Rosenfeld, P.E. and Suffet, M. (October 7- 10, 2002). Using High Carbon Wood Ash to Control Compost Odor. *Sixth Annual Symposium On Off Flavors in the Aquatic Environment. International Water Association*. Lecture conducted from Barcelona Spain.

Rosenfeld, P.E. and Grey, M. A. (September 22-24, 2002). Biocycle Composting For Coastal Sage Restoration. *Northwest Biosolids Management Association.* Lecture conducted from Vancouver Washington..

Rosenfeld, P.E. and Grey, M. A. (November 11-14, 2002). Using High-Carbon Wood Ash to Control Odor at a Green Materials Composting Facility. *Soil Science Society Annual Conferenc*e. Lecture conducted from Indianapolis, Maryland.

Rosenfeld. P.E. (September 16, 2000). Two stage biofilter for biosolids composting odor control. *Water Environment Federation.* Lecture conducted from Anaheim California.

Rosenfeld. P.E. (October 16, 2000). Wood ash and biofilter control of compost odor. *Biofest.* Lecture conducted from Ocean Shores, California.

Rosenfeld, P.E. (2000). Bioremediation Using Organic Soil Amendments. *California Resource Recovery Association*. Lecture conducted from Sacramento California.

Rosenfeld, P.E., C.L. Henry, R. Harrison. (1998). Oat and Grass Seed Germination and Nitrogen and Sulfur Emissions Following Biosolids Incorporation With High-Carbon Wood-Ash. *Water Environment Federation 12th Annual Residuals and Biosolids Management Conference Proceedings*. Lecture conducted from Bellevue Washington.

Rosenfeld, P.E., and C.L. Henry. (1999). An evaluation of ash incorporation with biosolids for odor reduction. *Soil Science Society of America*. Lecture conducted from Salt Lake City Utah.

Rosenfeld, P.E., C.L. Henry, R. Harrison. (1998). Comparison of Microbial Activity and Odor Emissions from Three Different Biosolids Applied to Forest Soil. *Brown and Caldwell.* Lecture conducted from Seattle Washington.

Rosenfeld, P.E., C.L. Henry. (1998). Characterization, Quantification, and Control of Odor Emissions from Biosolids Application To Forest Soil. *Biofest.* Lecture conducted from Lake Chelan, Washington.

Rosenfeld, P.E, C.L. Henry, R. Harrison. (1998). Oat and Grass Seed Germination and Nitrogen and Sulfur Emissions Following Biosolids Incorporation With High-Carbon Wood-Ash. Water Environment Federation 12th Annual Residuals and Biosolids Management Conference Proceedings. Lecture conducted from Bellevue Washington.

Rosenfeld, P.E., C.L. Henry, R. B. Harrison, and R. Dills. (1997). Comparison of Odor Emissions From Three Different Biosolids Applied to Forest Soil. *Soil Science Society of America*. Lecture conducted from Anaheim California.

Teaching Experience:

UCLA Department of Environmental Health (Summer 2003 through 20010) Taught Environmental Health Science 100 to students, including undergrad, medical doctors, public health professionals and nurses. Course focused on the health effects of environmental contaminants.

National Ground Water Association, Successful Remediation Technologies. Custom Course in Sante Fe, New Mexico. May 21, 2002. Focused on fate and transport of fuel contaminants associated with underground storage tanks.

National Ground Water Association; Successful Remediation Technologies Course in Chicago Illinois. April 1, 2002. Focused on fate and transport of contaminants associated with Superfund and RCRA sites.

California Integrated Waste Management Board, April and May, 2001. Alternative Landfill Caps Seminar in San Diego, Ventura, and San Francisco. Focused on both prescriptive and innovative landfill cover design.

UCLA Department of Environmental Engineering, February 5, 2002. Seminar on Successful Remediation Technologies focusing on Groundwater Remediation.

University Of Washington, Soil Science Program, Teaching Assistant for several courses including: Soil Chemistry, Organic Soil Amendments, and Soil Stability.

U.C. Berkeley, Environmental Science Program Teaching Assistant for Environmental Science 10.

Academic Grants Awarded:

California Integrated Waste Management Board. $41,000 grant awarded to UCLA Institute of the Environment. Goal: To investigate effect of high carbon wood ash on volatile organic emissions from compost. 2001.

Synagro Technologies, Corona California: $10,000 grant awarded to San Diego State University.
Goal: investigate effect of biosolids for restoration and remediation of degraded coastal sage soils. 2000.

King County, Department of Research and Technology, Washington State. $100,000 grant awarded to University of Washington: Goal: To investigate odor emissions from biosolids application and the effect of polymers and ash on VOC emissions. 1998.

Northwest Biosolids Management Association, Washington State. $20,000 grant awarded to investigate effect of polymers and ash on VOC emissions from biosolids. 1997.

James River Corporation, Oregon: $10,000 grant was awarded to investigate the success of genetically engineered Poplar trees with resistance to round-up. 1996.

United State Forest Service, Tahoe National Forest: $15,000 grant was awarded to investigating fire ecology of the Tahoe National Forest. 1995.

Kellogg Foundation, Washington D.C. $500 grant was awarded to construct a large anaerobic digester on St. Kitts in West Indies. 1993

Deposition and/or Trial Testimony:

In the United States District Court For The Southern District of Illinois
Duarte et al, *Plaintiffs,* vs. United States Metals Refining Company et. al. *Defendant.*
Case No.: 3:19-cv-00302-SMY-GCS
Rosenfeld Deposition. 2-19-2020

In the Circuit Court of Jackson County, Missouri
Karen Cornwell, *Plaintiff,* vs. Marathon Petroleum, LP, *Defendant.*
Case No.: 1716-CV10006
Rosenfeld Deposition. 8-30-2019

In the United States District Court For The District of New Jersey
Duarte et al, *Plaintiffs,* vs. United States Metals Refining Company et. al. *Defendant.*
Case No.: 2:17-cv-01624-ES-SCM
Rosenfeld Deposition. 6-7-2019

In the United States District Court of Southern District of Texas Galveston Division
M/T Carla Maersk, *Plaintiffs,* vs. Conti 168., Schiffahrts-GMBH & Co. Bulker KG MS "Conti Perdido" *Defendant.*
Case No.: 3:15-CV-00106 consolidated with 3:15-CV-00237
Rosenfeld Deposition. 5-9-2019

In The Superior Court of the State of California In And For The County Of Los Angeles – Santa Monica
Carole-Taddeo-Bates et al., vs. Ifran Khan et al., Defendants
Case No.: No. BC615636
Rosenfeld Deposition, 1-26-2019

In The Superior Court of the State of California In And For The County Of Los Angeles – Santa Monica
The San Gabriel Valley Council of Governments et al. vs El Adobe Apts. Inc. et al., Defendants
Case No.: No. BC646857
Rosenfeld Deposition, 10-6-2018; Trial 3-7-19

In United States District Court For The District of Colorado
Bells et al. Plaintiff vs. The 3M Company et al., Defendants
Case: No 1:16-cv-02531-RBJ
Rosenfeld Deposition, 3-15-2018 and 4-3-2018

In The District Court Of Regan County, Texas, 112th Judicial District
Phillip Bales et al., Plaintiff vs. Dow Agrosciences, LLC, et al., Defendants
Cause No 1923
Rosenfeld Deposition, 11-17-2017

In The Superior Court of the State of California In And For The County Of Contra Costa
Simons et al., Plaintiffs vs. Chevron Corporation, et al., Defendants
Cause No C12-01481
Rosenfeld Deposition, 11-20-2017

In The Circuit Court Of The Twentieth Judicial Circuit, St Clair County, Illinois
Martha Custer et al., Plaintiff vs. Cerro Flow Products, Inc., Defendants
Case No.: No. 0i9-L-2295
Rosenfeld Deposition, 8-23-2017

In United States District Court For The Southern District of Mississippi
Guy Manuel vs. The BP Exploration et al., Defendants
Case: No 1:19-cv-00315-RHW
Rosenfeld Deposition, 4-22-2020

In The Superior Court of the State of California, For The County of Los Angeles
Warrn Gilbert and Penny Gilber, Plaintiff vs. BMW of North America LLC
Case No.: LC102019 (c/w BC582154)
Rosenfeld Deposition, 8-16-2017, Trail 8-28-2018

In the Northern District Court of Mississippi, Greenville Division
Brenda J. Cooper, et al., *Plaintiffs,* vs. Meritor Inc., et al., *Defendants*
Case Number: 4:16-cv-52-DMB-JVM
Rosenfeld Deposition: July 2017

In The Superior Court of the State of Washington, County of Snohomish
Michael Davis and Julie Davis et al., Plaintiff vs. Cedar Grove Composting Inc., Defendants
Case No.: No. 13-2-03987-5
Rosenfeld Deposition, February 2017
Trial, March 2017

In The Superior Court of the State of California, County of Alameda
Charles Spain., Plaintiff vs. Thermo Fisher Scientific, et al., Defendants
Case No.: RG14711115
Rosenfeld Deposition, September 2015

In The Iowa District Court In And For Poweshiek County
Russell D. Winburn, et al., Plaintiffs vs. Doug Hoksbergen, et al., Defendants
Case No.: LALA002187
Rosenfeld Deposition, August 2015

In The Iowa District Court For Wapello County
Jerry Dovico, et al., Plaintiffs vs. Valley View Sine LLC, et al., Defendants
Law No,: LALA105144 - Division A
Rosenfeld Deposition, August 2015

In The Iowa District Court For Wapello County
Doug Pauls, et al.,, et al., Plaintiffs vs. Richard Warren, et al., Defendants
Law No,: LALA105144 - Division A
Rosenfeld Deposition, August 2015

In The Circuit Court of Ohio County, West Virginia
Robert Andrews, et al. v. Antero, et al.
Civil Action N0. 14-C-30000
Rosenfeld Deposition, June 2015

In The Third Judicial District County of Dona Ana, New Mexico
Betty Gonzalez, et al. Plaintiffs vs. Del Oro Dairy, Del Oro Real Estate LLC, Jerry Settles and Deward DeRuyter, Defendants
Rosenfeld Deposition: July 2015

In The Iowa District Court For Muscatine County
Laurie Freeman et. al. Plaintiffs vs. Grain Processing Corporation, Defendant
Case No 4980
Rosenfeld Deposition: May 2015

SWAPE Technical Consultation, Data Analysis and Litigation Support for the Environment

2656 29th Street, Suite 201
Santa Monica, CA 90405

Matt Hagemann, P.G, C.Hg.
(949) 887-9013
mhagemann@swape.com

Matthew F. Hagemann, P.G., C.Hg., QSD, QSP

Geologic and Hydrogeologic Characterization
Investigation and Remediation Strategies
Litigation Support and Testifying Expert
Industrial Stormwater Compliance
CEQA Review

Education:

M.S. Degree, Geology, California State University Los Angeles, Los Angeles, CA, 1984.
B.A. Degree, Geology, Humboldt State University, Arcata, CA, 1982.

Professional Certifications:

California Professional Geologist
California Certified Hydrogeologist
Qualified SWPPP Developer and Practitioner

Professional Experience:

Matt has 30 years of experience in environmental policy, contaminant assessment and remediation, stormwater compliance, and CEQA review. He spent nine years with the U.S. EPA in the RCRA and Superfund programs and served as EPA's Senior Science Policy Advisor in the Western Regional Office where he identified emerging threats to groundwater from perchlorate and MTBE. While with EPA, Matt also served as a Senior Hydrogeologist in the oversight of the assessment of seven major military facilities undergoing base closure. He led numerous enforcement actions under provisions of the Resource Conservation and Recovery Act (RCRA) and directed efforts to improve hydrogeologic characterization and water quality monitoring. For the past 15 years, as a founding partner with SWAPE, Matt has developed extensive client relationships and has managed complex projects that include consultation as an expert witness and a regulatory specialist, and a manager of projects ranging from industrial stormwater compliance to CEQA review of impacts from hazardous waste, air quality and greenhouse gas emissions.

Positions Matt has held include:

- Founding Partner, Soil/Water/Air Protection Enterprise (SWAPE) (2003 – present);
- Geology Instructor, Golden West College, 2010 – 2104, 2017;
- Senior Environmental Analyst, Komex H2O Science, Inc. (2000 -- 2003);

- Executive Director, Orange Coast Watch (2001 – 2004);
- Senior Science Policy Advisor and Hydrogeologist, U.S. Environmental Protection Agency (1989–1998);
- Hydrogeologist, National Park Service, Water Resources Division (1998 – 2000);
- Adjunct Faculty Member, San Francisco State University, Department of Geosciences (1993 – 1998);
- Instructor, College of Marin, Department of Science (1990 – 1995);
- Geologist, U.S. Forest Service (1986 – 1998); and
- Geologist, Dames & Moore (1984 – 1986).

Senior Regulatory and Litigation Support Analyst:

With SWAPE, Matt's responsibilities have included:

- Lead analyst and testifying expert in the review of over 300 environmental impact reports and negative declarations since 2003 under CEQA that identify significant issues with regard to hazardous waste, water resources, water quality, air quality, greenhouse gas emissions, and geologic hazards. Make recommendations for additional mitigation measures to lead agencies at the local and county level to include additional characterization of health risks and implementation of protective measures to reduce worker exposure to hazards from toxins and Valley Fever.
- Stormwater analysis, sampling and best management practice evaluation at more than 150 industrial facilities.
- Expert witness on numerous cases including, for example, perfluorooctanoic acid (PFOA) contamination of groundwater, MTBE litigation, air toxins at hazards at a school, CERCLA compliance in assessment and remediation, and industrial stormwater contamination.
- Technical assistance and litigation support for vapor intrusion concerns.
- Lead analyst and testifying expert in the review of environmental issues in license applications for large solar power plants before the California Energy Commission.
- Manager of a project to evaluate numerous formerly used military sites in the western U.S.
- Manager of a comprehensive evaluation of potential sources of perchlorate contamination in Southern California drinking water wells.
- Manager and designated expert for litigation support under provisions of Proposition 65 in the review of releases of gasoline to sources drinking water at major refineries and hundreds of gas stations throughout California.

With Komex H2O Science Inc., Matt's duties included the following:

- Senior author of a report on the extent of perchlorate contamination that was used in testimony by the former U.S. EPA Administrator and General Counsel.
- Senior researcher in the development of a comprehensive, electronically interactive chronology of MTBE use, research, and regulation.
- Senior researcher in the development of a comprehensive, electronically interactive chronology of perchlorate use, research, and regulation.
- Senior researcher in a study that estimates nationwide costs for MTBE remediation and drinking water treatment, results of which were published in newspapers nationwide and in testimony against provisions of an energy bill that would limit liability for oil companies.
- Research to support litigation to restore drinking water supplies that have been contaminated by MTBE in California and New York.

- Expert witness testimony in a case of oil production-related contamination in Mississippi.
- Lead author for a multi-volume remedial investigation report for an operating school in Los Angeles that met strict regulatory requirements and rigorous deadlines.
- Development of strategic approaches for cleanup of contaminated sites in consultation with clients and regulators.

Executive Director:

As Executive Director with Orange Coast Watch, Matt led efforts to restore water quality at Orange County beaches from multiple sources of contamination including urban runoff and the discharge of wastewater. In reporting to a Board of Directors that included representatives from leading Orange County universities and businesses, Matt prepared issue papers in the areas of treatment and disinfection of wastewater and control of the discharge of grease to sewer systems. Matt actively participated in the development of countywide water quality permits for the control of urban runoff and permits for the discharge of wastewater. Matt worked with other nonprofits to protect and restore water quality, including Surfrider, Natural Resources Defense Council and Orange County CoastKeeper as well as with business institutions including the Orange County Business Council.

Hydrogeology:

As a Senior Hydrogeologist with the U.S. Environmental Protection Agency, Matt led investigations to characterize and cleanup closing military bases, including Mare Island Naval Shipyard, Hunters Point Naval Shipyard, Treasure Island Naval Station, Alameda Naval Station, Moffett Field, Mather Army Airfield, and Sacramento Army Depot. Specific activities were as follows:

- Led efforts to model groundwater flow and contaminant transport, ensured adequacy of monitoring networks, and assessed cleanup alternatives for contaminated sediment, soil, and groundwater.
- Initiated a regional program for evaluation of groundwater sampling practices and laboratory analysis at military bases.
- Identified emerging issues, wrote technical guidance, and assisted in policy and regulation development through work on four national U.S. EPA workgroups, including the Superfund Groundwater Technical Forum and the Federal Facilities Forum.

At the request of the State of Hawaii, Matt developed a methodology to determine the vulnerability of groundwater to contamination on the islands of Maui and Oahu. He used analytical models and a GIS to show zones of vulnerability, and the results were adopted and published by the State of Hawaii and County of Maui.

As a hydrogeologist with the EPA Groundwater Protection Section, Matt worked with provisions of the Safe Drinking Water Act and NEPA to prevent drinking water contamination. Specific activities included the following:

- Received an EPA Bronze Medal for his contribution to the development of national guidance for the protection of drinking water.
- Managed the Sole Source Aquifer Program and protected the drinking water of two communities through designation under the Safe Drinking Water Act. He prepared geologic reports, conducted

public hearings, and responded to public comments from residents who were very concerned about the impact of designation.

- Reviewed a number of Environmental Impact Statements for planned major developments, including large hazardous and solid waste disposal facilities, mine reclamation, and water transfer.

Matt served as a hydrogeologist with the RCRA Hazardous Waste program. Duties were as follows:

- Supervised the hydrogeologic investigation of hazardous waste sites to determine compliance with Subtitle C requirements.
- Reviewed and wrote "part B" permits for the disposal of hazardous waste.
- Conducted RCRA Corrective Action investigations of waste sites and led inspections that formed the basis for significant enforcement actions that were developed in close coordination with U.S. EPA legal counsel.
- Wrote contract specifications and supervised contractor's investigations of waste sites.

With the National Park Service, Matt directed service-wide investigations of contaminant sources to prevent degradation of water quality, including the following tasks:

- Applied pertinent laws and regulations including CERCLA, RCRA, NEPA, NRDA, and the Clean Water Act to control military, mining, and landfill contaminants.
- Conducted watershed-scale investigations of contaminants at parks, including Yellowstone and Olympic National Park.
- Identified high-levels of perchlorate in soil adjacent to a national park in New Mexico and advised park superintendent on appropriate response actions under CERCLA.
- Served as a Park Service representative on the Interagency Perchlorate Steering Committee, a national workgroup.
- Developed a program to conduct environmental compliance audits of all National Parks while serving on a national workgroup.
- Co-authored two papers on the potential for water contamination from the operation of personal watercraft and snowmobiles, these papers serving as the basis for the development of nation-wide policy on the use of these vehicles in National Parks.
- Contributed to the Federal Multi-Agency Source Water Agreement under the Clean Water Action Plan.

Policy:

Served senior management as the Senior Science Policy Advisor with the U.S. Environmental Protection Agency, Region 9.

Activities included the following:

- Advised the Regional Administrator and senior management on emerging issues such as the potential for the gasoline additive MTBE and ammonium perchlorate to contaminate drinking water supplies.
- Shaped EPA's national response to these threats by serving on workgroups and by contributing to guidance, including the Office of Research and Development publication, Oxygenates in Water: Critical Information and Research Needs.
- Improved the technical training of EPA's scientific and engineering staff.
- Earned an EPA Bronze Medal for representing the region's 300 scientists and engineers in negotiations with the Administrator and senior management to better integrate scientific

principles into the policy-making process.
- Established national protocol for the peer review of scientific documents.

Geology:

With the U.S. Forest Service, Matt led investigations to determine hillslope stability of areas proposed for timber harvest in the central Oregon Coast Range. Specific activities were as follows:

- Mapped geology in the field, and used aerial photographic interpretation and mathematical models to determine slope stability.
- Coordinated his research with community members who were concerned with natural resource protection.
- Characterized the geology of an aquifer that serves as the sole source of drinking water for the city of Medford, Oregon.

As a consultant with Dames and Moore, Matt led geologic investigations of two contaminated sites (later listed on the Superfund NPL) in the Portland, Oregon, area and a large hazardous waste site in eastern Oregon. Duties included the following:

- Supervised year-long effort for soil and groundwater sampling.
- Conducted aquifer tests.
- Investigated active faults beneath sites proposed for hazardous waste disposal.

Teaching:

From 1990 to 1998, Matt taught at least one course per semester at the community college and university levels:

- At San Francisco State University, held an adjunct faculty position and taught courses in environmental geology, oceanography (lab and lecture), hydrogeology, and groundwater contamination.
- Served as a committee member for graduate and undergraduate students.
- Taught courses in environmental geology and oceanography at the College of Marin.

Matt is currently a part time geology instructor at Golden West College in Huntington Beach, California where he taught from 2010 to 2014 and in 2017.

Invited Testimony, Reports, Papers and Presentations:

Hagemann, M.F., 2008. Disclosure of Hazardous Waste Issues under CEQA. Presentation to the Public Environmental Law Conference, Eugene, Oregon.

Hagemann, M.F., 2008. Disclosure of Hazardous Waste Issues under CEQA. Invited presentation to U.S. EPA Region 9, San Francisco, California.

Hagemann, M.F., 2005. Use of Electronic Databases in Environmental Regulation, Policy Making and Public Participation. Brownfields 2005, Denver, Coloradao.

Hagemann, M.F., 2004. Perchlorate Contamination of the Colorado River and Impacts to Drinking Water in Nevada and the Southwestern U.S. Presentation to a meeting of the American Groundwater Trust, Las Vegas, NV (served on conference organizing committee).

Hagemann, M.F., 2004. Invited testimony to a California Senate committee hearing on air toxins at schools in Southern California, Los Angeles.

Brown, A., Farrow, J., Gray, A. and **Hagemann, M.**, 2004. An Estimate of Costs to Address MTBE Releases from Underground Storage Tanks and the Resulting Impact to Drinking Water Wells. Presentation to the Ground Water and Environmental Law Conference, National Groundwater Association.

Hagemann, M.F., 2004. Perchlorate Contamination of the Colorado River and Impacts to Drinking Water in Arizona and the Southwestern U.S. Presentation to a meeting of the American Groundwater Trust, Phoenix, AZ (served on conference organizing committee).

Hagemann, M.F., 2003. Perchlorate Contamination of the Colorado River and Impacts to Drinking Water in the Southwestern U.S. Invited presentation to a special committee meeting of the National Academy of Sciences, Irvine, CA.

Hagemann, M.F., 2003. Perchlorate Contamination of the Colorado River. Invited presentation to a tribal EPA meeting, Pechanga, CA.

Hagemann, M.F., 2003. Perchlorate Contamination of the Colorado River. Invited presentation to a meeting of tribal repesentatives, Parker, AZ.

Hagemann, M.F., 2003. Impact of Perchlorate on the Colorado River and Associated Drinking Water Supplies. Invited presentation to the Inter-Tribal Meeting, Torres Martinez Tribe.

Hagemann, M.F., 2003. The Emergence of Perchlorate as a Widespread Drinking Water Contaminant. Invited presentation to the U.S. EPA Region 9.

Hagemann, M.F., 2003. A Deductive Approach to the Assessment of Perchlorate Contamination. Invited presentation to the California Assembly Natural Resources Committee.

Hagemann, M.F., 2003. Perchlorate: A Cold War Legacy in Drinking Water. Presentation to a meeting of the National Groundwater Association.

Hagemann, M.F., 2002. From Tank to Tap: A Chronology of MTBE in Groundwater. Presentation to a meeting of the National Groundwater Association.

Hagemann, M.F., 2002. A Chronology of MTBE in Groundwater and an Estimate of Costs to Address Impacts to Groundwater. Presentation to the annual meeting of the Society of Environmental Journalists.

Hagemann, M.F., 2002. An Estimate of the Cost to Address MTBE Contamination in Groundwater (and Who Will Pay). Presentation to a meeting of the National Groundwater Association.

Hagemann, M.F., 2002. An Estimate of Costs to Address MTBE Releases from Underground Storage Tanks and the Resulting Impact to Drinking Water Wells. Presentation to a meeting of the U.S. EPA and State Underground Storage Tank Program managers.

Hagemann, M.F., 2001. From Tank to Tap: A Chronology of MTBE in Groundwater. Unpublished report.

Hagemann, M.F., 2001. Estimated Cleanup Cost for MTBE in Groundwater Used as Drinking Water. Unpublished report.

Hagemann, M.F., 2001. Estimated Costs to Address MTBE Releases from Leaking Underground Storage Tanks. Unpublished report.

Hagemann, M.F., and VanMouwerik, M., 1999. Potential Water Quality Concerns Related to Snowmobile Usage. Water Resources Division, National Park Service, Technical Report.

VanMouwerik, M. and **Hagemann, M.F**. 1999, Water Quality Concerns Related to Personal Watercraft Usage. Water Resources Division, National Park Service, Technical Report.

List of Acronyms and Abbreviations

Acronym	Term
AHSC	Affordable Housing and Sustainable Communities
CARB	California Air Resources Board
CMAQ	Congestion Mitigation and Air Quality
Diesel PM_{10}	diesel particulate matter with a diameter less than 10 micrometers
DC	direct current
g	grams
gal	gallons
GGRF	Greenhouse Gas Reduction Fund
GHG	greenhouse gas
ICP	Integrated Connectivity Project Area
kg	kilograms
kWh	kilowatt hours
lbs	pounds
$MTCO_2e$	metric tons of carbon dioxide equivalent
NO_x	nitrous oxide
$PM_{2.5}$	particulate matter with a diameter less than 2.5 micrometers
PV	photovoltaic
RIPA	Rural Innovation Project Area
ROG	reactive organic gas
scf	standard cubic feet
SGC	Strategic Growth Council
TOD	Transit Oriented Development Project Area
VMT	vehicle miles traveled

Section A. Introduction

California Climate Investments is a statewide initiative that puts billions of Cap-and-Trade dollars to work facilitating GHG emission reductions; strengthening the economy; improving public health and the environment; and providing benefits to residents of disadvantaged communities, low-income communities, and low-income households, collectively referred to as "priority populations." Where applicable and to the extent feasible, California Climate Investments must maximize economic, environmental, and public health co-benefits to the State.

CARB is responsible for providing guidance on estimating the GHG emission reductions and co-benefits from projects receiving monies from the GGRF. This guidance includes quantification methodologies, co-benefit assessment methodologies, and benefit calculator tools. CARB develops these methodologies and tools based on the project components eligible for funding by each administering agency, as reflected in the program expenditure records available at: www.arb.ca.gov/cci-expenditurerecords.

For the SGC AHSC Program, CARB and SGC developed this AHSC Quantification Methodology to provide guidance for estimating the GHG emission reductions and selected co-benefits of each proposed project type. This methodology uses calculations to estimate GHG emission reductions from avoided passenger VMT as a result of land use, housing, and transportation strategies to support infill, compact, and affordable housing development projects, in addition to GHG emission reductions from solar PV electricity generation.

The AHSC Benefits Calculator Tool automates methods described in this document, provides a link to a step-by-step user guide with a project example, and outlines documentation requirements. Applicants will estimate and SGC will report the total project GHG emission reductions and co-benefits estimated using the AHSC Benefits Calculator Tool, as well as the total project GHG emission reductions per dollar of GGRF funds requested. The AHSC Benefits Calculator Tool is available for download at: www.arb.ca.gov/cci-resources.

Using many of the same inputs required to estimate GHG emission reductions, the AHSC Benefits Calculator Tool estimates the following co-benefits and key variables from AHSC projects:

- Passenger VMT reductions (miles);
- Net density (dwelling units per acre);
- Renewable energy generation (kWh);
- Local and remote ROG emission reductions (lbs);
- Local and remote NO_x emission reductions (lbs);
- Local and remote $PM_{2.5}$ emission reductions (lbs);
- Local diesel PM_{10} emission reductions (lbs);

- Fossil fuel use reductions (gallons);
- Travel cost savings ($); and
- Energy and fuel cost savings ($).

Additional co benefits for which CARB assessment methodologies were not incorporated into the Benefits Calculator Tool may also be applicable to the project. Applicants should consult the AHSC Guidelines[1], solicitation materials, and agreements to ensure they meet AHSC requirements. All CARB co-benefit assessment methodologies are available at: www.arb.ca.gov/cci-cobenefits.

Methodology Development

CARB and SGC developed this Quantification Methodology consistent with the guiding principles of California Climate Investments, including ensuring transparency and accountability.[2] CARB developed this AHSC Quantification Methodology to be used to estimate the outcomes of proposed projects, inform project selection, and track results of funded projects. The implementing principles ensure that the methodology would:

- Apply at the project level;
- Provide uniform methods to be applied statewide and be accessible by all applicants;
- Use existing and proven tools and methods, where available and appropriate;
- Use project-level data, where available and appropriate; and
- Result in GHG emission reduction estimates that are conservative and supported by empirical literature.

CARB assessed peer-reviewed literature and tools and consulted with experts, as needed, to determine methods appropriate for the AHSC project types. CARB also consulted with SGC to determine the project-level inputs available. The methods were developed to provide estimates that are as accurate as possible with data readily available at the project level. CARB released the Draft AHSC Quantification Methodology and Draft AHSC Benefits Calculator Tool for public comment in August 2019. This Final AHSC Quantification Methodology and accompanying AHSC Benefits Calculator Tool have been updated to address public comments, where appropriate, and for consistency with updates to the AHSC Guidelines.

The "Methods to Find the Cost-effectiveness of Funding Air Quality Projects for Evaluating Motor Vehicle Registration Fee Projects and Congestion Mitigation and Air Quality Improvement Projects" were the basis for developing the GHG emission reduction estimates for transit and connectivity project features.[3] The CMAQ

[1] Strategic Growth Council. http://sgc.ca.gov/programs/ahsc/resources/guidelines.html
[2] California Air Resources Board. www.arb.ca.gov/cci-fundingguidelines
[3] California Air Resources Board and California Department of Transportation. *Methods to Find the Cost-Effectiveness of Funding Air Quality Projects for Evaluating Motor Vehicle Registration Fee*

Methods are equations for evaluating the cost-effectiveness of certain types of transportation projects, such as bicycle paths, vanpools, and new bus services. CARB and the California Department of Transportation developed the CMAQ Methods, which are used statewide by transportation agencies to assess criteria and toxic pollutant emission reductions from transportation projects competing for State motor vehicle fee and federal CMAQ funding. All of the CMAQ Methods equations and assumptions needed for this quantification method are included in this document, and some assumptions have been modified as necessary. Therefore, the equations presented in this Quantification Methodology are referred to as Transit and Connectivity Methods. The CMAQ Methods Guide is available at: www.arb.ca.gov/planning/tsaq/eval/eval.htm.

To develop VMT reduction estimates for projects that include affordable housing developments, the AHSC Benefits Calculator Tool uses information from the California Statewide Travel Demand Model,[4] metropolitan planning organizations,[5] the Institute of Transportation Engineers Trip Generation Manual[6] and Parking Generation Manual,[7] and the California Air Pollution Control Officers Association "Quantifying Greenhouse Gas Mitigation Measures" report[8] and California Emissions Estimator Model®.[9] The AHSC Benefits Calculator Tool adapts a methodology from this model for ease of use and alignment with the specific requirements of the AHSC Program.

In addition, the University of California, Berkeley, in collaboration with CARB, developed assessment methodologies for a variety of co-benefits such as providing cost savings, lessening the impacts and effects of climate change, and strengthening community engagement. Co-benefit assessment methodologies are posted at: www.arb.ca.gov/cci-cobenefits.

The AHSC Quantification Methodology and AHSC Benefits Calculator Tool are applicable only to AHSC project types and should not be used to estimate GHG

emission reductions or co-benefits for any projects which do not meet AHSC Program requirements.

Tools

The AHSC Benefits Calculator Tool relies on project-specific outputs from the National Renewable Energy Laboratory PVWatts® Calculator, a web-based tool that estimates the electricity production of grid-connected roof- or ground-mounted solar PV systems. PVWatts calculates estimated values for the proposed system's monthly and annual electricity production. For projects that include solar PV systems, the AHSC Benefits Calculator Tool relies on estimates of solar PV electricity generation from PVWatts. PVWatts is publicly available to anyone with internet access, free of charge, and subject to regular updates to incorporate new information. The tool can be accessed at: http://pvwatts.nrel.gov/.

In addition to PVWatts, the AHSC Benefits Calculator Tool relies on CARB-developed emission factors. CARB has established a single repository for emission factors used in CARB benefits calculator tools, referred to as the California Climate Investments Quantification Methodology Emission Factor Database, available at: http://www.arb.ca.gov/cci-resources. The Emission Factor Database Documentation explains how emission factors used in CARB benefits calculator tools are developed and updated.

Applicants must use the AHSC Benefits Calculator Tool to estimate the GHG emission reductions and co-benefits of the proposed project. The AHSC Benefits Calculator Tool and User Guide can be downloaded from: http://www.arb.ca.gov/cci-resources.

Updates

CARB staff periodically review each quantification methodology to evaluate its effectiveness and update methodologies to make them more robust, user-friendly, and appropriate to the projects being quantified. CARB updated the AHSC Quantification Methodology and AHSC Benefits Calculator Tool from the previous versions[10] to enhance the analysis and provide additional clarity, including the following additions:

- Equations to estimate avoided VMT from affordable housing developments;
- Home-based trip length information from metropolitan planning organizations and the California Statewide Travel Demand Model;

[10] California Air Resources Board. November 2018. https://ww2.arb.ca.gov/our-work/programs/california-climate-investments/cci-archived-quantification-materials

- Trip generation rates from 10th Edition Institute of Transportation Engineers Trip Generation Manual, including "Senior Adult Housing (Attached)" trip rates for age-restricted housing rather than "Retirement Community" trip rates;
- Compound degradation for solar PV electricity generation estimates;
- Calculations of criteria and toxic air pollutant emission reductions from transit and active transportation components past 2050;
- Passenger auto and transit vehicle emission factors derived from EMFAC2017;
- Updated default trip lengths for transit and active transportation components;
- Equations to estimate GHG emission reductions and co-benefits from electric bike share;
- Updated costs for energy, fuel, and transportation;
- Descriptions of additional data sources used; and
- An expanded project example and additional guidance to clarify frequently asked questions.

Section B. Methods

The following section provides details on the methods supporting emission reductions in the AHSC Benefits Calculator Tool.

Project Components

SGC developed five categories of eligible costs that meet the objectives of the AHSC Program.[11] For quantification purposes, CARB defined project components within those eligible costs for which there are methods to quantify GHG emission reductions.

Other project features may be eligible for funding under the AHSC Program; however, each project requesting GGRF funding must include at least one of the project components listed in Table 1 below.

Table 1. Project Components by Eligible Cost

Eligible Cost	Project Component
Affordable Housing Development; Housing-related Infrastructure	Construction or substantial rehabilitation of affordable housing, including mixed-use development, and related infrastructure
	Grid-connected solar PV system
Sustainable Transportation Infrastructure; Transportation-related Amenities	New bicycle facility (Class I bike path, Class II bike lane, or Class IV separated bikeway)
	New walkway
	New bike share equipment[12]
	New or expanded transit service (bus, cable car, ferry, heavy rail, light rail, streetcar, shuttle, trolley bus, or vanpool)
	Capital improvement that encourages mode shift
Program	Transit passes for residents
	New bike share operations[12]

[11] Strategic Growth Council. http://sgc.ca.gov/programs/ahsc/resources/guidelines.html

[12] Bike share infrastructure and fleets are eligible Sustainable Transportation Infrastructure costs according to the AHSC Guidelines, while bike share operations are eligible Active Transportation Program costs. Quantification of the benefits of new bike share infrastructure, fleets, or operations is equivalent regardless of the funding type requested.

General Approach

This section describes the methods used in the AHSC Benefits Calculator Tool to estimate GHG emission reductions and air pollutant emission co-benefits by project component. These methods account for emission reductions from avoided passenger VMT and the generation of solar PV electricity.

In general, the GHG and air pollutant emission reductions are estimated in the AHSC Benefits Calculator Tool using the quantification approaches by project component outlined in Table 2 below.

Table 2. General Approach to Quantification by Project Component

Project Component	Emission Reductions Estimated
Affordable housing development or residential transit subsidy	Emissions from avoided passenger VMT
Solar PV electricity generation	Emissions from avoided grid electricity production
New bicycle facility, walkway, or bike share	Emissions from displaced autos (less emissions from electric bikes, if applicable)
New or expanded transit service	Emissions from displaced autos less emissions from new service vehicle
Capital improvements	Emissions from displaced autos

A. Affordable Housing Developments and Residential Transit Subsidies

The emission reductions from affordable housing developments and residential transit subsidies are calculated as the emission reductions from avoided passenger VMT compared to a baseline scenario lacking VMT reduction measures. Equations 1 through 4 are used to estimate unmitigated VMT for the baseline scenario.[13]

Equation 1: Average Daily Trips per Dwelling Unit

$$Average\ Daily\ Trips = \frac{(Weekday\ Trips * 5) + Saturday\ Trips + Sunday\ Trips}{7\ days}$$

Where,			Units
Average Daily Trips	=	Average daily trip rate per dwelling unit for applicable dwelling type	trips/ dwelling unit-day
Weekday Trips	=	Average weekday trip rate per dwelling unit for applicable dwelling type	trips/ dwelling unit
Saturday Trips	=	Average Saturday trip rate per dwelling unit for applicable dwelling type	trips/ dwelling unit
Sunday Trips	=	Average Sunday trip rate per dwelling unit for applicable dwelling type	trips/ dwelling unit

[13] Equations 1 through 4 use a methodology and trip type and link percentages described in Appendices A and D of the *User's Guide for CalEEMod Version 2016.3.2*.
http://www.aqmd.gov/caleemod/user's-guide
Trip rates are derived from the *Trip Generation Manual, 10th Edition*.
https://www.ite.org/technical-resources/topics/trip-and-parking-generation/trip-generation-10th-edition-formats/
Trip lengths not provided by metropolitan planning organizations are calculated for multi-county regions from the California Statewide Travel Demand Model.
https://dot.ca.gov/programs/transportation-planning/multi-modal-system-planning/statewide-modeling

Equation 2: Primary Trip Length

$$Primary\ Trip\ Length = (H\text{-}W\ Length * H\text{-}W\ Share) + (H\text{-}S\ Length * H\text{-}S\ Share) + (H\text{-}O\ Length * H\text{-}O\ Share)$$

Where,			Units
Primary Trip Length	=	County-specific average length of urban or rural primary home-based trip	miles
H-W Length	=	County-specific average length of urban or rural trip between home and work	miles
H-W Share	=	Statewide default percentage of primary home-based trips which are between home and work (42.3%)	%
H-S Length	=	County-specific average length of urban or rural trip between home and shopping	miles
H-S Share	=	Statewide default percentage of primary home-based trips which are between home and shopping (19.6%)	%
H-O Length	=	County-specific average length of urban or rural trip between home and locations other than work or shopping	miles
H-O Share	=	Statewide default percentage of primary home-based trips which are between home and other locations (38.1%)	%

Equation 3: Overall Trip Length

$$Overall\ Trip\ Length = (Primary\ Trip\ Length * Primary\ Share) + (Primary\ Trip\ Length * 25\% * Diverted\ Share) + (0.1\ miles * Pass\text{-}by\ Share)$$

Where,			Units
Overall Trip Length	=	County-specific average length of urban or rural overall home-based trip	miles
Primary Trip Length	=	County-specific average length of urban or rural primary home-based trip, from Equation 2	miles
Primary Share	=	Statewide average percentage of home-based trips which are primary (86%)	%
Diverted Share	=	Statewide average percentage of home-based trips which are diverted (11%)	%
Pass-by Share	=	Statewide average percentage of home-based trips which are pass-by (3%)	%

Equation 4: Annual Unmitigated VMT

$$Annual\ Unmitigated\ VMT = Average\ Daily\ Trips * Overall\ Trip\ Length * Total\ Units * 365\ days$$

Where,			Units
Annual Unmitigated VMT	=	Annual VMT by residents of housing development without VMT mitigation measures	miles/year
Average Daily Trips	=	Average daily trip rate per dwelling unit for applicable dwelling type, from Equation 1	trips/ dwelling unit*day
Overall Trip Length	=	County-specific average length of urban or rural overall home-based trip, from Equation 3	miles
Total Units	=	Number of dwelling units in affordable housing development	dwelling units

Equations 5 through 17 are used to calculate the expected percent reductions in passenger VMT resulting from the characteristics of the affordable housing development.[14]

Equation 5: VMT Reductions from Increased Density

$$Density\ VMT\ Reductions = \left(\frac{Density - Required\ Density}{Required\ Density}\right) * 7\%$$

Where,			Units
Density VMT Reductions	=	VMT reductions associated with increased net density over required baseline, capped at 30%	%
Density	=	Net density of affordable housing development	dwelling units/acre
Required Density	=	Required baseline net density per Project Area Type, defined by the AHSC Guidelines (see Table 3)	dwelling units/acre

[14] Equations 5 through 17 use methodologies and elasticities described in the *Quantifying Greenhouse Gas Mitigation Measures* report.
www.capcoa.org/wp-content/uploads/2010/11/CAPCOA-Quantification-Report-9-14-Final.pdf

Table 3. Minimum Net Density by Project Area Type

Project Area Type	Minimum Net Density (dwelling units per acre)[15]
TOD	30
ICP	20
RIPA	15

Equations 6 and 7 are applicable to mixed-use developments only.

Equation 6: Land Use Index

$$Land\ Use\ Index = -\left[\frac{4 * (0.01 * \ln 0.01) + \left(\left(\frac{RS}{RS+MS}\right) * \ln\left(\frac{RS}{RS+MS}\right)\right) + \left(\left(\frac{MS}{RS+MS}\right) * \ln\left(\frac{MS}{RS+MS}\right)\right)}{\ln 6}\right]$$

Where,			Units
Land Use Index	=	Measure of diversity of land use in mixed-use development	unitless
RS	=	Space for residential uses in mixed-use development	square feet
MS	=	Publically accessible space for commercial or social services uses in mixed-use development	square feet

Equation 7: VMT Reductions from Increased Land Use Diversity

$$Diversity\ VMT\ Reductions = \left(\frac{Land\ Use\ Index - 0.15}{0.15}\right) * 9\%$$

Where,			Units
Diversity VMT Reductions	=	VMT reductions associated with increased land use diversity over baseline, capped at 30%, with increase in land use diversity capped at 500%	%
Land Use Index	=	Measure of diversity of land use in mixed-use development, from Equation 6	unitless

[15] Strategic Growth Council. http://sgc.ca.gov/programs/ahsc/resources/guidelines.html

Equation 8: VMT Reductions from Increased Destination Accessibility

$$Accessibility\ VMT\ Reductions = \left(\frac{12\ miles - Distance}{12\ miles}\right) * 20\%$$

Where,		Units
Accessibility VMT Reductions	= VMT reductions associated with increased destination accessibility, capped at 20%	%
Distance	= Distance from affordable housing development to nearest central business district	miles

Equation 9: VMT Reductions from Integration of Affordable Housing

$$Affordability\ VMT\ Reductions = \left(\frac{Affordable\ Units}{Total\ Units}\right) * 4\%$$

Where,		Units
Affordability VMT Reductions	= VMT reductions associated with integration of affordable dwelling units into housing development, capped at 4%	%
Affordable Units	= Number of affordable dwelling units in affordable housing development	dwelling units
Total Units	= Number of dwelling units in affordable housing development	dwelling units

Equation 10: Total VMT Reductions from Land Use Measures

$$Land\ Use\ VMT\ Reductions = 1 - (1 - Density\ VMT\ Reductions) * (1 - Diversity\ VMT\ Reductions) * (1 - Accessibility\ VMT\ Reductions) * (1 - Affordability\ VMT\ Reductions)$$

Where,		Units
Land Use VMT Reductions	= VMT reductions associated with all land use measures, capped according to Project Area Type (see Table 4)	%
Density VMT Reductions	= VMT reductions associated with increased density over required baseline, capped at 35%, from Equation 5	%
Diversity VMT Reductions	= VMT reductions associated with increased land use diversity over baseline, capped at 30%, from Equation 7	%
Accessibility VMT Reductions	= VMT reductions associated with increased destination accessibility, capped at 20%, from Equation 8	%
Affordability VMT Reductions	= VMT reductions associated with integration of affordable dwelling units into housing development, capped at 4%, from Equation 9	%

Table 4. Maximum VMT Reductions by Project Area Type[16]

Project Area Type	Land Use Measures	Land Use, Parking, and Traffic Calming Measures	Total
TOD	65%	70%	75%
ICP	30%	35%	40%
RIPA	5%	10%	15%

Equation 11: VMT Reductions from Limited Parking Supply

$$Parking\ Supply\ VMT\ Reductions = \left(\frac{Total\ Units * Parking\ Rate - Parking\ Spaces}{Total\ Units * Parking\ Rate}\right) * 50\%$$

Where,			Units
Parking Supply VMT Reductions	=	VMT reductions associated with limited residential parking supply, capped at 12.5%	%
Total Units	=	Number of dwelling units in affordable housing development	dwelling units
Parking Rate	=	Average peak parking demand per dwelling unit for applicable dwelling type	vehicles/ unit
Parking Spaces	=	Number of residential parking spaces in affordable housing development	parking spaces

Equation 12: VMT Reductions from Unbundled Parking Cost

$$Unbundled\ Parking\ VMT\ Reductions = Unbundled\ Cost * \left(\frac{12\ months}{\$4{,}000}\right) * 0.4 * 85\%$$

Where,			Units
Unbundled Parking VMT Reductions	=	VMT reductions associated with unbundled residential parking cost, capped at 20%	%
Unbundled Cost	=	Monthly unbundled cost for on-site residential parking	$/month

[16] VMT reduction caps are aligned with the "urban" location type from the *Quantifying Greenhouse Gas Mitigation Measures* report for TOD, "compact infill" for ICP, and "suburban" for RIPA. www.capcoa.org/wp-content/uploads/2010/11/CAPCOA-Quantification-Report-9-14-Final.pdf

Equation 13: VMT Reductions from Increased On-street Parking Price

$$Street\ Parking\ VMT\ Reductions = Street\ Cost * 0.11$$

Where,			Units
Street Parking VMT Reductions	=	VMT reductions associated with increased price of on-street parking, capped at 5.5%	%
Street Cost	=	Percent increase in on-street parking price above baseline within ½ mile of affordable housing development	%

Equation 14: Total VMT Reductions from Parking Measures

$$Parking\ VMT\ Reductions = 1 - (1 - Parking\ Supply\ VMT\ Reductions) * (1 - Unbundled\ Parking\ VMT\ Reductions) * (1 - Street\ Parking\ VMT\ Reductions)$$

Where,			Units
Parking VMT Reductions	=	VMT reductions associated with all parking measures, capped at 20%	%
Parking Supply VMT Reductions	=	VMT reductions associated with limited residential parking supply, capped at 12.5%, from Equation 11	%
Unbundled Parking VMT Reductions	=	VMT reductions associated with unbundled residential parking cost, capped at 20%, from Equation 12	%
Street Parking VMT Reductions	=	VMT reductions associated with increased price of on-street parking, capped at 5.5%, from Equation 13	%

Equation 15: VMT Reductions from Traffic Calming Measures

$$Traffic\ Calming\ VMT\ Reductions = 1\%$$

Where,			Units
Traffic Calming VMT Reductions	=	VMT reductions associated with traffic calming measures within ½ mile of affordable housing development	%

Equation 16: VMT Reductions from Residential Transit Subsidy

$$Subsidy\ VMT\ Reductions = Elasticity * \frac{Recipients}{Total\ Units} * \frac{Duration}{30\ years}$$

Where,			Units
Subsidy VMT Reductions	=	VMT reductions associated with transit passes for residents, capped at 20%	%
Elasticity	=	Elasticity of VMT specific to annual value of transit passes to residents and urban or rural project setting	unitless
Recipients	=	Number of dwelling units receiving transit passes in affordable housing development	dwelling units
Total Units	=	Number of dwelling units in affordable housing development	dwelling units
Duration	=	Number of years for which transit passes are funded	years

Equation 17: Total VMT Reductions

$$Total\ VMT\ Reductions = Land\ Use\ VMT\ Reductions + Parking\ VMT\ Reductions + Traffic\ Calming\ VMT\ Reductions + Subsidy\ VMT\ Reductions$$

Where,			Units
Total VMT Reductions	=	VMT reductions associated with all mitigation measures, capped according to Project Area Type (see Table 3)	%
Land Use VMT Reductions	=	VMT reductions associated with all land use measures, capped according to Project Area Type, from Equation 10	%
Parking VMT Reductions	=	VMT reductions associated with all parking measures, capped at 20%, from Equation 14	%
Traffic Calming VMT Reductions	=	VMT reductions associated with traffic calming measures within ½ mile of affordable housing development, from Equation 15	%
Subsidy VMT Reductions	=	VMT reductions associated with transit passes for residents, capped at 20%, from Equation 16	%

Equations 18 and 19 are used to apply the expected percent reductions in VMT to estimate avoided VMT from the affordable housing development.

Equation 18: Annual Avoided VMT

$$Annual\ Avoided\ VMT = Annual\ Unmitigated\ VMT * Total\ VMT\ Reductions$$

Where,			Units
Annual Avoided VMT	=	Annual reductions in baseline residential VMT	miles/year
Annual Unmitigated VMT	=	Annual VMT by residents of housing development without VMT mitigation measures, from Equation 4	miles/year
Total VMT Reductions	=	VMT reductions associated with all mitigation measures, from Equation 17	%

Equation 19: Total Avoided VMT

$$Total\ Avoided\ VMT = Annual\ Avoided\ VMT * 30\ years$$

Where,			Units
Total Avoided VMT	=	Reductions in baseline residential VMT for quantification period of affordable housing development (30 years)	miles
Annual Avoided VMT	=	Annual reductions in baseline residential VMT	miles/year

Equation 20: Auto Emission Reductions from Affordable Housing Development and Residential Transit Subsidies

$$Emission\ Reductions = \left(\frac{Annual\ Avoided\ VMT * EF_{Yr1} + Annual\ Avoided\ VMT * EF_{YrF}}{2}\right) * 30\ years * U^{-1}$$

Where,			Units
Auto Emission Reductions	=	Auto GHG or criteria and toxic air pollutant emission reductions for quantification period of affordable housing development (30 years)	$MTCO_2e$ or lbs
Annual Avoided VMT	=	Annual reductions in baseline residential VMT, from Equation 18	miles/year
EF_{Yr1}	=	County-specific auto vehicle emission factor for first year of project life	g/mile
EF_{YrF}	=	County-specific auto vehicle emission factor for final year of project life	g/mile
U	=	Unit conversion factor (1,000,000 for grams to metric tons; 453.59 for grams to pounds)	g/MT or g/lb

B. Solar PV Electricity Generation

The emission reductions from grid-connected solar PV projects are calculated as the emission reductions from avoided fossil-fuel-based electricity generation.[17]

Equation 21: Emission Reductions from Solar PV

$$Emission\ Reductions = \sum_{n=1}^{30} (1 - Degradation)^{n-1} * Production * EF$$

Where,			Units
Emission Reductions	=	GHG or criteria and toxic air pollutant emission reductions for useful life of solar PV system (30 years)	$MTCO_2e$ or lbs
Degradation	=	Annual rate of system degradation (0.5%)	%/year
Production	=	Annual electricity generation estimated using PVWatts Calculator	kWh/year
EF	=	Emission factor for California grid electricity	$MTCO_2e$/ kWh or lbs/kWh

[17] The 30-year useful life was obtained from the National Renewable Energy Laboratory "Life Cycle Greenhouse Gas Emissions from Solar Photovoltaics" fact sheet. www.nrel.gov/docs/fy13osti/56487.pdf
The estimated rate of system degradation was obtained from the National Renewable Energy Laboratory Technical Report "Photovoltaic Degradation Rates – An Analytical Review." 2012. www.nrel.gov/docs/fy12osti/51664.pdf

C. New Bicycle Facility or Walkway

The emission reductions from new bicycle facilities or walkways are calculated as the emission reductions from displaced autos.

Equation 22: VMT Reductions from Bicycle Facility or Walkway

$$VMT\ Displaced = D * ADT * (A + C) * L$$

Where,			Units
VMT Displaced	=	Annual passenger VMT replaced by cycling or walking trips	miles/year
D	=	Default annual days of use of new facility (200 days)	days/year
ADT	=	Average two-way daily traffic on road parallel to facility	vehicle trips/day
A	=	Adjustment factor for active transportation (see Table 5)	unitless
C	=	Credit for Key Destinations near facility (see Table 6)	unitless
L	=	Average length of auto trip replaced (1.5 miles for cycling; 0.3 miles for walking)	miles

Table 5. Active Transportation Adjustment Factors

Average Daily Traffic (vehicle trips per day)	One-way Facility Length[18] (miles)	Adjustment Factor for Population > 250,000 or Non-university Town with Population < 250,000	Adjustment Factor University Town with Population < 250,000
1 to 12,000	≤ 1	0.0019	0.0104
	1.01 to 2	0.0029	0.0155
	> 2	0.0038	0.0207
12,001 to 24,000	≤ 1	0.0014	0.0073
	1.01 to 2	0.0020	0.0109
	> 2	0.0027	0.0145
24,001 to 30,000	≤ 1	0.0010	0.0052
	1.01 to 2	0.0014	0.0078
	> 2	0.0019	0.0104

[18] The length of bicycle facilities and walkways should be measured in one direction because average daily traffic accounts for two-way traffic volume. Crosswalks should not be included in the length of sidewalks since they are accounted for as traffic calming measures.

Table 6. Key Destination Credits

Number of Key Destinations	Credit Within ½ Mile of Facility	Credit Within ¼ Mile of Facility
0 to 2	0	0
3	0.0005	0.001
4 to 6	0.0010	0.002
≥ 7	0.0015	0.003

Equation 23: Auto Emission Reductions from Bicycle Facility or Walkway

$$Auto\ Emission\ Reductions = \left(\frac{VMT\ Displaced * EF_{Yr1} + VMT\ Displaced * EF_{YrF}}{2}\right) * UL * U^{-1}$$

Where,			Units
Auto Emission Reductions	=	Auto GHG or criteria and toxic air pollutant emission reductions for useful life of bicycle facility or walkway	$MTCO_2e$ or lbs
VMT Displaced	=	Annual passenger VMT replaced by cycling or walking trips, from Equation 22	miles/year
EF_{Yr1}	=	County-specific auto vehicle emission factor for first year of useful life	g/mile
EF_{YrF}	=	County-specific auto vehicle emission factor for final year of useful life	g/mile
UL	=	Useful life of bicycle facility or walkway (20 years for Class I bike path or walkway; 15 years for Class II bike lane or Class IV separated bikeway)	years
U	=	Unit conversion factor (1,000,000 for grams to metric tons; 453.59 for grams to pounds)	g/MT or g/lb

D. New or Expanded Bike Share

The emission reductions from bike share components that result in an increase in bike trips are calculated as the emission reductions from displaced autos less the emissions from electric bicycles, if applicable.

Equation 24: VMT Reductions from Bike Share

$$VMT\ Displaced = T * A * L$$

Where,			Units
VMT Displaced	=	Annual passenger VMT replaced by bike share trips	miles/year
T	=	Total number of trips using bike share expected in first year of service	trips/year
A	=	Adjustment factor to account for induced demand and recreational bike share use (0.5)	unitless
L	=	Average length of auto trip replaced (1.5 miles)	miles

Equation 25: Auto Emission Reductions from Bike Share

$$Auto\ Emission\ Reductions = \left(\frac{VMT\ Displaced * EF_{Yr1} + VMT\ Displaced * EF_{YrF}}{2}\right) * 10\ years * U^{-1}$$

Where,			Units
Auto Emission Reductions	=	Auto GHG or criteria and toxic air pollutant emission reductions for useful life of bike share (10 years)	$MTCO_2e$ or lbs
VMT Displaced	=	Annual passenger VMT replaced by bike share trips, from Equation 24	miles/year
EF_{Yr1}	=	County-specific auto vehicle emission factor for first year of service	g/mile
EF_{YrF}	=	County-specific auto vehicle emission factor for final year of service	g/mile
U	=	Unit conversion factor (1,000,000 for grams to metric tons; 453.59 for grams to pounds)	g/MT or g/lb

Equations 26 and 27 apply to electric bike share only.

Equation 26: Emissions from Electric Bike Share

$$Electric\ Bicycle\ Emissions = T * L * EC * EF * 10\ years$$

Where,			Units
Electric Bicycle Emissions	=	Electric bicycle GHG or criteria and toxic air pollutant emissions for useful life of bike share (10 years)	$MTCO_2e$ or lbs
T	=	Total number of trips using bike share expected in first year of service	trips
L	=	Average length of auto trip replaced (1.5 miles)	miles
EC	=	Energy consumption per mile for electric bicycles	kWh/mile
EF	=	Emission factor for California grid electricity	$MTCO_2e$/ kWh or lbs/kWh

Equation 27: Net Emission Reductions from Electric Bike Share

$$Net\ Emission\ Reductions = Auto\ Emission\ Reductions - Electric\ Bicycle\ Emissions$$

Where,			Units
Net Emission Reductions	=	GHG or criteria and toxic air pollutant emission reductions for useful life of electric bike share (10 years)	$MTCO_2e$ or lbs
Auto Emission Reductions	=	Auto GHG or criteria and toxic air pollutant emission reductions for useful life of bike share, from Equation 25	$MTCO_2e$ or lbs
Electric Bicycle Emissions	=	Electric bicycle GHG or criteria and toxic air pollutant emissions for useful life of bike share, from Equation 26	$MTCO_2e$ or lbs

E. New or Expanded Bus, Cable Car, Rail, Streetcar, Shuttle, Trolley Bus, or Vanpool Service

The emission reductions from new or expanded transit service are calculated as the emission reductions from displaced autos less the new emissions from transit vehicles.

Equation 28: VMT Reductions from New or Expanded Transit Service

$$VMT\ Displaced = D * R * A * L$$

Where,			Units
VMT Displaced	=	Annual passenger VMT replaced by transit trips	miles/year
D	=	Annual days of operation of transit service	days/year
R	=	Increase in daily transit ridership in first or last year of service	trips/day
A	=	Adjustment factor for transit dependency (default or user-defined; see Table 7)	unitless
L	=	Length of average auto trip replaced (default or user-defined; see Table 7)	miles

Table 7. Default Trip Lengths and Adjustment Factors by Mode

Mode	Statewide Average Trip Length (miles)[19]	Default Adjustment Factor
Bus rapid transit	6.56	0.542
Cable car	1.26	0.479
Commuter rail	25.69	0.867
Ferry	10.85	1.000
Heavy rail	11.48	0.794
Light rail	5.44	0.685
Local bus	3.77	0.561
Long-distance commuter bus	17.57	0.705
Shuttle	9.08	0.585
Streetcar	1.43	0.479
Trolley bus	1.48	0.479
Vanpool	42.28	0.879

[19] Federal Transit Administration. National Transit Database. 2017. https://www.transit.dot.gov/ntd. Caltrans calculated the statewide average trip lengths by mode as passenger miles traveled divided by unlinked passenger trips, using 2017 annual data.

Equation 29: Auto Emission Reductions from New or Expanded Transit Service

$$Auto\ Emission\ Reductions = \frac{(VMT\ Displaced_{Yr1} * EF_{Yr1}) + (VMT\ Displaced_{YrF} * EF_{YrF})}{2} * UL * U^{-1}$$

Where,			Units
Auto Emission Reductions	=	Auto GHG or criteria and toxic air pollutant emission reductions for quantification period of new or expanded service	$MTCO_2e$ or lbs
$VMT\ Displaced_{Yr1}$	=	Annual passenger VMT replaced by transit trips in first year of service, from Equation 28	miles/year
$VMT\ Displaced_{YrF}$	=	Annual passenger VMT replaced by transit trips in final year of service, from Equation 28	miles/year
EF_{Yr1}	=	County-specific auto vehicle emission factor for first year of service	g/mile
EF_{YrF}	=	County-specific auto vehicle emission factor for final year of service	g/mile
UL	=	Quantification period for transit service, not to exceed maximum useful life per capital type (see Table 8)	years
U	=	Unit conversion factor (1,000,000 for grams to metric tons; 453.59 for grams to pounds)	g/MT or g/lb

The quantification period for a transit component is the number of years for which there are enforceable committed funds to operate the new or expanded service. The quantification period may not exceed the maximum useful life defined per capital type by the Federal Transit Administration guidelines.[20]

Table 8. Maximum Useful Life by Capital Type

Capital Type	Maximum Useful Life (years)
Bus	12
Ferry	25
Rail vehicle	25
Shuttle	10
Structure	40
Van	4

Equation 30: Transit Vehicle Emissions

$$Transit\ Vehicle\ Emissions\ =\ Transit\ VMT * EF_{YrM} * UL * U^{-1}$$

Where,			Units
Transit Vehicle Emissions	=	Transit vehicle GHG or criteria and toxic air pollutant emissions for quantification period of new or expanded service	$MTCO_2e$ or lbs
Transit VMT	=	Annual VMT of transit vehicles to operate new or expanded service	miles/year
EF_{YrM}	=	Transit vehicle emission factor for middle year of service	g/mile
UL	=	Quantification period for transit service, not to exceed maximum useful life per capital type (see Table 8)	years
U	=	Unit conversion factor (1,000,000 for grams to metric tons; 453.59 for grams to pounds)	g/MT or g/lb

Equation 31: Net Emission Reductions from New or Expanded Transit Service

$$Net\ Emission\ Reductions = Auto\ Emission\ Reductions - Transit\ Vehicle\ Emissions$$

Where,			Units
Net Emission Reductions	=	GHG or criteria and toxic air pollutant emission reductions for quantification period of new or expanded transit service	$MTCO_2e$ or lbs
Auto Emission Reductions	=	Auto GHG or criteria and toxic air pollutant emission reductions for quantification period of new or expanded service, from Equation 29	$MTCO_2e$ or lbs
Transit Vehicle Emissions	=	Transit vehicle GHG or criteria and toxic air pollutant emissions for quantification period of new or expanded service, from Equation 30	$MTCO_2e$ or lbs

F. New or Expanded Ferry Service

The emission reductions from new or expanded ferry service are calculated as the emission reductions from displaced autos less the new emissions from the ferry.

Equation 32: VMT Reductions from New or Expanded Ferry Service

$$VMT\ Displaced = D * R * A * L$$

Where,			Units
VMT Displaced	=	Annual passenger VMT replaced by ferry trips	miles/year
D	=	Annual days of operation of ferry service	days/year
R	=	Increase in daily ferry ridership in first or last year of service	trips/day
A	=	Adjustment factor for transit dependency (default or user-defined; see Table 7)	unitless
L	=	Length of average auto trip replaced (default or user-defined; see Table 7)	miles

Equation 33: Auto Emission Reductions from New or Expanded Ferry Service

$$Auto\ Emission\ Reductions = \frac{(VMT\ Displaced_{Yr1} * EF_{Yr1}) + (VMT\ Displaced_{YrF} * EF_{YrF})}{2} * UL * U^{-1}$$

Where,			Units
Auto Emission Reductions	=	Auto GHG or criteria and toxic air pollutant emission reductions for quantification period of new or expanded service	$MTCO_2e$ or lbs
$VMT\ Displaced_{Yr1}$	=	Annual passenger VMT replaced by ferry trips in first year of service, from Equation 32	miles/year
$VMT\ Displaced_{YrF}$	=	Annual passenger VMT replaced by ferry trips in final year of service, from Equation 32	miles/year
EF_{Yr1}	=	County-specific auto vehicle emission factor for first year of service	g/mile
EF_{YrF}	=	County-specific auto vehicle emission factor for final year of service	g/mile
UL	=	Quantification period for ferry service, not to exceed 25 years (see Table 8)	years

Equation 34: Ferry Emissions

$$Ferry\ Emissions = Fuel\ Consumption * EF * UL * U^{-1}$$

Where,			Units
Ferry Emissions	=	Ferry GHG or criteria and toxic air pollutant emissions for quantification period of new or expanded service	$MTCO_2e$ or lbs
Fuel Consumption	=	Annual quantity of fuel consumed by ferry to operate new or expanded service	gal, scf, kWh, or kg
EF	=	Fuel-specific carbon intensity emission factor for ferry	g/unit of fuel
UL	=	Quantification period for ferry service, not to exceed 25 years (see Table 8)	years
U	=	Unit conversion factor (1,000,000 for grams to metric tons; 453.59 for grams to pounds)	g/MT or g/lb

Equation 35: Net Emission Reductions from New or Expanded Ferry Service

$$Net\ Emission\ Reductions = Auto\ Emission\ Reductions - Ferry\ Emissions$$

Where,			Units
Net Emission Reductions	=	GHG or criteria and toxic air pollutant emission reductions for quantification period of new or expanded ferry service	$MTCO_2e$ or lbs
Auto Emission Reductions	=	Auto GHG or criteria and toxic air pollutant emission reductions for quantification period of new or expanded service, from Equation 33	$MTCO_2e$ or lbs
Ferry Emissions	=	Ferry GHG or criteria and toxic air pollutant emissions for quantification period of new or expanded service, from Equation 34	$MTCO_2e$ or lbs

G. Capital Improvements

The emission reductions from capital improvements that result in mode shift to transit are calculated as the emission reductions from displaced autos.

Equation 36: VMT Reductions from Capital Improvements

$$VMT\ Displaced = D * R * A * L$$

Where,			Units
VMT Displaced	=	Annual passenger VMT replaced by transit trips	miles/year
D	=	Annual days of operation of transit service utilizing capital improvement	days/year
R	=	Increase in daily transit ridership in first or last year of service	trips/day
A	=	Adjustment factor for transit dependency (default or user-defined; see Table 7)	unitless
L	=	Length of average auto trip reduced (default or user-defined; see Table 7)	miles

Equation 37: Auto Emission Reductions from Capital Improvements

$$Auto\ Emission\ Reductions = \left(\frac{VMT\ Displaced_{Yr1} * EF_{Yr1} + VMT\ Displaced_{YrF} * EF_{YrF}}{2}\right) * UL * U^{-1}$$

Where,			Units
Auto Emission Reductions	=	Auto GHG or criteria and toxic air pollutant emission reductions for quantification period of capital improvement	$MTCO_2e$ or lbs
VMT Displaced	=	Annual passenger VMT replaced by transit trips, from Equation 36	miles/year
EF_{Yr1}	=	County-specific auto vehicle emission factor for first year of service	g/mile
EF_{YrF}	=	County-specific auto vehicle emission factor for final year of service	g/mile
UL	=	Quantification period for transit utilizing capital improvement service, not to exceed 40 years (see Table 8)	years
U	=	Unit conversion factor (1,000,000 for grams to metric tons; 453.59 for grams to pounds)	g/MT or g/lb

EXHIBIT D

Quantifying Reductions in Vehicle Miles Traveled from New Bike Paths, Lanes, and Cycle Tracks

Summary Report

California Climate Investments Quantification Methods Assessment
California Air Resources Board
Agreement #16TTD004

Prepared by:
Jamey Volker with Susan Handy, Alissa Kendall and Elisa Barbour
Institute of Transportation Studies, University of California, Davis

March 25, 2019

Background

Under California's Cap-and-Trade program, the State's portion of the proceeds from Cap-and-Trade auctions is deposited in the Greenhouse Gas Reduction Fund (GGRF). The Legislature and Governor enact budget appropriations from the GGRF for State agencies to invest in projects that help achieve the State's climate goals. These investments are collectively called California Climate Investments. Senate Bill (SB) 862 requires the California Air Resources Board (CARB) to develop guidance on reporting and quantification methods for all State agencies that receive appropriations from the GGRF. CARB may review and update quantification methodologies, as needed.

To date, multiple California Climate Investments programs have offered funding for new bicycle paths or lanes[1] (CARB, 2016, 2017, 2018, 2019). CARB developed quantification methodologies to provide project-level greenhouse gas (GHG) emission reduction and co-benefit estimates for administering agencies to use when selecting projects for funding. To measure GHG emission reductions from new bike paths and lanes, CARB relies on a method it published with the California Department of Transportation (Caltrans) in 2005 for evaluating motor vehicle fee registration projects and congestion mitigation and air quality improvement (CMAQ) projects (CARB, 2016, 2018, 2019; CARB & Caltrans, 2005).

This report summarizes outcomes from a literature review to determine whether and how the CMAQ methods could be modified to better reflect emerging data and methods for estimating reductions in vehicle miles traveled (VMT) from new bike facilities, the first step in estimating GHG emission reductions.[2] The report also proposes an alternative VMT reduction quantification method based on existing bicyclist counts along the project corridor.

The current VMT reduction estimation equation uses five inputs: (1) days per year of facility use, (2) average annual two-way daily vehicular traffic on a road parallel to the proposed facility, (3) an adjustment factor, (4) an activity center credit, and (5) bike trip length. Our report reviews only those inputs—or the components of inputs—whose values are clearly derived in the methodology documentation, specifically the facility use factor, bike trip length, and the mode share and facility-level bicycle ridership change values used to calculate the adjustment factors. The report also reviews the merits of correcting for bike trip type—utilitarian versus recreational. The report does not probe the activity center credit values because it is unclear how they were derived.

[1] The new bike paths and lanes category of projects includes "Bicycle paths (Class I), bicycle lanes (Class II), or separated bikeways (Class IV) that are targeted to reduce commute VMT and other auto travel," with emissions "reduced by replacing auto trips with bicycle trips" (CARB, 2016).
[2] The full list of literature reviewed is provided in the section I of the accompanying technical documentation.

Summary of Current Quantification Method

CARB's current method estimates VMT reductions from new Class I (bike path), II (bike lane) and IV (cycle track) bicycle facilities (CARB, 2016, 2018, 2019). CARB does not currently include Class III facilities (bicycle boulevards) in its VMT reduction quantification method, or distinguish Class IV facilities that replace auto travel lanes or parking from those that replace existing Class II bike lanes. CARB's current method estimates the annual VMT reductions from new bicycle facilities using Equation 1 (CARB, 2016 [B-1], 2018 [26], 2019 [16]):

Equation 1: Auto VMT Reductions (current method)

$$Auto\ VMT\ Reduced = (D) * (ADT) * (A + C) * (L)$$

Where,			Units
D	=	days of use per year (default is 200 days)	Days
ADT	=	annual average two-way daily vehicular traffic on parallel road (project-specific data, with a maximum of 30,000)	Trips/day
A	=	adjustment factor (table lookup value)	-
C	=	activity center credit (table lookup value)	-
L	=	bike trip length (1.8 miles/trip in one direction)	Miles/trip

The multi-component adjustment factor uses mode share and facility-level bicycle ridership change data and assumptions to estimate how much of the measured ADT would be converted to bicycle trips after bicycle facility installation. The adjustment factors "were derived from a limited set of bicycle commute mode split data for cities and university towns in the southern and western United States,"[3] then multiplied by 0.7 to "estimate potential auto travel diverted to bikes," and again by a 0.65 "growth factor" to "estimate the growth in bicycle trips from construction of the bike facility" (CARB & Caltrans, 2005 [31]). However, it is unclear from the method documentation what portion of the cited mode split data was used to calculate the adjustment factors, and how it was used to create different factors by ADT and bicycle facility length.

The activity center credit is an accessibility proxy that increases the adjustment factor for bike facilities that are closer to more "activity centers," like banks, churches, hospitals, light rail stations, office parks, post offices, public libraries, shopping areas, grocery stores, or schools and universities (CARB, 2016 [B-2], 2018 [28], 2019 [17]). It is unclear how the activity center credits were derived, as there is no documentation for this component of the method.

[3] As compiled by the Federal Highway Administration in its 1992 National Bicycling and Walking Study.

Key Report Findings

The literature reviewed in the report indicates a need to update multiple factors in CARB's existing equation for estimating VMT reductions from new bicycle facilities. The report findings include:

- The 0.65 "growth rate" for cycling trips following new facility construction that the current quantification method uses may be low. Recent research indicates the growth rate may be closer to 1.0 for Class I bike paths, Class II bike lanes, and Class IV cycle tracks that do not replace existing Class II facilities. However, the growth rates may be lower for Class IV facilities that replace existing bike lanes (possibly closer to 0.6) and Class III bike boulevards (possibly closer to 0.3 or 0.4) (City of Toronto, 2001; Cohen et al., 2008; Dill et al., 2014; Fitzhugh et al., 2010; Goodno et al., 2013; Gudz et al., 2016; Matute et al., 2016; Monsere et al., 2014; Sallaberry, 2000).

- Methods exist for more accurately accounting for temporal variation in cycling levels than by assuming a new bicycle facility would be used a limited number of days per year (National Bicycle and Pedestrian Documentation Project, 2009; Nordback & Sellinger, 2014).

- The average bicycle trip length for all trips could be updated from the baseline 1.8 miles used in the current quantification method, based on more recent and/or California-specific data (Caltrans, 2013).

- Most of the cyclists riding on new facilities who did not take the same route prior to facility installation switch from other bicycle routes rather than from other travel modes. The available data indicate an overall stated substitution rate (from any non-cycling travel mode) of between 0.2 and 0.3, and an auto substitution rate of about 0.1, meaning that about 10 percent of the new bicycle trips replaced driving trips (Matute et al., 2016; Monsere et al., 2014; Thakuriah, Metaxatos, Lin, & Jensen, 2012).

- Nearly half of bicycle trips nationally are made for recreational purposes (Kuzmyak & Dill, 2012). The current quantification method does not fully exclude recreational trips from its VMT reduction calculus. And at least one recent study indicates that bike facilities do influence people's choice to bicycle instead of drive for recreational purposes (Matute et al., 2016). Nonetheless, if desired, decrementing the VMT reduction estimate by the percentage of recreational trips provides a more conservative estimate.

- A possible method is presented to project VMT reductions from new bicycle facilities based on existing bicycle counts, without using vehicular ADT. One reason to rely on bicycling count data rather than vehicular ADT is that using vehicular ADT assumes that higher auto volumes correlate to higher bicycling volumes, which is often not the case. Another reason is that

pre-facility-installation bicycle counts appear to be a reasonably reliable predictor of post-installation counts (Matute et al., 2016). In addition, there is a growing body of literature on the auto substitution rate for cyclists using a new facility and route, as well as average bicycle trip lengths.

Table 1 summarizes the values used in the current quantification method that could be directly updated based on the literature reviewed in the report. The next section presents the alternative quantification method.

Table 1. Summary of Potential Updates to Current Quantification Method Values

Method Input	Current Value	Updated Value
Bicycle Trip Growth Rate	0.65	1.0
Bicycle Trip Length	1.8 miles	1.5 miles
Auto-Bike Substitution Rate	0.7	0.1[4]

Alternative Quantification Method

Estimating VMT reductions from new bicycle facilities without vehicular ADT begins with obtaining bike counts on the route for the proposed facility (or an adjacent route, if no road or path currently exists where the facility is proposed to run). The short-duration ridership counts must then be converted to average annual daily bike trips using a temporal and seasonal adjustment factor. Post-installation bike ridership can then be estimated from that initial adjusted count using a growth factor based on ridership studies. The growth factor can be adjusted based on facility type and length, although more facility-specific data is needed. Multiplying that new ridership estimate by an average trip length yields new bicycle miles traveled from adding a bike facility. Not all of those new bicycle trips replace vehicle trips, however. Further adjustment is needed, including an auto-bicycle substitution rate, a carpool factor (not every vehicle trip has just one occupant) and, to be conservative, a trip type factor (recreational bike trips may be less likely than utilitarian bike trips to replace auto trips).

Equation 2 is one potential bicycle-count-based method.

[4] This could be adjusted to correct for carpooling (not all bicyclists who would have made the same trip by car would have done it alone) by dividing the substitution rate (or total number of substituted trips) by the average vehicle occupancy rate (average number of people per auto) used by Caltrans (1.15) (Caltrans, 2016).

Equation 2: Auto VMT Reductions (alternative method)

$$Auto\ VMT\ Reduced = (D) * (BC) * (S) * (GF) * (AS) * (C) * (T) * (L)$$

Where,			Units
D	=	days of use per year (default is 365 days, since counts can be adjusted seasonally)	Days/year
BC	=	average hourly (or daily) bicycle count (counts taken on the street to be improved with the bike facility, or, in the case of a facility not on an existing street, a parallel street)	Trips/day
S	=	seasonal adjustment factor (adjusts bicycle count to annual average daily bicycle trips)	-
GF	=	growth factor (expected rate of increase in bicycle count, e.g. 1.0 for a 100% increase in trips on the route)	-
AS	=	automobile substitution rate (expected rate at which cyclists who did not bike on the same route prior to bicycle facility installation switched from driving, or being driven in, an automobile to cycling)	-
C	=	carpool factor (default is 1/1.15, to reflect the California average number of vehicle trips per person trips by personal auto)	-
T	=	trip type factor (optional inclusion for conservative estimates; default is 0.506)	-
L	=	bike trip length (default is 1.5 miles/trip in one direction)	Miles/trip

Values for the first two variables, *D* and *BC*, would be provided by the funding applicant. *D* would have a default of 365, but it could be changed based on local conditions and the type of seasonable adjustment factor used.

The seasonal adjustment factor, *S*, could use local data where available. But to ensure continuity in application across California, the National Bicycle and Pedestrian Documentation Project's adjustment factors can be used in the interim (National Bicycle and Pedestrian Documentation Project, 2009).

The growth factor, *GF*, could be approximated based on the findings from the count-based studies reviewed in the full report. As discussed, it appears from the literature that a uniform, facility-agnostic growth rate around 1.0 could be appropriate. The literature also indicates at least some correlation between facility length and ridership increases (at least for Class IV cycle tracks), but more research is needed to clarify the facility length-ridership relationship.

The auto substitution factor, *AS*, could be based on the available data discussed above, which indicate an auto substitution rate of about 0.1. However, the auto substitution factor should be adjusted to account for carpooling (not all bicyclists who would have made the same trip by car would have done it alone).

The carpool factor, *C*, corrects for that, by dividing the total number of substituted trips by the average vehicle occupancy rate (average number of people per auto) used by Caltrans (1.15) (Caltrans, 2016).

The (optional) trip type factor, *T*, is included to correct for the fact that bike trips that are purely for exercise, sport or recreation are not as likely to substitute for auto trips as utilitarian bike trips. The default value for *T* is based on the combined share (49.4%) of bicycle trips made for "vacation" (2.1%) or "other social or recreational" (47.3%) purposes, taken from the 2009 National Household Travel Survey (Kuzmyak & Dill, 2012). The default value is the percentage of all other (non-vacation, social or recreational) trips, calculated as 1-0.494 (=0.506). This approximation of commute and utilitarian trip share is likely conservative, however. Furthermore, the auto substitution factor already accounts for recreational ridership (Matute et al., 2016; Monsere et al., 2014; Thakuriah et al., 2012).

The trip length factor, *L*, is based on the average length of bicycle trips taken for any purpose, using the default 1.5-mile average from most recent California Household Travel Survey data.

Ease of Applying the Alternative Quantification Method

To gauge how easy it would be to use the alternative quantification method, jurisdictions' housing projects that received funding from the Affordable Housing and Sustainable Communities program or Active Transportation Program were surveyed about the type, timing and location of their bicycle and vehicular counts, and who conducted the counts. The bicycle and vehicular count information available online for the jurisdictions was also reviewed. The results, along with the insights from the case study presented in the technical documentation, indicate that the alternative quantification method would be at least as easy to use as the existing method, for at least two reasons.

First, once a funding applicant has the requisite hourly (or daily) bicycle count data or vehicular ADT, the alternative quantification method can be applied more quickly than the existing method. Default values are available for all other factors in the alternative method besides the bike count. The existing method, on the other hand, requires the potentially time-consuming identification and documentation of all the "activity centers" within ½-mile and ¼-mile buffers of the planned bicycle facility.

Second, in many jurisdictions it may be just as easy for a funding applicant to obtain the requisite hourly bicycle count data as the necessary vehicular ADT. Most of the jurisdictions for which information was obtained about their bike and auto traffic data collect bike counts at dozens of locations, most updated at least annually. Multiple jurisdictions also collect at least some bike count data using continuous counters, while multiple others are planning to either expand or initiate continuous bike count programs. And many of the surveyed jurisdictions have bike count data for nearly as many locations as automobile counts.

I. RESPONSES TO LOZEAU DRURY DRAFT IS/MND COMMENT LETTER, JANUARY 19, 2021

The following responses are keyed to the numbers of the comments in the "Analysis" section of the Lozeau Drury LLP comment letter. The comment letter is included as Attachment A to this appendix. Responses are keyed to comments in the attorneys' cover letter, however the underlying technical studies have been reviewed by the IS preparers and additional relevant items in those studies also have been addressed in these responses. Responses to the biological resources comments have been prepared by Monk and Associates, with peer review by Jake Schweitzer of Vollmar Natural Lands Consulting (VNLC). Responses to air quality/GHG comments have been prepared for the City by The RCH Group. Responses to VMT comments have been prepared by GHD, with City staff peer review.

Comment 1: There is a fair argument that the project may have significant traffic and GHG impacts because the purported mitigation measure for VMT is not supported by substantial evidence and defies common sense.

Response: The VMT reduction (bicycle commute mode share) included in the original technical memorandum and analysis by GHD was based on the average commute length of Napa County residents, as established using Streetlight Data (approximately 17 miles). The comment letter questions the use of the existing average commute length (based on automobile travel mode) as the basis for estimating potential bicycle commute trip length, following anticipated mode shift once the proposed bicycle trail connection is complete. The methodology used by GHD is consistent with typical application of the bicycle commute mode shift analysis process outlined in the nationally recognized publication (NCHRP 552). GHD has, however, refined the analysis to use an average bicycle commute trip length of 5.2 miles which results in a conservative analysis. This trip length was established in *Understanding and Measuring Bicycling Behavior: A Focus on Travel Time and Route Choice* (OTREC-RR-08-03, December 2008) and was utilized irrespective of existing commute lengths in Napa County.

Upon review of the trip length assumptions questioned in the comment letter, GHD reviewed its analytical basis for establishing average trip lengths in Napa County and for the Project Area, and in turn the basis for establishing a trip length baseline and threshold (15% below baseline) and the basis for establishing an average commute length for the proposed Project. Upon further review of data provided by the applicant, indicating a roughly 11-mile one-way commute length, GHD revisited the available sources and found compelling evidence for using an average of three data sources (Streetlight Data, Census Longitudinal Employer-Household Dynamics, and the California Statewide Travel Demand Model). This additional analysis and supporting evidence for using an average of the available data sources, is provided in GHD's updated memorandum (Section 3), which is included in the Final IS/MND Traffic Appendices. Based on the refined analysis, the proposed Project's net VMT over the calculated threshold level was determined to be 729 daily VMT, as opposed to the previously reported 1,001.

The applicant had previously proposed a 300-foot bicycle trail project to help reduce VMT in the project area by inducing existing and future employee commutes using bicycles instead of

automobiles. The bicycle trail provides significant ancillary benefits outside the question of VMT reduction, including closing a significant gap in the regional bicycle network. Since preparing the prior analysis, the applicant has indicated that a previously-assumed bike trail along the frontage of a new school, south of the proposed project, is no longer being constructed. Thus, the applicant has proposed to nonetheless close the bicycle network gap by funding the construction of the bike trail along the school's frontage as well, extending the length of the proposed bike trail from about 300 to about 800 feet. This bike trail will close the gap between the Class II bikeways on Commerce Court and the existing bike trail along Wetlands Edge Road that currently terminates at Eucalyptus Drive. The prior analysis underrepresented the potential bicycle commute mode shift of the gap closure. Upon further review of the methodology used to estimate induced bicycle commutes, GHD has developed a refined methodology that better captures the anticipated benefits of the closure in the bicycle network gap.

Estimating the benefits of the 800-foot bike trail on its own assumes the bicycle commute potential of the existing trail on Wetlands Edge Road is already fully realized. Due to the isolation of this existing trail, however, this assumption is not realistic. Existing residents along Wetlands Edge Road, and those within a reasonable access buffer, would currently need to navigate State Route 29, which lacks bicycle facilities, to arrive at any significant employment destinations. Only the most experienced and fearless bicyclists would venture this journey to work (this finding is consistent with the industry-standard level-of-traffic-stress, or LTS, ranking of bikeways relative to potential user groups). Therefore, using only the proposed 800-foot bike trail is insufficient in estimating the potential bicycle commute mode shift that could reasonably be anticipated through closure of the gap in the regional bicycle network. GHD also estimated the bicycle mode shift reduction using the entirety of the existing Wetlands Edge Road bike trail in addition to the proposed 800-foot gap closure. This assessment implicitly assumes zero utilization of the existing Wetlands Edge Road bike trail. Although this assumption is likely closer to common-sense estimation of bicycle commute use of the existing trail, GHD used an average of both scenarios to estimate the potential bicycle mode shift of closing the gap in the regional bicycle network, between the existing bike trail on Wetlands Edge Road, and the bike lanes on Commerce Court. GHD has revised the analysis and now estimates an average of 96.5 daily commuters, including existing commuters and commuters to the proposed Project, can be assumed to utilize the available bicycle network to commute in lieu of automotive travel.

The cited data from CARB is misconstrued in the comment letter. The CARB report recommends assuming a bicycle commute length of 1.5 miles only in the absence of better data, and for the purpose of generating a conservative assessment. CARB's own report presents a table that shows a 2016 intercept survey in Los Angeles that presents an average 7-mile trip length. The CARB report also presents a 2.3-mile bicycle trip length from a 2012 National Household Travel Survey. The 1.5-mile bicycle trip length is from a 2013 California Household Travel Survey. The sample sizes for household travel surveys are notoriously small, and the data relative to trip length by mode are not specific to trip type (i.e. commute trip length). The 5.2-mile bicycle trip length applied in this study, from the cited *Understanding and Measuring Bicycling Behavior: A Focus on Travel Time and Route Choice* is more conservative than the 7-mile bicycle trip length from the 2016 intercept survey in Los Angeles. Both sources are of actual bicycle commuters.

The cited household travel surveys, besides the sample size issues, blend all trip purposes rather than focusing on commute trips. Other trip purposes, such as home-based-school and home-based-shopping trips are demonstrably shorter on average than commutes. Commutes are, on average, the longest distance regular household trips. CARB's recommendation is overly conservative in this case, in which our analysis is focused on home-based-work commute trips.

Evidence of potential commuters that could use the proposed bike trail has been further shown in the revised memorandum, through demonstration of significant commute patterns between the proposed Project vicinity and residential communities in American Canyon, in particular along Wetlands Edge Road. Data from Census Transportation Planning Products (CTPP) and Census Longitudinal Employer-Household Dynamics (LEHD) show several hundred commute pairs between these geographies. In the future, the utility of additional proposed and funded bicycle infrastructure along Green Island Road and Devlin Road, will be greatly increased with the closure of the gap in bicycle infrastructure between Eucalyptus Drive and Commerce Court. These indirect cumulative benefits are not included in this analysis. Additionally, non-commute trips are not included in the VMT reduction benefit assessment of the bicycle trail gap closure. The added non-commute bicycle trip inducement of the trail, including safe access to the new school, health benefit of recreational use, and VMT reduction of other non-commute trip mode shift will combine to result in significant societal benefits not included in the GHD analysis.

At an average one-way distance of 5.2 miles, the estimated 96.5 bike commuters calculated to be generated by the proposed 800-foot bike path extension mitigation would reduce VMT by approximately 1004 miles. This would more than offset the un-mitigated project's 729 VMT exceedance of the 15% VMT reduction significance threshold.

The VMT analysis in Item XVII.b, in the Final IS/MND, as well as Mitigation Measure TRA-2 (in the IS/MND and MMRP) have been updated to incorporate this more conservative analysis and the additional length of the path to be constructed by the applicant. The impact significance is not changed.

Comment 2: The MND fails to adequately analyze impacts to biological resources because it relies upon an incomplete baseline and the project may have adverse impacts on numerous sensitive species currently using the site or adjacent areas.

Response: The IS/MND identifies potential impacts to special-status birds, nesting raptors, passerine birds, the western pond turtle, and requires mitigation (BIO-1, BIO-2, BIO-3, BIO-4, BIO-5). The required mitigation (as modified in response to the CDFW comment letter and included in the Final IS/MND and MMRP) reduces impacts to these species to a less-than-significant level. The information provided in the comment letter does not change that conclusion. With respect to the adequacy of the baseline, as noted in Monk & Associates, Inc. (M&A) March 2020 *Biological Resources Analysis* report that was provided to the City of American Canyon's consultant for peer review and incorporation into the Mitigated Negative Declaration, M&A biologists have a long history of field surveys associated with the approximately 35-acre parcel, of which the approximately 10-acre project site is a part. M&A

biologists conducted site surveys on the parcel on March 1 and April 27, 2006, June 14, 2011, February 14, March 21, and June 12, 2012, May 18, 2017, and on March 30, 2018, December 19 and December 27, 2019. In 2006, and again in 2011, M&A conducted a wetland delineation on the entire parcel. This delineation of "waters of the U.S." was confirmed by the U.S. Army Corps of Engineers in 2012 and reverified by this agency in 2017. During the site surveys and wetland delineation, M&A biologists recorded biological resources and assessed the likelihood of resource regulated areas on the project site. In addition to the wetland delineations, the survey involved searching all habitats on the site and recording all plant and wildlife species observed. M&A cross-referenced the habitats found on the project site against the habitat requirements of local or regionally known special-status species to determine if the proposed project could directly or indirectly impact such species. The peer review, conducted for the City's consultants by biologist Jake Schweitzer of Vollmar Natural Lands Consulting, confirmed these conditions.

California Environmental Quality Act (CEQA) Guidelines Section 15125(a) requires that the CEQA document prepared for a project discuss the "baseline" environmental conditions at and in the vicinity of the project site. CEQA Guidelines Section 15125 (see also Section 15126.6(e)(2)) states the following regarding the environmental setting as it relates to baseline:

> (a) [the CEQA review document] must include a description of the physical environmental conditions in the vicinity of the project, as they exist at the time the notice of preparation is published, or if no notice of preparation is published, at the time environmental analysis is commenced, from both a local and regional perspective. This environmental setting will normally constitute the baseline physical conditions by which a lead agency determines whether an impact is significant. The description of the environmental setting shall be no longer than is necessary to understanding the significant effects of the proposed project...

In order to perform an impact analysis, it is necessary for one to "fix" the baseline conditions of the project site because this enables the lead agency to determine how the site conditions would be changed as a result of the proposed project. The intent of CEQA Guidelines Section 15125 is to provide guidance to lead agencies as to when to "fix" the baseline conditions of the project site.

The environmental "baseline" is the combined circumstances existing at the time the CEQA document is published, which in the case of M&A's Biological Resources Analysis is March 2020, which preceded an application submittal to the City of American Canyon for the proposed project. Consequently, past surveys and past species sightings by M&A in past years were not discussed for the currently proposed project. Note that the proposed project site is 10 acres of the original 35-acre parcel that M&A surveyed in 2006, 2011, and 2012, 2017, 2018, and 2019. M&A's Biological Resources Analysis report for this project also discusses wildlife habitats and species observed onsite during the current (2020) baseline survey that was used to prepare that report, and acknowledges that many other bird species likely nest in the eucalyptus trees adjacent to the project site to the west, north and south. Finally, CEQA does not require an exhaustive list of all bird species that could occur on a project site, only an analysis of potential

impacts to special-status birds and/or nesting habitat for common birds that raise to the level of significance, which M&A's Biological Resources Analysis addressed.

Dr. Smallwood stated that M&A did not consult eBird, the web-based list server that birders use to report their bird sightings. He also states that M&A "mostly relied" on the California Department of Fish and Wildlife's (CDFW) RareFind database (CNDDB) which provides records of special-status species nesting, breeding, or permanently residing in the area. CDFW's CNDDB is extremely useful because it documents nesting records and documents breeding "habitats" as opposed to an incidental sighting of a species (which is what eBird data are). Many of the nesting/breeding/permanent species habitat records in the CNDDB are reported by professional biologists, such as M&A biologists, who hold federal Recovery Permits (10(a)(1)(A) permits) with the U.S. Fish and Wildlife Service (USFWS) and/or a State Memorandum of Understanding (MOU) with the CDFW that allows us to work with specific federal and/or state listed wildlife species. Reporting these listed species sightings to the CNDDB is a *requirement* of these permits. In other words, the biologists making their reports to the CNDDB are experienced, qualified biologists who have been vetted by the federal and state government agencies in order to receive these federal and state permits. Whereas anyone can report their incidental bird sightings to eBird without any way to confirm the qualifications of the observer. Also, since the data reported to the CNDDB is a known occurrence of a nesting or breeding habitat (and not just an incidental flyover), this is relevant for assessing a development project's impacts in that geographic area.

It is important to note that merely observing sensitive birds flying over a property (as Dr. Smallwood reported), or foraging over the site, or using the habitat on the site in the month of January (the non-nesting season), does not warrant reporting to the CNDDB as these sightings are not of permanent breeding/nesting/larval development habitat (dependent on what type of animal it is) that warrant protection. The types of "incidental" sightings of common bird species, as Dr. Smallwood reported, do not necessarily translate into a "potentially significant biological impact" under CEQA.

While it is interesting to record birds flying overhead on their way to other more suitable habitats, observing a "flyover" bird or a bird resting in a tree adjacent to or on a project site does not necessarily translate into the project site providing "suitable habitat" or that development of that project site would cause a "significant adverse impact" to that species that warrants any special measures to reduce the significance of the potential impacts to a level regarded as less than significant under CEQA. Therefore, loss of *foraging habitat* that may occur on the project site for birds mentioned by Dr. Smallwood such as the red-tailed hawk, great horned owl (*Bubo virginianus*), Nuttall's woodpecker (*Picoides nuttallii*), Cooper's hawk (*Accipiter cooperii*), American kestrel (*Falco sparverius*), red-winged blackbird (*Agelaius phoeniceus*), Say's phoebe (*Sayornis saya*), and other wildlife species *is not necessarily a potentially significant impact.* Indeed, there is a plethora of such foraging habitats throughout the City of American Canyon and throughout this area of Napa County. The project site does not provide unique foraging habitat and the loss of this habitat is not significant relative to the amount of readily available similar foraging habitats located both locally and regionally.

Therefore, impacts to foraging or flyover habitat in most cases do not result in significant biological impacts that require mitigation. The project's impact to foraging habitat is therefore considered to be less-than-significant and does not warrant recirculation of the IS/MND or preparation of an EIR under Public Resources Code Section 21151.

As discussed above, the comment incorrectly states that M&A mostly relied on CNDDB RareFind records to make our biological impacts assessment. M&A biologists have extensive experience conducting biological surveys in the City of American Canyon and in southern Napa County. Also, as stated earlier in this response letter, M&A biologists have years of experience on this project site. It was this breadth of knowledge about the biological resources in American Canyon and on this particular project site that allowed M&A to determine which special-status species could be affected by the proposed development project, and therefore, which species warrant avoidance and minimization measures as necessary to address potentially significant adverse impacts. As noted previously M&A's findings were peer reviewed by an independent biologist under contract to the City's CEQA Consultant.

Comment 3: The Project will have a significant impact on wildlife movement and habitat fragmentation.

Response: The March 2020 *Biological Resources Analysis* prepared by Monk & Associates concluded that the proposed project would not interfere with the movement of native wildlife. The project site has a history of disturbance starting with eucalyptus tree removal in 2012, continued disturbance associated with the paintball facility located immediately to the southeast, and the recent construction of the SDG Commerce 330 Distribution Center distribution center to the south. The eucalyptus grove and the marshes associated with the Napa River to the west of the project site provide a more valuable wildlife corridor for terrestrial wildlife.

Regional wildlife corridors that have significant values include, well known and agency-recognized deer herd or elk herd migration corridors or any other regionally recognized wildlife corridor. The project site is not recognized by the CDFW or the USFWS as providing regionally or locally important wildlife corridors. Other than a wildlife movement area for an occasional Virginia opossum (*Didelphis virginiana*) or perhaps a striped skunk (*Mephitis mephitis*), or an occasional Columbian black-tailed deer (*Odocoileus hemionus columbianus*), the project site likely has little to no value as a local wildlife corridor at best. Impacts to this localized use area would not be considered significant pursuant to CEQA.

Comment 4: The MND Fails to Analyze the Project's Impacts on Wildlife from Additional Traffic Generated by the Project.

Response: The comment states that: "The MND contains no analysis of the impacts of the Project's added road traffic on special-status species of wildlife, including species such as the California red-legged frog and California tiger salamanders." "Regardless of whether these species live on site, these and other special status species must cross roadways that will

experience increased traffic volume as a result of the Project." The commenter continues "California red-legged frogs (Rana draytonii), which Monk & Associates (2020) concluded will suffer no impacts because CNDDB records are lacking west of Highway 29, will cross roads used by vehicles servicing the project."

California red-legged frogs (*Rana draytonii*) and California tiger salamanders (*Ambystoma californiense*) do not occur onsite. In the American Canyon/Napa area, there are no records for the California red-legged frog west of Highway 29 (aka State Route 29) where the project site is located. Rather all known records are east of State Route 29. Thus, if this frog is not known on the west side of State Route 29, the commenter's statement that this frog will cross roads used by vehicles servicing the project is not logical; any amphibian trying to cross Highway 29 to reach the project site would be squashed by traffic. The closest known California red-legged frog occurrence is 1.4 miles east of the project site (CNDDB Occurrence No. 896), east of State Route 29, a major geographic barrier to movements of the California red-legged frog to the west of this highway. It is noteworthy that M&A biologists have surveyed tributaries of the Napa River west of State Route 29 many times over numerous years and have yet to find this frog west of Highway 29. M&A biologists were the first biologists to identify the California red-legged frog east of Highway 29 in Napa County in 1996. Accordingly, they are qualified to assess potential impacts to this species. M&A concluded that increased traffic associated with the project west of State Route 29 would not affect the California red-legged frog.

There are no records for the California tiger salamander in Napa County. The closest known California tiger salamander occurrence is in Solano County located approximately 17 miles east of the project site (CNDDB Occurrence No. 485). M&A biologists carry both federal and state permits that allow us to work directly with the California tiger salamander. Mr. Monk has worked with this salamander throughout its known range in California. Indeed, Mr. Monk was on the scientific advisory panel for the recently completed USFWS Santa Rosa Plain California Tiger Salamander Recovery Plan (USFWS 2016)[1]. M&A concludes that increased traffic associated with the project will not affect the California tiger salamander.

