GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Date of Government Version: 06/30/2011

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 06/30/2011
Date Data Arrived at EDR: 07/12/2011
Date Made Active in Reports: 09/29/2011

Next Scheduled EDR Contact: 01/23/2012
Data Release Frequency: Quarterly

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Date of Government Version: 10/15/1991

Data Release Frequency: No Update Planned

Federal Delisted NPL site list

DELISTED NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Data Release Frequency: Quarterly

Federal CERCLIS list

CERCLIS: Comprehensive Environmental Response, Compensation, and Liability Information System

CERCLIS contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

Date of Government Version: 02/25/2011

Data Release Frequency: Varies

Federal CERCLIS NFRAP site List

CERCLIS-NFRAP: CERCLIS No Further Remedial Action Planned

Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Date of Government Version: 06/15/2011

Federal RCRA generators list

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

Date of Government Version: 06/15/2011
Date Data Arrived at EDR: 07/07/2011

RCRA-SQG: RCRA - Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

RCRA-CESQG: RCRA - Conditionally Exempt Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

Last EDR Contact: 09/12/2011
Next Scheduled EDR Contact: 12/26/2011
Data Release Frequency: Varies

US INST CONTROL: Sites with Institutional Controls

A listing of sites with institutional controls in place. Institutional controls include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on site. Deed restrictions are generally required as part of the institutional controls.

Date of Government Version: 03/16/2011

State- and tribal - equivalent CERCLIS

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites
Included in the listing are brownfields properties addresses by Cooperative Agreement Recipients and brownfields properties addressed by Targeted Brownfields Assessments. Targeted Brownfields Assessments-EPA's Targeted Brownfields Assessments (TBA) program is designed to help states, tribes, and municipalities--especially those without EPA Brownfields Assessment Demonstration Pilots--minimize the uncertainties of contamination often associated with brownfields. Under the TBA program, EPA provides funding and/or technical assistance for environmental assessments at brownfields sites throughout the country. Targeted Brownfields Assessments supplement and work with other efforts under EPA's Brownfields Initiative to promote cleanup and redevelopment of brownfields. Cooperative Agreement Recipients-States, political subdivisions, territories, and Indian tribes become Brownfields Cleanup Revolving Loan Fund (BCRLF) cooperative agreement recipients when they enter into BCRLF cooperative agreements with the U.S. EPA. EPA selects BCRLF cooperative agreement recipients based on a proposal and application process. BCRLF cooperative agreement recipients must use EPA funds provided through BCRLF cooperative agreement for specified brownfields-related cleanup activities.

Local Lists of Hazardous waste / Contaminated Sites

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

Data Release Frequency: Varies

US HIST CDL: National Clandestine Laboratory Register

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

Other Ascertainable Records

RCRA-NonGen: RCRA - Non Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method.

EDR PROPRIETARY RECORDS

EDR Proprietary Records

Manufactured Gas Plants: EDR Proprietary Manufactured Gas Plants
The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data
Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Oil/Gas Pipelines: This data was obtained by EDR from the USGS in 1994. It is referred to by USGS as GeoData Digital Line Graphs from 1:100,000-Scale Maps. It was extracted from the transportation category including some oil, but primarily gas pipelines.

Electric Power Transmission Line Data
Source: Rextag Strategies Corp.
Telephone: (281) 769-2247
U.S. Electric Transmission and Power Plants Systems Digital GIS Data

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:
Source: American Hospital Association, Inc.
Telephone: 312-280-5991
The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing
Source: Centers for Medicare & Medicaid Services
Telephone: 410-786-3000
A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes
Source: National Institutes of Health
Telephone: 301-594-6248
Information on Medicare and Medicaid certified nursing homes in the United States.

Public Schools
Source: National Center for Education Statistics
Telephone: 202-502-7300
The National Center for Education Statistics' primary database on elementary and secondary public education in the United States. It is a comprehensive, annual, national statistical database of all public elementary and secondary schools and school districts, which contains data that are comparable across all states.

Private Schools

ASTM USER QUESTIONNAIRE

AEI Consultants
Environmental & Engineering Services

ASTM E 1527-05 User Questionnaire

In order to qualify for the protection offered under the EPA All Appropriate Inquiry (AAI) Standard, the **User** (entities seeking to use the ASTM E1527-05 Practice to complete an environmental site assessment of the property; i.e. Lenders and/or Borrowers) must provide the following information (if available) to the environmental professional. Failure to provide this information could result in a determination that AAI is not complete. This information should be the collective knowledge of the entities relying on the Phase I. **Please note that you are not being asked to evaluate the property, but rather to provide your knowledge of information on the property.**

Site Name/Address: Napa Junction Road

Person Interviewed/Title: Derek Pampe - Director of Forward Planning Date: 12/2/11

If known, when was the property initially developed? undeveloped

If different, when were the current building(s) on the property constructed? n/a

1. Environmental cleanup liens that are filed or recorded against the site (40 CFR 312.25).

Are you aware of any environmental cleanup liens against the *property* that are filed or recorded under federal, tribal, state or local law? (**Note:** If unknown, a review of title records or an environmental lien search is recommended)

Yes ☐ No ☑ If you answer yes, please include an explanation in the space provided below:

2. Activity and land use limitations that are in place on the site or that have been filed or recorded in a registry (40 CFR 312.26).

Are you aware of any AULs, such as *engineering controls*, land use restrictions or *institutional controls* that are in place at the site and/or have been filed or recorded in a registry under federal, tribal, state or local law?

Engineering Controls are defined as physical modifications to a site or facility to reduce or eliminate the potential for exposure to hazardous substances or petroleum products in the soil or ground water on the property). *Institutional Controls* are defined as a legal or administrative restriction on the use of, or access to, a site or facility to 1) reduce or eliminate the potential for exposure to hazardous substances or petroleum products in the soil or ground water on the property, or 2) to prevent activities that could interfere with the effectiveness of a response action, in order to ensure maintenance of a condition of no significant risk to public health or the environment.

Yes ☐ No ☑ If you answer yes, please include an explanation in the space provided below:

3. Specialized knowledge or experience of the person seeking to qualify for the LLP (40 CFR 312.28).

As the *User* of this *ESA* do you have any specialized knowledge or experience related to the *property* or nearby properties? For example, are you involved in the same line of business as the current or former *occupants* of the *property* or an adjoining *property* so that you would have specialized knowledge of the chemicals and processes used by this type of business?

Yes☐ No☑ If you answer yes, please include an explanation in the space provided below:

4. Relationship of the purchase price to the fair market value of the *property* if it were not contaminated (40 CFR 312.29).

a) Does the purchase price being paid for this *property* reasonably reflect the fair market value of the *property*?

Yes☑ No☐ If you answer no, please include an explanation in the space provided below, including whether the lower purchase price is because contamination is known or believed to be present at the *property*?

5. Commonly known or *reasonably ascertainable* information about the *property* (40 CFR 312.30).

Are you aware of commonly known or *reasonably ascertainable* information about the *property* that would help the *environmental professional* to identify conditions indicative of releases or threatened releases? For example, as *User*:

a. Do you know the past uses of the *property*?

Yes☐ No☑

b. Do you know of specific chemicals that are present or once were present at the *property*?

Yes☐ No☑

c. Do you know of spills or other chemical releases that have taken place at the *property*?

Yes☐ No☑

d. Do you know of any environmental cleanups that have taken place at the *property*?

Yes☐ No☑

If you answered yes to any of the questions above, please include an explanation in the space provided below:

6. The degree of obviousness of the presence of likely presence of contamination at the *property*, and the ability to detect the contamination by appropriate investigation (40 CFR 312.31).

As the *User* of this *ESA*, based on your knowledge and experience related to the *property,* are there any *obvious* indicators that point to the presence or likely presence of contamination at the *property*?

Yes ☐ No ☑ If you answer yes, please include an explanation in the space provided below:

APPENDIX F

QUALIFICATIONS

Michael Audibert, REA – Senior Project Manager

MPA - Public Administration, San Francisco State University, 2000
BS - Business Administration, University of Vermont, 1992

California Registered Environmental Assessor (REA) #30090
Certified Mold Inspector (CMI) (Environmental Solutions Association), 2005

Mr. Audibert has over 8 years of experience in the environmental service industry. As Senior Project Manager, Mr. Audibert is responsible for conducting Phase I Environmental Site Assessments (ESAs), Real Estate Transaction Screens, radon screening projects, asbestos inspections, lead-based paint inspections, and reviewing/evaluating Phase II reports. His experience includes management of portfolio projects involving numerous properties throughout the US. Mr. Audibert also provides senior review expertise to ensure compliance and satisfaction of client requirements for Phase I Environmental Site Assessments and Transaction Screens.

His project management experience has included:

- Phase I Environmental Site Assessments and Real Estate Transaction Screens in conformance with ASTM.

- Various other environmental due diligence assessments, including regulatory compliance evaluations and industrial hygiene inspections, including asbestos, radon, lead-in-paint, lead-in-water, and mold surveys.

- The oversight of several Phase II soil and groundwater investigations for a variety of suspected contaminants for due diligence and liability purposes.

Mr. Audibert performed a Phase I Environmental Site Assessment (ESA) for a former steel and brass foundry to be converted into live/work loft apartments. The City of Oakland required that a comprehensive Phase I ESA be conducted for this property for foundry closure purposes. This project involved extensive agency and historical research, as well as determining what areas of the former foundry would be considered "at risk zones" for subsurface contamination.

Mr. Audibert has performed Phase I Environmental Site Assessments (ESAs) for existing gas stations developed on the site of former gas stations, as well as several historical and current leaking underground storage tank (LUST) sites, which involve an extensive historical use investigation and agency records review to determine the status of current and past underground storage tanks (USTs).

Steve G. Kovach - **Environmental Professional**

B.A. - Botany, Miami University (Ohio)
Minor – Conservation and the Environment

Mr. Kovach has spent over nine years working in a broad range of environmental and engineering disciplines including: engineering and environmental due diligence services, industrial air, water, and wastewater permit compliance and monitoring, hazardous waste management and disposal, electrical utilities projects, environmental engineering projects, and wetland ecology research. Mr. Kovach has worked closely with regulatory agencies including the US Environmental Protection Agency, Department of Toxic Substance Control, California Water Resources Control Board, California Integrated Waste Management Board, Bay Area Air Quality Management District, East Bay Municipal Utilities District, and the US Department of Energy.

Currently, Mr. Kovach is the Due Diligence Manager, Northern California Region for AEI, specializing in environmental due diligence services. As a senior member of AEI, Mr. Kovach provides staff supervision and senior review expertise to ensure ASTM compliance and satisfaction of client requirements for environmental assessments. AEI's review process provides for customization of reports to client needs, as well as strict conformance to ASTM standards. Additionally, Mr. Kovach provides senior project management to ensure ASTM compliance and satisfaction of client requirements for Phase I Environmental Site Assessments, Transaction Screens, and other related environmental assessments performed throughout California, Arizona, Nevada, Oregon, and Washington.

Interim Guidance for Sampling Agricultural Properties (Third Revision)

California Department of Toxic Substances Control
California Environmental Protection Agency

August 7, 2008

Preface

In June 2000, DTSC issued "Interim Guidance for Sampling Agricultural Soils" to provide a uniform approach for evaluating former agricultural properties where pesticides have been applied, and DTSC issued the revised Version 2 in August 2002. Over the last seven years, DTSC has reviewed several hundred former agricultural properties across California. DTSC has been committed to revising and updating the approach to these properties as new information and issues emerge. This revised guidance, Version 3, incorporates and refines the sampling and risk assessment approach to former agricultural properties.

This guidance is intended to supplement the DTSC Preliminary Endangerment Assessment (PEA) Guidance Manual, CalEPA 1994 (Second Printing, June 1999). Data obtained from the investigations should be evaluated for potential health risks according the PEA Manual. This guidance is not intended to diminish the need to take focused, authoritative samples at site locations commonly associated with hazardous substances releases nor replace guidance provided by the PEA Guidance Manual. This guidance is not applicable to areas where pesticides were mixed, stored, disposed, or areas where pesticides may have accumulated, such as ponds and drainage ditches.

The scope of this document is limited to evaluating only agricultural properties during a PEA or other initial sampling investigation. This applies to proposed new and/or expanded school sites or other project where new land use could result in increased human exposure, especially residential use. Agricultural properties are lands where pesticides were uniformly applied for agricultural purposes consistent with normal application practices, and where other non-agriculturally related activities have been absent. Data obtained from the sampling analyses will be incorporated into the PEA Report, including performing a risk analysis in accordance with the guidance in the PEA Manual.

This guidance does not apply to disturbed land, such as, land that has been graded in preparation for construction, areas where imported soil has been brought in, or any other activity

that would redistribute or impact the soil, other than normal agricultural practices, such as disking and plowing.

This guidance is an on-going effort to streamline the characterization of agricultural properties. As additional knowledge and experience is obtained, DTSC may modify this guidance, as appropriate.

1.0 PURPOSE

This guidance was initially prepared for use in evaluating soil at proposed new school sites and existing schools undergoing expansion projects where the property was currently or previously used for agricultural activities. This guidance is now expanded to include any project with DTSC oversight and is intended to supplement the DTSC PEA, and provide a uniform and streamlined approach for evaluating agricultural properties. This guidance can be used to assist environmental assessors in designing initial investigations or developing PEA Workplans for properties with agricultural uses. The analytical data obtained are to be incorporated into a risk analysis and PEA Report performed in accordance with the guidance in the PEA Manual.

2.0 AGRICULTURAL PROPERTIES

2.1 Eligible Agricultural Properties

This guidance is specific to agricultural properties where pesticides and/or fertilizers were presumably applied uniformly, for agricultural purposes consistent with normal application practices. It is applicable to agricultural properties that are currently under cultivation with row, fiber or food crops, orchards, or pasture. It is also applicable to fallow and former agricultural properties that are no longer in production and have not been disturbed beyond normal disking and plowing practices. Each field of the same crop is assumed to have been watered, fertilized and treated with agricultural chemicals to the same degree across the field. Because of this homogeneous application, contaminant levels are expected to be similar at any given location within the field. This is the underlying premise of the guidance, and one that must be verified at the scoping stage of the PEA process.

2.2 Properties not covered by this Guidance

This guidance does not apply to former agricultural property that has been graded for construction or other purposes, that has received fill, or has had parking lots or structures placed on it following active use as an agricultural field. An urban residential area that was agricultural property in the past does not qualify for this guidance since the construction of the residences would have resulted in the disturbance and redistribution of potential agricultural contaminants in the soil. These areas may require biased, discrete sampling as opposed to the sampling for agricultural properties discussed in this document.

2.3 Grazing Land and Dry-Land Farmed Agricultural Properties

2.3.1 Grazing Land and Pasture

Agricultural sampling is not required for property used exclusively as grazing lands or pasture, where the topography is not conducive to pesticide application, or the application of pesticides is not economically feasible. Aerial photographs, topographic maps, and a site visit should be used to evaluate the topography of the proposed school site and past land use. Sites that are suitable for animal grazing will often have irregular topography and often a cover of native trees,

brush and range grasses. In keeping with the definition of agricultural soils, the site must not have contained any structures, or been used for any commercial or manufacturing activities.

2.3.2 Dry-Land Farmed Agricultural Soils

Dry-land farming is the practice of growing a crop without irrigation. Many dry-land farming fields are not treated with pesticides or infrequently treated, since the lack of water does not provide a desirable habitat for most agricultural pests. Properties that clearly qualify as dry-land farming do not need further investigation for pesticides or metals. For properties where there is uncertainty regarding dry-land farming, limited sampling may be conducted at a rate of four discrete samples per site, with one sample collected in each quadrant.

Some production crops such as winter wheat and barley can be grown under dry-land farming conditions. If the site has been planted in a dry-land farming production crop, every assurance should be made to determine that the crop was not irrigated and pesticides were not applied. This information may be obtained from interviews with farmers in the area, records that the County Agricultural Commissioner may have, and information the Commissioner may have about the irrigation practices for that crop in the specific county. If it cannot be clearly shown that irrigation did not take place and pesticides were not applied, limited sampling for organochlorine pesticides (OCPs) and arsenic may be necessary. At a minimum, this should include four samples per site, one sample per quadrant.

2.4 Agricultural Properties Prior to 1950

A review of 35 proposed school sites along with the historical background of OCP use in California indicates that sites with agricultural usage ending prior to 1950 do not need to be evaluated for OCPs. Organochlorine pesticides were first introduced into California agriculture in 1944 and reached peak usage in the 1960's. In 1974 the use of the DDT was banned for agricultural purposes, and the elimination of remaining OCPs in California agriculture quickly followed. Data from 35 proposed school sites where agricultural use ended prior to 1950 indicates that OCPs were not identified as chemicals of potential concern. In those cases where OCPs were identified, the source appears to have been the application to structures on the property, and not the agricultural crops grown prior to 1950. It is recommended that former agricultural properties that terminated operation prior to 1950 not be evaluated for agriculturally related OCPs. Arsenic should still be evaluated as a chemical of potential concern (COPC) since its use as arsenical pesticides and herbicides predates 1950.

2.5 Continued Agricultural Use After PEA Sampling

Chemicals associated with agricultural activities may result in potential risks to human health or the environment. If agricultural activities continue on the subject site after DTSC issues a no further action determination on the PEA, DTSC cannot ensure the no further action determination will remain in effect.

This may have impacts for school projects where the school districts elect to postpone school construction and allow continued agricultural use of the property. The most recent chemical use documentation (e.g., local Agricultural Commissioner Pesticide Application Permits) regarding the quantity and types of agricultural chemicals used on the property should be provided in the PEA report. If the type of agricultural chemicals applied to the site change after DTSC's no further action determination, DTSC recommends submittal of the chemical use documentation to DTSC at least three months prior to commencement of grading or other construction activities at the school site. DTSC will review the information, and if necessary, may recommend additional sample collection and analyses to assess potential impacts and ensure school site safety.

2.6 Other Areas of Concern on Agricultural Properties

In many cases, agricultural properties may include other areas of concern such as operations yards, storage areas, fuel tanks, residences, irrigation systems, and animal facilities. Examples of areas of concern may include:

- Structures such as homes, garages, equipment sheds, barns, and other out-buildings
- Pesticide storage, mixing/loading, and wash-down areas
- Ecological habitats, or rare, threatened, or endangered species
- Irrigation ditches/canals, containment berms, and low-lying swales or drainage areas
- Irrigation water containment ponds and collection/recirculation sumps
- Production wells and pumps
- Pole- or pad-mounted transformers
- Waste oil areas
- Animal pens, barns, and manure and disposal piles
- Burn piles
- Underground and above ground storage tanks
- Properties in dibromochloropropane (DBCP) study areas

Although agricultural-related, these targeted areas should be considered during the PEA scoping meeting and investigated using standard PEA protocols. The following DTSC guidance documents may be considered in these investigations:

- Interim Guidance: Evaluating Total Petroleum Hydrocarbons (TPH) (DTSC 2008) (The draft TPH guidance document is being revised at this time and will not be available to the public until DTSC finalizes the document.)
- Interim Guidance: Evaluation of School Sites with Potential Contamination from Lead Based Paint, Termiticides, and Electrical Transformers (DTSC, June 9, 2006)
- Arsenic Strategies for Determination of Arsenic Remediation: Development of Arsenic Cleanup Goals for Proposed and Existing School Sites (DTSC 2007)
- Advisory: Methane Assessment and Common Remedies at School Sites (DTSC, June 2005)
- Advisory: Active Soil Gas Investigations (DTSC, January 2003)
- Guidance for the Evaluation and Mitigation of Subsurface Vapor Intrusion into Indoor Air (DTSC 2004)
- Fact Sheet: Information Advisory, Clean Imported Fill Material (DTSC, October 2001)
- Guidance Manual: Preliminary Endangerment Assessment (DTSC, January 1999)
- Data Validation Memorandum , Summary of Level II Data Validation (DTSC, May 2006)
- Guidance: Ecological Risk Assessment at Hazardous Waste Sites and Permitted Facilities (DTSC, July 4, 1996)

3.0 SAMPLING STRATEGIES

3.1 Chemicals of Concern

3.1.1 Pesticides

When the property is under active agricultural production, the operator should be interviewed to determine the types and amounts of pesticides historically used on the property. The County Agricultural Commissioner should also be consulted to verify pesticide usage on the property. The Agricultural Commissioner is required to maintain this information for three years, but often will have extensive knowledge of the farming practices over many years. A local or specialized farm advisor such as the University of California Cooperative Extension Agent is another source of information for farming practices in the area. These consultations should occur during the scoping phase of the investigation. For those properties that have not been actively farmed in the past three years, obtaining accurate information is more difficult. Information from surrounding or neighboring agricultural operations on the types of crops grown in the area during the time of active farming can provide clues on what chemicals may have been applied.

Based on data from former agricultural properties over the past seven years, the only pesticide class requiring analyses at agricultural properties are OCPs, such as DDT, toxaphene, dieldrin, etc. OCPs are biopersistent and bioaccumulate in the environment. Most other classes of pesticides have relatively short half-lives and have not been found in the agricultural fields. While paraquat does have a longer half-life in soil, it has either not been detected or detected rarely at trace levels at sites which DTSC has had oversight, therefore routine analyses for paraquat is not required for field areas. Analyses for paraquat may be required in storage and mixing/loading areas.

3.1.2 Metals

Based on data from former agricultural properties, the only heavy metal required for routine analyses for these properties is arsenic. Arsenic in the form of arsenical herbicides has been applied to many agricultural properties and elevated levels of arsenic have been reported in the evaluation of these properties.

Other heavy metals may be required on a case by case basis depending on history of the property and the surrounding environment. Certain counties, such as Kern and Merced in the Central Valley, allow the application of municipal sludge on agricultural properties with or without a permit. Municipal sludge has been often shown to have elevated levels of heavy metals. These metals concentrations can impact vadose soils and often may migrate to groundwater. If there is a history of sludge application, or if sludge application is suspected on an agricultural property, Title 22 metals (former CAM 17 metals) should be evaluated.

Copper compounds were generally applied directly to select crops (e.g. vineyards) to prevent or reduce mildew. Vineyards and grain storage areas may have elevated copper due to the use of copper compounds as fungicides. To date, DTSC has not found elevated copper in any agricultural property. However, analyzing soil or sediment samples for copper may be appropriate at agricultural properties with the potential to impact aquatic ecological habitats (e.g. a creek or stream which runs through site).

3.1.3 Additional Chemicals of Concern

3.1.3.1 Mixing/Loading/Storage Areas

Focused sampling in mixing/loading/storage areas, drainage ditches, farm houses, or outbuilding areas may require analyses for a number of other constituents besides OCPs and arsenic, including other classes of pesticides/herbicides, paraquat, metals, and petroleum related compounds (see Section 2.6).

3.1.3.2 Smudge Pots

If smudge pots have been routinely used on agricultural properties, for example in citrus groves, additional sampling for PAHs and TPH may be required.

3.2 Sampling Frequency

Sampling frequency may vary depending on the size of the site and conditions found. When the site has been used for agricultural crop, the presumption is that agricultural chemicals were applied uniformly across the site in any given year and that the variation across the site will be relatively small. An analysis of several hundred former agricultural properties by DTSC has supported the general use of the assumption of uniform application.

The assumption of uniform application may not apply to areas cultivated in different crops, adjoining or adjacent properties with different owners or operators. The uniform application assumption does not apply for non-cultivated areas (e.g. drainage ditches, farm houses and other structures, mixing/loading areas, storage sheds, etc.)

In general, the sampling pattern should be sufficient to characterize the site. Recommended numbers of borings or sampling locations and composite analyses are provided in Table 1 for both OCPs and arsenic analyses for sites up to 50 acres. DTSC should be consulted for sites greater than 50 acres. For these sites, the sampling frequency may be reduced based on documentation that verifies consistent owner, operator, and use. If different parcels of the property have different owners, operators or crops, the number of samples shown in Table 1 should be applied for each different parcel.

Table 1: Recommended Number of Sampling Locations

Site Acres	Number of Borings	OCP Analyses (Composites)	Arsenic Analyses (Discrete only)
1	4	4 (Discrete analyses)	4
2	4	4 (Discrete analyses)	4
3	4	4 (Discrete analyses)	4

3.3 Composite Samples

Since this guidance assumes a relatively even distribution of chemicals across the agricultural field portion of a site, compositing of discrete samples allows for increased sampling coverage for a site, while not significantly increasing the number of analytical samples. Composite surface samples may be made up of a maximum of four discrete surface samples from adjacent sampling locations. Compositing may occur in the field or at the laboratory. In cases where two crops were grown on the site, only discrete samples from within the same crop area may be composited.

Specify the method of selecting the discrete samples to be composited and the compositing factor (e.g. 3 to 1: three discrete samples composited to one) in the workplan. Compositing requires that each discrete sample be the same in terms of volume or weight, and that the discrete sample be thoroughly homogenized prior to compositing. The detection level does not need to be reduced since the composite sampling area is assumed to be homogeneous in concentration.

If compositing is not chosen, analyses will be performed on all the discrete samples and the number of analyses will correspond to the number of borings.

For more information on composite samples, see the references provided in Section 6.0.

3.4 Discrete Sampling for Arsenic

A minimum of four discrete on-site surface samples must be analyzed for arsenic. When samples are composited for OCP analysis, one discrete sample from each composite must be analyzed for arsenic. When more than four composite samples are analyzed for OCPs, the total number of discrete samples analyzed for arsenic does not need to be greater than the number of total composite samples used for OCP analysis (see Table 1).

3.5 Sampling Depth

Based on the extensive data DTSC has reviewed for agricultural properties, only surface samples will be required for the screening assessment. Each location should be sampled to include one surface sample (0 to 6 inches). [Note: 0 inches means first encountered soil. Thick mats of vegetable material, roots, and other extraneous material should not be sampled. The locations can be staked and surveyed using a sub-meter global positioning system. This will facilitate collection of supplemental site investigation samples, such as subsurface or step out sampling, if necessary.

3.6 Sample Collection

Sampling both the furrows and beds of existing rows will detect the greatest variability in the residuals. Some methods of pesticide application will favor residuals in the beds while others favor the furrows. In fields where rows remain, roughly half of the samples should be gathered from the furrows and half from the beds in an alternating pattern. Orchards should have the sampling locations placed at the current drip line for the trees, under the canopy, between the tree rows, and between the trees within a row. For sites with slopes, swales, or other uneven topography, sampling from centers should be modified to include samples from those areas where surface water would be expected to flow and accumulate.

3.7 Field Duplicates

Field duplicates should be collected at a rate of 10 percent (or a minimum of one). For arsenic, a discrete co-located sample should be collected and analyzed for every 10 arsenic samples collected. For OCPs where composite samples will be prepared and analyzed, every 10th

composite sample should be prepared (independently) in duplicate and analyzed. See Section 4.1 for a description on preparation of composite samples.

3.8 Requirements for Collection of Background Metal Samples

Consult with the DTSC project manager regarding the need for collecting background arsenic samples. In general, with the exception of arsenic, background samples for metals will not be necessary if all metals are below their respective California Human Health Screening Levels (CHHSLs). If all the arsenic results for the site are at or below 12 mg/kg, then collection of background samples will not be required. For sites where either arsenic or other metals are above their respective screening values, either collection of a background data set or use of an appropriate background data set may be required.

3.8.1 Sampling for Background Metals

If samples are needed to determine background levels of arsenic and/or other heavy metals (if additional metals are required for the PEA), a minimum of four onsite locations should be sampled at non-impacted areas, or samples may be collected at a depth of 5 to 5.5 feet bgs. In order to use background samples from 5 to 5.5 feet bgs, a licensed professional must make the determination that the background soils are similar enough geologically to the surface soils as to be representative.

Other background data sets may be substituted for on site sampling on a case by case basis in consultation with DTSC.

4.0 LABORATORY ANALYSES

4.1 Preparation of Composite Samples

Each discrete sample should be homogenized and uniformly split by trained field staff prior to compositing. A portion of each discrete sample should be frozen and archived in case additional analysis is warranted based on the composite results. Compositing requires that each discrete sample be the same in terms of volume or weight, and that the discrete sample be thoroughly homogenized prior to compositing. Excess sample from the homogenized composite sample shall be archived by the lab and/or used as a duplicate, as appropriate, for that composite set. The samples may be discarded when the PEA process has been completed and approved by the DTSC.

4.2 Methods

The analytes of primary concern are OCPs, arsenic, and, in some cases, Title 22 metals. Depending on the site history, analysis of other types of pesticides may be required. OCPs should be analyzed using U.S. EPA 8081A or equivalent. Metals must be analyzed using the U.S. EPA 6000/7000 series. If the site history indicates other classes of persistent pesticides should be evaluated, DTSC should be consulted for the acceptable method of analysis and appropriate detection limits. Highly organic topsoil may interfere with proper extraction of pesticides.

Sample holding times should be consistent with U.S. EPA SW-846. Variances to holding times and affects on data results must be discussed in the data validation section of the report.

Please note, for comparison of chlordane concentrations against the CHHSL, chlordane must be quantified against a ***technical chlordane*** standard. For purposes of the PEA, DTSC will not

allow quantitation of the individual alpha and gamma isomers, with a total concentration determined by addition of those concentrations.

4.3. Detection Limits

The actual detection limits obtained will vary depending on the particular analyte. For OCPs, the analytes typically causing detection limit concerns in agricultural fields are aldrin, dieldrin, and toxaphene. The detection limits should be 0.005 mg/kg for aldrin, dieldrin, and 0.05 mg/kg for toxaphene. Table 2 lists the detection limits for several OCPs.

In samples with elevated DDT, the detected concentration may be above the range of calibration. This can result in the analytical laboratory diluting the sample for reanalysis, and then reporting only the final result. In these cases, the reported detection limits for aldrin, dieldrin, and toxaphene may exceed the detection limits needed for determining potential health effects. Ideally the laboratory should be asked to report if those three analytes were detected in the first analysis prior to dilution. Multiple analyses of the same samples may be required to obtain the data necessary for risk assessment purposes.

Table 2. Analytical Methods and Detection Limits for Selected OCPs

Pesticide	Methods[2]	CAS No.[3]	DL[4] mg/kg
Aldrin	8081A	309-00-2	0.005
a-BHC	8081A	319-84-6	0.005
b-BHC	8081A	319-85-7	0.005
g-BHC (Lindane)	8081A	58-89-9	0.005
d-BHC	8081A	319-86-8	0.005
Total Chlordane[1]	8081A	57-74-9	0.05
DBCP[5]	8081A	96-12-8	0.01
DDD	8081A	72-54-8	0.05
DDE	8081A	72-55-9	0.05
DDT	8081A	50-29-3	0.05
Dieldrin	8081A	60-57-1	0.005
Endosulfan I	8081A	959-98-8	0.005
Endosulfan II	8081A	33213-65-9	0.005
Endosulfan sulfate	8081A	1031-07-8	0.005
Endrin	8081A	72-20-8	0.05
Endrin aldehyde	8081A	7421-93-4	0.05
Endrin ketone	8081A	53494-70-5	0.05
Heptachlor	8081A	76-44-8	0.05
Heptachlor epoxide	8081A	1024-57-3	0.005
Hexachlorobenzene (HCB)	8081A	118-74-1	0.3
Hexachlorocyclopentadiene	8081A	77-47-4	0.5
Methoxychlor	8081A	72-43-5	0.005
Toxaphene	8081A	8001-35-2	0.05

Notes:

1 = Report total Chlordane (based on a Technical Chlordane standard)
2 = Although other methods may be used to quantify OPCs, DTSC recommends the use of 8081A as the primary method of quantitation
3 = Chemical Abstract Service registry number
4 = Detection Limit recommended for risk assessment purposes
5 = If sampling for this compound is indicated, inclusion in the method must be requested in the workplan and/or QAPP

4.4 Pesticide Analyses

Surface samples, discrete or composite, must be analyzed for OCPs. Analysis for other classes of persistent pesticides may be required as indicated by the agricultural history of the site. If the composite sample result exceeds the health risk screening criteria (see Section 5.3), analyze each discrete sample that made up the composite sample.

4.5 Sub-surface sample analysis

In consultation with DTSC, analyses of sub-surface samples may be required if surface samples results exceed specified screening levels. This sampling may be a part of the PEA or included in a Supplemental Site Investigation. If subsurface samples were collected during the PEA sampling event, those samples may be taken off "hold" and analyzed by the laboratory. If subsurface samples were not collected during the PEA, a Supplemental Site Investigation Workplan or Technical Memorandum should be prepared identifying appropriate step-out (vertical and horizontal) sampling locations.

4.6 Quality Control

Quality control (QC) procedures specified in SW-846 must be followed. A matrix spike/matrix spike duplicate on one soil sample per batch of 20 samples must be performed to demonstrate that the targeted pesticide(s) can be recovered from the soil investigated. The laboratory data package must include a summary of the quality control sample results: blanks, matrix spike/ matrix spike duplicate, surrogate recoveries, laboratory control samples, etc., as specified by the method. The laboratory should provide a signed narrative stating whether the QC was met and listing any discrepancies. The consultant should perform a supplementary evaluation of the data, also referred to as data validation, and present the results of that evaluation in the PEA report. For an example of what to included in the data validation section, see the example data validation memorandum at the DTSC website:
http://www.dtsc.ca.gov/Schools/upload/Data_Validation.pdf

5.0 REPORTING

5.1 Format

The results of the sampling effort are to be reported in a PEA report as described in the DTSC PEA Guidance Manual.

5.1.1 Summary Tables

Include data tables in the PEA report to summarize the results of the investigation. Summary tables should include the analytes of interest, the reported concentrations or the reporting limit for non-detect results, and indicate whether a reported concentration exceeds its respective CHHSL screening level (if a CHHSL comparison is being conducted). In addition, for samples analyzed at multiple dilutions for purposes of reporting concentrations within calibration ranges (as described in Section 4.3), summary tables should either present the results for all of the dilution analyses indicating the appropriate result for each analyte, or a combined analysis indicating which results are being reported after a dilution. Sample results should also be flagged with appropriate qualifiers, where necessary, after data validation.

5.2 Evaluating Metals (Inorganic Elements) Data

Using a robust statistical procedure to determine if on-site metal concentrations are indicative of background conditions or the result of site-related activities can be problematic because of the limited number of background samples collected at any one site. Local site background may be used if the data is approved for use by the DTSC project manager and toxicologist. If DTSC

background levels are not available, then a defensible procedure for comparing on-site with background metals should be used. The DTSC project manager and DTSC toxicologist assigned to the project should be consulted on the most appropriate method of comparison.

5.2.1 Arsenic Evaluations

The DTSC Schools Program evaluated data from a large number of school sites across California. The data evaluation indicates that 12 mg/kg maybe a useful screening number for the Schools Program when evaluating arsenic as a COPC. If the proposed school property has been adequately characterized for arsenic and all the arsenic data are equal to or less than 12 mg/kg, then arsenic will be not be considered a COPC. This decision does not require collection and comparison to a background data set. If arsenic concentrations are greater than 12 mg/kg, then comparisons to background data will be required. In some cases additional sampling may also be required.

5.2.2 Strategy for Comparison of Background Metals

If background samples are necessary, follow the procedures provided in Section 3.8.
The following strategy may be used for comparing site data to background data:

1. Compare the highest site concentration with the highest background concentration. If the site concentration is equal to or less than the background, the metal may be eliminated as a COPC. If the onsite maximum is greater than the background maximum, go to 2).

2. Compare the site and background arithmetic mean concentrations. If the means are comparable, and if the highest site concentration is below the concentration associated with unacceptable risk or hazard, the metal may be eliminated as a COPC. If the site mean is greater than the maximum background, go to 3).

