AGENDA

ALISO VIEJO CITY COUNCIL
REGULAR MEETING
WEDNESDAY, OCTOBER 7, 2026
7:00 PM

CITY HALL
COUNCIL CHAMBERS
12 JOURNEY, ALISO VIEJO, CA

Mayor Max Duncan
Mayor Pro Tem Mike Munzing
Councilmember Tiffany Ackley
Councilmember Tim Zandbergen
Councilmember Garrett Dwyer

WELCOME to the City of Aliso Viejo City Council meeting. Persons wishing to address the City Council may submit a Request to Address City Council form to the City Clerk prior to the item being heard. Public comments are limited to three (3) minutes per speaker. Members of the public may also participate remotely as authorized by law. Instructions for virtual participation, including the meeting link and procedures for providing public comment and the SB707 Disruption Policy, are available on the City's website at: https://avcity.org/470/Public-Comments-and-Disruption-Policy-Pu

The City complies with the Americans with Disabilities Act (ADA). If you need reasonable accommodations to participate in the meeting, please contact Human Resources at (949) 425-2511 at least 48 hours prior to the meeting.

Regular meetings are held on the first and third Wednesday of the month at the City Hall Council Chambers, 12 Journey, Aliso Viejo. Agendas are available by the Friday preceding a regularly scheduled City Council meeting. Communications and supplemental materials received by the City relating to agenda items are presented at the dais and in the Public Copy agenda binder at the time of the meeting or contact the City Clerk's office to review or obtain a copy. Council proceedings are recorded.

Meetings are broadcast live on Cox Communications Channel 851, AT&T U-Verse Channel 99 and the City's website. By attending the City Council Meeting, you consent to be recorded and televised. Meetings are rebroadcast on Wednesday at 7:00 p.m. cable channels, and can be viewed on the City's website.

BRETT CHANNING	SCOTT C. SMITH	MARIA KENDIG
CITY MANAGER	CITY ATTORNEY	CITY CLERK

PLEASE SILENCE ALL CELL PHONES AND OTHER ELECTRONIC EQUIPMENT WHILE CITY COUNCIL IS IN SESSION

CALL TO ORDER: Convene Regular Meeting

STUDY SESSION

FISCAL YEAR 2025-26 YEAR-END RESULTS AND FIVE-YEAR FINANCIAL FORECAST

Recommended Action: Receive and file.

The City Council received a presentation regarding the Fiscal Year 2025-26 Year-End Results and Five-Year Financial Forecast, provided as a follow-up to a previous Council request. Director of Financial Services Ann Eifert presented the Fiscal Year 2025-26 year-end results, reporting a General Fund surplus of $5.1 million. Revenues totaled $32.9 million, driven by higher-than-expected sales tax. Expenditures totaled $27.8 million and were approximately $1.3 million under budget.

Director Eifert also provided an overview of the Five-Year Financial Forecast, including General Fund revenue and expenditure assumptions and projections, as well as potential future capital improvements. Two General Fund forecast scenarios were presented: a 5% increase and a 5% decrease in the four largest revenue sources. Staff responded to City Council questions regarding sales tax projections, CDBG funds, and carryover projects from Fiscal Year 2025-26.

The City Council thanked Director Eifert for the report and commended staff for maintaining fiscal conservatism.

The following member of the public spoke on the matter:

1. Art Camoia expressed appreciation for the projected surplus and noted the unusual economic conditions, including oil costs, tariffs, interest rates, and housing market uncertainty. Mr. Camoia suggested consideration of a third, more conservative scenario, such as a 15% stress test, as a contingency for a potential recession or lower-than-anticipated revenues.

   Motion: Mayor Pro Tem Munzing moved and Councilmember Ackley seconded to receive and file the report. Motion carried 5-0.

ADJOURNED: 7:12 P.M.

REGULAR CITY COUNCIL MEETING

CALL TO ORDER: Mayor Duncan called the Regular Meeting of the City Council of the City of Aliso Viejo to order at 7:12 p.m.

ROLL CALL

PRESENT: MAYOR MAX DUNCAN
MAYOR PRO TEM MIKE MUNZING
COUNCILMEMBER GARRETT DWYER
COUNCILMEMBER TIM A. ZANDBERGEN
COUNCILMEMBER TIFFANY ACKLEY

ABSENT: NONE

STAFF PRESENT: BRETT CHANNING, CITY MANAGER
SCOTT SMITH, CITY ATTORNEY
ANN EIFERT, DIRECTOR OF FINANCIAL SERVICES
MARIA KENDIG, DIRECTOR OF GOVERNMENT SERVICES / CITY CLERK
SO KIM, DIRECTOR OF COMMUNITY DEVELOPMENT
SHAUN PELLETIER, DIRECTOR OF PUBLIC WORKS
LIZZY MENDOZA, RECREATION & COMMUNITY SERVICES MANAGER
ISAAC AZIZ, INFORMATION TECHNOLOGY MANAGER
CAPT. RYAN BUHR, ALISO VIEJO POLICE SERVICES
DIVISION CHIEF REID GIBSON, ORANGE COUNTY FIRE AUTHORITY

PLEDGE OF ALLEGIANCE: City Attorney Scott Smith led the Pledge of Allegiance.

REPORT FROM CLOSED SESSION:
City Attorney Scott Smith stated no reportable action was taken.

1. SPECIAL PRESENTATIONS:

1.1 BUSINESS SPOTLIGHT - FS8 ALISO VIEJO
Mayor Duncan introduced FS8 as the City's Business Spotlight and a video highlighting the business was presented. Mel Rosborough, Studio Manager of FS8 Aliso Viejo, expressed her appreciation to the City Council and provided information regarding promotions available to Aliso Viejo residents.

PROCLAMATION - HUNGER ACTION MONTH

Mayor Duncan presented the proclamation to Malia Cary, Director of Government Affairs and Community Relations for Harvest Food Bank. She expressed her appreciation and spoke about the significance of the recognition.

2. ADDITIONS, DELETIONS, REORDERING TO THE AGENDA:

None.

3. COMMUNITY INPUT:

1. William "Bill" Moorhead, Director of Moulton Niguel Water District, highlighted his focus on interagency cooperation and infrastructure maintenance and improvements.
2. Jena Minnick Bull, Executive Director of South Coast Conservatory, spoke about the organization's performing arts programs, scholarships, and community partnerships, and expressed interest in collaborating with the city to expand arts opportunities.
3. Martin Beck of Soka University, representing the Aliso Viejo Chamber of Commerce, reminded the City Council and community that the State of the City event will be held the following Wednesday at the Aliso Viejo Ranch. The networking reception will begin at 6:00 p.m. and requires a fee, followed by the State of the City presentation at 7:00 p.m., which is free and open to the public.

4. CONSENT CALENDAR:

Motion: Mayor Pro Tem Munzing moved and Councilmember Dwyer seconded to approve the recommended actions for agenda items 4.1 through 4.7. Councilmember Ackley pulled item 4.8 for separate discussion. Motion carried 5-0.

4.1 WAIVE THE READING OF ALL ORDINANCES AND RESOLUTIONS

Recommended Action: Approve the reading by title only of all ordinances and resolutions wherein the titles appear on the public agenda; said titles shall be determined to have been read by title, and further reading is waived.

4.2 APPROVAL OF MINUTES

Recommended Action: Approve the minutes as submitted.

4.3 ACCOUNTS PAYABLE

Recommended Action: Ratify accounts payable checks and electronic funds transfers issued between August 14, 2026, and August 27, 2026, in the amount of $601,567.85.

4.4 TREASURER'S STATEMENT – JULY 2026

Recommended Action: Receive and file the July 2026 Treasurer's Statement.

4.5 RESOLUTION REAPPROPRIATING CERTAIN FISCAL YEAR 2025-26 FUND BALANCES AND AMENDING THE FISCAL YEAR 2026-27 BUDGET

Recommended Action: Adopt Resolution No. 2026-24 reappropriating certain Fiscal Year (FY) 2025-26 fund balances and amending the Fiscal Year 2026-27 Budget.

4.6 CONDITIONAL USE PERMIT AND EXCEPTION PERMIT TO ESTABLISH A LARGE OUTPATIENT MEDICAL OFFICE WITH A REDUCED NUMBER OF REQUIRED PARKING SPACES AT 27412 ALISO CREEK ROAD (USE-2026- 01005 AND EXP-2026-01001)

Recommended Action: Receive and file the Applicant's request to withdraw the application.

4.7 ADOPTION OF THE 2025-2026 CONSOLIDATED ANNUAL PERFORMANCE AND EVALUATION REPORT (CAPER) FOR EXPENDITURES OF COMMUNITY DEVELOPMENT BLOCK GRANT (CDBG) FUNDS

Recommended Actions:

1. Find that the 2025-2026 Consolidated Annual Performance and Evaluation Report (CAPER) is not subject to the California Environmental Quality Act (CEQA) because the activity is not a project as defined in Section 15378 (b)(5) of the State CEQA Guidelines;
2. Approve and adopt the 2025-2026 CAPER; and
3. Authorize the City Manager to submit the CAPER to the United States Department of Housing and Urban Development (HUD) and authorize the City Manager to submit all related documents.

4.8 PROPOSED LEASE RENEWAL WITH FAMILY ASSISTANCE MINISTRIES AT PLAYA CIRCLE

Recommended Actions:

1. Find that the lease of the property is exempt from the California Environmental Quality Act pursuant to State CEQA Guidelines Sections 15301 (Existing Facilities);
2. Approve the renewal of the lease agreement between the City and Family Assistance Ministries ("FAM") for the property at Playa Circle, and direct the City Manager to take all necessary steps to execute the lease of the property.

Councilmember Ackley directed staff to omit addresses associated with proposed lease renewals with Family Assistance Ministries from public meeting materials, to the extent permitted by law

Motion: Councilmember Ackley moved and Mayor Pro Tem Munzing seconded to approve the recommended actions. Motion carried 5-0.

5. PUBLIC HEARING(S):

None.

6. DISCUSSION:

None.

7. CITY MANAGER' S REPORT:

City Manager Channing announced several upcoming community events, including the Aliso Viejo Trails and Creek Cleanup event this Saturday, September 19, 2026, from 8:00 to 11:00 a.m., and encouraged residents to volunteer; State of the City on September 23, 2026 from 5:30 to 8:00 p.m.; Furry Friends Pet Fair and Vet Clinic on October 3, 2026 from 9:00 to 11:00 a.m. at the Aliso Viejo Ranch; and Family Movie Night on October 16, 2026 beginning at 5:30 p.m. also at the Aliso Viejo Ranch.

8. ANNOUNCEMENTS / COUNCIL COMMENTS / COMMITTEE UPDATES:

Mayor Duncan:

- Attended and donated blood at the American Red Cross blood drive at Aliso Viejo Ranch and encouraged residents to participate in future blood drives.
- Attended the City's Health and Safety Fair and commended staff for organizing the event.
- Attended the 9/11 memorial observance at the local fire station and recognized OCFA for continuing the tradition.
- Reminded residents that the State of the City event will be held at Aliso Viejo Ranch on Wednesday, September 23**,** with networking beginning at 6:00 p.m. and the event opening to the public at 7:00 p.m., encouraged residents to attend and noted that a new format and special activities are planned.

Councilmember Ackley:

- Expressed disappointment at missing the annual 9/11 memorial observance at the local Fire Station 57 due to travel out of town.
- Conveyed her anticipation of the upcoming State of the City event.

Councilmember Dwyer:

- Attended the Orange County Fire Authority (OCFA) 9/11 memorial observance at its headquarters in Irvine and commended the organization for conducting a solemn and respectful ceremony.
- Shared a story about firefighters who rescued an injured woman during the September 11 attacks and later served as her pallbearers at her funeral.
- Participated in blood drive and encouraged residents to donate blood through the American Red Cross.
- Attended OC Vector Control District Board meeting and provided update on mosquito activity.
- Highlighted September as a time to focus on hunger and food insecurity and recognized Second Harvest Food Bank for its partnership with the City's Nourishing Great Futures Market pantry.

- Volunteered at Nourishing Great Futures Market pantry and noted that food and supplies were provided to more than 80 families.
- Attended Aliso Niguel High School PTSA meeting and commended the high school, its students, and the PTSA for their accomplishments and encouraged parents to participate in the PTSA.

Councilmember Zandbergen:

- Attended the 9/11 memorial observance at the local fire station and reflected on the significance of the event.
- Attended Chamber networking luncheon and discussed local business matters.
- Provided updates from the Transportation Corridor Agencies on The Toll Roads, including call center activity, and commended the organization's efficiency and financial performance.

Mayor Pro Tem Munzing:

- Attended the Orange County Fire Authority's 9/11 25th anniversary memorial observance in Irvine.
- Attended the OCFA Budget and Finance Subcommittee meeting and discussed fiscal responsibility and future capital improvements.
- Attended the Aliso Viejo Health and Safety Fair and commended the organizers and volunteers.
- Participated in the City and AVCA standing committee meeting and discussed city and association projects, including the Tree City initiative.
- Thanked community members for their participation and contributions to the community.

9. **ADJOURNMENT:** Mayor Duncan adjourned the meeting at 7:49 p.m. The next regularly scheduled City Council meeting is Wednesday, October 7, 2026 at 7 p.m.

Respectfully submitted:

SPECIAL PRESENTATION:

STATE OF THE CITY PRESENTATION
Mayor Max Duncan delivered the State of the City address, sponsored by the Aliso Viejo Chamber of Commerce. The presentation recognized Aliso Viejo's 25th anniversary and its incorporation on July 1, 2001, and reflected on the City's past, present, and future. The Mayor introduced the City Council and noted the importance of preserving the City's history.

As part of the City's 25th anniversary celebration, Mayor Duncan introduced a video highlighting Aliso Viejo's history and the people who helped shape the community. The video featured interviews with former Mayor Carmen Cave, former City Councilmembers Bill Phillips and Phil Tsunoda, retired Park Ranger Tom Maloney, Moulton Foundation President Jared Mathis, and Bob Bunyan, who worked with the Mission Viejo Company during the community's early development.

The interviewees shared their recollections of the area before incorporation, the history of Moulton Ranch, the community's efforts to become a city, and the establishment of Aliso Viejo's first City Council. They also reflected on the City's early development, the importance of preserving its history and open space, and their hopes for the community's future.

City Manager Brett Channing, Captain Ryan Burh, Orange County Sheriff's Department (OCSD) and Chief Reid Gibson, Orange County Fire Authority (OCFA) provided updates. The Mayor thanked the presenters and staff for their work and partnership.

Also, the at the event recognized recipients through the Citizen of the Year Program, which was reintroduced to acknowledge residents' contributions to the community. The 2025 Civic Service Award was presented to Deputy Barragan for efforts promoting e-bike safety; the 2025 Citizen of the Year award was presented to Leilani Harwood for her service as AYSO Commissioner; and the 2025 Key to the City was presented to Michael Avramidis for volunteer service, including service on the Aliso Viejo Community Association Board. The 2026 Civic Service Award was presented to Ionut Breb for founding the Aliso Viejo Toastmaster club and initiating a youth leadership program; the 2026 Citizen of the Year award was presented to Carol Caito for her volunteer service with local school and community organizations; and the 2026 Key to the City was presented to Lisa Naegle for longstanding volunteer service, including service on the Aliso Viejo Community Association Board.

The Mayor concluded by thanking the Chamber of Commerce for sponsoring the event and the attendees for participating in the event.

MAYOR

City of Aliso Viejo
AGENDA ITEM

DATE: October 7, 2026

TO: Mayor and City Council

FROM: Ann Eifert, Director of Financial Services

SUBJECT: ACCOUNTS PAYABLE

Recommended Action:

Ratify accounts payable checks and electronic funds transfers issued between August 28, 2026, and September 24, 2026, for $4,742,423.48.

Fiscal Impact:

Expenditures in the amount of $4,742,423.48.

Background:

The City issues accounts payable checks on a bi-weekly basis and presents them to the City Council for ratification at its next regularly scheduled City Council meeting.

Discussion:

The attached registers containing checks and electronic funds transfers issued between August 28, 2026, and September 24, 2026, for $4,742,423.48, are being presented for ratification. All payments have been made in compliance with the City's purchasing policy and procedures. Payments have been reviewed and approved by the appropriate departmental staff. The issued accounts payable checks and electronic funds transfers have been reviewed and deemed in accordance with the fiscal year budget by the Director of Financial Services.

City of Aliso Viejo
AGENDA ITEM

DATE: October 7, 2026

TO: Mayor and City Council

FROM: Ann Eifert, Director of Financial Services

SUBJECT: FIRST AMENDMENT TO THE PROFESSIONAL SERVICES AGREEMENT WITH DAVIS FARR LLP FOR AUDITING SERVICES

Recommended Action:

1. Approve the First Amendment to the Agreement with Davis Farr LLP for professional auditing services, extending the term through June 30, 2027, and increasing compensation by $36,000 for a total contract amount not to exceed $165,000, and

2. Authorize the City Manager to execute the Amendment.

Fiscal Impact:

The estimated cost of the City's financial audit and related services is $36,000 for the renewal period and is included in the City's Adopted Fiscal Year 2026–27 Budget.

Background:

In accordance with the City's Purchasing Policy, Staff initiated a Request for Proposals (RFP) for professional auditing services in February of 2023 and in May 2023 awarded a three-year contract with Davis Farr LLP. The contract included the option to renew the agreement for two additional one-year terms.

Discussion:

Staff requests approval to extend the agreement with Davis Farr LLP for an additional one-year term and to increase the total compensation by $36,000. The scope of work and services for the renewal term is unchanged from the original agreement and includes independent auditing services, review of Agreed Upon Procedures (AUP) on the City Treasurer's Report, AUP on the GANN Limit Report, single audit for federal awards (if applicable), State Controller Report, City Street Report, and other auditing and accounting services as required.

Davis Farr LLP continues to provide the City with professional and timely services related to the City's annual audit. Staff recommends renewing the contract to ensure continuity of the City's annual audit process and timely completion of required financial reporting.

Attachment:

1. First Amendment with Davis Farr LLP
2. Original Agreement with Davis Farr LLP

CITY OF ALISO VIEJO

FIRST AMENDMENT TO PROFESSIONAL SERVICES AGREEMENT FOR AUDITING SERVICES

1. PARTIES AND DATE.

This First Amendment to the Professional Services Agreement for Auditing Services ("First Amendment") is entered into on the ____ day of _____, 2026, by and between the City of Aliso Viejo (hereinafter referred to as the "City") and Davis Farr LLP (hereinafter referred to as the "Consultant"). City and Consultant are sometimes collectively referred to herein as the "Parties."

2. RECITALS.

2.1 Agreement. The Parties entered into an agreement entitled Professional Services Agreement for Auditing Services dated May 3, 2023. ("Agreement").

2.2 First Amendment. The Parties now desire to amend the Agreement in order to renew the Agreement for an additional one-year term and to increase the total compensation under the Agreement by **THIRTY-SIX THOUSAND Dollars ($36,000**).

3. TERMS.

3.1 Term.

Pursuant to Section 3.1.2 of the Agreement, the City hereby exercises the option to renew the Agreement and extend the term of the Agreement for one year from July 1, 2026, to June 30, 2027, unless earlier terminated as provided in the Agreement.

3.2 Compensation.

The total compensation for the Services provided pursuant to the Agreement and this First Amendment shall not exceed **ONE HUNDRED SIXTY-FIVE THOUSAND Dollars ($165,000)** without written approval of the City Manager. Consultant shall receive compensation, including authorized reimbursements, for all Services rendered under this First Amendment at the rates set forth in Exhibit "A" attached to the Agreement and incorporated herein by reference.

3.3 Declaration of Political Contributions. Prior to the City's approval of this Amendment, Consultant shall submit to City a statement in writing declaring any political contributions of money, in-kind services, or loan made to any member of the City Council within the previous twelve-month period by the Consultant and all of their employees, including any employee(s) that Consultant intends to assign to perform the Services described in this First Amendment.

Docusign Envelope ID: 9859AC0B-0C6A-8E83-80FC-0D29E7C0EC17

3.4 Continuing Effect of Agreement. Except as otherwise specifically set forth in this First Amendment, the remaining provisions of the Agreement shall remain in full force and effect. From and after the date of this First Amendment, whenever the term "Agreement" appears in the Agreement, it shall mean the Agreement as amended by this First Amendment.

3.5 Adequate Consideration. The Parties hereto irrevocably stipulate and agree that they have each received adequate and independent consideration for the performance of the obligations they have undertaken pursuant to this First Amendment.

3.6 Counterparts. This First Amendment may be executed in duplicate originals, each of which is deemed to be an original, but when taken together shall constitute but one and the same instrument.

ACKNOWLEDGMENT OF RECEIPT OF FRAUD POLICY

I hereby acknowledge that I have received a copy of the City's "Fraud Prevention Policy" dated October 1, 2008. I understand that I am to promptly read its contents and distribute copies to employees assigned to perform Services for the City of Aliso Viejo.

To the extent that provisions of this policy conflict with previously issued policies or practices, whether or not such policies and practices were contained in written policies, this policy shall prevail.

CITY OF ALISO VIEJO
PROFESSIONAL SERVICES AGREEMENT
FOR
AUDITING SERVICES

1. PARTIES AND DATE.

This Agreement is made and entered into this 3rd day of May, 2023, by and between the City of Aliso Viejo, a municipal corporation organized under the laws of the State of California with its principal place of business at 12 Journey, Suite 100, Aliso Viejo, California 92656 ("City") and **Davis Farr LLP,** a limited liability partnership, with its principal place of business at 18201 Von Karman Avenue, Suite 1100, Irvine, CA 92612 ("Consultant"). City and Consultant are sometimes individually referred to herein as "Party" and collectively as "Parties."

2. RECITALS.

2.1 Consultant.

Consultant desires to perform and assume responsibility for providing professional services relating to independent auditing services as required by the City on the terms and conditions set forth in this Agreement. Consultant represents that it is experienced in providing professional AUDITING SERVICES to public client and are duly authorized to practice and are licensed by the California State Board of Accountancy.

2.2 Project.

City desires to engage Consultant to render such services for the City's auditing services ("Project") as set forth in this Agreement.

3. TERMS.

3.1 Scope of Services and Term.

3.1.1 General Scope of Services. Consultant promises and agrees to furnish to the City all labor, materials, tools, equipment, services, and incidental and customary work necessary to fully and adequately supply the professional auditing services for the Project ("Services"). The Services are more particularly described in Exhibit "A" and Consultant's Proposal, attached hereto and incorporated herein by reference as Exhibit "B". All Services shall be subject to, and performed in accordance with, this Agreement, the exhibits attached hereto and incorporated herein by reference, and all applicable local, state and federal laws, rules and regulations.

3.1.2 Term. The term of this Agreement shall be from May 3, 2023 to June 30, 2026, unless earlier terminated as provided herein. The City Manager shall have the unilateral option, at its sole discretion, to renew this Agreement annually for no more than two additional one-year terms. Consultant shall complete the Services within the term of this Agreement, and shall meet any other established schedules and deadlines.

3.2 Responsibilities of Consultant.

3.2.1 Control and Payment of Subordinates; Independent Contractor. The Services shall be performed by Consultant or under its supervision. Consultant will determine the means, methods and details of performing the Services subject to the requirements of this Agreement. City retains Consultant on an independent contractor basis and not as an employee. Consultant shall complete, execute, and submit to City a Request for Taxpayer Identification Number and Certification (IRS FormW-9) prior to commencement of any Services under this Agreement. Neither City, nor any of its officials, officers, directors, employees or agents shall have control over the conduct of Consultant or any of Consultant's officers, employees, or agents, except as set forth in this Agreement. Consultant retains the right to perform similar or different services for others during the term of this Agreement. Any additional personnel performing the Services under this Agreement on behalf of Consultant shall also not be employees of City and shall at all times be under Consultant's exclusive direction and control. Consultant shall pay all wages, salaries, and other amounts due such personnel in connection with their performance of Services under this Agreement and as required by law. Consultant shall be responsible for all reports and obligations respecting such additional personnel, including, but not limited to: social security taxes, income tax withholding, unemployment insurance, disability insurance, and workers' compensation insurance.

3.2.2 Schedule of Services.

3.2.2.1 Consultant shall perform the Services expeditiously, within the term of this Agreement, and in accordance with the Schedule of Services set forth in Exhibit "C" attached hereto and incorporated herein by reference. Consultant represents that it has the professional and technical personnel required to perform the Services in conformance with such conditions. In order to facilitate Consultant's conformance with the Schedule, City shall respond to Consultant's submittals in a timely manner. Upon request of City, Consultant shall provide a more detailed schedule of anticipated performance to meet the Schedule of Services.

3.2.2.2 Neither City nor Consultant shall be considered in default of this Agreement for delays in performance caused by circumstances beyond the reasonable control of the non-performing Party. For purposes of this Agreement, such circumstances include a Force Majeure Event. A Force Majeure Event shall mean an event that materially affects a Party's performance and is one or more of the following: (1) Acts of God or other natural disasters; (2) terrorism or other acts of a public enemy; (3) orders of governmental authorities (including, without limitation, unreasonable and unforeseeable delay in the issuance of permits or approvals by governmental authorities that are required for the Services); (4) strikes and other organized labor action occurring at the site and the effects thereof on the Services, only to the extent such strikes and other organized labor action are beyond the control of Consultant and its subcontractors, and to the extent the effects thereof cannot be avoided by use of replacement workers; and (5) pandemics, epidemics or quarantine restrictions. For purposes of this section, "orders of governmental authorities," includes ordinances, emergency proclamations and orders, rules to protect the public health, welfare and safety, and other actions of a public agency applicable to the Services and Agreement.

3.2.2.3 Should a Force Majeure Event occur, the non-performing Party shall, within a reasonable time of being prevented from performing, give written notice to the other Party describing the circumstances preventing continued performance and the efforts being made to resume performance of this Agreement. Force Majeure Events and/or delays, regardless of the Party responsible for the delay, shall not entitle Consultant to any additional compensation. Notwithstanding the foregoing in this section, the City may still terminate this Agreement in accordance with the termination provisions of this Agreement.

3.2.3 Conformance to Applicable Requirements. All work prepared by Consultant shall be subject to the approval of City.

3.2.4 Substitution of Key Personnel. Consultant has represented to City that certain key personnel will perform and coordinate the Services under this Agreement. Should one or more of such personnel become unavailable, Consultant may substitute other personnel of at least equal competence upon written approval of City. In the event that City and Consultant cannot agree as to the substitution of key personnel, City shall be entitled to terminate this Agreement for cause. As discussed below, any personnel who fail or refuse to perform the Services in a manner acceptable to the City, or who are determined by the City to be uncooperative, incompetent, a threat to the adequate or timely completion of the Project or a threat to the safety of persons or property, shall be promptly removed from the Project by the Consultant at the request of the City. The key personnel for performance of this Agreement are as follows:

Jennifer Farr, Partner
Tiffany Lam, Senior Manager
Claudia Espinoza, Audit Senior

3.2.5 City's Representative. The City hereby designates the City Manager, or his or her designee, to act as its representative for the performance of this Agreement ("City's Representative"). City's Representative shall have the power to act on behalf of the City for all purposes under this Contract. The City Manager hereby designates Ann Eifert, Director of Financial Services, or his or her designee, as the City's contact for the implementation of the Services hereunder. Consultant shall not accept direction or orders from any person other than the City's Representative or his or her designee.

3.2.6 Consultant's Representative. Consultant hereby designates Jennifer Farr, Partner, or his or her designee, to act as its representative for the performance of this Agreement ("Consultant's Representative"). Consultant's Representative shall have full authority to represent and act on behalf of the Consultant for all purposes under this Agreement. The Consultant's Representative shall supervise and direct the Services, using their best skill and attention, and shall be responsible for all means, methods, techniques, sequences and procedures and for the satisfactory coordination of all portions of the Services under this Agreement.

3.2.7 Coordination of Services. Consultant agrees to work closely with City staff in the performance of Services and shall be available to City's staff, consultants and other staff at all reasonable times.

3.2.8 Standard of Care; Performance of Employees. Consultant shall perform all Services under this Agreement in a skillful and competent manner, consistent with the standards generally recognized as being employed by professionals in the same discipline in the State of California. Consultant represents and maintains that it is skilled in the professional calling necessary to perform the Services. Consultant warrants that all employees and subconsultants shall have sufficient skill and experience to perform the Services assigned to them. Finally, Consultant represents that it, its employees and subconsultants have all licenses, permits, qualifications and approvals of whatever nature that are legally required to perform the Services and that such licenses and approvals shall be maintained throughout the term of this Agreement. As provided for in the indemnification provisions of this Agreement, Consultant shall perform, at its own cost and expense and without reimbursement from the City, any services necessary to correct errors or omissions which are caused by the Consultant's failure to comply with the standard of care provided for herein. Any employee of the Consultant or its sub-consultants who is determined by the City to be uncooperative, incompetent, a threat to the adequate or timely completion of the Project, a threat to the safety of persons or property, or any employee who fails or refuses to perform the Services in a manner acceptable to the City, shall be promptly removed from the Project by the Consultant and shall not be reemployed to perform any of the Services or to work on the Project.

3.2.9 Laws and Regulations. Consultant shall keep itself fully informed of and in compliance with all local, state and federal laws, rules and regulations in any manner affecting the performance of the Project or the Services, including all Cal/OSHA requirements, and shall give all notices required by law. Consultant shall be liable for all violations of such laws and regulations in connection with Services. If the Consultant performs any work knowing it to be contrary to such laws, rules and regulations, Consultant shall be solely responsible for all costs arising therefrom. Consultant shall defend, indemnify and hold City, its officials, directors, officers, employees and agents free and harmless, pursuant to the indemnification provisions of this Agreement, from any claim or liability arising out of any failure or alleged failure to comply with such laws, rules or regulations.

3.2.10 Insurance.

3.2.10.1 Time for Compliance. Consultant shall not commence Work under this Agreement until it has provided evidence satisfactory to the City that it has secured all insurance required under this section. In addition, Consultant shall not allow any subconsultant to commence work on any subcontract until it has provided evidence satisfactory to the City that the subconsultant has secured all insurance required under this section.

3.2.10.2 Types of Insurance Required. As a condition precedent to the effectiveness of this Agreement for work to be performed hereunder and without limiting the indemnity provisions of the Agreement, the Consultant in partial performance of its obligations under such Agreement, shall procure and maintain in full force and effect during the term of the Agreement, the following policies of insurance. If the existing policies do not meet the Insurance Requirements set forth herein, Consultant agrees to amend, supplement or endorse the policies to do so.

(a) Commercial General Liability: Commercial General Liability Insurance which affords coverage at least as broad as Insurance Services Office "occurrence" form CG 0001, with minimum limits of at least $1,000,000 per occurrence, and if written with an aggregate, the aggregate shall be double the per occurrence limit. Defense costs shall be paid in addition to the limits.

The policy shall contain no endorsements or provisions limiting coverage for (1) contractual liability; (2) cross liability exclusion for claims or suits by one insured against another; or (3) contain any other exclusion contrary to the Agreement.

(b) Automobile Liability Insurance: Automobile Liability Insurance with coverage at least as broad as Insurance Services Office Form CA 0001 covering "Any Auto" (Symbol 1) with minimum limits of $1,000,000 each accident.

(c) Professional Liability: Professional Liability insurance with minimum limits of $1,000,000. Covered professional services shall specifically include all work to be performed under the Agreement and delete any exclusions that may potentially affect the work to be performed (for example, any exclusions relating to lead, asbestos, pollution, testing, underground storage tanks, laboratory analysis, soil work, etc.).

If coverage is written on a claims-made basis, the retroactive date shall precede the effective date of the initial Agreement and continuous coverage will be maintained or an extended reporting period will be exercised for a period of at least three (3) years from termination or expiration of this Agreement.

(d) Workers' Compensation: Workers' Compensation Insurance, as required by the State of California and Employer's Liability Insurance with a limit of not less than $1,000,000 per accident for bodily injury and disease.

3.2.10.3 Endorsements. Required insurance policies shall not be in compliance if they include any limiting provision or endorsement that has not been submitted to the City for approval.

(a) The policy or policies of insurance required by Section 3.2.10.2 (a) Commercial General Liability shall be endorsed to provide the following:

(1) Additional Insured: The City of Aliso Viejo, its officials, officers, employees, agents, and volunteers shall be additional insureds with regard to liability and defense of

suits or claims arising out of the performance of the Agreement.

Additional Insured Endorsements shall not (1) be restricted to "ongoing operations"; (2) exclude "contractual liability"; (3) restrict coverage to "sole" liability of Consultant; or (4) contain any other exclusions contrary to the Agreement.

(2) Cancellation: Required insurance policies shall not be canceled or the coverage reduced until a thirty (30) day written notice of cancellation has been served upon the City except ten (10) days shall be allowed for non-payment of premium.

(b) The policy or policies of insurance required by Section 3.2.10.2 (b) Automobile Liability and (c) Professional Liability shall be endorsed to provide the following:

(1) Cancellation: Required insurance policies shall not be canceled or the coverage reduced until a thirty (30) day written notice of cancellation has been served upon the City except ten (10) days shall be allowed for non-payment of premium.

(c) The policy or policies of insurance required by Section 3.2.10.2 (d) Workers' Compensation shall be endorsed to provide the following:

(1) Waiver of Subrogation: A waiver of subrogation stating that the insurer waives all rights of subrogation against the indemnified parties.

(2) Cancellation: Required insurance policies shall not be canceled or the coverage reduced until a thirty (30) day written notice of cancellation has been served upon the City except ten (10) days shall be allowed for non-payment of premium.

3.2.10.4 Primary and Non-Contributing Insurance. All insurance coverages shall be primary and any other insurance, deductible, or self-insurance maintained by the indemnified parties shall not contribute with this primary insurance. Policies shall contain or be endorsed to contain such provisions.

3.2.10.5 Waiver of Subrogation. Required insurance coverages shall not prohibit Consultant from waiving the right of subrogation prior to a loss. Consultant shall waive all subrogation rights against the indemnified parties. Policies shall contain or be endorsed to contain such provisions.

3.2.10.6 Deductible. Any deductible or self-insured retention must be approved in writing by the City and shall protect the indemnified parties in the same manner and to the same extent as they would have been protected had the policy or policies not contained a deductible or self-insured retention.

3.2.10.7 Evidence of Insurance. The Consultant, concurrently with the execution of the Agreement, and as a condition precedent to the effectiveness thereof, shall deliver either certified copies of the required policies, or original certificates and endorsements on forms approved by the City. The certificates and endorsements for each insurance policy shall be signed by a person authorized by that insurer to bind coverage on its behalf. At least fifteen (15 days) prior to the expiration of any such policy, evidence of insurance showing that such insurance coverage has been renewed or extended shall be filed with the City. If such coverage is cancelled or reduced, Consultant shall, within ten (10) days after receipt of written notice of such cancellation or reduction of coverage, file with the City evidence of insurance showing that the required insurance has been reinstated or has been provided through another insurance company or companies.

3.2.10.8 Failure to Maintain Coverage. Consultant agrees to suspend and cease all operations hereunder during such period of time as the required insurance coverage is not in effect and evidence of insurance has not been furnished to the City. The City shall have the right to withhold any payment due Consultant until Consultant has fully complied with the insurance provisions of this Agreement.

In the event that the Consultant's operations are suspended for failure to maintain required insurance coverage, the Consultant shall not be entitled to an extension of time for completion of the Services because of production lost during suspension.

3.2.10.9 Acceptability of Insurers. Each such policy shall be from a company or companies with a current A.M. Best's rating of no less than A:VII and authorized to do business in the State of California, or otherwise allowed to place insurance through surplus line brokers under applicable provisions of the California Insurance Code or any federal law.

3.2.10.10 Insurance for Subconsultants. All Subconsultants shall be included as additional insureds under the Consultant's policies, or the Consultant shall be responsible for causing Subconsultants to purchase the appropriate insurance in compliance with the terms of these Insurance Requirements, including adding the City as an Additional Insured to the Subconsultant's policies.

3.2.11 Safety. Consultant shall execute and maintain its work so as to avoid injury or damage to any person or property. In carrying out its Services, the Consultant shall at all times be in compliance with all applicable local, state and federal laws, rules and regulations, and shall exercise all necessary precautions for the safety of employees appropriate to the nature of the work and the conditions under which the work is to be performed. Safety precautions where applicable shall include, but shall not be limited to: (A) adequate life protection and life saving equipment and procedures; (B) instructions in accident prevention for all employees and subconsultants, such as safe walkways, scaffolds, fall protection ladders, bridges, gang planks, confined space procedures, trenching and shoring, equipment and other safety devices, equipment and wearing

apparel as are necessary or lawfully required to prevent accidents or injuries; and (C) adequate facilities for the proper inspection and maintenance of all safety measures.

3.3 Fees and Payments.

3.3.1 Compensation. Consultant shall receive compensation, including authorized reimbursements, for all Services rendered under this Agreement at the rates set forth in Exhibit "D" attached hereto and incorporated herein by reference. The total compensation shall not exceed **One Hundred Twenty-Nine Thousand, ($129,000)** ("Total Compensation") without written approval of City's City Manager. Extra Work may be authorized, as described below, and if authorized, will be compensated at the rates and manner set forth in this Agreement.

3.3.2 Payment of Compensation. Consultant shall submit to City a monthly itemized statement which indicates work completed and hours of Services rendered by Consultant. The statement shall describe the amount of Services and supplies provided since the initial commencement date, or since the start of the subsequent billing periods, as appropriate, through the date of the statement. City shall, within 45 days of receiving such statement, review the statement and pay all non-disputed and approved charges thereon.

3.3.3 Reimbursement for Expenses. Consultant shall not be reimbursed for any expenses unless authorized in writing by City.

3.3.4 Extra Work. At any time during the term of this Agreement, City may request that Consultant perform Extra Work. As used herein, "Extra Work" means any work which is determined by City to be necessary for the proper completion of the Project, but which the Parties did not reasonably anticipate would be necessary at the execution of this Agreement. Consultant shall not perform, nor be compensated for, Extra Work without written authorization from the City.

3.4 Accounting Records.

3.4.1 Maintenance and Inspection. Consultant shall maintain complete and accurate records with respect to all costs and expenses incurred under this Agreement. All such records shall be clearly identifiable. Consultant shall allow a representative of City during normal business hours to examine, audit, and make transcripts or copies of such records and any other documents created pursuant to this Agreement. Consultant shall allow inspection of all work, data, documents, proceedings, and activities related to the Agreement for a period of three (3) years from the date of final payment under this Agreement.

3.5 General Provisions.

3.5.1 Termination of Agreement.

3.5.1.1 Grounds for Termination. City may, by written notice to Consultant, terminate the whole or any part of this Agreement at any time and without cause by giving written notice to Consultant of such termination, and specifying the effective date thereof, at least seven (7) days before the effective date of such termination. Upon termination, Consultant shall be compensated only for those services which have been adequately rendered to City, and

Consultant shall be entitled to no further compensation. Consultant may not terminate this Agreement except for cause. The rights and remedies of the City provided in this section shall not be exclusive and are in addition to any other rights and remedies provided by law, equity or under this Agreement.

3.5.1.2 Effect of Termination. If this Agreement is terminated as provided herein, City may require Consultant to provide all finished or unfinished Documents and Data and other information of any kind prepared by Consultant in connection with the performance of Services under this Agreement. Consultant shall be required to provide such document and other information within fifteen (15) days of the request.

3.5.1.3 Additional Services. In the event this Agreement is terminated in whole or in part as provided herein, City may procure, upon such terms and in such manner as it may determine appropriate, services similar to those terminated.

3.5.2 Delivery of Notices. All notices permitted or required under this Agreement shall be given to the respective parties at the following address, or at such other address as the respective parties may provide in writing for this purpose:

Consultant:

Davis Farr
Attn: Jennifer Farr, Partner
18201 Von Karman Ave, Suite 1100
Irvine, CA 92612

City:

City of Aliso Viejo
12 Journey, Suite 100
Aliso Viejo, CA 92656
Attn: Ann Eifert, Director of Financial Services

Such notice shall be deemed made when personally delivered or when mailed, forty-eight (48) hours after deposit in the U.S. Mail, first class postage prepaid and addressed to the party at its applicable address. Actual notice shall be deemed adequate notice on the date actual notice occurred, regardless of the method of service.

3.5.3 Ownership of Materials and Confidentiality.

3.5.3.1 Documents & Data; Licensing of Intellectual Property. This Agreement creates a non-exclusive and perpetual license for City to copy, use, modify, reuse, or sublicense any and all copyrights, designs, and other intellectual property embodied in plans, specifications, studies, drawings, estimates, and other documents or works of authorship fixed in any tangible medium of expression, including but not limited to, physical drawings or data magnetically or otherwise recorded on computer diskettes, which are prepared or caused to be prepared by Consultant under this Agreement ("Documents & Data"). Consultant shall require all subconsultants to agree in writing that City is granted a non-exclusive and perpetual license for

any Documents & Data the subconsultant prepares under this Agreement. Consultant represents and warrants that Consultant has the legal right to license any and all Documents & Data. Consultant makes no such representation and warranty in regard to Documents & Data which were prepared by design professionals other than Consultant or provided to Consultant by the City. City shall not be limited in any way in its use of the Documents and Data at any time, provided that any such use not within the purposes intended by this Agreement shall be at City's sole risk.

3.5.3.2 Confidentiality. All ideas, memoranda, specifications, plans, procedures, drawings, descriptions, computer program data, input record data, written information, and other Documents and Data either created by or provided to Consultant in connection with the performance of this Agreement shall be held confidential by Consultant. Such materials shall not, without the prior written consent of City, be used by Consultant for any purposes other than the performance of the Services. Nor shall such materials be disclosed to any person or entity not connected with the performance of the Services or the Project. Nothing furnished to Consultant which is otherwise known to Consultant or is generally known, or has become known, to the related industry shall be deemed confidential. Consultant shall not use City's name or insignia, photographs of the Project, or any publicity pertaining to the Services or the Project in any magazine, trade paper, newspaper, television or radio production or other similar medium without the prior written consent of City.

3.5.3.3 Confidential Information. The City shall refrain from releasing Consultant's proprietary information ("Proprietary Information") unless the City's legal counsel determines that the release of the Proprietary Information is required by the California Public Records Act or other applicable state or federal law, or order of a court of competent jurisdiction, in which case the City shall notify Consultant of its intention to release Proprietary Information. Consultant shall have five (5) working days after receipt of the Release Notice to give City written notice of Consultant's objection to the City's release of Proprietary Information. Consultant shall indemnify, defend and hold harmless the City, and its officers, directors, employees, and agents from and against all liability, loss, cost or expense (including attorney's fees) arising out of a legal action brought to compel the release of Proprietary Information. City shall not release the Proprietary Information after receipt of the Objection Notice unless either: (1) Consultant fails to fully indemnify, defend (with City's choice of legal counsel), and hold City harmless from any legal action brought to compel such release; and/or (2) a final and non-appealable order by a court of competent jurisdiction requires that City release such information.

3.5.4 Fraud Policy. Consultant shall provide a copy of the City's Fraud Prevention Policy to each of its employees assigned to perform Services under this Agreement. Consultant shall submit to the City a statement signed by an authorized representative for Consultant certifying receipt of the City's Fraud Prevention Policy. A finding by the City that any of Consultant's employees have committed fraud against the City or have violated the City's Fraud Prevention Policy shall be grounds for appropriate discipline, up to and including such employee's removal from performance of this Agreement at City's request and/or termination of this Agreement. Consultant shall reimburse the City for any costs and expenses associated with fraud against the City.

3.5.5 Cooperation; Further Acts. The Parties shall fully cooperate with one another, and shall take any additional acts or sign any additional documents as may be necessary, appropriate or convenient to attain the purposes of this Agreement.

3.5.6 Attorney's Fees. If either party commences an action against the other party, either legal, administrative or otherwise, arising out of or in connection with this Agreement, the prevailing party in such litigation shall be entitled to have and recover from the losing party reasonable attorney's fees and all other costs of such action.

3.5.7 Indemnification.

3.5.7.1 To the fullest extent permitted by law, Consultant shall defend (with counsel of City's choosing), indemnify and hold the City, its officials, officers, employees, volunteers and agents free and harmless from any and all claims, demands, causes of action, costs, expenses, liability, loss, damage or injury of any kind, in law or equity, to property or persons, including wrongful death, in any manner arising out of, pertaining to, or incident to any alleged acts, errors or omissions, or willful misconduct of Consultant, its officials, officers, employees, subcontractors, consultants or agents in connection with the performance of the Consultant's Services, the Project or this Agreement, including without limitation the payment of all damages, expert witness fees and attorneys fees and other related costs and expenses except such loss or damage caused by the sole negligence or willful misconduct of the City. Consultant's obligation to indemnify shall survive expiration or termination of this Agreement and shall not be restricted to insurance proceeds, if any, received by the Consultant or the City, its officials, officers, employees, agents or volunteers.

3.5.7.2 If Consultant's obligation to defend, indemnify, and/or hold harmless arises out of Consultant's performance as a "design professional" (as that term is defined under Civil Code section 2782.8), then, and only to the extent required by Civil Code section 2782.8, which is fully incorporated herein, Consultant's indemnification obligation shall be limited to claims that arise out of, pertain to, or relate to the negligence, recklessness, or willful misconduct of the Consultant, and, upon Consultant obtaining a final adjudication by a court of competent jurisdiction, Consultant's liability for such claim, including the cost to defend, shall not exceed the Consultant's proportionate percentage of fault.

3.5.8 Entire Agreement. This Agreement contains the entire Agreement of the parties with respect to the subject matter hereof, and supersedes all prior negotiations, understandings or agreements. This Agreement may only be modified by a writing signed by both parties.

3.5.9 Governing Law. This Agreement shall be governed by the laws of the State of California. Venue shall be in Orange County.

3.5.10 Time of Essence. Time is of the essence for each and every provision of this Agreement.

3.6 City's Right to Employ Other Consultants. City reserves right to employ other consultants in connection with this Project.

3.7 Successors and Assigns. This Agreement shall be binding on the successors and assigns of the parties.

3.8 Assignment or Transfer. Consultant shall not assign, hypothecate, or transfer, either directly or by operation of law, this Agreement or any interest herein without the prior written consent of the City. Any attempt to do so shall be null and void, and any assignees, hypothecates or transferees shall acquire no right or interest by reason of such attempted assignment, hypothecation or transfer.

3.9 Construction; References; Captions. Since the Parties or their agents have participated fully in the preparation of this Agreement, the language of this Agreement shall be construed simply, according to its fair meaning, and not strictly for or against any Party. Any term referencing time, days or period for performance shall be deemed calendar days and not work days. All references to Consultant include all personnel, employees, agents, and subconsultants of Consultant, except as otherwise specified in this Agreement. All references to City include its elected officials, officers, employees, agents, and volunteers except as otherwise specified in this Agreement. The captions of the various articles and paragraphs are for convenience and ease of reference only, and do not define, limit, augment, or describe the scope, content, or intent of this Agreement.

3.10 Amendment; Modification. No supplement, modification, or amendment of this Agreement shall be binding unless executed in writing and signed by both Parties.

3.11 Waiver. No waiver of any default shall constitute a waiver of any other default or breach, whether of the same or other covenant or condition. No waiver, benefit, privilege, or service voluntarily given or performed by a Party shall give the other Party any contractual rights by custom, estoppel, or otherwise.

3.12 No Third Party Beneficiaries. There are no intended third party beneficiaries of any right or obligation assumed by the Parties.

3.13 Invalidity; Severability. If any portion of this Agreement is declared invalid, illegal, or otherwise unenforceable by a court of competent jurisdiction, the remaining provisions shall continue in full force and effect.

3.14 Prohibited Interests. Consultant maintains and warrants that it has not employed nor retained any company or person, other than a bona fide employee working solely for Consultant, to solicit or secure this Agreement. Further, Consultant warrants that it has not paid nor has it agreed to pay any company or person, other than a bona fide employee working solely for Consultant, any fee, commission, percentage, brokerage fee, gift or other consideration contingent upon or resulting from the award or making of this Agreement. For breach or violation of this warranty, City shall have the right to rescind this Agreement without liability. For the term of this Agreement, no member, officer or employee of City, during the term of his or her service with City, shall have any direct interest in this Agreement, or obtain any present or anticipated material benefit arising therefrom.

3.15 Equal Opportunity Employment. Consultant represents that it is an equal opportunity employer and it shall not discriminate against any subconsultant, employee or

applicant for employment because of race, religion, color, national origin, handicap, ancestry, sex or age. Such non-discrimination shall include, but not be limited to, all activities related to initial employment, upgrading, demotion, transfer, recruitment or recruitment advertising, layoff or termination. Consultant shall also comply with all relevant provisions of City's Minority Business Enterprise program, Affirmative Action Plan or other related programs or guidelines currently in effect or hereinafter enacted.

3.16 Labor Certification. By its signature hereunder, Consultant certifies that it is aware of the provisions of Section 3700 of the California Labor Code which require every employer to be insured against liability for Worker's Compensation or to undertake self-insurance in accordance with the provisions of that Code, and agrees to comply with such provisions before commencing the performance of the Services.

3.17 Authority to Enter Agreement. Consultant has all requisite power and authority to conduct its business and to execute, deliver, and perform the Agreement. Each Party warrants that the individuals who have signed this Agreement have the legal power, right, and authority to make this Agreement and bind each respective Party.

3.18 Counterparts. This Agreement may be signed in counterparts, each of which shall constitute an original.

3.19 Declaration of Political Contributions. Consultant shall, throughout the term of this Agreement, submit to City an annual statement in writing declaring any political contributions of money, in-kind services, or loan made to any member of the City Council within the previous twelve-month period by the Consultant and all of Consultant's employees, including any employee(s) that Consultant intends to assign to perform the Services described in this Agreement.

3.20 Subcontracting.

3.20.1 Prior Approval Required. Consultant shall not subcontract any portion of the work required by this Agreement, except as expressly stated herein, without prior written approval of City. Subcontracts, if any, shall contain a provision making them subject to all provisions stipulated in this Agreement.

SCOPE OF SERVICES

A. Scope of the Work to be Performed

The City of Aliso Viejo desires an Annual Comprehensive Financial Report (ACFR) for the City of Aliso Viejo to be prepared by the independent auditor for the fiscal years ended June 30, 2023 through June 30, 2025, with the option of providing services for an additional two fiscal years. The City submits its ACFR to the Government Finance Officers Association (GFOA) for review in their Certificate of Achievement for Excellence in Financial Reporting program. The City has received this award since incorporation.

The selected independent auditor will be required to perform the following tasks:

1. The audit firm will perform an audit of all funds of the City of Aliso Viejo. The audit will be conducted in accordance with auditing standards generally accepted in the United States of America and Government Auditing Standards, issued by the Comptroller of the United States, and in compliance with the latest GASB pronouncements. The firm will render its auditors' report on the basic financial statements, which will include both Government-Wide Financial Statements and Fund Financial Statements. The audit firm will also apply limited audit procedures to Management's Discussion and Analysis and required supplementary information to the General Fund and each major fund of the City.

2. The City's Annual Comprehensive Financial Report (ACFR) will be prepared by the audit firm. Ten (10) hardcopies and (1) digital copy in searchable Adobe Acrobat format must be provided for each audit year. The audit firm will prepare all financial statements and schedules as required for the preparation of the ACFR and schedules for the MD&A.

The City of Aliso Viejo has obtained the "Certificate of Achievement for Excellence in Financial Reporting" from the Government Finance Officers Association (GFOA). It is the City's intention to continue to receive this award annually and will expect the annual financial report to meet the requirements of that program.

3. The audit firm will perform a single audit on the expenditures of federal grants in accordance with OMB Uniform Guidance and render the appropriate audit reports on Internal Control over Financial Reporting based upon the audit of the City's financial statements in accordance with Government Auditing Standards and the appropriate reports on compliance with Requirements Applicable to each Major Program, Internal Control over Compliance and on the Schedule of Expenditures of Federal Awards in accordance with OMB Uniform Guidance. The single audit report will include appropriate schedule of expenditures of federal awards, footnotes, findings and questioned costs, including reportable conditions and material weaknesses, and follow up on prior audit findings where required.

4. The audit firm shall perform agreed-upon auditing procedures pertaining to the City's GANN Limit (Appropriations Limit) and render a letter annually to the City regarding compliance.

5. The audit firm shall issue a separate "management letter" that includes recommendations for improvements in internal control, accounting procedures and other

significant observations that are considered to be non-reportable conditions. Management letters shall be addressed to the City Manager and the Director of Financial Services/City Treasurer.

6. The audit firm shall prepare the Annual State Controller's Report and the Annual Street Report for the City of Aliso Viejo.

7. The audit firm shall review the City's investment policy and portfolio.

8. The auditors will be consulted on an occasional basis throughout the year as an informational resource. Auditors may be asked to provide guidance on the implementation of Governmental Accounting Standards Board (GASB) requirements and specifics of federal and state regulations as they may affect local government accounting. In addition, they may be asked to assist with the implementation of new pronouncements.

9. The firm's partner/manager may be required to present the ACFR to the City Council and may be required to occasionally attend a City Council meeting to explain or clarify financial statement information or accounting requirements

Additional Auditing Services

The audit firm may be required to perform the following services:

10. Conduct a transient occupancy tax audit of hotels operating in Aliso Viejo. Currently, there are two hotels located in the City.

11. Conduct an audit and financial review of the City's cable franchise and other video service providers for compliance with franchise provisions.

12. Conduct a financial and compliance audit for the City's Conference Center and Aquatic Center.

13. Other audits/financial reviews may also be identified during the term of the contract.

14. Timely prepare and file tax returns as requested by the City for the Aliso Viejo Public Facilities Corporation

B. ***Auditing Standards to be Followed***

To meet the requirements of this Request for Proposals, the audit shall be performed in accordance with:

1. Generally accepted auditing standards as set forth by the American Institute of Certified Public Accountants;

2. The standards applicable to financial audits contained in the most current version of the Generally Accepted Government Auditing Standards, issued by the Comptroller General of the United States;

3. The provisions of the Single Audit Act as amended in 1996; and

4. The provisions of OMB Uniform Guidance, Audits of State and Local Governments and Non-Profit Organizations.

5. Any other applicable standards for conducting examinations of those items outlined in the Scope of Services and/or reports to be issued in conjunction therewith outlined in the section reports to be issued.

C. Working Paper Retention

All working papers and reports must be retained at the auditor's expense for a minimum of five (5) years, unless the firm is notified in writing by the City of Aliso Viejo of the need to extend the retention period. The auditor will be required to make working papers available to the City of Aliso Viejo or any government agencies included in the audit of federal grants. In addition, the firm shall respond to the reasonable inquiries of successor auditors and allow successor auditors to review working papers relating to matters of continuing accounting significance.

D. Irregularities and Illegal Acts

Auditors shall be required to make an immediate, written report of all irregularities and illegal acts or indications of illegal acts of which they become aware to the following parties: City Manager; Director of Financial Services/City Treasurer; and the City Attorney.

Re: RFP for Professional Auditing Services

Dear Ms. Eifert,

We are pleased to provide our proposal to perform professional auditing services to the City of Aliso Viejo ("City") for the fiscal years ending June 30, 2023 through 2025 with the option to renew the contract for two subsequent fiscal years.

Our service philosophy is one of open and constant communication, a proactive approach and responsive, value-added services. We will listen to your ideas and concerns and will bring creative solutions to you in both financial and other operational areas. We are aware that while the City has solicited numerous proposals, Davis Farr LLP would be your best selection for the following reasons which are set forth in greater detail in our proposal:

- We take a proactive leadership role in local government accounting and auditing issues. Jennifer Farr is the recent past Chair of the Government Accounting and Audit Committee of the Cal CPA Society and our Partners are active members of the CSMFO Professional Standards Committee, the GFOA Special Review Committee, and other organizations. Our Partners are frequent speakers on technical topics at conferences and training events throughout California, including the recent CSMFO Annual Conference where we presented on the topic of Compensated Absences.
- We currently provide audit services to over 20 cities in Southern California. Our deep understanding of the issues facing California governments enables us to provide high quality audit services to the City of Aliso Viejo.
- We extensively utilize data mining software to evaluate anomalies in your accounting data. This helps focus our auditors' attention on potential errors in the accounting records and transactions that could be more susceptible to fraud.

We appreciate the opportunity to share our credentials and look forward to developing our professional relationship. Our proposal remains a firm and irrevocable offer for 180 days. I look forward to you contacting me so that I may answer further any questions which you may have. You may contact me at (949) 783-1740.

Very truly yours,

Jennifer Farr

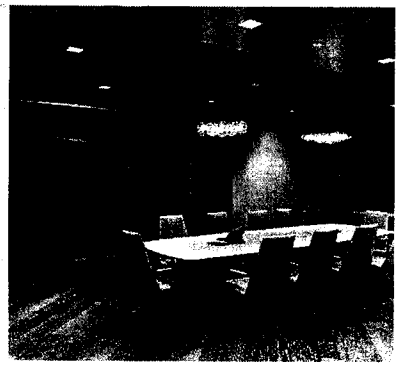
Jennifer Farr, CPA, MBA
Partner

Section A – About Davis Farr LLP

Background Information – Davis Farr LLP is a full-service regional accounting firm that specializes in providing attest and advisory services to federal, state, and local governments out of our California and Washington offices. This engagement would be serviced by our Irvine office. Our personnel have served governmental entities for over 30 years. A breakdown of our government audit personnel by classification is provided below.

License to Practice in California – Davis Farr LLP and all key personnel are licensed with the California State Board of Accountancy to practice as independent certified public accountants.

Independence – Davis Farr LLP is independent with respect to the City of Aliso Viejo and its component units as defined by U.S. General Accounting Office's *Government Auditing Standards* and Generally Accepted Auditing Standards. Neither Davis Farr LLP nor the key personnel have any potential or real conflicts of interest. Davis Farr has not provided any services for the City of Aliso Viejo within the last five years.



Insurance – Davis Farr LLP has sufficient insurance coverage to meet or exceed the City's requirements and will provide insurance certificates to the City prior to entering into a contract. The firm maintains a prudent amount of errors and omissions insurance that covers negligent acts as is appliable to the work requested in the RFP.

Quality Control– Davis Farr LLP and its Partners are members of the American Institute of Certified Public Accountants (AICPA) and is a member of the AIPCA's Government Audit Quality Center. Our firm is a voluntary participant in the AICPA Peer Review Program. Included in the appendix is our most recent Peer Review report where our firm received a *Pass*. A *Pass* demonstrates the highest level of quality control in a Peer Review. The Peer Review included a review of government engagements. Davis Farr LLP has not had any federal or state desk reviews or field reviews during the past three years. There have been no disciplinary action taken or pending against the firm during the past three years with state regulatory bodies or professional organizations.

Training – Every professional of the firm participates in continuing professional education courses. Each person is required to take at least 80 hours of training over a two-year period including 24 hours a year specific to government accounting and audit topics. Courses cover a wide spectrum of professional and technical subjects, and include Fraud, Professional Ethics and Governmental Accounting and Auditing topics to help the practitioner maintain his/her professional expertise.

Classification	Number of Employees
Partners	7
Managers	8
Supervisors	8
Seniors	10
Staff	17
Administrative	5
Total personnel	**55**

Professional Affiliations

Government Audit Quality Center – Davis Farr LLP is a member of the Government Audit Quality Center (GAQC). The GAQC promotes the importance of quality governmental audits and the value of such audits to purchasers of governmental audit services. GAQC is a voluntary membership center for CPA firms and state audit organizations that perform governmental audits.

National Registry of CPE Sponsors – Davis Farr LLP is registered to provide continuing professional education through the National Association of State Board of Accountancy (NASBA). NASBA recognizes CPE program sponsors who provide continuing professional education programs in accordance with nationally recognized standards. We provide CPE to our clients at our annual GASB Update.

Cal CPA – Many of the CPAs employed by Davis Farr LLP are members of Cal CPA and regularly participate in chapter meetings, education, and events. Cal CPA recognized one of Davis Farr LLP's partners with their ***Women to Watch*** award in the Experienced Leader category. Davis Farr presented at the 2020 **Women's Leadership Forum** on generational issues in the workplace. Davis Farr LLP partners are also members of the **Governmental Accounting and Auditing Committee** of the CalCPA and Jennifer Farr is the current Chair of the Committee.

American Institute of CPAs – Davis Farr LLP and the firm's Partners are members of the American Institute of CPAs (AICPA). The AICPA develops standards for audits, provides educational guidance materials to its members, and monitors and enforces compliance with the profession's technical and ethical standards.

CSMFO – The Partners of Davis Farr LLP are members of the California Society of Municipal Finance Officers (CSMFO), the statewide organization serving all California municipal finance professionals. Firm personnel regularly attend CSMFO Chapter Meetings and Conferences. The Partners of Davis Farr LLP are frequent presenters on accounting and auditing technical topics at Chapter Meetings and Conferences. Davis Farr presented at the annual CSMFO conference in February 2021 on the topic of capital assets.

GFOA – The Government Finance Officers Association (GFOA) enhances and promotes the professional management of governmental financial resources by identifying, developing, and advancing fiscal strategies, policies, and practices for the public benefit. The Partners of Davis Farr LLP are members of the Certificate of Achievement Program's Special Review Committee. The Committee reviews Comprehensive Annual Financial Reports submitted to GFOA for the CAFR Award Program.

Section B – Firm Qualifications and Experience

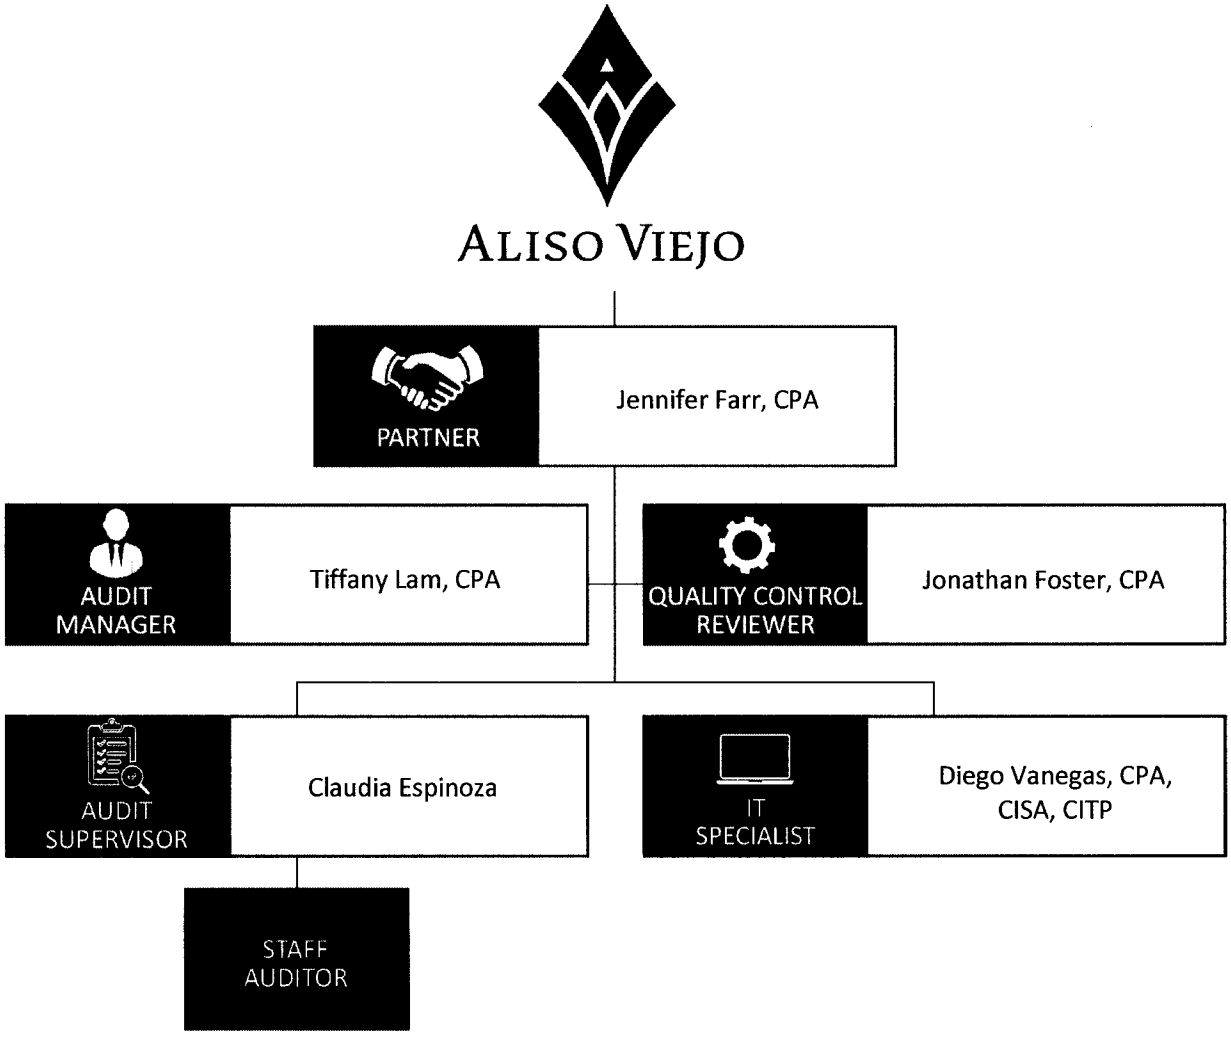
Davis Farr LLP is a leader in the local government sector throughout the Southern California Area. Currently, we service approximately 60 local, state, and federal government entities. Davis Farr LLP services routinely provided to our clients include, but are not limited to:

Our government expertise includes Cities, Special Districts, and other Governmental entities. Among the government agencies that the professionals of Davis Farr LLP have served recently are the following:

- City of Avalon
- City of Carlsbad
- City of Commerce
- City of Coronado
- City of Costa Mesa
- City of Cypress
- City of Encinitas
- City of Fontana
- City of Fountain Valley
- City of Garden Grove
- City of Huntington Beach
- City of Indio
- City of Irvine
- City of Laguna Niguel
- City of Los Angeles
- City of Mission Viejo
- City of Newport Beach
- City of Poway
- City of Rancho Santa Margarita
- City of Santee
- City of South Gate
- City of Vista
- County Los Angeles
- County of Placer
- County of San Diego
- East Orange County Water District
- Hass Avocado Board
- Irvine Ranch Water District
- Leucadia Wastewater District
- Metropolitan Water District of So CA
- Municipal Water District of So CA
- Orange County LAFCO
- Oxnard Housing Authority
- Placer County Water Agency
- Salton Sea Authority
- San Diego County Water Authority
- San Diego Association of Governments
- San Diego LAFCO
- Sweetwater Authority
- Tahoe Regional Planning Agency
- Tahoe Transportation District
- Vallecitos Water District

Section C – References

For your convenience, we have listed below references for audit work currently being performed by Davis Farr LLP personnel for several Cities throughout Southern California. For each of the references, we currently serve as independent auditors and have served these clients for a number of years.



Davis Farr did not have any contracts that were terminated in the last three years.

Section D – Proposed Staffing

The successful outcome of any audit requires personnel with the managerial and technical skills to perform the work required. The engagement team who will serve the City of Aliso Viejo have served together as a team of professionals on numerous financial audit examinations of local government entities.

We believe that efficient administrative management and supervision of the audits is an extremely critical factor in achieving the desired results for City of Aliso Viejo. In that regard, our proposal organizational structure for providing independent auditing services is as follows:

Section E – Work Plan

Davis Farr plans and conducts our engagements in the most efficient manner possible, and our audit approach is unique with regard to the following:

- Our firm is sensitive to the priorities and work requirements of our clients. We work around the schedules of our clients when scheduling segments of the audit or requesting documentation in order to minimize disruption of City staff and to complete the audit in a timely manner.
- Whenever possible, we use accounting support already prepared by the City staff to avoid duplication or unnecessary requests for audit supporting schedules.
- Our firm's expertise is in governmental auditing. Our auditors are GASB experts and skilled at addressing audit issues that are specific to local governments. You will not spend time training our personnel.
- When formulating internal control recommendations, we obtain a thorough understanding of the specific circumstances at your City to provide a tailored, practical recommendation.
- Throughout the year we are a resource to our clients in providing accounting advice, researching technical questions, dealing with tax problems, and helping with other problems as they arise. Our clients can also attend our annual GASB Update free of charge.

Audit Software - We utilize CaseWare audit software for the electronic City of workpapers. We have the ability to accept audit documentation in either hard copy or electronic format. CaseWare allows us the ability to import trial balances that can be provided in either excel or a text document. Some of the benefits of using CaseWare trial balance software are as follows:

- We create our own lead sheets (i.e., analytical review comparison schedules). This limits the amount of time finance staff spends creating audit schedules. Our software automatically generates analytical review reports by account number for ease of analyzing significant fluctuations between fiscal years.
- We can link the financial statement schedules directly to the CaseWare trial balances. As a result, we can provide the City with financial statements almost immediately after receiving the trial balance from the City. Additionally, journal entries are easy to post to the financial statement schedules and the risk of data entry error is minimized.
- We can provide the City with reports showing the coding of the financial statement schedules for ease of review by City staff. These reports show each account coded to a specific financial statement line item as well as journal entries that are posted during the audit.

Data Mining Software - We have a dedicated team of personnel trained to use special data mining software, IDEA. Our software uses source data from your accounting system to search for anomalies, such as duplicate or voided checks, cross-referencing vendor addresses with employee addresses, detecting accounting transactions recorded on the weekend, reviewing journal entry postings for unauthorized individuals. The IDEA software identifies specific transactions for the auditors to review for potential fraud or error.

Internal Control Evaluation - Our approach to evaluating internal controls involves observation and inquiry. We spend time with the personnel responsible for the accounting cycles to gain an understanding of the processes. We also carefully evaluate your policies and procedures. After our initial evaluation, we identify key controls in your processes and design test to evaluate the effectiveness of those processes. In the initial year of the audit, we will focus on the following accounting cycles for each department with decentralized accounting activities:

- Billing and cash receipting
- Capital assets
- Purchase and disbursements
- Payroll
- Investment and cash controls
- Information systems

In future years, we will review the accounting cycles noted above but also look at other processes such as credit card transactions, petty cash, inventory controls, offsite cash receipting, employee reimbursements, contract compliance, and other areas. Our goal is to modify our audit approach every year to further evaluate your internal controls.

Audit Stage	Procedures Performed
Planning and inquiry	**During the planning phase of the audit, we plan to perform the following procedures:** ✓ Meet with finance personnel to obtain an understanding of significant transactions during the year. ✓ Communicate with the City Council regarding fraud, compliance with laws, and any concerns they have regarding the finances of the City. ✓ Perform internal control evaluations as noted on the previous page. ✓ Determine materiality levels that will be used in selecting audit transactions. ✓ Perform a risk assessment to develop the audit plan for the year. ✓ Review minutes of City Council meetings. ✓ Review important new contracts, bond documents, and agreements. ✓ Evaluate compliance with investments. ✓ Test purchase orders and contract management. ✓ Test a sample of cash disbursements to determine adherence to policies and internal controls. ✓ Perform a review of the organization's information systems and controls. ✓ Perform compliance testing of federal grants. ✓ Review the prior audited financial statements and provide feedback to City staff regarding best practices for financial reporting. ✓ Provide a GASB Update and templates for implementing new accounting standards including the upcoming lease accounting standard.
Year-End Testing	**After the books are closed and ready for audit, we will perform our year-end procedures which include the following:** ✓ We will confirm 100% of all cash and investment balances and test market values provided by your investment custodians. ✓ We will test for proper cutoffs of accounts receivable and grants receivable. ✓ We will confirm and test material notes and loans receivable. ✓ We will review land held for resale transactions and related developer agreements. ✓ We will test additions and deletions to capital assets. We will review depreciation expense for reasonableness. ✓ We will test interfund transactions including due to/due from other funds, advances, and transfers. We will review legal documents supporting loans and test the allowability of transfers out of restricted funds. ✓ We will test current liabilities and perform a search for unrecorded liabilities. ✓ We will review unearned revenue balances for proper cutoffs. ✓ We will test the balances of accrued payroll and employee related liabilities. ✓ We will confirm long-term debt with independent parties. ✓ In years of new debt issuances, we will review the journal entry to record the debt to ensure the accuracy of the accounting. ✓ Testing of actuarial valuations and calculations related to OPEB obligations and disclosures under GASB 75. ✓ Testing of actuarial valuations and calculations related to pension obligations and disclosures under GASB 68. ✓ Evaluation of claims and judgments payable. ✓ Testing of restrictions and classifications of net position. ✓ Analyze grant revenues and expenses to ensure proper matching within the fiscal year. ✓ Test the reasonableness of interest income, realized, and unrealized gains/losses on investments. ✓ Analytically and substantively test revenues and expenses reported in the financial statements.

Audit Stage	Procedures Performed
	✓ We will incorporate an element of unpredictability every year that will focus on an audit area that is not typically considered a high or significant risk area such as petty cash, credit card purchases, new vendors, travel expenses, etc. The aforementioned tests are only a few of the tests performed during the examination and by no means is it meant to be all inclusive. During the final stage of the audit, we will meet with Finance staff to review our audit findings and any adjusting journal entries.
Single Audit Approach	**As part of our Single Audit for the years in which the City expends granter than $750,000, we will perform the following procedures in accordance with the Uniform Guidance:** ✓ Perform an evaluation of the major programs required to be tested ✓ Review OMB guidance and the OMB Compliance Supplement for the grant program audited. ✓ Review internal controls for each of the applicable 14 compliance areas for each program audited. ✓ Using AICPA sampling guidance, we will select a sample for each of the applicable 14 compliance areas for each program audited. We will test the sample for compliance with those 14 areas. ✓ Test the indirect cost rate, if applicable ✓ Review monitoring reports for noncompliance and follow up on the resolution of past noncompliance, if applicable. ✓ Issue a single audit report of federal expenditures. ✓ File the data collection form within the specified deadline.
Completion of the Audit and Preparation of Financial Statements	**The nature and extent of the work required is dependent on our assessment of the likelihood of misstatements in the financial statements together with our conclusions from the planning and testing stages of the audit. All of the audit information is then used to reach a conclusion on whether the financial statements taken as a whole conform with generally accepted accounting principles.** ✓ We will review significant events after year end ✓ We will review attorney letters for significant legal matters ✓ Prepare the draft of the Annual Comprehensive Financial Report ✓ We will ensure accurate and complete disclosures in the notes to the financial statements. ✓ We will meet with City Committees or City Council to present the audit results, as requested.

Identification of Anticipated Potential Audit Problems

We do not anticipate any anticipated potential audit problems.

Section F – Implementation of New GASB Pronouncements

The City will be required to implement the following accounting standards during the upcoming fiscal years. Part of our service to you includes consulting on these new auditing standards. A sampling of significant new GASB pronouncements planned or proposed for local governments that will impact the City of Aliso Viejo are listed below:

GASB 96
Subscription Based IT

The Statement provides guidance to governments on the accounting and financial reporting for subscription - based information technology arrangements. This Statement is effective for the fiscal year ending June 30, 2023.

GASB 94
PP and PPA

The primary objective of this Statement is to provide guidance related to public-private (PP) and public-public partnership arrangements (PPA) in which a government contracts with an operator to provide public services. This statement also provides guidance or accounting and financial reporting for availability payment arrangements in which a government compensates an operator for services in and exchange transaction. This standard will be effective for the fiscal year ending June 30, 2023.

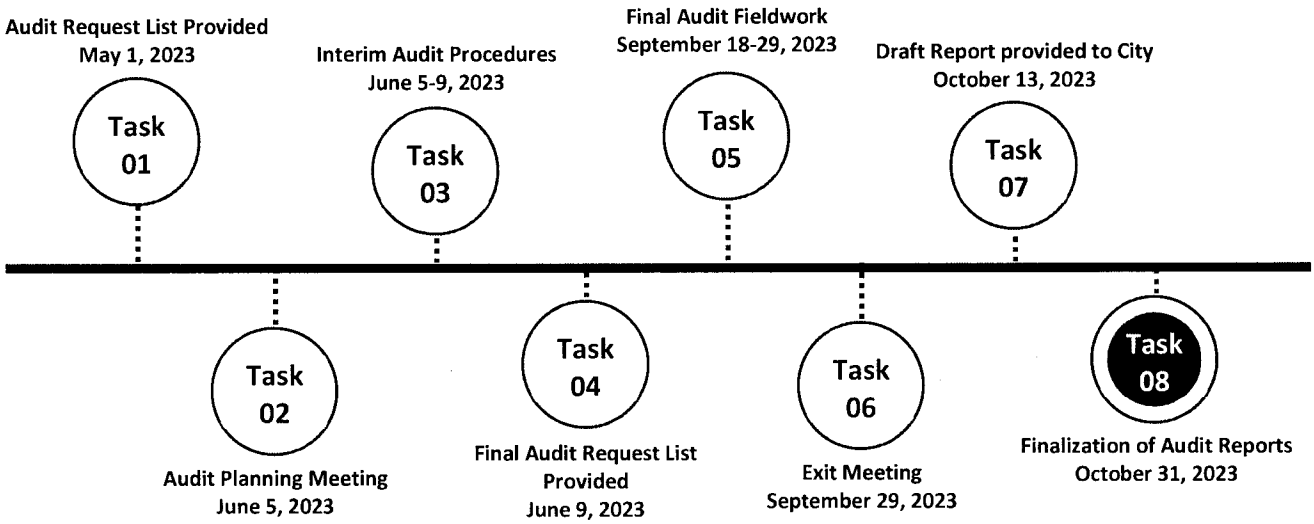
GASB 100: Accounting Changes & Error Correction

This statement enhances accounting and financial reporting for accounting changes and error corrections to provide understandable, reliable, relevant, consistent, and comparable information. This standard will be effective for the fiscal year ending June 30, 2024.

GASB 101: Compensated Absences

This statement changes the accounting for compensated absences, particularly as it applies to sick time not paid out upon termination and calculating the full cost of paid time off. The standard will be effective for the fiscal year ending June 30, 2025.

Section G – Scope of Work



Our understanding of the objectives and scope of the work to be performed is as follows:

- We will perform an audit examination of the financial statements of the City of Aliso Viejo for the fiscal years ending June 30, 2023 through 2025 with optional extensions for two years. Our examination will be conducted in accordance with generally accepted auditing standards, the AICPA Audit and Accounting Guide, Audits of State and Local Government Units, and the Government Auditing Standards issued by the Comptroller General of the United States. We prepare the Annual Comprehensive Financial Report based on the information provided to us during the audit. The Report will be prepared in conformity with the most recent edition of the GAAFR, the GAAFR Update, and subsequent GASB pronouncements. We will produce 10 bound copies and provide a PDF copy of the final report.
- We will perform a compliance audit of federal expenditures in accordance with the *Uniform Administrative Requirements, Cost Principles and Audit Requirements for Federal Awards* in any year the City has federal expenditures of more than $750,000.
- We will perform agreed-upon-procedures over the City's Gann Appropriations Limit. We will produce a bound and pdf copy of the final report.
- We will perform agreed-upon-procedures over the City's investment policy and portfolio.
- We will prepare the Annual Report of Financial Transactions to the State Controller's office by the due date established by the State Controller's Office.
- We will prepare a letter to the City Council summarizing the audit results in accordance with the Codification of Auditing Standards Section 260.
- We will prepare a letter to the City Council reporting matters dealing with internal control that meet the threshold of being a significant deficiency or material weakness, as defined by the Codification of Auditing Standards Section 265. We will immediately report any irregularities or illegal acts that come to our attention to management and/or those charged with governance.
- As requested, we will meet with the Audit/Finance Committee or City Council to discuss the results of the audit.
- Finally, we perceive the scope of our work as being advisors to the City regarding generally accepted accounting principles. Throughout the year, the management and other finance personnel of the City will have access to us to seek advice in the application of generally accepted accounting principles, advice regarding debt issuance, financial statement preparation and content, tax and any other matters relating to the City. Each year, we will go over upcoming accounting standards in a meeting with City staff.

Section H – Proposed Timing of the Audit for FY 22/23

The following proposed timing is subject to the City's revision and approval:

Section I – Segmentation of the Audit

The following is our estimate of the hours by professional classification required to perform the audit:

Classification	Hours	Percentage
Partners	*30*	*10%*
Managers	*70*	*23%*
Supervisor	*110*	*37%*
Staff Auditor	*90*	*30%*
Total	***300***	***100%***

CITY OF ALISO VIEJO

ACKNOWLEDGMENT OF RECEIPT OF FRAUD POLICY

I hereby acknowledge that I have received a copy of the City's "Fraud Prevention Policy" dated October 1, 2008. I understand that I am to promptly read its contents and distribute copies to employees assigned to perform Services for the City of Aliso Viejo.

To the extent that provisions of this policy conflict with previously issued policies or practices, whether or not such policies and practices were contained in written policies, this policy shall prevail.

City of Aliso Viejo
AGENDA ITEM

DATE: October 7, 2026

TO: Mayor and City Council

FROM: So Kim, Director of Community Development
Rose Rivera, Principal Planner

SUBJECT: SECOND AMENDMENT TO THE AGREEMENT WITH DE NOVO PLANNING GROUP FOR ON-CALL CEQA SERVICES

Recommended Action:

Approve and authorize the City Manager to execute the Second Amendment to the professional services agreement with De Novo Planning Group for on-call CEQA services, increasing compensation by $100,000 for a total of $250,000 and extending the agreement term to June 30, 2027.

Fiscal Impact:

The Second Amendment would increase the agreement amount by $100,000, from $150,000 to a revised total amount not to exceed $250,000. The cost will be passed through to project applicants and reimbursed through project deposit accounts, resulting in no net cost to the City.

Background:

The Community Development Department (“CDD”) does not have in-house resources to prepare and/or peer review CEQA-compliant environmental documents for projects. In August 2022, the City issued an informal Request for Proposals and executed a professional services agreement with De Novo Planning Group ("De Novo") for on-call CEQA services in an amount not to exceed $150,000. On June 23, 2025, the City approved a First Amendment extending the term of the agreement for one additional year.

Discussion:

Aliso Viejo Municipal Code Section 3.02.060 requires that contracts exceeding $150,000 be awarded pursuant to the City's formal proposal procedures. The original Professional Services Agreement with De Novo Planning Group was approved in an amount not to exceed $150,000. The proposed Second Amendment would increase the contract amount by an additional $100,000, resulting in a revised total not-to-exceed amount of

$250,000 and thereby exceeding the Municipal Code threshold that would require formal proposal procedures. In this instance, Staff recommends that the City Council determine, pursuant to Municipal Code Section 3.02.080(C), that competitive proposals would be unavailing and would not produce an advantage to the City, and that solicitation of proposals would be undesirable, impractical, and not in the City's best interest. Several active development projects remain in the pipeline and require ongoing environmental review. De Novo has already prepared environmental analyses for these projects and possesses extensive familiarity with the project scopes, technical documentation, and regulatory requirements. Retaining De Novo will provide continuity in the environmental review process, ensure consistency in project analysis and documentation, and avoid delays, duplication of effort, and inefficiencies associated with transitioning the work to a new consultant. Accordingly, Staff recommends approval of the Second Amendment to the Professional Services Agreement with De Novo Planning Group, increasing the contract compensation by $100,000 and extending the term through June 30, 2027. The additional costs will be fully funded by project applicants through development project deposit accounts, resulting in no net cost to the City.

Attachment:

1. Second Amendment to the Professional Services Agreement with De Novo

2. First Amendment with De Novo

3. Original Professional Services Agreement with De Novo

CITY OF ALISO VIEJO

SECOND AMENDMENT TO
PROFESSIONAL SERVICES AGREEMENT FOR
ON-CALL CALIFORNIA ENVIRONMENTAL QUALITY ACT (CEQA) SERVICES

1. PARTIES AND DATE.

This Second Amendment to the **Professional Services Agreement For On-Call California Environmental Quality Act (CEQA) Services** ("Second Amendment") is entered into on the ____ day of _____, 2026, by and between the City of Aliso Viejo (hereinafter referred to as the "City") and **De Novo Planning Group** (hereinafter referred to as the "Consultant"). City and Consultant are sometimes collectively referred to herein as the "Parties."

2. RECITALS.

2.1 Agreement. The Parties entered into an agreement entitled **Second Amendment to Professional Services Agreement For On-Call California Environmental Quality Act (CEQA) Services** dated **October 19, 2022** ("Agreement").

2.2 First Amendment. The Parties entered into a First Amendment to extend the term to June 30, 2026.

2.3 Second Amendment. The Parties now desire to amend the Agreement in order to renew the Agreement for an additional one-year term.

3. TERMS.

3.1 Term.

Pursuant to Section 3.1.2 of the Agreement, the City hereby exercises the option to renew the Agreement and extend the term of the Agreement for one year from **JULY 1, 2026 to JUNE 30, 2027**, unless earlier terminated as provided in the Agreement.

3.2 Declaration of Political Contributions. Prior to the City's approval of this Amendment, Consultant shall submit to City a statement in writing declaring any political contributions of money, in-kind services, or loan made to any member of the City Council within the previous twelve-month period by the Consultant and all of their employees, including any employees that Consultant intends to assign to perform the Services described in this Second Amendment.

3.3 Continuing Effect of Agreement. Except as otherwise specifically set forth in this Second Amendment, the remaining provisions of the Agreement shall remain in full force and effect. From and after the date of this Second Amendment, whenever the term "Agreement" appears in the Agreement, it shall mean the Agreement as amended by this Second Amendment.

3.4 Adequate Consideration. The Parties hereto irrevocably stipulate and agree that they have each received adequate and independent consideration for the performance of the obligations they have undertaken pursuant to this Second Amendment.

3.5 Counterparts. This Second Amendment may be executed in duplicate originals, each of which is deemed to be an original, but when taken together shall constitute but one and the same instrument.

CITY OF ALISO VIEJO
PROFESSIONAL SERVICES AGREEMENT
FOR
ON-CALL CALIFORNIA ENVIRONMENTAL QUALITY ACT (CEQA) SERVICES

1. PARTIES AND DATE.

This Agreement is made and entered into this 19th day of October, 2022, by and between the City of Aliso Viejo, a municipal corporation organized under the laws of the State of California with its principal place of business at 12 Journey, Suite 100, Aliso Viejo, California 92656 ("City") and **DE NOVO PLANNING GROUP, A CALIFORNIA S-CORPORATION**, with its principal place of business at: **180 E. MAIN STREET, SUITE 108, TUSTIN, CA 92780** ("Consultant"). City and Consultant are sometimes individually referred to herein as "Party" and collectively as "Parties."

2. RECITALS.

2.1 Consultant.

Consultant desires to perform and assume responsibility for the provision of professional **ON-CALL CALIFORNIA ENVIRONMENTAL QUALITY ACT ("CEQA") SERVICES** required by the City on the terms and conditions set forth in this Agreement. Consultant represents that it is experienced in providing professional **ON-CALL CEQA SERVICES** to public clients, is licensed in the State of California, and is familiar with the plans of City.

2.2 Project.

City desires to engage Consultant to render **ON-CALL CEQA SERVICES** project ("Project") as set forth in this Agreement.

3. TERMS.

3.1 Scope of Services and Term.

3.1.1 General Scope of Services. Consultant promises and agrees to furnish to the City all labor, materials, tools, equipment, services, and incidental and customary work necessary to fully and adequately supply the professional **ON-CALL CEQA SERVICES** necessary for the Project ("Services"). The Services are more particularly described in Exhibit "A" attached hereto and incorporated herein by reference. All Services shall be subject to, and performed in accordance with, this Agreement, the exhibits attached hereto and incorporated herein by reference, and all applicable local, state and federal laws, rules and regulations.

3.1.2 Term. The term of this Agreement shall be from **OCTOBER 5, 2022** to **JUNE 30, 2025**, unless earlier terminated as provided herein. The City Manager shall have the unilateral option, at its sole discretion, to renew this Agreement annually for no more than two additional one-year terms. Consultant shall complete the Services within the term of this Agreement, and shall meet any other established schedules and deadlines.

3.2 Responsibilities of Consultant.

3.2.1 Control and Payment of Subordinates; Independent Contractor. The Services shall be performed by Consultant or under its supervision. Consultant will determine the means, methods and details of performing the Services subject to the requirements of this Agreement. City retains Consultant on an independent contractor basis and not as an employee. Consultant shall complete, execute, and submit to City a Request for Taxpayer Identification Number and Certification (IRS FormW-9) prior to commencement of any Services under this Agreement. Neither City, nor any of its officials, officers, directors, employees or agents shall have control over the conduct of Consultant or any of Consultant's officers, employees, or agents, except as set forth in this Agreement. Consultant retains the right to perform similar or different services for others during the term of this Agreement. Any additional personnel performing the Services under this Agreement on behalf of Consultant shall also not be employees of City and shall at all times be under Consultant's exclusive direction and control. Consultant shall pay all wages, salaries, and other amounts due such personnel in connection with their performance of Services under this Agreement and as required by law. Consultant shall be responsible for all reports and obligations respecting such additional personnel, including, but not limited to: social security taxes, income tax withholding, unemployment insurance, disability insurance, and workers' compensation insurance.

3.2.2 Schedule of Services.

3.2.2.1 Consultant shall perform the Services expeditiously, within the term of this Agreement, and in accordance with the Schedule of Services set forth in Exhibit "B" attached hereto and incorporated herein by reference. Consultant represents that it has the professional and technical personnel required to perform the Services in conformance with such conditions. In order to facilitate Consultant's conformance with the Schedule, City shall respond to Consultant's submittals in a timely manner. Upon request of City, Consultant shall provide a more detailed schedule of anticipated performance to meet the Schedule of Services.

3.2.2.2 Neither City nor Consultant shall be considered in default of this Agreement for delays in performance caused by circumstances beyond the reasonable control of the non-performing Party. For purposes of this Agreement, such circumstances include a Force Majeure Event. A Force Majeure Event shall mean an event that materially affects a Party's performance and is one or more of the following: (1) Acts of God or other natural disasters; (2) terrorism or other acts of a public enemy; (3) orders of governmental authorities (including, without limitation, unreasonable and unforeseeable delay in the issuance of permits or approvals by governmental authorities that are required for the Services); (4) strikes and other organized labor action occurring at the site and the effects thereof on the Services, only to the extent such strikes and other organized labor action are beyond the control of Consultant and its subcontractors, and to the extent the effects thereof cannot be avoided by use of replacement workers; and (5) pandemics, epidemics or quarantine restrictions. For purposes of this section, "orders of governmental authorities," includes ordinances, emergency proclamations and orders, rules to protect the public health, welfare and safety, and other actions of a public agency applicable to the Services and Agreement.

3.2.2.3 Should a Force Majeure Event occur, the non-performing Party shall, within a reasonable time of being prevented from performing, give written notice to the other Party describing the circumstances preventing continued performance and the efforts being made to resume performance of this Agreement. Force Majeure Events and/or delays, regardless of the Party responsible for the delay, shall not entitle Consultant to any additional compensation. Notwithstanding the foregoing in this section, the City may still terminate this Agreement in accordance with the termination provisions of this Agreement.

3.2.3 Conformance to Applicable Requirements. All work prepared by Consultant shall be subject to the approval of City.

3.2.4 Substitution of Key Personnel. Consultant has represented to City that certain key personnel will perform and coordinate the Services under this Agreement. Should one or more of such personnel become unavailable, Consultant may substitute other personnel of at least equal competence upon written approval of City. In the event that City and Consultant cannot agree as to the substitution of key personnel, City shall be entitled to terminate this Agreement for cause. As discussed below, any personnel who fail or refuse to perform the Services in a manner acceptable to the City, or who are determined by the City to be uncooperative, incompetent, a threat to the adequate or timely completion of the Project or a threat to the safety of persons or property, shall be promptly removed from the Project by the Consultant at the request of the City. The key personnel for performance of this Agreement is **STARLA BARKER**.

3.2.5 City's Representative. The City hereby designates the City Manager, or his or her designee, to act as its representative for the performance of this Agreement ("City's Representative"). City's Representative shall have the power to act on behalf of the City for all purposes under this Contract. The City Manager hereby designates **COMMUNITY DEVELOPMENT DIRECTOR**, or his or her designee, as the City's contact for the implementation of the Services hereunder. Consultant shall not accept direction or orders from any person other than the City's Representative or his or her designee.

3.2.6 Consultant's Representative. Consultant hereby designates **STARLA BARKER**, or her designee, to act as its representative for the performance of this Agreement ("Consultant's Representative"). Consultant's Representative shall have full authority to represent and act on behalf of the Consultant for all purposes under this Agreement. The Consultant's Representative shall supervise and direct the Services, using his best skill and attention, and shall be responsible for all means, methods, techniques, sequences and procedures and for the satisfactory coordination of all portions of the Services under this Agreement.

3.2.7 Coordination of Services. Consultant agrees to work closely with City staff in the performance of Services and shall be available to City's staff, consultants and other staff at all reasonable times.

3.2.8 Standard of Care; Performance of Employees. Consultant shall perform all Services under this Agreement in a skillful and competent manner, consistent with the standards generally recognized as being employed by professionals in the same discipline in the State of California. Consultant represents and maintains that it is skilled in the professional calling necessary to perform the Services. Consultant warrants that all employees and subconsultants shall

have sufficient skill and experience to perform the Services assigned to them. Finally, Consultant represents that it, its employees and subconsultants have all licenses, permits, qualifications and approvals of whatever nature that are legally required to perform the Services and that such licenses and approvals shall be maintained throughout the term of this Agreement. As provided for in the indemnification provisions of this Agreement, Consultant shall perform, at its own cost and expense and without reimbursement from the City, any services necessary to correct errors or omissions which are caused by the Consultant's failure to comply with the standard of care provided for herein. Any employee of the Consultant or its sub-consultants who is determined by the City to be uncooperative, incompetent, a threat to the adequate or timely completion of the Project, a threat to the safety of persons or property, or any employee who fails or refuses to perform the Services in a manner acceptable to the City, shall be promptly removed from the Project by the Consultant and shall not be reemployed to perform any of the Services or to work on the Project.

3.2.9 Laws and Regulations. Consultant shall keep itself fully informed of and in compliance with all local, state and federal laws, rules and regulations in any manner affecting the performance of the Project or the Services, including all Cal/OSHA requirements, and shall give all notices required by law. Consultant shall be liable for all violations of such laws and regulations in connection with Services. If the Consultant performs any work knowing it to be contrary to such laws, rules and regulations, Consultant shall be solely responsible for all costs arising therefrom. Consultant shall defend, indemnify and hold City, its officials, directors, officers, employees and agents free and harmless, pursuant to the indemnification provisions of this Agreement, from any claim or liability arising out of any failure or alleged failure to comply with such laws, rules or regulations.

3.2.10 Insurance.

3.2.10.1 Time for Compliance. Consultant shall not commence Work under this Agreement until it has provided evidence satisfactory to the City that it has secured all insurance required under this section. In addition, Consultant shall not allow any subconsultant to commence work on any subcontract until it has provided evidence satisfactory to the City that the subconsultant has secured all insurance required under this section.

3.2.10.2 Types of Insurance Required. As a condition precedent to the effectiveness of this Agreement for work to be performed hereunder and without limiting the indemnity provisions of the Agreement, the Consultant in partial performance of its obligations under such Agreement, shall procure and maintain in full force and effect during the term of the Agreement, the following policies of insurance. If the existing policies do not meet the Insurance Requirements set forth herein, Consultant agrees to amend, supplement or endorse the policies to do so.

(a) Commercial General Liability: Commercial General Liability Insurance which affords coverage at least as broad as Insurance Services Office "occurrence" form CG 0001, with minimum limits of at least $1,000,000 per occurrence, and if written with an aggregate, the aggregate shall be double the per occurrence limit. Defense costs shall be paid in addition to the limits.

The policy shall contain no endorsements or provisions limiting coverage for (1) contractual liability; (2) cross liability exclusion for claims or suits by one insured against another; or (3) contain any other exclusion contrary to the Agreement.

(b) Automobile Liability Insurance: Automobile Liability Insurance with coverage at least as broad as Insurance Services Office Form CA 0001 covering "Any Auto" (Symbol 1) with minimum limits of $1,000,000 each accident.

(c) Professional Liability: Professional Liability insurance with minimum limits of $1,000,000. Covered professional services shall specifically include all work to be performed under the Agreement and delete any exclusions that may potentially affect the work to be performed (for example, any exclusions relating to lead, asbestos, pollution, testing, underground storage tanks, laboratory analysis, soil work, etc.).

If coverage is written on a claims-made basis, the retroactive date shall precede the effective date of the initial Agreement and continuous coverage will be maintained or an extended reporting period will be exercised for a period of at least three (3) years from termination or expiration of this Agreement.

(d) Workers' Compensation: Workers' Compensation Insurance, as required by the State of California and Employer's Liability Insurance with a limit of not less than $1,000,000 per accident for bodily injury and disease.

3.2.10.3 Endorsements. Required insurance policies shall not be in compliance if they include any limiting provision or endorsement that has not been submitted to the City for approval.

(a) The policy or policies of insurance required by Section 3.2.10.2 (a) Commercial General Liability shall be endorsed to provide the following:

(1) Additional Insured: The City of Aliso Viejo, its officials, officers, employees, agents, and volunteers shall be additional insureds with regard to liability and defense of suits or claims arising out of the performance of the Agreement.

Additional Insured Endorsements shall not (1) be restricted to "ongoing operations"; (2) exclude "contractual liability"; (3) restrict coverage to "sole" liability of Consultant; or (4) contain any other exclusions contrary to the Agreement.

(2) Cancellation: Required insurance policies shall not be canceled or the coverage reduced until a thirty (30) day written notice of cancellation has been served upon the City except ten (10) days shall be allowed for non-payment of premium.

(b) The policy or policies of insurance required by Section 3.2.10.2 (b) Automobile Liability and (d) Professional Liability shall be endorsed to provide the following:

(1) Cancellation: Required insurance policies shall not be canceled or the coverage reduced until a thirty (30) day written notice of cancellation has been served upon the City except ten (10) days shall be allowed for non-payment of premium.

(c) The policy or policies of insurance required by Section 3.2.10.2 (e) Workers' Compensation shall be endorsed to provide the following:

(1) Waiver of Subrogation: A waiver of subrogation stating that the insurer waives all rights of subrogation against the indemnified parties.

(2) Cancellation: Required insurance policies shall not be canceled or the coverage reduced until a thirty (30) day written notice of cancellation has been served upon the City except ten (10) days shall be allowed for non-payment of premium.

3.2.10.4 Primary and Non-Contributing Insurance. All insurance coverages shall be primary and any other insurance, deductible, or self-insurance maintained by the indemnified parties shall not contribute with this primary insurance. Policies shall contain or be endorsed to contain such provisions.

3.2.10.5 Waiver of Subrogation. Required insurance coverages shall not prohibit Consultant from waiving the right of subrogation prior to a loss. Consultant shall waive all subrogation rights against the indemnified parties. Policies shall contain or be endorsed to contain such provisions.

3.2.10.6 Deductible. Any deductible or self-insured retention must be approved in writing by the City and shall protect the indemnified parties in the same manner and to the same extent as they would have been protected had the policy or policies not contained a deductible or self-insured retention.

3.2.10.7 Evidence of Insurance. The Consultant, concurrently with the execution of the Agreement, and as a condition precedent to the effectiveness thereof, shall deliver either certified copies of the required policies, or original certificates and endorsements on forms approved by the City. The certificates and endorsements for each insurance policy shall be signed

by a person authorized by that insurer to bind coverage on its behalf. At least fifteen (15 days) prior to the expiration of any such policy, evidence of insurance showing that such insurance coverage has been renewed or extended shall be filed with the City. If such coverage is cancelled or reduced, Consultant shall, within ten (10) days after receipt of written notice of such cancellation or reduction of coverage, file with the City evidence of insurance showing that the required insurance has been reinstated or has been provided through another insurance company or companies.

3.2.10.8 Failure to Maintain Coverage. Consultant agrees to suspend and cease all operations hereunder during such period of time as the required insurance coverage is not in effect and evidence of insurance has not been furnished to the City. The City shall have the right to withhold any payment due Consultant until Consultant has fully complied with the insurance provisions of this Agreement.

In the event that the Consultant's operations are suspended for failure to maintain required insurance coverage, the Consultant shall not be entitled to an extension of time for completion of the Services because of production lost during suspension.

3.2.10.9 Acceptability of Insurers. Each such policy shall be from a company or companies with a current A.M. Best's rating of no less than A:VII and authorized to do business in the State of California, or otherwise allowed to place insurance through surplus line brokers under applicable provisions of the California Insurance Code or any federal law.

3.2.10.10 Insurance for Subconsultants. All Subconsultants shall be included as additional insureds under the Consultant's policies, or the Consultant shall be responsible for causing Subconsultants to purchase the appropriate insurance in compliance with the terms of these Insurance Requirements, including adding the City as an Additional Insured to the Subconsultant's policies.

3.2.11 Safety. Consultant shall execute and maintain its work so as to avoid injury or damage to any person or property. In carrying out its Services, the Consultant shall at all times be in compliance with all applicable local, state and federal laws, rules and regulations, and shall exercise all necessary precautions for the safety of employees appropriate to the nature of the work and the conditions under which the work is to be performed. Safety precautions where applicable shall include, but shall not be limited to: (A) adequate life protection and life saving equipment and procedures; (B) instructions in accident prevention for all employees and subconsultants, such as safe walkways, scaffolds, fall protection ladders, bridges, gang planks, confined space procedures, trenching and shoring, equipment and other safety devices, equipment and wearing apparel as are necessary or lawfully required to prevent accidents or injuries; and (C) adequate facilities for the proper inspection and maintenance of all safety measures.

3.3 Fees and Payments.

3.3.1 Compensation. Consultant shall receive compensation, including authorized reimbursements, for all Services rendered under this Agreement at the rates set forth in Exhibit "C" attached hereto and incorporated herein by reference. The total compensation shall not exceed **ONE HUNDRED FIFTY THOUSAND DOLLARS ($150,000)** ("Total

Compensation") without written approval of City's **CITY MANAGER.** Extra Work may be authorized, as described below, and if authorized, will be compensated at the rates and manner set forth in this Agreement.

3.3.2 Payment of Compensation.

Consultant shall submit to City a monthly itemized statement which indicates work completed and hours of Services rendered by Consultant. The statement shall describe the amount of Services and supplies provided since the initial commencement date, or since the start of the subsequent billing periods, as appropriate, through the date of the statement. City shall, within 45 days of receiving such statement, review the statement and pay all non-disputed and approved charges thereon; provided, however, that if funds deposited with City by an applicable **PROJECT APPLICANT** are insufficient to pay such monthly statement, payment to Consultant shall not be made until such time as funds have been deposited with City by an applicable **PROJECT APPLICANT** to pay Consultant's monthly statement.

3.3.3 Reimbursement for Expenses. Consultant shall not be reimbursed for any expenses unless authorized in writing by City.

3.3.4 Extra Work. At any time during the term of this Agreement, City may request that Consultant perform Extra Work. As used herein, "Extra Work" means any work which is determined by City to be necessary for the proper completion of the Project, but which the Parties did not reasonably anticipate would be necessary at the execution of this Agreement. Consultant shall not perform, nor be compensated for, Extra Work without written authorization from the City.

3.3.5 Prevailing Wages; DIR Registration.

3.3.5.1 Consultant is aware of the requirements of California Labor Code Section 1720, et seq., and 1770, et seq., as well as California Code of Regulations, Title 8, Section 16000, et seq., ("Prevailing Wage Laws"), which require the payment of prevailing wage rates and the performance of other requirements on "public works" and "maintenance" projects. If the Services are being performed as part of an applicable "public works" or "maintenance" project, as defined by the Prevailing Wage Laws, and if the total compensation is $1,000 or more, Consultant agrees to fully comply with such Prevailing Wage Laws. City shall provide Consultant with a copy of the prevailing rates of per diem wages in effect at the commencement of this Agreement. Consultant shall make copies of the prevailing rates of per diem wages for each craft, classification or type of worker needed to execute the Services available to interested parties upon request, and shall post copies at the Consultant's principal place of business and at the project site. It is the intent of the parties to effectuate the requirements of sections 1771, 1774, 1775, 1776, 1777.5, 1813, and 1815 of the Labor Code within this Agreement, and Consultant shall therefore comply with such Labor Code sections to the fullest extent required by law. Consultant shall defend, indemnify and hold the City, its elected officials, officers, employees and agents free and harmless from any claim or liability arising out of any failure or alleged failure to comply with the Prevailing Wage Laws.

3.3.5.2 If the Services are being performed as part of an applicable "public works" or "maintenance" project, in addition to the foregoing, then pursuant to Labor Code sections 1725.5 and 1771.1, the Consultant and all subconsultants must be registered with the Department of Industrial Relations ("DIR"). Consultant shall maintain registration for the duration of the project and require the same of any subconsultants. This project may also be subject to compliance monitoring and enforcement by the DIR. It shall be Contractor's sole responsibility to comply with all applicable registration and labor compliance requirements, including the submission of payroll records directly to the DIR.

3.4 Accounting Records.

3.4.1 Maintenance and Inspection. Consultant shall maintain complete and accurate records with respect to all costs and expenses incurred under this Agreement. All such records shall be clearly identifiable. Consultant shall allow a representative of City during normal business hours to examine, audit, and make transcripts or copies of such records and any other documents created pursuant to this Agreement. Consultant shall allow inspection of all work, data, documents, proceedings, and activities related to the Agreement for a period of three (3) years from the date of final payment under this Agreement.

3.5 General Provisions.

3.5.1 Termination of Agreement.

3.5.1.1 Grounds for Termination. City may, by written notice to Consultant, terminate the whole or any part of this Agreement at any time and without cause by giving written notice to Consultant of such termination, and specifying the effective date thereof, at least seven (7) days before the effective date of such termination. Upon termination, Consultant shall be compensated only for those services which have been adequately rendered to City, and Consultant shall be entitled to no further compensation. Consultant may not terminate this Agreement except for cause. The rights and remedies of the City provided in this section shall not be exclusive and are in addition to any other rights and remedies provided by law, equity or under this Agreement.

3.5.1.2 Effect of Termination. If this Agreement is terminated as provided herein, City may require Consultant to provide all finished or unfinished Documents and Data and other information of any kind prepared by Consultant in connection with the performance of Services under this Agreement. Consultant shall be required to provide such document and other information within fifteen (15) days of the request.

3.5.1.3 Additional Services. In the event this Agreement is terminated in whole or in part as provided herein, City may procure, upon such terms and in such manner as it may determine appropriate, services similar to those terminated.

3.5.2 Delivery of Notices. All notices permitted or required under this Agreement shall be given to the respective parties at the following address, or at such other address as the respective parties may provide in writing for this purpose:

Consultant:

DE NOVO PLANNING GROUP
180 E. MAIN STREET, SUITE 108
TUSTIN, CA 92780
ATTN: STARLA BARKER

City:

City of Aliso Viejo
12 Journey, Suite 100
Aliso Viejo, CA 92656
Attn: **COMMUNITY DEVELOPMENT DEPARTMENT**

Such notice shall be deemed made when personally delivered or when mailed, forty-eight (48) hours after deposit in the U.S. Mail, first class postage prepaid and addressed to the party at its applicable address. Actual notice shall be deemed adequate notice on the date actual notice occurred, regardless of the method of service.

3.5.3 Ownership of Materials and Confidentiality.

3.5.3.1 Documents & Data; Licensing of Intellectual Property. This Agreement creates a non-exclusive and perpetual license for City to copy, use, modify, reuse, or sublicense any and all copyrights, designs, and other intellectual property embodied in plans, specifications, studies, drawings, estimates, and other documents or works of authorship fixed in any tangible medium of expression, including but not limited to, physical drawings or data magnetically or otherwise recorded on computer diskettes, which are prepared or caused to be prepared by Consultant under this Agreement ("Documents & Data"). Consultant shall require all subconsultants to agree in writing that City is granted a non-exclusive and perpetual license for any Documents & Data the subconsultant prepares under this Agreement. Consultant represents and warrants that Consultant has the legal right to license any and all Documents & Data. Consultant makes no such representation and warranty in regard to Documents & Data which were prepared by design professionals other than Consultant or provided to Consultant by the City. City shall not be limited in any way in its use of the Documents and Data at any time, provided that any such use not within the purposes intended by this Agreement shall be at City's sole risk.

3.5.3.2 Confidentiality. All ideas, memoranda, specifications, plans, procedures, drawings, descriptions, computer program data, input record data, written information, and other Documents and Data either created by or provided to Consultant in connection with the performance of this Agreement shall be held confidential by Consultant. Such materials shall not, without the prior written consent of City, be used by Consultant for any purposes other than the performance of the Services. Nor shall such materials be disclosed to any person or entity not connected with the performance of the Services or the Project. Nothing furnished to Consultant which is otherwise known to Consultant or is generally known, or has become known, to the related industry shall be deemed confidential. Consultant shall not use City's name or insignia, photographs of the Project, or any publicity pertaining to the Services or the Project in any magazine, trade paper, newspaper, television or radio production or other similar medium without the prior written consent of City.

3.5.3.3 Confidential Information. The City shall refrain from releasing Consultant's proprietary information ("Proprietary Information") unless the City's legal counsel determines that the release of the Proprietary Information is required by the California Public Records Act or other applicable state or federal law, or order of a court of competent jurisdiction, in which case the City shall notify Consultant of its intention to release Proprietary Information. Consultant shall have five (5) working days after receipt of the Release Notice to give City written notice of Consultant's objection to the City's release of Proprietary Information. Consultant shall indemnify, defend and hold harmless the City, and its officers, directors, employees, and agents from and against all liability, loss, cost or expense (including attorney's fees) arising out of a legal action brought to compel the release of Proprietary Information. City shall not release the Proprietary Information after receipt of the Objection Notice unless either: (1) Consultant fails to fully indemnify, defend (with City's choice of legal counsel), and hold City harmless from any legal action brought to compel such release; and/or (2) a final and non-appealable order by a court of competent jurisdiction requires that City release such information.

3.5.4 Fraud Policy. Consultant shall provide a copy of the City's Fraud Prevention Policy to each of its employees assigned to perform Services under this Agreement. Consultant shall submit to the City a statement signed by an authorized representative for Consultant certifying receipt of the City's Fraud Prevention Policy. A finding by the City that any of Consultant's employees have committed fraud against the City or have violated the City's Fraud Prevention Policy shall be grounds for appropriate discipline, up to and including such employee's removal from performance of this Agreement at City's request and/or termination of this Agreement. Consultant shall reimburse the City for any costs and expenses associated with fraud against the City.

3.5.5 Cooperation; Further Acts. The Parties shall fully cooperate with one another, and shall take any additional acts or sign any additional documents as may be necessary, appropriate or convenient to attain the purposes of this Agreement.

3.5.6 Attorney's Fees. If either party commences an action against the other party, either legal, administrative or otherwise, arising out of or in connection with this Agreement, the prevailing party in such litigation shall be entitled to have and recover from the losing party reasonable attorney's fees and all other costs of such action.

3.5.7 Indemnification.

3.5.7.1 To the fullest extent permitted by law, Consultant shall defend (with counsel of City's choosing), indemnify and hold the City, its officials, officers, employees, volunteers and agents free and harmless from any and all claims, demands, causes of action, costs, expenses, liability, loss, damage or injury of any kind, in law or equity, to property or persons, including wrongful death, in any manner arising out of, pertaining to, or incident to any alleged acts, errors or omissions, or willful misconduct of Consultant, its officials, officers, employees, subcontractors, consultants or agents in connection with the performance of the Consultant's Services, the Project or this Agreement, including without limitation the payment of all damages, expert witness fees and attorneys' fees and other related costs and expenses except such loss or damage caused by the sole negligence or willful misconduct of the City. Consultant's obligation to indemnify shall survive expiration or termination of this Agreement and shall not be restricted

to insurance proceeds, if any, received by the Consultant or the City, its officials, officers, employees, agents or volunteers.

3.5.7.2 If Consultant's obligation to defend, indemnify, and/or hold harmless arises out of Consultant's performance as a "design professional" (as that term is defined under Civil Code section 2782.8), then, and only to the extent required by Civil Code section 2782.8, which is fully incorporated herein, Consultant's indemnification obligation shall be limited to claims that arise out of, pertain to, or relate to the negligence, recklessness, or willful misconduct of the Consultant, and, upon Consultant obtaining a final adjudication by a court of competent jurisdiction, Consultant's liability for such claim, including the cost to defend, shall not exceed the Consultant's proportionate percentage of fault.

3.5.8 Entire Agreement. This Agreement contains the entire Agreement of the parties with respect to the subject matter hereof, and supersedes all prior negotiations, understandings or agreements. This Agreement may only be modified by a writing signed by both parties.

3.5.9 Governing Law. This Agreement shall be governed by the laws of the State of California. Venue shall be in Orange County.

3.5.10 Time of Essence. Time is of the essence for each and every provision of this Agreement.

3.6 City's Right to Employ Other Consultants. City reserves right to employ other consultants in connection with this Project.

3.7 Successors and Assigns. This Agreement shall be binding on the successors and assigns of the parties.

3.8 Assignment or Transfer. Consultant shall not assign, hypothecate, or transfer, either directly or by operation of law, this Agreement or any interest herein without the prior written consent of the City. Any attempt to do so shall be null and void, and any assignees, hypothecates or transferees shall acquire no right or interest by reason of such attempted assignment, hypothecation or transfer.

3.9 Construction; References; Captions. Since the Parties or their agents have participated fully in the preparation of this Agreement, the language of this Agreement shall be construed simply, according to its fair meaning, and not strictly for or against any Party. Any term referencing time, days or period for performance shall be deemed calendar days and not workdays. All references to Consultant include all personnel, employees, agents, and subconsultants of Consultant, except as otherwise specified in this Agreement. All references to City include its elected officials, officers, employees, agents, and volunteers except as otherwise specified in this Agreement. The captions of the various articles and paragraphs are for convenience and ease of reference only, and do not define, limit, augment, or describe the scope, content, or intent of this Agreement.

3.10 Amendment; Modification. No supplement, modification, or amendment of this Agreement shall be binding unless executed in writing and signed by both Parties.

3.11 Waiver. No waiver of any default shall constitute a waiver of any other default or breach, whether of the same or other covenant or condition. No waiver, benefit, privilege, or service voluntarily given or performed by a Party shall give the other Party any contractual rights by custom, estoppel, or otherwise.

3.12 No Third Party Beneficiaries. There are no intended third-party beneficiaries of any right or obligation assumed by the Parties.

3.13 Invalidity; Severability. If any portion of this Agreement is declared invalid, illegal, or otherwise unenforceable by a court of competent jurisdiction, the remaining provisions shall continue in full force and effect.

3.14 Prohibited Interests. Consultant maintains and warrants that it has not employed nor retained any company or person, other than a bona fide employee working solely for Consultant, to solicit or secure this Agreement. Further, Consultant warrants that it has not paid nor has it agreed to pay any company or person, other than a bona fide employee working solely for Consultant, any fee, commission, percentage, brokerage fee, gift or other consideration contingent upon or resulting from the award or making of this Agreement. For breach or violation of this warranty, City shall have the right to rescind this Agreement without liability. For the term of this Agreement, no member, officer or employee of City, during the term of his or her service with City, shall have any direct interest in this Agreement, or obtain any present or anticipated material benefit arising therefrom.

3.15 Equal Opportunity Employment. Consultant represents that it is an equal opportunity employer and it shall not discriminate against any subconsultant, employee or applicant for employment because of race, religion, color, national origin, handicap, ancestry, sex or age. Such non-discrimination shall include, but not be limited to, all activities related to initial employment, upgrading, demotion, transfer, recruitment or recruitment advertising, layoff or termination. Consultant shall also comply with all relevant provisions of City's Minority Business Enterprise program, Affirmative Action Plan or other related programs or guidelines currently in effect or hereinafter enacted.

3.16 Labor Certification. By its signature hereunder, Consultant certifies that it is aware of the provisions of Section 3700 of the California Labor Code which require every employer to be insured against liability for Worker's Compensation or to undertake self-insurance in accordance with the provisions of that Code, and agrees to comply with such provisions before commencing the performance of the Services.

3.17 Authority to Enter Agreement. Consultant has all requisite power and authority to conduct its business and to execute, deliver, and perform the Agreement. Each Party warrants that the individuals who have signed this Agreement have the legal power, right, and authority to make this Agreement and bind each respective Party.

3.18 Counterparts. This Agreement may be signed in counterparts, each of which shall constitute an original.

3.19 Declaration of Political Contributions. Consultant shall, throughout the term of this Agreement, submit to City an annual statement in writing declaring any political contributions

of money, in-kind services, or loan made to any member of the City Council within the previous twelve-month period by the Consultant and all of Consultant's employees, including any employee(s) that Consultant intends to assign to perform the Services described in this Agreement.

3.20 Subcontracting.

3.20.1 Prior Approval Required. Consultant shall not subcontract any portion of the work required by this Agreement, except as expressly stated herein, without prior written approval of City. Subcontracts, if any, shall contain a provision making them subject to all provisions stipulated in this Agreement.

SCOPE OF SERVICES

E. SCOPE OF WORK

The De Novo team has provided environmental documentation and technical studies for a diverse range of development projects, as well as regulatory/policy documents, such as General Plans and zoning ordinances. We are proud of our history of working with local agencies on an on-call basis. We will work with the City to prepare a detailed and accurate scope of work tailored for the project being proposed at that time. Our scope of work will identify the specific tasks the De Novo team will undertake from project initiation to project closeout. The work program, including technical studies and level of analysis, will vary depending upon a project's location and characteristics. All technical studies and environmental documents will be completed in accordance with the adopted CEQA Guidelines and NEPA requirements.

Typical on-call contracts follow a standard protocol to assess project requirements, including but not necessarily limited to project initiation/kick-off; data review and research; project description; and technical studies and environmental analysis. Working with the City as an extension of staff, De Novo will be responsible for preparation of draft and final environmental documents, including all supporting documentation such as the Notice of Preparation, Initial Study, Notice of Intent to Adopt, Notice of Availability, Response to Comments, Findings and Facts, Statement of Overriding Considerations, Mitigation Monitoring and Reporting Program, and Notice of Determination. We will circulate environmental documents for public review and participate in community meetings and public hearings, as needed.

Deliverables are anticipated to include electronic Word and PDF files for each Administrative Draft and Review Draft document. Electronic copies of the kick-off meeting agenda and minutes, draft project description, schedule, and required notices will also be provided. We will coordinate with the City on any needed hard copies. De Novo will be responsible for submitting the Public Review Draft documents and notices to the State Clearinghouse through the CEQA Submit portal and filing CEQA notices with the County.

De Novo's project management team has a long history of working with local agencies on an on-call basis. Our staff can mobilize quickly and efficiently, meeting project schedules while ensuring our environmental documents are accurate, legally defensible, and cost-effective. We understand the environmental review may be in the form of a variety of documents. We have provided the following conceptual work programs for preparation of an Environmental Impact Report, Initial Study/Mitigated Negative Declaration, Environmental Assessment, and Third Party Peer Review Services. Regardless of the environmental compliance document needed, the De Novo team will serve as an extension of City staff in all aspects of the environmental review process. The De Novo team also has experience and capabilities in providing paleontological monitoring, assistance in preparing grant applications for CEQA studies, and attending meetings and providing in-house trainings on CEQA.

Technical studies can be prepared as stand-alone studies, but often are prepared to support an environmental document, including, but not limited to, an Initial Study, Negative Declaration, Mitigated Negative Declaration, Environmental Assessment, Environmental Impact Report (Project, Program, Supplemental, Addendum, etc.) or Environmental Impact Statement. The De Novo team has the experience and capacity to prepare the technical studies and analysis typically required for any project. The approach to preparation of technical studies and environmental review documents is described below.

CONCEPTUAL WORK PROGRAM

Conceptual Work Program – Environmental Impact Report

The following is a typical scope of work for preparation of an Environmental Impact Report. All technical studies and environmental documents will be completed by the De Novo team in accordance with the adopted CEQA Guidelines. The work program, including necessary technical studies and level of analysis, will vary depending upon a project's location and characteristics. Upon receipt of future RFPs from the City, we will provide a project-specific scope of work tailored for the project being proposed at that time.

1.0 PROJECT SCOPING

1.1 PROJECT KICK-OFF MEETING

The work program will be initiated with a kickoff meeting with City representatives and the Applicant team (if appropriate) to discuss the project features in greater detail. This initial meeting will be a key milestone to confirm the parameters of the analysis, project construction program, buildout conditions, scheduling, and overall communications. Prior to the kickoff meeting, De Novo will distribute an agenda and detailed memorandum, which will identify information needs. Upon completion of the kickoff meeting, De Novo will prepare meeting minutes that detail action items for the team.

1.2 CEQA INITIAL STUDY/ASSESSMENT

De Novo will prepare the Initial Study in accordance with the CEQA Guidelines. The Initial Study will include detailed explanations of all checklist determinations and discussions of potential environmental impacts. The analysis will be in accordance with Public Resources Code Section 21080(c) and CEQA Guidelines Section 15063. The impact analysis will be in a consistent order of environmental factors, as presented in the recently updated Appendix G of the CEQA Guidelines.

The Administrative Draft Initial Study will be provided to the City for review. De Novo will revise the Initial Study, providing the City with a Second Administrative Draft Initial Study with revisions in tracked changes for ease of review. De Novo will also prepare the Notice of Preparation (NOP) for review by City staff. Upon acceptance by the City, De Novo will finalize the Initial Study/Notice of Preparation for public distribution.

1.3 SCOPING MEETING

A public scoping meeting is anticipated to occur during the NOP public review period. De Novo will prepare presentation materials and facilitate the meeting. The scoping meeting will include an overview of the project and the environmental review process, as well as identification of environmental issues that will be addressed in the EIR by De Novo. Although the format of the meeting may vary, typically it is a presentation, open house, or hybrid approach. After completion of the scoping meeting, De Novo will provide a summary of environmental issues raised.

2.0 ADMINISTRATIVE DRAFT EIR

2.1 EXECUTIVE SUMMARY

This section will provide a concise description of the project, the potential areas of controversy, issues to be resolved, project alternatives, and a summary of impacts and mitigation measures.

2.2 INTRODUCTION AND PURPOSE

The Introduction will serve as an overview of the EIR, describing its purpose and relevant environmental review procedures, the document organization, and the methodology used.

2.3 PROJECT DESCRIPTION

The Project Description is a critical element of the environmental review and establishes the foundation for the technical analysis. The Project Description will detail the project location and environmental setting, project characteristics (construction and operation), project objectives, phasing, discretionary actions, and required permits and approvals based on available information. Exhibits will identify the regional and local site vicinity. Project plans and details, provided by the Applicant, will also be graphically depicted and referenced. De Novo will submit the Project Description to the City for review and approval prior to initiating technical analysis.

2.4 THRESHOLDS OF SIGNIFICANCE

Within each environmental topic subsection, a comprehensive description of the thresholds of significance for the environmental analysis will be described. The significance threshold criteria will provide the basis for conclusions of significance.

2.5 CUMULATIVE PROJECTS/ANALYSIS

De Novo will analyze the environmental impacts of the project when viewed in combination with other known, approved, or reasonably foreseeable projects in the region, determined in coordination with the City. The cumulative analysis will address each topic covered in the environmental analysis and will identify appropriate mitigation measures, if applicable.