Common wildlife road kill, such as the commenter has observed in the project area, of species associated with man and residential developments, Virginia opossum (*Didelphis virginiana*), striped skunk (*Mephitis mephitis*) and raccoon (*Procyon lotor*), is not considered a significant impact pursuant to CEQA. There are no regulations that protect common wildlife species that could be killed by vehicular traffic. While it is unfortunate that wildlife is killed on roadways by vehicular traffic, and we wish this was not the case, this is not a direct or cumulative impact that rises to a level that would be regarded as an impact that significantly affects a species or that requires mitigation pursuant to CEQA. Therefore, an EIR is not necessary to evaluate the

[1] USFWS (U.S. Fish and Wildlife Service). 2016. Recovery Plan for the Santa Rosa Plain: *Blennosperma bakeri* (Sonoma sunshine)*; Lasthenia burkei* (Burke's goldfields)*; Limnanthes vinculans* (Sebastopol meadowfoam); California Tiger Salamander Sonoma County Distinct Population Segment (*Ambystoma californiense*). U.S. Fish and Wildlife Service, Pacific Southwest Region, Sacramento, California. vi + 128 pp. June 20, 2016. Federal Register. Pages: 39945-39946.

direct and cumulative impacts of the project's vehicle collisions with common wildlife species under Public Resources Code Section 21151.

Comment 5: The MND fails to analyze the project's impacts from the use of pest control measures.

Response: The comment states that "The MND does not discuss the potential impact of using pesticides inside and outside of the proposed warehouse." The applicant would employ a pest control company that implements an Integrated Pest Management program. Integrated Pest Management (IPM) is an effective and environmentally sensitive approach to pest management that relies on a combination of common-sense practices. IPM programs use current, comprehensive information on the life cycles of pests and their interaction with the environment. IPM is used to manage pest damage by the most economical means, and with the least possible hazard to people, property, and the environment.

The project warehouse would be built to current code and through building design, would exclude rodents from the facility and would not provide an attractive nuisance. Other exclusion strategies would be incorporated into the design of the façade of the warehouse building, specifically the gables, eaves, overhangs, to prevent or discourage birds from establishing nests, or exclude birds from perching or nesting by using nets. In addition, the applicant uses Bird Gard Pro Plus, which is a sonic bird control system that uses a variety of naturally recorded bird distress calls to frighten, confuse and disorient birds in the immediate area. This has proven to be an effective way to discourage swallows from establishing nests on other warehouse buildings in the City of American Canyon owned by the applicant. Pesticides that would be routinely sprayed around the warehouse include Suspend SC and Essentria® G Granule Insecticide. Suspend is used for insect control on commercial and residential turf and landscape areas. The active ingredient is Deltamethrin (4.75%). Essentria® G Granule Insecticide is an environmentally friendly insecticide derived from essential oils. Essentria® G Granular Insecticide is a natural insecticide formulation for treatments in sensitive areas. Active ingredients include Eugenol (Clove Oil) 2.90% and Thyme Oil 0.60%. This insecticide is used to control ants, centipedes, chinch bugs, clover mites, cockroaches, crickets, earwigs, fleas, leafhoppers, millipedes, and other insect pests in landscape, turf, and perimeters around residential and commercial areas. These products do not result in harm to non-target wildlife. Instead of using an anticoagulant rodenticide to control rodents on this project site, the applicant is proposing to use a multi-use PROTECTA bait station, monitoring device and snap trap holder to capture rodents without the use of poison. The attractant used will be non-toxic, in combination with Trapper T Rex Rat Traps (snap traps) or Catchmaster Glue Traps inside the bait station. This would eliminate the potential risk of secondary poisoning of non-target animals through direct exposure and indirect exposure via predation and scavenging of affected pest animals. Consequently, there is no anticipated use of rodenticides for this project at this time, but if there was a rat or mice infestation of the warehouse grounds, the applicant would use CONTRAC rodenticide, which is considered to be less toxic to non-target animals, in both primary and secondary poisoning situations, than other single-feeding anticoagulants. The

applicant would continue to follow all state and federal laws regarding the use of anticoagulant rodenticides.

Comment 6: The project will have cumulative impacts on biological resources.

Response: The comment concludes that "the Project will have a significant cumulative impact on biological resources. An EIR is needed to fully analyze and mitigate the Project's cumulative biological impacts, including not only future projects but the existing impacts as well." The commenter states that the "City of American Canyon has sprawled across nearly all the available spaces between neighbor cities, hills to the east and San Pablo Bay to the west…" Over the past few decades the City of American Canyon has been transitioning from agricultural use to residential development. However, many open space preserves and parks have been established to preserve and protect open space habitats within the City limits and in this region. The Jack & Bernice Newell Wilderness Preserve (Newell Preserve), the Lynch Canyon Preserve, Canyon Estates Preserve (proposed) and the CDFW California Red-Legged Frog Preserve represent over 2,000 acres of permanently protected contiguous open space east of the project site. Closer to the project site, the Wetlands Open Space, Napa River Bay Trail, Clark Ranch and the Napa Plant Site Restoration Project represent several hundred additional acres of preserved open space and valuable wildlife habitats that are preserved in perpetuity. Therefore, conversion of approximately 10 acres of ruderal habitat on the project site to commercial development would be a less-than-significant contribution to the overall cumulative impact, given the extent of preserved open space in this region.

Implementation of the proposed project would result in cumulative impacts to ruderal habitats and less than significant impacts to common plant and animal species. While the project-related impacts would be considered cumulative with other projects in the City, the mitigation measures prescribed in the MND would offset cumulative impacts to special-status species and plant communities/wildlife habitats to levels regarded as less than significant. The mitigation measures identified in the MND (as modified in response to the CDFW comment letter, below) would be required to be adopted by the applicant upon project approval, and appropriately addresses potential impacts to western burrowing owl, Swainson's hawk, nesting raptors and nesting passerine birds, and reduce those impacts to a less-than-significant level in both the project and cumulative contexts. Therefore, no additional cumulative impacts assessment is required in the MND.

Comment 7: The IS utilized unsubstantiated input and output parameters to estimate project emissions. Specifically, The MND fails to explain how the City calculated the project's average daily construction emissions of ROGs and NOx.

Response: The daily construction emissions provided in Table AQ-1 on page 22 of the MND do not match the daily emissions estimates from the CalEEMod output files provided in Appendix B-3 because CalEEMod output files report construction emissions as maximum daily emissions and Table AQ-1 on page 22 of the MND reports average daily construction emissions, consistent with the BAAQMD's *CEQA Guidelines*. This is explained on page 22 of the MND, "As the

construction phases (i.e., grading, paving, building construction, etc.) are sequential, the average daily construction period emissions (i.e., total construction period emissions divided by the number of construction days) were compared to the BAAQMD significance thresholds."

For instance, average daily construction emissions of ROG and NOx were calculated to be 13.6 and 24.6 lbs/day, respectively (See Table AQ-1 on page 22 of MND). This was calculated by taking the annual emissions estimates for ROG (1.4226 tons/year) and NOx (2.5827 tons/year) from the CalEEMod annual output files in Appendix B-3, converting them to pounds (2,000 lbs/ton), and dividing them by the number of construction days (210 days) as shown in the construction schedule provided in the CalEEMod output files in Appendix B-3 and the air quality calculations supporting information in Appendix B-2. The average daily emissions calculations for ROG and NOx are the following:

- ROG: (1.4226 tons/ year) x (2,000 lbs/ton) x (210 days) = 13.6 average annual lbs/day of ROG
- NOx: (2.5827 tons/ year) x (2,000 lbs/ton) x (210 days) = 24.6 average annual lbs/day of NOx

As demonstrated by the calculations above, the average daily construction emissions shown in Table AQ-1 on page 22 of the MND are valid and were calculated in accordance with BAAQMD's *CEQA Guidelines*. As stated on page 22 of the MND, "All construction-related emissions would be below the BAAQMD significance thresholds." Therefore, project construction activities would result in a less-than-significant impact.

Comment 8: The MND used improper modeling inputs, including for water use for parking and solid waste generation.

Response: The water demand assumptions input into CalEEMod were based on the approved SDG 330 Warehouse project, but was scaled down proportionally to the building square footage of the proposed project. As stated on page 100 of the MND, the project's water use would be "approximately equivalent water demand to a one single-family house in American Canyon (274 gpd for single family dwelling and 242 gpd for the proposed warehouse use." Furthermore, water use does not generate air quality emissions under CalEEMod (as detailed in the CalEEMod annual output files in Appendix B-3), water use only generates GHG emissions under the CalEEMod. Adjusting CalEEMod to a total daily water demand of 683 gallons per day or 249,295 gallons per year would result in no increased local air quality emissions and less than one additional metric ton of CO_2e per year. Therefore, the proposed project water use results in negligible emissions and adjustments to that level of water use would not change the air quality emissions or conclusions of the MND.

CalEEMod default values for solid waste generation were not used because the proposed project would generate very little solid waste. Solid waste generation was based on the approved SDG 330 Warehouse project, but was scaled down proportionally to the square footage of the proposed project. As stated on page 100 of the MND, "The warehouses project

would produce small quantities solid waste, approximately equivalent to that produced by one or two houses. If significant amounts of recyclables, such as cardboard boxes, are generated, the tenant/operators would bale this waste and have it picked up separately from other solid wastes and removed by Recology American Canyon." Therefore, the solid waste generation assumptions input into the CalEEMod accurately reflect the estimated solid waste generation of the proposed project.

Similar to the operation of the approved SDG 330 Warehouse project, the proposed project was assumed to only generate trips Monday through Friday and would not need to bring natural gas to the warehouse building since there is no need for natural gas for the warehousing operations. The City of American Canyon considers the best management practices (BMPs) to reduce emissions of dust and particulates to be required and the BMPs would be implemented as part of the proposed project. As stated on page 24 of the MND, "Project construction emissions are less than the significance thresholds (See Table AQ-1) and the proposed project would also include BMPs required per BAAQMD's CEQA Air Quality Guidelines. Therefore, project impacts from construction emissions would be less than significant."

Comment 9: SWAPE's CalEEMod modeling run indicates a fair argument that the project may have a significant air quality impact.

Response: The comment is comparing maximum daily emissions estimated by CalEEMod to BAAQMD's **average daily** emissions significance thresholds. SWAPE's comments state that their CalEEMod re-run caused NOx to exceed BAAQMD's average daily significance threshold of 54 lbs/day. However, their CalEEMod re-run actually resulted in lower NOx emissions compared to the CalEEMod modeling for the MND provided in Appendix B-3 (2.58 vs. 2.56 tons of NOx during the entire construction period). Both CalEEMod runs result in average daily NOx emissions of approximately 25 lbs/day, which is less than 50% of BAAQMD's significance threshold of 54 lbs/day for NOx emissions during construction (See Response III.A. for how to calculate average daily construction emissions). Therefore, average daily construction emissions would be below BAAQMD's significance thresholds and project impacts from construction emissions would be less than significant.

Comments 10, 11, 12: The IS inadequately evaluates emissions of diesel particulate matter. Specifically, The HRA fails to account for the fact that the nearest sensitive receptor to the project's emissions is located only 500 feet from the soil borrow site. SWAPE's analysis provides substantial evidence of a fair argument that the project may have significant health risk impacts from its emissions of toxic air contaminants.

Response: The Draft IS acknowledges that a single residence is located within 500 feet of the project site. However, impacts to a single house are not considered potentially significant as CEQA does not consider the impacts on a few particular persons, but on the environment of persons in general. *See, Association for Protection etc. Values v. City of Ukiah* (1991) 2 Cal.App.4th 720, 734; *Topanga Beach Renters Assn. v. Department of General Services* (1976) 58

Cal.App.3d 188, 195. There are no other sensitive receptors within 1,000 feet of the project site.

A review of the SWAPE HRA also found a number of deficiencies in that document that skewed its results:

1. SWAPE 's HRA uses maximum daily emissions for DPM instead of using the annual emissions to calculate an emission rate.
2. SWAPE's HRA assumes all of the proposed project construction occurs 500 feet from the one residence, but only approximately 35 days of construction occurs that close (because grading activities are borrowing soil from the property to the south). All other construction activities are roughly 1,000 feet away.
3. SWAPE's HRA assumes that operation of the project occurs 500 feet away from the one residence, but the project site is roughly 1,000 feet away.
4. SWAPE uses AERSCREEN modeling. AERSCREEN modeling is a screening tool which determines the maximum hourly concentrations based on worst-case meteorological and land use conditions. That maximum hourly concentration is then multiplied by a factor of 10 percent to estimate the wind direction variability over a year. Regardless it still uses that worst-case meteorological condition for each hour within that 10 percent period. These worst-case meteorological include wind speeds of about 1 mph and generally stable atmospheric conditions which tend to occur during overnight hours. In this case, construction occurs primarily during the daytime except for the concrete pour. The area does have a high percentage of calm winds but also a moderate percentage of winds greater than 5.5 mph. Also, the SWAPE analysis uses a land use of "urban" to determine meteorological land use parameters of Bowen Ratio, albedo, and surface roughness. These parameters are used to produce the worst-case meteorological conditions. The surrounding land uses to the project site are a combination of open space and one/two story buildings. By using the screening approach, their model greatly overstates the construction and operational health impacts.
5. The majority of operational PM2.5 exhaust emissions calculated in the CalEEMod model are incorrectly calculated from electric forklifts. CalEEMod incorrectly ascribes combustion emissions for the electric forklifts. Electric forklifts do not have engines and therefore do no produce exhaust or generate PM2.5. The project would use only electric forklifts. Therefore, project operational emissions would be negligible and would occur approximately 1,000 feet from the nearest residence.

Comment 13: There is a fair argument that the project may have significant GHG impacts. The MND's reliance on the 1,100 MT CO2e per year threshold is only designed to achieve the GHG reductions required by 2020 and is insufficient to align the project with the State's 2030 GHG Reduction Targets.

Response: The BAAQMD adopted a "bright line" and "efficiency" GHG threshold because some projects have a very low service population, like the proposed project. Applying an efficiency metric for GHG emissions for projects like the proposed project is not appropriate, which is why BAAQMD's "bright line" threshold was used in the MND. As stated by the Commenter, "BAAQMD based its GHG "bright line" significance threshold on the amount of GHG reductions that were necessary in the Bay area to achieve the AB 32 reduction goals by 2020. California's 2030 GHG reduction goals (outlined in SB 32) require a 40% reduction in the State's GHG emissions from the 2020 reduction goal level (1990 levels). Thus, a 40% reduction from BAAQMD's 1,100 metric tons of CO_2e per year threshold or 660 metric tons of CO_2e per year would ensure a project is in line with the State's 2030 GHG reduction goals. As shown in Table GHG-1 on page 52 of the MND, the proposed project would generate 590 metric tons of CO_2e per year (amortized construction emissions plus operational emissions) for the first year of operations assumed to be year 2022, which is well below 660 metric tons of CO_2e per year. Furthermore, proposed project emissions would continue to decrease each year of operation as engine technology gets cleaner, fuels achieve reduced carbon intensity, and electricity generation utilizes more renewable and lower carbon sources. Therefore, the proposed project would have less-than-significant impacts on GHG emissions.

Comment 14: The project's failure to reduce its expected VMT and its levels of VMT per capita are evidence of a fair argument that the project may have significant GHG emission impacts.

Response: Please see response to comment 1, above.

Comment 15: For the foregoing reasons, the MND is inadequate and an EIR is required to analyze and mitigate the Project's potentially significant environmental impacts.

Response: As detailed in the responses to the comments presented above, no new or substantially increased impacts have been identified in the comments, and no substantive revisions are required to the Draft IS/MND in response to these comments. Therefore, the impacts remain mitigated to a less-than-significant level and an EIR is not required.

Subject: SDG Commerce 217 Distribution Center Project, Mitigated Negative Declaration, SCH No. 2020120302, Napa County

Dear Mr. He:

The California Department of Fish and Wildlife (CDFW) reviewed the Mitigated Negative Declaration (MND) for the SDG Commerce 217 Distribution Center Project (Project) and is submitting the following comments on the MND to inform the City of American Canyon, as the Lead Agency, of our concerns regarding potentially significant impacts to sensitive resources associated with the proposed Project.

CDFW is a Trustee Agency pursuant to the California Environmental Quality Act (CEQA) and is responsible for the conservation, protection, and management of the State's biological resources (Pub. Resources Code, § 21000 et seq.; Cal. Code Regs., tit. 14, § 15386). CDFW is also considered a Responsible Agency if a project would require discretionary approval, such as a California Endangered Species Act (CESA) Permit, Native Plant Protection Act Permit, Lake and Streambed Alteration (LSA) Agreement, and other provisions of the Fish and Game Code that afford protection to California's (State's) fish and wildlife trust resources.

Project Description

The proposed Project will develop a 217,294 square-foot wine distribution center, associated parking areas, a detention/bioretention pond, and will utilize a soil borrow area immediately north of the SDG Commerce 330 Distribution Center.

Project Location and Environmental Setting

The Project site is located at 1075 Commerce Court (previously Commerce Boulevard) in the City of American Canyon, Napa County, and is centered at approximately 38.187092 latitude, -122.273383 longitude. Access to the Project site is from State Route 29 via Green Island Road to Commerce Court. The Project will occur on a 10.39-acre parcel comprised of annual grassland habitat surrounded by blue gum eucalyptus (*Eucalyptus globulus*). The Project site also includes an approximately 46,700 cubic-yard soil borrow area within the parcel between the Project parcel and the southernmost

DocuSign Envelope ID: A138FA7A-27B8-492D-B000-DD17554CA0B1

parcel where the nearly completed wine distribution center (i.e., SDG Commerce 330 Distribution Center) occurs. North Slough, a tributary to the Napa River, occurs immediately west of the Project site and is separated from it by a dense stand of eucalyptus. Industrial buildings occur to the north. The recently completed Commerce Court road extension borders the eastern side of the Project.

Comments and Recommendations

Swainson's hawk (Buteo swainsoni)

Mitigation Measure BIO-2 would not reduce potential impact to Swainson's hawk, a State listed as threatened species, to less-than-significant. CDFW recommends that surveys be conducted within a 0.5-mile radius as stated in the *Recommended Timing and Methodology for Swainson's Hawk Nesting Surveys in California's Central Valley* (May 31, 2000) available on CDFW's webpage at https://wildlife.ca.gov/Conservation/Survey-Protocols#377281284-birds. CDFW recommends that Mitigation Measure BIO-2 be revised as follows (added language in ***bold italics***, deleted language in ~~strikethrough~~)*:*

1

> ***If Project activities must occur during the Swainson's hawk nesting season (i.e., typically March 1 through September 15), a qualified biologist (i.e., a biologist with at least two years' experience conducting protocol-level surveys for Swainson's hawk with detections) shall conduct p****~~P~~**re-construction surveys for nesting Swainson's hawks **within** ~~shall be conducted for~~ a **half**~~quarter~~-mile radius around all project activities for at least two survey periods immediately prior to a project's initiation. The surveys shall be conducted in accordance with CDFW's "Recommended Timing and Methodology for Swainson's Hawk Nesting Surveys in California's Central Valley" (CDFG 2000), which identifies different survey windows throughout the pre-nesting and nesting season (ranging from January 1 through July 30/post-fledging) that have different survey methodologies and requirements.*
>
> *If Swainson's hawks are found to be nesting on the project site or within a* ~~¼~~***0.5****-mile of the project site,* ***the project proponent shall either, a) delay project activities until all Swainson's hawk nests within 0.5 miles of the Project site are no longer active, as determined by a qualified biologist, b) determine if the 0.5-mile buffer zone may be reduced in consultation with CDFW based on site specific conditions, or c) if take cannot be avoided, obtain a CESA Incidental Take Permit from CDFW prior to starting project activities.*** ~~*consultation with CDFW shall be conducted. The size of the nest protection buffer shall be determined during consultation with CDFW but at a minimum there will be a 300-foot non-disturbance buffer around the nest site.*~~

DocuSign Envelope ID: A138FA7A-27B8-492D-B000-DD17554CA0B1

Western burrowing owl (Athene cunicularia)

Mitigation Measure BIO-1 in the MND would not reduce potential impacts to burrowing owl, a California Species of Special Concern, to less-than-significant because conducting a single survey within 14 days of the start of Project activities would be unlikely to detect burrowing owls. Burrowing owls may use the Project site and adjacent habitat for foraging, overwintering, and/or nesting habitat.

CDFW recommends that Mitigation Measure BIO-1 be revised as follows (added language in ***bold italics***, deleted language in ~~strikethrough~~):

② *A **qualified biologist shall conduct surveys in accordance with the California Department of Fish and Game (now CDFW) 2012 Staff Report on Burrowing Owl Mitigation survey methodology (see https://wildlife.ca.gov/Conservation/Survey-Protocols#377281284-birds). Surveys shall encompass the project area and a sufficient buffer zone to detect owls nearby that may be impacted. Time lapses between surveys or project activities shall trigger subsequent surveys including but not limited to a final survey within 24 hours prior to ground disturbance before construction equipment mobilizes to the Project area. The qualified biologist shall have a minimum of two years of experience implementing the CDFW 2012 Staff Report survey methodology resulting in detections.*** ~~*preconstruction survey for burrowing owls shall be conducted 14 days prior or less to initiating ground disturbance. As burrowing owls may recolonize a site after only a few days, time lapses between project activities trigger subsequent take avoidance surveys including but not limited to a final survey conducted within 24 hours prior to ground disturbance to ensure absence.*~~ *If no owls are found during these surveys, no further actions to protect burrowing owl would be necessary.*

~~*1)Burrowing owl surveys shall be conducted by walking the entire project site. Pedestrian survey transects shall be spaced to allow 100 percent visual coverage of the ground surface. The distance between transect center lines shall be seven meters to 20 meters and should be reduced to account for differences in terrain, vegetation density, and ground surface visibility. Poor weather may affect the surveyor's ability to detect burrowing owls thus, avoid conducting surveys when wind speed is greater than 20 kilometers per hour and there is precipitation or dense fog. To avoid impacts to owls from surveyors, owls and/or occupied burrows shall be avoided by a minimum of 50 meters (approximately 160 feet) wherever practical to avoid flushing occupied burrows. Disturbance to occupied burrows shall be avoided during all seasons.*~~

1) *If burrowing owls are detected on **or adjacent to** the site, the following restricted activity dates and setback distances recommended per CDFW's Staff Report (2012)*

DocuSign Envelope ID: A138FA7A-27B8-492D-B000-DD17554CA0B1

*shall be implemented**, unless reduced buffers are accepted by CDFW in writing based on site specific conditions**:*

- *From April 1 through October 15, low disturbance and medium disturbance activities shall have a 200-meter buffer while high disturbance activities **shall** have a 500-meter buffer from occupied nests **and wintering sites**.*
- *From October 16 through March 31, low disturbance activities shall have a 50-meter buffer, medium disturbance activities shall have a 100-meter buffer, and high disturbance activities shall have a 500-meter buffer from occupied nests **and wintering sites**.*
- *No earth-moving activities or other disturbance should occur within the aforementioned buffer zones of occupied burrows. These buffer zones **shall be marked with high visibility fencing or flagging** ~~should be fenced as well. If burrowing owls are found in the project area, a qualified biologist shall delineate the extent of burrowing owl habitat on the site.~~*

② (cont.)

2**) If burrowing owls are present outside of the nesting season, burrowing owls may be passively relocated from the project site **and adjacent habitat** using CDFW-**accepted**~~approved~~ methods so that construction can proceed. Any required passive relocation of burrowing owls would require CDFW **acceptance**~~approval~~. **If passive relocation of burrowing owls is necessary, a qualified biologist shall prepare a Relocation Plan, including compensatory habitat as described below, for CDFW review and acceptance prior to the start of construction activities.

***3**) If the survey determines that the project site is actively being used by burrowing owl, **or any owls are passively relocated as described above**, then compensatory habitat mitigation shall be provided. The habitat mitigation/compensation plan **shall be submitted to CDFW for review and approval prior to the start of project activities. Habitat compensation acreages shall be approved by CDFW, as the amount depends on site specific conditions, and completed before project construction. It shall also include placement of a conservation easement and preparation and implementation of a long-term management plan.** ~~would be subject to approval of the CDFW.~~ If burrowing owls are observed during surveys, notification shall also be submitted to the California Natural Diversity Database **(CNDDB; see https://wildlife.ca.gov/Data/CNDDB/Submitting-Data)**.*

Nesting Raptors and Other Birds

③ CDFW is concerned with the language in Mitigation Measures BIO-3 and BIO-4, particularly that surveys would be conducted within 30 days of the start of Project activities. Surveys should be completed as close to the start of Project activities as

DocuSign Envelope ID: A138FA7A-27B8-492D-B000-DD17554CA0B1

possible to minimize the likelihood of raptors and other birds nesting on or adjacent to the Project site between the time of the survey and the start of Project activities. CDFW recommends Mitigation Measures BIO-3 and BIO-4 be revised as follows (added language in ***bold italics***, deleted language in ~~strikethrough~~)*:*

To ensure that impacts to ~~tree or ground~~ nesting raptors and other birds are avoided, the following mitigation measures shall be implemented:

1) In order to avoid impacts to nesting raptors, a preconstruction nesting survey shall be conducted by a qualified ~~raptor~~ biologist ***(i.e., a biologist with at least 2 years' experience conducting surveys for nesting raptors with detections)*** *prior to commencing with earth-moving or construction work, if this work would commence between February 1st and August 31st. The survey shall be conducted within* ***7 days*** *~~the 30- day period~~ prior to site disturbance. The raptor nesting surveys shall include examination of all trees and other suitable nesting structures, within* ***500****~~200~~ feet of the project site.*

③ (cont.)

2) If nesting raptors are identified during the surveys, ***a qualified biologist shall determine appropriate, species-specific no-disturbance buffers around all active nests. No-disturbance buffers shall be demarcated in the field with*** *~~the dripline of the nest tree or ground-nesting site shall be fenced with~~ orange construction fencing ~~(provided the nest site is on the project site), and a 200-foot radius around the nest tree or nest site shall be staked with orange construction fencing~~****, or similar****. If the tree or* ***other*** *nest site is located off the project site, then the buffer shall be demarcated per above where the buffer occurs on the project site.* ***If nesting white-tailed kites are found during surveys, a minimum 300-foot no-disturbance buffer shall be established. To ensure the no-disturbance buffers are adequate, a qualified biologist shall monitor the active nests within and adjacent to the project site for a minimum of one consecutive week and then weekly during construction. If the qualified biologist observes any nesting raptor displaying potential nest-disturbance behavior, the qualified biologist shall require that all project activities cease. In this event, the qualified biologist and/or project proponent shall consult with CDFW regarding appropriate avoidance and minimization measures; and project activities shall not resume without CDFW's written permission. No-disturbance buffers shall remain in place until the nests are no longer active, as determined by a qualified biologist.*** *~~The size of the buffer may be altered if a qualified raptor biologist conducts behavioral observations and determines the nesting raptors are well acclimated to disturbance. If this occurs, the raptor biologist shall prescribe a modified buffer that allows sufficient room to prevent undue disturbance/harassment to the nesting raptors. No construction or earth-moving activity shall occur within the established buffer until it is determined by a qualified raptor biologist that the young have fledged (that is, left the nest) and have attained sufficient flight skills to avoid~~*

DocuSign Envelope ID: A138FA7A-27B8-492D-B000-DD17554CA0B1

~~project construction zones. This typically occurs by August 1st. This date may be earlier or later, and shall be determined by a qualified raptor biologist. If a qualified biologist is not hired to watch the nesting raptors then the buffers shall be maintained in place through the month of August and work within the buffer can commence on September 1st.~~

3) If the preconstruction nesting survey identifies a large stick or other type of raptor nest that appears inactive at the time of the survey, but there are territorial raptors evident in the nest site vicinity, a protection buffer (as described above) shall be established around the potential nest ***site*** *until the qualified ~~raptor~~ biologist determines that the nest is not being used. In the absence of conclusive observations indicating the nest site is not being used, the buffer shall remain in place until a second follow-up nesting survey can be conducted to determine the status of the nest and eliminate the possibility that the nest is utilized by a late-spring nesting raptor (for example, red-tailed hawk). This second survey shall be conducted even if construction has commenced. If during the follow-up late season nesting survey a nesting raptor is identified utilizing the nest, the protection buffer shall remain until it is determined by a qualified raptor biologist that* ***the nest is no longer active****. If the nest remains inactive, the protection buffer can be removed and construction and earth-moving activities can proceed unrestrained.*

③ (cont.)

To ensure that impacts to nesting passerine birds are avoided, a ***qualified biologist*** *~~nesting survey~~ shall ~~be~~ conduct~~ed~~* ***a survey*** *within* ***7~~15~~*** *days prior to commencing construction/grading or tree removal activities if this work would commence between* ***February*** *~~March~~ 1 and September 1. If common passerine birds or special-status passerine birds are identified nesting on* ***or adjacent to*** *the project site* ***within 200 feet****,* ***a qualified biologist shall determine appropriate, species-specific*** *~~a non~~-disturbance buffer****s for all nests. The no-disturbance buffers shall be clearly demarcated in the field with*** *~~of 75 feet shall be established or as otherwise prescribed by a qualified ornithologist. The buffer shall be demarcated with~~ orange construction fencing****, or similar, prior to the start of project activities****. Disturbance within the buffer shall be postponed until* ***a qualified biologist determines*** *~~it is determined by a qualified ornithologist~~ that the young have fledged and have attained sufficient flight skills to leave the area,* ***and*** *that the nesting cycle has otherwise completed.* ***To ensure the no-disturbance buffers are adequate, a qualified biologist shall monitor the active nests within and adjacent to the project site for a minimum of one consecutive week and then weekly during construction. If the qualified biologist observes any nesting bird displaying potential nest-disturbance behavior, the qualified biologist shall require that all project activities cease. In this event, the qualified biologist and/or project proponent shall consult with CDFW regarding appropriate avoidance and minimization measures; and project activities shall not resume without CDFW's written permission.*** *~~Typically, most passerine birds in the region of the~~*

DocuSign Envelope ID: A138FA7A-27B8-492D-B000-DD17554CA0B1

③ (cont.)

~~project site are expected to complete nesting by August 1st. Many species can complete nesting by the end of June or in early to mid-July. Regardless, nesting buffers shall be maintained until September 1 unless a qualified ornithologist determines that young have fledged and are independent of their nests at an earlier date. If buffers are removed prior to September 1, the qualified biologist conducting the nesting surveys should prepare a report that provides details about the nesting outcome and the removal of buffers. This report shall be submitted to the City of American Canyon Planning Department prior to the time that nest protection buffers are removed if the date is before September 1.~~

Western Pond Turtle (Emys marmorata)

The CNDDB shows an occurrence of western pond turtle from 2002 within 0.28 miles north of the Project site within North Slough. Western pond turtle is a California Species of Special Concern and impacts to this species would be potentially significant. Western pond turtles travel over land to reach nesting locations and may breed year-round. CDFW recommends the following mitigation measure:

④

A qualified biologist (i.e., a biologist with at least 2 years' experience conducting surveys for western pond turtle with detections) shall submit a wildlife exclusion fencing plan to CDFW for review and approval prior to starting construction. Exclusion fencing shall be installed along the western perimeter of the project site preventing the species from traveling from North Slough onto the project site during construction. A qualified biologist shall survey the project site and adjacent habitat within 72 hours of the start of project activities to determine if western pond turtle or their nests are present and guide the installation of the exclusion fence. If western pond turtles are discovered, a qualified biologist with experience handling and relocating the species shall move the species to the nearest suitable habitat outside of the project area and exclusion fencing. If western pond turtle nests or evidence of their presence is found, CDFW shall be consulted with, prior to starting project activities, regarding appropriate avoidance and minimization measures, such as delaying project activities until the nest is no longer active, as determined by a qualified biologist. In this event, project activities shall not begin without CDFW's written permission.

Filing Fees

CDFW anticipates that the Project will have an impact on fish and/or wildlife, and assessment of filing fees is necessary (Fish and Game Code, § 711.4; Pub. Resources Code, § 21089). Fees are payable upon filing of the Notice of Determination by the Lead Agency and serve to help defray the cost of environmental review by CDFW.

DocuSign Envelope ID: A138FA7A-27B8-492D-B000-DD17554CA0B1

CDFW appreciates the opportunity to provide comments on the MND for the proposed Project and is available to meet with you to further discuss our concerns. If you have any questions, please contact Mr. Garrett Allen, Environmental Scientist, at Garrett.Allen@wildlife.ca.gov; or Ms. Melanie Day, Acting Senior Environmental Scientist (Supervisory), at Melanie.Day@wildlife.ca.gov.

Sincerely,

II. RESPONSES TO CALIFORNIA DEPARTMENT OF FISH AND WILDLIFE DRAFT IS/MND COMMENT LETTER, JANUARY 11, 2021

New or revised IS text resulting from the following responses are identified in underline (added text) or strike through (deleted text). The updated mitigation measures are included in the Final IS text as well as the MMRP.

Comment 1: Adequacy of Swainson's Hawk mitigation

Response: The Final Initial Study has been revised to incorporate all of CDFW's suggested language into the Swainson's hawk mitigation measure, as follows (new language shown in underline). This mitigation measure would assure that impacts to the Swainson's hawk are reduced to a less-than-significant level because it meets or exceeds all standard resource agency requirements for this species, and is consistent with professionally accepted approaches to mitigating impacts to this species.

> ***Mitigation Measure BIO-2:*** <u>If project activities must occur during the Swainson's hawk nesting season (*i.e.*, typically March 1 through September 15), a qualified biologist (*i.e.*, a biologist with at least two years' experience conducting surveys who has made Swainson's hawk detections) shall conduct pre-construction surveys for nesting Swainson's hawks within a half-mile</u> radius around all project activities for at least two survey periods immediately prior to a project's initiation. The surveys shall be conducted in accordance with CDFW's "Recommended Timing and Methodology for Swainson's Hawk Nesting Surveys in California's Central Valley" (CDFG 2000), which identifies different survey windows throughout the pre-nesting and nesting season (ranging from January 1 through July 30/post-fledging) that have different survey methodologies and requirements.
>
> If Swainson's hawks are found to be nesting on the project site or within a 0.5-mile of the project site, <u>the project proponent shall either: a) delay project activities until all Swainson's hawk nests within 0.5-mile of the project site are no longer active, as determined by a qualified biologist, b) determine if the 0.5-mile buffer zone may be reduced in consultation with CDFW based on site specific conditions, or c) if take cannot be avoided, obtain a CESA Incidental Take Permit from CDFW prior to starting project activities.</u>

Comment 2: Adequacy of Western Burrowing Owl mitigation

Response: The suggested burrowing owl mitigation language provided by CDFW that was incorporated into the mitigation measure is shown in underline/strike through below. We did not incorporate all of CDFW's changes into the mitigation measure because some of the new language CDFW suggested is not standard mitigation that an applicant is typically held to for the presence of a wintering or transient owl observed spending a day or a week on a project site as it is passing through the area in the non-nesting season. Regardless, the mitigation

measure as revised is equally protective of the burrowing owl as CDFW's language, and meets the substantive protective goals of their suggested language.

> ***Mitigation Measure BIO-1:*** A qualified western burrowing owl biologist shall conduct surveys in accordance with the California Department of Fish and Game (now CDFW) 2012 Staff Report on Burrowing Owl Mitigation survey methodology (see https://wildlife.ca.gov/Conservation/ Survey-Protocols#377281284-birds). Surveys shall encompass the project area and a sufficient buffer zone or approximately 200-500 feet depending on the neighboring terrain and vegetation as necessary to detect owls nearby that may be impacted. Time lapses between surveys or project activities shall trigger subsequent surveys including but not limited to a final survey within 24 hours prior to ground disturbance before construction equipment mobilizes to the project area. If no owls are found during these surveys, no further actions to protect burrowing owl would be necessary.
>
> 1) If burrowing owls are detected on or adjacent to the site, the following restricted activity dates and setback distances recommended per CDFW's Staff Report (2012) shall be implemented, unless reduced buffers are accepted by CDFW in writing based on site specific conditions:
>
> • From April 1 through October 15, low disturbance and medium disturbance activities shall have a 200-meter buffer while high disturbance activities shall have a 500-meter buffer from occupied nests and wintering sites.
>
> • From October 16 through March 31, low disturbance activities shall have a 50-meter buffer, medium disturbance activities shall have a 100-meter buffer, and high disturbance activities should have a 500-meter buffer from occupied nests and wintering sites.
>
> • No earth-moving activities or other disturbance should occur within the aforementioned buffer zones of occupied burrows. These buffer zones shall be marked with high visibility fencing or flagging.
>
> 2) If burrowing owls are present outside of the nesting season, burrowing owls may be passively relocated from the project site and adjacent habitat using CDFW-accepted methods so that construction can proceed. Any required passive relocation of burrowing owls would require CDFW acceptance. If passive relocation of non-nesting burrowing owls is necessary, a qualified biologist shall prepare a Relocation Plan and submit it to CDFW.
>
> 3) If a nesting season survey determines that a burrow or refugia on the project site is occupied by nesting burrowing owls, then compensatory mitigation in the form of a permanently protected, deed restricted, set aside on open space land owned or obtained by the applicant shall be provided if such a protected area makes sense for

protection of nesting owls. This permanently protected area would be recorded within 90 days after commencement of project construction. If burrowing owls are observed during surveys, notification shall also be submitted to the CNDDB.

This mitigation measure would reduce impacts to the western burrowing owl to a less than significant level because it meets or exceeds all standard resource agency requirements for this species, and is consistent with professionally accepted approaches to mitigating impacts to this species.

Comment 3: Adequacy of mitigation for nesting raptors and other birds

Response: CDFW's suggested mitigation language nesting raptors and nesting passerine birds has been added to Mitigation Measures BIO-3 and BIO-4, below.

Mitigation Measure BIO-3: To ensure that impacts to nesting raptors are avoided, the following mitigation measures shall be implemented:

1) In order to avoid impacts to nesting raptors, a preconstruction nesting survey shall be conducted by a qualified biologist (i.e., a biologist with at least 2 years' experience conducting surveys for nesting raptors with detections) prior to commencing with earth-moving or construction work if this work would commence between February 1st and August 31st. The survey shall be conducted within 7 days prior to site disturbance. The raptor nesting surveys shall include examination of all trees and other suitable nesting structures/areas within 500 feet of the project site.

2) If nesting raptors are identified during the surveys, a qualified biologist shall determine appropriate, species-specific no-disturbance buffers around all active nests. No-disturbance buffers shall be demarcated in the field with orange construction fencing or similar. If the tree or other nest site is located off the project site, then the buffer shall be demarcated per above where the buffer occurs on the project site. If nesting white-tailed kites are found during surveys, a suitable no-disturbance buffer shall be established by a qualified biologist (as defined above) but in no case shall the buffer be less than 200 feet. To ensure the no-disturbance buffers are adequate, a qualified biologist shall monitor the active nests within and adjacent to the project site daily for a minimum of one week and then weekly during construction. If the qualified biologist observes any nesting raptor displaying distress, the qualified biologist shall require that all project activities cease. In this event, the qualified biologist shall ensure proper measures are taken so that no harm comes to the nest/nesting attempt and all activities causing distress shall cease until the nesting attempt is completed as determined by a qualified biologist.

3) If the preconstruction nesting survey identifies a large stick or other type of raptor nest that appears inactive at the time of the survey, but there are territorial raptors evident in the nest site vicinity, a protection buffer (as described above) shall be

established around the potential nest site until the qualified biologist determines that the nest is not being used. In the absence of conclusive observations indicating the nest site is not being used, the buffer shall remain in place until a second follow-up nesting survey can be conducted to determine the status of the nest and eliminate the possibility that the nest is utilized by a late-spring nesting raptor (for example, Cooper's hawk). This second survey shall be conducted even if construction has commenced. If during the follow-up late season nesting survey a nesting raptor is identified utilizing the nest, the protection buffer shall remain until it is determined by a qualified biologist that the nest is no longer active. If the nest remains inactive, the protection buffer can be removed and construction and earth-moving activities can proceed unrestrained.

Mitigation Measure BIO-4: To ensure that impacts to nesting passerine birds are avoided, a qualified biologist shall conduct a survey within 7 days prior to commencing construction/ grading or tree removal activities if this work would commence between February 1 and September 1. If common passerine birds or special-status passerine birds are identified nesting on or adjacent to the project site within 200 feet, a qualified biologist shall determine appropriate, species-specific no-disturbance buffers for all nests. The no-disturbance buffers shall be clearly demarcated in the field with orange construction fencing or similar, prior to the start of project activities. Disturbance within the buffer shall be postponed until a qualified biologist determines that the young have fledged and have attained sufficient flight skills to leave the area, and that the nesting cycle has otherwise completed. To ensure the no-disturbance buffers are adequate, a qualified biologist shall monitor the active nests within and adjacent to the project site on a daily basis for a minimum of one week and then weekly during construction. If the qualified biologist observes any nesting bird displaying distress, the qualified biologist shall have the authority to require that all project activities cease until the nesting distress has been ameliorated. In this event, the qualified biologist shall ensure proper measures are taken so that no harm comes to the nest/nesting attempt until the nesting attempt is completed as determined by a qualified biologist. These measures may include increasing the no-disturbance buffer, postponing specific construction activities causing the distress until the nesting attempt is completed, or other appropriate protection measures as determined in the field.

These revised mitigation measures would reduce impacts to nesting raptors and passerines to a less-than-significant level because they meet or exceed all standard resource agency requirements for nesting raptors, and are consistent with professionally accepted approaches to mitigating impacts to nesting raptors and passerines.

Comment 4: Adequacy of Western Pond Turtle mitigation

Response: The Draft IS/MND did not include a mitigation measure for the western pond turtle. However, upon reviewing CDFW's comment letter, we agree that it is appropriate to include a mitigation measure for this special-status species given the proximity of North Slough and western pond turtle sightings to the project site. Below we include CDFW's mitigation language

and bolster that language with additional measures that have proven effective on other projects with pond turtle populations.

The following has been added as the second paragraph on p. 32 of the Final IS/MND:

> The western pond turtle (*Emys marmorata*) is a California "species of special concern." In April of 2015, the USFWS issued a 90-day finding on a petition to list this species under FESA. In September 2016, M&A spoke with USFWS' Sacramento Field Office and was told that they "hope to finish a 12-month finding in the fiscal year of 2021" (G. Tarr, USFWS, Sacramento Field Office, pers. comm. with S. Lynch of M&A, September 21, 2016). Until the western pond turtle is formally listed it is not afforded the protections of FESA.
>
> The western pond turtle is a habitat generalist, inhabiting a wide range of fresh and brackish, permanent and intermittent water bodies from sea level to about 4,500 feet above sea level (USFWS 1992). Typically, this species is found in ponds, marshes, ditches, streams, and rivers that have rocky or muddy bottoms. This turtle is most often found in aquatic environments with plant communities dominated by watercress, cattail, and other aquatic vegetation. It is a truly aquatic turtle that usually only leaves the aquatic site to reproduce and to overwinter. Recent field work has demonstrated that western pond turtles may overwinter on land or in water, or may remain active in water during the winter season; this pattern may vary considerably with latitude, water temperature, and habitat type and remains poorly understood (Jennings and Hayes 1994).
>
> The pond turtle also requires upland areas for burrowing habitat where it digs nests and buries its eggs. These nests can extend from 52 feet to 1,219 feet from watercourses (Jennings and Hayes 1992), however most pond turtles nest in uplands within 250 meters of water (Bury, unpublished). Upland nest sites are usually found in areas with sparse vegetation. Sunny, barren, and undisturbed (not disked) land provides optimal habitat, while shady riparian habitat and planted agricultural fields do not provide suitable habitat (op. cit.). Eggs are typically laid from March to August (Zeiner et. al. 1988), with most eggs being laid in May and June. Hatchlings will stay in the nest until the following April (Bury, unpublished). Predators of juvenile pond turtles include the non-native bullfrog (*Lithobates catesbeiana*) and Centrarchid fish (sunfish). This turtle is most visible between April and July when it can be observed basking in the sun. In areas where the water is very warm during these months, however, it will bask in the warm water and will be more difficult to observe. It eats plants, insects, worms, fish and carrion (Stebbins 2003).
>
> According to the CDFW's CNDDB there is a 2002 record of this turtle in North Slough approximately 0.28-mile to 0.45-mile north of the project site. There is no aquatic habitat onsite and the upland habitat onsite appears to be most unsuitable for nesting turtles as it is a former eucalyptus forest that now, though devoid of trees, has

undulating topography from past land disturbance including from eucalyptus tree removal that took place in 2012. While it appears to be a most unlikely area for turtles to haul out and nest, in an abundance of caution that there is a possibility of turtles nesting onsite, impacts to western pond turtles from the proposed project are considered ***potentially significant***. Mitigation Measure BIO-5 would reduce this impact to a ***less-than-significant*** level.

The following mitigation measure has been added to the Biological Resources mitigation measures:

> ***Mitigation Measure BIO-5:*** A qualified biologist (*i.e.*, a biologist with at least 2 years' experience conducting surveys for western pond turtle detections) has prepared a wildlife exclusion plan for this project and has attached an exhibit of that fencing plan herein (please see attached Exhibit A). This wildlife exclusion fencing will be constructed of manufactured ERTEC wildlife exclusion fencing. This exclusion fencing shall be installed along the western perimeter of the project site returning back 50 feet to the north and 50 feet to the south preventing species from traveling from North Slough onto the project site during construction (see Exhibit A). A qualified biologist shall survey the project site and adjacent habitat within 72 hours of the start of project activities to determine if western pond turtles or their nests are present and guide the installation of the exclusion fence. If western pond turtles are discovered, a qualified biologist with experience handling and relocating the species shall move the species to the nearest suitable habitat outside of the project area and exclusion fencing. If western pond turtle nests are found, CDFW shall be notified prior to starting project activities, and the nest site plus a 50-foot buffer around the nest site shall be fenced with orange construction fence until eggs hatch and young turtles disperse to the adjacent North Slough. In addition, if nest(s) are located during surveys, moth balls (naphthalene) shall be sprinkled around the vicinity of the nest (no closer than 5 feet) to mask human scent and discourage predators. Grading within the nest site's 50-foot buffer area shall be delayed until the young leave the nest as determined by a qualified biologist. If the CDFW allows translocation of any nestling pond turtles this shall be completed by a qualified biologist under the direction of the CDFW.

Implementation of this mitigation measure reduces the project's impact to western pond turtle to a less than significant level because it meets or exceeds all standard resource agency requirements for this species, and is consistent with professionally accepted approaches to mitigating impacts to this species.

III. CALTRANS INQUIRY EMAILS AND RESPONSES

The City received an email inquiry on the Draft IS/MND from Caltrans staff, which was satisfied in correspondence. No formal comments on the IS/MND were received from that agency. The email chain is presented below.

Subject: RE: SDG Commerce 217 Distribution Center project

Yunsheng,

Good question - I should have clarified. The project is not a public-facing retail building, with very little "customer" traffic. In this case, the non-commute trips are either trucks (excluded from SB 743 analysis for reasons described below) or other work-based non-commute trips (small deliveries, lunch trips, etc.) Therefore, the average worker commute trip (home-based work) was used to make the VMT assessment, as it is directly comparable to the home-based work commute trip of other employment destinations in the region.

Thanks,

Todd

Subject: RE: SDG Commerce 217 Distribution Center project

Good afternoon Todd,

Thanks for sharing the information and the detailed explanation with me. We respect the city's preference in choosing the proper methodology for the VMT analysis. It is more for the discussion purpose for us to understand better about why/how the city does the VMT analysis in CEQA. Can I ask a follow-up question: because the employee trips only account for 1/3 of the total trips, while the visitor trips account for 2/3. Why in this case, the employee trips, instead of the visitor trips, were considered as the primary traffic generator of this project, since this is not a typical office project?

Thank you for your time.

Appendix B-1

Air Quality Setting and Regulatory Context

The project site is located within the San Francisco Bay Area Air Basin (Air Basin), which encompasses Alameda, Contra Costa, Santa Clara, San Francisco, San Mateo, Marin, and Napa Counties, and the southern portions of Solano and Sonoma Counties. The Air Basin is characterized by complex terrain which distorts normal wind flow patterns, consisting of coastal mountain ranges, inland valleys, and bays.

Regional Meteorology

Air quality is affected by the rate, amount, and location of pollutant emissions and the associated meteorological conditions that influence pollutant movement and dispersal. Atmospheric conditions, including wind speed, wind direction, stability, and air temperature, in combination with local surface topography (i.e., geographic features such as mountains, valleys, and San Francisco Bay), determine the effect of air pollutant emissions on local air quality.

The climate of the greater San Francisco Bay Area, including Napa County, is a Mediterranean-type climate characterized by warm, dry summers and mild, wet winters. The climate is determined largely by a high-pressure system that is often present over the eastern Pacific Ocean off the west coast of North America. In winter, the Pacific high-pressure system shifts southward, allowing storms to pass through the region. During summer and fall, air emissions generated within the Bay Area can combine with abundant sunshine under the restraining influences of topography and subsidence inversions to create conditions that are conducive to the formation of photochemical pollutants, such as ozone and secondary particulates, such as sulfates and nitrates.

The proposed project site lies in the Napa Valley climatological sub-region of the Bay Area. The Napa Valley is between the Mayacamas Mountains to the west and the Vaca Mountains to the east. These mountains, with an average ridge line height of about 2,000 feet, are effective barriers to the prevailing northwesterlies. The valley is 27 miles long with Napa and Calistoga defining its southern and northern ends, respectively. [1]

An upvalley wind frequently develops during warm summer afternoons drawing from air flowing through the San Pablo Bay. During the evening, especially in the winter, downvalley drainage flow can occur. The prevailing winds are upvalley, southwest through south southeasterly, and occur approximately 50 percent of the time. The second most common winds are down valley drainage winds, north northwesterly through northeasterly, which occur approximately 25 percent of the time. Wind speeds are low with almost 50 percent of the winds between calm and four miles per hour (mph) and an average speed of about five mph. Only five

[1] BAAQMD. Climate, Physiography, And Air Pollution Potential – Bay Area and Its Subregions http://hank.baaqmd.gov/dst/papers/bay_area_climate.pdf

percent of the winds are between 16 and 18 mph which represent strong summer time up valley winds and winter storm winds. Summer average maximum temperatures at the southern end of the valley are in the low 80's with extremes in the high 80's, and at the northern end are in the low 90's with extremes in the high 90's. Winter high temperatures are in the high 50's and low 60's with low temperatures in the high to mid-30's. Sunshine is plentiful and annual average precipitation is 24 inches at Napa.

Summer and fall prevailing winds can transport non-local and locally generated ozone precursors northward where the valley narrows, effectively trapping and concentrating the pollutants under stable conditions. The local upslope and downslope flows setup by the surrounding mountains may also recirculate pollutants adding to the total burden. Also, the high frequency of light winds and associated stable conditions during the late fall and winter, contributes to the buildup of particulates and carbon monoxide (CO) from automobiles, agricultural burning, and fireplace burning.

Local Air Quality

The Bay Area Air Quality Management District (BAAQMD) maintains a network of monitoring stations within the Air Basin that monitor air quality and compliance with applicable ambient standards. The monitoring station closest to and most representative of the project site is in Napa (Jefferson Street), approximately ten miles north of the proposed project site; where levels of ozone (O_3), particulate matter less than 10 micrometers (coarse or PM10), particulate matter less than 2.5 micrometers (fine or PM2.5), CO, and nitrogen dioxide (NO_2) are recorded. In April 2018, the Napa (Jefferson Street) monitoring station was discontinued and air monitoring began at Napa Valley College. Thus, 2018 data shown in **Table 1** is from the Napa Valley College monitoring station (and annual average data is not available for 2018).

Table 1 summarizes the most recent three years of data (2016 through 2018) from the Napa (2016-2017) and Napa Valley College (2018) air monitoring stations. No State or federal standards were exceeded in 2016. The State ozone standard (24-hour) was exceeded once in 2017 and the federal ozone standard (8-hour) was exceeded twice in 2017. The federal PM2.5 24-hour standard was exceeded 13 times in 2017 and 12 times in 2018. The state annual average PM2.5 standard was exceeded in 2017. No other State or federal air quality standards were exceeded during the three-year period.

The Bay Area is currently designated "nonattainment" for state and national (1-hour and 8-hour) ozone standards, for the state PM10 standards, and for state and national (annual average and 24-hour) PM2.5 standards. The Bay Area is designated "attainment" or "unclassifiable" with respect to the other ambient air quality standards.

Table 1
Air Quality Data Summary (2016 through 2018)

Pollutant	Standard[a]	Monitoring Data by Year 2016	2017	2018
Ozone				
Highest 1 Hour Average (ppm)[b]	0.09	0.080	**0.098**	0.083
Days over State Standard		0	**1**	0
Highest 8 Hour Average (ppm)[b]	0.070	0.067	**0.084**	0.068
Days over National Standard		0	**2**	0
Nitrogen Dioxide (NO_2)				
Highest 1 Hour Average (ppm)[b]	0.180	0.039	0.053	0.043
Days over State Standard		0	0	0
Annual Average ($\mu g/m^3$)[b]	0.030/0.053	0.007	0.007	--
Carbon Monoxide (CO)				
Highest 1 Hour Average (ppm)[b]	9.0	2.2	5.6	1.4
Days over State Standard		0	0	0
Highest 8 Hour Average (ppm)[b]	20	1.5	4.7	1.1
Days over State Standard		0	0	0
Coarse Particulate Matter (PM10)				
Highest 24 Hour Average ($\mu g/m^3$)[b]	50	33	--	26
Days over State Standard		0	0	0
State Annual Average ($\mu g/m^3$)[b]	20	16.6	--	--
Fine Particulate Matter (PM2.5)				
Highest 24 Hour Average ($\mu g/m^3$)[b]	35	24.3	**199.1**	**117.9**
Days over National Standard		0	**13**	**12**
State Annual Average ($\mu g/m^3$)[b]	12	8.5	**13.7**	--

*NOTES: Values in **bold** are in excess of at least one applicable standard.*
Generally, state standards and national standards are not to be exceeded more than once per year.
ppm = parts per million; $\mu g/m^3$ = micrograms per cubic meter.
PM10 is not measured every day of the year. Number of estimated days over the standard is based on 365 days per year. A "—" denotes no information available.

Source: BAAQMD, Air Quality Summary Reports, May 24, 2019. http://www.baaqmd.gov/about-air-quality/air-quality-summaries

The BAAQMD's Community Air Risk Evaluation (CARE) program was initiated in 2004 to evaluate and reduce health risks associated with exposure to outdoor air toxics in the Bay Area. Based on findings of the latest report, diesel particulate matter (DPM) was found to account for approximately 85 percent of the cancer risk from airborne toxics. Carcinogenic compounds from gasoline-powered cars and light duty trucks were also identified as significant contributors: 1,3-butadiene contributed four percent of the cancer risk-weighted emissions, and benzene contributed three percent. Collectively, five compounds—DPM, 1,3-butadiene, benzene, formaldehyde, and acetaldehyde—were found to be responsible for more than 90 percent of the cancer risk attributed to emissions. All of these compounds are associated with emissions from internal combustion engines. The most important sources of cancer risk-weighted emissions were combustion-related sources of DPM, including on-road mobile sources (31 percent), construction equipment (29 percent), and ships and harbor craft (13 percent). A 75 percent reduction in DPM was predicted between 2005 and 2015 when the inventory accounted for

CARB's diesel regulations. Overall, cancer risk from toxic air contaminants (TAC) dropped by more than 50 percent between 2005 and 2015, when emissions inputs accounted for state diesel regulations and other reductions.[2]

Modeled cancer risks from TAC in 2005 were highest near sources of DPM: near core urban areas, along major roadways and freeways, and near maritime shipping terminals. Peak modeled risks were found to be located east of San Francisco, near West Oakland, and the maritime Port of Oakland. BAAQMD has identified seven impacted communities in the Bay Area:

- Western Contra Costa County and the cities of Richmond and San Pablo.
- Western Alameda County along the Interstate 880 corridor and the cities of Berkeley, Alameda, Oakland, and Hayward.
- San Jose.
- Eastern side of San Francisco.
- Concord.
- Vallejo.
- Pittsburgh and Antioch.

The proposed project is within the city of American Canyon, which is not part of the seven CARE program impacted communities in the Bay Area. The health impacts in the Bay Area, as determined both by pollution levels and by existing health vulnerabilities in a community, is approximately 160 cancer risk per million persons, while in American Canyon, the health impact is approximately 98 cancer risk per million persons.[3]

Nearby Sensitive Receptors

BAAQMD considers the relevant zone of influence for an assessment of air quality health risks to be within 1,000 feet of a project site. The project site is generally bound by a warehouse to the north, a eucalyptus tree grove to the west, a vacant parcel and the Commerce 330 warehouse to the south, and a 68-foot wide City Public Access and Utility Easement to the east. There is one residence approximately 1,000 feet from the project site boundary (to the southeast) and a residential neighborhood approximately 2,000 feet from the project site boundary (to the southeast). There are no schools or daycare centers within 1,000 feet of the proposed project.

[3] BAAQMD. Identifying Areas with Cumulative Impacts from Air Pollution in the San Francisco Bay Area. March 2014. http://www.baaqmd.gov/~/media/Files/Planning%20and%20Research/CARE%20Program/Documents/ImpactCommunities_2_Methodology.ashx?la=en

Air Quality Significance Thresholds

The significance of potential impacts was determined based on State CEQA Guidelines, Appendix G, and the BAAQMD *CEQA Air Quality Guidelines*. Using Appendix G evaluation thresholds, the proposed project would be considered to have significant air quality impacts if it were to:

A. Conflict with or obstruct implementation of the applicable air quality plan;

B. Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is non-attainment under an applicable federal or state ambient air quality standard;

C. Expose sensitive receptors to substantial pollutant concentrations; or

D. Result in other emissions (such as those leading to odors) adversely affecting a substantial number of people.

The air quality analysis follows the methodology presented in the BAAQMD 2017 CEQA Guidelines. The thresholds of significance applied to assess project-level air quality impacts are:

- Average daily construction exhaust emissions of 54 pounds per day of ROG, NO_x, or PM2.5 or 82 pounds per day of PM10;
- Average daily operation emissions of 54 pounds per day of ROG, NO_x, or PM2.5 or 82 pounds per day of PM10; or result in maximum annual emissions of 10 tons per year of ROG, NO_x, or PM2.5 or 15 tons per year of PM10;
- Exposure of persons by siting a new source or a new sensitive receptor to substantial levels of TACs resulting in (a) a cancer risk level greater than 10 in one million, (b) a noncancerous risk (chronic or acute) hazard index greater than 1.0, or (c) an increase of annual average PM2.5 of greater than 0.3 micrograms per cubic meter ($\mu g/m^3$). For this threshold, sensitive receptors include residential uses, schools, parks, daycare centers, nursing homes, and medical centers; or
- Frequently and for a substantial duration, create or expose sensitive receptors to substantial objectionable odors affecting a substantial number of people.

Assessment of a significant cumulative impact if it would result in:

- Exposure of persons, by siting a new source or a new sensitive receptor, to substantial levels of TACs during either construction or operation resulting in (a) a cancer risk level greater than 100 in a million, (b) a noncancer risk (chronic or acute) hazard index greater than 10.0, or (c) annual average $PM_{2.5}$ of greater than 0.8 $\mu g/m^3$.

The BAAQMD air quality significance thresholds are found in **Table 2**.

The BAAQMD *CEQA Air Quality Guidelines* identify a project-specific threshold of either 1,100 metric tons of carbon dioxide equivalent (CO_2e) per year or 4.6 metric tons of CO_2e per year per service population (i.e., the number of residents plus the number of employees associated with a new development), which is also considered a cumulatively considerable contribution to the

global GHG burden and, therefore, a significant cumulative impact. This analysis applies the 1,100 metric tons of CO_2e per year significance criterion to proposed project GHG emissions.

Table 2

BAAQMD Air Quality Significance Thresholds

Pollutant	Construction Thresholds	Daily Operational Thresholds	Annual Operational Thresholds
Criteria Air Pollutants			
Reactive Organic Compounds (ROG)	54	54	10
Nitrogen Oxides (NOx)	54	54	10
Coarse Particulate matter (PM10)	82	82	15
Fine Particulate Matter (PM2.5)	54	54	10
Carbon Monoxide (CO)	NA	9.0 ppm (8-hour) and 20.0 ppm (1-hour)	
Fugitive Dust	Best Management Practices	NA	
Project Health Risk and Hazards			
Excess Cancer Risk	10 per million	10 per million	
Chronic Hazard Index	1.0	1.0	
Acute Hazard Index	1.0	1.0	
Incremental Annual Average PM2.5	0.3 $\mu g/m^3$	0.3 $\mu g/m^3$	
Cumulative Health Risk and Hazards			
Excess Cancer Risk	100 per million	100 per million	
Chronic Hazard Index	10.0	10.0	
Acute Hazard Index	10.0	10.0	
Incremental Annual Average PM2.5	0.8 $\mu g/m^3$	0.8 $\mu g/m^3$	
Greenhouse Gas Emissions			
Annual Emissions	1,100 metric tons or 4.6 metric tons per capita

Appendix B-2

Air Quality Calculations

Construction Activities

Construction activities are expected to commence in March 2021 with site preparation and grading occurring for approximately nine weeks. Paving, building construction and architectural coating would follow through the end of 2021. The proposed project would be constructed in a single phase estimated to require approximately nine and one half months. **Table 3** provides the estimated construction schedule for each phase:

Table 3

Estimated Construction Schedule

Phase	Description	Start	End	Working Days
1	Site Preparation	03/01/2021	03/12/2021	10
2	Grading	03/13/2021	04/30/2021	35
3	Paving	05/01/2021	05/28/2021	20
4	Building Construction	05/28/2021	11/25/2021	130
5	Architectural Coating	11/26/2021	12/16/2021	15

SOURCE: CalEEMod Version 2016.3.2.

Project construction would generate short-term emissions of air pollutants, including fugitive dust and equipment exhaust emissions. The BAAQMD *CEQA Air Quality Guidelines* recommend quantification of construction-related exhaust emissions and comparison of those emissions to significance thresholds. The CalEEMod (California Emissions Estimator Model, Version 2016.3.2) was used to quantify construction-related pollutant emissions. CalEEMod output worksheets are included in **Appendix B-3**.

The estimated construction equipment associated with the proposed project along with the number of pieces of equipment, daily hours of operation, horsepower (hp), and load factor (i.e., percent of full throttle) are shown in **Table 4**.

Table 4

Estimated Project Construction Equipment Usage

Phase	Equipment	Amount	Daily Hours	HP	Load Factor
Site Preparation	Rubber Tired Dozers	3	8	247	0.4
Site Preparation	Tractors/Loaders/Backhoes	4	8	97	0.37
Grading	Excavators	1	8	158	0.38
Grading	Graders	1	8	187	0.41
Grading	Rubber Tired Dozers	1	8	247	0.4
Grading	Tractors/Loaders/Backhoes	3	8	97	0.37
Building Construction	Cranes	1	7	231	0.29
Building Construction	Forklifts	3	8	89	0.2
Building Construction	Generator Sets	1	8	84	0.74
Building Construction	Tractors/Loaders/Backhoes	3	7	97	0.37
Building Construction	Welders	1	8	46	0.45
Paving	Pavers	2	8	130	0.42
Paving	Paving Equipment	2	8	132	0.36
Paving	Rollers	2	8	80	0.38
Architectural Coating	Air Compressors	1	6	78	0.48

SOURCE: CalEEMod Version 2016.3.2.

Based on CalEEMod, a total of 4,750 haul truck one-way trips (based on a 16 cubic yard haul truck capacity) were estimated as a result of the 38,000 cubic yards of soil import required for grading/earthwork, however all soil import would come from the existing stockpile and grading of the parcel adjacent to the south of the project site (estimated trip length of 0.25 mile). Based on CalEEMod, a total of approximately 60 vendor truck one-way trips were estimated during building construction. During the construction, approximately 12 to 24 workers would be at the site, with a maximum near 80 workers. **Table 5** provides a list of the expected trips and trip lengths by construction phase of vendors and construction workers.

Table 5

Construction Trips and Trip Lengths

Phase	Worker Trips	Vendor Trips	Haul Truck Trips	Worker Trip Length (mile)	Vendor Trip Length (mile)	Haul Trip Length (mile)
Site Preparation	18	0	0	10.8	7.3	20.0
Grading	15	0	4,750	10.8	7.3	0.25
Building Construction	155	60	0	10.8	7.3	20.0
Paving	15	0	0	10.8	7.3	20.0
Architectural Coating	31	0	0	10.8	7.3	20.0

SOURCE: CalEEMod Version 2013.2.2.

The emissions generated from these construction activities include:

- Dust (including PM10 and PM2.5) primarily from "fugitive" sources (i.e., emissions released through means other than through a stack or tailpipe) such as material handling and travel on unpaved surfaces;
- Combustion emissions of criteria air pollutants (ROG, NO_x, CO, PM10, and PM2.5) primarily from operation of heavy off-road construction equipment and construction worker automobile trips (primarily gasoline-operated); and
- VOC emissions from coating.

Construction-related fugitive dust emissions would vary from day to day, depending on the level and type of activity, silt content of the soil, and the weather. In the absence of mitigation, construction activities may result in significant quantities of dust, and as a result, local visibility and PM10 concentrations may be adversely affected on a temporary and intermittent basis during construction. In addition, the fugitive dust generated by construction would include not only PM10, but also larger particles, which would fall out of the atmosphere within several hundred feet of the site and could result in nuisance-type impacts.

Erosion control measures and water programs are typically undertaken to minimize these fugitive dust and particulate emissions. A dust control efficiency of over 50 percent due to daily watering and other measures (e.g., limiting vehicle speed to 15 mph, management of stockpiles, screening process controls, etc.) was estimated. Based on CalEEMod, one water application per day reduces fugitive dust by 34 percent, two water applications per day reduces fugitive dust by 55 percent, and three water applications per day reduces fugitive dust by 61 percent.

Operations

The proposed project would consist of a 217,294 square foot wine storage warehouse on the 10.39-acre project site. It is anticipated that the proposed project would have approximately 32 full-time employees and up to 18 part-time employees and operate 12 to 18 hours a day during the peak season. Approximately 2 to 4 vehicles trips per day would be from clients or visitors to the site.

A total of 134 car and 21 truck dock parking spaces would be provided for the building. Of these parking stalls, 4 stalls would be designated for Clean Air Vehicle parking. The project's traffic demands would be 367 weekday daily project trips (1.69 trips per 1,000 SF).[1]

Because the building is proposed for warehousing and distribution of wine and/or other wine related products it would be heavily insulated and refrigerated. The proposed project would be installed with a night-air cooling system to capture the cold air from outside during the night, which reduces the demand to use the refrigeration system. This reduces the building's electricity demand and is a unique trait of the Napa Valley climate to allow such a cooling process.

In many climates, night temperatures are cool even when daytime temperatures exceed economizer limits. Taking advantage of this resource, the air handler and economizer can flush the building with night air to cool down the building mass. The cool mass then acts as a heat sink the following day.

[1] GHD. *Traffic Impact Analysis Memorandum*. May 8, 2020.

Setting controls for night precooling can save a significant amount of energy, depending on location. Studies indicate cost savings range from five percent in Phoenix, Arizona, to 18 percent in Denver, Colorado, for a typical office building. Night precooling also reduces peak demand. Simulation analyses show that precooling a 100,000 square foot three-story building in Sacramento, California, would reduce energy use by 12.6 percent and cause a peak demand reduction of 31.3 percent.[2]

Interior lighting for the proposed project would be designed to meet Title 24 standards; however, measures to increase efficiency and reduce excess energy usage inside the warehouse would be promoted. Features such as motion sensor lighting for areas within the warehouse would be installed. This is beneficial as it reduces energy bills and reduces heat generate inside, further reducing the energy demands to cool the warehouse. The most current Pacific Gas & Electric incentives would be investigated and all attempts to incorporate them into the design would be made.

The fork lifts (estimated at 10) used within the warehouse would be powered by electricity instead of the typical natural gas powered fork lifts. This reduces the GHG emitted by the fork lift and is more efficient and less impactful on the air within the building. The building would have bike racks to accommodate up to a total of 12 bicycles, five more than the required seven stalls.

CalEEMod default electrical usage was adjusted to be consistent with the SGE 258 Warehouse Project[3] but scaled down to 217,294 square feet. The SGE 258 Warehouse Project energy use of was estimated using actual electrical usage from two nearby and almost identical buildings. Both buildings are insulated and refrigerated to the same degree as the proposed project.

CalEEMod default natural gas usage was adjusted to zero, although available in the street the proposed project would not bring it on site as there is no need. The proposed project would, instead, use electric water heaters and heat pump for the offices.

GHG emissions rates associated with electricity consumption were adjusted to account for Pacific Gas & Electric's projected 2020 (year in which project becomes operational) CO_2 intensity rate. This intensity rate is based, in part, on the requirement of a renewable energy portfolio standard of 33 percent by the year 2020. CalEEMod uses a default rate of 641 pounds of CO_2 per megawatt of electricity produced. The Pacific Gas & Electric's projected 2020 CO_2 intensity rate is 290 pounds of CO_2 per megawatt of electricity produced.[4]

1.3 User Entered Comments & Non-Default Data

Project Characteristics - 2020 Projected CO2 Intensity Factor, PG&E, 2015.

Land Use - The remaining approximately 1.92 acres of the site would be landscaping and undisturbed.

Construction Phase - Approximately 9.5 months of construction

Trips and VMT - Import from existing stockpile (17,000 cy) and grading of parcel adjacent to this parcel to the south (+/- 21,000 cy).

Grading - 38,000 cy of import all from existing stockpile (17,000 cy) and grading of parcel adjacent to this parcel to the south (+/- 21,000 cy). 17 total acres graded (9.9 for warehouse site and approximately 7 acres graded of borrow site to south).

Vehicle Trips - Monday Thru Friday Operations

Energy Use - Energy use scaled down from SDG Commerce 330 Project.

Water And Wastewater - Water use scaled down from SDG Commerce 330 project

Solid Waste - minimal solid waste generated

Construction Off-road Equipment Mitigation - BAAQMD basic fugitive dust measures

Operational Off-Road Equipment - Electric forklifts for operations

Fleet Mix -

SDG Commerce 217 Wine Storage Project - Napa County, Annual

1.1 Land Usage

Land Uses	Size	Metric	Lot Acreage	Floor Surface Area	Population
Refrigerated Warehouse-No Rail	217.29	1000sqft	4.99	217,294.00	0
Other Asphalt Surfaces	89.77	1000sqft	2.06	89,768.00	0
Parking Lot	155.00	Space	1.39	62,000.00	0

1.2 Other Project Characteristics

Urbanization	Urban	**Wind Speed (m/s)**	3.6	**Precipitation Freq (Days)**	64
Climate Zone	4			**Operational Year**	2022
Utility Company	Pacific Gas & Electric Company				
CO2 Intensity (lb/MWhr)	290	**CH4 Intensity (lb/MWhr)**	0.029	**N2O Intensity (lb/MWhr)**	0.006

1.3 User Entered Comments & Non-Default Data

Project Characteristics - 2020 Projected CO2 Intensity Factor, PG&E, 2015.

Land Use - The remaining approximately 1.92 acres of the site would be landscaping and undisturbed.

Construction Phase - Approximately 9.5 months of construction

Trips and VMT - Import from existing stockpile (17,000 cy) and grading of parcel adjacent to this parcel to the south (+/- 21,000 cy).

Grading - 38,000 cy of import all from existing stockpile (17,000 cy) and grading of parcel adjacent to this parcel to the south (+/- 21,000 cy). 17 total acres graded (9.9 for warehouse site and approximately 7 acres graded of borrow site to south).

Vehicle Trips - Monday Thru Friday Operations

Energy Use - Energy use scaled down from SDG Commerce 330 Project.

Water And Wastewater - Water use scaled down from SDG Commerce 330 project

Solid Waste - minimal solid waste generated

Construction Off-road Equipment Mitigation - BAAQMD basic fugitive dust measures

Operational Off-Road Equipment - Electric forklifts for operations

Fleet Mix -

1.0 Project Characteristics

1.1 Land Usage

Land Uses	Size	Metric	Lot Acreage	Floor Surface Area	Population
Refrigerated Warehouse-No Rail	217.29	1000sqft	4.99	217,294.00	0
Other Asphalt Surfaces	89.77	1000sqft	2.06	89,768.00	0
Parking Lot	155.00	Space	1.39	62,000.00	0

1.2 Other Project Characteristics

Urbanization	Urban	**Wind Speed (m/s)**	3.6	**Precipitation Freq (Days)**	64
Climate Zone	4			**Operational Year**	2022
Utility Company	Pacific Gas & Electric Company				
CO2 Intensity (lb/MWhr)	290	**CH4 Intensity (lb/MWhr)**	0.029	**N2O Intensity (lb/MWhr)**	0.006

1.3 User Entered Comments & Non-Default Data

Project Characteristics - 2020 Projected CO2 Intensity Factor, PG&E, 2015.

Land Use - The remaining approximately 1.92 acres of the site would be landscaping and undisturbed.

Construction Phase - Approximately 9.5 months of construction

Trips and VMT - Import from existing stockpile (17,000 cy) and grading of parcel adjacent to this parcel to the south (+/- 21,000 cy).

Grading - 38,000 cy of import all from existing stockpile (17,000 cy) and grading of parcel adjacent to this parcel to the south (+/- 21,000 cy). 17 total acres graded (9.9 for warehouse site and approximately 7 acres graded of borrow site to south).

Vehicle Trips - Monday Thru Friday Operations

Energy Use - Energy use scaled down from SDG Commerce 330 Project.

Water And Wastewater - Water use scaled down from SDG Commerce 330 project

Solid Waste - minimal solid waste generated

Construction Off-road Equipment Mitigation - BAAQMD basic fugitive dust measures

Operational Off-Road Equipment - Electric forklifts for operations

Fleet Mix -

Greenhouse Gas Setting and Regulatory Context

"Global warming" and "global climate change" are the terms used to describe the increase in the average temperature of the earth's near-surface air and oceans since the mid-20th century and its projected continuation. Warming of the climate system is now considered to be unequivocal (IPCC, 2007), with global surface temperature increasing approximately 1.33 degrees Fahrenheit (°F) over the last 100 years. Continued warming is projected to increase global average temperature between 2 and 11°F over the next 100 years.

Natural processes and human actions have been identified as the causes of this warming. The International Panel on Climate Change (IPCC) concludes that variations in natural phenomena such as solar radiation and volcanoes produced most of the warming from pre-industrial times to 1950 and had a small cooling effect afterward. After 1950, however, increasing GHG concentrations resulting from human activity such as fossil fuel burning and deforestation have been responsible for most of the observed temperature increase. These basic conclusions have been endorsed by more than 45 scientific societies and academies of science, including all of the national academies of science of the major industrialized countries. Since 2007, no scientific body of national or international standing has maintained a dissenting opinion.

Increases in GHG concentrations in the earth's atmosphere are thought to be the main cause of human-induced climate change. GHGs naturally trap heat by impeding the exit of solar radiation that has hit the earth and is reflected back into space. Some GHGs occur naturally and are necessary for keeping the earth's surface inhabitable. However, increases in the concentrations of these gases in the atmosphere during the last 100 years have decreased the amount of solar radiation that is reflected back into space, intensifying the natural greenhouse effect and resulting in the increase of global average temperature.

Gases that trap heat in the atmosphere are referred to as GHGs because they capture heat radiated from the sun as it is reflected back into the atmosphere, much like a greenhouse does. The accumulation of GHGs has been implicated as the driving force for global climate change. The primary GHGs are carbon dioxide (CO_2), methane (CH_4), and nitrous oxide (N_2O), ozone, and water vapor.

While the presence of the primary GHGs in the atmosphere are naturally occurring, CO_2, CH_4, and N_2O are also emitted from human activities, accelerating the rate at which these compounds occur within earth's atmosphere. Emissions of CO_2 are largely by-products of fossil fuel combustion, whereas methane results from off-gassing associated with agricultural practices and landfills. Other GHGs include hydrofluorocarbons, perfluorocarbons, and sulfur

hexafluoride, and are generated in certain industrial processes. Greenhouse gases are typically reported in "carbon dioxide-equivalent" measures (CO_2e).[1]

There is international scientific consensus that human-caused increases in GHGs have and will continue to contribute to global warming. Potential global warming impacts in California may include, but are not limited to, loss in snow pack, sea level rise, more extreme heat days per year, more high ozone days, more large forest fires, and more drought years. Secondary effects are likely to include a global rise in sea level, impacts to agriculture, changes in disease vectors, and changes in habitat and biodiversity.[2]

Senate Bill 97

Senate Bill (SB) 97, signed in August 2007, acknowledges that climate change is a prominent environmental issue requiring analysis under CEQA. This bill directed the Governor's Office of Planning and Research (OPR) to prepare, develop, and transmit to the California Natural Resources Agency guidelines for the feasible mitigation of GHG emissions or the effects of GHG emissions, as required by CEQA, no later than July 1, 2009. The California Natural Resources Agency was required to certify or adopt those guidelines by January 1, 2010. On December 30, 2009, the Natural Resources Agency adopted amendments to the CEQA Guidelines, as required by SB 97. These CEQA Guidelines amendments provide guidance to public agencies regarding the analysis and mitigation of the effects of GHG emissions in draft CEQA documents. The amendments became effective March 18, 2010.

Assembly Bill 1493

In 2002, Assembly Bill (AB) 1493 was passed, which required the CARB to develop and adopt, by January 1, 2005, regulations that achieve "the maximum feasible reduction of GHGs emitted by passenger vehicles and light-duty trucks and other vehicles determined by the CARB to be vehicles whose primary use is noncommercial personal transportation in the state."

To meet the requirements of AB 1493, the CARB approved amendments to the California Code of Regulations (CCR) in 2004, adding GHG emissions standards to California's existing standards for motor vehicle emissions. Amendments to CCR Title 13, Sections 1900 and 1961 (13 CCR 1900, 1961), and adoption of Section 1961.1 (13 CCR 1961.1), require automobile manufacturers to meet fleet-average GHG emissions limits for all passenger cars, light-duty trucks within various weight criteria, and medium-duty passenger vehicle weight classes (i.e., any medium-duty vehicle with a gross vehicle weight [GVW] rating of less than 10,000 pounds and that is designed primarily for the transportation of persons), beginning with model year 2009. For passenger cars and light-duty trucks with a loaded vehicle weight (LVW) of 3,750 pounds or less, the GHG emission limits for model year 2016 are approximately 37 percent

[1] Because of the differential heat absorption potential of various GHGs, GHG emissions are frequently measured in "carbon dioxide-equivalents," which present a weighted average based on each gas's heat absorption (or "global warming") potential.

[2] 2006 Final Climate Action Team Report to the Governor and Legislature. March 2006. http://www.climatechange.ca.gov/climate_action_team/reports/2006report/2006-04-03_FINAL_CAT_REPORT.PDF.

lower than the limits for the first year of the regulations, model year 2009. For light-duty trucks with an LVW of 3,751 pounds to a GVW of 8,500 pounds, as well as for medium-duty passenger vehicles, GHG emissions will be reduced approximately 24 percent between 2009 and 2016.

Because the Pavley standards (named for the bill's author, state Senator Fran Pavley) would impose stricter standards than those under the Federal CAA, California applied to the USEPA for a waiver under the Federal CAA. This waiver was initially denied in 2008. In 2009, however, the USEPA granted the waiver.

Executive Order S-3-05

In 2005, in recognition of California's vulnerability to the effects of climate change, then-Governor Arnold Schwarzenegger established Executive Order S-3-05, which sets forth the following target dates by which statewide GHG emissions would be progressively reduced: by 2010, reduce GHG emissions to 2000 levels; by 2020, reduce GHG emissions to 1990 levels; and by 2050, reduce GHG emissions to 80 percent below 1990 levels.

Assembly Bill 32 (California Global Warming Solutions Act of 2006)

California passed the California Global Warming Solutions Act of 2006 (AB 32; California Health and Safety Code Division 25.5, Sections 38500 - 38599). AB 32 establishes regulatory, reporting, and market mechanisms to achieve quantifiable reductions in GHG emissions and establishes a cap on statewide GHG emissions. AB 32 requires that statewide GHG emissions be reduced to 1990 levels by 2020. This reduction will be accomplished by enforcing a statewide cap on GHG emissions that will be phased in starting in 2012. To effectively implement the cap, AB 32 directs CARB to develop and implement regulations to reduce statewide GHG emissions from stationary sources. AB 32 specifies that regulations adopted in response to AB 1493 should be used to address GHG emissions from vehicles. However, AB 32 also includes language stating that if the AB 1493 regulations cannot be implemented, then CARB should develop new regulations to control vehicle GHG emissions under the authorization of AB 32.

AB 32 requires CARB to adopt a quantified cap on GHG emissions representing 1990 emissions levels and disclose how it arrived at the cap; institute a schedule to meet the emissions cap; and develop tracking, reporting, and enforcement mechanisms to ensure that the state reduces GHG emissions enough to meet the cap. AB 32 also includes guidance on instituting emissions reductions in an economically efficient manner, along with conditions to ensure that businesses and consumers are not unfairly affected by the reductions. Using these criteria to reduce statewide GHG emissions to 1990 levels by 2020 would represent an approximate 25 to 30 percent reduction in current emissions levels. However, CARB has discretionary authority to seek greater reductions in more significant and growing GHG sectors, such as transportation, as compared to other sectors that are not anticipated to significantly increase emissions. Under AB 32, CARB must adopt regulations to achieve reductions in GHG to meet the 1990 emissions cap by 2020.

Climate Change Scoping Plan

AB 32 required CARB to develop a Scoping Plan that describes the approach California will take to reduce GHG to achieve the goal of reducing emissions to 1990 levels by 2020. The Scoping Plan was first approved by CARB in 2008 and must be updated every five years. The initial AB 32 Scoping Plan contains the main strategies California will use to reduce the GHG that cause climate change. The initial Scoping Plan has a range of GHG reduction actions which include direct regulations, alternative compliance mechanisms, monetary and non-monetary incentives, voluntary actions, market-based mechanisms such as a cap-and-trade system, and an AB 32 program implementation fee regulation to fund the program. In August 2011, the initial Scoping Plan was approved by CARB.

The 2013 Scoping Plan Update builds upon the initial Scoping Plan with new strategies and recommendations. The 2013 Update identifies opportunities to leverage existing and new funds to further drive GHG emission reductions through strategic planning and targeted low carbon investments. The 2013 Update defines CARB climate change priorities for the next five years and sets the groundwork to reach California's long-term climate goals set forth in Executive Orders S-3-05 and B-16-2012. The 2013 Update highlights California progress toward meeting the near-term 2020 GHG emission reduction goals defined in the initial Scoping Plan. In the 2013 Update, nine key focus areas were identified (energy, transportation, agriculture, water, waste management, and natural and working lands), along with short-lived climate pollutants, green buildings, and the cap-and-trade program. On May 22, 2014, the First Update to the Climate Change Scoping Plan was approved by the Board, along with the finalized environmental documents.

Executive Order No. B-30-15

On April 29, 2015, Executive Order No. B-30-15 was issued to establish a California GHG reduction target of 40 percent below 1990 levels by 2030. Executive Order No. B-30-15 sets a new, interim, 2030 reduction goal intended to provide a smooth transition to the existing ultimate 2050 reduction goal set by Executive Order No. S-3-05 (signed by Governor Schwarzenegger in June 2005). It is designed so State agencies do not fall behind the pace of reductions necessary to reach the existing 2050 reduction goal. Executive Order No. B-30-15 orders "All State agencies with jurisdiction over sources of GHG emissions shall implement measures, pursuant to statutory authority, to achieve reductions of GHG emissions to meet the 2030 and 2050 targets." The Executive Order also states that "CARB shall update the Climate Change Scoping Plan to express the 2030 target in terms of million metric tons of carbon dioxide equivalent." CARB's second update to the Climate Change Scoping Plan (The 2017 Scoping Plan") reflects the 2030 reduction target and is described below.

Senate Bill 32

In September of 2016, Governor Brown signed Senate Bill (SB) 32 into law, which extended the goals of AB32 and set a goal 2030 goal of reducing GHG emissions 40 percent below 1990 levels by 2030. With SB 32, the Legislature passed companion legislation AB 197, which provided additional direction for developing the Scoping Plan.

In December of 2017, CARB adopted the second update to the Climate Change Scoping Plan, the 2017 Scoping Plan. The 2017 Scoping Plan provides a framework for achieving the 2030 target. The 2017 Scoping Plan Update builds upon the successful framework established by the initial Scoping Plan and the first update (the 2013 Update), while identifying new, technologically feasible, and cost-effective strategies to ensure that California meets its GHG reduction targets in a way that promotes and rewards innovation, continues to foster economic growth, and delivers improvements to the environment and public health, including in disadvantaged communities. The 2017 Plan includes policies to require direct GHG reductions at some of the State's largest stationary sources and mobile sources. These policies include the use of lower GHG fuels, efficiency regulations, and the Cap-and-Trade Program, which constraints and reduces emissions at covered sources. The 2017 Plan also noted that the Recycling and Waste Sector generates two percent of California's total GHG emissions.

California Green Building Standards Code

The 2016 California Green (CALGreen) Building Standards Code (California Code Regulations, Title 24, Part 11) is a comprehensive and uniform regulatory code for all residential, commercial and school buildings. The 2019 Standards were effective January 1, 2020.

CALGreen does not prevent a local jurisdiction from adopting a more stringent code as state law provides methods for local enhancements. CALGreen recognizes that many jurisdictions have developed existing construction and demolition ordinances, and defers to them as the ruling guidance provided they provide a minimum 50-percent diversion requirement. CALGreen also provides exemptions for areas not served by construction and demolition recycling infrastructure. State building code provides the minimum standard, which buildings need to meet in order to be certified for occupancy. Enforcement is generally through the local building official.

The development of CALGreen is intended to (1) cause a reduction in GHG emissions from buildings; (2) promote environmentally responsible, cost-effective, healthier places to live and work; (3) reduce energy and water consumption; and (4) respond to the directives by the Governor. In short, CALGreen is established to reduce construction waste; make buildings more efficient in the use of materials and energy; and reduce environmental impacts during and after construction.

CALGreen contains requirements for construction site selection, storm water control during construction, construction waste reduction, indoor water use reduction, material selection, natural resource conservation, site irrigation conservation, and more. CALGreen provides for design options allowing the designer to determine how best to achieve compliance for a given site or building condition. CALGreen also requires building commissioning, which is a process for verifying that all building systems, like heating and cooling equipment and lighting systems, are functioning at their maximum efficiency. The following provides examples of CALGreen requirements:

- **Designated parking.** Provide designated parking in commercial projects for any combination of low-emitting, fuel-efficient and carpool/van pool vehicles.

- **Recycling by Occupants.** Provide readily accessible areas that serve the entire building and are identified for the depositing, storage and collection of nonhazardous materials for recycling.

- **Construction waste.** A minimum 50-percent diversion of construction and demolition waste from landfills, increasing voluntarily to 65 and-75 percent for new homes and 80-percent for commercial projects. All (100 percent) of trees, stumps, rocks and associated vegetation and soils resulting from land clearing shall be reused or recycled.

- **Wastewater reduction.** Each building shall reduce the generation of wastewater by installation of water-conserving fixtures or using nonpotable water systems.

- **Water use savings.** 20-percent mandatory reduction in indoor water use with voluntary goal standards for 30, 35, and 40-percent reductions.

- **Water meters.** Separate water meters for buildings in excess of 50,000 square feet or buildings projected to consume more than 1,000 gallons per day.

- **Irrigation efficiency.** Moisture-sensing irrigation systems for larger landscaped areas.

- **Materials pollution control.** Low-pollutant emitting interior finish materials such as paints, carpet, vinyl flooring, and particleboard.

- **Building commissioning.** Mandatory inspections of energy systems (i.e. heat furnace, air conditioner, mechanical equipment) for nonresidential buildings over 10,000 square feet to ensure that all are working at their maximum capacity according to their design efficiencies.

Greenhouse Gas Regional Emission Estimates

In 2016, the United States emitted about 6,511 million metric tons of CO_2. Total U.S. emissions have increased by 2.4 percent from 1990 to 2016, and emissions decreased from 2015 to 2016 by 1.9 percent (126.8 million metric tons of CO_2). The decrease in total GHG emissions between 2015 and 2016 was driven in large part by a decrease in CO_2 emissions from fossil fuel combustion. The decrease in CO_2 emissions from fossil fuel combustion was a result of multiple factors, including substitution from coal to natural gas and other non-fossil energy sources in the electric power sector; and warmer winter conditions in 2016 resulting in a decreased demand for heating fuel in the residential and commercial sectors. Of the five major sectors nationwide — residential and commercial, industrial, agriculture, transportation, and electricity— electricity accounts for the highest fraction of GHG emissions (approximately 28 percent), closely followed by transportation (approximately 28 percent) and by industry (approximately 22 percent).[3]

[3] United States Environmental Protections Agency, *Inventory of U.S. Greenhouse Gas Emissions and Sinks: 1990-2016*, April 2018, https://www.epa.gov/ghgemissions/inventory-us-greenhouse-gas-emissions-and-sinks-1990-2016

In 2016, California emitted approximately 429.4 million tons of CO_2e. This represents approximately 6.6 percent of total U.S. emissions. This large number is due primarily to the sheer size of California compared to other states. California's gross emissions of GHGs decreased by 9.26 percent from 466.3 million metric tons of CO_2e in 2000, with a maximum of 492.7 million metric tons in 2004.[4] In 2016, the composition of GHG emissions in California (expressed as CO_2e) were as follows:

- CO_2 accounted for 83 percent;
- CH_4 accounted for 9 percent;
- N_2O accounted for 3 percent; and
- Fluorinated gases (hydrofluorocarbons (HFCs), perfluorinated compounds (PFCs), and sulfur hexafluoride (SF_6)) accounted for 5 percent.

Of these gases, the transportation is the source of approximately 41 percent of the State's GHG emissions, followed by industrial sources at 23 percent and electricity generation (both in-State and out-of-State) at 16 percent. Agriculture is the source of approximately 8 percent, residential activity is the source of about 7 percent, and commercial activities make up 5 percent.[5]

The majority of GHG emissions in the Bay Area come from transportation (39.7 percent), followed by industrial/commercial sources (35.7 percent) and electricity generation (14.0 percent). Construction equipment and other off-road equipment contribute 1.5 percent of the total GHG emissions.[6]

1.2 Findings and Conclusions Summary

ATC has performed this Phase I Environmental Site Assessment (ESA) of the property in conformance with the scope and limitations of ASTM Standard Practice E1527-13. Any exceptions to, or deletions from, this practice are described in Section 2.0 of this report. This assessment has revealed no evidence of *recognized environmental conditions* in connection with the property, except as noted in the summary of report findings and conclusions below.

FINDINGS AND CONCLUSIONS SUMMARY							
Report Section		Further Action?	De minimis Condition	REC and/or CREC	Historical REC	ASTM Non-Scope Condition	Description
4.0	User Provided Information	No					
5.1.1	Federal Database Findings	No					
5.1.2	State and Tribal Database Findings	No

Note 1) A Phase I Environmental Site Assessment was conducted by Environmental Science Associates in 2004. The site reconnaissance of the Couch Property identified small quantities of hazardous wastes and some soil staining. It appeared that the hazardous materials noted by the County in 1990 had been removed by the property owners, except for the gas cylinders and 3,000 gallon former underground storage tank. It is unknown where the County had observed the drums containing hazardous materials, the 10,000-gallon former underground storage tanks (USTs), and the other containers of hazardous materials. However, areas that had recently been disturbed and areas with a lack of vegetation were noted during the site reconnaissance. It appears that some of the hazardous materials, drums and the 10,000-gallon tanks may have been removed by the property owners. Based on the fact that the locations of the former USTs noted above is unknown and the lack of sampling including groundwater sampling, ATC considers the potential impacts from the USTs to be a *recognized environmental condition*.

Note 2) A Phase II Soil Investigation by Kleinfelder dated July 25, 2005. The investigation was conducted in response to several r*ecognized environmental conditions* which were noted in the report by Environmental Science Associates. The investigation was conducted in March through May 2005 and

consisted of nine Hollow-stem auger borings, four hand auger borings, and two test pits. A total of 34 soil samples were submitted for analysis. Groundwater was not sampled or analyzed during this investigation. Analytical tables were referenced in the report but no tables were included in the copy of the report obtained by ATC. Although this investigation was conducted on the approximately 106-acre Couch Property, only borings B-4 through B-12 (Appendix B) were advanced on the 35.85-acre property which is the subject of this report. The concentration of Chromium in B-12 at 15 feet bgs was noted at 130 milligrams per kilogram (mg/kg) which was noted above the screening levels used. However, concentrations of chromium in two samples collected at shallower levels from the same boring were noted below this level and, therefore, Kleinfelder determined the elevated concentration of chromium at 15 feet bgs was not due to a significant release. It should be noted that although the concentration of chromium noted above in boring B-12 at 130 mg/kg is above the 2005 ESLs, the concentration is below the current version of the February 2016 ESLs. As such the noted levels of chromium is considered an *historical recognized environmental concern*.

Note 3) Based on Kleinfelder's Phase I investigation completed in 2009, the Concentrated Area was reportedly previously occupied by a trailer and a methamphetamine lab in 2000. EPA guidelines note that soil sampling in areas of methamphetamine labs may be warranted if the ground is visibly stained or otherwise affected (e.g., odors burn piles, dead vegetation, or remnants of reaction waste. ATC did not observe evidence of dead vegetation or discarded waste on the day of the site reconnaissance (refer to Section 6.0). Thus, ATC considers the previous methamphetamine lab site to be a *de minimus condition* to the property.

1.3 Significant Data Gap Summary

Data gaps may have been encountered during the performance of this Phase I ESA and are discussed within the section of the report where they were encountered. However, according to ASTM Standard Practice E1527-13, data gaps are only significant if "other information and/or professional experience raise reasonable concerns involving the data gap." The following is a summary of *significant data gaps* identified in this report.

SIGNIFICANT DATA GAP SUMMARY		
Report Section		**Description**
3.5	**Current Uses of Adjoining Properties**	No *significant data gap* identified.
4.2	**Environmental Liens or Activity and Use Limitations (AULs)**	No *significant data gap* identified.
5.1	**Standard Environmental Records**	No *significant data gap* identified.
5.2	**Physical Setting Sources**	No *significant data gap* identified.
5.3	**Historical Records Sources**	No *significant data gap* identified.
6.1	**Methodology and Limiting Conditions**	No *significant data gap* identified.
7.0	**Interviews**	No *significant data gap* identified.

1.4 Recommendations

Based on information collected from the Phase I ESA, ATC offers the following recommendations:

- A Phase I Environmental Site Assessment was conducted by Environmental Science Associates in 2004. The site reconnaissance of the Couch Property identified small quantities of hazardous wastes and some soil staining. It appeared that the hazardous materials noted by the County in 1990 had been removed by the property owners, except for the gas cylinders and 3,000 gallon former underground storage tank. It is unknown where the County had observed the drums containing hazardous materials, the 10,000-gallon former USTs, and the other containers of hazardous materials. However, areas that had recently been disturbed and areas with a lack of vegetation were noted during the site reconnaissance. It appears that some of the hazardous materials, drums and the 10,000-gallon tanks may have been removed by the property owners. Based on the fact that the locations of the former USTs noted above is unknown and the lack of sampling including groundwater sampling, ATC considers the potential impacts from the USTs to be a *recognized environmental condition*. Therefore, ATC recommends a Phase II ESA for the property.

- If the property is to be developed, ATC recommends that a soil management plan be implemented. The plan would include contingencies for impacted areas. Also, if any septic systems and/or heating oil USTs are uncovered, they should be removed and disposed of per applicable regulations. In addition, if any wells are uncovered during development, it should be properly abandoned per applicable regulations.

2.0 INTRODUCTION

2.1 Purpose

The purpose of this Phase I ESA was to identify recognized environmental conditions in connection with the property at the time of the site reconnaissance. The scope of work for this Phase I ESA may also include certain potential environmental conditions beyond the scope of ASTM Standard Practice E1527-13 as listed below. This report documents the findings, opinions and conclusions of the Phase I ESA.

2.2 Scope

This Phase I ESA was conducted in general accordance with the ASTM Standard Practice E1527-13, consistent with a level of care and skill ordinarily practiced by the environmental consulting profession currently providing similar services under similar circumstances. Significant additions, deletions or exceptions to ASTM Standard Practice E1527-13 are noted below or in the corresponding sections of this report. The scope of this assessment included an evaluation of the following:

- Physical setting characteristics of the property through a review of referenced sources such as topographic maps and geologic, soils and hydrologic reports.

- Usage of the property, adjoining properties and surrounding area through a review of referenced historical sources such as land title records, fire insurance maps, city directories, aerial photographs, prior reports and interviews.

- Observations and interviews regarding current property usage and conditions including: the use, treatment, storage, disposal or generation of hazardous substances, petroleum products, hazardous wastes, nonhazardous solid wastes and wastewater.

- Usage of adjoining and surrounding area properties and the likely impact of known or suspected releases of hazardous substances or petroleum products from those properties in, on or at the property.

- Information in referenced environmental agency databases and local environmental records, within the specified approximate minimum search distance from the property.

- Potential for subsurface vapor migration in, on or at the property as described in Section 7.0.

The scope of the assessment also included consideration of the following potential environmental issues or conditions that are beyond the scope of ASTM Standard Practice E1527-13:

- Radon document review, consisting of the review of published radon data with regard to the potential for elevated levels of radon gas in the surrounding area of the property. No radon sampling was conducted.

- Lead in Drinking Water Data review, consisting of contacting the water supplier for information regarding whether or not the potable water provided to the property meets the drinking water standards for lead.

- Wetlands document review, consisting of a review of a current National Wetlands Inventory map of the surrounding area to note if the property is identified as having a wetland.

- Flood plain document review, consisting of a review of a reasonably ascertainable flood plain map of the surrounding area to note if the property is identified as being located within a flood plain.

- Regulatory Agency File and Records Review, consisting of conducting a file review (i.e., via Freedom of Information Act (FOIA) request or alternative method/source) for the property and/or one adjoining property at one regulatory agency, as warranted by the findings of the ESA.

2.3 Significant Assumption

The assumptions in this report were not considered as having significant impact on the determination of *recognized environmental conditions* associated with the property.

2.4 Limitations and Exceptions

ATC has prepared this Phase I ESA report using reasonable efforts to identify *recognized environmental conditions* associated with hazardous substances or petroleum products in, on or at the property. Findings contained within this report are based on information collected from observations made on the day(s) of the site reconnaissance and from reasonably ascertainable information obtained from certain public agencies and other referenced sources.

The ASTM Standard Practice E1527-13 recognizes inherent limitations for Phase I ESAs, including, but not limited to:

- *Uncertainty Not Eliminated* – A Phase I ESA cannot completely eliminate uncertainty regarding the potential for *recognized environmental conditions* in connection with any property.

