In 2019, I saw a juvenile bald eagle fly over the project site (Photos 1 and 2). Bald eagles are protected by the Bald and Golden Eagle Protection Act and the California Endangered Species Act. In 2021, I saw a peregrine falcon just west of the project site, but it was too fast for me to photograph it. I saw a northern harrier (Photo 3) and Cooper's hawk (Photo 4) on the project site, both species of which have been assigned special-status in addition to the 'birds of prey' statute. I saw American kestrels (Photos 5 and 6), Anna's hummingbirds (Photo 7 and 8), pied-billed grebes (Photo 9), mourning doves (Photo 10), a house wren (Photo 11), golden-crowned sparrows (Photo 12), white-crowned sparrows (Photos 13 and 14), Say's phoebe (Photo 15), red-winged blackbirds (Photo 16), fox sparrows (Photo 17), and song sparrows (Photo 18).

Some animals flew over, including Canada geese, mallards, Herring gulls, ring-billed gulls, and swallows. Most, however, spent considerable time on and around the site. Some species displayed courtship or territorial behaviors indicative of breeding, including red-winged blackbirds, Say's phoebe, red-tailed hawks, and American kestrels. In 2019, a juvenile bald eagle hunted the site by carefully using the Eucalyptus trees for cover, but numerous small birds raised a ruckus, alerting of the eagle's approach. Also foraging on site were the northern harrier and Cooper's hawk in 2019. In 2019, two American kestrels harassed a perched great-horned owl, who hooted for about 10 minutes after the kestrels relented.

PROJECT DESCRIPTION

The Napa River and Bay Trails wrap around the project from the south to the west. The site is next to an Audubon Society-designated Important Bird Area.

BASELINE ASSESSMENT

Project Description: The IS (page 6) did not reveal the nearness of Clark Ranch and Napa River and Bay Trails as surrounding land uses, instead attempting to cast the 300-foot distance as a mitigating buffer (*See, e.g.* IS, p. 34). Clark Ranch has been dedicated as open space. The Napa River and Bay Trails not only provide public access to wildlife viewing, but is also designated by Audubon Society as one of its Important Bird Areas ("IBA"). An EIR is needed to address project impacts on the IBA, Napa River and Bay Trails, and Clark Ranch.

Table 1. Species of wildlife I observed during visits on 23 January 2019 and 5 January 2021 at the site of the proposed SDG Commerce 217 Warehouse. The offsite visit was made during my 2021 survey, and includes a walk along Napa River and Bay Trails just south and west of the project site.

Species	*Scientific name*	Status[1]	Visit Onsite		Offsite
Canada goose	*Branta canadensis*		2019		
Mallard	*Anas platyrhynchos*		2019		
Northern shoveler	*Anas clypeata*				Yes
American coot	*Fulica americana*				Yes
Pied-billed grebe	*Podilymbus podiceps*				Yes
Black-necked stilt	*Himantopus mexicanus*				Yes
American avocet	*Recurvirostra americanus*				Yes
Long-billed dowitcher	*Limnodromus scolopaceus*				Yes
Least sandpiper	*Caladris minutilla*				Yes
California quail	*Callipepla californica*		2019		
Turkey vulture	*Cathartes aura*	FGC 3503.5			Yes
Bald eagle	*Haliaeetus leucocephalus*	BGEPA, CE, CFP	2019		
Cooper's hawk	*Accipiter cooperi*	TWL, FGC 3503.5	2019		
Red-tailed hawk	*Buteo jamaicensis*	FGC 3503.5	2019	2021	Yes
Red-shouldered hawk	*Buteo lineatus*	FGC 3503.5			Yes
Northern harrier	*Circus cyaneus*	SSC3, FGC 3503.5	2019		Yes
American kestrel	*Falco sparverius*	FGC 3503.5.5	2019		Yes
Peregrine falcon	*Falco peregrinus*	CFP, FGC 3503.5			Yes
Herring gull	*Larus argentatus*		2019		Yes
Ring-billed gull	*Larus delawarensis*		2019		Yes
Mourning dove	*Zenaida macroura*		2019		Yes
Eurasian collared-dove	*Streptopelia decaocto*	Non-native	2019		
Great-horned owl	*Bubo virginianus*	CDFW 3503.5	2019		
Black-chinned hummingbird	*Archilochus alexandri*		2019		
Anna's hummingbird	*Calypte anna*		2019	2021	Yes
Northern flicker	*Colaptes auratus*		2019	2021	Yes
Nuttall's woodpecker	*Picoides nuttallii*	BCC	2019		Yes

Species	*Scientific name*	Status[1]	Visit Onsite		Offsite
Say's phoebe	*Sayornis saya*		2019		Yes
Black phoebe	*Sayornis nigricans*		2019		Yes
Hutton's vireo	*Vireo huttoni*		2019		
Barn swallow	*Hirundo rustica*		2019		
Northern rough-winged swallow	*Stelgidopteryx serripennis*		2019		
Bushtit	*Psatriparus minimus*		2019	2021	
House wren	*Troglodytes aedon*		2019		
Marsh wren	*Cistothorus palustris*				Yes
California scrub-jay	*Aphelocoma californica*		2019		
Common raven	*Corvus corax*		2019		Yes
American crow	*Corvus brachyrhynchos*		2019	2021	
Western bluebird	*Sialia mexicana*		2019		
Northern mockingbird	*Mimus polyglottos*		2019		Yes
European starling	*Sturnus vulgaris*	Non-native	2019	2021	Yes
Yellow-rumped warbler	*Setophaga coronata*		2019	2021	Yes
California towhee	*Pipilo crissalis*		2019		Yes
Song sparrow	*Melospiza melodia*				Yes
Lincoln's sparrow	*Melospiza lincolnii*				Yes
White-crowned sparrow	*Zonotrichia leucophrys*		2019		Yes
Golden-crowned sparrow	*Zonotrichia atricapilla*		2019		Yes
Fox sparrow	*Passerella iliaca*				Yes
Dark-eyed junco	*Junco hyemalis*		2019	2021	Yes
Western meadowlark	*Sturnella neglecta*		2019		
Red-winged blackbird	*Agelaius phoeniceus*		2019		Yes
Brown-headed cowbird	*Molothrus ater*				Yes
Brewer's blackbird	*Euphagus cyanocephalus*		2019		Yes
American goldfinch	*Carduelis tristis*		2019		
Lesser goldfinch	*Carduelis psaltria*				Yes
House finch	*Carpodacus mexicanus*		2019		Yes
Sierran treefrog	*Pseudacris sierra*		2019		Yes
Botta's pocket gopher	*Thomomys bottae*				Yes

Species	*Scientific name*	Status[1]	Visit Onsite		Offsite
California ground squirrel	*Otospermophilus beecheyi*				Yes
Raccoon	*Procyon lotor*			2021	

[1] Listed as BGEPA = federal Bald and Golden Eagle Protection Act, BCC = federal Bird Species of Conservation Concern, CE = California endangered, CDFW 3503.5 = California Department of Fish and Wildlife Code 3503.5 (Birds of prey), SSC3 = California Species of Special Concern priority level 3, TWL = Taxa to Watch List (Shuford and Gardali 2008).

Photos 1 and 2. A bald eagle flew along the eucalyptus trees surrounding the project site on 23 January 2019. On 5 January 2021, Bay Trail visitors informed me that two bald eagles had been living in the area this winter.

Photos 3 and 4. Cooper's hawk (left) and northern harrier (right) fly over the project site, 23 January 2019.

Photos 5 and 6. American kestrel perches on a Eucalyptus branch on southern boundary of proposed project site, 23 January 2019 (left) and on a pole just south of the project site on 5 January 2021 (right).

Photos 7 and 8, right. Anna's hummingbird perched next to the site of the proposed project on a foggy day, 5 January 2021.

Photos 9 and 10. Pied-billed grebe (left) and mourning dove (right) next to the site of the proposed project, 5 January 2021.

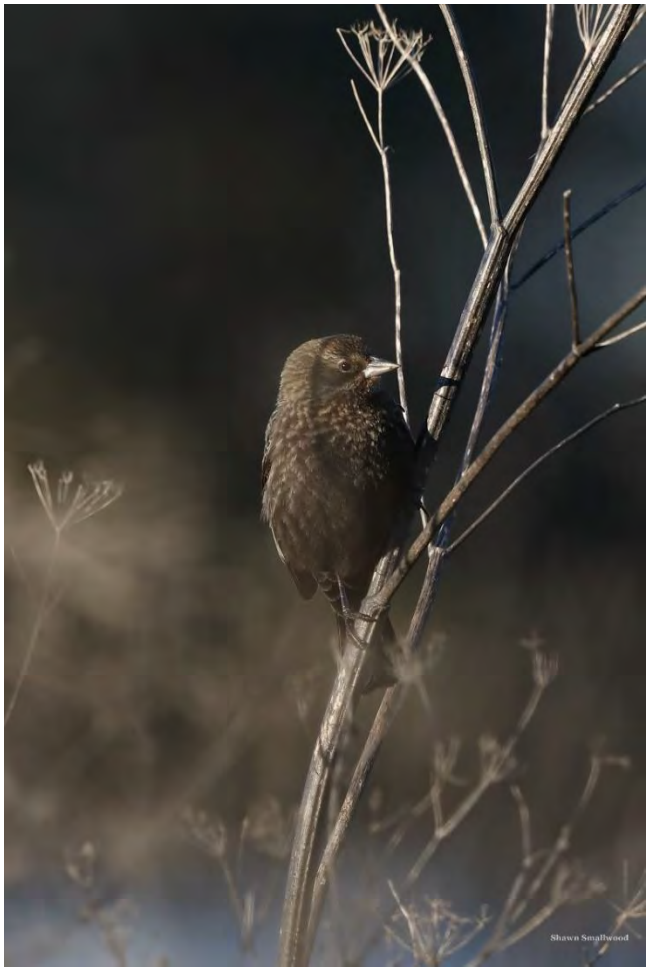
Photo 12, right. Golden-crowned sparrow next to the site of the proposed project, 5 January 2021.



Photos 13 and 14. Male and female white-crowned sparrows next to the site of the proposed project, 5 January 2021.

Photos 15 and 16. Say's phoebe (left), triumphant after driving out a black phoebe, and red-winged blackbird (right) at the project site, 23 January 2019.

Photos 17 and 18. Fox sparrow (left) and song sparrow (right) next to the site of the proposed project, 5 January 2021.

Reconnaissance surveys: Monk & Associates (2020) performed surveys on the site on 19 and 27 December 2019. However, Monk & Associates reported no details of their surveys, such as who exactly did the surveys, when they arrived, how long they stayed, and what methods they used. The reporting did not include the most basic information that a wildlife ecologist would need for assessing whether the survey truly met due diligence standards.

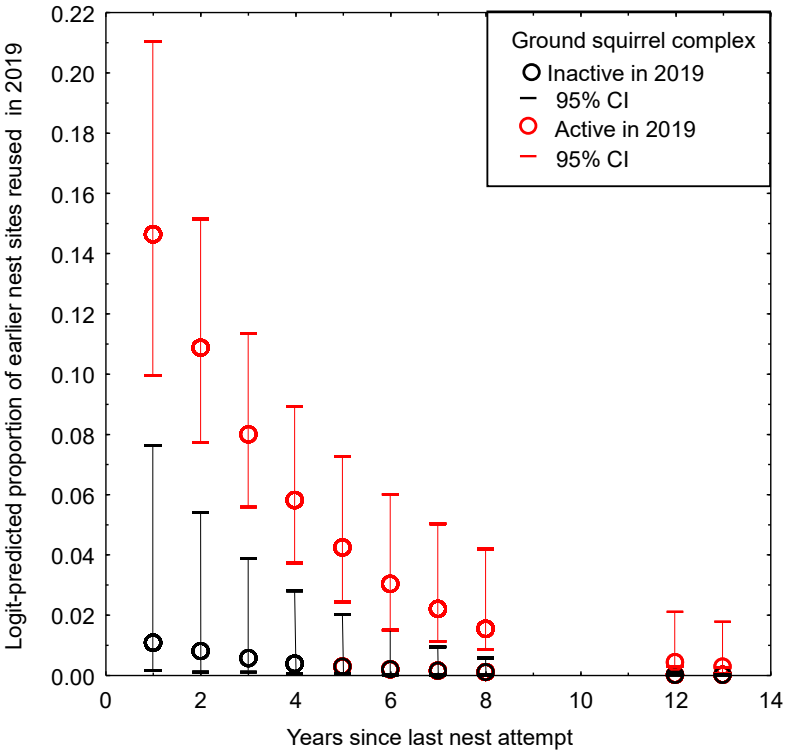
Peer review: The IS (page 29) assures that Monk & Associates (2020) was peer reviewed. However, the date of the site visit in support of the peer review was 10 August 2018, which was prior to the Monk & Associates surveys of 2019. and prior to their 2020 report. If the date was correct for the peer-review site visit, then it is unclear what was peer-reviewed.

In claiming Monk & Associates (2020) was peer reviewed, the IS misapplies a process routinely used by scientists to improve their work. The purpose of peer review is to (1) improve the reporting of scientific research results, and (2) contribute to an editor's decision over whether to accept or reject a manuscript, or to require minor or major revisions before making the decision to accept or reject. The conclusions of peer reviewers are not necessarily right while the authors' conclusions are wrong. Peer review comments contribute to the scientific process by adding additional perspectives that the authors can use to improve their product, despite whether the product was rejected by the institution administering the peer review. Peer reviews also assess manuscripts according to scientific standards and to written guidelines maintained by the organization to which the manuscript was submitted. Peer review comments are supposed to be constructive. The important point here is that a "peer review" provided by Vollmar Natural Lands Consulting would have contributed nothing to Monk & Associates (2020) unless it resulted in constructive revisions to the report. Perhaps improvements were made to the report, but the reader cannot tell because the IS provides no report of the peer-review nor any responses to review comments.

To qualify as independent peer review, the administrator of the peer review as well as the reviewers themselves must not benefit financially or professionally from the outcome of the review. There must not be any hint of bias for a review to be considered independent. Another qualification is that the reviewers must be the authors' peers, meaning that reviewers possess sufficient experience performing research on the same or similar topic area as the authors, and that the reviewers understand the theoretical foundation of the topic at hand and the research challenges faced by the authors. In my experience, targeted reviews are prone to bias because the paid reviewer understands the desired outcome; it is in the reviewer's financial interest to review the client's work product favorably if the reviewer is to acquire repeat business. City of American Canyon needs to explain its relationship with Vollmar Natural Lands Consulting and between Vollmar Natural Lands Consulting and Monk & Associates.

Determinations of occurrence likelihoods: Monk & Associates (2020) mostly relied on California Natural Diversity Data Base (CNDDB) records to assess the likelihood of occurrence of special-status wildlife species whose geographic range maps

overlap the project site. Whereas consulting CNDDB is fine for confirming presence of a species, it is inappropriate for determining absence and hence narrowing a list of potentially occurring species. CNDDB is voluntary and not based on scientific sampling or equal access to properties. The limitations of CNDDB are well-known, and they are summarized in a warning presented by CDFW on the CNDDB web site (https://www.wildlife.ca.gov/Data/CNDDB/About): "*We work very hard to keep the CNDDB and the Spotted Owl Database as current and up-to-date as possible given our capabilities and resources. However, we cannot and do not portray the CNDDB as an exhaustive and comprehensive inventory of all rare species and natural communities statewide. Field verification for the presence or absence of sensitive species will always be an important obligation of our customers*..." Therefore, the foundation of many conclusions in the is consists partly of a misapplication of CNDDB and needs to be replaced by a sound methodology in an EIR.



Consulting eBird reveals many sightings of special-status species near the project site (Table 2), many of which Monk & Associates (2020) conclude are less likely to occur at the site due to distant nearest-CNDDB records. My review of eBird and iNaturalist reveals 66 special-status species of vertebrate wildlife likely to rely on the site at one time or another, 15 of which have been confirmed at or near the site during surveys performed by Monk & Associates (2020) and myself (Table 2). The IS, on the other hand, identifies only 3 such species as unlikely to occur at the site, including northern harrier which I saw on site, and Swainson's hawk and burrowing owl which have both been reported nearby in eBird. The IS falls grossly short of a comprehensive and accurate assessment of occurrence likelihoods of special-status species.

The inadequacy of IS's assessment of species occurrences stems mostly from two fallacious arguments: (1) that the site is unsuitable for nesting, and (2) the site was previously disturbed by the removal of a eucalyptus grove. The first fallacy is that habitat can be divided distinctly by functionality. Specific to this project, the IS distinguishes nesting habitat as the only type of habitat to be concerned about. But no animals can breed without finding sufficient forage, cover and stopover opportunities; no species can breed without surviving both the breeding and nonbreeding seasons. There is no clear distinction between types of habitat, as every portion of an animal's habitat is critical to its survival and its productivity.

The second fallacy is that some previous disturbance – the removal of a eucalyptus grove in this case – diminishes or destroys habitat of a species today. CEQA reviews are supposed to be based on existing conditions, rather than to some past event that a project proponent can claim without evidence to have prevented the site from ever again being used by a species. This CEQA standard noted, I must add that the scientific literature is full of examples of wildlife populating places that have been severely disturbed, such as the slopes of Mount St. Helens following the 1980 eruption, and wildlife reinhabiting the forests surrounding Ukraine's Chernobyl Nuclear Plant since its meltdown and massive radioactive release. Multiple scientific journals focus on habitat restoration, which involves deliberate, major disturbances to generate new complexes of

vegetation intended to benefit wildlife. The IS misleads where it claims that the removal of a eucalyptus grove years ago doomed the occurrence of wildlife species there today. The IS (page 32) further misleads that only ground squirrel burrows of ancient origin are useful to burrowing owls. Specifically, the IS claims burrowing owls are unlikely because "...ground squirrel burrows are few and of recent origin (Monk & Associates 2020)." The IS cites no evidence in support of this notion. It is also inconsistent with my research experience. For example, in a revisit to nearly 800 burrowing owl nest sites I had mapped over 9 years in the Altamont Pass Wind Resource Area, I found reuse of the nest sites in 2019 to have been much greater within actively used ground squirrel burrows previously used more recently (Figure 1). Further misleading is the IS's argument that "Monk & Associates (2020) did not observe western burrowing owls or any indirect evidence that burrowing owls are using or residing on the project site during any of the site surveys." This is misleading because negative findings cannot be supported in the absence of detection surveys such as those recommended by CDFW (2012). It does not matter that Monk & Associates found no evidence of burrowing owls because they did not perform the appropriate detection surveys.

Figure 1. Proportion of revisited burrows that were either actively or inactively used by ground squirrels and where burrowing owls attempted re-nesting in 2019 declined quickly with years since the previous nest attempt.

The IS (page 33) claims that the loss of foraging habitat of northern harrier is "not considered substantial." However, the IS provides no evidence in support this conclusion. By what measure is the loss of foraging habitat judged substantial? Further, this conclusion neglects the possibility that the site is used by northern harrier for nesting as well as foraging. I saw a northern harrier fly over the site – the same site where the IS also says northern harriers would be unlikely to occur. The IS's analysis of potential impacts to northern harrier is flawed.

Table 2. Species reported on eBird (https://eBird.org) or iNaturalist on or near the proposed project site, where those in bold font were also seen on or near the site by myself or Monk & Associates (2020).

Species	Scientific name	Status[1]	Occurrence likelihood

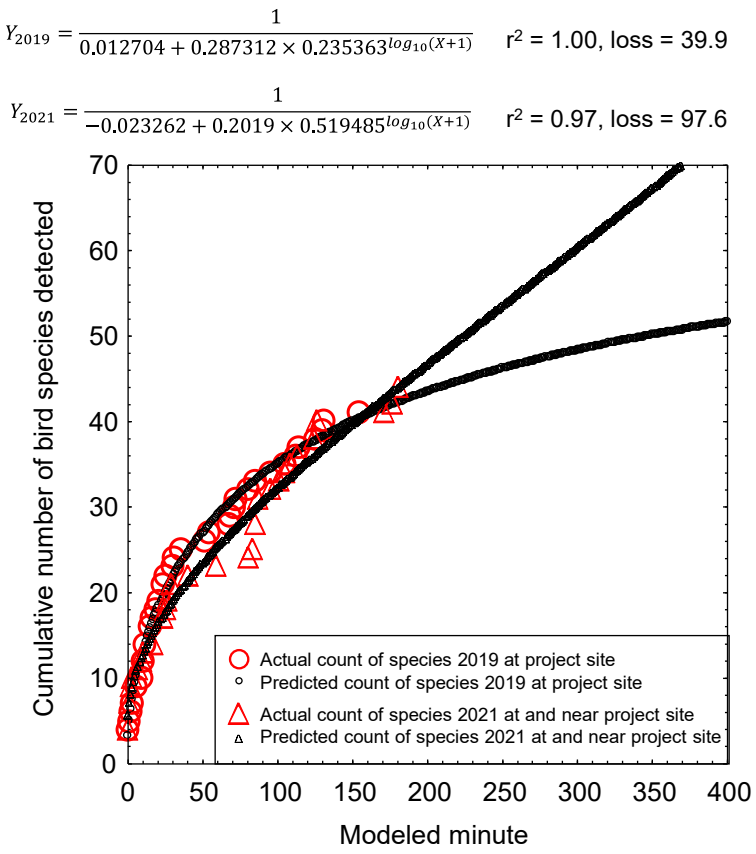
[1] Listed as FT & FE = federal threatened and endangered, BGEPA = Bald and Golden Eagle Protection Act, BCC = U.S. Fish and Wildlife Service Bird species of Conservation Concern, BCC = federal Bird Species of Conservation Concern, CT & CE = California threatened and endangered, CFP = California Fully Protected (FGC Code 3511), FGC 3503.5 = California Fish and Game Code 3503.5 (Birds of prey), and SSC1, SSC2 and SSC3 = California Bird Species of Special Concern priorities 1, 2 and 3, respectively (Shuford and Gardali 2008), and TWL = Taxa to Watch List (Shuford and Gardali 2008), WBWG = Western Bat Working Group with low, medium and high conservation priorities.

The IS (page 34) is also wrong in its conclusion of no impact to bats. The argument is that the site "...contains no roosting or nesting habitat because it has no trees, rock faces, structures, or cliffs." Trees surround the site. Bats undoubtedly roost in those trees. The site supports those roosts by providing forage. Night roosts of pallid bat, in particular, are typically located close to forage on open ground.

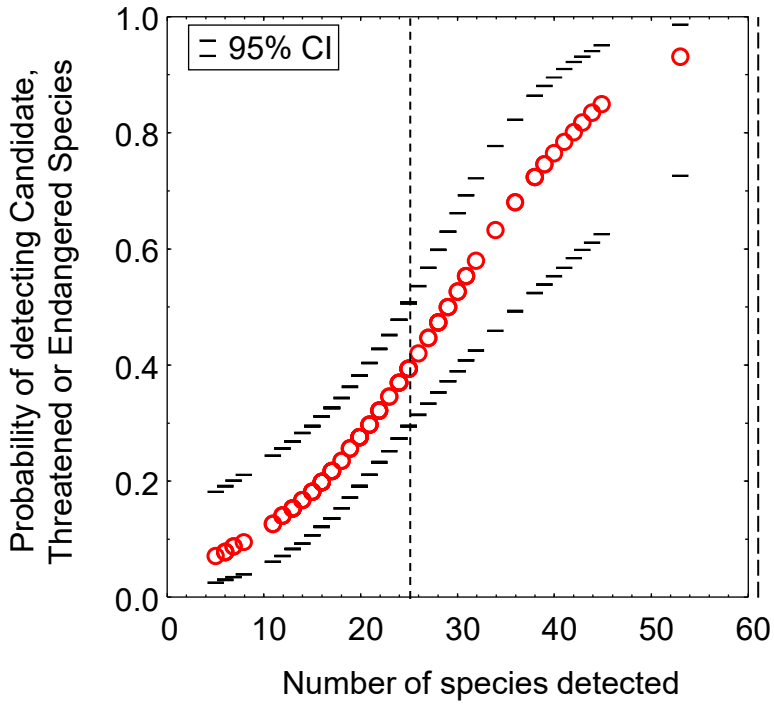
By relying solely on CNDDB for determining occurrence likelihoods, the IS overlooks occurrences reported in other data bases. For example, whereas nearest CNDDB records have Swainson's hawks and burrowing owls 2.5 and 2.6 miles away from the project site, eBird records show these species much closer. According to eBird, a Swainson's hawk was seen only 0.2 miles from the project site. Given the space used by Swainson's hawks, there should be no doubt that a Swainson's hawk 0.2 miles away would have also used the project site. Burrowing owls were seen by multiple observers only 0.2 miles from the project site. One of the observers is a good bird observer with whom I have worked for many years; his observation was as trustworthy.



Relying on CNDDB records, Monk & Associates (2020) claim the nearest northern harrier location was 2.7 miles away. However, not only did I see a northern harrier fly over the project site, but multiple other observers reported northern harrier sightings nearby.

Additional special-status species neglected by Monk & Associates include peregrine falcon and loggerhead shrike, both of which have been reported multiple times on eBird as having been seen near the project site. I saw a peregrine falcon right next to the site. And there are multiple others in addition to these species. I assert that Monk & Associates (2020) inadequately assessed potential project impacts to wildlife. Relying on CNDDB was inappropriate and inadequate. And after making multiple site visits, the number of wildlife species detected by Monk & Associates numbered only 25, whereas mine numbered more than twice as many.

That the environmental setting has yet to be accurately characterized is further supported by known trends in species detections with survey effort. Figure 2 shows my counts of species detected at the site with time into each of my two surveys – it simply shows the cumulative number of species detected with increasing survey time. Just as I have seen for many other survey efforts, nonlinear regression models fit the data very well, explaining 97% of the variation in the data in 2021 and nearly 100% of the variation in the data in 2019, and for both surveys they showed progress towards the inevitable asymptotes of the nonlinear prediction curve where the same survey methods will eventually detect no more species. I note that the 2019 count of species was specific to the project site, whereas my 2021 count of species included areas around the project site. One model shows that had I continued doing what I was doing on 23 January 2019, I would have eventually detected about 55 species of terrestrial vertebrate wildlife on the project site, or more than double the number detected by Monk & Associates (2020). The other model shows that had I continued doing what I was doing on 5 January 2021, I would eventually have detected hundreds of terrestrial vertebrate



wildlife in the project area, confirming the wisdom of Audubon Society's designation of an IBA there.

Figure 2. Actual and predicted relationships between the number of vertebrate wildlife species detected and the elapsed survey time based on visual scan on 23 January 2019 and 5 January 2021. Note that the relationships would differ if the surveys were based on another method, another time of day, or during another season. Also note that the cumulative number of vertebrate species across all methods, times of day, and seasons would increase substantially.

The likelihood of detecting special-status species is typically lower than that of more common species. This difference can be explained by the fact that special-status species tend to be rarer than common species. Special-status species also tend to be more cryptic, fossorial, or active during nocturnal periods when general biological surveys are not performed. Another useful relationship from careful recording of species detections and subsequent comparative analysis is the probability of detection of listed species as a function of increasing number of vertebrate wildlife species detected (Figure 3). (Note that listed species number fewer than special-status species, which are inclusive of listed species.) As demonstrated in Figure 2, the number of species detected is a function of survey effort. Therefore, greater survey effort increases the likelihood that listed species will be detected. The survey effort committed to the project site by City of American Canyon carried a 40% chance of detecting a listed species, whereas the effort committed by myself carried a nearly 100% chance of detecting a listed species. In fact, I detected 2 listed species, one on site and one just offsite, so my model prediction was accurate. Monk & Associates beat the odds by detecting white-tailed kite – a California Fully Protected species. Had we surveyed longer or using different methods, we would have detected more listed species. A fair argument can be made for the need to prepare an EIR to more comprehensive and more carefully analyze baseline conditions and potential project impacts to wildlife.

Figure 3. Probability of detecting ≥1 Candidate, Threatened or Endangered Species of wildlife listed under California or federal Endangered Species Acts, based on survey outcomes that I logit-regressed on the number of wildlife species I detected as an expert witness during 106 site visits throughout California. The vertical short-dashed line represents the number of species detected by Monk & Associates (2020), whereas the vertical short-dashed line depicts the number I detected between two site visits.

Habitat Loss

A recent study documented a 29% decline in overall bird abundance across North America over the last 48 years – a decline driven by multiple factors including habitat loss and habitat fragmentation (Rosenberg et al. 2019). Habitat loss not only results in the immediate numerical decline of wildlife, but also in permanent loss of productive capacity. For example, studies in grassland/wetland/woodland complexes documented total bird nesting densities of 32.8 nests per acre (Young 1948) and 35.8 nests per acre (Yahner 1982), averaged at 34.3 nests per acre. Assuming the project site in the absence of wetlands immediately on site, would support a third of the total nesting density measured by Young (1948) and Yahner (1982), a density of 11.4 nests per acre multiplied against the project's take of 11.23 acres would predict the loss of 128 bird nest sites. After 100 years and further assuming an average bird generation time of 5 years, and assuming an average 2.9 chicks fledged per nest (Young 1948), the lost capacity of both breeders and annual fledgling production would total 42,240 {(nests/year × chicks/nest × number of years) + (2 adults/nest × nests/year) × (number of years ÷ years per generation)}. These predicted losses would be substantial, and would qualify as significant impacts that have yet to be addressed by City of American Canyon. A fair argument can be made for the need to prepare an EIR to analyze the impacts of habitat destruction.

Habitat fragmentation, which is the reduction of connectivity of remaining habitat patches on a landscape, can further diminish the productive capacity of a site

(Smallwood 2015). Habitat fragmentation is one of the cumulative effects of this project that needs to be analyzed in an EIR.

Wildlife Movement

The IS accurately defines the concept of a wildlife corridor as a connector between already-fragmented habitat patches (see Smallwood 2015), but then inaccurately asserts that significant impacts to wildlife movement in a region can only happen with the interference of an existing wildlife corridor. One problem with this assertion is that a finding of significance would first require that habitat in the project area had already been fragmented and then a corridor constructed to reduce the effects of fragmentation. The assertion precludes a finding of significance where habitat has not been fragmented and no corridor constructed. The IS asserts a false CEQA standard for determining whether a project would interfere with wildlife movement in the region.

The primary phrase of the CEQA standard goes to wildlife movement regardless of whether the movement is channeled by a corridor. In fact, wildlife movement in the region is often diffuse rather than channeled (Runge et al. 2014, Taylor et al. 2011), and includes stop-over habitat used by birds and bats (Taylor et al. 2011), staging habitat (Warnock 2010), and crossover habitat used by nonvolant wildlife during dispersal, migration or home range patrol. The existence of a wildlife corridor is unnecessary for a project to interfere with wildlife movement in the region.

The IS (page 35) also speculates that the site's history of disturbance in the form of tree removal somehow precludes any possible project interference with wildlife movement. This speculation, however, is vulnerable to abuse, because it could be extended to any earlier site condition when terrestrial wildlife might not have been able to move across it, such as when it might have been under the sea. The site's use for movement by wildlife needs to be analyzed based on conditions existing at the time of the environmental review, consistent with CEQA's standard.

The IS (page 35) further speculates that wildlife movement in the region is prevented by "...continued disturbance associated with the paint ball facility located immediately to the southeast and construction of the SDG Commerce 330 facility to the south." Paint ball facilities do not prevent wildlife movement. I have recorded many wildlife observations at a paint ball facility near where I live, and have noticed no effect on bird activity. Northern harriers, white-tailed kites, American kestrels, Swanson's hawks, and many other species perch on site, using it for foraging, territory patrol and stopover habitat. The IS cites no evidence that paintball facilities interfere with wildlife movement or would do so on adjacent properties.

The IS (page 35) speculates even further by claiming, "The eucalyptus grove and the marshes associated with the Napa River to the west of the project site provide a more valuable wildlife corridor for terrestrial wildlife..." But without evidence that a eucalyptus grove is more valuable to wildlife movement, this claim is nothing more than

convenient speculation. I can agree that the marsh would be more valuable for wetland-adapted species, but not for all species.

The project would obviously interfere with wildlife movement in the region. Having studied millions of GPS telemetry data from 35 golden eagles tracked since 2013, I noticed a strong avoidance of anthropogenic structures such as warehouses and residential neighborhoods. I assume bald eagles express a similar level of avoidance. If this is assumption is true, then the bald eagle I saw fly over the site in 2019 might not do so again since the SDG Commerce 330 warehouse was built. Many other species would continue to fly over the project site despite the neighboring warehouse. I have recorded many observations of animals moving across fields next to warehouses, including red-tailed hawks, peregrine falcons, and many others. A fair argument can be made for the need to prepare an EIR to analyze the project's impacts on wildlife movement in the region.

Traffic Impacts on Wildlife

According to City of American Canyon (2020:88), the project would generate 367 daily vehicle trips. No analysis is provided in the IS of this traffic's impacts to wildlife in the area. The traffic would effectively extend the project's footprint well beyond the floor space, as trucks and cars traveling to and from the warehouse will drive over roads and highways that are also crossed by wildlife. On 23 January 2019 I saw two road-killed striped skunks on American Canyon Drive, and on 5 January 2021 I saw a road-killed striped skunk and an opossum killed on the same road – a road likely to be used by trucks and cars servicing the project. California red-legged frogs (*Rana draytonii*), which Monk & Associates (2020) concluded will suffer no impacts because CNDDB records are lacking west of Highway 29, will cross roads used by vehicles servicing the project. A shortfall of the IS is its failure to analyze the impacts of the project's added road traffic on special-status species of wildlife, including California red-legged frog, California tiger salamander (*Ambystoma californiense*), and American badgers (*Taxidea taxus*) that, regardless of whether they live on the site, must cross roadways that will experience increased traffic volume caused by this project.

Increased use of existing roads will increase wildlife fatalities (see Figure 7 in Kobylarz 2001). Across North America traffic impacts have taken devastating tolls on wildlife (Forman et al. 2003). In Canada, 3,562 birds were estimated killed per 100 km of road per year (Bishop and Brogan 2013), and the US estimate of avian mortality on roads is 2,200 to 8,405 deaths per 100 km per year, or 89 million to 340 million total per year (Loss et al. 2014). Local impacts can be more intense than nationally.

In a recent study of traffic-caused wildlife mortality, investigators found 1,275 carcasses of 49 species of mammals, birds, amphibians and reptiles over 15 months of searches along a 2.5 mile stretch of Vasco Road in Contra Costa County, California (Mendelsohn et al. 2009). Using carcass detection trials performed on land immediately adjacent to the traffic mortality study (Brown et al. 2016) to adjust the found fatalities for the proportion of fatalities not found due to scavenger removal and searcher error, the

estimated traffic-caused fatalities was 12,187. This fatality estimate translates to a rate of 3,900 wild animals per mile per year killed along 2.5 miles of road in 1.25 years. In terms comparable to the national estimates, the estimates from the Mendelsohn et al. (2009) study would translate to 243,740 animals killed per 100 km of road per year, or 29 times that of Loss et al.'s (2014) upper bound estimate and 68 times the Canadian estimate. An analysis is needed of whether increased traffic on roads to and from the project site would similarly result in intense local impacts on wildlife.

Wildlife roadkill is not randomly distributed, so can be predicted. Causal factors include types of roadway, human population density, and temperature (Chen and Wu 2014), as well as time of day and adjacency and extent of vegetation cover (Chen and Wu 2014, Bartonička et al. 2018), and intersections with streams and riparian vegetation (Bartonička et al. 2018). For example, species of mammalian Carnivora are killed by vehicle traffic within 0.1 miles of stream crossings >40 times other than expected (K. S. Smallwood, 1989-2018 unpublished data). These factors also point the way toward mitigation measures, which should be formulated in an EIR.

Pest Control and Target and Non-target Mortality

As I understand it, the proposed project would store and distribute wine. The Initial Study did not mention the likelihood that pest control would be needed to protect stored products. Because multiple businesses advertise their services on the internet for controlling stored products pests, perching birds, and rodent and other mammal pests within and around warehousing and food processing buildings (e.g., https://www.catseyepest.com/pest-control/ commercial-pest-control/warehouse-and-distribution-facilities, http://advancedipm .com /commercial/ commercial-pest-management-for-warehouses-and-distribution-centers/, https://www.terminix.com/blog/commercial/how-pests-impact-warehouses/, I assume pest control would be necessary. These types of businesses advertise exclusion strategies, as well as fumigation for stored products pests, glue boards for rodents, and 'other measures.' Having a background in animal damage control, I am familiar with 'other methods,' including the use of anticoagulant poisons and acute toxicants such as strychnine. In my experience, the use of toxicants can harm non-target wildlife through direct exposure and indirect exposure via predation and scavenging (also see Gabriel et al. 2012). In other words, pest control involving toxicants can result in the spread of toxicants beyond the project site.

I reviewed the scientific literature on animal damage control associated with distribution warehousing. Little to no serious scientific attention has been directed toward animal damage control in these settings. That businesses are advertising their animal damage control services in these settings indicates either an awareness or an assumption that damage from wildlife is an issue. It is important, therefore, that an EIR be prepared to address the potential impacts of animal damage control associated with this proposed project. Industry practices related to animal damage control should be detailed, as well as anticipated practices at this project. Potential impacts caused by these practices need to be assessed, and suitable mitigation measures formulated along with assurances that they will be implemented.

Cumulative Impacts

City of American Canyon (2019:97) concludes the project will result in no cumulative impacts because only one other new project is planned. The cumulative impacts analysis is flawed by considering only the single new project, and none of those under construction or already built. Had City of American Canyon listed all projects -- past, present and reasonably foreseeable projects -- then the need for a serious cumulative effects analysis would emerge as obvious. City of American Canyon has sprawled across nearly all of the available spaces between neighbor cities, hills to the east and San Pablo Bay to the west, leaving a fragmented mosaic of fields and woodlots as stop-over habitat for use by birds and bats. The project would also obviously be seen as adding more traffic extending the project's and the region's impacts far beyond their respective footprints.

When it comes to wildlife, cumulative effects can often be interpreted as effects on the numerical capacity (Smallwood 2015), breeding success, genetic diversity, or other population performance metrics expressed at the regional scale. In the case of migrating birds, the project's cumulative effects could be measured as numerical reductions of breeding birds at far-off breeding sites, as migrating adults and next-year's recruits lose access to stop-over habitat. These effects could be predicted and measured. If birds were to lose all stop-over habitat across City of American Canyon, then the numerical capacity of migration might decline for multiple species. Unfortunately, little is known about stop-over habitat requirements, such as how often migrants lose their lives for lack of stop-over habitat. Nevertheless, crude assessments are possible and imperative.

An EIR needs to be prepared to appropriately analyze the project's contribution to cumulative impacts. It also needs to present mitigation measures to minimize impacts, or to compensate for cumulative impacts. An EIR should assess the combined impacts of all projects, including this one. An EIR is needed to formulate appropriate mitigation for cumulative traffic-caused wildlife mortality.

MITIGATION MEASURES

MM BIO-1 I concur that preconstruction surveys are needed for burrowing owls. However, a preconstruction survey cannot serve as a surrogate for detection surveys. Preconstruction surveys have a specific purpose, which is take-avoidance salvage of readily detectable individuals in immediate jeopardy of harm just prior to construction. The purposes of detection surveys are to detect the species if it is present, to support determinations of absence, and to inform the CEQA review, preconstruction surveys about where the species is likely to be found on the project site, and the formulation of mitigation. To be consistent with the CDFW (2012) guidelines on burrowing owl mitigation, detection surveys are needed for burrowing owls and they need to be performed according to the guidelines. After the detection surveys are completed, then an impacts analysis is needed, and so is the formulation of mitigation measures, which might include compensatory mitigation. Based on the outcome of

detection surveys, an EIR should be prepared to adequately address impacts and mitigation related to burrowing owls.

MM BIO-2 I concur that preconstruction surveys are needed for Swainson's hawks. However, detection surveys are also needed. It is already established on eBird that Swainson's hawks are in the area and that at minimum the project would remove foraging habitat. This impact needs to be analyzed in an EIR and mitigated.

MM BIO-3 I concur that preconstruction surveys are needed for nesting raptors. However, detection surveys are needed first. Preconstruction surveys are intended to buffer or salvage nests immediately threatened by the tractor blade, but they do not inform of how many nests will be taken. The magnitude of the impact must be known or estimated in order to formulate appropriate minimization and compensatory mitigation. Detection surveys are needed to inform an EIR, which is needed to analyze potential impacts to nesting raptors.

MM BIO-4 I concur that preconstruction surveys are needed for nesting passerine birds. However, detection surveys are needed first. The same issues apply here as those I raised in MM BIO-1 through MM BIO-3. I will add that additional bird species might nest on the project site other than raptors and passerines. Killdeer might nest there, in addition to others. Detection surveys are needed for nests of all species protected by both the California and federal Migratory Bird Treaty Acts.

Additional Comments on Mitigation

The IS provides no mitigation for adverse impacts on regional movement of wildlife, nor for cumulative impacts on wildlife or even for direct impacts. At a minimum, an EIR needs to include substantial compensatory mitigation in response to the project's impacts on habitat loss and wildlife movement, including impacts to birds using the site as stop-over or staging during migration.

Compensatory mitigation is needed for the increased wildlife mortality that will be caused by the project's contribution to increased road traffic in the region. I suggest that this mitigation can be directed toward funding of research to identify fatality patterns and effective impact reduction measures.

Compensatory mitigation ought also to include funding contributions to wildlife rehabilitation facilities to cover the costs of injured animals that will be delivered to these facilities for care. Most of the injuries will likely be caused by the increased trip generation of cars and trucks. Many animals need treatment caused by collision injuries and an increasing number appear to be injured by the turbulence of passing trucks.

Mitigation measures are also needed for management of vertebrate pests on the project site. The project site is adjacent to Clark Ranch and to Napa River and Bay Trails, so any pest control on site needs to be prevented from spilling over into designated open spaces.

The IS (page 11) says, "The Building's roof structure is designed to accommodate solar panels and the building electrical infrastructure is designed to accept solar generation…" I suggest the building, if constructed, should include PV solar panels to the extent the roof can sustain. The project would use electrical energy, which if not generated on site will likely come from renewable energy sources. Utility-scale renewable energy is known to kill many members of many species of birds and bats. Onsite generation would kill many fewer birds and bats, if any (no fatalities have been documented to date as a result of collisions with rooftop solar).

Thank you for your attention,

_____

Born May 3, 1963 in
Sacramento, California.
Married, father of two.

Ecologist

Expertise

- Finding solutions to controversial problems related to wildlife interactions with human industry, infrastructure, and activities;
- Wildlife monitoring and field study using GPS, thermal imaging, behavior surveys;
- Using systems analysis and experimental design principles to identify meaningful ecological patterns that inform management decisions.

Education

Ph.D. Ecology, University of California, Davis. September 1990.
M.S. Ecology, University of California, Davis. June 1987.
B.S. Anthropology, University of California, Davis. June 1985.
Corcoran High School, Corcoran, California. June 1981.

Experience

- 665 professional publications, including:
- 88 peer reviewed publications
- 24 in non-reviewed proceedings
- 551 reports, declarations, posters and book reviews
- 8 in mass media outlets
- 87 public presentations of research results

Editing for scientific journals: Guest Editor, *Wildlife Society Bulletin*, 2012-2013, of invited papers representing international views on the impacts of wind energy on wildlife and how to mitigate the impacts. Associate Editor, *Journal of Wildlife Management*, March 2004 to 30 June 2007. Editorial Board Member, *Environmental Management*, 10/1999 to 8/2004. Associate Editor, *Biological Conservation*, 9/1994 to 9/1995.

Member, Alameda County Scientific Review Committee (SRC), August 2006 to April 2011. The five-member committee investigated causes of bird and bat collisions in the Altamont Pass Wind Resource Area, and recommended mitigation and monitoring measures. The SRC reviewed the science underlying the Alameda County Avian Protection Program, and advised

the County on how to reduce wildlife fatalities.

Consulting Ecologist, 2004-2007, California Energy Commission (CEC). Provided consulting services as needed to the CEC on renewable energy impacts, monitoring and research, and produced several reports. Also collaborated with Lawrence-Livermore National Lab on research to understand and reduce wind turbine impacts on wildlife.

Consulting Ecologist, 1999-2013, U.S. Navy. Performed endangered species surveys, hazardous waste site monitoring, and habitat restoration for the endangered San Joaquin kangaroo rat, California tiger salamander, California red-legged frog, California clapper rail, western burrowing owl, salt marsh harvest mouse, and other species at Naval Air Station Lemoore; Naval Weapons Station, Seal Beach, Detachment Concord; Naval Security Group Activity, Skaggs Island; National Radio Transmitter Facility, Dixon; and, Naval Outlying Landing Field Imperial Beach.

Part-time Lecturer, 1998-2005, California State University, Sacramento. Instructed Mammalogy, Behavioral Ecology, and Ornithology Lab, Contemporary Environmental Issues, Natural Resources Conservation.

Senior Ecologist, 1999-2005, BioResource Consultants. Designed and implemented research and monitoring studies related to avian fatalities at wind turbines, avian electrocutions on electric distribution poles across California, and avian fatalities at transmission lines.

Chairman, Conservation Affairs Committee, The Wildlife Society--Western Section, 1999-2001. Prepared position statements and led efforts directed toward conservation issues, including travel to Washington, D.C. to lobby Congress for more wildlife conservation funding.

Systems Ecologist, 1995-2000, Institute for Sustainable Development. Headed ISD's program on integrated resources management. Developed indicators of ecological integrity for large areas, using remotely sensed data, local community involvement and GIS.

Associate, 1997-1998, Department of Agronomy and Range Science, University of California, Davis. Worked with Shu Geng and Mingua Zhang on several studies related to wildlife interactions with agriculture and patterns of fertilizer and pesticide residues in groundwater across a large landscape.

Lead Scientist, 1996-1999, National Endangered Species Network. Informed academic scientists and environmental activists about emerging issues regarding the Endangered Species Act and other environmental laws. Testified at public hearings on endangered species issues.

Ecologist, 1997-1998, Western Foundation of Vertebrate Zoology. Conducted field research to determine the impact of past mercury mining on the status of California red-legged frogs in Santa Clara County, California.

Senior Systems Ecologist, 1994-1995, EIP Associates, Sacramento, California. Provided consulting services in environmental planning, and quantitative assessment of land units for their conservation and restoration opportunities basedon ecological resource requirements of 29 special-status species. Developed ecological indicators for prioritizing areas within Yolo County

to receive mitigation funds for habitat easements and restoration.

Post-Graduate Researcher, 1990-1994, Department of Agronomy and Range Science, *U.C. Davis*. Under Dr. Shu Geng's mentorship, studied landscape and management effects on temporal and spatial patterns of abundance among pocket gophers and species of Falconiformes and Carnivora in the Sacramento Valley. Managed and analyzed a data base of energy use in California agriculture. Assisted with landscape (GIS) study of groundwater contamination across Tulare County, California.

Work experience in graduate school: Co-taught Conservation Biology with Dr. Christine Schonewald, 1991 & 1993, UC Davis Graduate Group in Ecology; Reader for Dr. Richard Coss's course on Psychobiology in 1990, UC Davis Department of Psychology; Research Assistant to Dr. Walter E. Howard, 1988-1990, UC Davis Department of Wildlife and Fisheries Biology, testing durable baits for pocket gopher management in forest clearcuts; Research Assistant to Dr. Terrell P. Salmon, 1987-1988, UC Wildlife Extension, Department of Wildlife and Fisheries Biology, developing empirical models of mammal and bird invasions in North America, and a rating system for priority research and control of exotic species based on economic, environmental and human health hazards in California. Student Assistant to Dr. E. Lee Fitzhugh, 1985-1987, UC Cooperative Extension, Department of Wildlife and Fisheries Biology, developing and implementing statewide mountain lion track count for long-term monitoring.

Fulbright Research Fellow, Indonesia, 1988. Tested use of new sampling methods for numerical monitoring of Sumatran tiger and six other species of endemic felids, and evaluated methods used by other researchers.

Projects

Repowering wind energy projects through careful siting of new wind turbines using map-based collision hazard models to minimize impacts to volant wildlife. Funded by wind companies (principally NextEra Renewable Energy, Inc.), California Energy Commission and East Bay Regional Park District, I have collaborated with a GIS analyst and managed a crew of five field biologists performing golden eagle behavior surveys and nocturnal surveys on bats and owls. The goal is to quantify flight patterns for development of predictive models to more carefully site new wind turbines in repowering projects. Focused behavior surveys began May 2012 and continue. Collision hazard models have been prepared for seven wind projects, three of which were built. Planning for additional repowering projects is underway.

Test avian safety of new mixer-ejector wind turbine (MEWT). Designed and implemented a before-after, control-impact experimental design to test the avian safety of a new, shrouded wind turbine developed by Ogin Inc. (formerly known as FloDesign Wind Turbine Corporation). Supported by a $718,000 grant from the California Energy Commission's Public Interest Energy Research program and a 20% match share contribution from Ogin, I managed a crew of seven field biologists who performed periodic fatality searches and behavior surveys, carcass detection trials, nocturnal behavior surveys using a thermal camera, and spatial analyses with the collaboration of a GIS analyst. Field work began 1 April 2012 and ended 30 March 2015 without Ogin installing its MEWTs, but we still achieved multiple important scientific advances.

Reduce avian mortality due to wind turbines at Altamont Pass. Studied wildlife impacts caused by 5,400 wind turbines at the world's most notorious wind resource area. Studied how impacts are perceived by monitoring and how they are affected by terrain, wind patterns, food resources, range management practices, wind turbine operations, seasonal patterns, population cycles, infrastructure management such as electric distribution, animal behavior and social interactions.

Reduce avian mortality on electric distribution poles. Directed research toward reducing bird electrocutions on electric distribution poles, 2000-2007. Oversaw 5 founds of fatality searches at 10,000 poles from Orange County to Glenn County, California, and produced two large reports.

Cook *et al*. v. Rockwell International *et al*., No. 90-K-181 (D. Colorado). Provided expert testimony on the role of burrowing animals in affecting the fate of buried and surface-deposited radioactive and hazardous chemical wastes at the Rocky Flats Plant, Colorado. Provided expert reports based on four site visits and an extensive document review of burrowing animals. Conducted transect surveys for evidence of burrowing animals and other wildlife on and around waste facilities. Discovered substantial intrusion of waste structures by burrowing animals. I testified in federal court in November 2005, and my clients were subsequently awarded a $553,000,000 judgment by a jury. After appeals the award was increased to two billion dollars.

Hanford Nuclear Reservation Litigation. Provided expert testimony on the role of burrowing animals in affecting the fate of buried radioactive wastes at the Hanford Nuclear Reservation, Washington. Provided three expert reports based on three site visits and extensive document review. Predicted and verified a certain population density of pocket gophers on buried waste structures, as well as incidence of radionuclide contamination in body tissue. Conducted transect surveys for evidence of burrowing animals and other wildlife on and around waste facilities. Discovered substantial intrusion of waste structures by burrowing animals.

Expert testimony and declarations on proposed residential and commercial developments, gas-fired power plants, wind, solar and geothermal projects, water transfers and water transfer delivery systems, endangered species recovery plans, Habitat Conservation Plans and Natural Communities Conservation Programs. Testified before multiple government agencies, Tribunals, Boards of Supervisors and City Councils, and participated with press conferences and depositions. Prepared expert witness reports and court declarations, which are summarized under Reports (below).

Protocol-level surveys for special-status species. Used California Department of Fish and Wildlife and US Fish and Wildlife Service protocols to search for California red-legged frog, California tiger salamander, arroyo southwestern toad, blunt-nosed leopard lizard, western pond turtle, giant kangaroo rat, San Joaquin kangaroo rat, San Joaquin kit fox, western burrowing owl, Swainson's hawk, Valley elderberry longhorn beetle and other special-status species.

Conservation of San Joaquin kangaroo rat. Performed research to identify factors responsible for the decline of this endangered species at Lemoore Naval Air Station, 2000-2013, and implemented habitat enhancements designed to reverse the trend and expand the population.

Impact of West Nile Virus on yellow-billed magpies. Funded by Sacramento-Yolo Mosquito and Vector Control District, 2005-2008, compared survey results pre- and post-West Nile Virus epidemic for multiple bird species in the Sacramento Valley, particularly on yellow-billed magpie and American crow due to susceptibility to WNV.

Workshops on HCPs. Assisted Dr. Michael Morrison with organizing and conducting a 2-day workshop on Habitat Conservation Plans, sponsored by Southern California Edison, and another 1-day workshop sponsored by PG&E. These Workshops were attended by academics, attorneys, and consultants with HCP experience. We guest-edited a Proceedings published in Environmental Management.

Mapping of biological resources along Highways 101, 46 and 41. Used GPS and GIS to delineate vegetation complexes and locations of special-status species along 26 miles of highway in San Luis Obispo County, 14 miles of highway and roadway in Monterey County, and in a large area north of Fresno, including within reclaimed gravel mining pits.

GPS mapping and monitoring at restoration sites and at Caltrans mitigation sites. Monitored the success of elderberry shrubs at one location, the success of willows at another location, and the response of wildlife to the succession of vegetation at both sites. Also used GPS to monitor the response of fossorial animals to yellow star-thistle eradication and natural grassland restoration efforts at Bear Valley in Colusa County and at the decommissioned Mather Air Force Base in Sacramento County.

Mercury effects on Red-legged Frog. Assisted Dr. Michael Morrison and US Fish and Wildlife Service in assessing the possible impacts of historical mercury mining on the federally listed California red-legged frog in Santa Clara County. Also measured habitat variables in streams.

Opposition to proposed No Surprises rule. Wrote a white paper and summary letter explaining scientific grounds for opposing the incidental take permit (ITP) rules providing ITP applicants and holders with general assurances they will be free of compliance with the Endangered Species Act once they adhere to the terms of a "properly functioning HCP." Submitted 188 signatures of scientists and environmental professionals concerned about No Surprises rule US Fish and Wildlife Service, National Marine Fisheries Service, all US Senators.

Natomas Basin Habitat Conservation Plan alternative. Designed narrow channel marsh to increase the likelihood of survival and recovery in the wild of giant garter snake, Swainson's hawk and Valley Elderberry Longhorn Beetle. The design included replication and interspersion of treatments for experimental testing of critical habitat elements. I provided a report to Northern Territories, Inc.

Assessments of agricultural production system and environmental technology transfer to China. Twice visited China and interviewed scientists, industrialists, agriculturalists, and the Directors of the Chinese Environmental Protection Agency and the Department of Agriculture to assess the need and possible pathways for environmental clean-up technologies and trade opportunities between the US and China.

Yolo County Habitat Conservation Plan. Conducted landscape ecology study of Yolo County to spatially prioritize allocation of mitigation efforts to improve ecosystem functionality within the County from the perspective of 29 special-status species of wildlife and plants. Used a hierarchically structured indicators approach to apply principles of landscape and ecosystem ecology, conservation biology, and local values in rating land units. Derived GIS maps to help guide the conservation area design, and then developed implementation strategies.

Mountain lion track count. Developed and conducted a carnivore monitoring program throughout California since 1985. Species counted include mountain lion, bobcat, black bear, coyote, red and gray fox, raccoon, striped skunk, badger, and black-tailed deer. Vegetation and land use are also monitored. Track survey transect was established on dusty, dirt roads within randomly selected quadrats.

Sumatran tiger and other felids. Upon award of Fulbright Research Fellowship, I designed and initiated track counts for seven species of wild cats in Sumatra, including Sumatran tiger, fishing cat, and golden cat. Spent four months on Sumatra and Java in 1988, and learned Bahasa Indonesia, the official Indonesian language.

Wildlife in agriculture. Beginning as post-graduate research, I studied pocket gophers and other wildlife in 40 alfalfa fields throughout the Sacramento Valley, and I surveyed for wildlife along a 200 mile road transect since 1989 with a hiatus of 1996-2004. The data are analyzed using GIS and methods from landscape ecology, and the results published and presented orally to farming groups in California and elsewhere. I also conducted the first study of wildlife in cover crops used on vineyards and orchards.

Agricultural energy use and Tulare County groundwater study. Developed and analyzed a data base of energy use in California agriculture, and collaborated on a landscape (GIS) study of groundwater contamination across Tulare County, California.

Pocket gopher damage in forest clear-cuts. Developed gopher sampling methods and tested various poison baits and baiting regimes in the largest-ever field study of pocket gopher management in forest plantations, involving 68 research plots in 55 clear-cuts among 6 National Forests in northern California.

Risk assessment of exotic species in North America. Developed empirical models of mammal and bird species invasions in North America, as well as a rating system for assigning priority research and control to exotic species in California, based on economic, environmental, and human health hazards.

Smallwood, K. S., L. Neher, and J. Mount. 2011. Monitoring Burrow Use of Wintering Burrowing Owls. SRC document P229, County of Alameda, Hayward, California.

Smallwood, K. S., L. Neher, and J. Mount. 2011. Nesting Burrowing Owl Distribution and Abundance in the Altamont Pass Wind Resource Area, California. SRC document P228, County of Alameda, Hayward, California.

Smallwood, K. S. 2011. Draft Study Design for Testing Collision Risk of Flodesign Wind Turbine in Patterson Pass Wind Farm in the Altamont Pass Wind Resource Area (APWRA). http://www.altamontsrc.org/alt_doc/p100_src_document_list_with_reference_numbers.pdf

Smallwood, K. S. 2011. Sampling Burrowing Owls Across the Altamont Pass Wind Resource Area. SRC document P205, County of Alameda, Hayward, California.

Smallwood, K. S. 2011. Proposal to Sample Burrowing Owls Across the Altamont Pass Wind Resource Area. SRC document P155, County of Alameda, Hayward, California. SRC document P198, County of Alameda, Hayward, California.

Smallwood, K. S. 2010. Comments on APWRA Monitoring Program Update. SRC document P191, County of Alameda, Hayward, California.

Smallwood, K. S. 2010. Inter-turbine Comparisons of Fatality Rates in the Altamont Pass Wind Resource Area. SRC document P189, County of Alameda, Hayward, California.

Smallwood, K. S. 2010. Review of the December 2010 Draft of M-21: Altamont Pass Wind Resource Area Bird Collision Study. SRC document P190, County of Alameda, Hayward, California.

Alameda County SRC (Shawn Smallwood, Jim Estep, Sue Orloff, Joanna Burger, and Julie Yee). Comments on the Notice of Preparation for a Programmatic Environmental Impact Report on Revised CUPs for Wind Turbines in the Alameda County portion of the Altamont Pass. SRC document P183, County of Alameda, Hayward, California.

Smallwood, K. S. 2010. Review of Monitoring Implementation Plan. SRC document P180, County of Alameda, Hayward, California.

Burger, J., J. Estep, S. Orloff, S. Smallwood, and J. Yee. 2010. SRC Comments on CalWEA Research Plan. SRC document P174, County of Alameda, Hayward, California.

Alameda County SRC (Smallwood, K. S., S. Orloff, J. Estep, J. Burger, and J. Yee). SRC Comments on Monitoring Team's Draft Study Plan for Future Monitoring. SRC document P168, County of Alameda, Hayward, California.

Smallwood, K. S. 2010. Second Review of American Kestrel-Burrowing owl (KB) Scavenger Removal Adjustments Reported in Alameda County Avian Monitoring Team's M21 for the Altamont Pass Wind Resource Area. SRC document P171, County of Alameda, Hayward, California.

Smallwood, K. S. 2010. Assessment of Three Proposed Adaptive Management Plans for Reducing Raptor Fatalities in the Altamont Pass Wind Resource Area. SRC document P161, County of Alameda, Hayward, California.

Smallwood, K. S. and J. Estep. 2010. Report of additional wind turbine hazard ratings in the Altamont Pass Wind Resource Area by Two Members of the Alameda County Scientific Review Committee. SRC document P153, County of Alameda, Hayward, California.

Smallwood, K. S. 2010. Alternatives to Improve the Efficiency of the Monitoring Program. SRC document P158, County of Alameda, Hayward, California.

Smallwood, S. 2010. Summary of Alameda County SRC Recommendations and Concerns and Subsequent Actions. SRC document P147, County of Alameda, Hayward, California.

Smallwood, S. 2010. Progress of Avian Wildlife Protection Program & Schedule. SRC document P148, County of Alameda, Hayward, California. SRC document P148, County of Alameda, Hayward, California.

Smallwood, S. 2010. Old-generation wind turbines rated for raptor collision hazard by Alameda County Scientific Review Committee in 2010, an Update on those Rated in 2007, and an Update on Tier Rankings. SRC document P155, County of Alameda, Hayward, California.

Smallwood, K. S. 2010. Review of American Kestrel-Burrowing owl (KB) Scavenger Removal Adjustments Reported in Alameda County Avian Monitoring Team's M21 for the Altamont Pass Wind Resource Area. SRC document P154, County of Alameda, Hayward, California.

Smallwood, K. S. 2010. Fatality Rates in the Altamont Pass Wind Resource Area 1998-2009. Alameda County SRC document P-145.

Smallwood, K. S. 2010. Comments on Revised M-21: Report on Fatality Monitoring in the Altamont Pass Wind Resource Area. SRC document P144, County of Alameda, Hayward, California.

Smallwood, K. S. 2009. SRC document P129, County of Alameda, Hayward, California.

Smallwood, K. S. 2009. Smallwood's review of M32. SRC document P111, County of Alameda, Hayward, California.

Smallwood, K. S. 2009. 3rd Year Review of 16 Conditional Use Permits for Windworks, Inc. and Altamont Infrastructure Company, LLC. Comment letter to East County Board of Zoning Adjustments. 10 pp + 2 attachments.

Smallwood, K. S. 2008. Weighing Remaining Workload of Alameda County SRC against Proposed Budget Cap. Alameda County SRC document not assigned. 3 pp.

Alameda County SRC (Smallwood, K. S., S. Orloff, J. Estep, J. Burger, and J. Yee). 2008. SRC comments on August 2008 Fatality Monitoring Report, M21. SRC document P107, County of Alameda, Hayward, California.

Smallwood, K. S. 2008. Burrowing owl carcass distribution around wind turbines. SRC document P106, County of Alameda, Hayward, California.

Smallwood, K. S. 2008. Assessment of relocation/removal of Altamont Pass wind turbines rated as hazardous by the Alameda County SRC. SRC document P103, County of Alameda, Hayward, California.

Smallwood, K. S. and L. Neher. 2008. Summary of wind turbine-free ridgelines within and around the APWRA. SRC document P102, County of Alameda, Hayward, California.

Smallwood, K. S. and B. Karas. 2008. Comparison of mortality estimates in the Altamont Pass Wind Resource Area when restricted to recent fatalities. SRC document P101, County of Alameda, Hayward, California.

Smallwood, K. S. 2008. On the misapplication of mortality adjustment terms to fatalities missed during one search and found later. SRC document P97, County of Alameda, Hayward, California.

Smallwood, K. S. 2008. Relative abundance of raptors outside the APWRA. SRC document P88, County of Alameda, Hayward, California.

Smallwood, K. S. 2008. Comparison of mortality estimates in the Altamont Pass Wind Resource Area. SRC document P76, County of Alameda, Hayward, California.

Alameda County SRC (Smallwood, K. S., S. Orloff, J. Estep, J. Burger, and J. Yee). 2010. Guidelines for siting wind turbines recommended for relocation to minimize potential collision-related mortality of four focal raptor species in the Altamont Pass Wind Resource Area. SRC document P70, County of Alameda, Hayward, California.

Alameda County SRC (J. Burger, Smallwood, K. S., S. Orloff, J. Estep, and J. Yee). 2007. First DRAFT of Hazardous Rating Scale First DRAFT of Hazardous Rating Scale. SRC document P69, County of Alameda, Hayward, California.

Alameda County SRC (Smallwood, K. S., S. Orloff, J. Estep, J. Burger, and J. Yee). December 11, 2007. SRC selection of dangerous wind turbines. Alameda County SRC document P-67. 8 pp.

Smallwood, S. October 6, 2007. Smallwood's answers to Audubon's queries about the SRC's recommended four month winter shutdown of wind turbines in the Altamont Pass. Alameda County SRC document P-23.

Smallwood, K. S. October 1, 2007. Dissenting opinion on recommendation to approve of the AWI Blade Painting Study. Alameda County SRC document P-60.

Smallwood, K. S. July 26, 2007. Effects of monitoring duration and inter-annual variability on precision of wind-turbine caused mortality estimates in the Altamont Pass Wind Resource Area, California. SRC Document P44.

Smallwood, K. S. July 26, 2007. Memo: Opinion of some SRC members that the period over which post-management mortality will be estimated remains undefined. SRC Document P43.

Smallwood, K. S. July 19, 2007. Smallwood's response to P24G. SRC Document P41, 4 pp.

Smallwood, K. S. April 23, 2007. New Information Regarding Alameda County SRC Decision of 11 April 2007 to Grant FPLE Credits for Removing and Relocating Wind Turbines in 2004. SRC Document P26.

Alameda County SRC (Smallwood, K. S., S. Orloff, J. Estep, and J. Burger [J. Yee abstained]). April 17, 2007. SRC Statement in Support of the Monitoring Program Scope and Budget.

Smallwood, K. S. April 15, 2007. Verification of Tier 1 & 2 Wind Turbine Shutdowns and Relocations. SRC Document P22.

Smallwood, S. April 15, 2007. Progress of Avian Wildlife Protection Program & Schedule.

Alameda County SRC (Smallwood, K. S., S. Orloff, J. Estep, J. Burger, and J. Yee). April 3, 2007. Alameda County Scientific Review Committee replies to the parties' responses to its queries and to comments from the California Office of the Attorney General. SRC Document S20.

Smallwood, S. March 19, 2007. Estimated Effects of Full Winter Shutdown and Removal of Tier I & II Turbines. SRC Document S19.

Smallwood, S. March 8, 2007. Smallwood's Replies to the Parties' Responses to Queries from the SRC and Comments from the California Office of the Attorney General. SRC Document S16.

Smallwood, S. March 8, 2007. Estimated Effects of Proposed Measures to be Applied to 2,500 Wind Turbines in the APWRA Fatality Monitoring Plan. SRC Document S15.

Alameda County SRC (Smallwood, K. S., S. Orloff, J. Estep, J. Burger, and J. Yee). February 7, 2007. Analysis of Monitoring Program in Context of 1/1//2007 Settlement Agreement.

Smallwood, S. January 8, 2007. Smallwood's Concerns over the Agreement to Settle the CEQA Challenges. SRC Document S5.

Alameda County SRC (Smallwood, K. S., S. Orloff, J. Estep, J. Burger, and J. Yee). December 19, 2006. Altamont Scientific Review Committee (SRC) Recommendations to the County on the Avian Monitoring Team Consultants' Budget and Organization.

Reports to Clients

Smallwood, K. S. 2020. Comparison of bird and bat fatality rates among utility-scale solar projects in California. Report to undisclosed client.

Smallwood, K. S., D. Bell, and S. Standish. 2018. Skilled dog detections of bat and small bird carcasses in wind turbine fatality monitoring. Report to East Bay Regional Park District, Oakland, California.

Smallwood, K. S. 2018. Addendum to Comparison of Wind Turbine Collision Hazard Model Performance: One-year Post-construction Assessment of Golden Eagle Fatalities at Golden Hills. Report to Audubon Society, NextEra Energy, and the California Attorney General.

Smallwood, K. S., and L. Neher. 2018. Siting wind turbines to minimize raptor collisions at Rooney Ranch and Sand Hill Repowering Project, Altamont Pass Wind Resource Area. Report to S-Power, Salt Lake City, Utah.

Smallwood, K. S. 2017. Summary of a burrowing owl conservation workshop. Report to Santa Clara Valley Habitat Agency, Morgan Hill, California.

Smallwood, K. S., and L. Neher. 2018. Comparison of wind turbine collision hazard model performance prepared for repowering projects in the Altamont Pass Wind Resources Area. Report to NextEra Energy Resources, Inc., Office of the California Attorney General, Audubon Society, East Bay Regional Park District.

Smallwood, K. S., and L. Neher. 2016. Siting wind turbines to minimize raptor collisions at Summit Winds Repowering Project, Altamont Pass Wind Resource Area. Report to Salka, Inc., Washington, D.C.

Smallwood, K. S., L. Neher, and D. A. Bell. 2017. Mitigating golden eagle impacts from repowering Altamont Pass Wind Resource Area and expanding Los Vaqueros Reservoir. Report to East Contra Costa County Habitat Conservation Plan Conservancy and Contra Costa Water District.

Smallwood, K. S. 2016. Review of avian-solar science plan. Report to Center for Biological Diversity. 28 pp

Smallwood, K. S. 2016. Report of Altamont Pass research as Vasco Winds mitigation. Report to NextEra Energy Resources, Inc., Office of the California Attorney General, Audubon Society, East Bay Regional Park District.

Smallwood, K. S., and L. Neher. 2016. Siting Wind Turbines to Minimize Raptor collisions at Sand Hill Repowering Project, Altamont Pass Wind Resource Area. Report to Ogin, Inc., Waltham, Massachusetts.

Smallwood, K. S., and L. Neher. 2015a. Siting wind turbines to minimize raptor collisions at Golden Hills Repowering Project, Altamont Pass Wind Resource Area. Report to NextEra Energy Resources, Livermore, California.

Smallwood, K. S., and L. Neher. 2015b. Siting wind turbines to minimize raptor collisions at Golden Hills North Repowering Project, Altamont Pass Wind Resource Area. Report to NextEra Energy Resources, Livermore, California.

Smallwood, K. S., and L. Neher. 2015c. Siting wind turbines to minimize raptor collisions at the Patterson Pass Repowering Project, Altamont Pass Wind Resource Area. Report to EDF Renewable Energy, Oakland, California.

Smallwood, K. S., and L. Neher. 2014. Early assessment of wind turbine layout in Summit Wind Project. Report to Altamont Winds LLC, Tracy, California.

Smallwood, K. S. 2015. Review of avian use survey report for the Longboat Solar Project. Report to EDF Renewable Energy, Oakland, California.

Smallwood, K. S. 2014. Information needed for solar project impacts assessment and mitigation planning. Report to Panorama Environmental, Inc., San Francisco, California.

Smallwood, K. S. 2014. Monitoring fossorial mammals in Vasco Caves Regional Preserve, California: Report of Progress for the period 2006-2014. Report to East Bay Regional Park District, Oakland, California.

Smallwood, K. S. 2013. First-year estimates of bird and bat fatality rates at old wind turbines, Forebay areas of Altamont Pass Wind Resource Area. Report to FloDesign in support of EIR.

Smallwood, K. S. and W. Pearson. 2013. Neotropical bird monitoring of burrowing owls (*Athene cunicularia*), Naval Air Station Lemoore, California. Tierra Data, Inc. report to Naval Air Station Lemoore.

Smallwood, K. S. 2013. Winter surveys for San Joaquin kangaroo rat (*Dipodomys nitratoides*) and burrowing owls (*Athene cunicularia*) within Air Operations at Naval Air Station, Lemoore. Report to Tierra Data, Inc. and Naval Air Station Lemoore.

Smallwood, K. S. and M. L. Morrison. 2013. San Joaquin kangaroo rat (*Dipodomys n. nitratoides*) conservation research in Resource Management Area 5, Lemoore Naval Air Station: 2012 Progress Report (Inclusive of work during 2000-2012). Naval Facilities Engineering Command, Southwest, Desert Integrated Products Team, San Diego, California.

Smallwood, K. S. 2012. Fatality rate estimates at the Vantage Wind Energy Project, year one. Report to Ventus Environmental, Portland, Oregon.

Smallwood, K. S. and L. Neher. 2012. Siting wind turbines to minimize raptor collisions at North Sky River. Report to NextEra Energy Resources, LLC.

Smallwood, K. S. 2011. Monitoring Fossorial Mammals in Vasco Caves Regional Preserve, California: Report of Progress for the Period 2006-2011. Report to East Bay Regional Park District.

Smallwood, K. S. and M. L. Morrison. 2011. San Joaquin kangaroo rat (*Dipodomys n. nitratoides*) Conservation Research in Resource Management Area 5, Lemoore Naval Air Station: 2011 Progress Report (Inclusive of work during 2000-2011). Naval Facilities Engineering Command, Southwest, Desert Integrated Products Team, San Diego, California.

Letter Agreement N68711-04LT-A0002. 8 pp. + 2 pp. of photo plates.

Smallwood, K. S. and M. L. Morrison. 2003. 2003 Progress Report: San Joaquin kangaroo rat (*Dipodomys nitratoides*) Conservation Research at Resources Management Area 5, Lemoore Naval Air Station. Progress report to U.S. Department of the Navy, Lemoore, California. 56 pp. + 58 figures.

Smallwood, K. S. 2003. Comparison of Biological Impacts of the No Project and Partial Underground Alternatives presented in the Final Environmental Impact Report for the Jefferson-Martin 230 kV Transmission Line. Report to California Public Utilities Commission. 20 pp.

Morrison, M. L., and K. S. Smallwood. 2003. Kangaroo rat survey at RMA4, NAS Lemoore. Report to U.S. Navy. 6 pp. + 7 photos + 1 map.

Smallwood, K. S. 2003. Assessment of the Environmental Review Documents Prepared for the Tesla Power Project. Report to the California Energy Commission on behalf of Californians for Renewable Energy. 32 pp.

Smallwood, K. S., and M. L. Morrison. 2003. 2002 Progress Report: San Joaquin kangaroo rat (*Dipodomys nitratoides*) Conservation Research at Resources Management Area 5, Lemoore Naval Air Station. Progress report to U.S. Department of the Navy, Lemoore, California. 45 pp. + 36 figures.

Smallwood, K. S., Michael L. Morrison and Carl G. Thelander 2002. Study plan to test the effectiveness of aerial markers at reducing avian mortality due to collisions with transmission lines: A report to Pacific Gas & Electric Company. 10 pp.

Smallwood, K. S. 2002. Assessment of the Environmental Review Documents Prepared for the East Altamont Energy Center. Report to the California Energy Commission on behalf of Californians for Renewable Energy. 26 pp.

Thelander, Carl G., K. Shawn Smallwood, and Christopher Costello. 2002 Rating Distribution Poles for Threat of Raptor Electrocution and Priority Retrofit: Developing a Predictive Model. Report to Southern California Edison Company. 30 pp.

Smallwood, K. S., M. Robison, and C. Thelander. 2002. Draft Natural Environment Study, Prunedale Highway 101 Project. California Department of Transportation, San Luis Obispo, California. 120 pp.

Smallwood, K.S. 2001. Assessment of ecological integrity and restoration potential of Beeman/Pelican Farm. Draft Report to Howard Beeman, Woodland, California. 14 pp.

Smallwood, K. S., and M. L. Morrison. 2002. Fresno kangaroo rat (*Dipodomys nitratoides*) Conservation Research at Resources Management Area 5, Lemoore Naval Air Station. Progress report to U.S. Department of the Navy, Lemoore, California. 29 pp. + 19 figures.

Smallwood, K.S. 2001. Rocky Flats visit, April 4th through 6th, 2001. Report to Berger & Montaque, P.C. 16 pp. with 61 color plates.

Smallwood, K.S. 2001. Affidavit of K. Shawn Smallwood, Ph.D. in the matter of the U.S. Fish and Wildlife Service's rejection of Seatuck Environmental Association's proposal to operate an education center on Seatuck National Wildlife Refuge. Submitted to Seatuck Environmental Association in two parts, totaling 7 pp.

Magney, D., and K.S. Smallwood. 2001. Maranatha High School CEQA critique. Comment letter submitted to Tamara & Efren Compeán, 16 pp.

Smallwood, K. S. and D. Mangey. 2001. Comments on the Newhall Ranch November 2000 Administrative Draft EIR. Prepared for Ventura County Counsel regarding the Newhall Ranch Specific Plan EIR. 68 pp.

Magney, D. and K. S. Smallwood. 2000. Newhall Ranch Notice of Preparation Submittal. Prepared for Ventura County Counsel regarding our recommended scope of work for the Newhall Ranch Specific Plan EIR. 17 pp.

Smallwood, K. S. 2000. Comments on the Preliminary Staff Assessment of the Contra Costa Power Plant Unit 8 Project. Submitted to California Energy Commission on November 30 on behalf of Californians for Renewable Energy (CaRE). 4 pp.

Smallwood, K. S. 2000. Comments on the California Energy Commission's Final Staff Assessment

of the MEC. Submitted to California Energy Commission on October 29 on behalf of Californians for Renewable Energy (CaRE). 8 pp.

Smallwood, K. S. 2000. Comments on the Biological Resources Mitigation Implementation and Monitoring Plan (BRMIMP). Submitted to California Energy Commission on October 29 on behalf of Californians for Renewable Energy (CaRE). 9 pp.

Smallwood, K. S. 2000. Comments on the Preliminary Staff Assessment of the Metcalf Energy Center. Submitted to California Energy Commission on behalf of Californians for Renewable Energy (CaRE). 11 pp.

Smallwood, K. S. 2000. Preliminary report of reconnaissance surveys near the TRW plant south of Phoenix, Arizona, March 27-29. Report prepared for Hagens, Berman & Mitchell, Attorneys at Law, Phoenix, AZ. 6 pp.

Morrison, M.L., K.S. .Smallwood, and M. Robison. 2001. Draft Natural Environment Study for Highway 46 compliance with CEQA/NEPA. Report to the California Department of Transportation. 75 pp.

Morrison, M.L., and K.S. Smallwood. 1999. NTI plan evaluation and comments. Exhibit C in W.D. Carrier, M.L. Morrison, K.S. Smallwood, and Vail Engineering. Recommendations for NBHCP land acquisition and enhancement strategies. Northern Territories, Inc., Sacramento.

Smallwood, K. S. 1999. Estimation of impacts due to dredging of a shipping channel through Humboldt Bay, California. Court Declaration prepared on behalf of EPIC.

Smallwood, K. S. 1998. 1998 California Mountain Lion Track Count. Report to the Defenders of Wildlife, Washington, D.C. 5 pages.

Smallwood, K.S. 1998. Draft report of a visit to a paint sludge dump site near Ridgewood, New Jersey, February 26th, 1998. Unpublished report to Consulting in the Public Interest.

Smallwood, K.S. 1997. Science missing in the "no surprises" policy. Commissioned by National Endangered Species Network and Spirit of the Sage Council, Pasadena, California.

Smallwood, K.S. and M.L. Morrison. 1997. Alternate mitigation strategy for incidental take of giant garter snake and Swainson's hawk as part of the Natomas Basin Habitat Conservation Plan. Pages 6-9 and *iii* illustrations in W.D. Carrier, K.S. Smallwood and M.L. Morrison, Natomas Basin Habitat Conservation Plan: Narrow channel marsh alternative wetland mitigation. Northern Territories, Inc., Sacramento.

Smallwood, K.S. 1996. Assessment of the BIOPORT model's parameter values for pocket gopher burrowing characteristics. Report to Berger & Montague, P.C. and Roy S. Haber, P.C., Philadelphia. (peer reviewed).

Smallwood, K.S. 1997. Assessment of plutonium releases from Hanford buried waste sites. Report Number 9, Consulting in the Public Interest, 53 Clinton Street, Lambertville, New Jersey, 08530.

Smallwood, K.S. 1996. Soil Bioturbation and Wind Affect Fate of Hazardous Materials that were Released at the Rocky Flats Plant, Colorado. Report to Berger & Montague, P.C., Philadelphia.

Smallwood, K.S. 1996. Second assessment of the BIOPORT model's parameter values for pocket gopher burrowing characteristics and other relevant wildlife observations. Report to Berger & Montague, P.C. and Roy S. Haber, P.C., Philadelphia.

Smallwood, K.S., and R. Leidy. 1996. Wildlife and Their Management Under the Martell SYP. Report to Georgia Pacific, Corporation, Martel, CA. 30 pp.

EIP Associates. 1995. Yolo County Habitat Conservation Plan Biological Resources Report. Yolo County Planning and Development Department, Woodland, California.

Smallwood, K.S. and S. Geng. 1995. Analysis of the 1987 California Farm Cost Survey and recommendations for future survey. Program on Workable Energy Regulation, University-wide Energy Research Group, University of California.

Smallwood, K.S., S. Geng, and W. Idzerda. 1992. Final report to PG&E: Analysis of the 1987 California Farm Cost Survey and recommendations for future survey. Pacific Gas & Electric Company, San Ramon, California. 24 pp.

Fitzhugh, E.L. and K.S. Smallwood. 1987. Methods Manual – A statewide mountain lion population index technique. California Department of Fish and Game, Sacramento.

Salmon, T.P. and K.S. Smallwood. 1989. Final Report – Evaluating exotic vertebrates as pests to California agriculture. California Department of Food and Agriculture, Sacramento.

Smallwood, K.S. and W. A. Erickson (written under supervision of W.E. Howard, R.E. Marsh, and R.J. Laacke). 1990. Environmental exposure and fate of multi-kill strychnine gopher baits. Final Report to USDA Forest Service –NAPIAP, Cooperative Agreement PSW-89-0010CA.

Fitzhugh, E.L., K.S. Smallwood, and R. Gross. 1985. Mountain lion track count, Marin County, 1985. Report on file at Wildlife Extension, University of California, Davis.

Comments on Environmental Documents (Year; pages)

I was retained or commissioned to comment on environmental planning and review documents, including:

- Mulqueeney Ranch Wind Repowering Project DSEIR (2021; 98);
- Clawiter Road Industrial Project IS/MND, Hayward (2021; 18);
- Garnet Energy Center Stipulations, New York (2020);
- Heritage Wind Energy Project, New York (2020: 71);
- Ameresco Keller Canyon RNG Project IS/MND, Martinez (2020; 11);
- Cambria Hotel Project Staff Report, Dublin (2020; 19);
- Central Pointe Mixed-Use Staff Report, Santa Ana (2020; 20);
- Oak Valley Town Center EIR Addendum, Calimesa (2020; 23);

- Coachillin Specific Plan MND Amendment, Desert Hot Springs (2020; 26);
- Stockton Avenue Hotel and Condominiums Project Tiering to EIR, San Jose (2020; 19);
- Cityline Sub-block 3 South Staff Report, Sunyvale (2020; 22);
- Station East Residential/Mixed Use EIR, Union City (2020; 21);
- Multi-Sport Complex & Southeast Industrial Annexation Suppl. EIR, Elk Grove (2020; 24);
- Sun Lakes Village North EIR Amendment 5, Banning, Riverside County (2020; 27);

- NOA Draft Addendum to the Final Handbook for Habitat Conservation Planning and Incidental Take Permitting Process, termed the HCP 5-Point Policy Plan (Fed. Reg. 64(45): 11485 - 11490) (1999; 2 + attachments);
- Covell Center Project EIR and EIR Supplement (1997).

Position Statements I prepared the following position statements for the Western Section of The Wildlife Society, and one for nearly 200 scientists:

- Recommended that the California Department of Fish and Game prioritize the extermination of the introduced southern water snake in northern California. The Wildlife Society--Western Section (2001);
- Recommended that The Wildlife Society—Western Section appoint or recommend members of the independent scientific review panel for the UC Merced environmental review process (2001);
- Opposed the siting of the University of California's 10th campus on a sensitive vernal pool/grassland complex east of Merced. The Wildlife Society--Western Section (2000);
- Opposed the legalization of ferret ownership in California. The Wildlife Society--Western Section (2000);
- Opposed the Proposed "No Surprises," "Safe Harbor," and "Candidate Conservation Agreement" rules, including permit-shield protection provisions (Fed. Reg. Vol. 62, No. 103, pp. 29091-29098 and No. 113, pp. 32189-32194). This statement was signed by 188 scientists and went to the responsible federal agencies, as well as to the U.S. Senate and House of Representatives.

Posters at Professional Meetings

Leyvas, E. and K. S. Smallwood. 2015. Rehabilitating injured animals to offset and rectify wind project impacts. Conference on Wind Energy and Wildlife Impacts, Berlin, Germany, 9-12 March 2015.

Smallwood, K. S., J. Mount, S. Standish, E. Leyvas, D. Bell, E. Walther, B. Karas. 2015. Integrated detection trials to improve the accuracy of fatality rate estimates at wind projects. Conference on Wind Energy and Wildlife Impacts, Berlin, Germany, 9-12 March 2015.

Smallwood, K. S. and C. G. Thelander. 2005. Lessons learned from five years of avian mortality research in the Altamont Pass WRA. AWEA conference, Denver, May 2005.

Neher, L., L. Wilder, J. Woo, L. Spiegel, D. Yen-Nakafugi, and K.S. Smallwood. 2005. Bird's eye view on California wind. AWEA conference, Denver, May 2005.

Smallwood, K. S., C. G. Thelander and L. Spiegel. 2003. Toward a predictive model of avian fatalities in the Altamont Pass Wind Resource Area. Windpower 2003 Conference and Convention, Austin, Texas.

Smallwood, K.S. and Eva Butler. 2002. Pocket Gopher Response to Yellow Star-thistle Eradication as part of Grassland Restoration at Decommissioned Mather Air Force Base, Sacramento County, California. White Mountain Research Station Open House, Barcroft Station.

Smallwood, K.S. and Michael L. Morrison. 2002. Fresno kangaroo rat (*Dipodomys nitratoides*) Conservation Research at Resources Management Area 5, Lemoore Naval Air Station. White Mountain Research Station Open House, Barcroft Station.

Smallwood, K.S. and E.L. Fitzhugh. 1989. Differentiating mountain lion and dog tracks. Third Mountain Lion Workshop, Prescott, AZ.

Smith, T. R. and K. S. Smallwood. 2000. Effects of study area size, location, season, and allometry on reported *Sorex* shrew densities. Annual Meeting of the Western Section of The Wildlife Society.

Presentations at Professional Meetings and Seminars

Dog detections of bat and bird fatalities at wind farms in the Altamont Pass Wind Resource Area. East Bay Regional Park District 2019 Stewardship Seminar, Oakland, California, 13 November 2019.

Repowering the Altamont Pass. Altamont Symposium, The Wildlife Society – Western Section, 5 February 2017.

Developing methods to reduce bird mortality in the Altamont Pass Wind Resource Area, 1999-2007. Altamont Symposium, The Wildlife Society – Western Section, 5 February 2017.

Conservation and recovery of burrowing owls in Santa Clara Valley. Santa Clara Valley Habitat

Agency, Newark, California, 3 February 2017.

Mitigation of Raptor Fatalities in the Altamont Pass Wind Resource Area. Raptor Research Foundation Meeting, Sacramento, California, 6 November 2015.

From burrows to behavior: Research and management for burrowing owls in a diverse landscape. California Burrowing Owl Consortium meeting, 24 October 2015, San Jose, California.

The Challenges of repowering. Keynote presentation at Conference on Wind Energy and Wildlife Impacts, Berlin, Germany, 10 March 2015.

Research Highlights Altamont Pass 2011-2015. Scientific Review Committee, Oakland, California, 8 July 2015.

Siting wind turbines to minimize raptor collisions: Altamont Pass Wind Resource Area. US Fish and Wildlife Service Golden Eagle Working Group, Sacramento, California, 8 January 2015.

Evaluation of nest boxes as a burrowing owl conservation strategy. Sacramento Chapter of the Western Section, The Wildlife Society. Sacramento, California, 26 August 2013.

Predicting collision hazard zones to guide repowering of the Altamont Pass. Conference on wind power and environmental impacts. Stockholm, Sweden, 5-7 February 2013.

Impacts of Wind Turbines on Wildlife. California Council for Wildlife Rehabilitators, Yosemite, California, 12 November 2012.

Impacts of Wind Turbines on Birds and Bats. Madrone Audubon Society, Santa Rosa, California, 20 February 2012.

Comparing Wind Turbine Impacts across North America. California Energy Commission Staff Workshop: Reducing the Impacts of Energy Infrastructure on Wildlife, 20 July 2011.

Siting Repowered Wind Turbines to Minimize Raptor Collisions. California Energy Commission Staff Workshop: Reducing the Impacts of Energy Infrastructure on Wildlife, 20 July 2011.

Siting Repowered Wind Turbines to Minimize Raptor Collisions. Alameda County Scientific Review Committee meeting, 17 February 2011

Comparing Wind Turbine Impacts across North America. Conference on Wind energy and Wildlife impacts, Trondheim, Norway, 3 May 2011.

Update on Wildlife Impacts in the Altamont Pass Wind Resource Area. Raptor Symposium, The Wildlife Society—Western Section, Riverside, California, February 2011.

Siting Repowered Wind Turbines to Minimize Raptor Collisions. Raptor Symposium, The Wildlife Society - Western Section, Riverside, California, February 2011.

Wildlife mortality caused by wind turbine collisions. Ecological Society of America, Pittsburgh,

Pennsylvania, 6 August 2010.

Map-based repowering and reorganization of a wind farm to minimize burrowing owl fatalities. California burrowing Owl Consortium Meeting, Livermore, California, 6 February 2010.

Environmental barriers to wind power. Getting Real About Renewables: Economic and Environmental Barriers to Biofuels and Wind Energy. A symposium sponsored by the Environmental & Energy Law & Policy Journal, University of Houston Law Center, Houston, 23 February 2007.

Lessons learned about bird collisions with wind turbines in the Altamont Pass and other US wind farms. Meeting with Japan Ministry of the Environment and Japan Ministry of the Economy, Wild Bird Society of Japan, and other NGOs Tokyo, Japan, 9 November 2006.

Lessons learned about bird collisions with wind turbines in the Altamont Pass and other US wind farms. Symposium on bird collisions with wind turbines. Wild Bird Society of Japan, Tokyo, Japan, 4 November 2006.

Responses of Fresno kangaroo rats to habitat improvements in an adaptive management framework. California Society for Ecological Restoration (SERCAL) 13th Annual Conference, UC Santa Barbara, 27 October 2006.

Fatality associations as the basis for predictive models of fatalities in the Altamont Pass Wind Resource Area. EEI/APLIC/PIER Workshop, 2006 Biologist Task Force and Avian Interaction with Electric Facilities Meeting, Pleasanton, California, 28 April 2006.

Burrowing owl burrows and wind turbine collisions in the Altamont Pass Wind Resource Area. The Wildlife Society - Western Section Annual Meeting, Sacramento, California, February 8, 2006.

Mitigation at wind farms. Workshop: Understanding and resolving bird and bat impacts. American Wind Energy Association and Audubon Society. Los Angeles, CA. January 10 and 11, 2006.

Incorporating data from the California Wildlife Habitat Relationships (CWHR) system into an impact assessment tool for birds near wind farms. Shawn Smallwood, Kevin Hunting, Marcus Yee, Linda Spiegel, Monica Parisi. Workshop: Understanding and resolving bird and bat impacts. American Wind Energy Association and Audubon Society. Los Angeles, CA. January 10 and 11, 2006.

Toward indicating threats to birds by California's new wind farms. California Energy Commission, Sacramento, May 26, 2005.

Avian collisions in the Altamont Pass. California Energy Commission, Sacramento, May 26, 2005.

Ecological solutions for avian collisions with wind turbines in the Altamont Pass Wind Resource Area. EPRI Environmental Sector Council, Monterey, California, February 17, 2005.

Ecological solutions for avian collisions with wind turbines in the Altamont Pass Wind Resource Area. The Wildlife Society—Western Section Annual Meeting, Sacramento, California, January 19,

2005.

Associations between avian fatalities and attributes of electric distribution poles in California. The Wildlife Society - Western Section Annual Meeting, Sacramento, California, January 19, 2005.

Minimizing avian mortality in the Altamont Pass Wind Resources Area. UC Davis Wind Energy Collaborative Forum, Palm Springs, California, December 14, 2004.

Selecting electric distribution poles for priority retrofitting to reduce raptor mortality. Raptor Research Foundation Meeting, Bakersfield, California, November 10, 2004.

Responses of Fresno kangaroo rats to habitat improvements in an adaptive management framework. Annual Meeting of the Society for Ecological Restoration, South Lake Tahoe, California, October 16, 2004.

Lessons learned from five years of avian mortality research at the Altamont Pass Wind Resources Area in California. The Wildlife Society Annual Meeting, Calgary, Canada, September 2004.

The ecology and impacts of power generation at Altamont Pass. Sacramento Petroleum Association, Sacramento, California, August 18, 2004.

Burrowing owl mortality in the Altamont Pass Wind Resource Area. California Burrowing Owl Consortium meeting, Hayward, California, February 7, 2004.

Burrowing owl mortality in the Altamont Pass Wind Resource Area. California Burrowing Owl Symposium, Sacramento, November 2, 2003.

Raptor Mortality at the Altamont Pass Wind Resource Area. National Wind Coordinating Committee, Washington, D.C., November 17, 2003.

Raptor Behavior at the Altamont Pass Wind Resource Area. Annual Meeting of the Raptor Research Foundation, Anchorage, Alaska, September, 2003.

Raptor Mortality at the Altamont Pass Wind Resource Area. Annual Meeting of the Raptor Research Foundation, Anchorage, Alaska, September, 2003.

California mountain lions. Ecological & Environmental Issues Seminar, Department of Biology, California State University, Sacramento, November, 2000.

Intra- and inter-turbine string comparison of fatalities to animal burrow densities at Altamont Pass. National Wind Coordinating Committee, Carmel, California, May, 2000.

Using a Geographic Positioning System (GPS) to map wildlife and habitat. Annual Meeting of the Western Section of The Wildlife Society, Riverside, CA, January, 2000.

Suggested standards for science applied to conservation issues. Annual Meeting of the Western Section of The Wildlife Society, Riverside, CA, January, 2000.

The indicators framework applied to ecological restoration in Yolo County, California. Society for Ecological Restoration, September 25, 1999.

Ecological restoration in the context of animal social units and their habitat areas. Society for Ecological Restoration, September 24, 1999.

Relating Indicators of Ecological Health and Integrity to Assess Risks to Sustainable Agriculture and Native Biota. International Conference on Ecosystem Health, August 16, 1999.

A crosswalk from the Endangered Species Act to the HCP Handbook and real HCPs. Southern California Edison, Co. and California Energy Commission, March 4-5, 1999.

Mountain lion track counts in California: Implications for Management. Ecological & Environmental Issues Seminar, Department of Biological Sciences, California State University, Sacramento, November 4, 1998.

"No Surprises" -- Lack of science in the HCP process. California Native Plant Society Annual Conservation Conference, The Presidio, San Francisco, September 7, 1997.

In Your Interest. A half hour weekly show aired on Channel 10 Television, Sacramento. In this episode, I served on a panel of experts discussing problems with the implementation of the Endangered Species Act. Aired August 31, 1997.

Spatial scaling of pocket gopher (*Geomyidae*) density. Southwestern Association of Naturalists 44th Meeting, Fayetteville, Arkansas, April 10, 1997.

Estimating prairie dog and pocket gopher burrow volume. Southwestern Association of Naturalists 44th Meeting, Fayetteville, Arkansas, April 10, 1997.

Ten years of mountain lion track survey. Fifth Mountain Lion Workshop, San Diego, February 27, 1996.

Study and interpretive design effects on mountain lion density estimates. Fifth Mountain Lion Workshop, San Diego, February 27, 1996.

Small animal control. Session moderator and speaker at the California Farm Conference, Sacramento, California, Feb. 28, 1995.

Small animal control. Ecological Farming Conference, Asylomar, California, Jan. 28, 1995.

Habitat associations of the Swainson's Hawk in the Sacramento Valley's agricultural landscape. 1994 Raptor Research Foundation Meeting, Flagstaff, Arizona.

Alfalfa as wildlife habitat. Seed Industry Conference, Woodland, California, May 4, 1994.

Habitats and vertebrate pests: impacts and management. Managing Farmland to Bring Back Game Birds and Wildlife to the Central Valley. Yolo County Resource Conservation District, U.C. Davis, February 19, 1994.

Management of gophers and alfalfa as wildlife habitat. Orland Alfalfa Production Meeting and Sacramento Valley Alfalfa Production Meeting, February 1 and 2, 1994.

Patterns of wildlife movement in a farming landscape. Wildlife and Fisheries Biology Seminar Series: Recent Advances in Wildlife, Fish, and Conservation Biology, U.C. Davis, Dec. 6, 1993.

Alfalfa as wildlife habitat. California Alfalfa Symposium, Fresno, California, Dec. 9, 1993.

Management of pocket gophers in Sacramento Valley alfalfa. California Alfalfa Symposium, Fresno, California, Dec. 8, 1993.

Association analysis of raptors in a farming landscape. Plenary speaker at Raptor Research Foundation Meeting, Charlotte, North Carolina, Nov. 6, 1993.

Landscape strategies for biological control and IPM. Plenary speaker, International Conference on Integrated Resource Management and Sustainable Agriculture, Beijing, China, Sept. 11, 1993.

Landscape Ecology Study of Pocket Gophers in Alfalfa. Alfalfa Field Day, U.C. Davis, July 1993.

Patterns of wildlife movement in a farming landscape. Spatial Data Analysis Colloquium, U.C. Davis, August 6, 1993.

Sound stewardship of wildlife. Veterinary Medicine Seminar: Ethics of Animal Use, U.C. Davis. May 1993.

Landscape ecology study of pocket gophers in alfalfa. Five County Grower's Meeting, Tracy, California. February 1993.

Turbulence and the community organizers: The role of invading species in ordering a turbulent system, and the factors for invasion success. Ecology Graduate Student Association Colloquium, U.C. Davis. May 1990.

Evaluation of exotic vertebrate pests. Fourteenth Vertebrate Pest Conference, Sacramento, California. March 1990.

Analytical methods for predicting success of mammal introductions to North America. The Western Section of the Wildlife Society, Hilo, Hawaii. February 1988.

A state-wide mountain lion track survey. Sacramento County Dept Parks and Recreation. April 1986.

The mountain lion in California. Davis Chapter of the Audubon Society. October 1985.

Ecology Graduate Student Seminars, U.C. Davis, 1985-1990: Social behavior of the mountain lion; Mountain lion control; Political status of the mountain lion in California.

Other forms of Participation at Professional Meetings

- Scientific Committee, Conference on Wind energy and Wildlife impacts, Berlin, Germany, March 2015.

- Scientific Committee, Conference on Wind energy and Wildlife impacts, Stockholm, Sweden, February 2013.

- Workshop co-presenter at Birds & Wind Energy Specialist Group (BAWESG) Information sharing week, Bird specialist studies for proposed wind energy facilities in South Africa, Endangered Wildlife Trust, Darling, South Africa, 3-7 October 2011.

- Scientific Committee, Conference on Wind energy and Wildlife impacts, Trondheim, Norway, 2-5 May 2011.

- Chair of Animal Damage Management Session, The Wildlife Society, Annual Meeting, Reno, Nevada, September 26, 2001.

- Chair of Technical Session: Human communities and ecosystem health: Comparing perspectives and making connection. Managing for Ecosystem Health, International Congress on Ecosystem Health, Sacramento, CA August 15-20, 1999.

- Student Awards Committee, Annual Meeting of the Western Section of The Wildlife Society, Riverside, CA, January, 2000.

- Student Mentor, Annual Meeting of the Western Section of The Wildlife Society, Riverside, CA, January, 2000.

- MS Thesis Committee, Marcus Yee, California State University, Sacramento

Other Professional Activities or Products

Testified in Federal Court in Denver during 2005 over the fate of radio-nuclides in the soil at Rocky Flats Plant after exposure to burrowing animals. My clients won a judgment of $553,000,000. I have also testified in many other cases of litigation under CEQA, NEPA, the Warren-Alquist Act, and other environmental laws. My clients won most of the cases for which I testified.

Testified before Environmental Review Tribunals in Ontario, Canada regarding proposed White Pines, Amherst Island, and Fairview Wind Energy projects.

Testified in Skamania County Hearing in 2009 on the potential impacts of zoning the County for development of wind farms and hazardous waste facilities.

Testified in deposition in 2007 in the case of O'Dell et al. vs. FPL Energy in Houston, Texas.

Testified in Klickitat County Hearing in 2006 on the potential impacts of the Windy Point Wind Farm.

Subject: Comments on SDG Commerce 217 Distribution Center Project (SCH No. 2020120302)

Dear Mr. Lozeau,

We have reviewed the December 2020 Draft Initial Study/Mitigated Negative Declaration ("IS/MND") for the SDG Commerce 217 Distribution Center Project ("Project") located in the City of American Canyon ("City"). The Project proposes to construct a 217,294-SF wine distribution center, including 4,350-SF of office space, as well as 134 vehicle and 21 truck dock parking spaces, on the 10.39-acre site.

Our review concludes that the IS/MND fails to adequately evaluate the Project's air quality, health risk, and greenhouse gas impacts. As a result, emissions and health risk impacts associated with construction and operation of the proposed Project are underestimated and inadequately addressed. An EIR should be prepared to adequately assess and mitigate the potential air quality, health risk, and greenhouse gas impacts that the project may have on the surrounding environment.

Air Quality

Incorrect Analysis of Construction Emissions

The Bay Area Air Quality Management District ("BAAQMD") provides significance thresholds to evaluate air pollutant emissions in the form of pounds per day ("lbs/day") and tons per year ("tons/year"). CalEEMod provides three types of output files – winter, summer, and annual. Specifically, the CalEEMod User's Guide states:

"CalEEMod provides a simple platform to calculate both construction emissions and operational emissions from a land use project. It can calculate both the *daily* maximum and *annual* average for criteria pollutants as well as annual greenhouse gas (GHG) emissions" (emphasis added).[1]

While the annual output files provide *annual* emissions in tons/year, both the winter and summer output files provide *daily* emissions estimates in lbs/day. As such, the IS/MND should have relied upon the emissions estimates provided by the Project's summer and winter output files in order to determine the significance of the Project's air quality impact. However, review of the IS/MND and CalEEMod output files, provided in Appendix B-3 to the IS/MND, demonstrates that the emissions estimates purported by the IS/MND are inconsistent with the emissions estimates provided by the summer and winter CalEEMod output files.

Specifically, the IS/MND estimates that the Project would result in construction-related ROG, NO_X, exhaust PM_{10}, exhaust $PM_{2.5}$, and CO emissions of 13.6-, 24.6-, 1.0-, 0.9-, and 19.5-lbs/day, respectively (see excerpt below) (p. 22, Table AQ-1).

Table AQ-1. Estimated Daily Construction Emissions (pounds/day)

Construction Year	ROG	NO_x	PM10 (exhaust only)	PM2.5 (exhaust only)	CO
Proposed Project Unmitigated Emissions					
2021	**13.6**	**24.6**	**1.0**	**0.9**	**19.5**
BAAQMD Significance Threshold	*54*	*54*	*82*	*54*	--
Threshold Exceeded?	**No**	**No**	**No**	**No**	--

Source: CalEEMod Version 2016.3.2

However, review of the "SDG Commerce 217 Wine Storage Project" winter output file demonstrates that the model estimates daily construction-related ROG, NO_X, exhaust PM_{10}, exhaust $PM_{2.5}$, and CO emissions of 155.64-, 40.55-, 2.05-, 1.88-, and 22.64-lbs/day, respectively (see excerpt below) (Appendix B-3, pp. 72).

[1] CAPCOA (November 2017) CalEEMod User's Guide, http://www.aqmd.gov/docs/default-source/caleemod/01_user-39-s-guide2016-3-2_15november2017.pdf?sfvrsn=4, p. 1.

	ROG	NOx	CO	SO2	Fugitive PM10	Exhaust PM10	PM10 Total	Fugitive PM2.5	Exhaust PM2.5	PM2.5 Total
Year	lb/day									
2021	155.6355	40.5472	22.6449	0.0540	9.0890	2.0454	11.1344	4.5956	1.8818	6.4774
Maximum	**155.6355**	**40.5472**	**22.6449**	**0.0540**	**9.0890**	**2.0454**	**11.1344**	**4.5956**	**1.8818**	**6.4774**

Similarly, review of the "SDG Commerce 217 Wine Storage Project" summer output file demonstrates that the model estimates daily construction-related ROG, NO_X, exhaust PM_{10}, exhaust $PM_{2.5}$, and CO emissions of 155.63-, 40.54-, 2.05-, 1.88-, and 22.55-lbs/day, respectively (see excerpt below) (Appendix B-3, pp. 46).

	ROG	NOx	CO	SO2	Fugitive PM10	Exhaust PM10	PM10 Total	Fugitive PM2.5	Exhaust PM2.5	PM2.5 Total
Year	lb/day									
2021	155.6296	40.5366	22.5509	0.0553	9.0890	2.0454	11.1344	4.5956	1.8818	6.4774
Maximum	**155.6296**	**40.5366**	**22.5509**	**0.0553**	**9.0890**	**2.0454**	**11.1344**	**4.5956**	**1.8818**	**6.4774**

As you can see in the excerpts above, the emissions estimates purported by the IS/MND are underestimated and inconsistent with the emissions estimates provided by the summer and winter CalEEMod output files. This is incorrect, as CEQA requires disclosure of the full extent of a project's impacts prior to mitigation in order to accurately disclose the severity of an impact. By relying on incorrect and underestimated emissions estimates, the IS/MND's air quality analysis is incorrect, and the subsequent less-than-significant air quality impact conclusion should not be relied upon.

Failure to Identify Significant Air Quality Impact

The IS/MND concludes that the Project would not result in a significant impact due to mitigated construction-related ROG emissions (see excerpt below) (p. 22, Table AQ-1).

Table AQ-1. Estimated Daily Construction Emissions (pounds/day)

Construction Year	ROG	NO_x	PM10 (exhaust only)	PM2.5 (exhaust only)	CO
Proposed Project Unmitigated Emissions					
2021	**13.6**	**24.6**	**1.0**	**0.9**	**19.5**
BAAQMD Significance Threshold	*54*	*54*	*82*	*54*	--
Threshold Exceeded?	**No**	**No**	**No**	**No**	--

Source: CalEEMod Version 2016.3.2

However, as previously discussed, the emissions estimates purported by the IS/MND are underestimated and inconsistent with the emissions estimates provided by the summer and winter CalEEMod output files. As a result, in order to correctly evaluate the Project's estimated daily emissions based on the BAAQMD threshold in lbs/day, we reviewed the IS/MND's winter CalEEMod output file, which estimates *daily* ROG emissions of approximately 156 lbs/day (see excerpt below) (Appendix B-3, pp. 72).

	ROG	NOx	CO	SO2	Fugitive PM10	Exhaust PM10	PM10 Total	Fugitive PM2.5	Exhaust PM2.5	PM2.5 Total
Year	lb/day									
2021	155.6296	40.5366	22.5509	0.0553	9.0890	2.0454	11.1344	4.5956	1.8818	6.4774
Maximum	**155.6296**	**40.5366**	**22.5509**	**0.0553**	**9.0890**	**2.0454**	**11.1344**	**4.5956**	**1.8818**	**6.4774**

As the above excerpt demonstrates, the *daily* construction-related ROG emissions estimate provided by the "SDG Commerce 217 Wine Storage Project" winter output file clearly exceeds the BAAQMD threshold of 54 lbs/day, contrary to what is stated in the IS/MND. Thus, the IS/MND's conclusion that the Project's construction-related ROG emissions would result in a less-than-significant air quality impact is incorrect. An EIR should be prepared to adequately evaluate and mitigate the Project's significant construction-related ROG emissions.

Unsubstantiated Input Parameters Used to Estimate Project Emissions

The IS/MND's air quality analysis relies on emissions calculated with CalEEMod.2016.3.2 (p. 22).[2] CalEEMod provides recommended default values based on site-specific information, such as land use type, meteorological data, total lot acreage, project type and typical equipment associated with project

[2] CAPCOA (November 2017) CalEEMod User's Guide, http://www.aqmd.gov/docs/default-source/caleemod/01_user-39-s-guide2016-3-2_15november2017.pdf?sfvrsn=4.

type. If more specific project information is known, the user can change the default values and input project-specific values, but the California Environmental Quality Act ("CEQA") requires that such changes be justified by substantial evidence.[3] Once all of the values are inputted into the model, the Project's construction and operational emissions are calculated, and "output files" are generated. These output files disclose to the reader what parameters were utilized in calculating the Project's air pollutant emissions and make known which default values were changed as well as provide justification for the values selected.[4]

When reviewing the Project's CalEEMod output files, provided in the CalEEMod Output Files for the Air Quality and GHG Emissions Data and Supporting Information as Appendix B-3 to the IS/MND, we found that several model inputs were not consistent with information disclosed in the IS/MND. As a result, the Project's construction and operational emissions are underestimated. An EIR should be prepared to include an updated air quality analysis that adequately evaluates the impacts that construction and operation of the Project will have on local and regional air quality.

Unsubstantiated Reductions to Saturday and Sunday Trip Rates

Review of the CalEEMod output files demonstrates that the "SDG Commerce 217 Wine Storage Project" model includes unsubstantiated reductions to the default Saturday and Sunday operational vehicle trip rates (see excerpt below) (Appendix B-3, pp. 15, 45, 71).

Table Name	Column Name	Default Value	New Value
tblVehicleTrips	ST_TR	1.68	0.00
tblVehicleTrips	SU_TR	1.68	0.00

As you can see in the excerpt above, the model assumes the Project's Saturday and Sunday operational vehicle trip rate would be zero. As previously mentioned, the CalEEMod User's Guide requires any changes to model defaults be justified.[5] According to the "User Entered Comments & Non-Default Data" table, the justification provided for these changes is: "Monday Thru Friday Operations" (Appendix B-3, pp. 14, 44, 70). However, the IS/MND fails to mention or substantiate the claim that the Project will only be operational Monday through Friday. Furthermore, the Air Quality Calculations ("AQ Calculations"), provided as Appendix B-2 to the IS/MND, state:

> "It is anticipated that the proposed project would have approximately 32 full-time employees and up to 18 part-time employees and operate 12 to 18 hours *a day* during the peak season" (emphasis added) (Appendix B-2, pp. 10).

As the excerpt above demonstrates, the AQ Calculations fail to specify that Project operations will only occur on weekdays. As such, we cannot verify the revised Saturday and Sunday trip rates. These unsubstantiated reductions present an issue, as CalEEMod uses vehicle trip rates to calculate the

[3] CalEEMod User Guide, *available at:* http://www.caleemod.com/, p. 1, 9.
[4] CalEEMod User Guide, *available at:* http://www.caleemod.com/, p. 11, 12 – 13. A key feature of the CalEEMod program is the "remarks" feature, where the user explains why a default setting was replaced by a "user defined" value. These remarks are included in the report.
[5] CalEEMod User Guide, *available at:* http://www.caleemod.com/, p. 2, 9

Project's emissions associated with operational motor vehicle emissions.[6] By including unsubstantiated reductions to the Project's Saturday and Sunday operational vehicle trip rates, the model may underestimate the Project's mobile-source operational emissions and should not be relied upon to determine Project significance.

Unsubstantiated Reductions to Energy Use Values

Review of the CalEEMod output files demonstrates that the "SDG Commerce 217 Wine Storage Project" model includes unsubstantiated reductions to the default energy use values (see excerpt below) (Appendix B-3, pp. 15, 45, 71).