3. Two approaches may be used, depending on the size of the background data set.
   - If the background data set is of sufficient size, statistically evaluate the overlap of the background and onsite distributions to determine if they come from the same population. If they do, and if the highest site concentration is below the concentration associated with unacceptable risk or hazard, the metal may be eliminated as a COPC. If not, include the metal as a COPC in the risk evaluation.

   - If the background data set is limited (n=4), the onsite data can be evaluated statistically using probability plots to determine if one or more populations are present. If only one population is present, and if the highest site concentration is below the concentration associated with unacceptable risk or hazard, the metal may be eliminated as a COPC. If there are two or more populations present, then include the metal as a COPC.

4. Additional information on eliminating metals as COPCs can be found in "*Selecting Inorganic Constituents as Chemicals of Potential Concern at Risk Assessments at Hazardous Waste Sites and Permitted Facilities – Final Policy* (DTSC/HERD 1997),

5.3 Human Health Risk Assessment

All detected pesticides and any onsite metals above background should be evaluated as COPCs in a human health risk assessment as described in the DTSC PEA Guidance Manual or in comparison to CHHSLs. In the initial screening analysis, the highest

concentration of each detected pesticide and metal above background must be used as the exposure point concentration in the risk assessment.

Since agricultural properties are assumed to have uniform application of pesticides, DTSC has allowed compositing of samples for OCP analyses (Sections 3.3 and 4.1). The concentration from the composited sample can be used directly in the risk assessment without adjusting the toxicity screening numbers, such as the CHHSLs. The review of the former agricultural properties over the past seven years has supported the assumption of uniform application. This is in contrast to other DTSC guidance, such as the *Lead-Based Paint, Termiticide and PCB Guidance*, (DTSC, June, 2006), where adjustments to the CHHSLs are required for composite samples because applications were not necessarily uniform.

5.3.1 Application of PEA Risk Assessment Equations and CHHSLs

Chemicals of potential concern are evaluated either by comparison to the CHHSL, or by calculating the excess cancer risk and hazard index based on equations in the PEA Guidance.

Note: CHHSLs may not be used to "screen out" COPCs.

5.3.1.1 CHHSLs

CHHSLs are soil and/or soil gas concentrations for selected chemicals developed by Cal-EPA with a target threshold of a 1E-06 risk for carcinogens, and a hazard quotient of one for non-carcinogens. CHHSLs were developed using models and exposure assumptions similar to those used in the PEA Guidance Manual, with the exception of the concentrations for volatile organic compounds (VOCs), which were developed using the vapor intrusion model for addressing the inhalation of contaminated indoor air. CHHSLs may be used as a soil screening value at school sites if all of the chemicals detected at the site have a listed CHHSL, if it is agreed upon by all parties concerned, and if it is agreed that the screening document will be reviewed by a toxicologist from the Human and Ecological Risk Division. For school sites, only the residential-based CHHSLs may be used. The exposure pathways used in calculating the CHHSLs are incidental soil ingestion, dermal absorption, and inhalation of dusts in indoor air for non-volatile soil-bound chemicals, and the inhalation of indoor air pathway for VOCs. Direct exposures to VOCs are not included in the calculation of the CHHSLs and CHHSLs do not take into consideration the leaching of contaminants from soil to groundwater. CHHSLs are not appropriate if ecological receptors are the most sensitive species on the site. Lead should be evaluated using the most current DTSC LeadSpread Model or the school site lead screening level of 255 mg/kg.

5.3.1.2 Human Health Risk Assessment with CHHSLs

Independent of whether sites were analyzed with discrete samples or with composite samples, the evaluation is similar. Note that the CHHSL values are not adjusted for the number of discrete samples that comprise a composite. The rationale behind this comparison to un-adjusted CHHSL is that application of pesticides is assumed to be uniform throughout the field, and large variations in the pesticide concentrations are not expected. This rationale applies only to the agricultural portion, not to mixing areas, storage sites, structures, etc.

5.3.2 Procedure for Human Health Risk Assessment with CHHSL or PEA Guidance

- Determine that all of the chemicals detected at the site have the appropriate CHHSLs for soil and/or soil vapor. If they do not, then a PEA risk assessment must be conducted. A DTSC toxicologist will evaluate if the CHHSL screening is appropriate for the site

- The screening document, PEA or equivalent, will be reviewed by a toxicologist from the Human and Ecological Risk Division.

- The most recently published CHHSLs should be used. This may be found at: http://www.calepa.ca.gov/Brownfields/documents/2005/CHHSLsGuide.pdf.
- The exposure pathways at the site must match the exposure pathways used to develop the CHHSLs.
  Use the maximum concentration of each contaminant detected at the site and compare to unrestricted (residential) CHHSL or PEA risk calculations.
- Background metal concentrations can be used to screen metals as COPC. Construct a table listing the COPC (see Section 5.2.2 for discussion on background metals).
- The risk and hazard for each COPC should be calculated using the following equations:

$$\text{RISK} = \frac{[\text{maximum detected concentration}]}{\text{CHHSL}} \times 10^{-6}$$

$$\text{HQ} = \frac{[\text{maximum detected concentration}]}{\text{CHHSL}}$$

  - If there are multiple COPCs, calculate the cumulative risk and/or hazard. An Excel calculator is provided on the Cal/EPA website for CHHSLs: (http://www.calepa.ca.gov/Brownfields/documents/2005/Calculator.xls).
  - Complete a Risk Characterization Section where the total risk and hazard are presented and discussed along with the need for any further action.
  - If the maximum concentrations detected on site pose an unacceptable risk or hazard, a spatial analysis should be conducted to determine if the elevated levels represent a "hot spot", or are representative of concentrations across the site. In those cases where the elevated concentrations are determined to be one or more "hot spots", risk or concentration isopleths should be constructed to differentiate between those areas of the site in need of further action, and those where no further action is required. Any deviations from these analyses must be approved by the DTSC toxicologist assigned to the project.

Note: For evaluation of composite samples, the CHHSL values are not adjusted for the number of discrete samples that comprise a composite. The rationale behind this comparison to un-adjusted CHHSL is that application of pesticides is assumed to be uniform throughout the field, and large variations in the pesticide concentrations are not expected. Note that this rationale applies only to the agricultural portion, not to mixing areas, storage sites, structures, etc.

Project Summary

Parcel A

Gross Site Area: ± 11.3 Acres
Developable Area: ± 8.1 Acres
Total Units: 206 Homes
- (52) 1 Bdrm Units
- (108) 2 Bdrm Units
- (46) 3 Bdrm Units

Density: 18.2 DU per Gross Acre
25.4 DU per Developable Area

Parking:

Required: 438 Spaces
- (52) 1 Bedroom x 1.5 Spaces =78 Spaces
- (154) 2 or more Bedroom x 2 Spaces =308 Spaces
- (206) Guest x 0.25 Spaces =52 Spaces

Provided: 451 On-site & Off-site Spaces
428 On-site Spaces
- Garage: 157 Spaces
- Carports: 49 Spaces
- Head In: 222 Spaces

23 Off-site Spaces

Open Space
- Common Open Space: 53,571 SF
- Hillside Slope Area: 139,392 SF

Parcel B

Gross Site Area: ± 9.5 Acres
Developable Area: ± 3.6 Acres
Total Units: 85 Units
- (20) 1 Bdrm Units
- (45) 2 Bdrm Units
- (20) 3 Bdrm Units

Density: 8.9 DU per Gross Area
23.6 DU per Developable Area

Parking:

Required: 182 Spaces
- (20) 1 Bedroom x 1.5 Spaces =30 Spaces
- (45) 2 or more Bedroom x 2 Spaces =130 Spaces
- (85) Guest x 0.25 Spaces =22 Spaces

Provided: 183 Spaces
- Garage: 65 Spaces
- Carports: 20 Spaces
- Head In: 98 Spaces (9' x 18')

Open Space
- Common Open Space: 27,647 SF
- Hillside Slope Area: 257,004 SF

Notes:

1. Site plan is for conceptual purposes only.
2. Site plan must be reviewed by planning, building, and fire departments for code compliance.
3. Base information per civil engineer.
4. Civil engineer to verify all setbacks and grading information
5. Building Footprints might change due to the final design elevation style.
6. Open space area is subject to change due to the balcony design of the elevation.
7. Building setbacks are measured from property lines to building foundation lines.

Project Summary

Parcel B

Gross Site Area: ± 9.5 Acres
Developable Area: ± 3.6 Acres
Total Units: 85 Units
- (20) 1 Bdrm Units
- (45) 2 Bdrm Units
- (20) 3 Bdrm Units

Density: 8.9 DU per Gross Area
23.6 DU per Developable Area

Parking:

Required: 182 Spaces
- (20) 1 Bedroom x 1.5 Spaces =30 Spaces
- (45) 2 or more Bedroom x 2 Spaces =130 Spaces
- (85) Guest x 0.25 Spaces =22 Spaces

Provided: 183 Spaces
- Garage: 65 Spaces
- Carports: 20 Spaces
- Head In: 98 Spaces (9' x 18')

Open Space
- Common Open Space: 27,647 SF
- Hillside Slope Area: 257,004 SF

APPENDIX I

QUALIFICATIONS

Michael Audibert, REPA – Associate Consultant

Education:

Master's, Public Administration, San Francisco State University, 2000
BS, Business Administration, University of Vermont, 1992

Training/Licenses/Registrations:

ASTM Phase I Environmental Site Assessments (ESAs)
Phase II ESAs (ASTM E 1527 & ASTM E 1903) Training, 2003 and 2006
AHERA Accredited Asbestos Inspector #30950, 2011
Lead-Related Construction Sampling Technician #23886, 2012
EDR Vapor Intrusion Assessment (VI) Training, 2008
Certified Mold Inspector (CMI) (Environmental Solutions Association), 2005

Summary of Professional Experience:

Mr. Audibert has been conducting Phase I and II Environmental Site Assessments (ESAs) of commercial, industrial, and multi-family residential properties throughout the United States since 2001. He has also managed regulatory compliance evaluation programs on a nationwide basis. With a background in business management and public administration, Mr. Audibert brought these skills into the environmental due diligence and health & safety arenas with strengths in project management, real estate transaction due diligence, and public sector agency correspondence. Mr. Audibert also has extensive experience managing various industrial hygiene projects, including asbestos surveys, mold assessments, radon testing, lead-based paint testing, lead-in drinking-water testing, and other indoor air quality assessments. In addition, Mr. Audibert has completed multiple Phase I ESA's for Fannie Mae, Freddie Mac, and HUD projects.

Select Project Experience for Mr. Audibert includes:

- Former Steel Foundry, Oakland, CA - Mr. Audibert performed a Phase I ESA for a former steel and brass foundry to be converted into live/work loft apartments. The City of Oakland required that a comprehensive Phase I ESA be conducted for this property for foundry closure purposes. This project involved extensive agency and historical research, as well as determining what areas of the former foundry would be considered "at risk zones" for subsurface contamination.
- Gasoline Service Station Portfolio, CA - Mr. Audibert has performed Phase I ESAs for existing gas stations developed on the sites of former gas stations, as well as several historical and current leaking underground storage tank (LUST) sites, which involve an extensive historical use investigation and agency records review to determine the status of current and past underground storage tanks (USTs).
- Former Union Hall, San Francisco, CA – Mr. Audibert performed a Phase I ESA for a former union hall to be developed into a high rise cosmopolitan apartment building. Because of the age of the buildings to be demolished, a comprehensive asbestos survey and ensuing operations and maintenance program for removal and disposal of asbestos was recommended and implemented.
- Former Printers, San Francisco, CA – Mr. Audibert performed a Phase I ESA for a former printing operation. The property had a long history of high-risk uses, including various manufacturing, automobile repair, and printing operations. A comprehensive agency records investigation and review was conducted.

Katie Hindt – Client Manager

B.A. – Environmental Studies, University of California, Santa Cruz

Registered Environmental Property Assessor (REPA) #528528

Ms. Hindt has over 10 years of experience in the environmental service industry and provides project management to ensure ASTM compliance and satisfaction of client requirements for Phase 1 Environmental Site Assessments, Environmental Transaction Screens, Environmental Transaction Analyses, Records Research with Risk Assessments, Regulatory Database Reviews and Historical Records Reviews. She has completed assessments on a variety of residential, agricultural, commercial and industrial sites. Ms. Hindt is familiar with all aspects of Due Diligence Property Assessments and the requirements of many reporting standards including, ASTM, AAI, HUD and client-specific formats.

Project experience for Ms. Hindt includes:

- Phase 1 Environmental Site Assessments (Phase 1 ESA)
- Environmental Transaction Screens (ETS)
- Environmental Transaction Analyses (ETA)
- Records Search with Risk Assessment (RSRA)
- Regulatory Database Reviews
- Historical Records Reviews
- Project Coordination and Setup

As a Client Manager, Ms. Hindt provides senior author services and client management. Additional responsibilities include managing projects and staff mentorship.

In addition, prior to joining the environmental service industry, Ms. Hindt spent four years studying a broad range of environmental disciplines including: National environmental law, policy and economics, restoration ecology, California environmental history and California freshwater policy/issues.

EXECUTIVE SUMMARY

AEI Consultants (AEI) was retained by R.H. Hess Dev Co. to conduct a Phase I ESA in conformance with AEI's contract and the scope and limitations of ASTM Standard Practice E1527-13 and the EPA Standards and Practices for All Appropriate Inquiries (40 CFR Part 312) for the property located at Napa Junction Road at Oat Hill, American Canyon, Napa County, California (the "subject property"). Any exceptions to, or deletions from, this practice are described in Sections 1.4, 1.5, and 1.6 of this report.

Pertinent subject property information is noted below:

PROPERTY INFORMATION	
Site Address(es)	Napa Junction Road at Oat Hill, American Canyon, Napa County, California 94503
Property ID (APN or Block/Lot)	058-320-001
Location	Southwest of the intersection of Napa Junction Road and Hess Road
Property Type	Vacant Land
SITE AND BUILDING INFORMATION	
Approximate Site Acreage/Source	10.63/Assessor
Number of Buildings	None
Building Construction Date(s)/Source	N/A
Building Square Footage (SF)/Source	N/A
Number of Floors/Stories	N/A
Basement or Subgrade Area(s)	None identified
Number of Units	N/A
Additional Improvements	None
On-site Occupant(s)	None
Current On-site Operations/Use	Goat grazing
Current Use of Hazardous Substances	None identified
REGULATORY INFORMATION	
Regulatory Database Listing(s)	None identified

A chronological summary of historical subject property information is as follows:

Date Range	Subject Property Description and Occupancy (Historical Addresses)	Source(s)
Prior to 1937	Unknown use/Data failure; refer to Section 1.6.1	Aerial photographs
1937	Agricultural/apparent hay farming land	Aerial photograph
1948-present	Vacant pasture land	Aerial photographs, city directories, agency records, prior Phase I ESA report, interview, onsite observations

The immediately surrounding properties consist of the following:

Direction	Tenant/Use (Address)	Regulatory Database Listing(s)
North	Napa Junction Road, followed by: Oat Hill RV Parking and Hess Construction (4484/ 4501 Hess Road) Napa Junction Elementary School (300 Napa Junction Road) Vacant land (no address)	4484: HIST UST, UST, CERS, CERS HAZ WASTE
East	Residences (285 Napa Junction Road, 11 Medeiros Lane), the Calvary Baptist Church (117 Theresa Avenue) and a farm facility (no address)	None identified
South	Vacant land and water tower, with portion of Medeiros Lane (no address)	None identified
West	Vacant land (no address)	None identified

If the surrounding properties are listed in the regulatory database, please refer to Section 5.1 for discussion.

FINDINGS

Recognized Environmental Condition (REC) is defined by the ASTM Standard Practice E1527-13 as the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment.

- AEI did not identify evidence of RECs during the course of this assessment.

Controlled Recognized Environmental Condition (CREC) is defined by the ASTM Standard Practice E1527-13 as a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority, with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls.

- AEI did not identify evidence of CRECs during the course of this assessment.

Historical Recognized Environmental Condition (HREC) is defined by the ASTM Standard Practice E1527-13 as a past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls.

- AEI did not identify evidence of HRECs during the course of this assessment.

Other Environmental Considerations (OEC) warrant discussion, but do not qualify as RECs as defined by the ASTM Standard Practice E1527-13. These include, but are not limited to, de minimis conditions and/or environmental considerations such as the presence of ACMs, LBP,

radon, mold, and lead in drinking water, which can affect the liabilities and financial obligations of the client, the health and safety of site occupants, and the value and marketability of the subject property.

- AEI did not identify evidence of Other Environmental Considerations during the course of this assessment.

Conclusions, Opinions, and Recommendations

We have performed a Phase I Environmental Site Assessment in conformance with the scope and limitations of ASTM Standard Practice E1527-13 and the EPA Standards and Practices for All Appropriate Inquiries (40 CFR Part 312) of Napa Junction Road at Oat Hill, American Canyon, Napa County, California, the *subject property*. Any exceptions to, or deletions from, this practice are described in Sections 1.4, 1.5, and 1.6 of this report.

AEI did not identify evidence of RECs or CRECs in connection with the subject property during the course of this assessment. AEI recommends no further investigation for the subject property at this time.

1.0 INTRODUCTION

This report documents the methods and findings of the Phase I Environmental Site Assessment performed in conformance with AEI's contract and scope and limitations of ASTM Standard Practice E1527-13 and the EPA Standards and Practices for All Appropriate Inquiries (40 CFR Part 312) for the property located at Napa Junction Road at Oat Hill, American Canyon, Napa County, California (Appendix A: Figures and Appendix B: Property Photographs).

1.1 Scope of Work

The purpose of the Phase I ESA is to assist the client in identifying potential RECs, in accordance with ASTM E1527-13, associated with the presence of any hazardous substances or petroleum products, their use, storage, and disposal at and in the vicinity of the subject property. Property assessment activities focused on: 1) a review of federal, state, tribal, and local databases that identify and describe underground fuel tank sites, leaking underground fuel tank sites, hazardous waste generation sites, and hazardous waste storage and disposal facility sites within the ASTM approximate minimum search distance; 2) a property and surrounding site reconnaissance, and interviews with the past and present owners and current occupants and operators to identify potential environmental contamination; and 3) a review of historical sources to help ascertain previous land use at the site and in the surrounding area.

1.2 Additional Services

Other Environmental Considerations such as ACMs, LBP, lead in drinking water, radon, mold, and wetlands can result in business environmental risks for property owners which may disrupt current or planned operations or cash flow and are generally beyond the scope of a Phase I assessment as defined by ASTM E1527-13. Based upon the agreed-on scope of services this ESA did not include subsurface or other invasive assessments, business environmental risks, or other services not specifically identified and discussed herein.

1.3 Significant Assumptions

The following assumptions are made by AEI in this report. AEI relied on information derived from secondary sources including governmental agencies, the client, designated representatives of the client, property contact, property owner, property owner representatives, computer databases, and personal interviews. AEI has reviewed and evaluated the thoroughness and reliability of the information derived from secondary sources including government agencies, the client, designated representatives of the client, property contact, property owner, property owner representatives, computer databases, or personal interviews. It appears that all information obtained from outside sources and reviewed for this assessment is thorough and reliable. However, AEI cannot guarantee the thoroughness or reliability of this information.

Groundwater flow, unless otherwise specified by on-site well data or well data from the subject property or nearby sites, is inferred from contour information depicted on the USGS topographic maps. AEI assumes the property has been correctly and accurately identified by the client, designated representative of the client, property contact, property owner, and property owner's representatives.

1.4 LIMITATIONS

Property conditions, as well as local, state, tribal, and federal regulations can change significantly over time. Therefore, the recommendations and conclusions presented as a result of this assessment apply strictly to the environmental regulations and property conditions existing at the time the assessment was performed. Available information has been analyzed using currently accepted assessment techniques and it is believed that the inferences made are reasonably representative of the property. AEI makes no warranty, expressed or implied, except that the services have been performed in accordance with generally accepted environmental property assessment practices applicable at the time and location of the assessment.

Considerations identified by ASTM as beyond the scope of a Phase I ESA that may affect business environmental risk at a given property include the following: ACMs, radon, LBP, lead in drinking water, wetlands, regulatory compliance, cultural and historical resources, industrial hygiene, health and safety, ecological resources, endangered species, indoor air quality, mold, and high voltage lines. These environmental issues or conditions may warrant assessment based on the type of the property transaction; however, they are considered non-scope issues under ASTM Standard Practice E1527-13.

If requested by the client, these non-scope issues are discussed herein. Otherwise, the purpose of this assessment is solely to satisfy one of the requirements for qualification of the innocent landowner defense, contiguous property owner or bona fide prospective purchaser under CERCLA. ASTM Standard Practice E1527-13 and the United States EPA Standards and Practices for All Appropriate Inquiries (40 CFR Part 312) constitute the "all appropriate inquiry into the previous ownership and uses of the property consistent with good commercial or customary practice" as defined in:

1. 42 U.S.C. § 9601(35)(B), referenced in the ASTM Standard Practice E1527-13.
2. Sections 101(35)(B) (ii) and (iii) of CERCLA and referenced in the EPA Standards and Practices for All Appropriate Inquiries (40 CFR Part 312).
3. 42 U.S.C. § 9601(40) and 42 U.S.C. § 9607(q).

The Phase I Environmental Site Assessment is not, and should not be construed as, a warranty or guarantee about the presence or absence of environmental contaminants that may affect the property. Neither is the assessment intended to assure clear title to the property in question. The sole purpose of assessment into property title records is to ascertain a historical basis of prior land use. All findings, conclusions, and recommendations stated in this report are based upon facts, circumstances, and industry-accepted procedures for such services as they existed at the time this report was prepared (i.e., federal, state, and local laws, rules, regulations, market conditions, economic conditions, political climate, and other applicable matters). All findings, conclusions, and recommendations stated in this report are based on the data and information provided, current subject property use, and observations and conditions that existed on the date and time of the property reconnaissance.

Responses received from local, state, or federal agencies or other secondary sources of information after the issuance of this report may change certain facts, findings, conclusions, or circumstances to the report. A change in any fact, circumstance, or industry-accepted procedure upon which this report was based may adversely affect the findings, conclusions, and recommendations expressed in this report.

AEI's limited radon screening, if included, is intended to provide a preliminary screening to evaluate the potential presence of elevated radon concentrations at the site. The proposed scope is not intended to define the full extent of the presence of radon at the subject property. As such, the results should be used for lending purposes only. The recommendations and conclusions presented as a result of the limited preliminary radon screening apply strictly to the property conditions existing at the time the sampling was performed. The sample analytical results are only valid for the time, place, and condition of the site at the time of collection and AEI does not warrant that the results will be repeatable or are representative of past or future conditions.

1.5 Limiting Conditions/Deviations

The performance of this assessment was limited by the following:

- While additional assessments may have been conducted on the subject property, these documents must be provided for AEI's review in order for the information to be summarized/included in this report. Please refer to Section 6.3 for a summary of previous reports and other documentation provided to AEI during this assessment.
- A search of historical city directories was conducted for the subject property utilizing EDR. Since there is no known address for the subject property, no listings were present. Based on the nature of historical occupancy as established from other sources, the lack of historical city directory information is not expected to alter the findings of this assessment.
- Due to the size of the subject property, AEI performed a reconnaissance of the property utilizing a field technique of traversing the site in an attempt to provide an overlapping field of view. Due to the size of the property and the vegetation present on site, isolated areas of the site may have not been accessible for direct observation during AEI's field reconnaissance. Based on the quality of information obtained from historical sources and interviews, this limitation is not expected to significantly alter the findings of this assessment.

1.6 Data Failure and Data Gaps

According to ASTM E1527-13, data gaps occur when the Environmental Professional is unable to obtain information required by the Standard, despite good faith efforts to gather such information. Pursuant to ASTM E1527-13, only significant data gaps, defined as those that affect the ability of the Environmental Professional to identify RECs, need to be documented.

Data failure is one type of data gap. According to ASTM E1527-13, data failure occurs when all of the standard historical sources that are reasonably ascertainable and likely to be useful have been reviewed and yet the objectives have not been met. Pursuant to ASTM E1527-13, historical sources are required to document property use back to the property's first developed use or back to 1940, whichever is earlier, or periods of five years or greater.

1.6.1 Data Failure

The following data failure was identified during the course of this assessment:

Data Failure	Historical sources were not obtained at five-year intervals dating back to 1940 or first developed use. AEI was not able to track the history of the subject property between the years 1938 and 1947 as none of the historical sources

	utilized as part of this assessment covered this time period. In the 1937 aerial photograph, the subject property appears to be used for agricultural purposes (hay harvesting). In the 1948 aerial photograph, the subject property appears as vacant pasture land. Thus, it is assumed that during this time period the subject property would have been used for similar purposes. Therefore, this data failure is not expected to significantly alter the findings of this assessment.
Information/Sources Consulted	Aerial photographs, agency records, previous report, interviews

1.6.2 Significant Data Gaps

AEI did not identify significant data gaps which affected our ability to identify RECs.

1.7 Reliance

All reports, both verbal and written, are for the benefit of R.H. Hess Dev Co. This report has no other purpose and may not be relied upon by any other person or entity without the written consent of AEI. Either verbally or in writing, third parties may come into possession of this report or all or part of the information generated as a result of this work. In the absence of a written agreement with AEI granting such rights, no third parties shall have rights of recourse or recovery whatsoever under any course of action against AEI, its officers, employees, vendors, successors or assigns. Reliance is provided in accordance with AEI's contract and Terms and Conditions executed by R.H. Hess Dev Co. on June 15, 2020. The limitation of liability defined in the Terms and Conditions is the aggregate limit of AEI's liability to the client and all relying parties.

2.0 SITE AND VICINITY DESCRIPTION

2.1 SITE LOCATION AND DESCRIPTION

PROPERTY INFORMATION	
Site Address(es)	Napa Junction Road at Oat Hill, American Canyon, Napa County, California 94503
Property ID (APN or Block/Lot)	058-320-001
Location	Southwest of the intersection of Napa Junction Road and Hess Road
Property Type	Vacant Land
SITE AND BUILDING INFORMATION	
Approximate Site Acreage/Source	10.63/Assessor
Number of Buildings	None
Building Construction Date(s)/Source	N/A
Building Square Footage (SF)/Source	N/A
Number of Floors/Stories	N/A
Basement or Subgrade Area(s)	None identified
Number of Units	N/A
Additional Improvements	None
On-site Occupant(s)	None
Current On-site Operations/Use	Goat grazing
Current Use of Hazardous Substances	None identified
REGULATORY INFORMATION	
Regulatory Database Listing(s)	None identified

2.2 ON-SITE UTILITIES

Utility	Source/System Information
Heating System	N/A
Cooling System	N/A
Potable Water	N/A
Sewage Disposal/Treatment	N/A

Utility source/system information listed in the table above is provided by Mr. Rick Hess, unless otherwise noted above.

2.3 SITE AND VICINITY CHARACTERISTICS

The subject property is located in a rural and commercial area of American Canyon, California. The immediately surrounding properties consist of the following:

Direction	Tenant/Use (Address)	Regulatory Database Listing(s)
North	Napa Junction Road, followed by:	4484: HIST UST, UST, CERS, CERS HAZ WASTE

Direction	Tenant/Use (Address)	Regulatory Database Listing(s)
	Oat Hill RV Parking and Hess Construction (4484/ 4501 Hess Road) Napa Junction Elementary School (300 Napa Junction Road) Vacant land (no address)	
East	Residences (285 Napa Junction Road, 11 Medeiros Lane), the Calvary Baptist Church (117 Theresa Avenue) and a farm facility (no address)	None identified
South	Vacant land and water tower, with portion of Medeiros Lane (no address)	None identified
West	Vacant land (no address)	None identified

If the surrounding properties are listed in the regulatory database, please refer to Section 5.1 for discussion.

2.4 PHYSICAL SETTING

Geologic Unit: Description/Source	Alluvial deposits of the Cenozoic Era/USGS and United States Department of the Interior
Soil Series: Description/Source	Fagan: Clay loam with slow infiltration rates and well drained. Depth to bedrock is estimated at 46-50 inches./USDA Soil Survey
Groundwater Flow Direction/Source	East/Topographic map interpretation
Estimated Depth to Groundwater/ Source	1.52-7.67 feet bgs/SWRCB groundwater monitoring data for a nearby site (4391 Highway 29), approximately 0.61 mile to the south-southeast Note: The closest readily available data was 1.52-7.67 feet deep at at distance of 0.61 mile away. However given the topography of the subject property relative to this depth to groundwater source, depth to groundwater at the subject property is likely deeper.
Surface waters on the subject property or adjoining sites	None
Additional notes	None

Note: Groundwater flow direction can be influenced locally and regionally by the presence of local wetland features, surface topography, recharge and discharge areas, horizontal and vertical inconsistencies in the types and location of subsurface soils, and proximity to water pumping wells. Depth and gradient of the water table can change seasonally in response to variation in precipitation and recharge, and over time, in response to urban development such as storm water controls, impervious surfaces, pumping wells, cleanup activities, dewatering, seawater intrusion barrier projects near the coast, and other factors.

3.0 HISTORICAL REVIEW OF SITE AND VICINITY

Reasonably ascertainable standard historical sources as outlined in ASTM Standard E1527-13 were used to determine previous uses and occupancies of the subject property that are likely to have led to RECs in connection with the subject property. A chronological summary of historical data found, including but not limited to aerial photographs, historical city directories, Sanborn fire insurance maps, and agency records, is as follows:

Date Range	Subject Property Description and Occupancy (Historical Addresses)	Source(s)
Prior to 1937	Unknown use/Data failure; refer to Section 1.6.1	Aerial photographs
1937	Agricultural/apparent hay farming land	Aerial photograph
1948-present	Vacant pasture land	Aerial photographs, city directories, agency records, prior Phase I ESA report, interview, onsite observations

Historical Use Summary

Based on a review of an aerial photograph from 1937, it appears that the subject property was historically used for hay harvesting. The subject property appeared as vacant range land in the next available historical resource, a 1948 aerial photograph. Additionally, the subject property owner representative, Mr. Rick Hess, indicated that the land was always for grazing only to the best of his knowledge and that no pesticides have been applied.

Based on review of the California Department of Toxic Substances Control's (DTSC) August 7, 2008 *Interim Guidance for Sampling Agricultural Properties (Third Revision)*, organochlorine pesticides (OCPs) were introduced to California in 1944 and reached their peak in the 1960s. The document continues to state that properties which ended their agricultural use prior to 1950 need not be sampled for OCPs.

Hay cultivation does not typically involve the application of agricultural chemicals, such as pesticides, herbicides and fertilizers. Therefore, the historical use of the property is not expected to represent a significant environmental concern.

If available, copies of historical sources are provided in Appendix D.

3.1 AERIAL PHOTOGRAPHS

AEI reviewed aerial photographs of the subject property and surrounding area. A search was made of the EDR collection of aerial photographs. Aerial photographs were reviewed for the following years:

Year(s)	Subject Property Description	Adjoining Site Descriptions
1937	Appears as agricultural/hay farming land	Appears as agricultural/hay farming land. Residential to east.

Year(s)	Subject Property Description	Adjoining Site Descriptions
1948 1957 1965 1970	Appears as unimproved pasture land.	Pasture land; residential to east School to northeast by 1957. Partial coverage in 1965
1982	Appears as vacant land	NORTH: Current RV parking and construction facility, school EAST: Residences and a farm SOUTH: Pasture land and water tower WEST: Pasture land
1993 1998 2005 2006	No significant changes noted from the 1982 aerial photograph. Apparent dirt path with some storage. The subject property generally appears as it does today.	No significant changes

Based on a review of aerial photographs, the subject property appears to have been developed with agricultural/hay farming land in at least 1937, please refer to Section 3.0 for additional information.

3.2 Sanborn Fire Insurance Maps

Sanborn Fire Insurance maps were developed in the late 1800s and early 1900s for use as an assessment tool for fire insurance rates in urbanized areas. A search was made of the EDR collection of Sanborn Fire Insurance maps.

Sanborn map coverage was not available for the subject property.

3.3 City Directories

A search of historical city directories was conducted for the subject property utilizing EDR. Since there is no known address for the subject property, no listings were present. Refer to Section 1.5 for discussion of this limiting condition.

3.4 Historical Topographic Maps

Based on the quality of information obtained from other sources, historical topographic maps were not reviewed as a part of this assessment.

3.5 Chain of Title

Based on the quality of information obtained from other sources, a chain of title search was not performed as part of this assessment.

4.0 REGULATORY AGENCY RECORDS REVIEW

Local and state agencies, such as environmental health departments, fire prevention bureaus, and building and planning departments are contacted to identify any current or previous reports of hazardous substance use, storage, and/or unauthorized releases that may have impacted the subject property. In addition, information pertaining to AULs, defined as legal or physical restrictions, or limitations on the use of, or access to, a site or facility, is requested.

4.1 LOCAL ENVIRONMENTAL HEALTH DEPARTMENT AND/OR STATE ENVIRONMENTAL AGENCY

Agency	Date Contacted	Method of Contact	Name & Title of Contact	Agency Response
Napa County Environmental Health Department (NCEHD)	July 30, 2020	Website	Records Manager	No hazardous materials records on file

4.2 FIRE DEPARTMENT

Agency	Date Contacted	Method of Contact	Name & Title of Contact	Agency Response
American Canyon Fire Department (ACFD)	July 30, 2020	Telephone	Records Manager	No records on file

4.3 BUILDING DEPARTMENT

Agency	Date Contacted	Method of Contact	Name & Title of Contact	Agency Response
American Canyon Building Department (ACBD)	July 30, 2020	Telephone	Records Clerk	No records on file

4.4 PLANNING DEPARTMENT

Agency	Date Contacted	Method of Contact	Name & Title of Contact	Agency Response
American Canyon Planning Department (ACPD)	July 30, 2020	Telephone	Associate Planner	No evidence indicating the existence of AULs on file for the subject property

4.5 ASSESSOR'S OFFICE

Agency	Date Contacted	Method of Contact	Name & Title of Contact	Agency Response
Napa County Assessor's Office	July 30, 2020	Website	N/A	Information obtained is discussed below

Records Summary

APN	058-320-001
Acreage	10.63 acres

Construction Date	N/A
Building Square Footage	N/A
Current Owner	Not provided

4.6 Other Agencies Searched

Agency	Date Contacted	Method of Contact	Name & Title of Contact	Agency Response
CA State Water Resources Control Board (SWRCB) GeoTracker	July 30, 2020	Website	N/A	No records on file
CA Department of Toxic Substances Control (DTSC) Hazardous Waste Tracking System (HWTS)	July 30, 2020	Website	N/A	No records on file
CA DTSC EnviroStor	July 30, 2020	Website	N/A	No records on file
Bay Area Air Quality Management District (AQMD)	July 30, 2020	Website	N/A	No records on file

4.7 Oil and Gas Wells

Agency	Date Referenced	Resource	Oil or gas wells located within 500 feet of the subject property
California Geologic Energy Management Division (CalGEM)	July 30, 2020	CalGEM Map	No

4.8 Oil and Gas Pipelines

Agency	Date Referenced	Resource	Pipelines located within 500 feet of the subject property
National Pipeline Mapping System (NPMS)	July 30, 2020	NPMS Public Map Viewer	No

4.9 State Environmental Superliens

In accordance with our approved scope of services, AEI did not assess whether the subject property is subject to any state environmental superliens.

4.10 State Property Transfer Laws

In accordance with our approved scope of services, AEI did not assess whether the subject property is subject to any state property transfer laws.