- *Not Exhaustive* – A Phase I ESA is not an exhaustive investigation of the property and environmental conditions on such property.

- *Past Uses of the Property* – Phase I requirements only require review of standard historical sources at five year intervals. Therefore, past uses of property at less than five year intervals may not be discovered.

Users of this report may refer to ASTM Standard Practice E1527-13 for further information regarding these and other limitations. This report is not definitive and should not be assumed to be a complete and/or specific definition of all conditions above or below grade. Current subsurface conditions may differ from the conditions determined by surface observations, interviews and reviews of historical sources. The most reliable method of evaluating subsurface conditions is through intrusive techniques, which are beyond the scope of this report. Information in this report is not intended to be used as a construction document and should not be used for demolition, renovation, or other property construction purposes. Any use of this report by any party, beyond the scope and intent of the original parties, shall be at the sole risk and expense of such user.

ATC makes no representation or warranty that the past or current operations at the property are, or have been, in compliance with all applicable federal, state and local laws, regulations and codes. This report does not warrant against future operations or conditions, nor does it warrant against operations or conditions present of a type or at a location not investigated. Regardless of the findings stated in this report, ATC is not responsible for consequences or conditions arising from facts not fully disclosed to ATC during the assessment.

An independent data research company provided the government agency database referenced in this report. Information on surrounding area properties was requested for approximate minimum search

distances and is assumed to be correct and complete unless obviously contradicted by ATC's observations or other credible referenced sources reviewed during the assessment. ATC shall not be liable for any such database firm's failure to make relevant files or documents properly available, to properly index files, or otherwise to fail to maintain or produce accurate or complete records.

ATC makes no warranty, guarantee or certification regarding the quality, accuracy or reliability of any prior report provided to ATC and discussed in this Phase I ESA report. ATC expressly disclaims any and all liability for any errors or omissions contained in any prior reports provided to ATC and discussed in this Phase I ESA report.

ATC used reasonable efforts to identify evidence of aboveground and underground storage tanks and ancillary equipment on the property during the assessment. "Reasonable efforts" were limited to observation of accessible areas, review of referenced public records and interviews. These reasonable efforts may not identify subsurface equipment or evidence hidden from view by things including, but not limited to, snow cover, paving, construction activities, stored materials and landscaping.

Any estimates of costs or quantities in this report are approximations for commercial real estate transaction due diligence purposes and are based on the findings, opinions and conclusions of this assessment, which are limited by the scope of the assessment, schedule demands, cost constraints, accessibility limitations and other factors associated with performing the Phase I ESA. Subsequent determinations of costs or quantities may vary from the estimates in this report. The estimated costs or quantities in this report are not intended to be used for financial disclosure related to the Financial Accounting Standards Board (FASB) Statement No. 143, FASB Interpretation No. 47, Sarbanes/Oxley Act or any United States Securities and Exchange Commission reporting obligations, and may not be used for such purposes in any form without the express written permission of ATC.

ATC is not a professional title insurance or land surveyor firm and makes no guarantee, express or implied, that any land title records acquired or reviewed in this report, or any physical descriptions or depictions of the property in this report, represent a comprehensive definition or precise delineation of property ownership or boundaries.

The Environmental Professional Statement in Section 1.1 of this report does not "certify" the findings contained in this report and is not a legal opinion of such *Environmental Professional*. The statement is intended to document ATC's opinion that an individual meeting the qualifications of an Environmental Professional was involved in the performance of the assessment and that the activities performed by, or under the supervision of, the *Environmental Professional* were performed in conformance with the standards and practices set forth in 40 CFR Part 312 per the methodology in ASTM Standard Practice E1527-13 and the scope of work for this assessment.

Per ASTM Standard Practice E1527-13, Section 6, User Responsibilities, the User of this assessment has specific obligations for performing tasks during this assessment that will help identify the possibility of *recognized environmental conditions* in connection with the property. Failure by the User to fully comply with the requirements may impact their ability to use this report to help qualify for *Landowner Liability Protections* (LLPs) under Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). ATC makes no representations or warranties regarding a User's qualification for protection under any federal, state or local laws, rules or regulations.

In accordance with the ASTM Standard Practice E1527-13, this report is presumed to be valid for a six month period. If the report is older than six months, the following information must be updated in order for the report to be valid: (1) regulatory review, (2) site visit, (3) interviews, (4) specialized knowledge and (5) environmental liens search. Reports older than one year may not meet the ASTM Standard PracticE1527-13 and therefore, the entire report must be updated to reflect current conditions and property-specific information.

Other limitations and exceptions that are specific to the scope of this report may be found in corresponding sections.

2.5 Special Terms and Conditions (User Reliance)

This report is for the use and benefit of, and may be relied upon by, Stravinski Development Group, LLC, Peter T. Stravinski and any affiliates and their respective successors and assigns, in connection with a commercial real estate transaction involving the property. No third party is authorized to use this report for any purpose. Any use by or distribution of this report to third parties, without the express written consent of ATC, is at the sole risk and expense of such third party.

3.0 SITE DESCRIPTION

3.1 Location and Legal Description

The property address has not been established at this time. However, the property is located on Commerce Boulevard, American Canyon, California 94503. The Site Vicinity Map is located in Appendix A. The Site Plan is located in Appendix B. Site Photographs are provided in Appendix C. According to information obtained from the Napa County Property Assessor's office, the property is identified as Assessor's Parcel Number (APN); 058-030-065-000.

3.2 Surrounding Area General Characteristics

The property is located within the northern section of the City of American Canyon in an area characterized by industrial uses and undeveloped land. Surface topography across the property and in the surrounding area is relatively flat with a slope towards the west. Specific adjacent and abutting properties are summarized in Section 3.5.

3.3 Current Use of the Property

The property consists of one parcel totaling approximately 35.85 acres of undeveloped land. The property is located to the north of Eucalyptus Drive and to the west of the city utility access road. At the time of the site visit, the property was undeveloped land.

A Site Plan is included in Appendix B.

3.4 Description of Property Improvements

The following table provides general descriptions of the property improvements.

PROPERTY IMPROVEMENTS	
Size of Property (approximate)	35.85 acres
General Topography of Property	Relatively flat with a slope towards the west.
Adjoining and/or Access/Egress Roads	A city utility access road to the east.
Paved or Concrete Areas (including parking)	None
Unimproved Areas	The property is unimproved.
Landscaped Areas	None
Surface Water	None
Potable Water Source	None
Sanitary Sewer Utility	None
Storm Sewer Utility	None
Electrical Utility	None
Natural Gas Utility	None
Current Occupancy Status	The property is unoccupied.
Unoccupied Buildings/Spaces/Structures	Not applicable (N/A)
Number of Occupied Buildings	N/A

Building Name or General Building Description	N/A
Number of Floors	N/A
Total Square Feet of Space (approximate)	N/A
Construction Completion Date (year)	N/A
Construction Type	N/A
Interior Finishes Description	N/A
Exterior Finishes Description	N/A
Cooling System Type	N/A
Heating System Type	N/A
Emergency Power	None

3.5 Current Uses of Adjoining Properties

Current uses of the adjoining properties were observed to be as follows:

Direction from Property	Address	Occupant(s) Name	Current Use	Potential Environmental Conditions
North	1155 Commerce Boulevard	Western Carriers Inc	Industrial	None
South	N/A	Clark Ranch	City owned open space	None
East, beyond the city utility access road	2 Eucalyptus Drive	American Canyon Paintball	Commercial	Refer to Section 5.1
West	N/A	Undeveloped Land	Undeveloped	None

4.0 USER PROVIDED INFORMATION

The following section summarizes information (if any) provided by Stravinski Development Group (User) with regard to the Phase I ESA. Documentation may be found in Appendix D or where referenced in this report.

4.1 Title Records

The User provided no title records information.

4.2 Environmental Liens or Activity and Use Limitations (AULs)

The User provided no information regarding property environmental liens or activity and use limitations (AULs). ATC contracted Environmental Data Resources, Inc. (EDR) of Shelton, Connecticut to perform an environmental lien search for the property. According to the environmental lien and AUL search report the property, APN 058-030-065-000 is vested in the American Canyon Flatland Co Inc and the Deed is dated December 12, 2016. The EDR environmental lien search did not identify any environmental liens or AULs associated with the property.

A copy of the report is included in Appendix L.

4.3 Specialized Knowledge or Experience of the User

The User provided no specialized knowledge regarding *recognized environmental conditions* associated with the property.

4.4 Significant Valuation Reduction for Environmental Issues

The User provided no information regarding a significant valuation reduction for environmental issues associated with the property.

4.5 Owner, Property Manager and Occupant Information

The User identified the property as one vacant parcel located on Commerce Boulevard, American Canyon, California. The owner was specified as SDG Commerce 330, LLC.

4.6 Reason for Performing Phase I ESA

According to information provided by the User, this Phase I ESA will be used in connection with a commercial real estate transaction to identify *recognized environmental conditions* associated with the property.

4.7 Other User Provided Documents

The User provided no other documents as described in the ASTM Standard Practice E1527-13. Copies of these documents are provided in Appendix H and are described in Section 5.3.9.

It should be noted that these documents relate to what is known as the “Couch Property” which is an approximately 106-acre property which includes the 35.85-acre property which is the subject of this report. Refer to the Site Plan which is located in Appendix B for the outline of both the Couch Property and the property which is the subject of this report.

OTHER USER PROVIDED DOCUMENTS		
Title	**Date (if known)**	**Author and/or Source (if known)**
Couch Property Phase I Environmental Site Assessment	October 14, 2004	Environmental Science Associates
Phase II Soil Investigation	July 25, 2005	Kleinfelder
Phase I Environmental Site Assessment	March 16, 2006	Innovative & Creative Environmental Solutions (ICES)
Phase I Environmental Site Assessment 2 Eucalyptus Drive American Canyon, California	December 22, 2009	Kleinfelder
Limited Site Investigation	April 19, 2010	ICES

5.0 RECORDS REVIEW

5.1 Standard Environmental Records

The regulatory agency database report discussed in this section, provided by EDR, was reviewed for information regarding reported use or release of hazardous substances and petroleum products on or near the property. Unless otherwise noted, the information provided by the regulatory agency database report and other sources referenced in this report, were considered sufficient for *recognized environmental condition (REC)*, *controlled recognized environmental condition (CREC)*, *historical recognized environmental condition (HREC)* or *de minimis condition* determinations without conducting supplemental agency file reviews. ATC also reviewed the "unmappable" (also referred to as "orphan") listings within the database report, cross-referencing available address information and facility names. Unmappable sites are listings that could not be plotted with confidence, but are potentially in the general area of the property, based on the partial street address, city, or zip code. Any unmappable site that was identified by ATC as being within the approximate minimum search distance from the property, based on the site reconnaissance and/or cross-referencing to mapped listings, is included in the discussion within this section. The complete regulatory agency database report may be found in Appendix E.

The following is a summary of the findings of the database review.

SUMMARY OF FEDERAL, STATE AND TRIBAL DATABASE FINDINGS			
Regulatory Database	**Approx. Minimum Search Distance**	**Property Listed?**	**# Sites Listed**
Federal National Priority List (NPL)	1 mile	No	0
Federal Delisted NPL	½ mile	No	0
Federal Comprehensive Environmental Response, Compensation, and Liability Information System (CERCLIS) list	½ mile	No	0
Federal CERCLIS No Further Remedial Action Planned (NFRAP)	½ mile	No	0
Federal Resource Conservation and Recovery Act (RCRA), Corrective Action facilities (CORRACTS)	1 mile	No	0
Federal RCRIS non- CORRACTS Treatment, Storage, and Disposal Facilities (TSD)	½ mile	No	0
Federal RCRA Generators	Property & Adjoining	No	2
Federal Institutional Control/Engineering Control Registry	Property	No	0
Federal Emergency Response Notification System (ERNS) list	Property	No	0
National Pollutant Discharge Elimination System (NPDES)	Property	**Yes**	1
State and Tribal NPL (ENVIROSTOR)	1 mile	No	0
State and Tribal CERCLIS	½ mile	No	2
State and Tribal Landfill or Solid Waste Disposal Sites	½ mile	No	1
State and Tribal Leaking Underground Storage Tanks (LUST)	½ mile	Yes	2
State and Tribal Registered Underground Storage Tanks (UST)	Property & Adjoining	No	2
California Spills, Leaks, and Incident Clean-Up (CA SLIC)	½ mile	No	0
State and Tribal Institutional Control/Engineering Control Registry	Property	No	0
State and Tribal Voluntary Cleanup Site	½ mile	No	0
State and Tribal Brownfield Sites	½ mile	No	0
Hazardous Waste Manifests (HAZNET)	½ mile	No	0

5.1.1 Federal Agency Database Findings

The property was identified within the federal agency databases searched as part of the Couch Property. Listings for the Couch Property are discussed below. State database listings, corresponding to these federal database listings, are also discussed below.

Couch Property
2 Eucalyptus Drive
Databases: NPDES, Napa County LUST
Approximate Distance from the Property: Includes the property and east adjacent site, beyond Commerce Boulevard
Assumed Groundwater Gradient: Up-gradient
Regulatory Data Summary: The Couch Property is a 100+ acres site which includes the property. Listings for the Couch Property include a National Pollutant Discharge Elimination System (NPDES) permit issued in 2012. However, no other details are provided by EDR. Upon review of aerial photographs, the listing is in relation to the removal of the eucalyptus grove on the property.

The site is listed as a closed leaking underground storage tank (LUST) site. No details are provided by EDR. However, correspondence letters provided by the Napa County Planning Building and Environmental Services (NCPBES) indicated three USTs sitting on top of the ground and several 55-gallon drums. All but five drums were empty, two 10,000-gallon tanks were empty and one 3,000-gallon tank was partially full of an oily liquid. The tanks were noted to be in Area 5 of the Couch Property which is adjacent to the east of the property. Samples were collected from the five drums and the storage tank containing oily liquid. The samples were collected by a Hazardous Materials Team composed of staff from the California Department of Forestry and the American Canyon Fire Protection District. A total of six liquid samples were collected and submitted to a laboratory for chemical analysis (refer to Section 5.3.9 for further discussion).

In a 2009 Phase I Environmental Assessment, Kleinfelder mapped the areas in which contamination occurred (refer to the Appendix B Site Plan). According to the map, the tanks and dumping occurred east of the property beyond the government utility access road. No other leaks or violations were reported. Refer to Section 5.3.9 for additional information.
Discussion: Based on the offsite location (Area 5 beyond the government utility access road), the LUST listings are not considered to represent a *recognized environmental condition* to the property at this time

5.1.2 State and Tribal Database Findings

State and tribal database listings for the Couch Property, which includes the property, were previously discussed in Section 5.1.1.

Based on distance, topography, assumed groundwater gradient, current regulatory status, and/or the absence of reported releases, none of the other sites listed in the federal agency databases searched are considered to represent a likely past, present or material threat of release in, on, or at the property.

5.1.3 Local Environmental Records Sources

Local Health Department

ATC contacted the NCPBES Department to review available information regarding the property. Mr. John Kara of the NCPBES responded via email on April 2, 2018 and stated a soil boring permit (Permit # E18-00161) was issued on March 2, 2018.

In addition, Mr. Brian Clerici of the NCPBES sent files to ATC via email on April 13, 2018 for the Couch Property (2 Eucalyptus Drive) as summarized below. The Couch Property is a 100+ acre site which includes the property. The NCPBES records summarized below were issued for the entire Couch Property site therefore it is unknown which records are specific to the property portion of the site.

On November 15, 1973, an application was submitted by Mr. Robert Couch to build a domestic well at the Couch Property. On July 18, 1979, a second application was submitted to add an additional domestic well to the Couch Property. According to the site maps, neither of the domestic wells are located on the property.

On November 16, 1990, Napa County issued an Inspection Warrant for the Couch Property in order to perform observations, take photographs, and sample materials. The exact locations of the violations were not specified in the document due to tremendous amounts of debris, garbage, abandoned vehicles, machinery, equipment, trash heaps, concrete rubble, and three tanks and a railroad car.

In a correspondence from Napa County dated November 19, 1990, the results of the inspection of the Couch Property by Napa County indicated the following:

- The presence of people living on the Couch Property.
- A box containing six cardboard tubes labeled “GAMMA-FLAME” was found.
- Scattered throughout were used batteries and unmarked containers containing what appeared to be used oil and antifreeze.
- Many 55-gallon drums were found onsite and only five were full or partially-full.
- There were at least three tanks on the property; two are 10,000 gallons and empty. The third was a three-thousand gallon tank partially filled with an oily liquid.
- Compressed gas cylinders were found in a deteriorated condition with rust and corrosion forming on them
- In general, the hazardous wastes fell into four categories; oil or oily wastes, compressed gas cylinders, paints, lacquers, thinners, and solvents, unknowns in small containers, and automobile batteries.

Also recorded on November 19, 1990, a hazmat team composed of staff from the California Department of Forestry and the American Canyon Fire Protection District collected a total of six liquid samples. Five of the samples were taken from five 55-gallon drums and one sample from the three-thousand gallon tank. One sample was found on the south portion of the property which lies on the subject property and the other five were collect on the north portion of the east adjacent site. The gas cylinders in deteriorated condition and cylinders of hydrogen were noted to be the objects of most concern. One 55-drum showed leakage from the top rim and was heavily staining the wood pallet it was resting on.

The NCPBES concluded that the soil piles, asphalt piles, debris piles, hazardous materials, petroleum products, and abandoned automobiles indicated that the Couch Property owners allowed unpermitted dumping to take place on site. No records indicating soil or groundwater testing at the site were provided

On April 30, 2003, Napa County received a bid from Kroeker, Inc. of Fresno, California for the removal, cleaning, and grubbing for the Couch Property. The scope of work included demolishing all structures and animal pens, removal of all miscellaneous debris and garbage, removal of two 10,000-gallon fuel tanks presumed to be non-hazardous, and all trees and stumps within the site.

In a correspondence letter dated January 25, 2005, the Deputy County Counsel stated there were numerous tasks listed in a Stipulated Order that still needed to be completed. Some of the main unaddressed concerns included removal of the five trailers, removal of formerly excavated USTs, all scrap metal, motor vehicle tires and dismantled motor vehicles onsite. Itis unclear in the letter if the unaddressed tasks pertained to the property.

According to a site plan map in Kleinfelder's 2009 Phase I ESA, the illegal dumping occurred east of the property across the city utility access road (refer to Section 5.3.9 for additional details). During ATC's site reconnaissance on April 5, 2018, none of the materials noted above were observed. Based on the offsite location of the illegal dumping, the former use of the Couch Property as an unpermitted dumping site is not considered to represent an *recognized environmental concern* to the property.

California Environmental Protection Agency, Department of Toxic Substances Control (DTSC)

ATC contacted the DTSC and requested available files for the property. Ms. Ruth Saroian of the DTSC responded on April 2, 2018 and stated that no files exist for the property.

According to the DTSC EnviroStor website, http://www.envirostor.dtsc.ca.gov/public, the DTSC has no files for the property.

Regional Water Quality Control Board (RWQCB)

ATC contacted the RWQCB, San Francisco Regional Office and requested available files for the property. Ms. Margie Saldana of the RWQCB responded on March 29, 2018 and stated the department is no longer able to perform searches by APN. Since no physical address has been assigned to the property, the RWQCB could not perform a records search for the property.

According to the RWQCB GeoTracker website, http://geotracker.swrcb.ca.gov, no LUST sites or Spills, Leaks, Investigations and Clean-Up (SLIC) sites are located on the property.

Bay Area Air Quality Management District

ATC contacted the Bay Area Air Quality Management District (BAAQMD) to review available information regarding the property. The BAAQMD has not provided a response to ATC's request as of the date of this report. If information becomes available to ATC that alters the conclusions and/or recommendations presented herein, an addendum will be submitted.

Local Fire Department

ATC contacted then American Canyon Fire Department (ACFD) to review available information regarding the property. The ACFD has not provided a response to ATC's request as of the date of this report. If information becomes available to ATC that alters the conclusions and/or recommendations presented herein, an addendum will be submitted.

Department of Planning and Zoning

According to the City of American Canyon Planning Department (ACPD), the property is zoned *Recreation (REC).*

Building Department

ATC contacted the American Canyon Building Department (ACBD) to review available historical building department records for information regarding past uses of the property. Mr. William He of the ACBD responded on April 3, 2018 and stated that no building permits exist. However, Mr. He reported the department had communicated with the developer regarding a prospective warehouse, but no applications for the design permit have been submitted.

Electrical Utility Company

ATC confirmed the electrical utility for the surrounding area is provided by PG&E.

Water Utility

The City of American Canyon provides potable water utilities to the surrounding area.

Sewer Utility

The City of American Canyon provides municipal sewage utilities to the surrounding area.

Other Local Environmental Records Sources

No additional local environmental records sources were reviewed.

5.2 Physical Setting Sources

5.2.1 Topography

Based on the United States Geological Survey (USGS) 7.5-Minute Topographic Maps, *Cuttings Wharf, California, and Cordelia, California Quadrangles,* dated 2012, the property is located approximately 19 feet above mean sea level (MSL) and has a sloping topography towards the west.

A copy of the topographic map is included in Appendix A.

5.2.2 Geology

Based on the California Department of Conservation, *California Geological Survey, Preliminary geologic map of Solano County and Parts of Napa, Contra Costa, Marin, and Yolo Counties*, the property is primarily underlain by Older Alluvium, consisting of mainly flood-plain and alluvial-fan deposits adjacent to mountainous areas; sand, gravel, silt, and clay irregularly interstratified, commonly unconsolidated. This series is of the Quaternary era.

5.2.3 Soils

According to ATC's review of the United States Department of Agriculture Soil Conservation Service *Web-Based Soil Survey,* the property is underlain by Clear Lake Clay with zero to two percent slope (1%) and Haire Loam with two to nine percent slope (99%). Both Clear Lake Clay and Haire Loam consist of alluvium derived sedimentary rock.

A copy of the soil map is included in Appendix L.

5.2.4 Hydrology

Considering the surface topography for the property area, as interpreted from the *Cuttings Wharf, California, and Cordelia, California* topographic quadrangles, local groundwater would be expected to flow towards the west. Therefore, in assessing potential off-site environmental impacts, facilities located east of the property are of primary concern. However, actual groundwater flow direction is often locally influenced by factors such as underground structures, seasonal fluctuations, soil and bedrock geology, production wells, and other factors beyond the scope of this study. The actual groundwater flow direction under the property can be accurately determined only by installing groundwater-monitoring wells, which was beyond the scope of this project.

Depth to groundwater beneath the site has not been determined. Based on the soil investigation by Kleinfelder in 2005, groundwater was not encountered above 31 feet bgs.

5.2.5 Other Physical Setting Sources

Flood Plain Map

According to the Federal Emergency Management Agency (FEMA), the property is located in Flood Zone X, which is identified by FEMA as “areas determined to be outside [of the] 500-year floodplain” and Zone AE, which is identified by FEMA as “areas that have a 1% probability of flooding every year,” (Flood Insurance Rate Map [FIRM] Map Number 06055C0617F, dated August 3, 2016).

A copy of the FIRM is included in Appendix L.

Wetlands Map

Based on a review of the United States Department of the Interior, National Wetlands Inventory (NWI) Map (undated, online Wetlands Mapper at http://www.nwi.fws.gov/), there are no potential wetlands on the property.

A copy of the NWI map is included in Appendix L.

5.3 Historical Records Sources

The following table summarizes the findings of the research presented below pertaining to historical property and surrounding area uses.

HISTORICAL USE SUMMARY				
Period	**Identified Historical Uses**		**Source(s)**	**Intervals/Comments**
	Property	**Surrounding Area**		
Prior to 1940	Undeveloped/ Agricultural/ Residential	Undeveloped/ Agricultural/ Residential	Topographic Maps	The earliest record for the property is a 1902 topographic map which depicts the property and surrounding area as undeveloped land.
1940 - 1960	Undeveloped/ Agricultural/ Residential	Undeveloped/ Agricultural/ Residential	Aerial Photographs Topographic Maps	Interval data gaps exist. Land use does not change across the interval gaps and therefore, is not considered significant.
1961 - 1980	Undeveloped/ Agricultural/ Residential	Undeveloped/ Agricultural/ Residential/ Industrial	Aerial Photographs Topographic Maps Tax Records	Interval data gaps exist. Land use does not change across the interval gaps and therefore, is not considered significant.
1981 - 2000	Undeveloped/ Agricultural/ Residential	Undeveloped/ Agricultural/ Residential/ Industrial	Aerial Photographs Topographic Map Tax Records	Interval data gaps exist. Land use does not change across the interval gaps and therefore, is not considered significant.
2001 - present	Agricultural/ Undeveloped	Undeveloped/ Agricultural/ Industrial	Aerial Photographs Tax Records Regulatory Listings City Directory Listings	No data gaps.

Interval gaps (greater than five years) were encountered during the research of historical use information for the property and surrounding area. However, based on the review of available historical sources, these data gaps did not have an impact on the REC determinations of this assessment and are not significant data gaps.

5.3.1 Aerial Photographs

ATC reviewed available aerial photographs of the property and surrounding area provided by EDR. Available aerial photographs ranged from 1947 to 2012. The following are descriptions and interpretations from the aerial photograph review. Copies of reproducible aerial photographs are included in Appendix F.

AERIAL PHOTOGRAPH SUMMARY		
Year	**Scale**	**Comments**
1947 1952 1958 1968 1974 1982	1 inch = 500 feet	**Property**: The majority of the property is depicted as undeveloped land; specifically eucalyptus groves. **Surrounding Area**: The surrounding area is depicted as open fields and eucalyptus groves. A residential home is depicted to the south.
1993	1 inch = 500 feet	**Property**: No notable changes since the 1982 aerial photograph. **Surrounding Area**: No notable changes to the surrounding areas since the 1982 aerial photograph. However, the residential home to the south is no longer depicted.
2006 2010	1 inch = 500 feet	**Property**: No notable changes since the 1993 aerial photograph. **Surrounding Area**: To the north appears multiple large industrial warehouses and to the east appears Commerce Boulevard and nondescript structures. No notable changes to the south and west since the 1993 aerial photograph.
2014	1 inch = 500 feet	**Property**: The eucalyptus grove is removed and an open field is depicted. **Surrounding Area**: No notable changes to the surrounding area since the 2010 aerial photograph.

The review of aerial photographs did not identify past uses indicating *recognized environmental conditions* in, on, or at the property or surrounding area.

5.3.2 Fire Insurance Maps

A search for fire insurance maps for the property and surrounding area was conducted by EDR. No such maps for the property were available.

5.3.3 Property Tax Files

ATC obtained reasonably ascertainable tax files from the Nationwide Environmental Title Research (NETR) online database for historical ownership information pertaining to the property. The table below presents the results of the historical ownership information.

TAX RECORDS OWNERSHIP SUMMARY	
Owner: Parcel Number 075-130-002	**Date**
American Canyon Flat Land Co I	December 2016 to current

The review of tax files did not identify past uses indicating *recognized environmental conditions* in, on, or at the property or surrounding area.

5.3.4 Recorded Land Title Records

The acquisition of recorded land title records was not required by the scope of work for the Phase I ESA.

5.3.5 Historical USGS Topographic Maps

ATC reviewed available historical USGS Topographic Maps for information regarding past uses of the property provided by EDR. Available historical USGS Topographic Maps were dated 1902, 1914, 1916, 1947, 1949, 1951, 1968, 1973, 1980, 1981, and 2012. The property and surrounding area are depicted as vacant land on all available maps. Documentation is included in Appendix G.

The review of historic USGS Topographic Maps did not identify specific past uses indicating *recognized environmental conditions* in, on, or at the property or surrounding area.

5.3.6 City Directories

Research regarding the availability of historical city directories was conducted by EDR. The following are descriptions and interpretations from the historical city directory review. Documentation is included in Appendix G.

CITY DIRECTORY SUMMARY	
Year	**Comments**
1995	**Property**: No listings **Surrounding Area**: Good Health America (1245 Commerce Boulevard)
2000	**Property**: No listings **Surrounding Area**: Pokka USA Inc (1201 Commerce Boulevard) Santa Clara Warehouse Inc (1275 Commerce Boulevard)
2005	**Property**: No listings **Surrounding Area**: Hess Collection Winery (1166 Commerce Boulevard) Pro Mortgage Partners LLC (1175 Commerce Boulevard) PB Holdings Inc, Pokka USA Inc (1201 Commerce Boulevard) Santa Clara Warehouses Inc, Western Wine Service (1275 Commerce Boulevard)
2010	**Property**: No listings **Surrounding Area**: Grapevine Express, Hess Collection Winery, Tricana Inc, Zepexco Inc (1166 Commerce Boulevard) Amcan Beverages Inc, Coca Cola North America, Fluid Resource Management, Pacific Solutions Construction, Sun Pokka Citrus Inc (1201 Commerce Boulevard) Bacchus Distribution Co LLC (1245 Commerce Boulevard) Western Wine Services Inc (1275 Commerce Boulevard)

CITY DIRECTORY SUMMARY	
Year	**Comments**
2014	**Property**: No listings **Surrounding Area**: Hess Collection Winery, Zepexco Inc (1166 Commerce Boulevard) Amcan Beverages Inc, Coca Cola North America, (1201 Commerce Boulevard) Vin Go LLC (1245 Commerce Boulevard) Western Wine Services Inc (1275 Commerce Boulevard)

The review of city directories did not identify past uses indicating *recognized environmental conditions* in, on, or at the property or surrounding area.

5.3.7 Building Department Records

ATC contacted the American Canyon Building Department to review available historical building department records for information regarding past uses of the property. Mr. William He of the ACBD responded on April 3, 2018 and stated that no building permits exist. However, the department spoke with the developer on a prospective warehouse, but no applications for the design permit have been submitted.

5.3.8 Zoning/Land Use Records

ATC attempted to review available historical zoning/land use records at the ACPD for information regarding past uses of the property and surrounding area. No historical use information was available for the property. According to the ACPD, the property is zoned as *Recreation (REC).*

5.3.9 Prior Reports

The following provides a summary of information from prior reports made available to ATC for review. Documentation is included in Appendix H. Proposals and field forms associated with the reports below are not summarized but are included in Appendix H.

It should be noted that these documents relate to what is known as the “Couch Property” which is an approximately 106-acre property which includes the 35.85-acre property which is the subject of this report. Refer to the Site Plan which is located in Appendix B for the outline of both the Couch Property and the property which is the subject of this report.

Phase I Environmental Site Assessment by Environmental Science Associates dated October 14, 2004

The Phase I ESA was conducted for the Couch Property and the report concluded the following:

- There is past and present undocumented and illegal storage of hazardous materials and wastes on the Couch Property. The Napa County Department of Environmental Management inspected the property in 1990 and determined that the property constitutes an illegal junk yard and refuse disposal area, which constitutes a public nuisance. The violations found by the County at the property range from storage of hazardous wastes over 90 days without a permit to failure of the generator to determine if his wastes are hazardous and to properly manage hazardous wastes.

- The site reconnaissance of the Couch Property identified small quantities of hazardous wastes and some soil staining. It appeared that the hazardous materials noted by the County in 1990 had been removed by the property owners, except for the gas cylinders and 3,000 gallon former underground storage tank. It is unknown where the County had observed the drums containing hazardous materials, the 10,000-gallon former USTs, and the other containers of hazardous

materials. However, areas that had recently been disturbed and areas with a lack of vegetation were noted during the site reconnaissance. It appears that some of the hazardous materials, drums and the 10,000-gallon tanks may have been removed by the property owners.

- It is possible that methamphetamine labs operated in the eucalyptus groves in the area of the Couch Property. Operations of these types of labs typically produce hazardous wastes including phosphine gas, solvent, benzene, chloroform and thionyl chloride.

- A portion of the Couch Property was used to cut and store wood. A large amount of soil containing some type of oil was deposited on a portion of the property. There is an area of this portion of the property that appeared to have been leveled and graded where soil might have been brought onsite. Chief Keith Caldwell of the American Canyon Fire District remembers that soil was brought onto the property in the 1970s for a motorcycle track.

- The County identified two unapproved water wells on the property in their 1990 investigation. However, Environmental Science Associates staff could only locate one of the water wells.

- There are outhouses (holes in the ground) on the property that have been used for sewage disposal.

The recommendations of the report included the following:

- Soil and groundwater sampling is to be completed in the areas of concern that were identified by the Phase I report. It may also be necessary to sample other areas of the property as dictated by field personnel that will perform the soil and groundwater sampling at the site, depending on what is encountered during sampling. At a minimum, the soil and groundwater samples should be analyzed for petroleum hydrocarbons, oil and grease, solvents, and priority pollutant metals. The Phase II report should provide recommendations based on the laboratory analytical results.

- Due to the history of the use of the Couch Property, it is difficult to determine what might be uncovered during earth moving activities if the land is developed. At the time of excavation of the site for development, soil and groundwater sampling should be completed in any areas of the property where buried hazardous materials, odors, or stained soil are found. The results of the laboratory analytical results would provide the information needed to determine whether excavation of the soil would be necessary and whether the soil would need to be removed and properly disposed offsite.

- The water wells should be abandoned in accordance with California water well standards and Napa County protocol.

- The sewage disposal areas should be closed in accordance with Napa County protocol.

It should be noted that although the areas which were a concern by Environmental Science Associates are located within the approximately 106-acre Couch Property, the areas of concern are actually located to the east of the 35.85-acre property which is the subject of this report.

Based on the fact that the locations of the former USTs noted above is unknown and the lack of sampling including groundwater sampling, ATC considers the potential impacts from the USTs to be a *recognized environmental condition*.

Phase II Soil Investigation by Kleinfelder dated July 25, 2005

The investigation was conducted in response to several recognized environmental conditions which were noted in the report by Environmental Science Associates. The investigation was conducted in March through May 2005 and consisted of nine Hollow-stem auger borings, four hand auger borings, and two test pits. A total of 34 soil samples were submitted for analysis. Groundwater was not sampled or analyzed during this investigation. Analytical tables were referenced in the report but no tables were included in the copy of the report obtained by ATC.

Although this investigation was conducted on the approximately 106-acre Couch Property, only borings B-4 through B-12 (Appendix B) were advanced on the 35.85-acre property which is the subject of this report. Results that relate to the 35.85-acre property which is the subject of this report are the following:

- The report notes the presence of gasoline and BTEX which were detected in boring B-12 at 15 feet bgs in "low concentrations" that were below the 2005 Environmental Screening Levels (ESL's) as defined by the San Francisco Bay Water Board for residential shallow soils.

- The concentration of Chromium in B-12 at 15 feet bgs was noted at 130 milligrams per kilogram (mg/kg) which was noted above the screening levels used. However, concentrations of chromium in two samples collected at shallower levels from the same boring were noted below this level and, therefore, Kleinfelder determined the elevated concentration of chromium at 15 feet bgs was not due to a significant release.

- Although groundwater was not sampled during the investigation, Kleinfelder stated that potential impacts to groundwater were low.

It should be noted that although the concentration of chromium noted above in boring B-12 at 130 mg/kg is above the 2005 ESLs, the concentration is below the current version of the February 2016 ESLs. As such the noted levels of chromium is considered an *historical recognized environmental concern*.

Phase I Environmental Site Assessment by Innovative and Creative Environmental Solutions (ICES) dated March 16, 2005

The report by ICES was conducted for the approximately 106-acre Couch Property and the report concluded the following.

- A eucalyptus grove occupied the site until the late 1950s. In the early 1980s, the northeastern portion was developed and used for residential activities and the southeastern portion was used as a race track. Currently, paint ball fields are located at the west and central portions of the site.

- It was discovered that there was past and present undocumented and illegal storage of hazardous materials and waste on the site. In addition, a large amount of soil containing oil was deposited at the southeastern portion of the site in the 1970s for a motorcycle track.

ICES recommended that a supplementary investigation be conducted within the site including the following:

- Collect soil samples from the surficial soil within the west portion of the site to assess the potential presence of organochlorine pesticides, arsenic, lead, and mercury associated with the eucalyptus grove.

- Collect soil samples from the surficial soil within the southeastern portion of the site for petroleum hydrocarbons, semi-volatile organic compounds, and lead associated with the former motorcycle track and existing wood cutting and storage operations.

- Collect soil samples from the surficial soil within the northeastern portion of the site to assess surficial sediments containing arsenic, chromium, and vanadium levels detected in a previous site investigation which exceeded residential ESLs.

Phase I Environmental Site Assessment by Kleinfelder dated December 22, 2009

Kleinfelder partitioned the Couch Property into seven areas of concern: the Hurst Firewood Area, the Paintball Jungle Area (East), the Animal Pens Area, the Couch Residential Area, the Concentrated Area, the Sherwood Forest Paintball and North Slough Creek Area, and the Paintball Jungle Area (West).

According to the site map, only the Paintball Area (West), the Concentrated Area, and the Sherwood Forest Paintball and North Slough Creek Area are within the 35.85-acre property which is the subject of this report.

The report concluded the following:

- There is ample evidence that residual petroleum hydrocarbons, solvents, and certain metals may have been released in shallow soil throughout the eastern portion (Hurst Firewood, Paintball Jungle (East), Animal Pens, and Couch Residential areas) of the site as well as within the western portion (Concentrated Area, Sherwood Forest Paintball and North Slough Creek area) of the site. These petroleum hydrocarbons were likely surface spills and dumping related to the storage of hundreds of pieces of equipment, at least 150 vehicles, areas of the site occupied by the current owner and areas rented to tenants, and areas of dumping.

- The majority of the site is currently used for paintball games. Depending on where the paintballs were manufactured, it is possible that paint within paintballs may have contained lead and was released to soil.

Recommendations related to the 35.85-acre property which is the subject of this report are the following:

- A soil and groundwater investigation should be conducted within each area of the site to assess the extent of chemical constituents of concern in the soil and groundwater including, but not limited to, petroleum hydrocarbons, metals, and volatile organic compounds.

The Concentrated Area was reportedly previously occupied by a trailer and a methamphetamine lab in 2000. EPA guidelines note that soil sampling in areas of methamphetamine labs may be warranted if the ground is visibly stained or otherwise affected (e.g., odors burn piles, dead vegetation, or remnants of reaction waste. ATC did not observe evidence of dead vegetation or discarded waste on the day of the site reconnaissance (refer to Section 6.0). Thus, ATC considers the previous methamphetamine lab site to be a *de minimus condition* to the property.

Limited Site Investigation by ICES dated April 19, 2010

The investigation was conducted in March 2010 and involved the collection of soil samples from approximately 6 to 9 inches bgs from eight sample locations. Of those eight locations, four were located on the 35.85-acre property which is the subject of this report (TP-1 through TP-4) (Appendix B).

The analysis of the samples from TP-1 through TP-4 indicated that concentrations of petroleum hydrocarbons as gasoline, diesel, and motor oil and volatile organic compounds were generally below the residential Environmental Screening Levels (ESLs) with the exception of the result of 160 mg/kg of total petroleum hydrocarbons as diesel (TPHd) in the sample from TP-2 which was above the residential ESL of 83 mg/kg. The laboratory noted that oil range compounds were significant in the sample from TP-2

and ICES suggested that the elevated TPHd in the sample from TP-2 may be the result of natural oil compounds from eucalyptus trees. Also, levels of arsenic and vanadium were noted in the samples above the ESLs but below background levels. ICES concluded that surficial soil within the site has generally not been impacted by previous activities.

Limitations

ATC makes no warranty, guarantee or certification regarding the quality, accuracy or reliability of any prior report provided to ATC and discussed in this Phase I ESA report. ATC expressly disclaims any and all liability for any errors or omissions contained in any prior reports provided to ATC and discussed in this Phase I ESA report. Documentation is included in Appendix H.

5.3.10 Other Historical Sources

No other historical sources were reviewed.

6.0 SITE RECONNAISSANCE

The following is a summary of visual and/or physical observations of the property on the day of the site visit. Photographs can be found in Appendix C.

6.1 Methodology and Limiting Conditions

Mr. Gyan Rusconi-Rodrigues, Senior Scientist with ATC, conducted the site reconnaissance on April 5, 2018. Mr. Rusconi-Rodrigues was unescorted during the site reconnaissance. The site reconnaissance consisted of visual and/or physical observations of: the property; adjoining sites as viewed from the property; and, the surrounding area based on visual observations made during the trip to and from the property. Unimproved portions of the property were observed along the perimeter and in safely accessible areas. The weather at the time of the site reconnaissance was overcast. Due to vegetation overgrowth, ground visibility was limited.

6.2 Hazardous Substance Use, Storage, and Disposal

ATC did not observe the use, storage or disposal of hazardous substances, including hazardous wastes, on the property. However, visibility was limited due to overgrowth of vegetation.

6.3 Underground Storage Tanks (USTs)

ATC did not observe evidence of USTs on the property. However, visibility was limited due to overgrowth of vegetation.

6.4 Aboveground Storage Tanks (ASTs)

ATC did not observe evidence of ASTs on the property. However, visibility was limited due to overgrowth of vegetation.

6.5 Other Petroleum Products

ATC did not observe the use, storage or disposal of other petroleum products in, on or at the property. However, visibility was limited due to overgrowth of vegetation.

6.6 Polychlorinated Biphenyls (PCBs)

ATC did not observe evidence of the use, storage or disposal of PCB-containing electrical or hydraulic equipment in, on or at the property. However, visibility was limited due to overgrowth of vegetation.

6.7 Unidentified Substance Containers

ATC did not observe the presence of unidentified substance containers on the property. However, visibility was limited due to overgrowth of vegetation.

6.8 Nonhazardous Solid Waste

ATC did not observe evidence of the generation, storage or disposal of nonhazardous solid waste in, on or at the property. However, visibility was limited due to overgrowth of vegetation.

6.9 Wastewater

ATC did not observe evidence of wastewater generated, treated or discharged in, on or at the property or to adjoining properties.

6.10 Waste Pits, Ponds and Lagoons

ATC did not observe evidence of waste pits, ponds or lagoons in, on or at the property.

6.11 Drains and Sumps

ATC did not observe evidence of drains or sumps in, on or at the property. However, visibility was limited due to overgrowth of vegetation.

6.12 Septic Systems

ATC did not observe evidence of a septic system in, on or at the property. However, visibility was limited due to overgrowth of vegetation.

6.13 Stormwater Management System

Stormwater at the property is allowed to infiltrate the ground. The observed vegetation did not exhibit signs of biological stress. No strong odors were detected.

6.14 Wells

ATC did not observe evidence of wells in, on or at the property. However, there were visual limitations during site reconnaissance due to overgrowth of vegetation.

During ATC's review of documents submitted by the NCPBES, two domestic wells were noted on the Couch Property. It is estimated from the site maps that both wells are not located on the property. However, if during development of the property, a well is uncovered, it should be properly abandoned per applicable regulations.

7.0 SUBSURFACE VAPOR MIGRATION

Hazardous gases (vapor) from subsurface sources, such as contaminated soil or groundwater can migrate into residential, commercial, and industrial buildings with any foundation type, including basements, crawlspaces, or slabs. According to EPA guidance, three conditions must exist for hazardous vapors to reach the interior of buildings from the subsurface environment underneath or near a building. First, a source of hazardous vapors must be present in the soil or in groundwater underneath or near a building. Second, vapors must form and have a pathway along which to migrate toward the building. Third, entry routes must exist for the vapors to enter the building, and driving forces must exist to draw the vapors into the building.

ATC considered the nature and extent of on-site and nearby sources of potential subsurface vapor migration by evaluating the current and historical usage of the property, the construction type and history, the physical setting, and the potential sources of subsurface vapor migration through the review of regulatory agency database information that was summarized in Section 5.0. Based on the evaluation of the known or suspected releases of hazardous substances or petroleum products, distance from the property, potential pathways, and soil type, et al, no potential subsurface vapor migration sources were determined to represent a *recognized environmental condition* to the property.

8.0 INTERVIEWS

The following person(s) were interviewed to obtain information regarding *recognized environmental conditions* in connection with the property:

INTERVIEW SUMMARY				
Role	**Name**	**Title/Company**	**Years Assoc. With Property**	**Interview Type**
Authorized Property Representative	Brian Doswald	Stravinski Development Group	Unknown	Email

Not included in this listing are those governmental employees that were contacted solely for the purpose of retrieving public information pertaining to the property and who would not be expected to have first-hand knowledge of *recognized environmental conditions* at the property.

Pertinent information from the interviews is discussed in applicable sections of this report with details (including failed attempts to interview) documented on Record of Communication forms in Appendix J.

9.0 OTHER ENVIRONMENTAL CONDITIONS

9.1 Asbestos-Containing Materials (ACM)

Due to the undeveloped nature of the property, ACM was not addressed for this Phase I ESA and no additional investigation is recommended at this time.

9.2 Radon

Radon is a naturally occurring colorless, odorless gas that is a by-product of the decay of radioactive materials potentially present in bedrock and soil. The EPA guidance action level for annual residential exposure to radon is 4.0 picoCuries per liter of air (pCi/L). The guidance action level is not a regulatory requirement for private owners of commercial real estate, but is commonly used for comparison purposes to suggest whether further action at a building may be prudent.

ATC's review of published radon data indicates that the property is located in an area of low propensity with regard to the potential for elevated levels of radon gas. Napa County is listed as being within Zone 3, where average indoor levels are expected to be less than 2 pCi/L. Additional federal area radon statistics for zip code 94503, within Napa County, report results for 11 short-term tests as below 4.0 pCi/L. Given the available statistics, radon is not considered to represent a concern, and no additional investigations are recommended at this time.

9.3 Lead in Drinking Water

ATC confirmed with the City of American Canyon that the municipally supplied water meets all drinking water standards, including those for lead. Based on the fact that the water (once supplied to the property) is from the municipality, lead in drinking water would not be a concern to the property.

9.4 Lead-Based Paint (LBP)

Due to the undeveloped nature of the property, LBP was not addressed for this Phase I ESA and no additional investigation is recommended at this time.

9.5 Mold Screening

Due to the undeveloped nature of the property, mold was not addressed for this Phase I ESA and no additional investigation is recommended at this time.

9.6 Additional User Requested Conditions

No additional User requested services were included in the scope of work for this ESA.

11.0 TERMINOLOGY

The following provides definitions and descriptions of certain terms that may be used in this report. Italics indicate terms that are defined by ASTM Standard Practice E1527-13. The Standard Practice should be referenced for further detail (such as the precise wording), related definitions or additional explanation regarding the meaning of terms.

recognized environmental condition(s) (REC) - the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to any release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment.

material threat - a physically observable or obvious threat which is reasonably likely to lead to a release that, in the opinion of the environmental professional (EP), is threatening and might result in impact to public health or the environment. An example might include an aboveground storage tank system that contains a hazardous substance and which shows evidence of damage such that it may cause or contribute to tank integrity failure with a release of contents to the environment.

de minimis condition – is a condition that generally does not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of the appropriate governmental agencies. An example might include a release of *hazardous substances* or *petroleum products* that could reasonably and foreseeably result in a concentration exceeding the applicable regulatory agency risk-based residential standards or substantial damage to natural resources. The risk of that exposure or damage would represent a threat to human health or the environment. If an enforcement action would be less likely than not, then the condition is considered to be generally not likely the subject of an enforcement action. A condition determined to be *de minimis* is not a *REC* or *controlled recognized environmental condition (CREC)*.

historical recognized environmental condition(s) (HREC) - a past release of any *hazardous substances* or *petroleum products* that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls). Before calling the past release a *HREC*, the EP must determine whether the past release is a *REC* at the time the assessment is conducted (for example, if there has been a change in the regulatory criteria). If the EP considers the past release to be a *REC* at the time the Phase I ESA is conducted, the condition will be reported in Section 1.2 the Findings and Conclusions Summary table as a *REC*.

controlled recognized environmental condition (CREC) - a *recognized environmental condition* resulting from a past release of *hazardous substances* or *petroleum products* that has been addressed to the satisfaction of the applicable regulatory authority (for example, as evidenced by the issuance of a no further action letter or equivalent, or meeting risk-based criteria established by regulatory authority), with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls (for example, property use restrictions, activity and use limitation, institutional controls, or engineering controls). Per E1527-13, a *CREC* will be reported in the Section 1.2 Findings and Conclusions Summary table as a *CREC* and a *REC*.

migrate/migration - refers to the movement of *hazardous substances* or *petroleum products* in any form, including, for example, solid and liquid at the surface or subsurface, and vapor in the subsurface.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E 2247-16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E 1528-14) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

EXECUTIVE SUMMARY

STANDARD ENVIRONMENTAL RECORDS

Federal RCRA generators list

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 12/11/2017 has revealed that there are 2 RCRA-SQG sites within approximately 0.25 miles of the target property.

Equal/Higher Elevation	Address	Direction / Distance	Map ID	Page
GAS RECOVERY SYSTEMS	725 EUCALYPTUS ROAD	SSE 1/8 - 1/4 (0.177 mi.)	A3	11
AMCAM BEVERAGES INC	1201 COMMERCE BLVD	N 1/8 - 1/4 (0.215 mi.)	4	12

State- and tribal - equivalent CERCLIS

ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the ENVIROSTOR list, as provided by EDR, and dated 01/30/2018 has revealed that there are 2 ENVIROSTOR sites within approximately 1 mile of the target property.

Equal/Higher Elevation	Address	Direction / Distance	Map ID	Page
POLYVINYL CHEMICAL I Facility Id: 28510002 Status: No Action Required	501 GREEN ISLAND ROA	NE 1/2 - 1 (0.579 mi.)	6	16
FORMER SUNSHINE AUTO Facility Id: 28500004 Status: Refer: RWQCB	***1578 GREEN ISLAND***	***NNW 1/2 - 1 (0.759 mi.)***	***7***	***18***

State and tribal landfill and/or solid waste disposal site lists

SWF/LF: The Solid Waste Facilities/Landfill Sites records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. The data come from the Integrated Waste Management Board's Solid Waste Information System (SWIS) database.

A review of the SWF/LF list, as provided by EDR, has revealed that there is 1 SWF/LF site within

approximately 0.5 miles of the target property.

Equal/Higher Elevation	Address	Direction / Distance	Map ID	Page
AMERICAN CANYON SANI	***WESTERN TERMINUS OF***	***SSE 1/8 - 1/4 (0.170 mi.)***	***A2***	***9***

Database: SWF/LF (SWIS), Date of Government Version: 11/13/2017
Facility ID: 28-AA-0001
Operational Status: Closed
Regulation Status: Permitted

State and tribal leaking storage tank lists

LUST: Leaking Underground Storage Tank (LUST) Sites included in GeoTracker. GeoTracker is the Water Boards data management system for sites that impact, or have the potential to impact, water quality in California, with emphasis on groundwater.

A review of the LUST list, as provided by EDR, has revealed that there are 2 LUST sites within approximately 0.5 miles of the target property.

Equal/Higher Elevation	Address	Direction / Distance	Map ID	Page
MORROW EQUIPMENT CO	***833 HANNA DR***	***NNE 1/4 - 1/2 (0.409 mi.)***	***5***	***14***

Treat To Water:	Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity:	Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Completed Document Type:	Preliminary Assessment Report
Completed Date:	05/01/2014
Comments:	DTSC conducted a reassessment of sites in EPA's CERCLIS database on EPA's behalf. The regional waterboard had reviewed past soil and groundwater investigations and determined that no further action was required. Based on this information and available sampling data, DTSC recommended no further federal assessment under CERCLA.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 12/11/2017

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Federal Delisted NPL site list

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Date of Government Version: 12/11/2017

Federal CERCLIS list

FEDERAL FACILITY: Federal Facility Site Information listing

A listing of National Priority List (NPL) and Base Realignment and Closure (BRAC) sites found in the Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) Database where EPA Federal Facilities Restoration and Reuse Office is involved in cleanup activities.

Date of Government Version: 11/07/2016

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Federal RCRA generators list

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

Date of Government Version: 12/11/2017

RCRA-SQG: RCRA - Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

RCRA-CESQG: RCRA - Conditionally Exempt Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

US ENG CONTROLS: Engineering Controls Sites List

A listing of sites with engineering controls in place. Engineering controls include various forms of caps, building foundations, liners, and treatment methods to create pathway elimination for regulated substances to enter environmental media or effect human health.

Date of Government Version: 11/13/2017
Date Data Arrived at EDR: 11/27/2017
Date Made Active in Reports: 02/09/2018
Number of Days to Update: 74

Source: Environmental Protection Agency
Telephone: 703-603-0695
Last EDR Contact: 02/27/2018
Next Scheduled EDR Contact: 06/11/2018
Data Release Frequency: Varies

US INST CONTROL: Sites with Institutional Controls

A listing of sites with institutional controls in place. Institutional controls include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on site. Deed restrictions are generally required as part of the institutional controls.

Date of Government Version: 11/13/2017

State- and tribal - equivalent CERCLIS

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites
Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing
A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Date of Government Version: 10/19/2006

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data
Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:

Source: American Hospital Association, Inc.
Telephone: 312-280-5991

The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing

Source: Centers for Medicare & Medicaid Services
Telephone: 410-786-3000

A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes
Source: National Institutes of Health
Telephone: 301-594-6248
Information on Medicare and Medicaid certified nursing homes in the United States.
Public Schools
Source: National Center for Education Statistics
Telephone: 202-502-7300
The National Center for Education Statistics' primary database on elementary and secondary public education in the United States. It is a comprehensive, annual, national statistical database of all public elementary and secondary schools and school districts, which contains data that are comparable across all states.
Private Schools

GEOCHECK ®- PHYSICAL SETTING SOURCE ADDENDUM

TARGET PROPERTY ADDRESS

COMMERCE 320 DISTRIBUTION CENTER
NOT REPORTED
AMERICAN CANYON, CA 94503

TARGET PROPERTY COORDINATES

Latitude (North):	38.185443 - 38° 11' 7.59''
Longitude (West):	122.273651 - 122° 16' 25.14''
Universal Tranverse Mercator:	Zone 10
UTM X (Meters):	563612.6
UTM Y (Meters):	4226434.0
Elevation:	19 ft. above sea level

USGS TOPOGRAPHIC MAP

Target Property Map:	5602106 CUTTINGS WHARF, CA
Version Date:	2012

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principal investigative components:

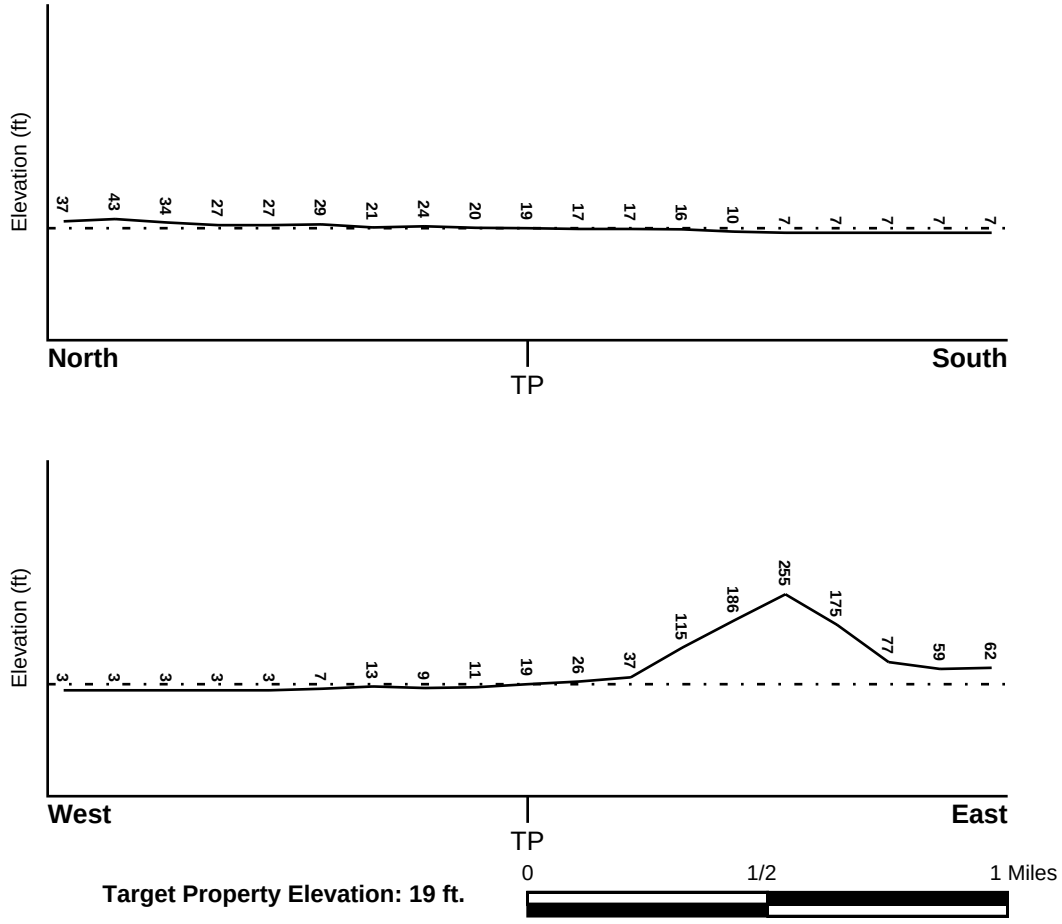
1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).



TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General West

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Target Property Elevation: 19 ft.

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Flood Plain Panel at Target Property	FEMA Source Type
06055C0625E	FEMA FIRM Flood data

Additional Panels in search area:	FEMA Source Type
06055C0610E	FEMA FIRM Flood data

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
CUTTINGS WHARF	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Status:	Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW

All of the information and opinions presented are those of the cited EPA report(s), which were completed under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: HAIRE

Soil Surface Texture: clay loam

Hydrologic Group: Class C - Slow infiltration rates. Soils with layers impeding downward movement of water, or soils with moderately fine or fine textures.

Soil Drainage Class: Moderately well drained

Hydric Status: Partially hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	22 inches	clay loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay	Max: 4 Min: 1.4	Max: 6 Min: 5.1
2	22 inches	27 inches	sandy clay loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	COARSE-GRAINED SOILS, Sands, Sands with fines, Clayey sand.	Max: 4 Min: 1.4	Max: 6 Min: 5.1
3	27 inches	44 inches	clay	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit 50% or more), Fat Clay.	Max: 0.42 Min: 0.01	Max: 5.5 Min: 4.5
4	44 inches	59 inches	sandy clay	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay	Max: 0.42 Min: 0.01	Max: 5.5 Min: 4.5

Soil Map ID: 2

Soil Component Name: CLEAR LAKE

Soil Surface Texture: clay

Hydrologic Group: Class D - Very slow infiltration rates. Soils are clayey, have a high water table, or are shallow to an impervious layer.

Soil Drainage Class: Poorly drained

Hydric Status: All hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	31 inches	clay	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit 50% or more), Fat Clay.	Max: 1.4 Min: 0.42	Max: 7.8 Min: 6.1
2	31 inches	68 inches	clay	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit 50% or more), Fat Clay.	Max: 1.4 Min: 0.42	Max: 8.4 Min: 7.4

Soil Map ID: 3

Soil Component Name: HAIRE

Soil Surface Texture: loam

Hydrologic Group: Class C - Slow infiltration rates. Soils with layers impeding downward movement of water, or soils with moderately fine or fine textures.

Soil Drainage Class: Moderately well drained

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Hydric Status: Partially hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

EDR BUILDING PERMIT REPORT

About This Report

The EDR Building Permit Report provides a practical and efficient method to search building department records for indications of environmental conditions. Generated via a search of municipal building permit records gathered from more than 1,600 cities nationwide, this report will assist you in meeting the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13), or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

Building permit data can be used to identify current and/or former operations and structures/features of environmental concern. The data can provide information on a target property and adjoining properties such as the presence of underground storage tanks, pump islands, sumps, drywells, etc., as well as information regarding water, sewer, natural gas, electrical connection dates, and current/former septic tanks.

ASTM and EPA Requirements

ASTM E 1527-13 lists building department records as a "standard historical source," as detailed in § 8.3.4.7: "Building Department Records - The term building department records means those records of the local government in which the property is located indicating permission of the local government to construct, alter, or demolish improvements on the property." ASTM also states that "Uses in the area surrounding the property shall be identified in the report, but this task is required only to the extent that this information is revealed in the course of researching the property itself."

EPA's Standards and Practices for All Appropriate Inquires (AAI) states: "§312.24: Reviews of historical sources of information. (a) Historical documents and records must be reviewed for the purposes of achieving the objectives and performance factors of §312.20(e) and (f). Historical documents and records may include, but are not limited to, aerial photographs, fire insurance maps, building department records, chain of title documents, and land use records."

Methodology

EDR has developed the EDR Building Permit Report through our partnership with BuildFax, the nation's largest repository of building department records. BuildFax collects, updates, and manages building department records from local municipal governments. The database now includes 30 million permits, on more than 10 million properties across 1,600 cities in the United States.

The EDR Building Permit Report comprises local municipal building permit records, gathered directly from local jurisdictions, including both target property and adjoining properties. Years of coverage vary by municipality. Data reported includes (where available): date of permit, permit type, permit number, status, valuation, contractor company, contractor name, and description.

Incoming permit data is checked at seven stages in a regimented quality control process, from initial data source interview, to data preparation, through final auditing. To ensure the building department is accurate, each of the seven quality control stages contains, on average, 15 additional quality checks, resulting in a process of approximately 105 quality control "touch points."

For more information about the EDR Building Permit Report, please contact your EDR Account Executive at (800) 352-0050.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Report is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Report includes a search of available city directory data at 5 year intervals.

RECORD SOURCES

EDR's Digital Archive combines historical directory listings from sources such as Cole Information and Dun & Bradstreet. These standard sources of property information complement and enhance each other to provide a more comprehensive report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer. Reproduction of City Directories without permission of the publisher or licensed vendor may be a violation of copyright.

EDR Environmental Lien and AUL Search

The EDR Environmental Lien and AUL Search Report provides results from a search of available current land title records for environmental cleanup liens and other activity and use limitations, such as engineering controls and institutional controls.

A network of professional, trained researchers, following established procedures, uses client supplied address information to:

- search for parcel information and/or legal description;
- search for ownership information;
- research official land title documents recorded at jurisdictional agencies such as recorders' offices, registries of deeds, county clerks' offices, etc.;
- access a copy of the deed;
- search for environmental encumbering instrument(s) associated with the deed;
- provide a copy of any environmental encumbrance(s) based upon a review of key words in the instrument(s) (title, parties involved, and description); and
- provide a copy of the deed or cite documents reviewed.

Thank you for your business.
Please contact EDR at 1-800-352-0050
with any questions or comments.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by ATC Group Services LLC were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

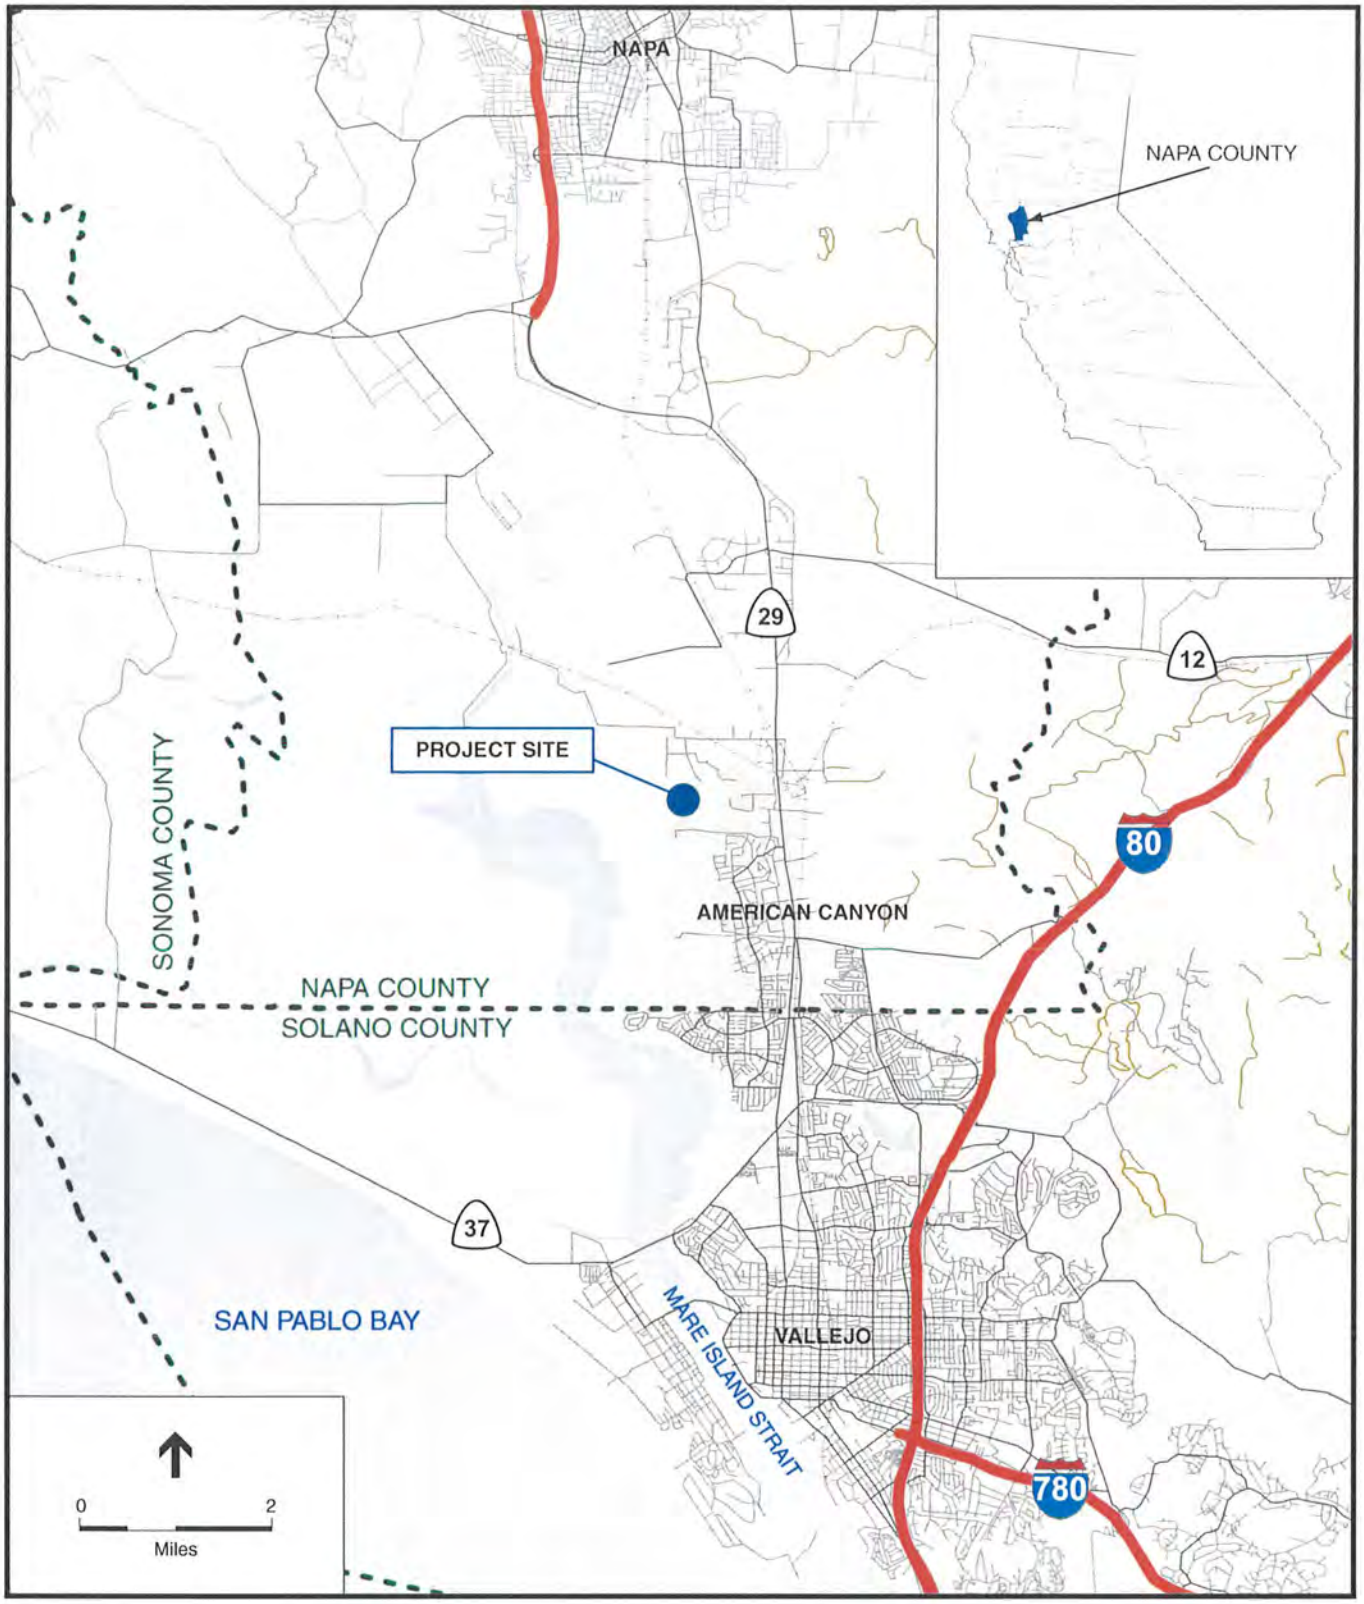
SECTION 1.0

EXECUTIVE SUMMARY

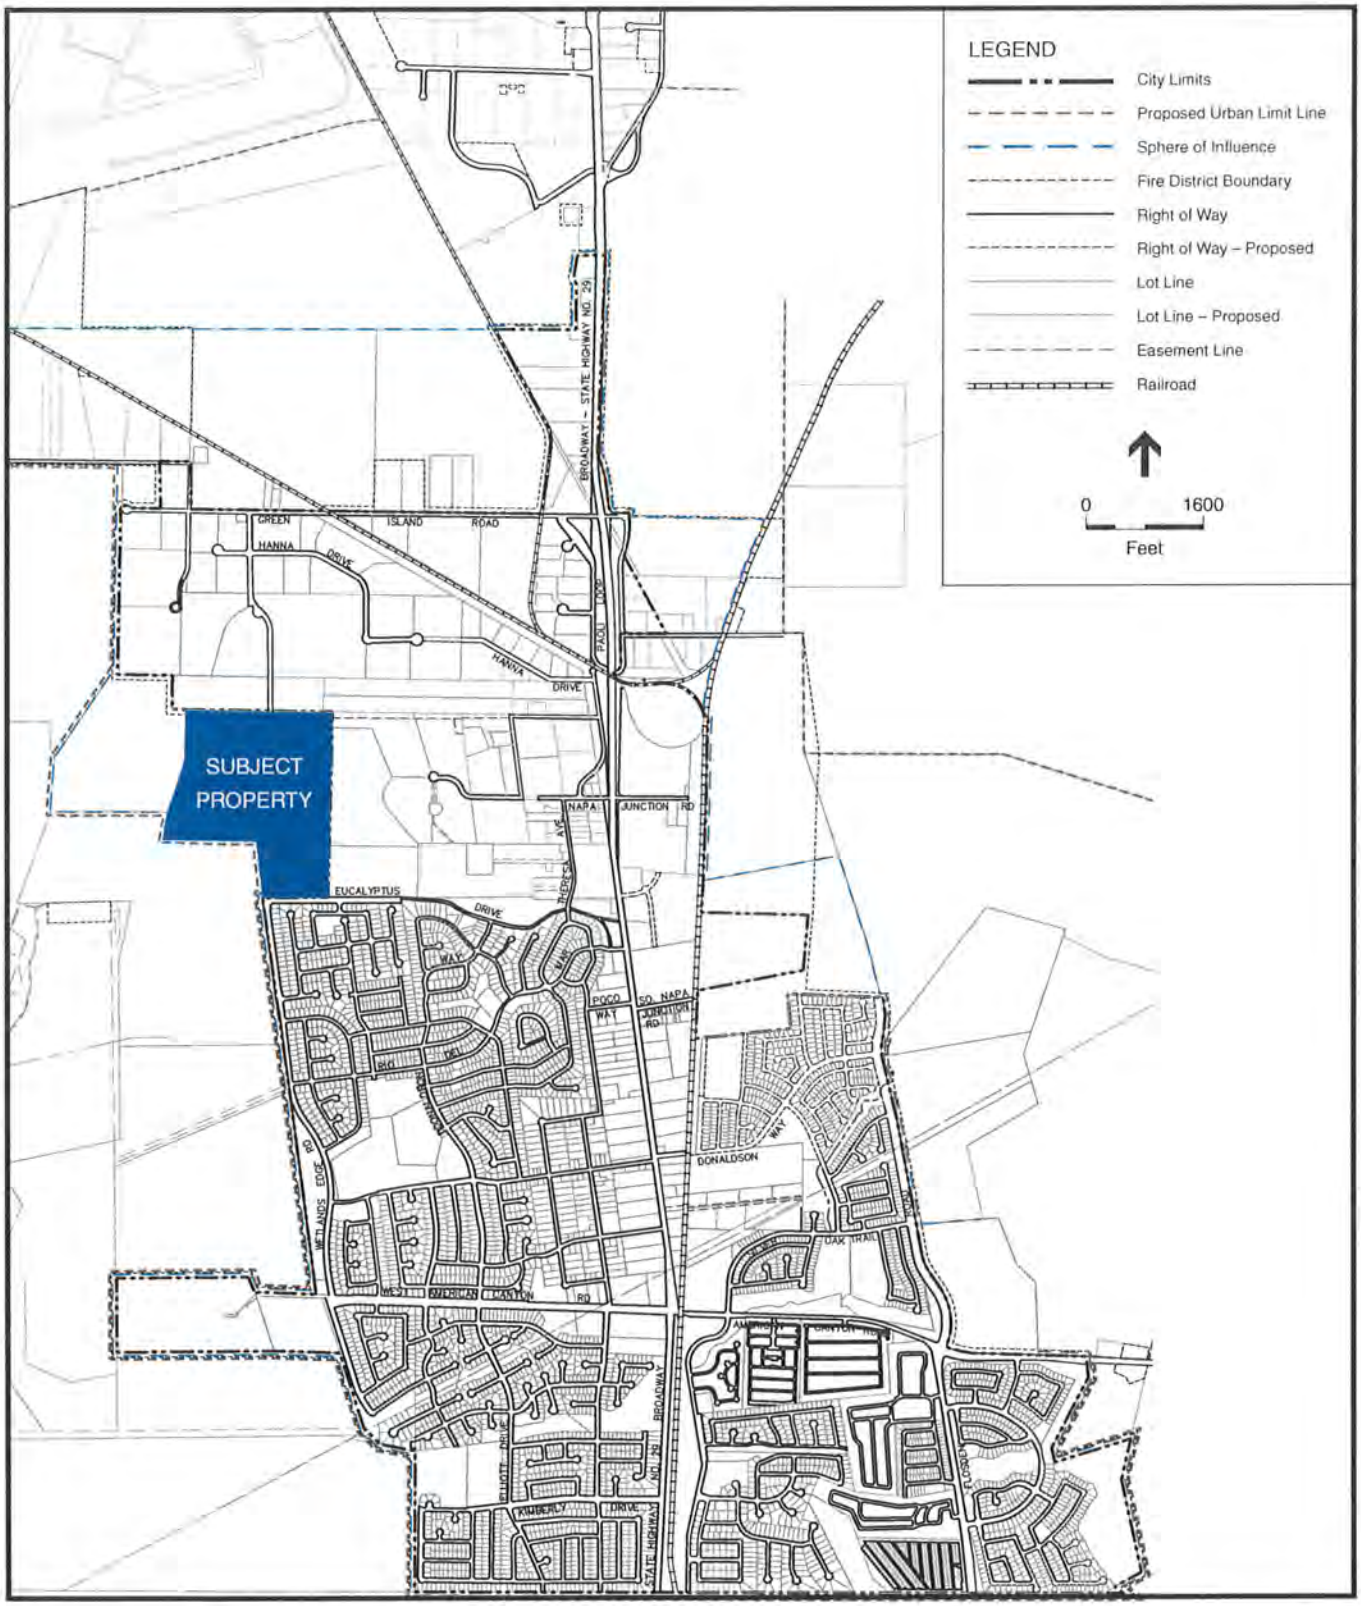
SECTION 1.0
EXECUTIVE SUMMARY



Environmental Science Associates (ESA) has been retained by Mr. Steve Brock, Fresno, California to prepare a Phase I Environmental Site Assessment of property located in American Canyon, Napa County, California (**Figure 1**). The property consists of approximately 106 acres of land located at 2 Eucalyptus Drive, American Canyon, California (**Figure 2**).

This Phase I Environmental Site Assessment was performed in conformance with the scope and limitations of the American Society for Testing and Materials (ASTM) E1527-00, Standard Practice for Environmental Site Assessments. ASTM E1527 specifies the *appropriate inquiry* to satisfy one of the requirements for the *innocent landowner defense* under the Comprehensive Environmental Response, Compensations, and Liability Act (CERCLA).

ESA's scope of work to complete the Phase I Assessment included several tasks to determine the past and present uses of the property, including:



- Review of available historical aerial photographs and topographic maps.
- Review of governmental agency database listings for records of known storage tank sites, leaking underground storage tank sites, and known sites with hazardous materials use, generation, storage, or soil and groundwater contamination.
- Site reconnaissance to evaluate the potential for existing sources of contamination on or adjacent to the subject property.

Based on the information reviewed as a part of this Phase I assessment, ESA observed evidence of potential soil contamination on the property due to previous and current storage of hazardous materials and wastes and housekeeping practices on the subject property. Conclusions and recommendations are presented in Section 6.0 of this report.

SECTION 2.0
INTRODUCTION

SECTION 2.0
INTRODUCTION

PURPOSE

ESA has performed this Phase I Environmental Site Assessment in conformance with the scope and limitations of American Society of Testing and Materials (ASTM) Standard Practice E1527-00, which specifies the *appropriate inquiry* to satisfy one of the requirements for the *innocent landowner defense* under the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA).

The purpose of this Phase I Environmental Site Assessment is to identify *recognized environmental conditions* that may pose a risk to human health or to the environment, or in any way affect the proposed use of the subject property. As defined in ASTM E1527 the term *recognized environmental conditions* means the presence or likely presence of any hazardous substances or petroleum products on a property under conditions that indicate an existing release, a past release, or a material threat of a release of any hazardous substances or petroleum products into any structures on the property or into the ground, groundwater, or surface water of the property.

The term *recognized environmental conditions* includes hazardous substances or petroleum products even under conditions in compliance with laws. The term is not intended to include *de minimis* conditions that generally do not present a material risk of harm to public health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies. Conditions determined to be *de minimis* are not recognized environmental conditions.

This Phase I assessment provides historical information of the subject property and adjacent properties. As a part of this assessment, ESA performed a site reconnaissance of the subject property, contacted local agencies, and reviewed relevant database listings of hazardous material sites, waste generators, and underground storage tanks.

LIMITATIONS AND EXCEPTIONS

No environmental site assessment can wholly eliminate uncertainty regarding the potential for recognized environmental conditions in connection with a property. Conformance of this assessment with the ASTM Standard Practice E1527-00 will reduce, but not eliminate, uncertainty regarding the potential for recognized environmental conditions in connection with the subject property.

While ESA has made every effort to discover and interpret available historical and current information on the property within the time available, the possibility for undiscovered contamination to be present remains. ESA's report is a best-effort collection and interpretation of available information consistent with industry standards for the completion of Phase I Environmental Site Assessments.

LIMITING CONDITIONS

This Phase I Environmental Site Assessment is based on a records review, a site reconnaissance, and interviews. Physical testing of soil or groundwater was not within the scope of this assessment. This Phase I Environmental Site Assessment did not include ASTM E1527 non-scope considerations for the subject property such as radon, lead in drinking water, wetlands, regulatory compliance, cultural and historic resources, industrial hygiene, health and safety, ecological resources, endangered species, and indoor air quality.

The subject property is a large dense eucalyptus grove, and while we attempted to walk the entire property, we were unable to view all areas due to dense vegetation and trees. The property has had numerous uses over the years, including reportedly illegal uses. It would be difficult to determine where the numerous shacks and temporary homes were located and where the methamphetamine labs operated throughout the property in the past.

This assessment is the result of appropriate inquiry, and is not an exhaustive assessment of the subject property. As described in the ASTM Standard Practice E1527-00, there is a point at which the cost of information obtained, or the time required to gather it, outweighs the usefulness of the information, and may, in fact, be a material detriment to the orderly completion of the investigation. Information was obtained for this Phase I investigation in compliance with ASTM E1527 guidelines.

METHODOLOGY

A variety of data sources and agencies were consulted in completing this Phase I Environmental Assessment. The following discussion describes the methods used and the data sources consulted to accomplish each task.

HISTORICAL REVIEW

Previous land uses and history of the subject property and adjacent properties were researched in an effort to identify potential sources of hazardous substances at or adjacent to the property. Aerial photographs and topographic maps were reviewed for the presence of industrial buildings, gas station canopies or pump islands, or other indications of bulk hazardous material storage and generation within the study area.

DATABASE SEARCH

Regulatory Agency database search requests were made for records of known storage tank sites and known sites of hazardous materials generation, storage or contamination. A database search report including a full listing of sites within the subject property vicinity is provided in **Appendix A.**

SITE RECONNAISSANCE

The purpose of the site reconnaissance is to observe potential locations of hazardous substances or petroleum products, to locate current aboveground storage tanks, to observe evidence of underground tanks, and to examine for obvious physical indications of improper hazardous substances or petroleum product disposal such as stained soil or asphalt, stressed vegetation, sumps, and partially buried drums.

SECTION 3.0
SITE DESCRIPTION

SECTION 3.0
SITE DESCRIPTION

LOCATION AND LEGAL DESCRIPTION

The subject property consists of approximately 106 acres of land located at 2 Eucalyptus Drive, American Canyon, Napa County, California. The Napa County Assessor's Parcel Number is 058-030-056.

SITE AND VICINITY CHARACTERISTICS

The property is located within the City of American Canyon boundary and is bound to the north warehouse buildings. To the east of the property is undeveloped grassland. The property is bound to the south by open space and a residential subdivision that is across Eucalyptus Drive. Properties to the west include a portion of the City Water Treatment Plant, a eucalyptus grove, and a wetland area. The now closed American Canyon Sanitary Landfill is located approximately 1/4 mile southwest of the subject property. Historically, the adjacent properties have been eucalyptus groves, undeveloped land, and rural residential.

The subject property is a eucalyptus grove, a portion of which is being used by the "Paint Ball Jungle" for paint ball games, and a portion is occupied by relatives of the property owners. Historically, the subject property has been a eucalyptus grove with developed portions of the property similar to what now exists.

There are paint balls throughout a portion of the property, and several forts and that have been built for use during the paint ball games. There are two unpermitted homes on the property. The area surrounding the homes has been used as an undocumented and illegal storage of hazardous materials and wastes. Utility pipelines were being installed along a dirt road that runs through the center of the property in a north/south direction.

On the southern portion of the property is an area that is being used to cut and store wood. Anecdotal information was received from Mr. Steve Brock, the person interested in purchasing the property, about this portion of the property. Mr. Brock indicated that a large amount of soil containing some type of oil was deposited on this portion of the property. It is unknown where this soil was placed on the property. There is an area of this portion of the property that appeared to have been leveled and graded where soil might have been brought onto the property.

The owners of the property have been illegally accepting and disposing of hazardous materials and wastes on their property for several years. Old abandoned vehicles, machinery, equipment,

trash piles, batteries, compressed gas cylinders, small containers of unknown substances, and tanks are located throughout the property. The owners have allowed people to put up temporary shelters, live in abandoned vehicles and trailers on the property over the years.

In 1990, a 165-acre portion of the subject property was inspected by staff at the County Department of Environmental Management. The hazardous materials and wastes observed on the property at that time were oil or oily wastes, compressed gas cylinders, paints, lacquers, thinners and solvents, unknown materials in small containers, and automobile batteries, 55-gallon drums, three underground storage tanks sitting on top of the ground, two 10,000 gallon tanks (empty) and one 3,000 gallon tank (partially full of an oily liquid). Samples were collected from the five drums and the storage tank containing an oily liquid. The samples were collected by a Hazardous Materials Team composed of staff from the California Department of Forestry and the American Canyon Fire Protection District. A total of six liquid samples were collected and submitted to a laboratory for chemical analysis. The drums contained chloride, phenols, petroleum hydrocarbons as diesel, and polynuclear aromatics. The tank contained petroleum hydrocarbons as diesel. The County determined that the property constitutes an illegal junk yard and refuse disposal area, which constitutes a public nuisance. The violations found by the County at the property range from storage of hazardous wastes over 90 days without a permit to failure of the generator to determine if his wastes are hazardous and to properly manage hazardous wastes.

PHYSICAL SETTING

The subject property is located within the Coast Ranges, which are between the Pacific Ocean and the Great Valley of California and run almost parallel with the Sierra Nevada Mountains to the east. The Coast Ranges are comprised of a series of small ranges bisected by the San Francisco Bay. The central portion of the Coast Ranges within the vicinity of the property is characterized by gentle sloping foothills to the east of American Canyon, and alluvial plains leading to the Napa River on the western border of the City.

The major topographic features within the vicinity of the property are lowlands and marshes which border the lower reaches of the Napa River, and Oat Hill located adjacent to the east side of the property.

The U.S. Geologic Survey (USGS), 7.5 minute Cuttings Warf, California, topographic quadrangle map, 1981, depicts the subject property at an elevation approximately 20 feet above mean sea level.

Surface soil types on the subject property include Clear Lake clay, Haire loam, and Haire clay loam (USDA NRCS Soil Survey of Napa County, 1978).

Hydrology

A creek runs through the western portion of the subject property. The nearest major surface water drainage is the Napa River, located approximately one mile to the west. Regional

groundwater depth ranges from 12 to 21 feet below ground surface in the area of the subject property. Regional groundwater flow is in an easterly direction.

A biological evaluation study was completed for the proposed property on August 24, 2004. According to that study, wetlands that are likely to meet the requirements of the jurisdiction under the Clean Water Act were observed in two locations. The first and largest area is a drainage that enters the property from an underground pipe on the northwest boundary of the property. The location on the northern boundary of the property this drainage was flowing southwest with water approximately 3-4 inches deep. The drainage continues through the property southwest until it crosses the property (fence line) and drains into the adjacent wetlands. Along the northern 60-80 feet of the drainage there is sparse perennial and annual herbaceous vegetation composed of plants that are known to be indicators of wetlands. Also along the western property boundary is an area near the fence line where the brackish marsh west of the property impinges into the project area. A small area approximately 25 square feet in size at the maximum is dominated by wetland plants.

WATER SUPPLY AND SEWAGE DISPOSAL SYSTEM

The Napa County Department of Environmental Management indicated in their 1990 site investigation report (see Appendix D) that "There is no approved water supply and there are two unapproved water wells that have been dug on the property). However, ESA staff was only able to find one of the water wells on the property.

There is no approved sewage disposal or approved septic system on the property. The Napa County Department of Environmental Management has indicated in their 1990 site investigation report (see Appendix D) that "There is no approved sewage disposal or approved septic system present. Sewage disposal ranges from holes in the ground to allowing sewage, to merely allowing sewage to run on the ground to an outhouse type structure. A few portable toilets were also observed on the property.

New infrastructure for utilities is being installed along a dirt roadway that runs through the property in a north/south direction.

HISTORICAL USES OF SUBJECT PROPERTY

Historical sources were reviewed to develop a history of the previous uses of the subject property and adjacent lands, in order to help identify the likelihood of past uses that might lead to recognized environmental conditions in connection with the subject property.

As stated in ASTM standard practice E1527-00, Section 3.3.27, *practically reviewable* data is information that is "provided by the source in a manner and in a form that, upon examination, yields information relevant to the property without the need for extraordinary analysis of irrelevant data." Furthermore, "records that are sorted, filed, organized, or maintained by the source agency only chronologically are not generally practically reviewable."

Historically, the subject property has been a eucalyptus grove with developed portions of the property similar to what now exists. The property has had numerous uses over the years, including reportedly illegal uses, such as methamphetamine labs and hazardous waste storage.

The owners of the property have been illegally accepting and disposing of hazardous materials and wastes on their property for several years. Old abandoned vehicles, machinery, equipment, trash piles, batteries, compressed gas cylinders, small containers of unknown substances, and tanks are located throughout the property. The owners have allowed people to put up temporary shelters, live in abandoned vehicles and trailers on the property over the years.

In 1990, a 165-acre portion of the subject property was inspected by staff at the County Department of Environmental Management. Hazardous materials and wastes were observed on the property and samples were collected from the five drums and the storage tank containing an oily liquid. The samples were collected by a Hazardous Materials Team composed of staff from the California Department of Forestry and the American Canyon Fire Protection District. The drums contained chloride, phenols, petroleum hydrocarbons as diesel, and polynuclear aromatics. The tank contained petroleum hydrocarbons as diesel. The County determined that the property constitutes an illegal junk yard and refuse disposal area, which constitutes a public nuisance. The violations found by the County at the property range from storage of hazardous wastes over 90 days without a permit to failure of the generator to determine if his wastes are hazardous and to properly manage hazardous wastes.

AERIAL PHOTOGRAPHS

Historic aerial photographs were provided by GeoSearch for the subject property and surrounding area. Aerial photographs were available for the years 1937, 1957, 1965, 1982 and 1993. Refer to **Appendix B** for copies of the aerial photographs.

1937 AND 1957

The subject property is shown as a eucalyptus grove in the aerial photographs. There are dirt roads that are located along the perimeter of the property and through portions of the property, similar to what is there now. A cleared area is shown in the northeast portion of the property, where the homes, outbuildings and other items are now located. The scale and quality of the photograph is such that it is difficult to determine what is located on the developed portion of the property. Adjacent properties are shown as undeveloped land, eucalyptus groves, and a rural residence and pasture.

1965

This aerial photograph shows that a large portion of the eucalyptus grove in the southeast area of the property has been harvested, and a portion of the northwest area has been harvested. A cleared area is shown in the northeast portion of the property. The scale and quality of this photograph is such that it is difficult to determine what is located on the developed portion of the

property. Adjacent properties are shown as undeveloped land, eucalyptus groves, and a rural residence and pasture.

1982 AND 1993

The subject property is shown as a eucalyptus grove in the aerial photographs, the areas that had been cleared are now covered with trees. There are now three developed areas on the property, two in the northeast portion and one in the southeast portion of the property. Adjacent properties are shown as undeveloped land, a pond or wetland area is now located to the west, eucalyptus groves, and a rural residence and pasture. The now closed American Canyon Landfill is shown to the southwest of the property.

TOPOGRAPHIC MAPS

Historic topographic maps were provided by GeoSearch for the subject property and surrounding area. The USGS Mare Island, California, 15 minute quadrangle topographic maps were available for the years 1916 (reprinted 1947) and 1941. The USGS Cuttings Warf, California, 7.5 minute quadrangle topographic maps were available for the years 1949, 1968, and 1981. Refer to **Appendix C** for copies of the topographic maps.

1916 (REPRINTED 1947)

The subject property is shown as undeveloped land. Surrounding lands are also shown as undeveloped land or having structures typical of rural residential homes.

1941, 1949, 1968, AND 1981

The subject property is shown as a eucalyptus grove. No structures are depicted on the property. Surrounding lands are shown as eucalyptus groves, undeveloped land, or land having structures typical of rural residential homes.

RECORDED LAND TITLE RECORDS

A chain of title report was not provided to ESA for this assessment.

SANBORN INSURANCE COMPANY MAPS

EDR conducted a search for Sanborn Fire Insurance Maps. The Sanborn maps do not provide coverage of the area in which the subject property is located.

BUILDING DEPARTMENT RECORDS

The Napa County Building Department was contacted. According to staff on duty at the Napa County Building Department, they have no records for any of the structures located on the property.

SECTION 4.0

SITE RECONNAISSANCE AND INTERVIEWS

SECTION 4.0
SITE RECONNAISSANCE AND INTERVIEWS

The purpose of the site reconnaissance was to identify visible hazardous materials involvement with respect to the subject property. Hazardous materials involvement includes the presence or likely presence of any hazardous materials or petroleum products that indicate an existing release, past release, or a threat of release into any structure on the property, soil, or groundwater.

Interviews included contacting individuals familiar with the subject property and knowledgeable of the property's historic and existing conditions relative to hazardous materials.

SITE RECONNAISSANCE FINDINGS

ESA performed a site reconnaissance of the subject property on June 18, 2004 and again on July 29, 2004. Notable features and property conditions were photographed (**Figures 5-1 through 5-5**). A map of the property with the locations of the areas discussed below is provided as **Figure 3**. A map of the area with the potential for contamination is provided as **Figure 4**. In 1990, a 165-acre portion of the subject property was inspected by staff at the County Department of Environmental Management (refer to page 6-2 of this report for a discussion of the County's findings).

The subject property is mostly a eucalyptus grove, a large portion of which is being used by the "Paint Ball Jungle" for paint ball games (Areas 1 and 2 on **Figure 3**). There are paint balls throughout the property, and several forts and that have been built for use during the paint ball games (Photograph 1, **Figure 5-1**). Three forts were observed on the property that had been set up for use in the paintball games. Included in those forts are several 55-gallon plastic drums used for walls. The drums did not have lids and were empty, appeared to have never been used for storage of material, and there was no soil staining beneath or around the drums. Paint balls typically contain a non-toxic oil, egg, or gelatin based paint.

Near a corner of the property that is intersected by two dirt roads was observed a pile of household debris (Area 3 on **Figure 3**), including a mattress, rug, lamp, hose, and other household trash (Photograph 2, **Figure 5-1**). No stained soil or hazardous materials were observed within, beneath or around the debris. A 55-gallon sealed drum was observed near the creek on the west side of the property. The drum appeared to be empty and there was no soil staining beneath or around the drum.

A portion of the property appeared to be or have been recently occupied (Area 4 on **Figure 3**, and photographs 3, 4 and 5, **Figures 5-1 and 5-2**). There was a small trailer, a truck with a camper

bed on the back, a portable toilet, a locked shed, some household debris, several 5-gallon containers of unknown material, and a no trespassing sign that read "violators will be shot". No stained soil or stressed vegetation were noted in this area of the property.

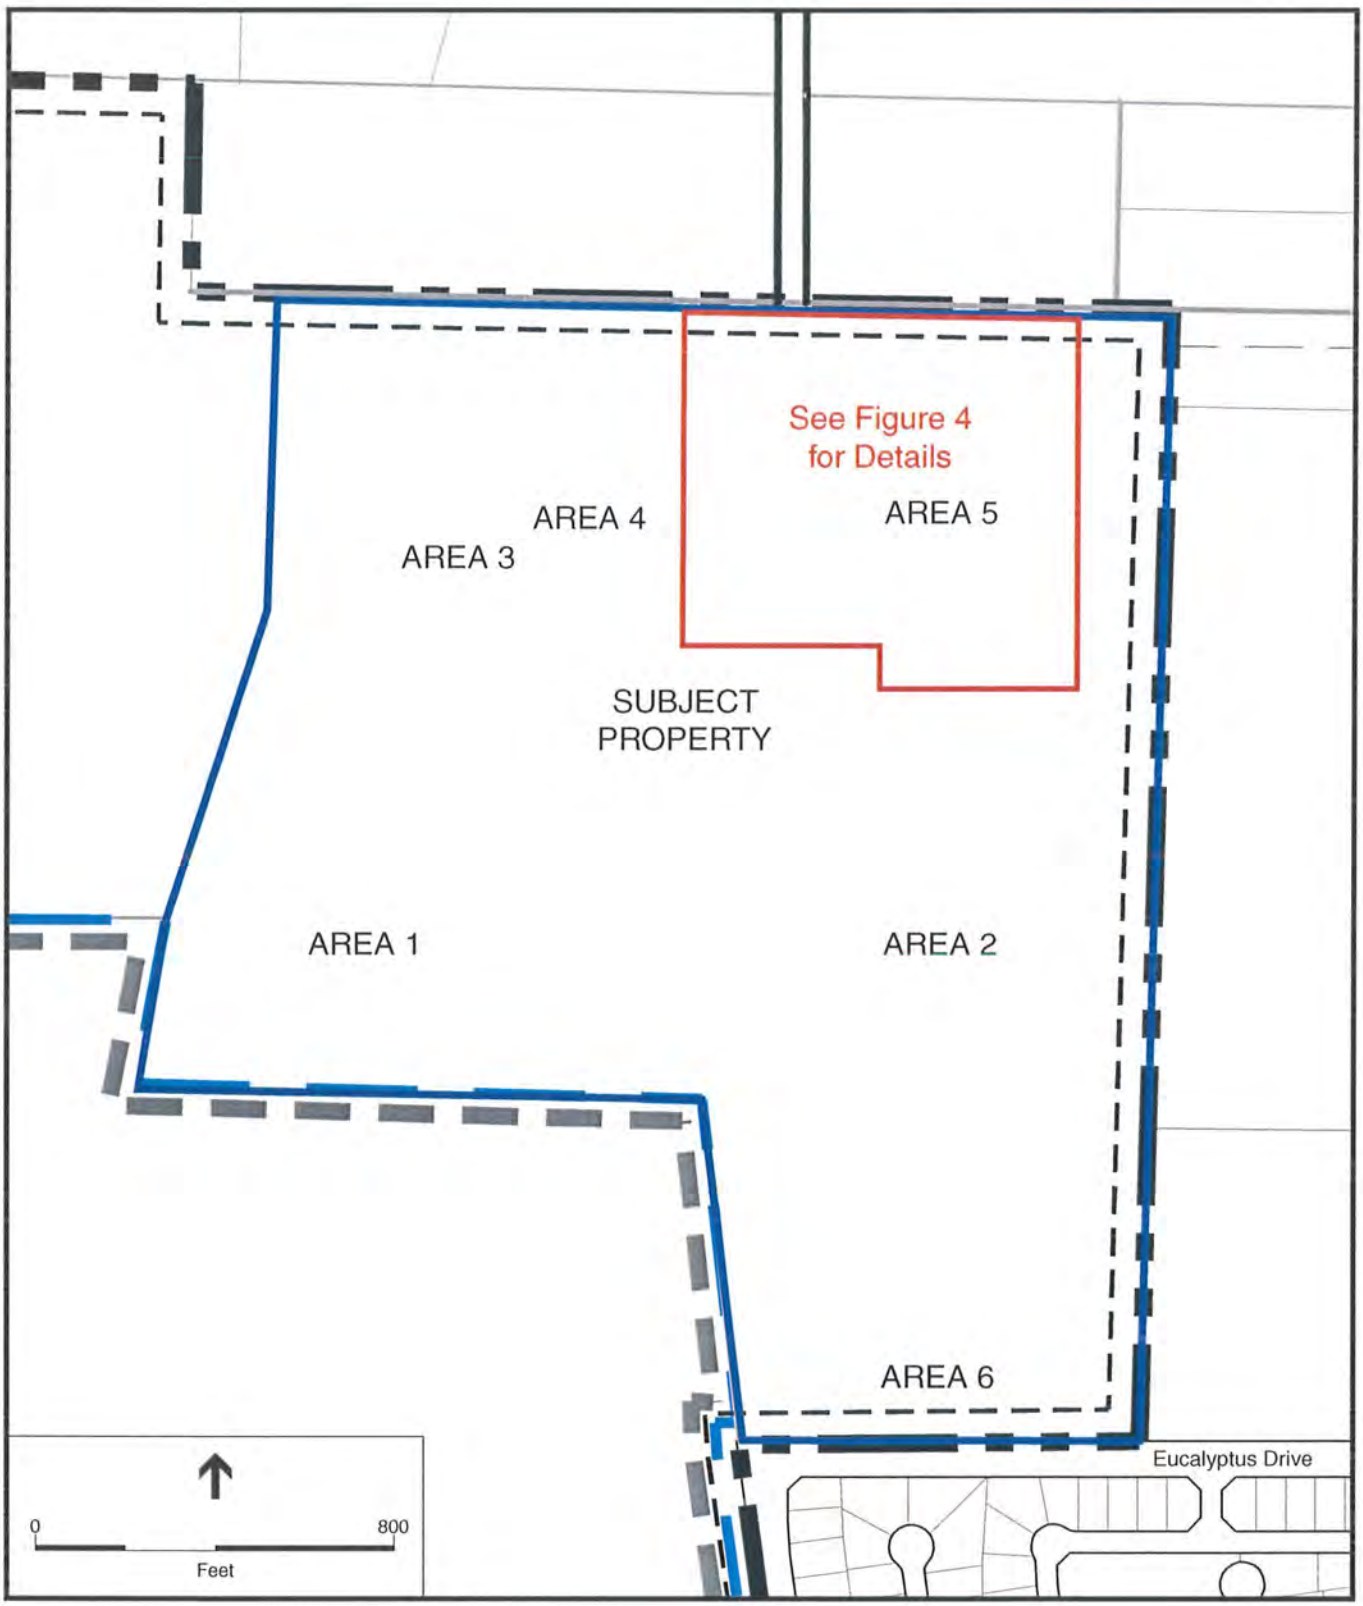
A portion of the property is occupied by relatives of the owners who live in unpermitted homes on the property (Area 5 on **Figure 3** and photographs 6 through 19, **Figures 5-2 through 5-5**). The area surrounding the residences contains a large amount of household items, wood debris, soil piles, concrete rubble, abandoned vehicles, refrigerators, burn piles, tires, 55-gallon drums, machinery, equipment, automobile batteries, 5-gallon or smaller containers of unknown material, several water tanks, a grave stone, an underground storage tank that was sitting on top of the ground, a concrete block foundation for some type of structure, and a wooden garage filled with clothes, trash, equipment, etc. Areas that had recently been disturbed and areas with a lack of vegetation were noted in this area of the property.