Table Name	Column Name	Default Value	New Value
tblEnergyUse	LightingElect	1.62	0.00
tblEnergyUse	NT24E	7.99	0.00
tblEnergyUse	NT24NG	3.06	0.00
tblEnergyUse	T24E	0.14	3.00
tblEnergyUse	T24NG	0.73	0.00

As you can see in the excerpt above, the lighting energy electricity ("LightingElect"), the non-Title 24 electricity energy intensity ("NT24E"), the non-Title 24 natural gas energy intensity ("NT24NG"), and the Title 24 natural gas energy intensity ("T24NG") values were each reduced to 0 kilowatt hours per land use size per year ("KWhr/size/year"). Furthermore, the Title 24 electricity energy intensity ("T24E") was increased to 3 KWhr/size/year. As previously mentioned, the CalEEMod User's Guide requires any changes to model defaults be justified.[7] According to the User Entered Comments and Non-Default Data table, the justification provided for these changes is: "Energy use scaled down from SDG Commerce 330 Project" (Appendix B-3, pp. 14, 44, 70). Furthermore, the AQ Calculations state:

> "CalEEMod default electrical usage was adjusted to be consistent with the SGE 258 Warehouse Project but scaled down to 217,294 square feet. The SGE 258 Warehouse Project energy use of was estimated using actual electrical usage from two nearby and almost identical buildings. Both buildings are insulated and refrigerated to the same degree as the proposed project.
>
> CalEEMod default natural gas usage was adjusted to zero, although available in the street the proposed project would not bring it on site as there is no need. The proposed project would, instead, use electric water heaters and heat pump for the offices" (pp. 11).

However, these justifications are insufficient. The AQ Calculations cannot claim that "[t]he SGE 258 Warehouse Project energy use of was estimated using actual electrical usage from two nearby and almost identical buildings" without providing sufficient calculations or an adequate source. Similarly, the AQ Calculations cannot simply state that natural gas usage was adjusted to zero without providing an adequate source or additional information. According to the CalEEMod User's Guide:

[6] CalEEMod User Guide, *available at:* http://www.caleemod.com/, p. 28.
[7] CalEEMod User Guide, *available at:* http://www.caleemod.com/, p. 2, 9

> "CalEEMod was also designed to allow the user to change the defaults to reflect site- or project-specific information, when available, *provided that the information is supported by substantial evidence as required by CEQA*" (emphasis added).[8]

Here, however, the IS/MND fails to provide *substantial evidence* for the revised energy use values, and as a result, the changes are unsubstantiated.

These unsubstantiated reductions present an issue, as CalEEMod uses the energy use values to calculate the Project's emissions associated with building electricity and non-hearth natural gas usage.[9] By including unsubstantiated changes to the Project's energy use values, the model may underestimate the Project's energy-source operational emissions and should not be relied upon to determine Project significance.

Unsubstantiated Reduction to Solid Waste Generation Rate

Review of the CalEEMod output files demonstrates that the "SDG Commerce 217 Wine Storage Project" model includes a manual reduction to the Project's default solid generation rate (see excerpt below) (Appendix B-3, pp. 15, 45, 71).

Table Name	Column Name	Default Value	New Value
tblSolidWaste	SolidWasteGenerationRate	204.25	2.00

As you can see in the excerpt above, the solid waste generation rate is decreased by approximately 99%, from the default value of 204.25- to 2.00-tons per year ("tons/year"). As previously mentioned, the CalEEMod User's Guide requires any changes to model defaults be justified.[10] According to the "User Entered Comments & Non-Default Data" table, the justification provided for this change is: "minimal solid waste generated" (Appendix B-3, pp. 14, 44, 70). Furthermore, the IS/MND states:

> "The warehouses project would produce small quantities solid waste, approximately equivalent to that produced by one or two houses. If significant amounts of recyclables, such as cardboard boxes, are generated, the tenant/operators would bale this waste and have it picked up separately from other solid wastes and removed by Recology American Canyon" (p. 100).

However, these justifications are insufficient for two reasons. First, while the IS/MND indicates that "[t]he warehouses project would produce small quantities solid waste," the IS/MND fails to provide an estimate of how much solid waste the warehouses would produce (p. 100). Second, the IS/MND fails to mention or provide a source for the 99% reduction to the solid waste generation rate. As such, we cannot verify the revised solid waste generation rate.

This unsubstantiated reduction presents an issue, as CalEEMod uses the solid waste generation rates to calculate the Project's operation greenhouse gas ("GHG") emissions associated with the disposal of solid

[8] CalEEMod Model 2013.2.2 User's Guide, *available at:* http://www.aqmd.gov/docs/default-source/caleemod/usersguideSept2016.pdf?sfvrsn=6, p. 12.
[9] CalEEMod User Guide, *available at:* http://www.caleemod.com/, p. 43
[10] CalEEMod User Guide, *available at:* http://www.caleemod.com/, p. 2, 9

waste into landfills.[11] Thus, by including an unsubstantiated reduction to the Project's solid waste generation rate, the model may underestimate the Project's operational emissions and should not be relied upon to determine Project significance.

Unsubstantiated Reduction to Indoor Water Use Rate

Review of the CalEEMod output files demonstrates the "SDG Commerce 217 Wine Storage Project" model includes manual changes to the default indoor and outdoor water use rates (see excerpt below) (Appendix B-3, pp. 15, 45, 71).

Table Name	Column Name	Default Value	New Value
tblWater	IndoorWaterUseRate	50,248,312.50	768.00
tblWater	OutdoorWaterUseRate	0.00	9,341.00

As you can see in the excerpt above, the indoor water use rate was decreased by nearly 100%, from the default value of 50,248,312.50- to 768-gallons per year ("gpy"), while the outdoor water use rate was increased by 9,341 gpy. As previously mentioned, the CalEEMod User's Guide requires any changes to model defaults be justified.[12] According to the "User Entered Comments & Non-Default Data" table, the justification provided for these changes is: "Water use scaled down from SDG Commerce 330 project" (Appendix B-3, pp. 14, 44, 70). Furthermore, the IS/MND states:

> "[T]he proposed project is estimated to have an average potable *water daily demand of 142 gallons/day (gpd)*, and a peak daily demand of 560 gpd. This is less than three percent of the UWMP's projected use at the site, and represents approximately equivalent water demand to a one single-family house in American Canyon (274 gpd for single family dwelling and 242 gpd for the proposed warehouse use. *In addition, it will use about 541 gpd of recycled water*" (emphasis added) (p. 100).

As the above excerpt demonstrates, the Project is estimated to require an average of 142 gallons per day ("gpd") of potable water and 541 gpd of recycled water, resulting in a total daily water demand of 683 gallons per day ("gpd"),[13] or 249,295 gpy.[14] Thus, the model underestimates the Project's total daily water demand by approximately 239,186 gpy.[15] As a result, the indoor and outdoor water use rates inputted into the model are underestimated and inconsistent with the information provided by the IS/MND.

This underestimation presents an issue, as CalEEMod uses the water use rates to calculate the Project's GHG emissions associated with the supply and treatment of water.[16] Thus, by including underestimated

[11] CalEEMod User Guide, *available at:* http://www.caleemod.com/, p. 46.
[12] CalEEMod User Guide, *available at:* http://www.caleemod.com/, p. 2, 9
[13] Calculated by: (142 gallons per day) + (541 recycled gallons per day) = 683 total gpd.
[14] Calculated by: (683 gallons per day) * (365 days) = 249,295 gallons per year.
[15] (249,295 gallons per year) – (768 indoor gallons per year) – (9,341 outdoor gallons per year) = 239,186 gallons per year.
[16] "CalEEMod User's Guide." CAPCOA, November 2017, *available at:* http://www.aqmd.gov/docs/default-source/caleemod/01_user-39-s-guide2016-3-2_15november2017.pdf?sfvrsn=4, p. 44-45.

indoor and outdoor water use rates, the model underestimates the Project's operational emissions and should not be relied upon to determine Project significance.

Incorrect Application of Construction-Related Mitigation Measures

Review of the CalEEMod output files demonstrates that the "SDG Commerce 217 Wine Storage Project" model includes the following construction-related mitigation measures: "Water Exposed Area" and "Reduce Vehicle Speed on Unpaved Roads" (see excerpt below) (Appendix B-3, pp. 21, 51, 77).

3.1 Mitigation Measures Construction

Water Exposed Area

Reduce Vehicle Speed on Unpaved Roads

Furthermore, the model includes a 15 miles per hour ("MPH") vehicle speed (see excerpt below) (Appendix B-3, pp. 15, 45, 71).

Table Name	Column Name	Default Value	New Value
tblConstDustMitigation	WaterUnpavedRoadVehicleSpeed	0	15

As previously mentioned, the CalEEMod User's Guide requires any changes to model defaults be justified.[17] According to the "User Entered Comments & Non-Default Data" table, the justification provided for this change is: "BAAQMD basic fugitive dust measures" (Appendix B-3, pp. 14, 44, 70). Furthermore, the IS/MND states:

> "The BAAQMD's *CEQA Air Quality Guidelines* consider these impacts to be less than significant if best management practices are employed to reduce these emissions. The BAAQMD requires the following best management practices (BMPs) to reduce emissions of dust and particulates:
>
> - All exposed surfaces (e.g., parking areas, staging areas, soil piles, graded areas, and unpaved access roads) shall be watered two times per day.
> - All haul trucks transporting soil, sand, or other loose material off site shall be covered.
> - All visible mud or dirt track-out onto adjacent public roads shall be removed using wet power vacuum street sweepers at least once per day. The use of dry power sweeping is prohibited.
> - All vehicle speeds on unpaved roads shall be limited to 15 miles per hour.
> - All roadways, driveways, and sidewalks to be paved shall be completed as soon as possible. Building pads shall be laid as soon as possible after grading unless seeding or soil binders are used.
> - A publicly visible sign shall be posted with the telephone number and person to contact at the Site Superintendent regarding dust complaints. This person shall respond and take corrective action with 48 hours. The Air District's phone number and Lead Agency

[17] CalEEMod User Guide, *available at:* http://www.caleemod.com/, p. 2, 9

contact information shall also be visible to ensure compliance with applicable regulations…

The implementation of these BMPs would reduce fugitive dust and combustion exhaust emissions per BAAQMD's *CEQA Air Quality Guidelines*.

Project construction emissions are less than the significance thresholds (See Table AQ-1) and the proposed project would also include BMPs required per BAAQMD's *CEQA Air Quality Guidelines*. Therefore, project impacts from construction emissions would be ***less than significant***" (p. 23).

However, these justifications are insufficient for three reasons.

First, simply because the IS/MND states the Project would implement the BAAQMD's best management practices ("BMPs") does not justify the inclusion of the above-mentioned construction-related mitigation measures in the model. According to the Association of Environmental Professionals ("AEP") *CEQA Portal Topic Paper* on mitigation measures:

> "By definition, *mitigation measures are not part of the original project design*. Rather, mitigation measures are actions taken by the lead agency to reduce impacts to the environment resulting from the original project design. Mitigation measures are identified by the lead agency after the project has undergone environmental review and are *above-and-beyond existing laws, regulations, and requirements* that would reduce environmental impacts" (emphasis added).[18]

As you can see in the excerpt above, mitigation measures "are not part of the original project design" and are intended to go "above-and-beyond" existing regulatory requirements. As such, the inclusion of these measures, based on the Project's compliance with the BAAQMD's BMPs, is unsubstantiated.

Second, regarding these BMPs, BAAQMD guidance states:

> "For fugitive dust emissions, staff *recommends* following the current best management practices approach which has been a pragmatic and effective approach to the control of fugitive dust emissions" (emphasis added).[19]

As you can see in the excerpt above, while these BMPs are recommended, they are not explicitly required by the BAAQMD. As a result, we cannot guarantee that they would be implemented, monitored, and enforced on the Project site.

Third, AEP guidance states:

> "While not 'mitigation', a good practice is *to include those project design feature(s) that address environmental impacts in the mitigation monitoring and reporting program (MMRP)*. Often the

[18] "CEQA Portal Topic Paper Mitigation Measures." AEP, February 2020, *available at:* https://ceqaportal.org/tp/CEQA%20Mitigation%202020.pdf, p. 5.
[19] "California Environmental Quality Act Air Quality Guidelines." BAAQMD, May 2017, *available at*: https://www.baaqmd.gov/~/media/files/planning-and-research/ceqa/ceqa_guidelines_may2017-pdf.pdf?la=en, p. D-47.

> MMRP is all that accompanies building and construction plans through the permit process. If the design features are not listed as important to addressing an environmental impact, *it is easy for someone not involved in the original environmental process to approve a change to the project that could eliminate one or more of the design features without understanding the resulting environmental impact*" (emphasis added).[20]

As you can see in the excerpts above, *project design features are not mitigation measures and may be eliminated from the Project's design*. Thus, as the above-mentioned construction-related mitigation measures are not *formally* included as mitigation measures, we cannot guarantee that they would be implemented, monitored, and enforced on the Project site. As a result, the inclusion of the above-mentioned construction-related mitigation measures is incorrect, and the model should not be relied upon to determine Project significance.

Updated Analysis Indicates a Potentially Significant Air Quality Impact

In an effort to determine the construction-related and operational emissions associated with the Project, we prepared an updated CalEEMod model, using the Project-specific information provided by the IS/MND. In our updated model, we omitted the unsubstantiated changes to the Saturday and Sunday operational vehicle trip rates, energy use values, and solid waste generation rates; corrected the indoor and outdoor water use rates; and excluded the unsubstantiated construction-related mitigation measures. Our updated analysis demonstrates that the NO_x emissions associated with Project construction exceed the 54-lbs/day threshold set by the BAAQMD, as referenced by Appendix B to the IS/MND (see table below) (Appendix B-1, pp. 7).

Construction Model	**NO_X**
SWAPE	61.54
IS/MND	40.55
% Increase	52%
BAAQMD Regional Threshold (lbs/day)	**54**
Threshold Exceeded?	***Yes***

As you can see in the excerpt above, when modeled correctly, the Project's construction-related NO_x emissions increase by approximately 52% and exceed the BAAQMD significance threshold. Thus, our model demonstrates that the Project would result in a potentially significant air quality impact that was not previously identified or addressed in the IS/MND. As a result, an EIR should be prepared to adequately assess and mitigate the potential air quality impacts that the Project may have on the surrounding environment.

[20] "CEQA Portal Topic Paper Mitigation Measures." AEP, February 2020, *available at:* https://ceqaportal.org/tp/CEQA%20Mitigation%202020.pdf, p. 6.

Diesel Particulate Matter Health Risk Emissions Inadequately Evaluated

The IS/MND concludes that the proposed Project would result in a less-than-significant health risk impact, without conducting a quantified construction or operational health risk assessment ("HRA") (p. 26). Specifically, the IS/MND states:

> "Project construction activities would be limited to the project site (1,500 feet away) when school is in-session during Fall 2021 and would therefore not warrant a health risk evaluation and would be considered less-than-significant by the BAAQMD" (p. 26).

Furthermore, the IS/MND states:

> "A Health Risk Assessment was prepared for the SDG 330 project in February 2019. The SDG 330 project is south of the proposed project and is much closer to existing residences and the future school. The SDG 330 project is also a larger project generating more vehicle trips than the proposed project. The Health Risk Assessment concluded that all construction and operational impacts from the SDG 330 project resulted in less-than-significant health impacts on residential and school receptors without mitigation" (p. 26).

Finally, the IS/MND concludes:

> "The dominate wind direction in the project area is from the south/southwest. Wind direction plays a major role in the transport and dispersion of air pollutants. TAC emissions from the project would generally be dispersed in the dominant wind direction away from sensitive receptors and towards industrial land uses north/northwest of the project site. Therefore, health impacts associated with the proposed project would be ***less than significant***" (p. 26).

However, the IS/MND's evaluation of the Project's potential health risk impacts, as well as the subsequent less-than-significant impact conclusion, is incorrect for four reasons.

First, the IS/MND's claim that health risk impacts would be less than significant, because construction activities would be located approximately 1,500 feet from the nearest school, is incorrect. According to BAAQMD guidelines, "BAAQMD recommends that all receptors located within a 1,000 foot radius of the project's fence line be assessed for potentially significant impacts from the incremental increase in risks or hazards from the proposed new source."[21] Here, the IS/MND states that there is "one residence about 1,000 feet east of the site" (p. 26). Moreover, further review of IS/MND demonstrates that the Project's borrow pit and stockpile hauling area is only 500 feet from the nearest residence (see excerpt below) (p. 77, Table Noise-4).

[21] "Assessing and Mitigating Local Community Risk and Hazard Impacts." BAAQMD, May 2011, *available at:* https://www.baaqmd.gov/~/media/Files/Planning%20and%20Research/CEQA/BAAQMD%20CEQA%20Guidelines_May%202011_5_3_11.ashx, p. 5-7.

Table Noise-4: Estimated Maximum Construction Noise Level at Nearest Residence

Construction Activity	Approximate Distance to Residence (feet)	Noise Level (dB, Lmax) at Residence
Site Preparation, grading, and paving	1,000	53
Material stockpile hauling and borrow area grading	500	60
Warehouse construction	1,100	52

As you can see in the excerpt above, the nearest sensitive receptor is only 500 feet from the Project. As such, pursuant to BAAQMD guidelines, the IS/MND should have prepared a quantified HRA evaluating the potential health risk impacts posed to nearby sensitive receptors.

Second, the IS/MND makes the qualitative claims that an HRA prepared for the SDG 330 project, which is "a larger project generating more vehicle trips than the proposed project," found a less-than-significant health risk impact, and "TAC emissions from the project would generally be dispersed in the dominant wind direction away from sensitive receptors and towards industrial land uses north/northwest of the project site" (p. 26). However, these qualitative claims are insufficient in justifying the omission of a construction and operational HRA. Simply because an HRA was prepared for a completely different project that found less-than-significant health risk impacts, does not guarantee that the health risk impacts posed by the proposed Project would be less than significant. Rather, construction of the Project will produce emissions of diesel particulate matter ("DPM"), a human carcinogen, through the exhaust stacks of construction equipment over a construction period of approximately 9.5 months (IS/MND, p. 12). Furthermore, the IS/MND indicates that Project operation would generate 367 daily weekday vehicle trips, which will generate additional exhaust emissions and continue to expose nearby sensitive receptors to DPM emissions (p. 45). As such, without making a reasonable effort to connect the Project's construction-related and operational TAC emissions and the potential health risks posed to nearby receptors, the IS/MND should not conclude that the Project's TAC emissions would be less than significant.

Third, by failing to prepare a construction HRA, the Project is inconsistent with the most recent guidance published by the Office of Environmental Health Hazard Assessment ("OEHHA"), the organization responsible for providing guidance on conducting HRAs in California. OEHHA released its most recent *Risk Assessment Guidelines: Guidance Manual for Preparation of Health Risk Assessments* in February 2015.[22] This guidance document describes the types of projects that warrant the preparation of an HRA. The OEHHA document recommends that all short-term projects lasting at least two months be evaluated for cancer risks to nearby sensitive receptors.[23] As the Project's proposed 9.5-month construction duration vastly exceeds the 2-month requirement set forth by OEHHA, it is clear that the

[22] "Risk Assessment Guidelines Guidance Manual for Preparation of Health Risk Assessments." OEHHA, February 2015, *available at:* http://oehha.ca.gov/air/hot_spots/hotspots2015.html.
[23] "Risk Assessment Guidelines Guidance Manual for Preparation of Health Risk Assessments." OEHHA, February 2015, *available at:* http://oehha.ca.gov/air/hot_spots/2015/2015GuidanceManual.pdf, p. 8-18.

Project meets the threshold requiring a quantified HRA under OEHHA guidance. Thus, we recommend that health risk impacts from Project construction be evaluated in an EIR, per OEHHA guidelines, in order to determine the nature and extent of the Project's health risk impacts.

Fourth, by failing to prepare an operational HRA, the Project is inconsistent with the most recent guidance published by OEHHA. Specifically, the OEHHA document recommends that exposure from projects lasting more than 6 months be evaluated for the duration of the project and recommends that an exposure duration of 30 years be used to estimate individual cancer risk for the maximally exposed individual resident ("MEIR").[24] Even though we were not provided with the expected lifetime of the Project, we can reasonably assume that the Project will operate for at least 30 years, if not more. Therefore, we recommend that health risk impacts from Project operation also be evaluated, as a 30-year exposure duration vastly exceeds the 6-month requirement set forth by OEHHA. These recommendations reflect the most recent state health risk policies, and as such, we recommend that an updated assessment of health risk impacts posed to nearby sensitive receptors from Project operation be included in an EIR for the Project.

Fifth, by claiming that the Project would result in a less-than-significant health risk impact without conducting a quantified construction or operational HRA, the IS/MND fails to compare the Project's estimated excess cancer risk to the BAAQMD's specific numeric threshold of 10 in one million, as referenced by the IS/MND (p. 26).[25] Thus, the IS/MND cannot conclude that Project construction and operation would result in a less-than-significant health risk impact without quantifying the resulting cancer risk to compare to the proper threshold. As a result, the IS/MND's less-than-significant health risk impact conclusion should not be relied upon.

Screening-Level Analysis Demonstrates Significant Impacts

In an effort to demonstrate the potential health risk impacts posed by Project construction and operation to nearby, existing sensitive receptors utilizing site-specific emissions estimates, we prepared a screening-level HRA. The results of our assessment, as described below, demonstrate that the proposed Project may result in a significant impact not previously identified or addressed by the IS/MND.

In order to conduct our screening-level risk assessment we relied upon AERSCREEN, which is a screening level air quality dispersion model.[26] The model replaced SCREEN3, and AERSCREEN is included in the

[24] "Risk Assessment Guidelines Guidance Manual for Preparation of Health Risk Assessments." OEHHA, February 2015, *available at:* http://oehha.ca.gov/air/hot_spots/2015/2015GuidanceManual.pdf, p. 8-6, 8-15

[25] "California Environmental Quality Act Air Quality Guidelines." BAAQMD, May 2017, *available at*: https://www.baaqmd.gov/~/media/files/planning-and-research/ceqa/ceqa_guidelines_may2017-pdf.pdf?la=en, p. 2-5.

[26] U.S. EPA (April 2011) AERSCREEN Released as the EPA Recommended Screening Model, http://www.epa.gov/ttn/scram/guidance/clarification/20110411_AERSCREEN_Release_Memo.pdf

OEHHA[27] and the California Air Pollution Control Officers Associated ("CAPCOA")[28] guidance as the appropriate air dispersion model for Level 2 health risk screening assessments ("HRSAs"). A Level 2 HRSA utilizes a limited amount of site-specific information to generate maximum reasonable downwind concentrations of air contaminants to which nearby sensitive receptors may be exposed. If an unacceptable air quality hazard is determined to be possible using AERSCREEN, a more refined modeling approach is required prior to approval of the Project.

We prepared a preliminary HRA of the Project's construction and operational health-related impact to residential sensitive receptors using the annual PM_{10} exhaust estimates from the IS/MND's incorrect and unsubstantiated air model. Consistent with recommendations set forth by OEHHA, we assumed residential exposure begins during the third trimester stage of life. The CalEEMod output files indicate that construction activities will generate 204 pounds of DPM over the 291-day construction period. The AERSCREEN model relies on a continuous average emission rate to simulate maximum downward concentrations from point, area, and volume emission sources. To account for the variability in equipment usage and truck trips over Project construction, we calculated an average DPM emission rate by the following equation:

$$Emission\ Rate\ \left(\frac{grams}{second}\right) = \frac{204\ lbs}{291\ days} \times \frac{453.6\ grams}{lbs} \times \frac{1\ day}{24\ hours} \times \frac{1\ hour}{3{,}600\ seconds} = \mathbf{0.00368\ g/s}$$

Using this equation, we estimated a construction emission rate of 0.000368 grams per second ("g/s"). Subtracting the 291-day construction period from the total residential duration of 30 years, we assumed that after Project construction, the sensitive receptor would be exposed to the Project's operational DPM for an additional 29.2 years, approximately. The CalEEMod output files indicate that operational activities will generate 188 pounds of DPM per year throughout operation. Applying the same equation used to estimate the construction DPM rate, we estimated the following emission rate for Project operation:

$$Emission\ Rate\ \left(\frac{grams}{second}\right) = \frac{188\ lbs}{365\ days} \times \frac{453.6\ grams}{lbs} \times \frac{1\ day}{24\ hours} \times \frac{1\ hour}{3{,}600\ seconds} = \mathbf{0.00270\ g/s}$$

Using this equation, we estimated an operational emission rate of 0.00270 g/s. Construction and operational activity was simulated as a 10.39-acre rectangular area source in AERSCREEN with dimensions of 296 by 142 meters. A release height of three meters was selected to represent the height of exhaust stacks on operational equipment and other heavy-duty vehicles, and an initial vertical dimension of one and a half meters was used to simulate instantaneous plume dispersion upon release. An urban meteorological setting was selected with model-default inputs for wind speed and direction distribution.

[27] OEHHA (February 2015) Risk Assessment Guidelines Guidance Manual for Preparation of Health Risk Assessments, https://oehha.ca.gov/media/downloads/crnr/2015guidancemanual.pdf.
[28] CAPCOA (July 2009) Health Risk Assessments for Proposed Land Use Projects, http://www.capcoa.org/wp-content/uploads/2012/03/CAPCOA_HRA_LU_Guidelines_8-6-09.pdf.

The AERSCREEN model generates maximum reasonable estimates of single-hour DPM concentrations from the Project site. EPA guidance suggests that in screening procedures, the annualized average concentration of an air pollutant be estimated by multiplying the single-hour concentration by 10%.[29] According to the IS/MND, the nearest sensitive receptor is a single-family residence located approximately 500 feet, or approximately 152 meters, from the Project site (p. 77). Thus, the single-hour concentration estimated by AERSCREEN for Project construction is approximately 3.827 µg/m^3 DPM at approximately 150 meters downwind. Multiplying this single-hour concentration by 10%, we get an annualized average concentration of 0.3827 µg/m^3 for Project construction at the MEIR. For Project operation, the single-hour concentration estimated by AERSCREEN is 2.812 µg/m^3 DPM at approximately 150 meters downwind. Multiplying this single-hour concentration by 10%, we get an annualized average concentration of 0.2812 µg/m^3 for Project operation at the MEIR.

We calculated the excess cancer risk to the MEIR using applicable HRA methodologies prescribed by OEHHA. Consistent with the construction schedule utilized in the IS/MND's CalEEMod model, the annualized average concentration for construction was used for the entire third trimester of pregnancy (0.25 years) and the first 0.55 years of the infantile stage of life (0 – 2 years). The annualized averaged concentration for operation was used for the remainder of the 30-year exposure period, which makes up the remaining 1.45 years of the infantile stage of life, the entire child stage of life (2 – 16 years), and the entire adult stage of life (16 – 30 years).

Consistent with OEHHA, as recommended by SCAQMD, BAAQMD, and SJVAPCD guidance, and referenced by the IS/MND, we used Age Sensitivity Factors ("ASFs") to account for the heightened susceptibility of young children to the carcinogenic toxicity of air pollution.[30, 31, 32, 33] According to this guidance, the quantified cancer risk should be multiplied by a factor of ten during the third trimester of pregnancy and during the first two years of life (infant) as well as multiplied by a factor of three during the child stage of life (2 – 16 years). Furthermore, in accordance with the guidance set forth by OEHHA,

---

we used the 95th percentile breathing rates for infants.[34] Finally, according to BAAQMD guidance, we used a Fraction of Time At Home ("FAH") value of 0.85 for the 3rd trimester and infant receptors, 0.72 for child receptors, and 0.73 for the adult receptors.[35] We used a cancer potency factor of 1.1 (mg/kg-day)$^{-1}$ and an averaging time of 25,550 days. The results of our calculations are shown below.

The Closest Exposed Individual at an Existing Residential Receptor

Activity	Duration (years)	Concentration (ug/m3)	Breathing Rate (L/kg-day)	Cancer Risk without ASFs*	ASF	Cancer Risk with ASFs*
Construction	0.25	0.3827	361	4.4E-07	10	4.4E-06
3rd Trimester Duration	***0.25***			***4.4E-07***	***3rd Trimester Exposure***	***4.4E-06***
Construction	0.55	0.3827	1090	2.9E-06	10	2.9E-05

Lifetime Exposure Duration	**30.00**			**4.5E-05**	**Lifetime Exposure**	**1.8E-04**

* We, along with CARB and BAAQMD, recommend using the more updated and health protective 2015 OEHHA guidance, which includes ASFs.

As demonstrated in the table above, the excess cancer risk to adults, children, infants, and during the 3rd trimester of pregnancy at the MEIR located approximately 150 meters away, over the course of Project operation, utilizing age sensitivity factors, are approximately 11, 73, 86, and 4.4 in one million, respectively. The excess cancer risk over the course of a residential lifetime (30 years), utilizing age sensitivity factors, is approximately 180 in one million. The infant, child, adult, and lifetime cancer risks exceed the BAAQMD threshold of 10 in one million, thus resulting in a potentially significant impact not previously addressed or identified by the IS/MND. Utilizing age sensitivity factors is the most conservative, health-protective analysis according to the most recent guidance by OEHHA and reflects recommendations from the air district. Results without age sensitivity factors are presented in the table

[34] "Supplemental Guidelines for Preparing Risk Assessments for the Air Toxics 'Hot Spots' Information and Assessment Act," June 5, 2015, *available at:* http://www.aqmd.gov/docs/default-source/planning/risk-assessment/ab2588-risk-assessment-guidelines.pdf?sfvrsn=6, p. 19.
"Risk Assessment Guidelines Guidance Manual for Preparation of Health Risk Assessments." OEHHA, February 2015, *available at:* https://oehha.ca.gov/media/downloads/crnr/2015guidancemanual.pdf

[35] "Air Toxics NSR Program Health Risk Assessment (HRA) Guidelines." BAAQMD, January 2016, *available at:* http://www.baaqmd.gov/~/media/files/planning-and-research/rules-and-regs/workshops/2016/reg-2-5/hra-guidelines_clean_jan_2016-pdf.pdf?la=en

above, although we **do not** recommend utilizing these values for health risk analysis. Regardless, the excess cancer risk to adults, children, infants, and during the 3rd trimester of pregnancy at the MEIR located approximately 150 meters away, over the course of Project construction and operation, without age sensitivity factors, are approximately 11, 24, 8.6, and 0.44 in one million, respectively. The excess cancer risk over the course of a residential lifetime (30 years), without age sensitivity factors, is approximately 45 in one million. The adult, child, and lifetime cancer risk, without age sensitivity factors, exceeds the BAAQMD threshold of 10 in one million, thus resulting in a potentially significant impact not previously addressed or identified by the IS/MND. While we recommend the use of age sensitivity factors, health risk impacts exceed the BAAQMD threshold regardless.

An agency must include an analysis of health risks that connects the Project's air emissions with the health risk posed by those emissions. Our analysis represents a screening-level HRA, which is known to be conservative and tends to err on the side of health protection. [36] The purpose of the screening-level construction and operational HRA shown above is to demonstrate the link between the proposed Project's emissions and the potential health risk. Our screening-level HRA demonstrates that construction and operation of the Project could result in a potentially significant health risk impact, when correct exposure assumptions and up-to-date, applicable guidance are used. Therefore, since our screening-level HRA indicates a potentially significant impact, the City should prepare an EIR with an HRA which makes a reasonable effort to connect the Project's air quality emissions and the potential health risks posed to nearby receptors. Thus, the City should prepare an updated, quantified air pollution model as well as an updated, quantified refined health risk assessment which adequately and accurately evaluates health risk impacts associated with both Project construction and operation.

Greenhouse Gas

Failure to Adequately Evaluate Greenhouse Gas Impacts

The IS/MND estimates that the Project would generate net annual greenhouse gas ("GHG") emissions of 590 metric tons of CO_2 equivalents per year ("MT CO_2e/year"), which would not exceed the BAAQMD threshold of 1,100 MT CO_2e/year (see excerpt below) (p. 52, Table GHG-1).

[36] "Risk Assessment Guidelines Guidance Manual for Preparation of Health Risk Assessments." OEHHA, February 2015, *available at:* https://oehha.ca.gov/media/downloads/crnr/2015guidancemanual.pdf, p. 1-5

Table GHG-1. Estimated Annual Construction Greenhouse Gas Emissions

Emission Source	GHG CO_2e Metric Tons Per Year
Construction (30-year amortized)	14
Operations	
Area	<1
Energy	87
Mobile	312
Off-Road Equipment (Forklifts)	176
Solid Waste	1
Water/Wastewater	<1
Total Emissions (including Construction)	**590**
BAAQMD Significance Threshold	1,100
Potentially Significant?	**No**

Source: CalEEMod Version 2016.3.2

Furthermore, the IS/MND states:

> "The City of American Canyon has not adopted a Climate Action Plan regarding the mandatory reduction of GHG emissions. The applicable plan, policy or regulation adopted for the purpose of reducing the GHG emissions is SB 32, which extends AB 32 and requires that GHG emissions are reduced 40% below the 1990 levels by 2030 (as written into Executive Order B-30-15), and other State regulations with post-2020 goals such as Executive Order S-3-05. The proposed project would result in a significant impact if it would be in conflict with the goals of these State regulations. The assumption is that SB 32 and associated regulations will be successful in reducing GHG emissions and reducing the cumulative GHG emissions Statewide to meet 2030 goals and post-2030 goals. The State has taken these measures, because no project individually could have a major impact (either positively or negatively) on the global concentration of GHG emissions. The proposed project has been reviewed relative to SB 32 and the State's Climate Change Scoping Plan and it has been determined that the proposed project would not conflict with the goals of SB 32 and other State regulations. Therefore, the proposed project would result in a ***less-than-significant impact***" (p. 52).

As you can see in the excerpt above, the IS/MND relies upon qualitative analyses of the Project's consistency with the SB 32 and CARB's 2017 *Scoping Plan* to determine the significance of the Project's GHG impact (p. 52). However, the IS/MND'S GHG analysis, as well as the subsequent less-than-significant impact conclusion, is incorrect for three reasons.

(1) The IS/MND's quantitative GHG analysis relies upon an incorrect and unsubstantiated air model;
(2) The IS/MND's GHG analysis relies upon an outdated threshold;
(3) The IS/MND fails to identify a potentially significant GHG impact; and
(4) The IS/MND fails to demonstrate that the Project would be consistent with CARB's *Scoping Plan*.

(1) Incorrect and Unsubstantiated Quantitative GHG Analysis

As previously stated, the IS/MND estimates that the Project would generate net annual GHG emissions of 590 MT CO_2e/year (p. 52, Table GHG-1). However, the IS/MND's quantitative GHG analysis should not be relied upon, as it relies upon an unsubstantiated air model. As previously discussed, when we reviewed the Project's CalEEMod output files, provided in the CalEEMod Output Files for the Air Quality and GHG Emissions Data and Supporting Information as Appendix B-3 to the IS/MND, we found that several of the values inputted into the model are not consistent with information disclosed in the IS/MND and associated documents. As a result, the model underestimates the Project's GHG emissions, and the IS/MND's quantitative GHG analysis should not be relied upon to determine Project significance. An EIR should be prepared that adequately assesses the potential GHG impacts that construction and operation of the proposed Project may have on the surrounding environment.

(2) Incorrect Reliance on an Outdated Threshold

As discussed above, the IS/MND relies upon the BAAQMD's bright-line threshold of 1,100 MT CO_2e/year. However, this threshold is outdated and inapplicable to the proposed Project, as it was developed for the air district's planned reductions for 2020, based on AB 32.[37] Thus, this threshold only applies to projects that will become operational by the year 2020. Given that it is January 2021, and the Project has not yet been approved, the Project will not become operational until *after the year 2020*. As such, the BAAQMD's 2020 bright-line threshold of 1,100 MT CO_2e/year is inapplicable to the proposed Project. Rather, we recommend that the Project apply the AEP "2030 Land Use Efficiency Threshold" of 2.6 metric tons of CO_2 equivalents per service population per year ("MT CO_2e/SP/year").[38] In support of this threshold for projects with a horizon year beyond 2020, AEP guidance states:

> "Once the state has a full plan for 2030 (which is expected in 2017), and then *a project with a horizon between 2021 and 2030 should be evaluated based on a threshold using the 2030 target*. A more conservative approach would be to apply a 2030 threshold *based on SB 32* for any project with a horizon between 2021 and 2030 regardless of the status of the Scoping Plan Update" (emphasis added).[39]

As the California Air Resources Board ("CARB") adopted *California's 2017 Climate Change Scoping Plan* in November of 2017, the proposed Project "should be evaluated based on a threshold using the 2030 target," according to the relevant guidance referenced above. As such, we recommend that an EIR be prepared, including an updated air model and comparing the Project's estimated GHG emissions to the "2030 Land Use Efficiency Threshold" of 2.6 MT CO_2e/SP/year.

---

[38] "Beyond Newhall and 2020: A Field Guide to New CEQA Greenhouse Gas Thresholds and Climate Action Plan Targets for California." Association of Environmental Professionals (AEP), October 2016, *available at:* https://califaep.org/docs/AEP-2016_Final_White_Paper.pdf, p. 40.

[39] "Beyond Newhall and 2020: A Field Guide to New CEQA Greenhouse Gas Thresholds and Climate Action Plan Targets for California." Association of Environmental Professionals (AEP), October 2016, *available at:* https://califaep.org/docs/AEP-2016_Final_White_Paper.pdf, p. 40.

(3) Failure to Identify a Potentially Significant GHG Impact

The IS/MND's incorrect and unsubstantiated air model indicates a potentially significant GHG impact, when applying the "2030 Land Use Efficiency Threshold" of 2.6 MT CO_2e/SP/year. As previously stated, the IS/MND estimates that the Project would generate net annual GHG emissions of 590 MT CO_2e/year (p. 52, Table GHG-1). Furthermore, according to CAPCOA's *CEQA & Climate Change* report, service population is defined as "the sum of the number of residents and the number of jobs supported by the project."[40] The IS/MND estimates that the Project would employ approximately 50 people (p. 82). As the Project does not contain any residential land uses, we estimate a service population of 50 people.[41] Dividing the Project's GHG emissions, as estimated by the IS/MND, by a service population of 50 people, we find that the Project would emit approximately 11.80 MT CO_2e/SP/year (see table below).[42]

IS/MND Service Population Efficiency	
Project Phase	**Proposed Project (MT CO_2e/year)**
Total	**590**
Service Population	50
Service Population Efficiency	**11.80**
Threshold	2.6
Exceed?	***Yes***

As demonstrated above, when we compare the Project's service population efficiency value to the AEP "2030 Land Use Efficiency Threshold" of 2.6 MT CO_2e/SP/year, we find that the Project would result in a significant GHG impact not previously identified or addressed by the IS/MND. Therefore, an EIR should be prepared and recirculated for the Project, and mitigation should be implemented where necessary.

(4) Failure to Consider Performance-based Standards Under CARB's 2017 Scoping Plan

As previously discussed, the IS/MND relies upon the Project's consistency with CARB's 2017 *Scoping Plan* to determine Project GHG significance (p. 52). However, this is incorrect, as the IS/MND fails to consider performance-based measures proposed by CARB.

i. Passenger & Light Duty VMT Per Capita Benchmarks per SB 375

In reaching the State's long-term GHG emission reduction goals, CARB's 2017 *Scoping Plan* explicitly cites to SB 375 and the VMT reductions anticipated under the implementation of Sustainable Community Strategies.[43] CARB has identified the population and daily VMT from passenger autos and light-duty vehicles at the state and county level for each year between 2010 to 2050 under a "baseline scenario" that includes "current projections of VMT included in the existing Regional Transportation

[40] CAPCOA (Jan. 2008) CEQA & Climate Change, p. 71-72, http://www.capcoa.org/wp-content/uploads/2012/03/CAPCOA-White-Paper.pdf.
[41] Calculated: 50 employees + 0 residents = 50 people.
[42] Calculated: (590 MT CO_2e/year) / (50 service population) = (11.80 MT CO_2e/SP/year).
[43] CARB (Nov. 2017) 2017 Scoping Plan, p. 25, 98, 101-103, https://ww3.arb.ca.gov/cc/scopingplan/scoping_plan_2017.pdf.

Plans/Sustainable Communities Strategies (RTP/SCSs) adopted by the State's 18 Metropolitan Planning Organizations (MPOs) pursuant to SB 375 as of 2015."[44] By dividing the projected daily VMT by the population, we calculated the daily VMT per capita for each year at the state and county level for 2010 (baseline year), 2022 (Project operational year), and 2030 (target years under SB 32) (see table below and Attachment B).

2017 Scoping Plan Daily VMT Per Capita						
	Napa County			State		
Year	Population	LDV VMT Baseline	VMT Per Capita	Population	LDV VMT Baseline	VMT Per Capita
2010	136,281	2,608,508.17	19.14	37,335,085	836,463,980.00	22.40
2022	145,557	2,870,053.23	19.72	41,321,565	916,010,146.00	22.17
2030	152,833	2,960,256.07	19.37	43,939,250	957,178,153.00	21.78

The below table compares the 2017 *Scoping Plan* daily VMT per capita values against the daily VMT per capita values for the Project based on the IS/MND's modeling (see table below and Attachment C).

Daily VMT Per Capita from Passenger & Light-Duty Trucks, Exceedances under 2017 Scoping Plan Performance-Based SB 375 Benchmarks	
Sources	Project
	IS/MND
Annual VMT from Auto & Light-Duty Vehicles	606,115
Daily VMT from Auto & Light-Duty Vehicles	1,661
Service Population	50
Daily VMT Per Capita	33.21
2017 Scoping Plan Benchmarks, Statewide	
22.40 VMT (2010 Baseline) Exceed?	**Yes**
22.17 VMT (2022 Projected) Exceed?	**Yes**
21.78 VMT (2030 Projected) Exceed?	**Yes**
2017 Scoping Plan Benchmarks, Napa County Specific	
19.14 VMT (2010 Baseline) Exceed?	**Yes**
19.72 VMT (2022 Projected) Exceed?	**Yes**
19.37 VMT (2030 Projected) Exceed?	**Yes**

As shown above, the IS/MND's modeling shows that the Project exceeds the CARB 2017 *Scoping Plan* projections for 2010, 2022, and 2030. Because the exceeds the CARB 2017 *Scoping Plan* performance-based daily VMT per capita projections, the Project conflicts with the CARB 2017 *Scoping Plan* and SB 375. As such, the IS/MND's claim that the proposed Project would not conflict with the CARB 2017

[44] CARB (Jan. 2019) 2017 Scoping Plan-Identified VMT Reductions and Relationship to State Climate Goals ("Supporting Calculations for 2017 Scoping Plan-Identified VMT Reductions"), Excel Sheet "Readme", https://ww2.arb.ca.gov/sites/default/files/2019-01/sp_mss_vmt_calculations_jan19_0.xlsx.

Scoping Plan is incorrect and unsubstantiated. An EIR should be prepared for the proposed Project to provide additional information and analysis to conclude less than significant GHG impacts.

Feasible Mitigation Measures Available to Reduce Emissions

Our analysis demonstrates that the Project's air quality, health risk, and GHG emissions may result in significant impacts and should be mitigated further. In an effort to reduce the Project's emissions, we identified several mitigation measures that are applicable to the proposed Project. Feasible mitigation measures can be found in CAPCOA's *Quantifying Greenhouse Gas Mitigation Measures*.[45] Therefore, to reduce the Project's emissions, consideration of the following measures should be made:

CAPCOA's *Quantifying Greenhouse Gas Mitigation Measures*[46]
Measures – Energy
Building Energy Use
Exceed Title-24 Building Envelope Energy Efficiency Standards (California Building Standards Code)
Install Programmable Thermostat Timers
Obtain Third-party HVAC Commissioning and Verification of Energy Savings
Install Energy Efficient Appliances
Install Energy Efficient Boilers
Lighting
Install Higher Efficacy Public Street and Area Lighting
Limit Outdoor Lighting Requirements
Replace Traffic Lights with LED Traffic Lights
Alternative Energy Generation
Establish Onsite Renewable or Carbon-Neutral Energy Systems
Establish Onsite Renewable Energy System – Solar Power
Establish Onsite Renewable Energy System – Wind Power
Utilize a Combined Heat and Power System
Establish Methane Recovery in Landfills
Establish Methane Recovery in Wastewater Treatment Plants
Measures – Transportation
Land Use/Location
Increase Density
Increase Location Efficiency

[45] http://www.capcoa.org/wp-content/uploads/2010/11/CAPCOA-Quantification-Report-9-14-Final.pdf

[46] "Quantifying Greenhouse Gas Mitigation Measures." California Air Pollution Control Officers Association (CAPCOA), August 2010, *available at:* http://www.capcoa.org/wp-content/uploads/2010/11/CAPCOA-Quantification-Report-9-14-Final.pdf, p.

Increase Diversity of Urban and Suburban Developments (Mixed Use)
Increase Destination Accessibility
Increase Transit Accessibility
Integrate Affordable and Below Market Rate Housing
Orient Project Toward Non-Auto Corridor
Locate Project near Bike Path/Bike Lane
Neighborhood/Site Enhancements
Provide Pedestrian Network Improvements, such as: • Compact, mixed-use communities • Interconnected street network • Narrower roadways and shorter block lengths • Sidewalks • Accessibility to transit and transit shelters • Traffic calming measures and street trees • Parks and public spaces • Minimize pedestrian barriers
Provide Traffic Calming Measures, such as: • Marked crosswalks • Count-down signal timers • Curb extensions • Speed tables • Raised crosswalks • Raised intersections • Median islands • Tight corner radii • Roundabouts or mini-circles • On-street parking • Planter strips with trees • Chicanes/chokers
Implement a Neighborhood Electric Vehicle (NEV) Network.
Create Urban Non-Motorized Zones
Incorporate Bike Lane Street Design (on-site)
Provide Bike Parking in Non-Residential Projects
Provide Bike Parking with Multi-Unit Residential Projects
Provide Electric Vehicle Parking
Dedicate Land for Bike Trails
Parking Policy/Pricing
Limit Parking Supply through: • Elimination (or reduction) of minimum parking requirements • Creation of maximum parking requirements

• Provision of shared parking
Unbundle Parking Costs from Property Cost
Implement Market Price Public Parking (On-Street)
Require Residential Area Parking Permits
Commute Trip Reduction Programs
Implement Commute Trip Reduction (CTR) Program – Voluntary • Carpooling encouragement • Ride-matching assistance • Preferential carpool parking • Flexible work schedules for carpools • Half time transportation coordinator • Vanpool assistance • Bicycle end-trip facilities (parking, showers and lockers) • New employee orientation of trip reduction and alternative mode options • Event promotions and publications • Flexible work schedule for employees • Transit subsidies • Parking cash-out or priced parking • Shuttles • Emergency ride home
Implement Commute Trip Reduction (CTR) Program – Required Implementation/Monitoring • Established performance standards (e.g. trip reduction requirements) • Required implementation • Regular monitoring and reporting
Provide Ride-Sharing Programs • Designate a certain percentage of parking spaces for ride sharing vehicles • Designating adequate passenger loading and unloading and waiting areas for ride-sharing vehicles • Providing a web site or messaging board for coordinating rides • Permanent transportation management association membership and funding requirement.
Implement Subsidized or Discounted Transit Program
Provide Ent of Trip Facilities, including: • Showers • Secure bicycle lockers • Changing spaces
Encourage Telecommuting and Alternative Work Schedules, such as: • Staggered starting times • Flexible schedules • Compressed work weeks
Implement Commute Trip Reduction Marketing, such as: • New employee orientation of trip reduction and alternative mode options • Event promotions • Publications

Implement Preferential Parking Permit Program
Implement Car-Sharing Program
Implement School Pool Program
Provide Employer-Sponsored Vanpool/Shuttle
Implement Bike-Sharing Programs
Implement School Bus Program
Price Workplace Parking, such as: • Explicitly charging for parking for its employees; • Implementing above market rate pricing; • Validating parking only for invited guests; • Not providing employee parking and transportation allowances; and • Educating employees about available alternatives.
Implement Employee Parking "Cash-Out"
Transit System Improvements
Transit System Improvements, including: • Grade-separated right-of-way, including bus only lanes (for buses, emergency vehicles, and sometimes taxis), and other Transit Priority measures. Some systems use guideways which automatically steer the bus on portions of the route. • Frequent, high-capacity service • High-quality vehicles that are easy to board, quiet, clean, and comfortable to ride. • Pre-paid fare collection to minimize boarding delays. • Integrated fare systems, allowing free or discounted transfers between routes and modes. • Convenient user information and marketing programs. • High quality bus stations with Transit Oriented Development in nearby areas. • Modal integration, with BRT service coordinated with walking and cycling facilities, taxi services, intercity bus, rail transit, and other transportation services.
Implement Transit Access Improvements, such as: • Sidewalk/crosswalk safety enhancements • Bus shelter improvements
Expand Transit Network
Increase Transit Service Frequency/Speed
Provide Bike Parking Near Transit
Provide Local Shuttles
Road Pricing/Management
Implement Area or Cordon Pricing
Improve Traffic Flow, such as: • Signalization improvements to reduce delay; • Incident management to increase response time to breakdowns and collisions; • Intelligent Transportation Systems (ITS) to provide real-time information regarding road conditions and directions; and

• Speed management to reduce high free-flow speeds.
Required Project Contributions to Transportation Infrastructure Improvement Projects
Install Park-and-Ride Lots
Vehicles
Electrify Loading Docs and/or Require Idling-Reduction Systems
Utilize Alternative Fueled Vehicles, such as: • Biodiesel (B20) • Liquefied Natural Gas (LNG) • Compressed Natural Gas (CNG)
Utilize Electric or Hybrid Vehicles
Measures – Water
Water Supply
Use Reclaimed Water
Use Gray Water
Use Locally Sourced Water Supply
Water Use
Install Low-Flow Water Fixtures
Adopt a Water Conservation strategy
Design Water-Efficient Landscapes (see California Department of Water Resources Model Water Efficient Landscape Ordinance), such as: • Reducing lawn sizes; • Planting vegetation with minimal water needs, such as native species; • Choosing vegetation appropriate for the climate of the project site; • Choosing complimentary plants with similar water needs or which can provide each other with shade and/or water.
Use Water-Efficient Landscape Irrigation Systems (“Smart” irrigation control systems)
Reduce Turf in Landscapes and Lawns
Plant Native or Drought-Resistant Trees and Vegetation
Measures – Area Landscaping
Landscaping Equipment
Prohibit Gas Powered Landscape Equipment
Implement Lawnmower Exchange Program
Electric Yard Equipment Compatibility
Measures – Solid Waste
Solid Waste
Institute Recycling and Composting Services
Recycle Demolished Construction Material

Measures – Vegetation
Vegetation
Urban Tree Planting
Create New Vegetated Open Space
Measures – Construction
Construction
Use Alternative Fuels for Construction Equipment
Urban Tree Planting
Use Electric and Hybrid Construction Equipment
Limit Construction Equipment Idling Beyond Regulation Requirements
Institute a Heavy-Duty Off-Road Vehicle Plan, including: • Construction vehicle inventory tracking system; • Requiring hour meters on equipment; • Document the serial number, horsepower, manufacture age, fuel, etc. of all onsite equipment; and • Daily logging of the operating hours of the equipment.
Implement a Construction Vehicle Inventory Tracking System
Measures – Miscellaneous
Miscellaneous
Establish a Carbon Sequestration Project, such as: • Geologic sequestration or carbon capture and storage techniques, in which CO_2 from point sources is captured and injected underground; • Terrestrial sequestration in which ecosystems are established or preserved to serve as CO_2 sinks; • Novel techniques involving advanced chemical or biological pathways; or • Technologies yet to be discovered.
Establish Off-Site Mitigation
Use Local and Sustainable Building Materials
Require best Management Practices in Agriculture and Animal Operations
Require Environmentally Responsible Purchasing, such as: • Purchasing products with sustainable packaging; • Purchasing post-consumer recycled copier paper, paper towels, and stationary; • Purchasing and stocking communal kitchens with reusable dishes and utensils; • Choosing sustainable cleaning supplies; • Leasing equipment from manufacturers who will recycle the components at their end of life; • Choosing ENERGY STAR appliances and Water Sense-certified water fixtures; • Choosing electronic appliances with built in sleep-mode timers; • Purchasing 'green power' (e.g. electricity generated from renewable or hydropower) from the utility; and • Choosing locally-made and distributed products.
Implement an Innovative Strategy for GHG Mitigation

Measures – General Plans
General Plans
Fund Incentives for Energy Efficiency, such as: • Retrofitting or designing new buildings, parking lots, streets, and public areas with energy-efficient lighting; • Retrofitting or designing new buildings with low-flow water fixtures and high-efficiency appliances; • Retrofitting or purchasing new low-emissions equipment; • Purchasing electric or hybrid vehicles; • Investing in renewable energy systems
Establish a Local Farmer's Market
Establish Community Gardens
Plant Urban Shade Trees
Implement Strategies to Reduce Urban Heat-Island Effect, such as: • Planting urban shade trees; • Installing reflective roofs; and • Using light-colored or high-albedo pavements and surfaces.

Furthermore, in an effort to reduce the Project's emissions, we identified several mitigation measures that are applicable to the proposed Project from NEDC's *Diesel Emission Controls in Construction Projects.*[47] Therefore, to reduce the Project's emissions, consideration of the following measures should be made:

NEDC's *Diesel Emission Controls in Construction Projects*[48]
Measures – Diesel Emission Control Technology
a. Diesel Onroad Vehicles All diesel nonroad vehicles on site for more than 10 total days must have either (1) engines that meet EPA onroad emissions standards or (2) emission control technology verified by EPA or CARB to reduce PM emissions by a minimum of 85%.
b. Diesel Generators All diesel generators on site for more than 10 total days must be equipped with emission control technology verified by EPA or CARB to reduce PM emissions by a minimum of 85%.
c. Diesel Nonroad Construction Equipment i. All nonroad diesel engines on site must be Tier 2 or higher. Tier 0 and Tier 1 engines are not allowed on site

[47] "Diesel Emission Controls in Construction Projects." Northeast Diesel Collaborative (NEDC), December 2010, *available at:* https://www.epa.gov/sites/production/files/2015-09/documents/nedc-model-contract-sepcification.pdf.

[48] "Diesel Emission Controls in Construction Projects." Northeast Diesel Collaborative (NEDC), December 2010, *available at:* https://www.epa.gov/sites/production/files/2015-09/documents/nedc-model-contract-sepcification.pdf.

ii. All diesel nonroad construction equipment on site for more than 10 total days must have either (1) engines meeting EPA Tier 4 nonroad emission standards or (2) emission control technology verified by EPA or CARB for use with nonroad engines to reduce PM emissions by a minimum of 85% for engines 50hp and greater and by a minimum of 20% for engines less than 50hp.
d. Upon confirming that the diesel vehicle, construction equipment, or generator has either an engine meeting Tier 4 non road emission standards or emission control technology, as specified above, installed and functioning, the developer will issue a compliance sticker. All diesel vehicles, construction equipment, and generators on site shall display the compliance sticker in a visible, external location as designated by the developer.
e. Emission control technology shall be operated, maintained, and serviced as recommended by the emission control technology manufacturer.
f. All diesel vehicles, construction equipment, and generators on site shall be fueled with ultra-low sulfur diesel fuel (ULSD) or a biodiesel blend[49] approved by the original engine manufacturer with sulfur content of 15 ppm or less.
Measures – Idling Requirements
During periods of inactivity, idling of diesel onroad vehicles and nonroad equipment shall be minimized and shall not exceed the time allowed under state and local laws.
Measures – Additional Diesel Requirements
a. Construction shall not proceed until the contractor submits a certified list of all diesel vehicles, construction equipment, and generators to be used on site. The list shall include the following: i. Contractor and subcontractor name and address, plus contact person responsible for the vehicles or equipment. ii. Equipment type, equipment manufacturer, equipment serial number, engine manufacturer, engine model year, engine certification (Tier rating), horsepower, engine serial number, and expected fuel usage and hours of operation. iii. For the emission control technology installed: technology type, serial number, make, model, manufacturer, EPA/CARB verification number/level, and installation date and hour-meter reading on installation date.
b. If the contractor subsequently needs to bring on site equipment not on the list, the contractor shall submit written notification within 24 hours that attests the equipment complies with all contract conditions and provide information.
c. All diesel equipment shall comply with all pertinent local, state, and federal regulations relative to exhaust emission controls and safety.
d. The contractor shall establish generator sites and truck-staging zones for vehicles waiting to load or unload material on site. Such zones shall be located where diesel emissions have the least impact on abutters, the general public, and especially sensitive receptors such as hospitals, schools, daycare facilities, elderly housing, and convalescent facilities.
Reporting

[49] Biodiesel blends are only to be used in conjunction with the technologies which have been verified for use with biodiesel blends and are subject to the following requirements: http://www.arb.ca.gov/diesel/verdev/reg/biodieselcompliance.pdf.

a. For each onroad diesel vehicle, nonroad construction equipment, or generator, the contractor shall submit to the developer's representative a report prior to bringing said equipment on site that includes: i. Equipment type, equipment manufacturer, equipment serial number, engine manufacturer, engine model year, engine certification (Tier rating), horsepower, and engine serial number. ii. The type of emission control technology installed, serial number, make, model, manufacturer, and EPA/CARB verification number/level. iii. The Certification Statement signed and printed on the contractor's letterhead.
b. The contractor shall submit to the developer's representative a monthly report that, for each onroad diesel vehicle, nonroad construction equipment, or generator onsite, includes: i. Hour-meter readings on arrival on-site, the first and last day of every month, and on off-site date. ii. Any problems with the equipment or emission controls. iii. Certified copies of fuel deliveries for the time period that identify: 1. Source of supply 2. Quantity of fuel 3. Quality of fuel, including sulfur content (percent by weight)

These measures offer a cost-effective, feasible way to incorporate lower-emitting design features into the proposed Project, which subsequently, reduce emissions released during Project construction and operation. An EIR should be prepared to include all feasible mitigation measures, as well as include an updated health risk and GHG analysis to ensure that the necessary mitigation measures are implemented to reduce emissions to below thresholds. The EIR should also demonstrate a commitment to the implementation of these measures prior to Project approval, to ensure that the Project's significant emissions are reduced to the maximum extent possible.

Disclaimer

SWAPE has received limited discovery regarding this project. Additional information may become available in the future; thus, we retain the right to revise or amend this report when additional information becomes available. Our professional services have been performed using that degree of care and skill ordinarily exercised, under similar circumstances, by reputable environmental consultants practicing in this or similar localities at the time of service. No other warranty, expressed or implied, is made as to the scope of work, work methodologies and protocols, site conditions, analytical testing results, and findings presented. This report reflects efforts which were limited to information that was reasonably accessible at the time of the work, and may contain informational gaps, inconsistencies, or otherwise be incomplete due to the unavailability or uncertainty of information obtained or provided by third parties.

Re: SDG Commerce 217 Distribution Center (PL20-0008) – Recirculated Mitigated Negative Declaration and Conditional Use Permit

Dear Mayor Garcia, Vice-Mayor Joseph, Council Members Aboudamous, Oro, and Washington and Mr. He:

I am writing on behalf of Laborers International Union of North America, Local 324 ("LIUNA") and its members living and working in and around the City of American Canyon regarding the Recirculated Draft Initial Study and Mitigated Negative Declaration ("MND") prepared for the proposed SDG Commerce 217 Distribution Center Project (the "Project"). This comment letter supplements and incorporates by reference our previous written comments dated January 19, 2021, February 25, 2021 and May 3, 2021.

1 In our May 3, 2021 comments, we criticized the use of an alternative figure claiming to represent the average length of bicycle commutes in the vicinity of the Project. Previously, the consultant GHD estimated the average bike trip length at 34.6 miles, then 5.2 miles. GHD now also mentions a third alternative figure of 3.8 mile for the average bicycle commute to be expected from cyclists using the proposed 800-foot bike lane. (GHD Memorandum, pp. 9, 24 (March 21, 2021).) Traffic Engineer Tom Brohard, PE, has now had an opportunity to review the January 2015 AASHTO publication "Brief 14. Bicycling and Walk Commuting in America 2013," referenced by GHD as the source of its 3.8 mile bike commute trip length. As Mr. Brohard explains, the footnote to the trip length number in the AASHTO report "indicates the bike commute distance is based on the Table 27 of the 2009 NHTS (National Household Travel Survey). Enclosed Table 27 does not break out trips or commute distances for bikes. The updated 2017 NHTS does not give bike commute distances either." (Comments of Tom Brohard, PE, dated June 1, 2021 [attached as Exhibit A].) Nor is there any explanation why this nation-wide figure would apply to the area in the vicinity of the Project. As pointed out in LIUNA's earlier comment, the furthest a commuting biker can travel north of the Project is 0.75 miles before they

would have to head east and ride on SR 29 which the MND claims does not happen due to safety concerns. (Recirculated MND, p. 22.) It is entirely arbitrary for the Project to imagine bike commutes extending 3.75 miles north through undeveloped fields. In addition, the 2013 report using 2009 data does not likely reflect 2020 or 2021 bicycle use in the vicinity of the Project. As a result, and for the many reasons identified in LIUNA's previous comments, the MND's estimate of VMT reductions that would result from the Project's proposed 800-foot bike lane are highly exaggerated. There is substantial evidence of a fair argument that the Project may have significant transportation impacts. This potentially significant impact requires the preparation of an environmental impact report.

1 (cont.)

For all of these reasons and those discussed in our prior comments, the MND is inadequate and an EIR is required to analyze and mitigate the Project's potentially significant environmental impacts. Thank you again for your attention to LIUNA's appeal and these comments.

2

Sincerely,

Michael Lozeau

SUBJECT: Proposed Wine Distribution Center at 1075 Commerce Court in the City of American Canyon – VMT Supplemental Report

Dear Mr. Lozeau:

Item #5 in my April 30, 2021 letter to you expressed concerns about the calculation of vehicle miles traveled (VMT) by GHD. My report stated that "Without any meaningful explanation, GHD averages their minimum 800' actual bike facility length and maximum 1.85-mile combined bike facility length to forecast daily VMT reduction associated with the 800-foot-long bicycle path. The random decision to average the minimum and maximum VMT forecasts is not supported by any reasoned analysis or facts." Furthermore, I concluded that the GHD report "...now averages the averages and concludes that the daily VMT reduction will be 733 VMT with a 3.8-mile bicycle commute from a publication that is not available from AASHTO or 1,004 VMT by using an unrealistically long average one-way trip length of 5.2 miles."

I have now reviewed the January 2015 AASHTO publication "Brief 14. Bicycling and Walk Commuting in America 2013". Enclosed is Page 15 which shows the 3.8-mile average bike commute distance. The footnote indicates the bike commute distance is based on the Table 27 of the 2009 NHTS (National Household Travel Survey). Enclosed Table 27 does not break out trips or commute distances for bikes. The updated 2017 NHTS does not give bike commute distances either.

Neither of the purported VMT reductions are supported by substantial evidence. GHD continues to find "new" reports that are based on "old" or "non-existent" data to support their incorrect conclusion that the total Project VMT will be less than the required threshold. Additional study together with mitigation measures are required for the Proposed Project.

Respectfully submitted,

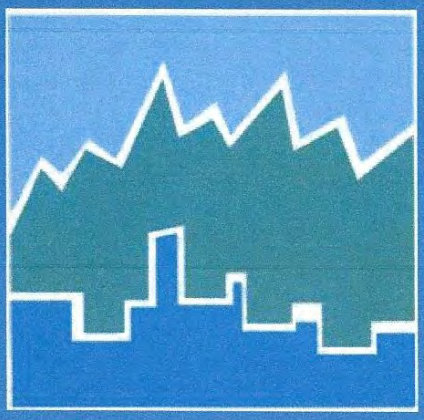
JANUARY 2015

Further Motorcycle, Bike, Walk Mode Detail

Motorcycle, bike, and walk modes have different characteristics than vehicle trips with respect to travel speed; hence, trip lengths and trip duration differ from those typical for vehicle trips. Motorcycle commuting is very comparable to private vehicle commuting, as might be expected. However, survey respondent data indicate that an average walk trip is approximately 1 mile, taking approximately 15 minutes. The derived walk speed of 3.7 mph is faster than the traditionally used 3 mph walk speed. This calculation is no doubt affected by the rounding that occurs when respondents tend to answer travel duration questions rounded to the nearest five minutes.

Bike travel speeds are similar to transit travel speeds, though the trip length is approximately 1/3 that of transit trips. Mode shares in this brief have been expressed in terms of percent of trips, as is normal practice. However, if one calculates mode share in terms of person miles of travel, the relative significance of bike and walk trips as a share of total commuting person miles of travel would be dramatically diminished.

Table 14-5. Average Duration, Distance, and Speed for Commuting Trips



Mode	Duration (minutes)	Distance (miles)	Speed (mph)
Motorcycle	24.6	12.1	29.5
Bike	20.9	3.8	10.8
Walk	15.6	1.0	3.7
Private Vehicle	22.9	12.1	28.9
Public Transit	53.0	10.2	11.4

Source: 2009 NHTS online tool, using variable TRVL_MIN, calculated for trips with both time and distance data. Private vehicle and public transit data from NHTS 2009 summary of travel trends, Table 27.

Figure 14-10 provides the trip duration distribution for walk trips. As shown, 47.4 percent of walk trips are 10 minutes or less and an additional 20 percent are 10 to 14 minutes in duration. Even for trips of less than 10 minutes, walking only constitutes 1.4 percent of commuting trips.

Short commute trip distances for walk and bike modes result in these mode shares being far smaller if expressed in terms of person miles of travel.

1.0 INTRODUCTION

This document presents results of a health risk assessment (HRA) associated with the American Canyon Commerce 217 Distribution Center in the City of American Canyon, California and evaluates the potential adverse health impacts associated with the project's construction and operational emissions. The supporting information, methodology and assumptions used in the air emission calculations and health risk assessment are provided in **Health Risk Assessment Methodology, Assumptions, and Detailed Results**.

The HRA focuses on health impacts on existing residences and school receptors from emissions of toxic air contaminants (TAC)[1] such as diesel particulate matter (DPM)[2] from diesel construction equipment and diesel delivery truck activities at loading docks and along roadways. The HRA was conducted to determine the health impacts, in terms of excess cancer risk and non-cancer hazards, using the significance levels identified by the Bay Area Air Quality Management District (BAAQMD)'s *CEQA Air Quality Guidelines*.[3] In accordance with the BAAQMD *CEQA Air Quality Guidelines*, this HRA also evaluated concentrations of particulate matter equal to or less than 2.5 micrometers (fine particulate or $PM_{2.5}$). The HRA was prepared based on the California Office of Environmental Health Hazard Assessment (OEHHA)'s *Air Toxics Hot Spots Program Guidance Manual for Preparation of Health Risk Assessments*.[4] For existing residential receptors, the HRA indicates less-than-significant exposures to the health impacts from the proposed project construction activities and operations. For the Napa Junction Elementary School, the HRA indicates less-than-significant exposures to the health impacts from the proposed project construction activities and operations.

2.0 PROJECT OVERVIEW

The project would consist of a 217,294 square foot wine storage and distribution center on the 10.39-acre site. It is anticipated that the warehouse would be used for wine storage and other

[1] Toxic air contaminants (TAC) are a broad class of compounds known to cause morbidity or mortality. TAC are found in ambient air, especially in urban areas, and are caused by industry, agriculture, fuel combustion, and commercial operations (e.g., gasoline service stations, dry cleaners). TAC are typically found in low concentrations, even near their source (e.g., diesel particulate matter near a freeway). Because chronic exposure can result in adverse health effects, TAC are regulated at the regional, state, and Federal level.

[2] In 1998, the California Air Resources Board (CARB) classified diesel particulate matter (DPM) as a toxic air contaminant, citing its potential to cause cancer and other health problems. The US Environmental Protection Agency (USEPA) concluded that long-term exposure to diesel engine exhaust is likely to pose a lung cancer hazard to humans and can also contribute to other acute and chronic health effects.

[3] Bay Area Air Quality Management District, *CEQA Air Quality Guidelines*, May 2017, http://www.baaqmd.gov/~/media/files/planning-and-research/ceqa/ceqa_guidelines_may2017-pdf.pdf?la=en

[4] Office of Environmental Health Hazard Assessment, *Air Toxics Hot Spots Program Guidance Manual for Preparation of Health Risk Assessments*, February 2015, http://oehha.ca.gov/air/hot_spots/hotspots2015.html

wine-related storage and warehousing activities (i.e. bottles, corks, barrels, etc.). A total of 134 car and 21 truck dock parking spaces would be provided. A peak daily weekday trip generation rate of 64 trucks per day (and an average daily weekday trip generation rate of 32 trucks per day) would occur; only three trucks per day would contain transport refrigeration units (TRU).[5] Most inbound trailers would not have TRU as they would only be hauling directly from the winery. Outbound long-haul trailers would not be running the refrigeration units while at the loading dock as they would initially be loaded. No trucks would be at the loading dock longer than 30 minutes. Trucks would not and cannot head south from the facility and pass by the Napa Junction Elementary School and residential land uses to the south of the project site as Commerce Court has a dead-end cul-de-sac. Project traffic would only travel along Commence Boulevard and Green Island Road to the north of the project site. Hours of operation would be 8 am to 4 pm; Monday thru Friday.

According to the requirements under the California Public Resources Code, Division 13, Environmental Quality (§21000 – §21189.57), proposed projects located within ¼ mile of a school that involve the construction or alteration of a facility that might reasonably be anticipated to emit hazardous air emissions, and that may impose a health or safety hazard to persons who would attend or would be employed at the school, must meet all requirements per CEQA Guidelines §15186 (b)(1)(2)[6]. The lead agency must consult with the affected school district or districts regarding the potential impact of the project on the school and notify the affected school district(s) of the project in writing, not less than 30 days prior to approval or certification of the negative declaration or environmental impact report. Napa Junction Elementary School is located with ¼ miles of the project site.

3.0 ANALYSIS METHODOLGY

Regulatory models used to estimate air quality and health impacts include:

- **California Emissions Estimator Model (CalEEMod) Version 2016.3.2[7] land use emissions model.** CalEEMod estimates emissions due to construction activities and operations.
- **California Air Resources Board's (CARB) EMFAC[8] emissions inventory model.** EMFAC is the latest emission inventory model that calculates emission inventories and

[5] Transport Refrigeration Units are refrigeration systems powered by diesel internal combustion engines designed to refrigerate or heat perishable products that are transported in various containers, including truck vans, semi-truck trailers, shipping containers, and railcars.

[6] 2019 CEQA Statutes and Guidelines, http://resources.ca.gov/ceqa/docs/2019_CEQA_Statutes_and_Guidelines.pdf

[7] California Air Resources Board, *California Emissions Estimator Model User's Guide*, November 9, 2017, http://www.caleemod.com/

emission rates for motor vehicles operating on roads in California. This model reflects CARB's current understanding of how vehicles travel and how much they emit. EMFAC can be used to show how California motor vehicle emissions have changed over time and are projected to change in the future.

- **American Meteorological Society/USEPA Regulatory Model (AERMOD)**. AERMOD (Version 19191) is an atmospheric dispersion model which can simulate point, area, volume, and line emissions sources and has the capability to include simple, intermediate, and complex terrain along with meteorological conditions and multiple receptor locations.[9,10] AERMOD is commonly executed to yield 1-hour maximum and annual average concentrations (in $\mu g/m^3$) at each receptor. AERMOD is used to estimate air concentrations at nearby receptors resulting from the activities associated with an air emission source (such as construction equipment).

Threshold of Significance

The standards of significance applied to the analysis of potential health impacts are based on Appendix G of the *CEQA Guidelines* and the BAAQMD *CEQA Air Quality Guidelines*. Using Appendix G evaluation thresholds, the proposed project would be considered to have significant health impacts if it were to expose sensitive receptors to substantial pollutant concentrations. The proposed project would have a significant project-level health impact if it would exceed the following BAAQMD thresholds:

- Exposure of persons by siting a new source or a new sensitive receptor to substantial levels of TAC resulting in (a) a cancer risk level greater than 10 in one million, (b) a noncancerous risk (chronic or acute) hazard index greater than 1.0, or (c) an increase of annual average $PM_{2.5}$ of greater than 0.3 micrograms per cubic meter ($\mu g/m^3$).

Health Impact Evaluation

The BAAQMD *Air Quality Guidelines* requires an assessment of air toxics impacts on sensitive receptors. The BAAQMD *Air Quality Guidelines* also requires an assessment of $PM_{2.5}$ concentrations as a result of the proposed project construction exhaust emissions. The proposed project would constitute a new emission source of TAC (such as DPM) and $PM_{2.5}$ from

[9] US Environmental Protection Agency Preferred/Recommended Models, *AERMOD Modeling System*, https://www.epa.gov/scram/air-quality-dispersion-modeling-preferred-and-recommended-models#aermod

[10] Title 40 CFR Part 51, *Revision to the Guideline on Air Quality Models: Adoption of a Preferred General Purpose (Flat and Complex Terrain) Dispersion Model and Other Revisions; Final Rule*.

construction equipment and delivery trucks. Studies have demonstrated that DPM from diesel-fueled engines is a human carcinogen and that chronic (long-term) inhalation exposure to DPM poses a chronic health risk.

The HRA was conducted following methodologies in OEHHA's *Air Toxics Hot Spots Program Guidance Manual for Preparation of Health Risk Assessments*.[11] This was accomplished by applying the estimated DPM concentrations at nearby sensitive receptors analyzed to the established cancer risk estimates and acceptable reference concentrations for non-cancer health effects. The USEPA's AERMOD atmospheric dispersion model then calculates air concentrations (in micrograms per cubic meter, or $\mu g/m^3$) of DPM and $PM_{2.5}$ at the nearby sensitive receptors. The supporting methodology and assumptions used in this HRA are provided in **Health Risk Assessment Methodology and Assumptions**.

Both acute (short-term, such as one-hour) and chronic (long-term, such as annual) adverse health impacts unrelated to cancer were addressed and are measured against a hazard index (HI). The hazard index is defined as the ratio of the estimated air concentrations of DPM at the nearby sensitive receptors to a reference exposure level (REL) that could cause adverse health effects. The health impact is significant if the HI is greater than 1.0 (i.e., the estimated air concentrations of DPM is greater than the REL).

There is no acute REL for DPM. The chronic reference exposure level for DPM established by the California OEHHA is 5 $\mu g/m^3$. Thus, if the proposed project-related annual concentration of DPM exceed 5.0 $\mu g/m^3$, resulting in a chronic HI of greater than 1.0 (i.e., DPM annual concentration/5.0 $\mu g/m^3$), the chronic health impacts would be significant.

Proposed Project Construction and Operations Health Impacts on Existing Residences

The following describes the HRA results associated with existing residential receptors due to proposed project construction and operations. As shown in **Table 1**, the maximum total cancer risk from the proposed project emissions for a residential receptor would be 3.35 per million persons. The maximum concentrations would occur at a residential receptor (also known as the maximum exposed individual or MEI) to the southeast of the proposed project. Thus, the cancer risk due to construction activities and operations would be less than the BAAQMD significance threshold of 10 per million and would be ***a less than significant health impact on residential receptors.***

[11] Office of Environmental Health Hazard Assessment, *Air Toxics Hot Spots Program Guidance Manual for Preparation of Health Risk Assessments*, February 2015, http://oehha.ca.gov/air/hot_spots/hotspots2015.html

Table 1: Estimated Construction and Operations Health Impacts for Existing Residences

Source	Cancer Risk	Hazard Impact	$PM_{2.5}$ Concentration
Total Proposed Project	**3.25**	**<0.01**	**0.02**
Significance Threshold	10	1.0	0.3
Potentially Significant (Yes or No)?	No	No	No

The chronic HI would be less than 0.01, based on a proposed project-related maximum annual diesel concentration of 0.005 μg/m^3 (per dispersion modeling analysis) and an REL for DPM of 5.0 μg/m^3. The resultant chronic HI is calculated as 0.005 μg/m^3/5.0 μg/m^3, which is less than 0.01. The chronic HI would be below the project-level threshold of 1.0 and would therefore be ***less than significant health impact on residential receptors***.

The proposed project's annual $PM_{2.5}$ concentration would be 0.02 μg/m^3. Thus, the annual $PM_{2.5}$ concentration due to project construction would be below the BAAQMD threshold of 0.3 μg/m^3 and would be considered ***less than significant health impact on residential receptors***.

Proposed Project Construction and Operations Health Impacts Associated with the Napa Junction Elementary School

The following describes the HRA results associated with school receptors (Napa Junction Elementary School) due to proposed project construction and operations. As shown in **Table 2**, the maximum cancer risk from the proposed project emissions for a school receptor would be 0.39 per million persons. Thus, the cancer risk due to operations would be less than the BAAQMD significance threshold of 10 per million and would be ***a less than significant health impact on school receptors.***

Table 2: Estimated Construction and Operations Health Impacts for Napa Junction Elementary School

Source	Cancer Risk	Hazard Impact	$PM_{2.5}$ Concentration
Total Proposed Project	**0.39**	**<0.01**	**0.02**
Significance Threshold	10	1.0	0.3
Potentially Significant (Yes or No)?	No	No	No

The chronic HI would be less than 0.01, based on a proposed project-related maximum annual diesel concentration of less than 0.01 μg/m^3 (per dispersion modeling analysis) and an REL for DPM of 5.0 μg/m^3. The resultant chronic HI is calculated as 0.003 μg/m^3/5.0 μg/m^3, which is less than 0.01. The chronic HI would be below the project-level threshold of 1.0 and would therefore be ***less than significant health impact on school receptors***.

The proposed project's annual $PM_{2.5}$ concentration would be 0.02 μg/m^3. Thus, the annual $PM_{2.5}$ concentration due to project construction would be below the BAAQMD threshold of 0.3 μg/m^3 and would be considered ***less than significant health impact on school receptors***.

Although the health impacts are less than signficant, the applicant would implement the following measures to further reduce construction-related exhaust emissions:

1. Where access to alternative sources of power are available, portable diesel engines shall be prohibited; and
2. All diesel-powered off-road equipment larger than 50 horsepower and operating at the site for more than two days continuously shall have engines that meet or exceed either USEPA or CARB Tier 3 (or better) off-road emission standards and Level 3 Diesel Particulate Filters.[12]

As a result of these measures, the maximum total cancer risk from the proposed project emissions for a residential receptor would be 2.65 per million persons and the maximum cancer risk from the proposed project emissions for a school receptor would be 0.34 per million persons.

[12] USEPA and CARB have implemented regulations and a tiering system to reduce emissions from off-road equipment with increasing combustion efficiency (i.e., decreasing emissions) where Tier 1 is the least efficient (greatest emissions) and Tier 4 is the most efficient (least emissions). The regulations have been implemented over time such that Tier 1 was phased out in the 1990's and Tier 2 was required, followed by implementation of Tier 3 and Tier 4 by 2015 with a phase out of Tier 2.

Health Risk Assessment Methodology, Assumptions, and Detailed Results

A health risk assessment (HRA) is accomplished in four steps: 1) hazards identification, 2) exposure assessment, 3) toxicity assessment, and 4) risk characterization. These steps cover the estimation of air emissions, the estimation of the air concentrations resulting from a dispersion analysis, the incorporation of the toxicity of the pollutants emitted, and the characterization of the risk based on exposure parameters such as breathing rate, age adjustment factors, and exposure duration; each depending on receptor type (i.e., residence, school, daycare centers, hospitals, senior care facilities, recreational areas, adult, infant, child).

This HRA was conducted in accordance with technical guidelines developed by federal, state, and regional agencies, including U.S. Environmental Protection Agency (USEPA), California Environmental Protection Agency (CalEPA), California Office of Environmental Health Hazard Assessment (OEHHA) *Air Toxics Hot Spots Program Guidance Manual for Preparation of Health Risk Assessments*[1] and the Bay Area Air Quality Management District (BAAQMD) *Health Risk Screening Analysis Guidelines*.[2] This HRA addresses the emissions from construction activities including onsite equipment and haul trucks. Specific focus is on diesel particulate matter (DPM) and particulate matter equal to or less than 2.5 micrometers (fine particulate or $PM_{2.5}$) emissions.

According to CalEPA, a HRA should not be interpreted as the expected rates of cancer or other potential human health effects, but rather as estimates of potential risk or likelihood of adverse effects based on current knowledge, under a number of highly conservative assumptions and the best assessment tools currently available.

TERMS AND DEFINITIONS

As the practice of conducting a HRA is particularly complex and involves concepts that are not altogether familiar to most people, several terms and definitions are provided that are considered essential to the understanding of the approach, methodology and results:

> *Acute effect* – a health effect (non-cancer) produced within a short period of time (few minutes to several days) following an exposure to toxic air contaminants (TAC).
>
> *Cancer risk* – the probability of an individual contracting cancer from a lifetime (i.e., 70 year) with a 30-year exposure to TAC such as DPM in the ambient air.
>
> *Chronic effect* – a health effect (non-cancer) produced from a continuous exposure occurring over an extended period (weeks, months, years).

---

[1] Office of Environmental Health Hazard Assessment, *Air Toxics Hot Spots Program Guidance Manual for Preparation of Health Risk Assessments*, March 6, 2015. http://oehha.ca.gov/air/hot_spots/hotspots2015.html.

[2] Bay Area Air Quality Management District, *Health Risk Screening Analysis Guidelines*, January 2010 http://www.baaqmd.gov/~/media/Files/Engineering/Air%20Toxics%20Programs/hrsa_guidelines.ashx

Hazard Index (HI) – the unitless ratio of an exposure level over the acceptable reference dose. The HI can be applied to multiple compounds in an additive manner.

Hazard Quotient (HQ) – the unitless ratio of an exposure level over the acceptable reference dose. The HQ is applied to individual compounds.

Toxic Air Contaminants – any air pollutant that can cause short-term (acute) and/or long-term (chronic or carcinogenic, i.e., cancer causing) adverse human health effects (i.e., injury or illness). The current California list of TAC lists approximately 200 compounds, including particulate emissions from diesel-fueled engines.

Human Health Effects - comprise disorders such as eye watering, respiratory or heart ailments, and other (i.e., non-cancer) related diseases.

Health Risk Assessment – an analysis designed to predict the generation and dispersion of TAC in the outdoor environment, evaluate the potential for exposure of human populations, and to assess and quantify both the individual and population-wide health risks associated with those levels of exposure.

Incremental – under CEQA, the net difference (or change) in conditions or impacts when comparing the baseline to future year project conditions.

Maximum exposed individual (MEI) – an individual assumed to be located at the point where the highest concentrations of TAC, and therefore, health risks are predicted to occur.

Non-cancer risks – health risks such as eye watering, respiratory or heart ailments, and other non-cancer related diseases.

Receptors – the locations where potential health impacts or risks are predicted (i.e., schools, residences, and recreational sites).

LIMITATIONS AND UNCERTAINTIES

There are several important limitations and uncertainties commonly associated with a HRA due to the wide variability of human exposures to TAC, the extended timeframes over which the exposures are evaluated, and the inability to verify the results. Limitations and uncertainties associated with the HRA and identified by the CalEPA include: (a.) lack of reliable monitoring data; (b.) extrapolation of toxicity data in animals to humans; (c.) estimation errors in calculating TAC emissions; (d.) concentration prediction errors with dispersion models; and (e.) the variability in lifestyles, fitness and other confounding factors of the human population. This HRA was performed using the best available data and methodologies, notwithstanding the following uncertainties:

- There are uncertainties associated with the estimation of emissions from project activities. Where project-specific data, such as emission factors, are not available, default assumptions in emission models were used.
- The limitations of the air dispersion model provide a source of uncertainty in the estimation of exposure concentrations. According to USEPA, errors due to the limitation of the algorithms implemented in the air dispersion model in the highest estimated concentrations of +/- 10 percent to 40 percent are typical.[3]
- The source parameters used to model emission sources add uncertainty. For all emission sources, the source parameters used source-specific, recommended as defaults, or expected to produce more conservative results. Discrepancies might exist in actual emissions characteristics of an emission source and its representation in the dispersion model.
- The exposure duration estimates do not consider that people do not usually reside at the same location for 30 years and that other exposures (i.e., school children) are also of much shorter durations than was assumed in this HRA. This exposure duration is a highly conservative assumption, since most people do not remain at home all day and on average residents change residences every 11 to 12 years. In addition, this assumption adopts that residents are experiencing outdoor concentrations for the entire exposure period.
- For the risk and hazards calculations as well as the cumulative health impact, numerous assumptions must be made in order to estimate human exposure to pollutants. These assumptions include parameters such as breathing rates, exposure time and frequency, exposure duration, and human activity patterns. While a mean value derived from scientifically defensible studies is the best estimate of central tendency, most of the exposure variables used in this HRA are high-end estimates. The combination of several high-end estimates used as exposure parameters may substantially overestimate pollutant intake. The excess lifetime cancer risks calculated in this HRA are therefore likely to be higher than may be required to be protective of public health.
- The Cal/EPA cancer potency factor for DPM was used to estimate cancer risks associated with exposure to DPM emissions from construction activities. However, the cancer potency factor derived by Cal/EPA for DPM is highly uncertain in both the estimation of response and dose. In the past, due to inadequate animal test data and epidemiology data on diesel exhaust, the International Agency for Research on Cancer (IARC), a branch of the World Health Organization, had classified DPM as Probably Carcinogenic

[3] United States Environmental Protection Agency, *Guideline on Air Quality Models (Revised), 40 Code of Federal Regulations, Part 51, Appendix W,* November 2005.

to Humans (Group 2); the USEPA had also concluded that the existing data did not provide an adequate basis for quantitative risk assessment.[4] However, based on two recent scientific studies,[5] IARC recently re-classified DPM as Carcinogenic to Humans to Group 1,[6] which means that the agency has determined that there is "sufficient evidence of carcinogenicity" of a substance in humans and represents the strongest weight-of-evidence rating in IARC's carcinogen classification scheme. This determination by the IARC may provide additional impetus for the USEPA to identify a quantitative dose-response relationship between exposure to DPM and cancer.

In summary, the estimated health impacts are based primarily on a series of conservative assumptions related to predicted environmental concentrations, exposure, and chemical toxicity. The use of conservative assumptions tends to produce upper-bound estimates of risk. BAAQMD acknowledges this uncertainty by stating: "the methods used [to estimate risk] are conservative, meaning that the real risks from the source may be lower than the calculations, but it is unlikely that they will be higher." The USEPA notes that the conservative assumptions used in a HRA are intended to assure that the estimated risks do not underestimate the actual risks posed by a site and that the estimated risks do not necessarily represent actual risks experienced by populations at or near a site.[7]

HAZARDS IDENTIFICATION

California Air Resources Board (CARB) has developed a list of TAC, where a TAC is "an air pollutant which may cause or contribute to an increase in mortality or in serious illness, or which may pose a present or potential hazard to human health (California Health and Safety Code Section 39655). All USEPA hazardous air pollutants are TAC. CARB administers the Air Toxics "Hot Spots" program under Assembly Bill 2588 "Hot Spots" Information and Assessment Act, which requires periodic local review of facilities which emit TAC. Local air agencies periodically must prioritize stationary sources of TAC and prepare health risk assessments for high-priority sources.

Diesel exhaust is a complex mixture of numerous individual gaseous and particulate compounds emitted from diesel-fueled combustion engines. Diesel particulate matter is formed

primarily through the incomplete combustion of diesel fuel. DPM is removed from the atmosphere through physical processes including atmospheric fall-out and washout by rain. Humans can be exposed to airborne DPM by deposition on water, soil, and vegetation; although the main pathway of exposure is inhalation. Cal/EPA has concluded that potential cancer risk from inhalation exposure to whole diesel exhaust outweigh the multi-pathway cancer risk from the speciated components.

In August 1998, the CARB identified DPM as an air toxic. CARB developed the *Risk Reduction Plan to Reduce Particulate Matter Emissions from Diesel- Fueled Engines and Vehicles* and *Risk Management Guidance for the Permitting of New Stationary Diesel-Fueled Engines* and approved these documents on September 28, 2000.[8,9] The documents represent proposals to reduce DPM emissions, with the goal of reducing emissions and the associated health risk by 75 percent in 2010 and by 85 percent in 2020. The program aimed to require the use of state-of-the-art catalyzed DPM filters and ultra-low-sulfur diesel fuel.

In 2001, CARB assessed the state-wide health risks from exposure to diesel exhaust and to other toxic air contaminants. It is difficult to distinguish the health risks of diesel emissions from those of other air toxics, since diesel exhaust contains approximately 40 different TAC. The CARB study detected diesel exhaust by using ambient air carbon soot measurements as a surrogate for diesel emissions. The study reported that the state-wide cancer risk from exposure to diesel exhaust was about 540 per million population as compared to a total risk for exposure to all ambient air toxics of 760 per million. This estimate, which accounts for about 70 percent of the total risk from TAC, included both urban and rural areas in the state. The estimate can also be considered an average worst-case for the state, since it assumes constant exposure to outdoor concentrations of diesel exhaust and does not account for expected lower concentrations indoors, where most of time is spent. Based on 2012 estimates of statewide exposure, DPM is estimated to increase statewide cancer risk by 520 cancers per million residents exposed over a lifetime.[10]

Exposure to DPM results in a greater incidence of chronic non-cancer health effects, such as cough, labored breathing, chest tightness, wheezing, and bronchitis. Individuals particularly vulnerable to DPM are children, whose lung tissue is still developing, the elderly and people with illnesses who may have other serious health problems that can be aggravated by exposure to DPM. In general, children are more vulnerable than adults to air pollutants because they

have higher inhalation rates, narrower airways, and less mature immune systems. In addition, children with allergies may have an enhanced allergic response when exposed to diesel exhaust).

COMMUNITY AIR RISK EVALUATION

The BAAQMD's Community Air Risk Evaluation (CARE) program was initiated in 2004 to evaluate and reduce health risks associated with exposure to outdoor air toxics in the Bay Area. Based on findings of the latest report, diesel particulate matter (DPM) was found to account for approximately 85 percent of the cancer risk from airborne toxics. Carcinogenic compounds from gasoline-powered cars and light duty trucks were also identified as significant contributors: 1,3-butadiene contributed four percent of the cancer risk-weighted emissions, and benzene contributed three percent. Collectively, five compounds—diesel PM, 1,3-butadiene, benzene, formaldehyde, and acetaldehyde—were found to be responsible for more than 90 percent of the cancer risk attributed to emissions. All these compounds are associated with emissions from internal combustion engines. The most important sources of cancer risk-weighted emissions were combustion-related sources of DPM, including on-road mobile sources (31 percent), construction equipment (29 percent), and ships and harbor craft (13 percent). Overall, cancer risk from air toxics dropped by more than 50 percent between 2005 and 2015, when emissions inputs accounted for state diesel regulations and other reductions.[11]

Cancer risks from air toxics in 2005 were highest near sources of DPM: near core urban areas, along major roadways and freeways, and near maritime shipping terminals. Highest cancer risks were found to be located east of San Francisco, near West Oakland, and the maritime Port of Oakland. As a result, BAAQMD identified seven impacted communities in the Bay Area:

- Western Contra Costa County and the cities of Richmond and San Pablo.
- Western Alameda County along the Interstate 880 corridor and the cities of Berkeley, Alameda, Oakland, and Hayward.
- San Jose.
- Eastern side of San Francisco.
- Concord.
- Vallejo.
- Pittsburgh and Antioch.

[11] Bay Area Air Quality Management District, *Improving Air Quality & Health in Bay Area Communities, Community Air Risk Program Retrospective & Path Forward (2004 – 2013)*, April 2014, http://www.baaqmd.gov/~/media/Files/Planning%20and%20Research/CARE%20Program/Documents/CARE_Retrospective_April2014.ashx?la=en

The proposed project is within the city of American Canyon, which is not part of the seven impacted communities. The health impacts in the Bay Area, as determined both by pollution levels and by existing health vulnerabilities in a community, are approximately 160 cancer risk per million persons. In American Canyon, including the project site, the health impacts are approximately 98 cancer risk per million persons.[12]

EXPOSURE ASSESSMENT

Dispersion is the process by which atmospheric pollutants disseminate due to wind and vertical stability. The results of a dispersion analysis are used to assess pollutant concentrations at or near an emission source. The results of an analysis allow predicted concentrations of pollutants to be compared directly to air quality standards and other criteria such as health risks based on modeled concentrations.

A rising pollutant plume reacts with the environment in several ways before it levels off. First, the plume's own turbulence interacts with atmospheric turbulence to entrain ambient air. This mixing process reduces and eventually eliminates the density and momentum differences that cause the plume to rise. Second, the wind transports the plume during its rise and entrainment process. Higher winds mix the plume more rapidly, resulting in a lower final rise. Third, the plume interacts with the vertical temperature stratification of the atmosphere, rising as a result of buoyancy in the unstable-to-neutrally stratified mixed layer. However, after the plume encounters the mixing lid and the stably stratified air above, its vertical motion is dampened.

Molecules of gas or small particles injected into the atmosphere will separate from each other as they are acted on by turbulent eddies. The Gaussian mathematical model such as AERMOD simulates the dispersion of the gas or particles within the atmosphere. The formulation of the Gaussian model is based on the following assumptions:

- The predictions are not time-dependent (all conditions remain unchanged with time)
- The wind speed and direction are uniform, both horizontally and vertically, throughout the region of concern
- The rate of diffusion is not a function of position
- Diffusion in the direction of the transporting wind is negligible when compared to the transport flow

Dispersion Modeling Approach

Air dispersion modeling was performed to estimate the downwind dispersion of DPM exhaust emissions resulting from construction activities. The following sections present the fundamental components of an air dispersion modeling analysis including air dispersion model selection and options, receptor locations, meteorological data, and source exhaust parameters.

Model Selection and Options

AERMOD (Version 19191)[13] was used for the dispersion analysis. AERMOD is the USEPA preferred atmospheric dispersion modeling system for general industrial sources. The model can simulate point, area, volume, and line sources. AERMOD is the appropriate model for this analysis based on the coverage of simple, intermediate, and complex terrain. It also predicts both short-term and long-term (annual) average concentrations. The model was executed using the regulatory default options (stack-tip downwash, buoyancy-induced dispersion, and final plume rise), default wind speed profile categories, default potential temperature gradients, and assuming no pollutant decay.

The selection of the appropriate dispersion coefficients depends on the land use within three kilometers (km) of the project site. The types of land use were based on the classification method defined by Auer (1978); using pertinent United States Geological Survey (USGS) 1:24,000 scale (7.5 minute) topographic maps of the area. If the Auer land use types of heavy industrial, light-to-moderate industrial, commercial, and compact residential account for 50 percent or more of the total area, the USEPA *Guideline on Air Quality Models* recommends using urban dispersion coefficients; otherwise, the appropriate rural coefficients can be used. Based on observation of the area surrounding the project site, rural (urban is only designated within dense city centers such as downtown San Francisco) dispersion coefficients were applied within AERMOD.

Receptor Locations

Some receptors are considered more sensitive to air pollutants than others, because of preexisting health problems, proximity to the emissions source, or duration of exposure to air pollutants. Land uses such as primary and secondary schools, hospitals, and convalescent homes are considered to be relatively sensitive to poor air quality because the very young, the old, and the infirm are more susceptible to respiratory infections and other air quality-related health problems than the general public. Residential areas are also considered sensitive to poor air quality because people in residential areas are often at home for extended periods. Recreational land uses are moderately sensitive to air pollution because vigorous exercise associated with recreation places having a high demand on respiratory system function.

[13] United States Environmental Protection Agency, AERMOD Modeling System, https://www.epa.gov/scram/air-quality-dispersion-modeling-preferred-and-recommended-models

Sensitive receptors were placed at existing residences and schools to estimate health impacts due to proposed project construction and operations. A residential receptor is located, within 1,000 feet of the project site to the east. Sensitive receptors were also placed at the Napa Junction Elementary School and the residential neighborhood to the southeast of the project site. **Figure 1** displays the location of the sensitive receptors used in this HRA. **Figure 1** also shows the delivery truck route, loading dock, as well as the project site and borrow site. Additionally, existing residences are located along Green Island Road, the delivery truck route, and were also included in the HRA. Receptors were placed at a height of 1.8 meters (typical breathing height). Terrain elevations for receptor locations were used based on available USGS information for the area.

FIGURE 1
HEALTH RISK ASSESSMENT RECEPTORS

Meteorological Data

Hourly meteorological data from Napa County Airport (surface data), located approximately four miles to the northwest of the proposed project, and Oakland International Airport (upper air) were used in the dispersion modeling analysis. Meteorological data from 2010 through 2014 were used.[14] **Figure 2** displays the annual wind rose. Wind directions are predominately from the south-southwest with a moderate frequency of calm wind speed conditions (approximately 20 percent), as shown in **Figure 3**. The average annual wind speed is 7.7 miles per hour.

Source Release Characteristics

Construction equipment activities were treated as an area source. The release height of the off-road equipment exhaust was 3.05 meters and an initial vertical dimension of 4.15 meters. Delivery trucks were treated as a line source (i.e., volume sources placed at regular intervals) located along an access road. Delivery trucks were assigned a release height of 3.05 meters and an initial vertical dimension of 4.15 meters, which accounts for dispersion from the movement of vehicles.[15] Loading dock activities were also treated as an area source with a release height of 3.05 meters. Fugitive dust-generating activities were treated as an area source. The release height of the fugitive dust was 0.0 meters (0.0 feet) and an initial vertical dimension of 1.0 meter.[16]

Typically, construction activities and operations would occur between 8 a.m. and 5 p.m. (ten hours per day), on Monday through Friday. Terrain elevations for emission source locations were used based on available USGS DEM for the area. AERMAP (Version 18081)[17] was used to develop the terrain elevations.

---

[14] California Air Resources Board, Air Dispersion Modeling and Risk Tool Meteorological Files, October 5, 2015. https://www.arb.ca.gov/toxics/harp/metfiles2.htm

[15] While delivery truck emissions contribute to overall project emissions, they are spread over many miles. Hence, the portion of trucking emissions that would impact one receptor is much smaller than the emissions that the clustered off-road construction activity at the project site would impact a receptor near the site. For example, the DPM emissions from truck travel within 1,000 feet of the project are less than 1 percent of the total off-road DPM emissions.

EXPOSURE PARAMETERS

This HRA was conducted following methodologies in OEHHA's *Air Toxics Hot Spots Program Guidance Manual for Preparation of Health Risk Assessments*.[18] This was accomplished by applying the estimated concentrations at the receptors analyzed to the established cancer risk estimates and acceptable reference concentrations for non-cancer health effects.

OEHHA's revisions to its *Guidance Manual* were primarily designed to ensure that the greater sensitivity of children to cancer and other health risks is reflected in HRAs. For example, OEHHA now recommends that risks be analyzed separately for multiple age groups, focusing especially on young children and teenagers, rather than the past practice of analyzing risks to the general population, without distinction by age. OEHHA also now recommends that statistical "age sensitivity factors" be incorporated into a HRA, and that children's relatively high breathing rates be accounted for. On the other hand, the *Guidance Manual* revisions also include some changes that would reduce calculated health risks. For example, under the former guidance, OEHHA recommended that residential cancer risks be assessed by assuming 70 years of exposure at a residential receptor; under the *Guidance Manual*, this assumption is lessened to 30 years.

OEHHA has developed exposure factors (e.g., daily breathing rates) for six age groups including the last trimester to birth, birth to 2 years, 2 to 9 years, 2 to 16 years, 16 to 30 years, and 16 to 70 years. These age bins allow for more refined exposure information to be used when estimating exposure and the potential for developing cancer over a lifetime. This means that exposure variates are needed for the third trimester, ages zero to less than two, ages two to less than nine, ages two to less than 16, ages 16 to less than 30, and ages 16 to 70. Residential receptors utilize the 95th percentile breathing rate values. The breathing rates are age-specific and are 1,090 liters per kilogram-day for ages less than 2 years, 745 liters per kilogram-day for ages 2 to 16 years, 335 liters per kilogram-day for ages 16 to 30 years, and 290 liters per kilogram-day for ages 30 to 70 years. A school child breathing rate is 520 liters per kilogram-day and an off-site worker breathing rate is 230 liters per kilogram-day.

OEHHA developed age sensitivity factors (ASF) to consider the increased sensitivity to carcinogens during early-in-life exposures. OEHHA recommends that cancer risks be weighted by a factor of 10 for exposures that occur from the third trimester of pregnancy to 2 years of age, and by a factor of 3 for exposures from 2 years through 15 years of age.

Based on OEHHA recommendations, the cancer risk to residential receptors assumes exposure occurs 24 hours per day for 350 days per year while accounting for a percentage of time at home. OEHHA evaluated information from activity pattern databases to estimate the fraction of

[18] Office of Environmental Health Hazard Assessment, *Air Toxics Hot Spots Program Guidance Manual for Preparation of Health Risk Assessments*, March 6, 2015. http://oehha.ca.gov/air/hot_spots/hotspots2015.html

time at home (FAH) during the day. This information was used to adjust exposure duration and cancer risk based on the assumption that a person is not present at home continuously for 24 hours and therefore exposure to emissions is not occurring when a person is away from their home. In general, the FAH factors are age-specific and are 0.85 for ages less than 2 years, 0.72 for ages 2 to 16 years, and 0.73 for ages 30 to 70 years.

OEHHA has decreased the exposure duration currently being used for estimating cancer risk at the maximum exposed individual resident from 70 years to 30 years. This is based on studies showing that 30 years is a reasonable estimate of the 90th to 95th percentile of residency duration in the population.

Given the exposure durations of less than 24 hours, sensitive recreational receptors were evaluated for acute impacts only. Based on OEHHA recommendations, for children at school sites, exposure is assumed to occur 10 hours per day for 180 days (or 36 weeks) per year. Cancer risk estimates for children at school sites are calculated based on 9-year exposure duration. School sites also include teachers and other adult staff which are treated as off-site workers.

RISK CHARACTERIZATION

Cancer risk is defined as the lifetime probability of developing cancer from exposure to carcinogenic substances. Cancer risks are expressed as the chance in one million of getting cancer (i.e., number of cancer cases among one million people exposed). The cancer risks are assumed to occur exclusively through the inhalation pathway. The cancer risk can be estimated by using the cancer potency factor (milligrams per kilogram of body weight per day [mg/kg-day]), the 30-year annual average concentration (microgram per cubic meter [μg/m^3]), and the lifetime exposure adjustment.

Following guidelines established by OEHHA, the incremental cancer risks attributable to the proposed project were calculated by applying exposure parameters to modeled DPM concentrations in order to determine the inhalation dose (mg/kg-day) or the amount of pollutants inhaled per body weight mass per day. The cancer risks occur exclusively through the inhalation pathway; therefore, the cancer risks can be estimated from the following equation:

$$\text{Dose-inh} = \frac{C_{air} * \{DBR\} * A * ASF * FAH * EF * ED * 10^{-6}}{AT}$$

where:

Dose-inh = Dose of the toxic substance through inhalation in mg/kg-day

10^{-6} = Micrograms to milligrams conversion, Liters to cubic meters conversion

C_{air} = Concentration in air in microgram (μg)/cubic meter (m^3)

{DBR} = Daily breathing rate in liter (L)/kg body weight – day

A = Inhalation absorption factor, 1.0

ASF = Age Sensitivity Factor

EF = Exposure frequency (days/year)

ED = Exposure duration (years)

FAH = Fraction of Time at Home

AT = Averaging time period over which exposure is averaged in days (25,550 days for a 70-year cancer risk)

To determine incremental cancer risk, the estimated inhalation dose attributed to the proposed project was multiplied by the cancer potency slope factor (cancer risk per mg/kg-day). The cancer potency slope factor is the upper bound on the increased cancer risk from a lifetime exposure to a pollutant. These slope factors are based on epidemiological studies and are different values for different pollutants. This allows the estimated inhalation dose to be equated to a cancer risk.

Non-cancer adverse health impacts, acute (short-term) and chronic (long-term), are measured against a hazard index (HI), which is defined as the ratio of the predicted incremental exposure concentration from the proposed project to a published reference exposure level (REL) that could cause adverse health effects as established by OEHHA. The ratio (referred to as the Hazard Quotient [HQ]) of each non-carcinogenic substance that affects a certain organ system is added to produce an overall HI for that organ system. The overall HI is calculated for each organ system. If the overall HI for the highest-impacted organ system is greater than one, then the impact is significant.

The HI is an expression used for the potential for non-cancer health effects. The relationship for the non-cancer health effects is given by the annual concentration (in $\mu g/m^3$) and the REL (in $\mu g/m^3$). The acute hazard index was determined using the "simple" concurrent maximum approach, which tends to be conservative (i.e., overpredicts).

The relationship for the non-cancer health effects is given by the following equation:

$$HI = C/REL$$

Where:

HI = Hazard index; an expression of the potential for non-cancer health effects.

C = Annual average concentration ($\mu g/m^3$) during the 70-year exposure period.

REL = Concentration at which no adverse health effects are anticipated.

The chronic REL for DPM was established by the California OEHHA as 5 μg/m^3.[19] There is no acute REL for DPM.

CITY COUNCIL AGENDA
JULY 20, 2021

STAFF REPORT
CONSENT
ITEM NUMBER: 17.

TITLE

Citywide Landscaping Lighting and Assessment District Fiscal Year 2021/2022 Annual Engineer's Report

RECOMMENDATION

Adopt a Resolution preliminarily approving the 2021/22 Annual Engineer's Report, declaring the intention to levy and collect annual assessments, and setting the Public Hearing for consideration of the American Canyon Landscaping and Lighting Assessment District assessments for Fiscal Year 2021/22 for July 20, 2021, at 6:30 p.m. in the Council Chambers.

CONTACT

Erica Smithies, Public Works Director, 707-647-4366, esmithies@ cityofamericancanyon.org

BACKGROUND & ANALYSIS

This item is for Council's consideration regarding the American Canyon Landscaping and Lighting Assessment District (LLAD). Harris & Associates is the Assessment Engineer for the American Canyon LLAD. In that role, they have prepared the 2021/22 Annual Engineer's Report (Attachment 2). The annual filing of an Engineer's Report is required by the Landscaping & Lighting Act of 1972. Proposed adjustments to the annual assessments are described below.

Staff is requesting City Council to initiate proceedings, preliminarily approve the Fiscal Year 20/21 Annual Engineer's Report, declare the intention to levy and collect assessments, and set the Public Hearing for consideration of the American Canyon Landscaping and Lighting Assessment District assessments for Fiscal Year 2021/22 for July 20, 2021, at 6:30 p.m. in the Council Chambers.

The American Canyon LLAD is divided into three (3) zones:

Zone 1

In January 2001, the City Council approved the formation of the LLAD. At the time, the purpose of the LLAD was to operate and maintain facilities constructed within the La Vigne subdivision. This area of the LLAD is known as Zone 1. The annual work associated with maintaining the facilities within Zone 1 includes operation and maintenance of landscaping in public areas, pedestrian paths, the streetscape of Via Bellagio, and the park areas. Also included are the operation and maintenance of the streetlights within the neighborhood.

Zone 2

Zone 2 encompasses the Vintage Ranch subdivision and includes operation and maintenance of parks, environmentally sensitive areas, bike trails, streetscape, water basins, fencing, walls, street lighting, and a portion of traffic signals within the subdivision.

Zone 3

Zone 3 encompasses the Napa Junction mixed-use development consisting of phases I, II & III which includes the operation and maintenance of landscaping, streetscape, bikeways, water basins, park areas, fencing, street lighting and a portion of traffic signals serving the development. It also includes mowing the frontage along Highway 29 between Rio Del Mar and Napa Junction Road.

Assessment Methodology

The Report includes a description of each zone in the LLAD, any proposed changes to the zones, the opposed costs to operate and maintain the improvements, the method of apportionment (spread) of the assessments, the assessment roll for all parcels, and the assessment diagrams (maps). As mentioned above, there will be no annexations to the LLAD this fiscal year.

Assessment Calculation

The activities described in the report are paid for by assessments on parcels that derive special benefit from the amenities located within the LLAD. The assessments are updated annually in order account for changes in maintenance budgets and changes in development patterns. Staff has verified the proposed FY 2021/22 assessments do not exceed the maximum assessment allowed. The table below illustrates all of the proposed FY 2021/22 assessments:

	Actual FY 2019/20 Assessment	Actual FY 2020/21 Assessment	**Proposed FY 2021/22 Assessment**	Maximum FY 2021/22 Assessment
Zone 1	$400.00	$400.00	**$400.00**	$626.20
Zone 2	$302.40	$302.40	**$302.40**	$959.87
Zone 3	$1,022.01/acre ($207.56/unit)	$1,022.01/acre ($207.56/unit)	**$1,022.01/acre ($207.56/unit)**	$2,117.54/acre ($351.04/unit)

Zone 1

The proposed assessment remains the same as FY 2020/21. The La Vigne subdivision is more than 15 years old and many facilities within it require repair and replacement and funds that will need to be accumulated to account for those additional costs.

Zone 2

The proposed assessment remains the same as FY 2020/21. Parts of the subdivision are ten years old and many facilities are approaching the end of their useful life. Included in the Capital Expenditure Plan is the last of the planned recycled water conversions, consisting of installing a

booster pump to irrigate the turf around the old fountain area with recycled water and renovation of the ROW landscaping along the western side of Newell Drive. Ultimately, this will assist in the overall water conservation efforts that have been undertaken in the last three years.

Zone 3

The proposed assessment remains the same as FY 2020/21. The budget is based on current landscaping contracts, expected increases in landscaping contracts based on preliminary bids, historical cost review, and professional estimates of labor efforts required to maintain the facilities. It also includes tree pruning, and the next phase of the basin modification project, and/or improvements related to split rail fencing associated with Napa Junction Phase III.

All Zones

It is proposed that there be no assessment increase for 2021/22. However, a draft Capital Reserve and Replacement study was completed for all zones during the 2020/21 fiscal year and will be used to project future assessments by Zone beginning in FY 2022/23. Staff will be finalizing the study and engaging the community later this calendar year for input prior to bringing the study to City Council.

COUNCIL PRIORITY PROGRAMS AND PROJECTS

Organizational Effectiveness: "Deliver exemplary government services."

FISCAL IMPACT

There is no General Fund impact by this action. All costs associated with the annual proceedings and the operation, maintenance, and administration of the Assessment District improvements are recovered from the assessments levied and collected on the parcels within each zone.

The total proposed Assessment District budget for FY 2021/22 for all three Zones is $612,156. Funding for this budget is proposed to include $480,999 from FY 2021/22 assessment revenues levied and collected, $137,512 contributed to operating reserves and $6,355 taken from capital reserves. No General Fund contributions are proposed.

A more detailed budget for each zone showing the prior year's expenses and projections for the next two fiscal years is shown in the attached Engineer's Report for FY 2021/22. This is done to provide each zone's property owners with information on trends and potential upcoming expenses, including planned capital expenditures.

ENVIRONMENTAL REVIEW

15378(b) - The action is not a "Project" subject to the California Environmental Quality Act ("CEQA") because it does not qualify as a "Project" under Public Resources Code Sections 21065 and 21080 and in Section 15378(b) of Title 14 of the California Code of Regulations.

ATTACHMENTS:

1. Resolution - Lighting Assessment District (LLAD)

2. Exhibit A - 2021/22 Annual Engineer's Report

RESOLUTION NO. 2021-_____

A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF AMERICAN CANYON APPROVING THE 2021/2022 ENGINEER'S REPORT FOR THE AMERICAN CANYON LANDSCAPING AND LIGHTING ASSESSMENT DISTRICT, APPROVING THE BUDGETS WITHIN THE ENGINEER'S REPORT, CONFIRMING THE ASSESSMENT DIAGRAM AND THE ANNUAL ASSESSMENT AMOUNTS, AND AUTHORIZING THE LEVY AND COLLECTION OF ANNUAL ASSESSMENTS FOR FISCAL YEAR 2021/2022.