2.6 ENVIRONMENTAL ANALYSIS

The Draft EIR will be prepared consistent with the requirements of CEQA, the CEQA Guidelines, and relevant case law. The Environmental Analysis section will address each environmental topical area determined to have the potential to result in a significant impact. Environmental issues raised during the scoping process (NOP responses, Public Scoping Meeting, and any other relevant and valid informative sources) will also be considered. The Environmental Analysis section will thoroughly discuss the existing conditions for each environmental issue area, identify short-term construction and long-term operational environmental impacts associated with the project, and their associated levels of significance. For each environmental topical area, the impact analysis subsection will begin with a list of all thresholds contained in CEQA Guidelines Appendix G and the thresholds for significance shall be identified for every environmental issue. For each environmental issue requiring analysis, the EIR will state the level of significance, and then provide the analysis discussion, mitigation measures specific to this environmental issue, and level of significance after mitigation.

The environmental factors and typical scope of analysis is provided below. De Novo will tailor the scope of the analysis based upon project-specific characteristics and environmental conditions.

A. Aesthetics

The existing aesthetic environment, including any scenic vistas or scenic resources will be identified. Photographs will be used to illustrate the visual character of a site and surrounding area. The analysis of construction activities will focus on the potential for sensitive uses to be impacted as a result of visible construction activities, including staging areas and construction vehicles. Potential visual impacts to scenic vistas and the potential for a project to result in substantial damage to scenic resources within a state scenic highway will be identified. If a project site is in a non-urbanized area, the potential for the project to substantially degrade the existing visual character or quality of public views of a site and its surroundings will be analyzed. The analysis will consider the proposed land use(s), overall design, including building form, mass, and height, and potential building materials as compared to the surrounding area. If

a site is located within an urbanized area, the potential for a project to conflict with applicable zoning and other regulations, including the City's design guidelines, governing scenic quality will be reviewed and analyzed.

In the event the project warrants preparation of visual simulations, De Novo's in-house urban designers will prepare visual simulations using specific building designs provided to us by the project architect/engineer. The visual simulations would be created using state-of-the-art equipment including GPS georeferencing, ACAD, 3D modeling software, and the Adobe Suite. We will provide visual simulations from public vantage points to be determined in coordination with City staff. The intent of the visual simulations is to provide a photo-realistic representation of what the site would look like under a before and after scenario from each vantage point.

The potential for a project to create a new source of substantial light or glare to the area will also be addressed. The existing environment as it pertains to light and glare will be identified. The analysis will discuss the potential for a project to impact sensitive uses from new light sources such as interior and exterior lighting, security lighting, parking lot lighting, and vehicle headlights associated with the development. Potential building materials and their ability to create glare which could adversely affect daytime views will also be considered.

Depending upon the location and nature of the project, a shade and shadow analysis may be conducted. De Novo can create shadow diagrams overlaid on a base map that show the building footprints of the project and the surrounding buildings. The intent of this work is to illustrate any change in shadow patterns that would be directly attributable to the project, and to visually demonstrate the effect of these shadows on surrounding land uses, particularly any adjacent residential or other sensitive uses.

B. Agriculture and Forestry Resources

Per the California Department of Conservation's Important Farmland Finder, there is no Prime, Unique, or Important Farmland located within the City. Additionally, there are no sites within the City that are zoned for forest land, timberland, or timberland zoned Timberland Production. The analysis in this section would document that agricultural and timber resources do not occur within the City.

C. Air Quality

De Novo will utilize our in-house environmental scientists to prepare an Air Quality analysis for the project. The analysis will be prepared consistent with South Coast Air Quality Management District (SCAQMD) and State and Federal guidelines using the latest version of CalEEMod software. The analysis will include a comparison of the proposed project's construction and operational emissions with SCAQMD's air quality thresholds of significance for criteria pollutants, consistent with SCAQMD's Guidance for Assessing and Mitigating Air Quality Impacts. De Novo will also analyze the potential for health risk and odor impacts on nearby receptors. The section will include the methodology for calculating emissions, an analysis of the proposed project's air quality impacts, a cumulative impact analysis, and a discussion of feasible mitigation measures that should be implemented to reduce impacts on air quality.

An assessment of toxic air contaminates (TAC) impacts (i.e., a Health Risk Assessment [HRA]) may be warranted depending on the potency, toxicity, quantity of emissions, and proximity of TACs to sensitive receptors such as hospitals, daycare centers, schools, work sites, and residences. De Novo's in-house air quality specialists will prepare an HRA, including an exposure assessment and risk calculations. The exposure assessment includes estimating the emission rates of TACs and running an air dispersion model

to calculate the concentration of TACs at each location in the modeling domain. We will calculate the residential (70 year) cancer, workplace cancer, and non-cancer (i.e. acute and chronic) health risks using the HARP Air Dispersion Modeling & Risk Tool (ADMRT). The resulting cancer and non-cancer risks will be plotted on the base map. Both the quantitative and visual results of the analysis will be incorporated into the HRA and summarized.

D. Biological Resources

Depending upon the location and nature of the project site, De Novo's in-house biologists will prepare a biological resources assessment for the project. The California Natural Diversity Database (CNDDB) and California Native Plant Society (CNPS) Electronic Inventory of Rare and Endangered Vascular Plants of California will be used to conduct record searches of sensitive biological resources known to occur on and within the general vicinity of the project site. Additional information sources will be consulted including the California Department of Fish and Wildlife (CDFW), United States Fish and Wildlife Service (USFWS), and historic/current aerial photographs, as appropriate, to define the habitat requirements for sensitive species potentially occurring on-site. Topographic maps, soil surveys, flood maps, hydrology/climate information, and watershed data will also be reviewed.

A site visit will be conducted by qualified biologists in order to document the presence/absence of special-status biological resources, or to determine the potential for occurrence of such resources that may not be detectable when the literature review is conducted. The location of any special-status biological resources (i.e., plants, plant communities, drainage features, wildlife), if present on-site, will be documented. Additionally, the suitability of the vegetation on and surrounding the proposed project site will be surveyed for their ability to provide suitable avian nesting opportunities. Notes will be taken on all plant and wildlife species observed on-site during the survey. This survey will provide an understanding of the overall project setting and biological resources occurring in the area. This data will be used to devise an appropriate clearance/conservation strategy for implementation of the proposed project.

Following completion of background research and field surveys, De Novo would summarize the results of these studies in a Biological Resources Assessment report. The report would identify the existing biological resources, potential project impacts on those resources, and proposed avoidance, minimization, and mitigation measures to minimize impacts. The report would also outline any future biological surveys, protected species consultations, and/or other anticipated regulatory agency requirements to obtain project approvals and/or environmental permits.

E. Cultural Resources

The analysis will address the potential for a project to cause a substantial adverse change in the significance of a historical, archaeological, or paleontological resource (although addressed here, paleontological resources will be discussed in Geology/Soils). Additionally, the potential for a project to disturb human remains will be discussed.

De Novo teams with experts specializing in cultural resources to prepare the technical analysis to support the environmental document. The specific nature of the report and work program will vary depending upon a site's location and conditions. Typical work efforts for assessing archaeological and paleontological resources include the following:

Cultural and Paleontological Resources Records Search. A records search for cultural resources within a 0.5-mile radius of the project area will be conducted A review of all relevant archival records (e.g., historic

maps and aerials) will be conducted, and all site records will be obtained. Local historical societies will be contacted. A Sacred Lands File search from the NAHC will also be requested. Project information letters will be sent to those individuals or entities provided by the NAHC that have not already been contacted through AB 52 consultation. A records search for paleontological resources will be requested and research to develop brief contexts for cultural and paleontological resources will be conducted.

Cultural Resources Survey. A cultural resources specialist will conduct a pedestrian survey of the proposed project site. The cultural resources specialist will inspect the project site for evidence of cultural resources that may be impacted by the proposed project. The survey will be conducted using transects spaced no greater than 10 meters apart with accuracy maintained by a hand-held GPS unit. Photographs will be taken of the project site and adjacent properties.

Cultural and Paleontological Resources Assessment Report. A cultural and paleontological resources assessment report will be prepared. The report will characterize the results of the records searches, consultation efforts to determine baseline conditions, assess potential impacts to cultural and paleontological resources resulting from the project, and make appropriate recommendations to avoid or minimize any potentially significant impacts.

If necessary, a determination of if any properties on a project site qualify as historical resources as defined by CEQA will be prepared. Historical resources in the vicinity of a project site will be identified and described, and the potential direct and indirect impacts the project may have on the identified historical resources will be assessed.

Records Search. A records search will be conducted to determine if the subject properties are currently listed under national, state, or local landmark or historic district programs or previously evaluated as eligible for listing in a historic resources survey of an area. The National Register of Historic Places, California Register of Historic Places, and local register (if applicable) will also be consulted to identify designated and previously surveyed historical resources in the vicinity.

Field Survey. A field survey will be conducted of the vicinity to photograph designated and previously surveyed historical resources. The physical integrity of buildings within the project site will be documented.

Research. General research will be conducted to determine the context(s) in which the subject properties should be evaluated. Property specific research will be conducted to determine the potential significance of the associated individuals such as owners, residents, builders, and architects.

Draft Report. The Historical Resources Technical Report will identify the criteria for determining historic significance and integrity under national, state, and local landmark and historic district programs; provide a brief history and description of each property and buildings; and evaluate each property for listing under national, state, and local landmark and historic district programs according to National Park Service, California Office of Historic Preservation, and local (if applicable) criteria. A summary of the designated and previously surveyed historical resources in the vicinity will be provided and the impact the project may have on the identified historical resources will be analyzed. If the project will have an impact on historical resources, the De Novo team will work with the City/Applicant to modify the project to avoid such an impact. Mitigation measures will be recommended, if necessary.

F. Energy

This section will identify the energy demand associated with the project and identify whether there is a potential environmental impact due to wasteful, inefficient or unnecessary use of energy during project construction or operation. The analysis will also assess the project's consistency with state or local plans for renewable energy or energy efficiency.

G. Geology and Soils

Utilizing existing resources and any previously prepared studies for a project site or surrounding area, the analysis will identify existing regional and local geology and soils constraints (such as compressible soils, landslide hazards, disruptions, displacements, compaction, or over-covering of the soil, and areas subject to subsidence) and seismic hazards. A project will be evaluated for its potential to expose people or structures to potential substantial adverse effects involving fault rupture, strong seismic ground shaking, seismic-related ground failure, and landslides. The potential for a project to destroy a unique paleontological resource will also be discussed.

H. Greenhouse Gas Emissions

De Novo's in-house environmental scientists will prepare a Greenhouse Gas Emissions analysis pursuant to the requirements of Executive Order S-3-05 and The Global Warming Solutions Act of 2006 (AB 32). The analysis will meet all of the requirements of CEQA Guidelines Section 15064.4. The discussion and analysis will include quantification of GHGs generated by the project using the latest version of the CalEEMod computer model as well as a quantitative analysis of the project's consistency with any applicable state and local plans, including all applicable City of Aliso Viejo General Plan policies and the Aliso Viejo Municipal Code. The discussion will provide a quantitative and qualitative analysis of the project's sustainability features. The De Novo team will work with City staff to implement a methodology and mitigation strategy that meets all legal requirements and is consistent with current City policies and preferences.

I. Hazards and Hazardous Materials

The hazardous materials analysis will include a summary of the existing regulatory conditions per the State Cortese Database Listing. Potentially hazardous materials conditions within a project site will be considered based on available resources, including any previous studies. The above referenced research will be used to analyze potential project-related impacts, as they pertain to hazards and hazardous materials per the CEQA thresholds of significance. Potential accidental conditions involving hazardous materials during construction and operations will be identified. If a project site is located within an airport land use plan or within two miles of an airport, the potential for excessive noise conditions will be discussed. Project emergency access and potential exposure to wildland fires will also be considered.

J. Hydrology and Water Quality

Existing and proposed hydrology and water quality data will be reviewed for a project area based upon available reference documents, including available information from the City and Applicant. This section will evaluate water quality conditions and identify water quality (National Pollutant Discharge Elimination System [NPDES]) techniques/structures in accordance with local, State, and Federal requirements. The potential for a project to degrade water quality, interfere with groundwater recharge or expose people to water-related hazards will be identified. The section will also address alteration of drainage conditions, potential for substantial erosion or siltation, potential for flooding, and the ability of a project to result in runoff that exceed the capacity of the storm drain system. The analysis will consider the potential for a

project to conflict with or obstruct implementation of a water quality control plan or sustainable groundwater management plan, as applicable.

K. Land Use and Planning

A proposed project will be reviewed for consistency with City standards and policies, as well as careful consideration of adjacent uses. Existing and proposed General Plan land use and zoning designations will be identified; any proposed amendments to the land use and zoning for a site will be assessed. A proposed project will be reviewed in the context of land use plans, policies, and regulations adopted for the purpose of avoiding or mitigating an environmental impact. The potential for the project to conflict with these plans, policies or regulations will be assessed.

L. Mineral Resources

According to the State of California, Department of Conservation, the majority of the City is located in Mineral Resource Zone 1 (MRZ-1), which indicates areas where no significant mineral deposits are present or where little likelihood exists for their presence. Portions of the City are also located in Mineral Resource Zone 3 (MRZ-3), which indicates areas containing mineral deposits the significance of which cannot be evaluated from available data. The analysis will document whether the specific site is located within a MRZ and the potential for impacts.

M. Noise

A technical noise analysis is prepared to determine project compliance with City noise standards and associated potential noise impacts based on the following approach:

The site plan, preliminary grading plans, and trip information for the project will be reviewed from an acoustical standpoint. The De Novo team will discuss with the City the potential noise impacts and determine noise measurement locations. Short-term and/or 24-hour noise measurements will be performed to determine the existing noise environment. Utilizing the FHWA Construction noise model and SoundPlan 3D Modeling software, the short-term construction noise and vibration impacts from the project during construction will be determined. The exterior noise impact to the surrounding adjacent properties will be assessed and mitigation measures to alleviate any potential significant noise impact will be identified, if necessary. Utilizing a version of the FHWA Noise Prediction Model the roadway noise impacts for existing and build-out scenarios will be determined and compared to the City's noise standards. This will help determine any change in the roadway noise level as a result of the project. The roadway noise impacts to the project site will be calculated. Potential stationary noise impacts from the project site will also be calculated. If necessary, mitigation measures will be identified to comply with City's limits. The results of the analysis will be summarized in a noise impact study that will address the noise impacts from the project for both short-term and long-term noise impacts.

N. Population and Housing

The analysis will consider the potential for a project to directly or indirectly induce substantial unplanned population growth in the area and the potential to displace a substantial number of people or housing, resulting in the need for replacement housing elsewhere. The section will identify population and housing projections for an area, including the anticipated and planned growth as identified in the City of Aliso Viejo General Plan and regional growth projections.

O. Public Services

Public service departments/agencies will be contacted to confirm existing service conditions and potential project impacts associated with a proposed development. The discussion will focus on the increased demand on services based on the proposed land uses and the potential alteration of existing facilities, extension or expansion of new facilities. The ability of a project to receive adequate service based on applicable standards will be evaluated. If necessary, mitigation measures to reduce impacts associated with providing new or altered facilities will be identified.

P. Recreation

Existing recreation facilities will be identified and the ability for these facilities to serve a proposed project will be assessed. The discussion will focus on the potential for the physical deterioration of existing facilities or potential adverse physical effects associated with the provision of new facilities proposed by the project.

Q. Transportation

With the implementation of Senate Bill (SB) 743, vehicle miles traveled (VMT) will be the required analysis metric to assess the potential for significant transportation impacts associated with proposed projects. The De Novo team will work with the City of Aliso Viejo to determine the scope of the transportation analyses in accordance with the City's adopted VMT Guidelines and other policies and procedures.

The analysis will also address any potential conflicts with the City's programs, plans, ordinances or policies addressing the circulation system, including transit, roadway, bicycle and pedestrian facilities, potential of a project to increase hazards due to a geometric design feature or incompatible use, or result in inadequate emergency access.

R. Tribal Cultural Resources

The De Novo team will provide AB 52 Native American consultation assistance. It is assumed that the City maintains a list of contacts for consultation under AB 52, but the De Novo team may request an AB 52 consultation list from the NAHC on behalf of the City should the City choose to request such a list from the NAHC. The De Novo team will prepare AB 52 letter templates and provide checklists, detailed instructions to ensure meaningful consultation with interested Native American groups in accordance with AB 52. If an assessment of tribal cultural resources is needed, De Novo will involve our cultural resources teaming partner to provide these services; refer to the Cultural Resources discussion above.

S. Utilities and Service Systems

Utility/service system providers will be contacted to confirm existing service conditions and potential project impacts associated with a proposed development. The discussion will focus on the increased demand and/or generation of utilities/service systems based on the proposed land uses and if capacity and supplies are available to support the increased demand and/or generation. The analysis will also consider the potential physical effects associated with the relocation or construction of new or expanded facilities, if applicable.

T. Wildfire

According to Cal Fire, the City is located within and immediately adjacent to a very high fire hazard severity zone within a Local Responsibility Area (LRA) and State Responsibility Area (SRA). The discussion will identify whether a project site is in or near state responsibility areas or lands classified as very high fire hazard severity zones. If located within a wildfire area, the analysis will address factors that could expose

people or structures to fire or post-fire flooding or landslides, risk or impair emergency response, or require infrastructure that could exacerbate fire risk.

2.7 GROWTH INDUCEMENT

This section will discuss ways in which a proposed project could foster economic or population growth, or the construction of additional housing, either directly or indirectly, in the surrounding environment. The analysis addresses growth-inducing impacts in terms of whether a project influences the rate, location, or amount of growth.

2.8 ALTERNATIVES TO THE PROPOSED ACTION

The EIR will identify a reasonable range of alternatives which could attain most of a project's objectives but would avoid or substantially lessen any of the significant events of a project. The range of alternatives is anticipated to include a No Project Alternative, as required under CEQA, and additional alternatives focused on reducing the potential environmental impacts. The alternatives analysis will compare the environmental impacts for each alternative for the environmental topical areas analyzed in the EIR. The advantages and disadvantages of each alternative and the reasons for rejecting or recommending the respective alternative will be discussed; an environmentally superior alternative will be identified. A summary matrix will compare the impacts for each alternative environmental topical area and whether the alternative involves greater, reduced, or equivalent impacts when compared to a project.

2.9 ADDITIONAL SECTIONS

Additional EIR sections to meet CEQA and City requirements will be prepared and include the following: Significant Irreversible Environmental Changes That Would Be Involved In the Proposed Action Should It Be Implemented; Effects Found Not To Be Significant; Inventory of Unavoidable Adverse Impacts; and Organizations and Persons Consulted/Bibliography will be provided.

2.10 GRAPHIC EXHIBITS

The EIR will include exhibits to enhance the written text and clarify a proposed project's environmental impacts.

2.11 MITIGATION MONITORING AND REPORTING PROGRAM

A Mitigation Monitoring and Reporting Program (MMRP) will be prepared to identify appropriate monitoring steps/procedures and provide a basis for monitoring such measures during and upon project implementation. The Checklist will identify the mitigation measure outlined in the EIR, the Mitigation Measure/Condition of Approval, the Monitoring Milestone (what agency/department is responsible for verifying implementation of the measure), Method of Verification (documentation, field checks, etc.), and a verification section.

2.12 ADMINISTRATIVE DRAFT EIR SUBMITTAL

The previous tasks will result in the Administrative Draft EIR, which will be provided to City staff for review and comment.

3.0 DRAFT ENVIRONMENTAL IMPACT REPORT

3.1 SECOND ADMINISTRATIVE DRAFT EIR

De Novo will respond to one complete set of comments from City staff on the Administrative Draft EIR. The Second Administrative Draft EIR will be provided to City staff with all revisions made in track changes to assist in review of the document.

3.2 COMPLETION OF THE DRAFT EIR

De Novo will respond to a second review of the Administrative Draft EIR. Upon approval, De Novo will prepare the Draft EIR for the required 45-day public review period. In addition, the Notice of Completion (NOC) and Notice of Availability (NOA) will be prepared for submittal to the State Clearinghouse and the County Clerk, and for distribution to the City-approved distribution list. De Novo will file the notices with the State Clearinghouse and County Clerk.

4.0 FINAL ENVIRONMENTAL IMPACT REPORT

4.1 RESPONSE TO COMMENTS

At the conclusion of the Draft EIR public review period, the De Novo team will respond to written comments received by the City, as well as oral comments received during community meetings and public hearings. The Draft Responses to Comments will be prepared for review by City staff. De Novo will address one complete set of comments from City staff on the Draft Responses to Comments and will provide the revisions in track changes for ease of review. De Novo will respond to a second set of comments and finalize this section for inclusion in the Final EIR.

4.2 FINAL EIR COMPLETION

The Final EIR will consist of the Draft EIR and Response to Comments. Any revisions to the Draft EIR will be shown as an excerpt demarcated with underline for new text and strikethrough for deleted text.

4.3 FINDINGS AND STATEMENT OF OVERRIDING CONSIDERATIONS

CEQA Findings of Fact/Statement of Overriding Considerations (Findings) will be prepared that identify each potentially significant and significant impact, describe mitigation for the impact, and the resultant level of significance after mitigation. The Findings will identify each alternative and, if the alternative was not selected as the proposed project, identify why the alternative was not feasible and considerations for not selecting the alternative. For each significant and unavoidable impact, the Findings will identify economic, legal, social, technical, or other defensible reasons why the project should be approved in light of the significant effects of the project. De Novo will submit the Draft Findings for City review and will respond to one complete set of City comments.

4.4 NOTICE OF DETERMINATION

De Novo will prepare and file a Notice of Determination (NOD) with the County Clerk and State Clearinghouse within five days of EIR certification.

5.0 PROJECT MANAGEMENT AND MEETINGS

5.1 PROJECT MANAGEMENT

Ms. Barker will direct preparation of and review the environmental document for compliance with CEQA requirements and guidelines and City CEQA procedures. Ms. Barker will coordinate with City staff and/or other stakeholder representatives as well as internal technical staff, support staff and word processing toward the timely completion of the environmental document, serving as an extension of City throughout the duration of the project. In addition to weekly status updates, monthly progress reports will be included with invoices identifying the tasks accomplished, deliverables submitted, anticipated tasks/progress for the next month, and any pending issues. Any modifications/ updates to the project schedule based on progress meetings and activities will also be provided. Monthly invoices will include total contract amount;

all costs (by task) incurred for the period (actual and percentage); all costs (by task) incurred to date (actual and percentage); estimated completion percentage for each task; and accounting by individual working on each task for that billing period.

5.2 MEETINGS AND HEARINGS

Close coordination with City staff is essential. The De Novo Project Manager will participate in progress/project conference calls and/or meetings with City staff, the Applicant, and stakeholder representatives, as necessary to identify issues, assess impacts, and define mitigation. The De Novo team will participate in public hearings and make presentations, as necessary. De Novo Principals, Project Manager, and technical staff, as well as subconsultant team members will be available, as necessary, to provide expert testimony before decision-making bodies, including describing the environmental review process, analysis and findings, and responding to questions.

Conceptual Work Program – Initial Study/Mitigated Negative Declaration

The following is a typical scope of work for preparation of an Initial Study/Mitigated Negative Declaration. As with preparation of an EIR, the work program, including necessary technical studies and level of analysis, will vary depending upon a project's location and characteristics. Typical scopes of work for technical studies have been provided under Conceptual Work Program – Environmental Impact Report, above. Upon receipt of future RFPs from the City, the De Novo team will provide a project-specific scope of work tailored for the project being proposed at that time.

1.0 PROJECT INITIATION

The work program will be initiated with a kickoff meeting with City representatives and the Applicant team (if appropriate) to discuss the project features in greater detail. This initial meeting will be a key milestone to confirm the parameters of the analysis, project construction program, buildout conditions, scheduling, and overall communications. Prior to the kickoff meeting, De Novo will distribute an agenda and detailed memorandum, which will identify information needs. Upon completion of the kickoff meeting, De Novo will prepare meeting minutes that detail action items for the team.

2.0 CEQA INITIAL STUDY/ASSESSMENT

De Novo will prepare the Initial Study in accordance with the CEQA Guidelines. The Initial Study will include detailed explanations of all checklist determinations and discussions of potential environmental impacts. The analysis will be in accordance with Public Resources Code Section 21080(c) and CEQA Guidelines Section 15063. The impact analysis will be in a consistent order of environmental factors, as presented in the recently updated Appendix G of the CEQA Guidelines and as described in the conceptual EIR work program, above. The determination page will conclude the appropriate CEQA action based upon the environmental analysis.

3.0 ADMINISTRATIVE DRAFT INITIAL STUDY

The Administrative Draft Initial Study will be provided to the City for review and will include a Mitigation Monitoring and Reporting Program (MMRP) to identify appropriate monitoring steps/procedures and provide a basis for monitoring such measures during and upon project implementation. De Novo will revise the Initial Study, providing the City with a Second Administrative Draft Initial Study with revisions in tracked changes for ease of review.

4.0 PUBLIC REVIEW DRAFT INITIAL STUDY/MITIGATED NEGATIVE DECLARATION

With a conclusion in the Initial Study that no significant environmental effects will occur as a result of implementation of the project, a Mitigated Negative Declaration will be prepared for the 30-day public review period. De Novo will prepare the Notice of Intent to Adopt a Negative Declaration (ND)/Mitigated Negative Declaration (MND) for public review. De Novo will file all necessary notices with the County Clerk and State Clearinghouse.

5.0 FINAL INITIAL STUDY/MITIGATED NEGATIVE DECLARATION

5.1 RESPONSES TO COMMENTS

Upon completion of the public review period, De Novo will prepare a written response to the public comments for review by the City.

5.2 FINAL INITIAL STUDY/MITIGATED NEGATIVE DECLARATION

Where necessary, the appropriate revisions will be made to the IS/MND text. Any additional text will be marked in underline format and any deleted text will be marked in strikeout format. The Draft Final IS/MND will be provided to the City for review and approval. We will make any additional revisions as directed by the City and prepare a Final Initial Study MND for consideration. The Final Initial Study will include a Mitigation Monitoring and Reporting Program, and any other information necessary for the City's staff report to the Planning Commission and/or City Council.

5.3 NOTICE OF DETERMINATION

De Novo will prepare and file a Notice of Determination (NOD) with the County Clerk and State Clearinghouse within five days of IS/MND adoption.

6.0 PROJECT MANAGEMENT AND MEETINGS

As provided in 5.0, Project Management and Meetings, under Conceptual Work Program – Environmental Impact Report, above, Ms. Barker will be responsible for management and supervision of the Project Team. The De Novo Project Manager will participate in progress/project conference calls and/or meetings with City staff, the Applicant, and stakeholder representatives, as necessary to identify issues, assess impacts, and define mitigation. The De Novo team will participate in public hearings and make presentations, as necessary. De Novo Principals, Project Manager, and technical staff, as well as subconsultant team members will be available, as necessary, to provide expert testimony before decision-making bodies, including describing the environmental review process, analysis and findings, and responding to questions.

Conceptual Work Program – Environmental Assessment

The following is a typical scope of work for preparation of a NEPA Environmental Assessment. It should be noted that the format and requirements of an Environmental Assessment will vary depending upon the NEPA Lead Agency. Additionally, the work program, including necessary technical studies and level of analysis, will vary depending upon a project's location and characteristics. Upon receipt of future RFPs from the City, the De Novo team will provide a project-specific scope of work tailored for the project being proposed at that time.

1.0 PROJECT INITIATION

The work program will be initiated with a kickoff meeting with City representatives and the Applicant team (if appropriate) to discuss the project features in greater detail. This initial meeting is vital to the success of the CEQA process and will be a key milestone to confirm the parameters of the analysis, project construction program, buildout conditions, scheduling, and overall communications. Prior to the kickoff meeting, De Novo will distribute an agenda and detailed memorandum, which will identify information needs. Upon completion of the kickoff meeting, De Novo will prepare meeting minutes that detail action items for the team. Based upon the detailed project information obtained at the project kickoff meeting, De Novo will draft a preliminary Project Description and project schedule for review and approval by City staff.

2.0 NEPA ENVIRONMENTAL ASSESSMENT PREPARATION

The evaluation and associated Environmental Assessment will be prepared in accordance with the U.S. Department of Housing and Urban Development (HUD) recommended format and in accordance with HUD Title 24, Code of Federal Regulations Part 58. The NEPA document will be no longer than necessary to concisely address required contents, will describe why some resources are not significant and focus on the significant resources and impacts, and will be written so that the lay person can understand the document. Where applicable, the EA will utilize any environmental documents or technical studies prepared for the project.

This EA is required to incorporate the assessment into an official Environmental Review Record (ERR) at the completion of the process. The ERR is the documentation of the process followed and the actions taken during the environmental review. It contains the various documents which result from the process. The following are the contents for the EA to file for an ERR. The process will be fully documented and procedures for notifications, compliances and the determinations or decisions will be carefully followed. The contents shown below apply to any EA where a FONSI is made. The following are the primary sections of the EA:

2.1 PURPOSE AND NEED

This section will summarize the City's purpose and need for the project.

2.2 PROJECT DESCRIPTION

The Project Description section will detail the project location and setting, characteristics, and construction and phasing program based on available information. Exhibits depicting the regional and site vicinity will be included in this section. As required, this section will include details regarding estimated cost of the project and total Federal funding to be utilized.

2.3 EXISTING CONDITIONS AND TRENDS

This section will provide a detailed description of existing conditions at the project site. Details such as topography, improvements, infrastructure, and existing access will also be provided. An inventory of surrounding uses will be incorporated to provide a description of conditions in the project area. Development trends likely to continue in the absence of the project will also be discussed.

2.4 STATUTORY CHECKLIST

The Statutory Checklist provides an analysis of project impacts under the NEPA Statutes. This section includes determinations for project impacts under each statute, executive order, or regulation. A listing

of project conditions and/or mitigation measures are provided, which is considered as part of the consistency/compliance determination. Analysis will be provided to adequately respond to and support the determination, as appropriate.

2.5 ENVIRONMENTAL ASSESSMENT CHECKLIST

This section analyzes the significance of project impacts on the character, features, and resources of the project area. A listing of project conditions and/or mitigation measures are provided, which is considered as part of the consistency/compliance determination. Analysis will be provided to adequately respond to and support the determination, as appropriate. Included here will be any documentation of coordination, consultation, permit procedures, or reviews carried out in accordance with any of the relevant statutes.

2.6 ALTERNATIVES TO THE PROPOSED ACTION

This section will consist of a brief discussion and comparison of alternatives considered. Typical alternatives that are considered consist of an alternative use, alternative location, and alternative development components. A No Action Alternative, where the project is not implemented, is also discussed.

The EA will also include several HUD-required summary sections, including a summary of mitigation measures, additional studies performed, and list of sources, agencies, and persons consulted.

3.0 ADMINISTRATIVE DRAFT ENVIRONMENTAL ASSESSMENT

De Novo will submit the Administrative Draft Environmental Assessment for review and comment by the City. De Novo will respond to a consolidated set of comments from City staff on the Administrative Draft Environmental Assessment. De Novo will provide the Second Administrative Draft Environmental Assessment with all revisions made in track changes to assist City staff's review of the document.

4.0 PUBLIC REVIEW DRAFT ENVIRONMENTAL ASSESSMENT

With a conclusion in the Environmental Assessment that no significant environmental effects will occur as a result of implementation of the project, a Notice of Intent to Request Release of Funds (NOIRROF)/FONSI will be prepared. The NOIRROF/FONSI will be subject to a 15-day objection period.

At a minimum, the City must send the NOIRROF/FONSI to the local newspaper of general circulation, to individuals and groups known to be interested in its activities; to appropriate local State and Federal agencies; to the Headquarters and appropriate Regional Office of the Environmental Protection Agency.

5.0 FINAL ENVIRONMENTAL ASSESSMENT

5.1 RESPONSES TO COMMENTS

If necessary, De Novo will respond to comments received on the Draft Environmental Assessment during the public review period.

5.2 COMPLETION OF THE FINAL ENVIRONMENTAL ASSESSMENT

If required, De Novo will prepare an Errata to the Public Review Draft Environmental Assessment for City review and approval. The Errata will be a stand-alone document identifying any revised text in strikethrough and underline, as necessary to address comments received on the Draft document.

6.0 PROJECT MANAGEMENT AND MEETINGS

6.1 PROJECT MANAGEMENT

Ms. Barker will be responsible for management and supervision of the Project Team. As Project Manager, Ms. Barker will direct preparation of and review the Environmental Assessment for compliance with NEPA requirements and guidelines. Ms. Barker will coordinate with City staff and/or other stakeholder representatives as well as internal technical staff, support staff and word processing toward the timely completion of the environmental document, serving as an extension of City throughout the duration of the project.

In addition to weekly status updates, monthly progress reports will be included with invoices identifying the tasks accomplished, deliverables submitted, anticipated tasks/progress for the next month, and any pending issues. Any modifications/ updates to the project schedule based on progress meetings and activities will also be provided. Monthly invoices will include total contract amount; all costs (by task) incurred for the period (actual and percentage); all costs (by task) incurred to date (actual and percentage); estimated completion percentage for each task; and accounting by individual working on each task for that billing period.

6.2 MEETINGS AND HEARINGS

Close coordination with City staff is essential. The De Novo Project Manager and/or Co-Project Manager will participate in progress/project conference calls and/or meetings with City staff, the Applicant, and stakeholder representatives, as necessary to identify issues, assess impacts, and define mitigation. The De Novo team will participate in public hearings and make presentations, as necessary.

Conceptual Work Program – Third Party Peer Review

In addition to preparing technical analysis and environmental compliance documentation, the De Novo team is often called upon to provide third party peer review services for our clients. Our approach to conducting peer reviews involve the following considerations: 1) compliance with the CEQA/NEPA Guidelines; 2) technical accuracy of analysis in support of conclusions and findings of significance; and 3) internal consistency of the document. CEQA/NEPA and technical specialists will conduct the review, with a Principal and/or Project Manager serving as the primary CEQA/NEPA reviewer. Our reviews will result in a memorandum providing a determination of compliance, along with any suggested edits or noted deficiencies in the document. Following revisions to the draft technical studies and/or environmental compliance documents, De Novo will review the revised documents to ensure the comments provided in the third-party peer review have been adequately addressed and resolved. The De Novo team will also be available to participate in conference calls or in-person meetings, as necessary, to discuss any issues of concern, approach to analysis, and third-party peer review comments. De Novo Principals, Project Manager, and technical staff, as well as subconsultant team members will be available, as necessary, to provide expert testimony before decision-making bodies, including describing our review and findings, and responding to questions.

EXHIBIT "B"

SCHEDULE OF SERVICES

TIMELINE

Following is a typical schedule for preparation of an EIR, IS/ND or IS/MND, and peer review of applicant-prepared technical studies and third-party peer review of environmental documents. The schedule for preparation of an EIS is similar to the timing of an EIR and preparation of an EA is similar to the timing of an IS/MND. The timing for peer review of applicant-prepared technical studies and third-party peer review of environmental documents can vary depending on the number and complexity of the technical studies and the environmental topical areas addressed in the environmental document.

Typical EIR Schedule	
Project Kick-off	Month 1
Notice of Preparation/Initial Study	Month 1
NOP 30-Day Public Review	Month 2
Prepare Technical Studies	Months 1 – 3
EIR Scoping Meeting	Month 2
De Novo Prepares Administrative Draft EIR	Months 2 – 5
City Review of Administrative Draft EIR	Month 6
De Novo Prepares Second Administrative Draft EIR	Month 7
City Review of Second Administrative Draft EIR	Month 7
De Novo Completes, Publishes, and Circulates Draft EIR	Month 8
EIR 45-Day Public Review Period	Months 8 – 9
Hearing during the Draft EIR Review to Receive Comments	Month 9
De Novo prepares Responses to Comments	Month 10
City Reviews Responses to Comments	Months 10 – 11
De Novo Prepares Administrative Final EIR	Months 11
City Reviews Administrative Final EIR	Month 11
De Novo Completes, Publishes, and Circulates Final EIR	Month 12
Certification Hearings	TBD

Typical IS/ND or IS/MND Schedule	
Project Kick-off	Week 1
De Novo drafts Project Description	Week 1
City Reviews/Approves Project Description	Week 2
Preparation of Technical Studies	Weeks 1 – 8
De Novo Prepares Administrative Draft IS/ND or IS/MND	Weeks 2 – 10
City Reviews Administrative Draft IS/ND or IS/MND	Week 11
De Novo Completes Draft IS/ND or IS/MND	Week 12
City Reviews Check Copy Draft IS/ND or IS/MND	Week 13
De Novo Distributes Public Review IS/ND or IS/MND	Week 14
IS/ND or IS/MND 30-Day Public Review	Weeks 14 – 18
De Novo Prepares Final IS/ND or IS/MND	Week 19
De Novo Prints and Distributes Final IS/ND or IS/MND	Week 20
Hearing	TBD

Typical Technical Study Peer Review Schedule	
De Novo Conducts Peer Review	Completed within 2 – 3 weeks of receipt
De Novo Conducts Review of Revised Technical Studies	Completed within 1 – 2 weeks of receipt

EXHIBIT "C"

COMPENSATION

In the event that this Agreement is renewed pursuant to Section 3.1.2, the rates set forth above may be adjusted each year at the time of renewal described in Exhibit "B" in accordance with the annual average Consumer Price Index of the prior calendar year, All Urban Consumers, Los Angeles-Long Beach-Anaheim up to a maximum percentage of five percent (5%).

De Novo Planning Group

A Land Use Planning, Design, and Environmental Firm

2021-2022 Schedule of Hourly Rates – Standard

Effective January 1, 2021

Below are the billing rates for all De Novo staff levels. Direct costs are limited to charges for document printing and shipping, and we do not mark these charges up.

Staff Level	Hourly Rate
Principal	$175
Principal Planner	$150
Senior Planner	$115
Associate Planner	$105
Assistant Planner	$90
GIS Analyst	$95

City of Aliso Viejo
AGENDA ITEM

DATE: October 7, 2026

TO: Mayor and City Council

FROM: So Kim, Community Development Department

SUBJECT: AMENDMENT TO OBJECTIVE DESIGN STANDARDS MANUAL

Recommended Actions:

1. Find that the amendment to the ODS is exempt from the provisions of the California Environmental Quality Act (CEQA) pursuant to Section 15061(b)(3) of the State CEQA Guidelines; and

2. (Option 1) Adopt a Resolution amending the Objective Design Standards manual to remove Modern Ranch and Modern architectural styles; or

   (Option 2) Adopt a Resolution amending the Objective Design Standards manual to remove Modern Ranch and Modern architectural styles and add the Craftsman architectural style.

Fiscal Impact:

None.

Background:

On June 17, 2026, the City Council adopted Ordinance 2026-254, amending Sections 15.62.010 and 15.62.040 of the Aliso Viejo Municipal Code to establish the Objective Design Standards Manual ("ODS"). During the August 19, 2026 Study Session, the City Council directed staff to prepare an amendment to the ODS to remove the Modern Ranch and Modern architectural styles, and to evaluate the inclusion of the Craftsman architectural style.

Discussion:

Staff prepared draft revisions to Chapter 3 (Architecture) of the ODS in response to the City Council's direction to remove the Modern Ranch and Modern architectural styles and evaluate the inclusion of a Craftsman architectural style. The proposed Craftsman style standards are intended to provide an additional objective architectural option while

maintaining clear, measurable, and objective design requirements suitable for ministerial review.

The proposed Craftsman architectural style is characterized by simple, low-profile building forms, low- to moderate-pitched roofs, wide overhanging eaves with exposed rafter tails, prominent porches, natural building materials, and articulated façades. The standards emphasize the use of wood or wood-like materials, stone and brick accents, earth-toned color palettes, recessed entries, and other architectural details commonly associated with traditional Craftsman design. In addition to the base architectural requirements, the draft standards include a menu of objective design features, such as entry porches, extended window lintels, decorative lighting, gabled dormers, balconies, chimneys, and paired or ribbon windows. Depending on project size, developments would be required to incorporate a specified number of these additional features to ensure architectural consistency while maintaining objective compliance standards.

The proposed amendments would not modify the applicability of the ODS program. Rather, they would update the architectural style options available to qualifying residential projects subject to the ODS. Qualifying residential projects include single-family, duplex, multi-family, and mixed-use developments that include one or more of the following:

- 20% affordable units dedicated to low-income housing on Housing Element sites;
- 10% affordable units dedicated to low-income housing on non-Housing Element sites that qualify for SB 35;
- Renovations affecting 50% or more of the exterior walls or roof.

As a point of reference, none of the development projects currently under review with the City qualify for the ODS program. Regardless of the SB35 eligibility, none of the pending projects meet the 10% or 20% affordability threshold to qualify for the ODS program.

Consistent with City Council direction, the amendments present two options for consideration: (1) remove the Modern Ranch and Modern architectural styles only, or (2) remove the Modern Ranch and Modern architectural styles and add the Craftsman architectural style to the ODS Manual.

Environmental:

The proposed ordinance is exempt from the provisions of the California Environmental Quality Act (CEQA) pursuant to Section 15061(b)(3) of the State CEQA Guidelines, commonly known as the common-sense exemption, because it can be seen with certainty that the amendment will not have a significant effect on the environment. The amendment modifies a design manual, and it does not authorize, approve, or entitle any specific development project, increase development intensity, or permit physical construction activity.

Attachments:

1. Resolution (Option 1)
2. Resolution (Option 2)
3. Original ODS
4. Presentation

RESOLUTION NO. 2026-

AN ORDINANCE OF THE CITY COUNCIL OF THE CITY OF ALISO VIEJO, CALIFORNIA, AMENDING THE OBJECTIVE DESIGN STANDARDS MANUAL TO REMOVE THE MODERN RANCH AND MODERN ARCHITECTURAL STYLES AND DETERMINING THE ACTION TO BE EXEMPT FROM CEQA.

WHEREAS, on June 3, 2026, the City Council held a duly noticed public hearing as prescribed by law and introduced an Ordinance 2026-254, amending Sections 15.62.010 and 15.62.040 of the Aliso Viejo Municipal Code to establish the Objective Design Standards Manual ("ODS");

WHEREAS, on June 17, 2026, the City Council held a duly noticed public hearing as prescribed by law, conducted second reading, and adopted Ordinance 2026-254;

WHEREAS, on August 19, 2026, the City Council held a duly noticed study session and directed Staff to prepare an amendment to the ODS to remove the Modern Ranch and Modern architectural styles and to evaluate the inclusion of the Craftsman architectural style;

WHEREAS, Section 15.62.040 of the Aliso Viejo Municipal Code provides that future amendments to the Objective Design Standards Manual may be adopted by City Council resolution;

WHEREAS, on October 7, 2026, the City Council conducted a duly noticed public hearing to consider amendments to the Objective Design Standards Manual removing the Modern Ranch and Modern architectural styles;

WHEREAS, the City Council finds that removing these architectural styles will better implement the community's design objectives and maintain consistency with the established character of residential development in the City; and

WHEREAS, all legal prerequisites to the adoption of this Resolution have occurred.

NOW, THEREFORE, the City Council of the City of Aliso Viejo does resolves as follows:

SECTION 1. Incorporation of Recitals. The recitals above are each incorporated by reference and adopted as findings by the City Council.

SECTION 2. CEQA. The City Council finds that amendment to the ODS is not subject to CEQA pursuant to Section 15061(b)(3) of the CEQA Guidelines, commonly known as the common-sense exemption, because it can be seen with certainty that the amendment will not have a significant effect on the environment. The amendment simply removes the Modern Ranch and Modern architectural styles from the ODS; it does not authorize, approve, or entitle any specific development project, increase development intensity, or permit physical construction activity. Therefore, the City Council finds that the

amendment has no potential to result in a direct or reasonably indirect physical change to the environment and, therefore, is not subject to CEQA pursuant to State CEQA Guidelines Section 15061(b)(3).

SECTION 3. Approval of Amendment. The City Council hereby approves amendments to the ODS, attached as Exhibit A, to remove Modern Ranch and Modern architectural styles and make any corresponding administrative edits necessary to maintain consistency within the manual.

SECTION 4. Custodian of Records. The custodian of records for this Resolution is the City Clerk and the records comprising the administrative record are located at 12 Journey, Suite 100, Aliso Viejo, CA 92656.

PASSED, APPROVED AND ADOPTED this 7th day of October, 2026.

OBJECTIVE DESIGN STANDARDS MANUAL

RESOLUTION NO. 2026-

AN ORDINANCE OF THE CITY COUNCIL OF THE CITY OF ALISO VIEJO, CALIFORNIA, AMENDING THE OBJECTIVE DESIGN STANDARDS MANUAL TO REMOVE THE MODERN RANCH AND MODERN ARCHITECTURAL STYLES, ADD CRAFTSMAN ARCHITECTURAL STYLE, AND DETERMINING THE ACTION TO BE EXEMPT FROM CEQA.

WHEREAS, on June 3, 2026, the City Council held a duly noticed public hearing as prescribed by law and introduced an Ordinance 2026-254, amending Sections 15.62.010 and 15.62.040 of the Aliso Viejo Municipal Code to establish the Objective Design Standards Manual ("ODS");

WHEREAS, on June 17, 2026, the City Council held a duly noticed public hearing as prescribed by law, conducted second reading, and adopted Ordinance 2026-254;

WHEREAS, on August 19, 2026, the City Council held a duly noticed study session and directed Staff to prepare an amendment to the ODS to remove the Modern Ranch and Modern architectural styles and to evaluate the inclusion of the Craftsman architectural style;

WHEREAS, Section 15.62.040 of the Aliso Viejo Municipal Code provides that future amendments to the Objective Design Standards Manual may be adopted by City Council resolution;

WHEREAS, on October 7, 2026, the City Council conducted a duly noticed public hearing to consider amendments to the Objective Design Standards Manual removing the Modern Ranch and Modern architectural styles and adding the Craftsman architectural style;

WHEREAS, the City Council finds that removing these architectural styles will better implement the community's design objectives and maintain consistency with the established character of residential development in the City; and

WHEREAS, all legal prerequisites to the adoption of this Resolution have occurred.

NOW, THEREFORE, the City Council of the City of Aliso Viejo does resolves as follows:

SECTION 1. Incorporation of Recitals. The recitals above are each incorporated by reference and adopted as findings by the City Council.

SECTION 2. CEQA. The City Council finds that amendment to the ODS is not subject to CEQA pursuant to Section 15061(b)(3) of the CEQA Guidelines, commonly known as the common-sense exemption, because it can be seen with certainty that the amendment will not have a significant effect on the environment. The amendment simply removes the Modern Ranch and Modern architectural styles and adds the Craftsman architectural style to the ODS; it does not authorize, approve, or entitle any specific

development project, increase development intensity, or permit physical construction activity. Therefore, the City Council finds that the amendment has no potential to result in a direct or reasonably indirect physical change to the environment and, therefore, is not subject to CEQA pursuant to State CEQA Guidelines Section 15061(b)(3).

SECTION 3. Approval of Amendment. The City Council hereby approves amendments to the ODS, attached as Exhibit A, to remove Modern Ranch and Modern architectural styles, add the Craftsman architectural style, and make any corresponding administrative edits necessary to maintain consistency within the manual.

SECTION 4. Custodian of Records. The custodian of records for this Resolution is the City Clerk and the records comprising the administrative record are located at 12 Journey, Suite 100, Aliso Viejo, CA 92656.

PASSED, APPROVED AND ADOPTED this 7th day of October, 2026.

Chapter 1
INTRODUCTION

1.1 Introduction

1.2 Applicability

1.1 Introduction

Development and design standards regulate development intensity, style, size, and orientation. Objective design standards (ODS) are measurable, verifiable, and quantifiable, supporting consistent housing design in the community. Ultimately, the standards contained in this document will provide for a predictable and equitable path for new housing in the City of Aliso Viejo.

This document provides clear and useful standards for the design of residential development in Aliso Viejo. These standards are written as minimum design standards for site and structure design but also offer various recommendations and guidelines for quality and character. Proposed projects must comply with all applicable building permit requirements, zoning code requirements, and other development standards found in the City of Aliso Viejo's Development Code (AVMC).

1.2 State Requirements

Senate Bill 330 (SB 330) established the Housing Crisis Act of 2019 (HCA) to increase residential unit development; protect existing housing inventory; and expedite permit processing. In addition, SB 35 requires local entities to streamline the approval by providing a ministerial process through which a project is only reviewed against objective standards.

For the purposes of SB 330 and SB 35, an eligible "housing development project" must be a multifamily or mixed-use project (with at least 2/3rd of the square footage being for residential uses).

Under these laws, cities and counties are prohibited from denying a housing development project or reducing its density based on a subjective design standard. A project can only be reviewed against "objective, quantifiable, written development standards, conditions and policies," and can only be denied if certain findings described in Gov. Code §65589.5(j) are met.

1.3 Applicability

Refer to Section 15.62.040 of the AVMC for applicability provisions and the list of project types that are required to be reviewed through these Objective Design Standards.

These standards do not apply to minor renovations (i.e. when less than 50 percent of the exterior walls or roof are demolished as part of the renovation) and routine maintenance of residential (single-family, multi-family, and mixed use) developments, even if such projects are qualifying SB 35 projects.

For SB 35 developments including, spanning or creating multiple lots, these standards apply to all lots proposed for multi-family housing, mixed-use developments, and any associated amenities, open space, or utilities that would serve multi-family or mixed-use units.

These standards are in addition to the standards of the underlying base zone. In the event of conflicting standards between these standards and the base zone, the more restrictive standard shall apply. For projects located in a Specific Plan, and if there is a conflict between the City's ODS and the Specific Plan's objective standards, the Specific Plan's objective standards shall prevail. Proposed projects must also comply with all other applicable local and state ordinances and codes.

1.4 Document Organization

These objective design standards serve as a stand-alone illustrated document, empowered by appropriate reference within the City's Development Code.

The standards contained in this document are split into three chapters. Chapter 2 consists of site planning standards, including those pertaining to access and circulation, streets, off-street parking, screening of equipment and facilities, outdoor lighting, pedestrian circulation, parks and open space, and trash enclosures.

Chapter 3 includes architectural standards, and includes a menu of architectural styles new residential development in Aliso Viejo shall adhere to. Standards pertaining to building elevations, roofs, materials, doors, windows, and garages are also included in this chapter.

Finally, Chapter 4 includes additional standards for large-scale residential, which is defined as residential developments at 25 or more units per acre.

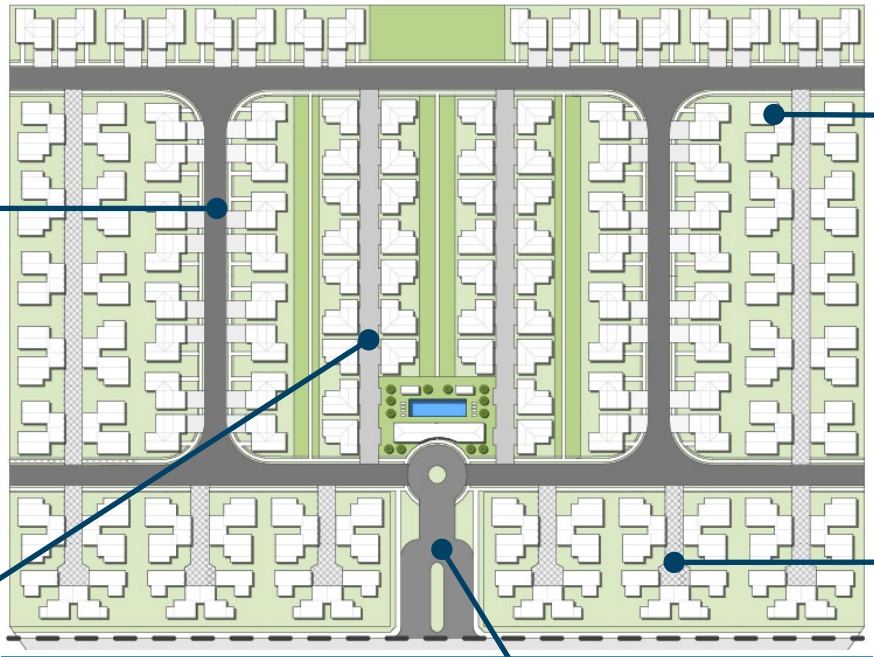
Chapter 2
SITE PLANNING

2.1 Access and Circulation
2.2 Streets
2.3 Off Street Parking Bays
2.4 Screening of Equipment and Facilities
2.5 Outdoor Lighting
2.6 Pedestrian Circulation
2.7 Bikeways and Equestrian Trails
2.8 Parks and Open Space
2.9 Trash Enclosures

2.1 Access and Circulation

1. **Connections to Existing Network.** Where an existing public or private street terminates at the project boundary, the project shall align any connecting internal street or pedestrian pathway within 15 degrees of the existing alignment unless prevented by topography, easements, or existing utilities
2. **Entries.**
   a. **Project Identification.** Identification signs shall be provided for all residential projects. Such signs shall conform to the limitations on size, height, and placement set out in Chapter 15.34 AVMC.
   b. **Entry Location.** Project entries shall not be located closer than 100 feet from an intersection/ curb return. If the parcel frontage is less than 100 feet from curb return the curb cut shall be located as far from the curb return as possible. A curb return is the point where the radius of a curve or intersection ends.
   c. **Entry Design.** Entry landscape treatment shall be in accordance with the landscape standards of AVMC 15.62.060.
   d. **Gated Entries.** Gate-guarded entries shall be regulated in accordance with city regulations governing gate-guarded neighborhoods as set out in AVMC 15.14.200.
3. **Transit.** Projects with a bus or transit stop along its frontage shall incorporate turnouts according to the standards of the applicable transit agency or school district.

2.2 Streets



Residential developments shall feature a circulation system with a clear hierarchy of streets, either public or private, that allows for efficient ingress and egress of vehicles, safe and convenient pedestrian connections throughout the development, and other associated infrastructure. An exhibit demonstrating that all portions of a project's roadway system adheres to one of the following street types shall be included. Street types shall not be combined with another street type. Public streets contained in a residential development shall adhere to AVMC 14.10.060. Private streets shall adhere to AVMC 14.10.040 and the design standards contained in this document.

Residential drives are the primary street typology for residential neighborhoods, connecting various dwelling units with other portions of the community through features such as front doors, pedestrian walkways, and landscaping.

Residential alleys provide dedicated vehicle access to the garages of individual residential units. Residential alleys are the least pedestrian-oriented street type.

Neighborhood entries serve as the primary access point(s) to a residential neighborhood, and may feature gates, special landscape treatments, and monumentation.

Residential lanes provide vehicular and pedestrian access to multiple residences in the form of a shared street. This street type features distinct entry paving and landscaping to demarcate the lane's dual functions.

Lane courts provide both vehicular and pedestrian access to multiple residences. Front doors open onto the lane court, which features distinct paving to demarcate the court's dual functions.

A system of pedestrian walkways shall also connect all residential dwellings to the public sidewalk, parking facilties, common open areas, waste and recycling enclosures, and mailboxes, as described in Section 2.6.

Neighborhood Entries

Neighborhood entries serve as the primary access point(s) to a residential neighborhood, and may feature gates, special landscape treatments, and monumentation. Guest and/or new resident parking is also permitted within a Neighborhood Entry.

1. **Neighborhood Entries.** All neighborhood entries shall adhere to the following standards:
   a. Garages for individual units are not permitted to be accessed from neighborhood entries.
   b. A pedestrian walkway at least 4 feet wide is required on at least one side of a neighborhood entry.
   c. A 5-foot wide landscaped area is required along the full length of a neighborhood entry. This landscaped area may be adjacent to the required pedestrian walkway.

Residential Drives

Residential drives are the primary street typology for residential neighborhoods, connecting various dwelling units with other portions of the community through features such as front doors, pedestrian walkways, and landscaping. Parallel parking is permitted on residential drives.

2. **Residential Drives.** All residential drives shall adhere to the following standards:
   a. A pedestrian walkway at least 4 feet wide is required on at least one side of a residential drive.
   b. In addition to the pedestrian walkway, a 5-foot wide landscaped area is required on both sides of a Rresidential drive. Street trees shall be installed within this landscaped area.
   c. Only residential units that feature both their primary unit entries and garages on same elevation/façade may provide direct vehicular access onto a residential drive.

Residential Alleys

Residential alleys provide dedicated vehicle access to the garages of individual residential units. They are the least pedestrian-oriented street type.

3. **Residential Alleys.** All residential alleys shall adhere to the following standards:
   a. Pedestrian walkways are not required along residential alleys.
   b. Primary dwelling entries (aka front doors) are prohibited along residential alleys, but may be provided along another elevation, such as an adjacent residential drive.
   c. The garage of a unit adjacent to a residential alley shall be accessed from the residential alley.

Residential Lanes

Residential lanes provide both vehicular and pedestrian access to multiple residences in the form of a shared street. This street type features distinct entry paving and landscaping to demarcate the lane's dual use as a pedestrian and vehicular space.

4. **Residential Lanes.** All residential lanes shall adhere to the following standards:
   a. Residential lanes shall be at least 30 feet wide, as measured from garage-to-garage.
   b. Patterned/colored pavers, brick, colored concrete, or stamped concrete that differ from adjacent paving shall be provided at the first 10 feet of each entrance to the residential lane.
   c. At least 5% of the area of a residential lanes shall be landscaped.
   d. At least 2 trees shall be planted at each entry to a residential lane.
   e. A maximum of 32 dwelling units may feature vehicular access from a single residential lane.

Lane Courts

Lane courts provide both vehicular and pedestrian access to multiple residences, and feature a single vehicular access point. Front doors open onto the lane court, which features distinct paving to demarcate the court's dual use as a pedestrian and vehicular space.

5. **Lane Courts.** All lane courts shall adhere to the following standards:
   a. Lane courts shall be at least 30 feet wide, as measured garage-to-garage.
   b. The entire length of a lane court colored/ patterned with pavers, concrete, stamped asphalt, or brick.
   c. At least 5% of the area of a lane court shall be landscaped.
   d. At least 2 trees shall be planted at the vehicular entry to a lane court.
   e. A maximum of 10 dwelling units may feature vehicular access from a single lane court.

2.3 Off Street Parking Bays

Off-street parking shall be provided in accordance with the ratios set out in AVMC 15.38.030.

2.4 Screening of Equipment and Facilities

Screening of equipment and facilities shall conform to the provisions of AVMC 15.62.080.

2.5 Outdoor Lighting

Outdoor lighting shall conform to the provisions of AVMC 15.62.070.

2.6 Pedestrian Circulation

In addition to the street types described in Section B, Streets, a system of pedestrian walkways shall connect all residential dwelling units to the public sidewalk, parking facilities, common open areas, waste and recycling enclosures, mailboxes, and other such features provided in the development. This system shall adhere to the following standards:

1. **Connectivity.** Pedestrian walkways shall not terminate at streets, but shall either:
   a. Merge with a sidewalk running parallel with the street.
   b. Traverse the street via crosswalks demarcated with paint or decorative paving, provided that this crosswalk connects to:
      i. A sidewalk on the other side of the street
      ii. Another pedestrian walkway
      iii. Common open area
      iv. Recreational amenities
2. **Paving.** Pedestrian walkways shall be paved.
3. **Width.** Pedestrian walkways shall be at least 4 feet wide.

2.7 Bikeways and Equestrian Trails

Bikeways and equestrian/hiking trails shall be provided in conjunction with each residential development in accordance with the City's General Plan, Development Code, and other applicable plans and ordinances.

2.8 Parks and Open Space

1. **Landscaping.** Landscape treatments shall be in accordance with the landscape standards of AVMC 15.62.060.
2. **Common open area.** In addition to public parkland contributions, residential projects shall provide usable common open area pursuant to AVMC 15.10.030.
   a. Location. All residential units shall be within 300 feet of a common open area.
   b. Setbacks. Common open areas shall be separated from arterial streets, service areas, and nonresidential uses by at least 10 feet. This 10-foot separation shall not be utilized in calculating open space.

2.9 Trash Enclosures

Residential trash enclosures shall conform to the same provisions as nonresidential enclosures set forth in AVMC 15.62.080 and shall accommodate the storage of trash, recycling, and organic waste containers.

Residential trash storage for single-family and duplexes shall not encroach into the unobstructed vehicular space required in Section AVMC 15.38.030. If stored in a garage, space for trash, recycling, and organic waste containers shall be at least 3 feet deep. This space may be located beside or behind the required unobstructed vehicular space.

Chapter 3
ARCHITECTURE

3.1 Color and Style
3.2 Architectural Styles
3.3 Building Elevations
3.4 Roofs
3.5 Materials
3.6 Doors, Windows, and Trim
3.7 Garages and Carports
3.8 Accessory Elements

3.1 Color and Style

Residential developments shall provide multiple colors schemes as they increase in scale.

If multiple color schemes are provided, a single color scheme shall be dedicated to no less than 30 percent of all residential buildings.

1. Residential developments with 25 to 50 single-family/duplex units, or 6 to 10 multifamily buildings shall provide a minimum of two distinct color schemes.
2. Residential developments with 51 to 100 single-family/duplex units, or 11 to 20 multifamily buildings shall provide at least two of the architectural styles in this section, each with at least one distinct color scheme.
3. Residential developments with 101 or more single-family/duplex units, or 21 or more multifamily buildings shall provide at least three of the architectural styles in this section, each with at least one distinct color scheme.

If multiple housing typologies (e.g. single-family units and townhomes) are proposed within a single development, the required number of styles for each typology may differ depending on the overall number of units or buildings provided in each typology.

3.2 Architectural Styles

All new residential developments shall adhere to one of the architectural styles contained in this section. All proposed design elements that define the chosen architectural style shall also meet the other standards contained in this document.

Architectural design elements and materials shall be consistent throughout the project, recognizing that a building is three dimensional and must feature architectural detailing on all sides. To provide guidance on architectural styles, the standards offer a menu of architectural traditions:

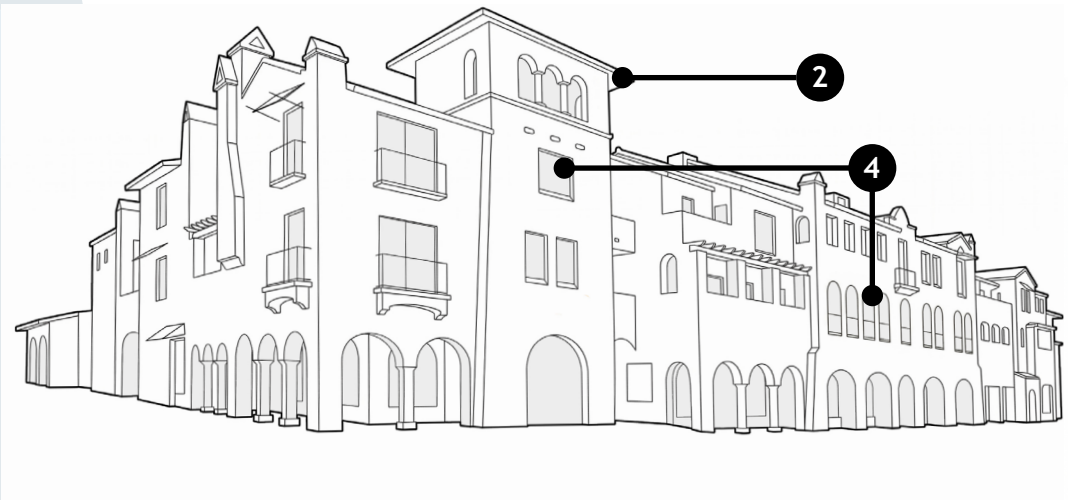
- Spanish Revival
- Tuscan
- Modern Ranch
- Modern

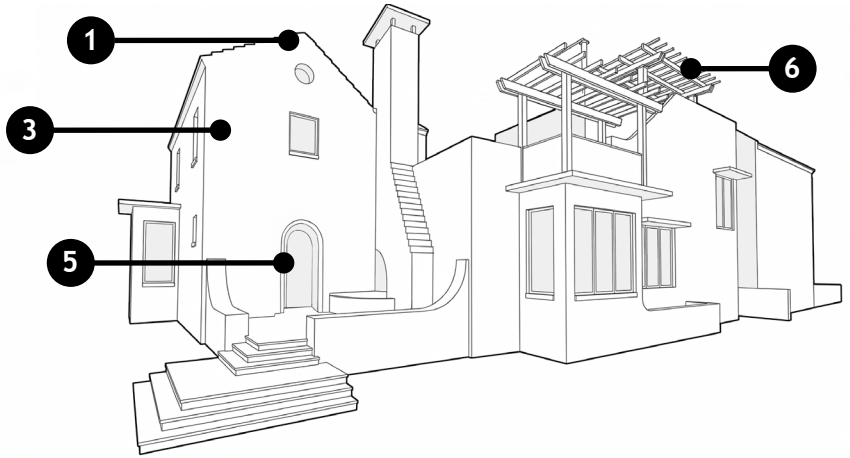
Each style contains a list of required architectural characteristics pertaining to roofs, walls, doors, and windows. In addition, all styles contain a menu of options that shall be included to provide architectural detailing to the building.

Styles may not be mixed within a single building.

A. Spanish Revival

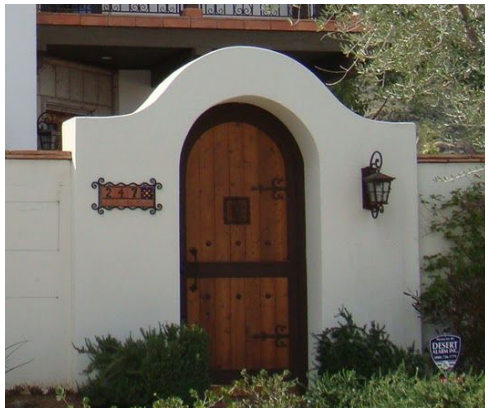
Spanish Revival style, also known as Spanish Colonial, Mission, or Monterey, is characterized by picturesque combinations of simple rectilinear forms of varying heights. The buildings are capped with gabled or hipped roofs of red clay barrel tiles with little or no eave overhang. Courtyards and well-detailed structural elements, such as pergolas, trellises or loggias and arcades often provide another layer to the massing. Elements such as balconies, towers, chimneys and other tile, wood, or wrought iron details add accents. Asymmetrical facades are common with arches over windows and doorways.





All Spanish Revival style residential buildings shall adhere to the following standards:

1. Low pitched (4:12 maximum) gable roofs. The pitch shall remain constant. Roofs shall be clay tile or concrete/cement tile roofs. Common tile shapes include both Spanish (S-shaped) and Mission (half-cylinder) types. Additional forms are permitted as follows:
   a. Hipped roofs may be used in combination with gables or on a tower element,
   b. Shed roofs may used in conjunction with verandas and minor "lean-to" structures,
   c. Flat roofs with parapets shall not exceed 40% of the total roof area;
2. At least 25% of the eaves shall have a minimum overhang of 9 inches with exposed rafter tails;
3. Primary facades shall be off-white, cream, or tan stucco with a smooth or lightly textured finish (i.e. minimum 16/20 finish, hand troweled or smaller particles). Window and doors shall be in a dark, contrasting color (such as black, navy blue, or forest green);
4. At least two types/shapes of windows shall be used. At least 50% of the windows shall have a vertical proportion. Windows over 5 feet in width shall be multi-paned;
5. All entrance doors shall be recessed at least 6 inches and banded with ceramic tile, molded plaster or painted accents; and
6. Wood or manufactured wood products shall be for at least one architectural element (such as posts and exposed beams; spindles and grill work; window frames, shutters, etc.).



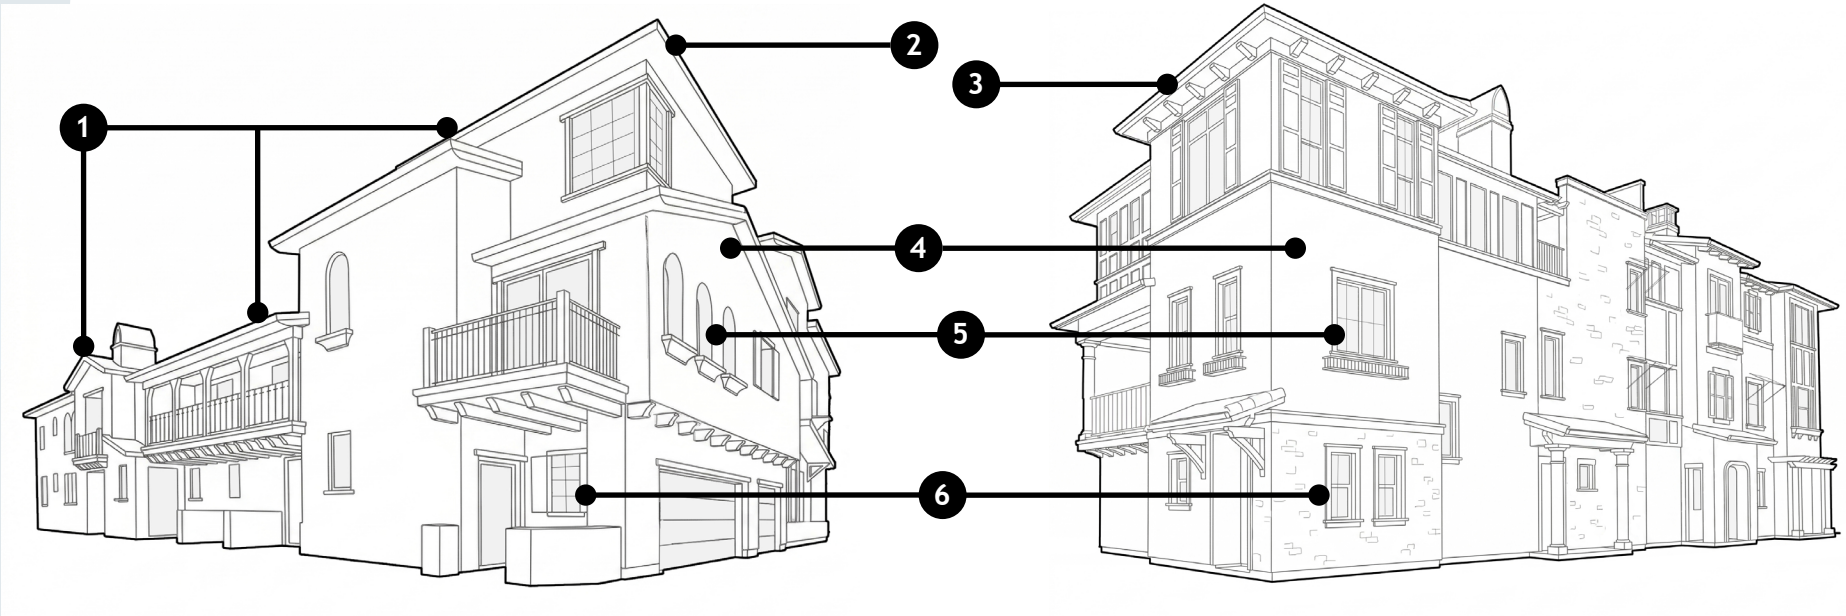
In addition, duplexes and detached single-family Spanish Revival buildings shall include at least two of the following features; buildings with 10 units or less shall feature at least three of the following features, and buildings with 11 or more units shall include at least four of the following features:

1. Use a minimum 3-inch wide by 1.5-inch thick flat casing on all non-recessed windows;
2. Provide verandas for at least 50 percent the total units in the building, each with a minimum depth of 6 feet and a minimum width of 10 feet;
3. Install awnings with metal spear supports at least 1 inch in diameter and spaced no more than 4 feet apart for at least 20% the total window count;
4. Provide shutters for at least 20% of the total window count;
5. Construct chimneys extending at least 2 feet above the roof ridge, featuring either a decorative cap, tile surrounding, or overhanging roof element;
6. Include a minimum of two decorative masonry, clay tile, or simulated vents per elevation, each at least 144 square inches in size;
7. Apply decorative tile accents covering at least 5% of the surface area around door and window openings, built-in seating, paving, or stairs;
8. Feature exposed, dark-stained timber structural elements such as beams, columns, and corbels with a minimum width of 4 inches.

9. Integrate one or more arched elements measuring at least 5 feet wide and 8 feet tall;
10. Utilize paired wood (or wood simulated) garage doors with at least two pieces of 18-inch iron or simulated iron strap hardware per door leaf;
11. Use shutters that match the door or trim accent color and are sized to cover 100% of the window opening width;
12. Design stepped-down ends that are at least 5 feet wide and 10 feet lower than the primary building mass;
13. Maintain three or more roof planes and/or ridge lines with a minimum slope of 3:12;
14. Build upper floor cantilevered balconies that project a minimum of 3 feet from the building face;
15. Define courtyards and walkways using verandas or pergolas with a minimum clear depth of 8 feet that cover at least 25% of the courtyard perimeter;
16. Utilize arcades with a minimum walkway width of 6 feet and arch spans of at least 4 feet to define primary circulation paths or courtyard edges;
17. Construct wingwalls with a minimum thickness of 1 foot or ground-level columns with a minimum diameter of 10 inches; and/or
18. Employ wrought iron for at least one architectural element, such as balcony railings at least 3 feet high, hardware, light fixtures, or gates.

B. Tuscan

Tuscan style is an interpretation of traditional Mediterranean architectural style joined by rural Italian elements. Key elements include the use of stone and stucco, light earth tones, and red tile roofs. Classical elements such as columns and arches and decorative iron work add visual complexity. Squared towers and projections speak to Italianate references. Porches and porticoes are common, as are vertically oriented, recessed windows.



All Tuscan style residential buildings shall adhere to the following standards:

1. Low-pitched hip or gable roof (maximum 6:12 slope) and at least 3 roof levels;
2. Roof material shall be composed of tiles;
3. Large overhanging eaves (minimum 12 inches) along primary elevation;
4. Flat stucco walls in earth tones shall be utilized, with earth toned being defined as a color with a lightness (light reflective) value of 25 to 60 that is composed of a mixture of any shade of brown and any shade of any other color or colors;
5. At least 50% of windows shall be recessed 3 to 9 inches from outer wall on primary façade and shall feature brown or beige trim; and
6. At least one casement window per unit shall be provided on single-family/duplex buildings, and shall be paired with four-pane patterns for narrow windows and eight-pane patterns for wider windows.

In addition, duplexes and detached single-family Tuscan buildings shall include at least two of the following features; buildings with 10 units or less shall feature at least three of the following features, and buildings with 11 or more units shall include at least four of the following features:

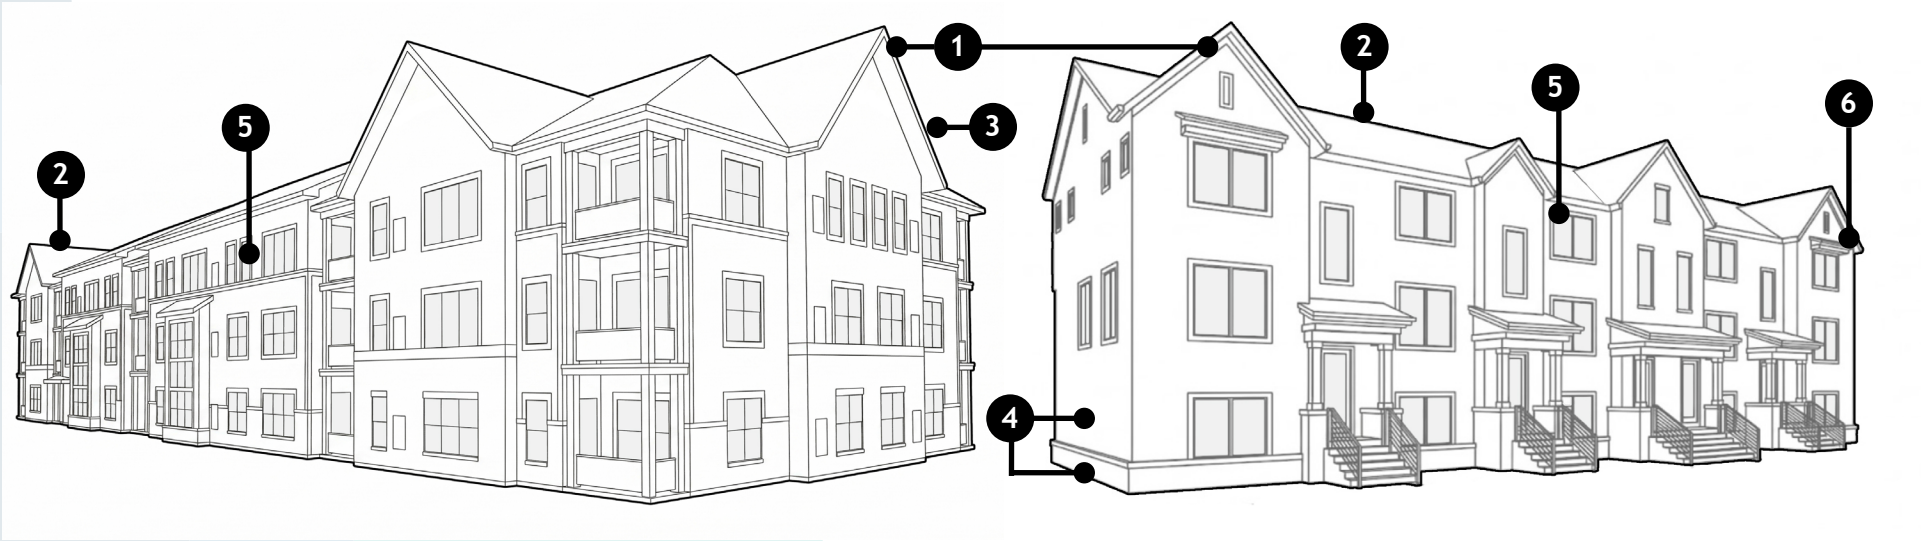
1. Arched wall niches with a minimum depth of 8 inches and a height-to-width ratio of at least 1.5:1 to ensure a vertical proportion;
2. Carved medallions with a minimum diameter of 12 inches and a depth of projection between 1.5 and 3 inches from the wall surface;
3. Ceramic inset tiles of 4x4 or 6x6 inches and recessed so the tile face sits flush with the surrounding stucco or stone finish;
4. Corner quoins: each block must have a minimum vertical height of 12 inches, with lengths alternating between 18 and 24 inches, and forming an interlocking pattern;
5. Decorative clavos, spaced no more than 6 to 8 inches apart on center along the perimeter or panels of wooden doors and shutters;
6. Decorative corbels with a minimum vertical height of 10 inches and a projection (run) that supports at least 60% of the overhanging element's depth;
7. Decorative plaster friezes between 8 and 18 inches in height, located within the top 10% of the wall's total vertical height;
8. Timber lintels with a minimum cross-section of 6x8 inches and extend at least 4 inches beyond the width of the window opening on both sides;

9. Juliet balconies, not more than 1 foot deep;
10. Sconces with a minimum height of 18 inches (excluding the mounting arm).
11. Scrolled window grilles projecting at least 4 to 6 inches from the window pane at their furthest point;
12. Stone window sills at least 3 inches thick and projecting a minimum of 2.5 inches beyond the finished wall surface to create a distinct shadow line;
13. Terracotta chimney pots standing between 18 and 36 inches tall, with a minimum wall thickness of 0.75 inches;
14. Tiered water features with a least two levels of basins, with the primary basin having a minimum diameter of 36 inches;
15. Trellis rafter tails extending at least 12 inches beyond the outermost supporting beam; or
16. Wrought iron finials extending a minimum of 8 to 12 inches above the ridge line or railing cap, with a base diameter of at least 2 inches.

C. Modern Ranch

Modern Ranch style is the synthesis of the California Ranch and the Modern Farmhouse styles. It merges the horizontal emphasis of the 19th-century Western vernacular with the clean lines and verticality of current residential form. This style prioritizes seamless indoor-outdoor connections, utilizing a sophisticated palette and a mixture of rustic and industrial materials.

Modern Ranch shall not be applied to buildings over 3 stories in height, or to any Large-Scale Residential project.



All modern ranch buildings shall adhere to the following standards:

1. Roofs shall be a combination of low-pitched hipped or gable-on-hip forms (3:12 to 5:12 slope) and prominent gabled or shed roof accents (minimum 6:12 slope).
2. Primary roof surfaces shall consist of dark architectural-grade asphalt shingles or synthetic slate. Accent roof planes, such as those over porches or bay windows, must utilize standing-seam metal or copper.
3. Eaves shall be a minimum of 2 feet along the primary elevation. Rafters may be boxed or open with exposed timber tails, emphasizing the horizontal plane.
4. Facades must utilize at least two materials: horizontal clapboard or smooth stucco (sand/dash finish) for the primary body, and board-and-batten siding or corrugated metal covering at least 15% of the exterior surface.
5. Windows shall feature slim-profile frames (steel, aluminum, or wood). At least 50% of the windows must feature a vertical proportion of at least 1.5:1.
6. Facade colors shall be restricted to pastels, grays, or earth tones, being defined as a color with a lightness (light reflective) value of 25 to 60 that is composed of a mixture of any shade of brown and any shade of any other color or colors. Contrasting dark accents (black or charcoal) or white accents are required for window sashes, doors, and architectural metalwork.

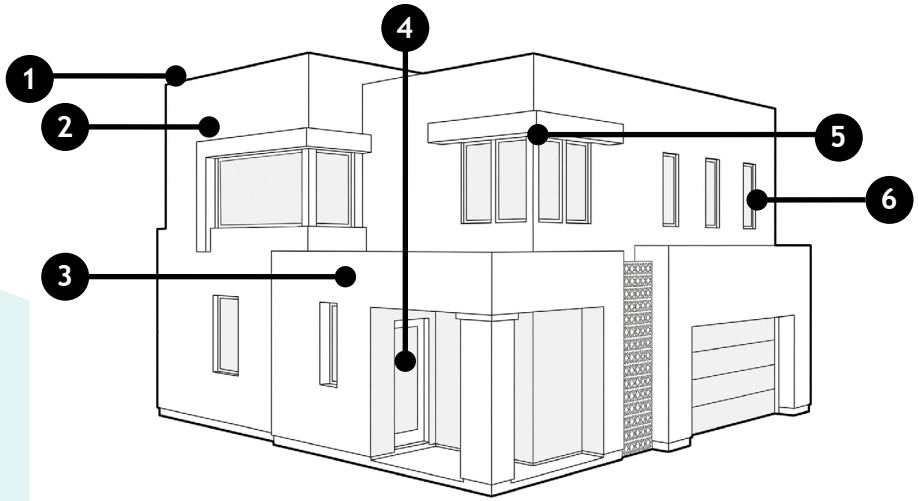
In addition, single-family and duplex modern ranch buildings shall include two of the following features; buildings with up to 10 residential units shall include at least three of the following features; and buildings with 11 or more residential units shall feature at least four of the following features:

1. 3 to 6-inch unadorned board trim around all window and door openings;
2. A wide front porch recessed under the primary roofline, supported by square columns or wrought iron supports;
3. A wide brick or natural stone chimney located on the primary or street-facing façade;
4. Integration of clerestory windows within the upper triangular portion of gable ends;
5. Cantilevered eaves or patio covers extending at least 5 feet from the facade, supported by industrial metal or heavy timber columns;
6. Wall-mounted gooseneck light fixtures used as the primary exterior illumination for entries and garage doors;
7. Garage doors or large entries featuring carriage-style detailing or “Dutch door” split configurations.
8. At least three distinct wall planes across the primary elevation;

9. Metal-clad awnings without side supports installed over ground-level windows;
10. The inclusion of at least one hexagonal, octagonal, or circular “moon” window or gate at the primary entrance;
11. Architectural massing inspired by rural granaries or tank houses (e.g., a vertical tower element for a stairwell);
12. Built-in wood or metal window boxes or balconettes on at least 20% of the street-facing windows;
13. Use of shed or gabled dormers to break up large roof planes;
14. Dark-color wood trellises or heavy timber lintels (minimum 6x8 inches) positioned above ground-floor openings;
15. Application of plank-style, louvered, or framed wood shutters on at least 20% of windows on a publicly visible elevation, finished in a darker accent color;
16. Use of unadorned corrugated metal panels for focal wall sections or as “eyebrow” awnings over secondary entries; or
17. Inclusion of at least one projecting bay window on the front facade, which may utilize a standing-seam metal or copper roof regardless of the primary roof material.

D. Modern

Modern architecture is the post-World War II iteration of the International Style, which was characterized by geometric forms, smooth wall surfaces, and an absence of exterior decoration. Modern architecture represents the adaptation of these elements to the local climate and topography, as well as the postwar need for efficiently-built homes. In Southern California, this often meant the use of wood post-and-beam construction. Modernism is often characterized by a clear expression of structure and materials, large expanses of glass, and open interior plans.



All modern buildings shall adhere to the following standards:

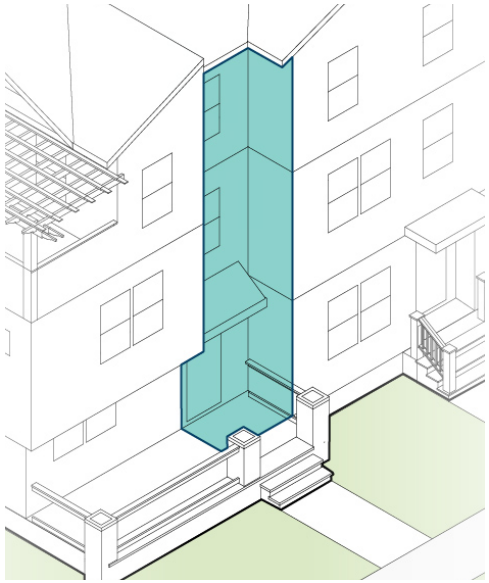
1. Flat, low pitched, folded plate, or butterfly roofs shall be utilized (4:12 slope max). Tile roofs are prohibited.
   a. Flat-roofed buildings shall incorporate a decorative molding (minimum 6-inch height for single-story, 12-inch for multi-story) that projects from the wall plane.
   b. Minimum 12-inch overhangs are required for at least 50 percent of the roofline.
2. The primary wall materials shall be either glass, concrete block veneer, natural stone, metal panels or wood. At least 20 percent of the street-facing façade shall be composed of glass/windows.
3. Primary facade colors shall be restricted to off-whites, greys, metallic shades, or earth-tones. Brighter colors with a light reflectance value (LRV) greater than 70 may only be used on recesses and detailing shall be reserved for recesses and architectural detailing. Contrasting accent colors (black or charcoal) are required for window sashes, doors, and architectural metalwork.
4. Primary entrances must be recessed by a minimum of 12 inches to create shadow lines.
5. Windows shall feature metal (steel/aluminum) frames. Frames shall not be white.
6. Windows shall be square or rectangular.

In addition, single-family and duplex modern buildings shall include two of the following features; buildings with up to 10 residential units shall include at least three of the following features; and buildings with 11 or more residential units shall feature at least four of the following features:

1. Aluminum louvers consisting of fixed or operable horizontal slats with an anodized or powder-coated finish;
2. Board and batten siding consisting of vertical boards 8 to 12 inches wide, with 1 to 2-inch wide battens;
3. Breeze block consisting of hollow-core masonry units with geometric apertures, stacked in a continuous plane;
4. Cantilevered upper stories projecting at least 3 feet beyond the ground-floor wall plane, supported without visible vertical columns;
5. Clerestory windows consisting of a horizontal band of glazing positioned located immediately beneath the roofline;
6. Colonnades consisting of at least three columns spaced at regular intervals of 6 to 10 feet, forming a continuous covered exterior walkway;
7. Corner windows consisting of glazing units joined at a 90-degree angle using mitered glass or a minimal-profile mullion less than 3 inches wide;
8. Decorative water feature consisting of a geometric pool or fountain with a minimum surface area of 100 square feet;

9. Exposed post-and-beam construction consisting of a visible structural framework of wood or steel members, articulated as the primary load-bearing system;
10. Floor-to-ceiling glass walls consisting of glazing units extending from the finished floor to the ceiling, utilizing slender frames;
11. Horizontal beveled windows consisting of bands of windows featuring beveled glass or frames, oriented horizontally;
12. Horizontal trellis consisting of a wood or metal framework of horizontal members, providing shade over at least 50 square feet of exterior space;
13. Metal shadowbox frames consisting of recessed window assemblies within a metal frame that projects at least 4 inches from the exterior wall surface;
14. Metal sunshades consisting of fixed horizontal or vertical metal fins mounted over glazing, with a projection depth-to-height ratio of at least 1:2;
15. Natural stone cladding consisting of travertine, marble, or granite applied in large-format slabs or ashlar patterns with a matte or honed finish;
16. Pivot-style front door, utilizing a concealed vertical pivot hinge system instead of side-mounted hinges;
17. Raised podium foundation consisting of a visible slab or masonry plinth that elevates the primary floor plate at least 3 feet above the finished grade;
18. Vertical metal slat awnings consisting of vertical metal slats spaced no more than 4 inches apart, projecting at least 1 foot from the facade.

3.3 Building Elevations

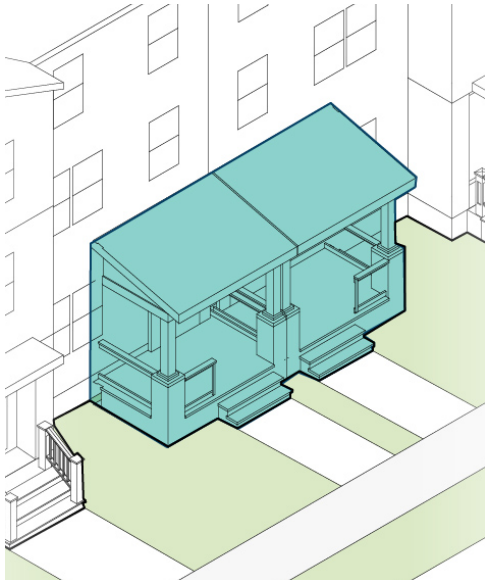


Massing

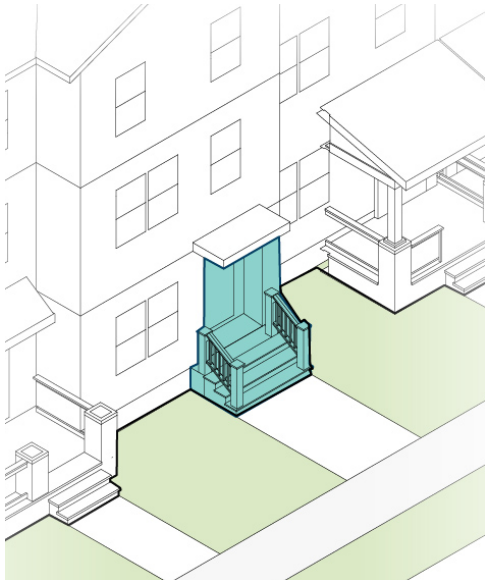
Primary elevations shall incorporate design features such as offsets, balconies, projections, window reveals, or similar elements to preclude large expanses of uninterrupted building. Along the vertical face of a structure, such features shall occur at a minimum of every 35 feet along neighborhood entries and residential drives:

1. Recesses (e.g. patio, forecourt, garage, balcony, etc.) with a minimum depth of 4 feet and a width of 10 feet.
2. Projections (e.g. floor area, bay window, covered entry, etc.) with a minimum depth of 2 feet and a width of 4 feet.
3. Offsets in the facade of 2 feet or greater.

Entrances

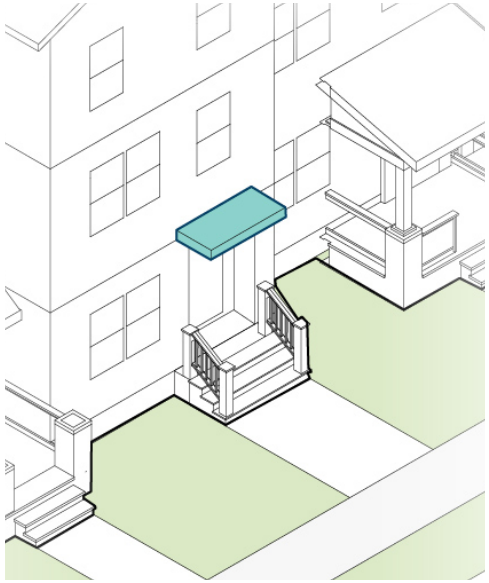


Residential entrances shall take the form of recesses, porches, stoops, overhangs, or forecourts for each primary dwelling unit.

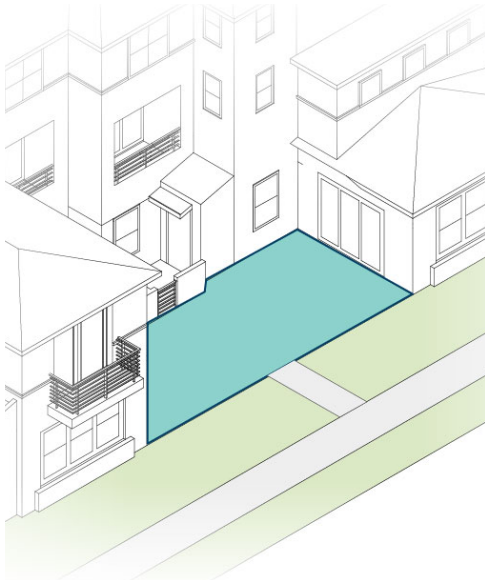


1. **Recesses.** A recess is a portion of a building that is set back from other portions of the elevation. If used to demarcate an entrance, recesses shall adhere to the following standards:
   a. Units. A single entry recess may serve up to two residential units.
   b. Width/Length. An entry recess shall be at least 5 feet wide, or 8 feet wide if used by two units.
   c. Depth. An entry recess shall be at least 3 feet deep.
   d. Height. The recess shall extend from grade to roof.
   e. Finish Level Above Sidewalk. An entryway solely utilizing the recess frontage may be flush with the sidewalk.

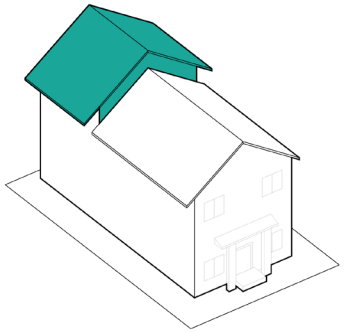
2. **Porches.** A porch is a roofed, unenclosed room attached to the exterior of a building that provides a physical transition between the sidewalk and the building. If provided, porches shall adhere to the following standards:
   a. Units. A single porch may serve no more than two residential units
   b. Width/Length. If provided, porches shall be at least 10 feet wide if serving one unit, or 12 feet wide if serving two units.
   c. Depth. Porches shall be at least 6 feet deep.
   d. Height. The clearance between the floor of the porch and the underside of the roof eave shall be at least 8 feet.



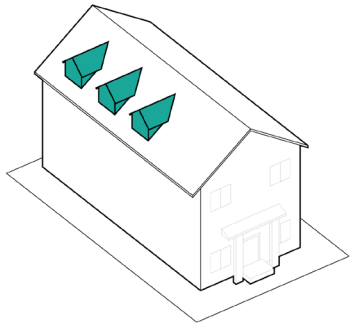
3. **Stoops.** A stoop is a stair and landing leading directly from the sidewalk to a building entrance. The ground floor of the building is typically raised to provide increased privacy for the rooms facing the public street. If provided, stoops shall adhere to the following standards:
   a. Units. An individual stoop may serve up to two residential units.
   b. Width/Length. If provided, stoops shall be at least 3 feet wide.
   c. Depth. Stoops shall be at least 3 feet deep. All stoop entries shall be recessed into the building façade by 1 foot.
   d. Height. An overhang above a stoop shall feature an 8 foot height clearance.

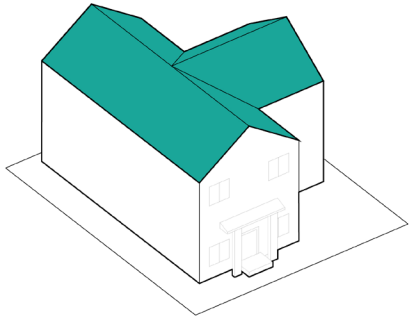


4. **Overhangs.** An overhang is a frontage wherein the building façade features a projection that covers the entrance of a dwelling unit. If provided, overhangs shall adhere to the following standards:
   a. Width/Length. If provided, overhangs shall be at least 5 feet wide.
   b. Depth. Overhangs shall be at least 2 feet deep. If used in conjunction with a stoop, the overhang shall be at least as deep as the stoop.
   c. Height. The clearance between the floor of the entryway and the underside of the overhang shall be at least 8 feet.



5. **Forecourts.** A forecourt is formed when a building is designed around an open space defined by the surrounding building walls. Forecourts may provide additional open space for units, and offer additional spaces for landscaping. If provided, forecourts shall adhere to the following standards:
   a. Width/Length. If provided, forecourts shall be at least 10 feet wide if serving one unit, 12 feet wide if serving two or three units, or 15 feet wide if serving four units.
   b. Depth. Forecourts shall be at least as deep as they are wide.
   c. Stairs. Stairs within a forecourt access units on an upper story.





3.4 Roofs

1. **Roofline Modulation.** Residential buildings two or more stories shall incorporate at least one of the following:
   a. Roofline Variation. Variation in roof height and/or ridgeline as follows:
      i. One story: Not required
      ii. Two stories: 2 feet for every 30 linear feet
      iii. Three stories: 2 feet for every 50 linear feet
      iv. Four+ stories: 3 feet for every 75 linear feet
   b. Pitched Roof Variation. Use of dormers, cross-gable and/or hipped roof lines.
2. **Flat Roofs.** Flat roofs shall not cover more than 50 percent of the building's footprint, and shall feature a screening parapet topped with a coping, cornice at least 3 feet in height.
   a. Modern-style buildings may feature flat roofs that cover 100 percent of its footprint.
3. **Roof-Mounted Equipment.** Roof-mounted equipment (e.g., air conditioning, heating, ventilation, and associated vents and exhausts) on multifamily buildings shall be screened from a horizontal line of sight pursuant to AVMC 15.62.080.
4. **Antennas.** Wireless communications, television, dish, amateur radio, and other antennas shall comply with the provisions of Chapters 15.42 and 15.44 AVMC.

3.5 Materials

1. **Material List.** Residential developments shall adhere to Table 3-1.
2. **Four-Sided Architecture.** All elevations shall contain the same primary materials and trim treatment.
3. **Material Changes.** Changes in material or color shall occur at inside corners of intersecting walls or at architectural features that break up the wall plane, such as columns.

Table 3-1. Material List

LOCATION	PERMITTED MATERIALS
ROOFS	Clay, slate, or concrete roof tiles Composite shingles Standing seam metal
BUILDING WALLS	Stucco Fiber-Cement Siding Brick Stone Metal Ignition-Resistant Wood Ceramic Tile Glass (glazing less than 15%)
FREE STANDING WALLS	Wood Stucco over CMU block Wrought iron Brick

3.6 Doors, Windows, and Trim

1. **Trim.** All windows and exterior doors shall either be recessed from the plane of the surrounding exterior wall or shall have a trim or windowsill.
   a. When trim is used, a minimum of 0.5 inch by 3 inch trim is required, which is of a different color to the primary color of the building.
   b. On stucco walls, when no trim is used, a minimum of 1 inch deep, raised relief around the window is required.
   c. On brick or stone walls, when no trim is used, a minimum 2 inch wide brickmold is required around windows.
2. **Door Elements.** Additional elements required for front doors include:
   a. Doorbells shall be provided within 2 feet of the front door.
   b. Entry doors for individual units shall include a viewport.
3. **Window Elements.** Additional requirements for windows include:
   a. Glass shall be clear without reflective coating or dark tinting. Lightly tinted glazing less than 15% is acceptable.
   b. Openable windows shall include screens.

3.7 Garages and Carports

1. **Recess.** Garage doors shall be set back at least 6 to 18 inches from the rest of the façade.
2. **Treatments.** Garage fixtures and wall treatments shall utilize materials and colors otherwise permitted for the selected architectural style category. Garages shall feature at least two of the following design elements:
   a. Driveway, residential lane, or lane court composed of patterned and/or colored pavers, brick, decorative colored concrete, stamped concrete, or permeable materials.
   b. Roof overhang at least 1 foot in depth.
   c. Windows on the garage door.
   d. Sectional rollup doors.
   e. Trellis at least 2 feet in depth.
   f. Side-loading.
   g. Decorative light fixture, consistent with the chosen architectural style.
3. **Carports.** Carport structures shall utilize the same colors, architectural finishes, and roofing materials as the residential building(s) it serves.

3.8 Accessory Elements

1. **Patios.** If provided as individual dwelling unit open space, private patios shall adhere to the following standards:
   a. Patios shall have a minimum area of 60 square feet with a minimum dimension of 6 feet in each direction.
   b. Patios shall be separated from common or public areas by a fence or wall.
2. **Balconies.** If provided as individual dwelling unit open space, balconies shall adhere to the following standards:
   a. Balconies shall have a minimum area of 50 square feet with a minimum dimension of 5 feet in one direction. This dimension excludes areas for permanent equipment and storage.
   b. Balconies shall be recessed a minimum of 1 foot partially recessed into the building façade. The maximum projection shall be 50 percent of the balcony's full depth or 5 feet, whichever is less.
   c. The underside of projecting balconies shall be finished with building material as the rest of the structure.
   d. No balconies shall overhang into the public right-of-way or sidewalk, not including the portion of the building setback behind the existing lot line.
3. **Roof Decks.** If provided as individual dwelling unit open space, roof decks shall adhere to the following standards:
   a. Roof decks shall have a minimum area of 50 square feet with a minimum dimension of 5 feet in one direction. This dimension excludes areas for permanent equipment and storage.
   b. The sides of the roof deck shall be finished with building material that matches the rest of the building.
   c. Roof decks shall not overhang from the building façade.
4. **Mailboxes.**
   a. Mailboxes shall be located within one block of the residential units.

Chapter 4
LARGE SCALE RESIDENTIAL

4.1 Threshold and Applicability
4.2 Site Planing
4.3 Architecture and Materials
4.4 Landscape and Open Space
4.5 Mixed Use

4.1 Threshold and Applicability

The supplemental standards in this section apply to residential developments with a density of 25 units per acre or more. Typical typologies at this level of density include apartments, built either as a wrap around a parking structure or built atop a parking podium. These types of buildings are much larger than typical residential structures found in Aliso Viejo, which are generally single-family homes, townhomes, duplexes, and smaller-scale apartments up to three stories in height.

The design standards in this section for higher density residential projects are intended to supplement, and are in addition to, the overall design standards of the rest of this document. These standards have been calibrated to address design issues that arise with larger residential or mixed-use buildings.

4.2 Site Planning

1. **Scale.** Larger structures shall utilize major modulations, and may utilize elevated pedestrian walkways to connect different wings of a building that are formed by major modulations to provide ADA-compliant pedestrian access between all residential units and shared amenities of a development. For the purposes of this section, large buildings are defined as structures containing 60 or more residential units.
2. **Corner Elements.** Large multifamily buildings and mixed-use buildings sited on a corner shall provide at least two of the following features:
   a. Tower or dome element at least 5 feet in height
   b. Recess or projection, at least 5 feet in depth, 20 feet in width, and at least as tall as wide
   c. Diagonal/curved walls at corner, at least 25 feet in length
   d. Entrance at corner
   e. Color and material variation from the primary façade with an area of at least 25 feet by 25 feet.
   f. Plaza or gathering area, with at least 1,000 square feet of paving.
3. **Elevated Pedestrian Walkways.** If provided, an elevated pedestrian walkway (or skybridge) connects two different buildings or different wings of the same building, and shall adhere to the followings standards:
   a. Width. The walkway shall have a minimum width of 5 feet and a maximum width of 8 feet.
   b. Height. The minimum height clearance from the ground to an elevated pedestrian walkway shall be 12 feet. The interior vertical clearance for each level of a pedestrian walkway shall be 8 feet.

4.3 Architecture and Materials

1. **Major Modulations.** A major modulation in facade depth, extending from grade to roof, shall be provided along facades greater than 150 feet in length. For such facades, a major modulation shall be provided for each 150 feet of building frontage. Major modulations shall be at least 10 feet deep and 25 feet in length.
2. **Minor Modulations.** A 5-foot change in facade depth no shorter than 15 feet in length and 10 feet in height shall be provided for every 50 feet of building frontage. Required minor modulations may be situated adjacent to, but not within, a major modulation, and shall feature a different depth than the major modulation.
3. **Stepbacks.** As required in Table 15.18.030 of the AVMC, all minimum perimeter setbacks shall be increased one foot for every foot in height above 35 feet (except for setbacks from interior property lines).
4. **Roofline Modulation.** Large buildings shall also utilize at least one of the following techniques to modulate their rooflines, in addition to the standard roofline modulation listed in Section 3.4.
   a. Reduced Floor Area. The uppermost floor features a footprint up to 75 percent the size of the floor below.
   b. Unit Type. Use of loft-style units on the uppermost floor with ceilings at least 5 feet taller than the floor below.
   c. Unit Count. Provide up to 75 percent the number of units on the uppermost floor as compared to the floor below.
5. **Blank Façades.** A blank façade is a portion of a façade without a window, balcony, and/or doorways more than 30 feet in any direction. Features such as trellises, screens, modulations, material changes, and landscaping shall cover at least 50 percent of all blank façades.

4.4 Landscape and Open Space

Landscaping shall be provided in accordance with the provisions of AVMC 15.62.060.

4.5 Mixed Use

1. **Distribution of Uses.**
   a. A minimum of 50 percent of a mixed-use building's commercial or office components shall be located on the ground floor.
   b. Common residential open space shall not be publicly-accessible.
2. **Entrances.**
   a. Entrances to upper floor uses shall be provided through a common entrance fronting a street.
   b. There shall be a ground-floor entrance to either a commercial, residential, open space, or parking use every 50 feet along the building's street-facing frontages.
3. **Building Design.**
   a. Service entries, loading areas, and trash areas associated with commercial uses shall not be immediately adjacent to residential uses.
   b. The windows, doors, and other access points of commercial uses shall be oriented to not face residential uses within 50 feet.
4. **Horizontal Mixed Use.**
   a. Commercial buildings shall face public streets and be sited either adjacent to or in front of the residential component of a horizontal mixed-use development.
   b. Residential uses shall be located at the rear or sides of the site.
   c. Parking for commercial uses shall be located at the center of the site, allowing the parking to provide a buffer from on-site residential uses and maximize shared parking opportunities between residential and commercial uses.
   d. If provided, dedicated private residential parking areas shall be separated from public commercial parking with a dedicated entrance.
   e. The commercial, residential, and open space areas of a horizontal mixed use project shall be connected via internal pathways.

Aliso Viejo

OBJECTIVE DESIGN STANDARD CHECKLIST

General Standards

Design Standards	Applicant		City Use Only	
	Complete	N/A	Complete	N/A
2.1 Access and Circulation				
Connections to Existing Network. Where an existing public or private street terminates at the project boundary, the project shall align any connecting internal street or pedestrian pathway within 15 degrees of the existing alignment unless prevented by topography, easements, or existing utilities	☐	☐	☐	☐
Project Identification. Identification signs shall be provided for all residential projects. Such signs shall conform to the limitations on size, height, and placement set out in Chapter 15.34 AVMC.	☐	☐	☐	☐
Entry Location. Project entries shall not be located closer than 100 feet from an intersection/curb return. If the parcel frontage is less than 100 feet from curb return the curb cut shall be located as far from the curb return as possible. A curb return is the point where the radius of a curve or intersection ends.	☐	☐	☐	☐
Entry Design. Entry landscape treatment shall be in accordance with the landscape standards of AVMC 15.62.060.	☐	☐	☐	☐
Gated Entries. Gate-guarded entries shall be regulated in accordance with city regulations governing gate-guarded neighborhoods as set out in AVMC 15.14.200.	☐	☐	☐	☐
Transit. Projects with a bus or transit stop along its frontage shall incorporate turnouts according to the standards of the applicable transit agency or school district.	☐	☐	☐	☐
Residential complex developments 81 or more single-family/duplex units, or 21 or more multifamily buildings shall shall provide three architectural styles from Chapter 4, each with at least three distinct color schemes.	☐	☐	☐	☐
2.2 Streets				
An exhibit showcasing the street types provided in a residential development shall be provided as part of the project's Planning Application. Samples are included at the end of this checklist.	☐	☐	☐	☐
Public streets contained in a residential development shall adhere to AVMC 14.10.060.	☐	☐	☐	☐
Private streets shall adhere to AVMC 14.10.040 and the design standards contained in this document.	☐	☐	☐	☐
Neighborhood Entries. All neighborhood entries shall adhere to the following standards:				
Garages for individual units are not permitted to be accessed from neighborhood entries.	☐	☐	☐	☐
A pedestrian walkway at least 4 feet wide is required on at least one side of a neighborhood entry.	☐	☐	☐	☐
A 5-foot wide landscaped area is required along the full length of a neighborhood entry. This landscaped area may be adjacent to the required pedestrian walkway.	☐	☐	☐	☐
Residential Drives. All residential drives shall adhere to the following standards:				
A pedestrian walkway at least 4 feet wide is required on at least one side of a residential drive.	☐	☐	☐	☐
In addition to the pedestrian walkway, a 5-foot wide landscaped area is required on both sides of a Rresidential drive. Street trees shall be installed within this landscaped area.	☐	☐	☐	☐
Only residential units that feature both their primary unit entries and garages on same elevation/façade may provide direct vehicular access onto a residential drive.	☐	☐	☐	☐

General Standards

Design Standards	Applicant		City Use Only	
	Complete	N/A	Complete	N/A
Residential Alleys. All residential alleys shall adhere to the following standards:				
Pedestrian walkways are not required along residential alleys.	☐	☐	☐	☐
Primary dwelling entries (aka front doors) are prohibited along residential alleys, but may be provided along another elevation, such as an adjacent residential drive.	☐	☐	☐	☐
The garage of a unit adjacent to a residential alley shall be accessed from the residential alley.	☐	☐	☐	☐
Residential Lanes. All residential lanes shall adhere to the following standards:				
Residential lanes shall be at least 30 feet wide, as measured from garage-to-garage.	☐	☐	☐	☐
Patterned/colored pavers, brick, colored concrete, or stamped concrete that differ from adjacent paving shall be provided at the first 10 feet of each entrance to the residential lane.	☐	☐	☐	☐
At least 5% of the area of a residential lanes shall be landscaped.	☐	☐	☐	☐
At least 2 trees shall be planted at each entry to a residential lane.	☐	☐	☐	☐
A maximum of 32 dwelling units may feature vehicular access from a single residential lane.	☐	☐	☐	☐
Lane Courts. All lane courts shall adhere to the following standards:				
Lane courts shall be at least 30 feet wide, as measured garage-to-garage.	☐	☐	☐	☐
The entire length of a lane court colored/patterned with pavers, concrete, stamped asphalt, or brick.	☐	☐	☐	☐
At least 5% of the area of a lane court shall be landscaped.	☐	☐	☐	☐
At least 2 trees shall be planted at the vehicular entry to a lane court.	☐	☐	☐	☐
A maximum of 10 dwelling units may feature vehicular access from a single lane court.	☐	☐	☐	☐
2.3 Off-Street Parking Bays - Off-street parking shall be provided in accordance with the ratios set out in AVMC 15.38.030.				
2.4 Screening of Equipment and Facilities - Screening of equipment and facilities shall conform to the provisions of AVMC 15.62.080.				
2.5 Outdoor Lighting - Outdoor lighting shall conform to the provisions of AVMC 15.62.070.				