5.0 REGULATORY DATABASE RECORDS REVIEW

AEI contracted EDR to conduct a search of publicly available information from federal, state, tribal, and local databases containing known and suspected sites of environmental contamination and sites of potential environmental significance. Data gathered during the current regulatory database search is compiled by EDR into one regulatory database report. Location information for listed sites is designated using geocoded information provided by federal, state, or local agencies and commonly used mapping databases with the exception of "Orphan" sites. Due to poor or inadequate address information, Orphan sites are identified but not geocoded/mapped by EDR, rather, information is provided based upon vicinity zip codes, city name, and state. The number of listed sites identified within the approximate minimum search distance from the federal and state environmental records database listings specified in ASTM Standard E1527-13 is summarized in Section 5.1, along with the total number of Orphan sites. A copy of the regulatory database report, which includes detailed descriptions of the databases noted below, is included in Appendix C of this report.

In determining if a listed site is a potential environmental concern to the subject property, AEI generally applies the following criteria to classify the site as lower potential environmental concern: 1) the site only holds an operating permit (which does not imply a release), 2) the site's distance from, and/or topographic position relative to, the subject property, and/or 3) the site has recently been granted "No Further Action" by the appropriate regulatory agency.

Regulatory database listings associated with the subject property, adjoining site(s) and/or nearby sites of concern that were determined to warrant additional discussion are identified and further discussed in Section 5.1.

5.1 RECORDS SUMMARY

Database	Search Distance (Miles)	Listings Within Search Distance	Subject Property	Adjoining Site(s)	Other Nearby Sites of Concern

ORPHAN	N/A	2			
ADDITIONAL ENVIRONMENTAL RECORD SOURCES	SP/ADJ	3		✔	

Facility Name	Hess Concrete/Construction
Address	4484 Hess Road
Distance & Direction	Adjoining to the north, beyond road
Hydrologic Position	Cross-gradient
Databases Listed	UST, HIST UST, CERS HAZ WASTE, CERS
Comments	According to the regulatory database, this site was equipped with one (1) 1,000-gallon diesel UST and one (1) 550-gallon gasoline UST which were both installed in 1977, which were removed from the site in 1988. AEI inquired as to the location of the former tanks, however the property owner's representative, Mr. Rick Hess, was unaware of their former locations. No releases have been reported in association with these USTs. Based on the inferred groundwater flow direction and lack of a documented release, the review of regulatory agency files for this site was not deemed necessary, and the site is not expected to represent a significant environmental concern.

Facility Name	Medeiros Property
Address	289 Napa Junction Road
Distance & Direction	Plotted 0.1 mile east (exact location unknown)
Hydrologic Position	Down-gradient
Databases Listed	LUST
Comments	The site was listed as a closed LUST case related to a historical diesel fuel release. AEI reviewed documentation on GeoTracker. The only document available was an NFA letter from 1998. Based on the regulatory status and groundwater flow, this nearby site is not expected to represent a significant environmental concern.

5.2 Vapor Migration

AEI reviewed reasonably ascertainable information for the subject and nearby properties, including a regulatory database, files for nearby release sites, and/or historical documentation, to determine if potential vapor-phase migration concerns may be present which could impact the subject property.

Based on a review of available resources as documented in this report, AEI did not identify significant on-site concerns and/or regulated listings from nearby sites which suggest that a vapor-phase migration concern currently exists at the subject property.

6.0 INTERVIEWS AND USER PROVIDED INFORMATION

6.1 INTERVIEWS

Pursuant to ASTM E1527-13, the following interviews were performed during this assessment in order to obtain information indicating RECs in connection with the subject property.

6.1.1 OWNER AND KEY SITE MANAGER

Relation to Property	Name	Date Interviewed	Method of Contact	Year First Associated w/ Property	Notes
Owner/Owner Representative and Key Site Manager	Mr. Rick hess	August 5, 2020	In Person	1977	Interviewed; see Interview Summary table below

Interview Summary

Question	Owner (Representative) Response/ Comment	Key Site Manager Response/ Comment
Do you have any knowledge of USTs, clarifiers or oil/water separators, sumps, or other subsurface features?	No	No
Do you have any knowledge of previous environmental investigations conducted on site?	Yes	Yes
Do you have any knowledge of current or past industrial operations and/or other operations which would involve the use of hazardous substances and/or petroleum products?	No	No
Are you aware of any known plans for site redevelopment or change in site use?	No	No
Are you aware of any pending, threatened, or past litigation relevant to hazardous substances or petroleum products in, on, or from the property?	No	No
Are you aware of any pending, threatened or past administrative proceedings relevant to hazardous substances or petroleum products in, on, or from the property?	No	No
Are you aware of any notices from any governmental entity regarding any possible violation of environmental laws or possible liability relating to hazardous substances or petroleum products?	No	No
Are you aware of any incidents of flooding, leaks, or other water intrusion, and/or complaints related to indoor air quality?	No	No

6.1.2 PAST OWNERS, OPERATORS, AND OCCUPANTS

AEI did not attempt to interview past owners, operators, and occupants of the subject property because information from these sources would likely be duplicative of information already obtained from other sources.

6.1.3 Interview with Others

Information obtained during interviews with local government officials is incorporated into the appropriate segments of this report.

6.2 User Provided Information

User provided information is intended to help identify the possibility of RECs in connection with the subject property. According to ASTM E1527-13 and the EPA Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), certain items should be researched by the prospective landowner or grantee, and the results of such inquiries may be provided to the Environmental Professional. The responsibility for qualifying for LLPs by conducting the inquiries ultimately rests with the User, and providing the information to the Environmental Professional would be prudent if such information is available.

The User Questionnaire was completed by Mr. Rick Hess, Property Owner. The following table represents information contained therein.

Question	Response / Comment
1. Environmental liens that are filed or recorded against the property (40 CFR 312.25) Did a search of recorded land title records (or judicial records where appropriate) identify any environmental liens filed or recorded against the property under federal, tribal, state or local law?	No
2. Activity and use limitations that are in place on the property or that have been filed or recorded against the property (40 CFR 312.26(a)(1)(v) and vi)). Did a search of recorded land title records (or judicial records where appropriate) identify any AULs, such as engineering controls, land use restrictions or institutional controls that are in place at the property and/or have been filed or recorded against the property under federal, tribal, state or local law?	No
3. Specialized knowledge or experience of the person seeking to qualify for the LLP (40 CFR 312.28). Do you have any specialized knowledge or experience related to the property or nearby properties? For example, are you involved in the same line of business as the current or former occupants of the property or an adjoining property so that you would have specialized knowledge of the chemicals and processes used by this type of business?	Yes: Property in family since 1978
4. Relationship of the purchase price to the fair market value of the property if it were not contaminated (40 CFR 312.29). Does the purchase price being paid for this property reasonably reflect the fair market value of the property? If you conclude that there is a difference, have you considered whether the lower purchase price is because contamination is known or believed to be present at the property?	N/A
5. Commonly known or reasonably ascertainable information about the property (40 CFR 312.30). Are you aware of commonly known or reasonably ascertainable information about the property that would help the environmental professional to identify conditions indicative of releases or threatened releases? For example:	A) Yes, B-D) No

Question	Response / Comment
(a) Do you know the past uses of the property? (b) Do you know of specific chemicals that are present or once were present at the property? (c) Do you know of spills or other chemical releases that have taken place at the property? (d) Do you know of any environmental cleanups that have taken place at the property?	
6. The degree of obviousness of the presence or likely presence of contamination at the property, and the ability to detect the contamination by appropriate investigation (40 CFR 312.31). Based on your knowledge and experience related to the property, are there any obvious indicators that point to the presence or likely presence of contamination at the property?	No

6.3 Previous Reports and Other Provided Documentation

Documentation was provided to AEI by the Client during this assessment. A summary of this information follows:

Phase I Environmental Site Assessment (Napa Junction Road/Oat Hill), prepared by AEI Consultants (December 7, 2011)

It should be noted that this prior Phase I ESA was conducted on the adjacent parcel to the west.

The December 2011 Phase I ESA did not reveal any RECs, HRECs, De Minimis Conditions, or BERs during the course of the assessment.

This assessment revealed no evidence of RECs in connection with the property. AEI recommended no further investigations for the subject property at that time.

A copy of the report is included in the appendices.

6.4 Environmental Lien Search

In accordance with our approved scope of services, an environmental lien search was not performed as part of this assessment.

7.0 SITE RECONNAISSANCE

Site Reconnaissance Date	August 5, 2020
AEI Site Assessor(s)	Michael Audibert
Property Escort(s)/ Relationship(s) to Property	Mr. Rick Hess/Property Owner
Units/Areas Observed	No buildings onsite Exterior areas: All property grounds
Area(s) not accessed and reason(s)	None
Other Physical Constraints	Large parcel, refer to Section 1.5

Reconnaissance Findings Summary

Feature	Observed on Subject Property (see Section 7.1)	Observed on Adjoining Property (see Section 7.2)
Regulated Hazardous Substances/Wastes and/or Petroleum Products in Connection with Property Use		
Aboveground/Underground Hazardous Substance or Petroleum Product Storage Tanks (ASTs/USTs)		
Hazardous Substance and Petroleum Product Containers Not in Connection with Property Use		
Unidentified Substance Containers		
Electrical or Mechanical Equipment Likely to Contain Fluids		✔
Interior Stains or Corrosion		
Strong, Pungent, or Noxious Odors		
Pools of Liquid		
Drains, Sumps, and Clarifiers		
Pits, Ponds, and Lagoons		
Stained Soil or Pavement		
Stressed Vegetation		
Solid Waste Disposal or Evidence of Fill Materials		
Waste Water Discharges		
Wells		
Septic Systems		
Biomedical Wastes		
Other	✔	

7.1 SUBJECT PROPERTY RECONNAISSANCE FINDINGS

During the site reconnaissance, AEI observed the items listed in the above Reconnaissance Findings Summary table, which are further discussed below.

7.1.1 Other

Various debris, including concrete, wood, metal, empty water drums/containers for goats (all non-hazardous). Based on the nature of the items, their presence is not expected to represent a significant environmental concern.

7.2 Adjoining Property Reconnaissance Findings

During the site reconnaissance, AEI observed the items listed in the above Reconnaissance Findings Summary table, which are further discussed below.

7.2.1 Electrical or Mechanical Equipment Likely to Contain Fluids

Toxic PCBs were commonly used historically in electrical equipment such as transformers, fluorescent lamp ballasts, and capacitors. According to United States EPA regulation 40 CFR, Part 761, there are three categories for classifying such equipment: <50 ppm of PCBs is considered "Non-PCB"; between 50 and 500 ppm is considered "PCB-Contaminated"; and >500 ppm is considered "PCB-Containing." Pursuant to 15 U.S.C. 2605(e)(2)(A), the manufacture, process, or distribution in commerce or use of any polychlorinated biphenyl in any manner other than in a totally enclosed manner was prohibited after January 1, 1977.

Transformers

The management of potential PCB-containing transformers is the responsibility of the local utility or the transformer owner. Actual material samples need to be collected to determine if transformers are PCB-containing.

Various pole-mounted and pad-mounted transformers were observed on the adjoining sites during the site reconnaissance. No spills, staining, or leaks were observed on or around the transformers. Based on the good condition of the equipment, the transformers are not expected to represent a significant environmental concern.

8.0 NON-ASTM SERVICES

8.1 Asbestos-Containing Building Materials

The subject property is currently vacant land and lacks structures. Consequently, no building components containing suspect asbestos containing materials were identified during the site inspection.

8.2 Lead-Based Paint

The subject property is currently vacant land and lacks structures. Consequently, AEI did not observe building components likely to contain suspect LBP during the site reconnaissance.

8.3 Radon

Radon is a naturally-occurring, odorless, and invisible gas. Natural radon levels vary and are closely related to geologic formations. Radon may enter buildings through basement sumps or other openings.

Radon sampling was not requested as part of this assessment. According to the California Department of Health Services Radon Database, 18 tests were conducted for radon levels in the subject property zip code (94503) in 2016. All of these tests indicated that radon levels were below the action level of 4.0 pCi/L set forth by the US EPA. Therefore, radon is not expected to represent a significant environmental concern.

8.4 Mold

The subject property is currently vacant land and lacks structures. Consequently, mold was not addressed as part of this assessment.

9.0 SIGNATURE OF ENVIRONMENTAL PROFESSIONALS

We declare that, to the best of our professional knowledge and belief, we meet the definition of Environmental Professional as defined in §312.10 of 40 CFR Part 312.

We have the specific qualifications based on education, training, and experience to assess a property of the nature, history and setting of the subject property. We have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E 2247-16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E 1528-14) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

EXECUTIVE SUMMARY

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

State- and tribal - equivalent CERCLIS

ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the ENVIROSTOR list, as provided by EDR, and dated 04/27/2020 has revealed that there are 3 ENVIROSTOR sites within approximately 1 mile of the target property.

State and tribal landfill and/or solid waste disposal site lists

SWF/LF: The Solid Waste Facilities/Landfill Sites records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. The data come from the Integrated Waste Management Board's Solid Waste Information System (SWIS) database.

A review of the SWF/LF list, as provided by EDR, has revealed that there is 1 SWF/LF site within

approximately 0.5 miles of the target property.

Lower Elevation	Address	Direction / Distance	Map ID	Page

State and tribal leaking storage tank lists

LUST: Leaking Underground Storage Tank (LUST) Sites included in GeoTracker. GeoTracker is the Water Boards data management system for sites that impact, or have the potential to impact, water quality in California, with emphasis on groundwater.

A review of the LUST list, as provided by EDR, has revealed that there are 5 LUST sites within approximately 0.5 miles of the target property.

State and tribal registered storage tank lists

UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the State Water Resources Control Board's Hazardous Substance Storage Container Database.

A review of the UST list, as provided by EDR, has revealed that there are 5 UST sites within approximately 0.25 miles of the target property.

State and tribal voluntary cleanup sites

VCP: Contains low threat level properties with either confirmed or unconfirmed releases and the project proponents have request that DTSC oversee investigation and/or cleanup activities and have agreed to provide coverage for DTSC's costs.

A review of the VCP list, as provided by EDR, and dated 04/27/2020 has revealed that there is 1 VCP site within approximately 0.5 miles of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 03/23/2020 has revealed that there are 3 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

Violation Date:	01-08-2020
Citation:	HSC 6.95 25505(a)(4) - California Health and Safety Code, Chapter 6.95, Section(s) 25505(a)(4)
Violation Description:	Failure to provide initial and annual training to all employees in safety procedures in the event of a release or threatened release of a hazardous material or failure to document and maintain training records for a minimum of three years.
Violation Notes:	Returned to compliance on 01/08/2020. The business failed to provide initial and annual training to all employees in safety procedures in the event of a release or threatened release of a hazardous material including familiarity with the emergency response plan or failure to document and maintain training records for a minimum of three years. Did not have training for the last 3 years but had the current training. Give training yearly and keep records for 3 years. Establish and electronically submit an employee training program containing provisions to ensure initial and annual training for all employees in safety procedures in the event of a release or threatened release of a hazardous material and document and maintain training records for a

Citation: HSC 6.5 25250.19(c) - California Health and Safety Code, Chapter 6.5, Section(s) 25250.19(c)
Violation Description: Failure to retain paperwork documenting disposal of used oil for three years.
Violation Notes: Returned to compliance on 11/06/2013.
Violation Division: Napa County Department of Environmental Management
Violation Program: HW
Violation Source: CERS

Site ID: 59860
Site Name: R.E. MAHER INC.
Violation Date: 01-08-2020
Citation: 22 CCR 12 66262.12 - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.12
Violation Description: Failure to obtain an Identification Number prior to treating, storing, disposing of, transporting or offering for transportation any hazardous waste.
Violation Notes: Returned to compliance on 01/10/2020. The generator has not obtained an active EPA ID number to manage hazardous waste. A hazardous waste generator shall not treat, store, dispose of, transport or offer for transportation, hazardous waste without an active EPA ID number. EPA ID number was inactive. The re-activation papers were sent to DTSC during inspection. Submit documentation to the CUPA demonstrating that you have obtained an EPA ID number.

Violation Date: 01-08-2020
Citation: HSC 6.95 25508.1(a)-(f) - California Health and Safety Code, Chapter 6.95, Section(s) 25508.1(a)-(f)
Violation Description: Failure to electronically update business plan within 30 days of any one of the following events: A 100 percent or more increase in the quantity of a previously disclosed material. Any handling of a

R.E. MAHER INC. (Continued) **S121788844**

previously undisclosed hazardous materials at or above reportable quantities. A change of business address, business ownership, or business name. A substantial change in the handler's operations that requires modification to any portion of the business plan.

Violation Notes: Returned to compliance on 01/08/2020. The business failed to update business plan within 30 days when one of the following occurs: a 100 percent or more increase in the quantity of a previously disclosed material; any handling of a previously undisclosed hazardous material; a change of business address, business ownership, or business name; or a substantial change in the handler's operations that requires modification to any portion of the business plan. The material "Cure" was reported at having 155 gallons onsite. There were several 55 gallon drums, 5 gallon drums and a 200 gallon tank. The inventory amount was corrected onsite in CERS at the time of inspection. Update all submittal elements effected by the change(s) and electronically submit the update within 30 days.

Comments:	The Triage recommended No Further Action. A Sensitive Receptor Survey and Risk Based Corrective Action Assessment submitted to the SF Water Board indicate that the contaminant residuals present at the site do not pose a significant health risk to current or future occupants of the site. Based on this Report, a No Further Action Letter was issued by the SF Board dated November 20, 2000.

Completed Document Type:	Preliminary Assessment Report
Completed Date:	05/01/2014
Comments:	DTSC conducted a reassessment of sites in EPA's CERCLIS database on EPA's behalf. The regional waterboard had reviewed past soil and groundwater investigations and determined that no further action was required. Based on this information and available sampling data, DTSC recommended no further federal assessment under CERCLA.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 04/27/2020

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Date of Government Version: 10/15/1991

Federal Delisted NPL site list

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Federal RCRA generators list

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

RCRA-VSQG: RCRA - Very Small Quantity Generators (Formerly Conditionally Exempt Small Quantity Generators)

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Very small quantity generators (VSQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites
Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing
A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Date of Government Version: 10/19/2006

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

WASTEWATER PITS: Oil Wastewater Pits Listing
Water officials discovered that oil producers have been dumping chemical-laden wastewater into hundreds of unlined pits that are operating without proper permits. Inspections completed by the Central Valley Regional Water Quality Control Board revealed the existence of previously unidentified waste sites. The water boards review found that more than one-third of the region's active disposal pits are operating without permission.

WDR: Waste Discharge Requirements Listing

In general, the Waste Discharge Requirements (WDRs) Program (sometimes also referred to as the "Non Chapter 15 (Non 15) Program") regulates point discharges that are exempt pursuant to Subsection 20090 of Title 27 and not subject to the Federal Water Pollution Control Act. Exemptions from Title 27 may be granted for nine categories of discharges (e.g., sewage, wastewater, etc.) that meet, and continue to meet, the preconditions listed for each specific exemption. The scope of the WDRs Program also includes the discharge of wastes classified as inert, pursuant to section 20230 of Title 27.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants
The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations
EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

EDR Hist Cleaner: EDR Exclusive Historical Cleaners
EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

LOS ANGELES CO LF METHANE: Methane Producing Landfills

This data was created on April 30, 2012 to represent known disposal sites in Los Angeles County that may produce and emanate methane gas. The shapefile contains disposal sites within Los Angeles County that once accepted degradable refuse material. Information used to create this data was extracted from a landfill survey performed by County Engineers (Major Waste System Map, 1973) as well as historical records from CalRecycle, Regional Water Quality Control Board, and Los Angeles County Department of Public Health

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data
Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

Latitude (North):	38.184119 - 38° 11' 2.83''
Longitude (West):	122.261667 - 122° 15' 42.00''
Universal Tranverse Mercator:	Zone 10
UTM X (Meters):	564663.3
UTM Y (Meters):	4226295.0
Elevation:	208 ft. above sea level

USGS TOPOGRAPHIC MAP

Target Property Map:	5602106 CUTTINGS WHARF, CA
Version Date:	2012
East Map:	5602186 CORDELIA, CA
Version Date:	2012

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

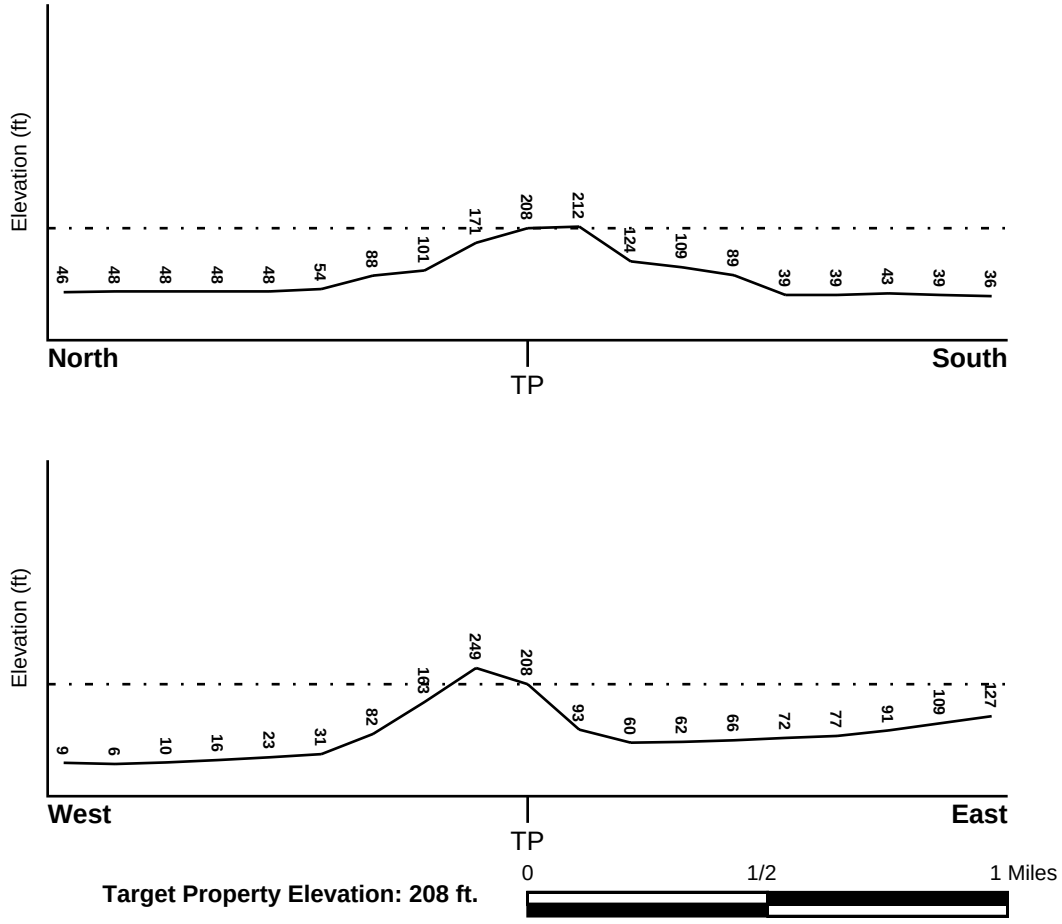
1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).



TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General East

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Flood Plain Panel at Target Property	FEMA Source Type
06055C0625E	FEMA FIRM Flood data

Additional Panels in search area:	FEMA Source Type
06055C0610E	FEMA FIRM Flood data
06055C0650E	FEMA FIRM Flood data

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
CUTTINGS WHARF	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Status:	Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW
Not Reported		

* ©1996 Site−specific hydrogeological data gathered by CERCLIS Alerts, Inc., Bainbridge Island, WA. All rights reserved. All of the information and opinions presented are those of the cited EPA report(s), which were completed under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: Fagan

Soil Surface Texture: clay loam

Hydrologic Group: Class C - Slow infiltration rates. Soils with layers impeding downward movement of water, or soils with moderately fine or fine textures.

Soil Drainage Class: Well drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Moderate

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	16 inches	clay loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	Not reported	Max: 4 Min: 1.4	Max: Min:
2	16 inches	27 inches	clay	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	Not reported	Max: 4 Min: 1.4	Max: Min:
3	27 inches	46 inches	sandy clay loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	Not reported	Max: 4 Min: 1.4	Max: Min:
4	46 inches	50 inches	weathered bedrock	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	Not reported	Max: 4 Min: 1.4	Max: Min:

Soil Map ID: 2

Soil Component Name: CLEAR LAKE

Soil Surface Texture: clay

Hydrologic Group: Class D - Very slow infiltration rates. Soils are clayey, have a high water table, or are shallow to an impervious layer.

Soil Drainage Class: Poorly drained

Hydric Status: All hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	31 inches	clay	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit 50% or more), Fat Clay.	Max: 1.4 Min: 0.42	Max: 8.4 Min: 7.4
2	31 inches	68 inches	clay	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit 50% or more), Fat Clay.	Max: 1.4 Min: 0.42	Max: 8.4 Min: 7.4

Soil Map ID: 3

Soil Component Name: HAIRE

Soil Surface Texture: loam

Hydrologic Group: Class C - Slow infiltration rates. Soils with layers impeding downward movement of water, or soils with moderately fine or fine textures.

Soil Drainage Class: Moderately well drained

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Hydric Status: Partially hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	22 inches	loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit 50% or more), Fat Clay.	Max: 0.42 Min: 0.01	Max: 5.5 Min: 4.5
2	22 inches	27 inches	sandy clay loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit 50% or more), Fat Clay.	Max: 0.42 Min: 0.01	Max: 5.5 Min: 4.5
3	27 inches	44 inches	clay	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit 50% or more), Fat Clay.	Max: 0.42 Min: 0.01	Max: 5.5 Min: 4.5
4	44 inches	59 inches	sandy clay	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit 50% or more), Fat Clay.	Max: 0.42 Min: 0.01	Max: 5.5 Min: 4.5

Soil Map ID: 4

Soil Component Name: Fagan

Soil Surface Texture: clay loam

Hydrologic Group: Class C - Slow infiltration rates. Soils with layers impeding downward movement of water, or soils with moderately fine or fine textures.

Soil Drainage Class: Well drained

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

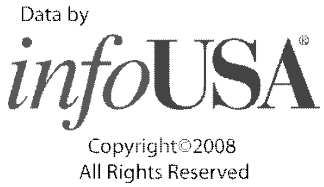
EXECUTIVE SUMMARY



DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Report is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Report includes a search of available city directory data at 5 year intervals.

RECORD SOURCES

EDR's Digital Archive combines historical directory listings from sources such as Cole Information and Dun & Bradstreet. These standard sources of property information complement and enhance each other to provide a more comprehensive report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer. Reproduction of City Directories without permission of the publisher or licensed vendor may be a violation of copyright.

RESEARCH SUMMARY

The following research sources were consulted in the preparation of this report. A check mark indicates where information was identified in the source and provided in this report.

EDR Aerial Photo Decade Package

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

When delivered electronically by EDR, the aerial photo images included with this report are for ONE TIME USE ONLY. Further reproduction of these aerial photo images is prohibited without permission from EDR. For more information contact your EDR Account Executive.

Thank you for your business.
Please contact EDR at 1-800-352-0050
with any questions or comments.

Environmental Data

Alquist Priolo Faults:	Alquist Priolo faults found
Archaeology:	Potential Archaeological sites may occur in this general area, please contact the Planning, Building, & Environmental Services Dept. for details*
California Planar Coordinate:	DF267 DF268 Multiple results found. For more information, see report footnote**
CalVeg:	No CalVeg data found
CalWater Watershed: Hydrologic Region (HR) Hydrologic Unit (HU) Hydrologic Area (HA) Hydrologic Sub Area (HSA) Super Planning Watershed (SPW) Planning Watershed (PW)	HR: San Francisco Bay HU: San Pablo HA: Napa River HSA: Napa River SPW: Lower Napa River PW: Mouth of Napa River
Faults:	No Faults found
FEMA Flood Zone:	Parcel not in FEMA Flood Zone

Parcel Report for { 058320001000 }

Developed by Napa County GIS
GISStaff@CountyOfNapa.org

Fire Hazard Severity:	High Fire Hazard Severity (SRA). Compliance with Chapter 7 A of the California Building Code is required for new construction.
GW Ordinance:	Parcel not in a designated Groundwater Deficient Area (actual groundwater conditions may vary)
Landslides:	Landslides found
Local Drainage:	Rancho del Mar Creek North Slough Multiple results found. For more information, see report footnote**
Soil Type:	Clear Lake clay, drained, 0 to 2 percent slopes, MLRA 14 Fagan clay loam, 30 to 50 percent slopes, slipped Haire loam, 0 to 2 percent slopes Multiple results found. For more information, see report footnote**
Special Species:	Potential Special Species may occur in this general area, please contact the Planning, Building, & Environmental Services Dept. for details*
Spotted Owls:	No Spotted Owls found

HazMat Releases - Local Oversight Program (LOP) (within 1500 ft):
EVAN-ATHAN ENTERPRISES
MEDEIROS PROPERTY
INDEPENDENT STAVE COMPANY

HazMat Releases - Non-Local Oversight Program (Non-LOP) (within 1500 ft):
No Non-LOP hazardous materials releases found

Agricultural Use USTs (within 1500 ft):
No Agricultureal Use USTs found

Location of archaeological sites, spotted owls, and other sensitive resources are generalized to protect their exact locations. For this reason, there is no guarantee they are located within or outside of the subject parcel. Please contact PBES to learn more.

Boundary Data

Basemap Grid:	1 - C 2 - C Multiple results found. For more information, see report footnote**
Census Data:	Tract: 201005 Block Group: 1
County Zoning:	American Canyon - Refer to city. Zoning is only available for the unincorporated area.
Fire Jurisdiction:	American Canyon Fire
Garbage Zone 1:	Parcel not in Garbage Zone 1
Projected Township, Range & Section:	M04N04W24
School District:	Napa Valley Unified
Supervisor District:	District 5 - Belia Ramos
Township & Range:	T04N-R04W24
USGS Topo Quad Name:	Cuttings Wharf
Voting Precinct:	561341

ASTM USER QUESTIONNAIRE

AEI Consultants

ASTM E 1527-13 USER QUESTIONNAIRE

To qualify for the protection offered under the EPA All Appropriate Inquiry (AAI) Standard, the User (entities seeking to use the ASTM E1527-13 Practice to complete an environmental site assessment of the property; i.e. Lenders and/or Borrowers) must provide the following information (if available) to the environmental professional. Failure to provide this information could result in a determination that AAI is not complete. This information should be the collective knowledge of the entities relying on the Phase I. **Please note that you are not being asked to evaluate the property, but rather to provide your knowledge of information on the property.**

Site Name/Address: CAT HILL PROJECT
058-320-001

Property Owner (Name/Title/Company): HAROLD AND BOBBIE HESS TRUST DATED 7-20-94

Phone/Email: rick @ rhhess.com

Key Site Personnel (Name/Title/Company): RICK HESS

Phone/Email: 925-487-1052

Past Owner (Name/Title/Company)

Phone/Email:

1. Environmental cleanup liens that are filed or recorded against the property (40 CFR 312.25).
Did a search of recorded land title records (or judicial records where appropriate, see NOTE 1 below) identify any environmental liens filed or recorded against the property under federal, tribal, state or local law?

NOTE 1: In certain jurisdictions, federal, tribal, state, or local statutes, or regulations specify that environmental liens and AULs be filed in judicial records rather than in land title records. In such cases judicial records must be searched for environmental liens and AULs.

☐ Yes ☒ No If yes, please include an explanation in the space provided below:

2. Activity and land use limitations that are in place on the property or that have been filed or recorded against the property (40 CFR 312.26(a)(1)(v) and vi).
Did a search of recorded land title records (or judicial records where appropriate, see NOTE 1 above) identify any AULs, such as engineering controls, land use restrictions or institutional controls that are in place at the property and/or have been filed or recorded against the property under federal, tribal, state or local law?

Engineering Controls are defined as physical modifications to a site or facility to reduce or eliminate the potential for exposure to hazardous substances or petroleum products in the soil or ground water on the property). Institutional Controls are defined as a legal or administrative restriction on the use of, or access to, a site or facility to 1) reduce or eliminate the potential for exposure to hazardous substances or petroleum products in the soil or ground water on the property, or 2) to prevent activities that could interfere with the effectiveness of a response action, in order to ensure maintenance of a condition of no significant risk to public health or the environment.

☐ Yes ☒ No If yes, please include an explanation in the space provided below:

3. Specialized knowledge or experience of the person seeking to qualify for the LLP (40 CFR 312.28).
Do you have any specialized knowledge or experience related to the property or nearby properties? For example, are you involved in the same line of business as the current or former occupants of the property or an adjoining property so that you would have specialized knowledge of the chemicals and processes used by this type of business?

☒ Yes ☐ No If yes, please include an explanation in the space provided below:

OUR FAMILY HAS OWNED PROPERTY SINCE 1978

NA

4. Relationship of the purchase price to the fair market value of the property if it were not contaminated (40 CFR 312.29).
Does the purchase price being paid for this property reasonably reflect the fair market value of the property?

☐ Yes ☐ No

If you conclude that there is a difference, have you considered whether the lower purchase price is because contamination is known or believed to be present at the property?

☐ Yes ☐ No

Comments:

5. Commonly known or reasonably ascertainable information about the property (40 CFR 312.30).
Are you aware of commonly known or reasonably ascertainable information about the property that would help the environmental professional to identify conditions indicative of releases or threatened releases? For example:

a. Do you know the past uses of the property?
☒ Yes ☐ No

b. Do you know of specific chemicals that are present or once were present at the property?
☐ Yes ☒ No

c. Do you know of spills or other chemical releases that have taken place at the property?
☐ Yes ☒ No

d. Do you know of any environmental cleanups that have taken place at the property?
☐ Yes ☒ No

If yes for questions above, please include an explanation in the space provided below:

6. The degree of obviousness of the presence or likely presence of contamination at the property, and the ability to detect the contamination by appropriate investigation (40 CFR 312.31).
Based on your knowledge and experience related to the property are there any obvious indicators that point to the presence or likely presence of releases at the property?

☐ Yes ☒ No If yes, please include an explanation in the space provided below:

EXECUTIVE SUMMARY

AEI Consultants (AEI) was retained by DeNova Homes to conduct a Phase I Environmental Site Assessment (ESA), in general conformance with the scope and limitations of ASTM Standard Practice E1527-05 and the Environmental Protection Agency Standards and Practices for All Appropriate Inquiries (40 CFR Part 312) for the property located at Napa Junction Road at Oat Hill in the City of American Canyon, Napa County, California. Any exceptions to, or deletions from, this practice are described in Section 1.3 of this report.

PROPERTY DESCRIPTION

The subject property, which consists of vacant land, is located on the south side of Napa Junction Road in a mixed commercial and residential area of American Canyon, California. The property totals approximately 10.17 acres and is currently unimproved and unoccupied.

The property has consisted of unimproved pasture and/or undeveloped land from as early as 1937.

The subject property was not identified in the regulatory database.

The immediately surrounding properties consist of the following:

Direction from Site	Address-Tenant/Use
North	Napa Junction Road, followed by undeveloped land
South	Undeveloped land and a water tower
East	Undeveloped land
West	A water tower and undeveloped land
Northwest	A vacant commercial/industrial building (100 Napa Junction Road)

None of the adjacent sites were identified in the regulatory database.

Based upon topographic map interpretation and groundwater monitoring data for a nearby site, the direction of groundwater flow beneath the subject property is inferred to be to the east. Based on a *Quarterly Monitoring Report – First Quarter 2011* for a nearby site (3462 Broadway) prepared by Cook Environmental Services and dated September 29, 2011, groundwater is presumed to be present at an estimated depth of 5-10 feet below ground surface (bgs).