A portion of the property is being used to cut and store wood (Area 6 on **Figure 3**). There is a trailer, several sheds, boats, truck trailers, tires, refrigerators, and equipment used for wood cutting on this portion of the property. Several 55-gallon oil drums that are empty were observed, and an old trichlorethane tank that is not being used was observed. There is a pole-top transformer that has a blue sticker indicating that it is PCB free. Anecdotal information was received from Mr. Steve Brock, the person interested in purchasing the property, about this portion of the property. Mr. Brock indicated that a large amount of soil containing some type of oil was deposited on this portion of the property. It is unknown where this soil was placed on the property. There is an area of this portion of the property that appeared to have been leveled and graded where soil might have been brought onto the property. ESA field personnel attempted to talk to the person in charge of the wood cutting operation on the property on both dates they accessed the property. The person in charge was not on the property on those dates.

A portion of the property is used to house animals, such as horses, calves, goats, and chickens/roosters (located adjacent to the south of Area 5 on **Figure 3**). The animals were in pens and appeared to be well cared for, possibly this area is leased for the boarding of the animals. No hazardous materials or wastes were observed in this area of the property.

INTERVIEWS

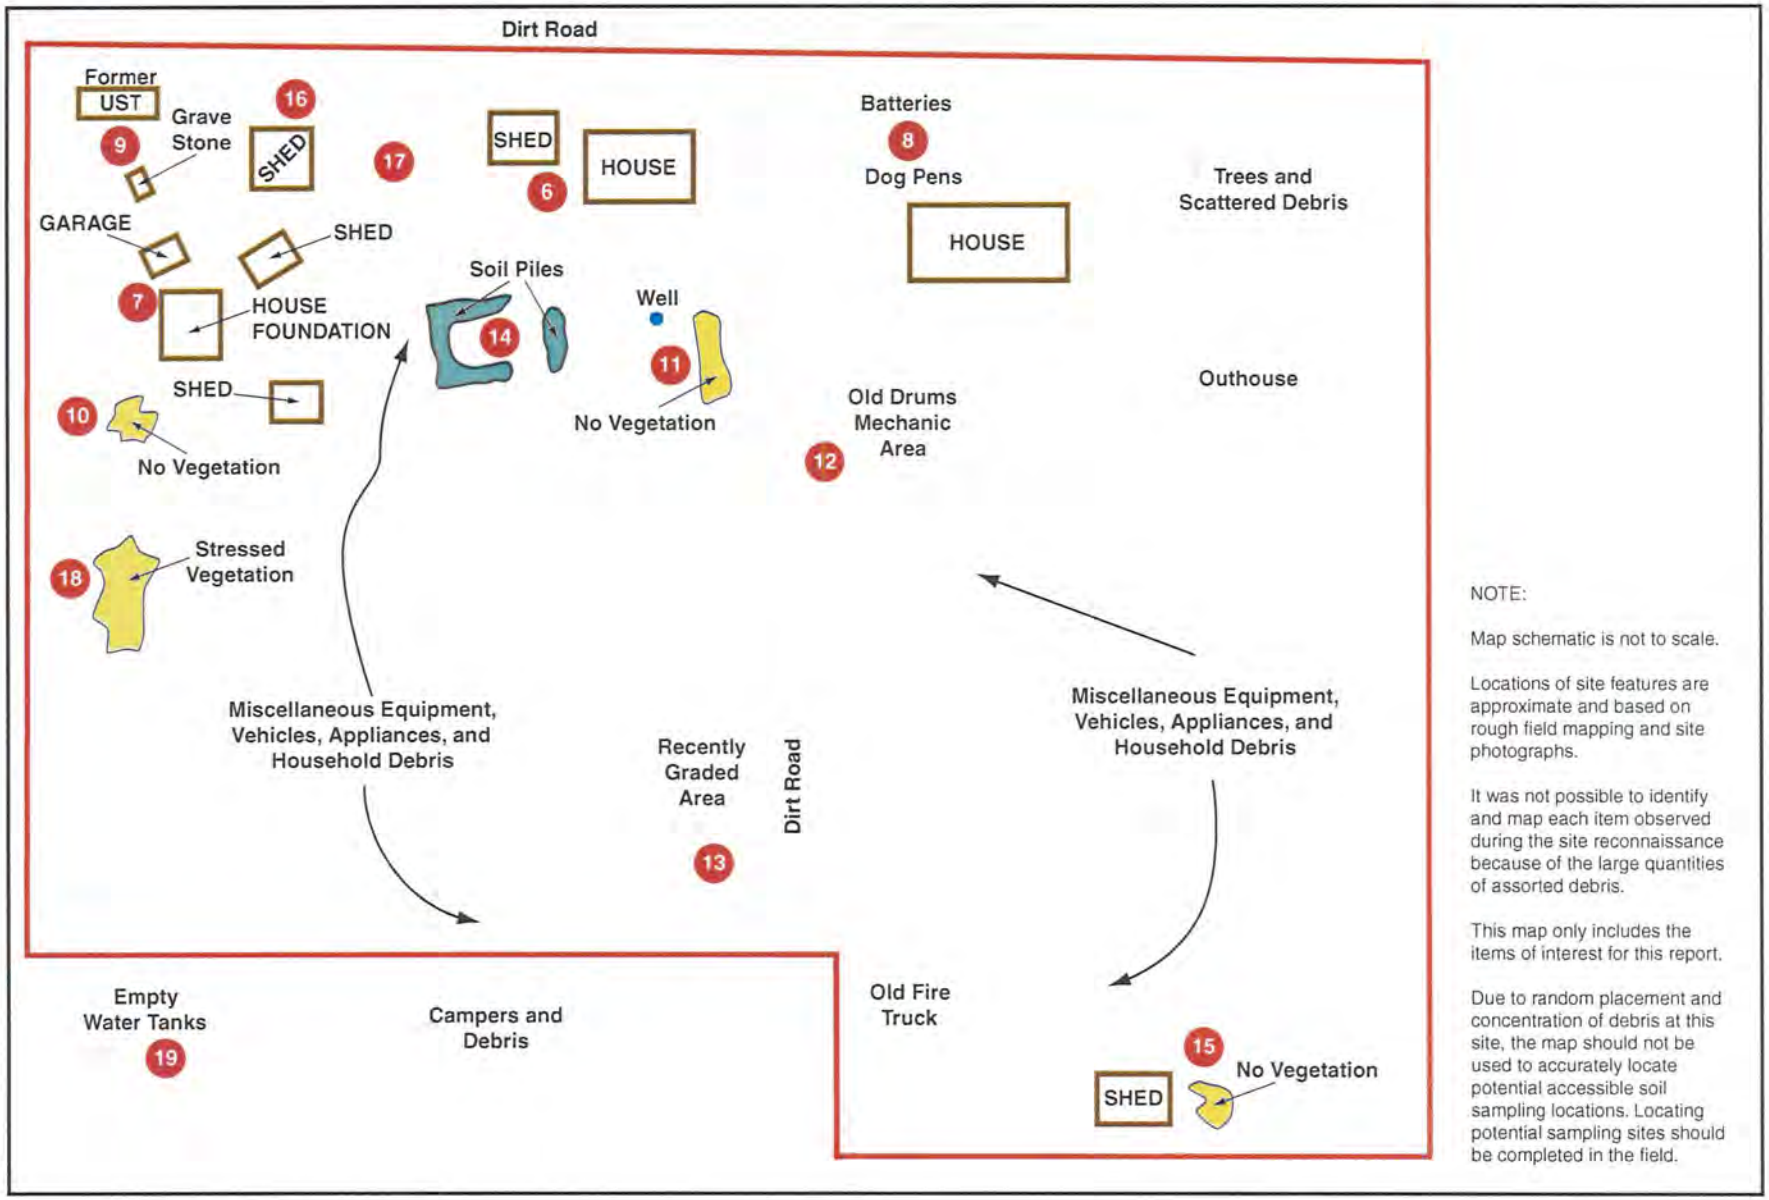
The objective of the interview process is to obtain additional information regarding the history and current uses of the subject property. The occupants of the property are the sons of the owners. There are legal issues pending on this property; therefore, we could not interview the occupants of the subject property (relatives of the property owners) due to their adversarial position with our client and with ESA staff.



ESA staff contact Mr. Trent Cave at the Napa County Environmental Management Department to discuss the contents of their file for the subject property and to find out if they have done any additional investigations of the property. Mr. Cave indicated that he has no information regarding the property other than what is in the County files. Mr. Cave noted that he made and signed the

Declaration in Support of Motion to Modify Final Judgment and Permanent Injunction in order to give the court a estimate of what it would cost to clean up the property based on what was found during the Site Investigation in 1990. Mr. Cave then directed ESA staff to Doug Calhoun of the County Environmental Management Department. Mr. Calhoun indicated that they have not done any additional investigations of the property since the 1990 inspection. Mr. Calhoun indicated that in 1990 there were many people living on the property in vehicles, tents, shacks built out of garage doors, etc. Mr. Calhoun does not know the location of the water wells that were identified by the County during their inspection of the property. He has no additional information regarding the property and what has occurred on the property since the 1990 inspection. If cleanup has occurred on the property, no inventory or manifests of the cleanup have been provided to the Napa County Environmental Management Department.

ESA staff contacted Chief Keith Caldwell at the American Canyon Fire District. Chief Caldwell indicated that in the past there have been as many as 30 families living on the subject property in various types of living quarters. There are no septic systems on the property and he knows of no approved water wells on the property. According to Chief Caldwell, in the 1970s soil was brought onto the portion of the property where the wood cutting business is now located for a motorcycle track. He does no know whether that soil was contaminated. Chief Caldwell knows of no underground storage tanks on the property, but does not know if there are any hazardous materials or other wastes buried on the property. There has been drums and above-ground tanks of hazardous materials/wastes located on the property in the past. Some cleanup of the property has been done by the owners of the property. However, no inventory or manifests of the cleanup have been provided to the American Canyon Fire District.



On September 27, 2004, ESA staff contacted Mr. Norbert Frost, the attorney for Patricia Couch who is one of the property owners. Mr. Frost indicated that he knows of no buried underground storage tanks on the property. He does not know the location of any water wells on the property. Mr. Frost is not aware of any contaminated soil brought onto the property prior to or by Mr. Hearst, who runs the woodcutting operation on the property. Over the years people have illegally dumped solid waste onto the property instead of taking it to the nearby landfill. However, the Couches have worked to clean up most of those areas over the last two years.

The Notice of Motion and Motion for Order Modifying Terms of Stipulation and Order dated August 26, 2003 has a Declaration signed by Edward S. Colby as Exhibit C. Mr. Colby indicated that he had inspected the Couch property in 1990 and in 2003. In the 2003 inspection the property contained scattered and accumulated piles of trash and debris, piles of vehicle tires, junked large appliances, used lumber, scrap metals, broken concrete, abandoned and inoperative heavy equipment, non-permitted wooden enclosures, buildings and fences, a wooden cabin and two mobile homes without appropriate permits, and an illegal tree-cutting business.

SECTION 5.0
RECORDS REVIEW

SECTION 5.0
RECORDS REVIEW

As stated in ASTM standard practice E1527-00, *practically reviewable* data is information that is "provided by the source in a manner and in a form that, upon examination, yields information relevant to the property without the need for extraordinary analysis of irrelevant data." Furthermore, "records that are sorted, filed, organized, or maintained by the source agency only chronologically are not generally practically reviewable."

DATABASE SEARCH

It should be noted that the database search is only as accurate as the data entered into the government agency maintained databases and the date on which those databases were last updated. Installation of underground storage tanks or hazardous material releases, if not reported to the appropriate agency, are not listed on any of the databases searched. The following section reviews the previously mentioned database search and all follow-up communications with local agencies and individuals.

REVIEW OF FEDERAL AND STATE REGULATORY AGENCY DATABASES

Federal and State Agency database searches were made for records of known storage tank sites and known sites of hazardous materials generation, storage or contamination. Databases were searched for sites and listings up to one mile from a point roughly equivalent to the center of the subject property. The database search report as provided to ESA by Environmental Data Resources (EDR) can be found in **Appendix A**. Included in the EDR database search report was a list of "unmapped sites". ESA reviewed the list of unmapped sites for properties that may be located within the search radius specified for each governmental database.

DATABASE SEARCH FINDINGS

The California Department of Conservation, Division of Oil, Gas and Geothermal Resources (DOGGR) map number W6-1, which includes the subject property and surrounding area does not show any oil or gas wells on the subject property or adjacent properties.

The subject property does not appear on any of the federal or state agency databases searched as of the date of this assessment. However, the Napa County Department of Environmental Management, Hazardous Material Section has a file for the subject property. The contents of that

file are attached as **Appendix D**, and a summary of the County findings for the property is presented below.

Couch Property (subject property)
2 Eucalyptus Road
American Canyon, California

On November 19, 1990 an inspection was made by Catherine Moody, Senior Hazardous Materials Specialist at the County Department of Environmental Management of a 165-acre portion of the subject property known to have hazardous materials and wastes. The hazardous materials and wastes observed on the property were oil or oily wastes, compressed gas cylinders, paints, lacquers, thinners and solvents, unknown materials in small containers, and automobile batteries. Some of the items noted on the property by Ms. Moody included several 55-gallon drums, all but five were empty. Three underground storage tanks sitting on top of the ground, two 10,000 gallon tanks (empty) and one 3,000 gallon tank (partially full of an oily liquid). Ms. Moody also observed several compressed gas cylinders scattered throughout the property.

Samples were collected from the five drums and the storage tank containing an oily liquid. The samples were collected by a Hazardous Materials Team composed of staff from the California Department of Forestry and the American Canyon Fire Protection District. A total of six liquid samples were collected and submitted to a laboratory for chemical analysis. The drums contained chloride, phenols, petroleum hydrocarbons as diesel, and polynuclear aromatics. The tank contained petroleum hydrocarbons as diesel.

The County determined that the property constitutes an illegal junk yard and refuse disposal area, which constitutes a public nuisance. The violations found by the County at the property range from storage of hazardous wastes over 90 days without a permit to failure of the generator to determine if his wastes are hazardous and to properly manage hazardous wastes.

There is one listed on the database search that are located within 1/4 mile of the subject property, and is discussed below.

American Canyon Landfill
Western Terminus of Eucalyptus Drive

The American Canyon Sanitary Landfill is located approximately 1/4 mile southwest of the subject property. The American Canyon Landfill was in operation from 1942 to 1995, when the landfill stopped accepting waste on a regular basis. During closure activities a leachate treatment system and landfill gas collection plant were installed. Groundwater is being monitored at the landfill. Groundwater beneath the landfill has been impacted with volatile organic compounds. Groundwater depth ranges from 12 to 21 feet below ground surface and flow at the landfill is in an east/northeast direction. Contamination at the site is mainly in the western portion of the landfill. It is unlikely that this landfill would have impacted soil or groundwater beneath the subject property due to its distance from the property.

There are several additional sites listed on the federal and state databases that are located 1/2 to 1 mile from the subject property. These sites are listed as leaking underground storage tank locations, hazardous waste generators, facilities with emissions permits, landfill locations, and locations of releases of hazardous materials. Readily available information relative to the listed sites located 1/2 to 1 mile from the subject property was reviewed and it is ESA's opinion that these sites are not expected to pose a threat of adverse impact to the subject property due to their distances from the subject property.

SECTION 6.0

FINDINGS AND CONCLUSIONS

SECTION 6.0
FINDINGS AND CONCLUSIONS

ESA has performed a Phase I Environmental Site Assessment in conformance with the scope and limitations of ASTM Standard Practice E1527-00 of the subject property. Any exceptions to, or deletions from, this practice are described in the Limiting Conditions section of this report. Based only on the information reviewed and described in this report, a site reconnaissance of the property, and interview, this assessment has noted the following recognized environmental conditions in connection with the subject property:

- There is past and present undocumented and illegal storage of hazardous materials and wastes on the subject property. The Napa County Department of Environmental Management inspected the property in 1990 and determined that the property constitutes an illegal junk yard and refuse disposal area, which constitutes a public nuisance. The violations found by the County at the property range from storage of hazardous wastes over 90 days without a permit to failure of the generator to determine if his wastes are hazardous and to properly manage hazardous wastes. Refer to page 6-2 for a discussion of the inspection by the County and to **Appendix D** for a copy of the County's file on the subject property.

- The site reconnaissance of the subject property identified small quantities of hazardous wastes and some soil staining. It appeared that the hazardous materials noted by the County in 1990 had been removed by the property owners, except for the gas cylinders and 3,000 gallon former underground storage tank. It is unknown where the County had observed the drums containing hazardous materials, the 10,000 gallon former underground storage tanks, and the other containers of hazardous materials. However, areas that had recently been disturbed and areas with a lack of vegetation were noted during the site reconnaissance. It appears that some of the hazardous materials, drums and the 10,000 gallon tanks may have been removed by the property owners. Refer to **Figures 3 through 5.**

- It should be noted that it is common knowledge that methamphetamine labs operated in the eucalyptus groves in the area of the subject property, and possibly on the property. Operations of these types of labs typically produce hazardous wastes including phosphine gas, solvent, benzene, chloroform and thionyl chloride. No methamphetamine labs were observed during the field reconnaissance.

- A portion of the property is being used to cut and store wood (Area 5, **Figure 3**). Anecdotal information was received from Mr. Steve Brock, the person interested in purchasing the property, about this portion of the property. Mr. Brock indicated that a large amount of soil containing some type of oil was deposited on this portion of the property. It is unknown where this soil was placed on the property. There is an area of this portion of the property that appeared to have been leveled and graded where soil might have been brought onto the property. Chief Keith Caldwell of the American Canyon Fire District remembers that soil was brought onto the property in the 1970s for a motorcycle track.

ESA field personnel attempted to talk to the person in charge of the wood cutting operation on the property on both dates they accessed the property. The person in charge was not on the property on those dates.

- The County identified two unapproved water wells on the property in their 1990 investigation (Appendix D). However, ESA staff could only locate one of the water wells.

- There are outhouses (holes in the ground) on the property that have been used for sewage disposal.

RECOMMENDATIONS

- Soil and groundwater sampling be completed in the areas of concern that were identified by this Phase I report (those areas on **Figure 4** that show no vegetation or stressed vegetation, the area with the batteries, the mechanic area, and soil sampling only from the soil piles). It may also be necessary to sample other areas of the property as dictated by field personnel that perform the soil and groundwater sampling at the site, depending on what is encountered during sampling. At a minimum, the soil and groundwater samples should be analyzed for petroleum hydrocarbons, oil and grease, solvents, and priority pollutant metals. The Phase II report should provide recommendations based on the laboratory analytical results.

  Due to the history of the use of the property, it is difficult to determine what might be uncovered during earth moving activities if the property is developed. At the time of excavation of the site for development soil and groundwater sampling should be completed in any areas of the property where buried hazardous materials, odors, or stained soil are found. The results of the laboratory analytical results would provide the information needed to determine whether excavation of the soil would be necessary and whether the soil would need to be taken off the site for disposal.

- Further investigation into the existence and location of soil containing oil that might have been placed on the portion of the property that is used for a wood cutting operation (Area 5, **Figure 3**). Soil and groundwater sampling might be warranted in that area of the property.

- The water wells should be abandoned in accordance with California water well standards and Napa County protocol.

- The sewage disposal areas should be closed in accordance with Napa County protocol.

SECTION 9.0
QUALIFICATIONS OF ENVIRONMENTAL PROFESSIONALS

CRYSTAL SPURR

Professional Experience:

Environmental Science Associates (2000–present)
NOA Environmental (1998–2000)
LRA Engineering (1994–1998)

Ms. Spurr has ten years of experience performing environmental site assessments for various types of commercial, industrial and residential projects throughout California. She has a Registered Environmental Assessor I designation issued by the California Environmental Protection Agency, Office of Environmental Health Hazard Assessment.

Education:

B.A., Environmental Studies, California State University, Sacramento

PETER HUDSON

Professional Experience:

Mr. Hudson is a senior geologist/hydrogeologist with over fourteen years of broad-based experience in engineering geology, hydrogeology, environmental and geotechnical studies. He is a registered geologist in the state of California (Registration No. 6730). His general responsibilities include providing geological, geotechnical, geophysical and hydrogeological technical support in water quality assessments, water resource and geological studies for planning, permit assistance, environmental impact assessments with a focus on hydrological and geologic issues, soils investigations and erosion/geomorphic investigations, planning/policy assessments, and mitigation planning and monitoring. Mr. Hudson provides technical input for completion of work products such as resource management plans, EIRs and EISs, reclamation/restoration plans, erosion control plans, draft permits, (e.g., NPDES), land development environmental feasibility analyses, and site selection studies.

Education: BA, Geology, San Francisco State University
Pre-Engineering Program, University of San Francisco

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc. (EDR). The report meets the government records search requirements of ASTM Standard Practice for Environmental Site Assessments, E 1527-00. Search distances are per ASTM standard or custom distances requested by the user.

TARGET PROPERTY INFORMATION

ADDRESS

EUCALYPTUS GROVE
AMERICAN CANYON, CA 94503

COORDINATES

Latitude (North):	38.182700 - 38° 10' 57.7"
Longitude (West):	122.280900 - 122° 16' 51.2"
Universal Tranverse Mercator:	Zone 10
UTM X (Meters):	562980.1
UTM Y (Meters):	4226124.5
Elevation:	6 ft. above sea level

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified.

EXECUTIVE SUMMARY

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

FEDERAL ASTM STANDARD

CERCLIS-NFRAP: As of February 1995, CERCLIS sites designated "No Further Remedial Action Planned" (NFRAP) have been removed from CERCLIS. NFRAP sites may be sites where, following an initial investigation, no contamination was found, contamination was removed quickly without the need for the site to be placed on the NPL, or the contamination was not serious enough to require Federal Superfund Action or NPL consideration. EPA has removed approximately 25,000 NFRAP sites to lift the unintended barriers to the redevelopment of these properties and has archived them as historical records so EPA does not needlessly repeat the investigations in the future. This policy change is part of the EPA's Brownfields Redevelopment Program to help cities, states, private investors and affected citizens to promote economic redevelopment of unproductive urban sites.

A review of the CERC-NFRAP list, as provided by EDR, and dated 02/26/2004 has revealed that there is 1 CERC-NFRAP site within approximately 1 mile of the target property.

Equal/Higher Elevation	Address	Dist / Dir	Map ID	Page
SUNSHINE AUTO SALVAGE	1578 GREEN ISLAND ROAD	1/2 - 1 N	F23	28

RCRIS: Resource Conservation and Recovery Information System. RCRIS includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs): generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month. Small quantity generators (SQGs): generate between 100 kg and 1,000 kg of hazardous waste per month. Large quantity generators (LQGs): generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste from the generator off-site to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

A review of the RCRIS-SQG list, as provided by EDR, and dated 04/13/2004 has revealed that there is 1 RCRIS-SQG site within approximately 1 mile of the target property.

Equal/Higher Elevation	Address	Dist / Dir	Map ID	Page

Threat to Water Quality:
Moderate Threat to Water Quality. A violation could have a major adverse impact on receiving biota, can cause aesthetic impairment to a significant human population, or render unusable a potential domestic or municipal water supply. Awsthetic impairment would include nuisance from a waste treatment facility.

Facility Type: Solid Waste Site-Class III - Landfills for non hazardous solid wastes.

Complexity: Category B - Any facility having a physical, chemical, or biological waste treatment system (except for septic systems with subsurface disposal), or any Class II or III disposal site, or facilities without treatment systems that are complex, such as marinas with petroleum products, solid wastes, and sewage pump out facilities.

Prime Waste: Solid Wastes - Designated/Influent or Solid Wastes that pose a significant threat to water quality because of their high concentrations (E.G., BOD, Hardness, TRF, Chloride). 'Manageable' hazardous wastes (E.G., inorganic salts and heavy metals) are included in this category.

2nd Waste Type: Miscellaneous (Includes wastes from dewatering, recreational lake overflow, swimming pool wastes, water ride wastewater, ground water seepage and other wastes of this type) - Designated/Influent or Solid Wastes that pose a significant threat to water quality because of their high concentrations (E.G., BOD, Hardness, TRF, Chloride). 'Manageable' hazardous wastes (E.G., inorganic salts and heavy metals) are included in this category.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Elapsed ASTM days: Provides confirmation that this EDR report meets or exceeds the 90-day updating requirement of the ASTM standard.

FEDERAL ASTM STANDARD RECORDS

NPL: National Priority List
Source: EPA
Telephone: N/A
National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Date of Government Version: 04/27/04
Date Made Active at EDR: 05/21/04
Database Release Frequency: Semi-Annually

Date of Data Arrival at EDR: 05/04/04
Elapsed ASTM days: 17
Date of Last EDR Contact: 05/04/04

CERCLIS: Comprehensive Environmental Response, Compensation, and Liability Information System
Source: EPA
Telephone: 703-413-0223
CERCLIS contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

Date of Government Version: 02/26/04
Date Made Active at EDR: 04/02/04
Database Release Frequency: Quarterly

Date of Data Arrival at EDR: 03/22/04
Elapsed ASTM days: 11
Date of Last EDR Contact: 03/22/04

CERCLIS-NFRAP: CERCLIS No Further Remedial Action Planned
Source: EPA
Telephone: 703-413-0223
As of February 1995, CERCLIS sites designated "No Further Remedial Action Planned" (NFRAP) have been removed from CERCLIS. NFRAP sites may be sites where, following an initial investigation, no contamination was found, contamination was removed quickly without the need for the site to be placed on the NPL, or the contamination was not serious enough to require Federal Superfund action or NPL consideration. EPA has removed approximately 25,000 NFRAP sites to lift the unintended barriers to the redevelopment of these properties and has archived them as historical records so EPA does not needlessly repeat the investigations in the future. This policy change is part of the EPA's Brownfields Redevelopment Program to help cities, states, private investors and affected citizens to promote economic redevelopment of unproductive urban sites.

RCRIS: Resource Conservation and Recovery Information System
Source: EPA
Telephone: 800-424-9346
Resource Conservation and Recovery Information System. RCRIS includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs): generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month. Small quantity generators (SQGs): generate between 100 kg and 1,000 kg of hazardous waste per month. Large quantity generators (LQGs): generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month. Transporters are individuals or entities that move hazardous waste from the generator off-site to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Date of Government Version: 04/13/04
Date Made Active at EDR: 05/13/04
Database Release Frequency: Varies
Date of Data Arrival at EDR: 04/20/04
Elapsed ASTM days: 23

FEDERAL ASTM SUPPLEMENTAL RECORDS

BRS: Biennial Reporting System
Source: EPA/NTIS
Telephone: 800-424-9346
The Biennial Reporting System is a national system administered by the EPA that collects data on the generation and management of hazardous waste. BRS captures detailed data from two groups: Large Quantity Generators (LQG) and Treatment, Storage, and Disposal Facilities.

Date of Government Version: 12/01/01
Database Release Frequency: Biennially
Date of Last EDR Contact: 03/16/04
Date of Next Scheduled EDR Contact: 06/14/04

CONSENT: Superfund (CERCLA) Consent Decrees
Source: EPA Regional Offices
Telephone: Varies
Major legal settlements that establish responsibility and standards for cleanup at NPL (Superfund) sites. Released periodically by United States District Courts after settlement by parties to litigation matters.

Date of Government Version: N/A
Database Release Frequency: Varies
Date of Last EDR Contact: N/A
Date of Next Scheduled EDR Contact: N/A

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

ROD: Records Of Decision
Source: EPA
Telephone: 703-416-0223
Record of Decision. ROD documents mandate a permanent remedy at an NPL (Superfund) site containing technical and health information to aid in the cleanup.

Date of Government Version: 04/08/04
Database Release Frequency: Annually

Date of Last EDR Contact: 04/05/04
Date of Next Scheduled EDR Contact: 07/05/04

DELISTED NPL: National Priority List Deletions
Source: EPA
Telephone: N/A
The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Date of Government Version: 04/27/04
Database Release Frequency: Quarterly

Date of Last EDR Contact: 05/04/04
Date of Next Scheduled EDR Contact: 08/02/04

FINDS: Facility Index System/Facility Identification Initiative Program Summary Report
Source: EPA
Telephone: N/A
Facility Index System. FINDS contains both facility information and 'pointers' to other sources that contain more detail. EDR includes the following FINDS databases in this report: PCS (Permit Compliance System), AIRS (Aerometric Information Retrieval System), DOCKET (Enforcement Docket used to manage and track information on civil judicial enforcement cases for all environmental statutes), FURS (Federal Underground Injection Control), C-DOCKET (Criminal Docket System used to track criminal enforcement actions for all environmental statutes), FFIS (Federal Facilities Information System), STATE (State Environmental Laws and Statutes), and PADS (PCB Activity Data System).

Date of Government Version: 04/08/04
Database Release Frequency: Quarterly

Date of Last EDR Contact: 04/05/04
Date of Next Scheduled EDR Contact: 07/05/04

HMIRS: Hazardous Materials Information Reporting System
Source: U.S. Department of Transportation
Telephone: 202-366-4555
Hazardous Materials Incident Report System. HMIRS contains hazardous material spill incidents reported to DOT.

Date of Government Version: 02/17/04
Database Release Frequency: Annually

Date of Last EDR Contact: 04/20/04
Date of Next Scheduled EDR Contact: 07/19/04

MLTS: Material Licensing Tracking System
Source: Nuclear Regulatory Commission
Telephone: 301-415-7169
MLTS is maintained by the Nuclear Regulatory Commission and contains a list of approximately 8,100 sites which possess or use radioactive materials and which are subject to NRC licensing requirements. To maintain currency, EDR contacts the Agency on a quarterly basis.

Date of Government Version: 04/19/04
Database Release Frequency: Quarterly

Date of Last EDR Contact: 04/05/04
Date of Next Scheduled EDR Contact: 07/05/04

MINES: Mines Master Index File

NPL LIENS: Federal Superfund Liens
Source: EPA
Telephone: 202-564-4267
Federal Superfund Liens. Under the authority granted the USEPA by the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA) of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner receives notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Date of Government Version: 10/15/91
Database Release Frequency: No Update Planned

Date of Last EDR Contact: 03/12/04
Date of Next Scheduled EDR Contact: 05/24/04

PADS: PCB Activity Database System
Source: EPA
Telephone: 202-564-3887
PCB Activity Database. PADS Identifies generators, transporters, commercial storers and/or brokers and disposers of PCB's who are required to notify the EPA of such activities.

Date of Government Version: 03/30/04
Database Release Frequency: Annually

Date of Last EDR Contact: 05/12/04
Date of Next Scheduled EDR Contact: 08/09/04

DOD: Department of Defense Sites
Source: USGS
Telephone: 703-692-8801
This data set consists of federally owned or administered lands, administered by the Department of Defense, that have any area equal to or greater than 640 acres of the United States, Puerto Rico, and the U.S. Virgin Islands.

Date of Government Version: 10/01/03
Database Release Frequency: Semi-Annually

Date of Last EDR Contact: 02/02/04
Date of Next Scheduled EDR Contact: 05/10/04

STORMWATER: Storm Water General Permits
Source: Environmental Protection Agency
Telephone: 202 564-0746
A listing of all facilities with Storm Water General Permits.

US BROWNFIELDS: A Listing of Brownfields Sites
Source: Environmental Protection Agency
Telephone: 202-566-2777
Included in the listing are brownfields properties addresses by Cooperative Agreement Recipients and brownfields properties addressed by Targeted Brownfields Assessments. Targeted Brownfields Assessments-EPA's Targeted Brownfields Assessments (TBA) program is designed to help states, tribes, and municipalities--especially those without EPA Brownfields Assessment Demonstration Pilots--minimize the uncertainties of contamination often associated with brownfields. Under the TBA program, EPA provides funding and/or technical assistance for environmental assessments at brownfields sites throughout the country. Targeted Brownfields Assessments supplement and work with other efforts under EPA's Brownfields Initiative to promote cleanup and redevelopment of brownfields. Cooperative Agreement Recipients-States, political subdivisions, territories, and Indian tribes become BCRLF cooperative agreement recipients when they enter into BCRLF cooperative agreements with the U.S. EPA. EPA selects BCRLF cooperative agreement recipients based on a proposal and application process. BCRLF cooperative agreement recipients must use EPA funds provided through BCRLF cooperative agreement for specified brownfields-related cleanup activities.

Date of Government Version: 04/14/04
Database Release Frequency: Semi-Annually

Date of Last EDR Contact: 03/15/04
Date of Next Scheduled EDR Contact: 06/14/04

RMP: Risk Management Plans
Source: Environmental Protection Agency
Telephone: 202-564-8600
When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

FUDS: Formerly Used Defense Sites
Source: U.S. Army Corps of Engineers
Telephone: 202-528-4285
The listing includes locations of Formerly Used Defense Sites properties where the US Army Corps of Engineers is actively working or will take necessary cleanup actions.

Date of Government Version: 10/01/03
Database Release Frequency: Varies

Date of Last EDR Contact: 04/26/04
Date of Next Scheduled EDR Contact: 07/05/04

RAATS: RCRA Administrative Action Tracking System
Source: EPA
Telephone: 202-564-4104
RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

Date of Government Version: 04/17/95
Database Release Frequency: No Update Planned

Date of Last EDR Contact: 03/08/04
Date of Next Scheduled EDR Contact: 06/07/04

TRIS: Toxic Chemical Release Inventory System
Source: EPA
Telephone: 202-566-0250
Toxic Release Inventory System. TRIS identifies facilities which release toxic chemicals to the air, water and land in reportable quantities under SARA Title III Section 313.

Date of Government Version: 12/31/01
Database Release Frequency: Annually

Date of Last EDR Contact: 03/23/04
Date of Next Scheduled EDR Contact: 06/21/04

TSCA: Toxic Substances Control Act
Source: EPA
Telephone: 202-260-5521
Toxic Substances Control Act. TSCA identifies manufacturers and importers of chemical substances included on the TSCA Chemical Substance Inventory list. It includes data on the production volume of these substances by plant site.

Date of Government Version: 12/31/02
Database Release Frequency: Every 4 Years

Date of Last EDR Contact: 03/05/04

Date of Next Scheduled EDR Contact: 07/05/04

CA WDS: Waste Discharge System
Source: State Water Resources Control Board
Telephone: 916-341-5227
Sites which have been issued waste discharge requirements.

Date of Government Version: 04/05/04
Database Release Frequency: Quarterly
Date of Last EDR Contact: 03/22/04
Date of Next Scheduled EDR Contact: 06/21/04

DEED: List of Deed Restrictions
Source: Department of Toxic Substances Control
Telephone: 916-323-3400
The use of recorded land use restrictions is one of the methods the DTSC uses to protect the public from unsafe exposures to hazardous substances and wastes.

Date of Government Version: 04/06/04
Database Release Frequency: Semi-Annually
Date of Last EDR Contact: 04/06/04
Date of Next Scheduled EDR Contact: 07/05/04

NFA: No Further Action Determination
Source: Department of Toxic Substances Control
Telephone: 916-323-3400
This category contains properties at which DTSC has made a clear determination that the property does not pose a problem to the environment or to public health.

Date of Government Version: 03/02/04
Database Release Frequency: Quarterly
Date of Last EDR Contact: 03/03/04
Date of Next Scheduled EDR Contact: 05/31/04

EMI: Emissions Inventory Data
Source: California Air Resources Board
Telephone: 916-322-2990
Toxics and criteria pollutant emissions data collected by the ARB and local air pollution agencies.

Date of Government Version: 12/31/02
Database Release Frequency: Varies
Date of Last EDR Contact: 04/20/04
Date of Next Scheduled EDR Contact: 07/19/04

REF: Unconfirmed Properties Referred to Another Agency
Source: Department of Toxic Substances Control
Telephone: 916-323-3400
This category contains properties where contamination has not been confirmed and which were determined as not requiring direct DTSC Site Mitigation Program action or oversight. Accordingly, these sites have been referred to another state or local regulatory agency.

Date of Government Version: 03/02/04
Database Release Frequency: Quarterly

Date of Last EDR Contact: 03/03/04
Date of Next Scheduled EDR Contact: 05/31/04

SCH: School Property Evaluation Program
Source: Department of Toxic Substances Control
Telephone: 916-323-3400
This category contains proposed and existing school sites that are being evaluated by DTSC for possible hazardous materials contamination. In some cases, these properties may be listed in the CalSites category depending on the level of threat to public health and safety or the environment they pose.

Date of Government Version: 03/02/04
Database Release Frequency: Quarterly

Date of Last EDR Contact: 03/03/04
Date of Next Scheduled EDR Contact: 05/31/04

NFE: Properties Needing Further Evaluation
Source: Department of Toxic Substances Control
Telephone: 916-323-3400
This category contains properties that are suspected of being contaminated. These are unconfirmed contaminated properties that need to be assessed using the PEA process. PEA in Progress indicates properties where DTSC is currently conducting a PEA. PEA Required indicates properties where DTSC has determined a PEA is required, but not currently underway.

Date of Next Scheduled EDR Contact: 05/31/04

HAZNET: Facility and Manifest Data
Source: California Environmental Protection Agency
Telephone: 916-255-1136
Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method.

US BROWNFIELDS: A Listing of Brownfields Sites
Source: Environmental Protection Agency
Telephone: 202-566-2777
Included in the listing are brownfields properties addresses by Cooperative Agreement Recipients and brownfields properties addressed by Targeted Brownfields Assessments. Targeted Brownfields Assessments-EPA's Targeted Brownfields Assessments (TBA) program is designed to help states, tribes, and municipalities--especially those without EPA Brownfields Assessment Demonstration Pilots--minimize the uncertainties of contamination often associated with brownfields. Under the TBA program, EPA provides funding and/or technical assistance for environmental assessments at brownfields sites throughout the country. Targeted Brownfields Assessments supplement and work with other efforts under EPA's Brownfields Initiative to promote cleanup and redevelopment of brownfields. Cooperative Agreement Recipients-States, political subdivisions, territories, and Indian tribes become BCRLF cooperative agreement recipients when they enter into BCRLF cooperative agreements with the U.S. EPA. EPA selects BCRLF cooperative agreement recipients based on a proposal and application process. BCRLF cooperative agreement recipients must use EPA funds provided through BCRLF cooperative agreement for specified brownfields-related cleanup activities.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

Oil/Gas Pipelines: This data was obtained by EDR from the USGS in 1994. It is referred to by USGS as GeoData Digital Line Graphs from 1:100,000-Scale Maps. It was extracted from the transportation category including some oil, but primarily gas pipelines.

Electric Power Transmission Line Data

Subject: Couch Property, #2 Eucalyptus Road, Am. Cyn.
APN #58-030-17 - Our File #HF 219

Date of
Inspection: November 19, 1990

Purpose: Site Investigation Under Inspection Warrant

Report
Prepared by: Catherine Moody, Senior Hazardous Materials Specialist, Department of Environmental Management, Hazardous Materials Section

On November 19, 1990, I accompanied members of the California Department of Forestry to inspect the property and to collect samples, take photographs and make notes regarding hazardous wastes and solid waste at the Couch Property in American Canyon.

The property is a one hundred sixty five acre parcel, heavily forested with eucalyptus trees. There are small dirt roads throughout much of the property. Pinpointing on specific locations on a map is difficult as there is a tremendous amount of all manner of debris, garbage, abandoned vehicles, machinery, equipment, trash heaps and concrete rubble,as well as 3 tanks and a railroad car. Trails and paths wind throughout the property.

Interspersed throughout the property are shelters where people are living, or were recently living. Some of these shelters used the debris piles as walls for their living quarters.

In addition, we found a box containing six cylindrical cardboard tubes, sealed on each end with wax and stenciled with the words "GAMMA-FLAME". The each tube is approximately ten inches in length, four inches in diameter. The cardboard tubing is approximately one-quarter inch in thickness. Inserted in this box was a piece of mail (unsealed) addressed to "Hollis Newman".

Scattered throughout the property are used automobile batteries and small containers of what is probably used oil and used antifreeze. There are also many small unlabeled containers, probably containing paint or automobile related wastes.

We observed many 55-gallon drums on the property however, most were empty, as determined either by observation (many lacked lids) or by tapping on the sides. Five drums were full or partially full. A sample was collected from each.

There are at least three tanks on the property. Two are of approximately ten-thousand gallon capacity and seemed empty. Apparently, these two tanks used to be underground storage tanks. One is of three-thousand capacity and was partially full of an oily liquid. A sample was collected from this tank.

There are many compressed gas cylinders scattered throughout the property; particularly propane cylinders. The propane cylinders was usually found in the garbage and debris piles.

Other compressed gas cylinders were grouped together in two areas: one group of five cylinders is in a wooden garage that presumably belongs to the Couch family. This garage is filled with all manner of clothes, trash, machinery, equipment, boxes and so forth and as well as five cylinders. (See photo #4).

Near the mobile home where the Couch family lives, adjacent to the road, are twenty-one compressed gas cylinders laying on the ground. Several of them were in a deteriorated condition with rust and corrosion forming on them. All of the cylinders looked like they have been outside for a long time; the paint was faded, the cylinders were scarred and rusty, and leaves and dirt had built up on them, partially burying them. We counted six acetylene cylinders, ten hydrogen cylinders, and five freon cylinders in this area.

Mr. Couch told me that he had tried to get the acetylene cylinders refilled but was refused due to the poor condition of the cylinder valves. He told me that he used the hydrogen cylinders to fill balloons. This concerned me since he seemed to me to be confusing hydrogen, a highly explosive and flammable gas, with helium, an inert gas commonly used to fill children's balloons.

In general, the hazardous wastes we observed fell into four categories;

1) oil or oily wastes
2) compressed gas cylinders
3) paints, lacquers, thinners and solvents
4) unknowns in small containers
5) automobile batteries

Sampling Summary:

All samples were collected by the Haz Mat Team composed of staff from of the California Department of Forestry and the American Canyon Fire Protection District. The Haz Mat Team also tested the two empty ten-thousand gallon tanks for the presence of volatile or toxic gases with hand-held meter device. The meter is a direct reading instrument that does not record findings. Neither tanks registered as having volatile or toxic gases.

A total of six liquid samples were collected. Five of the samples were taken from 55-gallon drums. One sample was taken from the three-thousand gallon tank. One of the cardboard cylinders stenciled "GAMMA-FLAME" was taken from the box if six.

One of the samples came from a drum located in area identified as Zone One; which was the southerly portion of the property that is either leased, rented or otherwise occupied by persons other than the Couch family. The drum was labeled Z-1-1. The sample was identified on the sample jar and on our Chain of Custody document as Sample Number One.

The other five liquid samples came from the drums and the tank located in Zone 3 and were identified on the sample jars and on our Chain of Custody document as Sample Numbers Two through Six.

Sample Z-1-2 consisted of one of the cardboard cylinders stenciled "GAMMA-FLAME". It was NOT included on the Chain of Custody document since we could not send it to a laboratory for analysis as there was concern that it might be explosive or incendiary device of some type, or possibly might contain a highly reactive metal. The device was subsequently x-rayed and opened by Sergeant Johnson of the Presidio Bomb Squad. It was found to be empty except for sawdust packing. Sergeant Johnson said he would list it on his report as a hoax device. He did say that the other cylinders were probably empty too.

Sample ID Number	Sample Type	Sample Jar #
Z-1-1	Liquid from drum	One
Z-1-2	Cardboard cylinder (Gamma-Flame)	N/A
Z-3-3	Liquid from drum	Two
Z-3-4	Liquid from ~~tank~~ drum	Three
Z-3-5	Liquid from ~~drum~~ tank	Four
Z-3-6	Liquid from drum	Five
Z-3-7	Liquid from drum	Six

Areas of Concern:

In terms of hazard potential, the cylinders of hydrogen would represent the most immediate concern. Also, the cylinders in deteriorated condition or of unknown contents have hazard potential. Neither this Department nor the Department of Forestry have the sampling equipment necessary for obtaining gas samples.

The unlabeled drums and tank represent a hazard in that they are unidentified as to contents. Drum Z-3-1 (lying on its side); showed leakage from the top rim. (See photo #17). Drums Z-3-4- and Z-3-5 were resting on a wooden pallet that is heavily stained, and therefore are believed to be leaking. (See photo #21).
The tank Z-3-3 is resting on the ground, without a cap on the fill hole, instead it had a chunk of wood stuck in it. In addition, the tank is not braced in anyway to prevent overturning and it rests on bare earth. (See photo #20).

There are at least two areas on Zone One where twenty or more small containers (one gallon or less) of what look to be various paints, sealers, epoxies, lacquers, engine treatments, wood stains and so forth area stored. Many are rusty or stained and therefore their contents are uncertain but they are mostly like paint and related materials. One group is stored in a fairly neat fashion on a wooden pallet, another group is stored haphazardly in wooden boxes and on the ground. (see Photo #6 and #7)

I observed a large pile of granular asphalt material and asphalt chunks, which would not usually represent an environment hazard unless placed in or along a waterway. (See photo #13).

Judging by the soil piles, asphalt piles, debris piles and abandoned automobiles on the property it appears that the property owners are allowing dumping to take place on their property, perhaps for revenue. Receiving off-site wastes constitutes operating a Solid Waste facility without a Permit or variance.

In addition, Napa County Ordinance #213 makes it unlawful to operate a refuse disposal area in the unincorporated area unless possessing a permit to do so.

An Order of Quarantine that forbids the removal of any hazardous wastes on the property for 30 days unless approval is received from this Department was present to Mr. Robert Couch by a representative of the Sheriff Department. Mr. Couch signed the Order verifying receipt. A copy appears as an attachment to this report.

Violative conditions:

Violative conditions are based wholly or partly on the following:

Section 25117(a), Chapter 6.5, Division 20, Health & Safety Code includes in the definition of a hazardous waste as any wastes or combination of wastes that pose a substantial present or potential hazard to human health or environment when improperly treated, stored, transported, or disposed of, or otherwise managed.

Section 25124(e), Chapter 6.5, Division 20, California Health & Safety Code includes in the definition of waste a material that poses a threat to public health or the environment and is either or both mislabeled or not adequately labeled or is packaged in deteriorated or damaged containers.

Based on those definitions, I have determined the following violations.

1. Section 66471, Title 22, California Code of Regulations. The generator (property owner) failed to determine if the wastes are hazardous wastes pursuant to this section in that five (5) drumsand one tank on the property were found (by laboratory analysis) to be hazardous. These containers were unlabeled and at least one container (drum #Z-3-7) did not contain the type of material Mr. Couch stated it to be. Both Robert Couch and David Couch believed all the containers held "cresote".

2. Section 66508, Title 22, California Code of Regulations. The generator (property owner) failed to satisfy the storage requirements for hazardous and the ninety (90) day accumulation time limit for hazardous wastes in that all five of the drums and the tank that were found to contain hazardous wastes were unlabeled and, according to my conversations with Robert Couch and with David Couch, and by my observations on the condition of the containers, these five drums, the tank and the cylinders have been stored on the property for years.

3. Section 67241, Title 22, California Administrative Code. The generator (property owner) failed to manage hazardous waste properly in that the cylinders were lying on their sides, on the ground, adjacent to a road. Several were severely rusted and all of which appeared to be in a deteriorated condition. At least three of drums were severely rusted, one was definitely leaking (Z-3-1) and two were suspected of leaking (Z-3-3 and Z-3-4).

4. Napa County Ordinance 213, Article VI, Section I makes it unlawful to operate a refuse disposal area in the unincorporated area unless possessing a permit from the Health Department to do so. Based on my observations and my discussion with David Couch the property owners have allowed dumping to take place on this property and have allowed refuse to accumulate on this property. (See all photos).

Couch Property
Report of 11-19-90
HF 219

Photo #	Description
1	Entrance to Couch Property. Note tractor-trailer exiting property.
2	Inside Couch property, west of entrance road. Note compressed gas cylinders lying on the ground.
3	Area near Couch residence. Note the drum, tank abandoned automobiles and debris.
4	Storage building. Note Compressed gas cylinders, paint & oil containers, debris.
5	Cardboard cylinders labeled "Gamma Flame". Either a "paint" game device or other hoax device.
6	Numerous containers of paint and related products.
7	Numerous containers of paint, epoxies, cleaners antifreeze, engine additives, etc.
8	Huge piles of debris.
9	Box of Gamma Flame cylinders.
10	Drums and debris pile. CDF staff labeling drum.
11	Debris & drums.
12	Abandoned autos, debris & living quarters for persons unknown.
13	Asphalt pile in foreground. Bus in the background is living quarters for a family, including small children and an infant. Poly drum on the top of pickup truck has plastic tubing that delivers water to the bus.
14	Apparently a former underground storage tank. CDF staff person is commencing to test it for explosive vapors.

Couch Property
Report 11-19-92
HF 219

Photo #	Description
15	Another view of the storage tank and debris pile
16	Eucalyptus tree grove. "Paint" games held here.
17	Toppled, leaking drum.
18	Another drum, full.
19	Another former underground storage tank. This tank contained an oily material. A sample was collected here.
20	Another view of the tank being sampled.
21	Two drums. Both appear to be leaking. One is toppled.
22	Compressed gas cylinders. Ten were labled as containing hydrogen. All of the 21 cylinders observed in this area were in a deteriorated condition.
23	Vehicle on property. Dog's skull nailed to vehicle. Trash in truck bed.
24	A living area for persons unknown.
25	Two horses tethered by chains. No water. Various vehicles in the background, used as living quarters.

COMMENTS:

ORDER OF QUARANTINE

You are hereby notified that an Order of Quarantine is issued on the hazardous wastes on this property; pursuant to the State of California Health & Safety Code, Division 20, Section 25187.6(a).

Pursuant to Section 25187.6(a)(2) No person shall remove, transfer, or dispose of the hazardous waste until permission for the removal, transfer or disposal is given by an authorized agent, identified in the document as the Napa County Department of Environmental Management or The Napa County Sheriffs Department.

Pursuant to Section 25187.6(a)(c), Chapter 6.5, Division 20, State of California Health & Safety Code this Order of Quarantine shall take effect upon issuance and shall remain effective for thirty (30) days or until an authorized agent as identified in this document shall remove this Order of Quarantine .

TOTAL PETROLEUM HYDROCARBON ANALYSIS
EPA METHOD 625/8270 (GC/MS)

CCAS

SAMPLE DESCRIPTION:
ANALYTE-FREE WATER SPIKE, Spiked to 16000 ug/L with Diesel #2

Component Determined	Detection Limit in ug/L (PQL)*	Concentration w/spike in ug/L	Percent Recovery
Total Petroleum Hydrocarbons (Diesel #2)	200.	8000.	50.

*(Practical Quantitation Limit)

The values presented are developed by comparison of sample extracts with a simulated extract prepared from authentic Diesel #2. Internal standards are employed for greater accuracy. Sample was extracted by EPA Method 3510.

HAZARDOUS MATERIALS SECTION
DEPT. OF ENVIRONMENTAL MANAGEMENT

COUCH PROPERTY VIOLATIONS

I. Zoning and Building Violations

1. The property is only zoned for one single-family dwelling and for agricultural uses. Despite this, there are twenty other structures (ten of which are inhabited, and ten of which are built for storage or for housing chickens). Also inhabited are ten trailers, two buses, and a camper shell. None of these inhabited structures are permitted uses (NCC 12231, 12107)

2. The twenty stuctures all exceed 120 square feet of roof area and require building permits, which were not obtained (UBC 301(a)).

3. The one permitted dwelling is still under construction and has never been completed. An unapproved, unpermitted underground utility trench has been dug.

4. The owners are living in a mobile home which is to be in dead storage, but is being used as a residence by the owners (NCC 11010).

5. There is no approved water supply and there are two unapproved water wells that have been dug on the property (NCC 5505, 5230).

6. The entire parcel constitutes an illegal junk yard (NCC 6051).

7. Evidence exists regarding the occurrance of paint-ball games which have occurred and been advertised. There is no approved use permit for this activity.

8. All of the residents in the unpermitted structures are renting from the owners, a use not permitted in this zoning. (NCC 12231, 12107).

10. The property is being used to store heavy construction equipment (such as dump trucks, skip loaders, backhoes, and semitrailers), a use not contemplated by the zoning.

11. The entire parcel constitutes a public nuisance (NCC 12903, 11021).

II. Environmental Management-Health and Safety Problems

1. There is no approved sewage disposal or approved septic system present in the park. Sewage disposal ranges from holes in the ground, to merely allowing sewage to run on the ground to an outhouse type structure (NCC 5621, 5622, H&S 5411).

2. There is the illegal accumulation of refuse, debris, trash, and garbage in places located throughout the property. Owners are operating a refuse disposal area without a permit, in violation of Napa County Ordinance No. 213.

3. The property contains unlocked abandoned refrigerators, in violation of Penal Code Section 402(b).

III. Environmental Management-Toxics Problems

1. Small amounts of toxic wastes have been discovered on the property, including oil, compressed gas cylinders, paints, lacquers, thinners, solvents, used auto batteries, containers with antifreeze.

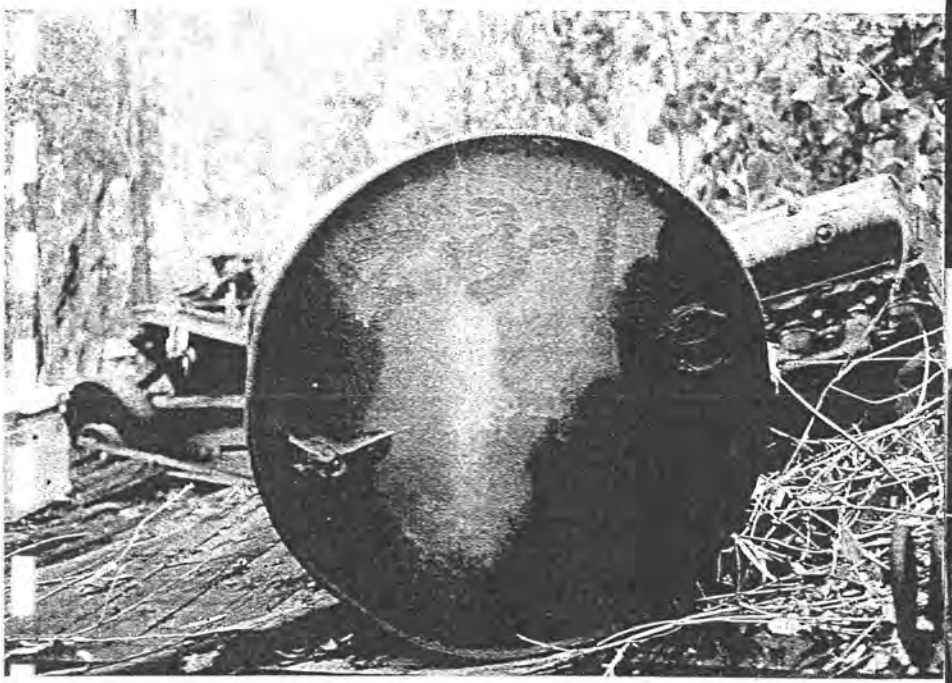
2. In addition, three large old abandoned underground storage tanks are present on the property, one of which is partially full of liquid that tested as hazardous waste.

3. The violations here range from storage of hazardous wastes over 90 days without a permit (22 CCR 66508, and H & S 25189.2) to failure of the generator to determine if his wastes are hazardous (22 CCR 66471) to failure to properly manage hazardous wastes (22 CCR 67243).

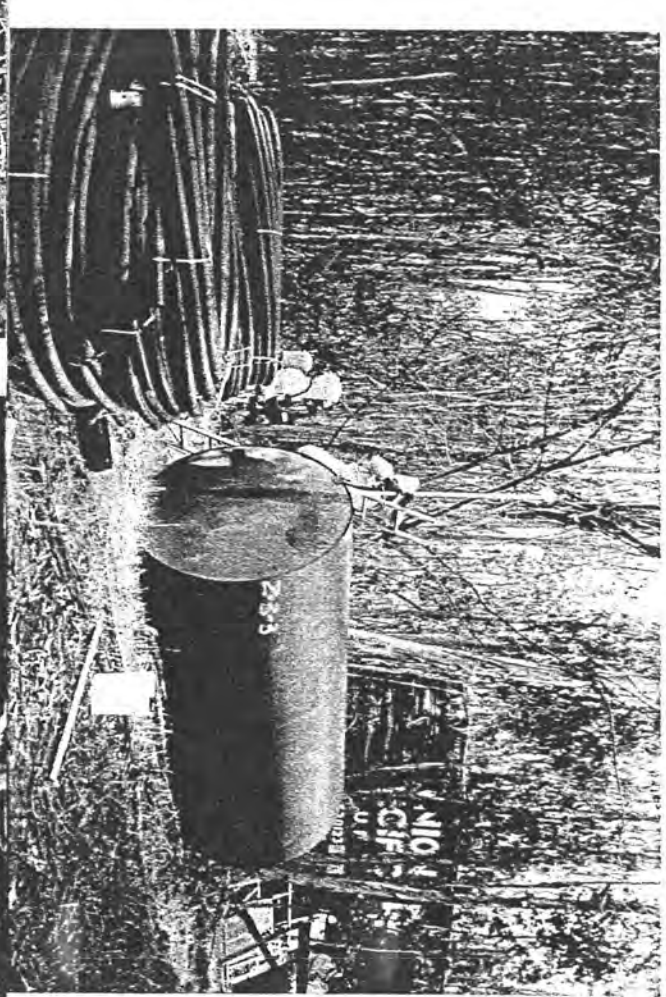
IV. Fire and Forestry Violations

1. There is not adequate clearance between combustable debris and material and the various residential structures (NCC 8871, Public Resources Code Section 4291).

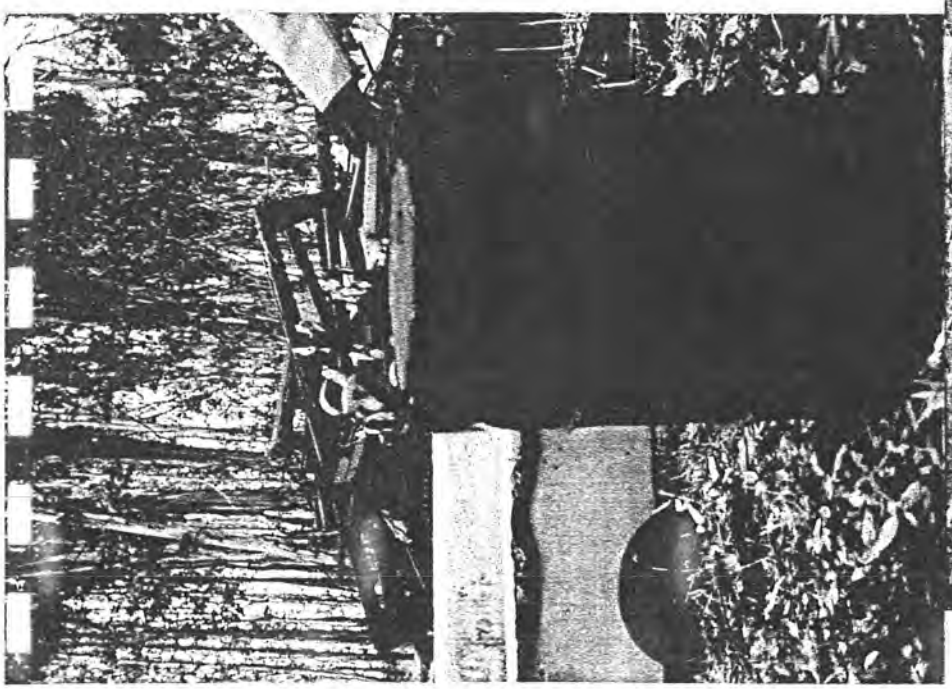
2. Residents have been found to be burning their household trash and garbage in violation of Bay Area Air Quality Management District Regulations (Regulation 5, Section 301).



V. CHP/Public Works Violations



1. The property contains over 230 abandoned vechicles (NCC 4700)



2. The proeprty contains numerous dismantled vehicles, for which the certificate of ownership, the registration card, and the license plates were not delivered to DMV before dismantling began (Vehicle Code Section 5500).

RE: CLEARING AND GRUBBING OF THE COUCH PROPERTY, AMERICAN CANYON, CALIFORNIA

Mr. Cave:

Thank you for the opportunity to submit our fees for the project referenced above. Below you will find our scope of work and our special provisions and exclusions.

SCOPE OF WORK
Demolish all structures and animal pens located on the Couch property, (prior to demolishing the structures an asbestos survey and a release from the air board will be required, along with county or city permits). This proposal does not include any abatement work or costs associated with abatement if any hazardous materials are discovered in the survey.

Remove and dispose of all miscellaneous debris and garbage.

Remove (2) 10,000-gallon fuel tanks, (tanks are presumed to be non-hazardous).

Remove all trees and stumps within the property, removing roots to a minimum of 2". Trees and stumps will be chipped onsite, with all chips and debris hauled offsite for recycling or disposal.

Provide dust control throughout our scope of work.

Our price for this work is: $ 714,000.00
This work is quoted during dry weather months only.

Breakdown of our services for budget purposes:

Remove structures, all animal pens, debris and garbage, working around and leaving the trees and stumps.
Our price for this work is: $ 434,000.00

Remove weeds, trees and stumps.
Our price for this work is: $ 280,000.00

EXCLUSIONS: Removal, transportation, or disposal of any hazardous waste, passage due to weather, import or export of soil, grading, backfill or compaction. Prevailing wage. Any special permits that maybe required other than those quoted above.

Best regards,

Jeff Kroeker
Manager
jknapa

IN THE SUPERIOR COURT OF THE STATE OF CALIFORNIA

IN AND FOR THE COUNTY OF NAPA

THE PEOPLE OF THE STATE OF CALIFORNIA, PLAINTIFF, VS. ROBERT L. COUCH, et. al., DEFENDANTS.	NSC: 64010 FINAL JUDGMENT AND PERMANENT INJUNCTION

This matter came on regularly before the Court for trial on the 17th, 23rd, 24th of February, and the 1st of March, 1993. Appearance on behalf of plaintiff was made by Deputy District Attorney Daryl A. Roberts, appearance on behalf of Defendant Patricia K. Couch was made by Norbert U. Frost of Frost & Healy, and Defendant Robert L. Couch appeared on behalf of himself. Evidence having been presented and accepted by the Court, arguments having been made, the Court having considered the evidence and the pleadings in this matter, good cause appearing, and in the furtherance of justice,

IT IS HEREBY ORDERED, ADJUDGED, AND DECREED as follows:

ANTHONY PEREZ
DISTRICT ATTORNEY
PUBLIC ADMINISTRATOR
PUBLIC GUARDIAN
COUNTY OF NAPA
931 PARKWAY MALL
NAPA, CALIFORNIA 94559

I

FINDINGS OF FACT

The Court finds that Robert L. Couch and Patricia K. Couch, defendants herein, are co-owners of the property located at #2 Eucalyptus Drive, American Canyon, California, Napa County Assessor's Parcel No. 058-030-017.

The Court further finds that the evidence produced by plaintiff in this matter establishes the following with regard to defendants' property, located at #2 Eucalyptus Drive, American Canyon, California, Napa County Assessor's Parcel No. 058-030-017:

1. At least 100 and possibly as many as 286 abandoned motor vehicles are on the property, in violation of Napa County Code §4700;

2. Defendants' property contains an unknown but large number of accumulations or piles of garbage, refuse, debris, metals, broken concrete, spoils, contractor materials, rubber tires, vehicle parts, household trash, furniture, junked appliances, and other similar items, in violation of the Napa County Garbage Ordinance No. 213;

3. Probably less than 10 abandoned refrigerators are located on the property in violation of Penal Code §402(b);

4. There are numerous illegal sewage disposal systems ranging from holes in the ground and outhouses to septic systems installed, in violation of Napa County Code §§5621, 5622 and Health & Safety Code §5411;

5. For property zoned Agricultural-Watershed, of which the

ANTHONY PEREZ
DISTRICT ATTORNEY
PUBLIC ADMINISTRATOR
PUBLIC GUARDIAN
COUNTY OF NAPA
931 PARKWAY MALL
NAPA, CALIFORNIA 94559

only permitted use is one single family dwelling, a second dwelling unit and a guest cottage, a number of other inhabited structures existed on the property ranging from lean-tos to trailers and buses, which structures were on plots of land being rented by the defendants to various tenants and none of these structures had legal water supplies or permitted sewage disposal systems, all in violation of Napa County Code §§12231,12107;

6. All of these the inhabited structures, as well as approximately 10 chicken coops with roof areas exceeding 120 square feet, were constructed without benefit of building permits, in violation of the Uniform Building Code §301;

7. One water well had been installed or constructed on the property without benefit of permits, in violation of the Napa County Code §§5505 and 5230;

8. In a number of areas on the property, the storage of heavy construction equipment occurred, a use not allowed by the zoning, in violation of Napa County Code §§12231 and 12107;

9. Small amounts of hazardous waste have been illegally stored or disposed of on the property, in violation of Health & Safety Code §25189.2;

10. Defendants are living in a mobile home for which the use permit has expired, and the one dwelling for which a building permit was issued is still under construction, and contains an unapproved, unpermitted underground utility trench, in violation of Napa County Code §11010;

11. Tenants have burned their household trash or

ANTHONY PEREZ
DISTRICT ATTORNEY
PUBLIC ADMINISTRATOR
PUBLIC GUARDIAN
COUNTY OF NAPA
931 PARKWAY MALL
NAPA, CALIFORNIA 94559

agricultural debris, in violation of Bay Area Air Quality Management District Regulations (Regulation 5, Section 301) and the Napa County Garbage Ordinance;

12. Adequate clearance does not exist between combustible debris and material and the residences of defendants in violation of Napa County Code §8871 and Public Resources Code §4291;

In addition to the above specific findings, the Court finds that Patricia K. Couch has cooperated with Plaintiff in its efforts to remedy the above-described conditions of defendants' property, including but not limited to, serving tenants with notices terminating tenancies and notices of building code violations, and cleaning and removing certain debris, garbage, refuse, trash and other similar items.

The Court finds that Robert L. Couch has accepted rent from at least one tenant in violation of the preliminary injunction issued by this Court.

II
CONCLUSIONS OF LAW

The Court finds that, based upon the evidence produced by plaintiff during trial, the defendants have been and are presently maintaining upon their property a public nuisance. Specifically, the Court bases this conclusion on both a public nuisance per se theory, as numerous conditions of defendants' property violate specific Napa County Code Sections relating to nuisances, as well as a common law nuisance theory, as the condition of the property meets the criteria as set forth in California case law regarding the existence of public nuisances.

ANTHONY PEREZ
DISTRICT ATTORNEY
PUBLIC ADMINISTRATOR
PUBLIC GUARDIAN
COUNTY OF NAPA
931 PARKWAY MALL
NAPA, CALIFORNIA 94559

In addition, based upon the evidence produced at trial, the Court finds that the defendants, by renting or leasing of portions of their property to tenants either for living on the property or for storage of belongings, engaged in unfair competition, as defined by Business & Professions Code §17200, as such activity was a business activity which violated the zoning laws of the County of Napa, and provisions of the Uniform Housing Code.

III
JURSIDICTION AND APPLICABILITY

The Court has jurisdiction of the subject matter hereof and the parties hereto.

The provisions of this final judgment are applicable to defendants Robert L. Couch and Patricia K. Couch, and to their agents, servants, employees, representatives, heirs, successors in interest, and any and all other persons acting in concert with or participating with defendants who have actual or constructive notice of this judgment.

IV
PROHIBITORY INJUNCTION

Defendants are permanently enjoined and restrained, pursuant to Civil Code §3494 and Business & Professions Code §17203, from doing, directly or indirectly, any of the following:

1. From leasing or renting any portion of the property unless any such lease or rental is in conformance with the zoning of the property and the terms of this judgment.

2. From bringing onto their property or causing to be

ANTHONY PEREZ
DISTRICT ATTORNEY
U IC ADMINISTRATOR
IBLIC GUARDIAN
OUNTY OF NAPA
931 PARKWAY MALL
APA, CALIFORNIA 94559

brought onto their property any of the following items:

a. Any junk, scrap, or dismantled or abandoned motor vehicles of any kind, including but not limited to automobiles, trucks, vans, buses, or motorcycles;

b. Any debris of any kind including but not limited to scrap lumber, scrap metal, broken concrete, other types of spoils, dirt, rubble, rock, or gravel unless the presence of such debris is consistent with the zoning of the property or not violative of any applicable law or ordinance;

c. Any junk of any kind, including but not limited to abandoned vehicle parts or components, junked appliances, junked appliance parts or components, tanks, machines, machinery parts or components;

d. Any garbage, rubbish, refuse, trash, or other similar type material;

e. Any hazardous wastes, including but not limited to waste oil, spent gasoline, gasoline products, gas cylinders, paints, lacquers, thinners, solvents, batteries, anti-freeze, or other similar material.

3. From constructing or maintaining any sewage disposal system unless defendants procure a valid and current permit to do so, and follow all conditions and requirements of said permit.

4. From erecting, constructing, enlarging, altering, repairing, moving, improving, or demolishing any structure or building on defendants property unless defendants comply with the provisions of Uniform Building Code §301, and follow all

ANTHONY PEREZ
DISTRICT ATTORNEY
PUBLIC ADMINISTRATOR
PUBLIC GUARDIAN
COUNTY OF NAPA
931 PARKWAY MALL
NAPA, CALIFORNIA 94559

conditions and requirements of any building permit required pursuant to the provisions of this section.

5. From installing or maintaining any water well on the property unless defendants procure a valid permit to do so, and follow all conditions and requirements of said permit.

6. From storing heavy construction equipment on the property unless the presence of such equipment would be consistent with the zoning of the property, or the equipment is being used to fulfill defendants' obligations under this judgment, or any construction or development performed is pursuant to a valid permit.

7. From storing or disposing of hazardous waste unless defendants do so in compliance with the provisions of the Hazardous Waste Control Act.

8. From allowing inadequate clearance between combustible debris material and any inhabited structure as required by Public Resources Code §4291.

9. From dismantling any motor vehicle unless done in compliance with the zoning laws of the parcel, and in compliance with Vehicle Code §5500.

10. From burning trash or other similar type debris, including agricultural debris, except as allowed by regulations promulgated by the Bay Area Air Quality Management District.

V
MANDATORY INJUNCTION

Defendants, are hereby ordered and mandated as follows:

1. Within 30 days from the filing of this judgment, Robert

ANTHONY PEREZ
DISTRICT ATTORNEY
PUBLIC ADMINISTRATOR
PUBLIC GUARDIAN
COUNTY OF NAPA
931 PARKWAY MALL
NAPA CALIFORNIA 94559

L. Couch or Patricia K. Couch shall do the following:

a. Personally serve a written notice upon each person (other than defendants or members of their immediate family) residing on defendants' property, #2 Eucalyptus Drive, American Canyon, Napa County, California, which provides that each resident has 30 days from the receipt of the notice to remove themselves and all their personal belongings from defendants' property, and that their failure to move their belongings off the property within the time indicated in the notice will constitute an abandonment of those belongings and may be disposed of pursuant to Civil Code §1980 et. seq.

b. Personally serve each and every person who has left personal belongings on defendants' property but does not reside there with a notice requiring them, within 30 days of receipt of the notice, to remove those personal belongings from defendants' property, and that any property left on the premises after the 30 day period will be deemed abandoned and may be disposed of pursuant to Civil Code §1980 et. seq.

c. In the event defendants are unable to personally serve any person, defendants shall cause such notice to be posted in a conspicuous area where the belongings are situated and a copy of the notice mailed to such persons at their last known address. If defendants are unable to locate tenants or their last known address,

ANTHONY PEREZ
ISTRICT ATTORNEY
3LIC ADMINISTRATOR
PUBLIC GUARDIAN
COUNTY OF NAPA
31 PARKWAY MALL
PA, CALIFORNIA 94559

they may apply to this Court for an order permitting publication of any notices required herein in the Napa Register, a newspaper of general circulation, to give tenants notice.

2. Within 45 days from the filing of this judgment, defendants shall cause to be filed unlawful detainer complaints against any and all tenants who remain on the property after the 30 day notice period has expired (as referred to above in paragraph 1), and shall properly serve each tenant with summons and complaint as required by law. In addition, defendants are hereby ordered to diligently pursue these unlawful detainer actions until all tenants have been removed from the property, and their property has been removed or been deemed abandoned. It is further ordered that to the extent the service of any tenants with required process and/or pursuit of these unlawful detainer actions prohibits defendants from meeting any time deadline, as set forth in this mandatory injunction, defendants shall be given an extension of time for meeting that deadline equivilant to the amount of time spent by defendant in pursuing these unlawful detainer actions.

3. Within 30 days of the filing of this judgment, each party to this action shall provide to the District Attorney's Office the name, address, and phone number of a scrap or junk dealer. The District Attorney's Office shall prepare a list of the scrap or junk dealers designated by each party and serve the list on defendants. Further, Defendants shall allow any scrap or

ANTHONY PEREZ
DISTRICT ATTORNEY
PUBLIC ADMINISTRATOR
PUBLIC GUARDIAN
COUNTY OF NAPA
931 PARKWAY MALL
NAPA, CALIFORNIA 94559

junk dealer so named to enter the property during reasonable times (8:00 a.m. to 6:00 p.m. Monday through Friday) for the purpose of assessing the status of the property and coming up with a bid for how much money that scrap or junk dealer would pay to remove all valuable items of scrap and abandoned motor vehicles (but excluding those items set aside by defendants pursuant to the provisions of paragraph 4, below) on the property. Only bids obtained within 90 days of the filing of this judgment shall be considered. The dealer offering the highest bid shall be chosen.

4. Defendants shall, within 105 days of the filing of this judgment, collect in one place on their property, unless physically impossible to do so, all operable motor vehicles, operable pieces of construction equipment or vehicle whose purpose is consistent with the agricultural zoning of the property, and any and all other valuable items that defendants contend are not scrap or junk, or an abandoned motor vehicle, and whose storage on the property is consistent with the zoning of the property. Once this has occurred, defendants shall then allow county officials to enter the property to inspect this collection of items to determine if their storage on the property would be consistent with the zoning of the property. If so, none of these items of property would be subject to any of the provisions set forth in paragraphs 5 and 15, below. In the event there is a dispute between defendants and county officials regarding any or all of these items of property, such dispute

ANTHONY PEREZ
DISTRICT ATTORNEY
PUBLIC ADMINISTRATOR
PUBLIC GUARDIAN
COUNTY OF NAPA
931 PARKWAY MALL
NAPA, CALIFORNIA 94559

shall be brought to hearing before this court upon 15 days written notice by either party. Opposition papers shall be filed at least 5 days before the hearing and reply papers shall be filed at least 3 days before the hearing. Defendants will be deemed to have abandoned all other items of scrap, junk, debris and abandoned motor vehicles on the property if not collected and set aside by the deadline set forth in this paragraph, or if ordered by court after hearing.

5. Robert L. Couch and/or Patricia K. Couch shall, within 105 days of the filing of this judgment, enter into a contract with the scrap or junk dealer chosen pursuant to paragraph 3, above, which contract will provide for the following:

a. It will set forth the price to be paid by the dealer for the abandoned motor vehicles and scrap to be removed from the property and it will require the dealer to remove all abandoned motor vehicles and not merely select and remove the motor vehicles and scrap bringing the dealer the highest and/or best price.

b. It will set forth a time period within which the scrap dealer is to remove all abandoned motor vehicles and valuable scrap from the property, with the period not to exceed 150 days, and the period to commence no later than 120 days from the filing of this judgment.

c. It will require the scrap dealer to keep legible records regarding the numbers of abandoned motor vehicles removed, and the weight of scrap removed, as well as legible records regarding

ANTHONY PEREZ
DISTRICT ATTORNEY
BY: ADMINISTRATOR
PUBLIC GUARDIAN
COUNTY OF NAPA
[illegible] PARKWAY MALL
PA, CALIFORNIA 94559
707-253-4211

the payment of moneys on either a price per vehicle or price per weight basis. Further, it will require the scrap dealer to, on weekly basis, provide these records both to defendants and to the District Attorney's Office.

d. The bid will require the dealer to handle and dispose of, in a lawful manner, all hazardous waste that may be generated by the removal of motor vehicles, including motor oil, gasoline, diesel fuel, brake fluid, transmission fluid, batteries, and catalytic converters, and any other similar hazardous materials that are commonly found in motor vehicles.

e. The bid will require the dealer to pay, on a weekly or monthly basis (to be negotiated), all moneys generated by the removal of abandoned motor vehicles and valuable scrap items to a trust fund, to be maintained by the District Attorney's Office, as more fully described in paragraph 13, below.

6. Defendants shall allow the chosen scrap or junk dealer to enter the defendants' property at reasonable times and shall not in any manner interfere with or obstruct the dealer's efforts to remove from the property all abandoned motor vehicles and valuable scrap items.

7. Defendants shall not in any manner interfere with or obstruct any and all County officials who may enter the property during reasonable hours to do the following: appraise any or all abandoned motor vehicles on the property for the purpose of issuing salvage certificates; monitor efforts to remove and properly dispose of hazardous wastes; monitor efforts to properly

OUNTY OF NAPA
31 PARKWAY MALL
A, CALIFORNIA 94559

remove abandoned motor vehicles and scrap from the property; monitor efforts to remove or destroy all illegal sewage disposal systems on the property; monitor efforts to raze all structures which are abandoned or condemned; monitor all efforts to remove from the property all garbage, rubbish, trash, spoils, and other similar unpermitted materials.

8. Within 105 days of the date of the filing of this judgment, Robert L. Couch and/or Patricia K. Couch shall commence to remove or have others undertake the removal of trees, bushes, and shrubs required to create an approximate 30 foot firebreak around the mobile home in which defendants are residing, and any other structure inhabited by any other member of defendants' immediate family. Such removal shall be completed within 165 days of the filing of this judgment.

9. In the event the District Attorneys Office determines, at any time, that income generated from the removal of abandoned motor vehicles and other valuable scrap is insufficient to pay for the removal of hazardous waste, debris, garbage, rubbish, trash (and all other items referred to in paragraph 13), the razing of structures on the property and subsequent removal of razed debris, and the removal or destruction of the illegal sewage disposal systems, then the District Attorney's Office may notify the defendants in writing of such situation.

10. Within 30 days of receipt of the notice from the District Attorney's Office referred to in paragraph 9, above, each party shall provide to the District Attorney's Office the

'A. CALIFORNIA 94559

name, address, and phone number of a commercial harvester wood pulp processor or other wood products dealer for the purpose of obtaining a bid to remove or thin out the eucalyptus trees present on defendants property, and to sell the trees for firewood or other income generating purposes. Either defendant may designate the areas where the trees may be removed or thinned out. Further, Defendants shall allow any commercial harvester or processor so named to enter the property during reasonable times for the purpose of assessing the status of the property and arriving at a bid for how much money that harvester or processor would pay to remove or thin out trees for the purpose of resale as firewood or other purpose. Only bids obtained within 60 days of defendants receipt of the notice referred to in paragraph 10 shall be considered. The harvester or processor offering the highest bid shall be chosen.

11. Robert L. Couch and/or Patricia K. Couch shall, within 75 days of receipt of the notice referred to in paragraph 9, enter into a contract with the chosen harvester, which contract will provide for the following:

a. It will set forth the price to be paid by the harvester or processor for the removal of trees from the property, and the approximate number of trees, or cords of firewood or weight of wood pulp, to be removed from the property.

b. It will set forth a time period within which the harvester is to remove trees from the property, with the period not to exceed 120 days, and the period to commence no later than

ANTHONY PEREZ
DISTRICT ATTORNEY
BLIC ADMINISTRATOR
PUBLIC GUARDIAN
COUNTY OF NAPA
931 PARKWAY MALL
PA, CALIFORNIA 94559

120 days from the date of defendants' receipt of the notice referred to in paragraph 9.

c. It will require the harvester or processor to apply for a timber harvest plan with the California Department of Forestry, and will require the harvester or processor to follow all conditions and requirements of any such plan as approved by said Department of Forestry.

d. It will require the harvester or processor to keep legible records regarding the numbers of trees removed or the cords of firewood removed or weight of wood pulp removed, as well as legible records regarding the payment of moneys on either a price per tree or price per cord basis. Further, it will require the harvester to, on a weekly basis, provide these records both to defendants and to the District Attorney's Office.

e. The contract will require the harvester or processor to pay, on a weekly or monthly basis (to be negotiated), all moneys generated by the removal of trees to the trust fund to be maintained by the District Attorney's Office, as described in paragraph 13, below.

12. Defendants shall to allow the chosen harvester or processor to enter the defendants' property at reasonable times and shall not in any manner interfere with or obstruct the harvester's or processor's efforts to remove designated trees from the property.

13. The District Attorney's office shall maintain a trust fund whose primary purpose shall be to pay for removing from

ANTHONY PEREZ
DISTRICT ATTORNEY
JBLIC ADMINISTRATOR
BLIC GUARDIAN
UNTY OF NAPA
PARKWAY MALL
APA, CALIFORNIA 94559

defendants' property hazardous waste, the various piles and accumulations of debris, garbage, rubbish, trash, metals, scrap lumber, broken concrete, spoils, contractor materials, rubber tires, vehicle parts, junked furniture and appliances, and oth similar items from the property, removing and destroying all illegal sewage disposal systems, and razing all structures whi are abandoned or condemned and removing the debris produced from such razing. Defendants may be reimbursed from this trust fund for costs they have incurred themselves in cleaning up the property, upon presenting bills, receipts or invoices, but only after the primary purpose of the fund, as set forth above, has been met, and there is money remaining in the trust fund for such reimbursement. Any funds remaining in the trust fund after completion of all clean up activities required under this injunction shall be paid to defendants.

14. Within 150 days of the filing of this judgment, Robert L. Couch and/or Patricia K. Couch shall enter into a contract to retain the services of a licensed hazardous waste consultant, licensed hazardous waste hauler, or licensed hazardous waste dealer to identify and remove from the property any and all hazardous wastes present. The contract shall contain the following provisions:

a. It shall set forth a time period within which the consultant, hauler or dealer shall produce a plan to identify and remove all hazardous waste on defendants' property, with the plan to be produced by a date no later than 30 days from the date the

ANTHONY PEREZ
ISTRICT ATTORNEY
ILIC ADMINISTRATOR
UBLIC GUARDIAN
COUNTY OF NAPA
31 PARKWAY MALL
A, CALIFORNIA 94559

contract is entered into.

b. It shall provide a time period for which all hazardous wastes shall to be removed, with the period not to exceed 120 days, and to commence no later than 60 days from the date the contract is entered into;

c. It will set forth the price to be paid by the consultant, hauler or dealer for any hazardous waste removed from the property which has some value and will set forth the cost for properly disposing of all other hazardous wastes which are present on the property.

d. It would provide for the maintenance of hazardous waste manifests for the tracking of the hazardous waste removed and properly disposed of, with the requirement that the consultant, hauler or dealer shall provide forthwith copies of these manifests both to the defendants and to the District Attorneys Office.

15. Once all valuable scrap, abandoned motor vehicles, and designated trees for firebreak purposes have been removed from the property, defendants shall either obtain bids from solid waste haulers for the cost to clean up, raze structures and remove from the property all remaining items of waste or garbage (including all piles of debris, garbage, rubbish, trash, and similar materials on the property, all debris created from the razing of structures on the property, along with any items of scrap, and motor vehicles that were left on the property because they were not valuable or income generating and were not picked

up by any scrap dealer) or defendants or their designees may clean up and remove from the property all of these remaining items of waste or garbage.

a. If defendants act upon their own, they shall remove all remaining items of waste or garbage and any necessary clean up shall be completed within 60 days of the date that all valuable scrap, motor vehicles, and trees for firebreak purposes have been removed.

b. In the event defendants or their designees fail to meet the 60 day requirement as set forth in subparagraph a, above, then defendants shall within 30 days after the 60 day period has expired, obtain bids from solid waste haulers for the cost to clean up the property, as set forth above.

c. Within 45 days after the end of the 60 day period, Robert L. Couch and/or Patricia K. Couch shall enter into a contract with the solid waste hauler giving the lowest bid, which contract shall provide for the following:

(1) It shall provide a time period for which all structures shall be razed and all remaining wastes on the property shall be removed, with the period not to exceed 150 days, and to commence no later than 60 days after the expiration of the 60 day period noted above;

(2) It will set forth the price to be charged by the solid waste hauler for the removal of the remaining waste on the property, including the cost of properly disposing of all of these wastes at a State licensed solid waste landfill. It will

ANTHONY PEREZ
STRICT ATTORNEY
LIC ADMINISTRATOR
UBLIC GUARDIAN
COUNTY OF NAPA

require the solid waste hauler to maintain legible records regarding the removal of the waste from the property and the costs incurred.

VI
RESERVATION OF JURISDICTION

The Court hereby reserves jurisdiction with regard to the following issues:

1. Issues pertaining to the need for defendants to obtain use permits or building permits for the structures on their property that they or their immediate family members reside in or otherwise intend to occupy;

2. Issues regarding the destruction of any unpermitted water wells that exist on the property;

3. Issues regarding the burning of household trash, garbage, or agricultural debris on the property;

4. Issues regarding the destruction or removal of any illegal sewage disposal systems on the property.

5. Issues regarding the razing of agricultural structures constructed on the property without benefit of building permits.

6. Issues regarding authorizing the County of Napa to enter defendants' property and conduct all clean-up and removal activities, including the removal of income generating items as have been addressed by this judgment, in the event defendants or either defendant fail to comply with the provisions of the mandatory injunction.

6. Issues regarding the issuance of civil penalties pursuant to Business & Professions Code §17206.

VII
MODIFICATION AND ENFORCEMENT

Any party to this judgment may seek leave of the court upon 15 days notice to the parties hereto and upon a showing of good cause, to modify, amend, or add to any of the provisions of this judgment.

The Court retains jurisdiction, in the event either Robert L. Couch or Patricia K. Couch individually, or both, interfere with, impede, refuse or fail to comply with any provision of this judgment, to make such orders as will prevent further contempt, prevent waste, and protect the property or title to the property, including but not limited to, appointing the defendant who is not in contempt, or a non-party, as a receiver for the purpose of ensuring compliance with this judgment, managing the subject property, and executing any agreements required to comply with this judgment. Further, jurisdiction is retained for the purpose of enabling any party to apply to the Court for such further orders and direction as may be necessary and appropriate for the construction or carrying out of this judgment, for the enforcement of compliance herewith, or for the punishment of violations thereof.

VIII
EFFECT AND ENTRY

This final judgment shall take effect immediately upon entry.

The Clerk is ordered to enter this final judgment forthwith.

KLEINFELDER
An employee owned company

July 25, 2005
File: 54912/2

Mr. Steven Brock
2555 West Bluff Avenue
Fresno, CA 93711

SUBJECT: Phase II Soil Investigation
Couch Property
2 Eucalyptus Drive
American Canyon, California

Dear Mr. Brock:

This report present the results of a soil investigation conducted at the Couch Property located at 2 Eucalyptus Drive in American Canyon, California (Plate 1). The objective of the investigation was to collect and assess the potential impact of chemical constituents associated with Recognized Environmental Conditions (REC's) as described in a Phase I Environmental Site Assessment and other areas as observed during a pre-field visit in April, 2005. To meet this objective, Kleinfelder placed borings and analyzed samples on the basis of: 1) the recommendations of the Phase I ESA, and 2) information acquired during a site inspection and conversations with Mr. Couch. Kleinfelder performed this investigation based on our proposal dated September 14, 2004; and approved with edits by email on February 15, 2005. In summary, this investigation did not reveal evidence for a significant contaminant release at the site.

BACKGROUND

Environmental Science Associates (ESA) identified several REC's in a Phase I Environmental Site Assessment conducted at the Couch Property (*Couch Property Phase I Environmental Site Assessment*, August 25, 2004). The REC's included past and present storage of hazardous materials and wastes on the property, soil staining, reported methamphetamine lab on the property, a wood-cutting area possibly contaminated with diesel fuel or fill dirt, unpermitted outhouses, and two water well locations.

ESA recommended that soil and groundwater be assessed for potential contamination at the site in areas that show stressed or no vegetation in areas used for battery storage and in a mechanic area. ESA also recommended that, "further investigation be conducted to determine the existence and location of soil containing oil that may have

Copyright 2005 Kleinfelder, Inc
KLEINFELDER 780 Chadbourne Road, Suite D, Fairfield, CA 94534 (707) 429-4070 (707) 429-4162 fax

been placed on the portion of the property that is used for a wood cutting operation" (within the southeast portion of the property).

ESA stated that water wells should be abandoned in accordance with California water well standards and Napa County protocol and the sewage disposal areas should be closed.

PRE-FIELD ACTIVITIES

Based on our review of ESA's Phase I Investigation, reports by Napa County Department of Environmental Management (NCDEM) (*Couch Property Violations*, 1991, and a letter *Clearing and Grubbing of the Couch Property, American Canyon, California*, 2003), conversations with the client, and field judgments, Kleinfelder designed a soil and groundwater investigation consisting of nine Hollow-stem auger borings, two test pits, four hand auger borings, and one four-point composite sample of a soil stockpile in areas of concern. Constituents of concern including petroleum hydrocarbons, pesticides, polynuclear aromatic hydrocarbons, volatile organic compounds, coliform, E. Coli, and metals, were identified based on observed and reported uses of areas of the property.

Kleinfelder placed borings and sample locations in areas designated as REC's in the Phase I report, as well as in areas near former above-ground storage tanks, possible underground storage tank locations, areas of oily soil, areas where site activities determined a need for sampling including woodcutting, landscaping materials storage areas, and areas adjacent to former outhouses and reported sewage disposal areas.

Kleinfelder was unable to locate the areas of stressed vegetation, as described in the Phase I report. In addition, the two water wells were non-operational. The current resident, George Couch, stated that the wells are no longer in use, and no potable water for human and domesticated animal consumption is derived from the property.

Kleinfelder obtained a boring permit from NCDEM prior to commencement of work (Appendix A).

Soil boring locations were marked in white paint. Kleinfelder notified USA who cleared the public areas of the site for underground utilities at boring locations.

FIELD ACTIVITIES

The investigation was conducted on March 31, April 1, April 4, April 13, April 20, and May 24, 2005 by Jeff Gilbert, Staff Engineer, under the direction of Jennifer Gomez, Senior Geologist and Environmental Department Manager. This investigation was conducted in conjunction with a Geotechnical report, under the direction of Tom Ries, P.E., Senior Engineer, which will be sent under separate cover. The environmental investigation consisted of nine Hollow-stem auger borings (7, 12, 13, 14, 15, 16, 17, 18,

Copyright 2005 Kleinfelder, Inc

19) four hand auger borings (2, 3, 4, 5), and two test pits (TP-1, TP-2) at the locations shown on Plate 2.

Hollow-stem auger borings were advanced by Woodward Drilling of Rio Vista, California, a C-57 licensed driller. A Kleinfelder engineer logged and classified the soil, and collected soil samples for laboratory analysis (Boring Logs, Appendix B). Hollow stem auger soil samples were collected at approximately every five feet to twenty feet, or until refusal. Hollow stem auger soil samples were obtained from the nine borings by advancing a Hollow stem auger core sampler, consisting of a 2-inch diameter hollow rod with new stainless steel tubing inside. The probe was driven over a 1.5-foot interval, and soil was contained inside the stainless steel tubing. Once the sampler was brought to the surface, the stainless steel tube was capped with Teflon sheets and plastic caps and put into an iced cooler, and the soil interval was logged and classified.

Kleinfelder collected five soil samples from four hand auger borings by advancing a hand auger to depths ranging from 0 to 1 foot. Each soil sample was collected by immediately filling a stainless steel tube with soil from the auger and capping each end with Teflon sheets and plastic caps.

One four-point composite soil sample (1 A-D) was collected from a soil stockpile. Four stainless steel tubes are filled with soil from the stockpile, then combined by the laboratory to create one composite representative sample that is analyzed.

Three soil samples were collected from two test pits. Each soil sample was collected by immediately filling a stainless steel tube with soil from the bottom of the pit as soon as overlying soil was removed by the backhoe bucket. Each end of the stainless steel tube was secured with Teflon sheets and plastic caps.

Groundwater was not encountered in any of the environmental borings. One boring, B-7, was left open overnight to determine if groundwater would collect in the boring. Groundwater was not present in this borehole. Groundwater was encountered in Geotechnical Boring B-4 at 31 feet below ground surface (bgs). Groundwater stabilized at 23 feet bgs within twenty minutes, however, this borehole was drilled using mud-rotary and drilling fluid, the use of which prevents the collection of an undisturbed and uncontaminated groundwater sample. This boring was left open for a short time to allow formation water to collect, however, upon return, the hole had caved, preventing groundwater sampling.

To prevent cross-contamination Hollow stem auger and hand auger sampling equipment was cleaned between borings with non-phosphate soap and rinsed with distilled water. The borings were backfilled at completion.

LABORATORY ANALYSIS

A total of 34 soil samples were submitted for analysis. Groundwater was not encountered during this investigation and therefore, not sampled. The soil samples

Copyright 2005 Kleinfelder, Inc

were submitted to Campbell Analytical in Pacheco, California who is accredited by the State of California for the analyses performed. The samples were transported under chain-of-custody documentation and were analyzed as follows:

Samples were collected at a variety of locations on the property, mostly near occupied areas. Borings 12, 13, 15, 16, 17, 18, and 19 were placed near the residences, sheds, equipment storage areas, possible areas where stressed vegetation may have been located, and mechanic storage areas. Borings 7 and 14 were placed down gradient from these activities in anticipation of a groundwater sample; however, groundwater was not encountered in any of these borings.

Soil samples from Borings 7, 12, 13, 14, 15, 16, 17, 18, and 19 were analyzed for:

- Total Petroleum Hydrocarbons-Extractable (TPH-d, TPH-mo);
- Total Petroleum Hydrocarbons-Purgeable (TPH-g);
- Benzene, Toluene, Ethylbenzene and Total Xylenes (BTEX);
- Methyl tertiary butyl Ether (MTBE);
- Polynuclear Aromatic Hydrocarbons (PAH);
- Total Coliform; and
- Cam 17 Metals.

The soil pile (1A-D) was located within the occupied area of the property, north of the dog pen, near some sheds and a possible former outhouse.

A four-point composite soil sample (1A-D) was taken from this stockpile and analyzed for:

- TPH-d, TPH-mo;
- TPH-g ;
- BTEX;
- MTBE;
- PAH; and
- Cam 17 Metals.

Hand Auger samples were located on an upslope area of the northeast corner of the property. Hand samples were required due to the limited access of this area to a drill rig. This area of the property was reportedly the location of two above ground storage tanks (removed by Napa County), possible underground storage tanks, possible stressed vegetation, and mechanic storage areas.

Copyright 2005 Kleinfelder, Inc

The Hand Auger sample 2, located adjacent to a possible former sewage dump or outhouse area, was analyzed for:

- PAH;
- Total Coliform;
- Cam 17 Metals; and
- E. Coli.

The Hand Auger samples 3, 4, and 5, all located in various areas of possible stressed vegetation and mechanic storage area were analyzed for:

- PAH; and
- Pesticides.

The Test Pit soil samples TP-1, TP-4 were located in the woodcutting area, reportedly the location of some dumped oily soil. Kleinfelder observed trash in the soil of these test pits at the depths sampled (TP1 at 2 feet and 3 feet bgs, TP4 at 2 feet bgs). These test pit samples were analyzed for:

- TPH-d, TPH-mo;
- TPH-g;
- MTBE; and
- BTEX.

All soil samples were analyzed on a standard five-day turnaround schedule.

ANALYTICAL RESULTS

Analytical results for the March 31, April 1, April 4, April 13, April 20, and May 24, 2005 sampling events are presented in Tables 1 and 2. Copies of analytical laboratory reports and chain-of-custody form are included in Appendix C.