General Standards

Design Standards	Applicant		City Use Only	
	Complete	N/A	Complete	N/A
2.6 Pedestrian Circulation				
In addition to the street types described in Section B, Streets, a system of pedestrian walkways shall connect all residential dwelling units to the public sidewalk, parking facilities, common open areas, waste and recycling enclosures, mailboxes, and other such features provided in the development.	☐	☐	☐	☐
Connectivity. Pedestrian walkways shall not terminate at streets, but shall either: **Merge** with a sidewalk running parallel with the street or **Traverse** the street via crosswalks demarcated with paint or decorative paving	☐	☐	☐	☐
Paving. Pedestrian walkways shall be paved.	☐	☐	☐	☐
Width. Pedestrian walkways shall be at least 4 feet wide.	☐	☐	☐	☐
2.7 Bikeways and Equestrian Trails - Bikeways and equestrian/hiking trails shall be provided in conjunction with each residential development in accordance with the City's General Plan, Development Code, and other applicable plans and ordinances.				
2.8 Parks and Open Space				
Landscaping. Landscape treatments shall be in accordance with the landscape standards of AVMC 15.62.060.	☐	☐	☐	☐
Common open area. In addition to public parkland contributions, residential projects shall provide usable common open area pursuant to AVMC 15.10.030.	☐	☐	☐	☐
Location. All residential units shall be within 300 feet of a common open area.	☐	☐	☐	☐
Setbacks. Common open areas shall be separated from arterial streets, service areas, and nonresidential uses by at least 10 feet. This 10-foot separation shall not be utilized in calculating open space.	☐	☐	☐	☐
2.9 Trash Enclosures - Residential trash enclosures shall conform to the same provisions as nonresidential enclosures set forth in AVMC 15.62.080 and shall accommodate the storage of trash, recycling, and organic waste containers. Residential trash storage for single-family and duplexes shall not encroach into the unobstructed vehicular space required in Section AVMC 15.38.030.				
If stored in a garage, space for trash, recycling, and organic waste containers shall be at least 3 feet deep. This space may be located beside or behind the required unobstructed vehicular space.	☐	☐	☐	☐

General Standards

Design Standards	Applicant		City Use Only	
	Complete	N/A	Complete	N/A
3.1 Color and Style				
If multiple color schemes are provided, a single color scheme shall be dedicated to no less than 30 percent of all residential buildings.	☐	☐	☐	☐
Residential developments with 25 to 50 single-family/duplex units, or 6 to 10 multifamily buildings shall provide a minimum of two distinct color schemes.	☐	☐	☐	☐
Residential developments with 51 to 100 single-family/duplex units, or 11 to 20 multifamily buildings shall provide at least two of the architectural styles in this section, each with at least one distinct color scheme.	☐	☐	☐	☐
Residential developments with 101 or more single-family/duplex units, or 21 or more multifamily buildings shall provide at least three of the architectural styles in this section, each with at least one distinct color scheme.	☐	☐	☐	☐
3.2 Architectural Styles				
All new residential developments shall adhere to one of the architectural styles contained in this section	☐	☐	☐	☐
Styles may not be mixed within a single building.	☐	☐	☐	☐
Spanish Revival - All Spanish Revival style residential buildings shall adhere to the following standards:				
Low pitched (4:12 maximum) gable roofs. The pitch shall remain constant. Roofs shall be clay tile or concrete/cement tile roofs. Common tile shapes include both Spanish (S-shaped) and Mission (half-cylinder) types.	☐	☐	☐	☐
Flat roofs with parapets shall not exceed 40% of the total roof area;	☐	☐	☐	☐
At least 25% of the eaves shall have a minimum overhang of 9 inches with exposed rafter tails;	☐	☐	☐	☐
Primary facades shall be off-white, cream, or tan stucco with a smooth or lightly textured finish (i.e. minimum 16/20 finish, hand troweled or smaller particles). Window and doors shall be in a dark, contrasting color (such as black, navy blue, or forest green);	☐	☐	☐	☐
At least two types/shapes of windows shall be used. At least 50% of the windows shall have a vertical proportion. Windows over 5 feet in width shall be multi-paned;	☐	☐	☐	☐
All entrance doors shall be recessed at least 6 inches and banded with ceramic tile, molded plaster or painted accents; and	☐	☐	☐	☐
Wood or manufactured wood products shall be for at least one architectural element (such as posts and exposed beams; spindles and grill work; window frames, shutters, etc.).	☐	☐	☐	☐

General Standards

Design Standards	Applicant		City Use Only	
	Complete	N/A	Complete	N/A
Spanish Revival - Duplexes and detached single-family Spanish Revival buildings shall include at least two of the following features; buildings with 10 units or less shall feature at least three of the following features, and buildings with 11 or more units shall include at least four of the following features:				
Use a minimum 3-inch wide by 1.5-inch thick flat casing on all non-recessed windows;	☐	☐	☐	☐
Provide verandas for at least 50 percent the total units in the building, each with a minimum depth of 6 feet and a minimum width of 10 feet;	☐	☐	☐	☐
Install awnings with metal spear supports at least 1 inch in diameter and spaced no more than 4 feet apart for at least 20% the total window count;	☐	☐	☐	☐
Provide shutters for at least 20% of the total window count;	☐	☐	☐	☐
Construct chimneys extending at least 2 feet above the roof ridge, featuring either a decorative cap, tile surrounding, or overhanging roof element;	☐	☐	☐	☐
Include a minimum of two decorative masonry, clay tile, or simulated vents per elevation, each at least 144 square inches in size;	☐	☐	☐	☐
Apply decorative tile accents covering at least 5% of the surface area around door and window openings, built-in seating, paving, or stairs;	☐	☐	☐	☐
Feature exposed, dark-stained timber structural elements such as beams, columns, and corbels with a minimum width of 4 inches.	☐	☐	☐	☐
Integrate one or more arched elements measuring at least 5 feet wide and 8 feet tall;	☐	☐	☐	☐
Utilize paired wood (or wood simulated) garage doors with at least two pieces of 18-inch iron or simulated iron strap hardware per door leaf;	☐	☐	☐	☐
Use shutters that match the door or trim accent color and cover 100% of the window opening width;	☐	☐	☐	☐
Design stepped-down ends that are at least 5 feet wide and 10 feet lower than the primary building mass;	☐	☐	☐	☐
Maintain three or more roof planes and/or ridge lines with a minimum slope of 3:12;	☐	☐	☐	☐
Build upper floor cantilevered balconies that project a minimum of 3 feet from the building face;	☐	☐	☐	☐
Define courtyards and walkways using verandas or pergolas with a minimum clear depth of 8 feet that cover at least 25% of the courtyard perimeter;	☐	☐	☐	☐
Utilize arcades with a minimum walkway width of 6 feet and arch spans of at least 4 feet to define primary circulation paths or courtyard edges;	☐	☐	☐	☐
Construct wingwalls with a minimum thickness of 1 foot or ground-level columns with a minimum diameter of 10 inches; and/or	☐	☐	☐	☐
Employ wrought iron for at least one architectural element, such as balcony railings at least 3 feet high, hardware, light fixtures, or gates.	☐	☐	☐	☐

General Standards

Design Standards	Applicant		City Use Only	
	Complete	N/A	Complete	N/A
Modern Ranch - All modern ranch buildings shall adhere to the following standards:				
Roofs shall be a combination of low-pitched hipped or gable-on-hip forms (3:12 to 5:12 slope) and prominent gabled or shed roof accents (minimum 6:12 slope).	☐	☐	☐	☐
Primary roof surfaces shall consist of dark architectural-grade asphalt shingles or synthetic slate. Accent roof planes, such as those over porches or bay windows, must utilize standing-seam metal or copper.	☐	☐	☐	☐
Eaves shall be a minimum of 2 feet along the primary elevation. Rafters may be boxed or open with exposed timber tails, emphasizing the horizontal plane.	☐	☐	☐	☐
Facades must utilize at least two materials: horizontal clapboard or smooth stucco (sand/dash finish) for the primary body, and board-and-batten siding or corrugated metal covering at least 15% of the exterior surface.	☐	☐	☐	☐
Windows shall feature slim-profile frames (steel, aluminum, or wood). At least 50% of the windows must feature a vertical proportion of at least 1.5:1.	☐	☐	☐	☐
Facade colors shall be restricted to pastels, grays, or earth tones. Contrasting dark accents (black or charcoal) or white accents are required for window sashes, doors, and architectural metalwork.	☐	☐	☐	☐
Modern Ranch - single-family and duplex modern ranch buildings shall include two of the following features; buildings with up to 10 residential units shall include at least three of the following features; and buildings with 11 or more residential units shall feature at least four of the following features:				
3 to 6-inch unadorned board trim around all window and door openings;	☐	☐	☐	☐
A wide front porch recessed under the primary roofline, supported by square columns or wrought iron supports;	☐	☐	☐	☐
A wide brick or natural stone chimney located on the primary or street-facing façade;	☐	☐	☐	☐
Integration of clerestory windows within the upper triangular portion of gable ends;	☐	☐	☐	☐
Cantilevered eaves or patio covers extending at least 5 feet from the facade, supported by industrial metal or timber columns;	☐	☐	☐	☐
Wall-mounted gooseneck light fixtures used as the primary exterior illumination for entries and garage doors;	☐	☐	☐	☐
Garage doors or large entries featuring carriage-style detailing or "Dutch door" split configurations;	☐	☐	☐	☐
At least three distinct wall planes across the primary elevation;	☐	☐	☐	☐
Metal-clad awnings without side supports installed over ground-level windows;	☐	☐	☐	☐
The inclusion of at least one hexagonal, octagonal, or circular "moon" window or gate at the primary entrance;	☐	☐	☐	☐
Architectural massing inspired by rural granaries or tank houses (e.g., a vertical tower element for a stairwell);	☐	☐	☐	☐
Built-in wood or metal window boxes or balconettes on at least 20% of the street-facing windows;	☐	☐	☐	☐
Use of shed or gabled dormers to break up large roof planes;	☐	☐	☐	☐
Dark-color wood trellises or heavy timber lintels (minimum 6x8 inches) positioned above ground-floor openings;	☐	☐	☐	☐
Application of plank-style, louvered, or framed wood shutters on at least 20% of windows on a publicly visible elevation, finished in a darker accent color;	☐	☐	☐	☐
Use of unadorned corrugated metal panels for focal wall sections or as "eyebrow" awnings over secondary entries; or	☐	☐	☐	☐
Inclusion of at least one projecting bay window on the front facade, which may utilize a standing-seam metal or copper roof regardless of the primary roof material.	☐	☐	☐	☐

General Standards

Design Standards	Applicant		City Use Only	
	Complete	N/A	Complete	N/A
Modern - All modern buildings shall adhere to the following standards:				
Flat, low pitched, folded plate, or butterfly roofs shall be utilized (4:12 slope max). Tile roofs are prohibited.	☐	☐	☐	☐
Flat-roofed buildings shall incorporate a decorative molding (minimum 6-inch height for single-story, 12-inch for multi-story) that projects from the wall plane.	☐	☐	☐	☐
Minimum 12-inch overhangs are required for at least 50 percent of the roofline.	☐	☐	☐	☐
The primary wall materials shall be either glass, concrete block veneer, natural stone, metal panels or wood. At least 20 percent of the street-facing façade shall be composed of glass/windows.	☐	☐	☐	☐
Primary facade colors shall be restricted to off-whites, greys, metallic shades, or earth-tones.	☐	☐	☐	☐
Primary entrances must be recessed by a minimum of 12 inches to create shadow lines.	☐	☐	☐	☐
Windows shall feature metal (steel/aluminum) frames. Frames shall not be white.	☐	☐	☐	☐
Windows shall be square or rectangular.	☐	☐	☐	☐
Modern - single-family and duplex modern buildings shall include two of the following features; buildings with up to 10 residential units shall include at least three of the following features; and buildings with 11 or more residential units shall feature at least four of the following features:				
Aluminum louvers consisting of fixed or operable horizontal slats with an anodized or powder-coated finish;	☐	☐	☐	☐
Board and batten siding consisting of vertical boards 8 to 12 inches wide, with 1 to 2-inch wide battens;	☐	☐	☐	☐
Breeze block consisting of hollow-core masonry units with geometric apertures, stacked in a continuous plane;	☐	☐	☐	☐
Cantilevered upper stories projecting at least 3 feet beyond the ground-floor wall plane, supported without visible vertical columns;	☐	☐	☐	☐
Clerestory windows consisting of a horizontal band of glazing positioned located immediately beneath the roofline;	☐	☐	☐	☐
Colonnades consisting of at least three columns spaced at regular intervals of 6-10 feet;	☐	☐	☐	☐
Corner windows consisting of glazing units joined at a 90-degree angle using mitered glass or mullion less than 3 inches wide;	☐	☐	☐	☐
Decorative water feature consisting of a geometric pool or fountain with a minimum surface area of 100 square feet;	☐	☐	☐	☐
Exposed post-and-beam construction consisting of a visible structural framework of wood or steel members, articulated as the primary load-bearing system;	☐	☐	☐	☐
Floor-to-ceiling glass walls consisting of glazing units extending from the finished floor to the ceiling, utilizing slender frames;	☐	☐	☐	☐
Horizontal beveled windows consisting of bands of windows featuring beveled glass or frames, oriented horizontally;	☐	☐	☐	☐
Horizontal trellis consisting of a wood or metal framework, providing shade over at least 50 square feet of exterior space;	☐	☐	☐	☐
Metal shadowbox frames consisting of recessed window assemblies within a metal frame that projects at least 4 inches;	☐	☐	☐	☐
Metal sunshades consisting of fixed metal fins mounted over glazing, with a projection depth-to-height ratio of at least 1:2;	☐	☐	☐	☐
Pivot-style front door, utilizing a concealed vertical pivot hinge system instead of side-mounted hinges;	☐	☐	☐	☐
Raised podium foundation that elevates the primary floor plate at least 3 feet above the finished grade;	☐	☐	☐	☐
Vertical metal slat awnings consisting spaced no more than 4 inches apart, projecting at least 1 foot from the facade.	☐	☐	☐	☐

3.3 Building Elevations				
Primary elevations shall incorporate design features such as offsets, balconies, projections, window reveals, or similar elements to preclude large expanses of uninterrupted building. Along the vertical face of a structure, such features shall occur at a minimum of every 35 feet along neighborhood entries and residential drives	☐	☐	☐	☐
Residential entrances shall take the form of recesses, porches, stoops, overhangs, or forecourts for each primary dwelling unit.	☐	☐	☐	☐
Recesses				
Units. A single entry recess may serve up to two residential units.	☐	☐	☐	☐
Width/Length. An entry recess shall be at least 5 feet wide, or 8 feet wide if used by two units.	☐	☐	☐	☐
Depth. An entry recess shall be at least 3 feet deep.	☐	☐	☐	☐
Height. The recess shall extend from grade to roof.	☐	☐	☐	☐
Finish Level Above Sidewalk. An entryway solely utilizing the recess frontage may be flush with the sidewalk.	☐	☐	☐	☐
Porches				
Units. A single porch may serve no more than two residential units	☐	☐	☐	☐
Width/Length. Porches shall be at least 10 feet wide if serving one unit, or 12 feet wide if serving two units.	☐	☐	☐	☐
Depth. Porches shall be at least 6 feet deep.	☐	☐	☐	☐
Height. The clearance between the floor of the porch and the underside of the roof eave shall be at least 8 feet.	☐	☐	☐	☐
Stoops				
Units. An individual stoop may serve up to two residential units.	☐	☐	☐	☐
Width/Length. If provided, stoops shall be at least 3 feet wide.	☐	☐	☐	☐
Depth. Stoops shall be at least 3 feet deep. All stoop entries shall be recessed into the building façade by 1 foot.	☐	☐	☐	☐
Height. An overhang above a stoop shall feature an 8 foot height clearance.	☐	☐	☐	☐
Overhangs				
Width/Length. If provided, overhangs shall be at least 5 feet wide.	☐	☐	☐	☐
Depth. Overhangs shall be at least 2 feet deep. If used in conjunction with a stoop, the overhang shall be at least as deep as the stoop.	☐	☐	☐	☐
Height. The clearance between the floor of the entryway and the underside of the overhang shall be at least 8 feet.	☐	☐	☐	☐
Forecourts				
Width/Length. If provided, forecourts shall be at least 10 feet wide if serving one unit, 12 feet wide if serving two or three units, or 15 feet wide if serving four units.	☐	☐	☐	☐
Depth. Forecourts shall be at least as deep as they are wide.	☐	☐	☐	☐
Stairs. Stairs within a forecourt access units on an upper story.	☐	☐	☐	☐

General Standards

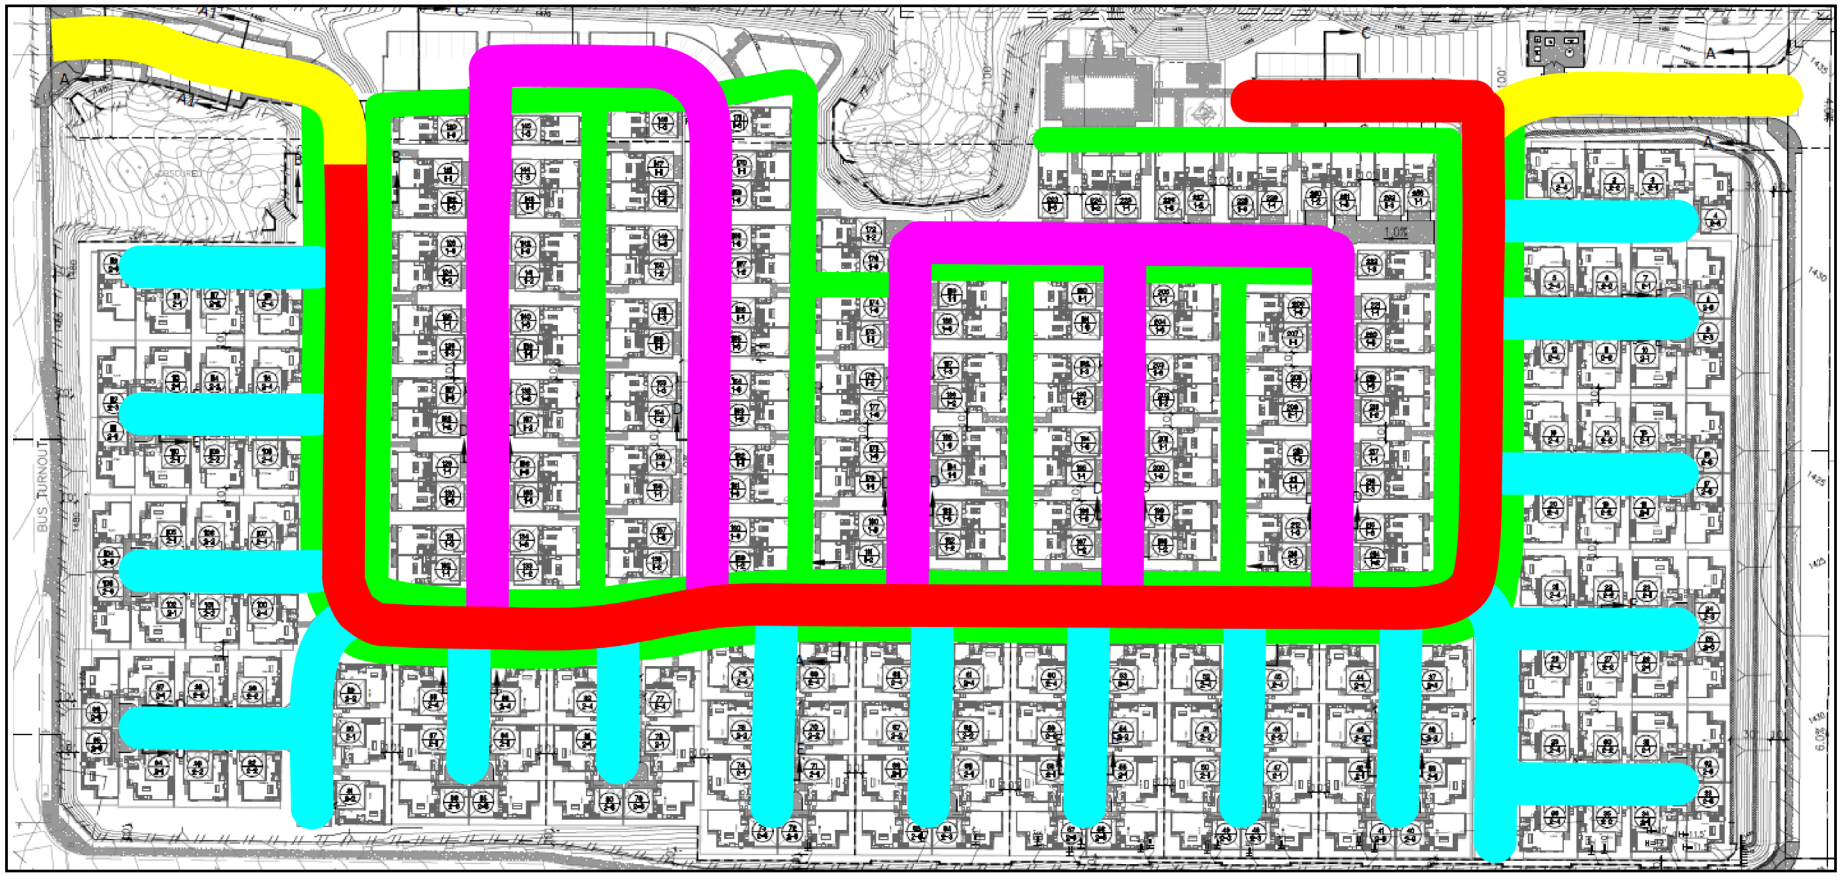
Design Standards	Applicant		City Use Only	
	Complete	N/A	Complete	N/A
3.4 Roofs				
Roofline Modulation. Residential buildings two or more stories shall feature roofline modulation and/or pitched roof variation.	☐	☐	☐	☐
Flat Roofs. Flat roofs shall not cover more than 50 percent of the building's footprint, and shall feature a screening parapet topped with a coping, cornice at least 3 feet in height. (Modern style buildings exempt from requirement)	☐	☐	☐	☐
Roof-Mounted Equipment. Roof-mounted equipment (e.g., air conditioning, heating, ventilation, and associated vents and exhausts) on multifamily buildings shall be screened from a horizontal line of sight pursuant to AVMC 15.62.080.	☐	☐	☐	☐
Antennas. Wireless communications, television, dish, amateur radio, and other antennas shall comply with the provisions of Chapters 15.42 and 15.44 AVMC.	☐	☐	☐	☐
3.5 Materials				
Material List. Residential developments shall adhere to Table 3-1 of the ODS.	☐	☐	☐	☐
Four-Sided Architecture. All elevations shall contain the same primary materials and trim treatment.	☐	☐	☐	☐
Material Changes. Changes in material or color shall occur at inside corners of intersecting walls or at architectural features that break up the wall plane, such as columns.	☐	☐	☐	☐
3.6 Doors, Windows, and Trim				
Trim. All windows and exterior doors shall either be recessed from the plane of the surrounding exterior wall or shall have a trim or windowsill.	☐	☐	☐	☐
When trim is used, a minimum of 0.5 inch by 3 inch trim is required, which is of a different color to the primary color of the building.	☐	☐	☐	☐
On stucco walls, when no trim is used, a minimum of 1 inch deep, raised relief around the window is required.	☐	☐	☐	☐
On brick or stone walls, when no trim is used, a minimum 2 inch wide brickmold is required around windows.	☐	☐	☐	☐
Doorbells shall be provided within 2 feet of the front door.	☐	☐	☐	☐
Entry doors for individual units shall include a viewport.	☐	☐	☐	☐
Glass shall be clear without reflective coating or dark tinting. Lightly tinted glazing less than 15% is acceptable.	☐	☐	☐	☐
Openable windows shall include screens.	☐	☐	☐	☐
3.7 Garages and Carports				
Recess. Garage doors shall be set back at least 6 to 18 inches from the rest of the façade.	☐	☐	☐	☐
Treatments. Garage fixtures and wall treatments shall utilize materials and colors otherwise permitted for the selected architectural style category. Garages shall feature at least two design elements listed in the ODS.	☐	☐	☐	☐
Carports. Carport structures shall utilize the same colors, architectural finishes, and roofing materials as the residential building(s) it serves.	☐	☐	☐	☐

General Standards

Design Standards	Applicant		City Use Only	
	Complete	N/A	Complete	N/A
3.8 Accessory Elements				
Patios shall have a minimum area of 60 square feet with a minimum dimension of 6 feet in each direction.	☐	☐	☐	☐
Patios shall be separated from common or public areas by a fence or wall.	☐	☐	☐	☐
Balconies shall have a minimum area of 50 square feet with a minimum dimension of 5 feet in one direction. This dimension excludes areas for permanent equipment and storage.	☐	☐	☐	☐
Balconies shall be recessed a minimum of 1 foot partially recessed into the building façade. The maximum projection shall be 50 percent of the balcony's full depth or 5 feet, whichever is less.	☐	☐	☐	☐
The underside of projecting balconies shall be finished with building material as the rest of the structure.	☐	☐	☐	☐
No balconies shall overhang into the public right-of-way or sidewalk, not including the portion of the building setback behind the existing lot line.	☐	☐	☐	☐
Roof decks shall have a minimum area of 50 square feet with a minimum dimension of 5 feet in one direction. This dimension excludes areas for permanent equipment and storage.	☐	☐	☐	☐
The sides of the roof deck shall be finished with building material that matches the rest of the building.	☐	☐	☐	☐
Roof decks shall not overhang from the building façade.	☐	☐	☐	☐
Mailboxes shall be located within one block of the residential units.	☐	☐	☐	☐
4.1 Large Scale Residential - The supplemental standards in this section apply to residential developments with a density of 25 units per acre or more.				
4.2 - Site Planning				
Larger (60+ unit) structures shall utilize major modulations, and may utilize elevated pedestrian walkways to connect different wings of a building that are formed by major modulations to provide ADA-compliant pedestrian access between all residential units and shared amenities of a development.	☐	☐	☐	☐
Corner Elements. Large multifamily buildings and mixed-use buildings sited on a corner shall provide at least two decorative features listed in the ODS.	☐	☐	☐	☐
Elevated Walkway Width. The walkway shall have a minimum width of 5 feet and a maximum width of 8 feet.	☐	☐	☐	☐
Elevated Walkway Height. The minimum height clearance from the ground to an elevated pedestrian walkway shall be 12 feet. The interior vertical clearance for each level of a pedestrian walkway shall be 8 feet.	☐	☐	☐	☐

General Standards

Design Standards	Applicant		City Use Only	
	Complete	N/A	Complete	N/A
4.3 Architecture and Materials				
Major Modulations. A major modulation in facade depth, extending from grade to roof, shall be provided along facades greater than 150 feet in length. For such facades, a major modulation shall be provided for each 150 feet of building frontage. Major modulations shall be at least 10 feet deep and 25 feet in length.	☐	☐	☐	☐
Minor Modulations. A 5-foot change in facade depth no shorter than 15 feet in length and 10 feet in height shall be provided for every 50 feet of building frontage.	☐	☐	☐	☐
Stepbacks. As required in Table 15.18.030 of the AVMC, all minimum perimeter setbacks shall be increased one foot for every foot in height above 35 feet (except for setbacks from interior property lines).	☐	☐	☐	☐
Roofline Modulation. Large buildings shall also utilize at least one of the following techniques to modulate their rooflines, in addition to the standard roofline modulation listed in Section 3.4.	☐	☐	☐	☐
Blank Façades. Features such as trellises, screens, modulations, material changes, and landscaping shall cover at least 50 percent of all blank façades	☐	☐	☐	☐
4.4 Landscaping and Open Space - Landscaping shall be provided in accordance with the provisions of AVMC 15.62.060.				
4.5 - Mixed Use				
A minimum of 50 percent of a mixed-use building's commercial or office components shall be located on the ground floor.	☐	☐	☐	☐
Common residential open space shall not be publicly-accessible.	☐	☐	☐	☐
Entrances to upper floor uses shall be provided through a common entrance fronting a street.	☐	☐	☐	☐
There shall be a ground-floor entrance to either a commercial, residential, open space, or parking use every 50 feet along the building's street-facing frontages.	☐	☐	☐	☐
Service entries, loading areas, and trash areas associated with commercial uses shall not be immediately adjacent to residential uses.	☐	☐	☐	☐
The windows, doors, and other access points of commercial uses shall be oriented to not face residential uses within 50 feet.	☐	☐	☐	☐
Commercial buildings shall face public streets and be sited either adjacent to or in front of the residential component of a horizontal mixed-use development.	☐	☐	☐	☐
Residential uses shall be located at the rear or sides of the site.	☐	☐	☐	☐
Parking for commercial uses shall be located at the center of the site, allowing the parking to provide a buffer from on-site residential uses and maximize shared parking opportunities between residential and commercial uses.	☐	☐	☐	☐
If provided, dedicated private residential parking areas shall be separated from public commercial parking with a dedicated entrance.	☐	☐	☐	☐
The commercial, residential, and open space areas of a horizontal mixed use project shall be connected via internal pathways.	☐	☐	☐	☐



STREET TYPOLOGY EXHIBIT EXAMPLE

Residential developments shall feature a circulation system with a clear hierarchy of streets that allows for efficient ingress and egress of vehicles, and safe and convenient pedestrian connections throughout the development. An exhibit demonstrating that all portions of a project's roadway system adheres to one of the following street types shall be included, according to the requirements below:

Residential Entries - YELLOW		Residential Alleys - PURPLE		Lane Courts - CYAN	
Residential Drives - RED		Residential Lanes - BLUE		Pedestrian Walkways - GREEN	

The Street Typology Exhibit shall contain all the information contained in the Proposed Development Site Plan, as described in the City's Planning Application packet, and illustrate the relevant street types as shown in the example below:

ALISO VIEJO

Objective Design Standards

October 7, 2026

Background

City Council adopted ODS in June and at the August Study Session, directed staff to prepare an amendment to:

- Remove Modern Ranch and Modern architectural styles
- Explore Craftsman architectural style

Objective Design Standards apply to all types of residential development that meet one or more of the criteria below:

- 20% affordable to low-income households on Housing Element sites.
- 10% affordable to low-income households on non-Housing Element sites that qualify for SB35.
- Renovations affecting 50% or more of the exterior walls or roof.

Existing Developments

ALISO VIEJO

Existing Developments

ALISO VIEJO

Objective Design Standards

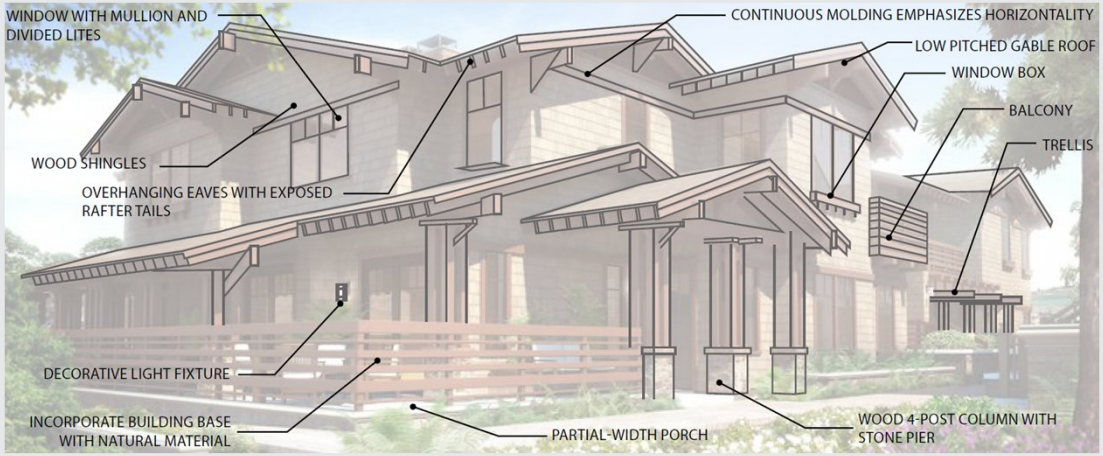
Tuscan

Spanish Revival

ALISO VIEJO

C. Craftsman

Craftsman style is characterized by simple, low-profile forms and an emphasis on natural materials and fine craftsmanship. Buildings typically feature low-pitched gabled roofs with wide overhanging eaves and exposed rafter tails. Prominent front porches supported by columns or piers add depth and visual interest to the massing. Exterior materials often include wood siding, shingles, stone, and brick, with decorative details expressed through exposed structural elements and handcrafted woodwork. Grouped windows and asymmetrical facades are common, creating a balanced yet informal appearance.



All Craftsman style residential buildings shall adhere to the following standards:

1. Low- to moderate-pitched gable and/or hipped roofs (6:12 to 8:12). Brackets or knee braces at gabled ends;
2. Cedar shakes, shingles, or standing-seam metal roofing material;
3. Overhanging eaves (minimum 24 inches) with exposed rafter tails or beams;
4. Porches and/or balconies;
5. Articulated façades with massing breaks every 25 feet minimum;
6. Use of wood shingles, clapboard or fiber cement siding material;
7. Wood or wood-like trim around windows and doors, with contrasting colors;
8. Wood or wood-like exterior material and natural stone or brick for exterior material;
9. Primary facades shall be of neutral, earth-toned color;
10. All entrance doors shall be recessed at least 6 inches and/or accentuated with a covered porch using gabled or hipped roof style.

In addition, duplexes and detached single-family Craftsman buildings shall include at least two of the following features; buildings with 10 units or less shall feature at least three of the following features, and buildings with 11 or more units shall include at least four of the following features:

1. Entry porch with a minimum depth of 5 feet, supported by wood or stone piers that extend to the ground;
2. Extended lintels above all windows;
3. Use at least two types or shapes of windows with at least 50 percent be designed as casement windows;
4. Decorative light fixtures with metal frames and geometric pattern;
5. One gabled dormer along the front façade or elevations visible from the public right-of-way with small single or paired windows;
6. Provide balconies for at least 50 percent the total units in the building, each with a minimum depth of 6 feet and a minimum width of 10 feet;
7. Construct chimneys extending at least 2 feet above the roof ridge;
8. Paired and/or ribbon windows, including narrow windows placed on both sides of a broad window.

Recommendations:

Option 1:

Adopt a Resolution amending the Objective Design Standards manual to remove Modern Ranch and Modern architectural styles.

or

Option 2:

Adopt a Resolution amending the Objective Design Standards manual to remove Modern Ranch and Modern architectural styles and add the Craftsman architectural style.

City of Aliso Viejo
AGENDA ITEM

DATE: October 7, 2026

TO: Mayor and City Council

FROM: So Kim, Community Development Director

SUBJECT: CONDITIONAL USE PERMIT TO EXPAND THE FLOOR AREA OF ALISO CROSSFIT AT 6 JOURNEY, SUITES 300 AND 325

Recommended Action:

Adopt a Resolution entitled: A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF ALISO VIEJO, CALIFORNIA, APPROVING A CONDITIONAL USE PERMIT TO ALLOW ALISO CROSSFIT TO EXPAND ITS FLOOR AREA TO 4,911 SQUARE FEET AT 6 JOURNEY, SUITES 300 AND 325 (USE-2026-01011).

Fiscal Impact:

There is no fiscal impact associated with the recommended action.

Background:

On October 10, 2011, the Community Development Director approved an Administrative Use Permit (PA11-035), allowing Aliso CrossFit to operate at 6 Journey, Suite 300. Aliso CrossFit is a fitness facility that provides personal and group training sessions.

On August 18, 2026, Kellie Wunsch (“Applicant”) submitted a Conditional Use Permit, requesting approval to expand the floor area of the existing 2,490 square foot fitness facility by adding the adjoining suite, resulting in a combined tenant space of approximately 4,911 square feet.

On September 23, 2026, public notice of the City Council hearing was published in the *Orange County Register* and mailed to owners of properties located within 300 feet of the subject property.

Discussion:

The existing fitness facility is classified as a “health club” in the Aliso Viejo Municipal Code (“AVMC”), which means a commercial establishment having members who pay a fee to use its health and fitness facilities and equipment. Health clubs over 3,000 square feet of

gross floor area may be allowed in the subject Business Park 1 zoning district with an approval of a Conditional Use Permit ("CUP"). Pursuant to AVMC §17.74.040.C Required Findings, the following findings shall be made by the City Council prior to the approval of a CUP:

1. Consistency with General Plan. The land use is consistent with the general plan and any applicable specific plan.

   The subject property is located within an existing commercial business park and is designated for nonresidential commercial uses. The continued operation and proposed expansion of an existing fitness facility supports recreational opportunities available to the community, consistent with Goal LU-1, which seeks to provide a diverse mix of land uses to meet the future needs of residents and the business community, and Policy LU-1.4, which supports beneficial recreational opportunities and services for the entire community. The project also advances Policy LU-1.5, which encourages maximizing the availability and use of recreational facilities within the community, and is consistent with Goal LU-12, which promotes the construction, maintenance, and active use of publicly and privately operated recreation facilities and programs. Additionally, the proposed tenant expansion supports Goal LU-3, which encourages development that provides a solid fiscal foundation for the City and diverse employment opportunities, and Policy LU-3.2, which promotes Aliso Viejo as an employment center responsive to the needs of the business community. Because the project expands existing recreational commercial use within an existing commercial building, is compatible with the surrounding business park environment, and furthers General Plan objectives related to recreation, economic vitality, and commercial services, the proposed fitness facility expansion is consistent with the General Plan. Therefore, this finding can be made.

2. Consistency with Zoning Code. The land use and associated development conform to the permitted use provisions and development standards of this zoning code and are consistent with this code and any applicable specific plan.

   The project site is located within the Business Park 1 (BP-1) zoning district. The proposed project involves the expansion of the existing fitness facility into the adjacent tenant space (Suite 375), which was previously occupied by Navika USA and is currently vacant. The expanded facility would occupy a combined tenant space of approximately 4,911 square feet. The expanded use will comply with the permitted use provisions of the BP-1 zoning district and the applicable AVMC development standards. No changes are proposed to the existing building footprint, site layout, access, circulation, and no physical modifications are proposed that would create a nonconforming condition. As for parking, the former tenant, Navika USA, operated a distribution and office use, which required one parking space per 1,000 square feet per the AVMC. Health clubs require one parking space per 150 square feet. Based on the proposed 2,421 square foot expansion area, the project would generate a demand for approximately 13

additional parking spaces compared to the previous use. However, a parking study prepared by Kimley-Horn in June 2026 found that the site's existing parking supply of 202 spaces substantially exceeded the observed average peak parking demand of 45 occupied spaces (see table below).

	Weekday			Weekend
	AM Peak (6am-10am)	Midday Peak (12pm-4pm)	PM Peak (5pm-9pm)	Midday Peak (9am-2pm)
Parking Inventory	202 Spaces			
Average Occupied Spaces	12	45	38	24
Average Available Spaces	164	131	138	178
Occupancy Rate	6%	22%	19%	12%

The study was prepared in support of the recently approved Jiu Jitsu studio located within the same building, which was projected to generate a parking demand of 33 spaces. Based on the study's observed peak parking demand of 45 occupied spaces, together with the Jiu Jitsu studio's projected parking demand of 33 spaces, the site would experience a total peak parking demand of 78 spaces. Compared to the site's existing supply of 202 parking spaces, a minimum of 124 parking spaces would remain available during peak demand periods. As the overall tenant mix within the business park has not changed since the study was completed, Staff believes the existing parking supply is sufficient to accommodate the additional 13 parking spaces required for the proposed fitness facility expansion. Therefore, this finding can be made.

3. Compliance with CEQA. Processing and approval of the permit application are in compliance with the requirements of the California Environmental Quality Act.

   The proposed project is exempt from the requirements of the California Environmental Quality Act (CEQA) pursuant to Section 15301 (Existing Facilities) of the CEQA Guidelines. The project consists of the expansion of an existing fitness facility into an adjoining tenant space within an existing commercial building, involving no expansion of the existing building footprint and no significant change in the intensity of use beyond that contemplated for the commercial center. The proposed project does not involve any exterior modifications or physical changes that would result in a potentially significant environmental impact. Therefore, this finding can be made.

4. Surrounding Uses. Approval of the application will not create conditions materially detrimental to the public health, safety and general welfare or injurious to or incompatible with other properties or land uses in the vicinity.

   The fitness facility has operated at the project site since 2011 pursuant to Administrative Use Permit PA11-035 without evidence of adverse impacts to neighboring businesses or properties. The proposed project consists solely of expanding the existing operation into an adjacent tenant suite within the same

commercial building. The use is compatible with the surrounding commercial and business park uses, and the facility will continue to operate in accordance with all applicable City regulations. Furthermore, adequate parking, access, and circulation are available to accommodate the expanded facility. As such, the project is not expected to result in significant noise, traffic, operational, or other land use compatibility impacts on adjacent properties or the surrounding area. Therefore, this finding can be made.

RESOLUTION NO. 2026-___

A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF ALISO VIEJO, CALIFORNIA, APPROVING A CONDITIONAL USE PERMIT TO ALLOW ALISO CROSSFIT TO EXPAND ITS FLOOR AREA TO 4,911 SQUARE FEET AT 6 JOURNEY, SUITES 300 AND 325 (USE-2026-01011).

WHEREAS, on October 10, 2011, the Community Director approved an Administrative Use Permit (PA11-035), allowing Aliso CrossFit to operate at 6 Journey, Suite 300. Aliso CrossFit is a fitness facility that provides personal and group training sessions;

WHEREAS, on August 18, 2026, Kellie Wunsch ("Applicant") submitted a Conditional Use Permit, requesting approval to expand the floor area of the existing 2,490 square foot fitness facility by adding the adjoining suite, resulting in a combined tenant space of approximately 4,911 square feet;

WHEREAS, on September 23, 2026, the City Council held a public hearing as prescribed by law and considered written and verbal public testimony that was submitted prior to the hearing and during the hearing and evidence and recommendations presented by staff in the agenda report and oral presentation; and

WHEREAS, all legal prerequisites to the adoption of this Resolution have occurred.

NOW, THEREFORE, BE IT RESOLVED BY THE CITY COUNCIL OF THE CITY OF ALISO VIEJO AS FOLLOWS:

Section 1. **Incorporation of Recitals.** The City Council hereby finds and determines that all of the recitals set forth above are true and correct. The above recitals are hereby incorporated as substantive findings of this Resolution.

Section 2. **Findings for Conditional Use Permit USE-2026-01011.** Pursuant to Aliso Viejo Municipal Code §17.74.040.C Required Findings, the City Council hereby makes the following findings of fact and approves the Conditional Use Permit USE-2026-01011, subject to the conditions of approval as set forth in Exhibit "A" and Project plans as set forth in Exhibit "B", which are attached hereto and incorporated herein by reference.

A. Consistency with General Plan. The project is consistent with the general plan and any applicable specific plan. The subject property is located within an existing commercial business park and is designated for nonresidential commercial uses. The continued operation and proposed expansion of an existing fitness facility supports recreational opportunities available to the community, consistent with Goal LU-1, which seeks to provide a diverse mix of land uses to meet the future needs of residents and the business community, and Policy LU-1.4, which supports beneficial recreational opportunities and services for the entire community. The project also advances Policy LU-1.5, which encourages

maximizing the availability and use of recreational facilities within the community, and is consistent with Goal LU-12, which promotes the construction, maintenance, and active use of publicly and privately operated recreation facilities and programs. Additionally, the proposed tenant expansion supports Goal LU-3, which encourages development that provides a solid fiscal foundation for the City and diverse employment opportunities, and Policy LU-3.2, which promotes Aliso Viejo as an employment center responsive to the needs of the business community. Because the project expands existing recreational commercial use within an existing commercial building, is compatible with the surrounding business park environment, and furthers General Plan objectives related to recreation, economic vitality, and commercial services, the proposed fitness facility expansion is consistent with the General Plan.

B. Consistency with Zoning Code. The land use and associated development conform to the permitted use provisions and development standards of this zoning code and is consistent with this code and any applicable specific plan. The project site is located within the Business Park 1 (BP-1) zoning district. The proposed project involves the expansion of the existing fitness facility into the adjacent tenant space (Suite 375), which was previously occupied by Navika USA and is currently vacant. The expanded facility would occupy a combined tenant space of approximately 4,911 square feet. The expanded use will comply with the permitted use provisions of the BP-1 zoning district and the applicable AVMC development standards. No changes are proposed to the existing building footprint, site layout, access, circulation, and no physical modifications are proposed that would create a nonconforming condition. As for parking, the former tenant, Navika USA, operated a distribution and office use, which required one parking space per 1,000 square feet per the AVMC. Health clubs require one parking space per 150 square feet. Based on the proposed 2,421 square foot expansion area, the project would generate a demand for approximately 13 additional parking spaces compared to the previous use. However, a parking study prepared by Kimley-Horn in June 2026 found that the site's existing parking supply of 202 spaces substantially exceeded the observed peak parking demand of 45 occupied spaces. The study was prepared in support of the recently approved Jiu Jitsu studio located within the same building, which was projected to generate a parking demand of 33 spaces. Based on the study's observed peak parking demand of 45 occupied spaces, together with the Jiu Jitsu studio's projected parking demand of 33 spaces, the site would experience a total peak parking demand of 78 spaces. Compared to the site's existing supply of 202 parking spaces, a minimum of 124 parking spaces would remain available during peak demand periods. As the overall tenant mix within the business park has not changed since the study was completed, the existing parking supply is sufficient to accommodate the additional 13 parking spaces required for the proposed fitness facility expansion.

C. Compliance with CEQA. Processing and approval of the permit application are in compliance with the requirements of the California Environmental Quality Act. The

proposed project is exempt from the requirements of the California Environmental Quality Act (CEQA) pursuant to Section 15301 (Existing Facilities) of the CEQA Guidelines. The project consists of the expansion of an existing fitness facility into an adjoining tenant space within an existing commercial building, involving no expansion of the existing building footprint and no significant change in the intensity of use beyond that contemplated for the commercial center. The proposed project does not involve any exterior modifications or physical changes that would result in a potentially significant environmental impact.

D. Surrounding Uses. Approval of the application will not create conditions materially detrimental to the public health, safety and general welfare or injurious to or incompatible with other properties or land uses in the vicinity. The fitness facility has operated at the project site since 2011 pursuant to Administrative Use Permit PA11-035 without evidence of adverse impacts to neighboring businesses or properties. The proposed project consists solely of expanding the existing operation into an adjacent tenant suite within the same commercial building. The use is compatible with the surrounding commercial and business park uses, and the facility will continue to operate in accordance with all applicable City regulations. Furthermore, adequate parking, access, and circulation are available to accommodate the expanded facility. As such, the project is not expected to result in significant noise, traffic, operational, or other land use compatibility impacts on adjacent properties or the surrounding area.

Section 3. **Custodian of Records.** The custodian of records for this Resolution is the City Clerk and the records comprising the administrative record are located at 12 Journey, Suite 100, Aliso Viejo, CA 92656.

PASSED, APPROVED AND ADOPTED this 7th day of October 2026.

Exhibit "A"
Conditions of Approval
Case No. USE-2026-01011

1. Project Description. Approval is for Aliso CrossFit to expand the floor area of the existing 2,490 square foot fitness facility (Suite 300) by adding adjoining Suite 375, resulting in a combined tenant space of approximately 4,911 square feet.

2. Payment of Fees. The Applicant and Applicant's successors in interest shall be responsible for payment of all applicable fees along with reimbursement for all City expenses in ensuring compliance with these conditions. Prior to issuance of a Certificate of Occupancy, the Applicant shall be fully responsible for reimbursing the City of Aliso Viejo for all expenses incurred to assure compliance with all conditions of approval.

3. Compliance with Regulations. The Applicant shall ensure design, maintenance, and operation of the permit area and fixtures thereon shall comply with all applicable regulations of the Municipal Code and all requirements and enactments of Federal, State, County and City authorities. All such requirements and enactments shall by reference become conditions of this permit whether or not they are listed as conditions. The Applicant and Applicant's successors in interest shall be fully responsible for knowing and complying with all conditions of approval, including making known the conditions to City staff for future governmental permits or actions on the project site.

4. Compliance with Conditions. The Applicant shall be fully responsible for knowing and complying with all conditions of approval, including making conditions known to City staff for future governmental permits or actions on the project site. Failure to abide by and faithfully comply with any and all conditions attached to granting these permits may constitute grounds for revocation of the permit(s) in accordance with AVMC Section 15.74.120.

5. Compliance with City Codes. The approved project shall comply with all applicable provisions of the municipal code, including but not limited to provisions of building codes and any conditions imposed as part of the approval process.

6. Compliance with Building Codes. Tenant improvement plans shall be submitted for review, approved and permits issued, and shall comply with standards, regulations and requirements of current editions of the California Building Code, California Plumbing Code, California Mechanical Code, and California Electrical Code, including any local amendments adopted by the City of Aliso Viejo.

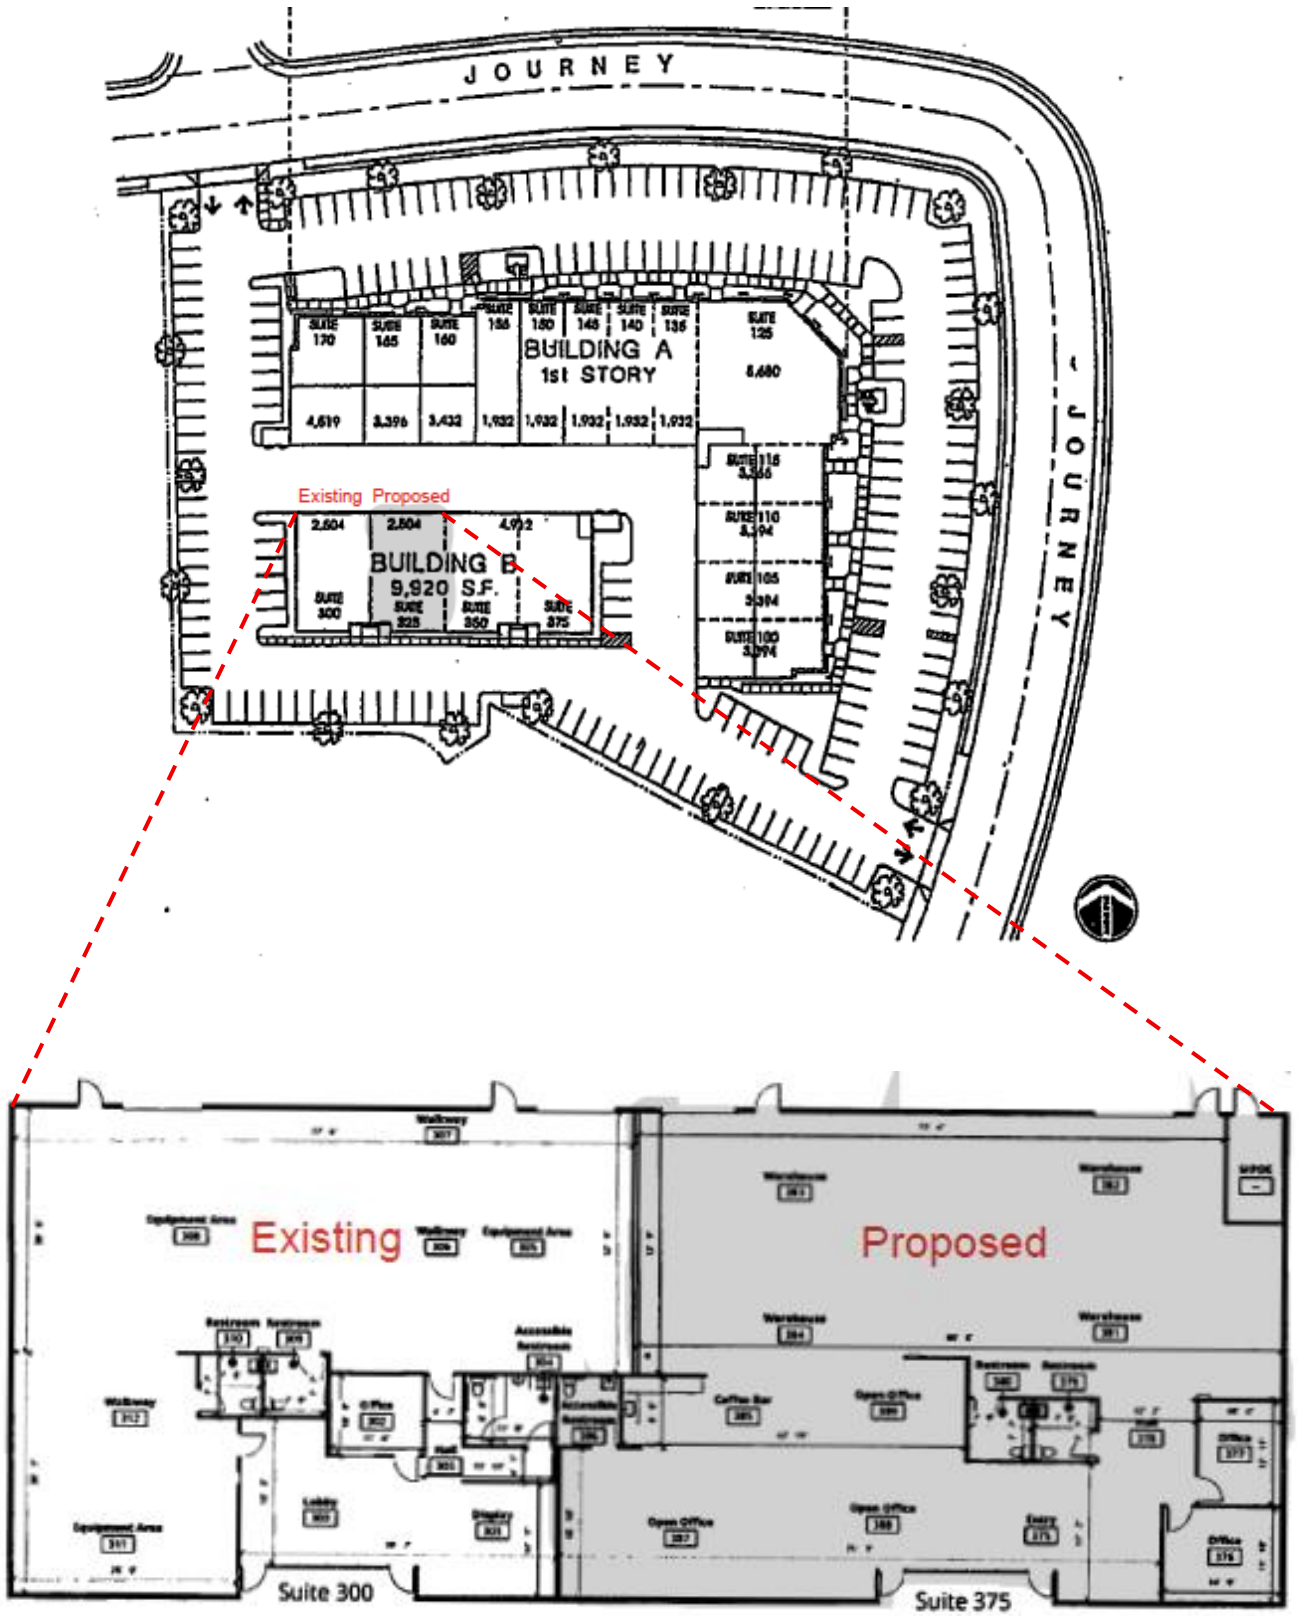
7. Noise. The following exterior noise standards, unless otherwise specifically indicated, shall apply to all nonresidential property within the city. If a noise affects both residential and nonresidential property, then the applicable noise standard shall be the arithmetic mean of the applicable standards that apply to residential

and nonresidential property. In the event the noise consists entirely of impact noise, simple tone noise, speech, music, or any combination thereof, each of the noise levels below shall be reduced by five dB(A).

Nonresidential Exterior Noise Standards		
	Noise Level	**Time Period**
Commercial	65 dB(A)	7:00 a.m. – 10:00 p.m.
	60 dB(A)	10:00 p.m. – 7:00 a.m.

8. Indemnification. The Applicant shall indemnify, protect, defend, and hold the city, and/or any of its officials (appointed or elected), officers, employees, agents, departments, agencies, and instrumentalities thereof, harmless from any and all claims, demands, lawsuits, writs of mandamus, and other actions and proceedings (whether legal, equitable, declaratory, administrative or adjudicatory in nature), and alternative dispute resolution procedures (including, but not limited to arbitrations, mediations, and other such procedures), judgments, orders, and decisions (collectively 'Actions'), brought against the city, and/or any of its officials, officers, employees, agents, departments, agencies, and instrumentalities thereof, that challenge, attack, or seek to modify, set aside, void, or annul, any action of, or any permit or approval issued by the city and/or any of its officials, officers, employees, agents, departments, agencies, and instrumentalities thereof (including actions approved by the voters of the city) for or concerning the project, whether such Actions are brought under the Ralph M. Brown Act, California Environmental Quality Act, Planning and Zoning Law, Subdivision Map Act, Community Redevelopment Law, Code of Civil Procedure Sections 1085 or 1094.5, or any other federal, state, or local constitution, statute, law, ordinance, charter, rule, regulation, or any decision of a court of competent jurisdiction. It is expressly agreed the city shall have the right to approve, which approval will not be unreasonably withheld, legal counsel providing the city's defense, and that Applicant shall reimburse city for any costs and expenses directly and necessarily incurred by the city in the course of the defense. The city shall promptly notify the Applicant of any action brought, and city shall cooperate with the Applicant in defense of the action.

9. Other Agency Approvals. The Applicant shall comply with all applicable requirements of outside agencies having jurisdiction, including but not limited to the local fire authority, water district, and any other local, regional, State, or Federal agencies.



10. Expiration. This approval shall expire and be of no further force or effect if:
    a. The permit is not established within two years of the permit's effective date or such other time period designated by the permit approval, by state law, or by this code; or

b. After establishment, the use or activity for which the permit was approved is discontinued or abandoned for a period of one year.

11. Time Extensions. Upon application before expiration of the period of validity, the City Council may grant or conditionally grant an extension to the period of validity for up to one year per extension if it finds that such an extension is justified by the circumstances of the original findings for the project can still be made with, if necessary, the imposition of conditions not originally imposed on the project. The filing of an application for extension shall stay expiration of the permit until action is taken on the time extension by the decision-making authority. No more than two one-year extensions may be granted or conditionally granted.

12. Revocation of discretionary permits. Any discretionary permit may be revoked by the original decision-making authority pursuant to the provisions of AVMC 15.74.120 (Revocation of Discretionary Permits).

City of Aliso Viejo
AGENDA ITEM

DATE: October 7, 2026

TO: Mayor and City Council

FROM: So Kim, Community Development Director
Rose Rivera, Principal Planner

SUBJECT: GENERAL PLAN AMENDMENT GPA-2026-01002, ZONE CHANGE ZC-2026-01001, VESTING TENTATIVE TRACT MAP 19489, SITE DEVELOPMENT PERMIT SDP-2026-01001, DEVELOPMENT AGREEMENT DA-2026-01002 AND ADOPTION OF MITIGATED NEGATIVE DECLARATION CEQA-2026-01004 FOR THE DEVELOPMENT OF A 58-UNIT RESIDENTIAL TOWNHOME COMMUNITY AT 15 ARGONAUT

Recommended Action:

Conduct a public hearing and:

1. Adopt a Resolution entitled: A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF ALISO VIEJO, CALIFORNIA, ADOPTING A MITIGATED NEGATIVE DECLARATION AND A MITIGATION MONITORING AND REPORTING PROGRAM (CEQA-2026-01004) PURSUANT TO THE CALIFORNIA ENVIRONMENTAL QUALITY ACT FOR GENERAL PLAN AMENDMENT GPA-2026-01002, ZONE CHANGE ZC-2026-01001, VESTING TENTATIVE TRACT MAP 19489, AND DEVELOPMENT AGREEMENT DA-2026-01002 TO ALLOW THE DEVELOPMENT OF A 58-UNIT RESIDENTIAL TOWNHOME COMMUNITY LOCATED AT 15 ARGONAUT (APN: 623-093-10 & 623-093-11);

2. Adopt a Resolution entitled: A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF ALISO VIEJO, CALIFORNIA, APPROVING AN AMENDMENT TO THE GENERAL PLAN LAND USE DESIGNATION AND ASSOCIATED LAND USE MAP FROM BUSINESS PARK TO MEDIUM DENSITY RESIDENTIAL FOR THE DEVELOPMENT OF A 58-UNIT RESIDENTIAL TOWNHOME COMMUNITY LOCATED AT 15 ARGONAUT (APN: 623-093-10 & 623-093-11);

3. Introduce for first reading an Ordinance entitled: AN ORDINANCE OF THE CITY COUNCIL OF THE CITY OF ALISO VIEJO, CALIFORNIA, APPROVING A ZONE CHANGE FROM BUSINESS PARK 2 TO MEDIUM DENSITY RESIDENTIAL

DISTRICT FOR THE DEVELOPMENT OF A 58-UNIT RESIDENTIAL TOWNHOME COMMUNITY LOCATED AT 15 ARGONAUT (623-093-10 & 623-093-11);

4. Adopt a Resolution entitled: A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF ALISO VIEJO, CALIFORNIA, APPROVING VESTING TENTATIVE TRACT MAP 19489 FOR SUBDIVISION INTO CONDOMINIUM PURPOSES AND SITE DEVELOPMENT PERMIT (SDP-2026-01001) TO ALLOW THE DEVELOPMENT OF A 58-UNIT RESIDENTIAL TOWNHOME COMMUNITY LOCATED AT 15 ARGONAUT (623-093-10 & 623-093-11); and

5. Introduce for first reading an Ordinance entitled: AN ORDINANCE OF THE CITY COUNCIL OF THE CITY OF ALISO VIEJO, CALIFORNIA, APPROVING DEVELOPMENT AGREEMENT DA-2026-01002 BETWEEN THE CITY AND BRANDYWINE ACQUISITION GROUP, LLC. FOR THE DEVELOPMENT OF A 58-UNIT RESIDENTIAL TOWNHOME COMMUNITY LOCATED AT 15 ARGONAUT (APN: 623-093-10 & 623-093-11).

Fiscal Impact:

As part of the Development Agreement, the Applicant will contribute a one-time $2,057,651 fee in public benefits to the City, with the funds deposited into the Development Impact Fund.

Background:

On April 15, 2026, Brandywine Acquisition Group, LLC. (“Applicant”) submitted a General Plan amendment, zone change, vesting tentative tract map, site development permit, and a Development Agreement (DA-2026-01002) application to demolish an existing office building to accommodate the construction of a multi-family residential community at 15 Argonaut (“Project”).

On March 4, 2026, the City Council held a duly noticed public review and provided initial feedback on concept plans for the Project.

Discussion:

Existing Site

The existing site measures 4.4 acres comprised of two parcels (APNs 623-093-10 and 623-093-11) (“Site”). The site is developed with a two-story, 41,000 square foot office building with exterior parking areas and landscaped slopes along the northern and western boundaries. The site is accessed by a single entry/exit located at the southeastern corner of the site and is located within a larger business park. The General Plan land use and zoning designations for the site are Business Park and Business Park 2, respectively. Surrounding land uses are detailed in Table 1 below.

Table 1	**Existing Uses**
North	Attached multi-family and single-family residential
South	Multi-tenant office buildings, light industrial
East	Laboratories, fitness facilities, approved multi-family residential
West	Gas station, fast-food restaurant, auto repair shop, and Brookline Park

Proposed Project

The Applicant is proposing to redevelop the Site by demolishing the existing office building and developing a residential community consisting of 58 townhome units, which includes three units restricted to very low-income households. The Project details are provided in Table 2 below:

Table 2	**Project Details**
Number of Units	• 58 units spread across 10 separate buildings. Each building will consist of five to six attached units. • Three- and four-bedroom units measuring 1,320 to 1,827 square feet in size.
Building	Three-story townhomes, measuring 36' max. height. The exterior of the building will have stucco finish, framed windows with faux shutters, recessed entryway, wrought iron balcony railings, hip and gable roofs with tile.
Parking	A total of 140 parking spaces (116 enclosed, 24 unenclosed) on site which exceeds the minimum required by State Density Bonus Law (SDBL). Each unit will have two enclosed private garages at ground floor level. Each garage will include additional areas for trash bins, water heater, and private storage. Driveways are not proposed. An additional 24 unenclosed guest parking spaces are provided on site.
Common Space	Open space of 9% consisting of 3,194 square feet of amenity areas (BBQ, shade structure, picnic tables, and dog park), and 14,092 square feet spread throughout the site as shared yards, paseos and landscaped areas. The Applicant requests a State Density Bonus Law (SDBL) concession to reduce the minimum common open space requirement from 25% as required by the AVMC to 9%. Additionally, the 1.93 acres of existing open space slopes would be preserved.
Miscellaneous	Community will not be gated, however, the perimeter of the site will be secured with fencing and landscaped. Entrance to the site will be enhanced with paving, signage, and accent trees. Streetlights, bollards, and shade structure lighting will be designed with recessed, downward-facing light sources.

Table 2	Project Details
Grading	Construction is anticipated to maintain existing grades and would result in approximately 473 cubic yards of soil export.
Infrastructure	New onsite water lines, sewer lines, storm drains, underground storm water facility, and fire hydrants.

Entitlements

The Project requires approval of a General Plan Amendment, Zone Change, Vesting Tentative Tract Map, Site Development Permit, and Development Agreement. Additionally, the Project qualifies for the State Density Bonus Program, and the Applicant is requesting specific waivers and concessions. Each of these components is discussed in detail below.

General Plan Amendment

The Applicant requests to change the existing office use to residential use to develop the Project. This requires an amendment to the General Plan land use designation from Business Park to Medium Density Residential. Pursuant to Aliso Viejo Municipal Code ("AVMC") Section 15.78.020 (General Plan Amendments), the City Council must make the following findings prior to approving the general plan amendment:

1. Public Welfare. Approval of the amendment will not create conditions materially detrimental to the public health, safety, and general welfare.

   While the Site is located within a larger business park area, it is situated in proximity to the recently approved 95 Argonaut residential development, which also involved the redevelopment of a business park use for residential use. Similar to 95 Argonaut, the proposed Project would introduce a three-story attached townhome development at a scale compatible with existing residential neighborhoods that are located directly north of the Site across Glenwood Drive, including both multi-family and single-family residential development. The proposed Project incorporates similar architectural features as 95 Argonaut and adjacent residential communities such as stucco exteriors, tile roofs, wrought-iron balconies, recessed entries, and shared open-space areas. As proposed, the Project incorporates architectural and site design elements that are generally consistent with the character of nearby residential development and would provide a transition between the surrounding residential neighborhoods and the remaining business park uses in the area. Both projects feature multi-story attached residential units with comparable architectural character, private garages, guest parking, landscaped common open space, and enhanced site entries.

   Additionally, the Site is situated in an area with established infrastructure, including roads, utilities, and public services, that can adequately support residential development. As part of the environmental assessment, the Project required comprehensive studies addressing air quality, energy, greenhouse gas emissions,

biological resources, cultural resources, geotechnical conditions, hydrology and water quality, noise, and transportation impacts. As discussed further in the Environmental Assessment section below, these studies concluded that the Project would result in less-than-significant impacts with the implementation of proposed mitigation measures. The Project plans also cleared preliminary review by the Orange County Fire Authority (OCFA).

Furthermore, the Project aligns with the City's housing goals by facilitating the development of new housing opportunities. Future construction on the Site will be subject to plan check review and inspection process to ensure full compliance with applicable building and safety standards. Therefore, this finding can be made.

2. Internal General Plan Consistency. The amendment is internally consistent with those goals, objectives, and policies of the general plan that are not being amended.

   The proposed amendment is consistent with the goals and policies of the General Plan listed below in that it incorporates landscaping aligned with the City Council-approved plant palette, emphasizing low-water, drought-tolerant species; features building materials, colors, and architectural design that are compatible with the surrounding residential communities; public benefit fees; proposes three affordable housing units restricted to very low-income households, thereby enhancing housing diversity and affordability; and introduces rezoning to facilitate residential development that includes affordable units in support of the City's housing objectives. Therefore, this finding can be made.

   In the General Plan, COS' refers to Conservation and Open Space policies, H' for Housing policies and goals, and 'LU' for Land Use policies.

   - Policy COS-1.2 Reduce the amount of water used for landscaping and increase use of native and low water plants. Maximize use of native, low-water plants for landscaping of areas adjacent to sidewalks or other impermeable surfaces.
   - Policy COS-4.2 Encourage and maintain high-quality architectural and landscaping designs that enhance or complement the community's visual character.
   - Policy COS-7.5 Ensure that new development provides park land and/or improvements at a fair share ratio, pursuant to the City's Parkland Ordinance.
   - Goal H-1: Encourage a diversity of housing types and provide affordability levels within Aliso Viejo to meet the needs of community residents.
   - Policy H-1.1 Identify sites appropriate for the development of a variety of housing types and price ranges to meet the needs of all socioeconomic segments of the community through the disbursement of affordable units in projects.
   - Policy H-1.2 Encourage through the use of density bonuses and rezoning to allow for residential development, development of affordable housing opportunities throughout the community, as well as development of housing for

elderly and low- and moderate-income households near public transportation services.

- Policy H-1.4 Ensure that a portion of future residential development is affordable to low- and very-low-income households by designating certain sites as having the potential to be used for residential uses.
- Policy H-3.8 Review existing zoning policies and explore zoning changes to facilitate the development of affordable housing.
- Policy LU-12.2 As a condition upon new development, require payment of park fees and/or dedication and provision of parkland, recreation facilities and/or multi-use trails that improve the public and private recreation system.

3. Land Use Compatibility. In the case of amendments to the General Plan land use policy map, the new designation is compatible with the designations on nearby properties.

   The Site is located at the edge of a larger business park and directly across from established multi-family and single-family residential neighborhoods. The proposed project is similar to a recently approved development at 95 Argonaut project, which is located on the same street within the same business park area. Both projects involve the conversion of an office property to a residential townhome community and introduce a land use that is compatible with nearby residential neighborhoods. The adjacent multi-family development shares several characteristics with the Project, including large attached-unit buildings, stucco exteriors, tile roofing, wrought iron balconies, recessed entryways, and shared open space without private driveways. These similarities ensure architectural and functional continuity between the Project and existing residential uses. The proposed land use designation therefore complements the surrounding residential character. Therefore, this finding can be made.

4. Property Suitability. In the case of amendments to the general plan land use policy map, the new designation is suitable for the location, access, visual character and topography of the subject property.

   The property is located along established roadways with adequate vehicular and pedestrian access and is supported by existing infrastructure, including utilities and public services, sufficient to accommodate residential development. The Site is generally flat within the developed portion, with sloped areas adjacent to Glenwood Drive and Aliso Creek Road. The proposed Project would retain the existing slope, utilize existing access from Argonaut, and incorporate site improvements consistent with applicable engineering and design standards. The proposed residential development includes architectural, landscaping, and site design elements that are similar to those found in nearby residential communities north of the Site, including attached residential development across Glenwood Drive and also the recently approved residential townhomes at 95 Argonaut. In addition, the Site is located between existing residential neighborhoods and surrounding

business park uses, making it suitable for the proposed Medium Density Residential land use designation. Therefore, this finding can be made.

Zone Change

In addition to the proposed General Plan amendment, the Project requires a zoning designation change for the Site from Business Park 2 to Medium Density Residential. Pursuant to AVMC Section 15.78.040 (Zone Change and Prezoning), the City Council must make the following findings prior to approving the zone change. All these findings can be made, as evidenced in the above General Plan Amendment Findings.

1. Public Welfare. Approval of the zone change will not create conditions materially detrimental to the public health, safety and general welfare.

2. General Plan Consistency. The zone change is consistent with the goals, objectives, and policies of the general plan and any applicable specific plan.

3. Land Use Compatibility. The zone change is compatible with the zoning and land use on nearby properties.

4. Property Suitability. The zone change is suitable for the location, access, visual character and topography of the subject property.

Vesting Tentative Tract Map

Pursuant to the requirements of the California Subdivision Map Act (Gov. Code §§ 66410 et seq.) and Title 14 of the Aliso Viejo Municipal Code, no tentative map shall be approved unless the following findings of consistency with the General Plan and compliance with CEQA have been made.

1. The proposed map is consistent with the applicable General and Specific Plans.

   The Site has a General Plan land use designation of Business Park. The Applicant proposes a General Plan Amendment to re-designate the property for Medium Density Residential, which allows for residential development of eight to 18 dwelling units per acre. The Vesting Tentative Tract Map proposes 58 multi-family homes on 4.4 acres, resulting in a density of 13.2 dwelling units per acre. As conditioned, the Vesting Tentative Tract Map will not take effect unless the General Plan Amendment, Zone Change, Site Development Permit, and Development Agreement take effect. Accordingly, the proposed map would be consistent with the applicable General Plan Land Use designation. There is no applicable Specific Plan for the Site. Therefore, this finding can be made.

2. The design or improvement of the proposed subdivision is consistent with the General and Specific Plans.

The Project is consistent with the goals and policies of the Conservation and Open Space, Housing, and Land Use element in that the Project promotes orderly growth, provides a compatible transition between non-residential and residential uses, supports housing objectives by creating new residential opportunities, and utilizes existing infrastructure in a manner consistent with the community's long-term vision and planning framework. The Project is also subject to mitigation measures and conditions of approval that address potential impacts related to traffic, noise, air quality, and emergency access. There is no applicable Specific Plan for the Project site. Therefore, this finding can be made.

3. The site is physically suitable for the type of development.

   The Site is generally level, has adequate access from existing public streets, and is served by established infrastructure systems including water, sewer, storm drainage, and utilities. The Site's size, configuration, and surrounding land use context are appropriate to accommodate the Project consistent with applicable zoning and General Plan designations. No unusual topographic, geologic, or environmental conditions have been identified that would render the site unsuitable for residential use. Therefore, this finding can be made.

4. The site is physically suitable for the proposed density of development.

   The Project includes a General Plan Amendment to re-designate the property to Medium Density Residential, which permits residential development at a range of eight to 18 dwelling units per acre. The Vesting Tentative Tract Map proposes 58 multi-family homes on 4.4 acres, resulting in a density of approximately 13.2 dwelling units per acre. This proposed density falls within the allowable range for the Medium-Density Residential designation. Therefore, this finding can be made.

5. The design of the subdivision and the proposed improvements are not likely to cause substantial environmental damage or substantial and avoidable injury to fish or wildlife or their habitat.

   The Project site is currently developed with an office building, surface parking lot, and landscaping. There is no fish, wildlife, or any habitat that would be affected by the Project.

6. The design of the subdivision or type of improvements is not likely to cause serious public health problems.

   The Project will be served by existing off-site infrastructure, with new on-site water, sewer, and storm drain facilities designed to connect to and extend those systems. All facilities have adequate capacity to accommodate the proposed residential use. The subdivision design incorporates standard improvements, including paved streets, sidewalks, street lighting, and utility connections that will be constructed in compliance with applicable building codes and City engineering standards. The

Initial Study prepared for the Project did not identify any conditions that would result in significant public health impacts, and all potentially significant effects have been mitigated to less-than-significant levels.

7. The design of the subdivision or the type of improvements will not conflict with existing easements, acquired by the public at large, for access through or use of property within the subdivision.

   The Project as conditioned requires the Applicant to obtain easement holders' authorization for any improvements or encroachments prior to building permit issuance.

8. The advisory agency shall determine whether the discharge of waste from the proposed subdivision into an existing sanitary sewer system would result in or add to a violation of existing requirements prescribed by either the Santa Ana or San Diego Regional Water Quality Control Boards.

   The Initial Study/Mitigated Negative Declaration (IS/MND) identified the Moulton Niguel Water District (MNWD) collection system for treatment at existing regional treatment facilities and concluded that the project would not violate any water quality standards or waste discharge requirements, nor substantially degrade surface water or groundwater quality. In correspondence dated October 1, 2025, MNWD indicated that it will provide water, recycled water, and wastewater service to the proposed development and that a preliminary review suggests adequate water supply and sewer capacity are available to serve the project. The project remains subject to all applicable federal, State, regional, and local water quality regulations, including National Pollutant Discharge Elimination System requirements, implementation of the approved Water Quality Management Plan, and applicable Regional Water Quality Control Board regulations.

9. If the advisory agency approves or conditionally approves a tentative map which deviates from any standard of design as allowed by AVMC, the advisory agency shall make a finding that each such deviation has been individually considered and found to be justified based upon specific special circumstances.

   No deviations from the subdivision design standards are proposed as part of the Vesting Tentative Tract Map. Accordingly, no deviations require consideration or justification based on special circumstances.

Site Development Permit

The purpose of a site development permit ("SDP") is to ensure that new development conforms to the development and design provisions of the AVMC, including but not limited to permitted uses, development standards, and supplemental regulations. Pursuant to AVMC Section 15.74.020 (Site Development Permits), the City Council must make the following findings prior to approving the SDP:

1. Consistency with General Plan. The Project is consistent with the general plan and any applicable specific plan.

   The Project includes a General Plan Amendment ("GPA"). As detailed in the preceding GPA section, all required findings to support the amendment can be made.

2. Consistency with Zoning Code. The land use and associated development conform to the permitted use provisions and development standards of this zoning code and is consistent with this code and any applicable specific plan.

   The proposed zone change to Medium Density Residential, together with the associated development, is compatible with surrounding land uses, providing a transition that complements the existing neighborhood character. The property is suitable for residential use based on its location, access, visual character, and topography, and existing infrastructure is adequate to support the proposed development. The Project includes requests for incentives, concessions, and waivers pursuant to California State Density Bonus Law (Government Code Section 65915). The Project provides three deed-restricted very low-income units, representing at least five percent of the total units, and therefore qualifies for consideration of the requested density bonus incentives and waivers. The requested modifications include a one-foot increase in building height, a reduction in common open space, reduced perimeter setbacks, and reduced minimum boundary landscaping standards.

   In addition, the Project qualifies for a reduced parking requirement under State Density Bonus Law. Based on the applicable density bonus parking ratio, the Project is required to provide a minimum of 130 parking spaces. The Project proposes 140 parking spaces, consisting of 116 private residential parking spaces within garages and 24 unenclosed guest parking spaces, including one ADA-accessible space. Accordingly, the Project exceeds the minimum parking requirement established under State Density Bonus Law.

   With these provisions, the Project conforms to the permitted use requirements and development standards of the zoning code and remains consistent with all applicable Specific Plan regulations. Therefore, this finding can be made.

3. Compliance with CEQA. Processing and approval of the permit application are in compliance with the requirements of the California Environmental Quality Act. This finding can be made as evidenced in the Environmental Analysis below.

4. Architectural Design. The architectural design of the Project, including but not limited to the architectural style, scale, building mass, materials, colors, architectural details, and roof style, is compatible with surrounding development.

Directly north of the site are established multi-family and single-family residential communities. The adjacent multi-family development, in particular, shares several defining characteristics with the Project, including similarly scaled buildings composed of six attached units. The architectural style is complementary, featuring stucco exteriors, tile roofing, wrought iron balconies, recessed entryways, and communal open space without private driveways. The surrounding single-family tract homes also reflect a consistent architectural design, with comparable color palettes, exterior finishes, and material selections. The Project further enhances this compatibility through the inclusion of framed windows, some accented with faux shutters, as well as a mix of hip and gable roof forms, which reflects the roof styles found in nearby residences. The proposed Project consists of similar attached townhome units with comparable building massing, architectural features, private garages, guest parking, landscaped common open-space amenities as the recently approved 95 Argonaut development, further demonstrating architectural compatibility. Both projects are designed to transition former office properties to residential communities while maintaining architectural consistency with surrounding neighborhoods. Collectively, these design elements ensure compatibility with the surrounding development and this finding can be made.

5. Site Design. The site design of the Project, including but not limited to project entries, interior circulation, pedestrian and bicycle access, pedestrian amenities, screening of equipment and trash enclosures, exterior lighting, and other site design elements, is compatible with surrounding development.

   Based on the analysis provided in the Initial Study and supporting documentation, the Project will retain the existing single-entry driveway at the southern end of the site along Argonaut. The internal private roadway system designed to provide two-way access to residential garages and guest parking spaces, emergency access, hydrant placement has been reviewed and conceptually approved by both the Building Division and the OCFA. Each unit will include an enclosed private garage with dedicated space for trash bin storage. Approximately 9% of the site will be dedicated to open space, including a private park, shared yards, pedestrian walkways, and perimeter landscaping. Perimeter fencing and exterior mechanical equipment will be screened with additional landscaping, and the site entrance will be enhanced with decorative paving, signage, and accent trees. Lighting throughout the site, including streetlights, bollards, and shade structures, will be designed with recessed, downward-facing fixtures to minimize light spill. These design elements are compatible with surrounding residential communities, and the required finding can be made.

6. Landscape Design. Project landscaping, including but not limited to the location, type, size, color, texture, and coverage of plant materials, has been designed so as to provide visual relief, complement buildings, visually emphasize prominent design elements and vistas, screen undesirable views, provide a harmonious

transition between adjacent land uses and between development and open space, and provide an overall unifying influence to enhance the visual continuity of the Project.

The Project incorporates a landscape plan that enhances the overall visual continuity of the site and complements the architectural character of the development. Existing landscaped slopes and mature screening trees along the northern and western boundaries will be preserved, maintaining established landscape buffers adjacent to Glenwood Drive and Aliso Creek Road. The Project provides common open-space amenities, including a community garden, dog play area, shade structure, barbeque area, pedestrian walkways, and landscaped gathering areas. In addition, approximately 7,611 square feet of private yard area is provided for individual residential units, and preserved open-space slope areas remain throughout the Site. Landscaping is also proposed around the exterior mechanical equipment and perimeter fencing to screen undesirable views. The site entrance is designed to create a welcoming and visually prominent focal point, enhanced with decorative paving, signage, and accent trees. The proposed landscaping aligns with the City Council-approved plant palette, emphasizing low-water, drought-tolerant species. Therefore, this finding can be made.

Development Agreement

This Project requires land use and zoning changes from office to residential, which requires Development Agreement DA-2026-01002 ("DA") to ensure the Project is implemented as approved, minimize potential adverse impacts, and secure long-term community benefits. Under the DA (Attachment 5, Exhibit A), the Applicant has agreed to contribute a one-time public impact fee of $2,057,651. Full payment must be made to the City prior to the issuance of any permit, and no permit will be issued until the City has received the payment and confirmed compliance with all applicable fee requirements.

Pursuant to AVMC 15.82.010 (Development Agreements and Other Actions), the City Council must make the following findings prior to approving the DA:

1. Public Welfare. Approval of the development agreement will not create conditions materially detrimental to the public health, safety and general welfare.

   The Project is consistent with the policies and regulations of the proposed Medium-Density Residential zoning district. The DA includes provisions to ensure compliance with applicable land use regulations, defines the scope of the Project, and identifies the public benefit obligations of the Applicant. The Project is compatible with the existing and recently approved multi-family and single-family communities in terms of layout, architectural style, materials, and open space; the site is served by existing infrastructure, including roads, utilities, and public services sufficient to support residential development; that the environmental assessment determined impacts would be less than significant with mitigation; the Project advances the City's housing goals by creating new housing opportunities;

and future construction will be subject to plan check review and inspection to ensure compliance with all applicable building and safety standards. Therefore, this finding can be made.

2. General Plan Consistency. The development agreement is consistent with the goals, objectives, and policies of the general plan and any applicable specific plan.

   The Project is consistent with the goals and policies of the Conservation and Open Space, Housing, and Land Use elements in that the Project promotes orderly growth, provides a compatible transition between non-residential and residential uses, supports housing objectives by creating new residential opportunities, and utilizes existing infrastructure in a manner consistent with the community's long-term vision and planning framework. The Project is also subject to mitigation measures and conditions of approval that address potential impacts related to biological resources, geology and soils, cultural and tribal resources, and hazards and hazardous materials. The DA incorporates, among other provisions, the scope of the Project, compliance with governing regulations, and the Applicant's public benefit obligations, ensuring that this finding can be made.

Environmental:

Pursuant to the California Environmental Quality Act ("CEQA") and the State CEQA Guidelines, the City prepared an Initial Study/Mitigated Negative Declaration ("IS/MND") to evaluate the potential environmental impacts of the proposed Project. The analysis concluded that the Project could result in potentially significant environmental impacts; however, all such impacts can be reduced to less-than-significant levels through the implementation of mitigation measures. As a result, the City also prepared a Mitigation Monitoring and Reporting Program ("MMRP") in compliance with CEQA.

The IS/MND was circulated for a 20-day public review period beginning on August 21, 2026. However, because the Notice of Intent was not posted at the County Recorder's Office until August 28, 2026, the public review period was extended by an additional seven days to ensure the full review period commenced upon posting. Accordingly, the IS/MND was available for public review from August 21 through September 17, 2026. Distribution included the State Clearinghouse, required public agencies, property owners within a 300-foot radius of the Project site, and interested parties. One comment was received from the State Department of Transportation (Caltrans) (Attachment 1, Exhibit C), In its letter, Caltrans expressed support for the City's efforts to provide additional housing opportunities and acknowledged the relationship between transportation and land use planning. Caltrans provided recommendations related to bicycle parking, pedestrian and bicycle connectivity, Complete Streets features, electric vehicle infrastructure, delivery and truck circulation, and construction traffic management. Caltrans did not identify any significant concerns regarding impacts on the State Highway System or request additional environmental analysis or mitigation measures. (Attachment 4, Exhibit A).

The IS/MND determined that the Project would not result in significant impacts to aesthetics, agricultural and forestry resources, air quality, energy, greenhouse gas emissions, hazards and hazardous materials, hydrology and water quality, land use and planning, mineral resources, noise, population and housing, public services, recreation, transportation, utilities and service systems, or wildfire. However, it identified potentially significant impacts to biological resources, cultural resources, tribal cultural resources, and geology and soils. With the implementation of mitigation measures, these impacts would be reduced to less than significant levels. The mitigation measures are detailed in the Mitigation Monitoring and Reporting Program (MMRP) (Attachment 1, Exhibit B) and have been incorporated into the Conditions of Approval (Attachment 4, Exhibit A) for the Project.

City Staff recommends that the City Council adopt the IS/MND and MMRP based on the findings set forth in the accompanying resolution. If the Project is approved, a Notice of Determination must be filed with the County Clerk and the State Clearinghouse within five working days of approval.

RESOLUTION NO. 2026-___

A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF ALISO VIEJO, CALIFORNIA, ADOPTING MITIGATED NEGATIVE DECLARATION AND A MITIGATION MONITORING AND REPORTING PROGRAM (CEQA-2026-01004) PURSUANT TO THE CALIFORNIA ENVIRONMENTAL QUALITY ACT FOR GENERAL PLAN AMENDMENT GPA-2026-01002, ZONE CHANGE ZC-2026-01001, SITE DEVELOPMENT PERMIT SDP-2026-01001, VESTING TENTATIVE TRACT MAP 19489, AND DEVELOPMENT AGREEMENT 2026-01002 TO ALLOW THE DEVELOPMENT OF A 58-UNIT RESIDENTIAL TOWNHOME COMMUNITY LOCATED AT 15 ARGONAUT (APN: 623-093-10 & 623-093-11).

WHEREAS, On April 15, 2026, Brandywine Acquisition Group, LLC ("Applicant") submitted a general plan amendment, zone change, vesting tentative tract map, site development permit, and a development agreement application to demolish an existing office building to accommodate the construction of a multi-family residential community at 15 Argonaut ("Project");

WHEREAS, pursuant to the California Environmental Quality Act (Public Resources Code, § 21000 et seq.) and the State CEQA Guidelines (California Code of Regulations, title 14, § 15000 et seq.) (Collectively, "CEQA"), the City is the lead agency for the proposed Project;

WHEREAS, in accordance with State CEQA Guidelines section 15063, the City prepared an Initial Study to analyze whether the proposed Project may cause a potentially significant effect on the environment;

WHEREAS, based on the information contained in the Initial Study, which concluded that the proposed Project could have potentially significant impacts but that those impacts could be reduced to less than significant levels with implementation of proposed mitigation measures, the City determined that a Mitigated Negative Declaration ("MND") should be prepared for the proposed Project;

WHEREAS, the Initial Study/Mitigated Negative Declaration (IS/MND) (State Clearinghouse Number [SCH] 2026080753) was prepared pursuant to CEQA and the State CEQA Guidelines;

WHEREAS, pursuant to CEQA, the City prepared a program for reporting on or monitoring the changes which it has either required in the proposed Project or made a condition of approval to mitigate or avoid potential significant environmental effects (the "Mitigation Monitoring and Reporting Program" or "MMRP");

WHEREAS, in accordance with State CEQA Guidelines sections 15072 and 15073, the IS/MND was circulated for public review beginning August 21, 2026 through September

17, 2026. However, because the Notice of Intent was not posted at the County Recorder's Office until August 28, 2026, the public review period was extended by an additional seven days to ensure the full review period commenced upon posting. Accordingly, the IS/MND was available for public review from August 21 through September 17, 2026;

WHEREAS, the City received one comment from the California Department of Transportation (Caltrans), which the City has reviewed and responded to;

WHEREAS, during the public review and comment period, copies of the IS/MND were available for review and inspection at the City of Aliso Viejo, Community Development Department and on the City's website;

WHEREAS, the City has reviewed the final IS/MND, and relevant information contained in the record regarding the Project, and determined that all legal prerequisites to the adoption of the resolution have been met;

WHEREAS, on September 15, 2026, the City gave public notice of the City Council public hearing for consideration of Mitigated Negative Declaration CEQA-2026-01004, General Plan Amendment GPA-2026-01002, Zone Change ZC-2026-01001, Vesting Tentative Tract Map 19489, Site Development Permit SDP-2026-01001 and Development Agreement DA-2026-01002 for the Project by publishing in a newspaper of general circulation; posting notices at City Hall and the Project site; and mailing notices to owners of property within 300 feet, to the project applicant, and to local agencies that provide water, sewage, electricity and schools;

WHEREAS, on October 7, 2026, the City Council held a public hearing as prescribed by law and considered written and verbal public testimony that was submitted prior to the hearing and during the hearing, and evidence and recommendations presented by staff in the agenda report and oral presentation;

WHEREAS, no comments made in the public hearing conducted by the City, and no additional information submitted to the City, have resulted in substantial new information requiring substantial revisions that would trigger recirculation of the IS/MND or additional environmental review of the proposed Project under State CEQA Guidelines section 15073.5; and

WHEREAS, all other legal prerequisites to the adoption of this Resolution have occurred.

NOW, THEREFORE, BE IT RESOLVED BY THE CITY COUNCIL OF THE CITY OF ALISO VIEJO AS FOLLOWS:

Section 1. **Incorporation of Recitals.** The City Council hereby finds and determines that all of the recitals set forth above are true and correct. The above recitals are hereby incorporated as substantive findings of this Resolution.

Section 2: **Compliance with CEQA.** The City Council has reviewed and considered the information contained in the IS/MND, comments received, and other documents contained in the administrative record for the Project. The City Council finds that the IS/MND has been completed in compliance with CEQA, the State CEQA Guidelines, and the City's Local CEQA Guidelines.

Section 3. **Findings.** Based on the whole record before it, including the IS/MND, the administrative record and all other written and oral evidence presented to the City Council, the City Council finds that all environmental impacts of the Project are either less than significant or can be mitigated to less than significant levels with the mitigation measures outlined in the IS/MND, and the Mitigation Monitoring and Reporting Program. The City Council finds that there is no substantial evidence in the administrative record supporting a fair argument that the Project may result in any significant environmental impact. The City Council finds that the IS/MND contains complete, objective, and accurate reporting of the environmental impacts associated with the Project and reflects the independent judgment and analysis of the City.

Section 4. **Adoption of The Mitigated Negative Declaration**. The City hereby approves and adopts the IS/MND, which is hereby attached to this Resolution as Exhibit "A."

Section 5. **Adoption of The Mitigation Monitoring And Reporting Program.** The City hereby adopts the MMRP, which is hereby attached to this Resolution as Exhibit "B." In the event of any inconsistencies between the mitigation measures as set forth in the IS/MND and the MMRP, the MMRP shall control.

Section 6. **Notice of Determination**. The City directs Staff to prepare, execute, and file a Notice of Determination with the County Clerk and the State Clearinghouse within five (5) working days of the passage and adoption of this Resolution.

Section 7: **Location of Documents.** The administrative record for the Project is maintained at City Hall located at 12 Journey, Suite 100, Aliso Viejo, CA 92656. The custodian of records is the City Clerk.

Section 8. **Execution of Resolution**. The Mayor shall sign this Resolution, and the City Clerk shall attest and certify to the passage and adoption thereof.

PASSED, APPROVED AND ADOPTED this 7th day of October 2026.

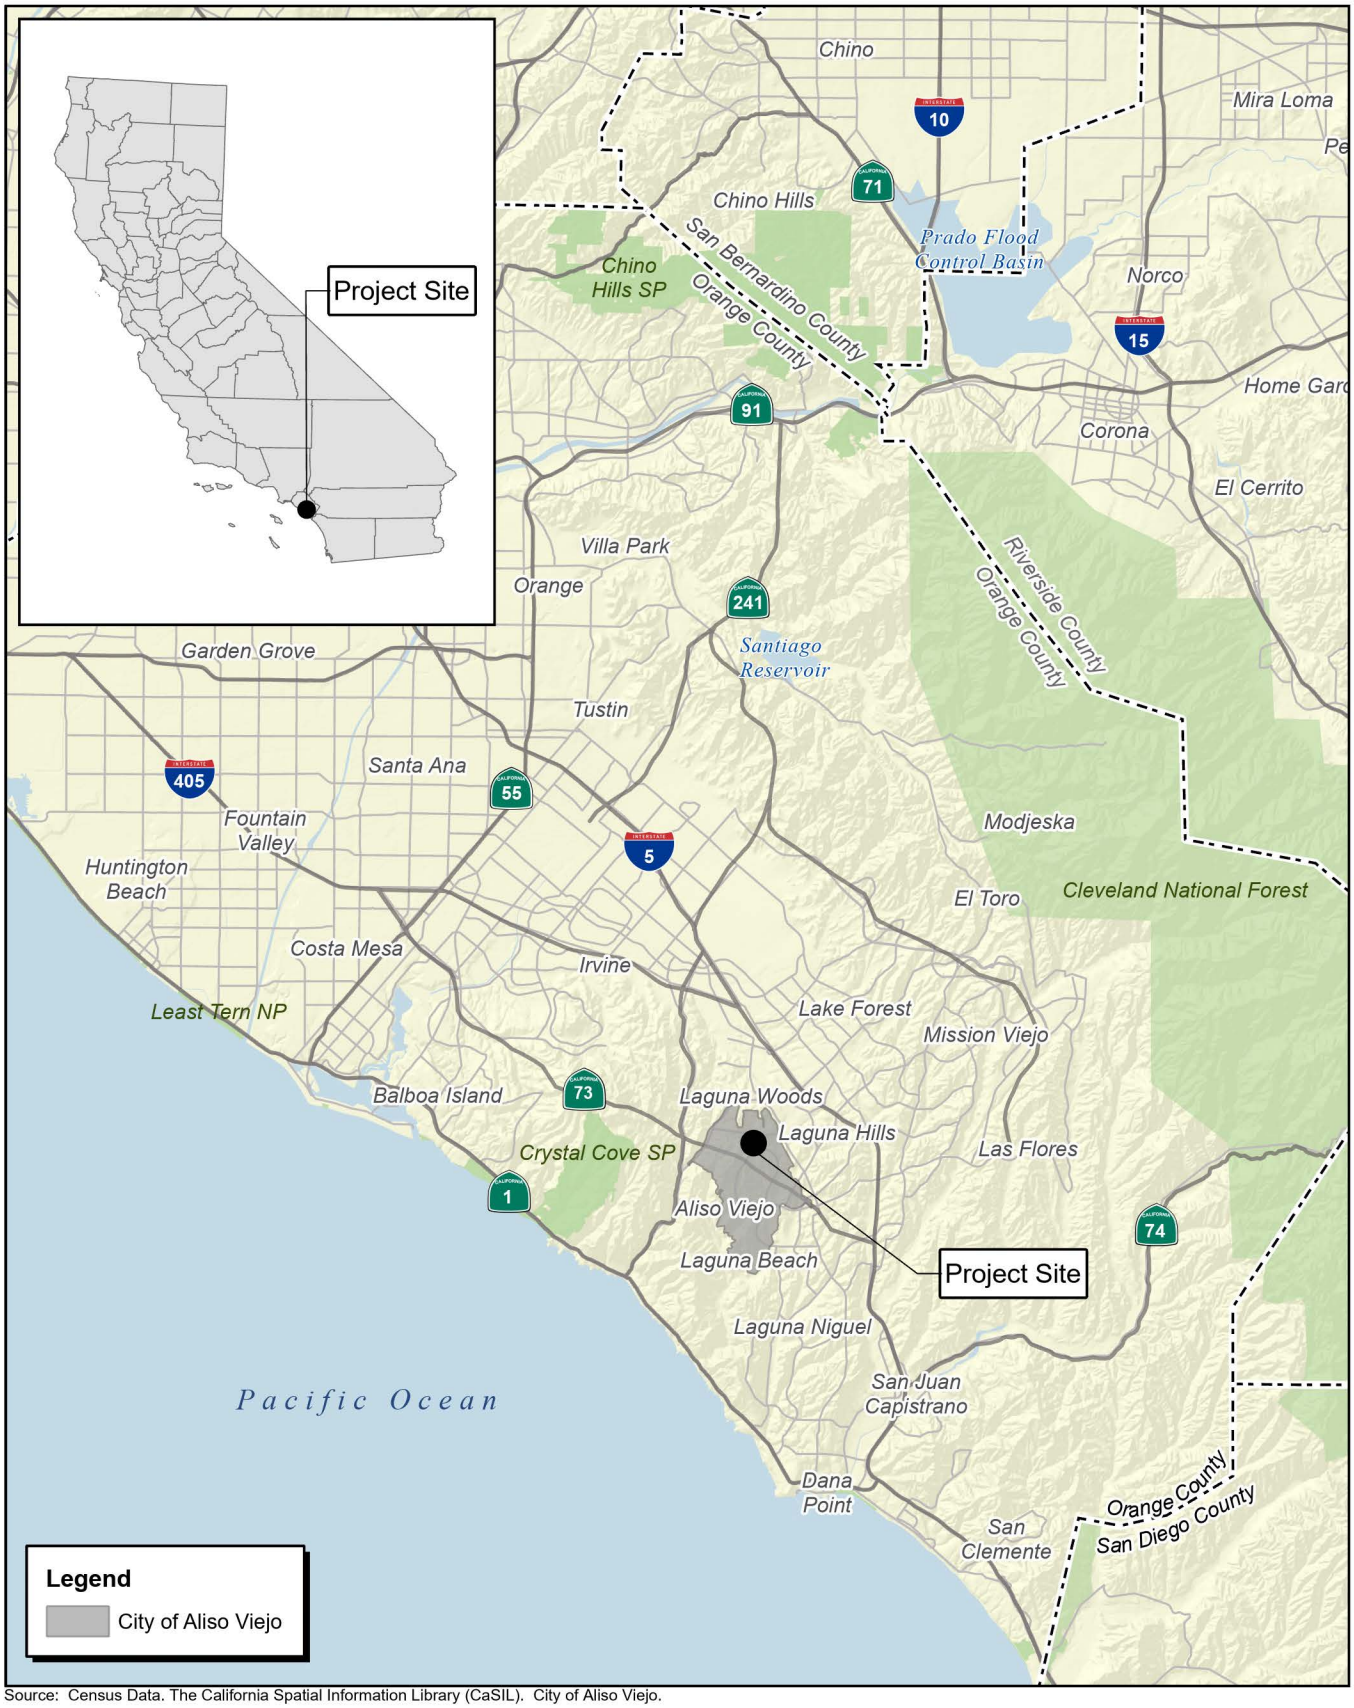
1 - INTRODUCTION AND PROJECT DESCRIPTION

1.1 - Purpose

The purpose of this Draft Initial Study/Mitigated Negative Declaration (Draft IS/MND) is to identify any potential environmental impacts that would result from implementation of the 15 Argonaut Project (proposed project) in the City of Aliso Viejo, California. Pursuant to California Environmental Quality Act (CEQA) Guidelines Section 15367, the City of Aliso Viejo (City) has discretionary authority over the proposed project and is the Lead Agency in the preparation of this Draft IS/MND and any additional environmental documentation required for the project.

The remainder of this section provides a brief description of the project location and the primary project characteristics. Section 2 includes an environmental checklist that provides an overview of the potential impacts that may result from project implementation, elaborates on the information contained in the environmental checklist, and provides justification for each checklist response. Feasible mitigations are analyzed to reduce all impacts to below a level of significance. Section 3 contains the List of Preparers.



1.2 - Project Location

The project site is located at 15 Argonaut, in the City of Aliso Viejo, in Orange County, California (see Exhibit 1) at the southeast corner of Glenwood Drive and Aliso Creek Road. The approximately 4.4-acre project site consists of two parcels (Assessor's Parcel Number [APN] 623-093-10 and 623-093-11). As shown in Exhibit 1, the project site is located in the northern portion of the City. Regional access to the project site is from Interstate 5 (I-5) via the El Toro Road exit and from State Route (SR) 73 via the Glenwood Drive exit.

1.3 - Environmental Setting

The project site is currently developed with an office building and a paved surface parking lot surrounding the building (Exhibit 2). The office building is approximately 41,519 square feet and 30 feet tall and currently unoccupied. The project site is relatively flat, with the exception of the northern and western portions of the project site, which include landscaped slopes ascending toward Glenwood Drive and Aliso Creek Road. Vehicular access is currently provided via a driveway at the southeastern corner of the site on Argonaut. Access to Argonaut is provided from Glenwood Drive and Aliso Creek Road.

1.4 - Project Description

1.4.1 - Land Use Designation and Zoning

The City of Aliso Viejo General Plan (General Plan) designates the project site as Business Park (Exhibit 3).[1] As shown in Exhibit 3, adjacent to the western border of the project site is land designated as Open Space. No changes are proposed that would change or affect the area designated as Open Space. The proposed project applicant requests a General Plan Amendment (GPA) to change the General Plan land use designation from Business Park to Medium-Density Residential (MDR). The MDR land use designation is intended to provide residential development with a density between 8 and 18 dwelling units per gross acre (du/acre), with an average density of 12 du/acre.[2]

The project site is currently zoned Business Park-2 (Exhibit 4). The proposed project applicant requests a rezone to change the designation from Business Park-2 to Residential–Medium Density (RM) District. The RM zoning district is intended to provide for the development and preservation of medium density neighborhoods containing detached and attached single-family homes on smaller lots, duplexes, townhomes, apartments, and condominiums (Aliso Viejo Municipal Code [Municipal Code] Chapter 15.10). Each project is required to have ample common open space and recreational facilities. The maximum density is 18 du/acre.[3]

1.4.2 - Surrounding Land Uses

North

- Existing Land Uses: Glenwood Drive and single-family residential community
- General Plan Land Use Designation: Very Low Density Residential and High Density Residential
- Zoning: Specific Plan – Glenwood

South

- Existing Land Uses: Argonaut and multi-tenant office buildings
- General Plan Land Use Designation: Business Park
- Zoning: Business Park-2

THIS PAGE INTENTIONALLY LEFT BLANK

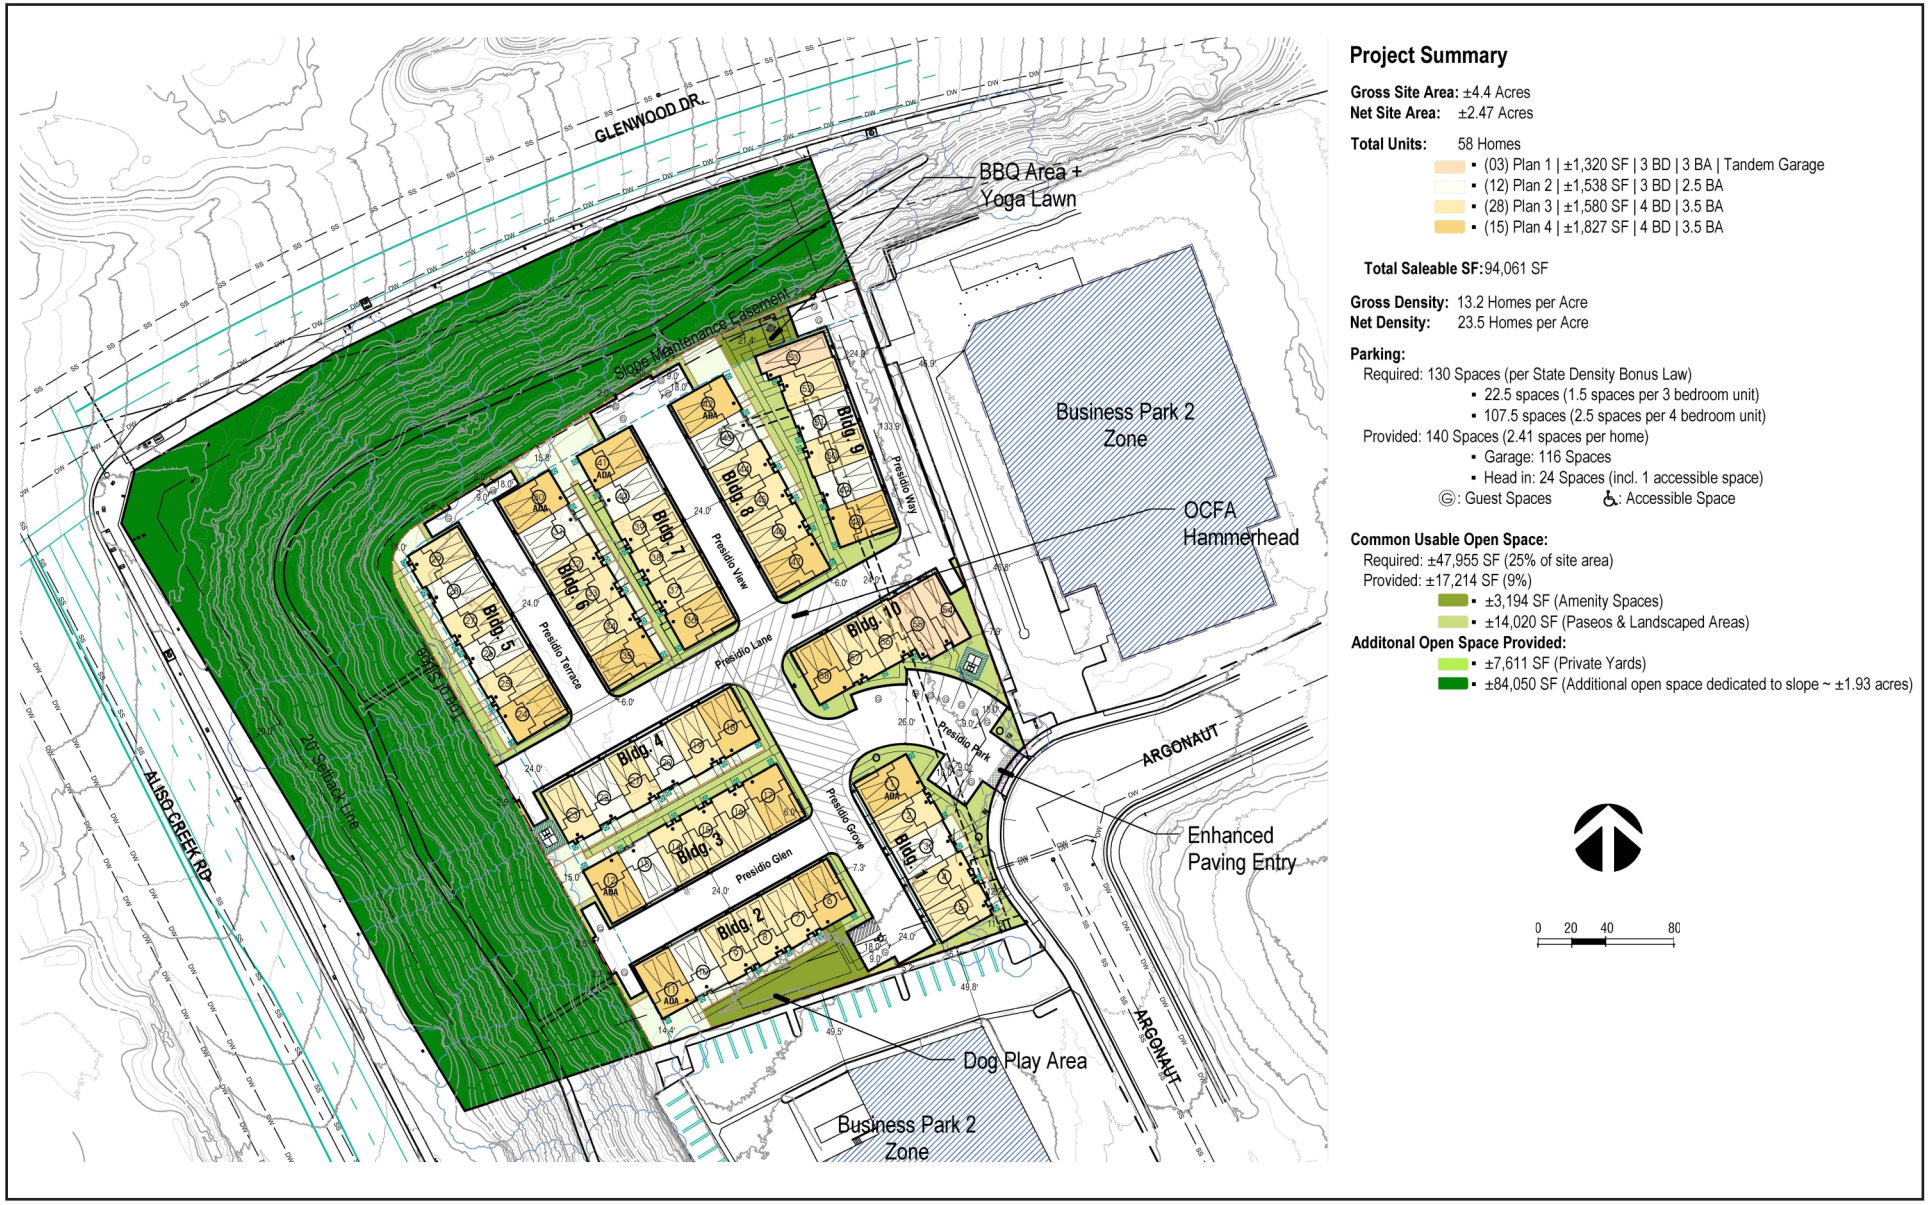
Brandywine Homes (applicant) proposes to demolish the existing approximately 41,519-square-foot two-story office building, the existing parking lot, and associated landscaping and develop a new residential infill community consisting of 58 3-story townhomes within 10 buildings. The proposed project's density would be 13.2 du/acre, which would comply with the maximum density allowed by the MDR land use designation (18 du/acre). The townhomes would range in size from approximately 1,320 to 1,827 square feet and would offer an array of three- and four-bedroom floorplans (Exhibit 5).

The townhomes would be a maximum height of 36 feet (Exhibit 6) and would have a total building square footage of 94,061 square feet and a total building footprint of 44,924 square feet.

Five different architectural building types, two different types of 5-plex buildings and three different types of 6-plex buildings each include their own color scheme to create variety within the community. Every home is designed to feature an individual entry front door and oversized decks to reinforce the strong indoor-outdoor lifestyle of the City. The color schemes include terracotta-colored roof tiles, with earth-tone palette trim accents such as browns and blues.



The existing screening trees along the western and northern perimeters of the project site would be preserved. During project site grading, existing ornamental landscaping and trees located within the interior developed areas would be removed. Nearly all trees removed by the proposed project would be replaced.

The proposed project would include private roadways and parking, pedestrian walkways, landscaping, and recreational amenity areas.

The proposed project would also include 5 percent deed-restricted affordable homes (three very-low-income homes), and, accordingly, the applicant seeks the following concessions and waivers pursuant to the State's Density Bonus Law:

- Open space concession
  - Reduction of required open space from 25 percent of total site area (Municipal Code Section 15.10.030 residential development standards) to 9 percent.
- Parking standard concession
  - Provide 140 parking spaces, which is below the 145 parking spaces required pursuant to the Municipal Code, but exceeds the 130 parking spaces required under the State's Density Bonus Law.
- Maximum building height waiver
  - Increase building height from 35 feet to 36 feet.
- Minimum perimeter setbacks waiver
  - Reduction of perimeter setbacks from the required 20 feet to a range of five feet and 14.9 feet in certain locations.
- Minimum boundary landscaping waiver
  - Modification of landscaping boundaries from a minimum of 15 feet (20 feet average) to:
    - greater than 20 feet along the majority of the project site boundary; and
    - five feet in areas where perimeter setbacks are reduced.

THIS PAGE INTENTIONALLY LEFT BLANK

Project Summary

Gross Site Area: ±4.4 Acres
Net Site Area: ±2.47 Acres

Total Units: 58 Homes
- (03) Plan 1 | ±1,320 SF | 3 BD | 3 BA | Tandem Garage
- (12) Plan 2 | ±1,538 SF | 3 BD | 2.5 BA
- (28) Plan 3 | ±1,580 SF | 4 BD | 3.5 BA
- (15) Plan 4 | ±1,827 SF | 4 BD | 3.5 BA

Total Saleable SF: 94,061 SF

Gross Density: 13.2 Homes per Acre
Net Density: 23.5 Homes per Acre

Parking:
Required: 130 Spaces (per State Density Bonus Law)
- 22.5 spaces (1.5 spaces per 3 bedroom unit)
- 107.5 spaces (2.5 spaces per 4 bedroom unit)

Provided: 140 Spaces (2.41 spaces per home)
- Garage: 116 Spaces
- Head in: 24 Spaces (incl. 1 accessible space)

Ⓖ: Guest Spaces ♿: Accessible Space

Common Usable Open Space:
Required: ±47,955 SF (25% of site area)
Provided: ±17,214 SF (9%)
- ±3,194 SF (Amenity Spaces)
- ±14,020 SF (Paseos & Landscaped Areas)

Additonal Open Space Provided:
- ±7,611 SF (Private Yards)
- ±84,050 SF (Additional open space dedicated to slope ~ ±1.93 acres)

Parking and Circulation

Vehicles would access the project site via the existing driveway located at the southeastern corner of the project site along Argonaut. An internal private roadway system would provide access to each unit's parking garage as well as to guest parking spaces that would be distributed throughout the site. The proposed project has been designed to comply with applicable emergency service provider access standards, including fire department access, turning radii (an inner radius of 20 feet and outer radius of 49 feet), and emergency response requirements. Pedestrians would circulate within the site via proposed internal pedestrian walkways and sidewalks.

The proposed project would have 140 on-site parking spaces, consisting of 116 spaces within garages (two per unit) and 24 guest spaces (including one Americans with Disabilities Act [ADA]-accessible stall). Accordingly, the proposed parking spaces would exceed the parking ratio requirement of 130 total parking spaces pursuant to a concession in accordance with the State Density Bonus Law.

Open Space and Landscaping

The proposed project would include 17,214 square feet of common usable open space, which would include amenities such as a dog play area, a community garden, a recreation/yoga lawn, and a barbeque area with an accompanying shade structure. The proposed dog play area would be enclosed with a 4-foot-high steel fence. Additionally, the proposed project would include approximately 7,611 square feet of private yard areas associated with individual residential units.

The proposed project also includes approximately 84,050 square feet of existing open space located on the northern and western portions of the site that would be preserved as part of the proposed project. These preserved areas consist of steeply sloped terrain and are intended to remain in a natural, undeveloped condition for visual buffering and site design purposes. Because these areas do not meet the City's definition of usable open space, they do not count toward the Municipal Code's minimum open space requirement.

The Municipal Code requires usable open space to equal 25 percent (approximately 47,955 square feet) of the total site area (approximately 191,664 square feet).[4] The proposed project would include 17,214 square feet of common open space, representing approximately 9 percent of the total site area. Accordingly, the project applicant is requesting an open space concession pursuant to the State Density Bonus Law.

For informational purposes, the proposed common open space and private yards, when combined with the preserved existing open space areas, would total approximately 108,875 square feet of open space on the project site.

[4] The project site is 4.40 acres in size (approximately 191,664 square feet). Twenty-five percent of the total site is, therefore, approximately 47,955 square feet.

Along the eastern and southern perimeter of the project site, a 5-foot-9-inch wall is proposed. Two monument signage features would be installed at the entrance of the community that would be 7 feet 6 inches high.

The proposed project includes a comprehensive landscape plan featuring substantial streetscape and perimeter planting areas, internal landscaped paseos, private yard landscaping, and enhanced entry features. Landscaping will consist of a variety of canopy, ornamental, and screening trees, along with drought-tolerant shrubs, groundcovers, grasses, and vines designed to enhance the visual character of the community while supporting water-efficient design principles. Landscape screening would be provided around walls, utilities, and project site boundaries, including evergreen hedges and ornamental planting areas.

Infrastructure and Utilities

Water service is currently provided by Moulton Niguel Water District (MNWD).[5] The proposed project would connect to existing water lines within Argonaut.

Wastewater is collected via the MNWD's wastewater collection system and is sent to its Regional Treatment Plant in Laguna Niguel.[6] The proposed project would connect to existing sanitary sewer lines within Argonaut.

The project site is currently served by existing storm drain infrastructure located within the adjacent public rights-of-way along Argonaut and the surrounding street network. The proposed project would incorporate an on-site stormwater collection system consisting of catch basins, underground storm drain lines, and water quality treatment facilities such as a biotreatment system designed to convey and manage runoff generated by the project. Runoff would be collected from rooftops, drive aisles, parking areas, and landscaped areas and directed through the proposed drainage system prior to discharge to the existing public storm drain network.

Additionally, the proposed project would install a fire hydrant consistent with fire flow requirements, in accordance with California Fire Code guidelines stipulated in Municipal Code Chapter 13.04, Fire Regulations, and would connect to existing water lines.

Each of the 58 townhomes would be solar-powered and all-electric.

Construction

Construction is anticipated to begin in March 2027 and would be completed by November 2028. Construction is anticipated to occur across five phases: Model Phase (Building 1 and access driveway), Phase 1 (Buildings 2 and 3), Phase 2 (Buildings 4, 5, and 6), Phase 3 (Buildings 7 and 8),

[5] Moulton Niguel Water District (MNWD). 2026. Serving South Orange County Since 1960. Website: https://www.mnwd.com/servicearea/. Accessed April 10, 2026.

[6] Moulton Niguel Water District (MNWD). 2026. Wastewater Collection and Treatment. Website: https://www.mnwd.com/wastewater-treatment/. Accessed April 10, 2026.

and Phase 4 (Buildings 9 and 10). It is anticipated that project construction would maintain the existing grades as close as possible and result in approximately 473 cubic yards of soil export.

1.5 - Required Approvals

The City of Aliso Viejo has discretionary authority over the proposed project and is the CEQA Lead Agency for the preparation of this Draft IS/MND. In order to implement the proposed project, the applicant would need to secure the following permits/approvals:

- **General Plan Amendment** to change the land use designation from Business Park to MDR (density of up to 18 du/acre).
- **Rezone** to change the zoning from Business Park-2 to RM (density of up to 18 du/acre).
- **Vesting Tentative Tract Map (VTTM)** for construction of 58 residential townhomes.
- **Site Development Permit and Development Agreement** for building construction.
- **Concessions and Waivers** pursuant to the State's Density Bonus Law:
  - Open space concession
  - Parking standard concession
  - Maximum building height waiver
  - Minimum perimeter setbacks waiver
  - Minimum boundary landscaping waiver

Additionally, ministerial permits would be required to implement the proposed project.

1.6 - Intended Uses of This Document

This Draft IS/MND has been prepared to determine the appropriate scope and level of detail required in completing the environmental analysis for the proposed project. This document will also serve as a basis for soliciting comments and input from members of the public and public agencies regarding the proposed project.

The Draft IS/MND will be circulated for a minimum of 20 days, during which comments concerning the analysis contained in the Draft IS/MND should be sent to:

2 - ENVIRONMENTAL CHECKLIST AND ENVIRONMENTAL EVALUATION

Environmental Factors Potentially Affected					
The environmental factors checked below would be potentially affected by this project, involving at least one impact that is a "Potentially Significant Impact" as indicated by the checklist on the following pages.					
☐	Aesthetics	☐	Agriculture and Forestry Resources	☐	Air Quality
☒	Biological Resources	☒	Cultural Resources	☐	Energy
☒	Geology and Soils	☐	Greenhouse Gas Emissions	☒	Hazards and Hazardous Materials
☐	Hydrology and Water Quality	☐	Land Use and Planning	☐	Mineral Resources
☐	Noise	☐	Population and Housing	☐	Public Services
☐	Recreation	☐	Transportation	☒	Tribal Cultural Resources
☐	Utilities and Services Systems	☐	Wildfire	☒	Mandatory Findings of Significance

Environmental Determination

On the basis of this initial evaluation:

☐ I find that the proposed project COULD NOT have a significant effect on the environment, and a NEGATIVE DECLARATION will be prepared.

☒ I find that although the proposed project could have a significant effect on the environment, there will not be a significant effect in this case because revisions in the project have been made by or agreed to by the project proponent. A MITIGATED NEGATIVE DECLARATION will be prepared.

☐ I find that the proposed project MAY have a significant effect on the environment, and an ENVIRONMENTAL IMPACT REPORT is required.

☐ I find that the proposed project MAY have a "potentially significant impact" or "potentially significant unless mitigated" impact on the environment, but at least one effect 1) has been adequately analyzed in an earlier document pursuant to applicable legal standards, and 2) has been addressed by mitigation measure based on the earlier analysis as described on attached sheets. An ENVIRONMENTAL IMPACT REPORT is required, but it must analyze only the effects that remain to be addressed.

☐ I find that although the proposed project could have a significant effect on the environment, because all potentially significant effects (a) have been analyzed adequately in an earlier EIR or NEGATIVE DECLARATION pursuant to applicable standards, and (b) have been avoided or mitigated pursuant to that earlier EIR or NEGATIVE DECLARATION, including revisions or mitigation measures that are imposed upon the proposed project, nothing further is required.

Date: 8/18/2026 Signed: 

Environmental Issues	Potentially Significant Impact	Less than Significant Impact with Mitigation Incorporated	Less than Significant Impact	No Impact
2.1 Aesthetics *Except as provided in Public Resources Code Section 21099, would the project:*				
a) Have a substantial adverse effect on a scenic vista?	☐	☐	☐	☒
b) Substantially damage scenic resources, including, but not limited to, trees, rock outcroppings, and historic buildings within a State Scenic Highway?	☐	☐	☐	☒
c) In non-urbanized areas, substantially degrade the existing visual character or quality of public views of the site and its surroundings? (Public views are those that are experienced from publicly accessible vantage points.) If the project is in an urbanized area, would the project conflict with applicable zoning and other regulations governing scenic quality?	☐	☐	☐	☒
d) Create a new source of substantial light or glare which would adversely affect day or nighttime views in the area?	☐	☐	☒	☐

Environmental Evaluation

Setting

The General Plan Conservation/Open Space Element identifies the hillsides, ridgelines, canyons, and view corridors as the primary aesthetic resources in the City. Canyon views and scenic highways are examples of scenic qualities, as defined by the General Plan, benefiting the community. Architectural and landscaping design guidelines complement the natural setting, enhancing the City's unique visual character.[7] Public and private portions of the City bordering the Aliso and Woods Canyons are situated with highly valued viewsheds or scenic overlooks of the canyons.

[7] City of Aliso Viejo. 2004. Alisa Viejo General Plan, Conservation/Open Space Element. Website: https://avcity.org/DocumentCenter/View/394/Conservation--Open-Space-Element-PDF. Accessed April 10, 2026.

In addition, several City roadways have been designated by the County of Orange Master Plan of Scenic Highways as having scenic qualities worth preserving. These roadways are classified as Viewscape Corridors or Landscape Corridors.[8] Additional scenic amenities, such as golf courses, also provide visual relief from the built environment and are important visual amenities and landmarks.

The project site is relatively flat, with the exception of the northern and western portions of the project site which include landscaped slopes ascending toward Glenwood Drive and Aliso Creek Road. The project site is currently developed with a 2-story office building. Surrounding uses include commercial uses and Brookline Park to the west across Aliso Creek Road, and residential uses to the north across Glenwood Drive. As such, the project site's existing visual character is a combination of urban and suburban uses. Views from the project site are primarily of landscaping and existing development within the immediate area which include Argonaut and parking lots associated with the office buildings to the south and east. Views beyond the project site to the north and west are largely screened by landscaped slopes and changes in elevation. Although distant hillsides are visible from Glenwood Community Park north of the site, they are not visible from the project site due to existing topography.

Existing sources of light and glare include streetlights and lighting on the interiors and exteriors of existing and surrounding buildings as well as vehicle headlights and traffic signals. Landscaping along both sides of Glenwood Drive, Argonaut, and the project site's western boundary along Aliso Creek Road provides shielding from light and glare on-site.

Would the project:

a) Have a substantial adverse effect on a scenic vista?

No impact. The City does not designate any specific scenic vistas; however, it identifies hillsides, ridgelines, canyons, canyon views, and view corridors as the primary aesthetic resources in the City and states that the Aliso and Woods Canyons have viewsheds or scenic overlooks of the canyons. The project site is in the northern portion of the City, approximately 1.53 miles east of the hillside and canyon area. Because of the distance and intervening development and topography, the project site cannot be seen from the hillsides and canyon areas or from the Aliso Viejo Country Club, nor does the project site have views of these areas.

General Plan Policy COS-4.1 aims to protect scenic landform features such as hillsides, ridgelines, canyons, and view corridors through designation of key areas as open space and use of other land use planning tools. Existing topography, mature landscaping, and surrounding development substantially limit views of these scenic resources from the project site. While intermittent long-range views of surrounding hillsides may be available from portions of Glenwood Drive, Aliso Creek Road, and nearby public open space areas, the project site itself does not provide prominent public viewpoints of scenic hillsides, ridgelines, or canyons. The proposed project would replace an existing office development with residential buildings that would not exceed 36 feet in height and would

[8] City of Aliso Viejo. 2004. Aliso Viejo General Plan, Conservation/Open Space Element. Website: https://avcity.org/DocumentCenter/View/394/Conservation--Open-Space-Element-PDF. Accessed April 10, 2026.

remain consistent with the scale of surrounding development similar to the newly approved residential townhomes at 95 Argonaut and the existing townhomes north of Glenwood Drive. As a result, the proposed development would not substantially obstruct or degrade publicly available views of scenic hillsides, ridgelines, canyons, view corridors, or the Aliso Creek landscape corridor from adjacent public roadways or other public viewing areas. Existing topography and intervening development would continue to limit views from the project site while preserving available public views of surrounding scenic resources from Glenwood Drive, Aliso Creek Road, and nearby open space areas. Accordingly, the proposed project would not substantially alter or impede views of surrounding hillsides or the Aliso Creek landscape corridor, would not conflict with General Plan Policy COS-4.1, and would not obstruct publicly available scenic views. Therefore, no impact would occur.

b) Substantially damage scenic resources, including, but not limited to, trees, rock outcroppings, and historic buildings within a State Scenic Highway?

No impact. The nearest designated State Scenic Highway is SR-91, approximately 18.34 miles north of the project site.[9] A portion of SR-1, approximately 4.8 miles southwest of the project site, is identified as being eligible for listing.[10] Because of the project site's distance from that section of SR-1 and from SR-91, as well as the varying topography of the area and intervening development, the project site is not visible from SR-1 or SR-91. Therefore, the proposed project would not damage any scenic resources within a scenic highway and no impact would occur.

c) In non-urbanized areas, substantially degrade the existing visual character or quality of public views of the site and its surroundings? (Public views are those that are experienced from publicly accessible vantage points). If the project is in an urbanized area, would the project conflict with applicable zoning and other regulations governing scenic quality?

No impact. The project site is located in an urbanized area and is currently developed with an existing office building and parking lot. As such, this discussion focuses on zoning and other regulations governing scenic quality. The General Plan and Zoning Ordinance define the permitted land uses and the corresponding development standards within the City. The project site currently has a General Plan Land Use Designation of Business Park. The proposed project would require a GPA to amend the land use designation from Business Park to MDR. The proposed project would be consistent with the MDR land use designation's maximum density of 18 du/acre.

The project site is currently zoned as Business Park-2. The proposed project would require a rezone to amend the zoning of Business Park-2 to RM. The RM zone is intended to provide for the development and preservation of medium density neighborhoods containing detached and attached single-family homes on smaller lots, duplexes, townhomes, apartments, and condominiums (Municipal Code Chapter 15.10). Additionally, the RM zone is intended to provide residential

[9] California Department of Transportation (Caltrans). 2026. State Scenic Highways. Website: https://dot.ca.gov/programs/design/lap-landscape-architecture-and-community-livability/lap-liv-i-scenic-highways. Accessed April 10, 2026.

[10] Ibid.

development with a density between 8 and 18 du/acre, with an average density of 12 du/acre.[11] In conjunction with the proposed GPA to MDR, pursuant to the RM zoning district, the proposed project would be subject to the RM zoning development standards.

The proposed project would comply with all Municipal Code requirements related to scenic quality, such as Chapter 15.62, Design Standards, which sets out design standards for development within the City and subjects the proposed project to a development review process to ensure the project design is consistent with adopted design guidelines.

The proposed project includes several concessions and waivers pursuant to State Density Bonus Law, including an open space concession, parking standard concession, maximum building height waiver, minimum perimeter setback waiver, and minimum boundary landscaping waiver.

Specifically, as discussed in the Project Description, the proposed project would provide 9 percent common open space compared to the 25 percent otherwise required by the Municipal Code, 140 parking spaces instead of 145 spaces, increase the maximum building height from 35 feet to 36 feet, reduce perimeter setbacks from 20 feet to as little as 5 feet in limited locations, and modify boundary landscaping widths to 5 feet and 20 feet in limited locations.

Despite these modifications, the proposed project would retain substantial open space within preserved slope areas, incorporate new landscaped paseos, private yards, and common amenity areas, and maintain perimeter landscaping exceeding 20 feet along most of the project site boundary. In addition, the proposed one-foot increase in building height would not alter the visual profile of the surrounding development. The five-space reduction in parking would not affect scenic quality because parking would continue to be accommodated on-site and the reduction would not substantially alter the site's visual appearance. The five-space reduction in parking would not affect or alter scenic quality on-site because parking would continue to be accommodated on-site with attached garages and guest parking. Accordingly, the proposed parking spaces would exceed the parking ratio requirement of 130 total parking spaces pursuant to a concession in accordance with the State Density Bonus Law. The reduced setbacks and landscaping areas would be limited to select portions of the site and would not disrupt the existing visual character of the surrounding urbanized area. Consequently, the requested concessions and waivers would not substantially degrade scenic quality, obstruct public views, or adversely affect the visual character of the surrounding area.

Furthermore, the retained screening trees along the northern and western boundaries would continue to provide an established vegetated buffer between the project site and surrounding roadways and development. These mature trees currently soften views of the project site, screen portions of the existing office building, and contribute to the landscaped character of the area. Because the perimeter screening trees would be retained, public views from Glenwood Drive, Aliso Creek Road, and adjacent properties would continue to include substantial mature vegetation in the foreground. Maintaining the existing visual screening features would reduce the visibility of the proposed

[11] City of Aliso Viejo. 2004. City of Aliso Viejo General Plan, Land Use Element. Website: https://avcity.org/DocumentCenter/View/391/Land-Use-Element-PDF. Accessed April 10, 2026.

residential buildings and help maintain the site's existing visual character despite the proposed reductions in setbacks and landscaping widths in limited areas. Accordingly, the proposed project would not substantially degrade visual character or scenic resources and would remain consistent with the intent of applicable scenic quality policies and design standards.

Furthermore, the proposed project would not conflict with any General Plan policies related to scenic quality, including General Plan Policy COS-4.1 and Policy COS-4.2, which protect scenic landforms such as hillsides, ridgelines, and canyons and encourage high-quality architectural and landscaping design. The proposed project would be located on a previously developed site and would not impact any scenic landforms. As previously mentioned, the proposed project would include a 20-foot setback along its northern and western boundaries, minimizing impacts to scenic resources along Aliso Creek Road, a designated landscape corridor. The existing screening trees along the western and northern perimeters of the project site would be preserved. The proposed project would also be designed with a refined architectural style tailored to reinforce the City's indoor-outdoor lifestyle, complementing the community's existing visual character pursuant to General Plan Policy COS-4.2.

The residential buildings would incorporate stucco façades, concrete tile roofs, decorative shutters, articulated building elevations, and complementary earth-tone materials and colors characteristic of existing residential development in Aliso Viejo. The site design also includes landscaped paseos, private yards, amenity areas, and substantial open space along the preserved slope areas, which would enhance visual quality and reinforce the project's integration with the surrounding environment. The proposed architectural design and materials would be subject to the City's design review process pursuant to Chapter 15.62 of the Municipal Code, ensuring consistency with adopted design guidelines. As such, the proposed project would not conflict with applicable zoning and other regulations pertaining to scenic quality, and no impacts would occur.

d) Create a new source of substantial light or glare which would adversely affect day or nighttime views in the area?

Less than significant impact. The project site is currently developed and located in an urbanized area with existing light sources, which include streetlights and lighting on the interiors and exteriors of existing and surrounding buildings, as well as vehicle headlights and traffic signals. The existing building on-site contains sources of light and glare, including indoor and outdoor lighting, reflective surfaces, and headlights from vehicles in the parking lot.

The proposed project would generate lighting from two primary sources: lighting from the building interiors that would pass through windows and lighting from exterior sources (e.g., street lighting, parking area lighting, building illumination, security lighting, and landscape lighting). The proposed lighting would be typical of residential developments. The proposed development would replace current existing sources of light and glare with new high-quality development and lighting. The proposed project's lighting would be similar to existing residential development in the area and would not substantially increase sources of light as compared to the existing uses on the project site.

No nighttime construction is proposed, and construction activities would be subject to regulations set forth by the City's Building and Safety Department, which restricts construction activities to between the hours of 7:00 a.m. and 8:00 p.m.[12] Therefore, the proposed project would not require construction lighting, except security and safety lighting.

The City's Building and Safety Department would review any proposed lighting to ensure conformance with the latest version of the California Building Standards Code (CBC), Title 24, as well as the California Green Building Standards Code (CALGreen) (California Code of Regulations [CCR] Title 24, Part 11). The proposed project would comply with all applicable design standards for outdoor lighting stipulated in Municipal Code Section 15.62.070, Outdoor Lighting, including those for the height limitations, lighting intensity and spillover, light fixture design, building illumination, and outdoor lighting for parks and playfields. In accordance with Municipal Code Section 15.62.070, low-height lighting would be used whenever possible for pedestrian areas and light fixture design would be designed to harmonize with and enhance the character of the proposed project. Although the proposed project would replace the existing office building with new residential buildings that would introduce new light sources, the surrounding area is urban and already illuminated and the proposed lighting conditions would be similar to those currently used on the project site and surrounding the project site. The proposed project would incorporate shielded wall-mounted fixtures, pedestrian-scale lighting, and limited pole-mounted lighting designed to illuminate building entrances, walkways, private streets, and parking areas. Consistent with the Municipal Code, CBC, and CALGreen, lighting would be directed toward on-site activity areas and illumination levels would decrease at the project boundaries, demonstrating that light spill onto adjacent properties would be avoided.

