Click Here for FRS Facility Detail Report:

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.
California's Hazardous Waste Tracking System Data Mart (HWTS-DATAMART) provides information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

Violation Date:	04-13-2017
Citation:	22 CCR 12 66262.34(f) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.34(f)
Violation Description:	Failure to properly label hazardous waste accumulation containers and portable tanks with the following requirements: "Hazardous Waste", name and address of the generator, physical and chemical characteristics of the Hazardous Waste, and starting accumulation date.
Violation Notes:	Returned to compliance on 05/13/2017. OBSERVATION: The waste IPA and waste chemicals in the flammable cabinet were not labeled during the inspection and the waste oil, was missing the accumulation date and was labeled with accumulation date during the inspection. All hazardous waste containers shall be marked with the following information: 1) the words Hazardous Waste ; 2) name and address of generator; 3) hazardous properties; 4) physical state; 5) composition (contents); 6) accumulation start date. CORRECTIVE ACTION: Immediately label these containers and ensure that all hazardous waste containers are marked with all the required information as soon. Submit pictures of properly labeled IPA and IPA container located inside the buildings (the one emptied daily).

Eval Notes: On site for routine hazardous waste inspection. Access to the facility, and permission to inspect and take photographs (if needed) was provided by Patricia Langraphi, and included the areas noted below. NOTE: Those chemicals in the storage area cabinets (small containers of miscellaneous oils and other items) if determined to be waste, must be managed as hazardous waste and shipped to an appropriate treatment facility. Determine, which, if any, are no longer in use by this facility and should be classified as waste. - Manufacturing: various waste lab chemicals, waste absorbent - Machine Shop: lubricating oils, metal fines, waste absorbent - Hazardous Waste Storage Area: containers properly labeled and closed The containers were observed properly stored and labeled. Hazardous waste disposal documents were reviewed. A copy of this report will be sent to: PLANGRAPHI@PARLYENE.COM

Eval Type: Other, not routine, done by local agency
Eval Notes: According to the CERS database, your business remains out of compliance with the annual certification requirement and a violation is being cited. Businesses are required to annually review and certify that their information in the California Electronic Reporting System (CERS) is complete, accurate and in compliance by March 1st. Your business was notified via email on March 27, 2024 that your facility was out of compliance with this requirement. Please note the following important details: 1) Complete submittal includes the HazMat Inventory AND the Emergency Plan / Training sections. Both sections must be submitted. Your submittal for 2024 was missing the Emergency Plan/Training section. 2) If your business qualifies (see below) you may submit 2024 via the Certify option available on CERS. You must be logged in to use. HMBP Certify: A business may use the Certify option button located on their forms page if: 1) A previous, complete submittal was made the prior year, and 2) The bu

Eval Notes: Orange County Environmental Health as the Certified Unified Program Agency (OC CUPA) is the administrating agency for the Hazardous Materials Disclosure and Business Emergency Plan programs (HMD/BEP) previously administered by the Orange County Fire Authority. During the months of August and December of 2013, the OC CUPA sent out letters to regulated businesses requesting them to electronically submit their HMD/BEP forms. Electronic submission of these forms is a legal requirement. Failure to submit HMD/BEP forms is in violation of the California Health & Safety Code Chapter 6.95. According to our records there is no electronic submission for this facility. Please go to www.esubmit.ocgov.com to request a user name and password and submit your HMD/BEP forms within the next 30 days. Businesses may also submit forms via the California Environmental Reporting System. Please verify that all owner information that is pre populated on the E-Submit Portal is still [Truncated]

Click Here for FRS Facility Detail Report:

Environmental Interest/Information System:
All generators and treatment, storage, and disposal (TSD) facilities who handle hazardous waste are required to report to the EPA Administrator at least once every two years. The data collected is used to create the National Biennial Resource Conservation and Recovery Act (RCRA) Hazardous Waste Report. This data is processed within the RCRA Information (RCRAInfo) database
The California Environmental Protection Agency (CalEPA) has recently implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS),EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), andToxic Release Inventory (TRI).
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.
California's Hazardous Waste Tracking System Data Mart (HWTS-DATAMART)

UNITED PARCEL SERVICE, INC. (Continued) **1000594559**

provides information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

Violations:
Site ID: 79269
Site Name: UPS - Laguna
Violation Date: 01-27-2021
Citation: HSC 6.7 25292.2(a) - California Health and Safety Code, Chapter 6.7, Section(s) 25292.2(a)
Violation Description: Failure to submit and maintain complete and current Certification of Financial Responsibility or other mechanism of financial assurance.
Violation Notes: Returned to compliance on 02/03/2021. Certification of Financial Responsibility (CFR) for this facility expired on 4/26/20. Current CFR must be submitted electronically and a copy be maintained on site within 30 days of this inspection.
Violation Division: Orange County Environmental Health
Violation Program: UST
Violation Source: CERS,

Site ID: 79269
Site Name: UPS - Laguna
Violation Date: 08-16-2021
Citation: HSC 6.7 25291(a)(2) - California Health and Safety Code, Chapter 6.7, Section(s) 25291(a)(2)
Violation Description: Failure to maintain secondary containment (e.g., failure of secondary containment testing).
Violation Notes: Returned to compliance on 06/09/2022. Diesel West, New Oil and Waste Oil Lines, UDCs 2 and 8 South failed tests on 7/22/21. Investigation to determine all secondary containment failures must be conducted and if necessary, plans for repair/replacement must be submitted to this Agency within 30 days of this report.
Violation Division: Orange County Environmental Health
Violation Program: UST
Violation Source: CERS,

Site ID: 79269
Site Name: UPS - Laguna
Violation Date: 09-29-2021
Citation: 23 CCR 16 2712(b)(1)(G) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2712(b)(1)(G)
Violation Description: Failure to comply with one or more of the following overfill prevention equipment requirements: Alert the transfer operator when the tank is 90 percent full by restricting the flow into the tank or triggering an audible and visual alarm; or Restrict delivery of flow to the tank at least 30 minutes before the tank overfills, provided the restriction occurs when the tank is filled to no more than 95 percent of capacity; and activate an audible alarm at least five minutes before the tank overfills; or Provide positive shut-off of flow to the tank when the tank is filled to no more than 95 percent of

UNITED PARCEL SERVICE, INC. (Continued) **1000594559**

capacity; or Provide positive shut-off of flow to the tank so that none of the fittings located on the top of the tank are exposed to product due to overfilling. Install/retrofit overfill prevention equipment that does not use flow restrictors on vent piping to meet overfill prevention equipment requirements when the overfill prevention equipment is installed, repaired, or replaced on and after October 1, 2018. For USTs installed before October 1, 2018, perform an inspection by October 13, 2018 and every 36 months thereafter. For USTs installed on and after October 1, 2018, perform an inspection at installation and every 36 months thereafter. Inspected within 30 days after a repair to the overfill prevention equipment. Inspected using an applicable manufacturer guidelines, industry codes, engineering standards, or a method approved by a professional engineer. Inspected by a certified UST service technician. Maintain records of overfill prevention equipment inspection for 36 months.

Violation Notes: Returned to compliance on 12/13/2021. The Shut-Off Valve in New Oil tank (T4) is broken and waste oil tank's overfill prevention equipment was not tested due to broken/disconnected probe wiring. Overfill prevention equipment for both new oil and waste oil tanks must replaced/repaired and retested within 30 day of this inspection report.

Violation Date: 10-21-2020
Citation: HSC 6.7 25291(a)(1) - California Health and Safety Code, Chapter 6.7, Section(s) 25291(a)(1)
Violation Description: Failure to construct, operate, and maintain primary containment as product-tight.
Violation Notes: Returned to compliance on 11/04/2021. A test of Tank 1’s (87 unleaded) annular space conducted in September 2020 indicates that the annular space is unable to hold vacuum pressure. Additionally the test report indicates the contents of the UST have been removed and water has subsequently entered the primary tank. Submit plans to this agency within 30 days (11/21/2020) detailing the repair or removal of this tank.

Citation: HSC 6.95 25508(a)(1) - California Health and Safety Code, Chapter 6.95, Section(s) 25508(a)(1)
Violation Description: Failure to complete and electronically submit hazardous material inventory information for all reportable hazardous materials on site at or above reportable quantities.
Violation Notes: Returned to compliance on 02/14/2018. OBSERVATION: The facility has

UNITED PARCEL SERVICE, INC. (Continued) **1000594559**

not accurately submitted the Hazardous Materials Inventory Chemical Description pages make the following changes and resubmit to the CUPA. 1. On the chemical disclosures for solids (which most are as you solidify most waste), change the units for solids to pounds, and delete all chemical disclosures that do not exceed 500 pounds for solids. In the case of the wastes from spills, review of your manifests show that the poundages for: waste flammable solids, waste oxidizing solids, waste organic peroxides, waste corrosive solids and waste other regulated solids are all well under the 500 pounds at all times. Review to verify then remove disclosures for these wastes as well as drain oil filters, drained paper filters, possibly the grease if max daily is less than 500 pounds, remove spent brake fluid, and possibly petroleum contaminated solid if less than 500 pounds stored onsite. 2. research the waste generated in April 2017, listed as 3 drums [Truncated]

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 03/27/2025

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Lists of Federal Delisted NPL sites

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Lists of Federal RCRA TSD facilities

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Lists of state- and tribal hazardous waste facilities

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites
Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs
A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

EPA WATCH LIST: EPA Watch List

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing
A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

PFAS RCRA MANIFEST: PFAS Transfers Identified In the RCRA Database Listing

To work around the lack of PFAS waste codes in the RCRA database, EPA developed the PFAS Transfers dataset by mining e-Manifest records containing at least one of these common PFAS keywords: PFAS, PFOA, PFOS, PERFL, AFFF, GENX, GEN-X (plus the VT waste codes). These keywords were searched for in the following text fields: Manifest handling instructions (MANIFEST_HANDLING_INSTR), Non-hazardous waste description (NON_HAZ_WASTE_DESCRIPTION), DOT printed information (DOT_PRINTED_INFORMATION), Waste line handling instructions (WASTE_LINE_HANDLING_INSTR), Waste residue comments (WASTE_RESIDUE_COMMENTS).

PFAS NPDES: Clean Water Act Discharge Monitoring Information

Any discharger of pollutants to waters of the United States from a point source must have a National Pollutant Discharge Elimination System (NPDES) permit. The process for obtaining limits involves the regulated entity (permittee) disclosing releases in a NPDES permit application and the permitting authority (typically the state but sometimes EPA) deciding whether to require monitoring or monitoring with limits. Caveats and Limitations: Less than half of states have required PFAS monitoring for at least one of their permittees and fewer states have established PFAS effluent limits for permittees. New rulemakings have been initiated that may increase the number of facilities monitoring for PFAS in the future.

PFAS ECHO FIRE TRAIN: Facilities in Industries that May Be Handling PFAS Listing

A list of fire training sites was added to the Industry Sectors dataset using a keyword search on the permitted facilitys name to identify sites where fire-fighting foam may have been used in training exercises. Additionally, you may view an example spreadsheet of the subset of fire training facility data, as well as the keywords used in selecting or deselecting a facility for the subset. as well as the keywords used in selecting or deselecting a facility for the subset. These keywords were tested to maximize accuracy in selecting facilities that may use fire-fighting foam in training exercises, however, due to the lack of a required reporting field in the data systems for designating fire training sites, this methodology may not identify all fire training sites or may potentially misidentify them.

PFAS PT 139 AIRPORT: All Certified Part 139 Airports PFAS Information Listing

Since July 1, 2006, all certified part 139 airports are required to have fire-fighting foam onsite that meet military specifications (MIL-F-24385) (14 CFR 139.317). To date, these military specification fire-fighting foams are fluorinated and have been historically used for training and extinguishing. The 2018 FAA Reauthorization Act has a provision stating that no later than October 2021, FAA shall not require the use of fluorinated AFFF. This provision does not prohibit the use of fluorinated AFFF at Part 139 civilian airports; it only prohibits FAA from mandating its use. The Federal Aviation Administration?s document AC 150/5210-6D - Aircraft Fire Extinguishing Agents provides guidance on Aircraft Fire Extinguishing Agents, which includes Aqueous Film Forming Foam (AFFF).

CHROME PLATING: Chrome Plating Facilities Listing

This listing represents chrome plating facilities the California State Water Resources Control Board staff identified as possibly being a source of Per- and polyfluoroalkyl substance (PFAS) contamination. Sites and locations were identified by staff with the Division of Water Quality in the California State Water Board. Data was collected from the CA Air Resources Board 2013 and 2018 - Cr VI emission survey, CA Emission Inventory, CA HAZ Waste discharge database and by reviewing storm water permits. Former chrome plating sites are also included that are open site investigation or remediation cases with the Regional Water Quality Control Boards and the Department of Toxic Substances Control.

HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

WASTEWATER PITS: Oil Wastewater Pits Listing
Water officials discovered that oil producers have been dumping chemical-laden wastewater into hundreds of unlined pits that are operating without proper permits. Inspections completed by the Central Valley Regional Water Quality Control Board revealed the existence of previously unidentified waste sites. The water boards review found that more than one-third of the region's active disposal pits are operating without permission.

WDR: Waste Discharge Requirements Listing

In general, the Waste Discharge Requirements (WDRs) Program (sometimes also referred to as the "Non Chapter 15 (Non 15) Program") regulates point discharges that are exempt pursuant to Subsection 20090 of Title 27 and not subject to the Federal Water Pollution Control Act. Exemptions from Title 27 may be granted for nine categories of discharges (e.g., sewage, wastewater, etc.) that meet, and continue to meet, the preconditions listed for each specific exemption. The scope of the WDRs Program also includes the discharge of wastes classified as inert, pursuant to section 20230 of Title 27.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants
The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data

Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:

UTM Y (Meters):	3717171.8
Elevation:	453 ft. above sea level

USGS TOPOGRAPHIC MAP

Target Property Map:	50006201 SAN JUAN CAPISTRANO, CA
Version Date:	2022

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

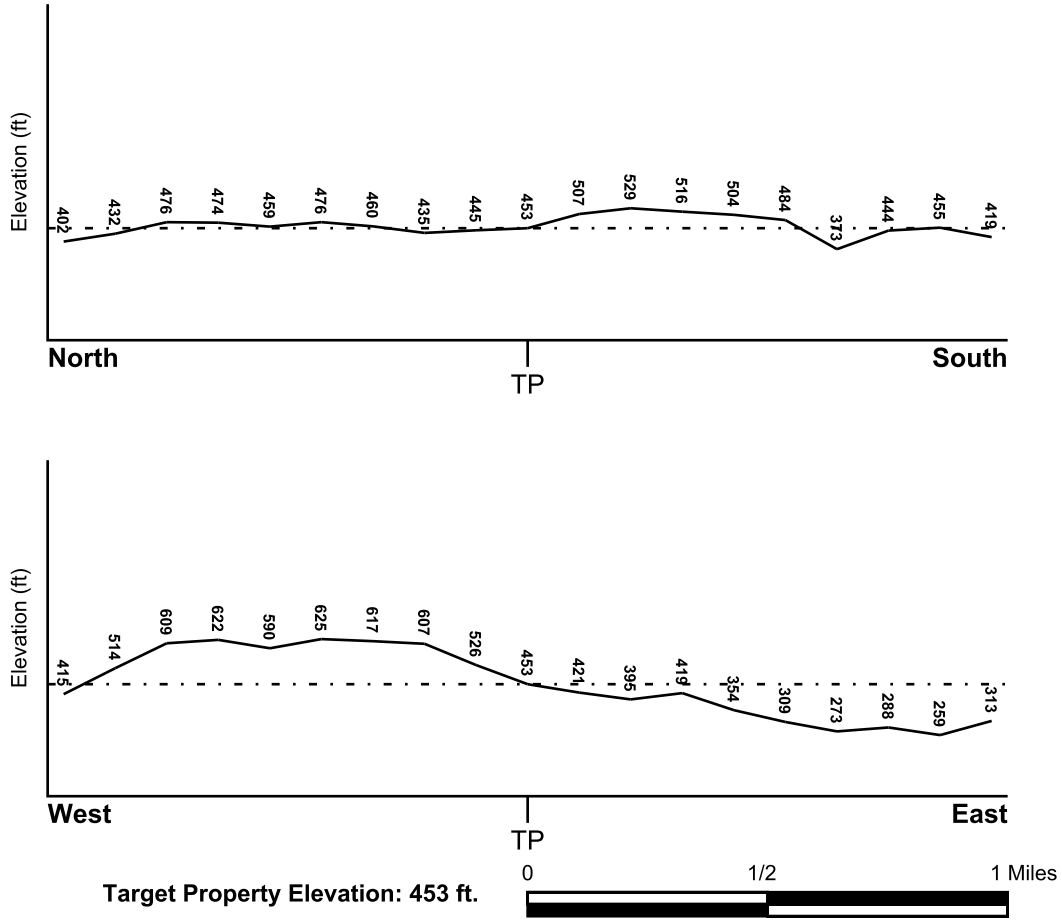
1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).



TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General ENE

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Flood Plain Panel at Target Property	FEMA Source Type
06059C0426J	FEMA FIRM Flood data

Additional Panels in search area:	FEMA Source Type

06059C0429J	FEMA FIRM Flood data

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
SAN JUAN CAPISTRANO	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Status:	Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW
Not Reported		

* ©1996 Site-specific hydrogeological data gathered by CERCLIS Alerts, Inc., Bainbridge Island, WA. All rights reserved. All of the information and opinions presented are those of the cited EPA report(s), which were completed under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: CAPISTRANO

Soil Surface Texture: sandy loam

Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.

Soil Drainage Class: Well drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Low

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	27 inches	sandy loam	Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 42 Min: 14	Max: 7.3 Min: 5.6

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Map ID: 2

Soil Component Name: CIENEBA

Soil Surface Texture: sandy loam

Hydrologic Group: Class C - Slow infiltration rates. Soils with layers impeding downward movement of water, or soils with moderately fine or fine textures.

Soil Drainage Class: Somewhat excessively drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Low

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	7 inches	sandy loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	Not reported	Max: 0.42 Min: 0	Max: Min:
2	7 inches	11 inches	weathered bedrock	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	Not reported	Max: 0.42 Min: 0	Max: Min:

Soil Map ID: 3

Soil Component Name: CALLEGUAS

Soil Surface Texture: clay loam

Hydrologic Group: Class D - Very slow infiltration rates. Soils are clayey, have a high water table, or are shallow to an impervious layer.

Soil Drainage Class: Well drained

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map
Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.
Source: FEMA
Telephone: 877-336-2627
Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005, 2010 and 2015 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Wetland Inventory
Source: Department of Fish and Wildlife
Telephone: 916-445-0411

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)
This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

OTHER STATE DATABASE INFORMATION

Groundwater Ambient Monitoring & Assessment Program
State Water Resources Control Board
Telephone: 916-341-5577
The GAMA Program is Californias comprehensive groundwater quality monitoring program. GAMA collects data by testing the untreated, raw water in different types of wells for naturally-occurring and man-made chemicals. The GAMA data includes Domestic, Monitoring and Municipal well types from the following sources, Department of Water Resources, Department of Heath Services, EDF, Agricultural Lands, Lawrence Livermore National Laboratory, Department of Pesticide Regulation, United States Geological Survey, Groundwater Ambient Monitoring and Assessment Program and Local Groundwater Projects.

Water Well Database
Source: Department of Water Resources
Telephone: 916-651-9648

California Drinking Water Quality Database
Source: Department of Public Health
Telephone: 916-324-2319
The database includes all drinking water compliance and special studies monitoring for the state of California since 1984. It consists of over 3,200,000 individual analyses along with well and water system information.

Geothermal Wells Listing
Department of Conservation
Telephone: 916-445-9686
Geothermal well means a well constructed to extract or return water to the ground after it has been used for heating or cooling purposes. Geothermal wells in California (except for wells on federal leases which are administered by the Bureau of Land Management) are permitted, drilled, operated, and permanently sealed and closed (plugged and abandoned) under requirements and procedures administered by the Geothermal Section of the Department of Conservations Geologic Energy Management Division (CalGEM, formerly DOGGR).

California Oil and Gas Well Locations
Source: Dept of Conservation, Geologic Energy Management Division
Telephone: 916-323-1779
Oil and Gas well locations in the state.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

California Earthquake Fault Lines
Source: California Division of Mines and Geology
The fault lines displayed on EDR's Topographic map are digitized quaternary fault lines prepared in 1975 by the United State Geological Survey. Additional information (also from 1975) regarding activity at specific fault lines comes from California's Preliminary Fault Activity Map prepared by the California Division of Mines and Geology.

RADON

State Database: CA Radon
Source: Department of Public Health
Telephone: 916-210-8558
Radon Database for California

Area Radon Information
Source: USGS
Telephone: 703-356-4020
The National Radon Database has been developed by the U.S. Environmental Protection Agency (USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

EPA Radon Zones
Source: EPA
Telephone: 703-356-4020
Sections 307 & 309 of IRAA directed EPA to list and identify areas of U.S. with the potential for elevated indoor radon levels.

It cannot be concluded from this Report that coverage information for the target and surrounding properties does not exist from other sources. This Report is provided on an "AS IS", "AS AVAILABLE" basis. NO WARRANTY EXPRESS OR IMPLIED IS MADE WHATSOEVER IN CONNECTION WITH THIS REPORT. ENVIRONMENTAL DATA RESOURCES, LLC AND ITS SUBSIDIARIES, AFFILIATES AND THIRD PARTY SUPPLIERS DISCLAIM ALL WARRANTIES, OF ANY KIND OR NATURE, EXPRESS OR IMPLIED, ARISING OUT OF OR RELATED TO THIS REPORT OR ANY OF THE DATA AND INFORMATION PROVIDED IN THIS REPORT, INCLUDING WITHOUT LIMITATION, ANY WARRANTIES REGARDING ACCURACY, QUALITY, CORRECTNESS, COMPLETENESS, COMPREHENSIVENESS, SUITABILITY, MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE, TITLE, NON-INFRINGEMENT, MISAPPROPRIATION, OR OTHERWISE. ALL RISK IS ASSUMED BY THE USER. IN NO EVENT SHALL ENVIRONMENTAL DATA RESOURCES, LLC OR ITS SUBSIDIARIES, AFFILIATES OR THIRD PARTY SUPPLIERS BE LIABLE TO ANYONE FOR ANY DIRECT, INCIDENTAL, INDIRECT, SPECIAL, CONSEQUENTIAL OR OTHER DAMAGES OF ANY TYPE OR KIND (INCLUDING BUT NOT LIMITED TO LOSS OF PROFITS, LOSS OF USE, OR LOSS OF DATA), ARISING OUT OF OR IN ANY WAY CONNECTED WITH THIS REPORT OR ANY OF THE DATA AND INFORMATION PROVIDED IN THIS REPORT. Any analyses, estimates, ratings, environmental risk levels, or risk codes provided in this Report are provided for illustrative purposes only, and are not intended to provide, nor should they be interpreted as providing any facts regarding, or prediction or forecast of, any environmental risk for any property. Only an assessment performed by a qualified environmental professional can provide findings, opinions or conclusions regarding the environmental risk or conditions in, on or at any property.

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at approximately five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1920 through current. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 660 feet of the target property.

Summary information obtained is provided in the text of this report.

RECORD SOURCES

The EDR City Directory Report accesses a variety of business directory sources, including Haines, InfoUSA, Polk, Cole, Bresser, and Stewart. Listings marked as EDR Digital Archive access Cole and InfoUSA records. The various directory sources enhance and complement each other to provide a more thorough and accurate report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer.

RESEARCH SUMMARY

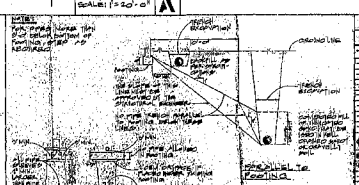
PLUMBING GENERAL NOTES:



1. INSTALLATION SHALL CONFORM TO THE ENERGY CONSERVATION DESIGN MANUAL STANDARDS FOR NEW NON-RESIDENTIAL BUILDINGS.
2. CONTRACTOR SHALL VERIFY DEPTH, SIZE, LOCATION OF ALL EXISTING UTILITIES IN FIELD BEFORE STARTING WORK.
3. CONTRACTOR SHALL COORDINATE INSTALLATION OF PLUMBING WORK WITH ALL OTHER TRADES SO AS TO AVOID UNNECESSARY DELAYS OR INTERFERENCES.
4. ALL PLUMBING WORK AND MATERIALS SHALL BE INSTALLED IN ACCORDANCE WITH ALL APPLICABLE ORDINANCES AND REGULATIONS HAVING JURISDICTION. CONTRACTOR SHALL OBTAIN ALL APPROVALS REQUIRED FROM REGULATING AGENCIES BEFORE STARTING WORK.
5. SOIL AND WASTE PIPE SHALL SLOPE AT 2% MINIMUM UNLESS OTHERWISE NOTED.
6. ALL PLUMBING WORK AND MATERIALS SHALL MEET THE REQUIREMENTS OF THE LATEST EDITIONS OF THE UNIFORM PLUMBING CODE, UNLESS OTHERWISE REQUIRED BY THE DEPT. OF BLDG. & SAFETY.
7. CONTRACTOR SHALL FURNISH AND INSTALL ALL BACKFLOW PROTECTION DEVICES REQUIRED BY AGENCIES HAVING JURISDICTION.
8. PLUMBING CONTRACTOR: CONDENSATE DRAIN FROM A/C UNITS TO APPROVED DRAIN POINT. ON WATER MAKE-UP TO MECHANICAL EQUIPMENT, GAS PIPING TO UNITS & FINAL CONNECTIONS.
9. OBTAIN AND PAY FOR ALL PERMITS, FEES, AND INSPECTIONS REQUIRED BY GOVERNING AUTHORITIES.
10. CONDENSATE DRAINS THAT TERMINATE AT TRAILPIECE OF LAST TRAILPIECE SHALL BE UNDERSIZED TO 1¼" TO RECEIVE DISPOSAL TYPE TEE IN "AIR-GAP".
11. DOMESTIC WATER PIPING: SHOWN UNDER CONCRETE SLAB TYPE K, BELOW GROUND OUTSIDE OF BLDG. IN 12" MINIMUM PVC SCHEDULE 40 WITH SCHEDULE 80 FITTINGS. 2" AND LARGER PVC CLASS 315 ASTM 2241 WITH SCHEDULE 40 FITTINGS.
12. GAS PIPING: CONCEALED BUILDING PIPING (ABOVE GROUND) TO BLACK STEEL PIPE. BELOW GROUND OUTSIDE OF BUILDING CLASS 315 ASTM 2241 GAS PIPE.
13. SOIL PIPING: BELOW SLAB BEARING BUILDING, SERVICE WEIGHT COATED CAST IRON HUBLESS PIPE AND FITTINGS. OUTSIDE OF BUILDING, VITRIFIED CLAY PIPE WITH "SPEED SEAL" OR "HERCULOCK" JOINTS.
14. VENT PIPING: BELOW GROUND CAST IRON, ABOVE GROUND SCHEDULE 40 GALVANIZED STEEL PIPE.
15. CONDENSATE DRAIN PIPING: COPPER TYPE M.
16. ROOF PENETRATIONS: ALL PIPING WITH PIPE PENETRATIONS SHALL BE SLEEVED WITH PIPE INSULATION WITH STANDARD CANVAS JACKET. OTHER EXPOSED UNDER THE OUTDOOR INSULATION WITH ALUMINUM JACKET.
17. STORM DRAINAGE: ABOVE GROUND INSIDE BUILDING: SCHEDULE 40 PIPE & FITTINGS. CAST IRON, SCREWED DRAINAGE FITTING AND LONG SWEEP ELBOWS. UNDERGROUND INSIDE BUILDING: SERVICE WEIGHT COATED CAST IRON HUBLESS PIPE AND FITTINGS. UNDERGROUND OUTSIDE OF BUILDING: NON-REINFORCED CONCRETE PIPE.
18. FIRE-SPRINKLER SYSTEM PIPING: UNDERGROUND FROM POINT 5'-0" OUTSIDE OF BUILDING: CEMENT-ASBESTOS CLASS 150 PIPE. PLASTIC OF BUILDING. ABOVE GROUND: 40 STEEL PIPE WITH 150 PSI MALLEABLE IRON SCREWED FITTINGS.
19. REFER TO KITCHEN CONSULTANTS DRAWINGS FOR PLUMBING ROUGH-IN SCHEDULE AND FOR ADDITIONAL WORK TO BE FURNISHED AND INSTALLED BY THIS CONTRACTOR.
20. PIPING SHALL BE INSULATED AS PER U.B.C. SECTION 3-5312.
21. PLUMBING EQUIPMENT CONCEALED PER U.B.C. SECTION 3-5314(5).
22. WATER HEATERS FOR DOMESTIC HOT WATER PER U.B.C. SECTION 3-5318.

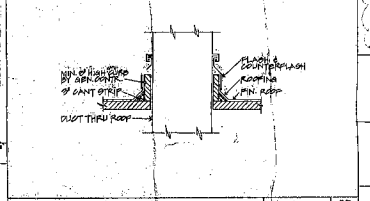
VVT. CONTROL DIAGRAM — NO SCALE — F

A/C GENERAL NOTES:



1. INSTALLATION SHALL CONFORM TO THE ENERGY CONSERVATION DESIGN MANUAL STANDARDS FOR NEW NON-RESIDENTIAL BUILDINGS.
2. ALL WORK AND MATERIALS SHALL COMPLY WITH GOVERNING CODES, SAFETY ORDERS AND REGULATIONS.
3. OBTAIN AND PAY FOR ALL NECESSARY PERMITS, FEES, AND INSPECTIONS REQUIRED BY GOVERNING AUTHORITIES.
4. ALL MATERIALS AND EQUIPMENT PROVIDED AND/OR INSTALLED SHALL BE GUARANTEED FOR A PERIOD OF ONE (1) YEAR FROM THE DATE OF FINAL ACCEPTANCE OF THE WORK BY THE OWNER. ANY DEFECTIVE MATERIALS OR INFERIOR WORKMANSHIP SHALL BE CORRECTED TO THE ENTIRE SATISFACTION OF THE OWNER.
5. WITHIN 14 DAYS AFTER AWARD OF CONTRACT SUBMIT FIVE (5) COPIES OF REQUIRED SHOP DRAWINGS, MATERIAL LISTS, AND EQUIPMENT SPECIFICATIONS OF ITEMS PROPOSED FOR INSTALLATION.
6. ELECTRICAL CONTRACTOR: CONDUIT FOR LINE & LOW VOLTAGE WIRING, LINE VOLTAGE WIRING, DISCONNECTS, DISCONNECTS, CIRCUIT BREAKERS, FINAL CONNECTIONS, ITEMS INDICATED THUS (E)
7. MECHANICAL CONTRACTOR: TEMPERATURE CONTROLS, LOW VOLTAGE WIRING & ITEMS INDICATED THUS (M). LIVERS SHALL CONFORM TO LOCAL CODES.
8. PLUMBING CONTRACTOR: CONDENSATE DRAIN FROM A/C UNITS TO APPROVED DRAIN POINT, DX WATER MAKE-UP TO MECHANICAL EQUIPMENT, GAS PIPING TO UNITS & FINAL CONNECTIONS.
9. GENERAL CONTRACTOR: CURBING, LEVEL PLATFORMS, FRAMED OPENINGS, DOOR LOUVERS, (OL), UNDERCUT DOORS (UC), EXTERIOR LOUVERS.
10. ALL EQUIPMENT THAT IS SUBSTITUTED SHALL FIT IN THE SPACE PROVIDED WITH ADEQUATE ROOM FOR SERVICING. EXCLUDING SUBSTITUTE EQUIPMENT NOTED IN THIS SECTION OF THE SPECIFICATIONS.
11. ALL SHEET METAL CONSTRUCTION AND GAUGE SHALL BE INSTALLED IN ACCORDANCE WITH LOCAL ANDTHERMIE CODES. TAPE ALL TRANSVERSE AND LONGITUDINAL JOINTS, SUPPLY AND RETURN DUCTS.
12. INSULATE ONE (1) ALL SUPPLY AND RETURN AIR DUCTS EXPOSED TO WEATHER AND AS NOTED. ACOUSTICAL LINER SHALL BE OF THE TYPE, AND EXCLUSIVE OF FILM RESISTANCE, NOT TO EXCEED (SEE SCHEDULE ON SHEET M-1) (SIZES SHOWN INCLUDE LINER).
13. ALL CONCEALED SUPPLY AND RETURN AIR DUCTS TO BE INSULATED WITH 2" THICK FIBERGLAS BLANKET WITH FSK EXCLUSIVE OF FILM RESISTANCE.
14. AT CONTRACTOR'S OPTION CONCEALED DUCTWORK MAY BE APPROVED IN LIEU OF CONCEALED SHEET METAL ROUND PIPE. THE DUCT SHALL BE UNDERWRITERS' LABORATORIES LABELLED AS A CLASS-1 AIR DUCT IN ACCORDANCE WITH U.L. STANDARD TEST METHOD 181.
15. END CONNECTION TO CEILING DIFFUSERS AND RETURN AIR GRILLE SHALL BE "CANCO SILENT FLEX" INSULATED LOW PRESSURE 07-181 " 0" LONG FLEXIBLE DUCT.
16. WHERE INTERIOR OF DUCTWORK IS VISIBLE THRU AIR OUTLET, LOUVRE OR DUCT SHALL BE PAINTED WITH A FLAT BLACK PRIMER, OR LINING SHALL HAVE BLACK FACING.
17. ALL JOINTS OF DUCTWORK EXPOSED TO WEATHER SHALL BE SEALED WATERTIGHT WITH CAULK AND CANVAS.
18. HVAC EQUIPMENT CONTAINED FOR C.E.C. SECTION 2-5314(a).
19. AUTOMATIC CONTROLS FOR OFF-HOURS SHALL COMPLY WITH C.E.C. SECTION 2-5315(a)(1).
20. THERMOSTAT SET POINT REQUIREMENTS SHALL COMPLY WITH C.E.C. SECTION 2-5315(d).
21. ZONE CONTROL OF HEATING & COOLING SHALL COMPLY WITH C.E.C. SECTION 2-5315(e)(1).
22. VENTILATION SHALL BE PROVIDED PER C.E.C. SECTIONS 2-5315 & 2-5345.

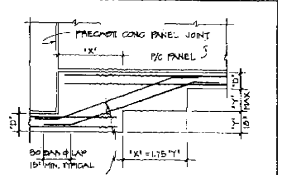
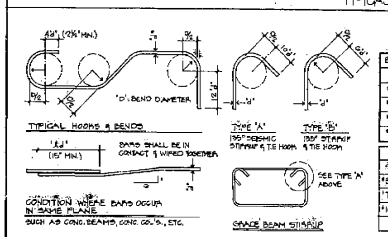
S-5



NOTES:
1. SLABS MAY BE POURED IN A CHARGE "CHECKERBOARD" MANNER WITH A MAX. AP. AM ONE SIDE NO GREATER THAN "D", OR SLABS MAY BE POURED AT STRIPS "D" WIDE MAX. WITH CONSTRUCTION JOINTS OR CONTROL JNTS. AT A SPACING EQUAL TO THE STRIP WIDTH.
2. CONSTRUCTION JOINTS SHALL OCCUR IN AT LEAST ONE DIRECTION ONLY. SIMILAR SPACED NO FURTHER APART THAN 30'-0", UNLESS INTERMEDIATE CONTROL JOINTS SHALL OCCUR WHEN "D" IS EXCEEDED THEN.
3. SAWCUT CONTROL JOINTS MAY BE USED IN BOTH DIRECTIONS AND SPACED EQUAL. ZIP STRIP JOINTS MAY NOT BE USED IN BOTH DIRECTIONS.
4. SAWCUT JOINTS SHALL BE MADE SOME DAY AS POUR AND PRIOR TO CRACKING OCCURRENCE. THE JOINT SHALL BE FLUSHED WITH WATER TO REMOVE SLURRY IMMEDIATELY AFTER SAWING.
5. DISCONTINUE REINFORCING UNDER ANY CONSTRUCTION OR CONTROL JOINT.
6. CONCRETE SHALL HAVE A 28 ENTRAINMENT OF 2% TO 3% BY VOLUME.
7. FINISHING OF SLAB CONCRETE SHALL BE DONE AFTER SURFACE BLEED WATER HAS DISAPPEARED.
8. MOISTEN SUB-GRADE PRIOR TO PLACING CONCRETE.
9. APPLY MEMBRANE CURE TO CONCRETE IMMEDIATELY AFTER CONCRETE FINISHING OPERATION.

TYPICAL SLAB ON GRADE (1)



TYPICAL PIPE @ FOOTING (2)

11	1/4	13/16	22	10

TYPICAL REBAR WELDING (8)

9

REINFORCING STEEL

1. Bar reinforcement shall conform to ASTM A615, Grade 60.
2. All welded rebar shall be A615 Grade 40 or A706.
3. Welding of reinforcing steel shall conform to AWS D1.4-79.
4. Welded wire fabric shall conform to ASTM A185.
5. Reinforcing detailing, bending, and placing shall be in accordance with Concrete Reinforcing Steel Institute "Manual of Standard Practice" latest edition.
6. Laps at bar splices shall be: 36 bar dia. or 12" min. for concrete and 40 bar dia. or 18" min. for masonry unless noted otherwise.
7. Vertical bars in walls shall be accurately positioned at the center of wall, unless otherwise noted on details. A hook shall be used for location at top and bottom and at intervals not exceeding 10' bar dia.
8. Reinforcing steel shall be provided with the following amounts of concrete cover, unless noted otherwise:
   - Footings (concrete deposited against earth) - - - - - - - 3"
   - Concrete surfaces (formed) exposed to earth or weather - 2"
   - Column reinforcing (including column ties) - - - - - - 1-1/2"
   - Beams and Girders: - - - - - - - - - - - - - - - - - - - 1-1/2"
   - Slabs (#11 or smaller) - - - - - - - - - - - - - - - - - 3/4"
9. All reinforcing steel, anchor bolts, dowels, and inserts shall be well secured in position prior to placing concrete or grout.
10. Unless otherwise noted in details, furnish #3 spacer ties at approximately 2'-9" on center in all beams and footings to secure reinforcing in place.

STRUCTURAL STEEL

1. Structural steel shall conform to ASTM A36, unless noted otherwise.
2. Steel pipe shall conform to ASTM A53, Grade B (F_y = 36 ksi).
3. Steel tube shall conform to ASTM A500, Grade B (F_y = 46 ksi).
4. All nuts-washers shall have bolts conforming to ASTM A325.
5. Machine bolts and anchor bolts shall conform to ASTM A307, Grade "A" unless noted otherwise.
6. Welding of structural steel shall be done by the shielded arc process, per AWS D1.1 using approved electrodes (E7018-low hydrogen).
7. Unless noted otherwise, all metal contact edges shall receive continuous fillet welds per AISC Table 1.17.2a.
8. All workmanship and materials shall conform to the latest edition of the "AISC Specification for the Design, Fabrication and Erection of Structural Steel for Buildings".

STRUCTURAL WOOD

1. All wood members shall be Douglas Fir (DF) or Larch grade marked by a recognized grading agency (W.C.L.A.).
2. Plywood sheathing shall be Douglas Fir conforming to concrete' products Standard PS-1-74, and shall be grade rated in accordance with APA.
3. Wood grades (unless noted otherwise):
   (A). For horizontal members: - Joists & Rafters - Grade #2 Beams & Stringers - Grade #1 Ledgers - Grade #1
   (B). For vertical members: - 2x4 studs: Construction Grade 2x6 & larger: #1 Grade #2 Posts & Timbers - Grade #1
4. Cutting, notching or additional bores or holes not to be permitted only, as detailed or approved by the Engineer.
5. Unless otherwise noted, all nailing shall conform to the latest edition of the U.B.C.
6. All nails shall be standard common nails, unless noted otherwise.
7. All sills or plates resting on concrete or masonry shall be pressure - treated Douglas Fir. Bolts shall be turned 7" from the end of a board or from a notch and spaced at intervals noted.
8. All bolt heads and nuts bearing on wood shall have standard cut washers. All bolt holes in wood shall be drilled 1/32" dia. larger, than normal bolt dia.
9. All framing anchors, post caps, column bases, etc. shall be as manufactured by "Simpson Company" or equivalent.
10. Provide double joists under all parallel partitions.
11. Provide blocking or bridging per latest edition of the U.B.C.
12. Top plates of all wood stud walls to be 2-2x 12 (same width as studs), unless otherwise noted. Lap 48" (min.) and nail less than. 6-16d nails at each lap and not more than 12" between nails.
13. Adhesives used for any field gluing shall conform to APA performance specification PRS-01.

PREFABRICATED WOOD JOISTS

1. Wood Joists shall be specified on plans and shall have a current I.C.B.O. acceptance.
2. Joists shall be factory manufactured with structural grade plywood web and flanges of machine stress rated lumber flanges utilizing waterproof resin glue.
3. Joists shall be fabricated in a properly equipped manufacturing facility and under the supervision of a third party inspection agency.
4. Specific joist layout shall be detailed to fit the dimensions and loads indicated on the plans. All design shall be in accordance with allowable values and section properties contained in the approved I.C.B.O. report.
5. Joist manufacturer shall submit calculations and shop drawings, signed by a registered Civil Engineer, for review prior to fabrication.
6. Joists shall be manufactured and installed in accordance with the plans, shop drawings, manufacturer's recommendations, erection procedures and applicable building codes. Joists shall be properly braced to keep the joists straight and plumb. Temporary bracing shall be added to resist lateral support for the individual joists and the entire system until sheathing material has been applied.
7. Temporary construction loads which cause stresses beyond the allowable design values are prohibited.
8. Truss manufacturer shall design for, coordinate and verify all openings in roof, prior to the construction, fabrication and erection.
9. Truss manufacturer shall design trusses for mechanical equipment loaded roof.
10. Wood floor joists shall satisfy a minimum live load deflection criteria of span/600.

GLUE LAMINATED WOOD

1. Fabrication of glulam beams shall be in accordance with standard specifications for structural Glu-Lam Douglas Fir (coastal species) by the Glu-Lam Laminator's Association (latest edition).
2. All glulam beams exposed to weather shall be fabricated with exterior glue.
3. All glulam beams shall be identified with the manufacturer's mark, inspection stamp, and grade stamp. Glulam beams shall be marked on the sides of the beam near the ends and at intervals not exceeding 10'-0". Marks shall be placed on the sides of the beam near the ends and at intervals not exceeding 10'-0". Marks shall be placed on the sides of the beam near the ends and at intervals not exceeding 10'-0".
4. Manufacturer shall be a commercial member of an I.C.B.O. certified qualified control inspection organization and a certificate of conformance shall be submitted to the Building Inspection Department and Engineer prior to installation.

GENERAL

1. The Contractor shall verify all dimensions, elevations, and site conditions before starting work and notify the Architect immediately of any discrepancies.
2. All omissions and conflicts between the various elements of the working drawings and/or specifications shall be brought to the attention of the Architect before proceeding with work so involved.
3. Resolve any conflicts in the drawings with the Architect before proceeding with construction.
4. The Contractor shall determine the location of utility services in the area to be excavated prior to beginning excavation.
5. No pipes, ducts, sleeves, chases, etc. shall be placed in slabs, beams, or walls unless specifically shown or noted. Any structural member be cut for pipes, ducts, etc., unless otherwise noted. Contractor shall obtain prior approval for installation of any additional pipes, ducts, etc. from Architectural and Mechanical drawings for locations.
6. All material and workmanship shall conform to the requirements of the latest edition of the U.B.C.
7. Special Inspection per Sec. 305 & 306 of the U.B.C. is required as follows:
   A. All structural field welding, including welding of reinforcing steel, and welding of steel decking.
   B. Installation and tightening operations for all high-strength friction bolting (A325X).
   C. Installation and tightening operations for high-strength anchor bolts.
   D. During the taking of test specimens and placing of all reinforced concrete, with the exception of foundation concrete when the structural design strength is no greater than f'c = 2000 PSI.
   E. Steel pipe shall conform to ASTM A53, Grade B (F_y = 46 ksi).
8. Design based on 1985 edition of Uniform Building Code.

FOUNDATION

1. Soil design pressure: 2000 P.S.F.
2. Bottom of footings shall be at least 30 BELOW SEWER.
3. Character of soil: See Soils Report by SCHAEFER, DYKAS ASSOC. Job no. 85-158 dated May, 1985.
4. Soil Engineer shall verify that construction at the site is in accordance with the recommendations and conclusions of his report.
5. Finished excavation for foundation shall be neat and true to line with all loose material and standing water removed from excavations.
6. Before any concrete is placed, excavations shall be checked and approved by a qualified Soils Engineer to assure compliance with the requirements.
7. All fill material is to be approved by the Soils Engineer and is to be compacted to 90% of maximum density for ____ as directed. Inspection is required during fill and compaction.

REINFORCED CONCRETE

1. Concrete shall conform to ASTM C-150, 1988 ed.
2. Aggregates shall conform to ASTM C-33 for normal-weight concrete and ASTM C-330 for lightweight concrete.
3. Ready-mix concrete shall be mixed and delivered in accordance with ASTM C-94.
4. Concrete shall have a minimum ultimate compressive strength (f'c) as noted on the drawings, but not less than 2,500 PSI for slabs & footings. See general elevations for minimum concrete strength.
5. Admixtures may be used with approval of Soils Engineer. Admixtures used to increase the workability of the concrete shall not be considered to reduce the specified minimum cement content.
6. Refer to and verify with architectural drawings any moulds, grooves, reveals, stoppers, ornaments, chips or textures required to be cast into concrete and the location and extent of depressions, curbs, and ramps, etc.
7. Reglets, recesses, chases, sleeves, curbs, columns, etc. shall be formed with 3/4"x4" chamfer unless otherwise noted.
8. Concrete forms & falsework shall be within the standards set by the American Concrete Institute.
9. All reinforcing steel, anchor bolts, dowels and other inserts shall be secured in position and inspected by the local building department inspector prior to the pouring of any concrete.
10. Location of all construction joints not specifically indicated on the drawings shall be approved by the Engineer prior to placing any steel.
11. Concrete floor slab variation from level to 1/8" in ten feet maximum.

TILT-UP PANEL CONCRETE

1. Precast concrete panels shall have a minimum ultimate compressive strength (f'c) as per panel elevation notes.
2. Precast concrete panels shall meet the following minimum criteria prior to their erection:
   A. 85% of design concrete strength = 2360 PSI as determined by ASTM C39 standard cylinder test for compressive strength.
   B. Modulus of rupture = 502 PSI as determined by ASTM C78 standard beam test for flexural strength.
   These values are minimums and may be greater as required by panel erection engineer.
3. Contractor shall be responsible for the correction of any cracks, honeycombing and other imperfections from precast panel fabrication. These shall be repaired to the satisfaction of the Engineer and they shall be fully responsible for the structural strength and other attachments or anchors with new low recurrence.
4. Recess, reglets, openings, inserts and unit installations, etc. shall be designed, fabricated and detailed by "Burke" or "Simpson" or equivalent and are subject to review by the Engineer prior to fabrication.
5. Provide temporary bracing for panels to support the panels until the structural connection is established or diaphragm is adequately braced to support the panels.
6. The connection details shall be submitted to the Engineer for review prior to fabrication. Welds, and elements subject to corrosion shall be protected from the weather and coatings shall be touched up after welding.
7. Weld plates shall be provided with adequate dimensions with anchorage to develop the full strength of the connection.
8. Bond breaking agents shall be compatible with paint, coatings and sealants. Bond breaking agents shall be applied to the forms in accordance with the manufacturer's recommendations. In no case shall the bond breaker restrict the bonding of paint, coatings, sealants or other types of surface treatments.
9. All tilt-up panels shall be cast on smooth and non smooth with-bureau to remove attention and ridges.
10. The Contractor shall notify the Engineer and Architect when the panels are ready for inspection to enable the Architect's office Job-site visit for review of panel reinforcing prior to pouring.
11. Avoid placement of panel pours over control joints and column blockouts.
12. Chord connections shall be welded no sooner than 36 days after panel is cast.

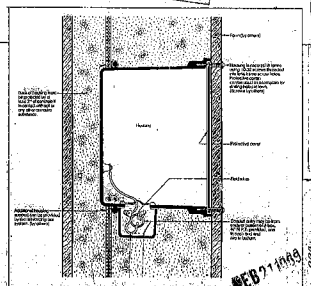
GENERAL NOTES



1. THE INTENT OF THESE DRAWINGS IS TO DESCRIBE A COMPLETE AND OPERABLE SYSTEM. REPORT ANY QUESTIONS TO ENGINEERS ATTENTION PRIOR TO BIDDING.
2. PROVIDE GROUNDING WHERE INDICATED OR REQUIRED BY CODE.
3. ALL INSTALLATIONS SHALL MEET FULLY WITH ALL REQUIREMENTS OF THE NATIONAL ELECTRICAL CODE (N.E.C.). MATERIAL SHALL BE U.L. LABELED OR LISTED.
4. WHERE NON-METALLIC CONDUIT IS USED, PROVIDE GROUND WIRE.
5. ALL EQUIPMENT SHALL BE INSTALLED PER MANUFACTURERS REQUIREMENTS. PREMISES SHALL BE CLEANED OF DIRT AND DEBRIS.
6. SUBCONTRACTOR SHALL FURNISH FOR APPROVAL, SHOP DRAWINGS OF ELECTRICAL EQUIPMENT, MOTOR STARTERS, LIGHTING FIXTURES, AND DEVICES PRIOR TO PURCHASE.
7. ALL CONDUCTORS SHALL BE COPPER TYPE "THWN" BELOW GRADE AND TYPE "THWN/THW" FOR EXPOSED AND ABOVE GRADE USES.
8. FURNISH AND PAY FOR ALL PERMITS, INCLUDING ELECTRICAL UTILITY ENABLES AND BUILDING DEPARTMENT PERMIT CHARGES.
9. COORDINATE ELECTRICAL WORK WITH REQUIREMENTS OF OTHER DIVISIONS.
10. PROVIDE CONDUIT BETWEEN THERMOSTATS, AIR CONDITIONING CONTROL PANELS, MOTOR STARTERS, SOLENOID VALVES, AND AIR CONDITIONING UNITS. SEE MECHANICAL PLANS FOR CONTROL WIRE SIZES OR SIZE PER N.E.C.
11. IN ADDITION TO SYSTEMS INDICATED, CONTRACTOR SHALL REVIEW MECHANICAL AND OTHER DRAWINGS PRIOR TO BID AND INCLUDE ALL WIRING MATERIALS (INCLUDING RELAYS AND CONTROL DEVICES) INDICATED THEREON AS PART OF ELECTRICAL WORK.
12. EACH SWITCH TO BE IN SEPARATE 2" X 3" BOX OR 2" X 3" SPACE IN GANG BOX.
13. THE ELECTRICAL SUBCONTRACTOR MUST BE LICENSED BY THE STATE (C-10) AND BOND, VISIT THE JOB SITE PRIOR TO BIDDING, EXAMINE EXISTING CONDITIONS, AND INCLUDE IN HIS BID ALL LABOR AND MATERIAL TO INTERFACE WITH EXISTING SYSTEMS.
14. ALL LIGHTING FIXTURES, INCLUDING LAMPS, SHALL BE FURNISHED WITH A STRAIGHT, COMPARTMENTED CEILING ACCEPTANCE BOARD, COMPARTMENTED EQUALIZER FILTER, REFLECTORS, AND LENS SUITABLE FOR INDICATED COMPARTMENT. COMPARTMENT SHALL HAVE SPACE FOR ADDITIONAL TYPE, DEVICES: 1 PH. BALLASTS SHALL BE SILVER/VOLTAGE AND MINIMUM RATING. FURNISH EQUAL NUMBER OF CONTACTS AS CIRCUITS CONTROLLED PLUS ONE SPARE POLE. TORK, INTERMATIC, ARI OR EQUAL.
15. ALL LIGHTING FIXTURES, INCLUDING LAMPS, SHALL BE FURNISHED WITH A STRAIGHT, COMPARTMENTED CEILING ACCEPTANCE BOARD, COMPARTMENTED EQUALIZER FILTER, REFLECTORS, AND LENS SUITABLE FOR INDICATED COMPARTMENT. COMPARTMENT SHALL HAVE SPACE FOR ADDITIONAL TYPE, DEVICES: 1 PH. BALLASTS SHALL BE SILVER/VOLTAGE AND MINIMUM RATING. FURNISH EQUAL NUMBER OF CONTACTS AS CIRCUITS CONTROLLED PLUS ONE SPARE POLE. TORK, INTERMATIC, ARI OR EQUAL.
16. ALL LIGHTING FIXTURES, INCLUDING LAMPS, SHALL BE FURNISHED WITH A STRAIGHT, COMPARTMENTED CEILING ACCEPTANCE BOARD, COMPARTMENTED EQUALIZER FILTER, REFLECTORS, AND LENS SUITABLE FOR INDICATED COMPARTMENT. COMPARTMENT SHALL HAVE SPACE FOR ADDITIONAL TYPE, DEVICES: 1 PH. BALLASTS SHALL BE SILVER/VOLTAGE AND MINIMUM RATING. FURNISH EQUAL NUMBER OF CONTACTS AS CIRCUITS CONTROLLED PLUS ONE SPARE POLE. TORK, INTERMATIC, ARI OR EQUAL.
17. REFER TO ARCH. DWGS FOR EXACT LOCATION OF LIGHT FIXTURES.
18. CONDUIT TRADE OBSTRUCTIONS DIRECTLY TO STRUCTURAL OVERHEAD WITH THE (DIAGONAL CORNERS) #16 WIRES.

ELECTRICAL WORK 16601

SECTION 16601 - ELECTRICAL WORK

1. GENERAL
1.01 REFERENCES:
All General, supplementary, special conditions and Division 1 apply to this Section.
1.02 SCOPE:
As indicated on Electrical Drawings.
1.03 CODES AND REGULATIONS:
All work under this Division shall comply with the most rigid requirements of the latest editions of the National Electrical Code, the California Administrative Code - Title 24 - State Building Standards Code, Part 3 - Basic Electrical Regulations, all local codes and Title 24 Calculation Mechanisms.
1.04 PERMITS AND INSPECTIONS:
The Contractor shall obtain and pay for all permits and inspections required for the work by all legally constituted authorities having jurisdiction. Certificates of all such permits and inspections shall be delivered to the Owner's representative.
1.05 TESTS:
The Contractor shall perform all electrical tests as required and he shall perform a complete "in service" operation of the entire electrical system to the full satisfaction of the Owner.
1.06 GUARANTEE:
Should any trouble develop within one (1) year from the date of completion and acceptance of the building, due to faulty or defective material and/or workmanship, the trouble shall be corrected by the Contractor without expense to the Owner.
1.07 RECORD DRAWINGS:
The Contractor shall keep an accurate dimensioned record of the finished locations of all buried conduits and sleeves and shall furnish to the Architect two (2) complete sets of reproducible drawings marked to show the electrical systems exactly as installed. Architect and Engineer forms shall not appear on the Record Documents.
2. PRODUCTS:
2.01 MATERIALS:
All material, appliances, fixtures and equipment shall be new and of the best grade of the respective kind, free from all defects and of the make, brand and quality specified. Materials for similar use shall be of the same type and manufacture. All materials shall be U.L. labled.
2.02 PROTECTION OF FINISH:
The Contractor shall fully protect all finished parts of the materials and equipment against damage from whatever cause during the progress of the work and until final completion.
2.03 MATERIALS:
A. CONDUIT: The term conduit shall refer to rigid heavy wall galvanized or sherardized steel conduit, rigid heavy wall aluminum conduit, directional metallic tubing (EMT), flexible metal conduit, schedule 40 PVC conduit.
1. Conduits exposed and subject to mechanical injury shall be rigid heavy wall galvanized steel or aluminum. Aluminum conduit may not be used below grade or imbedded in concrete.
2. Conduits run exposed outside or in floor slabs shall be rigid heavy wall galvanized or sherardized steel.
3. Conduits run below grade, exterior to the building, shall be schedule 40 heavy wall, high impact poly vinyl chloride electrical conduit. A ground wire shall be installed on all PVC conduits.
4. Conduits for lighting circuits and 120 volt outlet circuits shall be EMT where not subject to mechanical injury.
5. Conduit where allowed for lighting circuits and 120 volt outlets shall be flexible metal conduit in stud walls & ceilings.
6. Flexible conduit shall be installed to all vibrating equipment.
7. Underground conduit shall be used for all exterior equipment.
8. No conduit inside will be bolthited.
9. All conduit bodies installed in any location where the presence of moisture is apparent shall be equipped with rubber gaskets.
10. The Sub-Contractor shall furnish and install fittings, special devices and material which may be required for the proper installation of the conduit system.

B. OUTLET BOXES:
Outlet boxes and covers shall be galvanized or sherardized, one piece pressed steel, knockout type of approved manufacture. Gangs for multiple devices shall be gang-boxes.
2. Ceiling boxes shall be octagonal with plaster rings, extension rings, or fixture blanks as may be required.
3. Boxes exposed to rain or other moisture shall be Crouse-Hinds type FS or FD threaded, hinged with appropriate corners and gaskets; painted to match adjoining finish.

C. WIRING DEVICES AND PLATES:
1. Unless otherwise noted shall be Hiorns 1864.
2. Switches shall be Hiorns 5711, single pole, and 5713, three way.
3. Plates shall be brushed stainless steel or Hiorns plastic, smooth white standard.

D. CONDUCTORS:
1. CONDUCTORS: Furnish and install conductors of the size and type shown on the drawings and as herein specified. All conductors using this section shall be copper, as shown on the one-lined diagram, type THW and rated at 600 volts nominal, where allowed by local code.
2. Insulation for conductors shall conform to the following: Wire sizes No. 12 to No. 8 shall be Type THW wire size No. 6 and larger shall be type RHW or THW.
3. All current carrying wires shall be color coded throughout.

E. SWITCHBOARD:
1. Panel boards shall be dead-front, safety type equipped with thermal magnetic, molded case circuit breakers of interrupting capacity, trip ratings and of the number of poles indicated.
2. Circuit breakers shall be equipped with individually insulated, flexible and removable connecting fingers for all circuit breakers shall be flush-mounted in cabinet. Circuit breakers shall be clearly shown by the breaker handle taken in position between on and off. Provisions for additional breakers shall be such that no additional breakers shall be such that no additional connectors will be required for add breakers. Circuit breakers shall be thermal magnetic type with inverse time-current characteristics. Multiple pole circuit breakers shall be common trip with a single operating handle. Tandem ties will not be approved.
3. All panel boards shall be U.L. labled.
4. A 1/32 inch clear "Lexite" covered directory shall be provided on the inside of each panelboard door. The directory shall be typewritten, indicating each circuit used.
5. All circuit breakers serving discharge lighting shall be furnished with a locked device.

F. MAIN METERED SERVICE DISTRIBUTION BOARD: Shall be Circuit Breaker or fused disconnect type as required to maintain the let-through current to equipment equal to or within 10,000 amps.
G. DISCONNECT SWITCHES: Disconnect switches shall be fused, unfused or multi-breaker type as shown, with three poles and for the environment under which it is mounted. Enclosure shall be horsepower rated. Switch blades, contacts, quick-break mechanisms. Switch handles shall be capable of being locked in open or closed position and rebounding duty.
H. TELEPHONE & INTERCOM SYSTEMS: Contractor shall furnish and install all conduit and pull boxes required for the telephone and intercom systems.
I. GROUNDING: The power system shall be grounded in accordance with the provisions of the National Electric Code.
2.04 LIGHTING FIXTURES:
Furnish as shown on Electrical Drawings.
3. EXECUTION
3.01 VERIFICATION OF DIMENSIONS:
The Contractor shall carefully check the drawings to see that the equipment he contemplates installing will fit into the spaces provided.
3.02 LOCATIONS:
Prior to roughing, minor adjustments to outlet locations may be made without additional compensation.
3.03 INSTALLATION:
Install in conformance to governing codes and Electrical Drawings.

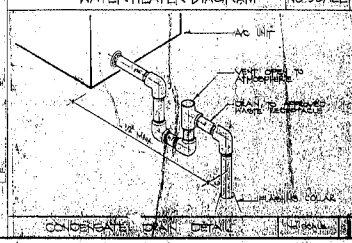
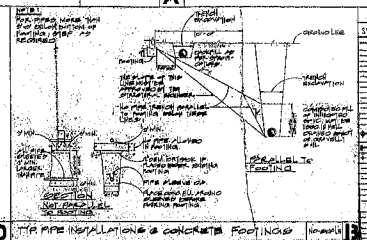
1 REVISION 3-15-89

APPROVAL OF PLUMBING PLANS
The plumbing design indicated on these plans meets the requirements of the Uniform Plumbing Code and all applicable local ordinances. Approval of these plans does not relieve the plumbing contractor of responsibility for any deviations, omissions or conflicts which may appear in these plans or specifications. Approval of these plans does not prevent the plumbing inspector from requiring corrections of errors in these plans or construction.



3-15-89 Date
Approved by [signature] Authority

PLUMBING GENERAL NOTES:



1. INSTALLATION SHALL CONFORM TO THE ENERGY CONSERVATION DESIGN MANUAL STANDARDS FOR NEW NON-RESIDENTIAL BUILDINGS.
2. CONTRACTOR SHALL VERIFY DEPTH, SIZE, LOCATION OF ALL EXISTING UTILITIES IN FIELD BEFORE STARTING WORK.
3. CONTRACTOR SHALL COORDINATE INSTALLATION OF PLUMBING WORK WITH ALL OTHER TRADES SO AS TO AVOID UNNECESSARY DELAYS OR INTERFERENCES.
4. ALL PLUMBING WORK AND MATERIALS SHALL BE INSTALLED IN ACCORDANCE WITH ALL APPLICABLE ORDINANCES AND REGULATIONS HAVING JURISDICTION. CONTRACTOR SHALL OBTAIN ALL APPROVALS REQUIRED FROM REGULATING AGENCIES BEFORE STARTING WORK.
5. SOIL AND WASTE PIPE SHALL SLOPE AT 2% MINIMUM UNLESS OTHERWISE NOTED.
6. ALL PLUMBING WORK AND MATERIALS SHALL MEET THE REQUIREMENTS OF THE LATEST EDITIONS OF THE UNIFORM PLUMBING CODE, UNLESS OTHERWISE REQUIRED BY THE DEPT. OF BLDG. & SAFETY.
7. CONTRACTOR SHALL FURNISH AND INSTALL ALL BACK-FLOW PROTECTION DEVICES REQUIRED BY AGENCIES HAVING JURISDICTION.
8. PLUMBING CONTRACTOR: CONDENSATE DRAIN FROM A/C UNITS TO APPROVED DRAIN POINT. H2O WATER MAKE-UP TO MECHANICAL EQUIPMENT. GAS PIPING TO UNITS & FINAL CONNECTIONS.
9. OBTAIN AND PAY FOR ALL PERMITS, FEES, AND INSPECTIONS REQUIRED BY GOVERNING AUTHORITIES.
10. CONDENSATE DRAINS THAT TERMINATE @ TAILPIECE OF LAV. TAILPIECES SHALL BE INCREASED TO 1½" TO RECEIVE DISPOSAL TYPE TEE 1½"x1½"x1½", EXPOSED TEES & PIPING TO BE CHROMEPLATED.
11. DOMESTIC WATER PIPING: ABOVE GROUND COPPER TYPE "L". BELOW GROUND OUTSIDE OF BLDG. 1½" AND SMALLER PVC SCHEDULE 40 WITH SCHEDULE 40 FITTINGS, 2" AND LARGER PVC CLASS 315 DRW 12-3 WITH SCHEDULE 80 FITTINGS.
12. GAS PIPING: INSIDE BUILDING ABOVE GROUND SCHEDULE 40 BLACK STEEL PIPE. W/ 40 GROUND OUTSIDE OF BUILDING CLASS 315 DRY 12-3 GAS PIPE.
13. SOIL PIPING: BELOW SLAB INSIDE BUILDING, SERVICE WEIGHT COATED CAST IRON HUBLESS PIPE AND FITTINGS. OUTSIDE OF BUILDING, VITRIFIED CLAY PIPE WITH "RIPPED SEAL" OR "MORELOCK" JOINTS.
14. VENT PIPING: BELOW GROUND CAST IRON, ABOVE GROUND SCHEDULE 40 GALVANIZED STEEL PIPE.
15. CONDENSATE DRAIN PIPING: COPPER PIPE TYP.
16. FIRE SPRINKLER SYSTEM: PIPING WITH 3/4" THICKNESS FIBERGLASS PER ASTM 84, R=4.2/INCH MINIMUM INSULATION WITH STANDARD CANVAS JACKET. COVER EXPOSED INDOOR AND OUTDOOR PIPING WITH UV RESISTANT WHITE PAINT.
17. STORM DRAIN PIPING: ABOVE GROUND INSIDE BUILDING, SERVICE WEIGHT CAST IRON WITH NO-HUB COUPLINGS AND CAST IRON SCREWED DRAINAGE FITTINGS AND LONG SWEEP ELBOWS. UNDERGROUND OUTSIDE BUILDING, SERVICE WEIGHT COATED CAST IRON HUBLESS PIPE AND FITTINGS. UNDERGROUND OUTSIDE OF BUILDING: NON-REINFORCED CONCRETE PIPE.
18. FIRE SPRINKLER WATER PIPING: UNDERGROUND FROM POINT 5'-0" OUTSIDE OF BUILDING: CEMENT-ASBESTOS CLASS 150. INSIDE OF BUILDING SCHEDULE 40 STEEL PIPE WITH 150 PSI. MALLEABLE IRON SCREWED FITTINGS.
19. REFER TO MECHANICAL CONSULTANTS' DRAWINGS FOR PLUMBING ROUGH-IN SCHEDULE AND FOR ADDITIONAL WORK TO BE FURNISHED AND INSTALLED BY THIS CONTRACTOR.
20. PIPING SHALL BE INSULATED AS PER U.B.C. SECTION 2-5303.
21. PLUMBING EQUIPMENT CERTIFIED PER U.B.C. SECTION 2-5314(A).
22. WATER HEATERS FOR DOMESTIC HOT WATER PER U.B.C. SECTION 2-5312.

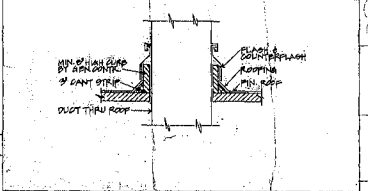
A/C GENERAL NOTES:



1. INSTALLATION SHALL CONFORM TO THE ENERGY CONSERVATION DESIGN MANUAL STANDARDS FOR NEW NON-RESIDENTIAL BUILDINGS.
2. ALL WORK AND MATERIALS SHALL COMPLY WITH GOVERNING CODES, SAFETY ORDERS AND REGULATIONS.
3. OBTAIN AND PAY FOR ALL NECESSARY PERMITS, FEES, AND INSPECTIONS REQUIRED BY GOVERNING AUTHORITIES.
4. ALL MATERIALS AND EQUIPMENT PROVIDED AND/OR INSTALLED SHALL BE GUARANTEED FOR A PERIOD OF ONE (1) YEAR FROM THE DATE OF FINAL ACCEPTANCE OF THE WORK BY THE OWNER. ANY DEFECTIVE MATERIALS OR EQUIPMENT DISCOVERED SHALL BE REPLACED TO THE ENTIRE SATISFACTION OF THE OWNER.
5. WITHIN 15 DAYS AFTER AWARD OF CONTRACT SUBMIT FIVE (5) COPIES OF REQUIRED SHOP DRAWINGS, MATERIAL LISTS, AND EQUIPMENT SPECIFICATIONS OF ITEMS PROPOSED FOR INSTALLATION.
6. ELECTRICAL CONTRACTOR: CONSULT FOR LINE & LOW VOLTAGE WIRING, LINE VOLTAGE WIRING, SWITCHES, DISCONNECTS, CIRCUIT BREAKERS, FINAL CONNECTIONS, ITEMS INDICATED THUS (E).
7. MECHANICAL CONTRACTOR: TEMPERATURE CONTROLS, LOW VOLTAGE WIRING & ITEMS INDICATED THUS (M). WIRING SHALL CONFORM TO LOCAL CODES.
8. PLUMBING CONTRACTOR: CONDENSATE DRAIN FROM A/C UNITS TO APPROVED DRAIN POINT, DX WATER MAKE-UP TO MECHANICAL EQUIPMENT, GAS PIPING TO UNITS & FINAL CONNECTIONS.
9. GENERAL CONTRACTOR: CURBING, LEVEL PLATFORMS, FRAMED OPENINGS, DOOR LOUVERS, (DL), UNDERCUT DOORS (UC), EXTERIOR LOUVERS.
10. ALL EQUIPMENT THAT IS SUBSTITUTED SHALL FIT IN THE SPACE PROVIDED WITH ADEQUATE ROOM FOR SERVICING, INCLUDING SUBSTITUTE EQUIPMENT NAMED IN THIS SECTION OF THE SPECIFICATIONS.
11. ALL DUCT METAL CONSTRUCTION AND CURBS SHALL BE INSTALLED IN ACCORDANCE WITH LOCAL AND SMACNA CODES. TAPE ALL TRANSVERSE AND LONGITUDINAL JOINTS, SUPPLY AND RETURN DUCTS.
12. SOUND LINE (SL): ALL SUPPLY AND RETURN AIR DUCTS EXPOSED TO WEATHER AND AS NOTED. ACOUSTIC LINER 1½" THICK, R=5 EXCLUSIVE OF FILM RESISTANCE, NRC=1 MATCH. (DUCT SIZES SHOWN INCLUDE LINER).
13. ALL CONCEALED SUPPLY AND RETURN AIR DUCTS TO BE INSULATED WITH 2" THICK FIBERGLAS BLANKET WITH R=6 EXCLUSIVE OF FILM RESISTANCE.
14. AT CONTRACTOR'S OPTION CARGO DUCT: 1" THICK WITH PRESTIGE VAPORSEAL(R) APPROVED LINER OF COMBINED SHEET METAL ROUND PIPE - THE DUCT SHALL BE UNPERFORATED LAGUNA, TORRES LABELED AS A CLASS 1 AIR DUCT IN ACCORDANCE WITH U.L. STANDARD TEST METHOD 181.
15. END CONNECTION TO CEILING DIFFUSER AND RETURN AIR GRILLE SHALL BE "CHICO SILENT FLEX" INSULATED LOW PRESSURE DUCT 1' 0" LONG FLEXIBLE DUCT.
16. WHERE INTERIOR OF DUCTWORK IS VISIBLE THRU AN AIR OUTLET, INSIDE OF DUCT SHALL BE PAINTED WITH A FLAT BLACK PRIMER, OR LINING SHALL HAVE BLACK FACING.
17. ALL JOINTS OF DUCTWORK EXPOSED TO WEATHER SHALL BE SEALED WATERTIGHT WITH MASTIC AND CANVAS.
18. HVAC EQUIPMENT CERTIFIED FOR [illegible]
19. AUTOMATIC CONTROLS FOR OFF-HOURS SHALL COMPLY WITH C.E.C. SECTION 2-5315(A).
20. THERMOSTAT SET POINT ADJUSTMENTS SHALL COMPLY WITH C.E.C. SECTION 2-5315(B).
21. SEQUENTIAL CONTROL OF HEATING & COOLING SHALL COMPLY WITH C.E.C. SECTION 2-5315(A).3.
22. VENTILATION SHALL BE MONITORED PER C.M.C. SECTION 2-5315 & 2-5345.

STANDARD WATER NOTES

1. THE WATER SYSTEM SHALL CONFORM TO THE DISTRICT'S "STANDARD SPECIFICATIONS FOR DOMESTIC WATER SYSTEM" AS LAST REVISED. THE CONTRACTOR SHALL HAVE A COPY OF THESE PLANS AND THE STANDARD SPECIFICATIONS ON THE JOB AT ALL TIMES.

2. THE DISTRICT SHALL BE FURNISHED WITH THREE COPIES OF APPROVED CONSTRUCTION PLANS PRIOR TO STARTING CONSTRUCTION. A PRECONSTRUCTION MEETING SHALL BE HELD ON THE JOBSITE 24 HOURS PRIOR TO THE START OF WORK.

3. THE DISTRICT INSPECTOR SHALL BE NOTIFIED AT LEAST TWO WORKING DAYS PRIOR TO BEGINNING CONSTRUCTION OR ANY INSPECTION. TO ARRANGE FOR INSPECTION, CALL (714) 831-1793.

4. WATER MAINS SHALL BE INSTALLED 6 FEET OFF THE CURB FACE, AND AFTER TO INSTALLATION OF CURB AND GUTTER AND PRIOR TO PAVING OF THE STREETS.

5. FIRE HYDRANTS AND BLOWOFFS SHALL BE INSTALLED IN ACCORDANCE WITH THE APPROPRIATE DETAILS HEREIN AND INSTALLED BEHIND CURBS AND SIDEWALKS WHERE THE SIDEWALKS ARE ADJACENT TO CURBS. FIRE HYDRANTS SHALL BE PER THE DISTRICT'S SPECIFICATIONS AND SHALL HAVE A CONCRETE PAD POURED AROUND THEM.

6. THE DEVELOPER SHALL FURNISH THE DISTRICT WITH EASEMENTS FOR ALL PORTIONS OF THE SYSTEM OUTSIDE THE PUBLIC RIGHT-OF-WAY. THESE EASEMENTS SHALL BE READY FOR RECORDATION PRIOR TO SIGNING THE IMPROVEMENT PLANS.

7. ALL FLANGED CONNECTIONS SHALL BE COATED WITH TWO COATS OF 10 MILS EACH OF E.C 244 AFTER INSTALLATION INCLUDING NUTS, BOLTS, FLANGES, AND LAVE NON NUTS AND BOLTS.

8. NO FACILITY TO BE BACKFILLED UNTIL INSPECTED BY THE DISTRICT.

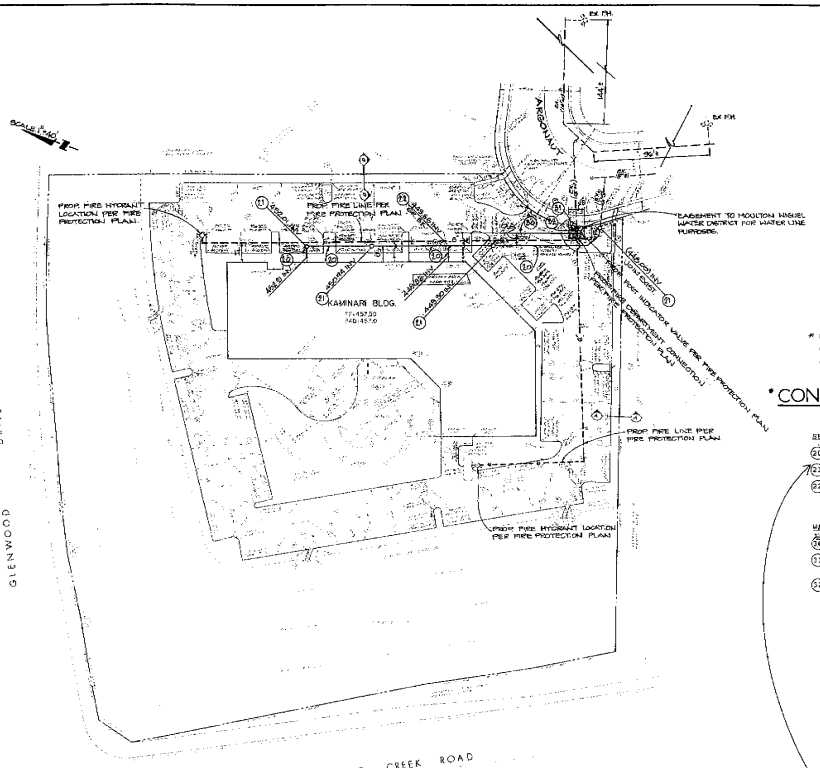
9. SHUT DOWN OR TAPPING OF EXISTING WATER LINES TO FACILITATE CONNECTION TO EXISTING FACILITIES SHALL BE COORDINATED WITH THE DISTRICT. ANY RELOCATIONS OF EXISTING FACILITIES ARE SUBJECT TO APPROVAL OF THE DISTRICT ENGINEER.

10. THE CONTRACTOR SHALL OBTAIN AN EXCAVATION PERMIT FROM THE COUNTY OF ORANGE ENVIRONMENTAL MANAGEMENT AGENCY PRIOR TO START OF CONSTRUCTION.

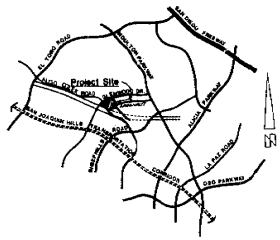
11. WATER HOUSE CONNECTION LATERALS SHALL BE INSTALLED TO THE PROPERTY LINE PRIOR TO PAVING OF THE STREET. AT THE OPTION OF THE DEVELOPER, WATER SERVICES MAY BE TEMPORARILY TERMINATED BEHIND THE CURB AND PLUGGED. THE SERVICE SHALL BE EXTENDED TO THEIR FINAL LOCATION BY THE DEVELOPER AT A TIME PRIOR TO PRESSURE TESTING OF THE WATER SYSTEM.

12. ALL WATER SERVICES SHALL BE INSTALLED PER THE DISTRICT'S STANDARD SPECIFICATIONS. ALL METERS SHALL BE INSTALLED IN GRASS OR PLANTER AREAS AND ACCESSIBLE BY VEHICLE. ANY SERVICES LOCATED IN SIDEWALKS OR DRIVEWAYS ARE SUBJECT TO O.C.E.M.A. APPROVAL. ANY METERS LOCATED IN BANKS OF 4 OR MORE SHALL BE MANIFOLDED PER STANDARD DRAWING W-1A. ALL METER REGISTERS AND LIDS SHALL BE MARKED WITH ADDRESS IDENTIFICATION.

13. ALL LOTS SHALL BE PROVIDED WITH APPROVED PRESSURE REGULATORS SET AT 80 PSI AND SHALL BE INSTALLED ACCORDING TO O.C.E.M.A. STANDARDS.



14. WATER LOW-FLOW DEVICES SHALL BE PROVIDED FOR ALL UNITS WITHIN THIS DEVELOPMENT IN ACCORDANCE WITH RULES AND REGULATIONS OF THE DISTRICT.



15. THE PLANS NOTWITHSTANDING ALL VALVES SHALL BE LOCATED OFF THE TEE. AT INTERSECTIONS, THE MAIN LINE SHALL BE ROPED TO 8' CURB FACE TO AVOID CROSS GUTTER CONFLICT.

16. ALL WATER EASEMENT LINES SHALL BE DUCTILE IRON PIPE.

17. ALL MAIN LINE VALVES SHALL BE MAINTAINED SO AS TO BE ACCESSIBLE DURING TRACT DEVELOPMENT. ALL VALVE STEMS HAVING OVER 48 INCHES OF COVER WILL REQUIRE AN EXTENTION.

18. WATER MAINS SHALL HAVE A COVER OF AT LEAST 30 INCHES BETWEEN THE TOP OF PIPE AND ROAD SUBGRADE.

PRIVATE ENGINEER'S NOTICE TO CONTRACTOR

THE EXISTENCE AND LOCATION OF ANY UNDERGROUND UTILITY PIPES OR STRUCTURES SHOWN ON THESE PLANS WERE OBTAINED BY A SEARCH OF THE AVAILABLE RECORDS. THESE LOCATIONS ARE APPROXIMATE AND SHALL BE CONFIRMED BY THE CONTRACTOR. HE SHALL ANY NECESSARY ADJUSTMENT CAN BE MADE IN ALIGNMENT AND/OR GRADE OF THE PROPOSED IMPROVEMENT. THE CONTRACTOR IS REQUIRED TO TAKE DUE PRECAUTIONARY MEASURES TO PROTECT ANY UTILITY LINES SHOWN AND ANY OTHER LINES NOT ON RECORD OR NOT SHOWN ON THESE PLANS.

CONTRACTOR AGREES THAT IN ACCORDANCE WITH GENERALLY ACCEPTED CONSTRUCTION PRACTICES, CONSTRUCTION CONTRACTOR WILL BE SOLELY AND COMPLETELY RESPONSIBLE FOR CONDITIONS OF THE JOBSITE, INCLUDING SAFETY OF ALL PERSONS AND PROPERTY DURING PERFORMANCE OF THE WORK. THIS REQUIREMENT SHALL APPLY CONTINUOUSLY AND NOT BE LIMITED TO NORMAL WORKING HOURS. AND CONSTRUCTION CONTRACTOR FURTHER AGREES TO DEFEND, INDEMNIFY AND HOLD DESIGN PROFESSIONAL HARMLESS FROM ANY AND ALL LIABILITY, REAL OR ALLEGED, IN CONNECTION WITH THE PERFORMANCE OF WORK ON THIS PROJECT, EXCEPTING LIABILITY ARISING FROM THE SOLE NEGLIGENCE OF DESIGN PROFESSIONAL.

Construction contractor, agrees that in accordance with generally accepted construction practices, construction contractor will be responsible to assume exclusive responsibility for job site conditions, during the course of construction of the project, including safety of all persons and property; that this requirement shall be made to apply continuously and not be limited to normal working hours, and construction contractor further agrees to defend, indemnify and hold design professional harmless from any and all liability, real or alleged, in connection with the performance of work on this project, excepting liability arising from the sole negligence of design professional.

DIVISION 1 - GENERAL REQUIREMENTS

01010_-_SUMMARY_OF_WORK

1.1 - All changes are to be made on these plans without the issuance of change orders. Any work done without signature appears herein.

1.2 - Dimensions as indicated are dimensions to be used for construction. Do not scale the prints.

1.3 - Any training of any type is to be connected prior to installation by qualified agencies.

1.4 - All of the ASTM designations are to be the latest editions.

1.5 - The drawings and specifications are intended to comply with all laws, ordinances, rules, and regulations of any authority having jurisdiction over the construction. Should any addition to any conditions appear there, the contractor, should be responsible to notify or change to produce the best results.

1.6 - Each Sub-Contractor shall verify all conditions and dimensions on the job site.

1.7 - Conventional details shall apply where no special detail or callout is shown. This notice will furnish any clarification at the request of the Superintendent.

1.8 - The Contractor shall coordinate all work and equipment provided by others.

1.9 - The Owner will furnish the Building Permit, and pay for water and sewer assessments. The General Contractor will be responsible for all coordination with his Sub-Contractors and shall obtain and pay for all other permits necessary and pay for any fees same. He shall obtain city licenses and submit same to the Superintendent before starting work. The Contractor shall obtain required permits and pay for any fees not listed in the portion of the work.

1.10 - It shall be the responsibility of each Sub to arrange and coordinate with suppliers material and delivery dates.

1.11 - Any Contractor shall provide temporary toilet facilities at the JOB SITE as required by the local health authorities.

1.12 - Shop drawings, (i.e. MIX reports, wood reinforcement, steel reinforcement, etc.) shall be submitted for review in writing prior to fabrication. Contractor shall review and reference such drawings prior to submittal to the Site.

1.13 - On Products specified by naming only one Product and manufacturer, there is no option of substitution. For Products specified by naming several Products or manufacturers, the Contractor may select any one of the Products specified by naming several Products or manufacturers unless stated otherwise in the specifications.

1.14 - The Contractor shall have at the worksite copies of building, zoning and Construction Safety Orders and Board Industrial Safety Orders.

1.15 - The Contractor shall install Architect furnished signs relating to the project, but shall not install other signs except for those required by law, during construction. Contractor shall coordinate the installation and/or removal of any signs with the Owner's representative. Failure to do so may result in forfeiture of such signs without recourse.

1.16 - The Contractor shall execute general cleaning during construction. He shall clean all exposed surfaces and leave premises in a clean condition. Cleaning shall include removal and disposal of all surplus and scrap materials, rubbish and debris. Any dust on the premises or on equipment furnished by others shall be removed.

1.17 - On Products specified by naming only one Product and manufacturer, there is no option of substitution. For Products specified by naming several Products or manufacturers, the Contractor may select any one of the Products specified by naming several Products or manufacturers unless stated otherwise in the specifications.

1.18 - Approved construction prints will be kept like with the Contractor at the site. Any changes shall be noted and kept for completion and shall be available for the Contractor to dispose.

1.19 - Fire hydrants, sprinklers and all weather access roads for vehicle or supporting emergency vehicles shall be provided COPIED to all new construction during construction or storage of combustible materials.

1.20 - In there is any discrepancy between the drawings and specifications, or between the drawings of the architect, civil engineer, and any other consultant, the architect shall be notified in writing, in writing, and shall clarification be obtained before proceeding with the work.

FINISH - FIN

A-1 SCOPE: This work includes the complete furnishings and installation of all the items as shown on the drawings, overall specified and necessary in satisfying the work. Refer to structural drawings for further information.

A-2 The plywood and SMS joists are to be factory-fabricated and erected in strict accordance with the manufacturer's shop drawings and standard bridging and welding requirements.

A-3 The plywood webs may be as an AITC Structural Grade, Exposure 1 or Exterior Grade, Group 1 or 2 APA plywood. Flanges may be of Douglas Fir-Larch, Grade No. 1 or better, or Douglas Fir-Larch, Select Structural. Web holes cannot be cut or altered in the field without approval of the Structural Engineer. The SMS joists shall be shop fabricated as a unit and shall not be cut or altered in the field without approval of the Structural Engineer.

A-4 The SMS joist shall be spaced and detailed to fit the dimensions shown on the drawings. Bearing of the joists shall be in accordance with allowable values and section properties assigned and approved by the building codes. Installation of plywood or SMS joists by concrete calculations must be available upon request.

A-5 Additional drawings showing layout and detail notes for the plywood and SMS joists shall be submitted to the building and be checked by the manufacturer.

A-6 The SMS joists shall be manufactured in a plant approved for fabrication by the Building Code.

A-7 Only the series joists approved under the acceptance and shall be stored in a vertical position, any structural joists damaged by shipping shall be brought with care so they are not damaged.

A-8 The joists are to be erected and installed in accordance with the plans, the SMS Drawings and installation suggestions. Temporary construction bracing shall remain secured wherever required until joists are set permanently. Erection bracing is required for the safety of the workmen and shall be used the joists straight and plumb as required by Safety Orders of the Division of Industrial Safety. Temporary bracing required when welding, the construction engineer notification prior to dismissing the fabricator opportunity for inspection of the installation.

DIVISION 2 - EXCAVATION, FOUNDATIONS, CONCRETE

2-1 All architectural concrete as shown on drawings will be furnished by others. Contractor to coordinate with the latest release of the "Guide, Division of the Architectural Concrete's Institute.

2-2 The precast manufacturer must have a reputation for quality workmanship, and must be capable of producing successfully completed specific work.

2-3 Submit shop drawings or fabrication or comparative literature, to Architect prior to the completion of any concrete.

2-4 The precast manufacturer is responsible for defects and dimensional non-conformity by job conditions and shall have on hand shop drawings all required items and shall be responsible for the proper fabrication and the precast manufacturer shall cooperate to establish and maintain these same dimensions.

2-5 Pavements to be steel trowel grade (suitably approved by American Precast Institute Standards. Color to be selected by the Architect. See Architect ordered floor hard, conforming to sheet.

2-6 Upon completion of all installations, visually inspect all exposed concrete surfaces and remove all defective work and dispose of as directed by the Architect. See Architect ordered floor hard, conforming to sheet.

2-7 Protect all work through the construction period to prevent injury to the finished work.

2-8 Adequately protect all work through by subsequent construction operations. Damaged work shall be repaired or replaced as directed by the Architect at no additional cost to the Owner.

2-9 Clean all exposed surfaces of concrete and remove all concrete and dispose of as directed by the Architect.

MASONRY - PLASTIC LAMINATE

3-1 Supply and install all Plastic Laminate in quantities noted, and as noted on Drawings, where work occurs and be installed in accordance with the manufacturer's responsibility of Summer Dealer.

3-2 For Section 01400 - Quality Control, submit samples of each type of plastic laminate specified plus at any time requested by Contractor or Architect to establish standards by which the finished plastic laminate is to be installed.

3-3 Deliver all materials under protective cloth and paper wrapping. Store materials in dry area and protect when and disposition against deterioration in any form.

3-4 Coordinate with all other trade contract work already, commence work or is intended by or required by other trades.

3-5 Plastic Laminate must be UNIFORMITY, or equal, colors as specified on Interior Elevations. Plastic laminate must be used by supervisor by the Architect before ordering. Plastic laminate must be applied to plastic laminate should be obtained in advance of installation or purchased in accordance by manufacturer. Use of plastic laminate must be approved by Architect before recommendation. Any change in color, texture, or pattern of laminate installed between the sample and the substitution does not exist. Color substitutions must be approved by Architect.

3-6 Fabrication of components should be made using approved methods and meet the specifications of SHOP Drawings and Manufacturer's Instructions Standards.

3-7 Examine all millworkings to receive work and report in writing to Architect any conditions detrimental, or which may prevent, a proper and satisfactory result. Advise to any subsequent claim to the contractor. Do not proceed with the installation of any unfinished surface until such conditions have been corrected and approved by Architect.

3-8 Verify all dimensions shown on Drawings by taking field measurements prior to fit and fabrication of all work. Discrepancies shall be brought to the attention of the Contractor.

3-9 Install, as per manufacturer's recommendations, Laminate shall be applicable surfaces with non-staining, non-bleeding, and shall result in a smooth, adhesive free bed. Contact cements without primer will not be accepted. Edge laminate shall be applied with a tight joint. Edges shall be filed, rasped or finely sanded. Observed irregularities shall be smoothed or rubbed. All joints corners should have a radius and all edges should be rounded smooth.

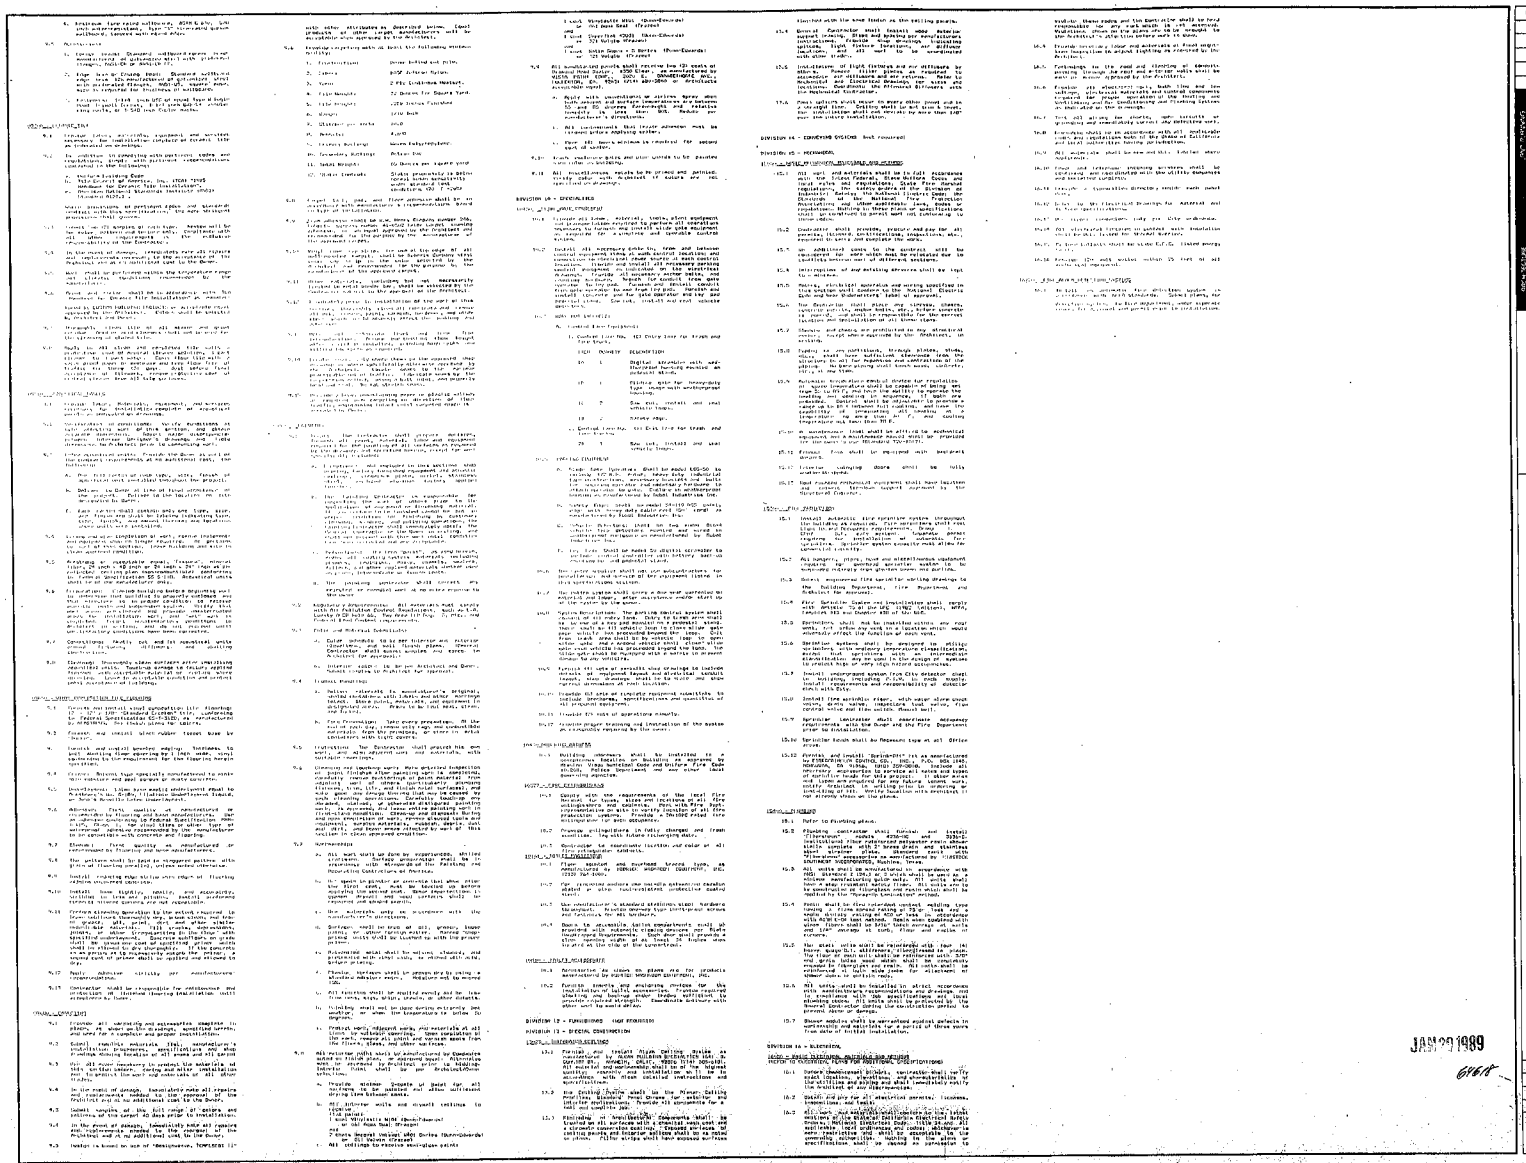
3-10 Allow surfaces, sheen after installation, free of adhesive staining, acids or abrasives should be provided. Care should be taken not to burn glue line with hot iron. Remove all excess adhesive from laminate with a recommended for the cleaning of plastic laminate.

DIVISION 7 - THERMAL AND MOISTURE PROTECTION

7-1 Provide labor, materials, equipment, and necessary services for installation insulation as delineated, performs waterproofing as indicated, another associated work as may result in satisfactory operation.

7-2 The manufacturer's recommended methods of installation when approved by the Architect, shall be the basis for acceptance or rejection of actual installation methods used in the work.

7-3 In addition to complying with pertinent codes and regulations, comply with Section 1, Manufacturer's Instructions - General, and Subcontractor Contractors shall obtain and keep at hand copies of manufacturer's printed instructions and recommendations. In the case of conflict between the manufacturer's instructions and the more stringent provisions shall govern.



7-4 In accordance with section 1400A00, RECONSTRUCTION, Contractor shall submit to the Architect for approval, a work procedure to be followed under this part of the work, giving manufacturer's name, labeling number, and application for per 4:1 square foot applications. Recommendations for materials list, manufacturer of the manufacturer for materials list, manufacturer of installation.

7-5 Give all rooms necessary to protect the materials and the existing surfaces, during, and after installation and to protect the installed work and materials of all other trades. Provide and maintain adequate protection to prevent any damage to the work and materials during the performance of the work and at no additional cost to the Owner.

7-6 Work shall be performed within range of temperatures, and in strictly accordance recommended by the manufacturer.

7-7 All materials shall be the flintlake, Dunmore brand delivered in original packages bearing manufacturer's label.

7-8 Unsatisfactory weather for installation below grade shall not be undertaken, unless otherwise directed by Architect. Insulation shall be applied to dry surfaces. All other insulation shall be applied to dry surfaces. All other insulation shall be applied to dry surfaces. All other

JAN 29 1999

STATE OF CALIFORNIA HANDICAP REQUIREMENTS

SITE ACCESS

TYPE SEVEN OR MORE UNIT FACILITIES

1. New Buildings and Facilities

a. Site development and grading are required to be designed to provide access to primary entrances and to connect points of arrival, curb ramps, interior streets and walks, parking areas, and facilities where access or change in level would prevent access.

b. A primary entrance is required as and intended to a facility, such as a dedicated file or pedestrians to and accessible major facilities at the facilities.

c. A path of travel is defined as a continuous path from accessible entrance to all buildings, and from accessible parking, as a continuation of accessible entrances, that provides ease and unobstructed access to or egress from all buildings, facilities or facilities for pedestrians and/or wheelchair users.

USE ZONES

1. New Buildings and Facilities

a. Parking spaces for disabled are required to be located as close as practical to primary entrances. If more than one space is provided it must be at least wide, lying to provide a 96 foot parking area and a 5 foot loading and unloading area between each two parking spaces. Such spaces may be grouped within a 22 foot wide area, lined to provide a 96 foot wide parking space on each side of a 5 foot loading and unloading area. Each parking space is required to be at least 9 feet long.

b. Loading spaces for the disabled are to be located where for the disabled persons will not be required to walk behind parked vehicles to reach the entrance. Such spaces are to be connected from each parking space to be designed to United Facilities. Turnover or dark be required to walk behind parked vehicles to reach the entrance. Such spaces are required width of paths and walkways. Curb ramps are not required as shown), but the ramps are not required only one parking space.

c. Surface slopes of parking spaces for the disabled should not exceed one unit of rise in 50 units of run (2% slope) in any direction.

2. Signage

a. Each parking space for the disabled is required to be identified by a permanently affixed sign with the International Symbol of Accessibility. The sign is to be located so that it cannot be obscured by a vehicle. It is to be a minimum size of 70 square inches and is to be either 36 inches from the bottom of the sign to the ground or 84 inches from the ground to the top of the sign, whichever the surface of the parking space. Painted words, symbols or markings, if required as well.

b. The surface of each parking space for the disabled is required to have a 3 foot square International Symbol of Accessibility painted in blue paint.

c. At the entrance to ambulant parking facilities, a permanently affixed sign is required to be located as shown. The following is required to be at least one inch high and read:

"Disabled and handicap and disabled parking/parking spaces reserved for disabled persons. Unauthorized vehicles may be towed away at owner's expense. Towed vehicles may be retrieved at [illegible]. Information regarding towing."

Contractor is responsible for verifying information for signs and supplying it on the sign.

CURB RAMPS

1. New and existing buildings and facilities. Curb ramps are required anywhere a pedestrian's path of travel crosses a curb, including each corner of street intersections. Where a curb ramp is provided at the end of a crosswalk, the slope of the curb ramp shall not exceed 8% as measured along the curb line, at the pedestrian crosswalk, and within the limits of the crosswalk and within the marked crosswalk.

a. Types. Curb ramps may be constructed either by lowering an area at the sidewalk or by building up the surface of the street to the level of the sidewalk. Curb ramps shall provide a grade whenever the curb ramp takes a turn greater.

b. Curb ramp widths. Minimum 4 feet wide.

c. Slopes. Maximum 1 vertical to 12 horizontal (1:12). Slopes are expressed to be in a straight slope with a minimum of surface variance or cross slope. The slopes of curb ramps shall be measured as a percentage of slope in either of the ways of 1 vertical and 12 horizontal (1:12).

d. Sidewalk transition. The upper end of the curb ramp is required to have a flush slope, level because 5:0 inches wide in any direction) flushes the full width of the curb ramp. At the landing is not practical, the slope of the ramped or flared side of the curb ramp must not exceed 10%.

e. Street transition. The low end of the curb ramp is required to have a 1/2 inch lip beveled at 45 degrees.

f. Surface Textures and Materials. Curb ramp surfaces, including the sloping ramps, are required to be the smoothest, and to be a non-plastic finish that the wheelchair wheels.

g. Where the curb ramp is located at the center of the curb ramp, the grooves or ridges are required to be parallel to the ramps. The grooves or ridges to be parallel to the lengthwise of the approaches, forming a "W" pattern when viewed from the center of the approaches. The grooves are required to be approximately 1/4-0 inches in width.

h. All curb ramp grooved surfaces is required so that obstacles on the top and sides of all curb ramps. The grooves are required to be perpendicular 3/4 inch as shown.

i. Grooved 3/4 inch wide by 1/4 inch deep.

PATHS

1. The path of travel will be considered a ramp if its slope is greater than 1 foot rise in 20 feet or run. The minimum allowable slope of a ramp is 1:20.

a. Ramp width. Pedestrian ramps serving primary entrances to buildings with an occupant load of 300 or more will be required to have a minimum width of 60 inches clear. All other pedestrian ramps will be required to be a minimum of 48 inches clear. Ramps with an occupant load of less than 50 will be required to have a minimum width of 36 inches clear. Ramps with an occupant load of less than 10 will be required to be not less than the width required for egress.

b. Landings. Landings are required at the top and bottom of each ramp. Intermediate landings will be required at intervals not greater than 30 inches of vertical rise of each change of direction. Landings will not be considered in determining the maximum horizontal distance of each ramp.

c. The landings, required at the direction of the ramp run, will be required to be not less than 60 inches long when no door or gate swings toward the landing. Where a door or gate swings toward the landing, the landing will be required to have a minimum width of 60 inches on the side with the landing. The landing will be required to be level with the ramp. Doors in any position will not be allowed to reduce the minimum dimension of the landing to less than 42 inches. Doors fully opened, doors will be required to reduce the minimum width to more than 24-0 inches.

d. Intermediate landings will be required to be 60 inches long in the direction of travel.

e. Bottom landings and landings at a change of direction in excess of 30 degrees will be required to be 72 inches long.

f. Handrails. Handrails will be required on each side of a ramp with a rise greater than 6 inches or a length of 72 inches. Handrails shall be 30 to 34 inches above the ramp surface, and must provide a minimum of 12 inches beyond the top and bottom of the ramp. Handrails are required to be smooth and without any projections. Ends will not be allowed to project across normal paths of travel. Handrails are required to comply with the requirements for stairway handrails.

g. Curbs and guard railings. Ramps with sides that do not have a solid wall are required to have curbs or guard railings. Curbs or guard rails are required to be at least 6 inches high. Curbs or guard rails are required to comply with the ramp width requirements.

h. Ramp Surfaces. Ramps with slopes of 1:15 or greater will be required to have a slip-resistant finish. Ramps with slopes greater than 1:20 but less than 1:15 will be required to have a slip-resistant finish. Ramps with slopes of 1:20 or less will be required to have a non-slip finish. Smooth surfaces will not be allowed or required.