WHEREAS, the City Council of the City of American Canyon ordered the formation of the American Canyon Landscaping and Lighting Assessment District (LLAD) in 2001 in order to levy and collect assessments pursuant to the Landscaping and Lighting Act of 1972 (Streets and Highways Code Section 22500 et. seq.); and

WHEREAS, the City Council intends to levy and collect assessments within the American Canyon LLAD during Fiscal Year 2021/2022; and

WHEREAS, the Engineer of Work has prepared and filed with the City Clerk the Fiscal Year 2021/2022 Engineer's Report for the Assessment District as required by the Landscaping and Lighting Act of 1972 outlining the proposed budgets, the proposed improvements, and/or changes to the Assessment District in order to levy and collect assessments during any following fiscal year; and

WHEREAS, all interested persons are referred to the Fiscal Year 2021/2022 Engineer's Report for a full and detailed description of the improvements, the proposed operation and maintenance costs, the boundaries of the Assessment District, and the proposed assessments upon assessable lots or parcels of land within the Assessment District boundaries; and

WHEREAS, on June 15, 2021, the City Council adopted a Resolution of Intention to levy and collect annual assessments for Fiscal Year 2021/2022, preliminarily approved the annual Engineer's Report for Fiscal Year 2021/2022, and set the time and date of the public hearing pursuant to Section 22624 of the Streets and Highways Code; and

WHEREAS, for Fiscal Year 2021/2022, the proposed annual assessment is $400.00 per Equivalent Single-Family Dwelling Unit (ESD) for all properties within Zone 1; and

WHEREAS, for Fiscal Year 2021/2022, the proposed annual assessment is $302.42 per ESD for all properties within Zone 2; and

WHEREAS, for Fiscal Year 2021/2022, the proposed annual assessment is $207.56 per ESD and $1,022.01 per acre of commercial property for all properties within Zone 3; and

WHEREAS, this Resolution is adopted pursuant to Section 22620 of the California Streets and Highways Code; and

WHEREAS, on July 20, 2021, the City Council held the public protest hearing and gave persons the opportunity to protest the Fiscal Year 2021/2022 Engineer's Report, either in writing or orally, and the City Council has fully heard and considered all matters and things pertaining to the levy and collection of the proposed assessments.

NOW THEREFORE, BE IT RESOLVED that in accordance with the requirements of Section 22631 of the California Streets and Highways Code, the City Council of the City of American Canyon hereby:

1. Approves the Fiscal Year 2021/2022 Annual Engineer's Report, attached hereto as Exhibit A and incorporated herein, for the Landscaping and Lighting Assessment District as prepared and filed.

2. Approves the budgets for each of the three zones within the Engineer's Report.

3. Confirms the assessment diagram and assessment as set forth in the Annual Engineer's Report or as modified as allowed by the City Council.

5. Authorizes the levy and collection of annual assessments for Fiscal Year 2021/2022 as set forth in said report for Landscaping and Lighting Assessment District Zone 1 - LaVigne Subdivision, Zone 2 - Vintage Ranch Subdivision, and Zone 3 – Napa Junction Mixed Use Development.

PASSED, APPROVED AND ADOPTED at a regular meeting of the City Council of the City of American Canyon on the 20th day of July, 2021, by the following vote:

AGENCY: **THE CITY OF AMERICAN CANYON**

PROJECT: **CITY OF AMERICAN CANYON LANDSCAPE AND LIGHTING ASSESSMENT DISTRICT**

TO: **THE CITY COUNCIL OF THE**
CITY OF AMERICAN CANYON
STATE OF CALIFORNIA

ENGINEER'S REPORT FOR FISCAL YEAR 2021-22

The preparation of this Annual Engineer's Report ("Report") is in conformance with the obligation of the City Council for the American Canyon Landscape and Lighting Assessment District of the City of American Canyon to provide landscaping services upon each lot or parcel of land in the district in proportion to the estimated benefit to be received by each such lot or parcel of land for Fiscal Year 2021-22.

Pursuant to the Landscaping and Lighting Act of 1972 (Part 2 Division 15 of the Streets and Highways Code of the State of California, commencing with Section 22500) ("Act"), Article XIIID, Section 4(a) of the State of California Constitution, and in accordance with the City of American Canyon's Resolution being adopted by the City Council for:

CITY OF AMERICAN CANYON LANDSCAPE AND LIGHTING ASSESSMENT DISTRICT

(Hereinafter referred to as the "District"),

I, Alison Bouley, authorized representative of the District, the duly appointed Assessment Engineer submit the following Report which consists of the following four (4) parts and Appendices:

PART I

Description of Improvements: This part provides a general description of improvements proposed to be maintained in the District. Plans and specifications for the improvements are on file with the District Engineer.

PART II

Estimate of Cost: This part contains the cost estimate of the proposed maintenance including incidental costs and expenses for Fiscal Year 2021-22.

PART III

Method of Apportionment of the Assessments: This part describes the method of apportionment of assessments, based upon parcel classification of land within the District in proportion to the estimated special benefits to be received. The costs and expenses of the District have been assessed upon the parcels of land within the boundaries of District pursuant to the initial methodology established at the time of formation, in 2001. For particulars as to the identification of parcels, reference is made to the District Diagram.

Appendices

Appendix A – Assessment Diagrams for the District
Appendix B – Assessment Roll

In conclusion, it is my opinion that the costs and expenses of the District have been assessed to the lots and parcels within the boundaries of the District in proportion to the estimated benefits to be received by each lot or parcel from the services provided.

PART I – PLANS AND SPECIFICATION

Plans and Specifications

PURPOSE

The purpose of this report is to set forth findings and the engineering analysis for the American Canyon Landscaping & Lighting District, City of American Canyon (City), for the subject year as directed by the City Council of the City of American Canyon (City Council), pursuant to Section 22620 of the Streets & Highways Code (Landscaping & Lighting Act of 1972) and Articles XIII C and D of the California State Constitution (Proposition 218).

BACKGROUND

The American Canyon Landscaping & Lighting Assessment District (Assessment District) was formed in January 2001 to provide a dedicated source of funds to cover the costs associated with the operation and maintenance of landscaping and lighting improvements which provide a special benefit to the parcels within the La Vigne Subdivision (Zone 1). Both Proposition 218 and the Landscape and Lighting Act of 1972 require that the Engineer's Report approved at the time of formation for the District establish a method of assessment, a maximum assessment amount, and any escalation factors that will be used to allow the annual assessments to keep pace with inflation. In order to take inflation into account, the 2001 formation proceedings allowed assessments to be escalated in accordance with the All Urban Consumers (San Francisco Area) CPI from the U. S. Department of Labor, Bureau of Labor Statistics. Maximum Assessments may be increased annually by the approved inflation factor without the need to provide notices and assessment ballots to property owners within the Assessment District. However, if the City proposes increasing maximum assessments in an amount above the approved inflation factor, it must conduct an assessment balloting process in accordance with Proposition 218.

Once an Assessment District is created, it is possible to annex new zones or annex new areas into existing zones as new subdivisions are developed and new facilities require maintenance. Since 2001, the Vintage Ranch Subdivision (Zone 2) and the Napa Junction Mixed Use Development (Zone 3) have been annexed into the Assessment District. In July of 2020, the Villages at Vintage Ranch, a 159 unit apartment complex was annexed into Zone 2. The same CPI escalator provision was also approved for these zones at the time they were annexed to the Assessment District.

The Landscaping & Lighting Act of 1972 requires that an Engineer's Report be prepared and adopted by the City Council each year, in order to levy and collect assessments in any following fiscal year. The City Council has appointed Harris & Associates as the Engineer of Work and directed the preparation and filing of this 2021-22 Annual Engineer's Report.

The 2021-22 Engineer's Report outlines the facilities to be maintained, the budgets proposed for this maintenance, and the assessments necessary to support these budgets. This Engineer's Report documents any land use changes in the zones (i.e. new subdivisions) and any proposed annexations. This Engineer's Report calculates the maximum allowable assessment for each zone based on the annual CPI escalator percentage (1.72%) and provides clear confirmation that the proposed assessments do not exceed the approved maximum including adjustments for inflation for each zone.

The table below summarizes the maximum annual assessments allowed in Zones 1, 2 and 3, including the CPI increase, and compares these to the assessments proposed to be levied and collected in Fiscal Year (FY) 2020-21. As shown, the proposed assessment within each Zone is less than the Maximum Assessment allowed, thus Proposition 218 balloting is not required in any zone.

Zone	FY 2020-21 Maximum Assessment (1)	Allowable CPI (2) Increase	FY 2021-22 Maximum Assessment	Preliminary FY 2021-22 Annual Assessment	Final FY 2021-22 Annual Assessment
Zone 1	$615.60	$10.60	$626.20	$400.00	
Zone 2	$943.62	$16.25	$959.87	$302.42	
Zone 3 - ESD	$345.10	$5.94	$351.04	$207.56	
Zone 3 - Acre	$2,081.69	$35.85	$2,117.54	$1,022.01	

Notes:

1 Refer to "FY 2020-21 Annual Engineer's Report".

2 United States Department of Labor, Bureau of Statistics, All Urban Consumers CPI (San Francisco Area), Annual average 2019 to 2020 = 1.72%.

The total proposed Assessment District budget for FY 2021-22 for all three Zones is $612,156. Funding for this budget is proposed to include $480,999 from FY 2021-22 assessment revenues levied and collected, $137,512 contributed to operating reserves and $6,355 taken from capital reserves. No General Fund contributions are proposed.

FACILITIES

ZONE 1 – LA VIGNE

Improvements Maintained

Zone 1 provides for funding for the following improvements, illustrated on the Zone 1 Assessment Diagram found in Appendix A:

1. The maintenance and operation including repair, replacement, and servicing of street light standards, luminaries, wiring and appurtenances necessary to provide street lighting within Zone 1.

2. The installation, maintenance and operation to include repair, replacement and servicing of street trees, shrubs, planting and irrigation systems together with earth berms, slopes, curbs, root deflectors, decorative paving, masonry walls and concrete or wood appurtenances, all as delineated on the improvements plans for A.P.N. 059-100-006 prepared by Carlson, Barbee & Gibson, Inc. dated June 1, 1999 or as specified in the City of American Canyon Public Works Department, Engineering Division Standard Details and Specifications. Specifically this work includes the following:

- Along the entire north side of Parcel A: landscaping and the public walkway adjacent to the creek running through La Vigne subdivision.
- Parcel B: landscape right-of-way area along east side of Flosden Road including the median area directly adjacent to parcel B; landscape and park area north of Parcel A and south of the north Via Bellagio entry including the entry monument and the median area in Via Bellagio and special amenities.
- Parcel C: landscape right-of-way area along east side of Flosden Road including the median area directly adjacent to Parcel C; landscaping and detention basin including entry monument and special amenities and the median area within Via Bellagio.
- Parcel D: landscape right-of-way area along east side of Flosden Road, including the median area directly adjacent to Parcel D; landscaping and sound wall west of Parcel J including entry monument and special amenities.
- Parcel E: landscape right-of-way area along east side of Flosden Road including the median area directly adjacent to Parcel E and right-of-way area along south side of American Canyon Road to Via Firenze; median landscape areas within Via Firenze at the intersection of American Canyon Road, landscaping and sound wall north and west of La Vigne Unit 1 including entry monuments and special amenities.
- Parcel F: landscape right-of-way area along south side of American Canyon Road to the wetlands restoration area, asphalt and DG trail, sound wall and landscape area north of Parcel F, entry monuments, and special amenities.
- Parcel G: Asphalt trail extending from Parcel F to southern subdivision boundary.
- Parcel H: special amenities and landscape within park site, "Via Bellagio Park".
- Parcel K: special amenities and landscape within park site, "Pelleria Park".
- Via Bellagio including the entire length of the landscape right-of-way area from back of curb to face of sidewalk including ancillary medians that intersect Via Bellagio from adjoining parcels and neighborhoods. Entry monuments are not included as they are noted in other parcel descriptions.

Prior to the (FY 2013-14) Engineer's Report, property owners within Zone 1 believed that there had been inconsistent information regarding Zone 1's responsibility of funding the maintenance of certain improvements located within parcels A, F, & G, or portions thereof.

In an attempt to provide clarity and finality to the issue, City Staff in collaboration with the City Attorney, performed an exhaustive records search of a variety of documentation regarding the specific improvements to be maintained by the District and the financial obligations of property owners within Zone 1 of the LLAD. Several property owners within Zone 1 did not agree with the findings made by the City Attorney as to the maintenance funding responsibilities for certain improvements located within parcels A, F, & G. With the desire to provide closure to this issue, the City and Zone 1 property owners agreed to have a mutually agreed upon neutral third party (William Abbott of Abbott & Kindermann, LLP) review the documents and the findings of the City Attorney.

Because the funding responsibility for certain improvements located within parcels A, F, & G were in dispute, no funds were included in the Zone 1 budget for FY 2013-14 for the maintenance of the disputed facilities by the District.

A memorandum was issued by Mr. Abbott dated December 3, 2013 that summarized the background and issues he was tasked to evaluate and make findings on. The memo concluded that "the documentation in 2001 supports the City's interpretation that maintenance of the trails on parcels A, F, and G were in included within the purposes of the district assessment in 2001." Based on these findings, this report and all future engineers' reports will include the necessary improvements associated with parcels A, F, and G, and the corresponding budget line items for maintenance and/or replacement.

The assessments collected in the Zone may also fund any and all incidental expenses in connection therewith, all as more particularly authorized pursuant to the Landscaping and Lighting Act.

Property Assessed

Zone 1 is built out and no new annexations are proposed for FY 2021-22. Zone 1 has 466.0 Equivalent Single Family Dwelling (ESD) units, the same as last year.

Proposed Budgets

All Zone 1 improvements have been completed and accepted. The total proposed Zone 1 budget (Total Expenses) for FY 2021-22 is $133,000. This budget is based on current landscaping contracts, expected increases in landscaping contracts based on preliminary bids, historical cost review, and professional estimates of labor efforts required to maintain the facilities. The proposed funding will be $186,400 from FY 2021-22 assessments, and $0.00 from available reserves. No general fund contributions are proposed.

A Capital Reserve and Replacement study was completed during the 2020-21 fiscal year to identify the increased services to be provided and to determine the annual costs to be assessed to the property owners. In preparation for those increased service levels, the assessment will need to be increased at some point in the future, but it is proposed that there be no increase for 2021-22. The Capital Reserve and Replacement study mentioned above will also be used to project future assessments for the Zone, and funds will need to be accumulated to account for those additional costs.

Proposed Assessments

The proposed Zone 1 annual assessment rate to levy and collect is proposed to be $400.00 per ESD. The new maximum annual assessment for Zone 1 is $626.20 per ESD including the allowed 1.72% CPI increase.

ZONE 2 – VINTAGE RANCH

Improvements Maintained

Zone 2 provides funding for the maintenance of landscaping, public walkways, creeks and their related improvements, creek trails, water quality basins and ponds, streetscapes, Class 1 bikeways, walls and fences, maintenance and electricity of street lighting, a portion of intersection traffic signals, and parks within Vintage Ranch. The Assessment

Diagram in Appendix A illustrates the location of these improvements including:

- Silver Oak Park, "LOT A"
- Shenandoah Park, "LOT H"
- PG&E Linear Park, "LOT F"
- Environmentally sensitive areas located on Lots A, C, D, G & in setback areas and ponds [1]
- The Creek Trail System along the south side of the tract, north of parcel C
- Streetscapes within Vintage Ranch, including landscaped areas at the end of Farentino and the end of the Newhall right-of-way (at the dead end)
- The Class 1 Bikeway on Newell Drive
- Fence and Wall Maintenance
- Water Quality Basins 1, 2, 3 & 4
- Street Lighting
- 25% of the traffic signals at Flosden and American Canyon Road; Silver Oak and American Canyon Road, Newell and Silver Oak, and Donaldson and Highway 29

The assessments collected may also fund any and all incidental expenses in connection therewith, all as more particularly authorized pursuant to the Landscaping and Lighting Act of 1972.

Property Assessed

The FY 2021-22 assessments are proposed to be levied on 860.40 ESD units, which remain unchanged from the ESD units included in the FY 2020-21 assessment roll as this zone is fully developed. Part III provides additional discussion and findings related to the benefits provided by the zone and the parcels that receive these benefits.

In Fiscal Year 2020-21, the Villages at Vintage Ranch, a 159 unit apartment complex on the northeast corner of American Canyon Road and Highway 29, was annexed into Zone 2 of the LLAD. This annexation increased the Zone ESD by 95.40, bring the total Zone ESD to 860.40 beginning in 2020-21 as mentioned above.

Proposed Budgets

The total proposed Zone 2 budget (Total Expenses) for FY 2021-22 is $244,700. This budget is based on current landscaping contracts and expected increases based on preliminary bids, historical cost review, and professional estimates of labor efforts required to maintain the facilities. Included in the Capital Expenditure Plan is the last of the planned recycled water conversions, consisting of installing a booster pump to irrigate the turf around the old fountain area with recycled water and renovation of the ROW landscaping along the western side of Newell Drive. Ultimately, this will assist in the overall water conservation efforts that have been undertaken in the last three years.

The proposed funding will be $260,202 from FY 2021-22 assessments, and $0.00 from available reserves. No general fund contributions are proposed. The proposed budget includes the full year maintenance funding for all facilities including the Environmentally Sensitive Areas.

A Capital Reserve and Replacement study was completed during the 2020-21 fiscal year to identify the need for any increased services to be provided and to determine the annual costs to be assessed to the property owners. The Capital Reserve and Replacement study will also be used to project future assessments for the Zone.

Proposed Assessments

The assessment rate is not proposed to increase for FY 2021-22 based upon the estimated maintenance costs and anticipated, future capital replacement costs. The proposed Zone 2 annual assessment to levy and collect is $302.42. The new maximum assessment is $959.87 including the allowed 1.72% CPI increase.

ZONE 3 – NAPA JUNCTION MIXED USE PROJECT

Improvements Maintained

Zone 3 maintains landscaping, streetscape, bikeways, water basins, park areas, fencing, street lighting and traffic signals within the Napa Junction Mixed Use Project. The Assessment Diagram in Appendix A illustrates the location of these improvements specifically:

- Streetscapes
- Class 1 Bikeways
- Highway 29 Ditch (Water Quality Basin 1)
- Small Park (Water Quality Basin 3)
- Street Lighting
- 25% of the traffic signal at Eucalyptus and Highway 29
- Caltrans right-of-way maintenance along the westerly border of the zone adjacent to the Napa Junction Phase I & II commercial development
- Improvements along the north and south sides of Napa Junction Road as part of the Napa Junction III development
- Multi-Use path/utility access road along the western property line of the Napa Junction III development
- Parcel 4 – Open space and Wetlands parcel*

The assessments collected may also fund any and all incidental expenses in connection therewith, all as more particularly authorized pursuant to the Landscaping and Lighting Act of 1972.

Property Assessed

During the annexation proceedings for Zone 3, it was determined the benefits received from certain improvements would be more equitably spread by the acreage, or portion thereof, of each parcel while the benefits received from certain other improvements would be more equitably spread by Equivalent Single Family Dwelling (ESD) units.

Zone 3 therefore, has a two-part assessment formula that includes both ESD units and Acres. The Method of Apportionment of Assessment (Part C) includes a complete description of the methodology used to calculate assessments.

The FY 2021-22 assessments are proposed to be levied on 570.92 ESD units which is the same number of units reported in FY 2020-21 final Report. The FY 2021-22 assessments are proposed to be levied on 46.40 acres which is the same number of acres from FY 2020-21 final Report. No annexations are proposed for FY 2021-22.

A mixed use (multi-family residential/commercial) development (commonly referred to as Napa Junction III), Assessor Parcel Number (APN) 059-020-001-000 was annexed into Zone 3 during the FY 2015-16 annual assessment process. It will be a phased development with street lighting and landscaping improvements to be serviced as a part of the overall Zone 3 budget. Because there were improvements in place to maintain during FY 2016-17, these new parcels were assessed the same rate as those within Napa Junction I & II beginning in FY 2016-17.

Proposed Budgets

The total proposed Zone 3 budget for FY 2020-21 is $103,300. This budget is based on current landscaping contracts, expected increases in landscaping contracts based on preliminary bids, historical cost review, and professional estimates of labor efforts required to maintain the facilities. It also includes tree pruning, and the next phase of the basin modification project, and/or improvements related to split rail fencing associated with Napa Junction Phase III. The proposed funding will be $165,553 from FY 2021-22 assessments and $0.00 from available reserves. No general fund contributions are proposed.

A Capital Reserve and Replacement study was completed during the 2020-21 fiscal year to identify the need for any increased services to be provided and to determine the annual costs to be assessed to the property owners. The Capital Reserve and Replacement study will also be used to project future assessments for the Zone.

Proposed Assessments

The proposed annual assessment to levy and collect for each parcel within Zone 3 is $1,022.01 per acre or portion thereof plus $207.56 per ESD. The new maximum assessment is $2,117.54 per acre or portion thereof and $351.04 per ESD. The new maximum assessments include the allowed 1.72% CPI increase.

PART II – COST ESTIMATE

Cost Estimate

The attached sheets include the budgets for FY 2021-22 for all those costs associated with the operation and maintenance in Zones 1, 2, and 3 within the Assessment District. The budget format has been modified to more closely match the format of the City's Annual Budget. The total budget summary for FY 2021-22 for the Assessment District is as follows:

	As Preliminarily Filed with City	As Presented at Public Hearing
Zone 1 Budget	$147,000	
Zone 2 Budget	$252,700	
Zone 3 Budget	$77,540	
Operating Reserve Contributions	$151,271	
Capital Reserve Contributions	($16,355)	
Balance to Assessment	$612,156	

The planned capital expenditures for each Zone for Fiscal Year 2021-22 are shown in the budget for each Zone and will be funded using the available Capital Reserve Funds for that Zone.

The budgets shown on the following pages for each Zone reflect the FY 2019-20 Actual Budgets, the FY 2020-21 Adjusted Budget and Estimated Year End amounts, and the Proposed Budgets for FY 2021-22. The Projected Budgets for FY 2022-23 and FY 2023-24 are also shown and are based upon the Proposed Budgets for FY 2021-22 with a projected cost increase of 2% per year where applicable. The year to date FY 2020-21 expenditures are available on the City's web-site or the City's Finance Division.

The budgets for each Zone also show the estimated fund balance (unrestricted, or Operating Reserve and restricted, or Capital Reserve) for the zone. Also shown for each Zone, is the Maximum Allowable Assessment based upon the annual change the Consumer Price Index as approved at the time the Assessment District was formed, the recommended Assessments for FY 2021-22, and the level of assessment that would be required to fully fund the Assessment District if funds from the reserve fund(s) were not used/available to reduce the total amount which needed to be levied.

[1] Future Year Budgets assumes 2% increase

The following definitions describe the costs and expenses included in the District Budget:

Maintenance Cost

General Repairs and Maintenance (Code-42310): This item includes the costs of materials, supplies and contract services for the repair and/or maintenance of district facilities and improvements including irrigation system repairs, maintenance of water quality basins and appurtenant facilities, repairs to play structures, concrete or asphalt pathways, decorative entry walls and other improvements as listed in this report within the District. This item also includes costs of incidental miscellaneous materials and supplies used by City staff for the maintenance and repair of Assessment District improvements.

Electric (Code-43210): This item includes the costs to furnish electricity required for the operation and maintenance of the sprinklers and irrigation controllers, and street lights.

Water (Code-43230): This item includes the costs to furnish irrigation water for the landscaping within the District.

Capital Repair/Maintenance Costs

Funds will be transferred annually from the restricted reserve fund balance within each zone as needed to fund the completion of the projects listed in the current year's budget for each of the zones. Any funds not expended will remain in the restricted reserve until needed for the completion of future capital projects or major maintenance activities. This will include the replacement/rehabilitation of the facilities shown in the capital reserve plan which is being developed for each zone.

District Expenses

Engineering Contract Services (Code-42130): This item includes the costs for the preparation of the Annual Engineer's Report and Assessment Roll as required by law for the placement of the assessments on the property tax roll.

Inspection/Contract Documents/LLAD Administration (Code-48115): This item includes the costs of all departments and staff and consultants of the City for providing the coordination of District services, contract management, inspections, annual bid management, responding to public concerns, public education, and procedural matters associated with the District.

Napa County Auditor Charges (Code-42290): This item includes the cost charged by the County for the placement and collection of the assessments on the County Property Tax roll.

Reserve Funds

Un-Restricted/Operating Reserve Collection: This item includes the amount to be collected to maintain reserves to enable the City to pay for the maintenance and servicing of the improvements prior to December 10 of the fiscal year, or whenever the City expects to receive its apportionment of special assessments and tax collections from the County, whichever is later. The Reserve Fund contribution will continue until such a time the Reserve Fund balance is approximately one half of the annual costs.

Repair/Replacement – Restricted/Capital Reserve: This item includes funds for the repair/replacement of improvements or the installation of new improvements to further enhance the level and quality of service provided within the boundaries of the District. The fund may be allowed to accumulate in anticipation of any unforeseen expenses not included in the yearly maintenance costs. This may include, but is not limited to the repair/replacement of improvements at the end of their useful life, upgrading or enhancement of improvements within the District, repair of damaged equipment due to vandalism, storms and other similar events where the costs cannot be covered by the annual assessment levy.

PART III – METHOD OF APPORTIONMENT

Method of Apportionment

Initial apportionment information relating to all zones and made a part of this report by reference here, can be found in the City of American Canyon Maintenance District No. 2001-02- (A.P.N. 059-100-006) Engineer's Report, Establishment of District and Assessments for FY 2001-02, Part D, City of American Canyon Maintenance District No. 2001-02- (A.P.N. 059-100-006) Method of Assessment. The following is a brief description of the manner the annual assessment has been apportioned to each parcel in Zones 1, 2 and 3 within the Assessment District consistent with the approved method.

GENERAL

Part 2 of Division 15 of the Streets and Highways Code, the Landscaping and Lighting Act of 1972, permits the establishment of assessment districts by cities for the purpose of providing certain public improvements which include operation, maintenance, rehabilitation and servicing of street lights, traffic signals, parks and landscaping.

The 1972 Act requires that maintenance assessments be levied according to benefit rather than according to assessed value. Section 22573 provides that:

> *"The net amount to be assessed upon lands within an assessment district may be apportioned by any formula or method which fairly distributes the net amount among all assessable lots or parcels in proportion to the estimated benefit to be received by each such lot or parcel from the improvements."*

The Act permits the designation of zones of benefit within any individual assessment district if "by reasons or variations in the nature, location, and extent of the improvements, the various areas will receive different degrees of benefit from the improvement" (Sec. 22547). Thus, the 1972 Act requires the levy of a true "assessment" rather than a "special tax."

In addition, Prop. 218 requires that a parcel's assessment may not exceed the reasonable cost of the proportional special benefit conferred on that parcel. Prop. 218 provides that only special benefits are assessable and the City must separate the general benefits from the special benefits.

SPECIAL BENEFIT ANALYSIS

The Assessment District provides for the maintenance and repair of public parks and landscaping, water quality basins, environmentally sensitive areas, trail, bikeways, streetlights and traffic signals. As determined at the time of formation, when these facilities are well maintained and in good working order they provide benefits that are unique and special to the property within the district including:

- Satisfaction of project design and mitigation requirements included within the CEQA documents for the development included in each zone. Satisfying these requirements uniquely benefits the property in the zone because it allows the various land uses being developed.

- Satisfaction of Conditions of Approval for the development included in each zone. Satisfying these requirements uniquely benefits the property in the zone because it allows the various land uses being developed.

- Provision of public safety benefits resulting from well-lit streets. Street lighting uniquely benefits the property within the zones that is adjacent to the lighting provided.

- Provision of public safety benefits resulting from functioning traffic signals. Traffic signals benefit property within the zone by providing for safe ingress and egress from the property. Traffic signals also provide general benefits to all motorists that are able to travel safely on the roadway system. Twenty-five percent of the traffic signal maintenance costs are allocated to the benefitting zones reflecting the approximate amount of trips associated with development in the zones.

- Provision of public safety benefits resulting from water quality detention basins. The water quality detention basins are part of the storm water management system which allows for adequate drainage and prevents flooding within the zones. Adequate drainage and protection from flooding is a unique and special benefit experience by the properties within the zones.

- Provision of public recreation benefits resulting from the parks and open spaces. The parks and open spaces within each zone are designed as local features that are integrated within the development and easily accessible to neighboring properties. These features are part of the overall park system, which also includes community facilities, which provide more regionally appropriate facilities (ball fields etc.). The local parks and open spaces uniquely benefit the property within each zone because they have been designed to be accessible and useful for the developed property in each zone.

- Provision of aesthetic benefits resulting from parks, open space and other landscaping features. The parks, open space and landscaping features are internal or directly adjacent to the properties in the zone, hence the aesthetic benefits provided from well-maintained landscaping features are experienced by the properties in the zone.

- Provision of public safety benefits resulting from the maintenance of parks and open spaces. Unmaintained parks and open spaces can attract litter, vectors and other undesirable features that create health and safety problems for adjoining properties. Adequate maintenance uniquely benefits the property in each zone because these potentially adverse effects do not occur.

METHOD OF APPORTIONMENT

ZONES 1 AND 2 METHOD OF ASSESSMENT

The method of apportionment (spread) equates all parcels in Zones 1 and 2 to an Equivalent Single Family Dwelling (ESD) unit, or portion thereof. The following ESD units were established for the American Canyon Landscaping and Lighting Assessment District, at its formation, and reflect the relative benefit accruing to parcels of land, in various stages of development, from the landscape and lighting facilities:

1. Vacant parcel in undeveloped area 1/10 unit
2. Vacant parcel in developed area 1/2 unit
3. Single dwelling parcel 1 unit
4. Multi-Family dwelling 0.60 unit

Vacant parcels in undeveloped areas experience the benefits provided from satisfying approval conditions but not the full benefits experienced when the facilities maintained by the zone are operational hence they are assigned 1/10 of an ESD unit. Vacant parcels in developed areas experience the benefits provided from satisfying approval conditions and the public safety benefits associated with sound drainage systems. These parcels also experience some fraction of the benefits associated with safe lighting and ingress and egress but not at the same level as a fully developed parcel, hence they are assigned 1/2 of an ESD unit. Fully developed parcels experience all benefits provided by the zone. Because the land uses on both Zone 1 and 2 are relatively uniform single family dwelling units, benefits are experienced equally. This relative equality of benefits results in an assessment methodology that spreads costs equally at full build out.

ESD units for each zone are determined annually based on the development pattern. Each zone's operation and maintenance expenses for the upcoming fiscal year is then divided by the total number of ESD units in order to calculate the annual cost per ESD unit (assessment rate) for the upcoming fiscal year. The annual assessment for each parcel is calculated by multiplying the annual cost per ESD unit (assessment rate) by the total number ESD units on the parcel in the upcoming fiscal year.

The method of apportionment for Zones 1 and 2 can be expressed mathematically as:

Cost per ESD Unit (Rate) = Fiscal Year Budget for Zone / Total Number of ESD Units in Zone

Assessment per Parcel = Cost per ESD Unit (Rate) x No. of ESD Units on Parcel

Although Section 22663 of the Streets and Highways Code typically requires that public property not be assessed, Article XIII, Section 4(a) of Proposition 218 requires that public property shall not be exempt from assessment if the property benefits from the facilities being maintained.

Zones 1 and 2 include publically owned property which is utilized for parks, creeks, open spaces, public right-of-way and easements. These properties serve to provide landscape, open space, drainage and recreational benefits to the adjoining residential property. Because these properties provide special benefits rather than receive special benefits they do not receive an annual assessment.

Likewise school sites, which provide for open space and recreational opportunities, enhance the special benefits received by residential property. In addition, school locations are required by the approval documents for the development and therefore help provide the special benefits associated with compliance with project CEQA documents and conditions of approval. Therefore because these properties provide benefits rather than receive benefits, they are also not assessed.

Civic properties including public safety facilities and utility facilities which were constructed as a condition of approval for the residential development serve to support the special benefits received by residential properties. Because these properties support the provision of special benefits rather than receiving special benefits, they are also not assessed.

ZONE 3 METHOD OF ASSESSMENT

Unlike Zones 1 and 2, Zone 3 contains a mix of residential, commercial, industrial and retail land uses. In order to apportion costs proportional to benefit, the method of apportionment (spread) for Zone 3 utilizes both an ESD unit component and an acreage component.

The benefits provided by the Class I bike path, three-rail fencing, street lights, traffic signal, and the detention pond and right of way maintenance along Highway 29 are apportioned by acreage because the size of the property provides a reasonable measure of the number trips (vehicular and bicycle), length of fencing and runoff detained. Therefore the cost of operating and maintaining these facilities is apportioned to the benefitting property based on its acreage.

The benefits provided by the streetscape, large and small parks are apportioned by ESD unit, as is done in the other two zones. These items provide benefit to and are accessible to resident families and employees of local businesses to enjoy during lunch breaks or after work hours. Non-residential land uses are converted to residential land uses using a square footage in order to maintain equality between the average size residential unit in the zone and the nonresidential units.

The following benefit units were established for the American Canyon Landscaping and Lighting Assessment Zone 3 (Napa Junction) at the time it was annexed to the Assessment District and these reflect the relative benefit accruing the various parcels of land within the zone:

Land Use Description	Total ESD's
SingleFamily Dwelling (SFD)	1/Unit
Condominium	1/Unit
Multiple Family Residential	1/Unit
Mobile Home	1/Unit
Commercial	1/1,500 sf floor space*
Commercial with Dwelling Unit - Includes Hotel	1/1,500 sf floor space + 1/Unit
All Land Use Types	Acres

ESD units for Zone 3 are determined annually based on the development pattern. The operational and maintenance expenses for the upcoming fiscal year for the streetscape, large park and small park facilities are then divided by the total number of ESD units in order to calculate the annual cost per ESD unit for the upcoming fiscal year.

Acreage units within Zone 3 are also determined annually based on development. The operational and maintenance expenses for the upcoming fiscal year for Class I bike path, three-rail fencing, street lights, traffic signal, and the detention pond and right of way maintenance along Highway 29 are then divided by the total acreage units in order to calculate the annual cost per acreage unit for the upcoming fiscal year. The annual assessment for each parcel is calculated by:

1. Multiplying the number of ESD units on the parcel by the annual cost per ESD unit to arrive at the ESD assessment for the parcel

2. Multiplying the acreage of the parcel by the annual cost per acreage unit to arrive at the acreage assessment; and

3. Adding the ESD assessment to the acreage assessment to arrive at the total assessment for the parcel.

The allocation formula for Zone 3 can be expressed mathematically as:

Cost per ESD Unit = Fiscal Year Budget for ESD Unit Items in Zone / Total ESD Units in Zone

Cost per Acre = Fiscal Year Budget for Acreage Items in Zone / Total Acreage in Zone

Assessment per Parcel = (Cost per ESD x No. of ESD Units on Parcel) + (Cost per Acre x No. of Acres on Parcel)

Although Section 22663 of the Streets and Highways Code typically requires that public property not be assessed, Article XIII, Section 4(a) of Proposition 218 requires that public property shall not be exempt from assessment if the property benefits from the facilities being maintained.

Zone 3 includes publically owned property which is utilized for parks, creeks, open spaces, public rights-of-way and easements. These properties serve to provide landscape, open space and recreational benefits to the adjoining property. Because these properties provide special benefits rather than receive special benefits they do not receive an annual assessment.

APPENDIX A – DISTRICT DIAGRAM

The following page is the Assessment Diagram for Zones 1, 2 and 3 within the Assessment District. Please note the lines and dimensions of each parcel, as well as the distinctive Assessor's Parcel Number, are shown on the Assessor's Maps for the City of American Canyon available at the County of Napa Assessor's Office. The reference to the appropriate Assessor Books at the County of Napa Assessor's Office for the respective subdivisions in each Zone are listed below.

ZONE 1 - LA VIGNE

All the land lying within the La Vigne Unit 1 Subdivision filed in the Recorder's office of the County of Napa in Book 22 of Recorded Maps, Pages 42 through 57.

All the land lying within the La Vigne Unit 2 Subdivision filed in the Recorder's office of the County of Napa in Book 22 of Recorded Maps, Pages 82 through 97.

ZONE 2 - VINTAGE RANCH

All the land within the Scally Ranch Unit 1 Subdivision filed in the Recorder's office of the County of Napa in Book 24 of Recorded Maps, Pages 1 through 22.

All the land within the Amended Scally Ranch Unit 1 Subdivision filed in the Recorder's office of the County of Napa in Book 24 of Recorded Maps, Pages 36 through 57.

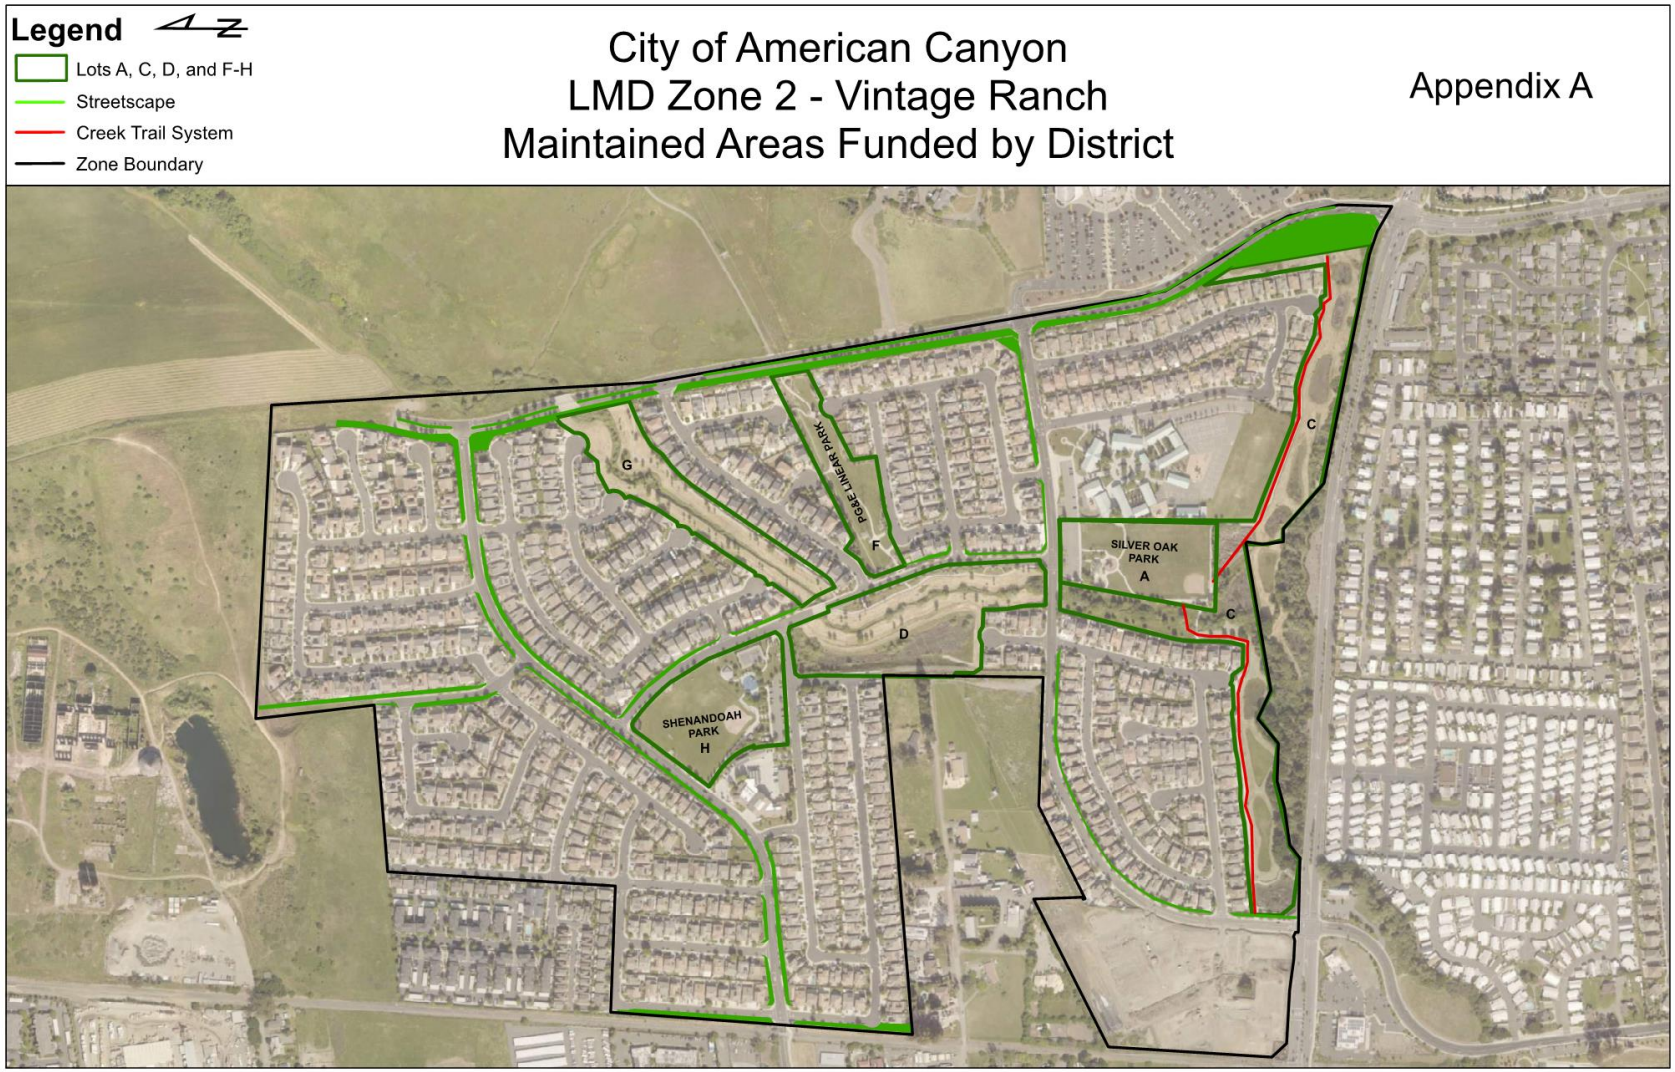
All of the land within the Vintage Ranch Unit 2 Subdivision filed in the Recorder's office of the County of Napa in Book 25 of Recorded Maps, Pages 35 through 51.

All of the land within the Vintage Ranch Unit 3 Subdivision filed in the Recorder's office of the County of Napa in Book 25 of Recorded Maps, Pages 52 through 57.

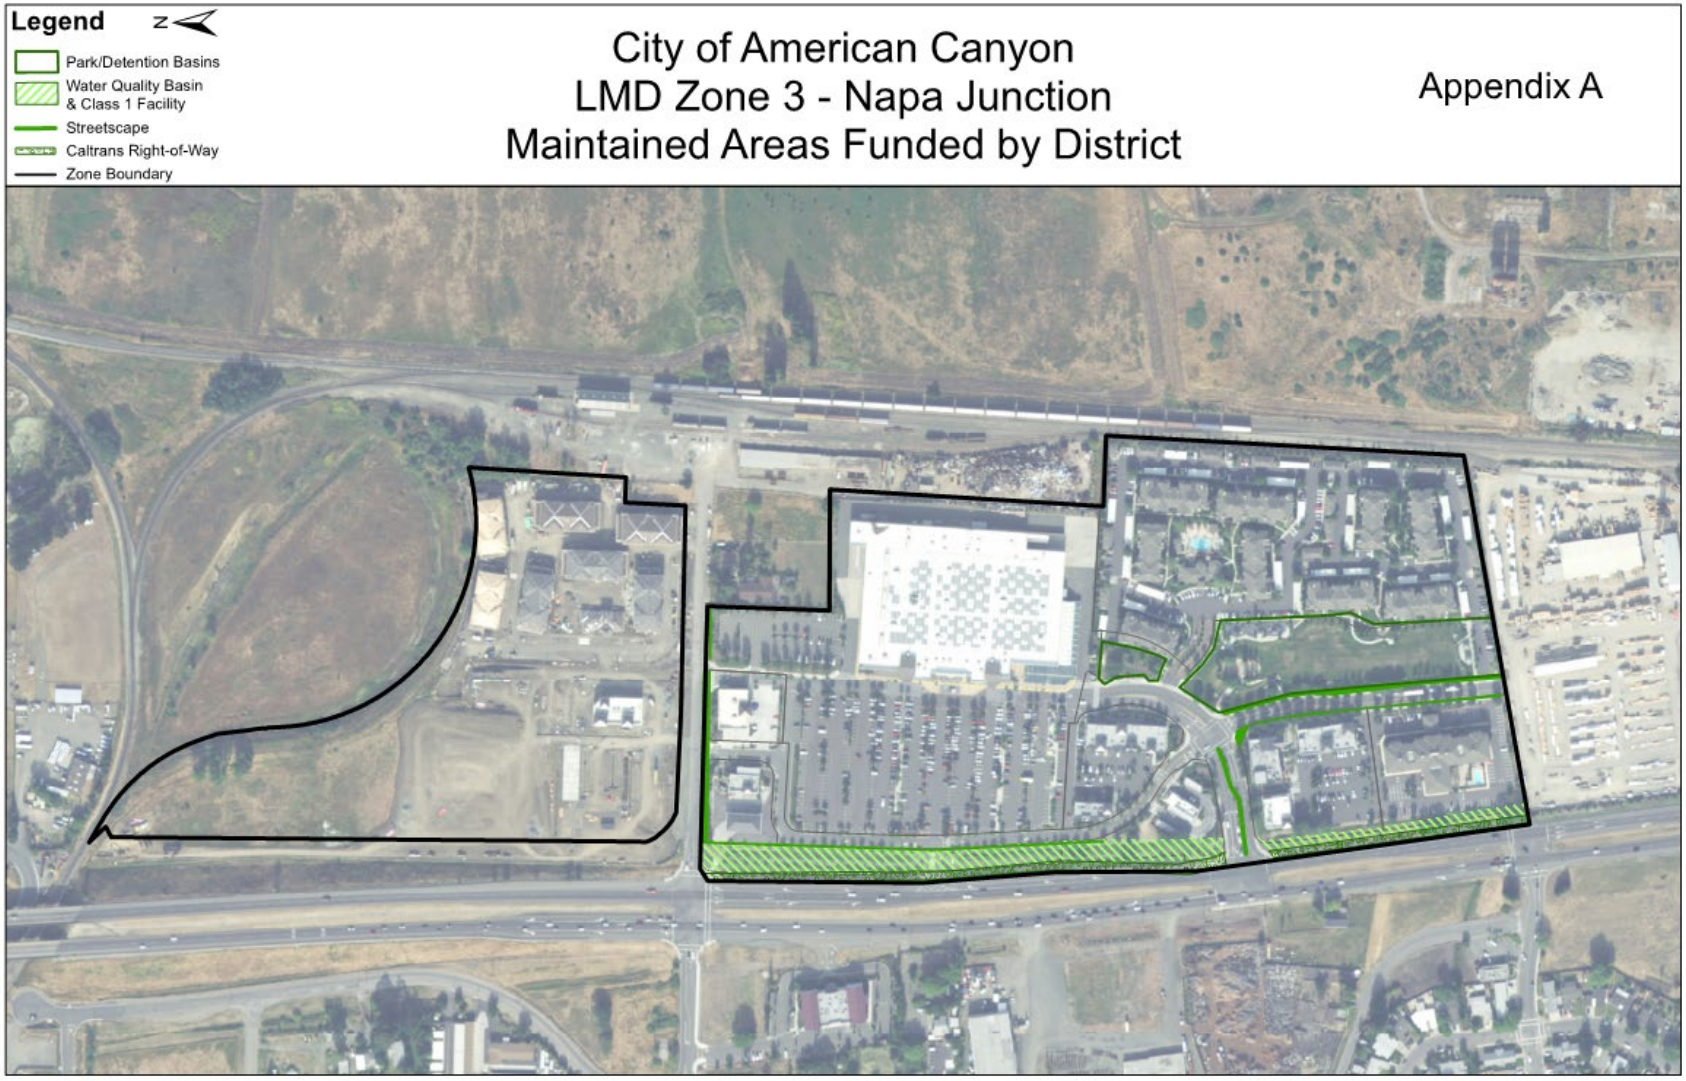
Vineyard Crossing and Vineyard Place parcels were de-annexed from Zone 2 by City Council Resolution No. 2011-37.

The Villages at Vintage Ranch were annexed in the Zone in FY 2020-21 by City Council Resolution No. 2020-68.

ZONE 3 - NAPA JUNCTION MIXED USE PROJECT



All the land within the Napa Junction Phase 1 Subdivision filed in the Recorder's office of the County of Napa in Book 24 of Recorded Maps, Pages 81 through 87.



All the land within the Amended Napa Junction Phase 1 Subdivision filed in the Recorder's office of the County of Napa in Book 25, Pages 5 through 11.

APPENDIX B – ASSESSMENT ROLL

Assessment Roll

The Assessment Roll for FY 2021-22 for the American Canyon Landscaping and Lighting Assessment District are listed on the following pages. The annual assessment for each parcel within Zones 1, 2 and 3 of the Assessment District are shown individually. The lines and dimensions of each parcel are shown on the Assessor's Maps for the City of American Canyon available at the County of Napa Assessor's Office.

Asmt No.12 (now deleted), former APN 59020001000, was subdivided into six new parcel numbers at the time of the filing of the FY 2106-17 Engineer's Report.
The new APN's are shown above (059-020-045 through 059-020-050) and will be assessed according to the established rate and
Method of Apportionment described in the Engineer's Report and as adopted by City Council Resolution No. 2016-57.
Assessment No. 14, former APN 059-020-046, was subdivided into parcels 051 and 052 for the 2017/18 levy.

ESD for each parcel is determined by dividing the commercial floor space SF by 1,500 (minimum 1,500) and adding any residential units

TITLE

Intent to Override Napa County Airport Land Use Commission Determination: Oat Hill Multi-Family Residential Project

RECOMMENDATION

Adopt a Resolution notifying the Napa County Airport Land Use Commission and the State Division of Aeronautics of the City's intention to find that the Oat Hill Multi-Family Residential Project is consistent with the purposes of the State Aeronautics Act and to overrule the Napa County Airport Land Use Commission's determination that the Oat Hill Multi-Family Residential Project is inconsistent with the Napa County Airport Land Use Compatibility Plan.(File Numbers PL20-0022 to -27).

CONTACT

William He, AICP, Associate Planner

BACKGROUND & ANALYSIS

Summary

On March 26, 2021, and in accordance with California Public Utilities Code (PUC) Section 21676(b), the City of American Canyon (City) referred RH Hess Development's proposed residential project (the Project) in the Oat Hill area of the City to the Napa County Airport Land Use Commission (ALUC) for a public hearing and consistency determination pursuant to the Napa County Airport Land Use Compatibility Plan (ALUCP). Eighty-nine (89) days later, on June 23, 2021, the ALUC held a public hearing on the Project (ALUC Project No. P21-00056-ALUC) and found it inconsistent with the policies of the ALUCP. The ALUC's determination was formally presented to the City by ALUC staff on July 8, 2021.

Background

The Project consists of the development of 291 multifamily residential units on 20.8 acres on the east side of Oat Hill, south of Napa Junction Road. The Oat Hill Project requires a General Plan Amendment, a Zone Change, Subdivision Maps, and Design Permits prior to obtaining construction permits. A graphic displaying the Project Location is included (Attachment 2).

The Project consists of two parcels: A and B. Parcel A is higher on Oat Hill than Parcel B. Parcel A is zoned Light Industrial: Specialty Commercial (LI:CS) with a proposed zoning designation of High

Density Residential. Parcel A is proposed for 206 residential units in 13, 3-story buildings, ranging from one to three bedrooms per unit. A graphic depicting 3 buildings with 51 dwelling units located in Napa Airport Land Use Compatibility Plan (ALUCP) Zone "D" is shown in (Attachment 3).

Parcel B (the lower parcel) is proposed for 85 residential units, in 5, 3-story buildings ranging from one to three bedrooms per unit. Parcel B is zoned Residential Estate (RE). The northwest corner of Parcel B is located in ALUCP Zone "D", but there are no homes proposed within Zone "D."

In 2019, Mr. Hess requested City Council support for residential uses on Oat Hill. Project planning began in earnest in January 21, 2020 when the City Council declared residential uses are the best use of the Rick Hess property on Oat Hill. A copy of Resolution 2020-06 is included (Attachment 5).

On August 14, 2020, RH Hess Development Company submitted that the Oat Hill Multifamily Residential Project. On March 3, 2021, the Open Space Advisory Committee reviewed the Project's proposed public access and views from the Project site.

On March 25, 2021, the Planning Commission conducted a public hearing and unanimously recommended the City Council approve the Oat Hill Project. Documentation of the Planning Commission decision including the California Environmental Quality Act (CEQA) Initial Study with Mitigated Negative Declaration (ISMND) is contained in nine resolutions. A copy of the March 25, 2021 Planning Commission staff report is included (Attachment 6). A copy of the ISMND Resolution is included (Attachment 7). The remaining signed Planning Commission Resolutions are included (Attachment 8).

In accordance with State Law, the applicant submitted a request to the Napa County Airport Land Use Commission (ALUC) for a determination of consistency with the ALUCP. A copy of the ALUCP is included (Attachment 9).

On June 23, 2021, the ALUC conducted a public hearing and determined the Project is inconsistent with the ALUCP primarily because 51 multifamily dwelling units are located within ALUCP Zone "D." According to the ALUCP, residential units are prohibited. A copy of the ALUC staff report along with the City's submittal documentation is included (Attachment 10).

At the June 23, 2021 ALUC meeting, the City Attorney presented testimony and written substantial evidence in a report dated June 22, 2021. This report provides reasons the Oat Hill Project is compatible with ALUCP. A copy of the City Attorney report is included (Attachment 11).

The ALUC's determination that the Oat Hill Project is inconsistent with the ALUCP is significant because the City Council may not approve the Oat Hill Project CEQA determination and entitlements (i.e.: General Plan Amendment, a Zone Change, Subdivision Maps, and Design Permits) unless the City Council overrides the ALUC determination. A July 8, 2021 letter confirming the ALUC Board's decision is included as (Attachment 4.)

In accordance with Public Utilities Code section 21676(d), the City of American Canyon has the right to override the ALUC's determination that the Oat Hill Residential Project is inconsistent with the ALUCP on the basis of substantial evidence.

ALUC Compatibility

Pursuant to California PUC Section 21670, it is in the public interest to provide for the orderly development of each public use airport in this state and the areas surrounding these airports so as to:

1. Promote the overall goals and objectives of the California airport noise standards adopted pursuant to PUC Section 21669;
2. Prevent the creation of new noise and safety problems; and
3. Protect the public health, safety and welfare by ensuring the orderly expansion of airports and the adoption of land use measures that minimize the public's exposure to excessive noise and safety hazards within areas around public airports to the extent that these areas are not already devoted to incompatible uses.

The following paragraphs explain the mandate of the ALUC with respect to airport land use compatibility and the ALUCP:

A. To provide for the orderly development of the Napa County Airport and the area surrounding the Airport, the ALUC adopted its Airport Land Use Compatibility Plan (ALUCP) on April 22, 1991 and revised it on December 15, 1999. The ALUCP is intended to guide development proposals for the orderly development of the airport and the area surrounding the airport through the implementation of various standards set forth in Section 2 (noise impacts, flight hazards, safety, and overflight impacts) and the policies set forth in Section 3 for review of development within the vicinity of the Napa County Airport. However, the ALUC has not updated its 1999 ALUCP to incorporate relevant updates contained within Napa County Airport plans, state airport compatibility guidance, and the land use plans of the surrounding communities.

B. The ALUC is required to use the California Airport Land Use Planning Handbook (Handbook) to formulate noise, flight hazards, safety, and overflight standards and related compatibility policies. The California Department of Transportation, Division of Aeronautics (Caltrans) substantially updated its Handbook in 2002 and again in 2011. PUC Section 21674.7 provides that the ALUCP shall be guided by information prepared and updated in the Handbook. State law further requires that the ALUC review and update its ALUCP as necessary to accomplish its purposes (PUC Section 21675). The ALUC has not updated its ALUCP to incorporate the two Handbook updates, nor has it updated its noise contours or adjusted its safety zones accordingly.

C. The ALUCP also must reflect the long-range airport plans and at least a 20-year forecast of operations for noise analysis. The ALUCP has not been updated to include updated information about the operation and environmental effects of Napa County Airport operations as reflected in the County's most recent Airport Master Plan (March 2007), FAA-approved Airport Layout Plan (May 17, 2016), and environmental analysis, including noise impact analysis, prepared for the FAA-approved forecast for the Terminal Area Redevelopment of the Napa County Airport (Initial Study and Mitigated Negative Declaration, dated August 2020, and certified by the Napa County Board of Supervisors on September 22, 2020).

D. The County's ALUCP is therefore based on outdated standards that do not reflect current guidance regarding orderly and compatible development within the vicinity of public airports, including the Napa County Airport.

On June 23, 2021, the ALUC held a hearing regarding the City of American Canyon's referral of the proposed Oat Hill Residential Project. The ALUC staff report dated June 23, 2021, provided that, with respect to ALUCP policies on noise impacts, flight hazards, safety, and overflight impacts, the proposed Project, including the proposed zone change and General Plan Amendment, was inconsistent with the ALUCP.

However, City staff finds that, due to the outdated nature of the ALUCP and the County's competing planning documents (e.g., the noise analysis presented in the County's Initial Study and Mitigated Negative Declaration, dated August 2020), the appropriate measures of airport compatibility for the Project are the underlying federal, state and local standards for aircraft safety, noise, overflight and airspace protection.

The City's proposed action on the Project provides for the orderly development of the area surrounding the Napa County Airport and promotes the overall goals and objectives of the State Aeronautics Act by avoiding new noise and safety problems, and by protecting the public health, safety and welfare through the adoption of land use measures that minimize the public's exposure to excessive noise and safety hazards. This Project would not add any new residential noise impacts to the Napa County Airport's 65 dBA Community Noise Equivalent Level (CNEL) noise area, and the Project complies with the safety standards set forth in the Caltrans Aeronautics Airport Land Use Planning Handbook prepared pursuant to PUC Section 21674.5. The Project is therefore consistent with the purposes of the State Aeronautics Act based on the proposed Findings set forth in the attached Resolution and substantial evidence in the public record.

The FAA's Determinations of No Hazard to Air Navigation for Oat Hill Residential Project development structures are the only source of authoritative, aviation safety findings regarding the Project. The FAA is conducting an aeronautical study (49 U.S.C. §44718 and 14 CFR Part 77) and its Determinations are pending. A FAA determination of "No Hazard" would be a condition of approval for approval of the eventual Project.

Next Steps
If the City Council chooses to override the ALUC's determination:

- The City must hold a hearing and provide the ALUC and the California Department of Transportation, Division of Aeronautics (Caltrans) a copy of its proposed decision and specific findings that the proposed action is consistent with purposes of PUC Section 21670.
- The ALUC and Caltrans have 30 days to provide written comments from the date they receive the City's proposed decision and findings.
- Comments received from Caltrans and ALUC, if provided, are advisory only and must be included in the final record of any final decision to overrule.
- If no comments are provided, the City may act without them.
- The final decision to override requires a two-thirds vote by the City Council.

Based on the Findings and the associated substantial evidence in the public record, City staff finds that the proposed override action by the City for the Oat Hill Residential Project and related zoning change and General Plan Amendment is consistent with the purposes of the State Aeronautics Act as stated in PUC Section 21670.

City staff therefore recommends the City Council express its intent to override the ALUC's determination of inconsistency in accordance with the attached Resolution.

COUNCIL PRIORITY PROGRAMS AND PROJECTS

Community and Sense of Place: "Build on the strength of our local community to develop a clear 'sense of place' and establish our unique identity."

FISCAL IMPACT

There is no fiscal impact to express the intent of an ALUC determination override.

ALTERNATIVES

The City has three options following the ALUC's actions on this Project:

First, the City could request the applicant redesign the Project to be consistent with the ALUCP, as was suggested by the ALUC staff. ALUC staff has indicated the only way to achieve consistency with the ALUCP would be to eliminate residential uses from Airport Land Use Compatibility Zone D.

Second, the City could find the Project consistent by law pursuant to PUC Section 21676(d) and ALUCP Policy 1.4.4, which requires the ALUC to make a consistency determination within 60 days of the date of the City's referral. As noted above, the ALUC did not make a consistency determination within the required 60-day timeframe.

Third, the City Council could override the ALUC's determination pursuant to PUC Section 21676(b) requirements, which provides that the City Council may override the ALUC's determination if it

makes specific findings that the Project is consistent with the purposes of PUC Section 21670 to protect the public health, safety, and welfare by ensuring orderly expansion of airports and adoption of land use measures that minimize public exposure to excessive noise and safety hazards within areas around public airports.

ENVIRONMENTAL REVIEW

The City of American Canyon circulated a Mitigated Negative Declaration in accordance with the California Environmental Quality Act (CEQA) from February 8, 2021 to March 10, 2021. The Mitigated Negative Declaration (MND) finds the proposed Project will not have a significant effect on the environment because mitigation measures will reduce the impacts to less than significant are part of Project conditions.

The proposed action is not subject to CEQA pursuant to Sections 15060(c)(2) and 15060(c)(3) of the CEQA Guidelines. The action does not have the potential to result in either a direct physical change in the environment, or a reasonably foreseeable indirect physical change in the environment because it is limited to the notification of the City's intent to overrule the ALUC determination. This action does not authorize the development of the Property or commit the City to approve the Project.

RESOLUTION NO. _____

A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF AMERICAN CANYON NOTIFYING THE NAPA COUNTY AIRPORT LAND USE COMMISSION AND THE STATE DIVISION OF AERONAUTICS OF THE CITY'S INTENTION TO FIND THAT THE OAT HILL MULTI-FAMILY RESIDENTIAL PROJECT IS CONSISTENT WITH THE PURPOSES OF THE STATE AERONAUTICS ACT AND TO OVERRULE THE NAPA COUNTY AIRPORT LAND USE COMMISSION'S DETERMINATION THAT THE OAT HILL MULTI-FAMILY RESIDENTIAL PROJECT IS INCONSISTENT WITH THE NAPA COUNTY AIRPORT LAND USE COMPATIBILITY PLAN

WHEREAS, an application was filed by RH Hess Development (the Applicant) with respect to the property (the Property) located at Assessor Parcel Numbers 058-380-008 and 058-320-001 in the Oat Hill area of the City of American Canyon;

WHEREAS, the Property is designated Industrial with Specialty Commercial overlay and Residential Estate, and is located within the Light Industrial with Specialty Commercial overlay and Residential Estate zoning districts;

WHEREAS, the Applicant proposes a multi-family residential project that would consist of 291 multi-family dwelling units and associated amenities and parking on approximately 21.8 acres, divided into two parcels (Parcel A and Parcel B), which require the following approvals from the City (the Project):

- The Oat Hill Multi-Family Residential Mitigated Negative Declaration, pursuant to the California Environmental Quality Act (CEQA);
- A General Plan Amendment on the 13.6-acre Oat Hill Parcel A from Industrial with a Specialty Commercial (CS) overlay and Estate Residential (RE) to High Density Residential (RH-1) (APN 058-380-008 and portion of APN 058-320-001);
- A General Plan Amendment on the 7.2-acre Oat Hill Parcel B from Estate Density Residential to Medium Density Residential (portion of APN 058-320-001);
- A Zone Change on the 13.6-acre Oat Hill Parcel A from Light Industrial with a Specialty Commercial (LI:CS) overlay and Estate Residential (RE) to High Density Residential (APN 058-380-008 and portion of APN 058-320-001);
- A Zone Change on the 7.2-acre Oat Hill Parcel B from Estate Density Residential to Medium Density Residential (RM) (portion of APN 058-320-001);
- A Tentative Subdivision Map for 206 condominium residential units on the 13.6-acre Oat Hill Parcel A (APN 058-380-008 and portion of APN 058-320-001);
- A Tentative Subdivision Map for 85 condominium residential units on the 7.2-acre Oat Hill Parcel B (portion of APN 058-320-001);
- A Design Permit for 206 condominium residential units on the 13.6-acre Oat Hill Parcel A (APN 058-380-008 and portion of APN 058-320-001); and
- A Design Permit for 85 condominium residential units on the 7.2-acre Oat Hill Parcel B (portion of APN 058-320-001);

WHEREAS, a public hearing was held by the City Planning Commission on March 25, 2021. A notice of the time, place, and purpose of the public hearing was given in accordance with California Government Code Section 54950 *et seq.* (the Ralph M. Brown Act). Evidence, both written and oral, was presented to and considered by the Planning Commission at the public hearing;

WHEREAS, the Planning Commission adopted Resolution Nos. 2021-04, 2021-05, 2021-06, 2021-07, 2021-08, 2021-09, 2021-10, 2021-11, and 2021-12 by a majority vote (4 ayes, 0 noes) recommending City Council approve the Project;

WHEREAS, due to the proposed amendments to the City General Plan and zoning regulations, California Public Utilities Code Section 21676(b) requires the City to refer the Project to the Napa County Airport Land Use Commission (ALUC) for a determination of the Project's consistency with the Napa County Airport Land Use Compatibility Plan (ALUCP);

WHEREAS, on March 26, 2021, the City referred the Project to the ALUC;

WHEREAS, on June 23, 2021, the ALUC voted (6 ayes, 0 noes, 1 absent) finding the Project inconsistent with the ALUCP;

WHEREAS, pursuant to California Public Utilities Code Section 21670 and 21676, the City Council may, after a public hearing, propose to overrule the ALUC by a two-thirds vote of the City Council, if it makes specific findings that the Project is consistent with California Public Utilities Code Section 21670, the purpose of which is to protect public health, safety, and welfare by ensuring the orderly expansion of airports and the adoption of land use measures that minimize the public's exposure to excessive noise and safety hazards within areas around public airports to the extent that these areas are not already devoted to incompatible uses; and

WHEREAS, a public hearing was held by the City Council on July 20, 2021. A notice of the time, place, and purpose of the hearing was given in accordance with the Ralph M. Brown Act. Evidence, both written and oral, was presented to and considered by the City Council at the public hearing.

NOW, THEREFORE, the City Council of the City of American Canyon resolves as follows:

Section 1: The ALUC failed to act in a timely manner as required by State law, and the City Councils finds the Project consistent with the ALUCP by law.

Findings in Support

The Project was referred to the ALUC on March 26, 2021. Pursuant to PUC Section 21676(d) and ALUCP Policy 1.4.4, the ALUC was required to conduct a hearing and make a consistency determination within 60 days of the referral or the Project would be deemed consistent with the ALUCP, by law. The ALUC had all the necessary information for its review of the Project since at least February 2021, when the City provided notice of completion of the Initial Study/Mitigated Negative Declaration prepared for the Project. The City further provided supplemental information on May 6 and May 7, 2021, in response to the ALUC's April 23, 2021 letter. The ALUC therefore had until May 25, 2021, to complete its consistency review, which it failed to do. The Project is therefore consistent with the ALUCP by law.

Section 2: The City Council finds the Project is consistent with the legislative purpose set forth in California Public Utilities Code Section 21670(a)(2) of protecting the public health, safety, and welfare by ensuring the orderly expansion of airports and the adoption of land use measures that minimize the public's exposure to excessive noise and safety hazards within areas around public airports to the extent that these areas are not already devoted to incompatible uses. The City Council further finds that the ALUC's determination that the Project is inconsistent with the ALUCP is not based on substantial evidence that was introduced, commented on, or identified in support of the inconsistency finding.

Findings in Support

A. **Noise**. The residential land use under the proposed Project is consistent with and exceeds the federal and State aircraft noise standards, as well as those of the ALUCP.

1. The Project is located approximately 1.4 miles outside of the 55 dBA CNEL aircraft noise contours in the ALUCP. The noise analysis in the ALUCP was prepared by Shutt Moen Associates, dated December 15, 1999 based on 1988/89 activity levels from the Airport Master Plan and future projections for 2008. The 2008 projections show 315 based aircraft, annual aircraft operations at 210,000 and 575 average day aircraft operations. By contrast, the Federal Aviation Administration (FAA) Terminal Area Forecast[1] for Napa County Airport for 2045 indicates 196 based aircraft, 53,109 annual operations and 145 average day operations. The ALUCP airport activity information used for purposes of the ALUCP noise analysis is four times higher than the longest-term official FAA forecast for Napa County Airport and does not account for updated airport operations.

2. An Environmental Noise Assessment of the Project was completed by Saxelby Acoustics (Saxelby) on September 10, 2020 as part of the Mitigated Negative Declaration prepared for the Project. Saxelby conducted a complete noise analysis, including noise monitoring on the Project site, and found that the Project site is approximately 1.8 miles from the Napa County Airport and well outside the 65 dB CNEL noise contour. Further, the Project would be constructed in accordance with California building regulations, which require that interior noise levels attributable to exterior sources not exceed 45 dB CNEL. The ALUCP classifies multi-family residential land uses as "clearly acceptable" within or below the 50 to 55 dBA CNEL level (ALUCP Table 2-1, Noise Compatibility Guidelines). The Project therefore meets the relevant noise standards. Further, pursuant to ALUCP Figure 5C (Airport Impact Areas, Napa County Airport), the Project is located outside the "common traffic pattern." Therefore, potential noise impacts to residents located outside of residences is best reflected under the ALUCP's noise contours, as the Project will not be subject to routine, everyday noise occurrences. The Project is located outside of the 65, 60, and 55 dB CNEL contours for Napa County Airport and, therefore, Project residents will not be subject to excessive noise impacts. The City also has included a condition of approval for the Project that requires a buyer awareness notification of the Napa County Airport and the potential for aircraft overflight and related single-event aircraft noise.

3. Single event aircraft noise is a supplemental noise metric for which a federal or State standard does not exist, and it is not a required metric for purposes of consistency with the State Aeronautics Act. However, the ALUC found the Project inconsistent because "it relies solely on the CNEL contours and does not consider potential overflight noise impacts relating to the site's conditions, terrain and elevation relative to flight patterns." CNEL noise contours are created by assessing flight paths and their regular

[1] Federal Aviation Administration, Terminal Area Forecast, 2020, https://www.faa.gov/data_research/aviation/taf/ accessed for Napa County Airport (APC) on July 7, 2021.

utilization that make up all the activity around the airport, including all the single event levels of aircraft noise. CNEL then adds time-of-day penalties for evening and nighttime operations to account for the potential activity and sleep disturbance, which can occur when evening and nighttime ambient noise levels are lower than during the day (one evening aircraft operation is the equivalent of three operations or about 5 dB penalty, and one nighttime operation is the equivalent of ten operations or about 10 dB penalty). It is for this reason that both Federal Aviation Administration (FAA) and the State noise standards (PUC 21669) recognize 65 dB CNEL as the definitive and comprehensive noise standard for residential land uses near public airports like Napa County Airport[2]. Figure 5C (Airport Impact Areas, Napa County Airport) of the ALUCP depicts "projected noise contours, overflight areas, flight patterns, and approach surfaces" in the airport vicinity. The Project is located one-half mile south of and 1.4 miles east of the outer boundaries of the depicted Airport Impact Areas, including the 65, 60, and 55 dB CNEL contours and the "common traffic pattern."

4. Recent noise analysis prepared by the County for its Terminal Area Redevelopment of the Napa County Airport project (Initial Study and Mitigated Negative Declaration dated August 2020) shows that the 65 dB CNEL noise contour is entirely contained within existing airport property. This study provides an FAA-approved 20-year forecast of total aircraft operations and the fleet of aircraft expected to use the Napa County Airport during the 20-year forecast period to 2038. The Project is located approximately 1.6 miles from the nearest point of the 65 dB CNEL noise contours in this most recent study of airport community noise impacts. The County did not independently study or mention single event noise analysis or any other alternative noise metric to CNEL in its environmental analysis for the Terminal Area Redevelopment project.

5. Accordingly, the proposed Project is consistent with and far exceeds the federal and State aircraft noise standards, including those of the ALUCP, as the Project is well-outside the 55, 60, and 65 dB CNEL contour lines and will be constructed in accordance with California building regulations, which require that interior noise levels attributable to exterior sources not exceed 45 dB CNEL. The Project will not be subject to excessive noise, in accordance with the State Aeronautics Act.

B. **Safety**. The residential land uses under the proposed Project are consistent with the safety standards of the ALUCP for those portions within Zone E and the Caltrans Handbook definition of Zone D, the "Traffic Pattern Zone."

1. The 85 residential units planned for Parcel B are located within ALUCP Zone E and meet all ALUCP safety requirements. The ALUCP indicates that the "risk of accident is very low" in Zone E (Table 3-1). Residential Uses are permitted in Zone E under the ALUCP (Table 3-2).

2. Of the 206 units planned for Parcel A, 155 units are located within ALUCP Zone E and meet all the ALUCP safety requirements, as provided above. The remaining 51 units are located within ALUCP Zone D. A conflict exists between the dimensions and allowable uses for ALUCP safety Zone D and the Caltrans Handbook Zone 6, the latter of which were establish pursuant to State law (PUC Section 21674.5).

[2] Federal Aviation Administration, Report to Congress, FAA Reauthorization Act of 2018 (Pub. L. 115-254) Section 188 and Section 173, April 14, 2020 regarding the study of alternative metrics including single-event noise metrics and current 65 DNL and 65 CNEL noise standards.

a. Both ALUCP Zone D and Caltrans Handbook Zone 6 are identified as encompassing the Airport's "traffic pattern"; however, the lateral dimensions of each respective zone are significantly different. The Handbook Zone 6 lateral dimension is 6,000 feet from the runway centerline. The ALUCP Zone D is located 10,000 feet from the runway centerline, with the stated reason for this dimension based on the defunct airline training program that was previously based at the Airport but that no longer exists (ALUCP p. 5-7). The ALUCP Zone D is further, and incorrectly, based on 14 CFR Part 77 imaginary surfaces (compare ALUCP Figure 3A and 5D). 14 Part 77 surfaces are created for purposes of identifying structures that should be studied by the FAA in the vicinity of airports, and are not intended to identify relative exposure to documented safety risks around airports. The FAA advises that pilots fly the rectangular traffic pattern within an area one-half mile to one mile (approximately 2,600 to 5,280 feet) laterally from the runway centerline, which creates the basis for the Handbook traffic pattern Zone 6. The Caltrans Handbook indicates that there is a "low" level of risk in Zone 6. The proposed project is outside of the Handbook Zone 6 by approximately 4,200 feet.

b. Handbook Zone 6 allows residential uses with no limit on maximum residential density due to the low accident risk, particularly on the "downwind" leg of the traffic pattern where aircraft are flying at 1,000 to 1,500 feet above airport elevation and parallel to the runway centerline. ALUCP Zone D prohibits residential uses and is inconsistent with Handbook Zone 6. The Caltrans Handbook does not provide any restrictions for uses outside of Handbook Zone 6, where the Project is located.

3. Whether the Project would result in a hazard to air navigation is a determination for the FAA, not the ALUC. However, even though Notice of the Project has been filed with the FAA, the Project may be considered exempt from the notice requirement because it is shielded by existing structures of a permanent and substantial nature and by natural terrain of equal or greater height and terrain (14 CFR Part 77.9(e)(1)). The existing water tank on Oat Hill, as well as the surrounding terrain are taller than the proposed height of the tallest structures associated with the Project. The top elevation of the existing water tank is approximately 308 feet above mean sea level, with an obstruction lighted antenna on top that extends an additional 30 feet. The terrain at the base of the tank is approximately 283 feet above mean sea level. The top of the proposed tallest structures associated with the Project are 281 feet above sea level.

4. The FAA's Determinations of No Hazard to Air Navigation for Oat Hill Residential Project development structures are the only source of authoritative, aviation safety findings regarding the Project. The FAA is conducting an aeronautical study (49 U.S.C. §44718 and 14 CFR Part 77) and its Determinations are pending. A FAA determination of "No Hazard" would be a condition of approval for approval of the eventual Project.

a. The United States Government has exclusive sovereignty of airspace of the United States (49 U.S.C. § 40103(a)(1)). In order to use this airspace, the FAA Administrator is responsible for:

(1) Plans and policy for the safe use of the navigable airspace (49 U.S.C. § 40103(b)(1)); and

(2) "[R]egulations on the flight of aircraft (including regulations on safe altitudes) for (A) navigating, protecting and identifying aircraft; (B) protecting individuals and property on the ground; (C) using the navigable airspace efficiently; and (D) preventing collision between aircraft, between aircraft and land or water vehicle, and between aircraft and airborne objects" (49 U.S.C. § 40103(b)(2)).

b. The FAA's aeronautical studies for the Oat Hill Residential Project structures are the definitive standard for assessing compliance with federal aviation safety laws and regulations, including height of structures (14 CFR § 77.1(c)). This federal authority is recognized in State law (Cal. PUC § 21240).

5. The City of American Canyon has land use authority to regulate land use on the Project site. This authority is acknowledged under State law (Cal. PUC § 21670 and § 21676), including the process which allows the City to overrule an ALUC finding of inconsistency. Though the ALUC is given authority to review and comment on proposed land use decisions, its comments as to consistency are advisory only. (*Citizens for Planning Responsibly v. County of San Luis Obispo* (2009) 176 Cal.App.4th 357, 372 [citing Pub. Utilities Code § 21676].) The City retains ultimate authority to regulate land use within the airport land use plan area. (*See id*. at 373.)

a. The City may further consider the Caltrans Handbook in regulating land use within the airport land use area, as the Handbook was created in accordance with State Law to "(1) provide information to ALUCs, their staffs, airport proprietors, cities, counties, consultants, and the public, (2) to identify the requirements and procedures for preparing effective compatibility planning documents, and (3) define exemptions where applicable (Caltrans, 2011)." The Handbook provides specific guidance for assessing potential airspace obstructions in Section 4.5, Airspace Protection, which indicates that potential hazards to air navigation should be evaluated by the FAA.

6. The proposed Project is consistent with the safety standards of the ALUCP for those portions of the Project within Zone E and with the safety standards of the Caltrans Handbook Zone 6 for those portions of the Project within ALUCP Zone D. The Project will not be subject to safety hazards, in accordance with the State Aeronautics Act.

C. **Airspace Protection**. The residential land uses under the proposed project will comply with the FAA's findings in its aeronautical study initiated on May 21, 2021.

1. The FAA conducted an aeronautical study (49 U.S.C. §44718 and 14 CFR Part 77) and its Determinations are pending. A FAA determination establishing that the Project would be neither an obstruction nor a hazard to air navigation would be a condition of approval for the Project.

a. As provided above, the United States Government has exclusive sovereignty of airspace of the United States (49 U.S.C. § 40103(a)(1)).

b. In order to use this airspace, the FAA Administrator is responsible for:
(1) Plans and policy for the safe use of the navigable airspace (49 U.S.C. § 40103(b)(1)); and
(2) "[R]egulations on the flight of aircraft (including regulations on safe altitudes) for (A) navigating, protecting and identifying aircraft; (B) protecting individuals and property on the ground; (C) using the navigable airspace efficiently; and (D) preventing collision between aircraft, between aircraft and land or water vehicle, and between aircraft and airborne objects" (49 U.S.C. § 40103(b)(2)).

2. The FAA's aeronautical studies for Oat Hill Residential Project structures are the definitive standard for assessing compliance with federal aviation safety laws and regulations (49 U.S.C. § 77.1(c)). This federal authority is recognized in State law (Cal. PUC §21240).

3. The proposed Project based upon a FAA Determination is consistent with airspace protection policies and would not be a hazard to air navigation.

D. **Overflight**. The residential land uses under the proposed Project are consistent with the overflight standards of the ALUCP for those portions within Zone E and the Caltrans Handbook definition of Zone D, the "Traffic Pattern Zone."

1. The ALUC found that the portion of the project within Zone E (Parcel B and 151 units associated with Parcel A) is consistent with the ALUCP overflight standards.

2. Regarding the Project's 51 units that are located within ALUCP Zone D, the ALUCP provides that impacts from overflight are commonly considered an annoyance, which are subjective and vary widely from individual to individual. As stated above, the Project is well-outside the 55, 60, and 65 dB CNEL contour lines and will be constructed in accordance with California building regulations, which require that interior noise levels attributable to exterior sources not exceed 45 dB CNEL.

3. Further, as provided in the Caltrans Handbook, the primary mechanism for addressing overflight is buyer awareness, not direct restrictions on land use. Buyer awareness often takes the form of notice as part of residential real estate transactions or recordation of an overflight notification or avigation easement.

4. The City has included a condition of approval for the Project that requires a buyer awareness notification of the Napa County Airport and the potential for aircraft overflight.

5. Accordingly, the proposed Project is consistent with the Caltrans overflight standards.

Section 3: To the extent that the ALUC's failure to act within 60 days pursuant to PUC Section 21676(d) has not resulted in the Project being deemed consistent with the ALUCP by law, the City Council hereby notifies the ALUC and the State Division of Aeronautics that it intends to overrule the ALUC's determination that the Project is inconsistent with the ALUCP.

Section 4: City Council directs City staff to provide notice to the ALUC and State Division of Aeronautics of the City Council's intent to overrule the ALUC's determination that the Project is inconsistent with the ALUCP, and provide the ALUC and State Division of Aeronautics a copy of this Resolution.

Section 5: This Resolution is not subject to CEQA pursuant to Sections 15060(c)(2) and 15060(c)(3) of the CEQA Guidelines. This Resolution does not have the potential to result in either a direct physical change in the environment, or a reasonably foreseeable indirect physical change in the environment because it is limited to the notification of the City's intent to overrule the ALUC determination. This Resolution does not authorize the development of the Property or commit the City to approve the Project.

RE: **OAT HILL RESIDENTIAL PROJECT**
Airport Land Use Compatibility Determination #P21-00056-ALUC

Dear Mr. He;

The Napa County Airport Land Use Commission (ALUC) considered the referral application of the City of American Canyon's Oat Hill Residential Project pursuant to the requirements of Section 21676 of the California Public Utilities Code at a public hearing on June 23, 2021. The project considered by the ALUC consists of a proposal from RH Hess Development Company to construct a 291 dwelling unit condominium project, including a General Plan Amendment and Rezoning, on two parcels totaling approximately 20.8 acres. Parcel A includes 206 dwelling units on 13.6 acres. Parcel B includes 85 dwelling units on 7.2 acres. The property is located on the land feature commonly known at Oat Hill, which is located within the City of American Canyon on Hess Drive approximately 0.25 miles west of the intersection of State Routes 29 and Napa Junction Road within Napa County Airport Compatibility Zones D and E (Assessor's Parcel Numbers 058-380-008, and 058-320-001).

Please be advised that the ALUC, by a 6-0-1 (absent) vote, found the proposed project **INCONSISTENT** with the policies set forth in the Napa County Airport Land Use Compatibility Plan (ALUCP). .

This finding of inconsistency with the ALUCP applies to the version of the project referred to the ALUC. Pursuant to ALUCP Policy 1.4.2, the ALUC advises the City of American that consistency with the ALUCP can be achieved by revising the project in a manner consistent with the recommendations contained in the ALUC Staff Report for the June 23, 2021 hearing, which can be accessed from the following link: AgendaNet - Meeting Agendas and Minutes (countyofnapa.org). To summarize those recommendations, consistency can be achieved by redesigning the project to eliminate residences from Airport Land Use Compatibility Zone D, and evaluation of all potential impacts related to aviation noise and hazards need to be completed and the project design and processing documents adjusted accordingly. ALUC Staff is available to discuss the recommendations should you have any questions or comments.

The ALUC's June 23, 2021 determination on File P21-00056-ALUC is a final action. In the event the project is revised, a new ALUC referral application is required for the ALUC to consider the revised project for consistency with the ALUCP.

Please feel free to contact me if you have any questions or comments at (707) 299-1354, or by email at john.mcdowell@countyofnapa.org.

Sincerely,

John McDowell

John McDowell

RESOLUTION NO. 2020-06

A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF AMERICAN CANYON DECLARING THAT RESIDENTIAL USES ARE THE BEST USE OF THE RICK HESS PROPERTY ON OAT HILL

WHEREAS, there is a critical shortage of residential housing for all levels of affordability in California; and,

WHEREAS, the State of California Department of Housing and Community Development (HCD) and the Association of Bay Area Governments (ABAG) will soon commence the process to establish Regional Housing Needs Allocations ("RHNA") for the greater San Francisco Bay Area and possibly Napa County as a Subregion; and,

WHEREAS, in light of the State's housing shortage, HCD and ABAG are expected to continue to emphasize the need for residential housing in Napa County and in the City of American Canyon ("City") within its municipal boundaries; and,

WHEREAS, at least since 2005, the City has considered the possibility of designating and rezoning the Hess Property and certain surrounding properties for residential uses but, to date, has not yet completed an evaluation of such an action; and,

WHEREAS, on August 20, 2019, the City Council considered the possibility of designating and rezoning approximately 30 acres on the east side of Oat Hill south of Napa Junction Road (the "Hess Property") for residential uses; and

WHEREAS, the City has commenced an update of the General Plan which could potentially accommodate residential uses on the Hess Property but could take approximately two (2) years to complete; and

WHEREAS, the General Plan update process timeframe is longer than Applicant and Owner, Mr. Hess, is willing to make his property available for residential development; and

WHEREAS, also on August 20, 2019, the Council concluded that residential uses are the best use for the Hess Property and directed Staff to work with Mr. Hess to identify means by which the City might evaluate and consider a residential development proposal for the Hess Property while providing Mr. Hess some certainty that his investment in a planning and California Environmental Quality Act (Pub. Res. Code § 21000 *et seq.*, "CEQA") review process would be brought to completion; and

WHEREAS, on November 6, 2019, Oat Hill Properties II, LLC (Rick Hess) submitted a General Plan Text Amendment and Zoning Code Overlay Study Amendment application which would allow for the filing of a subsequent General Plan Amendment and consistent Zoning Ordinance, which authorize residential development consistent with State law; and

WHEREAS, after consideration of the need for further study of residential development of the Hess Property compatibility with the Napa County Airport Land Compatibility Plan, on January 14, 2020, Mr. Hess transmitted a communication to the City Attorney, City Manager, and City Community Development Director stating that he could be provided with the assurance that he needs to proceed with residential development on the Hess Property if the Council confirms that direction by Resolution rather than General Plan Text Amendment and Zoning Overlay; and

WHEREAS, the Resolution will provide Mr. Hess with the certainty he requested on August 20, 2019 and January 14, 2020; and

WHEREAS, the proposed Resolution is exempt from CEQA. The Resolution does not reclassify or rezone the Hess Property for specific residential uses, but is rather a reflection of the Council's determination that the best use of the Hess Property is for residential uses. For these reasons, the action is not a project under CEQA and is exempt from CEQA review as it has no present potential impact on the physical environment. CEQA Guidelines §§ 15060(b)(3c), 15378(b); and

WHEREAS, the City Council has considered all of the written and oral testimony presented at this public hearing and its prior actions in considering this Resolution.

NOW, THEREFORE, BE IT RESOLVED by the City Council of the City of American Canyon that:

1. All recitals herein are incorporated and deemed true and correct;

2. The Council declares that residential uses are the best use of the Hess Property on Oat Hill, subject to consideration for General Plan Amendment.

PASSED, APPROVED and **ADOPTED** at a regularly scheduled meeting of the City Council of the City of American Canyon held on the 21st day of January 2020, by the following vote:

CITY OF AMERICAN CANYON

PLANNING COMMISSION
STAFF REPORT

March 25, 2021
Public Hearing

SUBJECT

Conduct a Public Hearing to consider Resolutions to Recommend City Council approval of:

(1) The *Oat Hill Multi-Family Residential Mitigated Negative Declaration*;
(2) A General Plan Amendment on a 13.6-acre Oat Hill Parcel A from Industrial with a Specialty Commercial (CS) overlay and Estate Residential (RE) to High Density Residential (RH-1), (APN 058-380-008 and portion of 058-320-001), (File No. PL20-0024);
(3) A General Plan Amendment on a 7.2-acre Oat Hill Parcel B from Estate Density Residential to Medium Density Residential (portion of APN 058-320-001); (File No. PL20-0026);
(4) A Zone Change from on a 13.6-acre Oat Hill Parcel A from Light Industrial with a Specialty Commercial (LI:CS) overlay and Estate Residential (RE) to Medium Density Residential (APN 058-380-008 and portion of 058-320-001), (File No. PL20-0024);
(5) A Zone Change on a 7.2-acre Oat Hill Parcel B from Estate Density Residential to Medium Density Residential (RM); (portion of APN 058-320-001), (File No. PL20-0026);
(6) A Tentative Subdivision Map for 206 condominium residential units on a 13.6-acre Oat Hill Parcel A; (APN 058-380-008 and portion of 058-320-001), (File No. PL20-0025);
(7) A Tentative Subdivision Map for 85 condominium residential units on a 7.2-acre Oat Hill Parcel B; (portion of APN 058-320-001); (File No. PL20-0027);
(8) A Design Permit for condominium 206 residential units on a 13.6-acre Oat Hill Parcel A; (APN 058-380-008 and portion of 058-320-001), (File No. PL20-0022); and
(9) A Design Permit Map for 85 condominium residential units on a 7.2-acre Oat Hill Parcel B; (portion of APN 058-320-001); (File No. PL20-0023).

PROJECT LOCATION	Oat Hill (Assessor Parcel Numbers 058-380-008, 058-320-001)
APPLICANT/OWNER	RH Hess Development Company
ENVIRONMENTAL REVIEW	The City of American Canyon has prepared an Initial Study Checklist and Mitigated Negative Declaration in accordance with the California Environmental Quality Act (CEQA). The basis for a Mitigated Negative Declaration (MND) is the finding that the proposed project will not have a significant effect on the environment because mitigation measures that reduce the impacts to less than significant are part of the project conditions. The MND includes mitigation measures for Biological Resources, Cultural Resources, Geology/Soils, Hazards and Hazardous Materials, Hydrology/Water Quality, Noise, Transportation/Traffic, and Utilities.
STAFF CONTACT	William He, AICP, Associate Planner

REQUESTED ACTIONS

1. Receive staff report.
2. Reopen Public Hearing.
3. Receive public testimony.
4. Close Public Hearing.
5. Commission comments and questions.
6. Adopt the following Resolutions:
   a. The *Oat Hill Multi-Family Residential Mitigated Negative Declaration*;
   b. A General Plan Amendment on a 13.6-acre Oat Hill Parcel A from Industrial with a Specialty Commercial (CS) overlay and Estate Residential (RE) to High Density Residential (RH-1), (APN 058-380-008 and portion of 058-320-001), (File No. PL20-0024);
   c. A General Plan Amendment on a 7.2-acre Oat Hill Parcel B from Estate Density Residential to Medium Density Residential (portion of APN 058-320-001); (File No. PL20-0026);
   d. A Zone Change from on a 13.6-acre Oat Hill Parcel A from Light Industrial with a Specialty Commercial (LI:CS) overlay and Estate Residential (RE) to Medium Density Residential (APN 058-380-008 and portion of 058-320-001), (File No. PL20-0024);
   e. A Zone Change on a 7.2-acre Oat Hill Parcel B from Estate Density Residential to Medium Density Residential (RM); (portion of APN 058-320-001), (File No. PL20-0026);
   f. A Tentative Subdivision Map for 206 condominium residential units on a 13.6-acre Oat Hill Parcel A; (APN 058-380-008 and portion of 058-320-001), (File No. PL20-0025);
   g. A Tentative Subdivision Map for 85 condominium residential units on a 7.2-acre Oat Hill Parcel B; (portion of APN 058-320-001); (File No. PL20-0027);
   h. A Design Permit for condominium 206 residential units on a 13.6-acre Oat Hill Parcel A; (APN 058-380-008 and portion of 058-320-001), (File No. PL20-0022); and
   i. A Design Permit Map for 85 condominium residential units on a 7.2-acre Oat Hill Parcel B; (portion of APN 058-320-001); (File No. PL20-0023).

Site Information

General Plan Designation	Parcel A is Industrial with Specialty Commercial overlay (CS) and Residential Estate (RE) Parcel B is Residential Estate (RE)
Zoning District	Parcel A is Light Industrial with Specialty Commercial overlay (LI:CS); Parcel B is Residential Estate (RE)
Site Size	20.08 acres (Parcel A is 13.6 acres and Parcel B is 7.2 acres)
Present Use	Vacant
Surrounding Zoning and Uses	North: Light Industrial; winery and a vacant parcel South: Residential Estate; vacant East: Medium Density Residential; single-family homes West: Light Industrial; vacant parcel
Access	Site access is provided from Napa Junction Road

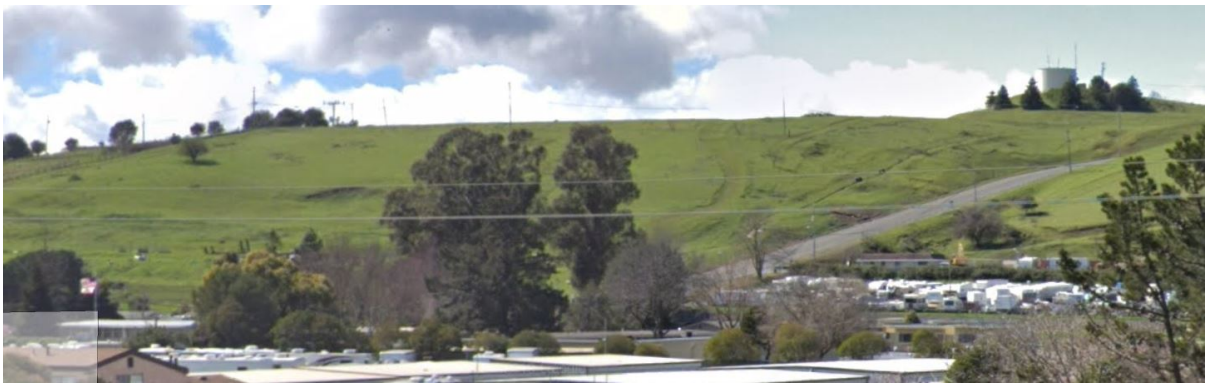

Figure 1: View of Oat Hill from SR-29@ Railroad Bridge

Figure 2: Vicinity Map

Background and Discussion

The Oat Hill property is located between Hess Road and the western terminus of Napa Junction Road. The proposed residential uses on Oat Hill would require a General Plan Amendment and a Zone Change.

A General Plan Amendment and Zone Change is a Legislative Act. Thus the Planning Commission, in its advisory role to the City Council as City residents with appointed authority, has complete discretion to approve, modify or deny such a request.

Proposed Development:
The Project Site topography is characterized by two generally flat terraces connected by a steep hillside, with elevations ranging approximately 80 to 185 feet above mean sea level. Parcel A (the upper parcel) and Parcel B (the lower parcel) are separated by a steep landscaped hillside. An emergency vehicle access (EVA) road will connect the two parcels.

The applicant submitted a Lot Line Adjustment (LLA) to reconfigure Parcel A from 11.3 acres to 13.6 acres and Parcel B from 9.5 acres to 7.2 acres (File No PL20-0039). An LLA is an administrative (staff approval) application. On March 11, 2021, staff informed the applicant the Lot Line Adjustment is technically correct and may be recorded.

History
In August 20, 2019, the applicant requested a workshop with the City Council for the consideration of residential uses on Oat Hill project. At that time, Parcel A was proposed for single family homes and Parcel B was proposed for apartment units.

In January 21, 2020, the City Council approved a resolution declaring that residential uses are the best use of the property on Oat Hill (Resolution 2020-06). The Resolution endorsed residential uses, but not a specific residential density.

In August 14, 2020, the applicant submitted the proposed Oat Hill Multifamily residential project. On December 4, 2020, the applicant submitted the first draft of the Initial Study and Mitigated Negative Declaration (ISMND) report.

On March 3, 2021, the Open Space Advisory Committee reviewed the project for consistency with public access requirements in the Parks Master Plan. Public access issues are considered later in this report.

Project Description
The overall project consists of 291 multi-family dwelling units. The Parcel A development consists of 206 dwelling units in 13 3-story multifamily buildings and a recreation building with leasing office. The density is 15.1 dwelling units per acre. The site will be supported with 451 parking spaces and approximately 2.2-acres of landscaping. The 206 multi-family residential units consists of 52 one-bedroom units, 108 two-bedroom units, and 46 three-bedroom units. Parcel A includes 1.2-acres of common open space and 3.2-acres of hillside slope area.

The Parcel B development consists of 85 dwelling units in five 3-story multifamily buildings and a recreation building with leasing office. The density is 11.8 dwelling units per acre. The 85 multi-family units comprise, 20 one-bedroom units, 45 two-bedroom units, and 20 three-bedroom units. The site will be supported with 183 parking spaces and 1.1-acres of landscaping. Parcel B includes 0.63-acres of common space and 5.9-acres of landscaped hillside slope.

As described in the “Subject Title” of the report, Parcel A and B are subject to the following entitlements:

- Mitigated Negative Declaration
- General Plan Amendment

- Zone change to amend the Zoning Map
- Tentative Subdivision Map, and
- Design Permit.

General Plan Amendment (GPA).

The Parcel A GPA changes the land use designation from Industrial with Specialty Commercial (I:CS) and Estate Residential to High Density Residential (RH-1). Estate Density Residential allows 1 dwelling unit per acres. High Density Residential allows a maximum of 16 dwelling units per acre. The graphic below depicts the "Current" and "Proposed" General Plan designations for Parcel A.

Existing General Plan Parcel A

Proposed General Plan Parcel A

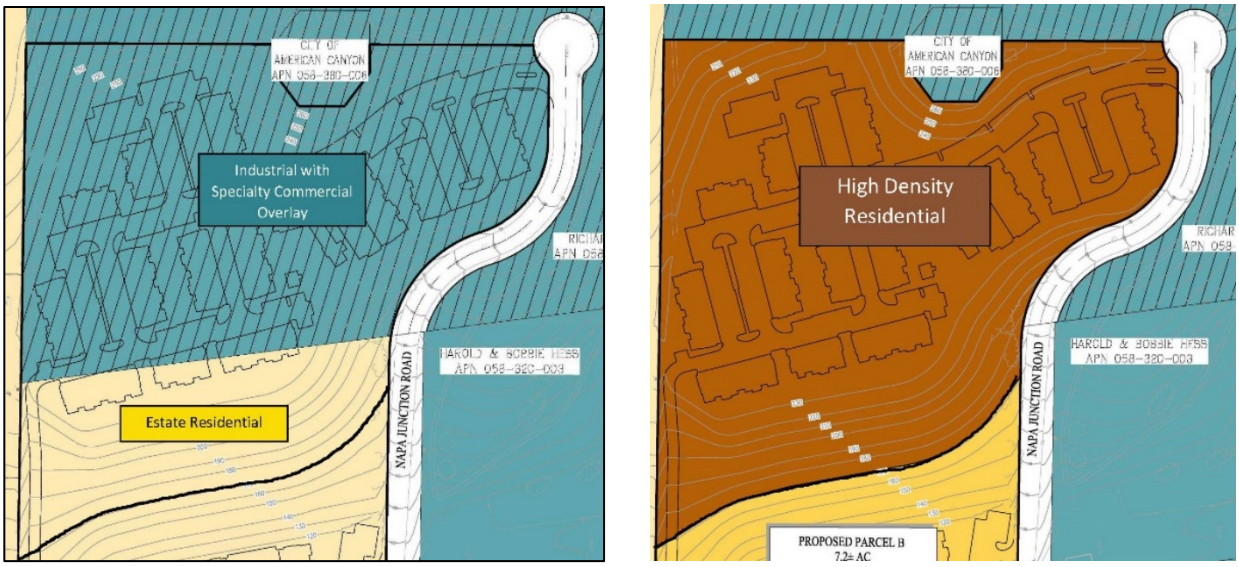

Figure 3: Existing and Proposed Parcel A General Plan Amendment

The Parcel B GPA changes the land use designation from Residential Estate (RE) to Medium Density Residential (RM). The graphic below depicts the "Current" and "Proposed" General Plan designations for Parcel B.

Existing General Plan Parcel B

Proposed General Plan Parcel B

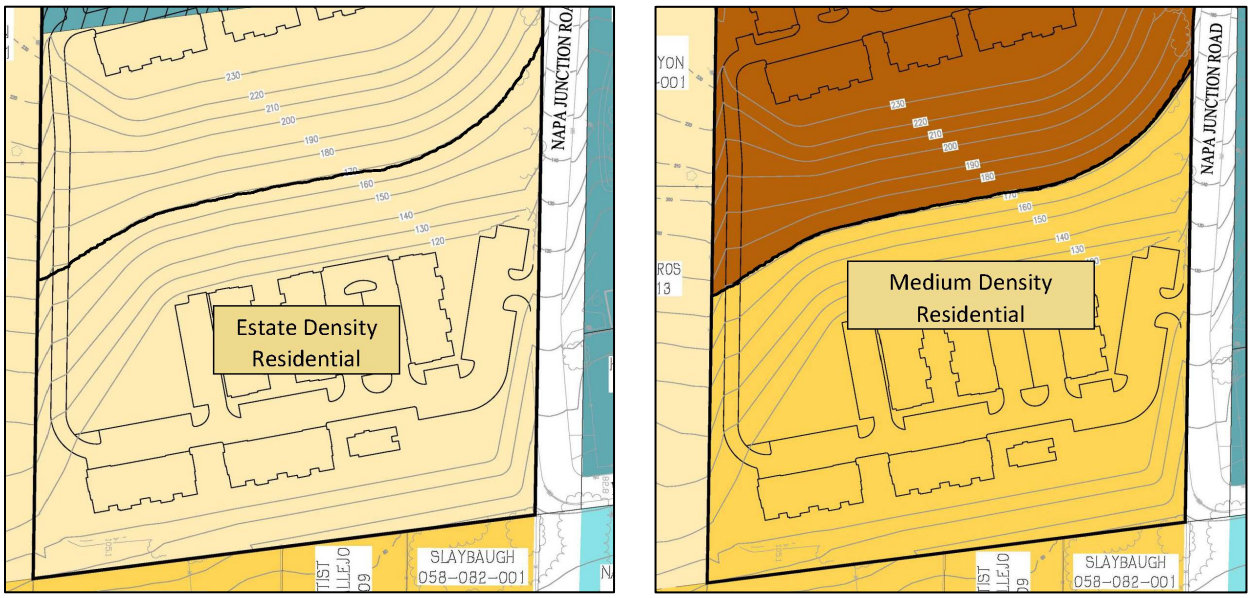

Figure 4 - Existing and Proposed Parcel B General Plan Designation

Zone Change Amendments (ZC).

Consistent with the General Plan revision, the Parcel A ZC amendments will change the zoning from Industrial with Specialty Commercial (I:CS) and Estate Residential to High Density Residential (RH-1). The graphic below depicts the "Current" and "Proposed" Zoning designations for Parcel A.

Existing Zoning Parcel A

Proposed Zoning Parcel A

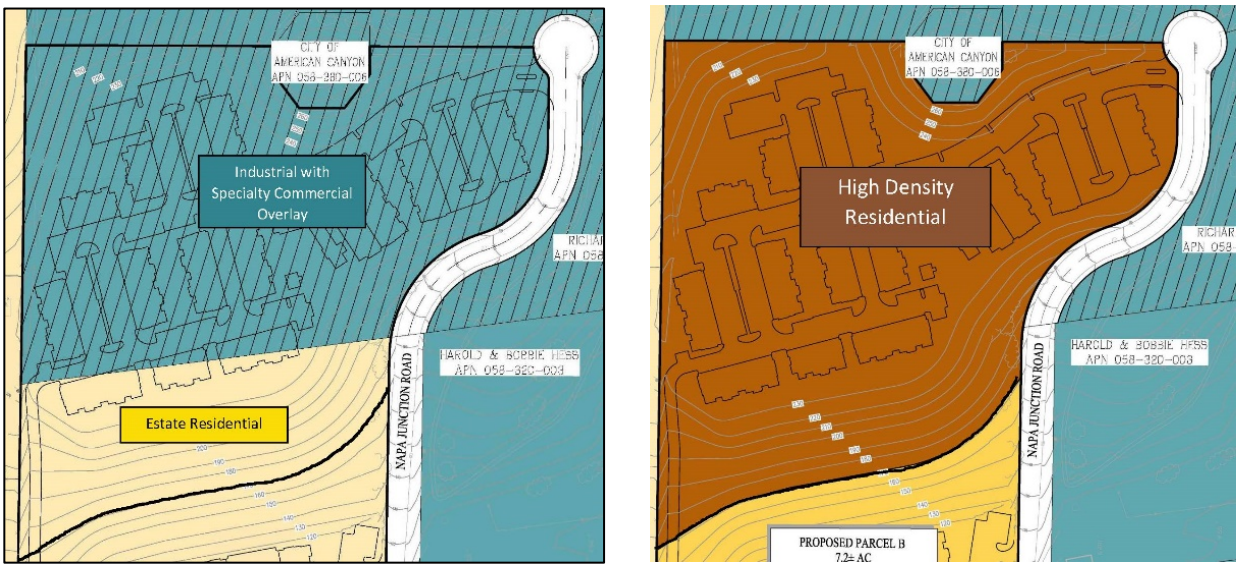

Figure 5 - Existing and Proposed Parcel A Zone Change Designations

The Parcel B ZC amendments will change the zoning from Residential Estate (RE) to Medium Density Residential (RM). The graphic below depicts the "Current" and "Proposed" Zoning designations for Parcel B.

Existing Zoning Parcel B

Proposed Zoning Parcel B

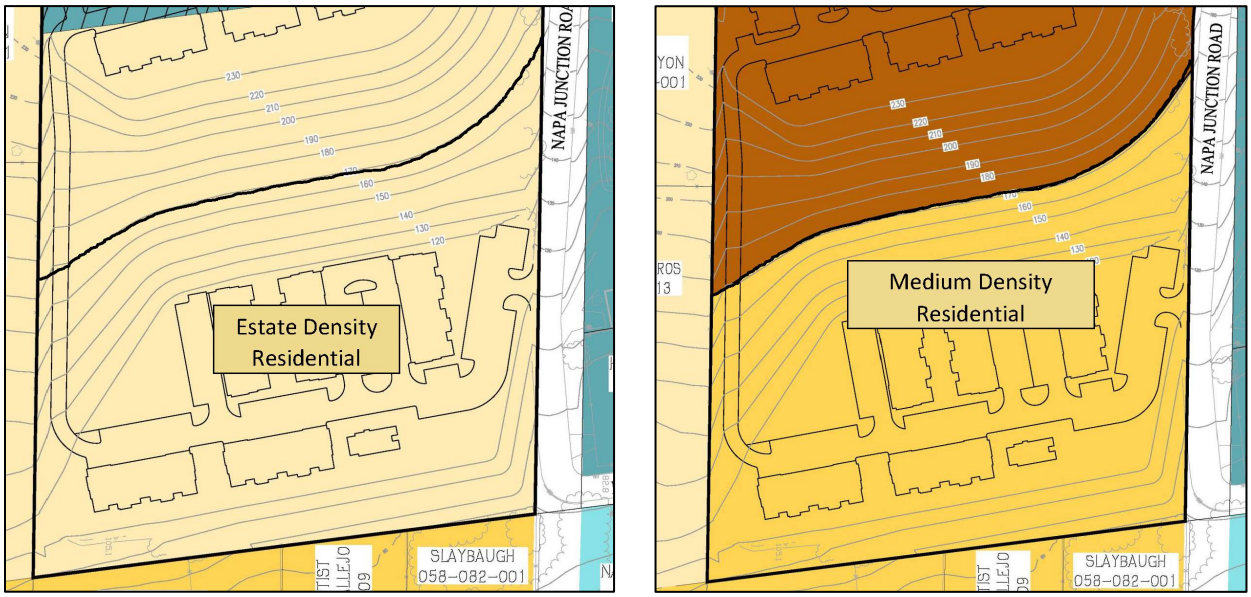

Figure 6 - Existing and Proposed Parcel B Zoning Designation

Tentative Subdivision Map

The applicant submitted a subdivision map for Parcel A and B. The subdivision maps provides flexibility to rent the dwelling units as apartments or sell them as ownership condominiums.

Parcel A Tentative Subdivision Map The Parcel A tentative subdivision map consists of 206 dwelling units in 13 3-story multifamily buildings and a recreation building with leasing office. The interior roads and recreation areas would be privately owned and maintained. The density is 15.1 dwelling units per acre which is within the 16 maximum dwelling units per acre per the High-Density zoning district.

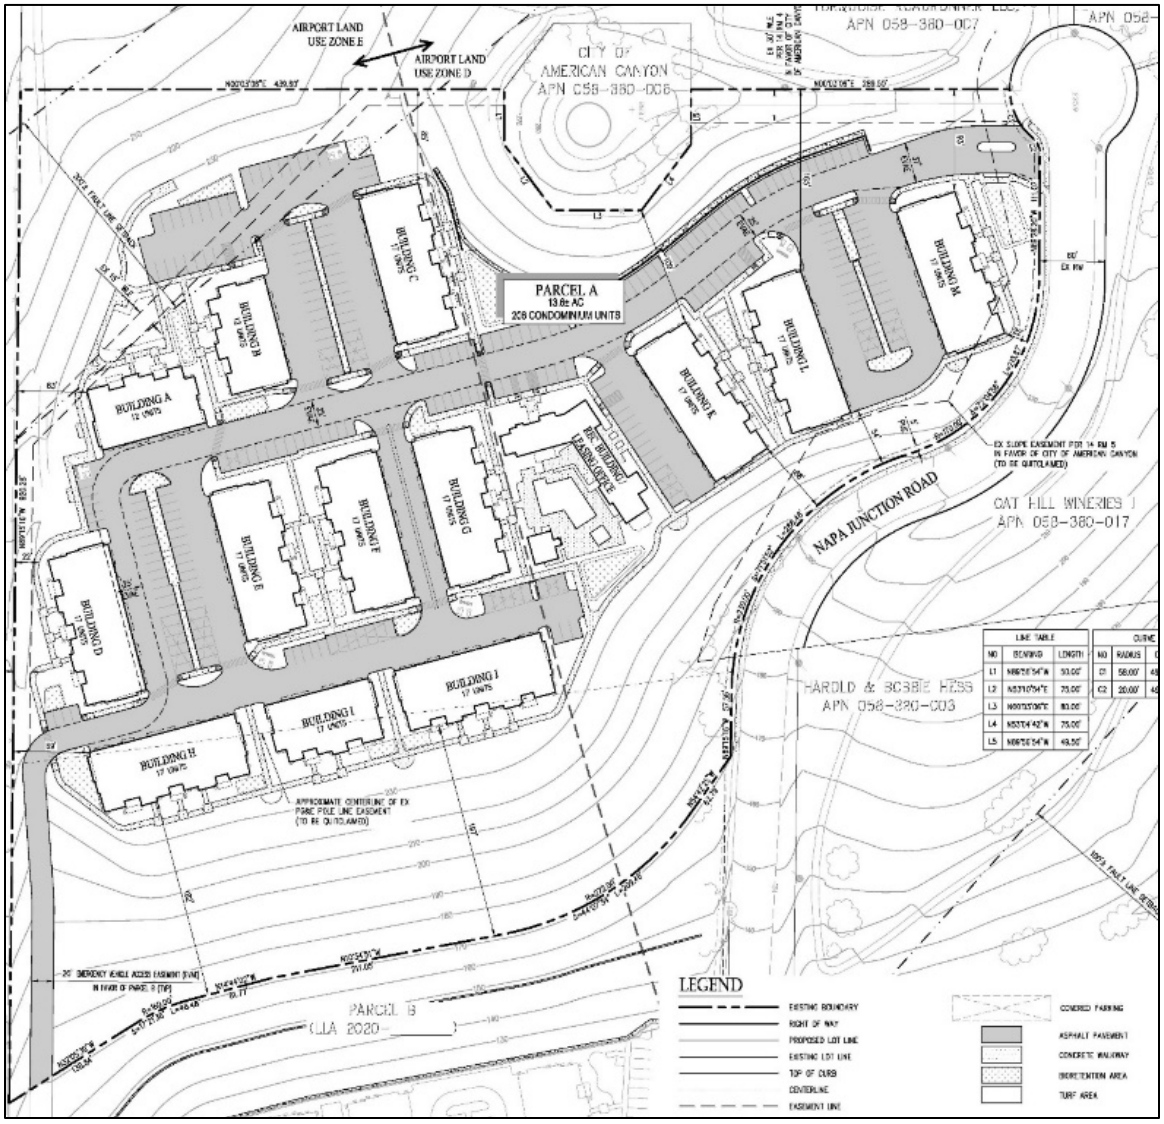

Figure 7 - Proposed Parcel A Tentative Subdivision Map

Parcel B Tentative Subdivision Map The Parcel B tentative subdivision map consists of 85 dwelling units in 5 3-story multifamily buildings and a recreation building with leasing office. The interior roads and recreation areas would be privately owned and maintained. The density is 11.8 dwelling units per acre which is within the 12 maximum dwelling units per acre per the Medium-Density zoning district.