Sunlight or artificial light reflecting from finished surfaces such as window glass or other reflective materials can cause reflected light (glare). Buildings constructed of highly reflective materials from which the sun reflects at a low angle commonly cause adverse glare. The proposed project does not include use of materials known to cause glare such as mirrored/reflective glass. Furthermore, the proposed project's lighting would be similar to the existing residential uses to the north and would not substantially increase sources of light as compared to the existing uses on the site. Additionally, the topography of the project site, existing screening trees on the northern and western boundaries of the project site, and landscaping within the project site, combined with existing landscaping in the area, would help shield adjacent residential areas from sources of light and glare. Therefore, impacts would be less than significant.

Mitigation Measures

None required.

[12] City of Aliso Viejo. 2026. Building & Safety. Website: https://avcity.org/154/Building-Safety. Accessed April 10, 2026.

Environmental Issues	Potentially Significant Impact	Less than Significant Impact with Mitigation Incorporated	Less than Significant Impact	No Impact
2.2 Agriculture and Forestry Resources *In determining whether impacts to agricultural resources are significant environmental effects, lead agencies may refer to the California Agricultural Land Evaluation and Site Assessment Model (1997) prepared by the California Dept. of Conservation as an optional model to use in assessing impacts on agriculture and farmland. In determining whether impacts to forest resources, including timberland, are significant environmental effects, lead agencies may refer to information compiled by the California Department of Forestry and Fire Protection regarding the State's inventory of forest land, including the Forest and Range Assessment Project and the Forest Legacy Assessment project; and forest carbon measurement methodology provided in Forest Protocols adopted by the California Air Resources Board.* *Would the project:*				
a) Convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (Farmland), as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency, to nonagricultural use?	☐	☐	☐	☒
b) Conflict with existing zoning for agricultural use, or a Williamson Act Contract?	☐	☐	☐	☒
c) Conflict with existing zoning for, or cause rezoning of, forest land (as defined in Public Resources Code Section 12220(g)), timberland (as defined by Public Resources Code Section 4526), or timberland zoned Timberland Production (as defined by Government Code Section 51104(g))?	☐	☐	☐	☒
d) Result in the loss of forest land or conversion of forest land to non-forest use?	☐	☐	☐	☒

Farmland, to nonagricultural use or conversion of forest land to non-forest use?				

Environmental Evaluation

Setting

The General Plan currently designates the project site as Business Park (Exhibit 3). The proposed project requests a GPA to change the General Plan land use designation from Business Park to MDR. The MDR land use designation is intended for residential uses and does not include agricultural or forestry uses.

The project site is currently zoned Business Park-2 (Exhibit 4). The proposed project requests a rezone to change the zoning designation from Business Park-2 to RM. The RM zoning district is intended to provide for residential uses and does not include agriculture or forestry uses.

The project site is mapped as Urban and Built-up Land by the California Department of Conservation's Farmland Mapping and Monitoring Program (FMMP).[13] Urban and Built-up Land is a nonagricultural land use designation.[14] The project site was historically undeveloped until 1963, when a single road traversed the site, and by 1989, an office building was developed on the project site.[15]

Would the project:

a) Convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (Farmland), as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency, to nonagricultural use?

No impact. The project site is mapped as "Urban and Built-up Land" by the California Department of Conservation's FMMP, which is a nonagricultural land use designation. There is no Prime Farmland, Unique Farmland, or Farmland of Statewide Importance on or near the project site. The nearest designated farmland is Prime Farmland and Unique Farmland located 2.70 miles north of the project

[13] Department of Conservation. 2026. California Important Farmland Finder. Website: https://maps.conservation.ca.gov/DLRP/CIFF/. Accessed April 10, 2026.

[14] Ibid.

[15] Stantec. 2025. Phase I Environmental Site Assessment Report. 15 Argonaut Aliso Viejo, California 92656. July 14.

site.[16] Additionally, the General Plan does not designate the site as agricultural or forest land, and the project site is not in active agricultural use. These conditions preclude the possibility of conversion of farmland to nonagricultural use. No impact would occur.

b) Conflict with existing zoning for agricultural use, or a Williamson Act Contract?

No impact. The proposed project requests a rezone to change the zoning designation from Business Park-2 to RM and is therefore not zoned for agricultural uses. The project site is currently developed with an office building and parking lot and does not support agricultural land use activities and, therefore, is not eligible for a Williamson Act Contract. This condition precludes the possibility of conflicts with agricultural zoning or Williamson Act Contracts. No impact would occur.

c) Conflict with existing zoning for, or cause rezoning of, forest land (as defined in Public Resources Code Section 12220(g)), timberland (as defined by Public Resources Code Section 4526), or timberland zoned Timberland Production (as defined by Government Code Section 51104(g))?

No impact. The proposed project requests a rezone to change the zoning designation from Business Park-2 to RM; both are non-forest zoning districts. This condition precludes the possibility of conflicts with forest zoning. No impact would occur.

d) Result in the loss of forest land or conversion of forest land to non-forest use?

No impact. The project site is mapped as "Urban and Built-up Land" by the California Department of Conservation's FMMP. The project site is currently developed with an office building and parking lot and does not contain forestland, timberland, or timberland zoned Timberland Production as defined by Public Resources Code Section 51104(g). This condition precludes the possibility of the conversion of forest land to non-forest use. No impact would occur.

e) Involve other changes in the existing environment which, due to their location or nature, could result in conversion of Farmland to nonagricultural use or conversion of forest land to non-forest use?

No impact. The project site and surrounding area are mapped as "Urban and Built-up Land" by the California Department of Conservation's FMMP. The project site is not located on or near land used for farmland or agriculture. This condition precludes the possibility of the proposed project creating pressures to convert farmland to nonagricultural use or forest land to non-forest use. No impact would occur.

Mitigation Measures

None required.

d) Result in other emissions (such as those leading to odors or) adversely affecting a substantial number of people?	☐	☐	☒	☐

Environmental Evaluation

Where available, the significance criteria established by the applicable air quality management district or air pollution control district may be relied upon to make the following determinations.

Setting

The proposed project site is located in the City of Aliso Viejo, in Orange County, which is within the South Coast Air Basin (SoCAB). The SoCAB includes all of Orange County, Los Angeles County (except for the Antelope Valley), the non-desert portion of western San Bernardino County, and the western and Coachella Valley portions of Riverside County. The San Gabriel, San Bernardino, and San Jacinto Mountains bound the SoCAB on the north and east, while the Pacific Ocean lies to the

west of the SoCAB. The southern limit of the SoCAB is the San Diego County line. The SoCAB is under the jurisdiction of South Coast Air Quality Management District (South Coast AQMD).[17]

The air pollutants for which national and State standards have been promulgated and that are most relevant to air quality planning and regulation in the SoCAB include ozone, nitrogen oxides (NO_X), carbon monoxide (CO), particulate matter, including dust, 10 microns or less in diameter (PM_{10}), and particulate matter, including dust, 2.5 microns or less in diameter ($PM_{2.5}$). In addition, toxic air contaminants (TACs) are of concern in the SoCAB. Each of these pollutants is briefly described below. Other pollutants that are regulated but not considered an issue in the project area are sulfur dioxide (SO_2), vinyl chloride, sulfates, hydrogen sulfide, and lead; the proposed project would not emit substantial quantities of those pollutants, so they are not discussed further in this section.

Construction and operation of the proposed project would be subject to applicable South Coast AQMD rules and requirements. The South Coast AQMD Air Quality Significance Thresholds[18] and Localized Significance Thresholds[19] were developed to assist local jurisdictions and lead agencies in complying with the requirements of CEQA regarding potentially adverse impacts to air quality.

Would the project:

a) Conflict with or obstruct implementation of the applicable air quality plan?

Less than significant impact. A potentially significant impact would occur if the proposed project would conflict with or obstruct implementation of the applicable air quality plan. The South Coast AQMD is responsible for preparing air quality attainment plans to be transmitted to the California Air Resources Board (CARB) and the United States Environmental Protection Agency (EPA) for incorporation into the State Implementation Plan (SIP). South Coast AQMD has designated this area as extreme nonattainment for ozone and serious nonattainment for $PM_{2.5}$.[20] To evaluate whether a project conflicts with or obstructs implementation of the applicable air quality plan (2022 Air Quality Management Plan [AQMP] for SoCAB), the South Coast AQMD CEQA Air Quality Handbook states that there are two key indicators. These indicators are identified by the criteria discussed below.

Indicator: Whether the proposed project will not result in an increase in the frequency or severity of existing air quality violations, or cause or contribute to new violations, or delay timely attainment of air quality standards or the interim emission reductions specified in the AQMP.

---

[20] South Coast Air Quality Management District (South Coast AQMD). 2022. Air Quality Management Plan. Website: http://www.aqmd.gov/home/air-quality/clean-air-plans/air-quality-mgt-plan. Accessed May 12, 2026.

If a project's emissions do not exceed the South Coast AQMD regional thresholds for volatile organic compounds (VOC), NO_X, CO, sulfur oxides (SO_X), PM_{10}, or $PM_{2.5}$, it follows that the project's emissions would not exceed the allowable limit for each project in order for the region to attain and maintain ambient air quality standards, which is the primary goal of air quality plans. As shown in Impact 2.3(b), the proposed project would not exceed the South Coast AQMD's regional thresholds of significance during either construction or operation. Therefore, the proposed project would be consistent with the AQMP under this criterion.

Indicator: According to Chapter 12 of the South Coast AQMD CEQA Air Quality Handbook, the purpose of the General Plan consistency findings is to determine whether a proposed project is inconsistent with the growth assumptions incorporated into the air quality plan and, thus, whether it would interfere with the region's ability to comply with federal and California air quality standards.

The development of emission inventories used in AQMPs to demonstrate compliance with ambient air quality standards is based on regional growth forecasts developed by the Southern California Association of Governments (SCAG). These forecasts include population, employment, and vehicle activity projections and form the basis for estimating future emissions within the air basin. While SCAG forecasts are informed by local land use plans, including general plans, they represent a regionally integrated projection of growth rather than a direct translation of individual jurisdiction land use designations. The General Plan and Zoning Ordinance define the permitted land uses and the corresponding development standards within the City. The project applicant requests a GPA to change the General Plan land use designation from Business Park-2 to MDR and a rezone to change the zoning designation to RM. As such, the proposed project would differ from the land use assumptions associated with the existing General Plan and may not precisely match the inputs used in preparation of the 2022 AQMP.

However, AQMP consistency is evaluated based on whether a project's population growth and associated vehicle miles traveled (VMT) are within the regional growth projections established by SCAG. As described in Section 2.14, Population and Housing, the City's population remains below SCAG projections, and the proposed project would incrementally contribute to planned growth without exceeding those forecasts. Furthermore, as explained in Section 2.17, Transportation, based on the City's VMT screening types and the net reduction of daily vehicle trips, the proposed project meets the Project Type screening criterion and is considered to have a less than significant VMT impact. Although the proposed project would increase the residential population on the site, the existing office use also contributes to regional growth forecasts through employment generation and associated travel demand. Therefore, the proposed project reflects a change in land use rather than growth substantially exceeding that anticipated in SCAG's regional planning projections.

Therefore, although the proposed project represents a land use change at the local level, it would not result in population growth or VMT substantially greater than that anticipated in regional projections.

Because the AQMP relies on SCAG growth forecasts, and the proposed project would remain within those forecasts, the project would not interfere with the region's ability to attain and maintain federal and State ambient air quality standards.

Therefore, the proposed project would not conflict with the applicable air quality plan. Impacts would be less than significant.

b) Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is nonattainment under an applicable federal or State ambient air quality standard?

Less than significant impact. This impact is related to the cumulative effect of a project's criteria pollutant emissions. By its nature, air pollution is largely a cumulative impact resulting from emissions generated over a large geographic region. The nonattainment status of regional pollutants results from past and present development within the SoCAB, and this regional impact is a cumulative impact. Therefore, new development projects (such as the proposed project) within the SoCAB would contribute to this impact only on a cumulative basis. No single project would be sufficient in size, by itself, to result in nonattainment of regional air quality standards. Instead, a project's emissions may be individually limited but cumulatively considerable when evaluated in combination with past, present, and future development projects.

Potential regional impacts could result in exceedances of State or federal standards for NO_X, $PM_{10,}$ $PM_{2.5}$, or CO. NO_X emissions are of concern because of potential health impacts from exposure to NO_X emissions during both construction and operation and as a precursor in the formation of airborne ozone. PM_{10} and $PM_{2.5}$ are of concern during construction because of the potential to emit exhaust emissions from the operation of off-road construction equipment and fugitive dust during ground-disturbing activities (construction fugitive dust). CO emissions are of concern during project operation because operational CO hotspots are related to increases in on-road vehicle congestion and resulting health effects.

VOC emissions are also important because of their participation in the formation of ground level ozone. Ozone is a respiratory irritant and an oxidant that increases susceptibility to respiratory infections and can cause substantial damage to vegetation and other materials. Elevated ozone concentrations result in reduced lung function, particularly during vigorous physical activity. This health problem is particularly acute in sensitive receptors, such as the sick, elderly, and young children.

The cumulative analysis focuses on whether a specific project would result in cumulatively considerable emissions. According to CEQA Guidelines Section 15064(h)(4), the existence of significant cumulative impacts caused by other projects alone does not constitute substantial evidence that a project's incremental effects would be cumulatively considerable. Rather, the determination of cumulative air quality impacts for construction and operational emissions is based on whether the proposed project would result in regional emissions that exceed the South Coast AQMD regional thresholds of significance for construction and operations on a project level. Projects that generate emissions below the South Coast AQMD significance thresholds would be considered consistent with regional air quality planning efforts and would not generate cumulatively considerable emissions. The proposed project's regional construction and operational emissions are evaluated separately below. Construction and operational emissions from the proposed project were estimated

using the California Emissions Estimator Model (CalEEMod) Version 2022.1. The complete CalEEMod output files are included as part of Appendix A.

Construction Emissions

Construction emissions are described as "short-term" or temporary in duration; however, they have the potential to represent a significant impact with respect to air quality. Construction of the proposed project would result in the temporary generation of VOC, NO_X, CO, SO_X, PM_{10}, and $PM_{2.5}$ emissions from construction activities such as demolition, site preparation, grading, building construction (home construction), architectural coating, and paving. Fugitive dust emissions are primarily associated with ground disturbance and grading activities and vary as a function of soil silt content, soil moisture, wind speed, acreage of disturbance area, and miles traveled by construction vehicles on-site and off-site. Construction-related NO_X emissions are primarily generated by exhaust emissions from heavy-duty construction equipment, material and haul trucks, and construction worker vehicles. VOC emissions are mainly generated by exhaust emissions from construction vehicles, off-gas emissions associated with architectural coatings, and asphalt paving.

The proposed project would be required to comply with all applicable South Coast AQMD rules and regulations intended to minimize emissions during construction activities. These requirements include measures to reduce fugitive dust emissions and limit the use of high–volatile VOC materials. The following South Coast AQMD rules are applicable to the proposed project:

South Coast AQMD Rule 403

South Coast AQMD Rule 403 requires the implementation of best available dust control measures during activities capable of generating fugitive dust. The proposed project must follow the standard South Coast AQMD rules and requirements with regard to fugitive dust control, which include, but are not limited to the following:

1. All active construction areas shall be watered two times daily.
2. Speed on unpaved roads shall be reduced to less than 15 miles per hour (mph).
3. Any visible dirt deposition on any public roadway shall be swept or washed at the site access points within 30 minutes.
4. Any on-site stockpiles of debris, dirt, or other dusty material shall be covered or watered twice daily.
5. All operations on any unpaved surface shall be suspended if winds exceed 15 mph.
6. Access points shall be washed or swept daily.
7. Construction sites shall be sandbagged for erosion control.
8. Apply nontoxic chemical soil stabilizers according to manufacturers' specifications to all inactive construction areas (previously graded areas inactive for 10 days or more).

9. Cover all trucks hauling dirt, sand, soil, or other loose materials, and maintain at least 2 feet of freeboard space in accordance with the requirements of California Vehicle Code (CVC) Section 23114.
10. Pave or gravel construction access roads at least 100 feet onto the site from the main road and use gravel aprons at truck exits.
11. Replace the ground cover of disturbed areas as quickly as possible.

South Coast AQMD Rule 1113

All interior and exterior architectural coatings used on-site during project construction must meet or exceed the VOC content limits established by South Coast AQMD Rule 1113. The project sponsor shall include in any construction contracts and/or subcontracts a requirement that all interior and exterior architectural coatings used in project construction meet the VOC content limits established by South Coast AQMD Rule 1113.

For the purpose of this analysis, construction of the proposed project was estimated to begin on March 2027, and would be completed by November 2028, and was modeled based on an applicant-provided preliminary schedule; see Appendix A. Note that construction emissions would likely decrease if the construction schedule were deferred to later years because of improvements in technology and more stringent regulatory requirements. The duration of construction activity and associated equipment represents a reasonable approximation of the expected construction fleet as required by the CEQA Guidelines. The calculations of pollutant emissions from the construction equipment account for the type of equipment, horsepower and load factors of the equipment, and the duration of equipment use. Table 1 presents the proposed project's maximum daily construction emissions during the entire construction duration using the worst-case summer or winter daily construction-related criteria pollutant emissions for each phase of construction.[21] The PM_{10} and $PM_{2.5}$ emissions reflect the combined exhaust and fugitive dust emissions after implementation of best available dust control measures outlined in South Coast AQMD Rule 403. Complete CalEEMod output files are included as part of Appendix A.

Table 1: Unmitigated Construction—Maximum Daily Regional Emissions by Year

Construction Year	Regional Pollutant Emissions (pounds per day)					
	VOC	NO_X	CO	SO_X	PM_{10}	$PM_{2.5}$
Maximum Daily from Project Construction (2027)	3.1	28.2	29.2	0.05	6.6	3.8

[21] At the time the air quality modeling was prepared, the proposed project was anticipated to achieve a balanced cut-and-fill condition and, therefore, no off-site soil export was assumed. Subsequent refinement of the grading plan identified the need to export approximately 473 cubic yards of soil. This volume represents a relatively small amount of material and would generate only a limited number of additional haul truck trips per day over the course of the grading period. The incremental emissions associated with these trips would constitute a negligible fraction of the overall construction emissions evaluated for the project and would not materially alter the results or conclusions of the air quality analysis. Construction emissions would remain below applicable significance thresholds.

Construction Year	Regional Pollutant Emissions (pounds per day)					
	VOC	NO_X	CO	SO_X	PM_{10}	$PM_{2.5}$
Maximum Daily from Project Construction (2028)	21.9	9.2	15	0.02	0.9	0.4
Maximum Daily Construction Emissions						
Maximum Daily Emissions	**21.9**	**28.2**	**29.2**	**0.05**	**6.6**	**3.8**
South Coast AQMD Significance Threshold	**75**	**100**	**550**	**150**	**150**	**55**
Exceed Threshold?	**No**	**No**	**No**	**No**	**No**	**No**

Notes:
CO = carbon monoxide
NO_X = nitrogen oxides
PM_{10} = particulate matter less than 10 microns in diameter
$PM_{2.5}$ = particulate matter less than 2.5 microns in diameter
South Coast AQMD = South Coast Air Quality Management District
SO_X = sulfur oxides
VOC = volatile organic compound
South Coast AQMD Rule 403 dust control measures available within CalEEMod have been applied in the emissions modeling.
Source of Emissions: Appendix A.

As shown above in Table 1, the proposed project's construction emissions would not exceed the applicable significance threshold for any of the pollutants. Therefore, the proposed project would have a less than significant impact related to regional air quality during project construction.

Operational Emissions

Long-term operational emissions would be generated, resulting from daily operations at the proposed townhomes. Operational emissions for residential land use development projects are typically distinguished as mobile-, area-, and energy-source emissions. Mobile source emissions are those associated with automobiles that would travel to and from the project site. Trip rates used to estimate mobile source emissions that would be generated by the proposed project were consistent with the daily trips presented in the project-specific Trip Generation and VMT Assessment Memorandum (Appendix I). The proposed project would replace the existing office uses on-site, but for conservative purposes, the analysis does not account for the removal of the existing emissions, such as car trips, that would be replaced by the proposed project. Area-source emissions are those associated with landscape maintenance activities and periodic architectural coatings. The proposed project would be all electric and would not have any natural gas infrastructure. Therefore, there are no direct emissions related to building energy use for space or water heating. Table 2 presents the proposed project's estimated maximum daily operational emissions.

Table 2: Maximum Daily Operational Regional Pollutants

Operational Activity	Regional Pollutant Emissions (pounds per day)[1]					
	VOC	NO_X	CO	SO_X	PM_{10} (Total)	$PM_{2.5}$ (Total)
Mobile (Automobiles)	1.0	0.8	8.4	<0.01	2.2	0.6
Energy	0.0	0.0	0.0	0.0	0.0	0.0
Area	2.5	0.03	3.3	<0.01	<0.01	<0.01
Overall Maximum Daily[1]	**3.5**	**0.8**	**11.7**	**<0.01**	**2.2**	**0.6**
South Coast AQMD Significance Threshold	**55**	**55**	**550**	**150**	**150**	**55**
Exceed Threshold?	**No**	**No**	**No**	**No**	**No**	**No**

Notes:
CO = carbon monoxide
NO_X = nitrogen oxides
PM_{10} = particulate matter less than 10 microns in diameter
$PM_{2.5}$ = particulate matter less than 2.5 microns in diameter
South Coast AQMD = South Coast Air Quality Management District
SO_X = sulfur oxides
VOC = volatile organic compounds
[1] Emissions shown represent the maximum total daily operational emissions for summer or winter season.
Source of Table: Appendix A.

As shown in Table 2, the proposed project's regional daily operational emissions would not exceed any of the South Coast AQMD thresholds of significance. Therefore, the proposed project would have a less than significant impact related to regional air quality during project operation.

c) Expose sensitive receptors to substantial pollutant concentrations?

Less than significant impact. This impact evaluates the potential for the proposed project's construction and operational emissions to expose sensitive receptors to substantial pollutant concentrations. Sensitive receptors are defined as those individuals who are sensitive to air pollution, including children, the elderly, and persons with pre-existing respiratory or cardiovascular illness. For purposes of CEQA, the South Coast AQMD considers a sensitive receptor to be a location where a sensitive individual could remain for 24 hours, such as residences, hospitals, or convalescent facilities. Commercial and industrial facilities are not included in the definition because employees do not typically remain on-site for 24 hours.

Localized Significance Threshold Analysis—Criteria Pollutants

The localized construction and operational analyses use thresholds (i.e., localized significance thresholds [LSTs]) that represent maximum emissions for a project that would not cause or contribute to an exceedance of the most stringent applicable federal or State ambient air quality standard. If the

proposed project's construction or operational emissions are under those thresholds, it follows that the proposed project would not cause or contribute to an exceedance of the standard and would not expose sensitive receptors to substantial pollutant concentrations.

Friant Ranch Case and Project Health Impacts

In the Fifth District Court of Appeal case *Sierra Club v. County of Fresno (Friant Ranch, L.P.)* (also referred to as *Friant Ranch)* the Court found the project EIR deficient because it did not identify specific health-related effects resulting from the estimated amount of pollutants generated by the project. The ruling stated that the EIR should give a "sense of the nature and magnitude of the 'health and safety problems' caused by a project's air pollution. The EIR should translate the emission numbers into adverse impacts or to understand why such translation is not possible at this time (and what limited translation is, in fact, possible)."

The California Supreme Court held that when an EIR concluded that a project would have significant impacts to air quality, an EIR should "make a reasonable effort to substantively connect a project's air quality impacts to likely health consequences." In order to determine compliance with this case, the Court developed a multi-part test that includes the following:

1. The air quality discussion shall describe the specific health risks created from each criteria pollutant, including diesel particulate matter (DPM).

   This air quality analysis details the specific health risks created from each criteria pollutant above under Section 2.3, Air Quality, Environmental Setting, Air Pollutants. As such, this analysis meets the Part 1 of the *Friant Ranch* case test.

2. The analysis shall identify the magnitude of the health risks created by the project. On page 24 of the Ruling, it is stated that "[t]he Court of Appeal identified several ways in which the EIR could have framed the analysis so as to adequately inform the public and decision-makers of possible adverse health effects."

The *Friant Ranch* case found that an EIR's air quality analysis must meaningfully connect the identified air quality impacts to the human health consequences of those impacts or meaningfully explain why that analysis cannot be provided. As noted in the brief of *Amicus Curiae* by the South Coast AQMD *Friant Ranch* (Brief), [22] South Coast AQMD has air quality modeling and health impact evaluation capability among the most sophisticated of any of the air districts in the State, and thus it is uniquely situated to express an opinion on how lead agencies should correlate air quality impacts with specific health outcomes. The South Coast AQMD discusses that it may be infeasible to quantify health risks caused by projects similar to the proposed project due to various factors. The Brief states that it may not be feasible to perform a health risk assessment for airborne toxics that will be emitted by a generic industrial building that was built on "speculation" (i.e., without knowing the future

[22] South Coast Air Quality Management District (South Coast AQMD). 2015. Application of the South Coast Air Quality Management District for Leave to File Brief of *Amicus Curiae* in Support of Neither Party and *[Proposed]* Brief of *Amicus Curiae*. Website: https://www.courts.ca.gov/documents/9-s219783-ac-south-coast-air-quality-mgt-dist-041315.pdf. Accessed March 2, 2025.

tenant(s)). Even where a health risk assessment can be prepared, the resulting maximum health risk value is only a calculation of risk; it does not necessarily mean anyone will contract cancer as a result of the project. Similarly, South Coast AQMD staff does not currently know of a way to accurately quantify ozone-related health impacts caused by NO_X or VOC emissions from relatively small projects due to photochemistry and regional model limitations. The Brief concludes, with respect to the Friant Ranch EIR, that although it may have been technically possible to plug the data into a methodology, the results would not have been reliable or meaningful.

On the other hand, for extremely large regional projects (unlike the proposed project), the South Coast AQMD states that it has been able to correlate potential health outcomes for very large emissions sources—as part of their rulemaking activity, specifically, 6,620 pounds per day of NO_X and 89,180 pounds per day of VOC were expected to result in approximately 20 premature deaths per year and 89,947 school absences due to ozone. As shown above in Table 1, project-related construction activities would generate a maximum of 21.9 pounds per day of VOC and 28.2 pounds per day of NO_X; and, as shown above in Table 2, operation of the proposed project is estimated to generate 3.5 pounds per day of VOC and 0.8 pounds per day NO_X. The proposed project would not generate emissions anywhere near levels that would reach 6,620 pounds per day of NO_X or 89,190 pounds per day of VOC emissions. Therefore, the proposed project's emissions are not sufficiently high enough to use a regional modeling program to correlate health effects on a basin-wide level.

Notwithstanding, this analysis does evaluate the proposed project's localized impact to air quality for emissions of NO_X, CO, PM_{10}, and $PM_{2.5}$ by comparing the proposed project's on-site emissions to the South Coast AQMD's applicable LST thresholds. LSTs are derived to ensure that short-term or localized emissions do not cause or contribute to exceedances of ambient air quality standards, which are established to protect public health, including sensitive populations such as children and the elderly. As such, compliance with LSTs serves as a screening tool to evaluate whether a project's localized criteria pollutant concentrations could affect nearby sensitive receptors. As evaluated in this analysis provided below, the proposed project would not result in emissions that exceeded the South Coast AQMD's LSTs during either the construction or operational period. Therefore, the proposed project would not be expected to exceed the most stringent applicable federal or State ambient air quality standards for emissions of NO_X, CO, PM_{10}, or $PM_{2.5}$.

Localized Construction Analysis

The LST Methodology only applies to on-site emissions and states that "off-site mobile emissions from the project should not be included in the emissions compared to LSTs." However, for conservative analysis purposes, the analysis includes both off-site and on-site emissions.

Utilizing the earthmoving activity acreages and phase durations from CalEEMod (Section 5.6.1), the number of acres disturbed per day was 1.5 for site preparation and 1.0 for grading. As specified in South Coast AQMD's guidance, Fact Sheet for Applying CalEEMod to Localized Significance Thresholds, the appropriate thresholds were selected based on the maximum number of acres

disturbed in a day. To ensure a conservative analysis, the proposed project emissions have been compared to the 1 acre per day LST.[23]

Table 3 presents the proposed project's maximum daily on-site emissions compared with the applicable LSTs. The LSTs for the project site were obtained from the South Coast AQMD LST methodology for a 1-acre project located in Source Receptor Area 20 (Central Coastal Orange County). The nearest sensitive receptors are located approximately 265 feet (80 meters) from the project site. Because this distance falls between the LST lookup table distances of 50 and 100 meters, the 50-meter thresholds were conservatively applied.

As noted in Table 3, emission estimates account for implementation of South Coast AQMD Rule 403 (incorporated into the proposed project through SC AIR-1).

Table 3: Construction Localized Significance Screening Analysis

Activity	Emissions (pounds per day)			
	NO_X	CO	PM_{10}	$PM_{2.5}$
Maximum Daily from Project Construction (2027)	28.2	29.2	6.6	3.8
Maximum Daily from Project Construction (2028)	9.1	15	0.9	0.4
Maximum Daily Construction Emissions	**28.2**	**29.2**	**6.6**	**3.8**

South Coast AQMD Rule 403 dust control measures available within CalEEMod have been applied in the emissions modeling.
Source of emissions: Appendix A.
Source of thresholds: South Coast Air Quality Management District (South Coast AQMD). Mass Rate Localized Significance Threshold (LST) Lookup Table for Source Receptor Area 20, 1 acre disturbed, within nearest sensitive receptor at a distance of 50 meters from the project site.

As shown in Table 3, the proposed project's maximum daily emissions would not exceed any applicable South Coast AQMD LSTs for sensitive receptors. In addition, consistent with South Coast AQMD's LST Methodology, commercial receptors are also evaluated for NO_2 and CO because these

[23] Because South Coast AQMD localized significance threshold (LSTs) are derived using dispersion modeling that distributes emissions across the assumed project footprint, a smaller site size results in higher concentrations at nearby receptors for the same emission rate. As a result, lower allowable emission thresholds are established for smaller sites.

pollutants are based on shorter averaging periods (one to eight hours) during which workers may reasonably be present on-site. The nearest commercial receptors are located immediately east of the project boundary. Because the distance to these receptors is less than 25 meters, the South Coast AQMD LST Methodology recommends application of the 25-meter LST values. Accordingly, predicted NOx and CO emissions were compared to the applicable 25-meter LSTs for the nearest commercial receptor. The applicable thresholds are 92 pounds per day for NOx and 647 pounds per day for CO. As shown in Table 3, above, the proposed project's maximum daily emissions are substantially below these thresholds, demonstrating that the proposed project would not cause or contribute to an exceedance of the applicable ambient air quality standards and would result in a less-than-significant localized air quality impact at nearby commercial receptors as well as residential receptors.

Therefore, localized construction impacts related to these air pollutants would be less than significant.

Localized Operational Analysis

Similar to the construction LST analysis above, the applicable operational LSTs were obtained for a project located in Source Receptor Area 20 with the nearest sensitive receptor being at a distance of 50 meters. South Coast AQMD provides LST thresholds for projects equal to 1 acre, 2 acres, or 5 acres in size. For the project site of 4.4 acres, the lower, more conservative threshold for a 2-acre site is used.

Table 4 presents the proposed project's maximum daily emissions compared with the appropriate LSTs.

Table 4: Operational Localized Screening Significance Analysis

Emissions Source	Pounds per Day			
	NO_X	CO	PM_{10}	$PM_{2.5}$
Maximum Daily On-site Operational Emissions	**0.8**	**11.7**	**2.3**	**0.6**
Localized Significance Thresholds (Source Receptor Area 20, 2-acre site, 50 meters)	**128**	**1,089**	**6**	**2**
Exceeds Screening Threshold?	**No**	**No**	**No**	**No**

Notes:
CO = carbon monoxide
NO_X = nitrogen oxides
PM_{10} = particulate matter less than 10 microns in diameter
$PM_{2.5}$ = particulate matter less than 2.5 microns in diameter
Source of Emissions: Appendix A.
Source of thresholds: South Coast AQMD Mass Rate Lookup Tables for a 2-acre site in Source Receptor Area 20 for sensitive receptors located within 50 meters of the project site.

As shown in Table 4, the proposed project's maximum daily operational emissions would not exceed any applicable South Coast AQMD LSTs.

In addition, commercial receptors are also evaluated for NO_2 and CO. The nearest commercial receptors are located immediately adjacent to the project boundary; therefore, consistent with the South Coast AQMD LST Methodology, the 25-meter operational LSTs were applied. The applicable operational thresholds are 131 pounds per day for NOx and 962 pounds per day for CO. As shown in Table 4, above, the proposed project's operational emissions are substantially below these thresholds and would not result in a significant localized air quality impact.

Therefore, the proposed project's operational activities would not cause or contribute substantially to an existing or future ambient air quality standard violation. Accordingly, the proposed project's operational criteria air pollutant and ozone precursor concentrations would not expose sensitive receptors to substantial pollutant concentrations. The impact would be less than significant.

Construction-related Diesel Particulate Matter

Project construction would generate DPM emissions from the use of off-road diesel equipment. The extent to which nearby receptors are exposed, determined by pollutant concentration and duration of exposure, is the primary factor used to evaluate health risks associated with TACs. Health risks from diesel exhaust are primarily associated with long-term exposure, particularly with respect to increased cancer risk.

The use of diesel-powered construction equipment would be temporary and episodic, and emissions would be short-term in duration and variable in location as construction activities progress across the site. As a result, potential exposure to DPM would be limited in both duration and intensity, and emissions would disperse rapidly with distance from the source.

Health risk assessment methodologies developed by the California Office of Environmental Health Hazard Assessment (OEHHA) are typically used to evaluate longer-term exposure scenarios. In this case, construction-related DPM emissions would be temporary, intermittent, and geographically variable, and therefore are not well-represented by standard long-term exposure assumptions. Accordingly, construction-related TAC impacts are evaluated qualitatively.

The nearest sensitive receptors are located approximately 265 feet north of the project site, which provides further attenuation of pollutant concentrations due to dispersion over distance. Construction activities would also be subject to California regulations limiting the idling of heavy-duty diesel equipment to no more than 5 minutes, which would further reduce short-term emissions and associated exposure.

Given the temporary and mobile nature of construction emissions, the limited duration of exposure, regulatory controls on diesel equipment, and the distance to nearby sensitive receptors, construction-related DPM emissions would not expose sensitive receptors to substantial levels of TAC. Therefore, impacts would be less than significant.

Carbon Monoxide Hotspot Analysis

A CO hotspot represents a condition wherein high concentrations of CO may be produced by motor vehicles accessing a congested traffic intersection under heavy traffic volume conditions. It has long

been recognized that CO exceedances are caused by vehicular emissions, primarily when idling at intersections. Accordingly, vehicle emissions standards have become increasingly more stringent to help remedy this impact. The CO hotspot analysis contained in the South Coast AQMD 1992 CO Plan is used to determine potential CO hotspot impacts from the proposed project, because by using the 1992 CO Plan as a worst-case scenario, the proposed project can measure CO impacts against intersections that experienced significantly more vehicle traffic than those adjacent to the proposed project. The 1992 CO Plan is used as a worst-case scenario because it included a CO hot spot analysis for four busy intersections in Los Angeles at the peak morning and afternoon time periods. The intersections evaluated included Long Beach Boulevard and Imperial Highway (Lynwood); Wilshire Boulevard and Veteran Avenue (Westwood); Sunset Boulevard and Highland Avenue (Hollywood); and La Cienega Boulevard and Century Boulevard (Inglewood). The busiest intersection evaluated was that at Wilshire Boulevard and Veteran Avenue, which has a daily traffic volume of approximately 100,000 vehicles per day. Subsequently, the CO Plan determined that no CO hotspot would occur even with 100,000 vehicles per day at this one intersection.

According to the transportation analysis prepared by Urban Crossroads, the proposed project would only generate 23 AM peak-hour trips and 31 PM peak-hour trips. For conservative analysis purposes, this analysis does not take credit for the removal of the office use and associated trips. Therefore, the proposed project would not result in traffic volumes exceeding 100,000 vehicles per day at any of the intersections evaluated near the project site. As a result, none of the intersections near the proposed project site would have peak-hour traffic volumes exceeding those at the intersections analyzed in the 1992 CO Plan. Additionally, the adjacent roadways are not located in an area where vertical or horizontal atmospheric mixing is substantially limited, such as a tunnel or overpass. Furthermore, there are no factors unique to the local meteorology to conclude that this intersection would yield higher CO concentrations if modeled in detail. Therefore, the operational CO impact would be less than significant.

In conclusion, the proposed project would not expose sensitive receptors to substantial pollutant concentrations either during construction or operation. Impacts would be less than significant.

d) Result in other emissions (such as those leading to odors) adversely affecting a substantial number of people?

Less than significant impact. Odors can cause a variety of responses. The impact of an odor is dependent on interacting factors such as frequency (how often), intensity (strength), duration (in time), offensiveness (unpleasantness), location, and sensory perception. While offensive odors rarely cause any physical harm, they still can be very unpleasant, leading to considerable distress and often generating citizen complaints to local governments and regulatory agencies.

The South Coast AQMD does not provide a suggested screening distance for odor-generating land uses and operations. However, the San Joaquin Valley Air Pollution Control District (Valley Air District) does have a screening distance for odor sources. These screening distances by type of odor generator are listed below in Table 5.

Table 5: Screening Levels for Potential Odor Sources

Odor Generator	Screening Distance
Wastewater Treatment Facilities	2 miles
Sanitary Landfill	1 mile
Transfer Station	1 mile
Composting Facility	1 mile
Petroleum Refinery	2 miles
Asphalt Batch Plant	1 mile
Chemical Manufacturing	1 mile
Fiberglass Manufacturing	1 mile
Painting/Coating Operations (e.g., auto body shop)	1 mile
Food Processing Facility	1 mile
Feed Lot/Dairy	1 mile
Rendering Plant	1 mile

Source: San Joaquin Valley Air Pollution Control District (Valley Air District). 2015. Guidance for Assessing and Mitigating Air Quality Impacts (GAMAQI). March 19. Website: https://valleyair.org/transportation/GAMAQI.pdf. Accessed May 12, 2026.

Construction-related Odors

Potential sources that may emit odors during construction activities include exhaust from diesel construction equipment. However, because of the temporary nature of these emissions, the intermittent nature of construction activities, and the highly diffusive properties of DPM exhaust, nearby receptors would not be affected by diesel exhaust odors associated with project construction. Odors from these sources would be localized and generally confined to the immediate area surrounding the proposed project site. The proposed project would utilize typical construction techniques, and the odors would be typical of most construction sites for a residential subdivision. As such, the proposed project would not cause odors that adversely affect a substantial number of people during the construction period; potential impacts during construction would be less than significant.

Operational-related Odors

The proposed project includes the construction and development of a new residential infill community consisting of a total of up to 58 townhomes and associated amenities, landscaping, and paving. Operations of the proposed project could lead to odors from associated vehicle exhaust and outdoor cooking. However, such odors generated by project operation would be small in quantity and duration and would not pose an objectionable odor impact to nearby receptors. Land uses that are typically identified as sources of objectionable odors include landfills, transfer stations, sewage treatment plants,

composting facilities, feedlots, coffee roasters, asphalt batch plants, and rendering plants. The proposed residential project would not produce any offensive odor emitting end uses such as coffee roasting, composting, feed lots, refining, sewage treatment, or solid waste management and would not be considered an odor generator as identified in Table 5, and potential impacts during operation would be less than significant.

Summary

The proposed project would not result in other emissions (such as those leading to odors) adversely affecting a substantial number of people from construction or operations. Therefore, approval of the proposed project would not result in any significant effects relating to other emissions (such as odors), and impacts would be less than significant.

Mitigation Measures

None required.

Environmental Evaluation

The analysis in this section is based, in part, on a biological resources evaluation, which consisted of a field survey and a desktop survey conducted by FirstCarbon Solutions (FCS). Desktop survey results are included in Appendix B.

Setting

Methods

The biological resources evaluation included a review of existing environmental documentation for the project site and vicinity, including literature pertaining to the habitat requirements of special-status species with the potential to occur in the project vicinity, and Federal Register listings, protocols, and species data provided by the United States Fish and Wildlife Service (USFWS) and California Department of Fish and Wildlife (CDFW). FCS also reviewed topographic maps, aerial photographs, and published soil surveys and queried special-status species databases, including the USFWS Information for Planning and Consultation (IPaC) database,[24] the California Natural Diversity Database (CNDDB),[25] and the California Native Plant Society Electronic Inventory (CNPS Inventory).[26]

The biological resources evaluation included a field survey of the project site on April 7, 2026, to ascertain general site conditions and identify whether existing vegetation communities provide suitable habitat for special-status plant or wildlife species.

[24] United States Fish and Wildlife Service (USFWS). 2026. Information for Planning and Consultation (IPaC). Website: https://ecos.fws.gov/ipac/. Accessed April 14, 2026.

[25] California Department of Fish and Wildlife (CDFW). 2026. CNDDB RareFind 5 California Natural Diversity Database Query for Special-Status Species. Website: https://wildlife.ca.gov/Data/CNDDB/Maps-and-Data. Accessed April 14, 2026.

[26] California Native Plant Society (CNPS). 2026. California Native Plant Society Rare and Endangered Plant Inventory. Website: http://www.rareplants.cnps.org/. Accessed April 14, 2026.

Results

A qualified FCS Biologist conducted a general biological survey of the project site on April 7, 2026, between approximately 10:00 a.m. and 11:10 a.m. Weather conditions during the field survey were sunny, with an average temperature around 65–69°F (degrees Fahrenheit) and wind speeds between 0 and 1 mph.

Environmental Setting

The project site is developed and is surrounded by Aliso Creek Road and commercial development to the west, Glenwood Drive and residential development to the north, and Argonaut and office development to the east and south. The project site is primarily paved or covered by an office building and is mostly flat, with slopes occurring along the western and northern boundaries. Ornamental trees are located along the boundaries or adjacent to the site on all sides, including hedgerows of pine (*Pinus* spp.) trees along the western and northern boundaries.

Would the project:

a) Have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special-status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Wildlife or United States Fish and Wildlife Service?

No impact. The project site is developed and is mostly paved or covered by an office building and contains ornamental trees located along the site boundaries and near the building. According to the CNDDB and CNPS Inventory, 83 special-status plant species have been recorded within 10 miles of the project site or within the *San Juan Capistrano, California* United States Geological Survey (USGS) 7.5-minute Topographic Quadrangle Map and the eight surrounding quadrangle search area that encompasses the project site (Appendix B). However, because of the urban/developed nature of the project site and lack of suitable habitat, all special-status plants that were documented in the region through the CNDDB and CNPS Inventory have no potential for occurrence (Appendix B, Table 1). Thus, special-status plants are not expected to occur on the project site.

Sixty special-status wildlife species were identified as occurring within 10 miles of the project site as recorded in the CNDDB or as identified in the USFWS IPaC database. Because of the urbanized/developed nature of the project site and vicinity, all special-status wildlife species identified in the database reviews were determined to have no potential for occurrence on the project site. Since there is no potential for special-status plants or wildlife to occur on the project site, no mitigation measures are required.

b) Have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, and regulations or by the California Department of Fish and Wildlife or United States Fish and Wildlife Service?

No impact. No riparian or other sensitive natural communities were recorded on or adjacent to the project site; therefore, the proposed project would have no impact on any riparian habitat or other sensitive natural community.

c) Have a substantial adverse effect on State or federally protected wetlands (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means?

No impact. There were no waters or wetland features detected on the project site that would be considered potentially jurisdictional by the United States Army Corps of Engineers (USACE), nor any features that would be considered potentially jurisdictional by State regulatory agencies including the Regional Water Quality Control Board (RWQCB) and CDFW. Additionally, the project site does not contain vernal pools or features indicative of the historic presence of vernal pools. According to the Natural Resources Conservation Service (NRCS) Web Soil Survey (WSS),[27] two soil types are mapped on the project site, Capistrano sandy loam and Cieneba-rock outcrop complex. While Cieneba soils are known to support vernal pools, there would be no potential for vernal pools to occur due to the developed nature of the site. Therefore, implementation of the proposed project would not result in impacts to State or federally protected wetlands, including vernal pools. No impacts would occur.

d) Interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of wildlife nursery sites?

Less than significant impact with mitigation incorporated. The project site is developed and is surrounded by urbanized areas and roads on all sides that limit wildlife movement through the project site. The project site itself does not serve as a wildlife movement corridor.

The project site contains vegetation, including trees within the site and along the boundaries, that could provide suitable nesting habitat for bird species protected under the Migratory Bird Treaty Act (MBTA) and the Fish and Game Code. These species include Cooper's hawk and other avian species. Only avian species adapted to urbanized areas may use the trees on-site for nesting.

The proposed project would remove existing ornamental trees, shrubs, and landscaped vegetation within the developed portions of the site to accommodate grading and construction activities. Existing screening trees along the northern and western boundaries of the project site would be retained. Trees and shrubs proposed for removal may provide nesting habitat for common urban-adapted bird species; however, replacement landscaping and tree planting would be incorporated throughout the project site, providing similar nesting and foraging opportunities over time.

The proposed trees would include native species, as well as climate-adaptive and drought-tolerant species. Additionally, the pine hedgerows along the western and northern boundaries of the site

[27] United States Department of Agriculture (USDA) Natural Resources Conservation Service (NRCS). 2026. Web Soil Survey (WSS). Website: https://websoilsurvey.nrcs.usda.gov/app/WebSoilSurvey.aspx. Accessed April 14, 2026.

would not be removed by the project. If ground-disturbing or vegetation-removing construction activities are initiated during the nesting season, they could disturb nesting and breeding birds on the ground surface, in trees and shrubs, and on structures on and adjacent to the project site, which would be considered a significant impact. Potential construction-related project impacts on special-status and migratory birds include destruction of eggs or occupied nests, mortality of young, and parental abandonment of nests with eggs or pre-fledged young birds. With the implementation of Mitigation Measure (MM) BIO-1a and MM BIO-1b, potential project impacts to nesting Cooper's hawk and other native and migratory birds would be reduced to a less than significant level.

e) Conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance?

No impact. The General Plan for the City of Aliso Viejo contains the following two Ecological and Biological Resources policies in the Conservation/Open Space Element:

Policy COS-3.1 Support regional and sub-regional efforts to conserve ecological and biological resources.

Policy COS-3.2 Protect sensitive habitat areas and vegetation, particularly along Aliso Creek, within Aliso Woods, and within the Aliso and Wood Canyons Wilderness Park, by maintaining these resources as long-term open space.

The proposed project would not conflict with these policies. The existing screening trees along the western and northern perimeters of the project site would be preserved. The project would remove existing ornamental landscaping and trees located within the interior developed areas of the site to accommodate grading and construction of the proposed residential development. As stated above, nearly all trees removed by the proposed project would be replaced. Therefore, there are no local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance, with which the proposed project would conflict. No impact would occur.

f) Conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or State habitat conservation plan?

No impact. The project site is located within the boundaries of the County of Orange Natural Communities Conservation Plan (County of Orange NCCP) Habitat Conservation Plan (HCP), an HCP and NCCP authorized by the CDFW through the NCCP Act (California Fish and Game Code [FGC] § 2800) and Sections 2081 and 2084 of the California Endangered Species Act (CESA) and by the USFWS through Sections 7 and 10 of the Endangered Species Act.

The project site does not contain Covered Habitats or suitable habitat for Identified Species covered under the County of Orange NCCP HCP and therefore would not require coverage under the plan. Thus, the proposed project would not conflict with an HCP, NCCP, or other approved local, regional, or State HCP. No impact would occur.

Mitigation Measures

MM BIO-1a Nesting Bird Pre-construction Surveys

If ground-disturbing or vegetation-removing construction activities or tree removal is proposed during the breeding/nesting season for migratory birds (February 1 through September 15), a qualified Biologist shall conduct pre-construction surveys for special-status birds and other migratory birds within the construction area, including a 300-foot survey buffer (where accessible), no more than 3 days prior to the start of ground-disturbing activities in the construction area.

MM BIO-1b Avoidance of Active Avian Nests

If an active nest (i.e., occupied by eggs or fledglings) is located during pre-construction surveys or at any point during the construction phase of the proposed project, the City of Aliso Viejo shall be notified regarding the status of the nest. Furthermore, construction activities shall be restricted as necessary to avoid disturbance of the nest until the eggs or fledglings no longer are in the nest or a qualified Biologist deems disturbance potential to be minimal. Restrictions may include establishment of exclusion zones (no ingress of personnel or equipment at a minimum radius of 300 feet around an active raptor nest and a 50-foot radius around an active migratory bird nest) or alteration of the construction schedule.

Environmental Evaluation

Setting

This section describes the existing cultural setting and potential effects from project implementation on the project site and its surrounding area. The following discussion is based on records searches from the South Central Coastal Information Center (SCCIC) and the Native American Heritage Commission (NAHC) and a cultural resources pedestrian survey conducted by FCS. The non-confidential SCCIC records search, pedestrian survey photographs, and NAHC correspondence are included in Appendix C.

South Central Coastal Information Center

On April 14, 2026, a records search/literature review was conducted at the SCCIC located at California State University, Fullerton. The purpose of this review was to access any existing cultural resources survey reports, archaeological site records, and historic maps to evaluate whether previously documented pre-contact or historic archaeological sites, architectural resources, cultural landscapes, or Tribal Cultural Resources (TCRs) exist within or near the project site. The records search/literature review was also conducted to evaluate whether the project site contains any historic properties listed on or determined eligible for listing on the National Register of Historic Places (NRHP), California Register of Historical Resources (CRHR), the California Historic Landmarks (CHL) list, the California Points of Historical Interest (CPHI) list, and the Built Environment Resource Directory (BERD) for Orange County. The results of the SCCIC records search indicate that seven pre-contact cultural resources have been recorded within the 0.5-mile search radius, one of which (P-30-000414) is located within the project boundaries. In addition, there are 25 area-specific survey

reports on file with the SCCIC, three of which (OR-00255, OR-00702, and OR-00926) partially address the project site and two of which (OR-00431 and OR-00705) address the project site entirely, indicating that the project site has been previously surveyed for cultural resources and produced positive results for cultural resources.

Native American Heritage Commission

On April 15, 2026, a records search request was sent to the NAHC in an effort to determine whether any sacred sites are listed on its Sacred Lands File (SLF) for the project site. On April 27, 2026, a response from the NAHC was received indicating that their SLF search came back positive for TCRs within the project site. The NAHC included a list of 28 Tribal representatives who may have additional knowledge of the project site. To ensure that all Native American knowledge and concerns over potential TCRs that may be affected by implementation of the proposed project are addressed, FCS sent letters to all 28 Tribal representatives on May 7, 2026. No responses have been received to date. Please note that this process is for information gathering purposes to support conclusions made within the cultural resources analysis and is not intended to satisfy the Lead Agency consultation requirements pursuant to Assembly Bill (AB) 52 or Senate Bill (SB) 18. See Section 2.18 Tribal Cultural Resources for discussions related to AB 52 and SB 18 consultation.

Cultural Resources Pedestrian Survey and Buried Site Potential

On May 5, 2026, an FCS Archaeologist conducted a pedestrian survey for unrecorded cultural resources within the project site. The project site is predominantly developed with impervious surfaces with vegetated slopes located primarily along the northern and western perimeters. The perimeter of the project site is enclosed by a parking lot dedicated to the office building (constructed between 1988 and 1992) located at the center of the project site. Overview shots of the project site were taken from the northeast, northwest, southeast, and southwest corners that showcase the structure and the surrounding parking lot. Visibility of exposed soil was nonexistent since the entirety of the site is hardscaped; thus, inspection of the soil for cultural resources was not possible. Survey conditions were documented using digital photographs and field notes. No pre-contact or historic resources were found during the pedestrian survey.

In addition to the pedestrian survey, the potential for yet-identified cultural resources in the project vicinity was reviewed against geologic and topographic geographic information system (GIS) data for the general area and information from other nearby projects. The proposed project was evaluated against a set of criteria originally identified by a geoarchaeological overview that was prepared for the California Department of Transportation (Caltrans) Districts 6 and 9.[28] This study mapped the "archaeological sensitivity," or potential to support the presence of buried pre-contact archaeological deposits, based on geology and environmental parameters including distance to water and landform slope. The methodology used in the study is applicable to other parts of California, such as the Bay Area, and generally concluded that sites consisting of flat, Holocene-era deposits in close proximity to

[28] Meyer, J., D. Craig Young, and Jeffrey S. Rosenthal. 2010. Volume I: A Geoarchaeological Overview and Assessment of Caltrans District 6 and 9, Cultural Resources Inventory of Caltrans District 6/9 Rural Conventional Highways. Submitted to Central California Department of Transportation, District 6.

natural water resources had a moderate to high probability of containing subsurface archaeological deposits when compared to earlier Pleistocene deposits situated on slopes or further away from drainages, lakes, and rivers.

According to the isotopic gravity map with geology of Santa Ana, Southern California,[29] the surface of the project site rests entirely on alluvial valley deposits (Holocene to late Pleistocene; Qya). Applying the criteria set forth in Meyer et al., all Holocene-era deposits have the potential to contain archaeological deposits, which increases with the ease of the slope and proximity to water resources. The terrain of the project site is relatively flat, with the exception of the northern and western portions of the project site, which include landscaped slopes, and the closest water source is Aliso Creek, located approximately 0.8 mile southeast of the project site. In addition, positive results from the NAHC SLF search for TCRs and the positive SCCIC results for cultural resources indicate a moderate to high potential for unanticipated buried cultural resources to be impacted by project construction.

Cultural Resources

Would the project:

a) Cause a substantial adverse change in the significance of a historical resource pursuant to Section 15064.5?

No impact. Historical resources in this context refer to the built environment, mainly buildings and structures over 50 years in age that may be eligible for inclusion on the CRHR or NRHP. Records search results conducted at the SCCIC did not identify any historical resources within the 0.5-mile search radius, nor within the proposed project boundaries. Additionally, the results of the pedestrian survey indicated that the project site consists of an enclosed parking lot and office building that was constructed between 1988 and 1992. As such, no historical resources were identified during the pedestrian field survey. Thus, the proposed project would not cause a substantial adverse change in the significance of any such known resources. No mitigation measures are required, and there would be no impact to historical resources.

b) Cause a substantial adverse change in the significance of an archaeological resource pursuant to Section 15064.5?

Less than significant impact with mitigation incorporated. Results from the SCCIC indicate that five pre-contact archaeological resources are recorded within a 0.5-mile radius of the project site, of which one pre-contact resource (P-30-000414) is recorded within the project boundaries. There are no historic era archaeological resources located in or within a 0.5-mile radius of the project site. The results of the pedestrian survey did not locate or identify any archaeological resources due to the lack of soil visibility across the project site. Given the results of the records searches, the potential to

[29] Langenheim, V.E., Tien-Chang Lee, Shawn Biehler, A.C. Jachens, and D.M. Morton. 2006. Isotopic gravity map with geology of the Santa Ana 30' x 60' quadrangle, southern California. United States Geological Survey. Map. Scale 1:100,000.

impact unidentified archaeological resources is considered moderate to high. It is possible that earthmoving activities associated with project construction could encounter previously undiscovered archaeological resources. Archaeological resources can include but are not limited to stone, bone, wood, or shell artifacts or features, including hearths and structural elements. Damage or destruction of these resources would have a potentially significant impact. MM CUL-1 would require a Worker Environmental Awareness Program (WEAP) training, a site survey conducted by a qualified Archaeologist, and archaeological monitoring. MM CUL-2 would require consultation with a qualified Archaeologist in the event that buried archaeological resources are discovered during construction, as well as inadvertent discovery procedures. Implementation of MM CUL-1 and MM CUL-2 would ensure that potential impacts to archaeological resources will be reduced to a level of less than significant.

c) Disturb any human remains, including those interred outside of formal cemeteries?

Less than significant impact with mitigation incorporated. While no formal cemeteries or areas containing human remains are known to be in the project site's vicinity, the possibility always exists that construction-related ground disturbance may uncover previously undiscovered human remains. In the unlikely event such a discovery is made, CEQA Guidelines Section 15064.5, Health and Safety Code Section 7050.5, and Public Resources Code Sections 5097.94 and 5097.98 must be followed. Additionally, implementation of MM CUL-3, which details inadvertent discovery procedures, would reduce potential impacts of previously undiscovered human remains to a less than significant level.

Mitigation Measures

MM CUL-1 Prior to the initiation of construction activities, all construction personnel conducting ground disturbance at the site shall be provided a Worker Environmental Awareness Program (WEAP) cultural resources "tailgate" training. The training shall include visual aids, a discussion of applicable laws and statutes relating to archaeological resources, types of resources that may be found within the project site, and procedures to be followed in the event such resources are encountered. The training shall be conducted by an Archaeologist who meets the Secretary of the Interior's Professional Qualification Standards for archaeology.

An Archaeologist who meets the Secretary of the Interior's Professional Qualification Standards for archaeology shall conduct an updated survey of the site following demolition and exposure of native soils and prior to any project-related trenching or grading to check for the inadvertent exposure of cultural materials.

This shall be followed by archaeological monitoring during the grading and trenching phase of the proposed project. At the completion of these phases, archaeological monitoring shall be reduced to periodic "spot checks." In the event exposed soils indicate cultural materials may be present, this may be followed by regular or full-time archaeological monitoring as determined by the Archaeologist.

MM CUL-2 In the event that buried archaeological resources are discovered during construction, operations shall stop within a 100-foot radius of the find and an Archaeologist who meets the Secretary of Interior's Professional Qualification Standards for archaeology shall be consulted to determine whether the resource requires further study. The qualified Archaeologist shall make recommendations to the Lead Agency on the measures that shall be implemented to protect the discovered resources, including but not limited to excavation of the finds and evaluation of the finds in accordance with Section 15064.5 of the CEQA Guidelines. Potentially significant cultural resources consist of but are not limited to stone, bone, fossils, wood, or shell artifacts or features, including hearths, structural remains, or historic dumpsites. Any previously undiscovered resources found during construction within the project area shall be recorded on appropriate California Department of Parks and Recreation (DPR) forms and evaluated for significance in terms of CEQA criteria. If the resources are determined to be unique historic resources as defined under Section 15064.5 of the CEQA Guidelines, mitigation measures shall be identified by the monitor and recommended to the Lead Agency. Appropriate mitigation measures for significant resources could include avoidance or capping, incorporation of the site in green space, parks, or open space, or data recovery excavations of the finds. The Lead Agency, along with other relevant or Tribal officials, shall be contacted upon the discovery of cultural resources to begin coordination on the disposition of the find(s). Treatment of any significant cultural resources shall be undertaken with the approval of the Lead Agency. No further grading shall occur in the area of the discovery until the Lead Agency approves the measures to protect these resources. Upon coordination with the Lead Agency, any archaeological artifacts recovered shall be donated to an appropriate Tribal custodian or a qualified scientific institution where they would be afforded applicable cultural resources laws and guidelines.

MM CUL-3 In the event of the accidental discovery or recognition of any human remains, CEQA Guidelines Section 15064.5, Health and Safety Code Section 7050.5, and Public Resources Code Section 5097.94 and Section 5097.98 shall be followed. If during the course of project construction, there is accidental discovery or recognition of any human remains, the following steps shall be taken:

1. There shall be no further excavation or disturbance of the site where human remains are discovered and/or any nearby area reasonably suspected to overlie adjacent human remains until the County Coroner is contacted to determine whether the remains are Native American and if an investigation of the cause of death is required. If the Coroner determines the remains to be Native American, the Coroner shall contact the Native American Heritage Commission (NAHC) within 24 hours, and the NAHC shall identify the person or persons it believes to be the Most Likely Descendant (MLD) of the deceased Native American. The MLD may make recommendations to the landowner or the person responsible for the excavation work within 48 hours, for means of treating or disposing of, with

appropriate dignity, the human remains, and any associated grave goods as provided in Public Resources Code Section 5097.98.

2. Where the following conditions occur, the landowner or his or her authorized representative shall rebury the Native American human remains and associated grave goods with appropriate dignity either in accordance with the recommendations of the MLD or on the project site in a location not subject to further subsurface disturbance:
   - The NAHC is unable to identify an MLD or the MLD failed to make a recommendation within 48 hours after being notified by the commission.
   - The descendant identified fails to make a recommendation.
   - The landowner or his authorized representative rejects the recommendation of the descendant, and mediation by the NAHC fails to provide measures acceptable to the landowner.

Environmental Issues	Potentially Significant Impact	Less than Significant Impact with Mitigation Incorporated	Less than Significant Impact	No Impact
2.6 Energy *Would the project:*				
a) Result in potentially significant environmental impact due to wasteful, inefficient, or unnecessary consumption of energy resources, during project construction or operation?	☐	☐	☒	☐
b) Conflict with or obstruct a State or local plan for renewable energy or energy efficiency?	☐	☐	☒	☐

Environmental Evaluation

Setting

Energy use, especially through fossil fuel consumption and combustion, relates directly to environmental quality since it can adversely affect air quality and generate greenhouse gas (GHG) emissions that contribute to climate change. Electrical power is generated through a variety of sources, including fossil fuel combustion, hydropower, wind, solar, biofuels, and others. Natural gas is widely used to heat buildings, prepare food in restaurants and residences, and fuel vehicles, among other uses. Fuel use for transportation is related to the fuel efficiency of cars, trucks, and public transportation; choice of different travel modes such as auto, carpool, and public transit; and miles traveled by these modes and is generally based on petroleum-based fuels, such as diesel and gasoline. Electric vehicles (EVs) may not have any direct emissions but do have indirect emissions via the source of electricity generated to power the vehicle. Construction and routine operation and maintenance of transportation infrastructure also consume energy. Southern California Edison (SCE) provides electricity and Southern California Gas Company (SoCalGas) provides natural gas service within the City of Aliso Viejo.

Would the project:

a) Result in potentially significant environmental impact due to wasteful, inefficient, or unnecessary consumption of energy resources, during project construction or operation?

Less than significant impact. A discussion of the proposed project's anticipated energy usage is presented below. Energy use consumed by the proposed project was estimated and includes

electricity and fuel consumption for project construction and operation. Energy calculations are included as part of Appendix A.

Short-term Construction Impacts

For the purpose of this analysis, construction of the proposed project was estimated to begin in March 2027 and conclude in November 2028 and was modeled based on an applicant-provided preliminary schedule (see Appendix A). If the construction schedule moves to later years, construction emissions would likely decrease because of improvements in technology and more stringent regulatory requirements as older, less efficient equipment is replaced by newer and cleaner equipment. The proposed project would require demolition, site preparation, grading, building construction, architectural coating, and paving. The construction phase would require energy for the manufacture and transportation of building materials, preparation of the site (e.g., site clearing and grading), and the actual construction of the buildings. Petroleum-based fuels such as diesel fuel and gasoline would be the primary sources of energy for these tasks.

The types of on-site equipment used during construction of the proposed project could include gasoline- and diesel-powered construction and transportation equipment, including trucks, front-end loaders, forklifts, and cranes. On-site, off-road construction equipment is estimated to consume a total of approximately 45,858 gallons of fuel over the entire construction duration (Appendix A).

Fuel use associated with construction vehicle trips generated by the proposed project was also estimated; trips include construction worker trips, haul truck trips for material transport, and vendor trips for construction material deliveries. Fuel use from these vehicles traveling to and from the project site was based on (1) the projected number of trips the proposed project would generate during construction, (2) average trip distances by trip type, and (3) fuel efficiencies estimated in the ARB Emissions Factors (EMFAC) mobile source emission model. In total, the proposed project is estimated to generate approximately 302,890 VMT and a combined 16,706 gallons of gasoline and diesel for vehicle travel during construction.

Other equipment could include construction lighting, field services (office trailers), and electrically driven equipment such as pumps and other tools. Municipal Code Section 8.12.070 permits construction, repair, remodeling, or grading activities during daytime hours, specifically between 7:00 a.m. and 8:00 p.m. on weekdays and between 8:00 a.m. and 8:00 p.m. on Saturdays, with no construction allowed on Sundays or federal holidays. As on-site construction activities would be restricted during these hours, it is anticipated that the use of construction lighting would be minimal.

The overall construction processes are already designed to be efficient in order to avoid excess monetary costs. For example, equipment and fuel are not typically used wastefully because of the added expense associated with renting the equipment, maintaining it, and fueling it. Therefore, the opportunities for future efficiency gains during construction are limited. Therefore, it is anticipated that the construction phase of the proposed project would not result in wasteful, inefficient, and unnecessary consumption of energy. Construction-related energy impacts would be less than significant.

Long-term Operational Impacts

The proposed project would consume energy as part of building operations and transportation activities. Operation of the proposed project would consume an estimated 478,814 kilowatt hours (kWh) of electricity. The proposed residential buildings would be built all-electric and the proposed project would install solar photovoltaic (PV) systems that would generate renewable energy, consistent with the 2025 Building Energy Efficiency Standards. Therefore, the proposed project would not impair, but rather would include the use of renewable energy. In addition, the proposed project's buildings would be designed and constructed in accordance with the City's latest adopted energy efficiency standards, which are based on the State's Building Energy Efficiency Standards. These are widely regarded as the most advanced Building Energy Efficiency Standards, and compliance would ensure that building energy consumption would not be wasteful, inefficient, or unnecessary. Additionally, the CBC requires new residential development to include energy efficiency features related to building envelope, mechanical systems (e.g., heating, ventilation, and air conditioning [HVAC] and water heating systems), and indoor and outdoor lighting. CALGreen requires all new garages for the proposed homes to install electrical panels of adequate size to support the installation of EV charging systems. The proposed project would install solar PV systems in compliance with Title 24, Part 6, California's Energy Code. As such, compliance with the CBC Title 24 standards and CALGreen would ensure that the proposed project would not interfere with the ability to include renewable energy sources. As it relates to energy use from vehicular travel, the proposed 58-unit residential project is estimated to generate approximately 356 daily vehicle trips. Project-related travel would consume an estimated 44,836 gallons of gasoline, diesel, and compressed natural gas and 63,330 kWh of electricity annually. Because these trips would support routine residential activities, utilize the existing transportation network, and would not result from inefficient site design or circulation patterns, transportation energy consumption would not be wasteful, inefficient, or unnecessary. Impacts would be less than significant.

b) Conflict with or obstruct a State or local plan for renewable energy or energy efficiency?

Less than significant impact. The proposed project would be evaluated with existing State energy standards and General Plan energy conservation policies. SCE would provide electricity to the proposed project. In 2024, the latest year with available data, SCE obtained 35 percent of its electricity from renewable energy sources. SCE also offers a Green Rate 50 percent option that sources 67 percent of its power mix from eligible renewable energy sources and a Green Rate 100 percent option that sources 100 percent of its power mix from eligible renewable energy sources.[30] SCE would be required to meet the future objective of sourcing 60 percent of its electricity from renewable energy sources by 2030. Additionally, the proposed project would replace an existing office development that, although currently vacant, continues to consume a limited amount of electricity for building maintenance and related functions. As a result, a portion of the proposed project's operational energy demand would be offset by the elimination of this existing energy use.

[30] Southern California Edison (SCE). 2024 Power Content Label. Website: https://www.energy.ca.gov/filebrowser/download/9168. Accessed May 12, 2026.

Furthermore, as an all-electric development, the proposed project would support California's transition toward lower-carbon energy consumption.

The proposed residential project would be designed in accordance with Title 24, California's Energy Efficiency Standards for residential buildings. These standards include minimum energy efficiency requirements related to building envelope, mechanical systems (e.g., HVAC and water heating systems), and indoor and outdoor lighting. CALGreen requires all new garages for the proposed homes to install electrical panels of adequate size to support the installation of EV charging systems. Therefore, it is anticipated that the proposed project would be designed and built to minimize transportation energy through the promotion of the use of electric-powered vehicles, and it is anticipated that existing and planned capacity and supplies of transportation fuels would be sufficient to support the proposed project's demand. The proposed project would install solar PV systems in compliance with Title 24, Part 6, California's Energy Code.

The General Plan Conservation/Open Space Element contains the following policies related to energy conservation.

Energy Supply and Conservation

Policy COS-6.1 Encourage green building designs for new construction and renovation projects within the City.

Policy COS-6.2 Coordinate with regional and local energy suppliers to ensure adequate supplies of energy to meet community needs, implement energy conservation and public education programs, and identify alternative energy sources where appropriate.

Policy COS-6.3 Encourage building orientations and landscaping that enhance natural lighting and sun exposure.

Policy COS-6.4 Encourage expansion of neighborhood-level products and services and public transit opportunities throughout the City to reduce automobile use.

While several of these policies are city-level requirements or voluntary, compliance with Title 24 standards and other applicable regulations would ensure that the proposed project would not conflict with any of the energy conservation policies related to the proposed project's building, mechanical systems, and indoor and outdoor lighting.

The proposed project would comply with existing State energy standards and with energy conservation policies contained in the General Plan. As such, the proposed project would not conflict with State or local renewable energy or energy efficiency objectives. Potential impacts would be less than significant.

Mitigation Measures

None required.

Environmental Issues	Potentially Significant Impact	Less than Significant Impact with Mitigation Incorporated	Less than Significant Impact	No Impact

Environmental Evaluation

Setting

Geology and Soils

The analysis in this section is based, in part, on the Geotechnical Investigation prepared by Alta California Geotechnical, Inc., on September 26, 2025, included in Appendix D of this document.[31] The report concluded that the proposed grading and development is considered geotechnically feasible, provided the recommendations in the report are implemented during design, grading, and construction.

Paleontological Resources

The analysis in this section is based, in part, on the Cultural Resources Due Diligence Memorandum prepared by FCS on July 3, 2024, for the 95 Argonaut Project, located 550 feet (0.1 mile) east of the project site.[32] Because of the close proximity of the proposed project to the 95 Argonaut Project, the results of the paleontological records search for the 95 Argonaut Project were used because the project site has the same 0.5-mile search radius for paleontological resources.

The Cultural Resources Due Diligence Memorandum included paleontological records searches of the San Diego Natural History Museum (The Nat) online fossil locality database and the Natural History Museum of Los Angeles County (NHM) collections, which are available online through the

[31] Alta California Geotechnical, Inc. 2025. Geotechnical Investigation. 15 Argonaut, City of Aliso Veijo, County of Orange, California. September 26.

[32] FirstCarbon Solutions (FCS). 2024. Cultural Resources Due Diligence Memorandum for the Proposed Argonaut Project, City of Aliso Viejo, Orange County, California. July 3.

Integrated Digitized Biocollections (iDigBio), and the University of California Museum of Paleontology (UCMP) online fossil locality database.

Paleontological resources are the fossilized remains of plants and animals, including vertebrates (animals with backbones; fish, amphibians, reptiles, birds, mammals, etc.), invertebrates (animals without backbones; starfish, clams, coral, cephalopods, etc.), microscopic plants and animals (microfossils), and trace fossils/ichnofossils (i.e., footprints, burrows, etc.). Fossils are valuable, nonrenewable, scientific resources used to document the existence of extinct life forms and to reconstruct the environments in which they lived. Fossils are preserved in sedimentary rocks and, despite the abundance of these rocks and the vast numbers of organisms that have lived through time, preservation of plant or animal remains as fossils is a rare occurrence.

The Society of Vertebrate Paleontology (SVP) defines a significant fossil resource as, "identifiable vertebrate fossils, large or small, uncommon invertebrate, plant, and trace fossils, and other data that provide taphonomic, taxonomic, phylogenetic, paleoecologic, stratigraphic, and/or biochronologic information." Paleontological resources are considered older than recorded human history and/or older than middle Holocene (i.e., older than about 5,000 radiocarbon years).[33]

The sensitivity of an area with respect to paleontological resources hinges on its geologic setting and whether significant fossils have been discovered in the area or in similar geologic units.

Would the project:

a) Directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury, or death involving:

i) Rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map issued by the State Geologist for the area or based on other substantial evidence of a known fault? Refer to Division of Mines and Geology Special Publication 42.

Less than significant impact. Seismically induced ground rupture is defined as the physical displacement of surface deposits in response to an earthquake's seismic waves. Ground rupture is most likely to occur along active faults and typically occurs during earthquakes of magnitude 5.0 or higher. Ground rupture only affects the area immediately adjacent to a fault.

The project site is located in Southern California, which is a seismically active area. The type and magnitude of seismic hazards affecting the project site are dependent on the distance to the causative fault and the intensity and magnitude of the seismic event. The seismic hazards may be primary, such as surface rupture and/or ground shaking, or secondary, such as liquefaction and/or ground lurching.

[33] Society of Vertebrate Paleontology (SVP). 2010. Standard Procedures for the Assessment and Mitigation of Adverse Impacts to Paleontological Resources. Society of Vertebrate Paleontology Impact Mitigation Guidelines Revision Committee.

Active faults are not known to exist within the project site, as discussed in the Geotechnical Investigation. According to the Geotechnical Investigation, the project site is not within a California State-designated earthquake fault zone, and the potential for fault surface rupture is considered very low. The nearest fault zone to the project site is the San Joaquin Hills Fault Zone, located approximately 2.2 miles to the west.[34] According to California Geological Survey's (CGS's) most recent Alquist-Priolo Earthquake Fault Zone and Seismic Hazard Zone Map, a known earthquake fault is not located near the project site or known to traverse the project site.[35] Additionally, the General Plan Safety Element states that there are no known fault zones or seismic zones in the City.[36] Therefore, impacts related to rupture of a known earthquake fault would be less than significant.

ii) Strong seismic ground shaking?

Less than significant impact. The City, as well as most of Southern California, is located in a region of historic seismic activity. Strong levels of seismic ground shaking can cause damage to buildings. The intensity of ground shaking on the project site would depend upon the earthquake's magnitude, distance to the epicenter, and geology of the area between the project site and epicenter.

According to the Geotechnical Investigation, ground shaking hazards would be associated with activity from the San Joaquin Hills Fault Zone and the Newport-Inglewood Fault Zone, located 2.2 miles and 7.1 miles to the west, respectively.[37] During seismic events, the project site could experience ground shaking hazards associated with the faults described above.

The Geotechnical Investigation noted that the project site has the potential for seismic shaking hazards during an earthquake event. Pursuant to Municipal Code Chapter 13.02, Building Regulations, the City has adopted the 2025 CBC. The proposed project would be required to comply with all applicable regulations in the 2025 CBC, as amended by the Municipal Code, which includes design requirements to minimize the effects of seismic ground shaking. The proposed project would also be subject to the current CBC, as adopted by the City's Planning and Building Department, with respect to seismic design parameters. Conformance with these standard engineering practices and design criteria would reduce the effects of seismic ground shaking.

Additionally, Municipal Code Chapter 13.08.170, Soil Engineering and Engineering Geology Reports, requires implementation of the site-specific recommendations provided in the Geotechnical Investigation, including seismic design parameters. The site-specific design recommendations would be required to be incorporated into project construction plans, including grading plans, as conditions

[34] Alta California Geotechnical, Inc. 2025. Geotechnical Investigation. 15 Argonaut, City of Aliso Veijo, County of Orange, California. September 26.

[35] California Geological Survey (CGS). 2026. Earthquake Zones of Required Investigation Map. Website: https://maps.conservation.ca.gov/cgs/informationwarehouse/eqzapp/?print_preview=true. Accessed April 10, 2026.

[36] City of Aliso Viejo. 2004. General Plan Safety Element. Website: https://www.avcity.org/DocumentCenter/View/395/Safety-Element-PDF. Accessed April 10, 2026.

[37] Alta California Geotechnical, Inc. 2025. Geotechnical Investigation. 15 Argonaut, City of Aliso Veijo, County of Orange, California. September 26.

of approval (COA GEO-1a) pursuant to Municipal Code Chapter 13.08.170. Implementation of COA GEO-1a would ensure that recommendations concerning earthwork, grading and fill, foundations, seismic design parameters, corrosivity, and drainage are implemented during design, grading, and construction. Compliance with Municipal Code Chapter 13.08.170 and the 2025 CBC would reduce potential impacts related to strong seismic ground shaking to a less than significant level.

Following compliance with standard engineering practices and through implementation of COA GEO-1a, potential impacts concerning exposure of people or structures to potential adverse effects involving strong seismic ground shaking would be less than significant.

iii) Seismic-related ground failure, including liquefaction?

No impact. Liquefaction is a phenomenon where earthquake-induced ground vibrations increase the pore pressure in saturated, granular soils until it is equal to the confining, overburden pressure. When this occurs, the soil can completely lose its shear strength and enter a liquefied state. For liquefaction to occur, a project site must be subject to three factors: underlying loose, coarse-grained (sandy) soils, a groundwater depth of approximately 25 feet, and a potential for seismic shaking from nearby large-magnitude earthquakes.

The project site is not located in a Liquefaction Hazard Zone.[38] According to the CGS, the nearest mapped Liquefaction Hazard Zone is located approximately 0.51 mile northwest of the project site.[39] The Geotechnical Investigation concluded that there is no potential for liquefaction since the project site is not located within a State-designated liquefaction zone and no groundwater was encountered during soil boring investigations performed. Furthermore, General Plan Figure S-1, Safety Policy Map, indicates that the project site is not located within an area with liquefaction potential.[40] Therefore, the proposed project would not cause potential substantial adverse effects involving seismic-related ground failure, including liquefaction. There would be no impact.

iv) Landslides?

Less than significant impact. Landslides can occur if ground shaking and/or heavy rainfall disturb areas of steep slopes consisting of unstable soils. According to the General Plan, earthquake-induced landslides have the potential to occur within the City. Generally, these types of failures consist of rock falls, landslides, and debris flows. The potential for earthquake-induced landslides generally occurs in areas of steep slopes consisting of unstable soils disturbed by ground shaking and/or heavy rainfall.[41]

[38] California Geological Survey. 2024. Earthquake Zones of Required Investigation Map. Website: https://maps.conservation.ca.gov/cgs/informationwarehouse/eqzapp/?print_preview=true. Accessed April 10, 2026.

[39] Ibid.

[40] City of Aliso Viejo. 2004. General Plan. Safety Element. Figure S-1: Safety Policy Map. https://avcity.org/DocumentCenter/View/384/Safety-Policy-Map-PDF. Accessed April 10, 2026.

[41] City of Aliso Viejo. 2004. General Plan, Safety Element. Website: https://avcity.org/DocumentCenter/View/395/Safety-Element-PDF. Accessed April 10, 2026.

The sloped areas along the northern and western boundaries of the project site are mapped as having landslide potential by the General Plan, as shown in the General Plan's Figure S-1, Safety Policy Map.[42] According to the Geotechnical Investigation, this slope is approximately 50 feet and was completed during the grading of the existing structures and adjacent streets.[43] The Geotechnical Investigation conducted a slope stability analysis and determined that no visible instabilities were observed and noted that the proposed structures have been designed to comply with the latest CBC setback requirements from the toe of the slope.[44]

As previously described, COA GEO-1a would be implemented pursuant to Municipal Code Chapter 13.08.170 and 2025 CBC standards. Implementation of COA GEO-1a would reduce the potential for landslide hazards by incorporating site-specific design recommendations into project construction plans and grading plans related to slope stability. In addition, implementation of COA GEO-1b would require grading activities adjacent to the existing slopes along the western and northern boundaries of the site to be observed by a licensed California Geotechnical Engineer or Certified Engineering Geologist. COA GEO-1b would ensure that, if necessary, supplemental recommendations would be incorporated into construction and grading plans to address potential impacts related to landslide susceptibility.

Furthermore, implementation of both COA GEO-1a and COA GEO-1b would ensure that on-site runoff is controlled and directed off-site in a nonerosive manner and that site drainage and slopes are maintained over the life of the proposed project and would establish minimum setback criteria for descending slopes. Additionally, as described under Impact 2.9(c)(i), Hydrology and Water Quality, the proposed project would also be required to implement a Stormwater Pollution Prevention Plan (SWPPP) during construction requiring the incorporation of Best Management Practices (BMPs) and would maintain existing on-site drainage and vegetation during operations.

Through implementation of COA GEO-1a and COA GEO-1b, in addition to BMPs implemented through a project-specific SWPPP, the proposed project would avoid substantial adverse impacts associated with landslides. Therefore, the proposed project would not result in significant impacts related to landslides. Impacts would be less than significant.

b) Result in substantial soil erosion or the loss of topsoil?

Less than significant impact. The Geotechnical Investigation indicates that the project site is underlain by silty sandstone, clayey sandstone, sandy claystone, sandstone, and claystone of the Miocene-age Monterey Formation.[45] This unit was logged to a depth of 51.5 feet below ground surface and is overlain by a thin layer of asphalt. The Geotechnical Investigation determined that the

[42] City of Aliso Viejo. 2004. General Plan. Safety Element. Figure S-1: Safety Policy Map. https://avcity.org/DocumentCenter/View/384/Safety-Policy-Map-PDF. Accessed April 10, 2026.

[43] Alta California Geotechnical, Inc. 2025. Geotechnical Investigation. 15 Argonaut, City of Aliso Veijo, County of Orange, California. September 26.

[44] Alta California Geotechnical, Inc. 2025. Geotechnical Investigation. 15 Argonaut, City of Aliso Veijo, County of Orange, California. September 26.

[45] Ibid.

upper portions of alluvium are compressible and thus are not suitable to support the proposed structures.[46] Therefore, the proposed project would be required to implement the site-specific recommendations referenced in the Geotechnical Investigation related to soil removal and recompaction and final slab and foundations.

During construction, the proposed project would also be required to comply with erosion and siltation control measures outlined in Municipal Code Chapter 13.08, Grading and Excavation Code, which requires that excavations and fills that may affect drainage and watercourses be performed in accordance with good engineering practice, thereby reducing to a minimum the hazards and damage to public and private property. This would include measures such as using sandbags or straw bales as temporary erosion control.

Additionally, the proposed project would comply with the National Pollutant Discharge Elimination System (NPDES) General Permit for Stormwater Discharges Associated with Construction and Land Disturbance Activities (Order No. 2009-0009DWQ, and all subsequent amendments) (Construction General Permit); see Impact 2.10(a). The Construction General Permit requires development and implementation of a SWPPP and monitoring plan, which must include erosion and sediment control BMPs that would meet or exceed measures required by the Construction General Permit to control potential construction-related pollutants. Following compliance with the established regulatory framework, including Municipal Code Chapter 13.08 and Chapter 13.08.170 and the Construction General Permit, potential impacts concerning soil erosion and loss of topsoil would be less than significant.

c) Be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the project, and potentially result in on- or off-site landslide, lateral spreading, subsidence, liquefaction, or collapse?

Less than significant impact. As discussed in Impact 2.7(a), the project site would not be subject to significant impacts from seismically induced liquefaction. As previously mentioned under Impact 2.7(a)(iv), to address potential impacts regarding landslides, the proposed project would implement COA GEO-1a and COA GEO-1b.

Lateral spreading is a type of ground deformation that occurs when surface material extends or spreads on gentle slopes.[47] Ground shaking, especially when inducing liquefaction, may cause lateral spreading toward unsupported slopes.

Subsidence is a gradual settling or sudden sinking of Earth's surface that occurs when the withdrawal of groundwater, oil, or natural gas vertically displaces a large portion of land. Soils that are particularly subject to subsidence include those with high silt or clay content.

[46] Alta California Geotechnical, Inc. 2025. Geotechnical Investigation. 15 Argonaut, City of Aliso Veijo, County of Orange, California. September 26.

[47] United States Geological Survey (USGS). Lateral Spread. https://www.usgs.gov/media/images/lateral-spread. Accessed April 10, 2026.

Hydro-consolidation is the effect of introducing water into soil that is prone to collapse. Upon loading and initial wetting, the soil structure and apparent strength are altered, resulting in almost immediate settlement.[48] According to the Geotechnical Investigation, based on laboratory testing, there is a minimum potential for hydro-collapse as a result of the proposed project.[49]

Sedimentary bedrock of the Monterey Formation that is successively overlain by unconsolidated alluvium underlies the project site. The Geotechnical Investigation evaluated site conditions and identified the need for removal and recompaction of all weathered/unsuitable fill materials in order to provide competent subgrade and bearing conditions for the proposed structural slabs and foundations. Accordingly, the Geotechnical Investigation recommends removal and recompaction of the upper 5 feet of existing on-site soils beneath the proposed structures and removal beneath the building pads of the proposed structures to extend to a minimum of 5 feet laterally beyond the building footprint. It is recommended to remove and recompact the upper 2 feet of existing soils underneath parking lots and drive aisles and for cuts that are less than 2 feet underneath street areas. A Geotechnical Consultant would be required to observe all removal and over-excavation bottoms prior to the placement of fill. If unsuitable soils such as undocumented artificial fill is exposed upon the completion of the removals recommended above, additional removals may be required. Earthwork would be required to meet compaction standards and import soils must be approved by the project Geotechnical Consultant.

Pursuant to Municipal Code Chapter 13.08.170, Soil engineering and engineering geology reports, the proposed project would incorporate all site-specific recommendations of the Geotechnical Investigation as COA GEO-1a, which would address any identified potential soil and geologic hazards. The proposed project would also implement additional design recommendations related to landslide susceptibility through implementation of COA GEO-1b. Furthermore, the proposed project would be required to comply with all applicable regulations in the 2025 CBC as amended by the Municipal Code, which includes design requirements to mitigate the effects of potential soil and geologic hazards, including landslide, lateral spreading, subsidence, liquefaction, and seismic settlement. The City would review project design and construction plans for compliance with the CBC and the Municipal Code prior to construction activities. Thus, compliance with the City's established regulatory framework and standard engineering practices and design criteria, which would be verified through the City's plan review process, would ensure potential impacts associated with a geologic unit or soil that is unstable or would become unstable at the project site would be less than significant.

d) Be located on expansive soil, as defined in Table 18-1-B of the Uniform Building Code (1994), creating substantial direct or indirect risks to life or property?

Less than significant impact. The Geotechnical Investigation anticipated on-site soils are diatomaceous soils, consisting of a low density and high moisture content, and have a low to medium

[48] Alta California Geotechnical, Inc. 2025. Geotechnical Investigation. 15 Argonaut, City of Aliso Veijo, County of Orange, California. September 26.

[49] Ibid.

expansion potential.[50] As such, the recommendations provided in the Geotechnical Investigation include design recommendations for post-tensioned slabs, select backfill, subgrade moisture conditioning, and concrete slab reinforcement. Municipal Code Chapter 13.08.170 requires implementation of the recommendations provided in the Geotechnical Investigation. This requirement is incorporated into the proposed project as COA GEO-1a. Additionally, the City's Building Division would review construction plans to verify compliance with standard engineering practices, the Municipal Code, and the CBC. Compliance with the Municipal Code and the City's established regulatory framework; standard engineering practices, which would be verified through the City's plan review process; and the CBC would ensure potential impacts related to expansive soil are less than significant.

e) Have soils incapable of adequately supporting the use of septic tanks or alternative wastewater disposal systems where sewers are not available for the disposal of wastewater?

No impact. Sewers are available for disposal of the proposed project's wastewater. The proposed project would connect to the existing sanitary sewer system for wastewater disposal and would not include the use of septic tanks. Therefore, no impacts would occur, and no mitigation is required.

f) Directly or indirectly destroy a unique paleontological resource or site or unique geologic feature?

Less than significant impact with mitigation incorporated. Geologic mapping indicates that the project site is underlain by sedimentary bedrock of Miocene-age Monterey Formation that is successively overlain by a thin layer of asphalt fill. Based on soil borings collected at the project site, sand, sandstone, clayey sandstone, and silty sandstone sediments of the Monterey Formation were encountered at depths of up to 51.5 feet.[51]

According to The Nat online fossil locality database and the NHM collections (which are available online through the iDigBio), there are no recorded fossil localities within the project site.[52,53] There are 23 recorded vertebrate fossil localities (4521, 5547, 5752, 6283, 6284, 6286, 6550, 6551, 7541, 7532, 7543, 7544, 7546, 7547, 7548, 7549, 7550, 7551, 7552, 7553, 7554, 7555, and 7755) approximately 1.09 miles northeast of the project site. Additional localities lie within 1 mile southwest of the site.

To address the potential for an unanticipated discovery during construction, implementation of MM GEO-1 would be required. MM GEO-1 would require worker training by a qualified Paleontologist, prior to the start of construction, to inform construction personnel of the potential to encounter fossils

[50] Alta California Geotechnical, Inc. 2025. Geotechnical Investigation. 15 Argonaut, City of Aliso Veijo, County of Orange, California. September 26.

[53] San Diego Natural History Museum (The Nat). 2024. Paleontology Collection Database Results, Pleistocene-age vertebrate localities in Aliso Viejo, CA.

and procedures to follow in the event fossils are encountered during construction. Implementation of MM GEO-1 would reduce the potentially significant impact to less than significant. The impact would be less than significant with mitigation incorporated.

Conditions of Approval

COA GEO-1a In accordance with Municipal Code 13.08.170, Soil Engineering and Engineering Geology Reports, a soil engineering and engineering geology report shall be required for grading projects unless otherwise waived by the building official. The reports shall include information appropriate for the site including any information required by the building official. Recommendations included in the reports and approved by the building official shall be incorporated in the grading plans or specifications.

Accordingly, prior to issuance of grading permit, the project applicant shall provide grading plans or specifications that include all recommendations from the proposed project's September 26, 2025, Geotechnical Investigation prepared by Alta California Geotechnical, Inc., or from the latest geotechnical study for the proposed project.

COA GEO-1b Prior to and during grading, all grading activities adjacent to the existing slopes along the western and northern boundaries of the site shall be observed by a licensed California Geotechnical Engineer or Certified Engineering Geologist, consistent with the requirements of Aliso Viejo Municipal Code Chapter 13.08 (Grading and Excavation Code).

If geologic or geotechnical conditions associated with slope instability are encountered that differ from those described in the approved Geotechnical Investigation prepared by Alta California Geotechnical, Inc. (September 26, 2025), the project Geotechnical Consultant shall evaluate such conditions and prepare supplemental geotechnical recommendations, as necessary, in accordance with the California Building Code and California Geological Survey Special Publication 117A.

Any supplemental recommendations or corrective measures shall be incorporated into the grading or construction plans and shall be subject to review and approval by the City Engineer prior to continuation of grading in the affected area, consistent with the Aliso Viejo Municipal Code.

Mitigation Measures

MM GEO-1 The project applicant shall enlist a qualified Paleontologist (meeting the standards of the Society of Vertebrate Paleontology [SVP]) to prepare a Worker Environmental Awareness Program (WEAP) presentation for construction personnel. It will include information on paleontological resources, laws protecting them, types of fossils that could occur at the project site, and protocol for unanticipated discoveries. In the event that fossils are discovered during construction, excavations within 50 feet of the find shall be temporarily halted or diverted. The contractor shall notify the qualified

Paleontologist to examine the discovery. The qualified Paleontologist shall document the discovery as needed in accordance with SVP standards, evaluate the potential resource, and assess the significance of the find under the criteria set forth in CEQA Guidelines Section 15064.5. Based on the significance of the find, the qualified Paleontologist shall determine procedures to be followed before construction is allowed to resume at the location of the find. If, in consultation with the qualified Paleontologist, it is determined that avoidance is not feasible, the qualified Paleontologist shall prepare a Paleontological Resources Impact Mitigation Program (PRIMP) to outline salvage and recovery procedures. If deemed necessary by the qualified Paleontologist, the PRIMP shall include construction monitoring requirements as well. The PRIMP shall be submitted to the City for review and approval, and the approved plan shall be implemented.

Environmental Issues	Potentially Significant Impact	Less than Significant Impact with Mitigation Incorporated	Less than Significant Impact	No Impact
2.8 Greenhouse Gas Emissions *Would the project:*				
a) Generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment?	☐	☐	☒	☐
b) Conflict with any applicable plan, policy, or regulation adopted for the purpose of reducing the emissions of greenhouse gases?	☐	☐	☒	☐

Environmental Evaluation

Setting and Threshold of Significance

The project site is within the SoCAB, which is under the jurisdiction of the South Coast AQMD. In 2008, the South Coast AQMD formed a working group to identify GHG emissions thresholds for land use projects that could be used by local lead agencies in the SoCAB. The working group developed several different options, which are contained in the South Coast AQMD Draft Guidance Document–Interim CEQA GHG Significance Threshold (Interim GHG Thresholds). The working group has not provided additional guidance since the release of the interim guidance in 2008. In 2010, the South Coast AQMD Tier 3 threshold was expanded to include non-industrial projects, as explained in the minutes from the most recent working group meeting.[54] The South Coast AQMD Board has not approved the thresholds; however, the Guidance Document provides substantial evidence supporting the approaches to significance of GHG emissions that can be considered by the lead agency in adopting its own threshold.

In summary, the South Coast AQMD's draft threshold uses the Executive Order S-3-05 goal as the basis for the Tier 3 screening level. Achieving the Executive Order's objective would contribute to worldwide efforts to cap CO_2 concentrations at 450 parts per million (ppm) and stabilize global climate.

To determine whether the proposed project would have a significant impact with respect to the generation of GHG emissions, the appropriate tier for this project is Tier 3, which states that if GHG

[54] South Coast Air Quality Management District (South Coast AQMD). 2010. Greenhouse Gas CEQA Threshold Stakeholder Working Group Meeting No. 15. September 28.

emissions are less than 3,000 metric tons (MT) carbon dioxide equivalent (CO_2e) per year, project-level and cumulative GHG emissions would be less than significant. However, this threshold was developed to meet the 2020 GHG emissions goals. To be consistent with State goals detailed in SB 32, Executive Order B-30-15, and Executive Order S-3-05 to reduce GHG emissions by 40 percent below 1990 levels by 2030, a scaled screening GHG threshold can be developed for an assumed opening year of 2028. Though the South Coast AQMD has not published a quantified threshold beyond 2020, a threshold of 2,040 MT CO_2e per year would be appropriate.[55] Therefore, this analysis utilizes 2,040 MT CO_2e per year for a quantitative threshold of significance for GHG emissions and ARB's 2022 Scoping Plan for consistency with an applicable GHG emissions reduction plan.

A project's incremental contribution to a cumulative impact can be found not to be cumulatively considerable if the project would comply with an approved plan or mitigation program that provides specific requirements to avoid or substantially lessen the cumulative problem within the geographic area of the project.

This analysis includes estimates of GHG emissions associated with project construction and operational activities using CalEEMod Version 2022.1. This model is considered by South Coast AQMD to be an accurate and comprehensive tool for quantifying air quality and GHG impacts from land use projects in California. These estimates have been disclosed to comply with CEQA Guidelines Section 15064.4(a) and to provide evidence that the implementation of the plans, policies, and regulations adopted to reduce GHG emissions would result in actual GHG emissions reduction.

Would the project:

a) Generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment?

Less than significant impact. Both construction and operational activities have the potential to generate GHG emissions. The following is a discussion of the proposed project's contribution to GHG emissions during both the construction and operation phases.

Construction Greenhouse Gas Emissions

The proposed project would generate GHG emissions during construction activities, resulting from emission sources such as construction equipment, haul trucks, and construction worker vehicles. Although these emissions would be temporary and short-term in nature, they could represent a substantial contribution of GHG emissions. Construction emissions were modeled using CalEEMod Version 2022.1. Table 6, below, shows the annual construction GHG emissions.

[55] The 2,040 metric tons carbon dioxide equivalent (MT CO_2e) per year threshold for opening year 2028 is calculated by reducing the 3,000 MT CO_2e per year threshold (developed to meet the 2020 GHG emissions goals) by 40 percent, then interpolating to obtain the scaled GHG emissions threshold for 2028. Based on a starting threshold of 3,000 MT CO_2e per year in 2020 and a threshold of 1,800 MT CO_2e per year in 2030, the 3,000 MT CO_2e per year threshold would be reduced by 120 MT CO_2e per year through 2030.

Table 6: Proposed Project Construction Greenhouse Gas Emissions

Construction Year	Total GHG Emissions (MT CO_2e per year)
Project Construction–2027	327
Project Construction–2028	263
Total Construction Emissions	**590**
Emissions Amortized Over 30 Years[1]	**20**

Notes:
GHG = greenhouse gas
MT CO_2e = metric tons carbon dioxide equivalent
[1] Construction GHG emissions are amortized over the 30-year lifetime of the proposed project.
Source: Appendix A.

As shown above, the proposed project would generate approximately 590 MT CO_2e during construction. Over 30 years, the construction GHG emissions would be amortized to approximately 20 MT CO_2e per year. Since South Coast AQMD has not established a construction GHG threshold, total construction emissions were amortized over 30 years and included in the emissions inventory to account for the short-term, one-time GHG emissions from the construction phase of the proposed project.

Operational Greenhouse Gas Emissions

Operational, or long-term, emissions are those emissions that occur over the life of a project. Project operations were modeled for the 2028 operational year. To present a conservative estimate of emissions, the baseline for the analysis was assumed to be zero. Because the proposed project would demolish and replace an existing structure, the proposed project's incremental increase in GHG emissions would be lower than estimated and presented below. Sources for operational GHG emissions are summarized below.

Motor Vehicles: These emissions refer to GHG emissions contained in the exhaust from the cars and other on-road vehicles that would travel to and from the project site. Based on the project-specific trip generation rates presented in the Trip Generation and VMT Assessment Memorandum (Appendix I), the proposed project was estimated to generate 356 daily vehicle trips for the 58-unit proposed project. For the purpose of conservative analysis, the emissions in Table 7, below, do not take credit for the office building's generated vehicle trips and associated emissions that would be replaced by the proposed project.

Natural Gas: These emissions refer to the GHG emissions that occur when natural gas is burned on the project site. The proposed project buildings would be all-electric and would, therefore, not result in any GHG emissions from natural gas use.

Indirect Electricity: These emissions refer to those generated by off-site power plants to supply electricity required for the proposed project. Although not included in the modeling and Table 7, below, the proposed project would install PV solar panels, consistent with Title 24, Part 6, of the California Energy Code. The inclusion of solar panels would provide on-site renewable energy that would reduce the proposed project's consumption of electricity generated at off-site power plants.

Area Sources: These emissions refer to those produced during activities such as landscape maintenance.

Water Transport: These emissions refer to those generated by the electricity required to transport and treat the water to be used on the project site.

Waste: These emissions refer to GHG emissions produced by decomposing waste generated by the proposed project.

Table 7 presents the estimated annual GHG emissions from the proposed project's operational activities. As shown in Table 7, the proposed project would generate approximately 484 MT CO_2e per year after the inclusion of 20 MT CO_2e per year from project construction. In addition, with continued implementation of various statewide measures, the proposed project's operational energy and mobile source emissions would continue to decline in the future.

Table 7: Operational Greenhouse Gas Emissions—Unmitigated

GHG Emissions Source	GHG Emissions (MT CO_2e per year)
Area	1
Energy	67
Mobile (Automobiles)	378
Waste	13
Water	5
Amortized Construction	20
Total Annual Project Emissions	**484**
Applicable Threshold[1]	**2,040**
Exceed Applicable Threshold	**No**

Notes:
MT CO_2e = metric tons carbon dioxide equivalent
[1] The 2,040 MT CO_2e per year threshold for opening year of 2028 is calculated by reducing the 3,000 MT CO_2e per year threshold (developed to meet the 2020 GHG emissions goals) by 40 percent, then interpolating to obtain the scaled GHG emissions threshold for 2028.
Source: Appendix A.

As shown in Table 7, the proposed project's GHG emissions would not exceed the applicable threshold of significance. In addition, the emissions shown in Table 7 were estimated without taking any reductions for the existing land uses which generate GHG emissions. The proposed project would replace an existing office building with new residential buildings. The existing office use is currently generating GHG emissions that would no longer occur once the existing structure is demolished. Thus, the proposed project's net increase in GHG emissions would be even lower than what is shown in Table 7. In summary, construction and operational GHG emissions would result in a less than significant impact on the environment.

b) Conflict with any applicable plan, policy, or regulation adopted for the purpose of reducing the emissions of greenhouse gases?

Less than significant impact.

2022 Scoping Plan Consistency

The 2022 Scoping Plan identifies additional GHG reduction actions and strategies necessary to achieve the AB 1279 target of 85 percent below 1990 levels by 2045. These actions and strategies build upon those identified in the first update to the Scoping Plan (2013) and in the second update to the Scoping Plan (2017). Although a number of these measures are currently established as statewide regulations, some measures have not yet been formally proposed or adopted. It is expected that these measures or similar actions to reduce GHG emissions will be adopted as required to achieve statewide GHG emissions targets. Many of the measures are implemented at the State level and therefore not applicable to the proposed project. However, as it relates to local climate actions, Appendix D of the ARB 2022 Scoping Plan highlights three priority areas for local jurisdictions to focus on when reducing GHGs: (1) transportation electrification; (2) VMT reduction; and (3) building decarbonization. The proposed project would be consistent with and would further the goals of all three priority areas.

Regarding transportation electrification, the proposed project would provide EV charging infrastructure in accordance with CALGreen Section 4.106.4.1. Accordingly, each dwelling unit would be EV capable by installing a raceway to accommodate a future branch circuit for future electric vehicle supply equipment (EVSE) installation. Therefore, the proposed project would be consistent with transportation electrification by having the infrastructure to accommodate the future residents' EV charging needs.

Regarding VMT reduction, as discussed in Impact 2.17(b), the proposed project meets the Project Type screening criteria and is therefore considered to have a less than significant VMT impact. Therefore, the proposed project would be consistent with VMT reduction goals.

Regarding building decarbonization, the proposed project would have an all-electric building design and would therefore comply with this goal. Furthermore, the proposed project complies with all relevant Energy Code and CALGreen requirements, which would ensure energy efficiency. Impact 2.6(a) demonstrates that the proposed project will not result in any wasteful, inefficient, or

unnecessary energy usage as determined by the analysis required under CEQA Section 21100(b)(3) and Section 15126.2(b) of the CEQA Guidelines.

The proposed project would be consistent with the applicable measures outlined in the 2022 Scoping Plan. Therefore, the proposed project would be consistent with the 2022 ARB Scoping Plan, and potential impacts would be less than significant.

Mitigation Measures

None required.

Environmental Issues	Potentially Significant Impact	Less than Significant Impact with Mitigation Incorporated	Less than Significant Impact	No Impact
2.9 Hazards and Hazardous Materials *Would the project:*

Environmental Evaluation

Setting

The analysis in this section is based, in part, on the Phase I and Phase II Environmental Site Assessments (ESAs) prepared by Stantec Consulting Services, Inc. (Stantec) on July 14, 2025,[56] and September 4, 2025.[57] Both the Phase I ESA and the Phase II ESA are included in Appendix E of this document.

Based on historical maps and aerial photographs reviewed by the Phase I ESA, the project site was vacant from at least the 1930s to the 1980s and was commercially developed with the existing structure and parking configuration between 1988 and 1992.

According to the Phase I ESA, the following Recognized Environmental Condition (REC) was identified in connection to the project site:

- A west-adjoining fuel station located at 23022 Aliso Creek Road approximately 163 feet (0.03 mile) west of the project site is listed as a gasoline service station since 1996 that reportedly houses three active underground storage tanks (USTs) installed between 2004 and 2016. The USTs range from 10,000 to 20,000 gallons in size and contain diesel, regular, and premium unleaded fuel. A minor spill of two gallons of fuel was reported in 2018 due to a vehicle overfill onto concrete. The spill was cleaned by on-site personnel. The site received permit-related violations between 2014 and 2016 that were returned to compliance. No releases are reported at the site.

[56] Stantec Consulting Services, Inc. (Stantec). 2025. Phase I Environmental Site Assessment Report. 15 Argonaut Aliso Viejo, California 92656. July 14.

[57] Stantec Consulting Services, Inc. (Stantec). 2025. Phase II Environmental Site Assessment Report. 15 Argonaut Aliso Viejo, California 92656. September 4.

Given the proximity of this fuel station to the project site, the lack of documented assessment of soil, soil vapor, or groundwater at the site, and inferred groundwater flow to the east, this site represents a potential Vapor Encroachment Condition (VEC) and is considered a REC.

Accordingly, to evaluate the REC identified above, Stantec performed a Phase II ESA to evaluate subsurface conditions at the project site. Soils encountered during the Phase II ESA indicated that no VOCs were detected above their respective laboratory reporting limits. Therefore, it was concluded that the west-adjoining fuel station would not represent a potential VEC to the project site, and no further assessment was warranted.

The Phase I ESA also noted that, given the age of the existing building on-site, which was constructed in the 1980s, asbestos-containing materials (ACMs) and lead-based paint (LBP) may be present in the building materials. The Phase I ESA also noted that the existing asphalt parking lot may contain Petromat, a stress-absorbing fabric often associated with asphalt that may contain asbestos.

Would the project:

a) Create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials?

Less than significant impact. Construction of the proposed project would include the routine transport, use, and disposal of limited quantities of hazardous materials necessary for construction, including fuel and solvents. The use of these hazardous materials would be typical of construction projects, would be short-term, and would be handled in accordance with standard construction practices, as well as with applicable federal, State, and local regulations. Standard construction practices would be observed such that hazardous materials are appropriately contained and remediated as needed, as required by local, State, and federal law. Regulatory requirements would include California Code of Regulations Title 22, Division 4.5, for appropriate management of hazardous materials, as well as the requirements of the EPA, Resource Conservation and Recovery Act (RCRA), California Department of Toxic Substance Control (DTSC), Division of Occupational Safety and Health (Cal/OSHA), Caltrans, and South Coast AQMD.

The proposed project would include residential development, which does not typically use or store large quantities of hazardous materials. During the operational phase of the proposed project, hazardous materials may be handled on the project site. Hazardous materials used during operation would likely be limited to fertilizers, herbicides, pesticides, solvents, household cleaning agents, and similar materials used for maintenance and operation of the townhomes, building facilities, amenities, and landscaping. These types of materials are common and represent a low risk to people and the environment when used as intended. The proposed project would also be required to adhere to State and federal regulatory requirements as discussed above. Therefore, impacts associated with hazardous materials would be less than significant.

b) Create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment?

Less than significant impact with mitigation incorporated. As discussed above, the Phase I ESA determined that the project site was undeveloped until the construction of a road traversing the project site in 1963 and the construction of the existing office building and parking lot by 1989.

Although the Phase I ESA recognized the west-adjoining fuel station located west of the project site as a potential VEC and REC,[58] the Phase II ESA did not detect any VOCs above their respective laboratory reporting limits, and it was concluded that the fuel station would not pose a potential VEC.[59] The Phase I ESA identified the potential for the existing building to contain ACM and LBP and the potential for the existing asphalt parking lot to contain Petromat.[60] As described above, Petromat may contain asbestos. To minimize the potential for exposure to asbestos and lead during construction activities, the proposed project would implement MM HAZ-1, requiring that all applicable surveys be conducted prior to site development activities in accordance with all applicable local, regional, State, and federal guidelines. If ACMs, LBP, or Petromat are identified, proper removal and disposal procedures, in accordance with all applicable local, regional, State, and federal regulations, would be required.

In addition, as previously discussed above under Impact 2.9(a), the proposed project would be required to comply with all applicable local, State, and federal laws and regulations pertaining to the transport, use, disposal, handling, and storage of hazardous waste during the construction phase to reduce the likelihood and severity of accidents during transit. Proper handling of the use and disposal of hazardous materials associated with residential uses would reduce the potential for exposure. Therefore, impacts related to construction would be less than significant with mitigation incorporated.

Operation of the proposed project would not involve the transport, use, or disposal of large quantities of hazardous materials. The use of hazardous materials on the project site post-construction would consist of those commonly used in a residential setting for routine maintenance and cleaning and would not be of a significant quantity to create a reasonably foreseeable upset or accident. As such, the proposed project would not introduce uses to the site that would create a significant hazard to the public or the environment through reasonably foreseeable upset or accident conditions involving the release of hazardous materials into the environment. The proposed project would be required to comply with additional regulatory requirements, including but not limited to the Code of Federal Regulations, Title 49, Transportation, specific to the transport of hazardous materials; California Code of Regulations Titles 8, 22, and 26, and their enabling legislation set forth in California Health and Safety Code Division 20, Chapter 6.95, Hazardous Materials Release Response Plans and Inventory;

[58] Stantec Consulting Services, Inc. (Stantec). 2025. Phase I Environmental Site Assessment Report. 15 Argonaut Aliso Viejo, California 92656. July 14.

[59] Stantec Consulting Services, Inc. (Stantec). 2025. Phase II Environmental Site Assessment Report. 15 Argonaut Aliso Viejo, California 92656. September 4.

[60] Stantec Consulting Services, Inc. (Stantec). 2025. Phase I Environmental Site Assessment Report. 15 Argonaut Aliso Viejo, California 92656. July 14.

and the requirements of the Orange County Health Care Agency Environmental Health Division (i.e., the Certified Unified Program Agency [CUPA]), which would ensure safety standards related to the use and storage of hazardous materials are implemented. Consistency with local, State, and federal regulations related to the transport, storage, use, and disposal of hazardous materials would minimize the potential for upset and accident conditions to occur within the site. Therefore, impacts related to operations would be less than significant, and no mitigation would be required.

In conclusion, the overall project impact would be less than significant with mitigation incorporated.

c) Emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school?

No impact. There are no schools within 0.25 mile of the project site. The nearest schools are Don Juan Avila Middle and Elementary School (26278 Wood Canyon Drive), 0.89 mile southwest of the project site; Aliso Viejo Middle School (111 Park Avenue), 1.15 miles southeast of the project site; and Laguna Hills High School (25401 Paseo De Valencia), 1.18 miles northeast of the project site. As discussed in Impact 2.9(a), construction of the proposed project would include the limited use of hazardous materials, such as fuel and solvents. The use of these hazardous materials would be in compliance with all applicable local, State, and federal regulations. During operation of the proposed project, limited use of hazardous materials would likely be used for building maintenance. Similarly, these hazardous materials would be stored, handled, and disposed of in accordance with applicable regulations. Thus, the proposed project would not include any uses that could potentially generate hazardous materials in significant quantities that would have an impact to surrounding schools. Therefore, there would be no impact.

d) Be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, would it create a significant hazard to the public or the environment?

No impact. Government Code Section 65962.5 refers to the Hazardous Waste and Substance Site List, commonly known as the Cortese List. The Cortese List contains hazardous waste and substance sites with known USTs having a reportable release and solid waste disposal facilities for which there is a known migration. The Cortese List also includes hazardous substance sites selected for remedial action; historic Cortese sites; and sites with known toxic materials identified through the abandoned site assessment program. The proposed project site is not located on a site which is included on a hazardous materials site list compiled pursuant to California Government Code Section 65962.5.[61] The closest site recognized by the Cortese List is a closed Leaking Underground Storage Tank (LUST) site, United Parcel Service (T0605902532), located approximately 500 feet southwest of the project site across intervening development at 22 Brookline in Aliso Viejo.[62] According to the

[61] California Environmental Protection Agency (Cal/EPA). 2026. Cortese List Data Resources. Website: https://calepa.ca.gov/SiteCleanup/CorteseList/. Accessed April 10, 2026.

[62] California State Water Resources Control Board (State Water Board). 2026. GeoTracker. Website: https://geotracker.waterboards.ca.gov/map/?CMD=runreport&myaddress=15+ARgonaut+Aliso+Viejo. Accessed April 10, 2026.

Geotracker website, the site has been closed since 1996.[63] The closest active site recognized by the Cortese List is located approximately 1.98 miles northeast of the project site and is an active Cleanup Program site located at 24312–24422 Rockfield Boulevard in Lake Forest.[64] None of the activities occurring at this site would be close enough to the project site to have an impact. Therefore, the proposed project would not create a significant hazard to the public or the environment. No impact would occur, and no mitigation is required.

e) For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project result in a safety hazard or excessive noise for people residing or working in the project area?

No impact. The project site is not within 2 miles of an airport. The nearest airport is John Wayne Airport, located 9.58 miles northwest of the project site. The project site is not within the Airport Influence Area of this airport and is not located within an airport land use plan. Therefore, the proposed project would not result in a safety hazard of excessive noise for people working or living at the project site. No impact would occur.

f) Impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan?

Less than significant impact. The City has developed an Emergency Operations Plan (EOP), consistent with the Standardized Emergency Management System (SEMS), outlining the City's response to extraordinary emergency situations associated with natural disasters, technological incidents, and national security emergencies.[65] The EOP is designed to incorporate and coordinate all the facilities and personnel of the City into an efficient organization capable of reacting adequately in the face of any disaster and to conduct such operations as the nature of the disaster deems necessary. It serves as an extension of the California Emergency Plan and the Emergency Resource Management Plan. The EOP is not intended to address normal day-to-day emergencies or the well-established and routine procedures used in coping with such emergencies. Instead, the operational concepts reflected in the EOP focus on potential large-scale disasters that can generate unique situations requiring unusual emergency responses. The EOP provides comprehensive policy and guidance for emergency and response operations and details the responsibilities of residents, organizations, and City departments. The EOP also establishes evacuation routes and identifies emergency shelter facilities and water supplies.

[65] City of Aliso Viejo. 2004. General Plan. Safety Element, 11–12. Website: https://avcity.org/DocumentCenter/View/395/Safety-Element-PDF. Accessed April 10, 2026.

General Plan Figure S-1, Safety Policy Map, identifies evacuation routes in the City.[66] Within the vicinity of the project site, Aliso Creek Road and Glenwood Drive are identified as primary evacuation routes.

The project site is within Zone 20 of Aliso Viejo's Evacuation Zones.[67] Designated evacuation routes within Zone 20 include Glenwood Drive, Aliso Creek Road, Aliso Viejo Parkway, and Moulton Parkway. The project site is adjacent to both Glenwood Drive and Aliso Creek Road, and construction would not require closure or partial closure of Glenwood Drive or Aliso Creek Road. The proposed project would be constructed completely within the project site and construction equipment would access the project site via Argonaut, which is the main access point to the project site. If any road closures to Argonaut are required, the project applicant and construction crew would be required to coordinate with the City of Aliso Viejo Public Works Department to ensure that emergency access routes are maintained during construction. Thus, construction of the proposed project would not impede the use of surrounding roadways for emergencies or access for emergency response vehicles.

Operation of the proposed project would be designed to not interfere with surrounding roadways, and the proposed project would provide adequate emergency vehicle access consistent with City and the Orange County Fire Authority (OCFA) requirements for emergency access.

Furthermore, the project site is not identified as a Constrained Access Parcel or as a parcel which may be vulnerable in the event of an evacuation due to a lack of redundant access, in General Plan Safety Element Figure 8, Impaired Access Roads and Parcels in Aliso Viejo. [68] Therefore, the proposed project would not result in adverse impacts on emergency evacuation routes that have not been previously identified in the City's General Plan and accounted for in the City's EOP.[69] Therefore, the proposed project would not result in significant impacts to emergency access during construction or operation. The proposed project would not impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan. Impacts would be less than significant.

g) Expose people or structures, either directly or indirectly, to a significant risk of loss, injury or death involving wildland fires?

Less than significant impact. California Department of Forestry and Fire Protection (CAL FIRE) has mapped fire threat potential throughout California and ranks fire threats within a designated Fire

[66] City of Aliso Viejo. 2004. General Plan. Safety Element, Figure S-1 Safety Policy Map. Website: https://avcity.org/DocumentCenter/View/384/Safety-Policy-Map-PDF. Accessed April 10, 2026.

[67] City of Aliso Viejo. 2024. Citywide Evacuation Zones. Website: https://avcity.org/DocumentCenter/View/3750. Accessed April 10, 2026.

[68] City of Aliso Viejo. 2004. General Plan. Safety Element. Website: https://adecinnovations.sharepoint.com/sites/ESSite/Shared%20Documents/ES/Active%20Projects/6513%20Brandywine%20Homes/0001%2015%20Argonaut/BACKGROUND/Reference%20Library/_General%20Plan_/Elements/gp_safety.pdf?CT=1778625769333&OR=ItemsView. Accessed May 12, 2026.

[69] Ibid.

Hazard Severity Zone (FHSZ) on a scale of moderate, high, and very high fire severity. According to the most recent CAL FIRE Hazards Severity Zone maps, the project site is not located within a designated FHSZ.[70] The project site is located within an urbanized area and is surrounded by intervening development. According to the General Plan, the project site is not located along an urban wildfire interface (WUI) and is not located in the portions of the City abutting the Aliso and Wood Canyon Wilderness Park, located approximately 0.82 mile west of the project site within OCFA's Very High Fire Hazard Severity Zone (VHFHSZ), where wildfires are of the greatest risk.[71] Additionally, the project site and its surrounding areas do not have a history of wildfire.[72]

The nearest natural and native hazardous vegetation is located approximately 0.62 mile northwest on Aliso Creek Road and Westwing and approximately 0.75 mile southeast on Aliso Viejo Parkway and Moulton Parkway. Wildfires in either area could carry embers to the project site. Additionally, human-caused vegetation fire could be ignited within the existing screening trees along the western and northern perimeters of the project site. However, the proposed project would be required to comply with the 2025 California Fire Code, as amended, in accordance with Municipal Code Chapter 13.04, and would be subject to approval by OCFA. Adherence with fire code standards and approval by OCFA would reduce the potential impacts associated with the possibility of an off-site wildfire showering embers into the site given the incorporation of ignition-resistant construction along with fire protection features that would be provided for the proposed buildings.

Further, the project site is in a developed, built-up urban area that is not adjacent to any VHFHSZ or areas in the WUI. Therefore, the proposed project would not expose people or structures to wildland fire hazards. Impacts would be less than significant.

Mitigation Measures

MM HAZ-1 Implementation of Asbestos-containing Material, Lead-based Paint, and Petromat Surveys Prior to Site Demolition Activities

Prior to the issuance of demolition permits, the proposed project shall retain a Qualified Environmental Professional to conduct asbestos-containing material (ACM), lead-based paint (LBP), and Petromat surveys. If ACM or LBP are identified in existing building materials or if asbestos is identified within any Petromat that is part of the existing parking lot, proper removal and disposal of the materials in

Environmental Evaluation

Setting

This analysis is based in part on the Drainage Report and the Water Quality Management Plan (WQMP) prepared for the proposed project by Advanced Civil Group, Inc., on April 7, 2026 and revised on July 14 and July 8, 2026, respectively.[73,74]

The project site is located within the Aliso Creek Watershed. Site drainage is generally broken up into four drainage areas under existing conditions, where drainage is collected via V-ditches adjacent to the site's northern and western boundaries that eventually drain into existing underground utility pipes in Argonaut.

The project site is approximately 62 percent impervious, with vegetated sloped areas located primarily along the northern and western perimeters. The proposed project would slightly increase the project site to 65 percent impervious.[75] Apart from minor landscape drains that outlet to the parking lot curb face, there are no known underground storm drain facilities on-site.

According to the General Plan's Safety Element, the project site is not within a designated 100-year flood zone, and Federal Emergency Management Agency's (FEMA's) National Flood Hazard Layer shows the project site within an area of minimal flood hazard (Zone X).[76,77]

a) Violate any water quality standards or waste discharge requirements or otherwise substantially degrade surface or groundwater quality?

Less than significant impact. Project impacts related to water quality could occur over three different periods:

- During the demolition, earthwork, and construction phase, where the potential for erosion, siltation, and sedimentation would be the greatest;
- Following construction, before the establishment of ground cover, when the erosion potential may remain relatively high; and
- After project completion, when impacts related to sedimentation would decrease markedly but those associated with urban runoff would increase.

Polluted runoff can have harmful effects on drinking water, recreational water, and wildlife. Urban runoff pollution includes a wide array of environmental and stormwater characteristics depending on-site conditions (e.g., land use, impervious cover, and pollution prevention practices), rain events (duration, amount of rainfall, intensity, and time between events), soil type and particle sizes, the amount of vehicular traffic, and atmospheric deposition. Major pollutants typically found in runoff from urban areas include sediments, nutrients, oxygen-demanding substances, heavy metals, petroleum hydrocarbons, pathogens, and bacteria. Most urban stormwater discharges are nonpoint sources.

The City is within the jurisdictional area of the San Diego RWQCB.[78] The San Diego RWQCB requirements are further clarified by the Orange County Drainage Area Management Plan (DAMP), which requires the preparation and implementation of WQMPs for development projects.[79] The DAMP reduces the pollution content of stormwater to the Maximum Extent Practicable (MEP). The purpose of the Orange County DAMP is to satisfy NPDES permit conditions for creating and implementing a Storm Water Management Plan (SWMP) to reduce pollutant discharges to the MEP. The DAMP contains guidelines on structural and nonstructural BMPs for meeting the NPDES goals.

Additionally, the City participates in the South Orange County Water Quality Improvement Plan (WQIP), a watershed-based planning framework developed to improve surface water quality through the reduction of pollutant loads in urban stormwater runoff within south Orange County. The WQIP identifies priority water quality conditions and implementation strategies intended to protect receiving waters and support compliance with applicable NPDES permit requirements.[80] Consistent with the goals of the WQIP, the proposed project would be required to incorporate site design features, source

control measures, and treatment control BMPs to minimize pollutants in runoff and manage post-construction stormwater discharges.

Consistent with the DAMP and City requirements, the project applicant would be required to prepare and submit a Preliminary Project WQMP, a Hydrology Report, and a SWPPP prior to project grading and construction. Compliance with these requirements would ensure that stormwater runoff generated by the proposed project is appropriately treated and managed in accordance with applicable local, regional, and state stormwater regulations.

As described in the proposed project's Drainage Report (Appendix F), existing drainage on the project site originates from overland flow from sloped landscaping and roof runoff that flows south, east, and west into V-ditches along the northern and western boundaries of the project site.[81] Peak flows under the proposed project within the sloped areas would be maintained as overland flow and flow east, west, and south along the boundaries of the site's developed footprint, where they would eventually be conveyed into underground utility pipes prior to draining into Argonaut's existing stormwater infrastructure located at the southeastern corner of the site.

In the post-construction condition, runoff generated from the developed portions of the project site, including rooftops, drive aisles, parking areas, walkways, private yards, common landscaped areas, and other hardscape surfaces, would be collected through a network of area drains and storm drain facilities and conveyed to the proposed project's water quality treatment system. The proposed project would incorporate a modular wetland/biofiltration treatment system designed to provide low impact development (LID) treatment of urban runoff prior to discharge. The treatment system would include pretreatment and biofiltration components that remove pollutants from stormwater runoff before treated flows are conveyed to the discharge system. Runoff from the treated drainage management area, which encompasses the proposed developed footprint, would be directed through the biofiltration facility and subsequently pumped to the existing storm drain system within Argonaut.

In addition to water quality treatment features, the proposed project would incorporate hydromodification management measures to control post-project peak runoff rates. The proposed project is located within a Hydromodification Zone[82] and includes an underground storage chamber to attenuate stormwater flows and mitigate increases in peak discharge rates. According to the project's WQMP, the proposed residential development would not generate greater runoff than the existing developed condition and would not discharge runoff at rates exceeding applicable hydromodification thresholds. Accordingly, the proposed project would satisfy hydromodification control requirements while also providing treatment of stormwater runoff through the biofiltration and modular wetland systems prior to discharge to Argonaut.

As the proposed project would disturb more than 1 acre of land, it would be subject to the NPDES General Permit for Stormwater Discharges Associated with Construction and Land Disturbance

[81] Advanced Civil Group, Inc. 2026. Drainage Report: Tract No. 19489. Proposed 58-unit Townhome Development Aliso Viejo, California. July 14.

[82] Advanced Civil Group, Inc. 2026. Water Quality Management Plan (WQMP). July 8.