DOORS AND ENTRANCE

1. Doors

a. Entrances. All primary entrances to buildings and facilities are required to be made accessible.

b. Door Widths and Heights. Doors and exit doorways are required to have a clear opening not less than 32 inches wide. For hinged doors, the opening is measured with the door open 90 degrees, measured between the face of the door and the stop, and required to be a minimum of 32 inches.

c. Combinations. The button to unlock, or similar, except combination and sliding doors, are required to have a maximum unobstructed surface or area for activation of 1 inch square. Doors are required to be of a type or have been operated without grasping a knob or twisting the wrist.

2. Hardware

a. Hardware. Door activating door opening hardware is required to be mounted at a height of 36 inches. Door latching and locking doors that are fixed, activation and which are in a path of travel have to open into with a single effort by lever type hardware, by pivot, push-pull activating bars, or other hardware designed to provide a similar function. Doors are required to be of the opening hardware. Locks and doors are required to operate with one hand and not to require the ability of grasping, pinching or twisting of the wrist to operate.

b. Closers. The maximum effort to operate doors, except exterior doors, is required to be 5 pounds for interior doors and 8 pounds for exterior doors. Sliding doors are required to be provided pressure. The pressure is to be measured at right angles to hinged doors and at the center plane of sliding or folding doors. Door-closing devices or automatic door operators may be utilized to meet the requirements.

c. Thresholds. Thresholds are required to be no more than 1/2 inch high. Raised or beveled thresholds are required to be provided. Changes in level greater than 1/2 inch are required to be ramped.

3. Revolving doors

a. Revolving doors, revolving doors between 20 inches and 80 inches from the floor, unless pedestrian doors there is provided adjacent doors, are required to be provided. The doors are required to be operated at right speed or removed long enough for a wheelchair.

b. Manual doors. Doors, including doors in gates or fences are required to be designed with a minimum of 32 inches clear opening. Doors with more than one leaf are required to have at least one leaf that meets this requirement. Doors are required to be operable with a single effort by lever type hardware, by push-pull activating bars, or other hardware designed to provide a similar function. Doors are required to operate with one hand and not require the ability of grasping, pinching or twisting of the wrist to operate. The force required to activate doors is not to exceed 5 pounds. Lever-operated, push type, and electronically controlled mechanisms are examples of acceptable designs. Self-closing doors are allowed to have a hold-open device.

c. Automatic doors and power-assisted doors. Doors are required to be provided with a power-assisted door or an automatic door. Doors are required to be provided with sufficient time to allow a person with a disability approaching in either direction to reach the door, and for the door to begin to open. Doors are required to be provided with sufficient time to remain open after being fully opened. Doors are required to be provided with sufficient time to allow a person with a disability to pass through the doorway before closing. Doors are required to be provided with sufficient time to remain open after being fully opened. Doors are required to be provided with sufficient time to allow a person with a disability to pass through the doorway before closing. Doors are required to be provided with sufficient time to remain open after being fully opened.

d. Entrance doors. Doors are required to be provided with sufficient time to allow a person with a disability approaching in either direction to reach the door, and for the door to begin to open. Doors are required to be provided with sufficient time to remain open after being fully opened. Doors are required to be provided with sufficient time to allow a person with a disability to pass through the doorway before closing. Doors are required to be provided with sufficient time to remain open after being fully opened.

e. Doors to rooms. Doors are required to be provided with sufficient time to allow a person with a disability approaching in either direction to reach the door, and for the door to begin to open. Doors are required to be provided with sufficient time to remain open after being fully opened. Doors are required to be provided with sufficient time to allow a person with a disability to pass through the doorway before closing. Doors are required to be provided with sufficient time to remain open after being fully opened.

f. Doors to rooms. Doors are required to be provided with sufficient time to allow a person with a disability approaching in either direction to reach the door, and for the door to begin to open. Doors are required to be provided with sufficient time to remain open after being fully opened. Doors are required to be provided with sufficient time to allow a person with a disability to pass through the doorway before closing. Doors are required to be provided with sufficient time to remain open after being fully opened.

g. Doors to rooms. Doors are required to be provided with sufficient time to allow a person with a disability approaching in either direction to reach the door, and for the door to begin to open. Doors are required to be provided with sufficient time to remain open after being fully opened. Doors are required to be provided with sufficient time to allow a person with a disability to pass through the doorway before closing. Doors are required to be provided with sufficient time to remain open after being fully opened.

h. Doors to rooms. Doors are required to be provided with sufficient time to allow a person with a disability approaching in either direction to reach the door, and for the door to begin to open. Doors are required to be provided with sufficient time to remain open after being fully opened. Doors are required to be provided with sufficient time to allow a person with a disability to pass through the doorway before closing. Doors are required to be provided with sufficient time to remain open after being fully opened.

i. Doors to rooms. Doors are required to be provided with sufficient time to allow a person with a disability approaching in either direction to reach the door, and for the door to begin to open. Doors are required to be provided with sufficient time to remain open after being fully opened. Doors are required to be provided with sufficient time to allow a person with a disability to pass through the doorway before closing. Doors are required to be provided with sufficient time to remain open after being fully opened.

j. Doors to rooms. Doors are required to be provided with sufficient time to allow a person with a disability approaching in either direction to reach the door, and for the door to begin to open. Doors are required to be provided with sufficient time to remain open after being fully opened. Doors are required to be provided with sufficient time to allow a person with a disability to pass through the doorway before closing. Doors are required to be provided with sufficient time to remain open after being fully opened.

k. Doors to rooms. Doors are required to be provided with sufficient time to allow a person with a disability approaching in either direction to reach the door, and for the door to begin to open. Doors are required to be provided with sufficient time to remain open after being fully opened. Doors are required to be provided with sufficient time to allow a person with a disability to pass through the doorway before closing. Doors are required to be provided with sufficient time to remain open after being fully opened.

l. Doors to rooms. Doors are required to be provided with sufficient time to allow a person with a disability approaching in either direction to reach the door, and for the door to begin to open. Doors are required to be provided with sufficient time to remain open after being fully opened. Doors are required to be provided with sufficient time to allow a person with a disability to pass through the doorway before closing. Doors are required to be provided with sufficient time to remain open after being fully opened.

m. Doors to rooms. Doors are required to be provided with sufficient time to allow a person with a disability approaching in either direction to reach the door, and for the door to begin to open. Doors are required to be provided with sufficient time to remain open after being fully opened. Doors are required to be provided with sufficient time to allow a person with a disability to pass through the doorway before closing. Doors are required to be provided with sufficient time to remain open after being fully opened.

n. Doors to rooms. Doors are required to be provided with sufficient time to allow a person with a disability approaching in either direction to reach the door, and for the door to begin to open. Doors are required to be provided with sufficient time to remain open after being fully opened. Doors are required to be provided with sufficient time to allow a person with a disability to pass through the doorway before closing. Doors are required to be provided with sufficient time to remain open after being fully opened.

o. Doors to rooms. Doors are required to be provided with sufficient time to allow a person with a disability approaching in either direction to reach the door, and for the door to begin to open. Doors are required to be provided with sufficient time to remain open after being fully opened. Doors are required to be provided with sufficient time to allow a person with a disability to pass through the doorway before closing. Doors are required to be provided with sufficient time to remain open after being fully opened.

p. Doors to rooms. Doors are required to be provided with sufficient time to allow a person with a disability approaching in either direction to reach the door, and for the door to begin to open. Doors are required to be provided with sufficient time to remain open after being fully opened. Doors are required to be provided with sufficient time to allow a person with a disability to pass through the doorway before closing. Doors are required to be provided with sufficient time to remain open after being fully opened.

q. Doors to rooms. Doors are required to be provided with sufficient time to allow a person with a disability approaching in either direction to reach the door, and for the door to begin to open. Doors are required to be provided with sufficient time to remain open after being fully opened. Doors are required to be provided with sufficient time to allow a person with a disability to pass through the doorway before closing. Doors are required to be provided with sufficient time to remain open after being fully opened.

r. Doors to rooms. Doors are required to be provided with sufficient time to allow a person with a disability approaching in either direction to reach the door, and for the door to begin to open. Doors are required to be provided with sufficient time to remain open after being fully opened. Doors are required to be provided with sufficient time to allow a person with a disability to pass through the doorway before closing. Doors are required to be provided with sufficient time to remain open after being fully opened.

s. Doors to rooms. Doors are required to be provided with sufficient time to allow a person with a disability approaching in either direction to reach the door, and for the door to begin to open. Doors are required to be provided with sufficient time to remain open after being fully opened. Doors are required to be provided with sufficient time to allow a person with a disability to pass through the doorway before closing. Doors are required to be provided with sufficient time to remain open after being fully opened.

t. Doors to rooms. Doors are required to be provided with sufficient time to allow a person with a disability approaching in either direction to reach the door, and for the door to begin to open. Doors are required to be provided with sufficient time to remain open after being fully opened. Doors are required to be provided with sufficient time to allow a person with a disability to pass through the doorway before closing. Doors are required to be provided with sufficient time to remain open after being fully opened.

u. Doors to rooms. Doors are required to be provided with sufficient time to allow a person with a disability approaching in either direction to reach the door, and for the door to begin to open. Doors are required to be provided with sufficient time to remain open after being fully opened. Doors are required to be provided with sufficient time to allow a person with a disability to pass through the doorway before closing. Doors are required to be provided with sufficient time to remain open after being fully opened.

v. Doors to rooms. Doors are required to be provided with sufficient time to allow a person with a disability approaching in either direction to reach the door, and for the door to begin to open. Doors are required to be provided with sufficient time to remain open after being fully opened. Doors are required to be provided with sufficient time to allow a person with a disability to pass through the doorway before closing. Doors are required to be provided with sufficient time to remain open after being fully opened.

w. Doors to rooms. Doors are required to be provided with sufficient time to allow a person with a disability approaching in either direction to reach the door, and for the door to begin to open. Doors are required to be provided with sufficient time to remain open after being fully opened. Doors are required to be provided with sufficient time to allow a person with a disability to pass through the doorway before closing. Doors are required to be provided with sufficient time to remain open after being fully opened.

x. Doors to rooms. Doors are required to be provided with sufficient time to allow a person with a disability approaching in either direction to reach the door, and for the door to begin to open. Doors are required to be provided with sufficient time to remain open after being fully opened. Doors are required to be provided with sufficient time to allow a person with a disability to pass through the doorway before closing. Doors are required to be provided with sufficient time to remain open after being fully opened.

y. Doors to rooms. Doors are required to be provided with sufficient time to allow a person with a disability approaching in either direction to reach the door, and for the door to begin to open. Doors are required to be provided with sufficient time to remain open after being fully opened. Doors are required to be provided with sufficient time to allow a person with a disability to pass through the doorway before closing. Doors are required to be provided with sufficient time to remain open after being fully opened.

z. Doors to rooms. Doors are required to be provided with sufficient time to allow a person with a disability approaching in either direction to reach the door, and for the door to begin to open. Doors are required to be provided with sufficient time to remain open after being fully opened. Doors are required to be provided with sufficient time to allow a person with a disability to pass through the doorway before closing. Doors are required to be provided with sufficient time to remain open after being fully opened.

aa. Doors to rooms. Doors are required to be provided with sufficient time to allow a person with a disability approaching in either direction to reach the door, and for the door to begin to open. Doors are required to be provided with sufficient time to remain open after being fully opened. Doors are required to be provided with sufficient time to allow a person with a disability to pass through the doorway before closing. Doors are required to be provided with sufficient time to remain open after being fully opened.

bb. Doors to rooms. Doors are required to be provided with sufficient time to allow a person with a disability approaching in either direction to reach the door, and for the door to begin to open. Doors are required to be provided with sufficient time to remain open after being fully opened. Doors are required to be provided with sufficient time to allow a person with a disability to pass through the doorway before closing. Doors are required to be provided with sufficient time to remain open after being fully opened.

cc. Doors to rooms. Doors are required to be provided with sufficient time to allow a person with a disability approaching in either direction to reach the door, and for the door to begin to open. Doors are required to be provided with sufficient time to remain open after being fully opened. Doors are required to be provided with sufficient time to allow a person with a disability to pass through the doorway before closing. Doors are required to be provided with sufficient time to remain open after being fully opened.

dd. Doors to rooms. Doors are required to be provided with sufficient time to allow a person with a disability approaching in either direction to reach the door, and for the door to begin to open. Doors are required to be provided with sufficient time to remain open after being fully opened. Doors are required to be provided with sufficient time to allow a person with a disability to pass through the doorway before closing. Doors are required to be provided with sufficient time to remain open after being fully opened.

ee. Doors to rooms. Doors are required to be provided with sufficient time to allow a person with a disability approaching in either direction to reach the door, and for the door to begin to open. Doors are required to be provided with sufficient time to remain open after being fully opened. Doors are required to be provided with sufficient time to allow a person with a disability to pass through the doorway before closing. Doors are required to be provided with sufficient time to remain open after being fully opened.

ff. Doors to rooms. Doors are required to be provided with sufficient time to allow a person with a disability approaching in either direction to reach the door, and for the door to begin to open. Doors are required to be provided with sufficient time to remain open after being fully opened. Doors are required to be provided with sufficient time to allow a person with a disability to pass through the doorway before closing. Doors are required to be provided with sufficient time to remain open after being fully opened.

gg. Doors to rooms. Doors are required to be provided with sufficient time to allow a person with a disability approaching in either direction to reach the door, and for the door to begin to open. Doors are required to be provided with sufficient time to remain open after being fully opened. Doors are required to be provided with sufficient time to allow a person with a disability to pass through the doorway before closing. Doors are required to be provided with sufficient time to remain open after being fully opened.

hh. Doors to rooms. Doors are required to be provided with sufficient time to allow a person with a disability approaching in either direction to reach the door, and for the door to begin to open. Doors are required to be provided with sufficient time to remain open after being fully opened. Doors are required to be provided with sufficient time to allow a person with a disability to pass through the doorway before closing. Doors are required to be provided with sufficient time to remain open after being fully opened.

ii. Doors to rooms. Doors are required to be provided with sufficient time to allow a person with a disability approaching in either direction to reach the door, and for the door to begin to open. Doors are required to be provided with sufficient time to remain open after being fully opened. Doors are required to be provided with sufficient time to allow a person with a disability to pass through the doorway before closing. Doors are required to be provided with sufficient time to remain open after being fully opened.

jj. Doors to rooms. Doors are required to be provided with sufficient time to allow a person with a disability approaching in either direction to reach the door, and for the door to begin to open. Doors are required to be provided with sufficient time to remain open after being fully opened. Doors are required to be provided with sufficient time to allow a person with a disability to pass through the doorway before closing. Doors are required to be provided with sufficient time to remain open after being fully opened.

kk. Doors to rooms. Doors are required to be provided with sufficient time to allow a person with a disability approaching in either direction to reach the door, and for the door to begin to open. Doors are required to be provided with sufficient time to remain open after being fully opened. Doors are required to be provided with sufficient time to allow a person with a disability to pass through the doorway before closing. Doors are required to be provided with sufficient time to remain open after being fully opened.

ll. Doors to rooms. Doors are required to be provided with sufficient time to allow a person with a disability approaching in either direction to reach the door, and for the door to begin to open. Doors are required to be provided with sufficient time to remain open after being fully opened. Doors are required to be provided with sufficient time to allow a person with a disability to pass through the doorway before closing. NOTES:

1. SLABS MAY BE POURED IN A SQUARE "CHECKERBOARD" MANNER WITH A MAX. OF ANY ONE SIDE NO GREATER THAN "D" OR SLABS MAY BE POURED IN STRIPS "D" WIDE MAX. WITH CONSTRUCTION JOINTS OR CONTROL JNTS. AT A SPACING EQUAL TO THE STRIP WIDTH.
2. CONSTRUCTION JOINTS SHALL OCCUR ON OR AT LEAST ONE DIRECTION AND SHALL BE SPACED NO FURTHER APART THAN 50'-0" (LONGER DIMENSION). CONTROL JOINTS SHALL OCCUR WHEN "D" IS EXCEEDED.
3. SAWCUT CONTROL JOINTS MAY BE USED IN BOTH DIRECTIONS AND SPACED AT ½"D" (ZIP STRIP JOINTS MAY NOT BE USED IN BOTH DIRECTIONS).
4. SAWCUT JOINTS SHALL BE MADE SAME DAY AS POUR AND PRIOR TO DRYING SHRINKAGE. THE JOINT SHALL BE FLUSHED WITH WATER OR AIR PRESSURE IMMEDIATELY AFTER SAWING.
5. DISCONTINUE REINFORCING UNDER ANY CONSTRUCTION OR CONTROL JOINT.
6. CONCRETE SHALL HAVE AIR ENTRAINMENT OF 2% TO 3% BY VOLUME.
7. FINISHING OF SLAB CONCRETE SHALL BE DONE AFTER SURFACE BLEED WATER HAS EVAPORATED.
8. MOISTEN SUB-GRADE PRIOR TO PLACING CONCRETE.
9. APPLY MEMBRANE CURE TO CONCRETE IMMEDIATELY AFTER CONCRETE FINISHING OPERATION.

TYPICAL REBAR WELDING (8)

(9)

REINFORCING STEEL

1. Bar reinforcement shall conform to ASTM A615, Grade 60.
2. All welded rebar shall be ASTM Grade 60 or A706.
3. Welding of reinforcing steel shall conform to AWS D1.4-79.
4. Welded wire fabric shall conform to ASTM A185.
5. Reinforcing detailing, bending and placing shall be in accordance with Concrete Reinforcing Steel Institute "Manual of Standard Practice" latest edition.
6. Hooks on #3 bars shall be 3" dia. or 12" min. for concrete cast in timber dia. or 18" min. for masonry unless noted otherwise.
7. Vertical bars in walls shall be accurately positioned at the center of wall, unless otherwise noted on details. A shall be tied in position at top and bottom and at intervals not exceeding 10' bar dia.
8. Reinforcing steel shall be provided with the following amounts of concrete cover, unless noted otherwise:
   Footings (concrete deposited against earth)- - - - - - - 3"
   Concrete surface (formed) exposed to earth or weather- - 2"
   Column reinforcing (including column ties)- - - - - - - 1½"
   Beams and Girders- - - - - - - - - - - - - - - - - - - 1½"
   Slabs (#11 or smaller)- - - - - - - - - - - - - - - - - ¾"
9. All reinforcing steel, anchor bolts, dowels, and inserts shall be well secured in position prior to placing concrete or grout.
10. Unless otherwise noted in details, furnish #3 spacer ties at approximately 3'-0" on center in all beams and footings to secure reinforcing in place.

STRUCTURAL STEEL

1. Structural steel shall conform to ASTM A36, unless noted otherwise.
2. Steel pipe shall conform to ASTM A53, Grade B (Fy = 35 ksi).
3. Steel tube shall conform to ASTM A500, Grade B (Fy = 46 ksi).
4. All main members shall have bolts conforming to ASTM A325.
5. Machine bolts and anchor bolts shall conform to ASTM A307, Grade "A" unless noted otherwise.
6. Welding of structural steel shall be done by the shielded arc process per AWS D1.1 using approved electrodes (E7018-low hydrogen).
7. Unless noted otherwise, all metal contact edges shall receive minimum size fillet welds per AISC Table 1.17.2a.
8. All workmanship, and materials shall conform to the latest edition of the "AISC Specification for the Design, Fabrication and Erection of Structural Steel for Buildings"

STRUCTURAL WOOD

1. All wood members shall be Douglas Fir (DF) or Larch grade marked by a recognized grading agency (W.C.L.I.A.).
2. Plywood sheathing shall be Douglas Fir conforming to commercial products Standard PS-1-74, and shall be grade marked in accordance with APA.
3. Wood grades (unless noted otherwise):
   (A) For horizontal members: Joists & Rafters - Grade #2
   Beams & Stringers - Grade #1
   Ledgers - Grade #1
   (B) For vertical members: 2x4 studs: Construction Grade
   2x6 & larger studs - Grade #2
   Posts & Timbers - Grade #1
4. Cutting, notching or drilling of beams or joists to be permitted only as detailed or approved by the Engineer.
5. Joists, otherwise specified, all nailing shall conform to the latest edition of the U.B.C.
6. Wood screws shall be standard common nails, unless noted otherwise.
7. All sills or plates resting on concrete or masonry shall be pressure treated Douglas Fir. Bolts shall be placed 7" from the end of a board or from a notch and spaced at intervals noted.
8. All bolt heads and nuts bearing on wood shall have standard cut washers. All bolt holes in wood shall be drilled 1/32" dia larger than nominal bolt dia.
9. All framing anchors, post caps, columns bases, etc. shall be as manufactured by "Simpson Company" or equivalent.
10. Provide double joists under all partition walls.
11. Provide blocking or bridging per latest edition of the U.B.C.
12. Top plates of all wood stud walls to be 3-2x4 #2 Grade width in stacked, unless otherwise noted, lap 48" min. with not less than 8-16d nails at each lap and not more than 12" between nails.
13. Adhesives used for any field gluing shall conform to APA Specification Specification AFG-01.

MECHANICALLY LAMINATED WOOD JOISTS

1. Wood joists shall be as called out on plans and shall have a current I.C.B.O. acceptance.
2. Joists shall be factory manufactured with a structural grade plywood web and MICRO-LAM lumber or machine stress rated lumber flanges utilizing waterproof type glues.
3. Joists shall be fabricated in a properly equipped manufacturing facility approved for fabrication by the U.B.C. and under the supervision of a third party inspection agency.
4. The joists shall be sized and detailed to fit the dimensions and loads indicated on the plans. All designs shall be in accordance with allowable values and section properties assigned and approved by the U.B.C.
5. Joist, fabricator shall submit calculations and shop drawings, signed by a California Registered Civil Engineer, for review prior to fabrication.
6. The joists shall be erected and installed in accordance with joist manufacturer's details and manufacturer's recommendations. Provide bridging in addition to stiffling principal to be provided to keep the joists straight and plumb as required and to assure adequate lateral support for the individual joists and the entire system until sheathing material has been installed.
7. Temporary construction loads which cause stresses beyond design limits are not permitted.
8. Truss fabricator shall design for, coordinate and verify openings in roof or floor with the contractor prior to fabrication and erection.
9. Truss fabricator shall design trusses for mechanical equipment loads on roof.
10. Wood floor joists shall satisfy a minimum live load deflection criteria of span/480.

GLUE LAMINATED WOOD

1. Fabrication of glu-lam beams shall be in accordance with standard specifications for structural glu-lam Douglas Fir beams, ANSI/AITC 190.1 as per West Coast Lumbermen's Association latest edition.
2. All glu-lam members exposed to weather shall be fabricated using exterior type adhesive.
3. All glu-lam members shall be in accordance with U.B.C. Table 25 C-1. Simple-span beams 21'-5" or less in width shall be camber for 1/2" of dead load plus ½ live load. Beams 21'-6" or more in width shall be cambered for full dead plus ½ live load. All cantilever beams shall be cambered for full dead plus live.
4. Manufacturer of glu-lam beams shall stamp members with an identifying mark. A certified control inspection organization and a complete list of conformance shall be submitted to the Building Inspection Department and Engineer prior to installations.

GENERAL

1. The Contractor shall verify all dimensions, elevations, and site conditions before starting work and notify the Architect immediately of any discrepancies.
2. Any omissions and conflict between the various elements of the working drawings and/or specifications shall be brought to the attention of the Architect before proceeding with work so involved.
3. Resolve any conflicts on the drawings with the Architect before proceeding with construction.
4. The Contractor shall determine the location of utility services in the area to be excavated prior to beginning excavation.
5. No pipes, ducts, sleeves, chases, etc., shall be placed in slabs, beams, or walls unless specifically shown or noted. Nor shall any structural member be cut for pipes, ducts, etc., unless otherwise noted. Contractor shall obtain prior approval for installation of any additional pipes, ducts, etc., Refer to Architectural and Mechanical drawings for locations.
6. All material and workmanship shall conform to the requirements of the latest edition of the U.B.C.
7. Special inspection per sec. 305 & 306 of the U.B.C. is required for:
   a. All structural field welding, including welding of reinforcing steel, and welding of steel decking.
   b. Installation and all phases of operations for all high-strength friction bolting (A325).
   c. Installation and tightening operations for high-strength anchor bolts.
   d. During the taking of test specimens and placing of all reinforced concrete, with the exception of foundation concrete when the structural design strength is not greater than f'c = 2000 PSI.
   e. During the placement of all masonry indicated as having "special inspection."
8. Design based on 1985 edition of Uniform Building Code.

FOUNDATION

1. Soil design pressure: 2000 P.S.F.
2. Bottom of footings shall be at least 30" BELOW LOWEST ADJACENT GRADE.
3. Character of soils: See Soils Report by CONVERSE DAVIS DANOS, JOB NO. 90-1753 DATED NOV. 30, 1990
4. Soil Engineer shall verify that construction at the site is in accordance with the recommendations and conclusions of his report.
5. Thickened projection for foundation shall be neat and true to line with minimum of loose material and standing water removed from excavations.
6. Before any concrete is placed, excavations shall be checked and approved by a Qualified Soils Engineer to ensure compliance with the requirements.
7. All fill material is to be approved by the Soils Engineer and is to be compacted to 90% of maximum density (or more as directed). Inspection is required during fill and compaction.

REINFORCED CONCRETE

1. Concrete shall conform to ASTM C-94, type II.
2. Aggregates shall conform to ASTM C-33 for normal-weight concrete and ASTM C-330 for lightweight concrete.
3. Concrete shall not be placed or delivered in accordance with ASTM C-94.
4. Concrete shall have a minimum ultimate compressive strength (f'c) at 28 days as follows: 3ksi for slab & footings. See panel elevations for tilt-up concrete strength.
5. Admixtures may be used with approval of the Engineer. Admixtures used to increase the workability of the concrete shall not be considered to replace the specified minimum cement content.
6. Refer to and verify with architectural drawings any haunches, grooves, reveals, recesses, ornaments, chips or textures required to be cast into concrete and for location and extent of dripnosings, curbs, and ramps.
7. Projecting corners of slabs, beams, walls, columns, etc. shall be formed with a 3/4" chamfer unless otherwise noted.
8. Concrete cover to underneath, side and ends of reinforcing bars shall be as required by the American Concrete Institute.
9. Anchor bolts, dowels, steel, anchor bolts, dowels and other items required to be secured in position and inspected by the Project building department inspector prior to the pouring of any concrete.
10. Location of all construction joints not specifically indicated on the drawings shall be approved by the Engineer prior to placing reinforcing steel.
11. Concrete floor slab variation from level to 1/8" in ten feet maximum.

TILT-UP PANEL CONCRETE

1. Precast concrete panels shall have a minimum ultimate compressive strength (f'c) per panel elevations notes.
2. Precast concrete panels shall attain the following minimum criteria prior to their erection:
   a. Min. design compressive strength = 2500 PSI as determined by ASTM C94 standard cylinder test for compressive strength.
   b. Modulus of rupture = 500 PSI as determined by ASTM C78 standard test for flexural strength.

   These values are minimums and may be greater as required by local erection conditions.
3. Tilt-up panel shop drawings shall indicate analysis of the erection stresses of all precast panels, inserts, and other members from a design stand point and licensed Civil Engineer shall be fully responsible for the safety of sidewalks and other attachments so voids which may be required.
4. Braces, strongbacks, pickup inserts and hole locations, etc. shall be designed, coordinated and detailed by "erector" or "supplier" or equivalent and are subject to review by the Engineer prior to installation.
5. Provide braces and connections to safely support the panels until the floor structure, including the roof diaphragm is adequately self supporting for all loadings.
6. The Contractor shall review, check and coordinate all panel dimensions with architectural plans and elevations prior to construction and shall notify the architect and Engineer immediately of any discrepancies.
7. Panel shop drawings shall indicate all dimensions with manufacturer, prior to placing any concrete.
8. Bond breaking agent shall be "Thompson Water Seal" or "Horn's Parting Compound" or "Burke Super Bond Breaker" or approved equivalent. In no case shall the bond breaker restrict the placement of finish materials or paint upon the concrete surfaces.
9. Fill all pick holes, and joints with grout and rub smooth with burlap to remove all ridges and ridges.
10. The Contractor shall notify the Engineer and Architect, two weeks prior to pouring any concrete to enable the scheduling of a Jobsite visit for review of panel reinforcing placement.
11. Avoid placement of panel pours over control joints and column blockouts.
12. Panel connections shall be welded no sooner than 28 days after panel is cast.

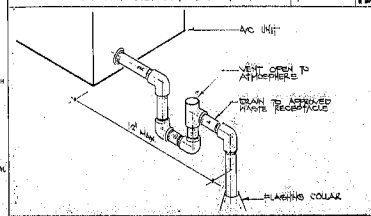
JOB NO. 86-84
SHEET P-1 OF 5 SHEETS

PLUMBING GENERAL NOTES:



1. INSTALLATION SHALL CONFORM TO THE ENERGY CONSERVATION DESIGN MANUAL STANDARDS FOR NEW NON-RESIDENTIAL BUILDINGS.
2. CONTRACTOR SHALL VERIFY DEPTH, SIZE, LOCATION OF ALL EXISTING UTILITIES IN FIELD BEFORE STARTING WORK.
3. CONTRACTOR SHALL COORDINATE INSTALLATION OF PLUMBING WORK WITH ALL OTHER TRADES SO AS TO AVOID UNNECESSARY DELAYS OR INTERFERENCES.
4. ALL PLUMBING WORK AND MATERIALS SHALL BE INSTALLED IN ACCORDANCE WITH ALL APPLICABLE ORDINANCES AND REGULATIONS HAVING JURISDICTION. CONTRACTOR SHALL OBTAIN ALL APPROVALS REQUIRED FROM REGULATING AGENCIES BEFORE STARTING WORK.
5. SOIL AND WASTE PIPE SHALL SLOPE AT 1% MINIMUM UNLESS OTHERWISE NOTED.
6. ALL PLUMBING WORK AND MATERIALS SHALL MEET THE REQUIREMENTS OF THE LATEST EDITIONS OF THE UNIFORM PLUMBING CODE, UNLESS OTHERWISE REQUIRED BY THE DEPT. OF BLDG. & SAFETY.
7. CONTRACTOR SHALL FURNISH AND INSTALL ALL BACKFLOW PROTECTION DEVICES REQUIRED BY AGENCIES HAVING JURISDICTION.
8. PLUMBING CONTRACTOR: CONDENSATE DRAIN FROM A/C UNITS TO APPROVED DRAIN POINT. ON WATER MAKE-UP TO MECHANICAL EQUIPMENT. GAS PIPING TO UNITS & FINAL CONNECTIONS.
9. OBTAIN AND PAY FOR ALL PERMITS, FEES, AND INSPECTIONS REQUIRED BY GOVERNING AUTHORITIES.
10. CONDENSATE DRAINS THAT TERMINATE @ TAILPIECE OF LAV. TAILPIECE SHALL BE INCREASED TO 1¼" TO RECEIVE DISPOSAL TYPE TEE (1¼"x1¼"x1¼"), EXPOSED TEES & PIPING TO BE CHROMEPLATED.
11. DOMESTIC WATER PIPING: ABOVE GROUND COPPER TYPE "L", BELOW GROUND OUTSIDE OF BLDG. 1¼" AND SMALLER PVC SCHEDULE 40 WITH SCHEDULE 80 FITTINGS, 2" AND LARGER PVC CLASS 315 SDR 13.5 WITH SCHEDULE 80 FITTINGS.
12. GAS PIPING: ~~INSIDE BUILDING VENT GROUND SCHEDULE 40 BLACK STEEL PIPE. BELOW GROUND OUTSIDE OF BUILDING GRADE 315 SDR 13.5 PVC PIPE.~~
13. SOIL PIPING: BELOW SLAB INSIDE BUILDING, SERVICE WEIGHT COATED CAST IRON HUBLESS PIPE AND FITTINGS. OUTSIDE OF BUILDING, VITRIFIED CLAY PIPE WITH "SPEED SEAL" OR "GEDGE-LOCK" JOINTS.
14. VENT PIPING: BELOW GROUND CAST IRON, ABOVE GROUND SCHEDULE 40 GALVANIZED STEEL PIPE.
15. CONDENSATE DRAIN PIPING: COPPER TYPE "M"
16. INSULATE DOMESTIC HOT WATER PIPING WITH 1" FIBERGLASS FIBERGLAS 205 .462/BSL R-4.5/INCH PIPE INSULATION WITH STANDARD CANVAS JACKET. EXPOSED INDOOR AND OUTDOOR INSULATION WITH ALUMINUM JACKET.
17. STORM DRAIN PIPING: ABOVE GROUND INSIDE BUILDING: SCHEDULE 40 PIPE AND FITTINGS. AND CAST IRON SCREWED DRAINAGE FITTINGS AND LONG SWEEP ELBOWS. UNDERGROUND INSIDE BUILDING: SCHEDULE 40 PIPE AND FITTINGS. UNDERGROUND OUTSIDE OF BUILDING: ASTM-REINFORCED CONCRETE PIPE.
18. FIRE SPRINKLER SYSTEM PIPING: UNDERGROUND FROM POINTS 5'-0" OUTSIDE OF BUILDING: CEMENT-LINED DUCTILE IRON. PIPING OF BUILDING SCHEDULE 40 STEEL PIPE WITH 150 PSI MALLEABLE IRON SCREWED FITTINGS.
19. REFER TO KITCHEN CONSULTANTS DRAWINGS FOR PLUMBING ROUGH-IN SCHEDULE AND FOR ADDITIONAL WORK TO BE FURNISHED AND INSTALLED BY THIS CONTRACTOR.
20. PIPING SHALL BE INSULATED AS PER C.E.C. SECTION 2-5312.
21. PLUMBING SUBCONTRACTOR CERTIFIED PER C.E.C. SECTION 2-5314(A).
22. WATER HEATERS FOR DOMESTIC HOT WATER PER C.E.C. SECTION 2-5318.

7. MECHANICAL CONTRACTOR: TEMPERATURE CONTROLS, LOW VOLTAGE WIRING & ITEMS INDICATED THUS (M). WIRING SHALL CONFORM TO LOCAL CODES.
8. PLUMBING CONTRACTOR: CONDENSATE DRAIN FROM A/C UNITS TO APPROVED DRAIN POINT, DI WATER MAKE-UP TO MECHANICAL EQUIPMENT, GAS PIPING TO UNITS & FINAL CONNECTIONS.
9. GENERAL CONTRACTOR: CUTTING, LEVEL PLATFORMS, FRAMED OPENINGS, DOOR LOUVERS, COL. UNDERCUT DOORS (UC), EXTERIOR LOUVERS.
10. ALL EQUIPMENT THAT IS SUBSTITUTED SHALL FIT IN THE SPACE PROVIDED WITH ADEQUATE ROOM FOR SERVICING, INCLUDING SUBSTITUTE EQUIPMENT NAMED IN THIS SECTION OF THE SPECIFICATIONS.
11. ALL SHEET METAL CONSTRUCTION AND GAUGES SHALL BE INSTALLED IN ACCORDANCE WITH LOCAL AND MINIMUM CODES. TAPE ALL TRANSVERSE AND LONGITUDINAL JOINTS, SUPPLY AND RETURN DUCTS.
12. SOUND LINE (SL) ALL SUPPLY AND RETURN AIR DUCTS EXPOSED TO WEATHER AND AS NOTED. FIBERGLAS LINER 1½" THICK, R-6 EXCLUSIVE OF FILM RESISTANCE, NRC RATED. (DUCT SIZES SHOWN INCLUDE LINER).
13. ALL CONCEALED SUPPLY AND RETURN AIR DUCTS TO BE INSULATED WITH 2" THICK FIBERGLAS BLANKET WITH R-6 EXCLUSIVE OF FILM RESISTANCE.
14. AT CONTRACTOR'S OPTION CASCO DUCT 1" THICK WITH POSITIVE VAPORSEAL IS APPROVED IN LIEU OF CONCEALED SHEET-METAL ROUND PIPE. THE DUCT SHALL BE UNDERWRITERS' LABORATORIES LABELED AS A CLASS 1 AIR DUCT IN ACCORDANCE WITH U.L. STANDARD TEST METHOD 181.
15. END CONNECTION TO CEILING DIFFUSER AND RETURN AIR GRILLE SHALL BE "CASCO SILENT FLEX" INSULATED LOW PRESSURE SF-181 7' 0" LONG FLEXIBLE DUCT.
16. WHERE INTERIOR OF DUCTWORK IS VISIBLE THRU AN AIR OUTLET, INSIDE OF DUCT SHALL BE PAINTED WITH A FLAT BLACK PRIMER, OR LINING SHALL HAVE BLACK FACING.
17. ALL JOINTS OF DUCTWORK EXPOSED TO WEATHER SHALL BE SEALED WATERTIGHT WITH ARABOL AND CANVAS.
18. HVAC EQUIPMENT CERTIFIED PER C.E.C. SECTION 2-5314(a).
19. AUTOMATIC CONTROLS FOR OFF-HOUR SHALL COMPLY WITH C.E.C. SECTION 2-5315(a).1.
20. THERMOSTAT SET POINT REQUIREMENTS SHALL COMPLY WITH C.E.C. SECTION 2-5315(e).
21. SEQUENTIAL CONTROL OF HEATING & COOLING SHALL COMPLY WITH C.E.C. SECTION 2-5315(a).3.
22. VENTILATION SHALL BE PROVIDED PER C.E.C. SECTIONS 2-5316 & 2-5343.

A/C EQUIPMENT SCHEDULE

(AC-1) 30 TON
ROOF MOUNTED AIR CONDITIONING UNIT:
CARRIER HEAT PUMP MODEL NO. 50HJ705, EER 8.2
150,000 BTU/HR COOLING @ 95°F AMB. &
67°DWB/60°DB ENT. EVAP. AIR
11,000 CFM @ 0.80" ESP
HEATING CAPACITY: 143,500 BTU/HR INPUT @ 47°F AMB.
C.O.P. 3.0
ELECTRICAL: 56.2 FLA @ 460 VOLTS, 3Ø, 60
VIBRATION ISOLATORS: VIBREX FF-80
FILTERS: (4)16x20x2, (4)16x20x2
REFRIGERANT: R-22, 15.2
FURNISH WITH: ALTERNATE MOTOR & DRIVE, FINE GUARD II CIRCUIT SMOKE DETECTOR W/AUTO-SHUTDOWN, ECONOMI-SAVER.
OPERATING WT. 4,700 LBS.

(AC-2) (AC-3) 25 TON
ROOF MOUNTED AIR CONDITIONING UNIT:
CARRIER HEAT PUMP MODEL NO. 50JH006, EER 8.3
91,000 BTU/HR COOLING @ 95°F AMB. &
67°DWB/60°DB ENT. EVAP. AIR
3000 CFM @ 0.80" ESP
HEATING CAPACITY: 92,000 BTU/HR INPUT @ 47°F AMB.
C.O.P. 3.1
ELECTRICAL: 31.9 FLA @ 460 VOLTS, 3Ø, 60
VIBRATION ISOLATORS: VIBREX FF-50
FILTERS: (2)16x20x1, (2)20x20x1, FARR 30/30
REFRIGERANT: R-22, 7.8 LBS., DUAL
FURNISH WITH: ALTERNATE MOTOR & DRIVE, FINE GUARD II CIRCUIT SMOKE DETECTOR W/AUTO-SHUTDOWN, ECONOMI-SAVER.
OPERATING WT. 1400 LBS.

(AC-4) (AC-5) (AC-7) 5 TON
ROOF MOUNTED AIR CONDITIONING UNIT:
CARRIER HEAT PUMP MODEL NO. 50QD060, EER 7.5
57,000 BTU/HR COOLING @ 95°F AMB. &
67°DWB/60°DB ENT. EVAP. AIR
2000 CFM @ 0.50" ESP
HEATING CAPACITY: 57,000 BTU/HR INPUT @ 47°F AMB.
C.O.P. 2.8
ELECTRICAL: 15.1 FLA @ 460 VOLTS, 3Ø, 60
VIBRATION ISOLATORS: VIBREX FF-50
FILTERS: (2)16x25x1, FARR 30/30
REFRIGERANT: R-22, 10 LBS., 3 CKT.
FURNISH WITH: AUTO-SHUTDOWN W/LOCKING COVER & ON-OFF SUBBASE. UNIT SIZE: 48"x43"x37" HIGH
OPERATING WT. 600 LBS.

(AC-6) 3 TON
ROOF MOUNTED AIR CONDITIONING UNIT:
CARRIER HEAT PUMP MODEL NO. 50QD036, EER 9.0
36,000 BTU/HR COOLING @ 95°F AMB. &
67°DWB/60°DB ENT. EVAP. AIR
1200 CFM @ 0.50" ESP
HEATING CAPACITY: 35,000 BTU/HR INPUT @ 47°F AMB.
C.O.P. 3.0
ELECTRICAL: 7.35 FLA @ 460 VOLTS, 3Ø, 60
VIBRATION ISOLATORS: VIBREX FF-50
FILTERS: (2)16x25x1, FARR 30/30
REFRIGERANT: R-22, 6 LBS., 3 CKT.
FURNISH WITH: AUTO-THERMOSTAT W/LOCKING COVER & ON-OFF SUBBASE. UNIT SIZE: 48"x43"x29" HIGH
OPERATING WT. 475 LBS.

(EF-1) ROOF MOUNTED EXHAUST FAN SCREEN COOK CO.
TYPE ACE-8, MODEL NO. 10XC2B
1260 CFM @ 1/2" S.P., 1065 FAN RPM
3/39 RPM TYP SPEED, 3/4 HP, 1PH, 115 VOLTS, 60
FURNISH WITH: MBE-PAS BIRD SCREEN, DISCONNECT SWITCH.
BACKDRAFT DAMPER
OPER. WT. 150 LBS.

(EF-2) ROOF MOUNTED EXHAUST FAN SCREEN COOK CO.
TYPE ACE-8, MODEL NO. 10XC2B
450 CFM @ 3/8" S.P., 1255 FAN RPM
1367 FPM TIP SPEED, 1/6 HP, 1PH, 1V, 60
FURNISH WITH: MBE-PAS CBBB, BIRD SCREEN, DISCONNECT SWITCH, THERMAL OVERLOAD PROTECTION, BACKDRAFT DAMPER, WIRE TO THERMOSTAT
OPER. WT. 100 LBS.

GENERAL NOTES
1. THE INTENT OF THESE DRAWINGS IS TO DESCRIBE A COMPLETE AND OPERABLE SYSTEM. BRING ANY QUESTIONS TO ENGINEERS ATTENTION PRIOR TO BIDDING.
2. PROVIDE GROUNDING WHERE INDICATED OR REQUIRED BY CODE.
3. ALL INSTALLATIONS SHALL MEET FULLY WITH ALL REQUIREMENTS OF THE NATIONAL ELECTRICAL CODE (N.E.C.). MATERIAL SHALL BE U.L. LABELED OR LISTED.
4. WHERE NON-METALLIC CONDUIT IS USED, PROVIDE GROUND WIRE.
5. ALL EQUIPMENT SHALL BE INSTALLED PER MANUFACTURERS REQUIREMENTS. REMISES SHALL BE CLEARED OF DIRT AND DEBRIS.
6. SUBCONTRACTOR SHALL FURNISH FOR APPROVAL, SHOP DRAWINGS OF ELECTRICAL EQUIPMENT, MOTOR STARTERS, LIGHTING FIXTURES, AND DEVICES PRIOR TO PURCHASE.
7. ALL CONDUCTORS SHALL BE COPPER TYPE "THWN" RATED GRADE AND TYPE "THHN/THWN" FOR EXPOSED AND ABOVE GRADE WORK.
8. FURNISH AND PAY FOR ALL PERMITS, INCLUDING ELECTRICAL UTILITY CHARGES AND BUILDING DEPARTMENT PERMIT CHARGES.
9. COORDINATE ELECTRICAL WORK WITH REQUIREMENTS OF OTHER TRADES.
10. PROVIDE CONDUIT BETWEEN THERMOSTATS, AIR CONDITIONING CONTROL PANELS, MOTOR STARTERS, SOLENOID VALVES, AND AIR CONDITIONING UNITS. SEE MECHANICAL PLANS FOR CONTROL WIRE SIZES OR SIZE PER N.E.C.
11. IN ADDITION TO WIRING HERE INDICATED, CONTRACTOR SHALL PROVIDE MECHANICAL AND OTHER DEVICES PRICED IN BID AND INCLUDE ALL WIRING MATERIALS (INCLUDING RELAYS AND CONTROL DEVICES) INDICATED SHOWN OR AS PART OF ELECTRICAL WORK.
12. EACH SWITCH TO BE IN SEPARATE 2" X 3" BOX OR 2" X 3" SPACE IN GANG BOX.
13. THE ELECTRICAL SUBCONTRACTOR MUST BE LICENSED BY THE STATE OF CALIFORNIA AND MUST VISIT THE JOB SITE PRIOR TO BIDDING. EXAMINE EXISTING CONDITIONS, AND INCLUDE IN HIS BID ALL LABOR AND MATERIAL TO INTERFACE WITH EXISTING SYSTEMS.
14. ALL PANELS WHICH INDICATE "ON" CIRCUITS (TIME) CONTROL SHALL BE FURNISHED WITH A SEPARATE COMPARTMENTED BOARD & SEPARATE DOOR. COMPARTMENT SHALL BE COMPLETE WITH THE NUMBER OF TIME SWITCHES INDICATED. COMPARTMENT BOARD, NAME SPACE PER TWO SCHEDULED TIME SWITCHES. TIME SWITCHES SHALL HAVE SILVER CONTACTS 30 AMP RESISTIVE RATING. FURNISH EQUAL NUMBERS OF CONTACTS AS CIRCUITS CONTROLLED PLUS ONE SPARE. POLL, 100%, INTERMATIC, ART OR EQUAL.
15. THE CONTRACTOR SHALL COORDINATE ELECTRICAL REQUIREMENTS AND SCALE (& COMPARTMENTS) INDICATED IN FROM SUCH TRADES REQUIREMENTS FOR EQUIPMENTS, SUCH AS MECHANICAL EQUIPMENT, KITCHEN EQUIPMENT, MILLWORK, ETC., AND INCLUDE COST OF INSTALLATION AND WIRING THIS REQUIRED EQUIPMENT IN BID.
16. OBTAIN ELECTRICAL SERVICE CHARACTERISTICS FROM THE POWER COMPANY PRIOR TO BID. EQUIPMENT, GUARDS AND CIRCUIT PROTECTIVE DEVICES SHALL HAVE INTERRUPTING RATING TO PROTECT THE ELECTRICAL SYSTEM AGAINST THE MAXIMUM AVAILABLE FAULT CURRENT.
17. REFER TO ARCH. PLANS FOR EXACT LOCATION OF LIGHT FIXTURES.
18. CONDUIT T-BAR DROP-IN FIXTURES DIRECTLY TO STRUCTURAL OVERHEAD WITH TWO (DIAGONAL CORNERS) #18 WIRES.

ELECTRICAL WORK 16001

SECTION 16001 - ELECTRICAL WORK

1. GENERAL:
1.01 REFERENCES:
All General, supplementary, special conditions and Division 1 apply to this Section.
1.02 SCOPE:
As indicated on Electrical Drawings.
1.03 ORDINANCES AND REGULATIONS:
All work under this Division shall comply with the most rigid requirements of the latest editions of the following: Electrical Code; the California Administrative Code - Title 24 - State Building Standards - Part 3 - State Electrical Regulations; all local codes, and Title 24 Calculation Amendments.
1.04 PERMITS AND INSPECTIONS:
The Contractor shall obtain and pay for all permits and inspections required for the work by all legally constituted authorities having jurisdiction. Certificates of all such permits and inspections shall be delivered to the Owner's representative.
1.05 TESTS:
The Contractor shall perform all electrical tests as required and he shall perform a complete "in service" operation of the entire electrical system to the full satisfaction of the Owner.
1.06 GUARANTEE:
Should any trouble develop within one (1) year from the date of acceptance of the building, due to faulty or defective workmanship, materials and/or workmanship, the trouble shall be corrected by the Contractor without expense to the Owner.
1.07 RECORD DOCUMENTS:
The Contractor shall keep an accurate dimensioned record of the installed locations of all buried conduits and ducts, and shall furnish to the Architect two (2) complete sets of reproducible drawings marked to show the electrical systems as installed. Architect and Engineer names shall not appear on the Record Documents.
2. PRODUCTS:
2.01 MATERIALS:
All materials, appliances, fixtures and equipment shall be new and of the best grade of the respective kind free from all defects and of the make, brand and quality specified. Materials for similar use shall be of the same type and manufacture. All materials shall be U.L. labled.
2.02 PROTECTION OF FINISH:
The Contractor shall fully protect all finished parts of the materials and equipment against damage from whatever cause during the progress of the work and until final completion.
2.03 MATERIALS:
A. CONDUIT: The term conduit shall refer to rigid heavy wall galvanized or sherardized steel conduit, rigid heavy wall aluminum conduit, electrical metallic tubing (EMT), flexible metal conduit, schedule 40 PVC conduit.
1. Conduits run exposed and subject to mechanical injury shall be rigid heavy wall galvanized steel or aluminum. Aluminum conduit may not be used below grade or imbedded in concrete.
2. Conduits run exposed outside or in floor slabs shall be rigid heavy wall galvanized or sherardized steel.
3. Conduits run below grade, exterior to the building, shall be schedule 40 heavy wall, high impact poly vinyl chloride electrical conduit. A ground wire shall be installed on all PVC conduits.
4. Conduits for lighting circuits and 120 volt outlet circuits shall be EMT where not subject to mechanical injury.
5. Conduit where allowed for lighting circuits and 120 volt outlets shall be flexible metal conduit in stud walls & ceilings.
6. Plenums cowbell shall be installed to all rotating or vibrating equipment.
7. "Seal-tite" conduit shall be used for all exterior equipment.
8. No running threads will be permitted.
9. All conduit bodies installed in any location where the pressure of moisture is apparent, shall be equipped with rubber gaskets.
10. The Sub-Contractor shall furnish and install fittings, special devices and materials which may be required for the proper installation of the conduit system.

B. OUTLET BOXES:
1. Outlet boxes and covers shall be galvanized or sherardized, one piece pressed steel, knockout type of approved manufacture, sized for multiple devices shall be used.
2. Outlet boxes shall be equipped with plaster rings, extension rings, or fixture studs as may be required.
3. Bodies exposed to the weather or moisture shall be Crouse-Hinds type FS or FD cast aluminum boxes with appropriate covers and gaskets; painted to match adjoining finish.

C. WIRING DEVICES (AND PLATES):
1. Receptacles shall be Hubbell #5266.
2. Switches shall be Sierra 2711, single pole, and 2713, three way.
3. Plates shall be brushed stainless steel or Sierra plastic, smooth style standard.

D. CONDUCTORS:
1. 600 VOLTS: Furnish and install conductors of the size and type shown on the drawings and as herein specified. All conductors under this section shall be copper, as shown on the one-lined diagram. Type THW and rated at 600 volts service. Wires allowed by Local Code.
2. Insulation for conductors shall conform to the following: Wire sizes No. 12 to No. 8 shall be Type THW wire also No. 6 and larger shall be type RHW or THW.
3. All branch circuit wire shall be color coded throughout.

E. PANELBOARDS:
1. Panel boards shall be dead-front, safety type equipped with thermal magnetic, molded case circuit breakers of interrupting capacity, trip ratings and of the number of poles indicated.
2. Circuit breakers shall be individually thermally & magnetically trip indicating. The front faces of all circuit breakers shall be flush with each other. Tripped indication shall be given by which by the breaker handle taking a position between on and off. Provisions for additional breakers shall be such that no additional brackets shall be such that no additional connectors will be required to add breakers. Circuit breakers shall be thermal-magnetic type with inverse time-current characteristics. Multiple pole circuit breakers shall be common trip with a single operating handle. Handle ties will not be approved.
3. All panel boards shall be U.L. listed.
4. A 1/32 inch clear "Lucite" covered directory shall be provided on the inside of each panelboard door. The directory shall be neatly typewritten designating each circuits used.
5. All circuit breakers serving dischargo lighting shall be furnished with a lockoff device.

F. MAIN METERED SERVICE DISTRIBUTION BOARD shall be circuit breaker or fused disconnect type as required to minimize the let-through current in the panel to maximum 13,000 IR.

G. DISCONNECT SWITCHES: Disconnect switches shall be fused, unfused or unindicated on the drawings, with three poles and for the environment in which it is mounted. Enclosure shall be horsepower rated, heavy duty with quick-make, quick-break mechanism. Switch handles shall be capable of being locked in open or closed position and rated heavy duty.

H. TELEPHONE & INTERCOM SYSTEMS: Contractor shall furnish and install all conduit and pull boxes required for the telephone and intercom systems.

I. GROUNDING: The power system shall be grounded in accordance with the provisions of the National Electric Code.

2.04 LIGHTING FIXTURES:
Furnish as shown on Electrical Drawings.

3. EXECUTION:
3.01 VERIFICATION OF DIMENSIONS:
The Contractor shall carefully check the drawings to see that the equipment he contemplates installing will fit into the spaces provided.
3.02 LOCATIONS:
Prior to rough-in, minor adjustments to outlet locations may be made without additional compensation.
3.03 INSTALLATION:
Install in conformance to governing codes and Electrical Drawings.

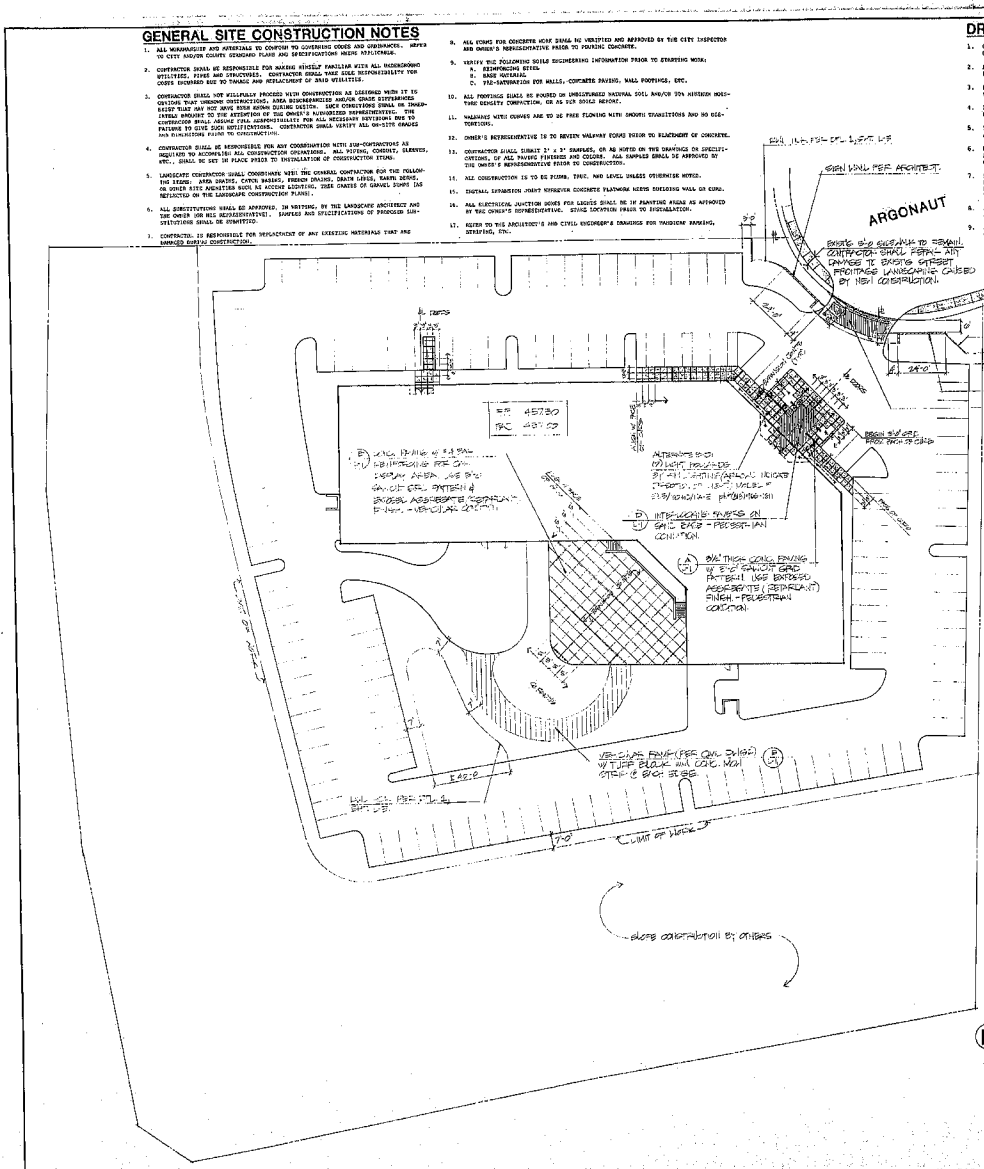
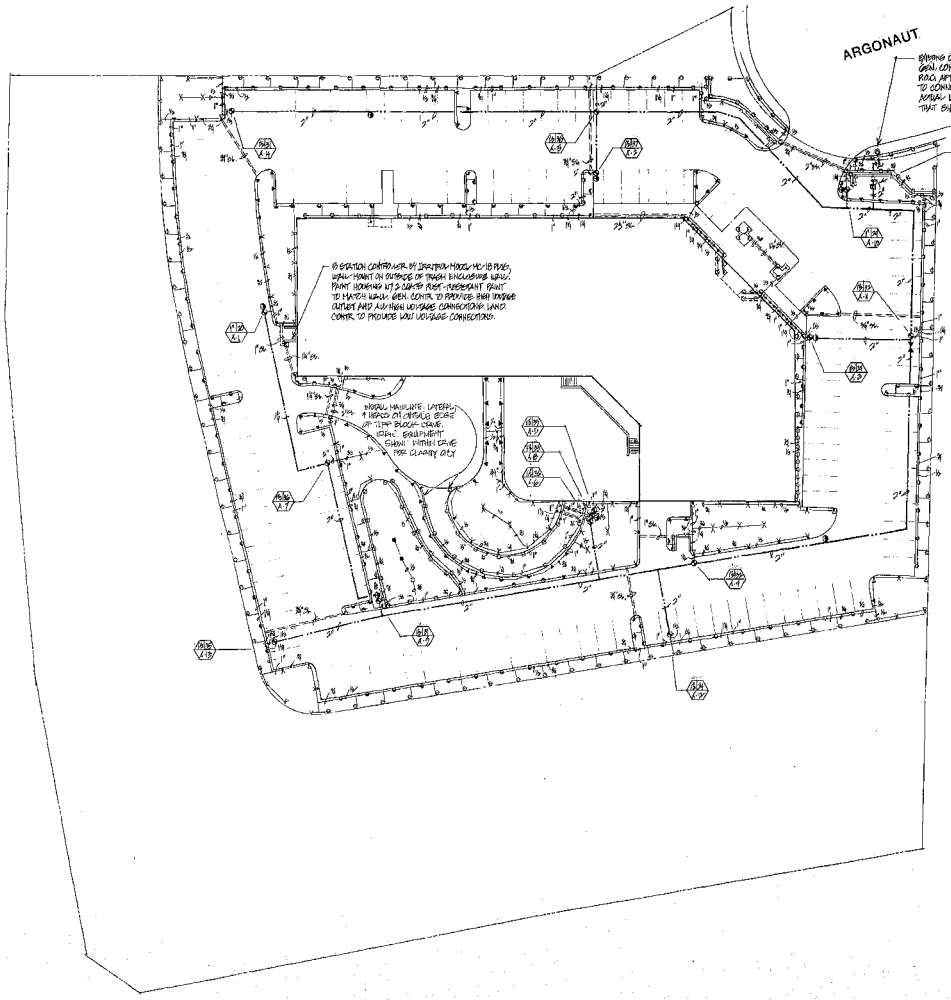
GENERAL SITE CONSTRUCTION NOTES



1. ALL WORKMANSHIP AND MATERIALS TO CONFORM TO GOVERNING CODES AND ORDINANCES. REFER TO CITY AND/OR COUNTY STANDARD PLANS AND SPECIFICATIONS WHERE APPLICABLE.
2. CONTRACTOR SHALL BE RESPONSIBLE FOR MAKING HIMSELF FAMILIAR WITH ALL UNDERGROUND UTILITIES, PIPES AND STRUCTURES. CONTRACTOR SHALL TAKE SOLE RESPONSIBILITY FOR COSTS INCURRED DUE TO DAMAGE AND REPLACEMENT OF SAID UTILITIES.
3. CONTRACTOR SHALL NOT WILLFULLY PROCEED WITH CONSTRUCTION AS DESIGNED WHEN IT IS OBVIOUS THAT UNKNOWN OBSTRUCTIONS, AREA DISCREPANCIES AND/OR GRADE DISTREPANCIES EXISTING THAT MAY NOT HAVE BEEN KNOWN DURING DESIGN. SUCH CONDITIONS SHALL BE IMMEDIATELY BROUGHT TO THE ATTENTION OF THE OWNER'S AUTHORIZED REPRESENTATIVE. THE INSTALL BROUGHT TO THE ATTENTION OF THE OWNER'S AUTHORIZED REPRESENTATIVE. THE CONTRACTOR SHALL ASSUME FULL RESPONSIBILITY FOR UNKNOWN CONDITIONS, AND/OR FAILURE TO GIVE SUCH NOTIFICATION. CONTRACTOR SHALL VERIFY ALL ON-SITE GRADES AND DIMENSIONS PRIOR TO CONSTRUCTION.
4. CONTRACTOR SHALL BE RESPONSIBLE FOR ANY COORDINATION WITH SUB-CONTRACTORS AS REQUIRED TO ACCOMPLISH ALL CONSTRUCTION OPERATIONS. ALL PIPING, CONDUIT, SLEEVES, ETC., SHALL BE SET IN PLACE PRIOR TO INSTALLATION OF CONSTRUCTION ITEMS.
5. LANDSCAPE CONTRACTOR SHALL COORDINATE WITH THE GENERAL CONTRACTOR FOR THE FOLLOWING ITEMS: AREA DRAINS, CATCH BASINS, FRENCH DRAINS, DRAIN LINES, SANDI BOXES, OR OTHER SITE AMENITIES SUCH AS ACCENT LIGHTING. THESE CHANGE OF GRAVEL ZOOMS (AS REFLECTED ON THE LANDSCAPE CONSTRUCTION PLANS).
6. ALL SUBSTITUTIONS SHALL BE APPROVED, IN WRITING, BY THE LANDSCAPE ARCHITECT AND THE OWNER (OR HIS REPRESENTATIVE). SAMPLES AND SPECIFICATIONS OF PROPOSED SUBSTITUTIONS SHALL BE SUBMITTED.
7. CONTRACTOR IS RESPONSIBLE FOR REPLACEMENT OF ANY EXISTING MATERIALS THAT ARE DAMAGED DURING CONSTRUCTION.
8. ALL WORK SHALL CONFORM TO THE RECOMMENDATIONS OF THE SOILS REPORT.
9. ALL FORMS FOR CONCRETE WORK SHALL BE VERIFIED AND APPROVED BY THE CITY INSPECTOR AND OWNER'S REPRESENTATIVE PRIOR TO POURING CONCRETE.
9. VERIFY THE FOLLOWING SOILS ENGINEERING INFORMATION PRIOR TO STARTING WORK:
   A. REINFORCING STEEL
   B. BASE MATERIAL
   C. 95%-SATURATION FOR WALLS, CONCRETE PAVING, WALL FOOTINGS, ETC.
10. ALL FOOTINGS SHALL BE FOUNDED ON UNDISTURBED NATURAL SOIL AND/OR 90% MINIMUM MODIFIED DENSITY COMPACTION, OR AS PER SOILS REPORT.
11. WALKWAYS WITH CURVES ARE TO BE FREE FLOWING WITH SMOOTH TRANSITIONS AND NO ABRUPTIONS.
12. OWNER'S REPRESENTATIVE IS TO REVIEW WALKWAY FORMS PRIOR TO PLACEMENT OF CONCRETE.
13. CONTRACTOR SHALL SUBMIT 2" x 3" SAMPLES, OR AS NOTED ON THE DRAWINGS OR SPECIFICATIONS, OF ALL PAVING FINISHES AND COLORS. ALL SAMPLES SHALL BE APPROVED BY THE OWNER'S REPRESENTATIVE PRIOR TO CONSTRUCTION.
14. ALL CONSTRUCTION IS TO BE FIRM, TRUE, AND LEVEL UNLESS OTHERWISE NOTED.
15. INSTALL EXPANSION JOINT MATERIAL IN CONCRETE PLATFORM WHERE BUILDING WALL OR CURB.
16. ALL ELECTRICAL JUNCTION BOXES FOR LIGHTS SHALL BE IN PLANTING AREAS AS APPROVED BY THE OWNER'S REPRESENTATIVE. STAKE LOCATION PRIOR TO INSTALLATION.
17. REFER TO THE ARCHITECT'S AND CIVIL ENGINEER'S DRAWINGS FOR PARKING RAMPING, GRADING, ETC.



DRAINAGE AND GRADING NOTES

1. GENERAL LANDSCAPE GRADES SHALL HAVE A 2% MINIMUM GRADE UNLESS CALLED OUT DIFFERENTLY ON THE DRAWINGS.
2. PROVIDE A MINIMUM 1% GRADE ON PAVING AWAY FROM BUILDING PAD AND IN THE SAME DIRECTION AS DRAINAGE.
3. BERM OR RAISED PLANTER FINISH GRADE HEIGHT AGAINST BUILDING WALLS SHALL BE NO CLOSER THAN 8" BELOW BOTTOM OF GLASS LINE.
4. LAWN BERMS SHALL HAVE A 3:1 MAXIMUM SLOPE UNLESS SPECIFIED DIFFERENTLY. SLOPES SHALL HAVE A 2:1 MAXIMUM SLOPE.
5. THE TOP AND BOTTOM BERM TRANSITIONS SHALL BE SHAPED FOR A SMOOTH, ROUND TRANSITION.
6. WATER SWEAGAT TO BE BY TRIO-DEC, ALONG WITH A MINIMALLESS EMPLEME SUCH AS 'YELLOW JACKET' UNLESS NOTED DIFFERENTLY ON ARCHITECTURAL DRAWINGS. INSTALL AS SHOWN ON DRAWINGS.
7. REFER TO CIVIL ENGINEER'S DRAWINGS FOR ADDITIONAL FINISH ELEVATIONS AND GRADES. REFER TO LANDSCAPE ARCHITECT'S DRAWINGS FOR LANDSCAPE BERMS AND SUPPLEMENTAL SPOT ELEVATIONS.
8. ALL GRADING TO BE SUPERVISED IN THE FIELD BY THE OWNER'S AUTHORIZED REPRESENTATIVE.
9. ALL PROPOSED GRADES TO MEET AND BLEND IN WITH EXISTING GRADING AT PROJECT LIMITS AND EXISTING SITE CONDITIONS.

HANDICAP ACCESS NOTES

A. GENERAL
1. WORK SHALL CONFORM TO THE FOLLOWING:
   a. 1994 UNIFORM BUILDING CODE (UBC) ADMINISTRATIVE CODE.
   b. 1994 UNIFORM BUILDING CODE (UBC) CHAPTER 70.
   c. ALL LOCAL BUILDING CODES AND LAWS APPLYING.
2. ALL ACCESSIBLE ROUTES OF TRAVEL SHALL BE CONTINUOUS, UNOBSTRUCTED PATHS WHICH SHALL HAVE A MINIMUM CLEAR WIDTH OF 36" EXCLUSIVE OF CURBS. WHERE A HANDRAIL IS PROVIDED, THE MINIMUM CLEAR WIDTH SHALL BE 42" MINIMUM. SEE PLAN FOR DIMENSIONS.
3. RAMPS SHALL NOT EXCEED A SLOPE OF 1:12 (8.33%) AND SHALL HAVE A MAXIMUM RISE OF 30" BETWEEN LEVELS. SEE PLAN FOR DIMENSIONS.
4. ACCESS SHALL BE PROVIDED TO ALL ENTRANCES AND EXITS OF BUILDINGS.
5. THERE SHALL BE A MINIMUM 18 INCH MINIMUM TO MAXIMUM 30 INCH CONCRETE CURB AT ALL SIDES EXPOSED. REFER TO DIMENSIONS SHOWN ON PLANS.
6. RAMPS:
   a. WIDTH: MIN. 48 INCHES CLEAR BETWEEN HANDRAILS
   b. LENGTH: MAX. 30 INCHES RISE PER RAMP RUN. MIN. LENGTH OF RAMP RUN SHALL BE 72 INCHES.
B. HAND-RAIL REQUIREMENTS
1. HAND-RAILS SHALL BE PROVIDED ON BOTH SIDES OF RAMPS WHERE RAMPS RISE MORE THAN 6 INCHES OR HAVE A HORIZONTAL PROJECTION GREATER THAN 72 INCHES. HAND-RAILS ARE NOT REQUIRED ON THE SIDE CONNECTED TO BUILDINGS. HAND-RAILS SHALL BE CONTINUOUS WITHIN THE LENGTH OF RAMPS.
2. PROVIDE A 12" EXTENSION BEYOND AREA OF LEAST RISER (OR) PATH OF TRAVEL AT TOP AND BOTTOM OF RAMPS.
3. HAND-RAILS SHALL BE CIRCULAR. THEIR SIZES SHALL NOT BE AT ELEVATION SHALLS MEASURE MORE THAN 2".
C. RAMPS
1. ON RAMPS RISING OR GREATER THAN 6.0" (0.15m) RISE:
   a. PROVIDE A 1'-0" (305 mm) LEVEL LANDING AT THE BOTTOM OF ALL RAMPS. LANDING SHALL BE AT LEAST AS WIDE AS THE RAMP AND HAVE A MINIMUM CLEAR LENGTH OF 5'-0" (1.52m).
   b. PROVIDE A LEVEL LANDING AT THE TOP OF ALL RAMPS. LANDING SHALL BE AS WIDE AS THE RAMP AND HAVE A MINIMUM CLEAR LENGTH OF 5'-0" (1.52m). MATERIAL AND SIZE CHANGE IS DIRECTION.
D. HANDRAILS
1. PROVIDE HANDRAILS WITH:
   a. TOP OF GRIPPING SURFACE OF HANDRAIL SHALL BE 34" (864 mm) MINIMUM TO 38" (965 mm) MAXIMUM VERTICALLY ABOVE RAMP SURFACE.
   b. HANDRAILS SHALL BE CONTINUOUS WITHIN THE FULL LENGTH OF EACH RAMP RUN.
   c. ENDS OF HANDRAILS SHALL EXTEND A MINIMUM OF 12" BEYOND THE TOP AND BOTTOM OF RAMP OR STAIRS.
2. ADJACENTLY ROUND OR CHAMFER A MINIMUM OF 1/2" (13 mm) RADIUS OR CHAMFER A MINIMUM OF 1/2" (13 mm).

ARGONAUT
EXIST. 5'-0" SIDEWALK TO REMAIN. CONTRACTOR SHALL REPAIR ANY DAMAGE TO EXISTING STREET FRONTAGE LANDSCAPING CAUSED BY NEW CONSTRUCTION.

	Remote control valve by RAINBIRD Model 100-150-PE
	Quick coupler valve - Rainbird #3156C.
	Automatic controller - Refer to plan for Model and Station #.
	Reduced pressure backflow device - Febco 825Y. Refer to plan for size.
	Line size gate valve by Nibco Model T-113.
1" / 2.9	Valve size/system flow.
	Station number.
	Class 200 P.V.C. Lateral line.
	Sch. 40 P.V.C. lateral line installed prior to A.C. paving.
	Sch. 40 P.V.C. electrical sleeve installed prior to A.C. paving.
	Sch. 40 P.V.C. pressure line.
	Sch. 40 pressure line installed in Sch. 40 P.V.C. sleeve. 24" depth w/sand backfill.

IRRIGATION NOTES

1. THE IRRIGATION SYSTEM IS DIAGRAMMATIC. VALVES, PIPE, ETC. SHOWN WITHIN PAVED AREAS IS FOR DESIGN CLARIFICATION ONLY AND SHALL BE INSTALLED IN PLANTING AREAS WHENEVER POSSIBLE
2. INSTALL EQUIPMENT AS PER DETAILS AND SPECIFICATIONS PROVIDED AS PART OF THIS CONTRACT.
3. THE SYSTEM HAS BEEN DESIGNED FOR A MINIMUM OPERATING PRESSURE OF 55 P.S.I. VERIFY PRESSURE IN THE FIELD PRIOR TO CONSTRUCTION TO DETERMINE IF IT IS SUFFICIENT TO OPERATE SYSTEMS AS DESIGNED. NOTIFY THE OWNER'S REPRESENTATIVE OF ANY DISCREPANCY FROM THAT STATED ON THESE DRAWINGS.
4. IRRIGATION WATER METER AND CONNECTION TO WATER LINE SHALL BE PROVIDED AND INSTALLED BY THE GENERAL CONTRACTOR WHEN REQUIRED. REFER TO PLAN. DOMESTICAN CONNECTION TO METER BY LANDSCAPE CONTRACTOR.
5. BACKFLOW DEVICE SHALL BE INSTALLED IN GROUND COVER AREA WHERE-EVER POSSIBLE. FINAL LOCATION SHALL BE DETERMINED BY THE OWNER'S REPRESENTATIVE AND MAY VARY FROM THAT INDICATED ON THE DRAWINGS.
6. CONTROLLER LOCATIONS ARE APPROXIMATE. FINAL LOCATION OF AUTOMATIC CONTROLLER SHALL BE DETERMINED BY THE OWNER'S REPRESENTATIVE.
7. 120 VOLT ELECTRICAL POWER SOURCE FOR CONTROLLER SHALL BE PROVIDED BY THE GENERAL CONTRACTOR. GENERAL CONTRACTOR SHALL BE RESPONSIBLE FOR MAKING HOOK-UP FROM POWER OUTLET TO CONTROLLER. LANDSCAPE CONTRACTOR SHALL BE RESPONSIBLE FOR LOW VOLTAGE CONNECTIONS.
8. QUICK COUPLER VALVES, GARDEN VALVES, AND VALVE BOXES SHALL BE INSTALLED IN GROUND COVER AREAS WHENEVER POSSIBLE.
9. STEEL AND GALVANIZED PIPE UNDER PAVED STREETS, PARKING LOTS, AND THROUGH WALLS SHALL BE INSTALLED IN SCH. 40 PVC SLEEVES, AS CALLED OUT ON PLANS, OR AS PER LOCAL CODES. COORDINATE INSTALLATION OF SLEEVES PRIOR TO HARDSCAPE CONSTRUCTION.
10. IRRIGATION HEADS WITH POTENTIAL FOR DRAINAGE FROM LATERAL WALLS BE EQUIPPED WITH ABOVE GRADE ANTI-DRAIN VALVES. (FOR POP-UP HEADS, USE BELOW GRADE ANTI-DRAIN VALVES).
11. UPON COMPLETION OF THE JOB, CONTRACTOR SHALL PROVIDE THE OWNER WITH TWO EACH OF THE FOLLOWING KEYS:
    1) QUICK COUPLER/GARDEN VALVE
    2) GATE VALVE
    3) CONTROLLER
12. DO NOT INSTALL ANY IRRIGATION SYSTEM AS INDICATED ON DRAWINGS WITHOUT FIRST CHECKING CONSTRUCTION. CHANGE DIFFERENCES IN FIELD CONDITIONS FROM THOSE INDICATED ON DRAWINGS IN AREA OF CONSTRUCTION. NOTIFY THE OWNER'S REPRESENTATIVE OF ANY DIFFERENCES BETWEEN EXISTING CONDITIONS THAT MAY NOT HAVE BEEN CONSIDERED IN THE ORIGINAL DESIGN. NOTIFY THE OWNER'S REPRESENTATIVE OF ANY EXISTING CONDITIONS THAT ARE NOT SHOWN OR THAT DIFFER FROM THOSE SHOWN ON THE DRAWINGS.

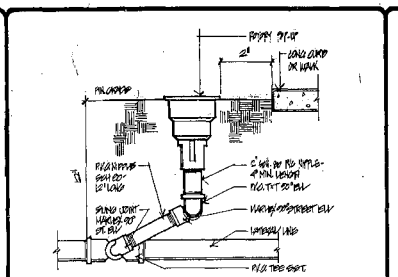
DESIGN
JOB 98090
SHEET L-2
OF

JOB # 01989

GENERAL IRRIGATION SPECIFICATIONS

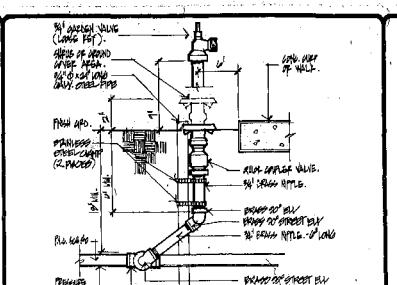
A. Scope
Provide labor, materials and equipment considered as necessary to complete irrigation work as indicated and specified.

B. General Conditions:
1. The irrigation design as indicated on the drawings is diagrammatic. Scaled dimensions are approximate. Before proceeding with work, check and verify site dimensions.
2. Do not install the irrigation system when unknown obstructions, grade differences or discrepancies in area dimensions exist. Immediately bring discrepancies to the attention of the owner's representative. If notification is not performed, the contractor shall assume responsibility for revisions necessary.
3. Coordinate installation of irrigation work to avoid conflicts with planting, utilities, engineering and architectural features.
4. Protect installed contract work and work of others.
5. Apply and pay for necessary permits and fees required in pursuit of work as required by governing codes.
6. Local, municipal and state laws, rules and regulations governing or relating to a portion of this work are hereby made a part of these specifications.
7. Keep premises clean and free of excess equipment, materials and rubbish incidental to work during construction and maintenance period. Broom clean all paved areas.
8. Note all finish grades before connecting work. Restore finish grade changed during course of this work to original or intended contours where practicable.



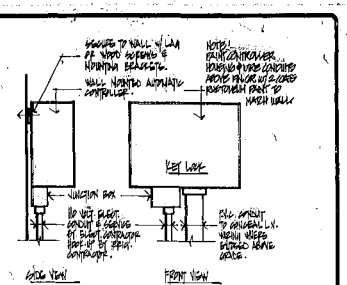
C. Submittal:
1. Record Drawings:
a. Reproduce one set of the drawings on Sepia base and record work as actually installed.
b. Make changes to Sepia prints in ink by ballpoint pen. Use eradicating fluid when re-doing drawings.
c. Maintain record drawings on site.
d. Turn over record drawings to the owner's representative before the end of the specified maintenance period.
e. Dimension from two permanent points of reference (buildings, monuments, pavement, curbs, etc.) the following:
1) Connections to existing water lines.
2) Gate, quick coupling and sprinkler control valves.
3) Routing of sprinkler pressure lines.
4) Routing of electrical wiring.
2. Controller Charts:
a. Submit record drawings with changes to the owner's representative before the charts are prepared.
b. Reduce record drawings to fit inside controller door. Reproduce as a blackline print and color code area of coverage for each station.
c. Mount between two pieces of 1/8 rigid plastic.
d. Provide one chart for each controller showing the area covered by that controller.

D. Guarantee
The 1ld sprinkler system, including work done under this contract, shall be guaranteed in writing as to material and workmanship, including settling of backfilled areas below grade for a period of one year following the date ending of the specified maintenance period. This date shall be determined by the owner's representative after review of the specified irrigation work. Immediately repair damage to the system and site caused by faulty materials of workmanship at no cost to the owner.



E. Materials
1. General:
a. Provide new materials and equipment of best recommended quality obtainable, which comply with drawings and specifications.
b. No substitution of specified material or equipment shall be made without review by Richard Irion & Associates.
2. Plastic Pipe and Fittings:
a. Pressure lines, mainline welded type, PVC class 315 for 3 1/2" and larger, solvent welded type PVC SCH 40 for 2" and smaller.
b. Non-pressure lines, solvent welded type PVC class 200.
c. Pipe shall be made from NSF approved, Type 1, Grade 1 PVC compound conforming to ASTM resin specification D1784. Pipe shall meet requirements set forth in tabular specification 12-2-7 and appropriate standard dimension ratio.
d. Pipe shall bear the following markings: Manufacturer's name, nominal pipe size, schedule or class, pressure rating in PSI, NSF approval and date of extrusion.
e. Fittings, solvent welded type PVC SCH 40, 1-2, 1241 NSF approved shall conform to ASTM test procedure D 2466.
f. Fittings shall bear the manufacturer's name or trademark, material designations, size, applicable I.P.S. schedule and NSF approval.
g. Solvent cement and primer shall be of type and installation per the manufacturer.
h. Pipe under 2" paving shall be PVC extension SCH 40.
3. Irrigation Equipment, including, but not limited to, quick coupling valve, hose bib, control valve, check valve, gate valve, backflow prevention unit, automatic controller and irrigation heads. Types, size and performance specified on the legend.
4. Control Wiring:
a. No. direct burial copper wire AWG-U.F. 600 volt. Size shall be #14 or larger. Common wire to be white, control wires to be color coded.
b. Solder splices, use Scotch-lok locking jacks or pen-lite wire connectors.
5. Valve Box:
a. One 9" dia. x 20" deep, round, green plastic box with cover marked "water" for gate valves.
b. One 9 1/2" w. x 13" l. x 14" deep rectangular, green plastic box with bolt-down cover marked "control valve" for electrical control valves.

F. Installation Procedure
1. General: If no detail is provided for work under this contract, install in accordance with manufacturer's recommendations or recognized standard practice. Submit recommended procedures to owner's representative before proceeding with work.
2. Water Supply:
a. Connect irrigation system to POC at approximate locations shown on drawings.
b. Allow for minor changes in POC caused by actual site conditions.
c. Verify available water pressure before construction. If pressure is not sufficient to operate systems as designed, bring this to the immediate attention of the owner's representative. If notification is not performed, the contractor shall assume responsibility for revisions necessary.
3. Electrical Supply:
a. Provide power and connections to the automatic controller as indicated on the drawings.
b. Comply with applicable codes and ordinances.
4. Trenching:
a. Dig trenches straight and support pipe continuously on bottom of trench. Lay pipe to an even grade. Follow layout indicated on drawings.
b. Minimum depth requirements: provide 18" of cover for pressure supply lines, 12" of cover for non-pressure lines and 24" of cover for lines under paving unless called for differently on drawings or as per city or county recommendation.
5. Control Wiring:
a. Install wiring in same trench as pressure supply lines wherever possible. Multiple wires shall be taped together at intervals of 10'.
b. No splices shall be made between controller and remote control valve.
c. Provide a 1' dia. by 12" loop expansion coil within 3' of each wire splice and at 100' on center.
6. Hydrostatic Pressure Test:
a. Notify owner's representative. Testing shall occur prior to backfill and installation of control valves.
b. Test all pressure lines under hydrostatic pressure of 125 lbs. per square inch for not less than four hours. Test all non-pressure lines under existing static pressure.
c. If leaks develop, replace joints and repeat test until system is shown to be watertight.
d. Furnish necessary force pump and other test equipment.
7. Backfilling:
a. Mechanically compact backfill for trenching to dry density equivalent to adjacent undisturbed soil, and make adjacent graded without surface areas, humps or other irregularities.
b. Place 6" or more of clean soil, free of debris, rock, etc. as initial backfill on pressure supply lines.
c. Place fine granular material with no foreign matter larger than 1/2" in size as initial backfill on all non-pressure lines.
d. Place a minimum of 6" of sand on pipes located under areas where paving will be installed. Use specified initial backfill for remaining backfill necessary.
e. Install piping under existing walks by jacking or boring. If cutting or breaking of walks is necessary, it shall be done and replaced as part of this contract. Notify permission from owner's representative before proceeding.
8. Line Clearances:
a. Lines shall have a clearance of 6" or more from each other, and from lines of other trades.
b. Parallel lines shall not be installed directly over one another, but staggered to the sides of the trench.
9. Irrigation Equipment, as defined above:
a. Install as per details.
b. Spacing of irrigation heads shall not exceed maximum the spacing on drawings.
c. Riser heights for irrigation heads shall be level.
d. Install sprinkler heads 12" out from low lying windows.
10. Assemblies:
a. Install no multiple assemblies on plastic lines. Provide each assembly with its own outlet.
b. PVC to metal connection shall be by PVC male thread adapter fitting screwed into metal female fitting.
c. Teflon tape shall be used on all threaded PVC to PVC and PVC to metal joints.
11. Flushing and Adjusting System:
a. After irrigation pipelines and risers are in place and connected, and prior to installation of irrigation heads, open the control valves and use a full head of water to flush out system.
b. Adjust valves and alignment and coverage of irrigation heads. Adjustments may include changes in nozzle sizes and patterns of arc. These changes shall be made without additional cost to the owner.



G. Observation Schedule
1. A pre-job conference shall be required before proceeding with work under this contract. An observation schedule shall be determined at this time for all work. Observations shall include, but not be limited to, one meeting at the start of the 60-day maintenance period and one at the end of the 60-day maintenance period.
2. Contact owner's representative 72 hours or 3 working days in advance of each agreed observation or conference.

PLANTING NOTES

1. The planting plan is diagrammatic. Plant locations are approximate. Plant symbols take precedence over plant quantities specified. Notify the Owner's Representative of discrepancies prior to starting work.
2. Plant quantities given in the legend are approximate and for the convenience of the Contractor only.
3. Prior to planting, construction adjacent to planting areas shall be complete and irrigation systems installed and operational.
4. Plant material in or near paving and walls may require installation prior to construction. Coordinate this work through the General Contractor.
5. Take soil samples and submit written report to Richard Price & Associates prior to the start of soil preparation per the specifications.
6. Three weeks prior to delivery to site, submit photos of sample shrub trees to Richard Price & Associates for review.
7. Install brake at small lines in planting areas where areas may interfere with parked cars.
8. Keep shrubs and trees a minimum of 3'-6" (or as indicated on plan) from back of parking curbs to allow for car overhang.
9. Unless noted differently on the plan, planting areas should receive ground cover treatment up to plant rootball. No bare soil areas shall be left exposed except directly above rootballs.

GENERAL PLANTING SPECIFICATIONS

A. Scope

Provide labor, materials and equipment considered as necessary to complete planting work as indicated and specified.

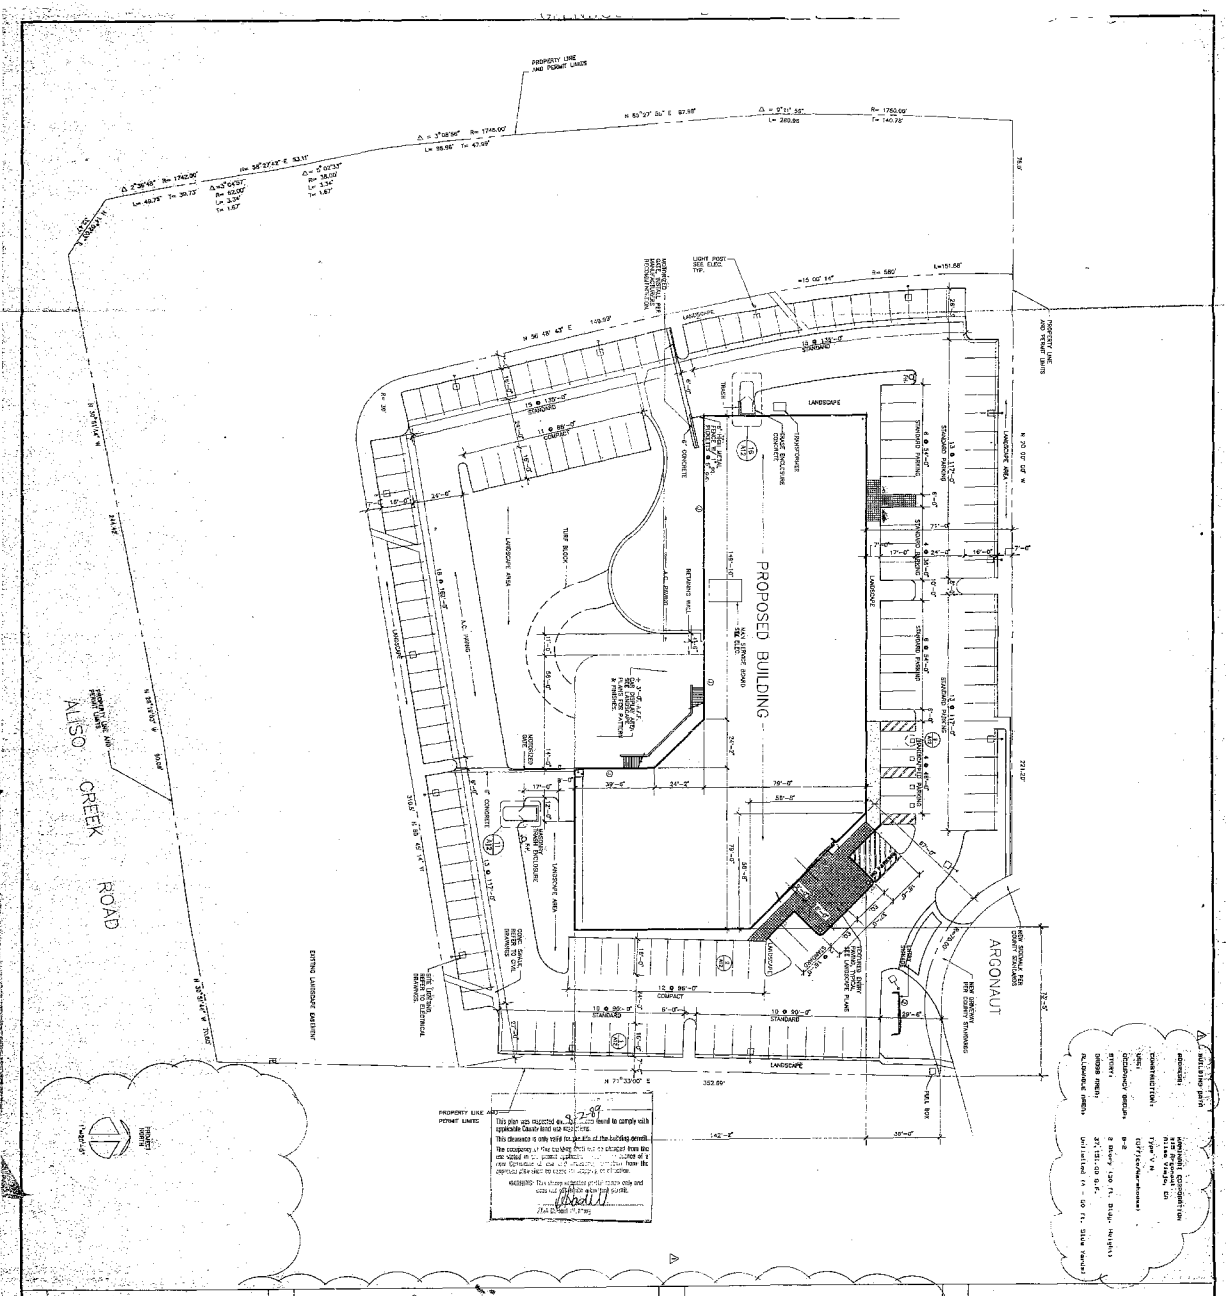
B. General Conditions

1. The planting design as indicated on the drawings is diagrammatic. Scaled dimensions are approximate. Before proceeding with work, check and verify site dimensions.
2. Do not install plantings where unknown obstructions, grade differences or discrepancies in site dimensions exist. Immediately bring discrepancies to the attention of the owner's representative. If notification is not performed, the contractor shall assume responsibility for revisions necessary.
3. Coordinate installation of planting to avoid conflicts with irrigation work, utilities, or engineering and architectural features.
4. Protect installed constant work and work of others.
5. Apply and pay for necessary permits and fees required in pursuit of work as required by governing codes.
6. Local, municipal and state laws, rules and regulations governing or relating to a person or his work are hereby made a part of these specifications.
7. Keep premises clean and free of excess equipment, materials and rubbish incident to work during construction and maintenance period. Broom clean all paved areas.
8. Make all finish grades before connecting work. Receive finish grade channel during course of this work on original or accepted contours where roof scales.
9. Do not proceed with the planting installation until irrigation system is installed and operable.

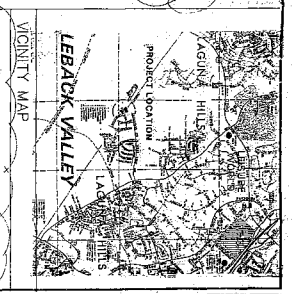
C. Submittals

1. Agronomic Soils Test Report:
   a. Take (3) samples of site soil at a depth of 6 to 12 inches, within proposed planting areas, after completion of grading and prior to weed control and soil preparation.
   b. Bring samples to an approved soils testing laboratory registered by the State of California for soil evaluation.
   c. Request testing for fertility and suitability analysis with written recommendations for soil amendment, fertilizer and chemical conditioners, application rates for soil preparation, planting backfill mix, hydromulch and post-maintenance fertilization programs.
   d. Soils report recommendations shall take precedence over the amendment and fertilizer application rates specified here.
   e. Submit written report to Owner's representative prior to soil amendment and ordering plant material.
2. Written Guarantees:
   a. All trees shall be guaranteed to live in a healthy condition for one year following the date of completion of the 60-day maintenance period. This date shall be determined by the owner's representative at the final inspection.
   b. Replacement of unhealthy trees immediately upon notification by the owner's representative, at no cost to the owner. Replacement trees shall meet the same specifications as the original trees. Replacement trees shall be guaranteed for one year after their review by the owner's representative.
   c. Install and stake trees as originally specified at no cost to the owner.
3. Statements of Conformation:
   a. Submit at the time of delivery invoice statement for organic amendment and fertilizer certifying delivery to the site quantities by each and/or volume.
   b. Submit suppliers' statements of conformation certifying compliance of organic amendments and fertilizers with these specifications.

D. Materials



1. Generals:
   a. Provide materials of best recommended quality obtainable which comply with drawings and specifications.
   b. No substitutions of specified materials shall be made without consent of the owner's representative.
2. Import Soil: friable sandy loam fraction with 5% sand, 30% clay and 35% silt:
   a. Free of rocks, clods and stones larger than 1" in diameter, weeds, sticks, brush, and other litter, infestation of undesirable insects and plant diseases.
   b. Salinity: The saturation medium conductivity shall not exceed 3.5 millimhos/CM at 25 C.
   c. Boron: The concentration in the saturation extract shall not exceed 1.0 PPM.
   d. Sodium: The sodium absorption ratio (SAR) as calculated from analyses of saturation extract shall not exceed 4.0 PPM.
   e. A soils test report shall be required at the contractor's expense if physical or chemical properties appear not to comply with specifications.
3. Organic Amendment, derived from wood or bark, granular in nature, stabilized with nitrogen, fortified with minerals and having the following properties:
   a. Particle size:
      1) Min. 95% passing 4 mesh screen
      2) Max. 60% passing 8 mesh screen
   b. Nitrogen content - (N) values based on dry weight: 0.5% for redwood amendant, 0.1% for fir amendant, 1.0% for cedar amendant, 1.0% for fir or pine bark. Urea formaldehyde not acceptable.
   c. Salinity - conductivity 3.5 millimhos/CM at 25 C or less as determined on saturation extract conductivity.
   d. Organic content - minimum 98% by weight.
4. Fertilizer and Minerals:
   a. Commercial Fertilizer:
      1) Soil preparation - use 6-20-20 grade.
      2) Hydroseed: Use 16-6-8 grade slow release.
      3) Wood mulches: Use 21-0-0 grade with 100% nitrate nitrogen.
      4) Sod lawn: Use 16-20-0 grade, ammonium phosphate.
      5) Watersaver: Use 16-4-8 grade.
   b. Soil Sulphur: Minimum 99% elemental sulfur.
   c. Iron Sulfate (FeSO4 7H2O): 1 minimum 20% Fe, in solution.
   d. Gypsum: Calcium Sulfate Ca SO4 2H2O: 22% CA
   e. Planting Supplies: All grades with minimum grade 20-20-5.
5. Plants:
   a. Quality: Healthy, vigorous, normal habit; free of weeds, insect infestations and plant diseases, with scales, abrasions of the bark and other disfigurements. Quality in accordance with these specifications shall be determined by the owner's representative.
   b. Size: Plant normally supplied in containers or locally available nursery stock for specimen variety specified in the legend. The root system shall fill the container but not be root bound. Size in accordance with these specifications shall be determined by the owner's representative.
   c. Rejection of substitutions: Remove rejected plants from the site immediately and replace at no additional cost to the owner. Substitutions shall not be permitted unless requested in writing in advance from the owner's representative.
   d. Protection: Handle and store plants to prevent from sun, wind and other injuries. Injury shall be cause for rejection even after initial inspection.
   e. Stakes, guying and ties shall be galvanized steel, shall not damage trees and shall be functional as indicated on drawings.
   f. Lawns: Turf mix shall be 95% tall fescue and 5% perennial rye.
   g. Hydromulch:
      1) Wood cellulose mulch: Clean, uniformly wood cellulose fiber, dyed green with uniform suspension in water without absorption of moisture, and harmful to people or soil below.
      2) Seeds: Clean, fresh, new crop, labeled with supplier's statement of composition and percentage of purity.



E. Installation

1. Weed Control:
   a. After establishment of rough grades, and prior to soil preparation, kill weed to uproot existing weeds and grasses and remove from site.
   b. Apply 200 lbs. per acre of commercial fertilizer. Irrigate (4) times per day during the summer season and (2) times per day during other seasons for (2) weeks, or until most weeds have germinated.
   c. Spray a non-selective contact herbicide per manufacturer's directions to eradicate the germinated weeds. Allow herbicide to kill weeds. Till soil to uproot germinated weeds and grasses and remove from site. Minimum till depth 6 inches.
   d. If weeds and grasses still exist, irrigate (4) or (2) times per day, as above, for (2) weeks or until new growth appears. Reapply herbicide and allow time to kill weeds. Remove weeds from site.
   e. No pre-emergent herbicide shall be used in landscape areas to be seeded.
2. Soil Preparation:
   a. Finish grading, mounding, soils bracing and weed control shall be completed prior to soil preparation.
   b. Apply per 1,000 sq. ft.. These rates may be adjusted by the soils report and are for bidding purposes only:

Organic Amendment	4	Cu. yds.
Commercial Fertilizer	20	lbs.
Soil Sulfur	10	lbs.

   c. Work into site soil by cultivation, spading or rototilling to a depth of at least 6-8 inches and fine grade to smooth finish (1) inch below adjacent paving and curbs. Remove debris and weeds from site. Keep material clean from paving.
3. Planting:
   a. Trees, shrubs and vines:
      1) Order plant locations or place recommended quantities or plants in containers on locations, and obtain verification from the owner's representative before excavating pits, making necessary adjustments as directed.
      2) Plant trees and shrubs as soon as site is available and weather conditions are suitable for performance of the specifications. Do not plant if soil is excessively wet.
      3) Excavate pits with vertical sides and flat bottoms and of sizes. The size shall be large enough to permit handling and planting operations without overcrowding, and at least 6" or more away from curbs and paving.
      4) Backfill mix: Use native soil blended with compost and/or specified import soil. This mix may be adjusted by the soil's report (or 1/3 compost per cu. yd.
         Tree backfill mix:
         Shrub backfill mix:
      5) Set plants in center of pits, in vertical position at the same depth as they were in the container or balled and burlapped material.

Owner-Builder Declaration
I hereby affirm that I am exempt from the Contractor's License Law for the following reason [Sec.7031.5, Business and Professions Code: Any city or county which requires a permit to construct, alter, improve, demolish, or repair any structure, prior to its issuance, also requires the applicant for such permit to file a signed statement that he is licensed pursuant to the provisions of the contractor's License Law(Chapter 9, commencing with Section 7000, of Division 3 of the Business and professions Code) or that he is exempt therefrom, and the basis for the alleged exemption. Any violation of section 7031.5 by any applicant for a permit subjects the applicant to a civil penalty of not more than five

☐ I, as owner of the property, or my employees with wages as their sole compensation, will do the work, and the structure is not intended or offered for sale (Sec. 7044, Business and Professions Code: The Contractor's Licensed Law does not apply to an owner of property who builds or improves thereon, and who does such work himself or through his own employees, provided that such improvements are not intended or offered for sale. If, however, the building or improvement is sold within one year of completion, the owner-builder will have the burden of proving that he did not build or improve the purpose of sale.)

☐ I, as owner of the property, am exclusively contracting with licensed contractors to construct the project(Sec 7044, Business and Professions Code:The Contractor's License Law does not apply to an owner of property who builds or improves thereon, and contracts for such projects with contractor(s) licensed pursuant to the contractors License Law).

☐ I am exempt under Sec _____, B&PC for this reason

Date 6/18/03 Initial MM

Workers' Compensation Declaration
I hereby affirm under penalty of perjury one of the following declarations:

☐ a. I have and will maintain a certificate of consent to self-insure for workers' compensation as provided by Section 3700 of the Labor Code, for the performance of the work for which this permit is issued.

☐ b. I have and will maintain worker's compensation, as required by Section 3700 of the Labor Code, for the performance of the work for which this permit is issued. My worker's compensation insurance carrier and policy number are:
Ins. Co.: _____
Policy No: _____
Exp Date: _____

☐ (This section need not be completed if the permit is for one hundred dollars ($100) or less).

☐ c. I certify that in the performance of the work for which this permit is issued,I shall not employ any person in any manner so as to become subject to the Workers' Compensation Laws of California and agree that if I should become subject to the workers' compensation provisions of Section 3700 of the Labor Code, I shall forthwith comply with those provisions.
Date _____ Signature _____
Warning: Failure to secure workers' compensation coverage is unlawful, and shall subject an employer to criminal penalties and civil fines up to one hundred thousand dollars ($100,000), in addition to the cost of compensation, damages as provided for in Section 3706 of the Labor Code, interest, and attorney's fees.

I certify that I have read this application and state that the above information is correct, and that I am the owner or the duly authorized agent of the owner. I agree to comply with all city and state laws relating to building construction. I hereby authorize representatives of the City of Aliso Viejo to enter upon the above mentioned property for inspection purposes.

RECESSED FIXTURE SUPPORT

MANDATORY MEASURES

1. EXISTING LIGHTING SHALL COMPLY. THE EXISTING LIGHTING SHALL BE SWITCHED BY AN AUTOMATIC TIME SWITCH CONTROL DEVICE WITH A 24-HOUR PROGRAM CAPABILITY AND A MINIMUM OF 4 SETTINGS PER DAY.
2. OUTDOOR LIGHTING SHALL BE CONTROLLED BY A PHOTOCELL AND AN ASTRONOMICAL TIME CLOCK. THE PHOTOCELL SHALL BE MOUNTED ON THE NORTH SIDE OF THE BUILDING AND SHALL NOT BE AFFECTED BY ARTIFICIAL LIGHT. THE ASTRONOMICAL TIME CLOCK SHALL BE CAPABLE OF SCHEDULING 7 DAYS IN ADVANCE AND SHALL BE CAPABLE OF RETAINING SCHEDULING DURING POWER OUTAGES FOR AT LEAST 48 HOURS.
3. AUTOMATIC CONTROL DEVICES OR SYSTEMS SHALL BE INSTALLED TO TURN OFF LIGHTS IN AREAS WHERE DAYLIGHT IS SUFFICIENT TO PERFORM VISUAL TASKS. THE CONTROL DEVICES SHALL REDUCE LIGHT LEVELS IN RESPONSE TO AVAILABLE DAYLIGHT USING PHOTOELECTRIC CONTROLS OR SKYLIGHTS WITH DIMMING OR SWITCHING BALLASTS.
4. ALL EXISTING LUMINAIRES AND LAMPS SHALL BE REPLACED WITH NEW ENERGY EFFICIENT LUMINAIRES AND LAMPS.
5. ALL EXISTING LUMINAIRES SHALL BE REPLACED WITH NEW ENERGY EFFICIENT LUMINAIRES AND LAMPS.
6. ALL EXISTING LUMINAIRES SHALL BE REPLACED WITH NEW ENERGY EFFICIENT LUMINAIRES AND LAMPS.
7. ALL EXISTING LUMINAIRES SHALL BE REPLACED WITH NEW ENERGY EFFICIENT LUMINAIRES AND LAMPS.
8. ALL EXISTING LUMINAIRES SHALL BE REPLACED WITH NEW ENERGY EFFICIENT LUMINAIRES AND LAMPS.
9. ALL EXISTING LUMINAIRES SHALL BE REPLACED WITH NEW ENERGY EFFICIENT LUMINAIRES AND LAMPS.