None of the samples analyzed had detected levels of the following constituents above the Environmental Screening Levels (ESL's) as defined by the San Francisco Bay Water Board for residential shallow soils (<3m) where groundwater is currently or potentially a source of drinking water (February, 2005).

- TPH-d, TPH-mo;
- TPH-g;
- BTEX;
- MTBE;

Copyright 2005 Kleinfelder, Inc

- PAH;
- Pesticides; or
- E. Coli.

The two samples collected at Hand Auger boring 2 both had detected levels of Total Coliform at depths of 0 and 1 foot bgs, 2-0-I (960 MPN/ml) and 2-1-I (430 MPN/ml). Hand Auger boring 2 was located near a variety of wooden structures, adjacent to a structure that appeared to be a former outhouse (Plate 2).

Metals were detected above ESL's level in the following samples:

- 14-5-I: Vanadium
- 19-5-I: Chromium, Nickel, Vanadium
- 12-15-I: Chromium
- 18-5-II: Cobalt, Vanadium

DISCUSSION

The purpose of this investigation was to screen for potential contamination by sampling soil and groundwater at locations where contamination, if present, would be most likely. The locations and constituents of concern were selected on the basis of information provided by the Phase I ESA, Mr. Couch, and a site walk.

Petroleum hydrocarbons, gasoline additives, and polynuclear aromatic compounds were not detected in any of the samples collected from the borings, with the exception of sample 12-15-1 where gasoline and BTEX were detected in low concentrations. In addition, gasoline and diesel-range hydrocarbons were detected in very low concentrations within the soil stockpile. Therefore, no evidence for a significant release of petroleum hydrocarbons was found at the site.

Review of the metals data indicate, with the possible exception of four samples discussed below, that the concentration of metals in soil represent background conditions. Elevated concentrations of some metals from four samples, however, warrant discussion:

- The concentration of Chromium (130 mg/kg) in sample 12-15-I collected at 15 feet bgs is elevated relative to the majority of samples. However, chromium concentrations in two samples collected at shallower levels from the same boring are low. In addition, elevated levels of other contaminants that often coexist with chromium at sites with a similar history were not detected. Therefore, the data does not indicate that the elevated chromium concentration is due to a significant release.
- The concentrations of vanadium in samples 14-15-I (110 mg/kg) and 18-5-II (120 mg/kg) appear to be elevated as compared to the majority of samples. However,

Copyright 2005 Kleinfelder, Inc

because other metals and petroleum hydrocarbons are not elevated in these samples, and vanadium is an unusual contaminant, the levels of vanadium do not likely represent a significant release at this location.

- Concentrations of chromium (230 mg/kg), nickel (150 mg/kg) and vanadium (160 mg/kg) are elevated relative to the other samples in sample 19-5-I. However, these constituents do not appear to be significantly elevated in samples collected above and below this sample. The boring was located near the former battery storage location, but elevated levels of lead (as would be expected from a release from lead-acid batteries) was not detected. Therefore, the data does not appear to reflect a significant release at this location.

Total coliform as high as 960 MPN/ml was detected at Hand Auger location 2, adjacent to a possible former outhouse structure. These levels are probably related to the former use of a nearby outhouse and reported sewage disposal at this location. E Coli was not detected in these samples. Therefore, the total coliform does not appear to represent a health risk at the site.

Groundwater was not sampled during this investigation, so direct data regarding potential contaminant impacts are not available. However, because no evidence of a significant release that may act as a source of groundwater contamination was found, it may be inferred that the potential of impacts to groundwater from the site is low.

Two water well spigots were located, as described in the Phase I report. According to Mr. Couch, the wells are not operational. Kleinfelder recommends decommissioning these wells and abandoning them in accordance with Napa County Department of Environmental Management procedures.

LIMITATIONS

This report was prepared in general accordance with the standard of care that exists in Northern California at the time the investigation was performed. It should be recognized that definition and evaluation of subsurface conditions are difficult. Judgments leading to conclusions and recommendations are generally made with incomplete knowledge of the subsurface conditions present. The conclusions of this assessment are based on field observations obtained during the time of drilling and laboratory analytical results. More extensive studies may further reduce the uncertainties associated with this assessment. Kleinfelder should be notified for additional consultation if the Client wishes to reduce the uncertainties beyond the level associated with this report. No warranty, express or implied, is made.

This report may be used only by the client and only for the purposes stated within a reasonable time from its issuance, but in no event later than three years from the date of the report. Land or facility use, on and off-site conditions, regulations, or other factors may change over time, and additional work may be required with the passage of time. Based on the intended use of the report, Kleinfelder may require that additional work be performed and that an updated report be issued. Non-compliance with any of these requirements by the client or anyone else will release Kleinfelder from any liability

Copyright 2005 Kleinfelder, Inc

resulting from the use of this report by any unauthorized party and client agrees to defend, indemnify, and hold harmless Kleinfelder from any claim or liability associated with such unauthorized use or non-compliance.

Kleinfelder offers various levels of investigative and engineering services to suit the varying needs of different clients. Although risk can never be eliminated, more detailed and extensive investigations yield more information, which may help understand and manage the level of risk. Since detailed investigation and analysis involves greater expense, our clients participate in determining levels of service, which provide adequate information for their purposes at acceptable levels of risk.

If you have any questions or need additional information, please contact us at 707-429-4070.

Sincerely,

KLEINFELDER, INC.

PHASE I ENVIRONMENTAL SITE ASSESSMENT
2 EUCALYPTUS DRIVE
AMERICAN CANYON, CALIFORNIA

1.0 INTRODUCTION

At the request of Mr. Aaron Ross-Swain of Standard Pacific Homes, Innovative and Creative Environmental Solutions (ICES) performed a Phase I Environmental Site Assessment (ESA) for 2 Eucalyptus Drive located in American Canyon, California ("the Site"; Figure 1). The accessors's parcel number (APN) for the Site is 058-030-056. This report presents:

1. A summary of relevant information obtained;

2. A description of the methods and sources used to obtain information concerning the Site;

3. Our interpretation of the information, with respect to potential environmental concerns; and

4. Our professional opinion concerning the likelihood of potential soil, groundwater, or surface-water degradation caused by the presence of hazardous substances, and the need, if any, for sampling and analysis to document site conditions.

The objectives of this ESA are to:

1. Assess the potential sources of hazardous substances at the Site as a result of on-site or off-site activities that may have affected site soil or groundwater quality; and

2. Evaluate the presence of chemically-affected soil on the Site to the extent indicated by visual observations, personal interviews, and regulatory records.

The ESA investigated past and present site uses, focusing on the use, handling, storage, release, or on-site disposal of hazardous substances, and examined the potential for migration of hazardous substances onto the Site from reported chemical releases, if any,

PAGE 6/26 * RCVD AT 3/24/2006 9:16:16 AM [Pacific Standard Time] * SVR:S30A1001/2 * DNIS:975 * CSID: * DURATION (mm-ss):07-58

in the site vicinity. The assessment was based solely on a review of available records, visual observations, and personal interviews. Field sampling was not performed as part of this ESA.

2.0 BACKGROUND

A eucalyptus grove has occupied the Site since the late 1950s. In the early 1980s, the northeastern portion of the Site was developed and used for residential applications. The southeastern portion of the Site appeared to have been used as a race track. Currently, the southeastern portion of the Site is used to cut and store wood. Paint ball fields are located at the western and central portions of the Site. A farm-like environment which is used to house animals is located directly south of the residential developed area at the northeastern portion of the Site.

A Phase I ESA was conducted by Environmental Science Associates of Sacramento, California in October 2004. Environmental Science Associates' assessment revealed that there was past and present undocumented and illegal storage of hazardous materials and waste on the Site. Additionally, Environmental Science Associates reported that a large amount of soil containing some type of oil was deposited at the southeastern portion of the Site in the 1970s for a motorcycle track. A site investigation was recommended based on their findings.

Kleinfelder of Fairfield, California performed a Phase II Site Investigation in March through May 2005. Soil samples were collected from sixteen sample locations and selectively analyzed for petroleum constituents, polynuclear aromatic hydrocarbons (PAHs), total coliform, ecoli, pesticides, and metals. Laboratory analytical results of the soil samples indicated non-detectable concentrations of PAHs, total coliform, ecoli, and pesticides; and low to non-detectable concentrations of petroleum hydrocarbons. The metal concentrations detected in the soil samples were generally below the California Regional Water Quality Control Board's Environmental Screening Levels (ESLs) for residential landuse, with the exception of arsenic, chromium, and vanadium. Arsenic, chromium, and vanadium concentrations which were at or above their respective residential ESLs were encountered in the surficial soil at the northeastern portion of the Site.

PAGE 7/26 * RCVD AT 3/24/2006 9:16:16 AM [Pacific Standard Time] * SVR:S30A1001/2 * DNIS:975 * CSID: * DURATION (mm-ss):07-58

3.0 SCOPE OF WORK

This Phase I ESA included the following tasks:

- Review of background information on site setting and history of site usage
- Field inspection of the Site and neighboring properties
- Review of regulatory records concerning the Site and surrounding area
- Data evaluation and report preparation

The findings associated with the above tasks are presented below.

4.0 SITE RECONNAISSANCE

ICES personnel conducted a walk-through site inspection, and performed a drive-by reconnaissance of the adjacent properties and the surrounding area on March 10 and 13, 2006.

4.1 Site Visit

The Site is located on the north side of Eucalyptus Drive and is within the legal jurisdiction of the City of American Canyon, in conjunction with Napa County and the State of California. The Site consists of one parcel (APN 058-030-056) covering an area of approximately 106 acres. The parcel falls distinctly from the northeast corner of the Site towards the central portion of the Site. The remaining areas of the Site are relatively flat.

A eucalyptus grove occupies the Site - a major portion is used by the Paint Ball Jungle (primarily during the weekends), and the remaining acreage is occupied by Mr. George Couch (the property owner) and a wood cutting and storage operation. The Paint Ball Jungle uses the western and central portions of the Site. Mr. Couch occupies the northeastern portion of the Site. A farm-like environment which is used to house animals is located directly south of Mr. Couch's residence. A cleared area used to cut and store wood is located at the southeastern portion of the Site. At the time of the site visit, several piles of wood chips, truck trailers, and equipment used for wood cutting were observed within the area.

A visual inspection of the paintball fields indicated that paint balls are scattered throughout the property and several forts have been built for the paint ball games. The forts house

PAGE 8/26 * RCVD AT 3/24/2006 9:16:16 AM [Pacific Standard Time] * SVR:S30A1001/2 * DNIS:975 * CSID: * DURATION (mm-ss):07-58

several empty 55-gallon plastic drums. An inspection of the northeastern portion of the Site indicated two residential structures, a concrete block structural foundation, an outhouse, several sheds, and a well. The areas surrounding the residential structures contained a lot of household items, wood debris, abandoned vehicles, machinery, equipment, small containers of unknown material, several water tanks, an underground storage tank that was sitting on the ground, tires, and refuse.

4.2 Drive-by Reconnaissance

A drive-by reconnaissance of the neighboring properties indicated that landuse in the vicinity of the Site is a mixture of residential and commercial.

The Site is bounded to the north by warehouse buildings and to the east by open pastures. The area south of the Site is occupied by open space and a residential subdivision. The American Canyon Sanitary Landfill, a eucalyptus grove, and wetlands are located west of the Site.

5.0 HISTORY OF THE SITE AND VICINITY

Historical records reviewed as part of this ESA included aerial photographs and Sanborn Fire Insurance maps.

5.1 Aerial Photographs Review

Historical aerial photographs of the Site and vicinity from 1959 through 1998 were provided by Environmental Data Resources, Inc. ("EDR") of Southport, Connecticut. A historical account of the landuse of the Site between 1959 and 1998 based on a review of available aerial photographs is presented below.

The Site

The 1959 aerial photograph showed that the Site was occupied by a eucalyptus grove. In 1965, a large section of the eucalyptus grove at the eastern portion of the Site had been harvested. Replanted eucalyptus trees were observed at the eastern portion of the Site by 1970. The 1982 aerial photograph showed that the northeastern portion of the Site was developed and used for residential applications. The southeastern portion of the Site appeared to have been used as a race track. There were no noticeable changes in the 1993 and 1998 aerial photographs relative to the 1982 aerial

PAGE 9/26 * RCVD AT 3/24/2006 9:16:16 AM [Pacific Standard Time] * SVR:S30A1001/2 * DNIS:975 * CSID: * DURATION (mm-ss):07-58

1688

photograph.

Neighboring Area

The 1957 aerial photograph showed that the neighboring area surrounding the Site was generally undeveloped land. Eucalyptus groves were present northwest of the Site. Two structures were located adjacent to the southwestern portion of the Site. A residential development was observed on the south side of Eucalyptus Drive, southeast of the Site.

There were no appreciable changes to the neighboring area in the 1965 and 1970 aerial photographs relative to the 1957 aerial photograph.

The 1982 aerial photograph showed that the American Canyon Sanitary Landfill was located west of the Site. There were no noticeable changes to the neighboring area in the 1993 and 1998 aerial photographs relative to the 1982 aerial photograph.

5.2 Sanborn Maps Review

A Sanborn Map site search conducted by EDR indicated that there were no Sanborn Maps available for the Site and the immediate surroundings.

5.3 Personnel Interviews

ICES attempted to interview Mr. Couth on March 10 and 13, 2006 to obtain additional information regarding the historical and current uses of the Site. Mr. Couch declined to be interviewed.

6.0 REGIONAL PHYSIOGRAPHY

The U.S. Geological Survey Cuttings Wharf Quadrangle indicated that the elevation at the Site is approximately 12 feet above mean sea level and that the topography at the Site slopes in a southwesterly direction. The nearest major body of water is the Napa River, which lies approximately 1.0 mile west of the Site.

7.0 RADON POTENTIAL

The radon data presented in this section is based on the California Statewide Radon Survey Interim Results (CSRSIR) for the County of

PAGE 10/26 * RCVD AT 3/24/2006 9:16:16 AM [Pacific Standard Time] * SVR:S30A1001/2 * DNIS:975 * CSID: * DURATION (mm-ss):07-58

Napa. Radon is a known human carcinogen and is the second leading cause of lung cancer in the United States. The United States Environmental Protection Agency (EPA) recommends that action be taken to reduce radon levels when indoor radon levels exceed 4 pico curies per liter of air (pCi/l).

The CSRSIR predicts that 4.7 percent of homes in the Napa County would exceed 4 pCi/l. Additionally, of the 34 states participating in the radon survey, California ranks as the third lowest state for percentage of homes exceeding 4 pCi/l. The survey results are not intended to predict the radon exposure level measurement in an individual structure since other factors such as climatic conditions, soil permeability, house structure, and soil/house pressures besides geographic location can affect indoor radon levels. Indoor radon levels at the Site can only be obtained by sampling and testing existing or future structures. Radon levels were not measured at the Site.

The potential for radon concentrations to exceed 4 pCi/l at the Site is relatively low based on the small percentage of homes in the County of Napa predicted to exceed EPA's recommended exposure limit.

8.0 REVIEW OF REGULATORY RECORDS

A governmental records report for the Site and the surrounding areas was prepared by EDR dated February 27, 2006. The geographic database search was conducted following the American Society for Testing Materials standards for a government records review. A copy of the EDR report is included in Appendix A. The record search included sites on governmental environmental lists within a one-eight to one mile radius of the Site to determine if the Site or nearby properties have been identified by Federal or State regulatory agencies and to identify hazardous material handling, storage or storage disposal operations. Within the EDR report, a complete listing of agency records is provided.

A total of two cases with possible releases of chemicals of concern to the environment were identified within the area of the search. EDR's radius map list review identified:

<> one State Landfill;

within a one eighth-mile radius from the Site;

PAGE 11/26 * RCVD AT 3/24/2006 9:16:16 AM [Pacific Standard Time] * SVR:S30A1001/2 * DNIS:975 * CSID: * DURATION (mm-ss):07-58

<> no cases;

within a one quarter-mile radius from the Site;

<> one WMDUS/SWAT case;

within a one half-mile radius from the Site;

<> no cases;

within a one mile radius from the Site.

Of the two cases, all two cases are not considered to have impacted the Site because of one of the following criteria:

1. No further action (NFA) status;
2. A De-listed status;
3. No violations; and
4. Their distance (approximately one-eight mile or greater) from the Site, and/or their relative location cross gradient from the Site.

A NFA status or a de-listed status for a site/case indicates that chemical releases to the environment had not occurred or had been successfully remediated. In addition, sites/cases with a "No Violations" notation have not had known releases of chemicals into the environment.

The local topography suggests that the local groundwater gradient flows in a southwesterly direction. It is, therefore, unlikely that properties situated in the down-gradient locations of the Site could have impacted the Site through groundwater flow.

9.0 SUMMARY AND CONCLUSIONS

A eucalyptus grove has occupied the Site since the late 1950s. In the early 1980s, the northeastern portion of the Site was developed and used for residential applications. The southeastern portion of the Site appeared to have been used as a race track. Currently, the southeastern portion of the Site is used to cut and store wood. Paint ball fields are located at the western and central portions of the Site. A farm-like environment which is used to house animals is located directly south of the residential developed area at the northeastern portion of the Site.

PAGE 12/26 * RCVD AT 3/24/2006 9:16:16 AM [Pacific Standard Time] * SVR:S30A1001/2 * DNIS:975 * CSID: * DURATION (mm-ss):07-58

A Phase I ESA was conducted by Environmental Science Associates of Sacramento, California in October 2004. Environmental Science Associates' assessment revealed that there was past and present undocumented and illegal storage of hazardous materials and waste on the Site. Additionally, Environmental Science Associates reported that a large amount of soil containing some type of oil was deposited at the southeastern portion of the Site in the 1970s for a motorcycle track. A site investigation was recommended based on their findings.

Kleinfelder of Fairfield, California performed a Phase II Site Investigation in March through May 2005. Soil samples were collected from sixteen sample locations and selectively analyzed for petroleum constituents, PAHs, total coliform, ecoli, pesticides, and metals. Laboratory analytical results of the soil samples indicated non-detectable concentrations of PAHs, total coliform, ecoli, and pesticides; and low to non-detectable concentrations of petroleum hydrocarbons. The metal concentrations detected in the soil samples were generally below the California Regional Water Quality Control Board's ESLs for residential landuse, with the exception of arsenic, chromium, and vanadium. Arsenic, chromium, and vanadium concentrations which were at or above their respective residential ESLs were encountered in the surficial soil at the northeastern portion of the Site.

Based on the findings of this ESA, ICES recommends that a supplementary investigation be conducted within the Site. Specifically, ICES recommends that the following task be performed to obtain additional information to adequately characterize the underlying sediments:

1. Collect soil samples from the surficial soil within the western portion of the Site to assess the potential presence of organochlorine pesticides, arsenic, lead, and mercury associated with the eucalyptus grove;

2. Collect soil samples from the surficial soil within the southeastern portion of the Site to assess the potential presence of petroleum hydrocarbons, semi-volatile organic compounds, and lead associated with the former motorcycle track and existing wood cutting and storage operations; and

3. Collect soil samples from the surficial soil within the northeastern portion of the Site to assess surficial sediments containing arsenic, chromium, and vanadium levels detected in a previous site investigation which exceeded residential ESLs.

PAGE 13/26 * RCVD AT 3/24/2006 9:16:16 AM [Pacific Standard Time] * SVR:S30A1001/2 * DNIS:975 * CSID: * DURATION (mm-ss):07-58

The evaluation is site specific, based on the information available at this time and could be revised if new information necessitating further review of the Site and adjacent facilities becomes available.

10.0 LIMITATIONS

The Scope of Work for this Phase I ESA did not include collection or analysis of soil and/or groundwater samples; assessment of the potential presence of asbestos in building materials; testing of electrical equipment for the potential presence of polychlorinated biphenyls; assessment of natural hazards such as naturally occurring asbestos, radon gas, or methane gas; assessment of the potential presence of radionuclides; or assessment of nonchemical hazards, such as the potential for damage from earthquakes or floods or the presence of endangered species or wildlife habitats. Therefore, a full and complete determination of environmental risks was not made. This Phase I ESA also did not include an assessment of the compliance status of the Site.

The observations and conclusions presented in this report are professional opinions based on the scope of activities and information obtained through the Phase I ESA described above. Opinions presented herein apply to site conditions at the time of our study, and cannot apply to site conditions or changes of which we are not aware, or which we have not had the opportunity to evaluate. It must be recognized that any conclusions drawn from these data rely on the integrity of the information available to ICES at the time of the investigation. Soil and/or groundwater sampling and analysis would provide additional level of confidence with respect to potential environmental risks at the Site.

This report is exclusively for the use of Mr. Aaron Ross-Swain of Standard Pacific Homes. Any reliance on this report by a third party shall be at such party's sole risk.

1. SUMMARY

A Phase I Environmental Site Assessment (ESA) was performed for American Canyon Flat Land Inc., for the property at 2 Eucalyptus Drive in American Canyon, California (Plate 1). This report was prepared in general accordance with the scope and limitations in the American Society for Testing and Materials (ASTM), *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process* E1527-05 and the All Appropriate Inquiry (AAI) section of the Small Business Liability Relief and Revitalization Act (the Federal Brownfields Law). The property is hereafter referred to as the "subject site."

The subject site consists of 106.57 acres of land in American Canyon, California, occupied by a residence, outbuildings, and a recreational paintball operation, (Plate 1). Much of the site is used for agricultural purposes, occupied by eucalyptus trees that were harvested for firewood. The parcel number, as identified by the Napa County Assessor's office, is 058-030-056.

For ease of description, the site is divided into several areas and described counterclockwise from Eucalyptus Drive (Plate 2):

- Hurst Firewood Area: located adjacent to the north of Eucalyptus Drive, south of an east/west unpaved road, and east of the unpaved section of Commerce Blvd. that runs north/south through the site;
- Paintball Jungle Area (East): located north of the east/west unpaved road and Hurst Firewood, south of the animal pens and Couch Residential Area, and on both sides of Commerce Blvd;
- Animal Pens Area: located north of Paintball Jungle and south of the Couch Residential Area;
- Couch Residential Area: located north of the animal pens, south of the property boundary, east of Commerce Blvd;

Copyright 2009 Kleinfelder

- "Concentrated Area" (named in accordance with County investigation and legal document maps): located west of Commerce Blvd across from the Couch Residential Area; and

- Sherwood Forest Paintball & North Slough Creek Area: located at the northwest corner of the property, west of the Concentrated Area.

- Paintball Jungle Area (West): located on the western side of Commerce Boulevard, south of Sherwood Forest Paintball, north of the property line, east of the property line.

The site has been developed as a eucalyptus tree farm since at least 1937. A Phase I ESA was performed in 2004 by Environmental Science Associates (ESA) that covered the entire parcel, but findings and recommendations were restricted to the 2004 observations of conditions at the Couch Residence and Hurst Firewood Areas. A Phase II soil and groundwater investigation performed by Kleinfelder in 2005 was based on the recommendations from ESA's Phase I report and maps, and therefore addressed only a portion of the areas where previous dumping, spills, and leaks may have occurred. During the Phase II investigation, Kleinfelder collected soil samples but did not encounter groundwater for sampling.

This Phase I ESA represents a re-evaluation of the site based on new information provided to Kleinfelder since the original investigations.

The following is a summary of Kleinfelder's findings in each area.

Hurst Firewood Area:

This area is currently occupied by Hurst Firewood, a business owned by Mr. Hurst, used for cutting eucalyptus trees into firewood for sale. Previously, as few as 19 to as many as 30 people reportedly may have resided in this area, mainly north of area cleared of trees. These renters set up residences on small plots of land that were not connected to water, sewer, or electricity. According to Keith Caldwell, former American Canyon Fire Chief, many of these renters conducted short-scale engine and auto repairs and one methamphetamine lab was discovered and removed. In addition, Mr. Hurst previously stored approximately 50 vehicles and pieces of equipment at the site and

Copyright 2009 Kleinfelder

performed small-scale engine repairs on these vehicles. Kleinfelder observed several stockpiles of wood chips and soil and concrete debris during the site visit.

Paintball Jungle Area (East):
This area is currently occupied by paintball games operated under the name Paintball Jungle. According to permitting records, paintball operations have occurred at the site since at least 1990. Prior to paintball operations, the majority of this area was occupied by junked cars, vehicles, drums, containers, trash, and other debris.

Animal Pens Area:
This area is currently occupied by animals including horses, roosters, and hens. The Couch family reportedly rents stalls and pens for horse boarding. Several vehicles were observed in this area as well as various storage containers. Kleinfelder did not have interior access to this portion of the site so observations were made from the perimeter fence. This area was reported to be occupied by various animals and was the site of illegal animal fighting activities.

Couch Residential Area:
This area is currently occupied by one member of the Couch family who lives on the property in a reportedly unpermitted dwelling. Kleinfelder observed at least 10 vehicles and hundreds of other pieces of equipment, various containers of paints, transmission oil, motor oils, areas of dumped garbage, three unpermitted wells, several large containers including tanks, tanks on wheels, structures, locked storage containers or structures that Kleinfelder could not access, and various debris. Previously, this area reportedly contained over 150 vehicles, hundreds of tires, additional structures occupied by other members of the Couch Family and possibly additional renters, and many widespread areas of debris.

Kleinfelder reviewed various documentation related to the 1993 court-ordered cleanup. This area of the site contained drums that were sampled by Catherine Moody of NCDEM and found to be either diesel or phenols which Robert Couch and David Couch reportedly described as “cresol.” Various subsequent court documents describe cleanup activities at the site and provide copies of household waste disposal at Devlin Road landfill in American Canyon (a Class III municipal landfill), tire disposal at a recycler, scrap metal at a recycler, and junked car removal and disposal. The

Copyright 2009 Kleinfelder

documents do not include manifests for the hazardous materials found to be within drums, fluids from vehicles, and contents of small containers. These materials, if disposed of properly, would have been disposed of at the fire department or a Class II landfill by a certified waste hauler. However, Kleinfelder searched the DTSC and Cal-EPA database to obtain records of a possible RCRA generator ID number (required on the waste manifest for hazardous materials) and no RCRA ID number was found for the Couch Family. A RCRA ID was found for paintball operations only.

Concentrated Area:

This area was identified and labeled by Napa County investigators during previous investigations and information gathering. This area is currently occupied by a chain-link fence, wooden garage door barrier, outhouse, boat, boat trailer, and camper trailer. This area previously was occupied by various renters and reportedly was the site of an additional illegal methamphetamine lab, which was reportedly removed by the Napa County Sheriff's Department in approximately 2000.

Sherwood Forest Paintball Area:

This area, located on the northwest corner of the property, appears to be currently occupied by paintball operations, formerly operated under the name "Sherwood Forest" paintball. Kleinfelder is not sure whether this company still operates this portion of the site, or whether this area is used by Paintball Jungle. Kleinfelder observed several small structures in this area including an enclosure for CO_2 compressed gas containers, a pickup truck, and a wood chipping machine. This area previously was reported to be the "cleared area" and possible location of an outdoor fireplace. According to Keith Caldwell, this area reportedly was a location where drums may have been buried.

North Slough Creek (within Sherwood Forest Paintball Area):

A creek, which appears to drain southwest to the Napa River, is located on the northwest corner of the property near the site boundary. A rock and soil pile was observed along the eastern bank of the creek. It was reported to Kleinfelder by Mr. Michael Johnson that a concern exists regarding the runoff within the creek, which was based on a reported surface water quality violation that was issued to the adjacent American Canyon Wastewater treatment plant. According to Mr. Johnson, the wastewater treatment plant was concerned that the source for pollutants in the creek

Copyright 2009 Kleinfelder

was the Couch Property. Kleinfelder has not seen a copy of the complaint or the results of any sampling or analysis that may have been performed.

Paintball Jungle Area (West):
This area, which comprises the majority of the area west of unpaved Commerce Blvd, was previously and now is currently used for paintball games. Several structures constructed of wood and 55-gallon drums were observed as well as two outhouses. Minor dumping was reported along the roadside but no residences or tenants occupied this area.

Kleinfelder's Phase I ESA of the subject site revealed the following current and historic RECs associated with the site.

- There is ample evidence that residual petroleum hydrocarbons, solvents, and certain metals may have been released in shallow soil throughout the eastern portion (Hurst Firewood, Paintball Jungle (East), Animal Pens, and Couch Residential areas) of the site as well as within the western portion (Concentrated Area, Sherwood Forest Paintball and North Slough Creek area) of the site. These petroleum hydrocarbons were likely surface spills and dumping related to the storage of hundreds of pieces of equipment, at least 150 vehicles, areas of the site occupied by the current owner and areas rented to tenants, and areas of dumping.

- The majority of the site is currently used for paintball games. Depending on where the paintballs were manufactured, it is possible that paint within paintballs may have contained lead and was released to soil.

In addition, while not considered to be RECs by definition, the following other environmental conditions were revealed that could affect the subject site:

- A septic system exists at the subject site. The purpose of the septic system is to receive domestic sewage. If future construction activities encounter the septic system or the system is no longer in use, the system must be abandoned in accordance with applicable local permitting requirements and regulations.

Copyright 2009 Kleinfelder

- Although asbestos and lead is specifically excluded from the Phase I standards, Kleinfelder recommends that all structures be surveyed prior to demolition in compliance with EPA, Bay Area Air Quality Control Management District, and Napa County Building Department rules and regulations.

- Three wells were observed at the site. If these wells are no longer in use, they must be abandoned in accordance with applicable federal, state, and local regulations.

- A complaint and possible violation reportedly occurred related to waters of the creek, located on the property in the northwest corner. The City of American Canyon Water Treatment Facility was reportedly concerned by the possibility of source material leaching into the creek from materials on the Couch property.

Any deviations, historical environmental conditions, and de minimis findings are discussed in Section 8 of this report. This report is subject to the limitations in Section 2.5.

Copyright 2009 Kleinfelder

2. INTRODUCTION

Kleinfelder conducted a Phase I ESA of the subject site. The following report is a summary of work performed in general accordance with the scope and limitations in the ASTM Standard E-1527-05, *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process* (ASTM Standard), the All Appropriate Inquiry (AAI) section of the Small Business Liability Relief and Revitalization Act (the Federal Brownfields Law), and our Master Services Agreement with American Canyon Flat Land Inc, dated November 7, 2009. This report also generally conforms to the ASTM Standard's suggested table of contents.

2.1 PURPOSE

The purpose of this Phase I ESA is to identify, to the extent feasible pursuant to the scope of work defined in our work order, and the limitations discussed in this report, RECs and other environmental issues related to the subject site. As defined in the ASTM Standard, a REC is:

> *The presence or likely presence of any hazardous substances or petroleum products on a property under conditions that indicate an existing release, a past release, or a material threat of a release of any hazardous substances or petroleum products into structures on the property or into the ground, ground water or surface water of the property. The term includes hazardous substances or petroleum products even under conditions in compliance with laws. The term is not intended to include de minimis conditions that generally do not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies. Conditions determined to be de minimis are not recognized environmental conditions.*

This report describes Kleinfelder's assessment methodology and documents our assessment findings, subject to the limitations presented in Section 2.5 of this report.

Copyright 2009 Kleinfelder

2.2 DETAILED SCOPE OF SERVICES

The following sections describe Kleinfelder's work scope:

- Section 2, **Introduction**, includes a discussion of the purpose/reason for performing the Phase I ESA, additional services requested by the Client (i.e. an evaluation of business environmental risk factors associated with the subject site), significant assumptions (i.e. property boundaries if not marked in the field), limitations, exceptions, and special terms and conditions (i.e. contractual), and user reliance parameters.

- Section 3, **Site Description**, is a compilation of information concerning the site location, legal description (if provided), current and proposed use of the subject site, physical setting, and geologic and hydrogeologic conditions.

- Section 4, **History of the Site**, summarizes the history of land use at the site and on adjoining properties. The history was developed by conducting interviews, reviewing information provided to Kleinfelder by the client and by consulting various resources such as aerial photographs, agency files, and historic maps.

- Section 5, **Records Review**, is a compilation of Kleinfelder's review of several databases available from the Federal, State, and local regulatory agencies regarding hazardous substance use, storage, or disposal at the subject site; and for off-site facilities up to a one-mile radius around the site. This chapter includes interviews with the owner.

- Section 6, **Site Reconnaissance**, describes Kleinfelder's site observations during the site reconnaissance and observations of adjacent parcels.

- Section 7, **Interviews**, is a summary of telephone and personal interviews conducted with "Key Site Managers" that may include the owner/manager of the facility, occupants/tenants, local government officials, and the Client. Additional interview sources may be contacted if "Key Site Managers" are not available prior to production of this report, and may include adjoining landowners and people with historical knowledge of the area.

Copyright 2009 Kleinfelder

- Section 8, **Evaluation**, is a presentation of our findings and conclusions regarding the information in Chapters 3 through 6; and presents our opinion regarding the presence of Recognized Environmental Conditions of concern at the site.

- Section 9, **References**, is a summary of some of the resources used to compile this report.

The appendices contain certain pertinent documentation regarding the subject site. Appendix A presents site photographs. Appendix B contains the qualifications of the environmental professionals responsible for the preparation of this report. Appendices C, D, E, F, and G contain historical records review and database review records, user provided aerial photographs and documents, regulatory agency documentation, supporting documentation for interviews, and Kleinfelder's previous investigations, respectively.

2.3 SIGNIFICANT ASSUMPTIONS

The subject site is hereafter referred to as the "site" or "subject site". Kleinfelder does not guarantee the accuracy of information supplied by its sources, but reserves the right to rely on this information in forming a professional opinion regarding the potential for contamination at the site.

2.4 LIMITATIONS AND EXCEPTIONS

Phase I ESAs are non-comprehensive by nature and are unlikely to identify all environmental problems or eliminate all risk. The attached report is a qualitative assessment. Kleinfelder offers a range of investigative and engineering services to suit the needs of our clients, including more quantitative investigations.

The scope of this ESA does not incorporate ASTM Standard non-scope considerations, such as asbestos/lead-based paint, radon, lead in drinking water, wetlands, regulatory compliance, cultural and historical resources, industrial hygiene, health and safety, ecological resources, endangered species, high voltage power lines, indoor air quality, and therefore vapor intrusion as a contributing indoor air quality issues.

Copyright 2009 Kleinfelder

Although risk can never be eliminated, more detailed and extensive investigations yield more information, which may help you understand and better manage your risks. Since such detailed services involve greater expense, we ask our clients to participate in identifying the level of service that will provide them with an acceptable level of risk. Please contact the signatories of this report if you would like to discuss this issue of risk further.

Kleinfelder performed this environmental site assessment in general accordance with the guidelines set forth in the ASTM and AAI Standards, and the proposed scope subsequently approved by our Client. No warranty, either expressed or implied, is made. Environmental issues not specifically addressed in this report were beyond the scope of our services and not included in our evaluation.

This report may be used only by the Client and only for the purposes stated within a reasonable time from its issuance, but in no event later than one year from the date of the report. Land or facility use, on- and off-site conditions, regulations, or other factors may change over time, and additional work may be required with the passage of time. Since site activities and regulations beyond our control could change at any time after the completion of this report, our observations, findings, and opinions can be considered valid only as of the date of the site visit. This report should not be relied upon after 180 days from the date of its issuance (ASTM Standard, Section 4.6). Any party other than the Client who wishes to use this report shall notify Kleinfelder of such intended use. Based on the intended use of the report, Kleinfelder may require that additional work be performed and that an updated report be issued. Non-compliance with any of these requirements by the Client or anyone else will release Kleinfelder from any liability resulting from the use of this report by any unauthorized party, and Client agrees to defend, indemnify, and hold harmless Kleinfelder from any claim or liability associated with such unauthorized use or non-compliance.

2.5 SPECIAL TERMS AND CONDITIONS

No special terms and conditions in addition to those discussed previously were agreed to either by the Client and Kleinfelder in our work order for this project.

Copyright 2009 Kleinfelder

3. SITE DESCRIPTION

This section describes the condition of the site at the time the Phase I ESA was conducted and provides information about the site description and local geologic and hydrogeologic conditions.

3.1 SITE DESCRIPTION

The site is identified as a 106.57 acre site, located north of Eucalyptus Drive and west of Oat Hill. The site is occupied by a eucalyptus grove and for the purposes of clarity for this assessment; the site is divided into several sections defined by their use:

- **Hurst Firewood Area**
  Hurst Firewood was formerly operated by Mr. Hurst for cutting of eucalyptus trees into firewood, storage of vehicles & equipment, reported periodic engine repair. In addition, north of the firewood cutting operation, the Couch family rented the area within the trees to at least 19 residents. The residences were constructed without permits and consisted of tarps, garage doors, scrap wood, trailers, and vehicles. In addition, a methamphetamine lab was reportedly removed from one of the residences.

- **Paintball Jungle Area (East)**
  Paintball Jungle area has been commercially operated by an outside company for recreational paintball games since at least the early 1990's. Areas currently operated as paintball were previously occupied by over 150 vehicles, various debris including tarps, equipment, 55-gallon drums of known and unknown contents.

- **Animal Pens Area**
  The Animal Pens area has been used to board horses, chickens, roosters, and possibly other animals. The Couch family reportedly rents stalls and pens for animal owners to board and take care of their animals. This location was formerly used for illegal chicken fighting activities and reportedly raided several times by law enforcement.

Copyright 2009 Kleinfelder

- **Couch Residential Area**
  The Couch Family occupied this area from at least the early 1970's. Several building permits were issued for the construction of a home that was not completed. At least one mobile home was occupied by Robert and Patricia Couch, which burned to the ground in 1994. A garage was occupied by several people and is now used to store tools. A small dwelling, constructed of wood, is currently occupied by one of the Couch's sons. Various areas of the property were occupied by the Couch's other two sons. In addition to residences, most of this area previously contained equipment, vehicles, metal debris, petroleum products, tanks, repair equipment, tools, drums and other containers, and debris including garbage. Three water wells were observed within this area.

- **Concentrated Area**
  The "Concentrated Area" was named by Napa County investigators during previous investigations and information gathering site visits. This area was previously occupied by a trailer and a methamphetamine lab, removed in 2000 or 2001. This reported methamphetamine lab was located within a chain-link fenced area. A portion of this fence still exists. This area is currently occupied by a boat, boat trailer, and camper.

- **Sherwood Forest Paintball Area and North Slough Creek**
  This area is located along the northwest corner of the property and is currently occupied by paintball operations, several wooden structures, wood chipping equipment, a truck, and CO2 compressed air containers. The creek is located along the western border of the property in this location. This area was reportedly used for drum burial and used to contain a brick fireplace. The creek flows southwest to the Napa River.

- **Paintball Jungle Area (West)**
  This area is composed of the western side of the property, west of the unpaved Commerce Blvd. This area appears to have been used for recreational paintball operations since the early 1990's, possibly earlier. Several wooden walls and paintball related structures are currently present in this area.

Roads at the site consist of an unpaved section of Commerce Boulevard, which is situated in the center of the property. Several other unpaved roads exist at the site

Copyright 2009 Kleinfelder

including a road leading to the residence and various unpaved paths through the trees. An unpaved parking lot associated with the paintball operation exists along the southern portion of the Paintball Jungle Area (East). Each area of the site is described in further detail in Section 6.2.

Surrounding properties consist of American Canyon Wastewater Treatment Plant and undeveloped land to the northwest and west, former municipal landfill to the west and southwest, undeveloped property to the east, commercial warehouses to the north, and single-family residential property to the south. In addition, a 4-H garden area is located adjacent to the southwest across the unpaved Commerce Blvd segment from Hurst Firewood.

The information presented in Table 3.1 describes the physical location of the subject site. This information was obtained from maps, public records, and interviews.

TABLE 3.1: SITE SETTING

DESIGNATION	DESCRIPTION
Address	2 Eucalyptus Drive
Location	North of Eucalyptus Drive, west of Oat Hill, American Canyon, California
Township & Range	Township 4 North, Range 4 West, Sections 14 & 23
Assessor's Parcel Number	058-030-056
Acreage	106.57 acres
Current Use	Rural residential, recreational paintball, storage areas
Potable Water Supply	Current: City water connection; Past: imported by truck, and possible wells
Waste Water System	Septic System, surface dumping
USGS TOPOGRAPHIC QUADRANGLE Cuttings Wharf, California 7.5 Minute Series. 1949, photorevised 1981	The subject site is approximately 15 to 30 feet above mean sea level. The site topography slopes toward the west.
MUNGER MAP (ftp://ftp.consrv.ca.gov/pub/oil/maps/Dist6/W6-1/MapW6-1.pdf)	There are no mapped oil wells or dry holes located on the subject site.

Copyright 2009 Kleinfelder

3.2 SITE SOILS

According to the Soil Survey of Napa County soils at the site are mapped as Haire clay loam, and Fagan clay loam.

The Haire series consists of moderately well drained soils located on old terraces and alluvial fans. The Haire series has slow to medium runoff, depending on slope and the hazard of erosion is slight to moderate, depending on slope.

The Fagan series consists of well drained soils on uplands. The Fagan series has medium to rapid runoff, depending on slope and the hazard of erosion is moderate to high, depending on slope.

3.3 REGIONAL AND LOCAL GEOLOGY

3.3.1 Regional Geology

The site lies within the Coast Range Geologic Province of California. This province is characterized by northwest trending mountain ranges and intervening valleys, which are a reflection of the dominant northwest structural trend in bedrock of the region. The basement rock in the northwest portion of this province is dominantly highly deformed sedimentary, metamorphic and volcanic rock of the Franciscan Complex of Upper Jurassic to Cretaceous Age.

3.3.2 Local Geology

The site is underlain by a portion of Oat Hill, which is composed of Quaternary Holocene sandstone, siltstone, and shale. The higher elevation portion of the property is composed of Late Pleistocene alluvial fan deposits which grade to the southwest. The low-lying area of the site, mainly on the western side of Commerce Blvd, is composed of Quaternary Holocene Bay Mud.

3.4 GROUNDWATER

Depth to groundwater beneath the site has not been determined. Based on a limited Phase I ESA by ESA in 2004 and a subsequent soil investigation by Kleinfelder in 2005, groundwater was not encountered above 31 feet bgs. Kleinfelder assumes, based on

Copyright 2009 Kleinfelder

this limited data and site topography, that groundwater depth should be deeper on the northeastern portion of the site (in areas of higher topography) and become progressively shallower toward the west and southwest where the site elevation approaches the level of the slough south of Eucalyptus Drive and to the west where the site meets the surface creek that drains to the Napa River. General groundwater depth and direction may be influenced by local pumping, rainfall, and irrigation patterns. Evaluation of such factors is beyond the scope of this assessment.

Copyright 2009 Kleinfelder

4. HISTORY OF THE SITE

The history of the site was researched to identify obvious uses of the site from the present to first developed use or back to 1940, whichever is earlier. The objective was to evaluate the likelihood that past uses resulted in RECs. Table 4.1 summarizes the information reviewed during this assessment. Kleinfelder used this information to establish the site history.

TABLE 4.1: HISTORICAL INFORMATION REVIEWED

4.1 AERIAL PHOTOGRAPHS

A review of historical aerial photography may indicate past activities at a site that may not be documented by other means, or observed during a site visit. The effectiveness of this technique depends on the scale and quality of the photographs and the available coverage. Aerial photographs were obtained from several historical photograph collections through EDR. Copes of the aerial photographs obtained by Kleinfelder are included in Appendix D.

1937

The site is occupied by a planted crop of trees, likely similar trees to the Eucalyptus trees planted at the site today. A creek is shown along the western boundary. Surrounding properties consist of residential southwest of the site boundaries, similar tree grove to the west and undeveloped land to the north, east, and south. In addition, several unpaved roads are observed in the site vicinity.

1948

The site and surrounding properties appear essentially unchanged from the 1937 photograph.

1957

The site and surrounding properties appear essentially unchanged from the 1948 photograph.

1965

The site is shown essentially unchanged from the 1957 photograph with the exception that a white structure is shown along the northern boundary of the site.

1970

A cleared area exists on the northwest corner of the site, in addition, a smaller cleared area and unpaved road with possible vehicles or trailers are shown in the northeast corner of the site. The surrounding properties appear to be essentially unchanged from the 1965 photo.

Copyright 2009 Kleinfelder

1982

Additional unpaved roads are observed in the northwest portion of the site, along with several vehicles, possible trailer or structures, and larger cleared areas. An unpaved oval-shaped area is shown in the southern portion of the site. A round pond is shown along the western boundary of the site in the vicinity of the creek. Surrounding properties appear essentially unchanged from the 1970 photo. The overall photo quality is poor.

1993

Additional unpaved roads, vehicles, small structures are visible in the northwestern portion of the site, and many vehicles are visible within the trees in the west-central portion of the site. Additional unpaved roads are visible in the southern portion of the site, possible debris or vehicles are visible along the unpaved roads. The surrounding properties consist of undeveloped land and a tree grove immediately surrounding the site, commercial warehouses to the north, a structure on the top of Oat Hill to the east, and residential housing to the south. The rural residence previously located adjacent to the southwest is no longer present.

1998

The subject site and surrounding properties are essentially unchanged from the 1993 photograph, except the surrounding properties are slightly more densely developed and several structures are shown in the vicinity of the rural residential property adjacent to the southwest of the site.

2005

The southern portion of the site is cleared and approximately 20 vehicles and semi-truck trailers are visible. In addition, several areas of fill material piles are visible. The north-south road is wider and appears to have gravel on it. The central portion of the road is used for vehicle parking. In addition, an area on the eastern side of the property has a small paved area that appears to be used for vehicle parking. The northeastern corner of the property appears to have several trailers, vehicles and small structures. An area on the northwest corner of the site appears to be paved. Surrounding properties consist of commercial warehouses adjacent to the north, a water treatment plant to the west, residential houses to the south, and undeveloped land to the east.

Copyright 2009 Kleinfelder

4.2 SANBORN FIRE INSURANCE MAPS

Sanborn Fire Insurance Maps provide historical land use information for some metropolitan areas and small, established towns. Sanborn maps were not available for this site.

4.3 HISTORICAL TOPOGRAPHIC MAPS

Kleinfelder obtained information regarding historical topographic map of the site vicinity from EDR. The topographic maps reviewed for this assessment are summarized below. Copies of the maps are included in Appendix C.

NAPA, 30 Minute Series, 1902, 1 inch = 10,416 feet

The subject site is shown as undeveloped, located west of a prominent hill with an elevation marker of 260 feet, and east of a wetlands area that drains to the Napa River.

MARE ISLAND, 15 Minute Series, 1914, 1 inch = 5,208 feet

The subject site is shown as undeveloped. The present day Eucalyptus Drive is represented as an unpaved road. A structure is depicted adjacent to the north of Eucalyptus Drive. Surrounding properties are undeveloped, with a structure depicted to the north at the end of another unpaved road.

MARE ISLAND, 15 Minute Series, 1947, 1 inch = 4,166 feet

The subject site is depicted as a vegetated area. Surrounding properties consist of three structures adjacent to the southwest, a creek along the northeast corner, and undeveloped property to the north, south, east, and west. Oat Hill is depicted as a prominent feature to the east and the Napa River is shown to the west.

CUTTINGS WHARF, 7.5 Minute Series, 1951, 1 inch = 2,000 feet

The subject site is represented as undeveloped. North slough creek is mapped along the northwest side of the property. Two structures are mapped adjacent to the southwest at the end of a paved road that continues west as an unpaved road. Oat Hill is depicted adjacent to the east and a levee and the Napa River are depicted to the west.

Copyright 2009 Kleinfelder

CUTTINGS WHARF, 7.5 Minute Series, 1949 photorevised 1968, 1 inch = 2,000 feet
The subject site is represented as undeveloped, but within a vegetated area. Surrounding properties are shown essentially unchanged from the 1951 map.

CUTTINGS WHARF, 7.5 Minute Series, 1949 photorevised 1981, 1 inch = 2,000 feet
The subject site and surrounding properties are essentially unchanged from the 1968 map, with the exception of additional development to the southeast and southwest, with additional paved and unpaved roads.

4.4 PREVIOUS INVESTIGATIONS

Kleinfelder was provided several previous investigations for review.

Environmental Science Associates, Phase I ESA, 2004
A Phase I ESA was prepared for the site by Environmental Science Associates (ESA) in 2004. This Phase I ESA recommended a Phase II investigation focused on several areas of the Hurst Firewood operation and near the dwelling currently occupied by a member of the Couch Family that were identified as RECs. It is Kleinfelder's opinion that the Phase I ESA was limited in scope and area, and did not include important information in site records available at NCDEM, and Napa County Building and Planning. It also did not include a complete review of historic aerial photographs. In addition, the Phase I ESA was prepared well prior to the current ASTM standard and is considered to be out of date.

Kleinfelder, Phase II Soil Investigation, 2005
In 2005, Kleinfelder was tasked to rely entirely on the findings and recommendations of ESA's Phase I report, and based on the findings in the report, perform a Phase II investigation. Kleinfelder conducted Phase II soil sampling and attempted to collect groundwater. Kleinfelder collected 34 soil samples, 30 samples were from the Couch Residential portion of the site in various locations including near the reported site of former "USTs" now present aboveground, near the dwelling, near a dog pen, near structures, storage areas, and locations that appeared to be presently occupied. Soil samples were analyzed for the presence of petroleum hydrocarbons as gasoline, diesel, motor oil, methyl tert-butyl ether (MTBE), benzene, toluene, ethylbenzene, and total xylenes (BTEX), polyaromatic hydrocarbons (PAHs), total coliform, and CAM 17 metals.

Copyright 2009 Kleinfelder

In addition, a composite sample was taken from a soil stockpile reportedly located north of the dog pen near a shed.

Soil samples results were reported by the laboratory to not contain petroleum hydrocarbons, MTBE, BTEX, or PAHs above the San Francisco Bay Regional Water Quality Control Board Environmental Screening Level established at that time for shallow soils where groundwater is a source for drinking water. Since this investigation was conducted, the ESL has been revised and many ESL thresholds were lowered. Soil samples analyzed for metals were reported by the laboratory to contain several metals above the ESL, however, at that time, Kleinfelder believed many of the metals concentrations (Chromium, Nickel, Vanadium, Cobalt) may be naturally-occurring. In addition, total coliform was reported within one of the samples, collected from a location near a reported outhouse. Coliform levels are expected to be elevated near outhouses.

Based on new data presented in this ESA, it is Kleinfelder's opinion that additional investigation is required to assess the potential for impacts on the site. In addition, the ESL screening levels have also been revised in May of 2008; therefore, the current screening levels may not be the same as screening levels in 2005.

Kleinfelder, Preliminary Geotechnical Investigation, 2005

Concurrent with the Phase II ESA, Kleinfelder performed a Preliminary Geotechnical investigation at the subject site in 2005. Although site geology and soils data may remain similar to conditions encountered in 2005, the reliance limitations to this report have been exceeded. It is Kleinfelder's opinion that the geotechnical report be reviewed, and if indicted, additional geotechnical investigations be conducted to augment the data and confirm the previous results.

A copy of both the Kleinfelder Phase II report and Geotechnical Report are included in Appendix G.

4.5 USER-PROVIDED INFORMATION

Kleinfelder was provided an assembly of information gathered by a third party, on behalf of our client for this investigation. This information included public records available from Napa County Environmental Management, Napa County Building and Planning

Copyright 2009 Kleinfelder

Department, and Napa County Court records. Kleinfelder has summarized the information below. A copy of this information is included in Appendix E.

Napa County GIS Information

Kleinfelder was provided a printout of available information on the parcel, obtained from the Napa County GIS website. In addition, aerial photographs of the site from 2002 and 2007, obtained from the GIS site were included. The 2002 aerial photograph records many areas of the eastern side of the property to have vehicles, blue-tarped areas, trailers, debris, unpaved roads. The southern third of the site has been mostly cleared of trees and has many stockpiles of soil or wood chips and at least 75 truck trailers, vehicles, pieces of equipment, and small structures. The 2007 aerial photograph records fewer debris areas and vehicles, however, many vehicles, trailers, and areas of debris still exist.

User Provided Aerial Photos

Kleinfelder was provided a set of aerial photos by R.H. Hess Development Company (representative of the client), who had this area photographed in 2004. The aerial photos provided from 2004 document various areas of debris, vehicles, and structures. These photos are included in Appendix D.

Napa County Department of Environmental Management

1973 - Map, dated 1973 that records the subject site and the footprint of a proposed residence, garage, house trailer, well, and septic tank attached to a leach field. These plans are marked as "approved" by the Department of Public Health on October 17, 1973.

1990 – Order of Quarantine copy, issued on November 19, 1990 for the hazardous wastes observed on the property. The order states that "pursuant to Section 25187.6 (a)(2) no person shall remove, transfer, or dispose of the hazardous waste until permission for removal, transfer or disposal is given by an authorized agent, identified in the document as the Napa County Department of Environmental Management or The Napa County Sheriffs Department." This order is addressed to Robert Couch and signed by Mr. Couch with a date of November 19, 1990.

Copyright 2009 Kleinfelder

1993 – Copy of Superior Court Final Judgment and Permanent Injunction for the People of the State of California vs. Robert L. Couch, et al. The judgment describes the following findings at the property (summarized):

- At least 100 and possibly as many as 286 abandoned motor vehicles on the property;
- An unknown but significant number of piles of garbage, refuse, debris, metals, broken concrete, spoils, contractor materials, rubber tires, vehicle parts, household trash, furniture, junked appliances, and other similar items;
- Probably less than 10 abandoned refrigerators;
- Numerous illegal sewage disposal systems ranging from holes in the ground to outhouses and septic systems;
- Only one residence is permitted, however, a second dwelling, guest cottage, and other inhabited structures existed on the property including lean-tos, trailers, buses, structures on plots of land being rented to various tenants;
- Approximately 10 chicken coops constructed without permits;
- One water well installed without a permit;
- Storage of heavy construction equipment;
- Small amounts of hazardous waste illegally stored or disposed of at the property;
- Unpermitted mobile home, unpermitted underground utility trench;
- Burned trash areas near tenant spaces; and
- Inadequate clearance between residences and combustible material.

The judgment also states that this property is a public nuisance and orders a cleanup of the property, in addition to prohibiting future renting of property, dumping, burning, etc.

The property owners (defendants in this case) were ordered specifically to:

Copyright 2009 Kleinfelder

- Enter a contract with a junk dealer/ hauler to haul away scrap and vehicles;
- Obtain a commercial harvester to thin out trees;
- Retain the services of a licensed hazardous waste consultant, licensed hazardous waste hauler, or licensed hazardous waste dealer to identify and remove from the property any and all hazardous wastes present;
- Provide hazardous waste manifests for hazardous wastes removed and disposed of; and
- Obtain bids from solid waste haulers to raze structures and clean up debris that is not income-generating or valuable.

A timeline was submitted for the tasks outlined in the judgment and each activity was scheduled to be completed by the end of 1994.

Napa County Superior Court Records

Kleinfelder was provided a copy of the available court record, filed for this case in Napa County Superior Court. In addition to the 1993 judgment summarized above, copies of written declarations by various witnesses in this case were provided from the court case files. Witnesses included Ruben Oropeza, Environmental Health Specialist for Napa County Department of Environmental Management; John Morrow, Building Inspector for Napa County Department of Conservation Development and Planning; Michael Collins, Detective for Napa County Sheriff's Office; Catherine Moody, Senior Hazardous Materials Specialist for Napa County Department of Environmental Management. In addition to their statements, various information is attached including a site map of the property's tenants and approximate areas where they resided, testing information for the liquids sampled during the inspection, and copies of photographs. Copies of these materials are in Appendix D.

In summary, this information was used during the court proceedings to provide support for the court-ordered cleanup action.

Records dated 2003 describe the schedule and approximate cost for removal and disposal of items at the site identified within the 1993 judgment. Within this document, dated September 15, 2003, Mr. Norbert Frost, attorney for Patricia Couch, states that

Copyright 2009 Kleinfelder

"there are no known hazardous materials or substances at the property" and "the Couches would hire an environmental consultant to evaluate the property to make sure that there are no hazardous materials stored there."

Additional records dated 2003 describe the cleanup that has already been performed at the site and includes copies of disposal documents. Disposal of materials was conducted between 2001 and 2003 and generally disposed of at Devlin Road Transfer Station, various scrap tire facilities, and various metal recyclers.

Records dated by the judge on November 3, 2009, state that the following steps will be taken within 90 days following the release of funds and approval of this initial plan by the County. The plan includes the following items:

- Hurst Firewood lessee shall remove all vehicles and equipment unrelated to on-site production of firewood within 30 days;
- Accessory storage structures greater than 120 square feet that the defendants do not intend to seek a building permit for will be demolished an debris removed promptly. Permits for demolition shall be obtained from the County and Bay Area Air Quality Management District.
- Multiple debris boxes shall be rented and placed on site, all general debris, construction debris, and non-hazardous materials shall be dumped prior to the end of the 90 day initial cleanup period; and
- The approved September 5, 2009 fire mitigation plan shall be completed and maintained as specified in that plan.

In addition, this order grants $30,000 to be released from a court account to hire consultants to assist with plan and application preparations, on-site monitoring, and liaison with county staff, as well as, rent the necessary equipment to accomplish the initial clean up objectives.

Additional court records were provided to Kleinfelder which include information regarding eminent domain acquisition of a former part of the property, currently occupied by the City of American Canyon wastewater treatment plant.

Copyright 2009 Kleinfelder

American Canyon Fire Protection District
Kleinfelder was provided a copy of two letters from Keith Caldwell, Fire Chief.

The first letter is dated September 27, 1990. Mr. Caldwell describes his attempt, along with members of building department, environmental health, and zoning enforcement on September 26, 1990 to inspect the commercial uses of the property. During this inspection, George Couch asked them to leave. This letter is a request for an inspection warrant.

The second letter is dated October 18, 1990. Mr. Caldwell describes his observations at the site which include the following:

- North corner of the property - three- 10,000 underground gasoline tanks;
- South portion of the property fronting Eucalyptus Drive- approximately 30- 55 gallon drums, undetermined amount of smaller containers, some appearing to be military with undetermined contents, some equipment that appears to be from a chemical lab or industrial lab work;
- Middle property - northeast side- large flatbed trailer with approximately 30 to 40 drums;
- Middle property - two 40-foot trailers, pad locked; and
- Throughout the entire parcel – approximately 150 abandoned vehicles in various states of dismantle and 15 to 20 residences made up of RV's or tents with no sanitary facilities.

4.6 CITY DIRECTORIES

City directories provide information regarding property occupants by address. Kleinfelder reviewed available historic city directory listings for the subject site and nearby addresses, as provided by EDR. Directories from the following years were reviewed: 1972, 1977, 1983, 1989, 1995, 2000, and 2007.

Copyright 2009 Kleinfelder

The subject site was listed as residential in 1977, 1983, and 1989. Sherwood Forest Paintball was listed at the site address in 2007.

Nearby addresses on Eucalyptus Drive were reviewed. Listed addresses were reported as residential. In addition, Williams Construction was listed in 1983 and 1989 at 97 Eucalyptus Drive. It is Kleinfelder's opinion that Williams Construction is located too far from the site to pose an environmental concern to the subject site.

4.7 PRELIMINARY TITLE REPORT

A preliminary title report was not provided to Kleinfelder for review.

4.8 ENVIRONMENTAL LIENS

EDR researchers located available environmental lien information for the parcel associated with the property. Environmental liens were not reported by EDR for the subject site, however a quitclaim deed was found, dated July 7, 2008. A copy of the EDR environmental lien search is included in Appendix C.

4.9 VALUE REDUCTION

As part of the ASTM E 1527-05 process, information must be gathered regarding the prospective purchase price of the property relative to the fair market value of the subject site. If there appears to be a value reduction, that reduction must be identified with respect to whether the difference could be attributed to environmental degradation of the property. Kleinfelder requested that our client provide this information by filling out the "user questionnaire" form. According to Mr. Chris Koenig, on behalf of American Canyon Flat Land Inc., the purchase price is currently being litigated and it is likely that the purchase price will be greater than the fair market value of the property. In addition, Mr. Koenig reports that he believes there is potential for contamination on the site based on the court documents and report discovered as part of the due diligence he has conducted and provided to Kleinfelder.

A copy of the User Questionnaire form is included in Appendix F.

Copyright 2009 Kleinfelder

5. RECORDS REVIEW

5.1 REGULATORY AGENCY DATABASE REVIEW

The purpose of the records review is to obtain and review records that would help to reveal Recognized Environmental Conditions in connection with the subject site and bordering properties.

Federal, State and local regulatory agencies publish databases or “lists” of businesses and properties that handle hazardous materials or waste, or are known locations of a release of hazardous substances. These databases are available for review or purchase at the regulatory agencies, or they can be obtained through a commercial database service. Kleinfelder contracted with a commercial database service, Environmental Data Resources, Inc., to review the agency lists for references to the site and any listings within the appropriate ASTM minimum search distance from the site. The executive summary and maps from the database search report are included in Appendix A of the EDR report, Regulatory Agency Database Summary. The federal and state databases reviewed are summarized on Table 5.1.

Copyright 2009 Kleinfelder

TABLE 5.1: RECORDS REVIEWED/SEARCH DISTANCES

FEDERAL	DISTANCE
EPA National Priority List (NPL)	1-mile
Comprehensive Environmental Response Compensation Liability Information System (CERCLIS)	½-mile
CERCLIS-NFRAP (No Further Remedial Action Planned)	Site & adjoining
Resource Conservation Recovery Act (RCRA)-CORRACTS TSDF	1-mile
RCRA-non CORRACTS TSD	½-mile
RCRA-GEN/FINDS	Site & adjoining
ERNS	Site
US Engineering Controls, US Institutional Controls	Site
STATE/LOCAL	**DISTANCE**
CLEANERS	¼-mile
CORTESE (formerly Hazardous Waste Substances)	½-mile
Landfills (SWAT/SWF/LF)	½-mile
Leaking Underground Storage Tank (LUST)	½-mile
Site Mitigation and Brownfields Reuse Program Database	½-mile
SLIC (Spills, Leaks, Investigations, & Clean-up)	½-mile
Toxic Chemical Release Inventory System (TRIS)	½-mile
Waste Discharge System (CA WDS)	½-mile
Cal-Sites, Bond Expenditure Plan (BEP), Annual Work Plan (AWP)	1-mile
Solid Waste Information System (SWIS)	1-mile
DEED	Site
Environmental Liens	Site
Above Ground Storage Tank	Site & adjoining
California Hazardous Materials Information System (CHMIRS)	Site & adjoining
FINDS	Site & adjoining
HAZNET	Site & adjoining
UST, CaFID, HistUST	Site & adjoining

A summary of facilities listed in the databases is presented in the executive summary of the EDR report, and each facility is cross-referenced with a radius map showing the location of the listed facility with respect to the subject property (Appendix A of the EDR

Copyright 2009 Kleinfelder

document). Kleinfelder conducted a review of the EDR report to assess which listings have a significant potential to impact the subject property. Factors used to screen the listed properties include distance to the site, geology, presumed or known direction of groundwater flow, type and magnitude of hazardous material release, and nature of sensitive receptors. Those considered to have a significant potential to impact the site were then subjected to a file review at appropriate regulatory agencies. A copy of the EDR report is included in Appendix C of this report.

5.2 RESULTS OF DATABASE SEARCH

The database report shows that:

- The site was not listed on the databases searched by EDR.

The two other cases, located within the search radius, are summarized below:

- **Envirostor:** One case was listed and is summarized below:
    1. **Sunshine Auto Salvage** (1578 Green Island Road), located approximately 4110 feet north-northwest of the subject site, is listed on the Envirostor database with leaks of metals and petroleum hydrocarbons to soil. Based on distance and direction from the subject site, it is Kleinfelder's opinion that this property is unlikely to pose an environmental concern to the subject site.

- **Solid Waste Facility / Land Fill (SWF/LF):** One site was listed and is summarized below:
    1. **American Canyon Sanitary Landfill** (Western Terminus of Eucalyptus Drive), located adjacent to the western edge of the property. This landfill was closed in 1994 and was previously operated by Napa-Vallejo Waste Management Authority as a municipal landfill.

Sites not plotted by EDR due to poor or inadequate address information are referred to as orphan sites. There is one unmapped site in the EDR Report, located in Sonoma County, which is too far from the subject site to pose an environmental concern. The orphan summary/unmapped sites report was reviewed to assess the potential for off-

Copyright 2009 Kleinfelder

site properties to be listed on databases that fall within the ASTM search distances. Based on our review this orphan site appears to be outside of the ASTM search distances.

5.3 REGULATORY AGENCY CONTACTS

The following additional sources of environmental records were reviewed during this Phase I ESA for the purposes of meeting the ASTM Standard. Local regulatory agencies were contacted for reasonably ascertainable and practically reviewable documentation regarding RECs present at the subject site and adjoining facilities (copies of file review information is included in Appendix E). Interviews with local regulatory agency representatives are included in Section 7 of this report. The following agencies were contacted for documentation:

TABLE 5.2: AGENCY CONTACTS SUMMARY

AGENCY	TYPE OF INFORMATION AND RESULTS
Napa County Department of Environmental Management (NCDEM)	Kleinfelder reviewed available files for the subject site; a summary of information gathered at NCDEM is located in Section 4.5 and in Section 5.3.1.
San Francisco Bay Regional Water Quality Control Board (SFRWQCB)	No files were available for the subject site address.
Napa County Building and Planning Department	Kleinfelder reviewed building permits at Napa County Building and Planning Department. Permits for the site dated back to 1966; a summary of information reviewed is located in Section 5.3.2.
State of California Fire Marshal Office of Pipeline Safety	No pipelines, jurisdictional to the State Fire Marshal's office, are located at the site.
State of California, Department of Conservation, Division of Oil and Gas	No oil or gas wells are depicted on or adjacent to the subject site.

5.3.1 NCDEM Records Review

Kleinfelder representative Sarah Kalika reviewed available site records at NCDEM on November 10, 2009. Available files were similar to information provided by the client and included two soil boring application permits dated March 2005 and March 2006,

Copyright 2009 Kleinfelder

records from the court judgment dated 1993, copies of correspondence from the hazardous materials testing performed in 1991 and inspections in 1990 and 1991, and additional correspondence dated 2003 and 2005. A more detailed description of the contents of this correspondence is included in Section 4.5, and copies of the information gathered are included in Appendix E.

5.3.2 Napa County Building and Planning Department

Kleinfelder representative Sarah Kalika reviewed one available file assigned to the parcel number at Napa County Building and Planning Department on November 10, 2009. The file contained records dating back to March 1966 and consist of the following:

- 1966: Planning department approval of a proposed dwelling
- 1967: Application for building permit and certificate of occupancy for a garage, tool sheds with foundations
- 1968: Electrical permit application
- 1973: Temporary use permit to Robert Couch, Jr. to utilize a construction trailer while completing a residence on a 170-acre parcel, limited to one year on until dwelling is constructed, whichever occurs first; dwelling permit application for 3,484 square foot house
- 1973: Sewage disposal system installed (septic tank and leach field)
- 1974: Use permit application to develop a recreation area to be utilized by American Canyon residents
- 1974: Temporary use permit renewal for construction trailer
- 1977: Correspondence regarding temporary use permit for trailer to Robert Couch, Jr., notice that temp use permit will expire on 3/9/77
- 1983: Correspondence that no work had been performed at proposed dwelling since 1976, permit cancelled, Board of Supervisors requires new permits for future work

Copyright 2009 Kleinfelder

- 1984: Request for inspection to see what progress has been made on construction. Inspection conducted 5/7/84, building has not been built.
- 1987: Permit application for new storage building, 3 storage containers (8x40 feet each), permit subsequently canceled on 3/13/93
- 1988: Order to comply, building permit required for shed roof and electrical permit for trailer
- 1990: Inspection warrant from Building Department to Assistant District Attorney Daryl Roberts "the property is in violation of Section 11206 (a), Ch1, Art 3 of Title XI of the Napa County Code."
- 1992: Negative Declaration for Paintball activities
- 1992: Use permit approved for paintball, to Robert D'Elia of Concord, CA.
- 1993: Approval of use permit for paintball (in area west of project site boundaries) to Gladis Jarquin
- 1994: Notice of paintball use permit approval with expiration of 5/28/97, notice to Dean Laing of Vacaville, CA with instruction "no paintball games to be conducted between 10/15 and 4/1 of any year unless all required road and parking improvements are installed and approved by Department of Public Works and Napa County Fire Department."
- 1994: Request for inspection to building department with note "trailer Couch was living in burnt completely last night, per Chief Caldwell"
- 1995: Use permit for paintball, no map attached
- 2001: Sherwood Forest Paintball use permit approved, no map attached

Copies of maps and correspondence collected during this file review are included in Appendix E.

Copyright 2009 Kleinfelder

6. SITE RECONNAISSANCE

Kleinfelder's assessment activities included a site reconnaissance. This section summarizes the findings from the site reconnaissance.

6.1 METHODOLOGY AND LIMITING CONDITIONS

Kleinfelder representative Sarah Kalika conducted a site reconnaissance on November 18, 2009, to assess and photograph present site conditions. Kleinfelder was accompanied by Mr. Chris Koenig of R.H. Hess Development Company, Mr. Michael Johnson of Griswold, LaSalle, Cobb, Dowd, and Gin, and a solid materials hauling contractor who is a potential bidder to remove solid waste material on behalf of our client. In addition, Mr. Glen Couch, his wife, and their attorney were also present to facilitate access to the Couch residence portion of the subject site.

The approximate site boundaries are shown on Plate 2 over an aerial photo from 2002. The northern portion of the 2002 aerial is shown on Plate 3, the central portion of the 2002 aerial photo from 2002 is shown on Plate 4, and the southern portion of the 2002 aerial photo from 2002 is shown on Plate 5. Color photographs of the site are shown in Appendix A. Site conditions discussed below are limited to readily apparent environmental conditions observed on the date of site reconnaissance.

6.2 ON-SITE OBSERVATIONS

The site consists of a eucalyptus grove, separated into several sections, as shown on Plate 2. The sections will be described as groups below.

Hurst Firewood Area: southern section of site, north of Eucalyptus Drive, south of Paintball Jungle operation, east of unpaved segment of Commerce Drive

Kleinfelder observed several piles of wood chips, concrete debris, approximately 11 abandoned pieces of equipment including heavy equipment, box trailers, semi-trucks, and one boat. None of the equipment appeared to be operational and several were observed to be leaking hydraulic fluid. One pole-mounted transformer was observed and was labeled "Non-PCB."

Copyright 2009 Kleinfelder

Paintball Jungle Area (East): eastern central section of site, north of Hurst Firewood area, east of unpaved segment of Commerce Drive, south of Couch Residential area

Kleinfelder observed paintball operations, several small shed structures, a fenced area of compressed CO2 gas cylinders, a semi-paved parking lot area, shooting range with many plastic 55-gallon drums. The plastic 55-gallon drums appeared to be relatively new and were labeled as previously containing olive oil or vinegar. Much of the ground, trees, drums, and other plastic or wooden barriers constructed related to paintball, were covered in paintball paint and unexploded paintballs.

Animal Pens Area: eastern central section of site, north and east of Paintball Jungle

Kleinfelder did not have access to the interior of this area. Observations and photographs were taken from fence line perimeter. Kleinfelder observed at least 10 horses, several chickens and roosters, three pickup trucks, many covered areas constructed of wood with corrugated metal roofs, several plastic and metal 55-gallon drums with unknown contents, and several portable containers, assumed to contain water.

Couch Residential Area: northeastern portion of site, north of Paintball Jungle and animal pens

Kleinfelder observed approximately four structures, one used as a residence, one a garage, and the others outbuildings, assumed to be sheds. One house foundation partially constructed is located near the garage. In addition, Kleinfelder observed many storage areas, covered areas, vehicles including several cars, two vans, at least three pickup trucks, one fire truck, one school bus with no front wheels, at least three pieces of heavy equipment or parts (excavator, bulldozer), one temporary office trailer, at least two metal storage containers, two boats, small wood chipper, camper shells, and travel trailers, tank on wheels, and a motorcycle.

Equipment at the site that may contain hazardous materials included, but is not limited to, many small tanks, one propane tank, one yellow flammables cabinet with hand-written sign “Anthrax Powder Storage Container” which Kleinfelder believes may be a

Copyright 2009 Kleinfelder

hoax label, several cans of paint, at least two air compressors, compressed air cylinders (helium or CO2 tanks), several gasoline cans, car batteries, fire extinguishers, and abandoned appliances.

Debris at the site included, but is not limited to, metal scrap, pipes, plastic debris, household garbage, old clothing, road signs, and several tires.

One gravestone was observed with several names as follows:

- Annie Hammond 1848-1922
- Sam'l B. Hammond 1878-1930
- Fred L. Hammond 1875-1931
- Mabel C. Hammond Sept 26 1886 aged 4 yrs, 11 mo, and 21 days
- Thomas Shields, native of Vermont (scratched out) 28, 1883 68 years, 15 days

It is Kleinfelder's opinion that the gravestone may have been transported from a cemetery or other source and not an actual gravesite.

Two wells were observed with adjacent small storage tanks (up to 150 gallons) that did not appear to be operating and did not appear to be connected to electricity or pipes.

One septic tank with buried pipe was observed near the house foundation.

One power pole was observed with three pole-mounted transformers, no PCB information was observed on the transformers, though they appeared to be in good condition without obvious signs of leaks.

"Concentrated Area": northern section of site, west of unpaved segment of Commerce Drive, east of Sherwood Forest Paintball

Kleinfelder observed a chain-link fenced area with debris including an outhouse, camper trailer, boat trailer, one boat, one enclosed & locked storage trailer, a few small bottles labeled motor oil, approximately 25 five-gallon buckets that appeared to be empty, a ladder, and various scrap pieces of plywood.

Copyright 2009 Kleinfelder

Sherwood Forest Paintball Area and North Slough Creek: western side of site, west of unpaved segment of Commerce Drive

Kleinfelder observed several wooden structures and shelters, assumed to be for paintball operations. In addition, one truck was observed in the northwest corner of the operation, east of the creek.

A creek was observed along the northwestern boundary of the property. The creek appeared to flow south.

The site is bounded by commercial warehouses to the north, American Canyon Wastewater Treatment Plant to the northwest, undeveloped land and former landfill to the west, 4-H garden west of the area occupied by Hurst Firewood, Eucalyptus Drive and single-family residential houses to the south, and undeveloped land (Oat Hill) to the east.

Site observations are tabulated in Table 6.1.

Copyright 2009 Kleinfelder

TABLE 6.1: SITE OBSERVATIONS

General Observations	Remarks	Observed	Not Observed
Hazardous chemical and petroleum products in connection with known use.	Fuels	X	
Fill dirt from an unknown source.	Hurst Firewood has various fill areas, another mound of fill in northwest corner along eastern side of creek	X	
Aboveground storage tanks (ASTs)	Various metal and plastic storage containers with unknown contents	X	
Underground storage tanks (USTs)			X
Odors	Animal odor near pens	X	
Pools of Liquid		X	
Drums		X	
Hazardous chemical and petroleum products in connection with unknown use.		X	
Unidentified substance containers		X

Surface water	Creek	X	
Storm basins/catch			X
Storm drains			X
Drains and sumps			X
Septic system	One septic tank, near house foundation	X	
Loading and unloading areas	No specific loading and unloading areas	X	
Burned or buried debris	Various locations of buried debris (plastic, wood, cloth) many areas buried by eucalyptus leaves	X	

6.3 OFF-SITE OBSERVATIONS

Kleinfelder conducted a brief drive-by survey of the parcels adjacent to the site on the same day as the site reconnaissance. A summary of the off-site properties is summarized in the following table:

TABLE 6.2
SURROUNDING PROPERTIES

North	Commercial warehouses
South	Eucalyptus Drive, single-family residential houses
East	Undeveloped land, Oat Hill
West	American Canyon Wastewater Treatment Plant, closed landfill, 4-H garden, undeveloped land, slough, Napa River

Copyright 2009 Kleinfelder

7. INTERVIEWS

Kleinfelder contacted “Key Site Managers” Michael Mochizuki of American Canyon Flat Land Inc., and Mr. Michael Johnson of Griswold, LaSalle, Cobb, Dowd, and Gin. Key Site Managers are contacted to obtain current and historical environmental information concerning the subject site. Mr. Mochizuki provided an interview questionnaire and “user questionnaire” form, completed by Mr. Chris Koenig, who has conducted due diligence research on behalf of American Canyon Flat Land Inc. A copy of this research has been provided to Kleinfelder and is included as “user provided information” in Appendix D and summarized in Section 4.5. A copy of the completed interview questionnaire as well as transmittal letter and backup information is included in Appendix F.

In addition to the completed questionnaire, Mr. Michael Mochizuki presented Kleinfelder with a letter that states that American Canyon Flat Land Inc. has been diligent in providing all of the information that they could find in regard to the history of the Couch Property. In addition, he states that the Couch’s have been unwilling to provide further information relating to the condition of the property and therefore American Canyon Flat Land has researched public records and conducted reasonable due diligence. He also states that American Canyon Flat Land Inc. cannot represent that there are not other potential environmental issues related to the Couch Property and ACFL has disclosed that which they have discovered through reasonable due diligence to determine potential issues relating to the Couch Property.

7.1 INTERVIEW WITH OWNER/MANAGER

Kleinfelder was unable to interview the current owner because no members of the Couch Family were willing to complete the interview form.

7.2 INTERVIEW WITH OCCUPANTS

The subject site is occupied by a member of the Couch Family who was not present during the site visit. No interviews were granted to Kleinfelder by the attorneys representing the current occupants.

Copyright 2009 Kleinfelder

7.3 INTERVIEWS WITH LOCAL GOVERNMENT OFFICIALS

Local government officials were contacted to obtain further information about environmental enforcement actions pending or ongoing at the site and adjacent facilities, or relevant permits (e.g. building, air quality, well abandonment, etc.) for the site and adjoining properties.

Napa County Department of Environmental Management

Kleinfelder contacted Napa County Department of Environmental Management. Kleinfelder reviewed available files for the property on November 10, 2009. A summary of records reviewed is located in Section 5.3.1.

San Francisco Bay Regional Water Quality Control Board

Kleinfelder contacted Melinda Wong of San Francisco Bay Regional Water Quality Control Board and requested to review any available files for the subject site. According to Ms. Wong, no files were available for the project site.

Napa County Building and Planning

Kleinfelder contacted the Napa County Department of Building and Planning. Kleinfelder reviewed available files for the property on November 10, 2009. A summary of records reviewed is located in Section 5.3.2.

Ed Colby, Napa County Planning

Kleinfelder interviewed Mr. Ed Colby, Planner III / Code Compliance for the Napa County Planning Department, on November 17, 2009. Mr. Colby stated that he has been associated with this site since 1990. Mr. Colby stated that he conducted a site visit, along with various County employees, Napa County Sheriff's Department, and Fire Department investigators in the early 1990's. Mr. Colby stated that he continues to perform periodic inspections of the property to assess progress on the cleanup order judgment of 1993. Mr. Colby stated that his most recent visit was in September 2008 and a report was issued in March 2009. A copy of this report is included in Appendix D, user provided information. During the interview, Mr. Colby reviewed the County Planning file for the site and described the various areas that County Code Enforcement divided the site into for ease of explanation in a report. Those areas include "Paintball 1, Concentrated Area, Staging Area, Area 1, Area 2" etc. Mr. Colby stated that the only

Copyright 2009 Kleinfelder

permitted activities at the site are paintball and firewood. Mr. Colby indicated that his inspections were exterior only; he personally has not entered any of the structures. Mr. Colby also stated that inspections by code enforcement were conducted at the request of county council, in response to requests by the Couch family to release Napa County cleanup funds for environmental and waste cleanup. Mr. Colby explained that County funding was set aside to assist in the cleanup and Code Enforcement was required to perform progress inspections before additional funds could be released. Mr. Colby stated that Mr. Keith Caldwell, current Napa County Supervisor and former American Canyon Fire District Chief reported that a methamphetamine lab was discovered and removed in 2000 somewhere onsite. Mr. Colby did not have knowledge of where the lab was discovered and suggested Kleinfelder speak to Mr. Caldwell directly. In addition, Mr. Colby recommended Kleinfelder speak to Mr. John Kara at Napa County Department of Environmental Management to obtain additional information regarding hazmat data collected at the site.

John Kara, Napa County Department of Environmental Management

Kleinfelder spoke briefly with Mr. John Kara of NCDEM on November 10, 2009. Mr. Kara stated that he could not provide additional information other than what was in the NCDEM file for the property.

Keith Caldwell, Napa County Supervisor- District 5 (American Canyon Area)

Kleinfelder interviewed Mr. Keith Caldwell, current Napa County Supervisor representing District 5, which includes American Canyon. Mr. Caldwell stated that he was formerly employed at the American Canyon Fire District as the Fire Chief. Mr. Caldwell stated that he was raised in American Canyon and has knowledge of the site dating back to when he was a teenager. Professionally, he was associated with the site since the mid 1980's. Mr. Caldwell provided an account from memory of various inspections associated with the warrant granted in the early 1990's and various times the Fire Department responded to emergencies at the site. Mr. Caldwell stated that a multi-agency team performed an inspection at the site under an inspection warrant based on many complaints and concerns about fire hazards and illegal living conditions. Mr. Caldwell stated that he observed over 100 cars, some drums, heavy equipment (construction equipment and some cars, some were stolen), a flatbed trailer with 20-25 drums, two meth labs, and many areas of dumping and illegal occupancy. Mr. Caldwell stated that he had heard rumors from local residents that drums were buried onsite, but

Copyright 2009 Kleinfelder

he was never able to find the locations. He was told by a local that drums may have been buried in the northwest corner of the site near an old stone fireplace. Mr. Caldwell identified two locations where meth labs were found and removed by the Sheriff's Department. One location was within the area identified by Napa County Code Enforcement as "Concentrated Area" within a chain-link fenced area. The other location was within the area currently occupied by Hurst Firewood. He stated that this location was approximately 100 yards west off of the eastern road within the area previously occupied by renters. Mr. Caldwell stated that red phosphorous was found and removed by the Sheriff's Department, and this chemical is typical of meth labs. Mr. Caldwell stated that within the firewood area, various motor oils and diesel fuel spills were observed and were minor. Mr. Caldwell described several fires within the Couch residential area of the site. Mr. Couch's mobile home burned in 1994; within the fire were guns, ammunition, and propane. Mr. Caldwell stated that the cars he observed were generally on the eastern side of the unpaved north-south road. Mr. Caldwell stated that within the Hurst Firewood area, Mr. Hurst sometimes performed engine repairs and that the approximately 30 people who lived in that portion of the site also periodically performed auto and engine repair.

In addition to environmental concerns, Mr. Caldwell stated that the area currently occupied by the American Canyon Wastewater Treatment Plant was cleared of eucalyptus trees, he heard that the trees were removed rather easily, but the root balls were approximately 10 feet in diameter and that "the biggest grinder west of the Mississippi" had to be hired to conduct stump grinding. Mr. Caldwell stated that a few root balls were transported to the 4-H area southwest of the site and are probably still there for viewing.

Copyright 2009 Kleinfelder

8. EVALUATION

Kleinfelder performed this Phase I ESA in accordance with the scope and limitations of ASTM Practice E-1527-05 and the All Appropriate Inquiry (AAI) section of the Small Business Liability Relief and Revitalization Act (the Federal Brownfields Law). The purpose of this assessment was to evaluate the likelihood of RECs resulting from the present or past usage, storage, or disposal of hazardous substances or petroleum hydrocarbons at the subject site and in the surrounding area. Kleinfelder's findings and conclusions are presented below.

8.1 FINDINGS

For ease of description, the site is divided into several areas and described counterclockwise from Eucalyptus Drive (Plate 2):

- Hurst Firewood Area: located adjacent to the north of Eucalyptus Drive, south of an east/west unpaved road, and east of the unpaved section of Commerce Blvd. that runs north/south through the site;
- Paintball Jungle Area (East): located north of the east/west unpaved road and Hurst Firewood, south of the animal pens and Couch Residential Area, and on both sides of Commerce Blvd;
- Animal Pens Area: located north of Paintball Jungle and south of the Couch Residential Area;
- Couch Residential Area: located north of the animal pens, south of the property boundary, east of Commerce Blvd;
- "Concentrated Area" (name in accordance with County investigation and legal document maps): located west of Commerce Blvd across from the Couch Residential Area; and
- Sherwood Forest Paintball & North Slough Creek Area: located at the northwest corner of the property, west of the Concentrated Area.

Copyright 2009 Kleinfelder

- Paintball Jungle Area (West): located on the western side of Commerce Boulevard, south of Sherwood Forest Paintball, north of the property line, east of the property line.

The site has been developed as a eucalyptus tree farm since at least 1937. A Phase I ESA was performed in 2004 by Environmental Science Associates (ESA) that covered the entire parcel, but findings and recommendations were restricted to the 2004 observations of conditions at the Couch Residence and Hurst Firewood Areas. A Phase II soil and groundwater investigation performed by Kleinfelder in 2005 was based on the recommendations from ESA's Phase I report and maps, and therefore addressed only a portion of the areas where previous dumping, spills, and leaks may have occurred. During the Phase II investigation, Kleinfelder collected soil samples but did not encounter groundwater for sampling.

This Phase I ESA represents a re-evaluation of the site based on new information provided to Kleinfelder since the original investigations.

The following is a summary of Kleinfelder's findings in each area.

Hurst Firewood Area:
This area is currently occupied by Hurst Firewood, a business owned by Mr. Hurst, used for cutting eucalyptus trees into firewood for sale. Previously, as few as 19 to as many as 30 people reportedly may have resided in this area, mainly north of area cleared of trees. These renters set up residences on small plots of land that were not connected to water, sewer, or electricity. According to Keith Caldwell, former American Canyon Fire Chief, many of these renters conducted short-scale engine and auto repairs and one methamphetamine lab was discovered and removed. In addition, Mr. Hurst previously stored approximately 50 vehicles and pieces of equipment at the site and performed small-scale engine repairs on these vehicles. Kleinfelder observed several stockpiles of wood chips and soil and concrete debris during the site visit.

Paintball Jungle Area (East):
This area is currently occupied by paintball games operated under the name Paintball Jungle. According to permitting records, paintball operations have occurred at the site

Copyright 2009 Kleinfelder

since at least 1990. Prior to paintball operations, the majority of this area was occupied by junked cars, vehicles, drums, containers, trash, and other debris.

Animal Pens Area:
This area is currently occupied by animals including horses, roosters, and hens. The Couch family reportedly rents stalls and pens for horse boarding. Several vehicles were observed in this area as well as various storage containers. Kleinfelder did not have interior access to this portion of the site so observations were made from the perimeter fence. This area was reported to be occupied by various animals and was the site of illegal animal fighting activities.

Couch Residential Area:
This area is currently occupied by one member of the Couch family who lives on the property in a reportedly unpermitted dwelling. Kleinfelder observed at least 10 vehicles and hundreds of other pieces of equipment, various containers of paints, transmission oil, motor oils, areas of dumped garbage, three unpermitted wells, several large containers including tanks, tanks on wheels, structures, locked storage containers or structures that Kleinfelder could not access, and various debris. Previously, this area reportedly contained over 150 vehicles, hundreds of tires, additional structures occupied by other members of the Couch Family and possibly additional renters, and many widespread areas of debris.

Kleinfelder reviewed various documentation related to the 1993 court-ordered cleanup. This area of the site contained drums that were sampled by Catherine Moody of NCDEM and found to be either diesel or phenols which Robert Couch and David Couch reportedly described as “cresol.” Various subsequent court documents describe cleanup activities at the site and provide copies of household waste disposal at Devlin Road landfill in American Canyon (a Class III municipal landfill), tire disposal at a recycler, scrap metal at a recycler, and junked car removal and disposal. The documents do not include manifests for the hazardous materials found to be within drums, fluids from vehicles, and contents of small containers. These materials, if disposed of properly, would have been disposed of at the fire department or a Class II landfill by a certified waste hauler. However, Kleinfelder searched the DTSC and Cal-EPA database to obtain records of a possible RCRA generator ID number (required on

Copyright 2009 Kleinfelder

the waste manifest for hazardous materials) and no RCRA ID number was found for the Couch Family. A RCRA ID was found for paintball operations only.

Concentrated Area:

This area was identified and labeled by Napa County investigators during previous investigations and information gathering. This area is currently occupied by a chain-link fence, wooden garage door barrier, outhouse, boat, boat trailer, and camper trailer. This area previously was occupied by various renters and reportedly was the site of an additional illegal methamphetamine lab, which was reportedly removed by the Napa County Sheriff's Department in approximately 2000.

Sherwood Forest Paintball Area:

This area, located on the northwest corner of the property, appears to be currently occupied by paintball operations, formerly operated under the name "Sherwood Forest" paintball. Kleinfelder is not sure whether this company still operates this portion of the site, or whether this area is used by Paintball Jungle. Kleinfelder observed several small structures in this area including an enclosure for CO_2 compressed gas containers, a pickup truck, and a wood chipping machine. This area previously was reported to be the "cleared area" and possible location of an outdoor fireplace. According to Keith Caldwell, this area reportedly was a location where drums may have been buried.

North Slough Creek (within Sherwood Forest Paintball Area):

A creek, which appears to drain southwest to the Napa River, is located on the northwest corner of the property near the site boundary. A rock and soil pile was observed along the eastern bank of the creek. It was reported to Kleinfelder by Mr. Michael Johnson that a concern exists regarding the runoff within the creek, which was based on a reported surface water quality violation that was issued to the adjacent American Canyon Wastewater treatment plant. According to Mr. Johnson, the wastewater treatment plant was concerned that the source for pollutants in the creek was the Couch Property. Kleinfelder has not seen a copy of the complaint or the results of any sampling or analysis that may have been performed.

Paintball Jungle Area (West):

This area, which comprises the majority of the area west of unpaved Commerce Blvd, was previously and now is currently used for paintball games. Several structures

Copyright 2009 Kleinfelder

constructed of wood and 55-gallon drums were observed as well as two outhouses. Minor dumping was reported along the roadside but no residences or tenants occupied this area.

8.2 OTHER ISSUES

In addition, while not considered by definition to be RECs, the following other environmental conditions were revealed that could affect the subject site:

- A septic system exists at the subject site. The purpose of the septic system is to receive domestic sewage. If future construction activities encounter the septic system or the system is no longer in use, the system must be abandoned in accordance with applicable local permitting requirements and regulations.
- Although asbestos and lead is specifically excluded from the Phase I standards, Kleinfelder recommends that all structures be surveyed prior to demolition in compliance with EPA, Bay Area Air Quality Control Management District, and Napa County Building Department rules and regulations.
- Three wells were observed at the site. If these wells are no longer in use, they must be abandoned in accordance with applicable federal, state, and local regulations.
- A complaint and possible violation reportedly occurred related to waters of the creek, located on the property in the northwest corner. The City of American Canyon Water Treatment Facility was reportedly concerned by the possibility of source material leaching into the creek from materials on the Couch property.

8.3 DEVIATIONS AND ADDITIONAL SERVICES

The scope of this ESA does not incorporate ASTM Standard non-scope considerations, such as asbestos/lead-based paint, radon, lead in drinking water, wetlands, regulatory compliance, cultural and historical resources, industrial hygiene, health and safety, ecological resources, endangered species, indoor air quality, and high voltage power lines.

Copyright 2009 Kleinfelder

8.4 CONCLUSIONS AND RECOMMENDATIONS

Kleinfelder's Phase I ESA of the subject site revealed the following current and historic RECs associated with the site.

- There is ample evidence that residual petroleum hydrocarbons, solvents, and certain metals may have been released in shallow soil throughout the eastern portion (Hurst Firewood, Paintball Jungle (East), Animal Pens, and Couch Residential areas) of the site as well as within the western portion (Concentrated Area, Sherwood Forest Paintball and North Slough Creek area) of the site. These petroleum hydrocarbons were likely surface spills and dumping related to the storage of hundreds of pieces of equipment, at least 150 vehicles, areas of the site occupied by the current owner and areas rented to tenants, and areas of dumping.

- The majority of the site is currently used for paintball games. Depending on where the paintballs were manufactured, it is possible that paint within paintballs may have contained lead and was released to soil.

Based on Kleinfelder's review of the 1990 and 1991 inspections, 1993 court judgment and cleanup order and related photographs, aerial photograph from 2002, and recent site visit, Kleinfelder recommends the following investigations:

- Each of the three wells should be sampled for water quality and presence of various constituents. These wells appear to be unpermitted and should be abandoned properly in compliance with Federal, State, and local regulations.

- A soil and groundwater investigation should be conducted within each area of the site to assess the extent of chemical constituents of concern in the soil and groundwater including, but not limited to, petroleum hydrocarbons, metals, and volatile organic compounds.

- Surface water and sediment should be sampled within the creek to assess the presence of leached materials that may travel off-site within creek runoff.

- The septic tank should be abandoned in accordance with applicable regulations, if no longer in use.

Copyright 2009 Kleinfelder

- A pre-demolition asbestos survey should be conducted in accordance with Federal, state, and local regulations.

8.4.1 Data Gaps

Although Kleinfelder attempted to obtain reasonably ascertainable information regarding the Site, some information was either not received or not readily available at the time of this report. Therefore, consistent with ASTM Standard E1527-05, the following data failures (data gaps) have been identified.

- Kleinfelder was not granted an interview with the current property owner.
- Kleinfelder was not granted an interview with the current site resident.
- Kleinfelder was not able to access the interior of the animal pens.
- Kleinfelder did not enter the interior of any locked vehicles, structure, or the dwelling.

Based on a review of the data gaps presented above, it is Kleinfelder's opinion that the data failure is not likely to have affected the identification of additional recognized environmental conditions at the site.

LIMITED SITE INVESTIGATION

2 EUCALYPTUS DRIVE
AMERICAN CANYON, CALIFORNIA

1.0 INTRODUCTION

This report presents the findings of the Limited Site Investigation that was conducted by Innovative and Creative Environmental Solutions (ICES) at the Hurst Firewood Area and the Paint Ball Jungle (West) located within 2 Eucalyptus Drive in American Canyon, California. ("the Site"; Figure 1).

The purpose of the investigation was to address the recommendations proposed in Kleinfelder's Phase I Environmental Site Assessment (ESA) report dated December 22, 2009 for parcels located within the Site. The investigation was limited to collecting soil samples from the shallow surface sediments within the Site and analyzing the samples for total petroleum hydrocarbons (TPH) as gasoline (TPHg); TPH as diesel (TPHd); TPH as motor oil (TPHmo); volatile organic compounds (VOCs); and metals.

2.0 SITE DESCRIPTION

The Site is located on the north side of Eucalyptus Drive and is within the legal jurisdiction of the City of American Canyon, in conjunction with Napa County and the State of California.

The Hurst Firewood Area is located adjacent to and north of Eucalyptus Drive. The Hurst Firewood Area consists of an approximately rectangular parcel covering an area of approximately 15.7 acres. The area is used as a storage yard and for cutting eucalyptus trees into firewood for sale.

The Paintball Jungle (West) is located northwest of the Hurst Firewood Area and is occupied by a eucalyptus grove covering an area of approximately 47.04 acres. The area is currently used

for paintball games.

3.0 BACKGROUND

Historically, the Site has been a eucalyptus grove. The Site has had numerous uses over the years, including reportedly illegal uses such as methamphetamine labs, hazardous waste storage, and temporary residential shelters. Currently, the southeastern portion of the Site is used as a storage yard and for cutting eucalyptus trees into firewood. Paint ball fields are located at the western portion of the Site.

A Phase I ESA was conducted by Environmental Science Associates of Sacramento, California in October 2004 for the Site and neighboring parcels. Environmental Science Associates' assessment revealed that there was past and present undocumented and illegal storage of hazardous materials and waste at the Hurst Firewood Area. Additionally, Environmental Science Associates reported that a large amount of soil containing some type of oil was deposited at the Hurst Firewood Area in the 1970s for a motorcycle track. A site investigation was recommended based on their findings.

Kleinfelder of Fairfield, California performed a Phase II Site Investigation in March through May 2005 for the Site and adjacent parcels. Soil samples were collected from sixteen sample locations and selectively analyzed for petroleum hydrocarbon constituents, polynuclear aromatic hydrocarbons (PAHs), total coliform, ecoli, pesticides, and metals. Laboratory analytical results of the soil samples indicated non-detectable concentrations of PAHs, total coliform, ecoli, and pesticides; and low to non-detectable concentrations of petroleum hydrocarbons. The metal concentrations detected in the soil samples were generally below the Regional Water Quality Control Boards Environmental Screening Levels (ESLs, where groundwater is a current or potential source of drinking water) for residential landuse, with the exception of arsenic, chromium, and vanadium. Arsenic, chromium, and vanadium concentrations which were at or above their respective residential ESLs were encountered in the surficial soil at the neighboring parcel, located directly north and east of the Site.

ICES conducted a Phase I ESA for the Site and neighboring parcels in March 2006. Based on the findings of the Phase I ESA, ICES recommended that a supplementary investigation be conducted at the Site.

A supplementary site investigation was performed by ICES in March 2006 for the Site and neighboring parcels. Laboratory analytical results indicated that soil samples collected from the Paintball Jungle (West) contained non-detectable concentrations of organochlorine pesticides; and concentrations of arsenic, chromium, lead, and mercury which were within typical background levels and also below their respective residential ESLs, with the exception of arsenic. Arsenic concentrations encountered in the soil samples exceeded the previous residential ESL of 5.5 mg/kg but were below the upper background range of 12 mg/kg. Results of the soil samples that were collected from the Hurst Firewood Area indicated non-detectable concentrations of SVOCs; and non-detectable to low concentrations of TPHd and TPHmo. The detectable TPHd and TPHmo contained in the soil samples were below the previous residential ESLs of 100 mg/kg and 500 mg/kg, respectively. Lead concentrations contained in the samples were within background levels and below the previous residential ESL of 150 mg/kg. Concentrations of arsenic, chromium, and vanadium contained in the soil samples collected from the neighboring parcel, located north and east of the Site, were within typical background levels and generally below their respective residential ESLs, with the exception of arsenic. Arsenic concentrations in nineteen of the twenty soil samples were above the residential ESL but at or below the upper bound of background range of 12 mg/kg.

Kleinfelder prepared an updated Phase I ESA for the Site and neighboring parcels in December 2009. Based on their findings, Kleinfelder recommended that a supplementary site investigation be performed.

4.0 LIMITED SITE INVESTIGATION

ICES collected soil samples on March 25, 2010. A total of eight soil samples were collected from eight sample locations. Samples TP-1 through TP-4 were collected within the Paintball Jungle (West) and samples TP-5 through TP-8 were collected at the Hurst Firewood Area. The approximate sample locations are shown in Figure 2.

Soil samples were collected from the shallow surficial soil at a depth of approximately 6 to 9 inches below the existing ground surface (bgs) by driving a precleaned brass tube into the floor of the shallow test pits.