Activities Construction General Permit (Construction General Permit). Construction activity subject to the Construction General Permit includes any construction or demolition activity, including but not limited to clearing, grading, grubbing, excavation, or any other activity that results in a land disturbance of equal to or greater than 1 acre. The Construction General Permit requires development and implementation of a SWPPP and monitoring plan, which must include erosion and sediment control BMPs that would meet or exceed measures required by the Construction General Permit to control potential construction-related pollutants. Erosion-control BMPs prevent erosion, whereas sediment controls trap sediment once it has been mobilized. The types of required BMPs are relative to the amount of soil disturbed, the types of pollutants used or stored at the project site, and proximity to water bodies.

The WQMP prepared for the proposed project is intended to comply with the requirements of the County of Orange NPDES Stormwater Program. The WQMP outlines the operation and maintenance of all BMPs to be used at the project site, including a catch basin storm filter, hydrologic source controls, and structural and nonstructural source controls.

Additionally, project construction activities would be required to comply with applicable City requirements to control erosion and reduce or eliminate stormwater runoff containing sediment, including Municipal Code Chapter 13.08, Article XIII, Erosion Control, which requires preparation of an Erosion Control Plan submitted to the building official and the implementation of erosion and sediment control measures. Project construction activities would also be required to comply with water quality measures included in the City's Water Quality Ordinance (Municipal Code Chapter 7.35, Stormwater Management). The Water Quality Ordinance is designed to effectively prohibit non-stormwater discharges into the storm sewers, reduce the discharge of pollutants, and achieve compliance with the Clean Water Act and the Porter-Cologne Water Quality Control Act. Specifically, in accordance with Section 7.35.080, Control of Urban Runoff–New Development and Redevelopment Projects, prior to the City's issuance of a grading or building permit for the proposed project, the project applicant would be required to submit project plans demonstrating compliance with all applicable local ordinances; California Stormwater Quality Association (CASQA) standards; and the City's water quality manual, which includes the City's jurisdictional urban runoff management plan or local implementation plan, the Orange County DAMP, and the City's NPDES permit.

In addition to the requirements of Municipal Code Section 7.35.080, project construction activities would be required to comply with Municipal Code Section 7.35.070, Control of Urban Runoff – Construction Projects, which requires the project applicant to submit a pollution control plan, construction BMP plan, and/or an erosion and sediment control plan meeting the requirements of the water quality manual and to submit evidence of coverage under the Construction General Permit prior to issuance of a permit involving ground-disturbing activities.

Compliance with the above regulations would ensure that impacts related to water quality during construction of the proposed project would be less than significant.

The proposed project would comply with the NPDES requirement through implementation of the Preliminary Project WQMP, and the Orange County DAMP and South Orange County WQIP; as such,

construction of the proposed project would not violate water quality standards or degrade surface or groundwater quality.

During operations, the project site would be subject to compliance with the Regional Municipal Separate Storm Sewer System (MS4) permit. The Regional MS4 Permit (Order No. R8-2009-0030, as amended by Order No. R8-2010-0062) requires co-permittees, including the City, to reduce the discharge of pollutants from new development and significant redevelopment to the MEP. All development projects are required to implement source control and site design practices. Per the MS4 Permit requirements for redevelopment, the proposed project will also incorporate LID elements into the site design as well as the implementation of BMPs.

As noted in the WQMP, the project site is located within a Hydromodification Zone.[83] Thus, the proposed project is required to mitigate the difference between the existing and proposed runoff peak flow rates. The proposed hydromodification management system would be designed to attenuate and manage stormwater flows to mimic pre-development hydrology, per MS4 Permit requirements. As previously mentioned, hillside runoff would be channeled through underground utility pipes and then conveyed to the front of the property, mimicking existing on-site drainage patterns. The impervious surfaces within the development footprint of the project site would increase by 3 percent from 62 percent to 65 percent under the proposed project.[84]

For runoff collected from buildings, drive aisles, hardscape, and landscaped areas, stormwater would be collected via area drains and directed to a biofiltration system for treatment before being pumped for final discharge into Argonaut.[85] During operations, peak flow levels would be maintained. Therefore, the proposed project would be consistent with requirements for Hydromodification Zones, as stipulated within the WQMP. The proposed project would be designed to mimic the existing condition to the maximum extent possible and would not negatively impact downstream infrastructure.

The proposed project would be subject to federal, State, and local regulations related to water quality, including the City's Water Quality Ordinance. Implementation of the measures outlined above, including water quality operational BMPs, would reduce pollutants of concern associated with the stormwater runoff from the project site in compliance with the Regional MS4 Permit and ensure the proposed project would not violate any water quality standards or waste discharge requirements or otherwise substantially degrade surface or ground water quality. The impact would be less than significant.

[83] Advanced Civil Group, Inc. 2026. Water Quality Management Plan (WQMP). July 8.

[84] Ibid.

[85] Ibid.

b) Substantially decrease groundwater supplies or interfere substantially with groundwater recharge such that the project may impede sustainable groundwater management of the basin?

Less than significant impact. The project site is located within the boundaries of the MNWD. MNWD's potable water supply is entirely imported water purchased from the Municipal Water District of Orange County (MWDOC).[86] As such, project implementation would not substantially decrease groundwater supplies associated with water demand such that the proposed project would impede sustainable groundwater management of the basin.

The proposed project would slightly reduce the pervious surfaces as compared to existing conditions. Under the existing conditions, the project site is approximately 62 percent impervious and the proposed project would increase the project site to 65 percent impervious.[87] However, as described in the WQMP, the existing soil type does not allow for adequate infiltration due to existing constraints with the soil conditions. Because the project site does not currently allow for infiltration and groundwater recharge, the proposed project would not interfere substantially with groundwater recharge such that the proposed project could impede sustainable groundwater management of the basin. As such, the proposed project would not interfere with groundwater recharge or impede sustainable groundwater management of a basin. Impacts would be less than significant.

c) Substantially alter the existing drainage pattern of the area, including through the alteration of the course of a stream or river or through the addition of impervious surfaces, in a manner which would:

(i) result in substantial erosion or siltation on- or off-site;

Less than significant impact. As discussed above, the proposed project would increase impervious surfaces at the project site by approximately 1 percent across the project site as a whole and by approximately 3 percent within the development footprint of the project site. These increases are not considered substantial because the proposed project would be subject to the NPDES permit requirements and would implement BMPs and LID elements to reduce runoff and erosion. The proposed condition peak flow drainage would mimic the existing condition to the maximum extent possible, and the proposed project would install a bioretention basin to address 10-year storm flows. As previously discussed, the proposed project's peak flow would either be maintained or reduced below existing conditions across all four drainage areas.

According to the Geotechnical Investigation, the slopes on-site are considered compressible and not suitable to support the proposed structures. Implementation of the recommendations provided in the Geotechnical Investigation in accordance with Municipal Code Section 13.08.070, as discussed in Section 2.7, Geology and Soils, would ensure that runoff is controlled and directed off-site in a

[86] Moulton Niguel Water District (MNWD). 2025. 2020 Urban Water Management Plan, 2021. Website: https://www.mnwd.com/wp-content/uploads/2021/12/2020-Urban-Water-Management-Plan.pdf. Accessed April 10, 2026.

[87] Advanced Civil Group, Inc. 2026. Drainage Report: Tract No. 19489. Proposed 58-unit Townhome Development Aliso Viejo, California. July 14.

nonerosive manner and that the slopes and natural drainage patterns are maintained over the life of the proposed project. The proposed project would not alter the course of a river or stream as the site is developed and located in an urban and developed area. As such, the proposed project would not alter the existing drainage pattern at the project site in a manner that would result in on- or off-site erosion or siltation. Additionally, the proposed project would implement the provisions provided in the WQMP prepared for the proposed project, which includes ongoing operation and management of BMPs at the project site. Further, the proposed project would be required to adhere to Article XIII of Chapter 13.08 of the City's Municipal Code, which contains provisions related to erosion control such as grading specifications and erosion control device requirements. Adherence to the WQMP would also ensure compliance with the County NPDES Stormwater Program. As such, impacts would be less than significant.

(ii) substantially increase the rate or amount of surface runoff in a manner which would result in flooding on- or off-site;

Less than significant impact. As discussed above, although the proposed project would increase impervious surfaces on the project site as compared to the existing conditions, BMPs designed to manage stormwater runoff would be implemented to reduce runoff and erosion. The proposed project would not alter the course of a river or stream. Stormwater runoff from buildings, drive aisles, hardscape, and landscaped areas would be routed to a biofiltration system for treatment before final discharge into Argonaut. The proposed project would be consistent with the approved drainage plan provided in the Drainage Report (Appendix F), including the proposed basin discussed above, which would reduce peak flows from the project site and would not result in increased surface runoff in a manner that would result in flooding. Additionally, all proposed habitable structures have been designed and graded such that finished floor elevations are above the adjacent public and private street elevations, providing positive drainage away from the buildings.[88] Surface runoff generated by the 100-year storm event will be collected and conveyed through proposed on-site drainage improvements and/or adjacent street conveyance systems in accordance with Orange County Local Drainage Manual requirements. The proposed project's peak flow drainage would mimic the existing condition to the maximum extent possible. The proposed biofiltration system is designed for hydromodification management as well as peak flow mitigation. Peak flows from all drainage areas on the project site would ultimately discharge into existing stormwater infrastructure in Argonaut located at the southeastern corner of the site. As such, impacts would be less than significant.

(iii) create or contribute runoff water which would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff; or

Less than significant impact. As discussed above, the proposed project would not substantially alter the existing drainage pattern at the project site through the increase of impervious surfaces at the project site or by altering the course of a river or stream. The proposed project would connect to

[88] Advanced Civil Group, Inc. 2026. Drainage Report: Tract No. 19489. Proposed 58-unit Townhome Development Aliso Viejo, California. July 14.

existing water and sanitary sewer lines and would include the installation of stormwater management systems on-site. Stormwater from the proposed project would be directed either to area drains and conveyed to a biofiltration system for treatment or to underground utility pipes before ultimately draining into Argonaut. The proposed project has been designed to meet water quality objectives as required by the MS4 Permit. The proposed project would be designed consistent with the approved drainage plan and would not exceed the capacity of the existing stormwater drainage system. Additionally, the proposed project would implement the provisions provided in the WQMP and the Geotechnical Investigation prepared for the proposed project—which include ongoing operation and management of BMPs at the project site and measures to ensure on-site runoff is controlled and directed off-site in a nonerosive manner. Further, adherence to the WQMP would ensure compliance with the County NPDES Stormwater Program, which would include biofiltration, and modular wetland systems and detention systems to control and reduce the discharge of pollutants in stormwater. Compliance with the WQMP would address potential additional sources of polluted runoff from the project site. The impact would be less than significant.

(iv) impede or redirect flood flows?

Less than significant impact. The project site is within an area of minimal flood hazard (Zone X);[89] and the proposed project would be consistent with the approved drainage plan and would not cause flood flows to be impeded or redirected. Any potential flooding on-site would either be funneled into underground utility pipes or into area drains and a proposed biofiltration system for treatment before draining into Argonaut. Peak flows from the site would drain into existing stormwater infrastructure located in Argonaut. As such, the impact would be less than significant.

d) In flood hazard, tsunami, or seiche zones, risk release of pollutants due to project inundation?

No impact. The project site is located more than 5 miles inland from the Pacific Ocean and is not situated near a large enclosed body of water; therefore, the site is not subject to inundation from a tsunami or seiche. In addition, the project site is located within an area of minimal flood risk. As such, the potential for flood-, tsunami-, or seiche-related inundation to cause the release of pollutants or hazardous materials into the environment is negligible. As such, no impact would occur.

e) Conflict with or obstruct implementation of a water quality control plan or sustainable groundwater management plan?

Less than significant impact. The project site is within the Aliso Creek Watershed and is subject to the Water Quality Control Plan for the San Diego Basin (Basin Plan). The Basin Plan includes an implementation plan describing the actions by the RWQCB and others that are necessary to achieve and maintain the water quality standards as well as water quality goals and policies that govern the

[89] Federal Emergency Management Agency (FEMA). 2026. National Flood Hazard Layer (NFHL). Website: https://hazards-fema.maps.arcgis.com/apps/webappviewer/index.html?id=8b0adb51996444d4879338b5529aa9cd. Accessed May 11, 2026.

San Diego Basin.[90] The proposed project would comply with the goals and policies outlined in the Basin Plan, such as nonpoint source pollution control, which require the proposed project to employ LID strategies as well as site-specific BMPs and implementation programs, including coordination with local stormwater permits. As previously discussed, the proposed project would comply with the WQMP prepared for it to ensure that the proposed project meets water quality standards and would not degrade surface or groundwater quality. Therefore, the proposed project would not conflict with or obstruct implementation of a water quality control plan. Impacts would be less than significant.

Mitigation Measures

None required.

Environmental Evaluation

Setting

The General Plan currently designates the project site as Business Park (Exhibit 3). The proposed project would require a GPA to change the land use designation from Business Park to MDR. The MDR land use designation is intended to provide residential development with a density between 8 and 18 du/acre, with an average density of 12 units per gross acre.[91] The project site is currently zoned Business Park-2 (Exhibit 4). The proposed project requests a rezone to change the zoning designation from Business Park-2 to RM. The RM zoning district is intended to provide for the development and preservation of medium density neighborhoods containing detached and attached single-family homes on smaller lots, duplexes, townhomes, apartments, and condominiums (Municipal Code Chapter 15.10).

Would the project:

a) Physically divide an established community?

No impact. The project site is in a highly developed and urbanized area and is currently developed with an office building and parking lot. The surrounding area contains office, commercial, and residential uses. Land adjacent to the proposed project is designated for Very Low Density Residential to the north, Business Park to the south and east, and Neighborhood Commercial to the west. The project site is not large enough or otherwise configured in such a way that would create a physical barrier within an established community. A typical example of such a barrier would be a

[91] City of Aliso Viejo. 2004. City of Aliso Viejo General Plan, Land Use Element. Website: https://avcity.org/DocumentCenter/View/391/Land-Use-Element-PDF. Accessed April 10, 2026.

project that involved a continuous right-of-way, such as a roadway, which would divide a community and impede access between parts of the community. The proposed project does not include these types of features. Implementation of the proposed project would not disrupt the surrounding land uses or divide the physical arrangement of the established communities adjacent to the project site. Therefore, the proposed project would not physically divide an established community. No impact would occur, and no mitigation is required.

b) Cause a significant environmental impact due to a conflict with any land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect?

Less than significant impact. The proposed project would include a GPA to amend the General Plan land use designation from Business Park to MDR and a rezone to change the zoning from Business Park-2 to RM. The land uses to the north, south, east, and west of the project site are designated by the General Plan as Very Low Density Residential, Business Park, and Neighborhood Commercial. The proposed GPA would be consistent with the existing surrounding land uses, and with the approval of these changes, the proposed project would not conflict with any applicable land use plan, policy, or regulation adopted for the purposes of avoiding or mitigating an environmental effect. Table 8 shows an analysis of the proposed project's consistency with relevant policies of the Aliso Viejo General Plan adopted for the purpose of avoiding or mitigating an environmental effect. As shown in Table 8, the proposed project is consistent with all applicable General Plan policies.

Table 8: Project Consistency with Applicable General Plan Policies

Aliso Viejo General Plan Policies and Actions	Project Consistency
Land Use Element	
Policy LU-2.1: Preserve the current pattern of development that encourages more intense and higher density development at the core of the community (near Grand Park and Aliso Viejo Town Center) and less intense uses radiating from the central core.	**Consistent.** The proposed project includes redevelopment of an underutilized office space that is not within the City's central core. The proposed project would include 58 townhome units, which is consistent with the homes located just north of the site on Glenwood Drive. Therefore, the proposed project would provide an appropriate density, consistent with this policy.
Policy LU-2.4: Encourage land uses that complement (in type, size, scale and design) the community's topography, scenic vistas, and natural resources.	**Consistent.** The proposed project includes a townhome development in an area that is developed and urbanized. Redevelopment of the site would be generally consistent with existing surrounding uses, including the existing homes north of the site. Further, as discussed in Section 2.1, Aesthetics, the proposed project would not damage a scenic vista or natural resources. As such, the proposed project is consistent with this policy.

Aliso Viejo General Plan Policies and Actions	Project Consistency
Policy LU-4.1: Encourage environmentally sensitive development patterns, promote public education, and enforce infrastructure criteria that protect residents and property from hazards related to slope stability and flooding.	**Consistent.** The proposed project consists of multi-family residential redevelopment in an urbanized area and would not degrade environmentally sensitive areas of the City. As discussed in Section 2.15, Public Services, the proposed project would pay all required and applicable school district impact fees. The proposed project is not located within or near a flood zone. Consistent with the requirements of the Municipal Code, the proposed project would comply with all recommendations in the project-specific Geotechnical Investigation, as detailed in COA GEO-1a and COA GEO-1b related to slope stability. On-site drainage and water quality improvements would provide protection from localized flooding through implementation of the approved drainage plan for the proposed project, which would reduce peak flows from the project site. As such, the proposed project is consistent with this policy.
Policy LU-4.2: In areas where residential and business park or office land uses abut each other, use buffering techniques employing water-conserving landscaping, setbacks, screening, and appearance standards to improve compatibility.	**Consistent.** The proposed project would be buffered from adjacent business park uses by setbacks and landscaping, including a 20-foot setback within sloped landscaped areas of the project site. In addition, the proposed project would include landscaping that includes native and/or low water plants designed to support water conservation. The existing screening trees on the project site would remain.
Policy LU-4.4: Reduce the discharge of pollutants and runoff flow from urban development to the maximum extent practicable.	**Consistent.** As discussed in Section 2.10, Hydrology and Water Quality, the proposed project includes an on-site biofiltration system designed to treat runoff before discharging into Argonaut. The proposed water quality BMPs would adhere to WQMP requirements, including providing operational BMPs that would reduce pollutants of concern associated with the stormwater runoff from the project site in compliance with the Regional Municipal Separate Storm Sewer System (MS4) Permit and ensure the proposed project would not violate any water quality standards or waste discharge requirements or otherwise substantially degrade surface or ground water quality. As such, the proposed project is consistent with this policy.
Policy LU-5.3: Ensure that new development is consistent with City and service provider plans to complete needed improvements and funding capacity for such improvements.	**Consistent.** As discussed in Section 2.15, Public Services and Section 2.19, Utilities and Service Systems, existing public and utility services are adequate to serve the proposed project. Any

Aliso Viejo General Plan Policies and Actions	Project Consistency
	improvements would be constructed in compliance with City and service provider standards and the project applicant would pay all applicable fees as required. As such, the proposed project is consistent with this policy.
Policy LU-8.2: Require recycling, composting, source reduction and education efforts throughout the community, including residential, businesses, industries, and institutions, within the construction industry, and in all City-sponsored activities.	**Consistent.** As discussed in Section 2.19, Utilities and Service Systems, the proposed project would be required to comply with applicable federal, State, and local regulations regarding the recycling, composting, source reduction, and education efforts. As such, the proposed project is consistent with this policy.
Policy LU-11.1: Ensure that new development contributes its fair share to the timely construction of new school facilities, to the extent permitted by law, and compatible with other City land use objectives.	**Consistent.** As discussed in Section 2.15, Public Services, the project applicant would be required to pay all statutory fees in place at the time in compliance with Senate Bill (SB) 50 and demonstrate proof of payment to the City for approval of a building permit. Payment of developer fees under SB 50 would ensure school related impacts are less than significant. As such, the proposed project is consistent with this policy.
Policy LU-12.2: As a condition upon new development, require payment of park fees and/or dedication and provision of parkland, recreation facilities and/or multiuse trails that improve the public and private recreation system.	**Consistent.** As discussed in Section 2.15, Public Services, the project applicant would be required to pay all public benefits fees in accordance with the Municipal Code Chapter 14.16, which would satisfy the City's parkland requirement. The proposed project would also provide 17,214 square feet of common usable open space and on-site amenities to residents that would partially offset impacts to parks facilities. As such, the proposed project is consistent with this policy.
Conservation/Open Space Element	
Policy COS-1.2: Reduce the amount of water used for landscaping and increase use of native and low water plants. Maximize use of native, low water plants for landscaping of areas adjacent to sidewalks or other impermeable surfaces.	**Consistent.** The proposed project would be required to comply with the City's landscaping requirements, including Chapter 7.30, Water Efficient Landscape Regulations, which would increase water efficiency. The project proposes landscaping that includes native and/or low water plants. As such, the proposed project is consistent with this policy.
Policy COS-1.4: Promote water conservation measures, reduce urban runoff, and prevent groundwater pollution within development projects, property maintenance, City operations and all activities requiring City approval.	**Consistent.** As discussed in Section 2.10, Hydrology and Water Quality, the proposed project would implement structural, source control, and site design BMPs to address water quality conditions associated with the proposed project consistent with the County of

Aliso Viejo General Plan Policies and Actions	Project Consistency
	Orange NPDES Stormwater Program through implementation of the project-specific WQMP. The proposed project would adhere to WQMP requirements, which would reduce pollutants of concern associated with the stormwater runoff from the project site in compliance with the Regional MS4 Permit and ensure the proposed project would not violate any water quality standards or waste discharge requirements or otherwise substantially degrade surface or ground water quality. As such, the proposed project is consistent with this policy.
Policy COS-4.2: Encourage and maintain high-quality architectural and landscaping designs that enhance or complement the community's visual character.	**Consistent.** The proposed project would be designed with elements such as terra-cotta roof tiles, earth-tone color palettes, and oversized decks to reinforce the City's indoor-outdoor lifestyle. Additionally, the existing screening trees along the project site would be preserved, and new landscaping would include private yards and common usable open space. The proposed project would be subject to design review as required by Chapter 15.62 of the City's Municipal Code. As such, the proposed project is consistent with this policy.
Policy COS-5.1: Integrate air quality planning with City land use, economic development, and transportation planning efforts.	**Consistent.** As discussed in Section 2.3, Air Quality, the proposed project would not generate pollutant emissions in excess of applicable significance thresholds. As such, the proposed project is consistent with this policy.
Policy COS-5.3: Support alternative transportation modes and technologies and develop bike- and pedestrian-friendly neighborhoods to reduce emissions associated with automobile use.	**Consistent.** The proposed project would provide electric vehicle (EV-capable) charging infrastructure consistent with the latest CALGreen requirements, which would allow future residents to charge electric vehicles, in turn reducing air quality emissions from fossil fueled vehicles. In addition, the proposed project would include landscaped paseos and sidewalks. As such, the proposed project is consistent with this policy.
Policy COS-6.1: Encourage green building designs for new construction and renovation projects within the City.	**Consistent.** The proposed project would be required to comply with current CBC Title 24 standards and CALGreen. Additionally, the proposed project buildings would be built all-electric and install solar photovoltaic (PV) systems that would generate renewable energy consistent with the 2025 Building Energy Efficiency Standards. As such, the proposed project is consistent with this policy.

Aliso Viejo General Plan Policies and Actions	Project Consistency
Policy COS-7.5: Ensure that new development provides park land and/or improvements at a fair share ratio, pursuant to the City's Parkland Ordinance.	**Consistent.** Refer to response to Land Use Element Policy 12-2. In addition, the proposed project is seeking an open space concession pursuant to the State's Density Bonus Law for the construction of 17,214 square feet of common open space, representing approximately 9 percent of the total site area instead of 25 percent (approximately 47,955 square feet) of the total site area typically required under the Municipal Code. As such, with the approval of the open space concession and payment of all public benefits fees in accordance with the Municipal Code Chapter 14.16, the proposed project is consistent with this policy.
Policy COS-8.1: Balance the benefits of development with a project's potential impacts to cultural resources.	**Consistent.** As discussed in Section 2.5, Cultural Resources, the project site does not contain known cultural resources; however, there is the potential for unknown or undiscovered resources to be uncovered through ground-disturbing construction activities. The proposed project would be required to implement mitigation measures, which would reduce potential impacts to cultural resources to a level that is less than significant. MM CUL-1 would require a Worker Environmental Awareness Program (WEAP) training, a site survey conducted by a qualified Archaeologist, and archaeological monitoring. MM CUL-2 would require consultation with a qualified Archaeologist in the event that buried archaeological resources are discovered during construction, as well as inadvertent discovery procedures. MM CUL-3 would require consultation with the County Coroner to determine whether human remains discovered during construction are Native American in origin. If the County Coroner determines that human remains discovered during construction are Native American in origin, further coordination with the NAHC for identifying an MLD and for treating and reburying any discovered human remains and associated grave goods would be required. Implementation MM CUL-1, MM CUL-2, and MM CUL-3 would ensure that potential impacts to archaeological resources will be reduced to a level of less than significant. As such, the proposed project is consistent with this policy.

Aliso Viejo General Plan Policies and Actions	Project Consistency
Safety Element	
Policy S-1.1: Avoid development in areas susceptible to erosion and sediment loss.	**Consistent.** As discussed in Section 2.7, Geology and Soils, grading and earthwork activities associated with project construction would expose soils to potential short-term erosion by wind and water. However, project construction activities would be required to comply with applicable City requirements to control erosion and reduce or eliminate stormwater runoff containing sediment, including Aliso Viejo Municipal Code Chapter 13.08, Article XIII, Erosion Control, which requires the implementation of erosion and sediment control measures. Project construction activities would also be required to comply with applicable water quality measures, including the City's Water Quality Ordinance (Municipal Code Chapter 7.35, Stormwater Management), which include conditions and requirements established by the City related to the reduction or elimination of stormwater runoff pollutants during construction and operational phases of the proposed project. As such, the proposed project is consistent with this policy.
Policy S-1.2: Investigate specific geologic conditions underlying all new development or redevelopment proposals in areas where potential fault rupture, liquefaction, slope instability or other geological hazards are suspected.	**Consistent.** As discussed in Section 2.7, Geology and Soils, the geologic conditions associated with development of the project site have been investigated in the Geotechnical Investigation. The project site is not susceptible to potential fault rupture or liquefaction. Although the northern and western boundaries of the project site are mapped as having landslide potential by the General Plan, implementation of COA GEO-1b would require landslide susceptibility monitoring by a licensed California Geotechnical Engineer or Certified Engineering Geologist. In addition to site-specific geotechnical recommendations associated with slope instability, the proposed project would also implement those associated with potential earthquake ground shaking, slope instability, or other geological hazards identified in the Geotechnical Investigation, as required by the Municipal Code and through implementation of COA GEO-1a. As such, the proposed project is consistent with this policy.
Policy S-2.3: Ensure adequate fire equipment access and fire suppression resources to all developed and open space areas within the City.	**Consistent.** The proposed project would install one fire hydrant consistent with fire flow requirements for the proposed project in accordance with California Fire

Aliso Viejo General Plan Policies and Actions	Project Consistency
	Code guidelines and Municipal Code Chapter 13.04 Fire Regulations. The proposed project would be required to comply with all City and Orange County Fire Authority (OCFA) requirements for fire prevention and safety measures, including site access and would be subject to approval by the City and OCFA. As such, the proposed project is consistent with this policy.
Policy S-3.1: Require that new development and redevelopment minimize stormwater and urban runoff into drainage facilities by incorporating on-site design features such as detention basins, water features, or other suitable strategies. Where feasible, support the use of common detention facilities serving more than one development.	**Consistent.** Refer to response to Land Use Element Policy LU-4.4 and Conservation/Open Space Element Policy COS-1.4.
Policy S-5.3: Apply design techniques and standards that employ adequate street and property lighting and place an increased emphasis on public areas to reduce potential criminal activity in new development and reuse projects.	**Consistent.** All lighting installed as part of the proposed project would be subject to compliance with the City's lighting requirements. In addition, the proposed project would be required to comply with the City's Crime Prevention Through Environmental Design (CPTED) requirements in accordance with Municipal Code Section 15.50.020, CPTED Safety Requirements. Prior to issuance of a building permit, Orange County Sheriff's Department (OCSD) would review the proposed project plans to ensure the proposed project adheres to all applicable security requirements. As such, the proposed project is consistent with this policy.
Noise Element	
Policy N-3.1: Ensure stationary noise impacts on sensitive receptors and noise emanating from construction activities, private developments/residences, landscaping activities and special events are minimized.	**Consistent.** As discussed in Section 2.13, Noise, the proposed project would result in less than significant impacts related to noise. As such, the proposed project is consistent with this policy.

Impacts are therefore considered less than significant, and no mitigation is required.

Mitigation Measures

None required.

Environmental Issues	Potentially Significant Impact	Less than Significant Impact with Mitigation Incorporated	Less than Significant Impact	No Impact
2.12 Mineral Resources *Would the project:*				
a) Result in the loss of availability of a known mineral resource that would be of value to the region and the residents of the State?	☐	☐	☐	☒
b) Result in the loss of availability of a locally important mineral resource recovery site delineated on a local general plan, specific plan or other land use plan?	☐	☐	☐	☒

Environmental Evaluation

Setting

The information and analysis for Mineral Resources impacts are based on the General Plan. The project site is zoned Business Park-2 and is located in an urbanized area in the City, and no known mineral resources are present on-site.

Would the project:

a) Result in the loss of availability of a known mineral resource that would be of value to the region and the residents of the State?

No impact. The General Plan does not identify any mineral resources in the City. The project site does not support mineral extraction and does not contain any mineral resource zones or other areas designated as containing known mineral resources. The project site is currently developed, zoned Business Park-2, and designated Business Park. The proposed project would redesignate the site to MDR and would rezone the project site to RM. These land use and zoning classifications do not support mineral resource extraction,[92] which precludes the potential for impacts associated with mineral resources. No impact would occur.

[92] City of Aliso Viejo. 2004. City of Aliso Viejo General Plan, Land Use Element, Land Use Policy Map, Figure LU-1. Website: http://avcity.org/DocumentCenter/View/397/Land-Use-Policy-Map-PDF. Accessed April 10, 2026.

b) Result in the loss of availability of a locally important mineral resource recovery site delineated on a local general plan, specific plan or other land use plan?

No impact. The Aliso Viejo General Plan does not designate any lands within the City as mineral resource deposit areas. There are no existing mineral resource recovery operations on the project site or surrounding area.[93] Additionally, the project site is not zoned for mineral resources. Therefore, the proposed project would not result in the loss of availability of known mineral resources of value to the region or result in the loss of a locally important mineral resource recovery site delineated on a local general plan, specific plan, or other land use plan. No impact to mineral resources would occur.

Mitigation Measures

None required.

[93] City of Aliso Viejo. 2004. City of Aliso Viejo General Plan, Land Use Element, Land Use Policy Map, Figure LU-1. Website: http://avcity.org/DocumentCenter/View/397/Land-Use-Policy-Map-PDF. Accessed April 10, 2026.

Environmental Issues	Potentially Significant Impact	Less than Significant Impact with Mitigation Incorporated	Less than Significant Impact	No Impact
2.13 Noise *Would the project result in:*				
a) Generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?	☐	☐	☒	☐
b) Generation of excessive groundborne vibration or groundborne noise levels?	☐	☐	☒	☐
c) For a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise levels?	☐	☐	☐	☒

Environmental Evaluation

Setting

The primary noise sources near the project site include traffic from Glenwood Drive to the north and Argonaut to the southeast. The closest noise-sensitive receptors to the project site are single-family residences located north of the project site, across Glenwood Drive.

Existing Conditions

Ambient Noise

Dominant noise sources in the project vicinity include traffic on local roadways, primarily from traffic on Glenwood Drive, which runs along the northern boundary of the project site, Aliso Creek Road, which runs along the western boundary of the project site, and on Argonaut, located near the southeast corner of the project site.

An ambient noise monitoring effort was conducted to document daytime ambient noise levels on the project site. Short-term noise monitoring was conducted by FCS on Monday, April 21, 2026, between

10:51 a.m. and 1:06 p.m. The noise measurements were taken during the midday hours, as the midday hours typically have the highest daytime noise levels in urban environments. It should be noted that peak noise hours often vary slightly from peak traffic hours as peak noise hours more closely align with high volume traffic that is still free-flowing, while peak traffic hours often result in slower vehicle speeds due to the volume of traffic on the roadway. The short-term existing noise measurement results are summarized in Table 9, and the locations are shown in Appendix G.

Table 9: Existing Ambient Noise Levels on the Project Site

Site ID #	Location (Primary Noise Sources)	L_{eq}	L_{max}
ST-1	Southeast corner of property in the greenbelt directly north of driveway entrance, just west of the metal sign. (Traffic from Glenwood Drive and Aliso Creek Road. HVAC system from lab facility at 7 Argonaut).	50.9	61.4
ST-2	Northeast corner of the project site in the parking lot, east of the existing building. (Traffic from Glenwood Drive and Aliso Creek Road. HVAC system from lab facility at 7 Argonaut).	51.8	60.0
ST-3	Northwest corner of the project site in the parking lot, west of the existing building. (Traffic from Glenwood Drive and Aliso Creek Road. HVAC system from lab facility at 7 Argonaut).	47.3	81.7

Characteristics of Noise

Noise is defined as unwanted sound. Sound levels are usually measured and expressed in decibels (dB), with 0 dB corresponding roughly to the threshold of hearing. Most of the sounds that we hear in the environment do not consist of a single frequency but rather a broad band of frequencies, with each frequency differing in sound level. The intensities of each frequency add together to generate a sound. Noise is typically generated by transportation, specific land uses, and ongoing human activity.

The standard unit of measurement of the loudness of sound is the dB. The 0 point on the dB scale is based on the lowest sound level that the healthy, unimpaired human ear can detect. Changes of 3 dB or less are only perceptible in laboratory environments. A change of 3 dB is the lowest change that can be perceptible to the human ear in outdoor environments. While a change of 5 A-weighted decibels (dBA) is considered to be the minimum readily perceptible change to the human ear in outdoor environments.

Since the human ear is not equally sensitive to sound at all frequencies, the dBA scale was derived to relate noise to the sensitivity of humans; it gives greater weight to the frequencies of sound to which the human ear is most sensitive. The A-weighted sound level is the basis for a number of various sound level metrics, including the day/night sound level (L_{dn}) and the Community Noise Equivalent Level (CNEL), both of which represent how humans are more sensitive to sound at night. In addition, the equivalent continuous sound level (L_{eq}) is the average sound energy of time-varying noise over a

sample period and the L_{max} is the maximum instantaneous noise level occurring over a sample period.

Regulatory Framework

The project site is located within the City of Aliso Viejo, in Orange County. The City addresses noise in the Noise Element of the General Plan and the Municipal Code.

City of Aliso Viejo General Plan

The Noise Element identifies goals and policies to guide development within the City. The following policies are applicable to the proposed project.

Policy N-1.1 Ensure that construction and occupancy of new development are compatible with, and do not exceed thresholds defining the acceptable noise environment in surrounding areas.

Policy N-1.2 Require inclusion of noise-reducing design features in development projects to address the impact of noise on residential development.

Policy N-3.1 Ensure stationary noise impacts on sensitive receptors and noise emanating from construction activities, private developments/residences, landscaping activities and special events are minimized.

Table 10 (Table N-1 in the City's General Plan Noise Element) summarizes the City's adopted residential noise standards. The standards represent the maximum acceptable noise levels as measured from any residential property in the City. Accordingly, it is unlawful to cause the noise level on any residential property to exceed the exterior noise standards: (1) for a cumulative period of more than 30 minutes in any hour; (2) by plus 5 dBA for a cumulative period of more than 15 minutes in any hour; (3) by plus 10 dBA for a cumulative period of more than 5 minutes in any hour; (4) by plus 15 dBA for a cumulative period of more than 1 minute in any hour; or (5) plus 20 dBA for any period of time. In addition, any noise that exceeds the interior noise standards established for residential uses: (1) for a cumulative period of more than 5 minutes in any hour; (2) by plus 5 dBA for a cumulative period of more than 1 minute in any hour; or (3) by plus 10 dBA for any period of time, is unlawful.

Table 10: Residential Noise Standards

	Daytime Noise Standards (7:00 a.m. through 10:00 p.m.)	Nighttime Noise Standards (10:00 p.m. through 7:00 a.m.)
Interior Noise Standards	55 dBA	45 dBA
Exterior Noise Standards	55 dBA	50 dBA

Note:
dBA = A-weighted decibels
Standards are based on measurements taken from any residential property in the City.
Source: Aliso Viejo General Plan, Noise Element, Table N-1.

City of Aliso Viejo Municipal Code

The City of Aliso Viejo has established noise performance standards and permissible hours for construction activities in the Municipal Code. The standards that are applicable to the proposed project are identified below:

Section 8.12.050 Exterior Noise Standards

A. The following exterior noise standards (Table 11), unless otherwise specifically indicated, shall apply to all residential property within the City:

Table 11: Exterior Noise Standards

Land Use	Noise Level	Time Period
Residential Exterior Noise Standards		
Density of less than 10 du/acre	50 dBA	7:00 a.m. – 10:00 p.m.
	45 dBA	10:00 p.m. – 7:00 a.m.
Density of more than 10 du/acre	55 dBA	7:00 a.m. – 10:00 p.m.
	50 dBA	10:00 p.m. – 7:00 a.m.
Nonresidential Exterior Noise Standards		
Commercial	65 dBA	7:00 a.m. – 10:00 p.m.
	60 dBA	10:00 p.m. – 7:00 a.m.
Manufacturing/Industrial	70 dBA	24 hours per day

Notes:
dBA = A-weighted decibels
du/acre = dwelling units per acre
Source: Aliso Viejo Municipal Code Section 8.12.050, Exterior Noise Standards.

Section 8.12.060, Interior Noise Standards

Section 8.12.060 establishes interior noise standards for residential property within the City. For all residential properties, the interior noise standard is 55 dBA between the hours of 7:00 a.m. to 10:00 p.m. and 45 dBA between the hours of 10:00 p.m. and 7:00 a.m.

Section 8.12.070, Exemptions

Section 8.12.070 establishes a list of activities that the Municipal Code considers exempt from the provisions of the City's noise ordinance. Exempt activities that are relevant to the proposed project include:

E. Noise sources associated with construction, repair, remodeling, or grading of any real property, provided the activities do not take place between the hours of 8:00 p.m. and 7:00 a.m. on weekdays, 8:00 p.m. and 8:00 a.m. on Saturday, or at any time on Sunday or a federal holiday.

Would the project result in:

a) Generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?

Short-term Construction Impacts

Less than significant impact. For purposes of this analysis, a significant impact would occur if construction activities would result in a substantial temporary increase in ambient noise levels in excess of the City's established standards applicable to construction noise.

Municipal Code Section 8.12.070 establishes allowable hours and noise standards for construction activities and equipment. Construction activities, including the operation of any tools or equipment used in construction, are allowed between the hours of 7:00 a.m. through 8:00 p.m. Monday through Friday and from 8:00 a.m. through 8:00 p.m. Saturday. Construction activities on Sundays and federal holidays are prohibited all hours.

While the City does not establish noise level thresholds for construction activities, this analysis uses the noise limits established by the Federal Transit Administration (FTA) to identify the potential for impacts due to substantial temporary construction noise. The FTA identifies construction noise limits in the Transit Noise and Vibration Impact Assessment Manual.[94] During daytime hours, a significant temporary increase would be an increase in excess of the average daily noise level of 80 dBA $L_{eq(8\text{-}hr)}$ as measured at a receiving residential land use and 85 dBA $L_{eq(8\text{-}hr)}$ as measured at a receiving commercial land use.

Noise impacts from construction activities associated with the proposed project would be a function of the noise generated by construction equipment, equipment location, sensitivity of nearby land uses, and the timing and duration of the construction activities.

The site preparation phase, which includes excavation and grading of the site, tends to generate the highest noise levels because the noisiest construction equipment is earthmoving equipment. Typical operating cycles for these types of construction equipment may involve 1 or 2 minutes of full power operation followed by 3 or 4 minutes at lower power settings. A conservative but reasonable assumption is that this equipment would operate simultaneously and continuously over at least a 1-hour period in the vicinity of the closest existing sensitive receptors but would move linearly over the project site during earthmoving operations, spending a relatively short amount of time adjacent to any one receptor. A characteristic of sound is that each doubling of sound sources with equal strength increases a sound level by 3 dBA. These worst-case construction noise levels would only occur during the site preparation phase of development.

The closest noise-sensitive residential receptor to the proposed project site is the single-family residence located north, across Glenwood Drive. This closest noise-sensitive receptor would be

[94] Federal Transit Administration (FTA). 2018. Transit Noise and Vibration Impact Assessment Manual. September.

located approximately 250 feet from the nearest construction footprint where multiple pieces of heavy construction equipment would potentially operate at the project site. At this distance, relative worst-case hourly average construction noise levels would range up to 64 dBA L_{eq} for this receptor. The reasonable worst-case calculated 8-hour average noise level would be 60 dBA $L_{eq(8\text{-}hr)}$, as measured at this nearest sensitive receptor. The calculation spreadsheet with the detailed modeling assumptions is included in Appendix G. These calculated worst-case construction noise levels do not exceed the FTA's 80 dBA $L_{eq(8\text{-}hr)}$ threshold as measured at the nearest residential receptors.

The closest commercial receptor to the proposed project site is the Ambry Genetics office building located directly east of the project site. This closest commercial receptor would be located approximately 50 feet from the nearest construction footprint where multiple pieces of heavy construction equipment would potentially operate at the project site. At this distance relative worst-case hourly average construction noise levels would range up to 82 dBA L_{eq} at this receptor. The reasonable worst-case calculated 8-hour average noise level would be 75 dBA $L_{eq(8\text{-}hr)}$, as measured at this nearest commercial receptor. The calculation spreadsheet with the detailed modeling assumptions is included in Appendix G. These calculated worst-case construction noise levels do not exceed the FTA's 85 dBA $L_{eq(8\text{-}hr)}$ threshold as measured at the nearest commercial receptor. Therefore, temporary or periodic noise impacts from construction activities associated with implementation of the proposed project would be less than significant.

Furthermore, the proposed project would be required to comply with the City's permissible hours for construction (7:00 a.m. through 8:00 p.m. Monday through Friday and 8:00 a.m. through 8:00 p.m. Saturday), which would ensure that construction noise would not result in a substantial increase in nighttime noise levels in the project vicinity. Therefore, the proposed project would not result in a substantial temporary increase in ambient noise levels at off-site sensitive receptors above established standards, and construction noise impacts on sensitive receptors in the project vicinity would be less than significant.

Operational/Stationary Source Noise Impacts

Less than significant impact. A significant impact would occur if the proposed project would result in an exceedance of the City's noise performance standards for stationary noise sources. A significant impact would occur if operational noise levels generated by stationary noise sources at the proposed project site would result in a substantial permanent increase in ambient noise levels in excess of any of the noise performance thresholds established by the City.

As identified in the Project Description, the proposed project's density would be 13.2 du/acre. Therefore, the City's applicable exterior daytime (7:00 a.m. through 10:00 p.m.) noise performance standard is 55 dBA L_{eq} and the applicable exterior nighttime (10:00 p.m. through 7:00 a.m.) noise performance standard is 50 dBA L_{eq} as measured at the nearest residential receptors.

Implementation of the proposed project would include operation of new mechanical ventilation equipment. Noise level ratings for residential-grade mechanical ventilation equipment systems range from 55 dBA to 70 dBA L_{eq} at a distance of 3 feet.

The nearest noise-sensitive residential receptor to the proposed rooftop mechanical ventilation equipment is the single-family residence located north of the project site, across Glenwood Drive. Rooftop mechanical ventilation equipment could be located approximately 265 feet from this closest sensitive receptor. At this distance, the highest noise rating and assuming no shielding from intervening structures or terrain, noise generated by typical mechanical ventilation equipment would attenuate to below 15 dBA L_{eq} as measured at the nearest residential property line. The noise calculation sheet is provided in Appendix G.

These operational noise levels would not exceed the City's most stringent nighttime noise performance thresholds of 50 dBA L_{eq} as measured at the nearest residential property line. In addition, they would not exceed existing ambient noise levels on the project site, which, as noted above, range from 47.3 dBA to 51.8 dBA L_{eq}. Therefore, mechanical ventilation system operational noise levels would not result in a substantial permanent increase in noise levels in excess of established standards. The impact of mechanical ventilation equipment operational noise levels on sensitive off-site receptors would be less than significant.

Operational/Mobile Source Noise Impacts

Less than significant impact. A significant impact would occur if project-generated traffic would result in a substantial increase in ambient noise levels compared with those that would exist without the proposed project. Typically, a doubling of the Average Daily Traffic (ADT) hourly volumes on a roadway segment is required in order to result in an increase of 3 dBA in traffic noise levels, which, as discussed in the characteristics of noise discussion above, is the lowest change that can be perceptible to the human ear in outdoor environments. Therefore, for the purposes of this analysis, a doubling of the existing ADT volumes would result in a substantial permanent increase in traffic noise levels.

According to the Trip Generation Assessment prepared by Urban Crossroads (Appendix I),[95] existing conditions of the office building currently generates approximately 500 daily trips. The proposed project would generate up to 356 average daily trips. This results in a net reduction of 144 daily trips. Similarly, during the PM peak-hour, the existing office building generates 77 trips, while the proposed project would generate 31 PM peak-hour trips, representing a reduction of 46 peak-hour trips.

Since the proposed project would result in a decrease in both ADT and peak-hour traffic volumes compared to existing conditions, roadway noise levels along adjacent roadway segments would correspondingly decrease or remain essentially unchanged. Therefore, the proposed project would not result in a substantial permanent increase in traffic noise levels. This impact would be less than significant.

b) Generation of excessive groundborne vibration or groundborne noise levels?

Less than significant impact. A significant impact would occur if the proposed project would generate groundborne vibration or groundborne noise levels in excess of established standards. The

[95] Urban Crossroads. 2026. Presidio Residential Trip Generation and VMT Assessment. July 20.

City has not established requirements regarding construction vibration impacts; therefore, for the purposes of this analysis, the FTA guidelines for vibration impacts are used to determine potential significant construction- and operation-related vibration impacts.[96]

This section analyzes both construction and operational groundborne vibration and noise impacts. Groundborne vibrations consist of rapidly fluctuating motions within the ground that have an average motion of zero. Vibrating objects in contact with the ground radiate vibration waves through various soil and rock strata to the foundations of nearby buildings. Groundborne noise is generated when vibrating building components radiate sound, or noise, generated by groundborne vibration. In general, if groundborne vibration levels do not exceed levels considered to be perceptible, then groundborne noise levels would not be perceptible in most interior environments. Therefore, this analysis focuses on determining exceedances of groundborne vibration levels.

Short-term Construction Vibration Impacts

Of the variety of equipment that would be used during construction, small vibratory rollers would produce the greatest groundborne vibration levels. Impact equipment such as pile drivers would not be used during construction of the proposed project. Small vibratory rollers produce groundborne vibration levels ranging up to 0.101 inch per second (in/sec) peak particle velocity (PPV) at 25 feet from the operating equipment.[97]

The closest structure to the project site is an Ambry Genetics office building directly east of the project site, located approximately 50 feet from the nearest construction footprint where small vibratory rollers would potentially operate. At this distance, groundborne vibration levels would range up to 0.03 in/sec PPV from operation of a small vibratory roller at the nearest project boundary. This is well below the FTA's Construction Vibration Impact Criteria of 0.5 PPV for this type of building, a commercial structure of engineered concrete and steel. As a result, construction of the proposed project would not expose the nearby office buildings to groundborne vibration levels in excess of their applicable FTA damage criteria, and this impact would be less than significant.

Operational Vibration Impacts

Implementation of the proposed project would not include any new permanent sources of groundborne vibration that would expose persons in the project vicinity to groundborne vibration levels that could be perceptible without instruments at any existing sensitive land use in the project vicinity. Additionally, there are no active sources of groundborne vibration in the project vicinity that would produce vibration levels that would be perceptible without instruments within the project site. Therefore, there would be no impact related to operational groundborne vibration.

[96] Federal Transit Administration (FTA). 2018. Transit Noise and Vibration Impact Assessment Manual. September.

[97] Compilation of scientific and academic literature, generated by the Federal Transit Administration (FTA) and Federal Highway Administration (FHWA).

c) For a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise levels?

No impact. The nearest airport to the project site is John Wayne Airport, located approximately 9.7 miles northwest of the project site. While aircraft noise is occasionally audible at the project site, because of the distance from the airport and the orientation of runways and flight patterns, the project site does not lie within the 60 dBA CNEL noise contour of John Wayne Airport and is not located within an airport land use plan. Therefore, implementation of the proposed project would not expose persons residing or working in the project vicinity to noise levels from airport activity that would exceed normally acceptable standards for the proposed land use development, and no impact would occur.

Mitigation Measures

None required.

Environmental Issues	Potentially Significant Impact	Less than Significant Impact with Mitigation Incorporated	Less than Significant Impact	No Impact
2.14 Population and Housing *Would the project:*				
a) Induce substantial unplanned population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (for example, through extension of roads or other infrastructure)?	☐	☐	☒	☐
b) Displace substantial numbers of existing people or housing, necessitating the construction of replacement housing elsewhere?	☐	☐	☐	☒

Environmental Evaluation

Setting

According to the California Department of Finance (DOF), the City had a population of 49,945 persons as of January 1, 2026.[98]

Would the project:

a) Induce substantial unplanned population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (for example, through extension of roads or other infrastructure)?

Less than significant impact. As described above, the City had a provisional population estimate of 49,945 persons as of January 1, 2026.[99] The 2004 Aliso Viejo General Plan Final Environmental Impact Report (General Plan Final EIR) anticipated a population of 48,071 persons at buildout. The buildout population identified in the General Plan Final EIR has already been exceeded.

[98] California Department of Finance (DOF). 2026. E-5 City/County Population and Housing Estimates for Cities, Counties, and the State, 2020-2025. Website: https://dof.ca.gov/forecasting/demographics/estimates/e-5-population-and-housing-estimates-for-cities-counties-and-the-state-2020-2026/. Accessed May 12, 2026.

[99] Ibid.

According to the DOF, the City has an average of 2.53 persons per household in 2026.[100] The proposed project would include the construction of 58 3-story townhomes, which would increase the City's population by up to 147 persons based on the DOF's average household size.[101] This is approximately 0.3 percent of the City's existing population, which is a negligible increase in the City's total population.

SCAG is the designated Metropolitan Planning Organization (MPO) for six counties (Los Angeles, Orange, San Bernardino, Riverside, Ventura, and Imperial) and 191 cities, including the City of Aliso Viejo. As the federally-designated MPO, SCAG is responsible for developing and adopting regional housing, population, and employment growth forecasts for local Orange County governments, among other counties. The latest SCAG Regional Transportation Plan/Sustainable Communities Strategy (RTP/SCS) was adopted in April 2024.[102]

While the 2024 RTP/SCS does not provide population projections below the county-level, the 2024 RTP/SCS states that a rough estimate of the future jurisdiction-level population based on Connect SoCal's household forecast can be derived using county-level population to housing ratio.[103] Using the 2050 Orange County population to housing ratio of 2.745, and the City's projected number of households, Aliso Viejo is projected to have a population of approximately 56,000 for the year 2050.[104] As such, the proposed project would not exceed SCAG's growth projections for the City.

Furthermore, in 2021, SCAG adopted the 6th Cycle Final Regional Housing Needs Assessment (RHNA) Allocation Plan, which assigns a share of the region's future housing need to each jurisdiction in the SCAG region. The City's share of the region's new housing need for the 2021–2029 planning period as established by SCAG in the RHNA is 1,195 units. Of these, the City's housing need includes 390 units for very-low-income households, 214 for low-income households, 205 for moderate-income households, and 386 for above-moderate-income households.[105] The proposed project would provide 58 residential units including three very-low-income units and 55 market-rate units. Therefore, the proposed project would help to accommodate the RHNA housing allocation for the City in order to meet housing needs.

[100] California Department of Finance (DOF). 2026. E-5 City/County Population and Housing Estimates for Cities, Counties, and the State, 2020-2025. Additionally, the proposed project would not indirectly induce substantial unplanned population growth through the extension of roads or other infrastructure, as the project site and surrounding area are currently served by adjacent roadways and utilities infrastructure. Therefore, the proposed project would not induce unplanned population growth either directly or indirectly, and impacts would be less than significant.

b) Displace substantial numbers of existing people or housing, necessitating the construction of replacement housing elsewhere?

No impact. There are no existing residences on-site, which precludes the possibility that the proposed project would displace people or housing. As such, no impact would occur.

Mitigation Measures

None required.

Environmental Issues	Potentially Significant Impact	Less than Significant Impact with Mitigation Incorporated	Less than Significant Impact	No Impact

Environmental Evaluation

Setting

The information in this section is based, in part, on correspondence with City of Aliso Viejo public service providers, included as Appendix H of this report. Correspondence consisted of responses to an inquiry sent via email to public service providers on April 7, 2026. Responses were provided to FCS between April 14, 2026, and April 29, 2026.

Fire

The City falls under the jurisdiction of OCFA, which provides services to 23 of Orange County's 34 cities and all unincorporated areas of the county. OCFA's services include emergency responses to 911 calls, fire inspections, plan review, public information and education, and arson investigation. OCFA's 90th percentile for response times is 8:16.[106]

The proposed project would be served by OCFA Fire Station 57, OCFA Fire Station 22, and OCFA Fire Station 39. OCFA Fire Station 57, the closest OCFA Fire Station to the project site, is located approximately 1.62 miles away at 57 Journey. OCFA Fire Station 22 is located approximately 1.63 miles away at 24001 Paseo de Valencia in Laguna Woods and OCFA Fire Station 39 is located approximately 2.38 miles away at 24241 Avila Road in Laguna Niguel. Fire service response from the

[106] Whittaker, Paul. Division Chief, Strategic Services, Orange County Fire Authority (OCFA). Personal communication: email. Forwarded by Todd Letterman, OCFA. April 23, 2026.

three closest stations would consist of a total of four engines, one truck, and one Battalion Chief, with a total of 21 all-risk personnel.[107] OCFA Fire Station 57 also serves as a Division Headquarters, housing the local Fire Chief, administrative staff, and community educator.

Police

The City contracts with OCSD for its law enforcement needs. OCSD is Orange County's mutual aid agency and contracts with 13 contract cities in its service area and currently uses a workload-based staffing model and has a goal of under 5 minutes for emergency response times.[108] Last month, OCSD's average for emergency response times was 5 minutes and 23 seconds. [109]

The Aliso Viejo Station is located at 12 Journey, which is 1.77 miles south of the project site. The staff dedicated to the City includes one Crime Prevention Specialist, one Emergency Management Coordinator, 17.65 Deputies (Patrol, Traffic Motor, School Resource Officer, Special Enforcement Team and Directed Enforcement Team), two Community Service Officers, 1.5 Investigators, and 2.33 Sergeants. The partial numbers are staff whose duties are split among other cities. There are 15 specialized units that can be contacted to provide service to the City when needed and include units such as Canine, Gang Enforcement, Homicide Detail, and more.[110]

Schools

The project site falls within the Capistrano Unified School District (CUSD). During the 2025–2026 school year, the district enrolled 46,429 students.[111] CUSD serves the City of San Juan Capistrano, City of Dana Point, City of Laguna Niguel, and the City of San Clemente, as well as a portion of the City of Aliso Viejo, City of Mission Viejo, City of Rancho Santa Margarita, and a very small portion of the Cities of Laguna Beach and Laguna Woods and a portion of unincorporated Orange County.[112] The proposed project is within the service area of Oak Grove Elementary School, Aliso Viejo Middle School, and Aliso Niguel High School.[113] During the 2025–2026 school year, Oak Grove Elementary School enrolled 519 students, Aliso Viejo Middle School enrolled 804 students, and Aliso Niguel High School enrolled 2,534 students.[114]

Level 1 Developer Fees are established by the State and are considered a basic mitigation fee that all residential and commercial projects must pay. In January 2026, the State Allocation Board approved the Level 1 Developer Fee of $5.38 per square foot of residential development.[115]

Parks

The City of Aliso Viejo Recreation & Community Services Department owns and manages Vista Park and Iglesia Park, which are a total of 7.4 acres. Additionally, Aliso Viejo Community Association (AVCA) is responsible for 21 parks (approximately 179 acres) and 600 acres of landscaping.[116] The closest park is Ridgecrest Park, located 220 feet (0.04 mile) northwest of the project site, across the Aliso Creek Road/Glenwood Drive intersection. Ridgecrest Park is a private park owned and managed by AVCA.[117] It contains barbecue pits, basketball courts, shaded picnic tables and benches, a shaded tot lot, tennis courts with lights, pickleball courts, and bocce ball courts. Crosswalks and traffic lights are available on both Glenwood Drive and Aliso Creek Road, allowing for pedestrian access to Ridgecrest Park. The two next closest parks are Glenwood Community Park and Pinewood Park. Glenwood Community Park is located 0.13 mile northwest of the project site on the opposite side of Glenwood Drive, and Pinewood Park is located 0.22 mile east of the project site on the opposite side of the business park.

Libraries

Orange County provides a range of public libraries, cultural facilities, and recreation services. The nearest Orange County Public Library branch to the project site is the Laguna Woods Branch, located at 24266 El Toro Road in the City of Laguna Woods, approximately 1.18 miles northwest of the project site. Additionally, the Aliso Viejo Branch is located at 1 Journey, approximately 1.64 miles south of the project site. Orange County Public Libraries provides library services to the City of Aliso Viejo through its system-wide network of 32 branches across the county. Aliso Viejo residents have access to all services as membership is not specific to individual branches; as such, residents of the City have access to resources and services throughout the entire Orange County Public Library system. The most current tenant projections are from 2023, during which the Aliso Viejo Branch had 140,931 visitors, with an average daily attendance of 470 people.[118] The Aliso Viejo Branch reopened in March 2026, after extensive renovations to enhance accessibility and facilities.[119]

Would the project result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for any of the public services:

a) Fire protection?

Less than significant impact. According to Division Chief of Strategic Services Paul Whittaker, OCFA has the ability to provide fire protection services to the project site and the proposed project will require an OCFA Secured Fire Protection Agreement, which requires a development impact fee of $600 per unit.[120] The proposed project would install one fire hydrant for firefighting purposes consistent with fire flow requirements for the proposed project in accordance with California Fire Code guidelines stipulated in Municipal Code Chapter 13.04, Fire Regulations, and would connect to existing water lines.

As discussed in Section 2.14, Population and Housing, the proposed project would generate 147 new residents. Fire protection and emergency service by OCFA is currently provided to the area under existing conditions.

As discussed in Section 2.14, Population and Housing, residential uses have been anticipated at the project site by the General Plan and population growth from the proposed project would not exceed SCAG's growth projections for the City by year 2050 based on the 2024 RTP/SCS. Thus, the 147 new residents would be considered planned growth that would be addressed with existing facilities. Therefore, the proposed project would not create a need for new or physically altered fire facilities to maintain acceptable service ratios, response times, or other performance objectives.

Furthermore, the proposed project would be required to comply with the California Fire Code, as amended, in accordance with Municipal Code Chapter 13.04, 2025 Edition of the California Fire Code, and would be subject to approval by OCFA. Adherence with fire code standards and approval by OCFA would reduce the potential demand for fire services by decreasing the likelihood and/or severity of a fire emergency at the project site. Implementation of City requirements, including compliance with the California Fire Code and approval of site plans by OCFA, would ensure that there would be no substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities for fire protection services. As such, impacts would be less than significant.

b) Police protection?

Less than significant impact. According to Captain Ryan Buhr, the City's Chief of Police Services, OCSD utilizes a workload-based staffing model as opposed to a population-to-staff ratio.[121] Currently,

[120] Whittaker, Paul. Division Chief, Strategic Services, Orange County Fire Authority. Personal communication: email. Forwarded by Todd Letterman, Orange County Fire Authority. April 23, 2026.

[121] Buhr, Ryan. Chief of Police, Aliso Viejo Police Services. Personal communication: email. April 29, 2026.

based on the Department's patrol allocation model, the OCSD – Aliso Viejo Station is currently short one Deputy.[122]

As described above, the proposed project would include the construction of a residential development that consists of 58 townhomes on the approximately 4.4-acre project site ranging from 1,320 to 1,827 square feet in size. Police protection services to the project site occurs under the existing conditions. While the proposed project would generate an estimated 147 residents, this would be considered planned growth under SCAG's predictions and would contribute to the City's RHNA, as discussed in Section 2.14, Population and Housing Question a). Furthermore, according to Captain Buhr, since OCSD relies on a workload-based staffing model reliant on actual demand for police services as opposed to a population-based ratio, the station would staff accordingly irrespective of population growth resulting from the proposed project.[123]

Because the proposed project would not induce substantial unplanned population growth, it is anticipated that the proposed project would be adequately served by OCSD and would not create a need for new or physically altered police facilities to maintain acceptable service ratios, response times, or other performance objectives. The proposed project would also be required to comply with the City's Crime Prevention Through Environmental Design (CPTED) requirements in accordance with Municipal Code Section 15.50.020, CPTED Safety Requirements. OCSD would review the project plans to ensure the proposed project adheres to all applicable security requirements prior to issuing the building permit. Implementation of City requirements and approval of site plans by OCSD would further reduce potential impacts concerning police protection services. As such, impacts would be less than significant.

c) Schools?

Less than significant impact. The schools that would serve the proposed project would be Oak Grove Elementary (Transitional Kindergarten [TK] through Grade 5), Aliso Viejo Middle School (Grades 6 through 8), and Aliso Niguel High School (Grades 9 through 12). According to the number of new students for these schools generated as a result of the proposed project, it was estimated that Oak Grove Elementary would expect an additional 13 students, Aliso Viejo Middle School would expect an additional five students, and Aliso Niguel High School would expect an additional five students, for a total of 23 new students.[124] CUSD did not identify any potential issues regarding growth associated with the housing development and states that the school district can accommodate the number of projected students.[125]

[122] Buhr, Ryan. Chief of Police, Aliso Viejo Police Services. Personal communication: email. April 29, 2026.

[123] Ibid.

[124] Hampton, Clark D. Deputy Superintendent, Business and Support Services, Capistrano Unified School District (CUSD). Personal communication: email. April 14, 2026.

[125] Hampton, Clark D. Deputy Superintendent, Business and Support Services, Capistrano Unified School District (CUSD). Personal communication: email. April 14, 2026.

The 2026 Developer Fee Justification Study conducted by CUSD concluded that, while there is capacity for students in TK through Grade 5, student capacity at the CUSD is currently exceeded for Grades 6 through 12.[126] The proposed project would be subject to payment of school impact fees in accordance with SB 50. Pursuant to Government Code Section 65995(3)(h), payment of statutory fees is deemed to be "full and complete mitigation of impacts of any legislative or adjudicative act, or both, involving but not limited to the planning, use or development of real property. . ." The developer would be required to pay Level 1 Developer Fees in accordance with Government Code Section 65995(3)(h). Developer fees collected by CUSD pursuant to SB 50 are used for the provision of additional and reconstructed or modernized school facilities. The project applicant would be required to pay all statutory fees in place at the time and demonstrate proof of payment to the City for approval of a building permit. Payment of the Level 1 Developer Fees is considered full mitigation for increased school enrollment as a result of the proposed project. As such, CUSD would be able to accommodate the additional students generated by the proposed project, and potential impacts to schools would be less than significant.

d) Parks?

Less than significant impact. The proposed project would develop up to 58 dwelling units, which would generate an estimated 147 new residents (See Section 2.14, Population and Housing). The new residents would increase the demand on existing neighborhood and regional parks. The additional use would further contribute to the need for maintenance and improvements.

The City's Municipal Code requires usable open space to equal 25 percent (approximately 47,955 square feet) of the total site area. The proposed project is seeking an open space concession pursuant to the State's Density Bonus Law for the construction of 17,214 square feet of common open space, representing approximately 9 percent of the total site area. On-site recreational amenities for residents would include a dog play area, a community garden, a recreation/yoga lawn, and a barbecue area with an accompanying shade structure that would offset impacts to park facilities. In addition, the proposed project would install 7,611 square feet of private yards.

The proposed project also includes approximately 84,050 square feet of existing open space located on the site's northern and western portions of the site that would be preserved as part of the proposed project. These preserved areas consist of steeply sloped terrain and are intended to remain in a natural, undeveloped condition for visual buffering and site design purposes. Because these areas do not meet the City's definition of usable open space, they do not count toward the Municipal Code's minimum open space requirement.

Furthermore, the applicant would comply with Municipal Code Chapter 14.16, Dedication of Land for Park Facilities and Payment of In Lieu Fees, which requires payment of park and recreation impact fees to offset incremental demand on local parks. By providing on-site recreational amenities that exceed the required minimum open space and paying applicable park development fees, the

[126] King Consulting. 2026. Developer Fee Justification Study. Capistrano Unified School District. Website: https://drive.google.com/file/d/1aJ41P9yOjicsQr1d2qM1B-RSeAGU8cqQ/view. Accessed April 10, 2026.

proposed project would ensure that the incremental increase in recreational demand would not result in substantial physical deterioration of existing neighborhood and regional parks.

Although project residents would likely use public parks, implementation of the proposed project would not require new or physically altered park facilities, the construction of which could cause significant environmental impacts. Therefore, impacts would be less than significant.

e) Other public facilities?

Less than significant impact. A service letter was sent out to the Orange County Public Libraries Administration about expected impacts from the proposed project on April 7, 2026, and they responded on April 16, 2026.[127] The library anticipates that the proposed project's anticipated population generation would utilize library services and that the increase in visitors would not have a significant impact on the library or its services.[128] Although the proposed project would increase demand for library services, the anticipated growth generated by the proposed project would be within the population growth projections anticipated and planned for by local and regional planning documents. The proposed project's impacts to the overall availability per capita of books, media, computers, and library public service space would not result in significant physical or environmental impacts, as the population growth resulting from the proposed project is within current City projections. Therefore, impacts would be less than significant.

Mitigation Measures

None required.

[127] Oakley, Julie. Library Administration, Orange County Public Libraries. Personal communication: email. April 16, 2026.
[128] Ibid.

Environmental Issues	Potentially Significant Impact	Less than Significant Impact with Mitigation Incorporated	Less than Significant Impact	No Impact
2.16 Recreation				
a) Would the project increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated?	☐	☐	☒	☐
b) Does the project include recreational facilities or require the construction or expansion of recreational facilities, which might have an adverse physical effect on the environment?	☐	☐	☒	☐

Environmental Evaluation

Setting

As previously discussed in Section 2.15, Public Services, the closest park is Ridgecrest Park, located 220 feet (0.04 mile) northwest of the project site on the opposite side of the Aliso Creek Road/Glenwood Drive intersection. Ridgecrest Park is a private park owned and managed by AVCA.[129] Crosswalks and traffic lights are available on both Glenwood Drive and Aliso Creek Road, allowing for pedestrian access to Ridgecrest Park. The second two closest parks are Argonaut Park and Pinewood Park. Argonaut Park is located approximately 0.2 mile south of the project site and Pinewood Park is located 0.22 mile east of the project site on the opposite side of the business park. These parks provide public amenities such as picnic tables, barbecues, playgrounds, basketball courts, and softball fields.

a) Would the project increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated?

[129] Aliso Viejo Community Association. 2026. Parks. Website: https://avca.net/community/parks. Accessed April 10, 2026.

Less than significant impact. The proposed project would develop 58 3-story townhomes. The City has an estimated population of 50,213 persons as of January 1, 2026.[130] As discussed previously in Section 2.14, Population and Housing, given that the proposed project would develop up to 58 dwelling units, the proposed project would generate up to 147 new residents, which would increase the demand on existing neighborhood and regional parks. The additional use would further contribute to the need for maintenance and improvements.

The City's Municipal Code requires usable open space to equal 25 percent (approximately 47,955 square feet) of the total site area. As previously mentioned under Impact 2.15(d), the proposed project is seeking an open space concession pursuant to the State's Density Bonus Law for the construction of 17,214 square feet of common open space, representing approximately 9 percent of the total site area. The existing open space located on the site's northern and western portions of the site that would be preserved does not count toward the Municipal Code's minimum open space requirement.

On-site recreational amenities would include a dog play area, a community garden, a recreation/yoga lawn, and a barbeque area with an accompanying shade structure and the proposed project would also incorporate 7,611 square feet of private yards, lessening the need for use of existing parks and recreational facilities by project residents. It is expected that these on-site recreational amenities would reduce the demand on neighborhood and regional parks and recreation facilities, and thereby reduce the proposed project's contribution to the deterioration of existing parks and recreational facilities.

To address the incremental increase in demand associated with the proposed project, the applicant would comply with Municipal Code Chapter 14.16, Dedication of Land for Park Facilities and Payment of In Lieu Fees, which requires developers to dedicate land for park facilities or pay park and recreation impact fees. By providing on-site recreational amenities that exceed the required minimum open space and paying applicable park development fees, the proposed project would ensure that the incremental increase in recreational demand would not result in substantial physical deterioration of existing neighborhood and regional parks. Therefore, impacts would be less than significant.

b) Does the project include recreational facilities or require the construction or expansion of recreational facilities, which might have an adverse physical effect on the environment?

Less than significant impact. As discussed previously, the proposed project would provide a total of 17,214 square feet of usable open space and install 7,611 square feet of private yards, resulting in a combined proposed and existing square footage of 108,875 square feet of open space on-site. Impacts related to the construction of improvements have been addressed throughout this Draft

[130] California Department of Finance (DOF). 2026. E-5 City/County Population and Housing Estimates for Cities, Counties, and the State, 2020-2025. Website: https://dof.ca.gov/forecasting/demographics/estimates/e-5-population-and-housing-estimates-for-cities-counties-and-the-state-2020-2025/. Accessed April 10, 2026.

IS/MND and would be reduced through the implementation of all mitigation measures included in this Draft IS/MND.

Therefore, impacts would be less than significant.

Mitigation Measures

None required.

Environmental Issues	Potentially Significant Impact	Less than Significant Impact with Mitigation Incorporated	Less than Significant Impact	No Impact
2.17 Transportation *Would the project:*				
a) Conflict with a program plan, ordinance or policy of the circulation system, including transit, roadway, bicycle and pedestrian facilities?	☐	☐	☒	☐
b) Would the project conflict or be inconsistent with CEQA Guidelines Section 15064.3, subdivision (b)?	☐	☐	☒	☐
c) Substantially increase hazards due to a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment)?	☐	☐	☒	☐
d) Result in inadequate emergency access?	☐	☐	☒	☐

Environmental Evaluation

Setting

This analysis is based in part on the Trip Generation & VMT Assessment prepared by Urban Crossroads, Inc. for the proposed project on July 20, 2026, and included as Appendix I in this report.[131]

Would the project:

a) Conflict with a program plan, ordinance or policy addressing the circulation system, including transit, roadway, bicycle and pedestrian facilities?

Less than significant impact.

Circulation System

The proposed project would result in a net reduction of daily trips compared to the existing office use on-site. According to the Trip Generation & VMT Assessment prepared for the proposed project, in its

[131] Urban Crossroads, Inc. 2026. Presidio Residential Trip Generation & VMT Assessment. July 20.

existing condition, the project site generates an average of 500 two-way trips per day, with 73 trips during the AM peak-hour and 77 trips during the PM peak-hour. The proposed project is anticipated to generate 418 two-way trips per day with 25 AM peak-hour trips and 32 PM peak-hour trips. Therefore, implementation of the proposed project would result in a net reduction of 82 two-way trips per day with a net reduction of 50 AM peak-hour trips and a net increase of 46 PM peak-hour trips when compared to the existing office use.[132] The City's Transportation Impact Guidelines indicate that projects that generate 1,600 ADT and add 51 or more trips during either the AM or PM peak-hours would result in potential significant impacts.[133] However, the proposed project is anticipated to generate fewer than 1,600 net new daily trips and fewer than 50 net new peak-hour trips. Therefore, impacts would be less than significant.

Transit Facilities

Public transportation services are provided by Orange County Transportation Authority (OCTA). Bus Route 90 provides service from Tustin to Dana Point via Moulton Parkway; a bus stop is located near the intersection of Moulton Parkway and Glenwood Drive. The nearest bus stop to the project site is the Moulton-Glenwood bus stop, located along Moulton Parkway, 0.66 mile east of the project site. There are no existing or planned transit facilities adjacent to the project site. Project implementation would not conflict with a program plan, ordinance, or policy addressing transit facilities.

Roadway Facilities

Vehicular access to the project site is currently provided from a driveway at the southeast corner of the project site along Argonaut. This existing driveway would be retained and utilized to serve the proposed project. An internal private roadway system would provide access to each unit's parking garage as well as to guest parking spaces that would be distributed throughout the site. Roadway facilities would continue to serve the project site and surrounding development. The proposed project would not involve modifications to any existing roadways within the area and, thus, would not conflict with a program, plan, ordinance, or policy addressing roadway facilities.

Bicycle Facilities

The Aliso Viejo General Plan Circulation Element (Figure C-2) identifies existing bicycle facilities within the City.[134] According to the General Plan Circulation Element and the OCTA 2009 Commuter Bikeways Strategic Plan, Class II on-road bicycle lanes currently exist along both sides of Glenwood Drive.[135] Additionally, Aliso Creek Road and Moulton Parkway have Class II on-road bicycle lanes.[136] There are no planned bicycle facilities near the project site. The proposed project would not involve

[135] Alta Planning + Design, KOA Corporation. 2009. Final 2009 OCTA Commuter Bikeways Strategic Plan for the Orange County Transportation Authority. Map 1-1. Website: https://www.octa.net/pdf/bikeways09.pdf. Accessed April 10, 2026.

[136] Orange County Transportation Authority (OCTA). 2026. Bikeways Planning, Orange County Bikeways Map. Website: https://www.octa.net/getting-around/active/oc-bike/bikeways-planning/overview/. Accessed April 10, 2026.

modifications to any of these roadways or bicycle lanes and thus would not conflict with a program, plan, ordinance, or policy addressing bicycle facilities.

Pedestrian Facilities

Pedestrian facilities, including crosswalks and sidewalks, are currently available along both sides of Glenwood Drive north of the project site, along both sides of Aliso Creek Road west of the project site, and along both sides of Argonaut south and west of the project site. Signalized crosswalks are available at the intersection of Glenwood Drive and Aliso Creek Road located at the northwest corner of the project site and at the intersection of Glenwood Drive and Argonaut east of the project site. Non-signalized crosswalks are available at the intersection of Argonaut located east of the project site. Pedestrians would circulate within the site via proposed internal pedestrian walkways and concrete sidewalks. The proposed internal pedestrian walkways and sidewalks would connect to the existing sidewalks along Argonaut via the existing driveway on the southeastern corner of the project site.

The proposed project would not conflict with any program, plan, ordinance, or policy addressing the circulation system, including transit, roadway, bicycle, or pedestrian facilities. Therefore, impacts would be less than significant.

b) Would the project conflict or be inconsistent with CEQA Guidelines Section 15064.3, subdivision (b)?

Less than significant impact. The project-specific Trip Generation and VMT Assessment (Appendix I) was prepared to evaluate transportation impacts pursuant to CEQA Guidelines Section 15064.3(b) and SB 743. The VMT assessment applies the City's Transportation Impact Guidelines to determine whether the proposed project meets established VMT screening criteria and would be expected to result in a less than significant impact or require additional VMT analysis.

VMT is a measurement of miles traveled by vehicles within a specified region and for a specified period of time. VMT is a measure of the use and efficiency of the transportation network and is calculated based on individual vehicle trips generated and their associated trip lengths. VMT accounts for two-way (round-trip) travel and is often estimated for a typical weekday for the purposes of measuring transportation impacts.

In September 2013, SB 743 was signed into law, which fundamentally changed transportation impact analysis as part of CEQA compliance. These changes include the elimination of auto delay, Level of Service (LOS), and similar measurements of vehicular roadway capacity and traffic congestion as the basis for determining significant traffic impacts. SB 743 identifies VMT as the most appropriate CEQA transportation metric. The justification for this paradigm shift is that LOS impacts lead to improvements that increase roadway capacity and, thus, induce more traffic and GHG emissions.

In May 2020, the City adopted its Aliso Viejo Transportation Impact Guidelines for CEQA and General Plan Consistency (AVTIG), which serves as the City's transportation analysis guidelines.[137] The AVTIG includes screening criteria that are intended to provide a simplified way to determine whether a project's VMT would be expected to cause a less than significant CEQA transportation impact without having to conduct a detailed VMT analysis. Below is a discussion of the various screening criteria outlined in the AVTIG and an analysis of whether the proposed project would be "screened" from requiring a detailed VMT analysis, either in its entirety or partially based on individual land uses.

City Guidelines outline appropriate screening criteria for identifying when a proposed land use project is expected to have a less than significant impact, thus avoiding the need for a more detailed analysis. The screening criteria are divided into the following:

- Step 1: Transit Priority Areas (TPA) Screening
- Step 2: Low VMT Area Screening
- Step 3: Project Type Screening

A land use project needs only to meet one of the above screening criteria to result in a less than significant impact.

Consistent with guidance identified in the City Guidelines, projects located within a TPA or High-quality Transit Area (HQTA) (i.e., within 0.5 mile of an existing "major transit stop" or an existing stop along a "high-quality transit corridor") may be presumed to have a less than significant impact absent substantial evidence to the contrary. However, consistent with City Guidelines, Aliso Viejo does not have any TPAs within the City.[138] Therefore, the Step 1: TPA screening criterion is not met.

The proposed project is not located within a low VMT-generating area and would not qualify for Step 2: Low VMT Area screening criterion.[139]

The City Guidelines state that local-serving uses such as day care centers, non-destination hotels, affordable housing, places of worship, municipal services, and other local essential services may be presumed to have a less than significant impact as local-serving in nature and would tend to shorten vehicle trips. The proposed project does not include any local-serving uses. However, according to the Trip Generation & VMT Assessment (Appendix I), the City Guidelines also consider small projects that generate fewer than 110 net new daily vehicle trips to have a less than significant VMT impact. Based on the results of the VMT assessment, the proposed residential development that would replace an existing office use is projected to result in a net reduction in daily vehicle trips compared to existing conditions. The proposed project is expected to generate a net reduction of 144 daily vehicle trips. Since the proposed project would result in a reduction of daily vehicle trips, it is below the 110

[137] City of Aliso Viejo. 2020.Transportation Impact Guidelines for CEQA and General Plan Consistency. Website: https://avcity.org/DocumentCenter/View/4395/Traffic-Impact-Analysis-Guidelines?bidId=. Accessed April 10, 2026.

[138] City of Aliso Viejo. 2020.Transportation Impact Guidelines for CEQA and General Plan Consistency. Page 18. Website: https://avcity.org/DocumentCenter/View/4395/Traffic-Impact-Analysis-Guidelines?bidId=. Accessed April 16, 2026.

[139] Ibid.

net new daily vehicle trip threshold.[140] Therefore, Step 3: Project Type screening criterion is met. Based on the City's VMT screening types and the net reduction of daily vehicle trips, the proposed project meets the Project Type screening criterion and is therefore considered to have a less than significant VMT impact. No additional VMT analysis is required, and impacts would be less than significant.

c) Substantially increase hazards due to a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment)?

Less than significant impact. The proposed project would include the development of a new residential community consisting of 58 residential units. Because the General Plan land use designation of the proposed project would change to MDR, this would be consistent with the updated land use designation and existing development north of the project site. Therefore, the proposed project would not introduce an incompatible use to the project site. Additionally, the proposed project would not provide off-site roadway improvements that could substantially increase hazards due to a design feature. Argonaut currently provides access to the project site. No modifications to Argonaut are proposed. Furthermore, the internal roadway system would provide access to each residential unit. This internal roadway would be consistent with the Municipal Code Chapter 10, Streets and Sidewalks. As previously mentioned under Impact 2.9(f), operation of the proposed project would also be consistent with all applicable OCFA requirements, which would include those for road width and turning radii to facilitate fire department access.

As part of the City's Site Development Permit process required under Municipal Code Section 15.74.020, Site Development Permits, the proposed project would be reviewed and only approved after finding the proposed development conforms with applicable requirements and standards set forth in the Municipal Code and General Plan, including the Circulation Element's standards related to design, access, and circulation. The proposed project would be designed to ensure all driveways and ingress/egress points maintain adequate line of sight unobstructed by landscaping, signage, or other barriers.

Additionally, as the proposed project would introduce an urban use within an urbanized area, it would not introduce incompatible elements such as farm equipment. The proposed project is designed to be consistent with the existing residential land uses designated Very Low Density Residential and High Density Residential to the north of the project site. The project would adhere to Municipal Code Section 15.62.050 design review requirements to guarantee safe line of sight and would not create traffic hazards. Therefore, impacts would be less than significant.

d) Result in inadequate emergency access?

Less than significant impact. As discussed in Impact 2.9(f), the City has developed an EOP outlining the City's response to extraordinary emergency situations associated with natural disasters, technological incidents, and national security emergencies. The EOP establishes evacuation routes.

[140] Urban Crossroads, Inc. 2026. Presidio Residential Trip Generation and VMT Assessment. July 20.

Additionally, the General Plan Safety Element identifies evacuation routes in the City. Within the vicinity of the project site, Aliso Creek Road and Glenwood Drive are identified as primary evacuation routes.[141]

The project site is within Zone 20 of Aliso Viejo's Evacuation Zones. Designated evacuation zones within Zone 20 include Glenwood Drive, Aliso Creek Road, Aliso Viejo Parkway, and Moulton Parkway.[142] The project site is adjacent to both Glenwood Drive and Aliso Creek Road, and construction would not require closure or partial closure of Glenwood Drive or Aliso Creek Road. The proposed project would be constructed completely within the project site and construction equipment would access the project site via Argonaut, which is the main access point to the project site. If any road closures to Argonaut are required, the project applicant and construction crew would be required to coordinate with the City of Aliso Viejo Public Works Department to ensure that emergency access routes are maintained during construction. Thus, construction of the proposed project would not impede the use of surrounding roadways for emergencies or access for emergency response vehicles.

The proposed project would provide internal circulation for emergency vehicle access. The proposed project has been designed to provide emergency service providers access to the site from any of the public streets or the drive aisles. The proposed project has been designed to comply with applicable emergency service provider access standards, including those from OCFA for fire department access, turning radii with an inner radius of 20 feet and an outer radius of 49 feet, and emergency response requirements. The design of the proposed project would provide adequate emergency access consistent with City requirements, including the required number and design of access points and safety features. Therefore, the proposed project would not result in significant impacts to emergency access during construction and/or operation. The proposed project would not impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan. Impacts would be less than significant.

Mitigation Measures

None required.

[141] City of Aliso Viejo. 2004. General Plan. Safety Element. Figure S-1 Safety Policy Map. Website: https://avcity.org/DocumentCenter/View/384/Safety-Policy-Map-PDF. Accessed April 10, 2026.

[142] City of Aliso Viejo. 2024. Citywide Evacuation Zones. Website: https://avcity.org/DocumentCenter/View/3750. Accessed April 10, 2026.

Environmental Issues	Potentially Significant Impact	Less than Significant Impact with Mitigation Incorporated	Less than Significant Impact	No Impact
2.18 Tribal Cultural Resources *Would the project:*				
a) Cause a substantial adverse change in the significance of a Tribal Cultural Resource, defined in Public Resources Code Section 21074 as either a site, feature, place, or cultural landscape that is geographically defined in terms of the size and scope of the landscape, sacred place, or object with cultural value to a California Native American Tribe, and that is:	☐	☒	☐	☐
i) Listed or eligible for listing in the California Register of Historical Resources, or in a local register of historical resources as defined in Public Resources Code Section 5020.1(k), or	☐	☒	☐	☐
ii) A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Public Resources Code Section 5024.1. In applying the criteria set forth in subdivision (c) of Public Resources Code Section 5024.1, the lead agency shall consider the significance of the resource to a California Native American Tribe.	☐	☒	☐	☐

Environmental Evaluation

Would the proposed project cause a substantial adverse change in the significance of a TCR, defined in Public Resources Code Section 21074 as either a site, feature, place, or cultural landscape that is

geographically defined in terms of the size and scope of the landscape, sacred place, or object with cultural value to a California Native American Tribe, and that is:

a) Cause a substantial adverse change in the significance of a Tribal Cultural Resource, defined in Public Resources Code Section 21074 as either a site, feature, place, or a cultural landscape that is geographically defined in terms of the size and scope of the landscape, sacred place, or object with cultural value to a California Native American Tribe, and that is:

i) Listed or eligible for listing in the California Register of Historical Resources, or in a local register of historical resources as defined in Public Resources Code Section 5020.1(k), or

Less than significant impact with mitigation incorporated. A review of the CRHR, local registers of historic resources, a records search conducted at the SCCIC, and a pedestrian survey failed to identify any listed TCRs that may be adversely affected by the proposed project. However, the NAHC SLF results were positive for TCRs on the project site, and subsequent Tribal outreach to obtain additional information pertaining to TCRs within the project site produced negative results. Should any undiscovered TCRs be encountered during project construction, implementation of MM TCR-1 through MM TCR-5 will ensure that potential impacts to TCRs will be reduced to a level of less than significant.

ii) A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Public Resources Code Section 5024.1. In applying the criteria set forth in subdivision (c) of Public Resources Code Section 5024.1, the lead agency shall consider the significance of the resource to a California Native American Tribe.

Less than significant impact with mitigation incorporated. Tribal consultation efforts conducted by the City of Aliso Viejo pursuant to SB 18 and AB 52 to identify TCRs meeting the criteria set forth in Public Resources Code Section 5024.1(c) were initiated on April 24, 2026, when consultation letters were sent to the tribes identified on the NAHC consultation list. The Juaneño Band of Mission Indians, Acjachemen Nation–84A responded on April 24, 2026, and formally requested consultation with the City. The Tribe indicated that it has ancestral and cultural ties to the project area and an interest in protecting and preserving TCRs, sacred sites, and other traditional cultural places within its traditional territory. A consultation meeting between the City and the Tribe was held on May 1, 2026. Following the meeting, the Tribe provided proposed mitigation measures via email on May 5, 2026. On May 8, 2026, the Juaneño Band of Mission Indians, Acjachemen Nation–Belardes also provided proposed mitigation measures for the City's consideration. On August 7, 2026, the City transmitted draft tribal mitigation measures to both consulting tribes for review. On August 8, 2026, the Juaneño Band of Mission Indians, Acjachemen Nation–84A responded, indicating that it had reviewed and generally accepted the City's proposed mitigation measures, while identifying several outstanding questions.

Tribal consultation efforts conducted by the City pursuant to SB 18 and AB 52 are summarized above and informed the development of MM TCR-1 through MM TCR-5. These measures establish

procedures for tribal monitoring, the treatment of tribal cultural resources, inadvertent discoveries, and consultation in the event previously unidentified resources are encountered during ground-disturbing activities.

Should any undiscovered TCRs be encountered during project construction, implementation of MM TCR-1 through MM TCR-5 will ensure that potential impacts to TCRs will be reduced to a level of less than significant.

Mitigation Measures

MM TCR-1 **Retention of Qualified Archaeologist and Worker Training.** Prior to the issuance of a grading permit by the City of Aliso Viejo, evidence shall be provided to the City that a qualified archaeologist meeting the Secretary of the Interior's Standards for professional archaeology (U.S. Secretary of the Interior 2008) has been retained by the Applicant to conduct any required training, evaluation, or treatment of archaeological resources that might be encountered during implementation of the project.

As part of this, prior to the start of grading, the qualified archaeologist shall conduct cultural resources sensitivity training for all construction personnel. Construction personnel must be informed of the types of archaeological resources that may be encountered (both prehistoric and historical), and of the proper procedures to be enacted in the event of an inadvertent discovery of archaeological resources or human remains. The Applicant must ensure that construction personnel are made available for and attend the training and retain documentation demonstrating attendance. This documentation shall be made available to the City upon request.

MM TCR-2 **Native American Monitoring.** A Native American monitor from or approved by the project's consulting Tribes (Juaneño Band of Mission Indians Acjachemen Nation – 84A and Juaneño Band of Mission Indians Acjachemen Nation – Belardes) shall be present during all earth-moving construction activities. The Native American monitor shall be given the opportunity to participate in the cultural resource sensitivity training described in the preceding condition of approval. At least 30 days prior to issuance of grading permits by the City for the project site and any off-site improvements, a Native American Monitoring Agreement (Monitoring Agreement) shall be developed between the Applicant and the consulting party. The Monitoring Agreement shall pertain to prehistoric archaeological resources and Tribal Cultural Resources, respectively, and shall identify any monitoring requirements and treatment of cultural resources to meet the requirements of the Tribal representative. The Monitoring Agreement shall also address communication protocols in the event of an unanticipated discovery of cultural materials, and the roles, responsibilities, and authorities of the Native American Monitor. The Monitoring Agreement shall also detail the protocols for treatment and final disposition of any Native American cultural

resources, sacred sites, and human remains discovered on the site that the Native American Monitor shall implement in consultation and coordination with the Native American Most Likely Descendant, as identified by the NAHC. In accordance with the condition of approval below, discovery and treatment of human remains shall comply with State Health and Safety Code Section 7050.5 and Public Resources Code (PRC) Section 5097.98.

MM TCR-3 **Archaeological Resource and/or Tribal Cultural Resource Discovery and Treatment.** In the event of the unanticipated discovery of archaeological or other cultural resources, whether discovered through Native American monitoring or not, all work activities in the area (within approximately 100 feet of the discovery) shall be halted or redirected until the discovery can be evaluated by a qualified archaeologist. Construction shall not resume until a qualified archaeologist has conferred with the City and, in the case of prehistoric archaeological resources and tribal cultural resources, the Native American monitor, on the significance of the resource. If it is determined that the discovered archaeological resource and/or tribal cultural resource is significant, avoidance and preservation in place shall be the preferred manner of mitigation, pursuant to PRC Section 21083.2(b) and Section 21084.3. Preservation in place may be accomplished by, but is not limited to, avoidance, incorporating the resource into open space, capping, or deeding the site into a permanent conservation easement. In the event that preservation in place is demonstrated to be infeasible and data recovery through excavation is the only feasible mitigation available, a Treatment Plan shall be prepared and implemented by a qualified archaeologist, in consultation with the City, that provides for the adequate recovery of the scientifically consequential information contained in the archaeological resource or cultural information in the event of a tribal cultural resource. The City and Applicant shall also consult with appropriate Native American representatives in determining treatment for prehistoric or Native American resources to ensure cultural values ascribed to the resources, beyond those that are scientifically important, are considered. Any evaluation and treatment shall be supervised by an individual or individuals that meet the Secretary of the Interior's Professional Qualification Standards.

MM TCR-4 **Treatment of Human Remains.** In accordance with California Health and Safety Code Section 7050.5, if human remains are found, the Orange County Sheriff's Coroner shall be immediately notified of the discovery. No further excavation or disturbance of the site or any nearby area reasonably suspected to overlie adjacent remains (100 feet or as determined by the project archaeologist) shall occur until the procedures set forth in this measure have been implemented. If the County Coroner determines that the remains are, or are believed to be, Native American, the Coroner shall notify the Native American Heritage Commission (NAHC) within 24 hours. In accordance with California PRC Section 5097.98, the NAHC must immediately notify those persons it believes to be the Most Likely Descendant (MLD) from the deceased

Native American. The MLD shall complete their inspection within 48 hours of being granted access to the site. The designated Native American representative would then determine, in consultation with the property owner, the disposition of the human remains.

MM TCR-5 **Native American Monitoring.** The project applicant shall retain a Native American Monitor from or approved by the project's consulting Tribes (Juaneño Band of Mission Indians Acjachemen Nation – 84A and Juaneño Band of Mission Indians Acjachemen Nation – Belardes).

(a) The monitor shall be retained prior to the commencement of any "ground-disturbing activity" for the subject project at all project locations (i.e., both on-site and any off-site locations that are included in the project description/definition and/or required in connection with the project, such as public improvement work). "Ground-disturbing activity" shall include, but is not limited to, demolition, pavement removal, potholing, auguring, grubbing, tree removal, boring, grading, excavation, drilling, and trenching.

(b) A copy of the executed monitoring agreement shall be submitted to the lead agency prior to the earlier of the commencement of any ground-disturbing activity, or the issuance of any permit necessary to commence a ground-disturbing activity.

1. Construction coordination meeting shall be conducted prior to start of ground disturbing work (grading, trenching, or excavation) with Qualified Archaeologist, Construction Contractor, Tribal Representative(s).
2. Tribal Cultural Resource Monitoring shall be conducted during all initial ground- disturbing activities until both the Archaeologist and Tribal Monitor determine monitoring is no longer needed. During construction, if cultural materials or features are discovered. Construction contractor, Archaeologist, Tribal Monitor(s) and Lead Agency shall submit a discovery report documenting find, treatment measures, and confirmation that work did not resume until treatment was completed. If human remains are encountered during construction, the construction contractor, County Coroner, NAHC, MLD and Tribal Representative(s) shall follow the following: the coroner shall provide written documentation, the NAHC will be notified, and there shall be confirmation of respectful treatment/reburial as directed by the MLD and Tribe.
3. Qualified Archaeologist and/or Tribal Representative(s) shall submit documentation of recovered materials, correspondence confirming tribal disposition decision (e.g., reburial, return, or other treatment) during and following construction, if artifacts are recovered.
4. Qualified Archaeologist shall submit a Final Monitoring and Mitigation Summary Report and submit to project applicant and appropriate CHRIS repository.

5. Lead Agency, Construction Contractor and or Tribal Representative(s) shall submit records of coordination and confirmation that tribal ceremonies or blessings were accommodated safely and respectfully prior to and/or during construction, as requested by the Tribe.
6. Responsibility for conditions:
    a. Lead Agency shall ensure that all measures are implemented, documented and verified prior to and during construction activities; and
    b. Tribal Participation be a consulting and monitoring partner throughout all ground- disturbing activities; and
    c. Compliance Verification shall include documentation of implementation, including monitoring logs, consultation records, and correspondence. Records shall be maintained in the project file by the Lead Agency.

Environmental Evaluation

Setting

This analysis is based in part on the Drainage Report prepared for the proposed project by Advanced Civil Group, Inc., on April 7, 2026, and revised on July 14, 2026.[143]

According to the MNWD's 2020 Urban Water Management Plan (UWMP), MNWD relies on a combination of imported water and recycled water.[144] The District's potable water demands are supplied from imported sources via the Metropolitan Water District of Southern California (Metropolitan) through MWDOC.

Imported water represents approximately 79 percent of MNWD's total water supply. Metropolitan's water supply originates from two principal sources—the Colorado River via the Colorado River Aqueduct and the Feather River Watershed/Lake Oroville in Northern California through the State Water Project (SWP). Recycled water provides 21 percent of the district's water supplies and is produced at one of two local treatment plants.[145]

The MNWD is responsible for maintenance of the City's sewer and storm drain lines. Wastewater would be collected via the MNWD's wastewater collection system and sent to its Regional Treatment Plant in Laguna Niguel.[146]

Additionally, SoCalGas would provide natural gas service to the project site.[147] Telecommunication services would be provided by AT&T and Cox Communications.

Individual trash service would be provided through CR&R Incorporated, with collection occurring on a weekly basis. Waste from the City is disposed of at a number of solid waste facilities, with the majority of waste disposed at the Prima Deshecha Sanitary Landfill.[148]

Would the project:

a) Require or result in the relocation or construction of new or expanded water, wastewater treatment or stormwater drainage, electric power, natural gas, or telecommunications facilities, the construction or relocation of which could cause significant environmental effects?

Less than significant impact.

Water

The proposed project would include water lines throughout the project site that would connect to existing water lines within Argonaut. As such, the existing water lines within Argonaut that connect to MNWD water services would sufficiently serve the proposed project. Impacts related to the construction of infrastructure improvements have been addressed throughout this Draft IS/MND and would be reduced through the implementation of all mitigation measures included in this Draft IS/MND. Therefore, the proposed project would not require and would not result in the construction of new water facilities or expansion of existing water facilities. Impacts would be less than significant.

Wastewater

Wastewater would be collected via the MNWD's wastewater collection system and sent to its Regional Treatment Plant in Laguna Niguel.[149] The proposed project would connect to existing sanitary sewer lines in Argonaut. As described under Impact 2.19(c) below, MNWD treats more than 10 MGD, and has sufficient capacity to accommodate wastewater generated by the proposed project. The proposed project is estimated to result in approximately 16,008.3 total gallons of wastewater a day, which is approximately 0.06 percent of MNWD's daily capacity, which is a nominal amount. Therefore, the proposed project would not require or result in relocation or construction of wastewater facilities, the construction or relocation of which could cause significant environmental effects.

Stormwater

The proposed project would include an on-site stormwater collection system consisting of catch basins, underground storm drain lines, and water quality treatment facilities designed to convey and manage runoff generated by the proposed project. Runoff would be collected from rooftops, drive aisles, parking areas, and landscaped areas and directed through the proposed drainage system prior to discharge to the existing public storm drain network. As further discussed in Section 2.10, Hydrology, the proposed project would be designed consistent with the approved drainage plan and would not exceed the capacity of the existing stormwater drainage system. The potential environmental effects associated with construction and operation of the proposed project, including the proposed stormwater facilities to serve the residential units are analyzed within this Initial Study and impacts have been determined to be less than significant with compliance with regulatory

[149] Moulton Niguel Water District (MNWD). 2026. Wastewater Collection and Treatment. Website: https://www.mnwd.com/wastewater-treatment/. Accessed April 10, 2026.

requirements and implementation of mitigation measures. As such, impacts would be less than significant.

Electric Power and Natural Gas

The project site is currently served by electrical and gas infrastructure associated with the existing office building. The proposed project would connect to existing electrical infrastructure. Natural gas would be provided by SoCalGas. Electrical service is currently available in the project area and would be provided by SCE. Electricity would connect to existing underground utility lines running within Argonaut and would not cause significant environmental effects. Impacts associated with the proposed project's electricity demand and natural gas demand are discussed previously in Section 2.6, Energy.

Telecommunications

The project site is currently fully developed and served by telecommunications infrastructure. The proposed project would connect to the existing telecommunications infrastructure. Therefore, the proposed project would not require the installation or development of new or improved telecommunications facilities such that environmental impacts would occur. Impacts would be less than significant.

b) Have sufficient water supplies available to serve the project and reasonably foreseeable future development during normal, dry and multiple dry years?

Less than significant impact. As discussed above, the proposed project would connect to the existing water lines and system. The 2020 UWMP includes a supply and demand assessment for projected years between 2025 and 2045 for normal year, single dry year, and multiple dry year scenarios. Table 12, below, shows the multiple-dry year supply and demand comparison through 2045.

Table 12: Multiple Dry Year Supply and Demand Comparison (AFY)

		2025	2030	2035	2040	2045
First year	Supply totals	33,435	33,111	32,934	32,790	32,588
	Demand totals	33,435	33,111	32,934	32,790	32,588
	Difference	0	0	0	0	0
Second year	Supply totals	33,419	33,124	32,953	32,797	32,636
	Demand totals	33,419	33,124	32,953	32,797	32,636
	Difference	0	0	0	0	0
Third year	Supply totals	31,969	31,714	31,556	31,396	31,280
	Demand totals	31,969	31,714	31,556	31,396	31,280
	Difference	0	0	0	0	0

		2025	2030	2035	2040	2045
Fourth year	Supply totals	31,906	31,680	31,529	31,357	31,280
	Demand totals	31,906	31,680	31,529	31,357	31,280
	Difference	0	0	0	0	0
Fifth year	Supply totals	31,844	31,646	31,501	31,319	31,280
	Demand totals	31,844	31,646	31,501	31,319	31,280
	Difference	0	0	0	0	0

Source: Moulton Niguel Water District (MNWD). 2021 (MNWD). 2020 Urban Water Management Plan. Website: https://www.mnwd.com/wp-content/uploads/2021/12/2020-Urban-Water-Management-Plan.pdf. Accessed April 10, 2026.

The demands are expected to be met through a combination of imported and recycled water. MNWD works together with two primary agencies, MWDOC and Metropolitan, to ensure a safe and reliable water supply that would serve the community in periods of drought and shortage.[150] The UWMP accounts for projected water demand based on water consumption by single- and multi-family residences, commercial, and institutional/government customers.[151] The UWMP also accounts for projected land use, population, economic growth, and future conservation.[152] As noted in the UWMP and as shown in Table 12, the City would have sufficient water supplies for normal year, single dry year, and multiple dry years.

According to the DOF, the City has an average of 2.53 persons per household.[153] The proposed project would include the construction of up to 58 3-story townhomes, which would increase the City's population by up to 147 persons based on the average household size.[154] As discussed in Section 2.14, Population and Housing, this population growth is considered planned growth under SCAG's predictions. MNWD's 2020 actual consumption was 121 gallons per capita per day (GPCD). For the estimated 147 residents under the proposed project, this would result in an estimated water demand of approximately 17,787 gallons per day (GPD) or 19.9 AFY. As noted in the UWMP, the projected normal year water use in 2030 is 31,782 AFY.[155] The proposed project's demand would be approximately 0.06 percent of the total projected normal year 2030 demand. The UWMP also notes that during the fifth year of the multiple dry year scenario, the projected water demand and supply would be 31,646 AFY. The proposed project's demand would be approximately 0.06 percent of the

[154] 2.53 persons per household * 58 residential units= 146.74 persons, or approximately 147 persons.

[155] Moulton Niguel Water District (MNWD). 2021. 2020 Urban Water Management Plan. Website: https://www.mnwd.com/wp-content/uploads/2021/12/2020-Urban-Water-Management-Plan.pdf. Accessed April 10, 2026.

total projected fifth multiple dry year demand. Additionally, water demand for the proposed project is partially offset by the existing water demand on-site currently used for landscaping and to service the existing office building. Therefore, the projected water use of the proposed project would be nominal, and water supplies would be sufficient to continue serving the project site. As such, the proposed project would not significantly impact water supplies. Impacts would be less than significant.

c) Result in a determination by the wastewater treatment provider which serves or may serve the project that it has adequate capacity to serve the project's projected demand in addition to the provider's existing commitments?

Less than significant impact. As discussed above, the proposed project would connect to existing sanitary sewer lines. The MNWD is responsible for the City's sewer lines. The MNWD collects and treats more than 10 million gallons of wastewater per day from residential and commercial customers throughout the district's service area. MNWD utilizes three different treatment plants to appropriately treat the wastewater, with two of those treatment plants equipped to produce recycled water. The 3A Treatment Plant in Mission Viejo is owned and operated by MNWD and has a capacity of 6 million GPD. The Regional Treatment Plant in Laguna Niguel is currently operated by a regional operator, South Orange County Wastewater Authority (SOCWA), but is also home to the largest recycled water facility that is owned and operated by MNWD. The Regional Treatment Plant has a capacity of 9.4 million GPD. Additionally, the J.B. Latham Treatment Plant in Dana Point, which is also operated by SOCWA, provides an additional facility for treatment of wastewater and has a capacity of 13 million GPD.[156] Any treated wastewater that cannot be utilized for irrigation purposes is then discharged to the ocean through one of two ocean outfalls, the Aliso Creek Ocean Outfall and the San Juan Creek Ocean Outfall. The MNWD works closely with SOCWA, as the regional permitting entity, and the appropriate regulatory agencies to ensure that all treated wastewater, whether used for irrigation purposes or discharged to the ocean, is compliant with all regulatory requirements.[157]

A Municipal Service Review was prepared for the Southwest Region of Orange County in 2023, which included a review of the MNWD.[158] The purpose of the review was in part—to review and study future growth in the service area and to determine whether Southwest Region of Orange County can efficiently, equitably, and reliably provide services. The review determined that MNWD existing and planned operations and infrastructure can meet current and future service demands.[159] The proposed project would result in approximately 16,008.3 total gallons of wastewater per day, which is equivalent to 0.016 million gallons per day (MGD).[160] Based on a total combined wastewater treatment capacity of 28.4 MGD, the proposed project's wastewater generation would be approximately 0.06 percent of the total daily capacity, which is a nominal amount. Furthermore, the proposed project's expected

[159] Ibid.

[160] Based on the assumption that wastewater generated is approximately 90 percent of indoor water use.

wastewater generation would be partially offset by the existing wastewater generated and treated from the on-site office building. Therefore, MNWD would have adequate capacity to continue serving the project site and the wastewater demands of the proposed project, and impacts would be less than significant.

d) Generate solid waste in excess of State or local standards, or in excess of the capacity of local infrastructure, or otherwise impair the attainment of solid waste reduction goals?

Less than significant impact. Construction and operational activities associated with the proposed project would generate solid waste requiring disposal. CR&R Incorporated is a private recycling and nonhazardous solid waste hauler and provides solid waste services to the City, including the project site.[161] CR&R Incorporated collects solid waste for all residential, commercial, and industrial waste and recycling services. Solid waste is disposed of in Orange County landfills.

Solid waste within the City is primarily disposed of at the Prima Deshecha Sanitary Landfill. Other sanitary landfills, including Chiquita Canyon, El Sobrante, Frank R. Bowerman, Simi Valley, and Olinda Alpha received relatively small amounts of solid waste from the City. The Prima Deshecha Landfill is the closest facility to the City and would likely be the solid waste facility most often receiving waste from the project site.[162] According to the California Department of Resources Recycling and Recovery (CalRecycle) Solid Waste Information System (SWIS), the Prima Deshecha Landfill has a maximum daily capacity of 4,000 tons per day and a remaining capacity of 128,800,000 cubic yards. The facility's maximum permitted capacity is 172,100,000 cubic yards.[163]

CalRecycle provides a solid waste generation factor to estimate the amount of solid waste generated by residential projects. Using the generation rate of 12.23 pounds (lbs) per household per day for residential development[164], the proposed project would generate approximately 709.34 lbs per day of solid waste, or approximately 0.35 tons per day (based on 58 townhomes)—which represents less than 0.01 percent of the maximum daily capacity of the Prima Deshecha Sanitary Landfill.

Therefore, the Prima Deshecha Landfill would have sufficient capacity to serve the proposed project and solid waste generated during construction and operations would represent a negligible increase compared to the daily permitted tonnage. Furthermore, under existing conditions, the project site generates solid waste associated with the existing office building. The proposed project would continue to be served by the same solid waste collection services and therefore, the expected solid waste generation from the proposed project is partially offset by the existing office use currently occupying the project site. The proposed project would also include recycling, reuse, and/or salvage

[161] City of Aliso Viejo. 2025. Services. Website: https://avcity.org/101/Services. Accessed April 10, 2026.

[162] California Department of Resources Recycling and Recovery (CalRecycle). 2024. SWIS Facility/Site Activity Details. Website: https:// www2.calrecycle.ca.gov/SolidWaste/SiteActivity/Details/2750?siteID=2085. Accessed April 10, 2026.

[163] Ibid.

programs to reduce solid waste and comply with all applicable regulations for solid waste. Impacts would be less than significant.

e) Comply with federal, State, and local management and reduction statutes and regulations related to solid waste?

Less than significant impact. The City complies with all federal, State, and local statutes and regulations related to solid waste. Regulations specifically applicable to the proposed project include the California Integrated Waste Management Act of 1989 (AB 939), SB 2202, SB 1016, 2019 CALGreen Section 4.408, SB 1383, and AB 341, which requires multfamily residential development and commercial uses to implement recycling programs.

In accordance with State law and Municipal Code Section 13.02, Building Regulations, which adopts CALGreen, the proposed project would be required to divert at least 65 percent of the nonhazardous construction and demolition debris from the project site by recycling, reuse, and/or salvage. In addition, Municipal Code Chapter 7.05, Solid Waste Disposal, addresses solid waste disposal, including recycling and organic waste. Compliance with the Municipal Code would achieve compliance with State law, including SB 1383.

The City has a per capita population disposal rate target of 3.3 pounds per person per day and a per capita employment disposal rate of 9.4 pounds per person per day. Since 2007, the City has met these targets through its diversion programs. The most recent population disposal rate (2024) was 3.5 pounds per day per capita for population and 8.9 pounds per day per capita for employment.[165] Therefore, although the City met its disposal rate target for per capita employment disposal, it slightly exceeded its target for per capita disposal rates. It should be noted that this minor exceedance represents a small, short-term fluctuation, and does not reflect a failure to implement diversion programs. The City would continue to implement its diversion programs and requires compliance with all federal, State, and local statutes and regulations for solid waste, including those identified under the most current CALGreen standards and in compliance with SB 1383.

In 1989, the Legislature adopted AB 939, in order to “reduce, recycle, and reuse solid waste generated in the State to the maximum extent feasible.” AB 939 established a waste management hierarchy and required that each county prepare a new Integrated Waste Management Plan and each City prepare a Source Reduction and Recycling Element (SRRE) by July 1, 1991. The SRRE was required to identify how each jurisdiction would meet the mandatory State waste diversion goal of 50 percent by and after the year 2000.

SB 2202 made a number of changes to the municipal solid waste diversion requirements under AB 939. These changes included a revision to the statutory requirement for 50 percent diversion of solid waste to clarify that local governments shall continue to divert 50 percent of all solid waste on and after January 1, 2000.

[165] California Department of Resources Recycling and Recovery (CalRecycle), Jurisdiction Per Capita Disposal Rate Trends. Website: https://www2.calrecycle.ca.gov/LGCentral/AnnualReporting/ReviewReports. Accessed April 10, 2026.

SB 1016 introduced a per capita disposal measurement system that measures the 50 percent diversion requirement using a disposal measurement equivalent. SB 1016 repealed the prior 2-year process, requiring instead that CalRecycle to make a finding whether each jurisdiction was in compliance with the Act's diversion requirements for calendar year 2006 and determine compliance for the 2007 calendar year and beyond based on the jurisdiction's change in its per capita disposal rate. CalRecycle is required to review a jurisdiction's compliance with those diversion requirements in accordance with a specified schedule, which is conditioned upon the CalRecycle finding that the jurisdiction complies with those requirements or has implemented its SRRE and household hazardous waste element. SB 1016 requires CalRecycle to issue an order of compliance if it is determined that the jurisdiction has failed to make a good faith effort to implement its SRRE or its household hazardous waste element, pursuant to a specified procedure. The per capita disposal rate is a jurisdiction-specific index, which is used as one of several "factors" in determining a jurisdiction's compliance with the intent of AB 939 and allows CalRecycle and jurisdictions to set their primary focus on successful implementation of diversion programs.

SB 1383 requires counties to take the lead in collaborating with jurisdictions located within the county in planning for the necessary organic waste recycling and food recovery capacity needed to divert organic waste from landfills into recycling activities and food recovery organizations.

CALGreen Section 4.408 requires preparation of a Construction Waste Management Plan that provides an overview of ways in which the applicant would recycle and/or salvage for reuse a minimum of 65 percent of the nonhazardous construction and demolition debris. As discussed above, during the construction phase, the proposed project would be required to comply with CALGreen through the recycling and reuse of at least 65 percent of the nonhazardous construction and demolition debris from the project site.

Participation in the City's recycling programs during project construction and operation, including CalRecycle's requirements, would ensure that the proposed project would not conflict with federal, State, and local statutes and regulations related to solid waste. Additionally, solid waste would be disposed of at existing Orange County Waste and Recycling landfills. Disposal of solid waste would comply with all federal, State, and local statutes and regulations related to solid waste. During operation, the proposed project would include receptacles for recyclables and garbage. Furthermore, the existing office use on-site complies with all aforementioned statutes and regulations related to solid waste. Therefore, continued and ongoing compliance with federal, State, and local mandates related to solid waste generated by the proposed project would reduce impacts on applicable federal, State, and local mandates related to solid waste to less than significant. Thus, impacts would be less than significant, and no mitigation is required.

Mitigation Measures

None required.

Environmental Issues	Potentially Significant Impact	Less than Significant Impact with Mitigation Incorporated	Less than Significant Impact	No Impact
2.20 Wildfire *If located in or near State Responsibility Areas or lands classified as very high fire hazard severity zones, would the project:*				
a) Substantially impair an adopted emergency response plan or emergency evacuation plan?	☐	☐	☐	☒
b) Due to slope, prevailing winds, and other factors, exacerbate wildfire risks, and thereby expose project occupants to, pollutant concentrations from a wildfire or the uncontrolled spread of a wildfire?	☐	☐	☒	☐
c) Require the installation or maintenance of associated infrastructure (such as roads, fuel breaks, emergency water sources, power lines or other utilities) that may exacerbate fire risk or that may result in temporary or ongoing impacts to the environment?	☐	☐	☐	☒
d) Expose people or structures to significant risks, including downslope or downstream flooding or landslides, as a result of runoff, post-fire slope instability, or drainage changes?	☐	☐	☒	☐

Environmental Evaluation

Setting

The CAL FIRE FHSZ Map indicates the project site is not within a State Responsibility Area (SRA). The closest SRA is located approximately 1.3 miles west of the project site, in the Aliso and Wood Canyons Wilderness Park. No part of the City is listed as an SRA.[166]

[166] California Department of Forestry and Fire Protection (CAL FIRE). 2026. Fire Hazard Severity Zones. Website:

VHFHSZs are located along the southern and western boundaries of the City.[167]

The General Plan indicates that the closest VHFHSZ is located near Aliso Creek Road, 0.82 mile west of the project site.[168]

Would the project:

a) Substantially impair an adopted emergency response plan or emergency evacuation plan?

No impact. The project site is developed and located within an urbanized area with existing infrastructure. According to the CAL FIRE FHSZ Map, the project site is not located within a VHFHSZ, nor is it within or near an SRA. Additionally, the proposed project would comply with all City and OCFA requirements for fire prevention and safety measures, including adequate site access.

The City is divided into 22 all-hazard evacuation zones. The project site is within Zone 20 of Aliso Viejo's Evacuation Zones. Designated evacuation zones within Zone 20 include Glenwood Drive, Aliso Creek Road, Aliso Viejo Parkway, and Moulton Parkway.[169] As previously mentioned under Impact 2.9(f), the project site is adjacent to both Glenwood Drive and Aliso Creek Road, which would be accessible via the project site's access driveway on Argonaut, and construction would not require closure or partial closure of Glenwood Drive or Aliso Creek Road. The proposed project would be constructed completely within the project site and construction equipment would access the project site via Argonaut, which is the main access point to the project site. If any road closures to Argonaut are required, the project applicant and construction crew would be required to coordinate with the City of Aliso Viejo Public Works Department to ensure that emergency access routes are maintained during construction. Thus, construction of the proposed project would not impede the use of surrounding roadways for emergencies or access for emergency response vehicles.

The proposed project would have access to several different emergency evacuation routes as shown on the evacuation zone maps and would not impair access to any of these emergency evacuation routes. Furthermore, the proposed project would not interfere with the evacuation plan or evacuation routes identified in the City's EOP and the General Plan Safety Element (see Impact 2.9(f)). Therefore, the proposed project would not conflict with any adopted emergency response or evacuation plans. No impact related to emergency response or evacuation plans would occur.

https://osfm.fire.ca.gov/what-we-do/community-wildfire-preparedness-and-mitigation/fire-hazard-severity-zones. Accessed April 10, 2026.

[167] City of Aliso Viejo. 2004. General Plan Figure S-1 Safety Policy Map. Website: https://www.avcity.org/DocumentCenter/View/384/Safety-Policy-Map-PDF. Accessed April 1, 2026.

[168] Ibid.

[169] City of Aliso Viejo. 2024. Citywide Evacuation Zones. Website: https://avcity.org/DocumentCenter/View/3750. Accessed April 1, 2026.

b) Due to slope, prevailing winds, and other factors, exacerbate wildfire risks, and thereby expose project occupants to, pollutant concentrations from a wildfire or the uncontrolled spread of a wildfire?

Less than significant impact. The project site is developed and located within an urbanized area with existing infrastructure. According to the most recent CAL FIRE maps, the project site is not located within a FHSZ[170] and the project site does not have a history of wildfires.[171] Although the topography of the project site is relatively flat, the existing northern and western slopes of the project site would be preserved along with the existing screening trees as part of the proposed project. Therefore, the proposed project would be largely buffered from prevailing northeasterly winds that would exacerbate fire risk. Furthermore, the proposed project would implement all applicable fire prevention standards and would thus not exacerbate fire risk, and the proposed project would install a slope maintenance easement along the toe of the slope along the northern and western boundaries of the development footprint to ensure ongoing maintenance and preservation of the slope in order to prevent wildfire risks. Thus, the proposed project would not exacerbate fire risk from existing conditions, and impacts would be less than significant.

c) Require the installation or maintenance of associated infrastructure (such as roads, fuel breaks, emergency water sources, power lines or other utilities) that may exacerbate fire risk or that may result in temporary or ongoing impacts to the environment?

No impact. The proposed project does not include infrastructure improvements, such as roads, fuel breaks, emergency water sources, or new utility installations, that could exacerbate fire risk. The site is already developed with existing infrastructure in place. Compliance with fire safety standards and coordination with the OCFA ensures no additional infrastructure would create new fire risks or result in temporary or ongoing environmental impacts. Additionally, the proposed project would install one fire hydrant consistent with fire flow requirements in accordance with California Fire Code guidelines stipulated in Municipal Code Chapter 13.04 and would connect to existing water lines. Installation of this fire hydrant would not exacerbate any fire risks but would assist the City in preparing for and addressing potential fires.

The proposed internal roadways would be designed to allow for adequate emergency access, and a fire hydrant would be provided, consistent with California Fire Code fire flow requirements on-site. Through compliance with all applicable fire safety regulations for fire prevention and emergency access, the proposed project would not exacerbate fire risk from existing conditions. Therefore, there would be no impact.

d) Expose people or structures to significant risks, including downslope or downstream flooding or landslides, as a result of runoff, post-fire slope instability, or drainage changes?

Less than significant impact. Although the sloped areas along the northern and western boundaries of the project site are mapped as having landslide potential by General Plan Figure S-1, Safety Policy Map, the proposed project would be required to incorporate the site-specific recommendations from the Geotechnical Investigation in accordance with Municipal Code Chapter 13.08.170 and to incorporate additional recommendations to address landslide susceptibility. Through implementation of these recommendations as COA GEO-1a and COA GEO-1b, the proposed project would ensure that slopes are maintained over the life of the project and would establish minimum setback criteria for descending slopes. Implementation of COA GEO-1a would reduce the potential for landslide hazards by incorporating site-specific design recommendations into project construction plans and grading plans related to slope stability. Implementation of COA GEO-1b would require grading activities adjacent to the existing slopes along the western and northern boundaries of the site to be observed by a licensed California Geotechnical Engineer or Certified Engineering Geologist. COA GEO-1b would ensure that, if necessary, supplemental recommendations would be incorporated into construction and grading plans to address potential impacts related to landslide susceptibility.

Furthermore, the project site and surrounding areas do not have a history of wildfires and would not include changes to drainage patterns that could increase risks of flooding or slope instability. Compliance with existing stormwater and drainage regulations would further prevent any related risks. Through application of project-specific recommendations in accordance with the recommendations of the Geotechnical Investigation and local regulations, the proposed project would not expose people to significant risks as a result of post-fire slope instability or drainage changes. Therefore, impacts would be less than significant.

Mitigation Measures

None required.

Environmental Issues	Potentially Significant Impact	Less than Significant Impact with Mitigation Incorporated	Less than Significant Impact	No Impact
2.21 Mandatory Findings of Significance				
a) Does the project have the potential to substantially degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, substantially reduce the number or restrict the range of a rare or endangered plant or animal, or eliminate important examples of the major periods of California history or prehistory?	☐	☒	☐	☐
b) Does the project have impacts that are individually limited, but cumulatively considerable? (“Cumulatively considerable” means that the incremental effects of a project are considerable when viewed in connection with the effects of past projects, the effects of other current projects, and the effects of probable future projects)	☐	☒	☐	☐
c) Does the project have environmental effects, which will cause substantial adverse effects on human beings, either directly or indirectly?	☐	☒	☐	☐

Environmental Evaluation

a) Does the project have the potential to substantially degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, substantially reduce the number or restrict the range of a rare or endangered plant or animal, or eliminate important examples of the major periods of California history or prehistory?

Less than significant impact with mitigation incorporated. As discussed throughout this document, the proposed project does not have the potential to substantially degrade the quality of the environment or result in significant environmental impacts that cannot be mitigated or reduced to a less than significant level through compliance with the established regulatory framework and implementation of mitigation measures.

As demonstrated in Section 2.4, Biological Resources, the proposed project would not substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, or substantially reduce the number or restrict the range of a rare or endangered plant or animal. The proposed project would be required to comply with the MBTA and other applicable regulations and to implement MM BIO-1a and MM BIO-1b, which require a pre-construction survey and avoidance of direct and indirect impacts on active nests. Implementation of these measures would reduce potential impacts to a less than significant level. Furthermore, the proposed project would not conflict with habitat because it does not contain Covered Habitats or suitable habitat for Identified Species covered under the CONCCP/HCP.

As demonstrated in Section 2.5, Cultural Resources, the proposed project would not eliminate important examples of the major periods of California history or prehistory. As concluded in Section 2.5, the proposed project would not result in significant adverse impacts to archaeological resources, TCRs, or human remains. MM CUL-1 would require WEAP training, a site survey conducted by a qualified Archaeologist, and archaeological monitoring. MM CUL-2 would require consultation with a qualified Archaeologist in the event that buried archaeological resources are discovered during construction, as well as inadvertent discovery procedures. MM CUL-3 would require specific procedures to be followed related to inadvertent discovery of human remains. Therefore, the proposed project would not degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, substantially reduce the number or restrict the range of a rare or endangered plant or animal, or eliminate important examples of the major periods of California history or prehistory.

As demonstrated in Section 2.18, Tribal Cultural Resources, the proposed project would not cause a substantial adverse change in the significance of a TCR, defined in Public Resources Code Section 21074. However, as concluded in Section 2.18, the proposed project's NAHC SLF results were positive for TCRs on the project site, and subsequent Tribal outreach to obtain additional information pertaining to TCRs within the project site produced negative results. However, should any

undiscovered TCRs be encountered during project construction, implementation of MM TCR-1 through MM TCR-5 as described above would reduce impacts to a less than significant level.

b) Does the project have impacts that are individually limited, but cumulatively considerable? ("Cumulatively considerable" means that the incremental effects of a project are considerable when viewed in connection with the effects of past projects, the effects of other current projects, and the effects of probable future projects)?

Less than significant impact with mitigation incorporated. A significant cumulative impact may occur if a project, in conjunction with related projects, would result in impacts that are less than significant when viewed individually but would be cumulatively significant when viewed together. Table 13 lists the development projects that have been proposed within the City. The nearest project is approximately 500 feet from the proposed project. Based on available information, there are no approved projects or projects currently under construction in the project's surrounding area at this time, nor are there any that would have a construction schedule that would overlap with the proposed project.[172] The projects were reviewed to identify whether the proposed project would contribute to cumulatively significant impacts when evaluated in combination with other projects.

Table 13: Current Projects in the Vicinity of the Proposed Project

Project Type	Location	Distance	Description	Status
City of Aliso Viejo[1]				
Residential	95 Argonaut	0.10 mile	Demolition of existing office building to accommodate the construction of 61 3-story townhomes.	Under review
Residential	27081 Aliso Creek Road	1.65 miles	Demolition of three existing office buildings and construction of a 137-unit, residential community.	Under review
Residential	26800–26970 Aliso Viejo Parkway	1.36 miles	Demolition of five 2-story office buildings to accommodate the construction of 215 residential units.	Under review
Residential	400–600 Freedom Lane	2.16 miles	Construction of a 134-unit residential community.	Under review
Mixed Use	26501 Aliso Creek Road	0.90 mile	Construction of a mixed-use building with 17,273 square feet of ground floor commercial space with 343 residential units above.	Under review

[172] City of Aliso Viejo. Major Projects. Website: https://avcity.org/412/Major-Projects. Accessed May 11, 2026.