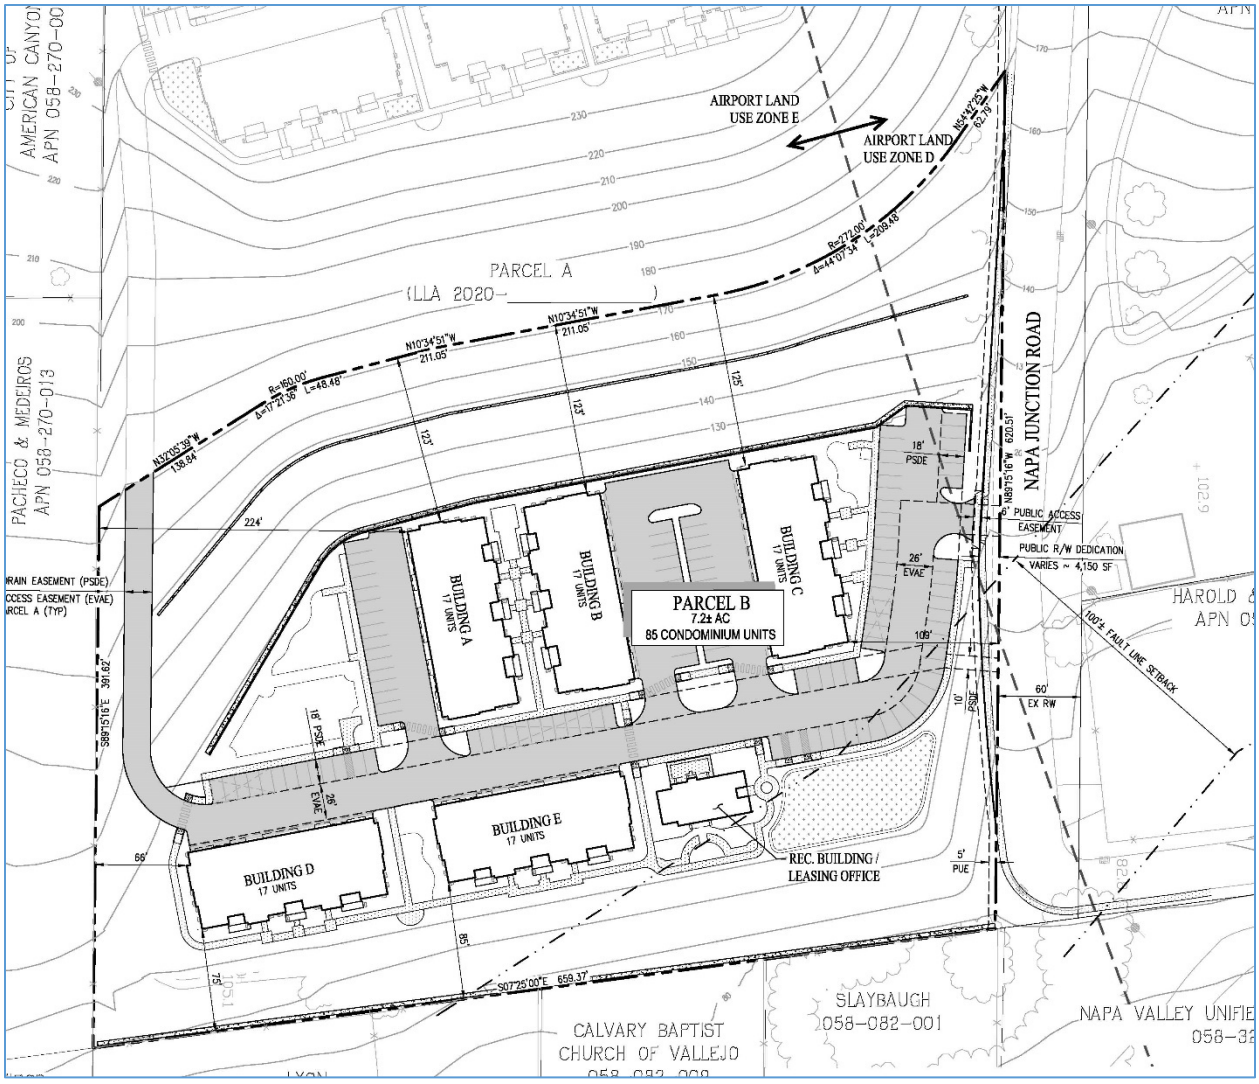

Figure 8 - Proposed Parcel A Tentative Subdivision Map

Analysis of the Proposed Project

The Conditional Use Permit application analysis includes:

1. Project Consistency with the General Plan
2. Project Consistency with the Zoning Ordinance
3. Specific Project Issues
4. Public Comments

1. Consistency with the General Plan

Approval of a General Plan Amendment for Parcel A and B supports several policies related to enhancing housing opportunities in the City. These policies are discussed below:

Because there is a critical shortage of residential housing for all levels of affordability in California, the proposed Oat Hill Multi-Family Residential general plan amendment will designate additional land to provide needed housing. Replacement of Light Industrial with a Specialty Commercial

Overlay (LI:CS) zoning with High Density Residential (RH-1) zoning is in keeping with the following General Plan Goals that promote additional housing in American Canyon:

Goal 2A: "Provide sufficient residential land with adequate infrastructure to accommodate the City's fair share of projected growth, and to facilitate mobility within the ownership and rental markets."

Goal 2B: "Provide a range of housing types within the community to accommodate a variety of incomes and lifestyles, and to enable residents to remain in American Canyon throughout their lives."

Goal 2E: "Address the housing needs of all economic segments of the existing and future community, including the City's fair share of the regional housing need." The applicant proposes to address housing affordable to lower income residents by providing in-lieu impact fees, pursuant to the Inclusionary Housing Ordinance (ACMC Chapter 19.28).

The project satisfies the following Land Use Element policies:

Goal 1E: "Ensure the development of residential neighborhoods that provide a range of housing opportunities to meet the physical, economic, and social needs of the population, are designed to exhibit a high quality and character, contain appropriate supporting services, and reflect their environmental setting." The design permit application associated with this property ensures that the development will exhibit a high quality and character. The project reflects its environmental setting by providing public access to locally-important views across the project site.

Policy 1.8 specifies that the intent of multifamily residential is to provide high quality residential at 5 to 12 dwellings per unit for the RM zone and 12 to 16 dwelling units for the RH zone.

Policy 1.8.4 call for special architectural treatment, the incorporation of arcades and other recesses, articulation and differentiation of building entrances and floors, and the use of landscaping.

Policy 1.17 specifies the zone should, "provide for development of uses that capitalize on and attract visitors due to their unique view sheds of the Napa River, San Francisco Bay, and Napa Valley, site topography, and other natural characteristics".

The Oat Hill Parcel A and B developments are consistent with these policies. The development takes advantage of the Oat Hill view by providing units with bay windows and balconies facing the south, southeast, and southwest. According to their preliminary architectural designs, the apartment buildings are of Modern Farmhouse design. They feature a hip roof, articulated entrances, functional balconies, separations in color, and recessed windows. The site also takes advantage of landscaping in the setbacks, common areas, and parking areas. The development complies with the Design Permit development standards for the RH-1 and RM zoning districts and proposes buildings of high quality that meets the General Plan Land Use goals.

Figure 9: Elevation of 17-unit apartment for Oat Hill Apartments

Figure 10: Front elevation of 12-unit apartment for Oat Hill Apartments

The development of housing on Oat Hill also would be compatible with the Broadway Specific Plan (the "Broadway Plan"). Although Parcels A and B are not within the boundaries of the Broadway Plan, that plan designates land adjacent to the parcels as "Medium Density Residential," which permits 12 units/acre and is intended to foster a high-density residential community that is compatible with the existing older single-family residences in this area. Re-designating Parcels A and B to RH-1 and RM would allow for residential densities similar to those permitted in the Medium Density Residential area of the Broadway Plan, and it would further establish a residential community that is compatible with surrounding uses.

Re-designating and rezoning Parcels A and B for medium- and high-density residential would be consistent with other development principles and strategies identified in the Broadway Plan. For example, the Broadway Plan has identified properties west of Theresa Avenue between Napa Junction and Eucalyptus Road West End as suitable for residential uses to facilitate the development of additional housing. Further, the Broadway Plan seeks to increase the number and type of housing opportunities in the Broadway area and encourages variety in the scale and design of new development. Re-designation of Parcels A and B directly furthers these goals.

Finally, the parcels are located near areas designated as "Business Park" under the Broadway Plan. The Business Park designation is designed to encourage professional office uses, as well as retail and service commercial uses that are oriented to the day-to-day needs of the local residents. Oat Hill's location west

of this area and the downtown core makes it an ideal location for new residences that are close to services and transit.

2. Consistency with Zoning Ordinance

According to the American Canyon Municipal Code (ACMC) multifamily projects within the High Density Residential (RH-1) and Medium Density Residential (RM) zoning districts are permitted uses. The project meets the required development standards as follows:

Table 1 – Parcel A Development Standards

Development Standard (RH-1 Zone)	Required	Provided
Minimum Lot Size	20,000 SF	13.6 acres
Max Density (dwelling units per acre)	16 DU/AC	15.1 DU/AC
Minimum Width	100 feet	600+ feet
Minimum Depth	100 feet	900+ feet
Max Lot Coverage	50%	17.6%
Max Building Height	42 feet	40 feet
Required Setbacks Front Yard Side (Interior) Rear First Story Second Story	 20 feet 5 feet 10 feet 5 feet 10 feet	 30 feet 20+ feet 20+ feet 20+ feet 20+ feet
Maximum # of stories	3 stories	3 stories
Parking: Unit with 1 bedroom requires 1 covered, plus .5 uncovered spaces; Unit with 2 or more bedrooms requires 1 covered space plus 1 uncovered space; Plus 1 guest space per 4 units	438	451 (23 offsite)
Bicycle Parking	10 stalls	10 stalls*

* The applicant shall identify the location of the bicycle parking prior to the issuance of building permits.

Table 2 – Parcel B Development Standards

Development Standard (RM Zone)	Required	Provided
Minimum Lot Size	20,000 SF	7.2 acres
Max Density	12 DU/AC	11.8 DU/AC
Minimum Width	100 feet	600+ feet
Minimum Depth	100 feet	300+ feet
Max Lot Coverage	50%	13%
Max Building Height	42 feet	40 feet
Required Setbacks Front Yard Side (Interior) Rear	 15 feet 5 feet 10 feet	 30 feet 20+ feet 20+ feet

First Story Second Story	5 feet 10 feet	20+ feet 20+ feet
Maximum # of stories	3 stories	3 stories
Parking: Unit with 1 bedroom requires 1 covered, plus .5 uncovered spaces; Unit with 2 or more bedrooms requires 1 covered space plus 1 uncovered space; Plus 1 guest space per 4 units	182	182
Bicycle Parking	7 stalls	7 stalls*

* The applicant shall identify the location of the bicycle parking prior to the issuance of building permits.

3. Specific Project Issues

a. Airport Land Use

A portion of the site lies within the Napa County Airport Land Use Compatibility Plan (ALUCP). Four buildings, K, L, M and the recreation office, are within the D-Zone, and consists of 51 units. The ALUCP defines the D-Zone as one that does not normally permit residential uses. The applicant conducted a peer-reviewed noise study, prepared by Saxelby Acoustics (Sept 10, 2020) and concluded that the Oat Hill project would not conflict with the noise contours or any of the "three established sources of guidance on safety compatibility" for Zone D. As an added precaution and a condition of approval, the applicant will agree to record an avigation easement in favor of the Napa County Airport to indemnify them from noise complaints. The applicant also scheduled to file an application with the Napa County Airport Land Use Commission (ALUC) to request approval of their project in the D-Zone. The applicant plans to attend their May 1, 2021 meeting to present their project.

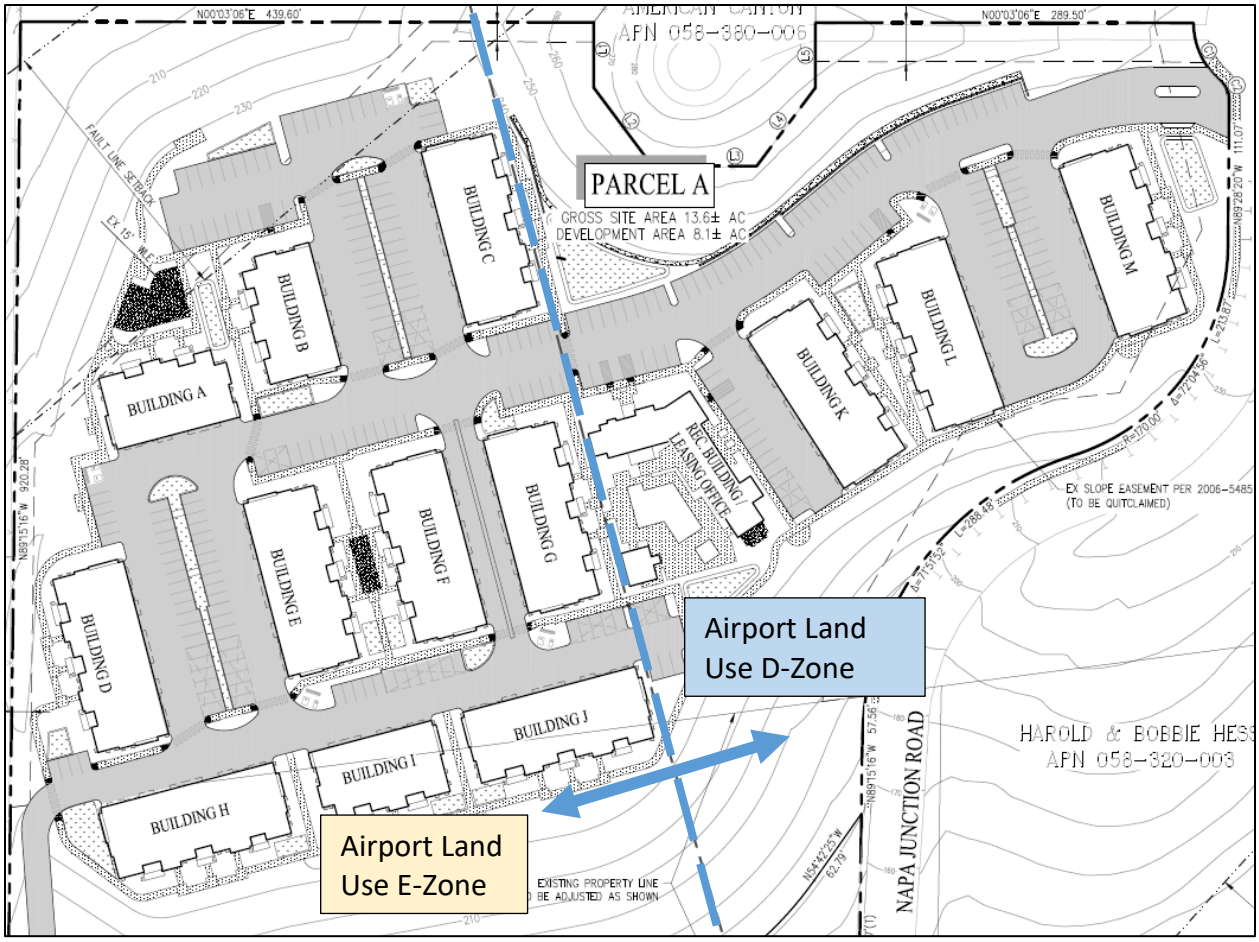

Figure 11: Buildings K, L, and M are within the D-Zone for the Airport Land Use Plan. All other units are not affected.

b. Affordable Housing

In accordance to the Municipal Code, new apartment developments that exceed five units are subject to inclusionary housing. The Code requires housing developments to provide 15% of the units, at 5% for very-low, 5% for low-income, and 5% for moderate income housing. For the 291 proposed units at the Oat Hill project, the applicant is required to provide 44 affordable units.

The applicant requested to provide an affordable housing nexus fee in-lieu of the 44 affordable units. The applicant provided a marketing study which explained that it was financially infeasible for the project to proceed without the in-lieu fee. The current affordable housing nexus fee is $3.82 per square feet, which is due prior to building permit issuance, and the marketing study is available in Attachment 1, Exhibit C.

c. Napa Junction Road

Primary access to both Parcels A and B will be from Napa Junction Road. A new sidewalk would be constructed along the frontage on Napa Junction Road. A new section of Napa Junction Road would be constructed between two disconnected segments east and west of Hess Road. The new roadway and pedestrian connections would result in a more direct route to the project site from SR 29 and other areas of the City and would require the removal of several existing trees located adjacent to Parcel B.

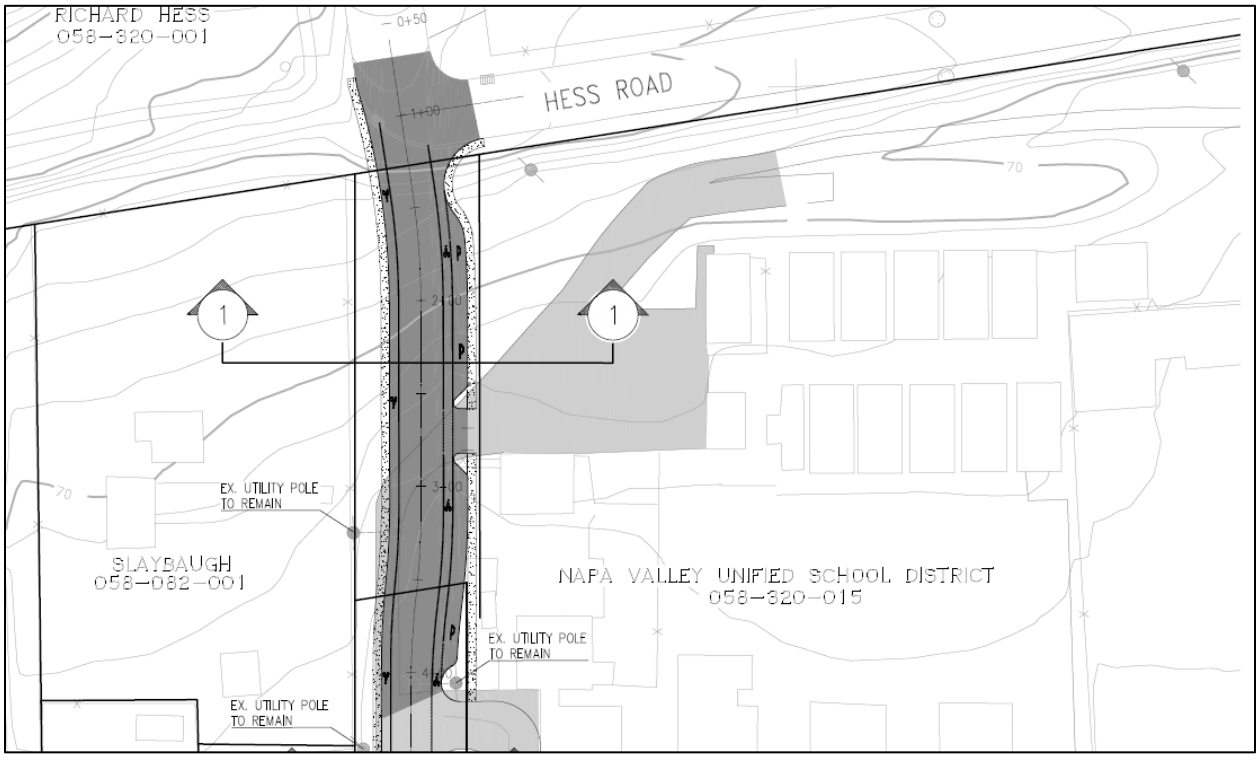

Figure 12: Napa Junction Road Extension proposed to be completed by the project will bring access and mobility to Oat Hill.

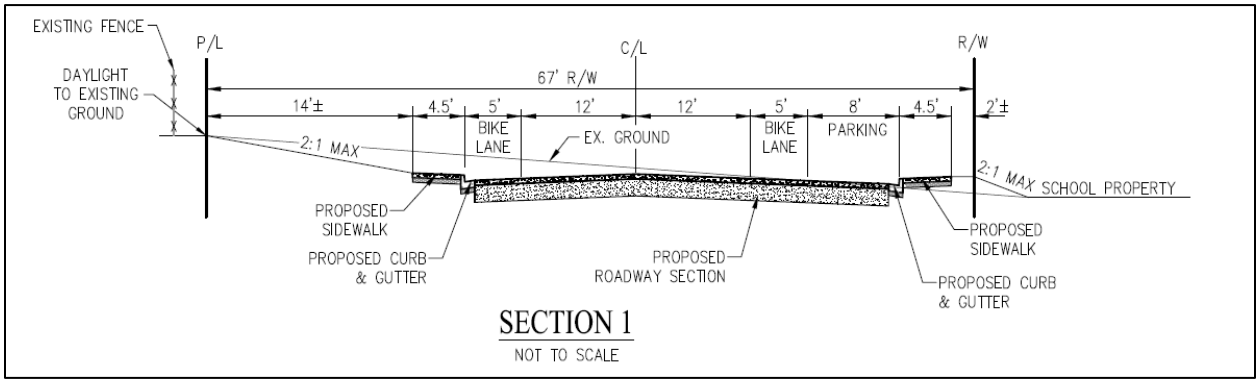

Figure 13: Preliminary cross-section drawing of the Napa Junction extension will include two travel lanes, bike lanes, sidewalks, and a single parking lane.

Part of the Napa Junction extension is owned by the Napa Valley Unified School District (NVUSD) and the applicant is required to make a good faith offer to NVUSD. This would include identification of property rights needed (permanent and temporary), appraisal of the value of the highest and best use of the property, and offer to pay this amount. The obligation is identified as a condition of approval.

d. Oat Hill Views and Public Access Trail

For many years, the City considered views from Oat Hill to be an important public resource. In 1994, the General Plan designated Oat Hill with a Specialty Commercial overlay that highlights the unique views from Oat Hill. According to the General Plan Land Use Policy 1.17.3, [The City shall] *Require that development be sited and designed to emphasize the unique character of its setting and intended functions*

(e.g., maintenance of viewsheds) and convey a high level of quality in accordance with Policies 1.18.1 to 1.18.4. Additionally, in accordance to ACMC Section 19.19.030(B)(3), *projects using the specialty commercial overlay zoning that require approval of a design permit shall incorporate into the site plan a public pedestrian easement to the site with potential connections to adjacent properties that provides access to the site's unique views.*

The Parcel B application is lower in elevation and the views are not significant. The Parcel A application being higher on Oat Hill offers the best views. Recognizing the City's Oat Hill view policy, the Parcel A site plan includes a pedestrian path that takes advantage of the views. Figures 4, 5 and 6 depict the views from the upper pad. The path, shown in yellow highlight in Figure below, generally follows the edge of the development pad with no structures in the way to block the view.

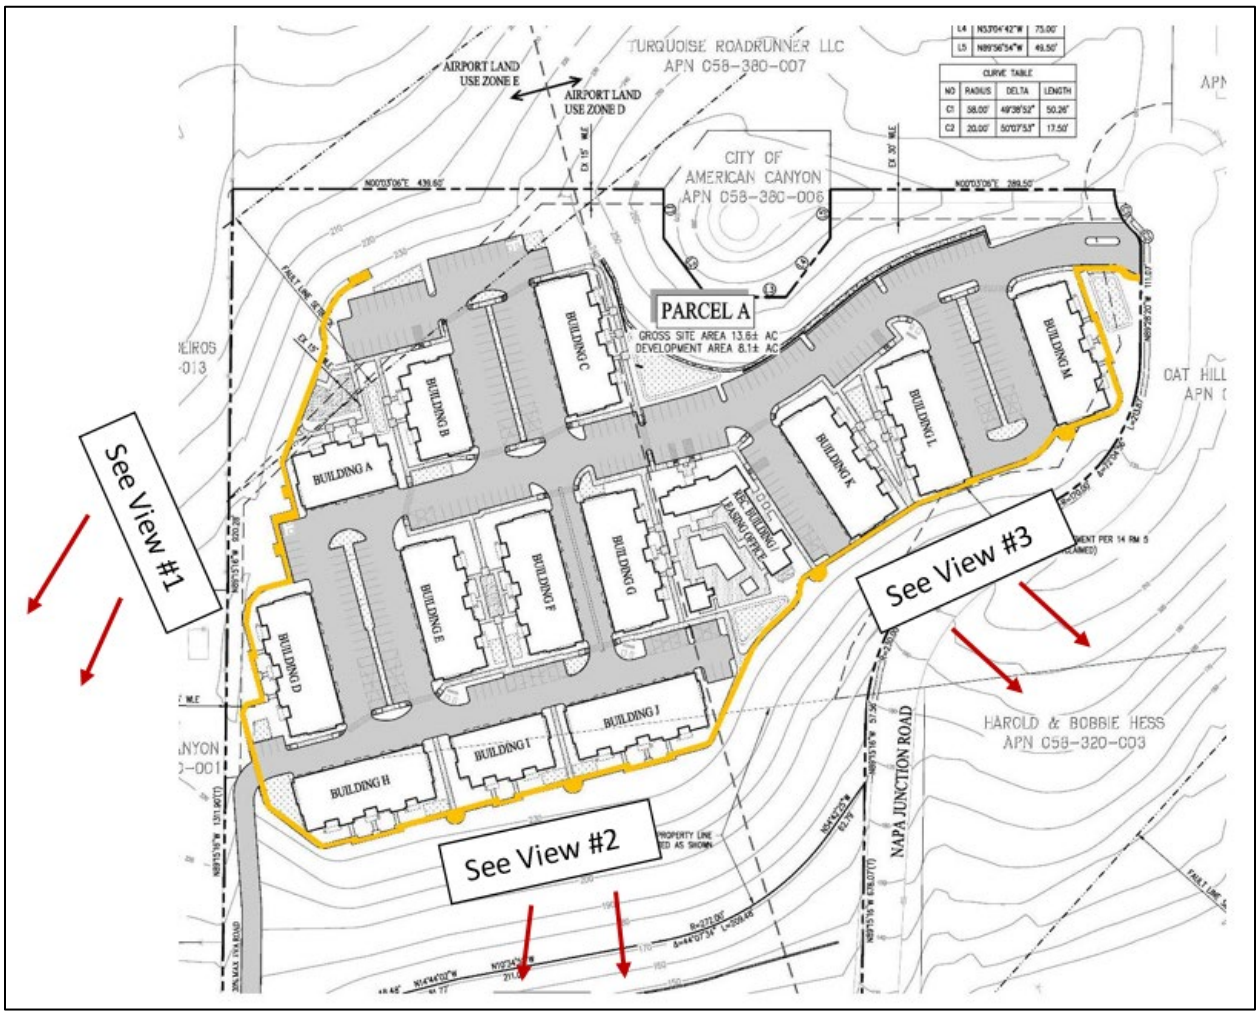

Figure 14: Proposed pedestrian view path shown in yellow.

Figure 15: View 1 – Southeast View

Figure 16: View #2 – East View

Figure 17: View #3 – Northeast View

The applicant attended an Open Space Advisory Committee (OSAC) meeting on March 3, 2021 and discussed the project with the committee. Mr. Hess explained that the pedestrian path, which he refers to as the "Community Loop Walkway", will be open to the public and maintained by the property-owner. The walkway is closest to the buildings where there are no apartment windows (i.e.: no privacy issue) and farther where it passes apartment unit front door entries. Mr. Hess explained that separating the path from the apartment buildings is constrained by the edge of Parcel A. The walkway will be at least 4 feet wide and contains look-out areas and benches to take advantage of Oat Hill views. Visitor parking will be

limited on site, but street parking along Napa Junction Road will be available as a first-come, first-serve basis.

e. Public Comments

A 30-day Notice of Intent was sent to the State Clearinghouse and published on February 5, 2021. Staff received three comments.

California Department of Fish and Wildlife. A California Department of Fish and Wildlife letter recommended revisions to the proposed Biological Resources mitigation measures. The revisions suggest expanding the size of pre-construction bird survey radiuses, and establishing tighter buffer zones. The biology consultant WRA Environmental Consultants reviewed the requests and is scheduled to updated Mitigation Measures BIO-1 to BIO-5 in the biology section.

Caltrans. A Department of Transportation letter recommended the applicant conduct annual monitoring reports, and inquired why the SR-29 / Napa Junction Road intersection was not considered in the group of analyzed areas in the traffic impact study. The letter also provided guidance on how to submit an encroachment permit application. The applicant's CEQA consultant, Raney Environmental, reviewed the requests and explained that subsequent to the publication of the IS/MND, a final traffic impact analysis (TIA) was prepared for the project. The final TIA, from February of 2021, includes the SR-29/Napa Junction Rd intersection. As noted in the final TIA, the Napa Junction Road/SR 29 intersection would operate at LOS F under Future Conditions with or without the proposed project. This operation was considered acceptable because the Napa Junction Road/SR 29 intersection is exempt from the City's LOS standard, and the California Department of Transportation (Caltrans) does not provide an operational standard. Therefore, the findings of the final TIA would not change the adequacy of the analysis, mitigation, or conclusions presented in the IS/MND. The final TIA is available in the Attachment 1, Exhibit A.

Resident. A resident of American Canyon inquired about why the IS/MND stated that there is no impact to our school system. The letter also stated that more housing would lead to increased traffic. The applicant's CEQA consultant reviewed the letter and will provide an explanation in the final IS/MND report. The applicant's CEQA consultant, Raney Environmental, reviewed the comment and responded. Raney explained that the applicant is required to pay a facilities fee to the Napa Valley Unified School District (NVUSD), which goes towards the cost of improvements and/or upgrades to school facilities. In regards to traffic, Raney explained that according to the TIA, the Oat Hill project would add traffic solely to the eastbound and westbound through movements in the Napa Junction / Lombard intersection, which do not have delays and are below average for the intersection as a whole. Project trips are expected to make use of the excess capacity, thus motorists would experience little, if any, change in conditions as a result of this project. See response to comments in Attachment 1, Exhibit A.

Property Owner. A property owner in a neighboring property provided a letter of support for the project. The comment does not address the adequacy of the IS/MND.

Public Outreach Efforts. The applicant conducted a public outreach study from September 18 to October 6 of 2020. The outreach area consisted of all property owners within 300 feet of the site and a few select neighbors beyond that proximity. The applicant met with neighbors in person, provided copies of the plans, and photo simulations. Several property owners provided letters of support as a result of these outreach efforts, see Attachment 1 Exhibit D.

CEQA Review

The City of American Canyon prepared an Initial Study Checklist and Mitigated Negative Declaration in accordance with the California Environmental Quality Act (CEQA). The basis for the Mitigated Negative Declaration (MND) is the finding that the proposed Project will not have a significant effect on the environment because mitigation measures that reduce the impacts to less than significant are being approved as part of project conditions. The MND includes mitigation measures for Biological Resources, Cultural Resources, Geology/Soils, Hydrology/Water Quality, Noise, Transportation/Traffic, and Utilities.

The MND was circulated to the public for 30 days starting February 5, 2021. In response to the notice, the City received one letter. The letters are included as with the final Initial Study MND in Attachment 1 Exhibit A.

Staff Recommendation

Consider Resolutions to Recommend City Council approval of:

(1) The *Oat Hill Multi-Family Residential Mitigated Negative Declaration*;
(2) A General Plan Amendment on a 13.6-acre Oat Hill Parcel A from Industrial with a Specialty Commercial (CS) overlay and Estate Residential (RE) to High Density Residential (RH-1), (APN 058-380-008 and portion of 058-320-001), (File No. PL20-0024);
(3) A General Plan Amendment on a 7.2-acre Oat Hill Parcel B from Estate Density Residential to Medium Density Residential (portion of APN 058-320-001); (File No. PL20-0026);
(4) A Zone Change from on a 13.6-acre Oat Hill Parcel A from Light Industrial with a Specialty Commercial (LI:CS) overlay and Estate Residential (RE) to Medium Density Residential (APN 058-380-008 and portion of 058-320-001), (File No. PL20-0024);
(5) A Zone Change on a 7.2-acre Oat Hill Parcel B from Estate Density Residential to Medium Density Residential (RM); (portion of APN 058-320-001), (File No. PL20-0026);
(6) A Tentative Subdivision Map for 206 condominium residential units on a 13.6-acre Oat Hill Parcel A; (APN 058-380-008 and portion of 058-320-001), (File No. PL20-0025);
(7) A Tentative Subdivision Map for 85 condominium residential units on a 7.2-acre Oat Hill Parcel B; (portion of APN 058-320-001); (File No. PL20-0027);
(8) A Design Permit for condominium 206 residential units on a 13.6-acre Oat Hill Parcel A; (APN 058-380-008 and portion of 058-320-001), (File No. PL20-0022); and
(9) A Design Permit Map for 85 condominium residential units on a 7.2-acre Oat Hill Parcel B; (portion of APN 058-320-001); (File No. PL20-0023).

RESOLUTION NO. 2021-04

A RESOLUTION OF THE PLANNING COMMISSION OF THE CITY OF AMERICAN CANYON, CALIFORNIA, RECOMMENDING THE CITY COUNCIL OF THE CITY OF AMERICAN CANYON, 1.) ADOPT THE INITIAL STUDY AND MITIGATED NEGATIVE DECLARATION FOR THE OAT HILL PROJECT CONSISTING OF A GENERAL PLAN AMENDMENT, ZONE CHANGE, TENTATIVE SUBDIVISION MAP, AND DESIGN PERMIT TO DEVELOP 206 DWELLING UNITS ON A 13.6-ACRE PARCEL AND 85 DWELLING UNITS ON A 7.2-ACRE PARCEL; 2.) ADOPT THE MITIGATION MONITORING AND REPORTING PROGRAM; AND 3) DIRECTING STAFF TO FILE A NOTICE OF DETERMINATION, APN 058-380-008 AND 058-320-001 (FILE NO. PL20-0024 AND PL20-0026)

WHEREAS, on August 14, 2020, RH Hess Development Company submitted a General Plan Amendment and Zone Change application for Parcel A to allow 206 dwelling units on approximately 13.6 acres on the east side of Oat Hill south of Napa Junction Road APN 058-380-008 (File No. PL20-0024); and

WHEREAS, on August 14, 2020, RH Hess Development Company submitted a General Plan Amendment and Zone Change application to for Parcel B allow 85 dwelling units on approximately 7.2 acres on the east side of Oat Hill south of Napa Junction Road APN 058-320-001 (File No. PL20-0026); and

WHEREAS, on August 14, 2020, RH Hess Development Company submitted a Tentative Subdivision Map and Design Permit application to create 206 dwelling units on 13.6 acres located at Oat Hill with access from Napa Junction Road, Assessor's Parcel Number 058-058-380-008 (File No. PL20-0022 and PL20-0025); and

WHEREAS, on August 14, 2020, RH Hess Development Company submitted a Tentative Subdivision Map and Design Permit application to create 85 dwelling units on 7.2 acres located at Oat Hill with access from Napa Junction Road, Assessor's Parcel Number 058-320-001 (File No. PL20-0023 and PL20-0027); and

WHEREAS, on November 2, 2021, RH Hess Development submitted a Lot Line Adjustment (File No. PL20-0039) to convert the two parcels APN 058-380-008 and 058-320-001 from 11.3-acres and 9.5-acres to 13.6-acres and 7.2-acres, respectively; and

WHEREAS, on January 21, 2020, the City Council approved a resolution (CC Resolution 2020-06) that declared residential uses are the best use of the Rick Hess property on Oat Hill; and

WHEREAS, the City of American Canyon determined that the project was subject to the California Environmental Quality Act (CEQA) and prepared an Initial Study pursuant to CEQA evaluating the potential environmental effects of the project; and

WHEREAS, pursuant to the California Environmental Quality Act ("CEQA"), an Initial Study/Mitigated Negative Declaration ("IS/MND"), that includes a "Mitigation and Monitoring Reporting Plan ("MMRP") was prepared for the Project and circulated for 30 days starting on February 5, 2021; and

WHEREAS, the IS/MND examined the Project at the project level to allow for construction; and

WHEREAS, a Notice of Completion ("NOC") was delivered to the State Clearinghouse in accordance with the CEQA requirements on February 5, 2021; and

WHEREAS, an NOI to adopt an MND was published in The Vallejo Times-Herald Democrat in accordance with the CEQA requirements on February 8, 2021 and the same noticing was mailed to property owners

DocuSign Envelope ID: 7AAFD2FD-43DC-48EA-AB7F-988EE094E281

WHEREAS, a duly-noticed public hearing was held by the City of American Canyon Planning Commission on March 25, 2021 on the subject application, at which time all those in attendance were given the opportunity to speak on this proposal; and

WHEREAS, a Response to Comments was provided to the Planning Commission addressing comments submitted at the March 25, 2021 Planning Commission hearing; and

WHEREAS, the Planning Commission has considered all of the written and oral testimony presented at the public hearing in making its decision.

NOW, THEREFORE, BE IT RESOLVED that the Planning Commission of the City of American Canyon recommends to the City Council of the City of American Canyon, based upon the record, that the Project will not have a significant effect upon the environment if the mitigation measures listed in the MND and MMRP are implemented, and hereby 1) adopts the Initial Study and Mitigated Negative Declaration, attached hereto as Exhibit A and incorporated herein, for the Oat Hill Project; 2) adopts the Mitigation and Monitoring Reporting Program for the Project, attached hereto as Exhibit B and incorporated herein; and 3) directs staff to file a Notice of Determination for the Project consistent with the CEQA Guidelines.

PASSED, APPROVED and **ADOPTED** at a regularly scheduled meeting of the Planning Commission of the City of American Canyon held on the 25th day of March 2021, by the following vote:

AYES: Commissioners Altman, Wong, Vice Chair Mallare, Chair Navarro

NOES: None

ABSTAIN: None

INITIAL STUDY

March 2021

A. BACKGROUND

1.	Project Title:	Oat Hill Multi-Family Project
2.	Lead Agency Name and Address:	City of American Canyon Community Development Department 4381 Broadway, Suite 201 American Canyon, CA 94503
3.	Contact Person and Phone Number:	Brent Cooper Community Development Director (707) 647-4348
4.	Project Location:	Southwest of the intersection of Napa Junction Road and Hess Road American Canyon, CA 94503 APNs: 058-380-008 and 058-320-001
5.	Project Sponsor's Name and Address:	R.H. Hess Development 3423 Broadway, Suite D-5 American Canyon, CA 94503
6.	Existing General Plan Designation:	Industrial: Commercial Specialty Overlay (I:CS) Residential Estate (RE)
7.	Existing Zoning Designation:	Light Industrial (LI) Residential Estate (RE)
8.	Proposed General Plan Designation:	Residential High, 16 dwelling units per acre (RH-1) Residential Medium, 12 dwelling units per acre (RM)
9.	Proposed Zoning Designation:	Residential High (RH) Residential Medium (RM)
10.	Required Approvals from Other Public Agencies:	California Department of Fish and Wildlife San Francisco Bay Regional Water Quality Control Board

11. Surrounding Land Uses and Setting:

The project site consists of two parcels (Parcel A and Parcel B) that total approximately 20.8 acres, located southwest of the Napa Junction Road and Hess Road intersection in the City of American Canyon, California. Currently, the project site is undeveloped and consists of vacant land with ruderal vegetation and limited trees. In addition, a mobile home, scattered debris, and construction materials are located within Parcel B. The overall topography of the site is characterized by two generally flat terraces connected by a steep hillside, with elevations ranging from approximately 80 to 185 feet above mean sea level (msl). Parcel A consists of the flat terrace located within the western portion of the site, while Parcel B consists of the flat terrace located within the eastern portion of the site. Surrounding development in the project vicinity includes industrial businesses, such as RLM Enterprises, and recreational vehicle (RV) storage to the north, a light industrial building to the northwest, Napa Junction Magnet Elementary School to the northeast, single-family residences, a Baptist Church, and American Canyon City Hall to the east, and undeveloped land to the south and west. The City of American Canyon General Plan designates Parcel A as Industrial: Commercial Specialty Overlay (I:CS) and the parcel is zoned Light Industrial (LI). In addition, the City's General Plan designates Parcel B as Residential Estate (RE) and the parcel is zoned RE.

12. Project Description Summary:

The Oat Hill Multi-Family Project (proposed project) would develop a multi-family residential community consisting of 291 multi-family residential units. Development within Parcel A would consist of 206 multi-family residential units, a community loop trail, recreation building, an outdoor seating area, and a pool. In addition, Parcel A would include 53,571 square feet (sf) of common open space and 139,392 sf of hillside slope area. Development within Parcel B would consist of 85 multi-family residential units, a recreation building, a tot lot, and an outdoor lounge and viewing area. Parcel B would also include 27,647 sf of common space and 257,004 sf of hillside slope area. Primary access to the site would be provided from an extension of Napa Junction Road, which would connect to the site through two new driveways allowing internal access to the proposed residences. The project would require approval of a Tentative Map for Parcel A, a General Plan Amendment to redesignate Parcel A as Residential High Density, 16 dwelling units per acre (RH-1) and a rezone of Parcel A to Residential High Density (RH). The project would also require approval of a Tentative Map for Parcel B, a General Plan Amendment to redesignate Parcel B as Residential Medium Density, 12 dwelling units per acre (RM) and a rezone of Parcel B to Residential Medium Density (RM).

13. Status of Native American Consultation Pursuant to Public Resources Code Section 21080.3.1:

In compliance with Assembly Bill (AB) 52 (Public Resources Code Section 21080.3.1), a project notification letter was distributed to the chairpersons of the Cortina Band of Indians, Federated Indians of Graton Rancheria, Middletown Rancheria of Pomo Indians, Mishewal-Wappo Tribe of Alexander Valley, and Yocha Dehe Wintun Nation. The letters were distributed on September 9, 2020. Requests to consult were not received within the 30-day response period.

C. ENVIRONMENTAL FACTORS POTENTIALLY AFFECTED

The environmental factors checked below would be potentially affected by this project, involving at least one impact that is a "Less Than Significant with Mitigation Incorporated" or as indicated by the checklist on the following pages.

☒ **Aesthetics**	☐ **Agriculture and Forest Resources**	☒ **Air Quality**
☒ **Biological Resources**	☒ **Cultural Resources**	☐ **Energy**
☒ **Geology and Soils**	☒ **Greenhouse Gas Emissions**	☐ **Hazards and Hazardous Materials**
☐ **Hydrology and Water Quality**	☐ **Land Use and Planning**	☐ **Mineral Resources**
☒ **Noise**	☐ **Population and Housing**	☐ **Public Services**
☐ **Recreation**	☒ **Transportation**	☒ **Tribal Cultural Resources**
		☒ **COVID-19 Prevention**
☒ **Utilities and Service Systems**	☐ **Wildfire**	☐ **Mandatory Findings of Significance**

D. DETERMINATION

On the basis of this initial study:

☐ I find that the Proposed Project COULD NOT have a significant effect on the environment, and a NEGATIVE DECLARATION will be prepared.

☒ I find that although the Proposed Project could have a significant effect on the environment, there will not be a significant effect in this case because revisions in the project have been made by or agreed to by the applicant. A MITIGATED NEGATIVE DECLARATION will be prepared.

☐ I find that the Proposed Project MAY have a significant effect on the environment, and an ENVIRONMENTAL IMPACT REPORT is required.

☐ I find that the proposed project MAY have a "potentially significant impact" or "potentially significant unless mitigated" on the environment, but at least one effect 1) has been adequately analyzed in an earlier document pursuant to applicable legal standards, and 2) has been addressed by mitigation measures based on the earlier analysis as described on attached sheets. An ENVIRONMENTAL IMPACT REPORT is required, but it must analyze only the effects that remain to be addressed.

☐ I find that although the proposed project could have a significant effect on the environment, because all potentially significant effects (a) have been analyzed adequately in an earlier EIR pursuant to applicable standards, and (b) have been avoided or mitigated pursuant to that earlier EIR, including revisions or mitigation measures that are imposed upon the proposed project, nothing further is required.

E. BACKGROUND AND INTRODUCTION

This Initial Study/Mitigated Negative Declaration (IS/MND) provides an environmental analysis pursuant to the California Environmental Quality Act (CEQA) of the proposed project. The information and analysis presented in this document is organized in accordance with the order of the CEQA checklist in Appendix G of the CEQA Guidelines. Where the analysis provided in this document identifies potentially significant environmental effects of the project, mitigation measures are prescribed.

In 1994, the City of American Canyon completed the General Plan[1] and General Plan Environmental Impact Report (EIR).[2] The General Plan EIR was prepared as a program-level EIR, pursuant to Section 15168 of the CEQA Guidelines (Title 14, California Code of Regulations, Sections 15000 et seq.). The General Plan EIR analyzed full implementation of the City's General Plan and identified measures to mitigate the significant adverse project and cumulative impacts associated with the General Plan. The environmental setting and impact discussions for each section of this IS/MND have been largely based on technical studies prepared for the proposed project, as well as information in the American Canyon General Plan and associated EIR.

The mitigation measures prescribed for environmental effects described in this IS/MND would be implemented in conjunction with the project, as required by CEQA, and the mitigation measures would be incorporated into the project. In addition, a project Mitigation Monitoring and Reporting Program (MMRP) would be adopted in conjunction with approval of the project.

On August 20, 2019, the American Canyon City Council conducted a public hearing to consider the most appropriate use for the project site, as well as an adjoining 10 acres located to the north of Parcel A. At the conclusion of the hearing, the City Council determined that residential development would be the best use for the project site and directed staff to work with the applicant to identify means by which the City might evaluate and consider a residential development proposal. The City Council's determination was subsequently ratified in a resolution adopted by the Council (Resolution No. 2020-06) on January 21, 2020. The entitlements for the proposed project are the result of the Resolution and subsequent discussions between the applicant and representatives of the City of American Canyon.

Two separate applications have been submitted to the City of American Canyon; one application for development within Parcel A and another application for development within Parcel B. As such, each "project" can be approved and developed independently; however, this IS/MND evaluates the project's both separately and together, where applicable. It should be noted that for the purposes of this environmental analysis, the term "project site" refers to the combined 20.8 acres. When discussing an individual parcel, the parcel letter, such as "Parcel A" or "Parcel B", is specifically identified.

During the Oat Hill Project IS/MND public review period, which commenced on February 5, 2021 and ended on March 10, 2021, four letters were received in regard to biological resources, public services, and transportation. In response to the comments, revisions have been made and included within this Final IS/MND. Where revisions to the IS/MND text were made, new text is <u>double underlined</u> and deleted text is ~~struck through~~.

[1] City of American Canyon. *General Plan.* November 3, 1994 (amended through March 2015).
[2] City of American Canyon. *General Plan Final Environmental Impact Report.* November 3, 1994.

F. PROJECT DESCRIPTION

A comprehensive description of the proposed project, including the project location, setting, project components, and entitlements, is provided below.

Project Location and Setting

The project site consists of two parcels (Parcel A and Parcel B) that total approximately 20.8 acres, located southwest of the Napa Junction Road and Hess Road intersection in the City of American Canyon, California (see Figure 1). The site is located approximately 0.22-mile northeast of State Route (SR) 29 and is identified by Assessor's Parcel Numbers (APNs) 058-380-008 (Parcel A) and 058-320-001 (Parcel B). Parcel A consists of approximately 11.3 acres and is located on the upper slope within the western portion of the site. Parcel B consists of approximately 9.5 acres and is located on the lower slope within the eastern portion of the site. Surrounding development in the project vicinity includes industrial businesses, such as RLM Enterprises, and RV storage to the north, a light industrial building to the northwest, Napa Junction Magnet Elementary School to the northeast, single-family residences, a Baptist Church, and American Canyon City Hall to the east, and undeveloped land to the south and west (see Figure 2). It should be noted that Napa Junction Magnet Elementary School is in the process of being relocated due to concerns regarding seismicity in the project region.

Currently, the project site is undeveloped and consists of vacant land with ruderal vegetation and limited trees. The project site is currently used for goat and sheep grazing and contains the site caretaker's mobile home. The entire project site has been subject to high levels of disturbance from past construction, grading, and other human activities over the past 20 years. Scattered debris and other materials associated with past site disturbance are located within Parcel B. In addition, a remnant concrete lined v-ditch was mapped within Parcel B, which was constructed in the uplands and does not follow a stream course. Although the ditch connects to the existing storm drain at the base of the slope within Parcel B, the ditch is currently filled with debris and does not convey stormwater flows.

The overall topography of the site is characterized by two generally flat terraces connected by a steep hillside, with elevations ranging from approximately 80 to 185 feet above mean sea level. Parcel A consists of the flat terrace located within the western portion of the site, while Parcel B consists of the flat terrace located within the eastern portion of the site. The City of American Canyon General Plan designates Parcel A as I:CS and the parcel is zoned LI. In addition, the City's General Plan designates Parcel B as RE and the parcel is zoned RE.

Project Components

The proposed project would develop a multi-family residential community consisting of 291 multi-family residential units (see Figure 3). The proposed development on Parcels A and B would be separated by the existing steep hillside within the center of the project site. The hillside area would be primarily retained as open space, with the exception of an emergency vehicle access (EVA) road connecting the two parcels.

As part of the proposed project, landscaping improvements would be included throughout the project site. A variety of trees and shrubs would be provided along the project drive aisles and parking areas, as well as along the perimeter of the proposed units within the project site.

In addition, a new sidewalk would be constructed along the project frontage on Napa Junction Road. A new section of Napa Junction Road would be constructed between two disconnected segments east and west of Hess Road. The new roadway and pedestrian connections would result in a more direct route to the project site from SR 29 and other areas of the City and would require the removal of several existing trees located adjacent to Parcel B.

The proposed development within Parcel A and Parcel B is described separately in detail below.

Figure 1
Regional Project Location

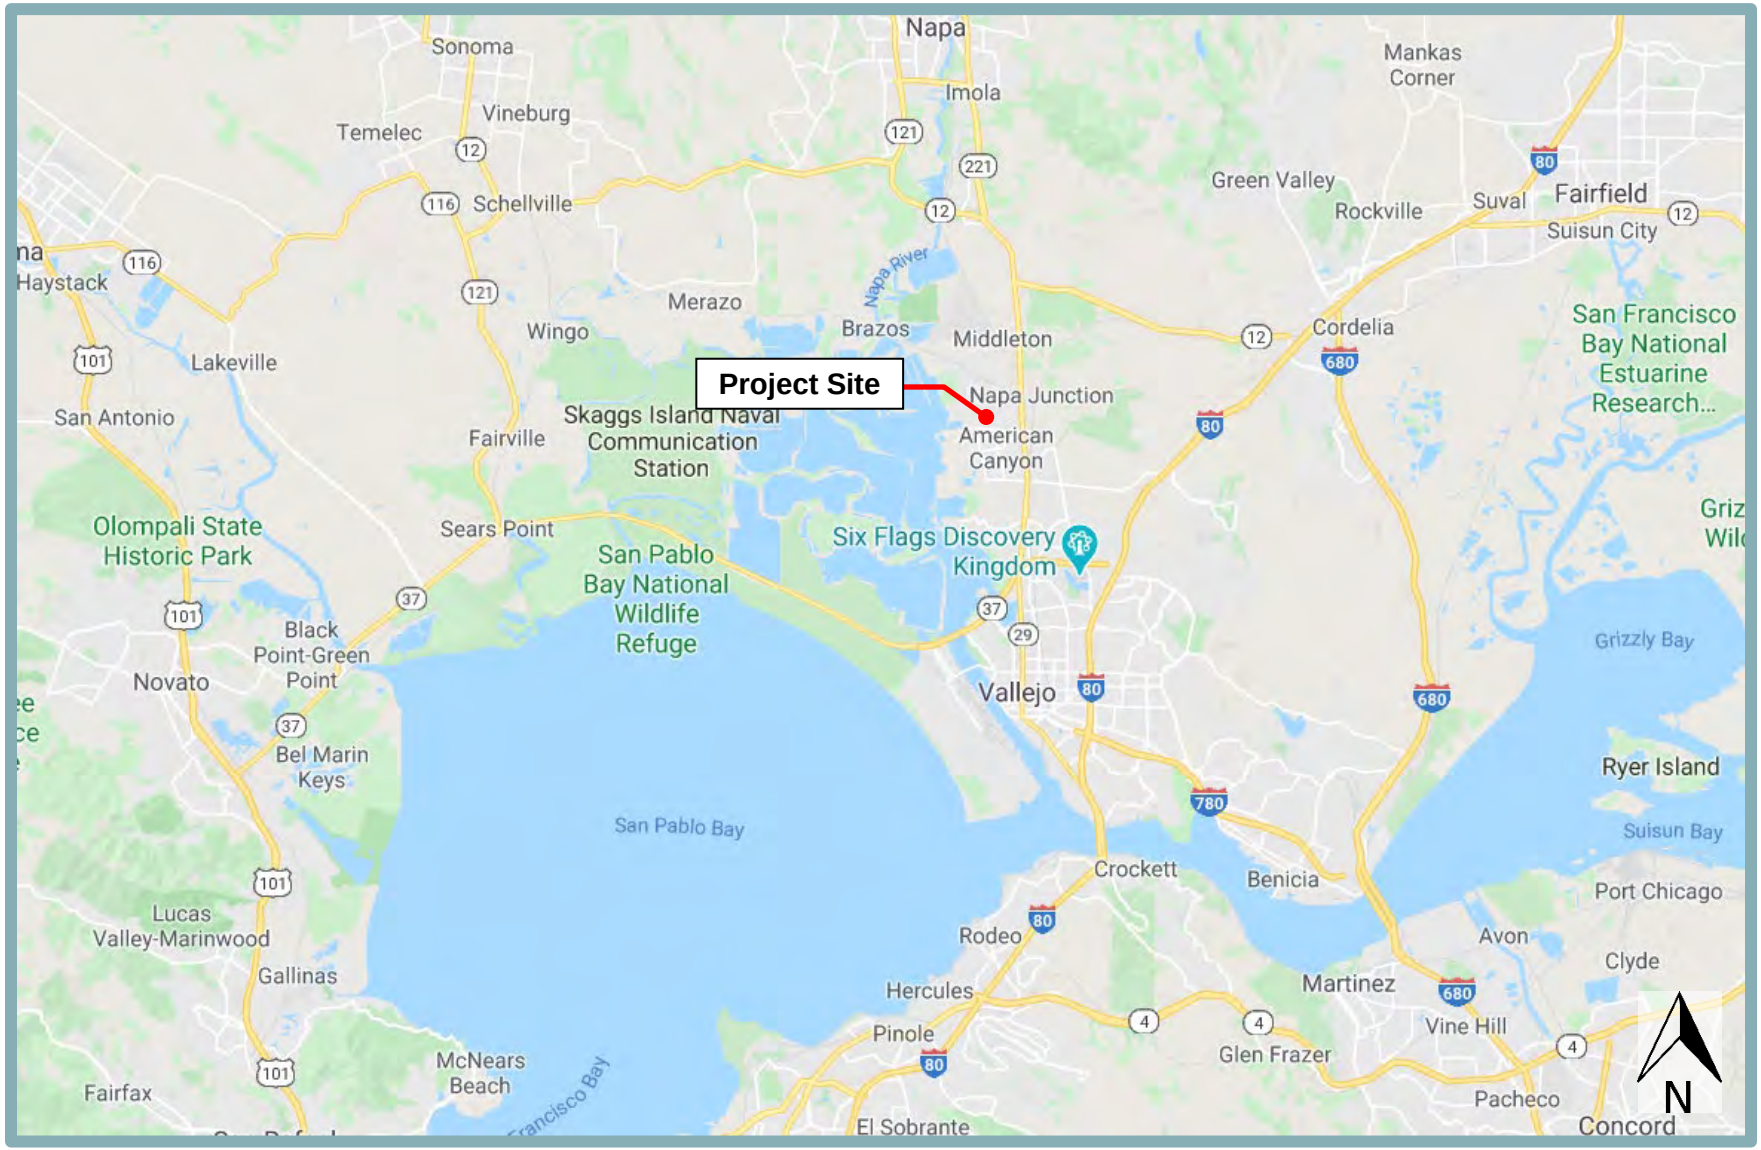

Figure 2
Project Site Boundaries Map

Figure 3
Project Site Plan

Parcel A

Development within Parcel A would require approval of a General Plan Amendment, rezone, and Tentative Map. A discussion of the aforementioned approvals and other project components for Parcel A are described in further detail below.

Parcel A – General Plan Amendment and Rezone

The proposed project would require approval of General Plan Amendment to change the designation of Parcel A from I:CS to RH-1. In addition, the proposed project would require approval of a rezone of Parcel A from LI to RH. Development of residences within Parcel A would result in a density of 15.1 dwelling units per acre, which would be consistent with the RH-1 land use designation and RH zoning, which permit a density of 12.0 to 16.0 dwelling units per acre for multi-family developments.

Tentative Map

Development within Parcel A would consist of 206 multi-family residential units distributed among 13, three-story buildings (see Figure 4). The proposed units would be constructed as condominiums and would be available for individual sale. In addition, Parcel A would include a single-story recreation building, a community loop trail, an outdoor seating area, and a pool, as well as 428 on-site parking spaces and 23 off-site, street parking spaces along the northern boundary of the site. Of the 206 multi-family residential units, 52 would be one-bedroom units, 108 would be two-bedroom units, and 46 would be three-bedroom units. Parcel A would also include 53,571 sf of common open space and 139,392 sf of hillside slope area.

The 428 on-site parking spaces would be comprised of 157 garage spaces, 49 carport spaces, and 222 uncovered spaces. Each of the 13 buildings would be allotted a certain number of garage spaces, carport spaces, and head-in spaces. Primary access to Parcel A would be provided by a new driveway located at the western end of Napa Junction Road. The new driveway would allow internal access to the proposed residences. The EVA noted above would allow access to Parcel B, should the driveway within Parcel A be compromised in any way.

Water and sewer service for the proposed project would be provided by the City. The project would be connected to an existing eight-inch water line along Napa Junction Road to the west by way of a new eight-inch water line. The eight-inch water line would be routed to a new pump station, located in the southwestern corner of Parcel A. From the pump station, water lines would be routed throughout Parcel A to connect to each residential building (see Figure 5). It should be noted that, as part of Capital Improvement Project (CIP) #W11, the project applicant would coordinate with the City to upsize the existing eight-inch water line in Napa Junction Road as part of project development.

The proposed project would include routing an eight-inch sanitary sewer line throughout the parcel to eventually connect to an existing six-inch sanitary sewer line within Napa Junction Road.

Stormwater from Parcel A would flow to 15 on-site drainage management areas (DMAs), each with their own bioretention area (see Figure 6). The bioretention areas would provide treatment of stormwater by allowing runoff to filter through layers of vegetated soil. Treated stormwater would be captured by an underdrain and routed to an underground detention facility that would be constructed within Parcel B, regardless of whether the proposed residences within Parcel B are approved.

Figure 4
Parcel A – Tentative Map

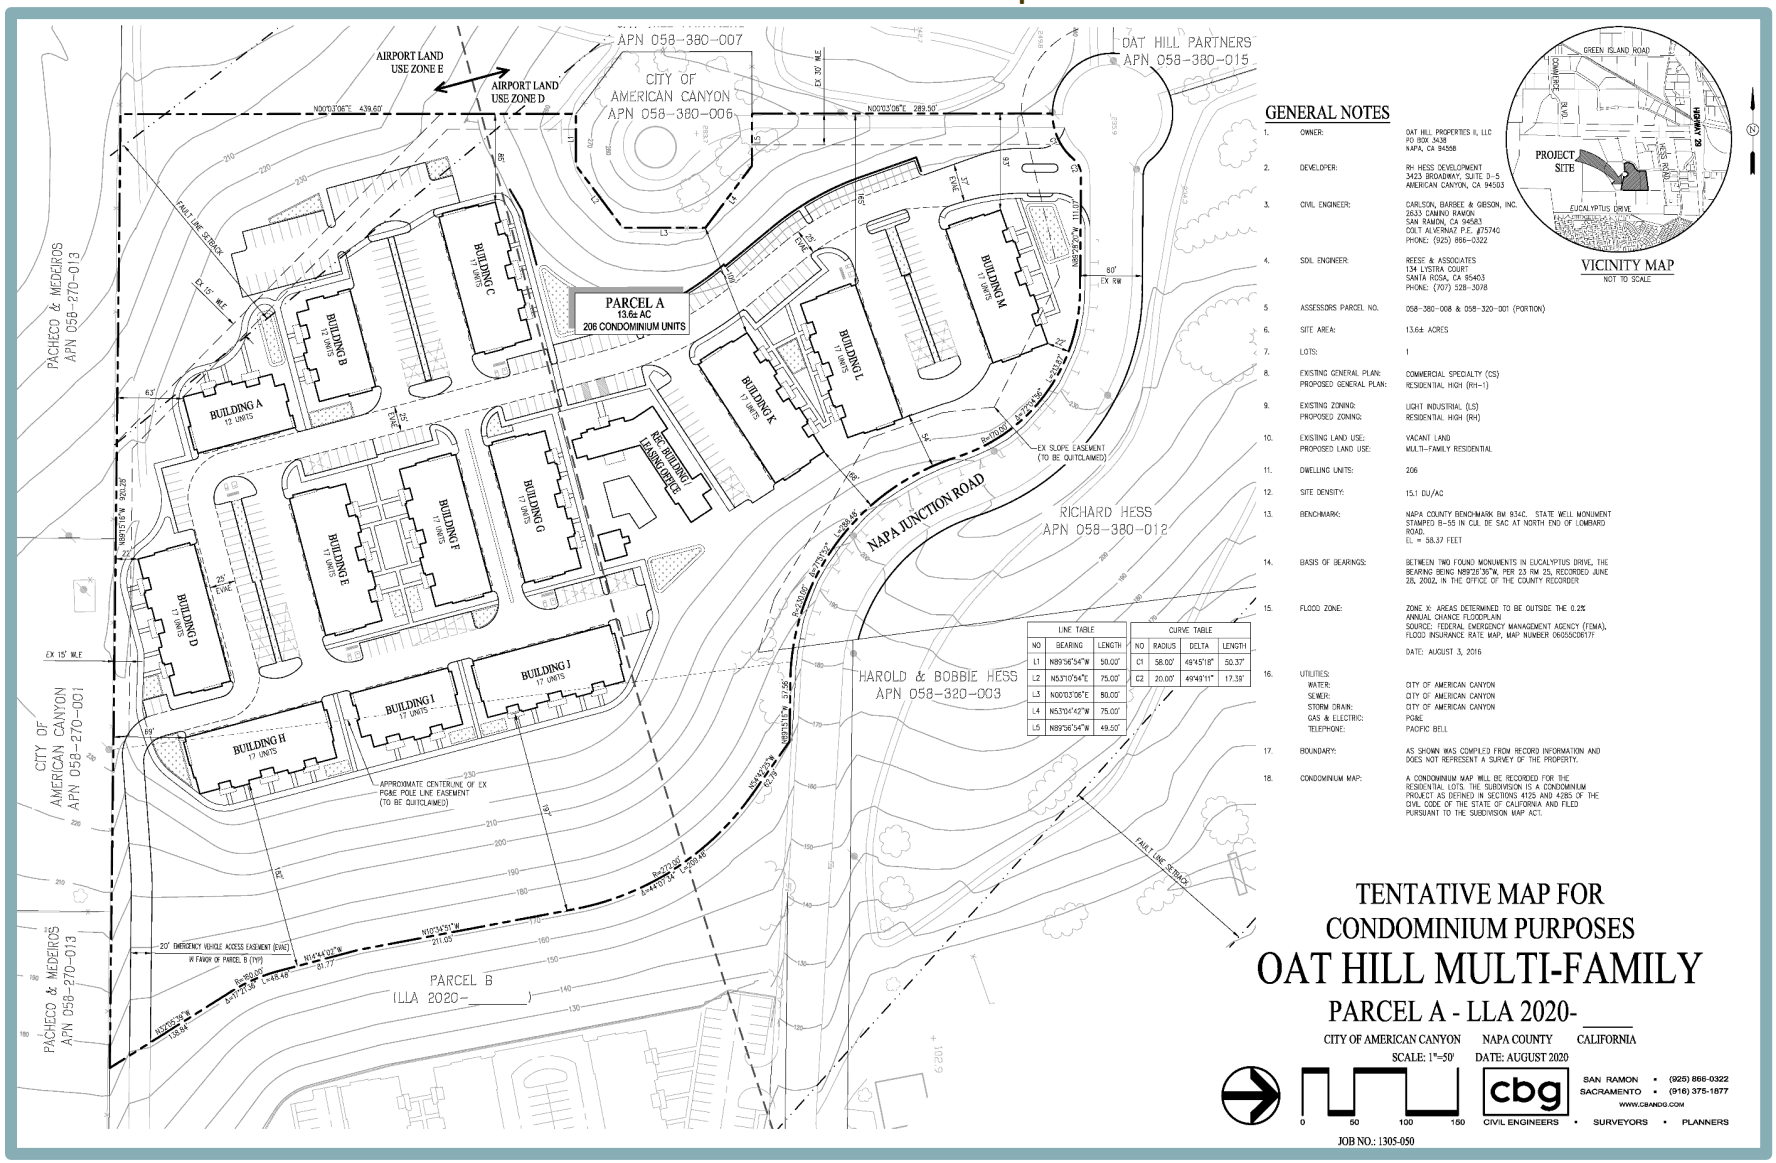

Figure 5
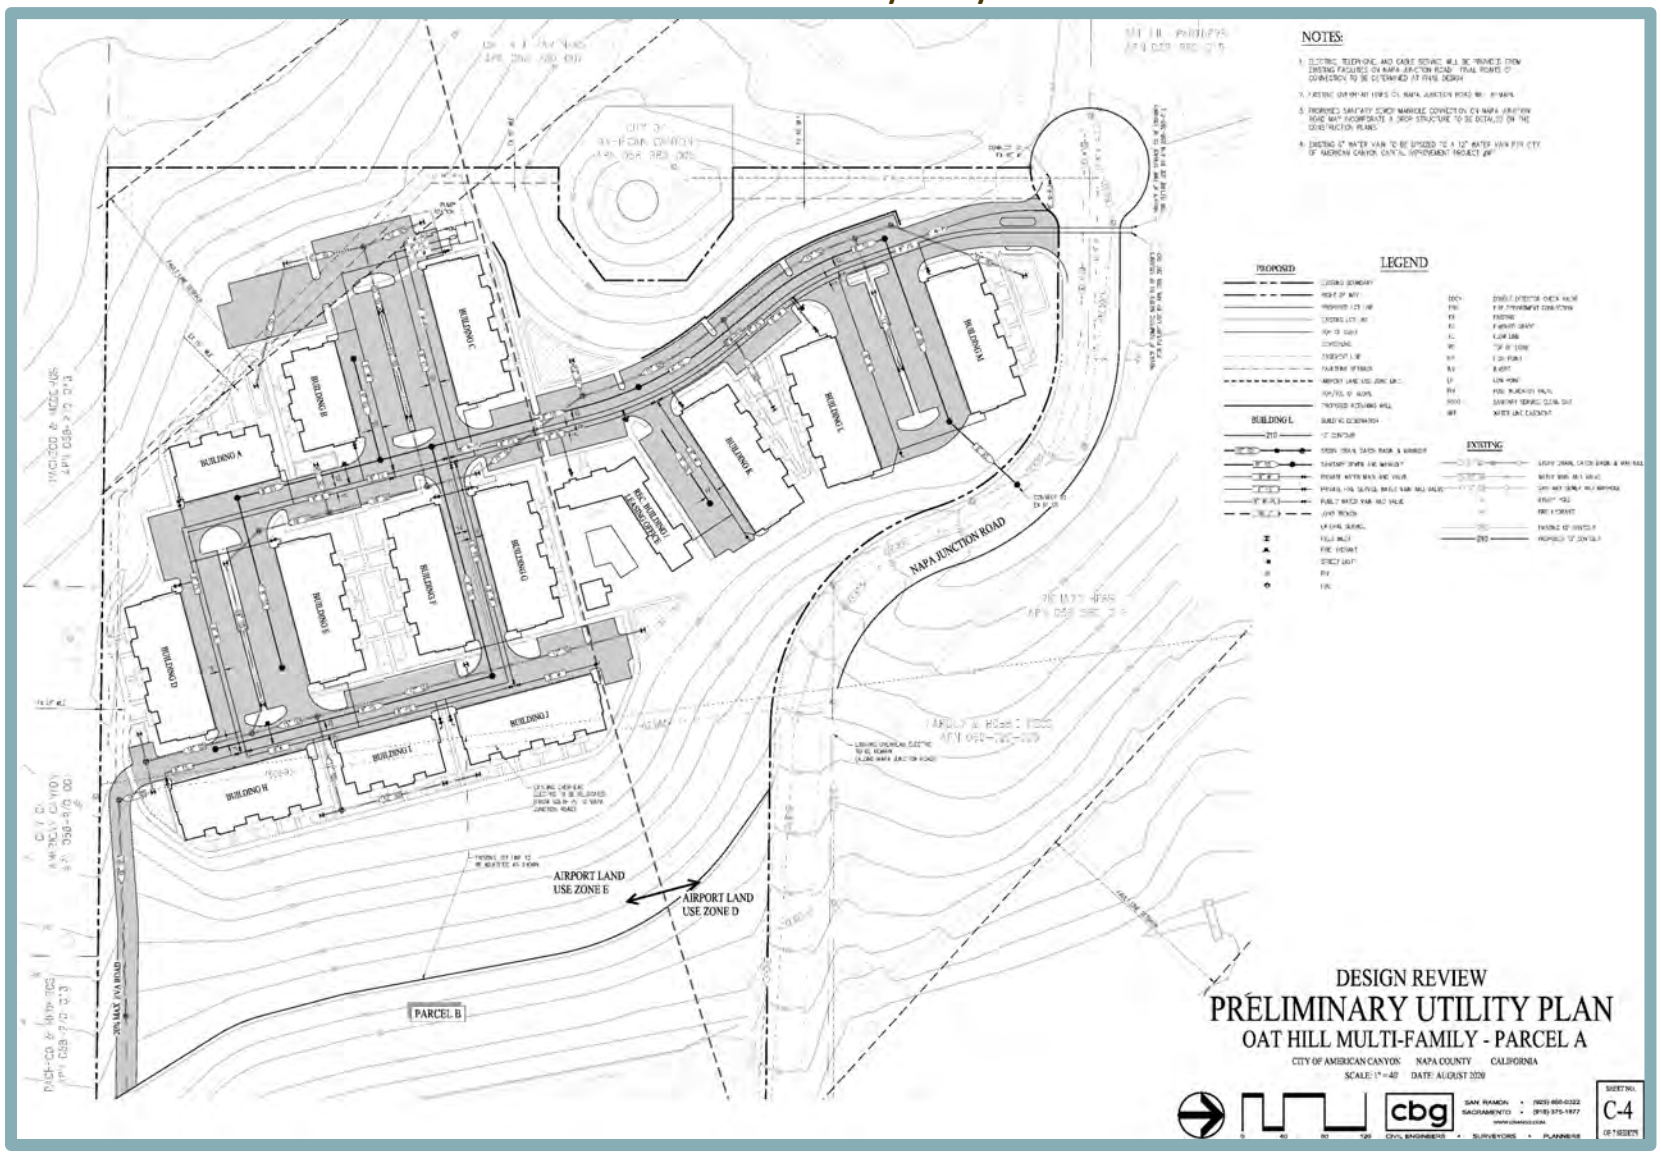
Parcel A – Preliminary Utility Plan



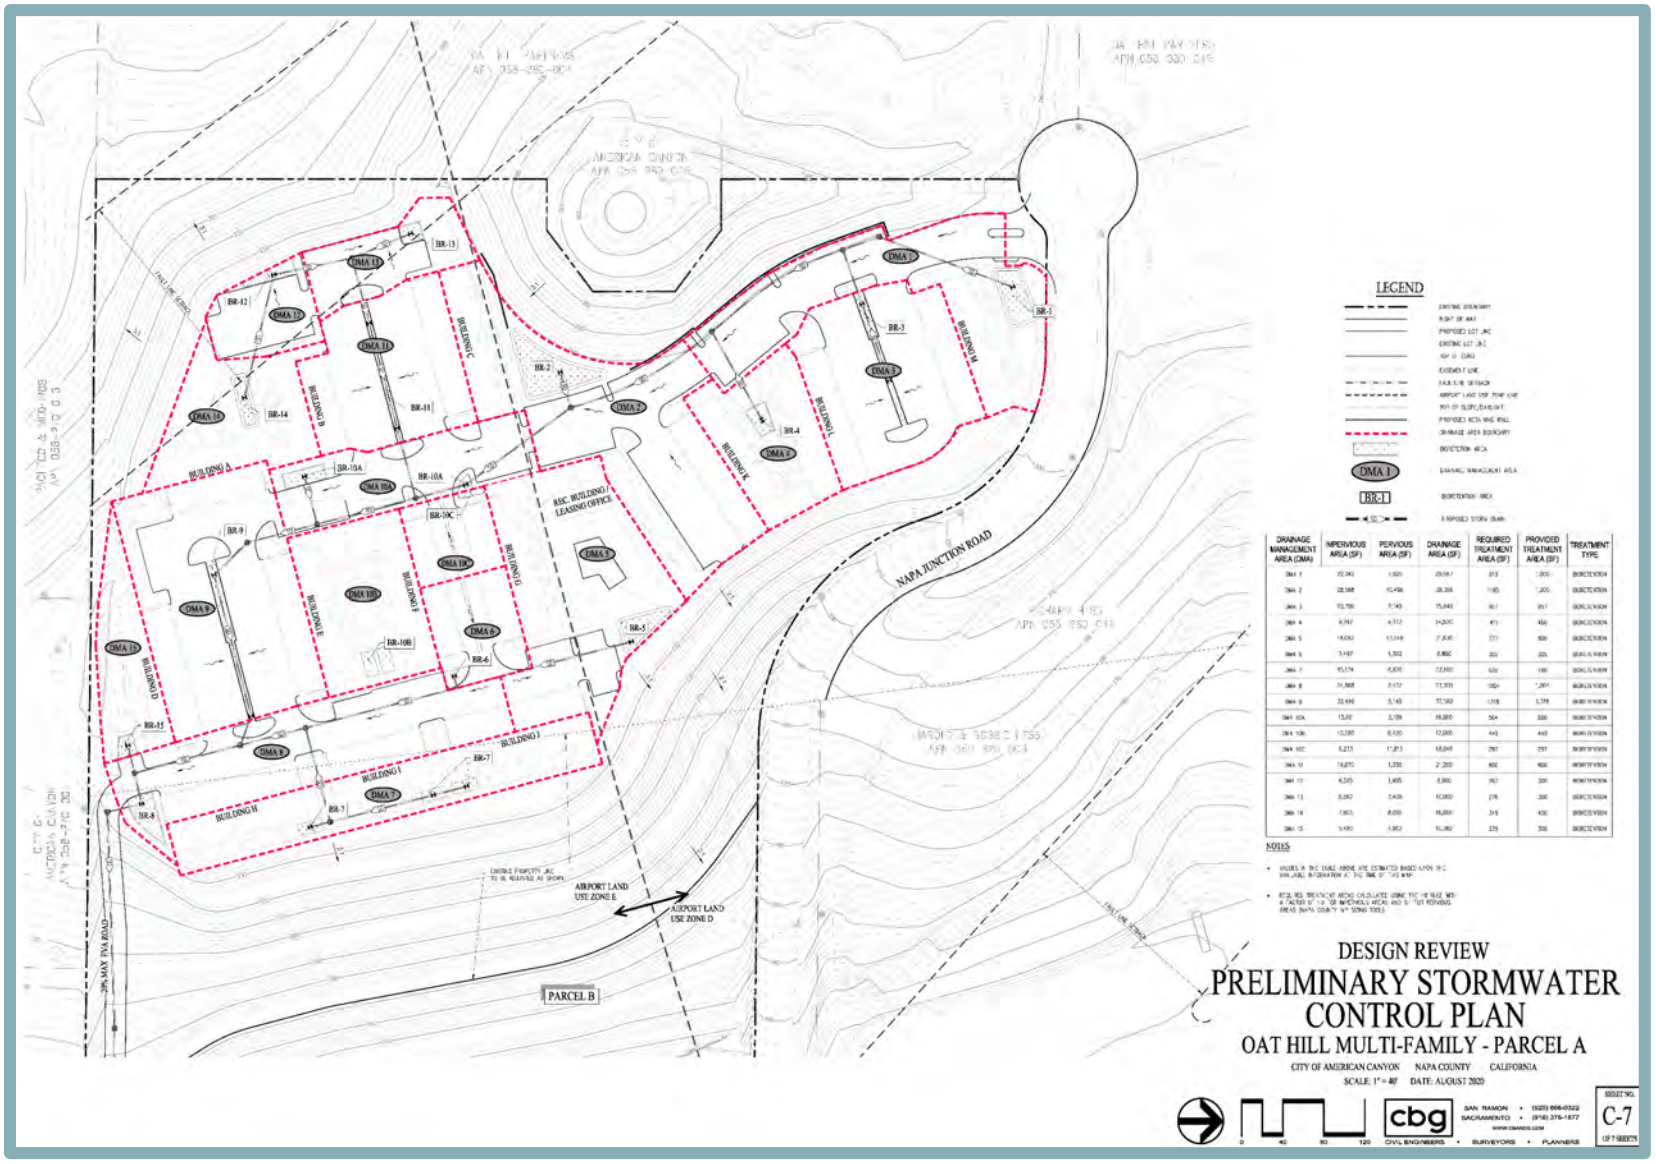


Figure 6
Parcel A – Stormwater Control Plan

Parcel B

Development within Parcel B would require approval of a General Plan Amendment, a rezone, and a Tentative Map. A discussion of the aforementioned approvals and other project components for Parcel B are described in further detail below.

Parcel B – General Plan Amendment and Rezone

The proposed project would require approval of General Plan Amendment to change the designation of Parcel B from RE to RM. In addition, the proposed project would require approval of a rezone of Parcel B from RE to RM. Development of residences within Parcel B would result in a density of 11.8 dwelling units per acre, which would be consistent with the RM General Plan land use designation and zoning designation, which permit a density of 5.0 to 12.0 dwelling units per acre for multi-family developments.

Tentative Map

Development within Parcel B would consist of 85 multi-family residential units distributed among five, three-story buildings (see Figure 7). The proposed units within Parcel B would also be designed as condominiums and would be available for individual sale. In addition, Parcel B would include a single-story recreation building, a tot lot, an outdoor lounge and viewing area, and 183 on-site parking spaces. Of the 183 on-site parking spaces, 65 would be garage spaces, 20 would be carport spaces, and 98 would be uncovered spaces. Parcel B would also include 27,647 sf of common space and 257,004 sf of hillside slope area that would be comprised of native vegetation.

Primary access to the site would be provided by a new driveway from Napa Junction Road. The new driveway would allow internal access to the proposed residences.

The project would connect to an existing water line within Napa Junction Road along the northern boundary of the site by way of a new eight-inch water line. The eight-inch water line would be routed throughout Parcel B to connect to each residential building (see Figure 8) The project applicant would coordinate with the City to upsize the existing eight-inch water line within Napa Junction Road to 12 inches as part of project development, per the City of American Canyon Capital Improvement Project #W11. The proposed project would include routing an eight-inch sanitary sewer line throughout Parcel B to eventually connect to an existing six-inch sanitary sewer line within Napa Junction Road.

Stormwater from impervious areas within Parcel B would drain to a bioretention area in the northeastern corner of the site (see Figure 9). The bioretention area would treat stormwater by allowing runoff to filter through layers of soil. Treated stormwater would be captured by an underdrain and routed to a 10-foot-wide and 470-foot-long, underground detention facility within Parcel B. From the detention facility, an 18-inch storm drain would connect to an existing 18-inch storm drain within Napa Junction Road. The detention facility would be constructed to capture all flows from both Parcel A and Parcel B during storm events and meter discharges into the City's stormwater at an acceptable level. In the event that development within Parcel A is approved and the Parcel B application is denied, the detention facility would still be required to be developed as an off-site improvement for Parcel A.

The proposed project would include the extension of Napa Junction Road to connect the project site with the residential neighborhoods and commercial uses located to the east. The extension of Napa Junction Road would require the removal of several existing eucalyptus trees adjacent to the eastern border of the project site.

Figure 7
Parcel B – Tentative Map

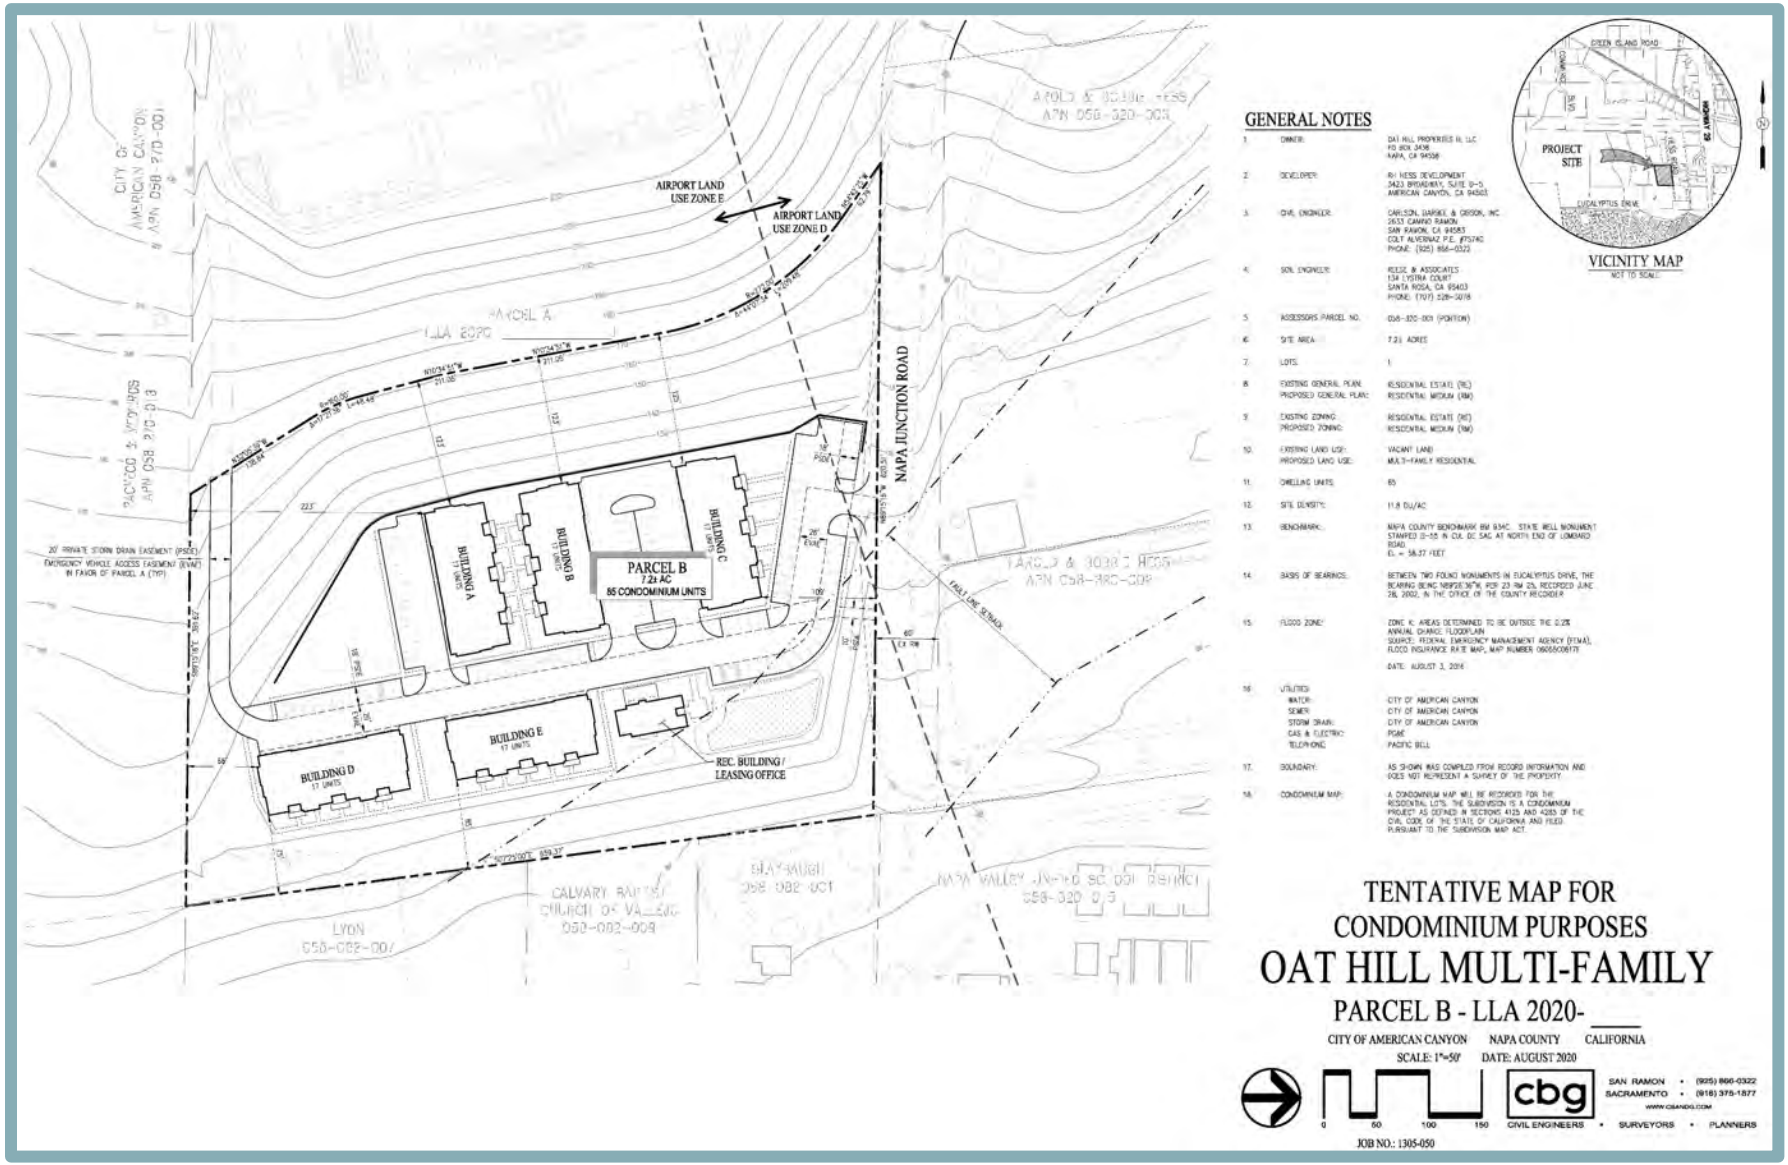

Figure 8
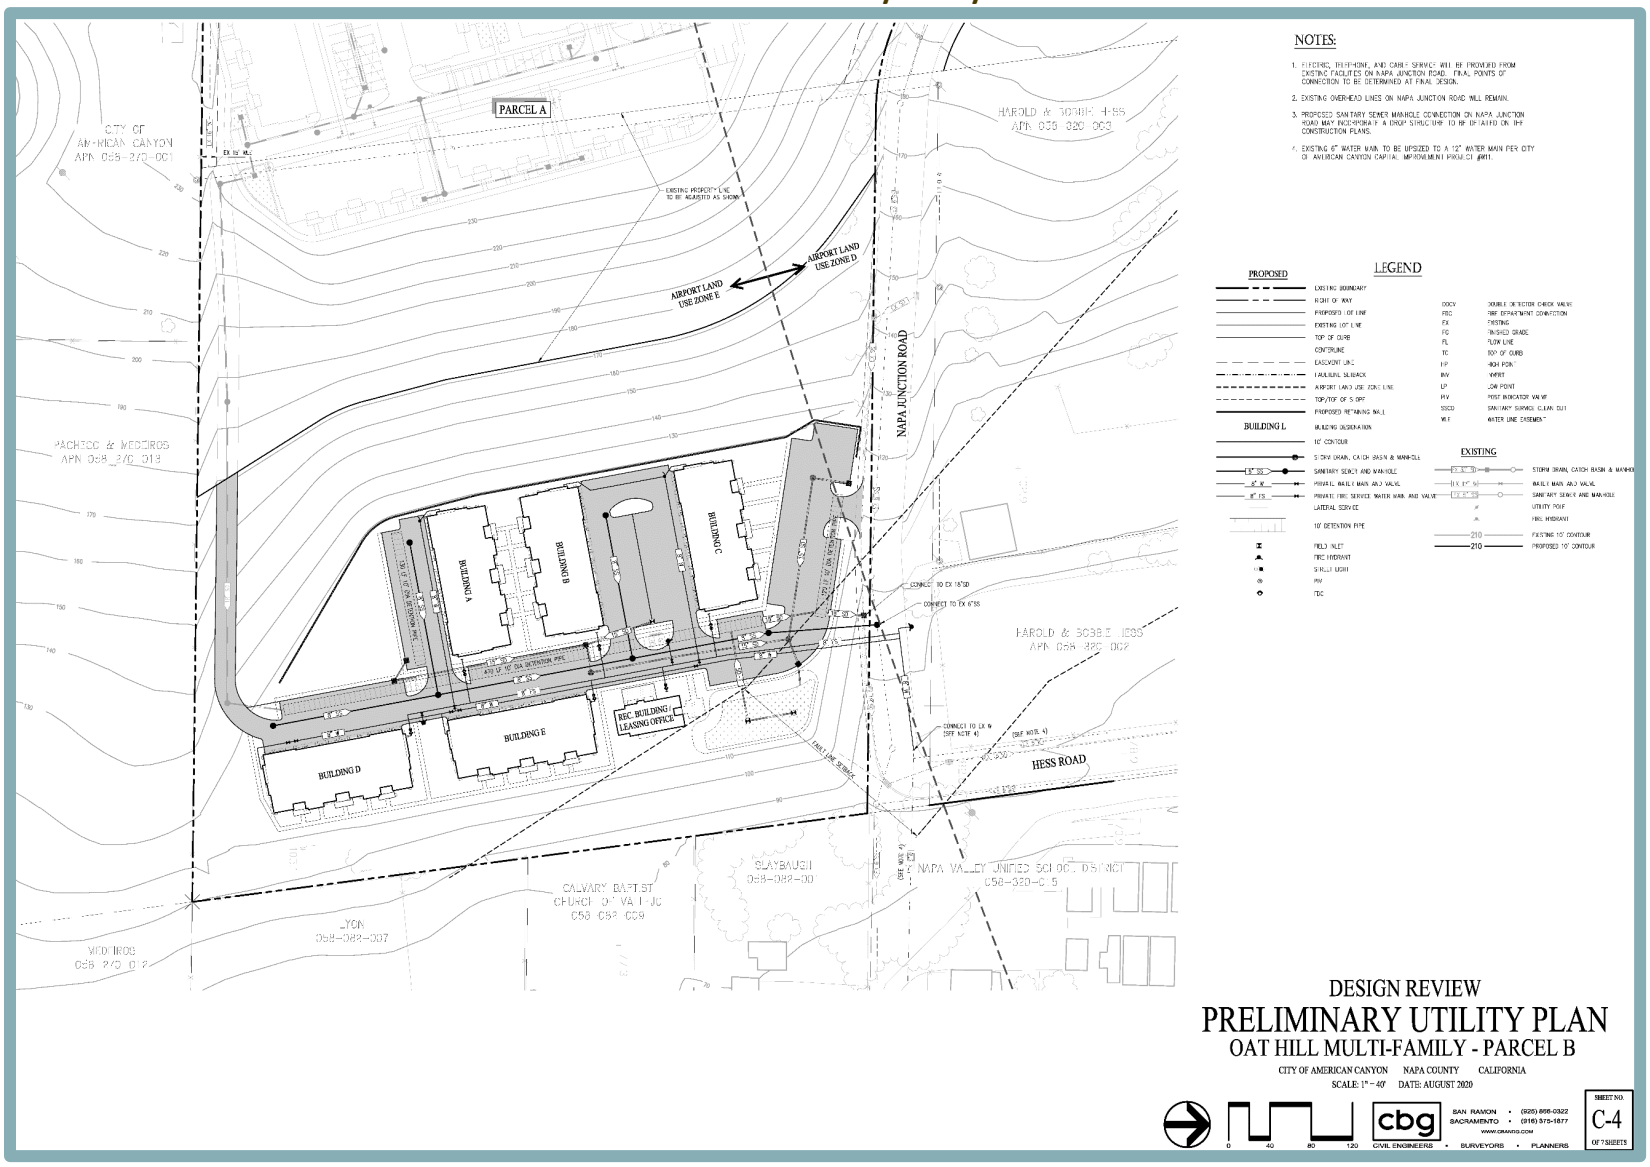
Parcel B – Preliminary Utility Plan



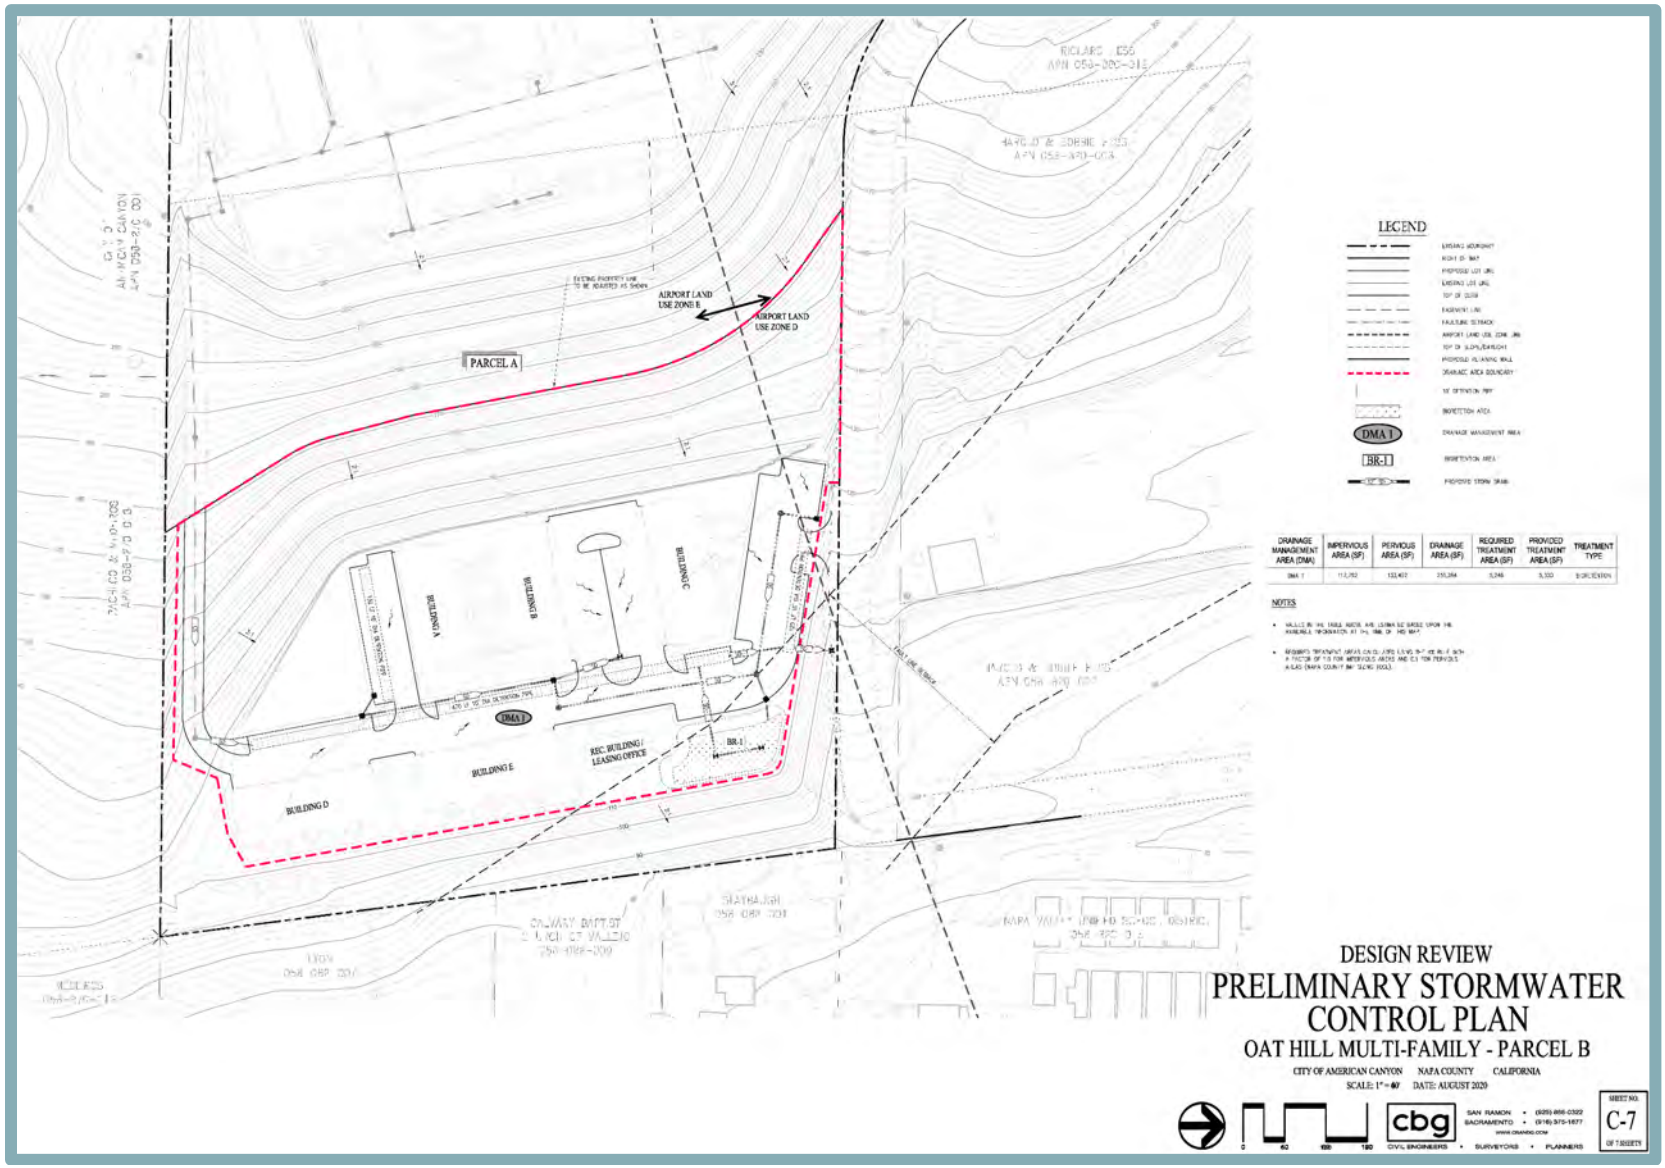


Figure 9
Parcel B – Stormwater Control Plan

Design Permit

Per Chapter 19.41 of the City's Zoning Code, the proposed project would require a Design Permit for each parcel. The purpose of the Design Permit process is to allow design review in order to establish procedures and standards to promote excellence in site planning and building design, to encourage the harmonious appearance of buildings and sites, to ensure that new and modified uses would be compatible with existing and potential development of the surrounding area, to ensure that projects comply with the design standards and intent of specific plans, and to produce an environment of stable and desirable character.

Discretionary Actions

The proposed project would require the following approvals from the City of American Canyon:

- Adoption of the Initial Study/Mitigated Negative Declaration;
- Adoption of the Mitigation Monitoring and Reporting Program;
- General Plan Amendment to redesignate Parcel A from Industrial: Commercial Specialty Overlay (I:CS) to Residential High, 12.0 to 16.0 units per acre (RH-1);
- General Plan Amendment to redesignate Parcel B from Residential Estate (RE) to Residential Medium (RM);
- Rezone of Parcel A from Light Industrial (LI) to Residential High (RH);
- Rezone of Parcel B Residential Estate (RE) to Residential Medium (RM);
- Two separate Tentative Maps for Parcel A and Parcel B; and
- Two separate design permits for Parcel A and Parcel B.

G. ENVIRONMENTAL CHECKLIST

The following checklist contains the environmental checklist form presented in Appendix G of the CEQA Guidelines. The checklist form is used to describe the impacts of the proposed project. A discussion follows each environmental issue identified in the checklist. For this checklist, the following designations are used:

Potentially Significant Impact: An impact that could be significant, and for which no mitigation has been identified. If any potentially significant impacts are identified, an EIR must be prepared.

Less Than Significant with Mitigation Incorporated: An impact that requires mitigation to reduce the impact to a less-than-significant level.

Less-Than-Significant Impact: Any impact that would not be considered significant under CEQA relative to existing standards.

No Impact: The project would not have any impact.

I. AESTHETICS. *Would the project:*	Potentially Significant Impact	Less-Than-Significant with Mitigation Incorporated	Less-Than-Significant Impact	No Impact
a. Have a substantial adverse effect on a scenic vista?	☐	☐	✖	☐
b. Substantially damage scenic resources, including, but not limited to, trees, rock outcroppings, and historic buildings within a State scenic highway?	☐	☐	✖	☐
c. In non-urbanized areas, substantially degrade the existing visual character or quality of public views of the site and its surroundings? (Public views are those that are experienced from publicly accessible vantage point). If the project is in an urbanized area, would the project conflict with applicable zoning and other regulations governing scenic quality?	☐	☐	✖	☐
d. Create a new source of substantial light or glare which would adversely affect day or nighttime views in the area?	☐	✖	☐	☐

Discussion

a,c. Examples of typical scenic vistas include mountain ranges, ridgelines, or bodies of water as viewed from a highway, public space, or other area designated for the express purpose of viewing and sightseeing. In general, a project's impact to a scenic vista would occur if development of the project would substantially change or remove a scenic vista. A scenic vista includes any such areas designated by a federal, state, or local agency. However, Oat Hill, on which the project is located, is considered a local scenic resource as the hill represents the highest and most visible hill feature on the west side of American Canyon. In addition, given that the project site is currently undeveloped, the visual character of the site would be changed from the existing character with implementation of the project.

Photo simulations were prepared for the project site in order to capture views from SR 29, nearby residences, and nearby church, as well as to provide illustrations of the potential views from the locations after implementation of the proposed project. The existing views of the project site are shown in Figure 10 through Figure 13. Figure 10 and Figure 11 both provide existing views of the site from the northeast and east along SR 29, respectively. Figure 12 provides existing views from the east along Theresa Avenue, while Figure 13 provides existing views form the southwest.

A discussion of the projects potential effects on scenic vistas and the potential to substantially degrade the existing visual character or quality of public views of the site is discussed in further detail below.

Parcel A

Development within Parcel A would consist of 206 multi-family residential units distributed amongst 13, three-story buildings. Parcel A is located at a relatively high elevation, within an existing flat terrace at the western edge of the project site. As such, any development within Parcel A would be visible to motorists on SR 29 and nearby residences in the northern portions of the City, which has the potential to have a significant effect on local scenic views of the site.

Figure 10
Existing View from the Northeast Along SR 29

Figure 11
Existing View from the East Along SR 29

Figure 12
Existing View from the East along Theresa Avenue

Figure 13
Existing View from the Southwest

Figure 14 through Figure 17 illustrate potential views of the proposed project following buildout. As shown in Figure 14 and Figure 15, the proposed buildings within Parcel A would be visible from the northeast and east along SR 29. In addition, as shown in Figure 16 and Figure 17, the proposed buildings would be visible from the east along Theresa Avenue and from the southwest of the site. Parcel A is currently designated in the General Plan I:CS and zoned LI. While buildout of the site was not anticipated for residential uses, development of the site for urban uses has been anticipated per the existing land use designations, and development of residential uses would not result in greater impacts as compared to development of the site with industrial uses. Should the site be built out under existing land use designations, development of Parcel A would likely be visible to the same degree as the proposed project, but the development would be industrial in nature, rather than residential.

The intent of the RH-1 designation is to "provide for development of uses that capitalize on and attract visitors due to their unique viewsheds […] topography, and other natural characteristics." Policy 1.17.3 in the Land Use Element of the General Plan specifies that "[…] development be sited and designed to emphasize the unique character of its setting and intended functions […] and convey a high level of quality in accordance with Policies 1.18.1 to 1.18.5. The aforementioned policies call for special architectural treatment, the incorporation of arcades and other recesses, articulation and differentiation of building entrances and floors, and the use of landscaping. Compliance with the foregoing goals and policies would ensure that the project meets specific City adopted standards. In addition, the City would ensure compliance through approval of a Design Permit. Approval of a Design Permit would ensure that the buildings would be designed with enhanced elevations, colors, and materials that both take advantage of the views from the hill, and complement the hillside and views of the project from below.

Therefore, once completed, the project would not be expected to have a substantial effect on the local views of or from Parcel A, as development of the project would be of high quality and attractive design that compliments the hillsides in accordance with City goals.

Parcel B

Development within Parcel B would consist of 85 multi-family residential units distributed amongst five, three-story buildings. Parcel B consists of approximately 9.5 acres and is located on the lower slope within the eastern portion of the site. As shown in Figure 14 and Figure 15, the proposed buildings within Parcel B would be visible from the northeast and east along SR 29. In addition, as shown in Figure 16, the proposed buildings would be visible from the east along Theresa Avenue. However, as shown in Figure 17, because the parcel is located on the lower slope within the eastern portion of the site, development within Parcel B would not be visible from the southwest.

Parcel B is currently anticipated for urban development and is located near existing areas of development to the east and north. Parcel B is currently designated in the General Plan RE and zoned RE. While the project would require a General Plan Amendment to change the site from RE to RM, development of the site with residential uses has been anticipated. Development of the site under existing land use designations would likely be visible from similar areas as the proposed project. Furthermore, Policy 1.17.3 in the Land Use Element of the General Plan specifies that "[…] development be sited and designed to emphasize the unique character of its setting and intended functions […] and convey a high level of quality in accordance with Policies 1.18.1 to 1.18.5.

Figure 14
Proposed View from the Northeast Along SR 29

Figure 15
Proposed View from the East Along SR 29

Figure 16
Proposed View from the East Along Theresa Avenue

Figure 17
Proposed View from the Southwest

The aforementioned policies call for special architectural treatment, the incorporation of arcades and other recesses, articulation and differentiation of building entrances and floors, and the use of landscaping. Compliance with the foregoing goals and policies would ensure that the project meets specific City adopted standards. In addition, the City would ensure compliance through Planning Commission approval of a Design Permit. Planning Commission approval of a Design Permit would ensure that the buildings would be designed with enhanced elevations, colors, and materials that both take advantage of the views from the hill, and complement the hillside and views of the project from below.

In addition, the entire project site has been subject to high levels of disturbance from past construction, grading, and other human activities over the past 20 years. Scattered debris and other materials associated with past site disturbance are located within Parcel B. Given that the project would remove existing debris and materials currently within the site, development within Parcel B would improve the overall visual quality of the parcel.

Therefore, once completed, the project would not be expected to have a substantial effect on the local views of Parcel B, would result in similar changes to views of the site as would occur with development of the site under existing land use designation, and would not substantially degrade the existing visual character of the site, as development would be of high quality and attractive design that compliments the hillsides in accordance with City goals.

Parcel A and Parcel B

Development within both parcels would be visible to nearby residences in the City and motorists along SR 29 and Theresa Avenue, which has the potential to have a significant effect on local views of the site. The proposed structures would be subject to General Plan Policies 1.18.1 to 1.18.5, which call for special architectural treatment, the incorporation of arcades and other recesses, articulation and differentiation of building entrances and floors, and the use of landscaping. In addition, all proposed structures would be required to adhere to Design Permit and Architectural Permits, which would ensure that the buildings would be designed with enhanced elevations, colors, and materials that both take advantage of the views from the hill, and complement the hillside and views of the project from below. As the entire project site has been subject to high levels of disturbance and contains scattered debris and materials, buildout of the project site with residential buildings compliant with the aforementioned policies would enhance, rather than degrade, the existing visual character and quality of the project site and its surroundings.

Conclusion

Based on the above, development of the proposed project would not have a substantial adverse effect on a scenic vista or substantially degrade the existing visual character or quality of the sites and their surroundings. Thus, a ***less-than-significant*** impact would occur.

b. **Parcel A and Parcel B**

According to the California Scenic Highway Mapping System, SR 29 is listed as eligible for State Scenic Highway designation. The project site is approximately 0.22-mile northeast of SR 29. Oat Hill is considered a local scenic resource as the hill represents the highest and most visible hill feature on the west side of American Canyon. Rock outcroppings, large trees, or historic buildings do not exist on-site, and such resources would not be adversely affected by the project.

Based on the above, development of the proposed project would not substantially damage scenic resources, including, but not limited to, trees, rock outcroppings, and historic buildings within a State Scenic Highway. Thus, a ***less-than-significant*** impact would occur.

d. **Parcel A and Parcel B**

The project site does not contain any structures and, thus, does not currently emit any sources of light or glare. Development of the proposed residences would add new sources of light and glare to the site, where none currently exist. As previously discussed, the project site is located near existing development including similar land uses. Light and glare associated with the proposed project would be expected to be similar to that of the surrounding area.

The American Canyon Municipal Code prohibits light from crossing property lines and requires downcasting of all exterior lighting on-site, which is intended to reduce the effects resulting from lighting and glare on adjacent properties. However, as the proposed project is located on a hillside, project lighting could spill down the hillside slopes and glare could potentially affect day or nighttime views of existing residents in the vicinity of the project and/or vehicles traveling along SR 29. Thus, the nearby residence could potentially be affected by the new sources of light and glare, including night lighting, from the proposed project. Because the proposed project would create sources of light and glare where none currently exist, which could affect nearby land uses, impacts from light and glare associated with the proposed project could be considered ***potentially significant***.