FINDINGS

Recognized Environmental Conditions (RECs) are defined by the ASTM Standard Practice E1527-05 as the presence or likely presence of any hazardous substances or petroleum products on a property under conditions that indicate an existing release, a past release, or a material threat of a release of any hazardous substances or petroleum products into structures on the property or into the ground, groundwater, or surface water of the property. AEI's assessment has revealed the following RECs associated with the subject property or nearby properties:

- No on-site RECs were identified during the course of this assessment.

Historical Recognized Environmental Conditions (HRECs) are defined by the ASTM Standard Practice E1527-05 as an environmental condition which in the past would have been considered a recognized environmental condition, but which may or may not be considered a recognized

environmental condition currently. AEI's assessment has revealed the following HRECs associated with the subject property or nearby properties:

- No on-site HRECs were identified during the course of this assessment.

De Minimis Environmental Conditions include environmental concerns identified by AEI that warrant discussion but do not qualify as RECs, as defined by the ASTM Standard Practice E1527-05. AEI's assessment has revealed the following de minimis environmental conditions associated with the subject property or nearby properties:

- No on-site de minimis environmental conditions were identified during the course of this assessment.

Business Environmental Risks (BERs) include risks which can have a material environmental or environmentally-driven impact on the business associated with the current or planned use of the subject property, not necessarily limited to those environmental issues required to be investigated in the standard ASTM scope. BERs may affect the liabilities and financial obligations of the client, the health & safety of site occupants, and the value and marketability of the subject property. AEI's assessment has revealed the following BERs associated with the subject property or nearby properties:

- No BERs were identified during the course of this assessment.

CONCLUSIONS, OPINIONS AND RECOMMENDATIONS

We have performed a Phase I Environmental Site Assessment for the property located at Napa Junction Road at Oat Hill in the City of American Canyon, Napa County, California, in general conformance with the scope and limitations of ASTM Standard Practice E1527-05 and the Environmental Protection Agency Standards and Practices for All Appropriate Inquiries (40 CFR Part 312). Any exceptions to, or deletions from, this practice are described in Section 1.3 of this report. This assessment has revealed no evidence of RECs in connection with the property. AEI recommends no further investigations for the subject property at this time.

1.0 INTRODUCTION

This report documents the methods and findings of the Phase I Environmental Site Assessment (ESA) performed in general conformance with the scope and limitations of ASTM Standard Practice E1527-05 and the Environmental Protection Agency Standards and Practices for All Appropriate Inquiries (40 CFR Part 312) for the property located at Napa Junction Road at Oat Hill in the City of American Canyon, Napa County, California (Figure 1: Site Location Map, Figure 2: Site Map, and Appendix A: Property Photographs).

1.1 SCOPE OF WORK

The purpose of the Phase I Environmental Site Assessment is to assist the client in identifying potential environmental liabilities associated with the presence of any hazardous substances or petroleum products, their use, storage, and disposal at and in the vicinity of the subject property, as well as regulatory non-compliance that may have occurred at the subject property. Property assessment activities focused on: 1) a review of federal, state, tribal and local databases that identify and describe underground fuel tank sites, leaking underground fuel tank sites, hazardous waste generation sites, and hazardous waste storage and disposal facility sites within the ASTM approximate minimum search distance; 2) a property and surrounding site reconnaissance, and interviews with the past and present owners and current occupants and operators to identify potential environmental contamination; and 3) a review of historical sources to help ascertain previous land use at the site and in the surrounding area.

The goal of AEI Consultants in conducting the Phase I Environmental Site Assessment was to identify the presence or likely presence of any hazardous substances or petroleum products on the property that may indicate an existing release, a past release, or a material threat of a release of any hazardous substance or petroleum product into the soil, groundwater, or surface water of the property.

1.2 SIGNIFICANT ASSUMPTIONS

The following assumptions are made by AEI Consultants in this report. AEI Consultants relied on information derived from secondary sources including governmental agencies, the client, designated representatives of the client, property contact, property owner, property owner representatives, computer databases, and personal interviews. AEI Consultants has reviewed and evaluated the thoroughness and reliability of the information derived from secondary sources including government agencies, the client, designated representatives of the client, property contact, property owner, property owner representatives, computer databases, or personal interviews. It appears that all information obtained from outside sources and reviewed for this assessment is thorough and reliable. However, AEI cannot guarantee the thoroughness or reliability of this information.

Groundwater flow and depth to groundwater, unless otherwise specified by on-site well data, or well data from adjacent sites are assumed based on contours depicted on the United States Geological Survey topographic maps. AEI Consultants assumes the property has been correctly and accurately identified by the client, designated representative of the client, property contact, property owner, and property owner's representatives.

1.3 LIMITATIONS

Property conditions, as well as local, state, tribal and federal regulations can change significantly over time. Therefore, the recommendations and conclusions presented as a result of this study apply strictly to the environmental regulations and property conditions existing at the time the study was performed. Available information has been analyzed using currently accepted assessment techniques and it is believed that the inferences made are reasonably representative of the property. AEI Consultants makes no warranty, expressed or implied, except that the services have been performed in accordance with generally accepted environmental property assessment practices applicable at the time and location of the study.

Considerations identified by ASTM as beyond the scope of a Phase I ESA that may affect business environmental risk at a given property include the following: asbestos-containing materials, radon, lead-based paint, lead in drinking water, wetlands, regulatory compliance, cultural and historic resources, industrial hygiene, health and safety, ecological resources, endangered species, indoor air quality, mold, vapor intrusion, and high voltage lines. These environmental issues or conditions may warrant assessment based on the type of the property transaction; however, they are considered non-scope issues under ASTM Standard Practice E1527-05.

If requested by the client, these non-scope issues are discussed in Section 7.2. Otherwise, the purpose of this assessment is solely to satisfy one of the requirements for qualification of the innocent landowner defense, contiguous property owner or bona fide prospective purchaser under the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA). ASTM Standard Practice E1527-05 and the EPA Standards and Practices for All Appropriate Inquiries (40 CFR Part 312) constitute the "all appropriate inquiry into the previous ownership and uses of the property consistent with good commercial or customary practice" as defined in:

1) 42 U.S.C § 9601(35)(B), referenced in the ASTM Standard Practice E1527-05.

2) Sections 101(35)(B) (ii) and (iii) of CERCLA and referenced in the EPA Standards and Practices for All Appropriate Inquiries (40 CFR Part 312).

3) 42 U.S.C. 9601(40) and 42 U.S.C. 9607(q).

The Phase I Environmental Site Assessment is not, and should not be construed as, a warranty or guarantee about the presence or absence of environmental contaminants that may affect the property. Neither is the assessment intended to assure clear title to the property in question. The sole purpose of assessment into property title records is to ascertain a historical basis of prior land use. All findings, conclusions, and recommendations stated in this report are based upon facts, circumstances, and industry-accepted procedures for such services as they existed at the time this report was prepared (i.e., federal, state, and local laws, rules, regulations, market conditions, economic conditions, political climate, and other applicable matters). All findings, conclusions, and recommendations stated in this report are based on the data and information provided, and observations and conditions that existed on the date and time of the property visit.

Responses received from local, state, or federal agencies or other secondary sources of information after the issuance of this report may change certain facts, findings, conclusions, or circumstances to the report. A change in any fact, circumstance, or industry-accepted

procedure upon which this report was based may adversely affect the findings, conclusions, and recommendations expressed in this report.

1.4 LIMITING CONDITIONS

AEI was granted full and complete access to the subject property.

1.5 DATA GAPS AND DATA FAILURE

According to ASTM E1527-05, data gaps occur when the Environmental Professional is unable to obtain information required, despite good faith efforts to gather such information.

Data failure is one type of data gap. According to ASTM E1527-05 "data failure occurs when all of the standard historical sources that are reasonably ascertainable and likely to be useful have been reviewed and yet the objectives have not been met". Pursuant to ASTM Standards, historical sources are required to document property use back to the property's first developed use or back to 1940, whichever is earlier.

No data gaps were identified during the course of this assessment.

1.6 RELIANCE

All reports, both verbal and written, are for the benefit of DeNova Homes. This report has no other purpose and may not be relied upon by any other person or entity without the written consent of AEI. Either verbally or in writing, third parties may come into possession of this report or all or part of the information generated as a result of this work. In the absence of a written agreement with AEI granting such rights, no third parties shall have rights of recourse or recovery whatsoever under any course of action against AEI, its officers, employees, vendors, successors or assigns. Reliance is provided in accordance with AEI's Proposal and Standard Terms & Conditions executed by DeNova Homes on November 15, 2011. The limitation of liability defined in the Terms and Conditions is the aggregate limit of AEI's liability to the client and all relying parties.

2.0 SITE AND VICINITY DESCRIPTION

2.1 SITE LOCATION AND DESCRIPTION

The subject property, which consists of vacant land, is located on the south side of Napa Junction Road in a mixed commercial and residential area of American Canyon, California. The property totals approximately 10.17 acres and is currently unimproved and unoccupied.

The subject property was not identified in the regulatory database.

The Assessor's Parcel Number (APN) for the subject property is 058-380-008. Based on the undeveloped nature of the subject property, it is not current serviced by any utilities. According to the American Canyon Building Department (ACBD), properties in the vicinity of the subject property are serviced by Pacific Gas and Electric (PG&E) for natural gas and electricity, and municipal services (City of American Canyon) for potable water and sewage disposal.

Refer to Figure 1: Site Location Map, Figure 2: Site Map, and Appendix A: Property Photographs for site location.

2.2 SITE AND VICINITY CHARACTERISTICS

The immediately surrounding properties consist of the following:

Direction from Site	Address-Tenant/Use
North	Napa Junction Road, followed by undeveloped land
South	Undeveloped land and a water tower
East	Undeveloped land
West	A water tower and undeveloped land
Northwest	A vacant commercial/industrial building (100 Napa Junction Road)

None of the adjacent sites were identified in the regulatory database.

2.3 PHYSICAL SETTING

Geology: According to information obtained from the United States Geological Survey (USGS), the area surrounding the subject property is underlain by alluvial deposits of the Cenozoic-era. Based on a review of the United States Department of Agriculture (USDA) Soil Survey for the area of the subject property, the soils in the vicinity of the subject property are classified as the Fagan Series. Soils from this series are characterized as a clay loam.	
USGS Topographic Map:	*Cuttings Wharf, California* Quadrangle
Nearest surface water to subject property:	Napa River/Approximately 1.4 miles to the west
Gradient Direction/Source:	East/Topographic map interpretation and groundwater monitoring data for a nearby site
Estimated Depth to Groundwater/Source:	5-10 feet bgs/*Quarterly Monitoring Report – First Quarter 2011* for a nearby site (3462 Broadway) prepared by Cook Environmental Services and dated September 29, 2011

3.0 HISTORICAL REVIEW OF SITE AND VICINITY

3.1 HISTORICAL SUMMARY

Reasonably ascertainable standard historical sources as outlined in ASTM Standard E1527-05 were used to determine previous uses and occupancies of the subject property that are likely to have led to RECs in connection with the subject property. A chronological summary of historical data found, including but not limited to aerial photographs, historic city directories, Sanborn fire insurance maps and agency records is as follows:

Date Range	Subject Property Description/Use	Source(s)
Circa 1937 - present	Unimproved pasture and/or undeveloped land	Aerial photographs, interview

The property has consisted of unimproved pasture and/or undeveloped land from as early as 1937.

No potential environmental concerns were identified in association with the current or historical use of the subject property.

If available, copies of historical sources are provided in the report appendices.

3.2 AERIAL PHOTOGRAPH REVIEW

AEI Consultants reviewed aerial photographs of the subject property and surrounding area. Aerial photographs were reviewed for the following years:

Date(s)	Scale	Subject Property Description	Surrounding Area Descriptions
1937 1948 1957 1965 1970	1" = 555' 1" = 655' 1" = 555 1" = 333' 1" = 555'	Appears as unimproved pasture land.	North: Unimproved pasture land South: Unimproved pasture land East: Unimproved pasture land West: Unimproved pasture land
1982	1" = 690'	Appears as undeveloped land with various dirt paths/roads on the lot.	North: Undeveloped land South: Undeveloped land East: Undeveloped land West: Undeveloped land
1993 2006	1" = 500' 1" = 500'	No significant changes noted from the 1982 aerial photograph. The subject property generally appears as it does today.	North: Napa Junction Road, followed by undeveloped land South: Undeveloped land and a water tower East: Undeveloped land West: A water tower and undeveloped land Northwest: A square-shaped commercial building (as it appears today)

3.3 SANBORN FIRE INSURANCE MAPS

Sanborn Fire Insurance maps were developed in the late 1800s and early 1900s for use as an assessment tool for fire insurance rates in urbanized areas. A search was made of Environmental Data Resources, Inc. (EDR) collection of Sanborn Fire Insurance maps.

Sanborn map coverage was not available for the subject property.

3.4 CITY DIRECTORIES

Based on the historical undeveloped nature of the subject property and lack of a physical address, a search of historic city directories was not conducted for the subject property.

3.5 HISTORICAL TOPOGRAPHIC MAPS

In accordance with our approved scope of services, historical topographic maps were not reviewed as a part of this assessment.

3.6 CHAIN OF TITLE

In accordance with our approved scope of services, a Chain of Title search was not performed as part of this assessment.

4.0 REGULATORY AGENCY RECORDS REVIEW

4.1 REGULATORY AGENCIES

Local and state agencies, such as environmental health departments, fire prevention bureaus, and building and planning departments are contacted to identify any current or previous reports of hazardous materials use, storage, and/or unauthorized releases that may have impacted the subject property. In addition, information pertaining to Activity and Use Limitations (AULs), defined as legal or physical restrictions, or limitations on the use of, or access to, a site or facility, is requested.

4.1.1 HEALTH DEPARTMENT

On November 25, 2011, AEI contacted the Napa County Environmental Health Department (NCEHD) for information on the subject property and nearby sites of concern. Files at this agency may contain information regarding hazardous materials storage, as well as information regarding unauthorized releases of petroleum hydrocarbons or other contaminants that may affect the soil or groundwater in the area.

No information indicating current or prior use or storage of hazardous materials, or the existence of AULs was on file for the subject property with the NCEHD.

4.1.2 FIRE DEPARTMENT

On November 25, 2011, AEI contacted the American Canyon Fire District (ACFD) for information on the subject property to identify any evidence of previous or current hazardous material usage.

No information indicating current or prior use or storage of hazardous materials, or the existence of AULs was on file for the subject property with the ACFD.

4.1.3 BUILDING DEPARTMENT

On December 2, 2011, AEI contacted the American Canyon Building Department (ACBD) for information on the subject property in order to identify historical tenants and property use.

According to the ACBD, the subject property site has never been developed.

No information indicating current or prior use or storage of hazardous materials, or the existence of AULs was on file for the subject property with the ACBD.

4.1.4 PLANNING DEPARTMENT

On December 2, 2011, AEI contacted the American Canyon Planning Department (ACPD) for information on the subject property in order to identify AULs associated with the subject property.

No information indicating the existence of AULs was on file for the subject property with the ACPD.

4.1.5 COUNTY ASSESSOR OFFICE

On December 2, 2011, AEI contacted the Napa County assessor's office for information on the subject property in order to determine the earliest recorded date of development and use.

According to the Napa County assessor's office, the subject property has never been developed.

4.1.6 DEPARTMENT OF OIL AND GAS

Department of Oil and Gas (DOG) maps concerning the subject property and nearby properties were reviewed. DOG maps contain information regarding oil and gas development.

According to the DOG map, there are no oil or gas wells within 500 feet of the subject property. No environmental concerns were noted during the DOG map review.

4.1.7 OTHER AGENCIES SEARCHED

On December 2, 2011, AEI accessed the State Water Resources Control Board (SWRCB) GeoTracker Database for information on the subject property and nearby sites of concern. Files on this agency database may contain information regarding hazardous materials storage, as well as information regarding unauthorized releases of petroleum hydrocarbons or other contaminants that may affect the soil or groundwater in the area.

No information indicating current or prior use or storage of hazardous materials, or the existence of AULs was on file for the subject property on the SWRCB GeoTracker Database.

5.0 REGULATORY DATABASE RECORDS REVIEW

AEI contracted EDR to conduct a search of federal, state, tribal, and local databases containing known and suspected sites of environmental contamination. The number of listed sites identified within the approximate minimum search distance (AMSD) from the Federal and State environmental records database listings specified in ASTM Standard E 1527-05 are summarized in the following table. A copy of the regulatory database report is included in Appendix B of this report.

The subject property was not identified in the databases reviewed.

In determining if a site is a potential environmental concern to the subject property in the records summary table below, AEI has applied the following criteria to classify the site(s) as low concern: 1) the site(s) only hold an operating permit (which does not imply a release), 2) the site(s) have been granted "No Further Action" by the appropriate regulatory agency, and/or 3) based upon AEI's review, the distance and/or topographic position relative to the subject property reduce the level of risk associated with the site(s).

5.1 RECORDS SUMMARY

Database	Search Distance (Miles)	Subject Property Listed	Total Number of Listings	Potential Environmental Concern to the Subject Property (Yes/No)
NPL	1	No	0	
DELISTED NPL	0.5	No	0	
CERCLIS	0.5	No	0	
CERCLIS NFRAP	0.5	No	0	
RCRA CORRACTS	1	No	0	
RCRA-TSD	0.5	No	0	
RCRA LG-GEN, SM-GEN, CESQGs, VGN, NLR	TP/ADJ		0	
US ENG CONTROLS	TP	No	0	
US INST CONTROLS	TP	No	0	
ERNS	TP	No	0	
STATE/TRIBAL HWS	1	No	0	
STATE/TRIBAL SWLF	0.5	No	1	No; the site is located over ¼-mile from the subject property.
STATE/TRIBAL REGISTERED STORAGE TANKS	TP/ADJ	No	0	

Database	Search Distance (Miles)	Subject Property Listed	Total Number of Listings	Potential Environmental Concern to the Subject Property (Yes/No)
STATE/TRIBAL LUST	0.5	No	5	No; all five sites have been issued a Case Closed status by the local oversight program (LOP).
STATE/TRIBAL ENG-INST CONTROLS	TP	No	0	
STATE/TRIBAL VCP	0.5	No	0	
STATE/TRIBAL BROWNFIELD	0.5	No	0	
ORPHAN	N/A	No	37	None of the identified orphan sites are located in the immediate vicinity (500-feet) of the subject property, and therefore, these sites are not expected to represent a significant environmental concern.
NON-ASTM DATABASES	TP/ADJ	No	0	

6.0 INTERVIEWS AND USER PROVIDED INFORMATION

6.1 INTERVIEWS

Pursuant to ASTM E1527-05, the following interviews were performed during this investigation in order to obtain information indicating RECs in connection with the subject property.

6.1.1 INTERVIEW WITH OWNER

The subject property owner representative, Mr. Derek Pampe, was contacted by email on November 22, 2011 and December 2, 2011. Mr. Pampe has been associated with the subject property for five months. Mr. Pampe was asked if he was aware of any of the following:

Any pending, threatened, or past litigation relevant to hazardous substances or petroleum products in, on, or from the property.		Yes	X	No
Any pending, threatened or past administrative proceedings relevant to hazardous substances or petroleum products in, on, or from the property.		Yes	X	No
Any notices from any governmental entity regarding any possible violation of environmental laws or possible liability relating to hazardous substances or petroleum products.		Yes	X	No
Any incidents of flooding, leaks, or other water intrusion, and/or complaints related to indoor air quality.		Yes	X	No

6.1.2 INTERVIEW WITH KEY SITE MANAGER

AEI was not accompanied during the site reconnaissance; therefore, an interview with a key site manager was not conducted.

6.1.3 PAST OWNERS, OPERATORS AND OCCUPANTS

Interviews with past owners and occupants regarding historical onsite operations were not reasonably ascertainable. However, based on information obtained from other sources including aerial photographs, building records, assessor records, and an interview, it is likely that the information provided by past owners and operators would have been duplicative.

6.1.4 INTERVIEW WITH OTHERS

Information obtained during interviews with local government officials is incorporated into the appropriate segments of this section.

6.2 USER PROVIDED INFORMATION

User provided information is intended to help identify the possibility of RECs in connection with the subject property. According to ASTM E1527-05 and EPA's AAI Rule, certain items should be researched by the prospective landowner or grantee, and the results of such inquiries may be provided to the environmental professional. The responsibility for qualifying for Landowner Liability Protections (LLPs) by conducting the inquiries ultimately rests with the User, and providing the information to the environmental professional would be prudent if such information is available.

6.2.1 ENVIRONMENTAL LIENS

AEI was not informed by the User, DeNova Homes, of any environmental cleanup liens encumbering the subject property that are filed or recorded under federal, tribal, state or local law.

6.2.2 Activity and Land Use Limitations

AEI was not informed by the User of any AULs, such as engineering controls, land use restrictions or institutional controls that are in place at the subject property and/or have been filed or recorded in a registry under federal, tribal, state or local law.

6.2.3 Specialized Knowledge

AEI was not informed by the User of any specialized knowledge or experience related to the subject property or nearby properties.

6.2.4 Valuation Reduction for Environmental Issues

The User did not indicate to AEI any information to suggest that the valuation of the subject property is significantly less than the valuation for comparable properties due to environmental factors.

6.2.5 Commonly Known or Reasonably Ascertainable Information

The User did not inform AEI of any commonly known or reasonably ascertainable information about the subject property which aided AEI in identifying conditions indicative of a release or threatened release.

6.2.6 Knowledge of Presence or Likely Presence of Contamination

The User did not inform AEI of any obvious indicators that pointed to the presence or likely presence of contamination at the subject property.

6.3 Previous Reports and Other Provided Documentation

No prior reports or relevant documentation in association with the subject property were made available to AEI during the course of this assessment.

7.0 SITE INSPECTION AND RECONNAISSANCE

On December 2, 2011, a site reconnaissance of the subject property and adjacent properties was conducted by Michael Audibert, REA of AEI in order to obtain information indicating the likelihood of RECs at the subject property and adjacent properties as specified in ASTM Standard Practice E1527-05 §8.4.2, 8.4.3 and 8.4.4. During the onsite reconnaissance, AEI was was not accompanied. During the onsite reconnaissance, AEI inspected the entire subject property site (the site is unimproved).

7.1 SUBJECT PROPERTY RECONNAISSANCE FINDINGS

Yes	No	Observation
	X	Hazardous Substances and/or Petroleum Products in Connection with Property Use
	X	Aboveground & Underground Hazardous Substance or Petroleum Product Storage Tanks (ASTs / USTs)
	X	Hazardous Substance and Petroleum Product Containers and Unidentified Containers not in Connection with Property Use
	X	Unidentified Substance Containers
	X	Electrical or Mechanical Equipment Likely to Contain Fluids
	X	Interior Stains or Corrosion
	X	Strong, Pungent or Noxious Odors
	X	Pools of Liquid
	X	Drains, Sumps and Clarifiers
	X	Pits, Ponds and Lagoons
	X	Stained Soil or Pavement
	X	Stressed Vegetation
	X	Solid Waste Disposal or Evidence of Fill Materials
	X	Waste Water Discharges
	X	Wells
	X	Septic Systems
X		Other

The subject property currently consists of unimproved vacant land.

The above identified observed item is further discussed below.

OTHER

AEI observed scattered debris in various locations on the subject property lot. The debris consisted of various construction materials, including metal and plastic piping, concrete, and wood; as well as some scattered household trash items, including glass, plastic containers, paper, and other miscellaneous trash. None of these materials appeared to be hazardous. Based on their non-hazardous nature, the presence of these materials is not expected to represent a significant environmental concern.

7.2 NON-ASTM SERVICES

7.2.1 ASBESTOS-CONTAINING BUILDING MATERIALS

The subject property is currently vacant land and lacks structures. Consequently, no building components containing suspect asbestos containing materials were identified during the site inspection.

7.2.2 LEAD-BASED PAINT

The subject property is currently vacant land and lacks structures. Consequently, no building components containing suspect lead-based paint were identified during the site inspection.

7.2.3 RADON

Radon is a naturally-occurring, odorless, invisible gas. Natural radon levels vary and are closely related to geologic formations. Radon may enter buildings through basement sumps or other openings.

Radon sampling was not requested as part of this investigation. According to the Department of Health Services (DHS) Radon Database for California for 2002, for one (1) total radon test conducted for the subject property zip code (94503), the one (1) test indicated an average indoor screening level below the action level of 4.0 pCi/L set forth by the EPA. Based on these results, radon does not appear to be a concern. However, testing would be required to determine site-specific radon levels.

7.2.4 DRINKING WATER SOURCES AND LEAD IN DRINKING WATER

The City of American Canyon supplies potable water to the subject property. The most recent water quality report states that lead levels in the areas water supply were well within standards established by the USEPA.

7.2.5 MOLD / INDOOR AIR QUALITY ISSUES

The subject property is currently vacant land or lacks structures. Consequently, mold was not addressed as part of this assessment.

7.3 ADJACENT PROPERTY RECONNAISSANCE FINDINGS

Yes	No	Observation
	X	Hazardous Substances and/or Petroleum Products in Connection with Property Use
	X	Aboveground & Underground Hazardous Substance or Petroleum Product Storage Tanks (ASTs / USTs)
	X	Hazardous Substance and Petroleum Product Containers and Unidentified Containers not in Connection with Property Use
	X	Unidentified Substance Containers
X		Electrical or Mechanical Equipment Likely to Contain Fluids
	X	Strong, Pungent or Noxious Odors
	X	Pools of Liquid
	X	Drains, Sumps and Clarifiers
	X	Pits, Ponds and Lagoons
	X	Stained Soil or Pavement
	X	Stressed Vegetation
	X	Solid Waste Disposal or Evidence of Fill Materials
	X	Waste Water Discharges
	X	Wells
	X	Septic Systems
	X	Other

The above identified observed item is further discussed below.

ELECTRICAL OR MECHANICAL EQUIPMENT LIKELY TO CONTAIN FLUIDS

Toxic polychlorinated biphenyls (PCBs) were commonly used historically in electrical equipment such as transformers, fluorescent lamp ballasts, and capacitors. According to United States EPA regulation 40 CFR, Part 761, there are three categories for classifying such equipment: <50 ppm of PCBs is considered "Non-PCB"; between 50 and 500 ppm is considered "PCB-Contaminated"; and >500 ppm is considered "PCB-Containing". Pursuant to 15 U.S.C. 2605(e)(2)(A), the manufacture, process, or distribution in commerce or use of any polychlorinated biphenyl in any manner other than in a totally enclosed manner was prohibited after January 1, 1977.

Transformers

The management of potential PCB-containing transformers is the responsibility of the local utility or the transformer owner. Actual material samples need to be collected to determine if transformers are PCB-containing.

One pad-mounted transformer was observed on the adjacent site to the northwest during the site inspection. No spills, staining or leaks were observed on or around the transformer. Based on the good condition of the equipment, the transformer is not expected to represent a significant environmental concern.

8.0 SIGNATURE OF ENVIRONMENTAL PROFESSIONALS

By signing this report, the senior author declares that, to the best of his or her professional knowledge and belief, he or she meets the definition of *Environmental Professional* as defined in §312.10 of 40 CFR Part 312.

The senior author has the specific qualifications based on education, training, and experience to assess a property of the nature, history and setting of the subject property. The senior author has developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-05) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

EXECUTIVE SUMMARY

STANDARD ENVIRONMENTAL RECORDS

State and tribal landfill and/or solid waste disposal site lists

SWF/LF: The Solid Waste Facilities/Landfill Sites records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. The data come from the Integrated Waste Management Board's Solid Waste Information System (SWIS) database.

A review of the SWF/LF list, as provided by EDR, and dated 08/22/2011 has revealed that there is 1 SWF/LF site within approximately 0.5 miles of the target property.

Lower Elevation	Address	Direction / Distance	Map ID	Page
AMERICAN CANYON SANITARY LANDF	*WESTERN TERMINUS OF EUC*	*WSW 1/4 - 1/2 (0.406 mi.)*	*6*	*14*

State and tribal leaking storage tank lists

LUST: The Leaking Underground Storage Tank Incident Reports contain an inventory of reported leaking underground storage tank incidents. The data come from the State Water Resources Control Board Leaking Underground Storage Tank Information System.

A review of the LUST list, as provided by EDR, and dated 09/19/2011 has revealed that there are 5 LUST sites within approximately 0.5 miles of the target property.

State and tribal registered storage tank lists

UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the State Water Resources Control Board's Hazardous Substance Storage Container Database.

A review of the UST list, as provided by EDR, and dated 09/19/2011 has revealed that there is 1 UST site within approximately 0.25 miles of the target property.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 06/30/2011
Date Data Arrived at EDR: 07/12/2011
Date Made Active in Reports: 09/29/2011

Data Release Frequency: Quarterly

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Federal Delisted NPL site list

DELISTED NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Federal CERCLIS list

CERCLIS: Comprehensive Environmental Response, Compensation, and Liability Information System

CERCLIS contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

Federal CERCLIS NFRAP site List

CERCLIS-NFRAP: CERCLIS No Further Remedial Action Planned

Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Date of Government Version: 06/15/2011

Federal RCRA generators list

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

Date of Government Version: 06/15/2011
Date Data Arrived at EDR: 07/07/2011

RCRA-SQG: RCRA - Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

Next Scheduled EDR Contact: 02/20/2012
Data Release Frequency: Quarterly

State- and tribal - equivalent CERCLIS

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

Date of Government Version: 09/13/2011

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites
Included in the listing are brownfields properties addresses by Cooperative Agreement Recipients and brownfields properties addressed by Targeted Brownfields Assessments. Targeted Brownfields Assessments-EPA's Targeted Brownfields Assessments (TBA) program is designed to help states, tribes, and municipalities--especially those without EPA Brownfields Assessment Demonstration Pilots--minimize the uncertainties of contamination often associated with brownfields. Under the TBA program, EPA provides funding and/or technical assistance for environmental assessments at brownfields sites throughout the country. Targeted Brownfields Assessments supplement and work with other efforts under EPA's Brownfields Initiative to promote cleanup and redevelopment of brownfields. Cooperative Agreement Recipients-States, political subdivisions, territories, and Indian tribes become Brownfields Cleanup Revolving Loan Fund (BCRLF) cooperative agreement recipients when they enter into BCRLF cooperative agreements with the U.S. EPA. EPA selects BCRLF cooperative agreement recipients based on a proposal and application process. BCRLF cooperative agreement recipients must use EPA funds provided through BCRLF cooperative agreement for specified brownfields-related cleanup activities.

Local Lists of Hazardous waste / Contaminated Sites

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

Date of Government Version: 06/08/2011

Local Land Records

LIENS 2: CERCLA Lien Information
A Federal CERCLA ('Superfund') lien can exist by operation of law at any site or property at which EPA has spent Superfund monies. These monies are spent to investigate and address releases and threatened releases of contamination. CERCLIS provides information as to the identity of these sites and properties.

Date of Government Version: 09/09/2011

DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

Other Ascertainable Records

RCRA-NonGen: RCRA - Non Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Data Release Frequency: Quarterly

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method.

EDR PROPRIETARY RECORDS

EDR Proprietary Records

Manufactured Gas Plants: EDR Proprietary Manufactured Gas Plants
The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data
Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Date of Government Version: 12/31/2007

Oil/Gas Pipelines: This data was obtained by EDR from the USGS in 1994. It is referred to by USGS as GeoData Digital Line Graphs from 1:100,000-Scale Maps. It was extracted from the transportation category including some oil, but primarily gas pipelines.

Electric Power Transmission Line Data
Source: Rextag Strategies Corp.
Telephone: (281) 769-2247
U.S. Electric Transmission and Power Plants Systems Digital GIS Data

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:
Source: American Hospital Association, Inc.
Telephone: 312-280-5991
The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing
Source: Centers for Medicare & Medicaid Services
Telephone: 410-786-3000
A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes
Source: National Institutes of Health
Telephone: 301-594-6248
Information on Medicare and Medicaid certified nursing homes in the United States.

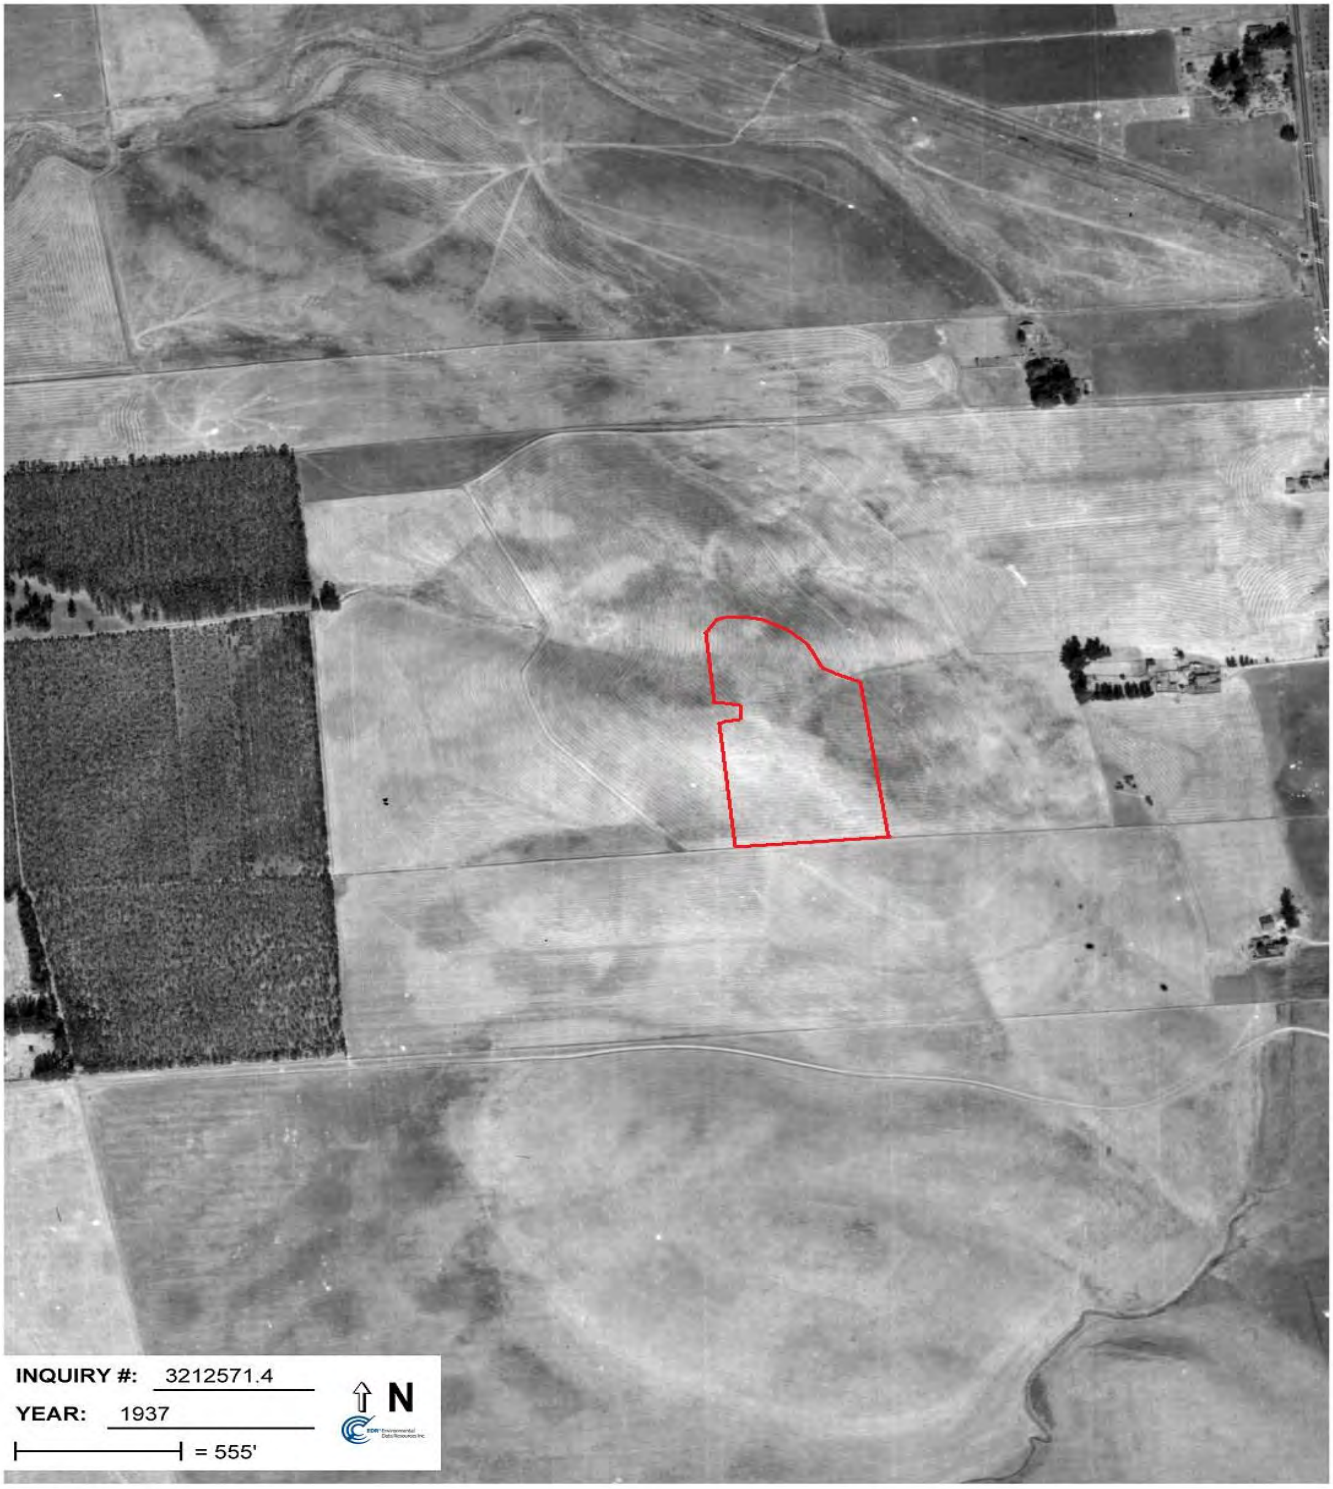
Public Schools
Source: National Center for Education Statistics
Telephone: 202-502-7300
The National Center for Education Statistics' primary database on elementary and secondary public education in the United States. It is a comprehensive, annual, national statistical database of all public elementary and secondary schools and school districts, which contains data that are comparable across all states.