Construction Lending Agency
I hereby affirm that there is a construction lending agency for the performance of the work for which this permit is issued (Sec. 1097, Civ..C)
Lender's Name _____
Lender's Address _____

Owner-Builder Declaration
I hereby affirm that I am exempt from the Contractor's License Law for the following reason [Sec.7031.5, Business and Professions Code: Any city or county which requires a permit to construct, alter, improve, demolish, or repair any structure, prior to its issuance, also requires the applicant for such permit to file a signed statement that he is licensed pursuant to the provisions of the contractor's License Law(Chapter 9, commencing with Section 7000, of Division 3 of the Business and professions Code) or that he is exempt therefrom, and the basis for the alleged exemption. Any violation of section 7031.5 by any applicant for a permit subjects the applicant to a civil penalty of not more than five

☐ I, as owner of the property, or my employees with wages as their sole compensation, will do the work, and the structure is not intended or offered for sale (Sec. 7044, Business and Professions Code: The Contractor's Licensed Law does not apply to an owner of property who builds or improves thereon, and who does such work himself or through his own employees, provided that such improvements are not intended or offered for sale. If, however, the building or improvement is sold within one year of completion, the owner-builder will have the burden of proving that he did not build or improve the purpose of sale.)

☐ I, as owner of the property, am exclusively contracting with licensed contractors to construct the project(Sec.7044, Business and Professions Code:The Contractor's License Law does not apply to an owner of property who builds or improves thereon, and contracts for such projects with contractor(s) licensed pursuant to the contractors License Law).

☐ I am exempt under Sec._____, B&PC for this reason

Date_____ Initial_____

Workers' Compensation Declaration
I hereby affirm under penalty of perjury one of the following declarations:

☐ a. I have and will maintain a certificate of consent to self-insure for workers' compensation as provided by Section 3700 of the Labor Code, for the performance of the work for which this permit is issued.

☒ b. I have and will maintain worker's compensation, as required by Section 3700 of the Labor Code, for the performance of the work for which this permit is issued. My worker's compensation insurance carrier and policy number are:
Ins. Co.: CONTINENTAL CASUALTY CO.
Policy No: WC 271041202
Exp Date: 2-28-05

☐ (This section need not be completed if the permit is for one hundred dollars ($100) or less)
c. I certify that in the performance of the work for which this permit is issued, I shall not employ any person in any manner so as to become subject to the Workers' Compensation Laws of California and agree that if I should become subject to the workers' compensation provisions of Section 3700 of the Labor Code, I shall forthwith comply with those provisions.
Date_____ Signature_____
Warning: Failure to secure workers' compensation coverage is unlawful, and shall subject an employer to criminal penalties and civil fines up to one hundred thousand dollars ($100,000), in addition to the cost of compensation, damages as provided for in Section 3706 of the Labor Code, interest, and attorney's fees.

I certify that I have read this application and state that the above information is correct, and that I am the owner or the duly authorized agent of the owner. I agree to comply with all city and state laws relating to building construction. I hereby authorize representatives of the City of Aliso Viejo to enter upon the above mentioned property for inspection purposes.

Memo

To: Ty Hall – City of Aliso Viejo FAX: 949-425-3899

From: Deborah Baker, Assistant General Manager

Date: 5/14/2004

Re: 15 Argonaut, Aliso Viejo, CA 92656

Mr. Hall,

Please allow this correspondence to confirm that the re-roofing project planned for 15 Argonaut does not require review by the Aliso Viejo Community Association (AVCA) Master Architectural Committee (MAC) since it is replacing the original roof with the same color and type of roofing materials.

The MAC only reviews plans for aesthetic purposes, and because this improvement will not affect the exterior appearance of the property there is no need for review or approval.

Should you have any questions or concerns regarding this matter, please do not hesitate to contact me at (949) 262-5890 ext 215.

Thank you.

Deborah

Dear Jennifer

Ambry Genetics is a testing lab with offices, currently residing in the City of Aliso Viejo. As their operations have expanded, they require additional space. They have agreed to relocate to 15 Argonaut – also in the City of Aliso Viejo.

This new, larger facility, previously occupied by a memory chip company, had a similar business model which allows Ambry a cost effective and relatively seamless expansion. It can also better accommodate their current and anticipated needs and it allows Ambry the chance to remain in the City of Aliso Viejo.

Reviewing City guidelines, we understand that Ambry is considered generally a dry lab with a minimal wet lab component.

Below is a description of the lab spaces of this project:

105 – R&D 2,954 s.f. (dry lab) – Use of small tubes and plates with micro-liter sized reactions. Various sequencing reactions and sample preps for next generation sequencing.

107A,B,C – Test & Test Storage 1,092 s.f. & 491 s.f. (Future R&D dry lab)– for future expansion, no work going on in any of the 3 areas.

112 – Sequence (dry lab) - 1,053 s.f.- Samples are loaded onto various sequencing platforms using either sequencing plates or flow-cells (microscope slide sized chips). Very little to no bench work required. This room will house the sequencing equipment that will run either overnight or over several days.

113 – PCR (dry lab) - 434 s.f. This room will house all of our PCR machines. Samples will be placed in these machines in either plates or tubes and be left to cycle through various temperatures for a number of cycles. Again this is very little to no bench work required.

114A – Dcode (dry lab) - 451 s.f. Being left empty at the moment for future growth.

5618 E. CONANT STREET LONG BEACH, CA 90808 562.420.1035

114B - QA (wet lab) - 449 s.f. This room is what I would consider "wet" because this is where we do all of our electrophoresis which uses buffered TAE solution mixed in with de-ionized water. Techs will load acrylamide gels with patient sample and let run for several hours as they gradually heat up and while constant voltage is being applied.

114C – Solutions (wet lab) - 329 s.f. - This is also what I would consider "wet" because this is where we use all of our chemicals in larger sized reactions. Usually in liters or in tens of liters. This is our reagent prep area.

The minimal amount of wet lab and the kinds and quantities of chemicals at this facility pose a minimal threat to public safety, yet Ambry is regulated by the following agencies:
The Federal agencies are CLIA = Clinical Laboratory Improvement Amendments and CAP = College of American Pathologists.

Federal	License #
CLIA	05D0981414
CAP	LAP# 7154701

In addition, they are liscened in the following States:

State	License #
California	CLF11694
Florida	800016789
Rhode Island	LCDO00439
Pennsylvania	027832
Maryland	1052
New York	PFI: 8160

Ambry Genetics also maintains a standard office emergency preparedness protocol.

Thank You,

Mark A. Grisafe, AIA

Moulton Niguel Water
WATER QUALITY AND SERVICE ARE #1

July 13, 2011

Phase 1

City of Aliso Viejo
12 Journey, Suite 100
Aliso Viejo, CA 92656

Attention: Joanna Stevens

Regarding: Ambry Genetics
15 Argonaut

Dear Ms. Stevens:

This letter serves as notice that the Moulton Niguel Water District (MNWD) will serve water and sanitary sewer to the above subject development. This project is completely within MNWD boundaries. MNWD staff has determined that there is no need for grease intercepting facilities. This indication of MNWD's ability to serve the above-referenced project is conditioned upon the payment of all applicable fees.

The availability of water services is subject to the suppliers of water to MNWD continuing to honor their contractual obligation relative to the amount of water to be supplied. MNWD can make no representations as to the future intention of said suppliers in this regard.

Sincerely,

MOULTON NIGUEL WATER DISTRICT

Mark H. Mountford, P.E.
Associate Engineer

Please review each category and Mark ☒ next to all that apply to your project. If none apply, Mark ☒ next to No. 97 and sign the declaration below.

Facility Types: Is your facility in a category below?

- ☐ **Will facility occupant use, handle or store hazardous materials in a quantity that is ≥ 55 gallons of liquid, 500 lbs. of solids, or 200 cu. ft. of compressed gas, at any time?** (1)
- ☐ **Within 1,000 ft. of (K-12) school or acute/long term health care facility** (2)
- ☐ **Assembly (50 or more for drinking, dining or education)** (3)
- ☐ **Dry Cleaner** (4)
- ☐ **Metal Finisher** (5)
- ☐ **Plating Shop** (6)
- ☐ **Photo Processor** (7)
- ☐ **Print Shop** (8)
- ☐ **Wood Stripping/Refinishing** (9)
- ☐ **Circuit Board Manufacturer** (10)
- ☐ **Medical/Health Care/Dental Office** (11)
- ☑ **Biomedical Operation** (12)
- ☐ **Restaurant** (13)
- ☐ **Food Preparation Facility** (14)
- ☐ **Motel or Hotel** (15)
- ☐ **Gasoline Station** (16)
- ☐ **Automotive Body/Repair Shop** (17)
- ☐ **Auto Wrecking Yard** (18)
- ☐ **Battery Storage, Use, Charging** (19)
- ☐ **Tire/Rubber Storage (2,500 sq. ft.)** (20)

Equipment: Will any of the following items be utilized at your facility?

- ☐ **Fuel storage/dispensing equipment** (21)
- ☐ **Above/below ground storage tanks** (22)
- ☐ **Underground storage tank for hazardous materials** (23)
- ☐ **Above ground storage tank for petroleum products** (24)
- ☐ **Public swimming pool** (25)
- ☐ **Refrigeration equipment** (26)
- ☐ **Ovens, industrial baking/drying** (27)
- ☐ Charbroiler (28)
- ☐ **Spray booth** (29)
- ☐ **Printing press (screen/lithographic/ flexographic)** (30)
- ☐ Abrasive blasting cabinet/room (31)
- ☐ **Grinder over 2 horsepower** (32)
- ☐ **Dust collector, scrubber, or other air pollution control equipment** (33)
- ☐ Elevators (34)
- ☐ Tower Cranes, Scaffolding (35)
- ☐ Boiler/Combustion (36)
- ☐ **Steam boilers** (volume > 15 PSI) (37)
- ☐ Internal combustion engine (> 50 HP, excluding motor vehicles) (38)
- ☐ Pressure vessels (volume > 1.5 cu. ft. 150 PSI of air) (39)
- ☐ **Retail stationary propane tanks** (40)
- ☐ **Chemical coagulation/precipitation** (41)
- ☐ **Cyanide destruction or chromium reduction** (42)
- ☐ **Air flotation** (43)

Will this facility use any of the following pretreatment systems for wastewater?

- ☐ **Acid or base neutralization** (44)
- ☐ **Interceptor, clarifier, sump, trap** (45)
- ☐ **Screen, filter, or grit removal** (46)
- ☐ **Solvent separation** (47)
- ☐ **Centrifuge or cyclone** (48)
- ☐ **Grease or oil removal** (49)
- ☐ **Spill protection** (50)

Processes: Will you conduct any of the following processes on site?

- ☐ **Treating hazardous waste on-site** (51)
- ☐ **High piled combustible storage (>12' or 6' for palettes)** (52)
- ☐ Asbestos removal (53)
- ☐ **Producing dust (wood work, milling, grinding), fumes, smoke, odors** (54)
- ☐ **Etching/casting/melting metals** (55)
- ☐ **Molding, extruding, curing plastics** (56)
- ☐ **Mixing and blending or refining of liquids and/or powders** (57)
- ☐ **Storage of acids, solvents, organic liquids or fuels** (58)
- ☐ **Application of paints/adhesives** (59)
- ☐ **Spraying/dipping** (60)
- ☐ **Welding and cutting** (61)
- ☐ Trenching and shoring (62)
- ☐ Land disturbance/construction (63)

Materials: Will you use, store or handle hazardous materials?

- ☐ **Hazardous materials** (See Definitions) (64)
- ☐ **Extremely hazardous substances** (List Available) (65)
- ☐ **Explosives, highly toxic material** (See Definitions) (66)
- ☐ **Combustible fiber (>100 cu. ft.)** (67)
- ☐ **Combustible material (> 2 cu. ft.)** (68)
- ☐ **Matches (storage >14,400 matches)** (69)
- ☐ **Liquefied petroleum gas** (70)
- ☐ **Medical gas installations** (71)
- ☐ **Aerosol products** (72)
- ☐ **Commercial grade pesticides, fertilizers or radioactive isotopes** (73)
- ☐ **Carcinogens** (List Available) (74)

Waste/Discharge: Will your facility potentially discharge the following?

- ☐ **Generation of hazardous waste** (75)
- ☐ **Toxic organic compounds, currently on EPA, SCAQMD, or RCRA list** (76)
- ☐ **Toxic/poisonous gases or wastes** (77)
- ☐ **Flammable waste** (78)
- ☐ **Radioactive materials** (79)
- ☐ **Acid materials (pH < 6.0)** (80)
- ☐ **Basic materials (pH > 11.0)** (81)
- ☐ **Materials that could obstruct sewer** (82)
- ☐ **Wastes > 3/8 inches in diameter** (83)
- ☐ **Any Petroleum based oils** (84)
- ☐ **Cyanide wastes** (85)
- ☐ **Total dissolved solids >1000 MG/L** (86)
- ☐ **Dissolved sulfides over 0.1 MG/L** (87)
- ☐ **Discharge with temperature >140° F** (88)
- ☐ **Highly colored wastes** (89)
- ☐ **Highly odorous wastes** (90)
- ☐ **Phenolic wastes** (91)
- ☐ **Arsenic, boron, cadmium, chromium, copper, lead, mercury** (92)
- ☐ **Rainwater to sewer (Not allowed)** (93)
- ☐ Industrial storm water run-off (94)
- ☐ Discharge into surface waters (95)
- ☐ Impacts to groundwater/changes in absorption rates (96)

- ☐ None of the Above Apply (97)

I understand that this form is provided to assist permit applicants to determine regulatory requirements and achieve compliance and that **bold** categories may require a permit prior to construction and operation. I certify that to the best of my knowledge the information I provided on this form is accurate.

ORANGE COUNTY FIRE AUTHORITY

Plan Submittal Criteria for COMMERCIAL projects, MULTIFAMILY RESIDENTIAL projects and RESIDENTIAL TRACT developments

COM

INSTRUCTIONS: Fill in the project/business address and provide a brief description of the scope of work and type of operation that will take place. Answer questions 1 through 10, read and initial items 11 and 12, then complete and sign the certification section. If you answer "YES" to questions 1 through 10, submit the type of plan indicated in italics to the OCFA (see www.ocfa.org for submittal information and locations). In some cases, other plan types not indicated herein may also be necessary depending on specific conditions or business operations. If you need help completing this form or have questions regarding requirements for review, please contact the OCFA at 714-573-6108 or visit us at 1 Fire Authority Road in Irvine for assistance.

Address (street number/name, suite, city): 15 ARGONAUT, ALISO VIEJO

Project Scope/Business Description: OFFICE T.I.

YES	NO	**Are the following applicable to the proposed project or business?**
1. ☐	☑	Construction of a new building, a new story, or increase the footprint of an existing building? Changes to roadways, curbs, or parking lots? Addition, relocation, or modification of fire hydrants or fences/gates? Construction within 300 feet of an active or proposed oil well? *Fire Master Plan*
2. ☐	☑	Property is adjacent to a wildland area or non-irrigated native vegetation? *Fire Master Plan; a Fuel Modification Plan may also be required.*
3. ☐	☑	Located in or <100' from a Division of Oil, Gas, and Geothermal Resources (DOGGR) field boundary, <300' from an oil/gas seep, or <1000' from a landfill? *Methane Work Plan.*
4. ☐	☑	Installation/modification/repair of underground piping, backflow preventers, or fire department connections serving private fire hydrant/sprinkler/standpipe systems? *Underground Plan.*
5. ☐	☑	Drinking/dining/recreation/religious functions or other gatherings in a room >750 sq.ft. or >49 people? Healthcare/outpatient services for >5 people who may be incapable of immediate evacuation without assistance? Daycare/education for children? Adult daycare? 24-hour care/supervision? Incarceration or restraint? Hotel/apartment/residential facility with 3+ units? Congregate housing/dormitories with 17+ people? A high-rise structure (55 feet)? *Architectural Plan*
6. ☐	☑	Installation or modification of electromechanical locks delaying/preventing egress from a room or building? *Architectural, Sprinkler, and Alarm Plan.*
7. ☐	☑	Installation/modification/use of spray booths; dust collection; dry cleaning; industrial ovens/drying equipment; industrial/commercial refrigeration systems; compressed gasses; tanks for cryogenic or flammable/combustible liquids; vapor recovery; smoke control; battery back-up or charging systems; welding/brazing/soldering, open flame torches, cutting/grinding or other similar operations? *Special Equipment Plan*
8. ☐	☑	Storage, equipment, processes, or research involving flammable/combustible liquids or other chemicals? Motor vehicle or aircraft maintenance/repair facility? Cabinetry, woodworking, or finishing facility? *Architectural Plan and Chemical Classification; Special Equipment Plans may also be necessary.*
9. ☐	☑	Storage or merchandizing areas in excess of 500 sq. ft. where items are located higher than 12' (6' for high-hazard commodities, plastic, rubber, foam, etc.)? *High-piled Storage Plan*
10. ☐	☑	Cooking under a Type I commercial hood; installation or modification of a fire extinguishing system located in a commercial cooking hood? *Hood & Duct Extinguishing System, not just the hood mechanical plan.*

Initial each of the following two items indicating that you have read and understand the statement:

11. *Sprinkler/Alarm Requirements: Consult California Building and Fire Codes and local ordinances to determine sprinkler or alarm system requirements; if a system is required, plans shall be submitted to the OCFA. Existing buildings undergoing remodel must be evaluated by a licensed contractor to determine if modification is needed; if so, the licensed contractor shall submit plans for approval prior to any changes taking place. (Initial here:)

12. Fire Hazard Severity Zone: Consult the maps available at the building department or on the OCFA website to determine if your site is located in a FHSZ. Buildings in a FHSZ may be subject to special construction requirements detailed in CBC Chapter 7A—the building department will determine specific requirements. (Initial here:)

I certify under penalty of perjury under the laws of the State of California that the above is true:

Print name: MARK ORISAFE Signature:

Phone Number: 562-420-1035 Date: 6/30/11

Building Department: *If all of the questions have been answered "NO" and the project does not otherwise require OCFA review of sprinkler or alarm plans*, then you may accept this signed form as a written release that OCFA review is not required. Should you still require that the applicant have plans approved by the OCFA please initial here _____ or attach an OCFA referral form and have the applicant submit the form along with the appropriate plans and fees for OCFA review.*

SECTION 2

Under California Health and Safety Code regulations, applicants must file with the South Coast Air Quality Management Control District (SCAQMD) an Asbestos Demolition/Renovation Notification for every demolition EVEN WHERE NO ASBESTOS IS PRESENT and for each renovation operation where the amount of friable asbestos-containing material is greater than or equal to100 square or linear feet. NOTIFICATION MUST BE FILED 10 WORKING DAYS PRIOR TO COMMENCEMENT OF ANY WORK.

APPLICANTS ARE RESPONSIBLE for fully satisfying the provisions of these requirements and for obtaining the necessary approvals. For additional information contact:

South Coast Air Quality Management District
21865 E. Copley Dr.
Diamond Bar, CA 91765-4182
(909) 396-2336

SECTION 3

I certify I have read the above excerpt and the information I have provided on this form is true and correct, and I further certify the following: Please initial.

_____ I certify that the amount of friable asbestos-containing material involved with this proposed renovation operation does not equal or exceed 100 square or linear feet.

✓ I declare that the written asbestos notification is not applicable

_____ Attached are the copies of all written asbestos notifications and SCAQMD approvals regarding the above reference project.

Applicant's Signature: _____ Date: 8/30/11

Air Quality Permit Checklist

California State Law Code 65850.2 prohibits cities from issuing an occupancy permit to a business without clearance from the local air quality agency. This checklist will determine if you need to obtain clearance from the South Coast Air Quality Management District (AQMD).

Company Name: AMBRT GENETICS

Property Address: 15 ARGONAUT

City: ALISO VIEJO Zip Code: 92656

Contact Person: JAMES DUNLOP Title: OPERATIONS MNGR

Type of Business: BIO MEDICAL Telephone: (949) 900-5510

Applicant (print name) MARK GRISAFE Signature: _____

- Will the facility have any of the following equipment? Yes [ ] No [✓]
  - Charbroiler
  - Dry cleaning machine
  - Spray booth
  - Printing press (screen/lithographic/flexographic)
  - Internal combustion engine (greater than 50 HP (excluding motor vehicles)
  - Boiler/combustion equipment (greater than 2 million BTU/hr. maximum input)
  - Abrasive blasting cabinet/room
  - Baghouse/cartridge-type dust filter/scrubber
  - Motor fuel storage and dispensing equipment

- Will any of the following operations be performed? Yes [ ] No [✓]
  - Application of paints or adhesives
  - Etching, plating, casting, or melting of metals
  - Molding, extruding, or curing of plastics
  - Mixing and blending of liquids and/or powders
  - Storage of acids, solvents, organic liquids, or fuels
  - Production of fumes, dust, smoke, or strong odors

If you answered "No" to both questions, *this checklist is your clearance from AQMD.* If you answered "Yes" to either question, you must contact AQMD to determine if air quality permits are required. If permits are needed, AQMD will assist you in submitting permit application(s) and then provide you with a clearance letter. You can call AQMD at their Small Business Assistance Office at **(800) 388-2121**.

September 29, 2011 Memo 11.162.1

Mark Grisafe
5618 E. Conant St
Long Beach, CA 90808

Subject: Drawing Clarification and Modification
Address: 15 Argonaut, Aliso Viejo, CA 92656

Dear Mark:

Item 1: Shear walls

Per E-mail from Mark and Brian requesting additional holdown information: there are no holdowns required for 15 Argonaut. Per the plans (1/S210) the shear wall symbol will indicate if a holdown is required. See legend for more information. The symbol at the one wood shear wall indicates "NONE" for the holdown type. The Typical Structural Panel Shear wall Construction detail (3/S310) shows where holdowns would located if required.

Item 2: Rooftop Units

Two rooftop unit have been relocated moved per contractors request. Please see attached SK- 2 for partial plan. Similar detailing may be applied at the other units.

Please feel free to call with any questions or if we can be of additional assistance.

Sincerely,

Jeffrey M Roettele

REQUEST FOR BUILDING PERMIT ISSUANCE

HOLD HARMLESS AGREEMENT

TO: **Building Department / Engineering Department / Planning Department**

APPLICANT: AICI, LLC

PROJECT ADDRESS: 15 ARGONAUT **PLAN CHECK#:** 68254

PROJECT DESCRIPTION: TENANT IMPROVEMENT BUILD OUT FOR NEW TENANT, AMBRY GENETICS

Building Permit Issuance. Following City of Aliso Viejo ("City") plan check review, the above listed project may be submitted to the Building Department/Engineering Department for issuance of a building permit. Applicant acknowledges no building permit final or Certificate of Occupancy shall be granted until all planning/zoning clearances have been obtained and all appeal periods exhausted. Applicant further acknowledges an appeal of planning/zoning approval may occur within ten (10) days of the date of planning discretionary approval determination and a public hearing may be required as part of the appeal process. Applicant acknowledges additional conditions or requirements may be placed on the project or planning/zoning approval may be overturned and the project denied. Applicant further acknowledges and agrees that in the event the approval is appealed and overturned or encumbered with additional conditions or requirements that may require additional building permit submittals, reviews, and issuances, that all plan check fees, building permit fees, and planning processing fees paid as part of the City's process are non-refundable and non-transferable.

Indemnification. Applicant shall defend, indemnify and hold City, its officials, officers, employees, volunteers and agents free and harmless from any and all claims, demands, causes of action, costs, expenses, liability, loss, damage or injury, in law or equity, to property or persons, including wrongful death, in any manner arising out of or incident to any alleged acts, omissions or willful misconduct of Applicant, its officials, officers, employees, agents, consultants, contractors and subcontractors arising out of or in connection with this Agreement, including but not limited to denial of the project and any changes that are required as a result of any pending discretionary actions and appeal periods.

Attorneys' Fees. If either Party commences an action against the other Party, either legal, administrative or otherwise, to enforce, interpret, rescind, or otherwise relating to this Agreement, the prevailing Party in such action shall be entitled to have and recover from the losing Party reasonable attorneys' fees and all other costs and expenses of such action.

PUBLIC WORKS SCREENING QUESTIONS

LANDSCAPE PERMIT

DOES THIS PROJECT INCLUDE NEW LANDSCAPE OR LANDSCAPE RENOVATIONS FOR:	YES	NO
RESIDENTIAL PROJECTS – 5,000 SF AREA OR MORE?		
COMMERCIAL/HOA/PROPERTY MGMT PROJECTS – 2,500 SF AREA OR MORE?		✓

IF YES TO EITHER QUESTION, LANDSCAPE PERMIT IS REQUIRED

WATER QUALITY PERMIT	YES	NO
DOES THIS PROJECT REQUIRE ANY MOVEMENT OF SOIL?		✓
DOES THIS PROJECT REQUIRE ANY OUTSIDE STORAGE OF MATERIALS?		✓

IF YES TO EITHER QUESTION, WATER QUALITY PERMIT IS REQUIRED

CONSTRUCTION AND DEMOLITION (C&D) PERMIT	YES	NO
DOES THIS PROJECT INVOLVE MORE THAN 5,000 SF?	✓	
IS THE TOTAL VALUE OF THE PROJECT $50,000 OR MORE?	✓	

IF YES TO EITHER QUESTION, C&D PERMIT IS REQUIRED

WATER POLLUTION PREVENTION	YES	NO
DOES THIS PROJECT INCLUDE ONE ACRE OR MORE OF DISTURBED SOIL?		✓

IF YES, STORM WATER POLLUTION PREVENTION PLAN (SWPPP, STATE) IS REQUIRED

	YES	NO
IS THIS A NON-RESIDENTIAL PROJECT THAT INCLUDES LESS THAN ONE ACRE OF DISTURBED SOIL?	✓	

IF YES, WATER POLLUTION CONTROL PLAN (WPCP, CITY) IS REQUIRED

✓ **SIGNATURE OF APPLICANT OR AGENT:** _____

CERTIFICATE OF ACCEPTANCE	LTG-2A
Lighting Control Acceptance Document	(Page 1 of 3)

Project Name/Address:
TENANT IMPROVEMENT FOR AMBRY GENETICS-PHASE ONE 15 ARGONAUT ALISO VIEJO, 92656

System Name or Identification/Tag:	System Location or Area Served:

Enforcement Agency:	Permit Number:
Note: Submit one Certificate of Acceptance for each system that must demonstrate compliance.	Enforcement Agency Use: Checked by/Date

FIELD TECHNICIAN'S DECLARATION STATEMENT

- I certify under penalty of perjury, under the laws of the State of California, the information provided on this form is true and correct.
- I am the person who performed the acceptance requirements verification reported on this Certificate of Acceptance (Field Technician).
- I certify that the construction/installation identified on this form complies with the acceptance requirements indicated in the plans and specifications approved by the enforcement agency, and conforms to the applicable acceptance requirements and procedures specified in Reference Nonresidential Appendix NA7.
- I have confirmed that the Installation Certificate(s) for the construction/installation identified on this form has been completed and is posted or made available with the building permit(s) issued for the building.

Company Name: R+C ELECTRICAL INC.		
Field Technician's Name: DONALD F BROWN		Field Technician's Signature:
	Date Signed:	Position With Company (Title): ELECTRICAL FOREMAN

RESPONSIBLE PERSON'S DECLARATION STATEMENT

- I certify under penalty of perjury, under the laws of the State of California, that I am the Field Technician, or the Field Technician is acting on my behalf as my employee or my agent and I have reviewed the information provided on this form.
- I am a licensed contractor, architect, or engineer, who is eligible under Division 3 of the Business and Professions Code, in the applicable classification, to take responsibility for the scope of work specified on this document and attest to the declarations in this statement (responsible person).
- I certify that the information provided on this form substantiates that the construction/installation identified on this form complies with the acceptance requirements indicated in the plans and specifications approved by the enforcement agency, and conforms to the applicable acceptance requirements and procedures specified in Reference Nonresidential Appendix NA7.
- I have confirmed that the Installation Certificate(s) for the construction/installation identified on this form has been completed and is posted or made available with the building permit(s) issued for the building.
- I will ensure that a completed, signed copy of this Certificate of Acceptance shall be posted, or made available with the building permit(s) issued for the building, and made available to the enforcement agency for all applicable inspections. I understand that a signed copy of this Certificate of Acceptance is required to be included with the documentation the builder provides to the building owner at occupancy.

CERTIFICATE OF ACCEPTANCE	LTG-2A
Lighting Control Acceptance Document	(Page 2 of 3)

Project Name/Address:
TENANT IMPROVEMENT FOR AMBRY GENETICS-PHASE ONE 15 ARGONAUT ALISO VIEJO

System Name or Identification/Tag:	System Location or Area Served:

2	Occupancy Sensor Construction Inspection		
	☒	Occupancy sensor has been located to minimize false signals	
	☐	Light meter	
	☐	Ultrasonic occupancy sensors do not emit audible sound (119a) 5 feet from source	
3	Manual Daylighting Controls Construction Inspection		
	☐	If dimming ballasts are specified for light fixtures within the daylit area, make sure they meet all the Standards requirements, including "reduced flicker operation" for manual dimming control systems	
4	Automatic Time Switch Controls Construction Inspection		
	a.	Automatic time switch control is programmed for (check all):	
			Weekdays
			Weekend
			Holidays
	b.	Document for the owner automatic time switch programming (check all):	
			Weekdays settings
			Weekend settings
			Holidays settings
			Set-up settings
			Preference program setting
		Verify the correct time and date is properly set in the time switch	
	☐	Verify the battery is installed and energized	
	☐	Override time limit is no more than 2 hours	
	☒	Occupant Sensors and Automatic Time Switch Controls have been certified to the Energy Commission in accordance with the applicable provision in Section 119 of the Standards, and model numbers for all such controls are listed on the Commission database as Certified Appliance and Control Devices	

A.	Select Acceptance Test (Indicate lighting control systems Names/Designations by the applicable tests below)	
☒	1	Occupancy Sensor
☐	2	Manual Daylighting Controls
	3	Automatic Time Switch Controls

B. Equipment Testing Requirements Check and verify those items applicable to selected system:		Applicable Lighting Control Systems		
Occupancy Sensor - Step 1: Simulate an unoccupied condition		1	2	3
a.	Lights controlled by occupancy sensors turn off within a maximum of 30 minutes from start of an unoccupied condition per Standard Section 119(d)	(Y) / N	Y / N	Y / N
b.	The occupant sensor does not trigger a false "on" from movement in an area adjacent to the controlled space or from HVAC operation	(Y) / N	Y / N	Y / N
c.	Signal sensitivity is adequate to achieve desired control	(Y) / N	Y / N	Y / N
Occupant Sensor - Step 2: Simulate an occupied condition				
a.	Status indicator or annunciator operates correctly	(Y) / N	Y / N	Y / N
b.	Lights controlled by occupancy sensors turn on when Immediately upon an occupied condition *OR* (this requirement is mutually exclusive with Step 2.c.)		Y / N	Y / N
c.	Sensor indicates space is "occupied" and lights turn on manually	(Y) / N	Y / N	Y / N

CERTIFICATE OF ACCEPTANCE	LTG-2A
Lighting Control Acceptance Document	**(Page 3 of 3)**

Project Name/Address:
TENANT IMPROVEMENT FOR AMBRY GENETICS-PHASE ONE 15 ARGONAUT ALISO VIEJO, CA

System Name or Identification/Tag:	System Location or Area Served:

Occupant Sensor - Step 3: System returned to initial operating conditions		(Y)/N	Y / N	Y / N
Occupant Sensor - Step 4 - Sensor is also a multi-Level Occupant Sensor used to qualify for a Power Adjustment Factor in Section 146(a)2D of the Standards. If yes, then 'a,' 'b,' and 'c' must also be yes.		(Y) (N)	Y / N	Y / N
a.	The first stage activates between 30 to 70% of the lighting either manually or automatically.	(Y) (N)	Y / N	Y / N
b.	A reasonably uniform level of illuminance is achieved by dimming of all lamps or luminaires; or by switching alternate lamps in luminaires, alternate luminaires, or alternate rows of luminaires.	(Y) (N)	Y / N	Y / N
c.	After the first stage occurs, manual switches have been provided to activate the alternate set of lights, activate 100% of the lighting power, and manually deactivate all of the lights.	(Y) (N)	Y / N	Y / N
Manual Daylighting Controls - Step 1: Manual switching control				
a.	At least 50% of lighting power in daylit areas is separately controlled from other lights	Y /	Y / N	Y / N
b.	The amount of light delivered to the space is uniformly reduced	Y	Y / N	Y / N
Manual Daylighting Controls - Step 2: System returned to initial operating conditions		Y /	Y / N	Y / N
Automatic Time Switch Controls - Step 1: Simulate occupied condition				
a.	All lights can be turned on and off by their respective area control switch	Y / N	Y / N	Y / N
b.	Verify the switch only operates lighting in the ceiling-height partitioned area in which the switch is located	Y / N	Y / N	Y / N
Automatic Time Switch Controls - Step 2: Simulate unoccupied condition				
a.	All non-exempt lighting turn off per Section 131(d)1	Y / N	Y / N	Y / N
b.	Manual override switch allows only the lights in the selected ceiling height partitioned space where the override switch is located, to turn on or remain on until the next scheduled shut off occurs	Y / N	Y / N	Y / N
c.	All non-exempt lighting turns off	Y / N	Y / N	Y / N
Automatic Time Switch Controls - Step 3: System returned to initial operating conditions		Y / N	Y / N	Y / N
Note: Shaded areas do not apply for particular test procedure				

C. **PASS / FAIL Evaluation (check one):**

☑ PASS: All applicable **Construction Inspection** responses are complete and all applicable **Equipment Testing Requirements** responses are positive (Y - yes)

☐ FAIL: Any applicable **Construction Inspection** responses are incomplete *OR* there is one or more negative (N - no) responses in any applicable **Equipment Testing Requirements** section. Provide explanation below. Use and attach additional pages if necessary.

Occupant Sensor - Step 4 - Sensor is also a multi-Level Occupant Sensor used to qualify for a Power Adjustment Factor in Section 146(a)2D of the Standards. If yes, then 'a,' 'b,' and 'c' must also be yes.		(Y) (N)	Y / N	Y / N
a.	The first stage activates between 30 to 70% of the lighting either manually or automatically.	(Y) (N)	Y / N	Y / N
b.	A reasonably uniform level of illuminance is achieved by dimming of all lamps or luminaires; or by switching alternate lamps in luminaires, alternate luminaires, or alternate rows of luminaires.	(Y) (N)	Y / N	Y / N
c.	After the first stage occurs, manual switches have been provided to activate the alternate set of lights, activate 100% of the lighting power, and manually deactivate all of the lights.	(Y) (N)	Y / N	Y / N
Manual Daylighting Controls - Step 1: Manual switching control				
a.	At least 50% of lighting power in daylit areas is separately controlled from other lights	Y /	Y / N	Y / N
b.	The amount of light delivered to the space is uniformly reduced	Y	Y / N	Y / N
Manual Daylighting Controls - Step 2: System returned to initial operating conditions		Y /	Y / N	Y / N
Automatic Time Switch Controls - Step 1: Simulate occupied condition				
a.	All lights can be turned on and off by their respective area control switch	Y / N	Y / N	Y / N
b.	Verify the switch only operates lighting in the ceiling-height partitioned area in which the switch is located	Y / N	Y / N	Y / N
Automatic Time Switch Controls - Step 2: Simulate unoccupied condition				
a.	All non-exempt lighting turn off per Section 131(d)1	Y / N	Y / N	Y / N
b.	Manual override switch allows only the lights in the selected ceiling height partitioned space where the override switch is located, to turn on or remain on until the next scheduled shut off occurs	Y / N	Y / N	Y / N
c.	All non-exempt lighting turns off	Y / N	Y / N	Y / N
Automatic Time Switch Controls - Step 3: System returned to initial operating conditions		Y / N	Y / N	Y / N
Note: Shaded areas do not apply for particular test procedure				

C.	**PASS / FAIL Evaluation (check one):**
☑	PASS: All applicable **Construction Inspection** responses are complete and all applicable **Equipment Testing Requirements** responses are positive (Y - yes)
☐	FAIL: Any applicable **Construction Inspection** responses are incomplete *OR* there is one or more negative (N - no) responses in any applicable **Equipment Testing Requirements** section. Provide explanation below. Use and attach additional pages if necessary.

CERTIFICATE OF ACCEPTANCE	LTG-2A
Lighting Control Acceptance Document	(Page 2 of 3)

Project Name/Address: TENENT IMPROVEMENT FOR AMBRY GENETICS - PHASE TWO 15 ARGONAUT ALISO VIEJO, CA

System Name or Identification/Tag:	System Location or Area Served:

2	Occupancy Sensor Construction Inspection		
	☑	Occupancy sensor has been located to minimize false signals	
	☐	Light meter	
	☐	Ultrasonic occupancy sensors do not emit audible sound (119a) 5 feet from source	
3	Manual Daylighting Controls Construction Inspection		
	☐	If dimming ballasts are specified for light fixtures within the daylit area, make sure they meet all the Standards requirements, including "reduced flicker operation" for manual dimming control systems	
4	Automatic Time Switch Controls Construction Inspection		
	a.	Automatic time switch control is programmed for (check all):	
		☐	Weekdays
		☐	Weekend
		☐	Holidays
	b.	Document for the owner automatic time switch programming (check all):	
		☐	Weekdays settings
		☐	Weekend settings
		☐	Holidays settings
		☐	Set-up settings
		☐	Preference program setting
	☐	Verify the correct time and date is properly set in the time switch	
	☐	Verify the battery is installed and energized	
	☐	Override time limit is no more than 2 hours	
	☐	Occupant Sensors and Automatic Time Switch Controls have been certified to the Energy Commission in accordance with the applicable provision in Section 119 of the Standards, and model numbers for all such controls are listed on the Commission database as Certified Appliance and Control Devices	

A.	**Select Acceptance Test** (Indicate lighting control systems Names/Designations by the applicable tests below)	
☑	1	Occupancy Sensor
☐	2	Manual Daylighting Controls
☐	3	Automatic Time Switch Controls

B.	**Equipment Testing Requirements** Check and verify those items applicable to selected system:	Applicable Lighting Control Systems		
Occupancy Sensor - Step 1: Simulate an unoccupied condition		1	2	3
a.	Lights controlled by occupancy sensors turn off within a maximum of 30 minutes from start of an unoccupied condition per Standard Section 119(d)	(Y) / N	Y / N	Y / N
b.	The occupant sensor does not trigger a false "on" from movement in an area adjacent to the controlled space or from HVAC operation	(Y) / N	Y / N	Y / N
c.	Signal sensitivity is adequate to achieve desired control	(Y) / N	Y / N	Y / N
Occupant Sensor - Step 2: Simulate an occupied condition				
a.	Status indicator or annunciator operates correctly	(Y) / N	Y / N	Y / N
b.	Lights controlled by occupancy sensors turn on when Immediately upon an occupied condition *OR* (this requirement is mutually exclusive with Step 2.c.)	-	Y / N	Y / N
c.	Sensor indicates space is "occupied" and lights turn on manually	(Y) / N	Y / N	Y / N

To: John Shoemaker
Subject: CPTED Inspection

John,

Today, 12/21/2011, I did the CPTED interior inspection for 15 Argonaut. The interior passes the CPTED inspection. I suggested that Ambry Genetics install a card reader for the first-floor electrical room which is adjacent to an exit door and roll-up door.

Tonight for the nighttime inspection of Ambry Genetics' exterior lighting, more than three-quarters of the wall-mounted exterior lighting and the parking lot lighting were not illuminating the building or parking lot.

I will approve the TC of O for 15 Argonaut, but I would request that all exterior lighting and light poles be operational for another CPTED nighttime inspection either on Thursday, 12/22/2011, or next week.

Also, the exterior lighting and parking lot lighting at 31 Argonaut (S&K Towing) was not illuminating the building or parking lot this evening. I asked the employee Kevin to inform Craig about the lighting not illuminating the areas.

Thank you.

Subject: RE: 15 Argonaut

OCFA waiver OCFA did review plans in the end see SR # 179263

Thanks Joanna for reminding me about the OCFA plan review process. I'm a bit rusty since I'm in another fire prevention section and not involved with the planning side of these projects. Please accept this email as OCFA's waiver to allow for the issuance of building permits connected with this project. If you need any additional information or direction, feel free to call/email me.

Kevin Bass
Assistant Fire Marshal

Subject: RE: 15 Argonaut

Hi Kevin,

Our standard procedure for plan check submittals is to have the customer fill out a variety of screening forms to determine what agency will need to review and approve the project.

In this case the customer answered yes to OCFA's screening from question No.1 "Construction of a new bldg, new story, or increase the footprint....", which triggered the city to require OCFA approval. When scenarios like this happen where the answer is a yes but OCFA determines a review is not required, that's when we require something in writing waiving the review. Does that make sense?

Having said that, I can accept this email as OCFA's acknowledgment of the project and determination that an "architectural" review is not required.

Feel free to contact me if you have any questions. I'm here from 7:30 am to 12pm Monday - Friday, closed every other Friday.

Thank you,
Joanna

Hi Joanna,
If you look below to the email string, you'll see the OCFA's plan reviewers' comments on the subject of OCFA approval for issuance of a building permit for TI's to a B occupancy. It looks like the plan submittal criteria form at the city would be sufficient for OCFA approval if all answers are "no". If this won't do, can you give me a call at my office after lunch? I should be back in the office about 1:30 p.m. Thanks, Kevin

Kevin Bass
Assistant Fire Marshal
OCFA Fire Prevention

Subject: RE: 15 Argonaut

Lynne's right. If the city needs something in writing though, I would recommend that the applicant fill out a plan submittal criteria form. If they answer no to all the questions, the city can accept that as a waiver for OCFA review.

Subject: RE: 15 Argonaut

Hi Kevin,
The mezzanine is a Building call. We wouldn't hold up building permits. All we care about is the sprinkler T.I. plans to be submitted before they cover up the sprinkler pipe.

Subject: FW: 15 Argonaut

Ruben and Lynne,
The project is a TI for a B occupancy with no permits or hazardous materials over threshold amounts. A sprinkler plan will be required since they are constructing a mezzanine, but that should be it. What I'm confused about is the waiver for the city to allow this project to go forward. Have we (OCFA) done this in the past with a city building department to allow issuance of building permits? Any help would be appreciated.
Thanks, Kevin

Hi Mark,

I talked to Ted this morning regarding your resubmital and he had no issues with the changes you made to the plans; however, I do have to send the structural out for recheck. It should be no more than 5 business days for review.

Regarding OCFA, you are correct in the fact that fire sprinklers are a separate submittal/permit; therefore it won't hold up your permit.
However, what we need in order to release the permit is an approval or waiver for the mezzanine and TI work. An email from Kevin waiving the review would be fine.

If you have any questions feel free to contact me.

Thank you,
Joanna

Hi Joanna-

Once Ted has had an opportunity to review and approve the drawings I dropped off today please let me know.

You mentioned that one outstanding item was the OFCA approval. I spoke to Kevin at OFCA. He wanted to make sure that the sprinklers were a deferred submittal, which we have indicated they are. He said in that case, he would defer to Ted as to issuance of a Permit and so OFCA review shouldn't hold up permit issuance.

Regards,

Moulton Niguel Water
WATER QUALITY AND SERVICE ARE #1

August 8, 2011

City of Aliso Viejo
12 Journey, Suite 100
Aliso Viejo, CA 92656

Attention: Joanna Stevens

Regarding: Ambry Genetics
15 Argonaut
(Phase 2)

Dear Ms. Stevens:

This letter serves as notice that the Moulton Niguel Water District (MNWD) will serve water and sanitary sewer to the above subject development. This project is completely within MNWD boundaries. MNWD staff has determined that there is no need for grease intercepting facilities. This indication of MNWD's ability to serve the above-referenced project is conditioned upon the payment of all applicable fees.

The availability of water services is subject to the suppliers of water to MNWD continuing to honor their contractual obligation relative to the amount of water to be supplied. MNWD can make no representations as to the future intention of said suppliers in this regard.

Sincerely,

MOULTON NIGUEL WATER DISTRICT

TRANSMITTAL

TO:	CITY OF ALISO VIEJO 12 Journey, Suite 100 Phone: 949-425-2526 Attn: Jennifer Lowe, Assoc. Planner
FROM:	Mark Grisafe
DATE:	July 26, 2011
REGARDING:	**15 Argonaut – CUP Description Letter**
VIA:	E-Mail
COPY:	File

Dear Jennifer

Ambry Genetics is a testing lab with offices, currently residing in the City of Aliso Viejo. As their operations have expanded, they require additional space. They have agreed to relocate to 15 Argonaut – also in the City of Aliso Viejo.

This new, larger facility, previously occupied by a memory chip company, had a similar business model which allows Ambry a cost effective and relatively seamless expansion. It can also better accommodate their current and anticipated needs and it allows Ambry the chance to remain in the City of Aliso Viejo.

Reviewing City guidelines, we understand that Ambry is considered generally a dry lab with a minimal wet lab component.

Below is a description of the lab spaces of this project:

105 – R&D 2,954 s.f. (dry lab) – Use of small tubes and plates with micro-liter sized reactions. Various sequencing reactions and sample preps for next generation sequencing.

107A,B,C – Test & Test Storage 1,092 s.f. & 491 s.f. (Future R&D dry lab)– for future expansion, no work going on in any of the 3 areas.

112 – Sequence (dry lab) - 1,053 s.f.- Samples are loaded onto various sequencing platforms using either sequencing plates or flow-cells (microscope slide sized chips). Very little to no bench work required. This room will house the sequencing equipment that will run either overnight or over several days.

113 – PCR (dry lab) - 434 s.f. This room will house all of our PCR machines. Samples will be placed in these machines in either plates or tubes and be left to cycle through various temperatures for a number of cycles. Again this is very little to no bench work required.

114A – Dcode (dry lab) - 451 s.f. Being left empty at the moment for future growth.

5618 E. CONANT STREET LONG BEACH, CA 90808 562.420.1035

114B - QA (wet lab) - 449 s.f. This room is what I would consider "wet" because this is where we do all of our electrophoresis which uses buffered TAE solution mixed in with de-ionized water. Techs will load acrylamide gels with patient sample and let run for several hours as they gradually heat up and while constant voltage is being applied.

114C – Solutions (wet lab) - 329 s.f. - This is also what I would consider "wet" because this is where we use all of our chemicals in larger sized reactions. Usually in liters or in tens of liters. This is our reagent prep area.

The minimal amount of wet lab and the kinds and quantities of chemicals at this facility pose a minimal threat to public safety, yet Ambry is regulated by the following agencies:
The Federal agencies are CLIA = Clinical Laboratory Improvement Amendments and CAP = College of American Pathologists.

Federal	License #
CLIA	05D0981414
CAP	LAP# 7154701

In addition, they are liscened in the following States:

State	License #
California	CLF11694
Florida	800016789
Rhode Island	LCDO00439
Pennsylvania	027832
Maryland	1052
New York	PFI: 8160

Ambry Genetics also maintains a standard office emergency preparedness protocol.

Thank You,

Mark A. Grisafe, AIA

APPLICATION FOR TEMPORARY CERTIFICATE OF OCCUPANCY

Project Name: 15 ARGONAUT - Ambry GENETICS

Owner's Name JAMES L. Dunlop Phone No.: 949-900-5518

Job Address 15 ARGONAUT, Aliso Viejo, CA 92656

Building Permit No. 68254 / 68318

Request is herby made for temporary use and occupancy on subject project only for a time period of 30 days.

I am fully aware of Section 110 of the California Building Code which indicates, in part, that no building or structure shall be used or occupied until the Building Official has issued a Certificate of Use and Occupancy for the building. I also understand that the fee is for administrative costs and is not refundable if application is denied.

This approval, if granted, will become void after 30 days, at which time a permanent Certificate of Use and Occupancy will be granted or occupancy terminated.

REASON FOR REQUEST To Move IN. To OPERATE OUR BUSINESS A Fully FUNCTIONAL LABORATORY AND OPERATIONS FACILITY

DECLARATION AND AGREEMENT

City of Aliso Viejo
12 Journey
Aliso Viejo, CA 92656

In consideration of granting a Temporary Certificate of Occupancy for the area improved or established under Building Permit No. 08254 68318 we, the responsible parties, hereby acknowledge and agree, by signature, to the following:

1. The Building Official is authorized to issue a Temporary Certificate of Occupancy (TCO), before the completion of the entire work covered by the permit, provided that such portion or portions shall be occupied safely.
2. The Building Official shall set a period of time during which the TCO is valid.
3. The Building Official is authorized to suspend or revoke, in writing, a TCO whenever the Certificate is issued in error, or on the basis of incorrect information supplied, or where it is determined that the building or structure or portion thereof is in violation of any ordinance or regulation or any of the provisions of this code.
4. The owner/lease holder is responsible for and agrees to ensure occupancy does not extend beyond the defined TCO period. Further, that continued use and occupancy beyond the period granted is a violation of the California Building Code.
5. Renewal of the TCO may be granted for just cause. A new application and fees are due at the time of the request.
6. In signing this declaration and agreement the owner and contractor of record understands and agrees to the following stipulations.
   A. The project shall be completed before the expiration date of the TCO,
   B. Completion of the project requires that all Building Department corrections must be satisfied with the final Building Department signature on the inspection record, and
   C. All other interested departments must have approved the C of O.

Stantec

Stantec is a global leader in sustainable architecture, engineering, and environmental consulting. The diverse perspectives of our partners and interested parties drive us to think beyond what's previously been done on critical issues like climate change, digital transformation, and future-proofing our cities and infrastructure. We innovate at the intersection of community, creativity, and client relationships to advance communities everywhere, so that together we can redefine what's possible.

Executive Summary

Stantec Consulting Services, Inc. (Stantec) has performed a Phase II Environmental Site Assessment (ESA) of the property located at 35 15 Argonaut, Aliso Viejo, Orange County, California (the "Subject Property" **Figure 1**), on behalf of Brandywine Homes (the "Client"). The work was performed according to the requirements of the Master Services Agreement between Brandywine Homes and Stantec (the "MSA").

The Subject Property consists of approximately 4.35 acres of land associated with Assessor's Parcel Numbers (APNs) 623-093-10 and 623-093-11, and the address of 15 Argonaut, Aliso Viejo, Orange County, California. According to records obtained through Environmental Data Resources (EDR), the Subject Property appears to have been vacant from at least the 1930s to 1980s and was commercially developed with one structure and asphalt parking lot by 1989 in its present-day configuration. The Subject Property building is currently vacant. The adjoining properties and vicinity are developed with commercial/light industrial businesses and residential properties. A Subject Property Location Map is provided as Figure 1. A Subject Property Vicinity Map illustrating the main features of the Subject Property and vicinity is provided as Figure 2.

The following potential vapor encroachment condition (pVEC) and recognized environmental condition (REC) were identified during the Phase I ESA completed for Subject Property dated July 14, 2025:

- A west-adjoining fuel station located at 23022 Aliso Creek Road is listed as a gasoline service station since 1996 that reportedly houses three active underground storage tanks (USTs) installed between 2004 and 2016. The USTs range from 10,000 to 20,000 gallons in size and contain diesel, regular and premium unleaded fuel. A minor spill of two gallons of fuel was reported in 2018 due to a vehicle overfill onto concrete. The spill was cleaned by onsite personnel. The site received permit-related violations between 2014 and 2016 which were returned to compliance. No releases are reported at the site. Given the proximity of the fuel station to the Subject Property, and no documented assessment of soil, soil vapor, or groundwater at the site, as well as inferred groundwater flow to the east, this site represented a potential VEC and was considered a REC for the Subject Property.

Accordingly, to evaluate the concern identified above, Stantec performed a Phase II Environmental Site Assessment to evaluate subsurface conditions at the Subject Property.

Phase II ESA Results

All work was conducted under the direct supervision of a State of California professional geologist. Stantec provided the services of a field geologist to supervise and direct all on-site activities performed during this investigation, which included the following:

- Stantec obtained an Underground Service Alert (USA) ticket number prior to commencement of drilling activities. Additionally, Stantec subcontracted a private utility locator to clear all proposed boring locations.

- On August 26, 2025, Stantec personnel oversaw the advancement of three (3) soil vapor borings (SV-1 through SV-3) to 5-feet below ground surface (bgs) on the Subject Property.
- On August 28, 2025, Stantec personnel oversaw soil vapor sampling of the newly-installed soil vapor probes at the Site. Soil vapor sampling was performed by A&R Laboratories (ARL), and analyzed on-site in a mobile laboratory. Soil boring SV-2 was submerged in water due to irrigation and no sample could be collected.

Soils encountered during this investigation generally consisted of silt and clay with sand to the maximum explored depth of 5.5 feet below ground surface (bgs). PID readings were measured at 0.0 parts per million by volume (ppmV) at all locations. No olfactory response, staining, or odors were observed in any borings advanced during this investigation.

Laboratory analytical test results from this assessment are attached as **Appendix A**. A summary of the analytical data from this assessment is provided below:

- Soil Vapor: There were no detections of any volatile organic compounds (VOCs) above their respective laboratory reporting limits in the two soil vapor samples collected during this assessment (i.e. “non-detect”).

Given there were no detections of VOCs above their corresponding laboratory reporting limits, the off-site west-adjoining fuel station does not present a VEC to the Subject Property. No further assessment appears to be warranted.

1 Introduction

Stantec Consulting Services, Inc. (Stantec) has performed a Phase II Environmental Site Assessment (ESA) of the property located at 35 15 Argonaut, Aliso Viejo, Orange County, California (the "Subject Property" **Figure 1**), on behalf of Brandywine Homes (the "Client"). The work was performed according to the requirements of the Master Services Agreement between Brandywine Homes and Stantec (the "MSA").

1.1 Property Description and Operations

The Subject Property consists of approximately 4.35 acres of land associated with Assessor's Parcel Numbers (APNs) 623-093-10 and 623-093-11, and the address of 15 Argonaut, Aliso Viejo, Orange County, California. According to records obtained through Environmental Data Resources (EDR), the Subject Property appears to have been vacant from at least the 1930s to 1980s and was commercially developed with one structure and asphalt parking lot by 1989 in its present-day configuration. The Subject Property building is currently vacant. The adjoining properties and vicinity are developed with commercial/light industrial businesses and residential properties. A Subject Property Location Map is provided as Figure 1. A Subject Property Vicinity Map illustrating the main features of the Subject Property and vicinity is provided as Figure 2.

1.1.1 Site Geology and Hydrogeology

According to a previous environmental site assessment for the Subject Property by EMG in 2016, the general geology of the Subject Property and vicinity is comprised of sandstone, mudstone, siltstone, evaporite and conglomerate, dating from the Oligocene to the Pliocene epochs (EMG, 2016).

According to California DOC Earthquake Zone Map (Department of Conservation Map Server (ca.gov)), the Subject Property is not located within an Alquist-Priolo (AP) Earthquake Fault Zone boundary. The closest fault zone is located approximately 20 miles to the northwest of the Subject Property. The Subject Property lies within a Landslide Zone.

The Subject Property lies within the Aliso Creek Watershed located in southern Orange County. The Watershed is part of the Laguna subunit of the San Juan Hydrologic Basin. The Basin is comprised of coastal watersheds which drain to the Pacific Ocean. The Aliso Creek Watershed drains approximately 30 square miles and has limited water-bearing formations, which include two alluvial aquifers and one deeper aquifer. The alluvial aquifers are separated by a shale formation. Groundwater extraction is limited within this area due to saltwater intrusion (Orange County, 2018).

Site specific groundwater investigations were not conducted during this ESA; however, according to a 2022 *Second Half Groundwater Monitoring Report* for a release site located approximately one mile to the north, groundwater in the vicinity is estimated to be approximately 7.19-15.64 feet below top of well casing (btoc) with a flow direction generally to the east.

1.2 Background

The following potential vapor encroachment condition (pVEC) and recognized environmental condition (REC) were identified during the Phase I ESA completed for Subject Property dated July 14, 2025:

- A west-adjoining fuel station located at 23022 Aliso Creek Road is listed as a gasoline service station since 1996 that reportedly houses three active underground storage tanks (USTs) installed between 2004 and 2016. The USTs range from 10,000 to 20,000 gallons in size and contain diesel, regular and premium unleaded fuel. A minor spill of two gallons of fuel was reported in 2018 due to a vehicle overfill onto concrete. The spill was cleaned by onsite personnel. The site received permit-related violations between 2014 and 2016 which were returned to compliance. No releases are reported at the site. Given the proximity of the fuel station to the Subject Property, and no documented assessment of soil, soil vapor, or groundwater at the site, as well as inferred groundwater flow to the east, this site represents a potential VEC and is considered a REC for the Subject Property.

2 Field Investigation

All work was conducted under the direct supervision of a State of California professional geologist. Stantec provided the services of a field geologist to supervise and direct all on-site activities performed during this investigation, which included the following:

- Stantec obtained an Underground Service Alert (USA) ticket number prior to commencement of drilling activities. Additionally, Stantec subcontracted a private utility locator to clear all proposed boring locations.
- On August 26, 2025, Stantec personnel oversaw the advancement of three (3) soil vapor borings (SV-1 through SV-3) to 5-feet below ground surface (bgs) on the Subject Property.
- On August 28, 2025, Stantec personnel oversaw soil vapor sampling of the newly-installed soil vapor probes at the Site. Soil vapor sampling was performed by A&R Laboratories (ARL), and analyzed on-site in a mobile laboratory. Soil boring SV-2 was submerged in water due to irrigation and no sample could be collected.

All boring locations advanced during this investigation are depicted on **Figure 2**.

2.1 Pre-Field Activities

In accordance with federal Occupational Safety and Health Administration (OSHA) regulations (29 CFR, Section 1910.120), Stantec developed a site-specific Health and Safety Plan (HASP) for the Property. All Stantec personnel and subcontractors associated with the project were required to be familiar with and comply with all provisions of the HASP.

Stantec visited the Property to mark the proposed boring locations. Subsequent to the marking, underground service alert (USA) was notified at least 72-hours prior to the commencement of drilling activities.

2.2 Investigation

All soil and soil vapor borings were advanced using a hand auger to a maximum explored depth of 5.5 feet below ground surface (bgs). Soil vapor samples were collected to assess for the presence of VOCs. Boring locations are depicted on **Figure 2**.

2.2.1 Soil Boring and Sampling Protocols

All locations were cleared of belowground utilities by clearing the top 5.5 feet of soil using a hand auger. The soils from each of the direct push borings were visually examined by Stantec field personnel who classified the soils in accordance with the Unified Soil Classification System (USCS). A photo-ionization detector (PID) was used to monitor/field screen the soils collected. Field screening for VOCs was

achieved by removing the soil from the uppermost sample sleeve and placing it in a zip-lock type baggie. A PID probe was inserted into the baggie to monitor the headspace for VOC vapors.

Following classification and VOC vapor evaluation, the soil samples were carefully packaged for chemical analysis by sealing the ends of the acetate liner with Teflon ® sheeting, covering with plastic end caps, and sealing with non-VOC containing tape. The sample containers were labeled with the appropriate identification information (boring number, sample depth, sample collection date, and sample collection time). The samples were logged on a chain-of-custody form and delivered to a state certified laboratory for analysis. Laboratory analysis is discussed in Section 3.0.

2.2.2 Soil Vapor Probe Installation

At the completion of drilling to the target depths, select soil borings were converted to soil vapor monitoring points at the five-foot depth interval. Subsurface soil vapor probe installation was performed in accordance with the July 2015 DTSC “Advisory - Active Soil Gas Investigations” (DTSC Advisory).

Each sample probe was constructed with a 1-inch-long Airstone sampling screen set at the prescribed sampling intervals. Each of the sampling screens was constructed with a permeable Airstone vapor tip connected to ¼-inch outer diameter Nylaflow tubing that was lowered to the bottom of the borehole and backfilled with filter sand, until approximately 12-inches of filter pack was placed. A transition seal consisting of approximately 12-inches of dry bentonite was then placed above the filter pack, followed by an annular seal consisting of hydrated bentonite until the next sampling interval was reached. The sequence was then repeated to install the second monitoring point, and/ or completely backfill the borehole. At the surface, the exposed nylon tubing was capped with tight fitting plastic endcaps and labeled to indicate sampling depth. After installation of the soil vapor sample probes, subsurface conditions were allowed to equilibrate a minimum of 48-hours prior to leak testing and sample collection on August 28, 2025.

2.2.3 Soil Vapor Sampling

Soil vapor samples were collected on August 28, 2025, in accordance with the methods and procedures outlined by the DTSC Advisory, a minimum of 48-hours after installation, in order to allow for equilibration.

Prior to sampling, a shut-in test was conducted on the sampling train to ensure all connections and fittings were airtight. The shut-in test was performed on the sampling train by applying a vacuum of 100 inches of water to the sampling train and monitoring magnehelic gauges for a pressure drop for one minute. If loss of vacuum was observed, the fittings were adjusted as needed until no vacuum loss was observed during subsequent shut-in tests.

After the sampling equipment passed the shut-in test, the probes were purged using an air pump outfitted with a low-flow module to remove internal air from the sample train (calculated from the internal volume of the tubing and probe tip); the void space of the sand pack around the probe tip; and the void space of the dry bentonite (in the annular space). Three internal volumes were purged from each sampling location at a rate less than 200 milliliters per minute (ml/min).

Immediately following purging the internal volumes, the soil vapor samples were collected by the soil vapor sampling technician into pre-cleaned glass syringes at a rate of 200 ml/min. A tracer compound of was placed above the surface seal and along the sampling train to evaluate the integrity of the seal. No tracer compounds were detected in the soil vapor samples collected during this investigation. The soil vapor samples were transported to the on-site mobile laboratory and analyzed within 30 minutes of sample collection.

2.2.4 Field Equipment Cleaning Procedures

To maintain quality control during drilling operations, all drill rods and reusable soil sampling equipment was decontaminated using a triple bucket rinse. Prior to drilling at a given location or sampling interval, all equipment coming in direct contact with soil samples was scrubbed with an Alconox scrub solution followed by a clean tap water rinse and then a final distilled water rinse. The disposable acetate soil sample liners were used for one sampling interval and then discarded.

3 Laboratory Testing Program

Soil vapor samples collected during this investigation were delivered under COC to the on-site mobile laboratory operated by A&R Laboratories (ARL), based in Ontario, California. All soil vapor samples were analyzed for VOCs USEPA test method 8260 by the on-site mobile laboratory.

ARL are certified to perform hazardous waste testing by the California State Water Resources Control Board Environmental Laboratory Accreditation Program (ELAP).

Complete laboratory analytical results are presented on the laboratory data sheets attached as **Appendix A**.

4 Investigation Results

4.1 Field Observations

Stantec personnel oversaw a geophysical subsurface survey to clear all locations before ground disturbance. No utility conflicts were identified at proposed boring locations.

Soils encountered during this investigation consisted of sand with silt and clay with sand to the maximum explored depth of 5.5 feet bgs. PID readings were measured at 0.0 parts per million by volume (ppmV) at all locations. No olfactory response, staining, or odors were observed in any borings advanced during this investigation. All borings locations are shown on **Figure 2**.

4.2 Analytical Results

The laboratory test results from this investigation are discussed below and were compared to the DTSC Human and Ecologic Risk Office (HERO), Note Number 3, Modified Indoor Air Screening Level (MIASL) using an attenuation factor (AF) of 0.03. Given the Subject Property is contemplated as a future residential community, residential-use screening criteria were used for evaluation of the analytical data collected during this investigation.

Laboratory analytical test results from this assessment are attached as **Appendix A**.

4.2.1 Soil Vapor Results

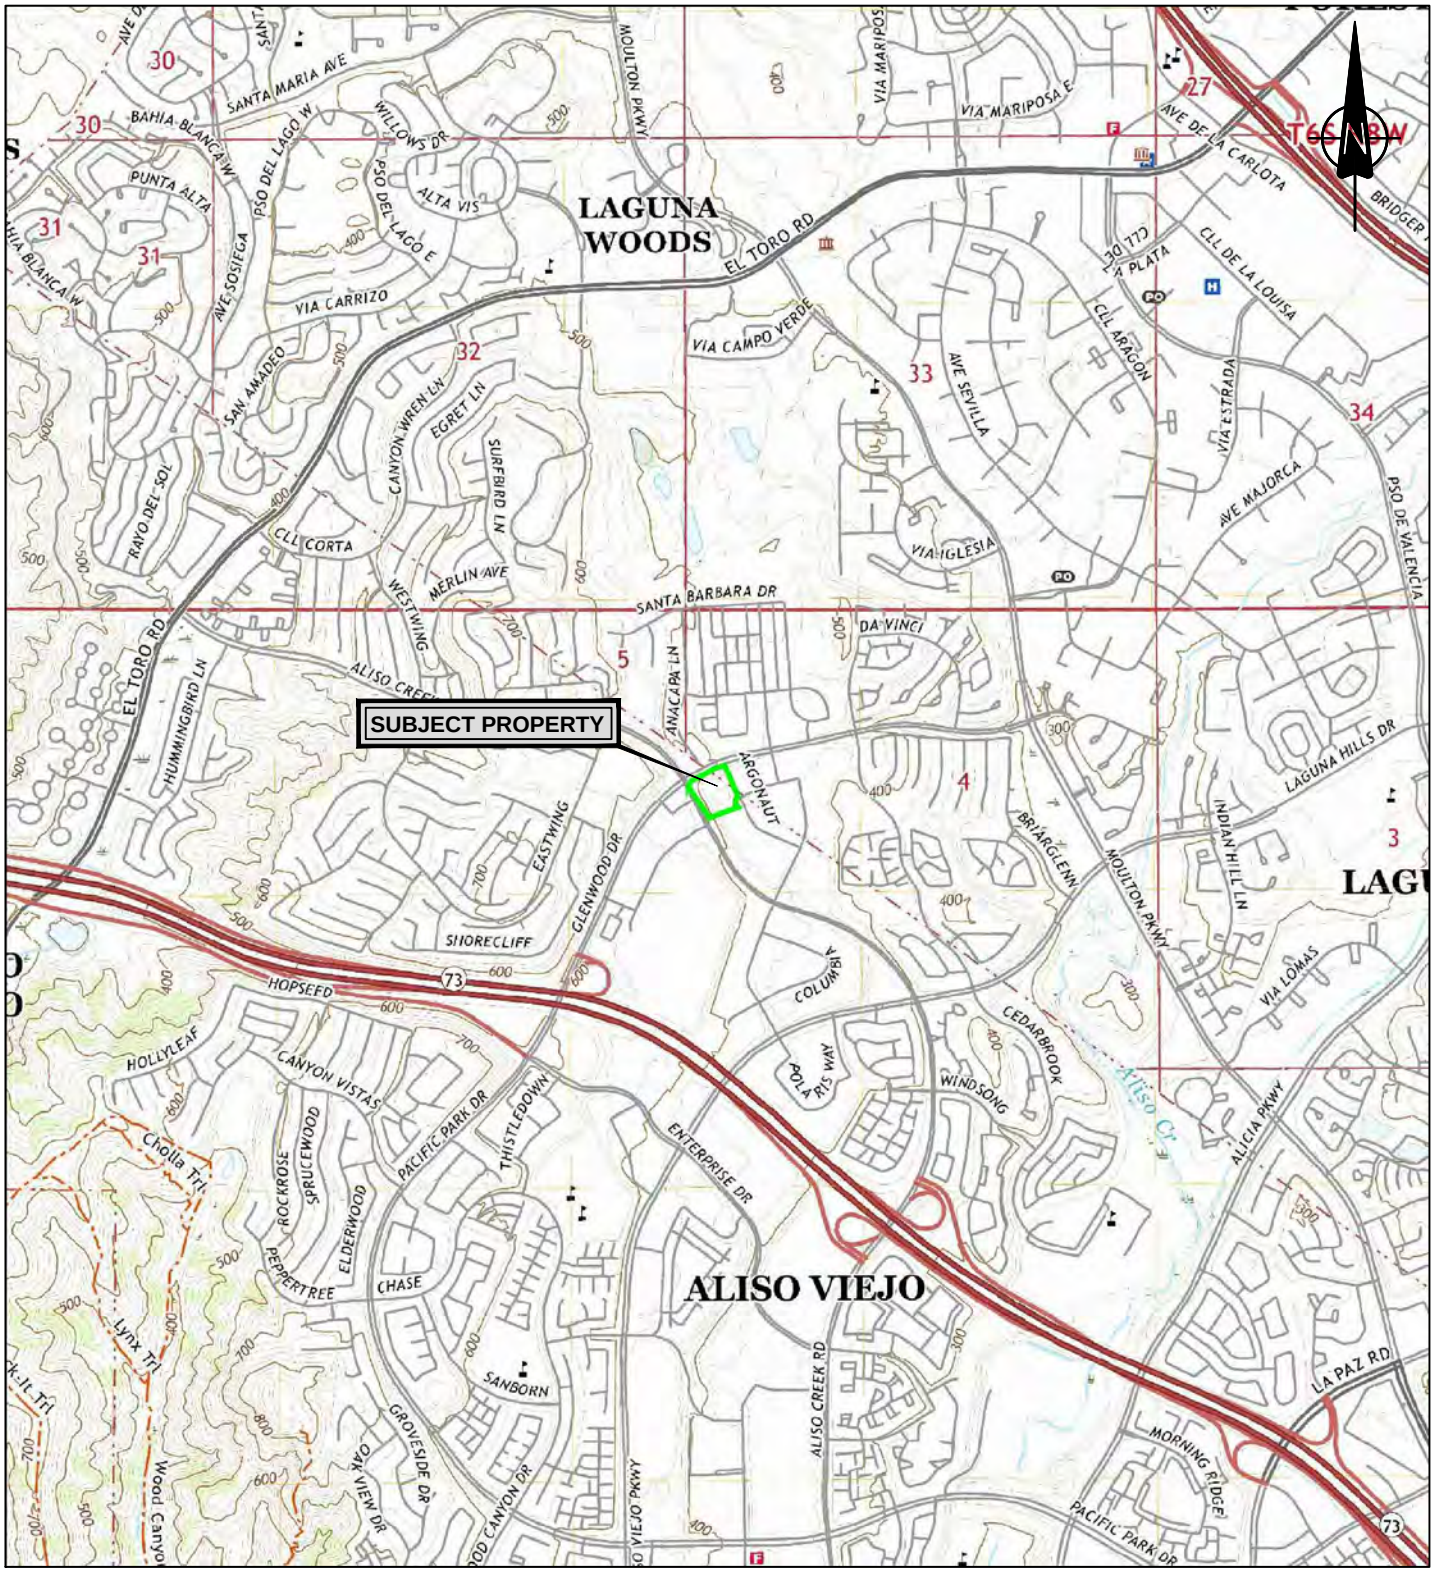
Soil boring SV-2 was submerged in water due to irrigation and no sample could be collected. There were no detections of any VOCs above their respective laboratory reporting limits in the two soil vapor samples collected during this assessment (i.e. “non-detect”).

5 Discussion and Recommendations

Stantec has completed an evaluation of subsurface conditions on the Subject Property.

Given there were no detections of VOCs above their corresponding laboratory reporting limits, the off-site west-adjoining fuel station does not present a VEC to the Subject Property. No further assessment appears to be warranted.

6 Limitations



The conclusions presented in this report are professional opinions based on data described in this report, and those data presented by prior investigations performed by others. The opinions of this report have been arrived at in accordance with currently accepted hydrogeologic and engineering standards and practices applicable to this location and are subject to the following inherent limitations. Stantec makes no other warranty, either expressed or implied, concerning the conclusions and professional advice that is contained within the body of this report.

Inherent in most projects performed in a heterogeneous subsurface environment, continuing excavation and assessments may reveal findings that are different than those presented herein. This facet of the environmental profession should be considered when formulating professional opinions on the limited data collected on these projects.

This report has been issued with the clear understanding that it is the responsibility of the owner, or their representative, to make appropriate notifications to regulatory agencies. It is specifically not the responsibility of Stantec to conduct appropriate notifications as specified by current County and State regulations.

The information presented in this report is valid as of the date our exploration was performed. Site conditions may degrade with time; consequently, the findings presented herein are subject to change. In the event of any conflict between the terms and conditions of this report and the terms and conditions of the MSA, the MSA shall control.

QUALIFIERS

B = Detected in the associated Method Blank at a concentration above the routine RL
B1= BOD blank is over specifications . The reported result may be biased high.
D = Surrogate recoveries are not calculated due to sample dilution
E = Estimated value
H = Analyte was prepared and/or analyzed outside of the analytical method holding time
I = Matrix Interference
J = Analyte concentration detected between RL and MDL

ABBREVIATIONS

DF = Dilution Factor
RL = Reporting Limit
MDL = Method Detection Limit
Qual = Qualifier
Tech = Technician

Stantec

Stantec is a global leader in sustainable engineering, architecture, and environmental consulting. The diverse perspectives of our partners and interested parties drive us to think beyond what's previously been done on critical issues like climate change, digital transformation, and future-proofing our cities and infrastructure. We innovate at the intersection of community, creativity, and client relationships to advance communities everywhere, so that together we can redefine what's possible.

This Water Quality Management Plan (WQMP) has been prepared for Presidio by Advanced Civil Group, Inc. The WQMP is intended to comply with the requirements of the local NPDES Stormwater Program requiring the preparation of the plan.

The undersigned, while it owns the subject property, is responsible for the implementation of the provisions of this plan and will ensure that this plan is amended as appropriate to reflect up-to-date conditions on the site consistent with the current Orange County Drainage Area Management Plan (DAMP) and the intent of the non-point source NPDES Permit for Waste Discharge Requirements for the County of Orange, Orange County Flood Control District and the incorporated Cities of Orange County within the San Diego Region (South Orange County). Once the undersigned transfers its interest in the property, its successors-in-interest shall bear the aforementioned responsibility to implement and amend the WQMP. An appropriate number of approved and signed copies of this document shall be available on the subject site in perpetuity.

Description of Proposed Project				
Site Location	15 Argonaut, Aliso Viejo, CA 92656			
Project Area (ft^2) 137,650	Number of Dwelling Units: 58		SIC Code: NA	
Narrative Project Description:	The project site is located at 15 Argonaut, Aliso Viejo, CA 92656. The project consists of 58 townhomes with associated drive aisles, sidewalks, parking, and landscaping. The north and west boundaries feature a 2:1 slope where v-ditches intercept undeveloped run-on and divert it through the site for untreated discharge into Argonaut. Because the development creates 48,700 square feet of impervious surface—exceeding the 10,000-square-foot threshold—it is classified as a Priority Project, requiring permanent Best Management Practices (BMPs) and water quality treatment for all onsite runoff.			
Project Area	Pervious		Impervious	
	Area (acres or sq ft)	Percentage	Area (acres or sq ft)	Percentage
Pre-Project Conditions	1.21 ac	38%	1.95 ac	62%
Post-Project Conditions	1.12 ac	35%	2.04 ac	65%

2.2 Post Development Drainage Characteristics

The proposed redevelopment replaces an existing commercial property that slopes from northwest to southeast. The northern and western boundaries feature a 2:1 hillside slope with v-ditches that intercept runoff; under the new design, this drainage will be conveyed through underground pipes to the front of the property, maintaining existing hydraulic patterns. Onsite stormwater will be collected via area drains and directed to a biofiltration system for treatment before being pumped for final discharge into Argonaut.

2.3 Property Ownership/Management

The property is owned by Brandywine Homes.

Section 3 Site & Watershed Characterization

3.1 Site Conditions

3.1.1 Existing Site Conditions

The subject site is located at 15 Argonaut, Aliso Viejo, CA. The site is bounded on the north by Glenwood Drive, on the west by Aliso Viejo Pkwy, and the south and east by commercial developments. The north and west side of the property consists of a 2:1 hillside slope which drains to v-ditches. The runoff from the v-ditches discharge to the surface and flow to the front of the property along with all other surface flows where it discharges to Argonaut.

Existing Land Uses				
Land Use Description	Total Area (acres)	Impervious Area (acres)	Pervious Area (acres)	Imperviousness (%)
Commercial Development	3.16	1.21	1.95	62%
Total	3.16	1.21	1.95	62%

3.1.2 Infiltration-Related Characteristics

3.1.2.1 Hydrogeologic Conditions

Regionally, the subject site is located in the Peninsular Ranges geomorphic province, which characterizes the southwest portion of southern California where right-lateral major active fault zones predominately trend northwest-southeast. The Peninsular Ranges province is composed of plutonic and metamorphic rock, with lesser amounts of Tertiary volcanic and sedimentary rock, Quaternary drainage in-fills and sedimentary veneers.

3.1.2.2 Soil and Geologic Infiltration Characteristics

Monterey Formation: The Miocene-age Monterey Formation observed onsite primarily consists of silty sandstone, clayey sandstone, sandy claystone, sandstone, and claystone. The fine grained silty sandstone onsite is pale brown, white, dark yellowish brown, and brown in a slightly moist to moist and medium dense to very dense condition. The fine grained clayey sandstone onsite is pale brown, white, dark brown, brown, gray, light gray, dark grayish brown, and bluish gray in a slightly moist to moist and medium dense to dense condition. The sandy claystone onsite is dark

brown, brown, and gray in a moist and stiff to very stiff condition. The very fine to fine grained sandstone onsite is pale brown, yellowish brown, grayish pale brow, and orange in a slightly moist and medium dense to very dense condition. The claystone onsite is dark brown to brown in a moist and very stiff condition. This unit was logged to a depth of 51.5 feet below the ground surface and is overlain by a thin layer of asphalt.

3.1.2.3 Geotechnical Conditions

Groundwater was not encountered during our subsurface investigation. Based on state-provided information, the historic-high groundwater is greater than 20.0 feet below the ground surface (CGS, 2001). The most recent groundwater data retrieved from the nearest groundwater monitoring site, site ID 336555N1176965W001, was recorded in 2024 and indicates groundwater was approximately greater than 60.0-feet at that time (CDWR, 2025).

3.1.2.4 Summary of Infiltration Opportunities and Constraints of Existing Site

Infiltration will not suffice, due to the existing constraints with the existing soil conditions. Therefore, the project will require biofiltration.

3.2 Proposed Site Development Activities

3.2.1 Overview of Site Development Activities

The proposed site development consist of 58 townhomes, drive aisles, sidewalks, and landscape amenities.

3.2.2 Project Attributes Influencing Stormwater Management

Potential pollutant-generating activities include:

- Automobile repair and maintenance
- Automobile washing/ parking
- Home and garden care activities
- Pet Waste
- Green waste
- Irrigation

Plants known to have excessive root systems should also be avoided near structural improvements as they can cause heave conditions. Drought-resistant and maintenance-free plant species are recommended.

Proposed Land Uses				
Land Use Description	Total Area (acres)	Impervious Area (acres)	Pervious Area (acres)	Imperviousness (%)
Hardscape and Buildings	2.04	2.04	0	65%
Landscape	1.12	0	1.12	35%
Total	3.16			

3.2.3 Effects on Infiltration and Harvest and Use Feasibility

The existing soil type does not allow for adequate infiltration; however the site has been designed to try to drain hardscape areas into pervious areas to help increase the amount of natural infiltration. Harvest and use feasibility was also considered. A comparison of the Design Capture Volume (DCV) in gallons was compared to an estimated net wet season total water use (ETWU) in gallons. The results show that the DCV is greater than the ETWU, which makes harvest and use infeasible. Please see calculations in the Attachments. The proposed biofiltration system is required to treat the majority of the low flow runoff, due to the inability of adequate infiltration of the site with the existing soil type.

3.3 Receiving Waterbodies

Stormwater runoff from the project site discharges onto Argonaut, where it is conveyed via curb and gutter eastward to a catch basin. From there, flows are directed into Aliso Creek, eventually discharging into the Pacific Ocean.

303(d) List

Aliso Creek: Indicator Bacteria, Nutrients, Selenium, Malathion, Benthic Community Effects

TMDL

Aliso Creek: Total Coliform, Fecal Coliform, Enterococcus

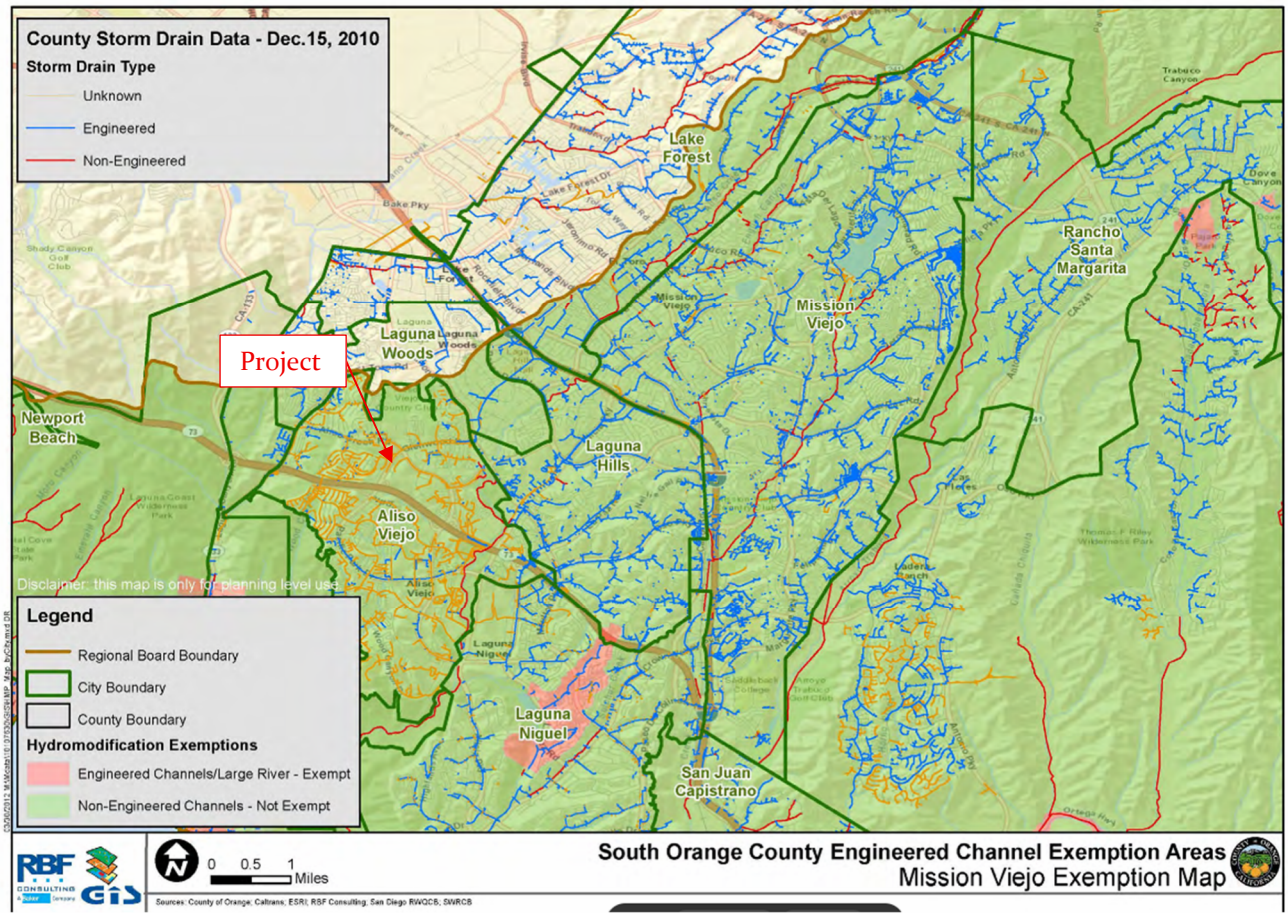
3.4 Stormwater Pollutants or Conditions of Concern

Residential water quality issues and related potential pollutants include the landscape planning and site design of the project. These proposed swales can trap pollutants such as suspended solids, oil and grease, as well as trace metals and it will reduce the flow velocity of storm water runoff.

Pollutants or Conditions of Concern				
Pollutant	Expected from Proposed Land Uses/Activities (Yes or No)	Receiving Waterbody Impaired (Yes or No)	Priority Pollutant from WQIP or other Water Quality Condition? (Yes or No)	**Pollutant of Concern (Primary, Other, or No)**
Suspended-Solids	Yes	No	Yes	Primary
Nutrients	Yes	No	Yes	Primary
Heavy Metals	No	No	Yes	Primary
Bacteria/Virus/Pathogens	Yes	No	Yes	Primary
Pesticides	No	No	Yes	Primary
Oil and Grease	Yes	No	No	No
Toxic Organic Compounds	No	No	No	No
Trash and Debris	Yes	No	No	No
Dry Weather Runoff	No	No	No	No

3.5 Hydrologic Conditions of Concern

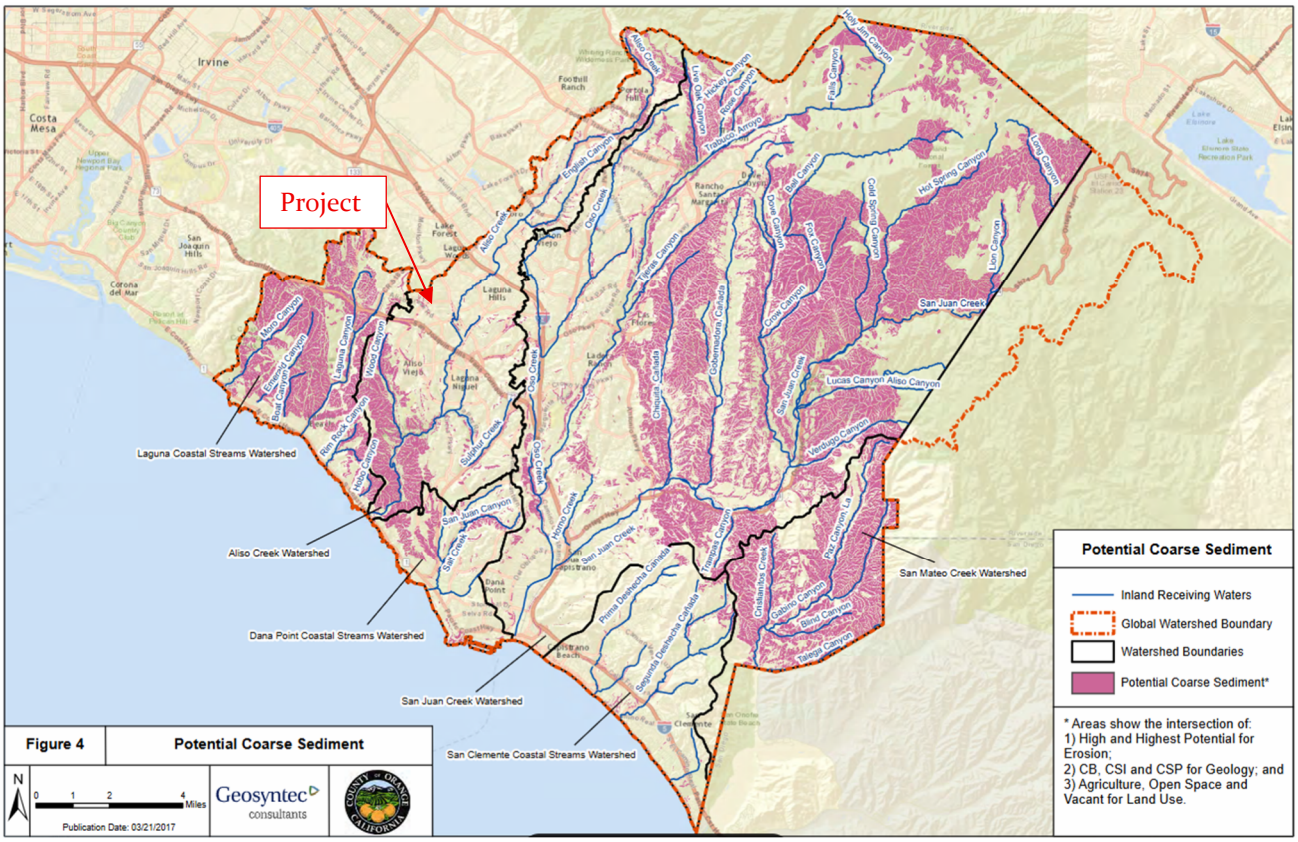
Does a hydrologic condition of concern exist for this project



☐ No – An HCOC does not exist for this receiving water because *(select one)*:

- ☐ Project discharges directly to a protected conveyance (bed and bank are concrete lined the entire way from the point(s) of discharge to a receiving lake, reservoir, embayment, or the Ocean
- ☐ Project discharges directly to storm drains which discharge directly to a reservoir, lake, embayment, ocean or protected conveyance (as described above)
- ☐ The project discharges to an area identified in the WMAA as exempt from hydromodification concerns

☒ Yes – An HCOC does exist for this receiving water because none of the above are applicable.



The projected is not exempt to hydromodification as shown on the TGD Exemption Maps.

The proposed project condition does not result in an increase in runoff, as demonstrated in the Drainage Report. The existing condition generates a higher runoff due to its commercial land use classification. Therefore, hydromodification requirements are satisfied, as the project does not increase runoff from existing to proposed conditions. See supporting calculations in the attachments.

3.6 Critical Course Sediment Yield Areas

There are no potential critical coarse sediment yield areas on the site per the potential coarse sediment map in Attachments of the technical guidance document.

Section 4 Site Plan and Drainage Plan

4.1 Drainage Management Area Delineation

The Project will be characterized with four drainage management areas, however only one area (DMA 1) will be required to treat runoff. The other three areas are from hillside runoff which will be routed through the site via underground storm drain pipes and will be discharged to Argonaut. DMA 1 consists of all proposed impervious areas and landscaped/pervious areas (see WQMP Site Plan). More specifically, DMA 1 will include flows originating from the buildings, drive aisles, hardscape, and landscape areas. Runoff from DMA 1 will be treated by a biofilter and then pumped to Argonaut.

4.2 Overall Site Design BMPs

Minimize Impervious Area - This Project was designed as a single-family residence with appropriate hardscape areas and drive.

Preserve Existing Drainage Patterns and Time of Concentration - Existing drainage patterns were preserved by limiting the grading area and preserving slope directions.

Disconnect Impervious Areas – Disconnect impervious areas through the use of landscape planters.

Protect Existing Vegetation and Sensitive Areas - Existing vegetation will be supplemented and/or replaced with additional vegetation.

Revegetate Disturbed Areas - The portion of the disturbed area that is pervious will be revegetated or overlain with synthetic grass.

Soil Stockpiling and Site Generated Organics - There will be no soil stockpiling or site generated organics as landscaping will be maintained by the owner on a regular basis.

Water Efficient Landscaping - Water efficient landscaping will be implemented.

Slopes and Channel Buffers - Slopes will be either undisturbed or vegetated.

4.3 DMA Characteristics and Site Design BMPs

4.3.1 DMA 1

DMA 1 consists of all proposed impervious areas and landscaped/pervious areas (see WQMP Site Plan). More specifically, DMA 1 will include flows originating from the buildings, drive aisles, hardscape, and landscape areas. Runoff from DMA 1 will be treated by a biofilter and then pumped to Argonaut.

4.3.3 DMA Summary

Drainage Management Areas				
DMA (Number/Description)	Total Area (acres)	Imperviousness (%)	Infiltration Feasibility Category (Full, Partial, or No Infiltration)	Hydrologic Source Controls Used
DMA 1	3.16	65%	No	None

4.4 Source Control BMPs

Section 5 Low Impact Development BMPs

5.1 LID BMPs

The project proposes to use a proprietary biotreatment system to treat stormwater runoff. A conventional biotreatment system was evaluated and sized (see the attached calculations); however, the proposed site development does not provide sufficient space to accommodate a conventional biotreatment facility. Although a proprietary biotreatment system is not the preferred option in the BMP selection process, it has been determined to be the only feasible treatment alternative for this site while meeting the project constraints.

The proposed project consists of a townhome development that has been designed to provide the minimum number of dwelling units necessary to maintain project feasibility while satisfying applicable fire access, grading, and life safety requirements. Any reduction in the proposed unit yield would result in an economically infeasible project due to fixed development costs and required infrastructure improvements.

Infiltration-based and volume retention BMPs were evaluated; however, these approaches are not feasible for the site. As documented in the project geotechnical/soils report, onsite soils are not suitable for infiltration; therefore, infiltration-based compliance is not viable.

The site is also constrained by the required infrastructure improvements necessary to support the development, including domestic water service (serving residential units and fire protection hydrants), sanitary sewer facilities, storm drain improvements for both hillside and developed area drainage, and electrical utilities. These improvements, in combination with grading constraints and fire access requirements, do not allow sufficient area for implementation of a conventional flow-through or storage-based treatment control system.

Based on the above constraints, the project qualifies as a space-limited project under Section 4.2.4.1, Option 2 (Project-Specific Space Allocation) of the WQMP requirements. A proprietary biotreatment system is therefore proposed as the most feasible treatment control BMP due to its compact footprint and ability to provide the required water quality treatment within the constrained development envelope without modification to the approved site layout or reduction in unit count.

5.1.1 Hydrologic Source Controls

No HSC's are applicable:

HSC-1: Not applicable due to the lack of infiltration potential at the site.
HSC-2: Not applicable due to the lack of infiltration potential at the site.
HSC-3: Not feasible because the required 20- to 30-foot tree canopy diameter cannot be achieved within the site constraints.

HSC-4: Not feasible because overflow dispersion requires a minimum 8-foot separation from buildings, which cannot be accommodated by the proposed site layout.
HSC-5: Not feasible due to the significant cost impacts to the project.
HSC-6: Not applicable due to the lack of infiltration potential at the site.

5.1.2 Structural LID BMP for DMA 1

Proprietary biotreatment (BIO-7) BMP's will be used to treat the stormwater runoff for DMA 1. This BMP satisfy the LID performance standard using the Flow-Based Compact Biofiltration Sizing Method. The required design flow rate for the BIO-7 BMP was calculate as follows:

Time of concentration (Tc) = 10 minutes

The time of concentration was calculated using the Orange County Hydrology Manual (OCHM) time of concentration nomograph (see time of concentration nomograph in Attachments). The time of concentration found by using the OCHM nomograph is 10 minutes.

$Q_{Design} = C \times i \times A \times 1.5$

$C = 0.75 \times imp + 0.15$

$C = 0.75 \times 0.65 + 0.15$

$C = 0.64$

$I_1 = 0.225$ in/hr

$Q_{Design} = 0.64 \times 0.225 \frac{in}{hr} \times 3.16\ acres$

$Q_{Design} = 0.45\ cfs$

$Q_{Design-final} = 1.5 * 0.45\ cfs = 0.68\ cfs$

The proprietary BIO-7 BMP used for this project is the Modular Wetlands Biofiltration System 8' x 16'.

5.2 Summary of LID BMPs

LID BMP (Number/Description)	Average Total Area (square feet)	Depth (feet)	Total Volume (cubic feet)

Biotreatment	128	4.0	512

Section 6 Hydromodification BMPs

6.1 Points of Compliance

Point of Compliance is considered to be the manhole where all storm runoff is captured and flows to a single point. The Point of Compliance was selected since runoff flows to this location.

6.2 Pre-Development (Natural) Conditions

The pre-developed site is assumed to be a straight grade from the top of the slope on the west side to the existing street on the east side with a slope of greater than 15%.

6.3 Post-Development Conditions and Hydromodification BMPs

The post development site will consist of 58 townhomes, drive aisles, walkways, and landscape amenities. The project will not discharge more runoff than allowed by hydromodification requirements.

6.4 Measures for Avoidance of Critical Coarse Sediment Yield Areas

There are no potential critical coarse sediment yield areas on the site per the potential coarse sediment map in Appendix N of the technical guidance document (see the Appendix – Potential Course Sediment Areas Map).

6.5 Hydrologic Modeling and Hydromodification Compliance

The project site is located within a Hydromodification control zone and is required to mitigate any increase in runoff peak flow rates between existing and proposed conditions. As documented in the attached South Orange County Hydrology Manual, storm drain chamber were sized to mitigate runoff per hydromodification requirements. Therefore, the project meets and exceeds the minimum Hydromodification requirements.

Attachment A: EDUCATIONAL MATERIALS

POOL AND SPA DRAINAGE

Unlike water in sanitary sewers (from sinks and toilets), water in storm drains is **not treated or cleaned** before entering our waterways and should never contain any pollutants. Many pools and spas are plumbed to drain directly to the sanitary sewer. If yours is not, you must take necessary steps before draining to landscaped areas or into the storm drain.

While the focus of this brochure is pools and spas, these requirements also apply to water features and fountains.

Who is H_2OC?

H_2OC is YOU. H_2OC is also a cooperative stormwater program which includes all 34 cities in Orange County, the County of Orange, and Orange County Flood Control District (OCFCD). Clean and healthy beaches, creeks, rivers, bays, wetlands, and ocean are important to Orange County. H_2OC provides resources to residents and businesses to encourage personal action and prevent polluted runoff from entering our waterways.

PROPER MAINTENANCE OF POOLS & SPAS

TO PROTECT OUR WATERWAYS

H_2OC® STORMWATER PROGRAM

PROPER DISPOSAL

When you cannot dispose of pool and spa water in the sanitary sewer, the release of dechlorinated pool and spa water to a landscaped area or in the storm drain system is allowed only if these parameters are met:

- ☑ Some cities may have ordinances that do not allow pool water disposal into a storm drain. Find your city's stormwater page here: h2oc.org/cities to check regulations.
- ☑ pH is between 6.5 and 8.5.
- ☑ Residual chlorine does not exceed 0.1 mg/L (parts per million).
- ☑ Water is clean and clear, free of any unusual coloration, dirt, or algae.
- ☑ There is no discharge of filter media or acid cleaning wastes.

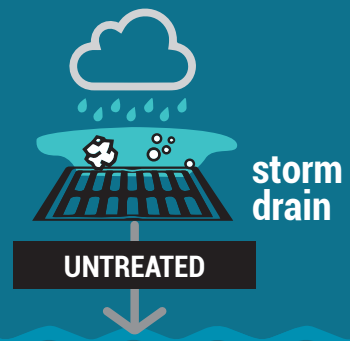
Saltwater pools must be discharged to the sanitary sewer, landscaped areas, or other pervious surfaces that can accommodate the volume of water. Alternatively, they can be discharged directly to a naturally saline body of water.

Disposal Process

- When possible, discharge all water to the sanitary sewer.
- Monitor the drain hose to prevent leakage.
- Remove trash and debris in the flow path between the pool or spa and storm drain.
- Monitor the rate of flow to ensure that draining the pool or spa does not cause erosion or flooding.

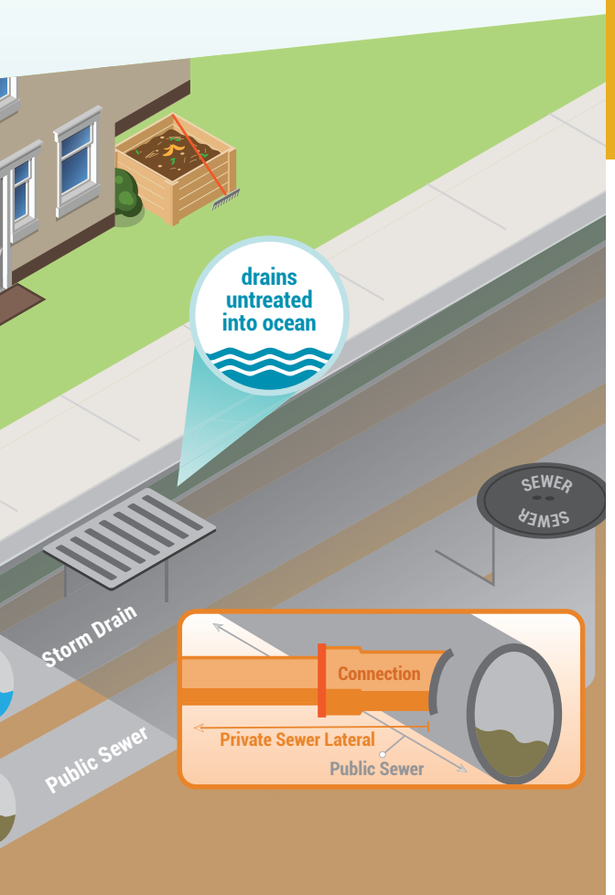
PROPER MAINTENANCE

- To prevent vectors and algae do not allow dechlorinated water to stand for more than 72 hours.
- Clean your pool regularly, maintain consistent and adequate chlorine or sodium bromide levels, monitor pH levels, and maintain your filtration and circulation system.
- Rinse pool filters and diatomaceous earth filters in landscaped areas where water and debris can readily soak into the soil.
- When draining pools or rinsing filters to a landscaped area, cover any landscape drains to prevent water from reaching the storm drain system.
- Used diatomaceous earth should be tossed in with solid garbage. It should never be discharged into storm drains or any place where it may wash into streams, rivers, or the ocean.
- Store chemicals indoors.



HOW TO KNOW IF YOU ARE FOLLOWING THE STANDARDS

You can find out how much chlorine is in your water by using a pool testing kit. Before discharging, reduce chlorine to 0.1 mg/L by discontinuing its use for a few days, or by using dechlorinating chemicals purchased from a local pool supply company. Always follow the instructions that come with any products you use.



DOING YOUR PART

By following these requirements, you will make a significant contribution towards keeping pollutants out of Orange County's waterways. You can help protect organisms that are sensitive to pool chemicals and maintain the health of our environment.

Sewer System Maintenance

Property owners are responsible for maintaining their private laterals from the connection at the home or business to the connection with the public sewer; this can include areas under the sidewalk and the street. Inadequate maintenance of laterals can result in sewer backups and spills. Operation and maintenance of the local, public, and regional sewer lines, on the other hand, are the responsibility of the sewer agency.* Visit the link inside for agency contact information.

Who is H_2OC?