Mitigation Measure(s)

Implementation of the following mitigation measures would reduce the above potential impact to a *less-than-significant* level.

Parcel A and Parcel B

I-1. *Prior to issuance of building permits, the applicant shall prepare and submit a detailed lighting plan for review and approval by the Community Development Department. The plan shall show conformance with City performance standards for street lighting and glare, including shielding of all on-site lighting so that light is directed within the project site and does not illuminate adjacent properties, and indicate the location and design of proposed lighting and lighted signs. The applicant shall implement the final plan as approved by the City.*

II. AGRICULTURE AND FOREST RESOURCES. *Would the project:*	Potentially Significant Impact	Less-Than-Significant with Mitigation Incorporated	Less-Than-Significant Impact	No Impact
a. Convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (Farmland), as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency, to non-agricultural use?	☐	☐	✖	☐
b. Conflict with existing zoning for agricultural use, or a Williamson Act contract?	☐	☐	☐	✖
c. Conflict with existing zoning for, or cause rezoning of, forest land (as defined in Public Resources Code section 12220(g)), timberland (as defined by Public Resources Code section 4526), or timberland zoned Timberland Production (as defined by Government Code section 51104(g))?	☐	☐	☐	✖
d. Result in the loss of forest land or conversion of forest land to non-forest use?	☐	☐	☐	✖
e. Involve other changes in the existing environment which, due to their location or nature, could result in conversion of Farmland, to non-agricultural use or conversion of forest land to non-forest use?	☐	☐	✖	☐

Discussion

a,e. Currently, the project site is undeveloped and consists of vacant land with ruderal vegetation and limited trees. The project site is currently used for goat and sheep grazing. Per the Department of Conservation Farmland Mapping and Monitoring Program, the entire project site consists of approximately 18.6 acres designated as "Grazing Land", approximately 0.7-acre of Farmland of Local Importance and approximately 0.2-acre of "Urban and Built-Up Land".[3] Potential impacts related to the conversion/loss of farmland are discussed separately for Parcel A and Parcel B below.

Parcel A

Parcel A consists of approximately 11.3 acres designated as "Grazing Land".[4] As such, the parcel is not designated as Prime Farmland, Unique Farmland, or Farmland of Statewide Importance. In addition, as noted above, the project site is currently used for goat and sheep grazing; however, the City's General Plan designates Parcel A as I:CS and the parcel is zoned LI:CS. Considering the existing land use designation for Parcel A, the City anticipated that Parcel A would be developed for urban uses, and did not anticipate on-going agricultural activity to occur within the site. Nonetheless, due to the existing California Department of Conservation designations of the parcel, implementation of the proposed project would convert land designated as Grazing Land to non-agricultural uses. While the project would result in the loss of Grazing Land, development of Parcel A for non-agricultural uses has been previously analyzed in the American Canyon General Plan EIR. Because the conversion of Grazing Land to non-agricultural uses at Parcel A was

[3] California Department of Conservation. *California Important Farmland Finder.* Available at: https://maps.conservation.ca.gov/DLRP/CIFF/. Accessed August 2020.

[4] *Ibid.*

anticipated in the City's General Plan and the project would not convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance, the project's impact would be less than significant.

Parcel B

Parcel B consists of approximately 7.3 acres designated as "Grazing Land", approximately 0.7-acre of Farmland of Local Importance and approximately 0.2-acre of "Urban and Built-Up Land".[5] While the site is currently used for grazing activities, Parcel B is designated and zoned RE. Furthermore, Parcel B does not include land that has been designated as Prime Farmland, Unique Farmland, or Farmland of Statewide Importance. However, due to the existing California Department of Conservation designations of the parcel, implementation of the proposed project would convert land designated as Farmland of Local Importance and Grazing Land to non-agricultural uses. Similar to the discussion of Parcel A above, development of Parcel B for non-agricultural uses has been previously analyzed in the American Canyon General Plan EIR. Because the conversion of Farmland of Local Importance and Grazing Land to non-agricultural uses at Parcel B was anticipated in the City's General Plan and the project would not convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance, the project's impact would be less than significant.

Conclusion

Based on the above, development of both Parcel A and Parcel B with residential uses would not convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance to a non-agricultural use, or involve other changes in the existing environment which, due to their location or nature, could individually or cumulatively result in loss of Farmland to non-agricultural use. Thus, a ***less-than-significant*** impact would occur.

b. **Parcel A and Parcel B**

The project site is currently designated I:CS and RE per the City's General Plan and is currently zoned LI and RE; thus, the site is not zoned for agricultural use. Additionally, the site is not under a Williamson Act contract. Therefore, the proposed project would not conflict with existing zoning for agricultural use or conflict with a Williamson Act contract, and ***no impact*** would occur.

C,d. **Parcel A and Parcel B**

The project area is not considered forest land (as defined in Public Resources Code section 12220[g]), timberland (as defined by Public Resources Code section 4526), and is not zoned Timberland Production (as defined by Government Code section 51104[g]). Therefore, the proposed project would have ***no impact*** with regard to conversion of forest land or any potential conflict with forest land, timberland, or Timberland Production zoning.

III. AIR QUALITY. *Would the project:*	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less-Than-Significant Impact	No Impact
a. Conflict with or obstruct implementation of the applicable air quality plan?	☐	✖	☐	☐
b. Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is non-attainment under an applicable federal or state ambient air quality standard?	☐	✖	☐	☐
c. Expose sensitive receptors to substantial pollutant concentrations?	☐	☐	✖	☐
d. Result in other emissions (such as those leading to odors) adversely affecting a substantial number of people?	☐	☐	✖	☐

Discussion

a,b. The City of American Canyon is located in the San Francisco Bay Area Air Basin (SFBAAB), which is under the jurisdiction of the Bay Area Air Quality Management District (BAAQMD). The SFBAAB area is currently designated as a nonattainment area for State and federal ozone, State and federal fine particulate matter 2.5 microns in diameter ($PM_{2.5}$), and State respirable particulate matter 10 microns in diameter (PM_{10}) ambient air quality standards (AAQS). The SFBAAB is designated attainment or unclassified for all other AAQS. It should be noted that on January 9, 2013, the U.S. Environmental Protection Agency (USEPA) issued a final rule to determine that the Bay Area has attained the 24-hour $PM_{2.5}$ federal AAQS. Nonetheless, the Bay Area must continue to be designated as nonattainment for the federal $PM_{2.5}$ AAQS until such time as the BAAQMD submits a redesignation request and a maintenance plan to the USEPA, and the USEPA approves the proposed redesignation.

In compliance with regulations, due to the nonattainment designations of the area, the BAAQMD periodically prepares and updates air quality plans that provide emission reduction strategies to achieve attainment of the AAQS, including control strategies to reduce air pollutant emissions through regulations, incentive programs, public education, and partnerships with other agencies. The current air quality plans are prepared in cooperation with the Metropolitan Transportation Commission and the Association of Bay Area Governments (ABAG).

The most recent federal ozone plan is the 2001 Ozone Attainment Plan, which was adopted on October 24, 2001 and approved by the California Air Resources Board (CARB) on November 1, 2001. The plan was submitted to the USEPA on November 30, 2001 for review and approval. The most recent State ozone plan is the 2017 Clean Air Plan, adopted on April 19, 2017. The 2017 Clean Air Plan was developed as a multi-pollutant plan that provides an integrated control strategy to reduce ozone, PM, toxic air contaminants (TACs), and greenhouse gases (GHGs). Although a plan for achieving the State PM10 standard is not required, the BAAQMD has prioritized measures to reduce PM in developing the control strategy for the 2017 Clean Air Plan. The control strategy serves as the backbone of the BAAQMD's current PM control program.

The aforementioned air quality plans contain mobile source controls, stationary source controls, and transportation control measures to be implemented in the region to attain the State and federal AAQS within the SFBAAB. Adopted BAAQMD rules and regulations, as well as the thresholds of significance, have been developed with the intent to ensure continued attainment

of AAQS, or to work towards attainment of AAQS for which the area is currently designated nonattainment, consistent with applicable air quality plans. The BAAQMD's established significance thresholds associated with development projects for emissions of the ozone precursors reactive organic gases (ROG) and oxides of nitrogen (NO_x), as well as for PM_{10} and $PM_{2.5}$, expressed in pounds per day (lbs/day) and tons per year (tons/yr), are listed in Table 1. By exceeding the BAAQMD's mass emission thresholds for ROG, NO_X, PM_{10}, or $PM_{2.5}$, a project would be considered to conflict with or obstruct implementation of the BAAQMD's air quality planning efforts.

Table 1
BAAQMD Thresholds of Significance

Pollutant	Construction	Operational	
	Average Daily Emissions (lbs/day)	Average Daily Emissions (lbs/day)	Maximum Annual Emissions (tons/year)
ROG	54	54	10
NO_x	54	54	10
PM_{10} (exhaust)	82	82	15
$PM_{2.5}$ (exhaust)	54	54	10

Source: BAAQMD, CEQA Guidelines, May 2017.

All projects under the jurisdiction of the BAAQMD are required to implement all of the BAAQMD's Basic Construction Mitigation Measures, which include the following:

1. All exposed surfaces (e.g., parking areas, staging areas, soil piles, graded areas, and unpaved access roads) shall be watered two times per day.
2. All haul trucks transporting soil, sand, or other loose material off-site shall be covered.
3. All visible mud or dirt track-out onto adjacent public roads shall be removed using wet power vacuum street sweepers at least once per day. The use of dry power sweeping is prohibited.
4. All vehicle speeds on unpaved roads shall be limited to 15 mph.
5. All roadways, driveways, and sidewalks to be paved shall be completed as soon as possible. Building pads shall be laid as soon as possible after grading unless seeding or soil binders are used.
6. Idling times shall be minimized either by shutting equipment off when not in use or reducing the maximum idling time to 5 minutes (as required by the California airborne toxics control measure Title 13, Section 2485 of California Code of Regulations [CCR]). Clear signage shall be provided for construction workers at all access points.
7. All construction equipment shall be maintained and properly tuned in accordance with manufacturer's specifications. All equipment shall be checked by a certified visible emissions evaluator.
8. Post a publicly visible sign with the telephone number and person to contact at the lead agency regarding dust complaints. This person shall respond and take corrective action within 48 hours. The Air District's phone number shall also be visible to ensure compliance with applicable regulations.

The proposed project's required implementation of the BAAQMD's Basic Construction Mitigation Measures listed above would help minimize construction-related emissions.

The proposed project's construction and operational emissions were quantified using the California Emissions Estimator Model (CalEEMod) software version 2016.3.2 – a statewide model designed to provide a uniform platform for government agencies, land use planners, and environmental professionals to quantify air quality emissions, including GHG emissions, from land use projects. The model applies inherent default values for various land uses, including construction data, vehicle mix, trip length, average speed, compliance with the 2016 California Building Standards Code (CBSC), etc. To reflect compliance with the 2019 CBSC, the model is adjusted to incorporate a Title 24 exceedance. Where project-specific information is available, such information should be applied in the model.

Given the independent nature of development on Parcel A and Parcel B, emissions from construction and operation on each parcel was first estimated separately. However, because both projects could be undertaken simultaneously, an additional emissions modeling scenario was analyzed where buildout of both Parcel A and Parcel B would occur simultaneously. This approach was selected in order to provide air quality information on each project component independently and together.

The construction emissions associated with the proposed roadway extension along Napa Junction Road have been estimated using the Sacramento Metropolitan Air Quality Management District (SMAQMD)'s Road Construction Emissions Model (RoadMod), Version 9.0.0. While the project site is not located within the jurisdiction of SMAQMD, RoadMod is an industry standard tool for evaluating construction emissions throughout the State. SMAQMD's RoadMod requires the user to input information related to the area of disturbance, the length of time a project would occur, and, for linear non-roadway projects, a list of equipment that would be used during project construction. The extension to Napa Junction Road would be constructed regardless of whether only Parcel A, only Parcel B, or both parcels were developed. Therefore, the estimated emissions were added to each of the construction scenarios discussed in further depth below.

The proposed project's estimated emissions associated with construction and operations are presented and discussed in further detail below. A discussion of the proposed project's contribution to cumulative air quality conditions is provided below as well. All CalEEMod and RoadMod results are included as Appendix A to this IS/MND.

Parcel A

The modeling for the proposed project on Parcel A assumed the following project and/or site-specific information:

- Construction would begin in August 2021;
- Construction would occur over an approximately three-year period;
- Land uses would include:
    - 206 mid-rise (three-story) apartments;
    - 294 parking spaces on an outdoor parking lot; and
    - 157 parking spaces in an enclosed parking garage.
- The entire 11.3-acre parcel would be disturbed during site preparation/grading;
- Fireplaces would not be included in any of the units;
- The project site is located within 0.2-mile of the nearest transit stop; and

- On-site renewable energy systems would be used to generate 100 percent of anticipated electricity use, pursuant to the 2019 CBSC.

Estimated emissions associated with construction and operations of the proposed project on Parcel A are presented and discussed in further detail below.

Construction Emissions

According to the CalEEMod and RoadMod results, buildout of Parcel A and the roadway improvements along Napa Junction Road would result in maximum unmitigated construction criteria air pollutant emissions as shown in Table 2.

Table 2
Parcel A: Maximum Unmitigated Construction Emissions (lbs/day)

Pollutant	Project Development Emissions[1]	Roadway Improvement Emissions[2]	Total Construction Emissions	Threshold of Significance	Exceeds Threshold?
ROG	7.88	3.66	11.54	54	**NO**
NO_X	40.54	39.94	80.48	54	**YES**
PM_{10} (exhaust)	2.05	1.75	3.8	82	**NO**
PM_{10} (fugitive)	18.21	6.60	24.81	None	**N/A**
$PM_{2.5}$ (exhaust)	1.88	1.57	3.45	54	**NO**
$PM_{2.5}$ (fugitive)	9.97	1.37	11.34	None	**N/A**

[1] ***Source: CalEEMod, August 2020 (see Appendix A).***
[2] ***Source: RoadMod, October 2020 (see Appendix A).***

As shown in the table, construction emissions from the proposed project on Parcel A would be below the applicable thresholds of significance for all criteria pollutants except NO_X. Because buildout of Parcel A would exceed the applicable thresholds of significance for construction NO_X emissions, project construction could result in a potentially significant air quality impact.

Operational Emissions

According to the CalEEMod results, buildout of Parcel A would result in maximum unmitigated operational criteria air pollutant emissions as shown in Table 3.

Table 3
Parcel A: Unmitigated Maximum Operational Emissions

Pollutant	Proposed Project Emissions		Threshold of Significance		Exceeds Threshold?
	Lbs/day	tons/yr	lbs/day	tons/yr	
ROG	9.84	1.30	54	10	**NO**
NO_X	7.77	1.29	54	10	**NO**
PM_{10} (exhaust)	3.58	0.05	82	15	**NO**
PM_{10} (fugitive)	5.93	1.01	None	None	**N/A**
$PM_{2.5}$ (exhaust)	3.57	0.05	54	10	**NO**
$PM_{2.5}$ (fugitive)	1.59	0.27	None	None	**N/A**

Source: CalEEMod, August 2020 (see Appendix A).

As shown in the table, operations of the proposed project on Parcel A would be below the applicable thresholds of significance. Thus, operations of the project on Parcel A would not be considered to conflict with air quality plans during project operations.

Parcel B

The modeling for the proposed project on Parcel B assumed the following project and/or site-specific information:

- Construction would begin in August 2021;
- Construction would occur over an approximately three-year period;
- Land uses would include:
  - 85 mid-rise (three-story) apartments;
  - 117 parking spaces on an outdoor parking lot; and
  - 65 parking spaces in an enclosed parking garage.
- The entire 9.5-acre parcel would be disturbed during site preparation/grading;
- Fireplaces would not be included in any of the units;
- The project site is located within 0.2-mile of the nearest transit stop; and
- On-site renewable energy systems would be used to generate 100 percent of anticipated electricity use, pursuant to the 2019 CBSC.

Estimated emissions associated with construction and operations of the proposed project on Parcel B are presented and discussed in further detail below.

Construction Emissions

According to the CalEEMod results, buildout of Parcel B and the roadway improvements along Napa Junction Road would result in maximum unmitigated construction criteria air pollutant emissions as shown in Table 4.

Table 4
Parcel B: Maximum Unmitigated Construction Emissions (lbs/day)

Pollutant	Project Development Emissions[1]	Roadway Improvement Emissions[2]	Total Construction Emissions	Threshold of Significance	Exceeds Threshold?
ROG	4.37	3.66	8.03	54	**NO**
NO_X	40.54	39.94	80.48	54	**YES**
PM_{10} (exhaust)	2.05	1.75	3.8	82	**NO**
PM_{10} (fugitive)	18.21	6.60	24.81	None	**N/A**
$PM_{2.5}$ (exhaust)	1.88	1.57	3.45	54	**NO**
$PM_{2.5}$ (fugitive)	9.97	1.37	11.34	None	**N/A**

[1] ***Source: CalEEMod, August 2020 (see Appendix A).***
[2] ***Source: RoadMod, October 2020 (see Appendix A).***

As shown in the table, construction emissions from the proposed project on Parcel B would be below the applicable thresholds of significance for all criteria pollutants except NO_X. Because buildout of Parcel B would exceed the applicable thresholds of significance for construction NO_X emissions, project construction could result in a potentially significant air quality impact.

Operational Emissions

According to the CalEEMod results, operations of the proposed project on Parcel B would result in maximum unmitigated operational criteria air pollutant emissions as shown in Table 5.

Table 5
Parcel B: Unmitigated Maximum Operational Emissions

Pollutant	Proposed Project Emissions		Threshold of Significance		Exceeds Threshold?
	Lbs/day	tons/yr	lbs/day	tons/yr	
ROG	4.06	0.53	54	10	**NO**
NO_X	3.21	0.53	54	10	**NO**
PM_{10} (exhaust)	1.48	0.02	82	15	**NO**
PM_{10} (fugitive)	2.45	0.42	None	None	**N/A**
$PM_{2.5}$ (exhaust)	1.47	0.02	54	10	**NO**
$PM_{2.5}$ (fugitive)	0.65	0.11	None	None	**N/A**

Source: CalEEMod, August 2020 (see Appendix A).

As shown in the table, operations of the proposed project on Parcel B would be below the applicable thresholds of significance. Thus, operations of the project on Parcel B would not be considered to conflict with air quality plans during project operations.

Parcel A and Parcel B

The modeling for the proposed project on Parcel A and Parcel B assumed the following project and/or site-specific information:

- Construction would begin in August 2021;
- Construction would occur over an approximately three-year period;
- Land uses would include:
  - 291 mid-rise (three-story) apartments;
  - 411 parking spaces on an outdoor parking lot; and
  - 222 parking spaces in an enclosed parking garage.
- The entire 20.8-acre project site would be disturbed during site preparation/grading;
- Fireplaces would not be included in any of the units;
- The project site is located within 0.2-mile of the nearest transit stop; and
- On-site renewable energy systems would be used to generate 100 percent of anticipated electricity use, pursuant to the 2019 CBSC.

In order to present the most conservative analysis, the modeling assumed that construction of both Parcel A and Parcel B would happen concurrently. Therefore, the modeling would represent the most intense construction period. Estimated emissions associated with construction and operations of the proposed project on Parcel A and B are presented and discussed in further detail below.

Construction Emissions

According to the CalEEMod results, buildout of both Parcel A and Parcel B would result in maximum unmitigated construction criteria air pollutant emissions as shown in **Error! Reference source not found.**.

Table 6
Parcel A and Parcel B: Maximum Unmitigated Construction Emissions (lbs/day)

Pollutant	Project Development Emissions[1]	Roadway Improvement Emissions[2]	Total Construction Emissions	Threshold of Significance	Exceeds Threshold?
ROG	10.34	3.66	14.00	54	**NO**
NO_X	46.45	39.94	86.39	54	**YES**
PM_{10} (exhaust)	2.05	1.75	3.80	82	**NO**
PM_{10} (fugitive)	18.21	6.60	24.81	None	**N/A**
$PM_{2.5}$ (exhaust)	1.88	1.57	3.45	54	**NO**
$PM_{2.5}$ (fugitive)	9.97	1.37	11.34	None	**N/A**

[1] ***Source: CalEEMod, October 2020 (see Appendix A).***
[2] ***Source: RoadMod, October 2020 (see Appendix A).***

As shown in the table, construction emissions from the proposed project would be below the applicable thresholds of significance for all criteria pollutants except NO_X. Because the proposed project would exceed the applicable thresholds of significance for construction NO_X emissions, project construction could result in a potentially significant air quality impact.

Operational Emissions

According to the CalEEMod results, operations of the proposed project on both Parcel A and Parcel B would result in maximum unmitigated operational criteria air pollutant emissions as shown in **Error! Reference source not found.**.

Table 7
Parcel A and Parcel B: Unmitigated Maximum Operational Emissions

Pollutant	Proposed Project Emissions		Threshold of Significance		Exceeds Threshold?
	Lbs/day	tons/yr	lbs/day	tons/yr	
ROG	13.89	1.83	54	10	**NO**
NO_X	10.98	1.82	54	10	**NO**
PM_{10} (exhaust)	5.05	0.07	82	15	**NO**
PM_{10} (fugitive)	8.37	1.43	None	None	**N/A**
$PM_{2.5}$ (exhaust)	5.05	0.07	54	10	**NO**
$PM_{2.5}$ (fugitive)	2.24	0.38	None	None	**N/A**

Source: CalEEMod, October 2020 (see Appendix A).

As shown in the table, the proposed project's operational emissions would be below the applicable thresholds of significance. Thus, the proposed project would not be considered to conflict with air quality plans during project operations.

Cumulative Emissions

Past, present, and future development projects contribute to the region's adverse air quality impacts on a cumulative basis. By nature, air pollution is largely a cumulative impact. A single project is not sufficient in size to, by itself, result in nonattainment of AAQS. Instead, a project's individual emissions contribute to existing cumulatively significant adverse air quality impacts. If a project's contribution to the cumulative impact is considerable, then the project's impact on air quality would be considered significant. In developing thresholds of significance for air pollutants, BAAQMD considered the emission levels for which a project's individual emissions would be cumulatively considerable. The thresholds of significance presented in Table 1 represent the levels at which a project's individual emissions of criteria air pollutants or precursors would result in a cumulatively considerable contribution to the SFBAAB's existing air quality conditions. If a project exceeds the significance thresholds presented in Table 1, the proposed project's emissions would be cumulatively considerable, resulting in significant adverse cumulative air quality impacts to the region's existing air quality conditions. Because the proposed project would result in operational emissions below the applicable thresholds of significance, operations of the project would not be expected to result in a cumulatively considerable contribution to the region's existing air quality conditions. However, as noted above, construction of the project under all modeled scenarios would exceed the applicable thresholds of significance. As such, construction of the proposed project could result in a short-term cumulatively considerable contribution to regional air quality conditions.

Conclusion

As stated previously, the applicable regional air quality plans include the 2001 Ozone Attainment Plan and the 2017 Clean Air Plan. According to BAAQMD, if a project would not result in significant and unavoidable air quality impacts, after the application of all feasible mitigation, the project may be considered consistent with the air quality plans. Because construction of the proposed project could result in emissions that exceed the applicable thresholds of significance, the project could conflict with or obstruct implementation of regional air quality plans.

Based on the above, operations of the proposed project would not conflict with or obstruct implementation of the applicable air quality plans, violate any air quality standards or contribute substantially to an existing or projected air quality violation, or result in a cumulatively considerable net increase in any criteria air pollutant. However, construction of the proposed project could exceed the applicable threshold of significance for NO_X and, therefore, impacts would be considered ***potentially significant***.

Mitigation Measure(s)

The most effective way to reduce construction-related NO_X emissions is by improving the engine tier/engine efficiency of construction equipment. Off-road diesel engines that are used in construction equipment fall into efficiency tiers, with the most efficient being the Tier 4 emission standards. Engine Tiers 3 through 1 are regressively less efficient. Based on modeling conducted, as shown in Table 8, Table 9, and Table 10, use of Tier 4 construction equipment for the off-site improvements alone would be sufficient to reduce the project's overall construction-related emissions of NO_X to below the applicable threshold of significance. Therefore, implementation of the following mitigation measure would reduce the construction-related emissions of NO_X to below the applicable threshold of significance, and would reduce the above potential impact to a *less-than-significant* level.

Table 8

Parcel A, Parcel B, or Parcel and Parcel B

III-1 *Prior to the issuance of a grading permit, the project applicant shall indicate via notation on project construction plans that all off-road construction equipment used for the roadway extension along Napa Junction Road, including owned, leased, and subcontractor vehicles, shall meet the California Air Resources Board's (CARB's) Tier 4 emissions standards. The construction plans shall be submitted for review and approval to the City of American Canyon Community Development Department.*

c. **Parcel A and Parcel B**

Some land uses are considered more sensitive to air pollution than others, due to the types of population groups or activities involved. Heightened sensitivity may be caused by health problems, proximity to the emissions source, and/or duration of exposure to air pollutants. Children, pregnant women, the elderly, and those with existing health problems are especially vulnerable to the effects of air pollution. Sensitive receptors are typically defined as facilities where sensitive receptor population groups (i.e., children, the elderly, the acutely ill, and the chronically ill) are likely to be located. Accordingly, land uses that are typically considered to be sensitive receptors include residences, schools, playgrounds, childcare centers, retirement homes, convalescent homes, hospitals, and medical clinics. The nearest existing sensitive receptors would be Napa Junction Elementary School, located approximately 300 feet to the east of the site, and the single-family residences along Theresa Avenue, located approximately 320 feet east of the site.

The major pollutant concentrations of concern are localized carbon monoxide (CO) emissions, toxic air contaminant (TAC), and criteria pollutant emissions, which are addressed in further detail below.

Localized CO Emissions

Localized concentrations of CO are related to the levels of traffic and congestion along streets and at intersections. High levels of localized CO concentrations are only expected where background levels are high, and traffic volumes and congestion levels are high. Emissions of CO are of potential concern, as the pollutant is a toxic gas that results from the incomplete combustion of carbon-containing fuels such as gasoline or wood.

To provide a conservative indication of whether a project would result in localized CO emissions that would exceed the applicable threshold of significance, BAAQMD has established screening criteria for localized CO emissions. According to BAAQMD, a proposed project would result in a less-than-significant impact related to localized CO emission concentrations if all of the following conditions are true for the project:

- The project is consistent with an applicable congestion management program established by the county congestion management agency for designated roads or highways, regional transportation plan, and local congestion management agency plans;
- The project traffic would not increase traffic volumes at affected intersections to more than 44,000 vehicles per hour; and

- The project traffic would not increase traffic volumes at affected intersections to more than 24,000 vehicles per hour where vertical and/or horizontal mixing is substantially limited (e.g., tunnel, parking garage, underpass, etc.).

As noted in Section XVII, Transportation, of this IS/MND, the proposed project is expected to generate an average of 105 AM peak hour trips and 128 PM peak hour trips when both Parcel A and Parcel B are built out. Considering traffic volumes at nearby intersections range between one and 541 vehicles per peak hour, the additional traffic generated by the proposed project would not increase traffic volumes at an affected intersection to more than 44,000 vehicles per hour.[6] Furthermore, areas where vertical and/or horizontal mixing is limited due to tunnels, underpasses, or similar features do not exist in the project area. Therefore, based on the BAAQMD's screening criteria for localized CO emissions, the proposed project would not be expected to result in substantial levels of localized CO at surrounding intersections or generate localized concentrations of CO that would exceed standards or cause health hazards.

TAC Emissions

Another category of environmental concern is TACs. The CARB's *Air Quality and Land Use Handbook: A Community Health Perspective* (Handbook) provides recommended setback distances for sensitive land uses from major sources of TACs, including, but not limited to, freeways and high traffic roads, distribution centers, and rail yards. The CARB has identified diesel particulate matter (DPM) from diesel-fueled engines as a TAC; thus, high volume freeways, stationary diesel engines, and facilities attracting heavy and constant diesel vehicle traffic are identified as having the highest associated health risks from DPM. Health risks associated with TACs are a function of both the concentration of emissions and the duration of exposure, where the higher the concentration and/or the longer the period of time that a sensitive receptor is exposed to pollutant concentrations would correlate to a higher health risk. The nearest existing sensitive receptors to the project site are the Napa Junction Elementary School, located approximately 300 feet to the east, and the single-family residences along Theresa Avenue, located approximately 320 feet east.

The proposed project does not include any operations that would be considered a substantial source of TACs. Accordingly, operations of the proposed project would not expose sensitive receptors to excess concentrations of TACs.

Short-term, construction-related activities could result in the generation of TACs, specifically DPM, from on-road haul trucks and off-road equipment exhaust emissions. However, as discussed above, construction is temporary and occurs over a relatively short duration in comparison to the operational lifetime of the proposed project. Health risks are typically associated with exposure to high concentrations of TACs over extended periods of time (e.g., 30 years or greater), whereas the construction period associated with the proposed project would likely be limited to approximately three years. All construction equipment and operation thereof would be regulated per the In-Use Off-Road Diesel Vehicle Regulation, which is intended to help reduce emissions associated with off-road diesel vehicles and equipment, including DPM. Project construction would also be required to comply with all applicable BAAQMD rules and regulations, particularly associated with permitting of air pollutant sources.

[6] W-Trans. *Traffic Impact Study for the Oat Hill Multi-Family Housing Project*. August 10, 2020.

During construction, only portions of the project site would be disturbed at a time. Operation of construction equipment would occur on such portions of the site intermittently throughout the course of a day over the overall construction period. Because construction equipment on-site would not operate for any long periods of time and would be used at varying locations within the site, associated emissions of DPM would not occur at the same location (or be evenly spread throughout the entire project site) for long periods of time. Due to the temporary nature of construction and the relatively short duration of potential exposure to associated emissions, sensitive receptors in the area would not be exposed to pollutants for a permanent or substantially extended period of time. Furthermore, any one nearby sensitive receptor would be exposed to varying concentrations of DPM emissions throughout the construction period. According to BAAQMD, research conducted by CARB indicates that DPM is highly dispersive in the atmosphere. Thus, emissions at the project site would be substantially dispersed at the nearest sensitive receptors, and the concentration of DPM at the nearest sensitive receptors would be lower than the concentration of DPM at the source of emissions.

Considering the short-term nature of construction activities, the regulated and intermittent nature of the operation of construction equipment, the highly dispersive nature of DPM, and the distance of the nearest sensitive receptor from the project site, the likelihood that any one sensitive receptor would be exposed to high concentrations of DPM for any extended period of time, during development of either project alone or both project simultaneously, would be low. For the aforementioned reasons, project construction would not be expected to expose sensitive receptors to substantial pollutant concentrations.

Criteria Pollutants

The BAAQMD thresholds of significance were established with consideration given to the health-based air quality standards established by the National Ambient Air Quality Standards (NAAQS) and California Ambient Air Quality Standards (CAAQS), and are designed to aid the district in achieving attainment of the NAAQS and CAAQS,[7] for which the SFBAAB is in nonattainment, but the thresholds of significance do not represent a level above which individual project-level emissions would directly result in public health impacts. Rather, the thresholds of significance represent emissions levels that would ensure that project-specific emissions would not inhibit attainment of regional NAAQS and CAAQS. Considering that, following implementation of Mitigation Measure III-1, the proposed project would not result in short-term construction-related or long-term operational emissions of criteria pollutants that would exceed BAAQMD standards, the proposed project would not inhibit attainment of regional NAAQS and CAAQS.

Conclusion

Based on the above discussion, the proposed project would not expose any sensitive receptors to substantial concentrations of pollutants, including localized CO, TACs, or criteria pollutants, during construction or operation. Therefore, the proposed project would result in a ***less-than-significant*** impact related to the exposure of sensitive receptors to substantial pollutant concentrations.

d. **Parcel A and Parcel B**

Emissions such as those leading to odor have the potential to adversely affect people. Emissions of principal concern include emissions leading to odors, emission that have the potential to cause

[7] Bay Area Air Quality Management District. *California Environmental Quality Act Air Quality Guidelines*. May 2017.

dust, or emissions considered to constitute air pollutants. Air pollutants have been discussed in sections "a" through "c" above. Therefore, the following discussion focuses on emissions of odors and dust.

Per the BAAQMD CEQA Guidelines, odors are generally regarded as an annoyance rather than a health hazard.[8] Manifestations of a person's reaction to odors can range from psychological (e.g., irritation, anger, or anxiety) to physiological (e.g., circulatory and respiratory effects, nausea, vomiting, and headache). The presence of an odor impact is dependent on a number of variables including: the nature of the odor source; the frequency of odor generation; the intensity of odor; the distance of odor source to sensitive receptors; wind direction; and sensitivity of the receptor.

Due to the subjective nature of odor impacts, the number of variables that can influence the potential for an odor impact, and the variety of odor sources, quantitative analysis to determine the presence of a significant odor impact is difficult. Typical odor-generating land uses include, but are not limited to, wastewater treatment plants, landfills, and composting facilities. The proposed project would not introduce any such land uses.

Construction activities often include diesel-fueled equipment and heavy-duty trucks, which could create odors associated with diesel fumes that may be considered objectionable. However, construction activities would be temporary, and hours of operation for construction equipment would be restricted to the hours of 7:00 AM and 7:00 PM on Monday through Friday per Section 8.12.080 of the American Canyon Municipal Code. Project construction would also be required to comply with all applicable BAAQMD rules and regulations, particularly associated with permitting of air pollutant sources. The aforementioned regulations would help to minimize emissions, including emissions leading to odors. Accordingly, substantial objectionable odors would not be expected to occur during construction activities.

BAAQMD regulates objectionable odors through Regulation 7, Odorous Substances, which does not become applicable until the Air Pollution Control Officer (APCO) receives odor complaints from ten or more complainants within a 90-day period. Once effective, Regulation 7 places general limitation on odorous substances and specific emission limitations on certain odorous compounds, which remain effective until such time that citizen complaints have not been received by the APCO for one year. The limits of Regulation 7 become applicable again when the APCO receives odor complaints from five or more complainants within a 90-day period. Thus, although not anticipated, if odor complaints are made after the proposed project is developed, the BAAQMD would ensure that such odors are addressed and any potential odor effects are minimized or eliminated.

With respect to dust, as noted previously, all projects under the jurisdiction of BAAQMD are required to implement the BAAQMD's Basic Construction Mitigation Measures. While the project may require movement of material to and from the site, all haul trucks with loose material are required to be covered, which would ensure that material from the site would not create significant amounts of dust during transport. Additionally, the Construction Mitigation Measures limit vehicle speeds within the project site and require removal of all mud or dirt tracked on to adjacent roads, which would ensure that construction of the proposed project does not result in substantial emissions of dust. Following project construction, vehicles operating within the

[8] *Ibid*.

project site would be limited to paved areas of the site, and non-paved areas would be landscaped. Thus, project operations would not include sources of dust that could adversely affect a substantial number of people.

For the aforementioned reasons, construction and operation of the proposed project would not result in emissions (such as those leading to odors) adversely affecting a substantial number of people, and a ***less-than-significant*** impact would result.

IV. BIOLOGICAL RESOURCES. *Would the project:*	Potentially Significant Impact	Less-Than-Significant with Mitigation Incorporated	Less-Than-Significant Impact	No Impact
a. Discussion

The following discussion is based primarily on a Biological Resources Technical Report (Biological Report) prepared for the proposed project by WRA, Inc (see Appendix B).[9]

a. **Parcel A and Parcel B**

The project site is undeveloped and consists of vacant land with ruderal vegetation and limited trees. The project site is currently used for goat and sheep grazing. The entire project site has been subject to high levels of disturbance from past construction, grading, and other human activities over the past 20 years. Scattered debris and other materials associated with past site disturbance are located within Parcel B. The overall topography of the site is characterized by two generally flat terraces connected by a steep hillside, with elevations ranging from approximately 80 to 185 feet above mean sea level.

Special-status species include plants, fish, and wildlife species that may be designated as threated or endangered by the federal Endangered Species Act (ESA), or the California Endangered Species Act (CESA). Specific protections and permitting mechanisms for species differ under ESA and CESA,

[9] WRA, Inc. *Biological Resources Technical Report, Oat Hill Multi-Family Development, American Canyon, Napa County, California.* July 2020.

and a species' designation under one law does not automatically provide protection under the other. In addition, California Department of Fish and Wildlife (CDFW) has developed a list of special species as "a general term that refers to all of the taxa the California Natural Diversity Database is interested in tracking, regardless of their legal or protection Status." The list includes the inventory developed by other organizations, including for example, the Audubon Watch List Species, the Bureau of Land Management Sensitive Species, and United States Fish and Wildlife Services Birds of Special Concern. Plant species on the California Native Plant Society (CNPS) Rare and Endangered Plant Inventory (Inventory) with California Rare Plant Ranks (Rank) of 1, 2, and 3 are also considered special-status plant species and must be considered under CEQA. Rank 4 species are typically only afforded protection under CEQA when such species are particularly unique to the local area (e.g., range limit, low abundance/low frequency, limited habitat) or are otherwise considered locally rare. Additionally, any species listed as sensitive within local plans, policies and ordinances are likewise considered sensitive.

Fully protected and designated rare plant species include specific plant and wildlife species that are designated in California Fish and Game Code (CFGC) as protected even if not listed under CESA or the ESA. By law, CDFW may not issue an Incidental Take Permit for Fully Protected Species. Under the California Native Plant Protection Act (NPPA), CDFW has listed 64 "rare" or "endangered" plant species, and prevents "take", with few exceptions, of these species. CDFW may authorize take of species protected by the NPPA through the Incidental Take Permit process, or under a natural conservation community plan. In addition to regulations for special-status species, most native birds in the United States, including non-status species, have baseline legal protections under the Migratory Bird Treaty Act (MBTA) of 1918 and CFGC, i.e., Sections 3503, 3503.5 and 3513. Under the MBTA and CFGC laws/codes, the intentional harm or collection of adult birds, as well as the intentional collection or destruction of active nests, eggs, and young is illegal. For bat species, the Western Bat Working Group (WBWG) designates conservation status for species of bats, and bats with a high or medium-high priority are typically given special consideration under CEQA.

On June 24, 2020, WRA, Inc. visited the project site to map vegetation, aquatic communities, unvegetated land cover types, document plant and wildlife species present, and evaluate habitat on-site for the potential to support special-status species as defined by CEQA. Prior to the site visit, WRA, Inc. reviewed literature resources and performed database searches to assess the potential for sensitive biological communities and special-status species to occur within the site. In addition, WRA, Inc. conducted a search of the California Natural Diversity Database (CNDDB) for the project site quadrangle, Cutting Wharf. The intent of the database review was to identify documented occurrences of special-status species in the vicinity of the project area, to determine their locations relative to the project site, and to evaluate whether the site meets the habitat requirements of such species. Based on the results of the CNDDB search, 11 special-status plant species and 32 special-status wildlife species have been documented in the vicinity of the project site.

Based on the site visit, WRA, Inc. concluded that the habitat types present within the project site include 19.51 acres of ruderal vegetation and 1.06 acres of disturbed/developed land. Ruderal vegetation is dominated by non-native annual grassland vegetation, with scattered native and non-native shrubs. Ruderal vegetation is not considered sensitive habitat. The disturbed/developed areas within the site include a gravel/dirt access road that bisects the site, abandoned construction materials, and a remnant concrete lined ditch. The off-site area where

Napa Junction Road would be extended includes various trees and shrubs, such as large eucalyptus, smaller pines, and snags. Although the roadway extension area was not specifically surveyed by WRA, Inc., the area is partially developed with a paved road for use by Napa Junction Elementary vehicles.

Several trees exist within the project site, mostly along the lower periphery of Parcel B. Trees within the site include valley oak (Quercus lobate), almond (Prunus dulcis), and plum (prunus sp.).

The potential for special-status species to occur on the project site is discussed in further detail below.

Special-Status Plants

Special-status plants generally occur in relatively undisturbed areas within vegetation communities such as vernal pools, marshes and swamps, chenopod scrub, seasonal wetlands, riparian scrub, chaparral, alkali playa, dunes, and areas with unusual soil characteristics.

Based on the results of the CNDDB search, 11 special-status plant species have been documented in the vicinity of the project site. However, special-status plant species documented within the vicinity are unlikely to occur on the project site due to one or more of the following reasons:

- Hydrologic conditions (e.g., tidal, riverine) are not present within the site;
- Edaphic (soil) conditions (e.g., volcanic tuff, serpentine) are not present within the site;
- Topographic conditions (e.g., montane setting) necessary to support special-status species are not present within the site;
- Unique pH conditions (e.g., alkali scalds, acidic bogs) are not present within the site;
- Associated natural communities (e.g., interior chaparral, tidal marsh) necessary to support the special-status plant species are not present in the project site;
- The project site is geographically isolated (e.g. below elevation, coastal environ) from the documented range of the special-status plant species;
- The historical landscape and/or habitat(s) of the project site were not suitable habitat prior to land/type conversion (e.g., reclaimed shoreline) to support the special-status plant species; and/or
- Land use history and contemporary management (e.g., grading, intensive grazing) renders the site unsuitable habitat.

Due to the absence of special-status plants and habitat limitations, construction activities associated with the proposed project would not result in adverse effects to special-status plant species.

Special-Status Wildlife

As noted previously, the Biological Report concluded that 32 special-status wildlife species have been documented in the vicinity of the project site. However, special-status wildlife species are not expected to occur on the project site due to a lack of suitable habitat features, including vernal pools, perennial aquatic habitat, tidal marsh areas, old growth redwood or fir forest, serpentine soils, sandy beaches or alkaline flats, specific host plants, and caves, mine shafts, or abandoned buildings.

The absence of such habitat features eliminates components critical to the survival or movement of most special-status species documented in the project vicinity. For instance, California red-legged frog (*Rana draytonii*) is known to occur in the project vicinity. However, in the American Canyon/Napa area, records of the California red-legged frog west of SR 29 do not exist. The closest known California red-legged frog occurrence is 0.81-mile east of the project site (CNDDB Occurrence No. 896). The California red-legged frog was found in a dry cement tank adjacent to a large quarry pond. SR 29 is located between the California red-legged frog occurrence location and the project site, which constitutes an effective geographic barrier to overland California red-legged frog movements. In addition, the project site does not provide suitable habitat for the California red-legged frog. Based on such, the project site does not provide suitable habitat for the California red-legged frog.

Given the site's relative proximity to sensitive habitats on the San Francisco Bay, many species documented nearby require marine or tidal marsh habitats that are not present on or in the immediate vicinity of the site.

Considering the limited habitats available within the site, only four of the 32 special status species have potential to occur in the immediate vicinity of or in portions of the site. The four species are Swainson's hawk (*Buteo swainsoni*), burrowing owl (*Athene cunicularia*), white-tailed kite (*Elanus leucurus*), and northern harrier (*Circus hudsonius*). Additionally, other avian species protected by the MBTA could use the existing grassland as foraging and potential nesting habitat.

Swainson's Hawk

Swainson's hawk is a summer resident and migrant in California's Central Valley and scattered portions of the southern California interior. Areas typically used for nesting include the edge of narrow bands of riparian vegetation, isolated patches of oak woodland, lone trees, and also planted and natural trees associated with roads, farmyards and sometimes adjacent residential areas. Foraging occurs in open habitats, including grasslands, open woodlands, and agricultural areas. According to the Biological Report, Swainson's hawk occurrences have been documented within 2.5 miles of the project site. While the site does not support any suitable nesting trees, large eucalyptus trees directly adjacent to the project site could provide suitable nesting habitat for Swainson's hawk. The eucalyptus trees identified by WRA, Inc. as potentially suitable nesting habitat are within the area of potential disturbance for the extension of Napa Junction Road. Consequently, the potential exists that implementation of the project could involve removal of the eucalyptus trees.

Considering the above, the project could result in direct impacts to Swainson's hawk if the species inhabit the site prior to construction activities. Therefore, the proposed project could result in significant adverse effects to Swainson's hawk.

Burrowing Owl

The burrowing owl occurs as a year-round resident and winter visitor in much of California's lowlands, inhabiting open areas with sparse or non-existent tree or shrub canopies. Typical habitat includes annual or perennial grassland, although human-modified areas, such as agricultural lands and airports are also used. Breeding typically takes place from March to July. According to the Biological Report, several burrowing owl occurrences have been documented within 2.5 miles of the project site. In addition, burrowing owls are known to winter in the nearby

American Canyon Wetlands, approximately 0.5 mile west of the project site. Several large debris piles and a few suitable California ground squirrel burrows were observed during the June 2020 site visit. Signs of active use by burrowing owl were not observed during the site visit.

Although signs of burrowing owl activity were not identified within the site, livestock grazing within the site keeps the vegetation relatively low, which increases the suitability of the project site for the species. In addition, several debris piles and various structures may provide perching locations. Considering the existence of suitable habitat for the species within the site, and the proximity of known occurrences of the species to the project site, the potential exists for the site to be used by burrowing owls in the future. Therefore, in the absence of pre-construction surveys, direct impacts to burrowing owls may occur due to the destruction of potentially occupied burrows or burrow surrogates during grading, vegetation removal, or other construction activities. Thus, the proposed project could result in significant adverse effects to burrowing owl.

White-tailed Kite, Northern Harrier, and Common Nesting Birds

Northern harrier occurs as a resident and winter visitor in open habitats throughout most of California, including freshwater and brackish marshes, grasslands and fields, agricultural areas, and deserts. Harriers typically nest in treeless areas within patches of dense, relatively tall, vegetation, the composition of which is highly variable. Nests are often located on the ground and near water or within wetlands. Marginal nesting habitat within the ruderal vegetation is present within the project site. Nesting sites for northern harrier have been documented within three miles of the project site.

White-tailed kite is a resident in open to semi-open habitats throughout the lower elevations of California, including grasslands, savannahs, woodlands, agricultural areas and wetlands. Vegetative structure and prey availability seem to be more important habitat elements than associations with specific plants or vegetative communities. Nests are constructed mostly of twigs and placed in trees, often at habitat edges. White-tailed kite has been documented recently in the vicinity of the project site. Small and medium trees and shrubs on the perimeter of the project site, as well as the eucalyptus trees within the off-site disturbance area related to extension of Napa Junction Road, could provide suitable nesting habitat for white-tailed kite.

Common song birds (passerine birds) could also nest in the small trees and shrubs on the project site. The common song birds and other migratory species are protected under the MBTA and eggs and young are protected under CFGC Sections 3503, 3503.5.

The proposed project would involve ground disturbance and vegetation removal during project construction. Therefore, the proposed project could result in significant adverse effects to white-tailed kite, northern harrier, and other nesting bird species if such species are present during project implementation.

Conclusion

Based on the above, the proposed project would not result in any impacts to special-status plant species. Although the field survey did not identify any special-status wildlife species within the project site, and the site is considered low-quality habitat, implementation of the proposed project could potentially result in adverse effects to Swainson's hawk, burrowing owl, northern harrier, white-tailed kite, and other species protected by the MBTA. Thus, the proposed project could have an adverse effect, either directly or through habitat modifications, on species

identified as special-status species in local or regional plans, policies, or regulations, or by the CDFW or the USFWS, and a ***potentially significant*** impact could result.

Mitigation Measure(s)

Implementation of the following mitigation measures would reduce the above potential impact to a *less-than-significant* level.

Parcel A and Parcel B

Swainson's Hawk

IV-1. *Prior to project initiation, pre-construction surveys shall be conducted by a qualified biologist within a ~~quarter~~ 0.5-mile radius around all project activities, including on-site and off-site work, and shall be completed for at least two survey periods prior to starting Project activities. The survey period timing and methodology shall be conducted in accordance with ~~CDFW's~~ the Swainson's Hawk Technical Advisory Committee's Recommended Timing and Methodology for Swainson's Hawk Nesting Surveys in California's Central Valley (2000 ~~CDFG 1994~~), which identifies different survey windows throughout the pre-nesting and nesting season (ranging from January 1 through July 30/post-fledging) that have different survey methodologies and requirements. A letter report summarizing the survey results shall be submitted to CDFW for review and written acceptance prior to starting Project activities. The survey results shall also be submitted to the Community Development Department within 30 days following the final survey. If active Swainson's hawk nests are not identified on or within ~~0.25~~ 0.5-mile of the project site within the survey periods, further avoidance and minimization measures for Swainson's hawk nesting habitat are not required.*

IV-2. *If Swainson's hawks are found to be nesting on the project site or within ~~0.25~~ 0.5-mile of the project site, the project proponent shall either, a) delay project activities until all Swainson's hawk nests within 0.5-mile of the project site are no longer active, as determined by a qualified biologist, b) determine if the 0.5-mile buffer zone may be reduced in consultation with CDFW based on site-specific conditions, or c) if take cannot be avoided, obtain a CESA Incidental Take Permit from CDFW prior to starting project activities. ~~consultation with CDFW shall be required. The size of the nest protection buffer shall be determined during consultation with CDFW, but at a minimum, shall be a 300 foot non-disturbance buffer around the nest site.~~*

Burrowing Owl

IV-3. *Prior to initiation of ground disturbance, a qualified biologist shall conduct nesting and/or wintering owl surveys, as appropriate, in accordance with the California Department of Fish and Game (now CDFW) 2012 Staff Report on Burrowing Owl Mitigation survey methodology (see https://wildlife.ca.gov/Conservation/Survey-Protocols#377281284-birds). Surveys shall encompass the project area and a sufficient buffer zone to detect owls nearby that may be impacted. Time lapses between surveys or project activities shall trigger subsequent surveys including but not limited to a final survey within 24 hours prior to ground disturbance before*

construction equipment mobilizes to the project area. The qualified biologist shall have a minimum of two years-experience implementing the CDFW 2012 Staff Report survey methodology resulting in detections. ~~*a pre-construction survey shall be performed within 14 days of construction activities. The pre-construction survey shall occur regardless of the time of year, as burrowing owls may use the project site during the non-nesting season. The survey shall be performed according to the standards set forth by the Staff Report for Burrowing Owl Mitigation (CDFW 2012).*~~ *A letter report summarizing the survey results shall be submitted to the Community Development Department within 30 days following the pre-construction survey. If burrowing owls are not present on-site or adjacent to the site where they may be disturbed during pre-construction surveys, further avoidance and minimization measures for burrowing owl nesting and wintering habitat are not required.*

IV-4. *If* ~~*occupied burrows are encountered on site, the species shall not be disturbed during the nesting season (February 1 through August 31) until juveniles from the occupied burrows are foraging independently and capable of independent survival.*~~

~~*If occupied burrows are encountered on-site during the non-nesting season (1 September to 31 January), and owls must be moved away from the disturbance area, passive relocation techniques shall be used rather than trapping, according to the standards set forth by the Staff Report for Burrowing Owl Mitigation (CDFW 2012). Burrow exclusion is a technique of installing one-way doors in burrow openings during the non-breeding season to temporarily exclude burrowing owls, or permanently exclude burrowing owls and close burrows after verifying burrows are vacant. At least 1 week shall be allowed to verify that the burrows are vacant and allow the owls to acclimate to alternate burrows. Burrowing owls shall not be excluded from burrows unless a Burrowing Owl Exclusion Plan is developed and approved by the applicable local CDFW office.*~~ *burrowing owls are detected on or adjacent to the site where they may be disturbed, the following restricted activity dates and setback distances recommended per CDFW's Staff Report (2012) shall be implemented, unless reduced buffers are accepted by CDFW in writing based on site-specific conditions:*

- *From April 1 through October 15, low disturbance and medium disturbance activities shall have a 200-meter buffer while high disturbance activities shall have a 500-meter buffer from occupied nests and wintering sites.*
- *From October 16 through March 31, low disturbance activities shall have a 50-meter buffer, medium disturbance activities shall have a 100-meter buffer, and high disturbance activities shall have a 500-meter buffer from occupied nests and wintering sites.*
- *No earth-moving activities or other disturbance should occur within the aforementioned buffer zones of occupied burrows. These buffer zones shall be marked with high visibility fencing or flagging.*

If burrowing owls are present outside of the nesting season, burrowing owls may be passively relocated from the project site and adjacent habitat using CDFW-accepted methods so that construction can proceed. Any required passive relocation of burrowing owls would require CDFW acceptance. If passive relocation of burrowing owls is necessary, a qualified biologist shall prepare a Relocation Plan, including compensatory habitat as described below, for CDFW review and acceptance prior to the start of construction activities.

If the survey determines that the project site is actively being used by burrowing owl, or any owls are passively relocated as described above, then compensatory habitat mitigation shall be provided. The habitat mitigation/compensation plan shall be submitted to CDFW for review and approval prior to the start of project activities. Habitat compensation acreages shall be approved by CDFW, as the amount depends on site specific conditions, and completed before project construction. It shall also include placement of a conservation easement and preparation and implementation of a long-term management plan. If burrowing owls are observed during surveys, notification shall also be submitted to the California Natural Diversity Database (CNDDB; see https://wildlife.ca.gov/Data/CNDDB/Submitting-Data).

White-tailed Kite, Northern Harrier, and Common Nesting Birds

IV-5. *IV-5. If project activities must be conducted during the nesting season (~~March~~ February 15 and September 1), a pre-construction nesting bird survey shall be conducted by a qualified biologist within 7~~14~~ days of vegetation removal or initial ground disturbance. The survey shall include the project site, any off-site disturbance areas, and within a minimum of 500 feet of all project areas, ~~surrounding vicinity~~ to identify the location and status of any nests that could potentially be affected either directly or indirectly by project activities. A letter report summarizing the survey results shall be submitted to the Community Development Department within 30 days following the pre-construction survey. If nesting birds are not present on-site or within a minimum 500 feet of the project site during pre-construction surveys, further avoidance and minimization measures for nesting bird habitat are not required.*

If active nests of ~~native~~ nesting bird species are identified during the nesting bird survey, a work exclusion zone shall be established around each nest by the qualified biologist. Established exclusion zones shall remain in place until all young in the nest have fledged or the nest otherwise becomes inactive (e.g., due to predation). Appropriate exclusion zone sizes shall be determined by a qualified biologist. The qualified biologist shall be on site daily for the first week during Project activities, and then weekly thereafter until the nest is no longer active, to observe all active bird and raptor nests and to ensure that Project activities do not cause nest disturbance. If the qualified biologist observes birds and/or raptors displaying potential nest disturbance behavior, the qualified biologist shall cease work and consult with CDFW before resuming Project activities. In this event, Project activities shall not resume without CDFW's written permission. ~~and shall vary based on species, nest location, existing visual buffers, noise levels, and other~~

~~*factors. An exclusion zone radius may be as small as 50 feet for common, disturbance-adapted species, or as large as 250 feet or more for raptors. The exclusion zone size shall be reduced from established levels by a qualified biologist if nest monitoring findings indicate that project activities do not adversely impact the nest, and if a reduced exclusion zone would not adversely affect the nest.*~~

b,c. **Parcel A and Parcel B**

According to the Biological Report, the site consists of ruderal vegetation that has been subject to continual livestock grazing. Additionally, the project site includes a gravel/dirt access road that bisects the site, the site caretaker's mobile home, several piles of construction materials, and the alignment of a remnant concrete v-ditch along the northern edge of the parcel. The v-ditch was constructed in an upland portion of the site and does not appear to convey flows. The project site does not contain riparian habitat or other sensitive natural communities, including wetlands, or potentially jurisdictional waters of the State. Therefore, the proposed project would not have a substantial adverse effect on riparian habitat, sensitive natural communities, or federally protected wetlands, and a ***less-than-significant*** impact would occur.

d. **Parcel A and Parcel B**

The project site is located in a relatively urbanized area and is bordered by Napa Junction Road to the north, commercial development to the east, and undeveloped land to the south and west. In addition, the site is located approximately 0.22-mile northeast of SR 29. Such development acts a barrier for wildlife species with limited crossing opportunities. Despite the existence of urban development to the north and east, the undeveloped land to the west and south of the project site are connected to large tracts of open space. As such, common wildlife species likely use the site to some degree for local movements, but the site does not provide connectivity to any significant habitat areas and is not a designated wildlife corridor. Because the site does not provide connectivity between significant habitat areas, the loss of the project site as open space would not constitute a loss of a migration corridor on a regional scale.

Migratory birds may also use the habitat within the project site opportunistically; however, higher quality habitat exists along the San Francisco Bay and Napa River corridor. The habitat within the project site offers only marginal habitat for species along the Pacific Flyway.

Based on the above, the project would not interfere substantially with the movement of any resident or migratory fish or wildlife species or with established resident or migratory wildlife corridors, or impede the use of wildlife nursery sites, and a ***less-than-significant*** impact would occur.

e. **Parcel A and Parcel B**

Several trees are located throughout the project site, primarily along the eastern site boundary of Parcel B, and within the roadway alignment. The trees consist of mostly valley oak, almond, plum, and eucalyptus. The project would require the removal of two valley oaks, one coast live oak, and four other non-native trees within the project site. Extension of Napa Junction Road would also likely require the removal of several trees, including large, non-native eucalyptus.

Section 18.40.110 of the City's Municipal Code requires that any trees removed be replaced on the project site. Replacement trees shall be a minimum size of twenty-four-inch box of the same

species unless specifically approved by the City Council. Given that the proposed project would comply with Section 18.40.100, the project would not conflict with any local policies or ordinances protecting biological resources.

Based on the above, the proposed project would not conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance, and a ***less-than-significant*** impact would occur.

f. **Parcel A and Parcel B**

Adopted Habitat Conservation Plans or Natural Conservation Community Plans covering the project site do not exist. Therefore, the proposed project would not conflict with the provisions of such a plan, and ***no impact*** would occur.

V. CULTURAL RESOURCES. *Would the project:*	Potentially Significant Impact	Less-Than-Significant with Mitigation Incorporated	Less-Than-Significant Impact	No Impact
a. Cause a substantial adverse change in the significance of a historical resource pursuant to Section 15064.5?	☐	✖	☐	☐
b. Cause a substantial adverse change in the significance of a unique archaeological resource pursuant to Section 15064.5?	☐	✖	☐	☐
c. Disturb any human remains, including those interred outside of dedicated cemeteries.	☐	✖	☐	☐

Discussion

a.-c. **Parcel A and Parcel B**

Historical resources are typically features that are associated with the lives of historically important persons and/or historically significant events, that embody the distinctive characteristics of a type, period, region or method of construction, or that have yielded, or may be likely to yield, information important to the pre-history or history of the local area, California, or the nation. Examples of typical historical resources include, but are not limited to, buildings, farmsteads, rail lines, bridges, and trash scatters containing objects such as colored glass and ceramics. According to the City's General Plan EIR, listed State and federal inventories of historic properties are not within the Planning Area or the American Canyon City limits.

Currently, the project site is undeveloped and consists of vacant land with ruderal vegetation and limited trees. The project site is currently used for goat and sheep grazing. The entire project site has been subject to high levels of disturbance from past construction, grading, and other human activities over the past 20 years. Scattered debris and other materials associated with past site disturbance are located within Parcel B. In addition, a remnant concrete lined v-ditch was mapped on the eastern portion of the project site. However, the site does not contain any permanent structures which could be considered historical resources pursuant to Section 15064.5 of the CEQA Guidelines. As part of the proposed off-site improvements, the extension of Napa Junction Road would disturb soils, some of which have been previously disturbed due to the construction of the existing access road associated with Napa Junction Magnet Elementary School. The areas associated with the proposed extension of Napa Junction Road have not been previously analyzed for historical resources. Thus, the potential for historical resources to occur within the proposed alignment of Napa Junction Road is unknown.

A records search of the California Historic Resources Information System (CHRIS) was performed on August 11, 2020 by the Northwest Information Center (NWIC) for cultural resource site records and survey reports within the project area. According to the records search, the project site does not contain any documented archaeological resources. The State Office of Historic Preservation Built Environment Resources Directory, which includes listings of the California State Points of Historical Interest, and the National Register of Historic Places, does not list recorded buildings or structures within or adjacent to the project site. However, the NWIC also stated that the California Inventory of Historic Resources states that an 1863 General Land Office Plat is located within the project area. The Plat documents the land holdings that existed in the project area dating back to the 19th century, and could indicate that activity occurred within the project site during the historic period. Therefore, a moderate to high potential exists for unrecorded historic resources

to be located on the project site.[10] In addition, a review of the Native American Heritage Commission (NAHC) Sacred Lands File returned positive results for the potential for the project site to contain tribal cultural resources.[11] Thus, while unlikely, the potential exists for subsurface, unrecorded archaeological resources to be encountered on the project site during grading and other ground-disturbing activities associated with the proposed project.

Based on the above, the possibility exists that previously undiscovered historical or archaeological resources, including human remains, could be uncovered during ground-disturbing activities associated with construction of the proposed project. Therefore, the project could result in a ***potentially significant*** impact with respect to causing a substantial adverse change in the significance of a unique historical or archaeological resource pursuant to Section 15064.5 and/or disturbing human remains.

Mitigation Measure(s)

Implementation of the following mitigation measures would reduce the above potential impact to a *less-than-significant* level.

Parcel A and Parcel B

V-1. *Prior to grading permit issuance, the applicant shall submit plans to the Community Development Department for review and approval which indicate (via notation on the improvement plans) that if historic and/or cultural resources are encountered during site grading or other site work or off-site work, all such work shall be halted immediately within 100 feet and the applicant shall immediately notify the Community Development Department of the discovery. In such case, the applicant shall be required, at their own expense, to retain the services of a qualified archaeologist meeting the Secretary of the Interior's Professional Qualification Standards for prehistoric and historic archaeologist for the purpose of recording, protecting, or curating the discovery as appropriate. The archaeologist shall be required to submit to the Community Development Department for review and approval a report of the findings and method of curation or protection of the resources. Further grading or site work within the area of discovery shall not be allowed until the preceding work has occurred.*

V-2. *If human remains, or remains that are potentially human, are found during construction, a professional archeologist shall ensure reasonable protection measures are taken to protect the discovery from disturbance. The archaeologist shall notify the Napa County Coroner (per §7050.5 of the State Health and Safety Code). The provisions of §7050.5 of the California Health and Safety Code, §5097.98 of the California Public Resources Code, and Assembly Bill 2641 will be implemented. If the Coroner determines the remains are Native American and not the result of a crime scene, then the Coroner will notify the Native American Heritage Commission (NAHC), which then will designate a Native American Most Likely Descendant (MLD) for the project (§5097.98 of the Public Resources Code). The designated MLD will have 48 hours from the time access to the property is granted to make recommendations concerning treatment of the remains. If the*

[10] Northwest Information Center. *Re: Record search results for the proposed Oat Hill Multi-Family Project, southwest of the Napa Junction Road and Hess Road, American Canyon, Napa County, CA.* August 11, 2020.

[11] Native American Heritage Commission. *Oat Hill Multi-Family Project, Napa County.* August 6, 2020.

applicant does not agree with the recommendations of the MLD, the NAHC can mediate (§5097.94 of the Public Resources Code). If an agreement is not reached, the qualified archaeologist or most likely descendent must rebury the remains where they will not be further disturbed (§5097.98 of the Public Resources Code). This will also include either recording the site with the NAHC or the appropriate Information Center, using an open space or conservation zoning designation or easement, or recording a reinternment document with the county in which the property is located (AB 2641). Work cannot resume within the no-work radius until the lead agencies, through consultation as appropriate, determine that the treatment measures have been completed to their satisfaction.

VI. ENERGY. *Would the project:*	Potentially Significant Impact	Less-Than-Significant with Mitigation Incorporated	Less-Than-Significant Impact	No Impact
a. Result in potentially significant environmental impact due to wasteful, inefficient, or unnecessary consumption of energy resources, during project construction or operation?	☐	☐	✖	☐
b. Conflict with or obstruct a state or local plan for renewable energy or energy efficiency?	☐	☐	✖	☐

Discussion

a,b. **Parcel A and Parcel B**

The main forms of available energy supply are electricity, natural gas, and oil. A description of the 2019 California Green Building Standards Code (CALGreen Code) and the Building Energy Efficiency Standards, with which the proposed project would be required to comply, as well as discussions regarding the proposed project's potential effects related to energy demand during construction and operations are provided below.

California Green Building Standards Code

The 2019 California Green Building Standards Code, otherwise known as the CALGreen Code (CCR Title 24, Part 11) is a portion of the California Building Standards Code (CBSC), which became effective on January 1, 2020.[12] The purpose of the CALGreen Code is to improve public health, safety, and general welfare by enhancing the design and construction of buildings through the use of building concepts having a reduced negative impact or positive environmental impact and encouraging sustainable construction practices. The CALGreen standards regulate the method of use, properties, performance, types of materials used in construction, alteration repair, improvement and rehabilitation of a structure or improvement to property. The provisions of the code apply to the planning, design, operation, construction, use, and occupancy of every newly constructed building or structure throughout California. Requirements of the CALGreen Code include, but are not limited to, the following measures:

- Compliance with relevant regulations related to future installation of electric vehicle charging infrastructure in residential and non-residential structures;
- Indoor water use consumption is reduced through the establishment of maximum fixture water use rates;
- Outdoor landscaping must comply with the California Department of Water Resources' Model Water Efficient Landscape Ordinance (MWELO), or a local ordinance, whichever is more stringent, to reduce outdoor water use;
- Diversion of 65 percent of construction and demolition waste from landfills;
- Mandatory use of low-pollutant emitting interior finish materials such as paints, carpet, vinyl flooring, and particle board; and
- For some single-family and low-rise residential structures developed after January 1, 2020, mandatory on-site solar energy systems capable of producing 100 percent of the electricity demand created by the residence(s). Certain residential developments, such as developments that are subject to substantial shading, rendering the use of on-site solar

[12] California Building Standards Commission. *California Green Building Standards Code*. 2019.

photovoltaic systems infeasible, may be exempt from the foregoing requirement on a case-by-case basis.

Building Energy Efficiency Standards

The 2019 Building Energy Efficiency Standards is a portion of the CBSC. Energy reductions relative to previous Building Energy Efficiency Standards are achieved through various regulations, including requirements for the use of high efficacy lighting, improved water heating system efficiency, and high-performance attics and walls. For residential buildings, compliance with the 2019 standards will use approximately seven percent less energy due to energy efficiency measures compared to homes built under the 2016 standards.[13] The Building Energy Efficiency Standards require residential buildings that are three stories or less to include solar photovoltaic systems. Once solar electricity generation is factored in, homes built under the 2019 standards will use approximately 53 percent less energy than those under the 2016 standards.

Construction Energy Use

Construction of the proposed project would involve on-site energy demand and consumption related to use of oil in the form of gasoline and diesel fuel for construction worker vehicle trips, hauling and materials delivery truck trips, and operation of off-road construction equipment. In addition, diesel-fueled portable generators may be necessary to provide additional electricity demands for temporary on-site lighting, welding, and for supplying energy to areas of the site where energy supply cannot be met via a hookup to the existing electricity grid. Project construction would not involve the use of natural gas appliances or equipment.

Even during the most intense period of construction, due to the different types of construction activities (e.g., site preparation, grading, building construction), only portions of each project parcel would be disturbed at a time, with operation of construction equipment occurring at different locations on the project site, rather than a single location. In addition, all construction equipment and operation thereof would be regulated pursuant to the CARB In-Use Off-Road Diesel Vehicle Regulation. The In-Use Off-Road Diesel Vehicle Regulation is intended to reduce emissions from in-use, off-road, heavy-duty diesel vehicles in California by imposing limits on idling, requiring all vehicles to be reported to CARB, restricting the addition of older vehicles into fleets, and requiring fleets to reduce emissions by retiring, replacing, or repowering older engines, or installing exhaust retrofits. In addition, as a means of reducing emissions, construction vehicles are required to become cleaner through the use of renewable energy resources. The In-Use Off-Road Diesel Vehicle Regulation would therefore help to improve fuel efficiency for equipment used in construction of the proposed project. Technological innovations and more stringent standards are being researched, such as multi-function equipment, hybrid equipment, or other design changes, which could help to further reduce demand on oil and limit emissions associated with construction.

The CARB prepared the 2017 Climate Change Scoping Plan Update (2017 Scoping Plan),[14] which builds upon previous efforts to reduce GHG emissions and is designed to continue to shift the California economy away from dependence on fossil fuels. Appendix B of the 2017 Scoping Plan includes examples of local actions (municipal code changes, zoning changes, policy directions, and mitigation measures) that would support the State's climate goals. The examples provided

[13] California Energy Commission. *Title 24 2019 Building Energy Efficiency Standards FAQ*. November 2018.
[14] California Air Resources Board. *The 2017 Climate Change Scoping Plan Update.* January 20, 2017.

include, but are not limited to, enforcing idling time restrictions for construction vehicles, utilizing existing grid power for electric energy rather than operating temporary gasoline/diesel-powered generators, and increasing use of electric and renewable fuel-powered construction equipment. The regulation described above, with which the proposed project must comply, would be consistent with the intention of the 2017 Scoping Plan and the recommended actions included in Appendix B of the 2017 Scoping Plan.

Based on the above, the temporary increase in energy use occurring during construction of the proposed project would not result in a significant increase in peak or base demands or require additional capacity from local or regional energy supplies. In addition, the proposed project would be required to comply with all applicable regulations related to energy conservation and fuel efficiency, which would help to reduce the temporary increase in demand.

Operational Energy Use

Energy use associated with operation of the proposed project would be typical of residential uses, requiring electricity and natural gas for heating, ventilation, and air conditioning (HVAC), interior and exterior building lighting, electronic equipment, machinery, refrigeration, appliances, security systems, and more. Maintenance activities during operations, such as landscape maintenance, would involve the use of electric or gas-powered equipment. As noted above, the project would be required to include a solar photovoltaic system in accordance with the Building Energy Efficiency Standards. In addition to on-site energy use, the proposed project would result in transportation energy use associated with vehicle trips generated by the proposed residential development.

The proposed project would be subject to all relevant provisions of the most recent update of the CBSC, including the CALGreen Code and the Building Energy Efficiency Standards. Adherence to the most recent CALGreen Code and the Building Energy Efficiency Standards would ensure that the proposed structures would consume energy efficiently through the incorporation of such features as efficient water heating systems, high performance attics and walls, and high efficacy lighting. Required compliance with the CBSC would ensure that the building energy use associated with the proposed project would not be wasteful, inefficient, or unnecessary.

With regard to transportation energy use, the proposed project would comply with all applicable regulations associated with vehicle efficiency and fuel economy. In addition, as discussed in Section XVII, Transportation, of this IS/MND, the project site is located in an urban area with access to several public transit lines. Transit would provide access to several grocery stores, restaurants, banks, and schools within close proximity to the project site. The site's access to public transit and proximity to such uses would reduce VMT and, consequently, fuel consumption associated with the proposed project.

Conclusion

Based on the above, construction and operations of the proposed residences, the proposed project would not result in wasteful, inefficient, or unnecessary consumption of energy resources or conflict with or obstruct a state or local plan for renewable energy or energy efficiency. Thus, a ***less-than-significant*** impact would occur.

VII. GEOLOGY AND SOILS. *Would the project:*	Potentially Significant Impact	Less-Than-Significant with Mitigation Incorporated	Less-Than-Significant Impact	No Impact
a. Directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury, or death involving:				
i. Rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map issued by the State Geologist for the area or based on other substantial evidence of a known fault? Refer to Division of Mines and Geology Special Publication 42.	☐	✖	☐	☐
ii. Strong seismic ground shaking?	☐	✖	☐	☐
iii. Seismic-related ground failure, including liquefaction?	☐	✖	☐	☐
iv. Landslides?	☐	✖	☐	☐
b. Result in substantial soil erosion or the loss of topsoil?	☐	✖	☐	☐
c. Be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the project, and potentially result in on- or off-site landslide, lateral spreading, subsidence, liquefaction or collapse?	☐	✖	☐	☐
d. Be located on expansive soil, as defined in Table 18-1B of the Uniform Building Code (1994), creating substantial direct or indirect risks to life or property?	☐	✖	☐	☐
e. Have soils incapable of adequately supporting the use of septic tanks or alternative wastewater disposal systems where sewers are not available for the disposal of wastewater?	☐	☐	☐	✖
f. Directly or indirectly destroy a unique paleontological resource or site or unique geologic feature?	☐	✖	☐	☐

Discussion

ai.-ii. **Parcel A and Parcel B**

The project site has been the subject of several Soil Investigations from 2005 to August 2020. Appendix C contains the most recent Soil Investigations and addenda that present the relevant information for the proposed project. According to the Soil Investigation prepared by Reese & Associates, Giblin Associates performed a geologic hazards and preliminary geotechnical investigation for a previous iteration of the proposed project, which only included development of Parcel A in August of 2005. Based on the findings of the 2005 reports, Reese & Associates determined that two active faults are located within the project site. The main trace of the West Napa fault runs northwesterly through the eastern project area, parallel to the project site, and establishes the western boundary of the Fault Exclusion Zone. The presence of the faults indicates a potential for ground rupture.

According to the Soil Investigation, an earthquake of moderate to high magnitude generated by the above faults could cause seismic ground shaking and fault rupture at the project site. Proper engineering of the proposed buildings in compliance with the existing standards of the CBSC

would ensure that the proposed project would not be subject to substantial risks related to seismic ground shaking. Projects designed in accordance with the CBSC should be able to: 1) resist minor earthquakes without damage, 2) resist moderate earthquakes without structural damage but with some nonstructural damage, and 3) resist major earthquakes without collapse but with some structural as well as nonstructural damage. Conformance with the design standards is enforced through building plan review and approval by the City. However, the potential still exists for seismic related ground rupture to occur on the project site. Therefore, a ***potentially significant*** impact could occur related to seismic surface rupture.

Mitigation Measure(s)

Implementation of the following mitigation measure would reduce the above potential impact to a *less-than-significant* level.

Parcel A and Parcel B

VII-1. *Prior to approval of any building permits, the project Civil Engineer shall show on the project plans that the project design would adhere to all engineering recommendations provided in the site-specific Geologic Hazards and Preliminary Geotechnical Investigation prepared by Giblin Associates and the Soil Investigation prepared by Reese & Associates. The project plans shall include, but would not be limited to, the use of mat slabs, post-tensioned slabs on-grade, imported non-expansive fill under conventional floor slabs, appropriate setbacks from fault zones, stabilization of potential landslide areas, and structural design in accordance with Site Class C of the CBSC Ground Motion Parameters. Project plans shall be subject to review and approval by the City Engineering Division.*

aiii.,aiv.,

c. **Parcel A and Parcel B**

The proposed project's potential effects related to liquefaction, landslides, lateral spreading, and subsidence/settlement are discussed in detail below.

Liquefaction and Settlement

Liquefaction is the temporary transformation of loose, saturated granular sediments from a solid state to a liquefied state as a result of seismic ground shaking. In the process, the soil undergoes transient loss of strength, which commonly causes ground displacement or ground failure to occur. Because saturated soils are a necessary condition for liquefaction, soil layers in areas where the groundwater table is near the surface have higher liquefaction potential than those in which the water table is located at greater depths. Additionally, loose unsaturated sandy soils have the potential to settle during strong seismic shaking. Liquefaction can often result in subsidence or settlement.

The Soil Investigation encountered a substantial accumulation of fill within Parcel B and throughout the project site. Based on the materials observed in test pits, the fills appear to be about six-feet thick and consist of medium stiff sandy clays and silts with occasional gravels. Below the existing fill deposits, and elsewhere at the ground surfaces within the project site, natural sandy clays and sandy silts were encountered. Such soil types would not likely be subject to liquefaction. In addition, the project site is not located within an area of mapped liquefaction

potential.[15] Thus, the proposed project would not be subject to substantial liquefaction risks and would not expose people or structures to potential risk of loss, injury, or death involving liquefaction and settlement.

Landslides

Seismically-induced landslides are triggered by earthquake ground shaking. The risk of landslide hazard is greatest in areas with steep, unstable slopes. As part of the Soil Investigation, soil testing was conducted to identify soil characteristics within the site. According to the Soil Investigation, Test Pits 3 and 5 through 10 are comprised of exposed, well-developed, landslide planes at depths that vary from about eight to 19 feet. Based on the findings of the Soil Investigation, landslides could present a hazard at the project site.

Lateral Spreading

Lateral spreading is horizontal/lateral ground movement of relatively flat-lying soil deposits towards a free face such as an excavation, channel, or open body of water; typically, lateral spreading is associated with liquefaction of one or more subsurface layers near the bottom of the exposed slope. The project site would not be exposed to liquefaction. However, the site includes sloping topography. Therefore, lateral spreading could present a hazard at the project site.

Conclusion

Although the proposed project would not be exposed to hazards related to liquefaction and settlement, the proposed project could be subject to substantial risks related to landslides and lateral spreading. Without implementation of the necessary minimization measures, the proposed project could cause substantial adverse effects related to such. Thus, a ***potentially significant*** impact could occur.

Mitigation Measure(s)

Implementation of the following mitigation measure would reduce the above potential impact to a *less-than-significant* level.

Parcel A and Parcel B

VII-2. Implement Mitigation Measure VII-1.

b. **Parcel A and Parcel B**

The proposed project would include grading of the project site prior to construction of the proposed residences. During construction activities, topsoil would be moved and graded, leading to disturbed soils. Such disturbed soils could suffer from wind and water erosion while the topsoil is exposed. Following development of the site, all exposed soils would be covered with impervious surfaces or landscaping, and, thus, long-term erosion would not occur.

The proposed project would be designed to minimize the potential for future erosion. Nonetheless, due to the potential for exposure of topsoil on the proposed project site during construction activities, implementation of the proposed project could result in substantial erosion or the loss of topsoil. Therefore, a ***potentially significant*** impact could occur.

[15] Reese & Associates. *Report: Soil Engineering Consultation, Oat Hill Residential Project Liquefaction Potential, American Canyon, California.* November 17, 2020.

Mitigation Measure(s)

Implementation of the following mitigation measure would reduce the above potential impact to a *less-than-significant* level.

Parcel A and Parcel B

VII-3. *Prior to the issuance of a grading permit, the project applicant shall prepare to the satisfaction of the Community Development Department, an erosion control plan that utilizes standard construction practices to limit the erosion effects during construction of the proposed project. Actions should include, but are not limited to, the following:*

- *Hydro-seeding;*
- *Placement of erosion control measures within drainage ways and ahead of drop inlets;*
- *The temporary lining (during construction activities) of drop inlets with "filter fabric";*
- *The placement of straw wattles along slope contours;*
- *Use of a designated equipment and vehicle "wash-out" location;*
- *Use of siltation fences;*
- *Use of on-site rock/gravel road at construction access points; and*
- *Use of sediment basins and dust palliatives.*

d. **Parcel A and Parcel B**

Expansive soils can undergo significant volume changes with changes in moisture content. Specifically, such soils shrink and harden when dried and expand and soften when wetted. If structures are underlain by expansive soils, foundation systems must be capable of withstanding the potential damaging movements of the soil. According to the soil investigation, a substantial accumulation of fill was encountered within Parcel B and throughout the project site. As described above, the fills appear to be about six-feet thick and consist of medium stiff sandy clays and silts with occasional gravels. Laboratory tests performed on the fill materials indicated that the soils vary in consistency and present a moderate expansion potential. Below the existing fill deposits, and elsewhere at the ground surfaces within the project site, natural sandy clays and sandy silts were encountered. The natural soils exhibit a moderate to high expansion potential with shrinkage cracks extending about one foot below the existing ground surface. Because the project site could be located on expansive soil, as defined in Table 18-1B of the Uniform Building Code (1994), creating substantial direct or indirect risks to life or property, a ***potentially significant*** impact could occur.

Mitigation Measure(s)

Implementation of the following mitigation measure would reduce the above potential impact to a *less-than-significant* level.

Parcel A and Parcel B

VII-4. *Implement Mitigation Measure VII-1.*

e. **Parcel A and Parcel B**

The proposed project would connect to existing City sewer services. Thus, the construction or operation of septic tanks or other alternative wastewater disposal systems is not included as part of the project. Therefore, ***no impact*** regarding the capability of soil to adequately support the use of septic tanks or alternative wastewater disposal systems would occur.

f. **Parcel A and Parcel B**

The City's General Plan does not note the existence of any unique geologic features within the City. Consequently, implementation of the proposed project would not be anticipated to have the potential to result in direct or indirect destruction of unique geologic features. In addition, the majority of the surrounding area is developed and paleontological resources have not been encountered in the vicinity. Thus, existing paleontological resources are not expected to occur on the site. Nonetheless, the potential exists for previously unknown paleontological resources could exist within the project site. Ground-disturbing activity such as grading, trenching, or excavating associated with implementation of the proposed project would have the potential to disturb or destroy such resources if present. Therefore, the proposed project could result in the direct or indirect destruction of a unique paleontological resource, and a ***potentially significant*** impact could occur.

Mitigation Measure(s)

Implementation of the following mitigation measure would reduce the above potential impact to a *less-than-significant* level.

Parcel A and Parcel B

VII-5. Implement Mitigation Measures V-1 and V-2.

VIII. GREENHOUSE GAS EMISSIONS. *Would the project:*	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less-Than-Significant Impact	No Impact
a. Generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment?	☐	✖	☐	☐
b. Conflict with an applicable plan, policy or regulation adopted for the purpose of reducing the emissions of greenhouse gasses?	☐	✖	☐	☐

Discussion

a,b. Emissions of GHGs contributing to global climate change are attributable in large part to human activities associated with the industrial/manufacturing, utility, transportation, residential, and agricultural sectors. Therefore, the cumulative global emissions of GHGs contributing to global climate change can be attributed to every nation, region, and city, and virtually every individual on Earth. An individual project's GHG emissions are at a micro-scale level relative to global emissions and effects to global climate change; however, an individual project could result in a cumulatively considerable incremental contribution to a significant cumulative macro-scale impact. As such, impacts related to emissions of GHG are inherently considered cumulative impacts.

Implementation of the proposed project would cumulatively contribute to increases of GHG emissions. Estimated GHG emissions attributable to future development would be primarily associated with increases of carbon dioxide (CO_2) and, to a lesser extent, other GHG pollutants, such as methane (CH_4) and nitrous oxide (N_2O) associated with area sources, mobile sources or vehicles, utilities (electricity and natural gas), water usage, wastewater generation, and the generation of solid waste. The primary source of GHG emissions for the project would be mobile source emissions. The common unit of measurement for GHG is expressed in terms of annual metric tons of CO_2 equivalents ($MTCO_2e$/yr).

The BAAQMD developed a threshold of significance for project-level GHG emissions in 2009. The District's approach to developing the threshold was to identify a threshold level of GHG emissions for which a project would not be expected to substantially conflict with existing California legislation. At the time that the thresholds were developed, the foremost legislation regarding GHG emissions was AB 32, which established an emissions reduction goal of reducing statewide emissions to 1990 levels by 2020.[16] The GHG emissions threshold of significance recommended by BAAQMD to determine compliance with AB 32 is 1,100 $MTCO_2e$/yr or 4.6 $MTCO_2e$ per service population per year ($MTCO_2e$/SP/yr). If a project generates GHG emissions above the BAAQMD's adopted threshold level, the project is considered to generate significant GHG emissions and conflict with AB 32.

The foregoing threshold is intended for use in assessing operational GHG emissions only. Construction of a proposed project would result in GHG emissions over a short-period of time in comparison to the operational lifetime of the project. To capture the construction-related GHG

[16] Bay Area Air Quality Management District. *California Environmental Quality Act Guidelines Update: Proposed Thresholds of Significance*. May 2017.

emissions due to buildout of the proposed project, such emissions are amortized over the duration of the construction period and added to the operational GHG emissions. Given that construction-related GHG emissions would not occur concurrently with operational emissions and would cease upon completion of construction activities, combining the two emissions sources represents a conservative estimate of total project GHG emissions.

Since the adoption of BAAQMD's GHG thresholds of significance, the State legislature has passed SB 32, which builds upon AB 32 and establishes a statewide GHG reduction target of 40 percent below 1990 levels by 2030. Considering the legislative progress that has occurred regarding statewide reduction goals since the adoption of BAAQMD's standards, the emissions thresholds presented above would determine whether a proposed project would be in compliance with the 2020 emissions reductions goals of AB 32, but would not necessarily demonstrate whether a project would be in compliance with SB 32. In accordance with the changing legislative environment, the BAAQMD has begun updating the CEQA Guidelines; however, updated GHG thresholds of significance have not yet been adopted. In addition, GHG emissions resulting from the proposed project have been assessed in relation to other existing statewide, regional, and Citywide plans related to climate change, including the 2017 Scoping Plan, Plan Bay Area 2040, and the City of American Canyon Climate Action Plan.

Based on the above, project-related GHG emissions have been quantitatively assessed in comparison to BAAQMD's adopted emissions thresholds for compliance with AB 32, and qualitatively assessed in comparison with the recommended mitigation measures in the 2017 Scoping Plan for compliance with SB 32. In addition, the project's consistency with the goals of the Plan Bay Area 2040 and the policies of the City's Climate Action Plan is discussed.

BAAQMD Thresholds

Construction GHG emissions are a one-time release and are, therefore, not typically expected to generate a significant contribution to global climate change. Neither the City nor BAAQMD has an adopted threshold of significance for construction-related GHG emissions and does not require quantification. Nonetheless, the proposed project's construction GHG emissions, as well as operational emissions, have been estimated using CalEEMod and RoadMod under the same assumptions discussed in Section III, Air Quality, of this IS/MND (see Appendix A).

For this analysis, the total construction GHG emissions were amortized over the three-year construction period and included in the annual operational GHG emissions. Including the amortized construction emissions, which are a one-time release that would occur only during construction of the project, with the annual operational emissions represents a conservative analysis for the annual operational GHG emissions.

Parcel A

The emissions estimates prepared for the proposed project determined that unmitigated construction of the project on Parcel A would result in total GHG emissions of 1,848.96 $MTCO_2e$. In addition, GHG emissions associated with the extension of Napa Junction Road were estimated to be 53.64 $MTCO_2e$. When project construction and roadway extension emissions are summed and amortized over the approximately three-year construction period, construction of Parcel A would emit approximately 634.20 $MTCO_2e$/yr.

As shown in Table 11, the total unmitigated annual GHG emissions in the first year of operation of Parcel A only, 2025, including amortized construction-related emissions, were estimated to be

approximately 1,770.94 $MTCO_2e$/yr. Construction of the 206 units on Parcel A would generate approximately 717 residents and, thus, the project annual GHG emissions per capita would be 2.47 $MTCO_2e$/SP/yr, which is below the BAAQMD's 4.6 $MTCO_2e$/SP/yr threshold of significance for GHG emissions. Thus, the proposed project on Parcel A would not be considered to conflict with the emissions reduction target of AB 32.

Table 11
Parcel A: Unmitigated Annual Project GHG Emissions

	Annual GHG Emissions ($MTCO_2e$/yr)
Amortized Construction GHG Emissions	634.20
Operational GHG Emissions:	
Area	6.16
Energy	91.29
Mobile	991.53
Waste	23.83
Water	23.93
Total Annual GHG Emissions	**1,770.94**
Total Annual GHG Emissions per Capita	**2.47 $MTCO_2e$/SP/yr**
BAAQMD Threshold	**1,100 $MTCO_2e$/yr or 4.6 $MTCO_2e$/SP/yr**

Note: 206 units x 3.48 residents/unit = 717 residents

Source: CalEEMod, August 2020 (see Appendix A).

Parcel B

The emissions estimates prepared for the proposed project determined that unmitigated project construction would result in total GHG emissions of 1,315.63 $MTCO_2e$. In addition, GHG emissions associated with the extension of Napa Junction Road were estimated to be 53.64 $MTCO_2e$. When project construction and roadway extension emissions are summed and amortized over the approximately three-year construction period, construction of Parcel B would emit approximately 456.42 $MTCO_2e$/yr.

Table 12
Parcel B: Unmitigated Annual Project GHG Emissions

	Annual GHG Emissions ($MTCO_2e$/yr)
Amortized Construction GHG Emissions	456.42
Operational GHG Emissions:	
Area	2.54
Energy	37.67
Mobile	409.13
Waste	9.82
Water	9.65
Total Annual GHG Emissions	**925.23**
Total Annual GHG Emissions per Capita	**3.13 $MTCO_2e$/SP/yr**
BAAQMD Threshold	**1,100 $MTCO_2e$/yr or 4.6 $MTCO_2e$/SP/yr**

Note: 85 units x 3.48 residents/unit = 296 residents

Source: CalEEMod, August 2020 (see Appendix A).

As shown in Table 12, the total unmitigated annual GHG emissions in the first year of operation of Parcel B only, including amortized construction emissions, were estimated to be approximately 925.23 $MTCO_2e$/yr, which is below the BAAQMD's 1,100 $MTCO_2e$/yr threshold of significance for GHG emissions. The 85 units on Parcel B would generate approximately 296 residents. Therefore, the project's annual GHG emissions would be 3.13 $MTCO_2e$/SP/yr, which is below the BAAQMD's 4.6 $MTCO_2e$/SP/yr threshold of significance. Thus, the proposed project on Parcel B would not be considered to conflict with the emissions reduction target of AB 32.

Parcel A and Parcel B

The emissions estimates prepared for the proposed project determined that unmitigated project construction would result in total GHG emissions of 2,388.38 $MTCO_2e$. In addition, GHG emissions associated with the extension of Napa Junction Road were estimated to be 53.64 $MTCO_2e$. When project construction and roadway extension emissions are summed and amortized over the approximately three-year construction period, construction of both Parcel A and Parcel B would emit approximately 814.01 $MTCO_2e$/yr.

As shown in Table 13, the project's total unmitigated annual GHG emissions in the first year of project operation, including amortized construction emissions, were estimated to be approximately 2,419.01 $MTCO_2e$/yr. Construction of all 291 units on both Parcel A and Parcel B would generate approximately 1,013 residents. Based on the expected population, the project annual GHG emissions per capita would be 2.39 $MTCO_2e$/SP/yr, which is below the BAAQMD's 4.6 $MTCO_2e$/SP/yr threshold of significance for GHG emissions. Thus, the proposed project would not be considered to conflict with the emissions reduction target of AB 32.

Table 13
Parcel A and Parcel B:
Unmitigated Annual Project GHG Emissions

	Annual GHG Emissions ($MTCO_2e$/yr)
Amortized Construction GHG Emissions	814.01
Operational GHG Emissions:	
Area	8.69
Energy	128.96
Mobile	1,400.65
Waste	33.66
Water	33.04
Total Annual GHG Emissions	**2,419.01**
Total Annual GHG Emissions per Capita	**2.39 $MTCO_2e$/SP/yr**
BAAQMD Threshold	**1,100 $MTCO_2e$/yr or 4.6 $MTCO_2e$/SP/yr**

Note: 291 units x 3.48 residents/unit = 1,013 residents

Source: CalEEMod, October 2020 (see Appendix A).

Consistency with 2017 Scoping Plan

In the absence of adopted GHG emissions thresholds to assess compliance with SB 32, the BAAQMD has directed jurisdictions to qualitatively assess a project's compliance with the recommended mitigation measures within the *California's 2017 Climate Change Scoping Plan*

(2017 Scoping Plan) as an alternative means of assessing a project's potential impacts related to GHG emissions.[17]

Appendix B to the CARB's 2017 Scoping Plan provides examples of potentially feasible mitigation measures that could be considered to assess a project's compliance with the State's 2030 GHG emissions reductions goals. Thus, general compliance with the Local Actions within the 2017 Scoping Plan could be considered to demonstrate the project's compliance with SB 32. The project's consistency with the applicable Local Actions within the 2017 Scoping Plan is assessed in Table 14 below.

Table 14
Project Consistency with the 2017 Scoping Plan

Suggested Measure	Consistency Discussion
Construction	
Enforce idling time restrictions for construction vehicles.	CARB's In-Use Off-Road Vehicle Regulations include restrictions that limit idling time to five minutes under most situations. Construction fleets and all equipment operated as part of on-site construction activities would be subject to CARB's idling restrictions. As such, the proposed project would be required to comply with this measure.
Require construction vehicles to operate with the highest tier engines commercially available.	In compliance with Mitigation Measure III-1, the project applicant would be required to use construction equipment that complies with the highest tier engines commercially available for off-site work associated with the extension of Napa Junction Road. As such, the proposed project would comply with this measure.
Divert and recycle construction and demolition waste, and use locally-sourced building materials with a high recycled material content to the greatest extent feasible.	The CALGreen code requires the diversion of construction and demolition waste, and the proposed project would be required to comply with the most up-to-date CALGreen Code. The project applicant has not committed to using locally-sourced building materials or materials with a high recycled content, and, thus, compliance with this portion of the suggested measure is uncertain at this time.
Minimize tree removal, and mitigate indirect GHG emissions increases that occur due to vegetation removal, loss of sequestration, and soil disturbance.	The project would require the removal two valley oaks, one coast live oak, and four other non-native trees. However, Section 18.40.110 of the City's Municipal Code requires that any trees removed be replaced on the project site. As such, the project would be considered to generally comply with the suggested measure.
Utilize existing grid power for electric energy rather than operating temporary gasoline/diesel powered generators.	The contractor would use existing grid electricity to the extent feasible. However, the possibility exists that temporary generators will be used for electricity in instances where grid electricity is not accessible. Overall, the project would be considered to generally comply with the suggested measure.
Increase use of electric and renewable fuel powered construction equipment	The project applicant has not committed to the use of alternatively fueled construction equipment. Furthermore, the commercial availability of renewable diesel in the project area

[17] Flores, Areana. Environmental Planner, Bay Area Air Quality Management District. Personal communication [phone] with Jacob Byrne, Senior Associate/Air Quality Technician, Raney Planning and Management, Inc. September 17, 2019.

Table 14
Project Consistency with the 2017 Scoping Plan

Suggested Measure	Consistency Discussion
and require renewable diesel fuel where commercially available.	is currently unknown. Consequently, compliance with this suggested measure is uncertain at this time.
Require diesel equipment fleets to be lower emitting than any current emission standard.	In compliance with Mitigation Measure III-1, the project applicant would be required to use Tier 4 construction equipment for off-site work associated with the extension of Napa Junction Road. Such engines are considered lower emitting than any current emission standard. As such, the proposed project would comply with this measure.
Operations	
Comply with lead agency's standards for mitigating transportation impacts under SB 743.	As noted in Section XVII, Transportation, of this IS/MND, implementation of the project would result in a less-than-significant impact to VMT with implementation of the TDM measures. As such, the proposed project would comply with this measure.
Require on-site EV charging capabilities for parking spaces serving the project to meet jurisdiction-wide EV proliferation goals.	Per the 2019 CALGreen Code, the project is required to provide the infrastructure necessary to facilitate installation of EV charging systems in six percent of total on-site parking spaces. Compliance with the 2019 CALGreen Code would ensure that the proposed project provides sufficient EV charging infrastructure to comply with this suggested measure.
Dedicate on-site parking for shared vehicles.	The project applicant has not committed to providing dedicated parking for shared vehicles. Therefore, compliance with the suggested measure is uncertain at this time.
Provide adequate, safe, convenient, and secure on-site bicycle parking and storage in multi-family residential projects and in non-residential projects.	As required per Mitigation Measure XVII-2 the project would include the provision of short-term and long-term bicycle parking. Accordingly, the project would comply with the suggested measure.
Provide on- and off-site safety improvements for bike, pedestrian, and transit connections, and/or implement relevant improvements identified in an applicable bicycle and/or pedestrian master plan.	The proposed project would provide on-site pedestrian infrastructure as well as off-site pedestrian improvements along the project frontage with a connection to the existing sidewalk on the south side of Napa Junction Road. In addition, the local roadways are considered bikeable, and American Canyon Transit provides bus service at the American Canyon City Hall bus stop, located approximately 0.2-mile from the project site. Per the American Canyon Bicycle Plan, a future Class II Bike Lane is proposed along Hess Road, which would further promote bicycle connectivity. Considering the project would provide pedestrian facility improvements and is located in close proximity to existing and planned bicycle and transit facilities, the proposed project would be generally consistent with the suggested measure.
Require on-site renewable energy generation.	The 2019 CBSC requires that residential structures that are three-stories or less in height be constructed with renewable energy systems sufficient to provide 100 percent of the electricity required for the residence. The proposed single-family residences would be subject to such requirements. Due to the CBSC's requirements regarding renewable energy systems for residential land uses, the proposed project would

Table 14
Project Consistency with the 2017 Scoping Plan

Suggested Measure	Consistency Discussion
	include on-site renewable energy generation and would comply with this measure.
Prohibit wood-burning fireplaces in new development, and require replacement of wood-burning fireplaces for renovations over a certain size development.	The proposed project would not include wood-burning fireplaces. Thus, the proposed project would comply with the suggested measure.
Require cool roofs and "cool parking" that promotes cool surface treatment for new parking facilities as well as existing surface lots undergoing resurfacing.	The 2019 CBSC contains requirements for the thermal emittance, three-year aged reflectance, and Solar Reflectance Index (SRI) of roofing materials used in new construction and re-roofing projects. Such standards, with which the project would be required to comply, would help to reduce heating and cooling costs associated with the proposed project. In addition, approximately 291 parking spaces would be located within internal garages or shaded carports, which reduces the amount of exposed pavement surfaces. Therefore, surface lot heat effects would be reduced compared to provision of all necessary parking spaces in uncovered surface lots. Therefore, the proposed project would generally comply with the suggested measure.
Require solar-ready roofs.	The 2019 CBSC requires that new residential structures under three stories generate 100 percent of electricity needs from on-site solar. Therefore, the proposed project would comply with this suggested measure.
Require organic collection in new developments.	California state legislature AB 1826 requires commercial and multi-family customers to subscribe to organics recycling. Therefore, the proposed multi-family residential buildings would be required to include organic collection, and organic composting is mandatory for all businesses and institutions with four or more cubic yards of garbage service. In addition, the City's garbage provider offers food scraps collection services for multi-family residential buildings. As such, future residents may have access to the organic collection service. Thus, the proposed project would include organic collection and the project would comply with the suggested measure.
Require low-water landscaping in new developments (see CALGreen Divisions 4.3 and 5.3 and the Model Water Efficient Landscape Ordinance [MWELO], which is referenced in CALGreen). Require water efficient landscape maintenance to conserve water and reduce landscape waste.	Landscaping within the project site would be required to comply with the CALGreen code and all water efficiency measures therein, including the MWELO, as well as all regulations set forth in Chapter 16.14, Water-Efficient Landscaping, of the City's Municipal Code. Accordingly, the proposed project is anticipated to comply with this measure.
Achieve Zero Net Energy performance building standards prior to dates required by the Energy Code.	The project applicant has not committed to achieving Zero Net Energy. Thus, compliance with the suggested measure is uncertain at this time. However, in accordance with the CALGreen code, 100 percent of all electricity needs generated by the proposed project would be met through on-site solar systems.

Table 14
Project Consistency with the 2017 Scoping Plan

Suggested Measure	Consistency Discussion
Encourage new construction, including municipal building construction, to achieve third-party green building certifications, such as the GreenPoint Rated program, LEED rating system, or Living Building Challenge.	The project applicant has not committed to achieving third-party green building certification. Consequently, compliance with this suggested measure is uncertain at this time.
Require the design of bike lanes to connect to the regional bicycle network.	Marked bike lanes do not exist in the project vicinity. However, nearby roadways have safe speed limits to allow for shared access for bicyclists. Per the American Canyon Bicycle Plan, a future Class II Bike Lane is proposed along Hess Road, which would further promote connectivity between the project site and the regional bicycle network. As noted in the Traffic Impact Study prepared for the proposed project, due to the steep slope of Napa Junction Road, bicycle trips to and from the site are expected to be minimal. Considering the above, the proposed project would comply with the general intent of the suggested measure.
Expand urban forestry and green infrastructure in new land development.	Landscaping improvements would be included throughout the project site. A variety of trees and shrubs would be provided along the project drive aisles and parking areas, as well as along the perimeter of the proposed units within the project site. As such, the development would expand upon urban forestry and green infrastructure, and would comply with this measure.
Require preferential parking spaces for park and ride to incentivize carpooling, vanpooling, commuter bus, electric vehicles, and rail service use.	The measure relates to larger-scale residential projects and commercial land uses. As a result, the measure does not apply to the proposed project. Nonetheless, as required per Mitigation Measure XVII-2 the project would include other carpool incentives.
Develop a rideshare program targeting commuters to major employment centers.	The project site would be developed with residences and therefore, would not be considered a major employment center. Consequently, the measure does not apply to the proposed project. However, the project would include transit benefits and a ride-matching program which would encourage commuters to rideshare to places of employment.
Require gas outlets in residential backyards for use with outdoor cooking appliances such as gas barbeques if natural gas service is available.	The project applicant has not committed to providing natural gas service for outdoor cooking appliances. Accordingly, compliance with this measure is uncertain at this time.
Require the installation of electrical outlets on the exterior walls of both the front and back of residences to promote the use of electric landscape maintenance equipment.[2]	Pursuant to California Electrical Code, Article 210.52(E), the project would be required to include at least one electrical outlet to be located in the perimeter of a balcony, desk, or porch. The project applicant has not committed to providing additional exterior electrical outlets to promote the use of electric landscape maintenance equipment. Consequently, the project would partially comply with the suggested measure.
Require the design of the electric outlets and/or wiring in new	The CBSC requires that new residential unit garages be designed with wiring sufficient to provide future installation of

Table 14
Project Consistency with the 2017 Scoping Plan

Suggested Measure	Consistency Discussion
residential unit garages to promote electric vehicle usage.	electric vehicle charging infrastructure. Therefore, the proposed project would be required to comply with this measure.
Provide electric outlets to promote the use of electric landscape maintenance equipment to the extent feasible on parks and public/quasi-public lands.	The project applicant has not committed to providing electrical outlets in the private parks or landscaping areas proposed for the project site. Compliance with this measure is uncertain at this time.
Require each residential unit to be "solar ready," including installing the appropriate hardware and proper structural engineering.	The CBSC requires all residences three-stories or less in height to include renewable energy systems. The proposed residences would by three-stories or less in height, and would thereby be required to generate 100 percent of project electricity needs from on-site solar. Thus, the proposed project would comply with this measure.
Require the installation of energy conserving appliances such as on-demand tank-less water heaters and whole-house fans.	The proposed project would be required to comply with the CBSC, which includes standards related to installation of energy-efficient appliances and building features such as water heaters and ventilation systems. Thus, the project would generally comply with the suggested measure.
Require each residential and commercial building equip buildings [sic] with energy efficient AC units and heating systems with programmable thermostats/timers.	The proposed project would be required to comply with the CBSC, which includes standards related to energy-efficient heating and cooling systems. Thus, the project would generally comply with the suggested measure.
Require large-scale residential developments and commercial buildings to report energy use, and set specific targets for per-capita energy use.	The project applicant has not committed to reporting energy use or setting specific energy use targets. Accordingly, compliance with this suggested measure is uncertain at this time.
Require each residential and commercial building to utilize low flow water fixtures such as low flow toilets and faucets (see CALGreen Divisions 4.3 and 5.3 as well as Appendices A4.3 and A5.3).	The proposed project would be required to comply with the residential water efficiency regulations within CALGreen. Thus, the proposed project would comply with this suggested measure.
Require the use of energy-efficient lighting for all street, parking, and area lighting.	All proposed exterior lighting would be LED type, consistent with the 2019 Building Energy Efficiency Standards. Thus, the proposed project would comply with the suggested measure.
Require the landscaping design for parking lots to utilize tree cover and compost/mulch.	The preliminary landscaping plans include tree planting throughout the proposed parking areas. In addition, pursuant to Section 16.14.100, Landscaping Design Plan, of the Municipal Code, a minimum three-inch layer of mulch would be applied on all exposed soil surfaces. Thus, the proposed project would comply with the suggested measure.
Incorporate water retention in the design of parking lots and landscaping, including using compost/mulch.	As noted above, the proposed project would include the use of mulch on all exposed soil surfaces in landscaped areas to aid in water retention. In addition, several bioretention basins are proposed on-site to treat runoff from each drainage management area. As such, water retention is incorporated

Table 14
Project Consistency with the 2017 Scoping Plan

Suggested Measure	Consistency Discussion
	into the overall project design, and the proposed project would comply with the suggested measure.
Require the development project to propose an off-site mitigation project which should generate carbon credits equivalent to the anticipated GHG emission reductions. This would be implemented via an approved protocol for carbon credits from California Air Pollution Control Officers Association (CAPCOA), the California Air Resources Board, or other similar entities determined acceptable by the local air district. The project may alternatively purchase carbon credits from the CAPCOA GHG Reduction Exchange Program, American Carbon Registry (ACR), Climate Action Reserve (CAR) or other similar carbon credit registry determined to be acceptable by the local air district.	The suggested mitigation measures included in the 2017 Scoping Plan are not considered to be requirements for local projects under CEQA, but instead represent options for projects to demonstrate compliance with the 2017 Scoping Plan. The inclusion of GHG off-set mitigation projects or the purchase of carbon credits is typically dependent on a project's exceedance of the previously identified quantitative GHG thresholds. However, neither BAAQMD nor the City's EECAP have identified quantitative thresholds that could be used to determine that the project's anticipated emissions would be such that an off-site mitigation project or purchase of GHG reduction credits would be required in order to comply with SB 32. Considering that the project has been shown to be generally consistent with the foregoing measures, the City, in its discretion as lead agency, has chosen not to require the project to implement an off-site mitigation project or purchase GHG reduction credits.

Source: California Air Resources Board. AB 32 Scoping Plan [Appendix B]. Accessible at: https://www.arb.ca.gov/cc/scopingplan/scopingplan.htm. Accessed March 2020.

As shown in Table 14, the proposed project would comply with the majority of the suggested measures and, thus, the proposed project would be considered generally consistent with the 2017 Scoping Plan. Because the 2017 Scoping Plan is the CARB's strategy for meeting the State's 2030 emissions goals established by SB 32, the project would be considered to comply with the goals of SB 32.

Consistency with Plan Bay Area 2040

The San Francisco Bay Area's Plan Bay Area 2040 has been prepared jointly by the San Francisco Bay Area Metropolitan Transportation Commission (MTC) and the ABAG. Plan Bay Area 2040 is a regional plan intended to provide a strategy for the reduction of GHG emissions and air pollutants within the San Francisco Bay Area. The Plan Bay Area 2040 is a long-range plan that serves as a Regional Transportation Plan and Sustainable Communities Strategy (SCS). As an SCS, the Plan Bay Area 2040 is required to comply with regional targets for reducing GHG emissions through the integration of transportation and land use planning. ABAG has not provided a specified means of identifying an individual development project's compliance with the Plan Bay Area 2040. For the purposes of this analysis, the proposed project is compared to the overall goal of the Plan Bay Area 2040, which is to reduce regional GHG emissions through the reduction of transportation-related emissions.

The proposed project would include pedestrian infrastructure on-site as well as off-site pedestrian facility improvements. The project would include construction of a new sidewalk along the project frontage which would connect to the existing pedestrian network. Considering the steepness of

Napa Junction Road, bicycle trips to and from the site are expected to be minimal. Nonetheless, the nearby roadways are considered bikeable, and the American Canyon Bike Plan identified a planned Class II Bicycle Lane adjacent to the project site, along Hess Road. The nearest public transit stop is the American Canyon City Hall bus stop, which is located approximately 0.2-mile from the project site. The proposed project's pedestrian connectively and proximity to public transit would help to reduce VMT levels.

Furthermore, compliance with Mitigation Measure XVII-2 would ensure that the project applicant implements a transportation demand management program with VMT-reducing measures including, but not limited to, the following: unbundled parking costs for residents; transit pass programs and benefits; expanded bicycle parking and maintenance tools; and availability of a ride-matching/carpooling program. Implementation of the aforementioned measures would further reduce VMT generated by future resident trips.

Because the project would not be considered to significantly contribute to an increase in regional VMT, the proposed project would be considered consistent with the Plan Bay Area 2040, and would not conflict with the regional GHG reduction targets therein.

City of American Canyon Energy Efficiency Climate Action Plan

In December of 2012, the City of American Canyon approved an Energy Efficiency Climate Action Plan (EECAP). The EECAP included emissions reduction targets for the City, as well as reduction measures, but did not specify project-level emissions thresholds. The project's consistency with the applicable reduction measures is assessed in Table 15 below. The following measures were relevant to the proposed project. Other measures included in the EECAP that were specific to existing buildings, non-residential developments, or municipal operations were not included in the table.

Table 15
Project Consistency with the EECAP

Suggested Measure	Consistency Discussion
Measure C-8: Require Energy Efficiency Beyond State Code for New Residential Construction. Through 2013, provide a streamlined permit process for new residential construction projects that incorporate energy efficiency improvements over Title 24, include all items on a voluntary energy efficiency checklist, or include renewable energy improvements. Starting in 2014 or 2017, require that all new residential construction achieve Tier 1 of Title 24 standards (15 percent more stringent than the mandatory standards.)	While the project would comply with all mandatory requirements set forth in the 2019 CBSC, the project applicant has not yet committed to achieving Tier 1 of the Title 24 standards. With implementation of Mitigation Measure VIII-1, the project would comply with this measure.
Measure C-11: Solar Ready Roofs for New Construction. For new construction: Require solar ready roofs that are pre-wired and ready for	The 2019 CBSC requires all residences three-stories or less in height to include renewable energy systems. The proposed residences would by three-stories or less in height, and would thereby be required to generate 100 percent of all electricity

Table 15
Project Consistency with the EECAP

Suggested Measure	Consistency Discussion
the installation of solar photovoltaic panels and solar water heating systems.	use from on-site solar. Thus, the proposed project would comply with this measure.
Measure C-13: Community Water Reduction. Reduce community water use through building and landscape design and improvements.	Both indoor and outdoor water use would be limited through compliance with Division 4.3, Water Efficiency and Conservation, of the 2019 CALGreen Code. As noted therein, landscaping and landscape irrigation systems within the project site would be required to comply with the MWELO, as well as all regulations set forth in Chapter 16.14, Water-Efficient Landscaping, of the City's Municipal Code. As such, the proposed project would comply with this measure.

Source: City of American Canyon. Energy Efficiency Climate Action Plan. December 2012.

As shown in the table, the proposed project would generally be consistent with the applicable reduction measures, with the exception of Measure C-8.

Conclusion

Based on the above, the proposed project would not be considered to generate GHG emissions, either directly or indirectly, that may have a significant impact on the environment. In addition, the project would not be considered to conflict with the 2017 Scoping Plan or the Plan Bay Area, which are used for analysis of SB 32. However, the project has the potential to conflict with the American Canyon EECAP. As such, the project may conflict with an applicable plan, policy, or regulation adopted for the purpose of reducing the emissions of GHGs, and impacts would be considered ***potentially significant***.

Mitigation Measure(s)

Implementation of the following mitigation measures would reduce the above potential impact to a *less-than-significant* level.