Private Schools
Source: National Center for Education Statistics
Telephone: 202-502-7300
The National Center for Education Statistics' primary database on private school locations in the United States.

Daycare Centers: Licensed Facilities
Source: Department of Social Services
Telephone: 916-657-4041

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 2003 & 2011 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002 and 2005 from the U.S. Fish and Wildlife Service.



Scanned Digital USGS 7.5' Topographic Map (DRG)
Source: United States Geologic Survey
A digital raster graphic (DRG) is a scanned image of a U.S. Geological Survey topographic map. The map images are made by scanning published paper maps on high-resolution scanners. The raster image is georeferenced and fit to the Universal Transverse Mercator (UTM) projection.

UNMAPPED PROPERTY

This report certifies that the complete holdings of the Sanborn Library, LLC collection have been searched based on client supplied target property information, and fire insurance maps covering the target property were not found.

The Sanborn Library includes more than 1.2 million Sanborn fire insurance maps, which track historical property usage in approximately 12,000 American cities and towns. Collections searched:

- ✓ Library of Congress
- ✓ University Publications of America
- ✓ EDR Private Collection

The Sanborn Library LLC Since 1866™

Limited Permission To Make Copies

AEI Consultants (the client) is permitted to make up to THREE photocopies of this Sanborn Map transmittal and each fire insurance map accompanying this report solely for the limited use of its customer. No one other than the client is authorized to make copies. Upon request made directly to an EDR Account Executive, the client may be permitted to make a limited number of additional photocopies. This permission is conditioned upon compliance by the client, its customer and their agents with EDR's copyright policy; a copy of which is available upon request.

APPENDIX E

ASTM USER QUESTIONNAIRE

AEI Consultants
Environmental & Engineering Services

ASTM E 1527-05 User Questionnaire

In order to qualify for the protection offered under the EPA All Appropriate Inquiry (AAI) Standard, the **User** (entities seeking to use the ASTM E1527-05 Practice to complete an environmental site assessment of the property; i.e. Lenders and/or Borrowers) must provide the following information (if available) to the environmental professional. Failure to provide this information could result in a determination that AAI is not complete. This information should be the collective knowledge of the entities relying on the Phase I. **Please note that you are not being asked to evaluate the property, but rather to provide your knowledge of information on the property.**

Site Name/Address: Napa Junction Road

Person Interviewed/Title: Derek Pampe - Director of Forward Planning Date: 12/2/11

If known, when was the property initially developed? undeveloped

If different, when were the current building(s) on the property constructed? n/a

1. Environmental cleanup liens that are filed or recorded against the site (40 CFR 312.25).

Are you aware of any environmental cleanup liens against the *property* that are filed or recorded under federal, tribal, state or local law? (**Note:** If unknown, a review of title records or an environmental lien search is recommended)

Yes ☐ No ☑ If you answer yes, please include an explanation in the space provided below:

2. Activity and land use limitations that are in place on the site or that have been filed or recorded in a registry (40 CFR 312.26).

Are you aware of any AULs, such as *engineering controls*, land use restrictions or *institutional controls* that are in place at the site and/or have been filed or recorded in a registry under federal, tribal, state or local law?

Engineering Controls are defined as physical modifications to a site or facility to reduce or eliminate the potential for exposure to hazardous substances or petroleum products in the soil or ground water on the property). *Institutional Controls* are defined as a legal or administrative restriction on the use of, or access to, a site or facility to 1) reduce or eliminate the potential for exposure to hazardous substances or petroleum products in the soil or ground water on the property, or 2) to prevent activities that could interfere with the effectiveness of a response action, in order to ensure maintenance of a condition of no significant risk to public health or the environment.

Yes ☐ No ☑ If you answer yes, please include an explanation in the space provided below:

3. Specialized knowledge or experience of the person seeking to qualify for the LLP (40 CFR 312.28).

As the *User* of this *ESA* do you have any specialized knowledge or experience related to the *property* or nearby properties? For example, are you involved in the same line of business as the current or former *occupants* of the *property* or an adjoining *property* so that you would have specialized knowledge of the chemicals and processes used by this type of business?

Yes☐ No☑ If you answer yes, please include an explanation in the space provided below:

4. Relationship of the purchase price to the fair market value of the *property* if it were not contaminated (40 CFR 312.29).

a) Does the purchase price being paid for this *property* reasonably reflect the fair market value of the *property*?

Yes☑ No☐ If you answer no, please include an explanation in the space provided below, including whether the lower purchase price is because contamination is known or believed to be present at the *property*?

5. Commonly known or *reasonably ascertainable* information about the *property* (40 CFR 312.30).

Are you aware of commonly known or *reasonably ascertainable* information about the *property* that would help the *environmental professional* to identify conditions indicative of releases or threatened releases? For example, as *User*:

a. Do you know the past uses of the *property*?

Yes☐ No☑

b. Do you know of specific chemicals that are present or once were present at the *property*?

Yes☐ No☑

c. Do you know of spills or other chemical releases that have taken place at the *property*?

Yes☐ No☑

d. Do you know of any environmental cleanups that have taken place at the *property*?

Yes☐ No☑

If you answered yes to any of the questions above, please include an explanation in the space provided below:

6. The degree of obviousness of the presence of likely presence of contamination at the *property*, and the ability to detect the contamination by appropriate investigation (40 CFR 312.31).

As the *User* of this *ESA*, based on your knowledge and experience related to the *property,* are there any *obvious* indicators that point to the presence or likely presence of contamination at the *property*?

Yes ☐ No ☑ If you answer yes, please include an explanation in the space provided below:

APPENDIX F

QUALIFICATIONS

Michael Audibert, REA – Senior Project Manager

MPA - Public Administration, San Francisco State University, 2000
BS - Business Administration, University of Vermont, 1992

California Registered Environmental Assessor (REA) #30090
Certified Mold Inspector (CMI) (Environmental Solutions Association), 2005

Mr. Audibert has over 8 years of experience in the environmental service industry. As Senior Project Manager, Mr. Audibert is responsible for conducting Phase I Environmental Site Assessments (ESAs), Real Estate Transaction Screens, radon screening projects, asbestos inspections, lead-based paint inspections, and reviewing/evaluating Phase II reports. His experience includes management of portfolio projects involving numerous properties throughout the US. Mr. Audibert also provides senior review expertise to ensure compliance and satisfaction of client requirements for Phase I Environmental Site Assessments and Transaction Screens.

His project management experience has included:

- Phase I Environmental Site Assessments and Real Estate Transaction Screens in conformance with ASTM.

- Various other environmental due diligence assessments, including regulatory compliance evaluations and industrial hygiene inspections, including asbestos, radon, lead-in-paint, lead-in-water, and mold surveys.

- The oversight of several Phase II soil and groundwater investigations for a variety of suspected contaminants for due diligence and liability purposes.

Mr. Audibert performed a Phase I Environmental Site Assessment (ESA) for a former steel and brass foundry to be converted into live/work loft apartments. The City of Oakland required that a comprehensive Phase I ESA be conducted for this property for foundry closure purposes. This project involved extensive agency and historical research, as well as determining what areas of the former foundry would be considered "at risk zones" for subsurface contamination.

Mr. Audibert has performed Phase I Environmental Site Assessments (ESAs) for existing gas stations developed on the site of former gas stations, as well as several historical and current leaking underground storage tank (LUST) sites, which involve an extensive historical use investigation and agency records review to determine the status of current and past underground storage tanks (USTs).

Steve G. Kovach - **Environmental Professional**

B.A. - Botany, Miami University (Ohio)
Minor – Conservation and the Environment

Mr. Kovach has spent over nine years working in a broad range of environmental and engineering disciplines including: engineering and environmental due diligence services, industrial air, water, and wastewater permit compliance and monitoring, hazardous waste management and disposal, electrical utilities projects, environmental engineering projects, and wetland ecology research. Mr. Kovach has worked closely with regulatory agencies including the US Environmental Protection Agency, Department of Toxic Substance Control, California Water Resources Control Board, California Integrated Waste Management Board, Bay Area Air Quality Management District, East Bay Municipal Utilities District, and the US Department of Energy.

Currently, Mr. Kovach is the Due Diligence Manager, Northern California Region for AEI, specializing in environmental due diligence services. As a senior member of AEI, Mr. Kovach provides staff supervision and senior review expertise to ensure ASTM compliance and satisfaction of client requirements for environmental assessments. AEI's review process provides for customization of reports to client needs, as well as strict conformance to ASTM standards. Additionally, Mr. Kovach provides senior project management to ensure ASTM compliance and satisfaction of client requirements for Phase I Environmental Site Assessments, Transaction Screens, and other related environmental assessments performed throughout California, Arizona, Nevada, Oregon, and Washington.

Interim Guidance for Sampling Agricultural Properties (Third Revision)

California Department of Toxic Substances Control
California Environmental Protection Agency

August 7, 2008

Preface

In June 2000, DTSC issued "Interim Guidance for Sampling Agricultural Soils" to provide a uniform approach for evaluating former agricultural properties where pesticides have been applied, and DTSC issued the revised Version 2 in August 2002. Over the last seven years, DTSC has reviewed several hundred former agricultural properties across California. DTSC has been committed to revising and updating the approach to these properties as new information and issues emerge. This revised guidance, Version 3, incorporates and refines the sampling and risk assessment approach to former agricultural properties.

This guidance is intended to supplement the DTSC Preliminary Endangerment Assessment (PEA) Guidance Manual, CalEPA 1994 (Second Printing, June 1999). Data obtained from the investigations should be evaluated for potential health risks according the PEA Manual. This guidance is not intended to diminish the need to take focused, authoritative samples at site locations commonly associated with hazardous substances releases nor replace guidance provided by the PEA Guidance Manual. This guidance is not applicable to areas where pesticides were mixed, stored, disposed, or areas where pesticides may have accumulated, such as ponds and drainage ditches.

The scope of this document is limited to evaluating only agricultural properties during a PEA or other initial sampling investigation. This applies to proposed new and/or expanded school sites or other project where new land use could result in increased human exposure, especially residential use. Agricultural properties are lands where pesticides were uniformly applied for agricultural purposes consistent with normal application practices, and where other non-agriculturally related activities have been absent. Data obtained from the sampling analyses will be incorporated into the PEA Report, including performing a risk analysis in accordance with the guidance in the PEA Manual.

This guidance does not apply to disturbed land, such as, land that has been graded in preparation for construction, areas where imported soil has been brought in, or any other activity

that would redistribute or impact the soil, other than normal agricultural practices, such as disking and plowing.

This guidance is an on-going effort to streamline the characterization of agricultural properties. As additional knowledge and experience is obtained, DTSC may modify this guidance, as appropriate.

1.0 PURPOSE

This guidance was initially prepared for use in evaluating soil at proposed new school sites and existing schools undergoing expansion projects where the property was currently or previously used for agricultural activities. This guidance is now expanded to include any project with DTSC oversight and is intended to supplement the DTSC PEA, and provide a uniform and streamlined approach for evaluating agricultural properties. This guidance can be used to assist environmental assessors in designing initial investigations or developing PEA Workplans for properties with agricultural uses. The analytical data obtained are to be incorporated into a risk analysis and PEA Report performed in accordance with the guidance in the PEA Manual.

2.0 AGRICULTURAL PROPERTIES

2.1 Eligible Agricultural Properties

This guidance is specific to agricultural properties where pesticides and/or fertilizers were presumably applied uniformly, for agricultural purposes consistent with normal application practices. It is applicable to agricultural properties that are currently under cultivation with row, fiber or food crops, orchards, or pasture. It is also applicable to fallow and former agricultural properties that are no longer in production and have not been disturbed beyond normal disking and plowing practices. Each field of the same crop is assumed to have been watered, fertilized and treated with agricultural chemicals to the same degree across the field. Because of this homogeneous application, contaminant levels are expected to be similar at any given location within the field. This is the underlying premise of the guidance, and one that must be verified at the scoping stage of the PEA process.

2.2 Properties not covered by this Guidance

This guidance does not apply to former agricultural property that has been graded for construction or other purposes, that has received fill, or has had parking lots or structures placed on it following active use as an agricultural field. An urban residential area that was agricultural property in the past does not qualify for this guidance since the construction of the residences would have resulted in the disturbance and redistribution of potential agricultural contaminants in the soil. These areas may require biased, discrete sampling as opposed to the sampling for agricultural properties discussed in this document.

2.3 Grazing Land and Dry-Land Farmed Agricultural Properties

2.3.1 Grazing Land and Pasture

Agricultural sampling is not required for property used exclusively as grazing lands or pasture, where the topography is not conducive to pesticide application, or the application of pesticides is not economically feasible. Aerial photographs, topographic maps, and a site visit should be used to evaluate the topography of the proposed school site and past land use. Sites that are suitable for animal grazing will often have irregular topography and often a cover of native trees,

brush and range grasses. In keeping with the definition of agricultural soils, the site must not have contained any structures, or been used for any commercial or manufacturing activities.

2.3.2 Dry-Land Farmed Agricultural Soils

Dry-land farming is the practice of growing a crop without irrigation. Many dry-land farming fields are not treated with pesticides or infrequently treated, since the lack of water does not provide a desirable habitat for most agricultural pests. Properties that clearly qualify as dry-land farming do not need further investigation for pesticides or metals. For properties where there is uncertainty regarding dry-land farming, limited sampling may be conducted at a rate of four discrete samples per site, with one sample collected in each quadrant.

Some production crops such as winter wheat and barley can be grown under dry-land farming conditions. If the site has been planted in a dry-land farming production crop, every assurance should be made to determine that the crop was not irrigated and pesticides were not applied. This information may be obtained from interviews with farmers in the area, records that the County Agricultural Commissioner may have, and information the Commissioner may have about the irrigation practices for that crop in the specific county. If it cannot be clearly shown that irrigation did not take place and pesticides were not applied, limited sampling for organochlorine pesticides (OCPs) and arsenic may be necessary. At a minimum, this should include four samples per site, one sample per quadrant.

2.4 Agricultural Properties Prior to 1950

A review of 35 proposed school sites along with the historical background of OCP use in California indicates that sites with agricultural usage ending prior to 1950 do not need to be evaluated for OCPs. Organochlorine pesticides were first introduced into California agriculture in 1944 and reached peak usage in the 1960's. In 1974 the use of the DDT was banned for agricultural purposes, and the elimination of remaining OCPs in California agriculture quickly followed. Data from 35 proposed school sites where agricultural use ended prior to 1950 indicates that OCPs were not identified as chemicals of potential concern. In those cases where OCPs were identified, the source appears to have been the application to structures on the property, and not the agricultural crops grown prior to 1950. It is recommended that former agricultural properties that terminated operation prior to 1950 not be evaluated for agriculturally related OCPs. Arsenic should still be evaluated as a chemical of potential concern (COPC) since its use as arsenical pesticides and herbicides predates 1950.

2.5 Continued Agricultural Use After PEA Sampling

Chemicals associated with agricultural activities may result in potential risks to human health or the environment. If agricultural activities continue on the subject site after DTSC issues a no further action determination on the PEA, DTSC cannot ensure the no further action determination will remain in effect.

This may have impacts for school projects where the school districts elect to postpone school construction and allow continued agricultural use of the property. The most recent chemical use documentation (e.g., local Agricultural Commissioner Pesticide Application Permits) regarding the quantity and types of agricultural chemicals used on the property should be provided in the PEA report. If the type of agricultural chemicals applied to the site change after DTSC's no further action determination, DTSC recommends submittal of the chemical use documentation to DTSC at least three months prior to commencement of grading or other construction activities at the school site. DTSC will review the information, and if necessary, may recommend additional sample collection and analyses to assess potential impacts and ensure school site safety.

2.6 Other Areas of Concern on Agricultural Properties

In many cases, agricultural properties may include other areas of concern such as operations yards, storage areas, fuel tanks, residences, irrigation systems, and animal facilities. Examples of areas of concern may include:

- Structures such as homes, garages, equipment sheds, barns, and other out-buildings
- Pesticide storage, mixing/loading, and wash-down areas
- Ecological habitats, or rare, threatened, or endangered species
- Irrigation ditches/canals, containment berms, and low-lying swales or drainage areas
- Irrigation water containment ponds and collection/recirculation sumps
- Production wells and pumps
- Pole- or pad-mounted transformers
- Waste oil areas
- Animal pens, barns, and manure and disposal piles
- Burn piles
- Underground and above ground storage tanks
- Properties in dibromochloropropane (DBCP) study areas

Although agricultural-related, these targeted areas should be considered during the PEA scoping meeting and investigated using standard PEA protocols. The following DTSC guidance documents may be considered in these investigations:

- Interim Guidance: Evaluating Total Petroleum Hydrocarbons (TPH) (DTSC 2008) (The draft TPH guidance document is being revised at this time and will not be available to the public until DTSC finalizes the document.)
- Interim Guidance: Evaluation of School Sites with Potential Contamination from Lead Based Paint, Termiticides, and Electrical Transformers (DTSC, June 9, 2006)
- Arsenic Strategies for Determination of Arsenic Remediation: Development of Arsenic Cleanup Goals for Proposed and Existing School Sites (DTSC 2007)
- Advisory: Methane Assessment and Common Remedies at School Sites (DTSC, June 2005)
- Advisory: Active Soil Gas Investigations (DTSC, January 2003)
- Guidance for the Evaluation and Mitigation of Subsurface Vapor Intrusion into Indoor Air (DTSC 2004)
- Fact Sheet: Information Advisory, Clean Imported Fill Material (DTSC, October 2001)
- Guidance Manual: Preliminary Endangerment Assessment (DTSC, January 1999)
- Data Validation Memorandum , Summary of Level II Data Validation (DTSC, May 2006)
- Guidance: Ecological Risk Assessment at Hazardous Waste Sites and Permitted Facilities (DTSC, July 4, 1996)

3.0 SAMPLING STRATEGIES

3.1 Chemicals of Concern

3.1.1 Pesticides

When the property is under active agricultural production, the operator should be interviewed to determine the types and amounts of pesticides historically used on the property. The County Agricultural Commissioner should also be consulted to verify pesticide usage on the property. The Agricultural Commissioner is required to maintain this information for three years, but often will have extensive knowledge of the farming practices over many years. A local or specialized farm advisor such as the University of California Cooperative Extension Agent is another source of information for farming practices in the area. These consultations should occur during the scoping phase of the investigation. For those properties that have not been actively farmed in the past three years, obtaining accurate information is more difficult. Information from surrounding or neighboring agricultural operations on the types of crops grown in the area during the time of active farming can provide clues on what chemicals may have been applied.

Based on data from former agricultural properties over the past seven years, the only pesticide class requiring analyses at agricultural properties are OCPs, such as DDT, toxaphene, dieldrin, etc. OCPs are biopersistent and bioaccumulate in the environment. Most other classes of pesticides have relatively short half-lives and have not been found in the agricultural fields. While paraquat does have a longer half-life in soil, it has either not been detected or detected rarely at trace levels at sites which DTSC has had oversight, therefore routine analyses for paraquat is not required for field areas. Analyses for paraquat may be required in storage and mixing/loading areas.

3.1.2 Metals

Based on data from former agricultural properties, the only heavy metal required for routine analyses for these properties is arsenic. Arsenic in the form of arsenical herbicides has been applied to many agricultural properties and elevated levels of arsenic have been reported in the evaluation of these properties.

Other heavy metals may be required on a case by case basis depending on history of the property and the surrounding environment. Certain counties, such as Kern and Merced in the Central Valley, allow the application of municipal sludge on agricultural properties with or without a permit. Municipal sludge has been often shown to have elevated levels of heavy metals. These metals concentrations can impact vadose soils and often may migrate to groundwater. If there is a history of sludge application, or if sludge application is suspected on an agricultural property, Title 22 metals (former CAM 17 metals) should be evaluated.

Copper compounds were generally applied directly to select crops (e.g. vineyards) to prevent or reduce mildew. Vineyards and grain storage areas may have elevated copper due to the use of copper compounds as fungicides. To date, DTSC has not found elevated copper in any agricultural property. However, analyzing soil or sediment samples for copper may be appropriate at agricultural properties with the potential to impact aquatic ecological habitats (e.g. a creek or stream which runs through site).

3.1.3 Additional Chemicals of Concern

3.1.3.1 Mixing/Loading/Storage Areas

Focused sampling in mixing/loading/storage areas, drainage ditches, farm houses, or outbuilding areas may require analyses for a number of other constituents besides OCPs and arsenic, including other classes of pesticides/herbicides, paraquat, metals, and petroleum related compounds (see Section 2.6).

3.1.3.2 Smudge Pots

If smudge pots have been routinely used on agricultural properties, for example in citrus groves, additional sampling for PAHs and TPH may be required.

3.2 Sampling Frequency

Sampling frequency may vary depending on the size of the site and conditions found. When the site has been used for agricultural crop, the presumption is that agricultural chemicals were applied uniformly across the site in any given year and that the variation across the site will be relatively small. An analysis of several hundred former agricultural properties by DTSC has supported the general use of the assumption of uniform application.

The assumption of uniform application may not apply to areas cultivated in different crops, adjoining or adjacent properties with different owners or operators. The uniform application assumption does not apply for non-cultivated areas (e.g. drainage ditches, farm houses and other structures, mixing/loading areas, storage sheds, etc.)

In general, the sampling pattern should be sufficient to characterize the site. Recommended numbers of borings or sampling locations and composite analyses are provided in Table 1 for both OCPs and arsenic analyses for sites up to 50 acres. DTSC should be consulted for sites greater than 50 acres. For these sites, the sampling frequency may be reduced based on documentation that verifies consistent owner, operator, and use. If different parcels of the property have different owners, operators or crops, the number of samples shown in Table 1 should be applied for each different parcel.

Table 1: Recommended Number of Sampling Locations

Site Acres	Number of Borings	OCP Analyses (Composites)	Arsenic Analyses (Discrete only)
1	4	4 (Discrete analyses)	4

3.3 Composite Samples

Since this guidance assumes a relatively even distribution of chemicals across the agricultural field portion of a site, compositing of discrete samples allows for increased sampling coverage for a site, while not significantly increasing the number of analytical samples. Composite surface samples may be made up of a maximum of four discrete surface samples from adjacent sampling locations. Compositing may occur in the field or at the laboratory. In cases where two crops were grown on the site, only discrete samples from within the same crop area may be composited.

Specify the method of selecting the discrete samples to be composited and the compositing factor (e.g. 3 to 1: three discrete samples composited to one) in the workplan. Compositing requires that each discrete sample be the same in terms of volume or weight, and that the discrete sample be thoroughly homogenized prior to compositing. The detection level does not need to be reduced since the composite sampling area is assumed to be homogeneous in concentration.

If compositing is not chosen, analyses will be performed on all the discrete samples and the number of analyses will correspond to the number of borings.

For more information on composite samples, see the references provided in Section 6.0.

3.4 Discrete Sampling for Arsenic

A minimum of four discrete on-site surface samples must be analyzed for arsenic. When samples are composited for OCP analysis, one discrete sample from each composite must be analyzed for arsenic. When more than four composite samples are analyzed for OCPs, the total number of discrete samples analyzed for arsenic does not need to be greater than the number of total composite samples used for OCP analysis (see Table 1).

3.5 Sampling Depth

Based on the extensive data DTSC has reviewed for agricultural properties, only surface samples will be required for the screening assessment. Each location should be sampled to include one surface sample (0 to 6 inches). [Note: 0 inches means first encountered soil. Thick mats of vegetable material, roots, and other extraneous material should not be sampled. The locations can be staked and surveyed using a sub-meter global positioning system. This will facilitate collection of supplemental site investigation samples, such as subsurface or step out sampling, if necessary.

3.6 Sample Collection

Sampling both the furrows and beds of existing rows will detect the greatest variability in the residuals. Some methods of pesticide application will favor residuals in the beds while others favor the furrows. In fields where rows remain, roughly half of the samples should be gathered from the furrows and half from the beds in an alternating pattern. Orchards should have the sampling locations placed at the current drip line for the trees, under the canopy, between the tree rows, and between the trees within a row. For sites with slopes, swales, or other uneven topography, sampling from centers should be modified to include samples from those areas where surface water would be expected to flow and accumulate.

3.7 Field Duplicates

Field duplicates should be collected at a rate of 10 percent (or a minimum of one). For arsenic, a discrete co-located sample should be collected and analyzed for every 10 arsenic samples collected. For OCPs where composite samples will be prepared and analyzed, every 10th

composite sample should be prepared (independently) in duplicate and analyzed. See Section 4.1 for a description on preparation of composite samples.

3.8 Requirements for Collection of Background Metal Samples

Consult with the DTSC project manager regarding the need for collecting background arsenic samples. In general, with the exception of arsenic, background samples for metals will not be necessary if all metals are below their respective California Human Health Screening Levels (CHHSLs). If all the arsenic results for the site are at or below 12 mg/kg, then collection of background samples will not be required. For sites where either arsenic or other metals are above their respective screening values, either collection of a background data set or use of an appropriate background data set may be required.

3.8.1 Sampling for Background Metals

If samples are needed to determine background levels of arsenic and/or other heavy metals (if additional metals are required for the PEA), a minimum of four onsite locations should be sampled at non-impacted areas, or samples may be collected at a depth of 5 to 5.5 feet bgs. In order to use background samples from 5 to 5.5 feet bgs, a licensed professional must make the determination that the background soils are similar enough geologically to the surface soils as to be representative.

Other background data sets may be substituted for on site sampling on a case by case basis in consultation with DTSC.

4.0 LABORATORY ANALYSES

4.1 Preparation of Composite Samples

Each discrete sample should be homogenized and uniformly split by trained field staff prior to compositing. A portion of each discrete sample should be frozen and archived in case additional analysis is warranted based on the composite results. Compositing requires that each discrete sample be the same in terms of volume or weight, and that the discrete sample be thoroughly homogenized prior to compositing. Excess sample from the homogenized composite sample shall be archived by the lab and/or used as a duplicate, as appropriate, for that composite set. The samples may be discarded when the PEA process has been completed and approved by the DTSC.

4.2 Methods

The analytes of primary concern are OCPs, arsenic, and, in some cases, Title 22 metals. Depending on the site history, analysis of other types of pesticides may be required. OCPs should be analyzed using U.S. EPA 8081A or equivalent. Metals must be analyzed using the U.S. EPA 6000/7000 series. If the site history indicates other classes of persistent pesticides should be evaluated, DTSC should be consulted for the acceptable method of analysis and appropriate detection limits. Highly organic topsoil may interfere with proper extraction of pesticides.

Sample holding times should be consistent with U.S. EPA SW-846. Variances to holding times and affects on data results must be discussed in the data validation section of the report.

Please note, for comparison of chlordane concentrations against the CHHSL, chlordane must be quantified against a ***technical chlordane*** standard. For purposes of the PEA, DTSC will not

allow quantitation of the individual alpha and gamma isomers, with a total concentration determined by addition of those concentrations.

4.3. Detection Limits

The actual detection limits obtained will vary depending on the particular analyte. For OCPs, the analytes typically causing detection limit concerns in agricultural fields are aldrin, dieldrin, and toxaphene. The detection limits should be 0.005 mg/kg for aldrin, dieldrin, and 0.05 mg/kg for toxaphene. Table 2 lists the detection limits for several OCPs.

In samples with elevated DDT, the detected concentration may be above the range of calibration. This can result in the analytical laboratory diluting the sample for reanalysis, and then reporting only the final result. In these cases, the reported detection limits for aldrin, dieldrin, and toxaphene may exceed the detection limits needed for determining potential health effects. Ideally the laboratory should be asked to report if those three analytes were detected in the first analysis prior to dilution. Multiple analyses of the same samples may be required to obtain the data necessary for risk assessment purposes.

Table 2. Analytical Methods and Detection Limits for Selected OCPs

Pesticide	Methods[2]	CAS No.[3]	DL[4] mg/kg
Aldrin	8081A	309-00-2	0.005
a-BHC	8081A	319-84-6	0.005
b-BHC	8081A	319-85-7	0.005
g-BHC (Lindane)	8081A	58-89-9	0.005
d-BHC	8081A	319-86-8	0.005
Total Chlordane[1]	8081A	57-74-9	0.05
DBCP[5]	8081A	96-12-8	0.01
DDD	8081A	72-54-8	0.05
DDE	8081A	72-55-9	0.05
DDT	8081A	50-29-3	0.05
Dieldrin	8081A	60-57-1	0.005
Endosulfan I	8081A	959-98-8	0.005
Endosulfan II	8081A	33213-65-9	0.005
Endosulfan sulfate	8081A	1031-07-8	0.005
Endrin	8081A	72-20-8	0.05
Endrin aldehyde	8081A	7421-93-4	0.05
Endrin ketone	8081A	53494-70-5	0.05
Heptachlor	8081A	76-44-8	0.05
Heptachlor epoxide	8081A	1024-57-3	0.005
Hexachlorobenzene (HCB)	8081A	118-74-1	0.3
Hexachlorocyclopentadiene	8081A	77-47-4	0.5
Methoxychlor	8081A	72-43-5	0.005
Toxaphene	8081A	8001-35-2	0.05

Notes:

1 = Report total Chlordane (based on a Technical Chlordane standard)
2 = Although other methods may be used to quantify OPCs, DTSC recommends the use of 8081A as the primary method of quantitation
3 = Chemical Abstract Service registry number
4 = Detection Limit recommended for risk assessment purposes
5 = If sampling for this compound is indicated, inclusion in the method must be requested in the workplan and/or QAPP

4.4 Pesticide Analyses

Surface samples, discrete or composite, must be analyzed for OCPs. Analysis for other classes of persistent pesticides may be required as indicated by the agricultural history of the site. If the composite sample result exceeds the health risk screening criteria (see Section 5.3), analyze each discrete sample that made up the composite sample.

4.5 Sub-surface sample analysis

In consultation with DTSC, analyses of sub-surface samples may be required if surface samples results exceed specified screening levels. This sampling may be a part of the PEA or included in a Supplemental Site Investigation. If subsurface samples were collected during the PEA sampling event, those samples may be taken off "hold" and analyzed by the laboratory. If subsurface samples were not collected during the PEA, a Supplemental Site Investigation Workplan or Technical Memorandum should be prepared identifying appropriate step-out (vertical and horizontal) sampling locations.

4.6 Quality Control

Quality control (QC) procedures specified in SW-846 must be followed. A matrix spike/matrix spike duplicate on one soil sample per batch of 20 samples must be performed to demonstrate that the targeted pesticide(s) can be recovered from the soil investigated. The laboratory data package must include a summary of the quality control sample results: blanks, matrix spike/ matrix spike duplicate, surrogate recoveries, laboratory control samples, etc., as specified by the method. The laboratory should provide a signed narrative stating whether the QC was met and listing any discrepancies. The consultant should perform a supplementary evaluation of the data, also referred to as data validation, and present the results of that evaluation in the PEA report. For an example of what to included in the data validation section, see the example data validation memorandum at the DTSC website:
http://www.dtsc.ca.gov/Schools/upload/Data_Validation.pdf

5.0 REPORTING

5.1 Format

The results of the sampling effort are to be reported in a PEA report as described in the DTSC PEA Guidance Manual.

5.1.1 Summary Tables

Include data tables in the PEA report to summarize the results of the investigation. Summary tables should include the analytes of interest, the reported concentrations or the reporting limit for non-detect results, and indicate whether a reported concentration exceeds its respective CHHSL screening level (if a CHHSL comparison is being conducted). In addition, for samples analyzed at multiple dilutions for purposes of reporting concentrations within calibration ranges (as described in Section 4.3), summary tables should either present the results for all of the dilution analyses indicating the appropriate result for each analyte, or a combined analysis indicating which results are being reported after a dilution. Sample results should also be flagged with appropriate qualifiers, where necessary, after data validation.

5.2 Evaluating Metals (Inorganic Elements) Data

Using a robust statistical procedure to determine if on-site metal concentrations are indicative of background conditions or the result of site-related activities can be problematic because of the limited number of background samples collected at any one site. Local site background may be used if the data is approved for use by the DTSC project manager and toxicologist. If DTSC

background levels are not available, then a defensible procedure for comparing on-site with background metals should be used. The DTSC project manager and DTSC toxicologist assigned to the project should be consulted on the most appropriate method of comparison.

5.2.1 Arsenic Evaluations

The DTSC Schools Program evaluated data from a large number of school sites across California. The data evaluation indicates that 12 mg/kg maybe a useful screening number for the Schools Program when evaluating arsenic as a COPC. If the proposed school property has been adequately characterized for arsenic and all the arsenic data are equal to or less than 12 mg/kg, then arsenic will be not be considered a COPC. This decision does not require collection and comparison to a background data set. If arsenic concentrations are greater than 12 mg/kg, then comparisons to background data will be required. In some cases additional sampling may also be required.

5.2.2 Strategy for Comparison of Background Metals

If background samples are necessary, follow the procedures provided in Section 3.8.
The following strategy may be used for comparing site data to background data:

1. Compare the highest site concentration with the highest background concentration. If the site concentration is equal to or less than the background, the metal may be eliminated as a COPC. If the onsite maximum is greater than the background maximum, go to 2).

