expensed in the period incurred. Additions and improvements to eligible infrastructure assets are capitalized. Additions or improvements increase the capacity or efficiency of infrastructure assets rather than preserve the useful life of the assets.

The condition of road pavement is measured using the Abbott Pavement Management System. All city streets have asphalt surfaces. Six distress factors are assessed for all street segments. Pavement condition is rated on a scale of 0 to 100 points. This rating scale is called a deficiency rating. The scale is subdivided into ranges or categories. Pavement condition is commonly defined by the following five categories.

1. Very good (86 to 100 Rating) — A street rated as excellent has the characteristics of a new street. A street in this category has no surface defects that would affect ride quality or cause excess tire noise.

2. Good (75 to 85 Rating) — A street rated as good has some surface defects that can be seen when walking along the street. Some cracking and raveling will probably exist. In fact, there could be large cracks in the street or many hairline cracks. There may be some minor bumps that can be felt when driving the street at posted speeds.

3. Fair (60 to 74 Rating) — A street rated as fair has areas of surface defects that are apparent to drivers and passengers as they use the street. There will probably be significant cracking and raveling of the asphalt surface. If cracking does not exist, the street will probably have many patches and utility cuts or perhaps some rutting and deformation. There will be some ride roughness and some additional tire noise. These streets will not cause increases in vehicle driving costs due to extra wear and tear on vehicles.

CAPITAL ASSETS – MODIFIED APPROACH FOR INFRASTRUCTURE (CONTINUED)

4. Poor (41 to 59 Rating) — A street rated as poor has surface defects generally throughout its length that are readily apparent to anyone using the street. There will be areas showing structural failure with closely spaced cracking and there may be pieces of loose pavement. A street in this category will cause additional vehicle user costs and excessive tire noise.

5. Very poor (40 and below Rating) — A street rated critical will have major areas of structural failure which may alter the speeds at which typical drivers drive on the street. There will be missing pieces of pavement. Repair of a street in this category will require reconstruction.

Annual street maintenance costs for the previous five fiscal years were as follows:

Year Ended June 30,	Actual	Estimated
2021	$ 3,425,241	3,779,360
2022	2,641,341	3,432,500
2023	3,480,668	4,824,716
2024	2,531,055	3,684,900
2025	2,070,847	4,058,051
Total	$ 14,149,152	19,779,527

The City of Aliso Viejo City Council (the Council) accepted the findings of the Pavement Management System performed in fiscal year 2002 (see results below) and adopted a condition rating of 75 as the minimum acceptable Pavement Condition Index (PCI). The PMS was updated using statistical methods in 2004. The approach incorporated a new field survey of approximately 10% of all streets. The survey was then statistically extended to the entire street system. A complete field survey was performed and accepted by the City Council starting fiscal year 2008 and every two years thereafter. See below for the three most recent condition assessments:

Conditions		2020	Mileage	2022	Mileage	2024	Mileage
86-100	Very good	40.8%	30.5	41.6%	31.2	50.5%	36.4
75-85	Good	36.3%	25.5	34.8%	23.7	23.4%	16.9
60-74	Fair	20.1%	14.1	17.6%	11.5	21.0%	15.2
41-59	Poor	2.1%	1.5	6.0%	4.0	5.1%	3.7
0-40	Very poor	0.7%	0.5	0.0%	-	0.0%	0
		100.0%	72.1	100.0%	70.4	100.0%	72.2

The results of the most recent complete condition assessment (performed in fiscal year 2024) reported an average condition rating of 82 which is consistent with the 2022 average. Funding in the amount of $1,041,848 was utilized for the maintenance/rehabilitation to achieve the minimum PCI standard as of June 30, 2024. The estimated funding required to maintain the PCI standard was calculated at $2,100,000. The condition survey will be updated during the fiscal year ended June 30, 2026, for a two-year cycle.