After being sealed and labeled, the soil samples were immediately

placed in a chilled cooler containing crushed ice for transportation to the laboratory. Proper documentation and field chain-of-custody procedures were followed.

All equipment used during this investigation which might have come into contact with contaminated materials was thoroughly decontaminated before and after each use. This was accomplished by washing with Alconox (a laboratory-grade detergent) and rinsing with deionized or distilled water.

5.0 LABORATORY ANALYSIS

The soil samples were sent to McCampbell Analytical, Inc. of Pittsburg, California, a state-certified laboratory, and analyzed for:

- TPHg, TPHd, and TPHmo using EPA Method 8015B;
- VOCs using EPA Method 8260B; and
- CAM 17 Metals using EPA Method 6020A.

The samples were analyzed on a normal turnaround basis.

6.0 INVESTIGATION RESULTS

The laboratory analytical results are presented below and summarized in Tables 1 and 2. Laboratory certificates are included in Appendix A.

6.1 Laboratory Analytical Results

Analysis of the surficial soil samples indicated that:

Petroleum Hydrocarbons

- TPHg concentrations ranged from less than 1.0 mg/kg (not detected) to 2.6 mg/kg.
- TPHd concentrations ranged from 28 mg/kg to 160 mg/kg.
- TPHmo concentrations ranged from 28 mg/kg to 830 mg/kg.

Volatile Organic Compounds

- Acetone concentrations ranged from less than 0.05 mg/kg (not detected) to 0.066 mg/kg.
- 4-Isopropyl toluene concentrations ranged from less than 0.005 mg/kg (not detected) to 0.017 mg/kg.
- The remaining volatile organic compounds analyzed using EPA Method 8260B were below their respective detection limits.

Metals

- Antimony concentrations ranged from less than 0.5 mg/kg (not detected) to 1.1 mg/kg.
- Arsenic concentrations ranged from 4.9 mg/kg to 10 mg/kg.
- Barium concentrations ranged from 93 mg/kg to 500 mg/kg.
- Beryllium concentrations ranged from less than 0.5 mg/kg (not detected) to 0.60 mg/kg.
- Cadmium concentrations ranged from less than 0.25 mg/kg (not detected) to 0.43 mg/kg.
- Chromium concentrations ranged from 26 mg/kg to 40 mg/kg.
- Cobalt concentrations ranged from 5.5 mg/kg to 32 mg/kg.
- Copper concentrations ranged from 21 mg/kg to 50 mg/kg.
- Lead concentrations ranged from 19 mg/kg to 54 mg/kg.
- Mercury concentrations ranged from less than 0.05 mg/kg (not detected) to 0.29 mg/kg.
- Molybdenum concentrations ranged from less than 0.5 mg/kg (not detected) to 13 mg/kg.
- Nickel concentrations ranged from 27 mg/kg to 37 mg/kg.
- Selenium concentrations were less than 0.5 mg/kg (not detected).

- Silver concentrations were less than 0.5 mg/kg (not detected).
- Thallium concentrations were less than 0.5 mg/kg (not detected).
- Vanadium concentrations ranged from 25 mg/kg to 75 mg/kg.
- Zinc concentrations ranged from 34 mg/kg to 240 mg/kg.

7.0 DISCUSSION

Results of the soil samples collected from Paintball Jungle (West) indicated non-detectable to low concentrations of TPHg, TPHd, TPHmo, and VOCs. The detectable TPHg, TPHd, TPHmo, and VOCs detected in soil samples TP-1 through TP-4 were generally below their residential ESLs with the exception of sample TP-2. The TPHd contained in sample TP-2 of 160 mg/kg exceeded the residential ESL of 83 mg/kg. McCampbell Analytical, Inc. reported that oil range compounds were significant in sample TP-2. Based on the location of sample TP-2 within the eucalyptus grove, it appears that the elevated TPHd detected in the sample maybe the result of natural oil compounds from the eucalyptus trees.

Laboratory analytical results indicated that the samples collected from the Hurst Firewood Area contained non-detectable concentrations of TPHg; and detectable concentrations of TPHd and TPHmo. The detectable TPHd and TPHmo contained in samples TP-5 through TP-8 were generally below their respective residential ESLs with the exception of sample TP-8 (located at the southern portion of the area). Sample TP-8 contained TPHd and TPHmo concentrations of 140 mg/kg and 830 mg/kg which were above their respective residential ESLs of 83 mg/kg and 370 mg/kg.

Metal concentrations contained in the eight samples were generally within background levels and below their respective residential ESLs with the exception of arsenic and vanadium. Arsenic and vanadium concentrations in the soil samples were above their respective residential ESLs of 0.39 mg/kg and 16 mg/kg but within background levels.

Based on the findings of this and the previous investigations, it appears that the surficial soil within the Site has generally not been impacted by previous activities. The petroleum hydrocarbons encountered at the southern portion of the Hurst Firewood appears

to be limited to the surficial sediments within a low area at the entrance to the Hurst Firewood yard. The likely source of the petroleum hydrocarbons is from drips and leaks from the heavy equipment that were formerly used to handle the eucalyptus trees and associated firewood.

8.0 EXCLUSIONS

ICES assumes no responsibility or liability for the reliance hereon or use hereof of information contained in this report by anyone other than the party to whom it is addressed.

The evaluations and recommendations presented in this report are based on the limited site investigation results available at this time and could be revised if new information necessitating further review of the Site becomes available.

Comments

*water samples are reported in µg/L, product/oil/non-aqueous liquid samples and all TCLP / STLC / DISTLC / SPLP extracts are reported in mg/L, soil/sludge/solid samples in mg/kg, wipe samples in µg/wipe, filter samples in µg/filter.

means surrogate diluted out of range; ND means not detected above the reporting limit/method detection limit; N/A means not applicable to this sample or instrument.

TOTAL = Hot acid digestion of a representative sample aliquot.
TRM = Total recoverable metals is the "direct analysis" of a sample aliquot taken from its acid-preserved container.
DISS = Dissolved metals by direct analysis of 0.45 µm filtered and acidified sample.

MS = Matrix Spike; MSD = Matrix Spike Duplicate; LCS = Laboratory Control Sample; LCSD = Laboratory Control Sample Duplicate; RPD = Relative Percent Deviation.

% Recovery = 100 * (MS-Sample) / (Amount Spiked); RPD = 100 * (MS - MSD) / ((MS + MSD) / 2).

MS / MSD spike recoveries and / or %RPD may fall outside of laboratory acceptance criteria due to one or more of the following reasons: a) the sample is inhomogenous AND contains significant concentrations of analyte relative to the amount spiked, or b) the spiked sample's matrix interferes with the spike recovery.

£ TPH(btex) = sum of BTEX areas from the FID.

cluttered chromatogram; sample peak coelutes with surrogate peak.

N/A = not enough sample to perform matrix spike and matrix spike duplicate.

NR = matrix interference and/or analyte concentration in sample exceeds spike amount for soil matrix or exceeds 2x spike amount for water matrix or sample diluted due to high matrix or analyte content.

MS = Matrix Spike; MSD = Matrix Spike Duplicate; LCS = Laboratory Control Sample; LCSD = Laboratory Control Sample Duplicate; RPD = Relative Percent Deviation.

% Recovery = 100 * (MS-Sample) / (Amount Spiked); RPD = 100 * (MS - MSD) / ((MS + MSD) / 2).

MS / MSD spike recoveries and / or %RPD may fall outside of laboratory acceptance criteria due to one or more of the following reasons: a) the sample is inhomogenous AND contains significant concentrations of analyte relative to the amount spiked, or b) the spiked sample's matrix interferes with the spike recovery.

£ TPH(btex) = sum of BTEX areas from the FID.

cluttered chromatogram; sample peak coelutes with surrogate peak.

N/A = not enough sample to perform matrix spike and matrix spike duplicate.

NR = matrix interference and/or analyte concentration in sample exceeds spike amount for soil matrix or exceeds 2x spike amount for water matrix or sample diluted due to high matrix or analyte content.

RESUMES

Gyan L. Rusconi–Rodrigues

Project Scientist

Branch Location

- San Ramon, California

Education

- BS, Environmental Science, Biology Emphasis, University of California, Berkeley, 5/2016

Professional Registrations/ Certifications

- Registration, #Number, Date
- Registration, #Number, Date

Specialized Training

- CPR and AED Certification

ATC Start Date

- 8/2017

Gyan Rusconi-Rodrigues recently joined the ATC office in San Ramon as a Project Scientist. He will be assisting the Due Diligence Practice Group. Gyan has a background in environmental science, policy, and management with a focus in biology. He is proficient with Geographic Information Systems (GIS) and Global Positioning System (GPS) technologies. Gyan is fluent in Spanish and French and has served as a Spanish-English translator.

Areas of Expertise

- Phase I and II Site Assessment Services
- Construction Environmental Oversight
- Water Resource Management
- Geographic Information Systems (GIS)

Project Experience

Storesund Consulting/Engineering LLC – Kensington, CA

Project Support Specialist: Duties included writing permits, reading blueprints/project plans and specifications, GIS analyses and field surveying for water conservation and ecology restoration projects for trout unlimited, American Rivers, and San Mateo County Resources Conservation District. Also, performed RTK GPS surveys, Nuclear Compaction Testing, Ground Based LiDAR surveys, utilized Quantum GIS software, and created AutoCAD drawings.

Basic Environmental Inc. – Oakland, CA

Environmental Research Intern: Conducted Environmental Transaction Screens and Phase I site reviews for various clients. Reviewed files to identify sites with “known” or “potential” contamination and environmentally sensitive business activities on or adjacent of subject property. Additional duties included: environmental database searches, site reconnaissance, historical searches, interviews, and summarization of reports.

BRYAN CAMPBELL, PG, CHG
Branch Manager

PROFESSIONAL SUMMARY

Mr. Campbell is a dedicated consulting professional with more than 20 years of responsible and diverse experience with expertise in:

- Environmental Assessment
- Vapor Intrusion
- Cost Estimating
- Groundwater Remediation
- Soil Gas/Vapor Assessment
- Peer Reviews
- Hydrogeology
- Soil Remediation
- Project Management

His qualifications include program and project management, the preparation of cost estimates and proposals, fostering client relationships, budget management, staff mentorship and training, and technical/editorial review of deliverables.

Mr. Campbell has acted as the Senior Geologist in charge for sites impacted with hydrocarbons, solvents, metals, pesticides, MTBE, and Volatile and Semi-Volatile Organic Compounds. He has overseen a variety of investigations including:

- Site Assessments: Direct-Push (GeoProbe™), Auger, MIP/CPT and Sonic Methods
- Remediation System: Design of Groundwater, Soil Vapor, and Dual-Phase Systems
- Vapor Intrusion Surveys: Utilizing RWQCB and DTSC Guidelines
- Corrective Action Plans (CAP) and Site Conceptual Models (SCM)
- Aquifer Testing and Analysis / Natural Attenuation Analysis
- Groundwater and Unsaturated Zone Modeling

Mr. Campbell has extensive health and safety training which includes HAZWOPER, behavior-based safety, driver safety training, and others. He has served as a Director of Health and Safety and as a Safety Manager for company-wide and program-wide safety programs. Mr. Campbell has personally performed and overseen hundreds of field inspections and has been the lead investigator on near miss and incident investigations. He has trained and educated staff in safe work practices and implemented new safety policies and procedures company-wide.

He is adept at negotiating environmental solutions with regulators, attorneys and clients. He has performed senior review of technical documents as part of litigation support and financial auditing on complex environmental cases in support of the settlement of environmental claims.

PROJECT EXPERIENCE

- **Program Manager** Preparation of work scopes and cost estimates totalling $18 million for national assessment and remediation projects for sites located in California, Washington, Texas, and Colorado which were impacted with hydrocarbons, solvents, metals, and pesticides. Senior Project Manager for projects with major clients including Wells Fargo Bank, Bank of the West, and JP Morgan Chase.

- **Senior Geologist, Walnut Creek, California** Mentored and trained new staff including project level geologists and engineers as well as Project Managers. Educated staff in both basic and complex environmental consulting practices and procedures. Review of over 600 assessment and remediation reports. Managed advanced remediation projects including those with dual-phase extraction, soil vapor extraction, in-situ remediation, air sparging, and groundwater extraction. Provided cost estimating for entire project lifecycles from assessment to closure.

- **Vapor Intrusion Specialist** Advanced training and experience with vapor intrusion (VI) and considered to be the “go-to” person for VI. Performed vapor intrusion risk assessments using the Johnson and Ettinger model for sites across the country.

- **Program Manager** Responsible for the coordination, tracking, and evaluation of environmental data for a $3.2 million annual portfolio of approximately 40 environmental cases with ExxonMobil over a 5-year period for a total of $16 million overall. Achieved regulatory case closure of 22 sites over a 5-year period. Managed, trained, and supervised an 8-person team of Project Managers, geologists, engineers, and technicians. Reported directly to the Board of Directors of the company.

- **Senior Manager** Part of the contract renewal team for contracts with ExxonMobil totaling $50 million in revenue over 5 years. Personally negotiated directly with upper-level ExxonMobil managers in Houston Texas on behalf of the company to establish new unit rate scopes. Performed scoping, forecasting, and estimating for all projects within the portfolio. Performed the final review of all project invoices and change orders.

- **Senior Geologist** Performed senior review of technical documents as part of litigation support and financial auditing on complex environmental cases in support of the settlement of environmental claims. Senior Geologist in responsible charge for sites impacted with hydrocarbons, MTBE and solvents. Managed the permitting, compliance, and operation of soil and groundwater remedial systems exceeding $400,000 each.

- **Safety Manager** Health and Safety Manager for the company-wide safety program and safety instructor for a behavior-based safety system.

PROFESSIONAL REGISTRATIONS

- Certified Hydrogeologist (CHG) 975 in California
- Professional Geologist (PG) 7724 in California
- Licensed Geologist (LG) 2909 in Washington
- Professional Geologist (PG) 11244 in Texas
- North Carolina Geologist 2022

EDUCATION

- University of California at Berkeley - Bachelors in Geology

TRAINING AND CERTIFICATIONS

- Fundamental Contaminant Chemistry in Soil and Groundwater
- Contaminant Vapor Migration and Intrusion
- UC Berkeley Extension Classes in Remediation, Environmental Law, and Business
- HAZWOPER 29 CFR 1910.120 Training

inspection warrant:

YOU ARE THEREFORE COMMANDED TO INSPECT, INVESTIGATE AND SEARCH, accompanied by authorized representatives of the establishment operator if present,

THE PROPERTY located at #2 Eucalyptus Dr., American Canyon, California, owned by Robert and Patricia Couch, Assesor's Parcel No. 058-030-017, a 165.05 acre parcel of densely wooded land, bordered on the South by Eucalyptus Dr., on the West by the American Canyon landfill and the Napa River, and on the North and East by a 4-strand barbed-wire fence, including but not limited to all structures of whatever type, nature or design used for habitation or ancillary to habitation uses,

WHICH INSPECTION SHALL INCLUDE the observation of physical conditions or processes, the taking of photographs, the taking of samples of materials, the conducting of any tests, the inspection and copying of documents and papers, and the questioning or conferring with the occupants of the property to obtain information bearing on whether the violations of the regulations and laws set forth above exist.

THIS WARRANT SHALL EXPIRE ON November 30, 1990, and the return must be executed by November 30, 1990.

ORDER OF QUARANTINE

You are hereby notified that an Order of Quarantine is issued on the hazardous wastes on this property; pursuant to the State of California Health & Safety Code, Division 20, Section 25187.6(a).

Pursuant to Section 25187.6(a)(2) No person shall remove, transfer, or dispose of the hazardous waste until permission for the removal, transfer or disposal is given by an authorized agent, identified in the document as the Napa County Department of Environmental Management or The Napa County Sheriffs Department.

Pursuant to Section 25187.6(a)(c), Chapter 6.5, Division 20, State of California Health & Safety Code this Order of Quarantine shall take effect upon issuance and shall remain effective for thirty (30) days or until an authorized agent as identified in this document shall remove this Order of Quarantine .

Subject: Couch Property, #2 Eucalyptus Road, Am. Cyn.
APN #58-030-17 - Our File #HF 219

Date of Inspection: November 19, 1990

Purpose: Site Investigation Under Inspection Warrant

Report Prepared by: Catherine Moody, Senior Hazardous Materials Specialist, Department of Environmental Management, Hazardous Materials Section

On November 19, 1990, I accompanied members of the California Department of Forestry to inspect the property and to collect samples, take photographs and make notes regarding hazardous wastes and solid waste at the Couch Property in American Canyon.

The property is a one hundred sixty five acre parcel, heavily forested with eucalyptus trees. There are small dirt roads throughout much of the property. Pinpointing on specific locations on a map is difficult as there is a tremendous amount of all manner of debris, garbage, abandoned vehicles, machinery, equipment, trash heaps and concrete rubble,as well as 3 tanks and a railroad car. Trails and paths wind throughout the property.

Interspersed throughout the property are shelters where people are living, or were recently living. Some of these shelters used the debris piles as walls for their living quarters.

In addition, we found a box containing six cylindrical cardboard tubes, sealed on each end with wax and stenciled with the words "GAMMA-FLAME". The each tube is approximately ten inches in length, four inches in diameter. The cardboard tubing is approximately one-quarter inch in thickness. Inserted in this box was a piece of mail (unsealed) addressed to "Hollis Newman".

Scattered throughout the property are used automobile batteries and small containers of what is probably used oil and used antifreeze. There are also many small unlabeled containers, probably containing paint or automobile related wastes.

We observed many 55-gallon drums on the property however, most were empty, as determined either by observation (many lacked lids) or by tapping on the sides. Five drums were full or partially full. A sample was collected from each.

There are at least three tanks on the property. Two are of approximately ten-thousand gallon capacity and seemed empty. Apparently, these two tanks used to be underground storage tanks. One is of three-thousand capacity and was partially full of an oily liquid. A sample was collected from this tank.

There are many compressed gas cylinders scattered throughout the property; particularly propane cylinders. The propane cylinders was usually found in the garbage and debris piles.

Other compressed gas cylinders were grouped together in two areas: one group of five cylinders is in a wooden garage that presumably belongs to the Couch family. This garage is filled with all manner of clothes, trash, machinery, equipment, boxes and so forth and as well as five cylinders. (See photo #4).

Near the mobile home where the Couch family lives, adjacent to the road, are twenty-one compressed gas cylinders laying on the ground. Several of them were in a deteriorated condition with rust and corrosion forming on them. All of the cylinders looked like they have been outside for a long time; the paint was faded, the cylinders were scarred and rusty, and leaves and dirt had built up on them, partially burying them. We counted six acetylene cylinders, ten hydrogen cylinders, and five freon cylinders in this area.

Mr. Couch told me that he had tried to get the acetylene cylinders refilled but was refused due to the poor condition of the cylinder valves. He told me that he used the hydrogen cylinders to fill balloons. This concerned me since he seemed to me to be confusing hydrogen, a highly explosive and flammable gas, with helium, an inert gas commonly used to fill children's balloons.

In general, the hazardous wastes we observed fell into four categories;

1) oil or oily wastes
2) compressed gas cylinders
3) paints, lacquers, thinners and solvents
4) unknowns in small containers
5) automobile batteries

Sampling Summary:

All samples were collected by the Haz Mat Team composed of staff from of the California Department of Forestry and the American Canyon Fire Protection District. The Haz Mat Team also tested the two empty ten-thousand gallon tanks for the presence of volatile or toxic gases with hand-held meter device. The meter is a direct reading instrument that does not record findings. Neither tanks registered as having volatile or toxic gases.

A total of six liquid samples were collected. Five of the samples were taken from 55-gallon drums. One sample was taken from the three-thousand gallon tank. One of the cardboard cylinders stenciled "GAMMA-FLAME" was taken from the box if six.

One of the samples came from a drum located in area identified as Zone One; which was the southerly portion of the property that is either leased, rented or otherwise occupied by persons other than the Couch family. The drum was labeled Z-1-1. The sample was identified on the sample jar and on our Chain of Custody document as Sample Number One.

The other five liquid samples came from the drums and the tank located in Zone 3 and were identified on the sample jars and on our Chain of Custody document as Sample Numbers Two through Six.

Sample Z-1-2 consisted of one of the cardboard cylinders stenciled "GAMMA-FLAME". It was NOT included on the Chain of Custody document since we could not send it to a laboratory for analysis as there was concern that it might be explosive or incendiary device of some type, or possibly might contain a highly reactive metal. The device was subsequently x-rayed and opened by Sergeant Johnson of the Presidio Bomb Squad. It was found to be empty except for sawdust packing. Sergeant Johnson said he would list it on his report as a hoax device. He did say that the other cylinders were probably empty too.

Sample ID Number	Sample Type	Sample Jar #
Z-1-1	Liquid from drum	One
Z-1-2	Cardboard cylinder (Gamma-Flame)	N/A
Z-3-3	Liquid from ~~drum~~	Two
Z-3-4	Liquid from ~~tank~~	Three
Z-3-5	Liquid from ~~drum~~	Four
Z-3-6	Liquid from drum	Five
Z-3-7	Liquid from drum	Six

Areas of Concern:

In terms of hazard potential, the cylinders of hydrogen would represent the most immediate concern. Also, the cylinders in deteriorated condition or of unknown contents have hazard potential. Neither this Department nor the Department of Forestry have the sampling equipment necessary for obtaining gas samples.

The unlabeled drums and tank represent a hazard in that they are unidentified as to contents. Drum Z-3-1 (lying on its side); showed leakage from the top rim. (See photo #17). Drums Z-3-4- and Z-3-5 were resting on a wooden pallet that is heavily stained, and therefore are believed to be leaking. (See photo #21).
The tank Z-3-3 is resting on the ground, without a cap on the fill hole, instead it had a chunk of wood stuck in it. In addition, the tank is not braced in anyway to prevent overturning and it rests on bare earth. (See photo #20).

There are at least two areas on Zone One where twenty or more small containers (one gallon or less) of what look to be various paints, sealers, epoxies, lacquers, engine treatments, wood stains and so forth area stored. Many are rusty or stained and therefore their contents are uncertain but they are mostly like paint and related materials. One group is stored in a fairly neat fashion on a wooden pallet, another group is stored haphazardly in wooden boxes and on the ground. (see Photo #6 and #7)

I observed a large pile of granular asphalt material and asphalt chunks, which would not usually represent an environment hazard unless placed in or along a waterway. (See photo #13).

Judging by the soil piles, asphalt piles, debris piles and abandoned automobiles on the property it appears that the property owners are allowing dumping to take place on their property, perhaps for revenue. Receiving off-site wastes constitutes operating a Solid Waste facility without a Permit or variance.

In addition, Napa County Ordinance #213 makes it unlawful to operate a refuse disposal area in the unincorporated area unless possessing a permit to do so.

An Order of Quarantine that forbids the removal of any hazardous wastes on the property for 30 days unless approval is received from this Department was present to Mr. Robert Couch by a representative of the Sheriff Department. Mr. Couch signed the Order verifying receipt. A copy appears as an attachment to this report.

Violative conditions:

Violative conditions are based wholly or partly on the following:

Section 25117(a), Chapter 6.5, Division 20, Health & Safety Code includes in the definition of a hazardous waste as any wastes or combination of wastes that pose a substantial present or potential hazard to human health or environment when improperly treated, stored, transported, or disposed of, or otherwise managed.

Section 25124(e), Chapter 6.5, Division 20, California Health & Safety Code includes in the definition of waste a material that poses a threat to public health or the environment and is either or both mislabeled or not adequately labeled or is packaged in deteriorated or damaged containers.

Based on those definitions, I have determined the following violations.

1. Section 66471, Title 22, California Code of Regulations. The generator (property owner) failed to determine if the wastes are hazardous wastes pursuant to this section in that five (5) drumsand one tank on the property were found (by laboratory analysis) to be hazardous. These containers were unlabeled and at least one container (drum #Z-3-7) did not contain the type of material Mr. Couch stated it to be. Both Robert Couch and David Couch believed all the containers held "cresote".

2. Section 66508, Title 22, California Code of Regulations. The generator (property owner) failed to satisfy the storage requirements for hazardous and the ninety (90) day accumulation time limit for hazardous wastes in that all five of the drums and the tank that were found to contain hazardous wastes were unlabeled and, according to my conversations with Robert Couch and with David Couch, and by my observations on the condition of the containers, these five drums, the tank and the cylinders have been stored on the property for years.

3. Section 67241, Title 22, California Administrative Code. The generator (property owner) failed to manage hazardous waste properly in that the cylinders were lying on their sides, on the ground, adjacent to a road. Several were severely rusted and all of which appeared to be in a deteriorated condition. At least three of drums were severely rusted, one was definitely leaking (Z-3-1) and two were suspected of leaking (Z-3-3 and Z-3-4).

4. Napa County Ordinance 213, Article VI, Section I makes it unlawful to operate a refuse disposal area in the unincorporated area unless possessing a permit from the Health Department to do so. Based on my observations and my discussion with David Couch the property owners have allowed dumping to take place on this property and have allowed refuse to accumulate on this property. (See all photos).

HAZARDOUS MATERIALS SECTION
DEPT OF ENVIRONMENTAL MANAGEMENT

COUCH PROPERTY VIOLATIONS

I. Zoning and Building Violations

1. The property is only zoned for one single-family dwelling and for agricultural uses. Despite this, there are twenty other structures (ten of which are inhabited, and ten of which are built for storage or for housing chickens). Also inhabited are ten trailers, two buses, and a camper shell. None of these inhabited structures are permitted uses (NCC 12231, 12107)

2. The twenty stuctures all exceed 120 square feet of roof area and require building permits, which were not obtained (UBC 301(a)).

3. The one permitted dwelling is still under construction and has never been completed. An unapproved, unpermitted underground utility trench has been dug.

4. The owners are living in a mobile home which is to be in dead storage, but is being used as a residence by the owners (NCC 11010).

5. There is no approved water supply and there are two unapproved water wells that have been dug on the property (NCC 5505, 5230).

6. The entire parcel constitutes an illegal junk yard (NCC 6051).

7. Evidence exists regarding the occurrance of paint-ball games which have occurred and been advertised. There is no approved use permit for this activity.

8. All of the residents in the unpermitted structures are renting from the owners, a use not permitted in this zoning. (NCC 12231, 12107).

10. The property is being used to store heavy construction equipment (such as dump trucks, skip loaders, backhoes, and semitrailers), a use not contemplated by the zoning.

11. The entire parcel constitutes a public nuisance (NCC 12903, 11021).

II. Environmental Management-Health and Safety Problems

1. There is no approved sewage disposal or approved septic system present in the park. Sewage disposal ranges from holes in the ground, to merely allowing sewage to run on the ground to an outhouse type structure (NCC 5621, 5622, H&S 5411).

2. There is the illegal accumulation of refuse, debris, trash, and garbage in places located throughout the property. Owners are operating a refuse disposal area without a permit, in violation of Napa County Ordinance No. 213.

3. The property contains unlocked abandoned refrigerators, in violation of Penal Code Section 402(b).

III. Environmental Management-Toxics Problems

1. Small amounts of toxic wastes have been discovered on the property, including oil, compressed gas cylinders, paints, lacquers, thinners, solvents, used auto batteries, containers with antifreeze.

2. In addition, three large old abandoned underground storage tanks are present on the property, one of which is partially full of liquid that tested as hazardous waste.

3. The violations here range from storage of hazardous wastes over 90 days without a permit (22 CCR 66508, and H & S 25189.2) to failure of the generator to determine if his wastes are hazardous (22 CCR 66471) to failure to properly manage hazardous wastes (22 CCR 67243).

IV. Fire and Forestry Violations

1. There is not adequate clearance between combustable debris and material and the various residential structures (NCC 8871, Public Resources Code Section 4291).

2. Residents have been found to be burning their household trash and garbage in violation of Bay Area Air Quality Management District Regulations (Regulation 5, Section 301).

V. CHP/Public Works Violations

1. The property contains over 230 abandoned vechicles (NCC 4700)

2. The proeprty contains numerous dismantled vehicles, for which the certificate of ownership, the registration card, and the license plates were not delivered to DMV before dismantling began (Vehicle Code Section 5500).

IN THE SUPERIOR COURT OF THE STATE OF CALIFORNIA

IN AND FOR THE COUNTY OF NAPA

THE PEOPLE OF THE STATE OF CALIFORNIA,

PLAINTIFF,

VS.

ROBERT L. COUCH, et. al.,

DEFENDANTS.

NSC: 64010

FINAL JUDGMENT AND PERMANENT INJUNCTION

This matter came on regularly before the Court for trial on the 17th, 23rd, 24th of February, and the 1st of March, 1993. Appearance on behalf of plaintiff was made by Deputy District Attorney Daryl A. Roberts, appearance on behalf of Defendant Patricia K. Couch was made by Norbert U. Frost of Frost & Healy, and Defendant Robert L. Couch appeared on behalf of himself. Evidence having been presented and accepted by the Court, arguments having been made, the Court having considered the evidence and the pleadings in this matter, good cause appearing, and in the furtherance of justice,

IT IS HEREBY ORDERED, ADJUDGED, AND DECREED as follows:

ANTHONY PEREZ
DISTRICT ATTORNEY
PUBLIC ADMINISTRATOR
PUBLIC GUARDIAN
COUNTY OF NAPA
931 PARKWAY MALL
NAPA, CALIFORNIA 94559

I

FINDINGS OF FACT

The Court finds that Robert L. Couch and Patricia K. Couch, defendants herein, are co-owners of the property located at #2 Eucalyptus Drive, American Canyon, California, Napa County Assessor's Parcel No. 058-030-017.

The Court further finds that the evidence produced by plaintiff in this matter establishes the following with regard to defendants' property, located at #2 Eucalyptus Drive, American Canyon, California, Napa County Assessor's Parcel No. 058-030-017:

1. At least 100 and possibly as many as 286 abandoned motor vehicles are on the property, in violation of Napa County Code §4700;

2. Defendants' property contains an unknown but large number of accumulations or piles of garbage, refuse, debris, metals, broken concrete, spoils, contractor materials, rubber tires, vehicle parts, household trash, furniture, junked appliances, and other similar items, in violation of the Napa County Garbage Ordinance No. 213;

3. Probably less than 10 abandoned refrigerators are located on the property in violation of Penal Code §402(b);

4. There are numerous illegal sewage disposal systems ranging from holes in the ground and outhouses to septic systems installed, in violation of Napa County Code §§5621, 5622 and Health & Safety Code §5411;

5. For property zoned Agricultural-Watershed, of which the

ANTHONY PEREZ
DISTRICT ATTORNEY
PUBLIC ADMINISTRATOR
PUBLIC GUARDIAN
COUNTY OF NAPA
931 PARKWAY MALL
NAPA, CALIFORNIA 94559

only permitted use is one single family dwelling, a second dwelling unit and a guest cottage, a number of other inhabited structures existed on the property ranging from lean-tos to trailers and buses, which structures were on plots of land being rented by the defendants to various tenants and none of these structures had legal water supplies or permitted sewage disposal systems, all in violation of Napa County Code §§12231,12107;

6. All of these the inhabited structures, as well as approximately 10 chicken coops with roof areas exceeding 120 square feet, were constructed without benefit of building permits, in violation of the Uniform Building Code §301;

7. One water well had been installed or constructed on the property without benefit of permits, in violation of the Napa County Code §§5505 and 5230;

8. In a number of areas on the property, the storage of heavy construction equipment occurred, a use not allowed by the zoning, in violation of Napa County Code §§12231 and 12107;

9. Small amounts of hazardous waste have been illegally stored or disposed of on the property, in violation of Health & Safety Code §25189.2;

10. Defendants are living in a mobile home for which the use permit has expired, and the one dwelling for which a building permit was issued is still under construction, and contains an unapproved, unpermitted underground utility trench, in violation of Napa County Code §11010;

11. Tenants have burned their household trash or

ANTHONY PEREZ
DISTRICT ATTORNEY
PUBLIC ADMINISTRATOR
PUBLIC GUARDIAN
COUNTY OF NAPA
931 PARKWAY MALL
NAPA, CALIFORNIA 94559

agricultural debris, in violation of Bay Area Air Quality Management District Regulations (Regulation 5, Section 301) and the Napa County Garbage Ordinance;

12. Adequate clearance does not exist between combustible debris and material and the residences of defendants in violation of Napa County Code §8871 and Public Resources Code §4291;

In addition to the above specific findings, the Court finds that Patricia K. Couch has cooperated with Plaintiff in its efforts to remedy the above-described conditions of defendants' property, including but not limited to, serving tenants with notices terminating tenancies and notices of building code violations, and cleaning and removing certain debris, garbage, refuse, trash and other similar items.

The Court finds that Robert L. Couch has accepted rent from at least one tenant in violation of the preliminary injunction issued by this Court.

II
CONCLUSIONS OF LAW

The Court finds that, based upon the evidence produced by plaintiff during trial, the defendants have been and are presently maintaining upon their property a public nuisance. Specifically, the Court bases this conclusion on both a public nuisance per se theory, as numerous conditions of defendants' property violate specific Napa County Code Sections relating to nuisances, as well as a common law nuisance theory, as the condition of the property meets the criteria as set forth in California case law regarding the existence of public nuisances.

ANTHONY PEREZ
DISTRICT ATTORNEY
PUBLIC ADMINISTRATOR
PUBLIC GUARDIAN
COUNTY OF NAPA
931 PARKWAY MALL
NAPA, CALIFORNIA 94559

In addition, based upon the evidence produced at trial, the Court finds that the defendants, by renting or leasing of portions of their property to tenants either for living on the property or for storage of belongings, engaged in unfair competition, as defined by Business & Professions Code §17200, as such activity was a business activity which violated the zoning laws of the County of Napa, and provisions of the Uniform Housing Code.

III
JURSIDICTION AND APPLICABILITY

The Court has jurisdiction of the subject matter hereof and the parties hereto.

The provisions of this final judgment are applicable to defendants Robert L. Couch and Patricia K. Couch, and to their agents, servants, employees, representatives, heirs, successors in interest, and any and all other persons acting in concert with or participating with defendants who have actual or constructive notice of this judgment.

IV
PROHIBITORY INJUNCTION

Defendants are permanently enjoined and restrained, pursuant to Civil Code §3494 and Business & Professions Code §17203, from doing, directly or indirectly, any of the following:

1. From leasing or renting any portion of the property unless any such lease or rental is in conformance with the zoning of the property and the terms of this judgment.

2. From bringing onto their property or causing to be

ANTHONY PEREZ
DISTRICT ATTORNEY
PUBLIC ADMINISTRATOR
PUBLIC GUARDIAN
COUNTY OF NAPA
931 PARKWAY MALL
NAPA, CALIFORNIA 94559

brought onto their property any of the following items:

a. Any junk, scrap, or dismantled or abandoned motor vehicles of any kind, including but not limited to automobiles, trucks, vans, buses, or motorcycles;

b. Any debris of any kind including but not limited to scrap lumber, scrap metal, broken concrete, other types of spoils, dirt, rubble, rock, or gravel unless the presence of such debris is consistent with the zoning of the property or not violative of any applicable law or ordinance;

c. Any junk of any kind, including but not limited to abandoned vehicle parts or components, junked appliances, junked appliance parts or components, tanks, machines, machinery parts or components;

d. Any garbage, rubbish, refuse, trash, or other similar type material;

e. Any hazardous wastes, including but not limited to waste oil, spent gasoline, gasoline products, gas cylinders, paints, lacquers, thinners, solvents, batteries, anti-freeze, or other similar material.

3. From constructing or maintaining any sewage disposal system unless defendants procure a valid and current permit to do so, and follow all conditions and requirements of said permit.

4. From erecting, constructing, enlarging, altering, repairing, moving, improving, or demolishing any structure or building on defendants property unless defendants comply with the provisions of Uniform Building Code §301, and follow all

ANTHONY PEREZ
DISTRICT ATTORNEY
PUBLIC ADMINISTRATOR
PUBLIC GUARDIAN
COUNTY OF NAPA
931 PARKWAY MALL
NAPA, CALIFORNIA 94559

conditions and requirements of any building permit required pursuant to the provisions of this section.

5. From installing or maintaining any water well on the property unless defendants procure a valid permit to do so, and follow all conditions and requirements of said permit.

6. From storing heavy construction equipment on the property unless the presence of such equipment would be consistent with the zoning of the property, or the equipment is being used to fulfill defendants' obligations under this judgment, or any construction or development performed is pursuant to a valid permit.

7. From storing or disposing of hazardous waste unless defendants do so in compliance with the provisions of the Hazardous Waste Control Act.

8. From allowing inadequate clearance between combustible debris material and any inhabited structure as required by Public Resources Code §4291.

9. From dismantling any motor vehicle unless done in compliance with the zoning laws of the parcel, and in compliance with Vehicle Code §5500.

10. From burning trash or other similar type debris, including agricultural debris, except as allowed by regulations promulgated by the Bay Area Air Quality Management District.

V
MANDATORY INJUNCTION

Defendants, are hereby ordered and mandated as follows:

1. Within 30 days from the filing of this judgment, Robert

ANTHONY PEREZ
DISTRICT ATTORNEY
PUBLIC ADMINISTRATOR
PUBLIC GUARDIAN
COUNTY OF NAPA
931 PARKWAY MALL
NAPA, CALIFORNIA 94559

L. Couch or Patricia K. Couch shall do the following:

a. Personally serve a written notice upon each person (other than defendants or members of their immediate family) residing on defendants' property, #2 Eucalyptus Drive, American Canyon, Napa County, California, which provides that each resident has 30 days from the receipt of the notice to remove themselves and all their personal belongings from defendants' property, and that their failure to move their belongings off the property within the time indicated in the notice will constitute an abandonment of those belongings and may be disposed of pursuant to Civil Code §1980 et. seq.

b. Personally serve each and every person who has left personal belongings on defendants' property but does not reside there with a notice requiring them, within 30 days of receipt of the notice, to remove those personal belongings from defendants' property, and that any property left on the premises after the 30 day period will be deemed abandoned and may be disposed of pursuant to Civil Code §1980 et. seq.

c. In the event defendants are unable to personally serve any person, defendants shall cause such notice to be posted in a conspicuous area where the belongings are situated and a copy of the notice mailed to such persons at their last known address. If defendants are unable to locate tenants or their last known address,

ANTHONY PEREZ
DISTRICT ATTORNEY
PUBLIC ADMINISTRATOR
PUBLIC GUARDIAN
COUNTY OF NAPA
1031 PARKWAY MALL
NAPA, CALIFORNIA 94559

they may apply to this Court for an order permitting publication of any notices required herein in the Napa Register, a newspaper of general circulation, to give tenants notice.

2. Within 45 days from the filing of this judgment, defendants shall cause to be filed unlawful detainer complaints against any and all tenants who remain on the property after the 30 day notice period has expired (as referred to above in paragraph 1), and shall properly serve each tenant with summons and complaint as required by law. In addition, defendants are hereby ordered to diligently pursue these unlawful detainer actions until all tenants have been removed from the property, and their property has been removed or been deemed abandoned. It is further ordered that to the extent the service of any tenants with required process and/or pursuit of these unlawful detainer actions prohibits defendants from meeting any time deadline, as set forth in this mandatory injunction, defendants shall be given an extension of time for meeting that deadline equivilant to the amount of time spent by defendant in pursuing these unlawful detainer actions.

3. Within 30 days of the filing of this judgment, each party to this action shall provide to the District Attorney's Office the name, address, and phone number of a scrap or junk dealer. The District Attorney's Office shall prepare a list of the scrap or junk dealers designated by each party and serve the list on defendants. Further, Defendants shall allow any scrap or

ANTHONY PEREZ
DISTRICT ATTORNEY
PUBLIC ADMINISTRATOR
PUBLIC GUARDIAN
COUNTY OF NAPA
931 PARKWAY MALL
NAPA, CALIFORNIA 94559

junk dealer so named to enter the property during reasonable times (8:00 a.m. to 6:00 p.m. Monday through Friday) for the purpose of assessing the status of the property and coming up with a bid for how much money that scrap or junk dealer would pay to remove all valuable items of scrap and abandoned motor vehicles (but excluding those items set aside by defendants pursuant to the provisions of paragraph 4, below) on the property. Only bids obtained within 90 days of the filing of this judgment shall be considered. The dealer offering the highest bid shall be chosen.

4. Defendants shall, within 105 days of the filing of this judgment, collect in one place on their property, unless physically impossible to do so, all operable motor vehicles, operable pieces of construction equipment or vehicle whose purpose is consistent with the agricultural zoning of the property, and any and all other valuable items that defendants contend are not scrap or junk, or an abandoned motor vehicle, and whose storage on the property is consistent with the zoning of the property. Once this has occurred, defendants shall then allow county officials to enter the property to inspect this collection of items to determine if their storage on the property would be consistent with the zoning of the property. If so, none of these items of property would be subject to any of the provisions set forth in paragraphs 5 and 15, below. In the event there is a dispute between defendants and county officials regarding any or all of these items of property, such dispute

ANTHONY PEREZ
DISTRICT ATTORNEY
PUBLIC ADMINISTRATOR
PUBLIC GUARDIAN
COUNTY OF NAPA
931 PARKWAY MALL
NAPA, CALIFORNIA 94559

shall be brought to hearing before this court upon 15 days written notice by either party. Opposition papers shall be filed at least 5 days before the hearing and reply papers shall be filed at least 3 days before the hearing. Defendants will be deemed to have abandoned all other items of scrap, junk, debris and abandoned motor vehicles on the property if not collected and set aside by the deadline set forth in this paragraph, or if ordered by court after hearing.

5. Robert L. Couch and/or Patricia K. Couch shall, within 105 days of the filing of this judgment, enter into a contract with the scrap or junk dealer chosen pursuant to paragraph 3, above, which contract will provide for the following:

a. It will set forth the price to be paid by the dealer for the abandoned motor vehicles and scrap to be removed from the property and it will require the dealer to remove all abandoned motor vehicles and not merely select and remove the motor vehicles and scrap bringing the dealer the highest and/or best price.

b. It will set forth a time period within which the scrap dealer is to remove all abandoned motor vehicles and valuable scrap from the property, with the period not to exceed 150 days, and the period to commence no later than 120 days from the filing of this judgment.

c. It will require the scrap dealer to keep legible records regarding the numbers of abandoned motor vehicles removed, and the weight of scrap removed, as well as legible records regarding

ANTHONY PEREZ
DISTRICT ATTORNEY
BLIC ADMINISTRATOR
PUBLIC GUARDIAN
COUNTY OF NAPA
931 PARKWAY MALL
APA, CALIFORNIA 94559
707-253-4211

the payment of moneys on either a price per vehicle or price per weight basis. Further, it will require the scrap dealer to, on weekly basis, provide these records both to defendants and to the District Attorney's Office.

d. The bid will require the dealer to handle and dispose of, in a lawful manner, all hazardous waste that may be generated by the removal of motor vehicles, including motor oil, gasoline, diesel fuel, brake fluid, transmission fluid, batteries, and catalytic converters, and any other similar hazardous materials that are commonly found in motor vehicles.

e. The bid will require the dealer to pay, on a weekly or monthly basis (to be negotiated), all moneys generated by the removal of abandoned motor vehicles and valuable scrap items to a trust fund, to be maintained by the District Attorney's Office, as more fully described in paragraph 13, below.

6. Defendants shall allow the chosen scrap or junk dealer to enter the defendants' property at reasonable times and shall not in any manner interfere with or obstruct the dealer's efforts to remove from the property all abandoned motor vehicles and valuable scrap items.

7. Defendants shall not in any manner interfere with or obstruct any and all County officials who may enter the property during reasonable hours to do the following: appraise any or all abandoned motor vehicles on the property for the purpose of issuing salvage certificates; monitor efforts to remove and properly dispose of hazardous wastes; monitor efforts to properly

ANTHONY PEREZ
DISTRICT ATTORNEY
PUBLIC ADMINISTRATOR
PUBLIC GUARDIAN
COUNTY OF NAPA
1031 PARKWAY MALL
NAPA, CALIFORNIA 94559

remove abandoned motor vehicles and scrap from the property; monitor efforts to remove or destroy all illegal sewage disposal systems on the property; monitor efforts to raze all structures which are abandoned or condemned; monitor all efforts to remove from the property all garbage, rubbish, trash, spoils, and other similar unpermitted materials.

8. Within 105 days of the date of the filing of this judgment, Robert L. Couch and/or Patricia K. Couch shall commence to remove or have others undertake the removal of trees, bushes, and shrubs required to create an approximate 30 foot firebreak around the mobile home in which defendants are residing, and any other structure inhabited by any other member of defendants' immediate family. Such removal shall be completed within 165 days of the filing of this judgment.

9. In the event the District Attorneys Office determines, at any time, that income generated from the removal of abandoned motor vehicles and other valuable scrap is insufficient to pay for the removal of hazardous waste, debris, garbage, rubbish, trash (and all other items referred to in paragraph 13), the razing of structures on the property and subsequent removal of razed debris, and the removal or destruction of the illegal sewage disposal systems, then the District Attorney's Office may notify the defendants in writing of such situation.

10. Within 30 days of receipt of the notice from the District Attorney's Office referred to in paragraph 9, above, each party shall provide to the District Attorney's Office the

ANTHONY PEREZ
DISTRICT ATTORNEY
PUBLIC ADMINISTRATOR
PUBLIC GUARDIAN
COUNTY OF NAPA
1031 PARKWAY MALL
NAPA, CALIFORNIA 94559

name, address, and phone number of a commercial harvester wood pulp processor or other wood products dealer for the purpose of obtaining a bid to remove or thin out the eucalyptus trees present on defendants property, and to sell the trees for firewood or other income generating purposes. Either defendant may designate the areas where the trees may be removed or thinned out. Further, Defendants shall allow any commercial harvester or processor so named to enter the property during reasonable times for the purpose of assessing the status of the property and arriving at a bid for how much money that harvester or processor would pay to remove or thin out trees for the purpose of resale as firewood or other purpose. Only bids obtained within 60 days of defendants receipt of the notice referred to in paragraph 10 shall be considered. The harvester or processor offering the highest bid shall be chosen.

11. Robert L. Couch and/or Patricia K. Couch shall, within 75 days of receipt of the notice referred to in paragraph 9, enter into a contract with the chosen harvester, which contract will provide for the following:

a. It will set forth the price to be paid by the harvester or processor for the removal of trees from the property, and the approximate number of trees, or cords of firewood or weight of wood pulp, to be removed from the property.

b. It will set forth a time period within which the harvester is to remove trees from the property, with the period not to exceed 120 days, and the period to commence no later than

ANTHONY PEREZ
DISTRICT ATTORNEY
PUBLIC ADMINISTRATOR
PUBLIC GUARDIAN
COUNTY OF NAPA
931 PARKWAY MALL
APA, CALIFORNIA 94559
707-253-4211

120 days from the date of defendants' receipt of the notice referred to in paragraph 9.

c. It will require the harvester or processor to apply for a timber harvest plan with the California Department of Forestry, and will require the harvester or processor to follow all conditions and requirements of any such plan as approved by said Department of Forestry.

d. It will require the harvester or processor to keep legible records regarding the numbers of trees removed or the cords of firewood removed or weight of wood pulp removed, as well as legible records regarding the payment of moneys on either a price per tree or price per cord basis. Further, it will require the harvester to, on a weekly basis, provide these records both to defendants and to the District Attorney's Office.

e. The contract will require the harvester or processor to pay, on a weekly or monthly basis (to be negotiated), all moneys generated by the removal of trees to the trust fund to be maintained by the District Attorney's Office, as described in paragraph 13, below.

12. Defendants shall to allow the chosen harvester or processor to enter the defendants' property at reasonable times and shall not in any manner interfere with or obstruct the harvester's or processor's efforts to remove designated trees from the property.

13. The District Attorney's office shall maintain a trust fund whose primary purpose shall be to pay for removing from

ANTHONY PEREZ
DISTRICT ATTORNEY
PUBLIC ADMINISTRATOR
PUBLIC GUARDIAN
COUNTY OF NAPA
931 PARKWAY MALL
NAPA, CALIFORNIA 94559
707-253-4211

defendants' property hazardous waste, the various piles and accumulations of debris, garbage, rubbish, trash, metals, scrap lumber, broken concrete, spoils, contractor materials, rubber tires, vehicle parts, junked furniture and appliances, and oth similar items from the property, removing and destroying all illegal sewage disposal systems, and razing all structures whi are abandoned or condemned and removing the debris produced from such razing. Defendants may be reimbursed from this trust fund for costs they have incurred themselves in cleaning up the property, upon presenting bills, receipts or invoices, but only after the primary purpose of the fund, as set forth above, has been met, and there is money remaining in the trust fund for such reimbursement. Any funds remaining in the trust fund after completion of all clean up activities required under this injunction shall be paid to defendants.

14. Within 150 days of the filing of this judgment, Robert L. Couch and/or Patricia K. Couch shall enter into a contract to retain the services of a licensed hazardous waste consultant, licensed hazardous waste hauler, or licensed hazardous waste dealer to identify and remove from the property any and all hazardous wastes present. The contract shall contain the following provisions:

a. It shall set forth a time period within which the consultant, hauler or dealer shall produce a plan to identify and remove all hazardous waste on defendants' property, with the plan to be produced by a date no later than 30 days from the date the

ANTHONY PEREZ
DISTRICT ATTORNEY
BLIC ADMINISTRATOR
PUBLIC GUARDIAN
COUNTY OF NAPA
931 PARKWAY MALL
PA, CALIFORNIA 94559

contract is entered into.

b. It shall provide a time period for which all hazardous wastes shall to be removed, with the period not to exceed 120 days, and to commence no later than 60 days from the date the contract is entered into;

c. It will set forth the price to be paid by the consultant, hauler or dealer for any hazardous waste removed from the property which has some value and will set forth the cost for properly disposing of all other hazardous wastes which are present on the property.

d. It would provide for the maintenance of hazardous waste manifests for the tracking of the hazardous waste removed and properly disposed of, with the requirement that the consultant, hauler or dealer shall provide forthwith copies of these manifests both to the defendants and to the District Attorneys Office.

15. Once all valuable scrap, abandoned motor vehicles, and designated trees for firebreak purposes have been removed from the property, defendants shall either obtain bids from solid waste haulers for the cost to clean up, raze structures and remove from the property all remaining items of waste or garbage (including all piles of debris, garbage, rubbish, trash, and similar materials on the property, all debris created from the razing of structures on the property, along with any items of scrap, and motor vehicles that were left on the property because they were not valuable or income generating and were not picked

ANTHONY PEREZ
ISTRICT ATTORNEY
LIC ADMINISTRATOR
UBLIC GUARDIAN
COUNTY OF NAPA
31 PARKWAY MALL
A, CALIFORNIA 94559
707-253-4211

up by any scrap dealer) or defendants or their designees may clean up and remove from the property all of these remaining items of waste or garbage.

a. If defendants act upon their own, they shall remove all remaining items of waste or garbage and any necessary clean up shall be completed within 60 days of the date that all valuable scrap, motor vehicles, and trees for firebreak purposes have been removed.

b. In the event defendants or their designees fail to meet the 60 day requirement as set forth in subparagraph a, above, then defendants shall within 30 days after the 60 day period has expired, obtain bids from solid waste haulers for the cost to clean up the property, as set forth above.

c. Within 45 days after the end of the 60 day period, Robert L. Couch and/or Patricia K. Couch shall enter into a contract with the solid waste hauler giving the lowest bid, which contract shall provide for the following:

(1) It shall provide a time period for which all structures shall be razed and all remaining wastes on the property shall be removed, with the period not to exceed 150 days, and to commence no later than 60 days after the expiration of the 60 day period noted above;

(2) It will set forth the price to be charged by the solid waste hauler for the removal of the remaining waste on the property, including the cost of properly disposing of all of these wastes at a State licensed solid waste landfill. It will

ANTHONY PEREZ
ISTRICT ATTORNEY
BLIC ADMINISTRATOR
PUBLIC GUARDIAN
COUNTY OF NAPA
31 PARKWAY MALL
PA, CALIFORNIA 94559

require the solid waste hauler to maintain legible records regarding the removal of the waste from the property and the costs incurred.

VI
RESERVATION OF JURISDICTION

The Court hereby reserves jurisdiction with regard to the following issues:

1. Issues pertaining to the need for defendants to obtain use permits or building permits for the structures on their property that they or their immediate family members reside in or otherwise intend to occupy;

2. Issues regarding the destruction of any unpermitted water wells that exist on the property;

3. Issues regarding the burning of household trash, garbage, or agricultural debris on the property;

4. Issues regarding the destruction or removal of any illegal sewage disposal systems on the property.

5. Issues regarding the razing of agricultural structures constructed on the property without benefit of building permits.

6. Issues regarding authorizing the County of Napa to enter defendants' property and conduct all clean-up and removal activities, including the removal of income generating items as have been addressed by this judgment, in the event defendants or either defendant fail to comply with the provisions of the mandatory injunction.

6. Issues regarding the issuance of civil penalties pursuant to Business & Professions Code §17206.

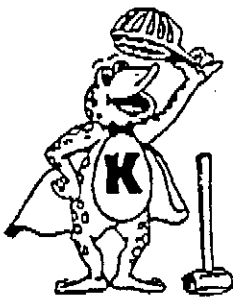
VII
MODIFICATION AND ENFORCEMENT

Any party to this judgment may seek leave of the court upon 15 days notice to the parties hereto and upon a showing of good cause, to modify, amend, or add to any of the provisions of this judgment.

The Court retains jurisdiction, in the event either Robert L. Couch or Patricia K. Couch individually, or both, interfere with, impede, refuse or fail to comply with any provision of this judgment, to make such orders as will prevent further contempt, prevent waste, and protect the property or title to the property, including but not limited to, appointing the defendant who is not in contempt, or a non-party, as a receiver for the purpose of ensuring compliance with this judgment, managing the subject property, and executing any agreements required to comply with this judgment. Further, jurisdiction is retained for the purpose of enabling any party to apply to the Court for such further orders and direction as may be necessary and appropriate for the construction or carrying out of this judgment, for the enforcement of compliance herewith, or for the punishment of violations thereof.

VIII
EFFECT AND ENTRY

This final judgment shall take effect immediately upon entry.



The Clerk is ordered to enter this final judgment forthwith.

RE: CLEARING AND GRUBBING OF THE COUCH PROPERTY, AMERICAN CANYON, CALIFORNIA

Mr. Cave:

Thank you for the opportunity to submit our fees for the project referenced above. Below you will find our scope of work and our special provisions and exclusions.

SCOPE OF WORK
Demolish all structures and animal pens located on the Couch property, (prior to demolishing the structures an asbestos survey and a release from the air board will be required, along with county or city permits). This proposal does not include any abatement work or costs associated with abatement if any hazardous materials are discovered in the survey.

Remove and dispose of all miscellaneous debris and garbage.

Remove (2) 10,000-gallon fuel tanks, (tanks are presumed to be non-hazardous).

Remove all trees and stumps within the property, removing roots to a minimum of 2". Trees and stumps will be chipped onsite, with all chips and debris hauled offsite for recycling or disposal.

Provide dust control throughout our scope of work.

Our price for this work is: $ 714,000.00
This work is quoted during dry weather months only.

Breakdown of our services for budget purposes:

Remove structures, all animal pens, debris and garbage, working around and leaving the trees and stumps.
Our price for this work is: $ 434,000.00

Remove weeds, trees and stumps.
Our price for this work is: $ 280,000.00

EXCLUSIONS: Removal, transportation, or disposal of any hazardous waste, passage due to weather, import or export of soil, grading, backfill or compaction. Prevailing wage. Any special permits that maybe required other than those quoted above.

Best regards,

Jeff Kroeker
Manager
jknapa

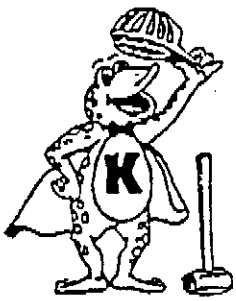
COR

SUBJECT: Status of Enforcement Action:
- Couch's Eucalyptus Grove
- Green Island Road Vehicle Dismantling Yards.

DATE: April 25, 2003

Eucalyptus Grove

On April 16, 2003, in response to a request by Chief Keith Caldwell, ACFPD, Deputy District Attorney, Rich Zimmerman and myself, plus the City of American Canyon's Chief Building Inspector, Joe Willer and newly-hired Code Enforcement Officer, James Cannon, drove through Eucalyptus Grove to make a visual inspection of the Couch's cleanup attempt. We observed many remaining chicken enclosures, another occupied area exhibiting a trailer and misc. storage and a vastly increased wood-cutting and processing operation leased by Bruce Hurst. Oak is now imported and processed at this location in addition to the on-site removal and cutting of existing eucalyptus trees. There are also two operating paintball game facilities on the property, one of which has not complied with the conditions of approval of its' use permit. Deputy District Attorney Rich Zimmerman is researching the current status of any existing legal action by the Napa Superior Court in Daryl Robert's absence. My plan is to send letters of violation to Mike Sinatra, the lessee/operator of "Sherwood Forest" and Bruce Hurst, the lessee/operator of "Oregon Firewood". Robert and Patricia Couch will, of course, be notified as property owners.



I did make two previous inspections of Eucalyptus Grove on October 22, 2001 and January 14, 2002, in response to a request by Deputy District Attorney Daryl Roberts. I have attached a copy of each inter-office memo for your review.

Green Island Road Dismantling Yards

There are four vehicle dismantling yards still operating on Green Island Road and a previously existing yard that was located at 2600 G. I. Road (*Uribe-Pantoja*, use permit revoked in 1999) that still continues to be a legal problem for the District Attorney's office. *California Auto Dismantling*, located at 1578 and *Brian Abbott Dismantling* located at 2580 Green Island Road are operating in compliance with their use permit conditions of approval. *Baker Auto Dismantling*, at 1678 G. I. Road, has been offered for sale and presently exhibits vehicle storage outside of the perimeter fencing. *Vallejo Pull-A-Part*, owned by Isiah ("Poochie") Lewis, located at 2744 Green Island Road, has been a long-standing problem and should be

the focus of our next public nuisance abatement action. There are no current actions taken against any of the yards mentioned above with the exception of the District Attorney's case against Celerino Uribe and Juan Pantoja-Guzman, owners of 2600 Green Island Road. Periodic monitoring of the dismantling yards along Green Island Road, as well as other south county locations, continues by this department and the Department of Environmental Management and often with the American Canyon Fire Protection District.

RE: CLEARING AND GRUBBING OF THE COUCH PROPERTY, AMERICAN CANYON, CALIFORNIA

Mr. Cave:

Thank you for the opportunity to submit our fees for the project referenced above. Below you will find our scope of work and our special provisions and exclusions.

SCOPE OF WORK
Demolish all structures and animal pens located on the Couch property, (prior to demolishing the structures an asbestos survey and a release from the air board will be required, along with county or city permits). This proposal does not include any abatement work or costs associated with abatement if any hazardous materials are discovered in the survey.

Remove and dispose of all miscellaneous debris and garbage.

Remove (2) 10,000-gallon fuel tanks, (tanks are presumed to be non-hazardous).

Remove all trees and stumps within the property, removing roots to a minimum of 2". Trees and stumps will be chipped onsite, with all chips and debris hauled offsite for recycling or disposal.

Provide dust control throughout our scope of work.

Our price for this work is: $ 714,000.00
This work is quoted during dry weather months only.

Breakdown of our services for budget purposes:

Remove structures, all animal pens, debris and garbage, working around and leaving the trees and stumps.
Our price for this work is: $ 434,000.00

Remove weeds, trees and stumps.
Our price for this work is: $ 280,000.00

EXCLUSIONS: Removal, transportation, or disposal of any hazardous waste, passage due to weather, import or export of soil, grading, backfill or compaction. Prevailing wage. Any special permits that maybe required other than those quoted above.

Best regards,

Jeff Kroeker
Manager

Re: City of American Canyon v. Couch

Dear Mr. Frost:

On December 9, 2004, I sent you a letter requesting an accounting of the trust funds being held to perform the required cleanup of the Couch property. To date, I have not received anything from you in this regard and would appreciate receiving such an accounting in the near future. I believe it is beneficial for all parties to know where we stand as to what funds remain to perform the necessary cleanup activities that remain.

There also remain numerous tasks listed in the Stipulated Order that need to be performed. I believe the following summarizes the major issues that remain (the identified paragraph numbers coincide with the Order):

1. Paragraph 1 - Identification of all tenants/occupants on the property. Other than Hurst Firewood and Sherwood Forest, please provide an update on who remains on the property or has some tenancy interest.

2. Paragraph 7 - The Order required the five trailers to be removed from the property by February 15, 2004, or obtain the appropriate permits for them to remain. This work remains uncompleted.

3. Paragraph 8 - The Couch's were required to demolish/remove the four underground tanks no later than May 1, 2004. These items still remain on the property.

4. Paragraph 10 - Scrap metal was to have been removed from the property by May 31, 2004. Although some has been removed, there still remain some such items on the property.

5. Paragraph 11 - By May 1, 2004, the Couch's were to remove all abandoned or dismantled motor vehicles (other than those belonging to the Couch's), and remove the fifteen pieces of heavy equipment. Numerous motor vehicles remain, and the County would like assurances that those remaining are in fact the personal property of the Couch's. Various pieces of heavy equipment have not yet been removed.

6. Paragraph 13 - All motor vehicle tires were to have been removed by March 1, 2004. Although the vast majority has been removed, there still remain some tires on the property.

7. Paragraph 15 - Appropriate permits were to have been obtained for Dave Couch's barn by May 1, 2004, or be demolished and removed by May 31, 2004. The barn remains and has not been permitted.

8. Paragraph 16 - Appropriate permits were to have been obtained for Robert Couch's garage and sheds or be demolished and removed by May 31, 2004. The requirements of this paragraph have not been complied with.

9. Paragraph 18 - All structures in Area 5 used by Glen Couch were to have been demolished and removed by May 31, 2004. The requirements of this paragraph have not been complied with.

10. Paragraph 19 - All structures in Area 5 used by George Couch were to have obtained necessary permits or have been demolished and removed by May 31, 2004. The requirements of this paragraph have not been complied with.

The timelines established in the Stipulated Order for completing the above referenced tasks have not been complied with. I would hope that your clients would continue with their cooperative efforts to bring the property into compliance with the terms and conditions set forth in the Stipulated Order. To that end, please provide me with a timeline in which your clients believe they can accomplish the necessary remaining work in the near future. Hopefully their proposal will be acceptable, which will obviate the need for the County to seek judicial assistance in having these tasks completed. Your prompt attention to these matters is requested.

Very truly yours,

Robert Paul

Robert Paul, Deputy County Counsel

RE: Use Permit #00308-UP
APN 58-030-~~017~~ 06

Dear Mr. Sinatra:

Please be advised that the above-referenced **Use Permit** was **APPROVED** by the Napa County Conservation, Development & Planning Commission on June 6, 2001 based on the attached conditions. The permit became effective on June 21, 2001, pursuant to Napa County Code Chapter 2.88.

Pursuant to Section 18.124.080 of the Napa County Code, the use permit must be activated within one year and ten calendar days from the approval date, or it shall automatically expire and become void on **June 17, 2002.**

An extension of time in which to activate the permit may be granted for a maximum of 12 months, upon application no more than 45 days prior to expiration, and payment of fees in effect at the time of application.

This letter is your only notice regarding expiration and procedures for extension of this permission.

Very truly yours,

Robert Miller for
Michael Miller
Deputy Planning Director

CONDITIONS OF APPROVAL
Use Permit #00308-UP (Sinatra/Couch)

1. The permit is limited to conducting paintball games within the area shown on the attached plot plan. A maximum of 50 participants may utilize the site at any one time. Any expansion or changes in use to be by separate use permit submitted for Commission consideration. Days and hours of operation shall be limited to weekends for general public use and weekdays by groups on a prior appointment basis, sunrise to sunset.

2. The permit shall be limited to a ten (10) year period, with department review at three (3) and six (6) years. The permit holder shall submit annual reports to the Department summarizing the activity of the past year. Such summary shall include the number of participants and hours of operation per month. The permit holder may seek use permit approval at the end of the ten (10) years.

3. A written maintenance agreement, which provides for annual inspections and recommended improvements of the on-site access road by the permit-holders engineer, shall be submitted to the Director and to the Department of Public Works on an annual basis.

4. A minimum of twenty (20) off-street parking spaces shall be maintained on a surface approved by the Department of Public Works.

5. Plans for any outdoor signs shall be submitted to the Department for review and approval in regard to design, area, height and placement.

6. Prior to activation of the use permit the applicant shall provide proof of liability insurance acceptable to the County's Risk Manager.

7. The permit holder shall comply with all applicable building codes, zoning standards and requirements of various County departments and other agencies as stated in the following:
   Department of Public Works letter of ~~April 25, 2001.~~ MAY 18, 2001 RP
   Department of Environmental Management memo of February 2, 2001.
   Napa County Fire Department memo of January 30, 2001.

8. An overflight and noise easement, acceptable to the Director of Aviation, shall be dedicated to the County of Napa prior to conducting any paintball games.

9. No tournaments or special events shall be conducted on the property.

10. No overnight camping or overnight stay in vehicles shall be allowed.

11. Fires and/or outdoor cooking shall be prohibited.

12. No motorcycles, off-road trucks or similar type vehicles shall be allowed off of the access roads.

13. No alcoholic beverages shall be consumed on-site.

14. The playing field boundary shall be clearly marked.

15. Access roads shall remain clear and gates unlocked during playing hours.

16. Security personnel shall be provided from among those in attendance.

17. At the end of each playing day, the site, access road and surrounding area shall be left in a clean and orderly condition.

18. All staff costs associated with monitoring compliance with these conditions and project revisions shall be borne by the applicant and/or property owner, other than those costs related to investigation of complaints of non-compliance which are determined to be unfounded. Costs shall be as established by Resolution #95-77 or as such Resolution may be amended from time to time.

PUBLIC WORKS DEPARTMENT
INTER-OFFICE MEMO

May 18, 2001

TO: Conservation Development and Planning Department

FROM: Annamaria Martinez, Junior Engineer

SUBJECT: **REVISED:** Sinatra/Sherwood Forest Paintball,
#2 Eucalyptus Drive, American Canyon
APN# 058-030-017, File #00308-UP

This application will allow the applicant to establish a paintball recreational operation and to construct eight new parking spaces on a 10-acre portion of a 165.5-acre parcel located on the north side of Eucalyptus Drive approximately 4,000-feet west of Donaldson Way.

EXISTING CONDITIONS:

1. Existing access road is 12-feet wide at the connection with Eucalyptus Drive, varying in width from 11 to 14-feet to the proposed entrance to the Paintball Park. The access road is roughly a four-inch thick gravel road.

2. An existing swale along Eucalyptus Drive is in disrepair near the access driveway and there is no visible culvert.

3. Parking surface is currently dirt and gravel.

RECOMMENDED CONDITIONS:

1. Access drive shall be a minimum of 18 feet wide with 2 feet of shoulder. Structural section shall be a minimum 5 inches of Class II Aggregate Base plus a double chip seal coat or equivalent. (County Road and Street Standards, Page 9, Par. 12)

   An exception to the Napa County Road and Street Standards was granted to the previous use permit holder for said property. The Public Works Department granted the exception for the access road due to the limited use of the property, i.e. weekend and dry-weather use only, and a letter written by a registered Civil Engineer, in which the engineer states that access road is acceptable for intended uses. The current applicant also proposes limited use of the property and has submitted, along with his application, a letter from Bartelt Engineering; therefore, the conditions of the previous exception also apply to this applicant.

2. Any parking proposed by the applicant or required by the Planning Commission as a condition of this use permit must have a minimum structural section of 5 inches of Class II Aggregate Base plus a double chip seal coat or equivalent.

   An exception to the Napa County Road and Street Standards for commercial parking areas was also granted to the previous use permit holder based on the limited use of the facility and the assertion by a licensed civil engineer that the access road and parking areas are acceptable for the intended use. (See #1 above)

3. Parking lot details shall conform to the requirements of the latest edition of the "Napa County Road and Street Standards."

4. Any necessary storm drainage improvements shall conform to the latest "Napa County Road and Street Standards."

   This includes the addition of a culvert and repair of the swale at the driveway connection with Eucalyptus Drive.

5. The applicant must obtain an encroachment permit for any work performed within the Napa County Right-of-Way, including item number 4, above.

Any changes in use may necessitate additional conditions for approval.

If you have any questions regarding the above items at this time please contact Annamaria Martinez or Larry Bogner of this office.

INTER-OFFICE MEMO

TO: Jeffrey Redding, Director
Conservation, Development, and Planning Department

FROM: Barbara Easter, Fire Department

DATE: January 30, 2001

SUBJECT: Sinatra/Sherwood Forest Paintball Use Permit Comments
Apn: 058-030-017 00308-UP

Site Address: 2 Eucalyptus Drive, American Canyon

The Napa County Fire Marshal staff has reviewed the Sinatra/Sherwood Forest Paintball Use Permit application to establish a paintball recreational operation on a 10-acre site. We recommend that the following items be incorporated as project conditions or mitigation measures if the commission approves the project.

1. Access roads from the public and/or private right-of- ways to the project/ building site shall comply with Napa County Road and Street Standards and shall be reviewed by the Napa County Public Works Department.

2. The request for beneficial occupancy ***will not*** be consider until all fire and life safety issues have been installed, tested and final.

3. Fire apparatus access roads shall be designed and maintained to support the imposed loads of fire apparatus and shall be provided with a surface so as to provide driving capabilities in all weather conditions. Said access shall be provided prior to any construction or storage of combustible materials on site.

4. The approved address numbers shall be placed on each building by the applicant in such a position as to be plainly visible and legible from the street fronting the property and shall be placed as to be seen from all entrances. Proposed address shall be indicated on the elevation drawings contained within the building plan submittal. The address numbers shall be a minimum of 10" in height, contrasting in color with their background and shall be illuminated.

5. An approved project sign shall be placed at vehicle access points into the project during construction to assist emergency responders. The sign shall identify the project name and address. Such signs shall be clearly visible and legible from the street fronting the project.

6. A Knox box or a Knox Cabinet shall be installed at approved location by the Napa County Fire Marshal's Office. If the building/suites are protected by a fire or burglar alarm system, the boxes will require "*tamper*" monitoring.

7. The Knox rapid entry system shall have one or all of the following items placed in the Knox box or Knox cabinet, dependant on requirements of this facility:

    1. A minimum of 2 master keys to the building(s) for emergency access.
    2. Scaled site plan of the facility, identifying all buildings, hydrants, fire department access around the facility, and location of all water, electric, and gas shut-off valves.
    3. Scaled floor plans of all buildings showing doors, offices, etc.
    4. Napa County Hazardous Materials Business including all MSDS forms, etc.

8. "Fire Plan Review and Inspection" fees shall be paid to the Fire Department for all applicable plan review and inspection work at the established deposit basis plus project consultation time at the hourly rate of $59 per hour (Napa County Resolution 92-65).

PROJECT STATEMENT FOR MICHAEL SINATRA USE PERMIT APPLICATION

This application is for a use permit on behalf of Michael Sinatra doing business as "Sherwood Forest Paintball" for the operation of a paintball playing field on a 10-acre portion of a 165.5-acre parcel owned by Robert and Patricia Couch. That entire parcel is known as APN 58-030-17.

The applicant, Michael Sinatra, is an experienced operator of this type of recreational playing field. Since 1992 Mr. Sinatra operated a similar playing field on Mare Island and has operated another in the City of Rohnert Park since 1995. Due to a development project undertaken by the California Department of Transportation, Mr. Sinatra was forced to relocate his Mare Island operations with essentially no notice when Highway 37 improvements commenced. After an exhaustive search, the Couch property has been determined to be the only suitable location for Mr. Sinatra's business in the greater Bay Area.

This particular area of American Canyon has long since been associated with paint ball playing fields. With apparent recognition of the entertainment value of this activity for diverse segments of the population, these operations have been consistently granted use permits by the County to operate on the Couch property. Examples include:

1. Mr. Dean Laing previously operated a paintball playing field, use permit #93388-UP, on just one half of the 10-acre space covered by this application. With a lease on only approximately 5 acres, Mr. Laing obtained approval from the County for 20 people to use his playing field each day. That number of people was served by 12 parking spaces.

2. The "Paintball Jungle" business (known in Permit #94354-UP, as "Vallejo Paint Ball Park") is operating under a ten year use permit. This site is directly adjacent to the Sherwood Forest site and is operated by Robert D'Elia. It was first granted a use permit by the County in May of 1994. That use permit allows up to 50 people each day to play paintball games at this site. To accommodate them, a total of 20 parking spaces were created by the operator and approved by the County. One issue that caused particular concern to the County when that application was considered was the lack of quality access roads. In particular, there was concern that emergency vehicles would not have access to the playing field during winter months. That concern was subsequently addressed when the applicant presented an engineer's report in which he agreed to improve the access roads to conform with the Napa County Fire Department's standards.

3. Finally, Use Permit # 91541-UP previously was in effect for a paintball operation on another section of the Couch property.

Mr. Sinatra proposes to operate his playing field similar to the preexisting paintball operations on the Couch Property. As such, his playing field will be open from sunrise to sunset on weekends for general public use. Due to the success of paintball fields for a greater audience in recent years, he also proposes to use the playing field for weekdays by groups on a prior private appointment basis. The audiences he can reach with this weekday use include church groups, non-profit organizations, and youth civic, and corporate groups. With twice the space as Dean Laing, Mr. Sinatra has requested an increase in the operation's capacity up to 50 people each day. To accommodate these additional users, Mr. Sinatra proposes to increase his parking by 8 spaces up to a total of 20 spaces, the same number as has been required for the D'Elia operation, which also is permitted for up to 50 customers per day.

Mr. Sinatra is aware of concerns that the access road leading to his playing field may not permit emergency vehicles to reach his playing field in winter months. To this end, consistent with the requirements imposed on Mr. Elia, Mr. Sinatra proposes to retain the services of a qualified engineer to advise him regarding the work that needs to be performed to provide all weather access to the site. This plan would be submitted for approval by the Public Works Department as a condition of approval for the project. Customers will access Mr. Sinatra's portion of the Couch Property by turning off Eucalyptus Drive on the easterly edge of the eucalyptus grove in which the paintball activities take place, driving in a northerly direction along an existing uninmproved access road that Mr. Sinatra will improve. These improvements will substantially improve the quality of the access road serving Mr. Sinatra's site. They will also serve to improve the safety of the access to the entire Couch property.

Sherwood Forest Paintball Player History

I have operated Mare Island Paintball in Vallejo on land leased to me by the City of Vallejo for approximately ten years. I have been displaced by Cal Trans due to the Highway 37 widening project. It is important to stay in the same area because a majority of my players come from the local area of Napa, the Highway 29 corrider, American Canyon and Vallejo. This year at the Napa County Fair we had a booth promoting Paintball. The only advertising I am currently doing is on the AT&T cable message channel which covers Napa. I have many players from all walks of life from Napa who have enjoyed Paintball. This new location off Highway 29 brings me several miles closer to my playership.

Re: Sherwood Forest Paintball Facility, Eucalyptus Drive, Napa County, CA, APN 058-030-017

Dear Mr. Redding:

At the direction of Michael Sinatra, proprietor of Sherwood Forest Paintball Facility, I have evaluated the current condition of the existing access road. The location of the existing facility is in Napa County west of the city limits of American Canyon. The facility is accessed by an existing road north of Eucalyptus Drive, approximately 4,000 feet west of Donaldson Way. The road in question proceeds north approximately 650 feet from it's intersection with Eucalyptus Drive to the parking lot as shown on the attached site plan. My review included emergency vehicle accessibility to the site year round.

A site reconnaissance revealed that the existing access road and parking lot has a 2 inch to 4 inch layer of 1"-1½" clean, crushed drain rock over a firm, sound base. There was no evidence of base weakness throughout the roadway or parking lot. Additionally, there is sufficient roadway width, height and turning radii's for emergency vehicles access. I concluded that the site can be accessed all year round by appropriate emergency vehicles.

If you have any questions or comments regarding this project please feel free to call me.

Sincerely,

Paul N. Bartelt, P.E.
Principal

SUBJECT: Use Permit Application for Jarquin/Couch-Paintball

DATE: August 31, 1994

APN 58-030-~~17~~ 66 **FILE #** 91541-UP

We have reviewed the above proposal and recommend approval of the application providing the following are included as conditions of approval:

1. That adequate chemical toilet facilities be provided by a chemical toilet service company with a valid permit issued by the Napa County Dept. of Environmental Management. A minimum of one toilet will be required.

2. That all solid waste be stored and disposed of in a manner to prevent nuisances or health threats from insects, vectors and odors.

3. Adequate area must be provided for collection of recyclables.

SUBJECT: Use Permit Application for Dean J. Laing, D.B.A. Storm Paintball Park

DATE: March 3, 1994

APN 58-030-~~17~~ 66 FILE # 93388-UP

Located at No. 2 Eucalyptus Drive

We have reviewed the above proposal and recommend approval of the application providing the following are included as conditions of approval:

1. That adequate chemical toilet facilities be provided. The chemical toilet service company must have a valid health permit issued by the Napa County Department of Environmental Management. Any permanent toilets which will be available to the special event guests, can be subtracted from the total amount of toilets required.

2. That all solid waste be stored and disposed of in a manner to prevent nuisances or health threats from insects, vectors and odors.

3. Adequate area must be provided for collection of recyclables. The applicant must contact the franchised garbage hauler for the service area in which they are located, in order to determine the area and the access needed for the collection site.

Burlingame, CA 94010

Dear Mr. Childress:

Reference is made to your inquiry as to the toxicity of paintballs to the skin and environment.

The ingredients used in Scherer paintballs are listed by the U.S. Food and Drug Adminstration's Center for Food Safety and Applied Nutrition as suitable for use in food products. In addition, the color additives are specifically listed as permitted for use in cosmetic products.

We wish you success on starting your indoor game.

Sincerely,

William E. Heary

Experience the
**** Excitement!***
**** Rush of adrenaline!***
**** Challenge of surviving!***
**** Sweet taste of victory!!***

CONGRATULATIONS! You're about to be introduced to the most thrilling and fastest growing sport of the 90's. PAINTBALL ADVENTURE GAMES. We're sure that once you've experienced a day of this exciting game, you and your friends will be back for more. A day of fun is GUARANTEED!

WHAT IS THE GAME OF PAINTBALL?
The basic two-team game is to capture the flag from the opposing team and successfully return with it to your own flag camp. Each player is armed with a special constant air gun designed to fire harmless paint pellets which mark their target on impact. Once a player is marked, he/she is eliminated. The game provides an opportunity to test your individual skills of stealth and tactics as well as stressing team work, planning and good humored competition.

WHO PLAYS THE GAME?
Anyone and everyone---men and women , all walks of life; office worker, college students, housewives, lawyers---everyone who wants to have a blast!
An ever increasing number of companies, both small and large, are discovering the game and forming department teams to challenge one another. (How about challenging your supervisory staff?!)

DO I NEED MY OWN EQUIPMENT?
No. Everything you need is at the field for rent. Once you get hooked you will most likely want to buy your own equipment. We also have limited equipment and supplies available for purchase.

IS THE GAME SAFE?
Absolutely. It is safer than most any competitive sports. Safety is stressed at our field. The CO2 powered pistol has been specifically engineered for this use. The "pellets" are soft water color marking capsules that are water soluble and do not harm the environment. SAFETY GOGGLES ARE PROVIDED AND WEARING THEM AT ALL TIMES IS REQUIRED.

IS THIS A RADICAL OR MILITANT ORGANIZATION?
Absolutely not! It's a game of strategy, hide and seek, cowboys and Indians all rolled up into one. These games are not a preparation for real combat. We have no affiliation with actual military groups. We're just here to have fun----- and lots of it!!

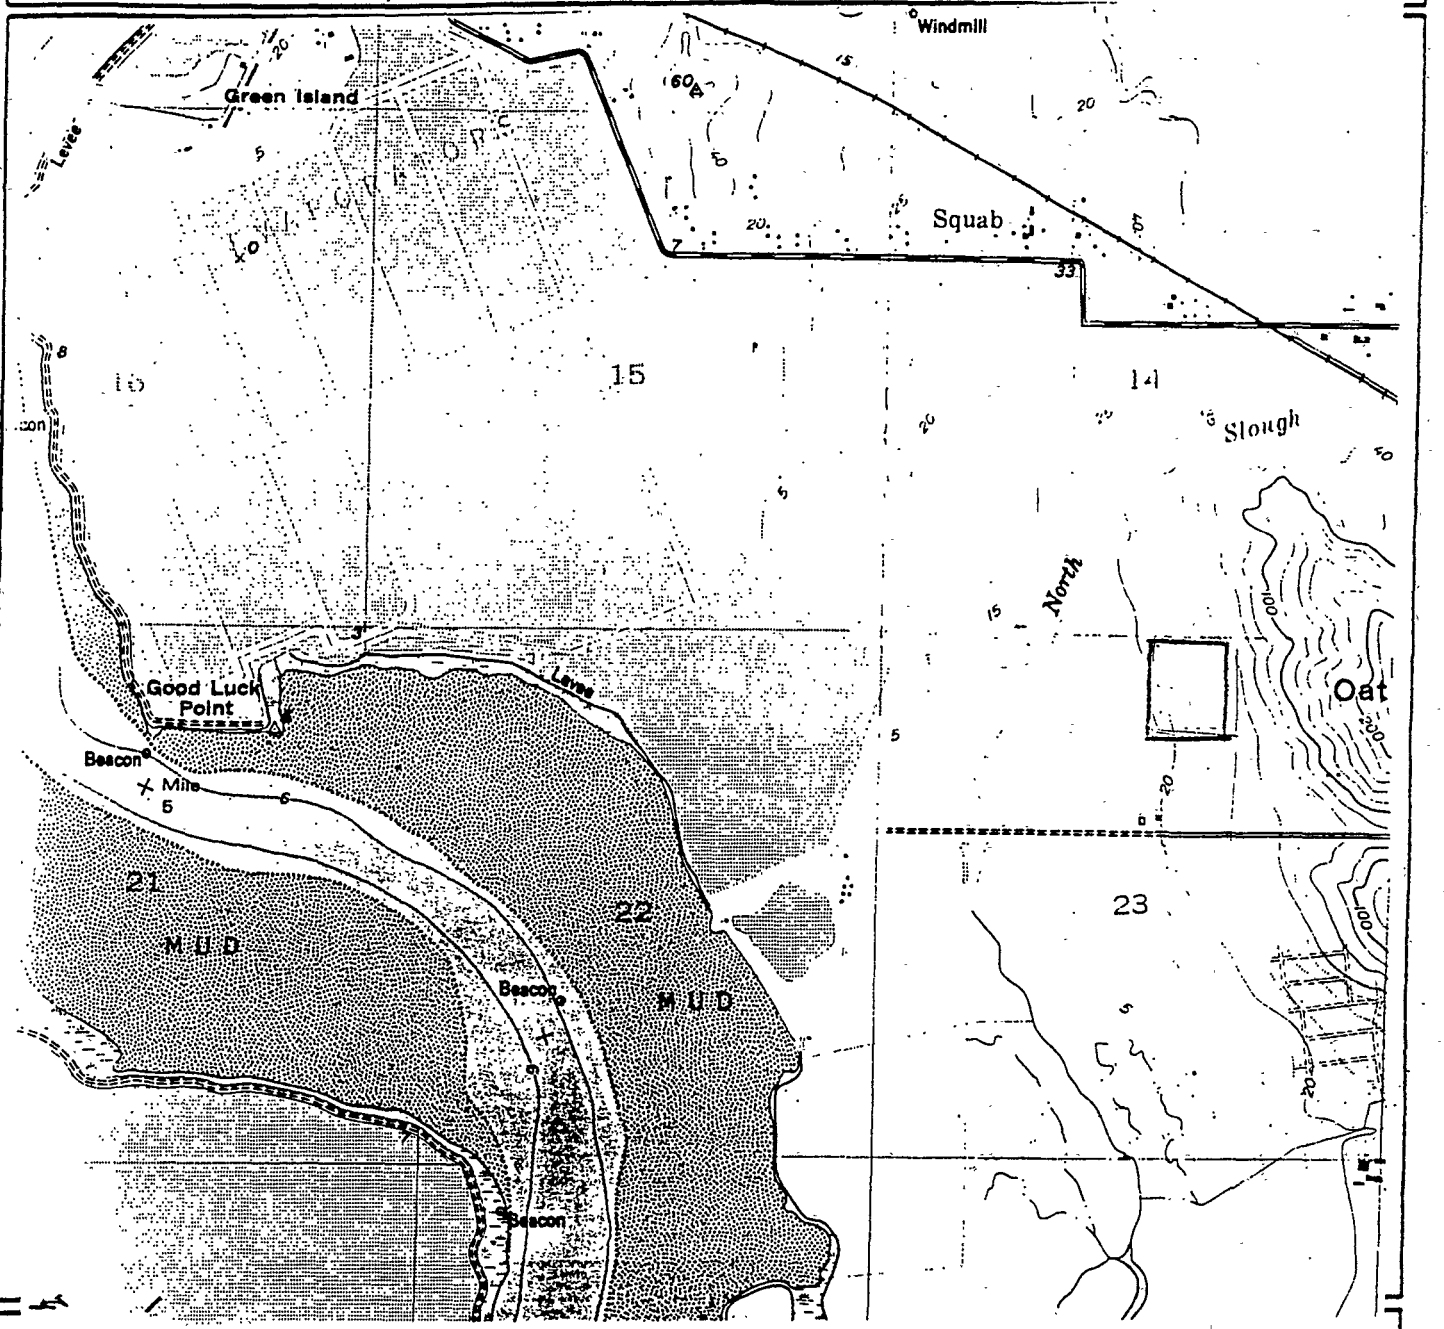
DO I NEED A TEAM TO PLAY?
No. You can come solo, with a couple of friends or a big group. We will divide everyone into two teams to ensure equitable levels of experience. Private games can also be arranged for groups of 30 or more.

WHAT DO I WEAR?
Any type of comfortable clothing (jeans, sweat shirt) is fine. Long-sleeves are recommended. The water dye should wash right out. We also have camouflage clothing available for rent on the field.

WHERE ARE THE GAMES PLAYED?
The field is outdoors on 36 acres located in a eucalyptus grove in Vallejo with thick brush, forts, bunkers and towers providing lots of cover to hide from the opposing team.

WHEN IS THE GAME PLAYED?
Every Saturday and Sunday. (Special arrangements to play during the week can be made for groups of 30 or more.) Players arrive usually around 9:00 a.m. and we wrap up the day approximately 4:00 p.m. (or later if players desire). Each game lasts approximately 20 to 30 minutes.

*** HOW MUCH DOES IT COST?**
Admission: $ 13.00 per person with own equipment.
Gun rentals: $ 10.00 for constant air gun. Includes 1st tank of air free,bulk loader, barrel plug, face mask + goggles . $ 20.00 for limited No. of semi-auto guns.
Paint pellets: $ 13.00 per box of 200 (save on purchase by the case.)



*** CLUB MEMBERSHIP**
A $ 10.00 membership card (valid for 3 months) will allow you to save substantially on all of the above costs.

HOW DO I ARRANGE TO PLAY?
Large groups require advance reservations + a deposit. Please call for information. Walk-ons may show up at the field but we suggest calling prior to the day of play to let us know you are coming.

OUR #1 GOAL IS CUSTOMER SATISFACTION. PLAN ON JOINING US SOON!

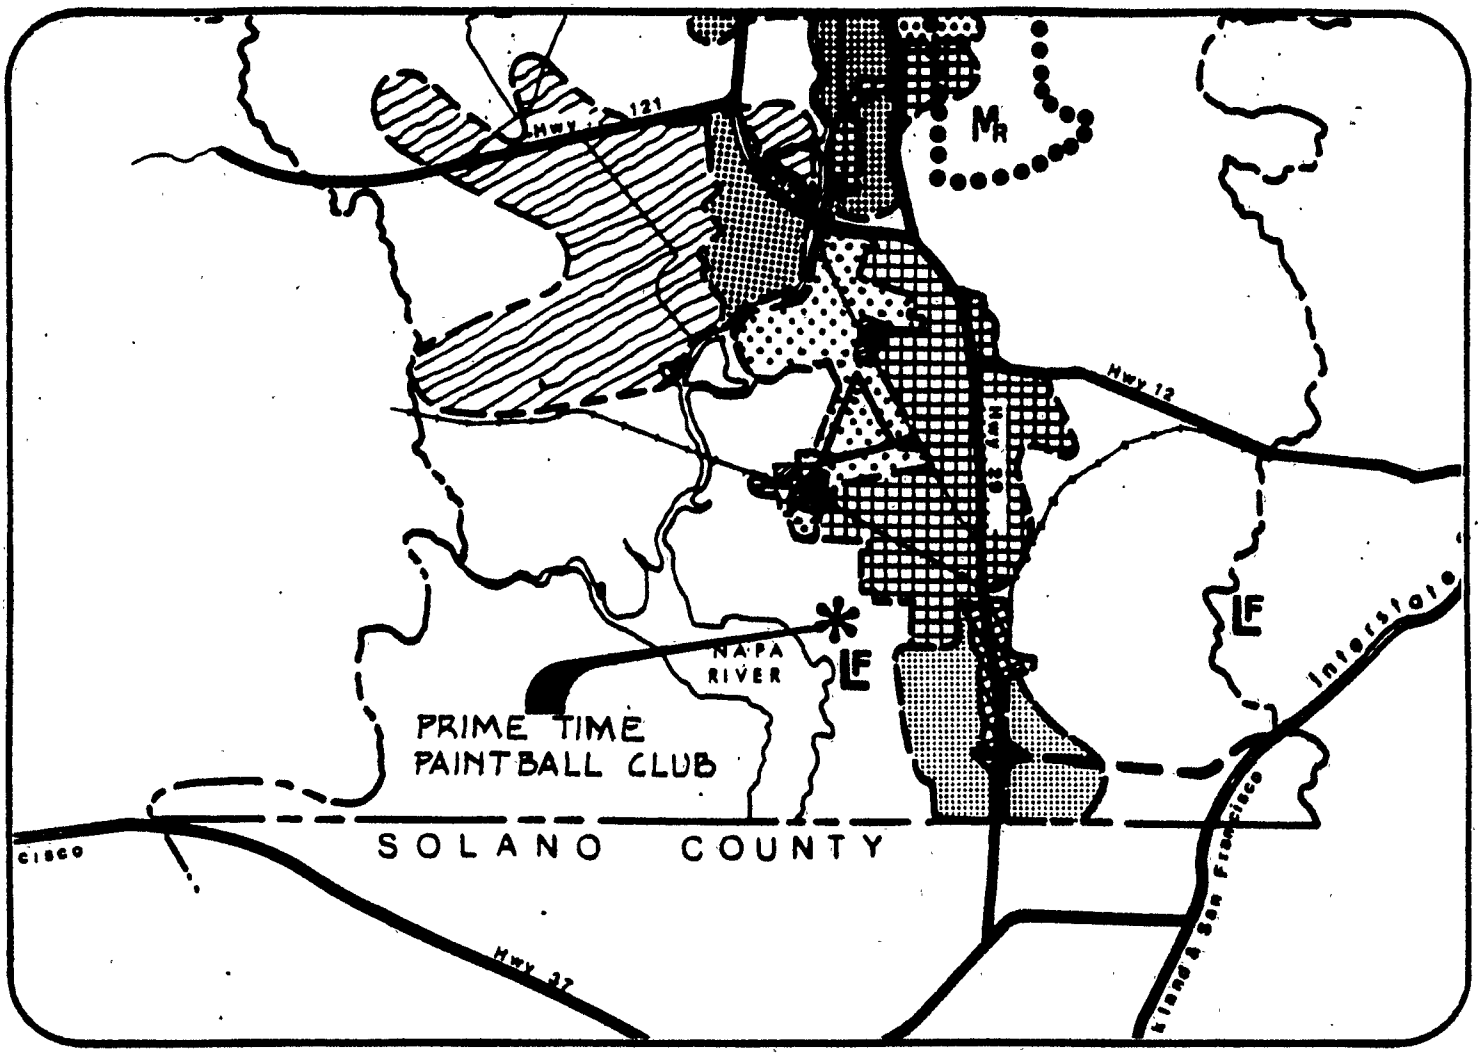
C.A.S.#	Chemical Name	Physical State	Largest Amount
None			



List the hazardous materials that are stored or handled at any one time, equal to or greater than any one of the following amounts: 500 pounds of solids, 55 gallons of liquids, 200 cubic feet of compressed gasses (s.t.p.). Aggregate amounts of the same hazard class are considered one type of hazardous material and must be listed individually below.

C.A.S.#	Chemical Name	Physical State	Largest Amount
	CO^2	Liquid	50 lbs.

If you are unsure about the C.A.S. #, etc., your distributor or supplier should be able to provide you with a M.S.D.S. (Material Safety Data Sheet) which will contain that information. Your Workman's Compensation Insurer and the local libraries may also have access to this information.

If you are a tenant, you are responsible for proper notification to the property owner.

Assessor's Parcel # 58-030-17

Robert D'Elia
3496 Hillsborough Dr.
Concord, CA 94520

Dear Mr. D'Elia:

Please be advised that **Use Permit Application Number 91435-UP** has been approved by the Napa County Conservation, Development and Planning Commission based upon the following conditions.

(SEE ATTACHED LIST OF CONDITIONS OF APPROVAL)

APPROVAL DATE: July 8, 1992 **EXPIRATION DATE: July 18, 1993**

The use permit becomes effective ten (10) working days from the approval date unless an appeal is filed with the Napa County Board of Supervisors pursuant to Title XIII of the Napa County Code. You may appeal the conditions of approval. In the event an appeal is made to the Board by another, you will be notified.

Pursuant to Section 12806 of the Napa County Code, the use permit must be activated by actual use of the facilities for the permitted purposes within one (1) year and ten (10) calendar days from the approval date or the use permit shall automatically expire and become void. A one-year extension of time in which to activate the use permit may be granted by the County provided that such extension request is made thirty (30) days prior to the expiration date. A request for an extension of time is subject to payment of a $300.00 filing fee.

This letter serves as the only notice you will receive regarding the expiration date of your permit or procedures for extension.

Very truly yours,

MICHAEL MILLER
Deputy Planning Director

cc: Jeffrey Redding, Director
John Tuteur, County Assessor
Gary Brewen, Building Codes Administrator
Bill Bickell, Director of Public Works
Trent Cave, Director of Environmental Management
Robert L. Couch, Jr., 2 Eucalyptus Dr., American Canyon 94589

CONDITIONS OF APPROVAL
Use Permit #91435-UP (Robert D'Elia) July 8, 1992

1. The permit be limited to conducting paintball games within the area shown on the attached plot plan. A maximum of 20 participants may utilize the site at any one time. Any expansion or changes in use to be by separate use permit submitted for Commission consideration.

2. The permit be limited to a three (3) year period. The applicant shall submit annual reports to the Department summarizing the activity of the past year. Such summary shall include the number of participants and hours of operation per month. The applicant may seek use permit approval at the end of the three (3) years.