2. Compare the site and background arithmetic mean concentrations. If the means are comparable, and if the highest site concentration is below the concentration associated with unacceptable risk or hazard, the metal may be eliminated as a COPC. If the site mean is greater than the maximum background, go to 3).

3. Two approaches may be used, depending on the size of the background data set.
   - If the background data set is of sufficient size, statistically evaluate the overlap of the background and onsite distributions to determine if they come from the same population. If they do, and if the highest site concentration is below the concentration associated with unacceptable risk or hazard, the metal may be eliminated as a COPC. If not, include the metal as a COPC in the risk evaluation.

   - If the background data set is limited (n=4), the onsite data can be evaluated statistically using probability plots to determine if one or more populations are present. If only one population is present, and if the highest site concentration is below the concentration associated with unacceptable risk or hazard, the metal may be eliminated as a COPC. If there are two or more populations present, then include the metal as a COPC.

4. Additional information on eliminating metals as COPCs can be found in "*Selecting Inorganic Constituents as Chemicals of Potential Concern at Risk Assessments at Hazardous Waste Sites and Permitted Facilities – Final Policy* (DTSC/HERD 1997),

5.3 Human Health Risk Assessment

All detected pesticides and any onsite metals above background should be evaluated as COPCs in a human health risk assessment as described in the DTSC PEA Guidance Manual or in comparison to CHHSLs. In the initial screening analysis, the highest

concentration of each detected pesticide and metal above background must be used as the exposure point concentration in the risk assessment.

Since agricultural properties are assumed to have uniform application of pesticides, DTSC has allowed compositing of samples for OCP analyses (Sections 3.3 and 4.1). The concentration from the composited sample can be used directly in the risk assessment without adjusting the toxicity screening numbers, such as the CHHSLs. The review of the former agricultural properties over the past seven years has supported the assumption of uniform application. This is in contrast to other DTSC guidance, such as the *Lead-Based Paint, Termiticide and PCB Guidance*, (DTSC, June, 2006), where adjustments to the CHHSLs are required for composite samples because applications were not necessarily uniform.

5.3.1 Application of PEA Risk Assessment Equations and CHHSLs

Chemicals of potential concern are evaluated either by comparison to the CHHSL, or by calculating the excess cancer risk and hazard index based on equations in the PEA Guidance.

Note: CHHSLs may not be used to "screen out" COPCs.

5.3.1.1 CHHSLs

CHHSLs are soil and/or soil gas concentrations for selected chemicals developed by Cal-EPA with a target threshold of a 1E-06 risk for carcinogens, and a hazard quotient of one for non-carcinogens. CHHSLs were developed using models and exposure assumptions similar to those used in the PEA Guidance Manual, with the exception of the concentrations for volatile organic compounds (VOCs), which were developed using the vapor intrusion model for addressing the inhalation of contaminated indoor air. CHHSLs may be used as a soil screening value at school sites if all of the chemicals detected at the site have a listed CHHSL, if it is agreed upon by all parties concerned, and if it is agreed that the screening document will be reviewed by a toxicologist from the Human and Ecological Risk Division. For school sites, only the residential-based CHHSLs may be used. The exposure pathways used in calculating the CHHSLs are incidental soil ingestion, dermal absorption, and inhalation of dusts in indoor air for non-volatile soil-bound chemicals, and the inhalation of indoor air pathway for VOCs. Direct exposures to VOCs are not included in the calculation of the CHHSLs and CHHSLs do not take into consideration the leaching of contaminants from soil to groundwater. CHHSLs are not appropriate if ecological receptors are the most sensitive species on the site. Lead should be evaluated using the most current DTSC LeadSpread Model or the school site lead screening level of 255 mg/kg.

5.3.1.2 Human Health Risk Assessment with CHHSLs

Independent of whether sites were analyzed with discrete samples or with composite samples, the evaluation is similar. Note that the CHHSL values are not adjusted for the number of discrete samples that comprise a composite. The rationale behind this comparison to un-adjusted CHHSL is that application of pesticides is assumed to be uniform throughout the field, and large variations in the pesticide concentrations are not expected. This rationale applies only to the agricultural portion, not to mixing areas, storage sites, structures, etc.

5.3.2 Procedure for Human Health Risk Assessment with CHHSL or PEA Guidance

- Determine that all of the chemicals detected at the site have the appropriate CHHSLs for soil and/or soil vapor. If they do not, then a PEA risk assessment must be conducted. A DTSC toxicologist will evaluate if the CHHSL screening is appropriate for the site

- The screening document, PEA or equivalent, will be reviewed by a toxicologist from the Human and Ecological Risk Division.

- The most recently published CHHSLs should be used. This may be found at: http://www.calepa.ca.gov/Brownfields/documents/2005/CHHSLsGuide.pdf.
- The exposure pathways at the site must match the exposure pathways used to develop the CHHSLs.
  Use the maximum concentration of each contaminant detected at the site and compare to unrestricted (residential) CHHSL or PEA risk calculations.
- Background metal concentrations can be used to screen metals as COPC. Construct a table listing the COPC (see Section 5.2.2 for discussion on background metals).
- The risk and hazard for each COPC should be calculated using the following equations:

$$\text{RISK} = \frac{[\text{maximum detected concentration}]}{\text{CHHSL}} \times 10^{-6}$$

$$\text{HQ} = \frac{[\text{maximum detected concentration}]}{\text{CHHSL}}$$

  - If there are multiple COPCs, calculate the cumulative risk and/or hazard. An Excel calculator is provided on the Cal/EPA website for CHHSLs: (http://www.calepa.ca.gov/Brownfields/documents/2005/Calculator.xls).
  - Complete a Risk Characterization Section where the total risk and hazard are presented and discussed along with the need for any further action.
  - If the maximum concentrations detected on site pose an unacceptable risk or hazard, a spatial analysis should be conducted to determine if the elevated levels represent a "hot spot", or are representative of concentrations across the site. In those cases where the elevated concentrations are determined to be one or more "hot spots", risk or concentration isopleths should be constructed to differentiate between those areas of the site in need of further action, and those where no further action is required. Any deviations from these analyses must be approved by the DTSC toxicologist assigned to the project.

Note: For evaluation of composite samples, the CHHSL values are not adjusted for the number of discrete samples that comprise a composite. The rationale behind this comparison to un-adjusted CHHSL is that application of pesticides is assumed to be uniform throughout the field, and large variations in the pesticide concentrations are not expected. Note that this rationale applies only to the agricultural portion, not to mixing areas, storage sites, structures, etc.

Director

August 20, 1998

Mr. Raymond Medeiros
289 Napa Junction Road
American Canyon, CA 94589

Subject: **Underground Storage Tank Case**
MEDEIROS PROPERTY
289 Napa Junction Road, American Canyon, California
Napa County Site LOP-670

Dear Mr. Medeiros:

This letter confirms the completion of site investigation and remedial action for the underground storage tanks formerly located at the above described location. Thank you for your cooperation throughout this investigation. Your willingness and promptness in responding to our inquiries concerning the former underground storage tank(s) are greatly appreciated.

Based on information in the above-referenced file and with the provision that the information provided to this agency was accurate and representative of site conditions, no further action related to the underground tank release is required.

This notice is issued pursuant to a regulation contained in Section 2721 (e) of Title 23 of the California Code of Regulations.

Please contact our office (707/253-4471) if you have any questions regarding this matter.

Sincerely,

Trent Cave,
Director, Napa County Department of Environmental Management

Project Summary

Parcel A

Gross Site Area: ± 11.3 Acres
Developable Area: ± 8.1 Acres
Total Units: 206 Homes
- (52) 1 Bdrm Units
- (108) 2 Bdrm Units
- (46) 3 Bdrm Units

Density: 18.2 DU per Gross Acre
25.4 DU per Developable Area

Parking:

Required: 438 Spaces
- (52) 1 Bedroom x 1.5 Spaces =78 Spaces
- (154) 2 or more Bedroom x 2 Spaces =308 Spaces
- (206) Guest x 0.25 Spaces =52 Spaces

Provided: 451 On-site & Off-site Spaces
428 On-site Spaces
- Garage: 157 Spaces
- Carports: 49 Spaces
- Head In: 222 Spaces

23 Off-site Spaces

Open Space
- Common Open Space: 53,571 SF
- Hillside Slope Area: 139,392 SF

Parcel B

Gross Site Area: ± 9.5 Acres
Developable Area: ± 3.6 Acres
Total Units: 85 Units
- (20) 1 Bdrm Units
- (45) 2 Bdrm Units
- (20) 3 Bdrm Units

Density: 8.9 DU per Gross Area
23.6 DU per Developable Area

Parking:

Required: 182 Spaces
- (20) 1 Bedroom x 1.5 Spaces =30 Spaces
- (45) 2 or more Bedroom x 2 Spaces =130 Spaces
- (85) Guest x 0.25 Spaces =22 Spaces

Provided: 183 Spaces
- Garage: 65 Spaces
- Carports: 20 Spaces
- Head In: 98 Spaces (9' x 18')

Open Space
- Common Open Space: 27,647 SF
- Hillside Slope Area: 257,004 SF

Notes:

1. Site plan is for conceptual purposes only.
2. Site plan must be reviewed by planning, building, and fire departments for code compliance.
3. Base information per civil engineer.
4. Civil engineer to verify all setbacks and grading information
5. Building Footprints might change due to the final design elevation style.
6. Open space area is subject to change due to the balcony design of the elevation.
7. Building setbacks are measured from property lines to building foundation lines.

APPENDIX I

QUALIFICATIONS

Michael Audibert, REPA – Associate Consultant

Education:

Master's, Public Administration, San Francisco State University, 2000
BS, Business Administration, University of Vermont, 1992

Training/Licenses/Registrations:

ASTM Phase I Environmental Site Assessments (ESAs)
Phase II ESAs (ASTM E 1527 & ASTM E 1903) Training, 2003 and 2006
AHERA Accredited Asbestos Inspector #30950, 2011
Lead-Related Construction Sampling Technician #23886, 2012
EDR Vapor Intrusion Assessment (VI) Training, 2008
Certified Mold Inspector (CMI) (Environmental Solutions Association), 2005

Summary of Professional Experience:

Mr. Audibert has been conducting Phase I and II Environmental Site Assessments (ESAs) of commercial, industrial, and multi-family residential properties throughout the United States since 2001. He has also managed regulatory compliance evaluation programs on a nationwide basis. With a background in business management and public administration, Mr. Audibert brought these skills into the environmental due diligence and health & safety arenas with strengths in project management, real estate transaction due diligence, and public sector agency correspondence. Mr. Audibert also has extensive experience managing various industrial hygiene projects, including asbestos surveys, mold assessments, radon testing, lead-based paint testing, lead-in drinking-water testing, and other indoor air quality assessments. In addition, Mr. Audibert has completed multiple Phase I ESA's for Fannie Mae, Freddie Mac, and HUD projects.

Select Project Experience for Mr. Audibert includes:

- Former Steel Foundry, Oakland, CA - Mr. Audibert performed a Phase I ESA for a former steel and brass foundry to be converted into live/work loft apartments. The City of Oakland required that a comprehensive Phase I ESA be conducted for this property for foundry closure purposes. This project involved extensive agency and historical research, as well as determining what areas of the former foundry would be considered "at risk zones" for subsurface contamination.
- Gasoline Service Station Portfolio, CA - Mr. Audibert has performed Phase I ESAs for existing gas stations developed on the sites of former gas stations, as well as several historical and current leaking underground storage tank (LUST) sites, which involve an extensive historical use investigation and agency records review to determine the status of current and past underground storage tanks (USTs).
- Former Union Hall, San Francisco, CA – Mr. Audibert performed a Phase I ESA for a former union hall to be developed into a high rise cosmopolitan apartment building. Because of the age of the buildings to be demolished, a comprehensive asbestos survey and ensuing operations and maintenance program for removal and disposal of asbestos was recommended and implemented.
- Former Printers, San Francisco, CA – Mr. Audibert performed a Phase I ESA for a former printing operation. The property had a long history of high-risk uses, including various manufacturing, automobile repair, and printing operations. A comprehensive agency records investigation and review was conducted.

Katie Hindt – Client Manager

B.A. – Environmental Studies, University of California, Santa Cruz

Registered Environmental Property Assessor (REPA) #528528

Ms. Hindt has over 10 years of experience in the environmental service industry and provides project management to ensure ASTM compliance and satisfaction of client requirements for Phase 1 Environmental Site Assessments, Environmental Transaction Screens, Environmental Transaction Analyses, Records Research with Risk Assessments, Regulatory Database Reviews and Historical Records Reviews. She has completed assessments on a variety of residential, agricultural, commercial and industrial sites. Ms. Hindt is familiar with all aspects of Due Diligence Property Assessments and the requirements of many reporting standards including, ASTM, AAI, HUD and client-specific formats.

Project experience for Ms. Hindt includes:

- Phase 1 Environmental Site Assessments (Phase 1 ESA)
- Environmental Transaction Screens (ETS)
- Environmental Transaction Analyses (ETA)
- Records Search with Risk Assessment (RSRA)
- Regulatory Database Reviews
- Historical Records Reviews
- Project Coordination and Setup

As a Client Manager, Ms. Hindt provides senior author services and client management. Additional responsibilities include managing projects and staff mentorship.

In addition, prior to joining the environmental service industry, Ms. Hindt spent four years studying a broad range of environmental disciplines including: National environmental law, policy and economics, restoration ecology, California environmental history and California freshwater policy/issues.

INTRODUCTION

The Oat Hill Apartments residential project is located along the south of Napa Junction Road and west of Highway 29 in the City of American Canyon, California. The project consists of the construction of 17 separate buildings on two combined parcels containing 291 residential units.

Figure 1 shows the project site plan. **Figure 2** shows an aerial photo of the project site.

ENVIRONMENTAL SETTING

BACKGROUND INFORMATION ON NOISE

Fundamentals of Acoustics

Acoustics is the science of sound. Sound may be thought of as mechanical energy of a vibrating object transmitted by pressure waves through a medium to human (or animal) ears. If the pressure variations occur frequently enough (at least 20 times per second), then they can be heard and are called sound. The number of pressure variations per second is called the frequency of sound, and is expressed as cycles per second or Hertz (Hz).

Noise is a subjective reaction to different types of sounds. Noise is typically defined as (airborne) sound that is loud, unpleasant, unexpected or undesired, and may therefore be classified as a more specific group of sounds. Perceptions of sound and noise are highly subjective from person to person.

Measuring sound directly in terms of pressure would require a very large and awkward range of numbers. To avoid this, the decibel scale was devised. The decibel scale uses the hearing threshold (20 micropascals), as a point of reference, defined as 0 dB. Other sound pressures are then compared to this reference pressure, and the logarithm is taken to keep the numbers in a practical range. The decibel scale allows a million-fold increase in pressure to be expressed as 120 dB, and changes in levels (dB) correspond closely to human perception of relative loudness.

The perceived loudness of sounds is dependent upon many factors, including sound pressure level and frequency content. However, within the usual range of environmental noise levels, perception of loudness is relatively predictable, and can be approximated by A-weighted sound levels. There is a strong correlation between A-weighted sound levels (expressed as dBA) and the way the human ear perceives sound. For this reason, the A-weighted sound level has become the standard tool of environmental noise assessment.

Project Summary

Parcel A

Gross Site Area: ± 11.3 Acres
Developable Area: ± 8.1 Acres
Total Units: 206 Homes
- (52) 1 Bdrm Units
- (108) 2 Bdrm Units
- (46) 3 Bdrm Units

Density: 18.2 DU per Gross Acre
25.4 DU per Developable Area

Parking:

Required: 438 Spaces
- (52) 1 Bedroom x 1.5 Spaces =78 Spaces
- (154) 2 or more Bedroom x 2 Spaces =308 Spaces
- (206) Guest x 0.25 Spaces =52 Spaces

Provided: 451 On-site & Off-site Spaces
428 On-site Spaces
- Garage: 157 Spaces
- Carports: 49 Spaces
- Head In: 222 Spaces

23 Off-site Spaces

Open Space
- Common Open Space: 53,571 SF
- Hillside Slope Area: 139,392 SF

Parcel B

Gross Site Area: ± 9.5 Acres
Developable Area: ± 3.6 Acres
Total Units: 85 Units
- (20) 1 Bdrm Units
- (45) 2 Bdrm Units
- (20) 3 Bdrm Units

Density: 8.9 DU per Gross Area
23.6 DU per Developable Area

Parking:

Required: 182 Spaces
- (20) 1 Bedroom x 1.5 Spaces =30 Spaces
- (45) 2 or more Bedroom x 2 Spaces =130 Spaces
- (85) Guest x 0.25 Spaces =22 Spaces

Provided: 183 Spaces
- Garage: 65 Spaces
- Carports: 20 Spaces

SAXELBY ACOUSTICS
Acoustics · Noise · Vibration

The decibel scale is logarithmic, not linear. In other words, two sound levels 10-dB apart differ in acoustic energy by a factor of 10. When the standard logarithmic decibel is A-weighted, an increase of 10-dBA is generally perceived as a doubling in loudness. For example, a 70-dBA sound is half as loud as an 80-dBA sound, and twice as loud as a 60 dBA sound.

Community noise is commonly described in terms of the ambient noise level, which is defined as the all-encompassing noise level associated with a given environment. A common statistical tool is the average, or equivalent, sound level (L_{eq}), which corresponds to a steady-state A weighted sound level containing the same total energy as a time varying signal over a given time period (usually one hour). The L_{eq} is the foundation of the composite noise descriptor, L_{dn}, and shows very good correlation with community response to noise.

The day/night average level (DNL or L_{dn}) is based upon the average noise level over a 24-hour day, with a +10-decibel weighing applied to noise occurring during nighttime (10:00 p.m. to 7:00 a.m.) hours. The nighttime penalty is based upon the assumption that people react to nighttime noise exposures as though they were twice as loud as daytime exposures. Because L_{dn} represents a 24-hour average, it tends to disguise short-term variations in the noise environment.

Table 1 lists several examples of the noise levels associated with common situations. **Appendix A** provides a summary of acoustical terms used in this report.

TABLE 1: TYPICAL NOISE LEVELS

Common Outdoor Activities	Noise Level (dBA)	Common Indoor Activities
	--110--	Rock Band
Jet Fly-over at 300 m (1,000 ft.)	--100--	
Gas Lawn Mower at 1 m (3 ft.)	--90--	
Diesel Truck at 15 m (50 ft.), at 80 km/hr. (50 mph)	--80--	Food Blender at 1 m (3 ft.) Garbage Disposal at 1 m (3 ft.)
Noisy Urban Area, Daytime Gas Lawn Mower, 30 m (100 ft.)	--70--	Vacuum Cleaner at 3 m (10 ft.)
Commercial Area Heavy Traffic at 90 m (300 ft.)	--60--	Normal Speech at 1 m (3 ft.)
Quiet Urban Daytime	--50--	Large Business Office Dishwasher in Next Room
Quiet Urban Nighttime	--40--	Theater, Large Conference Room (Background)
Quiet Suburban Nighttime	--30--	Library
Quiet Rural Nighttime	--20--	Bedroom at Night, Concert Hall (Background)
	--10--	Broadcast/Recording Studio
Lowest Threshold of Human Hearing	--0--	Lowest Threshold of Human Hearing

Effects of Noise on People

The effects of noise on people can be placed in three categories:

- Subjective effects of annoyance, nuisance, and dissatisfaction
- Interference with activities such as speech, sleep, and learning
- Physiological effects such as hearing loss or sudden startling

Environmental noise typically produces effects in the first two categories. Workers in industrial plants can experience noise in the last category. There is no completely satisfactory way to measure the subjective effects of noise or the corresponding reactions of annoyance and dissatisfaction. A wide variation in individual thresholds of annoyance exists and different tolerances to noise tend to develop based on an individual's past experiences with noise.

Thus, an important way of predicting a human reaction to a new noise environment is the way it compares to the existing environment to which one has adapted: the so-called ambient noise level. In general, the more a new noise exceeds the previously existing ambient noise level, the less acceptable the new noise will be judged by those hearing it.

With regard to increases in A-weighted noise level, the following relationships occur:

- Except in carefully controlled laboratory experiments, a change of 1-dBA cannot be perceived;
- Outside of the laboratory, a 3-dBA change is considered a just-perceivable difference;
- A change in level of at least 5-dBA is required before any noticeable change in human response would be expected; and
- A 10-dBA change is subjectively heard as approximately a doubling in loudness, and can cause an adverse response.

Stationary point sources of noise – including stationary mobile sources such as idling vehicles – attenuate (lessen) at a rate of approximately 6-dB per doubling of distance from the source, depending on environmental conditions (i.e. atmospheric conditions and either vegetative or manufactured noise barriers, etc.). Widely distributed noises, such as a large industrial facility spread over many acres, or a street with moving vehicles, would typically attenuate at a lower rate.

EXISTING NOISE AND VIBRATION ENVIRONMENTS

EXISTING NOISE RECEPTORS

Some land uses are considered more sensitive to noise than others. Land uses often associated with sensitive receptors generally include residences, schools, libraries, hospitals, and passive recreational areas. Sensitive noise receptors may also include threatened or endangered noise sensitive biological species, although many jurisdictions have not adopted noise standards for wildlife areas. Noise sensitive land uses are typically given special attention in order to achieve protection from excessive noise.

Sensitivity is a function of noise exposure (in terms of both exposure duration and insulation from noise) and the types of activities involved. In the vicinity of the project site, sensitive land uses include existing single-family residential uses and Calvary Baptist Church located east of the project site and Napa Junction Magnet Elementary School located northeast of the project site.

EXISTING GENERAL AMBIENT NOISE LEVELS

The existing noise environment in the project area is primarily defined by traffic on the Napa Vallejo Highway (Highway 29). Other noise sources include airplane flyovers to and from the Napa County Airport, transportation noise from the Union Pacific Rail Road line to the north of the project, and operational noise originating from a lumber processing facility to the southwest.

To quantify the existing ambient noise environment in the project vicinity, Saxelby Acoustics conducted continuous (24-hr.) noise level measurements at two locations on the project site. Noise measurement locations are shown on **Figure 2**. A summary of the noise level measurement survey results is provided in **Table 2**. **Appendix B** contains the complete results of the noise monitoring.

The sound level meters were programmed to record the maximum, median, and average noise levels at each site during the survey. The maximum value, denoted L_{max}, represents the highest noise level measured. The average value, denoted L_{eq}, represents the energy average of all the noise received by the sound level meter microphone during the monitoring period. The median value, denoted L_{50}, represents the sound level exceeded 50 percent of the time during the monitoring period.

Larson Davis Laboratories (LDL) model 812 and 820 precision integrating sound level meters were used for the ambient noise level measurement survey. The meters were calibrated before and after use with a B&K Model 4230 acoustical calibrator to ensure the accuracy of the measurements. The equipment used meets all pertinent specifications of the American National Standards Institute for Type 1 sound level meters (ANSI S1.4).

TABLE 2: SUMMARY OF EXISTING BACKGROUND NOISE MEASUREMENT DATA

Site	Location	Date	L_{dn}	Daytime L_{eq}	Daytime L_{50}	Daytime L_{max}	Nighttime L_{eq}	Nighttime L_{50}	Nighttime L_{max}

FUTURE TRAFFIC NOISE ENVIRONMENT AT OFF-SITE RECEPTORS

Off-Site Traffic Noise Impact Assessment Methodology

To assess noise impacts due to project-related traffic increases on the local roadway network, traffic noise levels are predicted at sensitive receptors for existing and future, project and no-project conditions.

Existing and Future noise levels due to traffic are calculated using the Federal Highway Administration Highway Traffic Noise Prediction Model (FHWA RD-77-108). The model is based upon the Calveno reference noise factors for automobiles, medium trucks and heavy trucks, with consideration given to vehicle volume, speed, roadway configuration, distance to the receiver, and the acoustical characteristics of the site.

The FHWA model was developed to predict hourly L_{eq} values for free-flowing traffic conditions. To predict traffic noise levels in terms of L_{dn}, it is necessary to adjust the input volume to account for the day/night distribution of traffic.

Project trip generation volumes were provided by the project traffic engineer (W-Trans), truck usage and vehicle speeds on the local area roadways were estimated from field observations. The predicted increases in traffic noise levels on the local roadway network for Existing and Future conditions which would result from the project are provided in terms of L_{dn}.

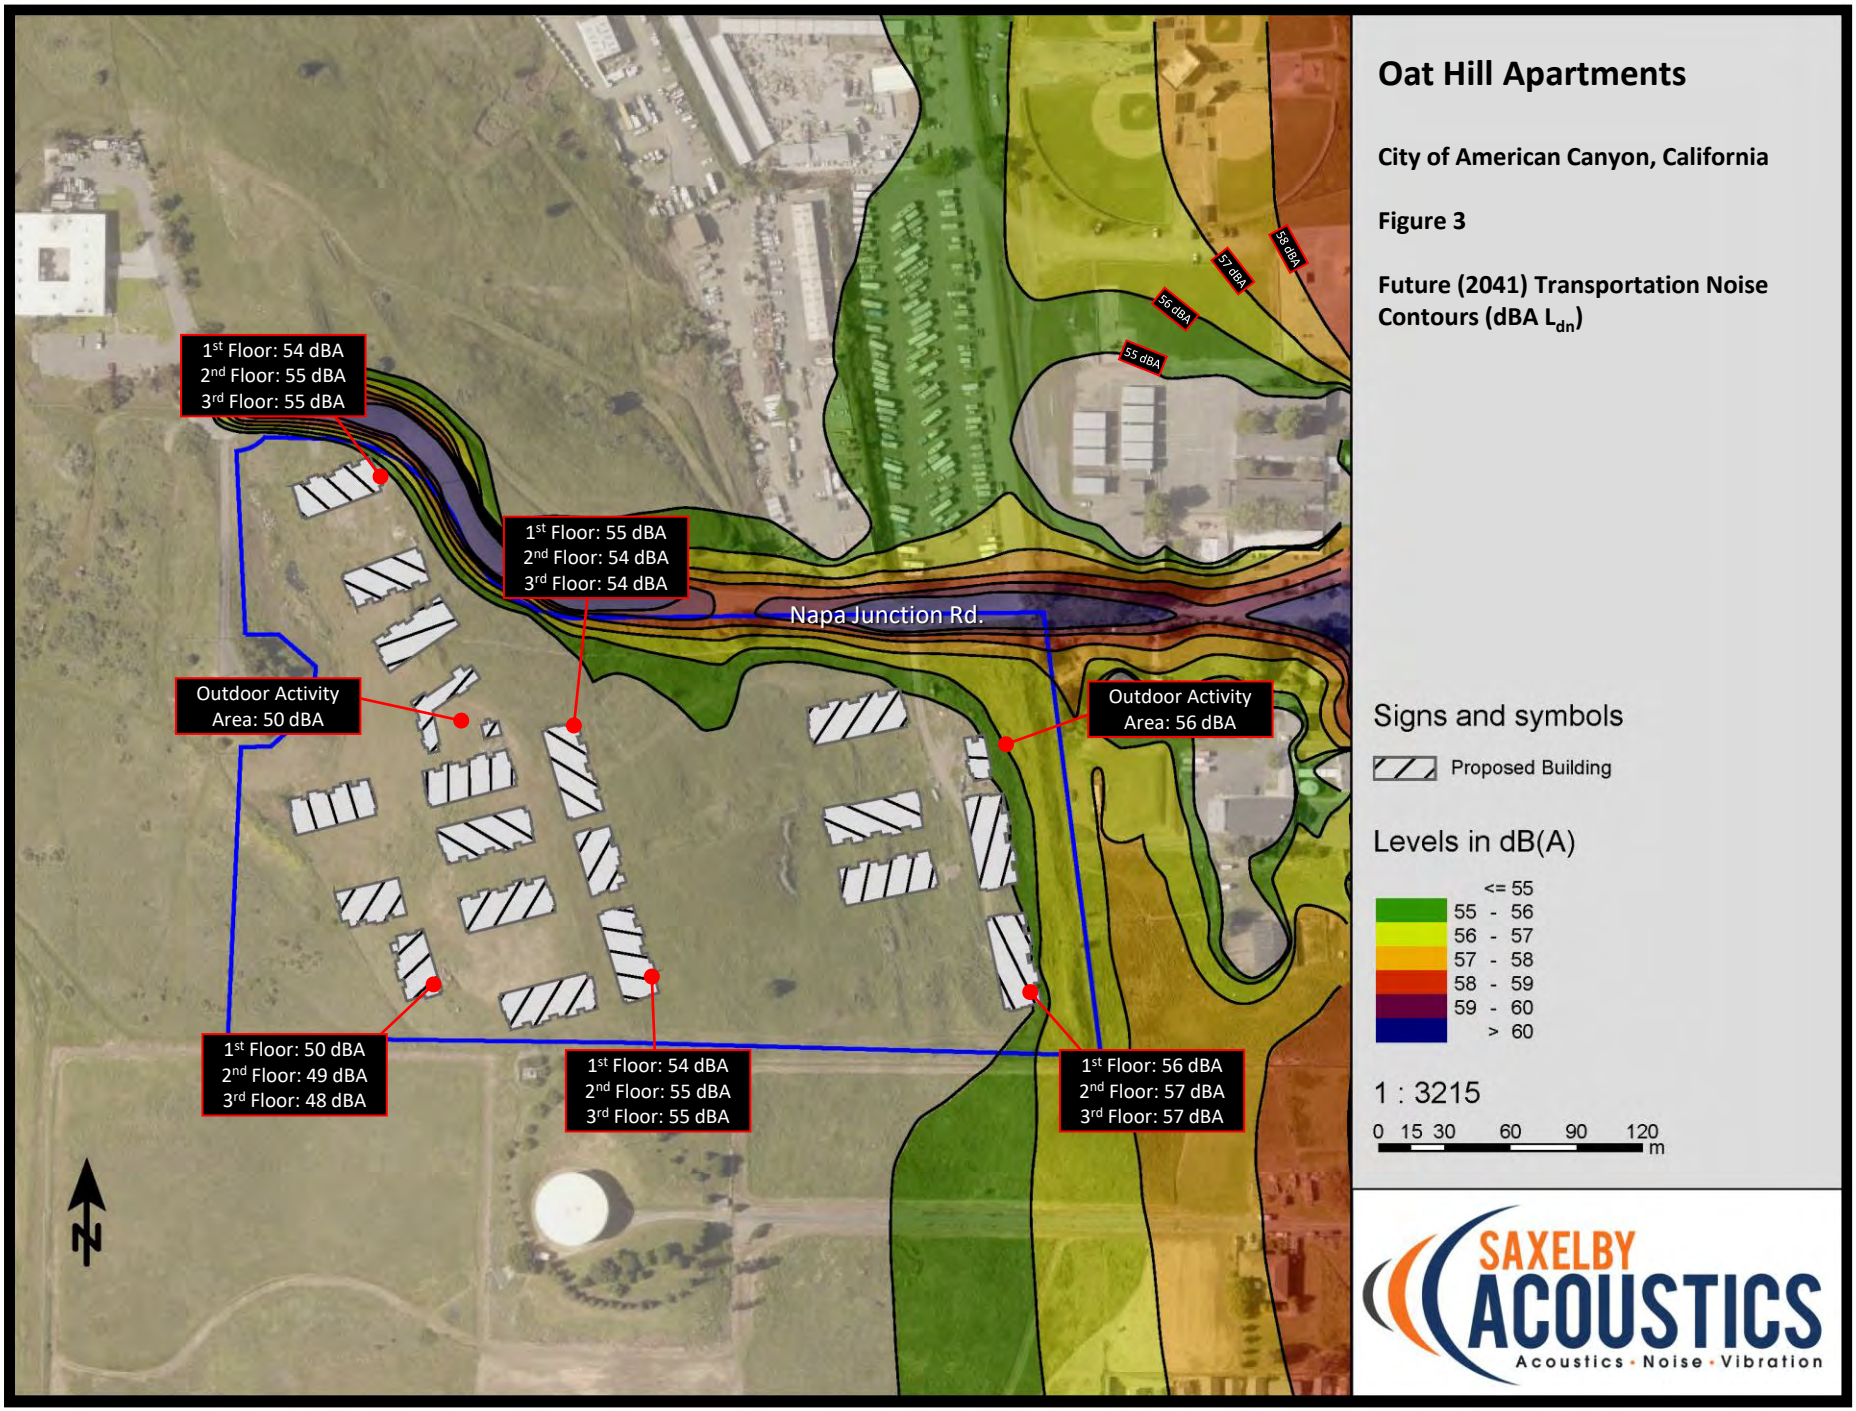
Traffic noise levels are predicted at the sensitive receptors located at the closest typical setback distance along each project-area roadway segment. In some locations sensitive receptors may not receive full shielding from noise barriers, or may be located at distances which vary from the assumed calculation distance.

Table 3 summarizes the modeled traffic noise levels at the nearest sensitive receptors along each roadway segment in the Project area. **Appendix C** provides the complete inputs and results of the FHWA traffic modeling.