When considering the proposed project in combination with other past, present, and reasonably foreseeable future projects in the vicinity of the project site, it is reasonably assumed, consistent with CEQA practice, that all cumulative development projects would be required to comply with applicable federal, State, and local regulations, performance standards, and environmental review requirements intended to avoid or reduce environmental impacts. Within this regulatory framework, past, present, and reasonably foreseeable future projects in the area consist primarily of infill or small-scale development and would not combine with the proposed project to create related or compounding environmental effects. Accordingly, the cumulative environmental setting would remain at less than significant levels with implementation of the proposed project.

Moreover, the proposed project does not result in environmental impacts that would incrementally contribute to a significant cumulative impact. The proposed project's impacts would be individually limited and not cumulatively considerable. The proposed project could result in potentially significant impacts related to biological resources, cultural resources, paleontological resources, and hazards and hazardous materials. However, these impacts would primarily be related to construction period activities, would be temporary in nature, and would not substantially contribute to any potential cumulative impacts associated with these topics. As there are no cumulative projects that would be undergoing construction simultaneously with the proposed project, less than significant cumulative impacts are anticipated.

Specifically, since the proposed project would not exceed South Coast AQMD thresholds of significance related to air quality, the proposed project would not result in a cumulatively considerable net increase of construction emissions, operational emissions, or TACs. As discussed more fully in Section 2.8 of this IS/MND, GHG emissions-related impacts are inherently cumulative in nature. The proposed project also would not conflict with any applicable GHG plan, policy, or regulation adopted for the purpose of reducing the emissions of GHGs. As such, the proposed project, in conjunction with other existing, planned, and probable foreseeable projects, would not result in a significant cumulative impact related to GHG emissions generation. As for transportation and traffic impacts, construction of the proposed project would have the potential for temporary impacts to road hazards and emergency access. Use of local roads for transport of construction equipment and construction personnel would be temporary and short-term. Given the location of the project area in relation to other development projects in the region, the transportation network is sufficient to accommodate construction traffic to avoid significant impacts to any one area. Transportation and traffic impacts would be temporary and less than significant, and would not contribute to cumulatively considerable impacts.

Furthermore, compliance with the regulatory requirements and implementation of mitigation measures at the project level would reduce the potential for incremental effects that would occur with construction and operation of the proposed project relevant to the environmental topical areas discussed within this document to below a level of significance. The mitigation measures identified in this document, including MM BIO-1a, MM BIO-1b, MM CUL-1, MM CUL-2, MM CUL-3, MM GEO-1, MM HAZ-1, MM TCR-1, MM TCR-2, MM TCR-3, MM TCR-4, and MM TCR-5 would reduce the proposed project's incremental contribution to any potential cumulative impacts to below a level of

significance. No additional mitigation measures would be required to address cumulative impacts. Therefore, the proposed project would cause less than significant cumulative impacts.

c) Does the project have environmental effects, which will cause substantial adverse effects on human beings, either directly or indirectly?

Less than significant impact with mitigation incorporated. The proposed project would improve the housing stock in the City. Based on the discussion provided in the Project Description and the analysis presented in Sections 2.1 through 2.20 of this document, the proposed project would not cause substantial adverse effects on human beings, either directly or indirectly, because the proposed project's potential impacts would be mitigated to a less than significant level. Therefore, with implementation of MM BIO-1a, MM BIO-1b, MM CUL-1, MM CUL-2, MM CUL-3, MM GEO-1, MM HAZ-1, MM TCR-1, MM TCR-2, MM TCR-3, MM TCR-4, and MM TCR-5. The proposed project would not result in substantial adverse effects on human beings. Impacts would be less than significant with mitigation incorporated.

Mitigation Measures

Implement MM BIO-1a, MM BIO-1b, MM CUL-1, MM CUL-2, MM CUL-3, MM GEO-1, MM HAZ-1, MM TCR-1, MM TCR-2, MM TCR-3, MM TCR-4, and MM TCR-5.

8. User Changes to Default Data

8.1. Justifications

Screen	Justification
Land Use	Per project description the project consists of 58 Townhomes with 94,061 SF of building space and 14,092 SF of landscaping area per the site plan.
Construction: Construction Phases	Adjusted construction schedule based on the applicant's construction timeline.
Construction: Trips and VMT	Conservatively added 4 additional trips for vendor trips during site prep phase. Asphalt vendor trips based on paved acreage.
Construction: Paving	Paved area = site area (191,664SF) minus open space and slope (98142 SF) - bldg coverage (42,933 SF) = 50,589 SF/43,560-22.4% = 0.94.
Operations: Vehicle Data	Trip rates were adjusted per project specific traffic study prepared by Urban Crossroad, Inc for 15 Argonaut.
Operations: Hearths	Wood stoves is prohibited. Project will be all electric.
Operations: Energy Use	Updated as per Measure E-15 using CAPCOA GHG Handbook, Table E 15.1 and 2. Commercial Energy Consumption by End Use, Electricity Demand Forecast Zone, and Building Type. CAPCOA, 2024. https://caleemod.com/documents/handbook/full_handbook.pdf

15 Argonaut

Construction -Material Movement

Calculations:

Description	Building Footprint (sf)	Building footprint (sq yards)	Foundation Depth (yards)	Excavation (cubic yards)	Additional 20%*
Building Footprint	42933	4770.333333	0.33	1574.21	1889.052

Notes:

1. Assumptions: 12" foundation pursuant to the California Building Code Section R301 to calculate soil cut and export.
2. *Applied an additional 20% to model a worst-case, conservative scenario.

15 Argonaut

Construction - Demolition

Description	Area (sq ft)	height/depth (ft)	Volume (ft^3)	Demolition Waste Fraction	Demolition Volume (ft^3)	Demolition Waste Density (tons/cy)	Demolition Weight (tons)
Buildings	41,519	10	415,190	0.25	103,798	0.50	1,922
Pavement	3,348	1	3,348	1	3,348	2.025	251
						Totals	**2,173**

Notes:

1. Assumptions: Building demolition estimates are based on methods used in CalEEMod (CAPCOA, 2022), based on 1 story building , assume 10 ft per floor where 1 square ft floor area = 10 cubic ft (ft^3) of building volume, and 1 ft^3 of building volume = 0.25 ft^3 of waste. This approach can be used to estimate demolition for multiple story buildings. It also assumes 1 cubic yard (cy) building waste = 0.5 ton weight

2. Assumptions: 1 cubic yard of asphalt = 2.025 tons or 4050 lbs.

3. Source: ICF in collaboration with Sacramento Metropolitan Air Quality Management District, Fehr & Peers, STI and Ramboll. 2022. CalEEMod Appendix C Emission Calculation Details for CalEEMod. April.

15 Argonaut

Construction - Pavement Trips

Calculations: Asphalt Pavement Vendor Trips

Landuse Asphalt Paved Area	Asphalt Paved Area (sf)	Asphalt volume (cubic feet)	Asphalt Volume (cy)	Capacity per vendor truck (cy per truck)	One Way Trips Total	Days in Paving Phase	One Way Vendor Trips Per Day (Asphalt)
Condo/Townhouse	50,589	25,295	937	16	118	26	5

Notes:

1. Assumptions: Asphalt paved areas includes driveways
2. Assumptions: Asphalt volume (cubic feet) assumes 6 inch pavement

Methods & Assumptions

- EMFAC Region: Orange; Construction Year: 2027.
- Off-road equipment fuel uses BSFC applied to HP × load × hours × work days by phase (liquid fuels in gallons; electric in kWh).
- On-road construction trips apply EMFAC fuel consumption factors (gal/mi) to allocated VMT (vehicles are liquid-only in this app; no EVMT/kWh/mi).
- Totals report liquid fuels in gallons and off-road electric in kWh.

Off-Road Equipment — Estimated Fuel Consumption

TOTAL									45,858

Sources: CalEEMod Section 5.1 (schedule) and CalEEMod Section 5.2 (equipment per phase, quantity/day, hours/day, horsepower, and load factor).

Notes: HP = horsepower; BSFC = Brake Specific Fuel Consumption. Fuel (gal) = Qty × HP × Load × Hours/Day → hp-hr/day × Work days × BSFC. A BSFC factor of 0.054 gal/bhp-hr corresponds to ~18.5 bhp-hr/gal (CARB-derived). Total Electricity (not shown per equipment): 0 kWh.

Phase Name	Trip Type	Vehicle Mix	Fuel	VMT	EMFAC gal/mi	Est. gallons

Sources: CalEEMod Section 5.1 (# of work days per phase) and CalEEMod Section 5.3 (trip type, vehicle mix, and VMT).

Notes: VMT = vehicle miles traveled; mpg = miles per gallon. VMT was derived as one-way trips per day × miles per one-way trip Estimated gallons for on-road trips: Fuel (gal) = VMT × EMFAC gal/mi. EMFAC gal/mi factors originate from CARB's EMFAC model for the applicable county and construction year.

EMFAC Fuel Consumption Rates by Vehicle Mix (County = Orange; Calendar Year=2027)

Vehicle Category	Diesel (gal/mi)	Gasoline (gal/mi)
HHDT	0.1571	—
MHDT	0.1115	—
LDA	—	0.0373
LDT1	—	0.0450
LDT2	—	0.0442

Notes: Fuel consumption from EMFAC2021v1.0.2

CalEEMod Vehicle Mix – EMFAC Rates

Vehicle Mix	Fuel	gal/mi
LDA,LDT1,LDT2	Gasoline	0.0429
HHDT,MHDT	Diesel	0.1343

Notes: Light-duty=25/50/25; Heavy-duty (HHDT,MHDT)=50/50.

Totals Summary

Metric	Value
Total estimated gallons — On-road	16,706
Total estimated gallons — Off-road (liquid fuels)	45,858
Total estimated kWh — Off-road (electric)	0
Grand total (reporting note)	Liquid fuels in gallons; electric in kWh
County (CalEEMod 1.1)	Orange
EMFAC Region	Orange
Year (from 1.1 Construction Start Date)	2027

Notes: Scenario codes shown above (e.g., 5.2.1/5.3.1 or 5.2.2/5.3.2).

15 Argonaut

Operational Energy

Scope: Full (Vehicles + Buildings + Stationary)

Sources

Field	Value
Project Name	15 Argonaut
County	Orange
EMFAC Region	Orange
Op Year	2028
CalEEMod Version	2022.1.1.43
CalEEMod workbook	15 Argonaut (3).xlsx
EMFAC Annual CSV	EMFAC2025EI-EMFAC2007Class-Orange-2028-Annual-20260512134451.csv
Land Use Sheet	1.2
Mobile Source Sheet	5.9.1
Operational Energy consumption sheet	5.11.1
Building Energy Title 24 and Non-Title 24 (overrides) Sheet	8.5.3

Methods & Assumptions

- Mobile energy is calculated as: Annual VMT by land use (CalEEMod 5.9.1) × vehicle-class mix (CalEEMod 8.5.1.2, Annual/Season A when provided; otherwise EMFAC population mix) × EMFAC effective per-mile energy rates.
- Plug-in hybrids contribute to both gasoline and electricity buckets per EMFAC fuel/energy accounting.
- “Natural Gas” in EMFAC is reported in diesel-equivalent gallons and is included in the CNG totals.
- Building energy (CalEEMod 5.11.1) and Title 24 / Non-Title 24 overrides (CalEEMod 8.5.3) are shown separately from mobile energy.
- Off-road (5.15.1 / 5.15.2) hp-hr/yr = HP × Load Factor × Hours/Day × Number/Day × Days/Year (assumed 260) and converted using construction-style factors; Generators/Fire Pumps (5.16.1) use Hours/Year.
- All reported values are annual totals: electricity (kWh/yr), natural gas (kBTU/yr), and liquid fuels (gallons/yr; diesel-equivalent gallons for CNG).

Project Land Uses and Descriptions

Land Use Subtype	Size	Unit	Description
Condo/Townhouse	58	Dwelling Unit	

Source: CalEEMod worksheet 1.2).

Trips by Land Use

Land Use	Description	Trips (Weekday)	Trips (Saturday)	Trips (Sunday)	Trips (Year)
Condo/Townhouse		356	356	356	129,940
TOTAL		**356**	**356**	**356**	**129,940**

CalEEMod Section 5.9.1.

VMT by Land Use

Land Use	Description	VMT (Weekday)	VMT (Saturday)	VMT (Sunday)	VMT (Year)
Condo/Townhouse		3,145	3,145	3,145	1,147,950
TOTAL		**3,145**	**3,145**	**3,145**	**1,147,950**

CalEEMod Fleet by Land Use (Percent of Annual VMT)

Land Use	Description	HHDT	LDA	LDT1	LDT2	LHDT1	LHDT2	MCY	MDV	MH	MHDT	OBUS	SBUS	UBUS
Condo/Townhouse		0.67	45.82	3.96	25.43	2.59	1.15	2.31	15.97	0.44	1.45	0.06	0.09	0.05

Notes:
1. Fleet mix values represent the percentage of annual VMT allocated to each vehicle class for each land use, and percentages sum to 100% across all classes.
2. Where available, CalEEMod 8.5.1.2 (Annual/Season A) fleet mix is used; otherwise EMFAC default fleet population mix is used.
3. Vehicle class abbreviations follow standard EMFAC conventions (e.g., LDA = Light-Duty Auto; HHDT = Heavy-Heavy-Duty Truck; MCY = Motorcycle).

Table 1: Special-status Plant Species Potentially Occurring within the Project Site

Scientific Name Common Name	Status			Habitat Description4	Potential to Occur and Rationale5	Included in Impact Analysis
	USFWS[1]	CDFW[2]	CNPS[3]			
Dicots						
Abronia maritima red sand-verbena	—	—	4.2	Perennial herb found in coastal dunes. Elevation: 0–100 m Bloom period: February–November	**None:** The project site has been subjected to significant historical surface disturbances and does not contain suitable habitat(s) that would support occurrence of this species.	No
Aphanisma blitoides aphanisma	—	—	1B.2	Annual herb found in gravelly (sometimes) and sandy (sometimes) soils in coastal bluff scrub, coastal dunes, and coastal scrub. Elevation: 1–305 m Bloom period: February–June	**None:** The project site has been subjected to significant historical surface disturbances and does not contain suitable habitat(s) that would support occurrence of this species. There are three recent and three historical records between five and ten miles from the project site.	No
Artemisia palmeri San Diego sagewort	—	—	4.2	Perennial deciduous shrub found in mesic and sandy soils in chaparral, coastal scrub, riparian forest, riparian scrub, and riparian woodland. Elevation: 5–915 m Bloom period: May–September	**None:** The project site has been subjected to significant historical surface disturbances and does not contain suitable habitat(s) that would support occurrence of this species.	No
Astragalus brauntonii Braunton's milk-vetch	FE	—	1B.1	Perennial herb found in carbonate and sandstone soils in chaparral, coastal scrub, and valley and foothill grassland communities. Typically found in burned areas and sometimes in disturbed areas. Elevation: 4–640 m Bloom period: January–August	**None:** The project site has been subjected to significant historical surface disturbances and does not contain suitable habitat(s) that would support occurrence of this species. There is one recent record between five and ten miles from the project site.	No

Scientific Name Common Name	Status			Habitat Description4	Potential to Occur and Rationale5	Included in Impact Analysis
	USFWS[1]	CDFW[2]	CNPS[3]			
Atriplex coulteri Coulter's saltbush	—	—	1B.2	Perennial herb found in alkaline or clay soils (sometimes) in coastal bluff scrub, coastal dunes, coastal scrub, and valley and foothill grassland communities. Elevation: 3–460 m Bloom period: March–October	**None:** The project site has been subjected to significant historical surface disturbances and does not contain suitable habitat(s) that would support occurrence of this species. There are three historical records within five miles of the project site and there are three recent and eight historical records between five and ten miles from the project site.	No
Atriplex pacifica south coast saltscale	—	—	1B.2	Annual herb found in coastal bluff scrub, coastal dunes, coastal scrub, and playas. Elevation: 0–140 m Bloom period: March–October	**None:** The project site has been subjected to significant historical surface disturbances and does not contain suitable habitat(s) that would support occurrence of this species. There are two historical records within five miles of the project site and one recent and two historical records between five and ten miles from the project site.	No
Atriplex parishii Parish's brittlescale	—	—	1B.1	Annual herb found in alkaline soils in chenopod scrub, playas, and vernal pools. Elevation: 25–1900 m Bloom period: June–October	**None:** The project site has been subjected to significant historical surface disturbances and does not contain suitable habitat(s) that would support occurrence of this species. There is one historical record within five miles of the project site. This species may be locally extirpated.	No
Atriplex serenana var. *davidsonii* Davidson's saltscale	—	—	1B.2	Annual herb found in alkaline soils in coastal bluff scrub and coastal scrub. Elevation: 10–200 m Bloom period: April–October	**None:** The project site has been subjected to significant historical surface disturbances and does not contain suitable habitat(s) that would support occurrence of this species. There is one record within five miles of the project site	No

					and three historical records between five and ten miles from the project site.	
Bahiopsis laciniata San Diego County viguiera	—	—	4.3	Perennial shrub found in chaparral and coastal scrub. Elevation: 60–750 m Bloom period: February–June	**None:** The project site has been subjected to significant historical surface disturbances and does not contain suitable habitat(s) that would support occurrence of this species.	No
Berberis nevinii Nevin's Barberry	FE	SE	1B.1	Perennial, evergreen shrub found on steep, north-facing slopes or in low-grade sandy washes in coastal scrub, chaparral, cismontane woodland, and riparian scrub communities. Elevation: 290–1,575 m Blooming period: March–June	**None:** The project site has been subjected to significant historical surface disturbances and does not contain suitable habitat(s) that would support occurrence of this species.	No
Camissoniopsis lewisii Lewis' evening-primrose	—	—	3	Annual herb found in clay and sandy soils (sometimes) in coastal bluff scrub, cismontane woodland, coastal dunes, coastal scrub, and valley and foothill grassland communities. Elevation: 0–300 m Bloom period: March–May	**None:** The project site has been subjected to significant historical surface disturbances and does not contain suitable habitat(s) that would support occurrence of this species.	No
Caulanthus simulans Payson's jewelflower	—	—	4.2	Annual herb found in granitic and sandy soils in chaparral and coastal scrub communities. Elevation: 90–2,200 m Bloom period: March–May	**None:** The project site has been subjected to significant historical surface disturbances and does not contain suitable habitat(s) that would support occurrence of this species.	No
Centromadia parryi ssp. *australis* southern tarplant	—	—	1B.1	Annual herb found in marshes and swamps (margins), valley and foothill grassland (vernally mesic), and vernal pools. Elevation: 0–480 m	**None:** The project site has been subjected to significant historical surface disturbances and does not contain suitable habitat(s) that would support occurrence of this species. There is	No

Scientific Name Common Name	Status			Habitat Description4	Potential to Occur and Rationale5	Included in Impact Analysis
	USFWS[1]	CDFW[2]	CNPS[3]			
				Bloom period: May–November	one recent record within five miles of the project site and six recent and thirteen historical records between five and ten miles from the project site.	
Chaenactis glabriuscula var. *orcuttiana* Orcutt's pincushion	—	—	1B.1	Annual herb found in coastal bluff scrub (sandy) and coastal dunes. Elevation: 0–100 m Bloom period: January–August	**None:** The project site has been subjected to significant historical surface disturbances and does not contain suitable habitat(s) that would support occurrence of this species. There is one historical record within five miles of the project site and one recent and two historical records between five and ten miles from the project site.	No
Chloropyron maritimum salt marsh bird's-beak	FE	SE	1B.2	Annual, hemiparasitic herb found in coastal dunes, marsh and swamp, salt marsh, and wetlands communities. Elevation: 0–30 m Bloom period: May–October	**None:** The project site has been subjected to significant historical surface disturbances and does not contain suitable habitat(s) that would support occurrence of this species. There is one recent record between five and ten miles from the project site.	No
Chorizanthe leptotheca Peninsular spineflower	—	—	4.2	Annual herb found in granitic soils in chaparral, coastal scrub, and lower montane coniferous forest communities. Elevation: 300–1,900 m Bloom period: May–August	**None:** The project site has been subjected to significant historical surface disturbances and does not contain suitable habitat(s) that would support occurrence of this species.	No
Chorizanthe polygonoides var. *longispina* long-spined spineflower	—	—	1B.2	Annual herb that occurs in valley and foothill grassland, coastal scrub, chaparral, meadows and seeps, and vernal pools. Elevation: 30–1,530 m Bloom period: April–July	**None:** The project site has been subjected to significant historical surface disturbances and does not contain suitable habitat(s) that would support occurrence of this species.	No

Scientific Name Common Name	Status			Habitat Description4	Potential to Occur and Rationale5	Included in Impact Analysis
	USFWS[1]	CDFW[2]	CNPS[3]			
Cistanthe maritima seaside cistanthe	—	—	4.2	Annual herb found in sandy soils in coastal bluff scrub, coastal scrub, and valley and foothill grassland. Elevation: 5–300 m Bloom period: March–June	**None:** The project site has been subjected to significant historical surface disturbances and does not contain suitable habitat(s) that would support occurrence of this species.	No
Clinopodium chandleri San Miguel savory	—	—	1B.2	Perennial shrub found in chaparral, cismontane woodland, coastal scrub, riparian woodland, and valley and foothill grassland. Sometimes in gabbroic and rocky soils. Elevation: 120–1,075 m Bloom period: March–July	**None:** The project site has been subjected to significant historical surface disturbances and does not contain suitable habitat(s) that would support occurrence of this species. There is one record between five and ten miles from the project site.	No
Comarostaphylis diversifolia ssp. *diversifolia* summer holly	—	—	1B.2	Perennial evergreen shrub found in chaparral and cismontane woodland. Elevation: 30–790 m Bloom period: April–June	**None:** The project site has been subjected to significant historical surface disturbances and does not contain suitable habitat(s) that would support occurrence of this species. There are one recent and five historical records between five and ten miles from the project site.	No
Convolvulus simulans small-flowered morning-glory	—	—	4.2	Annual herb found in clay soils, seeps, and serpentine soils in openings in chaparral, coastal scrub, and valley and foothill grassland communities. Elevation: 30–740 m Bloom period: March–July	**None:** The project site has been subjected to significant historical surface disturbances and does not contain suitable habitat(s) that would support occurrence of this species.	No
Deinandra paniculata paniculate tarplant	—	—	4.2	Annual herb found in sandy soils (sometimes) and in vernally mesic soils (usually) in coastal scrub, valley and foothill grassland, vernal pool communities.	**None:** The project site has been subjected to significant historical surface disturbances and does not contain suitable habitat(s) that would support occurrence of this species.	No

There is one recent record within five miles of the project site.	No
Dudleya viscida sticky dudleya	—	—	1B.2	Perennial herb found in rocky areas in coastal bluff scrub, chaparral, cismontane woodland, and coastal scrub. Elevation: 10–550 m Bloom period: May–June	**None:** The project site has been subjected to significant historical surface disturbances and does not contain suitable habitat(s) that would support occurrence of this species. There is one historical record between five and ten miles from the project site.	No
Eryngium pendletonense Pendleton button-celery	—	—	1B.1	Perennial herb found in clay and vernally mesic soils in coastal bluff scrub, valley foothill grassland, and vernal pools. Elevation: 15–110 m Bloom period: April–June	**None:** The project site has been subjected to significant historical surface disturbances and does not contain suitable habitat(s) that would support occurrence of this species.	No
Erythranthe diffusa Palomar monkeyflower	—	—	4.3	Annual herb found in gravelly and sandy soils (sometimes) in chaparral and lower montane coniferous forest communities.	**None:** The project site has been subjected to significant historical surface disturbances and	No

				Elevation: 1,220–1,830 m Bloom period: April – June	does not contain suitable habitat(s) that would support occurrence of this species.	
Euphorbia misera Cliff spurge	CONCCP/ HCP	CONCCP/ HCP	2B.2	Perennial shrub found in rocky soils in coastal bluff scrub, coastal scrub, and Mojavean desert scrub. Elevation: 10–500 m Bloom period: December–August	**None:** The project site has been subjected to significant historical surface disturbances and does not contain suitable habitat(s) that would support occurrence of this species. There are two recent and two historical records between five and ten miles from the project site.	No
Harpagonella palmeri Palmer's grapplinghook	CONCCP/ HCP	CONCCP/ HCP	4.2	Annual herb found in clay soils and openings in chaparral, coastal scrub, and valley and foothill grassland communities. Elevation: 20–955 m	**None:** The project site has been subjected to significant historical surface disturbances and does not contain suitable habitat(s) that would support occurrence of this species. There is one historical record between five and ten miles from the project site.	No
Helianthus nuttallii ssp. *parishii* Los Angeles sunflower	—	—	1A	Perennial rhizomatous herb found in marshes and swamps (freshwater, coastal salt). Elevation: 10–1525 m Bloom period: August–October	**None:** The project site has been subjected to significant historical surface disturbances and does not contain suitable habitat(s) that would support occurrence of this species. There is one historical record between five and ten miles from the project site.	No
Holocarpha virgata ssp. *elongata* graceful tarplant	—	—	4.2	Annual herb found in chaparral, cismontane woodland, coastal scrub, and valley and foothill grassland. Elevation: 60–1,100 m Bloom period: May–November	**None:** The project site has been subjected to significant historical surface disturbances and does not contain suitable habitat(s) that would support occurrence of this species.	No
Horkelia cuneata var. *puberula* mesa horkelia	—	—	1B.1	Perennial herb found in chaparral, coastal scrub, and cismontane woodland communities.	**None:** The project site has been subjected to significant historical surface disturbances and does not contain suitable habitat(s) that would	No

				Bloom period: February–July Elevation: 70–810 m Bloom period: March–May	support occurrence of this species. There is one historical record within five miles of the project site and one historical record between five and ten miles from the project site.	
Isocoma menziesii var. *decumbens* decumbent goldenbush	—	—	1B.2	Perennial shrub found in chaparral and coastal scrub (often disturbed areas, sandy). Elevation: 10–250 m Bloom period: April–November	**None:** The project site has been subjected to significant historical surface disturbances and does not contain suitable habitat(s) that would support occurrence of this species. There is one recent and one historical record between five and ten miles from the project site.	No
Juglans californica southern California black walnut	—	—	4.2	Perennial, deciduous tree found in chaparral, cismontane woodland, coastal scrub, and riparian woodland communities. Elevation: 50–900 m Bloom period: March–August	**None:** The project site has been subjected to significant historical surface disturbances and does not contain suitable habitat(s) that would support occurrence of this species.	No
Lasthenia glabrata ssp. *coulteri* Coulter's goldfields	—	—	1B.1	Annual herb found in marshes and swamps, playas, and vernal pools. Elevation: 1–1,220 m Bloom period: February–June	**None:** The project site has been subjected to significant historical surface disturbances and does not contain suitable habitat(s) that would support occurrence of this species. There are three historical records between five and ten miles from the project site.	No
Lepechinia cardiophylla heart-leaved pitcher sage	CONCCP/ HCP	CONCCP/ HCP	1B.2	Perennial shrub found in closed-cone coniferous forest, chaparral, and cismontane woodland communities. Elevation: 520– 1,370 m Bloom period: April–July	**None:** The project site has been subjected to significant historical surface disturbances and does not contain suitable habitat(s) that would support occurrence of this species.	No
Lepidium virginicum var. *robinsonii*	—	—	4.3	Annual herb found in dry soils in chaparral and coastal scrub communities.	**None:** The project site has been subjected to significant historical surface disturbances and	No

Robinson's pepper-grass				Elevation: 1–855 m Bloom period: January–July	does not contain suitable habitat(s) that would support occurrence of this species. There are two recent and two historical records between five and ten miles from the project site.	
Lessingia hololeuca woolly-headed lessingia	—	—	3	Annual herb found in clay and serpentine soils in broadleafed upland forest, coastal scrub, lower montane coniferous forest, and valley and foothill grassland. Elevation: 15–305 m Bloom period: June–October	**None:** The project site has been subjected to significant historical surface disturbances and does not contain suitable habitat(s) that would support occurrence of this species.	No
Lycium brevipes var. *hassei* Santa Catalina Island desert-thorn	—	—	3.1	Perennial deciduous shrub found in coastal bluff scrub and coastal scrub communities. Elevation: 65–300 m Bloom period: June	**None:** The project site has been subjected to significant historical surface disturbances and does not contain suitable habitat(s) that would support occurrence of this species.	No
Lycium californicum California box-thorn	—	—	4.2	Perennial shrub found in coastal bluff scrub and coastal scrub communities. Elevation: 5–150 m Bloom period: March–August	**None:** The project site has been subjected to significant historical surface disturbances and does not contain suitable habitat(s) that would support occurrence of this species.	No
Malacothrix saxatilis var. *saxatilis* cliff malacothrix	—	—	4.2	Perennial rhizomatous herb found in coastal bluff scrub and coastal scrub communities. Elevation: 3–200 m Bloom period: March–September	**None:** The project site has been subjected to significant historical surface disturbances and does not contain suitable habitat(s) that would support occurrence of this species.	No
Microseris douglasii ssp. *platycarpha* small-flowered microseris	—	—	4.2	Annual herb found in clay soils in cismontane woodland, coastal scrub, valley and foothill grassland, and vernal pool communities. Elevation: 15–1,070 m Bloom period: March–May	**None:** The project site has been subjected to significant historical surface disturbances and does not contain suitable habitat(s) that would support occurrence of this species.	No

Monardella hypoleuca ssp. *intermedia* intermediate monardella	—	—	1B.3	Perennial rhizomatous herb that occurs in chaparral, cismontane woodland, and lower montane coniferous forest communities. Elevation: 400–1,250 m Bloom period: April–September	**None:** The project site has been subjected to significant historical surface disturbances and does not contain suitable habitat(s) that would support occurrence of this species. There are three recent records between five and ten miles from the project site.	No
Monardella macrantha ssp. *hallii* Hall's monardella	—	—	1B.3	Perennial rhizomatous herb found in broadleafed upland forest, chaparral, cismontane woodland, lower montane coniferous forest, and valley and foothill grassland. Elevation: 730–2,195 m Bloom period: June–October	**None:** The project site has been subjected to significant historical surface disturbances and does not contain suitable habitat(s) that would support occurrence of this species.	No
Myosurus minimus ssp. *apus* little mousetail	—	—	3.1	Annual herb found in alkaline soils in valley and foothill grassland and vernal pools. Elevation: 20– 640 m Bloom period: March–June	**None:** The project site has been subjected to significant historical surface disturbances and does not contain suitable habitat(s) that would support occurrence of this species.	No
Nama stenocarpa mud nama	—	—	2B.2	Annual/perennial herb found in marshes and swamps. Elevation: 5–500 m Bloom period: January–July	**None:** The project site has been subjected to significant historical surface disturbances and does not contain suitable habitat(s) that would support occurrence of this species. There are two historical records within five miles of the project site and three historical records between five and ten miles from the project site.	No
Nasturtium gambelii Gambel's water cress	FE	CT	1B.1	Perennial rhizomatous herb found in marshes and swamps (brackish, freshwater). Elevation: 5–330 m	**None:** The project site has been subjected to significant historical surface disturbances and	No

				Bloom period: April–October	does not contain suitable habitat(s) that would support occurrence of this species.	
Navarretia prostrata prostrate vernal pool navarretia	—	—	1B.2	Annual herb found in mesic, alkaline soils in coastal scrub, meadows and seeps, valley and foothill grassland, and vernal pool communities. Elevation: 3–1,210 m Bloom period: April–July	**None:** The project site has been subjected to significant historical surface disturbances and does not contain suitable habitat(s) that would support occurrence of this species. There is one historical record within five miles of the project site.	No
Nemacaulis denudata var. *denudata* coast woolly-heads	—	—	1B.2	Annual herb found in coastal dunes. Elevation: 0–100 m Bloom period: April–September	**None:** The project site has been subjected to significant historical surface disturbances and does not contain suitable habitat(s) that would support occurrence of this species. There is one recent and one historical record within five miles of the project site and two historical records between five and ten miles from the project site.	No
Pentachaeta aurea ssp. *allenii* Allen's pentachaeta	—	—	1B.1	Annual herb found in openings in coastal scrub and valley and foothill grassland communities. Elevation: 75–520 m Bloom period: March–June	**None:** The project site has been subjected to significant historical surface disturbances and does not contain suitable habitat(s) that would support occurrence of this species. There are three historical records within five miles of the project site and three historical records between five and ten miles from the project site.	No
Pentachaeta aurea ssp. *aurea* golden-rayed pentachaeta	—	—	4.2	Annual herb found in chaparral, cismontane woodland, coastal scrub, lower montane coniferous forest, riparian woodland, and valley and foothill grassland communities.	**None:** The project site has been subjected to significant historical surface disturbances and does not contain suitable habitat(s) that would support occurrence of this species.	No

Elevation: 380–2,225 m Bloom period: May–July	**None:** The project site has been subjected to significant historical surface disturbances and does not contain suitable habitat(s) that would support occurrence of this species.	No

Code Designations

[1] Federal Status: 2026 USFWS Listing

- **FE** = Listed as endangered under Federal Endangered Species Act (FESA)
- **FT** = Listed as threatened under FESA
- **FC** = Candidate for listing (threatened or endangered) under FESA
- **FD** = Delisted in accordance with FESA
- **FPD** = Federally Proposed to be Delisted
- **—** = Not federally listed

[2] State Status: 2026 CDFW Listing

- **SE** = Listed as endangered under California Endangered Species Act (CESA)
- **ST** = Listed as threatened under CESA
- **SC** = Candidate for listing (threatened or endangered) under CESA
- **CR** = Rare in California
- **—** = Not State listed

[3] CNPS: 2026 CNPS Listing

- **Rank 1A** = Plants species that presumed extinct in California.
- **Rank 1B** = Plant species that are rare, threatened, or endangered in California and elsewhere.
- **Rank 2** = Plant species that are rare, threatened, or endangered in California, but more common elsewhere.
- **Rank 3** = Plants about which we need more information—A Review List
- **Rank 4** = Plants of limited distribution—A Watch List
- **CBR** = Considered But Rejected
- **Blooming period:** Months in parentheses are uncommon.

Notes:

[4] **Habitat Description**: Habitat description adapted from CNDDB and CNPS online inventory or other specified source.

[5] **Potential to Occur and Rationale**: Location of recorded species occurrences determined by geospatial information from BIOS 6 or other specified source.

Insects					
Bombus crotchii Crotch bumble bee	—	SC	This species occurs primarily in California, including coastal habitats, western Mojave Desert, San Joaquin Valley, and adjacent foothills through most of southwestern California. It inhabits arid grasslands and shrublands, and its food sources including milkweeds, pincushions, lupines, clovers, phacelias, sages, clarkias, poppies, and buckwheats.	**None:** The project site does not contain suitable habitat(s) that would support occurrence of this species. There is one recent and one historical record within five miles of the project site and five recent records between five and ten miles from the project site.	No
Bombus pensylvanicus American bumble bee	—	—	Occurs in coastal prairie, Great Basin grassland, and valley & foothill grassland communities. Nests above ground under long grass or underground.	**None:** The project site does not contain suitable habitat(s) that would support occurrence of this species. There are 14 recent and two historical records within five miles of the project site and 44 recent and six historical records between five and ten miles from the project site.	No
Cicindela hirticollis gravida sandy beach tiger beetle	—	—	Occurs in coastal dunes adjacent to non-brackish water along the coast of California from San Francisco Bay to northern Mexico.	**None:** The project site does not contain suitable habitat(s) that would support occurrence of this species. There is one historical record between five and ten miles from the project site. This species is believed to be locally extirpated.	No
Cicindela latesignata western beach tiger beetle	—	—	Occurs in mudflats and beaches of coastal estuaries from San Diego County to Los Angeles County. Typically inhabit wet or dry sandy beaches and mud, sand, or salt flats.	**None:** The project site does not contain suitable habitat(s) that would support occurrence of this species. There are two historical records between five and ten miles from the project site.	No

Scientific Name Common Name	Status		Habitat Description[3]	Potential to Occur and Rationale[4]	Included in Impact Analysis
	USFWS[1]	CDFW[2]			
Coelus globosus globose dune beetle	—	—	Occurs in coastal sand dune habitat. Inhabits foredunes and sand hummocks; burrows beneath the sand surface and is most common beneath dune vegetation.	**None:** The project site does not contain suitable habitat(s) that would support occurrence of this species. There is one historical record between five and ten miles from the project site.	No
Danaus plexippus monarch butterfly (California overwintering population)	FC	—	Occurs in temperate climates, such as eastern and western North America and undergoes long-distance migration. Lays eggs on obligate milkweed host plant (primarily *Asclepias* spp.). Roosts located in wind protected Eucalyptus, Monterey pine, and Cypress tree groves with nectar and water sources nearby	**None:** The project site does not contain suitable overwintering habitat or the obligate host plant that would support occurrence of this species.	No
Habroscelimorpha gabbii western tidal-flat tiger beetle	—	—	Occurs in estuaries and mudflats along the coast of Southern California. Generally found on dark-colored mud in the lower zone; occasionally found on dry saline flats of estuaries.	**None:** The project site does not contain suitable habitat(s) that would support occurrence of this species. There is one historical record between five and ten miles from the project site. This species is believed to be locally extirpated.	No
Mollusks					
Tryonia imitator mimic tryonia (=California brackishwater snail)	—	—	Occurs in coastal lagoons, estuaries and salt marshes, from Sonoma County south to San Diego County. Found only in permanently submerged areas in a variety of sediment types; able to withstand a wide range of salinities.	**None:** The project site does not contain suitable habitat(s) that would support occurrence of this species. There is one historical record between five and ten miles from the project site.	No
Crustaceans					
Branchinecta sandiegonensis San Diego fairy shrimp	FE CONCCP/ HCP	CONCCP /HCP	Small, shallow (5-30 cm deep) vernal pools with cool water (10-20ºC), moderate alkalinity and conductivity, and less than 1 m deep.	**None:** The project site does not contain suitable habitat(s) that would support occurrence of this species. There is one recent and two historical	No

				records between five and ten miles from the project site.	
Streptocephalus woottoni Riverside fairy shrimp	FE CONCCP/ HCP	CONCCP /HCP	Vernal pools on the Santa Rosa Plateau on Murrieta stony clay loams, Las Posas series, Wyman clay loam, and Willows soils.	**None:** The project site does not contain suitable habitat(s) that would support occurrence of this species. There are three recent and six historical records between five and ten miles from the project site.	No
Fish					
Eucyclogobius newberryi tidewater goby	FE	SSC	Occurs in shallow lagoons and lower stream reaches with fairly still but not stagnant water and high oxygen levels.	**None:** The project site does not contain suitable habitat(s) that would support occurrence of this species. There is one historical record within five miles of the project site and one historical record between five and ten miles from the project site.	No
Gila orcuttii arroyo chub	—	SSC	Native to the streams and rivers of the Los Angeles plain in Southern California. Arroyo chub are adapted to survive in streams that fluctuate between large winter storm flows, and low summer flows, and the low dissolved oxygen and wide temperature fluctuations. Feeds on plants such as algae and water fern, as well as insects and mollusks.	**None:** The project site does not contain suitable habitat(s) that would support occurrence of this species. There are two historical records within five miles of the project site and four historical records between five and ten miles from the project site.	No
Oncorhynchus mykiss irideus pop. 10 steelhead-southern California DPS	FE	SC	Occurs in Pacific coast streams, including the Santa Ana River.	**None:** The project site does not contain suitable habitat(s) that would support occurrence of this species. There is one historical record within five miles of the project site and one recent and one historical record between five and ten miles from the project site.	No

Scientific Name Common Name	Status		Habitat Description[3]	Potential to Occur and Rationale[4]	Included in Impact Analysis
	USFWS[1]	CDFW[2]			
Rhinichthys gabrielino Santa Ana speckled dace	—	SSC	Occurs in small springs, streams, large rivers, and deep lakes, including headwaters of the Santa Ana and San Gabriel Rivers.	**None:** The project site does not contain suitable habitat(s) that would support occurrence of this species. There are two historical records between five and ten miles from the project site.	No
Amphibians					
Anaxyrus californicus arroyo toad	FE CONCCP/ HCP	SSC CONCCP /HCP	Occurs in washes, arroyos, sandy riverbanks, riparian areas with willows, sycamores, oaks, cottonwoods. Requires exposed sandy streamsides with stable terraces for burrowing with scattered vegetation for shelter, and areas of quiet water or pools free of predatory fishes with sandy or gravel bottoms without silt for breeding.	**None:** The project site does not contain suitable habitat(s) that would support occurrence of this species. There is one historical record between five and ten miles from the project site.	No
Spea hammondii western spadefoot	CONCCP/ HCP	SSC CONCCP /HCP	Occurs in open areas with sandy or gravelly soils in mixed woodlands, grasslands, coastal sage and Riversidean alluvial fan sage scrub, chaparral, sandy washes, lowlands, river floodplains, alluvial fans, playas, alkali flats, foothills, and mountains. Breeds in ephemeral rain pools that do not contain bullfrogs, fish, or crayfish.	**None:** The project site does not contain suitable habitat(s) that would support occurrence of this species. There are eight recent and seven historical records within five miles of the project site and seventeen recent and fifteen historical records between five and ten miles from the project site.	No
Reptiles					
Actinemys pallida southwestern pond turtle	—	SSC	Occurs in ponds, lakes, rivers, streams, creeks, marshes, and irrigation ditches with abundant vegetation, and either rocky or muddy bottoms, in woodland, forest, and grassland. In streams, prefers pools to shallower areas. Logs, rocks, cattail mats, and exposed banks are required for basking. May enter brackish water and even seawater.	**None:** The project site does not contain suitable habitat(s) that would support occurrence of this species. There are one recent and six historical records within five miles of the project site and one recent and eight historical records between five and ten miles from the project site.	No

Scientific Name Common Name	Status		Habitat Description[3]	Potential to Occur and Rationale[4]	Included in Impact Analysis
	USFWS[1]	CDFW[2]			
Anniella stebbinsi southern California legless lizard	—	SSC	Occurs in moist, loose soil in coastal sand dunes and a variety of interior habitats, including sandy washes and alluvial fans. Tolerant of disturbances.	**None:** The project site does not contain suitable habitat(s) that would support occurrence of this species. There is one historical record within five miles of the project site and one recent and one historical record between five and ten miles from the project site.	No
Arizona elegans occidentalis California glossy snake	—	SSC	Occurs in areas of rocky washes and loose, sandy soils and for burrowing in desert scrub grassland, coastal sage and Riversidean alluvial fan sage scrub, and chaparral habitats. Prefer open sandy areas with scattered brush, but also found in rocky areas.	**None:** The project site does not contain suitable habitat(s) that would support occurrence of this species. There are two historical records within five miles of the project site and one historical record between five and ten miles from the project site.	No
Aspidoscelis hyperythra orange-throated whiptail	CONCCP/ HCP	WL CONCCP /HCP	Occurs primarily on coarse soils in open coastal sage and Riversidean alluvial fan sage scrub habitat.	**None:** The project site does not contain suitable habitat(s) that would support occurrence of this species. There is one recent and six historical records within five miles of the project site and five recent and ten historical records between five and ten miles from the project site.	No
Aspidoscelis tigris stejnegeri San Diegan (coastal) whiptail	CONCCP/HCP	SSC CONCCP /HCP	Occurs in dry, open areas with sparse foliage in coastal sage and Riversidean alluvial fan sage scrub, chaparral, woodland, and riparian habitats.	**None:** The project site does not contain suitable habitat(s) that would support occurrence of this species. There is one historical record within five miles of the project site and one recent and one historical record between five and ten miles from the project site.	No
Crotalus ruber red-diamond rattlesnake	CONCCP/ HCP	SSC CONCCP /HCP	Occurs in arid, rocky areas in creosote scrub, coastal sage and Riversidean alluvial fan sage scrub, chaparral, oak and pine woodlands, grasslands, on cultivated areas.	**None:** The project site does not contain suitable habitat(s) that would support occurrence of this species. There are two historical records within five miles of the project site and four historical	No

				records between five and ten miles from the project site.	
Phrynosoma blainvillii coast horned lizard	CONCCP/ HCP	SSC CONCCP /HCP	Occurs in open areas with sandy soil and low vegetation in grasslands, coniferous forests, woodlands, and chaparral.	**None:** The project site does not contain suitable habitat(s) that would support occurrence of this species. There are six historical records within five miles of the project site and one recent and twelve historical records between five and ten miles from the project site.	No
Salvadora hexalepis virgultea coast patch-nosed snake	—	SSC	Occurs in brushy or shrubby vegetation. Dependent on small mammal burrows.	**None:** The project site does not contain suitable habitat(s) that would support occurrence of this species. There is one historical record between five and ten miles from the project site.	No
Thamnophis hammondii two-striped gartersnake	—	SSC	Occurs in or near permanent fresh water in marshes and swamps, riparian scrub, riparian woodlands, and wetlands.	**None:** The project site does not contain suitable habitat(s) that would support occurrence of this species. There is one recent and one historical record within five miles of the project site and two historical records between five and ten miles from the project site.	No
Birds					
Agelaius tricolor tricolored blackbird	MBTA	FT SSC FGC	Occurs and nests in large freshwater marshes with dense stands of hydrophytic vegetation (cattails, bulrushes, etc.). Short-distance migrant.	**None:** The project site does not contain suitable habitat(s) that would support occurrence of this species. There are four historical records within five miles of the project site and one recent and five historical records between five and ten miles from the project site.	No
Aimophila ruficeps canescens	MBTA	WL FGC	Occurs and nests on steep, often rocky hillsides with grass and forb patches in coastal sage and	**None:** The project site does not contain suitable habitat(s) that would support occurrence of this	No

southern California rufous-crowned sparrow	CONCCP/ HCP	CONCCP /HCP	Riversidean alluvial fan sage scrub and sparse mixed chaparral habitats. Year-round resident in southern California.	species. There are fourteen historical records within five miles of the project site and four recent and six historical records between five and ten miles from the project site.	
Ammodramus savannarum grasshopper sparrow	MBTA	SSC	Occurs and nests in dense grasslands on rolling hills, lowland plains, in valleys and on hillsides on lower mountain slopes.	**None:** The project site does not contain suitable habitat(s) that would support occurrence of this species. There is one historical record within five miles of the project site and one historical record between five and ten miles from the project site.	No
Anarhynchus nivosus nivosus western snowy plover	FT MBTA	SSC	Occurs in sandy beaches, salt pond levees and shores of large alkali lakes. Needs sandy, gravelly or friable soils for nesting.	**None:** The project site does not contain suitable habitat(s) that would support occurrence of this species. There is one recent record between five and ten miles from the project site.	No
Aquila chrysaetos golden eagle	BGEPA MBTA CONCCP/ HCP	FP WL CONCCP /HCP	Forages in areas of rolling foothills, mountainous areas, sage-juniper flats, and desert. Cliff-walled canyons provide nesting habitat in most parts of range; also, large trees in open areas.	**None:** The project site does not contain suitable habitat(s) that would support occurrence of this species. There is one record between five and ten miles from the project site.	No
Asio otus long-eared owl	MBTA	FP FGC	Occurs and nests in conifer, oak, riparian, pinyon-juniper, and desert woodlands that are either open or are adjacent to grasslands, meadows, or shrublands.	**None:** The project site does not contain suitable habitat(s) that would support occurrence of this species. There are four historical records between five and ten miles from the project site.	No
Athene cunicularia burrowing owl	MBTA	SSC FGC	Occurs and nests in open, dry annual or perennial grasslands, deserts, and scrublands characterized by low-growing vegetation. A subterranean nester, dependent upon burrowing mammals, most notably the California ground squirrel. Short-distance migrant.	**None:** The project site does not contain suitable habitat(s) that would support occurrence of this species. There is one historical record within five miles of the project site and four recent and three historical records between five and ten miles from the project site.	No

Scientific Name Common Name	Status		Habitat Description[3]	Potential to Occur and Rationale[4]	Included in Impact Analysis
	USFWS[1]	CDFW[2]			
Buteo regalis ferruginous hawk	MBTA	WL	Occurs in grassland and arid shrublands with an abundance of prey species, such as pocket gophers, black-tailed jackrabbits, and desert cottontails. Will winter near cultivated fields that have an abundance of pocket gophers.	**None:** The project site does not contain suitable habitat(s) that would support occurrence of this species. There are two historical records between five and ten miles from the project site.	No
Campylorhynchus brunneicapillus sandiegensis coastal cactus wren	MBTA CONCCP/ HCP	SSC FGC CONCCP /HCP	Occurs and nests in coastal sage scrub. Requires tall opuntia cactus or *Yucca* trees for nesting and roosting.	**None:** The project site does not contain suitable habitat(s) that would support occurrence of this species. There are ten historical records within five miles of the project site and five recent and 32 historical records between five and ten miles from the project site.	No
Circus hudsonius northern harrier	MBTA CONCCP/H CP	SSC BCC CONCCP /HCP	Frequents meadows, grasslands, open rangelands, freshwater emergent wetlands; uncommon in wooded habitats.	**None:** The project site does not contain suitable habitat(s) that would support occurrence of this species. There is one historical record between five and ten miles from the project site.	No
Coturnicops noveboracensis yellow rail	MBTA	SSC FGC	Occurs in shallow marshes and wet meadows. In winter, this species inhabits drier fresh-water and brackish marshes, as well as dense, deep grass, and rice fields.	**None:** The project site does not contain suitable habitat(s) that would support occurrence of this species. There is one historical record between five and ten miles from the project site.	No
Elanus leucurus white-tailed kite	MBTA	FP FGC	Occurs and nests in grasslands and open coastal scrub in coastal and valley lowlands; rarely found away from agricultural areas. Inhabits herbaceous, open stages of most habitats mostly in cismontane California. Year-round resident in southern California.	**None:** The project site does not contain suitable habitat(s) that would support occurrence of this species. There are six recent records within five miles of the project site and thirteen recent and one historical records between five and ten miles from the project site.	No
Empidonax traillii extimus southwestern willow flycatcher	FE MBTA	SE CONCCP /HCP	Occurs and nests in dense riparian woodlands. Long-distance migrant.	**None:** The project site does not contain suitable habitat(s) that would support occurrence of this species. There is one recent and two historical	No

Eremophila alpestris actia California horned lark	MBTA	WL FGC	Occurs and nests in open areas with sparse vegetation. Year-round resident in southern California.	**None:** The project site does not contain suitable habitat(s) that would support occurrence of this species. There are three historical records within five miles of the project site and two historical records between five and ten miles from the project site.	No
Icteria virens yellow-breasted chat	MBTA	SSC FGC	Occurs and nests in riparian thickets of willow and other bushy tangles near watercourses. Long-distance migrant.	**None:** The project site does not contain suitable habitat(s) that would support occurrence of this species. There is one recent and one historical record within five miles of the project site and three historical records between five and ten miles from the project site.	No
Laterallus jamaicensis coturniculus California black rail	MBTA	ST FP FGC	Occurs and nests in freshwater marshes, wet meadows, and shallow margins of saltwater marshes bordering larger bays. Needs water depths of about 1 inch that do not fluctuate during the year and dense vegetation for nesting habitat.	**None:** The project site does not contain suitable habitat(s) that would support occurrence of this species. There is one historical record between five and ten miles from the project site.	No
Pandion haliaetus osprey	MBTA	WL	Occurs in ocean shore, bays, freshwater lakes, and larger streams.	**None:** The project site does not contain suitable habitat(s) that would support occurrence of this species. There is one recent record between five and ten miles from the project site.	No
Passerculus sandwichensis beldingi Belding's savannah sparrow	MBTA	SE	Occurs in coastal wetlands and marshes.	**None:** The project site does not contain suitable habitat(s) that would support occurrence of this species. There is one recent record within five miles of the project site and one historical record between five and ten miles from the project site.	No

Mammals					
Antrozous pallidus pallid bat	—	SSC	Occurs in deserts, grasslands, shrublands, woodlands, and forests. Most common in open, dry habitats with rocky areas for roosting. Roosts must protect bats from high temperatures. Species is very sensitive to disturbance of roosting sites.	**None:** The project site does not contain suitable habitat(s) that would support occurrence of this species. There are two historical records between five and ten miles from the project site.	No
Chaetodipus californicus femoralis Dulzura pocket mouse	—	—	Occurs in coastal scrub, chaparral and grassland in San Diego County.	**None:** The project site does not contain suitable habitat(s) that would support occurrence of this species. There is one historical record between five and ten miles from the project site.	No
Chaetodipus fallax fallax northwestern San Diego pocket mouse	—	SSC	Occurs in sandy, herbaceous areas, usually in association with rocks or coarse gravel, in coastal sage and Riversidean alluvial fan sage scrub, chaparral, and grasslands.	**None:** The project site does not contain suitable habitat(s) that would support occurrence of this species. There is one recent record between five and ten miles from the project site.	No
Eumops perotis californicus western mastiff bat	—	SSC	Occurs in many open, semi-arid to arid habitats, including conifer and deciduous woodlands, coastal scrub, grasslands, chaparral. Roosts in crevices in cliff faces, high buildings, trees, and tunnels.	**None:** The project site does not contain suitable habitat(s) that would support occurrence of this species. There are four historical records within five miles of the project site and five records between five and ten miles from the project site.	No
Lasiurus frantzii western red bat	—	SSC	Occurs in cismontane woodland, lower montane coniferous forest, riparian forest, riparian woodland. Prefers habitat edges and mosaics with trees that are protected from above and open below with open areas for foraging.	**None:** The project site does not contain suitable habitat(s) that would support occurrence of this species. There is one historical record between five and ten miles from the project site.	No
Myotis yumanensis Yuma myotis	—	—	Occurs in open forests and woodlands with sources of water over which to feed. Maternity colonies in caves, mines, buildings or crevices.	**None:** The project site does not contain suitable habitat(s) that would support occurrence of this	No

				species. There is one historical record within five miles of the project site.	
Neotoma lepida intermedia San Diego desert woodrat	CONCCP/HCP	SSC CONCCP/HCP	Occurs in rock outcrops, rocky cliffs, and slopes in coastal sage and Riversidean alluvial fan sage scrub with moderate to dense canopies.	**None:** The project site does not contain suitable habitat(s) that would support occurrence of this species. There is one recent and two historical records between five and ten miles from the project site.	No
Nyctinomops macrotis big free-tailed bat	—	SSC	Occurs in rocky habitats in arid landscapes and has been found in a variety of plant associations, including desert shrub, woodlands, and evergreen forests. Roosts by day in crevices on cliff faces. These bats forage mostly for large moths, but may eat other insects as well.	**None:** The project site does not contain suitable habitat(s) that would support occurrence of this species. There is one historical record between five and ten miles from the project site.	No
Onychomys torridus ramona southern grasshopper mouse	—	SSC	Occurs in desert areas, especially scrub habitats with friable soils for digging. Prefers low to moderate shrub cover.	**None:** The project site does not contain suitable habitat(s) that would support occurrence of this species. There is one recent record between five and ten miles from the project site.	No
Perognathus longimembris pacificus Pacific pocket mouse	FE CONCCP/HCP	SSC CONCCP/HCP	Occurs in coastal strand, coastal dunes, and coastal sage scrub growing on marine terraces. Prefers soils of fine alluvial sands near the ocean.	**None:** The project site does not contain suitable habitat(s) that would support occurrence of this species. There are three historical records between five and ten miles from the project site.	No
Sorex ornatus salicornicus southern California saltmarsh shrew	—	SSC	Occurs in coastal marshes in Los Angeles, Orange and Ventura counties. Requires dense vegetation and woody debris for cover.	**None:** The project site does not contain suitable habitat(s) that would support occurrence of this species. There is one historical record between five and ten miles from the project site.	No

Re: Tribal Consultation Under CEQA, 15 Argonaut Project, Orange County

To Whom It May Concern:

Pursuant to your request, attached is a consultation list of tribes that are traditionally and culturally affiliated with the geographic area of the above-listed project. Additionally, a search of the Native American Heritage Commission (NAHC) Sacred Lands File (SLF) was completed based on the information submitted for the above referenced project. The results were positive. Please contact the Juaneno Band of Mission Indians Acjachemen Nation – Belardes on the attached list for more information. Be aware that tribes do not always record their sacred sites in the SLF, nor are they required to do so. As such, an SLF search is not a substitute for consultation with all tribes that are traditionally and culturally affiliated with a project's geographic area. Please contact all of the listed tribes as they may have information about sacred sites within the project area that is not listed with the NAHC.

Additionally, the NAHC recommends that agencies include with their notification letters, information regarding any cultural resources assessment that has been completed on the Area of Potential Effect (APE), such as:

1. The results of any record search that may have been conducted at an Information Center of the California Historical Resources Information System (CHRIS), including, but not limited to:

- A listing of any and all known cultural resources that have already been recorded on or adjacent to the APE, such as known archaeological sites;
- Copies of any and all cultural resource records and study reports that may have been provided by the Information Center as part of the records search response;
- Whether the records search indicates a low, moderate, or high probability that unrecorded cultural resources are located in the APE; and
- If a survey is recommended by the Information Center to determine whether previously unrecorded cultural resources are present.

2. The results of any archaeological inventory survey that was conducted, including:

- Any report that may contain site forms, site significance, and suggested mitigation measures.

All information regarding site locations, Native American human remains, and associated funerary objects should be in a separate confidential addendum, and not be made available for public disclosure in accordance with Government Code section 6254.10.

3. The result of the Sacred Lands File check conducted through the Native American Heritage Commission.

4. Any ethnographic studies conducted for any area including all or part of the APE; and

5. Any geotechnical reports regarding all or part of the APE.

Lead agencies should be aware that records maintained by the NAHC and CHRIS are not exhaustive and a negative response to these searches does not preclude the existence of a tribal cultural resource. A tribe may be the only source of information regarding the existence of a tribal cultural resource, which is why consultation is vital.

This information will aid tribes in determining whether to request formal consultation. If consultation is requested, having the information beforehand will help to facilitate the process.

If you receive notification of a change of address or phone number from a tribe, please inform the NAHC. With your assistance, we can assure that our consultation list remains current.

If you have any questions or require additional information, please contact me at Andrew.Green@nahc.ca.gov.

Sincerely,

Andrew Green

Subject: 15 Argonaut Project

Dear Mr. Esparza:

FirstCarbon Solutions (FCS) is preparing an Initial Study/Mitigated Negative Declaration for the proposed 15 Argonaut Project in the city of Aliso Viejo, California. As part of the environmental review process, we are reaching out to the tribes for any additional information that can be incorporated into our analysis.

FCS understands that Brandywine Homes (applicant) is proposing the demolition of an approximately 47,096-square-foot existing office building on an approximately 4.4-acre site to facilitate the development of 58 three-story townhome units. The proposed townhomes would range from approximately 1,320 to 1,827 square feet in size and would consist of 3- and 4-bedroom units. The project site is located in the city of Aliso Viejo, Orange County, California. The project site is associated with Assessor's Parcel Numbers 623-093-10 and 623-093-11.

As part of the cultural resources assessment, FCS conducted a Sacred Lands File (SLF) search and a California Historical Resources Information System (CHRIS) search. The results of the SLF records search were positive. The CHRIS search found that there are seven pre-contact resources within the 0.5-mile search radius of the project site. Of these, one pre-contact resource was recorded within the project boundaries. Additionally, there are 24 studies within a 0.5-mile search radius of the project site, four of which address the project site. The Native American Heritage Commission (NAHC) suggested you might be able to provide further information. If you have any additional information regarding potential historic or cultural resources in proximity or relation to the proposed project area, we would greatly appreciate your input.

Please note that this letter is a request for information pertaining to a cultural resources assessment and is not notification of a project under Senate Bill (SB) 18, Assembly Bill (AB) 52, or Section 106 of the National Historic Preservation Act.

Designated lead agencies under the California Environmental Quality Act (CEQA) and/or National Environmental Policy Act (NEPA) are handling project notification and consultation requirements. Please feel free to contact me via email at sgriffin@fcsintl. com. Thank you for your valuable assistance.

Subject: 15 Argonaut Project

Dear Mr. Dunlap:

FirstCarbon Solutions (FCS) is preparing an Initial Study/Mitigated Negative Declaration for the proposed 15 Argonaut Project in the city of Aliso Viejo, California. As part of the environmental review process, we are reaching out to the tribes for any additional information that can be incorporated into our analysis.

FCS understands that Brandywine Homes (applicant) is proposing the demolition of an approximately 47,096-square-foot existing office building on an approximately 4.4-acre site to facilitate the development of 58 three-story townhome units. The proposed townhomes would range from approximately 1,320 to 1,827 square feet in size and would consist of 3- and 4-bedroom units. The project site is located in the city of Aliso Viejo, Orange County, California. The project site is associated with Assessor's Parcel Numbers 623-093-10 and 623-093-11.

As part of the cultural resources assessment, FCS conducted a Sacred Lands File (SLF) search and a California Historical Resources Information System (CHRIS) search. The results of the SLF records search were positive. The CHRIS search found that there are seven pre-contact resources within the 0.5-mile search radius of the project site. Of these, one pre-contact resource was recorded within the project boundaries. Additionally, there are 24 studies within a 0.5-mile search radius of the project site, four of which address the project site. The Native American Heritage Commission (NAHC) suggested you might be able to provide further information. If you have any additional information regarding potential historic or cultural resources in proximity or relation to the proposed project area, we would greatly appreciate your input.

Please note that this letter is a request for information pertaining to a cultural resources assessment and is not notification of a project under Senate Bill (SB) 18, Assembly Bill (AB) 52, or Section 106 of the National Historic Preservation Act.

Designated lead agencies under the California Environmental Quality Act (CEQA) and/or National Environmental Policy Act (NEPA) are handling project notification and consultation requirements. Please feel free to contact me via email at sgriffin@fcsintl. com. Thank you for your valuable assistance.

Sincerely,

Subject: 15 Argonaut Project

Dear Ms. Perry:

FirstCarbon Solutions (FCS) is preparing an Initial Study/Mitigated Negative Declaration for the proposed 15 Argonaut Project in the city of Aliso Viejo, California. As part of the environmental review process, we are reaching out to the tribes for any additional information that can be incorporated into our analysis.

FCS understands that Brandywine Homes (applicant) is proposing the demolition of an approximately 47,096-square-foot existing office building on an approximately 4.4-acre site to facilitate the development of 58 three-story townhome units. The proposed townhomes would range from approximately 1,320 to 1,827 square feet in size and would consist of 3- and 4-bedroom units. The project site is located in the city of Aliso Viejo, Orange County, California. The project site is associated with Assessor's Parcel Numbers 623-093-10 and 623-093-11.

As part of the cultural resources assessment, FCS conducted a Sacred Lands File (SLF) search and a California Historical Resources Information System (CHRIS) search. The results of the SLF records search were positive. The CHRIS search found that there are seven pre-contact resources within the 0.5-mile search radius of the project site. Of these, one pre-contact resource was recorded within the project boundaries. Additionally, there are 24 studies within a 0.5-mile search radius of the project site, four of which address the project site. The Native American Heritage Commission (NAHC) suggested you might be able to provide further information. If you have any additional information regarding potential historic or cultural resources in proximity or relation to the proposed project area, we would greatly appreciate your input.

Please note that this letter is a request for information pertaining to a cultural resources assessment and is not notification of a project under Senate Bill (SB) 18, Assembly Bill (AB) 52, or Section 106 of the National Historic Preservation Act.

Designated lead agencies under the California Environmental Quality Act (CEQA) and/or National Environmental Policy Act (NEPA) are handling project notification and consultation requirements. Please feel free to contact me via email at sgriffin@fcsintl. com. Thank you for your valuable assistance.

Sincerely,

Subject: 15 Argonaut Project

Dear Mr. Nejo:

FirstCarbon Solutions (FCS) is preparing an Initial Study/Mitigated Negative Declaration for the proposed 15 Argonaut Project in the city of Aliso Viejo, California. As part of the environmental review process, we are reaching out to the tribes for any additional information that can be incorporated into our analysis.

FCS understands that Brandywine Homes (applicant) is proposing the demolition of an approximately 47,096-square-foot existing office building on an approximately 4.4-acre site to facilitate the development of 58 three-story townhome units. The proposed townhomes would range from approximately 1,320 to 1,827 square feet in size and would consist of 3- and 4-bedroom units. The project site is located in the city of Aliso Viejo, Orange County, California. The project site is associated with Assessor's Parcel Numbers 623-093-10 and 623-093-11.

As part of the cultural resources assessment, FCS conducted a Sacred Lands File (SLF) search and a California Historical Resources Information System (CHRIS) search. The results of the SLF records search were positive. The CHRIS search found that there are seven pre-contact resources within the 0.5-mile search radius of the project site. Of these, one pre-contact resource was recorded within the project boundaries. Additionally, there are 24 studies within a 0.5-mile search radius of the project site, four of which address the project site. The Native American Heritage Commission (NAHC) suggested you might be able to provide further information. If you have any additional information regarding potential historic or cultural resources in proximity or relation to the proposed project area, we would greatly appreciate your input.

Please note that this letter is a request for information pertaining to a cultural resources assessment and is not notification of a project under Senate Bill (SB) 18, Assembly Bill (AB) 52, or Section 106 of the National Historic Preservation Act.

Designated lead agencies under the California Environmental Quality Act (CEQA) and/or National Environmental Policy Act (NEPA) are handling project notification and consultation requirements. Please feel free to contact me via email at sgriffin@fcsintl. com. Thank you for your valuable assistance.

Sincerely,

Subject: 15 Argonaut Project

Dear Mr. Ontiveros:

FirstCarbon Solutions (FCS) is preparing an Initial Study/Mitigated Negative Declaration for the proposed 15 Argonaut Project in the city of Aliso Viejo, California. As part of the environmental review process, we are reaching out to the tribes for any additional information that can be incorporated into our analysis.

FCS understands that Brandywine Homes (applicant) is proposing the demolition of an approximately 47,096-square-foot existing office building on an approximately 4.4-acre site to facilitate the development of 58 three-story townhome units. The proposed townhomes would range from approximately 1,320 to 1,827 square feet in size and would consist of 3- and 4-bedroom units. The project site is located in the city of Aliso Viejo, Orange County, California. The project site is associated with Assessor's Parcel Numbers 623-093-10 and 623-093-11.

As part of the cultural resources assessment, FCS conducted a Sacred Lands File (SLF) search and a California Historical Resources Information System (CHRIS) search. The results of the SLF records search were positive. The CHRIS search found that there are seven pre-contact resources within the 0.5-mile search radius of the project site. Of these, one pre-contact resource was recorded within the project boundaries. Additionally, there are 24 studies within a 0.5-mile search radius of the project site, four of which address the project site. The Native American Heritage Commission (NAHC) suggested you might be able to provide further information. If you have any additional information regarding potential historic or cultural resources in proximity or relation to the proposed project area, we would greatly appreciate your input.

Please note that this letter is a request for information pertaining to a cultural resources assessment and is not notification of a project under Senate Bill (SB) 18, Assembly Bill (AB) 52, or Section 106 of the National Historic Preservation Act.

Designated lead agencies under the California Environmental Quality Act (CEQA) and/or National Environmental Policy Act (NEPA) are handling project notification and consultation requirements. Please feel free to contact me via email at sgriffin@fcsintl. com. Thank you for your valuable assistance.

Sincerely,

Project No. 1-0631

Attention: Mr. Emmanuel Robinson

Subject: **GEOTECHNICAL INVESTIGATION**
15 Argonaut,
City of Aliso Viejo, County of Orange, California

References: Appendix A

Dear Mr. Robinson:

Alta California Geotechnical, Inc. (Alta) is pleased to present this geotechnical investigation for the proposed residential development of 15 Argonaut, located in the City of Aliso Viejo, County of Orange, California. This report is based on a recent subsurface investigation conducted by Alta, laboratory testing, and Alta's staff's experience with similar projects in this vicinity.

Alta's review of the data indicates that the proposed development is feasible, from a geotechnical perspective, provided that the recommendations presented in this report are incorporated into the grading and improvement plans and implemented during site development.

Included in this report are:

- Discussion of the site geotechnical conditions.
- Recommendations for remedial and site grading, including unsuitable soil removals.
- Geotechnical site construction recommendations.
- Foundation design parameters.

If you have any questions or should you require any additional information, please contact the undersigned at (951) 509-7090. Alta appreciates the opportunity to provide geotechnical consulting services for your project.

Sincerely,
Alta California Geotechnical, Inc.

1.0 INTRODUCTION

This report presents Alta's findings, conclusions, and geotechnical recommendations for the proposed development of 15 Argonaut, located in the City of Aliso Viejo, County of Orange, California.

1.1 Purpose

The purpose of this report is to examine the existing onsite geotechnical conditions and assess the impacts that the geotechnical conditions may have on the proposed development. This report is suitable for use in developing grading plans and engineer's cost estimates.

1.2 Scope of Work

Alta's *Scope of Work* for this geotechnical investigation included the following:

- Reviewing the referenced reports and air photos (Appendix A).
- Site geologic mapping.
- Excavating, logging, and sampling four (4) hollow stem auger borings to a maximum depth of 51.5-feet below the existing surface (Appendix B).
- Conducting laboratory testing on samples obtained during our investigation (Appendix C).
- Conducting two (2) infiltration tests in two (2) additional borings at a maximum depth of 5.0-feet below the ground surface.
- Evaluating engineering geologic and geotechnical engineering data, including laboratory data, to develop recommendations for site remedial grading, import soil, foundations, and utilities.
- Preparing this report and accompanying exhibits.

1.3 Report Limitations

The conclusions and recommendations presented in this report are based on the field and laboratory information generated during this investigation, and a review of the referenced reports. The information contained in this report is intended to be used for development of grading plans and preliminary construction cost estimates.

2.0 PROJECT DESCRIPTION

2.1 Site Location and Background

The irregular-shaped, approximately 4.6-acre site is bounded to the north by Glenwood Drive, to the west by Aliso Creek Road, and to the east and south by existing developments. The site is currently occupied by a commercial building and associated parking.

Historic aerial images are available as far back as 1938 and indicate the site was originally vacant. By 1992, the commercial building was constructed along with associated parking. The site has remained relatively unchanged since (Historic Aerials, 2025).

2.2 Proposed Development

The site will be redeveloped to support a residential development consisting of 58 single-family residential structures and associated improvements. Alta anticipates that conventional cut-and-fill grading techniques will be used to develop the site for the support of wood-frame construction with shallow foundations and reinforced concrete slabs-on-grade, and associated improvements.

3.0 SITE INVESTIGATION AND LABORATORY TESTING

3.1 Subsurface Investigation

Alta conducted a subsurface investigation on August 27th, 2025, consisting of the drilling, logging, and select sampling of four (4) hollow stem auger borings up to a maximum depth of 51.5-feet below the ground surface. The locations of the exploratory borings and excavations are shown on Plate 1 and the logs are presented in Appendix B.

Laboratory testing was performed on bulk samples obtained during the field investigation. A brief description of the laboratory test procedures and the test results are presented in Appendix C.

3.2 Infiltration Testing

It is Alta's understanding that the project may utilize infiltration systems for storm water disposal. Details of the system are not known at this time.

Infiltration testing was conducted in two (2) boring wells at a depth of 5.0-feet below the ground surface at specified locations. The testing was performed in general conformance with the County of Orange WQMP specifications. The testing wells were presoaked for more than 24 hours prior to testing. During testing, the water level readings were recorded every 10 to 30 minutes until the readings stabilized.

The data was then adjusted to provide an infiltration rate utilizing the Porchet Method. The resulting field infiltration rates, with no factor of safety, are summarized below in Table 3-1.

Table 3-1
Summary of Infiltration Testing
(No Factor of Safety)

Test Designation	P-1	P-2
Approximate Depth of Test	5.0 ft	5.0 ft
Final Time Interval	10 minutes	10 minutes
Radius of Test Hole	4 inches	4 inches
Tested Infiltration Rate	0.03 in/hr	0.00 in/hr

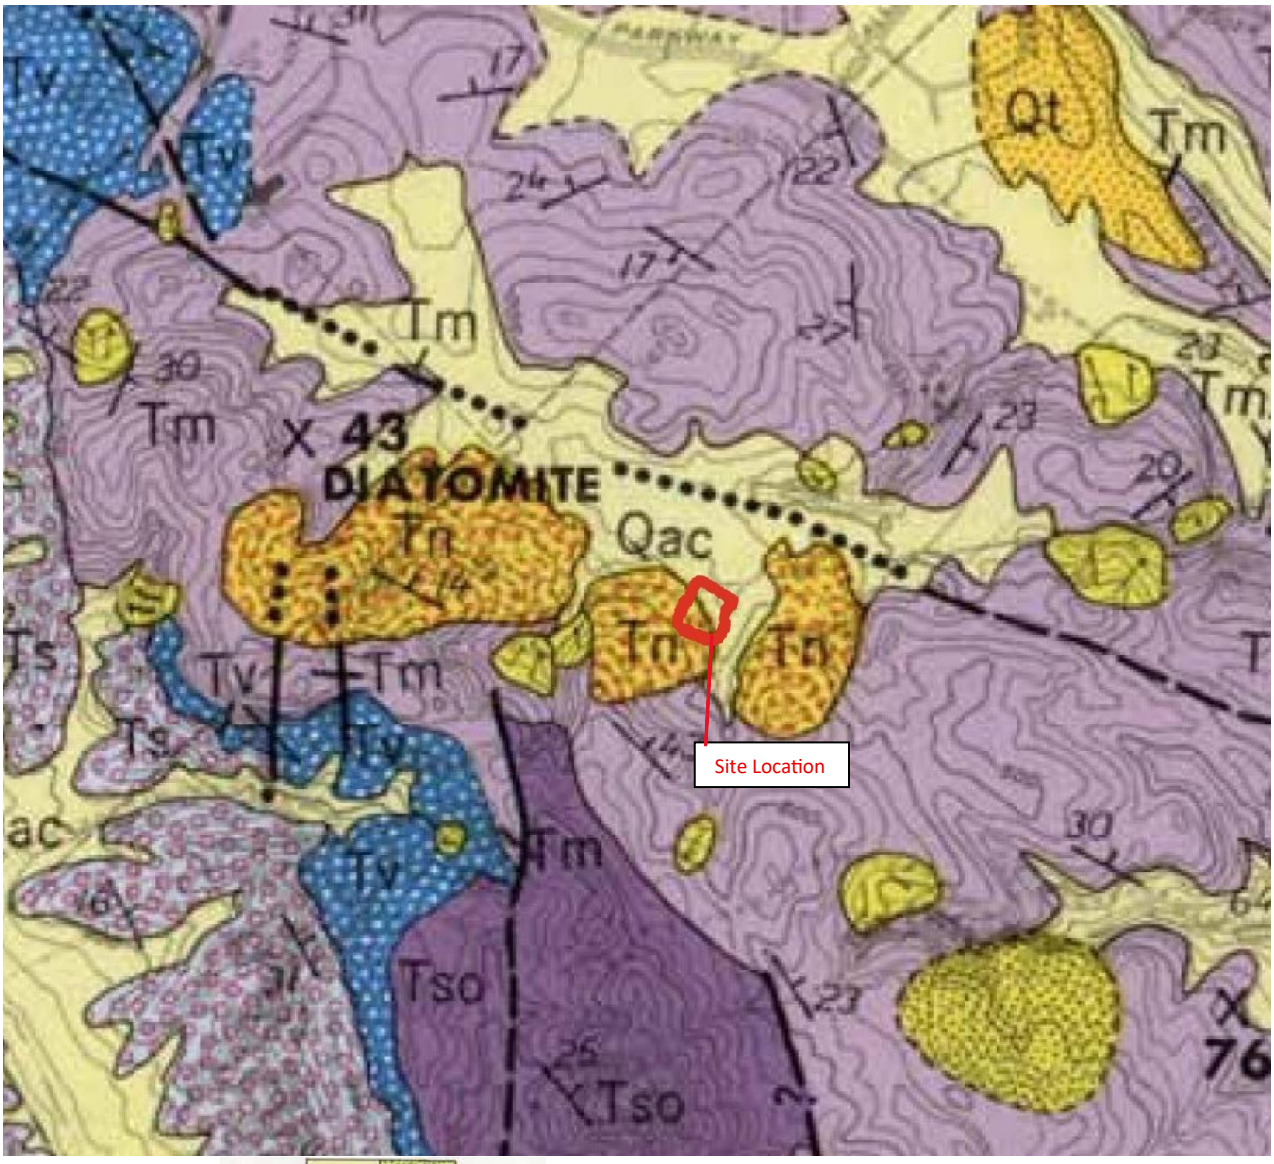
4.0 GEOLOGIC CONDITIONS

4.1 Geologic and Geomorphic Setting

Regionally, the subject site is located in the Peninsular Ranges geomorphic province, which characterizes the southwest portion of southern California where right-lateral major active fault zones predominately trend northwest-southeast. The Peninsular Ranges province is composed of plutonic and metamorphic rock, with lesser amounts of Tertiary volcanic and sedimentary rock, Quaternary drainage in-fills and sedimentary veneers.

4.2 Stratigraphy

Based on our literature review and subsurface investigation, the subject site is underlain by the Monterey Formation (CDC, 2001, Figure 1). The geologic unit is briefly described below.



4.2.1 Monterey Formation (map symbol Tmy)

The Miocene-age Monterey Formation observed onsite primarily consists of silty sandstone, clayey sandstone, sandy claystone, sandstone, and claystone. The fine grained silty sandstone onsite is pale brown, white, dark yellowish brown, and brown in a slightly moist to moist and medium dense to very dense condition. The fine grained clayey sandstone onsite is pale brown, white, dark brown, brown, gray, light gray, dark grayish brown, and bluish gray in a slightly moist to moist and medium dense to dense condition. The sandy claystone onsite is dark brown, brown, and gray in a moist and stiff to very stiff condition. The very fine to fine grained sandstone onsite is pale brown, yellowish brown, grayish pale brow, and orange in a slightly moist and medium dense to very dense condition. The claystone onsite is dark brown to brown in a moist and very stiff condition. This unit was logged to a depth of 51.5 feet below the ground surface and is overlain by a thin layer of asphalt.

4.3 Geologic Structure

4.3.1 Tectonic Framework

Jennings (1985) defined eight structural provinces within California that have been classified by predominant regional fault trends and similar fold structure. These provinces are in turn divided into blocks and sub-blocks that are defined by “major Quaternary faults.” These blocks and sub-blocks exhibit similar structural features. Within this framework, the subject site is located within Structural Province I, which is controlled by

GEOLOGIC MAP OF ORANGE COUNTY CALIFORNIA,
SHOWING MINES AND MINERAL DEPOSITS

Compiled by P. K. Morton and R. V. Miller
1981

ALTA CALIFORNIA GEOTECHNICAL INC.	Figure 1	Project Name:	15 Argonaut
		Project No.:	1-0631
		Date:	9/26/2025

the dominant northwest trend of the San Andreas Fault and is divided into two blocks, the Coast Range Block and the Peninsular Block. The Peninsular Range Block, on which this site is located, is characterized by a series of parallel, northwest trending faults that exhibit right-lateral strike-slip movement. These faults are terminated by the Transverse Range block to the north and extend southward into the Baja Peninsula. These northwest trending faults divide the Peninsular Range block into eight sub-blocks. The site is located in the northwestern portion of the Santa Ana sub-block, one of the eight sub-blocks, which is bound on the east by the Elsinore fault zone and on the west by the Newport-Inglewood fault zone.

4.3.2 Regionally Mapped Active Faults

Several large, active fault systems including the Elsinore and Newport-Inglewood faults occur in the region surrounding the site. These fault systems have been studied extensively and in a large part control the geologic structure of southern California.

4.3.3 Geologic Structure

Based upon our literature review, the younger fan deposits are of Quaternary age and are not folded or faulted.

4.4 Groundwater

Groundwater was not encountered during our subsurface investigation. Based on state-provided information, the historic-high groundwater is greater than 20.0 feet below the ground surface (CGS, 2001). The most recent groundwater data retrieved from the nearest groundwater monitoring site, site ID 336555N1176965W001, was recorded in 2024 and indicates groundwater was approximately greater than 60.0-feet at that time (CDWR, 2025).

4.5 Earthquake Hazards

The subject site is located in southern California, which is a tectonically active area. The type and magnitude of seismic hazards affecting a site are dependent on the distance to the causative fault and the intensity and magnitude of the seismic event. The seismic hazard may be primary, such as surface rupture and/or ground shaking, or secondary, such as liquefaction and/or ground lurching.

4.5.1 Local and Regional Faulting

The site is located in the northwestern portion of the Santa Ana sub-block. The closest known active faults and their distances to the site are presented on Table 4-1 below.

TABLE 4-1
Local and Regional Faulting

Fault Zone	Distance to Fault Zone
San Joaquin Hills	2.2 miles
Newport-Inglewood	7.1 miles
Elsinore	18.0 miles
Chino	18.4 miles
Palos Verdes	21.7 miles
Puente Hills (Coyote Hills)	22.1 miles
Coronado Bank	24.2 miles
Puente Hills (Santa Fe Springs)	28.6 miles

4.5.2 Surface Rupture

Active faults are not known to exist within the project and a review of Special Publication 42 indicates the site is not within a California State designated earthquake fault zone. Accordingly, the potential for fault surface rupture on the subject site is very low.

4.5.3 Seismicity

Ground shaking hazards caused by earthquakes along other active regional faults do exist. The 2022 California Building Code requires use-modified spectral accelerations and velocities for most structural designs. Seismic design parameters using soil profile types identified in the 2022 California Building Code are presented in Section 7.3.

4.5.4 Landslide Potential

Based on a review of the Seismic Hazard Zone Report for the San Juan Capistrano Quadrangle, the slope superjacent to the site is within an area with landslide potential. Further discussion into this hazard and its effects on the proposed project are presented in Section 6.3.

4.5.5 Liquefaction

Seismic agitation of relatively loose saturated sands, silty sands, and some silts can result in a buildup of pore pressure. If the pore pressure exceeds the overburden stresses, a temporary quick condition known as liquefaction can occur. Liquefaction effects can manifest in several ways including: 1) loss of bearing; 2) lateral spread; 3) dynamic settlement; and 4) flow failure. Lateral spreading has typically been the most damaging mode of failure.

In general, the more recent that a sediment has been deposited, the more likely it will be susceptible to liquefaction. Other factors that must be considered are groundwater, confining stresses, relative density, and the intensity and duration of seismically induced ground shaking.

Based on State provided information, the site is not located within a liquefaction zone. Groundwater was not encountered during our investigation to a depth of 51.5-feet bgs. Based on density of the

underlying formation, it is anticipated that the potential for liquefaction is nil.

5.0 ENGINEERING PROPERTIES AND ANALYSIS

5.1 Materials Properties

Presented herein is a general discussion of the engineering properties of the onsite materials that will be encountered during construction of the proposed project. Descriptions of the soil (Unified Soil Classification System) are presented on the logs in Appendices B.

5.1.1 Excavation Characteristics

Based on the data provided from the subsurface investigation, it is our opinion that the majority of the onsite materials possess favorable excavation characteristics such that conventional equipment can be utilized. Considerations should be given to the high moisture content of the diatomaceous soils encountered, as presented in the boring logs (Appendix B).

5.1.2 Compressibility

The upper portions of the Monterey Formation onsite are considered compressible and unsuitable to support the proposed improvements. Recommended removal depths are presented in Section 6.1.2.

As noted in the boring logs (Appendix B), the onsite soils are diatomaceous. Considerations should be given to the low dry density and high moisture content.

5.1.3 Hydro-Consolidation

Hydro-consolidation is the effect of introducing water into soil that is prone to collapse. Upon loading and initial wetting, the soil structure and apparent strength are altered resulting in almost immediate settlement.

That settlement can have adverse impacts on engineered structures, particularly in areas where it is manifested differentially. Differential settlements are typically associated with differential wetting, irregularities in the subsurface soil conditions, or irregular loading patterns.

Based on laboratory testing (Appendix C), there is minimal potential for hydro-collapse in the Monterey Formation onsite.

5.1.4 Expansion Potential

Expansion index testing was performed on samples taken during our subsurface investigation. Based on laboratory results, it is anticipated that the majority of materials onsite are "low" to "medium" in expansion potential (21≤EI≤90, Appendix C) when tested per ASTM D: 4829.

5.1.5 Earthwork Adjustments

The values presented in Table 5-2 are deemed appropriate for estimating purposes and may be used in an effort to balance earthwork quantities. As is the case with every project, contingencies should be made to adjust the earthwork balance when grading is in-progress and actual conditions are better defined.

TABLE 5-2
Earthwork Adjustment Factors

Geologic Unit	Adjustment Factor Range	Average
Monterey Formation	Shrink 4% to 8%	6%

5.1.6 Chemical Analyses

Chemical testing was performed on samples of material underlying the proposed site. Soluble sulfate test results indicate that the soluble sulfate concentrations of the soils tested are classified as negligible (Category S0) per ACI 318-14.

Negligible chloride levels were detected in the onsite soils. Based on laboratory results of soluble sulfate, chloride, and pH testing as presented in Appendix C, the onsite soils are classified as "non-corrosive" to buried metals and concrete (Caltrans, 2022). Additional discussions on corrosion are presented in Section 7.9. Corrosion tests results are presented in Appendix C.

5.2 Engineering Analysis

Presented below is a general discussion of the engineering analysis methods that were utilized to develop the conclusions and recommendations presented in this report.

5.2.1 Bearing Capacity and Lateral Earth Pressures

Ultimate bearing capacity values were obtained using the graphs and formula presented in NAVFAC DM-7.1. Allowable bearing was determined by applying a factor of safety of at least 3 to the ultimate bearing capacity. Static lateral earth pressures were calculated using Rankine methods for active and passive cases. If it is desired to use Coulomb forces, a separate analysis specific to the application can be conducted.

6.0 CONCLUSIONS AND RECOMMENDATIONS

Based on Alta's findings during our subsurface investigation, the laboratory test results, and our staff's previous experience in the area, it is Alta's opinion that the development of the site is feasible from a geotechnical perspective. Presented below are recommendations that should be incorporated into site development and construction plans.

6.1 Remedial Grading Recommendations

All grading shall be accomplished under the observation and testing of the project geotechnical consultant in accordance with the recommendations contained herein and the City of Santa Ana criteria.

6.1.1 Site Preparation

Vegetation, construction debris, and other deleterious materials are unsuitable as structural fill material and should be disposed of offsite prior to commencing grading/construction. Any septic tanks, seepage pits or wells should be abandoned as per the County of Orange Department of Health Services.

Existing concrete should be removed prior to the placement of engineered fill. The demolished concrete may be incorporated into compacted, engineered fills after it is crushed to a maximum size of six (6) inches. Prior to placement as engineered fill any protruding steel rebar should be cut from the concrete pieces and disposed of offsite.

Existing asphaltic concrete should be removed prior to the placement of engineered fill. From a geotechnical perspective, this material may be incorporated into compacted, engineered fills after it is ground down to passing the #4 sieve.

6.1.2 Unsuitable Soil Removals

The upper portions of alluvium are compressible and as such, are not suitable to support the proposed structures. Therefore, it is anticipated that, on average, the upper five (5) feet of existing soils will require removal and recompaction, extending a minimum of five (5) feet horizontally outside of the structures. This recommended removal combined with the foundation recommendations presented in Section 7.1 should provide suitable support for the proposed structures.

Footings for structures should be underlain by a minimum of three (3) feet of compacted fill. As such, for building pads where unsuitable soil removals do not provide the minimum depth of compacted fill, or where design grades and/or remedial grading activities create cut/fill transitions, the cut and shallow fill portions of the building pads should be over-excavated during grading and replaced with compacted fill. This condition shall be reviewed as foundation plans become available. The intent of this recommendations if for foundation loads to be encompassed within the engineered fill.

The Project Geotechnical Consultant should observe the removal bottom prior to placing fill. If unsuitable soils such as undocumented artificial fill is exposed upon the completion of the removals recommended above, additional removals may be required.

For fill areas in parking lots/drive aisles, in general, a minimum removal and recompaction of the upper two (2) feet is recommended, however all undocumented artificial fill shall be removed and recompacted. For cuts greater than two (2) feet in street areas, removals are not required. For

cuts less than two (2) feet, the two (2) foot removal and recompaction applies.

6.2 General Earthwork Recommendations

6.2.1 Compaction Standards

All fill and processed natural ground shall be compacted to a minimum relative compaction of 90 percent, as determined by ASTM Test Method: D-1557. Fill material should be moisture conditioned to optimum moisture or above, and as generally discussed in Alta's Earthwork Specification Section presented in Appendix E. Compaction shall be achieved with the use of heavy earthwork equipment. Mixing and moisture conditioning will be required in order to achieve the recommended moisture conditions.

As noted in the boring logs (Appendix B), the onsite soils are diatomaceous. Considerations should be given to the low dry density and high moisture content. It is recommended to utilize a contractor familiar with the difficulty of conducting grading operations within diatomaceous soil. Slower production rates should be anticipated.

6.2.2 Groundwater/Seepage

Groundwater was not encountered during the subsurface investigation. It is not anticipated that groundwater will be encountered during construction. It is possible that perched groundwater conditions could be encountered depending on the time of year construction occurs.

6.2.3 Documentation of Removals

All removal/over-excavation bottoms should be observed and approved by the project Geotechnical Consultant prior to fill placement. Consideration should be given to surveying the removal bottoms and undercuts after approval by the geotechnical consultant and prior to the

placement of fill. Staking should be provided in order to verify undercut locations and depths.

6.2.4 Treatment of Removal Bottoms

At the completion of removals/over-excavation, the exposed removal bottom should be ripped to a minimum depth of eight (8) inches, moisture-conditioned to above optimum moisture content and compacted in-place to the project standards.

6.2.5 Fill Placement

After removals, scarification, and compaction of in-place materials are completed, additional fill may be placed. Fill should be placed in eight-inch bulk maximum lifts, moisture conditioned or dried back so as to achieve optimum moisture content or above, compacted and tested as grading progresses until final grades are attained.

6.2.6 Mixing

Mixing of materials may be necessary to prevent layering of different soil types and/or different moisture contents. The mixing should be accomplished prior to and as part of compaction of each fill lift.

6.2.7 Import Soils

Import soils, if necessary, should consist of clean, structural quality, compactable materials similar to the on-site soils and should be free of trash, debris, or other objectionable materials. The project Geotechnical Consultant should be notified not less than 72 hours in advance of the locations of any soils proposed for import. Import sources should be sampled, tested, and approved by the project Geotechnical Consultant at the source prior to the importation of the soils to the site. The project Civil Engineer should include these requirements on plans and specifications for the project.

6.2.8 Utility Trenches

6.2.8.1 Excavation

Utility trenches should be supported, either by laying back excavations or shoring, in accordance with applicable OSHA standards. In general, existing site soils are classified as Soil Type “B” and "C" per OSHA standards. Upon completion of the recommended removals and recompaction, the artificial fill will be classified as Soil Type "B". The Project Geotechnical Consulting should be consulted if geologic conditions vary from what is presented in this report.

6.2.8.2 Backfill

Trench backfill should be compacted to at least 90 percent of maximum dry density as determined by ASTM D-1557. Onsite soils will not be suitable for use as bedding material but will be suitable for use in backfill provided oversized materials are removed. Although suitable for backfill, consideration should be given to utilizing imported materials as backfill materials. If native soils are to be used, slower production rates should be anticipated. No surcharge loads should be imposed above excavations. This includes spoil piles, lumber, concrete trucks, or other construction materials and equipment. Drainage above excavations should be directed away from the banks. Care should be taken to avoid saturation of the soils. Compaction should be accomplished by mechanical means. Jetting of native soils will not be acceptable.

Under-slab trenches should also be compacted to project specifications. If select granular backfill (SE > 30) is used, compaction by flooding will be acceptable.

6.3 Slope Stability

Surrounding the western and northern boundary of the site, adjacent to Glenwood Drive and Aliso Creek Road, is an approximately 50 foot slope ascending from the site. Within this slope is a landslide hazard mapped by the California Department of Conservation (CDMG, 2001). Based on a review of available data, the construction of the slope was completed during the grading of the existing structures or adjacent streets. Reports pertaining to this grading and any geologic / geotechnical reports pertaining to the hazard are not available from the City or the County. No visible instabilities were observed during our investigation. V-ditches are currently in place, and the existing slope is planted.

In consideration of the existing slope, the proposed structures have been setback from the toe of the slope in accordance with the requirements of the CBC.

Further review should be done as the project progresses. Additional recommendations pertaining to the grading and mitigation of the mapped hazard may be required based on conditions exposed during grading.

7.0 DESIGN CONSIDERATIONS

7.1 Structural Design

It is anticipated that multi-story residential structures with slab on-grade and shallow foundations will be constructed. Upon the completion of rough grading, finish grade samples should be collected and tested in order to provide specific recommendations as they relate to the individual building pads. These test

results and corresponding design recommendations should be presented in a final rough grading report. Final slab and foundation design recommendations should be made based upon specific structure sitings, loading conditions, and as-graded soil conditions.

It is anticipated that the majority of onsite soils will possess "low" to "medium" expansion potential when tested in general accordance with ASTM Test Method D: 4829. Due to the inherent characteristics of diatomaceous soils, it is recommended to utilize post-tensioned foundations in the design of the project.

7.1.1 Foundation Design

Foundations may be preliminary designed based on the values presented in Table 7-1 below.

Table 7-1
Foundation Design Parameters*

Allowable Bearing	1500 lbs/ft^2 (assuming a minimum embedment depth and width of 12 inches)
Lateral Bearing	250 lbs/ft^2 at a depth of 12 inches plus 250 lbs/ft^2 for each additional 12 inches of embedment to a maximum of 2000 lbs/ft^2.
Sliding Coefficient	0.30
Settlement	Static Settlement – 0.5 inch in 40 feet Dynamic Settlement – 0.5 inch in 40 feet

*These values may be increased as allowed by Code to resist transient loads such as wind or seismic. Building code and structural design considerations may govern depth and reinforcement requirements and should be evaluated.

7.1.2 Post-Tensioning Slabs/Foundation Design Recommendations

Post-tensioned slabs for the project may be designed utilizing the parameters presented in Tables 7-1 and 7-2. The parameters presented herein are based on methodology provided in the Design of Post-Tensioned Slabs-On-Ground, Third Edition, by the Post-Tensioning Institute, in accordance with the 2022 CBC.

TABLE 7-2
POST-TENSION SLAB DESIGN PARAMETERS

Category	Expansion Potential	Minimum Embedment*	Edge Lift		Center Lift	
			Em (ft)	Ym (inch)	Em (ft)	Ym (inch)
I	Low	12 inches	5.4	0.61	9.0	0.26
II	Medium	18 inches	5.0	1.10	9.0	0.46
Slab Subgrade Moisture						
Category I	Minimum 110% of optimum moisture to a depth of 12 inches prior to pouring concrete					
Category II	Minimum 120% of optimum moisture to a depth of 12 inches prior to pouring concrete					
Embedment*						
The minimum footing embedments presented herein are based on expansion indexes. The structural engineer should determine minimum embedments based on the number of floors supported by the footings, the structural loading, and the requirements of the latest California Building Code. If mat slabs are utilized, alternate embedment depths can be provided.						
Moisture Barrier						
A moisture barrier should be provided in accordance with the recommendations presented in Section 7.2						
The parameters presented herein are based on procedures presented in the Design of Post-Tensioned Slabs-On-Ground, Third Edition. No corrections for vertical barriers at the edge of the slab, or for adjacent vegetation have been assumed. The design parameters are based on a Constant Suction Value of 3.9 pF.						

7.2 Moisture Barrier

A moisture and vapor retarding system should be placed below the slabs-on-grade in portions of the structure considered to be moisture sensitive and should be capable of effectively preventing the migration of water and reducing the transmission of water vapor to acceptable levels. Historically, a 10-mil plastic membrane, such as Visqueen, placed between two to four inches of clean sand, has been used for this purpose. The use of this system or other systems can be considered, at the discretion of the designer, provided the system reduces the vapor transmission rates to acceptable levels.

7.3 Seismic Design

The site classes were determined based on the referenced reports and published geologic maps in the area in general conformance with Chapter 20 of ASCE 7-16. Based on the density of the underlying soils, a Site Class of D (shear wave velocity of 259 m/s) was selected. The seismic design parameters were calculated using a program based on the USGS website and ASCE 7-16 procedures. The resulting values are presented in Table 7-3. These values are applicable providing the exceptions presented in Supplements 2 and 3 of ASCE 7-16 are utilized in the design of the structure. If the design does not include the exception methodology, then a site-specific analysis shall be conducted.

TABLE 7-3 Seismic Ground Motion Values
2022 CBC and ASCE 7-16

Parameter	*Value*
Site Class	D
Site Latitude	33.5937
Site Longitude	-117.7272
Spectral Response Acceleration Parameter, S_S	1.22
Spectral Response Acceleration Parameter, S_1	0.438
Site Coefficient, F_a	1.012
Site Coefficient, F_v	1.85
MCE Spectral Response Acceleration Parameter, S_{MS}	1.235
MCE Spectral Response Acceleration Parameter, S_{M1}	0.810
Design Spectral Response Acceleration Parameter, S_{DS}	0.823
Design Spectral Response Acceleration Parameter, S_{D1}	0.540
Peak Ground Acceleration, PGA_M	0.568

7.4 Fence and Garden Walls

Block walls, if used, should be embedded a minimum of 2 feet below the lowest adjacent grade. Construction joints (not more than 20 feet apart) should be included in the block wall construction. Side yard walls should be structurally separated from the rear yard wall.

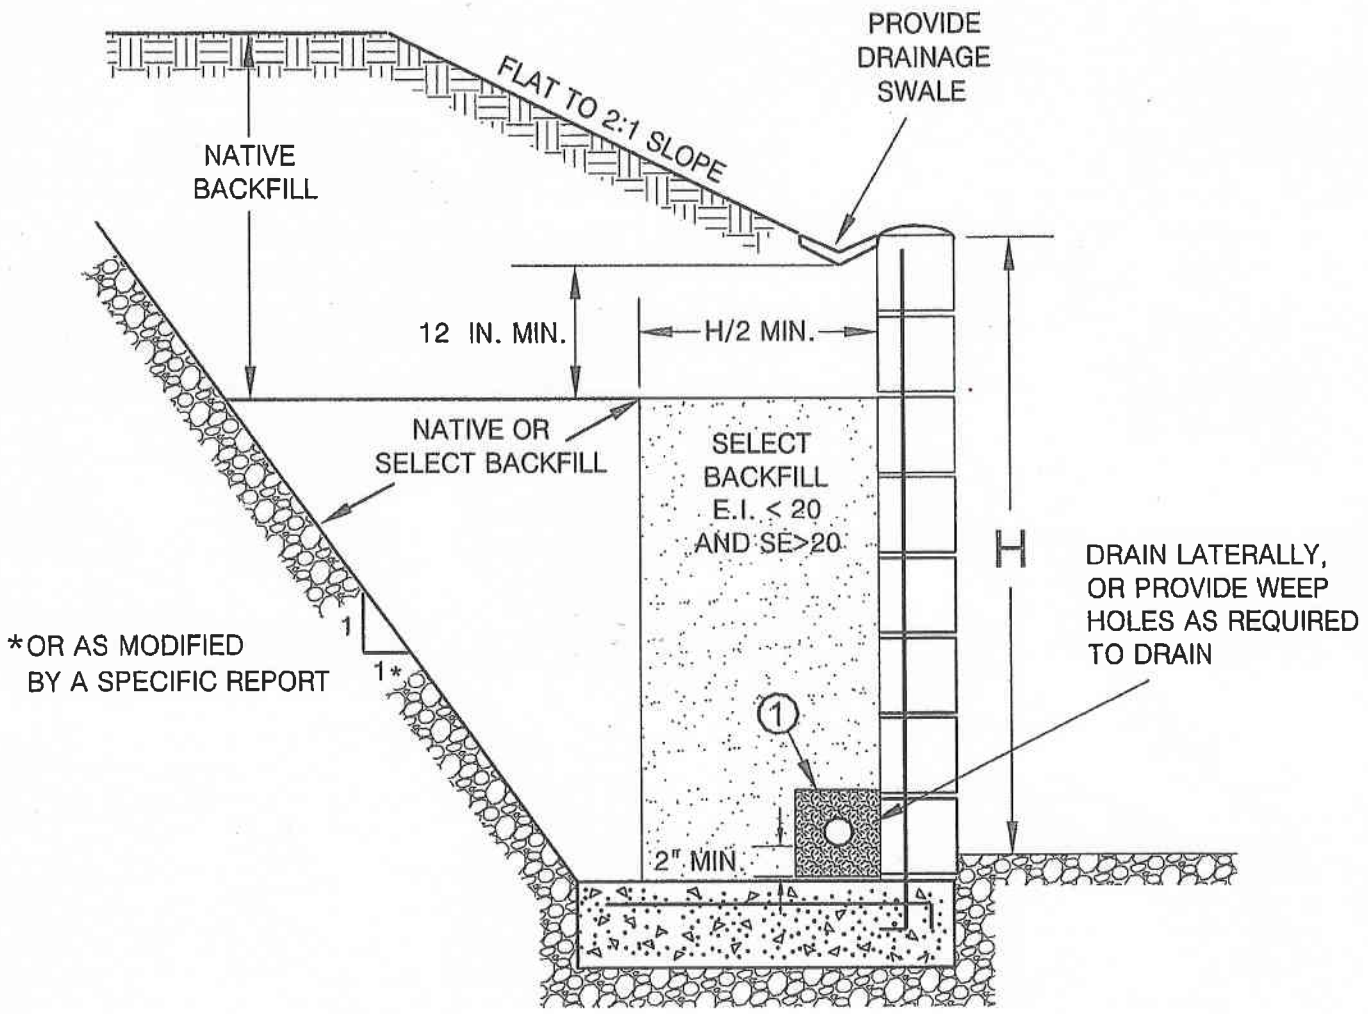
7.5 Footing Excavations

Soils from the footing excavations should not be placed in slab-on-grade areas unless properly compacted and tested. The excavations should be cleaned of all loose/sloughed materials and be neatly trimmed at the time of concrete placement. The Project Geotechnical Consultant should observe the footing excavations prior to the placement of concrete to determine that the excavations are founded in suitably compacted material.

7.6 Retaining Walls

Retaining walls should be founded on engineered fill and should be backfilled with granular soils that allow for drainage behind the wall. Foundations may be designed in accordance with the recommendations presented in Table 7-1, above. Unrestrained walls, free to horizontally move 0.0005H (for dense cohesionless backfill), may be designed to resist lateral pressures imposed by a fluid with a unit weight determined in accordance with the Table 7-4 below. The table also presents design parameters for restrained (at-rest) retaining walls. These parameters may be used to design retaining walls that may be considered as restrained due to the method of construction or location (corner sections of unrestrained retaining walls).

TABLE 7-4
Equivalent Fluid Pressures for 90% Compacted Fill (Select Material)



Backfill	Active Pressure (psf/ft)	At-Rest Pressure (psf/ft)
Level	35	55

Per the requirements of the 2022 CBC, the seismic force acting on the retaining walls with backfill exceeding 6-feet in height may be resolved utilizing the formula $12.5H^2$ lb/lineal ft (H=height of the wall). This force acts at approximately 0.6H above the base of the wall. The seismic value can be converted as required by the retaining wall engineer. Retaining walls should be designed in general accordance with Section 1807A.2 of the 2022 CBC.

- Restrained retaining walls should be designed for "at-rest" conditions.
- The design loads presented in the above table are to be applied on the retaining wall in a horizontal fashion and as such friction between wall and retained soils should not be allowed in the retaining wall analyses.
- Additional allowances should be made in the retaining wall design to account for the influence of construction loads, temporary loads, and possible nearby structural footing loads.
- Select backfill should be granular, structural quality backfill with a Sand Equivalent of 20 or better and an ASCE Expansion Index of 20 or less. The backfill must encompass the full active wedge area. The upper one foot of backfill should be comprised of native on-site soils (see Plate A).
- The wall design should include waterproofing (where appropriate) and backdrains or weep holes for relieving possible hydrostatic pressures. The backdrain should be comprised of a 4-inch perforated PVC pipe in a 1 ft. by 1 ft., ¾-inch gravel matrix, wrapped with a geofabric. The backdrain should be installed with a minimum gradient of 2 percent and should be outletted to an appropriate location. For subterranean walls this may include drainage by sump pumps.
- No backfill should be placed against concrete until minimum design strengths are achieved.

It should be noted that the allowable bearing and lateral bearing values presented in Table 7-1 are based on level conditions at the toe. Modified design parameters can be presented for retaining walls with sloping condition at the toe. Other conditions should be evaluated on a case-by-case basis.

RETAINING WALL BACKFILL DETAIL

(1)

PIPE: 4-INCH PERFORATED PVC, SCHEDULE 40, SDR35 OR APPROVED ALTERNATE MINIMUM 8 PERFORATIONS (1/4-IN. DIA.) PER LINEAL FT. IN BOTTOM HALF OF PIPE

ROCK: MINIMUM VOLUME OF 1 CU. FT. OF 3/4-IN. MAX. ROCK PER. LINEAL FOOT OF PIPE, OR APPROVED ALTERNATE

FILTER FABRIC: MIRAFI 140 FILTER FABRIC OR APPROVED EQUIVALENT

7.7 Exterior Slabs and Walkways

Exterior concrete slabs and walkways should be designed and constructed in consideration of the following recommendations.

7.7.1 Subgrade Compaction

The subgrade below exterior concrete slabs should be compacted to a minimum of 90 percent relative compaction as determined by ASTM Test Method: D 1557.

7.7.2 Subgrade Moisture

The subgrade below concrete slabs should be moisture conditioned to a minimum of 110 percent (low expansion potential) or 120 percent (medium expansion potential) of optimum moisture prior to concrete placement

7.7.3 Concrete Slab Thickness

Concrete flatwork and driveways should be designed utilizing four-inch minimum thickness.

7.7.4 Concrete Slab Reinforcement

Utilization of reinforcement for flatwork and driveways is subject to a cost/benefit analysis. Reinforcement will decrease the amount of cracking that may occur in flatwork, however, planning for occasional repairs may be more cost effective. Utilizing closely spaced control joints is likely more cost-effective than utilizing reinforcement. The majority of the soils onsite are classified as very low in expansion potential. Consideration should be given to reinforcing flatwork with irregular (non-square/rectangular) shapes or flatwork underlain by medium expansive soils. Reinforcement may consist of 6x6 W.14/W1.4 welded wire mesh or an equivalent section of rebar.

7.7.5 Control Joints

Weakened plane joints should be installed on walkways at intervals of approximately eight feet (maximum) or less. Exterior slabs should be designed to withstand shrinkage of the concrete.

7.8 Concrete Design

As stated in Section 5.1.7, negligible concentrations of sulfates were detected in the onsite soils (Class S0). Therefore, the use of sulfate resistant concrete is not required per ACI 318-14 at this time. Post-grading conditions should be evaluated, and final recommendations made at that time.

7.9 Corrosion

Based on laboratory results of soluble sulfate, chloride, and pH testing as presented in Appendix C, the onsite soils are classified as “non-corrosive” to buried metals and concrete (Caltrans, 2022). Buried ferrous metals should be protected against the effects of corrosive soils in accordance with the manufacturer’s recommendations. Typical measures may include using non-corrosive backfill, protective coatings, wrapping, plastic pipes, or a combination of these methods. A corrosion engineer should be consulted if specific design recommendations are required by the improvement designer.

Per ACI 318-14, an exposure class of C1 would be applicable to metals encased in concrete (rebar in footings) due to being exposed to moisture from surrounding soils. Per Table 19.3.2.1 of ACI 318-14, the requirements for concrete with an exposure class of C1 are a minimum compressive strength of 2500 psi and a maximum water-soluble chloride ion content in concrete of 0.30 (percent by weight of cement).

7.10 Pavement Design

Pavement sections for the proposed streets shall be designed based on laboratory testing conducted on samples taken from the soil subgrade. Preliminarily, based on an assumed R-Value of 30, the pavement may be designed utilizing the sections presented in Table 7-5. These sections should be verified upon the completion of grading, based on R-Value testing. The ultimate pavement section design for public streets is under the City of Aliso Viejo's purview.

Table 7-5
Preliminary Pavement Sections

Traffic Index	Pavement Section Options OR	
5.0	3-inch AC on 6-inch AB	4-inch AC on 4-inch AB
5.5	3-inch AC on 7-inch AB	4-inch AC on 5-inch AB

AC-Asphalt Concrete
AB-Caltrans Class II Base

Construction of the streets should be accomplished in accordance with the current criteria of the City of Aliso Viejo. Prior to the placement of base material, the subgrade should be suitably moisture conditioned, processed and compacted to a minimum 95 percent of the laboratory maximum density (ASTM: D 1557) to at least twelve (12) inches below subgrade. After subgrade compaction, the exposed grade should then be "proof"-rolled with heavy equipment to ensure the grade does not "pump" and is verified as non-yielding. Aggregate base material should be placed on the compacted subgrade and compacted in-place to a minimum 95 percent of the laboratory standard obtained per ASTM: D 1557.

8.0 LOT MAINTENANCE

Ongoing maintenance of the improvements is essential to the long-term performance of structures. As such, the owners must implement certain maintenance procedures. The attached " Maintenance and Improvement Considerations" presented in the Appendix E may be included as part of the sales packet to educate the owners in issues related to drainage, maintenance, improvements, etc. The following recommendations should also be implemented.

8.1 Lot Drainage

Roof, pad, and lot drainage should be collected and directed away from structures and slopes and toward approved disposal areas. Design fine grade elevations should be maintained throughout the life of the structure or if design fine grade elevations are altered, adequate area drains should be installed in order to provide rapid discharge of water, away from structures and slopes. Residents should be made aware that they are responsible for maintenance and cleaning of all drainage terraces, down drains, and other devices that have been installed to promote structure and slope stability.

8.2 Burrowing Animals

Owners should undertake a program for the elimination of burrowing animals.

9.0 FUTURE PLAN REVIEWS

This report represents a geotechnical review of the site. As the project design for the project progresses, site specific geologic and geotechnical issues should be considered in the design and construction of the project. Consequently, future plan reviews may be necessary. These reviews may include reviews of:

- Grading Plans
- Foundation Plans
- Utility Plans

These plans should be forwarded to the project Geotechnical Consultant for review.

10.0 CLOSURE

10.1 Geotechnical Review

For the purposes of this report, multiple working hypotheses were established for the project, utilizing the available data and the most probable model is used for the analysis. Future information collected during the proposed grading operations is intended to evaluate the hypothesis and as such, some of the assumptions summarized in this report may need to be changed. Some modifications of the grading recommendations may become necessary, should the conditions encountered in the field differ from the conditions hypothesized in this report.

Plans and sections of the project specifications should be reviewed by Alta to evaluate conformance with the intent of the recommendations contained in this report. If the project description or final design varies from that described in herein, Alta must be consulted regarding the applicability of the recommendations contained herein and whether any changes are required. Alta accepts no liability for any use of its recommendations if the project description or final design varies and Alta is not consulted regarding the alterations.

10.2 Limitations

This report is based on the following: 1) the project as presented on the attached plan; 2) the information obtained from Alta's laboratory testing included herein; and 3) from the information presented in the referenced reports. The findings and recommendations are based on the results of the subsurface investigation, laboratory testing, and office analysis combined with an interpolation and extrapolation of conditions between and beyond the subsurface excavation locations. However, the materials adjacent to or beneath those observed may have different characteristics than those observed, and no precise representations are made as to the quality or extent of the materials not

observed. The results reflect an interpretation of the direct evidence obtained. Work performed by Alta has been conducted in a manner consistent with the level of care and skill ordinarily exercised by members of the geotechnical profession currently practicing in the same locality under similar conditions. No other representation, either expressed or implied, and no warranty or guarantee is included or intended.

The recommendations presented in this report are based on the assumption that an appropriate level of field review will be provided by a geotechnical consultant who is familiar with the design and site geologic conditions. That field review shall be sufficient to confirm that geotechnical and geologic conditions exposed during grading are consistent with the geologic representations and corresponding recommendations presented in this report.

The conclusions and recommendations included in this report are applicable to the specific design of this project as discussed in this report. They have no applicability to any other project or to any other location and any and all subsequent users accept any and all liability resulting from any use or reuse of the data, opinions, and recommendations without the prior written consent of Alta.

Alta has no responsibility for construction means, methods, techniques, sequences, procedures, safety precautions, programs in connection with the construction, acts or omissions of the CONTRACTOR or any other person performing any of the construction, or for the failure of any of them to carry out the construction in accordance with the final design drawings and specifications.

APPENDIX B

Subsurface Investigation

APPENDIX B

Subsurface Investigation

Alta's subsurface investigation consisted of excavating, logging, and sampling four (4) hollow-stem auger borings. Details of the subsurface investigation are presented in Table B. The approximate location of the exploratory excavation is shown on the accompanying Plate 1 and the Geotechnical Logs are attached.

TABLE B
SURFACE INVESTIGATION DETAILS

Equipment	Range of Depths	Sampling Methods	Sample Locations
8” Hollow-Stem Auger	Up to 51.5 feet	1. Bulk 2. Ring	1. Bulk-Select Depths. 2. Ring-Every 2.5 or 5 feet.

UNIFIED SOIL CLASSIFICATION SYSTEM

Major Divisions		grf	ltr	Description
Coarse Grained Soils: More than 50% retained on No. 200 sieve	Gravel and Gravelly Soils: More than 50% of coarse fraction retained on No. 4 sieve		GW	Well-graded gravels or gravel sand mixtures, little or no fines
			GP	Poorly-graded gravels or gravel sand mixture, little or no fines
			GM	Silty gravels, gravel-sand-silt mixtures
			GC	Clayey gravels, gravel-sand-clay mixtures
	Sand and Sandy Soils: More than 50% of coarse fraction passes on No. 4 sieve		SW	Well-graded sands or gravelly sands, little or no fines
			SP	Poorly-graded sands or gravelly sands, little or no fines
			SM	Silty sands, sand-silt mixtures
			SC	Clayey sands, and-clay mixtures

Major Divisions		grf	ltr	
Fine Grained Soils: More than 50% passes on No. 200 sieve	Silts And Clays LL,<50		ML	Inorganic silts and very fine sands, rock flour, silty or clayey fine sands or clayey silts with slight plasticity
			CL	Inorganic clays of low to medium plasticity, gravelly clays, sandy clays, silty clays, lean clays
			OL	Organic silts and organic silt-clays of low plasticity
	Silts And Clays LL,<50		MH	Inorganic silts, micaceous or diatomaceous fine or silty soils, elastic silts
			VH	Inorganic clays of high plasticity, fat clays
			OH	Organic clays of medium to high plasticity
Highly Organic Soils			PT	Peat and other highly organic soils

BOUNDARY CLASSIFICATION: Soils possessing characteristics of two groups are designated by combinations of group symbols.

APPENDIX C

Laboratory Testing

LABORATORY TESTING

The following laboratory tests were performed on a representative sample in accordance with the applicable latest standards or methods from the ASTM, California Building Code (CBC) and California Department of Transportation.

Classification

Soils were classified with respect to the Unified Soil Classification System (USCS) in accordance with ASTM D-2487 and D-2488.

Particle Size Analysis

Modified hydrometer testing was conducted to aid in classification of the soil. The results of the particle size analysis are presented in Table C.

Maximum Density/Optimum Moisture

The maximum dry density and optimum moisture content of two representative bulk samples were evaluated in accordance with ASTM D-1557. The results are summarized in Table C.

Expansion Index Tests

Two (2) expansion index test was performed to evaluate the expansion potential of typical on-site soil. Testing was carried out in general conformance with ASTM Test Method D-4829. The results are presented in Table C.

Chemical Analyses

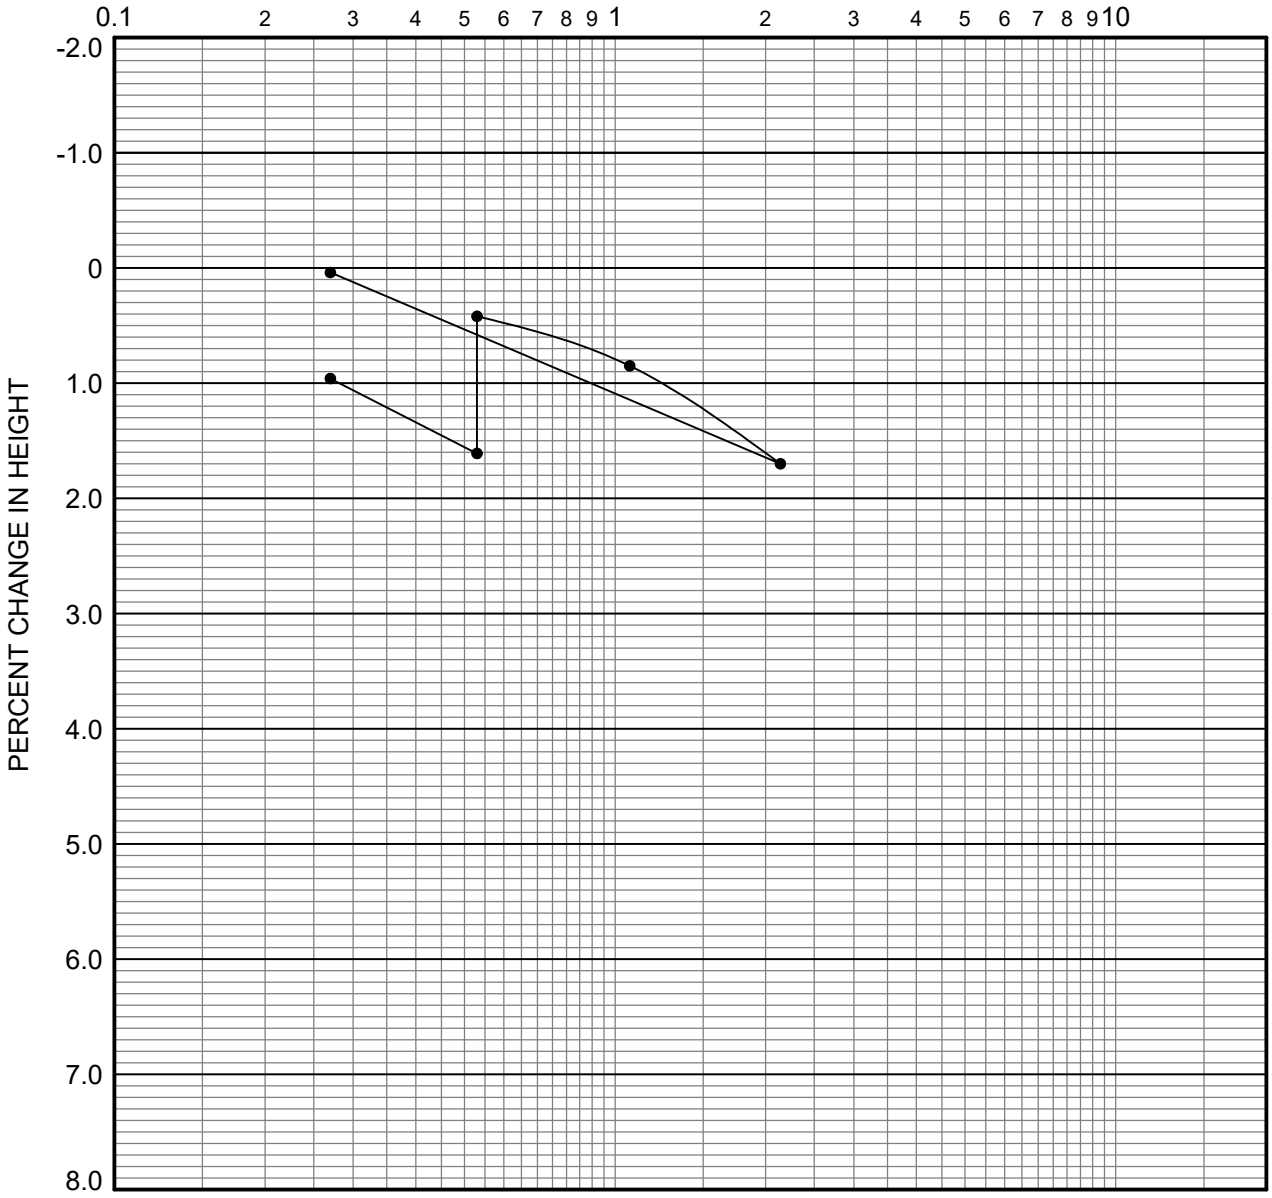
Chemical testing was performed on two select samples by Alta. The results of these tests (sulfate content, resistivity, chloride content and pH) are presented on Table C.

Consolidation Tests

Consolidation testing was performed on four (4) relatively “undisturbed” soil samples at their natural moisture content in accordance with procedures outlined in ASTM D-2435. The samples were placed in a consolidometer and loads were applied incrementally in geometric progression. The samples (2.42-inches in diameter and 1-inch in height) were permitted to

consolidate under each load increment until the slope of the characteristic linear secondary compression portion of the thickness versus log of time plot was apparent. The percent consolidation for each load cycle was recorded as the ratio of the amount of vertical compression to the original 1-inch height. The consolidation test results are shown on Plates C-1 through C-4.

Atterberg Limits



Atterberg limits testing was performed on two select samples by Alta. The results of these tests are presented on Table C

APPENDIX D

Maintenance and Improvement Considerations

MAINTENANCE AND IMPROVEMENT CONSIDERATIONS

General

Owners purchasing property must assume a certain degree of responsibility for improvements and for maintaining conditions around their home. Of primary importance from a geotechnical standpoint are maintaining drainage patterns and minimizing the soil moisture variation below all improvements. Such design, construction and owner maintenance provisions may include:

- Employing contractors for improvements who design and build in recognition of local building codes and specific site soils conditions.
- Establishing and maintaining positive drainage away from all foundations, walkways, driveways, patios, and other improvements.
- Avoiding the construction of planters adjacent to structural improvements. Alternatively, planter sides/bottoms can be sealed with an impermeable membrane and drained away from the improvements via subdrains into approved disposal areas.
- Sealing and maintaining construction/control joints within concrete slabs and walkways to reduce the potential for moisture infiltration into the subgrade soils.
- Utilizing landscaping schemes with vegetation that requires minimal watering. Watering should be done in a uniform manner, as equally as possible on all sides of the foundation, keeping the soil "moist" but not allowing the soil to become saturated.
- Maintaining positive drainage away from structures and providing roof gutters on all structures with downspouts that are designed to carry roof runoff directly into area drains or discharged well away from the foundation areas.
- Avoiding the placement of trees closer to the proposed structures than a distance of one-half the mature height of the tree.
- Observation of the soil conditions around the perimeter of the structure during extremely hot/dry or unusually wet weather conditions so that modifications can be made in irrigation programs to maintain relatively uniform moisture conditions.

Sulfates

Owners should be cautioned against the import and use of certain inorganic fertilizers, soil amendments, and/or other soils from offsite sources in the absence of specific information relating to their chemical composition. Some fertilizers have been known to leach sulfate compounds into soils and increase the sulfate concentrations to potentially detrimental levels.

Site Drainage

- The owners should be made aware of the potential problems that may develop when drainage is altered through construction of hardscape improvements. Ponded water, drainage over the slope face, leaking irrigation systems, overwatering, or other conditions which could lead to ground saturation must be avoided.
- No water should be allowed to flow over the slopes. No alteration of pad gradients should be allowed that would prevent pad and roof runoff from being directed to approved disposal areas.
- Drainage patterns have been established at the time of the fine grading should be maintained throughout the life of the structure. No alterations to these drainage patterns should be made unless designed by qualified professionals in compliance with local code requirements and site-specific soils conditions.