H_2OC is YOU! H_2OC is also a cooperative stormwater program which includes all 34 cities in Orange County, the County of Orange, and Orange County Flood Control District (OCFCD). Clean and healthy beaches, creeks, rivers, bays, wetlands, and ocean are important to Orange County. HOW TO PREVENT & REPORT SEWAGE SPILLS

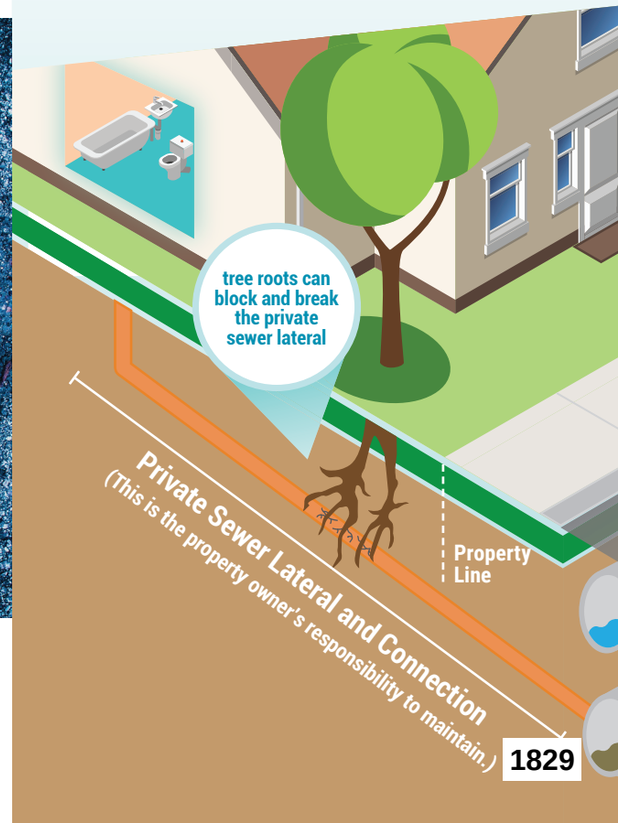
A PROPERTY OWNER'S GUIDE TO PRIVATE SEWER LATERALS



H_2OC STORMWATER PROGRAM

Developed in Collaboration with Orange County's Sewer Agencies

The Sanitary Sewer System

Every property with sewer service owns a private sewer line, also known as a "private lateral." The private lateral carries wastewater from indoor plumbing fixtures, like toilets, sinks, and dishwashers, to the public sewer line under the street. The sewer system transports wastewater to treatment plants before being released. It is important to maintain your private laterals to prevent sewage spills that can reach our storm drains. Unlike water in sanitary sewers, water that flows into storm drains is **not treated** before entering our waterways and should never contain sewage.

Backups and Sewage Spills

Sewage spills and backups occur when the wastewater being transported is blocked and overflows or leaks out of broken pipes inside or outside of your building. Once out of the pipe, the sewage can discharge to the curb, gutter, and storm drain system, which flows to local waterways. Sewage spills can cause health hazards, beach closures, damage to homes and businesses, and threaten the quality of our local waterways. As a property owner, if sewage from your property discharges to a gutter or storm drain, you may be subject to fines, penalties, or increased rates.

Common Causes

BLOCKAGES

Common causes of blockages include

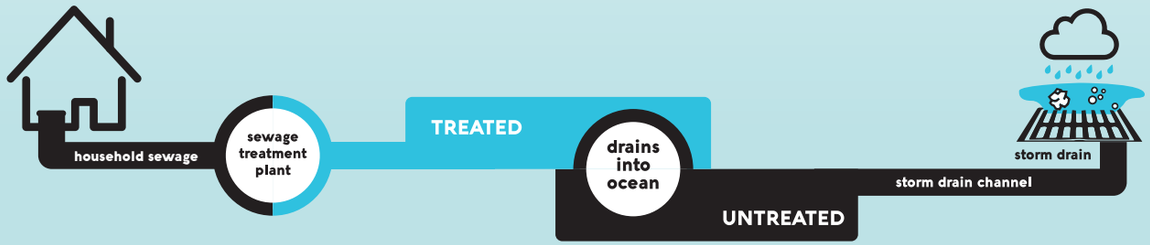
- Flushing anything other than toilet paper, including: wipes (even those advertised as "flushable"), feminine products, rags, and other items.
- Fats, oils, and grease (FOG) can get into the private lateral from household drains, as well as from poorly maintained commercial grease traps and interceptors.
- Tree roots can find their way into cracked or broken sewer laterals and cause blockages.

STRUCTURAL PROBLEMS

Common structural problems include

- Broken/cracked pipes.
- Deteriorated, missing, or broken cleanout caps.
- Aging or undersized sewers.

Keep Your Private Laterals Functioning Properly



Prevent Blockages

Remember, **the drain is not a dump!**

- Only flush toilet paper down the toilet.
- Use a mesh sink strainer to catch food scraps before they go down the drain.
- Scrape food scraps into a designated food waste/organics receptacle before rinsing dishes and utensils in the sink.
- After cooking at home, let grease cool then pour or scrape it into a metal can. When the can is full, dispose of grease properly.
- For businesses, grease traps or interceptors must be serviced regularly. Have spill kits readily available for cleaning up spills.
- Do not plant trees or large shrubs above or within several feet of your sewer laterals.

Structural Maintenance

- Contact a licensed plumber to determine the optimal maintenance schedule.
- Perform periodic cleaning to eliminate grease, debris, and roots from private laterals.
- Repair or replace deteriorated or damaged private laterals as soon as possible.
- Install a backflow device to prevent sewage from ending up in your home or business.

Identify & Report Sewage Spills or Backups

Know the Signs

Sewage spills can cause damage to your property, the environment, and our local waterways. Look for potential signs of a spill, which may include:

- Drains are operating slower than normal and continuing to slow over time.
- Drains backup inside of buildings.
- Unusually wet or soggy ground in your yard that may be accompanied by odors.
- Leakage from sewer cleanouts, outside drains, or manhole lids.

Report Sewage Spills Immediately

- If you suspect a sewer backup or leak, contact a licensed plumber.
- If you observe a sewer spill from a cleanout or manhole, contact your sewer agency.*
- Plumbers should contact the sewer agency prior to pushing roots from private sewer laterals to the sewer main.

Alternatively, you can contact the **24-Hour Pollution Reporting Hotline** by calling **1-877-89-SPILL (1-877-897-7455)** or visiting **myOCeServices.ocgov.com.**

Spill Control & Containment

- Turn off main water supply or stop all water use.
- Have a plumbing professional clear the blockage and make necessary repairs.
- Keep people and pets away from the affected area.
- When safe, place sandbags or other material in the flow path of the spill to control, contain, and prevent sewage from entering the storm drain system.

Sewer overflow

Plumber making repairs on private lateral

H2OC
STORMWATER PROGRAM

LANDSCAPE & SUSTAINABLE WATER USE GUIDE

Making Your Landscape Stormwater-Safe

Runoff is the flow of water from your property that doesn't get absorbed into the ground. When harmful substances like pesticides, fertilizer, and dirt are handled improperly, this water can pick them up on its way to the storm drain system where it flows untreated to our creeks, rivers, and ocean. There are simple actions you can take to collect runoff and use it on site to maintain your landscape and protect our water resources.

This guide will help you use rainwater as a resource to waste less water and keep your landscape stormwater-safe. Planting OC Garden Friendly plants, proper watering practices, and harvesting and using rainwater are terrific ways to beautify your landscape while protecting our water resources. Continue reading to learn how!

What Are OC Garden Friendly Plants?

OC Garden Friendly plants are either native or adapted to Orange County. Because they're accustomed to our climate, they require less water, pesticides, and fertilizer than other plants. These plants can be terrific assets to waste less water and keep our waterways healthy. Here are some beautiful OC Garden Friendly plants to add to your garden:

Groundcover

African daisy

Coral bells/ Allum root

Sage

Germander

Penstemon

Sundrops

Gaura

1

Heat and drought-tolerant groundcover with showy flowers.

Rock rose

2

Terrific groundcover for a dry garden whose colorful flowers blossom in the spring.

Perennial

Narrow-leaf milkweed

Douglas iris

Pumpkin monkey

Pine muhly grass

Beach strawberry

Yellow monkey

Shrub

Baja fairy duster

California fuchsia

Pacific mist manzanita

Sea lavender

Texas ranger

Toyon

Westringia/Coast rosemary

3

Charming and fragrant evergreen shrub with lavender flowers which shine in the spring.

Tree

Desert museum palo verde

4

Attractive tree with bright flowers appearing in mid-spring and leaves that shed each winter. Water deeply once or twice a month in the summer to promote flowering.

Marina madrone

5

Shiny evergreen leaves with drooping flower clusters followed by berries lasting into late winter. Plant if you want to see hummingbirds!

Desert willow

Where to Use Them:

Note: *For new or rehabilitated landscape projects greater than 500 sq. ft., it is mandatory to follow the Model Water Efficient Landscape Ordinance (MWELO) standards for landscape design and installation. These are a set of minimum standards to be followed. Check with your local city for specific requirements.*

Scan to learn more:

https://water.ca.gov/Programs/Water-Use-And-Efficiency/Urban-Water-Use-Efficiency/Model-Water-Efficient-Landscape-Ordinance

For more information regarding how to create a sustainable landscape please visit the UCCE Master Gardeners of Orange County website: https://mgorange.ucanr.edu.

Sustainable Water Use Best Practices

Watering

Proper irrigation practices are critical to protect Orange County's water bodies.

- Utilize smart irrigation controllers and, and/or soil moisture sensors. These can help manage your garden's water needs to waste less water.
- Take advantage of a drip irrigation system to directly water plant roots. This reduces water loss and runoff.
- Install rotating sprinkler nozzles to spread water more uniformly across your landscape.

Rainwater Collection and Use

In Orange County, 60%-70% of water is used for irrigation and other outdoor uses. Collecting and using rainwater are great ways to decrease water usage.

- Direct downspouts to flow towards vegetated areas to reduce runoff and use a splash block to prevent erosion.
- Install a rain barrel to collect rainwater from roofs and use for landscape irrigation. Make sure it has a screen, spigot to siphon water for use and an overflow tube.
- Build a rain garden using OC Garden Friendly plants and other landscape materials.

Rebates

Beautify your landscape in stormwater-safe ways by utilizing rebates from your local water district or the Municipal Water District of Orange County (MWDOC). Save money on water-efficient devices like smart irrigation controllers, high-efficiency nozzles, soil moisture sensors, and drip irrigation systems. Also, upgrade your landscape with their conversion rebates to replace turf with OC Garden Friendly plants. These rebates can change frequently, so check with your local water agency and MWDOC (mwdoc.com/rebates) regularly.

THANK YOU FOR PROTECTING OUR WATERWAYS BY CREATING AN OC GARDEN FRIENDLY LANDSCAPE.

Learn more at our Overwatering is Out webpage by scanning the QR code or visiting: h2oc.org/resources/take-action/overwatering-is-out.

WHO IS H_2OC?

H_2OC is YOU! H_2OC is also a cooperative stormwater program which includes all 34 cities in Orange County, the County of Orange, and Orange County Flood Control District (OCFCD). Clean and healthy beaches, creeks, rivers, bays, wetlands, and ocean are important to Orange County. H_2OC provides resources to residents and businesses to encourage personal action and prevent polluted runoff from entering our waterways.

Did you know that just one quart of oil can pollute 250,000 gallons of water?

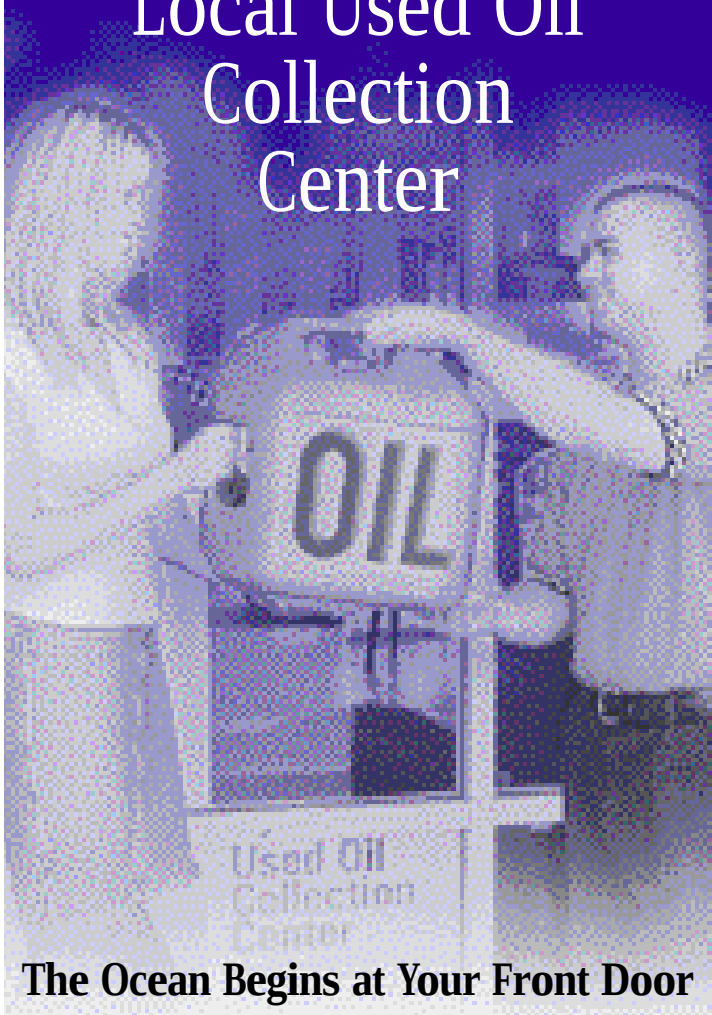
A clean ocean and healthy creeks, rivers, bays and beaches are important to Orange County. However, not properly disposing of used oil can lead to water pollution. If you pour or drain oil onto driveways, sidewalks or streets, it can be washed into the storm drain. Unlike water in sanitary sewers (from sinks and toilets), water in storm drains is not treated before entering the ocean. Help prevent water pollution by taking your used oil to a used oil collection center.

Included in this brochure is a list of locations that will accept up to five gallons of used motor oil at no cost. Many also accept used oil filters. Please contact the facility before delivering your used oil. This listing of companies is for your reference and does not constitute a recommendation or endorsement of the company.

Please note that used oil filters may not be disposed of with regular household trash. They must be taken to a household hazardous waste collection or recycling center in Anaheim, Huntington Beach, Irvine or San Juan Capistrano. For information about these centers, visit www.oclandfills.com.

Please do not mix your oil with other substances!

For more information, please call the Orange County Stormwater Program at 1-877-89-SPILL (1-877-897-7455) or visit www.watersheds.com.



For information about the proper disposal of household hazardous waste, call the Household Waste Hotline at (714) 834-6752 or visit www.oclandfills.com.

RECYCLE USED OIL

For additional information about the nearest oil recycling center, call the Used Oil Program at 1-800-CLEANUP or visit www.cleanup.org.

POLLUTION PREVENTION

No matter how large or small your home improvement project is, pollution prevention must always be part of the process. Use the required best management practices (BMPs) listed here to protect our waterways as you make your improvements. Whether you do-it-yourself or hire a contractor, you are responsible for preventing pollution.

Who is H_2OC?

H_2OC is YOU. H_2OC is also a cooperative stormwater program which includes all 34 cities in Orange County, the County of Orange, and Orange County Flood Control District (OCFCD). Clean and healthy beaches, creeks, rivers, bays, wetlands, and ocean are important to Orange County. H_2OC provides resources to residents and businesses to encourage personal action and prevent polluted runoff from entering our waterways.

CONDUCT HOME IMPROVEMENT PROJECTS PROPERLY TO PROTECT OUR WATERWAYS

H_2OC STORMWATER PROGRAM

UNDERSTAND THE REQUIREMENTS TO PREVENT POLLUTION WHEN COMPLETING HOME IMPROVEMENT PROJECTS

Home improvement activities such as remodeling, stucco repair, painting, landscape improvements, and power washing can generate pollution that can harm Orange County's waterways. These pollutants can include paint, debris, chemicals, and more. If not properly managed, these pollutants can flow into Orange County's rivers, creeks, channels, and ocean through our storm drain system. Unlike water in sanitary sewers (from sinks and toilets), water that flows into storm drains is not treated before entering our waterways and must never contain pollutants generated by home improvement projects.

Understand the Requirements When Conducting Home Improvement Projects

1836

General Construction

- Plan and complete projects when rain is not predicted.
- Keep all waste and debris away from the street, gutter, and storm drain. All area drains flow into the storm drain and can reach local waterways.
- Store all materials off of the ground, and under secured cover such as tarps or plastic sheets, and never near drains.
- When using concrete or drywall, liquid waste may be temporarily stored in a baby pool or plastic lined depression until dried. Powdery waste, like dry concrete, must be properly contained in a bag or box before placing into a dumpster.

Paint

- Before painting, prepare your work area with tarps to contain drips and spills.
- Rinse tools such as brushes, buckets, and rags in a sink connected to the sanitary sewer.
- Never wash tools where washwater can drain into the street, gutter, or storm drain. Discharges to the storm drain system are prohibited.
- Store leftover paint in original or clearly marked containers and in a dry location away from the elements.
- Dispose of water-based, oil-based, and aerosol paint at a Household Hazardous Waste Collection Center (HHWCC).*
- To dispose of small amounts of water-based paint, remove the lid, let it dry in the can, and recycle the can in your recycling bin.
- Visit paintcare.org for other disposal options.

Cleaning & Maintenance

- Use dry cleanup methods such as sweeping or vacuuming whenever possible and clean work areas at least daily.
- Clean paint, plaster, and drywall tools in a contained area to prevent pollution. No discharges to the storm drain are permitted.
- Dispose of solid or non-liquid debris in the trash or dumpster.
- Hazardous waste must be collected and disposed of at a Household Hazardous Waste Collection Center (HHWCC).*
- Vacuum or sweep sawdust and dispose of it in the trash or green waste bin.

Disposal & Recycling

- Use a construction and demolition recycling company to properly dispose of construction materials and debris.**

For more information scan the QR Code or visit
h2oc.org/resources/pollution-prevention-for-residents/home-repair-and-improvements/

Spills & Cleanup

- Clean up spills immediately using absorbent material, then sweep, wipe, or vacuum and dispose of material properly.
- To clean a paint spill, use rags for a small spill and dry absorbent material for larger spills. Dispose of soiled rags and used dry absorbent material at a Household Hazardous Waste Collection Center (HHWCC).*
- Report spills that have entered the street, gutter, or storm drain to the 24-Hour Pollution Reporting Hotline by calling 1-877-89-SPILL (1-877-897-7455) or visiting myOCeServices.ocgov.com.

Landscaping

- While new plants are being established, use BMPs such as mulch, straw wattles, or jute netting to prevent erosion.
- Use gravel bags or fiber rolls along the perimeter of your property to keep water on site and to prevent discharges to the street, gutter, or storm drain.
- Cover bare soil with mulch.
- Store all bulk materials including soil, mulch, or gravel under tarps while not in use.

1837

VEHICLE MAINTENANCE

Unlike water in sanitary sewers (from sinks and toilets), water in storm drains is **not treated or cleaned** before entering our waterways and should never contain any pollutants. Vehicle maintenance can generate a variety of waste products which can become pollutants like oil, gasoline, antifreeze, lubricants, metals, grease, and other harmful substances. If not properly managed, these pollutants can be transported to Orange County's creeks, rivers, and ocean through our storm drain system.

Understand the Best Practices for Conducting Car Maintenance at Home

Who is H_2OC?

H_2OC is YOU. H_2OC is also a cooperative stormwater program which includes all 34 cities in Orange County, the County of Orange, and Orange County Flood Control District (OCFCD). HOW TO BE A RESPONSIBLE HOME MECHANIC

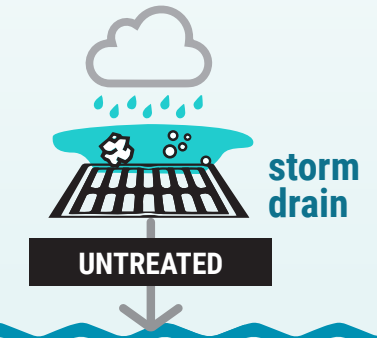
TO PROTECT OUR WATERWAYS

H_2OC STORMWATER PROGRAM

1838

BE PREPARED & PLAN AHEAD

Before working on a vehicle, it is important to prepare to prevent pollution.



- ☑ Identify all actions that can cause spills or release pollutants.
- ☑ Locate and protect all storm drains on or near your property in case there is a spill.
- ☑ Only perform repair and maintenance activities when it isn't raining, and on non-porous surfaces like concrete.
- ☑ Store car parts, batteries, oils, other materials and waste off the ground, under overhead cover, and in labeled containers.
- ☑ Have spill cleanup materials available, including absorbents like kitty litter, gloves, goggles, brooms, and rags.
- ☑ Park leaking vehicles on private property over a drip pan until repairs can be made.

COLLECT & CONTAIN WASTE

There are many types of waste products that result from vehicle maintenance. Keeping wastes contained properly will make pollution prevention simple.

- Use absorbents like rags or kitty litter to clean up any spills right away.
- Clean work areas using dry methods (use a vacuum or broom to sweep up debris).
- Drain vehicle fluids into appropriate receptacles for proper disposal. Check with your city to see if free recycle kits are offered.
- Place a drip pan under vehicles to capture fluids.
- When possible, perform all bodywork in enclosed areas. Collect all waste and dispose of it properly.
- All chemicals used to clean parts must be properly managed. Do not discharge to storm drain.
- If any waste enters the street, gutter, or storm drain, report it by calling 877-897-7455 or going to myOCeServices.ocgov.com.
- Most vehicle maintenance byproducts are hazardous waste and must be disposed of in accordance with all local, state, and federal laws.*

OCEAN

USED OIL RECYCLING

Take your used oil to one of the many CalRecycle Certified Used Oil Collection Centers throughout Orange County.** All Certified Centers will accept up to five gallons of uncontaminated used oil from the public absolutely FREE of charge during normal business hours. Here are some tips for utilizing a collection center:

- Drain your oil into a clean container with a tight fitting lid and place the filter in a sealed plastic bag.
- Do not mix oil with other substances.
- Many Certified Centers are now accepting used filters, call the center to confirm.
- There is no I.D. or paperwork required to participate.

Look for a sign like this:

For more information about the used oil program, visit: ocusedoil.com or scan the QR code.

1839

Update Your Irrigation System and Landscape

Switch to Rotating Sprinkler Nozzles: Consider replacing your sprinkler heads with rotating sprinkler nozzles. Rotating nozzles water more uniformly and efficiently, significantly reducing your outdoor water use. Check with your local water agency for available rebates on rotating nozzles, irrigation controllers, and other water efficient devices.

Get Smart: Consider using smart irrigation controllers. Smart irrigation controllers have internal clocks as well as sensors that will turn off the sprinklers in response to environmental changes. If it is raining, too windy, or too cold, the smart irrigation controller will automatically shut off the sprinklers.

Drip don't Douse: Drip irrigation systems prevent runoff from carrying pollutants into the storm drain by watering only the targeted plants using low volumes of water.

Reduce the Need: Replace water "thirsty" plants and grass types with water efficient natives or OC Garden Friendly plants to save water and reduce the need for pesticides and fertilizer. Please see the California Friendly® Landscape Maintenance Guide produced by the Metropolitan Water District of Southern California** and associated Southern California Water Agencies for more information.

Group Plants: When adding to or redesigning your landscaping, plants that require similar watering needs can be planted together. Grouping plants with similar watering needs helps prevent unnecessary watering.

Who is H_2OC?

H_2OC is YOU! H_2OC is also a cooperative stormwater program which includes all 34 cities in Orange County, the County of Orange, and Orange County Flood Control District (OCFCD). OVERWATERING IS OUT

TIPS TO PREVENT IRRIGATION RUNOFF

H_2OC® STORMWATER PRO 1840

What is Irrigation Runoff and How Does it Lead to Pollution?

Irrigation runoff is water flowing off landscaped areas, which can carry pollutants to our storm drains and waterways. It is usually the result of landscape overwatering, and mismanaged irrigation systems. Runoff can carry pesticides, fertilizers, pet waste, and other pollutants into our storm drains, which flow untreated to the ocean. Explore the tips below to find out how to prevent irrigation runoff.

RUN YOUR SYSTEM

Run and observe your irrigation system through its entire cycle seasonally (twice a year) to look for leaks, misaligned sprinkler heads, and areas of ponding and/or runoff.

WATER AT SUNRISE

Watering early in the morning before sunrise will reduce water loss due to evaporation. Wind also tends to die down in the early morning, so the water will irrigate the lawn as intended.

WATER BY PLANT TYPE AND SEASON

Different types of grass and plants have differing water needs. This also changes throughout the year, with cooler months typically requiring less water than warmer months. Ask your landscape maintenance provider or contact the University of California Cooperative Extension Master Gardeners* for questions regarding landscape watering needs.

HAND WATER PLANTS

Garden hoses with automatic shutoff nozzles can use less water than sprinkler irrigation systems. Hand watering also ensures only those areas that need water get it and prevents irrigation runoff. An easy alternative to sprinklers, hand watering can help keep our waterways clean!

Know Your Irrigation System and Landscape:

PROPER AIM

Adjust the direction of your sprinkler heads so water does not spray on sidewalks, driveways or roads. By simply adjusting the direction of your sprinklers, you can save water, prevent irrigation runoff, and keep your landscape healthy.

FIX LEAKS

Broken or leaky sprinklers can waste thousands of gallons of water per month and significantly increase the amount of runoff from your yard. Repairing sprinklers can prevent runoff from entering our waterways and save you money.

LEAST TOXIC FIRST

Limit pesticide use by using nonchemical methods, integrated pest management, or least-toxic pesticides whenever possible. Contact the University of California Cooperative Extension Master Gardeners* for alternative suggestions and related guidance.

CYCLE AND SOAK

Running multiple, shorter cycles with an hour break in between allows the water to infiltrate into the ground so it does not run off.

RAIN SKIP

Adjusting your watering schedule when it rains prevents unnecessary watering that can lead to runoff. Keep an eye on the weather forecast and skip your normal watering schedule before, during, and after a rain to help keep our waterways clean and your landscaping looking its best.

SET A TIMER

Use an irrigation timer to minimize runoff and maximize water absorption. Water districts often provide irrigation schedules to determine the best water scheme for your yard. Contact your water provider for a weekly irrigation schedule.

GIVE IT 48 HOURS

Prevent fertilizers and pesticides from entering our waterways by not watering your lawn 48 hours after application and stopping application 48 hours before a forecasted rain

MAINTAINING YOUR PROPERTY

Unlike water in sanitary sewers (from sinks and toilets), water in storm drains is **not treated or cleaned** before entering our waterways and should never contain any pollutants. Landscaping and gardening can generate a variety of waste products which can become pollutants like dirt, fertilizers, pesticides, green waste (grass clippings, prunings, branches), and other harmful substances. If not properly managed, these pollutants can be transported to Orange County's creeks, rivers, and ocean through our storm drain system.

Who is H_2OC?

H_2OC is YOU! H_2OC is also a cooperative stormwater program which includes all 34 cities in Orange County, the County of Orange, and Orange County Flood Control District (OCFCD). Clean and healthy beaches, creeks, rivers, bays, wetlands, and ocean are important to Orange County. PROPER MAINTENANCE OF LANDSCAPES & GARDENS

TO PROTECT OUR WATERWAYS

H_2OC STORMWATER PROGRAM

BEST MANAGEMENT PRACTICES

Runoff of anything other than clean rainwater is prohibited from entering the storm drain system. Here's what you can do while maintaining your yard and garden to protect our creeks, rivers, and ocean.

Landscaping

- Regularly inspect your sprinkler system for runoff and leaks and fix immediately. Check backup battery and adjust system regularly.
- Use smart irrigation controllers, drip irrigation, soaker hoses, high-efficiency sprinkler nozzles, or micro spray systems. Check with your local water agency or the Municipal Water District of Orange County (MWDOC) for currently available rebates.*
- Hand water your landscape to reduce overwatering.
- Cover bare soil with groundcover or mulch to prevent erosion and reduce runoff.
- Check the weather forecast and refrain from watering or using chemicals like fertilizers and pesticides 48 hours before or after rain is predicted.
- Sweep hardscapes and rinse patio furniture on permeable surfaces to prevent runoff.

Gardening

- Use integrated pest management (IPM) to target specific pests in problem areas instead of widespread chemical use.
- If pesticides or herbicides are necessary, follow the manufacturer's instructions on the label.
- Plant OC Garden Friendly plants to reduce the amount of water, fertilizers, and pesticides needed.

Containment

- Protect stockpiles and materials from wind and rain by storing them under tarps or secured plastic sheeting.
- Bulk deliveries of landscape materials such as mulch and soil, should be delivered to driveways and covered with a tarp.
- Store chemicals indoors or in a dry and covered area.

Proper Disposal

- Sweep up solid waste spills immediately. If the spill is liquid, apply an absorbent material then sweep it and dispose of it properly.
- Take unwanted pesticides, fertilizers, and herbicides to a Household Hazardous Waste Collection Center.**
- Dispose of green waste by composting it or placing in your organics waste bin.

For more on waterway-safe landscaping and gardening, please visit https://h2oc.org/resources/pollution-prevention-for-residents/lawn-and-garden-care/ or scan the QR code.

THANK YOU FOR PROTECTING OUR WATERWAYS FROM RUNOFF POLLUTION

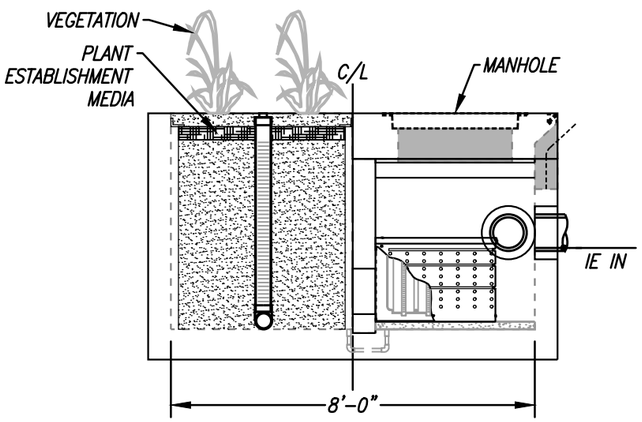
Worksheet 9: Flow-Based Compact Biofiltration with Supplemental Retention Method



Part 1: Determine the design storm intensity of the compact biofiltration BMP				
1	Enter the time of concentration, T_c (min) (See **E.2.3**) (account for upstream detention by increasing Tc to a maximum 60 minutes per **Section E.3.5.2** if detention is provided)	T_c=	10	min
2	Using **Figure E-7** or the figure included in the worksheet, determine the design intensity at which the estimated time of concentration (T_c) achieves 80% capture efficiency, I_1	I_1=	.225	in/hr
3	Enter capture efficiency corresponding to upstream HSCs and/or upstream BMPs, Y_2. Attach associated calculations.	Y_2 =	0	%
4	Using **Figure E-7**, determine the design intensity at which the time of concentration (T_c) achieves the upstream capture efficiency(Y_2), I_2	I_2=	.0	in/hr
5	Determine the design intensity that must be provided by BMP to achieve 80 percent capture, $I_{design}= I_1-I_2$	$I_{design_80\%}$ =	.225	in/hr
Part 2: Calculate the design flowrate of the compact biofiltration BMP (Section E.2.6)				
6a	Enter DMA area tributary to BMP (s), *A* (acres)	A=	3.16	acres
6b	Enter DMA Imperviousness, imp (unitless)	imp=	0.65	
6c	Calculate runoff coefficient, *c= (0.75 x imp) + 0.15*	c=	0.64	
6d	Calculate flowrate to achieve 80 percent capture, $Q_{80\%}$= *(c x* I_{design} *x A)*	$Q_{80\%}$=	0.45	cfs
7	Calculate design flowrate, $Q_{design}= Q_{80\%}$ *x 150%*	Q_{design}=	0.68	cfs
Part 3: Demonstrate that Supplemental Retention BMPs Conform to Volume Reduction Targets (Only DMAs Categorized as "Biotreatment with Partial Infiltration")				
8	Describe system, including features to maximize volume reduction (if applicable):			
9	Summarize calculations to demonstrate that volume reduction targets are met, where feasible and applicable.

INSTALLATION NOTES

1. CONTRACTOR TO PROVIDE ALL LABOR, EQUIPMENT, MATERIALS AND INCIDENTALS REQUIRED TO OFFLOAD AND INSTALL THE SYSTEM AND APPURTENANCES IN ACCORDANCE WITH THIS DRAWING AND THE MANUFACTURER'S SPECIFICATIONS, UNLESS OTHERWISE STATED IN MANUFACTURER'S CONTRACT.
2. UNIT MUST BE INSTALLED ON LEVEL BASE. MANUFACTURER RECOMMENDS A MINIMUM 6" LEVEL ROCK BASE UNLESS SPECIFIED BY THE PROJECT ENGINEER. CONTRACTOR IS RESPONSIBLE FOR VERIFYING PROJECT ENGINEER'S RECOMMENDED BASE SPECIFICATIONS.
3. CONTRACTOR TO SUPPLY AND INSTALL ALL EXTERNAL CONNECTING PIPES. ALL PIPES MUST BE FLUSH WITH INSIDE SURFACE OF CONCRETE (PIPES CANNOT INTRUDE BEYOND FLUSH). INVERT OF OUTFLOW PIPE MUST BE FLUSH WITH DISCHARGE CHAMBER FLOOR. ALL PIPES SHALL BE SEALED WATERTIGHT PER MANUFACTURER'S STANDARD CONNECTION DETAIL.
4. CONTRACTOR RESPONSIBLE FOR CONTACTING CONTECH FOR ACTIVATION OF UNIT. MANUFACTURER'S WARRANTY IS VOID WITHOUT PROPER ACTIVATION BY A CONTECH REPRESENTATIVE.
5. VERTICAL HEIGHT VARIES BASED ON SITE SPECIFIC REQUIREMENTS.

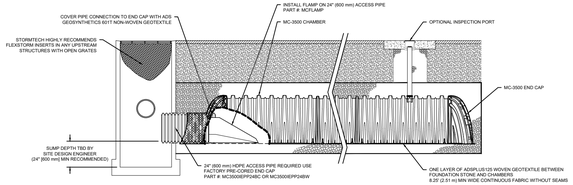
NOTE: ALL DIMENSIONS ARE NOMINAL

CUSTOM PRECORED INVERTS ARE AVAILABLE UPON REQUEST. INVENTORIED MANIFOLDS INCLUDE 12-24" (300-600 mm) SIZE ON SIZE AND 15-48" (375-1200 mm) ECCENTRIC MANIFOLDS. CUSTOM INVERT LOCATIONS ON THE MC-3500 END CAP CUT IN THE FIELD ARE NOT RECOMMENDED FOR PIPE SIZES GREATER THAN 10" (250 mm). THE INVERT LOCATION IN COLUMN 'B' ARE THE HIGHEST POSSIBLE FOR THE PIPE SIZE.

2 MC-3500 TECHNICAL SPECIFICATION

INSPECTION & MAINTENANCE

STEP 1) INSPECT ISOLATOR ROW PLUS FOR SEDIMENT
- A. INSPECTION PORTS (IF PRESENT)
  - A.1. REMOVE/OPEN LID ON NYLOPLAST INLINE DRAIN
  - A.2. REMOVE AND CLEAN FLEXSTORM FILTER IF INSTALLED
  - A.3. USING A FLASHLIGHT AND STADIA ROD, MEASURE DEPTH OF SEDIMENT AND RECORD ON MAINTENANCE LOG
  - A.4. LOWER A CAMERA INTO ISOLATOR ROW PLUS FOR VISUAL INSPECTION OF SEDIMENT LEVELS (OPTIONAL)
  - A.5. IF SEDIMENT IS AT, OR ABOVE, 3" (80 mm) PROCEED TO STEP 2. IF NOT, PROCEED TO STEP 3.
- B. ALL ISOLATOR PLUS ROWS
  - B.1. REMOVE COVER FROM STRUCTURE AT UPSTREAM END OF ISOLATOR ROW PLUS
  - B.2. USING A FLASHLIGHT, INSPECT DOWN THE ISOLATOR ROW PLUS THROUGH OUTLET PIPE
    - i) MIRRORS ON POLES OR CAMERAS MAY BE USED TO AVOID A CONFINED SPACE ENTRY
    - ii) FOLLOW OSHA REGULATIONS FOR CONFINED SPACE ENTRY IF ENTERING MANHOLE
  - B.3. IF SEDIMENT IS AT, OR ABOVE, 3" (80 mm) PROCEED TO STEP 2. IF NOT, PROCEED TO STEP 3.



STEP 2) CLEAN OUT ISOLATOR ROW PLUS USING THE JETVAC PROCESS
- A. A FIXED CULVERT CLEANING NOZZLE WITH REAR FACING SPREAD OF 45° (1.1 m) OR MORE IS PREFERRED
- B. APPLY MULTIPLE PASSES OF JETVAC UNTIL BACKFLUSH WATER IS CLEAN
- C. VACUUM STRUCTURE SUMP AS REQUIRED

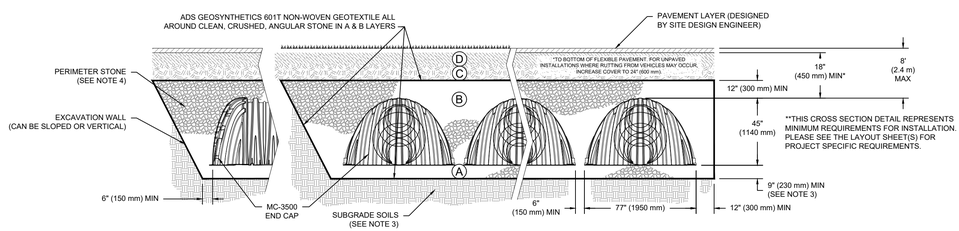
STEP 3) REPLACE ALL COVERS, GRATES, FILTERS, AND LIDS; RECORD OBSERVATIONS AND ACTIONS.

STEP 4) INSPECT AND CLEAN BASINS AND MANHOLES UPSTREAM OF THE STORMTECH SYSTEM.

NOTES

1. INSPECT EVERY 6 MONTHS DURING THE FIRST YEAR OF OPERATION. ADJUST THE INSPECTION INTERVAL BASED ON PREVIOUS OBSERVATIONS OF SEDIMENT ACCUMULATION AND HIGH WATER ELEVATIONS.
2. CONDUCT JETTING AND VACTORING ANNUALLY OR WHEN INSPECTION SHOWS THAT MAINTENANCE IS NECESSARY.

MC-3500 ISOLATOR ROW PLUS DETAIL



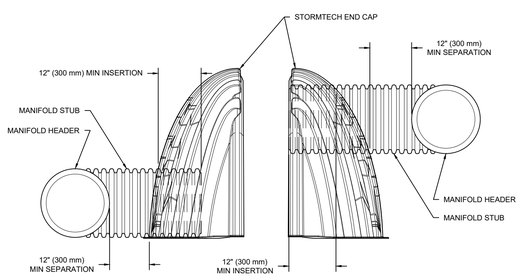
NTS

3 MC-3500 ISOLATOR ROW PLUS DETAIL

ACCEPTABLE FILL MATERIALS: STORMTECH MC-3500 CHAMBER SYSTEMS

	MATERIAL LOCATION	DESCRIPTION	AASHTO MATERIAL CLASSIFICATIONS	COMPACTION / DENSITY REQUIREMENT
D	**FINAL FILL:** FILL MATERIAL FOR LAYER 'D' STARTS FROM THE TOP OF THE 'C' LAYER TO THE BOTTOM OF FLEXIBLE PAVEMENT OR UNPAVED FINISHED GRADE ABOVE. NOTE THAT PAVEMENT SUBBASE MAY BE PART OF THE 'D' LAYER	ANY SOIL/ROCK MATERIALS, NATIVE SOILS, OR PER ENGINEER'S PLANS. CHECK PLANS FOR PAVEMENT SUBGRADE REQUIREMENTS.	N/A	PREPARE PER SITE DESIGN ENGINEER'S PLANS. PAVED INSTALLATIONS MAY HAVE STRINGENT MATERIAL AND PREPARATION REQUIREMENTS.
C	**INITIAL FILL:** FILL MATERIAL FOR LAYER 'C' STARTS FROM THE TOP OF THE EMBEDMENT STONE ('B' LAYER) TO 24" (600 mm) ABOVE THE TOP OF THE CHAMBER. NOTE THAT PAVEMENT SUBBASE MAY BE A PART OF THE 'C' LAYER.	GRANULAR WELL-GRADED SOIL/AGGREGATE MIXTURES, <35% FINES OR PROCESSED AGGREGATE. MOST PAVEMENT SUBBASE MATERIALS CAN BE USED IN LIEU OF THIS LAYER.	AASHTO M145⁴ A-1, A-2-4, A-3 OR AASHTO M43⁴ 3, 357, 4, 467, 5, 56, 57, 6, 67, 68, 7, 78, 8, 89, 9, 10	BEGIN COMPACTIONS AFTER 24" (600 mm) OF MATERIAL OVER THE CHAMBERS IS REACHED. COMPACT ADDITIONAL LAYERS IN 12" (300 mm) MAX LIFTS TO A MIN. 95% PROCTOR DENSITY FOR WELL GRADED MATERIAL AND 95% RELATIVE DENSITY FOR PROCESSED AGGREGATE MATERIALS.
B	**EMBEDMENT STONE:** FILL SURROUNDING THE CHAMBERS FROM THE FOUNDATION STONE ('A' LAYER) TO THE 'C' LAYER ABOVE.	CLEAN, CRUSHED, ANGULAR STONE OR RECYCLED CONCRETE⁵	AASHTO M43⁴ 3, 357, 4, 467, 5, 56, 57	NO COMPACTION REQUIRED.
A	**FOUNDATION STONE:** FILL BELOW CHAMBERS FROM THE SUBGRADE UP TO THE FOOT (BOTTOM) OF THE CHAMBER.	CLEAN, CRUSHED, ANGULAR STONE OR RECYCLED CONCRETE⁵	AASHTO M43⁴ 3, 357, 4, 467, 5, 56, 57	PLATE COMPACT OR ROLL TO ACHIEVE A FLAT SURFACE.[2,3]

PLEASE NOTE:
1. THE LISTED AASHTO DESIGNATIONS ARE FOR GRADATIONS ONLY. THE STONE MUST ALSO BE CLEAN, CRUSHED, ANGULAR. FOR EXAMPLE, A SPECIFICATION FOR #4 STONE WOULD STATE; "CLEAN, CRUSHED, ANGULAR NO. 4 (AASHTO M43) STONE".
2. STORMTECH COMPACTION REQUIREMENTS ARE MET FOR 'A' LOCATION MATERIALS WHEN PLACED AND COMPACTED IN 9" (230 mm) (MAX) LIFTS USING TWO FULL COVERAGES WITH A VIBRATORY COMPACTOR.
3. WHERE INFILTRATION SURFACES MAY BE COMPROMISED BY COMPACTION, FOR STANDARD DESIGN LOAD CONDITIONS, A FLAT SURFACE MAY BE ACHIEVED BY RAKING OR DRAGGING WITHOUT COMPACTION EQUIPMENT. FOR SPECIAL LOAD DESIGNS, CONTACT STORMTECH FOR COMPACTION REQUIREMENTS.
4. ONCE LAYER 'C' IS PLACED, ANY SOIL/MATERIAL CAN BE PLACED IN LAYER 'D' UP TO THE FINISHED GRADE. MOST PAVEMENT SUBBASE SOILS CAN BE USED TO REPLACE THE MATERIAL REQUIREMENTS OF LAYER 'C' OR 'D' AT THE SITE DESIGN ENGINEER'S DISCRETION.
5. WHERE RECYCLED CONCRETE AGGREGATE IS USED IN LAYERS 'A' OR 'B' THE MATERIAL SHOULD ALSO MEET THE ACCEPTABILITY CRITERIA OUTLINED IN TECHNICAL NOTE 6.20 "RECYCLED CONCRETE STRUCTURAL BACKFILL".



NOTES:

1. CHAMBERS SHALL MEET THE REQUIREMENTS OF ASTM F2418, "STANDARD SPECIFICATION FOR POLYPROPYLENE (PP) CORRUGATED WALL STORMWATER COLLECTION CHAMBERS" CHAMBER CLASSIFICATION 45x76 DESIGNATION SS.
2. MC-3500 CHAMBERS SHALL BE DESIGNED IN ACCORDANCE WITH ASTM F2787 "STANDARD PRACTICE FOR STRUCTURAL DESIGN OF THERMOPLASTIC CORRUGATED WALL STORMWATER COLLECTION CHAMBERS".
3. THE SITE DESIGN ENGINEER IS RESPONSIBLE FOR ASSESSING THE BEARING RESISTANCE (ALLOWABLE BEARING CAPACITY) OF THE SUBGRADE SOILS AND THE DEPTH OF FOUNDATION STONE WITH CONSIDERATION FOR THE RANGE OF EXPECTED SOIL MOISTURE CONDITIONS. REFERENCE STORMTECH DESIGN MANUAL FOR BEARING CAPACITY GUIDANCE.
4. PERIMETER STONE MUST BE EXTENDED HORIZONTALLY TO THE EXCAVATION WALL FOR BOTH VERTICAL AND SLOPED EXCAVATION WALLS.
5. REQUIREMENTS FOR HANDLING AND INSTALLATION:
   - TO MAINTAIN THE WIDTH OF CHAMBERS DURING SHIPPING AND HANDLING, CHAMBERS SHALL HAVE INTEGRAL, INTERLOCKING STACKING LUGS.
   - TO ENSURE A SECURE JOINT DURING INSTALLATION AND BACKFILL, THE HEIGHT OF THE CHAMBER JOINT SHALL NOT BE LESS THAN 3".
   - TO ENSURE THE INTEGRITY OF THE ARCH SHAPE DURING INSTALLATION, a) THE ARCH STIFFNESS CONSTANT SHALL BE GREATER THAN OR EQUAL TO 500 LBS/FT/%. THE ASC IS DEFINED IN SECTION 6.2.8 OF ASTM F2418. AND b) TO RESIST CHAMBER DEFORMATION DURING INSTALLATION AT ELEVATED TEMPERATURES (ABOVE 73° F / 23° C), CHAMBERS SHALL BE PRODUCED FROM REFLECTIVE GOLD OR YELLOW COLORS.

Conventional Biotreamtent Sizing Calculation

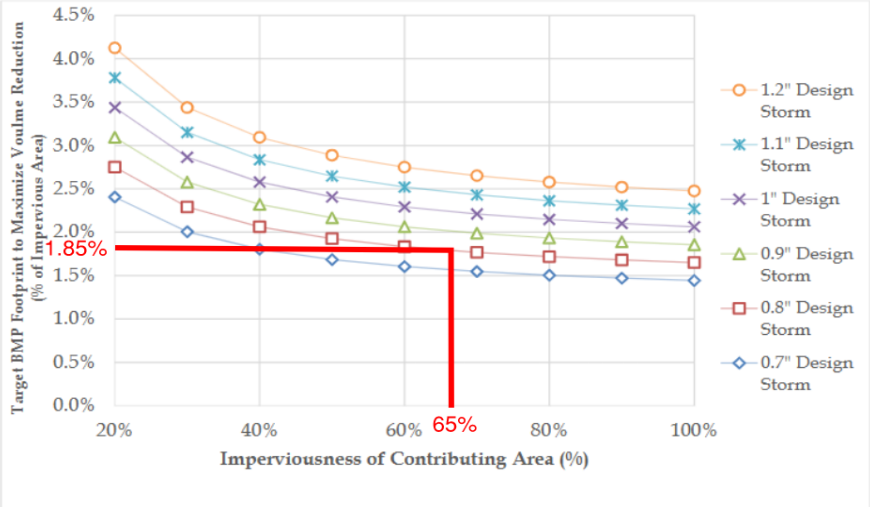
South Orange County WQMP TGD
E.3.3.1 Biofiltration Routing Method Stepwise Instructions for Sizing Biofiltration BMPs

1. Determine 85th Percentile, 24-Hour Design Storm

85th Percentile, 24-Hour Storm	0.80	in
Area	3.16	ac

2. Reduce design storm depth based on upstream HSCs

HSC-1: Not applicable due to the lack of infiltration potential at the site.
HSC-2: Not applicable due to the lack of infiltration potential at the site.
HSC-3: Not feasible because the required 20- to 30-foot tree canopy diameter cannot be achieved within the site constraints.
HSC-4: Not feasible because overflow dispersion requires a minimum 8-foot separation from buildings, which cannot be accommodated by the proposed site layout.
HSC-5: Not feasible due to the significant cost impacts to the project.
HSC-6: Not applicable due to the lack of infiltration potential at the site.



3. Convert the remaining design storm to a runoff volume

E.2.2 Runoff Volume
V=C x d x A x 43560 sf/ac x 1/12 in/ft

Impervious Ratio	65	%
C=0.75 x imp + 0.15	0.64	
Volume	5850	ft3

4. Select a BMP footprint area

Impervious Area	2.04	ac
Target BMP Footprint	1.85	%
	0.038	ac
	1644	sf

5. Not applicable since partial infiltration is not feasible

6. Not applicable since partial infiltration is not feasible

7. Select a media depth

Media Depth	24	in
Effective Retention Depth	2.4	in
Volume Retained	329	ft3

8. Calculate remaining portion of DCV

Initial Design Volume	5850	ft3
Volume Retained	329	ft3
Remaining DCV	5521	ft3

9. Multiply reamining DCV by 1.5

1.5x DCV	8282	ft3

10. Calculate Total Effective Biofiltration Storage

$$D_{biofilter_effective} = \text{ponding depth} + 0.2 * \text{media depth}$$

Ponding Depth	12	in
Media Depth	24	in
D	16.8	in

11. Calculate the Volume Biofiltered

$$V_{treated} = (D_{biofilter_effective} + K_{media} * T_{rout}) * A_{BMP_EFF} * (1ft/12\ inches)$$

D	16.8	in
K	2.5	in/hr
A	1644	ft2
T	5	hr
V	3329	ft3

12. Adjust Surface Area until Vtreated is larger than 1.5x DCV in step 9 (8282 ft3)

BMP Footprint (Adjusted)	4090	ft2

Media Depth	24	in
Effective Retention Depth	2.4	in
Volume Retained	0	ft3

$$D_{biofilter_effective} = \text{ponding depth} + 0.2 * \text{media depth}$$

Ponding Depth	12	in
Media Depth	24	in
D	16.8	in

$$V_{treated} = (D_{biofilter_effective} + K_{media} * T_{rout}) * A_{BMP_EFF} * (1ft/12\ inches)$$

D	16.8	in

K	2.5	in/hr
A	4090	ft2
T	5	hr
V	8282	ft3

There is insuffcient room on the project site to install a 4,090 ft2 bioretention area.

Attachment C: HARVEST AND REUSE DETERMINATION

Design Capture Volume (DCV) Calculation

85th Percentiel, 24-hr Storm Depth	0.8	inches
Drainage Area	3.16	acres
Imperviousness	65%	
HSCs	0	inches
Design Infiltration Rate	0.02	in/hr
Estimated DCV	**4,955**	**cu-ft**

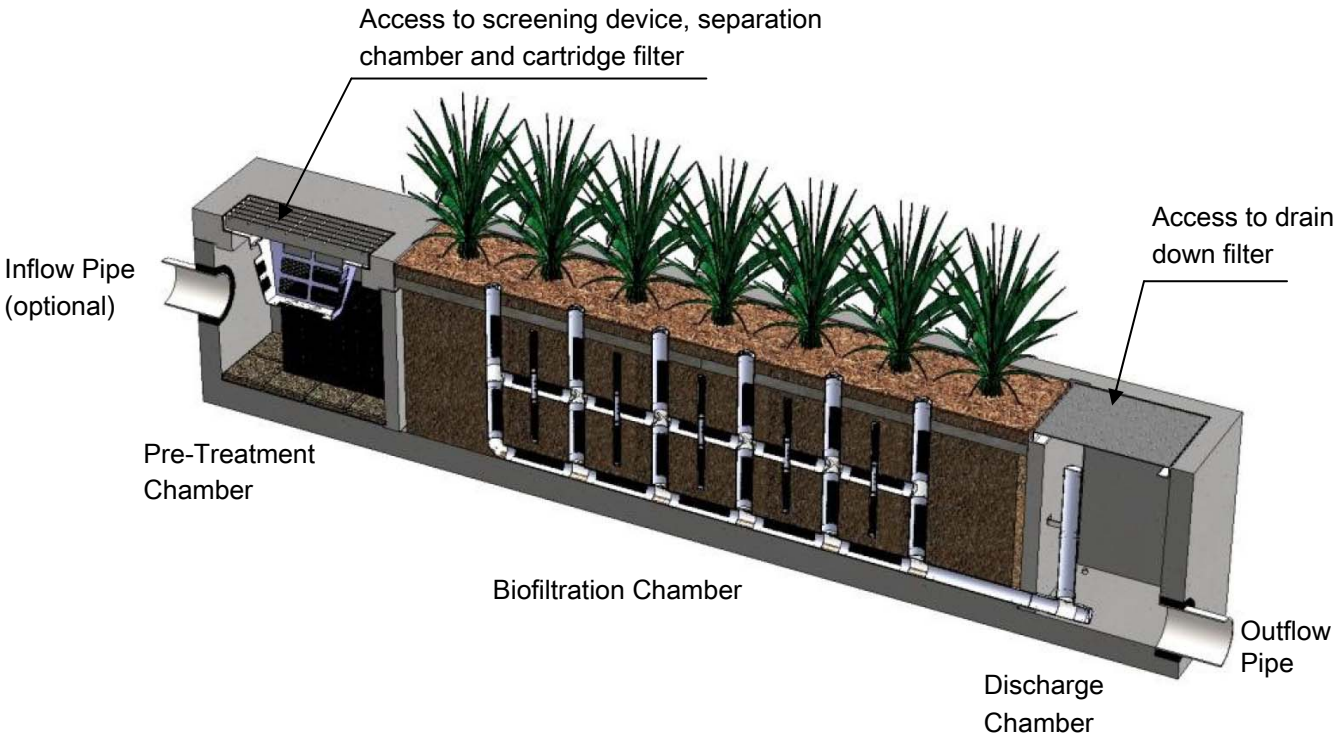
Harvest and Reuse Determination

Step 1 - Calculate the Design Capture Volume in Gallons		
DCV (cu-ft)	4,955	cu-ft
DCV (gallons)	37,066	gallons

Step 2 - Estimate Planted Area		
Planter Factor (PF) for low water use	0.12	
Panted Area	48,787	sf
Planted Area w/ PF	5,854	sf

Step 3 - Est.e Net Wet Season Est. Total Water Use (ETWU 7-months)		
Eto (Oct-Apr) from CIMIS Monthly Ave Rpt	19.18	in
Mean Avg Rainfall	12.9	in
Net ETWU (7 mnths)	22,917	gallons

DCV is greater than the Net ETWU, so Harvest and Resuse is not feasible.



Attachment D: OPERATIONS AND MAINTENANCE PLAN

Maintenance Guidelines for Modular Wetland System - Linear

Maintenance Summary

- Remove Trash from Screening Device – average maintenance interval is 6 to 12 months.
  - (*5 minute average service time*).
- Remove Sediment from Separation Chamber – average maintenance interval is 12 to 24 months.
  - (*10 minute average service time*).
- Replace Cartridge Filter Media – average maintenance interval 12 to 24 months.
  - (*10-15 minute per cartridge average service time*).
- Replace Drain Down Filter Media – average maintenance interval is 12 to 24 months.
  - (*5 minute average service time*).
- Trim Vegetation – average maintenance interval is 6 to 12 months.
  - (*Service time varies*).

System Diagram

Maintenance Procedures

Screening Device

1. Remove grate or manhole cover to gain access to the screening device in the Pre-Treatment Chamber. Vault type units do not have screening device. Maintenance can be performed without entry.
2. Remove all pollutants collected by the screening device. Removal can be done manually or with the use of a vacuum truck. The hose of the vacuum truck will not damage the screening device.
3. Screening device can easily be removed from the Pre-Treatment Chamber to gain access to separation chamber and media filters below. Replace grate or manhole cover when completed.

Separation Chamber

1. Perform maintenance procedures of screening device listed above before maintaining the separation chamber.
2. With a pressure washer spray down pollutants accumulated on walls and cartridge filters.
3. Vacuum out Separation Chamber and remove all accumulated pollutants. Replace screening device, grate or manhole cover when completed.

Cartridge Filters

1. Perform maintenance procedures on screening device and separation chamber before maintaining cartridge filters.
2. Enter separation chamber.
3. Unscrew the two bolts holding the lid on each cartridge filter and remove lid.
4. Remove each of 4 to 8 media cages holding the media in place.
5. Spray down the cartridge filter to remove any accumulated pollutants.
6. Vacuum out old media and accumulated pollutants.
7. Reinstall media cages and fill with new media from manufacturer or outside supplier. Manufacturer will provide specification of media and sources to purchase.
8. Replace the lid and tighten down bolts. Replace screening device, grate or manhole cover when completed.

Drain Down Filter

1. Remove hatch or manhole cover over discharge chamber and enter chamber.
2. Unlock and lift drain down filter housing and remove old media block. Replace with new media block. Lower drain down filter housing and lock into place.
3. Exit chamber and replace hatch or manhole cover.

Maintenance Notes

1. Following maintenance and/or inspection, it is recommended the maintenance operator prepare a maintenance/inspection record. The record should include any maintenance activities performed, amount and description of debris collected, and condition of the system and its various filter mechanisms.

2. The owner should keep maintenance/inspection record(s) for a minimum of five years from the date of maintenance. These records should be made available to the governing municipality for inspection upon request at any time.

3. Transport all debris, trash, organics and sediments to approved facility for disposal in accordance with local and state requirements.

4. Entry into chambers may require confined space training based on state and local regulations.

5. No fertilizer shall be used in the Biofiltration Chamber.

6. Irrigation should be provided as recommended by manufacturer and/or landscape architect. Amount of irrigation required is dependent on plant species. Some plants may require irrigation.

Maintenance Procedure Illustration

Screening Device

The screening device is located directly under the manhole or grate over the Pre-Treatment Chamber. It's mounted directly underneath for easy access and cleaning. Device can be cleaned by hand or with a vacuum truck.

Separation Chamber

The separation chamber is located directly beneath the screening device. It can be quickly cleaned using a vacuum truck or by hand. A pressure washer is useful to assist in the cleaning process.

Cartridge Filters

The cartridge filters are located in the Pre-Treatment chamber connected to the wall adjacent to the biofiltration chamber. The cartridges have removable tops to access the individual media filters. Once the cartridge is open media can be easily removed and replaced by hand or a vacuum truck.

Drain Down Filter

The drain down filter is located in the Discharge Chamber. The drain filter unlocks from the wall mount and hinges up. Remove filter block and replace with new block.

Trim Vegetation

Vegetation should be maintained in the same manner as surrounding vegetation and trimmed as needed. No fertilizer shall be used on the plants. Irrigation per the recommendation of the manufacturer and or landscape architect. Different types of vegetation requires different amounts of irrigation.

Weather Condition _____ Additional Notes _____

Inspection Checklist

Modular Wetland System Type (Curb, Grate or UG Vault): _____ Size (22', 14' or etc.): _____

Structural Integrity:	**Yes**	**No**	**Comments**
Damage to pre-treatment access cover (manhole cover/grate) or cannot be opened using normal lifting pressure?			
Damage to discharge chamber access cover (manhole cover/grate) or cannot be opened using normal lifting pressure?			
Does the MWS unit show signs of structural deterioration (cracks in the wall, damage to frame)?			
Is the inlet/outlet pipe or drain down pipe damaged or otherwise not functioning properly?			
Working Condition:			
Is there evidence of illicit discharge or excessive oil, grease, or other automobile fluids entering and clogging the unit?			
Is there standing water in inappropriate areas after a dry period?			
Is the filter insert (if applicable) at capacity and/or is there an accumulation of debris/trash on the shelf system?			
Does the depth of sediment/trash/debris suggest a blockage of the inflow pipe, bypass or cartridge filter? If yes, specify which one in the comments section. Note depth of accumulation in in pre-treatment chamber.			Depth:
Does the cartridge filter media need replacement in pre-treatment chamber and/or discharge chamber?			Chamber:
Any signs of improper functioning in the discharge chamber? Note issues in comments section.			
Other Inspection Items:			
Is there an accumulation of sediment/trash/debris in the wetland media (if applicable)?			
Is it evident that the plants are alive and healthy (if applicable)? Please note Plant Information below.			
Is there a septic or foul odor coming from inside the system?			

Waste:	**Yes**	**No**

Isolator® Row Plus
O&M Manual

ADS StormTech® 1872

The Isolator® Row Plus

Introduction

An important component of any Stormwater Pollution Prevention Plan is inspection and maintenance. The StormTech Isolator Row Plus is a technique to inexpensively enhance Total Suspended Solids (TSS), Total Phosphorus (TP), Total Petroluem Hydrocarbons (TPH) and Total Nitrogen (TN) removal with easy access for inspection and maintenance.

The Isolator Row Plus

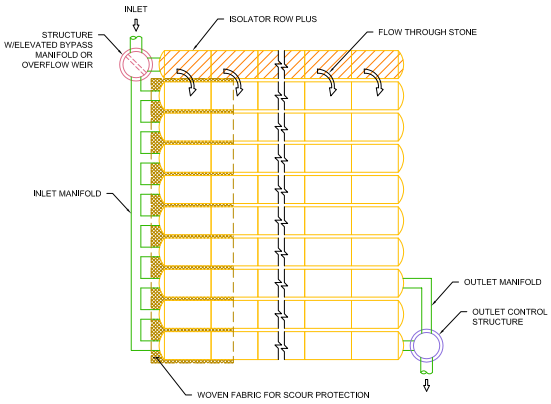
The Isolator Row Plus is a row of StormTech chambers, either SC-160, SC-310, DC-780, SC-800, MC-3500, MC-4500 or MC-7200 models, are lined with filter fabric and connected to a closely located manhole for easy access. The fabric lined chambers provide for sediment settling and filtration as stormwater rises in the Isolator Row Plus and passes through the filter fabric. The open bottom chambers allow stormwater to flow vertically out of the chambers. Sediments are captured in the Isolator Row Plus protecting the adjacent stone and chambers storage areas from sediment accumulation.

ADS Isolator Row and Plus fabric are placed between the stone and the Isolator Row Plus chambers. The woven geotextile provides a media for stormwater filtration, a durable surface for maintenance, prevents scour of the underlying stone and remains intact during high pressure jetting.

The Isolator Row Plus is designed to capture the “first flush” runoff and offers the versatility to be sized on a volume basis or a flow-rate basis. An upstream manhole provides access to the Isolator Row Plus and includes a high/low concept such that stormwater flow rates or volumes that exceed the capacity of the Isolator Row Plus bypass through a manifold to the other chambers. This is achieved with an elevated bypass manifold or a high-flow weir. This creates a differential between the Isolator Row Plus row of chambers and the manifold to the rest of the system, thus allowing for settlement time in the Isolator Row Plus. After Stormwater flows through the Isolator Row Plus and into the rest of the chamber system it is either exfiltrated into the soils below or passed at a controlled rate through an outlet manifold and outlet control structure.

The Isolator Row Plus Flamp™ is a flared end ramp apparatus attached to the inlet pipe on the inside of the chamber end cap. The FLAMP provides a smooth transition from pipe invert to fabric bottom. It is configured to improve chamber function performance by enhancing outflow of solid debris that would otherwise collect at the chamber's end, or more difficult to remove and require confined space entry into the chamber area. It also serves to improve the fluid and solid flow into the access pipe during maintenance and cleaning and to guide cleaning and inspection equipment back into the inlet pipe when complete.

The Isolator Row Plus may be part of a treatment train system. The treatment train design and pretreatment device selection by the design engineer is often driven by regulatory requirements. Whether pretreatment is used or not, StormTech recommend using the Isolator Row Plus to minimize maintenance requirements and maintenance costs.



Note: *See the StormTech Design Manual for detailed information on designing inlets for a StormTech system, including the Isolator Row Plus.*

Looking down the Isolator Row Plus from the manhole opening, ADS Plus Fabric is shown between the chamber and stone base.

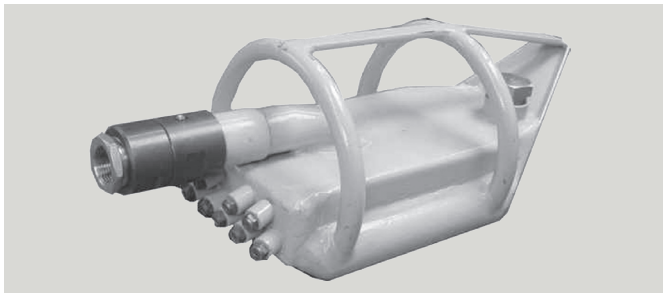
StormTech Isolator Row Plus with Overflow Structure (not to scale)

Isolator Row Plus Inspection/Maintenance

Inspection

The frequency of inspection and maintenance varies by location. A routine inspection schedule needs to be established for each individual location based upon site specific variables. The type of land use (i.e. industrial, commercial, residential), anticipated pollutant load, percent imperviousness, climate, etc. all play a critical role in determining the actual frequency of inspection and maintenance practices.

At a minimum, StormTech recommends annual inspections. Initially, the Isolator Row Plus should be inspected every 6 months for the first year of operation. For subsequent years, the inspection should be adjusted based upon previous observation of sediment deposition.

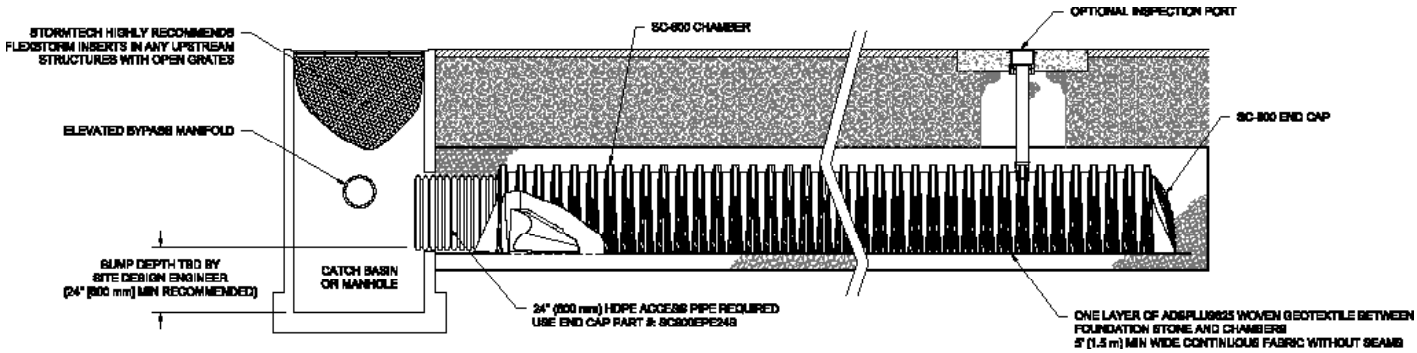


The Isolator Row Plus incorporates a combination of standard manhole(s) and strategically located inspection ports (as needed). The inspection ports allow for easy access to the system from the surface, eliminating the need to perform a confined space entry for inspection purposes.

If upon visual inspection it is found that sediment has accumulated, a stadia rod should be inserted to determine the depth of sediment. When the average depth of sediment exceeds 3" (75 mm) throughout the length of the Isolator Row Plus, clean-out should be performed.

Maintenance

The Isolator Row Plus was designed to reduce the cost of periodic maintenance. By “isolating” sediments to just one row, costs are dramatically reduced by eliminating the need to clean out each row of the entire storage bed. If inspection indicates the potential need for maintenance, access is provided via a manhole(s) located on the end(s) of the row for cleanout. If entry into the manhole is required, please follow local and OSHA rules for a confined space entry.



Maintenance is accomplished with the JetVac process. The JetVac process utilizes a high pressure water nozzle to propel itself down the Isolator Row Plus while scouring and suspending sediments. As the nozzle is retrieved, the captured pollutants are flushed back into the manhole for vacuuming. Most sewer and pipe maintenance companies have vacuum/JetVac combination vehicles. Selection of an appropriate JetVac nozzle will improve maintenance efficiency. Fixed nozzles designed for culverts or large diameter pipe cleaning are preferable. Rear facing jets with an effective spread of at least 45” are best. StormTech recommends a maximum nozzle pressure of 2000 psi be utilized during cleaning. JetVac reels can vary in length. For ease of maintenance, ADS recommends Isolator Row Plus lengths up to 200' (61 m). **The JetVac process shall only be performed on StormTech Isolator Row Plus that have ADS Plus Fabric (as specified by StormTech) over their angular base stone.**

StormTech Isolator Row Plus (*not to scale*)

Isolator Row Plus Step By Step Maintenance Procedures

Step 1

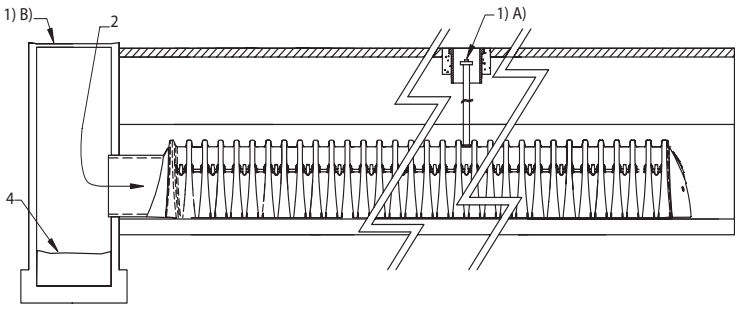
Inspect Isolator Row Plus for sediment.

A) Inspection ports (if present)
   i. Remove lid from floor box frame
   ii. Remove cap from inspection riser
   iii. Using a flashlight and stadia rod,measure depth of sediment and record results on maintenance log.
   iv. If sediment is at or above 3 inch depth, proceed to Step 2. If not, proceed to Step 3.

B) All Isolator Row Plus
   i. Remove cover from manhole at upstream end of Isolator Row Plus
   ii. Using a flashlight, inspect down Isolator Row Plus through outlet pipe
      1. Mirrors on poles or cameras may be used to avoid a confined space entry
      2. Follow OSHA regulations for confined space entry if entering manhole
   iii. If sediment is at or above the lower row of sidewall holes (approximately 3 inches), proceed to Step 2.
   If not, proceed to Step 3.

Step 2

Clean out Isolator Row Plus using the JetVac process.



A) A fixed floor cleaning nozzle with rear facing nozzle spread of 45 inches or more is preferable
B) Apply multiple passes of JetVac until backflush water is clean
C) Vacuum manhole sump as required

Step 3

Replace all caps, lids and covers, record observations and actions.

Step 4

Inspect & clean catch basins and manholes upstream of the StormTech system.

Sample Maintenance Log

Date	Stadia Rod Readings		Sedi-ment Depth (1)–(2)	Observations/Actions	Inspector
	Fixed point to chamber bottom (1)	Fixed point to top of sediment (2)			
3/15/11	6.3 ft	none		New installation. Fixed point is CI frame at grade	DJM

LIFT STATION REQUIRED MAINTENANCE

The lift station should be inspected twice a year for proper operation, and should be checked for overabundance of solid matter such as grease and soap buildup.

Proper operation and inspection would include the following:

1) Automatic operation of the system by float activation. One pump starting at lead on levels, second pump starting at high level conditions; manual operation by use of the selector switches.

2) Inspect floats for proper elevation and for proper movement. Correct any obstructions.

3) Check incoming power for proper voltage. Check voltage at motor connections.

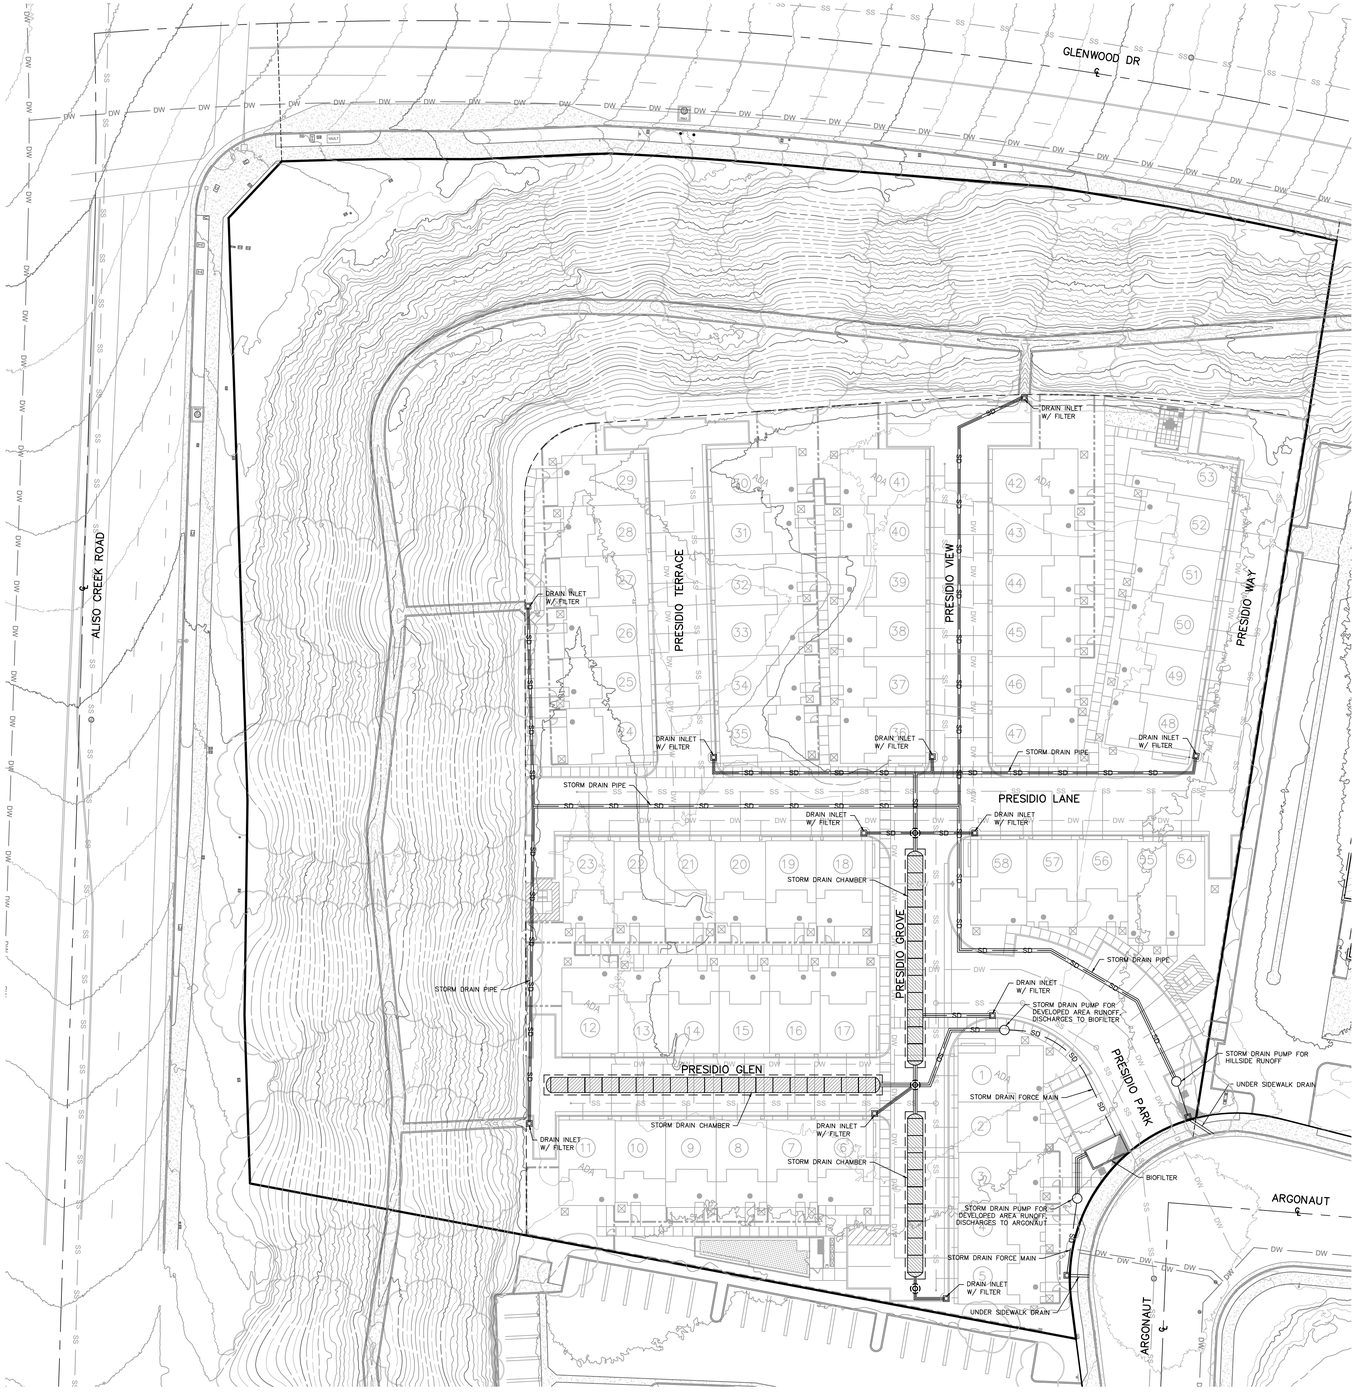
4) Check amperage of each motor.

5) Hose down lift station to clean the walls of the wet well, pumps and floats.

MECHANICAL SEAL INSPECTION OF PUMPS

Inspection of the mechanical seals should be done every two years.

The inspection will include the following:



Pull pump out of wet well. Remove oil seal plug and inspect the oil for clarity. Clear oil indicates no water intrusion and chamber is to be topped off with 30 weight turbine oil. If oil is cloudy the mechanical seal and oil needs to be replaced.

Note: Your lift station is designed to pump raw unscreened sewage. Refrain from putting the following into your sewage system: tampons, feminine napkins, condoms, handy wipes, baby wipes, paper towels, diapers, plastic bags, q-tips, etc., and food grease. Although grease will be pumped, grease will cause problems eventually and will not be covered under the manufacturer's warranty. Dispose of the above items in a trash can.

PSI recommends that preventive maintenance and service be performed by a qualified technician.
Any question regarding your lift station should be directed to Scott Richardson at 800-358-9095.

Required Permits

This section must list any permits required for the implementation, operation, and maintenance of the BMPs. Possible examples are:

- Permits for connection to sanitary sewer
- Permits from California Department of Fish and Game
- Encroachment permits

If no permits are required, a statement to that effect should be made.

Responsible Party

The owner is aware of the maintenance responsibilities of the proposed BMPs. A funding mechanism is in place to maintain the BMPs at the frequency stated in the LID Plan. The contact information for the entity responsible is below:

Name:	Alex Hernandez
Company:	Whittier 25, LLC
Title:	Vice President
Address 1:	2355 Main Street
Address 2:	Irvine, CA 92614
Phone Number:	949-296-2400

Attention: Mr. Emmanuel Robinson

Subject: **GEOTECHNICAL INVESTIGATION**
15 Argonaut,
City of Aliso Viejo, County of Orange, California

References: Appendix A

Dear Mr. Robinson:

Alta California Geotechnical, Inc. (Alta) is pleased to present this geotechnical investigation for the proposed residential development of 15 Argonaut, located in the City of Aliso Viejo, County of Orange, California. This report is based on a recent subsurface investigation conducted by Alta, laboratory testing, and Alta's staff's experience with similar projects in this vicinity.

Alta's review of the data indicates that the proposed development is feasible, from a geotechnical perspective, provided that the recommendations presented in this report are incorporated into the grading and improvement plans and implemented during site development.

Included in this report are:

- Discussion of the site geotechnical conditions.
- Recommendations for remedial and site grading, including unsuitable soil removals.
- Geotechnical site construction recommendations.
- Foundation design parameters.

If you have any questions or should you require any additional information, please contact the undersigned at (951) 509-7090. Alta appreciates the opportunity to provide geotechnical consulting services for your project.

Sincerely,
Alta California Geotechnical, Inc.

1.0 INTRODUCTION

This report presents Alta's findings, conclusions, and geotechnical recommendations for the proposed development of 15 Argonaut, located in the City of Aliso Viejo, County of Orange, California.

1.1 Purpose

The purpose of this report is to examine the existing onsite geotechnical conditions and assess the impacts that the geotechnical conditions may have on the proposed development. This report is suitable for use in developing grading plans and engineer's cost estimates.

1.2 Scope of Work

Alta's *Scope of Work* for this geotechnical investigation included the following:

- Reviewing the referenced reports and air photos (Appendix A).
- Site geologic mapping.
- Excavating, logging, and sampling four (4) hollow stem auger borings to a maximum depth of 51.5-feet below the existing surface (Appendix B).
- Conducting laboratory testing on samples obtained during our investigation (Appendix C).
- Conducting two (2) infiltration tests in two (2) additional borings at a maximum depth of 5.0-feet below the ground surface.
- Evaluating engineering geologic and geotechnical engineering data, including laboratory data, to develop recommendations for site remedial grading, import soil, foundations, and utilities.
- Preparing this report and accompanying exhibits.

1.3 Report Limitations

The conclusions and recommendations presented in this report are based on the field and laboratory information generated during this investigation, and a review of the referenced reports. The information contained in this report is intended to be used for development of grading plans and preliminary construction cost estimates.

2.0 PROJECT DESCRIPTION

2.1 Site Location and Background

The irregular-shaped, approximately 4.6-acre site is bounded to the north by Glenwood Drive, to the west by Aliso Creek Road, and to the east and south by existing developments. The site is currently occupied by a commercial building and associated parking.

Historic aerial images are available as far back as 1938 and indicate the site was originally vacant. By 1992, the commercial building was constructed along with associated parking. The site has remained relatively unchanged since (Historic Aerials, 2025).

2.2 Proposed Development

The site will be redeveloped to support a residential development consisting of 58 single-family residential structures and associated improvements. Alta anticipates that conventional cut-and-fill grading techniques will be used to develop the site for the support of wood-frame construction with shallow foundations and reinforced concrete slabs-on-grade, and associated improvements.

3.0 SITE INVESTIGATION AND LABORATORY TESTING

3.1 Subsurface Investigation

Alta conducted a subsurface investigation on August 27th, 2025, consisting of the drilling, logging, and select sampling of four (4) hollow stem auger borings up to a maximum depth of 51.5-feet below the ground surface. The locations of the exploratory borings and excavations are shown on Plate 1 and the logs are presented in Appendix B.

Laboratory testing was performed on bulk samples obtained during the field investigation. A brief description of the laboratory test procedures and the test results are presented in Appendix C.

3.2 Infiltration Testing

It is Alta's understanding that the project may utilize infiltration systems for storm water disposal. Details of the system are not known at this time.

Infiltration testing was conducted in two (2) boring wells at a depth of 5.0-feet below the ground surface at specified locations. The testing was performed in general conformance with the County of Orange WQMP specifications. The testing wells were presoaked for more than 24 hours prior to testing. During testing, the water level readings were recorded every 10 to 30 minutes until the readings stabilized.

The data was then adjusted to provide an infiltration rate utilizing the Porchet Method. The resulting field infiltration rates, with no factor of safety, are summarized below in Table 3-1.

Table 3-1
Summary of Infiltration Testing
(No Factor of Safety)

Test Designation	P-1	P-2
Approximate Depth of Test	5.0 ft	5.0 ft
Final Time Interval	10 minutes	10 minutes
Radius of Test Hole	4 inches	4 inches
Tested Infiltration Rate	0.03 in/hr	0.00 in/hr

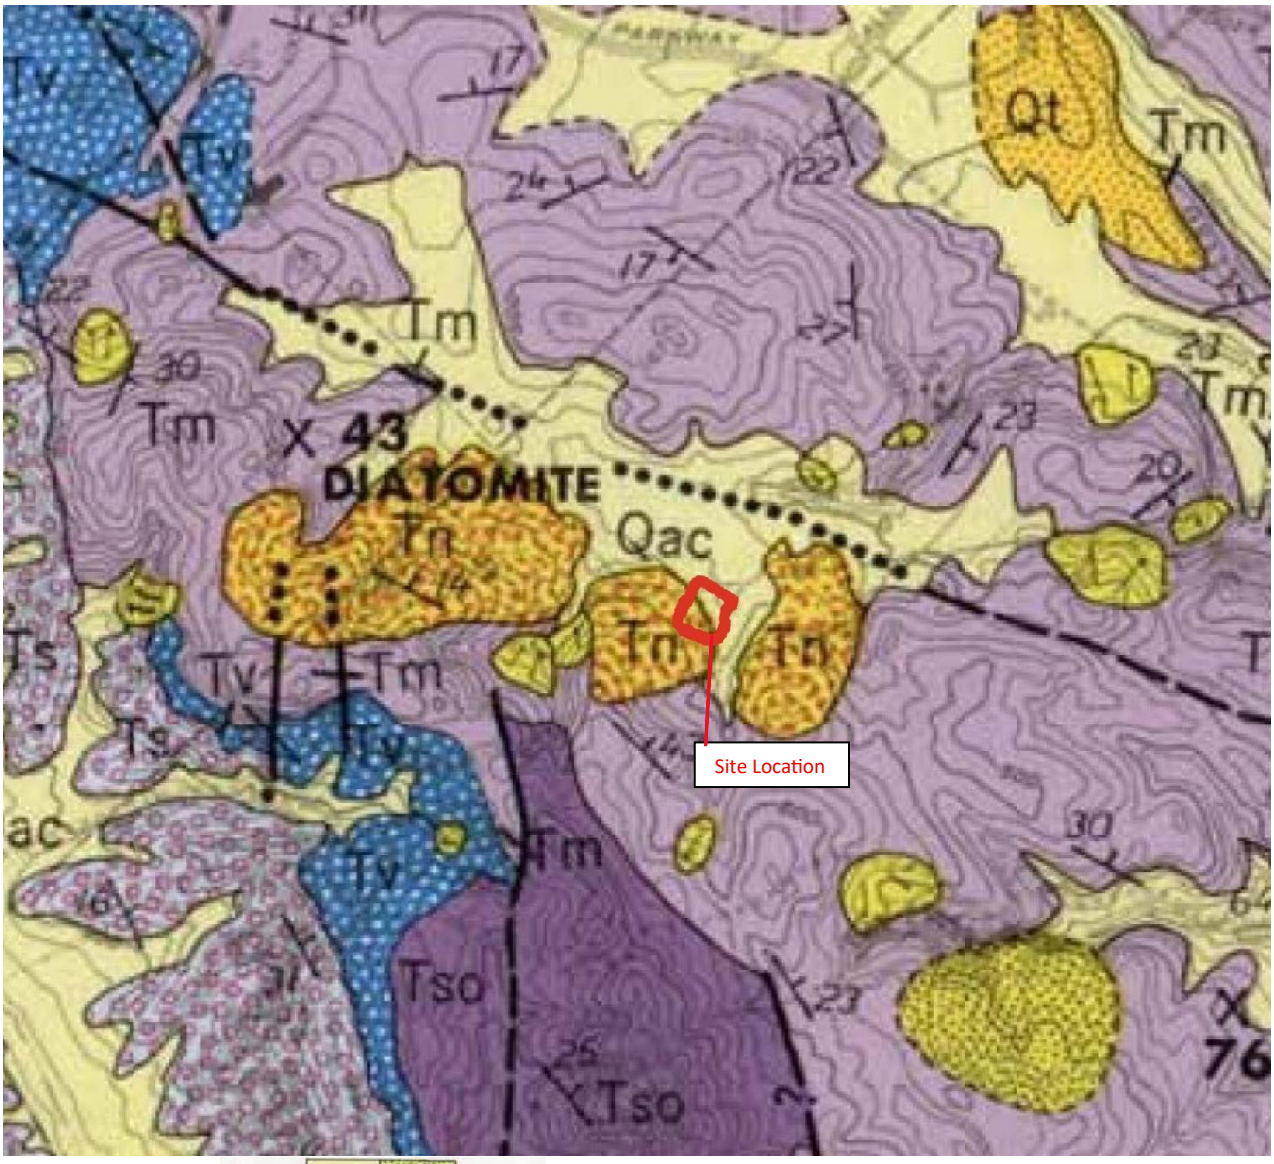
4.0 GEOLOGIC CONDITIONS

4.1 Geologic and Geomorphic Setting

Regionally, the subject site is located in the Peninsular Ranges geomorphic province, which characterizes the southwest portion of southern California where right-lateral major active fault zones predominately trend northwest-southeast. The Peninsular Ranges province is composed of plutonic and metamorphic rock, with lesser amounts of Tertiary volcanic and sedimentary rock, Quaternary drainage in-fills and sedimentary veneers.

4.2 Stratigraphy

Based on our literature review and subsurface investigation, the subject site is underlain by the Monterey Formation (CDC, 2001, Figure 1). The geologic unit is briefly described below.



4.2.1 Monterey Formation (map symbol Tmy)

The Miocene-age Monterey Formation observed onsite primarily consists of silty sandstone, clayey sandstone, sandy claystone, sandstone, and claystone. The fine grained silty sandstone onsite is pale brown, white, dark yellowish brown, and brown in a slightly moist to moist and medium dense to very dense condition. The fine grained clayey sandstone onsite is pale brown, white, dark brown, brown, gray, light gray, dark grayish brown, and bluish gray in a slightly moist to moist and medium dense to dense condition. The sandy claystone onsite is dark brown, brown, and gray in a moist and stiff to very stiff condition. The very fine to fine grained sandstone onsite is pale brown, yellowish brown, grayish pale brow, and orange in a slightly moist and medium dense to very dense condition. The claystone onsite is dark brown to brown in a moist and very stiff condition. This unit was logged to a depth of 51.5 feet below the ground surface and is overlain by a thin layer of asphalt.

4.3 Geologic Structure

4.3.1 Tectonic Framework

Jennings (1985) defined eight structural provinces within California that have been classified by predominant regional fault trends and similar fold structure. These provinces are in turn divided into blocks and sub-blocks that are defined by “major Quaternary faults.” These blocks and sub-blocks exhibit similar structural features. Within this framework, the subject site is located within Structural Province I, which is controlled by

Qac = Alluvium and colluvium
Qb = Beach sediments
Tn Niguel Formation
Tm Monterey Formation

GEOLOGIC MAP OF ORANGE COUNTY CALIFORNIA,
SHOWING MINES AND MINERAL DEPOSITS

Compiled by P. K. Morton and R. V. Miller
1981

ALTA CALIFORNIA GEOTECHNICAL INC.	Figure 1	Project Name:	15 Argonaut
		Project No.:	1-0631
		Date:	9/26/2025

the dominant northwest trend of the San Andreas Fault and is divided into two blocks, the Coast Range Block and the Peninsular Block. The Peninsular Range Block, on which this site is located, is characterized by a series of parallel, northwest trending faults that exhibit right-lateral strike-slip movement. These faults are terminated by the Transverse Range block to the north and extend southward into the Baja Peninsula. These northwest trending faults divide the Peninsular Range block into eight sub-blocks. The site is located in the northwestern portion of the Santa Ana sub-block, one of the eight sub-blocks, which is bound on the east by the Elsinore fault zone and on the west by the Newport-Inglewood fault zone.

4.3.2 Regionally Mapped Active Faults

Several large, active fault systems including the Elsinore and Newport-Inglewood faults occur in the region surrounding the site. These fault systems have been studied extensively and in a large part control the geologic structure of southern California.

4.3.3 Geologic Structure

Based upon our literature review, the younger fan deposits are of Quaternary age and are not folded or faulted.

4.4 Groundwater

Groundwater was not encountered during our subsurface investigation. Based on state-provided information, the historic-high groundwater is greater than 20.0 feet below the ground surface (CGS, 2001). The most recent groundwater data retrieved from the nearest groundwater monitoring site, site ID 336555N1176965W001, was recorded in 2024 and indicates groundwater was approximately greater than 60.0-feet at that time (CDWR, 2025).

4.5 Earthquake Hazards

The subject site is located in southern California, which is a tectonically active area. The type and magnitude of seismic hazards affecting a site are dependent on the distance to the causative fault and the intensity and magnitude of the seismic event. The seismic hazard may be primary, such as surface rupture and/or ground shaking, or secondary, such as liquefaction and/or ground lurching.

4.5.1 Local and Regional Faulting

The site is located in the northwestern portion of the Santa Ana sub-block. The closest known active faults and their distances to the site are presented on Table 4-1 below.

TABLE 4-1
Local and Regional Faulting

Fault Zone	Distance to Fault Zone
San Joaquin Hills	2.2 miles
Newport-Inglewood	7.1 miles
Elsinore	18.0 miles
Chino	18.4 miles
Palos Verdes	21.7 miles
Puente Hills (Coyote Hills)	22.1 miles
Coronado Bank	24.2 miles
Puente Hills (Santa Fe Springs)	28.6 miles

4.5.2 Surface Rupture

Active faults are not known to exist within the project and a review of Special Publication 42 indicates the site is not within a California State designated earthquake fault zone. Accordingly, the potential for fault surface rupture on the subject site is very low.

4.5.3 Seismicity

Ground shaking hazards caused by earthquakes along other active regional faults do exist. The 2022 California Building Code requires use-modified spectral accelerations and velocities for most structural designs. Seismic design parameters using soil profile types identified in the 2022 California Building Code are presented in Section 7.3.

4.5.4 Landslide Potential

Based on a review of the Seismic Hazard Zone Report for the San Juan Capistrano Quadrangle, the slope superjacent to the site is within an area with landslide potential. Further discussion into this hazard and its effects on the proposed project are presented in Section 6.3.

4.5.5 Liquefaction

Seismic agitation of relatively loose saturated sands, silty sands, and some silts can result in a buildup of pore pressure. If the pore pressure exceeds the overburden stresses, a temporary quick condition known as liquefaction can occur. Liquefaction effects can manifest in several ways including: 1) loss of bearing; 2) lateral spread; 3) dynamic settlement; and 4) flow failure. Lateral spreading has typically been the most damaging mode of failure.

In general, the more recent that a sediment has been deposited, the more likely it will be susceptible to liquefaction. Other factors that must be considered are groundwater, confining stresses, relative density, and the intensity and duration of seismically induced ground shaking.

Based on State provided information, the site is not located within a liquefaction zone. Groundwater was not encountered during our investigation to a depth of 51.5-feet bgs. Based on density of the

underlying formation, it is anticipated that the potential for liquefaction is nil.

5.0 ENGINEERING PROPERTIES AND ANALYSIS

5.1 Materials Properties

Presented herein is a general discussion of the engineering properties of the onsite materials that will be encountered during construction of the proposed project. Descriptions of the soil (Unified Soil Classification System) are presented on the logs in Appendices B.

5.1.1 Excavation Characteristics

Based on the data provided from the subsurface investigation, it is our opinion that the majority of the onsite materials possess favorable excavation characteristics such that conventional equipment can be utilized. Considerations should be given to the high moisture content of the diatomaceous soils encountered, as presented in the boring logs (Appendix B).

5.1.2 Compressibility

The upper portions of the Monterey Formation onsite are considered compressible and unsuitable to support the proposed improvements. Recommended removal depths are presented in Section 6.1.2.

As noted in the boring logs (Appendix B), the onsite soils are diatomaceous. Considerations should be given to the low dry density and high moisture content.

5.1.3 Hydro-Consolidation

Hydro-consolidation is the effect of introducing water into soil that is prone to collapse. Upon loading and initial wetting, the soil structure and apparent strength are altered resulting in almost immediate settlement.

That settlement can have adverse impacts on engineered structures, particularly in areas where it is manifested differentially. Differential settlements are typically associated with differential wetting, irregularities in the subsurface soil conditions, or irregular loading patterns.

Based on laboratory testing (Appendix C), there is minimal potential for hydro-collapse in the Monterey Formation onsite.

5.1.4 Expansion Potential

Expansion index testing was performed on samples taken during our subsurface investigation. Based on laboratory results, it is anticipated that the majority of materials onsite are "low" to "medium" in expansion potential (21≤EI≤90, Appendix C) when tested per ASTM D: 4829.

5.1.5 Earthwork Adjustments

The values presented in Table 5-2 are deemed appropriate for estimating purposes and may be used in an effort to balance earthwork quantities. As is the case with every project, contingencies should be made to adjust the earthwork balance when grading is in-progress and actual conditions are better defined.

TABLE 5-2
Earthwork Adjustment Factors

Geologic Unit	Adjustment Factor Range	Average
Monterey Formation	Shrink 4% to 8%	6%

5.1.6 Chemical Analyses

Chemical testing was performed on samples of material underlying the proposed site. Soluble sulfate test results indicate that the soluble sulfate concentrations of the soils tested are classified as negligible (Category S0) per ACI 318-14.

Negligible chloride levels were detected in the onsite soils. Based on laboratory results of soluble sulfate, chloride, and pH testing as presented in Appendix C, the onsite soils are classified as "non-corrosive" to buried metals and concrete (Caltrans, 2022). Additional discussions on corrosion are presented in Section 7.9. Corrosion tests results are presented in Appendix C.

5.2 Engineering Analysis

Presented below is a general discussion of the engineering analysis methods that were utilized to develop the conclusions and recommendations presented in this report.

5.2.1 Bearing Capacity and Lateral Earth Pressures

Ultimate bearing capacity values were obtained using the graphs and formula presented in NAVFAC DM-7.1. Allowable bearing was determined by applying a factor of safety of at least 3 to the ultimate bearing capacity. Static lateral earth pressures were calculated using Rankine methods for active and passive cases. If it is desired to use Coulomb forces, a separate analysis specific to the application can be conducted.

6.0 CONCLUSIONS AND RECOMMENDATIONS

Based on Alta's findings during our subsurface investigation, the laboratory test results, and our staff's previous experience in the area, it is Alta's opinion that the development of the site is feasible from a geotechnical perspective. Presented below are recommendations that should be incorporated into site development and construction plans.

6.1 Remedial Grading Recommendations

All grading shall be accomplished under the observation and testing of the project geotechnical consultant in accordance with the recommendations contained herein and the City of Santa Ana criteria.

6.1.1 Site Preparation

Vegetation, construction debris, and other deleterious materials are unsuitable as structural fill material and should be disposed of offsite prior to commencing grading/construction. Any septic tanks, seepage pits or wells should be abandoned as per the County of Orange Department of Health Services.

Existing concrete should be removed prior to the placement of engineered fill. The demolished concrete may be incorporated into compacted, engineered fills after it is crushed to a maximum size of six (6) inches. Prior to placement as engineered fill any protruding steel rebar should be cut from the concrete pieces and disposed of offsite.

Existing asphaltic concrete should be removed prior to the placement of engineered fill. From a geotechnical perspective, this material may be incorporated into compacted, engineered fills after it is ground down to passing the #4 sieve.

6.1.2 Unsuitable Soil Removals

The upper portions of alluvium are compressible and as such, are not suitable to support the proposed structures. Therefore, it is anticipated that, on average, the upper five (5) feet of existing soils will require removal and recompaction, extending a minimum of five (5) feet horizontally outside of the structures. This recommended removal combined with the foundation recommendations presented in Section 7.1 should provide suitable support for the proposed structures.

Footings for structures should be underlain by a minimum of three (3) feet of compacted fill. As such, for building pads where unsuitable soil removals do not provide the minimum depth of compacted fill, or where design grades and/or remedial grading activities create cut/fill transitions, the cut and shallow fill portions of the building pads should be over-excavated during grading and replaced with compacted fill. This condition shall be reviewed as foundation plans become available. The intent of this recommendations if for foundation loads to be encompassed within the engineered fill.

The Project Geotechnical Consultant should observe the removal bottom prior to placing fill. If unsuitable soils such as undocumented artificial fill is exposed upon the completion of the removals recommended above, additional removals may be required.

For fill areas in parking lots/drive aisles, in general, a minimum removal and recompaction of the upper two (2) feet is recommended, however all undocumented artificial fill shall be removed and recompacted. For cuts greater than two (2) feet in street areas, removals are not required. For

cuts less than two (2) feet, the two (2) foot removal and recompaction applies.

6.2 General Earthwork Recommendations

6.2.1 Compaction Standards

All fill and processed natural ground shall be compacted to a minimum relative compaction of 90 percent, as determined by ASTM Test Method: D-1557. Fill material should be moisture conditioned to optimum moisture or above, and as generally discussed in Alta's Earthwork Specification Section presented in Appendix E. Compaction shall be achieved with the use of heavy earthwork equipment. Mixing and moisture conditioning will be required in order to achieve the recommended moisture conditions.

As noted in the boring logs (Appendix B), the onsite soils are diatomaceous. Considerations should be given to the low dry density and high moisture content. It is recommended to utilize a contractor familiar with the difficulty of conducting grading operations within diatomaceous soil. Slower production rates should be anticipated.

6.2.2 Groundwater/Seepage

Groundwater was not encountered during the subsurface investigation. It is not anticipated that groundwater will be encountered during construction. It is possible that perched groundwater conditions could be encountered depending on the time of year construction occurs.

6.2.3 Documentation of Removals

All removal/over-excavation bottoms should be observed and approved by the project Geotechnical Consultant prior to fill placement. Consideration should be given to surveying the removal bottoms and undercuts after approval by the geotechnical consultant and prior to the

placement of fill. Staking should be provided in order to verify undercut locations and depths.

6.2.4 Treatment of Removal Bottoms

At the completion of removals/over-excavation, the exposed removal bottom should be ripped to a minimum depth of eight (8) inches, moisture-conditioned to above optimum moisture content and compacted in-place to the project standards.

6.2.5 Fill Placement

After removals, scarification, and compaction of in-place materials are completed, additional fill may be placed. Fill should be placed in eight-inch bulk maximum lifts, moisture conditioned or dried back so as to achieve optimum moisture content or above, compacted and tested as grading progresses until final grades are attained.

6.2.6 Mixing

Mixing of materials may be necessary to prevent layering of different soil types and/or different moisture contents. The mixing should be accomplished prior to and as part of compaction of each fill lift.

6.2.7 Import Soils

Import soils, if necessary, should consist of clean, structural quality, compactable materials similar to the on-site soils and should be free of trash, debris, or other objectionable materials. The project Geotechnical Consultant should be notified not less than 72 hours in advance of the locations of any soils proposed for import. Import sources should be sampled, tested, and approved by the project Geotechnical Consultant at the source prior to the importation of the soils to the site. The project Civil Engineer should include these requirements on plans and specifications for the project.

6.2.8 Utility Trenches

6.2.8.1 Excavation

Utility trenches should be supported, either by laying back excavations or shoring, in accordance with applicable OSHA standards. In general, existing site soils are classified as Soil Type “B” and "C" per OSHA standards. Upon completion of the recommended removals and recompaction, the artificial fill will be classified as Soil Type "B". The Project Geotechnical Consulting should be consulted if geologic conditions vary from what is presented in this report.

6.2.8.2 Backfill

Trench backfill should be compacted to at least 90 percent of maximum dry density as determined by ASTM D-1557. Onsite soils will not be suitable for use as bedding material but will be suitable for use in backfill provided oversized materials are removed. Although suitable for backfill, consideration should be given to utilizing imported materials as backfill materials. If native soils are to be used, slower production rates should be anticipated. No surcharge loads should be imposed above excavations. This includes spoil piles, lumber, concrete trucks, or other construction materials and equipment. Drainage above excavations should be directed away from the banks. Care should be taken to avoid saturation of the soils. Compaction should be accomplished by mechanical means. Jetting of native soils will not be acceptable.

Under-slab trenches should also be compacted to project specifications. If select granular backfill (SE > 30) is used, compaction by flooding will be acceptable.

6.3 Slope Stability

Surrounding the western and northern boundary of the site, adjacent to Glenwood Drive and Aliso Creek Road, is an approximately 50 foot slope ascending from the site. Within this slope is a landslide hazard mapped by the California Department of Conservation (CDMG, 2001). Based on a review of available data, the construction of the slope was completed during the grading of the existing structures or adjacent streets. Reports pertaining to this grading and any geologic / geotechnical reports pertaining to the hazard are not available from the City or the County. No visible instabilities were observed during our investigation. V-ditches are currently in place, and the existing slope is planted.

In consideration of the existing slope, the proposed structures have been setback from the toe of the slope in accordance with the requirements of the CBC.

Further review should be done as the project progresses. Additional recommendations pertaining to the grading and mitigation of the mapped hazard may be required based on conditions exposed during grading.

7.0 DESIGN CONSIDERATIONS

7.1 Structural Design

It is anticipated that multi-story residential structures with slab on-grade and shallow foundations will be constructed. Upon the completion of rough grading, finish grade samples should be collected and tested in order to provide specific recommendations as they relate to the individual building pads. These test

results and corresponding design recommendations should be presented in a final rough grading report. Final slab and foundation design recommendations should be made based upon specific structure sitings, loading conditions, and as-graded soil conditions.