Parcel A and Parcel B

VIII-1 *Prior to issuance of building permits, the applicant shall submit proof to the Community Development Department for review and approval which indicate project compliance with the Tier 1 Energy Efficiency division of the Title 24 standards. Tier 1 Energy Efficiency for low-rise multifamily developments require the following measures:*

- *Total Energy Design Rating (Total EDR) and Energy Efficiency Design Rating (Efficiency EDR) for the Proposed Design Building is included in the Certificate of Compliance documentation.*
- *Quality Insulation Installation procedures specified in the Building Energy Efficiency Standards Reference Appendices RA3.5 are completed.*
- *One of the following options is required:*
  - *A4.203.1.2.1 – Roof deck insulation or ducts in conditioned space.*
  - *A4.203.1.2.2 – High performance walls.*

- *A4.203.1.2.3 – HERS-verified compact hot water distribution system.*
- *A4.203.1.2.4 – HERS-verified drain water heat recovery.*

- *Buildings complying with the first level of advanced energy efficiency shall have additional integrated efficiency and onsite renewable energy generation sufficient to achieve a Total EDR of the Tier 1 value indicated by Table A4.203.1.1.1 or lower as calculated by Title 24, Part 6 Compliance Software approved by the Energy Commission. This Total EDR is in addition to meeting the Efficiency EDR.*
- *Local jurisdictions adopting Tier 1 or Tier 2, or considering community shared solar or storage options as specified, shall consult with the local electric service for acceptance.*

IX. HAZARDS AND HAZARDOUS MATERIALS. *Would the project:*	Potentially Significant Impact	Less-Than-Significant with Mitigation Incorporated	Less-Than-Significant Impact	No Impact
a. Create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials?	☐	☐	✖	☐
b. Create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the likely release of hazardous materials into the environment?	☐	☐	✖	☐
c. Emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school?	☐	☐	✖	☐
d. Be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, would it create a significant hazard to the public or the environment?	☐	☐	☐	✖
e. For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project result in a safety hazard or excessive noise for people residing or working in the project area?	☐	☐	✖	☐
f. Impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan?	☐	☐	✖	☐
g. Expose people or structures, either directly or indirectly, to the risk of loss, injury or death involving wildland fires?	☐	☐	✖	☐

Discussion

a. **Parcel A and Parcel B**

Residential uses are not typically associated with the routine transport, use, disposal, or generation of substantial amounts of hazardous materials. Construction activities would involve the use of heavy equipment, which would contain fuels and oils, and various other products such as concrete, paints, and adhesives. The use of chemicals required for construction activities would be required to comply with all relevant California Health and Safety Codes and local City ordinances regulating the handling, storage, and transportation of hazardous and toxic materials. Additionally, on-site operational maintenance may involve the use common household cleaning products, fertilizers, and herbicides, any of which could contain potentially hazardous chemicals; however, such products would be expected to be used in accordance with label instructions. Due to the regulations governing use of such products and the small amount anticipated to be used on the site, routine use of such products would not represent a substantial risk to public health or the environment. Therefore, the proposed project would not create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials, and a ***less-than-significant*** impact would occur.

b. **Existing Conditions**

The following discussion provides an analysis of potential hazards related to existing conditions within Parcel A and Parcel B.

Parcel A

A Phase I ESA was prepared by AEI Consultants for the purpose of identifying potential recognized environmental conditions (RECs) associated with Parcel A (see Appendix D).[18] As discussed previously, the project site is undeveloped and consists of vacant land with ruderal vegetation and limited trees. According to the Phase I ESA, Parcel A has been subject to past agricultural activities, particularly the farming of hay for some portion of the time between 1937 and 1948. Although some farming activities in the past relied on the use of organochlorine pesticides (OCPs), which can lead to residual soil contamination, AEI Consultants concluded that the timing of farming within the project site and the type of crop farmed, hay, indicate that OCPs or other agricultural chemicals were not likely used. Thus, previous farming within the site is not expected to represent a significant environmental concern.

In addition, various debris exist within Parcel A, which include concrete, wood, metal, and empty water drums/containers for goats. According to the Phase I ESA the items are all non-hazardous and the presence of the items does not present a significant environmental concern. The Phase I ESA also identified electrical or mechanical equipment that is likely to contain fluids on the adjoining sites during the site reconnaissance. Toxic polychlorinated biphenyls (PCBs) were commonly used historically in electrical equipment, such as transformers, fluorescent lamp ballasts, and capacitors. The management of PCB-containing transformers is the responsibility of the local utility or transformer owner. Actual material samples need to be collected to determine if transformers are PCB-containing. However, spills, staining, or leaks were not observed on or around the transformers and the equipment appears to be in good condition. Given that the equipment is in good condition and is located within adjoining properties and not within Parcel A, the transformers and other equipment would not present a significant environmental concern.

Parcel B

A separate Phase I ESA was prepared for Parcel B by AEI Consultants for the purposes of identifying RECs within the parcel (see Appendix E).[19] Similar to Parcel A, Parcel B has been subject to past agricultural activities. However, as discussed above for hay farming within Parcel A, the farming of hay in Parcel B was not considered to create a significant environmental concern.

In addition, the Phase I ESA also identified electrical or mechanical equipment that is likely to contain fluids on an adjoining site during the site reconnaissance. However, spills, staining, or leaks were not observed on or around the transformers and the equipment appears to be in good condition. Given that the equipment is in good condition and is located within an adjoining site and not within Parcel B, the transformers and other equipment would not present a significant environmental concern.

Construction Activities

The following discussion provides an analysis of potential hazards related to the proposed construction activities.

Parcel A and Parcel B

Because neither site contains any recognized environmental concerns, the ground disturbing activity associated with project construction would not have the potential to release hazardous materials or result in hazardous conditions due to existing site conditions.

Construction activities associated with the proposed project would involve the use of heavy equipment, which would contain fuels and oils, and the use of other products such as concrete, paints, and adhesives. Small quantities of potentially toxic substances (e.g., petroleum and other chemicals used to operate and maintain construction equipment) would be used at the project site and transported to and from the site during construction. However, the project contractor would be required to comply with all California Health and Safety Codes and local City ordinances regulating the handling, storage, and transportation of hazardous and toxic materials. Thus, construction of the proposed project would not create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the likely release of hazardous materials into the environment.

Conclusion

Based on the above, the proposed project would not create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the likely release of hazardous materials into the environment and a ***less-than-significant*** impact would occur.

c. **Parcel A and Parcel B**

The nearest school relative to the project site is Napa Junction Elementary School, which is located approximately 700 feet northeast of Parcel A and approximately 300 feet northeast of Parcel B. As discussed under question 'b' above, construction of the proposed project could include the use of small quantities of potentially toxic substances (e.g., petroleum and other chemicals used to operate and maintain construction equipment); however, the project contractor would be required to comply with all State and local City ordinances regulating the use of such products. In addition, residential developments do not typically include the use of or emission of hazardous materials. Therefore, the proposed project would not emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school, and a ***less-than-significant*** impact would occur.

d. **Parcel A and Parcel B**

According to the Phase I ESA prepared for Parcel A and the Phase ESA prepared for Parcel B, the parcels are not located on or near a site that is included a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5.[20] Therefore, the proposed project would have ***no impact*** with respect to being located on a hazardous materials site.

[20] Department of Toxic Substances Control. *EnviroStor.* Available at: https://www.envirostor.dtsc.ca.gov/public/. Accessed February 2020.

e. **Parcel A and Parcel B**

The nearest airport to the project site is the Napa County Airport, located approximately 1.75 miles north of the project site. As shown in the Napa County ALUCP, the proposed project site is located within ALUC Zones D and E, as provided by the County of Napa. Zone E permits the development of residential units; however, Zone D restricts development to industrial or other non-residential uses.

Four areas of land use compatibility are typically assessed for any type of near-airport development: 1) regular, nearly continuous adverse noise impact on residents and occupiers of structures near the airport; 2) safety of persons and structures/property on the ground under the normal, established aircraft flight paths; 3) possible vertical penetration of proposed structures into the Federal Aviation Regulation (FAR) Part 77 "imaginary surfaces" surrounding the airport; and 4) short-term but frequent overflight annoyance to persons residing in, or occupying structures under the normal, established flight paths. As described in a report prepared by Mead & Hunt (2005), which was peer reviewed by Walter Gillfilland and Associates (2005) development within the project site would not conflict with noise contours or any of the "three established sources of guidance on safety compatibility" for Zone D. It should also be noted that the project is not located within the regular flight-path/overflight for normal airport operations, nor would the project result in buildings that would obstruct established flight paths.

The City of American Canyon noted in their comment letter on the Terminal Area Redevelopment IS/MND that substantial evidence exists to support a reduction in Zone D.[21] The potential reduction is based on the findings of the Terminal Area Redevelopment IS/MND that the 65 decibel (dB) Community Noise Equivalent Level (CNEL) boundary (also known as the "Noise Annoyance Zone" or "Zone 'D'") is contained entirely within the Airport property under existing and future conditions. Likewise, a noise report prepared for the proposed project by Saxelby Acoustics demonstrates that the proposed project exterior noise levels within Parcel A and Parcel B would not exceed 65 dBA L_{dn} for outdoor activity areas, nor would the interior noise levels within both parcels exceed the 45 dBA L_{dn} standards for interior transportation noise exposure levels.[22] Prior to review by the City Council, the ALUC would review project plans to ensure that the proposed project would be a compatible use in proximity to the Napa County Airport.

Because the proposed project would not be subject to excessive noise levels associated with the Napa County Airport, a ***less-than-significant*** impact would occur related to a safety hazard or excessive noise for people residing or working in the project area.

f. **Parcel A and Parcel B**

During operation, the proposed project would provide adequate access for emergency vehicles and would not interfere with potential evacuation or response routes used by emergency response teams. During construction of the proposed project, all construction equipment would be staged on-site so as to prevent obstruction of local and regional travel routes in the City that could be used as evacuation routes during emergency events. In addition, the proposed project

---

21 City of American Canyon. *Item9A – Comments on the Initial Study/Mitigated Negative Declaration for the Terminal Area Redevelopment (IS/MND).* September 18, 2020.

22 Saxelby Acoustics. *Environmental Noise Assessment, Oat Hill Apartments, City of American Canyon, California*. September 10, 2020.

would include the construction of a new EVA road and a new section of Napa Junction Road between the two disconnected segments east and west of Hess Road. Provision of an EVA road within the project site would ensure that multiple routes of access exist between Parcel A and B, which would improve emergency vehicle circulation within the site. The new connection of Napa Junction Road would significantly improve emergency vehicle access to the project site by providing a more direct route to the project site from SR 29 and other areas of the City. As a result, the proposed project would have a ***less-than-significant*** impact with respect to impairing the implementation of or physically interfering with an adopted emergency response plan or emergency evacuation plan.

g. **Parcel A and Parcel B**

According to the California Department of Forestry and Fire Protection (CAL FIRE) Fire and Resource Assessment Program, the project site is not located within a Very High or High Fire Hazard Severity Zone (FHSZ).[23] In addition, the site is located in a relatively urbanized area of the City and is located near existing development to the north and east. Therefore, the proposed project would not expose people or structures to the risk of loss, injury or death involving wildland fires, and a ***less-than-significant*** impact would occur.

[23] California Department of Forestry and Fire Protection. *California Fire Hazard Severity Zone Viewer*. Available at: https://egis.fire.ca.gov/FHSZ/. Accessed: August 2020.

X. HYDROLOGY AND WATER QUALITY. *Would the project:*	Potentially Significant Impact	Less-Than-Significant with Mitigation Incorporated	Less-Than-Significant Impact	No Impact
a. Violate any water quality standards or waste discharge requirements or otherwise substantially degrade surface or ground water quality?	☐	☐	✖	☐
b. Substantially decrease groundwater supplies or interfere substantially with groundwater recharge such that the project may impede sustainable groundwater management of the basin?	☐	☐	✖	☐
c. Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river or through the addition of impervious surfaces, in a manner which would:				
i. Result in substantial erosion or siltation on- or off-site;	☐	☐	✖	☐
ii. Substantially increase the rate or amount of surface runoff in a manner which would result in flooding on- or offsite;	☐	☐	✖	☐
iii. Create or contribute runoff water which would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff; or	☐	☐	✖	☐
iv. Impede or redirect flood flows?	☐	☐	☐	✖
d. In flood hazard, tsunami, or seiche zones, risk release of pollutants due to project inundation?	☐	☐	☐	✖
e. Conflict with or obstruct implementation of a water quality control plan or sustainable groundwater management plan?	☐	☐	✖	☐

Discussion

a, ci-ciii. The following discussion provides a summary of the proposed project's potential to violate water quality standards/waste discharge requirement, alter the drainage pattern of the site resulting in erosion or siltation, increase the rate or amount of surface runoff in a manner which would result in flooding on- or off-site, contribute runoff water which would exceed the capacity of existing or planned stormwater drainage systems, or otherwise degrade water quality during construction and operation.

Potential Water Quality Violations During Construction

The following discussion provides a summary of the proposed project's potential to violate water quality standards during construction activities.

Parcel A and Parcel B

During the early stages of construction activities, topsoil would be exposed due to grading and excavation of the site. After grading and prior to overlaying the ground with impervious surfaces,

structures, or landscaping, the potential exists for wind and water to discharge sediment and/or urban pollutants into stormwater runoff, which could adversely affect water quality.

Water quality degradation is regulated by the federal National Pollutant Discharge Elimination System (NPDES) Program, established by the Clean Water Act, which controls and reduces pollutants to water bodies from point and non-point discharges. In California, the NPDES permitting program is administered by the State Water Resources Control Board through nine Regional Water Quality Control Boards (RWQCBs). The project site is located within the jurisdiction of the San Francisco Bay Regional Water Quality Control Board (SFBRWQCB). Projects that disturb one or more acres of soil, or disturb less than one acre, but are part of a larger common plan of development that in total disturbs one or more acres, are required to obtain coverage under the State NPDES General Permit for Discharges of Storm Water Associated with Construction Activity (General Permit). A Notice of Intent must be filed with the RWQCB and the General Permit requires that a Storm Water Pollution Prevention Plan (SWPPP) be prepared. Because the both Parcel A and Parcel B are larger than one acre, the project would be subject to the aforementioned State NPDES General Permit conditions. Preparation of an SWPPP would ensure that any adverse construction-related impacts to water quality degradation would be prevented by the inclusion of best management practices (BMPs) for erosion and pollution prevention. Per Chapter 14.28 of the American Canyon Municipal Code, erosion control BMPs may include, but are not limited to, scheduling and timing of grading activities, timely revegetation of graded areas, the use of hydroseed and hydraulic mulches, and installation of erosion control blankets. Pollution prevention practices may include designated washout areas or facilities, control of trash and recycled materials, tarping of materials stored on-site, and proper location of and maintenance of temporary sanitary facilities.

Potential Water Quality Violations During Operation

To reduce stormwater pollution in the Napa River watershed and provide a consistent approach to stormwater regulations, the City joined with other Napa County municipalities to form the Napa Countywide Stormwater Pollution Prevention Program. The Stormwater Pollution Prevention Plan incorporates the efforts of Napa County to meet the Phase II Small Municipal Separate Storm Sewer System (MS4) Program requirements. The City is covered by the State's NPDES permits, Design Guidance for Stormwater Treatment and Control for Projects in Marin, Sonoma, Napa and Solano Counties. Projects are required to address post-development stormwater quality using treatment measures. In addition, Per City of American Canyon standard specifications, peak discharge from project sites in the post-development condition cannot exceed 90 percent of the undeveloped peak flow for the 24-hour, 100-year event.

Following completion of project buildout, the site would be largely covered with impervious surfaces and landscaping areas, and topsoil would no longer be exposed. As such, the potential for erosion and associated impacts to water quality would be reduced. However, addition of the impervious surfaces on the site would result in the generation of urban runoff during project operations, which could contain pollutants if the runoff comes into contact with vehicle fluids on parking surfaces and/or landscape fertilizers and herbicides. A Stormwater Control Plan (SWCP) was prepared for development within each parcel and includes stormwater control measures in the form of bioretention basins that would manage runoff within the site. A discussion of the SWCPs prepared for each parcel is provided in further detail below.

Parcel A

Stormwater from Parcel A would flow to 15 on-site DMAs, each with their own bioretention area (see Figure 6). The bioretention areas in each DMA would provide treatment of stormwater by allowing runoff to filter through layers of vegetative soil. By allowing stormwater to pass through soil layers, the stormwater from the site would be treated prior to discharge, thus ensuring that the project would not degrade water quality. Treated stormwater would then be captured by an underdrain within each bioretention area and routed to an underground detention facility constructed within Parcel B. The underground detention facility would capture all flows from stormwater events and meter stormwater discharge into the City's stormwater system at an acceptable rate. The combined effect of stormwater treatment through the bioretention basins and underground detention facility would ensure stormwater runoff from Parcel A is properly treated to avoid discharge of polluted stormwater, would not exceed existing runoff conditions at the project site, and that stormwater discharges would not result in erosion or off-site siltation. Because the proposed project would not result in a significant contribution of stormwater runoff beyond the existing flows currently accommodated by the City's stormwater system, the proposed project would not create or exacerbate any existing capacity issues with the City's stormwater systems.

Parcel B

Stormwater from impervious areas within Parcel B would drain to a bioretention area in the northeastern corner of the site (see Figure 9). The bioretention area would treat stormwater by allowing runoff to filter through layers of soil, which would ensure the proposed project would not degrade stormwater quality. Treated stormwater would be captured by an underdrain and routed to a 10-foot-wide and 470-foot-long, underground detention facility within Parcel B. From the detention facility, a new 18-inch storm drain would connect to an existing 18-inch storm drain within Napa Junction Road. The detention facility would capture all flows from both Parcel A and Parcel B during storm events and meter discharges into the City's stormwater system at an acceptable level. The discharge of stormwater at acceptable levels would ensure the flow of stormwater from Parcel B would not exceed existing stormwater infrastructure capacity. Overall, the combined effect of the bioretention areas and underground detention facility would treat stormwater on-site prior to discharge, sufficiently slow the rate of stormwater discharge from the project site so as to not exceed the current amount of runoff generated at the project site, and avoid off-site erosion or siltation. Because the proposed project would not result in a significant contribution of stormwater runoff beyond the existing flows currently accommodated by the City's stormwater system, the proposed project would not create or exacerbate any existing capacity issues with the City's stormwater systems.

Conclusion

Based on the above, the development of an SWPPP designed in accordance with NPDES General Permit requirements and implementation of appropriate BMPs as noted in the City's Municipal Code would ensure the proposed project would not violate water quality standards/waste discharge requirements or alter the drainage pattern of the site resulting in erosion or siltation. Proposed utilities improvements, including bioretention areas and underground detention facilities, would ensure the proposed project will not increase the rate or amount of surface runoff in a manner which would result in flooding on- or off-site, contribute runoff water which would exceed the capacity of existing or planned stormwater drainage systems, or otherwise degrade water quality during construction and operation. Thus, a ***less-than-significant*** impact would occur.

b,e. **Parcel A and Parcel B**

Water would be provided to the project site via new connections to the existing water infrastructure surrounding the project site. The City does not currently use groundwater as a supply source. The City of American Canyon meets customer water demands by supplying water from the following existing sources:

- State Water Project water;
- Permit (raw) water from the City of Vallejo;
- Treated water from Vallejo;
- Treated water from the City of Napa;
- Recycled water from the City's wastewater treatment plant (WWTP); and
- Recycled water from Napa Sanitation District (NSD) that serves a portion of the City's water service area.

Other than recycled water from the City's WWTP and NSD, all of the City's raw water supplies are transported via the North Bay Aqueduct (NBA) system. Consequently, the project would not rely on groundwater as a source of water supply, and the proposed project would not contribute to depletion of groundwater supplies.

As noted above, the project's on-site drainage system would include bio-retention basins within Parcel A and Parcel B that manage runoff from all on-site impervious areas. While a portion of the runoff would be drained from the bio-retention basins into the City's existing storm drain system, the area in between Parcel A and Parcel B would remain undeveloped and would allow for continued groundwater recharge in the project area. Therefore, the proposed project would result in a ***less-than-significant*** impact with respect to substantially decreasing groundwater supplies, interfering substantially with groundwater recharge, or conflicting with or obstructing implementation of a water quality control plan or sustainable groundwater management plan.

civ. **Parcel A and Parcel B**

According to the Federal Emergency Management Agency (FEMA) Flood Insurance Rate Map for the project site, the project site is located within an Area of Minimal Flood Hazard (Zone X).[24] The site is not classified as a Special Flood Hazard Area or otherwise located within a 100-year or 500-year floodplain. Therefore, development of the proposed project would not impede or redirect flood flows and ***no impact*** would result.

d. **Parcel A and Parcel B**

As discussed under question 'civ' above, the project site is not located within a flood hazard zone. Tsunamis are defined as sea waves created by undersea fault movement, whereas a seiche is a long-wavelength, large-scale wave action set up in a closed body of water such as a lake or reservoir. The project site is not located in proximity to a coastline and would not be potentially affected by flooding risks associated with tsunamis. A seiche is a long-wavelength, large-scale wave action set up in a closed body of water such as a lake or reservoir. Seiches do not pose a risk to the proposed project, as the project site is not located adjacent to a large closed body of water. Based on the above, the proposed project would not pose a risk related to release of pollutants due to project inundation flooding, tsunami, or seiche, and ***no impact*** would occur.

[24] Federal Emergency Management Agency. *Flood Insurance Rate Map 06013C0355G.* Effective March 21, 2017.

XI. LAND USE AND PLANNING. *Would the project:*	Potentially Significant Impact	Less-Than-Significant with Mitigation Incorporated	Less-Than-Significant Impact	No Impact
a. Physically divide an established community?	☐	☐	✖	☐
b. Cause a significant environmental impact due to a conflict with any land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect?	☐	☐	✖	☐

Discussion

a. **Parcel A and Parcel B**

A project risks dividing an established community if the project introduces infrastructure, alters land use conditions in the surrounding community, or isolates an existing land use. Currently, the project site is undeveloped and consists of vacant land with ruderal vegetation and limited trees. Surrounding development in the project vicinity includes industrial businesses, such as RLM Enterprises, and a recreational vehicle (RV) park to the north, an office building to the northwest, Napa Junction Magnet Elementary School to the northeast, single-family residences, a Baptist Church, and American Canyon City Hall to the east, and undeveloped land to the south and west. The proposed residences would be compatible with the existing development in the project area. The proposed project involves construction on a vacant site. Therefore, the project would not divide an established community. In fact, the proposed Napa Junction Road extension would improve connectivity between the proposed residences and surrounding uses in the project area, which include schools, parks, and commercial uses. As such, the proposed project would not physically divide an established community and a ***less-than-significant*** impact would occur.

b. **Parcel A**

According to the City's General Plan, Parcel A is designated as I:CS and zoned LI:CS. The proposed project includes a request for a General Plan Amendment from I:CS to RH-1, as well as a rezone from LI:CS to RH-1. Upon approval of both entitlements, the proposed project would develop 206 multi-family residential units on Parcel A, and the current designations would be amended to reflect the characteristics of the proposed project. Although the City has not anticipated residential uses on the project site, the proposed project would not conflict with City policies and regulations adopted for the purpose of avoiding or mitigating an environmental effect. For example, because the project would introduce new residents and increase the demand for recreational facilities, the project applicant would be required to pay the City's parks and recreation impact fees or donate parkland and/or improvements to the City. In addition, in compliance with the Section 18.40.100 of the City's Municipal Code, the proposed project would be required to include replacement trees for any that are removed within Parcel A. Implementation of the mitigation measures included within this IS/MND would ensure all environmental impacts of the proposed project have been reduced to a less-than-significant level.

Parcel B

According to the City's General Plan, Parcel B is designated as RE and zoned RE. The proposed project includes a request for a General Plan Amendment from RE to RM, as well as a rezone from RE to RM. Upon approval of both entitlements, the proposed project would develop 85 multi-family residential units on Parcel B. Similar to the discussion above for Parcel A, the current designations would be amended to reflect the characteristics of the proposed project. In addition, although the City has not anticipated residential uses on the project site, the proposed project

would not conflict with City policies and regulations adopted for the purpose of avoiding or mitigating an environmental effect. For example, because the project would introduce new residents and increase the demand for recreational facilities, the project applicant would be required to pay the City's parks and recreation impact fees or donate parkland and/or improvements to the City. Tree removal associated with the extension of Napa Junction Road would similarly require compliance with Section 18.40.110 of the City's Municipal Code. Therefore, implementation of the mitigation measures included within this IS/MND would ensure all environmental impacts of the proposed project have been reduced to a less-than-significant level.

Conclusion

Implementation of the mitigation measures included within this IS/MND would ensure all potential environmental impacts associated with development within Parcel A and Parcel B have been reduced to a less-than-significant level. Based on the above, the proposed project would not cause a significant environmental impact due to a conflict with any land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect, and thus, a ***less-than-significant*** impact would occur.

XII. MINERAL RESOURCES. *Would the project:*	Potentially Significant Impact	Less-Than-Significant with Mitigation Incorporated	Less-Than-Significant Impact	No Impact
a. Result in the loss of availability of a known mineral resource that would be of value to the region and the residents of the state?	☐	☐	☐	✖
b. Result in the loss of availability of a locally-important mineral resource recovery site delineated on a local general plan, specific plan or other land use plan?	☐	☐	☐	✖

Discussion

a,b. **Parcel A and Parcel B**

The City of American Canyon General Plan does not identify any regionally or locally important mineral resources within the City and much of the adjacent land to the north and east consists of existing development. Because the site is located near an existing elementary school and residential development, the site would not be suitable for mining operations. Thus, the proposed project would not result in the loss of availability of a known mineral resource or a locally important mineral recovery site. The proposed project would have ***no impact*** to mineral resources.

XIII. NOISE. *Would the project result in:*	Potentially Significant Impact	Less-Than-Significant with Mitigation Incorporated	Less-Than-Significant Impact	No Impact
a. Generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?	☐	✖	☐	☐
b. Generation of excessive groundborne vibration or groundborne noise levels?	☐	☐	✖	☐
c. For a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise levels?	☐	☐	✖	☐

Discussion

The following discussion is based primarily on an Environmental Noise Assessment prepared for the proposed project by Saxelby Acoustics (see Appendix F).[25] The Environmental Noise Assessment included consideration of development of both Parcel A and Parcel B.

a. The following sections present information regarding sensitive noise receptors in proximity to the project site, the existing noise environment, and the potential for the proposed project to result in impacts during project construction and operation. The following terms are referenced in the sections below:

- Decibel (dB): A unit of sound energy intensity. An A-weighted decibel (dBA) is a decibel corrected for the variation in frequency response to the typical human ear at commonly encountered noise levels. All references to decibels (dB) in this report will be A-weighted unless noted otherwise.
- Average, or equivalent, sound level (L_{eq}): The L_{eq} corresponds to a steady-state A weighted sound level containing the same total energy as a time varying signal over a given time period (usually one hour).
- Day-Night Average Level (Ldn): The average sound level over a 24-hour day, with a +10 decibel weighing applied to noise occurring during nighttime (10:00 PM to 7:00 AM) hours.

Sensitive Noise Receptors

Some land uses are considered more sensitive to noise than others, and, thus, are referred to as sensitive noise receptors. Land uses often associated with sensitive noise receptors generally include residences, schools, libraries, hospitals and passive recreational areas. Noise sensitive land uses are typically given special attention in order to achieve protection from excessive noise.

[25] Saxelby Acoustics. *Environmental Noise Assessment, Oat Hill Apartments, City of American Canyon, California*. September 10, 2020.

In the vicinity of the project site, sensitive land uses include Napa Junction Magnet Elementary School to the northeast and single-family residences and a Baptist Church to the east.

Existing Noise Environment

The existing noise environment in the project area is primarily defined by traffic on SR 29. Other noise sources include airplane flyovers to and from the Napa County Airport, transportation noise from the Union Pacific Railroad line to the north of the project site and operational noise originating from a lumber processing facility to the southwest.

To quantify the existing ambient noise environment in the project vicinity, Saxelby Acoustics conducted two continuous noise level measurements in the vicinity of the project site. Noise measurement locations are shown in Figure 18, and a summary of the noise level measurement survey results is provided in Table 16.

Table 16
Summary of Existing Background Noise Measurement Data

Site	Date	L_{dn}	Average Measured Hourly Noise Levels (dBA)					
			Daytime (7 AM to 10 PM)			Nighttime (10 PM to 7 AM)		
			L_{eq}	L_{50}	L_{max}	L_{eq}	L_{50}	L_{max}
LT-1	08/05/20 – 08/06/20	55	51	49	64	48	46	60
LT-2	08/05/20 – 08/06/20	55	49	47	66	48	46	61

Source: Saxelby Acoustics, 2020.

Standards of Significance

The City of American Canyon establishes an exterior noise level criterion of 65 dB L_{dn} or less within outdoor activity areas of residential land uses. Additionally, the City requires that cumulative noise exposure from exterior noise sources within noise-sensitive dwellings not exceed 45 dB L_{dn}.

The American Canyon Municipal Code establishes maximum noise limits for construction activities. Specifically, Section 8.12.080 limits construction noise at residential receptors to a maximum of 75 dBA between the hours of 7:00 AM and 7:00 PM and 60 dBA between 7:00 PM and 7:00 AM every day of the week.

Impact Analysis

The following sections provide an analysis of potential noise impacts associated with construction and operation of the proposed project.

Construction Noise – Parcel A and Parcel B

During construction of the proposed project, heavy-duty equipment would be used for demolition, grading, excavation, paving, and building construction, which would result in temporary noise level increases. Noise levels would vary depending on the type of equipment used, how the equipment is operated, and how well the equipment is maintained. In addition, noise exposure at any single point outside the project site would vary depending on proximity of construction activities to that point. Standard construction equipment, such as backhoes, dozers, and dump trucks would be used on-site.

Figure 18
Noise Measurement Locations

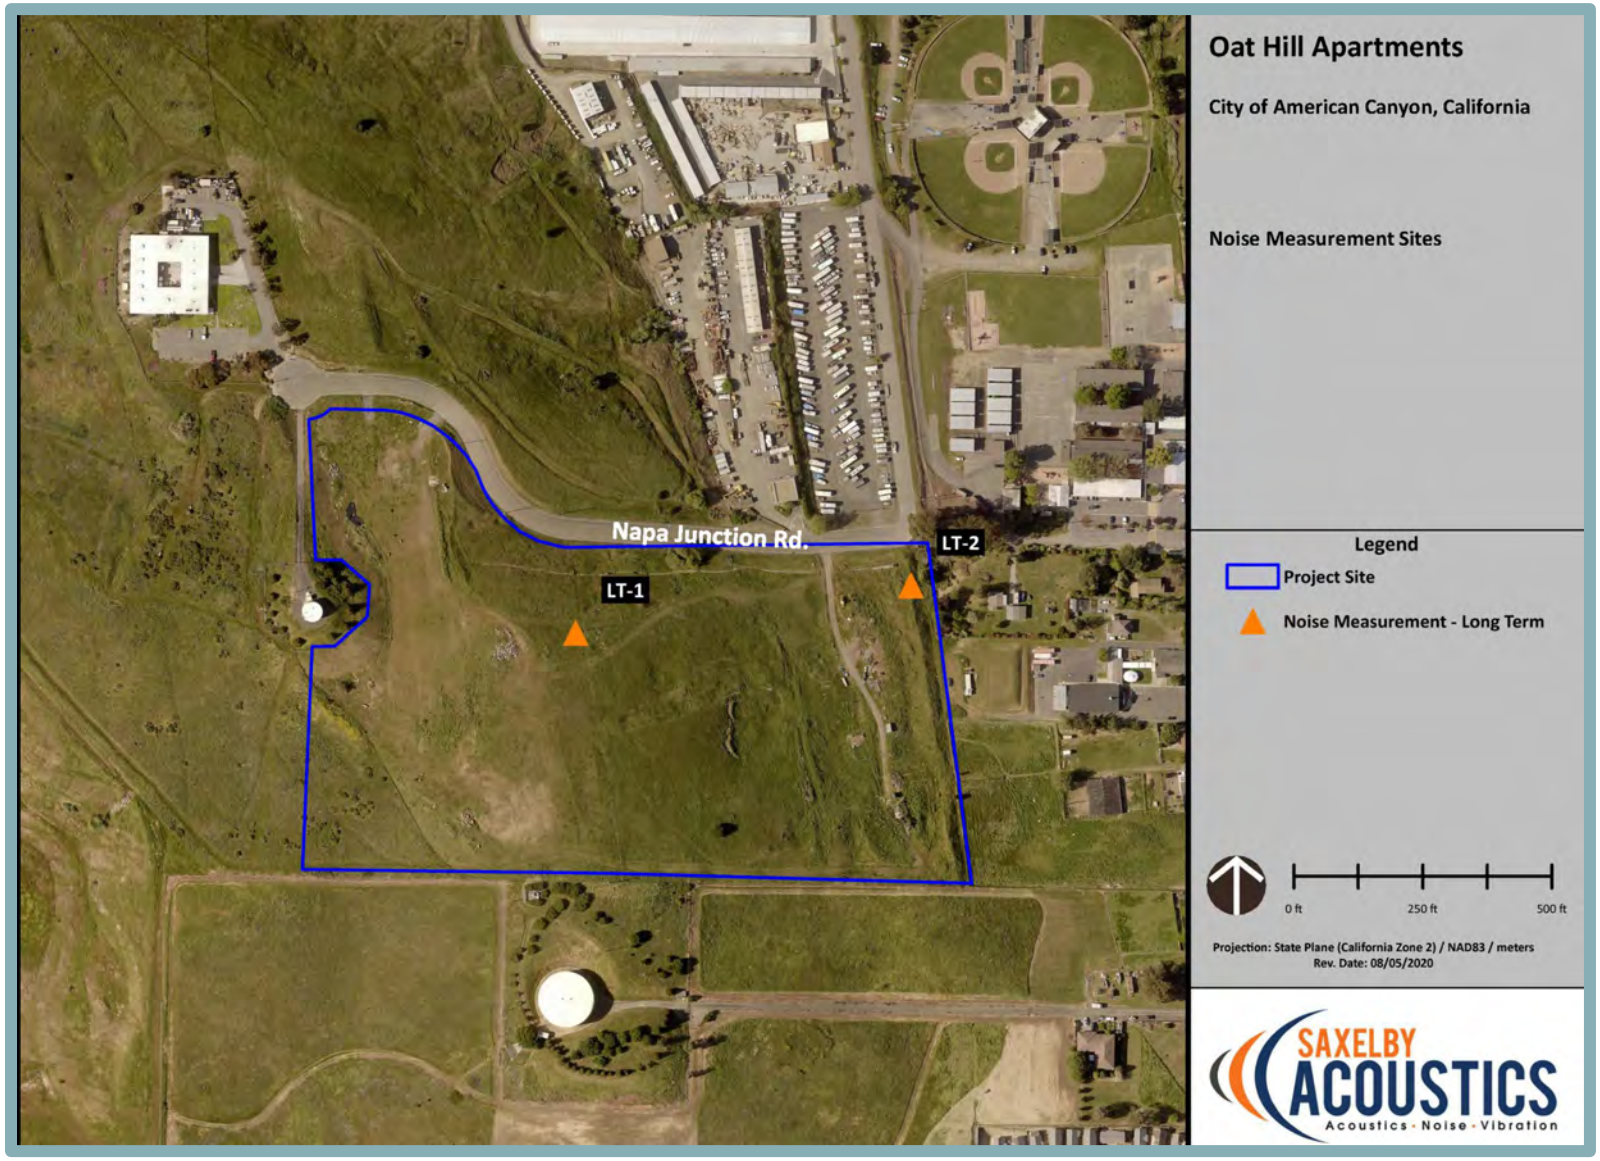

Table 17 shows predicted construction noise levels for development of the proposed project. Based on the table, typical construction activities would generate maximum noise levels up to 90 dB at a distance of 50 feet. Construction activities would be temporary and occur during normal daytime hours.

Table 17
Construction Equipment Noise

Type of Equipment	Maximum Level, dB at 50 feet
Auger Drill Rig	84
Backhoe	78
Compactor	83
Compressor (air)	78
Concrete Saw	90
Dozer	82
Dump Truck	76
Excavator	81
Generator	81
Jackhammer	89
Pneumatic Tools	85

Source: ***Federal Highway Administration, Roadway Construction Noise Model User's Guide, January 2006.***

Noise would also be generated during the construction phase by increased truck traffic on area roadways, including truck traffic associated with heavy material and equipment transport to and from the construction site. Noise increases from truck traffic related to the material movement would be short duration, and likely occur during daytime hours.

The City of American Canyon establishes maximum noise limits for construction activities of 75 dBA between the hours of 7:00 AM and 7:00 PM and 60 dBA between 7:00 PM and 7:00 AM. The nearest residential uses are located approximately 320 feet to the east, as measured from the center of Parcel B. At 320 feet, the maximum construction noise levels would range 60 dBA to 74 dBA L_{max} in the backyards of the nearest residential uses. Construction in Parcel A is farther from the nearest sensitive receptor, and, thus, the Parcel A construction noise experienced by the nearest receptor would be less intense than the noise experienced from Parcel B development. Therefore, noise generated from on-site construction would not significantly impact noise levels in the surrounding environment.

In addition to construction activities within the on-site parcels, off-site improvements would include the Napa Junction Road extension. Construction of the Napa Junction Road extension would occur over a much shorter time and subject to the same maximum noise limits than the residential development. Although off-site improvements would take place near Napa Junction Elementary School, the school is in the process of being relocated due to concerns regarding seismicity in the project region. However, construction of the roadway extension would take place approximately 80 feet north of the nearest residential building. At 80 feet from the nearest sensitive receptor, the maximum construction noise levels associated with the roadway extension may exceed the City's 75 dBA noise limit. Therefore, mitigation would be required to ensure that roadway extension construction activities would not adversely affect noise levels in the surrounding environment.

Although construction activities are temporary in nature and would likely occur during normal daytime working hours, on-site and off-site construction-related noise may disturb sleep at existing noise-sensitive land uses in the vicinity of the project if construction activities were to occur outside the normal daytime hours. Therefore, substantial temporary or permanent ambient noise level impacts in the vicinity of the project that exceed general plan or noise ordinance standards could be considered significant.

Project Operational Noise – Parcel A and Parcel B

The proposed project would primarily generate traffic noise on nearby roadways. Transportation related noise within the project area and at sensitive receptors is discussed in further detail below.

Traffic Noise Increases

As further discussed in Section XVII. Transportation/Traffic, of this IS/MND, the proposed project would increase vehicle trips and noise on local roadways. For the purposes of this analysis, where existing traffic noise levels are less than 60 dB L_{dn} at the outdoor activity areas of noise-sensitive uses, a 5.0 dB L_{dn} increase in roadway noise levels would be considered significant. Table 18 summarizes the modeled traffic noise levels at the nearest sensitive receptors along each roadway segment in the project vicinity.

Table 18
Predicted Traffic Noise Level and Traffic Noise Level Increases

Roadway	Segment	Predicted Exterior Noise Level					
		Existing No Project	Existing Plus Project	Change	Future No Project	Future Plus Project	Change
Napa Junction Road	West of Theresa Avenue	47.3	52.2	4.9	47.8	52.4	4.6
Theresa Avenue	South of Napa Junction Road	60.2	60.5	0.3	60.7	61.0	0.3
Napa Junction Road	East of Theresa Avenue	60.6	61.1	0.5	61.1	61.6	0.4
Theresa Avenue	North of Eucalyptus Drive	62.5	62.8	0.3	63.1	63.4	0.3

Note: All noise levels are predicted at closest sensitive receptors in terms of dBA, L_{dn}.

Source: Saxelby Acoustics, 2020

As shown in Table 18, the maximum traffic noise increase would be approximately 4.9 dB along Napa Junction Road on the segment west of Theresa Avenue. Considering the proposed project would not increase traffic noise by 5.0 dB, the proposed project would not substantially increase traffic noise in the project vicinity.

Traffic Noise at New Sensitive Receptors

Recent rulings by the California Supreme Court have clarified that environmental analyses prepared under CEQA are intended to analyze a project's impact on the environment, rather than the potential impact of the environment on the project. In the case of the proposed project,

potential impacts related to future traffic noise on new sensitive receptors within the project site, such as the proposed residences, would be an example of impacts of the environment on the project. Consequently, impacts of noise on future on-site receptors would not typically be considered a required topic of analysis under CEQA. Nevertheless, the City has elected to prepare an analysis of potential noise-related impacts on future residences within the project site to ensure that the proposed project complies with all City regulations intended to protect the health and welfare of the citizens of American Canyon.

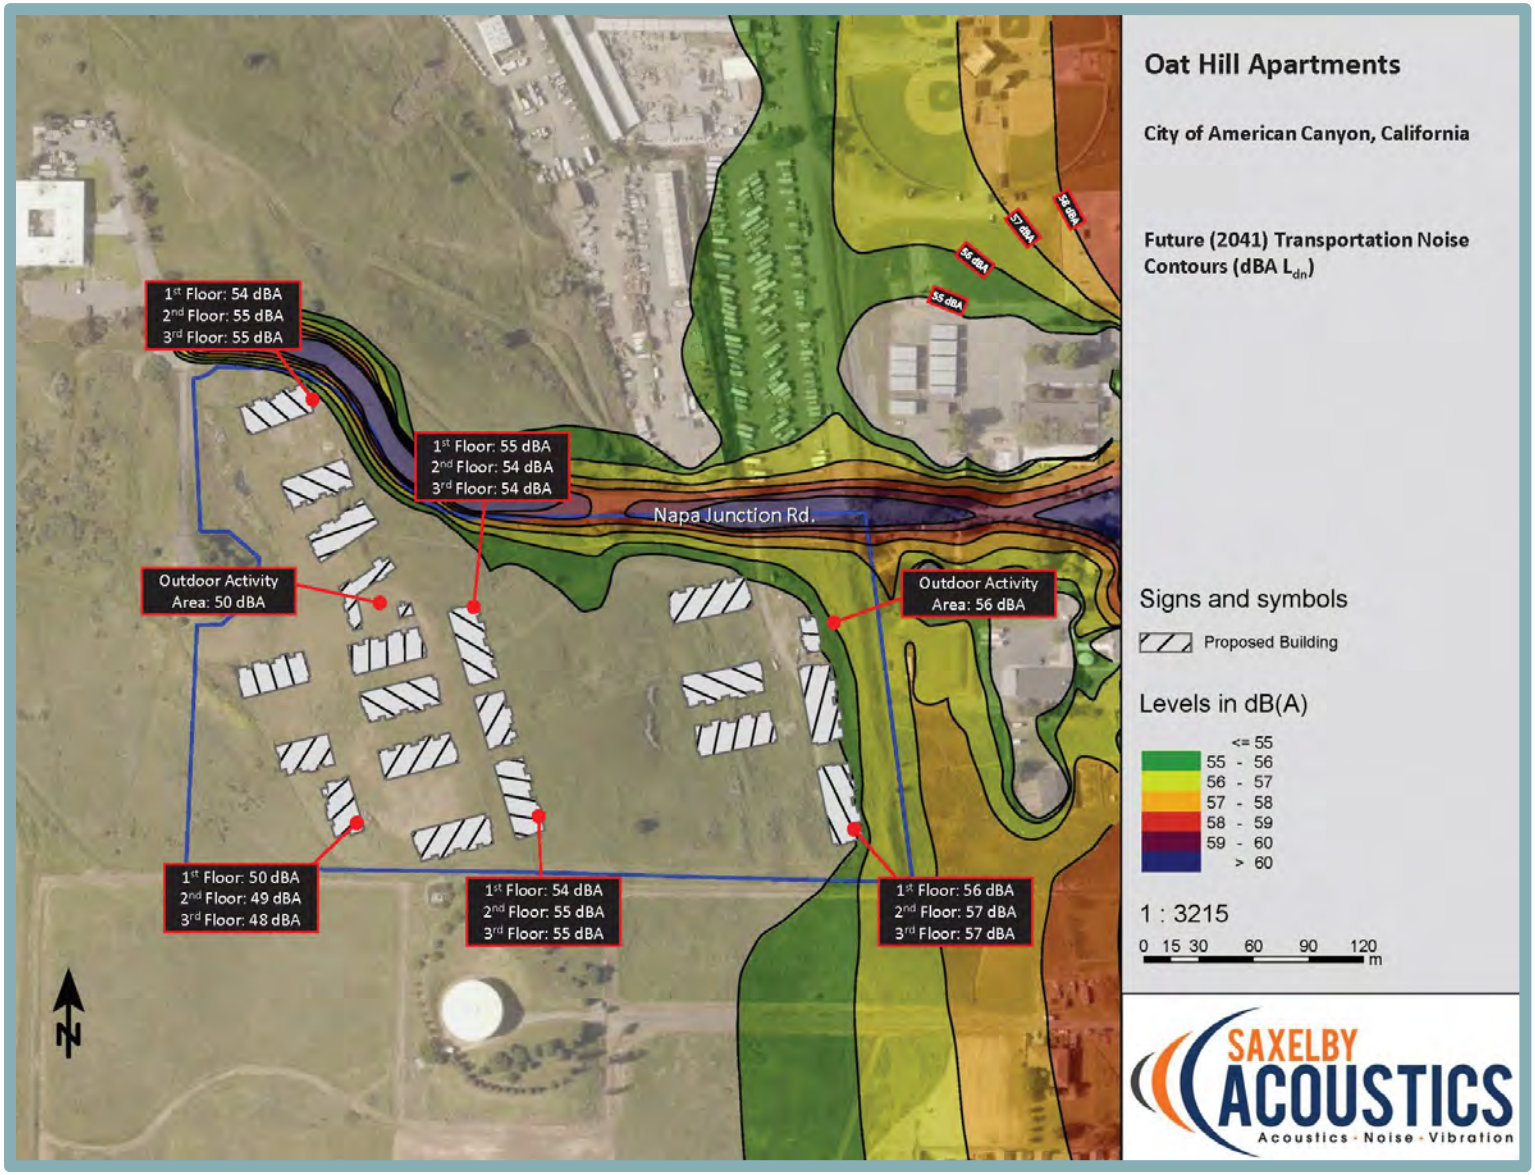
As shown in Figure 19, the proposed project would be exposed to transportation noise levels of up to 56 dB at the outdoor activity area within Parcel B and 50 dB at the outdoor activity area within Parcel A. Therefore, new sensitive receptors would not be exposed to noise levels above the City of American Canyon General Plan standard of 65 dB for outdoor activity areas.

The City of American Canyon General Plan requires that interior noise levels of new residential units be 45 dB or less. Standard residential construction practices typically reduce interior noise 25 dB below the exterior noise. The proposed residences would be exposed to noise levels up to 57 dB within Parcel B and 55 dB within Parcel A. Based on a 25 dB reduction, the interior noise level would be approximately 22 dB within Parcel B and 20 dB within Parcel A. Therefore, interior traffic noise levels would be considered less than significant.

Conclusion

Based on the above, operation of the proposed project would not result in a substantial permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the City's General Plan and the Municipal Code. However, considering temporary construction noise levels in the project area exceed general plan or noise ordinance, or applicable standards of other agencies standards, a ***potentially significant*** impact could occur.

Mitigation Measure(s)



Implementation of the following mitigation measures would reduce the above potential impact to a *less-than-significant* level.

Parcel A and Parcel B

XIII-1. *Prior to the approval of grading permits, the City shall establish the following related to the use of construction equipment:*

- *Construction activities (excluding activities that would result in a safety concern to the public or constructions workers) shall be limited to between the daytime hours of 7:00 AM and 7:00 PM daily;*
  Construction equipment shall be properly maintained and equipped with noise-reduction intake and exhaust mufflers and engine shrouds, in accordance with manufacturers recommendations
- *Equipment engine shrouds shall be closed during equipment operation;*
- *When not in use, motorized construction equipment shall not be left idling for more than five minutes; and*
- *Stationary equipment (power generators, compressors, etc.) shall be located at the furthest practical distance from nearby noise-sensitive land uses or sufficiently shielded to reduce noise-related impacts.*

Figure 19
Future Traffic Noise Contours

Construction noise BMPs shall be included in the grading plans and project improvement plans submitted by the applicant for review and approval by the Community Development Department.

b. **Parcel A and Parcel B**

Similar to noise, vibration involves a source, a transmission path, and a receiver. However, noise is generally considered to be pressure waves transmitted through air, whereas vibration usually consists of the excitation of a structure or surface. As with noise, vibration consists of an amplitude and frequency. A person's perception to vibration depends on their individual sensitivity, as well as the amplitude and frequency of the source and the response of the system which is vibrating.

Vibration is measured in terms of acceleration, velocity, or displacement. A common practice is to monitor vibration in terms of peak particle velocities (PPV) in inches per second (in/sec). Standards pertaining to perception as well as damage to structures have been developed for vibration levels defined in terms of PPV. Human and structural response to different vibration levels is influenced by a number of factors, including ground type, distance between source and receptor, duration, and the number of perceived vibration events. Table 19, which was developed by the California Department of Transportation (Caltrans), shows the vibration levels that would normally be required to result in damage to structures. As shown in the table, the threshold for architectural damage to structures is 0.20 in/sec PPV and continuous vibrations of 0.10 in/sec PPV, or greater, would likely cause annoyance to sensitive receptors.

The primary vibration-generating activities associated with the proposed project would occur during construction when activities such as grading, utilities placement, and paving occur. Table 20 shows the typical vibration levels produced by construction equipment at various distances. The most substantial source of groundborne vibrations associated with project construction would be the use of vibratory compactors. Use of vibratory compactors/rollers could be required during construction of the proposed project. The proposed project would only cause elevated vibration levels during construction, as the proposed project would not involve any uses or operations that would generate substantial groundborne vibration. Although noise and vibration associated with the construction phases of the project would add to the noise and vibration environment in the immediate project vicinity, construction activities would be temporary in nature and are anticipated to occur during normal daytime working hours.

Vibratory compactors/rollers may be used during on-site parking areas and Napa Junction Road extension construction. However, such activity would occur more than 26 feet north and south from the nearest existing structures and the proposed roadway alignment. A 26 foot or greater separation between existing structures and the groundborne vibration source, would be less than 0.2 in/sec PPV, and, thus, would not cause physical damage to structures or annoy nearby sensitive receptors. Therefore, the proposed project would not expose people to or generate excessive groundborne vibration or groundborne noise levels, and no impact would occur.

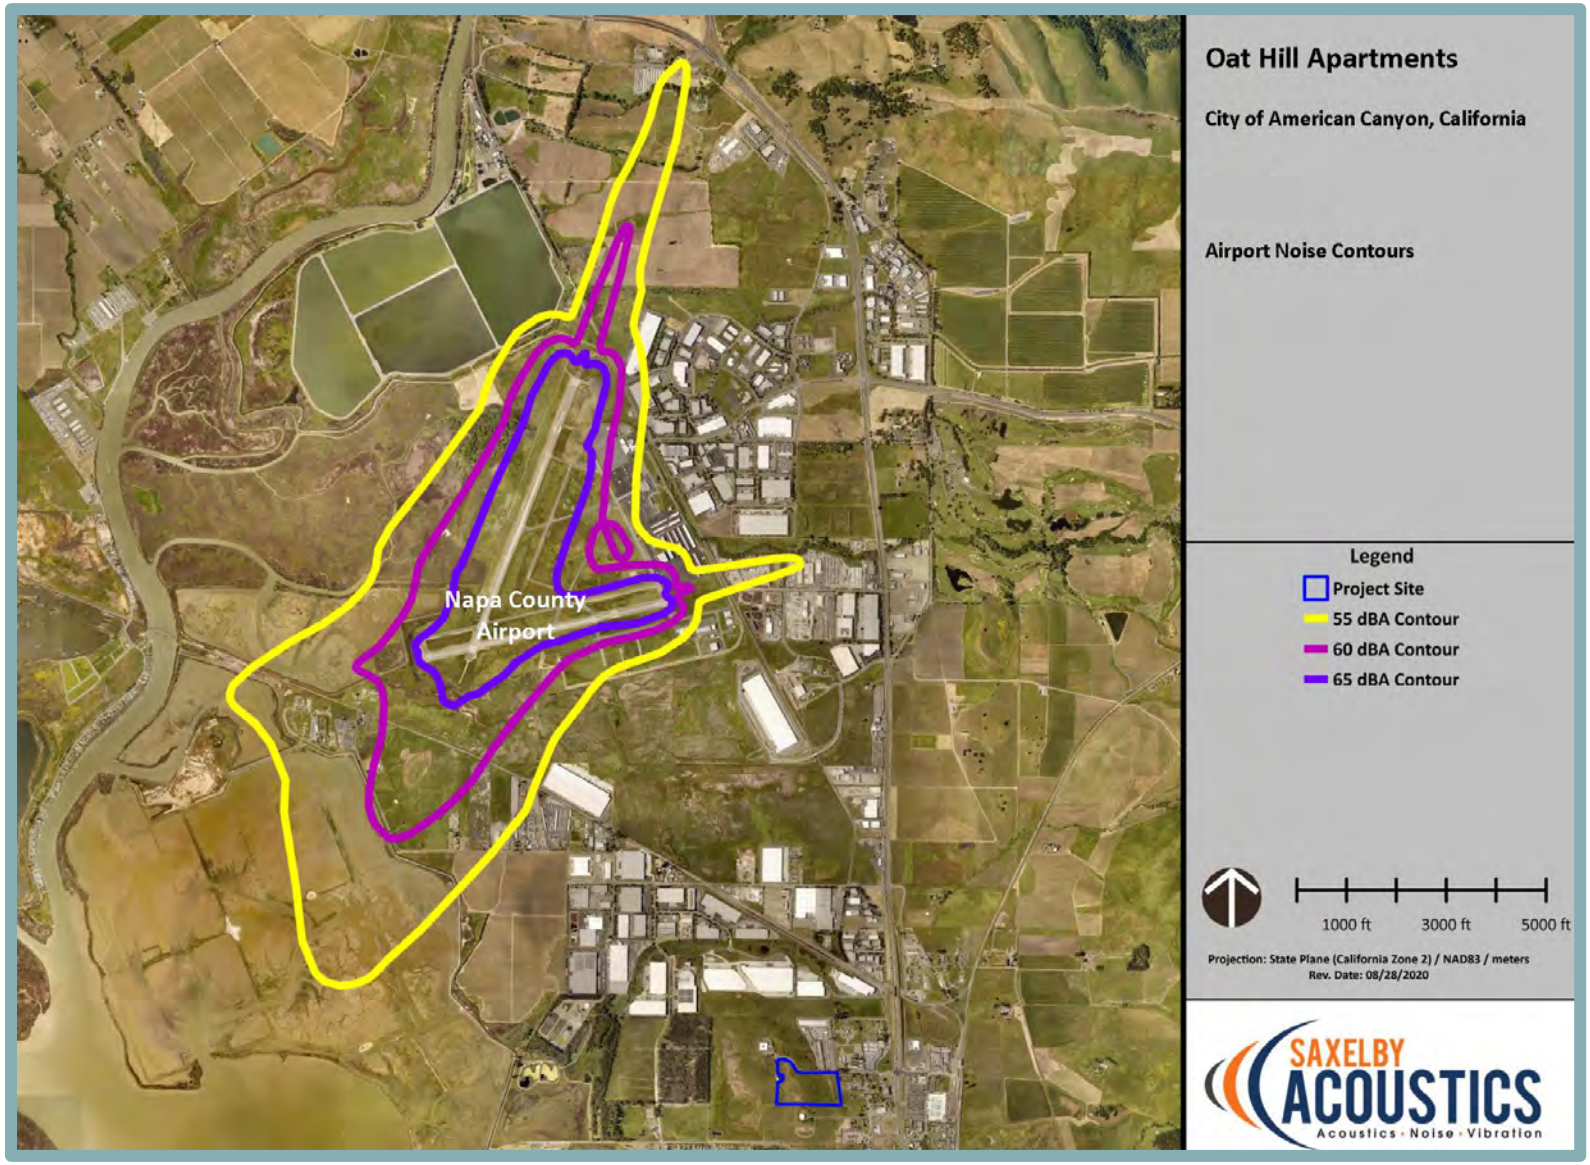
Based on the above, the proposed project would not expose people to or generate excessive groundborne vibration or groundborne noise levels and a ***less-than-significant*** impact would occur.

Table 19
Effects of Vibration on People and Buildings

PPV		Human Reaction	Effect on Buildings
mm/sec	in/sec		
0.15 to 0.30	0.006 to 0.019	Threshold of perception; possibility of intrusion	Vibrations unlikely to cause damage of any type
2.0	0.08	Vibrations readily perceptible	Recommended upper level of the vibration to which ruins and ancient monuments should be subjected
2.5	0.10	Level at which continuous vibrations begin to annoy people	Virtually no risk of "architectural" damage to normal buildings
5.0	0.20	Vibrations annoying to people in buildings (this agrees with the levels established for people standing on bridges and subjected to relative short periods of vibrations)	Threshold at which there is a risk of "architectural" damage to normal dwelling - houses with plastered walls and ceilings. Special types of finish such as lining of walls, flexible ceiling treatment, etc., would minimize "architectural" damage
10 to 15	0.4 to 0.6	Vibrations considered unpleasant by people subjected to continuous vibrations and unacceptable to some people walking on bridges	Vibrations at a greater level than normally expected from traffic, but would cause "architectural" damage and possibly minor structural damage

Source: Caltrans. Transportation Related Earthborne Vibrations. TAV-02-01-R9601. February 20, 2002.

Table 20
Vibration Levels for Various Construction Equipment



Type of Equipment	PPV at 25 feet (in/sec)	PPV at 50 feet (in/sec)
Large Bulldozer	0.089	0.031
Loaded Trucks	0.076	0.027
Small Bulldozer	0.003	0.001
Auger/Drill Rigs	0.089	0.031
Jackhammer	0.035	0.012
Vibratory Hammer	0.070	0.025
Vibratory Compactor/roller	0.210 (less than 0.20 at 26 feet)	0.074

Source: Federal Transit Administration, Transit Noise and Vibration Impact Assessment Guidelines, May 2006.

c. **Parcel A and Parcel B**

The nearest airport to the site is the Napa County Airport, located approximately 1.75 miles north of the site. The site is included in the Napa County Airport Land Use Compatibility Plan. As shown in Figure 20, the project is located approximately 1.4 miles outside of the estimated 55 dB CNEL noise contour. In addition, according to Table 2-1 of the Napa County Airport Land Use Compatibility Plan, multi-family residential land uses exposed to noise levels less than 55 dB CNEL are "Clearly Acceptable." Therefore, the proposed project would not expose people residing or working in the project area to excessive noise levels associated with airports. Thus, ***less-than-significant*** impact would occur.

Figure 20
Airport Noise Contours

XIV. POPULATION AND HOUSING. *Would the project:*	Potentially Significant Impact	Less-Than-Significant with Mitigation Incorporated	Less-Than-Significant Impact	No Impact
a. Induce substantial unplanned population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (e.g., through projects in an undeveloped area or extension of major infrastructure)?	☐	☐	✖	☐
b. Displace substantial numbers of existing people or housing, necessitating the construction of replacement housing elsewhere?	☐	☐	☐	✖

Discussion

a. **Parcel A and Parcel B**

The proposed project would include development of 291 multi-family residential units. Using the Department of Finance's average persons per household value for the City of American Canyon of 3.48, the proposed project's addition of 291 multi-family residential units would result in approximately 1,013 new residents.[26] The Department of Finance estimates the 2019 population of American Canyon, based on the 2010 Census, to be approximately 20,837.[27] The increase in population would constitute a 4.9 percent increase in the City's population. Population growth itself does not constitute an environmental impact; rather, increased demands on the physical environment resulting from population increases are considered environmental impacts. The physical environmental effects associated with development of the proposed project are evaluated throughout this IS/MND.

As discussed in Section XVIII, Utilities and Services Systems, of this IS/MND, adequate utility infrastructure and services exist to meet the additional demands created by the proposed project.As discussed in Section XIV, Public Services, of this IS/MND, public service providers such as local police and fire departments would be capable of accommodating the increased demands of the proposed project.

As a result, the project would have a ***less-than-significant*** impact with respect to substantial unplanned population growth in an area, either directly or indirectly.

b. **Parcel A and Parcel B**

The project site is vacant except for one mobile home occupied by the site's caretaker. As such, the proposed project would not displace a substantial number of existing housing or people, necessitating the construction of replacement housing elsewhere. Therefore, **no impact** would occur.

[26] California Department of Finance. *E-5 Population and Housing Estimates for Cities, Counties, and the State, 2011-2019, with 2010 Benchmark*. Available at: http://www.dof.ca.gov/Forecasting/Demographics/Estimates/E-5/. Accessed August 2020.

[27] *Ibid.*

XV. PUBLIC SERVICES. *Would the project result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for any of the public services:*	Potentially Significant Impact	Less-Than-Significant with Mitigation Incorporated	Less-Than-Significant Impact	No Impact
a. Fire protection?	☐	☐	✖	☐
b. Police protection?	☐	☐	✖	☐
c. Schools?	☐	☐	✖	☐
d. Parks?	☐	☐	✖	☐
e. Other Public Facilities?	☐	☐	✖	☐

Discussion

a. Parcel A and Parcel B

The American Canyon Fire Protection District (ACFPD) provides fire protection and emergency medical services to the project site. ACFPD has one fire station at 911 East Donaldson Way located approximately 1.9 miles southeast of the project site. Ambulance services are provided at 225 James Road, approximately two miles away from the project site. In 2015 the ACFPD received reports of 81 incidents in the City of American Canyon Industrial Area. Of the incidents that the ACFPD responded to, 20 percent of the responses were five minutes or less, which conflicts with the ACFPD's goal of five minutes or faster response times for a majority of incidents. The proposed project complies with local and statewide fire safety regulations. The fire safety features included in project plans ensure the proposed project does not substantially degrade fire response times.

The proposed project would be required to comply with the 2019 California Fire Building Codes with Local Code Amendments and ordinances adopted by the ACFPD, which are intended to reduce the risk of fire hazards on-site. The proposed project would also be subject to the applicable fire service fees required by the City, including a one-time Fire Mitigation Fee of $0.3030/sf in addition to an annual Fire Service Fee. Furthermore, the Napa Junction Road extension would substantially improve emergency vehicle response times to the project site as compared to existing conditions. By providing a more direct route to the project site from SR 29 and Theresa Avenue, emergency vehicles would no longer have to loop around the little league fields to the east of the project site using Lombard Road and Hess Road.

The City requires new development to submit plans demonstrating the project provides "defensible space." Defensible space is considered to provide the greatest level of protection against wildfire spread by reducing combustible fuels (i.e.: vegetation, debris) around buildings. Given that the hillside between Parcel A and Parcel B would remain as open space, the project would include a significant amount of defendable space. Furthermore, because the site has already been planned for urban uses by the City, the proposed project would not result in greater demand for fire protection as compared to what has been anticipated for the site in the City's General Plan.

Given that the proposed project would pay fire mitigation fees, comply with the conditions of approval, and improve circulation, maintaining "defensible space," is consistent with the General

Plan intent to allow the site for urban uses. The proposed project is not expected to cause significant degradation to response times or service ratios, which would induce the need for physically altered or expanded governmental facilities and the project would, therefore, result in a ***less-than-significant*** impact.

b. **Parcel A and Parcel B**

The American Canyon Police Department contracts with the Napa County Sheriff's Department for law enforcement service. Through an agreement with the California Highway Patrol, the Police Department is responsible for traffic related enforcement on SR 29 in conjunction with the Highway Patrol. The police department facility (co-located with the ACFPD facility) is located on Donaldson Way, approximately 1.10 miles from the site. With implementation of the policies in the General Plan, the project would not be expected to create an excess burden of service on existing police staff. Additionally, the proposed project would include increased lighting throughout the site and along the project site frontage. On-site and improved street lighting could deter crime in the project vicinity by increasing nighttime visibility in the area. Furthermore, the proposed project would be subject to fees for civic facilities that would support any increase in service demand created by residents at the site which may require the expansion of police stations.

The proposed project would develop a currently vacant site with new residential development, thereby increasing the current demand for services. However, the proposed project would not induce the need for physically altered or expanded governmental facilities beyond what has been anticipated in the existing General Plan EIR for the existing industrial and residential land use designations of the site. Therefore, the proposed project would result in a ***less-than-significant*** impact.

c. **Parcel A and Parcel B**

The Napa Valley Unified School District (NVUSD), which encompasses the southern portion of Napa County, provides educational services to the City of American Canyon. The proposed project would result in 291 multi-family residential units, which would increase the demand for educational services in the area. The NVUSD's generation factors and enrollment estimate for each specific grade level include: 0.4 students per household for kindergarten through 6th grade; 0.1 students per household for 6th grade through 7th grade; and 0.2 students per household for 9th grade through 12th grade. Based on the foregoing student generation factors, the proposed project would result in approximately 117 kindergarten through 6th grade students, approximately 30 6th grade and 7th grade students, and approximately 59 9th grade through 12th grade students, for a total of 206 students. NVUSD charges residential development fees of $4.08 per square foot for dwelling units. According to Government Code Section 65995 et. seq. and Education Code Section 17620 et. seq., payment of applicable development fees is sufficient to reduce impacts associated with an increase in student from the project. Furthermore, the NVUSD reports that the district's enrollment numbers have been steadily declining over the last decade, and are anticipated to continue dropping.[28] Therefore, the proposed project would result in a ***less-than-significant*** impact regarding an increase in demand for schools.

d,e. **Parcel A and Parcel B**

[28] Napa Valley Unified School District. *NVUSD Districtwide Financial Update*. Available at: http://nvusd-ca.schoolloop.com/news/view?id=1559644342111. June 4, 2019.

The City of American Canyon provides and maintains City-owned public parks and recreational opportunities within the City. These opportunities are facilitated by recreational centers, and various types of parks. The maintenance program consists of standard inspection and service of all buildings and parklands. Additionally, the City provides several community activities and events throughout the year. The programs are offered to all residents of the City and surrounding areas and include recreational classes and trips, special community events, and senior health assessment programs.

The proposed project would develop 291 multi-family residential units and would, therefore, result in the addition of residents to the City. Because the project would introduce new residents and increase the demand for recreational facilities, the project applicant would pay the City's parks and recreation impact fees as required by Section 15.08.050 of the City's Municipal Code, or donate parkland and/or improvements to the City.

Parcel A would be developed with a community pool, loop trail, outdoor seating area, and a recreation center. Similarly, Parcel B would include development of a tot lot, outdoor lounge and viewing area, and a dedicated recreation center. However, the proposed project would not dedicate on-site parks, and, thus, would be subject to payment of the City's parks and recreation impact fee as required by Section 15.08.050 of the City's Municipal Code. Additionally, the proposed project would be subject to development fees to reduce impacts on other public facilities. Therefore, with payment of the City's parks and recreation impact fee and development fees, the project would result in a ***less-than-significant*** impact on parks and other public facilities.

XVI. RECREATION. *Would the project:*	Potentially Significant Impact	Less-Than-Significant with Mitigation Incorporated	Less-Than-Significant Impact	No Impact
a. Would the project increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated?	☐	☐	✖	☐
b. Does the project include recreational facilities or require the construction or expansion of recreational facilities which might have an adverse physical effect on the environment?	☐	☐	✖	☐

Discussion

a,b. **Parcel A and Parcel B**

The City of American Canyon provides and maintains the parks and recreational opportunities within the City. These opportunities are facilitated by recreational centers, and various types of parks. The maintenance program consists of standard inspection and service of all buildings and parklands. Additionally, the City provides several community activities and events throughout the year. The programs are offered to all residents of the City and surrounding areas and include recreational classes and trips, special community events, and senior health assessment programs.

The proposed project would develop 291 multi-family residential units and would, therefore, result in the addition of residents to the City and a potential increase in the use of the existing parks and/or the demand for new neighborhood or community parks and recreation facilities in the area. However, the proposed project would include on-site recreational amenities, including a community pool, a community loop trail, a tot lot, outdoor seating and viewing areas, and a recreational building located within each parcel. While the proposed project would increase population and subsequent demand on recreational facilities, the on-site recreational facilities included in the proposed project would help to offset an increase in demand.

In addition, the project would pay the City's parks and recreation impact fees as required by Section 15.08.050 of the City's Municipal Code or donate parkland and/or improvements to the City. The City's parks and recreation impact fee is $5,740.99 per residential unit. Therefore, the proposed project would result in a ***less-than-significant*** impact on recreation.

XVII. TRANSPORTATION. *Would the project:*	Potentially Significant Impact	Less-Than-Significant with Mitigation Incorporated	Less-Than-Significant Impact	No Impact
a. Conflict with a program, plan, ordinance, or policy addressing the circulation system, including transit, roadway, bicycle, and pedestrian facilities?	☐	✖	☐	☐
b. Conflict or be inconsistent with CEQA Guidelines section 15064.3, subdivision (b)?	☐	✖	☐	☐
c. Substantially increase hazards due to a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment)?	☐	☐	✖	☐
d. Result in inadequate emergency access?	☐	☐	✖	☐

Discussion

a. **Parcel A and Parcel B**

The following discussion is based primarily on a Traffic Impact Study (TIS) prepared for the proposed project by W-Trans (see Appendix G).[29] The TIS includes a discussion of the proposed project's potential impacts on transit, bicycle, and pedestrian facilities which are discussed in further detail below. As a result of Senate Bill (SB) 743, discussed further below, local jurisdictions may not rely on vehicle Level of Service (LOS) and similar measures related to delay as the sole basis for determining the significance of transportation impacts under CEQA. However, existing LOS at the study roadway facilities is presented herein to comply with General Plan LOS policies.

Study Intersections

As part of the TIS, W-Trans evaluated transportation conditions at the following three study intersections (see Figure 21):

1. Napa Junction Road/Theresa Avenue
2. Napa Junction Road/Lombard Road (southbound approach)
3. Eucalyptus Drive/Theresa Avenue

W-Trans evaluated transportation conditions at all three existing intersections that would serve the project site. Transportation conditions were assessed during the AM (7:00 AM - 9:00 AM) and PM (4:00 PM - 6:00 PM) peak periods for a typical weekday with clear weather. The study intersections were selected in consultation with City staff based on the anticipated trip generation and travel pattern for project trips.

Study Scenarios

Conditions at each intersection were analyzed under the following scenarios:

- **Existing Conditions** – Provides an evaluation of current operations based on existing traffic volumes during the AM and PM peak periods;
- **Existing Plus Project Conditions** – Similar to Existing Conditions, but with the net new trips that would be generated by the project;

[29] W-Trans. *Traffic Impact Study for the Oat Hill Multi-Family Housing Project.* August 10, 2020.

Figure 21
Study Intersection Locations

Source: W-Trans, 2020.

- **Future Conditions** – Future peak hour volumes were developed based on projections contained in the build-out analysis prepared for the Napa Junction III Analysis Report. The Future Conditions scenario represents cumulative traffic conditions expected upon build-out of the land uses identified in the City of American Canyon General Plan.
- **Future Plus Project Conditions** – Similar to Future Conditions, but including vehicle trips generated by the project. The Future Plus Project Conditions impact analysis includes other projects completed within a similar timeframe as the project.

LOS Standards

Operations at each study intersection were evaluated based on LOS, a qualitative measure that describes operational conditions related to traffic stream and perceptions by motorists and passengers. The LOS generally describes conditions in terms of speed and travel time, delays, freedom to maneuver, traffic interruptions, comfort, convenience, and safety. Operational levels of service are given letter designations from A to F, with A representing the best operating conditions and F representing the worst conditions.

The City of American Canyon General Plan Circulation Element specifies minimum level-of-service standards for all streets and intersections in the City's jurisdiction. In section 4.1.6, the City establishes the following performance standards for acceptable LOS:

> Achieve and maintain a Multimodal LOS D or better for roadways and intersections during peak hours where possible for as long as possible. However, recognizing that LOS D may not be achievable or cannot be maintained upon full buildout of the General Plan, due to traffic generated from sources beyond control of the City, the City Council shall have the discretion to only require feasible mitigation measures that may not achieve LOS D, but will reduce the impact of any development use or VMT planned for in the Land Use Element of the General Plan. The locations that may not achieve or maintain LOS D are as follows and will be exempt from the LOS D policy:
>
> - SR 29 through the City;
> - American Canyon Road from SR 29 to Flosden Road-Newell Drive; and
> - Flosden Road south of American Canyon Road.

Project Trip Generation and Distribution

Project vehicle trip generation rates were obtained from the Institute of Transportation Engineers (ITEs) Trip Generation Manual (10th Edition). Based on the ITE rates, the proposed project is estimated to generate ~~660~~ 1,583 daily vehicle trips, including 105 AM peak hour and 128 PM peak hour trips (see Table 21).

The pattern used to allocate new project trips to the street network was based on familiarity with the area and the surrounding region, as well as likely destinations for future residents of the project.

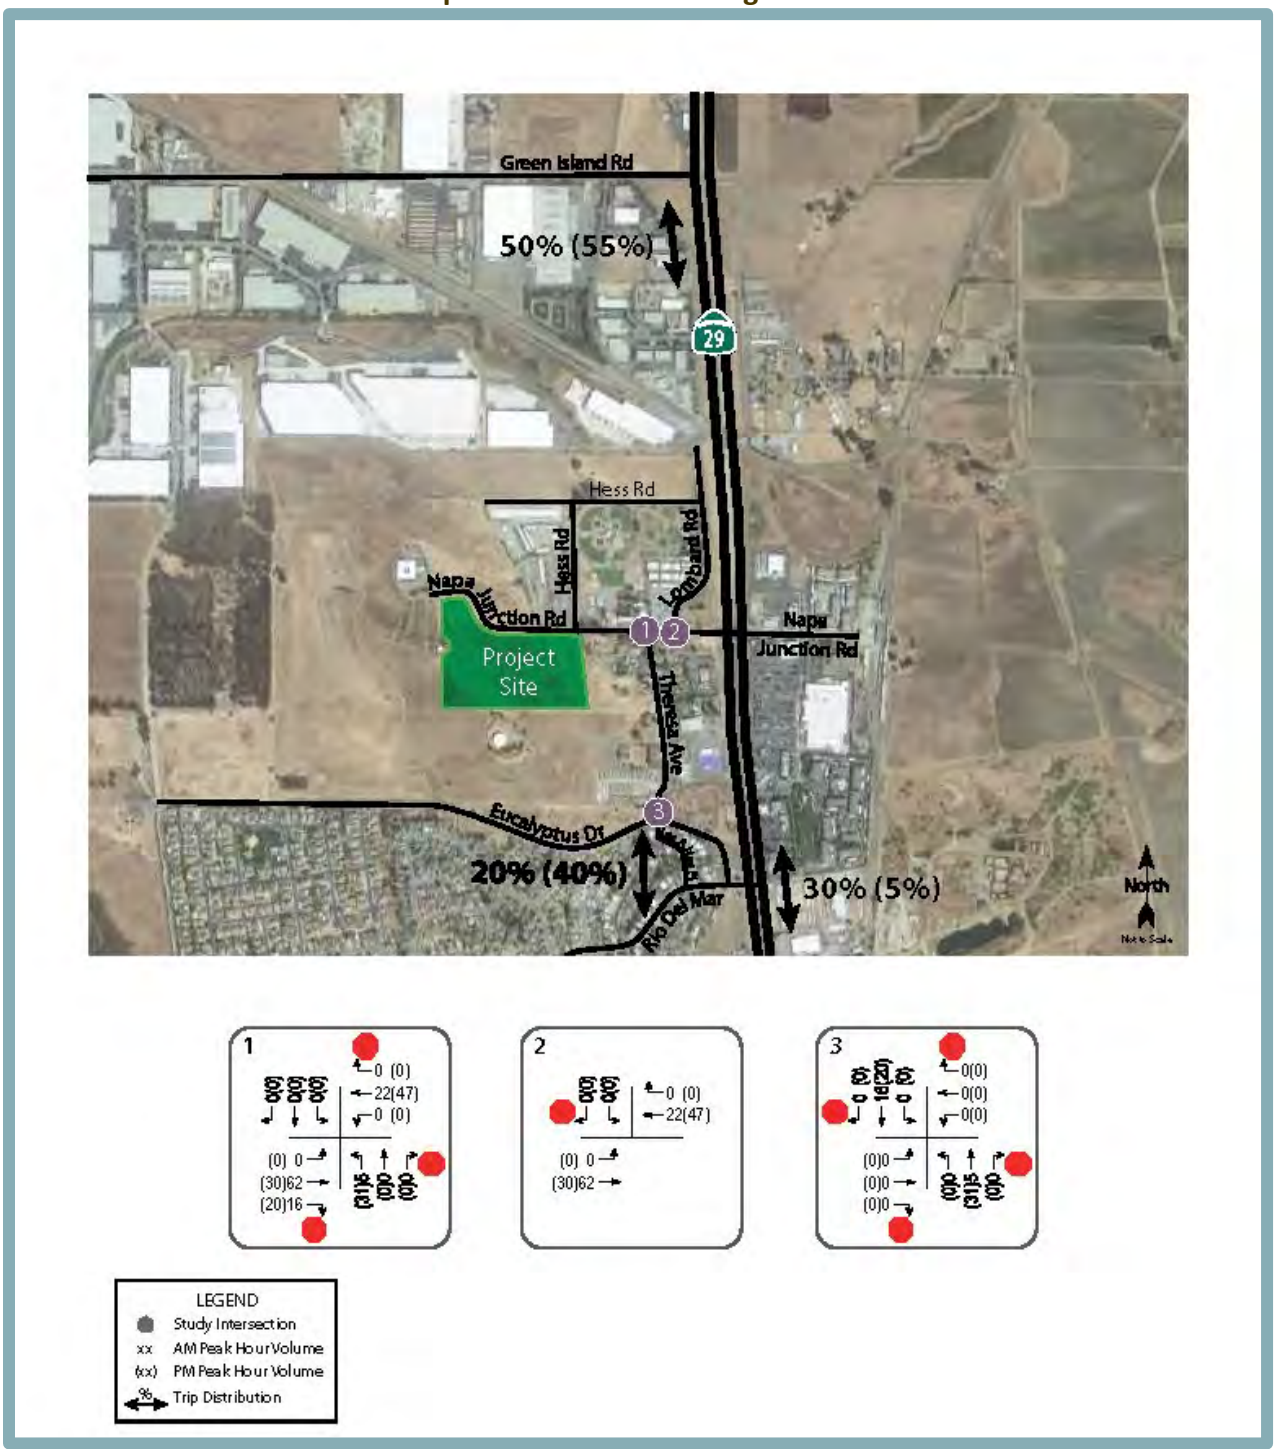
Table 21
Project Vehicle Trip Generation

Land Use (ITE Code)	Size	Daily Vehicle Trips		AM Peak Hour Vehicle Trips				PM Peak hour Vehicle Trips			
		Rate	Trips	Rate	In	Out	Total	Rate	In	Out	Total
Multi-Family Housing (Mid-Rise)	291 units	5.44	1,583	0.36	27	78	105	0.44	78	50	128

Source: W-Trans, 2020.

Figure 22 illustrates the distribution of project trips on the study intersections and nearby roadway segments.

Existing Plus Project Conditions



Adding project trips to each study intersection, Table 22 summarizes the peak hour study intersection LOS under Existing Conditions without the proposed project and Existing Plus Project conditions. As shown in Table 22, all of the study intersections would operate at an acceptable LOS under Existing Plus Project Conditions.

The addition of project traffic would slightly decrease average peak hour delay at the Napa Junction Road/Lombard Road intersection. While a reduction in peak hour delay appears counterintuitive in light of the addition of project traffic, this reduction in delay occurs when trips are added to underutilized movements or when current delays are below the intersection average, thus resulting in a better balance between approaches and lower overall average delay. The proposed project would add traffic solely to the eastbound and westbound through movements at this location, rather than the southbound through movements. The eastbound and westbound approaches do not have delays and are therefore below average for the intersection as a whole, which results in a slight reduction in the overall average delay. The conclusion could incorrectly be drawn that intersection operations would improve with the proposed project; however, the more appropriate conclusion would be that project trips are expected to make use of excess capacity, so motorists would experience little, if any, change in conditions as a result of the proposed project. Thus, implementation of the proposed project would not exceed the City's thresholds for intersection operations, and, thus, would not create a conflict with an adopted plan related to the City's circulation system.

Future Plus Project Conditions

Table 23 summarizes Future study intersection peak hour LOS conditions without the Proposed Project and with Future Plus Project. As shown in Table 23, all of the study intersections would operate at an acceptable LOS under Future Plus Project Conditions. Although not included in the study area of the TIS, the section of SR 29 near Napa Junction Road has been documented in other analyses as operating unacceptably under Existing Conditions and is expected to worsen by the Future Condition horizon year of 2040. The proposed project would be expected to add 77 new trips to SR 29 during the critical evening peak hour.

Source: W-Trans, 2020.

The *City of American Canyon – Broadway District Specific Plan Program EIR* and the General Plan states that SR 29 is planned to have three travel lanes in each direction through American Canyon. In addition, several multimodal improvements to State Route 29 are proposed near Napa Junction Road as described within the State Route 29 Comprehensive Multimodal Corridor Plan, including the extension and addition of shared use paths for bicycling and walking, eight-foot shoulders, and intersection improvements to South Kelly Road, Green Island Road, and North Kelly Road. Multimodal improvements near the project site would provide safer routes for bicycle and pedestrian crossing, thus encouraging the use of alternative modes of transportation and reducing the impact of project generated traffic on SR 29. Parallel capacity improvements and integrated corridor management systems, such as traffic monitoring detectors, CCTV cameras, and variable message signs, would take place throughout the City of American Canyon to further improve circulation along the SR 29 corridor. As mandated by the City, the project applicant would be required to pay a proportional share fee toward the cost of this planned future infrastructure improvement to the SR 29 corridor. Furthermore, it should be noted that the General Plan EIR

Circulation Element EIR adopted a Statement of Overriding Consideration for impacts to SR-29 LOS caused by buildout of the General Plan.

Based on the above, implementation of the proposed project would not exceed the City's thresholds for intersection operations, and, thus, would not create a conflict with an adopted plan related to the City's circulation system.

Pedestrian, Bicycle, and Transit Facilities

The proposed project's potential impacts related to pedestrian, bicycle, and transit facilities are discussed below.

Pedestrian Facilities

Pedestrian facilities include sidewalks, crosswalks, pedestrian, signal phases, curb ramps, curb extensions, and various streetscape amenities, such as lighting and benches. In general sidewalk coverage in the project area is limited; however, connectivity to points of interest is provided.

Sidewalks are provided along the south side of Napa Junction Road between SR 29 and about 100 feet west of Theresa Avenue; however large gaps in sidewalk coverage are present on the north side of Napa Junction Road. Continuous sidewalks are also provided on the west side of Theresa Avenue from Eucalyptus Drive to Napa Junction Road. Sidewalks are not provided on the east side of the street, and sidewalks are not currently provided along the project site frontage. The proposed project would include a community loop within Parcel A and a sidewalk along the project frontage would be provided. The provision of a sidewalk along the frontage would encourage pedestrian access to the surrounding commercial uses to the east. However, the provision of a sidewalk along the extension of Napa Junction Road is not identified on the site plan. Therefore, in order to promote pedestrian connectivity to surrounding uses, the proposed sidewalk along the project frontage should extend to the proposed extension of Napa Junction Road to connect with the existing terminus of the sidewalk on the south side of Napa Junction Road near the elementary school crossing.

Bicycle Facilities

According to the TIS, bicyclists currently ride in the roadways and/or on sidewalks in the project area, as dedicated bike facilities do not currently exist. However, the Napa Countywide Bicycle Plan includes a number of planned bike facilities for the project area. Specifically, a Class I Multi-Use Path is planned to be developed from Wetlands Edge Road to Theresa Avenue and be approximately 0.80-mile in length. Another Class I Multi-Use Path is planned to be developed from Donaldson Way to Paoli Road and be approximately 1.06 miles in length. In addition, the *Napa Countywide Bicycle Plan* anticipates three Class II bike lanes to be developed along Napa Junction Road, Lombard Avenue, Theresa Avenue, and the *American Canyon Bicycle Plan* anticipates the development of a Class II bike lane along Hess Road.

Based on the above, the existing and planned bike facilities in the project area are generally adequate to serve the proposed project. However, the project does not include spaces for residents to store bicycles. As such, the TIS recommends including space for bicycle storage either on balconies or other outside spaces dedicated to each housing unit, in garages, or other storage spaces for each unit, or through provision of bike racks.

Considering the above, the proposed project may conflict with adopted programs, plans, ordinances, or policies addressing bicycle facilities and a potentially significant impact would occur related to bicycle facilities.

Transit Facilities

The Napa County Transportation and Planning Agency (NCTPA) includes transit systems that provide service for local residents and visitors within the City. American Canyon Transit (ACT) is a bus service that provides a 90-minute roundtrip route through the City on weekdays between 7:30 AM and 6:00 PM. The ACT system has two morning and afternoon routes that stop at the American Canyon City Hall, approximately 0.20-mile from the project site. In the study area, ACT bus stops are located at the Napa Junction Wal-Mart center, the intersection at Napa Junction/Theresa Avenue, and the intersection at Rio Del Mar/Eucalyptus Drive. Napa Valley Transit (VINE) is another transit service that provides bus routes to several cities in Napa County. For American Canyon, VINE offers bus stops within a mile of the project site. One route stops at SR-29/Rio Del Mar and another route stops at SR 29/Crawford Way.

In addition, dial-a-ride, also known as paratransit, or door-to-door service, is available for individuals who are unable to independently use the transit system due to a physical or mental disability. VINE Paratransit is designed to serve the needs of individuals with disabilities within City of American Canyon and the greater City of American Canyon area.

Based on the above, future residents at the project site would have access to transit services. The project would not conflict with any existing or planned transit facilities. Thus, the proposed project would not conflict with a program, plan, ordinance, or policy addressing transit service and a less-than-significant impact would occur.

Conclusion

Based on the above, the proposed project would not conflict with a program, plan, ordinance, or policy addressing the circulation system, including transit, roadway, and bicycle, facilities. However, the proposed project could conflict with a program, plan, ordinance, or policy addressing the circulation system related to bicycle and pedestrian facilities. Thus, a ***potentially significant*** impact could occur.

Mitigation Measure(s)

Implementation of the following mitigation measure would reduce the above potential impact to a *less-than-significant* level.

Parcel A and Parcel B

XVII-1 *Prior to issuance of grading permits, the project applicant shall submit Improvement Plans that reflect the recommendations included in the Traffic Impact Study prepared by W-Trans. Specifically, the Improvement Plans shall reflect a pedestrian path or sidewalk between the project site and the existing terminus of the sidewalk on the south side of Napa Junction Road near the elementary school crossing. The Improvement Plans shall also reflect space for bicycle storage provided either on balconies or other outside spaces dedicated to each housing unit, in garages or other storage spaces for each unit, or through provision of bike racks. The recommendations made by W-Trans shall be*

confirmed by the City's Public Works Department and/or the City Engineer prior to issuance of grading permits.

b. **Parcel A and Parcel B**

Section 15064.3 of the CEQA Guidelines provides specific considerations for evaluating a project's transportation impacts. Pursuant to Section 15064.3, analysis of VMT attributable to a project is the most appropriate measure of transportation impacts. Other relevant considerations may include the effects of the project on transit and non-motorized travel. A lead agency may analyze a project's VMT qualitatively based on the availability of transit, proximity to destinations, etc. The following analysis is based on the report prepared by W-2 Trans, which evaluated the project's potential VMT impact qualitatively.

Given the rural land use pattern throughout Napa County, the project VMT is expected below the countywide average per capita because the project site is proximate to public transit and nearby commercial, industrial and civic land uses. In addition, the Napa Junction Road extension would shorten travel distances between the proposed project and surrounding uses, and reduce pedestrian distance to shopping and transit thus reducing the Project's VMT. As noted in question 'a' above, the project site would be served by the Napa Valley Transportation Authority (ACT system), which provides fixed route bus service in the City. The ACT system has two morning and afternoon routes that stop at the southwest corner Napa Junction Road/SR-29 intersection, approximately 0.20-mile from the project site. Furthermore, development of the proposed project would increase connectivity to the nearby neighborhoods by constructing new sidewalks along the project site frontage. By providing pedestrian and bicycle connectivity between the proposed residential units and the surrounding neighborhoods, and with implementation of the transportation demand management measures, the VMT associated with the proposed project would be expected to be below the countywide average VMT per capita. However, to ensure VMT is reduced to the greatest extent possible, transportation demand management measures would be required. Therefore, the proposed project could conflict or be inconsistent with CEQA Guidelines Section 15064.3(b), and a ***potentially significant*** impact could occur.

Mitigation Measure(s)

Implementation of the following mitigation measure would reduce the above potential impact to a *less-than-significant* level.

Parcel A and Parcel B

XVII-2 *Prior to the first residential occupancy, the applicant shall implement the following TDM measures, as described in the TIS:*

- *Unbundled Parking;*
- *Free Transit Passes;*
- *Secure Bicycle Parking and Maintenance Tools;*
- *Tele-Work/Compressed Schedules;*
- *Carpooling and Ride-Matching Program;*
- *Transportation Coordinator;*
- *Welcome Packet for New Residents; and*
- *Monitoring of Program Performance.*

Proof of implementation of the TDM measures shall be submitted to the City's Community Development Department for review and approval.

c,d. **Parcel A and Parcel B**

Access to the project site is proposed from two new connections to Napa Junction Road, one approximately 200 feet west of Hess Road and the other from the cul-de-sac at the western terminus of Napa Junction Road. With construction of the proposed project, a new section of Napa Junction Road would be constructed between Hess Road and Theresa Avenue. The new Napa Junction Road connection would result in a more direct route to the project site from SR 29 and other areas of the City. The new roadway segment would be designed and constructed to meet currently applicable codes and requirements and to ensure that the roadway would not result in any increased hazards.

An emergency vehicle access connection is proposed to link Parcel A and Parcel B so that residents would be able to use the other parcel's connection to Napa Junction Road, should one driveway be compromised in an emergency situation. All interior drive aisles and parking stalls would comply with City design standards, and, thus, on-site circulation would be expected to function acceptably for emergency response vehicles. In addition, the new Napa Junction Road extension would reduce emergency response times by providing a more direct route to the project site from SR 29 and other areas of the City than the current Lombard Road and Hess Road travel route. As such, the new street connection would improve emergency access and response times to the western segment of Napa Junction Road.

Conclusion

Based on the above, the proposed project would not substantially increase hazards due to a geometric design feature or incompatible uses, or result in inadequate emergency access, and a ***less-than-significant*** impact would occur.

XVIII. TRIBAL CULTURAL RESOURCES. *Would the project cause a substantial adverse change in the significance of a tribal cultural resource, defined in Public Resources Code section 21074 as either a site, feature, place, cultural landscape that is geographically defined in terms of the size and scope of the landscape, sacred place, or object with cultural value to a California Native American Tribe, and that is:*	Potentially Significant Impact	Less-Than-Significant with Mitigation Incorporated	Less-Than-Significant Impact	No Impact
a. Listed or eligible for listing in the California Register of Historical Resources, or in a local register of historical resources as defined in Public Resources Code section 5020.1(k).	☐	✖	☐	☐
b. A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Public Resources Code Section 5024.1. In applying the criteria set forth in subdivision (c) of Public Resources Code Section 5024.1, the lead agency shall consider the significance of the resource to a California Native American tribe.	☐	✖	☐	☐

Discussion

a,b. **Parcel A and Parcel B**

As discussed in Section V, Cultural Resources, of this IS/MND, a records search of the CHRIS was performed on August 11, 2020 by the NWIC for cultural resource site records and survey reports within the project area. The CHRIS search indicated a moderate to high potential for unrecorded historic resources on the project site. In addition, a search of the NAHC Sacred Lands File returned positive results for the potential of the project site to contain Tribal Cultural Resources.[30] Because the NAHC Sacred Lands File search results indicated that the project site could contain Tribal Cultural Resources, a project notification letter was sent to the Mishewal-Wappo Tribe of Alexander Valley; however, responses from the tribe have not been received.

As part of the proposed off-site improvements, the Napa Junction Road extension would disturb soils. However, the Napa Junction Road extension would be located on the same alignment as an existing access road for the Napa Junction Magnet Elementary School. The proposed Napa Junction Road extension has not been previously analyzed for tribal cultural resources. Thus, the potential for tribal cultural resources to occur within the proposed Napa Junction Road extension is unknown.

In compliance with AB 52 (Public Resources Code Section 21080.3.1), a project notification letter was distributed to the chairpersons of the Cortina Band of Indians, Federated Indians of Graton Rancheria, Middletown Rancheria of Pomo Indians, Mishewal-Wappo Tribe of Alexander Valley, and Yocha Dehe Wintun Nation. The letters were distributed on September 9, 2020. Requests to consult were not received within the 30-day response period.

[30] Native American Heritage Commission. *Oat Hill Multi-Family Project, Napa County.* August 6, 2020.

Based on previous disturbance of the project site and the lack of identified tribal cultural resources, tribal cultural resources are not expected to occur on-site. Nevertheless, the possibility exists that development of the proposed project could result in a substantial adverse change in the significance of a tribal cultural resource if previously unknown tribal cultural resources are uncovered during grading or other ground-disturbing activities. Thus, a ***potentially significant*** impact to tribal cultural resources could occur.

Mitigation Measure(s)

Implementation of the following mitigation measure would reduce the above potential impact to a *less-than-significant* level.

Parcel A and Parcel B

XVIII-1. Implement Mitigation Measures V-1 and V-2.

XIX. UTILITIES AND SERVICE SYSTEMS. *Would the project:*	Potentially Significant Impact	Less-Than-Significant with Mitigation Incorporated	Less-Than-Significant Impact	No Impact
a. Require or result in the relocation or construction of new or expanded water, wastewater treatment, or storm water drainage, electric power, natural gas, or telecommunications facilities, the construction or relocation of which could cause significant environmental effects?	☐	✖	☐	☐
b. Have sufficient water supplies available to serve the project and reasonably foreseeable future development during normal, dry, and multiple dry years?	☐	✖	☐	☐
c. Result in a determination by the wastewater treatment provider which serves or may serve the project that it has adequate capacity to serve the project's projected demand in addition to the provider's existing commitments?	☐	✖	☐	☐
d. Generate solid waste in excess of State or local standards, or in excess of the capacity of local infrastructure, or otherwise impair the attainment of solid waste reduction goals?	☐	☐	✖	☐
e. Comply with federal, state, and local management and reduction statutes and regulations related to solid waste?	☐	☐	✖	☐

Discussion

a-c. **Parcel A**

Brief discussions of the water, sewer service, and stormwater drainage facilities that would serve Parcel A are included below.

Water

The City of American Canyon supplies water service to residential, commercial, and industrial users within the City and the extraterritorial service area. The City's water distribution system consists of various-sized pipelines, including major (16-inch) pipelines and smaller pipelines (four- to eight-inch) that connect to the outer areas of the City. The majority of the existing service area is served by a two-million-gallon Oat Hill storage reservoir. This reservoir is located on Medeiros Lane, approximately 200 feet south of Parcel A.

Water service for the proposed project would be provided by the City. The project would connect to an existing eight-inch water line on Napa Junction Road with a new eight-inch water line. The eight-inch water line would be routed to a new pump station, located in the southwestern corner of Parcel A. From the pump station, water lines would be routed throughout the parcel to connect to each residential building. The existing Napa Junction Road eight-inch water line is scheduled to be replaced with a 12-inch water line as part of project development, per the City of American Canyon Capital Improvement Project #W11.

As a part of ongoing water conservation efforts, the City of American Canyon has adopted a Zero Water Footprint (ZWF) policy. The primary goal of the ZWF is to ensure that losses in reliability and increases in water rates for existing water service customers do not occur due to new demand for water within the City's water service area. The ZWF requires developers to ensure that new developments offset the amount of increased potable water that will be consumed by their project on a one-to-one basis. As part of the process, developers may minimize project demand for new potable water by using measures such as water efficient fixtures, consuming recycled water for non-potable uses when available, dual plumbing buildings, and installing water wise landscaping and irrigation.

As part of the proposed project, water demand calculations were prepared by Carlson, Barbee & Gibson, Inc. (CBG) to determine project compliance with the City's water efficiency goals. Water system demands for the Oat Hill Apartments were obtained from the City's 2016 Potable Water Master Plan (Master Plan) prepared by GHD. Per the Master Plan, the average day demand (ADD) per multi-family unit is 160 gpd/unit. Additionally, the maximum day demand (MDD) and peak hour demand (PHD) were calculated from the ADD using peaking factors from the Master Plan of 2.0 and 3.5, respectively.

According to the water demand calculations, development within Parcel A requires an average daily water use of approximately 32,960 gallons per day (gpd) with a maximum day demand of approximately 65,920 gpd.[31] In comparison, buildout of the project site under the existing LI designation for the site would be expected to result in an average daily water use of approximately 8,905 gpd with a maximum day demand of approximately 17,810 gpd. Based on such, the proposed residences within Parcel A would result in an increase in average daily water use of 24,055 gpd and an increase in maximum day water use of 48,110 gpd.

According to the City's Urban Water Management Plan (UWMP) (Resolution No. 2016-58) , water supply is anticipated to exceed demand through the year 2040 except in the case of a single-dry year event.[32] Under multiple-dry water year conditions, the supply is sufficient through 2035, although the demand curve trend suggests shortages may appear shortly thereafter. The proposed residences would require a substantial increase in water demand than previously been anticipated for the site. Therefore, the proposed project could result in a potentially significant impact related to water supply.

Sewer Service

The City's wastewater is conveyed to the City's Water Reclamation Facility (WRF) through gravity pipelines and pump stations. Two force mains deliver wastewater to the WRF. The WRF has a total wastewater treatment capacity of 2.5 million gallons per day (mgd) at average dry weather flow conditions and 5.0 mgd at peak wet weather flow conditions. The City's wastewater treatment and recycled water program is operated under a permit from the San Francisco Bay Regional Water Quality Control Board, which covers the City's discharge to the North Slough on the Napa River and to a constructed wetland that eventually flows to the North Slough.

The 2016 Sewer Master Plan (SMP) estimates full buildout of the General Plan generates an approximately 2.113 mgd average daily water flow. Peak dry weather flows would be approximately 3.42 mgd, while peak wet weather flows would be approximately 12.9 mgd. To

[31] Carlson, Barbee & Gibson, Inc. *Water Demand, Oat Hill Multi-Family, American Canyon, California*. October 1, 2020.

[32] City of American Canyon. *2015 Urban Water Management Plan.* Adopted June 21, 2016.

support future population growth and associated increases in wastewater treatment demand, the SMP identified ten capital improvement projects, including the replacement of the existing six-inch sewer main along Theresa Avenue with an eight-inch and 10-inch main to improve hydraulic capacity for wet weather flows (CIP #SS6). Additional citywide improvements include new pump stations, piping, emergency generator improvements, and new gravity sewers. In addition, in order to determine the remaining treatment capacity of the City of American Canyon Water Reclamation Facility (WRF), the City is expecting a stress test as part of a Local Limits assessment and Permit renewal process in early 2021.

The sewer capacity calculations prepared by CBG indicate that development within Parcel A would result in a peak flow of 231,750 gpd of wastewater. The City's WRF has a total wastewater treatment capacity of 2.5 mgd at average dry weather flow conditions and 5.0 mgd at peak wet weather flow conditions, which would be considered sufficient to treat wastewater generated by the proposed project. In addition, CIP #SS6, which would directly increase the hydraulic capacity of the sewer main lines downstream of the proposed project, is considered a near-term CIP priority for the City. CIP #SS6, in addition to several other recommended improvement projects provided in the 2016 Sewer Master Plan, are intended to address existing deficiencies while also accommodating future growth. Therefore, given the available wastewater facility capacity and planned infrastructure improvements, the proposed project would not result in inadequate capacity to serve the project's projected demand in addition to the existing commitments.

Stormwater Systems

As discussed in Section X, Hydrology and Water Quality, stormwater from Parcel A would flow to 15 on-site DMAs, each with their own bioretention area. The bioretention areas would treat stormwater by filtering runoff through vegetative soil layers. Treated stormwater would be captured by an underdrain and routed to a 10-foot-wide and 470-foot-long, underground detention facility within Parcel B. From the detention facility, an 18-inch storm drain would connect to the existing 18-inch storm drain within Napa Junction Road. The detention facility would capture all flows from both Parcel A and Parcel B during storm events and would meter discharges into the City's stormwater infrastructure at similar rates to existing stormwater discharge from the project site. Implementation of the Preliminary Stormwater Control Plan designed in accordance with the standards of the City's MS4 Permits would ensure that, after development of the proposed project, stormwater runoff would not exceed the existing rate of stormwater runoff generated at the project site. Because the proposed project would not result in a significant contribution of stormwater runoff beyond the existing flows currently accommodated by the City's stormwater system, the proposed project would not create or exacerbate any existing capacity issues with the City's stormwater systems.

Parcel B

Discussions of the water, sewer service, and stormwater drainage facilities that would serve Parcel B are included below.

Water

Water service for the proposed project would be provided by the City. The project would connect to an existing water line within Napa Junction Road along the northern boundary of the site by way of a new eight-inch water line. The eight-inch water line would be routed throughout Parcel B to connect to each residential building. The existing six-inch water line within Napa Junction

Road would be upsized to a 12-inch water line as part of project development, per the City of American Canyon Capital Improvement Project #W11.

According to the water demand calculations prepared by CBG, development within Parcel B would result in average daily water use of approximately 13,600 gpd with a maximum day demand of approximately 27,200 gpd.[33] The existing RE designation for the site would be expected to result in an average daily water use of approximately 1,889 gpd with a maximum day demand of approximately 3,777 gpd. Based on such, the proposed residences within Parcel B would result in an increase in average daily water use of 11,711 gpd and an increase in maximum day water use of 23,423 gpd. As noted above for Parcel A, the City's water supply is anticipated to exceed demand through the year 2040 except in the case of a single-dry year event.[34] Under multiple-dry water year conditions, the supply is sufficient through 2035, although the demand curve trend suggests that shortages will appear shortly thereafter. Although the City maintains an anticipated surplus in future water supplies, the proposed residences would result in a substantial increase in water demand than what has previously been anticipated for the site. Therefore, the proposed project could result in a potentially significant impact related to water supply.

Sewer Service

As noted under Parcel A, the City's WRF has a total wastewater treatment capacity of 2.5 mgd at average dry weather flow conditions and 5.0 mgd at peak wet weather flow conditions. The City's wastewater treatment and recycled water program is operated under a permit from the San Francisco Bay Regional Water Quality Control Board, which covers the City's discharge to the North Slough on the Napa River and to a constructed wetland that eventually flows to the North Slough. According to the sewer capacity calculations prepared by CBG, development within Parcel B would result in a peak flow of 95,625 gpd of wastewater.[35] Based on the capacity of the WRF under buildout conditions and the aforementioned planned infrastructural improvements to the citywide sewer system, the proposed project would not result in inadequate capacity to serve the projected demand from Parcel B in addition to the existing commitments.

Stormwater Systems

As discussed in Section X, Hydrology and Water Quality, of this IS/MND, stormwater from impervious areas within Parcel B would drain to a bioretention area in the northeastern corner of the site. The bioretention area would treat stormwater by allowing runoff to filter through layers of soil. Treated stormwater would be captured by an underdrain and routed to a 10-foot-wide and 470-foot-long, underground detention facility within Parcel B. From the detention facility, an 18-inch storm drain would connect to an existing 18-inch storm drain within Napa Junction Road. The detention facility would capture all flows from both Parcel A and Parcel B during storm events and would meter discharges into the City's stormwater infrastructure at similar rates to existing stormwater discharge from the project site. Implementation of the Preliminary Stormwater Control Plan designed in accordance with the standards of the City's MS4 Permits would ensure that, after development of the proposed project, stormwater runoff would not exceed the existing rate of stormwater runoff generated at the project site. Because the proposed project would not result in a significant contribution of stormwater runoff beyond the existing flows

[33] Carlson, Barbee & Gibson, Inc. *Water Demand, Oat Hill Multi-Family, American Canyon, California*. October 1, 2020.

[34] City of American Canyon. *2015 Urban Water Management Plan.* Adopted June 21, 2016.

[35] Carlson, Barbee & Gibson, Inc. *Preliminary Sanitary Sewer Flow Generation Calculations, Oat Hill Multi-family, American Canyon California*. August 6, 2020.

currently accommodated by the City's stormwater system, the proposed project would not create or exacerbate any existing capacity issues with the City's stormwater systems.

Other Utilities – Parcel A and Parcel B

Electricity, natural gas, and telecommunications utilities would be provided by way of connections to existing infrastructure located within the immediate project vicinity. PG&E would provide electricity and natural gas services to the project site. The proposed project would not require major upgrades to, or extension of, existing infrastructure. Thus, impacts to electricity, natural gas, and telecommunications infrastructure would be less than significant.

Water, Sewer Service, Stormwater Systems – Parcel A and Parcel B

The City's WRF has a total wastewater treatment capacity of 2.5 mgd at average dry weather flow conditions and 5.0 mgd at peak wet weather flow conditions to treat the combined wastewater generation of both parcels, which would total approximately 327,375 gallons per day. In light of planned infrastructure improvements to the Citywide sewer system, adverse impacts to sewer services by the proposed project are not anticipated. Stormwater infrastructure within both parcels would be sufficient to avoid discharge of polluted stormwater into the City's storm drain system and ensure that stormwater discharge would not result in erosion or off-site siltation through the incorporation of DMA's, several bioretention areas, and an underground detention system with capacity to treat stormwater from both Parcel A and Parcel B.

The City's water supply is anticipated to exceed demand through the year 2040 except in the case of a single-dry year event. Under multiple-dry water year conditions, the supply is sufficient through 2035, although the demand curve trend suggests that shortages will appear shortly thereafter. The combined average day water demand of Parcel A and Parcel B would total approximately 46,560 gpd, while the combined maximum day demand of both parcels would total approximately 93,120 gpd. Although the City maintains an anticipated surplus in future water supplies, the total water demand of the combined proposed residences would result in a substantial increase in water demand. Thus, the proposed project could result in a potentially significant impact related to water supply.

Conclusions

Based on the above, the project would not require the relocation or construction of new or expanded wastewater treatment, or stormwater drainage, electric power, natural gas, or telecommunications facilities, the construction or relocation of which could cause significant environmental effects. However, development within Parcel A and Parcel B would result in a substantial increase in water demand from what has been anticipated for the site by the City, and could result in a ***potentially significant*** impact related to the relocation or construction of new or expanded water facilities, the construction or relocation of which could cause significant environmental effects.

Mitigation Measure(s)

Implementation of the following mitigation measure would reduce the above potential impact to a *less-than-significant* level.

Parcel A and Parcel B

XIX-1 *The project applicant shall demonstrate compliance with the City's Zero Water Footprint Policy by mitigating all new potable water demands with "wet-water"*

offsets by one or more of the following options to ensure the proposed project results in a net zero increase in demand for potable water:

- *Reducing existing potable water demands on-site;*
- *Funding programs or constructing projects that would conserve an equivalent amount of water elsewhere within the water service area;*
- *Funding of and/or constructing projects that would increase an equivalent amount of recycled water use elsewhere within the water service area where potable water is currently used; and/or*
- *Purchasing new water supplies from other water providers.*

Compliance with the Zero Water Footprint Policy shall be ensured by submission of a "Will-Serve" Water Application to the City's Public Works Department for review and approval. Project plans shall demonstrate the applicant's inclusion of the selected wet-water offsets.

XIX-2. *The project shall be designed and constructed with purple irrigation pipe so that reclaimed water may be used for landscape irrigation purposes. The project shall use recycled water for irrigation in the event recycled water becomes available at the site.*

XIX-3. *At the time of issuance of building permits, the project applicant shall pay all updated water capacity and impact fees in effect to provide funding for the City to acquire additional long-term water resources and improve and develop its treatment and distribution system. The fees will permit the City to exercise additional options for potable water capacity from the City of Vallejo and/or other sources, and will also provide for implementation of the recycled water system.*

XIX-4. *The project applicant shall pay to the City a monthly service charge to adequately cover the project's costs associated with City supplying water through the City's connection to the City of Vallejo, as determined by the Public Works Director.*

XIX-5 *Prior to issuance of building permits, the project shall be reviewed by the Community Development Department for consistency with the Water Conservation Guidelines. The project applicant shall incorporate water conservation Best Management Practices into the project.*

XIX-6. *Should additional project water be required, the proposed project shall comply with the City's ordinances and regulations in effect at the time of authorization for additional water use. In addition, such changes in project use would trigger a new City Discretionary Review process, which would trigger re-evaluation of the proposed project's water supply impacts.*

XIX-7. *Prior to issuance of building permits, the project applicant shall submit landscaping plans to the City of American Canyon for review and approval demonstrating that the proposed landscaping would comply with the requirements in the City's Model Water Efficient Landscape Ordinance (AB 1881). The landscaping plan shall identify outdoor irrigation water conservation measures, such as, but not limited to:*

- *Drought-resistant vegetation;*
- *Irrigation systems employing the following features:*
  - *drip irrigation;*
  - *low-precipitation-rate sprinklers;*
  - *bubbler/soaker systems;*
  - *programmable irrigation controllers with an automatic rain shutoff sensors and flow sensing capabilities (ET Smart Controller);*
  - *Matched precipitation rate nozzles that maximize the uniformity of the water distribution characteristics of the irrigation system;*
  - *Conservative sprinkler spacings that minimize overspray onto paved surfaces; and*
  - *Hydrozones that keep plants with similar water needs in the same irrigation zone*
- *Minimally or gently sloped landscaped areas to minimize runoff and maximize infiltration; and*
- *Organic topdressing in non-turf areas to decrease evaporation and increase water retention.*

d,e. **Parcel A and Parcel B**

The proposed project would generate solid waste during construction and operation phases. The City receives solid waste and recycling services from Recology American Canyon. Recology transports solid waste to the Devlin Road Transfer Station located at 889 Devlin Road in American Canyon. From the transfer station, solid waste is transported to the Keller Canyon Landfill in Pittsburg, CA. Keller Canyon Landfill covers 2,600 acres of land; 244 acres are permitted for disposal. The site currently handles 2,500 tons of waste per day, although the permit for the site allows up to 3,500 tons of waste per day to be managed at the facility. According to the California Department of Resources Recycling and Recovery (CalRecycle), the Keller Canyon Landfill has a remaining capacity of 63,408,410 cubic yards out of a total permitted capacity of 75,018,280 cubic yards, or 85 percent remaining capacity.[36] Considering the remaining available capacity remaining at the Keller Canyon Landfill, sufficient capacity would be available to accommodate the project's solid waste disposal needs. Therefore, a ***less-than-significant*** impact related to solid waste would occur as a result of the proposed project.

[36] California Department of Resources Recycling and Recovery (CalRecycle). *Facility/Site Summary: Keller Canyon Landfill (07-AA-0032)*. Available at: https://www2.calrecycle.ca.gov/SolidWaste/Site/Summary/228. Accessed August 2020.

XX. WILDFIRE. *If located in or near state responsibility areas or lands classified as very high fire hazard severity zones, would the project:*	Potentially Significant Impact	Less-Than-Significant with Mitigation Incorporated	Less-Than-Significant Impact	No Impact
a. Substantially impair an adopted emergency response plan or emergency evacuation plan?	☐	☐	✖	☐
b. Due to slope, prevailing winds, and other factors, exacerbate wildfire risks, and thereby expose project occupants to, pollutant concentrations from a wildfire or the uncontrolled spread of a wildfire?	☐	☐	✖	☐
c. Require the installation or maintenance of associated infrastructure (such as roads, fuel breaks, emergency water sources, power lines or other utilities) that may exacerbate fire risk or that may result in temporary or ongoing impacts to the environment?	☐	☐	✖	☐
d. Expose people or structures to significant risks, including downslope or downstream flooding or landslides, as a result of runoff, post-fire slope instability, or drainage changes?	☐	☐	✖	☐

Discussion

a-d. **Parcel A and Parcel B**

According to the CAL FIRE Fire and Resource Assessment Program, the project site is not located within a Very High or High FHSZ.[37] In addition, the site is located in a relatively urbanized area of the City and near existing development. Although the project site is located in proximity to grassland, the grasslands are relatively isolated and are not located in a Very High or High FHSZ. Thus, the proposed project would not result in substantial risks or hazards related to wildfires, and a ***less-than-significant*** impact would occur.