Slope Drainage

- Residents should be made aware of the importance of maintaining and cleaning all interceptor ditches, drainage terraces, down drains, and any other drainage devices, which have been installed to promote slope stability.
- Subsurface drainage pipe outlets may protrude through slope surfaces and/or wall faces. These pipes, in conjunction with the graded features, are essential to slope and wall stability and must be protected in-place. They should not be altered or damaged in any way.

Planting and Irrigation of Slopes

- Seeding and planting of the slopes should be planned to achieve, as rapidly as possible, a well-established and deep-rooted vegetal cover requiring minimal watering.
- It is the responsibility of the landscape architect to provide such plants initially and of the residents to maintain such planting. Alteration of such a planting scheme is at the resident's risk.
- The resident is responsible for proper irrigation and for maintenance and repair of properly installed irrigation systems. Leaks should be fixed immediately.

- Sprinklers should be adjusted to provide maximum uniform coverage with a minimum of water usage and overlap. Overwatering with consequent wasteful runoff and serious ground saturation must be avoided.
- If automatic sprinkler systems are installed, their use must be adjusted to account for seasonal and natural rainfall conditions.

Burrowing Animals

- Residents must undertake a program to eliminate burrowing animals. This must be an ongoing program in order to promote slope stability.

Owner Improvement

Owner improvements (pools, spas, patio slabs, retaining walls, planters, etc.) should be designed to account for the terrain of the project, as well as expansive soil conditions and chemical characteristics. Design considerations on any given lot may need to include provisions for differential bearing materials, ascending/descending slope conditions, bedrock structure, perched (irrigation) water, special geologic surcharge loading conditions, expansive soil stresses, and long-term creep/settlement.

All owner improvements should be designed and constructed by qualified professionals utilizing appropriate design methodologies, which account for the on-site soils and geologic conditions. Each lot and proposed improvement should be evaluated on an individual basis.

Setback Zones

Manufactured slopes maybe subject to long-term settlement and creep that can manifest itself in the form of both horizontal and vertical movement. These movements typically are produced as a result of weathering, erosion, gravity forces, and other natural phenomenon. A setback adjacent to slopes is required by most building codes, including the California Building Code. This zone is intended to locate and support the residential structures away from these slopes and onto soils that are not subject to the potential adverse effects of these natural phenomena.

The owner may wish to construct patios, walls, walkways, planters, swimming pools, spas, etc. within this zone. Such facilities may be sensitive to settlement and creep and should not be

constructed within the setback zone unless properly engineered. It is suggested that plans for such improvements be designed by a professional engineer who is familiar with grading ordinances and design and construction requirements. In addition, we recommend that the designer and contractor familiarize themselves with the site specific geologic and geotechnical conditions on the specific lot.

APPENDIX E

Earthwork Specifications

ALTA CALIFORNIA GEOTECHNICAL, INC.
EARTHWORK SPECIFICATIONS

These specifications present the generally accepted standards and minimum earthwork requirements for the development of the project. These specifications shall be the project guidelines for earthwork except where specifically superseded in preliminary geology and soils reports, grading plan review reports or by the prevailing grading codes or ordinances of the controlling agency.

A. GENERAL

1. The Contractor shall be responsible for the satisfactory completion of all earthwork in accordance with the project plans and specifications.

2. The project Geotechnical Engineer and Engineering Geologist, or their representatives, shall provide observation and testing services, and Geotechnical consultation for the duration of the project.

3. All clearing, grubbing, stripping and site preparation for the project shall be accomplished by the Contractor to the satisfaction of the Geotechnical Engineer/Engineering Geologist.

4. It is the Contractor's responsibility to prepare the ground surface to receive fill to the satisfaction of the Geotechnical Engineer and to place, spread, mix, moisture condition, and compact the fill in accordance with the job specifications and as required by the Geotechnical Engineer. The Contractor shall also remove all material considered by the Geotechnical Engineer to be unsuitable for use in the construction of engineered fills.

5. The Contractor shall have suitable and sufficient equipment in operation to handle the amount of fill being placed. When necessary, equipment will be shut down temporarily in order to permit the proper preparation of fills.

B. PREPARATION OF FILL AREAS

1. Excessive vegetation and all deleterious material should be disposed of offsite as required by the Geotechnical Engineer.

   Existing fill, soil, alluvium or rock materials determined by the Geotechnical Engineer as being unsuitable for placement in compacted fills shall be removed and hauled from the site. Where applicable, the Contractor may obtain the

approval of the Soils Engineer and the controlling authorities for the project to dispose of the above described materials, or a portion thereof, in designated areas onsite.

After removal of the deleterious materials have been accomplished, earth materials deemed unsuitable in their natural, in-place condition, shall be removed as recommended by the Geotechnical Engineer/Engineering Geologist.

2. Upon achieving a suitable bottom for fill placement, the exposed removal bottom shall be disced or bladed by the Contractor to the satisfaction of the Geotechnical Engineer. The prepared ground surfaces shall then be brought to the specified moisture content mixed as required, and compacted and tested as specified. In localities where it is necessary to obtain the approval of the controlling agency prior to placing fill, it will be the Contractor's responsibility to contact the proper authorities to visit the site.

3. Any underground structure such as cesspools, cisterns, mining shafts, tunnels, septic tanks, wells, pipelines or other structures not located prior to grading are to be removed or treated in a manner prescribed by the Geotechnical Engineer and/or the controlling agency for the project.

C. ENGINEERED FILLS

1. Any material imported or excavated on the property may be utilized as fill, provided the material has been determined to be suitable by the Geotechnical Engineer. Deleterious materials shall be removed from the fill as directed by the Geotechnical Engineer.

2. Rock or rock fragments less than twelve inches in the largest dimension may be utilized in the fill, provided they are not placed in concentrated pockets and the distribution of the rocks is approved by the Geotechnical Engineer.

3. Rocks greater than twelve inches in the largest dimension shall be taken offsite, or placed in accordance with the recommendations of the Geotechnical Engineer in areas designated as suitable for rock disposal.

4. All materials to be used as fill, shall be tested in the laboratory by the Geotechnical Engineer. Proposed import materials shall be approved by the Geotechnical Engineer 48 hours prior to importation.

5. The fill materials shall be placed by the Contractor in lifts, that when compacted, shall not exceed six inches. Each lift shall be spread evenly and shall be

thoroughly mixed to achieve a near uniform moisture condition and a uniform blend of materials.

All compaction shall be achieved at or above the optimum moisture content, as determined by the applicable laboratory standard. The Contractor will be notified if the fill materials are too wet or too dry to achieve the required compaction standard.

6. When the moisture content of the fill material is below the limit specified by the Geotechnical Engineer, water shall be added and the materials shall be blended until a uniform moisture content, within specified limits, is achieved. When the moisture content of the fill material is above the limits specified by the Geotechnical Engineer, the fill materials shall be aerated by discing, blading, mixed with dryer fill materials, or other satisfactory methods until the moisture content is within the specified limits.

7. Each fill lift shall be compacted to the minimum project standards, in compliance with the testing methods specified by the controlling governmental agency, and in accordance with recommendations of the Geotechnical Engineer.

   In the absence of specific recommendations by the Geotechnical Engineer to the contrary, the compaction standard shall be the most recent version of ASTM:D 1557.

8. Where a slope receiving fill exceeds a ratio of five-horizontal to one-vertical, the fill shall be keyed and benched through all unsuitable materials into sound bedrock or firm material, in accordance with the recommendations and approval of the Geotechnical Engineer.

9. Side hill fills shall have a minimum key width of 15 feet into bedrock or firm materials, unless otherwise specified in the soil report and approved by the Geotechnical Engineer in the field.

10. Drainage terraces and subdrainage devices shall be constructed in compliance with the ordinances of the controlling governmental agency and/or with the recommendations of the Geotechnical Engineer and Engineering Geologist.

11. The Contractor shall be required to maintain the specified minimum relative compaction out to the finish slope face of fill slopes, buttresses, and stabilization fills as directed by the Geotechnical Engineer and/or the governing agency for the project. This may be achieved by either overbuilding the slope and cutting

back to the compacted core; by direct compaction of the slope face with suitable equipment; or by any other procedure which produces the required result.

12. The fill portion of fill-over-cut slopes shall be properly keyed into rock or firm material; and the fill area shall be stripped of all soil or unsuitable materials prior to placing fill.

    The design cut portion of the slope should be made first and evaluated for suitability by the Engineering Geologist prior to placement of fill in the keyway above the cut slope.

13. Pad areas in cut or natural ground shall be approved by the Geotechnical Engineer. Finished surfaces of these pads may require scarification and recompaction, or over excavation as determined by the Geotechnical Engineer.

D. CUT SLOPES

1. The Engineering Geologist shall observe all cut slopes and shall be notified by the Contractor when cut slopes are to be started.

2. If, during the course of grading, unforeseen adverse or potentially adverse geologic conditions are encountered, the Engineering Geologist and Soil Engineer shall investigate, analyze and make recommendations to remediate these problems.

3. Non-erodible interceptor swales shall be placed at the top of cut slopes that face the same direction as the superjacent, prevailing drainage.

4. Unless otherwise specified in specific geotechnical reports, no cut slopes shall be excavated higher or steeper than that allowed by the ordinances of controlling governmental agencies.

5. Drainage terraces shall be constructed in compliance with the ordinances of the controlling governmental agencies, and/or in accordance with the recommendations of the Geotechnical Engineer or Engineering Geologist.

E. GRADING CONTROL

1. Fill placement shall be observed and tested by the Geotechnical Engineer and/or his representative during grading.

   Field density tests shall be made by the Geotechnical Engineer and/or his representative to evaluate the compaction and moisture compliance of each fill lift. Density tests shall be conducted at intervals not to exceed two feet of fill

height. Where sheepsfoot rollers are used, the fill may be disturbed to a depth of several inches. Density determinations shall be taken in the compacted material below the disturbed surface at a depth determined by the Geotechnical Engineer or his representative.

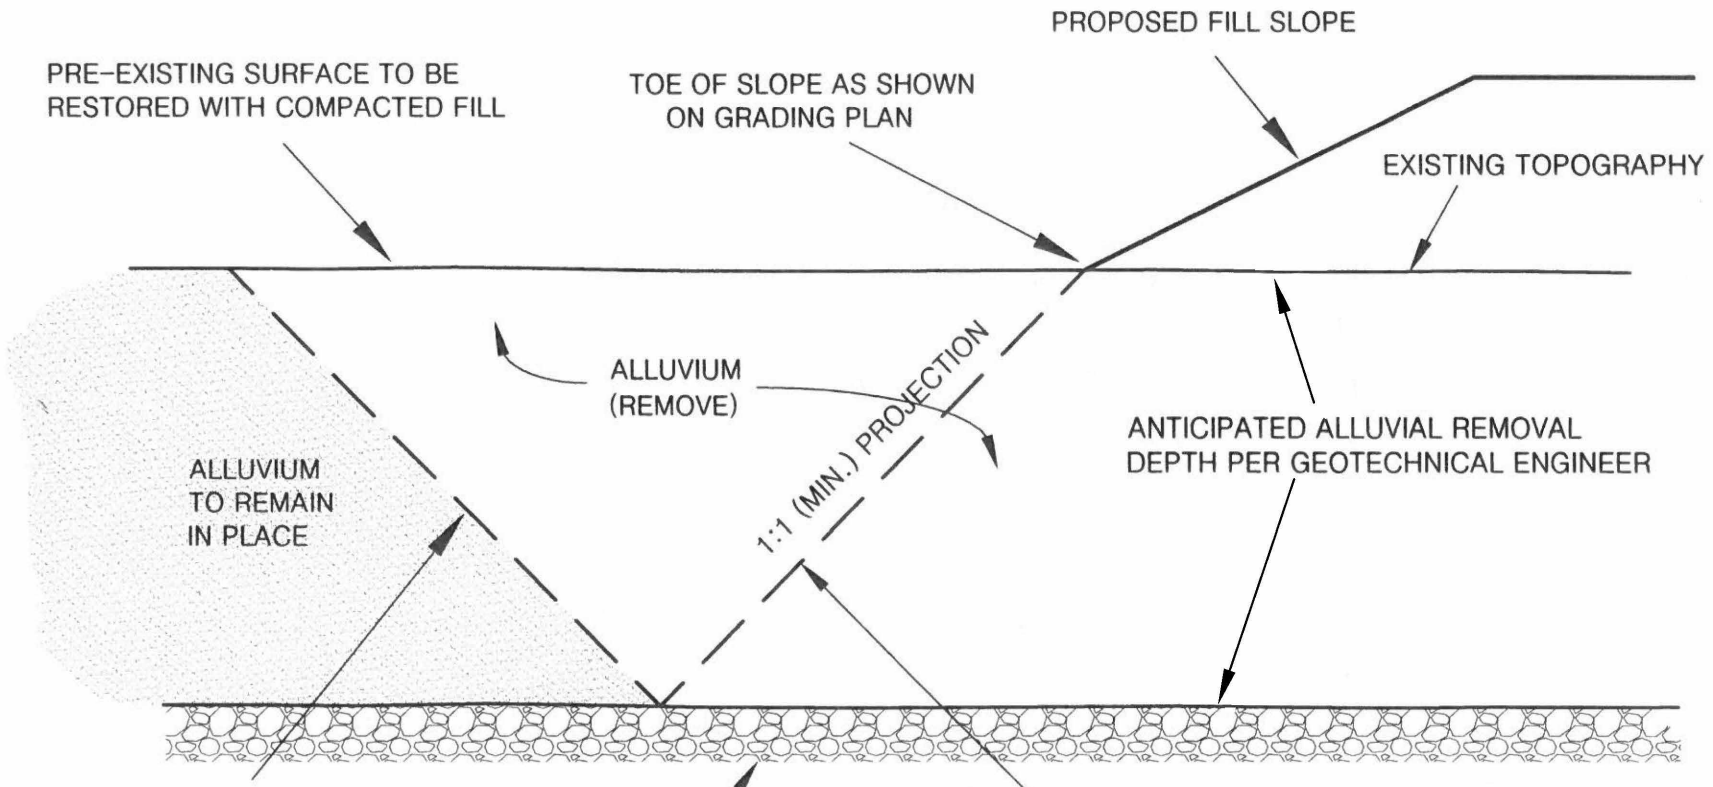
2. Where tests indicate that the density of any layer of fill, or portion thereof, is below the required relative compaction, or improper moisture content is in evidence, that particular layer or portion thereof shall be reworked until the required density and/or moisture content has been attained. Additional fills shall not be placed over an area until the previous lift of fill has been tested and found to meet the density and moisture requirements for the project and the previous lift is approved by the Geotechnical Engineer.

3. When grading activities are interrupted by heavy rains, fill operations shall not be resumed until field observations and tests by the Geotechnical Engineer indicate the moisture content and density of the fill are within the specified limits.

4. During construction, the Contractor shall properly grade all surfaces to maintain good drainage and prevent the ponding of water. The Contractor shall take remedial action to control surface water and to prevent erosion of graded areas until such time as a permanent drainage and erosion devices have been installed.

5. Observation and testing by the Geotechnical Engineer and/or his representative shall be conducted during filling and compacting operations in order that he will be able to state in his opinion that all cut and filled areas are graded in accordance with the approved specifications.

6. Upon the completion of grading activities and after the Geotechnical Engineer and Engineering Geologist have finished their observations of the work, final reports shall be submitted. No further excavation or fill placement shall be undertaken without prior notification of the Geotechnical Engineer and/or Engineering Geologist.



F. **FINISHED SLOPES**

All finished cut and fill slopes shall be planted and irrigated and/or protected from erosion in accordance with the project specifications, governing agencies, and/or as recommended by a landscape architect.

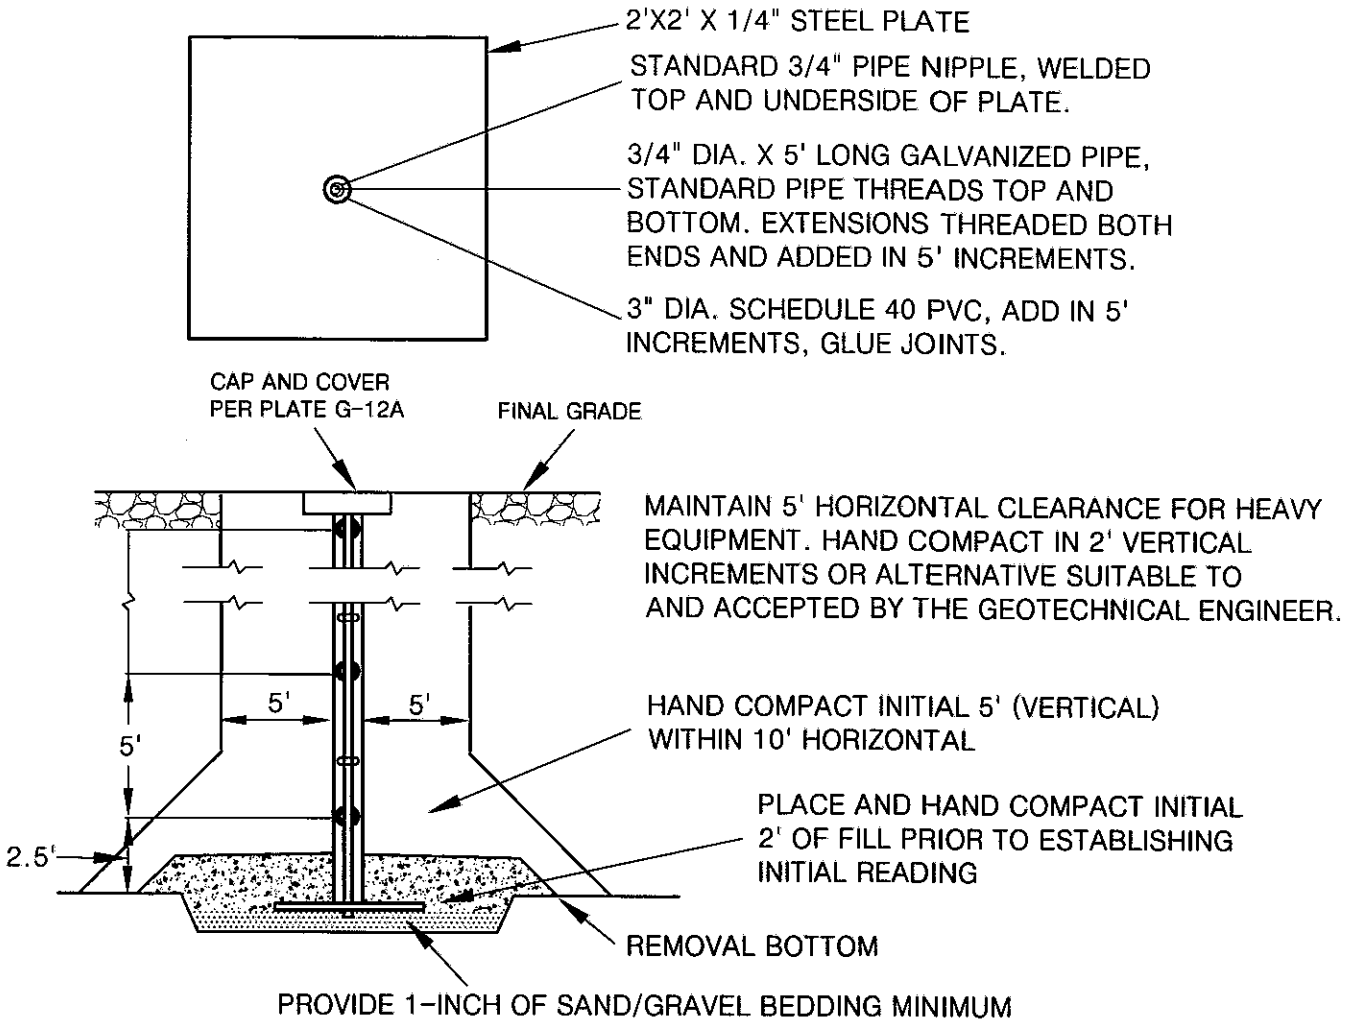
CANYON WALL LAY BACK
DIFFERENTIAL FILL OVEREXCAVATION DETAILS

1. ALL FILL PLACED BELOW 50 FEET OF FINISHED GRADE SHALL BE COMPACTED TO A MINIMUM OF 93% RELATIVE COMPACTION.

2. CANYON WALLS WITHIN 50 FEET OF FINISHED GRADE SHALL BE LAID BACK TO A SLOPE RATIO OF 2:1 OR FLATTER.



3. ALL BUILDING PADS SHALL BE OVER EXCAVATED TO A MINIMUM OF 1/3 OF THE MAXIMUM DEPTH OF FILL BELOW THE BUILDING PAD TO A MAXIMUM OF 17 FEET.

4. IF THE 2:1 LAY BACK OF THE CANYON WALL IS IMPRACTICAL, THEN AS AN ALTERNATIVE THE INCREASED COMPACTION STANDARDS IN NOTE 1 SHOULD BE EXTENDED UP TO H/3 AND THE LAY BACK WILL NOT BE REQUIRED.

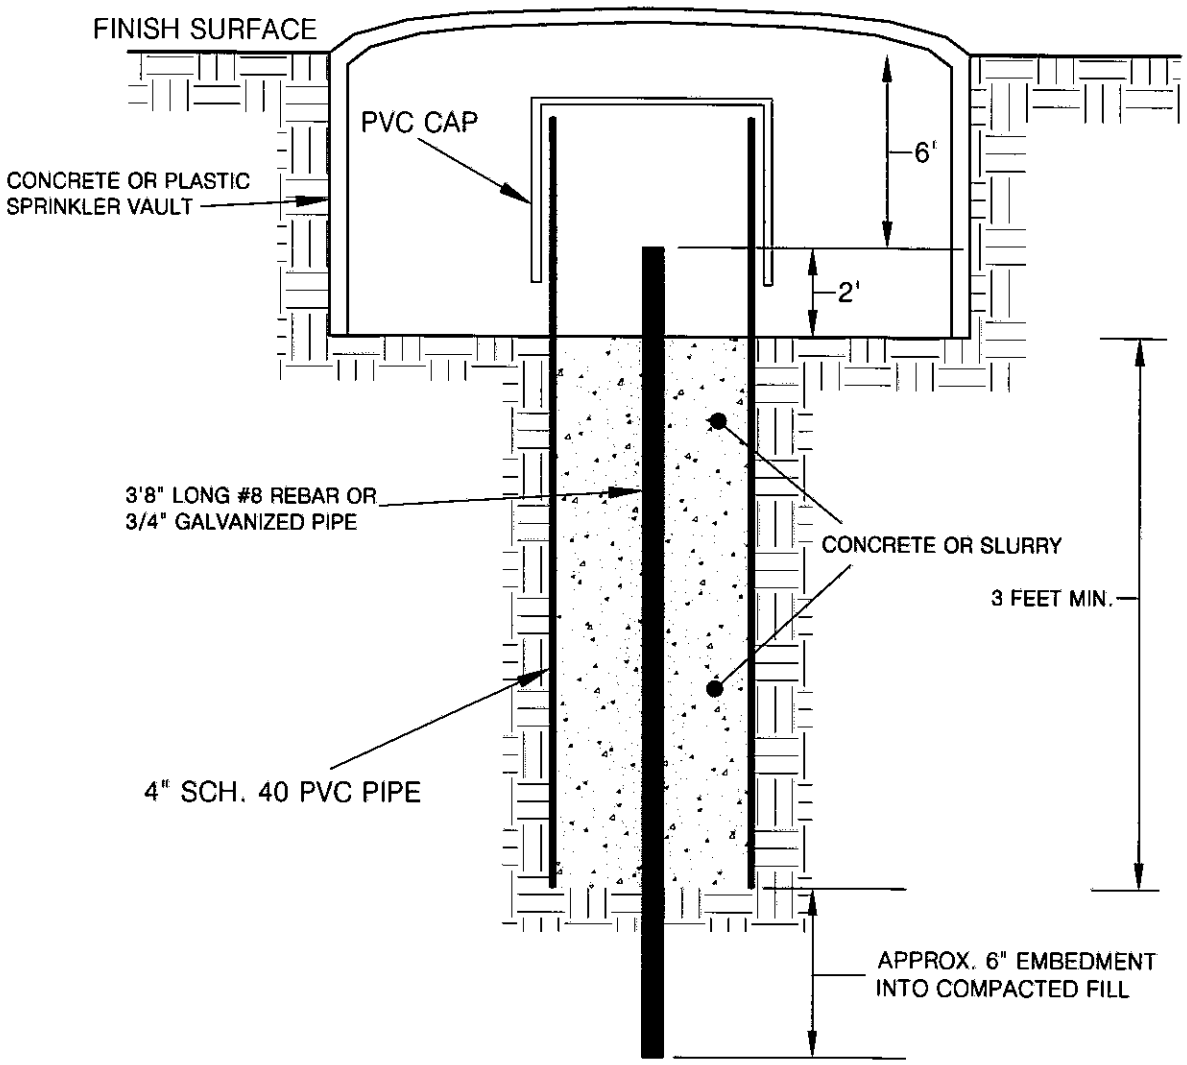
SETTLEMENT PLATE DETAIL

NOTES:



1) LOCATIONS OF SETTLEMENT PLATES SHALL BE CLEARLY MARKED AND READILY VISIBLE (RED FLAGGED) TO EQUIPMENT OPERATORS.

2) CONTRACTOR SHALL MAINTAIN 10' HORIZONTAL CLEARANCE FOR HEAVY EQUIPMENT WITHIN 5' (VERTICAL) OF PLATE BASE. FILL WITHIN CLEARANCE AREA SHALL BE HAND COMPACTED TO PROJECT SPECIFICATIONS OR COMPACTED BY ALTERNATIVE APPROVED BY THE GEOTECHNICAL ENGINEER.

3) AFTER 5' (VERTICAL) OF FILL IS IN PLACE, CONTRACTOR SHALL MAINTAIN 5' HORIZONTAL EQUIPMENT CLEARANCE. FILL IN CLEARANCE AREA SHALL BE HAND COMPACTED (OR APPROVED ALTERNATIVE) IN VERTICAL INCREMENTS NOT TO EXCEED 2 FEET.

4) IN THE EVENT OF DAMAGE TO SETTLEMENT PLATE OR EXTENSION RESULTING FROM EQUIPMENT OPERATING WITHIN PRESCRIBED CLEARANCE AREA, CONTRACTOR SHALL IMMEDIATELY NOTIFY GEOTECHNICAL ENGINEER AND SHALL BE RESPONSIBLE FOR RESTORING THE SETTLEMENT PLATE AND EXTENSION RODS TO WORKING ORDER.

Zoning Summary

Existing Zoning:	BP-2
Proposed Zoning:	RM - Residential Medium Density District
Max. Density:	18 Homes per Acre
Perimeter Site Setbacks:	20'
Common Open Space:	25%
Max. Building Height:	35'
Max. Lot Coverage:	60%

LEGEND

- Tm — MONTEREY FORMATION
- B-4 ⊕ — APPROXIMATE LOCATION OF HOLLOW STEM AUGER BORING
- P-2 ○ — APPROXIMATE LOCATION OF INFILTRATION TEST
- — — — LIMITS OF REPORT

Project Summary

Total Site Area: ±4.4 Acres
Net Site Area: ±2.47 Acres

Total Units: 58 Homes
- (02) Plan 1 | 1,323 SF | 3 bed | 2.5 Bath | Tandem Garage
- (19) Plan 2 | 1,530 SF | 3 bed | 2.5 Bath
- (22) Plan 3 | 1,575 SF | 3 bed | 2.5 Bath
- (15) Plan 4 | 1,825 SF | 4 bed | 2.5 Bath

Total SF: 89,470 SF

Total Density: 13.18 Homes per Acre
Net Density: 23.48 Homes per Acre

Parking:
Provided: 133 Spaces (2.3 spaces per home)
- Garage: 116 Spaces
- Head in: 17 Spaces (9'x18')

Open Space:
Provided: ±27,940 SF (0.64 AC)

Sloped Area: 83,053 SF (1.92 AC @ 44% of Total Area)

Notes:
- The sloped landscape currently occupies 44% of the total site area.
- There is no defined minimum width requirement for common open space.
- If we calculate 25% of the net area, we would be required to provide 0.61 acres of common open space.

Stantec Consulting Services Inc.

This document entitled **Phase I Environmental Site Assessment Report** (Report) was prepared by Stantec Consulting Services Inc. (“Stantec”) for the account of Brandywine Homes (the “Client”). he work performed herein was done in conformance the Master Services agreement between the Client and Stantec (the “MSA”). In the event of any conflict between this document and the MSA, the MSA will prevail. Any reliance on this document by any third party is strictly prohibited. Any use which a third party makes of this document is the responsibility of such third party. Such third party agrees that Stantec shall not be responsible for costs or damages of any kind, if any, suffered by it or any other third party as a result of decisions made or actions taken based on this document. All information, conclusions, and recommendations provided by Stantec in this document regarding the Phase I ESA have been prepared under the supervision of and reviewed by the professionals whose signatures appear below.

Stantec has assumed all information received from the “Client” and third parties in the preparation of the Report to be correct. While Stantec has exercised a customary level of judgment or due diligence in the use of such information, Stantec assumes no responsibility for the consequences of any error or omission contained therein. This Report is intended solely for use by the Client in accordance with Stantec’s contract with the Client. While the Report may be provided to applicable authorities having jurisdiction and others for whom the Client is responsible, Stantec does not warrant the services to any third party. The report may not be relied upon by any other party without the express written consent of Stantec, which may be withheld at Stantec’s discretion.

Executive Summary

Stantec Consulting Services Inc. (Stantec) has completed a Phase I Environmental Site Assessment (ESA) report of the property located at 15 Argonaut, Aliso Viejo, Orange County, California (the “Subject Property”), on behalf of Brandywine Homes (the “Client”). The work was performed in accordance with the Master Services Agreement (MSA) between Stantec and Brandywine Homes (the “User”) has been designated as the User of this report. The intended use of this Phase I ESA is for due diligence in support of potential redevelopment.

The Phase I ESA was conducted in conformance with the requirements of ASTM International (ASTM) Designation E1527-21, and All Appropriate Inquiries (AAI) as defined by the United States Environmental Protection Agency (EPA) in Title 40 of the Code of Federal Regulations, Part 312 (40 CFR 312), except as may have been modified by the scope of work, and terms and conditions, requested by the Client. Any exceptions to, or deletions from, the ASTM or AAI practice are described in Section 1.3.

The Subject Property consists of approximately 4.35 acres of land associated with Assessor’s Parcel Numbers (APNs) 623-093-10 and 623-093-11, and the address of 15 Argonaut, Aliso Viejo, Orange County, California. According to records obtained through Environmental Data Resources (EDR), the Subject Property appears to have been vacant from at least the 1930s to 1980s and was commercially developed with one structure and asphalt parking lot by 1989 in its present-day configuration. The Subject Property building is currently vacant. The adjoining properties and vicinity are developed with commercial/light industrial businesses and residential properties. A Subject Property Location Map is provided as Figure 1. A Subject Property Vicinity Map illustrating the main features of the Subject Property and vicinity is provided as Figure 2. Photographs taken during the site reconnaissance visit are provided in Appendix A.

We have performed a Phase I ESA in conformance with the scope and limitations of ASTM Practice E1527-21 of the property located at 15 Argonaut, Aliso Viejo, Orange County, California, or the “Subject Property”. Any exceptions to, or deletions from, this practice are described in Section 2.3 of this report. This assessment has revealed the following evidence of recognized environmental conditions (RECs), Controlled RECs (CRECs), and/or significant data gaps in connection with the Subject Property.

- A west-adjoining fuel station located at 23022 Aliso Creek Road is listed as a gasoline service station since 1996 that reportedly houses three active underground storage tanks (USTs) installed between 2004 and 2016. The USTs range from 10,000 to 20,000 gallons in size and contain diesel, regular and premium unleaded fuel. A minor spill of two gallons of fuel was reported in 2018 due to a vehicle overfill onto concrete. The spill was cleaned by onsite personnel. The site received permit-related violations between 2014 and 2016 which were returned to compliance. No releases are reported at the site. Given the proximity of the fuel station to the Subject Property, and no documented assessment of soil, soil vapor, or groundwater at the site, as well as inferred groundwater flow to the east, this site represents a potential VEC and is considered a REC for the Subject Property.

Stantec recommends a Phase II subsurface investigation to address potential subsurface impacts related to the west-adjoining fuel station.

This assessment has revealed the following items of note in connection with the Subject Property.

- The Subject Property building was constructed in the 1980s. Given the age of construction, asbestos-containing materials (ACMs) and lead-based paint (LBP) may be present in building materials. Additionally, an asphalt parking lot is present on the Subject Property. Petromat is a stress-absorbing fabric often associated with asphalt, and it sometimes contains asbestos. Stantec recommends an ACM, LBP and Petromat survey be conducted prior to renovation or demolition in accordance with applicable local and federal regulations.

The preceding summary is intended for informational purposes only. Reading of the full body of this report is recommended.

1 Introduction

The objective of this Phase I ESA was to perform AAI into the past ownership and uses of the Subject Property consistent with good commercial or customary practice as outlined by ASTM International (ASTM) in “Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process,” Designation E1527-21. “All Appropriate Inquiries” is the process for evaluating a property’s environmental conditions for the purpose of qualifying for landowner liability protections under the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA) following final rule of Part 312 of Title 40, Code of Federal Regulations (40 CFR Part 312). The purpose of this Phase I ESA was to identify, to the extent feasible, adverse environmental conditions including recognized environmental conditions (“RECs”) of the Subject Property.

The ASTM E1527-21 standard indicates that the goal of the Phase I ESA is to identify RECs, as well as historical recognized environmental conditions (“HRECs”) and controlled recognized environmental conditions (“CRECs”) that may exist at a property. The term “recognized environmental conditions” is defined as:

1. the presence of hazardous substances or petroleum products in, on, or at the Subject Property due to a release to the environment;

2. the likely presence of hazardous substances or petroleum products in, on, or at the Subject Property due to a release or likely release to the environment; or

3. the presence of hazardous substances or petroleum products in, on, or at the Subject Property under conditions that pose a material threat of a future release to the environment.

ASTM defines a “HREC” as a previous release of hazardous substances or petroleum products affecting the Subject Property that has been addressed to the satisfaction of the applicable regulatory authority and meets current unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls (e.g., activity and use limitations or other property use limitations). A HREC is not considered a REC.

ASTM defines a “CREC” as a REC resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority (e.g., as evidenced by the issuance of a no further action letter or equivalent, or meeting risk-based criteria established by regulatory authority), but with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls (e.g., activity and use limitations, institutional controls, or engineering controls).

As defined by ASTM, RECs can include hazardous substances or petroleum products present under conditions in compliance with laws if that presence represents a material threat of future release. The release of hazardous substances or petroleum products is, however, not a REC if that presence is a *de minimis* condition. *De minimis* conditions are minor releases that generally do not present a material risk to human health and would not likely be subject to enforcement action if brought to the attention of

governmental agencies. ASTM also considers the potential for a business environmental risk (BER), defined as a risk which can have a material environmental or environmentally driven impact on the business associated with the current or planned use of the Subject Property, not necessarily limited to those environmental issues required to be investigated by the ASTM standard. Consideration of BERs may involve addressing one or more ASTM non-scope considerations.

The work was performed in accordance with the Master Services Agreement (MSA) between Stantec and Brandywine Homes. The scope of work conducted during this Phase I ESA consisted of a visual reconnaissance of the Subject Property, interviews with key individuals, and review of reasonably ascertainable documents. The scope of work did not include an assessment for environmental regulatory compliance of any facility ever operated at the Subject Property (past or present), or sampling and analyzing of environmental media. Stantec was not contracted to perform an independent evaluation of the purchase or lease price of the Subject Property and its relationship to current fair market value. The conclusions presented in this Phase I ESA report are professional opinions based on data described herein. The opinions are subject to the limitations described in Section 1.3.

ASTM E1527-21 notes that the availability of record information varies from source to source. The User or Environmental Professional (EP) is not obligated to identify, obtain, or review every possible source that might exist with respect to a property. Instead, ASTM identifies record information that is reasonably ascertainable from standard sources. “Reasonably ascertainable” means:

1. Information that is publicly available;
2. Information that is obtainable from its source within reasonable time and cost constraints; and
3. Information that is practicably reviewable.

1.1 Subject Property Description

The Subject Property consists of approximately 4.35 acres of land associated with Assessor’s Parcel Numbers (APNs) 623-093-10 and 623-093-11, and the address of 15 Argonaut, Aliso Viejo, Orange County, California. According to records obtained through Environmental Data Resources (EDR), the Subject Property appears to have been vacant from at least the 1930s to 1980s and was commercially developed with one structure and asphalt parking lot by 1989 in its present-day configuration. The Subject Property building is currently vacant. The adjoining properties and vicinity are developed with commercial/light industrial businesses and residential properties. A Subject Property Location Map is provided as Figure 1. A Subject Property Vicinity Map illustrating the main features of the Subject Property and vicinity is provided as Figure 2. Photographs taken during the site reconnaissance visit are provided in Appendix A.

1.2 Special Terms, Conditions, and Additional Assumptions

There were no special terms, conditions, or additional assumptions associated with this Phase I ESA.

1.3 Exemptions and Limiting Conditions

This report documents work that was performed in accordance with generally accepted professional standards at the time and location in which the services were provided and given the schedule and budget constraints established by the Client. No other representations, warranties, or guarantees are made concerning the accuracy or completeness of the data or conclusions contained within this report, including no assurance that this work has uncovered all potential and actual liabilities and conditions associated with the Subject Property.

This report provides an evaluation of selected environmental conditions associated with the Subject Property that was assessed at the time the work was conducted and is based on information obtained by and/or provided to Stantec at that time. There are no assurances regarding the accuracy and completeness of this information received from others.

Conclusions made within this report consist of Stantec's professional opinion as of the time of the writing of this report and are based solely on the scope of work described in the report, the limited data available, and the results of the work. They are not a certification of the Subject Property's environmental condition.

The Client did not provide or contract Stantec to provide recorded title records or search results for environmental liens or activity and use limitations encumbering the property or in connection with the Subject Property. Stantec did not obtain historical records that document the property history in 5-year intervals, and this resulted in data gaps. Although this represents data gaps, these data gaps are not considered to impact the EPs ability to identify RECs unless stated as such. Based on the information obtained during the course of this ESA and general knowledge of development at and near the Subject Property, the absence of this information did not affect the ability of the EPs to identify RECs, HRECs, CRECs, or *de minimis* conditions.

This report has been prepared for the exclusive use of the Client identified herein and any use of or reliance on this report by any third party is prohibited, except as may be consented to in writing by Stantec or as required by law. The provision of any such consent is at Stantec's sole and unfettered discretion and will only be authorized pursuant to the conditions of Stantec's standard form reliance letter. Stantec assumes no responsibility for losses, damages, liabilities, or claims, howsoever arising, from third party use of this report.

Project Specific limiting conditions are provided in Section 1.2.

The conclusions are based on the conditions encountered at the Subject Property by Stantec at the time the work was conducted. within this report, if any, including pole lines, conduits, water mains, sewers and other surface or sub-surface utilities and structures, are not guaranteed. Before starting site work, the exact location of all such utilities and structures must be confirmed by the client and the party performing the work, and Stantec assumes no liability resulting from damage to such utilities and structures.

As the purpose of this report is to identify Subject Property conditions which may pose an environmental risk; the identification of non-environmental risks to structures or people on the Subject Property is beyond the scope of this assessment.

The findings, observations, and conclusions expressed by Stantec in this report are not an opinion concerning the compliance of any past or present owner or operator of the Subject Property which is the subject of this report with any Federal, state, provincial or local law or regulation.

This report presents professional opinions and findings of a scientific and technical nature. It does not and shall not be construed to offer a legal opinion or representations as to the requirements of, nor compliance with, environmental laws, rules, regulations, or policies of Federal, state, provincial or local governmental agencies.

Stantec specifically disclaims any responsibility to update the conclusions in this report if new or different information later becomes available or if the conditions or activities on the property subsequently change.

1.4 Personnel Qualifications

This Phase I ESA was conducted by, or under the supervision of, an individual that meets the ASTM definition of an EP. The credentials of the EP and other key Stantec personnel involved in conducting this Phase I ESA are provided in Appendix B.

2 User-Provided Information

ASTM E1527-21 describe responsibilities of the User to complete certain tasks in connection with the performance of “All Appropriate Inquiries” into the Subject Property. The ASTM standard requires that the EP request information from the User on the results of those tasks because that information can assist in the identification of RECs, CRECs, HRECs, or *de minimis* conditions in connection with the Subject Property. Toward that end, Stantec requested that the User provide the following documents and information:

Description of Information	Provided (Yes / No)	Description and/or Key Findings
User Questionnaire and/or Interview	Yes	Mr. Emanuel Robinson, Senior Project Manager with Brandywine Homes, completed the user questionnaire. Mr. Robinson is not aware of any environmental issues associated with the Subject Property and referenced a previous ESA provided by the seller.
Environmental Liens or Activity and Use Limitations (AUL)	No	Deeds, environmental liens, and activity and use limitation documentation were not provided by the User, and public records were not searched by Stantec.
Previous Environmental Permits or Reports Provided by User	Yes	A Phase I ESA for the Subject Property prepared by EMG and dated October 30, 2016, was provided to Stantec for review. No RECs or environmental concerns were identified within the report, and no further investigation was recommended by EMG. User provided documents are provided in Appendix C.
Purpose of the Phase I ESA	Yes	The intended use of the Phase I is for planned redevelopment of the Subject Property.

3 Records Review

The objective of consulting historical sources of information is to develop the history of the Subject Property and surrounding area and evaluate if past uses may have resulted in RECs. Physical setting records are evaluated to determine if the physical setting may have contributed to adverse environmental conditions in connection with the Subject Property. During the review of historical records, Stantec attempted to identify uses of the Subject Property from the present to the first developed use of the Subject Property. Stantec's research included the reasonably ascertainable and useful records described in this section.

3.1 Physical Setting

A summary of the physical setting of the Subject Property is provided in the table below with additional details in the following subsections:

Topography	Soil/Bedrock Data	Estimated Depth to Groundwater/ Estimate Direction of Gradient
According to the United States Geologic Survey (USGS) San Juan Capistrano, California topographic map provided in the Environmental Data Resources Inc. (EDR) Physical Setting Source Addendum (Appendix D), the topographic gradient in the vicinity of the Subject Property is to the east-northeast and the Subject Property is located at approximately 453 feet above mean sea level (ft. amsl).	The United States Department of Agriculture – Natural Resources Conservation Service (USDA-NRCS), Web Soil Survey identifies the soils beneath the Subject Property as Capistrano sandy loam, with well drained soils and a typical soil profile comprised of sandy loam (0-27 inches), and fine sandy loam (27-64 inches).	Site specific groundwater investigations were not conducted during this ESA; however, according to a 2022 *Second Half Groundwater Monitoring Report* for a release site located approximately one mile to the north, groundwater in the vicinity is estimated to be approximately 7.19-15.64 feet below top of well casing (btoc) with a flow direction generally to the east.

NOTE:
Site-specific groundwater flow direction and depth can only be determined by conducting site-specific testing, which Stantec has not conducted.

3.1.1 Subject Property Topography and Surface Water Flow

The Subject Property topography is relatively flat and is located at an elevation of approximately 453 ft. amsl. Based on the topography and existing surface conditions, general surface water is expected to flow to the east-northeast.

3.1.2 Regional and Subject Property Geology

According to a previous environmental site assessment for the Subject Property by EMG in 2016, the general geology of the Subject Property and vicinity is comprised of sandstone, mudstone, siltstone, evaporite and conglomerate, dating from the Oligocene to the Pliocene epochs (EMG, 2016).

According to California DOC Earthquake Zone Map (Department of Conservation Map Server (ca.gov)), the Subject Property is not located within an Alquist-Priolo (AP) Earthquake Fault Zone boundary. The closest fault zone is located approximately 20 miles to the northwest of the Subject Property. The Subject Property lies within a Landslide Zone.

3.1.3 Regional and Subject Property Hydrogeology

The Subject Property lies within the Aliso Creek Watershed located in southern Orange County. The Watershed is part of the Laguna subunit of the San Juan Hydrologic Basin. The Basin is comprised of coastal watersheds which drain to the Pacific Ocean. The Aliso Creek Watershed drains approximately 30 square miles and has limited water-bearing formations, which include two alluvial aquifers and one deeper aquifer. The alluvial aquifers are separated by a shale formation. Groundwater extraction is limited within this area due to saltwater intrusion (Orange County, 2018).

Site specific groundwater investigations were not conducted during this ESA; however, according to a 2022 *Second Half Groundwater Monitoring Report* for a release site located approximately one mile to the north, groundwater in the vicinity is estimated to be approximately 7.19-15.64 feet below top of well casing (btoc) with a flow direction generally to the east.

3.2 Federal, State, and Tribal Environmental Records

A regulatory agency database search report was obtained from EDR, a third-party environmental database search firm. A complete copy of the database search report, including the date the report was prepared, the date the information was last updated, and the definition of databases searched, is provided in Appendix D.

Stantec evaluated the information listed within the database relative to potential impact to the Subject Property, assessing the potential for impacts based in part on the physical setting. As part of this process, inferences have been made regarding the likely groundwater flow direction at or near the Subject Property. As described in 4.1.3, the inferred shallow groundwater flow direction is likely to be toward the east. Observations about the Subject Property and adjoining properties made during the Subject Property reconnaissance are provided in more detail in Section 4.

3.2.1 Listings for Subject Property

The Subject Property was identified in the following EDR databases:

- RCRA-LQG, HWTS, HAZNET, FINDS, ECHO: The Subject Property listed under “Ambry Genetics Corp” is listed in the RCRA database as of 2018 as a large quantity hazardous waste generator of ignitable and corrosive wastes, chloroform, nonhalogenated solvents, benzene, and liquid wastes. The Subject Property is listed under “Research and Development in Biotechnology” and “Medical and Diagnostic Laboratories.” No violations are reported.

- HWTS: The Subject Property listed under “Kamanari Inc” in the Hazardous Waste Tracking System (EPA ID No. CAP982455610) shows an inactive status as of 12/21/2000. No violations are reported.
- HWTS: The Subject Property listed under “Arbonne International” in the Hazardous Waste Tracking System (EPA ID No. CAC001314128) shows an inactive status as of 10/25/2000. No violations are reported.
- HWTS: The Subject Property listed under “Stracon Manufacturing” in the Hazardous Waste Tracking System (EPA ID No. CAL000277358) shows an inactive status as of 12/16/2003. No violations are reported.
- HWTS, HAZNET: The Subject Property listed under “Centon Electronics Inc” in the Hazardous Waste Tracking System (EPA ID No. CAL000298473) shows an inactive status as of 6/30/2008. Additionally, wastes generated onsite included other inorganic solid waste between 2006 and 2015. No violations are reported.
- HWTS, HAZNET: The Subject Property listed under “Green Co Services LLC” in the Hazardous Waste Tracking System (EPA ID No. CAC002638779) shows an inactive status as of 7/28/2009. Additionally, waste generated onsite included unspecified solvent mixture and off-specification, aged or surplus organics in 2009. No violations are reported.

Given there are no reported violations, spills or releases, these listings do not constitute a REC for the Subject Property.

3.2.2 Listings for Adjoining and Nearby Sites with Potential to Impact Subject Property

Stantec assessed data presented in the environmental agency database search report to evaluate the potential for conditions on adjoining and nearby sites to pose a REC, CREC, or HREC for the Subject Property. The evaluation included an opinion of the potential for contamination by hazardous substances or petroleum products to migrate to the Subject Property from an adjoining or nearby site, including by vapor migration or encroachment (i.e., potential for a vapor encroachment condition [VEC]. ASTM E2600-22 Standard Guide for Vapor Encroachment Screening on Property Involved in Real Estate Transactions (ASTM, 2022) was used as the basis for a Tier I Vapor Encroachment Screen (VES) for the Subject Property. This included evaluation of release sites within 1/10 mile for Petroleum Hydrocarbon releases, and 1/3 mile for volatile and semi-volatile organic compound (VOC, SVOC), plus other potential vapor phase contaminants (such as mercury).

Based on this evaluation, the following individual facilities were identified as the most likely potential sources of impact to the Subject Property. The basis for why each of the following listed databases creates a REC for the Subject Property is also provided.

Listed Facility Name/Address	Database Listing(s)	Distance/Direction from Subject Property
Hunter Graphics Inc/Mobile Tech Inc/Halo Clinical Lab Inc 21 Argonaut Aliso Viejo, CA	RCRA-SQG, FINDS, ECHO, EDR HIST AUTO, RCRA NONGEN/NLR, E MANIFEST	0.016 mile/86 feet southeast at higher elevation
This site is listed as a small-quantity hazardous waste generator as of 1989 and in the RCRA NONGEN database as of 2023 under “Medical Laboratories”. Additionally, the site is listed as a gasoline service station in 2008; however, no documentation regarding status is reported. Given there are no reported violations or releases, this site is not considered a REC for the Subject Property.		
Chevron Products Company/Chevron #0200913/Chevron Station #200913/1404/Chevron USA Inc 23022 Aliso Creek Road Aliso Viejo, CA	RCRA-SQG, SWEEPS UST, CA FID UST, FINDS, ECHO, E MANIFEST, UST, UST FINDER, CERS HAZ WASTE, CERS TANKS, CHMIRS, CERS	0.020 mile/106 feet southwest at higher elevation
This site is listed as a gasoline service station since 1996 that reportedly houses three active USTs installed between 2004 and 2016. The USTs range from 10,000 to 20,000 gallons in size and contain diesel, regular and premium unleaded fuel. A minor spill of two gallons of fuel was reported in 2018 due to a vehicle overfill onto concrete. The spill was cleaned by onsite personnel. The site received permit-related violations between 2014 and 2016 which were returned to compliance. No releases are reported at the site. Given the proximity of the fuel station to the Subject Property, and no documented assessment of soil, soil vapor, or groundwater at the site, as well as inferred groundwater flow to the east, this site represents a potential VEC and is considered a REC for the Subject Property.		
Ambry Genetics 7 Argonaut Aliso Viejo, CA	CERS TANKS, CERS, CERS HAZ WASTE, EMI	0.024 mile/126 feet east at lower elevation
This site is listed as having an AST under 10,000 gallons in size. No violations, spills or releases are reported. Given there are no reported releases, this site is not considered a REC for the Subject Property.		
Bearing Engineers 27 Argonaut Aliso Viejo, CA	RCRA NONGEN/NLR, E MANIFEST	0.049 mile/258 feet southeast at higher elevation
This site is listed in the RCRA database as of 1997 with no violations reported. Given there are no reported violations, spills or releases, this site is not considered a REC for the Subject Property.		
Soft Health Technologies LLC/Inceptus Medical 8 Argonaut Aliso Viejo, CA	RCRA NONGEN/NLR	0.059 mile/309 feet east at lower elevation
This site is listed in the RCRA database under “Game, Toy, and Children’s Vehicle Manufacturing” as of 2014 and under “All Other Miscellaneous Manufacturing” as of 2022 with no violations reported. Given there are no reported violations, spills or releases, this site is not considered a REC for the Subject Property.		
Aliso Viejo Towing & Recovery Inc 31 Argonaut	CERS HAZ WASTE, CERS, RCRA NONGEN/NLR, E MANIFEST	0.078 mile/411 feet southeast at higher elevation

Listed Facility Name/Address	Database Listing(s)	Distance/Direction from Subject Property
Aliso Viejo, CA This site is listed as a hazardous waste generator with permit-related violations received in 2018 through 2021 that were largely returned to compliance. Given there are no reported spills or releases, this site is not considered a REC for the Subject Property.		
Econo Lube N Tune/UTV Repair LLC DBA Glenwood Aliso Creek Auto Repair 22932 Glenwood Drive Aliso Viejo, CA This site is listed as having at least one UST of unreported contents and is listed in the RCRA database under "General Automotive Repair" as of 2022 with no violations reported. Given there are no reported violations, spills or releases, this site is not considered a REC for the Subject Property.	UST, RCRA NONGEN/NLR, E MANIFEST	0.081 mile/428 feet west-southwest at higher elevation
Para Tech Coasting Inc 35 Argonaut Circle Aliso Viejo, CA This site is listed as a hazardous waste generator as of 1999 of other inorganic solid waste, waste and mixed oil, off-specification, aged or surplus organics, and unspecified solvent mixture. Permit-related violations were received between 2014 and 2024 which were returned to compliance. Given there are no reported spills or releases, this site is not considered a REC for the Subject Property.	RCRA-SQG, CERS HAZ WASTE, FINDS, ECHO, E MANIFEST, HWTS, HAZNET, CERS	0.105 mile/557 feet southeast at higher elevation
Corte Fina Homeowners Assoc. 95 Argonaut Aliso Viejo, CA This site is listed as a fuel station in 2007 and 2008. No additional details are provided. Given there are no reported violations or releases, this is not considered a REC for the Subject Property.	EDR HIST AUTO	0.123 mile/650 feet east at lower elevation

The remaining listings in the database search report, including listings of Orphan/Unlocated Sites, provided in Appendix D do not constitute a REC for the Subject Property.

3.3 Local/Regional Environmental Records

Stantec checked the following sources to obtain information pertaining to Subject Property use and/or indications of RECs in connection with the Subject Property:

3.3.1 Local Health Department

Agency Name, Contact Information, Date	Finding
Orange County Health Care Agency Via online: https://orangecounty.nextrequest.com Submitted on July 3, 2025	As of the writing of this report, a complete response has not been received by the agency. Should any pertinent information become available an addendum to this report will be issued. However, given the historical documents available the lack of a response from this agency is not considered a significant data gap and is unlikely to impact the findings of this report.

3.3.2 Fire Department

Agency Name, Contact Information, Date	Finding
Custodian of Records Orange County Fire Authority Via email: CRTK@ocfa.org Submitted on: July 3, 2025	As of the writing of this report, a complete response has not been received by the agency. Should any pertinent information become available an addendum to this report will be issued. However, given the historical documents available the lack of a response from this agency is not considered a significant data gap and is unlikely to impact the findings of this report.

3.3.3 Local Building and/or Planning Department Records

Agency Name, Contact Information, Date	Findings
Custodian of Records City of Aliso Viejo Via email: city-clerk@avcity.org Submitted on July 3, 2025	The City of Aliso Viejo provided available records for the Subject Property and adjoining properties on July 8, 2025. Subject Property records available included certificates of occupancy, grading permits, tenant improvements, and building permits. No records of environmental significance were observed. Copies of the provided records are included in Appendix F.

3.3.4 State Department Records

Agency Name, Contact Information, Date	Findings
Department of Toxic Substances Control (DTSC), EnviroStor database Cypress Regional Office Online database: https://www.envirostor.dtsc.ca.gov/public/	Stantec researched EnviroStor, the DTSC public database, to evaluate if there are any reported releases at the Subject Property or on adjoining properties. There were no release sites listed for the Subject Property or adjoining properties. According to an email dated July 11, 2025, the DTSC only has hazardous waste tracking system (HWTS) records for the

Agency Name, Contact Information, Date	Findings
Via email: cypressfileroom@dtsc.ca.gov Submitted and accessed on Jul 3, 2025	Subject Property and adjoining sites which are available online (Hazardous Waste Tracking System: Home). These records are discussed in Section 3.2 above.
California Geologic Energy Management (CalGEM) Online database: https://maps.conservation.ca.gov/doggr/wellfinder Accessed on July 7, 2025	The CalGEM database was searched to identify the potential existence of oil and gas production wells within the vicinity of the Subject Property. No oil or gas wells were located within the Subject Property or adjoining property boundaries. The closest well is located approximately 0.6 miles to the northwest and is listed as a dry plugged hole (API 0405900854). Given the distance of this well, this well is not considered a REC for the Subject Property.

3.3.5 Local/Regional Water Quality Agency Records

Agency Name, Contact Information, Date	Findings
Custodian of Records San Diego Regional Water Quality Control Board (SDRWQCB) Via email: rb9_records@waterboards.ca.gov Submitted and accessed on July 3, 2025	Stantec researched GeoTracker, the California Regional Water Quality Control Board public database, to evaluate if there are any reported releases at the Subject Property or on adjoining properties. There were no release sites listed for the Subject Property or adjoining properties. On July 8, 2025, the agency responded with records for the Subject Property, including: • 2010 stormwater discharge permit termination for adjoining fuels station site at 23022 Aliso Creek Road. No environmental concerns were identified. Additional information regarding this adjoining fuel station is provided in Section 3.2.2 above.

3.3.6 National Pipeline Mapping System – Public Viewer

The National Pipeline Mapping System – Public Viewer was accessed by Jenny Alvarado of Stantec on July 8, 2025. According to the Public Viewer, no buried pipelines are located on or near to the Subject Property.

National Pipeline Mapping System Public Viewer. NPMS Public Viewer (dot.gov). Accessed on July 8, 2025.

3.4 Historical Records Review

3.4.1 Land Title Records/Deeds

Land title records, deeds, environmental liens, and activity and use limitation documentation were not provided by the User, and public records were not searched by Stantec.

3.4.2 Aerial Photographs

Stantec reviewed historical aerial photographs provided by EDR. The general type of activity on a property and land use changes can often be discerned from the type and layout of structures visible in the photographs. However, specific elements of a facility's operation usually cannot be discerned from aerial photographs alone. The following table summarizes Stantec's observations of the reviewed historical aerial photographs. Copies of the historical aerial photographs are provided in Appendix E.

Year	Scale	Observations of Subject Property and Adjoining/Nearby Properties
1938 1946 1952 1963 1967	1"=500'	The Subject Property and adjoining properties are undeveloped land. A creek appears to transect the Subject Property. A road transects the Subject Property by 1963.
1972 1974 1981	1"=500'	The Subject Property and adjoining properties are depicted as undeveloped land.
1989	1"=500'	The Subject Property is depicted with a commercial building and parking lot in its present-day configuration and bound by roads to the north and west. Commercial buildings are depicted adjoining east, south and southeast. Undeveloped land is depicted adjoining to the north and west.
1994 2002 2005	1"=500'	The Subject Property and adjoining properties to the east and south appear similar to the 1989 aerial. The adjoining north property appears to be under construction. Commercial buildings are depicted adjoining west. A golf course is depicted adjoining north and a park to the northwest by 2002.
2010 2014 2018 2022	1"=500'	The Subject Property and adjoining properties to the east, west and south appear similar to the 2005 aerial. Residential development is depicted adjoining north. The vicinity is densely developed.

Name of aerial photograph source: The EDR Aerial Photo Decade Package

3.4.3 City Directories

Stantec retained a third party to research available city directories for the Subject Property and adjoining and nearby properties, in approximately five-year intervals. Copies of the city directory listings are provided in Appendix E. The following is a summary of Stantec's review of the city directory listings:

Subject/Adjoining Properties	Year	Listed Occupants
Subject Property Address: 15 Argonaut	2020-1992	Commercial/industrial
Adjoining North Address: 64 Anacapa Lane	--	No Listing
Adjoining North Address: 75 Anacapa Lane	--	No Listing
Adjoining East Address: 7 Argonaut	2020-1992	Commercial/industrial
Adjoining Southeast Address: 8 Argonaut	2020-1992	Commercial
Adjoining South Address: 21 Argonaut	2020-1992	Commercial/industrial
Adjoining West Address: 23002 Aliso Creek Road	2020	Restaurant
Adjoining West Address: 23022 Aliso Creek Road	2020-1992	Fuel Station

Name of city directories and source: EDR City Directory

3.4.4 Historical Fire Insurance Maps

Fire insurance maps were developed for use by insurance companies to depict facilities, properties, and their uses for many locations throughout the United States. These maps provide information on the history of prior land use and are useful in assessing whether there may be potential environmental contamination on or near the Subject Property. These maps, which have been periodically updated since the late 19th century, often provide valuable insight into historical Subject Property and adjoining and nearby property uses.

Stantec requested fire insurance maps from EDR; however, no coverage exists for the Subject Property. The Sanborn® Map Search Report indicating "no coverage" is presented in Appendix E.

3.4.5 Historical Topographic Maps

Stantec reviewed historical USGS 7.5-minute Topographic Maps of the San Juan Capistrano and Laguna Beach, California Quadrangles (scale 1:24,000), the historical USGS 15-minute Topographic Maps of the Santa Ana and Santiago Peak, California Quadrangles (scale 1:50,000), and the historical USGS 30-minute Topographic Maps of the Corona, California Quadrangles (scale 1:125,000) to help identify past

Subject Property and adjoining and nearby property usage and areas of potential environmental concern. Copies of the historical maps are provided in Appendix E.

The following table summarizes the maps reviewed and our observations.

Year	Scale	Observations of Subject Property and Adjoining/Nearby Properties
1902 1942 1948 1949 1965 1974 1981	1:125,000 1:50,000 1:24,000	The Subject Property and adjoining properties are depicted as undeveloped land. The vicinity appears to be largely vacant/undeveloped.
2012 2015 2018 2022	1:24,000	Structures/features are not depicted on the map.

Name of maps and source: The EDR Historical Topographic Map Report

3.4.6 Other Historical Sources

No other historical sources were researched.

4 Site Reconnaissance

A site reconnaissance of the Subject Property and its vicinity was conducted by Mitchell Bohn on July 10, 2025. Access to the Subject Property was provided by Patrick Barnes of Avison Young. Stantec was unaccompanied during the site reconnaissance. Figure 2 provides information about the Subject Property and adjoining sites and the location of potential areas of environmental concern. Photographs collected during the site reconnaissance are included in **Appendix A**.

4.1 Site Reconnaissance Methodology

The site reconnaissance focused on observation of current conditions and observable indications of past uses and conditions of the Subject Property that may indicate the presence of RECs. The site reconnaissance of the Subject Property was conducted on foot and Stantec utilized the following methodology to observe the Subject Property:

- Traverse the outer Subject Property boundary
- Traverse transects across the Subject Property
- Traverse the periphery of structures on the Subject Property
- Visually observe accessible interior areas expected to be used by occupants or the public maintenance and repair areas, utility areas, and a representative sample of occupied spaces

Weather conditions during the site reconnaissance of the Subject Property were clear and sunny. There were no weather-related Subject Property access restrictions encountered during the reconnaissance visit.

4.2 General Description

Observations	Description
Subject Property and Area Description:	The Subject Property is a former Ambry Genetics commercial property located in a commercial/mixed use zone west of Argonaut and to the southeast corner of Glenwood Dr., and east of Aliso Creek Rd. in the City of Aliso Viejo, County of Orange, California.
Subject Property Operations:	The Subject Property is vacant. No operations were observed at the time of the site reconnaissance. The structure on the Subject Property appears to have been under demolition or renovation based on the interior condition of the structure.
Structures, Roads, Other Improvements:	A single two story commercial/mixed use occupies the center of the Subject Property. Asphalt parking areas are located around the building. The north and west landscaped areas rise from the asphalt parking elevation to street grade (~30 feet rise in elevation).
Subject Property Size (acres):	~4.41 acres.

Observations	Description
Estimated % of Subject Property Covered by Buildings and/or Pavement:	~50%
Observed Current Subject Property Use/Operations:	The Subject Property is vacant. No operations were observed at the time of the site reconnaissance.
Observed Evidence of Past Subject Property Use(s):	Ambry Genetics: genetics, clinical genomic diagnostics.
Sewage Disposal Method (and age):	South Orange County (age unknown).
Potable Water Source:	Moulton Niguel Water District.
Electric and Natural Gas Utilities:	Southern California Edison, Southern California Gas Company.

4.3 Hazardous Substances and Petroleum Products

The following table summarizes Stantec's observations during the Subject Property reconnaissance.

Observations	Description/Location
Hazardous Substances and Petroleum Products as Defined by CERCLA 42 U.S.C. § 9601(14) with identified uses:	None observed.
Drums/Totes/Intermediate Bulk Containers (≥ 5 gallons):	None observed.
Strong, Pungent, or Noxious Odors:	None detected.
Pools of Liquid:	None observed.
Unidentified Substance Containers:	None observed.
Polychlorinated biphenyl (PCB)-Containing Equipment:	One pad mounted transformer is located at the north end of the Subject Property structure. The transformer is in good condition with no visible signs of damage or leaking.
Other Observed Evidence of Hazardous Substances or Petroleum Products:	None observed.

4.4 Interior Observations

Stantec made the following observations during the site reconnaissance of the building interiors at the Subject Property and/or identified the following information during the interview or records review portions of the assessment.

Observations	Description
Heating/Cooling Method:	Electrical HVAC units are located on the roof and in three ground mounted compounds around the structure.
Surface Stains or Corrosion:	None observed.
Floor Drains and Sumps:	Floor drains were observed on the ground floor of the structure in the kitchen/breakroom and bathrooms. No staining or corrosion was observed in or around these features.
Other Interior Observations:	None observed.

4.5 Exterior Observations

Stantec made the following observations during the site reconnaissance of exterior areas of the Subject Property and/or identified the following information during the interview or records review portions of the assessment.

Observations	Description
On-site Pits, Ponds, or Lagoons:	None observed.
Stained Soil or Pavement:	None observed. Note that the parking lot has been recently resurfaced.
Stressed Vegetation:	None observed.
Waste Streams and Waste Collection Areas:	The Subject Property is vacant. No waste observed.
Solid Waste Disposal:	Two concrete trash enclosures were observed during the site reconnaissance. Only one enclosure contained a trash bin from CR&R Disposal.
Potential Areas of Fill Placement:	No mounds, piles, or depressions suggesting the placement of fill material were observed on the Subject Property.
Wastewater:	No exterior wastewater discharge was observed.
Stormwater:	Stormwater is anticipated to flow from across the Subject Property to swales and/or gutters in the asphalt parking lot, thence to Argonaut.
Wells:	No wells were observed.
Septic Systems:	No visible evidence of the existence of a septic system was observed.
Other Exterior Observations:	None observed.

4.6 Underground Storage Tanks/Structures

Observations	Description
Existing USTs:	No visible evidence (fill pipes, vent pipes, dispensers, surface patches) that would indicate the presence of USTs was discovered during the site reconnaissance.
Former USTs:	No visible evidence (fill pipes, vent pipes, dispensers, surface patches), reports, or other evidence of the former presence of USTs was discovered during this Phase I ESA.
Other Underground Structures:	None observed.

4.7 Aboveground Storage Tanks

Observations	Description
Existing ASTs:	No visible evidence (fill pipes, vent pipes, dispensers, surface stains) that would indicate the presence of ASTs was discovered during the site reconnaissance.
Former ASTs:	No visible evidence (fill pipes, vent pipes, dispensers, surface stains), reports, or other evidence of the former presence of ASTs was discovered during this Phase I ESA.

4.8 Adjoining Properties

4.8.1 Current Uses of Adjoining Properties

As viewed from the Subject Property and/or from public rights-of-way, Stantec made the following observations about use and activities on adjoining sites.

NORTH	Glenwood Dr. followed by residential homes.
EAST	Ambry Genetics, 7 Argonaut, commercial property.
SOUTH	Warehouse, commercial, 21 Argonaut.
WEST	Aliso Creek Rd followed by Chevron fuel station (23022 Aliso Creek Rd.), followed by Glenwood Aliso Creek Auto Repair (22932 Glenwood Dr.). Due to the proximity of the adjoining fuel station to the Subject Property (<1/8 mile) and the up-slope location in relation to the Subject Property, Stantec recommends a Phase II Environmental Investigation for potential soil and soil vapor impact to the Subject Property.

Refer to Figure 2.

4.8.2 Observed Evidence of Past Uses of Adjoining Properties

No indications of past use of the adjoining properties were observed.

4.8.3 Pits, Ponds, or Lagoons on Adjoining Properties

Pits, ponds, or lagoons were not observed on the adjoining properties.

4.9 Observed Physical Setting

Observations	Description
Topography of the Subject Property and Surrounding Area:	The Subject Property is generally gently sloped from northwest to southeast excluding the landscaped areas to the north and west of the asphalt parking areas. These are steeply sloped with approximately 1:2 from parking lot grade to street grade.

5 Evaluation

This section provides a summary overview of findings, opinions, and conclusions.

5.1 Findings and Opinions

Information gathered from interviews, reviews of existing data, and an inspection was evaluated to determine if RECs are present in connection with the Subject Property. Based on this information, Stantec made the following findings and developed the following opinions.

- The Subject Property consists of approximately 4.35 acres of land associated with Assessor's Parcel Numbers (APNs) 623-093-10 and 623-093-11, and the address of 15 Argonaut, Aliso Viejo, Orange County, California.

  According to records obtained through Environmental Data Resources (EDR), the Subject Property appears to have been vacant from at least the 1930s to 1980s and was commercially developed with one structure and asphalt parking lot by 1989 in its present-day configuration. No evidence of historical agricultural use was identified on the Subject Property.

- A west-adjoining fuel station located at 23022 Aliso Creek Road is listed as a gasoline service station since 1996 that reportedly houses three active USTs installed between 2004 and 2016. The USTs range from 10,000 to 20,000 gallons in size and contain diesel, regular and premium unleaded fuel. A minor spill of two gallons of fuel was reported in 2018 due to a vehicle overfill onto concrete. The spill was cleaned by onsite personnel. The site received permit-related violations between 2014 and 2016 which were returned to compliance. No releases are reported at the site. Given the proximity of the fuel station to the Subject Property, and no documented assessment of soil, soil vapor, or groundwater at the site, as well as inferred groundwater flow to the east, this site represents a potential VEC and is considered a REC for the Subject Property.

  Stantec recommends a Phase II subsurface investigation to address potential subsurface impacts related to the west-adjoining fuel station.

- The Subject Property building was constructed in the 1980s. Given the age of construction, asbestos-containing materials (ACMs) and lead-based paint (LBP) may be present in building materials. Additionally, an asphalt parking lot is present on the Subject Property. Petromat is a stress-absorbing fabric often associated with asphalt, and it sometimes contains asbestos.

  Stantec recommends an ACM, LBP and Petromat survey be conducted prior to renovation or demolition in accordance with applicable local and federal regulations.

5.2 Data Gaps

The Federal AAI final rule [40 CFR 312.10(a)] and ASTM E1527-21 identify a "data gap" as the lack or inability to obtain information required by the standards and practices of the rule despite good faith efforts by the EP or the User.

Any data gaps resulting from the Phase I ESA described in this report are listed and discussed below.

Gap	Discussion
Deletions or Exceptions from Scope of Work Referenced in Section 1.4:	None.
Weather-Related Restrictions to Site Reconnaissance:	None.
Facility Access Restrictions to Site Reconnaissance:	None.
Other Site Reconnaissance Restrictions:	None.
Data Gaps from Environmental Records Review:	None.
Data Gaps from Historical Records Review:	Historical records for the Subject Property were not available in five-year increments. These are considered to be data gaps; however, based on available historical records and consistent land use, they do not appear to change the conclusions of this report.
Data Gaps from Interviews:	No on-site interview was conducted. Given the historical documentation available, the lack of an on-site interview is not considered a significant data gap and is unlikely to impact the findings of the report.
Other Data Gaps:	To date, some agency responses have not been received; however, this is not expected to impact the EP's ability to identify RECs.

5.3 Conclusions

We have performed a Phase I ESA in conformance with the scope and limitations of ASTM Practice E1527-21 of the property located at 15 Argonaut, Aliso Viejo, Orange County, California, or the "Subject Property". Any exceptions to, or deletions from, this practice are described in Section 2.3 of this report. This assessment has revealed the following evidence of recognized environmental conditions (RECs), Controlled RECs (CRECs), and/or significant data gaps in connection with the Subject Property.

- A west-adjoining fuel station located at 23022 Aliso Creek Road is listed as a gasoline service station since 1996 that reportedly houses three active USTs installed between 2004 and 2016. The USTs range from 10,000 to 20,000 gallons in size and contain diesel, regular and premium unleaded fuel. A minor spill of two gallons of fuel was reported in 2018 due to a vehicle overfill onto concrete. The spill was cleaned by onsite personnel. The site received permit-related

violations between 2014 and 2016 which were returned to compliance. No releases are reported at the site. Given the proximity of the fuel station to the Subject Property, and no documented assessment of soil, soil vapor, or groundwater at the site, as well as inferred groundwater flow to the east, this site represents a potential VEC and is considered a REC for the Subject Property.

Stantec recommends a Phase II subsurface investigation to address potential subsurface impacts related to the west-adjoining fuel station.

This assessment has revealed the following items of note in connection with the Subject Property.

- The Subject Property building was constructed in the 1980s. Given the age of construction, asbestos-containing materials (ACMs) and lead-based paint (LBP) may be present in building materials. Additionally, an asphalt parking lot is present on the Subject Property. Petromat is a stress-absorbing fabric often associated with asphalt, and it sometimes contains asbestos. Stantec recommends an ACM, LBP and Petromat survey be conducted prior to renovation or demolition in accordance with applicable local and federal regulations.

6 Non-Scope Considerations

The following ASTM E1527-13 non-scope services were performed as part of this Phase I ESA:

6.1 Lead-Based Paint

Concern for LBP is primarily related to residential structures. The EPA's Final Rule on Disclosure of Lead-Based Paint in Housing (40 CFR Part 745) defines LBP as paint or other surface coatings that contain lead equal to or in excess of 1.0 milligram per square centimeter or 0.5 percent by weight.

The risk of lead toxicity in LBP varies based upon the condition of the paint and the year of its application. The U.S. Department of Housing and Urban Development (HUD) has identified the following risk factors:

- The age of the dwelling as follows:
  - Maximum risk is from paint applied before 1950.
  - There is severe risk from paint applied before 1960.
  - There is moderate risk from deteriorated paint applied before 1970.
  - There is slight risk from the paint that is intact but applied before 1977.
- The condition of the painted surfaces.
- The presence of children and certain types of households in the building.
- Previously reported cases of lead poisoning in the building or area.

The Subject Property was developed in the 1980s; therefore, the potential for LBP is considered possible. Stantec recommends an LBP survey prior to redevelopment.

6.2 Asbestos

Asbestos can be found in many applications, including sprayed-on or blanket-type insulation, pipe wraps, mastics, floor and ceiling tiles, wallboard, mortar, roofing materials, and a variety of other materials commonly used in construction. The greatest asbestos-related human health risks are associated with friable asbestos, which is ACM that can be reduced to powder by hand pressure. Friable asbestos can become airborne and inhaled, which has been associated with specific types of respiratory disease. The manufacturing and use of asbestos in most building products was curtailed during the late 1970s.

The Subject Property was developed in the 1980s; therefore, the potential for ACMs is considered possible. Stantec recommends an ACM survey prior to redevelopment.

6.3 Radon

Radon is a colorless, tasteless radioactive gas with an EPA-specified action level of 4.0 PicoCuries per liter of air (pCi/L) for residential properties. Radon gas has a very short half-life of 3.8 days. The health risk potential of radon is primarily associated with its rate of accumulation within confined areas near or in the ground, such as basements, where vapors can readily transfer to indoor air from the ground through

foundation cracks or other pathways. Large, adequately ventilated rooms generally present limited risk for radon exposure. The radon concentrations in buildings and homes depend on many factors, including soil types, temperature, barometric pressure, and building construction (EPA, 1993).

Stantec reviewed regional data published by the EPA on average indoor radon concentrations in the vicinity of the Property (http://www.epa.gov/radon/zonemap.html).

EPA Radon Zones (w/Average Measured Indoor Radon concentrations)		
Zone 1 – High (>4.0 pCi/L)	Zone 2 – Moderate (2 to 4 pCi/L)	Zone 3 – Low (<2 pCi/L)
		X
Normally occupied sub grade areas present? (i.e., basement apartments, offices, stores, etc.)		
No subgrade areas currently occupied at the Subject Property.		

The Subject Property is located in Zone 3 and is considered to have a low potential for radon. To determine Subject Property-specific radon levels, a radon survey would have to be conducted. However, because the Subject Property does not have any occupied subgrade areas and is planned for redevelopment, further investigation of indoor radon issues does not appear to be warranted.

6.4 Flood Zones

According to the Physical Setting summary portion of the EDR report, the Subject Property is not located within a 0.2% Annual Chance Flood Hazard Zone.

Stantec Resumes

Jenny Alvarado

Project Biologist

13 years of experience · Ventura CA, California

A wildlife biologist who specializes in the avian and botanical fields, Jenny performs threatened and endangered species surveys, protocol nesting bird surveys, biological resource assessments, habitat characterization surveys, and restoration monitoring across Southern California. Jenny has prepared permit applications for CDFG Streambed Alteration Agreements (CDFG Section 1600), Regional Water Quality Control Board Water Quality Certifications (Clean Water Act Section 401), and U.S. Army Corps of Engineers Permits (Clean Water Act Section 404). Jenny is also experienced with California Environmental Quality Act and National Environmental Policy Act compliance. Although her background is mainly avian biology, she has experience identifying mammals, reptiles, and aquatic species. She performs compliance monitoring for a wide array of clients, including Southern California Gas Company, Plains All American Pipeline, and Caltrans. She assists in preparing Initial Studies, Mitigated Negative Declarations, Environmental Assessments, and Environmental Impact Reports for a variety of land uses. Additionally, she has experience assisting with asbestos and lead building surveys in California and Hawaii.

PROJECT EXPERIENCE

WILDLIFE BIOLOGY

Los Angeles County Beaches and Harbors Beach Berm Construction* | Los Angeles County, California | Snowy Plover Monitor

Jenny conducted snowy plover monitoring on five Los Angeles County beaches during berm construction and deconstruction. Daily monitoring reports were submitted to the County.

United Water District, Least Tern Surveys* | United Water Conservation District | Saticoy, California | Biologist

Jenny conducted weekly least tern surveys over two nesting seasons at the United Water facility. She drafted the final results report for the District.

McGrath State Beach Tidewater Goby and Water Quality Monitoring* | California Department of Fish and Wildlife | Ventura, California | Biologist

Jenny conducted daily tidewater goby sein netting surveys and relocation for an emergency construction project in the Santa Clara River estuary. She also performed daily water quality sampling and invasive species removal.

Ormond Beach Snowy Plover and Least Tern Surveys* | California Department of Fish and Wildlife | Ventura, California | Biologist

Jenny conducted protocol nesting bird surveys for the snowy plover and least tern within protected enclosures. Nesting behaviors, nest location, and young were tracked, documented and monitored throughout the nesting season.

California State University Channel Islands, Least Bell's Vireo Surveys* | California State University Channel Islands | Camarillo, California | Biologist

Jenny conducted least Bell's vireo surveys on the CSUCI campus for one nesting season, and assisted in preparation of final reporting.

** denotes projects completed with other firms*

Special-Status Species Surveys* | Recurrent Energy | Kern County, California | Biologist

Jenny conducted desert tortoise, burrowing owl and kit fox surveys for several solar projects across Kern County.

Stantec Architecture, FedEx Construction Site Burrowing Owl Survey | Bloomington, California | Biologist

Jenny performed a pre-construction special status species survey as well as burrowing owl presence/absence surveys in support of a proposed expansion project at a FedEx Ground facility. While conducting the survey, Jenny observed one burrowing owl within the proposed project area and helped coordinate additional protocol surveys in accordance with the project's mitigation requirements.

Luis Oasis Senior Center, Biological Constraints Analysis | Orcutt, California | Biologist

Jenny performed a field reconnaissance survey to document existing site conditions, the potential for sensitive biological resources, and took an inventory of protected native trees. Jenny also drafted the Biological Constraints Analysis Report for the project.

Town Building and Development, ISBA | Ventura County, California | Biologist

Jenny performed a field reconnaissance survey and prepared an ISBA to document existing habitat conditions and the potential for sensitive biological resources in accordance with County of Ventura ISBA requirements.

Algonquin Power, SKIC 10 Solar Project San Joaquin Kit Fox, Burrowing Owl, Nesting Bird and Wildlife Clearance Surveys | Bakersfield, California | Biologist

Jenny performed San Joaquin kit fox, burrowing owl, nesting bird, and wildlife clearance surveys prior to project construction.

Comstock Homes, Burrowing Owl Surveys | Camarillo, California | Biologist

Jenny prepared a proposal and conducted burrowing owl presence/absence surveys for a residential development project in Camarillo. She also concurrently performed a nesting bird survey of the project area and prepared a report of the results.

ENVIRONMENTAL MONITORING

Pipeline Safety Enhancement Plan* | Southern California Gas Company | Ventura and Los Angeles Counties, California | Lead Environmental Monitor

Jenny conducted environmental monitoring for several gas pipeline replacement projects. She monitored biological resources, storm water and air quality, hazardous waste control, and cultural and archaeological resources, as well as performing water and polychlorinated biphenyl sampling. She also conducted pre-construction surveys, prepared project reports, and compliance monitoring documents.

Caltrans Bridge Replacement Project* | Santa Barbara, California | Biologist

Jenny conducted the biological monitoring for two bridge replacements that required monitoring stream diversion installation and removal. She performed aquatic species surveys, nesting bird surveys, and water diversion as well as general construction compliance monitoring.

Biological Monitoring, Line 63 Pipeline Replacement Project | Plains All American Pipeline Company | Castaic, California | Biologist

Jenny conducted biological and restoration monitoring of a petroleum pipeline replacement within the Angeles National Forest. She conducted sensitive species clearance surveys prior to daily construction activities and monitored habitat restoration and Best Management Practices (BMP) installation.

Plains All American Pipeline Drilling Project | Posey Canyon, Angeles National Forest, California | Biologist

Jenny provided biological resource monitoring, and nesting bird and wildlife surveys for a drilling project in the Angeles National Forest.

Riparian Habitat Assessment, Line 63 Replacement Project | Plains All American Pipeline Company (PAALP) | Santa Clara River, Los Angeles County, California | Biologist

Jenny was approved by CDFW as a qualified biological monitor and conducted environmental compliance monitoring for installation of a pipeline through the Santa Clara River via Horizontal Directional Drilling (HDD). During monitoring of construction activities Jenny also surveyed for potential frac- out during HDD operations.

Carpinteria Sanitary District, Carpinteria Creek Aquatic Species Surveys and Horizontal Direction Drilling (HDD) Monitoring | Carpinteria, California | Biologist

Jenny conducted pre-construction aquatic surveys within Carpinteria Creek for red-legged frog, southwestern pond turtle, tidewater goby, and two-striped garter snake. She also provided biological construction monitoring during HDD construction activities within the creek. Jenny detected a frac-out and was able to prevent any frac-out material from entering Carpinteria Creek by promptly alerting project personnel.

Phillips 66 Pipeline Biological Monitoring Project | Phillip 66 Pipeline LLC | Arroyo Grande, California | Biologist

Jenny conducted environmental compliance monitoring for a 5.6 mile pipeline project that crossed the Arroyo Grande Creek and an additional tributary. The project entailed dewatering a 70- foot section of creek and replacing a portion of pipeline underneath. Jenny also conducted SWPPP inspections for the entire project.

** denotes projects completed with other firms*

STREAM/RIVER RESTORATION

California State University Channel Islands, Restoration Monitoring* | Camarillo, California | Biologist

Jenny conducted quarterly and annual qualitative and quantitative monitoring for a creek restoration site on CSUCI campus. She also prepared quarterly status memos and annual restoration monitoring reports in accordance with agency requirements.

Restoration Monitoring* | City of Santa Barbara | Santa Barbara, California | Biologist

Jenny performed quarterly and annual qualitative and quantitative monitoring for two bridge projects over Mission Creek. She prepared annual restoration monitoring reports in accordance with agency requirements.

BOTANICAL SURVEYS

California State University Channel Islands, Vegetation Mapping* | California State University Channel Islands | Camarillo, California | Biologist

Jenny conducted vegetation habitat mapping on CSUCI campus and prepared survey results reports.

Oak Tree Inventory and Vegetation Mapping* | Confidential | Castaic, California | Biologist

Jenny conducted oak tree inventories for several hundred trees and prepared vegetation habitat maps for three adjacent parcels.

High Speed Rail Special-Status Floral Surveys* | Tehachapi, California | Biologist

Jenny conducted focused, rare plant surveys for a portion of a high-speed rail project through Tehachapi.

NATURAL RESOURCE DAMAGE ASSESSMENT AND OIL SPILL RESPONSE

Habitat Restoration Monitoring, Refugio Oil Spill | Plains All American Pipeline Company | Goleta, California | Biologist

Jenny conducted restoration monitoring and assisted with habitat assessments at multiple sites along the California coast following spill cleanup response efforts.

ASBESTOS, LEAD BASED PAINT, AND HAZARDOUS MATERIAL (MERCURY, PCB) ASSESSMENTS

Asbestos and Lead Surveys | Hawaii | Environmental Scientist

Jenny assisted with asbestos and lead surveys for several multi-story buildings for a confidential client. The surveys included exterior and interior sampling, mapping, and reporting. Additionally, inventories of hazardous materials were taken, including potential mercury and PCB-containing materials.

Asbestos and Lead Surveys | Westlake and Thousand Oaks, California | Environmental Scientist

Jenny assisted with asbestos and lead surveys for several shopping centers for a confidential client. The surveys included exterior and interior sampling, mapping, and reporting. Additionally, inventories of hazardous materials were taken, including potential mercury and PCB-containing materials.

Alicia Jansen CAC, LRCIA

Senior Scientist
21 years of experience

Alicia is a Senior Scientist with over twenty years of experience in Phase I and II Environmental Assessments, with strong emphasis in water quality and environmental research. Alicia has managed the preparation of environmental documents, training programs, and environmental compliance during large scale environmental monitoring projects. Alicia's environmental consulting experience includes performing asbestos and lead-based paint surveys, oversight of contractors during asbestos abatement, hazardous materials surveys, and Phase I Environmental Site Assessments (ESAs) in accordance with the practices identified in the American Society for Testing and Materials (ASTM) Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process, ASTM Designation E 1527-21 and the Standard Practice for Environmental Site Assessments for Forestland or Rural Property, ASTM Designation E 2247-16.

PROJECT EXPERIENCE

HEALTH, SAFETY & INDUSTRIAL HYGIENE

Cochise County, Asbestos, Lead-Based Paint, and Hazardous Materials Survey | Arizona | Field Lead and Certified Asbestos Consultant

Alicia conducted with site inspections for asbestos, lead-based paint, and hazardous materials at multiple vacant structures including schools, multi-tenant apartment buildings, and commercial structures. The scope of work involved sample collection for asbestos and lead-based paint in addition to the quantification of universal wastes (PCBs, mercury containing equipment, refrigerants, etc.) that would require special handling and disposal. She assisted with the preparation of reports summarizing findings. Role: Field Lead | Dates involved: 2020-2022

Confidential Health Care Company, Asbestos, Lead-Based Paint, and Hazardous Materials Survey | Northern California | Staff

Alicia assisted with site inspections for asbestos, lead-based paint, and hazardous materials at multiple occupied hospitals and office spaces. The scope of work involved sample collection for asbestos and lead-based paint in addition to the quantification of universal wastes (PCBs, mercury containing equipment, refrigerants, etc.) that would require special handling and disposal. She assisted with the preparation of reports summarizing findings. Role: Field Lead | Dates involved: 2013-2020

State of California General Services, Asbestos, Lead-Based Paint, and Hazardous Materials Survey | Northern California | 2009 | Technical Support

Alicia assisted with site inspections for asbestos, lead-based paint, and hazardous materials at multiple communication towers in remote areas. The scope of work involved sample collection for asbestos and lead-based paint in addition to the quantification of universal wastes (PCBs, mercury containing equipment, refrigerants, etc.) that would require special handling and disposal. She assisted with the preparation of reports summarizing findings. Role: Technical Support | Cost: Unknown | Dates involved: 10/2009-10/2009

Indoor Air Quality Assessments* | San Jose, California | 2002-2005 | Staff

Alicia performed site inspections, interviews, and collected air samples to be analyzed for various air pollutants and molds including formaldehyde, penicillium, aspergillus, cladosporium, and stachybotry. She prepared reports summarizing findings and made recommendations.

Veteran's Administration of Puget Sound, Asbestos and Lead-Based Paint Survey | Seattle, Washington | 2009 | Project Scientist

Alicia served as the Project Scientist responsible for hazardous building material assessments, specifically asbestos and lead-based paint. These services were required as part of the pre-design tasks for this project. Over 300 samples were collected over the span of four days culminating in a final hazardous building materials report to be incorporated into the facility design as well as demolition activities once the construction phase of the

** denotes projects completed with other firms*

project commences.

Interim Remedial Action, Indoor Air Sampling, and Sub-Slab Soil Gas Sampling | Sunnyvale, California | 2004–2014 | Task Manager and Field Support

Alicia conducted an indoor air sampling survey using air sampling pumps, dosimeter badges, and flame ionization detector (FID) during a sump excavation. She performs semi-annual sub-slab soil vapor sampling and indoor air quality surveys using summa canisters. She assists with the preparation and submittal of reports summarizing the findings and provides recommendations to the local regulatory agency. Role: Indoor Air Sampling Survey | Cost: Unknown | Dates involved: 09/2004-09/2014

Lead Dust Assessment and Abatement Oversight | Fremont, California | 2009 | Technical Support

Alicia assisted with the evaluation of lead dust in an industrial facility. A total of 307 dust wipe samples were collected in order to evaluate the potential presence of lead dust throughout the two-story, 500,000 square foot manufacturing building. Role: Technical Support | Cost: Unknown | Dates involved: 01/2009-03/2009

Former Tesoro Coke Facility, Asbestos, Lead-Based Paint Survey | Pittsburg, California | Technical Support

Alicia assisted with an asbestos and lead paint survey of 20 structures at the facility ultimately scheduled for demolition. More than 200 samples were collected over the span of two days. She prepared a report for demolition while also providing the information needed for worker safety during demolition activities at the facility. Role: Technical Support | Cost: Unknown | Dates involved: 04/2009-04/2009

State of California General Services, Asbestos and Lead-Based Paint Survey | Southern California | 2014-2019 | Certified Asbestos Consultant

Alicia conducted with site inspections for asbestos and lead-based paint at multiple bridges, maintenance stations, and roadways throughout Southern California. The scope of work involved sample collection for asbestos and lead-based paint that would require special handling and disposal. She assisted with the review and approval of reports summarizing findings. Role: Certified Asbestos Consultant | Cost: Unknown | Dates involved: 9/2014-10/2019

Confidential Client, Asbestos and Lead-Based Paint Survey | Multiple Sites, California | Task Manager and Certified Asbestos Consultant

Alicia conducts pre-demolition asbestos and lead paint surveys of structures ultimately scheduled for demolition. She prepared a report for demolition while also providing the information needed for worker safety during demolition activities at the facility. Role: Task Manager and Certified Asbestos Consultant| Dates involved: 2006 - present

PERMITTING, COMPLIANCE, AUDITING

Tesoro Refinery, Initial Study* | Benicia, California | 2005 | Staff

Alicia assisted with the background research and preparation of applicant-prepared initial study for the upgrade of a refinery.

Transmission Line Upgrade* | San Mateo to San Francisco, California | 2005 | Environmental Research and Compliance Staff

Alicia supported the environmental compliance program for the construction of a 27-mile 230 kV underground and overhead transmission line. She assisted with the preparation and submittal of variance requests, extra work space requests, and daily and weekly reports for submittal to the California Public Utilities Commission. She also conducted research and assisted with training and report preparation.

REMEDIAL INVESTIGATIONS & ASSESSMENTS

California Department of Transportation Portfolio | Multiple Sites, Northern California and Southern California, California | 2008-2019 | Task Lead Manager

Alicia prepared quarterly groundwater monitoring reports, subsurface investigation reports, sensitive receptor surveys, and preferential pathway studies for various California Department of Transportation locations throughout Northern California. She assisted with the utility locating, work plan preparation, field coordination, archived data onto the State Water Resource Control Board's (RWQCB) Geotracker electronic filing system. Alicia currently conducts site inspections for asbestos, lead-based paint, and hazardous materials for bridges, salt barns, and maintenance buildings associated with California Department of Transportation locations throughout Southern California. The scope of work involves sample collection for asbestos and lead-based paint that would require special handling and disposal. She assists with the preparation of reports summarizing findings. Role: Task Lead Manager | Cost: Unknown | Dates involved: 06/2008-02/2019

Soil Gas Sampling and Human Health Risk Assessment | San Jose, California | 2014 | Project Lead

Alicia performed a soil vapor survey in conformance with the DTSC Advisory Active Soil Gas Investigations, using soil vapor sampling devices and a mobile laboratory for onsite chemical analysis. She also assisted with the report preparation summarizing the findings and providing recommendations for further assessment. Role: Task Lead Manager | Cost: Unknown | Dates involved: 2014

Confidential Clients, Phase I Environmental Site Assessments | Multiple Sites, California, Arizona, New Mexico, Texas, Virginia | Task Manager

Alicia performs Phase I Environmental Site Assessments for multiple confidential clients in accordance with the practices identified in the American Society for Testing and Materials (ASTM) Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process, ASTM Designation E 1527-13; ASTM E 1527-21; and Standard Practice for Environmental Site Assessments for Forestland or Rural Property, ASTM Designation E 2247-16 to achieve compliance with requirements of the "All Appropriate Inquiries" rule required to obtain protection from liability under the federal Comprehensive Environmental Response, Cleanup and Liability Act (CERCLA). Previous sites include large industrial warehouses, multi-tenant

commercial buildings, large lots of vacant land, and residential properties. She reviews topographic maps, Sanborn Fire Insurance Maps, and files at local regulatory agencies. She interviews present and former property owners and performed site and adjacent property reconnaissance. She prepares reports summarizing the findings and provides recommendations for further assessment if applicable. Role: Task Lead Manager | Cost: $3,000-8,000 per report. | Dates involved: 2006-present

Goodyear Portfolio | California and Hawaii | 2005–2020 | Project Lead

Alicia performed Phase I Environmental Site Assessments (ESA) and Phase II Site Assessments for various Goodyear Tire & Rubber Company locations throughout California and Hawaii. She assisted with the installation of monitoring wells and exploratory borings; underground storage tank removals; site restoration; product removal with passive recovery system; archived data onto the State Water Resource Control Board's Geotracker electronic filing system; and assisted with the preparation of quarterly groundwater monitoring reports, sensitive receptor surveys, site conceptual models, and subsurface investigation reports. Approximately 250 Sites • Cost: $8,000 per site.

Kyle D. Emerson PG, CEG

Managing Principal Geologist

Stantec

Kyle has more than 28 years of professional experience—17 of those years with Stantec—providing geotechnical and environmental consulting. During the course of his experience, he has been involved with a wide variety of geological and engineering projects. He has been in direct charge of quality control/quality assurance (QA/QC) work for Stantec and previous firms for geological, engineering geological, and environmental services primarily in California. Additionally, Kyle has been a primary contact for Stantec with many different clients (including multi-party actions) and regulatory bodies involving contracting, workplan approvals, site assessments and closures, permitting, remedial action, and litigation support. With regard to litigation services, Kyle has extensive experience providing expert witness testimony, second-party review, and litigation support and analysis.

Kyle's extensive experience includes assessment and remediation of property-specific and regional issues involving soil and groundwater contaminated with petroleum hydrocarbons, chlorinated solvents, heavy metals, pesticides, and PCBs.

He currently serves as the managing principal geologist in Stantec's Redlands, California office.

EDUCATION

Engineering Geology/Hydrogeology, California State University, Los Angeles, California, 1984

AS, General Science, Crafton Hills College, Yucaipa, California, 1975

BS, Geological Sciences, California State University, Long Beach, California, 1982

REGISTRATIONS

Certified Engineering Geologist #1271, State of California Issued 1985, Expires 2011

Professional Geologist #4066, State of California Issued 1985, Expires 2011

PROJECT EXPERIENCE

Bioremediation

Excavation and Treatment of Petroleum-Contaminated Soil

Kyle designed the excavation and treatment of 45,000 cubic yards of petroleum-contaminated soil. Soil treatment included utilizing vapor extraction, combined with bioremediation.

** denotes projects completed with other firms*

Kyle D. Emerson PG, CEG

Managing Principal Geologist

Chemicals & Polymers

Two Former Chemical Plants, Environmental Site Assessments and Remediation, Vernon, California

Mr. Emerson was part of the team for conducting Phase I and Phase II Environmental Site Assessments (ESA) and developing remedial action plans for two former chemical plant sites with 80-year industrial histories. Phase I ESAs used historical files, maps, aerial photographs, available documents, and data from public agencies and historical directories for identifying recognized environmental concerns. Extensive Phase II ESA survey activities aided in identifying below-grade structures such as vaults/USTs, as well as assessing the extent of influence and nature of the contamination. These investigations confirmed the presence of heavy metals, petroleum hydrocarbons, volatile organic compounds, polychlorinated biphenyls, radioactive materials, semi-volatile organic compounds, and polycyclic aromatic compounds in the soils for these sites. Specific areas of concern included former settling ponds, a bone yard, maintenance areas, transformer and substations, wastewater treatment facilities, and above-ground storage tank farms. A conceptual mode was developed for use in a health risk assessment and developed risk-based corrective actions to address potential health and environmental concerns. He assisted with the development and implementation of a remedial action plan, combined administrative controls, engineering controls, and active remediation; this resulted in the cost-effective return of one site to active use, and is reducing health risks to occupants and the public at the second site.

CONFIDENTIAL: Aerospace Adhesives and Coatings Plant, Glendale, California

Mr. Emerson was part of the team that conducted feasibility studies to evaluate remedial alternatives for remediation of chlorinated VOCs, 1,4 dioxane, and hexavalent chromium (CrVI) in soil, soil vapor, and groundwater. Feasibility studies included groundwater pump testing, benchscale column testing to evaluate in situ alternatives for reducing CrVI to the less mobile CrIII valence state, soil vapor extraction, capping, and excavation. Field pilot studies were performed to evaluate the efficiency of various CrVI reductants including the use of ferrous sulfate, calcium polysulfide, emulsified oil, and fructose. Extensive multi-depth soil vapor testing was conducted to evaluate the distribution of VOCs in the subsurface and to support vapor intrusion risk assessment. Feasibility studies were completed in 2008. Remedial actions are expected to be completed in 2011.

Condition Assessments

Assessment and Mitigation of Manufacturing Facility

Kyle managed the assessment and mitigation of an ammunition manufacturing facility covering 1,100 acres in a complex geologic environment. The contaminates involved red and white phosphorous, TNT, chlorinated solvents, solid wastes, and live ordinance.

Soil Contamination Assessment Supervision and Management

Kyle managed and supervised soil contamination assessment and in-situ remediation of heavy metals involving chromium, cadmium, nickel and zinc by chemical fixation to depths in excess of 40 feet below ground surface beneath existing structures within several manufacturing facilities.

** denotes projects completed with other firms*

Kyle D. Emerson PG, CEG

Managing Principal Geologist

Litigation Support and Expert Testimony
Kyle provided litigation support and expert testimony on more than 20 separate projects involving service stations, chlorinated solvent cases, heavy metal, and semi-volatile releases.

Corporate / Office
Commercial Developer - Environmental Remediation of Former Dry Cleaners, El Centro, California
Mr. Emerson was responsible for assessments and remediation at this former dry cleaners which released the dry cleaning chemical tetrachloroethene (PCE) to the ground and underlying groundwater. The work included initial site assessment, agency interaction and negotiations with the California Regional Water Quality Control Board (CRWQCB), and Colorado Basin Region human health risk assessment (HHRA), design and implementation of remedial investigations, feasibility studies, remedial action plans, and implementation of remediation in mitigating chlorinated solvent contamination in vadose and saturated zones at concentrations indicative of DNAPL. The results of the completed remediation, as well as continued confirmation sampling and monitoring, allowed the CRWQCB to issue site closure in 2008. The site has since been redeveloped into a new commercial development.

Environmental Assessments
Siting Studies
Kyle performed initial siting studies for potential Class I, II, and III landfills. The project included detailed geologic mapping, hydrogeological studies, and permeability studies of caps and liners.

Environmental Site Remediation
Assessment and Remedial Design, California (Project Supervisor)
Kyle supervised the assessment and remedial design of a system to eliminate salt brine contamination in shallow perched water horizons in the Yucaipa, San Bernardino, and Riverside areas of southern California.

Design and Installation of Recovery Systems*
Kyle designed and installed numerous free-product recovery systems that successfully recovered product. One of the sites contained product up to 11-feet thick covering more than three city blocks. The dissolved phase had affected a multi-aquifer system and a public drinking water system.

Geophysical Characterizations*
Kyle performed and supervised numerous geophysical characterizations to determine the extent of old landfills. He provided classification studies, landfill gas monitoring, removal verification during grading, methane collection and mitigation plans, permitting, and closure plans.

Domestic Landfill Development*
Kyle designed and supervised the dynamic consolidation of a domestic landfill for development. He used this process to minimize expected settlement to overlying structures. Kyle designed commercial developments on closed landfills that involved complex methane collection and monitoring systems and building settlement controls.

** denotes projects completed with other firms*

Kyle D. Emerson PG, CEG

Managing Principal Geologist

Clay Borrow Site Studies
Kyle performed more than 10 separate clay borrow site studies for determining sources of material to cap landfills; ranged from a 20-acre dry lakebed to a 450-acre parcel in complex folded marine sediments.

Assessment, Clean Up, and Regulatory Support Management, Santa, Monica (Project Manager)
Kyle managed the assessment, clean up, and complex regulatory support of a PRP site in an MTBE case (Charnock subbasin). His work involved more than 20 environmental professionals working full time for two years to complete the assessment and clean up mandated by the regulatory agencies.

Hazardous Waste
San Gabriel Valley Superfund Site, Remediation & Closure of Multiple Source Areas, Industry, California
Mr. Emerson performed feasibility studies to evaluate appropriate and relevant remedial alternatives to mitigate constituents of concern in five AOCs contaminated with chlorinated hydrocarbons, heavy metals, petroleum fuel, and cutting oils. Ultimately, a combination of remedial alternatives was implemented that included large-diameter auger excavation to 45 feet to minimize impacts on facility operations, vapor extraction, vapor intrusion risk assessment, deed restriction, and monitored natural attenuation. At the completion of remedial actions, confirmation soil, soil vapor, and groundwater sampling were conducted and followed with risk assessment to demonstrate that remedial objectives had been achieved. No further action was recently granted by the US EPA and Los Angeles Regional Water Quality Control Board.

Mixed-Use
Port of San Diego Rohr Facility, Chula Vista, California
Mr. Emerson assisted in a detailed subsurface assessment of the Rohr facility. The intent of the assessment was to evaluate the 40-acre former aircraft part manufacturing facility for acquisition by the Port of San Diego for redevelopment into a business park and entertainment complex. The assessment identified the presence of soil, soil vapor, and groundwater impacts by petroleum hydrocarbons, VOCs, heavy metals, PCBs, and semi-volatile organic compounds. He utilized many sampling techniques to assess the limits and concentrations of contaminants in the subsurface. Ultimately, the team was able to develop a cost estimate for potential remedial action cost associated to corrective action to allow redevelopment.

Master Planned Commercial/Residential Redevelopment Project, Whittier, California (Project Manager)
Kyle oversaw the assessment of 26 contiguous properties that are part of a 21-acre master planned commercial/residential redevelopment project. The properties included industrial facilities, platting lines, fuel USTs, and metal processing plants, among others. The estimated cleanup costs are approximately $2 million.

** denotes projects completed with other firms*

Kyle D. Emerson PG, CEG

Managing Principal Geologist

Multi-Unit / Family Residential

Residential Development Assessment, Ventura, California (Project Director)

Kyle directed an assessment of a 40-acre former agricultural property proposed for residential development. Pesticides were identified above hazardous waste levels and preliminary remediation goals established by the U.S. Environmental Protection Agency. Through corrective grading methods and onsite placement of the pesticide impacted soils, all material were re-used on site without offsite disposal. The over all cost savings for the client was more than $1 million. Total cost was less than $250,000 for all necessary activities.

Oil & Gas

Oil Field Site Assessments*

Kyle performed site assessments at oil field leases involving refineries, bulk storage areas, piping systems and wellhead, and drilling mud pit contamination.

Environmental Protection Agency Superfund Action, Culver City, California (Project Manager)

Kyle served as the project manager representing a major oil company in the assessment, remedial action, and litigation support in a multi-party contamination case affecting a City water supply. The assessment involved more than 250 continuous core borings up to 100 feet, as well as extensive remedial actions. The total cost for all related activities was $22 million. The case is settled and the closure of the site is pending.

Project Management

Liability and Property Management Consulting Services

Kyle is providing liability and property management consulting services to more than 10 medium to large property development firms in the US. His work involves property transaction assessments, contract review, acquisition guideline development, liability management evaluation, insurance acquisition, and strategic planning.

Residential Development

Environmental Development Management and Review (Project Manager)

Kyle manages and reviews environmental development issues for a large residential developer specializing in development of contaminated industrial properties by providing innovative solutions in developing contaminated properties for residential use through risk assessment, engineering, and administrative and property development controls.

Site Management and Remediation

Design and Implementation of Biodegradation Programs*, California

Kyle designed and implemented one of the first in-situ biodegradation programs in California; it involved 50,000 cubic yards of diesel-contaminated soils, and groundwater to depths of 70 feet below ground surface.

** denotes projects completed with other firms*

Kyle D. Emerson PG, CEG

Managing Principal Geologist

Soil and Groundwater Remediation Systems

Soil and Groundwater Contamination Assessments and Mitigation*, California (Project Manager)

Kyle managed numerous chlorinated solvent soil and groundwater contamination assessments and mitigation programs in southern California. The projects involved releases that impacted soil and groundwater to depth of groundwater more than 700 feet in multi-aquifer systems. One case involved with plume dimensions more than 1 mile from the source affecting residential properties.

Soil and Groundwater Assessment and Remediation Programs*

Implemented hundreds of soil and groundwater assessment and remediation programs at various service station facilities in Southern and Northern California, and Nevada. Work involved assessment, remedial design, installation, maintenance and monitoring. Closure has been received on a majority of these sites.

Assessment and Remediation Management*

Kyle managed the assessment and remediation of soil and groundwater manufacturing at dry cleaning facilities contaminated with chlorinated solvents.

Warehouse / Light Industrial

Glendale Redevelopment Project, Glendale, California (Project Manager)

Kyle managed the assessment and remedial actions during the redevelopment of and industrial property. The project involved the demolition of a historic manufacturing facility and a commercial dry cleaner. Each of these facilities were associated with releases of solvents and petroleum hydrocarbons. Remedial actions involved excavation by pattern drilling and off site disposal along with removal of former USTs. The total cost of remediation and assessment was $450,000.00.

Compton Redevelopment Project, Compton, California (Project Manager)

Kyle is serving as project manager for the assessment and remedial actions for a large redevelopment project. The project involves the redevelopment of a historic manufacturing facility and a former dry cleaner. Each of these facilities were associated with releases of solvents and petroleum hydrocarbons. The industrial facility was also associated with significant volumes of buried waste that required removal and disposal. These wastes also included the chemical referenced above, as well as PCBs and heavy metals. Remediation has included excavation, vapor extraction, and chemical fixation. The total cost of this project has been $2.8 million to date.

User-Provided Records

Stantec

PHASE I ESA USER'S QUESTIONNAIRE

In order to qualify for protection from land owner liability under CERCLA as an *innocent landowner, bona fide prospective purchaser,* or *contiguous property owner*, ASTM standard practice E1527-21 and the federal AAI rule (40 CFR 312) require that the User of the Phase I ESA report provide certain information (if available) to the Environmental Professional completing the assessment. Failure to provide this information could result in a determination that "all appropriate inquiry" is not complete. Information that is not or cannot be provided to the Environmental Professional may be identified as a "data gap" in the Phase I ESA report.

Please answer the following questions as completely as possible. Attach additional pages as needed. Return the completed questionnaire to Stantec along with the executed Authorization For services form.

1. Property Information

Property Name: 15 Argonaut

Property Address(es): 15 Argonaut

City: Aliso Viejo State CA Zip 92656

Property Owner Name: _____

Property Owner Phone #: _____

2. Contact For Site Access

Name: Emanuel Robinson

Company/Organization/Title: Brandywine Homes

Phone # 925-389-8632 E-Mail Address: emanuel@brandywine-homes.com

3. Environmental Cleanup Liens. Are you aware of any environmental cleanup liens against the property that are filed or recorded under federal, tribal, state or local law?

_____ Yes _____X____ No

If yes, describe or attach details of the lien _____

_____

4. Activity and Land Use Limitations. Are you aware of any activity and use limitations, such as engineering controls, land use restrictions, or institutional controls that are in place at the property and/or have been filed or recorded as applicable to the property as a result of environmental contamination, investigation, cleanup, or related matters?

_____ Yes _____X_____ No

If yes, describe or attach details of the limitations _____

_____

5. Specialized Knowledge or Experience. As the User of this ESA, do you have any specialized knowledge or experience related to the property or nearby properties? For example, are you involved in the same line of business as the current or former occupants of the property or an adjoining property, such that you would have specialized knowledge about chemicals and processes used by this type of business?

_____ Yes _____X_____ No

If yes, describe or attach details of your specialized knowledge or experience _____

_____

6. Relationship of Purchase Price to Fair Market Value of Property. Does the purchase price being paid for the property reasonably reflect the fair market value?

X_____Yes _____No

_____Not applicable. User is not involved in a purchase of the property.

If you conclude that there is a difference, do you have any reason to believe that the reduced purchase price may be related to contamination known or believed to be present at the property?

_____Yes, I have reason to believe that the purchase price for the property has been reduced in comparison with the fair market value due to contamination known or believed to be present at the property.

X_____No, I have no reason to believe that the purchase price for the property has been reduced in comparison with the fair market value due to contamination known or believed to be present at the property.

7. Commonly Known or Reasonably Ascertainable Information. Are you aware of commonly known or reasonably ascertainable information about the property that would help the Environmental Professional to identify conditions indicative of releases or threatened releases of hazardous substances or petroleum products? For example:

Do you know the past uses of the property?
X_____Yes (describe) Have reviewed the ESA from the seller
_____
_____
_____No

Do you know of chemicals, hazardous substances or petroleum products that are present or once were present at the property?
_____Yes (describe) _____
_____
_____
X_____No

Do you know of spills or other releases of chemicals, hazardous substances or petroleum products that have taken place at the property?

_____Yes (describe) _____

_____

_____

X_____No

Do you know of any environmental cleanups that have taken place at the property?

_____Yes (describe) _____

_____

_____

X_____No

8. The Degree of Obviousness of Contamination. E1527-21 and the federal AAI rule (40 CFR 312.31) require that the Phase I ESA consider the degree of obviousness of the presence or likely presence of contamination at the property, and the ability to detect the contamination by appropriate investigation. Based on your knowledge and experience related to the property, are there any *obvious* indictors that point to the presence or likely presence of contamination at the property?

_____Yes (describe) _____

_____

_____

X_____No

9. Availability of Previous Environmental Reports. Are you aware of previous environmental site assessment reports, other environmental reports, documents, correspondence, etc. concerning the property and its environmental condition?

X_____Yes (describe) _____ESA (Sellers)_____

_____

_____

_____No

1.0 EXECUTIVE SUMMARY

EMG performed a Phase I Environmental Site Assessment, which included on-site observations of the accessible areas of 15 Argonaut (the "Project"), on February 11, 2016.

This assessment was performed at the Client's request using methods and procedures consistent with good commercial and customary practice conforming with ASTM E 1527-13, Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process. Any exceptions to, or deletions from, this practice are described in Section 2 of this report.

PROJECT DESCRIPTION	
Project Address:	15 Argonaut, Aliso Viejo, Orange County, California 92656
Additional Current/Historical Addresses:	Not Applicable
Assessor Parcel Number(s):	623-093-10 and 623-093-11
Project Use:	Office/medical laboratory
Land Area (acres):	4.32
Number of Units:	One unit
Number of Buildings:	One
Year Constructed:	1989
Basement:	No
Gross Building Area (SF):	41,549
Net Rentable Area (SF):	Not reported

SITE RECONNAISSANCE CONDITIONS	
Date Completed:	February 11, 2016
EMG Project Manager:	Talmage Jordan
Weather Conditions:	Sunny
Temperature (F):	70s
Percent of Units Observed:	100%
Access Limitations:	A representative sample of interior areas was not made available to EMG for access. Specifically, EMG was unable to photograph certain laboratory equipment as it is considered by Ambry Genetics to be trade secrets. The lack of access represents a data gap. However, based on the conditions observed in the accessed areas, discussions with the site contact, and review of other available information, the lack of access does not represent a significant data gap.

ENVIRONMENTALLY SUSPECT PROJECT USE	
PROJECT USE	CURRENTLY LOCATED AT THE PROJECT
Cellular Communications Equipment:	No
Commercial Printing:	No
Dry Cleaner:	No

ENVIRONMENTALLY SUSPECT PROJECT USE

Vehicle Repair:	No

CHRONOLOGICAL HISTORY OF PROJECT		
YEARS	PROJECT USE / TENANTS	ENVIRONMENTAL CONCERN
Prior to 1942	No historical sources identified	No
1942-1989	Undeveloped land	No
1989 to Current	Office building	No

ADJACENT PROPERTIES			
DIRECTION	ADDRESSES	PROPERTY USE / BUSINESS NAME	ENVIRONMENTAL CONCERNS
North	Glenwood Drive	Single-famliy residences	No
East	7 Argonaut	Ambry Genetics, professional office building	No
Southeast	8,28,36,66,72, and 92 Argonaut	Pacific Park Business Center, various professional office tenants	No
South	21 Argonaut	Jockimo and Motion Solutions, office building	No
West	23002 Aliso Creek Road 23022 Aliso Creek Road	Carl's Jr., retail Chevron gas station	No

1.1 FINDINGS AND OPINIONS

This assessment has revealed no evidence of recognized environmental conditions (RECs), historical recognized environmental conditions (HRECs), controlled recognized environmental conditions (CRECs), significant data gaps, or significant business environmental risks in connection with the Project.

1.2 RECOMMENDATIONS

No further action or investigation is recommended at this time.

1.3 CERTIFICATION

EMG certifies that EMG has no undisclosed interest in the subject property, that EMG's relationship with the Client is at arms-length, and that EMG's employment and compensation are not contingent upon the findings or recommendations provided in the Report.

If you have any questions regarding this report, please contact Brian "Jake" Jakubiak at (800) 733-0660 x6543 or bjakubiak@emgcorp.com.

Environmental Professional:

Brian "Jake" Jakubiak, Senior Environmental Consultant

I declare that, to the best of my professional knowledge and belief, I meet the definition of Environmental Professional as defined in § 312.10 of 40 CFR 312.

I have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the Project. I have developed and performed the all appropriate inquiries in conformance with the standard and practices set forth in 40 CFR Part 312.

1.4 RELIANCE

This report has been prepared for and is exclusively for the use and benefit of the Client identified on the cover page of this report. The purpose for which this report shall be used shall be limited to the use as stated in the contract between the client and EMG.

This report, or any of the information contained therein, is not for the use or benefit of, nor may it be relied upon by any other person or entity, for any purpose without the advance written consent of EMG. Any reuse or distribution without such consent shall be at the client's or recipient's sole risk, without liability to EMG.

2.0 INTRODUCTION

2.1 PURPOSE

The purpose of this report is to provide the Client the results of a commercially prudent and reasonable inquiry designed to identify recognized environmental conditions at the Project taking into account reasonably ascertainable information. In accordance with ASTM E1527-13, the level of environmental assessment was guided by several factors, including the type of property and the risk tolerance of the user.

The user informed EMG that the purpose of the assessment is for pre-sale due diligence.

2.2 SCOPE OF WORK

The assessment was conducted utilizing generally accepted Phase I industry standards, using American Society for Testing and Materials (ASTM) Standard Practice E 1527-13.

This assessment is based on the evaluation of the information gathered, laboratory analyses of samples collected (when required), and accessibility at the time of the assessment.

The Scope of Work included an evaluation of:

- Interviews with individuals knowledgeable about the Project for the purpose of gathering information regarding the potential for contamination at the Project.
- Available pertinent documents obtained by EMG or provided by the client.
- Reasonably ascertainable federal, state, and local records in an effort to identify sites of known or suspected hazardous waste activity located at or near the Project.
- The Project history in an attempt to identify possible ownership(s) and/or uses, as identified through review of reasonably ascertainable standard historical sources.
- The physical characteristics of the Project, as identified through review of reasonably ascertainable topographic data, wetlands, soils, geology, and groundwater data.
- Current Project conditions (as applicable) as they pertain to the presence or absence of: facility storage tanks, drums, containers (above or below ground), etc., transformers and other electrical equipment which utilize fluid which may potentially contain PCBs, the use of hazardous materials/chemicals and petroleum products, and/or the generation, treatment, storage, or disposal of hazardous, regulated, or medical wastes.
- An evaluation of information contained in programs such as the NPL, CERCLIS, SHWS, RCRIS, SWF, LUST, and other governmental information systems within specific search distances of the Project. This evaluation was performed to identify sites that represent a recognized environmental condition. The regulatory agency report provided is based on an evaluation of the data collected and compiled by a contracted data research company. The search is designed to meet the requirements of ASTM Standard Practice E 1527-13. The information provided is assumed to be correct and complete.
- Visual observation of the adjacent properties to identify high-risk neighbors and the potential for known or suspected contamination to migrate onto the Project.

2.2.1 ASTM E1527 NON-SCOPE CONSIDERATIONS

At the Client's request, the assessment included a screening approach for the following Non-ASTM Considerations, which are otherwise beyond the Scope of ASTM E1527-13.

NON-ASTM CONSIDERATIONS	
NON-ASTM CONSIDERATION	SCOPE OF WORK
Asbestos Containing Materials:	The identification of suspect asbestos containing materials in accessible areas. Sampling of suspect materials was not performed.
Radon Gas:	Radon gas propensity, through the review of the USEPA's Map of Radon Zones.
Lead Based Paint:	The identification of lead-based paint for residential and daycare properties constructed prior to 1978.
Lead In Drinking Water:	A screening for lead in water, based on information provided by the municipal water provider.
Moisture Conditions:	The identification of visible moisture conditions and conditions conducive for moisture conditions. In addition, EMG interviewed Project personnel regarding any known or suspected moisture conditions, water intrusion, or mildew like odors.
Wetlands:	Review of readily available wetlands map data available from the US Fish and Wildlife Service. A site specific wetland delineation is beyond the scope of this assessment.
Flood Zone:	Review of readily available flood zone map designations available from regulatory agencies, such as the Federal Emergency Management Agency (FEMA).

2.3 LIMITATIONS

The opinions EMG expresses in this report were formed utilizing the degree of skill and care ordinarily exercised by any prudent Environmental Professional in the same community under similar circumstances. EMG assumes no responsibility or liability for the accuracy of information contained within this report that has been obtained from the Client or the Client's representatives, from other interested parties, or from the public domain. The conclusions presented represent EMG's professional judgment based on information obtained during the course of this assignment.

Factual information regarding operations, conditions, and test data provided by the Client or the Client's representative has been assumed to be correct and complete. The conclusions presented within this report are based on the data provided, observations made, and conditions that existed specifically on the date of the assessment.

EMG's ESA cannot wholly eliminate the uncertainty regarding the presence of recognized environmental conditions and environmental business risk. The report is intended to reduce, but not eliminate, uncertainty regarding the potential for recognized environmental conditions in connection with the Project. The report is limited in budget and scope. The nature of subsurface soil and ground water at the Project cannot be confirmed, given the limited budget and scope of this ESA. The report is not and should not be considered a warranty or guarantee about the presence or absence of environmental contaminants which might affect the Project. It should be understood that EMG's suggested remedy may be determined under time constraints or may be formed without the aid of engineering calculations, testing, exploratory probing, the removal of materials, or design. Furthermore, there may be other alternate or more appropriate schemes or methods to remedy the noted environmental conditions.

2.4 KEY TERMS

Business environmental risk - A risk which can have a material environmental or environmentally-driven impact on the business associated with the current or planned use of a parcel of commercial real estate, not necessarily limited to those environmental issues required to be investigated in this practice. Consideration of business environmental risk issues may involve addressing one or more non-scope considerations. For the purposes of this assessment, a significant business environmental risk is both included in the agreed upon scope of work and requires further action at this time.

Controlled recognized environmental condition - A recognized environmental condition resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority (for example, as evidenced by the issuance of a no further action letter or equivalent, or meeting risk-based criteria established by regulatory authority), with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls).

Data gap - The lack of or inability to obtain information required by ASTM E 1527-13 despite good faith efforts is considered a data gap. A data gap is considered significant if it affects the ability of the environmental professional to identify recognized environmental conditions.

De minimis condition - A condition that generally does not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies. Conditions determined to be de minimis conditions are not recognized environmental conditions nor controlled recognized environmental conditions.

Environmental Professional - A person meeting the education, training, and experience requirements set forth in 40 CFR 312.10(b).

Historical recognized environmental condition - A past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted residential use criteria established by a regulatory authority, without subjecting the property to any required controls (e.g. property use restriction, AULS, institutional controls, or engineering controls), at the time the Phase I ESA is conducted (e.g., if there has been a change in the regulatory criteria). If the EP considers this past release to be a REC at the time the Phase I ESA is conducted, the condition shall be included in the conclusion section of the report as a REC.

Material threat - A physically observable or obvious threat which is reasonably likely to lead to a release that, in the opinion of the environmental professional, is threatening and might result in impact to public health or the environment.

Practically reviewable - Information that is provided by the source in a manner and in a form that, upon examination, yields information relevant to the property without the need for extraordinary analysis of irrelevant data.

Release - Any spilling, leaking, pumping, pouring, emitting, emptying, discharging, injecting, escaping, leaching, dumping, or disposing into the environment (including the abandonment or discarding of barrels, containers, and other closed receptacles containing any hazardous substance or pollutant or contaminant), with certain exclusions as defined in 42 U.S.C. 9601 (22).

Reasonably ascertainable - Information that is publicly available, obtainable from its source within reasonable time and cost constraints, and practically reviewable.

Recognized environmental condition - The presence or likely presence of any hazardous substances or petroleum products in, on, or at a property 1) due to any release to the environment; 2) under conditions indicative of a release to the environment; or 3) under conditions that pose a material threat of a future release to the environment. De minimis conditions are not recognized environmental conditions.

Standard environmental record sources - Environmental records contained in various regulatory databases, with search distances defined by ASTM E1527-13, unless otherwise specified by client in the scope of work.

Standard historical sources - Reasonably ascertainable records, including aerial photographs, fire insurance maps, property tax files, recorded land title records, USGS topographic maps, local street directories, building department records, and zoning/land use records.

3.0 USER PROVIDED INFORMATION

In order to qualify for one of the Landowner Liability Protections (LLPs) offered by the Small Business Liability Relief and Brownfield's Revitalization Act of 2001 (the "Brownfield's Amendments") (if desired), the user must provide certain information (if available) identified in the User Questionnaire to the environmental professional. Failure to provide this information could result in a determination that "all appropriate inquiry" is not complete.

Within this Phase I Environmental Site Assessment, EMG's reference to the Client follows the ASTM guide's definition of user, that is, the party that retains EMG for the preparation of a baseline ESA of the Project. A user may include, without limitation, a purchaser, potential tenant, owner, existing or potential mortgagee, lender, or property manager of the Project.

3.1 USER QUESTIONNAIRE

EMG submitted the following User Questionnaire to the user pursuant to the responsibilities described in Section 6 of ASTM Standard E 1527-13. All Appropriate Inquires (40 CFR Part 312) requires that these questions be answered by or on behalf of a party seeking to qualify for limited liability protections to CERCLA liability.