It is anticipated that the majority of onsite soils will possess "low" to "medium" expansion potential when tested in general accordance with ASTM Test Method D: 4829. Due to the inherent characteristics of diatomaceous soils, it is recommended to utilize post-tensioned foundations in the design of the project.

7.1.1 Foundation Design

Foundations may be preliminary designed based on the values presented in Table 7-1 below.

Table 7-1
Foundation Design Parameters*

Allowable Bearing	1500 lbs/ft^2 (assuming a minimum embedment depth and width of 12 inches)
Lateral Bearing	250 lbs/ft^2 at a depth of 12 inches plus 250 lbs/ft^2 for each additional 12 inches of embedment to a maximum of 2000 lbs/ft^2.
Sliding Coefficient	0.30
Settlement	Static Settlement – 0.5 inch in 40 feet Dynamic Settlement – 0.5 inch in 40 feet

*These values may be increased as allowed by Code to resist transient loads such as wind or seismic. Building code and structural design considerations may govern depth and reinforcement requirements and should be evaluated.

7.1.2 Post-Tensioning Slabs/Foundation Design Recommendations

Post-tensioned slabs for the project may be designed utilizing the parameters presented in Tables 7-1 and 7-2. The parameters presented herein are based on methodology provided in the Design of Post-Tensioned Slabs-On-Ground, Third Edition, by the Post-Tensioning Institute, in accordance with the 2022 CBC.

TABLE 7-2
POST-TENSION SLAB DESIGN PARAMETERS

Category	Expansion Potential	Minimum Embedment*	Edge Lift		Center Lift	
			Em (ft)	Ym (inch)	Em (ft)	Ym (inch)
I	Low	12 inches	5.4	0.61	9.0	0.26
II	Medium	18 inches	5.0	1.10	9.0	0.46
Slab Subgrade Moisture						
Category I	Minimum 110% of optimum moisture to a depth of 12 inches prior to pouring concrete					
Category II	Minimum 120% of optimum moisture to a depth of 12 inches prior to pouring concrete					
Embedment* The minimum footing embedments presented herein are based on expansion indexes. The structural engineer should determine minimum embedments based on the number of floors supported by the footings, the structural loading, and the requirements of the latest California Building Code. If mat slabs are utilized, alternate embedment depths can be provided.						
Moisture Barrier A moisture barrier should be provided in accordance with the recommendations presented in Section 7.2						
The parameters presented herein are based on procedures presented in the Design of Post-Tensioned Slabs-On-Ground, Third Edition. No corrections for vertical barriers at the edge of the slab, or for adjacent vegetation have been assumed. The design parameters are based on a Constant Suction Value of 3.9 pF.						

7.2 Moisture Barrier

A moisture and vapor retarding system should be placed below the slabs-on-grade in portions of the structure considered to be moisture sensitive and should be capable of effectively preventing the migration of water and reducing the transmission of water vapor to acceptable levels. Historically, a 10-mil plastic membrane, such as Visqueen, placed between two to four inches of clean sand, has been used for this purpose. The use of this system or other systems can be considered, at the discretion of the designer, provided the system reduces the vapor transmission rates to acceptable levels.

7.3 Seismic Design

The site classes were determined based on the referenced reports and published geologic maps in the area in general conformance with Chapter 20 of ASCE 7-16. Based on the density of the underlying soils, a Site Class of D (shear wave velocity of 259 m/s) was selected. The seismic design parameters were calculated using a program based on the USGS website and ASCE 7-16 procedures. The resulting values are presented in Table 7-3. These values are applicable providing the exceptions presented in Supplements 2 and 3 of ASCE 7-16 are utilized in the design of the structure. If the design does not include the exception methodology, then a site-specific analysis shall be conducted.

TABLE 7-3 Seismic Ground Motion Values
2022 CBC and ASCE 7-16

Parameter	*Value*
Site Class	D
Site Latitude	33.5937
Site Longitude	-117.7272
Spectral Response Acceleration Parameter, S_S	1.22
Spectral Response Acceleration Parameter, S_1	0.438
Site Coefficient, F_a	1.012
Site Coefficient, F_v	1.85
MCE Spectral Response Acceleration Parameter, S_{MS}	1.235
MCE Spectral Response Acceleration Parameter, S_{M1}	0.810
Design Spectral Response Acceleration Parameter, S_{DS}	0.823
Design Spectral Response Acceleration Parameter, S_{D1}	0.540
Peak Ground Acceleration, PGA_M	0.568

7.4 Fence and Garden Walls

Block walls, if used, should be embedded a minimum of 2 feet below the lowest adjacent grade. Construction joints (not more than 20 feet apart) should be included in the block wall construction. Side yard walls should be structurally separated from the rear yard wall.

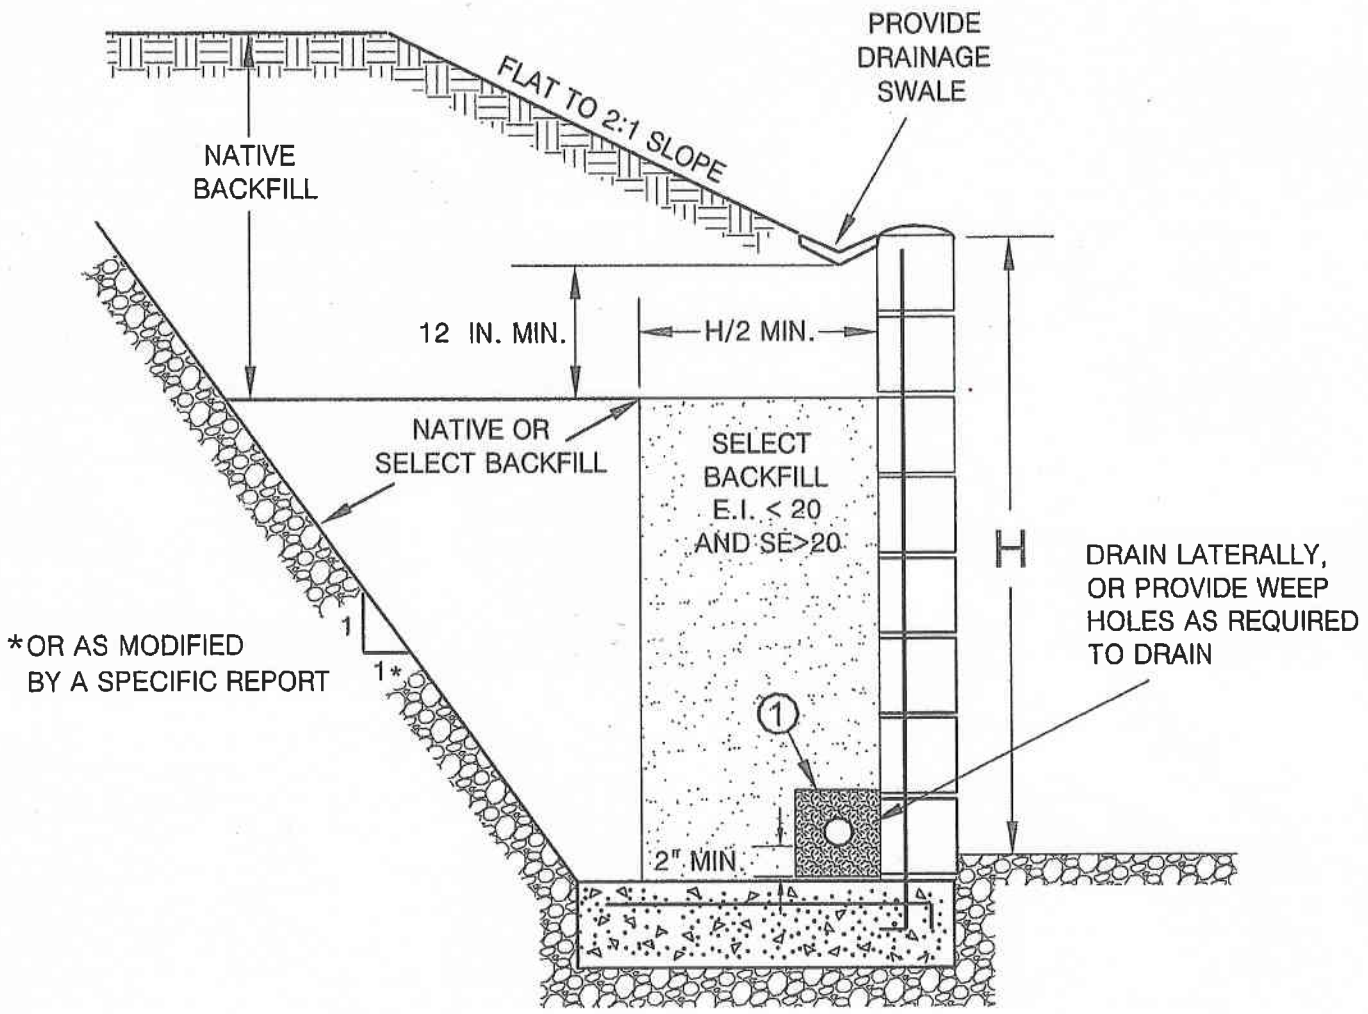
7.5 Footing Excavations

Soils from the footing excavations should not be placed in slab-on-grade areas unless properly compacted and tested. The excavations should be cleaned of all loose/sloughed materials and be neatly trimmed at the time of concrete placement. The Project Geotechnical Consultant should observe the footing excavations prior to the placement of concrete to determine that the excavations are founded in suitably compacted material.

7.6 Retaining Walls

Retaining walls should be founded on engineered fill and should be backfilled with granular soils that allow for drainage behind the wall. Foundations may be designed in accordance with the recommendations presented in Table 7-1, above. Unrestrained walls, free to horizontally move 0.0005H (for dense cohesionless backfill), may be designed to resist lateral pressures imposed by a fluid with a unit weight determined in accordance with the Table 7-4 below. The table also presents design parameters for restrained (at-rest) retaining walls. These parameters may be used to design retaining walls that may be considered as restrained due to the method of construction or location (corner sections of unrestrained retaining walls).

TABLE 7-4
Equivalent Fluid Pressures for 90% Compacted Fill (Select Material)



Backfill	Active Pressure (psf/ft)	At-Rest Pressure (psf/ft)
Level	35	55

Per the requirements of the 2022 CBC, the seismic force acting on the retaining walls with backfill exceeding 6-feet in height may be resolved utilizing the formula $12.5H^2$ lb/lineal ft (H=height of the wall). This force acts at approximately 0.6H above the base of the wall. The seismic value can be converted as required by the retaining wall engineer. Retaining walls should be designed in general accordance with Section 1807A.2 of the 2022 CBC.

- Restrained retaining walls should be designed for "at-rest" conditions.
- The design loads presented in the above table are to be applied on the retaining wall in a horizontal fashion and as such friction between wall and retained soils should not be allowed in the retaining wall analyses.
- Additional allowances should be made in the retaining wall design to account for the influence of construction loads, temporary loads, and possible nearby structural footing loads.
- Select backfill should be granular, structural quality backfill with a Sand Equivalent of 20 or better and an ASCE Expansion Index of 20 or less. The backfill must encompass the full active wedge area. The upper one foot of backfill should be comprised of native on-site soils (see Plate A).
- The wall design should include waterproofing (where appropriate) and backdrains or weep holes for relieving possible hydrostatic pressures. The backdrain should be comprised of a 4-inch perforated PVC pipe in a 1 ft. by 1 ft., ¾-inch gravel matrix, wrapped with a geofabric. The backdrain should be installed with a minimum gradient of 2 percent and should be outletted to an appropriate location. For subterranean walls this may include drainage by sump pumps.
- No backfill should be placed against concrete until minimum design strengths are achieved.

It should be noted that the allowable bearing and lateral bearing values presented in Table 7-1 are based on level conditions at the toe. Modified design parameters can be presented for retaining walls with sloping condition at the toe. Other conditions should be evaluated on a case-by-case basis.

RETAINING WALL BACKFILL DETAIL

(1)

PIPE: 4-INCH PERFORATED PVC, SCHEDULE 40, SDR35 OR APPROVED ALTERNATE MINIMUM 8 PERFORATIONS (1/4-IN. DIA.) PER LINEAL FT. IN BOTTOM HALF OF PIPE

ROCK: MINIMUM VOLUME OF 1 CU. FT. OF 3/4-IN. MAX. ROCK PER. LINEAL FOOT OF PIPE, OR APPROVED ALTERNATE

FILTER FABRIC: MIRAFI 140 FILTER FABRIC OR APPROVED EQUIVALENT

7.7 Exterior Slabs and Walkways

Exterior concrete slabs and walkways should be designed and constructed in consideration of the following recommendations.

7.7.1 Subgrade Compaction

The subgrade below exterior concrete slabs should be compacted to a minimum of 90 percent relative compaction as determined by ASTM Test Method: D 1557.

7.7.2 Subgrade Moisture

The subgrade below concrete slabs should be moisture conditioned to a minimum of 110 percent (low expansion potential) or 120 percent (medium expansion potential) of optimum moisture prior to concrete placement

7.7.3 Concrete Slab Thickness

Concrete flatwork and driveways should be designed utilizing four-inch minimum thickness.

7.7.4 Concrete Slab Reinforcement

Utilization of reinforcement for flatwork and driveways is subject to a cost/benefit analysis. Reinforcement will decrease the amount of cracking that may occur in flatwork, however, planning for occasional repairs may be more cost effective. Utilizing closely spaced control joints is likely more cost-effective than utilizing reinforcement. The majority of the soils onsite are classified as very low in expansion potential. Consideration should be given to reinforcing flatwork with irregular (non-square/rectangular) shapes or flatwork underlain by medium expansive soils. Reinforcement may consist of 6x6 W.14/W1.4 welded wire mesh or an equivalent section of rebar.

7.7.5 Control Joints

Weakened plane joints should be installed on walkways at intervals of approximately eight feet (maximum) or less. Exterior slabs should be designed to withstand shrinkage of the concrete.

7.8 Concrete Design

As stated in Section 5.1.7, negligible concentrations of sulfates were detected in the onsite soils (Class S0). Therefore, the use of sulfate resistant concrete is not required per ACI 318-14 at this time. Post-grading conditions should be evaluated, and final recommendations made at that time.

7.9 Corrosion

Based on laboratory results of soluble sulfate, chloride, and pH testing as presented in Appendix C, the onsite soils are classified as “non-corrosive” to buried metals and concrete (Caltrans, 2022). Buried ferrous metals should be protected against the effects of corrosive soils in accordance with the manufacturer’s recommendations. Typical measures may include using non-corrosive backfill, protective coatings, wrapping, plastic pipes, or a combination of these methods. A corrosion engineer should be consulted if specific design recommendations are required by the improvement designer.

Per ACI 318-14, an exposure class of C1 would be applicable to metals encased in concrete (rebar in footings) due to being exposed to moisture from surrounding soils. Per Table 19.3.2.1 of ACI 318-14, the requirements for concrete with an exposure class of C1 are a minimum compressive strength of 2500 psi and a maximum water-soluble chloride ion content in concrete of 0.30 (percent by weight of cement).

7.10 Pavement Design

Pavement sections for the proposed streets shall be designed based on laboratory testing conducted on samples taken from the soil subgrade. Preliminarily, based on an assumed R-Value of 30, the pavement may be designed utilizing the sections presented in Table 7-5. These sections should be verified upon the completion of grading, based on R-Value testing. The ultimate pavement section design for public streets is under the City of Aliso Viejo's purview.

Table 7-5
Preliminary Pavement Sections

Traffic Index	Pavement Section Options OR	
5.0	3-inch AC on 6-inch AB	4-inch AC on 4-inch AB
5.5	3-inch AC on 7-inch AB	4-inch AC on 5-inch AB

AC-Asphalt Concrete
AB-Caltrans Class II Base

Construction of the streets should be accomplished in accordance with the current criteria of the City of Aliso Viejo. Prior to the placement of base material, the subgrade should be suitably moisture conditioned, processed and compacted to a minimum 95 percent of the laboratory maximum density (ASTM: D 1557) to at least twelve (12) inches below subgrade. After subgrade compaction, the exposed grade should then be "proof"-rolled with heavy equipment to ensure the grade does not "pump" and is verified as non-yielding. Aggregate base material should be placed on the compacted subgrade and compacted in-place to a minimum 95 percent of the laboratory standard obtained per ASTM: D 1557.

8.0 LOT MAINTENANCE

Ongoing maintenance of the improvements is essential to the long-term performance of structures. As such, the owners must implement certain maintenance procedures. The attached " Maintenance and Improvement Considerations" presented in the Appendix E may be included as part of the sales packet to educate the owners in issues related to drainage, maintenance, improvements, etc. The following recommendations should also be implemented.

8.1 Lot Drainage

Roof, pad, and lot drainage should be collected and directed away from structures and slopes and toward approved disposal areas. Design fine grade elevations should be maintained throughout the life of the structure or if design fine grade elevations are altered, adequate area drains should be installed in order to provide rapid discharge of water, away from structures and slopes. Residents should be made aware that they are responsible for maintenance and cleaning of all drainage terraces, down drains, and other devices that have been installed to promote structure and slope stability.

8.2 Burrowing Animals

Owners should undertake a program for the elimination of burrowing animals.

9.0 FUTURE PLAN REVIEWS

This report represents a geotechnical review of the site. As the project design for the project progresses, site specific geologic and geotechnical issues should be considered in the design and construction of the project. Consequently, future plan reviews may be necessary. These reviews may include reviews of:

- Grading Plans
- Foundation Plans
- Utility Plans

These plans should be forwarded to the project Geotechnical Consultant for review.

10.0 CLOSURE

10.1 Geotechnical Review

For the purposes of this report, multiple working hypotheses were established for the project, utilizing the available data and the most probable model is used for the analysis. Future information collected during the proposed grading operations is intended to evaluate the hypothesis and as such, some of the assumptions summarized in this report may need to be changed. Some modifications of the grading recommendations may become necessary, should the conditions encountered in the field differ from the conditions hypothesized in this report.

Plans and sections of the project specifications should be reviewed by Alta to evaluate conformance with the intent of the recommendations contained in this report. If the project description or final design varies from that described in herein, Alta must be consulted regarding the applicability of the recommendations contained herein and whether any changes are required. Alta accepts no liability for any use of its recommendations if the project description or final design varies and Alta is not consulted regarding the alterations.

10.2 Limitations

This report is based on the following: 1) the project as presented on the attached plan; 2) the information obtained from Alta's laboratory testing included herein; and 3) from the information presented in the referenced reports. The findings and recommendations are based on the results of the subsurface investigation, laboratory testing, and office analysis combined with an interpolation and extrapolation of conditions between and beyond the subsurface excavation locations. However, the materials adjacent to or beneath those observed may have different characteristics than those observed, and no precise representations are made as to the quality or extent of the materials not

observed. The results reflect an interpretation of the direct evidence obtained. Work performed by Alta has been conducted in a manner consistent with the level of care and skill ordinarily exercised by members of the geotechnical profession currently practicing in the same locality under similar conditions. No other representation, either expressed or implied, and no warranty or guarantee is included or intended.

The recommendations presented in this report are based on the assumption that an appropriate level of field review will be provided by a geotechnical consultant who is familiar with the design and site geologic conditions. That field review shall be sufficient to confirm that geotechnical and geologic conditions exposed during grading are consistent with the geologic representations and corresponding recommendations presented in this report.

The conclusions and recommendations included in this report are applicable to the specific design of this project as discussed in this report. They have no applicability to any other project or to any other location and any and all subsequent users accept any and all liability resulting from any use or reuse of the data, opinions, and recommendations without the prior written consent of Alta.

Alta has no responsibility for construction means, methods, techniques, sequences, procedures, safety precautions, programs in connection with the construction, acts or omissions of the CONTRACTOR or any other person performing any of the construction, or for the failure of any of them to carry out the construction in accordance with the final design drawings and specifications.

APPENDIX B

Subsurface Investigation

APPENDIX B

Subsurface Investigation

Alta's subsurface investigation consisted of excavating, logging, and sampling four (4) hollow-stem auger borings. Details of the subsurface investigation are presented in Table B. The approximate location of the exploratory excavation is shown on the accompanying Plate 1 and the Geotechnical Logs are attached.

TABLE B
SURFACE INVESTIGATION DETAILS

Equipment	Range of Depths	Sampling Methods	Sample Locations
8" Hollow-Stem Auger	Up to 51.5 feet	1. Bulk 2. Ring	1. Bulk-Select Depths. 2. Ring-Every 2.5 or 5 feet.

UNIFIED SOIL CLASSIFICATION SYSTEM

Major Divisions		grf	ltr	Description
Coarse Grained Soils: More than 50% retained on No. 200 sieve	Gravel and Gravelly Soils: More than 50% of coarse fraction retained on No. 4 sieve		GW	Well-graded gravels or gravel sand mixtures, little or no fines
			GP	Poorly-graded gravels or gravel sand mixture, little or no fines
			GM	Silty gravels, gravel-sand-silt mixtures
			GC	Clayey gravels, gravel-sand-clay mixtures
	Sand and Sandy Soils: More than 50% of coarse fraction passes on No. 4 sieve		SW	Well-graded sands or gravelly sands, little or no fines
			SP	Poorly-graded sands or gravelly sands, little or no fines
			SM	Silty sands, sand-silt mixtures
			SC	Clayey sands, and-clay mixtures

Major Divisions		grf	ltr	
Fine Grained Soils: More than 50% passes on No. 200 sieve	Silts And Clays LL,<50		ML	Inorganic silts and very fine sands, rock flour, silty or clayey fine sands or clayey silts with slight plasticity
			CL	Inorganic clays of low to medium plasticity, gravelly clays, sandy clays, silty clays, lean clays
			OL	Organic silts and organic silt-clays of low plasticity
	Silts And Clays LL,<50		MH	Inorganic silts, micaceous or diatomaceous fine or silty soils, elastic silts
			VH	Inorganic clays of high plasticity, fat clays
			OH	Organic clays of medium to high plasticity
Highly Organic Soils			PT	Peat and other highly organic soils

BOUNDARY CLASSIFICATION: Soils possessing characteristics of two groups are designated by combinations of group symbols.

PARTICLE SIZE LIMITS

U.S. STANDARD SERIES SIEVE: 200 | 40 | 10 | 4

CLEAR SQUARE SIEVE OPENINGS: 3/4" | 3" | 12"

Silts and Clays	Sand			Gravel		Cobbles	Boulders

APPENDIX C

Laboratory Testing

LABORATORY TESTING

The following laboratory tests were performed on a representative sample in accordance with the applicable latest standards or methods from the ASTM, California Building Code (CBC) and California Department of Transportation.

Classification

Soils were classified with respect to the Unified Soil Classification System (USCS) in accordance with ASTM D-2487 and D-2488.

Particle Size Analysis

Modified hydrometer testing was conducted to aid in classification of the soil. The results of the particle size analysis are presented in Table C.

Maximum Density/Optimum Moisture

The maximum dry density and optimum moisture content of two representative bulk samples were evaluated in accordance with ASTM D-1557. The results are summarized in Table C.

Expansion Index Tests

Two (2) expansion index test was performed to evaluate the expansion potential of typical on-site soil. Testing was carried out in general conformance with ASTM Test Method D-4829. The results are presented in Table C.

Chemical Analyses

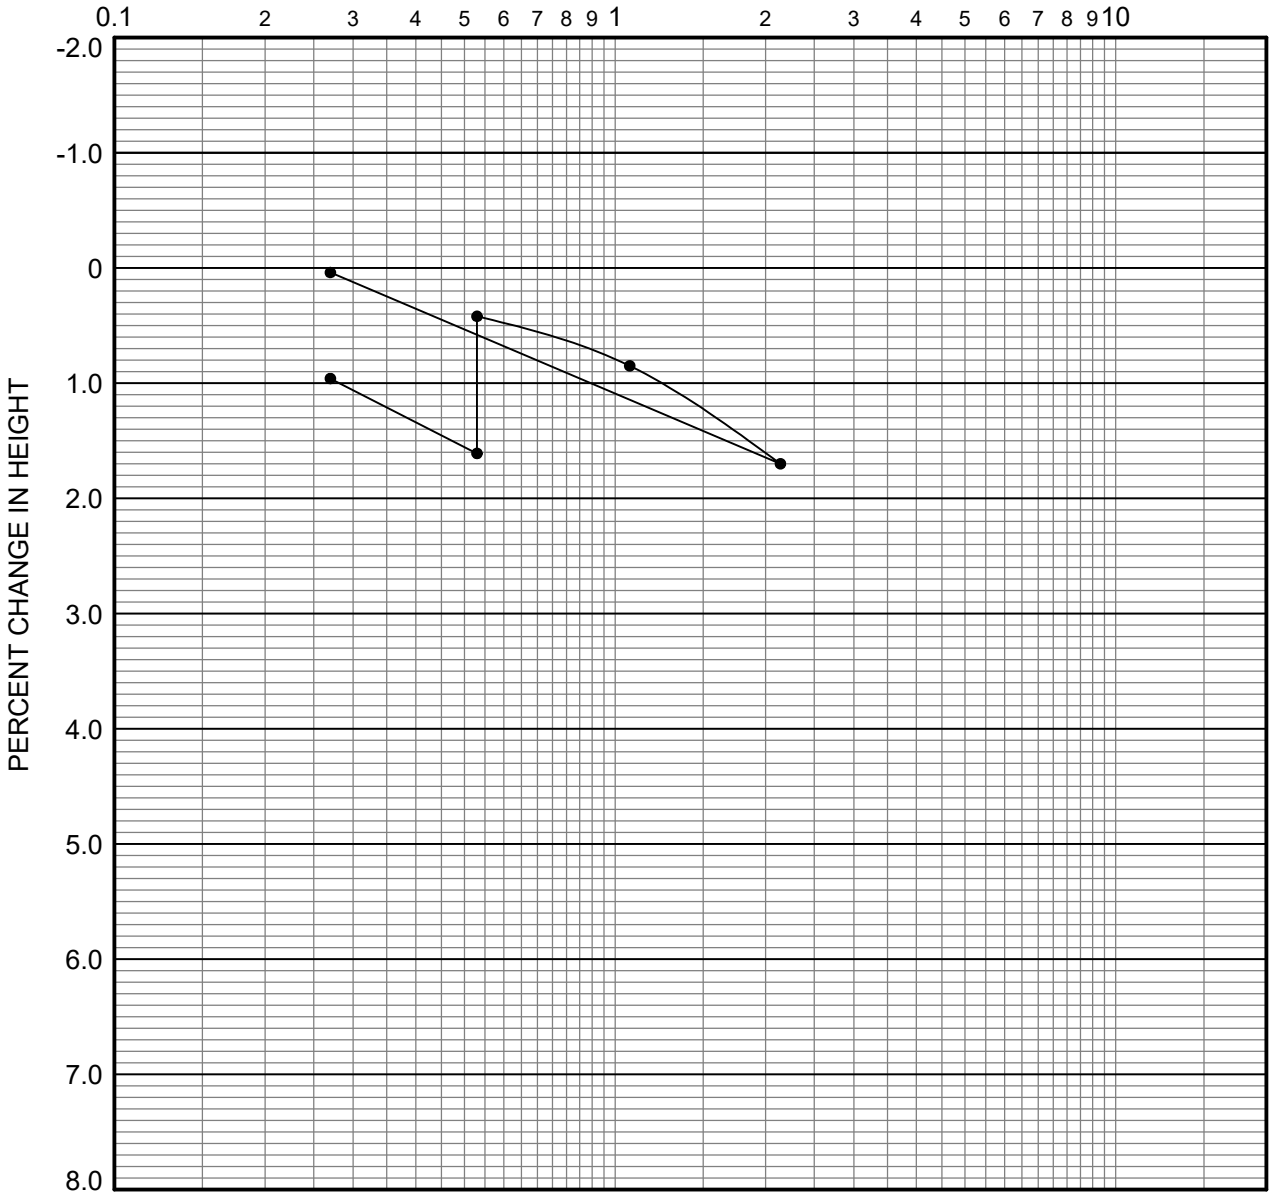
Chemical testing was performed on two select samples by Alta. The results of these tests (sulfate content, resistivity, chloride content and pH) are presented on Table C.

Consolidation Tests

Consolidation testing was performed on four (4) relatively “undisturbed” soil samples at their natural moisture content in accordance with procedures outlined in ASTM D-2435. The samples were placed in a consolidometer and loads were applied incrementally in geometric progression. The samples (2.42-inches in diameter and 1-inch in height) were permitted to

consolidate under each load increment until the slope of the characteristic linear secondary compression portion of the thickness versus log of time plot was apparent. The percent consolidation for each load cycle was recorded as the ratio of the amount of vertical compression to the original 1-inch height. The consolidation test results are shown on Plates C-1 through C-4.

Atterberg Limits



Atterberg limits testing was performed on two select samples by Alta. The results of these tests are presented on Table C

APPENDIX D

Maintenance and Improvement Considerations

MAINTENANCE AND IMPROVEMENT CONSIDERATIONS

General

Owners purchasing property must assume a certain degree of responsibility for improvements and for maintaining conditions around their home. Of primary importance from a geotechnical standpoint are maintaining drainage patterns and minimizing the soil moisture variation below all improvements. Such design, construction and owner maintenance provisions may include:

- Employing contractors for improvements who design and build in recognition of local building codes and specific site soils conditions.
- Establishing and maintaining positive drainage away from all foundations, walkways, driveways, patios, and other improvements.
- Avoiding the construction of planters adjacent to structural improvements. Alternatively, planter sides/bottoms can be sealed with an impermeable membrane and drained away from the improvements via subdrains into approved disposal areas.
- Sealing and maintaining construction/control joints within concrete slabs and walkways to reduce the potential for moisture infiltration into the subgrade soils.
- Utilizing landscaping schemes with vegetation that requires minimal watering. Watering should be done in a uniform manner, as equally as possible on all sides of the foundation, keeping the soil "moist" but not allowing the soil to become saturated.
- Maintaining positive drainage away from structures and providing roof gutters on all structures with downspouts that are designed to carry roof runoff directly into area drains or discharged well away from the foundation areas.
- Avoiding the placement of trees closer to the proposed structures than a distance of one-half the mature height of the tree.
- Observation of the soil conditions around the perimeter of the structure during extremely hot/dry or unusually wet weather conditions so that modifications can be made in irrigation programs to maintain relatively uniform moisture conditions.

Sulfates

Owners should be cautioned against the import and use of certain inorganic fertilizers, soil amendments, and/or other soils from offsite sources in the absence of specific information relating to their chemical composition. Some fertilizers have been known to leach sulfate compounds into soils and increase the sulfate concentrations to potentially detrimental levels.

Site Drainage

- The owners should be made aware of the potential problems that may develop when drainage is altered through construction of hardscape improvements. Ponded water, drainage over the slope face, leaking irrigation systems, overwatering, or other conditions which could lead to ground saturation must be avoided.
- No water should be allowed to flow over the slopes. No alteration of pad gradients should be allowed that would prevent pad and roof runoff from being directed to approved disposal areas.
- Drainage patterns have been established at the time of the fine grading should be maintained throughout the life of the structure. No alterations to these drainage patterns should be made unless designed by qualified professionals in compliance with local code requirements and site-specific soils conditions.

Slope Drainage

- Residents should be made aware of the importance of maintaining and cleaning all interceptor ditches, drainage terraces, down drains, and any other drainage devices, which have been installed to promote slope stability.
- Subsurface drainage pipe outlets may protrude through slope surfaces and/or wall faces. These pipes, in conjunction with the graded features, are essential to slope and wall stability and must be protected in-place. They should not be altered or damaged in any way.

Planting and Irrigation of Slopes

- Seeding and planting of the slopes should be planned to achieve, as rapidly as possible, a well-established and deep-rooted vegetal cover requiring minimal watering.
- It is the responsibility of the landscape architect to provide such plants initially and of the residents to maintain such planting. Alteration of such a planting scheme is at the resident's risk.
- The resident is responsible for proper irrigation and for maintenance and repair of properly installed irrigation systems. Leaks should be fixed immediately.

- Sprinklers should be adjusted to provide maximum uniform coverage with a minimum of water usage and overlap. Overwatering with consequent wasteful runoff and serious ground saturation must be avoided.
- If automatic sprinkler systems are installed, their use must be adjusted to account for seasonal and natural rainfall conditions.

Burrowing Animals

- Residents must undertake a program to eliminate burrowing animals. This must be an ongoing program in order to promote slope stability.

Owner Improvement

Owner improvements (pools, spas, patio slabs, retaining walls, planters, etc.) should be designed to account for the terrain of the project, as well as expansive soil conditions and chemical characteristics. Design considerations on any given lot may need to include provisions for differential bearing materials, ascending/descending slope conditions, bedrock structure, perched (irrigation) water, special geologic surcharge loading conditions, expansive soil stresses, and long-term creep/settlement.

All owner improvements should be designed and constructed by qualified professionals utilizing appropriate design methodologies, which account for the on-site soils and geologic conditions. Each lot and proposed improvement should be evaluated on an individual basis.

Setback Zones

Manufactured slopes maybe subject to long-term settlement and creep that can manifest itself in the form of both horizontal and vertical movement. These movements typically are produced as a result of weathering, erosion, gravity forces, and other natural phenomenon. A setback adjacent to slopes is required by most building codes, including the California Building Code. This zone is intended to locate and support the residential structures away from these slopes and onto soils that are not subject to the potential adverse effects of these natural phenomena.

The owner may wish to construct patios, walls, walkways, planters, swimming pools, spas, etc. within this zone. Such facilities may be sensitive to settlement and creep and should not be

constructed within the setback zone unless properly engineered. It is suggested that plans for such improvements be designed by a professional engineer who is familiar with grading ordinances and design and construction requirements. In addition, we recommend that the designer and contractor familiarize themselves with the site specific geologic and geotechnical conditions on the specific lot.

APPENDIX E

Earthwork Specifications

ALTA CALIFORNIA GEOTECHNICAL, INC.
EARTHWORK SPECIFICATIONS

These specifications present the generally accepted standards and minimum earthwork requirements for the development of the project. These specifications shall be the project guidelines for earthwork except where specifically superseded in preliminary geology and soils reports, grading plan review reports or by the prevailing grading codes or ordinances of the controlling agency.

A. GENERAL

1. The Contractor shall be responsible for the satisfactory completion of all earthwork in accordance with the project plans and specifications.

2. The project Geotechnical Engineer and Engineering Geologist, or their representatives, shall provide observation and testing services, and Geotechnical consultation for the duration of the project.

3. All clearing, grubbing, stripping and site preparation for the project shall be accomplished by the Contractor to the satisfaction of the Geotechnical Engineer/Engineering Geologist.

4. It is the Contractor's responsibility to prepare the ground surface to receive fill to the satisfaction of the Geotechnical Engineer and to place, spread, mix, moisture condition, and compact the fill in accordance with the job specifications and as required by the Geotechnical Engineer. The Contractor shall also remove all material considered by the Geotechnical Engineer to be unsuitable for use in the construction of engineered fills.

5. The Contractor shall have suitable and sufficient equipment in operation to handle the amount of fill being placed. When necessary, equipment will be shut down temporarily in order to permit the proper preparation of fills.

B. PREPARATION OF FILL AREAS

1. Excessive vegetation and all deleterious material should be disposed of offsite as required by the Geotechnical Engineer.

   Existing fill, soil, alluvium or rock materials determined by the Geotechnical Engineer as being unsuitable for placement in compacted fills shall be removed and hauled from the site. Where applicable, the Contractor may obtain the

approval of the Soils Engineer and the controlling authorities for the project to dispose of the above described materials, or a portion thereof, in designated areas onsite.

After removal of the deleterious materials have been accomplished, earth materials deemed unsuitable in their natural, in-place condition, shall be removed as recommended by the Geotechnical Engineer/Engineering Geologist.

2. Upon achieving a suitable bottom for fill placement, the exposed removal bottom shall be disced or bladed by the Contractor to the satisfaction of the Geotechnical Engineer. The prepared ground surfaces shall then be brought to the specified moisture content mixed as required, and compacted and tested as specified. In localities where it is necessary to obtain the approval of the controlling agency prior to placing fill, it will be the Contractor's responsibility to contact the proper authorities to visit the site.

3. Any underground structure such as cesspools, cisterns, mining shafts, tunnels, septic tanks, wells, pipelines or other structures not located prior to grading are to be removed or treated in a manner prescribed by the Geotechnical Engineer and/or the controlling agency for the project.

C. ENGINEERED FILLS

1. Any material imported or excavated on the property may be utilized as fill, provided the material has been determined to be suitable by the Geotechnical Engineer. Deleterious materials shall be removed from the fill as directed by the Geotechnical Engineer.

2. Rock or rock fragments less than twelve inches in the largest dimension may be utilized in the fill, provided they are not placed in concentrated pockets and the distribution of the rocks is approved by the Geotechnical Engineer.

3. Rocks greater than twelve inches in the largest dimension shall be taken offsite, or placed in accordance with the recommendations of the Geotechnical Engineer in areas designated as suitable for rock disposal.

4. All materials to be used as fill, shall be tested in the laboratory by the Geotechnical Engineer. Proposed import materials shall be approved by the Geotechnical Engineer 48 hours prior to importation.

5. The fill materials shall be placed by the Contractor in lifts, that when compacted, shall not exceed six inches. Each lift shall be spread evenly and shall be

thoroughly mixed to achieve a near uniform moisture condition and a uniform blend of materials.

All compaction shall be achieved at or above the optimum moisture content, as determined by the applicable laboratory standard. The Contractor will be notified if the fill materials are too wet or too dry to achieve the required compaction standard.

6. When the moisture content of the fill material is below the limit specified by the Geotechnical Engineer, water shall be added and the materials shall be blended until a uniform moisture content, within specified limits, is achieved. When the moisture content of the fill material is above the limits specified by the Geotechnical Engineer, the fill materials shall be aerated by discing, blading, mixed with dryer fill materials, or other satisfactory methods until the moisture content is within the specified limits.

7. Each fill lift shall be compacted to the minimum project standards, in compliance with the testing methods specified by the controlling governmental agency, and in accordance with recommendations of the Geotechnical Engineer.

   In the absence of specific recommendations by the Geotechnical Engineer to the contrary, the compaction standard shall be the most recent version of ASTM:D 1557.

8. Where a slope receiving fill exceeds a ratio of five-horizontal to one-vertical, the fill shall be keyed and benched through all unsuitable materials into sound bedrock or firm material, in accordance with the recommendations and approval of the Geotechnical Engineer.

9. Side hill fills shall have a minimum key width of 15 feet into bedrock or firm materials, unless otherwise specified in the soil report and approved by the Geotechnical Engineer in the field.

10. Drainage terraces and subdrainage devices shall be constructed in compliance with the ordinances of the controlling governmental agency and/or with the recommendations of the Geotechnical Engineer and Engineering Geologist.

11. The Contractor shall be required to maintain the specified minimum relative compaction out to the finish slope face of fill slopes, buttresses, and stabilization fills as directed by the Geotechnical Engineer and/or the governing agency for the project. This may be achieved by either overbuilding the slope and cutting

back to the compacted core; by direct compaction of the slope face with suitable equipment; or by any other procedure which produces the required result.

12. The fill portion of fill-over-cut slopes shall be properly keyed into rock or firm material; and the fill area shall be stripped of all soil or unsuitable materials prior to placing fill.

    The design cut portion of the slope should be made first and evaluated for suitability by the Engineering Geologist prior to placement of fill in the keyway above the cut slope.

13. Pad areas in cut or natural ground shall be approved by the Geotechnical Engineer. Finished surfaces of these pads may require scarification and recompaction, or over excavation as determined by the Geotechnical Engineer.

D. CUT SLOPES

1. The Engineering Geologist shall observe all cut slopes and shall be notified by the Contractor when cut slopes are to be started.

2. If, during the course of grading, unforeseen adverse or potentially adverse geologic conditions are encountered, the Engineering Geologist and Soil Engineer shall investigate, analyze and make recommendations to remediate these problems.

3. Non-erodible interceptor swales shall be placed at the top of cut slopes that face the same direction as the superjacent, prevailing drainage.

4. Unless otherwise specified in specific geotechnical reports, no cut slopes shall be excavated higher or steeper than that allowed by the ordinances of controlling governmental agencies.

5. Drainage terraces shall be constructed in compliance with the ordinances of the controlling governmental agencies, and/or in accordance with the recommendations of the Geotechnical Engineer or Engineering Geologist.

E. GRADING CONTROL

1. Fill placement shall be observed and tested by the Geotechnical Engineer and/or his representative during grading.

   Field density tests shall be made by the Geotechnical Engineer and/or his representative to evaluate the compaction and moisture compliance of each fill lift. Density tests shall be conducted at intervals not to exceed two feet of fill

height. Where sheepsfoot rollers are used, the fill may be disturbed to a depth of several inches. Density determinations shall be taken in the compacted material below the disturbed surface at a depth determined by the Geotechnical Engineer or his representative.

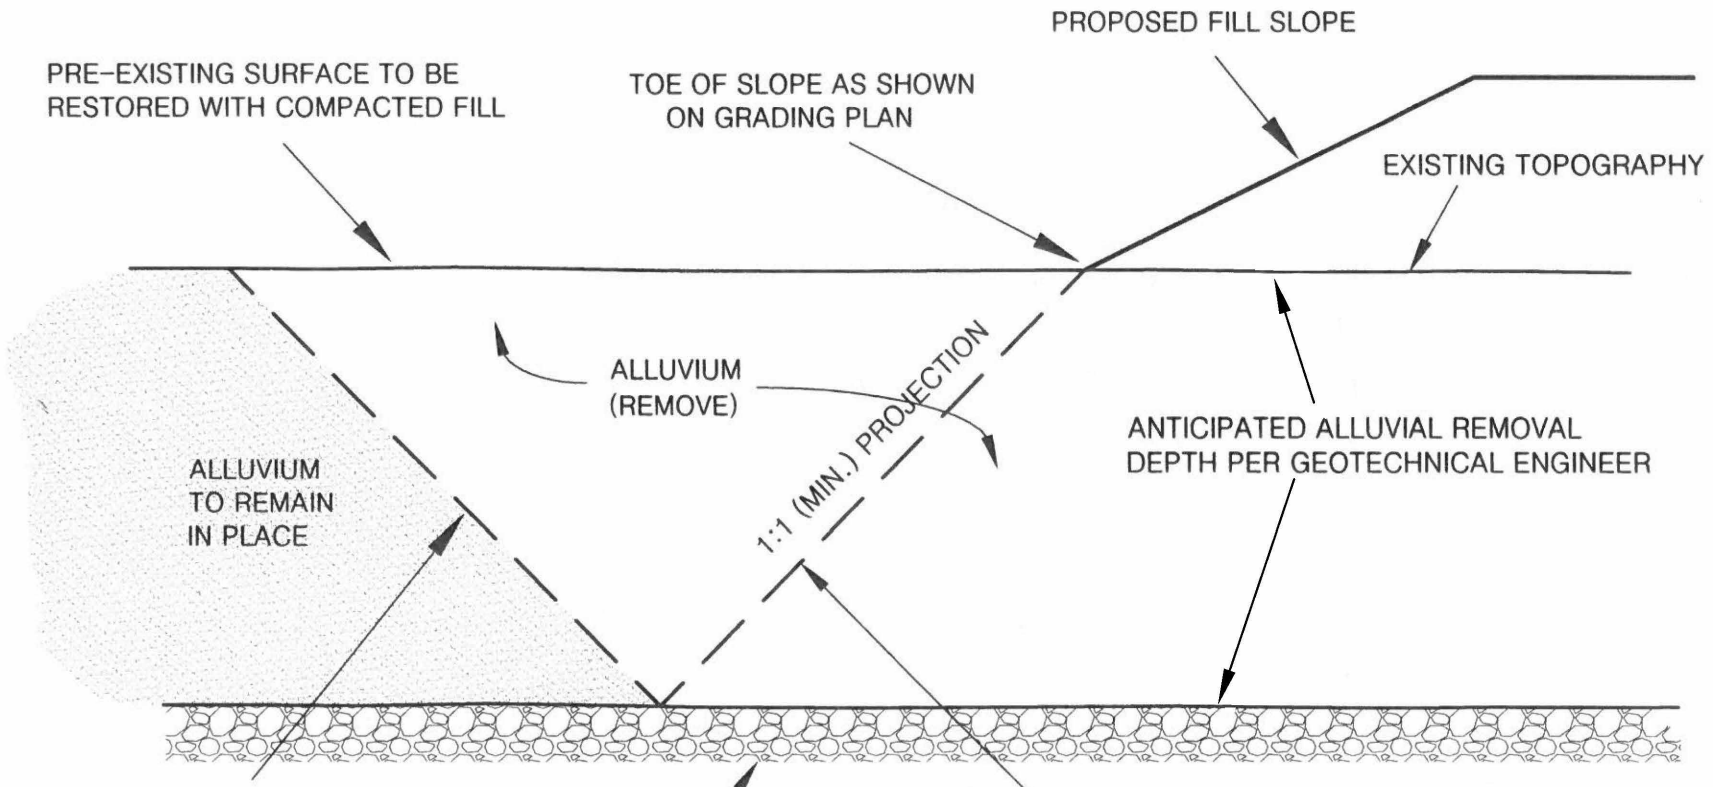
2. Where tests indicate that the density of any layer of fill, or portion thereof, is below the required relative compaction, or improper moisture content is in evidence, that particular layer or portion thereof shall be reworked until the required density and/or moisture content has been attained. Additional fills shall not be placed over an area until the previous lift of fill has been tested and found to meet the density and moisture requirements for the project and the previous lift is approved by the Geotechnical Engineer.

3. When grading activities are interrupted by heavy rains, fill operations shall not be resumed until field observations and tests by the Geotechnical Engineer indicate the moisture content and density of the fill are within the specified limits.

4. During construction, the Contractor shall properly grade all surfaces to maintain good drainage and prevent the ponding of water. The Contractor shall take remedial action to control surface water and to prevent erosion of graded areas until such time as a permanent drainage and erosion devices have been installed.

5. Observation and testing by the Geotechnical Engineer and/or his representative shall be conducted during filling and compacting operations in order that he will be able to state in his opinion that all cut and filled areas are graded in accordance with the approved specifications.

6. Upon the completion of grading activities and after the Geotechnical Engineer and Engineering Geologist have finished their observations of the work, final reports shall be submitted. No further excavation or fill placement shall be undertaken without prior notification of the Geotechnical Engineer and/or Engineering Geologist.



F. **FINISHED SLOPES**

All finished cut and fill slopes shall be planted and irrigated and/or protected from erosion in accordance with the project specifications, governing agencies, and/or as recommended by a landscape architect.

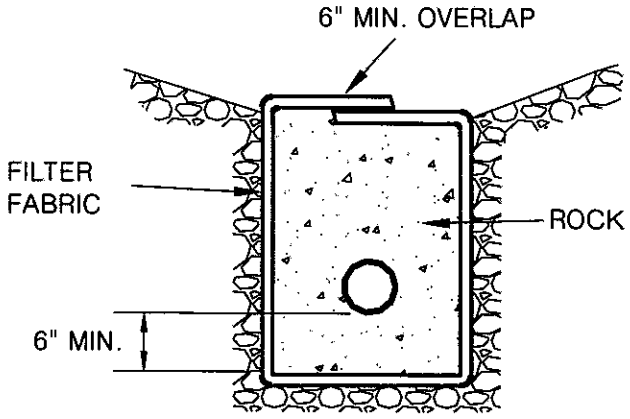
REMOVAL ADJACENT TO EXISTING FILL



*INITIATE 1:1 TIE-IN BACKCUT TO INTERCEPT TOE OF INTERIM BACKCUT

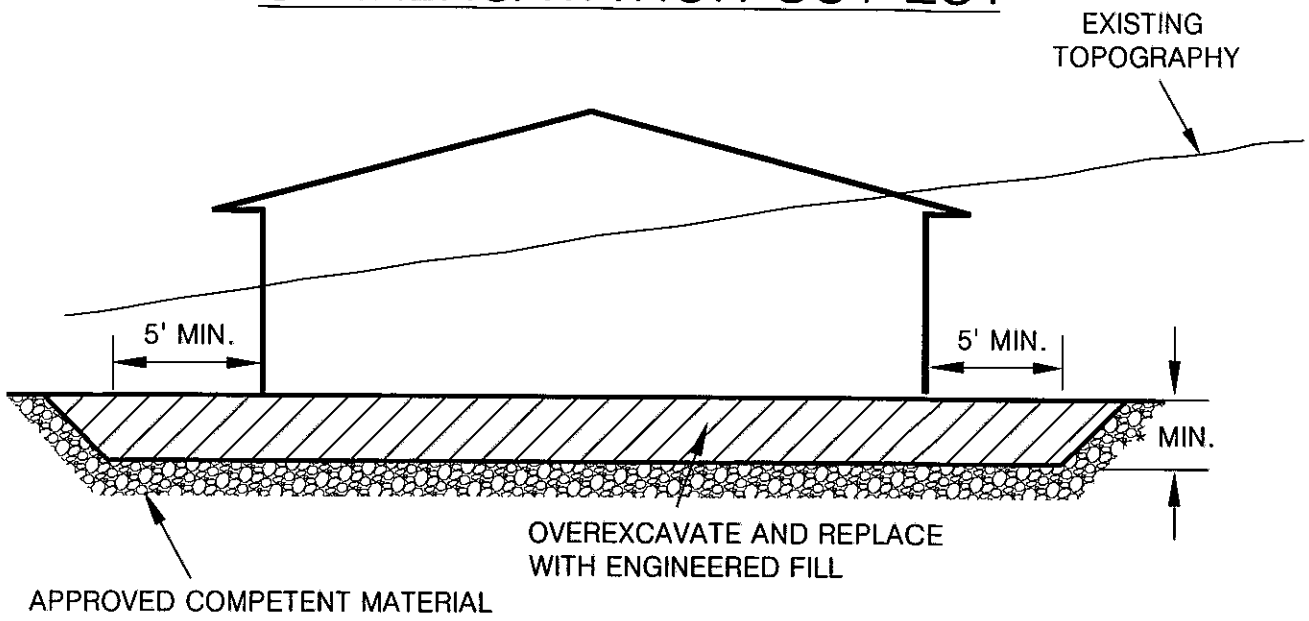
**AS PART OF TIE-IN FOR ADDITIONAL ENGINEERED FILL

CANYON SUBDRAIN

CANYON SUBDRAIN DETAIL

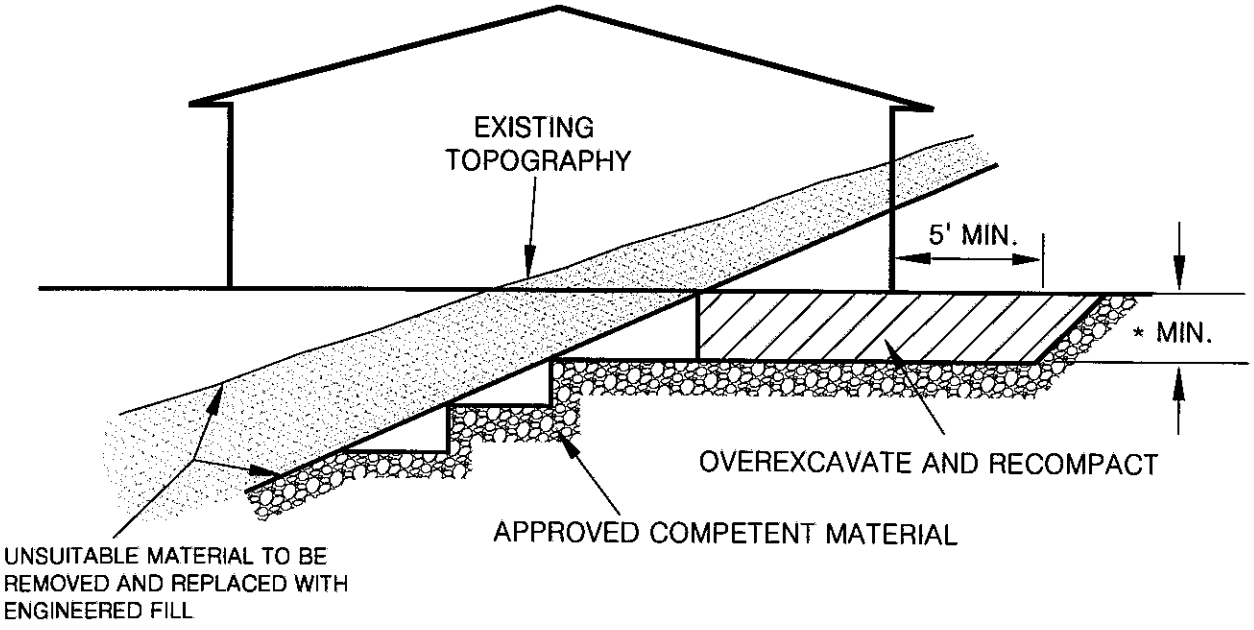
PERFORATED PIPE SURROUNDED WITH ROCK AND FILTER FABRIC

ROCK: MIN. VOLUME OF 9 CU.FT. PER LINEAR FT. OF 3/4 IN. MAX. ROCK



PIPE: 6 IN. ABS OR PVC PIPE WITH A MINIMUM OF 8 PERFORATIONS (1/4-IN. DIA.) PER LINEAL FT. IN BOTTOM HALF OF PIPE ASTM D2751, SDR 35, OR ASTM D3034 OR ASTM D1527, SCHD. 40 ASTM D1785, SCHD. 40

FILTER FABRIC: MIRAFI 140 FILTER FABRIC OR APPROVED EQUIVALENT



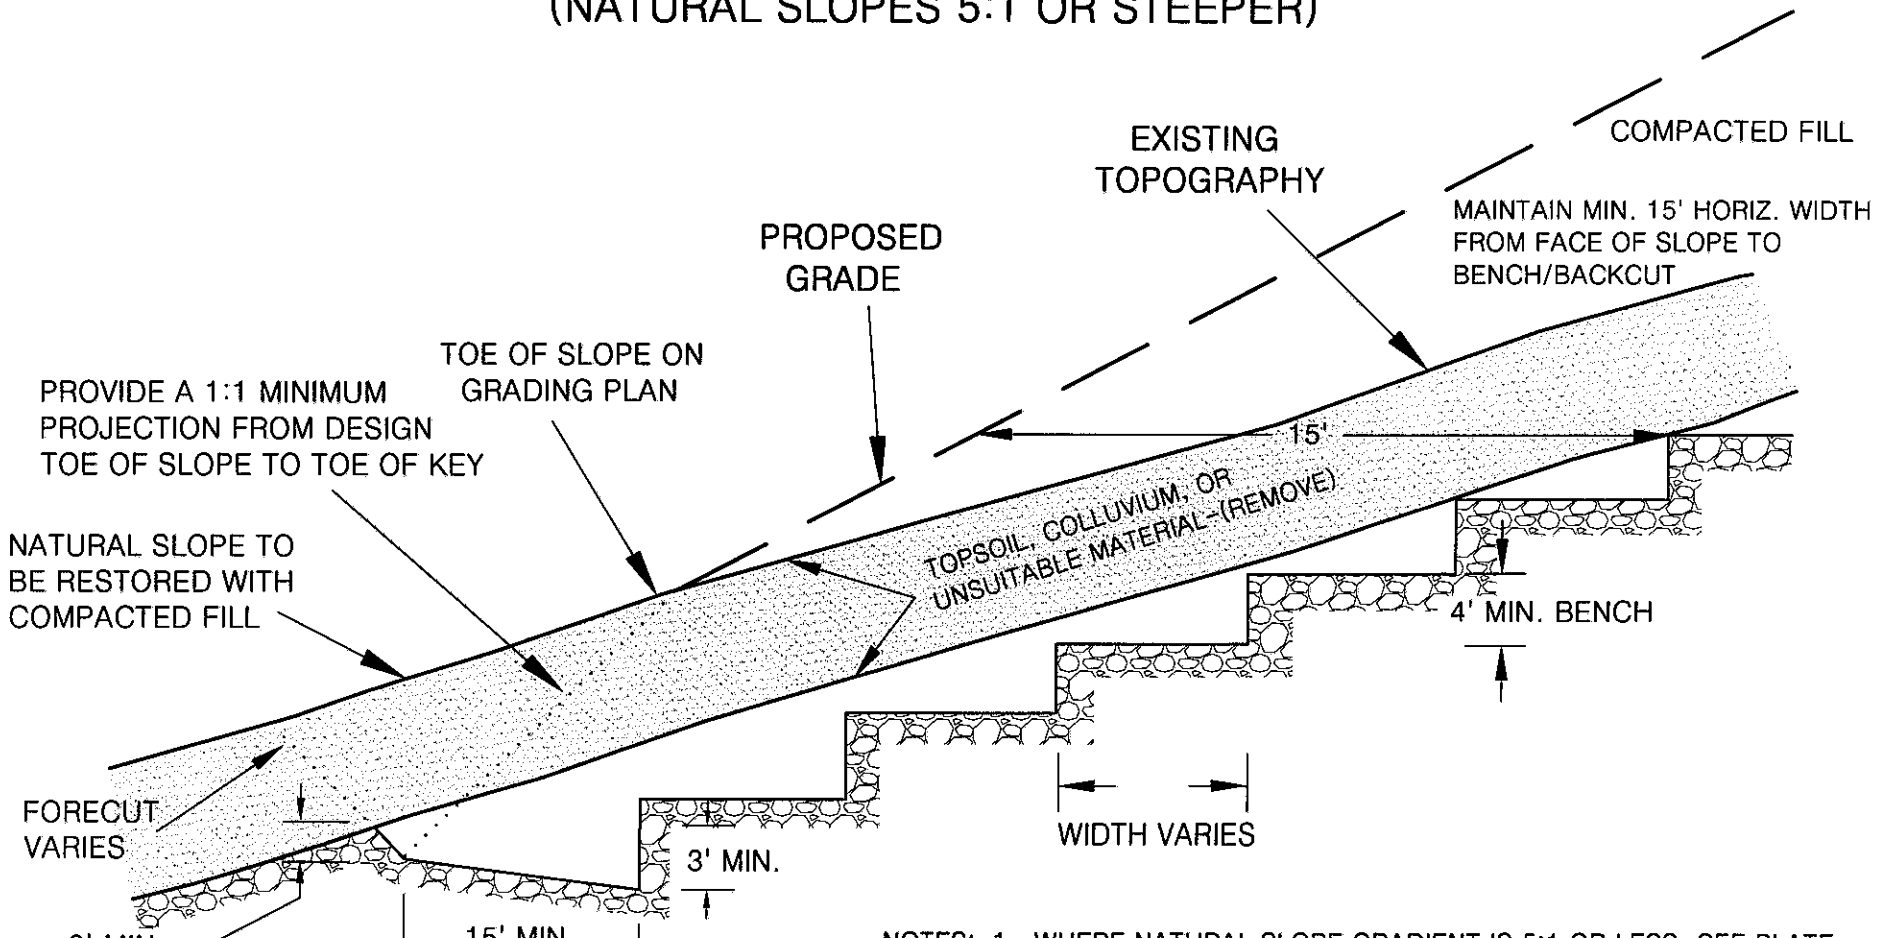
NOTES:

1. FOR CONTINUOUS RUN IN EXCESS OF 500. FT USE 8 IN. DIA. PIPE
2. ENGINEERED FILL PLACED BELOW DRAINS SHALL BE COMPACTED TO 93% OF THE LABORATORY MAXIMUM DRY DENSITY (ASTM:D1557)

OVEREXCAVATION CUT LOT

CUT-FILL LOT (TRANSITION)

*NOTE ALL BUILDING PADS SHALL BE OVER EXCAVATED TO A MINIMUM OF 1/3 OF THE MAXIMUM DEPTH OF FILL BELOW THE BUILDING PAD TO A MAXIMUM OF 17 FEET (SEE PLATE G-16)



ALTA CALIFORNIA GEOTECHNICAL, INC .

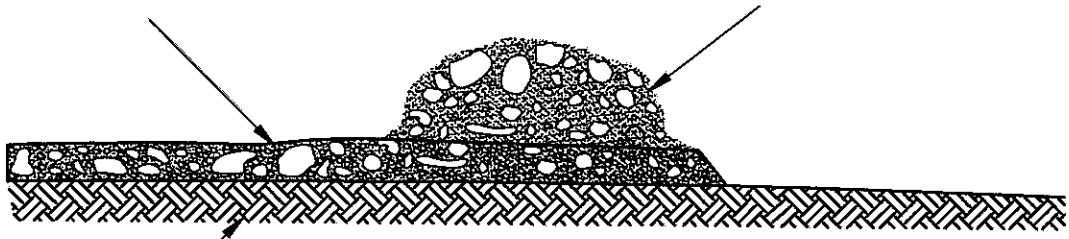
DETAIL FOR MAXIMUM PARTICLE DIMENSION

ZONE	DEPTH	PARTICLE MAX. DIMENSION	PLACEMENT METHOD
1	0-3 ft.	≤1.0 ft.	STANDARD OR CONVENTIONAL COMPACTION METHODS (SEE EARTHWORK SPECIFICATIONS)
2	3-10 ft.	≤2.0 ft.	ROCK BLANKETS (SEE PLATE G-13)
3	>10 ft.	≤8.0 ft.	ROCK BLANKETS (PLATE G-13) ROCK WINDROW (PLATE G-14) INDIVIDUAL ROCK BURIED (PLATE G-15)
4	15 HORIZONTAL FEET FROM FILL SLOPE FACE	≤1.0 ft.	STANDARD OR CONVENTIONAL COMPACTION METHODS (SEE EARTHWORK SPECIFICATIONS)

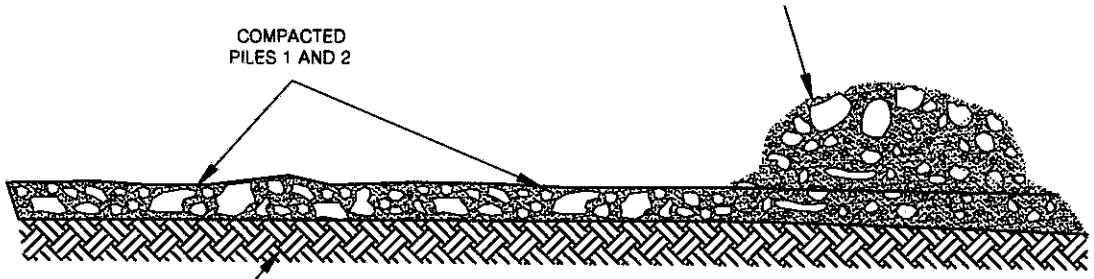
ROCK BLANKET DETAILS



LOOSE PILE 1
LOOSE, DUMPED ROCK, GRAVEL AND SAND MIXTURE REMOVE FRAGMENTS LARGER THAT 2 FEET FOR ISOLATED BURIAL (PLATE G-15) OR WINDROW (PLATE G-10)

APPROVED BOTTOM, OR TOP OF PREVIOUSLY APPROVED BLANKET FILL

COMPACT PILE 1
SPREAD LOOSE PILE FORWARD WITH HEAVY TRACKED DOZER (D-8 OR LARGER). HEAVILY WATER, TRACK, AND APPLY ADDITIONAL SAND AND GRAVEL AS NECESSARY TO FILL VOIDS AND CREATE A DENSE MATRIX OF ROCK, COBBLES, GRAVEL AND SAND (2 FOOT MAXIMUM THICKNESS)

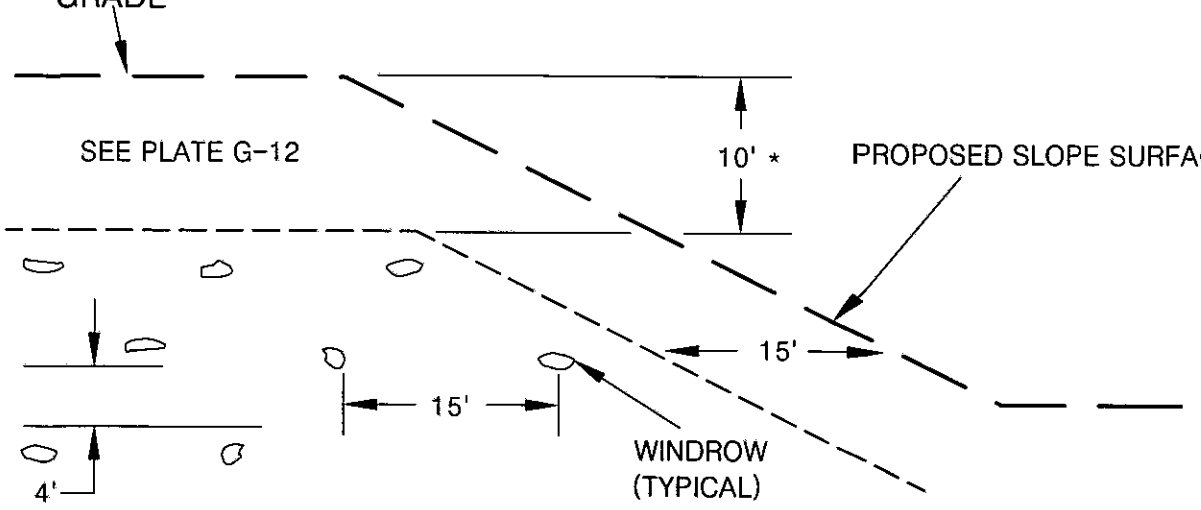


LOOSE PILE 2
DUMP SUCCESSIVE PILES OF LOOSE ROCK, GRAVEL AND SAND MIXTURE ON FORWARD EDGE OF PREVIOUSLY COMPACTED LIFT WITH TRUCKS AND/OR SCRAPERS. USE PREVIOUS LIFT TO ACCESS AND FURTHER COMPACT PILE 1.

APPROVED BOTTOM, OR TOP OF PREVIOUSLY APPROVED BLANKET FILL

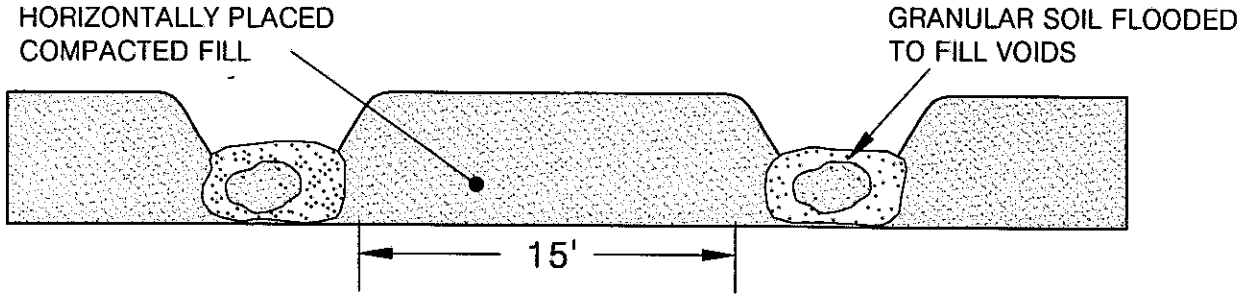
LOOSE PILE 3
DUMP SUCCESSIVE PILES OF LOOSE ROCK, GRAVEL AND SAND MIXTURE ON FORWARD EDGE OF PREVIOUSLY COMPACTED LIFT WITH TRUCKS AND/OR SCRAPERS. USE PREVIOUS LIFT TO ACCESS AND FURTHER COMPACT EXISTING BLANKET.

COMPACTED PILES 1 AND 2



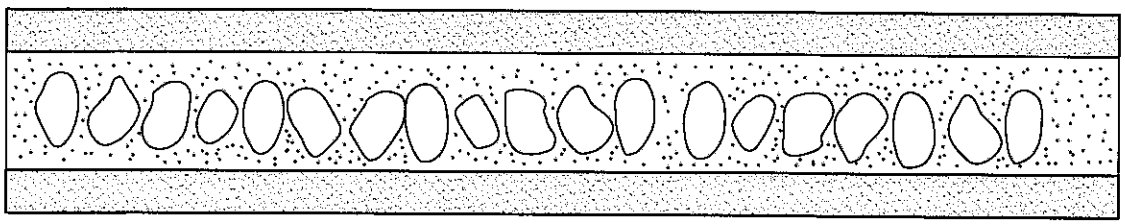
APPROVED BOTTOM, OR TOP OF PREVIOUSLY APPROVED BLANKET FILL

OBSERVATION TESTING AND APPROVAL PROCEDURES



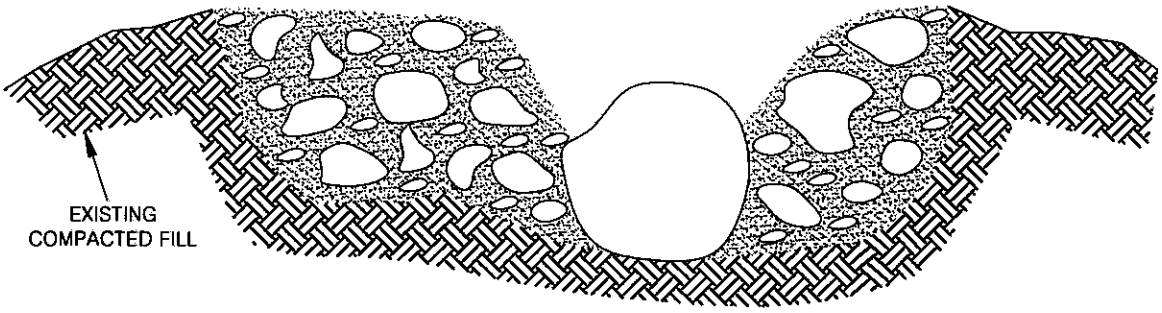
OBSERVE EQUIPMENT. SCRAPERS AND TRUCKS SHOULD BE FULLY SUPPORTED ON BLANKET WITHOUT SIGNIFICANT YIELDING. EXCAVATE TEST/OBSERVATION PITS TO CONFIRM EXISTENCE OF MIXTURE OF VARIOUS PARTICLE SIZES, WITHOUT SIGNIFICANT VOIDS, AND FORMING A DENSE, COMPACTED FILL MATRIX. TEST BY ASTM D1556, D2922 AND/OR D3017 WHEN APPROPRIATE. RECORD LIMITS AND ELEVATION OF BLANKET. ALL FILL AND COMPACTION OPERATIONS TO BE CONDUCTED UNDER THE OBSERVATION OF THE GEOTECHNICAL ENGINEER. SUBSEQUENT LIFTS TO BE APPLIED ONLY AFTER OBSERVATION AND CONFIRMATION OF SUITABILITY OF FILL AND RELEASE BY THE GEOTECHNICAL ENGINEER. BLANKETS TO BE CONSTRUCTED IN ACCORDANCE WITH PLATE G-12.

ROCK WINDROW DETAIL

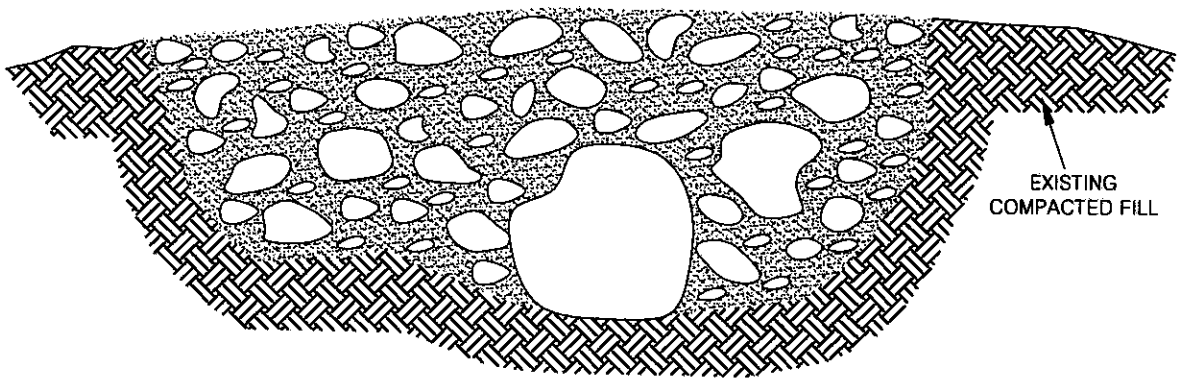


NOTE: OVERSIZED MATERIAL SHOULD BE REMOVED FROM THE 15' CLEAR ZONES WITH SPECIAL EQUIPMENT, SUCH AS A ROCK RAKE, PRIOR TO PLACING THE NEXT FILL LIFT.
*VARIANCES TO THE ABOVE ROCK HOLD DOWN MAY BE GRANTED SUBJECT TO APPROVAL BY THE OWNER, GEOTECHNICAL ENGINEER, AND GOVERNING AGENCY

TYPICAL WINDROW DETAIL (END VIEW)



NOTE: COMPACTED FILL SHALL BE BROUGHT UP TO A HIGHER ELEVATION ALONG EACH WINDROW SO GRANULAR SOIL CAN BE FLOODED IN A "TRENCH CONDITION".



PROFILE VIEW

ISOLATED ROCK BURIAL DETAILS

EXCAVATE HOLE INTO EXISTING FILL PRISM, PLACE BOULDER (< 8 feet in maximum dimension) INTO EXISTING COMPACTED FILL. SURROUND WITH SAND, GRAVEL, COBBLES AND WATER HEAVILY. TRACK WITH D8 OR LARGER EQUIPMENT UNTIL RESULTING FILL FULLY SUPPORTS EQUIPMENT. OBSERVE AND/OR TEST IN ACCORDANCE WITH ASTM D1556, D2922 OR D3017. ROCKS LARGER THAN 8 FEET SHALL BE FURTHER REDUCED IN SIZE BY SECONDARY BREAKING.

Zoning Summary

Existing Zoning:	BP-2
Proposed Zoning:	RM - Residential Medium Density District
Max. Density:	18 Homes per Acre
Perimeter Site Setbacks:	20'
Common Open Space:	25%
Max. Building Height:	35'
Max. Lot Coverage:	60%

LEGEND

- Tm — MONTEREY FORMATION
- B-4 ⊕ — APPROXIMATE LOCATION OF HOLLOW STEM AUGER BORING
- P-2 ○ — APPROXIMATE LOCATION OF INFILTRATION TEST
- — — — LIMITS OF REPORT

Project Summary

Total Site Area: ±4.4 Acres
Net Site Area: ±2.47 Acres

Total Units: 58 Homes
- (02) Plan 1 | 1,323 SF | 3 bed | 2.5 Bath | Tandem Garage
- (19) Plan 2 | 1,530 SF | 3 bed | 2.5 Bath
- (22) Plan 3 | 1,575 SF | 3 bed | 2.5 Bath
- (15) Plan 4 | 1,825 SF | 4 bed | 2.5 Bath

Total SF: 89,470 SF

Total Density: 13.18 Homes per Acre
Net Density: 23.48 Homes per Acre

Parking:
Provided: 133 Spaces (2.3 spaces per home)
- Garage: 116 Spaces
- Head in: 17 Spaces (9'x18')

Open Space:
Provided: ±27,940 SF (0.64 AC)

Sloped Area: 83,053 SF (1.92 AC @ 44% of Total Area)

Notes:
- The sloped landscape currently occupies 44% of the total site area.
- There is no defined minimum width requirement for common open space.
- If we calculate 25% of the net area, we would be required to provide 0.61 acres of common open space.

PLATE 1

ALTA CALIFORNIA GEOTECHNICAL, INC.
170 N. MAPLE STREET, STE 108, CORONA, CA 92880
TELEPHONE: (951) 509-7090
PROJECT NUMBER: 1-0631 DATE: Sept. 2025

Notes:
1. Site plan is for conceptual purposes only.
2. Site plan must be reviewed by planning, building, and fire departments for code compliance.
3. Base information per civil engineer.
4. Civil engineer to verify all setbacks and grading information
5. Building Footprints might change due to the final design elevation style.
6. Open space area is subject to change due to the balcony design of the elevation.
7. Building setbacks are measured from property lines to building foundation lines.

INTRODUCTION

Project Description

The proposed development at 15 Argonaut ("Property") consists of a proposed 58-unit townhome development ("Project"). The Project is in Aliso Viejo ("City"), County of Orange ("County"). The area of the Property is 4.40 acres known as Assessor Parcel Number's 623-093-10 and 623-093-11. Existing commercial developments border the Property to the south and east. An existing hillside and v-ditches are located on the north and west portions of the Property (See Figure 1 - Area Map and Figure 2 - Vicinity Map).

The central to southeast portion of the existing property is relatively flat and contains a commercial building, drive aisles, and parking. The north and west side of the property consists of a 2:1 hillside slope which drains to v-ditches. The runoff from the v-ditches discharge to the surface and flow to the front of the property along with all other surface flows where it discharges to Argonaut via under sidewalk drains.

Project Objectives

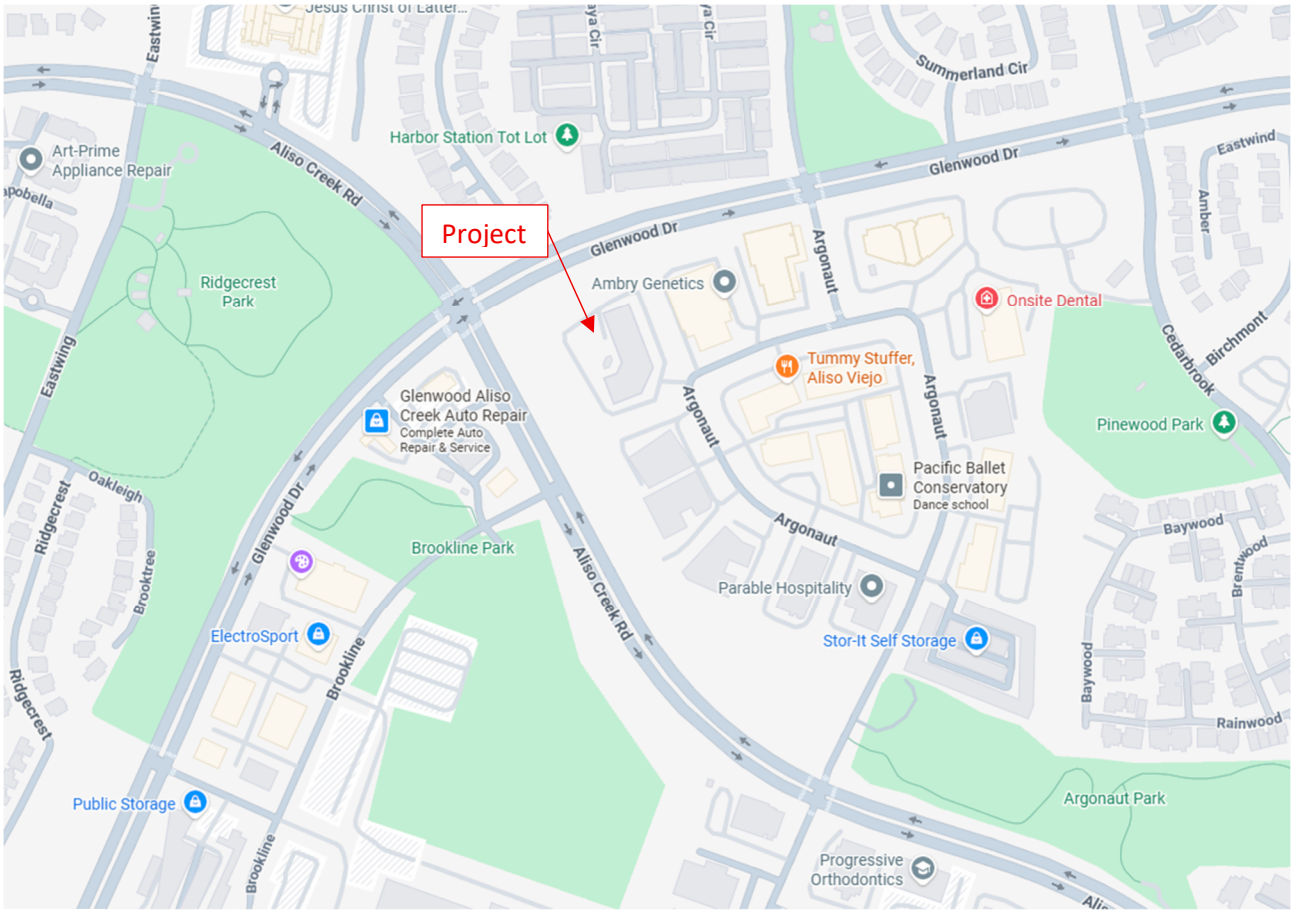
The objectives of this study are listed below.

1. Use the Rational Method to determine the 10-Year Storm peak flow rates for the existing and proposed conditions.

2. Demonstrate that all habitable structures and protected for the 100-Year Storm Event.

3. Prepare Final Drainage Study based on objectives above.

Figure 1 - Area Map



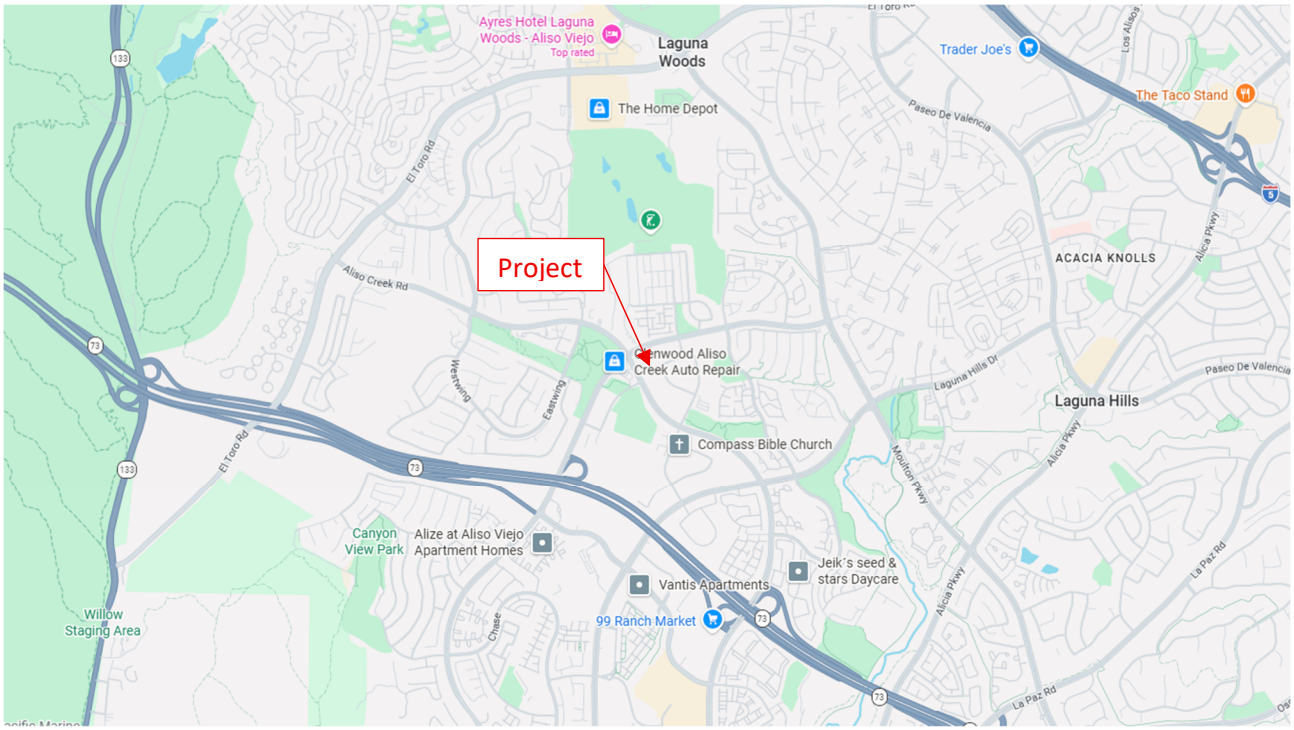


Figure 2 - Vicinity Map

Existing Facilities

The central to southeast portion of the property is relatively flat and contains a commercial building, drive aisles, and parking. The north and west side of the property consists of a 2:1 hillside slope which drains to v-ditches. The runoff from the v-ditches discharge to the surface and flow to the front of the property along with all other surface flows where it discharges to Argonaut via under sidewalk drains.

Proposed Facilities

The proposed redevelopment replaces an existing commercial property that slopes from northwest to southeast. The northern and western boundaries feature a 2:1 hillside slope with v-ditches that intercept runoff; under the new design, this drainage will be conveyed through underground pipes to the front of the property, maintaining existing hydraulic patterns. Onsite stormwater will be collected via area drains and directed to a biofiltration system for treatment before being pumped for final discharge into Argonaut.

HYDROLOGY

Methodology

The tributary drainage area boundaries were delineated utilizing topography from aerial photogrammetry over the Project site and surrounding areas. The proposed Project drainage design found on the attached Site BMP Locations exhibit illustrates the locations of onsite drainage systems.

Rational Method

The Rational Method, an empirical computational procedure for developing peak runoff and discharge for storms of a specified recurrence interval in small watersheds, was used to compute peak flow rates for the watersheds tributary to the Project. The Orange County Hydrology Manual provides a Rational Method formula to calculate the peak runoff. The Rational Method formula is:

$$Q = CIA$$

Where:

Q = Peak discharge, in cubic feet per second (cfs)
C = Runoff coefficient representing the ratio of runoff depth to rainfall depth
= 0.90 (ai + ((1-Fp) ap)/I) for I greater than Fp; 0.90 ai for I less than or equal to Fp
ai = ratio of impervious area to total area (decimal fraction)
ap = ration of pervious area to total are (decimal fraction), (ap = 1 – ai)
Fp = infiltration rate for pervious area (inches per hour)
I = The time-averaged rainfall intensity for a storm duration equal to the time of concentration, in inches/hour (in/hr)
A = Drainage area, in acres (ac)

Hydrology Summary

The peak flow rate for the 10-year storm event was calculated using the Rational Method. The results of these calculations are presented in Table 1 below. Supporting documentation for these results is included in the attachments.

Table 1 - Rational Method Results

	10-Year Existing Storm Event	10-Year Proposed Storm Event
Drainage Area 1	8.10 cfs	7.57 cfs
Drainage Area 2	0.68 cfs	0.68 cfs
Drainage Area 3	0.67 cfs	0.67 cfs
Drainage Area 4	0.58 cfs	0.58 cfs

The 10-year Rational Method analysis shows that the proposed condition maintains or slightly reduces peak flows compared to existing conditions, with Drainage Area 1 decreasing from 8.10 cfs to 7.57 cfs and the other areas remaining unchanged.

100-Year Storm Protection

The project site is not located within a mapped FEMA Special Flood Hazard Area (SFHA), as confirmed by FEMA FIRMette Panel 06059C0426J, effective date 12/3/2009. Based on this determination, the site is outside of the 100-year floodplain and is not subject to mapped flood zone inundation.

All proposed habitable structures have been designed and graded such that finished floor elevations are above the adjacent public and private street elevations, providing positive drainage away from the buildings. Surface runoff generated by the 100-year storm event will be collected and conveyed through proposed on-site drainage improvements and/or adjacent street conveyance systems in accordance with Orange County Local Drainage Manual requirements.

CONCLUSION

Based on the Rational Method analysis, the proposed Project drainage design will not increase peak runoff for the 10-year storm event. Peak flows are either maintained or slightly reduced compared to existing conditions, demonstrating that the Project's on-site drainage systems effectively manage runoff. Therefore, the proposed development meets the hydrology performance objectives and is consistent with the requirements of the Orange County Hydrology Manual.

MAINTENANCE COVENANT AND AGREEMENT FOR
WATER QUALITY MANAGEMENT PLAN (WQMP) REQUIREMENTS

The undersigned hereby certifies I am (we are) the owner(s) ("Owner(s)") of the hereinafter described real property located in the City of Aliso Viejo, County of Orange, State of California ("Property"):
Site Address: _____ APN: _____

Please attach the legal description for the Property as Attachment 1.

Owner and its heirs, successors, and assigns, including each successive owner of an interest in all or any part of the Property shall, throughout the period of their respective ownership, implement, and fund implementation of, the Operations & Maintenance ("O&M") Plan for the Property, which was approved by the City as part of the Water Quality Management Plan ("WQMP") required for development of the Property, and shall operate, inspect, maintain, repair, and replace the Best Management Practices ("BMPs") described in the O&M Plan for the Property, which includes:

- Description of all post-construction BMPs (non-structural and structural)
- WQMP BMP Site Plan
- Description of the Owner's responsibilities and required training of persons performing BMP implementation, operation, maintenance, and inspection
- Implementation/inspection/maintenance frequency and operating schedule
- Specific BMP implementation, maintenance, and inspection activities
- Description of all permits required for the implementation, operation, and maintenance of BMPs
- Forms to be used in documenting implementation, operation, maintenance, and inspection of BMPs
- Recordkeeping requirements

Please attach copies of the approved O&M Plan and WQMP BMP Site Plan as Attachment 2 to this Agreement for recordation.

A copy of the approved O&M Plan is described in the current WQMP for the project, as it may be amended from time to time according to its terms, which is on file with the City of Aliso Viejo and is incorporated herein by this reference.

Owner(s) shall maintain the drainage devices described in the O&M Plan for the Property indicated and as shown on plans permitted by the City of Aliso Viejo in good and functional condition to safeguard the property owners and adjoining properties from damage and pollution.

Owner(s) hereby consent to inspection of the Property by an inspector authorized by the City Manager, or his or her designee, for the purpose of verifying compliance with the provisions of this Agreement.

Owner(s) shall provide printed educational materials with any sale of the property which provide information on what stormwater management facilities are present, the type(s) and location(s) of maintenance signs that are required, and how the necessary maintenance can be performed.

Owner(s) shall provide actual notice of this Agreement and its terms to any respective successor(s) in interest to the Property prior to transfer of said interest to such successor(s) in interest. This covenant and agreement shall run with the land and shall be binding upon any future owners, encumbrances, their successors, heirs or assigns and shall continue in effect until the City of Aliso Viejo approves its termination.

INTRODUCTION

Project Description

The proposed development at 15 Argonaut ("Property") consists of a proposed 58-unit townhome development ("Project"). The Project is in Aliso Viejo ("City"), County of Orange ("County"). The area of the Property is 4.40 acres known as Assessor Parcel Number's 623-093-10 and 623-093-11. Existing commercial developments border the Property to the south and east. An existing hillside and v-ditches are located on the north and west portions of the Property (See Figure 1 - Area Map and Figure 2 - Vicinity Map).

The central to southeast portion of the existing property is relatively flat and contains a commercial building, drive aisles, and parking. The north and west side of the property consists of a 2:1 hillside slope which drains to v-ditches. The runoff from the v-ditches discharge to the surface and flow to the front of the property along with all other surface flows where it discharges to Argonaut via under sidewalk drains.

Project Objectives

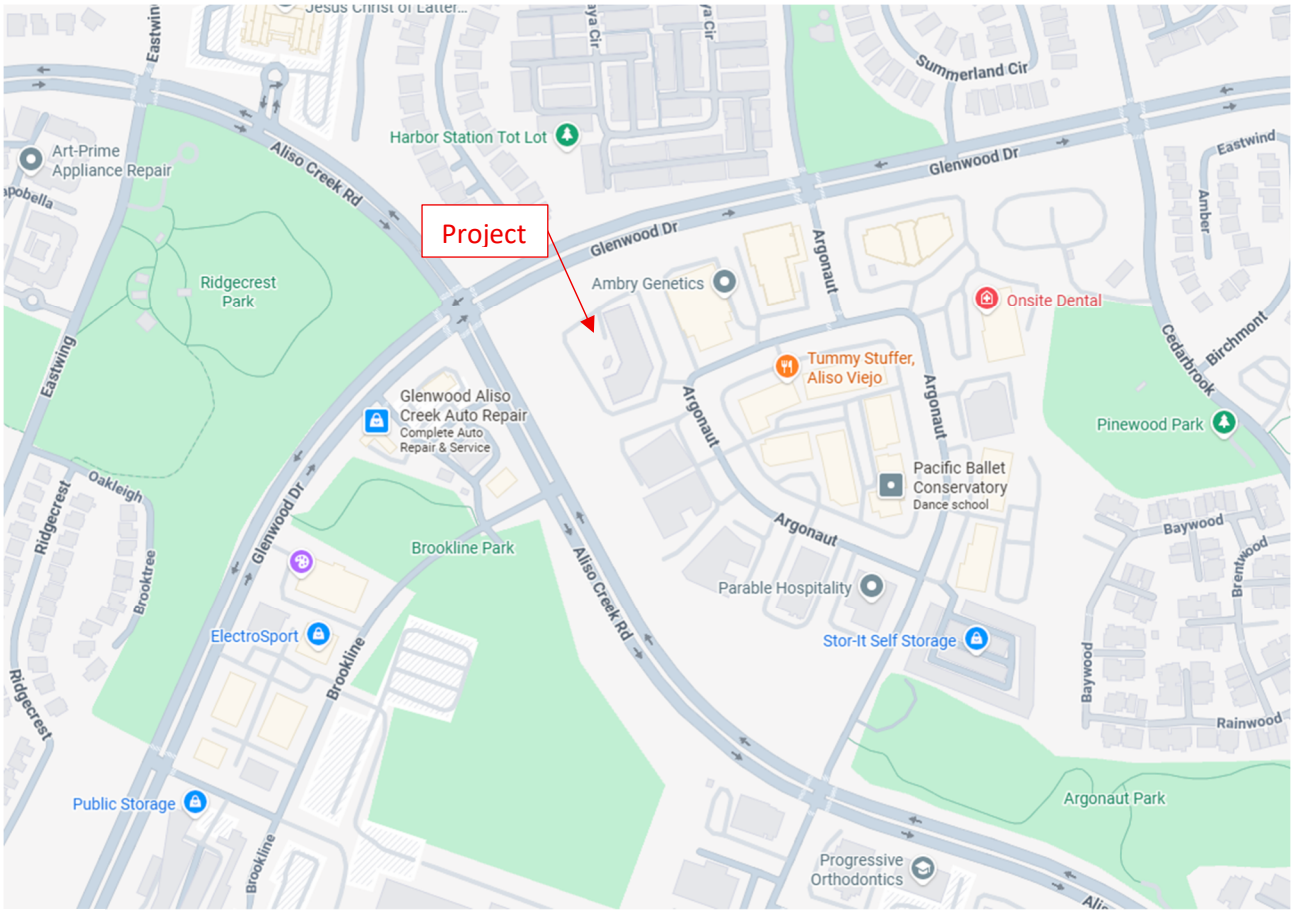
The objectives of this study are listed below.

1. Use the Rational Method to determine the 10-Year Storm peak flow rates for the existing and proposed conditions.

2. Demonstrate that all habitable structures and protected for the 100-Year Storm Event.

3. Prepare Final Drainage Study based on objectives above.

Figure 1 - Area Map



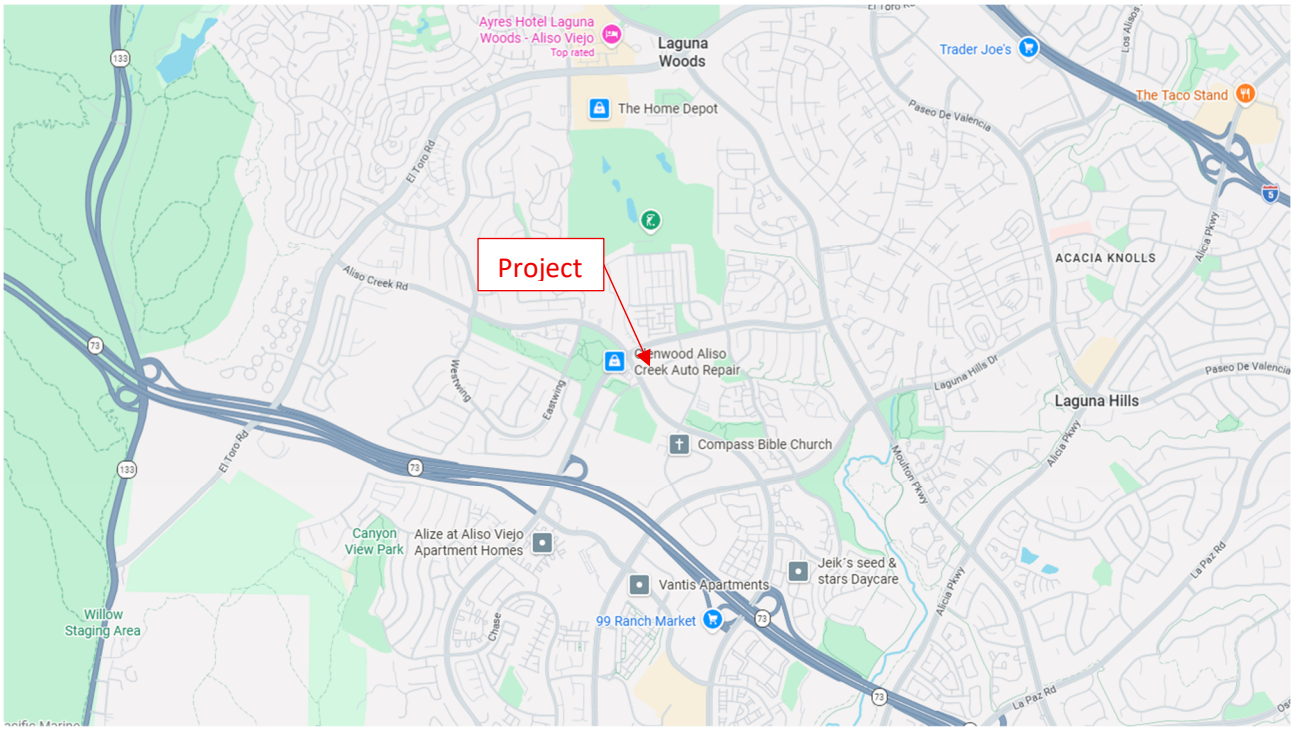


Figure 2 - Vicinity Map

Existing Facilities

The central to southeast portion of the property is relatively flat and contains a commercial building, drive aisles, and parking. The north and west side of the property consists of a 2:1 hillside slope which drains to v-ditches. The runoff from the v-ditches discharge to the surface and flow to the front of the property along with all other surface flows where it discharges to Argonaut via under sidewalk drains.

Proposed Facilities

The proposed redevelopment replaces an existing commercial property that slopes from northwest to southeast. The northern and western boundaries feature a 2:1 hillside slope with v-ditches that intercept runoff; under the new design, this drainage will be conveyed through underground pipes to the front of the property, maintaining existing hydraulic patterns. Onsite stormwater will be collected via area drains and directed to underground storage chambers which are proposed to mitigate the peak flow per hydromodification requirements. Runoff will exit the storage chambers at a designed flow rate and then pumped to a biofiltration system for treatment before being pumped for final discharge into Argonaut.

HYDROLOGY

Methodology

The tributary drainage area boundaries were delineated utilizing topography from aerial photogrammetry over the Project site and surrounding areas. The proposed Project drainage design found on the attached Site BMP Locations exhibit illustrates the locations of onsite drainage systems.

Rational Method

The Rational Method, an empirical computational procedure for developing peak runoff and discharge for storms of a specified recurrence interval in small watersheds, was used to compute peak flow rates for the watersheds tributary to the Project. The Orange County Hydrology Manual provides a Rational Method formula to calculate the peak runoff. The Rational Method formula is:

$$Q = CIA$$

Where:

Q = Peak discharge, in cubic feet per second (cfs)
C = Runoff coefficient representing the ratio of runoff depth to rainfall depth
= 0.90 (ai + ((1-Fp) ap)/I) for I greater than Fp; 0.90 ai for I less than or equal to Fp
ai = ratio of impervious area to total area (decimal fraction)
ap = ration of pervious area to total are (decimal fraction), (ap = 1 – ai)
Fp = infiltration rate for pervious area (inches per hour)
I = The time-averaged rainfall intensity for a storm duration equal to the time of concentration, in inches/hour (in/hr)
A = Drainage area, in acres (ac)

Hydrology Summary

The peak flow rate for the 10-year storm event was calculated using the Rational Method. The results of these calculations are presented in Table 1 below. Supporting documentation for these results is included in the attachments.

Table 1 - Rational Method Results

	10-Year Existing Storm Event	10-Year Proposed Storm Event
Drainage Area 1	8.10 cfs	7.57 cfs
Drainage Area 2	0.68 cfs	0.68 cfs
Drainage Area 3	0.67 cfs	0.67 cfs
Drainage Area 4	0.58 cfs	0.58 cfs

The 10-year Rational Method analysis shows that the proposed condition maintains or slightly reduces peak flows compared to existing conditions, with Drainage Area 1 decreasing from 8.10 cfs to 7.57 cfs and the other areas remaining unchanged.

100-Year Storm Protection

The project site is not located within a mapped FEMA Special Flood Hazard Area (SFHA), as confirmed by FEMA FIRMette Panel 06059C0426J, effective date 12/3/2009. Based on this determination, the site is outside of the 100-year floodplain and is not subject to mapped flood zone inundation.

All proposed habitable structures have been designed and graded such that finished floor elevations are above the adjacent public and private street elevations, providing positive drainage away from the buildings. Surface runoff generated by the 100-year storm event will be collected and conveyed through proposed on-site drainage improvements and/or adjacent street conveyance systems in accordance with Orange County Local Drainage Manual requirements.

CONCLUSION

Based on the Rational Method analysis, the proposed Project drainage design will not increase peak runoff for the 10-year storm event. Peak flows are either maintained or slightly reduced compared to existing conditions, demonstrating that the Project's on-site drainage systems effectively manage runoff. Therefore, the proposed development meets the hydrology performance objectives and is consistent with the requirements of the Orange County Hydrology Manual.

RE: 15 Argonaut Residential Project – Fire Services

From Letterman, Todd <ToddLetterman@ocfa.org>
Date Thu 4/23/2026 9:04 AM
To Heather Carr <hcarr@fcs-intl.com>

Caution: This is an external email and may contain suspicious subject or content. Please take care when clicking links or opening attachments. When in doubt, please contact your IT Department

1. Please identify which station(s) will provide service to the proposed project's area.

OCFA Fire Station #57 (1.62 mi)
ALISO VIEJO
57 Journey
Aliso Viejo, CA 92656

OCFA Fire Station #22 (1.63 mi)
LAGUNA HILLS/LAGUNA WOODS
24001 Paseo de Valencia
Laguna Woods, CA 92637

OCFA Fire Station #39 (2.38 mi)
NORTH LAGUNA NIGUEL
24241 Avila Rd.
Laguna Niguel, CA 92677

2. Please describe existing staffing levels and assets (department-wide and at any other station(s) that would serve the Project area). Please include a description of number of firefighters, EMT personnel, engines, hook and ladder trucks, etc., and whether this has changed substantially in the last 20 years. What is the target service ratio that the department would like to achieve?

Fire service response from the three closest stations will consist of 4 engines, 1 truck, and 1 battalion chief for a total of 21 all risk personnel. There has been no substantial change in the last 20 years.

3. Please provide the current average response times for emergency calls for service as a whole and whether this has changed substantially in the last 20 years.

Our current OCFA response time is 8:16 @ the 90th percentile. We do not use averages to calculate response times.

4. Please provide information about the residential and non-residential development fee schedule. What are the current rates?

Through a OCFA Secured Fire Protection Agreement (SFPA), OCFA charges a development impact fee of $600 per residential unit or an equivalent for commercial development square footage may be divided by 1,000 and then multiplied by 0.9 to reach equivalent dwelling units. These rates are currently being updated.