OTHER GOVERNMENTAL FUNDS

OTHER SPECIAL REVENUE FUNDS

Traffic Congestion Relief

The Traffic Congestion Relief Fund is used to account for revenue received from the SB1 Loan Repayment Program from the State of California.

Gas Tax

This fund is used to account for the City's share of the motor vehicle gas tax imposed under the provisions of the Street and Highway Code of the State of California under Sections 2105, 2106, 2107, and 2107.5 which are legally restricted for the acquisition, construction, improvements, and maintenance of public streets.

Measure M

The Measure M Fund is used to account for the City's share of the sales tax increase authorized by Orange County's Measure "M". These monies are legally restricted for the acquisition, construction, and improvement of public streets.

SB1 – RMRA

Senate Bill (SB) 1 created the Road Rehabilitation Maintenance Account to address deferred maintenance on the State Highway System and the local street and road system. These funds are legally restricted for basic road maintenance, rehabilitation, and critical safety projects on the local streets and roads.

Public Safety Grants

This fund is used to account for law enforcement grants received such as the California Law Enforcement Equipment Program (CLEEP) and the Supplemental Law Enforcement State Fund (SLESF).

Air Quality Improvement

This fund is used to account for the City's share of vehicle registration fees that the State of California has allocated to address air quality concerns in Southern California. These monies are to be used in air quality maintenance programs locally and/or regionally.

Integrated Waste Management

This fund is used to account for the receipt of the California Beverage and Recycling Grant.

Other Grants

This fund is used to account for state, local, and other grants received such as Prop 10, CalRecycle, and the urban Runoff Grant.

OTHER GOVERNMENTAL FUNDS (Continued)

Technology Grants

This fund is a result of negotiations between the City and a franchisee for a new franchise agreement. These funds will be used for new technology purchases, provide City information on the Cable T.V. Government Access Channel and provide programs and access to computers through technology upgrades to the Family Resource Center.

Development Impact

This fund is used to account for revenue received as a result of negotiated developer agreements for affordable housing, traffic mitigation, community enhancement, and open spaces. This fund had no legally adopted budget for fiscal year ending June 30, 2025.

Federal Grants

The Federal Grants Fund is used to account for Federal Grants received by the City for various projects. Grants vary from year to year depending on funding awards, but include Community Development Block Grant (CDBG), Energy Efficiency and Conservation Block Grants, and Federal Emergency Management Agency (FEMA).

Aquatic Center

This fund is used to account for the operations of the Aliso Viejo Aquatic Center. The Aliso Viejo Aquatic Center is a City owned facility that provides residents with a resort-style swimming complex that includes a lap pool, whirlpool, tots wading pool, snack bar, and patio.

AV Ranch Foundation

This fund is used to account for donations received for the AV Ranch and payments approved by its Board of Trustees. This fund had no legally adopted budget for fiscal year ending June 30, 2025.

CAPITAL PROJECTS FUNDS

Capital Improvements

This fund is used to account for the City's street improvement projects.

Storm Water

This fund is used to account for the City's storm water related improvement projects.

Street Improvements

This fund is used to account for the City's street improvement projects.

DEBT SERVICE FUNDS

Debt Service Fund

This fund is used to account for the City's debt payments as well as any additional debt amounts deemed to be advisable and necessary for any public or municipal purposes.

***In anticipation of the issuance of tax-exempt obligations for the Aliso Viejo Ranch project, the City Council passed a reimbursement resolution on February 20, 2019. The resolution would allow the City to reimburse itself for expenditures relating to the Aliso Viejo Ranch Project. On August 13, 2019, the City issued $12,250,000 of tax-exempt Certificates of Participation to*

Total Direct Rate [4]	0.02165	0.02165	0.02170	0.02163	0.02165	0.02165	0.02167	0.02168	0.02173	0.02169

[1]In 1978, California voters passed Proposition 13 which set the property tax rate at a 1.00% fixed amount. This 1.00% is shared by all taxing agencies for which the subject property resides within. In addition to the 1.00% fixed amount, property owners are charged taxes as a percentage of assessed property values for the payment of any voter approved bonds.