[37] California Department of Forestry and Fire Protection. *California Fire Hazard Severity Zone Viewer*. Available at: https://egis.fire.ca.gov/FHSZ/. Accessed: August 2020.

XXI. COVID-19 HAZARDS. *Would the project:*	Potentially Significant Impact	Less-Than-Significant with Mitigation Incorporated	Less-Than-Significant Impact	No Impact
a. Substantially affect the spread of COVID-19?	☐	✖	☐	☐

Discussion

a. Parcel A and Parcel B

On March 4, 2020, Governor Gavin Newsom proclaimed a State of Emergency to exist in California as a result of the threat of COVID-19. Governor Newsom and other state and local agencies have issued various orders, directives, and policies, to address the COVID-19 pandemic and the health, safety, and welfare of California residents, including a stay-at-home mandate and provisions intended to provide for the continued delivery of necessary goods and services.

Executive Order N-33-20, which includes the stay-at-home mandate, provided that residents working in critical infrastructure sectors identified by the federal government may continue working because of the importance of these sectors to California's health and well-being. Under this order, local governments, including the City of American Canyon and Napa County, have continued to provide critical functions and services to the public. These functions and services include law enforcement, fire protection, public safety, emergency management, emergency medical technicians, public works, healthcare, and transportation. Additionally, local government agencies have emergency plans that provide appropriate procedures and actions to implement during emergency situations such as the COVID-19 pandemic. The plans address many of the concerns associated with the consequences of the pandemic, such as the continued provision of emergency and medical services.

Buildout of the proposed project and full occupancy of the site is not expected until after the current state of emergency has expired. While it is expected that a COVID-19 vaccine would be available in the near future, distribution of the vaccine has not currently been widespread enough to ensure "herd immunity," which occurs when a large portion of a community becomes immune to a disease, thus making the spread of disease from person to person unlikely. If construction is initiated prior to the expiration of the state of emergency and/or the availability of a vaccine, construction activities would be subject to various safety measures necessary to reduce for the spread of the virus. Such measures would be included in a project construction site safety plan and could include, among other measures, social distancing requirements, masks for all workers, daily worker screening for potential symptoms, disinfecting protocols for all shared surfaces, avoidance of tool sharing, and provision of sufficient hand sanitizer for all workers. Additional COVID-19 safety measures for the construction industry have been published by the California Department of Public Health and the California Division of Occupational Safety and Health (CalOSHA).[38] Similarly, the U.S. Department of Labor Occupational Safety and Health Administration (OSHA) and the Center for Disease Control (CDC) have published planning

[38] California For All. *COVID-19 Industry Guidance: Construction*. Available at: https://covid19.ca.gov/industry-guidance. Accessed January 2021.

guidance to help identify risk levels in workplace settings and to determine any appropriate control measures to implement in the workplace.[39]

Without implementation of a project construction site safety plan compliant with local and statewide COVID-19 safety measures, the proposed project would have a ***potentially significant*** impact in regards to affecting the spread of COVDI-19. To ensure that the proposed project implements a COVID-19 Exposure Control Plan, Mitigation Measure XXI-I has been included in the IS/MND to reduce impacts to a less-than-significant level.

Mitigation Measure(s)

Implementation of the following mitigation measure would reduce the above potential impact to a *less-than-significant* level.

Parcel A and Parcel B

XXI-1 *The project applicant shall prepare a COVID-19 Exposure Control Plan which shall be included in the project construction site safety plan. The COVID-19 Exposure Control Plan shall comply with all regional and statewide orders related to the operation of construction sites and essential businesses during the COVID-19 pandemic, including but not limited to: social distancing requirements, masks for all workers, daily worker screening for potential symptoms, disinfecting protocols for all shared surfaces, avoidance of tool sharing, and provision of sufficient hand sanitizer for all workers. The COVID-19 Exposure Control Plan shall be submitted to the City of American Canyon Planning Department for review and approval prior to the issuance of grading permits.*

[39] U.S. Department of Labor Occupational Safety and Health Administration. *Guidance on Preparing Workplaces for COVID-19.* Available at: https://www.osha.gov/Publications/OSHA3990.pdf. Accessed January 2021.

XXII. MANDATORY FINDINGS OF SIGNIFICANCE.	Potentially Significant Impact	Less-Than-Significant with Mitigation Incorporated	Less-Than-Significant Impact	No Impact
a. Does the project have the potential to substantially degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, substantially reduce the number or restrict the range of a rare or endangered plant or animal or eliminate important examples of the major periods of California history or prehistory?	☐	☐	✖	☐
b. Does the project have impacts that are individually limited, but cumulatively considerable? ("Cumulatively considerable" means that the incremental effects of a project are considerable when viewed in connection with the effects of past projects, the effects of other current projects, and the effects of probable future projects)?	☐	☐	✖	☐
c. Does the project have environmental effects which will cause substantial adverse effects on human beings, either directly or indirectly?	☐	☐	✖	☐

Discussion

a. **Parcel A and Parcel B**

As discussed in Section IV, Biological Resources, of this IS/MND, while a limited potential exists for Swainson's hawk, burrowing owl, white-tailed kite, Northern Harrier, and common nesting birds to occur on-site, Mitigation Measures IV-1 through IV-5 would ensure that any impacts related to special-status species would be reduced to a less-than-significant level.

The project site does not contain any on-site structures or known historic or prehistoric resources. Implementation of the proposed project is not anticipated to have the potential to result in impacts related to historic or prehistoric resources. Mitigation Measures V-1 and V-2 would ensure that in the event that prehistoric resources are discovered within the project site, such resources would be protected in compliance with the requirements of CEQA and other State standards.

The proposed project would not degrade the quality of the environment, substantially reduce or impact the habitat of fish or wildlife species, cause fish or wildlife populations to drop below self-sustaining levels, threaten to eliminate a plant or animal community, reduce the number or restrict the range of a rare or endangered plant or animal, or eliminate important examples of the major periods of California history or prehistory. Therefore, a ***less-than-significant*** impact would occur.

b. **Parcel A and Parcel B**

The proposed project, could incrementally contribute to cumulative impacts in the area. However, as demonstrated in this IS/MND, all potential environmental impacts that could occur as a result of project implementation would be reduced to a less-than-significant level through compliance

with the mitigation measures included in this IS/MND, as well as applicable General Plan policies, Municipal Code standards, and other applicable local and State regulations.

Therefore, when viewed in conjunction with other closely related past, present, or reasonably foreseeable future projects, development of the proposed project would not result in a cumulatively considerable contribution to cumulative impacts, and the project's incremental contribution to cumulative impacts would be ***less than significant***.

c. **Parcel A and Parcel B**

As described in this IS/MND, the proposed project would comply with all applicable General Plan policies, Municipal Code standards, other applicable local and State regulations, and mitigation measures included herein. In addition, as discussed in Section VII, Geology and Soils, Section VIII, Greenhouse Gas Emissions, Section XIII, Noise, and Section XVII, Transportation, of this IS/MND, the proposed project would not cause substantial effects to human beings, including effects related to exposure to hazardous materials and noise. For example, Mitigation Measure VII-1 would require compliance with the Tier 1 Energy Efficiency division of the Title 24 standards to ensure the project would not conflict with the American Canyon EECAP. Therefore, the proposed project would result in a ***less-than-significant*** impact.

APPENDIX A

AIR QUALITY AND GREENHOUSE GAS EMISSIONS
CALEEMOD AND ROADMOD RESULTS

Oat Hill Project - Parcel A

Bay Area AQMD Air District, Annual

1.0 Project Characteristics

1.1 Land Usage

Land Uses	Size	Metric	Lot Acreage	Floor Surface Area	Population
Enclosed Parking Structure	157.00	Space	0.00	62,800.00	0
Parking Lot	294.00	Space	3.17	117,600.00	0
Apartments Mid Rise	206.00	Dwelling Unit	4.93	206,000.00	589

1.2 Other Project Characteristics

Urbanization	Urban	**Wind Speed (m/s)**	2.2	**Precipitation Freq (Days)**	64
Climate Zone	4			**Operational Year**	2025
Utility Company	Pacific Gas & Electric Company				
CO2 Intensity (lb/MWhr)	234.06	**CH4 Intensity (lb/MWhr)**	0.029	**N2O Intensity (lb/MWhr)**	0.006

1.3 User Entered Comments & Non-Default Data

Oat Hill Project - Parcel A - Bay Area AQMD Air District, Annual

Project Characteristics - Intensity factor for CO2 adjusted based on PG&E's RPS reductions

Land Use - Acreages adjusted per site plan

Construction Phase - Phase timing based on AQ Questionnaire.

Grading - Total acres graded ajusted per site plans.

Vehicle Trips - Trip rates adjusted per ITE Trip Gen Rates 9th Ed.

Woodstoves - Per AQ Questionnaire, no fireplaces proposed.

Mobile Land Use Mitigation - applied inherent site lcoation features

Area Mitigation -

Energy Mitigation - Title 24 exceedance applied to reflect compliance with 2019 CBSC.

Water Mitigation - water conservation strategy applied to reflect compliance with CALGreen Code and MWELO

Waste Mitigation - Waste diversion applied to reflect compliance with AB 341

1.3 User Entered Comments & Non-Default Data

Oat Hill Project - Parcel A - Bay Area AQMD Air District, Summer

Project Characteristics - Intensity factor for CO2 adjusted based on PG&E's RPS reductions

Land Use - Acreages adjusted per site plan

Construction Phase - Phase timing based on AQ Questionnaire.

Grading - Total acres graded ajusted per site plans.

Vehicle Trips - Trip rates adjusted per ITE Trip Gen Rates 9th Ed.

Woodstoves - Per AQ Questionnaire, no fireplaces proposed.

Mobile Land Use Mitigation - applied inherent site lcoation features

Area Mitigation -

Energy Mitigation - Title 24 exceedance applied to reflect compliance with 2019 CBSC.

Water Mitigation - water conservation strategy applied to reflect compliance with CALGreen Code and MWELO

Waste Mitigation - Waste diversion applied to reflect compliance with AB 341

1.0 Project Characteristics

1.1 Land Usage

Land Uses	Size	Metric	Lot Acreage	Floor Surface Area	Population
Enclosed Parking Structure	157.00	Space	0.00	62,800.00	0
Parking Lot	294.00	Space	3.17	117,600.00	0
Apartments Mid Rise	206.00	Dwelling Unit	4.93	206,000.00	589

1.2 Other Project Characteristics

Urbanization	Urban	**Wind Speed (m/s)**	2.2	**Precipitation Freq (Days)**	64
Climate Zone	4			**Operational Year**	2025
Utility Company	Pacific Gas & Electric Company				
CO2 Intensity (lb/MWhr)	234.06	**CH4 Intensity (lb/MWhr)**	0.029	**N2O Intensity (lb/MWhr)**	0.006

1.3 User Entered Comments & Non-Default Data

Oat Hill Project - Parcel A - Bay Area AQMD Air District, Winter

Project Characteristics - Intensity factor for CO2 adjusted based on PG&E's RPS reductions

Land Use - Acreages adjusted per site plan

Construction Phase - Phase timing based on AQ Questionnaire.

Grading - Total acres graded ajusted per site plans.

Vehicle Trips - Trip rates adjusted per ITE Trip Gen Rates 9th Ed.

Woodstoves - Per AQ Questionnaire, no fireplaces proposed.

Mobile Land Use Mitigation - applied inherent site lcoation features

Area Mitigation -

Energy Mitigation - Title 24 exceedance applied to reflect compliance with 2019 CBSC.

Water Mitigation - water conservation strategy applied to reflect compliance with CALGreen Code and MWELO

Waste Mitigation - Waste diversion applied to reflect compliance with AB 341

Climate Zone	4			**Operational Year**	2025
Utility Company	Pacific Gas & Electric Company				
CO2 Intensity (lb/MWhr)	234.06	**CH4 Intensity (lb/MWhr)**	0.029	**N2O Intensity (lb/MWhr)**	0.006

1.3 User Entered Comments & Non-Default Data

Project Characteristics - Intensity factor for CO2 adjusted based on PG&E□s RPS reductions

Land Use - Acreages adjusted per site plans.

Construction Phase - Phase timing provided by applicant on AQ Questionnaire.

Grading - Total acres graded based on site plan.

Vehicle Trips - Trip rates adjusted per ITE Trip Gen Rates 9th ed.

Woodstoves - Per AQ Questionnaire, no fireplaces proposed.

Mobile Land Use Mitigation -

Area Mitigation -

Energy Mitigation - Title 24 exceedance applied to reflect compliance with 2019 CBSC

Water Mitigation - Water conservation strategy applied to reflect compliance with CALGreen Code and MWELO

Waste Mitigation - Waste reduction applied to reflect compliance with AB 341

Oat Hill Project - Parcel B - Bay Area AQMD Air District, Annual

Apartments Mid Rise	85.00	Dwelling Unit	2.24	85,000.00	243

1.2 Other Project Characteristics

Urbanization	Urban	**Wind Speed (m/s)**	2.2	**Precipitation Freq (Days)**	64
Climate Zone	4			**Operational Year**	2025
Utility Company	Pacific Gas & Electric Company				
CO2 Intensity (lb/MWhr)	234.06	**CH4 Intensity (lb/MWhr)**	0.029	**N2O Intensity (lb/MWhr)**	0.006

1.3 User Entered Comments & Non-Default Data

Project Characteristics - Intensity factor for CO2 adjusted based on PG&E□s RPS reductions

Land Use - Acreages adjusted per site plans.

Construction Phase - Phase timing provided by applicant on AQ Questionnaire.

Grading - Total acres graded based on site plan.

Vehicle Trips - Trip rates adjusted per ITE Trip Gen Rates 9th ed.

Woodstoves - Per AQ Questionnaire, no fireplaces proposed.

Mobile Land Use Mitigation -

Area Mitigation -

Energy Mitigation - Title 24 exceedance applied to reflect compliance with 2019 CBSC

Water Mitigation - Water conservation strategy applied to reflect compliance with CALGreen Code and MWELO

Waste Mitigation - Waste reduction applied to reflect compliance with AB 341

Oat Hill Project - Parcel B - Bay Area AQMD Air District, Summer

Oat Hill Project - Parcel B

Bay Area AQMD Air District, Winter

1.0 Project Characteristics

1.1 Land Usage

Land Uses	Size	Metric	Lot Acreage	Floor Surface Area	Population
Enclosed Parking Structure	65.00	Space	0.00	26,000.00	0
Parking Lot	117.00	Space	1.36	46,800.00	0
Apartments Mid Rise	85.00	Dwelling Unit	2.24	85,000.00	243

1.2 Other Project Characteristics

Urbanization	Urban	**Wind Speed (m/s)**	2.2	**Precipitation Freq (Days)**	64
Climate Zone	4			**Operational Year**	2025
Utility Company	Pacific Gas & Electric Company				
CO2 Intensity (lb/MWhr)	234.06	**CH4 Intensity (lb/MWhr)**	0.029	**N2O Intensity (lb/MWhr)**	0.006

1.3 User Entered Comments & Non-Default Data

Project Characteristics - Intensity factor for CO2 adjusted based on PG&E□s RPS reductions

Land Use - Acreages adjusted per site plans.

Construction Phase - Phase timing provided by applicant on AQ Questionnaire.

Grading - Total acres graded based on site plan.

Vehicle Trips - Trip rates adjusted per ITE Trip Gen Rates 9th ed.

Woodstoves - Per AQ Questionnaire, no fireplaces proposed.

Mobile Land Use Mitigation -

Area Mitigation -

Energy Mitigation - Title 24 exceedance applied to reflect compliance with 2019 CBSC

Water Mitigation - Water conservation strategy applied to reflect compliance with CALGreen Code and MWELO

Waste Mitigation - Waste reduction applied to reflect compliance with AB 341

Oat Hill Project - Parcel B - Bay Area AQMD Air District, Winter

1.2 Other Project Characteristics

Urbanization	Urban	**Wind Speed (m/s)**	2.2	**Precipitation Freq (Days)**	64
Climate Zone	4			**Operational Year**	2025
Utility Company	Pacific Gas & Electric Company				
CO2 Intensity (lb/MWhr)	234.06	**CH4 Intensity (lb/MWhr)**	0.029	**N2O Intensity (lb/MWhr)**	0.006

1.3 User Entered Comments & Non-Default Data

Oat Hill - Parcel A and Parcel B - Bay Area AQMD Air District, Annual

Project Characteristics - Intensity factor for CO2 adjusted based on PG&E's RPS reductions

Land Use - Acreages adjusted per site plans.

Construction Phase - Phase timing left as defaults, except architectural coating shifted to occur during building cosntruction.

Grading - Total acres adjusted per site plan.

Vehicle Trips - Trip rates adjusted per ITE Trip Gen Rates 9th ed.

Woodstoves - Per AQ questionnaire, no fireplaces proposed.

Mobile Land Use Mitigation - inherent site location features applied

Area Mitigation -

Energy Mitigation - title 24 exceedance applied to reflect compliance with 2019 CBSC

Water Mitigation - water conservation strategy applied to reflect compliance with CALGreen Code and MWELO

Waste Mitigation - solid waste reduction applied to reflect compliance with AB 341

1.3 User Entered Comments & Non-Default Data

Oat Hill - Parcel A and Parcel B - Bay Area AQMD Air District, Summer

Project Characteristics - Intensity factor for CO2 adjusted based on PG&E's RPS reductions

Land Use - Acreages adjusted per site plans.

Construction Phase - Phase timing left as defaults, except architectural coating shifted to occur during building cosntruction.

Grading - Total acres adjusted per site plan.

Vehicle Trips - Trip rates adjusted per ITE Trip Gen Rates 9th ed.

Woodstoves - Per AQ questionnaire, no fireplaces proposed.

Mobile Land Use Mitigation - inherent site location features applied

Area Mitigation -

Energy Mitigation - title 24 exceedance applied to reflect compliance with 2019 CBSC

Water Mitigation - water conservation strategy applied to reflect compliance with CALGreen Code and MWELO

Waste Mitigation - solid waste reduction applied to reflect compliance with AB 341

1.3 User Entered Comments & Non-Default Data

Oat Hill - Parcel A and Parcel B - Bay Area AQMD Air District, Winter

Project Characteristics - Intensity factor for CO2 adjusted based on PG&E's RPS reductions

Land Use - Acreages adjusted per site plans.

Construction Phase - Phase timing left as defaults, except architectural coating shifted to occur during building cosntruction.

Grading - Total acres adjusted per site plan.

Vehicle Trips - Trip rates adjusted per ITE Trip Gen Rates 9th ed.

Woodstoves - Per AQ questionnaire, no fireplaces proposed.

Mobile Land Use Mitigation - inherent site location features applied

Area Mitigation -

Energy Mitigation - title 24 exceedance applied to reflect compliance with 2019 CBSC

Water Mitigation - water conservation strategy applied to reflect compliance with CALGreen Code and MWELO

Waste Mitigation - solid waste reduction applied to reflect compliance with AB 341

Paving	0	48	0	90	400	0

PM10 and PM2.5 estimates assume 50% control of fugitive dust from watering and associated dust control measures if a minimum number of water trucks are specified.

Total PM10 emissions shown in column F are the sum of exhaust and fugitive dust emissions shown in columns G and H. Total PM2.5 emissions shown in Column I are the sum of exhaust and fugitive dust emissions shown in columns J and K.

CO2e emissions are estimated by multiplying mass emissions for each GHG by its global warming potential (GWP), 1 , 25 and 298 for CO2, CH4 and N2O, respectively. Total CO2e is then estimated by summing CO2e estimates over all GHGs.

Total Emission Estimates by Phase for -> Napa Junction Project Phases (Tons for all except CO2e. PM10 and PM2.5 estimates assume 50% control of fugitive dust from watering and associated dust control measures if a minimum number of water trucks are specified.

Total PM10 emissions shown in column F are the sum of exhaust and fugitive dust emissions shown in columns G and H. Total PM2.5 emissions shown in Column I are the sum of exhaust and fugitive dust emissions shown in columns J and K.

CO2e emissions are estimated by multiplying mass emissions for each GHG by its global warming potential (GWP), 1 , 25 and 298 for CO2, CH4 and N2O, respectively. Total CO2e is then estimated by summing CO2e estimates over all GHGs.

The CO2e emissions are reported as metric tons per phase.

Road Construction Emissions Model
Data Entry Worksheet

Version 9.0.0

Note: Required data input sections have a yellow background.
Optional data input sections have a blue background. Only areas with a yellow or blue background can be modified. Program defaults have a white background.
The user is required to enter information in cells D10 through D24, E28 through G35, and D38 through D41 for all project types.
Please use "Clear Data Input & User Overrides" button first before changing the Project Type or begin a new project.

To begin a new project, click this button to clear data previously entered. This button will only work if you opted not to disable macros when loading this spreadsheet.

SACRAMENTO METROPOLITAN AIR QUALITY MANAGEMENT DISTRICT

Input Type

Project Name	Napa Junction	
Construction Start Year	2021	Enter a Year between 2014 and 2040 (inclusive)
Project Type	1	1) New Road Construction : Project to build a roadway from bare ground, which generally requires more site preparation than widening an existing roadway 2) Road Widening : Project to add a new lane to an existing roadway 3) Bridge/Overpass Construction : Project to build an elevated roadway, which generally requires some different equipment than a new roadway, such as a crane 4) Other Linear Project Type: Non-roadway project such as a pipeline, transmission line, or levee construction
Project Construction Time	1.00	month
Working Days per Month	22.00	days (assume 22 if unknown)
Predominant Soil/Site Type: Enter 1, 2, or 3 (for project within "Sacramento County", follow soil type selection instructions in cells E18 to E20 otherwise see instructions provided in cells J18 to J22)	2	1) Sand Gravel : Use for quaternary deposits (Delta/West County) 2) Weathered Rock-Earth : Use for Laguna formation (Jackson Highway area) or the lone formation (Scott Road, Rancho Murieta) 3) Blasted Rock : Use for Salt Springs Slate or Copper Hill Volcanics (Folsom South of Highway 50, Rancho Murieta)
Project Length	0.06	miles
Total Project Area	0.33	acres
Maximum Area Disturbed/Day	0.33	acres
Water Trucks Used?	2	1. Yes 2. No

Please note that the soil type instructions provided in cells E18 to E20 are specific to Sacramento County. Maps available from the California Geologic Survey (see weblink below) can be used to determine soil type outside Sacramento County.

http://www.conservation.ca.gov/cgs/information/geologic_mapping/Pages/googlemaps.aspx#regionalseries

Material Hauling Quantity Input

Material Type	Phase	Haul Truck Capacity (yd^3) (assume 20 if unknown)	Import Volume (yd^3/day)	Export Volume (yd^3/day)

	Drainage/Utilities/Sub-Grade	20.00	0.00	0.00
	Paving	20.00	47.78	0.00

Mitigation Options

On-road Fleet Emissions Mitigation	No Mitigation	Select "2010 and Newer On-road Vehicles Fleet" option when the on-road heavy-duty truck fleet for the project will be limited to vehicles of model year 2010 or newer
Off-road Equipment Emissions Mitigation	No Mitigation	Select "20% NOx and 45% Exhaust PM reduction" option if the project will be required to use a lower emitting off-road construction fleet. The SMAQMD Construction Mitigation Calculator can be used to confirm compliance with this mitigation measure (http://www.airquality.org/Businesses/CEQA-Land-Use-Planning/Mitigation). Select "Tier 4 Equipment" option if some or all off-road equipment used for the project meets CARB Tier 4 Standard

The remaining sections of this sheet contain areas that can be modified by the user, although those modifications are optional.

Note: The program's estimates of construction period phase length can be overridden in cells D50 through D53, and F50 through F53.

Construction Periods	User Override of Construction Months	Program Calculated Months	User Override of Phase Starting Date	Program Default Phase Starting Date
Grubbing/Land Clearing		0.10		1/1/2021
Grading/Excavation		0.45		1/5/2021
Drainage/Utilities/Sub-Grade		0.30		1/19/2021
Paving		0.15		1/29/2021
Totals (Months)	1			

Note: Soil Hauling emission default values can be overridden in cells D61 through D64, and F61 through F64.

Notes:

Project Start Year ->	2021
Project Length (months) ->	1
Total Project Area (acres) ->	0
Maximum Area Disturbed/Day (acres) ->	0
Water Truck Used? ->	No

	Total Material Imported/Exported Volume (yd^3/day)		Daily VMT (miles/day)			
Phase	Soil	Asphalt	Soil Hauling	Asphalt Hauling	Worker Commute	Water Truck
Grubbing/Land Clearing	0	0	0	0	160	0
Grading/Excavation	0	0	0	0	680	0
Drainage/Utilities/Sub-Grade	0	0	0	0	560	0
Paving	0	48	0	90	400	0

PM10 and PM2.5 estimates assume 50% control of fugitive dust from watering and associated dust control measures if a minimum number of water trucks are specified.

Total PM10 emissions shown in column F are the sum of exhaust and fugitive dust emissions shown in columns G and H. Total PM2.5 emissions shown in Column I are the sum of exhaust and fugitive dust emissions shown in columns J and K.

CO2e emissions are estimated by multiplying mass emissions for each GHG by its global warming potential (GWP), 1 , 25 and 298 for CO2, CH4 and N2O, respectively. Total CO2e is then estimated by summing CO2e estimates over all GHGs.

Total Emission Estimates by Phase for -> Napa Junction														
Project Phases (Tons for all except CO2e. Metric tonnes for CO2e)	**ROG (tons/phase)**	**CO (tons/phase)**	**NOx (tons/phase)**	**Total PM10 (tons/phase)**	**Exhaust PM10 (tons/phase)**	**Fugitive Dust PM10 (tons/phase)**	**Total PM2.5 (tons/phase)**	**Exhaust PM2.5 (tons/phase)**	**Fugitive Dust PM2.5 (tons/phase)**	**SOx (tons/phase)**	**CO2 (tons/phase)**	**CH4 (tons/phase)**	**N2O (tons/phase)**	**CO2e (MT/phase)**

PM10 and PM2.5 estimates assume 50% control of fugitive dust from watering and associated dust control measures if a minimum number of water trucks are specified.

Total PM10 emissions shown in column F are the sum of exhaust and fugitive dust emissions shown in columns G and H. Total PM2.5 emissions shown in Column I are the sum of exhaust and fugitive dust emissions shown in columns J and K.

CO2e emissions are estimated by multiplying mass emissions for each GHG by its global warming potential (GWP), 1 , 25 and 298 for CO2, CH4 and N2O, respectively. Total CO2e is then estimated by summing CO2e estimates over all GHGs.

The CO2e emissions are reported as metric tons per phase.

Road Construction Emissions Model
Data Entry Worksheet

Version 9.0.0

Note: Required data input sections have a yellow background.
Optional data input sections have a blue background. Only areas with a yellow or blue background can be modified. Program defaults have a white background.
The user is required to enter information in cells D10 through D24, E28 through G35, and D38 through D41 for all project types.
Please use "Clear Data Input & User Overrides" button first before changing the Project Type or begin a new project.

To begin a new project, click this button to clear data previously entered. This button will only work if you opted not to disable macros when loading this spreadsheet.

SACRAMENTO METROPOLITAN AIR QUALITY MANAGEMENT DISTRICT

Input Type

Project Name	Napa Junction	
Construction Start Year	2021	Enter a Year between 2014 and 2040 (inclusive)
Project Type	1	1) New Road Construction : Project to build a roadway from bare ground, which generally requires more site preparation than widening an existing roadway 2) Road Widening : Project to add a new lane to an existing roadway 3) Bridge/Overpass Construction : Project to build an elevated roadway, which generally requires some different equipment than a new roadway, such as a crane 4) Other Linear Project Type: Non-roadway project such as a pipeline, transmission line, or levee construction
Project Construction Time	1.00	month
Working Days per Month	22.00	days (assume 22 if unknown)
Predominant Soil/Site Type: Enter 1, 2, or 3 (for project within "Sacramento County", follow soil type selection instructions in cells E18 to E20 otherwise see instructions provided in cells J18 to J22)	2	1) Sand Gravel : Use for quaternary deposits (Delta/West County) 2) Weathered Rock-Earth : Use for Laguna formation (Jackson Highway area) or the lone formation (Scott Road, Rancho Murieta) 3) Blasted Rock : Use for Salt Springs Slate or Copper Hill Volcanics (Folsom South of Highway 50, Rancho Murieta)
Project Length	0.06	miles
Total Project Area	0.33	acres
Maximum Area Disturbed/Day	0.33	acres
Water Trucks Used?	2	1. Yes 2. No

Please note that the soil type instructions provided in cells E18 to E20 are specific to Sacramento County. Maps available from the California Geologic Survey (see weblink below) can be used to determine soil type outside Sacramento County.

http://www.conservation.ca.gov/cgs/information/geologic_mapping/Pages/googlemaps.aspx#regionalseries

Material Hauling Quantity Input

Material Type	Phase	Haul Truck Capacity (yd^3) (assume 20 if unknown)	Import Volume (yd^3/day)	Export Volume (yd^3/day)
Soil	Grubbing/Land Clearing	20.00	0.00	0.00
	Grading/Excavation	20.00	0.00	0.00
	Drainage/Utilities/Sub-Grade	20.00	0.00	0.00
	Paving	20.00	0.00	0.00
Asphalt	Grubbing/Land Clearing	20.00	0.00	0.00
	Grading/Excavation	20.00	0.00	0.00
	Drainage/Utilities/Sub-Grade	20.00	0.00	0.00
	Paving	20.00	47.78	0.00

Mitigation Options

On-road Fleet Emissions Mitigation	No Mitigation	Select "2010 and Newer On-road Vehicles Fleet" option when the on-road heavy-duty truck fleet for the project will be limited to vehicles of model year 2010 or newer
Off-road Equipment Emissions Mitigation	Tier 4 Equipment	Select "20% NOx and 45% Exhaust PM reduction" option if the project will be required to use a lower emitting off-road construction fleet. The SMAQMD Construction Mitigation Calculator can be used to confirm compliance with this mitigation measure (http://www.airquality.org/Businesses/CEQA-Land-Use-Planning/Mitigation).
Will all off-road equipment be tier 4?	All Tier 4 Equipment	Select "Tier 4 Equipment" option if some or all off-road equipment used for the project meets CARB Tier 4 Standard

The remaining sections of this sheet contain areas that can be modified by the user, although those modifications are optional.

Note: The program's estimates of construction period phase length can be overridden in cells D50 through D53, and F50 through F53.

Construction Periods	User Override of Construction Months	Program Calculated Months	User Override of Phase Starting Date	Program Default Phase Starting Date

1.0 INTRODUCTION

This Biological Resources Technical Report evaluates existing biological resources, potential impacts, and mitigation measures for the Oat Hill Multi-Family Development Project located in American Canyon, California (Figures 1 and 2, Appendix A). The proposed project (Project) involves the construction of new apartments and recreational buildings, with associated infrastructure, access roads and parking spaces.

1.1 Overview and Purpose

This report provides an assessment of biological resources within the Project Site and immediate vicinity. The purpose of the assessment was to develop and gather information on sensitive biological communities and special-status plant and wildlife species to support an evaluation of the Project under the California Environmental Quality Act (CEQA). This report describes the results of the site visit, which assessed the Project Site for (1) the presence of sensitive biological communities, special status plant species, and special status wildlife species, (2) the potential for the site to support special-status plant and wildlife species. Based on the results of the site assessment, potential impacts to sensitive biological communities and special status species resulting from the proposed project were evaluated. If the project has the potential to result in significant impacts to these biological resources, measures to avoid, minimize, or mitigate for those significant impacts are described.

A biological resources assessment provides general information on the presence, or potential presence, of sensitive species and habitats. This assessment is based on information available at the time of the study and on site conditions that were observed on the dates the site was visited. Conclusions are based on currently available information used in combination with the professional judgement of the biologists completing this study.

1.2 Project Description

The Project involves the construction of new apartment complexes on two parcels, Parcel A and Parcel B, as illustrated in the Site Plan (Appendix B). Parcel A is 11.3 acres with an 8.1-acre development area that will include a total of 206 units, a recreation building, a pool building and pool, a community loop trail, 451 onsite and off-site parking spaces, 1.2 acres of common open space, and 3.2 acres of hillside slope area. Parcel B is 9.3 acres with a 3.2-acre development area that will include a total of 85 units, a recreation building, an outdoor lounge and viewing area, 183 onsite parking spaces, 0.6 acre of common open space, and 5.9 acres of hillside slope area. Access will be provided by new private roads off Napa Junction Road, and an EVA road that connects the two parcels, as illustrated in the Site Plan (Appendix B).

2.0 REGULATORY BACKGROUND

The following sections explain the regulatory context of the biological assessment, including applicable laws and regulations that were applied to the field investigations and analysis of potential project impacts. Table 1 shows the correlation between these regulations and each Biological Resources question in the Environmental Checklist Form (Appendix G) of the CEQA guidelines.

Table 1. Summary of Biological Resources Evaluation

CEQA Assessment Category[1] IV. -Biological Resources	Biological Resources Considered	Relevant Laws and Regulations	Responsible Regulatory Agency	Summary of Findings & Report Section[2]
Question A. Special-status species	Special-status Plants Special-status Wildlife Designated Critical Habitat	Federal Endangered Species Act (ESA) California Endangered Species Act (CESA) California Native Plant Protection Act (CNPPA) Migratory Bird Treaty Act (MBTA) Bald and Golden Eagle Protection Act (BGEPA)	U.S. Fish and Wildlife Service (USFWS) California Department of Fish and Wildlife (CDFW)	Potentially significant impacts were identified and mitigation measures included that reduce those impacts to a level that is less than significant. **See Section 5.2 for more information**
Question B. Sensitive natural communities & riparian habitat	Sensitive Natural Communities Streams, Lakes, & Riparian Habitat	California Fish and Game Code (CFGC) Oak Woodland Conservation Act Porter-Cologne Act Clean Water Act (CWA)	California Department of Fish and Wildlife (CDFW) U.S. Army Corps of Engineers (Corps) U.S. Environmental Protection Agency (EPA) State Water Resources Control Board Regional Water Quality Control Board	No potentially significant impacts were identified (no mitigation is required)
Question C. State and federally protected wetlands	Wetlands Unvegetated surface waters	Clean Water Act (CWA) Sections 404/401 Rivers and Harbors Act Section 10 Porter Cologne Act	U.S. Army Corps of Engineers (Corps) U.S. Environmental Protection Agency (EPA) State Water Resources Control Board Regional Water Quality Control Board	No potentially significant impacts were identified (no mitigation is required)

Question F. Local, state, federal conservation plans	Habitat Conservation Plans Natural Community Conservation Plans	Federal Endangered Species Act (ESA) Natural Community Conservation Planning Act (NCCPA)	U.S. Fish and Wildlife Service (USFWS) California Department of Fish and Wildlife (CDFW)	No potentially significant impacts were identified (no mitigation is required)

THIS PAGE INTENTIONALLY LEFT BLANK.

2.1 Federal and State Regulatory Setting

2.1.1 Vegetation and Aquatic Communities

CEQA provides protections for particular vegetation types defined as sensitive by the California Department of Fish and Game (CDFW), and aquatic communities protected by laws and regulations administered by the U.S Army Corps of Engineers (Corps), State Water Resources Control Board (SWRCB), and Regional Water Quality Control Boards (RWQCB). The laws and regulations that provide protection for these resources are summarized below.

Sensitive Natural Communities: Sensitive natural communities include habitats that fulfill special functions or have special values. Natural communities considered sensitive are those identified in local or regional plans, policies, regulations, or by the CDFW. CDFW ranks sensitive communities as "threatened" or "very threatened" (CDFG 2010, CDFW 2018) and keeps records of their occurrences in its California Natural Diversity Database (CNDDB; CDFW 2020). CNDDB vegetation alliances are ranked 1 through 5 based on NatureServe's (2018) methodology, with those alliances ranked globally (G) or statewide (S) as 1 through 3 considered sensitive. Impacts to sensitive natural communities identified in local or regional plans, policies, or regulations or those identified by the CDFW or U.S. Fish and Wildlife Service (USFWS) must be considered and evaluated under CEQA (CCR Title 14, Div. 6, Chap. 3, Appendix G). In addition, this general class includes oak woodlands that are protected by local ordinances under the Oak Woodlands Protection Act.

Waters of the United States, Including Wetlands: The United States Army Corps of Engineers (Corps) regulates “Waters of the United States” under Section 404 of the Clean Water Act (CWA). Waters of the United States are defined in the Code of Federal Regulations (CFR) as including the territorial seas, and waters which are currently used, or were used in the past, or may be susceptible to use in interstate or foreign commerce, such as tributaries, lakes and ponds, impoundments of waters of the U.S., and wetlands (33 CFR 328.3). Potential wetland areas, according to the three criteria used to delineate wetlands as defined in the Corps Wetlands Delineation Manual (Environmental Laboratory 1987), are identified by the presence of (1) hydrophytic vegetation, (2) hydric soils, and (3) wetland hydrology. Unvegetated waters including lakes, rivers, and streams may also be subject to Section 404 jurisdiction and are characterized by an ordinary high water mark (OHWM) identified based on field indicators such as the lack of vegetation, sorting of sediments, and other indicators of flowing or standing water. The placement of fill material into Waters of the United States generally requires a permit from the Corps under Section 404 of the CWA.

The Corps also regulates construction in navigable waterways of the U.S. through Section 10 of the Rivers and Harbors Act (RHA) of 1899 (33 USC 403). Section 10 of the RHA requires Corps approval and a permit for excavation or fill, or alteration or modification of the course, location, condition, or capacity of, any port, roadstead, haven, harbor, canal, lake, harbor or refuge, or enclosure within the limits of any breakwater, or of the channel of any navigable water of the United States. Section 10 requirements apply only to navigable waters themselves, and are not applicable to tributaries, adjacent wetlands, and similar aquatic features not capable of supporting interstate commerce.

Waters of the State, Including Wetlands: The term “Waters of the State” is defined by the Porter-Cologne Act as “any surface water or groundwater, including saline waters, within the boundaries of the state.” The State Water Resources Control Board (SWRCB) and nine Regional Water Quality Control Boards

(RWQCB) protect waters within this broad regulatory scope through many different regulatory programs. Waters of the State in the context of a CEQA Biological Resources evaluation include wetlands and other surface waters protected by the *State Wetland Definition and Procedures for Discharges of Dredged or Fill Material to Waters of the State*. The SWRCB and RWQCB issue permits for the discharge of fill material into surface waters through the State Water Quality Certification Program, which fulfills requirements of Section 401 of the CWA and the Porter-Cologne Water Quality Control Act. Projects that require a Clean Water Act permit are also required to obtain a Water Quality Certification. If a project does not require a federal permit, but does involve discharge of dredge or fill material into surface waters of the State, the SWRCB and RWQCB may issue a permit in the form of Waste Discharge Requirements.

Sections 1600-1616 of California Fish and Game Code: Streams and lakes, as habitat for fish and wildlife species, are regulated by CDFW under Sections 1600-1616 of California Fish and Game Code (CFGC). Alterations to or work within or adjacent to streambeds or lakes generally require a 1602 Lake and Streambed Alteration Agreement. The term "stream", which includes creeks and rivers, is defined in the California Code of Regulations (CCR) as "a body of water that flows at least periodically or intermittently through a bed or channel having banks and supports fish or other aquatic life [including] watercourses having a surface or subsurface flow that supports or has supported riparian vegetation" (14 CCR 1.72). The term "stream" can include ephemeral streams, dry washes, watercourses with subsurface flows, canals, aqueducts, irrigation ditches, and other means of water conveyance if they support aquatic life, riparian vegetation, or stream-dependent terrestrial wildlife (CDFG 1994). Riparian vegetation has been defined as "vegetation which occurs in and/or adjacent to a stream and is dependent on, and occurs because of, the stream itself" (CDFG 1994). Removal of riparian vegetation also requires a Section 1602 Lake and Streambed Alteration Agreement from CDFW.

2.1.2 Special-status Species

Endangered and Threatened Plants, Fish and Wildlife. Specific species of plants, fish, and wildlife species may be designated as threatened or endangered by the federal Endangered Species Act (ESA), or the California Endangered Species Act (CESA). Specific protections and permitting mechanisms for these species differ under each of these acts, and a species' designation under one law does not automatically provide protection under the other.

The ESA (16 USC 1531 et seq.) is implemented by the United States Fish and Wildlife Service (USFWS) and the National Marine Fisheries Service (NMFS). The USFWS and NMFS maintain lists of "endangered" and "threatened" plant and animal species (referred to as "listed species"). "Proposed" or "candidate" species are those that are being considered for listing, and are not protected until they are formally listed as threatened or endangered. Under the ESA, authorization must be obtained from the USFWS or NMFS prior to take of any listed species. Take under the ESA is defined as "harass, harm, pursue, hunt, shoot, wound, kill, trap, capture, or collect, or to attempt to engage in any such conduct." Take under the ESA includes direct injury or mortality to individuals, disruptions in normal behavioral patterns resulting from factors such as noise and visual disturbance, and impacts to habitat for listed species. Actions that may result in "take" of an ESA-listed species may obtain a permit under ESA Section 10, or via the interagency consultation described in ESA Section 7. Federally listed plant species are only protected when take occurs on federal land.

The ESA also provides for designation of critical habitat, which are specific geographic areas containing physical or biological features "essential to the conservation of the species". Protections afforded to designated critical habitat apply only to actions that are funded, permitted, or carried out by federal

agencies. Critical habitat designations do not affect activities by private landowners if there is no other federal agency involvement.

The CESA (California Fish and Game Code 2050 et seq.) prohibits a "take" of any plant and animal species that the California Fish and Game Commission determines to be an endangered or threatened species in California. CESA regulations include take protection for threatened and endangered plants on private lands, as well as extending this protection to "candidate species" which are proposed for listing as threatened or endangered under CESA. The definition of a "take" under CESA ("hunt, pursue, catch, capture, or kill, or attempt to hunt, pursue, catch, capture, or kill") only applies to direct impact to individuals, and does not extend to habitat impacts or harassment. CDFW may issue an Incidental Take Permit under CESA to authorize take if it is incidental to otherwise lawful activity and if specific criteria are met. Take of these species is also authorized if the geographic area is covered by a Natural Community Conservation Plan (NCCP), as long as the NCCP covers that activity.

Fully Protected Species and Designated Rare Plant Species. This category includes specific plant and wildlife species that are designated in California Fish and Game Code (CFGC) as protected even if not listed under CESA or the ESA. Fully Protected Species includes specific lists of birds, mammals, reptiles, amphibians, and fish designated in CFGC. Fully protected species may not be taken or possessed at any time. No licenses or permits may be issued for take of fully protected species, except for necessary scientific research and conservation purposes. The definition of "take" is the same under the California Fish and Game Code and the CESA. By law, CDFW may not issue an Incidental Take Permit for Fully Protected Species. Under the California Native Plant Protection Act (NPPA), CDFW has listed 64 "rare" or "endangered" plant species, and prevents "take", with few exceptions, of these species. CDFW may authorize take of species protected by the NPPA through the Incidental Take Permit process, or under a NCCP.

Special Protections for Nesting Birds and Bats. The federal Bald and Golden Eagle Protection Act provides relatively broad protections to both of North America's eagle species (bald [*Haliaeetus leucocephalus*] and golden eagle [*Aquila chrysaetos*)] that in some regards are similar to those provided by the ESA. In addition to regulations for special-status species, most native birds in the United States, including non-status species, have baseline legal protections under the Migratory Bird Treaty Act of 1918 and CFGC, i.e., sections 3503, 3503.5 and 3513. Under these laws/codes, the intentional harm or collection of adult birds as well as the intentional collection or destruction of active nests, eggs, and young is illegal. For bat species, the Western Bat Working Group (WBWG) designates conservation status for species of bats, and those with a high or medium-high priority are typically given special consideration under CEQA.

Species of Special Concern, Movement Corridors, and Other Special Status Species Under CEQA. To address additional species protections afforded under CEQA, CDFW has developed a list of special species as "a general term that refers to all of the taxa the CNDDB is interested in tracking, regardless of their legal or protection status." This list includes lists developed by other organizations, including for example, the Audubon Watch List Species, the Bureau of Land Management Sensitive Species, and USFWS Birds of Special Concern. Plant species on the California Native Plant Society (CNPS) Rare and Endangered Plant Inventory (Inventory) with California Rare Plant Ranks (Rank) of 1, 2, and 3 are also considered special-status plant species and must be considered under CEQA. Rank 4 species are typically only afforded protection under CEQA when such species are particularly unique to the locale (e.g., range limit, low abundance/low frequency, limited habitat) or are otherwise considered locally rare. Additionally, any species listed as sensitive within local plans, policies and ordinances are likewise considered sensitive.

Movement and migratory corridors for native wildlife (including aquatic corridors) as well as wildlife nursery sites are given special consideration under CEQA.

2.2 Local Regulatory Setting

2.2.1 City of American Canyon General Plan

The City of American Canyon General Plan sets forth the following goals, objectives, and policies relevant to biological resources on the project site. Only those applicable to the proposed project are discussed herein:

GOAL 8: Protect and preserve the significant habitats, plants and wildlife that exist in the City and its Planning Area.

OBJECTIVE 8.1 AND POLICIES 8.1.1 AND 8.1.4

• Objective 8.1: Maintain data and information regarding areas of significant biological value within the Planning Area to facilitate resource conservation and the appropriate management of development.

• Policy 8.1.1: Acquire and maintain the most current information available regarding the status and location of sensitive biological elements (species and natural communities) within the City and, as appropriate, within the Sphere of Influence and Urban Limit Line.

• Policy 8.1.4: Regularly monitor and review developments proposed within the City's Planning Area to assess their impacts on local biological resources and to recommend appropriate mitigation measures that the developer and/or government agency can implement.

OBJECTIVE 8.2 AND POLICY 8.2.1

• Objective 8.2: Balance the preservation of natural habitat areas, including coastal saltmarsh, mixed hardwood forest, oak savannah, and wetland and riparian habitats, with new development in the City.

• Policy 8.2.1: Land use applications for developments located within sensitive habitats, including coastal saltmarsh, mixed hardwood forest, oak savannah, and riparian habitats (see Figure 8-1) [General Plan], or with areas potentially occupied by vernal pools (see Figure 8-2) [General Plan] shall be accompanied by sufficient technical background data to enable an adequate assessment of the potential for impacts on these resources, and possible measures to reduce any identifiable impacts. In addition to examining Figure 8-1 [General Plan] for information on these sensitive habitats, an on-site assessment shall be conducted by a City approved qualified biologist to determine if sensitive habitats exist on-site. In instances where the potential for significant impacts exists, the applicant must submit a Biological Assessment Report prepared by a qualified professional.

OBJECTIVE 8.3 AND POLICY 8.3.1

• Objective 8.3: Protect natural drainages and riparian corridors within the American Canyon Planning Area.

• Policy 8.3.1: Review proposed developments in wetlands and riparian habitats to evaluate their conformance with the following policies and standards:

a. The development plan shall fully consider the nature of existing biological resources and all reasonable measures shall be taken to avoid significant impacts, including retention of sufficient natural open space and undeveloped buffer zones.

b. Development shall be designed and sited to preserve watercourses, riparian habitat, vernal pools, and wetlands in their natural condition, unless these actions result in an unfeasible project, in which case habitat shall be replaced in accord with subsection "g" (see below).

e. Development shall incorporate fences, walls, vegetative cover, or other measures to adequately buffer habitat areas, linkages or corridors from built environment.

f. Roads and utilities shall be located and designed such that conflicts with biological resources, habitat areas, linkages or corridors are avoided where feasible.

g: Future development shall utilize appropriate open space or conservation easements in order to protect sensitive species or their habitats.

POLICIES 8.3.5 AND 8.3.6

• Policy 8.3.5: Establish a network of open spaces along the City's natural drainages and riparian corridors and link significant biological habitats. Any recreational use of these areas shall be designed to avoid damaging sensitive habitat areas.

• Policy 8.3.6: Preserve and integrate the City's natural drainages in new development, as opposed to their channelization or undergrounding, emphasizing opportunities for the development of pedestrian paths and greenbelts along their lengths throughout the City.

2.2.2 City of American Canyon – Tree Ordinance (Ord. 18.40.110)

A. Existing trees shall be preserved on the site unless otherwise approved by the city council as a part of the site development plans.

B. Unless specifically approved by the city council, any tree removed shall be replaced on the site. Replacement trees shall be a minimum size of a twenty-four-inch box of the same species unless specifically approved by the city council. (Ord. 98-10 § 1 (part), 1998).

3.0 ASSESSMENT METHODOLOGY

On June 24, 2020, WRA biologists visited the Project Site to map vegetation, aquatic communities, unvegetated land cover types, document plant and wildlife species present, and evaluate habitat on site for the potential to support special status species as defined by the California Environmental Quality Act (CEQA). Prior to the site visit, WRA biologists reviewed literature resources and performed database

searches to assess the potential for sensitive biological communities (e.g., wetlands) and special-status species (e.g., endangered plants), including:

- Soil Survey of Napa County, California (USDA 1978)
- Cuttings Wharf 7.5-minute quadrangle (USGS 2020)
- Contemporary aerial photographs (Google Earth 2020)
- Historical aerial photographs (Historical Aerials 2020)
- National Wetlands Inventory (USFWS 2020a)
- California Aquatic Resources Inventory (SFEI 2020)
- California Natural Diversity Database (CNDDB, CDFW 2020)
- California Native Plant Society Electronic Inventory (CNPS 2020a)
- Consortium of California Herbaria (CCH 2020)
- USFWS List of Federal Endangered and Threatened Species (USFWS 2020b)
- eBird Online Database (eBird 2020)
- CDFW Publication, California Bird Species of Special Concern in California (Shuford and Gardali 2008)
- CDFW and University of California Press publication California Amphibian and Reptile Species of Special Concern (Thomson et al. 2016)
- A Field Guide to Western Reptiles and Amphibians (Stebbins 2003)
- A Manual of California Vegetation, 2nd Edition (Sawyer et al. 2009)
- A Manual of California Vegetation Online (CNPS 2020b)
- Preliminary Descriptions of the Terrestrial Natural Communities (Holland 1986)
- California Natural Community List (CDFW 2020)

Database searches (i.e., CNDDB, CNPS) focused on the Cuttings Wharf USGS 7.5-minute quadrangles for special-status plants and wildlife. Figures 3 and 4 in Appendix A contains observations of special-status species documented within a five-mile radius of the Project Site.

Following the remote assessment, WRA biologists completed a field review of the project site to document: (1) land cover types (e.g., terrestrial communities, aquatic resources), (2) existing conditions and to determine if such provide suitable habitat for any special-status plant or wildlife species, (3) if and what type of aquatic natural communities (e.g., wetlands) are present, and (4) if special-status species are present.

3.1 Vegetation Communities and Other Land Cover Types

During the site visit, WRA evaluated the species composition and area occupied by distinct vegetation communities, aquatic communities (if any), and other land cover types. Mapping of these classifications utilized a combination of aerial imagery and ground surveys. In most instances, communities are characterized and mapped based on distinct shifts in plant assemblage (vegetation), and follow the California Natural Community List (CDFW 2018), Preliminary Descriptions of the Terrestrial Natural Communities of California (Holland 1986), and A Manual of California Vegetation, Online Edition (CNPS 2020b). These vegetation manuals cannot anticipate every component of every potential vegetation assemblage in California, and so in some cases, it is necessary to identify other appropriate vegetative classifications based on best professional judgment of WRA biologists. When undescribed variants are used, it is noted in the description. Vegetation alliances (natural communities) with a CDFW Rank of 1

through 3 (globally critically imperiled (S1/G1), imperiled (S2/G2), or vulnerable (S3/G3), were evaluated as sensitive as part of this evaluation.

The site was reviewed for the presence of wetlands and other aquatic resources according to the methods described in the *U.S. Army Corps of Engineers Wetlands Delineation Manual* ("Corps Manual"; Environmental Laboratory 1987), the *Regional Supplement to the Corps of Engineers Wetland Delineation Manual: Arid West Region* ("Arid West Supplement"; Corps 2008), and A Field Guide to the Identification of the Ordinary High Water Mark (OHWM) in the Arid West Region of the Western United States (Lichvar and McColley 2008). Areas meeting these indicators were mapped based on best professional judgement of biologists completing the field surveys.

3.2 Special-status Species

3.2.1 General Assessment

Potential occurrence of special-status species in the area of the Project Site was evaluated by first determining which special-status species occur in the vicinity of the Project Site through a literature and database review as described above. Presence of suitable habitat for special-status species was evaluated during the site visit based on physical and biological conditions of the site, as well as the professional expertise of the investigating biologists. The potential for each special-status species to occur in the Project Site was then determined according to the following criteria:

- No Potential. Habitat on and adjacent to the site is clearly unsuitable for the species requirements (foraging, breeding, cover, substrate, elevation, hydrology, plant community, site history, disturbance regime).

- Unlikely. Few of the habitat components meeting the species requirements are present, and/or the majority of habitat on and adjacent to the site is unsuitable or of very poor quality. The species is not likely to be found on the site.

- Moderate Potential. Some of the habitat components meeting the species requirements are present, and/or only some of the habitat on or adjacent to the site is unsuitable. The species has a moderate probability of being found on the site.

- High Potential. All of the habitat components meeting the species requirements are present and/or most of the habitat on or adjacent to the site is highly suitable. The species has a high probability of being found on the site.

- Present. Species is observed on the site or has been recorded (i.e. CNDDB, other reports) on the site in the recent past.

If a more thorough assessment was deemed necessary, a targeted or protocol-level assessment or survey was conducted or recommended as a future study. If a special-status species was observed during the site visit, its presence was recorded and discussed below in Section 5.2. If designated critical habitat is present for a species, the extent of critical habitat present and an evaluation of critical habitat elements is provided as part of the species discussions below.

3.3 Wildlife Corridors and Native Wildlife Nursery Sites

To account for potential impacts to wildlife movement/migratory corridors, biologists reviewed maps from the California Essential Connectivity Project (CalTrans 2010), and habitat connectivity data available through the CDFW Biogeographic Information and Observation System (BIOS) (CDFW 2020). Additionally, aerial imagery (Google 2018) for the local area was referenced to assess if local core habitat areas were present within, or connected to the Project Site. This assessment was refined based on observations of on-site physical and/or biological conditions, including topographic and vegetative factors that can facilitate wildlife movement, as well as on-site and off-site barriers to connectivity.

The potential presence of native wildlife nursery sites is evaluated as part of the site visit and discussion of individual wildlife species below. Examples of native wildlife nursery sites include nesting sites for native bird species (particularly colonial nesting sites), marine mammal pupping sites, and colonial roosting sites for other species (such as for monarch butterfly).

4.0 ECOLOGICAL SETTING

The approximately 21-acre Project Site (Parcels A and B) is located on Oat Hill in American Canyon, California. The Project Site overlooks the City of American Canyon. The Project Site consists of two relatively flat terraces with a steep, east-facing hillside connecting the two terraces. The Project Site serves as pasture for livestock, with small corrals and low, grazed vegetation. Currently the site supports a caretaker's mobile home. The Project Site is also being used as a staging area for construction materials and contains miscellaneous piles of debris. A few native and non-native trees occur along the periphery of the Project Site.

4.1 Soils and Topography

The overall topography of the Project Site is two generally flat terraces connected by a steep hillside with elevations ranging from approximately 80 to 185 feet above sea level. According to the *Soil Survey of Napa County* (USDA 1978), the Project Site is underlain by two soil mapping units: Clear Lake clay and Fagan clay loam (Figure 5). The parent soil series of all the Project Site's mapping units are summarized below.

Fagan clay loam: This series consists of clayey loamy soils formed from residuum weathered from sandstone and shale, and is situated on backslope hills at elevations ranging from 200 to 1,500 feet (CSRL 2020, USDA 1978). These soils are not considered hydric, and are well drained with very high runoff (USDA 1978).

Clear Lake clay: This series consists of clayey soils formed from basin alluvium derived from igneous, metamorphic, and sedimentary rock. It is situated on basin floors at elevations ranging from 10 to 800 feet (CSRL 2020, USDA 1978). These soils are considered hydric, and are poorly drained with high runoff (USDA 1978).

4.2 Climate and Hydrology

The Project Site is located in the southern extreme of Napa County. The average monthly maximum temperature in the area is 64 degrees Fahrenheit, while the average monthly minimum temperature is 51

degrees Fahrenheit. Predominantly, precipitation falls as rainfall between November and March with an annual average precipitation of 25 inches.

The local watershed is American Canyon Creek – Frontal San Pablo Estuaries (HUC 12: 180500020401) and the regional watershed is San Pablo Bay (HUC 8: 18050002). The Project Site is located in the central portion of the American Creek watershed. Detailed descriptions of aquatic resources are provided in Section 5.1 below.

4.3 Land-use

The entire Project Site has been subject to high levels of disturbance from past construction, grading and other human activities over the past 20+ years (Historic Aerials), and is characterized by ruderal non-native annual grassland vegetation that is currently used for goat and sheep grazing. Detailed plant community descriptions are included in Section 5.1 below, and all observed plants are included in Appendix C. Surrounding land uses include low-density residential and commercial, and light industrial (Google Earth 2020).

Photo 1. Photograph of adjacent water tank.

A large water tank situated on city-owned land is located directly west of the Project Site on the upper slopes of Oat Hill. In addition, a remnant concrete-lined v-ditch was mapped on the eastern portion of the Project Site (Figure 6). The ditch was constructed in uplands and does not follow a natural stream course. The ditch is filled with debris and does not convey stormwater flows. The ditch connects to the existing storm drain system at the base of the slope.

Photo 2. Photograph of remnant concrete v-ditch.

5.0 ASSESSMENT RESULTS

5.1 Vegetation Communities and Other Land Cover

WRA observed two land cover types within the entire Project Site: ruderal non-native annual grassland and disturbed/developed. Land cover types within the Project Site are illustrated in Figure 6 (Appendix

A). The non-sensitive land cover types on the Project Site include ruderal and disturbed/developed. No sensitive communities were observed.

Table 2. Land Cover Types

COMMUNITY/LAND COVERS	SENSITIVE STATUS	RARITY RANKING	ACRES WITHIN PROJECT SITE
Terrestrial Community/Land Cover			
Ruderal	Non-sensitive	None	19.51
Disturbed/Developed	Non-sensitive	None	1.06

5.1.1 Terrestrial Land Cover

Ruderal Vegetation (*Avena* spp. - *Bromus* spp. Herbaceous Semi-Natural Alliance). CDFW Rank: None. The majority of the Project Site consists of ruderal vegetation subject to continual livestock grazing. Ruderal vegetation covered 19.5 acres within the Project Site. The ruderal non-native annual grassland vegetation consisted of brome grasses (*Bromus* spp.), wild oats (*Avena fatua*), Italian ryegrass (*Festuca perennis*), and common weeds such as English plantain (*Plantago lanceolata*), bristly ox-tongue (*Helminthotheca echioides*), rose clover (*Trifolium hirtum*), Italian thistle (*Carduus pycnocephalus*), yellow star thistle (*Centaurea solstitialis*), purple star thistle (*Centaurea calcitrapa*), sweet fennel (*Foeniculum vulgare*), and mustard (*Hirschfeldia incana*). Scattered native and non-native shrubs were also observed and included coyote brush (*Baccharis pilularis*) and Himalayan blackberry (*Rubus armeniacus*). This community is not considered sensitive by Napa County, CDFW, or any other regulatory entity.

Photo 3. Photograph of typical ruderal vegetation on-site.

Several trees were observed on the Project Site, mostly along the lower periphery of the Parcel B, including valley oak (*Quercus lobata*), almond (*Prunus dulcis*), and plum (*Prunus* sp.).

Photo 4. Photograph of plum tree on-site with livestock.

Disturbed/Developed. CDFW Rank: None.

The disturbed/developed areas of the Project Site include the gravel/dirt access road that bisects the site, the caretaker's mobile home, several piles of construction materials, and the alignment of the remnant concrete v-ditch along the northern edge of the parcel, as illustrated in Figure 6 (Appendix A).

5.2 Special-status Species

5.2.1 Special-status Plants

No special-status plants have been mapped on or adjacent to the Project Site. Based upon a review of the resource databases listed in Section 3.0, 11 special-status plant species have been documented in the vicinity of the Project Site (Figure 3). Most of the plant species documented from the greater vicinity are unlikely or have no potential to occur for one or more of the following:

- Hydrologic conditions (e.g., tidal, riverine) necessary to support the special-status plant species are not present in the Project Site;
- Edaphic (soil) conditions (e.g., volcanic tuff, serpentine) necessary to support the special-status plant species are not present in the Project Site;
- Topographic conditions (e.g., north-facing slope, montane) necessary to support the special-status plant species are not present in the Project Site;
- Unique pH conditions (e.g., alkali scalds, acidic bogs) necessary to support the special-status plant species are not present in the Project Site;
- Associated natural communities (e.g., interior chaparral, tidal marsh) necessary to support the special-status plant species are not present in the Project Site;
- The Project Site is geographically isolated (e.g. below elevation, coastal environ) from the documented range of the special-status plant species;
- The historical landscape and/or habitat(s) of the Project Site were not suitable habitat prior to land/type conversion (e.g., reclaimed shoreline) to support the special-status plant species;
- Land use history and contemporary management (e.g., grading, intensive grazing) has degraded the localized habitat necessary to support the special-status plant species.

5.2.2 Special-status Wildlife

Of the 32 special-status wildlife species documented in the vicinity of the Project Site (Figure 4), most are excluded from the Project Site based on a lack of habitat features. Features not found within the Project Site that are required to support special-status wildlife species include:

- Vernal pools
- Perennial aquatic habitat (e.g. streams, rivers or ponds)
- Tidal Marsh areas
- Old growth redwood or fir forest
- Serpentine soils to support host plants
- Sandy beaches or alkaline flats
- Presence of specific host plants
- Caves, mine shafts, or abandoned buildings

The absence of such habitat features eliminates components critical to the survival or movement of most special-status species found in the vicinity. For instance, California red-legged frog (*Rana draytonii*) is known to occur in the project vicinity. However, in the American Canyon/Napa area, there are no records for the California red-legged frog west of State Route 29 where the project site is located. The closest known California red-legged frog occurrence is 0.81 miles east of the project site (CNDDB Occurrence No. 896). The California red-legged frog at this location was found in a dry cement tank adjacent to a large quarry pond. State Route 29 is located between this closest California red-legged frog record and the project site and constitutes an effective geographic barrier to overland California red-legged frog movements to/from the known record location and other extant California red-legged frog populations to the project site. In addition, the project site does not provide suitable habitat for the California red-legged frog. Based on all the available information, it can be concluded that the project site does not provide suitable habitat for the California red-legged frog.

Given the Project Site's relative proximity to sensitive habitats on the San Francisco Bay, many species documented nearby are additionally obligates to marine or tidal marsh habitats which are not present on or in the immediate vicinity of the Project Site.

Three special status species have potential to occur in the immediate vicinity of or in portions of the Project Site: white-tailed kite (*Elanus leucurus*), burrowing owl (*Athene cunicularia*), northern harrier (*Circus hudsonius*), and Swainson's hawk (*Buteo swainsoni*). These species are discussed in greater detail below.

Swainson's hawk (*Buteo swainsoni*). State Threatened. Moderate Potential. Swainson's hawk is a summer resident and migrant in California's Central Valley and scattered portions of the southern California interior. Nests are constructed of sticks and placed in trees located in otherwise largely open areas. Areas typically used for nesting include the edge of narrow bands of riparian vegetation, isolated patches of oak woodland, lone trees, and also planted and natural trees associated with roads, farmyards and sometimes adjacent residential areas. Foraging occurs in open habitats, including grasslands, open woodlands, and agricultural areas. While breeding, adults feed primarily on rodents (and other vertebrates); for the remainder of the year, large insects (e.g., grasshoppers, dragonflies) comprise most of the diet. In many areas, Swainson's hawks have adapted to foraging primarily in and around agricultural plots (particularly alfalfa, wheat and row crops), as prey is both numerous and conspicuous at harvest and/or during flooding or burning (Bechard et al. 2010). There are several CNDDB occurrences within 2.5 miles of the Project Site (CDFW 2020) and there are several recent eBird sightings of this species within one mile of the Project Site (eBird 2020). While the Project Site does not support any suitable nesting trees, large eucalyptus trees directly adjacent to the Project Site may provide suitable nesting habitat for Swainson's hawk.

Burrowing owl (*Athene cunicularia*). CDFW Species of Special Concern**.** Moderate Potential. The burrowing owl occurs as a year-round resident and winter visitor in much of California's lowlands, inhabiting open areas with sparse or non-existent tree or shrub canopies. Typical habitat is annual or perennial grassland, although human-modified areas such as agricultural lands and airports are also used (Poulin et al. 2011). This species is dependent on burrowing mammals to provide the burrows that are characteristically used for shelter and nesting, and in northern California is typically found in close association with California ground squirrels (*Otospermophilus beecheyi*). Manmade substrates such as pipes or debris piles may also be occupied in place of burrows. Prey consists of insects and small vertebrates. Breeding typically takes place from March to July. Several CNDDB occurrences have been

recorded within 2.5 miles of the Project Site (CDFW 2020). In addition, burrowing owls are known to winter in the nearby American Canyon Wetlands, approximately 0.5 mile west of the Project Site (eBird 2020). Several large debris piles and a few suitable California ground squirrel burrows were observed during the June 2020 site visit; however, there was no sign of active use by this species during the site assessment. Livestock grazing within the Project Site keeps the vegetation relatively low and several debris piles and various structures may provide perching locations.

Northern harrier (*Circus hudsonius* [*cyaneus*]). CDFW Species of Special Concern. Unlikely. The northern harrier occurs as a resident and winter visitor in open habitats throughout most of California, including freshwater and brackish marshes, grasslands and fields, agricultural areas, and deserts. Harriers typically nest in treeless areas within patches of dense, relatively tall, vegetation, the composition of which is highly variable; nests are placed on the ground and often located near water or within wetlands (Shuford and Gardali 2008). Harriers are birds of prey and subsist on a variety of small mammals and other vertebrates. Marginal nesting habitat within the ruderal vegetation is present within the Project Site. Nesting sites for northern harrier has been documented within 3 miles of the Project Site (CDFW 2020).

White-tailed kite (*Elanus leucurus*). CDFW Fully Protected Species. Moderate Potential. The white-tailed kite is resident in open to semi-open habitats throughout the lower elevations of California, including grasslands, savannahs, woodlands, agricultural areas and wetlands. Vegetative structure and prey availability seem to be more important habitat elements than associations with specific plants or vegetative communities (Dunk 1995). Nests are constructed mostly of twigs and placed in trees, often at habitat edges. Nest trees are highly variable in size, structure, and immediate surroundings, ranging from shrubs to trees greater than 150 feet tall (Dunk 1995). This species preys upon a variety of small mammals, as well as other vertebrates and invertebrates. This species has been documented recently in the vicinity of the Project Site (eBird 2020, CDFW 2020). Small and medium trees and shrubs on the perimeter of the Project Site may provide suitable nesting habitat for white-tailed kite.

5.3 Wildlife Corridors and Native Wildlife Nursery Sites

Wildlife movement between suitable habitat areas can occur via open space areas lacking substantial barriers. The terms “landscape linkage” and “wildlife corridor” are often used when referring to these areas. The key to a functioning corridor or linkage is that it connects two larger habitat blocks, also referred to as core habitat areas (Beier 1992, Soule and Terborgh 1999). It is useful to think of a “landscape linkage” as being valuable in a regional planning context, a broad scale mapping of natural habitat that functions to join two larger habitat blocks. The term “wildlife corridor” is useful in the context of smaller, local area planning, where wildlife movement may be facilitated by specific local biological habitats or passages and/or may be restricted by barriers to movement. Above all, wildlife corridors must link two areas of core habitat and should not direct wildlife to developed areas or areas that are otherwise void of core habitat (Hilty et al. 2006).

The Project Site is not within a designated wildlife corridor (CalTrans 2010), however, large tracts of open space surround the Project Site. As such, common wildlife species presumably utilize the site to some degree for local movements. It is important to note that commercial developments and State Route-29, approximately 900 feet east of the Project Site, likely create a barrier for wildlife with limited crossing opportunities.

The Project Site is also within the Pacific Flyway, a major corridor for migratory birds, particularly given the extensive marsh habitats along the Napa River. However, the habitat within the Project Site is

marginal for migratory birds since the ruderal non-native annual vegetation on the Project Site is subject to continual livestock grazing. Higher quality habitat in the nearby Napa River corridor to the west and the open space that surrounds the site is more likely to support migrating birds.

6.0 ANALYTICAL METHODOLOGY AND SIGNIFICANCE THRESHOLD CRITERIA

Pursuant to Appendix G, Section IV of the State CEQA Guidelines, a project would have a significant impact on biological resources if it would:

a) Have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special-status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Game or U.S. Fish and Wildlife Service;

b) Have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations, or by the California Department of Fish and Game or U.S. Fish and Wildlife Service;

c) Have a substantial adverse effect on federally protected wetlands as defined by Section 404 of the Clean Water Act (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means;

d) Interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites;

e) Conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance; and/or,

f) Conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan.

These thresholds were utilized in completing the analysis of potential project impacts for CEQA purposes. For the purposes of this analysis, a "substantial adverse effect" is generally interpreted to mean that a potential impact could directly or indirectly affect the resiliency or presence of a local biological community or species population. Potential impacts to natural processes that support biological communities and special-status species populations that can produce similar effects are also considered potentially significant. Impacts to individuals of a species or small areas of existing biological communities may be considered less than significant if those impacts are speculative, beneficial, de-minimis, and/or would not affect the resiliency of a local population.

7.0 IMPACTS AND MITIGATION EVALUATION

Using the CEQA analysis methodology outlined in Section 6.0 above, the following section describes potential significant impacts to sensitive resources within the area of the Project Site as well as suggested mitigation measures which are expected to reduce impacts to less than significant.

7.1 Special-status Species

This section analyzes the Project's potential impacts and mitigation for special-status species in reference to the significance threshold outlined in CEQA Appendix G, Part IV (a):

> *Does the project have the potential to have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special-status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Game or U.S. Fish and Wildlife Service?*

Potential impacts and mitigation for potentially significant impacts are discussed below

Swainson's Hawk

No temporary or permanent loss of Swainson's hawk nesting habitat is anticipated due to construction of the Project. Therefore, the Project will not result in direct impacts to Swainson's hawk. However, this species may nest in the large eucalyptus trees located adjacent to the Project Site.

> **Potential Impact BIO-1:** There is a possibility that noise and visual impacts associated with construction of the proposed project could result in: (1) nest abandonment; (2) loss of young; (3) reduced health and vigor of eggs and/or nestlings (resulting in reduced survival rates).

To reduce potential impacts to Swainson's hawk to a less-than-significant level, the following measures will be implemented:

> **Mitigation Measure BIO-1:** Preconstruction surveys will be conducted within a quarter-mile radius around all Project activities and will be completed for at least two survey periods immediately prior to the Project's initiation. The survey period timing and methodology will be conducted in accordance with CDFW's Recommended Timing and Methodology for Swainson's Hawk Nesting Surveys in California's Central Valley (CDFG 1994), which identifies different survey windows throughout the pre-nesting and nesting season (ranging from January 1 through July 30/post-fledging) that have different survey methodologies and requirements.
>
> **Mitigation Measure BIO-2**: If Swainson's hawks are found to be nesting on the Project Site or within a ¼-mile of the project site, consultation with CDFW will be required. The size of the nest protection buffer will be determined during consultation with CDFW but at a minimum there will be a 300-foot non-disturbance buffer around the nest site.

Implementation of these mitigation measures will reduce potential impacts to Swainson's hawk to a level that is less than significant.

Burrowing Owl

Suitable burrows and burrow surrogates for burrowing owl were observed within the Project Site; however, there was no sign of active use by this species during the site assessment. In the absence of surveys, direct impacts to burrowing owls may occur due to the destruction of potentially occupied burrows or burrow surrogates during grading, vegetation removal, or other construction activities.

> **Potential Impact BIO-2:** There is a possibility that grading, vegetation removal, or other construction activities may result in the killing or injuring of burrowing owl adults, nestling, and/or eggs. In addition, noise and visual impacts associated with construction of the proposed project could result in: (1) nest abandonment; (2) loss of young; (3) reduced health and vigor of eggs and/or nestlings (resulting in reduced survival rates).

To reduce potential impacts burrowing owl to a less-than-significant level, the following measures will be implemented:

> **Mitigation Measure BIO-3:** For the protection of burrowing owl, a pre-construction survey should be performed no more than 14 days prior to initiating ground disturbance. This survey will occur regardless of the time of year, as burrowing owls may use the Project Site during the non-nesting season. The survey will be performed according to the standards set forth by the Staff Report for Burrowing Owl Mitigation (CDFW 2012). If no owls are found during these surveys, no additional measures for burrowing owl would be necessary.
>
> **Mitigation Measure BIO-4:** If occupied burrows are encountered on site, they should not be disturbed during the nesting season (February 1 through August 31) until juveniles from the occupied burrows are foraging independently and capable of independent survival.
>
> If occupied burrows are encountered on site during the non-nesting season (1 September to 31 January), and owls must be moved away from the disturbance area, passive relocation techniques should be used rather than trapping, according to the standards set forth by the Staff Report for Burrowing Owl Mitigation (CDFW 2012). Burrow exclusion is a technique of installing one-way doors in burrow openings during the non-breeding season to temporarily exclude burrowing owls, or permanently exclude burrowing owls and close burrows after verifying burrows are empty. At least 1 week should be allowed to accomplish this and allow the owls to acclimate to alternate burrows. Burrowing owls should not be excluded from burrows unless a Burrowing Owl Exclusion Plan is developed and approved by the applicable local CDFW office.

White-tailed Kite, Norther Harrier and Common Nesting Birds

Several small and medium trees near the perimeter of the Project Site could support nesting by white-tailed kites. Northern harrier could nest in the marginal non-native annual grassland on the site, and common song birds (passerine birds) could also nest in the small trees and shrubs on the project site. All of these birds are protected under the Migratory Bird Treaty Act (50 CFR 10.13) and their eggs and young are protected under California Fish and Game Code Sections 3503, 3503.5. Impacts to these and other nesting bird species would be considered a potentially significant impact.

Potential Impact BIO-3: Potential impacts to nesting bird species from the proposed Project include disturbance to nesting birds and possibly death of adults and/or young. Impacts to nesting birds from the proposed Project would be potentially significant.

To reduce potential impacts these species to a less-than-significant level, the following measures will be implemented:

Mitigation Measure BIO-5: If Project activities must be conducted during the nesting season (March 1 and September 1), a pre-construction nesting bird survey will be conducted by a qualified biologist no more than 14 days prior to vegetation removal or initial ground disturbance. The survey will include the Project Site and surrounding vicinity to identify the location and status of any nests that could potentially be affected either directly or indirectly by Project activities.

If active nests of native nesting bird species are located during the nesting bird survey, a work exclusion zone will be established around each nest by the qualified biologist. Established exclusion zones will remain in place until all young in the nest have fledged or the nest otherwise becomes inactive (e.g., due to predation). Appropriate exclusion zone sizes will be determined by a qualified biologist and will vary based on species, nest location, existing visual buffers, noise levels, and other factors. An exclusion zone radius may be as small as 50 feet for common, disturbance-adapted species, or as large as 250 feet or more for raptors. Exclusion zone size will be reduced from established levels by a qualified biologist if nest monitoring findings indicate that Project activities do not adversely impact the nest, and if a reduced exclusion zone would not adversely affect the nest.

Implementation of these mitigation measures will reduce potential impacts to nesting birds to a level that is less than significant.

7.2 Sensitive Land Cover Types

This section addresses the question:

b) Does the Project have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations, or by the California Department of Fish and Game or U.S. Fish and Wildlife Service;

No sensitive natural communities were observed within the Project Site. The Project will have no impacts to sensitive natural communities.

7.3 Aquatic Resources

This section analyzes the Project's potential impacts and mitigation for wetlands and other areas presumed or determined to be within the jurisdiction of the Corps or BCDC in reference to the significance threshold outlined in CEQA Appendix G, Part IV (c):

c) Does the Project have the potential to have a substantial adverse effect on federally protected wetlands as defined by Section 404 of the Clean Water Act (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means;

No direct or indirect impacts to wetlands are anticipated from the Project. The Project will have no impacts to aquatic resources.

7.4 Wildlife Corridors and Native Wildlife Nursery Sites

This section analyzes the Project's potential impacts and mitigation for habitat corridors and linkages in reference to the significance threshold outlined in CEQA Appendix G, Part IV (d):

> *d) Does the Project have the potential to interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites;*

Large commercial developments and State Route-29, approximately 900 feet east of the Project Site, likely create a barrier for wildlife with limited crossing opportunities. While common wildlife species likely utilize the site to some degree for local movements, the Project Site is surrounded by large tracts of open space. As such, the loss of the project site as a migration corridor will result in a less than significant impact on a regional scale.

Migratory birds may use the habitat within the Project Site opportunistically, however, higher quality habitat exists along the San Francisco Bay and Napa River corridor. The marginal habitat within the Project Site offers only marginal habitat for species along the Pacific Flyway. Based on these factors, the construction of the Project will result in a less than significant impact to migratory corridors and habitat linkages.

7.5 Local Policies and Ordinances

This section analyzes the Project's potential impacts and mitigation based on conflicts with local policies and ordinances in reference to the significance threshold outlined in CEQA Appendix G, Part IV (e):

> *e) Does the Project have the potential to conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance;*

The General Plan policies related to biological resources examined in this analysis are detailed in Section 2.2. This report represents a Biological Assessment Report documenting findings from background research, and presents the current habitats and species present on the Project Site. Proposed development on the Project Site does not impact watercourses, riparian habitat, vernal pools or wetlands. The proposed Project will remain consistent with the policies (applicable to all Project components), and will therefore have no impact with regard to local plan and policy consistency.

The Project would require removal of approximately two valley oaks, one coast live oak (*Quercus agrifolia*), and four other non-native trees (almond and plum). In accordance with the City's Tree Ordinance, any tree removed will be replaced on the site, as approved by the City Council.

7.6 Habitat Conservation Plans

This section analyzes the Project's potential impacts and mitigation based on conflicts with any adopted local, regional, and state habitat conservation plans in reference to the significance threshold outlined in CEQA Appendix G, Part IV (f):

f) Does the Project have the potential to conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan.

The proposed project will not conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan. No such plan exists applicable to the Project Site. No impact will occur.

APPENDIX B – PROJECT SITE PLANS

THIS PAGE INTENTIONALLY LEFT BLANK.

Project Summary

Parcel A

Gross Site Area: ± 11.3 Acres
Developable Area: ± 8.1 Acres
Total Units: 206 Homes
- (52) 1 Bdrm Units
- (108) 2 Bdrm Units
- (46) 3 Bdrm Units

Density: 18.2 DU per Gross Acre
25.4 DU per Developable Area

Parking:

Required: 438 Spaces
- (52) 1 Bedroom x 1.5 Spaces =78 Spaces
- (154) 2 or more Bedroom x 2 Spaces =308 Spaces
- (206) Guest x 0.25 Spaces =52 Spaces

Provided: 451 On-site & Off-site Spaces
428 On-site Spaces
- Garage: 157 Spaces
- Carports: 49 Spaces
- Head In: 222 Spaces

23 Off-site Spaces

Open Space
- Common Open Space: 53,571 SF
- Hillside Slope Area: 139,392 SF

Parcel B

Gross Site Area: ± 9.5 Acres
Developable Area: ± 3.6 Acres
Total Units: 85 Units
- (20) 1 Bdrm Units
- (45) 2 Bdrm Units
- (20) 3 Bdrm Units

Density: 8.9 DU per Gross Area
23.6 DU per Developable Area

Parking:

Required: 182 Spaces
- (20) 1 Bedroom x 1.5 Spaces =30 Spaces
- (45) 2 or more Bedroom x 2 Spaces =130 Spaces
- (85) Guest x 0.25 Spaces =22 Spaces

Provided: 183 Spaces
- Garage: 65 Spaces
- Carports: 20 Spaces
- Head In: 98 Spaces (9' x 18')

Open Space
- Common Open Space: 27,647 SF
- Hillside Slope Area: 257,004 SF

Notes:

1. Site plan is for conceptual purposes only.
2. Site plan must be reviewed by planning, building, and fire departments for code compliance.
3. Base information per civil engineer.
4. Civil engineer to verify all setbacks and grading information
5. Building Footprints might change due to the final design elevation style.
6. Open space area is subject to change due to the balcony design of the elevation.
7. Building setbacks are measured from property lines to building foundation lines.

APPENDIX C – SPECIES OBSERVED IN AND AROUND THE PROJECT SITE

THIS PAGE INTENTIONALLY LEFT BLANK.

Appendix C-1. Plant species observed on the Project Site.

Plant Species					
Scientific Name	**Common Name**	**Origin**	**Form**	**Cal-IPC Ranking***	**Wetland Status (Lichvar et al. 2016)+**
Acacia melanoxylon	Blackwood acacia	non-native (invasive)	tree	Limited	-
Avena barbata	Slim oat	non-native (invasive)	annual, perennial grass	Moderate	-
Baccharis pilularis subsp. *consanguinea*	Coyote brush	native	shrub	-	-
Bellardia trixago	Mediterranean lineseed	non-native (invasive)	annual herb	Limited	-
Bromus carinatus	California brome	native	perennial grass	-	-
Bromus diandrus	Ripgut brome	non-native (invasive)	annual grass	Moderate	-
Bromus hordeaceus	Soft chess	non-native (invasive)	annual grass	Limited	FACU
Carduus pycnocephalus subsp. *pycnocephalus*	Italian thistle	non-native	annual herb	-	-
Centaurea calcitrapa	Purple star thistle	non-native (invasive)	annual or perennial herb	Moderate	-
Centaurea solstitialis	Yellow star thistle	non-native (invasive)	annual herb	High	-
Cirsium vulgare	Bull thistle	non-native (invasive)	perennial herb	Moderate	FACU
Cynodon dactylon	Bermuda grass	non-native (invasive)	perennial grass	Moderate	FACU
Elymus caput-medusae	Medusa head	non-native	annual grass	High	-

Plant Species					
Scientific Name	**Common Name**	**Origin**	**Form**	**Cal-IPC Ranking***	**Wetland Status (Lichvar et al. 2016)+**
Erodium botrys	Broad-leaf filaree	non-native	annual herb	-	FACU
Festuca perennis	Italian ryegrass	non-native (invasive)	annual or perennial grass	Moderate	FAC
Foeniculum vulgare	Fennel	non-native (invasive)	perennial herb	High	-
Helminthotheca echioides	Bristly ox-tongue	non-native	annual or perennial herb	Limited	FAC
Hirschfeldia incana	Mustard	non-native (invasive)	perennial herb	Moderate	-
Hordeum marinum	Seaside barley	non-native	annual grass	-	FAC
Iris sp.	Iris	-	perennial herb	-	-
Lactuca serriola	Prickly lettuce	non-native	annual herb	-	FACU
Lotus corniculatus	Birdfoot trefoil	non-native	perennial herb	-	FAC
Medicago polymorpha	Bur clover	non-native (invasive)	annual herb	Limited	FACU
Plantago lanceolata	English plantain	non-native (invasive)	perennial herb	Limited	FAC
Prunus americana	American plum	non-native	tree	-	-
Prunus dulcis	Domestic almond	non-native	tree	-	-
Quercus agrifolia	Coast live oak	native	tree	-	-
Quercus lobata	Valley oak	native	tree	-	FACU

Plant Species					
Scientific Name	**Common Name**	**Origin**	**Form**	**Cal-IPC Ranking***	**Wetland Status (Lichvar et al. 2016)+**
Rubus armeniacus	Himalayan blackberry	non-native (invasive)	shrub	High	FAC
Rumex crispus	Curly dock	non-native (invasive)	perennial herb	Limited	FAC
Trifolium hirtum	Rose clover	non-native (invasive)	annual herb	Limited	-

Appendix C-2. Wildlife species observed on the Project Site.

Wildlife Species	
Scientific Name	**Common Name**
Buteo jamaicensis	Red-tailed hawk
Cathartes aura	Turkey vulture
Euphagus cyanocephalus	Brewer's blackbird
Haemorhous mexicanus	House finch
Icterus cucullatus	Hooded oriole
Lepus californicus	Black-tailed jackrabbit
Melozone crissalis	California towhee
Mimus polyglottos	Northern mockingbird
Odocoileus hemionus	Mule deer
Otospermophilus beecheyi	California ground squirrel
Psaltriparus minimus	Bushtit
Sceloporus occidentalis	Western fence lizard
Stelgidopteryx serripennis	Northern rough-winged swallow
Sturnus vulgaris	European starling
Thomomys bottae	Botta's pocket gopher

+ National Plant List of Plant Species that Occur in Wetlands, California – Arid West (Lichvar et al. 2016)

APPENDIX D – SPECIAL-STATUS SPECIES POTENTIAL TABLE

THIS PAGE INTENTIONALLY LEFT BLANK.

Species	Status	Habitat Requirements	Potential to Occur in the Project Site	Results and Recommendations
Plants				
alkali milk-vetch *Astragalus tener* var. *tener*	Rank 1B.2	Playas, valley and foothill grassland (adobe clay), vernal pools. Elevation ranges from 0 to 195 feet (1 to 60 meters). Blooms Mar-Jun.	No Potential. No vernal pools are present within the Project Site.	No further recommendations.
big-scale balsamroot *Balsamorhiza macrolepis*	Rank 1B.2	Chaparral, cismontane woodland, valley and foothill grassland. Elevation ranges from 145 to 5100 feet (45 to 1555 meters). Blooms Mar-Jun.	No Potential. No suitable habitat is present within the Project Site.	No further recommendations.
Lyngbye's sedge *Carex lyngbyei*	Rank 2B.2	Marshes and swamps (brackish or freshwater). Elevation ranges from 0 to 35 feet (0 to 10 meters). Blooms Apr-Aug.	No Potential. No marshes or swamps are present within the Project Site.	No further recommendations.
Tiburon paintbrush *Castilleja affinis* var. *neglecta*	FE, ST, Rank 1B.2	Valley and foothill grassland (serpentine). Elevation ranges from 195 to 1310 feet (60 to 400 meters). Blooms Apr-Jun.	No Potential. No suitable habitat is present within the Project Site.	No further recommendations.
soft bird's-beak *Chloropyron molle* ssp. *molle*	FE, SR, Rank 1B.2	Marshes and swamps (coastal salt). Elevation ranges from 0 to 10 feet (0 to 3 meters). Blooms Jun-Nov.	No Potential. No marshes or swamps are present within the Project Site.	No further recommendations.
dwarf downingia *Downingia pusilla*	Rank 2B.2	Valley and foothill grassland (mesic), vernal pools. Elevation ranges from 0 to 1460 feet (1 to 445 meters). Blooms Mar-May.	No Potential. No vernal pools are present within the Project Site.	No further recommendations.

San Joaquin spearscale *Extriplex joaquinana*	Rank 1B.2	Chenopod scrub, meadows and seeps, playas, valley and foothill grassland. Elevation ranges from 0 to 2740 feet (1 to 835 meters). Blooms Apr-Oct.	No Potential. No suitable habitat is present within the Project Site.	No further recommendations.
Carquinez goldenbush *Isocoma arguta*	Rank 1B.1	Valley and foothill grassland (alkaline). Elevation ranges from 0 to 65 feet (1 to 20 meters). Blooms Aug-Dec.	No Potential. No suitable habitat is present within the Project Site.	No further recommendations.
Contra Costa goldfields *Lasthenia conjugens*	FE, Rank 1B.1	Cismontane woodland, playas (alkaline), valley and foothill grassland, vernal pools. Elevation ranges from 0 to 1540 feet (0 to 470 meters). Blooms Mar-Jun.	No Potential. No vernal pools are present within the Project Site.	No further recommendations.
Delta tule pea *Lathyrus jepsonii* var. *jepsonii*	Rank 1B.2	Marshes and swamps (freshwater and brackish). Elevation ranges from 0 to 15 feet (0 to 5 meters). Blooms May-Jul(Aug-Sep).	No Potential. No marshes or swamps are present within the Project Site.	No further recommendations.
legenere *Legenere limosa*	Rank 1B.1	Vernal pools. Elevation ranges from 0 to 2885 feet (1 to 880 meters). Blooms Apr-Jun.	No Potential. No vernal pools are present within the Project Site.	No further recommendations.
Mason's lilaeopsis *Lilaeopsis masonii*	SR, Rank 1B.1	Marshes and swamps (brackish or freshwater), riparian scrub. Elevation ranges from 0 to 35 feet (0 to 10 meters). Blooms Apr-Nov.	No Potential. No marshes or swamps are present within the Project Site.	No further recommendations.

Marin knotweed *Polygonum marinense*	Rank 3.1	Marshes and swamps (coastal salt or brackish). Elevation ranges from 0 to 35 feet (0 to 10 meters). Blooms (Apr)May-Aug(Oct).	No Potential. No marshes or swamps are present within the Project Site.	No further recommendations.
Suisun Marsh aster *Symphyotrichum lentum*	Rank 1B.2	Marshes and swamps (brackish and freshwater). Elevation ranges from 0 to 10 feet (0 to 3 meters). Blooms (Apr)May-Nov.	No Potential. No marshes or swamps are present within the Project Site.	No further recommendations.
two-fork clover *Trifolium amoenum*	FE, Rank 1B.1	Coastal bluff scrub, valley and foothill grassland (sometimes serpentine). Elevation ranges from 15 to 1360 feet (5 to 415 meters). Blooms Apr-Jun.	No Potential. No suitable habitat is present within the Project Site.	No further recommendations.
saline clover *Trifolium hydrophilum*	Rank 1B.2	Marshes and swamps, valley and foothill grassland (mesic, alkaline), vernal pools. Elevation ranges from 0 to 985 feet (0 to 300 meters). Blooms Apr-Jun.	No Potential. No suitable habitat is present within the Project Site.	No further recommendations.
MAMMALS				
salt-marsh harvest mouse *Reithrodontomys raviventris*	FE, SE, CFP	Endemic to salt marshes and brackish wetlands of the San Francisco Bay Estuary. Pickleweed marshes are primary habitat; also occurs in various other wetland communities with dense vegetation. Does not burrow, builds loosely organized nests. Requires higher areas for flood escape.	No Potential. No marsh wetlands are present within the Project Site.	No further recommendations.
Suisun shrew *Sorex ornatus sinuosus*	SSC	Tidal marshes of the northern shores of San Pablo and Suisun Bays. Require dense low-lying cover and driftwood and other litter above the mean hightide	No Potential. No tidal marshes are present within the Project Site.	No further recommendations.

		line for nesting and foraging.		
American badger *Taxidea taxus*	SSC	Most abundant in drier open stages of most shrub, forest, and herbaceous habitats, with friable soils. Requires friable soils and open, uncultivated ground. Preys on burrowing rodents.	Unlikely. No suitable burrows for this species were observed within the Project Site. The nearest occurrence is approximately 6 miles north of the Project Site and is from 1911 (CDFW 2020).	No further recommendations.
Birds				
tricolored blackbird Agelaius tricolor	SC (E), SSC	Nearly endemic to California, where it is most numerous in the Central Valley and vicinity. Highly colonial, nesting in dense aggregations over or near freshwater in emergent growth or riparian thickets. Also uses flooded agricultural fields. Abundant insect prey near breeding areas essential.	Unlikely. No suitable emergent vegetation or riparian thickets for nesting are present within the Project Site.	No further recommendations.
golden eagle *Aquila chrysaetos*	CFP	Occurs year-round in rolling foothills, mountain areas, sage-juniper flats, and deserts. Cliff-walled canyons provide nesting habitat in most parts of range; also nests in large trees, usually within otherwise open areas.	Unlikely. No cliffs for nesting are present within the Project Site. Golden eagles may occasionally forage within the Project Site. The nearest documented occurrence is approximately 4 miles east of the Project Site (CDFW 2020). No golden eagles were observed during the 2020 site visit.	No further recommendations.
burrowing owl *Athene cunicularia*	SSC	Year-round resident and winter visitor. Occurs in open, dry grasslands and scrub habitats with low-growing vegetation, perches and abundant mammal burrows. Preys upon insects and small vertebrates. Nests and roosts in old mammal burrows,	Moderate Potential. Debris piles and a few ground squirrel burrows may provide suitable nesting and wintering habitat for this species. In addition, livestock grazing within the Project Site has limited	Preconstruction surveys will be conducted prior to ground disturbance in the Project site. See Section 7.1.

		most commonly those of ground squirrels.	vegetation growth. Several documented occurrences for burrowing owl have been documented within 3 miles of the Project Site (CDFW 2020).	
Swainson's hawk *Buteo swainsoni*	ST	Summer resident in California's Central Valley and limited portions of the southern California interior. Nests in tree groves and isolated trees in riparian and agricultural areas, including near buildings. Forages in grasslands and scrub habitats as well as agricultural fields, especially alfalfa. Preys on arthropods year-round as well as smaller vertebrates during the breeding season.	Moderate Potential. No suitable nesting trees were observed within the Project Site. However, several large eucalyptus trees suitable for nesting are present within 100 feet of the Project Site. In addition, the Project Site may provide suitable foraging habitat for this species. The nearest documented nesting site is approximately 2 miles north of the Project Site, with multiple documented nesting sites within 5 miles of the Project Site (CDFW 2020).	Preconstruction surveys will be conducted within ¼ mile of the Project site. See Section 7.1.
western snowy plover *Charadrius nivosus (alexandrines) nivosus*	FT, SSC	Federal listing applies only to the Pacific coastal population. Year-round resident and winter visitor. Occurs on sandy beaches, salt pond levees, and the shores of large alkali lakes. Nests on the ground, requiring sandy, gravelly or friable soils.	No Potential. No suitable sandy beaches or salt pond levees were observed within the Project Site.	No further recommendations.
northern harrier *Circus hudsonius (cyaneus)*	SSC	Year-round resident and winter visitor. Found in open habitats including grasslands, prairies, marshes and agricultural areas. Nests on the ground in dense vegetation, typically near water	Unlikely. Marginal suitable nesting habitat is present within the Project Site. Northern harrier may occasionally forage within the Project Site. The nearest	Preconstruction surveys will be conducted prior to ground disturbance in the Project site. See Section 7.1.

		or otherwise moist areas. Preys on small vertebrates.	documented occurrence is 3 miles west of the Project Site in wetlands associated with the Napa River (CDFW 2020).	
white-tailed kite *Elanus leucurus*	CFP	Year-round resident in coastal and valley lowlands with scattered trees and large shrubs, including grasslands, marshes and agricultural areas. Nests in trees, of which the type and setting are highly variable. Preys on small mammals and other vertebrates.	Moderate Potential. Small and medium trees and shrubs on the Project Site may provide suitable nesting habitat for this species. The Project Site may also provide foraging habitat for white-tailed kites.	Preconstruction surveys will be conducted prior to ground disturbance in the Project site. See Section 7.1.
American peregrine falcon *Falco peregrinus anatum*	FD, SD, CFP	Year-round resident and winter visitor. Occurs in a wide variety of habitats, though often associated with coasts, bays, marshes and other bodies of water. Nests on protected cliffs and also on man-made structures including buildings and bridges. Preys on birds, especially waterbirds. Forages widely.	Unlikely. No protected cliffs or suitable man-made structures for nesting are present within the Project Site. This species may occasionally forage within the Project Site.	No further recommendations.
San Francisco common yellowthroat *Geothlypis trichas sinuosa*	SSC	Resident of the San Francisco Bay region, in fresh and salt water marshes. Requires thick, continuous cover down to water surface for foraging; tall grasses, tule patches, willows for nesting.	No Potential. No emergent or riparian vegetation is present within the Project Site.	No further recommendations.
California black rail *Laterallus jamaicensis coturniculus*	ST, CFP	Year-round resident in marshes (saline to freshwater) with dense vegetation within four inches of the ground. Prefers larger, undisturbed marshes that have an extensive upper zone and are close to a major	No Potential. No marshes are present within the Project Site.	No further recommendations.

		water source. Extremely secretive and cryptic.		
Samuels (San Pablo) song sparrow *Melospiza melodia samuelis*	SSC	Year-round resident of tidal marshes along the north side of San Francisco and San Pablo Bays. Typical habitat is dominated by pickleweed, with gumplant and other shrubs present in the upper zone for nesting. May forage in areas adjacent to marshes.	No Potential. No suitable nesting habitat for this species is present within the Project Site.	No further recommendations.
California Ridgway's (clapper) rail *Rallus obsoletus obsoletus*	FE, SE, CFP	Year-round resident in tidal marshes of the San Francisco Bay estuary. Requires tidal sloughs and intertidal mud flats for foraging, and dense marsh vegetation for nesting and cover. Typical habitat features abundant growth of cordgrass and pickleweed. Feeds primarily on molluscs and crustaceans.	No Potential. No tidal sloughs or intertidal mudflats are present within the Project Site.	No further recommendations.
California least tern *Sternula antillarum browni*	FE, SE, CFP	Summer resident along the coast from San Francisco Bay south to northern Baja California; inland breeding also very rarely occurs. Nests colonially on barren or sparsely vegetated areas with sandy or gravelly substrates near water, including beaches, islands, and gravel bars. In San Francisco Bay, has also nested on salt pond margins.	No Potential. No beaches, islands, or gravel bars are present within the Project Site.	No further recommendations.
northern spotted owl *Strix occidentalis caurina*	FT, ST, SSC	Year-round resident in dense, structurally complex forests, primarily those with old-growth conifers. In Marin County, uses both coniferous and mixed	No Potential. No forests are present within the Project Site.	No further recommendations.

		(coniferous-hardwood) forests. Nests on platform-like substrates in the forest canopy, including in tree cavities. Preys on mammals.		
Reptiles and Amphibians				
California giant salamander *Dicamptodon ensatus*	SSC	Occurs in the north-central Coast Ranges. Moist coniferous and mixed forests are typical habitat; also uses woodland and chaparral. Adults are terrestrial and fossorial, breeding in cold, permanent or semi-permanent streams. Larvae usually remain aquatic for over a year.	No Potential. No coniferous or mixed forests or aquatic breeding habitat is present within the Project Site.	No further recommendations.
Pacific (western) pond turtle *Emys marmorata*	SSC	A thoroughly aquatic turtle of ponds, marshes, rivers, streams and irrigation ditches with aquatic vegetation. Require basking sites such as partially submerged logs, vegetation mats, or open mud banks, and suitable upland habitat (sandy banks or grassy open fields) for egg-laying.	No Potential. No aquatic habitat is present within 1 mile of the Project Site.	No further recommendations.
foothill yellow-legged frog *Rana boylii*	SC, SSC	Found in or adjacent to rocky streams in a variety of habitats. Prefers partly-shaded, shallow streams and riffles with a rocky substrate; requires at least some cobble-sized substrate for egg-laying. Needs at least 15 weeks to attain metamorphosis. Feeds on both aquatic and terrestrial invertebrates.	No Potential. No aquatic habitat is present within the Project Site.	No further recommendations.
California red-legged frog *Rana draytonii*	FT, SSC	Lowlands and foothills in or near permanent sources of deep water with dense, shrubby or	Unlikely. No aquatic breeding or non-breeding habitat is present within the	No further recommendations.

		emergent riparian vegetation. Requires 11 to 20 weeks of permanent water for larval development. Associated with quiet perennial to intermittent ponds, stream pools and wetlands. Prefers shorelines with extensive vegetation. Disperses through upland habitats after rains.	Project Site. The nearest documented occurrence for this species is 0.7 mile east of the Project Site, however SR-29 and several large commercial developments separate the Project Site and this occurrence (CDFW 2020). Therefore, dispersal into the Project Site is unlikely.	
green sea turtle *Chelonia mydas*	FT (west coast populations)	Found in fairly shallow waters inside reefs, bays and inlets with marine grass and algae. Open beaches with a sloping platform and minimal disturbance are required for nesting. This species exhibits high site fidelity.	No Potential. No suitable aquatic habitat is present within the Project Site.	No further recommendations.

Fish				
tidewater goby *Eucyclogobius newberryi*	FE, SSC	Brackish water habitats along the California coast from Agua Hedionda Lagoon, San Diego County to the mouth of the Smith River. Found in shallow lagoons and lower stream reaches. Requires fairly still but not stagnant water and high oxygen levels.	No Potential. No aquatic habitat is present within the Project Site.	No further recommendations.
Delta smelt *Hypomesus transpacificus*	FT, ST	Endemic to the Sacramento-San Joaquin estuary in areas where salt and freshwater systems meet. Occurs seasonally in Suisun Bay, Carquinez Strait and San Pablo Bay. Seldom found at salinities > 10 ppt; most often at salinities < 2 ppt.	No Potential. No aquatic habitat is present within the Project Site.	No further recommendations.
steelhead - central CA coast DPS *Oncorhynchus mykiss irideus*	FT	Occurs from the Russian River south to Soquel Creek and Pajaro River. Also in San Francisco and San Pablo Bay Basins. Adults migrate upstream to spawn in cool, clear, well-oxygenated streams. Juveniles remain in fresh water for 1 or more years before migrating downstream to the ocean.	No Potential. No aquatic habitat is present within the Project Site.	No further recommendations.
Sacramento splittail *Pogonichthys macrolepidotus*	SSC	Formerly endemic to the lakes and rivers of the Central Valley, but now confined to the Sacramento Delta, Suisun Bay and associated marshes. Occurs in slow-moving river sections and dead-end sloughs. Requires flooded vegetation for spawning and foraging for young. A	No Potential. No aquatic habitat is present within the Project Site.	No further recommendations.

		freshwater species, but tolerant of moderate salinity (10-18 parts per thousand).		
longfin smelt *Spirinchus thaleichthys*	FC, ST, SSC	Euryhaline, nektonic and anadromous. Found in open waters of estuaries, mostly in middle or bottom of water column. Prefer salinities of 15 to 30 ppt, but can be found in completely freshwater to almost pure seawater.	No Potential. No aquatic habitat is present within the Project Site.	No further recommendations.
Invertebrates				
western bumble bee *Bombus occidentalis*	SC	Formerly common throughout much of western North America; populations from southern British Columbia to central California have nearly disappeared (Xerces 2015). Occurs in a wide variety of habitat types. Nests are constructed annually in pre-existing cavities, usually on the ground (e.g. mammal burrows). Many plant species are visited and pollinated.	No Potential. The Project Site is outside of the known range for this species.	No further recommendations.
vernal pool fairy shrimp *Branchinecta lynchi*	FT, SSI	Endemic to the grasslands of the Central Valley, central coast mountains, and south coast mountains, in astatic rain-filled pools. Inhabit small, clear-water sandstone-depression pools and grassed swale, earth slump, or basalt-flow depression pools.	No Potential. No vernal pools are present within the Project Site.	No further recommendations.
Callippe silverspot butterfly *Speyeria callippe callippe*	FE, SSI	Two populations in San Bruno mountain and the Cordelia Hills are recognized. Hostplant is *Viola pedunculata*, which is found on serpentine soils. Most	No Potential. No *Viola pedunculata* are present within the Project Site.	No further recommendations.

		adults found on east-facing slopes; males congregate on hilltops in search of females.		
conservancy fairy shrimp *Branchinecta conservatio*	FE, SSI, RP	Endemic to the grasslands of the northern two-thirds of the Central Valley; found in large, turbid pools. Inhabit astatic pools located in swales formed by old, braided alluvium; filled by winter/spring rains, last until June.	No Potential. No aquatic habitat is present within the Project Site.	No further recommendations.
San Bruno elfin butterfly *Callophrys mossii bayensis*	FE, SSI	Limited to the vicinity of San Bruno Mountain, San Mateo County. Colonies are located on in rocky outcrops and cliffs in coastal scrub habitat on steep, north-facing slopes within the fog belt. Species range is tied to the distribution of the larval host plant, Sedum spathulifolium.	No Potential. The Project Site is outside of the known range of this species.	No further recommendations.

Job No. 2011.1.1
December 11, 2019

INTRODUCTION

This report presents the results of our soil investigation for the proposed new multi-family apartment buildings in American Canyon, California. The site is located near the southeast portion of Oat Hill, and includes the east-facing slope. The approximate site location is shown on Plate 1. Giblin Associates (GA) performed a geologic hazards and preliminary geotechnical investigation for the Oat Hill Subdivision and the results were presented in their report dated August 3, 2005. As part of their investigation, several exploratory test pits were excavated on the subject property. Our principal engineer and project geologist helped conduct those studies while employed by GA. We performed a soil investigation for the proposed residential project in the west portion of Plate 1. The results of our work were presented in our report dated January 10, 2012. However, at the time of that report, 12 multi-family apartment buildings were proposed.

The conceptual site plan provided by R. H. Hess Development Company, as shown on Plate 1 indicates the proposed development will consist of the construction of five apartment buildings and a recreation building/leasing office. We understand that the proposed apartments will be two- and possibly three-story structures and the recreation building will be a one-story structure. We also understand that all the buildings will be wood-frame structures with concrete slab-on-grade floors. The development will be served by asphalt-paved driveway and parking areas with underground utilities. As shown on the conceptual site plan, site retaining walls are indicated along the upslope (west) side of the project that may extend up to about 10 feet tall. A rough grading plan prepared by CBG Civil Engineers dated October 2019 indicates proposed site

grading to create a gently sloping 3-acre building and bio-retention area that will include cuts and fills varying up to about 20 feet. The deepest cuts are shown near the west margin of the bio-retention area and will include a series of two horizontal to one vertical (2:1) cuts provided with level benches about 8 to 10 feet wide spaced at vertical intervals of about 25 feet. The deepest fills are proposed near the southwest portion of the proposed building pad and northeast corner of the bio-retention area.

PURPOSE AND SCOPE

The purpose of this investigation is to provide soil engineering recommendations for planning and design of the project. In GA's report, several areas on the slopes in or within close proximity to the proposed development were identified to be unstable.

The scope of our work included the following tasks:

- Review selected published, geologic information in our files.
- Explore subsurface conditions to the extent of 11 test pits with excavator equipment.
- Obtain a few samples for visual classification and minor laboratory testing to determine physical properties of the soils sampled.

We summarized the soil and rock conditions observed and performed engineering analyses to develop conclusions and recommendations concerning:

1. Proximity of the site to active faults.
2. Site preparation and grading.
3. Foundation support and design criteria.

4. Support of concrete slab-on-grade floors.

5. Retaining wall design criteria.

6. Quality and compaction criteria for development of asphalt-paved driveways and parking.

7. Soil engineering drainage.

8. Supplemental soil engineering services.

WORK PERFORMED

We reviewed GA's previous report performed at Oat Hill, and on October 7 and 8, 2019, we were on-site to observe conditions exposed and explore subsurface conditions to the extent of eleven (11) supplemental test pits at the approximate locations indicated on Plate 2. We also performed a limited geologic reconnaissance to map general site surface geology, including existing landslides present on the northeast facing slope. The mapped slope instabilities are also shown on Plate 2.

The test pits were excavated with track-mounted excavator equipment to depths ranging from about 5 to 20 feet. Our project geologist located the pits, observed the excavations, logged the soil and rock conditions encountered and obtained samples for visual classification and minor laboratory testing. In-place strength indicator determinations were conducted in the pit walls with a pocket penetrometer. Logs of the pits are presented on Plates 3 and 4. The soils are classified in general accordance with the Unified Soil Classification System explained on Plate 5. Rock physical characteristics are described on Plate 6.

Selected samples were tested in our laboratory to determine classification (percent free swell and Atterberg Limits). The laboratory test results and field penetrometer data are summarized on Plates 7 and 8. Detailed results of the Atterberg Limits are shown on Plate 9.

The pit locations shown on Plate 2 were determined by visually estimating from existing surface features. The locations should be considered no more accurate than implied by the methods used to establish the data. All the test pits were backfilled at the completion of the exploration with the excavated soil and rock.

SITE CONDITIONS

General Site Description

The proposed project site is located near the southeast portion of Oat Hill, extending near the bottom of the slope. The site is bordered on the east by existing single-family residences and rural properties and on the north by an extension of Napa Junction Road. The areas to the west and south consist of moderately to steeply sloping, hillside terrain. A significant portion of the proposed building area has been previously graded. Based on our conversations, we understand that grading within this area was performed in the early 1980s. Past grading included cuts along the west portion of the building area and placement of fill within the east portion.

Subsurface Conditions

Soil deposits observed are comprised of existing fills, natural topsoils and sandy clays and residual soils. Detailed soil descriptions and depths are provided on the test pit logs, Plates 3 and 4.

A substantial accumulation of fill was encountered at the east portion of the site (refer to Plate 2). Based on the materials observed in test pits, the fills appear to be about 6 feet thick and consist of a heterogeneous mixture of medium stiff sandy clays and silts with occasional gravels. Laboratory tests performed on the fill materials indicate that the soils vary in consistency and exhibit a moderate expansion potential. That is, the soils would tend to undergo moderate strength and volume changes with seasonal changes in moisture content.

Below the existing fill deposits, and elsewhere at the ground surface, natural sandy clays and sandy silts were encountered. These natural soils exhibit a moderate to high expansion potential with shrinkage cracks extending about 1 foot deep below the existing ground surface.

Residual soil is produced by deep weathering of underlying rock and retains some of the texture and fabric of the parent rock. Where present, the residual soils occurred at the contact between the upper natural soils and the underlying bedrock. The residual soils consist of sandy clays with variable amounts of mudstone fragments, and generally exhibit a moderate expansion potential.

Test Pits 3 and 5 through 10 exposed well-developed landslide planes at depths that varied from about 8 to 19 feet deep.

Faulting and Seismicity

As concluded in GA's geologic hazards report, two active faults project through the project site and there is a potential for ground rupture on these faults. Building setbacks from fault zones were recommended in GA's previous report. The closest nearby identified fault

zone, as defined in GA's geologic hazards report that impacts this particular proposed building area is shown on the attached Plate 2. The area shown established the west boundary of the Fault Exclusion Zone.

Slope Instability

In the geologic hazards report, GA mapped extensive landsliding affecting the east-facing slopes of Oat Hill. These slope instabilities extend into the proposed building area. The approximate extent of landsliding is depicted on the attached Plate 2. Interpretation of the subsurface soil and rock conditions based on extrapolation of information from our site exploration was superimposed on the interpretative cross-sections A-A′, B-B′ and C-C′ on Plate 10. The approximate location of the cross-sections are shown on Plate 2. The cross-sections depict the planned rough grading as shown on CBG Civil Engineers plans and the conceptual "finish plan" provided by R.H. Hess Development Company.