TABLE 3: PREDICTED TRAFFIC NOISE LEVEL AND PROJECT-RELATED TRAFFIC NOISE LEVEL INCREASES

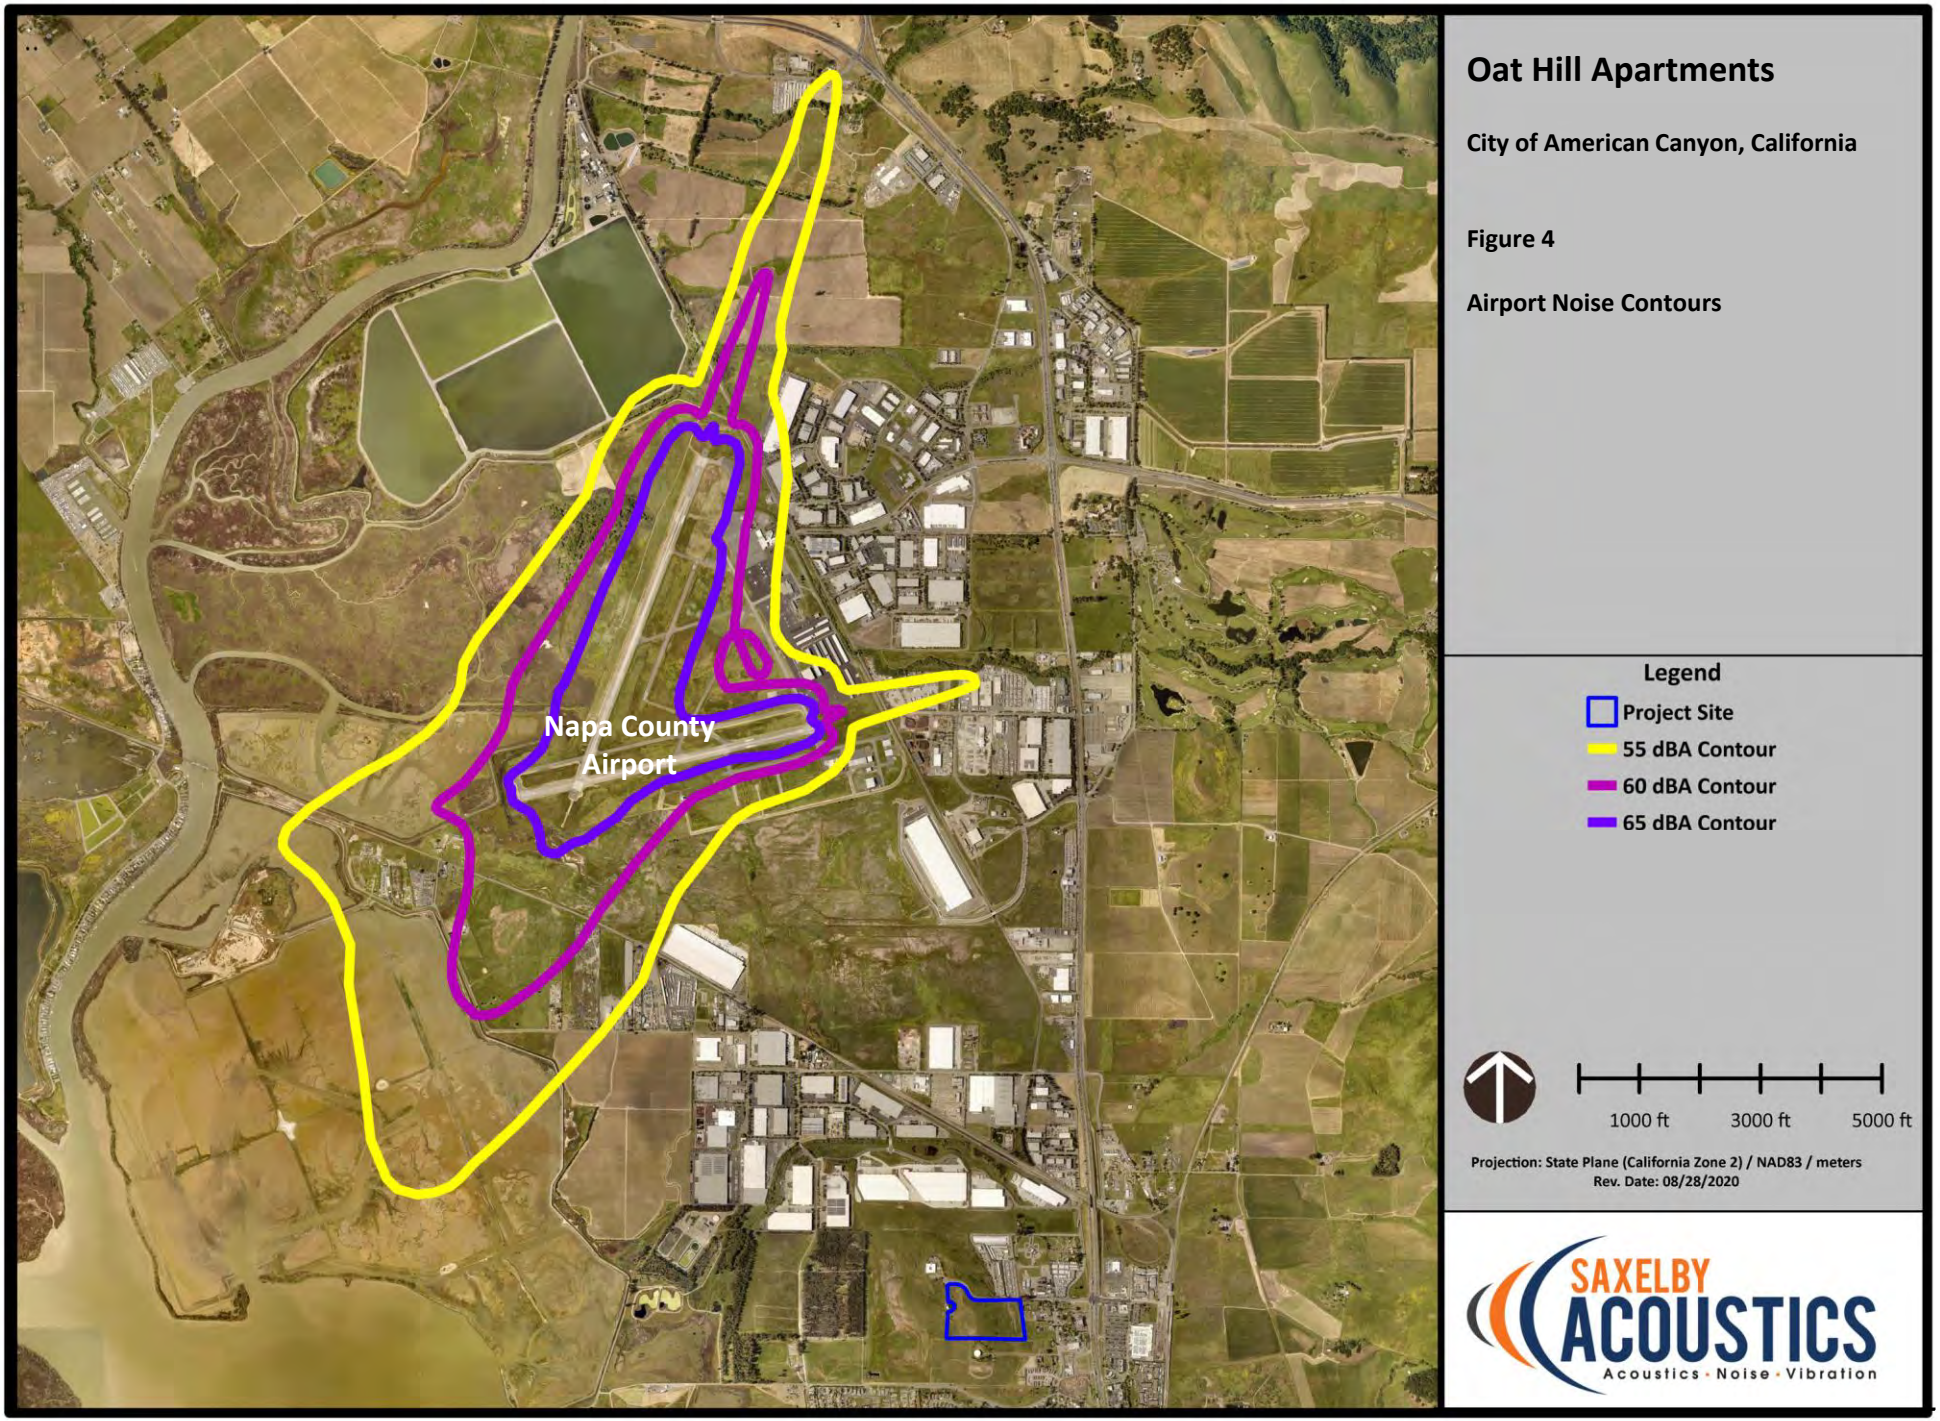
Roadway	Segment	Existing No Project	Existing + Project	Change	Future No Project	Future + Project	Change
Napa Junction Rd.	West of Theresa Ave.	47.3	52.2	4.9	47.8	52.4	4.6
Theresa Ave.	South of Napa Junction Rd.	60.2	60.5	0.3	60.7	61.0	0.3
Napa Junction Rd.	East of Theresa Ave.	60.6	61.1	0.5	61.1	61.6	0.4
Theresa Ave.	North of Eucalyptus Dr.	62.5	62.8	0.3	63.1	63.4	0.3

Note: All noise levels are predicted at closest sensitive receptors in terms of dBA, L_{dn}.



EVALUATION OF TRANSPORTATION NOISE SOURCES ON THE PROJECT SITE

On-Site Transportation Noise Prediction Methodology



Saxelby Acoustics used the SoundPLAN noise model to calculate traffic noise levels at the proposed residential uses due to traffic on Highway 29 and Napa Junction Road. The proposed project buildings and surrounding structures were input into the SoundPLAN model to determine the traffic noise exposure on the project site. Future (2041) traffic noise levels for Highway 29 were calculated by assuming a 1% per year increase in traffic volumes. Future traffic noise levels for Napa Junction Road were calculated using the Federal Highway Administration Highway Traffic Noise Prediction Model (FHWA RD-77-108). The results of this analysis are shown graphically on **Figure 3**.

NAPA COUNTY AIRPORT NOISE

The Napa County Airport is located approximately 1.8 miles west of the project site and aircraft overflights were observed during visits to the project site. **Figure 4** shows the noise contours for the airport as published in the City of American Canyon General Plan.

CONSTRUCTION NOISE ENVIRONMENT

During the construction of the proposed project noise from construction activities would temporarily add to the noise environment in the project vicinity. As shown in **Table 4**, activities involved in construction would generate maximum noise levels ranging from 76 to 90 dB at a distance of 50 feet.

TABLE 4: CONSTRUCTION EQUIPMENT NOISE

CONSTRUCTION VIBRATION ENVIRONMENT

The primary vibration-generating activities associated with the proposed project would occur during construction when activities such as grading, utilities placement, and parking lot construction occur. **TABLE 5** shows the typical vibration levels produced by construction equipment.

TABLE 5: VIBRATION LEVELS FOR VARIOUS CONSTRUCTION EQUIPMENT

REGULATORY CONTEXT

FEDERAL

There are no federal regulations related to noise that apply to the Proposed Project.

STATE

The State Building Code, Title 24, Part 2 of the State of California Code of Regulations, establishes uniform minimum noise insulation performance standards to protect persons within new buildings which house people, including hotels, motels, dormitories, apartment houses, and dwellings other than single-family dwellings. Title 24 mandates that interior noise levels attributable to exterior sources shall not exceed 45 dB L_{dn} or CNEL in any habitable room. Title 24 also mandates that for structures containing noise-sensitive uses to be located where the L_{dn} or CNEL exceeds 60 dB, an acoustical analysis must be prepared to identify mechanisms for limiting exterior noise to the prescribed allowable interior levels. If the interior allowable noise levels are met by requiring that windows be kept closed, the design for the structure must also specify a ventilation or air conditioning system to provide a habitable interior environment.

LOCAL

City of American Canyon General Plan

The City of American Canyon General Plan sets forth the following goals, objectives, and policies relevant to noise that are applicable to the proposed project:

- **Goal 11:** Ensure that American Canyon's existing and future residents, employees and employers, as well as visitors to the City, are protected from the adverse human health and environmental impacts of excessive noise levels created by stationary and ambient (intrusive) noise sources and conditions. Take all necessary and appropriate action to avoid or mitigate the detrimental effects of such excessive noise on the community.
- **Objective 11.1:** Control both ambient and stationary (intrusive) noise conditions and impacts that may occur in American Canyon. Maintain base line information regarding ambient and stationary noise sources within the community.
- **Policy 11.1.1:** Promote noise-compatible land use relationships by implementing the noise standards identified in Figure 11-2 [of the General Plan], to be utilized for design purposes in new development and for establishing a program to attenuate existing noise problems.
- **Policy 11.1.2:** Monitor and update available data regarding the community's ambient and stationary noise levels.
- **Objective 11.2:** Protect residents, employees, and visitors to the community from

excessive noise exposure. If possible, mitigate the adverse impacts of existing or unavoidable excessive noise on these same groups.

- **Policy 11.2.1:** Require that new development for locations in which the exterior or interior noise levels indicated in Figure 11-2 [of the General Plan] are likely to be exceeded, submit a noise attenuation study prepared by a qualified acoustical engineer in order to determine appropriate mitigation measures.
- **Policy 11.2.4:** Require that new industrial, commercial and related land uses, or the expansion of these existing land uses, demonstrate that they would not directly cause ambient noise levels to exceed an exterior Ldn of 65 dB(A) in areas containing housing, schools, health care facilities, or other "noise-sensitive" land uses. Additionally, require that potentially significant noise generators, including uses such as night clubs that cause sporadic noise intensities, submit noise analyses prepared by an acoustical expert that include specific recommendations for mitigation when: a) the project is located in close proximity to noise-sensitive land uses or land that is planned for noise-sensitive land uses, or b) the proposed noise source could violate the noise provisions of the General Plan or City Noise ordinance.
- **Objective 11.3:** Minimize the adverse impacts of traffic-generated noise on residential and other "noise-sensitive" uses as depicted on Figure 11-5 [of the General Plan].
- **Policy 11.3.1:** Minimize motor vehicle noise impacts from streets and highways through proper route location and sensitive roadway design by employing the following strategies:
  - **a.** Consider the impacts of truck routes, the effects of a variety of truck traffic, and future motor vehicle volumes on noise levels adjacent to master planned roadways when improvements to the circulation system are planned.
  - **b.** Mitigate traffic volumes and vehicle speed through residential neighborhoods.
  - **c.** Work closely with the State of California Department of Transportation (Caltrans) in the early stages of highway improvements and design modifications to ensure that proper consideration is given to potential noise impacts on the City.
- **Policy 11.3.2:** Require that all new nonresidential development design and configure on-site ingress and egress points to divert traffic (and its resultant noise) away from "noise-sensitive" land uses to the greatest degree practicable.
- **Policy 11.4.1:** Restrict the development of uses located within the 65 CNEL contour of Napa Airport to industrial, agricultural, or other open space uses (see Figure 11-5 [of the General Plan]).
- **Policy 11.4.1:** Require that development in the vicinity of Napa Airport comply with the noise standards contained in the Airport Land Use Compatibility Plan (ALUP).

- **Objective 11.5:** Minimize noise spillover or encroachment from commercial and industrial land uses into adjoining residential neighborhoods or "noise-sensitive" uses.
- **Objective 11.7:** Minimize the impacts of construction noise on adjacent uses.

The City of American Canyon General Plan establishes an exterior noise level criterion of 65 dB L_{dn} (or CNEL) or less within outdoor activity areas of residential land uses. Additionally, the City requires that cumulative noise exposure from exterior noise sources within noise-sensitive dwellings not exceed 45 dB L_{dn} (or CNEL).

City of American Canyon Municipal Code

Municipal Code Chapter 8.12.080 establishes maximum noise limits for construction activities. Where economically and technically feasible, construction noise at residential receptors is limited to no more than 75 dBA between the hours of 7:00 a.m. and 7:00 p.m. and 60 dBA between 7:00 p.m. and 7:00 a.m.

County of Napa

The Airport Land Use Compatibility Plan governs land use around the Napa County Airport and sets forth noise compatibility standards for new development land use activities. Table 2-1 of the Airport Land Use Compatibility Plan identifies acceptable aviation noise levels by land use. For multifamily residential uses, aviation noise levels of 50-55 dBA Community Noise Equivalent Level (CNEL) are listed as "clearly acceptable."

Figure 5 shows the Napa County Airport Land Use Compatibility Plan Noise Compatibility Guidelines.

FIGURE 5: NAPA COUNTY AIRPORT NOISE COMPATIBILITY GUIDELINES

Table 2-1

Noise Compatibility Guidelines

LAND USE AVAILABILITY		INTERPRETATION/COMMENTS
++	Clearly Acceptable	The activities associated with the specified land use can be carried out with essentially no interference from the noise exposure.
+	Normally Acceptable	Noise is a factor to be considered in that slight interference with outdoor activities may occur. Conventional construction methods will eliminate most noise intrusions upon indoor activities.
o	Marginally Acceptable	The indicated noise exposure will cause moderate interference with outdoor activities and with indoor activities when windows are open. The land use is acceptable on the conditions that outdoor activities are minimal and construction features which provide sufficient noise attenuation are used (e.g., installation of air conditioning so that windows can be kept closed). Under other circumstances, the land use should be discouraged.
–	Normally Unacceptable	Noise will create substantial interference with both outdoor and indoor activities. Noise intrusion upon indoor activities can be mitigated by requiring special noise insulation construction. Land uses which have conventionally constructed structures and/or involve outdoor activities which would be disrupted by noise should generally be avoided.
—	Clearly Unacceptable	Unacceptable noise intrusion upon land use activities will occur. Adequate structural noise insulation is not practical under most circumstances. The indicated land use should be avoided unless strong overriding factors prevail and it should be prohibited if outdoor activities are involved.

Criteria for Acceptable Vibration

Vibration is like noise in that it involves a source, a transmission path, and a receiver. While vibration is related to noise, it differs in that in that noise is generally considered to be pressure waves transmitted through air, whereas vibration usually consists of the excitation of a structure or surface. As with noise, vibration consists of an amplitude and frequency. A person's perception to the vibration will depend on their individual sensitivity to vibration, as well as the amplitude and frequency of the source and the response of the system which is vibrating.

Vibration can be measured in terms of acceleration, velocity, or displacement. A common practice is to monitor vibration measures in terms of peak particle velocities in inches per second. Standards pertaining to perception as well as damage to structures have been developed for vibration levels defined in terms of peak particle velocities.

Human and structural response to different vibration levels is influenced by a number of factors, including ground type, distance between source and receptor, duration, and the number of perceived vibration events. **Table 6** which was developed by Caltrans, shows the vibration levels which would normally be required to result in damage to structures. The vibration levels are presented in terms of peak particle velocity in inches per second.

Table 6 indicates that the threshold for architectural damage to structures is 0.20 in/sec p.p.v. A threshold of 0.20 in/sec p.p.v. is considered to be a reasonable threshold for short-term construction projects.

TABLE 6: EFFECTS OF VIBRATION ON PEOPLE AND BUILDINGS

Peak Particle Velocity		Human Reaction	Effect on Buildings
mm/second	in/second		
0.15-0.30	0.006-0.019	Threshold of perception; possibility of intrusion	Vibrations unlikely to cause damage of any type
2.0	0.08	Vibrations readily perceptible	Recommended upper level of the vibration to which ruins and ancient monuments should be subjected
2.5	0.10	Level at which continuous vibrations begin to annoy people	Virtually no risk of "architectural" damage to normal buildings
5.0	0.20	Vibrations annoying to people in buildings (this agrees with the levels established for people standing on bridges and subjected to relative short periods of vibrations)	Threshold at which there is a risk of "architectural" damage to normal dwelling - houses with plastered walls and ceilings. Special types of finish such as lining of walls, flexible ceiling treatment, etc., would minimize "architectural" damage
10-15	0.4-0.6	Vibrations considered unpleasant by people subjected to continuous vibrations and unacceptable to some people walking on bridges	Vibrations at a greater level than normally expected from traffic, but would cause "architectural" damage and possibly minor structural damage

IMPACTS AND MITIGATION MEASURES

THRESHOLDS OF SIGNIFICANCE

Appendix G of the CEQA Guidelines states that a project would normally be considered to result in significant noise impacts if noise levels conflict with adopted environmental standards or plans or if noise generated by the project would substantially increase existing noise levels at sensitive receivers on a permanent or temporary basis. Significance criteria for noise impacts are drawn from CEQA Guidelines Appendix G (Items XI [a-c]).

Would the project:

a. Generate a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?

b. Generate excessive groundborne vibration or groundborne noise levels?

c. For a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise levels?

Noise Level Increase Criteria for Long-Term Project-Related Noise Level Increases

The California Environmental Quality Act (CEQA) guidelines define a significant impact of a project if it "increases substantially the ambient noise levels for adjoining areas." Generally, a project may have a significant effect on the environment if it will substantially increase the ambient noise levels for adjoining areas or expose people to severe noise levels. In practice, more specific professional standards have been developed. These standards state that a noise impact may be considered significant if it would generate noise that would conflict with local project criteria or ordinances, or substantially increase noise levels at noise sensitive land uses. The potential increase in traffic noise from the project is a factor in determining significance. Research into the human perception of changes in sound level indicates the following:

- A 3-dB change is barely perceptible,
- A 5-dB change is clearly perceptible, and
- A 10-dB change is perceived as being twice or half as loud.

A limitation of using a single noise level increase value to evaluate noise impacts is that it fails to account for pre-project-noise conditions. **Table 7** is based upon recommendations made by the Federal Interagency Committee on Noise (FICON) to provide guidance in the assessment of changes

in ambient noise levels resulting from aircraft operations. The recommendations are based upon studies that relate aircraft noise levels to the percentage of persons highly annoyed by the noise. Although the FICON recommendations were specifically developed to assess aircraft noise impacts, it has been accepted that they are applicable to all sources of noise described in terms of cumulative noise exposure metrics such as the L_{dn}.

TABLE 7: SIGNIFICANCE OF CHANGES IN NOISE EXPOSURE

Ambient Noise Level Without Project, Ldn	Increase Required for Significant Impact
<60 dB	+5.0 dB or more
60-65 dB	+3.0 dB or more
>65 dB	+1.5 dB or more

Source: Federal Interagency Committee on Noise (FICON)

Based on the **Table 7** data, an increase in the traffic noise level of 5 dB or more would be significant where the pre-project noise levels are less than 60 dB Ldn, or 3 dB or more where existing noise levels are between 60 to 65 dB Ldn. Extending this concept to higher noise levels, an increase in the traffic noise level of 1.5 dB or more may be significant where the pre-project traffic noise level exceeds 65 dB Ldn. The rationale for the **Table 7** criteria is that, as ambient noise levels increase, a smaller increase in noise resulting from a project is sufficient to cause annoyance.

PROJECT-SPECIFIC IMPACTS AND MITIGATION MEASURES

IMPACT 1: WOULD THE PROJECT GENERATE A SUBSTANTIAL TEMPORARY OR PERMANENT INCREASE IN AMBIENT NOISE LEVELS IN THE VICINITY OF THE PROJECT IN EXCESS OF STANDARDS ESTABLISHED IN THE LOCAL GENERAL PLAN OR NOISE ORDINANCE, OR APPLICABLE STANDARDS OF OTHER AGENCIES?

Exterior noise at New Sensitive Receptors

As shown in **Figure 3**, the proposed project is predicted to be exposed to transportation noise levels of up to 56 dBA at the eastern outdoor activity area and 50 dBA at the western outdoor activity area. This complies with the City of American Canyon existing General Plan standard of 65 dBA L_{dn} for outdoor activity areas.

The City of American Canyon General Plan requires that interior noise levels of new residential uses must be 45 dBA L_{dn} or less. Standard construction methods typically yield a 25 dBA noise reduction. The proposed project buildings are predicted to be exposed to noise levels of up to 57 dBA L_{dn}. Based upon a 25 dB reduction, the interior noise level would be 22 dBA L_{dn}. This complies with City of

American Canyon allowable transportation noise exposure limits.

This is a **less-than-significant** impact and no mitigation is required.

Traffic Noise Increases

The CEQA guidelines specify criteria to determine the significance of traffic noise impacts. Where existing traffic noise levels are less than 60 dB L_{dn} at the outdoor activity areas of noise-sensitive uses, a +5.0 dB L_{dn} increase in roadway noise levels will be considered significant. As shown in **Table 3**, the maximum increase due to traffic noise is +4.9 dBA along Napa Junction Rd. on the segment west of Theresa Ave. The existing noise level due to traffic noise on this segment is 47.3 dBA and the future no-project noise level is predicted to be 47.8 dBA. All other increases are below +1.5 dBA.

Therefore, impacts resulting from increased traffic noise would be considered ***less-than-significant***.

Construction Noise

During the construction phases of the project, noise from construction activities would add to the noise environment in the immediate project vicinity. As indicated in **Table 4**, activities involved in construction would generate maximum noise levels ranging from 76 to 90 dBA L_{max} at a distance of 50 feet. Construction activities would also be temporary in nature and are anticipated to occur during normal daytime working hours.

The City of American Canyon Municipal Code establishes maximum noise limits for construction activities of 75 dBA between the hours of 7:00 a.m. and 7:00 p.m. and 60 dBA between 7:00 p.m. and 7:00 a.m. The nearest residential uses are located approximately 320 feet to the east, as measured from the center of the eastern housing site. At this distance, maximum construction noise levels would be in the range of 60-74 dBA L_{max} in the backyards of the nearest residential uses.

Noise would also be generated during the construction phase by increased truck traffic on area roadways. A project-generated noise source would be truck traffic associated with transport of heavy materials and equipment to and from the construction site. This noise increase would be of short duration and would occur during daytime hours.

Although construction activities are temporary in nature and would occur during normal daytime working hours, construction-related noise could result in sleep interference at existing noise-sensitive land uses in the vicinity of the construction if construction activities were to occur outside the normal daytime hours. Therefore, impacts resulting from noise levels temporarily exceeding the threshold of significance due to construction would be considered ***potentially significant***.

Mitigation Measure

1(a) The City shall establish the following as conditions of approval for any permit that results in the use of construction equipment:

- Construction activities (excluding activities that would result in a safety concern to the public or construction workers) shall be limited to between the daytime hours of 7 AM and 7 PM daily.
- Construction equipment shall be properly maintained and equipped with noise-reduction intake and exhaust mufflers and engine shrouds, in accordance with manufacturers' recommendations. Equipment engine shrouds shall be closed during equipment operation.
- When not in use, motorized construction equipment shall not be left idling for more than 5 minutes.
- Stationary equipment (power generators, compressors, etc.) shall be located at the furthest practical distance from nearby noise-sensitive land uses or sufficiently shielded to reduce noise-related impacts.

Timing/Implementation: Implemented prior to approval of grading and/or building permits
Enforcement/Monitoring: City of American Canyon Community Development Services Department

Implementation of mitigation measure 1(a) would help to reduce construction-generated noise levels. With mitigation, this impact would be considered ***less-than-significant***.

IMPACT 2: WOULD THE PROJECT GENERATE EXCESSIVE GROUNDBORNE VIBRATION OR GROUNDBORNE NOISE LEVELS?

Construction vibration impacts include human annoyance and building structural damage. Human annoyance occurs when construction vibration rises significantly above the threshold of perception. Building damage can take the form of cosmetic or structural.

The **Table 5** data indicate that construction vibration levels anticipated for the project are less than the 0.2 in/sec threshold at distances of 26 feet. Sensitive receptors which could be impacted by construction related vibrations, especially vibratory compactors/rollers, are located approximately 26 feet, or further, from typical construction activities. At these distances construction vibrations are not predicted to exceed acceptable levels. Additionally, construction activities would be temporary in nature and would likely occur during normal daytime working hours.

This is a **less-than-significant** impact and no mitigation is required.

IMPACT 3: **FOR A PROJECT LOCATED WITHIN THE VICINITY OF A PRIVATE AIRSTRIP OR AN AIRPORT LAND USE PLAN OR, WHERE SUCH A PLAN HAS NOT BEEN ADOPTED, WITHIN TWO MILES OF A PUBLIC AIRPORT OR PUBLIC USE AIRPORT, WOULD THE PROJECT EXPOSE PEOPLE RESIDING OR WORKING IN THE PROJECT AREA TO EXCESSIVE NOISE LEVELS?**

Based upon **Figure 4**, the proposed project is located approximately 1.4 miles outside of the predicted 55 dBA CNEL noise contour. According to Table 2-1 (**Figure 5**) of the Napa County Airport Land Use Compatibility Plan, multi-family residential land uses exposed to noise levels less than 55 dBA CNEL are "Clearly Acceptable." Land use may be carried out with essentially no interference from the noise exposure.

This is a **less-than-significant** impact and no mitigation is required.

Appendix A: Acoustical Terminology

Acoustics	The science of sound.
Ambient Noise	The distinctive acoustical characteristics of a given space consisting of all noise sources audible at that location. In many cases, the term ambient is used to describe an existing or pre-project condition such as the setting in an environmental noise study.
ASTC	Apparent Sound Transmission Class. Similar to STC but includes sound from flanking paths and correct for room reverberation. A larger number means more attenuation. The scale, like the decibel scale for sound, is logarithmic.
Attenuation	The reduction of an acoustic signal.
A-Weighting	A frequency-response adjustment of a sound level meter that conditions the output signal to approximate human response.
Decibel or dB	Fundamental unit of sound, A Bell is defined as the logarithm of the ratio of the sound pressure squared over the reference pressure squared. A Decibel is one-tenth of a Bell.
CNEL	Community Noise Equivalent Level. Defined as the 24-hour average noise level with noise occurring during evening hours (7 - 10 p.m.) weighted by +5 dBA and nighttime hours weighted by +10 dBA.
DNL	See definition of Ldn.
IIC	Impact Insulation Class. An integer-number rating of how well a building floor attenuates impact sounds, such as footsteps. A larger number means more attenuation. The scale, like the decibel scale for sound, is logarithmic.
Frequency	The measure of the rapidity of alterations of a periodic signal, expressed in cycles per second or hertz (Hz).
Ldn	Day/Night Average Sound Level. Similar to CNEL but with no evening weighting.
Leq	Equivalent or energy-averaged sound level.
Lmax	The highest root-mean-square (RMS) sound level measured over a given period of time.
L(n)	The sound level exceeded a described percentile over a measurement period. For instance, an hourly L50 is the sound level exceeded 50% of the time during the one-hour period.
Loudness	A subjective term for the sensation of the magnitude of sound.
NIC	Noise Isolation Class. A rating of the noise reduction between two spaces. Similar to STC but includes sound from flanking paths and no correction for room reverberation.
NNIC	Normalized Noise Isolation Class. Similar to NIC but includes a correction for room reverberation.
Noise	Unwanted sound.
NRC	Noise Reduction Coefficient. NRC is a single-number rating of the sound-absorption of a material equal to the arithmetic mean of the sound-absorption coefficients in the 250, 500, 1000, and 2,000 Hz octave frequency bands rounded to the nearest multiple of 0.05. It is a representation of the amount of sound energy absorbed upon striking a particular surface. An NRC of 0 indicates perfect reflection; an NRC of 1 indicates perfect absorption.
RT60	The time it takes reverberant sound to decay by 60 dB once the source has been removed.
Sabin	The unit of sound absorption. One square foot of material absorbing 100% of incident sound has an absorption of 1 Sabin.
SEL	Sound Exposure Level. SEL is a rating, in decibels, of a discrete event, such as an aircraft flyover or train pass by, that compresses the total sound energy into a one-second event.
SPC	Speech Privacy Class. SPC is a method of rating speech privacy in buildings. It is designed to measure the degree of speech privacy provided by a closed room, indicating the degree to which conversations occurring within are kept private from listeners outside the room.
STC	Sound Transmission Class. STC is an integer rating of how well a building partition attenuates airborne sound. It is widely used to rate interior partitions, ceilings/floors, doors, windows and exterior wall configurations. The STC rating is typically used to rate the sound transmission of a specific building element when tested in laboratory conditions where flanking paths around the assembly don't exist. A larger number means more attenuation. The scale, like the decibel scale for sound, is logarithmic.
Threshold of Hearing	The lowest sound that can be perceived by the human auditory system, generally considered to be 0 dB for persons with perfect hearing.
Threshold of Pain	Approximately 120 dB above the threshold of hearing.
Impulsive	Sound of short duration, usually less than one second, with an abrupt onset and rapid decay.
Simple Tone	Any sound which can be judged as audible as a single pitch or set of single pitches.

Executive Summary

The proposed Oat Hill Multi-Family project would include construction of 291 housing units near the terminus of Napa Junction Road in the City of American Canyon. The project would be expected to generate an average of 1,583 new trips per day, including 105 trips during the weekday a.m. peak hour and 128 trips during the p.m. peak hour.

The project would be expected to have a *less-than-significant* transportation impact on vehicle miles traveled (VMT) with implementation of TDM measures identified in this report such as unbundled parking, transit passes, secure bicycle parking, and educational materials.

The study area for the operational analysis includes the intersections of Napa Junction Road/Theresa Avenue, Napa Junction Road/Lombard Road, and Eucalyptus Drive/Theresa Avenue. Analysis indicates that these intersections operate acceptably under Existing Conditions and would continue to do so under Future Conditions and upon the addition of project-related traffic volumes. As required by the City, the project should pay a fee toward the cost of the planned future improvements to SR 29 to address cumulative effects of project traffic.

As proposed, the project site would be accessible from two new connections to Napa Junction Road, one approximately 200 feet west of Hess Road and the other from the cul-de-sac at the western terminus of the roadway. With the project, a new section of Napa Junction Road would be constructed between the two disconnected segments east and west of Hess Road. All interior drive aisles and parking stalls as well as the new section of roadway should be designed to comply with City design standards and on-site circulation and site access is therefore expected to function acceptably for emergency response vehicles. The new connection of Napa Junction Road would result in a more direct route to the project site from SR 29 and other areas of the City so emergency response times to the section of Napa Junction Road west of Hess Road would be improved over existing conditions wherein vehicles have to loop around the little league fields using Lombard Road and Hess Road.

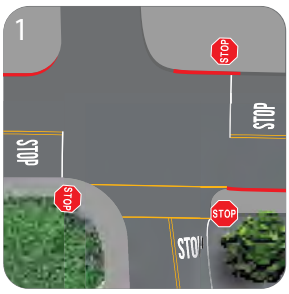
Access for pedestrians is not currently adequate as a sidewalk is missing along the project frontage with Napa Junction Road. The project should include construction of sidewalk along the project frontage and a connection to the existing sidewalk on the south side of Napa Junction Road near the school crossing. Transit facilities serving the site will be adequate with completion of the sidewalk connection so that a dedicated path of travel is provided between the site and the transit stops near City Hall. Bicycle facilities serving the project site are generally adequate, though space should be provided for bicycles to be stored on-site.

DRAFT

Introduction

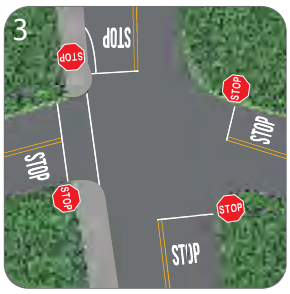
This report presents an analysis of the potential traffic impacts that would be associated with development of a proposed multifamily housing project to be located at the terminus of Napa Junction Road in the City of American Canyon. The traffic study was completed in accordance with the criteria established by the City of American Canyon, reflects a scope of work approved by City staff, and is consistent with standard traffic engineering techniques.

Prelude



The purpose of a traffic impact study is to provide City staff and policy makers with data that they can use to make an informed decision regarding the potential traffic impacts of a proposed project, and any associated improvements that would be required in order to mitigate these impacts to an acceptable level under CEQA, the City's General Plan, or other policies. Impacts relative to access for pedestrians, bicyclists, and to transit are addressed in the context of the CEQA criteria. Consistent with SB 743, the project's transportation impacts were analyzed using VMT. While no longer a part of the CEQA review process, vehicular traffic service levels at key intersections were evaluated for consistency with General Plan policies by determining the number of new trips that the proposed use would be expected to generate, distributing these trips to the surrounding street system based on anticipated travel patterns specific to the proposed project, then analyzing the impact the new traffic would be expected to have on the study intersections.

Project Profile



The proposed project includes multifamily housing to be located near the terminus of Napa Junction Road in the City of American Canyon. As proposed, the project includes 291 one-, two-, and three-bedroom units. As part of the project, the two existing segments of Napa Junction Road east and west of Hess Road would be connected near the southwest corner of the Napa Junction Magnet Elementary School site. The project would be accessed from two new driveways on Napa Junction Road to the west of Hess Road. The location of the project site is shown in Figure 1.

Traffic Impact Study for the Oat Hill Multi-Family Housing Project

Figure 1 – Study Area and Existing Lane Configurations

W-Trans

6078

Transportation Setting

Operational Analysis

Study Area and Periods

The study area, which was selected in consultation with City staff, consists of the section of Napa Junction Road providing access to the project site and the project access points as well as the following intersections:

1. Napa Junction Road/Theresa Avenue
2. Napa Junction Road/Lombard Road
3. Eucalyptus Drive/Theresa Avenue

Operating conditions during the weekday a.m. and p.m. peak periods were evaluated to capture the highest potential impacts for the proposed project as well as the highest volumes on the local transportation network. The morning peak hour occurs between 7:00 and 9:00 a.m. and reflects conditions during the home to work or school commute, while the p.m. peak hour occurs between 4:00 and 6:00 p.m. and typically reflects the highest level of congestion during the homeward bound commute.

Study Intersections

Napa Junction Road/Theresa Avenue is an all-way stop-controlled four-legged intersection with the Napa Junction Magnet Elementary School's driveway being slightly offset from the intersection as the north leg. There is a crosswalk on the south leg and a marked crossing on Napa Junction Road approximately 100 feet west of the center of the intersection.

Napa Junction Road/Lombard Road is a tee intersection with stop control on the southbound Lombard Road approach. There are no crosswalks.