[2]Overlapping rates are those of local and county governments that apply to property owners within the City. Not all overlapping rates apply to all property owners.

[3]City's Share of 1% Levy is based on the City's share of the general fund tax rate area with the largest net taxable value within the City. The ERAF portion of the City's Levy has been subtracted where known.

[4]Total Direct Rate is the weighted average of all individual direct rates applied by the City/Agency preparing the statistical section information and excludes revenues derived from aircraft. Beginning in 2013/14 the Total Direct Rate no longer includes revenue generated from the former redevelopment tax rate areas. Challenges to recognized enforceable obligations are assumed to have been resolved during 2012/13. For the purposes of this report, residual revenue is assumed to be distributed to the City/Agency in the same proportions as general fund revenue.

(1) The percentage of overlapping debt applicable to the city is estimated using taxable assessed property value. Applicable percentages were estimated by determining the portion of the overlapping district's assessed value that is within the boundaries of the city divided by the district's total taxable assessed value.

(2) Excludes tax and revenue anticipation notes, enterprise revenue, mortage revenue and non-bonded capital lease obligations.

(3) On August 13, 2019 the City issued $12,250,000 of tax-exempt Certificates of Participation to provide financing for the construction of the Aliso Viejo Ranch.

Note: The general laws of the State of California for muncipalities provide for a legal debt limit of 15% of gross assessed valuation. However, this provision was enacted when assessed valuation was established based on 25% of market value. Effective with fiscal year 1981-82, taxable property is assessed at 100% of market value. Although the debt limit provision has not been since this change, the percentage has been proportionately modified to 3.75% for the purpose of this amended by the State calculation for consistency with the original intent of the State's debt limit.

The Honorable Mayor and City Council
City of Aliso Viejo, California

We have audited the financial statements of the governmental activities, each major fund, and the aggregate remaining fund information of the City of Aliso Viejo ("City") as of and for the year ended June 30, 2025, and have issued our report thereon dated November 13, 2025. Professional standards require that we advise you of the following matters relating to our audit.

Our Responsibility in Relation to the Financial Statement Audit

As communicated in our engagement letter dated May 23, 2025, our responsibility, as described by professional standards, is to form and express opinions about whether the financial statements that have been prepared by management with your oversight are presented fairly, in all material respects, in accordance with accounting principles generally accepted in the United States of America. Our audit of the financial statements does not relieve you or management of your respective responsibilities.

Our responsibility, as prescribed by professional standards, is to plan and perform our audit to obtain reasonable, rather than absolute, assurance about whether the financial statements are free of material misstatement. An audit of financial statements includes consideration of internal control over financial reporting as a basis for designing audit procedures that are appropriate in the circumstances, but not for the purpose of expressing an opinion on the effectiveness of the entity's internal control over financial reporting. Accordingly, as part of our audit, we considered the internal control of the City solely for the purpose of determining our audit procedures and not to provide any assurance concerning such internal control.

We are also responsible for communicating significant matters related to the audit that are, in our professional judgment, relevant to your responsibilities in overseeing the financial reporting process. However, we are not required to design procedures for the purpose of identifying other matters to communicate to you.

Planned Scope and Timing of the Audit

We conducted our audit consistent with the planned scope and timing we previously communicated to you in our engagement letter.

Compliance with All Ethics Requirements Regarding Independence

The engagement team, others in our firm, as appropriate, and our firm have complied with all relevant ethical requirements regarding independence.

We identified self-review threats to independence as a result of non-attest services provided. Those non-attest services included recording journal entries detected during the audit process and preparing the financial statements. To mitigate the risk, management has compared the draft financial statements and footnotes to the underlying accounting records to verify accuracy and has reviewed a disclosure checklist to ensure footnotes are complete and accurate.

Significant Risks Identified

We have identified the following significant risks:

Implementation of Governmental Accounting Standards Board (GASB) No. 101 – Compensated Absences due to the complexity of the standard and being the first year of implementation.