3. No tournaments or special events shall be conducted on the property.

4. The hours of operation shall be limited to weekends and weekday holidays, sunrise to sunset.

5. No overnight camping or overnight stay in vehicles shall be allowed.

6. Fires or outdoor cooking is prohibited.

7. No motorcycles, off-road trucks or similar type vehicles shall be allowed off of the access roads.

8. No alcoholic beverages shall be consumed on-site.

9. Provision for twenty (20) off-street parking spaces shall be maintained on a surface approved by Public works.

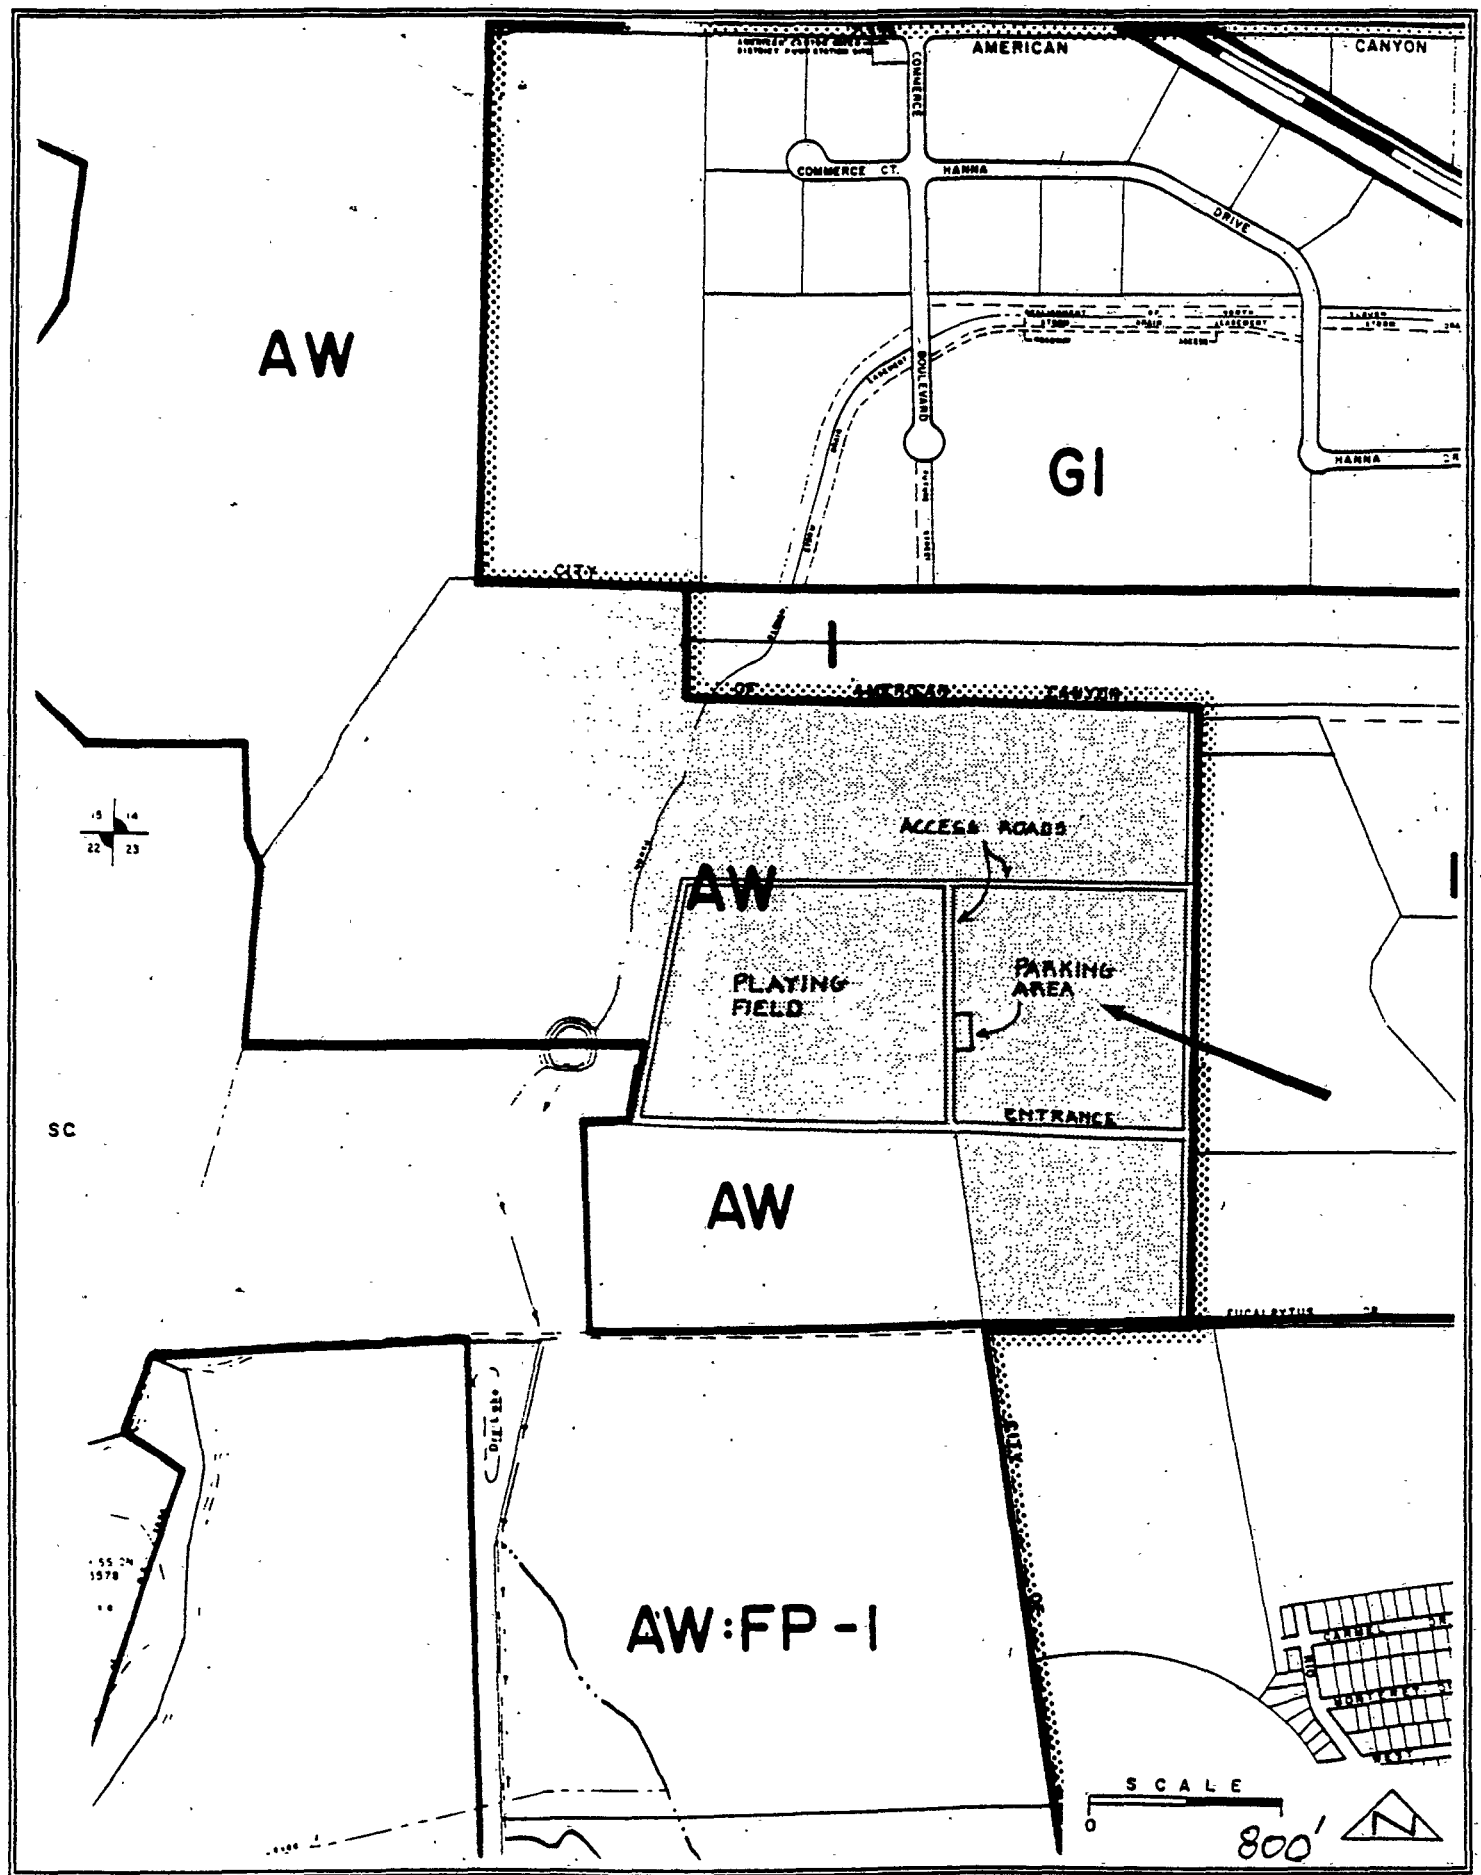
10. Plans for any outdoor signs shall be submitted to the Department for review and approval in regard to design, area, height and placement.

11. Prior to activation of the use permit the applicant shall provide proof of liability insurance acceptable to County Counsel.

12. The playing field boundary shall be clearly marked.

13. Access roads shall remain clear and gates unlocked during playing hours.

14. Security personnel shall be provided from among those in attendance.



15. At the end of each playing day, the site shall be left in a clean and orderly condition.

16. An overflight and noise easement shall be dedicated to the County of Napa prior to conducting any paintball games. The easement shall be acceptable to and approved by the Director of Aviation and the County Counsel.

17. Compliance with all applicable building codes, zoning standards and requirements of various County departments and other agencies.

TO: Napa County Planning Dept. - Jeff Redding, Director

FROM: Dept. of Environmental Mgmt. - Chris Secheli, R.E.H.S.

SUBJECT: Use Permit Application for Robert D'Elia/Vjo Paintball Park

DATE: June 22, 1992

APN 58-030-17 66 FILE # 914235-UP

We have reviewed the above proposal and recommend approval of the application providing the following are included as conditions of approval:

1. That adequate chemical toilet facilities be provided by a chemical toilet service company with a valid permit issued by the Napa County Dept. of Environmental Management. A minimum of one toilet will be required.

2. That all solid waste be stored and disposed of in a manner to prevent nuisances or health threats from insects, vectors and odors.

3. Adequate area must be provided for collection of recyclables. The applicant must contact the franchised garbage hauler for the service area in which they are located, in order to determine the area and the access needed for the collection site.

APPLICATION TITLE: VALLEJO PAINTBALL PARK FILE #: 91435-UP

RESPONSE REQUEST DATE: 4/20/92 RESPONSE RETURN DATE: 5/4/92
FINAL REQUEST DATE: _____ FINAL RESPONSE DATE: _____

This application (see enclosed project description and/or maps) is being sent to you for your review and comment.

With respect to environmental analysis, the County is assuming Lead Agency status for the project and will be preparing the necessary environmental documents.

Please advise us as to which of your permits is required, your environmental concerns, and whether you recommend that a Negative Declaration or an Environmental Impact Report be prepared on this project. Due to the provisions of AB 884, it is essential that we receive your comments within the next 10 days.

1. Do you have jurisdiction by law over this project ☐ Yes ☐ No
   If yes, indicate required permits: _____
2. Indicate areas of environmental concern and availability of appropriate technical data: _____
3. Do you recommend: ☐ Negative Declaration ☐ Environmental Impact Report
4. If the project is approved, recommend conditions-of-approval (use additional page if needed): _____
5. Have you previously reviewed an application on any portion of this project?
   ☐ Yes ☐ No
6. Name of contact person: _____ Telephone: _____

Response Prepared by: _____

Informational Trailer Permit Map
Conservation, Development & Planning Department 1939

ROBERT L. COUCH
TRAILER PERMIT
REQUEST

To obtain a temporary trailer permit for watchman/caretaker purposes on a 171-acre parcel of land located approximately 3,200 feet west of State Highway 29 and 2,500 feet south of Green Island Road within an "M" District. (Assessor's Parcel #58-030-17)

The Director reported that this proposal had been continued by the Commission from the September 5th meeting pending review of use permit and building permit applications on file with the Conservation, Development and Planning Department. Department records, he said, had indicated that a Use Permit to build a residence on the property had been denied by the Commission on April 4, 1966 but approved by the Board of Supervisors on appeal on May 26, 1966. A building permit and certificate of occupancy had been issued to the applicant in March of 1967, within one year of Board approval, for the construction of a garage. Related electrical and plumbing permits had also been issued. It would appear, he continued, that that action had been taken within the required one-year period to start the construction of a residence on the property.

Based on the submitted information and further discussion with the applicant, it would also appear that a temporary construction trailer would be more appropriate to the situation than the request for a temporary watchman trailer. It was the recommendation of the Department, therefore, that the applicant's request for a temporary watchman trailer permit be denied and he be allowed to apply for a temporary construction trailer pending issuance of a building permit and with a waiver of the additional filing fee.

During public hearing, Mr. Couch appeared briefly in support of the proposal indicating his concurrence with the Department's recommendations.

No opponents were present

MOTION BY PELISSA, SECONDED BY MC FARLAND

that the Temporary Trailer Permit Request of Robert L. Couch be denied based on the findings of the Department and that he be allowed to file a new application without additional filing fee in the future for a temporary construction trailer when he was prepared to proceed with construction.

This motion carried on the following roll call vote:

AYES: Blaufuss, Ingalls, McFarland, Pellissa and Vanderschoot
NOES: None
ABSENT: None

Findings and recommendations on which the Commission based their denial of this request are as follows:

FINDINGS:

1. This proposal was continued by the Commission from its September 5, 1973 meeting pending review of use permit and building permit applications on file with the Conservation, Development and Planning Department. Department records indicate that:

   a. A use permit to construct a single-family residence on the property was denied by the Commission on April 4, 1966, but approved on appeal by the Board of Supervisors on May 26, 1966.
   b. The site and surrounding area was zoned M-2 at the time of use permit application. The M-2 zone allowed residences under use permit at the discretion of the Commission. The area was rezoned "M" in 1970. The "M" District does not allow permanent residences under any conditions.
   c. Since the Commission denied the use permit, there were no conditions of approval. The Board of Supervisors' minutes do not indicate any conditions of approval.
   d. Department files indicate problems with the Division of Environmental Quality Control in 1969 regarding methods of water supply and sewage disposal.
   e. Building division files show an application for building permit (#9653) and certificate of occupancy was issued to Robert Couch, Jr. on March 10, 1967, within one year of Board approval, for a garage. A plumbing permit (#5558) was also issued on March 10, 1967 for such fixtures as showers, lavatories, automatic washers, water closets, and water heater.

Building files also contain several electrical permits issued from March 10, 1967 to June 20, 1968.

2. Based on the submitted application, the applicant is:
   a. Living on the property in a garage.
   b. Requests permission to live in a trailer to be located adjacent to the garage until a permanent residence can be constructed on the property.
3. The garage is shown as being detached from a "future house". Construction of permanent residences is not allowed within "M" Districts.
4. An environmental assessment of this project is not required under adopted County guidelines.

CONCLUSION:
It appears that on approval by the Board of Supervisors in 1966, action was taken within one year to start construction of a residence on the property.

Based on the submitted information and further discussion with the applicant, it also appears sthat a temporary construction trailer permit would be more appropriate to this situation rather than the applicant's request for a temporary watchman trailer.

RECOMMENDATION: DENIAL

On the basis that:
1. The applicant be allowed to apply for a temporary construction trailer pending issuance of a building permit to finish construction of the residence started in 1967.
2. Fees paid for the temporary watchman trailer permit be applied to the temporary construction trailer permit.
3. Questions regarding the conversion of the garage to non-occupancy status be resolved with conditions to be attached to final approval of the building permit for completion of the residence.

CONSERVATION, DEVELOPMENT AND PLANNING DEPARTMENT

USE PERMITS

DEPARTMENT REPORT AND RECOMMENDATION
Meeting of May 18, 1994
Agenda Item: #11

APPLICATION DATA:

APPLICANT: **Dean Laing/Storm Paintball Park**
Use Permit Request #93388-UP Filed: 2/24/94

REQUEST FOR: Approval to operate a paintball playing field within a eucalyptus grove on weekends for twenty (20) people.

LOCATION: On a 5 acre portion of a 165.5 acre parcel located north of Eucalyptus Drive approximately 4,200 feet west of its intersection with Donaldson Way in an AW (Agricultural Watershed) zoning District. (Assessor's Parcel #58-030-~~17~~ 066

FINDINGS:

SPECIAL INFORMATION:

1. Details of the proposal are contained in the attached supplemental information sheet.

2. Comments and recommendations from various County departments and other agencies are attached.

3. Two other parts of the site have been used as a paintball playing field since 1987. The requested use of the site is for twenty (20) or fewer players during weekend daylight hours. Air guns are used to propel gelatin covered balls filled with water-soluble paint in games of hide and seek over a marked playing field with temporary wood barricades. Included is a staging and parking area with a portable latrine and a temporary open sided plastic or fabric shelter. The two other paintball playing fields previously approved on the parcel by the Commission are the Vallejo Paint Ball Park (D'Elia applicant) for maximum of 20 users, and the Prime Time Paintball Club (Jarquin applicant) for maximum of 30 users.

4. The proposed access road is a rutted dirt road with a fairly hard base. It is passable for passenger cars except in wet weather. The first part of the access road from Eucalyptus Drive to a point approximately 1,000 feet north is used by customers of both the Vallejo Paint Ball and Primetime Paint Ball. The access road for Primetime continues approximately another 700 feet northerly and approximately 2,400 feet westerly. The Department of Public Works requires paving the road from Eucalyptus Drive to the parking lot. Ambulances and fire

AGENDA ITEM NO. 11

engines can not reach a majority of the property due to seasonal mud.

5. Airport compatibility with Zone E and implementation of airport overflight avigation easement is necessary.

ENVIRONMENTAL ANALYSIS:

6. The project proposal limits the number of participants to maximum of 20 per day on weekends and holidays between sunrise and sunset and includes in the instruction manual procedures for litter control and cleanup of the site as well as sanitary facilities minimizing any potential noise and litter problems.

7. Impacts associated with the establishment of a paintball playing field would not be environmentally significant, individually or cumulatively. The eucalyptus grove is not being harvested. There would be no significant impact on wildlife or water habitat resources, as defined in Section 711.2 of the Fish and Game Code. The Department of Fish & Game offers no comments on this proposal. A Negative Declaration is recommended. (see attached copy).

PLANNING AND ZONING ANALYSIS:

8. The following findings must be made in order to approve the use permit:

   A. The Commission has the power to issue a Use Permit under the Zoning Regulations in effect as applied to the property.

      Analysis: Pursuant to Section 12232 (a) of the County Zoning Ordinance, the establishment of a paintball playing field is permitted in the AW zoning district with a use permit.

   B. The procedural requirements for a Use Permit set forth in Title XII of the Napa County Code (zoning regulations) have been met.

      Analysis: All applicable procedural requirements have been met.

   C. The grant of the Use Permit, as conditioned, will not adversely affect the public health, safety or welfare of the County of Napa.

      Analysis: The proposed use is compatible with the open space character of an area which includes agriculture, a sanitary landfill, a dirt quarry, residential development, industrial development and an incorporated city. Transitional land use of the site is important as an open space buffer strip between the following nearby uses:

      a) General Industrial District on Green Island Road northerly,
      b) Residential part of the City of American Canyon southeasterly,

c) Eventual reuse of the landfill southwesterly,
d) Port of Oakland marshland mitigation westerly, and
e) Cargill Salt Company land reuse northwesterly.

The proximity of the City of American Canyon and unincorporated industrial lands increases the possibility of this site and adjacent parcels being considered for more intensive land uses within the next few years. Therefore, the permit should be timed for future review.

D. The proposed use, as conditioned, complies with applicable provisions of the Napa County Code and is consistent with the policies and standards of the Napa County General Plan. The proposal is in conformance with the General Plan designation of Agriculture, Watershed and Open Space and the AW (Agriculture Watershed) zoning specified for the property.

Analysis:

- The activity proposed is a use which may be permitted within the AW zoning district. Outdoor parks and recreation facilities are compatible with agriculture.

- The proposed use is open space oriented and is consistent with Recreational Policy 2.2 of the Napa County General Plan, which encourages private recreational development that is beneficial to residents and visitors.

- The playing field is within the Airport Land Use Commission's referral area and Zone E of the Airport Land Use Compatibility Zones (see Exhibit "A"). Zone E is characterized as a zone of common flight paths and subject to limited risk and frequent noise intrusion. Overflight easements are required. A paintball playing field with a peak usage of 20 persons is an acceptable density in this zone.

RECOMMENDATION:

ENVIRONMENTAL:

1. Find that the Planning Commission has read and considered the Negative Declaration prior to taking action on said negative declaration and the proposed project.

2. Adopt the Negative Declaration.

PLANNING:

3. **APPROVAL** with Findings and subject to the attached Conditions of Approval.

JO:pjcB21\Laingpai.SR

CONDITIONS OF APPROVAL
Use Permit #93388-UP (Laing)

1. The permit be limited to conducting paintball games within the area shown on the attached plot plan. A maximum of 20 participants may utilize the site at any one time. Any expansion or changes in use to be by separate use permit submitted for Commission consideration. The hours of operation shall be limited to weekends and weekday holidays, sunrise to sunset.

2. The permit be limited to a three (3) year period. The applicant shall submit annual reports to the Department summarizing the activity of the past year. Such summary shall include the number of participants and hours of operation per month. The applicant may seek use permit approval at the end of the three (3) years.

3. No tournaments or special events shall be conducted on the property.

4. No overnight camping or overnight stay in vehicles shall be allowed.

5. Fires or outdoor cooking is prohibited.

6. No motorcycles, off-road trucks or similar type vehicles shall be allowed off of the access roads.

7. No alcoholic beverages shall be consumed on-site.

8. Provision for minimum of twenty (20) off-street parking spaces shall be maintained on a surface approved by Public works.

9. Plans for any outdoor signs shall be submitted to the Department for review and approval in regard to design, area, height and placement.

10. Prior to activation of the use permit the applicant shall provide proof of liability insurance acceptable to County Counsel.

11. The playing field boundary shall be clearly marked.

12. Access roads shall remain clear and gates unlocked during playing hours.

13. Security personnel shall be provided from among those in attendance.

14. At the end of each playing day, the site and surrounding area shall be left in a clean and orderly condition.

15. An overflight and noise easement, acceptable to the Director of Aviation, shall be dedicated to the County of Napa prior to conducting any paintball games.

16. Compliance with all applicable building codes, zoning standards and requirements of various County departments and other agencies as stated in the following:

    (a) Department of Environmental Management memo of March 3, 1994.
    (b) Department of Public Works letter of March 15, 1994.
    (c) American Canyon Fire Department comments of March 23, 1994.

Responsible (R) and Trustee (T) Agencies	Other Agencies Contacted
None	Napa County Airport-American Canyon Fire Protection Dist.-Environmental Management City of American Canyon-California Division of Forestry-Public Works-Sheriff

ENVIRONMENTAL SETTING:

A nearly level site west of Oat Hill within a grove of eucalyptus trees at an elevation of approximately 20 feet above sea level adjacent to North Slough and the City of American Canyon. Surrounding land uses on the same parcel are the Vallejo Paintball Park with Robert B. D'Elia applicant located on a 40 acre portion of the parcel app. 400 feet westerly and the Prime Time Paint Ball Park of applicant Gladis Jarquin located on a 36 acre portion of the parcel approx. 2,400 feet westerly of the Vallejo Paintball Park. Also on Parcel #58-030-17 are abandoned vehicles, an illegal mobile home, and several illegal accessory buildings.

Surrounding land uses include open space northerly, westerly and southerly, a quarry easterly, and residences southeasterly.

ENVIRONMENTAL EFFECTS:
Normally Significant Individual Impacts

		(Growth Inducement)	
__	X	53.	Inducement of substantial residential, commercial, or industrial development.

Mandatory Findings of Significance

		YES	NO
Does the project:			
a)	Have the potential to degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community reduce the number or restrict the range of a rare or endangered plant or animal or eliminate important examples of the major periods of California history or prehistory?	__	X
b)	Have the potential to achieve short-term, to the disadvantage of long-term, environmental goals?	__	X
c)	Have possible environmental effects which are individually limited but cumulatively considerable?	__	X
d)	Have environmental effects which will cause substantial adverse effects on human beings, either directly or indirectly?	__	X

* Mitigable (see Mitigation Measures below)
° Cumulatively Significant Only

Impact Discussion

[All items checked above "YES", "YES, mitigable", or "YES, cumulatively significant" must be discussed below.]

Noise

Limited hours of operation, small number of participants (20) and use of air guns utilizing gelatin - coated paintballs (about the size of a marble) will keep noise levels at an insignificant level. The hours of operation for this field and the other nearby fields is proposed to be limited to weekends and weekday holidays, sunrise to sunset.

Litter

The operations manual for the activity includes that at the end of each playing day the site will be left in a clean and orderly condition. This will keep the playing area from becoming unsightly and unsanitary over time. Those items generally not removed on a daily basis include: staging area tent, portable latrine, temporary wood barricades and playing area markers. Also left behind is the multi-colored effects of the paint on the trees and temporary structures. The paint is non-toxic and water-soluble but tends to remain in place during the dry months of the year.

Fire

The property is located within a general area identified as low fire risk. Access roads should be kept clear and locked gates should remain open during playing hours.

MITIGATION MEASURES:

- X None Required
- ___ Identified By This Study - Unadopted (see attached Draft Project Revision Statement)
- ___ Included By Applicant As Part of Project (see attached Project Revision Statement)
- ___ Recommended For Inclusion As Part of Public Project (see attached Recommended Mitigation Measure List)

BASIS OF CONCLUSIONS:

The conclusions and recommendations contained herein are professional opinions derived in accordance with current standards of professional practice. They are based on a review of the Napa County Environmental Sensitivity Maps, the other sources of information listed in the file, and the comments received, conversations with knowledgeable individuals; the preparer's personal knowledge of the area; and, where necessary, a visit to the site. For further information, see the Environmental Background Information Form contained in the permanent file on this project.

Dean Laing/Storm Paintball Park
Initial Study

AGENCY STAFF PARTICIPATING IN THE INITIAL STUDY:

Resource Evaluation:	James O'Loughlin	Date: April 21, 1994
Site Review:	James O'Loughlin	Date: September 1, 1992
Planning/Zoning Review:	James O'Loughlin	Date: April 21, 1994

PRELIMINARY DETERMINATION:

X No reasonable possibility of environmental effect has been identified, and a Negative Declaration should be prepared.

___ A Negative Declaration cannot be prepared unless all identified impacts are reduced to a level of insignificance or avoided.

DATE: April 21, 1994

BY: James O'Loughlin

James O'Loughlin
Planner III

FINAL DETERMINATION:

On the basis of this preliminary evaluation:

X I find that the project COULD NOT have a significant effect on the environment, and a NEGATIVE DECLARATION should be approved.

___ I find that although the proposed project could have a significant effect on the environment, there will not be a significant effect in this case because the mitigation measures described on an attached sheet have been added to the project. A NEGATIVE DECLARATION should therefore be approved.

___ I find the proposed project MAY have a significant effect on the environment, and an ENVIRONMENTAL IMPACT REPORT would be required:

___ Mitigation measures to reduce all impacts to levels of insignificance or to avoid such impacts have been identified and may be adopted as part of the project.

___ A previously-certified Environmental Impact Report will fully address the impacts of the project, supplemented as necessary for public projects by additional mitigation recommended as part of the project.

___ A new, Subsequent or Supplemental Environmental Impact Report is appropriate for the project.

RE: Storm Paintball Park
Use Permit #93388
APN: 58-030-17
Eucalyptus Dr.

Commissioners:

This permit will allow the applicant to establish a 15 acre paintball playing field on a portion of a 165 acre parcel off of Eucalyptus Drive in southern Napa County.

The following conditions have been provided by the Napa County Public Works Department in order to help the applicant meet applicable County ordinances and standards:

EXISTING:

1. The access road is a rutted dirt road and is 12 to 15 feet wide.

CONDITIONS:

1. The applicant shall construct a sixteen foot Low Density Common Drive from Eucalyptus Drive to the proposed parking area. The minimum structural section on the roadway will be a double seal coat on five inches of Class II aggregate base.

2. The proposed parking area will have a dust free all weather surface i.e. a double seal coat on five inches of Class II aggregate base.

3. All Public Works related improvements will conform to the latest adopted "Napa County Road and Street Standards."

4. Parking lot, grading, and drainage improvements shall be constructed according to plans prepared by a registered civil engineer which are reviewed and approved by this office.

5. An engineering and inspection fee shall be paid to Napa County Public Works prior to approval of the engineered plans. This fee will be three percent of the cost of public works improvements as estimated by the applicant's engineer and approved by this office.

6. Any work performed within the right-of-way of Eucalyptus drive will be performed in accordance with an encroachment permit issued by this office.

The above requirements will become conditions of this use permit upon County approval of this application. If there are any questions regarding the above conditions, please do not hesitate to contact our office.

Very truly yours,

WILLIAM E. BICKELL
Director of Public Works

MEMORANDUM

TO: Napa County Planning Dept. - Jeff Redding, Director

FROM: Dept. of Environmental Mgmt. - Christine M. Secheli, R.E.H.S.

SUBJECT: Use Permit Application for Dean J. Laing, D.B.A. Storm Paintball Park

DATE: March 3, 1994

APN 58-030-17 FILE # 93388-UP

Located at No. 2 Eucalyptus Drive

We have reviewed the above proposal and recommend approval of the application providing the following are included as conditions of approval:

1. That adequate chemical toilet facilities be provided. The chemical toilet service company must have a valid health permit issued by the Napa County Department of Environmental Management. Any permanent toilets which will be available to the special event guests, can be subtracted from the total amount of toilets required.

2. That all solid waste be stored and disposed of in a manner to prevent nuisances or health threats from insects, vectors and odors.

3. Adequate area must be provided for collection of recyclables. The applicant must contact the franchised garbage hauler for the service area in which they are located, in order to determine the area and the access needed for the collection site.

PERMIT APPLICATION AND INITIAL STUDY REQUEST FOR COMMENTS

TO: American Canyon Fire Dept.

APPLICATION TITLE: Dean Laing / Storm Paintball FILE #: 93388-up

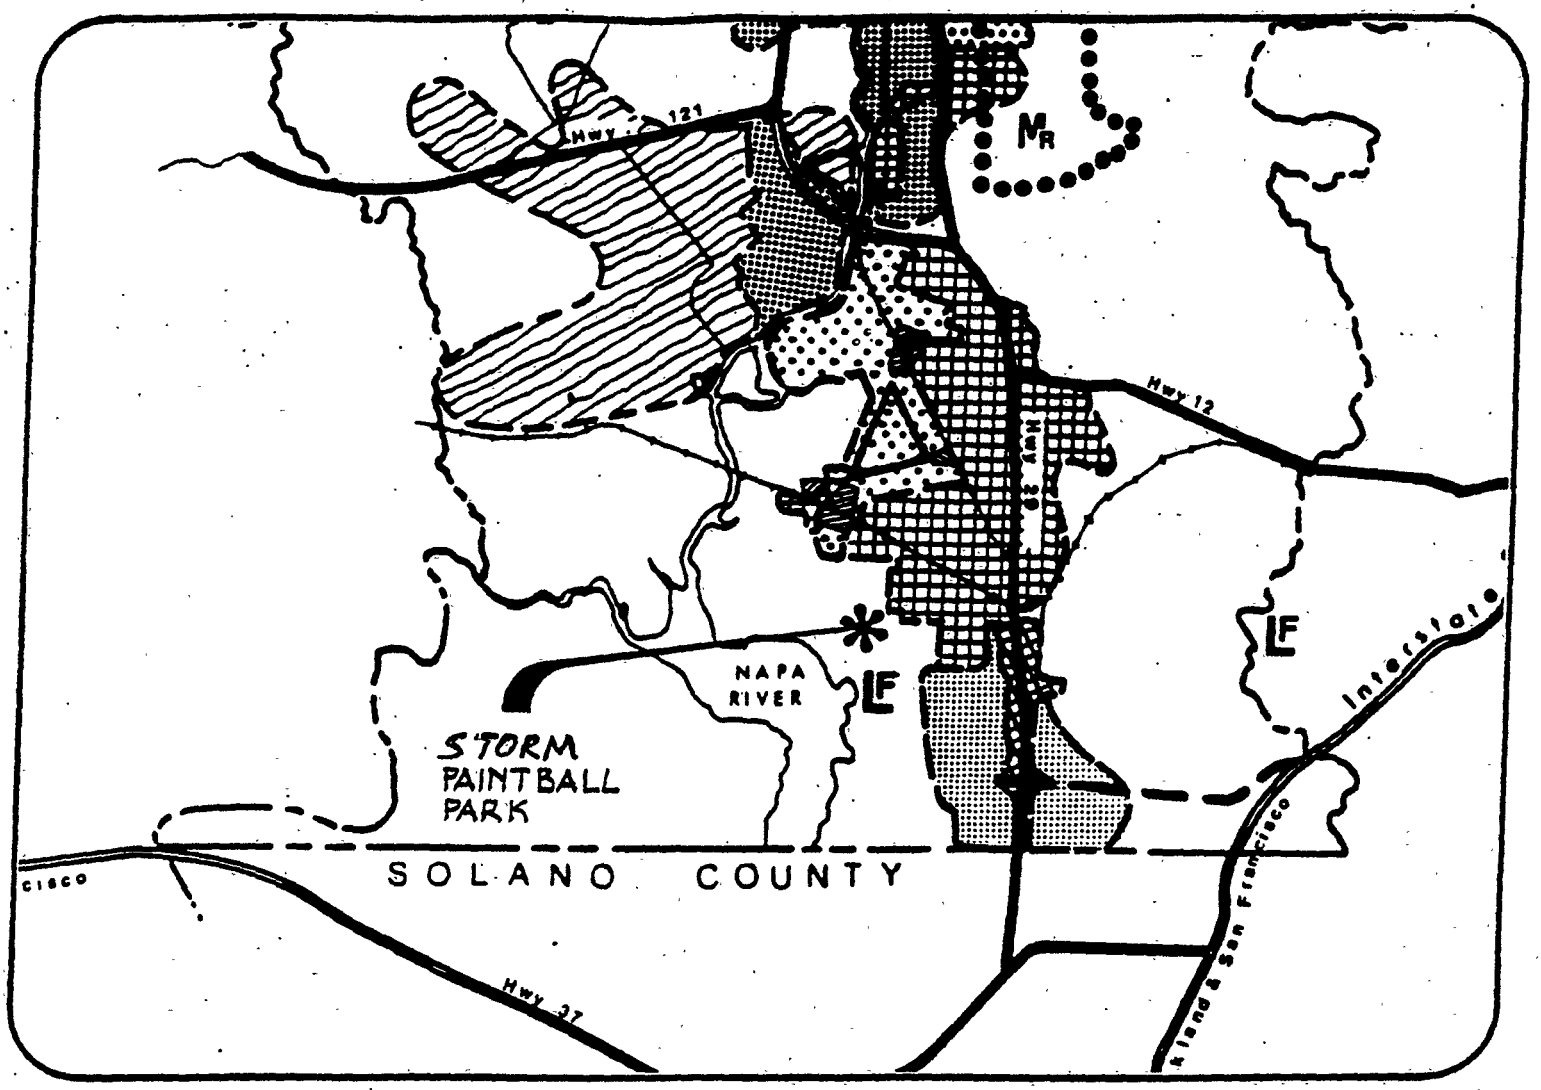
RESPONSE REQUEST DATE: 3-11-94 RESPONSE RETURN DATE: 3-24-94
FINAL REQUEST DATE: _____ FINAL RESPONSE DATE: _____

This application (see enclosed project description and/or maps) is being sent to you for your review and comment.

With respect to environmental analysis, the County is assuming Lead Agency status for the project and will be preparing the necessary environmental documents.

Please advise us as to which of your permits is required, your environmental concerns, and whether you recommend that a Negative Declaration or an Environmental Impact Report be prepared on this project. Due to the provisions of AB 884, it is essential that we receive your comments within the next 10 days.

1. Do you have jurisdiction by law over this project ☐ Yes ☒ No
   If yes, indicate required permits: _____



2. Indicate areas of environmental concern and availability of appropriate technical data:
   None At This Time

3. Do you recommend: ☒ Negative Declaration ☐ Environmental Impact Report
4. If the project is approved, recommend conditions-of-approval (use additional page if needed):
   Applicant should provide all-weather access roads and also provide public telephone for emergency notification. Parking area should be kept clear of combustible grasses and debri. Applicant to maintain fire breaks in and around proposed area.

5. Have you previously reviewed an application on any portion of this project?
   ☐ Yes ☒ No
6. Name of contact person: Keith Caldwell Telephone: (707) 642-2747
   Response Prepared by: Keith Caldwell
   Title: Fire Chief
   Date: 3/23/94

NOTES TO USERS

For information and questions about this map, available products associated with this FIRM including historic versions of this FIRM, how to order products or the National Flood Insurance Program in general, please call the FEMA Map Information eXchange at 1-877-FEMA-MAP (1-877-336-2627) or visit the FEMA Map Service Center website at http://msc.fema.gov. Available products may include previously issued Letters of Map Change, a Flood Insurance Study Report, and/or digital versions of this map. Many of these products can be ordered or obtained directly from the website. Users may determine the current map date for each FIRM panel by visiting the FEMA Map Service Center website or by calling the FEMA Map Information eXchange.

Communities annexing land on adjacent FIRM panels must obtain a current copy of the adjacent panel as well as the current FIRM Index. These may be ordered directly from the Map Service Center at the number listed above.

For community and countywide map dates refer to the Flood Insurance Study report for this jurisdiction.

To determine if flood insurance is available in this community, contact your insurance agent or call the National Flood Insurance Program at 1-800-638-6620.

Base map information shown on this FIRM was derived from Coastal California LiDAR and Digital Imagery dated 2011. USDA NAIP 2012 imagery is used in areas not covered by the Coastal California imagery.

Madera, CA 93637

Subject: **Limited Phase II Subsurface Investigation**
35.85 Acre Parcel, APN 058-030-065, American Canyon, California
ATC Project Number: 118EM01181

Dear Mr. Doswald:

ATC Group Services LLC (ATC) has prepared this report to document field activities and findings for the Limited Phase II Subsurface Investigation (Phase II) for the above-referenced property for Stravinski Development Group (herein referred to as the Client). The Phase II was completed in accordance with our proposal (ATC Proposal 118-2018-0065).

SITE DESCRIPTION

The Land referred to in this report is situated in the City of American Canyon, County of Napa, State of California (Figures 1 and 2), and is described as follows: Parcel 3, as shown on that certain Map entitled "Lands of Couch Parcel Map", filed November 8, 2012 in "Book 26 of Parcel Maps at pages 87 - 90 in the office of the Napa County Recorder of Napa County. The property is located within the northern section of the City of American Canyon in an area characterized by industrial uses and undeveloped land (Figure 2). The property consists of one parcel totaling approximately 35.85 acres of undeveloped land. The property is located to the north of Eucalyptus Drive and to the west of the city utility access road.

The nearest water body is a tributary of the North Slough which is located approximately 200 feet to the west of the property.

Based on the United States Geological Survey (USGS) 7.5-Minute Topographic Maps, Cuttings Wharf, California and Cordelia, California Quadrangles, dated 2012, the property is located approximately 19 feet above mean sea level (MSL) and has a sloping topography towards the west (Figure 1).

Based on the California Department of Conservation, California Geological Survey, Preliminary geologic map of Solano County and Parts of Napa, Contra Costa, Marin, and Yolo Counties, the property is primarily underlain by older alluvium, consisting of mainly flood-plain and alluvial-fan deposits adjacent to mountainous areas. These deposits are comprised of sand, gravel, silt, and clay, and is irregularly interstratified and commonly unconsolidated. This series is of the Quaternary era.

Considering the surface topography for the property area, as interpreted from the Cuttings Wharf, California and Cordelia, California topographic quadrangles, local groundwater is expected to flow towards the west. Depth to groundwater beneath the site has not been determined.

BACKGROUND

According to ATC's *Phase I Environmental Site Assessment* (Phase I ESA), dated June 6, 2018 (Attachment D), the site reconnaissance of the Couch Property identified small quantities of hazardous wastes, including drums containing hazardous materials, two 10,000-gallon former USTs, and the other containers of hazardous materials. These hazardous materials were first noted by Napa County in 1990 and appear to have been removed by the property owners except for some gas cylinders and a 3,000-gallon former underground storage tank (UST). The location of the removed items is unknown, however, areas that had recently been disturbed and areas with a lack of vegetation were noted during the site reconnaissance. Based on the fact that the locations of the former USTs and drums noted above is unknown and the lack of sampling including groundwater sampling, ATC considered the potential impacts from the USTs to be a *recognized environmental condition*. Therefore, ATC recommended a Phase II for the property.

SCOPE OF WORK

ATC was requested to conduct Limited Phase II ESA consisting of advancing soil borings for the collection of soil and groundwater to determine potential subsurface impacts at the property due to the concerns noted above. This work was performed under the oversight of a California state-licensed professional geologist.

Pre-Field Activities

Prior to initiating field activities, ATC prepared a site specific Health and Safety Plan (HASP) for the site. The HASP complied with Title 29 of the Code of Federal Regulations (CFR) Section 1920.120(j), the California General Industry Safety Order (GISO) and Title 8, California Code of Regulations (CCR) Section 5192. A copy of the HASP was on-site during all field activities.

A drilling permit for temporary soil borings was obtained from the Napa County Department of Environmental Management (NCDEM) (Attachment A).

The public underground utility locating service USA North was notified to identify public utilities in the work area. Private utility locating was conducted by GPRS of San Francisco, California to identify underground utilities on the subject property.

Drilling and Soil Sampling Activities

On November 6, 2018, drilling using direct-push technology was performed on the property by Cascade Drilling of Richmond, California. Originally three (3) soil borings (SB-1, SB-2, and SB-3) were planned to be advanced for the collection of soil and groundwater samples. However, due to issues encountered in the field, only borings SB-2 and SB-3 were advanced.

Boring SB-2 was advanced to a depth of 40 feet below ground surface (bgs). The boring was advanced using approximately 2-inch outer diameter rods and soil samples were collected by advancing the rods with acetate sample liners in discrete intervals. After each interval, the core was retrieved, core barrel disassembled, and the sample liner was removed and transferred to the onsite geologist for sample collection, field screening, and logging. Down-hole equipment was decontaminated prior to use.

The soil boring was logged using the Unified Soil Classification System. A photo ionization detector (PID) was used to screen soil samples in the field and the PID readings for each sample were included on the boring logs (Attachment B). Selected soil samples were sealed with Teflon tape and plastic end caps. Samples selected for laboratory analysis from SB-2 were from depths of 10, 20, and 38 feet bgs.

Following completion of sample collection and removal of tooling, the borings were backfilled with neat cement grout as required by the NCDEM. Investigation derived waste was left onsite in a drum.

Groundwater Sampling

Attempts were made to sample groundwater in borings SB-2 and SB-3. In boring SB-2, groundwater was not encountered to a depth of 40 feet bgs, the maximum depth explored. Boring SB-3 was advanced to a depth of 40 feet bgs using a hydropunch sampler in an attempt to collect groundwater samples only, therefore no soil samples were collected. The hydropunch sampler was advanced to a depth of 40 feet and then the sampler was pulled up to expose the sampling screen. However, after waiting at least 30 minutes, no groundwater was found in the boring.

Laboratory Analysis

The soil samples were labeled and placed into a cooler with ice following sampling. All samples were transferred under appropriate chain-of-custody documentation to McCampbell Analytical, Inc. of Pittsburg, California. Laboratory analytical documentation is provided in Attachment C.

Laboratory analysis of the soil samples consisted of the following:

- Total Petroleum Hydrocarbons (TPH) multi-range (gasoline, diesel, and motor oil) by EPA Method 8015
- Volatile Organic Compounds (VOCs) by EPA Method 8260
- CAM 17 by EPA Methods

RESULTS

The soil encountered in boring SB-2 consisted of well-graded gravel to a depth of 3 feet which was underlain by clay from 3 to 14 feet bgs, sandy silt and silty sand layers from 14 to 23.5 feet bgs, silt from 23.5 to 32 feet bgs, and clay from 32 feet bgs to 40 feet bgs, the maximum depth explored. Groundwater sampling was attempted in borings SB-2 and SB-3 but groundwater was not encountered in either boring to a depth of 40 feet bgs.

Laboratory analytical documentation is provided in Table 1 and in Attachment A. The results of this assessment were compared to the Tier 1 Environmental Screening Levels (ESLs) from the San Francisco Bay Regional Water Quality Control Board (RWQCB) dated February 2016. The ESLs are considered to be conservative. Under most circumstances, and within the limitations described in the ESL guidance document, the presence of a chemical at concentrations below the corresponding ESL can generally be assumed to not pose a significant threat to human health and the environment. Additional evaluation will generally be necessary at sites where a chemical is present at concentrations above the corresponding ESL.

The results of the analysis of the soil samples indicated the following:

- Concentrations of TPH as gasoline, diesel, and motor oil were not detected above the laboratory method detection limits.
- Concentrations of VOCs were not detected above the laboratory method detection limits.
- Arsenic was detected at a maximum concentration of 11 milligrams per kilogram (mg/kg) which is above the ESL of 0.067 mg/kg. It should be noted that the maximum concentration of background levels of arsenic in California soils is 11 mg/kg as indicated in a study entitled Background Concentrations of Trace and Major Elements in California Soils by Bradford dated March 1996.
- The remaining metals were either detected at concentrations below the ESLs or below the laboratory method detection limits.

SUMMARY AND CONCLUSIONS

In the Phase I ESA by ATC dated June 6, 2018, ATC considered the potential impacts from the former USTs and drums on the Couch Property to be a *recognized environmental condition* and this conclusion

was based on the fact that the locations of the former USTs and drums are unknown and the lack of sampling including groundwater sampling.

On November 6, 2018, three (3) soil borings (SB-1, SB-2, and SB-3) were advanced at the property. Groundwater sampling was attempted in borings SB-2 and SB-3 but groundwater was not encountered in either boring to a depth of 40 feet bgs. With the exception of arsenic, no analytes were detected in the soil samples collected above the ESLs. The maximum concentration of arsenic was noted at the maximum background level for California soils. Concentrations of TPH as gasoline, diesel, and motor oil and VOCs were not detected above the laboratory detection limits.

In order for potential impacts from the Couch property to impact the subsurface of the subject property the following conditions would have to be satisfied:

1. The potential contaminants would have to be released and the release would have to migrate to the subsurface,
2. The impacts would then have to travel through the soil column to groundwater which is at a depth below 40 feet bgs,
3. The contaminants would then have to migrate in the groundwater in the direction of the subject property, and
4. The contaminants would have to arrive beneath the property in sufficient concentrations to be a concern.

As such, although a degree of uncertainty exists, based on these enumerated factors taken altogether, it would appear to be unlikely that impacts from the Couch property could impact the subject property.

As noted in the ASTM standard, the term *recognized environmental condition* means the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property. Since this investigation indicates that it would appear to be unlikely that impacts from the Couch property could impact the subject property, the *recognized environmental condition* noted in the Phase I ESA by ATC dated June 6, 2018 is no longer considered to exist. Further investigation of potential impacts from the Couch property on the subject property is not recommend at this time.

LIMITATIONS AND RELIANCE

This report was prepared in accordance with the scope of work outlined in ATC's contract and with generally accepted professional engineering and environmental consulting practices existing at the time this report was prepared and applicable to the location of the site. To the extent this report is based on information provided to ATC by third parties, ATC may have made efforts to verify this third party information, but ATC cannot guarantee the completeness or accuracy of this third party information. The opinions expressed and data collected are based on the conditions of the site existing at the time of the field investigation. No other warranties, expressed or implied are made by ATC.

This report is for the use and benefit of, and may be relied upon by SDG Commerce 330, LLC, Stravinski Development Group, LLC, Peter T. Stravinski, and any affiliates and their respective successors and assigns, in conjunction with a commercial real estate transaction involving the property. No third party is authorized to use this report for any purpose. Any use by or distribution of this report to third parties, without the express written consent of ATC, is at the sole risk and expense of such third party.

This report is for the use and benefit of, and may be relied upon by Metlife Investment Advisors, LLC and any affiliates and their respective successors assigns, in conjunction with a commercial real estate transaction involving the southerly 15.24 acres of the land that is the subject of this report more particularly described in Exhibit A.

ATC Group Services LLC agrees that, at its sole cost and expense, it shall maintain in full force and effect, in form and content (including deductible and self-insurance retentions, if any), and with carriers, acceptable to MetLife, the following primary and noncontributory policy of insurance: Professional Liability Insurance covering liability imposed by law or by contract arising out of negligence, errors, omissions or intentional misconduct in the performance of its services, in an amount of not less than five-million Dollars ($5,000,000). The foregoing insurance shall be kept in force for a period of at least two (2) years following the date of this letter.

ATC Group Services LLC represents that they have used the degree of care and skill ordinarily exercised by consultants in the preparation of this report and in the assembling of data and information related thereto, and that there are no other reports prepared by ATC Group Services LLC related to the Property that have not been appended to this report.

ATC appreciates the opportunity to assist you on this project. If you have any questions or require additional information, please contact Bryan Campbell at 925-804-2858.

Respectfully submitted,
ATC Group Services LLC

Bryan Campbell, PG, CHG

E18-00851

Napa County Use Only
FEE EXEMPT SITE: Y / (N)
If NO, FEE $ 740.35
Date 10/24/18 By AB
Receipt # 131834
Permit # E18-00851

Application for: Monitoring Wells ____ Extraction Wells ____ Other ____
Cathodic Protection Wells ____ Exploratory Hole (boring) X
(Please check one)

Type of Investigation: Geotechnical ____ Phase 2 X LOP ____ Other ____
(Please check one)

LOP SITE NUMBER: ____

ASSESSOR'S PARCEL NUMBER: 058-030-065

The following **MUST** be included before this permit application can be processed:
1. Assessor's Parcel Number
2. Well location map (showing both proposed and existing wells)
3. Permission document(s) (if required)
4. Encroachment permit(s) (if required)
5. Clearance from public agency(ies) (if required)

Site Name: 330 Commerce Boulevard	Property Owner: AMERICAN CANYON FLAT LAND CO INC
Site Address: Commerce Boulevard	City: American Canyon Zip: 94503
Owner's Mailing Address: 17674 N Woodson Avenue	City: Fresno, CA Zip: 93711
Drilling Contractor: Cascade Drilling	Type of License: C57 DONALD WINGLEMIRE II
Mailing Address: 120 South 23rd Street	License #: C-57 #938110 Exp. 11/1/18
City: Richmond State: CA Zip: 94804	11/1/19 CERT. RCVD. (AG)
Consultant: ATC Group Services LLC	Telephone #: 925-804-2858
Address: 2400 Camino Ramon, Suite 360 City: San Ramon State: CA Zip: 94583	
Responsible Person at Site: Bryan Campbell	Cell Phone # 925-250-5256

Type of Work

New Construction of wells - _____, # of wells _____ Destruction of wells - _____, # of wells _____
Reconditioning of wells (reconstruct or repair) - _____ - # of wells _____
Wells currently on Site? - _____ - # of wells _____ New Construction of borings 3 , # of borings ____

Reason for Well Installation (Check as many as apply):

Underground tank site:	Surface Impoundment:
Tanks Still Present:	Landfill Site:
Spill or Discharge Site:	Cathodic Protection:
Baseline Study:	Other: Possible impacts from nearby property

Other Site Information:

Closest Distance to:

Septic System: None Onsite	Sewer Line: None Onsite	Water Wells: None Onsite	Rivers, Creeks, or Lakes: 1,000 feet
Underground Utilities: None	Underground Storage Tanks: None		

Riparian Cover Permit Required? Yes _____ No X
Issued by the County Public Works Dept. *(Attach Copy)*
May apply to any site outside City limits and within 150 feet of a designated waterway.

gyan.rusconi@atcgs.com NOV 16th

Permit Application
Page 2 of 2

Well/Boring Location: Are all wells/borings covered by this application on a single parcel and not on adjoining parcels or public or utility rights-of-way? Yes X No_____ If no, list other parcels, public rights-of-way or utility rights-of-way.
Note: Each parcel with a new well or new boring must have a separate permit for that parcel.

1. Owner or R/W Owner:	Site Address:		APN:
Owner address:	City:	State:	Zip:
Number of Wells:	Permission Document Attached:		
2. Owner or R/W Owner:	Site Address:		APN:
Owner address:	City:	State:	Zip:
Number of Wells:	Permission Document Attached:		
3. Owner or R/W Owner:	Site Address:		APN:
Owner address:	City:	State:	Zip:
Number of Wells:	Permission Document Attached:		

NOTE: For each parcel listed above which is under different ownership, a letter authorizing access and work on the property must be submitted.The letter must include address, Assessor's parcel number and the notarized signature of the owner or legal agent for the owner. If any wells are proposed on public or utility rights-of-way, a written clearance and/or encroachment permit must accompany application.

Well/Boring Construction

Bore Hole Diameter: 3 in.	Maximum Depth: 50 feet	Annular Space: N/A
Casing: Diameter: N/A	Gauge: N/A	Material: N/A
Grout: Depth of Seal: N/A	Type of Grout: Boring will be filled with neat cement grout when done	
Conductor Casing: Yes_____	No X	

_____ Check if wells are intended to be constructed into aquifers below the first encountered one. Indicate how cross contamination will be prevented on a separate sheet.

Well reconstruction and destruction applications must include a written description of work proposed and existing well information.

Disposal Methods

Soil Cuttings Drum, transportation, and disposal Development/Rinsate Water Drum, transportation, and disposa

In applying for this permit, I understand that the drilling contractor and the consultant are responsible for the following:

1) Compliance with the State of California Worker's Compensation Laws;
2) Compliance with the State and Federal Worker Health and Safety Laws;
3) Location of all underground and aboveground utilities which might be impacted by the proposed work;
4) Compliance with the Napa County and State of California well requirements;
5) Notification to Napa County PBES at least two (2) workdays before work is initiated,
6) Notification to Napa County within two (2) workdays of the discovery of contaminated soil or ground water and;
7) Filing a completed well log for each well within four (4) months of completion to Napa County and the State Department Water Resources.

Signature of Authorized Agent of Drilling Contractor — Date: 10-24-18

FOR OFFICIAL USE ONLY:

____ Required certificate of current worker's compensation insurance is on file with DEM;
Consultant: Exp. Date:_____ Confirmed:_____
X Contractor: Exp. Date: 11/1/19 Confirmed: 10/31/18 AC

Permit Issued by: SEE BELOW Date: 10/31/18

Permit is valid for one (1) year from date of issuance.

2008

Glossary of Terms & Qualifier Definitions

Client: ATC Group Services
Project: 118EMO1181; Stravinski
WorkOrder: 1811490

Glossary Abbreviation

%D	Serial Dilution Percent Difference
95% Interval	95% Confident Interval
DF	Dilution Factor
DI WET	(DISTLC) Waste Extraction Test using DI water
DISS	Dissolved (direct analysis of 0.45 µm filtered and acidified water sample)
DLT	Dilution Test (Serial Dilution)
DUP	Duplicate
EDL	Estimated Detection Limit
ERS	External reference sample. Second source calibration verification.
ITEF	International Toxicity Equivalence Factor
LCS	Laboratory Control Sample
MB	Method Blank
MB % Rec	% Recovery of Surrogate in Method Blank, if applicable
MDL	Method Detection Limit
ML	Minimum Level of Quantitation
MS	Matrix Spike
MSD	Matrix Spike Duplicate
N/A	Not Applicable
ND	Not detected at or above the indicated MDL or RL
NR	Data Not Reported due to matrix interference or insufficient sample amount.
PDS	Post Digestion Spike
PDSD	Post Digestion Spike Duplicate
PF	Prep Factor
RD	Relative Difference
RL	Reporting Limit (The RL is the lowest calibration standard in a multipoint calibration.)
RPD	Relative Percent Deviation
RRT	Relative Retention Time
SPK Val	Spike Value
SPKRef Val	Spike Reference Value
SPLP	Synthetic Precipitation Leachate Procedure
ST	Sorbent Tube
TCLP	Toxicity Characteristic Leachate Procedure
TEQ	Toxicity Equivalents
WET (STLC)	Waste Extraction Test (Soluble Threshold Limit Concentration)

Quality Control Qualifiers

F2	LCS/LCSD recovery and/or RPD is out of acceptance criteria.

NOTES: - STLC and TCLP extractions require 2 days to complete; therefore, all TATs begin after the extraction is completed (i.e., One-day TAT yields results in 3 days from sample submission).

- MAI assumes that all material present in the provided sampling container is considered part of the sample - MAI does not exclude any material from the sample prior to sample preparation unless requested in writing by the client.

Analysis Requested

MAI clients MUST disclose any dangerous chemicals known to be present in their submitted samples in concentrations that may cause immediate harm or serious future health endangerment as a result of brief, gloved, open air, sample handling by MAI staff. Non-disclosure incurs an immediate $250 surcharge and the client is subject to full legal liability for harm suffered. Thank you for your understanding and for allowing us to work safely.

* If metals are requested for water samples and the water type (Matrix) is not specified on the chain of custody, MAI will default to metals by E200.8.

Please provide an adequate volume of sample. If the volume is not sufficient for a MS/MSD a LCS/LCSD will be prepared in its place and noted in the report.

Comments / Instructions: All samples preserved with ice

Environmental Professional Statement:
I declare that, to the best of my professional knowledge and belief, I meet the definition of *Environmental Professional* as defined in § 312.10 part of 40 CFR 312. I have the specific qualifications based on education, training and experience to assess a property of the nature, history and setting of the subject property. I have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

Bryan Campbell, PG, GHG, Project Manager
Branch Manager

1.2 Findings and Conclusions Summary

ATC has performed this Phase I Environmental Site Assessment (ESA) of the property in conformance with the scope and limitations of ASTM Standard Practice E1527-13. Any exceptions to, or deletions from, this practice are described in Section 2.0 of this report. This assessment has revealed no evidence of *recognized environmental conditions* in connection with the property, except as noted in the summary of report findings and conclusions below.

FINDINGS AND CONCLUSIONS SUMMARY							
Report Section		Further Action?	De minimis Condition	REC and/or CREC	Historical REC	ASTM Non-Scope Condition	Description
4.0	User Provided Information	No					
5.1.1	Federal Database Findings	No					
5.1.2	State and Tribal Database Findings	No

9.5	Mold Screening	No					
9.6	Additional User Requested Services	No					

Note 1) A Phase I Environmental Site Assessment was conducted by Environmental Science Associates in 2004. The site reconnaissance of the Couch Property identified small quantities of hazardous wastes and some soil staining. It appeared that the hazardous materials noted by the County in 1990 had been removed by the property owners, except for the gas cylinders and 3,000 gallon former underground storage tank. It is unknown where the County had observed the drums containing hazardous materials, the 10,000-gallon former underground storage tanks (USTs), and the other containers of hazardous materials. However, areas that had recently been disturbed and areas with a lack of vegetation were noted during the site reconnaissance. It appears that some of the hazardous materials, drums and the 10,000-gallon tanks may have been removed by the property owners. Based on the fact that the locations of the former USTs noted above is unknown and the lack of sampling including groundwater sampling, ATC considers the potential impacts from the USTs to be a *recognized environmental condition*.

Note 2) A Phase II Soil Investigation by Kleinfelder dated July 25, 2005. The investigation was conducted in response to several r*ecognized environmental conditions* which were noted in the report by Environmental Science Associates. The investigation was conducted in March through May 2005 and

consisted of nine Hollow-stem auger borings, four hand auger borings, and two test pits. A total of 34 soil samples were submitted for analysis. Groundwater was not sampled or analyzed during this investigation. Analytical tables were referenced in the report but no tables were included in the copy of the report obtained by ATC. Although this investigation was conducted on the approximately 106-acre Couch Property, only borings B-4 through B-12 (Appendix B) were advanced on the 35.85-acre property which is the subject of this report. The concentration of Chromium in B-12 at 15 feet bgs was noted at 130 milligrams per kilogram (mg/kg) which was noted above the screening levels used. However, concentrations of chromium in two samples collected at shallower levels from the same boring were noted below this level and, therefore, Kleinfelder determined the elevated concentration of chromium at 15 feet bgs was not due to a significant release. It should be noted that although the concentration of chromium noted above in boring B-12 at 130 mg/kg is above the 2005 ESLs, the concentration is below the current version of the February 2016 ESLs. As such the noted levels of chromium is considered an *historical recognized environmental concern*.

Note 3) Based on Kleinfelder's Phase I investigation completed in 2009, the Concentrated Area was reportedly previously occupied by a trailer and a methamphetamine lab in 2000. EPA guidelines note that soil sampling in areas of methamphetamine labs may be warranted if the ground is visibly stained or otherwise affected (e.g., odors burn piles, dead vegetation, or remnants of reaction waste. ATC did not observe evidence of dead vegetation or discarded waste on the day of the site reconnaissance (refer to Section 6.0). Thus, ATC considers the previous methamphetamine lab site to be a *de minimus condition* to the property.

1.3 Significant Data Gap Summary

Data gaps may have been encountered during the performance of this Phase I ESA and are discussed within the section of the report where they were encountered. However, according to ASTM Standard Practice E1527-13, data gaps are only significant if "other information and/or professional experience raise reasonable concerns involving the data gap." The following is a summary of *significant data gaps* identified in this report.

SIGNIFICANT DATA GAP SUMMARY		
Report Section		**Description**
3.5	**Current Uses of Adjoining Properties**	No *significant data gap* identified.
4.2	**Environmental Liens or Activity and Use Limitations (AULs)**	No *significant data gap* identified.
5.1	**Standard Environmental Records**	No *significant data gap* identified.
5.2	**Physical Setting Sources**	No *significant data gap* identified.
5.3	**Historical Records Sources**	No *significant data gap* identified.
6.1	**Methodology and Limiting Conditions**	No *significant data gap* identified.
7.0	**Interviews**	No *significant data gap* identified.

1.4 Recommendations

Based on information collected from the Phase I ESA, ATC offers the following recommendations:

- A Phase I Environmental Site Assessment was conducted by Environmental Science Associates in 2004. The site reconnaissance of the Couch Property identified small quantities of hazardous wastes and some soil staining. It appeared that the hazardous materials noted by the County in 1990 had been removed by the property owners, except for the gas cylinders and 3,000 gallon former underground storage tank. It is unknown where the County had observed the drums containing hazardous materials, the 10,000-gallon former USTs, and the other containers of hazardous materials. However, areas that had recently been disturbed and areas with a lack of vegetation were noted during the site reconnaissance. It appears that some of the hazardous materials, drums and the 10,000-gallon tanks may have been removed by the property owners. Based on the fact that the locations of the former USTs noted above is unknown and the lack of sampling including groundwater sampling, ATC considers the potential impacts from the USTs to be a *recognized environmental condition*. Therefore, ATC recommends a Phase II ESA for the property.

- If the property is to be developed, ATC recommends that a soil management plan be implemented. The plan would include contingencies for impacted areas. Also, if any septic systems and/or heating oil USTs are uncovered, they should be removed and disposed of per applicable regulations. In addition, if any wells are uncovered during development, it should be properly abandoned per applicable regulations.

2.0 INTRODUCTION

2.1 Purpose

The purpose of this Phase I ESA was to identify recognized environmental conditions in connection with the property at the time of the site reconnaissance. The scope of work for this Phase I ESA may also include certain potential environmental conditions beyond the scope of ASTM Standard Practice E1527-13 as listed below. This report documents the findings, opinions and conclusions of the Phase I ESA.

2.2 Scope

This Phase I ESA was conducted in general accordance with the ASTM Standard Practice E1527-13, consistent with a level of care and skill ordinarily practiced by the environmental consulting profession currently providing similar services under similar circumstances. Significant additions, deletions or exceptions to ASTM Standard Practice E1527-13 are noted below or in the corresponding sections of this report. The scope of this assessment included an evaluation of the following:

- Physical setting characteristics of the property through a review of referenced sources such as topographic maps and geologic, soils and hydrologic reports.

- Usage of the property, adjoining properties and surrounding area through a review of referenced historical sources such as land title records, fire insurance maps, city directories, aerial photographs, prior reports and interviews.

- Observations and interviews regarding current property usage and conditions including: the use, treatment, storage, disposal or generation of hazardous substances, petroleum products, hazardous wastes, nonhazardous solid wastes and wastewater.

- Usage of adjoining and surrounding area properties and the likely impact of known or suspected releases of hazardous substances or petroleum products from those properties in, on or at the property.

- Information in referenced environmental agency databases and local environmental records, within the specified approximate minimum search distance from the property.

- Potential for subsurface vapor migration in, on or at the property as described in Section 7.0.

The scope of the assessment also included consideration of the following potential environmental issues or conditions that are beyond the scope of ASTM Standard Practice E1527-13:

- Radon document review, consisting of the review of published radon data with regard to the potential for elevated levels of radon gas in the surrounding area of the property. No radon sampling was conducted.

- Lead in Drinking Water Data review, consisting of contacting the water supplier for information regarding whether or not the potable water provided to the property meets the drinking water standards for lead.

- Wetlands document review, consisting of a review of a current National Wetlands Inventory map of the surrounding area to note if the property is identified as having a wetland.

- Flood plain document review, consisting of a review of a reasonably ascertainable flood plain map of the surrounding area to note if the property is identified as being located within a flood plain.

- Regulatory Agency File and Records Review, consisting of conducting a file review (i.e., via Freedom of Information Act (FOIA) request or alternative method/source) for the property and/or one adjoining property at one regulatory agency, as warranted by the findings of the ESA.

2.3 Significant Assumption

The assumptions in this report were not considered as having significant impact on the determination of *recognized environmental conditions* associated with the property.

2.4 Limitations and Exceptions

ATC has prepared this Phase I ESA report using reasonable efforts to identify *recognized environmental conditions* associated with hazardous substances or petroleum products in, on or at the property. Findings contained within this report are based on information collected from observations made on the day(s) of the site reconnaissance and from reasonably ascertainable information obtained from certain public agencies and other referenced sources.

The ASTM Standard Practice E1527-13 recognizes inherent limitations for Phase I ESAs, including, but not limited to:

- *Uncertainty Not Eliminated* – A Phase I ESA cannot completely eliminate uncertainty regarding the potential for *recognized environmental conditions* in connection with any property.

- *Not Exhaustive* – A Phase I ESA is not an exhaustive investigation of the property and environmental conditions on such property.

- *Past Uses of the Property* – Phase I requirements only require review of standard historical sources at five year intervals. Therefore, past uses of property at less than five year intervals may not be discovered.

Users of this report may refer to ASTM Standard Practice E1527-13 for further information regarding these and other limitations. This report is not definitive and should not be assumed to be a complete and/or specific definition of all conditions above or below grade. Current subsurface conditions may differ from the conditions determined by surface observations, interviews and reviews of historical sources. The most reliable method of evaluating subsurface conditions is through intrusive techniques, which are beyond the scope of this report. Information in this report is not intended to be used as a construction document and should not be used for demolition, renovation, or other property construction purposes. Any use of this report by any party, beyond the scope and intent of the original parties, shall be at the sole risk and expense of such user.

ATC makes no representation or warranty that the past or current operations at the property are, or have been, in compliance with all applicable federal, state and local laws, regulations and codes. This report does not warrant against future operations or conditions, nor does it warrant against operations or conditions present of a type or at a location not investigated. Regardless of the findings stated in this report, ATC is not responsible for consequences or conditions arising from facts not fully disclosed to ATC during the assessment.

An independent data research company provided the government agency database referenced in this report. Information on surrounding area properties was requested for approximate minimum search

distances and is assumed to be correct and complete unless obviously contradicted by ATC's observations or other credible referenced sources reviewed during the assessment. ATC shall not be liable for any such database firm's failure to make relevant files or documents properly available, to properly index files, or otherwise to fail to maintain or produce accurate or complete records.

ATC makes no warranty, guarantee or certification regarding the quality, accuracy or reliability of any prior report provided to ATC and discussed in this Phase I ESA report. ATC expressly disclaims any and all liability for any errors or omissions contained in any prior reports provided to ATC and discussed in this Phase I ESA report.

ATC used reasonable efforts to identify evidence of aboveground and underground storage tanks and ancillary equipment on the property during the assessment. "Reasonable efforts" were limited to observation of accessible areas, review of referenced public records and interviews. These reasonable efforts may not identify subsurface equipment or evidence hidden from view by things including, but not limited to, snow cover, paving, construction activities, stored materials and landscaping.

Any estimates of costs or quantities in this report are approximations for commercial real estate transaction due diligence purposes and are based on the findings, opinions and conclusions of this assessment, which are limited by the scope of the assessment, schedule demands, cost constraints, accessibility limitations and other factors associated with performing the Phase I ESA. Subsequent determinations of costs or quantities may vary from the estimates in this report. The estimated costs or quantities in this report are not intended to be used for financial disclosure related to the Financial Accounting Standards Board (FASB) Statement No. 143, FASB Interpretation No. 47, Sarbanes/Oxley Act or any United States Securities and Exchange Commission reporting obligations, and may not be used for such purposes in any form without the express written permission of ATC.

ATC is not a professional title insurance or land surveyor firm and makes no guarantee, express or implied, that any land title records acquired or reviewed in this report, or any physical descriptions or depictions of the property in this report, represent a comprehensive definition or precise delineation of property ownership or boundaries.

The Environmental Professional Statement in Section 1.1 of this report does not "certify" the findings contained in this report and is not a legal opinion of such *Environmental Professional*. The statement is intended to document ATC's opinion that an individual meeting the qualifications of an Environmental Professional was involved in the performance of the assessment and that the activities performed by, or under the supervision of, the *Environmental Professional* were performed in conformance with the standards and practices set forth in 40 CFR Part 312 per the methodology in ASTM Standard Practice E1527-13 and the scope of work for this assessment.

Per ASTM Standard Practice E1527-13, Section 6, User Responsibilities, the User of this assessment has specific obligations for performing tasks during this assessment that will help identify the possibility of *recognized environmental conditions* in connection with the property. Failure by the User to fully comply with the requirements may impact their ability to use this report to help qualify for *Landowner Liability Protections* (LLPs) under Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). ATC makes no representations or warranties regarding a User's qualification for protection under any federal, state or local laws, rules or regulations.

In accordance with the ASTM Standard Practice E1527-13, this report is presumed to be valid for a six month period. If the report is older than six months, the following information must be updated in order for the report to be valid: (1) regulatory review, (2) site visit, (3) interviews, (4) specialized knowledge and (5) environmental liens search. Reports older than one year may not meet the ASTM Standard PracticE1527-13 and therefore, the entire report must be updated to reflect current conditions and property-specific information.

Other limitations and exceptions that are specific to the scope of this report may be found in corresponding sections.

2.5 Special Terms and Conditions (User Reliance)

This report is for the use and benefit of, and may be relied upon by, Stravinski Development Group, LLC, Peter T. Stravinski and any affiliates and their respective successors and assigns, in connection with a commercial real estate transaction involving the property. No third party is authorized to use this report for any purpose. Any use by or distribution of this report to third parties, without the express written consent of ATC, is at the sole risk and expense of such third party.

3.0 SITE DESCRIPTION

3.1 Location and Legal Description

The property address has not been established at this time. However, the property is located on Commerce Boulevard, American Canyon, California 94503. The Site Vicinity Map is located in Appendix A. The Site Plan is located in Appendix B. Site Photographs are provided in Appendix C. According to information obtained from the Napa County Property Assessor's office, the property is identified as Assessor's Parcel Number (APN); 058-030-065-000.

3.2 Surrounding Area General Characteristics

The property is located within the northern section of the City of American Canyon in an area characterized by industrial uses and undeveloped land. Surface topography across the property and in the surrounding area is relatively flat with a slope towards the west. Specific adjacent and abutting properties are summarized in Section 3.5.

3.3 Current Use of the Property

The property consists of one parcel totaling approximately 35.85 acres of undeveloped land. The property is located to the north of Eucalyptus Drive and to the west of the city utility access road. At the time of the site visit, the property was undeveloped land.

A Site Plan is included in Appendix B.

3.4 Description of Property Improvements

The following table provides general descriptions of the property improvements.

PROPERTY IMPROVEMENTS	
Size of Property (approximate)	35.85 acres
General Topography of Property	Relatively flat with a slope towards the west.
Adjoining and/or Access/Egress Roads	A city utility access road to the east.
Paved or Concrete Areas (including parking)	None
Unimproved Areas	The property is unimproved.
Landscaped Areas	None
Surface Water	None
Potable Water Source	None
Sanitary Sewer Utility	None
Storm Sewer Utility	None
Electrical Utility	None
Natural Gas Utility	None
Current Occupancy Status	The property is unoccupied.
Unoccupied Buildings/Spaces/Structures	Not applicable (N/A)
Number of Occupied Buildings	N/A

Building Name or General Building Description	N/A
Number of Floors	N/A
Total Square Feet of Space (approximate)	N/A
Construction Completion Date (year)	N/A
Construction Type	N/A
Interior Finishes Description	N/A
Exterior Finishes Description	N/A
Cooling System Type	N/A
Heating System Type	N/A
Emergency Power	None

3.5 Current Uses of Adjoining Properties

Current uses of the adjoining properties were observed to be as follows:

Direction from Property	Address	Occupant(s) Name	Current Use	Potential Environmental Conditions
North	1155 Commerce Boulevard	Western Carriers Inc	Industrial	None
South	N/A	Clark Ranch	City owned open space	None
East, beyond the city utility access road	2 Eucalyptus Drive	American Canyon Paintball	Commercial	Refer to Section 5.1
West	N/A	Undeveloped Land	Undeveloped	None

4.0 USER PROVIDED INFORMATION

The following section summarizes information (if any) provided by Stravinski Development Group (User) with regard to the Phase I ESA. Documentation may be found in Appendix D or where referenced in this report.

4.1 Title Records

The User provided no title records information.

4.2 Environmental Liens or Activity and Use Limitations (AULs)

The User provided no information regarding property environmental liens or activity and use limitations (AULs). ATC contracted Environmental Data Resources, Inc. (EDR) of Shelton, Connecticut to perform an environmental lien search for the property. According to the environmental lien and AUL search report the property, APN 058-030-065-000 is vested in the American Canyon Flatland Co Inc and the Deed is dated December 12, 2016. The EDR environmental lien search did not identify any environmental liens or AULs associated with the property.

A copy of the report is included in Appendix L.

4.3 Specialized Knowledge or Experience of the User

The User provided no specialized knowledge regarding *recognized environmental conditions* associated with the property.

4.4 Significant Valuation Reduction for Environmental Issues

The User provided no information regarding a significant valuation reduction for environmental issues associated with the property.

4.5 Owner, Property Manager and Occupant Information

The User identified the property as one vacant parcel located on Commerce Boulevard, American Canyon, California. The owner was specified as SDG Commerce 330, LLC.

4.6 Reason for Performing Phase I ESA

According to information provided by the User, this Phase I ESA will be used in connection with a commercial real estate transaction to identify *recognized environmental conditions* associated with the property.

4.7 Other User Provided Documents

The User provided no other documents as described in the ASTM Standard Practice E1527-13. Copies of these documents are provided in Appendix H and are described in Section 5.3.9.

It should be noted that these documents relate to what is known as the “Couch Property” which is an approximately 106-acre property which includes the 35.85-acre property which is the subject of this report. Refer to the Site Plan which is located in Appendix B for the outline of both the Couch Property and the property which is the subject of this report.

OTHER USER PROVIDED DOCUMENTS		
Title	**Date (if known)**	**Author and/or Source (if known)**
Couch Property Phase I Environmental Site Assessment	October 14, 2004	Environmental Science Associates
Phase II Soil Investigation	July 25, 2005	Kleinfelder
Phase I Environmental Site Assessment	March 16, 2006	Innovative & Creative Environmental Solutions (ICES)
Phase I Environmental Site Assessment 2 Eucalyptus Drive American Canyon, California	December 22, 2009	Kleinfelder
Limited Site Investigation	April 19, 2010	ICES

5.0 RECORDS REVIEW

5.1 Standard Environmental Records

The regulatory agency database report discussed in this section, provided by EDR, was reviewed for information regarding reported use or release of hazardous substances and petroleum products on or near the property. Unless otherwise noted, the information provided by the regulatory agency database report and other sources referenced in this report, were considered sufficient for *recognized environmental condition (REC)*, *controlled recognized environmental condition (CREC)*, *historical recognized environmental condition (HREC)* or *de minimis condition* determinations without conducting supplemental agency file reviews. ATC also reviewed the "unmappable" (also referred to as "orphan") listings within the database report, cross-referencing available address information and facility names. Unmappable sites are listings that could not be plotted with confidence, but are potentially in the general area of the property, based on the partial street address, city, or zip code. Any unmappable site that was identified by ATC as being within the approximate minimum search distance from the property, based on the site reconnaissance and/or cross-referencing to mapped listings, is included in the discussion within this section. The complete regulatory agency database report may be found in Appendix E.

The following is a summary of the findings of the database review.

SUMMARY OF FEDERAL, STATE AND TRIBAL DATABASE FINDINGS			
Regulatory Database	**Approx. Minimum Search Distance**	**Property Listed?**	**# Sites Listed**
Federal National Priority List (NPL)	1 mile	No	0
Federal Delisted NPL	½ mile	No	0
Federal Comprehensive Environmental Response, Compensation, and Liability Information System (CERCLIS) list	½ mile	No	0
Federal CERCLIS No Further Remedial Action Planned (NFRAP)	½ mile	No	0
Federal Resource Conservation and Recovery Act (RCRA), Corrective Action facilities (CORRACTS)	1 mile	No	0
Federal RCRIS non- CORRACTS Treatment, Storage, and Disposal Facilities (TSD)	½ mile	No	0
Federal RCRA Generators	Property & Adjoining	No	2
Federal Institutional Control/Engineering Control Registry	Property	No	0
Federal Emergency Response Notification System (ERNS) list	Property	No	0
National Pollutant Discharge Elimination System (NPDES)	Property	**Yes**	1
State and Tribal NPL (ENVIROSTOR)	1 mile	No	0
State and Tribal CERCLIS	½ mile	No	2
State and Tribal Landfill or Solid Waste Disposal Sites	½ mile	No	1
State and Tribal Leaking Underground Storage Tanks (LUST)	½ mile	Yes	2
State and Tribal Registered Underground Storage Tanks (UST)	Property & Adjoining	No	2
California Spills, Leaks, and Incident Clean-Up (CA SLIC)	½ mile	No	0
State and Tribal Institutional Control/Engineering Control Registry	Property	No	0
State and Tribal Voluntary Cleanup Site	½ mile	No	0
State and Tribal Brownfield Sites	½ mile	No	0
Hazardous Waste Manifests (HAZNET)	½ mile	No	0

5.1.1 Federal Agency Database Findings

The property was identified within the federal agency databases searched as part of the Couch Property. Listings for the Couch Property are discussed below. State database listings, corresponding to these federal database listings, are also discussed below.

Couch Property
2 Eucalyptus Drive
Databases: NPDES, Napa County LUST
Approximate Distance from the Property: Includes the property and east adjacent site, beyond Commerce Boulevard
Assumed Groundwater Gradient: Up-gradient
Regulatory Data Summary: The Couch Property is a 100+ acres site which includes the property. Listings for the Couch Property include a National Pollutant Discharge Elimination System (NPDES) permit issued in 2012. However, no other details are provided by EDR. Upon review of aerial photographs, the listing is in relation to the removal of the eucalyptus grove on the property.

The site is listed as a closed leaking underground storage tank (LUST) site. No details are provided by EDR. However, correspondence letters provided by the Napa County Planning Building and Environmental Services (NCPBES) indicated three USTs sitting on top of the ground and several 55-gallon drums. All but five drums were empty, two 10,000-gallon tanks were empty and one 3,000-gallon tank was partially full of an oily liquid. The tanks were noted to be in Area 5 of the Couch Property which is adjacent to the east of the property. Samples were collected from the five drums and the storage tank containing oily liquid. The samples were collected by a Hazardous Materials Team composed of staff from the California Department of Forestry and the American Canyon Fire Protection District. A total of six liquid samples were collected and submitted to a laboratory for chemical analysis (refer to Section 5.3.9 for further discussion).

In a 2009 Phase I Environmental Assessment, Kleinfelder mapped the areas in which contamination occurred (refer to the Appendix B Site Plan). According to the map, the tanks and dumping occurred east of the property beyond the government utility access road. No other leaks or violations were reported. Refer to Section 5.3.9 for additional information.
Discussion: Based on the offsite location (Area 5 beyond the government utility access road), the LUST listings are not considered to represent a *recognized environmental condition* to the property at this time

5.1.2 State and Tribal Database Findings

State and tribal database listings for the Couch Property, which includes the property, were previously discussed in Section 5.1.1.

Based on distance, topography, assumed groundwater gradient, current regulatory status, and/or the absence of reported releases, none of the other sites listed in the federal agency databases searched are considered to represent a likely past, present or material threat of release in, on, or at the property.

5.1.3 Local Environmental Records Sources

Local Health Department

ATC contacted the NCPBES Department to review available information regarding the property. Mr. John Kara of the NCPBES responded via email on April 2, 2018 and stated a soil boring permit (Permit # E18-00161) was issued on March 2, 2018.

In addition, Mr. Brian Clerici of the NCPBES sent files to ATC via email on April 13, 2018 for the Couch Property (2 Eucalyptus Drive) as summarized below. The Couch Property is a 100+ acre site which includes the property. The NCPBES records summarized below were issued for the entire Couch Property site therefore it is unknown which records are specific to the property portion of the site.

On November 15, 1973, an application was submitted by Mr. Robert Couch to build a domestic well at the Couch Property. On July 18, 1979, a second application was submitted to add an additional domestic well to the Couch Property. According to the site maps, neither of the domestic wells are located on the property.

On November 16, 1990, Napa County issued an Inspection Warrant for the Couch Property in order to perform observations, take photographs, and sample materials. The exact locations of the violations were not specified in the document due to tremendous amounts of debris, garbage, abandoned vehicles, machinery, equipment, trash heaps, concrete rubble, and three tanks and a railroad car.

In a correspondence from Napa County dated November 19, 1990, the results of the inspection of the Couch Property by Napa County indicated the following:

- The presence of people living on the Couch Property.
- A box containing six cardboard tubes labeled “GAMMA-FLAME” was found.
- Scattered throughout were used batteries and unmarked containers containing what appeared to be used oil and antifreeze.
- Many 55-gallon drums were found onsite and only five were full or partially-full.
- There were at least three tanks on the property; two are 10,000 gallons and empty. The third was a three-thousand gallon tank partially filled with an oily liquid.
- Compressed gas cylinders were found in a deteriorated condition with rust and corrosion forming on them
- In general, the hazardous wastes fell into four categories; oil or oily wastes, compressed gas cylinders, paints, lacquers, thinners, and solvents, unknowns in small containers, and automobile batteries.

Also recorded on November 19, 1990, a hazmat team composed of staff from the California Department of Forestry and the American Canyon Fire Protection District collected a total of six liquid samples. Five of the samples were taken from five 55-gallon drums and one sample from the three-thousand gallon tank. One sample was found on the south portion of the property which lies on the subject property and the other five were collect on the north portion of the east adjacent site. The gas cylinders in deteriorated condition and cylinders of hydrogen were noted to be the objects of most concern. One 55-drum showed leakage from the top rim and was heavily staining the wood pallet it was resting on.

The NCPBES concluded that the soil piles, asphalt piles, debris piles, hazardous materials, petroleum products, and abandoned automobiles indicated that the Couch Property owners allowed unpermitted dumping to take place on site. No records indicating soil or groundwater testing at the site were provided

On April 30, 2003, Napa County received a bid from Kroeker, Inc. of Fresno, California for the removal, cleaning, and grubbing for the Couch Property. The scope of work included demolishing all structures and animal pens, removal of all miscellaneous debris and garbage, removal of two 10,000-gallon fuel tanks presumed to be non-hazardous, and all trees and stumps within the site.

In a correspondence letter dated January 25, 2005, the Deputy County Counsel stated there were numerous tasks listed in a Stipulated Order that still needed to be completed. Some of the main unaddressed concerns included removal of the five trailers, removal of formerly excavated USTs, all scrap metal, motor vehicle tires and dismantled motor vehicles onsite. Itis unclear in the letter if the unaddressed tasks pertained to the property.

According to a site plan map in Kleinfelder's 2009 Phase I ESA, the illegal dumping occurred east of the property across the city utility access road (refer to Section 5.3.9 for additional details). During ATC's site reconnaissance on April 5, 2018, none of the materials noted above were observed. Based on the offsite location of the illegal dumping, the former use of the Couch Property as an unpermitted dumping site is not considered to represent an *recognized environmental concern* to the property.

California Environmental Protection Agency, Department of Toxic Substances Control (DTSC)

ATC contacted the DTSC and requested available files for the property. Ms. Ruth Saroian of the DTSC responded on April 2, 2018 and stated that no files exist for the property.

According to the DTSC EnviroStor website, http://www.envirostor.dtsc.ca.gov/public, the DTSC has no files for the property.

Regional Water Quality Control Board (RWQCB)

ATC contacted the RWQCB, San Francisco Regional Office and requested available files for the property. Ms. Margie Saldana of the RWQCB responded on March 29, 2018 and stated the department is no longer able to perform searches by APN. Since no physical address has been assigned to the property, the RWQCB could not perform a records search for the property.

According to the RWQCB GeoTracker website, http://geotracker.swrcb.ca.gov, no LUST sites or Spills, Leaks, Investigations and Clean-Up (SLIC) sites are located on the property.

Bay Area Air Quality Management District

ATC contacted the Bay Area Air Quality Management District (BAAQMD) to review available information regarding the property. The BAAQMD has not provided a response to ATC's request as of the date of this report. If information becomes available to ATC that alters the conclusions and/or recommendations presented herein, an addendum will be submitted.

Local Fire Department

ATC contacted then American Canyon Fire Department (ACFD) to review available information regarding the property. The ACFD has not provided a response to ATC's request as of the date of this report. If information becomes available to ATC that alters the conclusions and/or recommendations presented herein, an addendum will be submitted.

Department of Planning and Zoning

According to the City of American Canyon Planning Department (ACPD), the property is zoned *Recreation (REC).*

Building Department

ATC contacted the American Canyon Building Department (ACBD) to review available historical building department records for information regarding past uses of the property. Mr. William He of the ACBD responded on April 3, 2018 and stated that no building permits exist. However, Mr. He reported the department had communicated with the developer regarding a prospective warehouse, but no applications for the design permit have been submitted.

Electrical Utility Company

ATC confirmed the electrical utility for the surrounding area is provided by PG&E.

Water Utility

The City of American Canyon provides potable water utilities to the surrounding area.

Sewer Utility

The City of American Canyon provides municipal sewage utilities to the surrounding area.

Other Local Environmental Records Sources

No additional local environmental records sources were reviewed.

5.2 Physical Setting Sources

5.2.1 Topography

Based on the United States Geological Survey (USGS) 7.5-Minute Topographic Maps, *Cuttings Wharf, California, and Cordelia, California Quadrangles,* dated 2012, the property is located approximately 19 feet above mean sea level (MSL) and has a sloping topography towards the west.

A copy of the topographic map is included in Appendix A.

5.2.2 Geology

Based on the California Department of Conservation, *California Geological Survey, Preliminary geologic map of Solano County and Parts of Napa, Contra Costa, Marin, and Yolo Counties*, the property is primarily underlain by Older Alluvium, consisting of mainly flood-plain and alluvial-fan deposits adjacent to mountainous areas; sand, gravel, silt, and clay irregularly interstratified, commonly unconsolidated. This series is of the Quaternary era.

5.2.3 Soils

According to ATC's review of the United States Department of Agriculture Soil Conservation Service *Web-Based Soil Survey,* the property is underlain by Clear Lake Clay with zero to two percent slope (1%) and Haire Loam with two to nine percent slope (99%). Both Clear Lake Clay and Haire Loam consist of alluvium derived sedimentary rock.

A copy of the soil map is included in Appendix L.

5.2.4 Hydrology

Considering the surface topography for the property area, as interpreted from the *Cuttings Wharf, California, and Cordelia, California* topographic quadrangles, local groundwater would be expected to flow towards the west. Therefore, in assessing potential off-site environmental impacts, facilities located east of the property are of primary concern. However, actual groundwater flow direction is often locally influenced by factors such as underground structures, seasonal fluctuations, soil and bedrock geology, production wells, and other factors beyond the scope of this study. The actual groundwater flow direction under the property can be accurately determined only by installing groundwater-monitoring wells, which was beyond the scope of this project.

Depth to groundwater beneath the site has not been determined. Based on the soil investigation by Kleinfelder in 2005, groundwater was not encountered above 31 feet bgs.

5.2.5 Other Physical Setting Sources

Flood Plain Map

According to the Federal Emergency Management Agency (FEMA), the property is located in Flood Zone X, which is identified by FEMA as “areas determined to be outside [of the] 500-year floodplain” and Zone AE, which is identified by FEMA as “areas that have a 1% probability of flooding every year,” (Flood Insurance Rate Map [FIRM] Map Number 06055C0617F, dated August 3, 2016).

A copy of the FIRM is included in Appendix L.

Wetlands Map

Based on a review of the United States Department of the Interior, National Wetlands Inventory (NWI) Map (undated, online Wetlands Mapper at http://www.nwi.fws.gov/), there are no potential wetlands on the property.

A copy of the NWI map is included in Appendix L.

5.3 Historical Records Sources

The following table summarizes the findings of the research presented below pertaining to historical property and surrounding area uses.

HISTORICAL USE SUMMARY				
Period	**Identified Historical Uses**		**Source(s)**	**Intervals/Comments**
	Property	**Surrounding Area**		
Prior to 1940	Undeveloped/ Agricultural/ Residential	Undeveloped/ Agricultural/ Residential	Topographic Maps	The earliest record for the property is a 1902 topographic map which depicts the property and surrounding area as undeveloped land.
1940 - 1960	Undeveloped/ Agricultural/ Residential	Undeveloped/ Agricultural/ Residential	Aerial Photographs Topographic Maps	Interval data gaps exist. Land use does not change across the interval gaps and therefore, is not considered significant.
1961 - 1980	Undeveloped/ Agricultural/ Residential	Undeveloped/ Agricultural/ Residential/ Industrial	Aerial Photographs Topographic Maps Tax Records	Interval data gaps exist. Land use does not change across the interval gaps and therefore, is not considered significant.
1981 - 2000	Undeveloped/ Agricultural/ Residential	Undeveloped/ Agricultural/ Residential/ Industrial	Aerial Photographs Topographic Map Tax Records	Interval data gaps exist. Land use does not change across the interval gaps and therefore, is not considered significant.
2001 - present	Agricultural/ Undeveloped	Undeveloped/ Agricultural/ Industrial	Aerial Photographs Tax Records Regulatory Listings City Directory Listings	No data gaps.

Interval gaps (greater than five years) were encountered during the research of historical use information for the property and surrounding area. However, based on the review of available historical sources, these data gaps did not have an impact on the REC determinations of this assessment and are not significant data gaps.

5.3.1 Aerial Photographs

ATC reviewed available aerial photographs of the property and surrounding area provided by EDR. Available aerial photographs ranged from 1947 to 2012. The following are descriptions and interpretations from the aerial photograph review. Copies of reproducible aerial photographs are included in Appendix F.

AERIAL PHOTOGRAPH SUMMARY		
Year	**Scale**	**Comments**
1947 1952 1958 1968 1974 1982	1 inch = 500 feet	**Property**: The majority of the property is depicted as undeveloped land; specifically eucalyptus groves. **Surrounding Area**: The surrounding area is depicted as open fields and eucalyptus groves. A residential home is depicted to the south.
1993	1 inch = 500 feet	**Property**: No notable changes since the 1982 aerial photograph. **Surrounding Area**: No notable changes to the surrounding areas since the 1982 aerial photograph. However, the residential home to the south is no longer depicted.
2006 2010	1 inch = 500 feet	**Property**: No notable changes since the 1993 aerial photograph. **Surrounding Area**: To the north appears multiple large industrial warehouses and to the east appears Commerce Boulevard and nondescript structures. No notable changes to the south and west since the 1993 aerial photograph.
2014	1 inch = 500 feet	**Property**: The eucalyptus grove is removed and an open field is depicted. **Surrounding Area**: No notable changes to the surrounding area since the 2010 aerial photograph.

The review of aerial photographs did not identify past uses indicating *recognized environmental conditions* in, on, or at the property or surrounding area.

5.3.2 Fire Insurance Maps

A search for fire insurance maps for the property and surrounding area was conducted by EDR. No such maps for the property were available.

5.3.3 Property Tax Files

ATC obtained reasonably ascertainable tax files from the Nationwide Environmental Title Research (NETR) online database for historical ownership information pertaining to the property. The table below presents the results of the historical ownership information.

TAX RECORDS OWNERSHIP SUMMARY	
Owner: Parcel Number 075-130-002	**Date**
American Canyon Flat Land Co I	December 2016 to current

The review of tax files did not identify past uses indicating *recognized environmental conditions* in, on, or at the property or surrounding area.

5.3.4 Recorded Land Title Records

The acquisition of recorded land title records was not required by the scope of work for the Phase I ESA.

5.3.5 Historical USGS Topographic Maps

ATC reviewed available historical USGS Topographic Maps for information regarding past uses of the property provided by EDR. Available historical USGS Topographic Maps were dated 1902, 1914, 1916, 1947, 1949, 1951, 1968, 1973, 1980, 1981, and 2012. The property and surrounding area are depicted as vacant land on all available maps. Documentation is included in Appendix G.

The review of historic USGS Topographic Maps did not identify specific past uses indicating *recognized environmental conditions* in, on, or at the property or surrounding area.

5.3.6 City Directories

Research regarding the availability of historical city directories was conducted by EDR. The following are descriptions and interpretations from the historical city directory review. Documentation is included in Appendix G.

CITY DIRECTORY SUMMARY	
Year	**Comments**
1995	**Property**: No listings **Surrounding Area**: Good Health America (1245 Commerce Boulevard)
2000	**Property**: No listings **Surrounding Area**: Pokka USA Inc (1201 Commerce Boulevard) Santa Clara Warehouse Inc (1275 Commerce Boulevard)
2005	**Property**: No listings **Surrounding Area**: Hess Collection Winery (1166 Commerce Boulevard) Pro Mortgage Partners LLC (1175 Commerce Boulevard) PB Holdings Inc, Pokka USA Inc (1201 Commerce Boulevard) Santa Clara Warehouses Inc, Western Wine Service (1275 Commerce Boulevard)
2010	**Property**: No listings **Surrounding Area**: Grapevine Express, Hess Collection Winery, Tricana Inc, Zepexco Inc (1166 Commerce Boulevard) Amcan Beverages Inc, Coca Cola North America, Fluid Resource Management, Pacific Solutions Construction, Sun Pokka Citrus Inc (1201 Commerce Boulevard) Bacchus Distribution Co LLC (1245 Commerce Boulevard) Western Wine Services Inc (1275 Commerce Boulevard)

CITY DIRECTORY SUMMARY	
Year	**Comments**
2014	**Property**: No listings **Surrounding Area**: Hess Collection Winery, Zepexco Inc (1166 Commerce Boulevard) Amcan Beverages Inc, Coca Cola North America, (1201 Commerce Boulevard) Vin Go LLC (1245 Commerce Boulevard) Western Wine Services Inc (1275 Commerce Boulevard)

The review of city directories did not identify past uses indicating *recognized environmental conditions* in, on, or at the property or surrounding area.

5.3.7 Building Department Records

ATC contacted the American Canyon Building Department to review available historical building department records for information regarding past uses of the property. Mr. William He of the ACBD responded on April 3, 2018 and stated that no building permits exist. However, the department spoke with the developer on a prospective warehouse, but no applications for the design permit have been submitted.

5.3.8 Zoning/Land Use Records

ATC attempted to review available historical zoning/land use records at the ACPD for information regarding past uses of the property and surrounding area. No historical use information was available for the property. According to the ACPD, the property is zoned as *Recreation (REC).*

5.3.9 Prior Reports

The following provides a summary of information from prior reports made available to ATC for review. Documentation is included in Appendix H. Proposals and field forms associated with the reports below are not summarized but are included in Appendix H.

It should be noted that these documents relate to what is known as the “Couch Property” which is an approximately 106-acre property which includes the 35.85-acre property which is the subject of this report. Refer to the Site Plan which is located in Appendix B for the outline of both the Couch Property and the property which is the subject of this report.

Phase I Environmental Site Assessment by Environmental Science Associates dated October 14, 2004

The Phase I ESA was conducted for the Couch Property and the report concluded the following:

- There is past and present undocumented and illegal storage of hazardous materials and wastes on the Couch Property. The Napa County Department of Environmental Management inspected the property in 1990 and determined that the property constitutes an illegal junk yard and refuse disposal area, which constitutes a public nuisance. The violations found by the County at the property range from storage of hazardous wastes over 90 days without a permit to failure of the generator to determine if his wastes are hazardous and to properly manage hazardous wastes.

- The site reconnaissance of the Couch Property identified small quantities of hazardous wastes and some soil staining. It appeared that the hazardous materials noted by the County in 1990 had been removed by the property owners, except for the gas cylinders and 3,000 gallon former underground storage tank. It is unknown where the County had observed the drums containing hazardous materials, the 10,000-gallon former USTs, and the other containers of hazardous

materials. However, areas that had recently been disturbed and areas with a lack of vegetation were noted during the site reconnaissance. It appears that some of the hazardous materials, drums and the 10,000-gallon tanks may have been removed by the property owners.

- It is possible that methamphetamine labs operated in the eucalyptus groves in the area of the Couch Property. Operations of these types of labs typically produce hazardous wastes including phosphine gas, solvent, benzene, chloroform and thionyl chloride.

- A portion of the Couch Property was used to cut and store wood. A large amount of soil containing some type of oil was deposited on a portion of the property. There is an area of this portion of the property that appeared to have been leveled and graded where soil might have been brought onsite. Chief Keith Caldwell of the American Canyon Fire District remembers that soil was brought onto the property in the 1970s for a motorcycle track.

- The County identified two unapproved water wells on the property in their 1990 investigation. However, Environmental Science Associates staff could only locate one of the water wells.

- There are outhouses (holes in the ground) on the property that have been used for sewage disposal.

The recommendations of the report included the following:

- Soil and groundwater sampling is to be completed in the areas of concern that were identified by the Phase I report. It may also be necessary to sample other areas of the property as dictated by field personnel that will perform the soil and groundwater sampling at the site, depending on what is encountered during sampling. At a minimum, the soil and groundwater samples should be analyzed for petroleum hydrocarbons, oil and grease, solvents, and priority pollutant metals. The Phase II report should provide recommendations based on the laboratory analytical results.

- Due to the history of the use of the Couch Property, it is difficult to determine what might be uncovered during earth moving activities if the land is developed. At the time of excavation of the site for development, soil and groundwater sampling should be completed in any areas of the property where buried hazardous materials, odors, or stained soil are found. The results of the laboratory analytical results would provide the information needed to determine whether excavation of the soil would be necessary and whether the soil would need to be removed and properly disposed offsite.

- The water wells should be abandoned in accordance with California water well standards and Napa County protocol.

- The sewage disposal areas should be closed in accordance with Napa County protocol.

It should be noted that although the areas which were a concern by Environmental Science Associates are located within the approximately 106-acre Couch Property, the areas of concern are actually located to the east of the 35.85-acre property which is the subject of this report.

Based on the fact that the locations of the former USTs noted above is unknown and the lack of sampling including groundwater sampling, ATC considers the potential impacts from the USTs to be a *recognized environmental condition*.

Phase II Soil Investigation by Kleinfelder dated July 25, 2005

The investigation was conducted in response to several recognized environmental conditions which were noted in the report by Environmental Science Associates. The investigation was conducted in March through May 2005 and consisted of nine Hollow-stem auger borings, four hand auger borings, and two test pits. A total of 34 soil samples were submitted for analysis. Groundwater was not sampled or analyzed during this investigation. Analytical tables were referenced in the report but no tables were included in the copy of the report obtained by ATC.

Although this investigation was conducted on the approximately 106-acre Couch Property, only borings B-4 through B-12 (Appendix B) were advanced on the 35.85-acre property which is the subject of this report. Results that relate to the 35.85-acre property which is the subject of this report are the following:

- The report notes the presence of gasoline and BTEX which were detected in boring B-12 at 15 feet bgs in "low concentrations" that were below the 2005 Environmental Screening Levels (ESL's) as defined by the San Francisco Bay Water Board for residential shallow soils.

- The concentration of Chromium in B-12 at 15 feet bgs was noted at 130 milligrams per kilogram (mg/kg) which was noted above the screening levels used. However, concentrations of chromium in two samples collected at shallower levels from the same boring were noted below this level and, therefore, Kleinfelder determined the elevated concentration of chromium at 15 feet bgs was not due to a significant release.

- Although groundwater was not sampled during the investigation, Kleinfelder stated that potential impacts to groundwater were low.

It should be noted that although the concentration of chromium noted above in boring B-12 at 130 mg/kg is above the 2005 ESLs, the concentration is below the current version of the February 2016 ESLs. As such the noted levels of chromium is considered an *historical recognized environmental concern*.

Phase I Environmental Site Assessment by Innovative and Creative Environmental Solutions (ICES) dated March 16, 2005

The report by ICES was conducted for the approximately 106-acre Couch Property and the report concluded the following.

- A eucalyptus grove occupied the site until the late 1950s. In the early 1980s, the northeastern portion was developed and used for residential activities and the southeastern portion was used as a race track. Currently, paint ball fields are located at the west and central portions of the site.

- It was discovered that there was past and present undocumented and illegal storage of hazardous materials and waste on the site. In addition, a large amount of soil containing oil was deposited at the southeastern portion of the site in the 1970s for a motorcycle track.