SEISMIC DESIGN PARAMETERS

Because of the site proximity of the active Napa fault as well as the presence of several other large active faults in the region, we judge that the potential exists for the project site to be subjected to very strong to possibly violent earthquake ground shaking during the project life. The intensity of seismic ground shaking at the site would depend on a number of factors including the magnitude of the earthquake, the distance to the earthquake epicenter, the nature of the fault motion, and the depth and physical characteristics of the soil and rock underlying the site. Earthquakes can induce a number of geologic phenomena with a potential to damage

hillside developments by ground movements including landslides, rockfalls, ground cracking and strong ground motions. It will be necessary to design and construct the project in strict accordance with current standards for earthquake-resistant construction.

We have determined seismic ground motion values in accordance with procedures outlined in Section 1613 of the 2016 California Building Code (CBC). Mapped acceleration parameters, S_S and S_1, were obtained by inputting the approximate site location into seismic design mapping tools provided by the Structural Engineers Association of California/California's Office of Statewide Health Planning and Development (SEAOC/OSHPD). Based on our review of available geologic maps and knowledge of the subsurface conditions, we judge that the site can be classified as Site Class C, as described in Table 20.3-1 of the American Society of Civil Engineers/Structural Engineering Institute (ASCE/SEI) Standard ASCE/SEI 7-10. Using corresponding values of site coefficients for Site Class C and procedures outlined in the CBC, the mapped acceleration parameters were adjusted to yield the design spectral response acceleration parameters, S_{DS} and S_{D1}. The following earthquake design data summarize the results of the procedures outlined above.

2016 CBC Ground Motion Parameters

Site Class	C

Mapped Spectral Response Accelerations:

S_S	2.037g
S_1	0.730g

Design Spectral Response Accelerations:

S_{DS}	1.358g
S_{D1}	0.633g

CONCLUSIONS

Based on our field exploration, laboratory tests, geotechnical engineering analyses and experience with similar subsurface conditions at nearby sites, we conclude that the site can be used for the proposed construction. The most significant geotechnical engineering factors that must be considered during design and construction are the presence of:

1. Landsliding within the project site.
2. Relatively deep existing fills and plastic clayey soils of moderate expansion potential overlying highly weathered rock materials on sloping terrain.
3. Potential differential supporting conditions based on proposed grading.

Landsliding within the project area, as indicated on Plate 2, would need to be stabilized by removing the unstable materials for their full depth and replacing the materials as properly placed and compacted earth fill buttresses with subdrainage, as subsequently recommended. Based on the

conditions encountered in our test pits, we anticipate the depth of the unstable materials will vary from about 8 to about 20 feet or more below the existing ground surface.

Based on our review of the rough grading plan prepared by CBG Engineers (Plate 2), the 3.0-acre pad will be positioned in areas transitioning from cut to fill, with planned cuts and fills on the order of about 20 and 9 feet, respectively. However, the conceptional plan provided by R.H. Hess Development (Plate 1) indicates "finish grades" with cuts and fills on the order of about 26 and 13 feet, respectively. Our experience indicates that differential settlements and resultant distress to structures can occur in areas that transition from cut to fill, and in areas underlain by significant variation in fill thickness.

Satisfactory foundation support for the proposed structures can be obtained from conventional spread footings bottomed at relatively shallow depth on properly compacted fill. However, with this alternative, to help provide more uniform support and satisfactorily reduce the potential for differential heave and/or settlements and resultant distress, grading would need to be performed so as to underlie the buildings with a pad of properly compacted fill. Fill thicknesses would need to be adjusted such that the variation in fill thickness beneath footings and slabs does not exceed 6 feet. When taking into account the amount of material removed and replaced as properly compacted as part of the slide removal process, potential fills under buildings could extend up to about 30 feet or more, resulting in potentially large overexcavations to reduce the variation in fill thickness.

As an alternative, to help reduce the extent of rough grading within the building areas, we judge that mat or post-tensioned slab foundations and greater differential fill thickness beneath

the structures would be a suitable alternative, provided the slabs are designed to tolerate anticipated differential settlements and the potential for some future minor tilting would be acceptable. For the purpose of this report, we conclude that Buildings C, D and E (see Plate 1 for building designation) could best be supported on either post-tensioned or mat slabs. Building A and B can be supported on either minimum depth footings and conventional concrete slab-on-grade floors, mat or post-tensioned slabs. The actual variation in fill thickness placed beneath the structures should be further evaluated by the soil engineer, in consultation with the structural engineer when actual building loads, location, size and configurations are known, or if changed from that shown on Plate 1.

We believe that concrete floor slabs can be used within buildings not underlain by large differential fill thicknesses, such as Buildings A and B. However, because of the presence of moderately expansive clays and deeply weathered rock materials, we judge the materials can shrink and swell with seasonal variation in moisture content and can heave and distress lightly loaded footings and slabs. Therefore, we judge that it will be necessary to provide space for a moisture confining and protecting blanket of approved on-site materials of low expansion potential or imported nonexpansive fill under conventional floor slabs.

The backhoe pits were backfilled with the excavated materials, but the soils were not compacted. Therefore, the pit backfills constitute local deep zones of material subject to significant settlement and/or erosion. Where encountered in planned improvement areas, compressible pit backfills should be removed for their entire depth and replaced as properly compacted soils or foundation elements deepened accordingly.

RECOMMENDATIONS

Site Grading

Areas to be developed should be cleared of dense growths of grass and vegetation and should be stripped of the upper soils containing root growth and organic matter. We anticipate that the depth of stripping needed will average about 3 inches. The strippings should be removed from the site or may be suitable for reuse in landscaping areas.

Wells, septic tanks, foundations or other underground obstructions encountered during grading should be removed or abandoned in place. The resultant voids should be backfilled with soil or granular material that is properly compacted, as subsequently discussed, or capped with concrete. The method of removal/abandonment and void backfilling should be determined by the appropriate governing agency and/or the soil engineer.

After clearing and stripping, excavation should be performed as necessary. Existing fills or stockpiles encountered within building and improvement areas should be removed for their full depth. We anticipate that, with the exception of organic matter and rocks or hard fragments larger than 6 inches in diameter, the excavated materials will be suitable for reuse as compacted fill, as discussed below. However, were conventional spread footings and concrete floor slabs are planned, expansive clayey soils should not be reused as fill within the upper portions of planned pad grade elevation, as discussed below.

The mapped landslide areas should be repaired by removing the unstable soils and replacing the excavated materials as compacted fill that is keyed and benched into firm

underlying bedrock with internal subdrainage, as subsequently discussed. We anticipate that the depth of the initial keyway will vary and will bottom about 13 to 20 feet (or more) below the existing ground surface. The contractor should recognize the potential for slope instability during the work. Measures to reduce potential instability could include temporary excavation slopes of 1:1 or flatter, backfilling temporary excavations in a timely manner, and performing the work during dry weather. Tentative locations of recommended keyways and subdrains are shown on the attached Plate 11.

Keyways and other areas to receive fill should be scarified at least 6 inches deep, moisture conditioned to slightly above optimum (at least 4 percentage points above optimum for expansive clayey soils) and compacted to at least 90 percent relative compaction[1].

Approved, excavated or other on-site soils then should be placed in layers, moisture conditioned to at least 2 percentage points above optimal moisture, and compacted to at least 90 percent relative compaction. The fill should be benched into firm rock materials below any upper weak, unstable soils, as outlined above. Also, granular subdrainage installed along the back edge of the lower keyway for the buttress fill should extend up the back edge of the excavation a minimum of 3 feet. Approximately 4 to 6 cubic feet of drainrock should be installed per foot of pipe. Clean-out risers should be installed at the uphill ends of subdrains.

---

1 Relative compaction refers to the in-place dry density of fill expressed as a percentage of maximum dry density of the same material determined in accordance with the American Society for Testing and Materials (ASTM) Standard ASTM D1557 laboratory compaction test procedure. Optimum moisture content refers to the moisture content at maximum dry density.

The clean-out should be extended to the final ground surface and be capped with a suitable cover. A similar subdrain blanket should be installed at the uphill edge of the compacted fill buttress. Normally, such uphill subdrains must blanket the potential slide zone and, therefore, contain two or three times more drainrock than the lower subdrain. Our recommended cross-section of landslide corrective measures are shown as Cross-Sections A-A′, B-B′ and C-C′ on Plate 10. The actual location, depth and extent of the buttress keyway, benches, and subdrains will vary and must be determined in the field by the soil engineer when the actual conditions are exposed during the grading.

As fill placement continues upslope, a series of level benches should be excavated into firm soil or bedrock material to key the fill into the hillside.

Provided the site is graded in accordance with our previous recommendations, we anticipate the proposed building areas will be underlain by firm bedrock or properly compacted fill.

Where minimum depth footings and concrete slab-on-grade floors are desired at Buildings A and B, overexcavations in such areas should extend at least 5 feet beyond the building perimeter, 3 feet beyond the edge of building foundations, or 3 feet beyond adjacent exterior concrete slabs that abut the building, whichever is greater. Overexcavation depths then should be adjusted so as to provide space for at least 12 inches of approved compacted fill of low expansion potential below all footings and provide space for a minimum 30-inch-thick moisture confining and protecting blanket of approved, on-site material of low expansion potential or imported nonexpansive fill under slabs. The recommended overexcavation should also be

performed in planned cut areas so as to provide more uniform supporting capacity for the foundation and floor slab. Also, the variation in the thickness of fill, including overexcavation, should not exceed 6 feet for conventional footings and slabs. Where post-tensioned or mat slabs are used, to help provide uniform support, we recommend that those slabs be underlain by at least 12 inches of properly compacted fill. Also, the variation in thickness of fill, including overexcavation, should not exceed 15 feet for mat or post-tensioned slabs.

Proper moisture conditioning of the underlying expansive soils is critical to future slab performance. Because evaporation is inhibited by the overlying slabs, eventual saturation of the underlying soils can occur. Therefore, if the expansive soils are not brought to a fully swelled state prior to casting of slabs, eventual heave is likely. Therefore, we recommend that slab areas be probed by the soil engineer during the grading work to verify that expansive soils, if present, contain sufficient moisture such that the risk of future slab heave could be considered low.

Imported fills, if used, should be of low expansion potential and have a Plasticity Index of 15 or less. The imported fill material should be free of organic matter and rocks or hard fragments larger than 4 inches in diameter. The material proposed for use as nonexpansive fill should be tested and approved by the soil engineer before delivering to the site.

Slope Criteria

As indicated in GA's previous report, finished cut and fill slopes should be trimmed to expose dense materials and should be no steeper than 2½:1. Both the conceptual and rough grading plans indicates cut and fill slopes inclined at 2:1. The previous recommendation of fill

slope inclination anticipated that onsite expansive soils would be used to construct proposed fill slopes. Provided, the materials used to construct the proposed fill slope consist of more granular and/or less plastic soils such as those that would likely be generated by the proposed excavations, we judge cut and fill slopes can be inclined at 2:1. The face of finish fill slopes should be thoroughly compacted or constructed wider than planned and then trimmed to expose dense, well compacted material.

Foundations

Spread Footings – Provided the site is graded in accordance with the recommendations outlined above for conventional foundations and slabs, foundation support for the proposed Buildings A and/or B can be provided by spread footings bottomed on properly compacted fill.

Footings should be at least 12 inches wide. Footings should be underlain by at least 12 inches of properly compacted fill of low expansion and a minimum of 12 inches deep, as measured below lowest adjacent compacted pad elevation. On slopes, footings should be stepped, as necessary, to provide level (and up to 10 percent slope) bottoms.

Spread footings can be designed to impose dead plus code live load and total design load (including wind or seismic forces) bearing pressures of 2,000 and 3,000 pounds per square foot (psf), respectively.

Resistance to lateral loads can be obtained from passive earth pressures and soil friction. We recommend the following criteria for design:

Passive Earth Pressure	=	300 pounds per cubic foot (pcf) equivalent fluid, neglect the upper 1 foot, unless confined by pavement or slab, and within 8 horizontal feet from the face of the nearest slope
Soil Friction Factor	=	0.30

Mat-Slabs – The proposed new structures can also be supported on mat-slabs to help reduce potential distress from total and/or differential settlements. For planning purposes, we judge that mat slab foundation should be at least 12 inches thick with a thickened edge at the perimeter for stiffening and to act as a moisture cutoff barrier. The slab should be designed to span a distance of at least 6 feet in any direction, and a cantilever of at least 3 feet at the perimeter. An allowable bearing pressure of 1,000 psf can be used. Differential settlement across the slabs is dependent upon several factors, including the differential thickness of fill beneath the building. Where the differential fill thickness is 15 feet, about 1½ inches of differential settlement should be anticipated. We would anticipate that two courses of steel may be needed to help reinforce the slab. Actual design of mat slab foundations should be by the project structural engineer.

Mat-slabs should be underlain with a capillary moisture break and cushion layer consisting of at least 4 inches of free-draining gravel or crushed rock (slab rock). The slab rock should be at least 1/4-inch and no larger than 3/4-inch in size. Moisture vapor will condense on the underside of slabs. Where moisture migration through the slab would be detrimental, an impermeable moisture barrier (visqueen) should be provided between the drainrock and the slab. Two inches of clean, moist sand

could be placed over a plastic membrane, if used, to aid in curing and help provide puncture protection.

Post-Tensioned Slabs-on-Grade - We recommend that the post-tensioned slabs be designed in accordance with the Post-Tensioning Institute's Standard Requirements for Design and Analysis of Shallow Post-Tensioned Concrete Foundation on Expansive Soils, current edition, and the criteria in the CBC. Provided the site is graded as recommended above, post-tensioned slabs should be underlain by at least 12 inches of properly compacted fill. Based on our field and laboratory data, we recommend the following parameters be used for design.

E_M = 9.0 feet (center lift) Y_M = 2 inches (center lift)

E_M = 5.5 feet (edge lift) Y_M = 1 inch (edge lift)

For design, an allowable bearing value of 1,000 psf and a friction factor of 0.30 can be used, with an assumed differential settlement across the slab of about 1½ inches where underlain by a differential fill thickness of 15 feet. Uniform thickness post-tensioned slabs, if used, should be at least 12 inches thick with an additional 2-inch thickened edge for stiffening.

Moisture vapor will condense on the underside of slabs. In general, where moisture migration through the slab would be detrimental, an impermeable moisture vapor barrier should be provided. At least 2 inches of clean, moist sand could be placed over a plastic membrane, if used, to aid in slab curing and help provide puncture protection. However, the actual use of sand over the vapor barrier should be determined by the architect or design engineer. The use of a heavier/stronger membrane should be considered if sand is not to be placed for puncture, and

concrete design and curing specifications should recognize the potential adverse effects associated with placement of concrete directly on the membrane. Where sand is used, the thickened edge of uniform thickness post-tensioned slabs should penetrate through the sand and bottom in compacted pad soils to act as a moisture barrier. We believe that the risk of water seeping into the underslab sand could be significantly reduced by not allowing the vapor barrier and sand to extend beneath the perimeter thickened edges, and by separating the sand from surrounding soils. This could be accomplished by overlapping the vapor barrier at the planned edges of the sand.

To further reduce the risks of moisture migration up through floor slabs, the slabs could be underlain with a capillary moisture break and cushion layer consisting of at least 4 inches of free-draining, crushed rock or gravel. Underslab subdrains could also be provided that extend through or beneath perimeter foundations and discharge by gravity to planned or existing storm drain improvements. We could provide specific recommendations for the use of underslab rock and underslab subdrains, if requested.

Where the ground surface has an upslope within 25 feet of a structure, additional drainage measures, such as underslab subdrains or perimeter foundation subdrains, should be considered. We could be consulted to develop specific recommendations for additional drainage measures, during final design.

Conventional Slab-on-Grade

Provided the site is prepared as recommended above, floor slab areas should be underlain by at least 30 inches of properly compacted, approved on-site or imported fill materials of low expansion potential. Slab-on-grade subgrade should not be allowed to dry prior to concrete placement. In addition, slabs should be underlain by a capillary moisture break and cushion layer consisting of at least 4 inches of free-draining, crushed rock or gravel (drainrock) at least 1/4-inch and no larger than 3/4-inch in size. Crushed rock should be used where the slabs would be subjected to wheel loads such as forklifts or trucks.

Floor slabs should be at least 5 inches thick and be reinforced to reduce cracking. Where subjected to heavy wheel or storage loads, the slabs should be thickened and reinforced to accommodate the increased loading. Actual slab thickness and reinforcing used should be determined by the structural design engineer or architect based on anticipated use and performance. Design of conventional slabs should also recognize the potential for moisture vapor to condense on the underside of the slab, and provisions to reduce migration through the slab should be provided, as discussed above for post-tensioned slabs. Prior to placing the reinforcing or slab rock, the subgrade soils should be thoroughly moisture conditioned and be smooth, firm and uniform.

Retaining Walls

Retaining walls that are free to rotate slightly and support level backfill should be designed to resist an active equivalent fluid pressure of 45 pcf acting in a triangular pressure

distribution. Where the backfill slope is steeper than 3:1, the pressure should be increased to 60 pcf. If the wall is constrained at the top and cannot tilt, the design pressures for level and sloping backfill should be increased to 60 and 75 pcf, respectively. Where retaining wall backfill is subject to vehicular traffic, the walls should be designed to resist an added surcharge pressure equivalent to 1½ feet of additional backfill.

Retaining walls can be supported on spread footings designed in accordance with the recommendations above for building foundations. Site retaining walls can be underlain by properly compacted fill or bottomed into firm natural soil or bedrock materials. Footings should be at least 18 inches deep. However, where expansive soils are exposed, minimum footing depths should be 30 inches, as determined in the field by the soil engineer. Where foundations for retaining walls are located on or near slopes, footings should be deepened so as to provide at least 8 horizontal feet of confinement from the face of the footing to an adjacent downslope.

As outlined in the 2016 California Building Code (CBC), it may be necessary to design retaining walls to resist additional lateral soil loads imposed during seismic shaking. Accordingly, based on the Mononobe-Okabe Method, we have computed the following dynamic component of total thrust induced on the wall for varying backslope inclinations.

Backslope Inclination (β)	Dynamic Thrust* Component (lbs/ft)
$0 \leq \beta \leq 8{:}1$	$9H^2$
$8{:}1 < \beta \leq 4{:}1$	$13H^2$
$4{:}1 < \beta \leq 3{:}1$	$22H^2$

* The dynamic component of total thrust should be applied as a line load at a height of 0.6H above the base of the retaining wall; where H is height of the retaining wall.

Retaining walls should be fully backdrained. The backdrains should consist of 4-inch-diameter, perforated rigid plastic pipe sloped to drain to outlets by gravity and clean free-draining, crushed rock or gravel (drainrock). The drainrock should consist of Class 2 Permeable Material per current Caltrans standard specifications. As an alternative, any clean drainrock could be used if the rock is separated from the adjacent soil and covered by a nonwoven, geotextile fabric (such as Mirafi 140N or equivalent) weighing at least 4 ounces per square yard. The crushed rock or gravel should extend to within 1 foot of the surface. The upper 12 inches should be backfilled with compacted soil to inhibit surface water infiltration unless capped with a concrete slab.

Where migration of moisture through retaining walls would be detrimental, the walls should be waterproofed. The ground surface behind retaining walls should be sloped to drain.

Light compaction equipment should be used to avoid overstressing the walls. Retaining walls can yield slightly during backfilling. Therefore, backfill operations should be completed prior to building on or adjacent to the walls.

Geotechnical Drainage

Ponding water will cause softening of the site soils and could be detrimental to foundations. It is important that the building sites be sloped to drain away from foundations. The roofs should be provided with gutters, and the downspouts should be connected to nonperforated, rigid plastic pipelines with water-tight joints that discharge into planned drainage facilities.

We recommend that good, positive surface drainage away from and around the structure be provided. A gradient of at least 1/4-inch per foot extending at least 4 feet out should be provided. Careful attention to fine (finish) grading around the structures should be provided. Loose or poorly compacted materials should not be allowed adjacent to foundations.

All surface drainage should be diverted away from cut and fill slope faces by means of top-of-slope ditches, berms or approved equivalents. Pavement surfaces should be constructed to provide positive drainage and not allow ponding.

Where irrigated landscape areas abut the building, excess water can be introduced into soil layers along the edge of the building, tending to soften soils, and induce extra moisture into underfloor areas. We believe that the installation of the recommended compacted fill pad that extends to at least 5 feet beyond building perimeter should provide an effective barrier to the infiltration of excess waters from landscape areas. However, as an added precaution, such planter areas should be provided with a drain that outlets into planned site drainage systems (gutters, storm drains, etc.). Also, hot-mopping or other methods of waterproofing the exterior sides of below grade cold joints in perimeter foundations should be performed.

Roof downspouts and surface drains must be maintained entirely separate from retaining wall and underslab subdrains.

Supplemental Soil Engineering Services

The actual variation in fill thickness placed beneath the structures should be further evaluated by the soil engineer, in consultation with the structural engineer when actual building

loads, location, size and configuration are known, or if changed. We should review the final grading and foundation plans for conformance with the intent of our recommendations. During site grading operations, we should provide intermittent soil engineering observation and testing to determine the conditions encountered and modify our recommendations, if warranted. Field and laboratory tests should be performed to ascertain that the specified moisture content and degree of compaction are being attained.

We should observe footing excavations to verify that the conditions are as anticipated and to modify our recommendations, if warranted. Concrete placement and reinforcing should be checked as stipulated on the project plans or as required by the Building Department. It is our understanding that approval from the Building Department must be obtained prior to the placement of concrete in foundation elements.

LIMITATIONS

We have performed the investigation and prepared this report in accordance with generally accepted standards of the soil engineering profession. No warranty, either express or implied, is given. This scope of work is limited to evaluating the physical properties of earth materials considered typical of geotechnical engineering practice and does not include other concerns such as soil chemistry, corrosion potential, mold, and soil and/or groundwater contamination.

Subsurface conditions are complex and may differ from those indicated by surface features or encountered at test pit locations. Therefore, variations in subsurface conditions not indicated on the logs could be encountered.

If the project is revised or if conditions different from those described in this report are encountered during construction, we should be notified immediately so that we can take timely action to modify our recommendations, if warranted.

Supplemental services as recommended herein are performed on an as-requested basis. Such services are in addition to this soil investigation, and are charged for on an hourly basis in accordance with our Standard Schedule of Charges. We accept no responsibility for items we are not notified to check, or for use and/or interpretation by others of the information contained herein.

Site conditions and standards of practice change. Therefore, we should be notified to update this report if construction is not performed within 36 months.

SOIL CLASSIFICATION CHART AND KEY TO TEST DATA
OAT HILL RESIDENTIAL PROJECT
NAPA, CALIFORNIA

PLATE 5

A: CONSOLIDATION OF SEDIMENTARY ROCKS; usually determined from unweathered samples.
Largely dependent on cementation

1. U = unconsolidated
2. P = poorly consolidated
3. M = moderately consolidated
4. W = well consolidated

B: BEDDING OF SEDIMENTARY ROCKS

	Splitting Property	Thickness (in feet)	Stratification
1.	Massive	Greater than 4.0 ft	very thick bedded
2.	Blocky	2.0 to 4.0 ft	thick bedded
3.	Slabby	0.2 to 2.0 ft	thin bedded
4.	Flaggy	0.05 to 0.2 ft	very thin bedded
5.	Shaly or platy	0.01 to 0.05 ft	laminated
6.	Papery	Less than 0.01 ft	thinly laminated

C: FRACTURING

	Intensity	Size of Pieces (in feet)
1.	Very little fractured	Greater than 4.0 ft
2.	Occasionally fractured	1.0 to 4.0 ft
3.	Moderately fractured	0.5 to 1.0 ft
4.	Closely fractured	0.1 to 0.5 ft
5.	Intensely fractured	0.05 to 0.1 ft
6.	Crushed	Less than 0.05 ft

D: HARDNESS

1. **Soft** - Reserved for plastic material alone.
2. **Low hardness** - can be gouged deeply or carved easily with a knife blade.
3. **Moderately hard** - can be readily scratched by a knife blade; scratch leaves a heavy trace of dust and is readily visible after the powder has been blow away.
4. **Hard** - can be scratched with difficulty; scratch produces little powder and is often faintly visible
5. **Very hard** - cannot be scratched with knife blade; leaves a metallic streak

E: STRENGTH

1. **Plastic** - of very low strength.
2. **Friable** - Crumbles easily by rubbing with fingers.
3. **Weak** - An unfractured specimen of such material will crumble under light hammer blows.
4. **Moderately strong** - Specimen will withstand a few heavy hammer blows before breaking.
5. **Strong** - Specimen will withstand a few heavy ringing hammer blows and will yield with difficulty only dust and small flying fragments.
6. **Very strong** - Specimen will resist heavy ringing hammer blows and will yield with difficulty only dust and small flying fragments.

F: WEATHERING - The physical and chemical disintegration and decomposition of rocks and minerals by natural processes such as oxidation, reduction, hydration, solution, carbonation, and freezing and thawing

1. **Deep** - Moderate to complete mineral decomposition; extensive disintegration; deep and thorough discoloration; many fractures, all extensively coated or filled with oxides, carbonates and/or clay or silt.
2. **Moderate** - Slight change or partial decomposition of minerals; little disintegration; cementation little to unaffected. Moderate to occasional intense discoloration. Moderately coated fractures.
3. **Little** - No megascopic decomposition of minerals; little or no effect on normal cementation. Slight and intermittent, or localized discoloration. Few stains on fracture surfaces.
4. **Fresh** - Unaffected by weathering agents. No disintegration or discoloration.

Report
Soil Engineering Consultation
Oat Hill Residential Project
American Canyon, California

This report presents the results of our soil engineering consultation for the planned Oat Hill Residential project in American Canyon, California. The site is located near the center of and at the top of Oat Hill. The approximate site location is shown on the attached Plate 1. We performed a soil investigation for previously proposed apartment buildings on the property, and the results were submitted in our report dated January 10, 2012. In general, recommendations for foundation support consisted of either spread footings bottomed at relatively shallow depths on properly compacted fill or post-tensioned slab foundations. As shown on the attached Plate 1, we also performed a soil investigation for the proposed multi-family buildings at the east portion of Oat Hill. The results were submitted in our report dated December 11, 2019.

We understand that development of the subject site has changed. A site plan dated July 2020 prepared by CBG, Civil Engineers indicates that the new residential project will include thirteen, three-story multi-family buildings and a recreation center/leasing office. The buildings will be served by asphalt-paved driveway and parking areas with underground utilities.

Based on our knowledge of the subsurface conditions, we judge that the general conclusions and recommendations contained in our previous geotechnical investigation report would be applicable to the currently proposed project.

We trust this provides the information needed at this time. If you have questions or wish to discuss this in more detail, please do not hesitate to contact us. The following plate is attached and completes this report.

LETTER OF TRANSMITTAL

To: RH Hess Development
Attention: Rick Hess
rick@rhhess.com

Date: August 13, 2020

Subject: Oat Hill Residential Project

Our Job No: 2011.1.3

Attached is the revised building locations for the proposed Oat Hill Residential Project. We performed a soil investigation and the results are recorded in our report dated December 11, 2019.

We judge that the general conclusions and recommendations contained in our report would still be applicable for the proposed project. However, because of variations of fill thickness beneath structures, we should be consulted to provide specific foundation recommendations in consultation with your structural engineering when building loads are known.

We trust this provides the information needed at this time. If you have questions or wish to discuss this in more detail, please do not hesitate to contact us.

Thank you,

REESE & ASSOCIATES

Dear Rick Hess:

AEI Consultants is pleased to provide the *Phase I Environmental Site Assessment* of the above referenced property. This assessment was authorized and performed in accordance with the scope of services engaged.

We appreciate the opportunity to provide services to you. If you have any questions concerning this report, or if we can assist you in any other matter, please contact me at (925) 746-6000 or pmcintyre@aeiconsultants.com.

Sincerely,

Peter McIntyre, PG

EXECUTIVE SUMMARY

AEI Consultants (AEI) was retained by R.H. Hess Dev Co. to conduct a Phase I ESA in conformance with AEI's contract and the scope and limitations of ASTM Standard Practice E1527-13 and the EPA Standards and Practices for All Appropriate Inquiries (40 CFR Part 312) for the property located at Napa Junction Road at Oat Hill, American Canyon, Napa County, California (the "subject property"). Any exceptions to, or deletions from, this practice are described in Sections 1.4, 1.5, and 1.6 of this report.

Pertinent subject property information is noted below:

PROPERTY INFORMATION	
Site Address(es)	Napa Junction Road at Oat Hill, American Canyon, Napa County, California 94503
Property ID (APN or Block/Lot)	058-380-008
Location	Southeast of the terminus of Napa Junction Road
Property Type	Vacant Land
SITE AND BUILDING INFORMATION	
Approximate Site Acreage/Source	10.17/Assessor
Number of Buildings	None
Building Construction Date(s)/Source	N/A
Building Square Footage (SF)/Source	N/A
Number of Floors/Stories	N/A
Basement or Subgrade Area(s)	None identified
Number of Units	N/A
Additional Improvements	None
On-site Occupant(s)	None
Current On-site Operations/Use	Vacant land (no current use)
Current Use of Hazardous Substances	None identified
REGULATORY INFORMATION	
Regulatory Database Listing(s)	None identified

A chronological summary of historical subject property information is as follows:

Date Range	Subject Property Description and Occupancy (Historical Addresses)	Source(s)
Prior to 1937	Unknown use/Data failure; refer to Section 1.6.1	Aerial photographs
1937	Agricultural/hay farming land	Aerial photograph
1948-present	Vacant pasture land	Aerial photographs, city directories, agency records, prior Phase I ESA report, interview, onsite observations

The immediately surrounding properties consist of the following:

Direction	Tenant/Use (Address)	Regulatory Database Listing(s)
North	Napa Junction Road, followed by: Vacant land (no address) Hess Construction (4501 Hess Road)	None identified
East	Undeveloped land with goat grazing (no address)	None identified
South	Vacant land, followed by a large water tower/tank (no address)	None identified
West	A small water tower/tank and undeveloped land (no address)	None identified
Northwest	A wine barrel manufacturing facility (100 Napa Junction Road)	RCRA NonGen/NLR

If the surrounding properties are listed in the regulatory database, please refer to Section 5.1 for discussion.

FINDINGS

Recognized Environmental Condition (REC) is defined by the ASTM Standard Practice E1527-13 as the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment.

- AEI did not identify evidence of RECs during the course of this assessment.

Controlled Recognized Environmental Condition (CREC) is defined by the ASTM Standard Practice E1527-13 as a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority, with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls.

- AEI did not identify evidence of CRECs during the course of this assessment.

Historical Recognized Environmental Condition (HREC) is defined by the ASTM Standard Practice E1527-13 as a past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls.

- AEI did not identify evidence of HRECs during the course of this assessment.

Other Environmental Considerations (OEC) warrant discussion, but do not qualify as RECs as defined by the ASTM Standard Practice E1527-13. These include, but are not limited to, de minimis conditions and/or environmental considerations such as the presence of ACMs, LBP, radon, mold, and lead in drinking water, which can affect the liabilities and financial obligations of the client, the health and safety of site occupants, and the value and marketability of the subject property.

- AEI did not identify evidence of Other Environmental Considerations during the course of this assessment.

Conclusions, Opinions, and Recommendations

We have performed a Phase I Environmental Site Assessment in conformance with the scope and limitations of ASTM Standard Practice E1527-13 and the EPA Standards and Practices for All Appropriate Inquiries (40 CFR Part 312) of Napa Junction Road at Oat Hill, American Canyon, Napa County, California, the *subject property*. Any exceptions to, or deletions from, this practice are described in Sections 1.4, 1.5, and 1.6 of this report.

AEI did not identify evidence of RECs or CRECs in connection with the subject property during the course of this assessment. AEI recommends no further investigation for the subject property at this time.

1.0 INTRODUCTION

This report documents the methods and findings of the Phase I Environmental Site Assessment performed in conformance with AEI's contract and scope and limitations of ASTM Standard Practice E1527-13 and the EPA Standards and Practices for All Appropriate Inquiries (40 CFR Part 312) for the property located at Napa Junction Road at Oat Hill, American Canyon, Napa County, California (Appendix A: Figures and Appendix B: Property Photographs).

1.1 Scope of Work

The purpose of the Phase I ESA is to assist the client in identifying potential RECs, in accordance with ASTM E1527-13, associated with the presence of any hazardous substances or petroleum products, their use, storage, and disposal at and in the vicinity of the subject property. Property assessment activities focused on: 1) a review of federal, state, tribal, and local databases that identify and describe underground fuel tank sites, leaking underground fuel tank sites, hazardous waste generation sites, and hazardous waste storage and disposal facility sites within the ASTM approximate minimum search distance; 2) a property and surrounding site reconnaissance, and interviews with the past and present owners and current occupants and operators to identify potential environmental contamination; and 3) a review of historical sources to help ascertain previous land use at the site and in the surrounding area.

1.2 Additional Services

Other Environmental Considerations such as ACMs, LBP, lead in drinking water, radon, mold, and wetlands can result in business environmental risks for property owners which may disrupt current or planned operations or cash flow and are generally beyond the scope of a Phase I assessment as defined by ASTM E1527-13. Based upon the agreed-on scope of services this ESA did not include subsurface or other invasive assessments, business environmental risks, or other services not specifically identified and discussed herein.

1.3 Significant Assumptions

The following assumptions are made by AEI in this report. AEI relied on information derived from secondary sources including governmental agencies, the client, designated representatives of the client, property contact, property owner, property owner representatives, computer databases, and personal interviews. AEI has reviewed and evaluated the thoroughness and reliability of the information derived from secondary sources including government agencies, the client, designated representatives of the client, property contact, property owner, property owner representatives, computer databases, or personal interviews. It appears that all information obtained from outside sources and reviewed for this assessment is thorough and reliable. However, AEI cannot guarantee the thoroughness or reliability of this information.

Groundwater flow, unless otherwise specified by on-site well data or well data from the subject property or nearby sites, is inferred from contour information depicted on the USGS topographic maps. AEI assumes the property has been correctly and accurately identified by the client, designated representative of the client, property contact, property owner, and property owner's representatives.

1.4 LIMITATIONS

Property conditions, as well as local, state, tribal, and federal regulations can change significantly over time. Therefore, the recommendations and conclusions presented as a result of this assessment apply strictly to the environmental regulations and property conditions existing at the time the assessment was performed. Available information has been analyzed using currently accepted assessment techniques and it is believed that the inferences made are reasonably representative of the property. AEI makes no warranty, expressed or implied, except that the services have been performed in accordance with generally accepted environmental property assessment practices applicable at the time and location of the assessment.

Considerations identified by ASTM as beyond the scope of a Phase I ESA that may affect business environmental risk at a given property include the following: ACMs, radon, LBP, lead in drinking water, wetlands, regulatory compliance, cultural and historical resources, industrial hygiene, health and safety, ecological resources, endangered species, indoor air quality, mold, and high voltage lines. These environmental issues or conditions may warrant assessment based on the type of the property transaction; however, they are considered non-scope issues under ASTM Standard Practice E1527-13.

If requested by the client, these non-scope issues are discussed herein. Otherwise, the purpose of this assessment is solely to satisfy one of the requirements for qualification of the innocent landowner defense, contiguous property owner or bona fide prospective purchaser under CERCLA. ASTM Standard Practice E1527-13 and the United States EPA Standards and Practices for All Appropriate Inquiries (40 CFR Part 312) constitute the "all appropriate inquiry into the previous ownership and uses of the property consistent with good commercial or customary practice" as defined in:

1. 42 U.S.C. § 9601(35)(B), referenced in the ASTM Standard Practice E1527-13.
2. Sections 101(35)(B) (ii) and (iii) of CERCLA and referenced in the EPA Standards and Practices for All Appropriate Inquiries (40 CFR Part 312).
3. 42 U.S.C. § 9601(40) and 42 U.S.C. § 9607(q).

The Phase I Environmental Site Assessment is not, and should not be construed as, a warranty or guarantee about the presence or absence of environmental contaminants that may affect the property. Neither is the assessment intended to assure clear title to the property in question. The sole purpose of assessment into property title records is to ascertain a historical basis of prior land use. All findings, conclusions, and recommendations stated in this report are based upon facts, circumstances, and industry-accepted procedures for such services as they existed at the time this report was prepared (i.e., federal, state, and local laws, rules, regulations, market conditions, economic conditions, political climate, and other applicable matters). All findings, conclusions, and recommendations stated in this report are based on the data and information provided, current subject property use, and observations and conditions that existed on the date and time of the property reconnaissance.

Responses received from local, state, or federal agencies or other secondary sources of information after the issuance of this report may change certain facts, findings, conclusions, or circumstances to the report. A change in any fact, circumstance, or industry-accepted procedure upon which this report was based may adversely affect the findings, conclusions, and recommendations expressed in this report.

AEI's limited radon screening, if included, is intended to provide a preliminary screening to evaluate the potential presence of elevated radon concentrations at the site. The proposed scope is not intended to define the full extent of the presence of radon at the subject property. As such, the results should be used for lending purposes only. The recommendations and conclusions presented as a result of the limited preliminary radon screening apply strictly to the property conditions existing at the time the sampling was performed. The sample analytical results are only valid for the time, place, and condition of the site at the time of collection and AEI does not warrant that the results will be repeatable or are representative of past or future conditions.

1.5 Limiting Conditions/Deviations

The performance of this assessment was limited by the following:

- While additional assessments may have been conducted on the subject property, these documents must be provided for AEI's review in order for the information to be summarized/included in this report. Please refer to Section 6.3 for a summary of previous reports and other documentation provided to AEI during this assessment.
- A search of historical city directories was conducted for the subject property utilizing EDR. Since there is no known address for the subject property, no listings were present. Based on the nature of historical occupancy as established from other sources, the lack of historical city directory information is not expected to alter the findings of this assessment.
- Due to the size of the subject property, AEI performed a reconnaissance of the property utilizing a field technique of traversing the site in an attempt to provide an overlapping field of view. Due to the size of the property and the vegetation present on site, isolated areas of the site may have not been accessible for direct observation during AEI's field reconnaissance. Based on the quality of information obtained from historical sources and interviews, this limitation is not expected to significantly alter the findings of this assessment.

1.6 Data Failure and Data Gaps

According to ASTM E1527-13, data gaps occur when the Environmental Professional is unable to obtain information required by the Standard, despite good faith efforts to gather such information. Pursuant to ASTM E1527-13, only significant data gaps, defined as those that affect the ability of the Environmental Professional to identify RECs, need to be documented.

Data failure is one type of data gap. According to ASTM E1527-13, data failure occurs when all of the standard historical sources that are reasonably ascertainable and likely to be useful have been reviewed and yet the objectives have not been met. Pursuant to ASTM E1527-13, historical sources are required to document property use back to the property's first developed use or back to 1940, whichever is earlier, or periods of five years or greater.

1.6.1 Data Failure

The following data failure was identified during the course of this assessment:

Data Failure	Historical sources were not obtained at five-year intervals dating back to 1940 or first developed use. AEI was not able to track the history of the subject property between the years 1938 and 1947 as none of the historical sources utilized as part of this assessment covered this time period. In the 1937 aerial photograph, the subject property appears to be used for agricultural purposes (hay harvesting). In the 1948 aerial photograph, the subject property appears as vacant pasture land. Thus, it is assumed that during this time period the subject property would have been used for similar purposes. Therefore, this data failure is not expected to significantly alter the findings of this assessment.
Information/Sources Consulted	Aerial photographs, agency records, previous report, interviews

1.6.2 Significant Data Gaps

AEI did not identify significant data gaps which affected our ability to identify RECs.

1.7 Reliance

All reports, both verbal and written, are for the benefit of R.H. Hess Dev Co. This report has no other purpose and may not be relied upon by any other person or entity without the written consent of AEI. Either verbally or in writing, third parties may come into possession of this report or all or part of the information generated as a result of this work. In the absence of a written agreement with AEI granting such rights, no third parties shall have rights of recourse or recovery whatsoever under any course of action against AEI, its officers, employees, vendors, successors or assigns. Reliance is provided in accordance with AEI's contract and Terms and Conditions executed by R.H. Hess Dev Co. on June 15, 2020. The limitation of liability defined in the Terms and Conditions is the aggregate limit of AEI's liability to the client and all relying parties.

2.0 SITE AND VICINITY DESCRIPTION

2.1 SITE LOCATION AND DESCRIPTION

PROPERTY INFORMATION	
Site Address(es)	Napa Junction Road at Oat Hill, American Canyon, Napa County, California 94503
Property ID (APN or Block/Lot)	058-380-008
Location	Southeast of the terminus of Napa Junction Road
Property Type	Vacant Land
SITE AND BUILDING INFORMATION	
Approximate Site Acreage/Source	10.17/Assessor
Number of Buildings	None
Building Construction Date(s)/Source	N/A
Building Square Footage (SF)/Source	N/A
Number of Floors/Stories	N/A
Basement or Subgrade Area(s)	None identified
Number of Units	N/A
Additional Improvements	None
On-site Occupant(s)	None
Current On-site Operations/Use	Vacant land (no current use)
Current Use of Hazardous Substances	None identified
REGULATORY INFORMATION	
Regulatory Database Listing(s)	None identified

2.2 ON-SITE UTILITIES

Utility	Source/System Information
Heating System	N/A
Cooling System	N/A
Potable Water	N/A
Sewage Disposal/Treatment	N/A

Utility source/system information listed in the table above is provided by Mr. Rick Hess, unless otherwise noted above.

2.3 SITE AND VICINITY CHARACTERISTICS

The subject property is located in a rural and commercial area of American Canyon, California. The immediately surrounding properties consist of the following:

Direction	Tenant/Use (Address)	Regulatory Database Listing(s)
North	Napa Junction Road, followed by: Vacant land (no address) Hess Construction (4501 Hess Road)	None identified

Direction	Tenant/Use (Address)	Regulatory Database Listing(s)
East	Undeveloped land with goat grazing (no address)	None identified
South	Vacant land, followed by a large water tower/tank (no address)	None identified
West	A small water tower/tank and undeveloped land (no address)	None identified
Northwest	A wine barrel manufacturing facility (100 Napa Junction Road)	RCRA NonGen/NLR

If the surrounding properties are listed in the regulatory database, please refer to Section 5.1 for discussion.

2.4 PHYSICAL SETTING

Geologic Unit: Description/Source	Alluvial deposits of the Cenozoic Era/USGS and United States Department of the Interior
Soil Series: Description/Source	Fagan: Clay loam with slow infiltration rates and well drained. Depth to bedrock is estimated at 46-50 inches./USDA Soil Survey
Groundwater Flow Direction/Source	East/Topographic map interpretation
Estimated Depth to Groundwater/ Source	1.52-7.67 feet bgs/SWRCB groundwater monitoring data for a nearby site (4391 Highway 29), approximately 0.70 mile to the south-southeast Note: The closest readily available data was 1.52-7.67 feet deep at at distance of 0.70 mile away. However given the topography of the subject property relative to this depth to groundwater source, depth to groundwater at the subject property is likely deeper.
Surface waters on the subject property or adjoining sites	None
Additional notes	None

Note: Groundwater flow direction can be influenced locally and regionally by the presence of local wetland features, surface topography, recharge and discharge areas, horizontal and vertical inconsistencies in the types and location of subsurface soils, and proximity to water pumping wells. Depth and gradient of the water table can change seasonally in response to variation in precipitation and recharge, and over time, in response to urban development such as storm water controls, impervious surfaces, pumping wells, cleanup activities, dewatering, seawater intrusion barrier projects near the coast, and other factors.

3.0 HISTORICAL REVIEW OF SITE AND VICINITY

Reasonably ascertainable standard historical sources as outlined in ASTM Standard E1527-13 were used to determine previous uses and occupancies of the subject property that are likely to have led to RECs in connection with the subject property. A chronological summary of historical data found, including but not limited to aerial photographs, historical city directories, Sanborn fire insurance maps, and agency records, is as follows:

Date Range	Subject Property Description and Occupancy (Historical Addresses)	Source(s)
Prior to 1937	Unknown use/Data failure; refer to Section 1.6.1	Aerial photographs
1937	Agricultural/hay farming land	Aerial photograph
1948-present	Vacant pasture land	Aerial photographs, city directories, agency records, prior Phase I ESA report, interview, onsite observations

Historical Use Summary

Based on a review of an aerial photograph from 1937, it appears that the subject property was historically used for hay harvesting. The subject property appeared as vacant range land in the next available historical resource, a 1948 aerial photograph. Additionally, the subject property owner representative, Mr. Rick Hess, indicated that the land was always for grazing only to the best of his knowledge and that no pesticides have been applied.

Based on review of the California Department of Toxic Substances Control's (DTSC) August 7, 2008 *Interim Guidance for Sampling Agricultural Properties (Third Revision)*, organochlorine pesticides (OCPs) were introduced to California in 1944 and reached their peak in the 1960s. The document continues to state that properties which ended their agricultural use prior to 1950 need not be sampled for OCPs.

Hay cultivation does not typically involve the application of agricultural chemicals, such as pesticides, herbicides and fertilizers. Therefore, the historical use of the property is not expected to represent a significant environmental concern.

If available, copies of historical sources are provided in Appendix D.

3.1 AERIAL PHOTOGRAPHS

AEI reviewed aerial photographs of the subject property and surrounding area. A search was made of the EDR collection of aerial photographs. Aerial photographs were reviewed for the following years:

Year(s)	Subject Property Description	Adjoining Site Descriptions
1937	Appears as agricultural/hay farming land	Agricultural/hay farming land

Year(s)	Subject Property Description	Adjoining Site Descriptions
1948 1957 1965 1970	Appears as unimproved pasture land.	Pasture land
1982	Vacant land with various dirt paths/roads on the lot	NORTH: Pasture land EAST: Pasture land SOUTH: Pasture land and a large water tower/tank WEST: A small water tower/tank and pasture land NORTHWEST: Pasture land
1993 1998 2005 2006	No significant changes noted from the 1982 aerial photograph. The subject property generally appears as it does today.	NORTH: Pasture land EAST: Pasture land SOUTH: Pasture land and a large water tower/tank WEST: A small water tower/tank and pasture land NORTHWEST: The current commercial office/ warehouse facility improvements

Based on a review of aerial photographs, the subject property appears to have been developed with agricultural/hay farming land in at least 1937, please refer to Section 3.0 for additional information.

3.2 Sanborn Fire Insurance Maps

Sanborn Fire Insurance maps were developed in the late 1800s and early 1900s for use as an assessment tool for fire insurance rates in urbanized areas. A search was made of the EDR collection of Sanborn Fire Insurance maps.

Sanborn map coverage was not available for the subject property.

3.3 City Directories

A search of historical city directories was conducted for the subject property utilizing EDR. Since there is no known address for the subject property, no listings were present. Refer to Section 1.5 for discussion of this limiting condition.

3.4 Historical Topographic Maps

Based on the quality of information obtained from other sources, historical topographic maps were not reviewed as a part of this assessment.

3.5 Chain of Title

Based on the quality of information obtained from other sources, a chain of title search was not performed as part of this assessment.

4.0 REGULATORY AGENCY RECORDS REVIEW

Local and state agencies, such as environmental health departments, fire prevention bureaus, and building and planning departments are contacted to identify any current or previous reports of hazardous substance use, storage, and/or unauthorized releases that may have impacted the subject property. In addition, information pertaining to AULs, defined as legal or physical restrictions, or limitations on the use of, or access to, a site or facility, is requested.

4.1 LOCAL ENVIRONMENTAL HEALTH DEPARTMENT AND/OR STATE ENVIRONMENTAL AGENCY

Agency	Date Contacted	Method of Contact	Name & Title of Contact	Agency Response
Napa County Environmental Health Department (NCEHD)	July 30, 2020	Website	Records Manager	No hazardous materials records on file

4.2 FIRE DEPARTMENT

Agency	Date Contacted	Method of Contact	Name & Title of Contact	Agency Response
American Canyon Fire Department (ACFD)	July 30, 2020	Telephone	Records Manager	No records on file

4.3 BUILDING DEPARTMENT

Agency	Date Contacted	Method of Contact	Name & Title of Contact	Agency Response
American Canyon Building Department (ACBD)	July 30, 2020	Telephone	Records Clerk	No records on file

4.4 PLANNING DEPARTMENT

Agency	Date Contacted	Method of Contact	Name & Title of Contact	Agency Response
American Canyon Planning Department (ACPD)	July 30, 2020	Telephone	Associate Planner	No evidence indicating the existence of AULs on file for the subject property

4.5 ASSESSOR'S OFFICE

Agency	Date Contacted	Method of Contact	Name & Title of Contact	Agency Response
Napa County Assessor's Office	July 30, 2020	Website	N/A	Information obtained is discussed below

Records Summary

APN	058-380-008
Acreage	10.17 acres

Construction Date	N/A
Building Square Footage	N/A
Current Owner	Not provided

4.6 Other Agencies Searched

Agency	Date Contacted	Method of Contact	Name & Title of Contact	Agency Response
CA State Water Resources Control Board (SWRCB) GeoTracker	July 30, 2020	Website	N/A	No records on file
CA Department of Toxic Substances Control (DTSC) Hazardous Waste Tracking System (HWTS)	July 30, 2020	Website	N/A	No records on file
CA DTSC EnviroStor	July 30, 2020	Website	N/A	No records on file
Bay Area Air Quality Management District (AQMD)	July 30, 2020	Website	N/A	No records on file

4.7 Oil and Gas Wells

Agency	Date Referenced	Resource	Oil or gas wells located within 500 feet of the subject property
California Geologic Energy Management Division (CalGEM)	July 30, 2020	CalGEM Map	No

4.8 Oil and Gas Pipelines

Agency	Date Referenced	Resource	Pipelines located within 500 feet of the subject property
National Pipeline Mapping System (NPMS)	July 30, 2020	NPMS Public Map Viewer	No

4.9 State Environmental Superliens

In accordance with our approved scope of services, AEI did not assess whether the subject property is subject to any state environmental superliens.

4.10 State Property Transfer Laws

In accordance with our approved scope of services, AEI did not assess whether the subject property is subject to any state property transfer laws.

5.0 REGULATORY DATABASE RECORDS REVIEW

AEI contracted EDR to conduct a search of publicly available information from federal, state, tribal, and local databases containing known and suspected sites of environmental contamination and sites of potential environmental significance. Data gathered during the current regulatory database search is compiled by EDR into one regulatory database report. Location information for listed sites is designated using geocoded information provided by federal, state, or local agencies and commonly used mapping databases with the exception of "Orphan" sites. Due to poor or inadequate address information, Orphan sites are identified but not geocoded/mapped by EDR, rather, information is provided based upon vicinity zip codes, city name, and state. The number of listed sites identified within the approximate minimum search distance from the federal and state environmental records database listings specified in ASTM Standard E1527-13 is summarized in Section 5.1, along with the total number of Orphan sites. A copy of the regulatory database report, which includes detailed descriptions of the databases noted below, is included in Appendix C of this report.

In determining if a listed site is a potential environmental concern to the subject property, AEI generally applies the following criteria to classify the site as lower potential environmental concern: 1) the site only holds an operating permit (which does not imply a release), 2) the site's distance from, and/or topographic position relative to, the subject property, and/or 3) the site has recently been granted "No Further Action" by the appropriate regulatory agency.

Regulatory database listings associated with the subject property, adjoining site(s) and/or nearby sites of concern that were determined to warrant additional discussion are identified and further discussed in Section 5.1.

5.1 RECORDS SUMMARY

Database	Search Distance (Miles)	Listings Within Search Distance	Subject Property	Adjoining Site(s)	Other Nearby Sites of Concern
NPL	1.0	0			
DELISTED NPL	0.5	0			
SEMS/CERCLIS	0.5	0			
SEMS-ARCHIVE/CERCLIS NFRAP	0.5	0			
RCRA CORRACTS	1.0	0			
RCRA-TSDF	0.5	0			
RCRA LQG, SQG, CESQGs, NLR	SP/ADJ	1		✔	
US ENG CONTROLS	SP	0			
US INST CONTROLS	SP	0			
ERNS	SP	0			
STATE/TRIBAL HWS	1.0	3			
STATE/TRIBAL SWLF	0.5	1			
STATE/TRIBAL REGISTERED STORAGE TANKS	SP/ADJ	1			
STATE/TRIBAL LUST	0.5	5			

Database	Search Distance (Miles)	Listings Within Search Distance	Subject Property	Adjoining Site(s)	Other Nearby Sites of Concern
STATE/TRIBAL EC and IC	SP	0			
STATE/TRIBAL VCP	0.5	1			
STATE/TRIBAL BROWNFIELD	0.5	0			
ORPHAN	N/A	2			
ADDITIONAL ENVIRONMENTAL RECORD SOURCES	SP/ADJ	0			

Facility Name	Miocene Wine LLC
Address	100 Napa Junction Road
Distance & Direction	Adjoining to northwest, beyond road
Hydrologic Position	Cross-gradient
Databases Listed	RCRA NON GEN/NLR
Comments	The site is listed as a permitted hazardous waste generator. No violations were noted on the listing. Based on the non-release nature of the listing and gradient, the review of regulatory files was not deemed necessary and therefore this listing is not expected to represent a significant environmental concern.

5.2 Vapor Migration

AEI reviewed reasonably ascertainable information for the subject and nearby properties, including a regulatory database, files for nearby release sites, and/or historical documentation, to determine if potential vapor-phase migration concerns may be present which could impact the subject property.

Based on a review of available resources as documented in this report, AEI did not identify significant on-site concerns and/or regulated listings from nearby sites which suggest that a vapor-phase migration concern currently exists at the subject property.

6.0 INTERVIEWS AND USER PROVIDED INFORMATION

6.1 INTERVIEWS

Pursuant to ASTM E1527-13, the following interviews were performed during this assessment in order to obtain information indicating RECs in connection with the subject property.

6.1.1 OWNER AND KEY SITE MANAGER

Relation to Property	Name	Date Interviewed	Method of Contact	Year First Associated w/ Property	Notes
Owner/Owner Representative and Key Site Manager	Mr. Rick hess	August 5, 2020	In Person	1977	Interviewed; see Interview Summary table below

Interview Summary

Question	Owner (Representative) Response/ Comment	Key Site Manager Response/ Comment
Do you have any knowledge of USTs, clarifiers or oil/water separators, sumps, or other subsurface features?	No	No
Do you have any knowledge of previous environmental investigations conducted on site?	Yes	Yes
Do you have any knowledge of current or past industrial operations and/or other operations which would involve the use of hazardous substances and/or petroleum products?	No	No
Are you aware of any known plans for site redevelopment or change in site use?	No	No
Are you aware of any pending, threatened, or past litigation relevant to hazardous substances or petroleum products in, on, or from the property?	No	No
Are you aware of any pending, threatened or past administrative proceedings relevant to hazardous substances or petroleum products in, on, or from the property?	No	No
Are you aware of any notices from any governmental entity regarding any possible violation of environmental laws or possible liability relating to hazardous substances or petroleum products?	No	No
Are you aware of any incidents of flooding, leaks, or other water intrusion, and/or complaints related to indoor air quality?	No	No

6.1.2 PAST OWNERS, OPERATORS, AND OCCUPANTS

AEI did not attempt to interview past owners, operators, and occupants of the subject property because information from these sources would likely be duplicative of information already obtained from other sources.

6.1.3 Interview with Others

Information obtained during interviews with local government officials is incorporated into the appropriate segments of this report.

6.2 User Provided Information

User provided information is intended to help identify the possibility of RECs in connection with the subject property. According to ASTM E1527-13 and the EPA Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), certain items should be researched by the prospective landowner or grantee, and the results of such inquiries may be provided to the Environmental Professional. The responsibility for qualifying for LLPs by conducting the inquiries ultimately rests with the User, and providing the information to the Environmental Professional would be prudent if such information is available.

The User Questionnaire was completed by Mr. Rick Hess, Property Owner. The following table represents information contained therein.

Question	Response / Comment
1. Environmental liens that are filed or recorded against the property (40 CFR 312.25) Did a search of recorded land title records (or judicial records where appropriate) identify any environmental liens filed or recorded against the property under federal, tribal, state or local law?	No
2. Activity and use limitations that are in place on the property or that have been filed or recorded against the property (40 CFR 312.26(a)(1)(v) and vi)). Did a search of recorded land title records (or judicial records where appropriate) identify any AULs, such as engineering controls, land use restrictions or institutional controls that are in place at the property and/or have been filed or recorded against the property under federal, tribal, state or local law?	No
3. Specialized knowledge or experience of the person seeking to qualify for the LLP (40 CFR 312.28). Do you have any specialized knowledge or experience related to the property or nearby properties? For example, are you involved in the same line of business as the current or former occupants of the property or an adjoining property so that you would have specialized knowledge of the chemicals and processes used by this type of business?	Yes: Property in family since 1978
4. Relationship of the purchase price to the fair market value of the property if it were not contaminated (40 CFR 312.29). Does the purchase price being paid for this property reasonably reflect the fair market value of the property? If you conclude that there is a difference, have you considered whether the lower purchase price is because contamination is known or believed to be present at the property?	N/A
5. Commonly known or reasonably ascertainable information about the property (40 CFR 312.30). Are you aware of commonly known or reasonably ascertainable information about the property that would help the environmental professional to identify conditions indicative of releases or threatened releases? For example:	A) Yes, B-D) No

Question	Response / Comment
(a) Do you know the past uses of the property? (b) Do you know of specific chemicals that are present or once were present at the property? (c) Do you know of spills or other chemical releases that have taken place at the property? (d) Do you know of any environmental cleanups that have taken place at the property?	
6. The degree of obviousness of the presence or likely presence of contamination at the property, and the ability to detect the contamination by appropriate investigation (40 CFR 312.31). Based on your knowledge and experience related to the property, are there any obvious indicators that point to the presence or likely presence of contamination at the property?	No

6.3 Previous Reports and Other Provided Documentation

Documentation was provided to AEI by the Client during this assessment. A summary of this information follows:

Phase I Environmental Site Assessment (Napa Junction Road/Oat Hill), prepared by AEI Consultants (December 7, 2011)

This report describes the subject property generally consistent with current conditions.

The December 2011 Phase I ESA did not reveal any RECs, HRECs, De Minimis Conditions, or BERs during the course of the assessment.

This assessment revealed no evidence of RECs in connection with the property. AEI recommended no further investigations for the subject property at that time.

A copy of the report is included in the appendices.

6.4 Environmental Lien Search

In accordance with our approved scope of services, an environmental lien search was not performed as part of this assessment.

7.0 SITE RECONNAISSANCE

Site Reconnaissance Date	August 5, 2020
AEI Site Assessor(s)	Michael Audibert
Property Escort(s)/ Relationship(s) to Property	Mr. Rick Hess/Property Owner
Units/Areas Observed	No buildings onsite Exterior areas: All property grounds
Area(s) not accessed and reason(s)	None
Other Physical Constraints	Large parcel, refer to Section 1.5

Reconnaissance Findings Summary

Feature	Observed on Subject Property (see Section 7.1)	Observed on Adjoining Property (see Section 7.2)
Regulated Hazardous Substances/Wastes and/or Petroleum Products in Connection with Property Use		
Aboveground/Underground Hazardous Substance or Petroleum Product Storage Tanks (ASTs/USTs)		
Hazardous Substance and Petroleum Product Containers Not in Connection with Property Use		
Unidentified Substance Containers		
Electrical or Mechanical Equipment Likely to Contain Fluids		✔
Interior Stains or Corrosion		
Strong, Pungent, or Noxious Odors		
Pools of Liquid		
Drains, Sumps, and Clarifiers		
Pits, Ponds, and Lagoons		
Stained Soil or Pavement		
Stressed Vegetation		
Solid Waste Disposal or Evidence of Fill Materials		
Waste Water Discharges		
Wells		
Septic Systems		
Biomedical Wastes		
Other	✔	

7.1 SUBJECT PROPERTY RECONNAISSANCE FINDINGS

During the site reconnaissance, AEI observed the items listed in the above Reconnaissance Findings Summary table, which are further discussed below.

7.1.1 Other

Various debris, including concrete, wood, metal, empty water drums/containers for goats (all non-hazardous). Based on the nature of the items, their presence is not expected to represent a significant environmental concern.

7.2 Adjoining Property Reconnaissance Findings

During the site reconnaissance, AEI observed the items listed in the above Reconnaissance Findings Summary table, which are further discussed below.

7.2.1 Electrical or Mechanical Equipment Likely to Contain Fluids

Toxic PCBs were commonly used historically in electrical equipment such as transformers, fluorescent lamp ballasts, and capacitors. According to United States EPA regulation 40 CFR, Part 761, there are three categories for classifying such equipment: <50 ppm of PCBs is considered "Non-PCB"; between 50 and 500 ppm is considered "PCB-Contaminated"; and >500 ppm is considered "PCB-Containing." Pursuant to 15 U.S.C. 2605(e)(2)(A), the manufacture, process, or distribution in commerce or use of any polychlorinated biphenyl in any manner other than in a totally enclosed manner was prohibited after January 1, 1977.

Transformers

The management of potential PCB-containing transformers is the responsibility of the local utility or the transformer owner. Actual material samples need to be collected to determine if transformers are PCB-containing.

Various pole-mounted and pad-mounted transformers were observed on the adjoining sites during the site reconnaissance. No spills, staining, or leaks were observed on or around the transformers. Based on the good condition of the equipment, the transformers are not expected to represent a significant environmental concern.

8.0 NON-ASTM SERVICES

8.1 Asbestos-Containing Building Materials

The subject property is currently vacant land and lacks structures. Consequently, no building components containing suspect asbestos containing materials were identified during the site inspection.

8.2 Lead-Based Paint

The subject property is currently vacant land and lacks structures. Consequently, AEI did not observe building components likely to contain suspect LBP during the site reconnaissance.

8.3 Radon

Radon is a naturally-occurring, odorless, and invisible gas. Natural radon levels vary and are closely related to geologic formations. Radon may enter buildings through basement sumps or other openings.

Radon sampling was not requested as part of this assessment. According to the California Department of Health Services Radon Database, 18 tests were conducted for radon levels in the subject property zip code (94503) in 2016. All of these tests indicated that radon levels were below the action level of 4.0 pCi/L set forth by the US EPA. Therefore, radon is not expected to represent a significant environmental concern.

8.4 Mold

The subject property is currently vacant land and lacks structures. Consequently, mold was not addressed as part of this assessment.

9.0 SIGNATURE OF ENVIRONMENTAL PROFESSIONALS

We declare that, to the best of our professional knowledge and belief, we meet the definition of Environmental Professional as defined in §312.10 of 40 CFR Part 312.

We have the specific qualifications based on education, training, and experience to assess a property of the nature, history and setting of the subject property. We have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E 2247-16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E 1528-14) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

EXECUTIVE SUMMARY

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

State- and tribal - equivalent CERCLIS

ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the ENVIROSTOR list, as provided by EDR, and dated 04/27/2020 has revealed that there are 3 ENVIROSTOR sites within approximately 1 mile of the target property.

State and tribal landfill and/or solid waste disposal site lists

SWF/LF: The Solid Waste Facilities/Landfill Sites records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. The data come from the Integrated Waste Management Board's Solid Waste Information System (SWIS) database.

A review of the SWF/LF list, as provided by EDR, has revealed that there is 1 SWF/LF site within

approximately 0.5 miles of the target property.

State and tribal leaking storage tank lists

LUST: Leaking Underground Storage Tank (LUST) Sites included in GeoTracker. GeoTracker is the Water Boards data management system for sites that impact, or have the potential to impact, water quality in California, with emphasis on groundwater.

A review of the LUST list, as provided by EDR, has revealed that there are 5 LUST sites within approximately 0.5 miles of the target property.

State and tribal voluntary cleanup sites

VCP: Contains low threat level properties with either confirmed or unconfirmed releases and the project proponents have request that DTSC oversee investigation and/or cleanup activities and have agreed to provide coverage for DTSC's costs.

A review of the VCP list, as provided by EDR, and dated 04/27/2020 has revealed that there is 1 VCP site within approximately 0.5 miles of the target property.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Lists of Landfill / Solid Waste Disposal Sites

SWRCY: A listing of recycling facilities in California.

A review of the SWRCY list, as provided by EDR, and dated 03/09/2020 has revealed that there is 1

SWRCY site within approximately 0.5 miles of the target property.

Lower Elevation	Address	Direction / Distance	Map ID	Page
AMERICAN CANYON REDE Cert Id: RC216208.001	3915 BROADWAY ST	SE 1/4 - 1/2 (0.485 mi.)	16	36

Local Lists of Hazardous waste / Contaminated Sites

CERS HAZ WASTE: List of sites in the California Environmental Protection Agency (CalEPA) Regulated Site Portal which fall under the Hazardous Chemical Management, Hazardous Waste Onsite Treatment, Household Hazardous Waste Collection, Hazardous Waste Generator, and RCRA LQ HW Generator programs.

A review of the CERS HAZ WASTE list, as provided by EDR, and dated 04/20/2020 has revealed that there are 2 CERS HAZ WASTE sites within approximately 0.25 miles of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 03/23/2020 has revealed that there are 3 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

Violation Date: 01-08-2020
Citation: HSC 6.95 25508.1(a)-(f) - California Health and Safety Code, Chapter 6.95, Section(s) 25508.1(a)-(f)
Violation Description: Failure to electronically update business plan within 30 days of any one of the following events: A 100 percent or more increase in the quantity of a previously disclosed material. Any handling of a

R.E. MAHER INC. (Continued) **S121788844**

previously undisclosed hazardous materials at or above reportable quantities. A change of business address, business ownership, or business name. A substantial change in the handler's operations that requires modification to any portion of the business plan.

Violation Notes: Returned to compliance on 01/08/2020. The business failed to update business plan within 30 days when one of the following occurs: a 100 percent or more increase in the quantity of a previously disclosed material; any handling of a previously undisclosed hazardous material; a change of business address, business ownership, or business name; or a substantial change in the handler's operations that requires modification to any portion of the business plan. The material "Cure" was reported at having 155 gallons onsite. There were several 55 gallon drums, 5 gallon drums and a 200 gallon tank. The inventory amount was corrected onsite in CERS at the time of inspection. Update all submittal elements effected by the change(s) and electronically submit the update within 30 days.

Comments:	The Triage recommended No Further Action. A Sensitive Receptor Survey and Risk Based Corrective Action Assessment submitted to the SF Water Board indicate that the contaminant residuals present at the site do not pose a significant health risk to current or future occupants of the site. Based on this Report, a No Further Action Letter was issued by the SF Board dated November 20, 2000.

Completed Sub Area Name:	Not reported
Completed Document Type:	Preliminary Assessment Report
Completed Date:	05/01/2014
Comments:	DTSC conducted a reassessment of sites in EPA's CERCLIS database on EPA's behalf. The regional waterboard had reviewed past soil and groundwater investigations and determined that no further action was required. Based on this information and available sampling data, DTSC recommended no further federal assessment under CERCLA.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 04/27/2020

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Federal Delisted NPL site list

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Federal RCRA generators list

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites
Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

SSTS: Section 7 Tracking Systems

Section 7 of the Federal Insecticide, Fungicide and Rodenticide Act, as amended (92 Stat. 829) requires all registered pesticide-producing establishments to submit a report to the Environmental Protection Agency by March 1st each year. Each establishment must report the types and amounts of pesticides, active ingredients and devices being produced, and those having been produced and sold or distributed in the past year.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing
A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Date of Government Version: 10/19/2006

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

WASTEWATER PITS: Oil Wastewater Pits Listing
Water officials discovered that oil producers have been dumping chemical-laden wastewater into hundreds of unlined pits that are operating without proper permits. Inspections completed by the Central Valley Regional Water Quality Control Board revealed the existence of previously unidentified waste sites. The water boards review found that more than one-third of the region's active disposal pits are operating without permission.

WDR: Waste Discharge Requirements Listing

In general, the Waste Discharge Requirements (WDRs) Program (sometimes also referred to as the "Non Chapter 15 (Non 15) Program") regulates point discharges that are exempt pursuant to Subsection 20090 of Title 27 and not subject to the Federal Water Pollution Control Act. Exemptions from Title 27 may be granted for nine categories of discharges (e.g., sewage, wastewater, etc.) that meet, and continue to meet, the preconditions listed for each specific exemption. The scope of the WDRs Program also includes the discharge of wastes classified as inert, pursuant to section 20230 of Title 27.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants
The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations
EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

LOS ANGELES CO LF METHANE: Methane Producing Landfills

This data was created on April 30, 2012 to represent known disposal sites in Los Angeles County that may produce and emanate methane gas. The shapefile contains disposal sites within Los Angeles County that once accepted degradable refuse material. Information used to create this data was extracted from a landfill survey performed by County Engineers (Major Waste System Map, 1973) as well as historical records from CalRecycle, Regional Water Quality Control Board, and Los Angeles County Department of Public Health

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data
Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

AHA Hospitals:
Source: American Hospital Association, Inc.
Telephone: 312-280-5991
The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing
Source: Centers for Medicare & Medicaid Services
Telephone: 410-786-3000

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

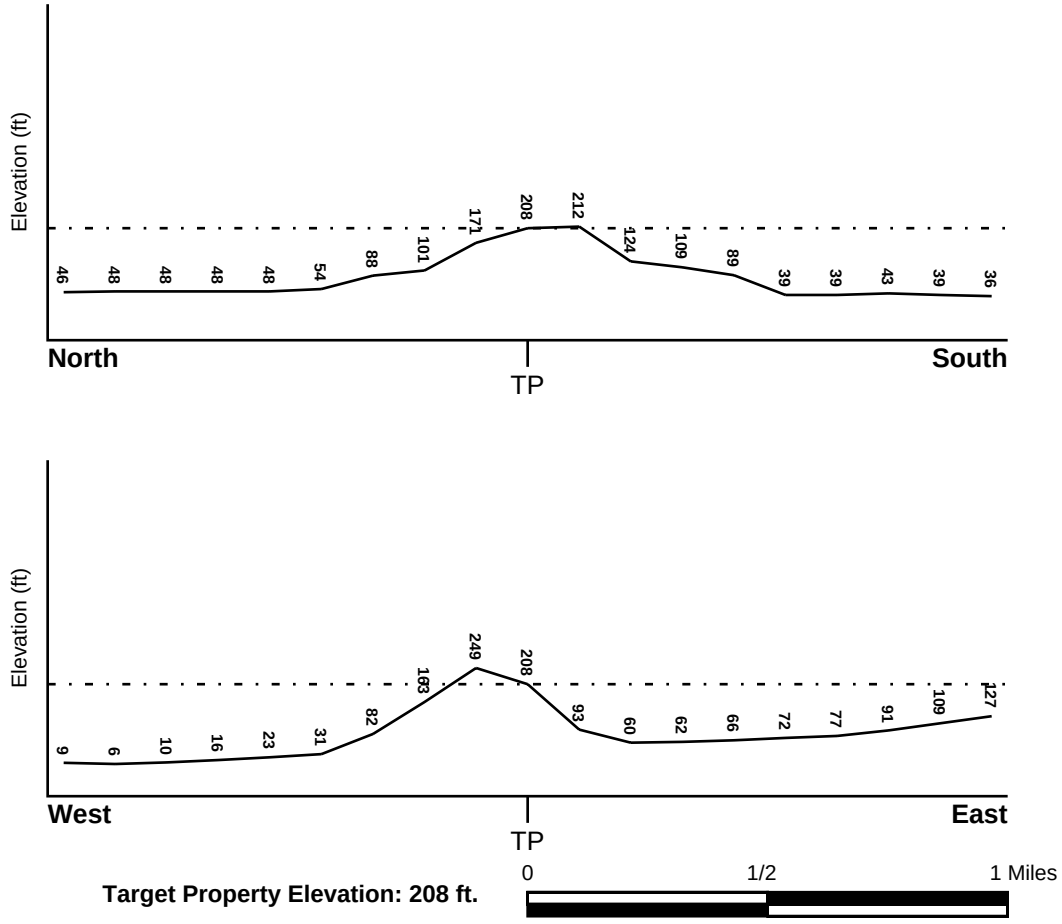
1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).



TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General East

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Flood Plain Panel at Target Property	FEMA Source Type
06055C0625E	FEMA FIRM Flood data

Additional Panels in search area:	FEMA Source Type
06055C0610E	FEMA FIRM Flood data
06055C0650E	FEMA FIRM Flood data

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
CUTTINGS WHARF	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Status:	Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

All of the information and opinions presented are those of the cited EPA report(s), which were completed under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: Fagan

Soil Surface Texture: clay loam

Hydrologic Group: Class C - Slow infiltration rates. Soils with layers impeding downward movement of water, or soils with moderately fine or fine textures.

Soil Drainage Class: Well drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Moderate

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	16 inches	clay loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	Not reported	Max: 4 Min: 1.4	Max: Min:
2	16 inches	27 inches	clay	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	Not reported	Max: 4 Min: 1.4	Max: Min:
3	27 inches	46 inches	sandy clay loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	Not reported	Max: 4 Min: 1.4	Max: Min:
4	46 inches	50 inches	weathered bedrock	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	Not reported	Max: 4 Min: 1.4	Max: Min:

Soil Map ID: 2

Soil Component Name: CLEAR LAKE

Soil Surface Texture: clay

Hydrologic Group: Class D - Very slow infiltration rates. Soils are clayey, have a high water table, or are shallow to an impervious layer.

Soil Drainage Class: Poorly drained

Hydric Status: All hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information

	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	31 inches	clay	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit 50% or more), Fat Clay.	Max: 1.4 Min: 0.42	Max: 8.4 Min: 7.4
2	31 inches	68 inches	clay	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit 50% or more), Fat Clay.	Max: 1.4 Min: 0.42	Max: 8.4 Min: 7.4

Soil Map ID: 3

Soil Component Name: HAIRE

Soil Surface Texture: loam

Hydrologic Group: Class C - Slow infiltration rates. Soils with layers impeding downward movement of water, or soils with moderately fine or fine textures.

Soil Drainage Class: Moderately well drained

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Hydric Status: Partially hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	22 inches	loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit 50% or more), Fat Clay.	Max: 0.42 Min: 0.01	Max: 5.5 Min: 4.5
2	22 inches	27 inches	sandy clay loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit 50% or more), Fat Clay.	Max: 0.42 Min: 0.01	Max: 5.5 Min: 4.5
3	27 inches	44 inches	clay	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit 50% or more), Fat Clay.	Max: 0.42 Min: 0.01	Max: 5.5 Min: 4.5
4	44 inches	59 inches	sandy clay	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit 50% or more), Fat Clay.	Max: 0.42 Min: 0.01	Max: 5.5 Min: 4.5

Soil Map ID: 4

Telephone: 916-445-0411

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

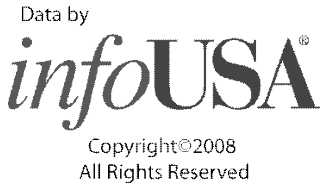
EXECUTIVE SUMMARY



DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Report is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Report includes a search of available city directory data at 5 year intervals.

RECORD SOURCES

EDR's Digital Archive combines historical directory listings from sources such as Cole Information and Dun & Bradstreet. These standard sources of property information complement and enhance each other to provide a more comprehensive report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer. Reproduction of City Directories without permission of the publisher or licensed vendor may be a violation of copyright.

RESEARCH SUMMARY

The EDR Aerial Photo Decade Package

EDR® Environmental Data Resources Inc

440 Wheelers Farms Road
Milford, CT 06461
800.352.0050
www.edrnet.com

EDR Aerial Photo Decade Package

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

When delivered electronically by EDR, the aerial photo images included with this report are for ONE TIME USE ONLY. Further reproduction of these aerial photo images is prohibited without permission from EDR. For more information contact your EDR Account Executive.

Thank you for your business.
Please contact EDR at 1-800-352-0050
with any questions or comments.

Disclaimer - Copyright and Trademark Notice

This Report contains certain information obtained from a variety of public and other sources reasonably available to Environmental Data Resources, Inc. It cannot be concluded from this Report that coverage information for the target and surrounding properties does not exist from other sources. **NO WARRANTY EXPRESSED OR IMPLIED, IS MADE WHATSOEVER IN CONNECTION WITH THIS REPORT. ENVIRONMENTAL DATA RESOURCES, INC. SPECIFICALLY DISCLAIMS THE MAKING OF ANY SUCH WARRANTIES, INCLUDING WITHOUT LIMITATION, MERCHANTABILITY OR FITNESS FOR A PARTICULAR USE OR PURPOSE. ALL RISK IS ASSUMED BY THE USER. IN NO EVENT SHALL ENVIRONMENTAL DATA RESOURCES, INC. BE LIABLE TO ANYONE, WHETHER ARISING OUT OF ERRORS OR OMISSIONS, NEGLIGENCE, ACCIDENT OR ANY OTHER CAUSE, FOR ANY LOSS OF DAMAGE, INCLUDING, WITHOUT LIMITATION, SPECIAL, INCIDENTAL, CONSEQUENTIAL, OR EXEMPLARY DAMAGES. ANY LIABILITY ON THE PART OF ENVIRONMENTAL DATA RESOURCES, INC. IS STRICTLY LIMITED TO A REFUND OF THE AMOUNT PAID FOR THIS REPORT.** Purchaser accepts this Report AS IS. Any analyses, estimates, ratings, environmental risk levels or risk codes provided in this Report are provided for illustrative purposes only, and are not intended to provide, nor should they be interpreted as providing any facts regarding, or prediction or forecast of, any environmental risk for any property. Only a Phase I Environmental Site Assessment performed by an environmental professional can provide information regarding the environmental risk for any property. Additionally, the information provided in this Report is not to be construed as legal advice.

ASTM USER QUESTIONNAIRE

AEI Consultants

ASTM E 1527-13 USER QUESTIONNAIRE

To qualify for the protection offered under the EPA All Appropriate Inquiry (AAI) Standard, the User (entities seeking to use the ASTM E1527-13 Practice to complete an environmental site assessment of the property; i.e. Lenders and/or Borrowers) must provide the following information (if available) to the environmental professional. Failure to provide this information could result in a determination that AAI is not complete. This information should be the collective knowledge of the entities relying on the Phase I. **Please note that you are not being asked to evaluate the property, but rather to provide your knowledge of information on the property.**

Site Name/Address: OAT HILL PROJECT
APN# 058-380-008

Property Owner (Name/Title/Company): OAT HILL PROPERTIES II, LLC

Phone/Email: rick@thhcss.com

Key Site Personnel (Name/Title/Company): RICK HESS

Phone/Email: 925-487-1052

Past Owner (Name/Title/Company)

Phone/Email:

1. Environmental cleanup liens that are filed or recorded against the property (40 CFR 312.25).
Did a search of recorded land title records (or judicial records where appropriate, see NOTE 1 below) identify any environmental liens filed or recorded against the property under federal, tribal, state or local law?

NOTE 1: In certain jurisdictions, federal, tribal, state, or local statutes, or regulations specify that environmental liens and AULs be filed in judicial records rather than in land title records. In such cases judicial records must be searched for environmental liens and AULs.

☐ Yes ☒ No If yes, please include an explanation in the space provided below:

2. Activity and land use limitations that are in place on the property or that have been filed or recorded against the property (40 CFR 312.26(a)(1)(v) and vi).
Did a search of recorded land title records (or judicial records where appropriate, see NOTE 1 above) identify any AULs, such as engineering controls, land use restrictions or institutional controls that are in place at the property and/or have been filed or recorded against the property under federal, tribal, state or local law?

Engineering Controls are defined as physical modifications to a site or facility to reduce or eliminate the potential for exposure to hazardous substances or petroleum products in the soil or ground water on the property). Institutional Controls are defined as a legal or administrative restriction on the use of, or access to, a site or facility to 1) reduce or eliminate the potential for exposure to hazardous substances or petroleum products in the soil or ground water on the property, or 2) to prevent activities that could interfere with the effectiveness of a response action, in order to ensure maintenance of a condition of no significant risk to public health or the environment.

☐ Yes ☒ No If yes, please include an explanation in the space provided below:

3. Specialized knowledge or experience of the person seeking to qualify for the LLP (40 CFR 312.28).
Do you have any specialized knowledge or experience related to the property or nearby properties? For example, are you involved in the same line of business as the current or former occupants of the property or an adjoining property so that you would have specialized knowledge of the chemicals and processes used by this type of business?

☒ Yes ☐ No If yes, please include an explanation in the space provided below:

OUR FAMILY HAS OWNED PROPERTY SINCE 1978

NA

4. Relationship of the purchase price to the fair market value of the property if it were not contaminated (40 CFR 312.29).

Does the purchase price being paid for this property reasonably reflect the fair market value of the property?

☐ Yes ☐ No

If you conclude that there is a difference, have you considered whether the lower purchase price is because contamination is known or believed to be present at the property?

☐ Yes ☐ No

Comments:

5. Commonly known or reasonably ascertainable information about the property (40 CFR 312.30).

Are you aware of commonly known or reasonably ascertainable information about the property that would help the environmental professional to identify conditions indicative of releases or threatened releases? For example:

a. Do you know the past uses of the property?
☒ Yes ☐ No

b. Do you know of specific chemicals that are present or once were present at the property?
☐ Yes ☒ No

c. Do you know of spills or other chemical releases that have taken place at the property?
☐ Yes ☒ No

d. Do you know of any environmental cleanups that have taken place at the property?
☐ Yes ☒ No

If yes for questions above, please include an explanation in the space provided below:

6. The degree of obviousness of the presence or likely presence of contamination at the property, and the ability to detect the contamination by appropriate investigation (40 CFR 312.31).

Based on your knowledge and experience related to the property are there any obvious indicators that point to the presence or likely presence of releases at the property?

☐ Yes ☒ No If yes, please include an explanation in the space provided below:

EXECUTIVE SUMMARY

AEI Consultants (AEI) was retained by DeNova Homes to conduct a Phase I Environmental Site Assessment (ESA), in general conformance with the scope and limitations of ASTM Standard Practice E1527-05 and the Environmental Protection Agency Standards and Practices for All Appropriate Inquiries (40 CFR Part 312) for the property located at Napa Junction Road at Oat Hill in the City of American Canyon, Napa County, California. Any exceptions to, or deletions from, this practice are described in Section 1.3 of this report.

PROPERTY DESCRIPTION

The subject property, which consists of vacant land, is located on the south side of Napa Junction Road in a mixed commercial and residential area of American Canyon, California. The property totals approximately 10.17 acres and is currently unimproved and unoccupied.

The property has consisted of unimproved pasture and/or undeveloped land from as early as 1937.

The subject property was not identified in the regulatory database.

The immediately surrounding properties consist of the following:

Direction from Site	Address-Tenant/Use
North	Napa Junction Road, followed by undeveloped land
South	Undeveloped land and a water tower
East	Undeveloped land
West	A water tower and undeveloped land
Northwest	A vacant commercial/industrial building (100 Napa Junction Road)

None of the adjacent sites were identified in the regulatory database.

Based upon topographic map interpretation and groundwater monitoring data for a nearby site, the direction of groundwater flow beneath the subject property is inferred to be to the east. Based on a *Quarterly Monitoring Report – First Quarter 2011* for a nearby site (3462 Broadway) prepared by Cook Environmental Services and dated September 29, 2011, groundwater is presumed to be present at an estimated depth of 5-10 feet below ground surface (bgs).

FINDINGS

Recognized Environmental Conditions (RECs) are defined by the ASTM Standard Practice E1527-05 as the presence or likely presence of any hazardous substances or petroleum products on a property under conditions that indicate an existing release, a past release, or a material threat of a release of any hazardous substances or petroleum products into structures on the property or into the ground, groundwater, or surface water of the property. AEI's assessment has revealed the following RECs associated with the subject property or nearby properties:

- No on-site RECs were identified during the course of this assessment.

Historical Recognized Environmental Conditions (HRECs) are defined by the ASTM Standard Practice E1527-05 as an environmental condition which in the past would have been considered a recognized environmental condition, but which may or may not be considered a recognized

environmental condition currently. AEI's assessment has revealed the following HRECs associated with the subject property or nearby properties:

- No on-site HRECs were identified during the course of this assessment.

De Minimis Environmental Conditions include environmental concerns identified by AEI that warrant discussion but do not qualify as RECs, as defined by the ASTM Standard Practice E1527-05. AEI's assessment has revealed the following de minimis environmental conditions associated with the subject property or nearby properties:

- No on-site de minimis environmental conditions were identified during the course of this assessment.

Business Environmental Risks (BERs) include risks which can have a material environmental or environmentally-driven impact on the business associated with the current or planned use of the subject property, not necessarily limited to those environmental issues required to be investigated in the standard ASTM scope. BERs may affect the liabilities and financial obligations of the client, the health & safety of site occupants, and the value and marketability of the subject property. AEI's assessment has revealed the following BERs associated with the subject property or nearby properties:

- No BERs were identified during the course of this assessment.

CONCLUSIONS, OPINIONS AND RECOMMENDATIONS

We have performed a Phase I Environmental Site Assessment for the property located at Napa Junction Road at Oat Hill in the City of American Canyon, Napa County, California, in general conformance with the scope and limitations of ASTM Standard Practice E1527-05 and the Environmental Protection Agency Standards and Practices for All Appropriate Inquiries (40 CFR Part 312). Any exceptions to, or deletions from, this practice are described in Section 1.3 of this report. This assessment has revealed no evidence of RECs in connection with the property. AEI recommends no further investigations for the subject property at this time.

1.0 INTRODUCTION

This report documents the methods and findings of the Phase I Environmental Site Assessment (ESA) performed in general conformance with the scope and limitations of ASTM Standard Practice E1527-05 and the Environmental Protection Agency Standards and Practices for All Appropriate Inquiries (40 CFR Part 312) for the property located at Napa Junction Road at Oat Hill in the City of American Canyon, Napa County, California (Figure 1: Site Location Map, Figure 2: Site Map, and Appendix A: Property Photographs).

1.1 SCOPE OF WORK

The purpose of the Phase I Environmental Site Assessment is to assist the client in identifying potential environmental liabilities associated with the presence of any hazardous substances or petroleum products, their use, storage, and disposal at and in the vicinity of the subject property, as well as regulatory non-compliance that may have occurred at the subject property. Property assessment activities focused on: 1) a review of federal, state, tribal and local databases that identify and describe underground fuel tank sites, leaking underground fuel tank sites, hazardous waste generation sites, and hazardous waste storage and disposal facility sites within the ASTM approximate minimum search distance; 2) a property and surrounding site reconnaissance, and interviews with the past and present owners and current occupants and operators to identify potential environmental contamination; and 3) a review of historical sources to help ascertain previous land use at the site and in the surrounding area.

The goal of AEI Consultants in conducting the Phase I Environmental Site Assessment was to identify the presence or likely presence of any hazardous substances or petroleum products on the property that may indicate an existing release, a past release, or a material threat of a release of any hazardous substance or petroleum product into the soil, groundwater, or surface water of the property.

1.2 SIGNIFICANT ASSUMPTIONS

The following assumptions are made by AEI Consultants in this report. AEI Consultants relied on information derived from secondary sources including governmental agencies, the client, designated representatives of the client, property contact, property owner, property owner representatives, computer databases, and personal interviews. AEI Consultants has reviewed and evaluated the thoroughness and reliability of the information derived from secondary sources including government agencies, the client, designated representatives of the client, property contact, property owner, property owner representatives, computer databases, or personal interviews. It appears that all information obtained from outside sources and reviewed for this assessment is thorough and reliable. However, AEI cannot guarantee the thoroughness or reliability of this information.

Groundwater flow and depth to groundwater, unless otherwise specified by on-site well data, or well data from adjacent sites are assumed based on contours depicted on the United States Geological Survey topographic maps. AEI Consultants assumes the property has been correctly and accurately identified by the client, designated representative of the client, property contact, property owner, and property owner's representatives.

1.3 LIMITATIONS

Property conditions, as well as local, state, tribal and federal regulations can change significantly over time. Therefore, the recommendations and conclusions presented as a result of this study apply strictly to the environmental regulations and property conditions existing at the time the study was performed. Available information has been analyzed using currently accepted assessment techniques and it is believed that the inferences made are reasonably representative of the property. AEI Consultants makes no warranty, expressed or implied, except that the services have been performed in accordance with generally accepted environmental property assessment practices applicable at the time and location of the study.

Considerations identified by ASTM as beyond the scope of a Phase I ESA that may affect business environmental risk at a given property include the following: asbestos-containing materials, radon, lead-based paint, lead in drinking water, wetlands, regulatory compliance, cultural and historic resources, industrial hygiene, health and safety, ecological resources, endangered species, indoor air quality, mold, vapor intrusion, and high voltage lines. These environmental issues or conditions may warrant assessment based on the type of the property transaction; however, they are considered non-scope issues under ASTM Standard Practice E1527-05.

If requested by the client, these non-scope issues are discussed in Section 7.2. Otherwise, the purpose of this assessment is solely to satisfy one of the requirements for qualification of the innocent landowner defense, contiguous property owner or bona fide prospective purchaser under the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA). ASTM Standard Practice E1527-05 and the EPA Standards and Practices for All Appropriate Inquiries (40 CFR Part 312) constitute the "all appropriate inquiry into the previous ownership and uses of the property consistent with good commercial or customary practice" as defined in:

1) 42 U.S.C § 9601(35)(B), referenced in the ASTM Standard Practice E1527-05.

2) Sections 101(35)(B) (ii) and (iii) of CERCLA and referenced in the EPA Standards and Practices for All Appropriate Inquiries (40 CFR Part 312).

3) 42 U.S.C. 9601(40) and 42 U.S.C. 9607(q).

The Phase I Environmental Site Assessment is not, and should not be construed as, a warranty or guarantee about the presence or absence of environmental contaminants that may affect the property. Neither is the assessment intended to assure clear title to the property in question. The sole purpose of assessment into property title records is to ascertain a historical basis of prior land use. All findings, conclusions, and recommendations stated in this report are based upon facts, circumstances, and industry-accepted procedures for such services as they existed at the time this report was prepared (i.e., federal, state, and local laws, rules, regulations, market conditions, economic conditions, political climate, and other applicable matters). All findings, conclusions, and recommendations stated in this report are based on the data and information provided, and observations and conditions that existed on the date and time of the property visit.

Responses received from local, state, or federal agencies or other secondary sources of information after the issuance of this report may change certain facts, findings, conclusions, or circumstances to the report. A change in any fact, circumstance, or industry-accepted

procedure upon which this report was based may adversely affect the findings, conclusions, and recommendations expressed in this report.

1.4 LIMITING CONDITIONS

AEI was granted full and complete access to the subject property.

1.5 DATA GAPS AND DATA FAILURE

According to ASTM E1527-05, data gaps occur when the Environmental Professional is unable to obtain information required, despite good faith efforts to gather such information.

Data failure is one type of data gap. According to ASTM E1527-05 "data failure occurs when all of the standard historical sources that are reasonably ascertainable and likely to be useful have been reviewed and yet the objectives have not been met". Pursuant to ASTM Standards, historical sources are required to document property use back to the property's first developed use or back to 1940, whichever is earlier.

No data gaps were identified during the course of this assessment.

1.6 RELIANCE

All reports, both verbal and written, are for the benefit of DeNova Homes. This report has no other purpose and may not be relied upon by any other person or entity without the written consent of AEI. Either verbally or in writing, third parties may come into possession of this report or all or part of the information generated as a result of this work. In the absence of a written agreement with AEI granting such rights, no third parties shall have rights of recourse or recovery whatsoever under any course of action against AEI, its officers, employees, vendors, successors or assigns. Reliance is provided in accordance with AEI's Proposal and Standard Terms & Conditions executed by DeNova Homes on November 15, 2011. The limitation of liability defined in the Terms and Conditions is the aggregate limit of AEI's liability to the client and all relying parties.

2.0 SITE AND VICINITY DESCRIPTION

2.1 SITE LOCATION AND DESCRIPTION

The subject property, which consists of vacant land, is located on the south side of Napa Junction Road in a mixed commercial and residential area of American Canyon, California. The property totals approximately 10.17 acres and is currently unimproved and unoccupied.

The subject property was not identified in the regulatory database.

The Assessor's Parcel Number (APN) for the subject property is 058-380-008. Based on the undeveloped nature of the subject property, it is not current serviced by any utilities. According to the American Canyon Building Department (ACBD), properties in the vicinity of the subject property are serviced by Pacific Gas and Electric (PG&E) for natural gas and electricity, and municipal services (City of American Canyon) for potable water and sewage disposal.

Refer to Figure 1: Site Location Map, Figure 2: Site Map, and Appendix A: Property Photographs for site location.

2.2 SITE AND VICINITY CHARACTERISTICS

The immediately surrounding properties consist of the following:

Direction from Site	Address-Tenant/Use
North	Napa Junction Road, followed by undeveloped land
South	Undeveloped land and a water tower
East	Undeveloped land
West	A water tower and undeveloped land
Northwest	A vacant commercial/industrial building (100 Napa Junction Road)

None of the adjacent sites were identified in the regulatory database.

2.3 PHYSICAL SETTING

Geology: According to information obtained from the United States Geological Survey (USGS), the area surrounding the subject property is underlain by alluvial deposits of the Cenozoic-era. Based on a review of the United States Department of Agriculture (USDA) Soil Survey for the area of the subject property, the soils in the vicinity of the subject property are classified as the Fagan Series. Soils from this series are characterized as a clay loam.	
USGS Topographic Map:	*Cuttings Wharf, California* Quadrangle
Nearest surface water to subject property:	Napa River/Approximately 1.4 miles to the west
Gradient Direction/Source:	East/Topographic map interpretation and groundwater monitoring data for a nearby site
Estimated Depth to Groundwater/Source:	5-10 feet bgs/*Quarterly Monitoring Report – First Quarter 2011* for a nearby site (3462 Broadway) prepared by Cook Environmental Services and dated September 29, 2011

3.0 HISTORICAL REVIEW OF SITE AND VICINITY

3.1 HISTORICAL SUMMARY

Reasonably ascertainable standard historical sources as outlined in ASTM Standard E1527-05 were used to determine previous uses and occupancies of the subject property that are likely to have led to RECs in connection with the subject property. A chronological summary of historical data found, including but not limited to aerial photographs, historic city directories, Sanborn fire insurance maps and agency records is as follows:

Date Range	Subject Property Description/Use	Source(s)
Circa 1937 - present	Unimproved pasture and/or undeveloped land	Aerial photographs, interview

The property has consisted of unimproved pasture and/or undeveloped land from as early as 1937.

No potential environmental concerns were identified in association with the current or historical use of the subject property.

If available, copies of historical sources are provided in the report appendices.

3.2 AERIAL PHOTOGRAPH REVIEW

AEI Consultants reviewed aerial photographs of the subject property and surrounding area. Aerial photographs were reviewed for the following years:

Date(s)	Scale	Subject Property Description	Surrounding Area Descriptions
1937 1948 1957 1965 1970	1" = 555' 1" = 655' 1" = 555 1" = 333' 1" = 555'	Appears as unimproved pasture land.	North: Unimproved pasture land South: Unimproved pasture land East: Unimproved pasture land West: Unimproved pasture land
1982	1" = 690'	Appears as undeveloped land with various dirt paths/roads on the lot.	North: Undeveloped land South: Undeveloped land East: Undeveloped land West: Undeveloped land
1993 2006	1" = 500' 1" = 500'	No significant changes noted from the 1982 aerial photograph. The subject property generally appears as it does today.	North: Napa Junction Road, followed by undeveloped land South: Undeveloped land and a water tower East: Undeveloped land West: A water tower and undeveloped land Northwest: A square-shaped commercial building (as it appears today)

3.3 SANBORN FIRE INSURANCE MAPS

Sanborn Fire Insurance maps were developed in the late 1800s and early 1900s for use as an assessment tool for fire insurance rates in urbanized areas. A search was made of Environmental Data Resources, Inc. (EDR) collection of Sanborn Fire Insurance maps.

Sanborn map coverage was not available for the subject property.

3.4 CITY DIRECTORIES

Based on the historical undeveloped nature of the subject property and lack of a physical address, a search of historic city directories was not conducted for the subject property.

3.5 HISTORICAL TOPOGRAPHIC MAPS

In accordance with our approved scope of services, historical topographic maps were not reviewed as a part of this assessment.

3.6 CHAIN OF TITLE

In accordance with our approved scope of services, a Chain of Title search was not performed as part of this assessment.

4.0 REGULATORY AGENCY RECORDS REVIEW

4.1 REGULATORY AGENCIES

Local and state agencies, such as environmental health departments, fire prevention bureaus, and building and planning departments are contacted to identify any current or previous reports of hazardous materials use, storage, and/or unauthorized releases that may have impacted the subject property. In addition, information pertaining to Activity and Use Limitations (AULs), defined as legal or physical restrictions, or limitations on the use of, or access to, a site or facility, is requested.

4.1.1 HEALTH DEPARTMENT

On November 25, 2011, AEI contacted the Napa County Environmental Health Department (NCEHD) for information on the subject property and nearby sites of concern. Files at this agency may contain information regarding hazardous materials storage, as well as information regarding unauthorized releases of petroleum hydrocarbons or other contaminants that may affect the soil or groundwater in the area.

No information indicating current or prior use or storage of hazardous materials, or the existence of AULs was on file for the subject property with the NCEHD.

4.1.2 FIRE DEPARTMENT

On November 25, 2011, AEI contacted the American Canyon Fire District (ACFD) for information on the subject property to identify any evidence of previous or current hazardous material usage.

No information indicating current or prior use or storage of hazardous materials, or the existence of AULs was on file for the subject property with the ACFD.

4.1.3 BUILDING DEPARTMENT

On December 2, 2011, AEI contacted the American Canyon Building Department (ACBD) for information on the subject property in order to identify historical tenants and property use.

According to the ACBD, the subject property site has never been developed.

No information indicating current or prior use or storage of hazardous materials, or the existence of AULs was on file for the subject property with the ACBD.

4.1.4 PLANNING DEPARTMENT

On December 2, 2011, AEI contacted the American Canyon Planning Department (ACPD) for information on the subject property in order to identify AULs associated with the subject property.

No information indicating the existence of AULs was on file for the subject property with the ACPD.

4.1.5 COUNTY ASSESSOR OFFICE

On December 2, 2011, AEI contacted the Napa County assessor's office for information on the subject property in order to determine the earliest recorded date of development and use.

According to the Napa County assessor's office, the subject property has never been developed.

4.1.6 DEPARTMENT OF OIL AND GAS

Department of Oil and Gas (DOG) maps concerning the subject property and nearby properties were reviewed. DOG maps contain information regarding oil and gas development.

According to the DOG map, there are no oil or gas wells within 500 feet of the subject property. No environmental concerns were noted during the DOG map review.

4.1.7 OTHER AGENCIES SEARCHED

On December 2, 2011, AEI accessed the State Water Resources Control Board (SWRCB) GeoTracker Database for information on the subject property and nearby sites of concern. Files on this agency database may contain information regarding hazardous materials storage, as well as information regarding unauthorized releases of petroleum hydrocarbons or other contaminants that may affect the soil or groundwater in the area.

No information indicating current or prior use or storage of hazardous materials, or the existence of AULs was on file for the subject property on the SWRCB GeoTracker Database.

5.0 REGULATORY DATABASE RECORDS REVIEW

AEI contracted EDR to conduct a search of federal, state, tribal, and local databases containing known and suspected sites of environmental contamination. The number of listed sites identified within the approximate minimum search distance (AMSD) from the Federal and State environmental records database listings specified in ASTM Standard E 1527-05 are summarized in the following table. A copy of the regulatory database report is included in Appendix B of this report.

The subject property was not identified in the databases reviewed.

In determining if a site is a potential environmental concern to the subject property in the records summary table below, AEI has applied the following criteria to classify the site(s) as low concern: 1) the site(s) only hold an operating permit (which does not imply a release), 2) the site(s) have been granted "No Further Action" by the appropriate regulatory agency, and/or 3) based upon AEI's review, the distance and/or topographic position relative to the subject property reduce the level of risk associated with the site(s).

5.1 RECORDS SUMMARY

Database	Search Distance (Miles)	Subject Property Listed	Total Number of Listings	Potential Environmental Concern to the Subject Property (Yes/No)
NPL	1	No	0	
DELISTED NPL	0.5	No	0	
CERCLIS	0.5	No	0	
CERCLIS NFRAP	0.5	No	0	
RCRA CORRACTS	1	No	0	
RCRA-TSD	0.5	No	0	
RCRA LG-GEN, SM-GEN, CESQGs, VGN, NLR	TP/ADJ		0	
US ENG CONTROLS	TP	No	0	
US INST CONTROLS	TP	No	0	
ERNS	TP	No	0	
STATE/TRIBAL HWS	1	No	0	
STATE/TRIBAL SWLF	0.5	No	1	No; the site is located over ¼-mile from the subject property.
STATE/TRIBAL REGISTERED STORAGE TANKS	TP/ADJ	No	0	

Database	Search Distance (Miles)	Subject Property Listed	Total Number of Listings	Potential Environmental Concern to the Subject Property (Yes/No)
STATE/TRIBAL LUST	0.5	No	5	No; all five sites have been issued a Case Closed status by the local oversight program (LOP).
STATE/TRIBAL ENG-INST CONTROLS	TP	No	0	
STATE/TRIBAL VCP	0.5	No	0	
STATE/TRIBAL BROWNFIELD	0.5	No	0	
ORPHAN	N/A	No	37	None of the identified orphan sites are located in the immediate vicinity (500-feet) of the subject property, and therefore, these sites are not expected to represent a significant environmental concern.
NON-ASTM DATABASES	TP/ADJ	No	0	

6.0 INTERVIEWS AND USER PROVIDED INFORMATION

6.1 INTERVIEWS

Pursuant to ASTM E1527-05, the following interviews were performed during this investigation in order to obtain information indicating RECs in connection with the subject property.

6.1.1 INTERVIEW WITH OWNER

The subject property owner representative, Mr. Derek Pampe, was contacted by email on November 22, 2011 and December 2, 2011. Mr. Pampe has been associated with the subject property for five months. Mr. Pampe was asked if he was aware of any of the following:

Any pending, threatened, or past litigation relevant to hazardous substances or petroleum products in, on, or from the property.		Yes	X	No
Any pending, threatened or past administrative proceedings relevant to hazardous substances or petroleum products in, on, or from the property.		Yes	X	No
Any notices from any governmental entity regarding any possible violation of environmental laws or possible liability relating to hazardous substances or petroleum products.		Yes	X	No
Any incidents of flooding, leaks, or other water intrusion, and/or complaints related to indoor air quality.		Yes	X	No

6.1.2 INTERVIEW WITH KEY SITE MANAGER

AEI was not accompanied during the site reconnaissance; therefore, an interview with a key site manager was not conducted.

6.1.3 PAST OWNERS, OPERATORS AND OCCUPANTS

Interviews with past owners and occupants regarding historical onsite operations were not reasonably ascertainable. However, based on information obtained from other sources including aerial photographs, building records, assessor records, and an interview, it is likely that the information provided by past owners and operators would have been duplicative.

6.1.4 INTERVIEW WITH OTHERS

Information obtained during interviews with local government officials is incorporated into the appropriate segments of this section.

6.2 USER PROVIDED INFORMATION

User provided information is intended to help identify the possibility of RECs in connection with the subject property. According to ASTM E1527-05 and EPA's AAI Rule, certain items should be researched by the prospective landowner or grantee, and the results of such inquiries may be provided to the environmental professional. The responsibility for qualifying for Landowner Liability Protections (LLPs) by conducting the inquiries ultimately rests with the User, and providing the information to the environmental professional would be prudent if such information is available.

6.2.1 ENVIRONMENTAL LIENS

AEI was not informed by the User, DeNova Homes, of any environmental cleanup liens encumbering the subject property that are filed or recorded under federal, tribal, state or local law.

6.2.2 Activity and Land Use Limitations

AEI was not informed by the User of any AULs, such as engineering controls, land use restrictions or institutional controls that are in place at the subject property and/or have been filed or recorded in a registry under federal, tribal, state or local law.

6.2.3 Specialized Knowledge

AEI was not informed by the User of any specialized knowledge or experience related to the subject property or nearby properties.

6.2.4 Valuation Reduction for Environmental Issues

The User did not indicate to AEI any information to suggest that the valuation of the subject property is significantly less than the valuation for comparable properties due to environmental factors.

6.2.5 Commonly Known or Reasonably Ascertainable Information

The User did not inform AEI of any commonly known or reasonably ascertainable information about the subject property which aided AEI in identifying conditions indicative of a release or threatened release.

6.2.6 Knowledge of Presence or Likely Presence of Contamination

The User did not inform AEI of any obvious indicators that pointed to the presence or likely presence of contamination at the subject property.

6.3 Previous Reports and Other Provided Documentation

No prior reports or relevant documentation in association with the subject property were made available to AEI during the course of this assessment.

7.0 SITE INSPECTION AND RECONNAISSANCE

On December 2, 2011, a site reconnaissance of the subject property and adjacent properties was conducted by Michael Audibert, REA of AEI in order to obtain information indicating the likelihood of RECs at the subject property and adjacent properties as specified in ASTM Standard Practice E1527-05 §8.4.2, 8.4.3 and 8.4.4. During the onsite reconnaissance, AEI was was not accompanied. During the onsite reconnaissance, AEI inspected the entire subject property site (the site is unimproved).

7.1 SUBJECT PROPERTY RECONNAISSANCE FINDINGS

Yes	No	Observation
	X	Hazardous Substances and/or Petroleum Products in Connection with Property Use
	X	Aboveground & Underground Hazardous Substance or Petroleum Product Storage Tanks (ASTs / USTs)
	X	Hazardous Substance and Petroleum Product Containers and Unidentified Containers not in Connection with Property Use
	X	Unidentified Substance Containers
	X	Electrical or Mechanical Equipment Likely to Contain Fluids
	X	Interior Stains or Corrosion
	X	Strong, Pungent or Noxious Odors
	X	Pools of Liquid
	X	Drains, Sumps and Clarifiers
	X	Pits, Ponds and Lagoons
	X	Stained Soil or Pavement
	X	Stressed Vegetation
	X	Solid Waste Disposal or Evidence of Fill Materials
	X	Waste Water Discharges
	X	Wells
	X	Septic Systems
X		Other

The subject property currently consists of unimproved vacant land.

The above identified observed item is further discussed below.

OTHER

AEI observed scattered debris in various locations on the subject property lot. The debris consisted of various construction materials, including metal and plastic piping, concrete, and wood; as well as some scattered household trash items, including glass, plastic containers, paper, and other miscellaneous trash. None of these materials appeared to be hazardous. Based on their non-hazardous nature, the presence of these materials is not expected to represent a significant environmental concern.

7.2 NON-ASTM SERVICES

7.2.1 ASBESTOS-CONTAINING BUILDING MATERIALS

The subject property is currently vacant land and lacks structures. Consequently, no building components containing suspect asbestos containing materials were identified during the site inspection.

7.2.2 LEAD-BASED PAINT

The subject property is currently vacant land and lacks structures. Consequently, no building components containing suspect lead-based paint were identified during the site inspection.

7.2.3 RADON

Radon is a naturally-occurring, odorless, invisible gas. Natural radon levels vary and are closely related to geologic formations. Radon may enter buildings through basement sumps or other openings.

Radon sampling was not requested as part of this investigation. According to the Department of Health Services (DHS) Radon Database for California for 2002, for one (1) total radon test conducted for the subject property zip code (94503), the one (1) test indicated an average indoor screening level below the action level of 4.0 pCi/L set forth by the EPA. Based on these results, radon does not appear to be a concern. However, testing would be required to determine site-specific radon levels.

7.2.4 DRINKING WATER SOURCES AND LEAD IN DRINKING WATER

The City of American Canyon supplies potable water to the subject property. The most recent water quality report states that lead levels in the areas water supply were well within standards established by the USEPA.

7.2.5 MOLD / INDOOR AIR QUALITY ISSUES

The subject property is currently vacant land or lacks structures. Consequently, mold was not addressed as part of this assessment.

7.3 ADJACENT PROPERTY RECONNAISSANCE FINDINGS

Yes	No	Observation
	X	Hazardous Substances and/or Petroleum Products in Connection with Property Use
	X	Aboveground & Underground Hazardous Substance or Petroleum Product Storage Tanks (ASTs / USTs)
	X	Hazardous Substance and Petroleum Product Containers and Unidentified Containers not in Connection with Property Use
	X	Unidentified Substance Containers
X		Electrical or Mechanical Equipment Likely to Contain Fluids
	X	Strong, Pungent or Noxious Odors
	X	Pools of Liquid
	X	Drains, Sumps and Clarifiers
	X	Pits, Ponds and Lagoons
	X	Stained Soil or Pavement
	X	Stressed Vegetation
	X	Solid Waste Disposal or Evidence of Fill Materials
	X	Waste Water Discharges
	X	Wells
	X	Septic Systems
	X	Other

The above identified observed item is further discussed below.

ELECTRICAL OR MECHANICAL EQUIPMENT LIKELY TO CONTAIN FLUIDS

Toxic polychlorinated biphenyls (PCBs) were commonly used historically in electrical equipment such as transformers, fluorescent lamp ballasts, and capacitors. According to United States EPA regulation 40 CFR, Part 761, there are three categories for classifying such equipment: <50 ppm of PCBs is considered "Non-PCB"; between 50 and 500 ppm is considered "PCB-Contaminated"; and >500 ppm is considered "PCB-Containing". Pursuant to 15 U.S.C. 2605(e)(2)(A), the manufacture, process, or distribution in commerce or use of any polychlorinated biphenyl in any manner other than in a totally enclosed manner was prohibited after January 1, 1977.

Transformers

The management of potential PCB-containing transformers is the responsibility of the local utility or the transformer owner. Actual material samples need to be collected to determine if transformers are PCB-containing.

One pad-mounted transformer was observed on the adjacent site to the northwest during the site inspection. No spills, staining or leaks were observed on or around the transformer. Based on the good condition of the equipment, the transformer is not expected to represent a significant environmental concern.

8.0 SIGNATURE OF ENVIRONMENTAL PROFESSIONALS

By signing this report, the senior author declares that, to the best of his or her professional knowledge and belief, he or she meets the definition of *Environmental Professional* as defined in §312.10 of 40 CFR Part 312.

The senior author has the specific qualifications based on education, training, and experience to assess a property of the nature, history and setting of the subject property. The senior author has developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-05) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

EXECUTIVE SUMMARY

STANDARD ENVIRONMENTAL RECORDS

State and tribal landfill and/or solid waste disposal site lists

SWF/LF: The Solid Waste Facilities/Landfill Sites records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. The data come from the Integrated Waste Management Board's Solid Waste Information System (SWIS) database.

A review of the SWF/LF list, as provided by EDR, and dated 08/22/2011 has revealed that there is 1 SWF/LF site within approximately 0.5 miles of the target property.

Lower Elevation	Address	Direction / Distance	Map ID	Page
AMERICAN CANYON SANITARY LANDF	*WESTERN TERMINUS OF EUC*	*WSW 1/4 - 1/2 (0.406 mi.)*	*6*	*14*

State and tribal leaking storage tank lists

LUST: The Leaking Underground Storage Tank Incident Reports contain an inventory of reported leaking underground storage tank incidents. The data come from the State Water Resources Control Board Leaking Underground Storage Tank Information System.

A review of the LUST list, as provided by EDR, and dated 09/19/2011 has revealed that there are 5 LUST sites within approximately 0.5 miles of the target property.

State and tribal registered storage tank lists

UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the State Water Resources Control Board's Hazardous Substance Storage Container Database.

A review of the UST list, as provided by EDR, and dated 09/19/2011 has revealed that there is 1 UST site within approximately 0.25 miles of the target property.