Qualitative Aspects of the Entity's Significant Accounting Practices

Significant Accounting Policies

Management has the responsibility to select and use appropriate accounting policies. A summary of the significant accounting policies adopted by the City is included in Note 1 to the financial statements. There have been no initial selection of accounting policies and the City changed the accounting policies related to compensated absences by adopting Statement of Governmental Accounting Standards (GASB Statement) No. 101, Compensated Absences, and risk disclosures related to government vulnerabilities due to concentrations and constraints by adopting Statement of Governmental Accounting Standards (GASB Statement) No. 102, Certain Risk Disclosures, in the fiscal year ended June 30, 2025. No matters have come to our attention that would require us, under professional standards, to inform you about (1) the methods used to account for significant unusual transactions and (2) the effect of significant accounting policies in controversial or emerging areas for which there is a lack of authoritative guidance or consensus.

Significant Accounting Estimates

Accounting estimates are an integral part of the financial statements prepared by management and are based on management's current judgments. Those judgments are normally based on knowledge and experience about past and current events and assumptions about future events. Certain accounting estimates are particularly sensitive because of their significance to the financial statements and because of the possibility that future events affecting them may differ markedly from management's current judgments.

The most sensitive accounting estimates affecting the financial statements include:

- Management's estimate of transactions related to net pension and OPEB liabilities based on actuarial information.

We evaluated the key factors and assumptions used to develop the estimates and determined that it is reasonable in relation to the basic financial statements taken as a whole and in relation to the applicable opinion units.

Financial Statement Disclosures

Certain financial statement disclosures involve significant judgment and are particularly sensitive because of their significance to financial statement users. The most sensitive disclosures affecting the financial statements were:

- The disclosure of investment fair value in note 2 to the financial statements
- The disclosure of pensions in note 9 to the financial statements
- The disclosure of OPEB in note 10 to the financial statements.

The financial statement disclosures are neutral, consistent, and clear.

Significant Difficulties Encountered during the Audit

We encountered no significant difficulties in dealing with management relating to the performance of the audit.

Uncorrected and Corrected Misstatements

For purposes of this communication, professional standards also require us to accumulate all known and likely misstatements identified during the audit, other than those that we believe are trivial, and communicate them to the appropriate level of management. Further, professional standards require us to also communicate the effect of uncorrected misstatements related to prior periods on the relevant classes of transactions, account balances or disclosures, and the financial statements as a whole and each applicable opinion unit. Uncorrected misstatements or matters underlying those uncorrected misstatements could potentially cause future-period financial statements to be materially misstated, even though the uncorrected misstatements are immaterial to the financial statements currently under audit. There was one adjustment not recorded by management because it was not material to the financial statements. This was a passed adjustment to record the disposal of a median, as the asset did not exist at year-end.

In addition, professional standards require us to communicate to you all material, corrected misstatements that were brought to the attention of management as a result of our audit procedures. There were no material misstatements noted as a result of our audit procedures.

Disagreements with Management

For purposes of this letter, professional standards define a disagreement with management as a matter, whether or not resolved to our satisfaction, concerning a financial accounting, reporting, or auditing matter, which could be significant to the City's financial statements or the auditor's report. No such disagreements arose during the course of the audit.

Representations Requested from Management

We have requested certain written representations from management in a letter dated November 13, 2025.

Management's Consultations with Other Accountants

In some cases, management may decide to consult with other accountants about auditing and accounting matters. Management informed us that, and to our knowledge, there were no consultations with other accountants regarding auditing and accounting matters.

Other Significant Matters, Findings, or Issues

In the normal course of our professional association with the City, we generally discuss a variety of matters, including the application of accounting principles and auditing standards, significant events or transactions that occurred during the year, operating and regulatory conditions affecting the entity, and operational plans and strategies that may affect the risks of material misstatement. None of the matters discussed resulted in a condition to our retention as the City's auditors.