ICES recommended that a supplementary investigation be conducted within the site including the following:

- Collect soil samples from the surficial soil within the west portion of the site to assess the potential presence of organochlorine pesticides, arsenic, lead, and mercury associated with the eucalyptus grove.

- Collect soil samples from the surficial soil within the southeastern portion of the site for petroleum hydrocarbons, semi-volatile organic compounds, and lead associated with the former motorcycle track and existing wood cutting and storage operations.

- Collect soil samples from the surficial soil within the northeastern portion of the site to assess surficial sediments containing arsenic, chromium, and vanadium levels detected in a previous site investigation which exceeded residential ESLs.

Phase I Environmental Site Assessment by Kleinfelder dated December 22, 2009

Kleinfelder partitioned the Couch Property into seven areas of concern: the Hurst Firewood Area, the Paintball Jungle Area (East), the Animal Pens Area, the Couch Residential Area, the Concentrated Area, the Sherwood Forest Paintball and North Slough Creek Area, and the Paintball Jungle Area (West).

According to the site map, only the Paintball Area (West), the Concentrated Area, and the Sherwood Forest Paintball and North Slough Creek Area are within the 35.85-acre property which is the subject of this report.

The report concluded the following:

- There is ample evidence that residual petroleum hydrocarbons, solvents, and certain metals may have been released in shallow soil throughout the eastern portion (Hurst Firewood, Paintball Jungle (East), Animal Pens, and Couch Residential areas) of the site as well as within the western portion (Concentrated Area, Sherwood Forest Paintball and North Slough Creek area) of the site. These petroleum hydrocarbons were likely surface spills and dumping related to the storage of hundreds of pieces of equipment, at least 150 vehicles, areas of the site occupied by the current owner and areas rented to tenants, and areas of dumping.

- The majority of the site is currently used for paintball games. Depending on where the paintballs were manufactured, it is possible that paint within paintballs may have contained lead and was released to soil.

Recommendations related to the 35.85-acre property which is the subject of this report are the following:

- A soil and groundwater investigation should be conducted within each area of the site to assess the extent of chemical constituents of concern in the soil and groundwater including, but not limited to, petroleum hydrocarbons, metals, and volatile organic compounds.

The Concentrated Area was reportedly previously occupied by a trailer and a methamphetamine lab in 2000. EPA guidelines note that soil sampling in areas of methamphetamine labs may be warranted if the ground is visibly stained or otherwise affected (e.g., odors burn piles, dead vegetation, or remnants of reaction waste. ATC did not observe evidence of dead vegetation or discarded waste on the day of the site reconnaissance (refer to Section 6.0). Thus, ATC considers the previous methamphetamine lab site to be a *de minimus condition* to the property.

Limited Site Investigation by ICES dated April 19, 2010

The investigation was conducted in March 2010 and involved the collection of soil samples from approximately 6 to 9 inches bgs from eight sample locations. Of those eight locations, four were located on the 35.85-acre property which is the subject of this report (TP-1 through TP-4) (Appendix B).

The analysis of the samples from TP-1 through TP-4 indicated that concentrations of petroleum hydrocarbons as gasoline, diesel, and motor oil and volatile organic compounds were generally below the residential Environmental Screening Levels (ESLs) with the exception of the result of 160 mg/kg of total petroleum hydrocarbons as diesel (TPHd) in the sample from TP-2 which was above the residential ESL of 83 mg/kg. The laboratory noted that oil range compounds were significant in the sample from TP-2

and ICES suggested that the elevated TPHd in the sample from TP-2 may be the result of natural oil compounds from eucalyptus trees. Also, levels of arsenic and vanadium were noted in the samples above the ESLs but below background levels. ICES concluded that surficial soil within the site has generally not been impacted by previous activities.

Limitations

ATC makes no warranty, guarantee or certification regarding the quality, accuracy or reliability of any prior report provided to ATC and discussed in this Phase I ESA report. ATC expressly disclaims any and all liability for any errors or omissions contained in any prior reports provided to ATC and discussed in this Phase I ESA report. Documentation is included in Appendix H.

5.3.10 Other Historical Sources

No other historical sources were reviewed.

6.0 SITE RECONNAISSANCE

The following is a summary of visual and/or physical observations of the property on the day of the site visit. Photographs can be found in Appendix C.

6.1 Methodology and Limiting Conditions

Mr. Gyan Rusconi-Rodrigues, Senior Scientist with ATC, conducted the site reconnaissance on April 5, 2018. Mr. Rusconi-Rodrigues was unescorted during the site reconnaissance. The site reconnaissance consisted of visual and/or physical observations of: the property; adjoining sites as viewed from the property; and, the surrounding area based on visual observations made during the trip to and from the property. Unimproved portions of the property were observed along the perimeter and in safely accessible areas. The weather at the time of the site reconnaissance was overcast. Due to vegetation overgrowth, ground visibility was limited.

6.2 Hazardous Substance Use, Storage, and Disposal

ATC did not observe the use, storage or disposal of hazardous substances, including hazardous wastes, on the property. However, visibility was limited due to overgrowth of vegetation.

6.3 Underground Storage Tanks (USTs)

ATC did not observe evidence of USTs on the property. However, visibility was limited due to overgrowth of vegetation.

6.4 Aboveground Storage Tanks (ASTs)

ATC did not observe evidence of ASTs on the property. However, visibility was limited due to overgrowth of vegetation.

6.5 Other Petroleum Products

ATC did not observe the use, storage or disposal of other petroleum products in, on or at the property. However, visibility was limited due to overgrowth of vegetation.

6.6 Polychlorinated Biphenyls (PCBs)

ATC did not observe evidence of the use, storage or disposal of PCB-containing electrical or hydraulic equipment in, on or at the property. However, visibility was limited due to overgrowth of vegetation.

6.7 Unidentified Substance Containers

ATC did not observe the presence of unidentified substance containers on the property. However, visibility was limited due to overgrowth of vegetation.

6.8 Nonhazardous Solid Waste

ATC did not observe evidence of the generation, storage or disposal of nonhazardous solid waste in, on or at the property. However, visibility was limited due to overgrowth of vegetation.

6.9 Wastewater

ATC did not observe evidence of wastewater generated, treated or discharged in, on or at the property or to adjoining properties.

6.10 Waste Pits, Ponds and Lagoons

ATC did not observe evidence of waste pits, ponds or lagoons in, on or at the property.

6.11 Drains and Sumps

ATC did not observe evidence of drains or sumps in, on or at the property. However, visibility was limited due to overgrowth of vegetation.

6.12 Septic Systems

ATC did not observe evidence of a septic system in, on or at the property. However, visibility was limited due to overgrowth of vegetation.

6.13 Stormwater Management System

Stormwater at the property is allowed to infiltrate the ground. The observed vegetation did not exhibit signs of biological stress. No strong odors were detected.

6.14 Wells

ATC did not observe evidence of wells in, on or at the property. However, there were visual limitations during site reconnaissance due to overgrowth of vegetation.

During ATC's review of documents submitted by the NCPBES, two domestic wells were noted on the Couch Property. It is estimated from the site maps that both wells are not located on the property. However, if during development of the property, a well is uncovered, it should be properly abandoned per applicable regulations.

7.0 SUBSURFACE VAPOR MIGRATION

Hazardous gases (vapor) from subsurface sources, such as contaminated soil or groundwater can migrate into residential, commercial, and industrial buildings with any foundation type, including basements, crawlspaces, or slabs. According to EPA guidance, three conditions must exist for hazardous vapors to reach the interior of buildings from the subsurface environment underneath or near a building. First, a source of hazardous vapors must be present in the soil or in groundwater underneath or near a building. Second, vapors must form and have a pathway along which to migrate toward the building. Third, entry routes must exist for the vapors to enter the building, and driving forces must exist to draw the vapors into the building.

ATC considered the nature and extent of on-site and nearby sources of potential subsurface vapor migration by evaluating the current and historical usage of the property, the construction type and history, the physical setting, and the potential sources of subsurface vapor migration through the review of regulatory agency database information that was summarized in Section 5.0. Based on the evaluation of the known or suspected releases of hazardous substances or petroleum products, distance from the property, potential pathways, and soil type, et al, no potential subsurface vapor migration sources were determined to represent a *recognized environmental condition* to the property.

8.0 INTERVIEWS

The following person(s) were interviewed to obtain information regarding *recognized environmental conditions* in connection with the property:

INTERVIEW SUMMARY				
Role	**Name**	**Title/Company**	**Years Assoc. With Property**	**Interview Type**
Authorized Property Representative	Brian Doswald	Stravinski Development Group	Unknown	Email

Not included in this listing are those governmental employees that were contacted solely for the purpose of retrieving public information pertaining to the property and who would not be expected to have first-hand knowledge of *recognized environmental conditions* at the property.

Pertinent information from the interviews is discussed in applicable sections of this report with details (including failed attempts to interview) documented on Record of Communication forms in Appendix J.

9.0 OTHER ENVIRONMENTAL CONDITIONS

9.1 Asbestos-Containing Materials (ACM)

Due to the undeveloped nature of the property, ACM was not addressed for this Phase I ESA and no additional investigation is recommended at this time.

9.2 Radon

Radon is a naturally occurring colorless, odorless gas that is a by-product of the decay of radioactive materials potentially present in bedrock and soil. The EPA guidance action level for annual residential exposure to radon is 4.0 picoCuries per liter of air (pCi/L). The guidance action level is not a regulatory requirement for private owners of commercial real estate, but is commonly used for comparison purposes to suggest whether further action at a building may be prudent.

ATC's review of published radon data indicates that the property is located in an area of low propensity with regard to the potential for elevated levels of radon gas. Napa County is listed as being within Zone 3, where average indoor levels are expected to be less than 2 pCi/L. Additional federal area radon statistics for zip code 94503, within Napa County, report results for 11 short-term tests as below 4.0 pCi/L. Given the available statistics, radon is not considered to represent a concern, and no additional investigations are recommended at this time.

9.3 Lead in Drinking Water

ATC confirmed with the City of American Canyon that the municipally supplied water meets all drinking water standards, including those for lead. Based on the fact that the water (once supplied to the property) is from the municipality, lead in drinking water would not be a concern to the property.

9.4 Lead-Based Paint (LBP)

Due to the undeveloped nature of the property, LBP was not addressed for this Phase I ESA and no additional investigation is recommended at this time.

9.5 Mold Screening

Due to the undeveloped nature of the property, mold was not addressed for this Phase I ESA and no additional investigation is recommended at this time.

9.6 Additional User Requested Conditions

No additional User requested services were included in the scope of work for this ESA.

11.0 TERMINOLOGY

The following provides definitions and descriptions of certain terms that may be used in this report. Italics indicate terms that are defined by ASTM Standard Practice E1527-13. The Standard Practice should be referenced for further detail (such as the precise wording), related definitions or additional explanation regarding the meaning of terms.

recognized environmental condition(s) (REC) - the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to any release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment.

material threat - a physically observable or obvious threat which is reasonably likely to lead to a release that, in the opinion of the environmental professional (EP), is threatening and might result in impact to public health or the environment. An example might include an aboveground storage tank system that contains a hazardous substance and which shows evidence of damage such that it may cause or contribute to tank integrity failure with a release of contents to the environment.

de minimis condition – is a condition that generally does not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of the appropriate governmental agencies. An example might include a release of *hazardous substances* or *petroleum products* that could reasonably and foreseeably result in a concentration exceeding the applicable regulatory agency risk-based residential standards or substantial damage to natural resources. The risk of that exposure or damage would represent a threat to human health or the environment. If an enforcement action would be less likely than not, then the condition is considered to be generally not likely the subject of an enforcement action. A condition determined to be *de minimis* is not a *REC* or *controlled recognized environmental condition (CREC)*.

historical recognized environmental condition(s) (HREC) - a past release of any *hazardous substances* or *petroleum products* that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls). Before calling the past release a *HREC*, the EP must determine whether the past release is a *REC* at the time the assessment is conducted (for example, if there has been a change in the regulatory criteria). If the EP considers the past release to be a *REC* at the time the Phase I ESA is conducted, the condition will be reported in Section 1.2 the Findings and Conclusions Summary table as a *REC*.

controlled recognized environmental condition (CREC) - a *recognized environmental condition* resulting from a past release of *hazardous substances* or *petroleum products* that has been addressed to the satisfaction of the applicable regulatory authority (for example, as evidenced by the issuance of a no further action letter or equivalent, or meeting risk-based criteria established by regulatory authority), with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls (for example, property use restrictions, activity and use limitation, institutional controls, or engineering controls). Per E1527-13, a *CREC* will be reported in the Section 1.2 Findings and Conclusions Summary table as a *CREC* and a *REC*.

migrate/migration - refers to the movement of *hazardous substances* or *petroleum products* in any form, including, for example, solid and liquid at the surface or subsurface, and vapor in the subsurface.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E 2247-16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E 1528-14) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

EXECUTIVE SUMMARY

STANDARD ENVIRONMENTAL RECORDS

Federal RCRA generators list

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 12/11/2017 has revealed that there are 2 RCRA-SQG sites within approximately 0.25 miles of the target property.

Equal/Higher Elevation	Address	Direction / Distance	Map ID	Page
GAS RECOVERY SYSTEMS	725 EUCALYPTUS ROAD	SSE 1/8 - 1/4 (0.177 mi.)	A3	11
AMCAM BEVERAGES INC	1201 COMMERCE BLVD	N 1/8 - 1/4 (0.215 mi.)	4	12

State- and tribal - equivalent CERCLIS

ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the ENVIROSTOR list, as provided by EDR, and dated 01/30/2018 has revealed that there are 2 ENVIROSTOR sites within approximately 1 mile of the target property.

State and tribal landfill and/or solid waste disposal site lists

SWF/LF: The Solid Waste Facilities/Landfill Sites records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. The data come from the Integrated Waste Management Board's Solid Waste Information System (SWIS) database.

A review of the SWF/LF list, as provided by EDR, has revealed that there is 1 SWF/LF site within

approximately 0.5 miles of the target property.

Description:	Discovered an oily substance on top of a drainage ditch that runs along side of the building. Company traced the spill back to the far drain on the back of the property. Company has called a contactor to come and contain the spill. Company does not bbeleive this is caused by them.

WDS:

Facility ID:	San Francisco Bay 28I017048
Facility Type:	Industrial - Facility that treats and/or disposes of liquid or semisolid wastes from any servicing, producing, manufacturing or processing operation of whatever nature, including mining, gravel washing, geothermal operations, air conditioning, ship building and repairing, oil production, storage and disposal operations, water pumping.
Facility Status:	Active - Any facility with a continuous or seasonal discharge that is under Waste Discharge Requirements.
NPDES Number:	CAS000001 The 1st 2 characters designate the state. The remaining 7 are assigned by the Regional Board
Subregion:	2
Facility Telephone:	7076443731

Treat To Water:	Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity:	Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Completed Document Type: Site Screening
Completed Date: 11/16/1987
Comments: SITE SCREENING DONE MANUFACTURER OF ACRYLIC EMULSIONS CHEMS. ORGANIC CHEMICALS FOUND IN SOIL AND GROUNDWATER AROUND PIT. PCI WAS PART OF BEATRICE CHEMICAL DIVISION OF BEATRICE FOODS. THE DIVISION WAS SOLD TO IMPERIAL CHEMICAL INDUSTRIES 03/01/85.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Site Screening
Completed Date: 05/28/2008
Comments: The Triage recommended No Further Action. A Sensitive Receptor Survey and Risk Based Corrective Action Assessment submitted to the SF Water Board indicate that the contaminant residuals present at the site do not pose a significant health risk to current or future occupants of the site. Based on this Report, a No Further Action Letter was issued by the SF Board dated November 20, 2000.

Completed Area Name: PROJECT WIDE

POLYVINYL CHEMICAL INDUSTRIES, INC (Continued) **S118756649**

Completed Sub Area Name: Not reported
Completed Document Type: Preliminary Assessment Report
Completed Date: 05/01/2014
Comments: DTSC conducted a reassessment of sites in EPA's CERCLIS database on EPA's behalf. The regional waterboard had reviewed past soil and groundwater investigations and determined that no further action was required. Based on this information and available sampling data, DTSC recommended no further federal assessment under CERCLA.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Federal Delisted NPL site list

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Data Release Frequency: Quarterly

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Federal RCRA generators list

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

State- and tribal - equivalent CERCLIS

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

Data Release Frequency: Quarterly

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites
Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

Other Ascertainable Records

RCRA NonGen / NLR: RCRA - Non Generators / No Longer Regulated

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing
A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

EDR Hist Cleaner: EDR Exclusive Historical Cleaners

EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

Hazardous Materials Management Division Database

The database includes: HE58 - This report contains the business name, site address, business phone number, establishment 'H' permit number, type of permit, and the business status. HE17 - In addition to providing the same information provided in the HE58 listing, HE17 provides inspection dates, violations received by the establishment, hazardous waste generated, the quantity, method of storage, treatment/disposal of waste and the hauler, and information on underground storage tanks. Unauthorized Release List - Includes a summary of environmental contamination cases in San Diego County (underground tank cases, non-tank cases, groundwater contamination, and soil contamination are included.)

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data
Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:
Source: American Hospital Association, Inc.
Telephone: 312-280-5991
The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

UTM Y (Meters):	4226434.0
Elevation:	19 ft. above sea level

USGS TOPOGRAPHIC MAP

Target Property Map:	5602106 CUTTINGS WHARF, CA
Version Date:	2012

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principal investigative components:

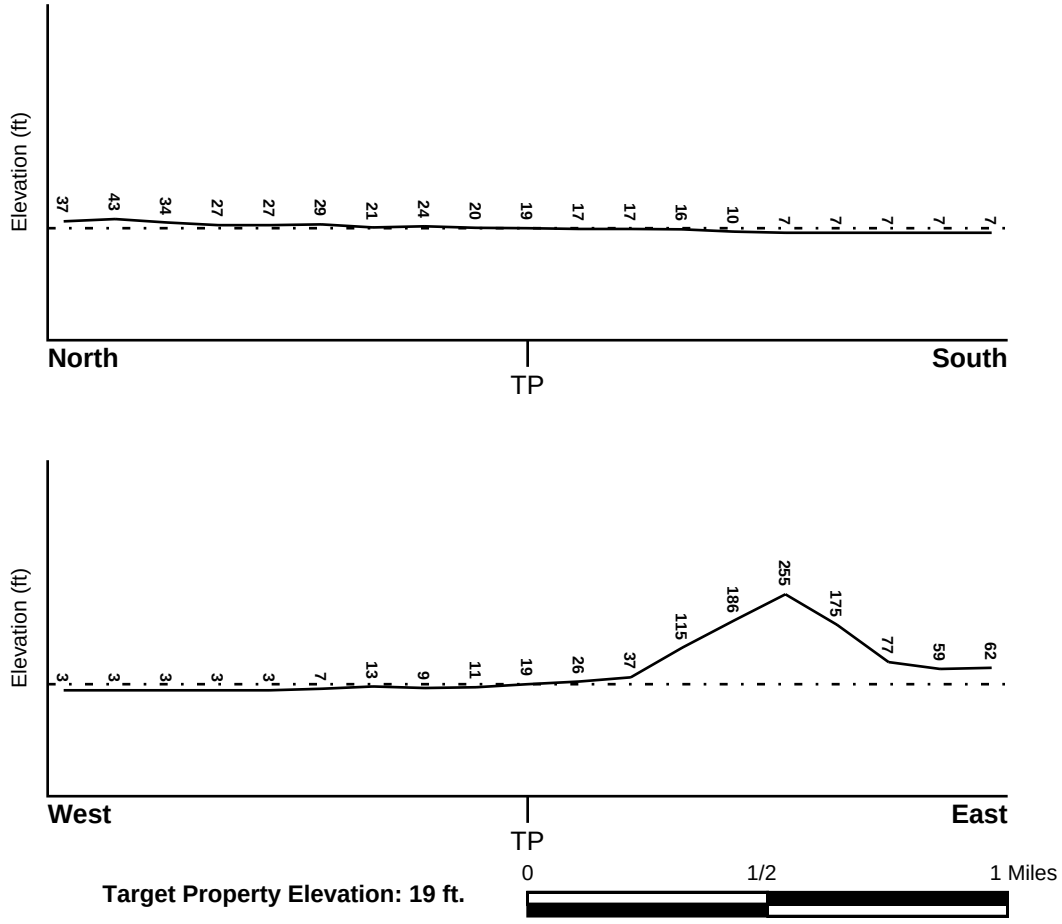
1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).



TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General West

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Flood Plain Panel at Target Property	FEMA Source Type
06055C0625E	FEMA FIRM Flood data

Additional Panels in search area:	FEMA Source Type

CUTTINGS WHARF	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Status:	Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

All of the information and opinions presented are those of the cited EPA report(s), which were completed under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: HAIRE

Soil Surface Texture: clay loam

Hydrologic Group: Class C - Slow infiltration rates. Soils with layers impeding downward movement of water, or soils with moderately fine or fine textures.

Soil Drainage Class: Moderately well drained

Hydric Status: Partially hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	22 inches	clay loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay	Max: 4 Min: 1.4	Max: 6 Min: 5.1
2	22 inches	27 inches	sandy clay loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	COARSE-GRAINED SOILS, Sands, Sands with fines, Clayey sand.	Max: 4 Min: 1.4	Max: 6 Min: 5.1
3	27 inches	44 inches	clay	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit 50% or more), Fat Clay.	Max: 0.42 Min: 0.01	Max: 5.5 Min: 4.5
4	44 inches	59 inches	sandy clay	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay	Max: 0.42 Min: 0.01	Max: 5.5 Min: 4.5

Soil Map ID: 2

Soil Component Name: CLEAR LAKE

Soil Surface Texture: clay

Hydrologic Group: Class D - Very slow infiltration rates. Soils are clayey, have a high water table, or are shallow to an impervious layer.

Soil Drainage Class: Poorly drained

Hydric Status: All hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	31 inches	clay	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit 50% or more), Fat Clay.	Max: 1.4 Min: 0.42	Max: 7.8 Min: 6.1
2	31 inches	68 inches	clay	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit 50% or more), Fat Clay.	Max: 1.4 Min: 0.42	Max: 8.4 Min: 7.4

Soil Map ID: 3

Soil Component Name: HAIRE

Soil Surface Texture: loam

Hydrologic Group: Class C - Slow infiltration rates. Soils with layers impeding downward movement of water, or soils with moderately fine or fine textures.

Soil Drainage Class: Moderately well drained

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Hydric Status: Partially hydric

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map
Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.
Source: FEMA
Telephone: 877-336-2627
Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Wetland Inventory

Telephone: 916-445-0411

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)
This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

STATE RECORDS

Water Well Database
Source: Department of Water Resources
Telephone: 916-651-9648

California Drinking Water Quality Database
Source: Department of Public Health
Telephone: 916-324-2319
The database includes all drinking water compliance and special studies monitoring for the state of California since 1984. It consists of over 3,200,000 individual analyses along with well and water system information.

OTHER STATE DATABASE INFORMATION

California Oil and Gas Well Locations
Source: Department of Conservation
Telephone: 916-323-1779
Oil and Gas well locations in the state.

RADON

State Database: CA Radon
Source: Department of Health Services
Telephone: 916-324-2208
Radon Database for California

Area Radon Information
Source: USGS
Telephone: 703-356-4020
The National Radon Database has been developed by the U.S. Environmental Protection Agency (USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

EPA Radon Zones
Source: EPA
Telephone: 703-356-4020
Sections 307 & 309 of IRAA directed EPA to list and identify areas of U.S. with the potential for elevated indoor radon levels.

EDR BUILDING PERMIT REPORT

About This Report

The EDR Building Permit Report provides a practical and efficient method to search building department records for indications of environmental conditions. Generated via a search of municipal building permit records gathered from more than 1,600 cities nationwide, this report will assist you in meeting the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13), or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

Building permit data can be used to identify current and/or former operations and structures/features of environmental concern. The data can provide information on a target property and adjoining properties such as the presence of underground storage tanks, pump islands, sumps, drywells, etc., as well as information regarding water, sewer, natural gas, electrical connection dates, and current/former septic tanks.

ASTM and EPA Requirements

ASTM E 1527-13 lists building department records as a "standard historical source," as detailed in § 8.3.4.7: "Building Department Records - The term building department records means those records of the local government in which the property is located indicating permission of the local government to construct, alter, or demolish improvements on the property." ASTM also states that "Uses in the area surrounding the property shall be identified in the report, but this task is required only to the extent that this information is revealed in the course of researching the property itself."

EPA's Standards and Practices for All Appropriate Inquires (AAI) states: "§312.24: Reviews of historical sources of information. (a) Historical documents and records must be reviewed for the purposes of achieving the objectives and performance factors of §312.20(e) and (f). Historical documents and records may include, but are not limited to, aerial photographs, fire insurance maps, building department records, chain of title documents, and land use records."

Methodology

EDR has developed the EDR Building Permit Report through our partnership with BuildFax, the nation's largest repository of building department records. BuildFax collects, updates, and manages building department records from local municipal governments. The database now includes 30 million permits, on more than 10 million properties across 1,600 cities in the United States.

The EDR Building Permit Report comprises local municipal building permit records, gathered directly from local jurisdictions, including both target property and adjoining properties. Years of coverage vary by municipality. Data reported includes (where available): date of permit, permit type, permit number, status, valuation, contractor company, contractor name, and description.

Incoming permit data is checked at seven stages in a regimented quality control process, from initial data source interview, to data preparation, through final auditing. To ensure the building department is accurate, each of the seven quality control stages contains, on average, 15 additional quality checks, resulting in a process of approximately 105 quality control "touch points."

For more information about the EDR Building Permit Report, please contact your EDR Account Executive at (800) 352-0050.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Report is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Report includes a search of available city directory data at 5 year intervals.

RECORD SOURCES

EDR's Digital Archive combines historical directory listings from sources such as Cole Information and Dun & Bradstreet. These standard sources of property information complement and enhance each other to provide a more comprehensive report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer. Reproduction of City Directories without permission of the publisher or licensed vendor may be a violation of copyright.

EDR Environmental Lien and AUL Search

The EDR Environmental Lien and AUL Search Report provides results from a search of available current land title records for environmental cleanup liens and other activity and use limitations, such as engineering controls and institutional controls.

A network of professional, trained researchers, following established procedures, uses client supplied address information to:

- search for parcel information and/or legal description;
- search for ownership information;
- research official land title documents recorded at jurisdictional agencies such as recorders' offices, registries of deeds, county clerks' offices, etc.;
- access a copy of the deed;
- search for environmental encumbering instrument(s) associated with the deed;
- provide a copy of any environmental encumbrance(s) based upon a review of key words in the instrument(s) (title, parties involved, and description); and
- provide a copy of the deed or cite documents reviewed.

Thank you for your business.
Please contact EDR at 1-800-352-0050
with any questions or comments.

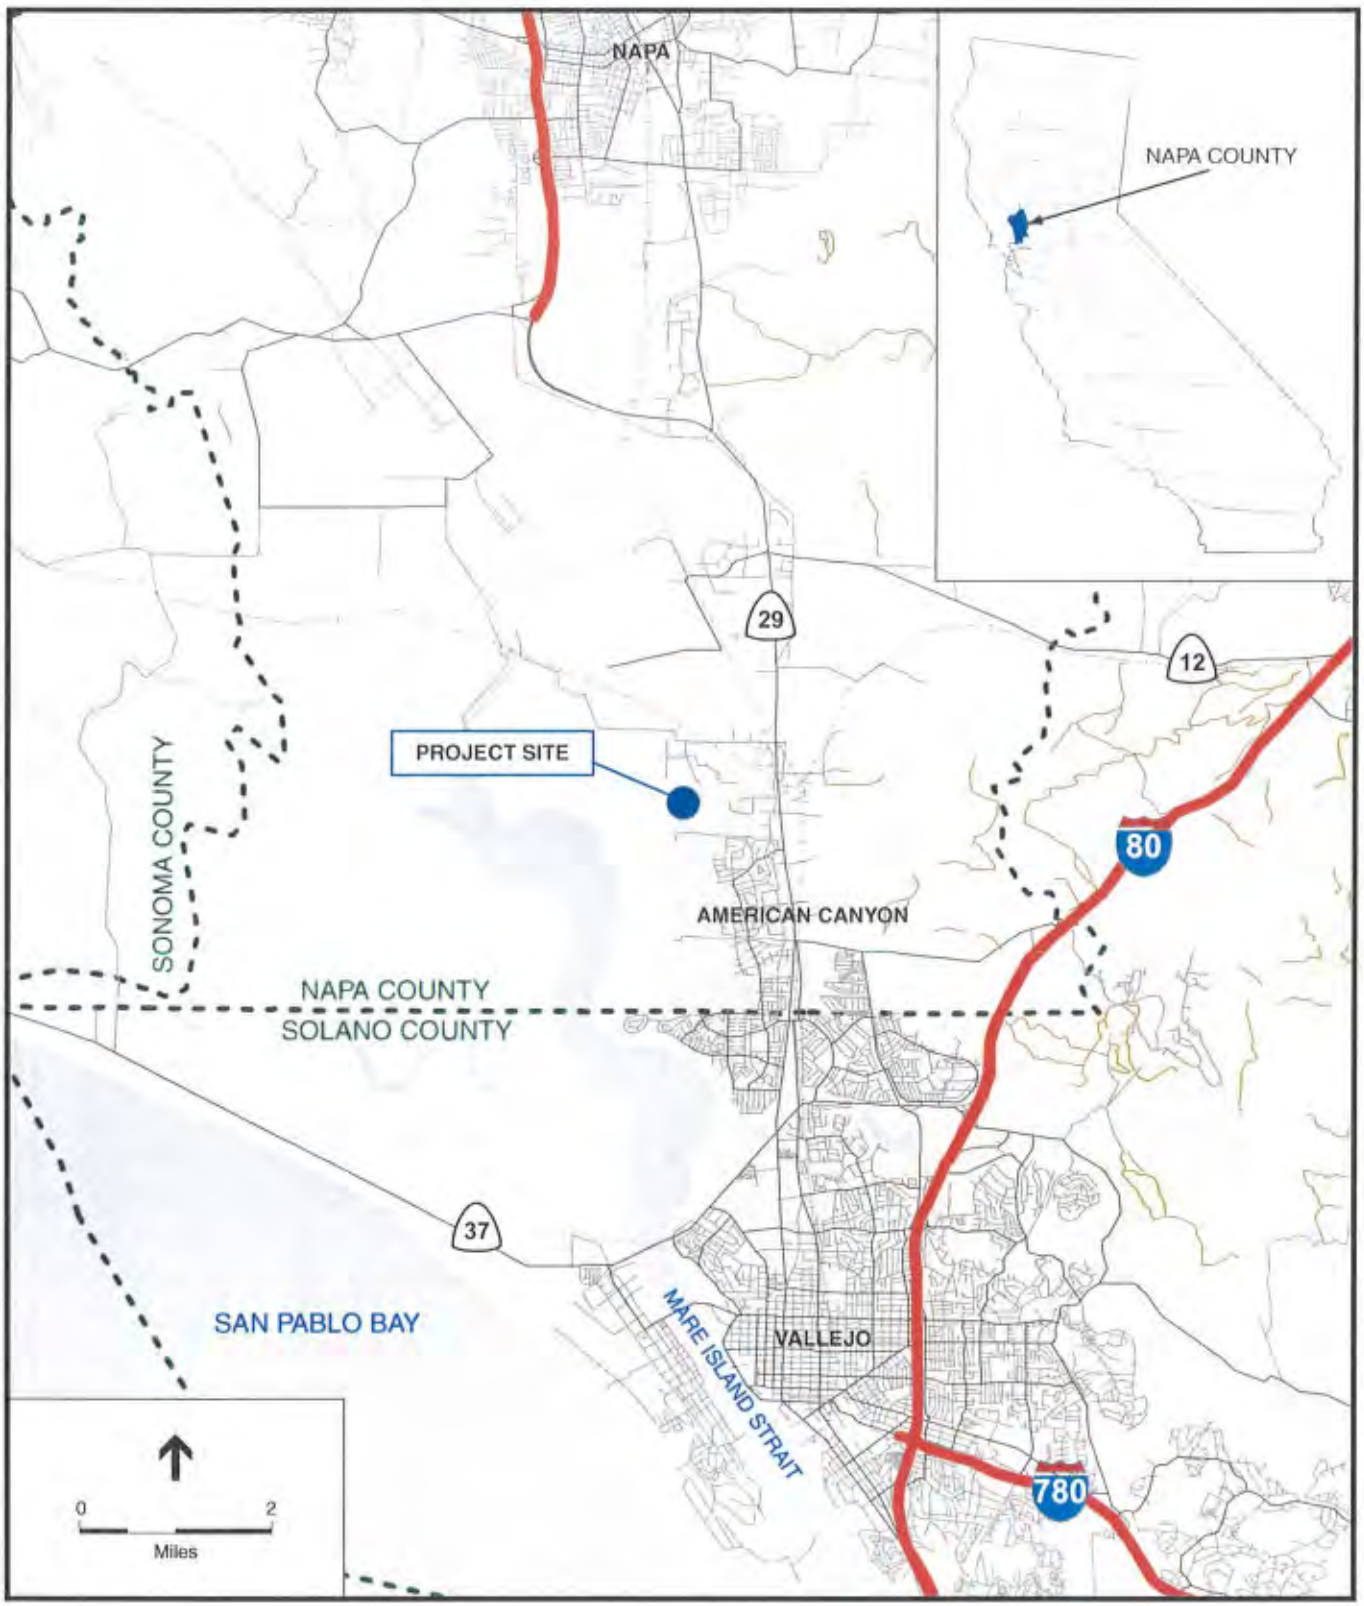
SECTION 1.0

EXECUTIVE SUMMARY

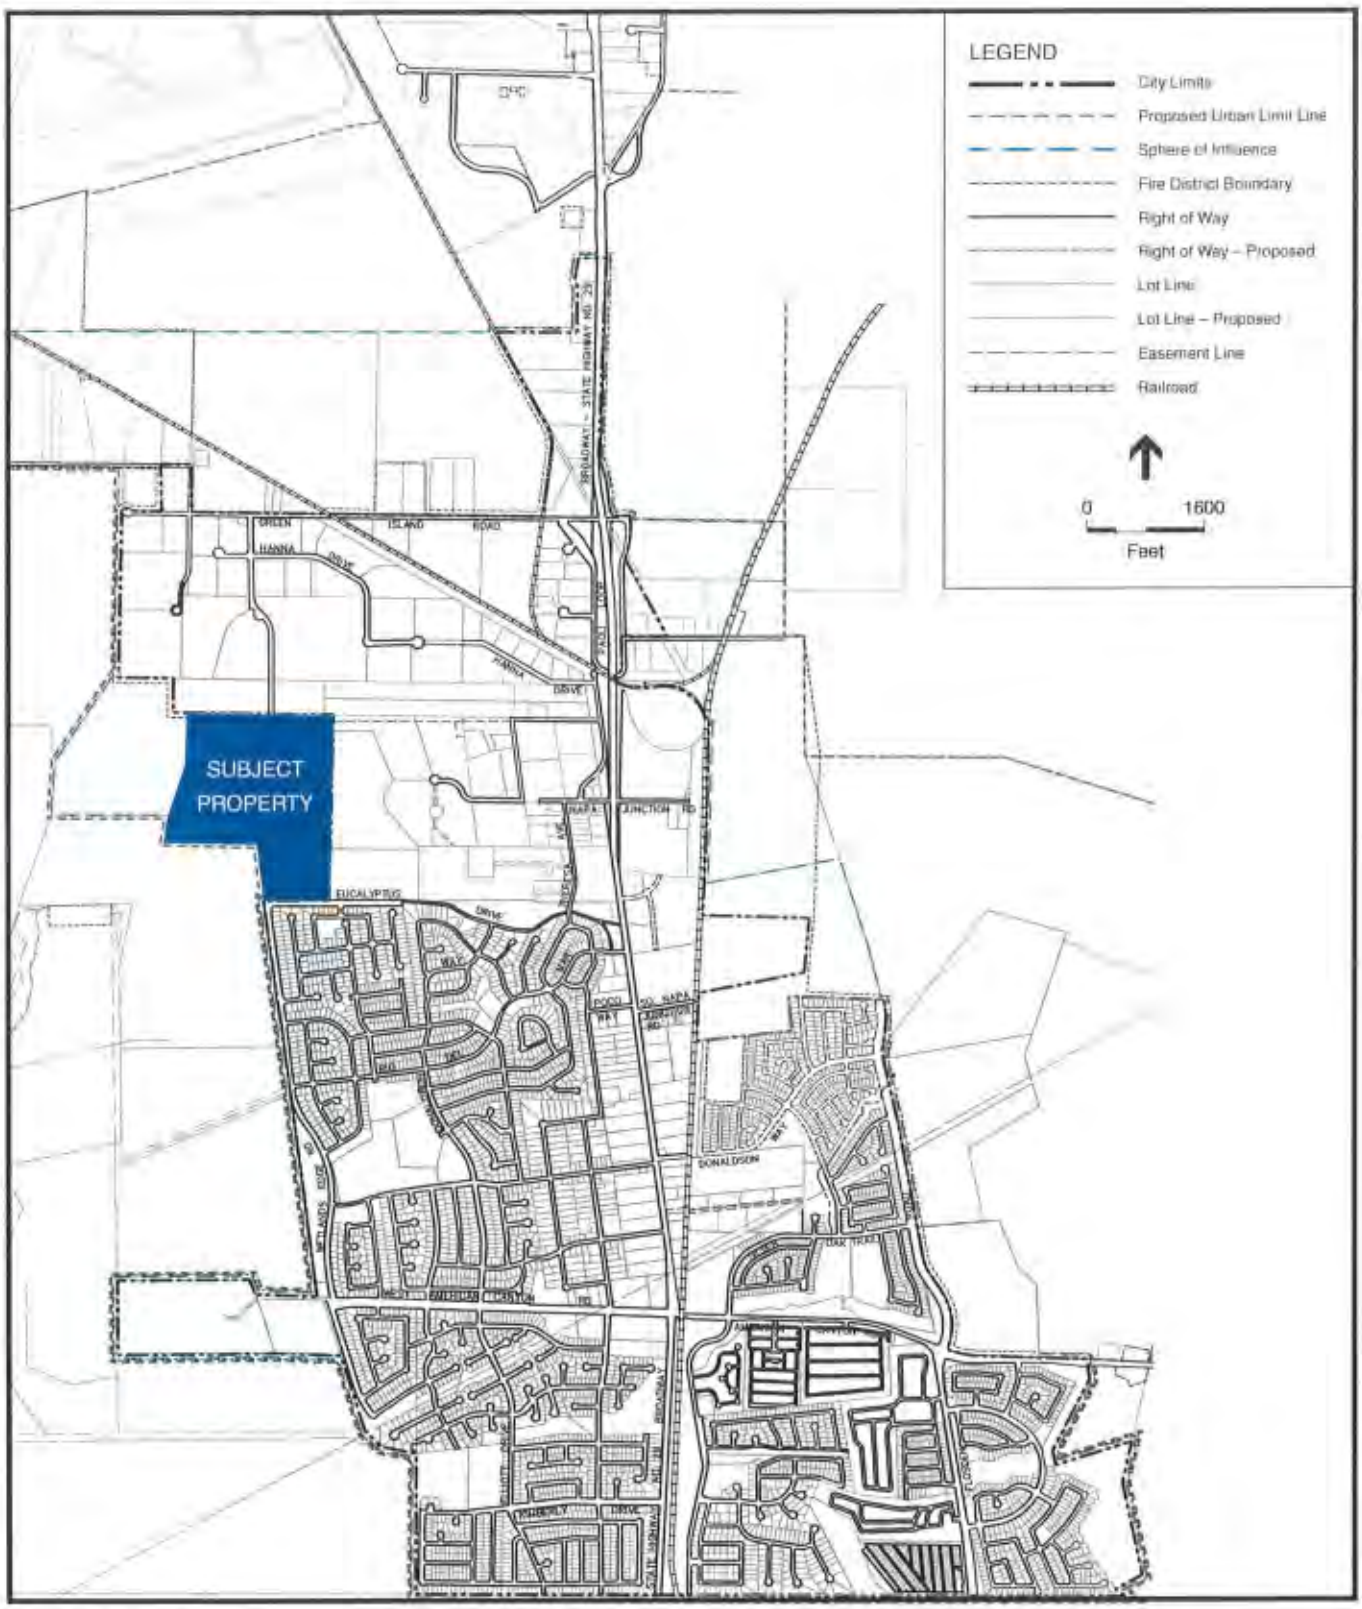
SECTION 1.0
EXECUTIVE SUMMARY



Environmental Science Associates (ESA) has been retained by Mr. Steve Brock, Fresno, California to prepare a Phase I Environmental Site Assessment of property located in American Canyon, Napa County, California (**Figure 1**). The property consists of approximately 106 acres of land located at 2 Eucalyptus Drive, American Canyon, California (**Figure 2**).

This Phase I Environmental Site Assessment was performed in conformance with the scope and limitations of the American Society for Testing and Materials (ASTM) E1527-00, Standard Practice for Environmental Site Assessments. ASTM E1527 specifies the *appropriate inquiry* to satisfy one of the requirements for the *innocent landowner defense* under the Comprehensive Environmental Response, Compensations, and Liability Act (CERCLA).

ESA's scope of work to complete the Phase I Assessment included several tasks to determine the past and present uses of the property, including:



- Review of available historical aerial photographs and topographic maps.
- Review of governmental agency database listings for records of known storage tank sites, leaking underground storage tank sites, and known sites with hazardous materials use, generation, storage, or soil and groundwater contamination.
- Site reconnaissance to evaluate the potential for existing sources of contamination on or adjacent to the subject property.

Based on the information reviewed as a part of this Phase I assessment, ESA observed evidence of potential soil contamination on the property due to previous and current storage of hazardous materials and wastes and housekeeping practices on the subject property. Conclusions and recommendations are presented in Section 6.0 of this report.

SECTION 2.0
INTRODUCTION

SECTION 2.0
INTRODUCTION

PURPOSE

ESA has performed this Phase I Environmental Site Assessment in conformance with the scope and limitations of American Society of Testing and Materials (ASTM) Standard Practice E1527-00, which specifies the *appropriate inquiry* to satisfy one of the requirements for the *innocent landowner defense* under the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA).

The purpose of this Phase I Environmental Site Assessment is to identify *recognized environmental conditions* that may pose a risk to human health or to the environment, or in any way affect the proposed use of the subject property. As defined in ASTM E1527 the term *recognized environmental conditions* means the presence or likely presence of any hazardous substances or petroleum products on a property under conditions that indicate an existing release, a past release, or a material threat of a release of any hazardous substances or petroleum products into any structures on the property or into the ground, groundwater, or surface water of the property.

The term *recognized environmental conditions* includes hazardous substances or petroleum products even under conditions in compliance with laws. The term is not intended to include *de minimis* conditions that generally do not present a material risk of harm to public health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies. Conditions determined to be *de minimis* are not recognized environmental conditions.

This Phase I assessment provides historical information of the subject property and adjacent properties. As a part of this assessment, ESA performed a site reconnaissance of the subject property, contacted local agencies, and reviewed relevant database listings of hazardous material sites, waste generators, and underground storage tanks.

LIMITATIONS AND EXCEPTIONS

No environmental site assessment can wholly eliminate uncertainty regarding the potential for recognized environmental conditions in connection with a property. Conformance of this assessment with the ASTM Standard Practice E1527-00 will reduce, but not eliminate, uncertainty regarding the potential for recognized environmental conditions in connection with the subject property.

While ESA has made every effort to discover and interpret available historical and current information on the property within the time available, the possibility for undiscovered contamination to be present remains. ESA's report is a best-effort collection and interpretation of available information consistent with industry standards for the completion of Phase I Environmental Site Assessments.

LIMITING CONDITIONS

This Phase I Environmental Site Assessment is based on a records review, a site reconnaissance, and interviews. Physical testing of soil or groundwater was not within the scope of this assessment. This Phase I Environmental Site Assessment did not include ASTM E1527 non-scope considerations for the subject property such as radon, lead in drinking water, wetlands, regulatory compliance, cultural and historic resources, industrial hygiene, health and safety, ecological resources, endangered species, and indoor air quality.

The subject property is a large dense eucalyptus grove, and while we attempted to walk the entire property, we were unable to view all areas due to dense vegetation and trees. The property has had numerous uses over the years, including reportedly illegal uses. It would be difficult to determine where the numerous shacks and temporary homes were located and where the methamphetamine labs operated throughout the property in the past.

This assessment is the result of appropriate inquiry, and is not an exhaustive assessment of the subject property. As described in the ASTM Standard Practice E1527-00, there is a point at which the cost of information obtained, or the time required to gather it, outweighs the usefulness of the information, and may, in fact, be a material detriment to the orderly completion of the investigation. Information was obtained for this Phase I investigation in compliance with ASTM E1527 guidelines.

METHODOLOGY

A variety of data sources and agencies were consulted in completing this Phase I Environmental Assessment. The following discussion describes the methods used and the data sources consulted to accomplish each task.

HISTORICAL REVIEW

Previous land uses and history of the subject property and adjacent properties were researched in an effort to identify potential sources of hazardous substances at or adjacent to the property. Aerial photographs and topographic maps were reviewed for the presence of industrial buildings, gas station canopies or pump islands, or other indications of bulk hazardous material storage and generation within the study area.

DATABASE SEARCH

Regulatory Agency database search requests were made for records of known storage tank sites and known sites of hazardous materials generation, storage or contamination. A database search report including a full listing of sites within the subject property vicinity is provided in **Appendix A**.

SITE RECONNAISSANCE

The purpose of the site reconnaissance is to observe potential locations of hazardous substances or petroleum products, to locate current aboveground storage tanks, to observe evidence of underground tanks, and to examine for obvious physical indications of improper hazardous substances or petroleum product disposal such as stained soil or asphalt, stressed vegetation, sumps, and partially buried drums.

SECTION 3.0
SITE DESCRIPTION

SECTION 3.0
SITE DESCRIPTION

LOCATION AND LEGAL DESCRIPTION

The subject property consists of approximately 106 acres of land located at 2 Eucalyptus Drive, American Canyon, Napa County, California. The Napa County Assessor's Parcel Number is 058-030-056.

SITE AND VICINITY CHARACTERISTICS

The property is located within the City of American Canyon boundary and is bound to the north warehouse buildings. To the east of the property is undeveloped grassland. The property is bound to the south by open space and a residential subdivision that is across Eucalyptus Drive. Properties to the west include a portion of the City Water Treatment Plant, a eucalyptus grove, and a wetland area. The now closed American Canyon Sanitary Landfill is located approximately 1/4 mile southwest of the subject property. Historically, the adjacent properties have been eucalyptus groves, undeveloped land, and rural residential.

The subject property is a eucalyptus grove, a portion of which is being used by the "Paint Ball Jungle" for paint ball games, and a portion is occupied by relatives of the property owners. Historically, the subject property has been a eucalyptus grove with developed portions of the property similar to what now exists.

There are paint balls throughout a portion of the property, and several forts and that have been built for use during the paint ball games. There are two unpermitted homes on the property. The area surrounding the homes has been used as an undocumented and illegal storage of hazardous materials and wastes. Utility pipelines were being installed along a dirt road that runs through the center of the property in a north/south direction.

On the southern portion of the property is an area that is being used to cut and store wood. Anecdotal information was received from Mr. Steve Brock, the person interested in purchasing the property, about this portion of the property. Mr. Brock indicated that a large amount of soil containing some type of oil was deposited on this portion of the property. It is unknown where this soil was placed on the property. There is an area of this portion of the property that appeared to have been leveled and graded where soil might have been brought onto the property.

The owners of the property have been illegally accepting and disposing of hazardous materials and wastes on their property for several years. Old abandoned vehicles, machinery, equipment,

trash piles, batteries, compressed gas cylinders, small containers of unknown substances, and tanks are located throughout the property. The owners have allowed people to put up temporary shelters, live in abandoned vehicles and trailers on the property over the years.

In 1990, a 165-acre portion of the subject property was inspected by staff at the County Department of Environmental Management. The hazardous materials and wastes observed on the property at that time were oil or oily wastes, compressed gas cylinders, paints, lacquers, thinners and solvents, unknown materials in small containers, and automobile batteries, 55-gallon drums, three underground storage tanks sitting on top of the ground, two 10,000 gallon tanks (empty) and one 3,000 gallon tank (partially full of an oily liquid). Samples were collected from the five drums and the storage tank containing an oily liquid. The samples were collected by a Hazardous Materials Team composed of staff from the California Department of Forestry and the American Canyon Fire Protection District. A total of six liquid samples were collected and submitted to a laboratory for chemical analysis. The drums contained chloride, phenols, petroleum hydrocarbons as diesel, and polynuclear aromatics. The tank contained petroleum hydrocarbons as diesel. The County determined that the property constitutes an illegal junk yard and refuse disposal area, which constitutes a public nuisance. The violations found by the County at the property range from storage of hazardous wastes over 90 days without a permit to failure of the generator to determine if his wastes are hazardous and to properly manage hazardous wastes.

PHYSICAL SETTING

The subject property is located within the Coast Ranges, which are between the Pacific Ocean and the Great Valley of California and run almost parallel with the Sierra Nevada Mountains to the east. The Coast Ranges are comprised of a series of small ranges bisected by the San Francisco Bay. The central portion of the Coast Ranges within the vicinity of the property is characterized by gentle sloping foothills to the east of American Canyon, and alluvial plains leading to the Napa River on the western border of the City.

The major topographic features within the vicinity of the property are lowlands and marshes which border the lower reaches of the Napa River, and Oat Hill located adjacent to the east side of the property.

The U.S. Geologic Survey (USGS), 7.5 minute Cuttings Warf, California, topographic quadrangle map, 1981, depicts the subject property at an elevation approximately 20 feet above mean sea level.

Surface soil types on the subject property include Clear Lake clay, Haire loam, and Haire clay loam (USDA NRCS Soil Survey of Napa County, 1978).

Hydrology

A creek runs through the western portion of the subject property. The nearest major surface water drainage is the Napa River, located approximately one mile to the west. Regional

groundwater depth ranges from 12 to 21 feet below ground surface in the area of the subject property. Regional groundwater flow is in an easterly direction.

A biological evaluation study was completed for the proposed property on August 24, 2004. According to that study, wetlands that are likely to meet the requirements of the jurisdiction under the Clean Water Act were observed in two locations. The first and largest area is a drainage that enters the property from an underground pipe on the northwest boundary of the property. The location on the northern boundary of the property this drainage was flowing southwest with water approximately 3-4 inches deep. The drainage continues through the property southwest until it crosses the property (fence line) and drains into the adjacent wetlands. Along the northern 60-80 feet of the drainage there is sparse perennial and annual herbaceous vegetation composed of plants that are known to be indicators of wetlands. Also along the western property boundary is an area near the fence line where the brackish marsh west of the property impinges into the project area. A small area approximately 25 square feet in size at the maximum is dominated by wetland plants.

WATER SUPPLY AND SEWAGE DISPOSAL SYSTEM

The Napa County Department of Environmental Management indicated in their 1990 site investigation report (see Appendix D) that "There is no approved water supply and there are two unapproved water wells that have been dug on the property). However, ESA staff was only able to find one of the water wells on the property.

There is no approved sewage disposal or approved septic system on the property. The Napa County Department of Environmental Management has indicated in their 1990 site investigation report (see Appendix D) that "There is no approved sewage disposal or approved septic system present. Sewage disposal ranges from holes in the ground to allowing sewage, to merely allowing sewage to run on the ground to an outhouse type structure. A few portable toilets were also observed on the property.

New infrastructure for utilities is being installed along a dirt roadway that runs through the property in a north/south direction.

HISTORICAL USES OF SUBJECT PROPERTY

Historical sources were reviewed to develop a history of the previous uses of the subject property and adjacent lands, in order to help identify the likelihood of past uses that might lead to recognized environmental conditions in connection with the subject property.

As stated in ASTM standard practice E1527-00, Section 3.3.27, *practically reviewable* data is information that is "provided by the source in a manner and in a form that, upon examination, yields information relevant to the property without the need for extraordinary analysis of irrelevant data." Furthermore, "records that are sorted, filed, organized, or maintained by the source agency only chronologically are not generally practically reviewable."

Historically, the subject property has been a eucalyptus grove with developed portions of the property similar to what now exists. The property has had numerous uses over the years, including reportedly illegal uses, such as methamphetamine labs and hazardous waste storage.

The owners of the property have been illegally accepting and disposing of hazardous materials and wastes on their property for several years. Old abandoned vehicles, machinery, equipment, trash piles, batteries, compressed gas cylinders, small containers of unknown substances, and tanks are located throughout the property. The owners have allowed people to put up temporary shelters, live in abandoned vehicles and trailers on the property over the years.

In 1990, a 165-acre portion of the subject property was inspected by staff at the County Department of Environmental Management. Hazardous materials and wastes were observed on the property and samples were collected from the five drums and the storage tank containing an oily liquid. The samples were collected by a Hazardous Materials Team composed of staff from the California Department of Forestry and the American Canyon Fire Protection District. The drums contained chloride, phenols, petroleum hydrocarbons as diesel, and polynuclear aromatics. The tank contained petroleum hydrocarbons as diesel. The County determined that the property constitutes an illegal junk yard and refuse disposal area, which constitutes a public nuisance. The violations found by the County at the property range from storage of hazardous wastes over 90 days without a permit to failure of the generator to determine if his wastes are hazardous and to properly manage hazardous wastes.

AERIAL PHOTOGRAPHS

Historic aerial photographs were provided by GeoSearch for the subject property and surrounding area. Aerial photographs were available for the years 1937, 1957, 1965, 1982 and 1993. Refer to **Appendix B** for copies of the aerial photographs.

1937 AND 1957

The subject property is shown as a eucalyptus grove in the aerial photographs. There are dirt roads that are located along the perimeter of the property and through portions of the property, similar to what is there now. A cleared area is shown in the northeast portion of the property, where the homes, outbuildings and other items are now located. The scale and quality of the photograph is such that it is difficult to determine what is located on the developed portion of the property. Adjacent properties are shown as undeveloped land, eucalyptus groves, and a rural residence and pasture.

1965

This aerial photograph shows that a large portion of the eucalyptus grove in the southeast area of the property has been harvested, and a portion of the northwest area has been harvested. A cleared area is shown in the northeast portion of the property. The scale and quality of this photograph is such that it is difficult to determine what is located on the developed portion of the

property. Adjacent properties are shown as undeveloped land, eucalyptus groves, and a rural residence and pasture.

1982 AND 1993

The subject property is shown as a eucalyptus grove in the aerial photographs, the areas that had been cleared are now covered with trees. There are now three developed areas on the property, two in the northeast portion and one in the southeast portion of the property. Adjacent properties are shown as undeveloped land, a pond or wetland area is now located to the west, eucalyptus groves, and a rural residence and pasture. The now closed American Canyon Landfill is shown to the southwest of the property.

TOPOGRAPHIC MAPS

Historic topographic maps were provided by GeoSearch for the subject property and surrounding area. The USGS Mare Island, California, 15 minute quadrangle topographic maps were available for the years 1916 (reprinted 1947) and 1941. The USGS Cuttings Warf, California, 7.5 minute quadrangle topographic maps were available for the years 1949, 1968, and 1981. Refer to **Appendix C** for copies of the topographic maps.

1916 (REPRINTED 1947)

The subject property is shown as undeveloped land. Surrounding lands are also shown as undeveloped land or having structures typical of rural residential homes.

1941, 1949, 1968, AND 1981

The subject property is shown as a eucalyptus grove. No structures are depicted on the property. Surrounding lands are shown as eucalyptus groves, undeveloped land, or land having structures typical of rural residential homes.

RECORDED LAND TITLE RECORDS

A chain of title report was not provided to ESA for this assessment.

SANBORN INSURANCE COMPANY MAPS

EDR conducted a search for Sanborn Fire Insurance Maps. The Sanborn maps do not provide coverage of the area in which the subject property is located.

BUILDING DEPARTMENT RECORDS

The Napa County Building Department was contacted. According to staff on duty at the Napa County Building Department, they have no records for any of the structures located on the property.

SECTION 4.0

SITE RECONNAISSANCE AND INTERVIEWS

SECTION 4.0
SITE RECONNAISSANCE AND INTERVIEWS

The purpose of the site reconnaissance was to identify visible hazardous materials involvement with respect to the subject property. Hazardous materials involvement includes the presence or likely presence of any hazardous materials or petroleum products that indicate an existing release, past release, or a threat of release into any structure on the property, soil, or groundwater.

Interviews included contacting individuals familiar with the subject property and knowledgeable of the property's historic and existing conditions relative to hazardous materials.

SITE RECONNAISSANCE FINDINGS

ESA performed a site reconnaissance of the subject property on June 18, 2004 and again on July 29, 2004. Notable features and property conditions were photographed (**Figures 5-1 through 5-5**). A map of the property with the locations of the areas discussed below is provided as **Figure 3**. A map of the area with the potential for contamination is provided as **Figure 4**. In 1990, a 165-acre portion of the subject property was inspected by staff at the County Department of Environmental Management (refer to page 6-2 of this report for a discussion of the County's findings).

The subject property is mostly a eucalyptus grove, a large portion of which is being used by the "Paint Ball Jungle" for paint ball games (Areas 1 and 2 on **Figure 3**). There are paint balls throughout the property, and several forts and that have been built for use during the paint ball games (Photograph 1, **Figure 5-1**). Three forts were observed on the property that had been set up for use in the paintball games. Included in those forts are several 55-gallon plastic drums used for walls. The drums did not have lids and were empty, appeared to have never been used for storage of material, and there was no soil staining beneath or around the drums. Paint balls typically contain a non-toxic oil, egg, or gelatin based paint.

Near a corner of the property that is intersected by two dirt roads was observed a pile of household debris (Area 3 on **Figure 3**), including a mattress, rug, lamp, hose, and other household trash (Photograph 2, **Figure 5-1**). No stained soil or hazardous materials were observed within, beneath or around the debris. A 55-gallon sealed drum was observed near the creek on the west side of the property. The drum appeared to be empty and there was no soil staining beneath or around the drum.

A portion of the property appeared to be or have been recently occupied (Area 4 on **Figure 3**, and photographs 3, 4 and 5, **Figures 5-1 and 5-2**). There was a small trailer, a truck with a camper

bed on the back, a portable toilet, a locked shed, some household debris, several 5-gallon containers of unknown material, and a no trespassing sign that read "violators will be shot". No stained soil or stressed vegetation were noted in this area of the property.

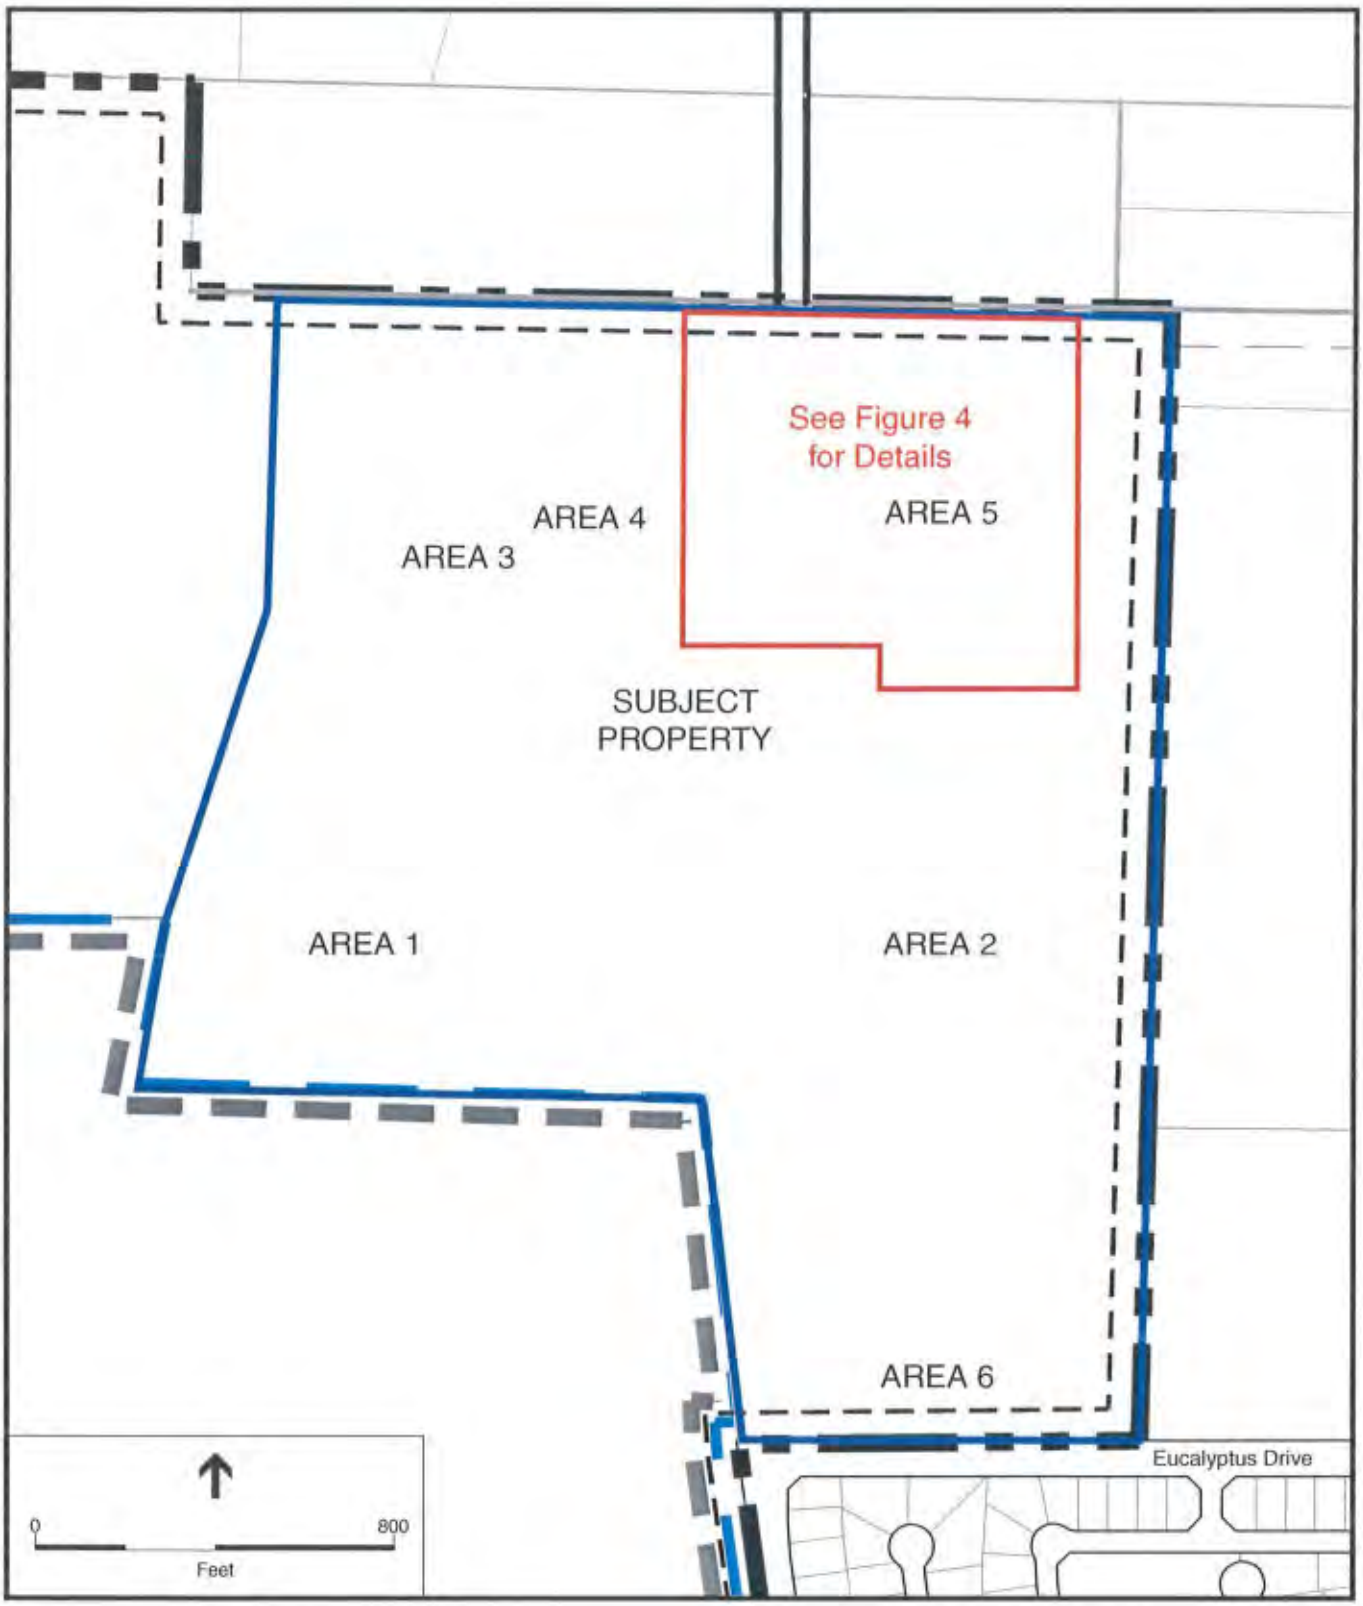
A portion of the property is occupied by relatives of the owners who live in unpermitted homes on the property (Area 5 on **Figure 3** and photographs 6 through 19, **Figures 5-2 through 5-5**). The area surrounding the residences contains a large amount of household items, wood debris, soil piles, concrete rubble, abandoned vehicles, refrigerators, burn piles, tires, 55-gallon drums, machinery, equipment, automobile batteries, 5-gallon or smaller containers of unknown material, several water tanks, a grave stone, an underground storage tank that was sitting on top of the ground, a concrete block foundation for some type of structure, and a wooden garage filled with clothes, trash, equipment, etc. Areas that had recently been disturbed and areas with a lack of vegetation were noted in this area of the property.

A portion of the property is being used to cut and store wood (Area 6 on **Figure 3**). There is a trailer, several sheds, boats, truck trailers, tires, refrigerators, and equipment used for wood cutting on this portion of the property. Several 55-gallon oil drums that are empty were observed, and an old trichlorethane tank that is not being used was observed. There is a pole-top transformer that has a blue sticker indicating that it is PCB free. Anecdotal information was received from Mr. Steve Brock, the person interested in purchasing the property, about this portion of the property. Mr. Brock indicated that a large amount of soil containing some type of oil was deposited on this portion of the property. It is unknown where this soil was placed on the property. There is an area of this portion of the property that appeared to have been leveled and graded where soil might have been brought onto the property. ESA field personnel attempted to talk to the person in charge of the wood cutting operation on the property on both dates they accessed the property. The person in charge was not on the property on those dates.

A portion of the property is used to house animals, such as horses, calves, goats, and chickens/roosters (located adjacent to the south of Area 5 on **Figure 3**). The animals were in pens and appeared to be well cared for, possibly this area is leased for the boarding of the animals. No hazardous materials or wastes were observed in this area of the property.

INTERVIEWS

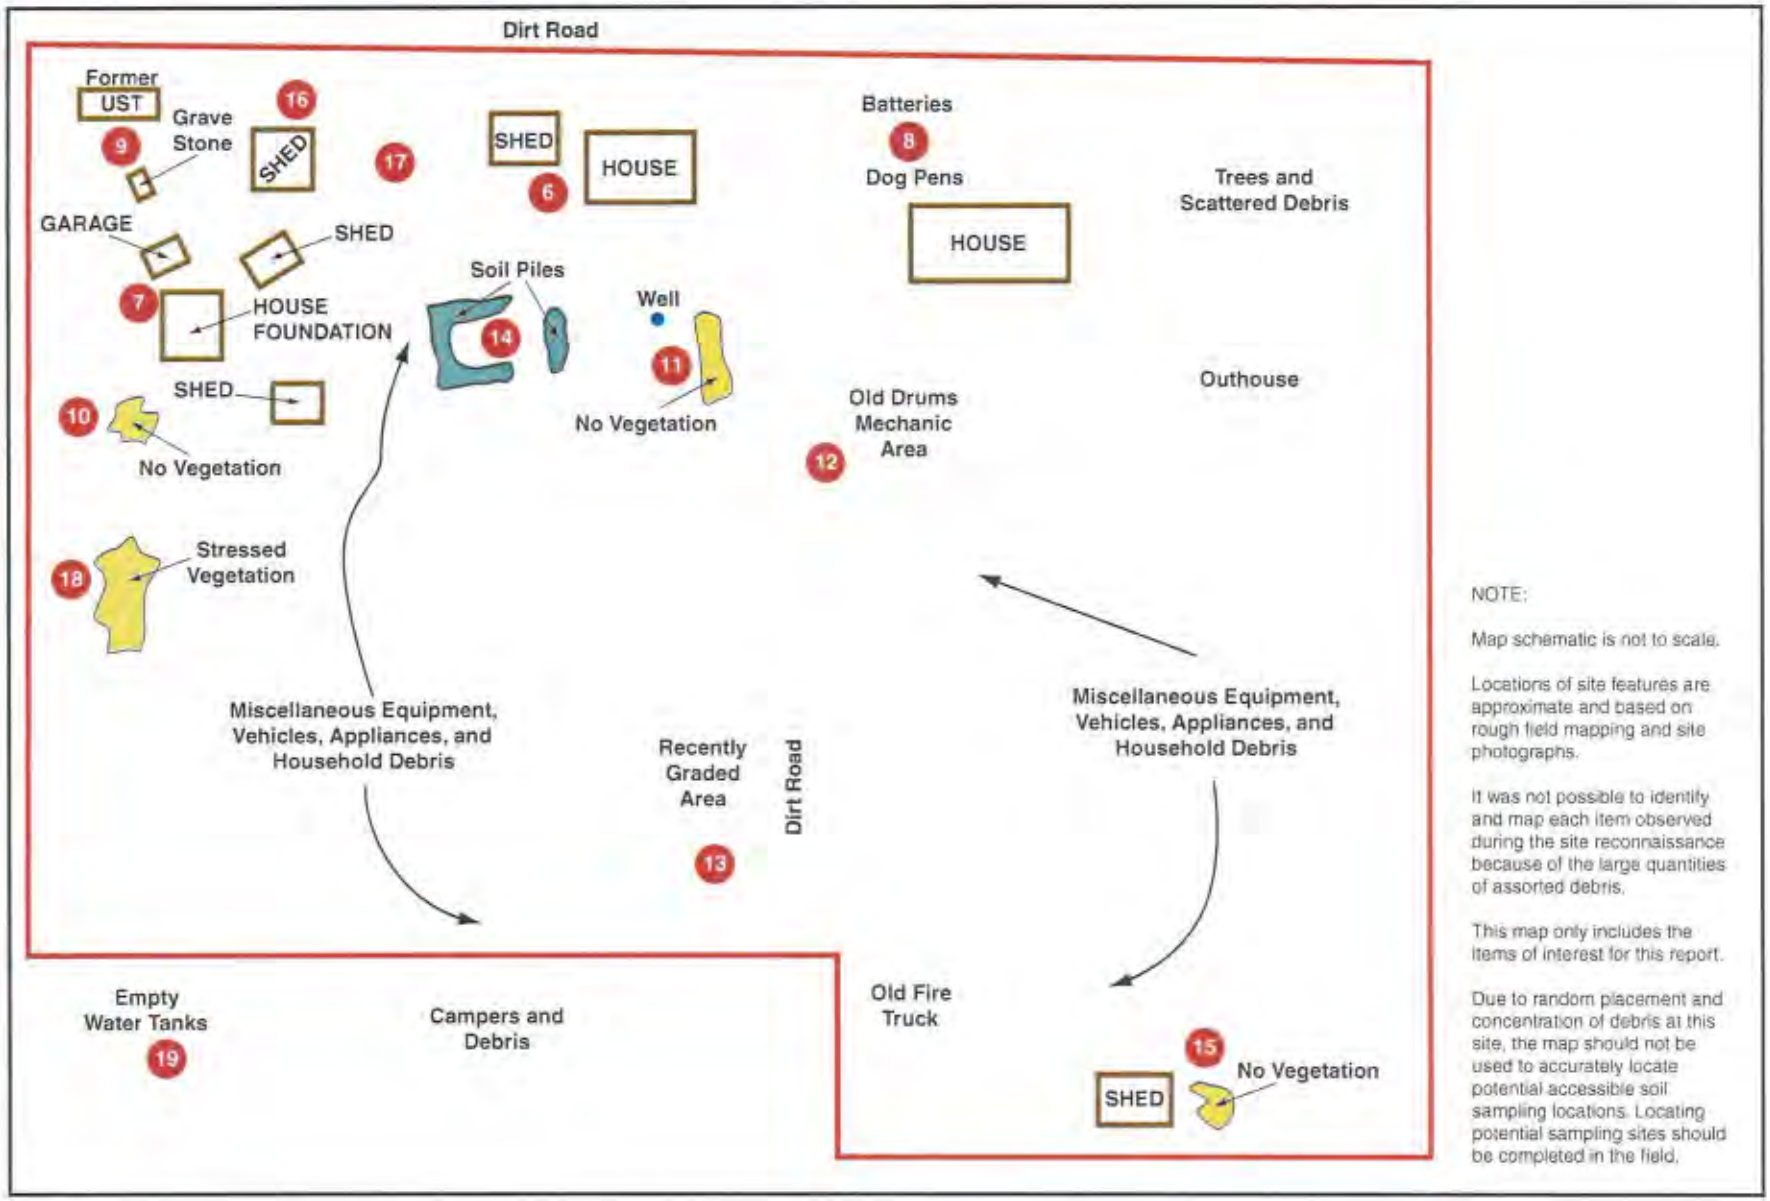
The objective of the interview process is to obtain additional information regarding the history and current uses of the subject property. The occupants of the property are the sons of the owners. There are legal issues pending on this property; therefore, we could not interview the occupants of the subject property (relatives of the property owners) due to their adversarial position with our client and with ESA staff.



ESA staff contact Mr. Trent Cave at the Napa County Environmental Management Department to discuss the contents of their file for the subject property and to find out if they have done any additional investigations of the property. Mr. Cave indicated that he has no information regarding the property other than what is in the County files. Mr. Cave noted that he made and signed the

Declaration in Support of Motion to Modify Final Judgment and Permanent Injunction in order to give the court a estimate of what it would cost to clean up the property based on what was found during the Site Investigation in 1990. Mr. Cave then directed ESA staff to Doug Calhoun of the County Environmental Management Department. Mr. Calhoun indicated that they have not done any additional investigations of the property since the 1990 inspection. Mr. Calhoun indicated that in 1990 there were many people living on the property in vehicles, tents, shacks built out of garage doors, etc. Mr. Calhoun does not know the location of the water wells that were identified by the County during their inspection of the property. He has no additional information regarding the property and what has occurred on the property since the 1990 inspection. If cleanup has occurred on the property, no inventory or manifests of the cleanup have been provided to the Napa County Environmental Management Department.

ESA staff contacted Chief Keith Caldwell at the American Canyon Fire District. Chief Caldwell indicated that in the past there have been as many as 30 families living on the subject property in various types of living quarters. There are no septic systems on the property and he knows of no approved water wells on the property. According to Chief Caldwell, in the 1970s soil was brought onto the portion of the property where the wood cutting business is now located for a motorcycle track. He does no know whether that soil was contaminated. Chief Caldwell knows of no underground storage tanks on the property, but does not know if there are any hazardous materials or other wastes buried on the property. There has been drums and above-ground tanks of hazardous materials/wastes located on the property in the past. Some cleanup of the property has been done by the owners of the property. However, no inventory or manifests of the cleanup have been provided to the American Canyon Fire District.



On September 27, 2004, ESA staff contacted Mr. Norbert Frost, the attorney for Patricia Couch who is one of the property owners. Mr. Frost indicated that he knows of no buried underground storage tanks on the property. He does not know the location of any water wells on the property. Mr. Frost is not aware of any contaminated soil brought onto the property prior to or by Mr. Hearst, who runs the woodcutting operation on the property. Over the years people have illegally dumped solid waste onto the property instead of taking it to the nearby landfill. However, the Couches have worked to clean up most of those areas over the last two years.

The Notice of Motion and Motion for Order Modifying Terms of Stipulation and Order dated August 26, 2003 has a Declaration signed by Edward S. Colby as Exhibit C. Mr. Colby indicated that he had inspected the Couch property in 1990 and in 2003. In the 2003 inspection the property contained scattered and accumulated piles of trash and debris, piles of vehicle tires, junked large appliances, used lumber, scrap metals, broken concrete, abandoned and inoperative heavy equipment, non-permitted wooden enclosures, buildings and fences, a wooden cabin and two mobile homes without appropriate permits, and an illegal tree-cutting business.

SECTION 5.0

RECORDS REVIEW

SECTION 5.0
RECORDS REVIEW

As stated in ASTM standard practice E1527-00, *practically reviewable* data is information that is "provided by the source in a manner and in a form that, upon examination, yields information relevant to the property without the need for extraordinary analysis of irrelevant data." Furthermore, "records that are sorted, filed, organized, or maintained by the source agency only chronologically are not generally practically reviewable."

DATABASE SEARCH

It should be noted that the database search is only as accurate as the data entered into the government agency maintained databases and the date on which those databases were last updated. Installation of underground storage tanks or hazardous material releases, if not reported to the appropriate agency, are not listed on any of the databases searched. The following section reviews the previously mentioned database search and all follow-up communications with local agencies and individuals.

REVIEW OF FEDERAL AND STATE REGULATORY AGENCY DATABASES

Federal and State Agency database searches were made for records of known storage tank sites and known sites of hazardous materials generation, storage or contamination. Databases were searched for sites and listings up to one mile from a point roughly equivalent to the center of the subject property. The database search report as provided to ESA by Environmental Data Resources (EDR) can be found in **Appendix A**. Included in the EDR database search report was a list of "unmapped sites". ESA reviewed the list of unmapped sites for properties that may be located within the search radius specified for each governmental database.

DATABASE SEARCH FINDINGS

The California Department of Conservation, Division of Oil, Gas and Geothermal Resources (DOGGR) map number W6-1, which includes the subject property and surrounding area does not show any oil or gas wells on the subject property or adjacent properties.

The subject property does not appear on any of the federal or state agency databases searched as of the date of this assessment. However, the Napa County Department of Environmental Management, Hazardous Material Section has a file for the subject property. The contents of that

file are attached as **Appendix D**, and a summary of the County findings for the property is presented below.

Couch Property (subject property)
2 Eucalyptus Road
American Canyon, California

On November 19, 1990 an inspection was made by Catherine Moody, Senior Hazardous Materials Specialist at the County Department of Environmental Management of a 165-acre portion of the subject property known to have hazardous materials and wastes. The hazardous materials and wastes observed on the property were oil or oily wastes, compressed gas cylinders, paints, lacquers, thinners and solvents, unknown materials in small containers, and automobile batteries. Some of the items noted on the property by Ms. Moody included several 55-gallon drums, all but five were empty. Three underground storage tanks sitting on top of the ground, two 10,000 gallon tanks (empty) and one 3,000 gallon tank (partially full of an oily liquid). Ms. Moody also observed several compressed gas cylinders scattered throughout the property.

Samples were collected from the five drums and the storage tank containing an oily liquid. The samples were collected by a Hazardous Materials Team composed of staff from the California Department of Forestry and the American Canyon Fire Protection District. A total of six liquid samples were collected and submitted to a laboratory for chemical analysis. The drums contained chloride, phenols, petroleum hydrocarbons as diesel, and polynuclear aromatics. The tank contained petroleum hydrocarbons as diesel.

The County determined that the property constitutes an illegal junk yard and refuse disposal area, which constitutes a public nuisance. The violations found by the County at the property range from storage of hazardous wastes over 90 days without a permit to failure of the generator to determine if his wastes are hazardous and to properly manage hazardous wastes.

There is one listed on the database search that are located within 1/4 mile of the subject property, and is discussed below.

American Canyon Landfill
Western Terminus of Eucalyptus Drive

The American Canyon Sanitary Landfill is located approximately 1/4 mile southwest of the subject property. The American Canyon Landfill was in operation from 1942 to 1995, when the landfill stopped accepting waste on a regular basis. During closure activities a leachate treatment system and landfill gas collection plant were installed. Groundwater is being monitored at the landfill. Groundwater beneath the landfill has been impacted with volatile organic compounds. Groundwater depth ranges from 12 to 21 feet below ground surface and flow at the landfill is in an east/northeast direction. Contamination at the site is mainly in the western portion of the landfill. It is unlikely that this landfill would have impacted soil or groundwater beneath the subject property due to its distance from the property.

There are several additional sites listed on the federal and state databases that are located 1/2 to 1 mile from the subject property. These sites are listed as leaking underground storage tank locations, hazardous waste generators, facilities with emissions permits, landfill locations, and locations of releases of hazardous materials. Readily available information relative to the listed sites located 1/2 to 1 mile from the subject property was reviewed and it is ESA's opinion that these sites are not expected to pose a threat of adverse impact to the subject property due to their distances from the subject property.

SECTION 6.0

FINDINGS AND CONCLUSIONS

SECTION 6.0
FINDINGS AND CONCLUSIONS

ESA has performed a Phase I Environmental Site Assessment in conformance with the scope and limitations of ASTM Standard Practice E1527-00 of the subject property. Any exceptions to, or deletions from, this practice are described in the Limiting Conditions section of this report. Based only on the information reviewed and described in this report, a site reconnaissance of the property, and interview, this assessment has noted the following recognized environmental conditions in connection with the subject property:

- There is past and present undocumented and illegal storage of hazardous materials and wastes on the subject property. The Napa County Department of Environmental Management inspected the property in 1990 and determined that the property constitutes an illegal junk yard and refuse disposal area, which constitutes a public nuisance. The violations found by the County at the property range from storage of hazardous wastes over 90 days without a permit to failure of the generator to determine if his wastes are hazardous and to properly manage hazardous wastes. Refer to page 6-2 for a discussion of the inspection by the County and to **Appendix D** for a copy of the County's file on the subject property.

- The site reconnaissance of the subject property identified small quantities of hazardous wastes and some soil staining. It appeared that the hazardous materials noted by the County in 1990 had been removed by the property owners, except for the gas cylinders and 3,000 gallon former underground storage tank. It is unknown where the County had observed the drums containing hazardous materials, the 10,000 gallon former underground storage tanks, and the other containers of hazardous materials. However, areas that had recently been disturbed and areas with a lack of vegetation were noted during the site reconnaissance. It appears that some of the hazardous materials, drums and the 10,000 gallon tanks may have been removed by the property owners. Refer to **Figures 3 through 5.**

- It should be noted that it is common knowledge that methamphetamine labs operated in the eucalyptus groves in the area of the subject property, and possibly on the property. Operations of these types of labs typically produce hazardous wastes including phosphine gas, solvent, benzene, chloroform and thionyl chloride. No methamphetamine labs were observed during the field reconnaissance.

- A portion of the property is being used to cut and store wood (Area 5, **Figure 3**). Anecdotal information was received from Mr. Steve Brock, the person interested in purchasing the property, about this portion of the property. Mr. Brock indicated that a large amount of soil containing some type of oil was deposited on this portion of the property. It is unknown where this soil was placed on the property. There is an area of this portion of the property that appeared to have been leveled and graded where soil might have been brought onto the property. Chief Keith Caldwell of the American Canyon Fire District remembers that soil was brought onto the property in the 1970s for a motorcycle track.

ESA field personnel attempted to talk to the person in charge of the wood cutting operation on the property on both dates they accessed the property. The person in charge was not on the property on those dates.

- The County identified two unapproved water wells on the property in their 1990 investigation (Appendix D). However, ESA staff could only locate one of the water wells.

- There are outhouses (holes in the ground) on the property that have been used for sewage disposal.

RECOMMENDATIONS

- Soil and groundwater sampling be completed in the areas of concern that were identified by this Phase I report (those areas on **Figure 4** that show no vegetation or stressed vegetation, the area with the batteries, the mechanic area, and soil sampling only from the soil piles). It may also be necessary to sample other areas of the property as dictated by field personnel that perform the soil and groundwater sampling at the site, depending on what is encountered during sampling. At a minimum, the soil and groundwater samples should be analyzed for petroleum hydrocarbons, oil and grease, solvents, and priority pollutant metals. The Phase II report should provide recommendations based on the laboratory analytical results.

  Due to the history of the use of the property, it is difficult to determine what might be uncovered during earth moving activities if the property is developed. At the time of excavation of the site for development soil and groundwater sampling should be completed in any areas of the property where buried hazardous materials, odors, or stained soil are found. The results of the laboratory analytical results would provide the information needed to determine whether excavation of the soil would be necessary and whether the soil would need to be taken off the site for disposal.

- Further investigation into the existence and location of soil containing oil that might have been placed on the portion of the property that is used for a wood cutting operation (Area 5, **Figure 3**). Soil and groundwater sampling might be warranted in that area of the property.

- The water wells should be abandoned in accordance with California water well standards and Napa County protocol.

- The sewage disposal areas should be closed in accordance with Napa County protocol.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc. (EDR). The report meets the government records search requirements of ASTM Standard Practice for Environmental Site Assessments, E 1527-00. Search distances are per ASTM standard or custom distances requested by the user.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified.

EXECUTIVE SUMMARY

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

FEDERAL ASTM STANDARD

CERCLIS-NFRAP: As of February 1995. CERCLIS sites designated "No Further Remedial Action Planned" (NFRAP) have been removed from CERCLIS. NFRAP sites may be sites where, following an initial investigation, no contamination was found, contamination was removed quickly without the need for the site to be placed on the NPL, or the contamination was not serious enough to require Federal Superfund Action or NPL consideration. EPA has removed approximately 25,000 NFRAP sites to lift the unintended barriers to the redevelopment of these properties and has archived them as historical records so EPA does not needlessly repeat the investigations in the future. This policy change is part of the EPA's Brownfields Redevelopment Program to help cities, states, private investors and affected citizens to promote economic redevelopment of unproductive urban sites.

A review of the CERC-NFRAP list, as provided by EDR, and dated 02/26/2004 has revealed that there is 1 CERC-NFRAP site within approximately 1 mile of the target property.

RCRIS: Resource Conservation and Recovery Information System. RCRIS includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs): generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month. Small quantity generators (SQGs): generate between 100 kg and 1,000 kg of hazardous waste per month. Large quantity generators (LQGs): generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste from the generator off-site to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

A review of the RCRIS-SQG list, as provided by EDR, and dated 04/13/2004 has revealed that there is 1 RCRIS-SQG site within approximately 1 mile of the target property.

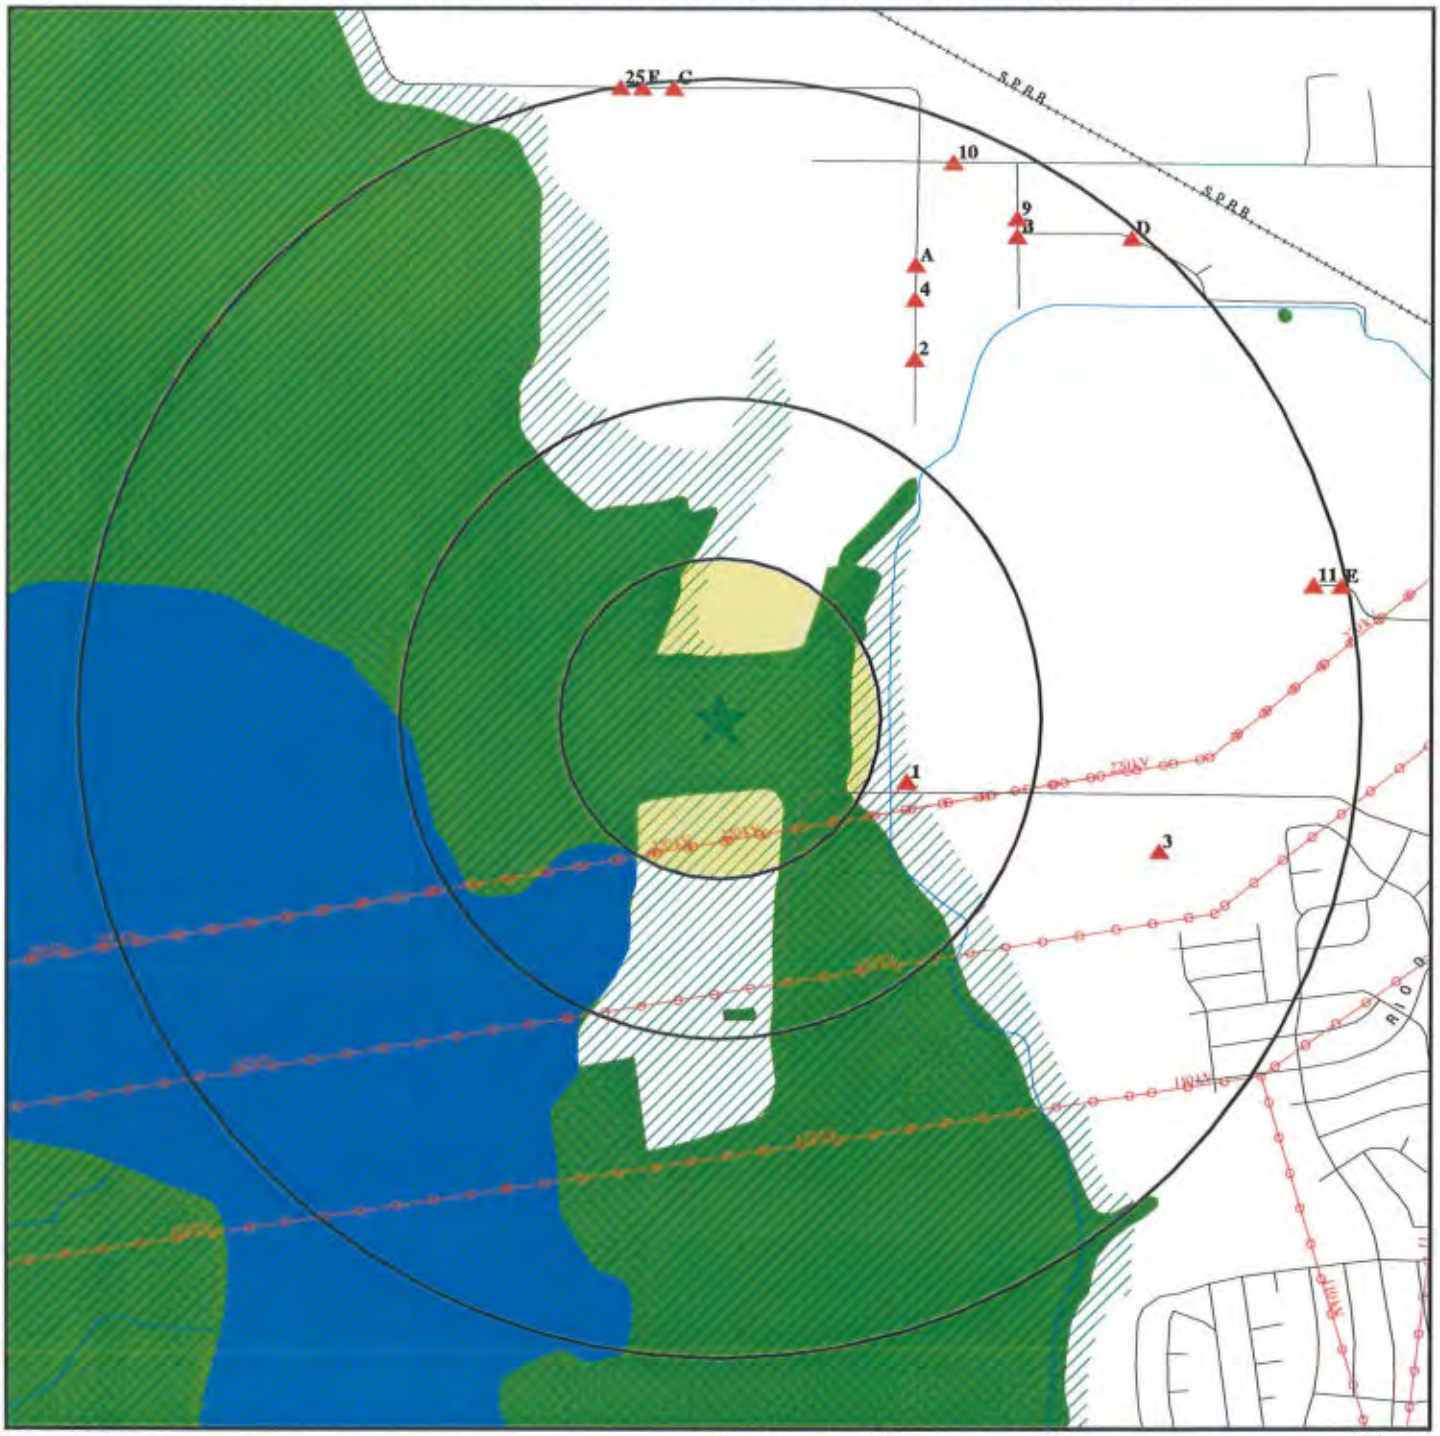
CALIFORNIA AUTO DISMANTLERS	1578 GREEN ISLAND RD	1/2 - 1 N	C17	23

HAZNET: The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000-1,000,000 annually, representing approximately 350,000-500,000 shipments. Data from non-California manifests & continuation sheets

are not included at the present time. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, & disposal method. The source is the Department of Toxic Substance Control is the agency



A review of the HAZNET list, as provided by EDR, and dated 12/31/2002 has revealed that there are 8 HAZNET sites within approximately 1 mile of the target property.

Threat to Water Quality:
Moderate Threat to Water Quality. A violation could have a major adverse impact on receiving biota, can cause aesthetic impairment to a significant human population, or render unusable a potential domestic or municipal water supply. Awsthetic impairment would include nuisance from a waste treatment facility.

Facility Type: Solid Waste Site-Class III - Landfills for non hazardous solid wastes.

Complexity: Category B - Any facility having a physical, chemical, or biological waste treatment system (except for septic systems with subsurface disposal), or any Class II or III disposal site, or facilities without treatment systems that are complex, such as marinas with petroleum products, solid wastes, and sewage pump out facilities.

Prime Waste: Solid Wastes - Designated/Influent or Solid Wastes that pose a significant threat to water quality because of their high concentrations (E.G., BOD, Hardness, TRF, Chloride). 'Manageable' hazardous wastes (E.G., inorganic salts and heavy metals) are included in this category.

2nd Waste Type: Miscellaneous (Includes wastes from dewatering, recreational lake overflow, swimming pool wastes, water ride wastewater, ground water seepage and other wastes of this type) - Designated/Influent or Solid Wastes that pose a significant threat to water quality because of their high concentrations (E.G., BOD, Hardness, TRF, Chloride). 'Manageable' hazardous wastes (E.G., inorganic salts and heavy metals) are included in this category.

Facility Type:	Industrial - Facility that treats and/or disposes of liquid or semisolid wastes from any servicing, producing, manufacturing or processing operation of whatever nature, including mining, gravel washing, geothermal operations, air conditioning, ship building and repairing, oil production, storage and disposal operations, water pumping.		
Facility Status:	Active - Any facility with a continuous or seasonal discharge that is under Waste Discharge Requirements.		
Agency Type:	Private		
Waste Type:	Not reported		
Threat to Water:	Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.		
Complexity:	Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.		
Reclamation:	Not reported

Design Flow:	Not reported	Baseline Flow:	Not reported
Facility Type:	Industrial - Facility that treats and/or disposes of liquid or semisolid wastes from any servicing, producing, manufacturing or processing operation of whatever nature, including mining, gravel washing, geothermal operations, air conditioning, ship building and repairing, oil production, storage and disposal operations, water pumping.		
Facility Status:	Active - Any facility with a continuous or seasonal discharge that is under Waste Discharge Requirements.		
Agency Type:	Private		
Waste Type:	Not reported		
Threat to Water:	Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.		
Complexity:	Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.		
Reclamation:	Not reported		
POTW:	Not reported		
NPDES Number:	CAS000001 The 1st 2 characters designate the state. The remaining 7 are assigned by the Regional Board

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Elapsed ASTM days: Provides confirmation that this EDR report meets or exceeds the 90-day updating requirement of the ASTM standard.

FEDERAL ASTM STANDARD RECORDS

NPL: National Priority List
Source: EPA
Telephone: N/A
National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Date of Government Version: 04/27/04
Date Made Active at EDR: 05/21/04
Database Release Frequency: Semi-Annually

Date of Data Arrival at EDR: 05/04/04

CERCLIS: Comprehensive Environmental Response, Compensation, and Liability Information System
Source: EPA
Telephone: 703-413-0223
CERCLIS contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

Date of Government Version: 02/26/04
Date Made Active at EDR: 04/02/04
Database Release Frequency: Quarterly

Date of Data Arrival at EDR: 03/22/04
Elapsed ASTM days: 11
Date of Last EDR Contact: 03/22/04

CERCLIS-NFRAP: CERCLIS No Further Remedial Action Planned
Source: EPA
Telephone: 703-413-0223
As of February 1995, CERCLIS sites designated "No Further Remedial Action Planned" (NFRAP) have been removed from CERCLIS. NFRAP sites may be sites where, following an initial investigation, no contamination was found, contamination was removed quickly without the need for the site to be placed on the NPL, or the contamination was not serious enough to require Federal Superfund action or NPL consideration. EPA has removed approximately 25,000 NFRAP sites to lift the unintended barriers to the redevelopment of these properties and has archived them as historical records so EPA does not needlessly repeat the investigations in the future. This policy change is part of the EPA's Brownfields Redevelopment Program to help cities, states, private investors and affected citizens to promote economic redevelopment of unproductive urban sites.

Date of Government Version: 02/26/04
Date Made Active at EDR: 04/02/04

CORRACTS: Corrective Action Report
Source: EPA
Telephone: 800-424-9346
CORRACTS identifies hazardous waste handlers with RCRA corrective action activity.

Date of Government Version: 03/15/04
Date Made Active at EDR: 04/15/04
Database Release Frequency: Semi-Annually

Date of Data Arrival at EDR: 03/25/04
Elapsed ASTM days: 21
Date of Last EDR Contact: 03/08/04

RCRIS: Resource Conservation and Recovery Information System
Source: EPA
Telephone: 800-424-9346
Resource Conservation and Recovery Information System. RCRIS includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs): generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month. Small quantity generators (SQGs): generate between 100 kg and 1,000 kg of hazardous waste per month. Large quantity generators (LQGs): generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month. Transporters are individuals or entities that move hazardous waste from the generator off-site to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Date of Government Version: 04/13/04
Date Made Active at EDR: 05/13/04
Database Release Frequency: Varies

Date of Data Arrival at EDR: 04/20/04