Subject: 15 Argonaut Residential Project – Fire Services

Dear Orange County Fire Department Staff,

FirstCarbon Solutions (FCS) is preparing a Draft Initial Study/Mitigated Negative Declaration (Draft IS/MND) to identify any potential environmental impacts that would result from implementation of the 15 Argonaut Residential Project in the City of Aliso Viejo, California that requires review under the California Environmental Quality Act (CEQA).

The attached pdf shows the full letter with project description as well as relevant exhibits maps showing the proposed rezoning areas. Inside you will find the Service Questions we have for Fire Services.

We greatly appreciate your expertise and assistance in this matter. Your responses will help us ensure that our analysis is accurate and complete. To ensure a timely completion of our analysis, please provide your response via e-mail no later than **Friday, May 1, 2026**. If you have any questions, please contact me by email at hcarr@fcs-intl.com.

Thank you again.

Sincerely,

Heather Carr

Caution: This is an external email and may contain suspicious subject or content. Please take care when clicking links or opening attachments. When in doubt, please contact your IT Department

Heather,

Please refer to the responses below:

Service Questions

1. What is the target service ratio that the Sheriff Department would like to achieve?
   - We utilize a workload-based staffing model. We do not have a population-to-staff ratio in place. Currently, based on our patrol allocation model, we are short 1 Deputy Sheriff in patrol.

2. Please provide the current average response times for emergency calls for service.
   - The Department's Goal is under 5 minutes for an emergency response. Last month our average was 5:23

3. Please list any existing or planned mutual aid agreements with other agencies.
   - We are the county's mutual aid agency and partner with 13 contract cities in our area.

4. Please describe concerns related to potential population growth associated with the Proposed Project. This includes concerns related to response times, staffing, apparatus, stations, etc. Please describe any measures that you would recommend to reduce potential concerns/challenges.
   - Similar answer to #1 - we are a workload-based model and staff accordingly.

5. Please describe the emergency response or emergency evacuation plans, including but not limited to, emergencies related to seismic and wildfire events, that are in place. Additionally, what emergency operation centers would serve future development within the Sheriff Department's service area in the event of an emergency?
   - The City of Aliso Viejo has their own internal emergency response plans. The Orange County Sheriff's Department has a fully staffed Emergency Operations Center:
   - https://ocsheriff.gov/commands-divisions/investigations-special-operations-command/emergency-management/hazard-mitigation#docaccess-f5582eae56245e60fe3ef47b2fcd6ea8

6. Do any adopted emergency response plans or emergency evacuation plans need revisions?
   - The OCSD response plan is constantly evaluated.

Cc Regan Del Rosario <rdelrosario@fcs-intl.com>; Lizzy Mendoza <LMendoza@AVCity.org>; Recreation Department <recreation@AVCity.org>; Shaun Pelletier <spelletier@AVCity.org>

Caution: This is an external email and may contain suspicious subject or content. Please take care when clicking links or opening attachments. When in doubt, please contact your IT Department

Hi Heather,
Please see responses to your service questions.

1. Please identify the current parks and recreational facility centers of the Aliso Viejo Recreation & Community Services. Please describe the existing conditions of these parks and recreational facility centers. The City oversees the operations at the Aliso Viejo Ranch, Iglesia Community Center, the Aliso Viejo Aquatic Center, and the Aliso Viejo Center. The City owns and manages Iglesia Park and Vista Park. All these facilities and parks are in great condition.
2. Please identify current park and recreational facility center usage for the City. Aliso Viejo Ranch hosts all rental and recreational programs for the City. This facility is managed by the Recreation & Community Services Department. The Iglesia Community Center and Park is a space managed by the Boys & Girls Club of Capistrano Valley as an after-school program for youth in the community. The Aliso Viejo Aquatic Center is managed by Premier Aquatics for swimming lessons. The Aliso Viejo Center is managed by Wedgewood Weddings as a banquet center.
3. Please provide an estimate of the current park acres per 1,000 residents and the target ratio that the Aliso Viejo Recreation & Community Services would like to achieve. The City owns and manages Vista Park and Iglesia Park. The total acreage of these two parks is 7.4 acres. The Master Homeowners Association is responsible for 21 parks and 600 acres of landscape. The City's Conservation/Open Space Element states that as of 2003, the City had a ratio of 5.37 acres of parkland per 1,000 residents. It further states that the standard is 5 acres per 1,000 residents and that new development shall provide fees or dedicate land per the City's code.
4. Please describe concerns related to potential population growth associated with the proposed project. Please describe any measures that you would recommend to reduce potential concerns/challenges. The proposed project may have several concerns related to population rise, such as, potential increase to traffic/congestion, strain on infrastructure, change in character of the immediate and larger area, and other environmental impacts, etc. Examples of mitigation measures may include some type of improvement or upgrades to traffic management, infrastructure, police/fire services etc.

Hi Heather

The numbers provided are the number of students the project is expected to generate. All schools that serve the development can accommodate those students. However, the developer still needs to pay Level 1 school developer fees when filing for a permit.

Clark

Subject: Re: 15 Argonaut Residential Project – School Services

Hi Mr. Hampton,

Thank you for your prompt response!

Can you please provide clarification for your answer to number 2? Specifically, do the numbers mentioned reflect an anticipated increase in enrollment within the district due to the proposed 15 Argonaut project, **or** do these numbers represent the students needed to achieve the district's planned enrollment targets?

Please let us know and please provide/confirm both the anticipated increase due to the proposed project *and* the planned enrollment targets if you have those numbers available. This information is incredibly helpful for our evaluation and your insight is appreciated.

Thank you,

Heather Carr

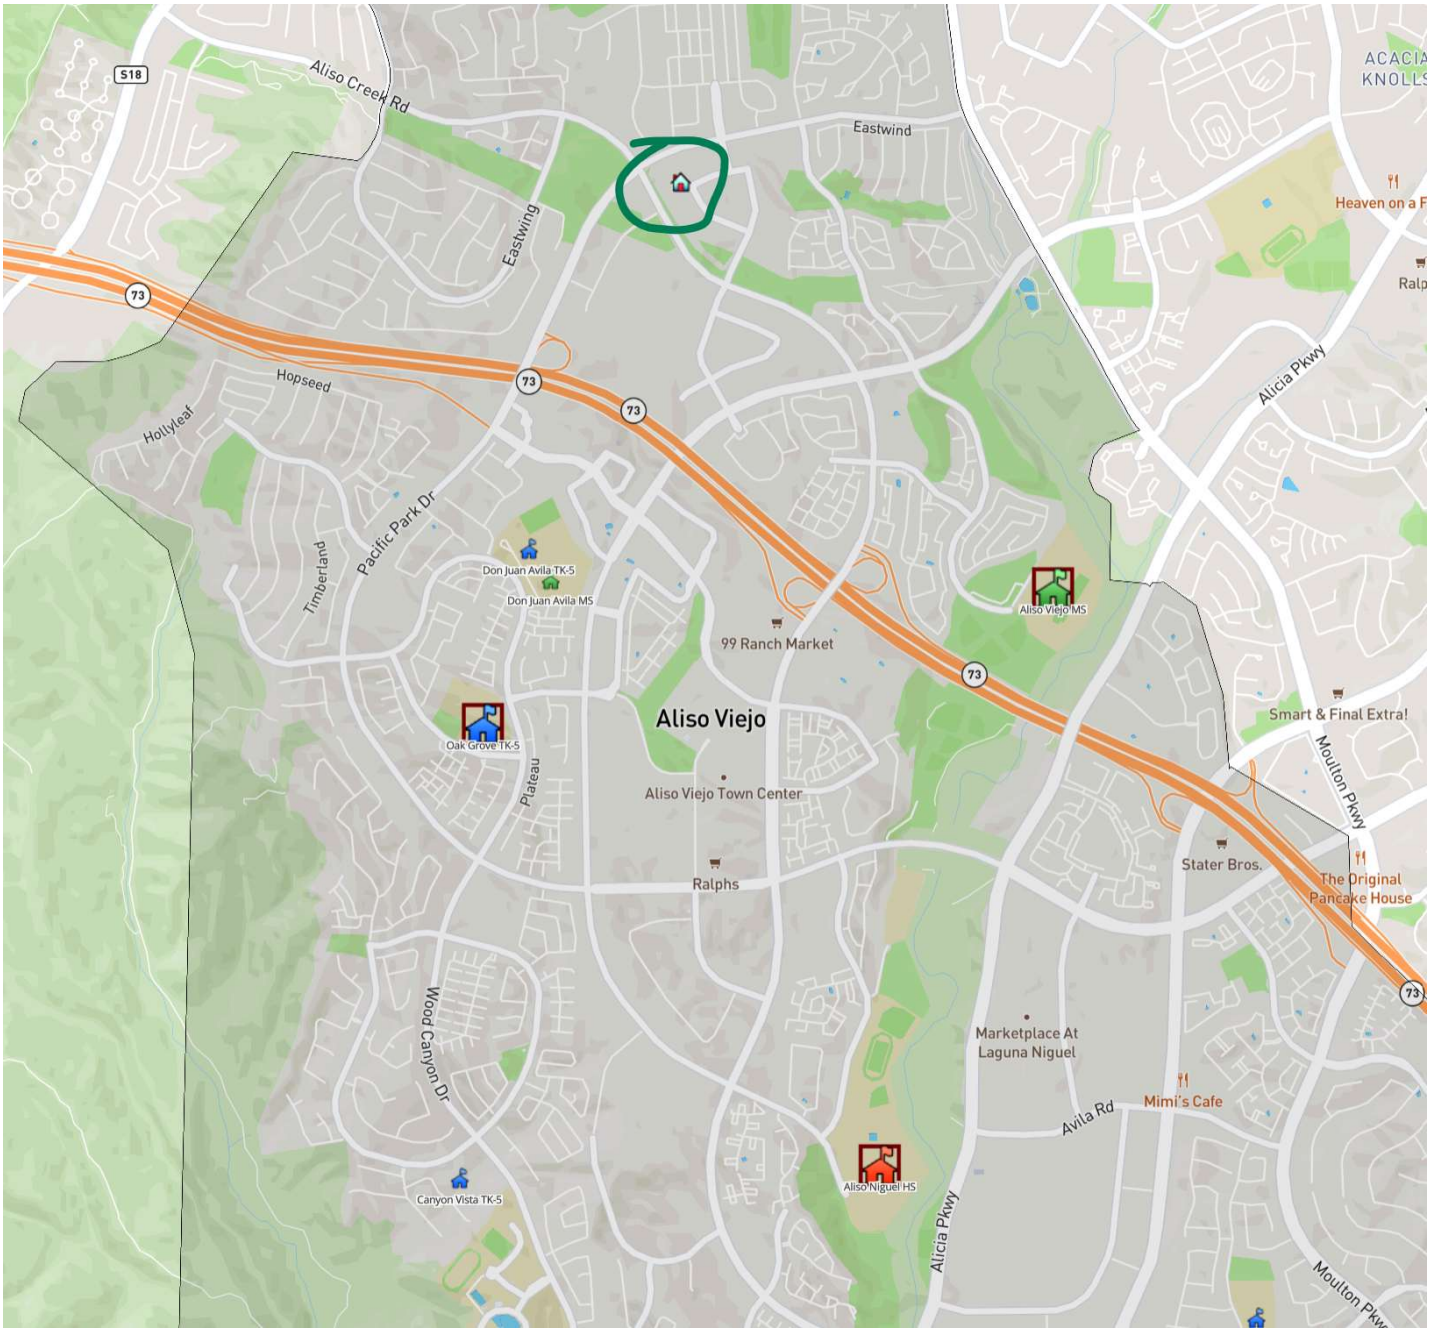
Good morning Heather

See answers to your questions below:



Service Questions

1. Please identify the Capistrano Unified School District's (CUSD) area of enrollment.
   The three schools (shown on attached map) serving the development (circled on attached map) are:
   Oak Grove Elementary School
   Aliso Viejo Middle School
   Aliso Niguel High School

2. Please provide an estimate of the current standard student generation factors for elementary, middle, and high school students used by the CUSD and the target student enrollment that CUSD would like to achieve.
   TK-5 13 students
   6-8 5 students
   9-12 5 students

3. Please describe concerns related to potential population growth associated with the Housing Development Project. Please describe any measures that you would recommend to reduce potential concerns/challenges.

   The District does not have any concerns with the numbers of students generated by this development. Developer would be expected to pay Level 1 developer fees for this project.

Subject: 15 Argonaut Residential Project – School Services

Dear Deputy Superintendent Clark Hampton and District Principals:

FirstCarbon Solutions (FCS) is preparing a Draft Initial Study/Mitigated Negative Declaration (Draft IS/MND) to identify any potential environmental impacts that would result from implementation of the 15 Argonaut Residential Project in the City of Aliso Viejo, California that requires review under the California Environmental Quality Act (CEQA).

The attached pdf shows the full letter with project description as well as relevant exhibits maps showing the proposed rezoning areas. Inside you will find the Service Questions we have for School Services. Although the letter is directed to Superintindent Hampton, we have included the principals of schools that would be servicing the project in this email in order to request any additional information that they may be able to provide on student generation factors, enrollment, and anything else they would be able to share regarding potential impacts on school services.

We greatly appreciate your expertise and assistance in this matter. Your responses will help us ensure that our analysis is accurate and complete. To ensure a timely completion of our analysis, please provide your response via e-mail no later than **Friday, May 1, 2026**. If you have any questions, please contact me by email at hcarr@fcs-intl.com.

Thank you again.

Sincerely,

Heather Carr
Environmental Services Analyst I

15 Argonaut Residential Project

Library Services Questions:

1. Please identify the Aliso Viejo Library's current library membership for the City.

Aliso Viejo specifically does not have a "membership." OC Public Libraries (OCPL) operates as a countywide system of 29 branches, and every patron has full access to all OCPL locations regardless of where they register. Therefore, the Aliso Viejo Library does not maintain a branch-specific membership count. For reporting purposes, and consistent with OCPL's systemwide service model, the Aliso Viejo Library's usage is measured by annual visitation. In calendar year 2023, the branch recorded **140,931 visitors**, with an average daily attendance of approximately **470 people**. These figures represent the most current pre-closure statistics available, as the branch closed in early 2024 for a tenant enhancement project and reopened in March 2026.

2. Please provide an estimate of the current Aliso Viejo Library services demand and the target ratio that the Aliso Viejo Library would like to achieve.

Usage in 2023 represented a high-traffic community branch, recording 140,931 visitors with an average of 470 daily attendees. These figures reflect a consistent baseline demand for library services at this location prior to closure.
Upon reopening, demand is expected to increase due to anticipated improvements, including quiet study rooms, expanded electrical access, additional seating, and a new program room designed to support expanded programming for all ages. These enhancements historically correlate with notable increases in visitor usage in similar OCPL remodel projects.

3. Please describe concerns related to potential population growth associated with the project. Please describe any measures that you would recommend to reduce potential concerns/challenges.

The proposed project includes 58 three-story townhomes, and using OCPL's standard assumption of three residents per unit, the development is anticipated to introduce approximately 174 new residents into the surrounding area. The site is located approximately 2.3 miles from the Aliso Viejo Library, an increase of this scale is not expected to create a significant impact on library services.

Orange County, CA Public Libraries
1501 E. ST. ANDREW PLACE
SANTA ANA, CA 92705-4930
PHONE: 714.566.3000

OCPL would recommend continued coordination with the City if future development proposals in the vicinity indicate additional population increases beyond current projections.

Sincerely,

Julie Quillman, County Librarian

PREFACE

Section 21081.6 of the California Environmental Quality Act (CEQA) and CEQA Guidelines Section 15097 require a Lead Agency to adopt a Mitigation Monitoring and Reporting Program (MMRP) whenever it adopts a Mitigated Negative Declaration (MND) in conjunction with a project approval. The purpose of the MMRP is to ensure compliance with the mitigation measures occurs during project implementation.

The Draft IS/MND prepared for the proposed Presidio at Pacific Park Residential Development (proposed project) concluded that project implementation could result in potentially significant effects on the environment, and mitigation measures were incorporated into the proposed project or are required as a condition of project approval that reduce these potential impacts to a less than significant level. This MMRP documents how and when the mitigation measures adopted by the Lead Agency will be implemented and confirms that potential environmental impacts are reduced to less than significant levels as identified in the Draft IS/MND.

This document does not discuss those subjects that the environmental analysis demonstrates would result in less than significant impacts and for which no mitigation was proposed or necessary.

Table 1: Presidio at Pacific Park Residential Development Mitigation Monitoring and Reporting Program

Requirements	Method of Verification	Timing of Verification	Responsible for Verification	Verification of Completion	
				Date	Initial
2.4 Biological Resources					
MM BIO-1a: Nesting Bird Pre-construction Surveys					
If ground-disturbing or vegetation-removing construction activities or tree removal is proposed during the breeding/nesting season for migratory birds (February 1 through September 15), a qualified Biologist shall conduct pre-construction surveys for special-status birds and other migratory birds within the construction area, including a 300-foot survey buffer (where accessible), no more than 3 days prior to the start of ground-disturbing activities in the construction area.	Submittal to the City of pre-construction survey reports for nesting birds conducted by a qualified Biologist	Within 3 days prior to the initiation of construction	City of Aliso Viejo Planning Department		
MM BIO-1b: Avoidance of Active Avian Nests					
If an active nest (i.e., occupied by eggs or fledglings) is located during pre-construction surveys or at any point during the construction phase of the proposed project, the City of Aliso Viejo shall be notified regarding the status of the nest. Furthermore, construction activities shall be restricted as necessary to avoid disturbance of the nest until the eggs or fledglings no longer are in the nest or a qualified Biologist deems disturbance potential to be minimal. Restrictions may include establishment of exclusion zones (no ingress of personnel or equipment at a minimum radius of 300 feet around an active raptor nest and a 50-foot radius around an active migratory bird nest) or alteration of the construction schedule.	Submittal of reports documenting establishment of avoidance buffer by a qualified Biologist (if active nests are found), monitoring and maintenance of the restrictions under the supervision of a qualified Biologist, final removal of buffers, and documentation that applicable requirements	During pre-construction surveys or at any point during construction	City of Aliso Viejo Planning Department		

Requirements	Method of Verification	Timing of Verification	Responsible for Verification	Verification of Completion	
				Date	Initial
	have been implemented before ground-disturbing activities occur within affected areas.				
2.5 Cultural Resources					
MM CUL-1: Worker Environmental Awareness Program					
Prior to the initiation of construction activities, all construction personnel conducting ground disturbance at the site shall be provided a Worker Environmental Awareness Program (WEAP) cultural resources "tailgate" training. The training shall include visual aids, a discussion of applicable laws and statutes relating to archaeological resources, types of resources that may be found within the project site, and procedures to be followed in the event such resources are encountered. The training shall be conducted by an Archaeologist who meets the Secretary of the Interior's Professional Qualification Standards for archaeology.	Verify documentation of WEAP training materials and employee attendance. Submission to the City of WEAP attendance logs and training date(s) to City	Prior to initiation of construction activities	City of Aliso Viejo Planning Department		
An Archaeologist who meets the Secretary of the Interior's Professional Qualification Standards for archaeology shall conduct an updated survey of the site following demolition and exposure of native soils and prior to any project-related trenching or grading to check for the inadvertent exposure of cultural materials.	Submit to the City documentation of site survey	Following demolition and exposure of native soils and prior to trenching or grading	City of Aliso Viejo Planning Department		
This shall be followed by archaeological monitoring during the grading and trenching phase of the proposed project. At the completion of these phases, archaeological monitoring shall be reduced to periodic "spot checks." In the event exposed soils indicate cultural materials may be present, this may be followed by	Provide documentation to the City demonstrating implementation of archaeological	During grading and trenching phases, after trenching. In the event of inadvertent	City of Aliso Viejo Planning Department		

Requirements	Method of Verification	Timing of Verification	Responsible for Verification	Verification of Completion	
				Date	Initial
regular or full-time archaeological monitoring as determined by the Archaeologist.	monitoring and periodic "spot checks" after trenching. Submit documentation of archaeological monitoring (if cultural materials are found).	discovery of cultural resources			
MM CUL-2: Inadvertent Discovery of Buried Archaeological Resources					
In the event that buried archaeological resources are discovered during construction, operations shall stop within a 100-foot radius of the find and an Archaeologist who meets the Secretary of Interior's Professional Qualification Standards for archaeology shall be consulted to determine whether the resource requires further study. The qualified Archaeologist shall make recommendations to the Lead Agency on the measures that shall be implemented to protect the discovered resources, including but not limited to excavation of the finds and evaluation of the finds in accordance with Section 15064.5 of the CEQA Guidelines. Potentially significant cultural resources consist of but are not limited to stone, bone, fossils, wood, or shell artifacts or features, including hearths, structural remains, or historic dumpsites. Any previously undiscovered resources found during construction within the project area shall be recorded on appropriate California Department of Parks and Recreation (DPR) forms and evaluated for significance in terms of CEQA criteria. If the resources are determined to be unique historic resources as defined under Section 15064.5 of the CEQA Guidelines, mitigation measures shall be identified by the monitor and recommended to the Lead Agency. Appropriate mitigation measures for significant resources	Submittal and review of recommendations, and recordation of previously undiscovered archaeological resources on appropriate DPR forms	In the event of inadvertent discovery of buried archaeological resources during construction, prior to resuming operations	City of Aliso Viejo Planning Department		

Requirements	Method of Verification	Timing of Verification	Responsible for Verification	Verification of Completion	
				Date	Initial
could include avoidance or capping, incorporation of the site in green space, parks, or open space, or data recovery excavations of the finds. The Lead Agency, along with other relevant or Tribal officials, shall be contacted upon the discovery of cultural resources to begin coordination on the disposition of the find(s). Treatment of any significant cultural resources shall be undertaken with the approval of the Lead Agency. No further grading shall occur in the area of the discovery until the Lead Agency approves the measures to protect these resources. Upon coordination with the Lead Agency, any archaeological artifacts recovered shall be donated to an appropriate Tribal custodian or a qualified scientific institution where they would be afforded applicable cultural resources laws and guidelines.					
MM CUL-3: Accidental Discovery or Recognition of Any Human Remains					
In the event of the accidental discovery or recognition of any human remains, CEQA Guidelines Section 15064.5, Health and Safety Code Section 7050.5, and Public Resources Code Section 5097.94 and Section 5097.98 shall be followed. If during the course of project construction, there is accidental discovery or recognition of any human remains, the following steps shall be taken: 1. There shall be no further excavation or disturbance of the site where human remains are discovered and/or any nearby area reasonably suspected to overlie adjacent human remains until the County Coroner is contacted to determine whether the remains are Native American and if an investigation of the cause of death is required.	Submission to the City of documentation demonstrating the Orange County Sheriff's Coroner has been contacted.	In the event of the accidental discovery or recognition of any human remains during the course of project development	City of Aliso Viejo Planning Department		
If the Coroner determines the remains to be Native American, the Coroner shall contact the Native American	If the remains are determined to be of	Within 24 hours of determining	City of Aliso Viejo Planning Department		

Requirements	Method of Verification	Timing of Verification	Responsible for Verification	Verification of Completion	
				Date	Initial
Heritage Commission (NAHC) within 24 hours, and the NAHC shall identify the person or persons it believes to be the Most Likely Descendant (MLD) of the deceased Native American. The MLD may make recommendations to the landowner or the person responsible for the excavation work within 48 hours, for means of treating or disposing of, with appropriate dignity, the human remains, and any associated grave goods as provided in Public Resource Code Section 5097.98.	Native American origin, confirm the MLD and NAHC have been contacted, and submit documentation of coordination between County Coroner and NAHC. If human remains are uncovered, confirm compliance with Public Resources Code Section 5097.98.	discovered human remains to be Native American			
2. Where the following conditions occur, the landowner or his or her authorized representative shall rebury the Native American human remains and associated grave goods with appropriate dignity either in accordance with the recommendations of the MLD or on the project site in a location not subject to further subsurface disturbance: • The NAHC is unable to identify an MLD or the MLD failed to make a recommendation within 48 hours after being notified by the commission. • The descendant identified fails to make a recommendation. • The landowner or his authorized representative rejects the recommendation of the descendant, and mediation by the NAHC fails to provide measures acceptable to the landowner.	Submit written evidence of treatment and disposition of remains consistent with applicable regulations.	Prior to resuming construction activities	City of Aliso Viejo Planning Department		

Requirements	Method of Verification	Timing of Verification	Responsible for Verification	Verification of Completion	
				Date	Initial
2.7 Geology and Soils					
COA GEO-1a: Soil Engineering and Engineering Geology Recommendations					
In accordance with Municipal Code 13.08.170, Soil Engineering and Engineering Geology Reports, a soil engineering and engineering geology report shall be required for grading projects unless otherwise waived by the building official. The reports shall include information appropriate for the site including any information required by the building official. Recommendations included in the reports and approved by the building official shall be incorporated in the grading plans or specifications. Accordingly, prior to issuance of grading permit, the project applicant shall provide grading plans or specifications that include all recommendations from the proposed project's September 26, 2025 Geotechnical Investigation prepared by Alta California Geotechnical, Inc., or from the latest geotechnical study for the proposed project.	Submission of soil engineering and engineering geology report and inclusion in project plans; site inspection; submission of plans	Prior to the issuance of a grading permit; during and following project construction	City of Aliso Viejo Planning Department		
COA GEO-1b: Grading Activities adjacent to Western and Northern Slopes					
Prior to and during grading, all grading activities adjacent to the existing slopes along the western and northern boundaries of the site shall be observed by a licensed California Geotechnical Engineer or Certified Engineering Geologist, consistent with the requirements of Aliso Viejo Municipal Code Chapter 13.08 (Grading and Excavation Code).	Provide letter of retention from licensed California Geotechnical Engineer or Certified Engineering Geologist confirming grading observations	Prior to the issuance of a grading permit	City of Aliso Viejo Planning Department		

Requirements	Method of Verification	Timing of Verification	Responsible for Verification	Verification of Completion	
				Date	Initial
If geologic or geotechnical conditions associated with slope instability are encountered that differ from those described in the approved Geotechnical Investigation prepared by Alta California Geotechnical, Inc. (September 26, 2025), the project Geotechnical Consultant shall evaluate such conditions and prepare supplemental geotechnical recommendations, as necessary, in accordance with the California Building Code and California Geological Survey Special Publication 117A.	Provide supplementation geotechnical recommendations for City review and approval.	During construction	City of Aliso Viejo Planning Department		
Any supplemental recommendations or corrective measures shall be incorporated into the grading or construction plans and shall be subject to review and approval by the City Engineer prior to continuation of grading in the affected area, consistent with the Aliso Viejo Municipal Code.	Provide updated grading or construction plans detailing any supplemental recommendations or corrective measures	During construction	City of Aliso Viejo Planning Department		
MM GEO-1: Paleontological Resources Worker Environmental Awareness Program					
The project applicant shall enlist a qualified Paleontologist (meeting the standards of the Society of Vertebrate Paleontology [SVP]) to prepare a Worker Environmental Awareness Program (WEAP) presentation for construction personnel. It will include information on paleontological resources, laws protecting them, types of fossils that could occur at the project site, and protocol for unanticipated discoveries.	Verify documentation of WEAP training materials and employee attendance. Submission to the City of WEAP attendance logs and training date(s) to City	Prior to initiation of construction activities	City of Aliso Viejo Planning Department		

Requirements	Method of Verification	Timing of Verification	Responsible for Verification	Verification of Completion	
				Date	Initial
In the event that fossils are discovered during construction, excavations within 50 feet of the find shall be temporarily halted or diverted. The contractor shall notify the qualified Paleontologist to examine the discovery. The qualified Paleontologist shall document the discovery as needed in accordance with SVP standards, evaluate the potential resource, and assess the significance of the find under the criteria set forth in CEQA Guidelines Section 15064.5. Based on the significance of the find, the qualified Paleontologist shall determine procedures to be followed before construction is allowed to resume at the location of the find. If, in consultation with the qualified Paleontologist, it is determined that avoidance is not feasible, the qualified Paleontologist shall prepare a Paleontological Resources Impact Mitigation Program (PRIMP) to outline salvage and recovery procedures. If deemed necessary by the qualified Paleontologist, the PRIMP shall include construction monitoring requirements as well. The PRIMP shall be submitted to the City for review and approval, and the approved plan shall be implemented.	If paleontological resources are discovered, confirm all work within 50 feet has been halted, and confirm a qualified Paleontologist has assessed the find. Submittal of PRIMP to City for approval, and confirmation of implementation of the approved plans.	In the event that fossils are discovered during construction	City of Aliso Viejo Planning Department		

Requirements	Method of Verification	Timing of Verification	Responsible for Verification	Verification of Completion	
				Date	Initial
2.9 Hazardous Waste and Materials					
MM HAZ-1: Implementation of Asbestos-containing Material, Lead-based Paint, and Petromat Surveys Prior to Site Demolition Activities					
Prior to the issuance of demolition permits, the proposed project shall retain a Qualified Environmental Professional to conduct asbestos-containing material (ACM), lead-based paint (LBP), and Petromat surveys. If ACM or LBP are identified in existing building materials or if asbestos is identified within any Petromat that is part of the existing parking lot, proper removal and disposal of the materials in accordance with applicable local, regional, State, and federal regulations would be required. In addition, the developer shall implement all appropriate engineering controls, work practices, and notification procedures to prevent exposure of workers and the public and shall prepare and submit all necessary compliance documentation to the City.	Submittal and review of ACM, LBP, and Petromat survey reports and, if applicable, documentation of proper removal and disposal, engineering controls, notifications, and regulatory compliance.	Prior to issuance of demolition permits and prior to demolition activities; during removal and disposal if hazardous materials are identified.	City of Aliso Viejo Planning Department		
2.18 Tribal Cultural Resources					
MM TCR-1: Retention of Qualified Archaeologist and Worker Training					
Prior to the issuance of a grading permit by the City of Aliso Viejo, evidence shall be provided to the City that a qualified archaeologist meeting the Secretary of the Interior's Standards for professional archaeology (U.S. Secretary of the Interior 2008) has been retained by the Applicant to conduct any required training, evaluation, or treatment of archaeological resources that might be encountered during implementation of the project. As part of this, prior to the start of grading, the qualified archaeologist shall conduct cultural resources sensitivity training for all construction personnel. Construction personnel must be	Submittal of evidence that a qualified archaeologist has been retained; verification of cultural resources sensitivity training materials and construction personnel attendance records.	Prior to issuance of a grading permit and prior to the start of grading	City of Aliso Viejo Planning Department		

Requirements	Method of Verification	Timing of Verification	Responsible for Verification	Verification of Completion	
				Date	Initial
informed of the types of archaeological resources that may be encountered (both prehistoric and historical), and of the proper procedures to be enacted in the event of an inadvertent discovery of archaeological resources or human remains. The Applicant must ensure that construction personnel are made available for and attend the training and retain documentation demonstrating attendance. This documentation shall be made available to the City upon request.					
MM TCR-2: Native American Monitoring					
A Native American monitor from or approved by the project's consulting Tribes (Juaneño Band of Mission Indians Acjachemen Nation – 84A and Juaneño Band of Mission Indians Acjachemen Nation – Belardes) shall be present during all earth-moving construction activities. The Native American monitor shall be given the opportunity to participate in the cultural resource sensitivity training described in the preceding condition of approval. At least 30 days prior to issuance of grading permits by the City for the project site and any off-site improvements, a Native American Monitoring Agreement (Monitoring Agreement) shall be developed between the Applicant and the consulting party. The Monitoring Agreement shall pertain to prehistoric archaeological resources and Tribal Cultural Resources, respectively, and shall identify any monitoring requirements and treatment of cultural resources to meet the requirements of the Tribal representative. The Monitoring Agreement shall also address communication protocols in the event of an unanticipated discovery of cultural materials, and the roles, responsibilities, and authorities of the Native American Monitor. The Monitoring Agreement shall also detail the protocols for treatment and final disposition of any Native American cultural	Submit documentation that a Native American monitor has been retained. Submittal and review of the executed Native American Monitoring Agreement; review of monitoring logs, documentation confirming Native American monitoring during earth-moving activities, and documentation of compliance with the Monitoring Agreement, State Health and Safety Code Section 7050.5, and Public Resources	At least 30 days prior to issuance of grading permits; during all earth-moving construction activities	City of Aliso Viejo Planning Department		

Requirements	Method of Verification	Timing of Verification	Responsible for Verification	Verification of Completion	
				Date	Initial
resources, sacred sites, and human remains discovered on the site that the Native American Monitor shall implement in consultation and coordination with the Native American Most Likely Descendant, as identified by the NAHC. In accordance with the condition of approval below, discovery and treatment of human remains shall comply with State Health and Safety Code Section 7050.5 and Public Resources Code (PRC) Section 5097.98.	Code (PRC) Section 5097.98.				
MM TCR-3: Archaeological Resource and/or Tribal Cultural Resource Discovery and Treatment					
In the event of the unanticipated discovery of archaeological or other cultural resources, whether discovered through Native American monitoring or not, all work activities in the area (within approximately 100 feet of the discovery) shall be halted or redirected until the discovery can be evaluated by a qualified archaeologist. Construction shall not resume until a qualified archaeologist has conferred with the City and, in the case of prehistoric archaeological resources and tribal cultural resources, the Native American monitor, on the significance of the resource. If it is determined that the discovered archaeological resource and/or tribal cultural resource is significant, avoidance and preservation in place shall be the preferred manner of mitigation, pursuant to PRC Section 21083.2(b) and Section 21084.3. Preservation in place may be accomplished by, but is not limited to, avoidance, incorporating the resource into open space, capping, or deeding the site into a permanent conservation easement. In the event that preservation in place is demonstrated to be infeasible and data recovery through excavation is the only feasible mitigation available, a Treatment Plan shall be prepared and implemented by a qualified archaeologist, in consultation with the City, that provides for the adequate recovery of the scientifically consequential	If archaeological or cultural resources are discovered, confirm all work within 100 feet has been halted and a qualified archaeologist has been retained; review discovery documentation, consultation records, resource evaluation, and, if required, an approved Treatment Plan; field verification that work did not resume until authorized. Requirements	Method of Verification	Timing of Verification	Responsible for Verification	Verification of Completion	
				Date	Initial
information contained in the archaeological resource or cultural information in the event of a tribal cultural resource. The City and Applicant shall also consult with appropriate Native American representatives in determining treatment for prehistoric or Native American resources to ensure cultural values ascribed to the resources, beyond those that are scientifically important, are considered. Any evaluation and treatment shall be supervised by an individual or individuals that meet the Secretary of the Interior's Professional Qualification Standards.					
MM TCR-4: Treatment of Human Remains					
In accordance with California Health and Safety Code Section 7050.5, if human remains are found, the Orange County Sheriff's Coroner shall be immediately notified of the discovery. No further excavation or disturbance of the site or any nearby area reasonably suspected to overlie adjacent remains (100 feet or as determined by the project archaeologist) shall occur until the procedures set forth in this measure have been implemented. If the County Coroner determines that the remains are, or are believed to be, Native American, the Coroner shall notify the Native American Heritage Commission (NAHC) within 24 hours. In accordance with California PRC Section 5097.98, the NAHC must immediately notify those persons it believes to be the Most Likely Descendant (MLD) from the deceased Native American. The MLD shall complete their inspection within 48 hours of being granted access to the site. The designated Native American representative would then determine, in consultation with the property owner, the disposition of the human remains.	Submit documentation of coordination between Orange County Sheriff's Coroner and NAHC; confirm implementation of the specified procedures	Within 24 hours of determining discovered human remains to be Native American	City of Aliso Viejo Planning Department		

Requirements	Method of Verification	Timing of Verification	Responsible for Verification	Verification of Completion	
				Date	Initial
MM TCR-5: Native American Monitoring					
The project applicant shall retain a Native American Monitor from or approved by the project's consulting Tribes (Juaneño Band of Mission Indians Acjachemen Nation – 84A and Juaneño Band of Mission Indians Acjachemen Nation – Belardes). (a) The monitor shall be retained prior to the commencement of any "ground- disturbing activity" for the subject project at all project locations (i.e., both on-site and any off-site locations that are included in the project description/definition and/or required in connection with the project, such as public improvement work). "Ground-disturbing activity" shall include, but is not limited to, demolition, pavement removal, potholing, auguring, grubbing, tree removal, boring, grading, excavation, drilling, and trenching. (b) A copy of the executed monitoring agreement shall be submitted to the lead agency prior to the earlier of the commencement of any ground-disturbing activity, or the issuance of any permit necessary to commence a ground-disturbing activity.	Submittal and review of evidence that an approved Native American Monitor has been retained and provision of a copy of the executed monitoring agreement.	Prior to the earlier of commencement of any ground-disturbing activity or issuance of any permit necessary to commence ground -disturbing activity.	City of Aliso Viejo Planning Department		
1. Construction coordination meeting shall be conducted prior to start of ground disturbing work (grading, trenching, or excavation) with Qualified Archaeologist, Construction Contractor, Tribal Representative(s).	Submittal and review of construction coordination meeting agenda, attendance	Prior to the start of ground-disturbing work	City of Aliso Viejo Planning Department		

Requirements	Method of Verification	Timing of Verification	Responsible for Verification	Verification of Completion	
				Date	Initial
	records, and meeting notes				
2. Tribal Cultural Resource Monitoring shall be conducted during all initial ground- disturbing activities until both the Archaeologist and Tribal Monitor determine monitoring is no longer needed. During construction, if cultural materials or features are discovered. Construction contractor, Archaeologist, Tribal Monitor(s) and Lead Agency shall submit a discovery report documenting find, treatment measures, and confirmation that work did not resume until treatment was completed. If human remains are encountered during construction, the construction contractor, County Coroner, NAHC, MLD and Tribal Representative(s) shall follow the following: the coroner shall provide written documentation, the NAHC will be notified, and there shall be confirmation of respectful treatment/reburial as directed by the MLD and Tribe.	Review of daily Tribal monitoring logs; written determination that monitoring is no longer required; and, if resources or human remains are encountered, submittal and review of discovery reports, treatment documentation, required notifications, and confirmation that work resumed only after treatment was completed.	During all initial ground-disturbing activities; during construction; upon discovery of cultural materials, features, or human remains; and prior to resuming work in the discovery area.	City of Aliso Viejo Planning Department		
3. Qualified Archaeologist and/or Tribal Representative(s) shall submit documentation of recovered materials, correspondence confirming tribal disposition decision (e.g., reburial, return, or other treatment) during and following construction, if artifacts are recovered. 4. Qualified Archaeologist shall submit a Final Monitoring and Mitigation Summary Report and submit to project applicant and appropriate CHRIS repository. 5. Lead Agency, Construction Contractor and or Tribal Representative(s) shall submit records of coordination and confirmation that tribal ceremonies or blessings were	Submittal and review of recovered-material documentation and Tribal disposition correspondence, if applicable; confirm submittal of Final Monitoring and Mitigation Summary Report; confirm submittal of records of	During construction, if artifacts are recovered; following completion of monitoring and mitigation; and prior to and/or during construction for requested Tribal ceremonies or blessings	City of Aliso Viejo Planning Department

1 - INTRODUCTION

Although a lead agency is not required to provide written responses to comments on proposed Negative Declarations (NDs) or Mitigated Negative Declarations (MNDs) under the California Environmental Quality Act (CEQA), the City of Aliso Viejo has evaluated the comments received on the Presidio at Pacific Park Residential Development (State Clearinghouse No. 2026080753) (proposed project) Draft Initial Study/Mitigated Negative Declaration (Draft IS/MND) and has elected to provide responses to the following environmental comments. None of the comments received results in the need to recirculate the Draft IS/MND or to prepare an Environmental Impact Report (EIR). Furthermore, no comments require revisions or clarifications to the Draft IS/MND.

The Final IS/MND includes the following contents:

- Draft IS/MND (provided under separate cover)
- Draft IS/MND appendices (provided under separate cover)
- Responses to Written Comments
- Mitigation Monitoring and Reporting Program (provided under separate cover)

2 - RESPONSE TO WRITTEN COMMENTS

A list of public agencies, organizations, and individuals that provided comments on the Draft IS/MND is presented below. Each comment has been assigned a code. Individual comments within each communication have been numbered so comments can be crossed-referenced with responses. Following this list, the text of the communication is reprinted and followed by the corresponding response.

I-5, PM 18.329

Dear Ms. Kim,

Thank you for including the California Department of Transportation (Caltrans) in the review of the Mitigated Negative Declaration for the Presidio at Pacific Park Residential Development Project for the City of Aliso Viejo. The mission of Caltrans is improving lives and communities through transportation.

A1-1

The proposed project involves the demolition of a 41,519 sq ft office building to construct a 58-unit, three-story, for-sale attached townhome community on approximately 4.4 acres. Regional access to the site is provided by State Route 73 (SR 73) and Interstate 5 (I-5). Caltrans is a commenting agency on this project and has the following comments:

1. Caltrans recognizes there is a strong link between transportation and land use. Development can have a significant impact on traffic and congestion on State transportation facilities. In particular, the pattern of land use can affect both local vehicle miles traveled and the number of trips.

   Caltrans supports collaboration with local agencies to work towards a safe, functional, interconnected, multi-modal transportation network integrated through applicable "smart growth" type land use planning and policies. Additionally, Caltrans supports the City's progress in meeting its Regional Housing Needs Assessment (RHNA) allocation, and we encourage the City to promote the development of housing units for a variety of income levels.

A1-2

2. The project is adjacent or close to several existing and planned bicycle facilities. Therefore, Caltrans recommends the inclusion of secure and functional short-term bike parking pursuant to CALGreen code. Short-term bike parking should be place on the ground floor in visible areas that are close to main entrances

A1-3

and should be installed at least 24" away from walls and other objects (e.g. trash cans, plants, etc.). With the increasing popularity of electric bikes and cargo/utility bikes, bike parking should also be designed to accommodate different styles, sizes, and weights of bikes (e.g. cargo bike, bike with trailer, adult tricycle, etc.). A1-3 cont.

- For additional guidance on providing functional bike parking, see the attached "Essentials of Bike Parking" guidance created by the Association of Pedestrian and Bicycle Professionals (link to online PDF: https://www.apbp.org/Publications).

3. Caltrans encourages the design of Complete Streets that include high-quality pedestrian, bicycle, and transit facilities that are safe and comfortable for users of all ages and abilities. Improvements may include providing secure bicycle parking, pedestrian-oriented LED lighting, and comfortable connections to nearby active transportation and/or transit facilities. Complete Streets improvements also promote regional connectivity, improve air quality, reduce congestion, promote improved first-/last-mile connections, and increase safety for all modes of transportation. A1-4

4. Please consider the addition of high visibility crosswalks and ADA curb ramps on intersections in or adjacent to the project location that currently lack one or both. A1-5

5. Consider adding pedestrian scale lighting along sidewalks within or adjacent to project limits to improve pedestrian safety. A1-6

6. Consider installing or planning for zero- or near zero-emission infrastructure (e.g. EV charging stations for delivery vehicles) to support California's transition to clean freight and reduce local air quality impacts. A1-7

7. Please ensure that all ingress/egress driveways and internal circulation routes are designed to accommodate the turning radii and maneuvering needs of large trucks and trailers, consistent with Caltrans and American Association of State Highway and Transportation Officials (AASHTO) standards. A1-8

8. Consider whether there is a need for short-term delivery parking or package drop-off areas to prevent double-parking or blocking of driveways and sidewalks. Encourage the use of shared package lockers to reduce the number of delivery stops and vehicle idling. A1-9

9. Confirm that internal roads and parking areas are designed for safe truck circulation, including adequate width, turning radii, and clear signage. Emergency access routes should be maintained and not obstructed by truck parking or event staging. A1-10

10. Assess potential conflict points between delivery vehicles and non-motorized users at site entrances, internal walkways, and adjacent sidewalks. Incorporate design features such as clear signage, marked crosswalks, and sight distance improvements to enhance safety for all users. A1-11

11. During construction phase, please ensure that appropriate detours, signage, and safety measures that prioritize the mobility, access and safety of all traffic modes, including bicyclists, pedestrians and transit users. A1-12

    Please also evaluate how construction may alter wayfinding, transit signage and multimodal circulation in the immediate project area and surrounding vicinity. Given the site's proximity to nearby rail and bus service, the project should consider both temporary construction-period access and long-term access for future users, including opportunities to support transit use. A1-13

12. All construction haul vehicles accessing the State Highway System must use routes approved by Caltrans. Any transportation of heavy construction equipment and/or materials which requires use of oversized-transport vehicles on State highways will require a Caltrans transportation permit. We recommend large size truck trips be limited to off-peak commute periods for the construction and operation phases. Construction truck loads should be covered with a tarpaulin cover. A1-14

13. The applicant shall ensure that construction-related traffic does not adversely impact operations on the State Highway System. All temporary traffic control within or affecting state highways state highways shall comply with the most current edition of the California Manual on Uniform Traffic Control Devices (CA MUTCD) and Caltrans standards. The applicant shall ensure that public safety and mobility are maintained during construction. A1-15

Please continue to coordinate with Caltrans for any future developments that could potentially impact State transportation facilities. If you have any questions, please do not hesitate to contact Joseph Jamoralin at Joseph.Jamoralin@dot.ca.gov. A1-16

Sincerely,

Scott Shelley (Sep 10, 2026 10:18:38 PDT)

Scott Shelley
Branch Chief, Local Development Review/Climate Resiliency
Caltrans, District 12

State Agencies

California Department of Transportation (A1)

Response to A1-1

The comment does not raise project-specific environmental concerns or comments related to the Draft IS/MND.

Response to A1-2

The City will continue coordinating with Caltrans and other stakeholders to evaluate transportation impacts and support a safe, functional, interconnected multimodal network.

Response to A1-3

The project site is located adjacent to existing Class II bicycle lanes along Glenwood Drive and Aliso Creek Road. In Section 2.17, Transportation of the Draft IS/MND, the analysis found that the project would not conflict with any bicycle facilities, and the proposed project would provide internal pedestrian walkways and sidewalks connecting to the existing pedestrian network. Each townhome would have a private garage which could be used for bicycle storage and parking. In addition, the project is required to comply with all applicable provisions of CALGreen and the California Building Standards Code during final design and building plan review. In response to this comment, the applicant has voluntarily agreed to install additional bike racks, which would be depicted in the final project plans. The City will review final project plans for compliance with applicable bicycle parking requirements.

Response to A1-4

The proposed project includes then “complete street” improvements that were described in the comment, Specifically, the proposed project provides internal pedestrian walkways, landscaped paseos, pedestrian-oriented lighting, sidewalks, and a network of common open space areas that connect residential units to project amenities and the existing public sidewalk system and bike lanes along Argonaut. Incorporation of site design features and public improvements will be reviewed by the City during project design and permitting, as applicable.

Response to A1-5

The project vicinity contains safe pedestrian crossings and ADA curb ramps. Existing pedestrian infrastructure already serves the project vicinity, including sidewalks on Glenwood Drive, Aliso Creek Road, and Argonaut, as well as signalized crosswalks at the Glenwood Drive/Aliso Creek Road intersection and nearby crossings connecting residents to Ridgecrest Park and surrounding destinations. The project would connect directly to this existing pedestrian network through internal sidewalks and walkways extending from the project entrance on Argonaut. As shown on the Project plans, the proposed sidewalks and crosswalks would be constructed of concrete, which provides visual contrast from the adjacent asphalt roadways and clearly delineates pedestrian and vehicular travel areas. ADA-compliant curb ramps would be provided as required by applicable accessibility standards and City development requirements. Any required frontage and accessibility improvements will be reviewed by the City during final site plan review.

Response to A1-6

Section 2.1 of the Draft IS/MND specifically states that the project would incorporate shielded wall-mounted fixtures, pedestrian-scale lighting, and limited pole-mounted lighting designed to illuminate entries, walkways, private streets, parking areas, and common-use spaces while minimizing off-site light spill. Therefore, pedestrian safety considerations associated with lighting are incorporated into the project design and applicable City standards.

Response to A1-7

The project will comply with all applicable State and local building code requirements, including applicable electric vehicle infrastructure requirements in effect at the time of building permit issuance.

The City notes that sustainable design features have been incorporated into the proposed project. Specifically, as described in Section 2.6, Energy of the Draft IS/MND, all 58 residential units would be constructed as solar-powered, all-electric townhomes, eliminating the need for on-site natural gas infrastructure and supporting California's building decarbonization objectives. The proposed project also includes electric vehicle charging infrastructure consistent with applicable CALGreen requirements and EV-capable garage infrastructure to support future electric vehicle ownership by residents.

Response to A1-8

The proposed project has been designed to comply with applicable emergency access and circulation requirements. The proposed development would utilize the existing driveway on Argonaut and includes an internal private roadway system that provides access to all residential units, guest parking spaces, and emergency service vehicles. The site plan includes an Orange County Fire Authority (OCFA) hammerhead turnaround and internal circulation network specifically designed to facilitate emergency response vehicle access throughout the community. Further, as described in the Project Description of the Draft IS/MND, the project has been designed to comply with applicable emergency service provider standards, including a minimum inside turning radius of 20 feet and outside turning radius of 49 feet.

In addition, final engineering plans will be reviewed by the City and OCFA during the Site Development Permit and building permit processes to ensure continued compliance with all applicable circulation, access, and emergency response standards. Therefore, adequate internal circulation and vehicle maneuverability have already been incorporated into the project design.

Response to A1-9

Given the residential nature and relatively small scale of the proposed 58-unit townhome development, delivery activity is expected to be similar to that associated with typical residential neighborhoods and can be accommodated within the project's internal circulation and parking facilities.

Response to A1-10

The proposed project has been designed to comply with applicable City and OFCA access requirements. The project includes an internal private roadway network, emergency access routes, and an OCFA-compliant hammerhead turnaround to facilitate emergency vehicle maneuvering throughout the site. As described in the Project Description of the Draft IS/MND, the internal circulation system has been designed with a minimum inside turning radius of 20 feet and outside turning radius of 49 feet to accommodate emergency and service vehicles. Additionally, final engineering plans will be reviewed by the City and OCFA to ensure continued compliance with applicable circulation and emergency access standards.

Response to A1-11

As described in Section 2.17, Transportation of the Draft IS/MND, the project would not create transportation hazards and would comply with applicable City circulation and design standards. Project access points and internal circulation routes will be subject to final engineering review to ensure adequate sight distance and safe interaction between vehicles and pedestrians. Additionally, ingress and egress areas will be designed to maintain visibility and remain unobstructed by landscaping, signage, or other site features. Accordingly, pedestrian and vehicle interactions have been considered through project design and City review requirements.

Response to A1-12

Construction activities would occur within the project site and would be required to comply with applicable City requirements and permit conditions related to public safety, temporary traffic control, and construction management. The proposed project would maintain access to surrounding roadways and would not require permanent modifications to the existing transportation network. Any temporary traffic control measures required during construction would be implemented in accordance with applicable City standards and permit requirements. Compliance with these requirements would ensure that commenter's recommendation is incorporated into the project and public safety and mobility are maintained during project construction.

Response to A1-13

Section 2.17 of the Draft IS/MND identifies existing transit service in the project vicinity and concludes that the project would not conflict with applicable transportation plans, policies, or programs supporting transit, bicycle, or pedestrian facilities. During construction, the project would comply with applicable City requirements for temporary traffic control, signage, wayfinding, and maintenance of safe pedestrian, bicycle, transit, and vehicular access.

At operation, the proposed project includes pedestrian walkways and sidewalk connections that provide residents with access to the existing transportation network serving the surrounding community.

Response to A1-14

The project applicant and its contractors will be responsible for obtaining any required permits and complying with all applicable federal, State, and local regulations governing construction traffic and transport of oversized equipment.

Response to A1-15

Construction activities associated with the proposed project would occur within the project site and would be subject to all applicable City, State, and agency requirements related to traffic control, public safety, and construction management. Any temporary traffic control measures required during construction would be implemented through applicable permit requirements and would be required to comply with relevant regulatory standards. As discussed in Section 2.17, Transportation of the Draft IS/MND, the proposed project would maintain emergency access and would not result in significant transportation impacts.

Response to A1-16

The comment does not raise project-specific environmental concern or comments related to the Draft IS/MND. The City is committed to ongoing coordination with Caltrans and other stakeholders to ensure that land use decisions are made with a comprehensive understanding of their transportation impacts.

RESOLUTION NO. 2026-___

A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF ALISO VIEJO, CALIFORNIA, APPROVING AN AMENDMENT TO THE GENERAL PLAN LAND USE DESIGNATION AND ASSOCIATED LAND USE MAP FROM BUSINESS PARK TO MEDIUM DENSITY RESIDENTIAL FOR THE DEVELOPMENT OF A 58-UNIT RESIDENTIAL TOWNHOME COMMUNITY LOCATED AT 15 ARGONAUT (APN: 623-093-10 & 623-093-11).

WHEREAS, on April 15, 2026, Brandywine Acquisition Group, LLC. ("Applicant") submitted a general plan amendment, zone change, vesting tentative tract map, site development permit, and a development agreement application to demolish an existing office building and accommodate the construction of a multi-family residential community at 15 Argonaut ("Project");

WHEREAS, pursuant to section 21067 of the Public Resources Code, and section 15367 of the State CEQA Guidelines (Cal. Code Regs., tit. 14, § 15000 et seq.), the City is the lead agency for the proposed Project and has prepared an Initial Study/Mitigated Negative Declaration (SCH#2026080753) ("IS/MND") and a Mitigation Monitoring and Reporting Program ("MMRP") for the Project;

WHEREAS, on March 4, 2026, the City Council held a duly noticed public review to receive and provide initial feedback on concept plans for the Project;

WHEREAS, on September 15, 2026, the City gave public notice of the City Council public hearing for consideration of Mitigated Negative Declaration CEQA-2026-01004, General Plan Amendment GPA-2026-01002, Zone Change ZC-2026-00001, Vesting Tentative Tract Map 19489, Site Development Permit SDP-2026-01001 and Development Agreement DA-2026-01002 for the Project by publishing in a newspaper of general circulation; by posting notices at City Hall and the Project site; and by mailing notices to owners of property within 300 feet, to the project applicant, and to local agencies that provide water, sewage, electricity and schools;

WHEREAS, on October 7, 2026, the City Council held a public hearing as prescribed by law and considered written and verbal public testimony that was submitted prior to the hearing and during the hearing, and evidence and recommendations presented by staff in the agenda report and oral presentation; and

WHEREAS, all other legal prerequisites to the adoption of this Resolution have occurred.

NOW, THEREFORE, BE IT RESOLVED BY THE CITY COUNCIL OF THE CITY OF ALISO VIEJO AS FOLLOWS:

Section 1. **Incorporation of Recitals.** The City Council hereby finds and determines that all of the recitals set forth above are true and correct. The above recitals are hereby incorporated as substantive findings of this Resolution.

Section 2. **CEQA.** Pursuant to the California Environmental Quality Act (Public Resources Code, § 21000 et seq.) and the State CEQA Guidelines (California Code of Regulations, title 14, § 15000 et seq.) (Collectively, "CEQA"), the City Council adopted Resolution No._____, determining that there is no substantial evidence that the approval of the Project would result in a significant adverse effect on the environment, provided appropriate mitigation measures, as identified in the MMRP, are imposed on the Project.

Section 3. **Findings for General Plan Amendment GPA-2026-01002.** Pursuant to AVMC 15.78.020 (General Plan Amendments), the City Council hereby makes the following findings of fact and approves an amendment to the General Plan land use designation and associated land use map from Business Park to Medium Density Residential, as set forth in Exhibit "A", which is attached hereto and incorporated herein by reference.

1. Public Welfare. Approval of the amendment will not create conditions materially detrimental to the public health, safety and general welfare. While the Site is located within a larger business park area, it is situated in proximity to the recently approved 95 Argonaut residential development, which also involved the redevelopment of a business park use for residential use. Similar to 95 Argonaut, the proposed Project would introduce a three-story attached townhome development at a scale compatible with existing residential neighborhoods that are located directly north of the Site across Glenwood Drive, including both multi-family and single-family residential development. The proposed Project incorporates similar architectural features as 95 Argonaut and adjacent residential communities such as stucco exteriors, tile roofs, wrought-iron balconies, recessed entries, and shared open-space areas. As proposed, the Project incorporates architectural and site design elements that are generally consistent with the character of nearby residential development and would provide a transition between the surrounding residential neighborhoods and the remaining business park uses in the area. Both projects feature multi-story attached residential units with comparable architectural character, private garages, guest parking, landscaped common open space, and enhanced site entries. Additionally, the Site is situated in an area with established infrastructure, including roads, utilities, and public services, that can adequately support residential development. As part of the environmental assessment, the Project required comprehensive studies addressing air quality, energy, greenhouse gas emissions, biological resources, cultural resources, geotechnical conditions, hydrology and water quality, noise, and transportation impacts. As discussed further in the Environmental Assessment section, below, these studies concluded that the Project would result in less-than-significant impacts with the implementation of proposed mitigation measures. The Project plans also cleared preliminary review by the Orange County Fire Authority (OCFA). Furthermore, the Project aligns with

the City's housing goals by facilitating the development of new housing opportunities. Future construction on the Site will be subject to plan check review and inspection process to ensure full compliance with applicable building and safety standards.

2. Internal General Plan Consistency. The amendment is internally consistent with those goals, objectives, and policies of the general plan that are not being amended. The proposed amendment is consistent with the goals and policies of the General Plan listed below in that it incorporates landscaping aligned with the City Council-approved plant palette, emphasizing low-water, drought-tolerant species; features building materials, colors, and architectural design that are compatible with the surrounding residential communitiespublic benefit fees ; proposes three affordable housing units restricted to very low-income households, thereby enhancing housing diversity and affordability; and introduces rezoning to facilitate residential development that includes affordable units in support of the City's housing objectives. In the General Plan, 'COS' refers to Conservation and Open Space policies, 'H' for Housing policies and goals, and 'LU' for Land Use policies.

    - Policy COS-1.2 Reduce the amount of water used for landscaping and increase use of native and low water plants. Maximize use of native, low-water plants for landscaping of areas adjacent to sidewalks or other impermeable surfaces.
    - Policy COS-4.2 Encourage and maintain high-quality architectural and landscaping designs that enhance or complement the community's visual character.
    - Policy COS-7.5 Ensure that new development provides park land and/or improvements at a fair share ratio, pursuant to the City's Parkland Ordinance.
    - Goal H-1: Encourage a diversity of housing types and provide affordability levels within Aliso Viejo to meet the needs of community residents.
    - Policy H-1.1 Identify sites appropriate for the development of a variety of housing types and price ranges to meet the needs of all socioeconomic segments of the community through the disbursement of affordable units in projects.
    - Policy H-1.2 Encourage through the use of density bonuses and rezoning to allow for residential development, development of affordable housing opportunities throughout the community, as well as development of housing for elderly and low- and moderate-income households near public transportation services.
    - Policy H-1.4 Ensure that a portion of future residential development is affordable to low- and very-low-income households by designating certain sites as having the potential to be used for residential uses.
    - Policy H-3.8 Review existing zoning policies and explore zoning changes to facilitate the development of affordable housing.

- Policy LU-12.2 As a condition upon new development, require payment of park fees and/or dedication and provision of parkland, recreation facilities and/or multi-use trails that improve the public and private recreation system.

3. Land Use Compatibility. In the case of amendments to the General Plan land use policy map, the new designation is compatible with the designations on nearby properties. The Site is located at the edge of a larger business park and directly across from established multi-family and single-family residential neighborhoods. The proposed project is similar to a recently approved development at 95 Argonaut project, which is located on the same street within the same business park area. Both projects involve the conversion of an office property to a residential townhome community and introduce a land use that is compatible with nearby residential neighborhoods. The adjacent multi-family development shares several characteristics with the Project, including large attached-unit buildings, stucco exteriors, tile roofing, wrought iron balconies, recessed entryways, and shared open space without private driveways. These similarities ensure architectural and functional continuity between the Project and existing residential uses. The proposed land use designation therefore complements the surrounding residential character.

4. Property Suitability. In the case of amendments to the general plan land use policy map, the new designation is suitable for the location, access, visual character and topography of the subject property. The property is located along established roadways with adequate vehicular and pedestrian access and is supported by existing infrastructure, including utilities and public services, sufficient to accommodate residential development. The Site is generally flat within the developed portion, with sloped areas adjacent to Glenwood Drive and Aliso Creek Road. The proposed Project would retain the existing slope, utilize existing access from Argonaut, and incorporate site improvements consistent with applicable engineering and design standards. The proposed residential development includes architectural, landscaping, and site design elements that are similar to those found in nearby residential communities north of the Site, including attached residential development across Glenwood Drive and also the recently approved residential townhomes at 95 Argonaut. In addition, the Site is located between existing residential neighborhoods and surrounding business park uses, making it suitable for the proposed Medium Density Residential land use designation.

Section 4. **Severability**. If any provision of this Resolution or the application thereof to any person or circumstance is held invalid, such invalidity shall not affect other provisions or applications of this Resolution that can be given effect without the invalid provision or application, and to this end the provisions of this Resolution are severable. The City Council hereby declares that it would have adopted this Resolution irrespective of the invalidity of any particular portion thereof.

Section 5: **Location of Documents.** The administrative record for the Project is maintained at City Hall located at 12 Journey, Suite 100, Aliso Viejo, CA 92656. The custodian of records is the City Clerk.

Section 6: **Effective Date.** This General Plan Amendment shall not take effect unless and until Zone Change ZC-2026-01001, Vesting Tentative Tract Map 19489, Site Development Permit SDP-2026-01001, and Development Agreement DA-2026-01002 are each approved by the City Council and have become effective, and the associated Development Agreement is approved by the City Council and executed by both parties thereto.

Section 7. **Execution of Resolution**. The Mayor shall sign this Resolution and the City Clerk shall attest and certify to the passage and adoption thereof.

PASSED, APPROVED AND ADOPTED this 7th day of October 2026.

Amendment to the General Plan Land Use Map
Case No. GPA-2026-01002

Property Location – 15 Argonaut (see red-circled area below)
Existing Land Use Designation – Business Park ("BP")
Proposed Land Use Designation – Medium Density Residential (Max. 18 units/acre) ("MDR")

ORDINANCE NO. 2026-___

AN ORDINANCE OF THE CITY COUNCIL OF THE CITY OF ALISO VIEJO, CALIFORNIA, APPROVING A ZONE CHANGE FROM BUSINESS PARK 2 TO MEDIUM DENSITY RESIDENTIAL DISTRICT FOR THE DEVELOPMENT OF A 58-UNIT RESIDENTIAL TOWNHOME COMMUNITY LOCATED AT 15 ARGONAUT (623-093-10 AND 623-093-11).

WHEREAS, on April 15, 2026, Brandywine Acquisition Group, LLC. ("Applicant") submitted a general plan amendment, zone change, vesting tentative tract map, site development permit, and a development agreement application to demolish an existing office building and accommodate the construction of a multi-family residential community at 15 Argonaut ("Project");

WHEREAS, pursuant to section 21067 of the Public Resources Code, and section 15367 of the State CEQA Guidelines (Cal. Code Regs., tit. 14, § 15000 et seq.), the City is the lead agency for the proposed Project and has prepared an Initial Study/Mitigated Negative Declaration (SCH #2026080753) ("IS/MND") and a Mitigation Monitoring and Reporting Program ("MMRP") for the Project;

WHEREAS, on October 7, 2026, the City Council held a duly noticed public hearing to receive and consider public testimony and evidence regarding the Project;

WHEREAS, on September 15, 2026, the City gave public notice of the City Council public hearing for consideration of Mitigated Negative Declaration CEQA-2026-01004, General Plan Amendment GPA-2026-01002, Zone Change ZC-2026-00001, Vesting Tentative Tract Map 19489, Site Development Permit SDP-2026-01001 and Development Agreement DA-2026-01002 for the Project by publishing in a newspaper of general circulation; by posting notices at City Hall and the Project site; and by mailing notices to owners of property within 300 feet, to the project applicant, and to local agencies that provide water, sewage, electricity and schools;

WHEREAS, on October 7, 2026, the City Council held a duly noticed public hearing as prescribed by law and considered written and verbal public testimony that was submitted prior to the hearing and during the hearing, and evidence and recommendations presented by staff in the agenda report and oral presentation and introduced the Ordinance; and

WHEREAS, all legal prerequisites to the adoption of this Ordinance have occurred.

NOW, THEREFORE, THE CITY COUNCIL OF THE CITY OF ALISO VIEJO DOES ORDAIN AS FOLLOWS:

Section 1. **Incorporation of Recitals.** The City Council hereby finds and determines that all of the recitals set forth above are true and correct. The above recitals are hereby incorporated as substantive findings of this Ordinance.

Section 2. **CEQA.** Pursuant to the California Environmental Quality Act (Public Resources Code, § 21000 et seq.) and the State CEQA Guidelines (California Code of Regulations, title 14, § 15000 et seq.) (Collectively, "CEQA"), the City Council adopted Resolution No._____, determining that there is no substantial evidence that the approval of the Project would result in a significant adverse effect on the environment, provided appropriate mitigation measures, as identified in the MMRP, are imposed on the Project;

Section 3. **Findings for Zone Change ZC-2026-00001**. Pursuant to AVMC 15.78.040 (Zone Change and Prezoning), the City Council hereby makes the following findings of fact and approves the Zone Change ZC-2026-00001 from Business Park 2 to Medium Density Residential, as set forth in Exhibit "A", which is attached hereto and incorporated herein by reference.

1. Public Welfare. Approval of the zone change will not create conditions materially detrimental to the public health, safety and general welfare. While the Site is located within a larger business park area, it is situated in proximity to the recently approved 95 Argonaut residential development, which also involved the redevelopment of a business park use for residential use. Similar to 95 Argonaut, the proposed Project would introduce a three-story attached townhome development at a scale compatible with existing residential neighborhoods that are located directly north of the Site across Glenwood Drive, including both multi-family and single-family residential development. The proposed Project incorporates similar architectural features as 95 Argonaut and adjacent residential communities such as stucco exteriors, tile roofs, wrought-iron balconies, recessed entries, and shared open-space areas. As proposed, the Project incorporates architectural and site design elements that are generally consistent with the character of nearby residential development and would provide a transition between the surrounding residential neighborhoods and the remaining business park uses in the area. Both projects feature multi-story attached residential units with comparable architectural character, private garages, guest parking, landscaped common open space, and enhanced site entries. Additionally, the Site is situated in an area with established infrastructure, including roads, utilities, and public services, that can adequately support residential development. As part of the environmental assessment, the Project required comprehensive studies addressing air quality, energy, greenhouse gas emissions, biological resources, cultural resources, geotechnical conditions, hydrology and water quality, noise, and transportation impacts. As discussed further in the Environmental Assessment section below, these studies concluded that the Project would result in less-than-significant impacts with the implementation of proposed mitigation measures. The Project plans also cleared preliminary review by the Orange County Fire Authority (OCFA). Furthermore, the Project aligns with the City's housing goals by facilitating the development of new

housing opportunities. Future construction on the Site will be subject to plan check review and inspection process to ensure full compliance with applicable building and safety standards.

2. General Plan Consistency. The amendment is internally consistent with those goals, objectives, and policies of the general plan that are not being amended. The proposed amendment is consistent with the goals and policies of the General Plan listed below in that it incorporates landscaping aligned with the City Council-approved plant palette, emphasizing low-water, drought-tolerant species; features building materials, colors, and architectural design that are compatible with the surrounding residential communities;public benefit fees ; proposes three affordable housing units restricted to very low-income households, thereby enhancing housing diversity and affordability; and introduces rezoning to facilitate residential development that includes affordable units in support of the City's housing objectives. In the General Plan, 'COS' refers to Conservation and Open Space policies, 'H' for Housing policies and goals, and 'LU' for Land Use policies.

   - Policy COS-1.2 Reduce the amount of water used for landscaping and increase use of native and low water plants. Maximize use of native, low-water plants for landscaping of areas adjacent to sidewalks or other impermeable surfaces.
   - Policy COS-4.2 Encourage and maintain high-quality architectural and landscaping designs that enhance or complement the community's visual character.
   - Policy COS-7.5 Ensure that new development provides park land and/or improvements at a fair share ratio, pursuant to the City's Parkland Ordinance.
   - Goal H-1: Encourage a diversity of housing types and provide affordability levels within Aliso Viejo to meet the needs of community residents.
   - Policy H-1.1 Identify sites appropriate for the development of a variety of housing types and price ranges to meet the needs of all socioeconomic segments of the community through the disbursement of affordable units in projects.
   - Policy H-1.2 Encourage through the use of density bonuses and rezoning to allow for residential development, development of affordable housing opportunities throughout the community, as well as development of housing for elderly and low- and moderate-income households near public transportation services.
   - Policy H-1.4 Ensure that a portion of future residential development is affordable to low- and very-low-income households by designating certain sites as having the potential to be used for residential uses.
   - Policy H-3.8 Review existing zoning policies and explore zoning changes to facilitate the development of affordable housing.
   - Policy LU-12.2 As a condition upon new development, require payment of park fees and/or dedication and provision of parkland, recreation facilities and/or multi-use trails that improve the public and private recreation system.

3. Land Use Compatibility. The zone change is compatible with the zoning and land use on nearby properties. The Site is located at the edge of a larger business park and directly across from established multi-family and single-family residential neighborhoods. The proposed project is similar to a recently approved development at 95 Argonaut project, which is located on the same street within the same business park area. Both projects involve the conversion of an office property to a residential townhome community and introduce a land use that is compatible with nearby residential neighborhoods. The adjacent multi-family development shares several characteristics with the Project, including large attached-unit buildings, stucco exteriors, tile roofing, wrought iron balconies, recessed entryways, and shared open space without private driveways. These similarities ensure architectural and functional continuity between the Project and existing residential uses. The proposed land use designation therefore complements the surrounding residential character.

4. Property Suitability. The zone change is suitable for the location, access, visual character and topography of the subject property. The property is located along established roadways with adequate vehicular and pedestrian access and is supported by existing infrastructure, including utilities and public services, sufficient to accommodate residential development. The Site is generally flat within the developed portion, with sloped areas adjacent to Glenwood Drive and Aliso Creek Road. The proposed Project would retain the existing slope, utilize existing access from Argonaut, and incorporate site improvements consistent with applicable engineering and design standards. The proposed residential development includes architectural, landscaping, and site design elements that are similar to those found in nearby residential communities north of the Site, including attached residential development across Glenwood Drive and also the recently approved residential townhomes at 95 Argonaut. In addition, the Site is located between existing residential neighborhoods and surrounding business park uses, making it suitable for the proposed Medium Density Residential land use designation.

Section 4. **Severability.** If any provision of this Ordinance or its application to any person or circumstance is held to be invalid by a court of competent jurisdiction, such invalidity has no effect on the other provisions or applications of the Ordinance that can be given effect without the invalid provision or application, and to this extent, the provisions of this Ordinance are severable. The City Council declares that it would have adopted this Ordinance irrespective of the invalidity of any portion thereof.

Section 5. **Location of Documents.** The administrative record for the Project is maintained at City Hall located at 12 Journey, Suite 100, Aliso Viejo, CA 92656. The custodian of records is the City Clerk.

Section 6. **Effective Date.** This Zone Change Ordinance shall not take effect unless and until General Plan Amendment 2026-01002, Vesting Tentative Tract Map 19489, Site Development Permit SDP-2026-01001 and Development Agreement 2026-

01002 are each approved by the City Council and have become effective, and the associated Development Agreement is approved by the City Council and executed by both parties thereto.

Section 7. **City Clerk's Certification.** The City Clerk shall certify to the adoption of this Ordinance and cause a summary thereof to be published five days prior to the date of adoption of this Ordinance, and, within 15 days after adoption, the City Clerk shall cause to be published the aforementioned summary and shall post a certified copy of this Ordinance, together with the vote for and against the same, in the Office of the City Clerk.

PASSED, APPROVED AND ADOPTED this 21st day of October, 2026.

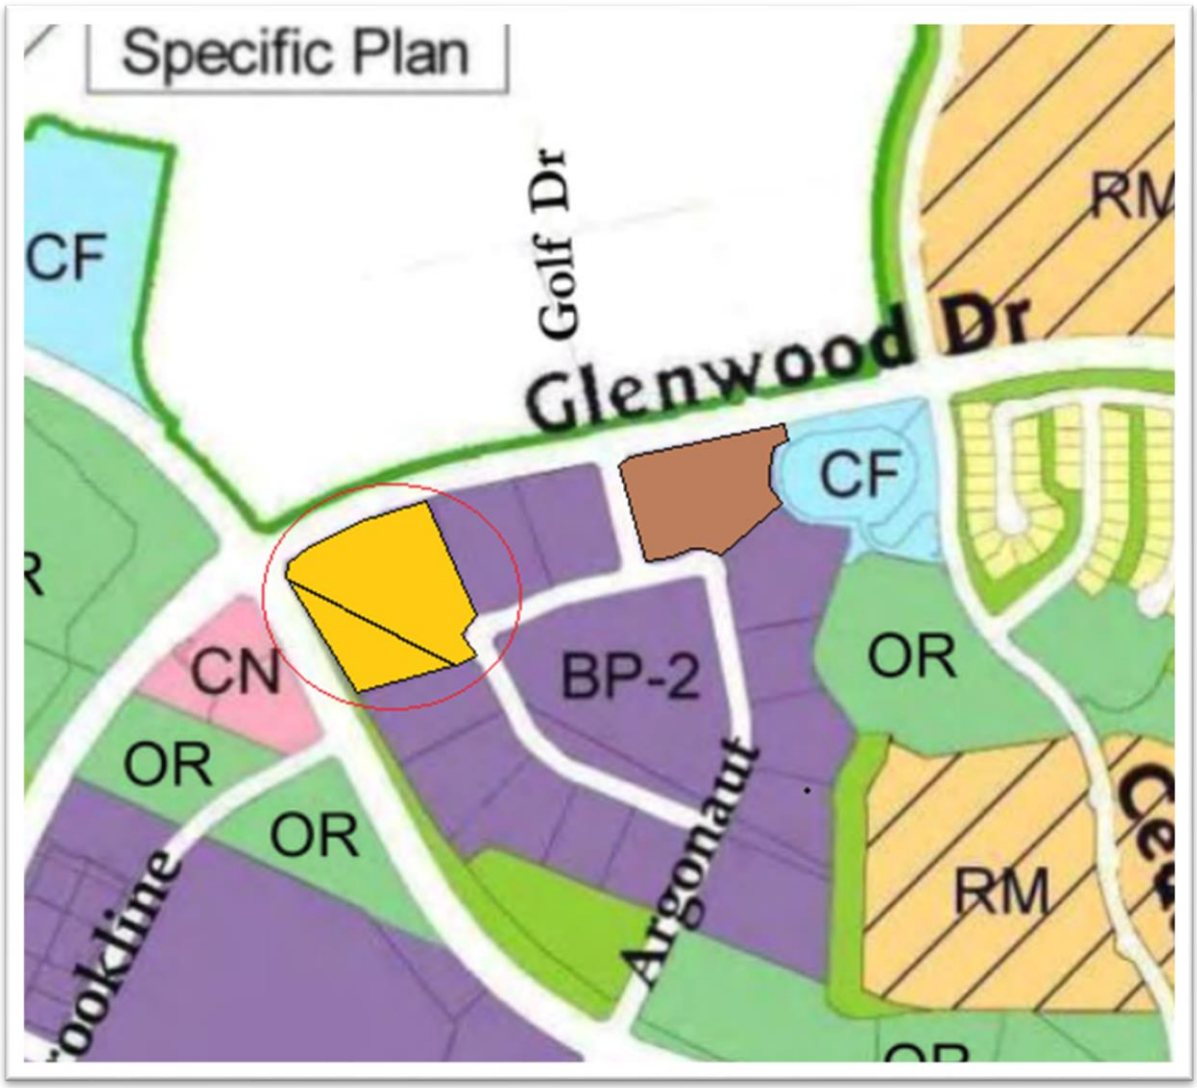
(SEAL)



I hereby certify that the foregoing is the original of Ordinance No. 2026-__ duly passed and adopted by the Aliso Viejo City Council at its regular meeting held October 21, 2026, and that the Summary of the Ordinance was published on _____ and _____ in the Laguna Niguel News.

_____
MARIA KENDIG, CITY CLERK

(SEAL)

Exhibit "A"
Zone Change Map
Case No. ZC-2026-01001

Property Location – 15 Argonaut (see red-circled area below)
Existing Zoning District Designation – Business Park 2 ("BP-2")
Proposed Zoning District Designation – Medium Density Residential (Max. 18 units/acre) ("MDR")

RESOLUTION NO. 2026-___

A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF ALISO VIEJO, CALIFORNIA, APPROVING VESTING TENTATIVE TRACT MAP 19489 FOR SUBDIVISION INTO CONDOMINIUM PURPOSES AND SITE DEVELOPMENT PERMIT (SDP-2026-01001) TO ALLOW THE DEVELOPMENT OF A 58-UNIT RESIDENTIAL TOWNHOME COMMUNITY LOCATED AT 15 ARGONAUT (APN: 623-093-10 & 623-093-11).

WHEREAS, on April 15, 2026, Brandywine Acquisition Group, LLC. ("Applicant") submitted a general plan amendment, zone change, vesting tentative tract map, site development permit, and a development agreement application to demolish an existing office building and accommodate the construction of a multi-family residential community at 15 Argonaut ("Project");

WHEREAS, pursuant to section 21067 of the Public Resources Code, and section 15367 of the State CEQA Guidelines (Cal. Code Regs., tit. 14, § 15000 et seq.), the City is the lead agency for the proposed Project and has prepared an Initial Study/Mitigated Negative Declaration (SCH#2026080753) ("IS/MND") and a Mitigation Monitoring and Reporting Program ("MMRP") for the Project;

WHEREAS, the public benefits include, among other things, park in-lieu fees, as authorized by law and the City's ordinances, to rehabilitate and improve existing open space and recreational facilities in the City, including but not limited to, the Aquatic Center, Iglesia Community Center and Park, and the Ranch ("Facilities") in order to maintain the City's high standard of recreation and community services while accommodating a growing population, including future residents of the proposed subdivision;

WHEREAS, residents throughout the City regularly use the Facilities due to the variety of programs and services offered. Although the Facilities are located outside of the subdivision, future residents of the subdivision will undoubtedly use and benefit from use of the Facilities as well;

WHEREAS, on March 4, 2026, the City Council held a duly noticed public review to receive and provide initial feedback on concept plans for the Project;

WHEREAS, on September 15, 2026, the City gave public notice of the City Council public hearing for consideration of Mitigated Negative Declaration CEQA-2026-01004, General Plan Amendment GPA-2026-01002, Zone Change ZC-2026-00001, Vesting Tentative Tract Map 19489, Site Development Permit SDP-2026-01001 and Development Agreement DA-2026-01002 for the Project by publishing in a newspaper of general circulation; by posting notices at City Hall and the Project site; and by mailing notices to owners of property within 300 feet, to the project applicant, and to local agencies that provide water, sewage, electricity and schools;

WHEREAS, on October 7, 2026, the City Council held a public hearing as prescribed by law and considered written and verbal public testimony that was submitted prior to the hearing and during the hearing, and evidence and recommendations presented by staff in the agenda report and oral presentation; and

WHEREAS, all legal prerequisites to the adoption of this Resolution have occurred.

NOW, THEREFORE, BE IT RESOLVED BY THE CITY COUNCIL OF THE CITY OF ALISO VIEJO AS FOLLOWS:

Section 1. **Incorporation of Recitals.** The City Council hereby finds and determines that all of the recitals set forth above are true and correct. The above recitals are hereby incorporated as substantive findings of this Resolution.

Section 2. **CEQA**. Pursuant to the California Environmental Quality Act (Public Resources Code, § 21000 et seq.) and the State CEQA Guidelines (California Code of Regulations, title 14, § 15000 et seq.) (Collectively, "CEQA"), the City Council adopted Resolution No. _____, determining that there is no substantial evidence that the approval of the Project would result in a significant adverse effect on the environment, provided appropriate mitigation measures, as identified in the MMRP, are imposed on the Project.

Section 3. **Findings for Vesting Tentative Tract Map 19489.** Pursuant to the requirements of the California Subdivision Map Act (Government Code Section 66410 *et. seq.)* and AVMC Title 14 (Subdivisions), the City Council hereby makes the following findings of fact and approves the Vesting Tentative Tract Map ("VTTM") 19489 as set forth in the Project plans as set forth in Exhibit "B", Sheets 1 and 2 and subject to the conditions of approval as set forth in Exhibit "A", which are attached hereto and incorporated herein by reference.

A. The proposed map is consistent with the applicable General and Specific Plans. The Site has a General Plan land use designation of Business Park. The Applicant proposes a General Plan Amendment to re-designate the property for Medium Density Residential, which allows for residential development of eight to 18 dwelling units per acre. The Vesting Tentative Tract Map proposes 58 multi-family homes on 4.4 acres, resulting in a density of 13.2 dwelling units per acre. As conditioned, the Vesting Tentative Tract Map will not take effect unless the General Plan Amendment, Zone Change, Site Development Permit, and Development Agreement take effect. Accordingly, the proposed map would be consistent with the applicable General Plan Land Use designation. There is no applicable Specific Plan for the Site.

B. The design or improvement of the proposed subdivision is consistent with the General and Specific Plans. The Project is consistent with the goals and policies of the Conservation and Open Space (COS), Housing (H), and Land Use element (LU) listed below in that the Project promotes orderly growth,

provides a compatible transition between non-residential and residential uses, supports housing objectives by creating new residential opportunities, and utilizes existing infrastructure in a manner consistent with the community's long-term vision and planning framework. The Project is also subject to mitigation measures and conditions of approval that address potential impacts related to traffic, noise, air quality, and emergency access. There is no applicable Specific Plan for the Project site.

- Policy COS-1.2 Reduce the amount of water used for landscaping and increase use of native and low water plants. Maximize use of native, low-water plants for landscaping of areas adjacent to sidewalks or other impermeable surfaces.
- Policy COS-4.2 Encourage and maintain high-quality architectural and landscaping designs that enhance or complement the community's visual character.
- Policy COS-7.5 Ensure that new development provides park land and/or improvements at a fair share ratio, pursuant to the City's Parkland Ordinance.
- Goal H-1: Encourage a diversity of housing types and provide affordability levels within Aliso Viejo to meet the needs of community residents.
- Policy H-1.1 Identify sites appropriate for the development of a variety of housing types and price ranges to meet the needs of all socioeconomic segments of the community through the disbursement of affordable units in projects.
- Policy H-1.2 Encourage through the use of density bonuses and rezoning to allow for residential development, development of affordable housing opportunities throughout the community, as well as development of housing for elderly and low- and moderate-income households near public transportation services.
- Policy H-1.4 Ensure that a portion of future residential development is affordable to low- and very-low-income households by designating certain sites as having the potential to be used for residential uses.
- Policy H-3.8 Review existing zoning policies and explore zoning changes to facilitate the development of affordable housing.
- Policy LU-12.2 As a condition upon new development, require payment of park fees and/or dedication and provision of parkland, recreation facilities and/or multi-use trails that improve the public and private recreation system.

C. The proposed subdivision conforms to all applicable zoning standards set forth in AVMC Title, as required by AVMC Section 14.08.050. With the proposed zone change to Medium Density Residential, together with the associated development, the Project conforms with all applicable zoning standards set forth in the AVMC. The Project includes requests for incentives, concessions, and waivers pursuant to California State Density Bonus Law (Government Code Section 65915). The Project provides three deed-restricted very low-income units, representing at least five percent of the total units, and therefore

qualifies for consideration of the requested density bonus incentives and waivers. The requested modifications include a one-foot increase in building height, a reduction in common open space, reduced perimeter setbacks, and reduced minimum boundary landscaping standards.

In addition, the Project qualifies for a reduced parking requirement under State Density Bonus Law. Based on the applicable density bonus parking ratio, the Project is required to provide a minimum of 130 parking spaces. The Project proposes 140 parking spaces, consisting of 116 private residential parking spaces within garages and 24 unenclosed guest parking spaces, including one ADA-accessible space. Accordingly, the Project exceeds the minimum parking requirement established under State Density Bonus Law.

With these provisions, the Project conforms to the permitted use requirements and development standards of the zoning code and remains consistent with all applicable Specific Plan regulations.

D. The site is physically suitable for the type of development. The Site is generally level, has adequate access from existing public streets, and is served by established infrastructure systems including water, sewer, storm drainage, and utilities. The Site's size, configuration, and surrounding land use context are appropriate to accommodate the Project consistent with applicable zoning and General Plan designations. No unusual topographic, geologic, or environmental conditions have been identified that would render the site unsuitable for residential use.

E. The site is physically suitable for the proposed density of development. The Project includes a General Plan Amendment to re-designate the property to Medium Density Residential, which permits residential development at a range of eight to 18 dwelling units per acre. The Vesting Tentative Tract Map proposes 58 multi-family homes on 4.4 acres, resulting in a density of approximately 13.2 dwelling units per acre. This proposed density falls within the allowable range for the Medium-Density Residential designation.

F. The design of the subdivision and the proposed improvements are not likely to cause substantial environmental damage or substantial and avoidable injury to fish or wildlife or their habitat. The Project site is currently developed with an office building, surface parking lot, and landscaping. There is no fish, wildlife, or any habitat that would be affected by the Project.

G. The design of the subdivision or type of improvements is not likely to cause serious public health problems. The Project will be served by existing off-site infrastructure, with new on-site water, sewer, and storm drain facilities designed to connect to and extend those systems. All facilities have adequate capacity to accommodate the proposed residential use. The subdivision design incorporates standard improvements, including paved streets, sidewalks, street lighting, and utility connections that will be constructed in compliance with

applicable building codes and City engineering standards. The Initial Study prepared for the Project did not identify any conditions that would result in significant public health impacts, and all potentially significant effects have been mitigated to less-than-significant levels.

H. The design of the subdivision or the type of improvements will not conflict with existing easements, acquired by the public at large, for access through or use of property within the subdivision. The Project as conditioned requires the Applicant to obtain easement holders' authorization for any improvements or encroachments prior to building permit issuance.

I. The advisory agency shall determine whether the discharge of waste from the proposed subdivision into an existing sanitary sewer system would result in or add to a violation of existing requirements prescribed by either the Santa Ana or San Diego Regional Water Quality Control Boards. The Initial Study/Mitigated Negative Declaration (IS/MND) identified the Moulton Niguel Water District (MNWD) collection system for treatment at existing regional treatment facilities and concluded that the project would not violate any water quality standards or waste discharge requirements, nor substantially degrade surface water or groundwater quality. In correspondence dated October 1, 2025, MNWD indicated that it will provide water, recycled water, and wastewater service to the proposed development and that a preliminary review suggests adequate water supply and sewer capacity are available to serve the project. The project remains subject to all applicable federal, State, regional, and local water quality regulations, including National Pollutant Discharge Elimination System requirements, implementation of the approved Water Quality Management Plan, and applicable Regional Water Quality Control Board regulations.

J. If the advisory agency approves or conditionally approves a tentative map which deviates from any standard of design as allowed by AVMC, the advisory agency shall make a finding that each such deviation has been individually considered and found to be justified based upon specific special circumstances. No deviations from the subdivision design standards are proposed as part of the Vesting Tentative Tract Map. Accordingly, no deviations require consideration or justification based on special circumstances, and this finding is not applicable.

Section 4. **Findings for Site Development Permit SDP-2026-01001.** Pursuant to AVMC 15.74.020 (Site Development Permits), the City Council hereby makes the following findings of fact and approves the Site Development Permit SDP-2026-01001, subject to the conditions of approval as set forth in Exhibit "A" and Project plans as set forth in Exhibit "B", which are attached hereto and incorporated herein by reference.

A. Consistency with General Plan. The project is consistent with the general plan and any applicable specific plan. The Project with the General Plan

Amendment to Medium Density Residential is consistent with the goals and policies of the General Plan as listed below in that it incorporates landscaping aligned with the City Council-approved plant palette, emphasizing low-water, drought-tolerant species; features building materials, colors, and architectural design that are compatible with the surrounding residential communities; includes a development impact fee that a portion of which is consistent the City's parkland ordinance; proposes three affordable housing units restricted to very low-income households, thereby enhancing housing diversity and affordability; and introduces rezoning to facilitate residential development that includes affordable units in support of the City's housing objectives.

- Policy COS-1.2 Reduce the amount of water used for landscaping and increase use of native and low water plants. Maximize use of native, low-water plants for landscaping of areas adjacent to sidewalks or other impermeable surfaces.
- Policy COS-4.2 Encourage and maintain high-quality architectural and landscaping designs that enhance or complement the community's visual character.
- Policy COS-7.5 Ensure that new development provides park land and/or improvements at a fair share ratio, pursuant to the City's Parkland Ordinance.
- Goal H-1: Encourage a diversity of housing types and provide affordability levels within Aliso Viejo to meet the needs of community residents.
- Policy H-1.1 Identify sites appropriate for the development of a variety of housing types and price ranges to meet the needs of all socioeconomic segments of the community through the disbursement of affordable units in projects.
- Policy H-1.2 Encourage through the use of density bonuses and rezoning to allow for residential development, development of affordable housing opportunities throughout the community, as well as development of housing for elderly and low- and moderate-income households near public transportation services.
- Policy H-1.4 Ensure that a portion of future residential development is affordable to low- and very-low-income households by designating certain sites as having the potential to be used for residential uses.
- Policy H-3.8 Review existing zoning policies and explore zoning changes to facilitate the development of affordable housing.
- Policy LU-12.2 As a condition upon new development, require payment of park fees and/or dedication and provision of parkland, recreation facilities and/or multi-use trails that improve the public and private recreation system.

B. Consistency with Zoning Code. The land use and associated development conform to the permitted use provisions and development standards of this zoning code and is consistent with this code and any applicable specific plan. The proposed zone change to Medium Density Residential, together with the

associated development, is compatible with surrounding land uses, providing a transition that complements the existing neighborhood character. The property is suitable for residential use based on its location, access, visual character, and topography, and existing infrastructure is adequate to support the proposed development. The Project includes requests for incentives, concessions, and waivers pursuant to California State Density Bonus Law (Government Code Section 65915). The Project provides three deed-restricted very low-income units, representing at least five percent of the total units, and therefore qualifies for consideration of the requested density bonus incentives and waivers. The requested modifications include a one-foot increase in building height, a reduction in common open space, reduced perimeter setbacks, and reduced minimum boundary landscaping standards. In addition, the Project qualifies for a reduced parking requirement under State Density Bonus Law. Based on the applicable density bonus parking ratio, the Project is required to provide a minimum of 130 parking spaces. The Project proposes 140 parking spaces, consisting of 116 private residential parking spaces within garages and 24 unenclosed guest parking spaces, including one ADA-accessible space. Accordingly, the Project exceeds the minimum parking requirement established under State Density Bonus Law. With these provisions, the Project conforms to the permitted use requirements and development standards of the zoning code and remains consistent with all applicable Specific Plan regulations.

C. Compliance with CEQA. Processing and approval of the permit application are in compliance with the requirements of the California Environmental Quality Act. An Initial Study (“IS”) was prepared for the project, which identified potentially significant environmental impacts. However, these impacts can be mitigated to less than significant levels through revisions and implementation of mitigation measures. As such, a Mitigated Negative Declaration (“MND”) was prepared and circulated for a 20-day public review period from August 28 through September 17, 2026, with distribution to the State Clearinghouse, public agencies, nearby property owners, and interested parties. One comment was received from the California Department of Transportation (Caltrans), and its recommendation regarding construction haul routes using the state route highway system has been incorporated as conditions of approval. The IS determined that the project would not result in significant impacts to most resource areas, and identified mitigation measures for biological resources, cultural resources, tribal cultural resources, and geology and soils, which are included in the Mitigation Monitoring Program and Conditions of Approval.

D. Architectural Design. Directly north of the site are established multi-family and single-family residential communities. The adjacent multi-family development, in particular, shares several defining characteristics with the Project, including similarly scaled buildings composed of six attached units. The architectural style is complementary, featuring stucco exteriors, tile roofing, wrought iron balconies, recessed entryways, and communal open space without private

driveways. The surrounding single-family tract homes also reflect a consistent architectural design, with comparable color palettes, exterior finishes, and material selections. The Project further enhances this compatibility through the inclusion of framed windows, some accented with faux shutters, as well as a mix of hip and gable roof forms, which reflects the roof styles found in nearby residences. The proposed Project consists of similar attached townhome units with comparable building massing, architectural features, private garages, guest parking, landscaped common open-space amenities as the recently approved 95 Argonaut development, further demonstrating architectural compatibility. Both projects are designed to transition former office properties to residential communities while maintaining architectural consistency with surrounding neighborhoods. Collectively, these design elements ensure compatibility with the surrounding development

E. Site Design. Based on the analysis provided in the Initial Study and supporting documentation, the Project will retain the existing single-entry driveway at the southern end of the site along Argonaut. The internal private roadway system designed to provide two-way access to residential garages and guest parking spaces, emergency access, hydrant placement has been reviewed and conceptually approved by both the Building Division and the OCFA. Each unit will include an enclosed private garage with dedicated space for trash bin storage. Approximately 9% of the site will be dedicated to open space, including a private park, shared yards, pedestrian walkways, and perimeter landscaping. Perimeter fencing and exterior mechanical equipment will be screened with additional landscaping, and the site entrance will be enhanced with decorative paving, signage, and accent trees. Lighting throughout the site, including streetlights, bollards, and shade structures, will be designed with recessed, downward-facing fixtures to minimize light spill which are compatible with the designs of the surrounding residential communities.

F. Landscape Design. Project landscaping, including but not limited to the location, type, size, color, texture, and coverage of plant materials, has been designed so as to provide visual relief, complement buildings, visually emphasize prominent design elements and vistas, screen undesirable views, provide a harmonious transition between adjacent land uses and between development and open space, and provide an overall unifying influence to enhance the visual continuity of the project. The Project incorporates a landscape plan that enhances the overall visual continuity of the site and complements the architectural character of the development. Existing landscaped slopes and mature screening trees along the northern and western boundaries will be preserved, maintaining established landscape buffers adjacent to Glenwood Drive and Aliso Creek Road. The Project provides common open-space amenities, including a community garden, dog play area, shade structure, barbeque area, pedestrian walkways, and landscaped gathering areas. In addition, approximately 7,611 square feet of private yard area is provided for individual residential units, and preserved open-space

slope areas remain throughout the Site. Landscaping is also proposed around the exterior mechanical equipment and perimeter fencing to screen undesirable views. The site entrance is designed to create a welcoming and visually prominent focal point, enhanced with decorative paving, signage, and accent trees. The proposed landscaping aligns with the City Council-approved plant palette, emphasizing low-water, drought-tolerant species.

Section 5.**Severability**. If any provision of this Resolution or the application thereof to any person or circumstance is held invalid, such invalidity shall not affect other provisions or applications of this Resolution that can be given effect without the invalid provision or application, and to this end the provisions of this Resolution are severable. The City Council hereby declares that it would have adopted this Resolution irrespective of the invalidity of any particular portion thereof.

Section 6. **Location of Documents.** The administrative record for the Project is maintained at City Hall located at 12 Journey, Suite 100, Aliso Viejo, CA 92656. The custodian of records is the City Clerk.

Section 7. **Effective Date.** This Vesting Tentative Tract Map 19489, Site Development Permit SDP-206-01001 shall not take effect unless and until General Plan Amendment 2026-01002, Zone Change ZC-2026-01001, and the Development Agreement DA-2026-01002 are each approved by the City Council and have become effective, and the associated Development Agreement is approved by the City Council and executed by both parties thereto.

Section 8. **Execution of Resolution**. The Mayor shall sign this Resolution and the City Clerk shall attest and certify to the passage and adoption thereof.

PASSED, APPROVED AND ADOPTED this 7th day of October 2026.

Case Nos. GPA-2026-01002, ZC 2026-01001, VTTM 19489, and SDP-2026-01001

General

1. Indemnification. The Applicant shall indemnify, protect, defend, and hold the city, and/or any of its officials (appointed or elected), officers, employees, agents, departments, agencies, and instrumentalities thereof, harmless from any and all claims, demands, lawsuits, writs of mandamus, and other actions and proceedings (whether legal, equitable, declaratory, administrative or adjudicatory in nature), and alternative dispute resolution procedures (including, but not limited to arbitrations, mediations, and other such procedures), judgments, orders, and decisions (collectively 'Actions'), brought against the city, and/or any of its officials, officers, employees, agents, departments, agencies, and instrumentalities thereof, that challenge, attack, or seek to modify, set aside, void, or annul, any action of, or any permit or approval issued by the city and/or any of its officials, officers, employees, agents, departments, agencies, and instrumentalities thereof (including actions approved by the voters of the city) for or concerning the project, whether such Actions are brought under the Ralph M. Brown Act, California Environmental Quality Act, Planning and Zoning Law, Subdivision Map Act, Community Redevelopment Law, Code of Civil Procedure Sections 1085 or 1094.5, or any other federal, state, or local constitution, statute, law, ordinance, charter, rule, regulation, or any decision of a court of competent jurisdiction. It is expressly agreed the city shall have the right to approve, which approval will not be unreasonably withheld, legal counsel providing the city's defense, and that Applicant shall reimburse city for any costs and expenses directly and necessarily incurred by the city in the course of the defense. The city shall promptly notify the Applicant of any action brought, and city shall cooperate with the Applicant in defense of the action.

2. Other Agency Approvals. The Applicant shall comply with all applicable requirements of outside agencies having jurisdiction, including but not limited to the local fire authority, water district, and any other local, regional, State, or Federal agencies.

3. **Prior to approval of the Final Map or issuance of a grading permit, whichever occurs first**, the Applicant shall provide documentation from applicable utility providers confirming the availability and capacity of water, sewer, electric, communications, and other required utility services necessary to serve the project.

4. **Prior to issuance of a certificate of occupancy for the first residential unit**, the Applicant shall submit a Solid Waste Management Plan demonstrating compliance with applicable State recycling and organics requirements, including provisions for the storage, collection, and handling of solid waste, recyclable

materials, and organic waste. Any required waste collection areas shall be screened and maintained in accordance with the Municipal Code.

5. Public Works. If applicable, the Applicant shall apply for and obtain encroachment permits or other permits from the Public Works Department for any work or placement within the public right-of-way.

Development Agreement and Vesting Tentative Tract Map

6. **Prior to issuance of any permit,** the Applicant shall execute the Development Agreement with the City. The Applicant shall comply with all terms and conditions of the agreement.

7. Payment of the full $2,057,651 fee amount shall be made to the City **prior to the issuance of a building permit** for the Project. No permit shall be issued until the City has received the full payment and confirmed compliance with all applicable fee requirements. The City shall have no obligation to issue any permit until and unless such payment is received in full, any delay resulting from non-payment shall be solely the responsibility of the Applicant.

8. The Applicant shall provide a minimum of 3 dwelling units on-site as for-sale housing, which shall be deed restricted to very low-income households. Each unit shall be designed and located in full compliance with the plans reviewed by the City Council on October 7, 2026. **Prior to issuance of any permit,** the Applicant shall execute the Density Bonus Housing Agreement as provided in the Development Agreement. The Applicant shall comply with all terms and conditions of the Density Bonus Housing Agreement and the Development Agreement.

Vesting Tentative Tract Map

9. **Prior to approval of the Final Map or issuance of a permit,** the Applicant shall submit a Fire Master Plan to Orange County Fire Authority for review.

10. **Prior to approval of the Final Map**, the property owners shall sign the ownership certification on the map. If an authorized person is to sign for an owner, the Applicant shall submit documentation of such authorization to the City for review and approval.

11. Utility lines, including, but not limited to, electric, communications, street lighting, and cable television, shall be placed underground. The Applicant is responsible for making the necessary arrangements with the utility companies for the installation of such facilities. Appurtenances and associated equipment such as, but not limited to, surface-mounted transformers, pedestal-mounted terminal boxes, meter cabinets, and concealed ducts in an underground system may be placed above ground within the street right-of-way where sufficient right-of-way width exists so as not to pose a serious hazard to pedestrian traffic.

12. All lots shall be connected to a sanitary sewer system.

Construction

13. The approved project involves the demolition of an existing office building development and construction of a new 58-unit townhome complex with associated parking lot and open space amenities. The project shall be constructed and maintained in full compliance with the approved plans and specifications, including but not limited to all details regarding building height, setbacks, site layout, parking, circulation, architectural features, and other design elements, reviewed by the City Council on October 7, 2026. Any modifications or deviations from the approved plans shall require prior review and approval by the City pursuant to AVMC 15.74.110 (Modifications to discretionary permits).

14. The approved project shall comply with all applicable provisions of the Aliso Viejo Municipal Code, including but not limited to building codes and any conditions imposed as part of the approval process.

15. **Prior to issuance of any permits,** the Applicant shall submit and obtain City approval of a construction plan detailing the phasing and timing of demolition of the existing office building, site grading, infrastructure installation, landscape/open space installation and construction of the approved 58-unit townhome community. All work shall proceed in accordance with the approved construction plan, and any substantive changes to phasing or timing shall require prior written authorization from the City.

16. **Prior to issuance of any permits**, the Applicant shall submit a proposed haul route for the transport of earth, materials, and equipment to and from the site. The haul route shall be reviewed and approved by the City to ensure public safety, minimize traffic impacts, and protect adjacent properties. No grading or excavation shall occur until the haul route has received written approval, and any subsequent modifications shall require prior authorization by the City.

17. **Following completion of grading and prior to issuance of any building permits**, the Applicant shall submit a pad certification prepared and signed by a licensed civil engineer or geotechnical engineer, verifying that all building pads have been graded in accordance with the approved grading plans and are suitable for the intended construction. The certification shall be reviewed and approved by the City prior to any construction.

18. Construction activities shall be limited to the hours of 7:00 a.m. to 8:00 p.m., Monday through Saturday. No construction shall occur on Sundays or on Federal holidays. Use of rock crusher on site is prohibited.

19. **Prior to issuance of any grading permit**, the Applicant shall submit a final drainage report, including detailed drainage and hydrology calculations, for review and approval by the City Engineer. The final drainage report shall demonstrate consistency with the approved preliminary drainage concept and confirm that proposed drainage improvements adequately convey, treat, detain, and discharge stormwater in accordance with applicable City and County standards.

20. **Prior to issuance of a precise grading permit**, the Applicant shall submit to the Director of Public Works for review and approval, street improvement plans including drainage plans and hydraulic calculations prepared by a California Registered Civil Engineer.

21. **Prior to grading or building permit issuance**, the Applicant shall prepare and submit for approval a Project Specific Final Water Quality Management Plan (F-WQMP) for the subject project. The F-WQMP shall be consistent with the approved Preliminary Water Quality Management Plan and in full conformance with the Technical Guidance Document.
    a. The Final Water Quality Management Plan shall include a copy of the applicable final Conditions of Approval, complete and thorough contents for all attachments, and a copy of the draft construction plan set, including project-specific details for all proposed water quality systems.
    b. The Water Quality Management Plan site plan shall show all applicable features proposed in the project narratives, including all source control and structural BMPs, including but not limited to catch basins, catch basin filters, catch basin stencils, drainage swales, parking lots, buildings, pump facilities, trash enclosures, retaining wall locations, landscaped areas, areas not a part of the project, and the point of compliance. The site plan shall be included in the Operations and Maintenance Plan and shall identify all BMPs required to be maintained in perpetuity.
    c. The Final Water Quality Management Plan shall: revise Section 3.4 to reflect all applicable impairments to Aliso Creek; revise Sections 4.1 and 4.3 to reflect the true proposed path of travel for on-site flows; revise Section 5.2 to accurately represent the proposed LID BMPs; and revise Section 6 to include all information necessary to accurately describe the proposed project.
    d. The Operations and Maintenance Plan shall be revised to include all applicable source control and structural control BMPs, including the proposed pump, catch basin inspection and maintenance, and street sweeping. The Applicant shall remove any items that are not relevant to this project.
    e. The Applicant shall revise the stormwater documentation to ensure consistency and accurate representation of the project's impervious area, including reconciliation of the discrepancy between the SOHM report impervious area and the impervious area stated elsewhere in the Water Quality Management Plan.