Other Information Included in the Annual Comprehensive Financial Report

Pursuant to professional standards, our responsibility as auditors for other information, whether financial or nonfinancial, included in the City's annual report, does not extend beyond the information identified in the audit report, and we are not required to perform any procedures to corroborate such other information. However, in accordance with such standards, we have read the information and

considered whether such information, or the manner of its presentation, was materially inconsistent with its presentation in the financial statements.

Our responsibility also includes communicating to you any information which we believe is a material misstatement of fact. Nothing came to our attention that caused us to believe that such information, or its manner of presentation, is materially inconsistent with the information, or manner of its presentation, appearing in the financial statements.

This report is intended solely for the information and use of the City Council and management of the City and is not intended to be and should not be used by anyone other than these specified parties.

REPORT ON INTERNAL CONTROL OVER FINANCIAL REPORTING AND ON COMPLIANCE AND OTHER MATTERS BASED ON AN AUDIT OF FINANCIAL STATEMENTS PERFORMED IN ACCORDANCE WITH *GOVERNMENT AUDITING STANDARDS*

Independent Auditor's Report

The Honorable Mayor and City Council
City of Aliso Viejo, California

We have audited, in accordance with auditing standards generally accepted in the United States of America and the standards applicable to financial audits contained in *Government Auditing Standards* issued by the Comptroller General of the United States, the financial statements of the governmental activities, each major fund, and the aggregate remaining fund information of City of Aliso Viejo (the 'City'), as of and for the year ended June 30, 2025, and the related notes to the financial statements, which collectively comprise the City's basic financial statements, and have issued our report thereon dated November 13, 2025.

Report on Internal Control over Financial Reporting

In planning and performing our audit of the financial statements, we considered The City's internal control over financial reporting (internal control) as a basis for designing audit procedures that are appropriate in the circumstances for the purpose of expressing our opinions on the financial statements, but not for the purpose of expressing an opinion on the effectiveness of the City's internal control. Accordingly, we do not express an opinion on the effectiveness of the City's internal control.

A deficiency in internal control exists when the design or operation of a control does not allow management or employees, in the normal course of performing their assigned functions, to prevent, or detect and correct misstatements on a timely basis. A material weakness is a deficiency, or combination of deficiencies, in internal control, such that there is a reasonable possibility that a material misstatement of the entity's financial statements will not be prevented or detected and corrected on a timely basis. A significant deficiency is a deficiency, or a combination of deficiencies, in internal control that is less severe than a material weakness, yet important enough to merit attention by those charged with governance.

Our consideration of the internal control was for the limited purpose described in the first paragraph of this section and was not designed to identify all deficiencies in internal control that might be material weaknesses or significant deficiencies. Given these limitations, during our audit we did not identify any deficiencies in internal control that we consider to be material weaknesses. However, material weaknesses or significant deficiencies may exist that have not been identified.

Report on Compliance and Other Matters

As part of obtaining reasonable assurance about whether The City's financial statements are free from material misstatement, we performed tests of its compliance with certain provisions of laws, regulations, contracts, and grant agreements, noncompliance with which could have a direct and material effect on the financial statements. However, providing an opinion on compliance with those provisions was not an objective of our audit and, accordingly, we do not express such an opinion. The results of our tests disclosed no instances of noncompliance or other matters that are required to be reported under *Government Auditing Standards.*

Purpose of this Report

The purpose of this report is solely to describe the scope of our testing of internal control and compliance and the results of that testing, and not to provide an opinion on the effectiveness of the entity's internal control or on compliance. This report is an integral part of an audit performed in accordance with *Government Auditing Standards* in considering the entity's internal control and compliance. Accordingly, this communication is not suitable for any other purpose.

INDEPENDENT ACCOUNTANT'S REPORT

The Honorable Mayor and City Council
City of Aliso Viejo, California

We have performed the procedures enumerated below on the City of Aliso Viejo, California (City) appropriations limit worksheets for compliance with the requirements of Section 1.5 of Article XIIIB of the California Constitution for the year ended June 30, 2025. The City is responsible for compliance with Section 1.5 of Article XIIIB of the California Constitution.