#	QUESTION ASKED OF USER	RESPONSE	COMMENTS
1	Are you aware of any pending, threatened, or past litigation relevant to hazardous substances or petroleum products in, on, or from the property?	No response	
2	Are you aware of any pending, threatened, or past administrative proceedings relevant to hazardous substances or petroleum products in, on or from the property?	No response	
3	Are you aware of any notices from any governmental entity regarding any possible violation of environmental laws or possible liability relating to hazardous substances or petroleum products?	No response	
4	Are you aware of any environmental cleanup liens against the property that are filed or recorded under federal, tribal, state or local law?	No response	
5	Are you aware of any Activity and Use Limitations, such as engineering controls, land use restrictions or institutional controls that are in place at the site and/or have been filed or recorded in a registry under federal, tribal, state or local law?	No response	
6	As the user of this ESA do you have any specialized knowledge or experience related to the property or nearby properties? For example, are you involved in the same line of business as the current or former occupants of the property or an adjoining property so that you would have specialized knowledge of the chemicals and processes used by this type of business?	No response	
7	Does the purchase price being paid for this property reasonably reflect the fair market value of the property? If you conclude that there is a difference, have you considered whether the lower purchase price is because contamination is known or believed to be present at the property?	No response	
8	Are you aware of commonly known or reasonably ascertainable information about the property that would help the environmental professional to identify conditions indicative of releases or threatened releases? For example, as user:	No response	
	Do you know the past uses of the property?	No response	

#	QUESTION ASKED OF USER	RESPONSE	COMMENTS
	Do you know of specific chemicals that are present or once were present at the property?	No response	
	Do you know of spills or other chemical releases that have taken place at the property?	No response	
	Do you know of any environmental cleanups that have taken place at the property?	No response	
9	As the user of this ESA, based on your knowledge and experience related to the property are there any obvious indicators that point to the presence or likely presence of contamination at the property?	No response	

A completed User Questionnaire was not returned to EMG. The lack of this information represents a data gap. However, based on the other information obtained during the completion of this assessment, the lack of the User Questionnaire does not represent a significant data gap.

3.2 ENVIRONMENTAL LIEN/AUL SEARCH

The presence of an Activity and Use Limitations (AUL) at a property is an indication that there may be residual levels of hazardous substances or petroleum products present above unrestricted land use levels. Although Environmental Liens and AULs are often recorded with the property deed at the local land title office, in some cases they are filed in a separate environmental agency database or in project documentation, such as agency closure letters. ASTM E1527-13 does not require the environmental professional to undertake a review of recorded land title records and judicial records for environmental liens and AULs. Such a review is performed at the discretion of the user, based on their need to meet the requirements of 40 CFR 312.20 and 312.25.

The user did not engage EMG to review title and judicial records for environmental liens or AULs recorded against the Project. Furthermore, these documents were not provided to EMG for review. The lack of this information represents a data gap. However, based on the other information obtained during the completion of this assessment, the lack of the an Environmental AUL/Lien search does not represent a significant data gap.

3.3 PREVIOUS ENVIRONMENTAL ASSESSMENTS

In accordance with ASTM E1527-13, EMG requested that the user provide copies of previous environmental assessments for review. Furthermore, EMG may have obtained prior environmental assessments and regulatory records from local, state, and federal regulatory agencies. The purpose of reviewing prior environmental assessments is to determine if any recognized environmental conditions have previously been identified. Documentation provided to EMG which is unrelated to the identification of recognized environmental conditions may not be reviewed.

EMG was not provided with any previously conducted environmental assessment reports for the Project.

4.0 PHYSICAL SETTING

ASTM E1527-13 requires that the current 7.5-minute USGS Topographic Map (or equivalent) showing the area on which the Project is located be reviewed. Additional physical setting sources, such as soil survey maps, groundwater maps and geologic maps may be obtained and reviewed at the discretion of the environmental professional. The purpose of this review is to evaluate whether hazardous substances or petroleum products are likely to migrate to the Project.

4.1 TOPOGRAPHY

The most recent version of the USGS Topographic Map available is discussed below. Historical USGS Topographic Maps, if available, are discussed in Section 6.

USGS TOPOGRAPHIC MAP REVIEW	
Topographic Map Name:	San Juan Capistrano, California
Topographic Map Year:	2015
PROJECT TOPOGRAPHY	
Upper Elevation (feet):	520
Lower Elevation (feet):	460
Surface Slope:	Moderately sloping
Slope Direction:	Southeast
GENERAL VICINITY TOPOGRAPHY	
Slope Direction:	Northeast
Nearest Surface Water Feature:	Tributary of Aliso Creek
Nearest Surface Water Feature Distance:	650 feet
Nearest Surface Water Feature Direction:	East

4.2 GEOLOGY

The generalized geology of the Project area was researched using readily available geologic maps.

GENERALIZED GEOLOGY	
Source:	1:750,000 scale Geologic map of California published by the California Division of Mines and Geology and dated 1977
Geologic Description:	Sandstone, mudstone, and siltstone, evaporite and conglomerate materials from the Oligocene to Pliocene epochs

4.3 HYDROGEOLOGY

Groundwater conditions at the Project are estimated based on reasonably available data such as groundwater maps, previous subsurface investigations conducted at, or in the vicinity of the Project, and local conditions. Shallow groundwater flow is generally expected to follow the ground level slope of surface elevations towards the nearest open body of water. Estimated groundwater levels may vary due to seasonal fluctuations in precipitation, local usage demands, geology, underground structures, or dewatering operations.

HYDROGEOLOGY	
Source:	Estimated from local topography and presence of nearby surface water features
Estimated Depth to Shallow Groundwater:	Between 19 and 28 feet below ground surface
Estimated Direction of Groundwater Flow:	East

4.4 SOILS

Review of the Natural Resources Conservation Service (NRCS) Web Soil Survey identified the following soil type(s) at the Project:

SOIL SERIES NAME	DRAINAGE	TEXTURE	DEPTH
Capistrano	Well drained	Sandy loam	65 inches
Cieneba-Rock	Somewhat excessively drained	Not Applicable	59 inches

5.0 SITE RECONNAISSANCE

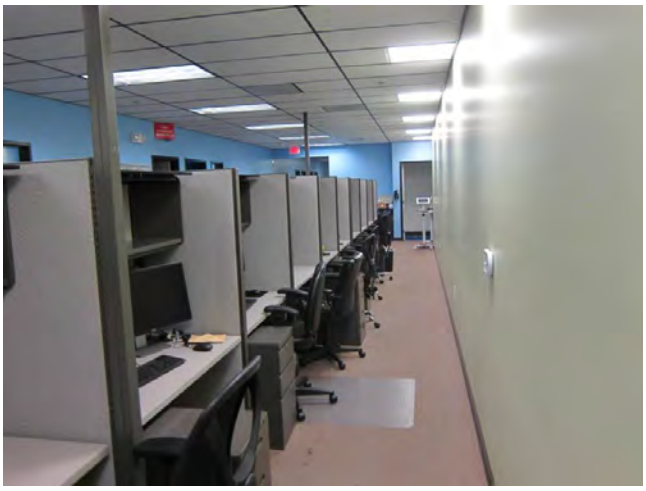
The objective of the site reconnaissance is to obtain information indicating the likelihood of identifying recognized environmental conditions in connection with the property. In accordance with ASTM E1527-13, EMG attempted to visually observe the periphery of the Project and all structures to the extent not obstructed by obstacles. In addition, EMG attempted to visually observe interior common areas, maintenance and repair areas, and a representative sample of occupant spaces. In general, EMG does not look under floors, above ceilings, behind walls, in confined spaces, in transformer vaults, or in other areas not considered to be safe to access.

SITE RECONNAISSANCE CONDITIONS	
Date Completed:	February 11, 2016
EMG Project Manager:	Talmage Jordan
Weather Conditions:	Sunny
Temperature (F):	70s
Percent of Units Observed:	100%
Access Limitations:	A representative sample of interior areas was not made available to EMG for access. Specifically, EMG was unable to photograph certain laboratory equipment as it is considered by Ambry Genetics to be trade secrets. The lack of access represents a data gap. However, based on the conditions observed in the accessed areas, discussions with the site contact, and review of other available information, the lack of access does not represent a significant data gap.

5.1 UNITS OBSERVED

COMMERCIAL UNITS OBSERVED		
UNIT #	TENANT NAME	TENANT OPERATIONS
15 Argonaut	Ambry Genetics	Office/medical laboratory. Laboratory conducts tests specific to genetics and genomics.

5.2 PROJECT USE



ENVIRONMENTALLY SUSPECT PROJECT USE	
PROJECT USE	CURRENTLY LOCATED AT THE PROJECT
Cellular Communications Equipment:	No
Commercial Printing:	No
Dry Cleaner:	No
Gasoline Station:	No
Heavy Industrial Use:	No
Landfill:	No
Machine Shop:	No
Military Use:	No
Oil Well:	No
Photograph/X-Ray Developing:	No

ENVIRONMENTALLY SUSPECT PROJECT USE	
PROJECT USE	CURRENTLY LOCATED AT THE PROJECT
Vehicle Repair:	No

Photographs

Reception area

Office area

Laboratory area

Recieving area

5.3 HAZARDOUS MATERIALS AND PETROLEUM PRODUCTS

Accessible interior and exterior areas of the Project were observed for the presence of hazardous materials and petroleum products.

EMG evaluated any observed manways, vent pipes, fill connections, concrete pads, and unknown saw cuts to determine if USTs are present at the Project, or if USTs were historically located at the Project. In addition, the Key Site Manager and other property management personnel were interviewed regarding the presence of USTs at the Project.

EMG observed the Project for the presence of potentially PCB-containing equipment such as electrical transformers and hydraulic lifts. Equipment installed after 1979 is unlikely to contain PCBs.

EMG observed the Project for visual evidence of petroleum and natural gas pipelines, such as pipeline markers.

STORAGE AND USE OF HAZARDOUS MATERIALS AND PETROLEUM PRODUCTS	
FEATURE	IDENTIFIED AT PROJECT
Underground Storage Tanks (USTs):	No
Aboveground Storage Tanks (ASTs):	No
Drums and Containers:	Yes. Further discussed below.
Potentially PCB-Containing Equipment:	Yes. Further discussed below.
Petroleum or Natural Gas Pipelines:	No

DRUMS AND CONTAINERS			
MATERIAL	QUANTITY	STORAGE LOCATION	SPILLS OR LEAKS
Janitorial and maintenance supplies	Retail-size containers	Janitor closets and other designated areas	No
Paint	Retail-size containers	Janitor closets and other designated areas	No
Various laboratory chemicals, including hydrochloric acid and various alcohols	Varying quanities, labeled plastic containers	Designated flammable lockers and storage areas	No
Propane	Forklift-sized cylinders	Receiving area and forklift equipment	No
Compressed nitrogen	Cylinders	Throughout project	No

Review of the hazardous materials use and storage at the Project did not identify any recognized environmental conditions or environmental concerns.

POTENTIALLY PCB-CONTAINING EQUIPMENT					
TYPE OF EQUIPMENT	NUMBER OF UNITS	OWNER	INSTALLED AFTER 1979	LIKELY TO CONTAIN PCBS	SPILLS OR LEAKS
Transformer (pad)	1	Utility company	Yes	No	No

Based on the date of construction, the equipment listed in the table above is not likely to contain PCBs. Furthermore, no leaks were observed in the area of this equipment and no current or historical leaks were reported by the Key Site Manager. Therefore, the presence of this equipment does not represent a recognized environmental condition.

Photographs

Janitorial closet with various housekeeping

Paint

Flammable lockers for laboratory chemical storage

Laboratory chemicals

Propane cylinders

Pad-mounted transformer

5.4 WASTE GENERATION, STORAGE, AND DISPOSAL

Visual observation for the generation, treatment, storage, and disposal of wastes was performed. The areas of waste generation and storage were observed for evidence of current and past releases.

Although a waste disposal regulatory compliance audit is beyond the scope of this assessment, general waste disposal procedures were evaluated to determine if any deficiencies exist that could result in a release to the Project.

WASTE GENERATION AND DISPOSAL	
FEATURE	IDENTIFIED AT PROJECT
Waste Generation:	Yes. Further discussed below.
Septic Systems:	No
Oil-Water Separators:	No
Cooking Grease Traps:	No
Unknown Drums or Containers:	No
Waste Disposal Ponds or Lagoons:	No

WASTE GENERATION			
WASTE TYPE	DISPOSAL METHOD	STORAGE LOCATION	SPILLS OR LEAKS
Domestic sewage	Sanitary sewer	Not applicable	No
Municipal trash	Contracted waste hauler	Dumpsters	No
Medical waste (red bags and/or sharps)	Contracted waste hauler	Designated storage areas	No
Laboratory chemical waste	Contracted waste hauler	Designated storage area	No

Review of waste storage and disposal information did not identify any recognized environmental conditions or environmental concerns.

Photographs

Dumpster

Bio-hazardous waste bin

Waste lab chemicals container

Hazardous waste area

5.5 SURFACE AREAS

The interior and exterior surface areas were observed for environmentally significant features such as wells, sumps, staining, and pits.

SURFACE AREAS	
FEATURE	IDENTIFIED AT PROJECT
Floor Drains and Sumps:	No
Pits:	No
Pools of Liquid Waste:	No
Surface Staining:	No
Unusual or Noxious Chemical Odors:	No
Landfilling:	No

SURFACE AREAS	
FEATURE	IDENTIFIED AT PROJECT
Stressed Vegetation:	No
Stormwater Retention/Detention Basins:	No
Domestic Water Wells:	No
Monitoring Wells:	No
Irrigation Wells:	No
Dry Wells:	No

5.6 UTILITIES, HEATING, AND COOLING

UTILITIES	
Domestic Drinking Water:	Moulton Niguel Water District
Electricity:	Southern California Edison
Natural Gas:	Southern California Gas Company
Domestic Sewer:	Moulton Niguel Water District

HEATING AND COOLING	
Type of Heating:	Electric units
Type of Cooling:	Electric units

5.7 ADJACENT PROPERTY USE

The adjacent properties were visually observed for evidence of recognized environmental conditions, such as property uses likely to result in a release, and visual evidence of surface migration of releases. The following adjacent properties were identified:

ADJACENT PROPERTIES			
DIRECTION	ADDRESSES	PROPERTY USE / BUSINESS NAME	ENVIRONMENTAL CONCERNS
North	Glenwood Drive	Single-famliy residences	No
East	7 Argonaut	Ambry Genetics, professional office building	No
Southeast	8,28,36,66,72, and 92 Argonaut	Pacific Park Business Center, various professional office tenants	No
South	21 Argonaut	Jockimo and Motion Solutions, office building	No
West	23002 Aliso Creek Road 23022 Aliso Creek Road	Carl's Jr., retail Chevron gas station	No

Review of the adjacent properties did not identify any recognized environmental conditions or environmental concerns.

Photographs

Adjacent property, east - Ambry Genetics (7 Argonaut)

Adjacent property, southeast - Pacific Park Business Center (8, 28, 36, 66, 72, and 92 Argonaut)

Adjacent property, south - Jockimo/Motion Solutions (21 Argonaut)

Adjacent property, west - Chevron (23022 Aliso Creek Road)

5.8 INTERVIEWS

5.8.1 KEY SITE MANAGER

EMG attempted to interview the Key Site Manager as part of this assessment. In addition, a Questionnaire was provided to the Key Site Manager to assist EMG in determining if recognized environmental conditions exist at the Project. A copy of the Key Site Manager Questionnaire is included in Appendix D.

KEY SITE MANAGER INTERVIEWS			
NAME	RELATIONSHIP TO PROPERTY	YEARS WITH PROPERTY	TELEPHONE NUMBER
Robert Vincent	Property Manager	Three	480.760.5408

The Key Site Manager did not identify any recognized environmental conditions or environmental concerns with the current or historical use of the Project.

5.8.2 CURRENT OCCUPANTS

EMG made a reasonable attempt to interview all major occupants and also those other occupants whose operations are likely to indicate a recognized environmental condition.

No occupants of the Project were available or would agree to an interview. The lack of occupant interviews represents a data gap. However, based on the conditions observed in the accessed areas, discussions with the site contact, and review of other available information, the lack of this information does not represent a significant data gap.

5.8.3 CURRENT OWNER

EMG submitted an Owner Questionnaire to the user in an effort to identify the owner of the Project who could be interviewed to provide information regarding proceedings involving the Project.

#	QUESTION ASKED OF OWNER	RESPONSE	COMMENTS
1	Are you aware of any pending, threatened, or past litigation relevant to hazardous substances or petroleum products in, on, or from the property?	No response	
2	Are you aware of any pending, threatened, or past administrative proceedings relevant to hazardous substances or petroleum products in, on or from the property?	No response	
3	Are you aware of any notices from any governmental entity regarding any possible violation of environmental laws or possible liability relating to hazardous substances or petroleum products?	No response	

A completed Owner Questionnaire was not returned to EMG. The lack of this information represents a data gap. However, based on the other information obtained during the completion of this assessment, the lack of the User Questionnaire does not represent a significant data gap.

5.8.4 PAST OWNERS AND OCCUPANTS

No past owners of the Project, who likely would have material information regarding recognized environmental conditions at the Project, were identified.

5.8.5 NEARBY OWNERS AND OCCUPANTS

The Project was not an abandoned property with evidence of unauthorized uses or uncontrolled access; therefore, interviews were not conducted with adjacent or nearby property owners or occupants.

6.0 HISTORICAL USE INFORMATION

The purpose of the historical review is to determine the previous uses of the Project and surrounding area in order to identify the likelihood of past uses having led to a recognized environmental condition. Historical sources that are both reasonably ascertainable, and likely to be useful are reviewed in an attempt to document the historical use of the Project and surrounding areas dating back to 1940, or the first developed use, whichever is earlier.

Copies of representative historical maps/aerial photographs are included in Appendix C. Other historical documentation, such as City Directory abstracts, copies of building department records, and ownership records are included in Appendix F, when available.

The following standard historical sources were researched:

STANDARD HISTORICAL SOURCES		
DATA TYPE	SOURCE	YEARS COVERED
Aerial Photographs:	ERIS	1947, 1963, 1972, 1981, 1994, 2005, and 2014
Fire Insurance (Sanborn) Maps:	ERIS	None identified
USGS Topographic Maps:	USGS	1942, 1948, 1949, 1981, 2012, and 2015
Local Street Directories:	Aliso Viejo Branch Library; ERIS	2014 and 2015; Pending
Building Department Records:	Aliso Viejo Building Department	1989-Current
Zoning/Land Use Records:	Aliso Viejo Planning Department	Current
Property Tax Files and Land Title Records:	Orange County Assessor	Current
Key Site Manager Interview:	Pre-Survey Questionnaire	2013-Current

EMG was not able to obtain standard historical sources that document the Project history in five year intervals. Furthermore, EMG was not able to document the use of the Project back to the first developed use, or back to 1940, whichever is earlier. The lack of this information represents a data gap. However, based on the other information obtained during the completion of this assessment, the lack of this information does not represent a significant data gap.

6.1 PROJECT HISTORICAL USE

Based on review of the historical resources identified in Section 6.0, the following chronological history was developed for the Project.

CHRONOLOGICAL HISTORY OF PROJECT		
YEARS	PROJECT USE / TENANTS	ENVIRONMENTAL CONCERN
Prior to 1942	No historical sources identified	No
1942-1989	Undeveloped land	No
1989 to Current	Office building	No

OWNERSHIP HISTORY OF PROJECT		
YEAR PURCHASED	OWNER NAME	ENVIRONMENTAL CONCERN
Not applicable	The Orange County Assessor's website does not provided ownership information online.	Not applicable

The review of the historical data readily available for the Project revealed no evidence that may have led to an environmental impact to the Project.

6.2 OFF-SITE HISTORICAL USE

Based on review of the historical resources identified in Section 7.0, the following chronological history was developed for the adjacent properties.

CHRONOLOGICAL HISTORY OF ADJACENT PROPERTIES		
YEARS	ADJACENT PROPERTY USE	ENVIRONMENTAL CONCERN
NORTH		
Prior to 1942	No historical sources identified	No
1942 to 1981	Naturally vegetated land	No
1994	Graded land	No
2005	Golf course	No
2014 to Current	Single-family residences	No
EAST		
Prior to 1942	No historical sources identified	No
1941 to 1981	Naturally vegetated land	No
1994 to Current	Commercial structure	No
SOUTHEAST		
Prior to 1942	No historical sources identified	No
1942 to 1981	Naturally vegetated land	No
1994 to Current	Commercial business park	No
SOUTH		
Prior to 1942	No historical sources identified	No
1942 to 1981	Naturally vegetated land	No
1994 to Current	Commercial structure	No
WEST		
Prior to 1942	No historical sources identified	No
1942 to 1981	Naturally vegetated land	No
1994 to Current	Gasoline station and a fast food restaurant	No

The review of the historical data available the surrounding areas of the Project revealed no evidence that may have led to an environmental impact to the Project.

7.0 ENVIRONMENTAL RECORDS REVIEW

The purpose of the records review is to obtain and review records that will help identify recognized environmental conditions. ASTM E1527-13 requires the review of reasonably ascertainable records from standard sources as defined in Section 8.2.1 of ASTM E1527-13. Additional records sources, such as local fire department records, local building department records, and local environmental health department records may be obtained and reviewed at the discretion of the environmental professional.

The availability of record information varies widely, depending on the source. Reasonably ascertainable records are those records that are publicly available, obtainable within reasonable time and cost constraints, and practically reviewable. In addition, the records must be provided by the agency within 20 calendar days of receiving a request, at no more than a nominal cost intended to cover the source's cost of retrieving and duplicating the information.

7.1 REGULATORY DATABASE REVIEW

EMG obtained a regulatory database report from a commercial database provider in an effort to determine if the Project is a listed regulatory site and whether there are any mappable regulatory database sites within the search distances specified by ASTM E1527-13. EMG attempted to field-verify the locations of the identified regulatory sites, as well as confirm distances and locations relative to the Project using available mapping software. Therefore, the distances and/or directions noted in this section may not match the Database Report. In addition, EMG reviewed the unmappable sites in the database report, cross-referencing addresses and site names.

In accordance with ASTM E1527-13, regulatory files and/or records associated with standard environmental record sources may be obtained and reviewed when the files and/or records are reasonably ascertainable, the files/records are expected to contain significant information for the purpose of identifying recognized environmental conditions, and an alternative source of the information is not available. Furthermore, review of regulatory files and/or records may be limited by the scope of work. Unless otherwise noted in Section 1.1, further review of regulatory agency files and/or records is not considered to be warranted based on the general nature of the regulatory database listing, the level of detail provided in the regulatory database, the availability of information from alternative sources, and/or the low likelihood that the agency files and/or records will contain information indicating the presence of a recognized environmental condition.

A copy of the full regulatory database report is included in Appendix H.

Regulatory Report Summary

DATABASE	SEARCH RADIUS	TARGET PROPERTY	WITHIN 0.12MI	0.12MI TO 0.25MI	0.25MI TO 0.50MI	0.50MI TO 1.00MI	TOTAL
ERNS	0.02	0	-	-	-	-	1
FINDS/FRS	0.02	1	-	-	-	-	3
HAZNET	0.02	10	-	-	-	-	15
ORANGE AST	0.25	0	1	0	-	-	1
ORANGE UST	0.25	0	1	1	-	-	2
RCRA GEN	0.25	1	4	0	-	-	5
LUST	0.5	0	0	0	1	-	1
UST	0.25	1	1	2	-	-	4

7.1.1 PROJECT REGULATORY DATABASE REVIEW

ON-SITE REGULATORY DATABASE LISTINGS		
FACILITY NAME	FACILITY ADDRESS	DATABASES
Ambry Genetics Corporation	15 Argonaut	RCRA GEN, HAZNET, FINDS/FRS
Arbonne International,	15 Argonaut	HAZNET
1X Kaminari / Kamanari Inc	15 Argonaut	HAZNET
Centon Electronics Inc	15 Argonaut	HAZNET
Green Co Services LLC	15 Argonaut	HAZNET
Stracon Manufacturing	15 Argonaut	HAZNET

RCRA Generators

The RCRA Generators database is a listing of facilities that generate, transport, store, treat and/or dispose of hazardous waste and does not necessarily indicate that a release to the environment has occurred. Refer to Section 5.4 for further discussion of wastes currently generated at the Project.

RCRA Generators				
Facility Name	**Classification**	**Violations Noted**	**Wastes Generated**	**Years Generated**
Ambry Genetics Corporation	Large quantity generator	Not Reported	Numerous lab wastes	2011 and 2015

NR-Not Reported

The information provided in this database is not indicative of a recognized environmental condition and no further action or investigation is recommended.

Facility Index System (FINDS)

The FINDS database cross-references various federal and state database listings and does not, in and of itself, typically contain environmentally significant information. The FINDS database provides the following pertinent information:

- Facility Name: Ambry Genetics Corporation
- Facility Address: 15 Argonaut
- Program Cross Referenced: RCRA GEN

The information provided is not indicative of a recognized environmental condition and no further action or investigation is recommended.

HAZNET

The HAZNET database indicates that the current Project tenant, Ambry Genetics Corporation, has generated hazardous wastes, from at least 2011 through 2015. Hazardous wastes generated by Ambry Genetics Corporation include unspecified aqueous solution, oxygenated solvents (acetone, butanol, ethyl acetate, etc.), unspecified solvent mixture, unspecified organic liquid mixture, other organic solids, empty containers (less than 30 gallons), and laboratory waste chemicals.

In addition, the HAZNET database indicates that the former Project tenants reportedly generated hazardous wastes, including 1X Kaminari/Kamanari Inc, from at least 1991 through 2000; Arbonne International, from at least 1998 through 2000; Green Co Services LLC, circa 1999; Stracan Manufacturing, from at least 2003 through 2006; and Centon Electronics Inc, from at least 2005 through 2008. Hazardous wastes generated by former Project tenants were reported by Centon Electronics Inc. only, and included other inorganic solid waste.

7.1.2 OFF-SITE REGULATORY DATABASE REVIEW

Regulatory database listings which have a reasonable potential to impact the Project are discussed below. This determination is based on, but not limited to, such factors such as the topographic gradient in relation to the Project, the estimated groundwater flow direction in the vicinity of the Project, the distance between the listed site and the Project, the type of site or materials involved, and/or whether a release to the environment is known or likely to have occurred.

CHEVRON #0200913	
Facility Address:	23022 Aliso Creek Road
Databases:	UST, ERNS, FINDS/FRS, HAZNET, RCRA GEN
Distance:	Adjacent
Direction:	West
Estimated Direction of Groundwater Flow:	Northeast
Relationship to Project:	Towards the Project
Release Reported:	Yes
Release Date:	April 6, 2012
Contaminant(s) of Concern:	Gasoline
Media Impacted:	Land/Concrete
Regulatory Status of Release:	Closed
Summary of Available Documentation:	According to the ERNS database, an incident of gasoline release was reported at the facility in April 2012 when "a customer filled a gas tank on a vehicle that had a hole in its tank and materials discharged onto the concrete." The amount of product released as estimated to be three gallons of gasoline. The remedial actions taken in response to the release comprised of utilizing a spill kit, and the released product was cleaned and disposed of into hazmat drums.
Conclusion:	Based on the "closed" ERNS regulatory status, the incidental nature of the release and emergency response actions performed to remediate the release incident, and the lack of reported groundwater contamination, it is unlikely that this facility has impacted the Project. Therefore, this facility does not represent a recognized environmental condition.
Vapor Migration Concern:	Unlikely

HUNTER GRAPHICS INC./TOMORROW'S LOOK INC. DBA DIMENSIONS SCR./NICOLAS HOLDINGS	
Facility Address:	21 Argonaut
Databases:	FINDS/FRS, HAZNET, RCRA GEN
Distance:	Adjacent
Direction:	South
Estimated Direction of Groundwater Flow:	Northeast

Relationship to Project:	Parallel to the Project
Release Reported:	No
Release Date:	Not reported
Contaminant(s) of Concern:	Not Applicable
Media Impacted:	Not Applicable
Regulatory Status of Release:	Not Applicable
Summary of Available Documentation:	Not Applicable
Conclusion:	Based on the lack of a reported release, it is unlikely that this facility has impacted the Project. Therefore, this facility does not represent a recognized environmental condition.
Vapor Migration Concern:	No

AMBRY GENETICS CORPORATION	
Facility Address:	7 Argonaut
Databases:	RCRA GEN
Distance:	Adjacent
Direction:	East
Estimated Direction of Groundwater Flow:	Northeast
Relationship to Project:	Away from the Project
Release Reported:	No
Release Date:	Not Applicable
Contaminant(s) of Concern:	Not Applicable
Media Impacted:	Not Applicable
Regulatory Status of Release:	Not Applicable
Summary of Available Documentation:	Not Applicable
Conclusion:	Based on the lack of a reported release and estimated direction of groundwater flow, it is unlikely that this facility has impacted the Project. Therefore, this facility does not represent a recognized environmental condition.
Vapor Migration Concern:	No

7.1.3 VAPOR MIGRATION

Indoor air quality concerns are generally excluded from the scope of ASTM E1527-13 and this assessment. However, the migration of vapors caused by a release of hazardous substances or petroleum products to the environment can represent a recognized environmental condition in certain conditions.

For the purposes of this assessment, the potential for migrating vapors to represent a recognized environmental condition was evaluated using a limited screening method based on technical guidance documents from the US EPA and *ASTM E2600-10 Standard Guide for Vapor Encroachment Screening on Property Involved in Real Estate Transactions*. In addition, screening tools created by regulatory agencies may be used to evaluate the significance of a release with respect to the vapor migration and/or vapor intrusion potential. EMG's vapor migration screening is not a human health risk assessment and is not intended to comply with regulatory requirements that might exist for the evaluation of vapor migration.

Based on the review of regulatory database records in Section 7.1.1 and 7.1.2, no vapor migration concerns were identified.

7.2 LOCAL AGENCY RECORDS

The following additional environmental records were reviewed to supplement the standard environmental record sources discussed in Sections 7.1.1 and 7.1.2.

Reasonably ascertainable records for the Project may be reviewed for evidence of recognized environmental conditions and other environmental concerns such as underground storage tanks, significant hazardous materials use, the presence of septic systems, and/or the presence of wells.

BUILDING DEPARTMENT	
Name of Agency:	Aliso Viejo Building Department
Contact Name/Telephone:	Joanna Stevens/ 949.425.2546
Review Method:	In person records review.
Records Date Back To:	The City of Aliso Viejo was incorporated in 2001. Any records prior to 2001 have been provided to the City from the Orange County Building Department. These records vary in availability.
Summary of Records Reviewed:	The Project was built in 1989. General building, plumbing, mechanical, and electrical permits were on file.
Environmentally Significant Information:	No environmentally significant information was identified

FIRE DEPARTMENT	
Name of Agency:	Orange County Fire Authority
Contact Name/Telephone:	Not applicable
Review Method:	A written request for information has been submitted. A response is currently pending. A copy of the request is included in Appendix F.

Records Date Back To:	Pending response from agency
Summary of Records Reviewed:	Pending response from agency
Environmentally Significant Information:	Pending response from agency

8.0 ASTM E1527 NON-SCOPE CONSIDERATIONS

The items discussed in this section are outside the scope of ASTM E1527-13. These are included at the discretion of the user based upon the scope of work.

8.1 ASBESTOS

In accordance with the scope of work, EMG performed a screening to document the presence of known and/or suspect asbestos containing materials (ACM) at the Project. This screening approach is not a comprehensive (i.e., AHERA-Style) asbestos survey, nor is it intended to fulfill the NESHAP requirements for demolition or renovation purposes. All materials listed in Appendix G of the United States Environmental Protection Agency (USEPA) publication Managing Asbestos in Place (the "Green Book") are considered suspect.

Some non-friable building products, such as sheet vinyl floor tile, vinyl floor tile, floor tile mastic, asbestos-cement board, and roofing materials can still be manufactured with asbestos and installed in the United States. However, U.S. manufacturers have largely excluded asbestos fibers from their building products since 1981. In addition to a visual assessment, EMG reviewed provided documentation to determine if asbestos has been previously documented at the Project.

SUSPECT ASBESTOS CONTAINING MATERIALS		
MATERIAL	FRIABLE	CONDITION
Roofing materials	No	Good
Vinyl composition tile	No	Good
Mastic	No	Good

Based on the scope of work, sampling of suspect asbestos containing materials was not performed. Furthermore, since the Project was developed after 1981, it is unlikely that asbestos containing materials are present in quantities that would require further assessment at this time. No further action or investigation is recommended regarding asbestos containing materials.

8.2 RADON GAS

Radon originates from the natural (radioactive) breakdown of uranium in soil, rock and water and is the second leading cause of lung cancer in the United States. Radon can move up through the ground and into living spaces through cracks and other holes in the foundation. The USEPA has developed the EPA Map of Radon Zones to assist National, State, and local organizations in implementing radon-resistant building codes. This map assigns each county in the U.S. to one of three zones based on radon potential. The USEPA uses a continuous exposure level of 4.0 pCi/L (picoCuries per liter of air) as an action level at which additional action is recommended.

For the purposes of this assessment, the radon zone and the use of the Project have been used to determine the level of risk associated with radon. However, the USEPA and the Surgeon General recommend testing all homes for radon, regardless of geographic location.

EPA RADON ZONE
Zone 3 (Lowest Potential) - Counties have a predicted average indoor radon screening level less than 2 pCi/L

Radon sampling was not performed based on the non-residential use of the Project and the Scope of Work.

8.3 LEAD BASED PAINT

All paint applied prior to 1978 is considered suspect. The basis for this determination is taken from the Lead Paint Poisoning Act passed by the Congress of the United States that banned the use of lead paint starting January 1, 1978. This screening approach does not comply with Requirements for Disclosure of Known Lead-Based Paint and/or Lead-Based Paint Hazards in Housing. This approach does not constitute a pre-occupancy survey or the basis of attainment of "Lead Free" certification.

Generally, due to the date of construction, the potential use of lead-based paint was minimized due to regulatory requirements and sound business practice. Based on the date of construction and the Scope of Work, no samples were collected. No further action or investigation is recommended regarding lead-based paint.

8.4 LEAD IN DRINKING WATER

Lead is commonly used in household plumbing materials and water service lines. Exposure to lead in drinking water above the USEPA action level can result in adverse health effects in children and adults. Lead is rarely found in source water, but enters tap water through corrosion of plumbing materials. Homes built before 1986 are more likely to have lead pipes, fixtures and solder. The most common problem is with brass or chrome-plated brass faucets and fixtures which can leach significant amounts of lead into the water. The USEPA action level for lead-in-drinking water is 15 parts per billion (ppb).

According to information from the local water utility, the water supplied to the Project is within federal, state, and local drinking water quality standards. In addition, construction of the Project occurred after the 1986 ban on lead drinking water piping, lead solder, and flux on copper drinking water piping. No further action or investigation is recommended regarding lead in drinking water at the Project.

8.5 MOISTURE CONDITIONS

EMG performed a limited visual and olfactory assessment for evidence of moisture conditions in readily accessible interior areas of the Project. In addition, the Key Site Manager was interviewed regarding the presence of current and historical moisture conditions. This assessment was not designed to discover all areas which may be affected by moisture conditions. Rather, it is intended to provide an indication of significant moisture conditions observed during the site visit. Moisture conditions may be present in areas not observed, such as pipe chases, HVAC systems, and behind enclosed walls and ceilings. De minimis moisture conditions, such as small, isolated, water stains on ceiling tiles, and mildew at bathtubs and sinks are considered to be routine maintenance issues and are not addressed in this Report.

EMG did not observe visual or olfactory indications of significant moisture conditions in readily accessible interior areas of the Project. Furthermore, the Key Site Manager did not report any significant current or historical moisture conditions at the Project.

8.6 WETLANDS

For regulatory purposes under the Clean Water Act, the term wetlands means "those areas that are inundated or saturated by surface or groundwater at a frequency and duration sufficient to support, and that under normal circumstances do support, a prevalence of vegetation typically adapted for life in saturated soil conditions. Wetlands generally include swamps, marshes, bogs and similar areas." A wetlands delineation is beyond the scope of this assessment. However, review of National Wetlands Inventory (NWI) data, provided by the United States Fish and Wildlife Service, indicated the following:

WETLANDS REVIEW	
PROJECT	ADJACENT PROPERTIES
Review of the NWI data did not identify any wetlands.	Review of the NWI data did not identify any wetlands.

No wetlands were identified. No further action or investigation is recommended regarding wetlands.

8.7 FLOOD ZONE

FEMA identifies flood hazards, assesses flood risks and partners with states and communities to provide accurate flood hazard and risk data to guide them to mitigation actions.Flood hazard mapping is the basis for the National Flood Insurance Program (NFIP) and flood insurance requirements. FEMA maintains and updates data through Flood Insurance Rate Maps (FIRMs) and risk assessments. FIRMs include statistical information such as data for river flow, storm tides, hydrologic/hydraulic analyses and rainfall and topographic surveys. Review of the FIRM indicated the following:

FLOOD ZONE MAP REVIEW	
MAP DATE	PROJECT FLOOD ZONE
December 3, 2009	The Project is located in Zone X (unshaded), minimal risk areas outside the one percent and 0.2 percent annual chance floodplains. No base flood elevations or base flood depths are shown within these zones.

The flood zone designation is provided for informational purposes only. A determination of the need for flood insurance is beyond the scope of this assessment.

SANTA ANA, CA 92702

TELEPHONE: (714) 433-6000
FAX: (714) 433-6424

REQUEST FOR ENVIRONMENTAL HEALTH RECORDS

The undersigned hereby requests a copy of the records prepared and maintained by the Health Care Agency in the ordinary course of business, at or near the time of the act, condition, or event which they depict.

The records requested are maintained under the Public Records Act Government Code § 6250 □ 6276.48. Some information held in the documents may be exempt from release pursuant to the Public Records Act.

The undersigned understands that the Health Care Agency will charge □0.15 per page copied. In the case of a request for a large number of copies, the Health Care Agency may provide the requestor an estimate of copy costs prior to making said copies. If any request is to be canceled, this office must be notified at the above number within ten (10) days of receipt of request, otherwise cost incurred will be charged to the undersigned.

In order to assist you, please describe the reason for your request:

Environmental Report

Please list addresses here (no more than 10 addresses per request):

15 Argonaut
Aliso Viejo, CA 92656

Check here if you would like a review only or to review before copies are made ☒

FIRE INSURANCE MAP RESEARCH RESULTS

Date: 2016-02-04

Order Number:20160204086

15 Argonaut, Aliso Viejo, CA, 92656

ERIS has searched our in-house collection of close to 1 million Fire Insurance Maps for the address at 15 Argonaut, Aliso Viejo, CA, 92656.

Please note that no information was found for your site or adjacent properties.

If you have any questions regarding the enclosed information, please do not hesitate to contact us.

Individual Fire Insurance Maps for the subject property and/or adjacent sites are included with the ERIS environmental database report to be used for research purposes only and cannot be resold for any other commercial uses other than for use in a Phase I environmental assessment.

Address: 38 Lesmill Road Unit 2, Toronto, ON M3B 2T5

Notice: IMPORTANT LIMITATIONS and YOUR LIABILITY

Reliance on information in Report: This report DOES NOT replace a full Phase I Environmental Site Assessment but is solely intended to be used as database review of environmental records.

License for use of information in Report: No page of this report can be used without this cover page, this notice and the project property identifier. The information in Report(s) may not be modified or re-sold.

Your Liability for misuse: Using this Service and/or its reports in a manner contrary to this Notice or your agreement will be in breach of copyright and contract and ERIS may obtain damages for such mis-use, including damages caused to third parties, and gives ERIS the right to terminate your account, rescind your license to any previous reports and to bar you from future use of the Service.

No warranty of Accuracy or Liability for ERIS: The information contained in this report has been produced by EcoLog Environmental Risk Information Services Ltd ("ERIS") using various sources of information, including information provided by Federal and State government departments. The report applies only to the address and up to the date specified on the cover of this report, and any alterations or deviation from this description will require a new report. This report and the data contained herein does not purport to be and does not constitute a guarantee of the accuracy of the information contained herein and does not constitute a legal opinion nor medical advice. Although ERIS has endeavored to present you with information that is accurate, EcoLog ERIS disclaims, any and all liability for any errors, omissions, or inaccuracies in such information and data, whether attributable to inadvertence, negligence or otherwise, and for any consequences arising therefrom. Liability on the part of EcoLog ERIS is limited to the monetary value paid for this report.

Trademark and Copyright: You may not use the ERIS trademarks or attribute any work to ERIS other than as outlined above. This Service and Report(s) are protected by copyright owned by EcoLog ERIS Ltd. Copyright in data used in the Service or Report(s) (the "Data") is owned by EcoLog ERIS or its licensors. The Service, Report(s) and Data may not be copied or reproduced in whole or in any substantial part without prior written consent of EcoLog ERIS.

SITE HISTORY:

The subject site is vacant, prior to 1987 the site was undeveloped, rolling hillside terrain. In 1987-1988, the property was rough graded along with adjoining properties. Fill material was generated during the grading process. No agriculture appear to have occurred on the site

Appendix: Database Descriptions

Ecolog Environmental Risk Information Services Ltd (ERIS) can search the following databases. The extent of historical information varies with each database and current information is determined by what is publicly available to ERIS at the time of update. ERIS updates databases as set out in ASTM Standard E1527-13, Section 8.1.8 Sources of Standard Source Information:

"Government information from nongovernmental sources may be considered current if the source updates the information at least every 90 days, or, for information that is updated less frequently than quarterly by the government agency, within 90 days of the date the government agency makes the information available to the public."

Standard Environmental Record Sources

Federal

National Priority List: NPL

National Priorities List (Superfund)-NPL: EPA's (United States Environmental Protection Agency) list of the most serious uncontrolled or abandoned hazardous waste sites identified for possible long-term remedial action under the Superfund program. The NPL, which EPA is required to update at least once a year, is based primarily on the score a site receives from EPA's Hazard Ranking System. A site must be on the NPL to receive money from the Superfund Trust Fund for remedial action.

Government Publication Date: Oct 8, 2015

National Priority List - Proposed: PROPOSED NPL

Includes sites proposed (by the EPA, the state, or concerned citizens) for addition to the NPL due to contamination by hazardous waste and identified by the Environmental Protection Agency (EPA) as a candidate for cleanup because it poses a risk to human health and/or the environment.

Government Publication Date: Oct 8, 2015

Deleted NPL: DELETED NPL

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Government Publication Date: Oct 8, 2015

Comprehensive Environmental Response, Compensation and Liability Information System - CERCLIS: CERCLIS

Superfund is a program administered by the United States Environmental Protection Agency (EPA) to locate, investigate, and clean up the worst hazardous waste sites throughout the United States. CERCLIS is a database of potential and confirmed hazardous waste sites at which the EPA Superfund program has some involvement. It contains sites that are either proposed to be or are on the National Priorities List (NPL) as well as sites that are in the screening and assessment phase for possible inclusion on the NPL. The EPA administers the Superfund program in cooperation with individual states and tribal governments; this database is made available by the EPA.

Government Publication Date: Oct 25, 2013

CERCLIS - No Further Remedial Action Planned: CERCLIS NFRAP

An archived site is one at which EPA has determined that assessment has been completed and no further remedial action is planned under the Superfund program at this time. The Archive designation means that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL). This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

Government Publication Date: Oct 25, 2013

CERCLIS Liens: CERCLIS LIENS

A Federal Superfund lien exists at any property where EPA has incurred Superfund costs to address contamination ("Superfund site") and has provided notice of liability to the property owner. A Federal CERCLA ("Superfund") lien can exist by operation of law at any site or property at which EPA has spent Superfund monies. This database is made available by the United States Environmental Protection Agency (EPA).

Government Publication Date: Jan 30, 2014

RCRA CORRACTS- Corrective Action: RCRA CORRACTS

RCRA Info is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. At these sites, the Corrective Action Program ensures that cleanups occur. EPA and state regulators work with facilities and communities to design remedies based on the contamination, geology, and anticipated use unique to each site.

Government Publication Date: Oct 13, 2015

RCRA non-CORRACTS TSD Facilities: RCRA TSD

RCRA Info is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. This database includes Non-Corrective Action sites listed as treatment, storage and/or disposal facilities of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA).

Government Publication Date: Oct 13, 2015

RCRA Generator List: RCRA GEN

RCRA Info is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. RCRA Info replaces the data recording and reporting abilities of the Resource Conservation and Recovery Information System (RCRIS) and the Biennial Reporting System (BRS). A hazardous waste generator is any person or site whose processes and actions create hazardous waste (see 40 CFR 260.10).

Government Publication Date: Oct 13, 2015

RCRA Non-Generators: RCRA NON GEN

RCRA Info is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. RCRA Info replaces the data recording and reporting abilities of the Resource Conservation and Recovery Information System (RCRIS) and the Biennial Reporting System (BRS). A hazardous waste generator is any person or site whose processes and actions create hazardous waste (see 40 CFR 260.10). Non-Generators do not presently generate hazardous waste.

Government Publication Date: Oct 13, 2015

Federal Engineering Controls-ECs: FED ENG

Engineering controls (ECs) encompass a variety of engineered and constructed physical barriers (e.g., soil capping, sub-surface venting systems, mitigation barriers, fences) to contain and/or prevent exposure to contamination on a property. This database is made available by the United States Environmental Protection Agency (EPA).

Government Publication Date: Jul 30, 2014

Federal Institutional Controls- ICs: FED INST

Institutional controls are non-engineered instruments, such as administrative and legal controls, that help minimize the potential for human exposure to contamination and/or protect the integrity of the remedy. Although it is EPA's (United States Environmental Protection Agency) expectation that treatment or engineering controls will be used to address principal threat wastes and that groundwater will be returned to its beneficial use whenever practicable, ICs play an important role in site remedies because they reduce exposure to contamination by limiting land or resource use and guide human behavior at a site.

Government Publication Date: Jul 30, 2014

Emergency Response Notification System: ERNS 1982 TO 1986

Database of oil and hazardous substances spill reports controlled by the The National Response Center. The primary function of the National Response Center is to serve as the sole national point of contact for reporting all oil, chemical, radiological, biological, and etiological discharges into the environment anywhere in the United States and its territories.

Government Publication Date: 1982-1986

Emergency Response Notification System: ERNS 1987 TO 1989

Database of oil and hazardous substances spill reports controlled by the The National Response Center. The primary function of the National Response Center is to serve as the sole national point of contact for reporting all oil, chemical, radiological, biological, and etiological discharges into the environment anywhere in the United States and its territories.

Government Publication Date: 1987-1989

Emergency Response Notification System: ERNS

Database of oil and hazardous substances spill reports controlled by the The National Response Center. The primary function of the National Response Center is to serve as the sole national point of contact for reporting all oil, chemical, radiological, biological, and etiological discharges into the environment anywhere in the United States and its territories. This database is made available by the United States Environmental Protection Agency (EPA).

Government Publication Date: Oct 7, 2015

The Assessment, Cleanup and Redevelopment Exchange System (ACRES) Brownfield Database: FED BROWNFIELDS

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties protects the environment, reduces blight, and takes development pressures off greenspaces and working lands. This database is made available by the United States Environmental Protection Agency (EPA).

Government Publication Date: Jul 20, 2015

Material Licensing Tracking System (MLTS): MLTS

A list of sites that store radioactive material subject to the Nuclear Regulatory Commission (NRC) licensing requirements. This list is maintained by the NRC.

Government Publication Date: Oct 7, 2014

State

Proposed Closure of Underground Storage Tank Cases: UST CLOSURE

List of UST cases that are being considered for closure by either the California Environmental Protection Agency, State Water Resources Control Board or the Executive Director that have been posted for a 60-day public comment period.

Government Publication Date: Sept 10, 2015

State Response Sites: RESPONSE

A list of identified confirmed release sites where the Department of Toxic Substances Control (DTSC) is involved in remediation, either in a lead or oversight capacity. These confirmed release sites are generally high-priority and high potential risk. This database is state equivalent NPL.

Government Publication Date: Aug 24, 2015

EnviroStor Database: ENVIROSTOR
The EnviroStor Data Management System is made available by the Department of Toxic Substances Control (DTSC). Includes Corrective Action sites, Tiered Permit sites, Historical Sites and Evaluation/Investigation sites. This database is state equivalent CERCLIS.
Government Publication Date: Dec 31, 2015

Solid Waste Information System (SWIS): SWF/LF
The Solid Waste Information System (SWIS) database made available by the Department of Resources Recycling and Recovery (CalRecycle) contains information on solid waste facilities, operations, and disposal sites throughout the State of California. The types of facilities found in this database include landfills, transfer stations, material recovery facilities, composting sites, transformation facilities, waste tire sites, and closed disposal sites.
Government Publication Date: Sep 02, 2015

EnviroStor Hazardous Waste Facilities: HWP
A list of hazardous waste facilities including permitted, post-closure and historical facilities found in the Department of Toxic Substances Control (DTSC) EnviroStor database.
Government Publication Date: Sep 8, 2015

Land Disposal Sites: LDS
Land Disposal Sites in GeoTracker, the State Water Resources Control Board (SWRCB)'s data management system. The Land Disposal program regulates of waste discharge to land for treatment, storage and disposal in waste management units. Waste management units include waste piles, surface impoundments, and landfills.
Government Publication Date: Jul 16, 2015

Leaking Underground Fuel Tank Reports: LUST
List of Leaking Underground Storage Tanks within the Cleanup Sites data in GeoTracker database. GeoTracker is the State Water Resources Control Board's (SWRCB) data management system for managing sites that impact groundwater, especially those that require groundwater cleanup (Underground Storage Tanks, Department of Defense and Site Cleanup Program) as well as permitted facilities such as operating Underground Storage Tanks. The Leak Prevention Program that overlooks LUST sites is the SWRCB in California's Environmental Protection Agency.
Government Publication Date: Dec 4, 2015

Delisted Leaking Storage Tanks: DLST
This database contains a list of leaking storage tank sites that were removed from the GeoTracker is the State Water Resources Control Board's (SWRCB) data management system.
Government Publication Date: Aug 31,2015

Permitted Underground Storage Tank (UST) in GeoTracker: UST
List of Permitted Underground Storage Tank (UST) sites made available by the State Water Resources Control Board (SWRCB) in California's Environmental Protection Agency (EPA).
Government Publication Date: Sep 8, 2015

Aboveground Storage Tanks: AST
A statewide list from 2009 of aboveground storage tanks (ASTs) made available by the Cal FIRE Office of the State Fire Marshal (OSFM). This list is no longer maintained or updated by the Cal FIRE OSFM.
Government Publication Date: Aug 31, 2009

Historical Hazardous Substance Storage Information Database: HHSS

The Historical Hazardous Substance Storage database contains information collected in the 1980s from facilities that stored hazardous substances. The information was originally collected on paper forms, was later transferred to microfiche, and recently indexed as a searchable database. When using this database, please be aware that it is based upon self-reported information submitted by facilities which has not been independently verified. It is unlikely that every facility responded to the survey and the database should not be expected to be a complete inventory of all facilities that were operating at that time. This database is maintained by the California State Water Resources Control Board's (SWRCB) Geotracker.

Government Publication Date: Aug 27, 2015

Site Mitigation and Brownfields Reuse Program Facility Sites with Land Use Restrictions: LUR

The Department of Toxic Substances Control (DTSC) Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents land use restrictions that are active. Some sites have multiple land use restrictions.

Government Publication Date: Aug 25, 2015

Hazardous Waste Management Program Facility Sites with Deed / Land Use Restrictions: HLUR

The Department of Toxic Substances Control (DTSC) Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

Government Publication Date: Nov 30, 2015

Deed Restrictions and Land Use Restrictions: DEED

List of Deed Restrictions, Land Use Restrictions and Covenants in GeoTracker made available by the State Water Resources Control Board (SWRCB) in California's Environmental Protection Agency. A deed restriction (land use covenant) may be required to facilitate the remediation of past environmental contamination and to protect human health and the environment by reducing the risk of exposure to residual hazardous materials.

Government Publication Date: Jul 20, 2015

Voluntary Cleanup Program: VCP

List of sites in the Voluntary Cleanup Program made available by the Department of Toxic Substances and Control (DTSC). The Voluntary Cleanup Program was designed to respond to lower priority sites. Under the Voluntary Cleanup Program, DTSC enters site-specific agreements with project proponents for DTSC oversight of site assessment, investigation, and/or removal or remediation activities, and the project proponents agree to pay DTSC's reasonable costs for those services.

Government Publication Date: Dec 7, 2015

GeoTracker Cleanup Sites Data: CLEANUP SITES

A list of cleanup sites in the state of California made available by The State Water Resources Control Board (SWRCB) of the California Environmental Protection Agency (EPA). SWRCB tracks leaking underground storage tank cleanups as well as other water board cleanups.

Government Publication Date: Dec 4, 2015

Well Investigation Program Case List: WIP

The Well Investigation Program (WIP) was developed by the State Water Resources Control Board (SWRCB) to locate, assess and remediate sources of solvent contamination impacting drinking water wells. This list contains WIP cases (active and historical) for the San Gabriel and San Fernando Valley area and was provided by the Los Angeles Regional Water Quality Control Board.

Government Publication Date: Nov 13, 2015

Tribal

Leaking Underground Storage Tanks (LUSTs) on Indian Lands: INDIAN LUST
LUSTs on Tribal/Indian Lands in Region 9, which includes California.
Government Publication Date: Aug 28, 2014

Underground Storage Tanks (USTs) on Indian Lands: INDIAN UST
USTs on Tribal/Indian Lands in Region 9, which includes California.
Government Publication Date: Aug 28, 2014

County

Alameda County LOP Sites List: ALAMEDA LOP
A list of Leaking Underground Storage Tanks (LUST) facilities in Alameda County. This list is made available by Alameda County Department of Environmental Health (ACEH). ACEH implements a Local Oversight Program (LOP) under contract with the State Water Resources Control Board to provide regulatory oversight of the investigation and cleanup of soil and groundwater contamination from leaking petroleum USTs.
Government Publication Date: Sep 23, 2015

Alameda County UST List: ALAMEDA UST
A list of all registered Underground Storage Tanks (USTs) in the County of Alameda. The list is made available by Alameda County Department of Environmental Health.
Government Publication Date: Sep 23, 2015

Amador County CUPA List: AMADOR CUPA
A list of facilities associated with various Certified Unified Program Agency (CUPA) programs in Amador County. This list is made available by Amador County Environmental Health Department which is the CUPA for Amador County and administers a consolidated hazardous materials program.
Government Publication Date: Nov 16, 2015

Butte County CUPA List: BUTTE CUPA
A list of facilities associated with various Certified Unified Program Agency (CUPA) programs in Butte County. This list is made available by Butte County Public Health Department, Environmental Health Division which was certified by the California Environmental Protection Agency as the CUPA for Butte County.
Government Publication Date: May 28, 2015

Calaveras County CUPA Facilities List: CALAVERAS CUPA
A list of facilities associated with various Certified Unified Program Agency (CUPA) programs in the County of Calaveras. This list is made available by Calaveras County Environmental Health Department which has been certified by CalEPA to implement the Unified program as a CUPA.
Government Publication Date: Jun 19, 2015

Calaveras County Landfills List: CALAVERAS LF
A list of landfills in Calaveras County. This list is made available by Calaveras County Environmental Health Department which has been designated as the CUPA for the County.
Government Publication Date: Jul 21, 2014

Calaveras County UST Remediation Sites: CALAVERAS LUST

A list of Leaking Underground Storage Tank (LUST) facilities in Calaveras County. This list is made available by Calaveras County Environmental Health Department. Local Implementing Agency (LIA) provides oversight of site remediation with soil contamination while CalEPA - California Regional Water Quality Control Board - Central Valley Region oversees remediation of sites with groundwater contamination.

Government Publication Date: Aug 13, 2014

Colusa County CUPA List: COLUSA CUPA

A list of facilities associated with Business Plan and Hazardous Generator programs in the County of Colusa. This list is made available by Colusa County Environmental Health which was certified by the California Environmental Protection Agency as Certified Unified Program Agency for Colusa County.

Government Publication Date: Sep 12, 2014

Contra Costa County CUPA List: CONTRACO CUPA

A list of facilities associated with various Certified Unified Program Agency (CUPA) programs in the County of Contra Costa. This list is made available by Contra Costa County which has been certified by CalEPA to implement the Unified program as a CUPA.

Government Publication Date: Jun 15, 2015

Del Norte County CUPA Facility List: DELNORTE CUPA

A list of facilities associated with various Certified Unified Program Agency (CUPA) programs in Del Norte County. This list is made available by Del Norte County Environmental Health Division which is the designated CUPA for the county.

Government Publication Date: Jan 22, 2016

El Dorado County CUPA Facility List: ELDORADO CUPA

A list of facilities associated with various Certified Unified Program Agency (CUPA) programs in El Dorado County. This list is made available by El Dorado County Department of Environmental Management - Hazardous Waste Division which is approved by CalEPA as CUPA for El Dorado County.

Government Publication Date: Dec 28, 2015

Fresno County CUPA/Solid Waste Programs Resource List: FRESNO CUPA

A list of facilities associated with various Certified Unified Program Agency (CUPA) programs in Fresno County. This list is made available by Fresno County Department of Environmental Health Division which is approved by Cal-EPA as CUPA for the County.

Government Publication Date: Jan 05, 2016

Humboldt County CUPA Facility List: HUMBOLDT CUPA

A list of facilities associated with various Certified Unified Program Agency (CUPA) programs in Humboldt County. This list is made available by Humboldt County Division of Environmental Health which is approved by the State Secretary for Environmental Protection as CUPA for the County.

Government Publication Date: May 28, 2015

Imperial County CUPA Facility List: IMPERIAL CUPA

A list of facilities associated with various Certified Unified Program Agency (CUPA) programs in Imperial County. This list is made available by the California Department of Toxic Substances Control (DTSC) which is appointed as CUPA for Imperial County.

Government Publication Date: May 19, 2015

Inyo County CUPA Facility List: INYO CUPA

A list of facilities associated with various Certified Unified Program Agency (CUPA) programs in the County of Inyo. This list is made available by the Inyo County Environmental Health Services Department which has been certified by CalEPA to implement the Unified program as a CUPA.

Government Publication Date: Jul 16, 2014

Kern County CUPA List: KERN CUPA
A list of facilities associated with various Certified Unified Program Agency (CUPA) programs in the County of Kern. This list is made available by Kern County Environmental Health Services Department which has been certified by CalEPA to implement the Unified program as a CUPA for Kern County.
Government Publication Date: May 19, 2015

Kern County UST List: KERN UST
A list of all registered and inactive Underground Storage Tanks in the County of Kern. The list is made available by Kern County Environmental Health Division.
Government Publication Date: May 19, 2015

Kings County CUPA Facility List: KINGS CUPA
A list of facilities associated with various Certified Unified Program Agency (CUPA) programs in Kings County. This list is made available by Kings County Department of Public Health which is appointed as CUPA for the county.
Government Publication Date: May 26, 2015

Lake County CUPA Facility List: LAKE CUPA
A list of facilities associated with various Certified Unified Program Agency (CUPA) programs in Lake County. This list is made available by Lake County Division of Environmental Health which is CUPA for the entire county.
Government Publication Date: Jun 9, 2015

Los Angeles County - El Segundo City Underground Storage Tanks List: ELSEGUNDO UST
A list of all registered Underground Storage Tanks (USTs) in the City of El Segundo of Los Angeles County. The list is made available by El Segundo City Fire Department.
Government Publication Date: Jul 24, 2014

Los Angeles County - Torrance City Underground Storage Tanks: TORRANCE UST
A list of registered Underground Storage Tank (UST) sites in Torrance City of Los Angeles County. This list is made available by Torrance City Office of Clerk.
Government Publication Date: May 07, 2015

Los Angeles County HMS List: LA HMS
This list contains sites that have or had permits for Industrial Waste, Underground Storage Tanks, or Storm water in the County of Los Angeles. This list is made available by the County of Los Angeles Department of Public Works.
Government Publication Date: Jun 22, 2015

Los Angeles County Long Beach UST List: LA LONGB UST
A list of all registered active Underground Storage Tanks in the City of Long Beach of Los Angeles County. The list is made available by Long Beach Certified Unified Program Agency.
Government Publication Date: Jun 18, 2015

Los Angeles County Solid Waste Sites: LA SWF
List of permitted solid waste facilities, closed landfills, historical dumpsites and other solid waste sites in Los Angeles County, made available by the Department of Public Works in Los Angeles County.
Government Publication Date: Dec 22, 2015

Madera County CUPA Facility List: MADERA CUPA
A list of facilities associated with various Certified Unified Program Agency (CUPA) programs in Madera County. This list is made available by Madera County Environmental Health Department which is CUPA for the entire county.
Government Publication Date: Sep 16, 2015

Marin County CUPA List: MARIN CUPA
A list of facilities associated with various Certified Unified Program Agency (CUPA) programs in the County of Marin. This list is made available by Marin County which has been certified by CalEPA to implement the Unified program as a CUPA.
Government Publication Date: May 26, 2015

Merced County CUPA Facilities List: MERCED CUPA
A list of facilities associated with various Certified Unified Program Agency (CUPA) programs in the County of Merced. This list is made available by Merced County which has been certified by CalEPA to implement the Unified program as a CUPA for the entire county.
Government Publication Date: Jan 15, 2016

Mono County CUPA Facility List: MONO CUPA
A list of facilities associated with various Certified Unified Program Agency (CUPA) programs in Mono County. This list is made available by Mono County Environmental Health Department which has been certified by CalEPA to implement the Unified program as a CUPA for the entire county.
Government Publication Date: Sep 29, 2015

Monterey County CUPA Facility List: MONTEREY CUPA
A list of facilities associated with various Certified Unified Program Agency (CUPA) programs in Monterey County. This list is made available by Monterey County Hazardous Materials Management Services which is designated as the CUPA in Monterey County.
Government Publication Date: Jun 17, 2015

Napa County UST List: NAPA UST
A list of all registered active Underground Storage Tanks (USTs) in the County of Napa. This list is made available by Napa County Environmental Health Division.
Government Publication Date: Sep 10, 2015

Nevada County CUPA Facility List: NEVADA CUPA
A list of facilities associated with various Certified Unified Program Agency (CUPA) programs in Nevada County. This list is made available by Nevada County Department of Environmental Health which is the CUPA for all cities and unincorporated areas within Nevada County.
Government Publication Date: Oct 8, 2015

Orange County Aboveground Petroleum Storage Tank Listing: ORANGE AST
A list of Aboveground Petroleum Storage Tank (APST) facilities inspected by Orange County Certified Unified Program Agency (CUPA) Under the Aboveground Petroleum Storage Act (APSA). This list is made available by the Environmental Health Division of Orange County Health Care Agency.
Government Publication Date: Dec 1, 2015

Orange County Underground Storage Tanks Listing: ORANGE UST
A list of registered Underground Storage Tank (UST) sites in Orange County. This list is made available by Orange County Health Care Agency (OCHCA), Environmental Health Division which oversees the underground storage tank inspection program in most of the cities of Orange County, with the exception of Anaheim, Fullerton, and Orange.
Government Publication Date: Dec 01, 2015

Placer County CUPA Facilities List: PLACER CUPA
A list of facilities associated with various Certified Unified Program Agency (CUPA) programs in Placer County. This list is made available by Placer County Environmental Health which is designated CUPA for all areas of the county except for the City of Roseville.
Government Publication Date: Aug 13, 2015

Riverside County Local Oversight Program List: RIVERSIDE LOP
A list of Leaking Underground Storage Tank (LUST) facilities in Riverside County. This list is made available by Riverside County Department of Environmental Health. Environmental Cleanup Program provides oversight of assessments and cleanups at properties that have been, or may have been, contaminated with hazardous substances from LUSTs or releases associated with other commercial/industrial use.
Government Publication Date: Jun 10, 2015

Riverside County Underground Storage Tanks List: RIVERSIDE UST
A list of registered Underground Storage Tank (UST) sites in Riverside County. This list is made available by Riverside County Department of Environmental Health. The Hazardous Materials Management Branch (HMMB) regulates and oversees the inspections of constructions, repairs, upgrades, system operation and removal of UST systems.
Government Publication Date: Jun 10, 2015

Sacramento County Master Hazardous Materials Facility List: SACRAMENTO HAZ
A list of Hazardous Materials Facilities in Sacramento County. This list is made available by Sacramento County Environmental Management Department which has been designated as the Certified Unified Program Agency (CUPA) for the County.
Government Publication Date: Nov 2, 2015

Sacramento Toxic Site Cleanup List: SACRAMENTO TOX
Sacramento County Environmental Management Department (EMD)'s Toxic Site Cleanup List includes sites where unauthorized releases of potentially hazardous materials have occurred. The EMD's Site Assessment & Mitigation Program, also referred to as Toxic Site Cleanup Program, provides mandated regulatory oversight of the assessment and remediation of properties on which there has been a release of hazardous materials to soil and/or groundwater.
Government Publication Date: Nov 2, 2015

San Bernardino County CUPA List: SANBERN CUPA
A list of facilities associated with various Certified Unified Program Agency (CUPA) programs in San Bernardino County. This list is made available by San Bernardino County Fire Department which is the CUPA for all areas of the County except the city of Victorville.
Government Publication Date: Jun 30, 2015

San Diego County Hazardous Materials Management Division Database: SANDIEGO HAZ
A list of facilities with Unified Program Facility Permit in San Diego County. This list has been made available by County of San Diego Environmental Health.
Government Publication Date: Jan 18, 2016

San Diego County Site Assessment and Mitigation Investigation Sites: SANDIEGO SAM
List of sites which have undergone a Site Assessment and Mitigation investigation. This list is made available by the County of San Diego Department of Environmental Health.
Government Publication Date: Jul 25, 2015

San Diego County Solid Waste Facility List: SANDIEGO SWF
A list of open and closed Solid Waste Facilities in the County of San Diego. The list is made available by San Diego County Department of Environmental Health.
Government Publication Date: Oct 15, 2015

San Francisco County Aboveground Storage Tanks List: SANFRAN AST
A list of Aboveground Storage Tanks (ASTs) facilities inspected by San Francisco Department of Public Health's (SFDPH) Hazardous Materials and Waste Program. Aboveground storage containers or tanks include oil-filled equipment (such as hydraulic systems/reservoirs and heat transfer systems) which have a petroleum storage capacity of 55 gallons or greater.
Government Publication Date: Sep 11, 2015

San Francisco County CUPA Facilities List: SANFRAN CUPA
A list of facilities associated with various Certified Unified Program Agency (CUPA) programs in San Francisco County. This list is made available by San Francisco County Hazardous Materials and Waste Program which is the CUPA for all areas of the County.
Government Publication Date: Sep 11, 2015

San Francisco County LOP Sites: SANFRAN LOP
A list of Underground Storage Tank (UST) release sites in the County of San Francisco. This list is made available by San Francisco County Department of Public Health Environmental Health Protection Branch.

Government Publication Date: Oct 6, 2015

San Francisco County UST List: SANFRAN UST
A list of all registered Underground Storage Tanks (USTs) in the County of San Francisco. This ist is made available by San Francisco County Environmental Health Division. The Hazardous Materials and Waste Program provides regulatory oversight for the construction, operation, repair and removal of USTs in San Francisco.
Government Publication Date: Sep 11, 2015

San Joaquin County Aboveground Tank List: SANJOAQUIN AST
A list of Aboveground Storage Tanks (ASTs) inspected by San Joaquin County Environmental Health Department (SJCEHD) under Aboveground Petroleum Storage Act (APSA).
Government Publication Date: Jun 5, 2015

San Joaquin County UST List: SANJOAQUIN UST
A list of all registered Underground Storage Tanks in the County of San Joaquin. The list is made available by San Joaquin County Environmental Health Division.
Government Publication Date: Jun 05, 2015

San Joaquin Hazardous Waste Facilities: SANJOAQUIN HW
A list of Hazardous Waste Facilities in San Joaquin County. This list is made available by San Joaquin County Environmental Health Department which has been designated as the CUPA for the County.
Government Publication Date: Jun 5, 2015

San Mateo County CUPA Facilities List: SANMATEO CUPA
A list of facilities associated with various Certified Unified Program Agency (CUPA) programs in San Mateo County. This list is made available by San Mateo County Environmental Health Department which has been designated as the CUPA for the County.
Government Publication Date: May 28, 2015

San Mateo County LOP List: SANMATEO LOP
A list of Leaking Underground Storage Tank (LUST) facilities in San Mateo County. This list is made available by San Mateo County Environmental Health Services Division.
Government Publication Date: May 27, 2015

Santa Clara County CUPA Facilities List: SANTACLARA CUPA
A list of facilities associated with various Certified Unified Program Agency (CUPA) programs in Santa Clara County. This list is made available by Santa Clara County Department of Environmental health (DEH). DEH's Hazardous Materials Compliance Division (HMCD) is CUPA for the county with jurisdiction within the Cities of Los Altos Hills, Monte Sereno, and Saratoga; and in all unincorporated areas of Santa Clara County, including Moffett Field, San Martin, and Stanford.
Government Publication Date: May 26, 2015

Santa Clara Local Oversight Program Listing: SANTACLARA LO
A list of Leaking Underground Storage Tanks (LUST) facilities in Santa Clara County Provided by Santa Clara Department of Environmental Health (DEH). Since July 1, 2004 the DEH has served as the oversight agency for investigations and clean-up of petroleum releases from underground storage tanks through implementation of the Local Oversight Program (LOP) contract with the State Water Resources Control Board.
Government Publication Date: Nov 13, 2015

Santa Cruz County CUPA Facility List: SANTACRUZ CUPA
A list of facilities associated with various Certified Unified Program Agency (CUPA) programs in Santa Cruz County. This list is made available by Santa Cruz County Environmental Health Services (EHS) Division which has been designated as the CUPA for the County.
Government Publication Date: Jan 19, 2016

San Luis Obispo County CUPA Facilities List: SANLUISOB CUPA
A list of facilities associated with various Certified Unified Program Agency (CUPA) programs in San Luis Obispo County. This list is made available by County of San Luis Obispo Environmental Health Services Division which has been designated as the CUPA for the County.
Government Publication Date: May 27, 2015

Shasta County CUPA Facility List: SHASTA CUPA
A list of facilities associated with various Certified Unified Program Agency (CUPA) programs in Shasta County. This list is made available by Shasta County Environmental Health Division which has been designated as the CUPA for Shasta County by CalEPA.
Government Publication Date: Jun 12, 2015

Solano County CUPA List: SOLANO CUPA
A list of facilities associated with various Certified Unified Program Agency (CUPA) programs in the County of Solano. This list is made available by Solano County Environmental Health Division which has been certified by CalEPA to implement the Unified program as a CUPA.
Government Publication Date: Oct 22, 2015

Solano County Local Oversight Program List: SOLANO LOP
A list of Leaking Underground Storage Tank (LUST) facilities in the Solano County. This list is made available by the Solano County Environmental Health Services. Since April 1993, the State Water Resources Control Board has contracted with the County of Solano to provide regulatory oversight for the cleanup of LUSTs under Local Oversight Program (LOP) contract.
Government Publication Date: Oct 22, 2015

Solano County Underground Storage Tanks List: SOLANO UST
A list of all registered Underground Storage Tanks (USTs) in the County of Solano. The list is made available by Solano County Environmental Health Services Division. There are an estimated 190 facilities throughout the county that are subject to the regulatory requirements of the UST program.
Government Publication Date: Oct 22, 2015

Sonoma County CUPA Facilities List: SONOMA CUPA
A list of facilities associated with various Certified Unified Program Agency (CUPA) programs in Sonoma County. This list is made available by Sonoma County Hazardous Materials (HazMat) Division which has been designated as the CUPA for the County.
Government Publication Date: May 28, 2015

Sonoma County LOP Site List: SONOMA LOP
A list of Leaking Underground Storage Tank (LUST) facilities in Sonoma County. This list is made available by Sonoma County Department of Health Services. Sonoma County Local Oversight Program (LOP) oversees the investigation and cleanup of fuel releases from underground storage tanks in all areas of the County with the exception of the Cities of Santa Rosa and Healdsburg.
Government Publication Date: Jan 5, 2016

Sonoma County Petaluma City CUPA Facilities: SONOMA PETAL
A list of facilities associated with various Certified Unified Program Agency (CUPA) programs in Petaluma City. This list is made available by Petaluma Fire Prevention Bureau which is the CUPA for Petaluma City in Sonoma County.
Government Publication Date: May 21, 2015

Sutter County CUPA List: SUTTER CUPA
A list of facilities associated with Aboveground Petroleum Storage Tank (APSA) regulation, Hazardous Materials Business Plan (HMBP) Program and Underground Storage Tank (UST) regulation of Certified Unified Program Agency (CUPA) programs in Sutter County. This list is made available by Sutter County Enviornmental Health Division which has been designated as the CUPA for the County.

Government Publication Date: May 06, 2015

Tuolumne County CUPA Facility List: TUOLUMNE CUPA
A list of facilities associated with various Certified Unified Program Agency (CUPA) programs in Tuolumne County. This list is made available by Tuolumne County Environmental Health which is the CUPA for all areas of the County.
Government Publication Date: June 3, 2015

Ventura County CUPA Facilities List: VENTURA CUPA
A list of facilities associated with various Certified Unified Program Agency (CUPA) programs in Ventura County. This list is made available by Ventura County Environmental health Division.
Government Publication Date: Dec 28, 2015

Ventura County City of Oxnard CUPA Facility List: OXNARD CUPA
A list of facilities associated with various Certified Unified Program Agency (CUPA) programs in Oxnard City. This list is made available by Oxnard City Fire Department which is the CUPA for Oxnard City in Ventura County.
Government Publication Date: Dec 11, 2015

Ventura County Inactive Underground Storage Tanks Sites: VENTURA INUST
A list of inactive Underground Storage Tank (UST) sites in Ventura County. This list is made available by Ventura County Environmental Health Division.
Government Publication Date: Nov 30, 2015

Ventura County Leaking Underground Fuel Tanks - Historic: VENTURA HLUFT
A historical list of cleanup oversight of the Leaking Underground Fuel Tank (LUFT) program provided by Ventura County Environmental Health Division. All new and existing underground fuel storage tank releases are now referred to the Los Angeles Regional Water Quality Control Board.
Government Publication Date: May 31, 2008

Yolo County UST List: YOLO UST
A list of registered Underground Storage Tank (UST) sites in Yolo County. This list is made available by Yolo County Environmental Health Department which regulates the construction, operation, repair and removal of USTs throughout Yolo County.
Government Publication Date: Jan 18, 2016

Yuba County CUPA Facilities List: YUBA CUPA
A list of facilities associated with various Certified Unified Program Agency (CUPA) programs in Yuba County. This list is made available by Yuba County Environmental Health Division which is the CUPA for all areas of the County.
Government Publication Date: May 27, 2015

City of Bakersfield CUPA List: BKRSFIELD CUPA
A list of facilities associated with various Certified Unified Program Agency (CUPA) programs in the City of Bakersfield. This list is made available by the City of Bakersfield Fire Department.
Government Publication Date: Jun 19, 2015

Gilroy City CUPA Facilities List: SANTACLARA GIL
The Gilroy City Fire Marshal's office maintains a list of CUPA Facilities located in Gilroy City.
Government Publication Date: Jan 19, 2016

Glenn County CUPA List: GLENN CUPA
The Glenn County Air Pollution Control District is the Administering Agency and the Certified Unified Program Agency (CUPA) for Glenn County with responsibility for regulating hazardous materials handlers, hazardous waste generators, underground storage tank facilities, above ground storage tanks, and stationary sources handling regulated substances.
Government Publication Date: Sep 21,2015

Lassen County CUPA List: LASSEN CUPA
The Environmental Health Program of Lassen County tracks Certified Unified Program Agencies (CUPA) facilities.

Government Publication Date: Jan 25, 2016

Mariposa County CUPA List: MARIPOSA CUPA
Mariposa County Health Department, Environmental Health Services, is certified by Cal-EPA as the Certified Unified Program Agency (CUPA) that administers specific hazardous materials/hazardous waste programs.
Government Publication Date: Oct 19,2015

Siskiyou County CUPA List: SISKIYOU CUPA
The Hazardous Materials Management Group of Siskiyou County's Environmental Health Division Certified Unified Program Agency (CUPA) regulates underground tanks, hazardous materials (including but not limited to: hazardous substances, hazardous waste, and any material which a handler or the CUPA has reasonable basis for believing that it would be injurious to the health and safety of persons or harmful to the environment if released into the workplace or the environment.

Government Publication Date: Oct 14,2015

Stanislaus County CUPA List: STANISLAUS CUPA
The Environmental Resources Department of Stanislaus County maintains a list of Certified Unified Program Agency (CUPA) facilities.
Government Publication Date: Sep 21,2015

Trinity County CUPA List: TRINITY CUPA
On January 1, 2005, the Department of Toxic Substances Control (DTSC) was authorized by the California Environmental Protection Agency (Cal/EPA) as the Trinity County Certified Unified Program Agency (CUPA). This CUPA list was made available by the DTSC.
Government Publication Date: Sep 22,2015

Tulare County CUPA List: TULARE CUPA
The Certified Unified Program Agency (CUPA) unifies and consolidates under one roof the various requirements for businesses handling hazardous materials, generating or treating hazardous wastes, or operating aboveground or underground storage tanks. CUPA thereby enhances consistency, reduces duplication, and simplifies compliance for the regulated public. The Tulare County Environmental Health Division was certified as a CUPA in December, 1996.
Government Publication Date: Dec 3, 2015

Additional Environmental Record Sources

Federal

Facility Registry Service/Facility Index: FINDS/FRS
The US Environmental Protection Agency (EPA)'s Facility Registry System (FRS) is a centrally managed database that identifies facilities, sites or places subject to environmental regulations or of environmental interest. FRS creates high-quality, accurate, and authoritative facility identification records through rigorous verification and management procedures that incorporate information from program national systems, state master facility records, data collected from EPA's Central Data Exchange registrations and data management personnel.
Government Publication Date: Sep 24, 2015

Toxics Release Inventory (TRI) Program: TRIS
The EPA's Toxics Release Inventory (TRI) is a database containing data on disposal or other releases of over 650 toxic chemicals from thousands of U.S. facilities and information about how facilities manage those chemicals through recycling, energy recovery, and treatment. One of TRI's primary purposes is to inform communities about toxic chemical releases to the environment.
Government Publication Date: 1987-2013

Hazardous Materials Information Reporting System: HMIRS
US DOT - Department of Transportation Pipeline and Hazardous Materials Safety Administration (PHMSA) Incidents Reports Database taken from Hazmat Intelligence Portal, U.S. Department of Transportation.
Government Publication Date: Dec 8, 2015

National Clandestine Drug Labs: NCDL
The U.S. Department of Justice ("the Department") provides this data as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy.
Government Publication Date: Sep 5, 2015

Inventory of Open Dumps, June 1985: ODI
The Resource Conservation and Recovery Act (RCRA of the Act) provides for publication of an inventory of open dumps. The Act defines "open dumps" as facilities which do not comply with EPA's "Criteria for Classification of Solid Waste Disposal Facilities and Practices" (40 CFR 257).
Government Publication Date: Jun 1985

EPA Report on the Status of Open Dumps on Indian Lands: IODI
Public Law 103-399, The Indian Lands Open Dump Cleanup Act of 1994, enacted October 22, 1994, identified ongressional concerns that solid waste open dump sites located on American Indian or Alaska Native (AI/AN) lands threaten the health and safety of residents of those lands and contiguous areas. The purpose of the Act is to identify the location of open dumps on Indian lands, assess the relative health and environment hazards posed by those sites, and provide financial and technical assistance to Indian tribal governments to close such dumps in compliance with Federal standards and regulations or standards promulgated by Indian Tribal governments or Alaska Native entities.
Government Publication Date: Dec 31, 1998

Toxic Substances Control Act: TSCA
The Environmental Protection Agency (EPA) is amending the Toxic Substances Control Act (TSCA) section 8(a) Inventory Update Reporting (IUR) rule and changing its name to the Chemical Data Reporting (CDR) rule.
The CDR enables EPA to collect and publish information on the manufacturing, processing, and use of commercial chemical substances and mixtures (referred to hereafter as chemical substances) on the TSCA Chemical Substance Inventory (TSCA Inventory). This includes current information on chemical substance production volumes, manufacturing sites, and how the chemical substances are used. This information helps the Agency determine whether people or the environment are potentially exposed to reported chemical substances. EPA publishes submitted CDR data that is not Confidential Business Information (CBI).
Government Publication Date: Jun 30, 2014

Hist TSCA: HIST TSCA
The Environmental Protection Agency (EPA) is amending the Toxic Substances Control Act (TSCA) section 8(a) Inventory Update Reporting (IUR) rule and changing its name to the Chemical Data Reporting (CDR) rule.
The 2006 IUR data summary report includes information about chemicals manufactured or imported in quantities of 25,000 pounds or more at a single site during calendar year 2005. In addition to the basic manufacturing information collected in previous reporting cycles, the 2006 cycle is the first time EPA collected information to characterize exposure during manufacturing, processing and use of organic chemicals. The 2006 cycle also is the first time manufacturers of inorganic chemicals were required to report basic manufacturing information.
Government Publication Date: 2006

FTTS Administrative Case Listing: FTTS ADMIN
An administrative case listing from the Federal Insecticide, Fungicide, & Rodenticide Act (FIFRA) and Toxic Substances Control Act (TSCA), together known as FTTS. This database was obtained from the Environmental Protection Agency's (EPA) National Compliance Database (NCDB). The FTTS and NCDB was shut down in 2006.
Government Publication Date: Jan 19, 2007

FTTS Inspection Case Listing: FTTS INSP

An inspection case listing from the Federal Insecticide, Fungicide, & Rodenticide Act (FIFRA) and Toxic Substances Control Act (TSCA), together known as FTTS. This database was obtained from the Environmental Protection Agency's (EPA) National Compliance Database (NCDB). The FTTS and NCDB was shut down in 2006.

Government Publication Date: Jan 19, 2007

Potentially Responsible Parties List: PRP

Early in the cleanup process, the Enviromental Protection Agency (EPA) conducts a search to find all of the potentially responsible parties (PRPs). EPA looks for evidence to determine liability by matching wastes found at the site with parties that may have contributed wastes to the site.

Government Publication Date: Nov 12, 2013

State Coalition for Remediation of Drycleaners Listing: SCRD DRYCLEANER

The State Coalition for Remediation of Drycleaners (SCRD) was established in 1998, with support from the U.S. Environmental Protection Agency (EPA) Office of Superfund Remediation and Technology Innovation. It is comprised of states with established drycleaner remediation programs. Coalition members are states with mandated programs and funding for drycleaner site remediation. Coalition members are states with mandated programs and funding for drycleaner site remediation. Current members are Alabama, Connecticut, Florida, Illinois, Kansas, Minnesota, Missouri, North Carolina, Oregon, South Carolina, Tennessee, Texas, and Wisconsin.

Government Publication Date: Jan 1, 2016

Integrated Compliance Information System (ICIS): ICIS

The Integrated Compliance Information System (ICIS) is a system that provides information for the Federal Enforcement and Compliance (FE&C) and the National Pollutant Discharge Elimination System (NPDES) programs. The FE&C component supports the Environmental Protection Agency's (EPA) Civil Enforcement and Compliance program activities. These activities include Compliance Assistance, Compliance Monitoring and Enforcement. The NPDES program supports tracking of NPDES permits, limits, discharge monitoring data and other program reports.

Government Publication Date: Dec 17, 2015

State

EnviroStor Inspection, Compliance, and Enforcement: INSP COMP ENF

A list of permitted facilities with inspections and enforcements tracked in the Department of Toxic Substance Control (DTSC) EnviroStor.

Government Publication Date: Aug 24, 2015

Clandestine Drug Lab Sites: CDL

The Department of Toxic Substances Control (DTSC) maintains a listing of drug lab sites. DTSC is responsible for removal and disposal of hazardous substances discovered by law enforcement officials while investigating illegal/clandestine drug laboratories.

Government Publication Date: Feb 27, 2015

School Property Evaluation Program Sites: SCH

A list of sites registered with The Department of Toxic Substances Control (DTSC) School Property Evaluation and Cleanup (SPEC) Division. SPEC is responsible for assessing, investigating and cleaning up proposed school sites. The Division ensures that selected properties are free of contamination or, if the properties were previously contaminated, that they have been cleaned up to a level that protects the students and staff who will occupy the new school.

Government Publication Date: Dec 7, 2015

California Hazardous Material Incident Report System (CHMIRS): CHMIRS

A list of reported hazardous material incidents, spills, and releases from the California Hazardous Material Incident Report System (CHMIRS). This list has been made available by the California Office of Emergency Services (OES).

Government Publication Date: Sept 18, 2015

Sites Listed in the Solid Waste Assessment Test (SWAT) Program Report: SWAT
In a 1993 Memorandum of Understanding, the State Water Resources Control Board (SWRCB) agreed to submit a comprehensive report on the Solid Waste Assessment Test (SWAT) Program to the California Integrated Waste Management Board (CIWMB). This report summarizes the work completed to date on the SWAT Program, and addresses both the impacts that leakage from solid waste disposal sites (SWDS) may have upon waters of the State and the actions taken to address such leakage.
Government Publication Date: Dec 31, 1995

Hazardous Waste Manifest Data: HAZNET
A list of hazardous waste manifests received each year by Department of Toxic Substances Control (DTSC). The volume of manifests is typically 900,000 - 1,000,000 annually, representing approximately 450,000 - 500,000 shipments.
Government Publication Date: Oct 2,2015

Historical California Hazardous Material Incident Report System (CHMIRS): HIST CHMIRS
A list of reported hazardous material incidents, spills, and releases from the California Hazardous Material Incident Report System (CHMIRS) prior to 1993. This list has been made available by the California Office of Emergency Services (OES).
Government Publication Date: Jan 1, 1993

Historical Hazardous Waste Manifest Data: HIST MANIFEST
A list of historic hazardous waste manifests received by the Department of Toxic Substances Control (DTSC) from year the 1980 to 1992. The volume of manifests is typically 900,000 - 1,000,000 annually, representing approximately 450,000 - 500,000 shipments.
Government Publication Date: Dec 31, 1992

Tribal

No Tribal additional environmental record sources available for this State.

County

Los Angeles County Site Mitigation List: LA SML
A Site Mitigation List in the County of Los Angeles. The list is made available by Los Angeles County Fire Department. Site mitigation is handled by the Site Mitigation Unit (SMU) which facilitates completion of site clean-up projects of contaminated sites in an expeditious manner in all cities of the Los Angeles County except El Segundo, Glendale, Long Beach, Santa Fe Springs, and Vernon.
Government Publication Date: Jun 23, 2015

Riverside County Disclosure Facility List: RIVERSIDE HZH
A list of facilities disclosed to Riverside County Department of Environmental Health (DEH). This list is made available by Riverside County DEH which has been designated as the CUPA for the County. A business is required to establish and submit a Business Plan if the facility handles hazardous material equal to or greater than 55 gallons, 500 pounds or 200 cubic feet at any time during the year.
Government Publication Date: Jun 10, 2015

Riverside County Hazardous Waste Generator Sites List: RIVERSIDE HWG
A list of Hazardous Waste Generator Sites in the County of Riverside. This list is made available by Riverside County Department of Environmental Health which has been designated as the CUPA for the County.
Government Publication Date: Jun 10, 2015

San Joaquin County Hazardous Materials Facilities List: SANJOAQUIN HM
A list of Hazardous Materials Facilities in San Joaquin County. This list is made available by San Joaquin County Environmental Health Department which has been designated as the CUPA for the County.

Government Publication Date: Jun 05, 2015

Ventura County Hazardous Material Release (Prop 65) Sites: VENTURA HAZR

A historic list of hazardous material releases from the Hazardous Material Release Report collected by the Environmental Health Division of Ventura County. As per the department this report contains records from 1987 to 2014.

Government Publication Date: 1987 - 2014

Ventura County Inactive Hazardous Waste Sites: HW INACTIVE

A list of Inactive Hazardous Waste Sites in Ventura County collected by Ventura County's Environmental Health Division.

Government Publication Date: Jun 26, 2015

Delisted County Records: DELISTED COUNTY

Records removed from county or CUPA databases. Records may be removed from the county lists made available by the respective county departments because they are inactive, or because they have been deemed to be below reportable thresholds.

Government Publication Date: Dec 1, 2015

Definitions

Database Descriptions: This section provides a detailed explanation for each database including: source, information available, time coverage, and acronyms used. They are listed in alphabetic order.

Detail Report: This is the section of the report which provides the most detail for each individual record. Records are summarized by location, starting with the project property followed by records in closest proximity.

Distance: The distance value is the distance between plotted points, not necessarily the distance between the sites' boundaries". All values are an approximation.

Direction: The direction value is the compass direction of the site in respect to the project property and/or center point of the report.

Elevation: The elevation value is taken from the location at which the records for the site address have been plotted. All values are an approximation. Source: Google Elevation API.

Executive Summary: This portion of the report is divided into 3 sections:

'Report Summary'- Displays a chart indicating how many records fall on the project property and, within the report search radii.

'Site Report Summary'-Project Property'- This section lists all the records which fall on the project property. For more details, see the 'Detail Report' section.

'Site Report Summary-Surrounding Properties'- This section summarizes all records on adjacent properties, listing them in order of proximity from the project property. For more details, see the 'Detail Report' section.

Map Key: The map key number is assigned according to closest proximity from the project property. Map Key numbers always start at #1. The project property will always have a map key of '1' if records are available. If there is a number in brackets beside the main number, this will indicate the number of records on that specific property. If there is no number in brackets, there is only one record for that property.

The symbol and colour used indicates 'elevation': the red inverted triangle will dictate 'ERIS Sites with Lower Elevation', the yellow triangle will dictate 'ERIS Sites with Higher Elevation' and the orange square will dictate 'ERIS Sites with Same Elevation.'

Unplottables: These are records that could not be mapped due to various reasons, including limited geographic information. These records may or may not be in your study area, and were included as reference.

APPENDIX I:
RESUMES

Brian "Jake" Jakubiak

SENIOR ENVIRONMENTAL CONSULTANT

Education

-Bachelor Degree, Geography and Environmental Science, Towson University, 1997
-Graduate course work in Environmental Science, Johns Hopkins University 2000-2002

Project Experience

Retail Shopping Center; **Baltimore**, **MD** – Mr. Jakubiak performed a Phase I ESA of an approximate 20-acre retail center, which historic occupants included a dry cleaner and two gasoline service stations. A Phase II ESA was subsequently performed, which included the collection and analysis of soil, sub-slab soil-gas, and groundwater from the site. The results of the laboratory analysis did not identify contaminants at concentrations requiring further action. Based on the results of the Phase II ESA, the Client was able to obtain financing and move forward with the redevelopment of the site.

Former Landfill; **North Miami**, **FL** – Mr. Jakubiak performed a Phase I ESA of an approximate 140-acre former landfill property currently undergoing redevelopment with residential and commercial land uses. The Phase I ESA included reviewing prior environmental reports that had been performed over the past 25 years; recent remediation activities; and regulatory correspondence detailing the current regulatory status and remaining remedial activities required to obtain closure of the landfill. Based on the review of these documents and interviews with local and state regulatory representative, no further evaluation was recommended.

Assisted Living Facility (ALF); **Warminister**, **PA** – Mr. Jakubiak performed a Phase I ESA of an approximate 100-acre ASF constructed on a former military base. Based on the review of prior reports, no further action was recommended.

INDUSTRY TENURE

Environmental: 1998
EMG: 2011

RELATED EXPERIENCE

- UST Removal Oversight
- Phase II ESA sampling & reporting
- Radon Sampling
- Asbestos Sampling
- Stormwater Pollution Prevention Plans (SWP3)
- National Environmental Protection Act (NEPA) compliance

- AAI/ASTM E1527-13 Environmental Professional

REGIONAL LOCATION

Des Moines, IA

Project Experience Cont.

Industrial Facility; **Owings Mills**, **MD** – Mr. Jakubiak performed a Phase I ESA of an approximate 50-acre industrial facility that had operated at the site since the 1960s. RECs identified included the use of solvents in a large-scale printing operation; USTs that had been abandoned in-place; the presence of oil-water separators; and documented on-site petroleum releases. A Phase II ESA was performed to further evaluate the areas of concern (AOCs). Based on the results of the Phase II ESA, the Seller was required to remediate several areas of impacted soil and remove the abandoned USTs prior to the Buyer acquiring the site.

Manufacturing Facility; **Ellicott City**, **MD** – Following the identification of suspect piping to the boiler room, Mr. Jakubiak provided oversight of a Phase II ESA, which initially included a geophysical survey in the area of the suspect piping. Two significant anomalies were identified and were subsequently verified to be 10,000-gallon fuel oil USTs. Mr. Jakubiak provided removal oversight of the USTs and confirmatory sampling activities. A significant release was identified and was reported to the State. Mr. Jakubiak managed the soil excavation and groundwater monitoring well installation. Mr. Jakubiak performed groundwater remediation, monitoring, and reporting activities and assisted in obtaining case closure of this leaking underground storage tank site.

Residential Subdivision; **Perry Hall**, **MD** – Following the identification of former waste collection and greenhouse facilities on the site, Mr. Jakubiak provided oversight of a Phase II ESA in areas formerly containing USTs, disturbed surface areas suspected of containing fill material, truck maintenance areas, and greenhouses. Based on the findings of the Phase II ESA, the site was entered into the State Voluntary Cleanup Program and Mr. Jakubiak delineated petroleum impacted soils and areas containing buried refuse and oversaw the excavation of these materials. Following removal activities, confirmatory sampling was performed and the site was granted case closure and allowed to be redeveloped for residential use.

Malinda S. Ross

TECHNICAL REPORT REVIEWER

Education

Bachelor of Science, Environmental Science and Studies – Concentration in Biology, Towson University, 2010

Project Experience

Former Automotive Repair Facility at K-Mart; **Lodi**, **NJ** – Ms. Ross reviewed a Phase I ESA for the subject property with documented evidence of tetrachloroethylene (PCE) and trichloroethylene (TCE) contamination associated with the historic use of chlorinated solvents. Groundwater and soil contamination at the subject property had been identified by previous subsurface investigations. At the time of EMG's assessment, Ms. Ross identified anomalies regarding the proper abandonment and closure of in-ground hydraulic lifts and the oil-water separator system associated with the former automotive garage. Based on Ms. Ross' review, EMG was able to provide the client definitive recommendations to address the identified recognized environmental conditions and data gaps associated with the Project.

Forsgate Country Club; **Monroe**, **NJ** – Ms. Ross performed a Phase I ESA of this 313.65 acres golf course and country club facility. Historical review of this 50+ year facility identified historical underground storage tanks and NJ Spills Cases related to the historical dairy farm formerly located at the Project and adjoining property use, and owned by a former owner associated with the Project. In addition, regional contamination in the area of the golf course and observations from the site reconnaissance identified several monitoring wells installed at the Project and along Project boundaries related to a historical off-site landfill facility. Ms. Ross' extensive research and comprehensive site reconnaissance provided the client with full detail of the Project's associated recognized environmental conditions in order tomake a well-informed transaction decision.

SPECIAL SKILLS & TRAINING

- ASTM Phase I Environmental Site Assessment Practices for Commercial Real Estate: Transaction Screen & Phase I Site Assessment (October 2014)

REGIONAL LOCATION

Baltimore, MD

Project Experience Cont.

2800 28th Street; **Santa Monica**, **CA** – Ms. Ross performed a historical review and ghostwrote the Phase I ESA report for the 40-unit office building situated on 4.48 acres. Ms. Ross determined the Project and surrounding areas were historically utilized as the previous manufacturing facility, McDonnell Douglas Aircraft Company, which operated during the late 1930's to early 1970's. Historical operations performed by the aircraft company included the manufacturing, testing, and research of aircraft missiles and miscellaneous military materials. Review of previous subsurface investigations documented the presence of groundwater and soil contamination at the Project, and the Project was undergoing soil vapor extraction (SVE) remedial action at the time of EMG's assessment. EMG was able to provide the client evidence that contamination from the historical use and surrounding areas was present, and the affected areas were actively being remediated by a separate responsible party.

Home Depot Shopping Center; **Nanuet**, **NY** – As a Project Manager, Ms. Ross performed a file review and updated Phase I Environmental Site assessment report for the retail shopping center situated on 3.57 acres. Research of the records obtained from state and local environmental agencies, as well as client-supplied previous Phase I reports, indicated case closure was granted to the Project for the historical USTs and soil contamination associated with a gasoline station that formerly operated at the Project. However, none of the closure letters obtained specifically addressed groundwater contamination that was reported at the Project in 1995. Based on her research, EMG was able to address the data gap to the client, and conclude no further action would be required based on the remedial measures performed since the 1995 discovery and case-closures granted by the regulating agencies.

Riverside Apartments; **Alexandria**, **VA** – Ms. Ross performed a Limited Visual Mold Inspection of a high-rise multi-family residential complex. The Project was inspected for areas with visible water damage and visible mold growth, and random moisture meter readings were collected from various surfaces. EMG was informed of a leak occurring from the roof drain above Stack 03 identified by a previous inspection and needed to be repaired. EMG found the internal drainage system associated with the impaired roof drain that caused significant degradation to the adjoining building materials from floor 16 down to floor 9. Ms. Ross provided the client a unit-by-unit remedial action plan for moisture- and mold-impacted building materials, with consideration to minimize asbestos-related exposure.

Latham Hotel; **Washington**, **D.C.** – Ms. Ross performed a Mold Survey at the shut-down hotel to inspect 30 hotel rooms and all common areas, former retail spaces, and the exteriors. The hotel ceased operations and was evacuated in 2012 for structural and waterproofing repairs. Ms. Ross surveyed the property and identified a variety of mold and moistures issues, including saturated building materials and significant mold growth in excess of 1,000-square feet, indicative of ongoing and active moisture intrusion at the Project. From her findings and observations, EMG was able to provide the client definitive recommendations to address mold growth and moisture intrusion issues.

Talmage Maxwell Jordan

TITLE

Education

Bachelor of Science, Environmental Science, University of California, Los Angeles, 2010

Project Experience

Car Wash and Auto Repair; **Encino**, **CA** – Mr. Jordan performed a Phase I Environmental Site Assessment for an existing car wash and auto repair. The car wash had previously had a gasoline service station located on the premises with documented releases to the groundwater. Ground water monitoring data and regulatory agency files from the California Regional Water Quality Control Board were reviewed in the scope of the assessment to determine the extent and location of the petroleum release. A Phase II Subsurface Investigation was not necessary to address the former release; however a review of plans and closure permits revealed evidence of abandoned in-ground hydraulic lifts. A Phase II subsurface investigation was recommended to address these abandoned site features.

Industrial Plating Facility; **Ontario**, **CA** – Mr. Jordan performed a Phase I Environmental Site Assessment for an existing heavy metal plating facility. The facility had occupied its current location for over 30 years and signs of stressed vegetation because of the adequate groundwater monitoring on the site and staining led to a recommendation for a Phase II Subsurface investigation.

Gasoline Station; **San Diego**, **CA** – Mr. Jordan performed a Phase I Environmental Site Assessment for an existing Gasoline Service Station. The facility had occupied its current location for over 30 years. Ground water monitoring data and regulatory agency files from the California Regional Water Quality Control Board and San Diego Department of Environmental Health were reviewed in the scope of the assessment to determine the extent and location of the petroleum release. This review revealed that petroleum and solvent releases from adjacent sites had comingled with a petroleum release from the gasoline service station. A Phase

II subsurface investigation was recommended to assess the extent of contamination at this site.

FDIC Portfolio; Doral Bank; **Puerto Rico** – Mr. Jordan performed over thirty Phase I Environmental Assessments in the Commonwealth of Puerto Rico on various types of properties including, residential, retail, virgin rainforest, and dry cleaners. Ground water monitoring data and regulatory agency files from the Puerto Rico Environmental Quality Board (JCA) were reviewed in the scope of the assessments to determine the extent and location (if any) of any environmental impacts. Phase II subsurface investigations were recommended as needed.

ALTA/NSPS LAND TITLE SURVEY

15 ARGONAUT,
ALISO VIEJO, CA

LEGAL DESCRIPTION:

THE LAND REFERRED TO HEREIN BELOW IS SITUATED IN THE CITY OF ALISO VIEJO, IN THE COUNTY OF ORANGE, STATE OF CALIFORNIA, AND IS DESCRIBED AS FOLLOWS:

PARCEL 12 AS PER MAP FILED IN BOOK 218, PAGES 27 TO 30 INCLUSIVE OF PARCEL MAPS, IN THE OFFICE OF THE COUNTY RECORDER OF SAID COUNTY.

EXCEPT THEREFROM THAT PORTION OF SAID PARCEL 12 DESCRIBED AS FOLLOWS:
BEGINNING AT THE SOUTHERLY TERMINUS OF THE WEST LINE OF SAID PARCEL 2, SHOWN AS NORTH 20 DEG. 00' 00" WEST 297 FEET; THENCE ON THE PROLONGATION OF SAID LAND SOUTH 20 DEG. 00' 00" EAST 75.57 TO A POINT ON THE SOUTHEASTERLY LINE OF SAID PARCEL 12, SAID POINT BEING ON A CURVE CONCAVE TO THE SOUTHEAST HAVING A RADIUS OF 70.00 FEET, A RADIAL LINE THROUGH SAID POINT BEARS NORTH 43 DEG. 16' 57" WEST; THENCE ALONG SAID PARCEL LINE AND CURVE EASTERLY 34.81 FEET THROUGH A CENTRAL ANGLE OF 28 DEG. 29' 39" TO THE EAST CORNER OF SAID PARCEL 12; THENCE NORTH 45 DEG. 51' 29" FEET TO THE POINT OF BEGINNING,

SAID LAND IS SHOWN AS PARCEL 1 OF LOT LINE ADJUSTMENT NO. LL87-116 RECORDED MARCH 9, 1988 INSTRUMENT/FILE NO, 88-107296 OF OFFICIAL RECORDS, IN THE OFFICE OF THE COUNTY RECORDER OF SAID COUNTY.

ALSO EXCEPTING THEREFROM ONE HUNDRED PERCENT (100%) OF ALL RIGHTS TO OIL, GAS AND OTHER HYDROCARBON AND MINERAL SUBSTANCES LYING UNDER OR THAT MAY BE PRODUCED FROM THE ABOVE DESCRIBED LAND, TOGETHER WITH ONE HUNDRED PERCENT (100%) OF ALL RIGHTS TO THE PROCEEDS THEREFROM AND ONE HUNDRED PERCENT (100%) OF ALL RENTS, BONUSES AND PROFITS ACCRUING THEREFROM; WITHOUT, HOWEVER, ANY RIGHTS INCLUDING RIGHTS OF ENTRY IN OR WITH RESPECT TO ANY PORTION OF THE SURFACE OR SUBSURFACE TO A VERTICAL DEPTH OF 500 FEET FROM THE SURFACE AS THE SAME MAY FROM TIME TO TIME EXISTS, AS RESERVED BY DEEDS FROM LLYODS BANK OF CALIFORNIA, FORMERLY FIRST WESTERN BANK AND TRUST COMPANY, A CORPORATION, SUCCESSOR TO FIRST NATIONAL BANK IN SANTA ANA, A CORPORATION, RECORDED SEPTEMBER 30, 1976 IN BOOK 11908, PAGE 573, AND IN BOOK 11908, PAGE 582, BOTH OF OFFICIAL RECORDS.

ASSESSOR' S PARCEL NO: 623-093-10 AND 623-093-11

LAND AREA:

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E1527 - 21), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E2247 - 16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E1528 - 22) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

DATABASES WITH NO MAPPED SITES

No mapped sites were found in EDR's search of available ("reasonably ascertainable ") government records either on the target property or within the search radius around the target property for the following databases:

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal NPL (Superfund) sites

NPL ---------- National Priority List
Proposed NPL ---------- Proposed National Priority List Sites
NPL LIENS ---------- Federal Superfund Liens

Lists of Federal Delisted NPL sites

Delisted NPL ---------- National Priority List Deletions

Lists of Federal sites subject to CERCLA removals and CERCLA orders

FEDERAL FACILITY ---------- Federal Facility Site Information listing
SEMS ---------- Superfund Enterprise Management System

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE ---------- Superfund Enterprise Management System Archive

Lists of Federal RCRA facilities undergoing Corrective Action

CORRACTS ---------- Corrective Action Report

Lists of Federal RCRA TSD facilities

RCRA-TSDF ---------- RCRA - Treatment, Storage and Disposal

Lists of Federal RCRA generators

RCRA-VSQG ---------- RCRA - Very Small Quantity Generators (Formerly Conditionally Exempt Small Quantity Generators)

Federal institutional controls / engineering controls registries

LUCIS ---------- Land Use Control Information System
US ENG CONTROLS ---------- Engineering Controls Sites List
US INST CONTROLS ---------- Institutional Controls Sites List

EXECUTIVE SUMMARY

Federal ERNS list

ERNS ---------- Emergency Response Notification System

Lists of state- and tribal (Superfund) equivalent sites

RESPONSE ---------- State Response Sites

Lists of state- and tribal hazardous waste facilities

ENVIROSTOR ---------- EnviroStor Database

Lists of state and tribal landfills and solid waste disposal facilities

SWF/LF ---------- Solid Waste Information System

Lists of state and tribal leaking storage tanks

INDIAN LUST ---------- Leaking Underground Storage Tanks on Indian Land
CPS-SLIC ---------- Statewide SLIC Cases

Lists of state and tribal registered storage tanks

FEMA UST ---------- Underground Storage Tank Listing
AST ---------- Aboveground Petroleum Storage Tank Facilities
INDIAN UST ---------- Underground Storage Tanks on Indian Land

Lists of state and tribal voluntary cleanup sites

VCP ---------- Voluntary Cleanup Program Properties
INDIAN VCP ---------- Voluntary Cleanup Priority Listing

Lists of state and tribal brownfield sites

BROWNFIELDS ---------- Considered Brownfieds Sites Listing

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS ---------- A Listing of Brownfields Sites

Local Lists of Landfill / Solid Waste Disposal Sites

WMUDS/SWAT ---------- Waste Management Unit Database

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal RCRA generators

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 06/02/2025 has revealed that there are 3 RCRA-SQG sites within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

Lists of state and tribal leaking storage tanks

LUST: Leaking Underground Storage Tank (LUST) Sites included in GeoTracker. GeoTracker is the Water Boards data management system for sites that impact, or have the potential to impact, water quality in California, with emphasis on groundwater.

A review of the LUST list, as provided by EDR, has revealed that there is 1 LUST site within approximately 0.5 miles of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 06/02/2025 has revealed that there are 14 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

UST FINDER RELEASE: US EPA's UST Finder data is a national composite of leaking underground storage tanks. This data contains information about, and locations of, leaking underground storage tanks. Data was collected from state sources and standardized into a national profile by EPA's Office of Underground Storage Tanks, Office of Research and Development, and the Association of State and Territorial Solid Waste Management Officials.

A review of the UST FINDER RELEASE list, as provided by EDR, and dated 06/08/2023 has revealed that there is 1 UST FINDER RELEASE site within approximately 0.5 miles of the target property.

UST FINDER: EPA developed UST Finder, a web map application containing a comprehensive, state-sourced national map of underground storage tank (UST) and leaking UST (LUST) data. It provides the attributes and locations of active and closed USTs, UST facilities, and LUST sites from states and from Tribal lands and US territories . UST Finder contains information about proximity of UST facilities and LUST sites to: surface and groundwater public drinking water protection areas; estimated number of private domestic wells and number of people living nearby; and flooding and wildfires.

A review of the UST FINDER list, as provided by EDR, and dated 06/08/2023 has revealed that there are 2 UST FINDER sites within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

E MANIFEST: EPA established a national system for tracking hazardous waste shipments electronically. This system, known as ?e-Manifest,? will modernize the nation?s cradle-to-grave hazardous waste tracking process while saving valuable time, resources, and dollars for industry and states.

A review of the E MANIFEST list, as provided by EDR, and dated 02/17/2025 has revealed that there are 12 E MANIFEST sites within approximately 0.25 miles of the target property.

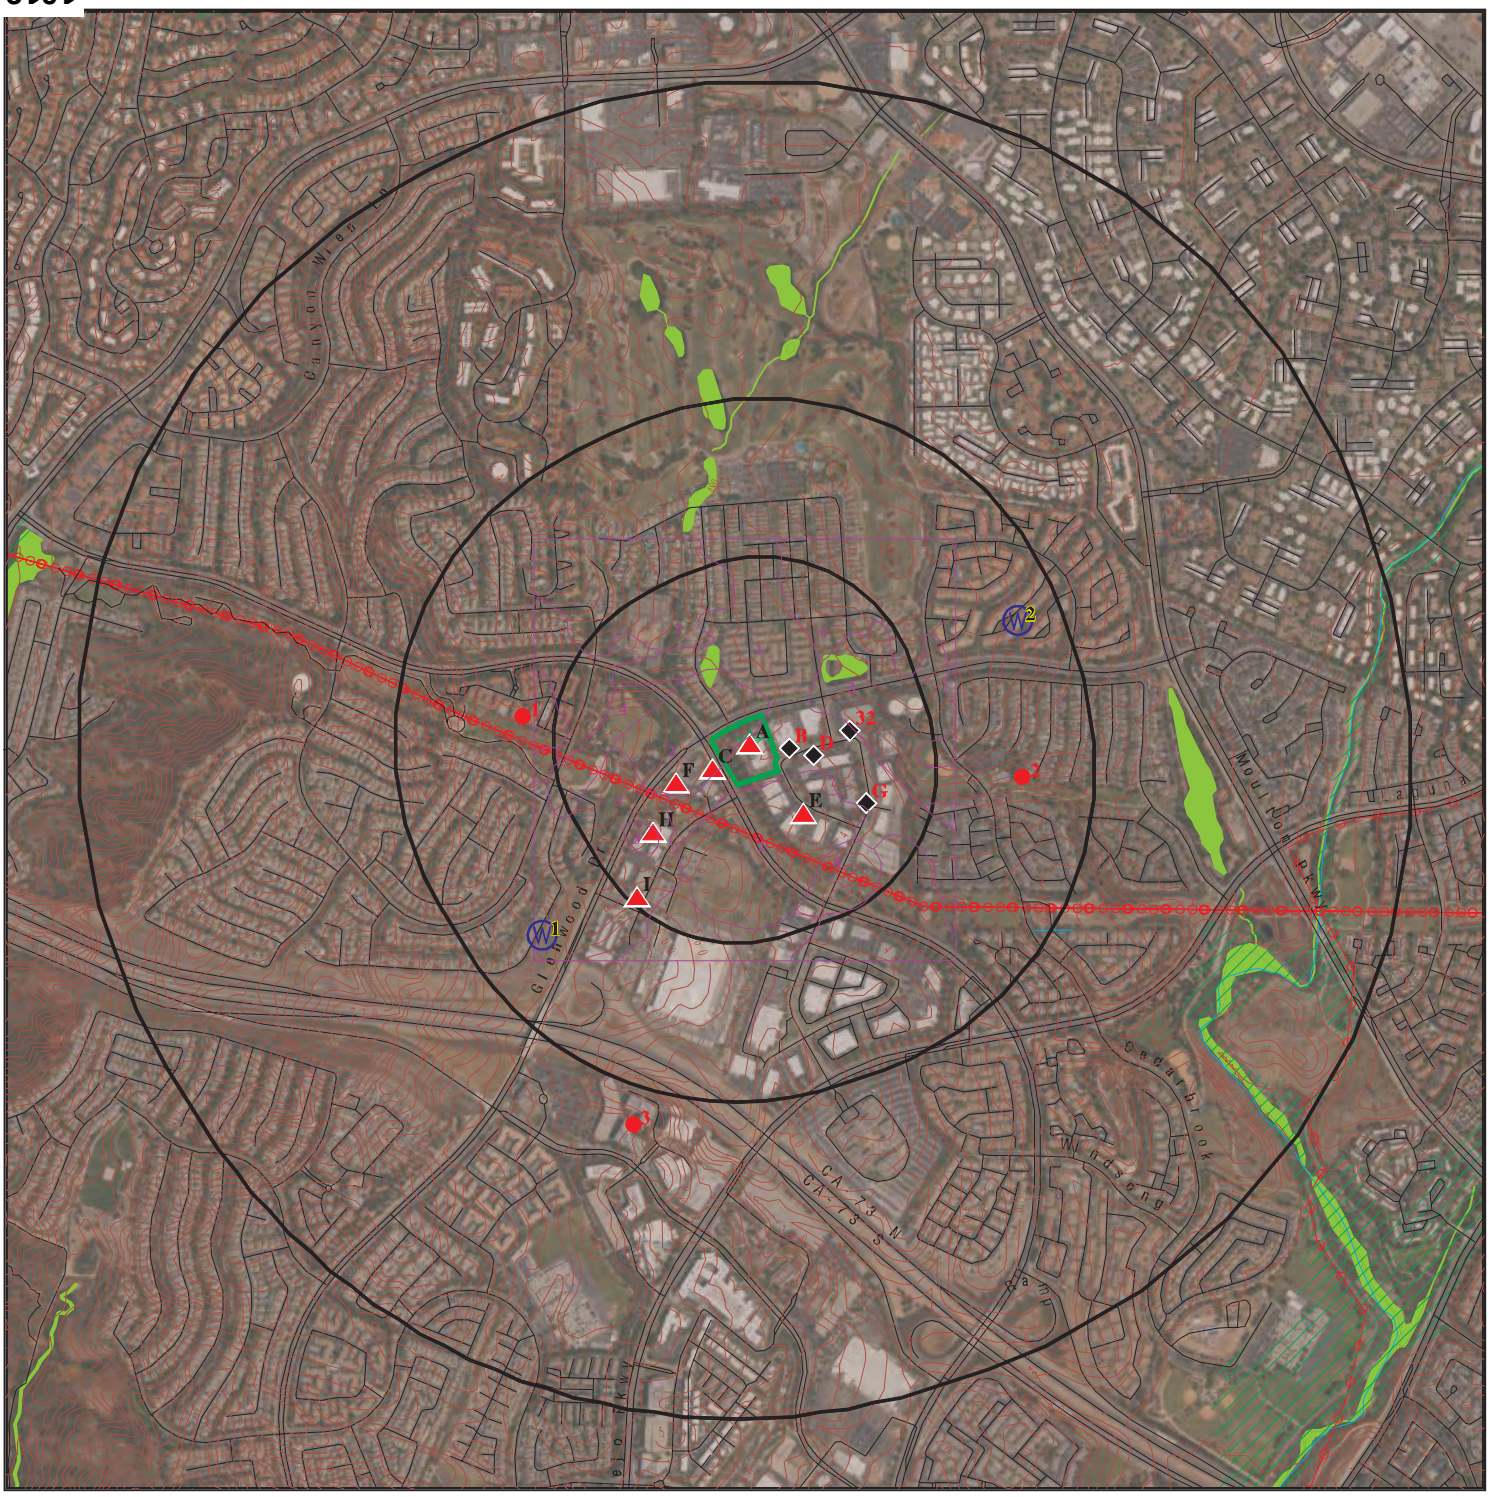
EXECUTIVE SUMMARY

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.



A review of the EDR Hist Auto list, as provided by EDR, has revealed that there are 3 EDR Hist Auto sites within approximately 0.125 miles of the target property.

Hazardous Waste Summary:

Waste Code:	D001
Waste Description:	Ignitable Waste
Waste Code:	D002
Waste Description:	Corrosive Waste
Waste Code:	D022
Waste Description:	Chloroform
Waste Code:	F003
Waste Description:	The Following Spent Nonhalogenated Solvents: Xylene, Acetone, Ethyl Acetate, Ethyl Benzene, Ethyl Ether, Methyl Isobutyl Ketone, N-Butyl Alcohol, Cyclohexanone, And Methanol; All Spent Solvent Mixtures/Blends Containing, Before Use, Only The Above Spent Nonhalogenated Solvents; And All Spent Solvent Mixtures/Blends Containing, Before Use, One Or More Of The Above Nonhalogenated Solvents, And A Total Of Ten Percent Or More (By Volume) Of One Or More Of Those Solvents Listed In F001, F002, F004, And F005; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.
Waste Code:	U002
Waste Description:	2-Propanone (I) (Or) Acetone (I)
Waste Code:	U007
Waste Description:	2-Propenamide (Or) Acrylamide
Waste Code:	U031
Waste Description:	1-Butanol (I) (Or) N-Butyl Alcohol (I)
Waste Code:	U044

AMBRY GENETICS CORP (Continued) **1014922508**

Waste Description: Chloroform (Or) Methane, Trichloro-

Waste Code: U188
Waste Description: Phenol

Waste Code: U239
Waste Description: Benzene, Dimethyl- (I,T) (Or) Xylene (I)

Environmental Interest/Information System:
All generators and treatment, storage, and disposal (TSD) facilities who handle hazardous waste are required to report to the EPA Administrator at least once every two years. The data collected is

Map ID

Elevation | Site | MAP FINDINGS | Database(s) | EDR ID Number
EPA ID Number

AMBRY GENETICS CORP (Continued) **1015867398**

used to create the National Biennial Resource Conservation and Recovery Act (RCRA) Hazardous Waste Report. This data is processed within the RCRA Information (RCRAInfo) database
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Environmental Interest/Information System:

The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.
California's Hazardous Waste Tracking System Data Mart (HWTS-DATAMART) provides information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Description: Customer overfilled their vehicle and the automatic shutoff on the pump did not engage. Spilled approximately 2 gallons onto concrete. Spill was cleaned up by service station personnel. Not reported

CERS:
Name: CHEVRON STATION #200913/1404
Address: 23022 ALISO CREEK RD
City,State,Zip: ALISO VIEJO, CA 92656
Site ID: 104900
CERS ID: 10441546
CERS Description: Chemical Storage Facilities

Violations:
Site ID: 104900
Site Name: Chevron Station #200913/1404
Violation Date: 05-17-2016
Citation: 23 CCR 16 2636(f)(2) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2636(f)(2)
Violation Description: Failure of the pressurized piping to meet one or more of the following requirements: monitored at least hourly with the capability of detecting a release of 3.0 gallons per hour, and will restrict the flow of product through the piping or trigger an alarm when a release occurs.
Violation Notes: Returned to compliance on 05/17/2016. 87 octane PLLD failed testing during the annual monitoring system certification. Leak detector was replaced and passed testing later that day
Violation Division: Orange County Environmental Health
Violation Program: UST
Violation Source: CERS,

Site ID: 104900
Site Name: Chevron Station #200913/1404
Violation Date: 05-07-2014
Citation: HSC 6.7 25292(e) - California Health and Safety Code, Chapter 6.7, Section(s) 25292(e)
Violation Description: Failure to maintain secondary containment, as evidenced by failure of secondary containment testing.
Violation Notes: Returned to compliance on 05/18/2015. The following secondary components failed SB 989 testing performed on 4-28-14: UDCs 1/2, 3/4, 5/6, 7/8, 9/10, 11/12 & 13/14 and the vent termination sump. According to the report, entry fittings are dried out and cracked. Address situation and submit modification plans to Health Care Agency within 30 days.

CHEVRON STATION #200913/1404 (Continued) **S123298347**

Violation Description: Failure of the double-walled pressurized piping to be continuously monitored with a system that activates an audible and visual alarm or stops flow at the dispenser when a leak is detected.
Violation Notes: Returned to compliance on 07/05/2016. Diesel turbine sump sensor failed testing. Sensor was replaced and successfully tested. Abated violation I504
Violation Division: Orange County Environmental Health
Violation Program: UST
Violation Source: CERS,

Evaluation:
Eval General Type: Other/Unknown
Eval Date: 08-05-2016
Violations Found: No
Eval Type: Other, not routine, done by local agency
Eval Notes: Reviewed and accepted submittal. Tank sump sensors were changed from Veeder-Root 208s to 209s.
Eval Division: Orange County Environmental Health
Eval Program: UST
Eval Source: CERS,

Eval General Type: Other/Unknown
Eval Date: 10-23-2014
Violations Found: No
Eval Type: Other, not routine, done by local agency
Eval Notes: On site for a modification inspection. Alan Evans of Wayne Perry on site. Current ICC (service technician and retro fitting) certifications provided. Current Bravo certification also provided. Piping penetration fittings have been replaced in all nine UDCs and in the vent termination sump. Secondary testing to be performed on this date Witnessed first 15 minute testing on UDCs 9/10, 11/12, 13/14 & 15/16. All four passed. * Send the complete testing results to Health Care Agency

Eval Notes: Service request status as of this date: Hi Monica, The anniversary date for the plan approval is 5-11-16. If there are no changes to the scope of work, I can extend the plan check (permit) to the new tank set date (5-31-16). If the tank set gets delayed again we will need a new submittal (application/plans/fees). Lance Lance, The construction start date for this site has been delayed, new start date 05/09/2016. We anticipate setting the new tank 05/31/2016, please let me know if we need to extend our permit that will expire 05/11/2016. Thank You Monica Molinar Project Manager West Wind Consulting/Chevron Products Team 145 S. Citation: HSC 6.95 25508(a)(1) - California Health and Safety Code, Chapter 6.95, Section(s) 25508(a)(1)
Violation Description: Failure to establish and electronically submit an adequate emergency response plan and procedures for a release or threatened release of a hazardous material.

ALISO VIEJO TOWING & RECOVERY, INC (Continued) **S123522862**

Violation Notes:	Returned to compliance on 12/03/2018. Complete the Emergency Response plan I emailed or the one on the CERS site and upload to CERS and submit for review within 30 days. The violation will be abated when the submittal is accepted.
Violation Division:	Orange County Environmental Health
Violation Program:	HMRRP
Violation Source:	CERS,
Site ID:	445757
Site Name:	ALISO VIEJO TOWING & RECOVERY, INC
Violation Date:	07-12-2018
Citation:	22 CCR 12 66262.34(f) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.34(f)
Violation Description:	Failure to properly label hazardous waste accumulation containers and portable tanks with the following requirements: "Hazardous Waste", name and address of the generator, physical and chemical characteristics of the Hazardous Waste, and starting accumulation date.
Violation Notes:	Returned to compliance on 11/13/2018. OBSERVATION: The waste oil drums must be appropriately labeled. All hazardous waste containers shall be marked with the following information: 1) the words Hazardous Waste ; 2) name and address of generator; 3) hazardous properties; 4) physical state; 5) composition (contents); 6) accumulation start date. In addition, your waste oil filter drum must be labeled "used drained oil filters" with the date of accumulation. CORRECTIVE ACTION: Immediately label these containers and ensure that all hazardous waste containers are marked with all the required information. I have left labels to be affixed to the waste oil drums, put them on the drums and label the filter drum as listed above. Send me a picture of the labeled waste oil drums to abate the violation.

Violation Date: 07-12-2018
Citation: 22 CCR 12 66262.11 - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.11
Violation Description: Failure to determine if wastes generated are hazardous waste by using generator knowledge or applying testing method.
Violation Notes: Returned to compliance on 11/13/2018. The waste absorbent waste from below wrecked cars is presumed to be hazardous by this agency. Manage this waste as hazardous waste unless you can prove to this agency that the waste is non-hazardous by submitting to a certified lab for analysis. Because the absorbent waste is obtained from numerous locations when you pick up the vehicles, determining that it is not a hazardous waste is problematic. You must bring this waste back to your site and dispose of it as hazardous waste or if it is not saturated, you may continue to use the absorbent at your location until you dispose of it as a hazardous waste through your hazardous waste transporter. Until you have proven this waste absorbent is not hazardous, the waste absorbent generated at the pickup site and in the shop, must be managed as a hazardous waste. Obtain a lidded drum and label it as a hazardous waste- a label was left during the inspection.