22. **Prior to issuance of any permit**, during all grading and construction activities, the construction contractor shall post a clearly visible sign at the project site boundary listing a contact name and telephone number.

23. **At least ten (10) days prior to commencement of mass grading, demolition, or major earth-moving activities**, the Applicant shall provide written notice to surrounding property owners and occupants describing the anticipated construction schedule, duration of activities, hours of construction, haul routes, and a project contact telephone number. **Prior to issuance of any permit,** the Applicant shall submit a copy of the written notice to the City for review.

24. **Prior to building permit final of any unit,** perimeter fencing shall be installed on two sides of the property as referenced in the approved plans. The use of chain link, barbed wire, razor wire or electrified fencing are prohibited.

25. Project identification sign is required. Prior to installation of this sign, the project name shall be approved by the City to ensure appropriateness, aid in identification for emergency services and to avoid duplication with other projects in the City. Placement of any permanent and temporary signs may be permitted pursuant to AVMC Chapter 15.34.

26. Screening of Equipment and Facilities. Mechanical equipment, ground-mounted utility, mechanical, and other similar equipment shall be screened pursuant to AVMC 15.14.120 (Screening of Equipment and Facilities).

27. Landscaping shall comply with AVMC 15.62.060 (Landscaping and screening). All landscaping and common areas on site shall be maintained in perpetuity by the Applicant or an established homeowners' association.

28. **Prior to issuance of any demolition or grading permit**, the Applicant shall submit a Construction Waste Management Plan for review and approval by the Director of Public Works. The plan shall identify methods for recycling, salvaging, and diverting construction and demolition debris generated by the project and shall comply with applicable City waste reduction requirements. The Applicant shall demonstrate a minimum diversion rate of 75 percent from landfill disposal.

29. During construction, the Applicant and its contractors shall protect all existing survey monuments. Any survey monument disturbed or destroyed during construction shall be replaced or reset by a licensed land surveyor in accordance with applicable State law and City requirements.

30. **Prior to issuance of any grading permit**, the Applicant shall prepare and implement a Storm Water Pollution Prevention Plan (SWPPP), if required by State law, and shall obtain coverage under applicable National Pollutant Discharge Elimination System (NPDES) permits. Documentation demonstrating compliance shall be provided to the Director of Public Works.

31. The Applicant shall retain a Qualified SWPPP Developer (QSD) and Qualified SWPPP Practitioner (QSP), as required by the State Construction General Permit, to prepare and implement all stormwater pollution prevention measures during construction activities.

32. If project grading activities require the import or export of more than 500 cubic yards of material, the Applicant shall obtain approval from the Director of Public Works prior to commencement of hauling operations. Any required haul route plan shall identify truck routes, hours of operation, traffic control measures, and street maintenance responsibilities.

Temporary Use Permits

33. The temporary placement of a trailer, recreational vehicle or other relocatable building, or the temporary use of a permanent structure on an active construction or grading site to serve as a construction and/or guard office may be permitted subject to approval of a temporary use permit pursuant to AVMC 15.14.170 (Construction and Guard Offices).

34. Temporary model home complexes and real estate sales offices may be established subject to approval of a temporary use permit pursuant to AVMC 15.14.180 (Model Home Offices).

Permit Validity

35. Expiration. This approval shall expire and be of no further force or effect if:
    a. The permit is not established within two years of the permit's effective date or such other time period designated by the permit approval, by state law, or by this code; or
    b. After establishment, the use or activity for which the permit was approved is discontinued or abandoned for a period of one year.

36. Time Extensions. Upon application before expiration of the period of validity, the City Council may grant or conditionally grant an extension to the period of validity for up to one year per extension if it finds that such an extension is justified by the circumstances of the original findings for the project can still be made with, if necessary, the imposition of conditions not originally imposed on the project. The filing of an application for extension shall stay expiration of the permit until action is taken on the time extension by the decision-making authority. No more than two one-year extensions may be granted or conditionally granted.

37. Revocation of discretionary permits. Any discretionary permit may be revoked by the original decision-making authority pursuant to the provisions of AVMC 15.74.120 (Revocation of Discretionary Permits).

Orange County Fire Authority ("OCFA")

38. **Prior to building permit issuance,** submit plans for review and approval of the following: underground piping for private hydrants and fire sprinkler systems, and fire sprinkler systems.

39. **Prior to concealing interior construction**, submit plan for review and approval of the fire alarm system.

Mitigation Measures

Biological Resources

45. MM BIO-1a: Nesting Bird Pre-construction Surveys If ground-disturbing or vegetation-removing construction activities or tree removal is proposed during the breeding/nesting season for migratory birds (February 1 through September 15), a qualified Biologist shall conduct pre-construction surveys for special-status birds and other migratory birds within the construction area, including a 300-foot survey buffer (where accessible), no more than three (3) days prior to the start of ground-disturbing activities in the construction area.

46. MM BIO-1b: Avoidance of Active Avian Nests If an active nest (i.e., occupied by eggs or fledglings) is located during pre-construction surveys or at any point during the construction phase of the proposed project, the City of Aliso Viejo shall be notified regarding the status of the nest. Furthermore, construction activities shall be restricted as necessary to avoid disturbance of the nest until the eggs or fledglings no longer are in the nest or a qualified Biologist deems disturbance potential to be minimal. Restrictions may include establishment of exclusion zones (no ingress of personnel or equipment at a minimum radius of 300 feet around an active raptor nest and a 50-foot radius around an active migratory bird nest) or alteration of the construction schedule.

Cultural Resources

47. MM CUL-1: Prior to the initiation of construction activities, all construction personnel conducting ground disturbance at the site shall be provided a Worker Environmental Awareness Program (WEAP) cultural resources "tailgate" training. The training shall include visual aids, a discussion of applicable laws and statutes relating to archaeological resources, types of resources that may be found within the project site, and procedures to be followed in the event such resources are encountered. The training shall be conducted by an Archaeologist who meets the Secretary of the Interior's Professional Qualification Standards for archaeology. An Archaeologist who meets the Secretary of the Interior's Professional Qualification Standards for archaeology shall conduct an updated survey of the site following demolition and exposure of native soils and prior to any project-related trenching or grading to check for the inadvertent exposure of cultural materials. This shall be followed by archaeological monitoring during the grading and trenching phase of the

proposed project. At the completion of these phases, archaeological monitoring shall be reduced to periodic “spot checks.” In the event exposed soils indicate cultural materials may be present, this may be followed by regular or full-time archaeological monitoring as determined by the Archaeologist.

48. MM CUL-2: In the event that buried archaeological resources are discovered during construction, operations shall stop within a 100-foot radius of the find and an Archaeologist who meets the Secretary of Interior’s Professional Qualification Standards for archaeology shall be consulted to determine whether the resource requires further study. The qualified Archaeologist shall make recommendations to the Lead Agency on the measures that shall be implemented to protect the discovered resources, including but not limited to excavation of the finds and evaluation of the finds in accordance with Section 15064.5 of the CEQA Guidelines. Potentially significant cultural resources consist of but are not limited to stone, bone, fossils, wood, or shell artifacts or features, including hearths, structural remains, or historic dumpsites. Any previously undiscovered resources found during construction within the project area shall be recorded on appropriate California Department of Parks and Recreation (DPR) forms and evaluated for significance in terms of CEQA criteria. If the resources are determined to be unique historic resources as defined under Section 15064.5 of the CEQA Guidelines, mitigation measures shall be identified by the monitor and recommended to the Lead Agency. Appropriate mitigation measures for significant resources could include avoidance or capping, incorporation of the site in green space, parks, or open space, or data recovery excavations of the finds. The Lead Agency, along with other relevant or Tribal officials, shall be contacted upon the discovery of cultural resources to begin coordination on the disposition of the find(s). Treatment of any significant cultural resources shall be undertaken with the approval of the Lead Agency. No further grading shall occur in the area of the discovery until the Lead Agency approves the measures to protect these resources. Upon coordination with the Lead Agency, any archaeological artifacts recovered shall be donated to an appropriate Tribal custodian or a qualified scientific institution where they would be afforded applicable cultural resources laws and guidelines.

49. MM CUL-3: In the event of the accidental discovery or recognition of any human remains, CEQA Guidelines Section 15064.5, Health and Safety Code Section 7050.5, and Public Resources Code Sections 5097.94 and Section 5097.98 shall be followed. If during the course of project construction, there is accidental discovery or recognition of any human remains, the following steps shall be taken: 1. There shall be no further excavation or disturbance of the site where human remains are discovered and/or any nearby area reasonably suspected to overlie adjacent human remains until the County Coroner is contacted to determine whether the remains are Native American and if an investigation of the cause of death is required. If the Coroner determines the remains to be Native American, the Coroner shall contact the Native American Heritage

Commission (NAHC) within 24 hours, and the NAHC shall identify the person or persons it believes to be the Most Likely Descendant (MLD) of the deceased Native American. The MLD may make recommendations to the landowner or the person responsible for the excavation work within 48 hours, for means of treating or disposing of, with appropriate dignity, the human remains, and any associated grave goods as provided in Public Resource Code Section 5097.98. 2. Where the following conditions occur, the landowner or his or her authorized representative shall rebury the Native American human remains and associated grave goods with appropriate dignity either in accordance with the recommendations of the MLD or on the project site in a location not subject to further subsurface disturbance:

a. The NAHC is unable to identify an MLD or the MLD failed to make a recommendation within 48 hours after being notified by the commission.
b. The descendant identified fails to make a recommendation.
c. The landowner or his authorized representative rejects the recommendation of the descendant, and mediation by the NAHC fails to provide measures acceptable to the landowner.

Geology and Soils

50. COA GEO-1a: In accordance with Municipal Code 13.08.170, Soil Engineering and Engineering Geology Reports, a soil engineering and engineering geology report shall be required for grading projects unless otherwise waived by the building official. The reports shall include information appropriate for the site including any information required by the building official. Recommendations included in the reports and approved by the building official shall be incorporated in the grading plans or specifications. Accordingly, prior to issuance of grading permit, the project applicant shall provide grading plans or specifications that include all recommendations from the proposed project's September 26, 2025, Geotechnical Investigation prepared by Alta California Geotechnical, Inc., or from the latest geotechnical study for the proposed project.

51. COA GEO-1b: Prior to and during grading, all grading activities adjacent to the existing slopes along the western and northern boundaries of the site shall be observed by a licensed California Geotechnical Engineer or Certified Engineering Geologist, consistent with the requirements of Aliso Viejo Municipal Code Chapter 13.08 (Grading and Excavation Code). If geologic or geotechnical conditions associated with slope instability are encountered that differ from those described in the approved Geotechnical Investigation prepared by Alta California Geotechnical, Inc. (September 26, 2025), the project Geotechnical Consultant shall evaluate such conditions and prepare supplemental geotechnical recommendations, as necessary, in accordance with the California Building Code and California Geological Survey Special Publication 117A. Any supplemental recommendations or corrective measures shall be incorporated into the grading or construction plans and shall be subject

to review and approval by the City Engineer prior to continuation of grading in the affected area, consistent with the Aliso Viejo Municipal Code.

52. MM GEO-1: The project applicant shall enlist a qualified Paleontologist (meeting the standards of the Society of Vertebrate Paleontology [SVP]) to prepare a Worker Environmental Awareness Program (WEAP) presentation for construction personnel. It will include information on paleontological resources, laws protecting them, types of fossils that could occur at the project site, and protocol for unanticipated discoveries. In the event that fossils are discovered during construction, excavations within 50 feet of the find shall be temporarily halted or diverted. The contractor shall notify the qualified Paleontologist to examine the discovery. The qualified Paleontologist shall document the discovery as needed in accordance with SVP standards, evaluate the potential resource, and assess the significance of the find under the criteria set forth in CEQA Guidelines Section 15064.5. Based on the significance of the find, the qualified Paleontologist shall determine procedures to be followed before construction is allowed to resume at the location of the find. If, in consultation with the qualified Paleontologist, it is determined that avoidance is not feasible, the qualified Paleontologist shall prepare a Paleontological Resources Impact Mitigation Program (PRIMP) to outline salvage and recovery procedures. If deemed necessary by the qualified Paleontologist, the PRIMP shall include construction monitoring requirements as well. The PRIMP shall be submitted to the City for review and approval and the approved plan shall be implemented.

Hazards and Hazardous Materials

53. MM HAZ-1: Implementation of Asbestos-containing Material, Lead-based Paint, and Petromat Surveys Prior to Site Demolition Activities: Prior to the issuance of demolition permits, the proposed project shall retain a Qualified Environmental Professional to conduct asbestos-containing material (ACM), lead-based paint (LBP), and Petromat surveys. If ACM or LBP are identified in existing building materials or if asbestos is identified within any Petromat that is part of the existing parking lot, proper removal and disposal of the materials in accordance with applicable local, regional, State, and federal regulations would be required. In addition, the developer shall implement all appropriate engineering controls, work practices, and notification procedures to prevent exposure of workers and the public and shall prepare and submit all necessary compliance documentation to the City.

Tribal Cultural Resources

54. MM TCR-1: Retention of Qualified Archaeologist and Worker Training. Prior to the issuance of a grading permit by the City of Aliso Viejo, evidence shall be provided to the City that a qualified archaeologist meeting the Secretary of the Interior's Standards for professional archaeology has been retained by the Applicant to conduct any required training, evaluation, or treatment of archaeological resources that might be encountered during implementation of

the project. Prior to the start of grading, the qualified archaeologist shall conduct cultural resources sensitivity training for all construction personnel. Construction personnel must be informed of the types of archaeological resources that may be encountered, both prehistoric and historical, and of the proper procedures to be enacted in the event of an inadvertent discovery of archaeological resources or human remains. The Applicant must ensure that construction personnel are made available for and attend the training and retain documentation demonstrating attendance. This documentation shall be made available to the City upon request.

55. MM TCR-2: Native American Monitoring. A Native American monitor from or approved by the project's consulting Tribes (Juaneño Band of Mission Indians Acjachemen Nation – 84A and Juaneño Band of Mission Indians Acjachemen Nation – Belardes) shall be present during all earth-moving construction activities. The Native American monitor shall be given the opportunity to participate in the cultural resource sensitivity training. At least 30 days prior to issuance of grading permits by the City for the project site and any off-site improvements, a Native American Monitoring Agreement shall be developed between the Applicant and the consulting party. The Monitoring Agreement shall identify monitoring requirements, treatment of cultural resources, communication protocols in the event of an unanticipated discovery, and the roles, responsibilities, and authorities of the Native American Monitor. The Monitoring Agreement shall also detail protocols for treatment and final disposition of any Native American cultural resources, sacred sites, and human remains discovered on the site that the Native American Monitor shall implement in consultation and coordination with the Native American Most Likely Descendant, as identified by the NAHC. Discovery and treatment of human remains shall comply with State Health and Safety Code Section 7050.5 and Public Resources Code Section 5097.98.

56. MM TCR-3: Archaeological Resource and/or Tribal Cultural Resource Discovery and Treatment. In the event of the unanticipated discovery of archaeological or other cultural resources, whether discovered through Native American monitoring or not, all work activities in the area within approximately 100 feet of the discovery shall be halted or redirected until the discovery can be evaluated by a qualified archaeologist. Construction shall not resume until a qualified archaeologist has conferred with the City and, in the case of prehistoric archaeological resources and tribal cultural resources, the Native American monitor, on the significance of the resource. If the discovered archaeological resource and/or tribal cultural resource is significant, avoidance and preservation in place shall be the preferred manner of mitigation pursuant to Public Resources Code Sections 21083.2(b) and 21084.3. If preservation in place is infeasible and data recovery through excavation is the only feasible mitigation available, a Treatment Plan shall be prepared and implemented by a qualified archaeologist, in consultation with the City. The City and Applicant shall also consult with appropriate Native American representatives in

determining treatment for prehistoric or Native American resources. Any evaluation and treatment shall be supervised by an individual or individuals that meet the Secretary of the Interior's Professional Qualification Standards.

57. MM TCR-4: Treatment of Human Remains. In accordance with California Health and Safety Code Section 7050.5, if human remains are found, the Orange County Sheriff's Coroner shall be immediately notified of the discovery. No further excavation or disturbance of the site or any nearby area reasonably suspected to overlie adjacent remains, approximately 100 feet or as determined by the project archaeologist, shall occur until the procedures set forth in this measure have been implemented. If the County Coroner determines that the remains are, or are believed to be, Native American, the Coroner shall notify the Native American Heritage Commission (NAHC) within 24 hours. In accordance with California Public Resources Code Section 5097.98, the NAHC must immediately notify those persons it believes to be the Most Likely Descendant (MLD) from the deceased Native American. The MLD shall complete their inspection within 48 hours of being granted access to the site. The designated Native American representative would then determine, in consultation with the property owner, the disposition of the human remains.

58. MM TCR-5: Native American Monitoring. The project applicant shall retain a Native American Monitor from or approved by the project's consulting Tribes (Juaneño Band of Mission Indians Acjachemen Nation – 84A and Juaneño Band of Mission Indians Acjachemen Nation – Belardes). The monitor shall be retained prior to the commencement of any ground-disturbing activity for the project at all project locations, including on-site and any off-site locations included in the project description or required in connection with the project. Ground-disturbing activity shall include, but is not limited to, demolition, pavement removal, potholing, auguring, grubbing, tree removal, boring, grading, excavation, drilling, and trenching. A copy of the executed monitoring agreement shall be submitted to the lead agency prior to the earlier of the commencement of any ground-disturbing activity or issuance of any permit necessary to commence a ground-disturbing activity. A construction coordination meeting shall be conducted prior to the start of ground-disturbing work with the Qualified Archaeologist, Construction Contractor, and Tribal Representative(s). Tribal Cultural Resource monitoring shall be conducted during all initial ground-disturbing activities until both the Archaeologist and Tribal Monitor determine monitoring is no longer needed. If cultural materials, features, human remains, or artifacts are discovered, the applicable reporting, consultation, treatment, documentation, and respectful reburial or disposition procedures required by the IS/MND shall be followed. The Qualified Archaeologist shall submit a Final Monitoring and Mitigation Summary Report to the project applicant and appropriate CHRIS repository. The Lead Agency shall ensure that all measures are implemented, documented, and verified prior to and during construction activities, and records shall be maintained in the project file.

Public Works

P1. **Prior to any work being conducted within the City right of way**, the Owner/Developer shall obtain all necessary encroachment permits from the Public Works Department. Separate deposit is required for plan check/inspection of encroachment permit.

P2. **Prior to issuance of a Grading Permit**, the Owner/Developer shall submit to the Director of Public Works for review and approval, street improvement plans including drainage plans and hydraulic calculations prepared by a California Registered Civil Engineer.

P3. Water Quality Management Plan. **Prior to issuance of a grading permit,** the Owner/Developer shall submit and obtain approval of a final project-specific WQMP consistent with the applicable local WQMP or BMP Design Manual and the San Diego Regional MS4 Permit, Order No. R9-2013-0001, as amended by Order Nos. R9-2015-0001 and R9-2015-0100, or the applicable successor order. The WQMP shall address applicable low impact development, pollutant control, and hydromodification management requirements. The approved WQMP shall govern implementation and long-term maintenance of the project's water quality features. The Owner/Developer shall implement its requirements and allow City verification of compliance.

P4. **Prior to issuance of a construction or grading permit and before clearing, grading, or excavation**, the Owner/Developer shall provide evidence of coverage under the State Water Resources Control Board Construction General Permit, Order WQ 2022-0057-DWQ, or the applicable successor order, when coverage is required. Evidence shall include the applicable Notice of Intent and Waste Discharge Identification number or other documentation accepted by the Public Works Director. The Owner/Developer shall maintain required coverage throughout construction and satisfy applicable permit termination requirements.

P5. Other Water Board Approvals. **Before undertaking work requiring separate authorization,** the Owner/Developer shall obtain all applicable Regional Water Quality Control Board and State Water Resources Control Board permits and clearances, including those applicable to grading, clearing, and grubbing. Copies shall be furnished to the Public Works Director before the affected work begins.

P6. Storm Water Pollution Prevention Plan. Where required by the Construction General Permit, the Owner/Developer shall have a Qualified SWPPP Developer prepare a Storm Water Pollution Prevention Plan (SWPPP) addressing potential pollutant sources, construction pollution prevention, and solid waste management. The SWPPP shall identify the design and placement of BMPs to prevent pollutants from entering the storm drain system. The

Owner/Developer shall retain a Qualified SWPPP Practitioner to implement the SWPPP and perform required inspections, monitoring, and corrective actions. The project shall provide onsite QSP oversight during construction as required by the applicable permit and City-approved construction controls.

P7. Erosion and Sediment Control Plan. **Prior to issuance of a grading permit,** the Owner/Developer shall submit an Erosion and Sediment Control Plan prepared by a qualified civil engineer. The plan shall address construction impacts and long-term effects on downstream environments and watersheds, relevant NPDES requirements, and appropriate best available technology. The plan shall identify temporary soil cover, inlet protection, vegetative filtering, debris basins, silt fences, sediment traps, and other controls suited to the site. Graded slopes shall be protected with approved cover or equivalent measures from October 1 through April 30.

P8. Construction BMPs on Project Plans. Construction plans shall identify applicable measures from the California Stormwater BMP Handbooks and the approved SWPPP and Erosion and Sediment Control Plan. Controls shall include temporary soil cover such as hydroseeding, mulch, binders, or erosion-control blankets; protection of storm drain inlets and drainage courses; grading contours that reduce flow concentration and velocity; runoff diversion; reduced soil exposure during the October-through-April rainy season; sediment traps or basins; and inspection and maintenance of all controls.

P9. Construction and Demolition Waste Management Plan and Recycling Permit. **Prior to issuance of the first permit authorizing demolition, grading, or construction**, the Owner/Developer shall submit and obtain City approval of a construction and demolition (C&D) Waste Management Plan and obtain any C&D recycling permit required by the City. The plan shall identify waste reduction measures, anticipated material types and quantities, materials to be salvaged or recycled, proposed haulers and receiving facilities, onsite separation or approved commingled processing, the responsible coordinator, and documentation procedures. The plan shall demonstrate compliance with the applicable CALGreen code and City waste reduction ordinance. For covered work, at least 65 percent of nonhazardous C&D waste shall be recycled or salvaged for reuse, or a more stringent applicable local standard shall be met. Any code-authorized alternative compliance method or exception requires documented approval by the enforcing agency. Calculations shall use the measurement basis and exclusions required by the applicable code and City program.

P10. Operational Solid Waste Management Plan and Enclosure Design. **Prior to issuance of a grading permit,** the Owner/Developer shall submit an operational Solid Waste Management Plan to the Public Works Director for approval. The plan shall address trash, recyclable materials, and organic waste, including food scraps and landscape waste as applicable to the project and local collection program. It shall identify anticipated waste volumes, container capacity,

collection frequency, separation procedures, and storage and enclosure locations. Enclosures shall comply with City screening and access standards, provide adequate space for required waste streams, and allow safe collection access. Containers shall be covered and maintained to prevent precipitation entry, litter, leakage, and pollutant discharge. Enclosure drainage and cleaning shall comply with the approved WQMP; wash water shall not enter storm drains. The plan shall be reviewed by the City-authorized or franchise waste hauler and revised as necessary for effective collection. Applicable commercial recycling and organics requirements, including AB 341, AB 1826, SB 1383, and local implementing requirements, shall be addressed.

P11. Drainage Improvement Plans and Security. **Prior to issuance of a grading permit**, the Owner/Developer shall submit drainage and related street improvement plans, with hydraulic calculations, prepared by a California registered civil engineer. The Owner/Developer shall post security required by the City to guarantee construction of the approved improvements.

P12. Hydrology Study and Final Drainage Plan. **Prior to issuance of a grading permit**, the Owner/Developer shall submit a hydrology study and final drainage plan addressing the onsite surface drainage system, underground facilities, and capacity of the offsite system to accommodate project-generated flows. Plans and calculations shall identify pre- and post-development runoff quantities and flow rates, watercourses, drainage areas and patterns, diversions, collection systems, flood hazard areas, sumps, and detention facilities. For an Orange County project, the study and plans shall follow the applicable Orange County Flood Control District Hydrology Manual, Orange County Local Drainage Manual, and Orange County Flood Control District Design Manual, as required by the City.

P13. Permanent Stormwater Facilities. A California registered civil engineer shall design the structural BMPs required by the approved WQMP as part of the drainage improvement plans. The Owner/Developer shall provide the approved infiltration, detention, treatment, and other BMPs and establish the maintenance mechanism required below. Selection and sizing of facilities shall follow the approved WQMP; a generic oil or grease trap shall not substitute for a required treatment or hydromodification BMP without City approval.

P14. Permanent Erosion Control Design. The grading and drainage plans shall consider drainage swales, subsurface and slope drains, storm drains, inlet and outlet protection, sediment traps, check dams, permanent desilting basins, grass-lined swales and other permanent vegetation, scour protection, and infiltration areas. The Owner/Developer shall incorporate the features required by the Public Works Director to control permanent erosion sources.

P15. Onsite Collection and Municipal Connection. The Owner/Developer shall collect surface drainage in an onsite private storm drain system before discharge

to the approved municipal storm drain connection. Sheet or concentrated flow shall not leave the site across adjacent property or discharge uncontrolled into the public right-of-way. Surface water shall be conveyed into the onsite underground drainage system; parkway drains beneath sidewalks shall not be permitted.

P16. Protection of Adjacent Properties. The development shall not increase or concentrate surface drainage onto adjacent properties. The Owner/Developer shall provide all drainage improvements necessary to mitigate project stormwater flows and shall use reasonable efforts to minimize surface drainage across onsite sidewalks and driveways, to the Public Works Director's satisfaction.

P17. Storm Drain Capacity. Storm drains and catch basins shall be designed to carry at least the 20-year storm, or a larger design event where required by applicable City or flood-control standards. The Owner/Developer shall demonstrate that the selected design meets the standards applicable to the project.

P18. Flood Protection. The Owner/Developer shall demonstrate that habitable structures and other structures that are not floodproof will be protected from the 100-year flood level, to the Public Works Director's satisfaction.

P19. Conveyance to the Final Discharge Point. The Owner/Developer shall design and install all necessary onsite and offsite drainage facilities and appurtenances to safely contain and convey storm flows to the approved final discharge point. Facilities identified in approved drainage studies shall be shown on the final drainage plans.

P20. Ditches and Drainage Easements. Flows from V-ditches, ribbon gutters, and similar facilities shall enter the storm drain system before reaching streets, as required by the Public Works Director. Where necessary, the Owner/Developer shall extend facilities through recorded easements to eliminate surface flow between parcels. Maintenance responsibility for private facilities and associated easements shall be assigned to the property owner or other City-approved responsible entity.

P21. Detention Basin Design. Detention basins shall be designed to be safe, accessible for maintenance, and compatible with the site's landscaping and appearance. Basin design shall avoid creating an attractive nuisance.

P22. Appearance of Drainage Structures. **Prior to issuance of a grading permit**, the Owner/Developer shall obtain approval of the color and appearance of exposed concrete drainage structures from the Public Works Director and Community Development Director. Natural features and landscaping shall be incorporated where practical to reduce visibility without impairing function or maintenance access.

P23. Disturbance and Staged Grading. The Owner/Developer shall minimize disturbance of natural groundcover until needed for construction and limit disturbance to the active construction phase. Requests for staged grading shall be approved by the Public Works Director. Daily disturbed area shall be limited to five acres or less. Stockpiles shall be located and managed under an approved grading plan. Street-cleaning and repair security shall be provided when required by the Public Works Director.

P24. Temporary stabilization. Temporary irrigation, hydroseeding, and/or approved erosion controls shall be installed on partially completed grading and other disturbed ground that remains, or is expected to remain, unfinished or undisturbed in its altered condition for more than 30 days or until the beginning of the rainy season, whichever occurs first. Earlier stabilization shall be provided where required by the SWPPP or applicable permit.

P25. Rainy season grading. Grading between October 15 and April 15 shall require the Public Works Director's approval and installation of erosion controls. Erosion-control facilities shall remain installed and functional between October 1 and April 30. Revised erosion-control plans shall be submitted by September 1 of each year from the start of clearing or grading until release of the grading bond. These dates do not waive year-round permit obligations or storm-event preparation requirements.

P26. NPDES Compliance Superintendent. The Owner/Developer shall designate an onsite superintendent responsible for NPDES compliance during grading and clearing through release of the grading bond. The superintendent shall have authority to hire personnel, obtain equipment, and purchase materials necessary to implement BMPs. The superintendent shall be present before and during grading or clearing, Monday through Friday, and on Saturdays when the probability of rain is 40 percent or greater. Before designation, the Owner/Developer shall provide evidence of at least eight hours of Public Works Director-approved training in NPDES compliance and BMP implementation. This position does not replace required QSD or QSP responsibilities.

P27. Temporary Stormwater Diversions. During site preparation and construction, the Owner/Developer shall install and maintain temporary stormwater diversion structures approved by the Public Works Director. Diversions shall be coordinated with the approved erosion and sediment controls.

P28. Vehicle Trackout Controls. The Owner/Developer shall remove mud and dirt from heavy construction vehicles before they leave the site. Approved wheel or vehicle wash-down facilities shall be provided where necessary to prevent tracking onto public streets. Wash water and sediment shall be contained and managed so they do not discharge to the storm drain system.

P29. Stabilization and Street Sweeping. Inactive disturbed areas shall be stabilized using approved nonhazardous stabilizers or suitable soil-binding vegetation. Nearby public streets shall be swept periodically, and as directed by the Public Works Director, to remove silt deposited by construction vehicles, wind, or runoff. Sediment shall be collected and properly disposed of.

P30. Construction Housekeeping and Equipment Maintenance. The Owner/Developer shall continuously maintain the site free of litter and debris in accordance with the SWPPP and applicable worker-safety requirements. The Owner/Developer shall provide schedules and procedures for maintenance of earthmoving and other heavy equipment and document proper disposal of used oil and lubricants. Construction materials and wastes shall be managed to prevent pollutant discharge.

P31. Contractor Recycling and Diversion Records. The Owner/Developer shall require all contractors and subcontractors to implement the approved C&D Waste Management Plan and use authorized hauling and lawful receiving facilities. Provide designated containers or an approved commingled recovery system; protect waste from wind, precipitation, and runoff; and keep hazardous waste out of nonhazardous C&D recycling streams. Retain weight tickets, facility receipts, salvage and reuse records, and other City-required documentation identifying the project, material, quantity, destination, and recovered or disposed amount. Submit progress documentation when required by the City. These records shall support the applicable diversion calculation; shipment to a processing facility alone shall not establish that all material was diverted.

P32. Permanent Slope Planting. Graded slopes shall be permanently planted in a timely manner with groundcover, trees, and shrubs that stabilize slopes and minimize erosion. Planting shall conform to the approved landscape plan and meet the Public Works Director’s approval.

P33. Recorded Stormwater Maintenance Covenant. **Prior to issuance of certificate of occupancy**, the Owner/Developer shall execute and record a City-approved stormwater BMP maintenance covenant against the property in the official records of the County Recorder and provide the City with a conformed recorded copy and recording information. The covenant shall run with the land and bind successors and assigns. It shall identify the BMPs and responsible maintenance party; incorporate or reference the approved WQMP and operation and maintenance requirements; establish responsibility and funding for inspection, maintenance, repair, and replacement; and provide City-approved access, inspection, and enforcement provisions. Required drainage, access, and maintenance easements and ownership instruments shall also be recorded. The Owner/Developer shall provide evidence of these arrangements to the Public Works Director before occupancy clearance. This condition implements the maintenance-mechanism and recordation obligations in Regional MS4 Permit Provisions E.3.c.(4) and E.3.e.(1)(c).

P34. Post Construction BMP Certification. **Prior to issuance of certificate of occupancy**, the Owner/Developer shall submit a post-construction BMP installation and operational certification, signed and stamped by the California registered civil engineer responsible for the stormwater design, or another appropriately licensed professional accepted by the Public Works Director. The certification shall identify each permanent structural BMP and confirm, based on construction observations and supporting records, that it has been installed in accordance with the approved WQMP, plans, specifications, and approved revisions and is functioning as designed. The submittal shall include record drawings, a BMP inventory and location plan, photographs and applicable testing or inspection records, and the final operation and maintenance information. Unapproved deviations and deficiencies shall be corrected, and revised documentation shall be accepted by the Public Works Director before occupancy clearance. This certification supports the City's verification under Regional MS4 Permit Provision E.3.e.(1)(d) and does not replace the required final inspection.

P35. Final WQMP Inspection and City Acceptance. **Prior to issuance of certificate of occupancy**, the Owner/Developer shall request and obtain a satisfactory final WQMP inspection and written stormwater clearance from the Public Works Director. The inspection shall verify that each permanent structural BMP has been constructed and is operating in compliance with the approved WQMP, specifications, plans, permits, applicable ordinances, and Regional MS4 Permit requirements. The inspection shall also verify required source controls, drainage connections, inlet labels, maintenance access, and correction of construction-related sediment accumulation or damage. All deficiencies shall be corrected and any required reinspection completed before occupancy or intended use. The recorded maintenance covenant and accepted post-construction BMP certification shall be provided before the City issues stormwater clearance. This condition implements Regional MS4 Permit Provision E.3.e.(1)(d).

P36. Solid Waste Recycling and Organic Waste Collection. **Prior to issuance of certificate of occupancy**,, the Owner/Developer shall provide evidence of active or scheduled-to-commence trash, recycling, and organic waste collection services through the City-authorized waste hauler. Evidence shall identify the site, required waste streams, container sizes, and collection frequency. Any applicable waiver or lawful alternative compliance method shall be documented and accepted by the City. Approved enclosures and adequately sized, accessible, properly labeled or color-coded containers shall be installed and ready for use before occupancy. Collection shall begin no later than occupancy or intended use.

P37. C and D Diversion Verification and Permit Closeout. **Prior to issuance of certificate of occupancy**, the Owner/Developer shall submit a final C&D diversion report with supporting receipts, weight tickets, and salvage or reuse records demonstrating compliance with the approved Waste Management Plan

and applicable diversion requirement or approved alternative. Obtain City acceptance and close out any required C&D recycling permit. For phased construction or temporary occupancy, submit interim records and obtain City approval of the remaining reporting and closeout schedule; temporary occupancy shall not waive outstanding diversion obligations.

P38. Perpetual BMP Maintenance. The property owner or City-approved responsible entity shall inspect, operate, maintain, repair, and replace all structural and nonstructural BMPs in accordance with the approved WQMP, recorded covenant, and approved operation and maintenance plan. Applicable CC&Rs shall incorporate the maintenance obligations. Responsibilities shall continue through ownership transfers. Maintenance records shall be retained and made available to the City, and the responsible entity shall allow inspections and complete corrective actions required by the City.

P39. Landscaping and Irrigation Runoff. Landscaping shall be permanently maintained in a healthy condition. Irrigation shall be designed, operated, and maintained to eliminate runoff to the extent practical and promote surface filtration. Fertilizer and pesticide use shall be minimized to reduce urban runoff pollution.

P40. Storm Drain Inlet Labeling. All onsite storm drain inlets shall be labeled “Don’t Dump Drains to Ocean,” or with equivalent wording approved by the City. Labels shall remain legible and shall be replaced as necessary.

P41. Storm Drain Cleaning. All onsite storm drains shall be cleaned using approved methods at least twice annually, once immediately before October 1 and once in January. Additional cleaning shall be performed when required by the approved WQMP, facility condition, or the Public Works Director, including during construction.

P42. Sweeping and Wash Water Management. Parking, circulation, and street surfaces shall be maintained in good condition and swept at least as frequently as City public streets. Common sidewalks, walkways, and parking areas shall be swept regularly to prevent litter and debris accumulation. During sweeping or washing, debris shall be captured and collected. Cleaning agents and wash water shall not enter storm drains. Wash water proposed for sanitary-sewer disposal shall be collected and discharged only with the applicable sanitary-sewer agency’s approval.

P43. Ongoing Collection Separation and Education. The property owner or responsible operator shall maintain sufficient trash, recycling, and organic waste collection service and container capacity throughout operation, consistent with the approved Solid Waste Management Plan and applicable City requirements. Occupants and landscape contractors shall separate materials according to the local collection program. Required indoor and outdoor collection containers shall

have compliant labels or colors and be placed in required locations. The responsible operator shall provide required sorting education to employees, contractors, tenants, and customers, inspect for contamination, and correct improper sorting and overflowing containers. Applicable business education shall occur at least annually, with required information provided to new tenants within 14 days of occupancy. Maintain service and compliance records for City review and update service levels when occupancy or waste generation changes.

P44. Litter and Debris Removal. Common areas shall be maintained free of litter and debris. Waste storage areas shall remain functional and shall be operated in accordance with the approved solid waste management plan and WQMP source controls.

P45. Outdoor Vehicle Maintenance and Washing. Outdoor vehicle maintenance shall be prohibited. Car washing shall be prohibited unless a dedicated area is designed and approved to meet applicable water quality requirements. If proposed, the location and design of the washing area shall be approved by the Public Works Director and Community Development Director before issuance of a precise grading permit. Wash water shall not enter storm drains.

Project Description

PRESIDIO AT PACIFIC PARK – CITY OF ALISO VIEJO

Brandywine Acquisition Group, LLC is proud to present a proposal for a thoughtfully planned townhome style community located at 15 Argonaut in the City of Aliso Viejo.

Rooted in Brandywine's mission to build lasting neighborhoods for California families, this new community reflects a careful balance of design, open space, and character—integrating seamlessly into the surrounding environment while delivering much-needed for-sale housing.

The vision of this community is centered around place making, open space, and thoughtful architecture. A dog play area, a community garden, a recreation lawn, BBQ area with shade structure, meandering paseos, all work together to create an inviting and connected place to call home. The site design prioritizes preserved open space, livability and neighborhood character while celebrating the Aliso Viejo lifestyle.

The proposed architecture embraces a refined, grounded style tailored specifically for the city, featuring three-story townhome-style homes that offer spacious layouts for families to grow and thrive. Each of the 58 for-sale solar-powered, all-electric homes will range in size from approximately 1,320 to 1,827 square feet and will include two car private garages (116 total spaces), accessed by common drive aisles to ensure privacy and convenience.

The community will offer 55 market-rate homes and 3 inclusionary below market rate units, for very low-income households. Every home is designed with livability in mind and will feature individual entry front door, and oversized decks, reinforcing the strong indoor-outdoor lifestyle that is so valued by Aliso Viejo families. The homes will be arranged across 10 residential buildings in total, reflecting 5 unique architectural building types, with 4 distinct floor plans offered to future residents. The community is further enhanced by shared and private landscaped spaces and 24 guest parking stalls, consisting of 23 guest spaces and 1 unassigned accessible ADA space.

This new neighborhood has been designed to comply with all applicable objective General Plan and Subdivision standards as outlined in Government Code Section 65589.5(j) and qualifies as a housing development project under Government Code Section 65589.5(h)(2). The project is also consistent with an adopted community plan under CEQA Guidelines Section 15183.

To bring this vision to life, Brandywine Acquisition Group, LLC is requesting a General Plan Amendment, a Vesting Tentative Tract Map, Site Development Permit, CEQA – MND, Zoning Change, and State Density Bonus Law (SB 330, AB52, SB18). As part of the Density Bonus application, Brandywine is requesting waivers of development standards to physically accommodate the permitted density, as well as one incentive and concession, with details outlined on submittal. The project is also eligible for a reduced parking ratio pursuant to Government Code Section 65915(p)(1).

Brandywine is excited to collaborate with the City of Aliso Viejo on a community that will bring vitality, housing opportunity, and architectural integrity to the neighborhood. We are proud to offer solar, all-electric homes designed for today's families and look forward to working together to make this community a reality.

Zoning Summary - RM - Medium Density Residential

ZONING CODE	REQUIRED	PROPOSED
Maximum Density	18 du/ac	13.2 du/ac
Maximum Building Height	35 feet	Not to exceed 36 feet (Applying waiver for Setback per State Density Bonus Law)
Maximum Building Coverage	60%	22.4%
Minimum Common Open Space Area	25%	9% (Concession for Open Space per State Density Bonus Law)
Minimum Perimeter Setback	20 feet	>20' along majority of property boundary except two building corners at 5' and one at 14.9' (Applying waiver for Setback per State Density Bonus Law)
Minimum Boundary Landscaping	15 feet minimum, 20 feet minimum average	>20' along majority of property boundary except four building corners between 5' and 14.4' (Applying waiver for Setback per State Density Bonus Law)
Parking	2.0 Spaces per Unit in a Garage (116 Spaces) Guest: 0.5 Space per Unit (29 Spaces) Total: 145 Spaces per Unit	Parking Reqd. Per State Density Bonus Law: 130 Spaces 22.5 spaces (1.5 spaces per 3 bedroom unit) 107.5 spaces (2.5 spaces per 4 bedroom unit) Parking Provided: 140 Spaces (2.4 Spaces per Unit) 2-car Garage per unit (58 units X 2 = 116 Spaces) Guest: 24 Open Spaces (Incl. 1 Accessible Stall)

PROJECT INFORMATION

Project Summary

Gross Site Area: ±4.4 Acres
Net Site Area: ±2.47 Acres

Total Units: 58 Homes
- (03) Plan 1 | ±1,320 SF | 3 BD | 3 BA | Tandem Garage
- (12) Plan 2 | ±1,538 SF | 3 BD | 2.5 BA
- (28) Plan 3 | ±1,580 SF | 4 BD | 3.5 BA
- (15) Plan 4 | ±1,827 SF | 4 BD | 3.5 BA

Total Saleable SF: 94,061 SF

Gross Density: 13.2 Homes per Acre
Net Density: 23.5 Homes per Acre

Parking:
Required: 130 Spaces (per State Density Bonus Law)
- 22.5 spaces (1.5 spaces per 3 bedroom unit)
- 107.5 spaces (2.5 spaces per 4 bedroom unit)

Provided: 140 Spaces (2.41 spaces per home)
- Garage: 116 Spaces
- Head in: 24 Spaces (incl. 1 accessible space)

G: Guest Spaces ♿: Accessible Space

Common Usable Open Space:
Required: ±47,955 SF (25% of site area)
Provided: ±17,214 SF (9%)
- ±3,194 SF (Amenity Spaces)
- ±14,020 SF (Paseos & Landscaped Areas)

Additonal Open Space Provided:
- ±7,611 SF (Private Yards)
- ±84,050 SF (Additional open space dedicated to slope ~ ±1.93 acres)

Building Coverage: 22.4% (±42,924 SF); 60% Max. Allowed

Schematic Landscape Plan

LEGEND

1. North community open space area with shade structure, picnic seating, BBQ, yoga lawn. See L-2 Enlargement.
2. Four community cluster mailboxes, per USPS review and approval.
3. Proposed wall, pilaster, gate or fence, per Wall & Fence Plan.
4. Proposed tree, per Planting Plan.
5. 4' wide community natural colored concrete sidewalk, with light top-cast finish and saw-cut joints.
6. Accessible parking stall and striping, per Civil plans.
7. Guest parking stall.
8. Natural colored concrete driveway, with light broom finish and tooled joints.
9. Private patio / yard area, homeowner maintained.
10. South community dog park with real lawn, bench seating, and dog bag station, See L-2 Enlargement.
11. Property line.
12. Public street R.O.W.
13. Sight line triangles.
14. Transformer to be screened with landscape, quantity and final locations to be determined.
15. Community monument at project entrance.
16. Community garden with edible planting shrubs and herbs surrounding turf area.
17. Modular wetland system, per Civil plans.
18. Above ground utility evergreen hedge, see planting plan.
19. Enhanced stamped concrete paving at project entrance.

EXISTING EASEMENTS

3. AN EASEMENT FOR EITHER OR BOTH POLE LINES, CONDUITS AND INCIDENTAL PURPOSES, RECORDED SEPTEMBER 21, 1926 AS BOOK 678, PAGE 106 OF DEEDS.
IN FAVOR OF: SOUTHERN CALIFORNIA EDISON COMPANY
AFFECTS: SAID LAND

THE LOCATION OF THE EASEMENT CANNOT BE DETERMINED FROM RECORD INFORMATION.

4. A PERPETUAL EASEMENT IN GROSS FOR AIRCRAFT OPERATIONS, AIRCRAFT SOUND AND NOISE, AIRCRAFT AVIGATION AND FLIGHT, HAZARD AND AIR SPACE, REFERRED TO HEREINAFTER, ONE WORD FOR THE ENTIRETY, AS A PERPETUAL, NONEXCLUSIVE AVIGATION EASEMENT, IN, TO OVER AND THROUGH ALL AIR SPACE ABOVE GRANTOR'S ENTIRE PROPERTY AS PARTICULARLY DESCRIBED HEREINBEFORE, ABOVE A MEAN SEA LEVEL OF 1500 FEET, TO AN INDEFINITE HEIGHT ABOVE SAID MEAN SEA LEVEL OF 1500 FEET, TO AN INDEFINITE HEIGHT ABOVE SAID MEAN SEA LEVEL OF 1500 FEET RECORDED JULY 2, 1979 AS BOOK 13213, PAGE 1111 OF OFFICIAL RECORDS.
IN FAVOR OF: COUNTY OF ORANGE
AFFECTS: SAID LAND

THE LOCATION OF THE EASEMENT CANNOT BE DETERMINED FROM RECORD INFORMATION.

7. AN EASEMENT FOR LANDSCAPE AND MAINTENANCE AND INCIDENTAL PURPOSES RECORDED FEBRUARY 1987 AS BOOK 218, PAGE 27-30 OF PARCEL MAP.
IN FAVOR OF: ALISO VIEJO COMMUNITY ASSOCIATION
AFFECTS: SAID LAND

9. AN EASEMENT FOR MAINTENANCE AND INCIDENTAL PURPOSES RECORDED APRIL 14, 1987 AS INSTRUMENT NO. 87-204131 OF OFFICIAL RECORDS AND RE-RECORDED ON OCTOBER 1, 1987 AS INSTRUMENT NO. 87-554296 OF OFFICIAL RECORDS.
IN FAVOR OF: ALISO VIEJO COMMUNITY ASSOCIATION
AFFECTS: SAID LAND

THE LOCATION OF THE EASEMENT CANNOT BE DETERMINED FROM RECORD INFORMATION

10. AN EASEMENT FOR EITHER OR BOTH UNDERGROUND LINES, CONDUITS AND INCIDENTAL PURPOSES RECORDED ON JUNE 8, 1989 AS INSTRUMENT NO. 89-301830 OF OFFICIAL RECORDS.
IN FAVOR OF: SOUTHERN CALIFORNIA GAS EDISON COMPANY
AFFECTS: SAID LAND

EASEMENT TO BE MAPPED OVER

11. AN EASEMENT FOR SEWER LINES, WATER TRANSMISSION PURPOSES AND INCIDENTAL PURPOSES RECORDED ON SEPTEMBER 26, 1989 AS INSTRUMENT NO. 89-516161 OF OFFICIAL RECORDS.
IN FAVOR OF: MOULTON MIGUEL WATER DISTRICT

ORDINANCE NO. 2026-___

AN ORDINANCE OF THE CITY COUNCIL OF THE CITY OF ALISO VIEJO, CALIFORNIA, APPROVING A DEVELOPMENT AGREEMENT BETWEEN THE CITY AND BRANDYWINE HOMES FOR THE DEVELOPMENT OF PRESIDIO AT PACIFIC PARK, A 58-UNIT RESIDENTIAL TOWNHOME COMMUNITY LOCATED AT 15 ARGONAUT (APN: 623-093-10 & 623-093-11).

WHEREAS, the City of Aliso Viejo ("City") has found that development agreements strengthen the public planning process, encourage private participation in comprehensive planning by providing a greater degree of certainty in that process, reduce the economic costs of development, allow for the orderly planning of public improvements and services, allocate costs to achieve maximum utilization of public and private resources in the development process, and ensure that appropriate measures to enhance and protect the environment are achieved;

WHEREAS, pursuant to California Government Code section 65864 et seq. and Aliso Viejo Municipal Code ("AVMC") section 15.82.010, the City is authorized to enter into development agreements providing for the development of land under terms and conditions set forth therein;

WHEREAS, on April 15, 2026, Brandywine Homes ("Applicant") submitted applications for a general plan amendment, zone change, vesting tentative tract map, site development permit, and a development agreement application to demolish an existing office building and construct the construction of a multi-family residential community at 15 Argonaut ("Project");

WHEREAS, because of the logistics, magnitude of the expenditure and considerable lead time prerequisite to planning and developing the Project, Developer has proposed to enter into a development agreement concerning the Project ("Development Agreement") to provide assurances that the Project can proceed without disruption caused by a change in the City's planning policies and requirements except as provided in the Development Agreement, which assurance will thereby reduce the actual or perceived risk of planning for and proceeding with development of the Project;

WHEREAS, the City Council has determined that by entering into the Development Agreement: (i) the City will promote orderly growth and quality development on the Property in accordance with the goals and policies set forth in the General Plan; and (ii) the Project will provide public benefits, including 58 for-sale homes, three units restricted to very low-income households, pedestrian walkways, landscaped open spaces, and recreational amenities;

WHEREAS, it is the intent of the City and Applicant to establish certain conditions and requirements related to review and development of the Project which are or will be the

subject of subsequent development applications and land use entitlements for the Project as well as the Development Agreement;

WHEREAS, the City and Applicant have reached mutual agreement and desire to voluntarily enter into the Development Agreement to facilitate development of the Project subject to the conditions and requirements set forth therein;

WHEREAS, the Development Agreement contains, including, without limitation, property owner's vested right to complete development of the Project with governing land use regulations applicable at the time of approval; defines the scope of the Project; and identifies the public benefit obligations of the Applicant;

WHEREAS, the public benefits include, among other things, park in-lieu fees, as authorized by law and the City's ordinances, to rehabilitate and improve existing open space and recreational facilities in the City, including but not limited to, the Aquatic Center, Iglesia Community Center and Park, and the Ranch ("Facilities") in order to maintain the City's high standard of recreation and community services while accommodating a growing population, including future residents of the proposed subdivision;

WHEREAS, residents throughout the City regularly use the Facilities due to the variety of programs and services offered. Although the Facilities are located outside of the subdivision, future residents of the subdivision will undoubtedly use and benefit from use of the Facilities as well;

WHEREAS, on March 4, 2026, the City Council held a duly noticed public review to receive and provide initial feedback on concept plans for the Project;

WHEREAS, on September 15, 2026, the City gave public notice of the City Council public hearing for consideration of Mitigated Negative Declaration CEQA-2026-01004, General Plan Amendment GPA-2026-01002, Zone Change ZC-2026-00001, Vesting Tentative Tract Map 19489, Site Development Permit SDP-2026-01001 and Development Agreement DA-2026-01002 for the Project by publishing in a newspaper of general circulation; by posting notices at City Hall and the Project site; and by mailing notices to owners of property within 300 feet, to the project applicant, and to local agencies that provide water, sewage, electricity and schools;

WHEREAS, on October 7, 2026, the City Council held a duly noticed public hearing, discussed the parameters of the public benefit contributions of the Development Agreement;

WHEREAS, all legal prerequisites to the adoption of this Ordinance have occurred.

NOW, THEREFORE, THE CITY COUNCIL OF THE CITY OF ALISO VIEJO DOES ORDAIN AS FOLLOWS:

Section 1: **Incorporation of Recitals.** The City Council hereby finds and determines that all of the recitals set forth above are true and correct. The above recitals are hereby incorporated as substantive findings of this Ordinance.

Section 2. **CEQA.** Pursuant to the California Environmental Quality Act (Public Resources Code, § 21000 et seq.) and State CEQA Guidelines (California Code of Regulations, title 14, § 15000 et seq.) (collectively, "CEQA"), the City Council adopted Resolution No. _____, adopting a Mitigated Negative Declaration and Mitigation Monitoring and Reporting Program for the Project and determining that the Project, with implementation of the identified mitigation measures, will not have a significant effect on the environment.

Section 3. **Findings.** Pursuant to AVMC 15.82.010 (Development Agreement and Other Actions), the City Council determined that approving the Development Agreement is in the best interest of the City and for the common benefit of residents, and hereby makes the following findings of fact and approves the Development Agreement between the City and the Applicant as set forth in Exhibit "A", which are attached hereto and incorporated herein by reference.

1. Public Welfare. The Project is consistent with the policies and regulations of the proposed Medium-Density Residential zoning district. The DA includes provisions to ensure compliance with applicable land use regulations, defines the scope of the Project, and identifies the public benefit obligations of the Applicant. The Project is compatible with the existing and recently approved multi-family and single-family communities in terms of layout, architectural style, materials, and open space; the site is served by existing infrastructure, including roads, utilities, and public services sufficient to support residential development; that the environmental assessment determined impacts would be less than significant with mitigation; the Project advances the City's housing goals by creating new housing opportunities; and future construction will be subject to plan check review and inspection to ensure compliance with all applicable building and safety standards.

    A. General Plan Consistency. The development agreement is consistent with the goals, objectives, and policies of the General Plan and any applicable specific plan. The Project is consistent with the goals and policies of the Conservation and Open Space (COS), Housing (H), and Land Use element (LU) listed below in that the Project promotes orderly growth, provides a compatible transition between non-residential and residential uses, supports housing objectives by creating new residential opportunities, and utilizes existing infrastructure in a manner consistent with the community's long-term vision and planning framework. The Project is also subject to mitigation measures and conditions of approval that address potential impacts related to traffic, noise, air quality, and emergency access. There is no applicable Specific Plan for the Project site.

- Policy COS-1.2 Reduce the amount of water used for landscaping and increase use of native and low water plants. Maximize use of native, low-water plants for landscaping of areas adjacent to sidewalks or other impermeable surfaces.
- Policy COS-4.2 Encourage and maintain high-quality architectural and landscaping designs that enhance or complement the community's visual character.
- Policy COS-7.5 Ensure that new development provides park land and/or improvements at a fair share ratio, pursuant to the City's Parkland Ordinance.
- Goal H-1: Encourage a diversity of housing types and provide affordability levels within Aliso Viejo to meet the needs of community residents.
- Policy H-1.1 Identify sites appropriate for the development of a variety of housing types and price ranges to meet the needs of all socioeconomic segments of the community through the disbursement of affordable units in projects.
- Policy H-1.2 Encourage through the use of density bonuses and rezoning to allow for residential development, development of affordable housing opportunities throughout the community, as well as development of housing for elderly and low- and moderate-income households near public transportation services.
- Policy H-1.4 Ensure that a portion of future residential development is affordable to low- and very-low-income households by designating certain sites as having the potential to be used for residential uses.
- Policy H-3.8 Review existing zoning policies and explore zoning changes to facilitate the development of affordable housing.
- Policy LU-12.2 As a condition upon new development, require payment of park fees and/or dedication and provision of parkland, recreation facilities and/or multi-use trails that improve the public and private recreation system.

Section 4. **Minor Modifications.** The City Council hereby approves the Development Agreement attached hereto as Exhibit "A" and authorizes the Community Development Director to make any further minor, non-substantive changes and modifications thereto.

Section 5. **Effective Date.** This Ordinance shall not take effect unless and until the General Plan Amendment GPA-2026-01002, Zone Change ZC-2026-01001, Vesting Tentative Tract Map 19489 and Site Development Permit SDP-2026-01001 and approvals under State Density Bonus Law for the Project are each approved by the City Council and have become effective, and the Development Agreement is executed by both parties.

Section 6. **Severability.** If any provision of this Ordinance or its application to any person or circumstance is held to be invalid by a court of competent jurisdiction, such invalidity has no effect on the other provisions or applications of the Ordinance that can be given effect without the invalid provision or application, and to this extent, the

provisions of this Ordinance are severable. The City Council declares that it would have adopted this Ordinance irrespective of the invalidity of any portion thereof.

Section 7. **City Clerk's Certification.** The City Clerk shall certify to the adoption of this Ordinance and cause a summary thereof to be published five days prior to the date of adoption of this Ordinance, and, within 15 days after adoption, the City Clerk shall cause to be published the aforementioned summary and shall post a certified copy of this Ordinance, together with the vote for and against the same, in the Office of the City Clerk.

Section 8. The Mayor, City Manager, and City Clerk, or their designees, are authorized to take such actions as may be necessary to effect the execution, recordation, and enforcement of this Ordinance and the Development Agreement.

PASSED, APPROVED AND ADOPTED this 21st day of October, 2026.

DEVELOPMENT AGREEMENT

between

THE CITY OF ALISO VIEJO,
a California municipal corporation

and

[BRANDYWINE ACQUISITION GROUP, LLC.

THIS DEVELOPMENT AGREEMENT ("Agreement") is entered into by and between THE CITY OF ALISO VIEJO, a California municipal corporation ("City"), and BRANDYWINE ACQUISITION GROUP, LLC. ("Owner") with reference to the following facts:

RECITALS.

A. To strengthen the public planning process, encourage private participation in comprehensive planning and reduce the economic risk of development, the Legislature of the State of California adopted the "Development Agreement Statute," Sections 65864 et seq., of the Government Code. City, a general law city, is authorized by the Development Agreement Statute to enter into development agreements with persons and entities having legal or equitable interests in real property for the purpose of establishing predictability for both City and the property owner in the development process. Owner has requested that City enter into a development agreement for the development of the Property, as defined below. City enters into this Agreement pursuant to the provisions of the California Government Code, the City's General Plan, the City Municipal Code, and applicable City policies.

B. Owner has a legal or equitable interest in that certain real property consisting of approximately 4.4 acres of land located in the City of Aliso Viejo, County of Orange, State of California, more particularly described in Exhibit "A" (the "Property"). Owner desires to develop the Property for residential uses of 58 for-sale residential Units, including 55 for sale market-rate units and three (3) affordable for-sale units, as further described herein.

C. This Agreement is intended to ensure that Owner has provided funding sufficient to provide the adequate and appropriate public recreational facilities and services required by the development of the Property.

D. This Agreement also assures that the development will assist the City in meeting its goals for the provisions of affordable housing by contributing to the City's affordable housing stock.

E. This Agreement further assures that development of the Property may occur in accordance with City's General Plan, as amended by the General Plan Amendment and Zone Change. The development of the Property pursuant to the Existing Land Use Regulations, this Agreement, the Subsequent Land Use Regulations to which Owner has consented in writing, and Subsequent Development Approvals (as each of those terms and phrases is defined within this Agreement) shall be referred to as the "Development Plan."

F. This Agreement constitutes a current exercise of City's police powers to provide predictability to Owner in the development approval process by vesting the permitted use, density, intensity of use, and timing and phasing of development consistent with the Development Plan in exchange for Owner's commitment to provide significant public benefits to City (the "Public Benefits") as set forth in Section 9.

G. The provision by Owner of the Public Benefits allows the City to realize significant economic, recreational, park, open space, educational, social, and public facilities benefits. The Public Benefits will advance the interests and meet the needs of Aliso Viejo's residents and visitors.

H. In return for Owner's participation and commitment to these significant contributions of private resources for public purposes, City is willing to exercise its authority to enter into this Agreement and to make a commitment of predictability for the development process for the Property. Absent City's willingness to make such a commitment, Owner would be unwilling to enter into this Agreement or make the significant investment of resources identified in this Agreement.

AGREEMENT

City and Owner agree as follows:

1. INTEREST OF OWNER. Owner represents that it has a legal or equitable interest in the Property and is authorized to enter into this Agreement.

2. PUBLIC HEARINGS.

   2.1 On October 7, 2026, after providing notice as required by law, the City Council held a public hearing on this Agreement and made the findings set forth in Section 3.

3. CITY COUNCIL FINDINGS. The City Council finds that:

   3.1 Subject to the approval of the General Plan Amendment and Zone Change becoming effective on or before the Effective Date, this Agreement is consistent with City's General Plan.

   3.2 This Agreement ensures a desirable and functional community environment, provides effective and efficient development of public facilities, infrastructure, and services appropriate for the development of the Project, enhances effective utilization of resources within the City, provides assurances to the developer in an effort to control the cost of housing and development to the consumer, and provides other significant benefits to the City and its residents.

   3.3 This Agreement provides public benefits beyond those which are necessary to mitigate the development of the Project.

   3.4 This Agreement strengthens the public planning process, encourages private participation in comprehensive planning, particularly with respect to the implementation of the City's General Plan, and reduces the economic costs of development and government.

3.5 The best interests of the citizens of the City and the public health, safety, and welfare will be served by entering into this Agreement.

4. CONTINUING OBLIGATIONS. This Agreement binds the City now and in the future. By approving this Agreement, the City Council has elected to exercise certain governmental powers at the time of entering into this Agreement rather than deferring its actions to some undetermined future date. The terms and conditions of this Agreement have undergone extensive review by the City staff and the City Council and have been found to be fair, just, and reasonable. City has concluded that the Project will serve the best interests of its citizens and that the public health, safety, and welfare will be best served by entering into this Agreement.

5. DEFINITIONS. In this Agreement, unless the context otherwise requires, the following terms and phrases shall have the following meanings:

5.1 "Agreement" shall mean this Development Agreement between the City and Owner. The term "Agreement" shall include any amendment properly approved and executed pursuant to Section 7.5.

5.2 "Approval Date" means the date on which the City Council conducted the second reading of the ordinance adopting this Agreement. That date is October 21, 2026.

5.3 "City" shall mean the City of Aliso Viejo, a California municipal corporation.

5.4 "City Council" shall mean the governing body of the City.

5.5 "City Municipal Code" shall mean the Aliso Viejo Municipal Code. However, changes to the Aliso Viejo Municipal Code occurring between the Approval Date and the Effective Date shall not be considered part of the City Municipal Code for purposes of this Agreement without Owner's prior written consent.

5.6 "Day" refers to a calendar day unless specifically stated as a "business day."

5.7 "Default" shall refer to a Major Default or Minor Default as defined herein.

5.8 "Development" shall mean the improvement of the Property for the purposes of completing the structures, improvements, and facilities comprising the Project including, but not limited to: grading; the construction of infrastructure and private facilities related to the Project whether located within or outside the Property; the construction of buildings and structures; the installation of landscaping; and other improvements.

5.9 "Development Approvals" shall mean all permits and other entitlements approved or issued by the City for the use of, construction upon, and/or development of the Property. For the purposes of this Agreement,

Development Approvals shall be deemed to include, but are not limited to, the following actions, including revisions, addenda, amendments, and modifications to these actions:

a. this Agreement;

b. amendments to this Agreement;

c. amendments to the General Plan;

d. tentative and final subdivision and tract maps;

e. site development permit;

f. zoning;

g. grading and building permits;

h. certificates of compliance;

i. street, drainage, utility, stormwater, and landscape permits;

j. occupancy permits; and

k. environmental review documents for the Project.

5.10 "Development Impact Fees" shall mean all fees established and imposed upon the Project by the City and this Agreement.

5.11 "Development Plan" means the Existing Land Use Regulations, the Development Approvals, this Agreement, the Subsequent Land Use Regulations to which Owner has consented in writing, and Subsequent Development Approvals.

5.12 "Effective Date" shall mean the later of: (i) date the ordinance adopting this Agreement becomes effective; or (ii) expiration of the period provided by applicable law, including but not limited to Government Code Section 65009, for challenging the General Plan Amendment and/or the Zone Change.

5.13 "Existing Land Use Regulations" means all Land Use Regulations in effect on the Effective Date, including the General Plan Amendment and Zone Change (including the number of Units approved for the Project by the General Plan Amendment). However, changes to Land Use and Zoning Regulations occurring between the Approval Date and the Effective Date shall not be considered part of the Existing Land Use or Zoning Regulations without Owner's prior written consent. Owner has consented to the General

Plan Amendment and Zone Change, which shall be considered part of the Existing Land Use and Zoning Regulations.

5.14 "Final Map" refers to the final map which may be filed with respect to any Tentative Map, including the First Tentative Map, as set forth in Section 66456 et seq. of the Subdivision Map Act.

5.15 "First Tentative Map" shall mean the first Tentative Map for the Project which is approved by the City prior to or concurrent with the Effective Date of this Agreement. Owner may submit more than one Tentative Map to be considered concurrently as the First Tentative Map.

5.16 "First Tentative Map Submittal Package" shall mean the package of materials to be submitted with the Owner's application for the First Tentative Map, which shall include the site development permit for the Project.

5.17 "General Plan" shall mean the general plan of the City.

5.18 "General Plan Amendment" shall refer to the amendment of the City's General Plan on October 7, 2026, for the Property. A copy of the General Plan Amendment is attached as Exhibit "B".

5.19 "Implementing Agreement" refers to any agreement entered into by Owner and the City for the implementation of obligations established in this Agreement.

5.20 "Land Use Regulations" shall mean all ordinances, resolutions, codes, rules, regulations and official policies of the City governing the development and use of land, including, without limitation, the permitted use of land, the density or intensity of use, subdivision requirements, timing and phasing of development, the maximum height and size of buildings, the provisions for reservation or dedication of land for public purposes, and the design, improvement, construction, and initial occupancy standards and specifications applicable to the Project. Land Use Regulations do not include any City ordinance, resolution, code, rule, regulation or official policy governing:

- The conduct or taxation of businesses, professions, and occupations applicable to all businesses, professions, and occupations in the City;

- Taxes and assessments of general application upon all residents of the City, provided that the taxes and assessments are not imposed for the purpose of taxing the right, power or privilege of developing or improving land (e.g., excise tax) or to directly finance the acquisition or dedication of open space or any other public improvement in respect of which the Owner is paying any fee

(directly or through a Financing District) or providing any improvement pursuant to this Agreement;

- The control and abatement of nuisances.

5.21 "Major Default" refers to the material and substantial failure by (1) Owner to timely meet Owner's Public Benefit obligations, or (2) City's failure to issue Subsequent Development Approvals in accordance with its obligations under this Agreement, or (3) either Party to provide the agreed upon cooperation needed to implement the Public Benefits and/or the development of the Property pursuant to the Development Plan, including but not limited to a failure to comply with the terms of any Implementing Agreement. This definition is not intended to expand or limit the legal definition of "materiality," but only to establish the agreement of the Parties as to the nature of a default which could lead to an early termination of this Agreement.

5.22 "Minor Default" means a failure by Owner or City to comply with the terms and conditions of this Agreement which is not a "Major Default" as defined herein.

5.23 "Mortgagee" means a mortgagee of a mortgage, a beneficiary under a deed of trust or any other security-device, a lender, and their successors and assigns.

5.24 "Owner" refers to Brandywine Acquisition Group, LLC., and Owner's successors and assigns as set forth in Section 14.14.

5.25 "Owner's Vested Right" refers to Owner's guaranteed right to develop the Property as set forth in this Agreement, with particular reference to Section 8.

5.26 "Paragraph" means a lettered or numbered paragraph of an Exhibit to this Agreement, unless specifically stated to refer to another document or matter. (Note below that "Section" means a lettered or numbered section of the main body of this Agreement.) A reference to a Paragraph includes all subparagraphs of that Paragraph.

5.27 The "Parties" means the City and Owner. A "Party" refers to either the City or the Owner.

5.28 "Project" means the development of the Property as set forth in the Development Plan.

5.29 "Property" means the real property described in Exhibit "A".

5.30 "Public Benefits" refers to those benefits provided to the City and the community by Owner pursuant to Section 9 and Exhibit "C" below.

5.31 "Reservation of Authority" means the rights and authority specifically reserved to City which limits the assurances and rights provided to the Owner under this Agreement. The Reservation of Authority is described in Section 8.6.

5.32 "Section" refers to a numbered section of this Agreement, unless specifically stated to refer to another document or matter.

5.33 "Subsequent Development Approvals" means all Development Approvals and permits approved, granted, or issued after the Effective Date for the Project which are required or permitted by the Existing Land Use Regulations, the Subsequent Land Use Regulations to which Owner has consented in writing, and this Agreement. Subsequent Development Approvals include, without limitation, all development review approvals required under the Subdivision Map Act, the City's subdivision ordinance and/or other provisions of the City Municipal Code, site development permits, excavation, grading, building, construction, encroachment or street improvement permits, occupancy certificates, utility connection authorizations, drainage, landscape, or other permits or approvals necessary for the grading, construction, marketing, use and occupancy of the Project.

5.34 "Subsequent Land Use Regulations" means those Land Use Regulations which are both adopted and effective after the Approval Date and which are not included within the definition of Existing Land Use Regulations. "Subsequent Land Use Regulations" include any Land Use Regulations adopted by moratorium by initiative, City action, or otherwise

5.35 "Tentative Map" shall mean any tentative map, as defined in the Subdivision Map Act and the City Municipal Code, for the Project, including the First Tentative Map. With the approval of any Tentative Map, the City shall identify the conditions that shall be satisfied to process the map.

5.36 "Term" means the term of this Agreement as set forth in Section 7.2 of this Agreement.

5.37 "Unit" means a residential dwelling unit within the Project. This definition is provided solely for the purposes of determining the uses which may be built as a part of the Project and, if applicable, for calculating the City Fee described in Exhibit "C", and is not intended to allow for conversion of non-residential uses to residential uses.

5.38 "Very Low Income Household" means persons and families whose income does not exceed fifty percent (50%) of the then-current area median income of the County of Orange adjusted for family size by the State Department of Housing and Community Development in accordance with adjustment factors adopted and amended from time to time by the United States

Department of Housing and Urban Development pursuant to Section 8 of the United States Housing Act of 1937, as amended, and California Health and Safety Code Section 50105, as it may be amended from time-to-time. In no event, however, shall the maximum annual income for a Very Low Income Household be, for purposes of this Agreement, less than fifty percent (50%) of the then-current area median income of the County of Orange.

6. EXHIBITS. All exhibits attached to this Agreement are incorporated as a part of this Agreement. Those exhibits are:

Exhibit	Description
"A"	Legal Description of the Property
"B"	General Plan Amendment
"C"	Public Benefits
"D"	Density Bonus Housing Agreement
"E"	Assignment and Assumption Agreement

7. GENERAL PROVISIONS.

7.1 Binding Effect of Agreement. This Agreement shall be recorded against the Property and shall run with the land. The Development shall be carried out only in accordance with the terms of this Agreement. Until released or terminated pursuant to the provisions of this Agreement or until Owner has fully performed its obligations arising out of this Agreement, no portion of the Property shall be released from this Agreement.

7.2 Term of Agreement. The Term shall commence on the Effective Date. The Term shall continue for a period of ten (10) years from the Effective Date, subject to the following:

7.2.1 *Extensions of Term*. The Term shall be extended for periods equal to the time during which:

7.2.1.1 Litigation is pending which challenges any matter, including compliance with CEQA or any other local, state, or federal law, related in any way to the approval or implementation of all or any part of the Development Plan. Any such extension shall be equal to the time between the filing of litigation, on the one hand, and the entry of final judgment or dismissal, on the other. All such extensions shall be cumulative.

7.2.1.2 Any application by Owner for state or federal regulatory permits and/or approvals required for the Project has been pending more than one year after its submittal, beginning on the 366th day following its submittal for approval.

7.2.1.3 Any other delay occurs which is beyond the control of the Parties, as described in Section 14.10.

7.2.2 During the Term, certain portions of the Property may be released from this Agreement as provided elsewhere in this Agreement.

7.2.3 As provided in Section 7.3 and elsewhere within this Agreement, the Term may end earlier than the end of the Term specified in this Section.

7.3 Termination. This Agreement shall be deemed terminated and of no further effect upon the earlier occurrence of any of the following events:

7.3.1 Expiration of the Term as set forth in Section 7.2;

7.3.2 Entry of a final judgment setting aside, voiding, or annulling the adoption of the ordinance approving this Agreement;

7.3.3 The adoption of a referendum measure overriding or repealing the ordinance approving this Agreement;

7.3.4 Completion of the Project in accordance with the terms of this Agreement, including issuance of all required occupancy permits and acceptance, as required by state law, by City, or the applicable public agency, of all required dedications and the satisfaction of all of Owner's obligations under this Agreement; or

7.3.5 As may be provided by other specific provisions of this Agreement.

7.4 Effect of Termination. Subject to Section 8.9, upon any termination of this Agreement, the only rights or obligations under this Agreement which either Party shall have are:

7.4.1 The completion of obligations which were to have been performed prior to termination, other than those which are separately addressed by Section 12;

7.4.2 The performance and cure rights set forth in Section 12; and

7.4.3 Those obligations that are specifically set forth as surviving this Agreement, such as those described in Section 9 and in Sections 11.1 through 11.7 and Section 14.15.

7.5 Amendment or Cancellation of Agreement. This Agreement may be amended from time to time or canceled only by the written consent of both City and Owner in the same manner as its adoption, as set forth in California Government Code Section 65868. Any amendment or cancellation shall be in a form suitable for recording in the Official Records of Orange County, California. An amendment or other modification of this Agreement will continue to relate back to the Effective Date of this Agreement (as opposed to the effective date of the amendment or modification), unless the amendment or modification expressly states otherwise.

7.6 Release of Obligations With Respect to Individual Unit Upon Certification of Occupancy. Notwithstanding any other provision of this Agreement:

7.6.1 When any individual unit has been finally subdivided and sold, leased, or made available for lease to a member of the public or any other ultimate user, and a certificate of occupancy has been obtained for the building(s) on the lot, that unit and its owner shall have no further obligations under and shall be released from this Agreement.

7.6.2 Upon the conveyance of any lot, parcel, or other property, whether residential, commercial, or open space, to a homeowners' association, property owners' association, or public or quasi-public entity, that lot, parcel, or property and its owner shall have no further obligations under and shall be released from this Agreement, provided that this paragraph shall not be deemed to release any transferee (including a good faith purchaser) from obligations to pay assessments imposed in connection with a Financing District.

No formal action by the City is required to effect this release, but, upon Owner's request, City shall sign an estoppel certificate or other document to evidence the release.

7.7 Minor Changes. The provisions of this Agreement require a close degree of cooperation between the Parties and "Minor Changes" to the Project may be required from time to time to accommodate design changes, engineering changes, and other refinements related to the details of the Parties' performance. "Minor Changes" shall mean changes to the Project that are otherwise consistent with the Development Plan, and which do not result in a change in the type of use, an increase in density or intensity of use, significant new or increased environmental impacts that cannot be mitigated, or violations of any applicable health and safety regulations in effect on the Effective Date.

Accordingly, the Parties may mutually consent to adopting "Minor Changes" through their signing of an "Operating Memorandum" reflecting the Minor

Changes. Neither the Minor Changes nor any Operating Memorandum shall require public notice or hearing. The City Attorney and City Manager shall be authorized to determine whether proposed modifications and refinements are "Minor Changes" subject to this Section 7.7 or more significant changes requiring amendment of this Agreement. The City Manager may execute any Operating Memorandum without City Council action.

7.8 Term of Map(s) and Other Project Approvals.

7.8.1 Subdivision Maps. Pursuant to Government Code Section 66452.6, the term of all subdivision or tract maps that are approved for all or any portion of the Property shall be extended to a date coincident with the Term and, where not prohibited by State law, with any extension of the Term.

7.8.2 Site Development Permits. Site Development Permits for the Project shall have terms that coincide with the term of the subdivision or tract map for the portion of the Property to which a particular Site Development Permit pertains.

7.8.3 Other Development Approvals. Pursuant to Government Code Section 65863.9, any and all other Development Approvals for any portion of the Project shall automatically be extended for a term ending concurrently with the applicable tentative maps for the Project. Pursuant to Section 7.8.1, those terms shall be the same as the Term of this Agreement.

7.8.4 Decisions of Community Development Director. Any decision of the Community Development Director with respect to Subsequent Development Approvals may be appealed to the City's City Council pursuant to Section 15.70.080 of the Aliso Viejo Municipal Code.

7.9 Relationship of City and Owner. The contractual relationship between City and Owner arising out of this Agreement is one of independent contractor and not agency. This Agreement does not create any third-party beneficiary rights.

7.10 Notices. All notices, demands, and correspondence required or permitted by this Agreement shall be in writing and delivered in person, overnight delivery (e.g. Fedex) or mailed by first class and certified mail, return receipt requested, postage prepaid, addressed as follows:

If to City, to:
City of Aliso Viejo
12 Journey, Suite 100
Aliso Viejo, CA 92656

Attn: City Manager

With a copy to:
Scott C. Smith
18101 Von Karman Avenue
Suite 1000
Irvine, CA 92612

If to Owner, to:
Brandywine Acquisition Group, LLC.
2355 Main Street, Suite 220
Irvine, CA 92614

With a copy to:
Cox, Castle & Nicholson LLP
2029 Century Park East, Suite 2100
Los Angeles, CA 90067
Attn: Andrew K. Fogg, Esq.

City or Owner may change its address by giving notice in writing to each of the other names and addresses listed above. Thereafter, notices, demands, and correspondence shall be addressed and transmitted to the new address. Notice shall be deemed given upon personal delivery or, notices shall be deemed given upon receipt as evidenced by the customary receipt provided by the delivery service.

7.11 Waiver of Right to Protest. Execution of this Agreement is made by Owner without protest. Owner knowingly and willingly waives any rights it may have under Government Code Section 66020 or any other provision of law to protest the imposition of any fees, dedications, reservations, or other exactions imposed on the Project as authorized by this Agreement.

8. DEVELOPMENT OF THE PROPERTY.

8.1 Owner's Vested Right. Owner shall have the vested right to complete Development of the Property in accordance with the Development Plan as provided in this Agreement ("Owner's Vested Right"). To enable Owner to complete the Project, Owner's Vested Right shall include, but not be limited to, the rights to (1) develop 58 for-sale residential Units, including fifty five (55) for-sale market-rate units and three (3) affordable for-sale units, all in accordance with the Development Plan, (2) the timely issuance by the City of all Subsequent Development Approvals, and (3) the timely taking by the City of such other actions that are (i) requested by Owner, and (ii) consistent with the terms of this Agreement, including, but not limited, to the vested rights afforded pursuant to Section 8.9 of this Agreement.

Owner's Vested Right shall be subject to the Reservation of Authority set forth in Section 8.6 and all provisions of this Agreement and may not be modified or terminated except as expressly provided by this Agreement.

8.2 Governing Land Use Regulations. The Land Use Regulations applicable to the Project and the Property shall be those contained in the Development Plan. An amendment or other modification of this Agreement will not change these applicable Land Use Regulations unless the amendment or modification expressly provides otherwise. Subsequent Land Use Regulations shall not apply to the Property except as authorized in Section 8.6 of this Agreement, unless the Owner and the City mutually agree in writing that the Project will be subject to one or more Subsequent Land Use Regulations. To the extent of any inconsistency between this Agreement and any provision of the City's subdivision ordinance (comprising Title 14 of the Aliso Viejo Municipal Code), this Agreement shall control.

Nothing contained in this Section shall be deemed to authorize City to withhold any building permit, approval, and/or certificate of occupancy based on Owner's failure to comply with any Land Use Regulation that is not applicable to the Project because of this Agreement.

8.3 Permitted Uses. Except as otherwise provided within this Agreement, the permitted uses on the Property shall be as provided in the Development Plan.

8.4 Density and Intensity; Requirement for Reservation and Dedication of Land. Except as otherwise provided within this Agreement, the density and intensity of use for all Development on the Property, and the requirements for reservation and dedication of land, shall be as provided in the Development Plan.

8.5 Unit Counts to be Determined with First Tentative Map Approval. The City Council will, concurrently with the approval of the First Tentative Map, determine the specific number of Units which may be built as part of the Project in accordance with Owner's Vested Right set forth in Section 8.1 of this Agreement. In order for the City to make this determination, Owner shall submit the First Tentative Map Submittal Package, concurrently with its application for the First Tentative Map. Under no circumstances may the City reduce the number of units permitted under the Development Plan in conjunction with the First Tentative Map Approval without consent of Owner.

8.6 Reservation of Authority. The following Land Use Regulations or Subsequent Land Use Regulations shall apply to the Property and the Project:

8.6.1 Processing fees and charges imposed by the City to cover the City's estimated or actual costs of reviewing and processing

applications for the Project, providing inspections, conducting annual reviews, providing environmental analysis, or for monitoring compliance with this Agreement or any Development Approvals granted or issued, provided such fees and charges are in force and effect on a general basis on the date of filing such applications with the City. This Section shall not be construed to limit the authority of City to charge its then-current, normal and customary application, processing, and permit fees for Subsequent Development Approvals, building permits and other similar permits, which fees are designed to reimburse City's expenses attributable to such application, processing, and permitting and are in force and effect on a City-wide basis at such time as the Subsequent Development Approvals and permits are granted by City, notwithstanding the fact that such fees may have been increased by City subsequent to the Effective Date;

8.6.2 Procedural regulations relating to hearing bodies, petitions, applications, notices, findings, records, hearings, reports, recommendations, appeals, and any other matter of procedure;

8.6.3 The following, provided that (i) they are uniformly applied to all development projects within the City and (ii) are not applied retroactively to any Development Approval issued before their adoption or amendment:

8.6.3.1 Uniform codes governing engineering and construction standards and specifications adopted by the City pursuant to state law. Such codes include, without limitation, the City's Municipal Code, adopted version of the California Building Code, California Plumbing Code, California Mechanical Code, California Electrical Code, California Energy Code, California Green Building Standards Code, California Residential Code, and California Fire Code;

8.6.3.2 Local amendments to those uniform codes which are adopted by the City pursuant to state law, provided they pertain exclusively to the preservation of life and safety; and

8.6.3.3 The City's standards and procedures regarding the granting of encroachment permits and the conveyance of rights and interests which provide for the use of or the entry upon public property.

8.6.4 Regulations which may be in conflict with this Agreement, but which are objectively required (and there are no available

reasonable alternatives) to protect the public health and safety in the event of a sudden, unexpected occurrence involving a clear and imminent danger, and demanding immediate action to prevent or mitigate loss of, or damage to, life, health, property, or essential public services within the immediate community. Such regulations must be a valid exercise of the City's police power and must be applied and construed so as to provide Owner, to the maximum extent possible, with the rights and assurances provided in this Agreement. To apply to the Property, such regulations must be adopted after a public hearing and must be based upon findings of necessity established by a preponderance of the evidence. Any regulations, including moratoria, enacted by City and imposed on the Property to protect the public health and safety in the circumstances described above shall toll the Term and any time periods for performance by Owner and City set forth in this Agreement;

8.6.5 Owner shall be issued building permits for the Project after permit applications are reviewed and approved by City in the City's customary fashion for such review and approval; and

8.6.6 The exercise of the power of eminent domain.

8.7 County-Mandated Impact Fees. Nothing in this Agreement shall relieve Owner of the responsibility to pay any impact fees established by the County of Orange or associated with any County program and for which Owner is legally responsible. Owner shall pay any such fees the City is required to collect or otherwise collects on behalf of the County of Orange. Owner understands and acknowledges that Exhibit "C" reflects only the City's estimate of fees paid and fees owed, and may not accurately reflect Owner's County fee obligations. The omission of any fee from Exhibit "C" which is due to the County or any other public agency shall not invalidate or otherwise affect Owner's obligation to pay that fee.

8.8 Adequacy of Required Infrastructure. The City acknowledges and agrees that there will be sufficient capacity to accommodate the Project in the infrastructure and services owned, operated, outsourced, controlled, and/or provided by the City, including, without limitation, traffic circulation, storm drainage, trash collection, and flood control. Where City renders or outsources such services or owns such infrastructure, City shall serve the Project and there shall be no restrictions placed upon Owner concerning hookups or service for the Project, except for reasons beyond City's control. Notwithstanding the foregoing, City does not warrant the adequacy of, and City shall not be responsible or liable for any infrastructure or services that are not owned, operated, outsourced, controlled, and/or provided by City.

8.9 Vested Rights Upon Termination. Termination of the Agreement shall not invalidate any Land Use Regulations or terminate any Subsequent Development Approvals obtained prior to the date of termination. Upon any termination of this Agreement, Owner's vested rights, if any, shall be determined by this Agreement to the extent development has occurred hereunder, and as to the remainder of the Project, by state and federal statutes and case law and then current factual state of the Development. Subject to that determination of rights and all other applicable law, Owner's right to continue development of the Project pursuant to some or all of the Development Plan shall be subject to the ordinary exercise of the City's police power, including the adoption of a general plan amendment, zoning change, or other Land Use Regulations applicable to the Property. Owner acknowledges that following termination or expiration of this Agreement, except as to any development that has vested, City may amend the general plan designation of the Property and/or the zoning designation applicable to the Property.

8.10 Waiver of Density Bonus. While this Agreement is in effect, Owner waives any right Owner may have to a density bonus under Government Code Sections 65915 through 65917.5 or the Aliso Viejo Municipal Code. Densities vested hereunder include all densities available as density bonuses under the Aliso Viejo Municipal Code and Government Code Sections 65915 through 65917.5; Owner shall not be entitled to further density bonuses. Nothing in this section limits Owner's right to seek incentives, concessions, and/or waivers under the state Density Bonus Law, as applicable, all of which are expressly reserved.

8.11 Staffing and Expedited Processing. City shall employ all lawful actions capable of being undertaken by City to (i) promptly receive and, when complete, accept all applications for Subsequent Development Approvals and related environmental analysis, if any (collectively, "Applications"), and (ii) expeditiously process and take action upon the Applications in accordance with applicable law.

8.12 Changes in Federal and State Law. The Property may be subject to subsequently enacted state or federal laws or regulations that preempt local regulations or mandate the adoption of local regulations that conflict with the Development Plan. Upon discovery of such a subsequently enacted federal or state law, City or Owner shall provide the other Party with written notice, a copy of the state or federal law or regulation, and a written explanation of the legal or regulatory conflict created. Within ten (10) days thereafter, City and Owner shall meet and confer in good faith in a reasonable attempt to modify this Agreement, as necessary, to comply with such federal or state law or regulation. In such negotiations, City and Owner agree to preserve the terms of this Agreement and the rights of Owner and City as derived from this Agreement to the maximum feasible extent while resolving the conflict. City agrees to cooperate with Owner in resolving the

conflict in a manner which minimizes any financial impact of the conflict upon Owner or City. City also agrees to process, in the same expedited manner as set forth for Applications in Section 8.11, Owner's proposed changes to the Development Plan as needed to comply with such federal or state law, and to process those changes in accordance with City procedures. Any delays caused by such changes in state or federal law shall toll the term of this Agreement and the time periods for performance by Owner and City set forth in this Agreement.

8.13 Cooperation in Securing Other Governmental Approvals and Permits. City agrees to make its staff available, at Owner's cost, to assist Owner in securing permits and approvals required by other governmental agencies to assure Owner's ability to (i) implement the Development Plan and (ii) perform its obligations under this Agreement in a timely manner. City does not warrant or represent that any other governmental permits or approvals will be granted.

8.14 Compliance with CEQA. Where the California Environmental Quality Act requires that an environmental analysis be performed in connection with a future discretionary approval granted by the City for the Project, the City, consistent with Section 8.13, shall provide the cooperation needed to expeditiously complete those actions.

8.15 Timing of Development. Because the California Supreme Court held in *Pardee Construction Co. v. City of Camarillo*, 37 Cal. 3d 465 (1984), that the failure of the parties in that case to provide for the timing of development resulted in a later-adopted initiative restricting the timing of development to prevail over the parties' agreement, it is the specific intent of the Parties to provide for the timing of the Project in this Agreement. To do so, the Parties acknowledge and provide that Owner shall have the right, but not the obligation, to complete the Project in such order, at such rate, at such times, and in as many development phases and sub-phases as Owner deems appropriate in its sole subjective business judgment but subject to Section 9.4 of this Agreement.

8.16 Conditions, Covenants and Restrictions. Owner shall have the ability to reserve and record such covenants, conditions, and restrictions ("CC&Rs") against the Property as Owner deems appropriate, in its sole and absolute discretion. Such CC&Rs may not conflict with this Agreement or the General Plan. Before recording any CC&Rs, Owner shall provide a copy of the CC&Rs to the City for review and approval by the City Attorney. The City Attorney's review shall be limited to determining if the CC&Rs substantially comply with this Agreement. Within forty-five (45) days after receiving a copy of the proposed CC&Rs from Owner, the City Attorney shall provide Owner with either (i) a statement that the CC&Rs comply with this Agreement ("CC&R Approval") or (ii) written comments identifying each aspect of the CC&Rs which the City Attorney believes not to be in

compliance with this Agreement (a "Statement of Non-Compliance"). If the City Attorney fails to provide Owner with either CC&R Approval or a Statement of Non-Compliance within forty-five (45) days following a written request by Owner, City shall be deemed to have approved the CC&Rs and Owner may record the CC&Rs against the Property. If the City Attorney provides a Statement of Non-Compliance, Owner shall have thirty (30) days in which to respond to the Statement of Non-Compliance. Upon submittal of Owner's response, the procedure described above for the initial submittal and City Attorney review of proposed CC&Rs shall again be followed. This procedure shall be followed until Owner either (1) receives CC&R Approval, (2) submits the compliance issues to binding arbitration pursuant to the rules of the American Arbitration Association, (3) files an action for declaratory relief in Orange County Superior Court seeking a judicial determination of the compliance of the proposed CC&Rs, or (4) agreement is otherwise reached between the Parties allowing for the recording of the CC&Rs. The CC&Rs may run with the land and bind Owner's successors and assigns. Except as provided above, any dispute between the Parties regarding the City's approval or rejection of the CC&Rs shall be subject to immediate and binding arbitration pursuant to the rules of the American Arbitration Association.

9. PUBLIC BENEFITS.

9.1 Intent. This Agreement is entered into by the City in consideration of, and in exchange for, Owner's agreement to contribute to the development and rehabilitation of public recreational facilities, affordable housing, and other services.

9.2 Public Benefits. Owner's development and financial obligations related to public benefits are set forth in this Section 9 and Exhibit "C". This Section 9 and Exhibit "C" shall survive the termination, cancellation, or expiration of this Agreement.

9.3 Independent Nature of Obligations. Owner's Public Benefit obligations are independent of the obligations of any other landowner or any other property which the City intends to participate in providing some or all of the Public Benefits. Provided that Owner satisfies its Public Benefit obligations and is not in Material Default, Owner's Vested Right to complete the full development of the Project shall not be limited, diminished, or otherwise adversely affected by the failure of any other landowner or property to participate in providing the Public Benefits as anticipated by the City. Similarly, the City's obligations to Owner and the Property are independent of the City's obligations to any other property or landowner. Owner acknowledges that the provisions of this paragraph shall not apply to any fee the amount of which is not controlled by the City, including but not limited to fees paid to the Capistrano Unified School District, the County of Orange, and/or any other government agency.

9.4 Affordable Housing Obligations. Owner recognizes the policy stated in the Housing Element of the Aliso Viejo General Plan to encourage the provision of affordable housing in new development. Owner agrees to satisfy its obligation to provide for affordable housing by constructing three (3) units restricted to Very Low Income Households. All affordable housing Units must be developed on-site at the Property. The affordable Units shall be constructed concurrently with the market rate Units in the Project.

Owner shall enter into a Density Bonus Housing Agreement with the City, in the form attached hereto as Exhibit "D", which shall set forth the terms, conditions, and restrictions governing the development, affordability, and occupancy of the affordable housing Units. Execution of the Density Bonus Housing Agreement shall be completed prior to the issuance of any building permit for the Project. The City shall have no obligation to issue any building permit for the Project until the fully executed Density Bonus Housing Agreement has been submitted to and accepted by the City. Any delay in the issuance of building permits resulting from the Owner's failure to timely submit the executed agreement shall be solely the responsibility of the Owner.

10. ANNUAL REVIEW.

10.1 Timing of Annual Review. Pursuant to Government Code Section 65865.1, at least once during every twelve (12) month period of the Term, City shall review the good faith compliance of Owner with the terms of this Agreement ("Annual Review").

10.2 Standards for Annual Review. During the Annual Review, Owner shall be required to demonstrate good faith compliance with the terms of this Agreement. "Good faith compliance" shall be established if Owner is in compliance with every term and condition of this Agreement. If the City Council or its designee finds and determines, based on substantial evidence, that Owner is not in good faith compliance, then City may proceed in accordance with Section 12 pertaining to the potential Default of Owner and the opportunities for cure. Owner shall pay a reasonable fee to cover the costs incurred by City (*i.e*., staff time and necessary consultant costs) in connection with the Annual Review.

10.3 Procedures for Annual Review. The Annual Review shall be conducted by the City Council or its designee. Owner shall be given a minimum of thirty (30) days' notice of any date scheduled for an Annual Review. Owner shall not be limited in the information it presents to the City Council for the Annual Review and may, if needed, provide information to the City Council in the first instance at the City Council hearing on the Annual Review. Should the City Council designate a party other than itself to conduct the Annual Review, these same notice and procedural requirements shall apply to the conduct by the designee of the Annual Review.

11. THIRD PARTY LITIGATION.

11.1 General Plan Litigation. City has determined that this Agreement is consistent with its General Plan. Owner has reviewed the General Plan and concurs with City's determination. Neither Owner nor City shall have any liability under this Agreement or otherwise for any failure of City to perform under this Agreement, or for the inability of Owner to develop the Property as contemplated by the Development Plan or this Agreement, if such failure or inability is the result of a judicial determination that part or all of the General Plan is invalid, inadequate, or not in compliance with law.

11.2 Third Party Litigation Concerning Agreement. Owner shall, at Owner's expense (including attorneys' fees), defend, indemnify, and hold City, its officials, officers, employees, agents, and independent contractors, harmless from any third-party claim, action or proceeding against City, its officials, officers, employees agents, or contractors to attack, set aside, void, or annul the approval of this Agreement. City shall promptly notify Owner of any such claim, action or proceeding, and City shall cooperate in the defense at Owner's cost. Owner reserves the right to withdraw its Project application or request that City repeal or rescind Project approvals. If Owner requests such application withdrawal or Project repeal or rescission, Owner shall also pay all costs related to processing those requests and bringing them to City Council for hearing. Notwithstanding the foregoing, Owner shall continue to pay for any and all litigation costs and fees until such litigation has been resolved by a Court (*i.e.*, obtaining a dismissal of the City from the case). For the avoidance of doubt, any damages or judgment shall also solely be paid for by Owner. To the extent that Owner withdraws its Project application or requests that the City rescind or repeal Project approvals, City reserves the right to reduce or abandon its defense of any litigation.

11.3 Indemnity. In addition to the provisions of Section 11.2, Owner shall indemnify and hold City, its officials, officers, agents, employees and independent contractors free and harmless from liability whatsoever or claims based or alleged upon any act or omission of Owner, its officers, agents, employees, subcontractors and independent contractors, for property damage, bodily injury or death (Owner's employees included) or any other element of damage of any kind or nature, relating to or arising from development of the Project, except for claims for damages arising through active negligence or willful misconduct of City, its officials, officers, agents, employees and independent contractors. Owner shall defend, at Owner's expense, including attorneys' fees, City, its officials, officers, agents, employees and independent contractors in any legal action based upon such alleged acts or omissions of Owner, its officers, agents, employees, subcontractors, and independent contractors, in connection with the development of the Project, this Agreement, or the Development

Approvals. For the avoidance of doubt, any damages or judgments shall also solely be paid for by Owner.

11.4 Environmental Contamination. Owner shall indemnify and hold City, its officers, agents, employees, and contractors free and harmless from any liability, based or alleged, upon any act or omission of Owner, its officers, agents, employees, subcontractors, predecessors in interest, successors, assigns, and independent contractors, resulting in any violation of any federal, state or local law, ordinance or regulation relating to industrial hygiene or to environmental conditions on, under, or about the Property, including, but not limited to, soil and groundwater conditions, and Owner shall defend, at its expense, including attorneys' fees, City, its officials, officers, agents and employees in any action based or asserted upon any such alleged act or omission. Notwithstanding anything to the contrary set forth in this Section, Owner shall not be responsible for clean-up and removal of groundwater contamination migrating to or from an adjacent property not owned by Owner.

11.5 City to Reasonably Approve Counsel; Conduct of Litigation. With respect to Sections 11.2 through 11.4, City reserves the right to either (a) reasonably approve the attorney(s) that Owner selects, hires, or otherwise engages to defend City, which approval shall not be unreasonably withheld or delayed, or (b) conduct its own defense, provided, however, that if City elects to conduct its own defense, Owner shall reimburse City for any and all reasonable expenses incurred for such defense, including attorneys' fees, upon billing and accounting therefore. To the extent that Owner does not timely pay its full share of attorneys' fees and court costs, in addition to any other remedy, the City reserves the right to reduce or abandon its defense of any litigation. To the extent that Owner has failed to timely pay its full share of attorneys' fees and court costs under this section, Owner shall be deemed to have waived any right to participate in the selection of counsel and/or be involved in establishing and implementing litigation strategy, and Owner's rights under this Agreement shall be suspended until Owner has fully reimbursed the City to make up a funding shortfall created by Owner's failure to timely pay. Owner shall have the right to audit all billings for such fees and expenses. City shall not have the right to approve counsel selected by Owner to represent Owner's interests in any litigation. In any joint defense between the City and Owner of matters arising under this Agreement, City shall cooperate fully with Owner's counsel.

11.6 Processing During Third Party Litigation. The filing of any third party lawsuit(s) against City or Owner relating to this Agreement, the General Plan, any Development Approvals, including Subsequent Development Approvals, or other development issues affecting the Property shall not delay or stop the development, processing, or construction of the Project, approval of Subsequent Development Approvals, or issuance of "Ministerial Approvals," unless the third party obtains a court order preventing the

activity or invalidating this Agreement or any provision thereof. City shall not stipulate to the issuance of any such order without Owner's prior written consent. For purposes of this Section, the term "Ministerial Approvals" shall mean the issuance of approvals or permits requiring the determination of conformance with Land Use Regulations and Development Approvals, including, without limitation, site plans, site development permits, area plans, design review, development plans, land use plans, grading plans, improvement plans, building plans and specifications, ministerial issuance or approval of one or more final maps, zoning clearances, grading permits, improvement permits, stormwater management plans, wall permits, building permits, lot line adjustments, conditional and temporary use permits, certificates of use and occupancy, approvals, entitlements, and related matters as may be necessary for the completion of the Project.

11.7 Survival. The provisions of Sections 11.1 through 11.7 inclusive, shall survive the termination, cancellation, or expiration of this Agreement.

12. DEFAULTS AND REMEDIES.

12.1 Major Default Defined. A Major Default, as defined in Section 5.21 of this Agreement, may establish cause for early termination of this Agreement. This provision does not limit the right of either Party to pursue other non-termination remedies permitted by this Section 12 for Minor Defaults.

12.2 Notice and Termination. Before either Party may declare a Major Default or termination of this Agreement or bring a legal action to terminate this Agreement, the procedures of this Section must be followed. In the case of a Major Default arising from the conduct of an Annual Review, the procedures of this Section shall be strictly followed and shall constitute a second and independent review of the good faith compliance of Owner.

The Party asserting a Default (the "Non-Defaulting Party") may elect to do so by providing written notice to the Party alleged to be in Default (the "Defaulting Party") setting forth the nature of the Default and the actions, if any, required by the Defaulting Party to cure the Default. The Defaulting Party shall be deemed in Default if the Defaulting Party fails to cure the Default within thirty (30) business days after the date of such notice (for monetary defaults) or within sixty business (60) days after the date of such notice (for non-monetary defaults) ("cure periods"). If the nature of the alleged Default is such that it cannot reasonably be cured within the applicable cure period, the Defaulting Party shall not be deemed to be in Default if it has commenced efforts to cure the Default within the applicable cure period and continues to diligently pursue completion of the cure.

12.3 Default Remedies. A Party who complies with the notice of Default and opportunity to cure requirements of Section 12.2 may, at its option, institute legal action to cure, correct, or remedy the alleged Default, enjoin any

threatened or attempted violation, enforce the terms of this Agreement by specific performance, or pursue any other legal or equitable remedy. These remedies shall be cumulative rather than exclusive, except as otherwise provided by law.

Furthermore, the City, after first following the procedures set forth in Section 12.2, may give notice of its intent to terminate or modify this Agreement for an uncured Major Default, in which event the matter shall be scheduled for consideration and review by the City Council, using the notice and procedure provisions set forth in Section 10.3 for an Annual Review. The "preponderance of evidence" standard of review set forth in Section 12.4, however, shall be employed rather than the "substantial evidence" standard set forth in Section 10.2.

12.4 Standard of Review. Any determination by City that Owner is in Default shall be based on the preponderance of evidence before the City. In any legal action by Owner challenging the City's determination of Default, the court shall conduct a de novo review of Owner's compliance based on the administrative record and determine if the preponderance of evidence supports the City's determination.

12.5 Owner's and City's Exclusive Remedy. City and Owner acknowledge that neither City nor Owner would have entered into this Agreement if it were to be liable for damages under or with respect to all or any part of the Development Plan. Accordingly, except as stated below, neither Party shall sue the other for damages or monetary relief for any matter related to the Development Plan. City may, however, sue Owner for the payment of sums due from Owner to City under provisions of this Agreement which are expressly stated to survive termination of this Agreement. With these exceptions, Owner's and City's litigation remedies shall be limited to declaratory and injunctive relief, mandate, and specific performance.

12.6 Waiver; Remedies Cumulative. All waivers of performance must be in a writing signed by the Party granting the waiver. There are no implied waivers. Failure by City or Owner to insist upon the strict performance of any provision of this Agreement, irrespective of the length of time for which such failure continues, shall not constitute a waiver of the right to demand strict compliance with this Agreement in the future.

A written waiver affects only the specific matter waived and defines the performance waived and the duration of the waiver. Unless expressly stated in a written waiver, future performance of the same or any other condition is not waived.

A Party who complies with the notice of Default and opportunity to cure requirements of Section 12.2, where applicable, and elects to pursue a legal or equitable remedy available under this Agreement does not waive its right

to pursue any other remedy available under this Agreement, unless prohibited by statute, court rules, or judicial precedent.

Delays, tolling, and other actions arising under Section 14.10 shall not be considered waivers subject to this Section 12.6.

12.7 Alternative Dispute Resolution. Any dispute between the Parties may, upon the mutual agreement of the Parties, be submitted to mediation, binding arbitration, or any other mutually agreeable form of alternative dispute resolution. While an alternative dispute process is pending, the statute of limitation shall be tolled for any claim or cause of action which either of the Parties may have against the other.

13. ENCUMBRANCES, ASSIGNMENTS, AND RELEASES.

13.1 Discretion to Encumber. This Agreement shall not prevent or limit Owner, in any manner, at Owner's sole discretion, from encumbering some or all of the Property or any improvement on the Property by any mortgage, deed of trust, or other security device to secure financing related to the Property or the Project.

13.2 Mortgagee Protection. City acknowledges that the Lender(s) providing financing secured by the Property and/or its improvements may require certain Agreement interpretations and modifications. City shall, at any time requested by Owner or the lender, meet with Owner and representatives of such lender(s) to negotiate in good faith any such interpretation or modification. City will not unreasonably withhold or delay its consent to any requested interpretation or modification provided such interpretation or modification is consistent with the intent and purposes of this Agreement. Any Mortgagee of the Property shall be entitled to the following rights and privileges:

13.2.1 Neither entering into this Agreement nor a breach of this Agreement shall defeat, render invalid, diminish, or impair the lien of any mortgage or deed of trust on the Property made in good faith and for value.

13.2.2 If City timely receives a request from a Mortgagee requesting a copy of any notice of Default given to Owner under the terms of this Agreement, City shall provide a copy of that notice to the Mortgagee within ten (10) days of sending the notice of Default to Owner. The Mortgagee shall have the right, but not the obligation, to cure the Default during the remaining cure period allowed Owner under Section 12.2 of this Agreement.