The City has agreed to and acknowledged that these procedures are appropriate to meet the intended purpose of evaluating compliance with the requirements of Section 1.5 of Article XIIIB of the California Constitution and the League of California Cities publication entitled *Article XIIIB Appropriations Limitation Uniform Guidelines* for the year ended June 30, 2025. This report may not be suitable for any other purpose. The procedures performed may not address all the items of interest to a user of this report and may not meet the needs of all users of this report and, as such, users are responsible for determining whether the procedures performed are appropriate for their purposes.

The procedures and the associated findings are as follows:

1. We obtained the worksheets referred to above and compared the limit and annual adjustment factors included in those worksheets to the limit and annual adjustment factors that were adopted by resolution of the City Council. We also compared the population and inflation options included in the aforementioned worksheets to those that were selected by a recorded vote.

   Results: No exceptions were noted as a result of our procedures.

2. We recalculated the mathematical computations reflected in the City's worksheets.

   Results: No exceptions were noted as a result of our procedures.

3. We compared the current year information used to determine the current year limit and agreed it to worksheets prepared by the City and to information provided by the State Department of Finance.

   Results: No exceptions were noted as a result of our procedures.

4. We compared the amount of the prior year appropriations limit presented in the worksheets to the amount adopted by the City Council for the prior year.

   Results: No exceptions were noted as a result of our procedures.

We were engaged by the City to perform this agreed-upon procedures engagement and conducted our engagement in accordance with standards established by the American Institute of Certified Public Accountants. We were not engaged to and did not conduct an examination or review, the objective of which would be the expression of an opinion or conclusion, respectively on the worksheets referred to above. Accordingly, we do not express such an opinion or conclusion. Had we performed additional procedures, other matters might have come to our attention that would have been reported to you. No procedures have been performed with respect to the determination of the appropriation limit for the base year, as defined by the League publication entitled *Article XIIIB Appropriations Limitation Uniform Guidelines*.

We are required to be independent of the City and to meet our other ethical responsibilities, in accordance with the relevant ethical requirements related to our agreed-upon procedures engagement.

This report is intended solely for the information and use of the Management of the City of Aliso Viejo, California and is not intended to be, and should not be, used by anyone other than the specified party.

INDEPENDENT ACCOUNTANT'S REPORT

The Honorable Mayor and City Council
City of Aliso Viejo, California

We have performed the procedures enumerated below on the City of Aliso Viejo, California (City) Treasurer's Monthly Cash Statement for the month ended June 30, 2025, for compliance with the provisions of the California Government Code and with the City's investment policy dated July 17, 2024. The City's management is responsible for the Treasurer's Monthly Cash Statement for the month ended June 30, 2025.

The City has agreed to and acknowledged that these procedures are appropriate to meet the intended purpose of evaluating compliance with the requirements of the California Government Code and with the City's investment policy dated July 17, 2024. This report may not be suitable for any other purpose. The procedures performed may not address all the items of interest to a user of this report and may not meet the needs of all users of this report and, as such, users are responsible for determining whether the procedures performed are appropriate for their purposes.

The procedures and the associated findings are as follows:

1. We obtained a copy of the City's Treasurer's Report for the month ended June 30, 2025, and reconciled individual investments/deposits to supporting documentation obtained from City staff. We also traced total funds reported on the Treasurer's Report to the City's General Ledger at June 30, 2025.

   Results: No exceptions were noted as a result of our procedures.

2. We compared the investments listed on the City's Treasurer's Report for the month ended June 30, 2025, to the type of investments authorized by the City's Investment Policy and Government Code Section 53601.

   Results: No exceptions were noted as a result of our procedures.

3. We compared the market value of the investments listed on the Treasurer's Report for the month ended June 30, 2025, to the City's copies of investment statements.

   Results: No exceptions were noted as a result of our procedures.

4. We read the City Treasurer's Report for the month ended June 30, 2025, to ascertain that it contains all the information/data required by Government Code Section 53646 and meets the timing requirements of Government Code Section 53646 as follows:

   a. Was submitted within 45 days following the end of the quarter

b. Included the type of investment, issuer, date of maturity, par and dollar amount invested on all securities, investments, and monies held by the City

c. Included those funds under management of contracted parties (fiscal agents, trustee, deferred compensation, plan administrators, etc.)

d. Included market value (and source) as of the date of the report for all securities held by the City or under management of any outside party that is not also a local agency or the State of California Local Agency Investment Fund

e. Stated compliance of the portfolio to the investment policy of the City

f. Included a statement addressing the ability of the City to meet the pool's expenditure requirements for the next six months

g. Included the most recent statements from the Local Agency Investment Fund in lieu of the information required by (b) and (d) above, for City investments that have been placed in those pools

Results: No exceptions were noted as a result of our procedures, except for step 4a, the Treasurer’s report was approved by the Council on August 20, 2025 as per minutes of the meeting.

5. We compared the investments listed in the City Treasurer's Report for the month ended June 30, 2025, to the prohibited investments listed in the City's Investment Policy and Government Code Section 53601.6.

   Results: No exceptions were noted as a result of our procedures.

6. We calculated the totals (cost basis) for the investments listed in the City Treasurer's Report for the month ended June 30, 2025, and compared those totals to the limitations imposed by the City's Investment Policy and Government Code Section 53601 for specified investment types

   Results: No exceptions were noted as a result of our procedures.

7. We agreed individual investment maturity dates listed on the City Treasurer's Report for the month ended June 30, 2025, to the City's copies of the investment statements, to determine if they conformed to the maturity requirements of the City's Investment Policy and Government Code Section 53601.

   Results: No exceptions were noted as a result of our procedures.

The Honorable Mayor and City Council
City of Aliso Viejo, California

We were engaged by the City to perform this agreed-upon procedures engagement and conducted our engagement in accordance with standards established by the American Institute of Certified Public Accountants. We were not engaged to and did not conduct an examination or review, the objective of which would be the expression of an opinion or conclusion, respectively on the Treasurer's Monthly Cash Statement dated June 30, 2024. Accordingly, we do not express such an opinion or conclusion. Had we performed additional procedures, other matters might have come to our attention that would have been reported to you.

We are required to be independent of the City and to meet our other ethical responsibilities, in accordance with the relevant ethical requirements related to our agreed-upon procedures engagement.

This report is intended solely for the information and use of the Management of the City of Aliso Viejo, California and is not intended to be, and should not be, used by anyone other than the specified party.

ALISO VIEJO

Questions?

City of Aliso Viejo
AGENDA ITEM

DATE: December 3, 2025

TO: Mayor and City Council

FROM: Mitzi Ortiz, City Manager

SUBJECT: CITY COUNCIL REORGANIZATION

Recommended Action:

Select a Mayor and Mayor Pro Tem in accordance with Ordinance No. 2001-022, for the 2026 calendar year.

Fiscal Impact:

There is no fiscal impact to this action.

Background:

Ordinance No. 2001-022 provides for the selection of the Mayor and Mayor Pro Tem on an annual basis at the first meeting of the City Council in December of each year with their terms commencing on January 1st the following year.

Discussion:

To conduct the selection of the next Mayor and Mayor Pro Tem, the following steps are recommended:

- The City Clerk calls for a motion to nominate a member of the City Council to serve as Mayor for 2026.
- The City Clerk requests any additional nominations.
- Nominations are closed.
- A roll call vote is taken by the City Clerk for each nominee until a successful nominee receives a majority vote and is declared Mayor.

The process is then repeated for the position of Mayor Pro Tem.

Additionally, Council Policy 400-2 states that the Council seating order shall be at the discretion of the Mayor.