13.2.3 Except as otherwise provided within this Agreement, any Mortgagee who comes into possession of some or all of the

Property pursuant to foreclosure of a mortgage or deed of trust, or deed in lieu of such foreclosure or otherwise, shall:

13.2.3.1 Take that property subject to the terms of this Agreement and as Owner's successor;

13.2.3.2 Have the rights and obligations of an Assignee as set forth in Sections 13.3 and 13.4;

13.2.3.3 Have the right to rely on the provisions of Section 8 of this Agreement, provided that any development proposed by the Mortgagee is in substantial conformance with the terms of this Agreement; and

13.2.3.4 Not be liable for any defaults, whether material or immaterial, or monetary obligations of Owner arising prior to acquisition of title to the Property by the Mortgagee, except that the Mortgagee may not pursue development pursuant to this Agreement until all delinquent and current fees and other monetary obligations due under this Agreement for the portions of the Property acquired by the Mortgagee have been paid to City.

13.3 Transfer or Assignment. Subject to Section 13.5, Owner shall have the right to sell, transfer, or assign its rights and obligations under this Agreement (collectively, an "Assignment") in connection with a transfer of Owner's interest in all, any portion of, or any interest in the Property (the "Transferred Property"). No Assignment shall be made unless made together with the sale, transfer, or assignment of all or any portion of Owner's interest in the Property.

Concurrent with any Assignment, Owner shall notify City in writing of the Assignment and shall provide City with an executed Assignment and Assumption Agreement, in a form substantially similar to Exhibit "E", executed by the purchaser, transferee, or assignee (collectively, the "Assignee") to expressly and unconditionally assume all duties and obligations of Owner under this Agreement remaining to be performed at the time of the Assignment. Any Assignment not made in strict compliance with the foregoing conditions shall constitute a default by Owner under this Agreement. Notwithstanding the failure of any Assignee to execute the agreement required herein this Subsection 13.3, the burdens of this Agreement shall be binding upon such Assignee, but the benefits of this Agreement shall not inure to such Assignee until and unless such agreement is executed.

13.4 Effect of Assignment. Subject to Section 13.5 and unless otherwise stated within the Assignment, upon an Assignment:

13.4.1 The Assignee shall be liable for the performance of all obligations of Owner with respect to Transferred Property, but shall have no obligations with respect to the portions of the Property, if any, not transferred (the "Retained Property").

13.4.2 The owner of the Retained Property shall be liable for the performance of all obligations of Owner with respect to the Retained Property, but shall have no further obligations with respect to the Transferred Property.

13.4.3 The Assignee's exercise, use, and enjoyment of the Transferred Property shall be subject to the terms of this Agreement to the same extent as if the Assignee were the Owner.

13.5 City's Consent. The City's consent shall not be required to a transfer between Owner and any other entity controlling, controlled by, or under common control with Owner, except an assignment and assumption agreement must be executed between the two entities in a form substantially conforming to Exhibit "E". Moreover, the City's consent shall not be required unless, at the time of the Assignment, Owner has been determined to be in Major Default pursuant to Section 12 and the Major Default has not been cured. If Owner is in Major Default, City shall consent to any Assignment which provides adequate security to City, in the reasonable exercise of City's discretion, to guarantee the cure of the Major Default upon completion of the Assignment.

14. MISCELLANEOUS PROVISIONS.

14.1 Rules of Construction. The singular includes the plural; the masculine gender includes the feminine; "shall" is mandatory; "may" is permissive.

14.2 Entire Agreement. This Agreement constitutes the entire understanding and agreement of City and Owner with respect to the matters set forth in this Agreement. This Agreement supersedes all negotiations or previous agreements between City and Owner respecting the subject matter of this Agreement including, without limitation, the Original City Agreement.

14.3 Recorded Statement Upon Termination. Upon the completion of performance of this Agreement or its cancellation or termination, a statement evidencing completion, cancellation, or termination signed by the appropriate agents of City, shall be recorded in the Official Records of Orange County, California.

14.4 Project as a Private Undertaking. It is specifically understood by City and Owner that (i) the Project is a private development; (ii) City has no interest

in or responsibilities for or duty to third parties concerning any improvements to the Property unless City accepts the improvements pursuant to the provisions of this Agreement or in connection with subdivision map approvals; and (iii) Owner shall have the full power and exclusive control of the Property, subject to the obligations of Owner set forth in this Agreement.

14.5 Incorporation of Recitals. Each of the Recitals set forth at the beginning of this Agreement are part of this Agreement.

14.6 Captions. The captions of this Agreement are for convenience and reference only and shall not define, explain, modify, construe, limit, amplify, or aid in the interpretation, construction, or meaning of any of the provisions of this Agreement.

14.7 Consent. Where the consent or approval of City or Owner is needed to implement Development under this Agreement, the consent or approval shall not be unreasonably withheld, delayed, or conditioned.

14.8 Covenant of Cooperation. City and Owner shall cooperate and deal with each other in good faith and assist each other in the performance of the provisions of this Agreement.

14.9 Execution and Recording. The City Clerk shall cause a copy of this Agreement to be signed by the appropriate representatives of the City and recorded with the Office of the County Recorder of Orange County, California, within six months following the effective date of Ordinance No. _____, the ordinance adopting this Agreement, or prior to building permit issuance, whichever comes first. The failure of the City to sign and/or record this Agreement shall not affect the validity of and binding obligations set forth within this Agreement.

14.10 Delay for Events Beyond the Parties' Control. Performance by either Party of its obligations under this Agreement shall be excused, and the Term shall be extended, for periods equal to the time during which (1) litigation is pending which challenges any matter, including compliance with CEQA or any other local, state, or federal law, related in any way to the approval or implementation of all or any part of the Development Plan. Any such extension shall be equal to the time between the filing of litigation, on the one hand, and the entry of final judgment or dismissal, on the other. All such extensions shall be cumulative; (2) any application by Owner for state or federal regulatory permits and/or approvals required for the Project has been pending more than one year after its submittal; or (3) a delay is caused by reason of any event beyond the control of City or Owner which prevents or delays performance by City or Owner of obligations under this Agreement. Such events shall include, by way of example and not limitation, acts of nature, enactment of new conflicting federal or state laws or

regulations (example: listing of a species as threatened or endangered), judicial actions such as the issuance of restraining orders and injunctions, delay in the issuance of bonds or formation of any Financing Districts, and riots, strikes, or damage to work in process by reason of fire, mud, rain, floods, earthquake, or other such casualties.

If City or Owner seeks excuse from performance, it shall provide written notice of such delay to the other within thirty (30) days of the commencement of such delay. If the delay or default, whether material or immaterial, is beyond the control of City or Owner it shall be excused, and an extension of time for such cause shall be granted in writing for the period of the enforced delay, or longer as may be mutually agreed upon. Any disagreement between the Parties with respect to whether this Section 14.10 applies to a particular delay or default is subject to the filing by either Party of an action for judicial review of the matter, including requests for declaratory and/or injunctive relief.

14.11 Interpretation and Governing Law. In any dispute regarding this Agreement, the Agreement shall be governed and interpreted in accordance with the laws of the State of California. Venue for any litigation concerning this Agreement shall be in Orange County, California.

14.12 Time of Essence. Time is of the essence in the performance of the provisions of this Agreement as to which time is an element.

14.13 Estoppel Certificate. Within ten (10) business days following a written request by either of the Parties, the other Party shall execute and deliver to the requesting Party a statement certifying that (i) either this Agreement is unmodified and in full force and effect or there have been specified (date and nature) modifications to the Agreement, but it remains in full force and effect as modified; and (ii) either there are no known current uncured Major Defaults under this Agreement or that the responding Party alleges that specified (date and nature) Major Defaults exist. The statement shall also provide any other reasonable information requested. The failure to timely deliver this statement shall constitute a conclusive presumption that this Agreement is in full force and effect without modification, except as may be represented by the requesting Party and that there are no uncured Major Defaults in the performance of the requesting Party, except as may be represented by the requesting Party. Owner shall pay to City all reasonable administrative costs incurred by City in connection with the issuance of estoppel certificates under this Section 14.13 prior to City's issuance of such certificates.

14.14 Successors and Assigns. This Agreement shall be binding upon and inure to the benefit of the Parties and their respective successors and assigns.

14.15 Future Litigation Expenses.

14.15.1 Payment to Prevailing Party. If either Party brings a legal or equitable proceeding against the other Party which arises in any way out of this Agreement, the prevailing Party shall be entitled to recover its reasonable attorneys' fees and all other reasonable costs and expenses incurred in that proceeding.

14.15.2 Scope of Fees. Attorneys' fees under this Section shall include attorneys' fees on any appeal and in any post-judgment proceedings to collect or enforce the judgment. The provisions in 14.15.1 through 14.15.3 are separate and several and shall survive the termination of this Agreement.

14.15.3 Limitation of Liability. Owner's obligations under this Agreement are solely those of Owner. In no event shall any present, past or future officer, director, shareholder, member, employee, partner, affiliate, manager, representative or agent of Owner (a "Related Party") have any personal liability, directly or indirectly, under this Agreement. Recourse in any way connected with or arising from this Agreement shall not be available against any Related Party.

Owner and City have executed this Agreement on the dates set forth below.

PUBLIC BENEFITS

In addition to complying with the Project conditions of approval, Owner has committed by this Agreement to contribute to the City for, among other things, certain "Public Benefits." Owner shall make contributions to the City, as follows:

1. City Public Benefit Fee. Owner shall pay a one-time City Public Benefit Fee in the amount of Two Million Fifty-Seven Thousand, Six Hundred Fifty-One Dollars and No Cents ($2,057,651.00). This fee is inclusive of any and all park in-lieu fee required under the Quimby Act and/or Aliso Viejo Municipal Code Chapter 14.16. Because this fee is an obligation arising from a Development Agreement, it is not subject to the Mitigation Fee Act. This Agreement does not limit the purposes for which the City may use City Public Benefit Fees, and the use and timing of such use of City Public Benefit Fees shall be entirely within the City's sole and absolute discretion.

2. Payment of the full City Public Benefit Fee shall be made to the City prior to the issuance of any permit for the Project. No permit shall be issued until the City has received the full payment and has confirmed compliance with all applicable fee requirements. The City shall have no obligation to issue any permit until and unless such payment is received in full, and any delay resulting from non-payment shall be solely the responsibility of the Owner.

3. To the extent that Owner not has paid to City the entirety of the Public Benefit Fee within the first three years of this Agreement, for any reason, any and all remaining portion of the City Public Benefit Fee shall be increased, annually, on the anniversary date of the Agreement starting in the fourth year of the Agreement and continuing every subsequent year of the Agreement's term. The City Public Benefit Fee shall be increased by a percentage set by the Consumer Price Index, which is defined at the Consumer Price Index for all Urban Consumers (CPI-U), published by the Bureau of Labor Statistics of the United States Department of Labor for Los-Angeles-Riverside-Orange County, All Items (1982-84=100) and utilizing the prior calendar year's average as the annual average. If this Index is discontinued, the Parties shall use any other renamed national index covering the Aliso Viejo metropolitan areas or any other successor or substitute index appropriately adjusted. In no event shall the City Public Benefit Fee be reduced.

ASSIGNMENT AND ASSUMPTION AGREEMENT

ASSIGNMENT AND ASSUMPTION OF DEVELOPMENT AGREEMENT BETWEEN CITY OF ALISO VIEJO AND _____, WHICH WILL DO BUSINESS IN CALIFORNIA AS _____.,

THIS ASSIGNMENT AND ASSUMPTION OF DEVELOPMENT AGREEMENT BETWEEN CITY OF ALISO VIEJO AND _____ WHICH WILL DO BUSINESS IN CALIFORNIA AS _____.**("Assignment")** is made as of the ___ day of _____, 20___ (**"Effective Date"**), by and among [ENTITY] ("[ENTITY]") a [LEGAL DESIGNATION] and _____ ("**Assignee**") with reference to the following facts:

RECITALS

A. [ENTITY] has entered into that certain Development Agreement, dated _____, 2026, by and between the City of Aliso Viejo ("**City**"), on the one hand, and [ENTITY], on the other hand ("**Agreement"**) for certain real property consisting of approximately 4.4 acres of land located in the City, more particularly described in Exhibit "A" ("**Property**").

B. [ENTITY] desires to assign and delegate, and Assignee desires to accept and assume, all of [ENTITY'S] rights and obligations under the Agreement in accordance with the terms and conditions set forth herein.

C. City has approved the Assignment in accordance with the terms and conditions set forth herein and in the Agreement.

AGREEMENT

NOW, THEREFORE, for good and valuable consideration, the receipt and sufficiency of which are hereby acknowledged, [ENTITY] and Assignee do hereby agree as follows:

1. Assignment and Assumption. Effective as of the Effective Date, [ENTITY] hereby assigns, transfers, and conveys to Assignee all of [ENTITY'S] rights, interest, duties, liabilities, and obligations in, to, and under the Agreement, and Assignee hereby accepts and assumes all such rights, interests, duties, liabilities, and obligations under the Agreement from [ENTITY] for [the Property or a portion of the Property] ("Assigned Property") [, except to the extent [ENTITY] has retained a portion of the Property (the "Retained Property")].

2. City Consent to Assignment. Effective as of the Effective Date, City hereby consents to the Assignment and hereby fully releases and forever discharges [ENTITY] from any and all obligations to City under the Agreement for the Assigned Property, [except [ENTITY'S] obligations with respect to the Retained Property].

3. Entire Agreement. This Agreement represents the final and entire agreement between the parties in connection with the subject matter hereof, and may not be modified except by a written agreement signed by both [ENTITY] and Assignee.

4. Governing Law. This Agreement has been prepared, negotiated, and executed in, and shall be construed in accordance with, the laws of the State of California, without regard to conflict of law rules.

IN WITNESS WHEREOF, the parties hereto have executed this Agreement as of the date first above written.

DENSITY BONUS HOUSING AGREEMENT

BRANDYWINE ACQUISITION GROUP, LLC
15 Argonaut, Aliso Viejo, CA

This DENSITY BONUS HOUSING AGREEMENT ("**Agreement**") is made and entered into this [date], by and between the City of Aliso Viejo ("**City**"), a California municipal corporation, and BRANDYWINE ACQUISITION GROUP, LLC, a California limited liability company ("**Developer**"). City and Developer are sometimes referred to collectively as the "**Parties**" and individually as a "**Party**."

RECITALS

A. Developer owns that certain real property located within the City of Aliso Viejo, County of Orange, State of California, commonly known as 15 Argonaut, Aliso Viejo, CA (APNs 623-093-10 and 623-093-11) more particularly described in the legal description attached as Exhibit A and more particularly depicted in Exhibit B ("**Property**").

B. Developer is proposing the construction of 58 units on the Property, with related amenities and improvements, as further set forth in Resolution Nos. 20XX-XX and Ordinance Nos. 20XX-XX approving the project ("**Project**").

C. The Project qualifies for a density bonus under California Government Code section 65915 *et seq*. ("**State Density Bonus Law**"). Under the State Density Bonus Law, the Project will provide 3 residential units for sale to Very Low Income Households ("**Affordable Units**"), as set forth in this Agreement.

D. In accordance with State Density Bonus Law, Developer has requested, and City has granted, certain concessions, incentives, and waivers more particularly set forth herein.

E. This Agreement, including the attached exhibits, sets forth the terms and conditions for implementing the Project's requirement to provide the Affordable Units in exchange for receiving the concessions, incentives and waivers, as set forth herein.

NOW, THEREFORE, in consideration of the above recitals, which are incorporated herein by this reference, and of the mutual covenants contained herein, and for other good and valuable consideration, the receipt and sufficiency of which is hereby acknowledged, the Parties agree as follows:

1. DEFINITIONS AND EXHIBITS

1.1 Definitions. In addition to the terms that may be defined elsewhere in this Agreement, the following terms when used in this Agreement shall be defined as follows:

1.1.1 "**Adjusted for family size appropriate to the unit**" has the meaning provided in California Health and Safety Code section 50052.5(h).

1.1.2 "**Affordable Housing Cost**" means the maximum purchase price that results in an affordable housing cost, adjusted for family size appropriate to the unit, for a Very Low Income Household, as determined pursuant to Health and Safety Code section 50052.5(b) and applicable HCD regulations.

1.1.3 "**Affordable Units**" means the 3 Units within the Project to be sold by Developer to Qualified Purchasers in accordance with this Agreement. An "**Affordable Unit**" means one of the Affordable Units.

1.1.4 "**AMI**" means the Orange County, California, area median income, as periodically published by HCD.

1.1.5 "**City**" means the City of Aliso Viejo, California.

1.1.6 "**City Attorney**" means the City Attorney for the City.

1.1.7 "**City Council**" means the City Council of the City.

1.1.8 "**City Deed of Trust**" means a Deed of Trust and Security Agreement executed by a Qualified Purchaser and recorded as a lien against the Affordable Unit acquired by that Qualified Purchaser as required by the terms of the Equity Sharing Agreement, the form of which is attached to the Equity Sharing Agreement.

1.1.9 "**City Manager**" means the City Manager for the City.

1.1.10 "**City Note**" means the promissory note executed by a Qualified Purchaser in favor of City pursuant to the Equity Sharing Agreement, the form of which is attached to the Equity Sharing Agreement.

1.1.11 "**Developer**" means BRANDYWINE ACQUISITION GROUP, LLC, a California limited liability company, and its successors and assigns to all or any part of the Property, the Project, or this Agreement. "Developer" does not include an ultimate purchaser of an individual Unit in a retail sale.

1.1.12 "**Effective Date**" means the date that City executes this Agreement.

1.1.13 "**Equity Sharing Agreement**" means that certain Owner Occupancy and Equity Sharing Agreement to be entered into by and between City and each Qualified Purchaser that purchases an Affordable Unit, which shall be recorded against each Affordable Unit in the form attached hereto as Exhibit C.

1.1.14 "**HCD**" means the California Department of Housing and Community Development.

1.1.15 "**Household**" means all persons residing in a Unit.

1.1.16 "**Income Verification Materials**" means those materials specified in Section 4.5 to verify the income of a proposed purchaser of an Affordable Unit.

1.1.17 "**Market Rate Units**" means the Units within the Project to be sold by Developer to a household without restriction.

1.1.18 "**Project**" means that certain residential development as more particularly described in the Recitals above and Section 2 below.

1.1.19 "**Project Approvals**" means the Project's approved entitlements pursuant to Resolution Nos. 20XX-XX and Ordinance Nos. 20XX-XX and all terms and conditions stated therein. The Project Approvals include, but are not limited to, that certain Development Agreement dated [insert], between Developer and City governing the development of the Project on the Property.

1.1.20 "**Property**" means that certain real property more particularly described in the legal description in Exhibit A.

1.1.21 "**Qualified Purchaser**" means a person or family who complies with the requirements of Sections 4.5 and 4.6 and qualifies as a Very Low Income Household.

1.1.22 "**State Density Bonus Law**" means Government Code section 65915 *et seq.*, as of the Effective Date.

1.1.23 "**Unit**" means a residential dwelling unit within the Project to be constructed by Developer pursuant to the Project Approvals. The Project contains a total of 58 Units, with 3 Affordable Units and 55 Market Rate Units.

1.1.24

"Very Low Income Household" means persons and families whose income does not exceed 50 percent of the AMI, adjusted for household size, as determined for the County of Orange in accordance with California Health and Safety Code section 50105, and implementing regulations published by HCD.

1.2 Exhibits. The following documents are attached hereto and incorporated herein by this reference:

Exhibit "A" – Legal Description of Property

Exhibit "B" – Map Showing Property and its Location

Exhibit "C" – Equity Sharing Agreement (and attachments)

2. DEVELOPMENT OF THE PROPERTY

2.1 Project. Developer shall develop the Project on the Property in accordance with this Agreement and the Project Approvals.

2.2 No Increase in Density. Developer acknowledges and agrees that Developer has not requested, and the Project is not receiving, an increase in density under State Density Bonus Law.

2.3 Market Rate Units. The Project shall have no more than 55 Market Rate Units with unit sizes as may be determined by Developer in accordance with the Project Approvals. Developer may alter the unit distribution of the Market Rate Units in Developer's discretion, provided that the Project has the minimum number of Affordable Units and the minimum distribution thereof as specified in this Agreement.

2.4 Affordable Units. The Project shall have no less than 3 Affordable Units pursuant to the terms and conditions of this Agreement. The Affordable Units shall be consistent in terms of type, design, and number of bedrooms with the Market Rate Unit types as depicted in the Project Approvals. The Affordable Units shall be located throughout the Project and not clustered in one area or building.

2.5 Minimum Development Standards for Affordable Units; Access and Restrictions. The Affordable Units shall be constructed with the same exterior appearance and standard interior features, fixtures, and amenities, and shall use the same type and quality of materials as provided for the Market Rate Units of the same model and size. City acknowledges that purchasers of Market Rate Units may elect to purchase optional upgrades and such optional upgrades may not be available for the Affordable Units. Except as otherwise authorized by City in writing, the Affordable Units shall be constructed concurrently with the Market Rate Units. The Affordable Units, and their occupants, shall have access to all common areas of the Project to the same extent as occupants of the Market Rate Units.

2.6 Development Concessions, Incentives, and Waivers. In accordance with State Density Bonus Law, the Project is hereby granted the following: one concession from otherwise applicable minimum boundary landscaping requirement, one waiver from otherwise applicable setback requirements, and one waiver from otherwise applicable height requirements.

2.7 Parking Requirements. The Project's onsite parking shall be provided in compliance with Government Code sections 65915(p)(1)(A)-(B). The Project will provide 140 total onsite parking spaces.

2.8 No Increase in Density or Further Concessions, Incentives, or Waivers. Developer acknowledges and agrees that the concessions, incentives, and waivers set forth in Section 2.6 and 2.7 fully satisfy City's duty to grant a density bonus and any other incentive, concession, or waiver of any building, zoning, or other requirement in connection with the Project, State Density Bonus Law, and the City's Density Bonus Ordinance. Additionally, Developer acknowledges and agrees that Developer has not requested, and the Project is not receiving, an increase in density under State Density Bonus Law or City's Density Bonus Ordinance. By way of this Agreement, Developer releases any and all claims Developer may have against City in any way relating to or arising from City's satisfaction of its obligations under Government Code section 65915 with respect to the Project.

2.9 Permits and Processing; Compliance with Laws. Developer, at its sole cost and expense, or as otherwise set forth in a separate written agreement, shall secure or cause to be secured any and all permits that may be required for development of the Project by City or any other federal, state, or local governmental entity having or claiming jurisdiction over the Property or Project. Upon securing any and all permits, Developer shall carry out and perform the development of the Project, or cause the performance of the development of the Project, in conformity with all applicable federal, state, and local laws and regulations, and all conditions of approval issued by City, including the Project Approvals. If any changes to the Project materially alter Developer's ability to comply with any terms of this Agreement, in City's reasonable determination, then City and Developer shall meet and confer to address amendments and revisions to this Agreement as necessary.

2.10 Relocation Prior to Development of Project. If relocation is required prior to the completion of development of the Project, Developer shall have the sole and exclusive responsibility for providing relocation assistance and paying all relocation costs as may be required to comply with applicable federal and state laws and regulations. In addition to any other indemnity provided by Developer under this Agreement, Developer shall indemnify, defend (with counsel of City's choosing and the consent of Developer, which shall not be unreasonably withheld, and which may be joint defense counsel upon City's and Developer's consent), and hold harmless City and all of its officials, officers, employees, representatives, volunteers and agents from any and all alleged or actual claims, causes of action, liabilities, and damages from any third party for relocation assistance, benefits and costs prior to the completion of the development of the Project.

2.11 Mechanic's Liens; Indemnification. Prior to the closing of the sale of an Affordable Unit, Developer shall take all actions necessary to remove any then-existing mechanic's liens or other similar liens (including design professional liens) against the Property, the Project, or any part thereof, by reason of work, labor, services, or materials supplied or claimed to have been supplied to Developer or caused by, at the direction of, or on behalf of Developer. Prior to the recording of this Agreement pursuant to Section 3.1 below, Developer shall provide evidence from a reputable title company of any new recordings against the Property or Project. City hereby reserves all rights to post notices of non-responsibility and any other notices as may be appropriate upon a filing of a mechanic's lien. In addition to any other indemnity provided by Developer under this Agreement, Developer shall indemnify, defend (with counsel of Developer's choosing and reasonably approved by City), and hold harmless City and all of its officials, officers, employees, representatives, volunteers and agents from any and all alleged or actual claims, causes of action, liabilities, and damages from any third party by reason of a mechanic's lien or work, labor, services,

or materials supplied or claimed to have been supplied to Developer or caused by, at the direction of, or on behalf of Developer. The provisions of this Section 2.11 survive termination of this Agreement.

3. RECORDING OF AGREEMENT

3.1 Recording. Prior to the issuance of any building permit for the Project, Developer shall record or shall cause to be recorded in the Official Records for Orange County, California, an executed original of this Agreement. City shall cooperate with Developer in promptly executing this Agreement in recordable form.

4. SALE OF UNITS

4.1 Conveyance of Units. Developer may construct and convey title to the Units at any time after the Effective Date, in accordance with this Agreement, the Project Approvals, and any and all federal, state, and local laws and regulations. Developer may offer to sell some or all Units in phases or all at once in Developer's discretion, provided Developer's sale complies with applicable federal, state, and local laws and regulations. Developer shall convey title to each Affordable Unit through a purchase and sale agreement to be processed through an escrow. Upon City's request, Developer shall deliver to City a copy of the purchase and sale agreement and preliminary title report for the conveyance of an Affordable Unit.

4.2 Notice to City. Developer shall provide City with no less than 60 days written notice prior to the date that Developer intends to commence activities to market, offer, or sell the Affordable Units.

4.3 Designation of Affordable Units. Prior to commencement of any activities to market, offer, or sell the Units, Developer shall designate the 3 Units as Affordable Units. Developer's notice to City under Section 4.2 above shall disclose to City which Units Developer has designated as the Affordable Units. [NOTE: AS AN ALTERNATIVE, WE CAN PREDESIGNATE NOW AND CHANGE THIS SECITON TO READ AS FOLLOWS: "Developer has designated Units 53, 54, and 55 as Affordable Units."]

4.4 Sale of Affordable Units. Developer shall sell each Affordable Unit at no more than the Affordable Housing Cost and only to a buyer that qualifies as a Qualified Purchaser. So that City may verify the amount is not more than the Affordable Housing Cost, Developer shall provide written notice to City of the sale price of each Affordable Unit prior to offering for sale the Affordable Unit. City verification shall be provided within 30 days of City's receipt of Developer's written notice of the proposed sale price. Developer shall sell each Affordable Unit only to those who qualify as a Qualified Purchaser, as determined pursuant to Sections 4.5 and 4.6. Developer shall not knowingly convey title to any Affordable Unit to a Household that does not qualify as a Very Low Income Household, and Developer shall not convey fee title to any Affordable Unit to a Very Low Income Household at a price that exceeds the Affordable Housing Cost for that Affordable Unit.

4.5 Income Verification. The proposed purchaser of an Affordable Unit shall provide and certify, for the purpose of City approval, the following information: the Social Security Number of the proposed purchaser; copies of the federal and state income tax returns filed

by the proposed purchaser for the prior two calendar years; preceding six months of bank statements of the proposed purchaser; background documentation of any income (e.g., Social Security award letter, stock interest forms, court statement regarding support payments, retirement or pension benefit statement, etc.); copies of the two most current wage earning statements of the proposed purchaser; the purchase price that the proposed purchaser intends to pay for the Affordable Unit; and any other information that City may reasonably require to verify the income of the proposed purchaser. The proposed purchaser of an Affordable Unit shall also provide, for the purpose of City approval, a written statement signed by the proposed purchaser (in a form acceptable to City) that authorizes City to inspect, use, and rely on the information provided by the proposed purchaser, and waives and releases any right or claim that said proposed purchaser might otherwise have in the absence of such written authorization to maintain the privacy or confidentiality of such information. The information, statements, agreements, and other documents that a proposed purchaser is required to provide pursuant to this section 4.5 are collectively the "Income Verification Materials." Developer shall have the obligation to collect and compile all Income Verification Materials from a proposed purchaser of an Affordable Unit. Developer shall be responsible for working with the proposed purchaser to compile all required Income Verification Materials to be submitted to the City for approval, which may be accomplished by Developer contracting with a third-party consultant to provide such services.

4.6 City Verification. Developer shall not convey fee title to any Affordable Units to a proposed purchaser until such time as City has determined (i) the proposed purchaser intends to occupy the Affordable Unit as a principal residence; (ii) the proposed purchaser is a Very Low Income Household; (iii) the purchase price for the Affordable Unit does not exceed the Affordable Housing Cost; (iv) the proposed purchaser and City have executed the Equity Sharing Agreement, the proposed purchaser has executed the City Note and the City Deed of Trust, and the Equity Sharing Agreement and City Deed of Trust are both in a recordable form; and (v) the proposed conveyance will not otherwise violate the terms and conditions of this Agreement. Developer shall reasonably cooperate with City in its determination of the matters set forth in clauses (i)-(v) herein and Developer shall be entitled to conclusively rely on any City determination regarding Developer's compliance with this Section 4.6. City shall respond to a request from Developer for verification of the matters in clauses (i)-(v) herein by written notice, which shall be delivered to Developer within 30 days of City's receipt of all Income Verification Materials and all other information and documents reasonably required by City to make the determinations described in clauses (i) through (v). If City is unable to verify the proposed purchaser's income as provided herein, then the prospective purchaser's income shall be deemed to exceed the maximum allowable limit for a Very Low Income Household. If City determines a proposed conveyance would violate this Agreement, City shall specify the reasons for the violation. If the proposed violation is not corrected to the satisfaction of City within 30 days after the date of the notice specifying the violation, or within such further time as City determines in its sole and absolute discretion is necessary to correct said violation, Developer shall not convey title to the proposed purchaser. City may apply to a court of competent jurisdiction for specific performance of this Agreement, for a declaration that the proposed conveyance is void, or for any such relief as may be appropriate under law or equity.

4.7 Quality Standards for Affordable Units. At the time of conveyance of an Affordable Unit from Developer to a Qualified Purchaser, the physical condition and quality of the Affordable Unit shall be in the same physical condition and of the same quality (as to standard features, but

not upgrades) as the other Market Rate Units of the same model and size that Developer has offered for sale.

4.8 Execution of Equity Sharing Agreement and City Note; Recording the Equity Sharing Agreement and City Deed of Trust. Developer shall cause the Equity Sharing Agreement, the City Note, and the City Deed of Trust, together with all attachments thereto, to be duly executed with the Equity Sharing Agreement and City Deed of Trust executed in recordable form. At the close of escrow, the escrow agent handling the conveyance shall record, or cause to be recorded, the instruments effectuating the conveyance of the Affordable Unit in the Official Records of Orange County, California, including the grant deed conveying title to the Qualified Purchaser, the Equity Sharing Agreement, the City Deed of Trust, and any other instruments necessary to consummate the conveyance and establish the intended priority of liens and encumbrances under this Agreement, the Equity Sharing Agreement, and the City Deed of Trust. Upon recordation, the Equity Sharing Agreement shall run with the Affordable Unit and the City Deed of Trust shall constitute a lien against the Affordable Unit. City shall cooperate with Developer and each Qualified Purchaser in executing the Equity Sharing Agreement and any other documents requiring City's execution so that such documents may be delivered into escrow for recording at the close of escrow.

4.9 Sale of Units; Indemnification. In addition to any other indemnification provided in this Agreement, Developer shall indemnify, defend (with counsel of Developer's choosing and reasonably approved by City), and hold harmless City and its officials, officers, employees, representatives, agents, and volunteers (collectively, "Indemnitees") from and against any claims, liabilities, damages, or losses alleged or made against Indemnitees by any person or entity for any alleged or actual violation by Developer of any federal, state, or local law or regulation in connection with the sale by Developer of the Units or otherwise arising from any act or omission of Developer in violation of this Section 4, except in each instance to the extent caused by the gross negligence or willful misconduct of any of the Indemnitees. The provisions of this Section 4.9 survive termination of this Agreement.

4.10 Qualified Purchaser Marketing and Orientation. Developer shall be responsible for marketing the Affordable Units to potential Qualified Purchasers. Developer shall coordinate with designated City staff for the marketing plan of any Affordable Units. As part of the marketing plan, before the Qualified Purchaser executes the Equity Sharing Agreement and in all events before the close of escrow for the applicable Affordable Unit, City shall provide to the Qualified Purchaser of the Affordable Unit an in-person, informational session that will explain, in plain and simple language, the resale restrictions and other provisions of the Equity Sharing Agreement. Upon completion of the informational session, City shall cause the Qualified Purchaser to execute an agreement, in a form approved by City, acknowledging the Qualified Purchaser's attendance at the informational session and providing for the Qualified Purchaser's waiver and release of Developer and City from any claims or causes of action related to the restrictions on the marketability of the Affordable Unit, provided that the Qualified Purchaser represents that they understand the restrictions on marketability.

4.11 Transfer to Qualified Nonprofit Housing Corporation. If, despite bona fide good faith documented marketing efforts, Developer is unable to locate a Qualified Purchaser to purchase an Affordable Unit within 180 calendar days after the issuance of a certificate of

occupancy for such Affordable Unit, Developer may sell or otherwise transfer such Affordable Unit to a qualified nonprofit housing corporation that meets all of the requirements set forth in Government Code section 65915(c)(2)(A)(ii) and any other applicable provisions of state law, which sale or transfer shall satisfy the requirements of this Agreement applicable to Developer. If Developer sells or otherwise transfers an Affordable Unit pursuant to this Section 4.11, City and Developer shall reasonably cooperate in executing such amendments to this Agreement, and any other documents executed in connection herewith, as may be reasonably necessary to reflect such sale or transfer and to implement the requirements of Government Code section 65915 applicable thereto.

5. TERM

5.1 Term. The term of this Agreement commences on the Effective Date and will continue until all of the Affordable Units have been conveyed to Qualified Purchasers and (i) each Qualified Purchaser has entered into a fully executed Equity Sharing Agreement with City in recordable form; (ii) each Qualified Purchaser has executed a City Note and City Deed of Trust in favor of City; and (iii) all of the Equity Sharing Agreements and City Deeds of Trust for all Affordable Units have been recorded. Developer shall provide, upon City's request, evidence that Equity Sharing Agreements and the City Deeds of Trust have been recorded for all of the Affordable Units. Termination of this Agreement shall not affect the continued validity or enforceability of any Equity Sharing Agreement, City Note, or City Deed of Trust executed in connection with an Affordable Unit. Nor shall termination of this Agreement affect any rights or remedies arising from a breach occurring before termination.

6. DEFAULT AND TERMINATION; INDEMNIFICATION

6.1 Default. Failure or delay by any Party to perform any term or provision of this Agreement that is not cured within 30 days after receipt of notice from the other Party specifying the default (or such other period specifically provided herein) constitutes a default under this Agreement; provided, however, if such default is of the nature requiring more than 30 days to cure, the defaulting Party shall avoid default hereunder by commencing to cure within such 30 day period, and thereafter diligently pursuing such cure to completion within an additional 60 days following the conclusion of such 30 day period (for a total of 90 days). Except as required to protect against further damages, the injured Party may not institute proceedings against the Party in default until the time for cure has expired. Failure or delay in giving such notice shall not constitute a waiver of any default, nor shall it change the time of default.

6.2 Rights and Remedies Cumulative. The rights and remedies of the Parties are cumulative, and the exercise by either Party of one or more of its rights or remedies shall not preclude the exercise by it, at the same or different times, of any other rights or remedies for the same default or any other default by the other Party.

6.3 Indemnification. In addition to any other indemnity specifically provided in this Agreement, Developer agrees to defend (with counsel of Developer's choosing and reasonably approved by City), indemnify and hold harmless the Indemnitees from and against any loss, liability, claim, or judgment arising from or related to any act or omission of Developer in connection with its obligations under this Agreement, except to the extent caused by the gross

negligence or willful misconduct of any of the Indemnitees. The provisions of this Section 6.3 survive the termination of this Agreement.

7. ASSIGNMENT; COVENANTS RUN WITH THE LAND

7.1 Assignment by Developer. Developer will comply with the Project Approvals in connection with any sale, transfer, or assignment of the Property or Project in whole or part, or any transfer or assignment of Developer's rights and obligations under this Agreement.

7.2 Covenants Run with the Land. The Property shall be used, occupied, and improved subject to the covenants, conditions, and restrictions set forth herein. The covenants, conditions, restrictions, reservations, equitable servitudes, liens and charges set forth in this Agreement shall run with the Property and shall be binding upon Developer and all persons having any right, title or interest in the Property, or any part thereof, their heirs, and successive owners and assigns, and shall inure to the benefit of City and its successors and assigns, and may be enforced by City and its successors and assigns. The covenants established in this Agreement shall, without regard to technical classification and designation, be binding for the benefit and in favor of City and its successors and assigns, and the parties hereto expressly agree that this Agreement and the covenants herein shall run in favor of City. City is deemed the beneficiary of the terms and provisions of this Agreement and of the covenants running with the land, for and in its own right and for the purposes of protecting the interests of the community and other parties, public or private, in whose favor and for whose benefit this Agreement and the covenants running with the land have been provided. Developer hereby declares its understanding and intent that the burden of the covenants set forth herein touch and concern the land and that Developer's interest in the Property may be rendered less valuable thereby. Developer hereby further declares its understanding and intent that this Agreement provides a public benefit and that the covenants set forth herein touch and concern the Property by furthering the health, safety, and welfare of the residents of the City. Notwithstanding anything in this Agreement to the contrary: (a) in the event that Developer transfers its interest in the Property to a successor, Developer shall have no further obligation or liability under this Agreement except to the extent arising out of a default by Developer under this Agreement that existed at the time of such transfer; and (b) this Agreement shall automatically terminate and be of no further force or effect, without any additional instrument or other action required, as to each of the Market Rate Units upon the closing of the sale of each such Market Rate Unit to the initial purchaser thereof.

8. **MISCELLANEOUS**

8.1 Entire Agreement. This Agreement, including all of its exhibits and attachments, contains the Parties' entire understanding and agreement with respect to the matters set forth herein, and there are no oral or written representations, understandings or ancillary covenants, undertakings or agreements which are not contained or expressly referred to herein. No testimony or evidence of any such representations, understandings or covenants shall be admissible in any proceeding of any kind or nature to interpret or determine this Agreement's terms or conditions.

8.2 Notices.

8.2.1 Delivery. As used in this Agreement, "notice" includes, but is not limited to, the communication of notice, request, demand, approval, statement, report, acceptance, consent, waiver, appointment or other communication required or permitted hereunder. All notices shall be in writing and shall be considered given either: (i) when delivered in person to the recipient named below; or (ii) on the date of delivery shown on the return receipt, after deposit in the United States mail in a sealed envelope as either registered or certified mail with return receipt requested, and postage and postal charges prepaid, and addressed to the recipient named below; or (iii) on the date of delivery shown on the delivery receipt, after deposit with a known and reliable next-day document delivery service (such as FedEx), charges prepaid and addressed to the recipient named below. All notices shall be addressed as follows:

If to City: City of Aliso Viejo
12 Journey, Suite 100
Aliso Viejo, CA 92656-5335
Attn: City Manager

With a copy to: Best Best & Krieger LLP
18101 Von Karman Ave.
Unit 1000
Irvine, CA 92612
Attn: Scott Smith

If to Developer: Brandywine Acquisition Group, LLC
2355 Main Street, Suite 220
Irvine, CA 92614

With a copy to: Cox, Castle & Nicholson LLP
2029 Century Park East, Suite 2100
Los Angeles, CA 90067
Attn: Andrew K. Fogg, Esq.

8.2.2 Change of Address. Either Party may, by notice given at any time, require subsequent notices to be given to another person or entity, whether a party or an officer or representative of a party, or to a different address, or both. Notices given before actual receipt of notice of change shall not be invalidated by the change.

8.3 Severability. If any term, provision, covenant or condition of this Agreement shall be determined invalid, void or unenforceable by a court of competent jurisdiction, the remainder of this Agreement shall not be affected thereby to the extent such remaining provisions are not rendered impractical to perform, taking into consideration the purposes of this Agreement.

8.4 Interpretation and Governing Law. This Agreement and any dispute hereunder shall be governed and interpreted in accordance with the laws of the State of California without regard to conflict of law principles. This Agreement shall be construed as a whole according to its fair language and common meaning to achieve the objectives and purposes of the Parties hereto, and the rule of construction to the effect that ambiguities are to be resolved against the drafting Party shall not be employed in interpreting this Agreement, all Parties having been represented by counsel in the negotiation and preparation hereof.

8.5 Section Headings. All section headings and subheadings are inserted for convenience only and shall not affect any construction or interpretation of this Agreement.

8.6 Singular and Plural. As used herein, the singular of any word includes the plural, and vice versa, as context so dictates. Masculine, feminine, and neuter forms of any word include the other as context so dictates.

8.7 Joint and Several Obligations. If at any time during the term of this Agreement the Property or Project is owned, in whole or in part, by more than one party developing or selling the Units to the initial purchasers thereof, then all obligations of the Developer under this Agreement shall be joint and several as to such parties, and the default of any one of such Developers shall be the default of all such Developers.

8.8 Time of Essence. Time is of the essence in the performance of the provisions of this Agreement as to which time is an element.

8.9 Computation of Days. Unless otherwise specified in this Agreement or any exhibit attached hereto, use of the term "days" shall mean calendar days. For purposes of this Agreement and all exhibits attached hereto, "business days" means every day of the week except Saturdays, Sundays, official State holidays as recognized in Government Code section 19853(a) or successor statute, and any days in which City is closed for business.

8.10 Waiver. Failure by a Party to insist upon the strict performance of any of the provisions of this Agreement by the other Party, or the failure by a Party to exercise its rights upon the default of the other Party, shall not constitute a waiver of such Party's right to insist and demand strict compliance by the other Party with the terms of this Agreement thereafter.

8.11 Non-Discrimination. In performing its obligations under this Agreement, Developer shall not discriminate because of race, color, religion, sex, gender, gender identity, gender expression, sexual orientation, marital status, national origin, ancestry, familial status, disability, veteran or military status, source of income, or genetic information, as defined and prohibited by applicable law. Developer affirms that it is an equal opportunity employer and shall comply with all applicable federal, state and local laws and regulations.

8.12 Counterparts. This Agreement may be executed by the Parties in counterparts, which counterparts shall be construed together and have the same effect as if all of the Parties had executed the same instrument.

8.13 Jurisdiction and Venue. Any action at law or in equity under this Agreement or brought by a Party hereto for the purpose of enforcing, construing or determining the validity of

any provision of this Agreement shall be filed and tried in the Superior Court of the County of Orange, State of California, and the Parties hereto waive all provisions of law providing for the filing, removal or change of venue to any other court.

8.14 Attorneys' Fees and Costs. If any party to this Agreement institutes any action, suit, counterclaim, appeal or arbitration for any relief against another party, declaratory or otherwise (collectively an "Action"), to enforce the terms hereof or to declare rights hereunder or with respect to any inaccuracies or material omissions in connection with any of the terms, conditions, representations or warranties on the part of the other party to this Agreement, then the prevailing party in such Action, whether by arbitration or final judgment, shall be entitled to have and recover from the other party all costs and expenses of the Action, including reasonable attorneys' fees and costs incurred in bringing and prosecuting such Action and/or enforcing any judgment, order, ruling or award granted therein, all of which shall be deemed to have accrued on the commencement of such Action. For purposes of this section, costs shall include, without limitation, in addition to costs incurred in prosecution or defense of the underlying action, reasonable attorneys' fees, costs, expenses and expert fees and costs incurred in the following: (a) post judgment motions and collection actions; (b) discovery; and (c) appeals of any order or judgment. For the purposes of this Agreement the term "prevailing party" shall have the meaning set forth in California Code of Civil Procedure section 1032(a)(4).

8.15 Project as a Private Undertaking. It is specifically understood and agreed by and between the Parties hereto that the development of the Project is a private development, that neither Party is acting as the agent of the other in any respect hereunder, and that each Party is an independent contracting entity with respect to the terms, covenants and conditions contained in this Agreement. No partnership, joint venture or other association of any kind is formed by this Agreement. The only relationship between City and Developer is that of a government entity regulating the development of private property and the development of such property.

8.16 Further Actions and Instruments. Each of the Parties shall cooperate with and provide reasonable assistance to the other to the extent contemplated hereunder in the performance of all obligations under this Agreement and in the satisfaction of the Project and conditions of this Agreement. Upon the request of either Party at any time, the other Party shall promptly execute, with acknowledgment or affidavit if reasonably required, and file or record such required instruments and writings and take any actions as may be reasonably necessary under the terms of this Agreement to carry out the intent and to fulfill the provisions of this Agreement or the Project or to evidence or consummate the transactions contemplated by this Agreement. City hereby authorizes City Manager to take such other actions and negotiate and execute any additional agreements as may be reasonably necessary or proper to fulfill City's obligations under this Agreement. The City Manager may delegate their powers and duties under this Agreement to an authorized management level employee of City.

8.17 Amendment. Any alteration, change, or modification of or to this Agreement, in order to become effective, shall be made in writing and in each instance approved by the City Council and signed on behalf of each Party. Any requested alteration, change, or modification of this Agreement by Developer shall require the payment of fees or deposit by Developer to City, as applicable, for City's review of the request. Each alteration, change, or modification to this

Agreement shall be recorded against the Property in the Official Records of Orange County, California.

{Signatures on following page}

IN WITNESS WHEREOF, the parties hereto have caused this Density Bonus Housing Agreement to be executed on the date set forth at the beginning of this Agreement.

OWNER OCCUPANCY AND EQUITY SHARING AGREEMENT (DENSITY BONUS UNIT)

Owner:	_____
Property:	_____
Purchase Price:	$_____
Original Fair Market Value:	$_____
City Subsidy Amount:	$_____

This Owner Occupancy and Equity Sharing Agreement ("**Equity Sharing Agreement**") is entered into as of this [date], by and between the City of Aliso Viejo, California, ("**City**") and [name(s)] (referred to herein as "**Buyer**" and sometimes as "**Owner**").

RECITALS

A. BRANDYWINE ACQUISITION GROUP, LLC, a California limited liability company, ("**Developer**"), applied for and received development entitlements from City for the development of a 58 unit residential project ("**Project**"). 3 units within the Project will be designated affordable units for Very Low Income Households ("**Affordable Units**").

B. Pursuant to Government Code section 65915 *et seq*. ("**State Density Bonus Law**"), projects that include specified levels of affordable housing are entitled to receive certain density bonuses and other incentives to facilitate the economic feasibility of those projects.

C. In accordance with State Density Bonus Law, Developer has proposed to sell 3 dwelling units in the Project to Very Low Income Households and requested 2 concessions and 1 waiver in order to accommodate the Project.

D. On [date], City and Developer entered into that certain "**Density Bonus Housing Agreement**" pursuant to which Developer agreed to provide the Affordable Units.

E. Buyer intends to purchase the property located at [ADDRESS] in the City of Aliso Viejo, California, County of Orange ("**Property**"). The Property, which is one of the Affordable Units, is more particularly described in Exhibit A-1.

F. To comply with the requirements of the Density Bonus Housing Agreement, Developer agrees to sell the Property to Buyer for a purchase price of $[insert] ("**Original Purchase Price**"). Buyer and City agree that the fair market value of the Property at time of purchase is $[insert] ("**Original Fair Market Value**"), which price is based on an appraisal conducted at the time of the purchase of the Property by Buyer, or such other method as agreed to by City and Buyer. The Original Purchase Price has been reduced from fair market value as a direct result of the requirements imposed by City on the Project pursuant to the Density Bonus Housing Agreement. City and Buyer acknowledge that the difference between the Original Fair Market Value and the Original Purchase Price, which is equal to $[insert], is a subsidy from City that has enabled Buyer to acquire the Property at an affordable price ("**City Subsidy**").

G. State Density Bonus Law requires City to enter into an agreement with the purchaser of any affordable dwelling unit constructed and sold in exchange for such density bonus that allows City to recapture any initial subsidy and its proportionate share of appreciation. Buyer has agreed to execute and comply with this Equity Sharing Agreement in compliance with such requirements in consideration of the opportunity to purchase the Property at an affordable price, which is below the fair market value of the Property.

H. The purpose of this Equity Sharing Agreement is to: (i) place controls on ownership and occupancy of the Property; (ii) provide City with a First Option when Owner intends to Transfer the Property and preserve City's rights in the event of foreclosure; and (iii) require payment of the City Subsidy and a share of the Property's appreciation to City in accordance with the State Density Bonus Law. In accordance with the foregoing, Owner shall execute a promissory note in favor of City ("**City Note**") to ensure the repayment of the City Subsidy and the City Shared Appreciation, as defined in Section 8(a). The form of the City Note is attached hereto as Exhibit B-1.

I. Buyer is receiving a first mortgage loan ("**First Mortgage Loan**") from [lender name] ("**First Lender**"). The First Mortgage Loan is secured by a deed of trust dated [insert], executed by Buyer in favor of First Lender and recorded in the County of Orange concurrently herewith ("**First Mortgage Deed of Trust**").

J. This Equity Sharing Agreement and the City Note shall be secured by a deed of trust on the Property ("**City Deed of Trust**"). The form of the City Deed of Trust is attached hereto as Exhibit C-1. This Equity Sharing Agreement and the City Deed of Trust shall be subordinate to the lien of the First Mortgage Deed of Trust.

NOW, THEREFORE, in consideration of the benefits received by Buyer and City hereunder, Buyer and City agree as follows:

AGREEMENT

1. DEFINITIONS

The following terms are specially defined for this Equity Sharing Agreement and their definitions can be found in the sections indicated below:

a. "Affordable Housing Cost" — Same meaning as provided in the Density Bonus Housing Agreement.

b. "Buyer" or "Owner" — First sentence on page 1 of this Equity Sharing Agreement

c. "City" — First sentence on page 1 of this Equity Sharing Agreement

d. "City Deed of Trust" — Recital J

e. "City Note" — Recital H

f. "City Shared Appreciation" — Section 8.a

g. "City Subsidy" — Recital F

h. "Default" — Section 9

i. "Density Bonus Housing Agreement" – Recital D

j. "Eligible Capital Improvements" — Section 8.b

k. "Fair Market Value" — Section 6

l. "First Lender" — Recital I

m. "First Mortgage Deed of Trust" — Recital I

n. "First Mortgage Loan" — Recital I

o. "Original Fair Market Value" — Recital F

p. "Original Purchase Price" — Recital F

q. "Owner's Notice of Intent to Transfer" — Section 6

r. "Property" — Recital E and Section 2

s. "Transfer" — Section 5

t. "Very Low Income Household" – same meaning as provided in the Density Bonus Housing Agreement.

2. DESCRIPTION OF PROPERTY

This Agreement concerns the real property commonly known as [ADDRESS], which is more fully described in Exhibit A-1 ("**Property**").

3. BUYER CERTIFICATIONS; OWNER OCCUPANCY REQUIREMENT

a. Owner Occupancy Requirement. The purpose of the City assistance provided pursuant to this Equity Sharing Agreement is to provide Buyer with the opportunity to become a homeowner. Investment in real estate is not the primary purpose of this Equity Sharing Agreement. Therefore, Buyer shall occupy the Property as Buyer's principal place of residence for at least 10 months during each 12-month period. City may grant a temporary waiver of this occupancy requirement for good cause in its sole discretion.

b. Buyer Certifications. Buyer certifies that the financial and other information previously provided in order to qualify to purchase the Property is true and correct as of the date first written above.

4. INSURANCE REQUIREMENTS

Buyer shall maintain insurance on the Property in accordance with Section 5 of the City Deed of Trust.

5. RESTRICTIONS ON RESALE OF THE PROPERTY

Any Transfer of the Property will be subject to the provisions of this Agreement. "**Transfer**" means any sale, assignment or transfer, voluntary or involuntary, of any interest in the Property, including, but not limited to, a fee simple interest, a joint tenancy interest, a life estate, a leasehold interest, an interest evidenced by a land contract by which possession of the Property is transferred and Owner retains title, or a deed of trust. Any Transfer without satisfaction of the provisions of this Agreement is prohibited and shall constitute a default by Owner for which City may exercise any and all remedies under this Agreement, the City Note and the City Deed of Trust. A Transfer shall not include a conveyance: (i) to an existing spouse or domestic partner; (ii) by an Owner to a spouse or domestic partner where the spouse or domestic partner becomes the co-owner of the Property; (iii) between spouses as part of a marriage dissolution proceeding; (iv) by Owner into an *inter vivos* trust in which Owner is the beneficiary; or (v) refinance of the First Mortgage Loan meeting the requirements of Section 17; provided, however, that Owner shall provide written notice to City of all such conveyances within 30 days of the conveyance and Owner shall continue to occupy the Property as Owner's principal place of residence (except where the conveyance occurs pursuant to subsection (iii) above, in which event the new owner shall occupy the Property and affirmatively assume Owner's obligations under this Agreement, the City Note, and the City Deed of Trust).

6. NOTICE OF INTENDED TRANSFER; CITY'S FIRST OPTION; PREPARATION OF PROPERTY FOR SALE

a. Notice of Intent to Transfer. If Owner intends to Transfer the Property, Owner shall promptly give City written notice of such intent ("**Owner's Notice of Intent to Transfer**"). Owner shall give City the Owner's Notice of Intent to Transfer prior to notifying real estate brokers or lenders of Owner's intent to Transfer the Property and prior to listing of the Property on the Multiple Listing Service. The Owner's Notice of Intent to Transfer shall be sent to City by certified

mail, return receipt requested at the address provided in Section 22 below. The Owner's Notice of Intent to Transfer shall include the information necessary for City to determine the City Shared Appreciation of the Property, including the following information:

(1) The address of the Property;

(2) The date of purchase of the Property by Owner;

(3) The Original Fair Market Value of the Property at the time of Owner's purchase as determined by City and Owner and set forth on the first page of this Equity Sharing Agreement;

(4) A copy of the HUD-1 Settlement Statement or equivalent document from the close of escrow on Owner's purchase of the Property;

(5) If Owner has made capital improvements to the Property that Owner wishes to have recognized as Eligible Capital Improvements for purposes of determining the amount payable to City under Section 8, Owner shall provide a description of the improvements, the date the improvements were made, a copy of City's prior written approval of the improvements (if obtained), evidence of the cost of the improvements, and an appraisal documenting the value added to the Property by the Eligible Capital Improvements. If Owner did not obtain City's prior written approval before making the Capital Improvements, Owner may nevertheless identify such capital improvements in the Notice of Intent to Transfer and request that City recognize them as Eligible Capital Improvements. City shall recognize the improvements as Eligible Capital Improvements if City reasonably determines, based upon documentation provided by Owner, that the improvements satisfy the requirements of Section 8.b. The value of any improvements recognized by City as Eligible Capital Improvements shall be determined pursuant to Section 8.b;

(6) The date the Property will be placed on the market;

(7) The name and phone number of the person to contact to schedule inspection of the Property by City; and

(8) The proposed sale price and other material terms upon which Owner proposes to sell the Property.

b. Fair Market Value Appraisal. Prior to the Transfer of the Property, the Fair Market Value of the Property at the time of Transfer shall be determined by a certified MAI or other qualified real estate appraiser approved in advance by City. If possible, the appraisal shall be based upon the sales prices of comparable properties sold in the market area during the preceding three month period. The cost of the appraisal shall be paid by Owner, unless the appraisal is obtained from a new purchaser. Further, in the event that Owner has made Eligible Capital Improvements, the value of which Owner wishes to retain, the appraisal shall determine the value of such Eligible Capital Improvements in accordance with Section 8.b below. Nothing in this section precludes

Owner and City from establishing the Fair Market Value of the Property at the time of Transfer by mutual agreement in lieu of an appraisal pursuant to this section.

c. City's First Option. Upon receipt of a complete Owner's Notice of Intent to Transfer, City shall have the first right to purchase the Property. The purchase price payable by City shall equal the Fair Market Value of the Property determined pursuant to subsection (b), less the City Subsidy and City Shared Appreciation that would be payable to City under Section 8 if the Property were Transferred to a person other than City (the "**Option Purchase Price**"). Except for the determination and payment of the Option Purchase Price as provided herein, City shall purchase the Property on the material terms specified in the Owner's Notice of Intent to Transfer, to the extent those terms are applicable to City's purchase and are not inconsistent with this Equity Sharing Agreement. City shall have such right and option ("**First Option**") for 45 days after City receives a complete Owner's Notice of Intent to Transfer. If not timely exercised, the First Option shall terminate. If City exercises the First Option, the purchase shall close through escrow within 60 days after City's exercise, or on such other date as City and Owner may agree in writing. Upon the closing of City's purchase pursuant to the First Option, the City Subsidy and City Shared Appreciation shall be credited against the Fair Market Value of the Property in determining the Option Purchase Price and shall be deemed paid and satisfied through the credit. The parties intend that the Option Purchase Price permit Owner to retain the value of any Eligible Capital Improvements, Owner's downpayment, and Owner's proportionate share of appreciation, while permitting City to recapture its initial subsidy and proportionate share of appreciation, in accordance with Government Code section 65915(c)(2)(C).

7. SALE OF PROPERTY BY OWNER

a. Subject to Section 6.c above, Owner may Transfer the Property to a person of Owner's choosing at an unrestricted price (supported by an MAI or other qualified appraisal), and City shall release the Equity Sharing Agreement and cause the City Deed of Trust to be reconveyed from the Property, provided that Owner pays the full amount owed under the City Note to the City pursuant to Section 8 below. Owner shall provide City with the following documentation associated with such a Transfer:

(1) The name and address of the purchaser;

(2) The final sales contract and all other related documents which shall set forth all the terms of the sale of the Property, including a HUD-1 Settlement Statement or equivalent document. Said documents shall include at least the following terms: (a) the sales price; and (b) the price to be paid by the purchaser for Owner's personal property, if any, for the services of Owner, if any, and any credits, allowances or other consideration, if any.

(3) A written certification, from Owner and the purchaser in a form acceptable to City that the sale shall be closed in accordance with the terms of the sales contract and other documents submitted to and approved by City. The certification shall also provide that the purchaser or any other party has not paid and will not pay to Owner, and Owner has not received and will not

receive from the purchaser or any other party, money or other consideration, including personal property, in addition to what is set forth in the sales contract and documents submitted to City. The written certification shall also include a provision that in the event a Transfer is made in violation of the terms of this Equity Sharing Agreement or false or misleading statements are made in any documents or certification submitted to City, City shall have the right to foreclose on the Property or file an action at law or in equity as may be appropriate. In any event, any costs, liabilities or obligations incurred by Owner and the purchaser for the return of any moneys paid or received in violation of this Equity Sharing Agreement or for any costs and legal expenses, shall be borne by Owner and/or the purchaser and they shall hold City and its designee harmless and reimburse their expenses, legal fees and costs for any action they reasonably take in good faith in enforcing the terms of this Equity Sharing Agreement.

(4) A copy of the MAI or other qualified appraisal prepared for the Property in accordance with Section 6.b.

(5) Upon the close of the proposed sale, a copy of the final sales contract, HUD-1 Settlement Statement or equivalent document, escrow instructions, and any other documents which City may reasonably request.

8. PAYMENT TO CITY OF CITY SUBSIDY AND SHARED APPRECIATION

a. Upon a Transfer of the Property to a person other than City pursuant to Section 7, Owner shall pay to City the City Subsidy plus the City Shared Appreciation. The "**City Subsidy**," as defined in Recital F, is equal to the amount by which the Original Fair Market Value of the Property exceeds the Original Purchase Price of the Property. For purposes of this Section 8, "**Adjusted Fair Market Value**" means the Fair Market Value of the Property at the time of Transfer, less the value of any Eligible Capital Improvements determined pursuant to Section 8.b. "**City Shared Appreciation**" shall be calculated pursuant to the City Note but by way of information the following sets forth the method for determining the City Shared Appreciation. If there is any inconsistency between the City Note and this Equity Sharing Agreement with respect to the determination of City Shared Appreciation, the City Note shall control. City Shared Appreciation shall be calculated by dividing the City Subsidy by the Original Fair Market Value of the Property. The resulting percentage, rounded to the closest one-tenth of a percentage point, shall be multiplied by the amount, if any, by which the Adjusted Fair Market Value exceeds the Original Fair Market Value, and the resulting product shall equal the City Shared Appreciation. Notwithstanding the foregoing, if the Adjusted Fair Market Value is lower than the Original Fair Market Value, the amount payable to City shall instead be determined in accordance with subsection (d).

b. The value of any Eligible Capital Improvements shall be the value of any substantial structural or permanent fixed improvements that Owner has made to the Property after acquiring the Property, provided that such improvements are: (i) made or installed by Owner in conformity with applicable building codes at the time of installation; and (ii) approved or recognized by City in writing, either before construction or pursuant to Section 6.a.5. The value of

Eligible Capital Improvements shall be limited to the appraised increase in the value of the Property attributable to the improvements, as determined by the appraisal performed pursuant to 6.b, taking into account any depreciation in value since the installation, and shall not be based on the actual cost of constructing the improvements.

c. The City Subsidy and the City Shared Appreciation shall be a debt of Owner to City, evidenced by this Equity Sharing Agreement and the City Note, and secured by the City Deed of Trust. Owner acknowledges that City shall have no obligation to release this Equity Sharing Agreement or reconvey the City Deed of Trust until the City Subsidy and the City Shared Appreciation are paid to City. City shall utilize the repayment of the City Subsidy and the City Shared Appreciation within five years of receipt of such funds for any of the purposes described in subdivision (e) of section 33334.2 of the Health and Safety Code that promote homeownership.

d. Notwithstanding anything to the contrary in this Section 8, if the Adjusted Fair Market Value is lower than the Original Fair Market Value, the Adjusted Fair Market Value shall be used as the initial market value for purposes of determining the City Subsidy, and the amounts payable to City shall otherwise be calculated in accordance with Government Code section 65915(c)(2)(C), as amended from time to time. In no event shall the amount payable to City under this subsection be less than zero.

9. DEFAULTS

a. The following events shall constitute a "Default" by Owner under this Equity Sharing Agreement:

(1) City determines that Owner has made a misrepresentation to obtain the benefits of purchase of the Property or in connection with its obligations under this Equity Sharing Agreement;

(2) Owner fails to occupy the Property as required pursuant to Section 3 above;

(3) Owner makes a Transfer in violation of this Equity Sharing Agreement;

(4) Owner otherwise fails to comply with the requirements of this Equity Sharing Agreement, the City Note, or the City Deed of Trust and such violation is not corrected to the satisfaction of City within 10 days after the date of written notice by City to Owner of such violation;

(5) A lien is recorded against the Property other than the First Mortgage Deed of Trust, the City Deed of Trust, a lien in favor of City, a lien for nondelinquent taxes or assessments, or any other lien approved by City in writing;

(6) Owner places a mortgage on the Property in violation of Section 17 below;

(7) Owner declares a bankruptcy or makes an assignment of assets for the benefit of creditors.

b. Upon a declaration of Default by City under this Equity Sharing Agreement, City may pursue any or all of the following remedies:

(1) Subject to all applicable notice and cure requirements under the City Note and the City Deed of Trust, declare the City Subsidy and City Shared Appreciation immediately due and payable without further demand, declare a default under the City Note, and invoke the power of sale under the City Deed of Trust;

(2) Apply to a court of competent jurisdiction for any such relief at law or in equity as may be appropriate including, but not limited to, the collection of damages from Owner, which damages shall include City's costs associated with administering City's affordable housing program and the cost to City of providing sufficient assistance to a **Very Low Income** Household to acquire a market rate home at an affordable housing cost as that term is defined in Health and Safety Code section 50052.5; and

(3) Declare a Default under the City Note and City Deed of Trust and pursue all City remedies thereunder.

10. NOTICE OF DEFAULT AND FORECLOSURE

a. City may record a request for copies of any notice of default and notice of sale under any mortgage encumbering the Property. City may declare a Default under this Equity Sharing Agreement upon receipt of any notice given to City pursuant to Civil Code section 2924b, and may exercise its rights as provided in Section 9.

b. In the event of default and foreclosure, City shall have the same right as Owner to cure defaults and redeem the Property prior to the foreclosure sale. Nothing herein shall be construed as creating any obligation of City to cure any such default, nor shall this right to cure and redeem operate to extend any time limitations in the default provisions of the underlying deed of trust or mortgage.

c. Whether or not City has recorded a request pursuant to subsection (a), City may exercise its rights under this Section upon City's actual receipt of written notice of the foreclosure proceedings from Owner, the First Lender, or any other source. Nothing in this Section shall limit City's right to bid at, acquire, or otherwise protect its interest in the Property through any foreclosure sale or any other remedy available under applicable law.

11. NON-LIABILITY OF CITY

a. Non-liability for Negligence, Loss, or Damage. Owner acknowledges, understands and agrees that the relationship between Owner and City is solely that of an owner and an administrator of a City affordable housing program, and that City does not undertake or assume any responsibility for or duty to Owner to select, review, inspect, supervise, pass judgment on, or inform Owner of the quality, adequacy or suitability of the Property or any other matter. City owes no duty of care to protect Owner against negligent, faulty, inadequate or defective building or

construction or any condition of the Property and Owner agrees that neither Owner, or Owner's heirs, successors or assigns shall ever claim, have or assert any right or action against City for any loss, damage or other matter arising out of or resulting from any condition of the Property and will hold City harmless from any liability, loss or damage for these things.

b. Indemnity. Owner agrees to defend, indemnify, and hold City harmless from all losses, damages, liabilities, claims, actions, judgments, costs, and reasonable attorney's fees that City may incur as a direct or indirect consequence of: (1) Owner's default, performance, or failure to perform any obligations as and when required by this Equity Sharing Agreement or the City Deed of Trust; or (2) the failure at any time of any of Owner's representations to City to be true and correct.

12. RESTRICTIONS ON FORECLOSURE PROCEEDS

Subject to the rights of senior lienholders, any proceeds arising from a foreclosure, deed in lieu of foreclosure, or other involuntary Transfer that would otherwise be payable to Owner shall first be applied to the amounts owed to City under the City Note, and only the remaining balance, if any, shall be payable to Owner.

13. RESTRICTION ON INSURANCE PROCEEDS

If the Property is damaged or destroyed and Owner elects not to rebuild or repair the Property, Owner shall pay City the portion of any insurance proceeds received by Owner for such destruction or damage which is equal to the City Subsidy plus the City Shared Appreciation calculated pursuant to Section 8 above, with the total amount of insurance proceeds serving as the Fair Market Value upon Transfer of the Property, provided that in no event shall City receive insurance proceeds in an amount that results in the amount of insurance proceeds available to Owner being less than the Original Purchase Price for the Property as set forth above.

14. TERM OF AGREEMENT

All the provisions of this Equity Sharing Agreement, including the benefits and burdens, run with the Property and this Equity Sharing Agreement shall bind, and the benefit hereof shall inure to, Owner, Owner's heirs, legal representatives, executors, successors in interest and assigns, and to City and its successors, until the earliest to occur of: (i) the Transfer of the Property and payment to City of the City Subsidy and the City Shared Appreciation in accordance with this Agreement and the City Note, (ii) the closing of City's purchase of the Property pursuant to City's exercise of the First Option under Section 6.c, or (iii) termination under Section 16 following foreclosure or deed in lieu.

15. SUPERIORITY OF AGREEMENT

Owner covenants that Owner has not, and will not, execute any other agreement with provisions contradictory to or in opposition to the provisions hereof, and that, in any event, except as otherwise provided herein, this Equity Sharing Agreement is controlling as to the rights and obligations between and among Owner and City and their respective successors.

16. SUBORDINATION

a. Notwithstanding any provision herein, this Equity Sharing Agreement shall not diminish or affect the rights of the First Lender under the First Mortgage Deed of Trust or any subsequent First Lender deeds of trust hereafter recorded against the Property in compliance with Section 17 below.

b. Notwithstanding any other provision hereof, the provisions of this Equity Sharing Agreement and the City Deed of Trust shall be subordinate to the lien of the First Mortgage Deed of Trust and shall not impair the rights of the First Lender, or such First Lender's assignees or successors in interest to exercise their remedies under the First Mortgage Deed of Trust in the event of default under the First Mortgage Deed of Trust by Owner. Such remedies under the First Mortgage Deed of Trust include the right of foreclosure or acceptance of a deed or assignment in lieu of foreclosure. After such foreclosure or acceptance of a deed in lieu of foreclosure, this Equity Sharing Agreement and the City Deed of Trust shall be forever terminated and shall have no further effect as to the Property or any transferee thereafter; provided, however, if the holder of such First Mortgage Deed of Trust acquires title to the Property pursuant to a deed or assignment in lieu of foreclosure, this Equity Sharing Agreement and the City Deed of Trust shall automatically terminate upon such acquisition of title only if: (i) City has been given written notice of the default under the First Mortgage Deed of Trust and a 60-day opportunity to cure such default; and (ii) City has not cured the default within such 60-day period or commenced to cure the default and provided a firm commitment, in form and substance reasonably acceptable to the First Lender, to complete such cure.

17. REFINANCE OF MORTGAGE LOAN

The outstanding principal on the City Note shall not be due upon prepayment and refinancing of the First Mortgage Loan, and this Agreement and the City Deed of Trust shall be subordinated to the refinanced First Mortgage Loan, provided that following such refinance, the principal amount of the refinanced First Mortgage Loan will not exceed the original principal amount of the First Mortgage Loan unless some other amount is approved by City in writing, in City's sole and absolute discretion. Mortgage loans or equity lines of credit junior in lien priority to the City Deed of Trust are not permitted. City and Owner agree that the requirements of this Section 17 are necessary to ensure the continued affordability of the Property to Owner and to minimize the risk of loss of the Property by Owner through default and foreclosure of mortgage loans. Owner further acknowledges that violation of the provisions of this Section 17 shall constitute a Default under this Equity Sharing Agreement.

18. NONDISCRIMINATION

Owner covenants by and for itself and its successors and assigns that there shall be no discrimination against or segregation of a person or of a group of persons on account of race, color, religion, creed, age, disability, sex, sexual orientation, marital status, ancestry or national origin in the sale, transfer, use, occupancy, tenure or enjoyment of the Property, nor shall Owner or any person claiming under or through Owner establish or permit any such practice or practices of

discrimination or segregation with reference to the use, occupancy, or transfer of the Property. The foregoing covenant shall run with the land.

19. INVALID PROVISIONS

If any one or more of the provisions contained in this Equity Sharing Agreement shall for any reason be held to be invalid, illegal or unenforceable by a court of competent jurisdiction, then such provision or provisions shall be deemed severable from the remaining provisions contained in this Equity Sharing Agreement, and this Equity Sharing Agreement shall be construed as if such invalid, illegal or unenforceable provision had never been contained herein.

20. CONTROLLING LAW

The terms of this Equity Sharing Agreement shall be interpreted under the laws of the State of California. The venue for any legal action pertaining to this Agreement shall be Orange County, California.

21. NO WAIVER

No delay or omission in the exercise of any right or remedy of City upon any default by Owner shall impair such right or remedy or be construed as a waiver. City's failure to insist in any one or more instance upon the strict observance of the terms of this Equity Sharing Agreement shall not be considered a waiver of City's right thereafter to enforce the provisions of the Equity Sharing Agreement. City shall not waive its rights to enforce any provision of this Equity Sharing Agreement unless it does so in writing, signed by an authorized agent of City.

22. NOTICES

a. All notices required herein shall be sent by certified mail, return receipt requested or express delivery service with a delivery receipt and shall be deemed to be effective as of the date received or the date delivery was refused as indicated on the return receipt as follows:

b. The parties may subsequently change addresses by providing written notice of the change in address to the other parties in accordance with this Section.

23. INTERPRETATION OF AGREEMENT

The terms of this Equity Sharing Agreement shall be interpreted so as to avoid speculation on the Property and to ensure to the extent possible that its sales price and mortgage payment remain affordable to Very Low Income Households.

24. EXHIBITS

Any exhibits referred to in this Equity Sharing Agreement are hereby incorporated herein by this reference.

25. ATTORNEYS FEES

If any action is filed in a court of competent jurisdiction related to this Equity Sharing Agreement, the prevailing party shall be entitled to recover reasonable attorneys' fees and costs from the non-prevailing party.

26. TAX RETURNS

Owner shall execute such documents as are necessary to provide City with access to Owner's filed federal income tax returns.

27. ACKNOWLEDGEMENT OF TERMS

Owner hereby acknowledges that, prior to Owner's execution of this Equity Sharing Agreement, City provided Owner with an in-person, informational session during which City explained, in plain and simple language, the resale restrictions and other material provisions of this Equity Sharing Agreement.

28. ENTIRE AGREEMENT

This Equity Sharing Agreement (along with the City Note and City Deed of Trust) sets forth the entire understanding and agreement of City and Owner and any amendment, alteration or interpretation of this Equity Sharing Agreement must be in writing signed by both City and Owner.

IN WITNESS WHEREOF, the parties have executed this Equity Sharing Agreement on or as of the date first written above.

City Note

[Attached behind this cover page]

CITY OF ALISO VIEJO PROMISSORY NOTE

Secured by Deed of Trust

$_____ _____, 202_
And City Shared Appreciation

FOR VALUE RECEIVED, the undersigned [name(s)] ("**Borrower**") promises to pay to the City of Aliso Viejo, a California municipal corporation ("**City**"), at 12 Journey, Suite 100, Aliso Viejo, CA 92656-5335, or such other place as City may designate in writing: (i) a principal amount of $[amount] ("**City Subsidy**"), which amount constitutes a subsidy provided by City to Borrower pursuant to that certain Owner Occupancy and Equity Sharing Agreement entered into by and between Borrower and City dated [date] ("**Equity Sharing Agreement**") for purchase of the Property located at [address] in the City of Aliso Viejo, California ("**Property**"); and (ii) the City Shared Appreciation, as defined herein.

1. Purpose of Loan. Borrower is purchasing the Property, which is being sold by BRANDYWINE ACQUISITION GROUP, LLC, a California limited liability company ("**Developer**"), pursuant to that certain Density Bonus Housing Agreement entered into by and between City and Developer to ensure that a certain number of the housing units being constructed by Developer are sold at an affordable housing cost to Very Low Income Households. The purchase price of the Property has been set substantially below the market value so that the Property will be affordable for purchase by Very Low Income Households. Because the purchase price has been set below the market value, Borrower is required and has agreed to enter into the Equity Sharing Agreement with City, which requires Borrower to pay the City Subsidy and the City Shared Appreciation to City. This Note evidences the obligation of Borrower to pay the City Subsidy and the City Shared Appreciation to City pursuant to the Equity Sharing Agreement.

2. Definitions. The terms set forth in this section shall have the following meanings in this Note.

a. "Borrower" has the meaning set forth in the introductory paragraph on page 1 of this Note.

b. "City" means the City of Aliso Viejo, California.

c. "City Deed of Trust" means the deed of trust and security agreement that secures the Equity Sharing Agreement and this Note on the Property.

d. "City Subsidy" has the meaning provided in the introductory paragraph on page 1 of this Note.

e. "City Shared Appreciation" means and shall be calculated by dividing the City Subsidy by the Original Fair Market Value of the Property. The resulting percentage, rounded to the closest one-tenth of a percentage point, shall be multiplied by the

amount, if any, by which the Adjusted Fair Market Value exceeds the Original Fair Market Value, and the resulting product shall equal the City Shared Appreciation. "Adjusted Fair Market Value" has the meaning provided in Section 8.a of the Equity Sharing Agreement. City Shared Appreciation shall not be less than zero.

f. "Developer" has the meaning provided in Section 1 of this Note.

g. "Eligible Capital Improvements" has the meaning provided in Section 8.b of the Equity Sharing Agreement.

h. "Equity Sharing Agreement" has the meaning provided in the introductory paragraph on page 1 of this Note.

i. "Fair Market Value at the time of Transfer" has the meaning provided in Section 6.b of the Equity Sharing Agreement.

j. "First Mortgage Loan" has the meaning provided in Recital I of the Equity Sharing Agreement.

k. "First Option" has the meaning provided in Section 6.c of the Equity Sharing Agreement.

l. "Original Fair Market Value" has the meaning set forth in Recital F of the Equity Sharing Agreement.

m. "Original Purchase Price" has the meaning set forth in Recital F of the Equity Sharing Agreement.

n. "Note" means this promissory note.

o. "Property" means the dwelling, and the real property on which the dwelling is located, which secure the City Deed of Trust executed in connection with this Note. The Property's location is provided in the introductory paragraph on page 1 of this Note.

p. "Transfer" has the meaning provided in Section 5 of the Equity Sharing Agreement.

3. Term. The term of this Note commences on the date of this Note and expires upon the earliest to occur of: (i) the date of Transfer of the Property and the payment to City of the City Subsidy and the City Shared Appreciation; (ii) the closing of City's purchase of the Property pursuant to City's exercise of the First Option in accordance with Section 6.c of the Equity Sharing Agreement; or (iii) termination of the Equity Sharing Agreement and City Deed of Trust pursuant to Section 16 of the Equity Sharing Agreement following foreclosure or acceptance of a deed or assignment in lieu of foreclosure by the First Lender. Notwithstanding the foregoing, termination of this Note following foreclosure or a deed or assignment in lieu of foreclosure shall not affect City's rights to receive any surplus or other proceeds otherwise payable to Borrower, subject to

the rights of senior lienholders, as provided in Section 12 of the Equity Sharing Agreement. Nothing herein shall release Borrower from liability arising from fraud, intentional misrepresentation, waste, or a Transfer made in violation of the Equity Sharing Agreement, except to the extent prohibited by applicable law.

4. Payment.

a. Subject to Subsections 4.b and 4.c below, the total amount of the City Subsidy and the City Shared Appreciation shall immediately become due and payable upon the occurrence of any of the following: (i) an uncured Borrower default (after the applicable notice and cure periods) under this Note, the Equity Sharing Agreement, the City Deed of Trust, or the First Mortgage Loan; (ii) upon a Transfer of the Property as set forth in Section 8 of the Equity Sharing Agreement; or (iii) Borrower ceases to occupy the Property in violation of Section 3 of the Equity Sharing Agreement. For purposes of clauses (i) and (iii), if no Transfer has occurred, the Adjusted Fair Market Value used to calculate City Shared Appreciation shall be determined in accordance with Section 8(a) of the Equity Sharing Agreement, using the Fair Market Value of the Property as of the date of acceleration, as determined by an appraiser selected or approved by City in accordance with Section 6(b) of the Equity Sharing Agreement, less the value of any Eligible Capital Improvements determined pursuant to Section 8(b) of the Equity Sharing Agreement.

b. Upon a Transfer of the Property, if the Adjusted Fair Market Value is lower than the Original Fair Market Value, the amounts payable under this Note shall be determined in accordance with Section 8(d) of the Equity Sharing Agreement.

c. If City's purchase of the Property pursuant to the First Option closes, this Note shall immediately terminate and Borrower shall not be liable for payment of the City Subsidy or the City Shared Appreciation.

5. Security. This Note is secured by the City Deed of Trust, which also secures the Equity Sharing Agreement.

6. No Assumption of Note by Subsequent Buyers; Acceleration. Borrower acknowledges that this Note is given in connection with the purchase of the Property as part of a City program to assist in the purchase of homes by Very Low Income Households. Consequently, this Note is not automatically assumable, but is subject to section 711.5 of the California Civil Code, which allows City to accelerate all amounts due under this Note if any subsequent sale or transfer of the Property of any kind does not comply with the provisions of the Equity Sharing Agreement.

7. Refinance of First Mortgage Loan. The outstanding principal on this Note shall not be due upon prepayment and refinance of the First Mortgage Loan, and the City Deed of Trust and Equity Sharing Agreement shall be subordinated, provided that such refinancing meets the requirements of Section 17 of the Equity Sharing Agreement.

8. Default. Borrower shall be in default under this Note if Borrower is in default under any mortgage loan on the Property (including the First Mortgage Loan) following the expiration

of applicable cure periods, or if, after the notice and cure period provided by City to Borrower pursuant to the notice and cure provisions of the City Deed of Trust, Borrower (i) fails to pay any money when due under this Note; (ii) breaches any representation or covenant made in this Note or the Equity Sharing Agreement in any material respect; or (iii) breaches any provision of the City Deed of Trust or the Equity Sharing Agreement.

9. Acceleration. Subject to Section 4 and following the expiration of all applicable notice and cure periods, upon the occurrence of a default under this Note, the Equity Sharing Agreement, the City Deed of Trust, or the First Mortgage Loan, City shall have the right to declare the City Subsidy and the City Shared Appreciation immediately due and payable.

10. Non-liability for Negligence, Loss, or Damage. Borrower acknowledges, understands and agrees that the relationship between Borrower and City is solely that of borrower and lender, and that City neither undertakes nor assumes any responsibility for or duty to Borrower to select, review, inspect, supervise, pass judgment on, or inform Borrower of the quality, adequacy or suitability of the Property or any other matter. City owes no duty of care to protect Borrower against negligent, faulty, inadequate or defective building or construction or any condition of the Property and Borrower agrees that neither Borrower, or Borrower's heirs, successors or assigns shall ever claim, have or assert any right or action against City for any loss, damage or other matter arising out of or resulting from any condition of the Property and will hold City harmless from any liability, loss or damage for these things.

11. Indemnity. Borrower agrees to defend, indemnify, and hold City harmless from all losses, damages, liabilities, claims, actions, judgments, costs, and reasonable attorney's fees that City may incur as a direct or indirect consequence of:

a. Borrower's default or failure to perform any obligations as and when required by this Note, the City Deed of Trust, and the Equity Sharing Agreement; or

b. The failure at any time of any of Borrower's representations or warranties to be true and correct.

12. No Waiver by City. Failure by City to pursue its legal and equitable remedies upon Borrower's default shall not constitute a waiver of City's right to declare a default and exercise all of its rights under this Note, the City Deed of Trust and the Equity Sharing Agreement. Failure to declare amounts due shall not constitute a waiver on the part of City of the right to declare them due in the event of any subsequent Transfer. Nor shall acceptance by City of any payment provided for herein constitute a waiver of City's right to require prompt payment of any remaining principal owed. A waiver of any term of the Note must be made in writing, signed by an authorized agent of City, and shall be limited to the express written terms of such waiver.

13. Interest. Notwithstanding any other provision of this Note, or any instrument securing the obligations of Borrower under this Note, if, for any reason whatsoever, the payment of any sums by Borrower pursuant to the terms of this Note would result in the payment of interest which would exceed the amount that City may legally charge under the laws of the State of California, then the amount by which payments exceed the lawful interest rate shall automatically

be deducted from the principal balance owing on this Note, so that in no event shall Borrower be obligated under the terms of this Note to pay any interest which would exceed the lawful rate.

14. Attorney's Fees and Costs. Borrower agrees that if any amounts due under this Note are not paid when due, to pay in addition to the City Subsidy and City Shared Appreciation, all costs and expenses of collection and reasonable attorneys' fees paid or incurred by City in connection with the collection or enforcement of this Note, whether or not suit is filed.

15. Joint and Several Obligations. This Note is the joint and several obligation of all makers, sureties, guarantors and endorsers, and shall be binding upon them and their successors and assigns.

16. No Offset. Borrower hereby waives any rights of offset it now has or may hereafter have against City, its successors and assigns, and agrees to make the payments called for herein in accordance with the terms of this Note.

17. Borrower's Waiver. Borrower and any endorsers or guarantors of this Note, for themselves, their heirs, legal representatives, successors and assigns, respectively, severally waive diligence, presentment, protest, and demand, and notice of protest, notice of dishonor and notice of nonpayment of this Note, and expressly waive any rights to be released by reason of any extension of time or change in terms of payment, or change, alteration or release of any security given for the payments hereof, and expressly waive the right to plead any and all statutes of limitations as a defense to any demand on this Note or agreement to pay the same, and jointly and severally agree to pay all costs of collection when incurred, including reasonable attorneys' fees.

18. Notices. All notices required in this Note shall be sent by certified mail, return receipt requested, or express delivery service with a delivery receipt, or personally delivered with a delivery receipt obtained and shall be deemed to be effective as of the date shown on the delivery receipt as the date of delivery, the date delivery was refused, or the date the notice was returned as undeliverable as follows:

The parties may subsequently change addresses by providing written notice of the change in address to the other parties in accordance with this section.

19. Controlling Law. This Note shall be construed in accordance with and be governed by the laws of the State of California.

20. Assignment by City. City may assign its right to receive the proceeds under this Note to any person and upon notice to Borrower by City all payments shall be made to the assignee.

21. Severability. If any provision of this Note shall be invalid, illegal or unenforceable, the validity, legality and enforceability of the remaining provisions hereof shall not in any way be affected or impaired thereby.

22. Entire Agreement. This Note (along with the Equity Sharing Agreement and the City Deed of Trust) sets forth the entire understanding and agreement of City and Borrower and any amendment, alteration or interpretation of this Note must be in writing signed by both City and Borrower.

DEED OF TRUST
AND SECURITY AGREEMENT
(DENSITY BONUS UNIT)

Note to Borrower:
This Deed of Trust Contains
Provisions Restricting Assumptions

THIS DEED OF TRUST AND SECURITY AGREEMENT ("**Deed of Trust**") is made this [date], among the trustor, [name(s)] ("**Borrower**"), whose address is [address], Aliso Viejo, California, [name] Title Company ("**Trustee**") and the City of Aliso Viejo, California ("**City**") as Beneficiary.

Borrower, in consideration of the promises herein recited and the trust herein created, irrevocably grants, transfers, conveys and assigns to Trustee, in trust, with power of sale, the property located in the City of Aliso Viejo, County of Orange, State of California, described in the attached Exhibit "1" and more commonly known as: [address], Aliso Viejo, California [zip code] ("**Property**").

TOGETHER with all the improvements now or hereafter erected on the Property, and all easements, rights, appurtenances, and all fixtures now or hereafter attached to the Property, all of which, including replacements and additions thereto, shall be deemed to be and remain a part of the Property covered by this Deed of Trust; and TOGETHER with all articles of personal property or fixtures now or hereafter attached to or used in and about the building or buildings now erected or hereafter to be erected on the Property which are necessary to the complete and comfortable use and occupancy of such building or buildings for the purposes for which they were or are to be erected, including all other goods and chattels and personal property as are ever used or furnished in operating a building, or the activities conducted therein, similar to the one herein described and referred to, and all renewals or replacements thereof or articles in substitution therefor, whether or not the same as, or shall be attached to said building or buildings in any manner; and all of the foregoing, together with the Property, is herein referred to as the "**Security**;"

To have and to hold the Security together with appurtenances to Trustee, its successors and assigns forever;

TO SECURE to City the performance of the covenants and agreements of Borrower contained in the Owner Occupancy and Equity Sharing Agreement executed by and between Borrower and City ("**Equity Sharing Agreement**");

TO SECURE to City the repayment of the sums evidenced by a promissory note executed by Borrower in favor of City dated [insert] ("**Note**"), which note provides for repayment of a City Subsidy in the amount of $[insert], and City's share of appreciation in the value of the Property, based on City's proportionate assistance to Borrower, as more particularly described in the Note and the Equity Sharing Agreement; and

TO SECURE the payment of all other sums, with interest thereon, advanced in accordance herewith to protect the security of this Deed of Trust; and the performance of the covenants and agreements of Borrower herein contained.

BORROWER AND CITY COVENANT AND AGREE AS FOLLOWS:

1. Borrower's Estate. Borrower is lawfully seized of the estate hereby conveyed and has the right to grant and convey the Security, that other than this Deed of Trust, the Security is encumbered only by: (1) a deed of trust executed by Borrower in connection with a loan made to Borrower by [lender name] ("**First Lender**"), dated [date], executed by Borrower in favor of First Lender, securing a first mortgage loan ("**First Mortgage Loan**") to assist in the purchase of the Property ("**First Mortgage Deed of Trust**"); (2) the Equity Sharing Agreement; and (3) any other deeds of trust or encumbrances approved by City. Borrower agrees to warrant and defend generally the title to the Security against all claims and demands, subject to any declarations, easements or restrictions listed in a schedule of exceptions to coverage in any title insurance policy insuring City's interest in the Security. As used in this Deed of Trust, the term "First Lender" shall include all successors and assigns of First Lender.

2. Repayment. Borrower will promptly repay, when due, all amounts due under the Note. The Note contains the following provisions concerning repayment under certain conditions:

> Borrower acknowledges that this Note is given in connection with the purchase of the Property as part of a City program to assist in the purchase of homes by Very Low Income Households. Consequently, this Note is not automatically assumable, but is subject to section 711.5 of the California Civil Code, which allows the City to accelerate all amounts due under this Note if any subsequent sale or transfer of the Property of any kind does not comply with the provisions of the Equity Sharing Agreement.

3. Equity Sharing Agreement. Borrower will observe and perform all of the covenants and agreements of the Equity Sharing Agreement.

4. Charges; Liens. Borrower will pay all taxes, assessments and other charges, fines and impositions attributable to the Security which may attain a priority over this Deed of Trust, by

making any payment, when due, directly to the payee thereof. Borrower will promptly furnish to City all notices of amounts due under this paragraph, and in the event Borrower makes payment directly, Borrower will promptly discharge any lien which has priority over this Deed of Trust; provided, that Borrower will not be required to discharge the lien of the First Mortgage Deed of Trust (securing the First Mortgage Loan) or any other lien described in this paragraph so long as Borrower will agree in writing to the payment of the obligation secured by such lien in a manner acceptable to City, or will, in good faith, contest such lien by, or defend enforcement of such lien in, legal proceedings which operate to prevent the enforcement of the lien or forfeiture of the Security or any part thereof.

5. Hazard Insurance.

NOTICE REQUIRED BY CALIFORNIA CIVIL CODE SECTION 2955.5: NO LENDER SHALL REQUIRE A BORROWER, AS A CONDITION OF RECEIVING OR MAINTAINING A LOAN SECURED BY REAL PROPERTY, TO PROVIDE HAZARD INSURANCE COVERAGE AGAINST RISKS TO THE IMPROVEMENTS ON THAT REAL PROPERTY IN AN AMOUNT EXCEEDING THE REPLACEMENT VALUE OF THE IMPROVEMENTS ON THE PROPERTY.

BORROWER ACKNOWLEDGES THAT THE FOREGOING DISCLOSURE WAS PROVIDED IN WRITING BEFORE BORROWER EXECUTED THE NOTE, THIS DEED OF TRUST, OR ANY OTHER SECURITY DOCUMENT RELATING TO THE CITY LOAN.

Borrower will keep the improvements on the Security insured under a standard fire and extended coverage insurance policy in at least such amounts and for such periods as City may reasonably require; provided, however, that City shall not require hazard insurance coverage in an amount exceeding the replacement value of the improvements on the Security. Subject to that limitation, the required coverage shall not be less than the amount necessary to prevent Borrower from becoming a co-insurer under the terms of the policy.

The insurance carrier providing this insurance shall be licensed to do business in the State of California and be chosen by Borrower subject to approval by City; provided, that such approval will not be withheld if the insurer is also approved by the First Lender.

All insurance policies and renewals thereof will be in a form acceptable to City and will include a standard mortgagee clause with standard lender's endorsement in favor of the holder of the First Mortgage Loan and City as their interests may appear and in a form acceptable to City. City shall have the right to hold, or cause its designated agent to hold, the policies and renewals thereof, and Borrower shall promptly furnish to City, or its designated agent, the original insurance policies or certificates of insurance, all renewal notices and all receipts of paid premiums. In the event of loss, Borrower will give prompt notice to the insurance carrier and City or its designated agent. City, or its designated agent, may make proof of loss if not made promptly by Borrower.

City shall receive 30 days advance notice of cancellation of any insurance policies required under this section.

Unless City and Borrower otherwise agree in writing, insurance proceeds, subject to the rights of the First Lender, will be applied to restoration or repair of the Security damaged, provided such restoration or repair is economically feasible and the Security of this Deed of Trust is not thereby impaired. If such restoration or repair is not economically feasible or if the Security of this Deed of Trust would be impaired, the insurance proceeds will be used to repay the loan under this Deed of Trust, with the excess, if any, paid to Borrower. If the Security is abandoned by Borrower, or if Borrower fails to respond to City, or its designated agent, within 30 days from the date notice is mailed by either of them to Borrower that the insurance carrier offers to settle a claim for insurance benefits, City, or its designated agent, is authorized to collect and apply the insurance proceeds at City's option either to restoration or repair of the Security or to repay the amounts due under the Note.

If the Security is acquired by City, all right, title and interest of Borrower in and to any insurance policy and in and to the proceeds thereof resulting from damage to the Security prior to the sale or acquisition will pass to City to the extent of the sums secured by this Deed of Trust immediately prior to such sale or acquisition subject to the rights of First Lender.

6. Preservation and Maintenance of Security. Borrower will keep the Security in good repair and will not commit waste or permit impairment or deterioration of the Security.

7. Protection of City's Security. If Borrower fails to perform the covenants and agreements contained in this Deed of Trust or if any action or proceeding is commenced which materially affects City's interest in the Security, including, but not limited to, default under the First Mortgage Deed of Trust securing the First Mortgage Loan, eminent domain, insolvency, code enforcement, or arrangements or proceedings involving a bankrupt or decedent, then City, at City's option, upon notice to Borrower, may make such appearances, disburse such sums and take such action as it determines necessary to protect City's interest, including but not limited to, disbursement of reasonable attorneys' fees and entry upon the Security to make repairs.

Any amounts disbursed by City pursuant to this paragraph shall become indebtedness of Borrower secured by this Deed of Trust. Unless Borrower and City agree to other terms of payment, such amount shall be payable upon notice from City to Borrower requesting payment thereof and shall bear interest from the date of disbursement at the maximum rate permitted by applicable law. Nothing contained in this paragraph will require City to incur any expense or take any action hereunder.

8. Inspection. City may make or cause to be made reasonable entries upon and inspections of the Security; provided that City will give Borrower reasonable notice of inspection.

9. Forbearance by City Not a Waiver. Any forbearance by City in exercising any right or remedy will not be a waiver of the exercise of any such right or remedy. The procurement of insurance or the payment of taxes or other liens or charges by City will not be a waiver of City's right to accelerate the maturity of the indebtedness secured by this Deed of Trust.

10. Remedies Cumulative. All remedies provided in this Deed of Trust are distinct and cumulative to any other right or remedy under this Deed of Trust or any other document, or afforded by law or equity, and may be exercised concurrently, independently or successively.

11. Successors and Assigns Bound. The covenants and agreements herein contained shall bind, and the rights hereunder shall inure to, the respective successors and assigns of City and Borrower subject to the provisions of this Deed of Trust.

12. Joint and Several Liability. All covenants and agreements of Borrower shall be joint and several.

13. Notice. Except for any notice required under applicable law to be given in another manner: (a) any notice to Borrower provided for in this Deed of Trust will be given by certified mail, addressed to Borrower at the address shown in the first paragraph of this Deed of Trust or such other address as Borrower may designate by notice to City as provided herein; and (b) any notice to City will be given by express delivery, return receipt requested, to City at 12 Journey, Suite 100, Aliso Viejo, CA, 92656-5335, Attn: City Manager, or to such other address as City may designate by notice to Borrower as provided above. Notice shall be effective as of the date received by the recipient as shown on the return receipt.

14. Governing Law. This Deed of Trust shall be governed by the laws of the State of California.

15. Severability. If any provision or clause of this Deed of Trust, the Note, or the Equity Sharing Agreement conflict with applicable law, such conflicts will not affect other provisions of this Deed of Trust, the Note, or the Equity Sharing Agreement which can be given effect without the conflicting provision, and to this end the provisions of the Deed of Trust, the Note, and the Equity Sharing Agreement are declared to be severable.

16. Captions. The captions and headings in this Deed of Trust are for convenience only and are not to be used to interpret or define the provisions hereof.

17. Acceleration; Remedies. Upon Borrower's breach of any covenant or agreement of Borrower in this Deed of Trust, including, but not limited to, the covenants to pay, when due, any sums secured by this Deed of Trust, City, prior to acceleration, will mail by express delivery, return receipt requested notice to Borrower specifying: (1) the breach; (2) the action required to cure such breach; (3) a date, not less than 30 days from the date the notice is received by Borrower as shown on the return receipt, by which such breach is to be cured; and (4) that failure to cure such breach on or before the date specified in the notice may result in acceleration of the sums secured by this Deed of Trust and sale of the Security. The notice will also inform Borrower of Borrower's right to reinstate after acceleration and the right to bring a court action to assert the nonexistence of default or any other defense of Borrower to acceleration and sale. If the breach is not cured on or before the date specified in the notice, City, at City's option, may: (a) declare all of the sums secured by this Deed of Trust to be immediately due and payable without further demand and may invoke the power of sale and any other remedies permitted by California law; (b) either in person

or by agent, with or without bringing any action or proceeding, or by a receiver appointed by a court, and without regard to the adequacy of its security, enter upon the Security and take possession thereof (or any part thereof) and of any of the Security, in its own name or in the name of Trustee, and do any acts which it deems necessary or desirable to preserve the value or marketability of the Security, or part thereof or interest therein, increase the income therefrom or protect the security thereof. The entering upon and taking possession of the Security shall not cure or waive any breach hereunder or invalidate any act done in response to such breach and, notwithstanding the continuance in possession of the Security, City shall be entitled to exercise every right provided for in this Deed of Trust, or by law upon occurrence of any uncured breach, including the right to exercise the power of sale; (c) commence an action to foreclose this Deed of Trust as a mortgage, appoint a receiver, or specifically enforce any of the covenants hereof; (d) deliver to Trustee a written declaration of default and demand for sale, pursuant to the provisions for notice of sale found at California Civil Code Sections 2924, et seq., as amended from time to time; or (e) exercise all other rights and remedies provided herein, in the instruments by which Borrower acquires title to any Security, or in any other document or agreement now or hereafter evidencing, creating or securing all or any portion of the obligations secured hereby, or provided by law.

City shall be entitled to collect all reasonable costs and expenses incurred in pursuing the remedies provided in this paragraph, including, but not limited to, reasonable attorney's fees and costs.

18. Borrower's Right to Reinstate. Notwithstanding City's acceleration of the sums secured by this Deed of Trust, Borrower will have the right to have any proceedings begun by City to enforce this Deed of Trust discontinued at any time prior to five business days before sale of the Security pursuant to the power of sale contained in this Deed of Trust or at any time prior to entry of a judgment enforcing this Deed of Trust if: (a) Borrower pays City all sums that would then be due under the Note and this Deed of Trust had no acceleration occurred; (b) Borrower cures all breaches of any other covenants or agreements of Borrower contained in this Deed of Trust; (c) Borrower pays all reasonable expenses incurred by City and Trustee in enforcing the covenants and agreements of Borrower contained in this Deed of Trust, and in enforcing City's and Trustee's remedies, including, but not limited to, reasonable attorney's fees; and (d) Borrower takes such action as City may reasonably require to assure that the lien of this Deed of Trust, City's interest in the Security and Borrower's obligation to pay the sums secured by this Deed of Trust shall continue unimpaired. Upon such payment and cure by Borrower, this Deed of Trust and the obligations secured hereby will remain in full force and effect as if no acceleration had occurred.

19. Reconveyance. Upon payment or forgiveness of all sums secured by this Deed of Trust, City will request Trustee to reconvey the Security and will surrender this Deed of Trust and the Note to Trustee. Trustee will reconvey the Security without warranty and without charge to the person or persons legally entitled thereto. Such person or persons will pay all costs of recordation, if any.

20. Substitute Trustee. City, at City's option, may from time to time remove Trustee and appoint a successor trustee to any Trustee appointed hereunder. The successor trustee will succeed to all the title, power and duties conferred upon the Trustee herein and by applicable law.

21. Superiority of First Lender Documents. Notwithstanding any provision herein, this Deed of Trust shall not diminish or affect the rights of First Lender under the First Mortgage Deed of Trust or any subsequent First Lender deeds of trust hereafter recorded against the Security in compliance with the requirements of Section 17 of the Equity Sharing Agreement.

Notwithstanding any other provision hereof, the provisions of this Deed of Trust shall be subordinate to the lien of the First Mortgage Deed of Trust and shall not impair the rights of the First Lender, or such lender's assignee or successor in interest, to exercise its remedies under its First Mortgage Deed of Trust in the event of default under its First Mortgage Deed of Trust by Borrower. Such remedies under the First Mortgage Deed of Trust include the right of foreclosure or acceptance of a deed or assignment in lieu of foreclosure. After such foreclosure or acceptance of a deed in lieu of foreclosure, this Deed of Trust shall be forever terminated and shall have no further effect as to the Property or any transferee thereafter; provided, however, if the holder of such First Mortgage Deed of Trust acquires title to the Property pursuant to a deed or assignment in lieu of foreclosure, this Deed of Trust shall automatically terminate upon such acquisition of title, only if: (i) City has been given written notice of the default under the First Mortgage Deed of Trust and a 60-day opportunity to cure such default; and (ii) City has not cured the default within such 60-day period or commenced to cure the default and provided a firm commitment, in a form and substance reasonably acceptable to First Lender, to complete such cure.

22. Request for Notice. Pursuant to Civil Code section 2924b, City requests that a copy of any notice of default and notice of sale under any deed of trust or mortgage senior to this Deed of Trust be mailed to City at the address set forth in Section 13 of this Deed of Trust.

IN WITNESS WHEREOF, Borrower has executed this Deed of Trust as of the date first written above.

CITY OF ALISO VIEJO

FIRST AMENDMENT TO PROFESSIONAL SERVICES AGREEMENT FOR AUDITING SERVICES

1. PARTIES AND DATE.

This First Amendment to the Professional Services Agreement for Auditing Services ("First Amendment") is entered into on the ____ day of _____, 2026, by and between the City of Aliso Viejo (hereinafter referred to as the "City") and Davis Farr LLP (hereinafter referred to as the "Consultant"). City and Consultant are sometimes collectively referred to herein as the "Parties."

2. RECITALS.

2.1 Agreement. The Parties entered into an agreement entitled Professional Services Agreement for Auditing Services dated May 3, 2023. ("Agreement").

2.2 First Amendment. The Parties now desire to amend the Agreement in order to renew the Agreement for an additional one-year term and to increase the total compensation under the Agreement by **THIRTY-SIX THOUSAND Dollars ($36,000**).

3. TERMS.

3.1 Term.

Pursuant to Section 3.1.2 of the Agreement, the City hereby exercises the option to renew the Agreement and extend the term of the Agreement for one year from July 1, 2026, to June 30, 2027, unless earlier terminated as provided in the Agreement.

3.2 Compensation.

The total compensation for the Services provided pursuant to the Agreement and this First Amendment shall not exceed **ONE HUNDRED SIXTY-FIVE THOUSAND Dollars ($165,000)** without written approval of the City Manager. Consultant shall receive compensation, including authorized reimbursements, for all Services rendered under this First Amendment at the rates set forth in Exhibit "A" attached to the Agreement and incorporated herein by reference.

3.3 Declaration of Political Contributions. Prior to the City's approval of this Amendment, Consultant shall submit to City a statement in writing declaring any political contributions of money, in-kind services, or loan made to any member of the City Council within the previous twelve-month period by the Consultant and all of their employees, including any employee(s) that Consultant intends to assign to perform the Services described in this First Amendment.

Docusign Envelope ID: 9859AC0B-0C6A-8E83-80FC-0D29E7C0EC17

3.4 Continuing Effect of Agreement. Except as otherwise specifically set forth in this First Amendment, the remaining provisions of the Agreement shall remain in full force and effect. From and after the date of this First Amendment, whenever the term "Agreement" appears in the Agreement, it shall mean the Agreement as amended by this First Amendment.

3.5 Adequate Consideration. The Parties hereto irrevocably stipulate and agree that they have each received adequate and independent consideration for the performance of the obligations they have undertaken pursuant to this First Amendment.

3.6 Counterparts. This First Amendment may be executed in duplicate originals, each of which is deemed to be an original, but when taken together shall constitute but one and the same instrument.