Eucalyptus Drive/Theresa Avenue is an all-way stop-controlled intersection with a crosswalk on the west leg.

The locations of the study intersections and the existing lane configurations and controls are shown in Figure 1.

Alternative Modes

Pedestrian Facilities

Pedestrian facilities include sidewalks, crosswalks, pedestrian signal phases, curb ramps, curb extensions, and various streetscape amenities such as lighting, benches, etc. In general, sidewalk coverage is limited in the surrounding vicinity, but connectivity to points of interest is provided.

Napa Junction Road – Sidewalk is provided on the south side of the street between SR 29 and about 100 feet west of Theresa Avenue, but there are large gaps in sidewalk coverage on the north side of Napa Junction Road.

Theresa Avenue – Continuous sidewalk is provided on the west side of Theresa Avenue from Eucalyptus Drive to Napa Junction Road. No sidewalk is provided on the east side of the street.

DRAFT

Bicycle Facilities

The *Highway Design Manual*, Caltrans, 2017, classifies bikeways into four categories:

- **Class I Multi-Use Path** – a completely separated right-of-way for the exclusive use of bicycles and pedestrians with cross flows of motorized traffic minimized.
- **Class II Bike Lane** – a striped and signed lane for one-way bike travel on a street or highway.
- **Class III Bike Route** – signing only for shared use with motor vehicles within the same travel lane on a street or highway.
- **Class IV Bikeway** – also known as a separated bikeway, a Class IV Bikeway is for the exclusive use of bicycles and includes a separation between the bikeway and the motor vehicle traffic lane. The separation may include, but is not limited to, grade separation, flexible posts, inflexible physical barriers, or on-street parking.

Bicyclists ride in the roadway and/or on sidewalks along all streets within the project study area as there are no existing dedicated bike facilities, though there are plans to provide numerous facilities in the vicinity including Class I trails and Class II bike lanes. Table 1 summarizes the planned bicycle facilities in the project vicinity, as contained in the *Napa Countywide Bicycle Plan*, Napa Valley Transportation Authority, 2019.

Table 1 – Planned Bicycle Facilities Summary

Facility	Class	Length (miles)	Begin Point	End Point
Bay Area Ridge Trail	I	0.80	Wetlands Edge Rd	Theresa Ave
Vine Trail	I	1.06	Donaldson Way	Paoli Rd
Napa Junction Rd	II	0.35	Theresa Ave	End of Roadway
Lombard Rd	II	0.31	End of Roadway	Napa Junction Rd
Theresa Ave	II	0.30	Napa Junction Rd	Eucalyptus Dr

Transit Facilities

The American Canyon Transit (VINE) provides fixed route bus service in American Canyon. ACT has two morning and afternoon routes that stop at American Canyon City Hall, which would be approximately 0.20 miles from the project site upon the extension of Napa Junction Road. The route that stops at City Hall provides loop service to destinations throughout the City.

Two bicycles can be carried on most VINE buses. Bike rack space is on a first come, first served basis. Additional bicycles are allowed on VINE buses at the discretion of the driver.

Dial-a-ride, also known as paratransit, or door-to-door service, is available for those who are unable to independently use the transit system due to a physical or mental disability. VINE Paratransit is designed to serve the needs of individuals with disabilities within City of American Canyon and the greater City of American Canyon area.

DRAFT

Capacity Analysis

Intersection Level of Service Methodologies

Level of Service (LOS) is used to rank traffic operation on various types of facilities based on traffic volumes and roadway capacity using a series of letter designations ranging from A to F. Generally, Level of Service A represents free flow conditions and Level of Service F represents forced flow or breakdown conditions. A unit of measure that indicates a level of delay generally accompanies the LOS designation.

The study intersections were analyzed using methodologies published in the *Highway Capacity Manual* (HCM), 6th Edition, Transportation Research Board, 2018. This source contains methodologies for various types of intersection control, all of which are related to a measurement of delay in average number of seconds per vehicle.

The Levels of Service for the intersection of Napa Junction Road/Lombard Road, which is stop-controlled on the side-street approach, were analyzed using the "Two-Way Stop-Controlled" intersection capacity method from the HCM. This methodology determines a level of service for each minor turning movement by estimating the level of average delay in seconds per vehicle. Results are presented for individual approaches together with the weighted overall average delay for the intersection.

The remaining two study intersections have stop signs on all approaches and were analyzed using the "All-Way Stop-Controlled" Intersection methodology from the HCM. This methodology evaluates delay for each approach based on turning movements, opposing and conflicting traffic volumes, and the number of lanes. Average vehicle delay is computed for the intersection as a whole and then related to a Level of Service.

The ranges of delay associated with the various levels of service are indicated in Table 2.

DRAFT

Table 2 – Intersection Level of Service Criteria		
LOS	**Two-Way Stop-Controlled**	**All-Way Stop-Controlled**
A	Delay of 0 to 10 seconds. Gaps in traffic are readily available for drivers exiting the minor street.	Delay of 0 to 10 seconds. Upon stopping, drivers are immediately able to proceed.
B	Delay of 10 to 15 seconds. Gaps in traffic are somewhat less readily available than with LOS A, but no queuing occurs on the minor street.	Delay of 10 to 15 seconds. Drivers may wait for one or two vehicles to clear the intersection before proceeding from a stop.
C	Delay of 15 to 25 seconds. Acceptable gaps in traffic are less frequent, and drivers may approach while another vehicle is already waiting to exit the side street.	Delay of 15 to 25 seconds. Drivers will enter a queue of one or two vehicles on the same approach and wait for vehicle to clear from one or more approaches prior to entering the intersection.
D	Delay of 25 to 35 seconds. There are fewer acceptable gaps in traffic, and drivers may enter a queue of one or two vehicles on the side street.	Delay of 25 to 35 seconds. Queues of more than two vehicles are encountered on one or more approaches.
E	Delay of 35 to 50 seconds. Few acceptable gaps in traffic are available, and longer queues may form on the side street.	Delay of 35 to 50 seconds. Longer queues are encountered on more than one approach to the intersection.
F	Delay of more than 50 seconds. Drivers may wait for long periods before there is an acceptable gap in traffic for exiting the side streets, creating long queues.	Delay of more than 50 seconds. Drivers enter long queues on all approaches.

Reference: *Highway Capacity Manual,* 6th Edition, Transportation Research Board, 2018

Traffic Operation Standards

City of American Canyon

The *City of American Canyon General Plan Circulation Element* specifies minimum level-of-service standards for all streets and intersections in the City's jurisdiction. In section 4.1.6, the City establishes the following performance standards for acceptable LOS:

Achieve and maintain a Multimodal LOS D or better for roadways and intersections during peak hours where possible for as long as possible. However, recognizing that LOS D may not be achievable or cannot be maintained upon full buildout of the General Plan, due to traffic generated from sources beyond control of the City, the City Council shall have the discretion to only require feasible mitigation measures that may not achieve LOS D, but will reduce the impact of any development use or VMT planned for in the Land Use Element of the General Plan.

The locations that may not achieve or maintain LOS D are as follows and will be exempt from the LOS D policy:

- State Route 29 through the City
- American Canyon Road from SR 29 to Flosden Road-Newell Drive
- Flosden Road south of American Canyon Road

Existing Conditions

The Existing Conditions scenario provides an evaluation of current operation based on existing traffic volumes during the a.m. and p.m. peak periods. This condition does not include project-generated traffic volumes. Volume data was collected on May 29, 2019 during typical traffic conditions while the Napa Junction Magnet Elementary School was in session. It is noted that because this school will be closed in the Fall of 2020 and the students moved

to a new school on Eucalyptus Drive, trips associated with movements to and from the school were eliminated from the counts to reflect the pre-project Existing Conditions.

Intersection Levels of Service

Under Existing Conditions, all intersections operate acceptably during both peak periods. A summary of the intersection level of service calculations is contained in Table 3, and copies of the Level of Service calculations for all evaluated scenarios are provided in Appendix A. The Existing traffic volumes are shown in Figure 2.

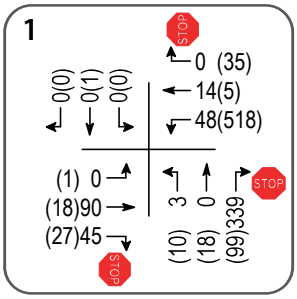
Table 3 – Existing Peak Hour Intersection Levels of Service

Study Intersection *Approach*	AM Peak		PM Peak	
	Delay	LOS	Delay	LOS
1. Napa Junction Rd/Theresa Ave	9.9	A	17.6	C
2. Napa Junction Rd/Lombard Rd	2.0	A	0.8	A
Southbound (Lombard Rd) Approach	*11.9*	*B*	*14.2*	*B*
3. Eucalyptus Dr/Theresa Ave	10.3	B	13.6	B

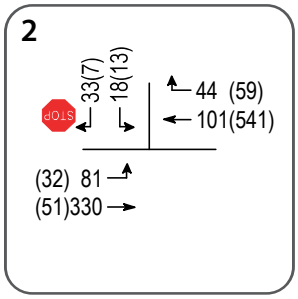
Notes: Delay is measured in average seconds per vehicle; LOS = Level of Service; Results for minor approaches to two-way stop-controlled intersections are indicated in *italics*

Future Conditions

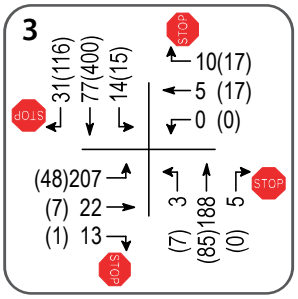
Future peak hour volumes were developed based on projections contained in the build-out analysis that was prepared for the *Napa Junction III Transportation Impact Analysis Report*; this scenario represents cumulative traffic conditions that would be expected upon build-out of the land uses identified in the *City of American Canyon General Plan*. Although some of the anticipated development included in this previous effort may already be complete and occupied, to provide a conservative estimate of future operations, the incremental increase in trips associated with build-out of the City of American Canyon under its current General Plan was added to existing volumes in order to determine Future operating conditions without the project.



Because the west side of SR 29 is nearly already built out, so would be expected to experience considerably less of an increase in traffic compared to either SR 29 or the northeast part of the City, a growth rate of one-percent per year was used to develop future peak hour volumes for the study intersections, all of which are located in the west part of the City that is nearly fully developed.



Intersection Levels of Service



Under the anticipated Future volumes, the study intersections are expected to operate acceptably during both peak hours. Future volumes are shown in Figure 3 and operating conditions are summarized in Table 4.

2.	Napa Junction Rd/Lombard Rd	2.0	A	0.9	A
	Southbound (Lombard Rd) Approach	*11.2*	*B*	*14.7*	*B*
3.	Theresa Ave/Eucalyptus Dr	10.2	B	14.9	B

Notes: Delay is measured in average seconds per vehicle; LOS = Level of Service; Results for minor approaches to two-way stop-controlled intersections are indicated in *italics*

It should be noted that the average delays under Future Conditions are lower than Existing Conditions for all intersections during the a.m. peak hour. This is because a peak hour factor (PHF) of 0.80 was used in the Existing Conditions scenario to reflect morning traffic generated by Napa Junction Magnet Elementary School while a PHF of 1.0 was used for the Future Conditions scenario as volumes are generally expected to "flatten out" as volumes increase over time and because the traffic associated with the elementary school that caused the low PHF will be going to a different site. The difference between these factors results in analysis volumes (or those derived from application of the PHF) that are higher for Existing Conditions than Future Conditions; therefore, the average delays are lower even though the base Future volumes are higher than the base Existing volumes.

Project Description

The proposed project includes multifamily housing to be located near the terminus of Napa Junction Road in the City of American Canyon. As proposed, the project includes 291 one-, two-, and three-bedroom housing units. The project would be accessed from two driveways on an existing segment of Napa Junction Road west of Hess Road. As part of the project, a new segment of Napa Junction Road would be constructed resulting in a continuous section of roadway running between SR 29 and the existing terminus west of the site. The proposed project site plan is shown in Figure 4.

Trip Generation

The anticipated trip generation for the proposed project was estimated using standard rates published by the Institute of Transportation Engineers (ITE) in *Trip Generation Manual*, 10th Edition, 2017 for "Multifamily Housing (Mid-Rise)" (LU #221) since the residential buildings would be three stories tall. Based on application of these rates, the proposed project would be expected to result in 1,583 daily trips on average, including 105 trips during the weekday a.m. peak hour and 128 trips during the p.m. peak hour; these results are shown in Table 5.

Table 5 – Trip Generation Summary											
Land Use	**Units**	**Daily**		**AM Peak Hour**				**PM Peak Hour**			
		Rate	**Trips**	**Rate**	**Trips**	**In**	**Out**	**Rate**	**Trips**	**In**	**Out**
Multifamily Housing (Mid-Rise)	291 du	5.44	1583	0.36	105	27	78	0.44	128	78	50

Note: du = dwelling unit

Trip Distribution

The pattern used to allocate new project trips to the street network was determined based on familiarity with the area and surrounding region as well as likely origins and destinations for residents of the project. It is noted that,

Source: WHA Architects 05/2020 aca022.ai 7/20

Traffic Impact Study for the Oat Hill Multi-Family Housing Project

Figure 4 – Site Plan

as discussed with staff, the distribution of trips along Theresa Drive is higher during the evening peak hour than the morning consistent with existing travel patterns. The applied distribution assumptions and resulting trips are shown in Table 6. Project traffic volumes and trip distribution assumptions are shown in Figure 5.

Table 6 – Trip Distribution Assumptions

Route	AM Peak Hour		PM Peak Hour	
	Percent	Trips	Percent	Trips
To/from North on SR 29	50%	53	55%	71
To/from South on SR 29	30%	31	5%	6
To/From South on Theresa Dr	20%	21	40%	51
TOTAL	**100%**	**105**	**100%**	**128**

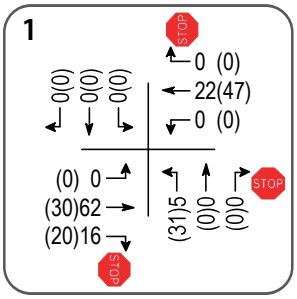
Intersection Operation

Existing plus Project Conditions

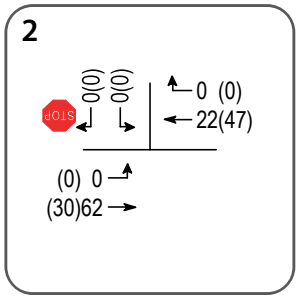
Upon the addition of project-related traffic to the Existing volumes, the study intersections are expected to continue operating at an acceptable LOS during each peak hour. These results are summarized in Table 7 and Existing plus Project traffic volumes are shown in Figure 6.

Table 7 – Existing and Existing plus Project Peak Hour Intersection Levels of Service

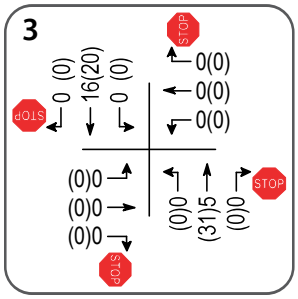
	Study Intersection *Approach*	Existing Conditions				Existing plus Project			
		AM Peak		PM Peak		AM Peak		PM Peak	
		Delay	LOS	Delay	LOS	Delay	LOS	Delay	LOS
1.	Napa Junction Rd/Theresa Ave	9.9	A	17.6	C	10.5	B	22.7	C
2.	Napa Junction Rd/Lombard Rd	2.0	A	0.8	A	1.5	A	0.7	A
	Southbound (Lombard Rd) Approach	11.9	B	14.2	B	*12.1*	*B*	*15.1*	*C*
3.	Eucalyptus Dr/Theresa Ave	10.3	B	13.6	B	10.5	B	14.5	B



Notes: Delay is measured in average seconds per vehicle; LOS = Level of Service; Results for minor approaches to two-way stop-controlled intersections are indicated in *italics*



It should be noted that with the addition of project traffic, average delay at the intersection of Napa Junction Road/Lombard Road decreases slightly during each peak hour. While this is counter-intuitive, this condition occurs when trips are added to movements that are currently underutilized or have delays that are below the intersection average, resulting in a better balance between approaches and lower overall average delay. The proposed project would add traffic solely to the eastbound and westbound through movements at this location, which have virtually no delay, so are below the average for the intersection as a whole, resulting in a slight reduction in the overall average delay. The conclusion could incorrectly be drawn that operation would improve with the project based on this data alone; however, it is more appropriate to conclude that project trips are expected to make use of excess capacity, so drivers will experience little, if any, change in conditions as a result of the project.



Finding – The study intersections are expected to continue operating acceptably upon the addition of project-generated traffic to Existing volumes.

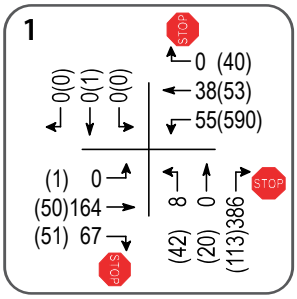
Future plus Project Conditions

Upon the addition of project-generated traffic to the anticipated Future volumes, the study intersections are expected to continue operating acceptably during both peak hours. The Future plus Project operating conditions are summarized in Table 8 and shown in Figure 7.

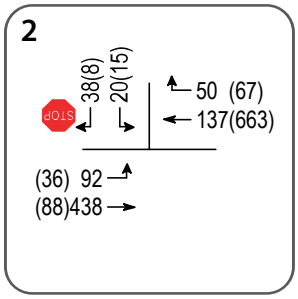
Table 8 – Future and Future plus Project Peak Hour Intersection Levels of Service

Study Intersection *Approach*		Future Conditions				Future plus Project			
		AM Peak		PM Peak		AM Peak		PM Peak	
		Delay	LOS	Delay	LOS	Delay	LOS	Delay	LOS
1.	Napa Junction Rd/Theresa Ave	9.4	A	19.8	C	10.2	B	26.8	D
2.	Napa Junction Rd/Lombard Rd	2.0	A	0.9	A	1.8	A	0.8	A
	Southbound (Lombard Rd) Approach	*11.2*	*B*	*14.7*	*B*	*11.8*	*B*	*15.7*	*C*
3.	Eucalyptus Dr/Theresa Ave	10.2	B	14.9	B	10.3	B	15.9	C

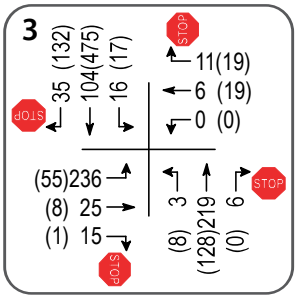
Notes: Delay is measured in average seconds per vehicle; LOS = Level of Service; Results for minor approaches to two-way stop-controlled intersections are indicated in *italics*



Although not included in the study area of this analysis, the section of SR 29 near Napa Junction Road has been documented in other analyses as operating unacceptably under Existing Conditions and is expected to worsen by the Future Condition horizon year of 2040. The *City of American Canyon – Broadway District Specific Plan Draft EIR*, First Carbon Solutions, 2017 states that there are future plans for SR 29 to have three travel lanes in each direction through American Canyon. As required by the City, the project should pay a proportional share fee toward the cost of this planned future infrastructure improvement. The proposed project would be expected to add 77 new trips to SR 29 during the critical evening peak hour. Consequently, the project should pay a fee toward the cost of the planned improvements to SR 29 based on the City's fee schedule.



Finding – The study intersections are expected to continue operating acceptably with project traffic added to Future volumes.



Recommendation – As required by the City, the project should pay a fee toward the cost of the planned future improvements to SR 29.

Vehicle Miles Traveled

Senate Bill (SB) 743 established a change in the metric to be applied for determining traffic impacts associated with development projects. Rather than the delay-based criteria associated with a Level of Service analysis, the increase in Vehicle Miles Traveled (VMT) as a result of a project will be the basis for determining impacts once this new metric is fully vetted and adopted. The City of American Canyon has not yet established thresholds of significance related to VMT, and as of the date of the preparation of this report, the Napa County travel demand model was not yet available for VMT analysis. As a result, the project-related VMT impacts were qualitatively assessed based on guidance provided by the California Governor's Office of Planning and Research (OPR) in the publication *Transportation Impacts (SB 743) CEQA Guidelines Update and Technical Advisory*, 2018.

The project site is within a walkable distance to commercial, residential, civic, and school land uses, being less than one-quarter mile from Eagle's Nest Preschool, Calvary Baptist Church, and the City of American Canyon City Hall. Also, within that distance is a bus stop at the intersection of SR 29/Napa Junction Road for Vine Transit Route 11, which serves the Vallejo Ferry Terminal. Within one-half mile of the project are a Walmart and other retail businesses. Given the general rural nature of the land use pattern throughout Napa County, it is reasonable to expect the project to have a VMT that is below the countywide average per capita based on the proximity of the project site to other land uses and connectivity to public transit.

To minimize the potential for the project to have an impact on VMT, transportation demand management (TDM) measures can be implemented to further reduce the need for vehicle travel by residents of the proposed project. The VMT associated with a development project is influenced by numerous factors, including proximity to other land uses. The publication *Quantifying Greenhouse Gas Mitigation Measures*, California Air Pollution Control Officers Association (CAPCOA), 2010 includes a review of TDM strategies that can be expected to reduce VMT in comparison with typical development practices in the area. The TDM measures described below are potential measures that would be expected to reduce VMT and are recommended for the proposed project.

Transportation Demand Management (TDM) Measures

The following section describes the recommended resident TDM program. It should be noted that although the great majority of VMT reduction can be achieved by focusing on residents alone, some TDM measures can be used by guests or visitors and can contribute in reducing impacts. Note that the measures below are supported by the Guaranteed Ride Home (GRH) program operated by Napa Valley Transportation Authority (NVTA) as part of its Vcommute platform. The GRH program helps incentivize use of alternative transportation modes for workers or college students by providing free transportation in the event of a family emergency, bicycle theft, or other circumstance which may be problematic in terms of getting home if they are relying on an alternative mode.

Unbundled Parking

Most suburban multi-family residential dwellings are built with parking spaces dedicated to a specific unit. This guarantees reserved parking for its residents, but it also incentivizes the developer to "hide" the cost of parking as part of the unit's rent or sale price and therefore residents are charged for parking whether they own vehicles or not. In addition, many parking spaces go unused in this scenario. Unbundled parking occurs when developers charge for parking separately from the price of the dwelling unit so renters and buyers can choose to opt in or out. This encourages a development with fewer parking spaces being needed to meet demand.

Transit Benefits

Transit Pass program

Vine Transit operates local and express bus service near the project site, covering the area from Napa to regional destinations including the Vallejo Ferry Terminal and the El Cerrito Del Norte BART Station. Vine Transit offers adult ride passes ranging from $29 to $120 per month. The residential management organization can purchase transit passes in bulk for all residents with the understanding that not all will choose to take transit. This encourages residents to use transit and allows the transit provider some comfort that new demand will not be overwhelming. Given the large number of passes that would need to be purchased, Vine Transit may offer a group discount.

Bicycle Benefits

Bicycle Parking and Maintenance Tools

The provision of both short-term and long-term bicycle parking is important. Secure long-term parking (e.g. bike lockers) is a critical component in encouraging residents to bike to nearby employment or recreation destinations; long-term parking areas can also be provisioned with simple tools kept on-site such as a pump and tire patches. Short-term parking (e.g. bike racks) can be used by residents or visitors and is generally an inexpensive way to accommodate travelers.

Tele-Work/Compressed Schedules

There are various terms used to describe non-standard working hours, but they all involve decreasing the number of vehicle trips to and from work. Telework (i.e. working from home) and compressed schedules (i.e. working more than eight hours each day and shortening the work week) are two of the most commonly employed. They are both effective at reducing vehicle trips to work and particularly so during peak commute hours, but it is uncertain whether they decrease the overall number of vehicle trips.

Ride-matching Program

Carpooling is one of the most common and cost-effective alternative modes of transportation and one which commuters can adopt part-time. There are numerous benefits to ridesharing. Carpooling can reduce peak-period vehicle trips and increase commuters' travel choices. It reduces congestion, road and parking facility costs and pollution emissions. Carpooling tends to have the lowest cost per passenger-mile of any motorized mode of transportation, since it makes use of a vehicle seat that would otherwise be empty. Carpooling also provides the consumer financial savings by decreasing fuel and parking costs.

The greatest barrier to carpooling is often simply being able to identify and travel with other nearby commuters. Fortunately, there are many services that can assist in pairing individuals within the same community. The most basic publicly available service is 511.org's free ride-matching service.

Education, Outreach and Marketing

Transportation Coordinator

The presence of a part-time staff person dedicated to overseeing and managing the resident and visitor TDM program will be very helpful in ensuring the ongoing success of these programs. This does not need to be a distinct position but can be a role that is integrated into the on-site manager. The duties can include:

- Create and distribute resident transportation information welcome packets
- Maintain and update the transportation information kiosk board

DRAFT

- Distribute Napa Bicycle Coalition maps
- Monitor bicycle parking to ensure that there is sufficient space
- Assist in selling or distributing transit passes
- Market the TDM program and transit service
- Advertise the unbundled parking program
- Promote 511.org's ride-matching program

Welcome Packet for New Residents

New residents should be provided with a welcome packet containing relevant transportation information. The packet could include maps and information from Vine Transit, the Napa County Bicycle Coalition and material regarding 511.org ride-matching services.

Monitor Performance

It is important to continually monitor the performance of a TDM program and adjust measures as necessary to ensure its success. The resident management organization should conduct mode split and vehicle miles traveled (VMT) surveys each year both to determine if adjustments are needed and to use as marketing material. Resident satisfaction surveys are also an effective way of ensuring a quality TDM program.

Finding – The project could reasonably be expected to have a less-than-significant transportation impact on vehicle miles traveled with implementation of appropriate TDM measures.

Recommendation – The project should incorporate TDM measures identified in this report such as unbundled parking, transit passes, secure bicycle parking, and educational materials.

DRAFT

Alternative Modes

Pedestrian Facilities

Given the proximity of the project site to City Hall, transit, and the commercial uses on the east side of SR 29, it is reasonable to assume that some residents will want to walk, bicycle, and/or use transit for trips from and to the project site. Sidewalks do not currently exist along the project frontage on Napa Junction Road so it is recommended that one be installed along the entirety of the project frontage. Additionally, a sidewalk or paved pathway should be provided on the new section of Napa Junction Road between the project site and the existing sidewalk about 100 feet west of the school crossing. With these improvements, the project site would be connected to the surrounding pedestrian network.

Finding – Pedestrian facilities serving the project site are not currently adequate.

Recommendation – The proposed project should include construction of sidewalk along the project frontage and a connection to the existing sidewalk on the south side of Napa Junction Road near the school crossing.

Bicycle Facilities

Shared use of minor streets and sidewalks in the area provide adequate access for bicyclists, though due to the steep slope of the section of Napa Junction Road that provides access to the site bicycle trips are expected to be minimal.

Bicycle Storage

The *American Canyon Municipal Code*, Chapter 19.21.050, bicycle parking does not identify standards for residential uses. The proposed project site plan does not include bicycle parking spaces though it is anticipated that residents would have space to store their bicycles either in the dwelling units or other on-site spaces.

Finding – Bicycle facilities serving the project site are generally adequate, though space should be provided for bicycles to be stored on-site.

Recommendation – Space for bicycle storage should be provided either on balconies or other outside spaces dedicated to each housing unit, in garages or other storage spaces for each unit, or through provision of bike racks.

Transit

Existing transit routes are adequate to accommodate any project-generated transit trips that may occur. With the Napa Junction Road connection, the project site would be within acceptable walking distance of the transit stop at City Hall and this connection would be adequate upon provision of a sidewalk.

Finding – Transit facilities serving the project site will be adequate with the completion of a sidewalk connection.

DRAFT

Access and Circulation

Site Access

The project site would be accessible from two new connections to Napa Junction Road, one approximately 200 feet west of Hess Road and the other from the cul-de-sac at the western terminus of the roadway. With the project, a new section of Napa Junction Road would be constructed between the two disconnected segments east and west of Hess Road.

Emergency Access

An emergency vehicle access connection would link the two parcels so that residents of one parcel would be able to use the other parcel's connection to Napa Junction Road should their driveway be compromised in an emergency situation. All interior drive aisles and parking stalls should be designed to comply with City design standards and on-site circulation is therefore expected to function acceptably for emergency response vehicles. It should also be noted that the new connection of Napa Junction Road would result in a more direct route to the project site from SR 29 and other areas of the City so emergency response times to the section of Napa Junction Road west of Hess Road would be improved over existing conditions wherein vehicles have to loop around the little league fields using Lombard Road and Hess Road.

Finding – Access for emergency vehicles is expected to be adequate.

Recommendation – The parking lot and drive aisles should be designed to comply with City design standards.

DRAFT

CEQA Checklist

This section details discussion and results of the CEQA checklist for potential transportation/traffic impacts. The results are contained in Table 9 below and a discussion of each criterion follows.

Table 9 – XVII. TRANSPORTATION/TRAFFIC

Would the Project:	Potentially Significant Impact	Less than Significant Impact with Mitigation	Less than Significant Impact	No Impact
a) Conflict with a program, plan, ordinance or policy addressing the circulation system, including transit, roadway, bicycle and pedestrian facilities?		X		
b) Conflict or be inconsistent with CEQA Guidelines § 15064.3, subdivision (b)?		X		
c) Substantially increase hazards due to a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment)?			X	
d) Result in inadequate emergency access?			X	

Discussion of Results

a. Would the Project conflict with a program, plan, ordinance or policy addressing the circulation system, including transit, roadway, bicycle and pedestrian facilities?

According to the *City of American Canyon General Plan*, numerous objectives, policies and programs have been established supporting the need for all modes of travel to be accommodated by the transportation system. This is demonstrated through General Plan Guiding Policies 1.6, 1.9, 1.11, 2.1, and 3.1

- **Policy 1.6 Achieve and maintain a Multimodal LOS D or better for roadways and intersections during peak hours where possible and as long as possible.** The locations that may not achieve or maintain LOS D are as follows and will be exempt from the LOS D policy: State Route 29 through the City, American Canyon Road from SR 29 to Flosden Road-Newell Drive, and Flosden Road south of American Canyon Road.
- **Policy 1.9 Use of existing facilities.** Make efficient use of existing transportation facilities and improve these facilities as necessary in accordance with the Circulation Map.
- **Policy 1.11 Reduce Vehicle Miles Traveled.** Through layout of land uses, improved alternate modes, and provision of more direct routes, strive to reduce the total vehicle miles traveled by City residents.
- **Policy 2.1 Promote walking and bicycling.** Promote walking and bike riding for transportation,
- recreation, and improvement of public and environmental health.
- **Policy 3.1 Promote safe, efficient, and convenient public transportation.** Promote the use of public transportation for daily trips, including to schools and workplaces, as well as other purposes.

Roadway Facilities

The proposed project would not cause any study intersections to operate below the City's standard of LOS D. The project's roadway impacts would therefore be *less than significant*, and no mitigation measures are required.

Pedestrian Facilities

The proposed project includes pedestrian connectivity infrastructure on-site. The community loop trail and pedestrian paths provide access to all housing units and promote walking, though the provision of a sidewalk along the project frontage with Napa Junction Road is not identified on the site plan. This would restrict pedestrian access to the surrounding civic and commercial uses to the east and would be considered a *significant* impact. Therefore, as mitigation it is recommended that the project include constructing a sidewalk along the project frontage on Napa Junction Road and a pedestrian path or sidewalk between the project site and the existing terminus of the sidewalk on the south side of Napa Junction Road near the elementary school crossing. With these mitigation measures, pedestrian impacts would be reduced to *less than significant.*

Bicycle Facilities

Shared use of minor streets provides adequate access for bicyclists, though due to the steep slope of the section of Napa Junction Road that provides access to the site bicycle trips are expected to be minimal. In addition, future bicycle facilities near the project site have been identified in City and regional plans, which would improve future circulation for bicyclists. Therefore, bicycle impacts would be *less than significant.*

Transit Facilities

The American Canyon Transit (VINE) provides fixed route bus service in American Canyon. ACT has two morning and afternoon routes that stop at American Canyon City Hall, approximately 0.20 miles from the project site. Existing service is expected to be adequate to accommodate demand and transit impacts would therefore be *less than significant* upon implementation of the pedestrian facility measures identified above.

b. Would the Project conflict or be inconsistent with CEQA Guidelines § 15064.3, subdivision (b)?

CEQA Guidelines §15064.3, Subdivision (b) indicates that land use projects would have a significant impact if the project resulted in vehicle miles traveled (VMT) exceeding an applicable threshold of significance. It further notes that if existing models or methods are not available to estimate the VMT for the project being considered, a lead agency may analyze the project's VMT qualitatively. The City of American Canyon currently has no thresholds of significance related to VMT, and as of the date of the analysis, a regional travel demand model for Napa County is under development but not yet available for VMT analysis so the project was assessed qualitatively and TDM measures were recommended that would be expected to reduce any potential VMT impact to *less than significant*.

Given the general rural nature of the land use pattern throughout Napa County, it is reasonable to expect the project to have a VMT that is below the countywide average per capita based on the proximity of the project site to surrounding commercial and civic land uses and connectivity to public transit. To minimize the potential for the project to have an impact on VMT, the following transportation demand management (TDM) measures are recommended.

- Unbundled Parking
- Free Transit Passes
- Secure Bicycle Parking and Maintenance Tools

- Tele-Work/Compressed Schedules
- Carpooling and Ride-matching Program
- Transportation Coordinator
- Welcome Packet for New Residents
- Monitoring of Program Performance

c. *Would the Project substantially increase hazards due to a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment)?*

As part of the project, a new segment of Napa Junction Road would be constructed resulting in a continuous section of roadway running between SR 29 and the existing terminus west of the project site. The project itself as well as the new segment of roadway would be designed and constructed to meet currently applicable codes and requirements, so would not be expected to result in any increased hazards. The project is therefore expected to have a *less-than-significant* impact regarding geometric design features or incompatible uses.

d. *Would the Project result in inadequate emergency access?*

The project site would have adequate emergency access and would improve emergency access and response times to the section of Napa Junction Road west of Hess Road with the provision of a new street connection; therefore, the project would result in a *less-than-significant* and in fact beneficial impact related to emergency access.

DRAFT

Conclusions and Recommendations

Conclusions

- The proposed project would be expected to generate 1,583 daily trips on average, including 105 trips during the weekday a.m. peak hour and 128 trips during the p.m. peak hour.
- Under Existing Conditions all study intersections operate acceptably and they are expected to continue doing so upon the addition of project-related traffic.
- Under the anticipated Future volumes, the study intersections are expected to operate acceptably without or with the addition of project-related traffic.
- The project would be expected to have a *less-than-significant* transportation impact on vehicle miles traveled (VMT) with implementation of TDM measures.
- The shared use of minor streets along with the planned facilities outlined in the *Napa Countywide Bicycle Plan* would provide adequate access for bicyclists, though the project site plan does not identify the provision of bike parking.
- Pedestrian facilities serving the project site are not currently adequate.
- Transit facilities serving the project site are adequate.
- Access for emergency response vehicles is expected to be adequate and response times would be improved over existing conditions.

Recommendations

- As required by the City, the project should pay a fee toward the cost of the planned future improvements to SR 29.
- The project should incorporate TDM measures identified in this report such as unbundled parking, transit passes, secure bicycle parking, and educational materials.
- The project should include constructing a sidewalk along the project frontage on Napa Junction Road and a making connection to the existing sidewalk on the south side of street near the school crossing.
- Secure bicycle storage should be provided, if not already planned as part of on-site amenities.

Executive Summary

The proposed Oat Hill Multi-Family project would include construction of 291 housing units near the terminus of Napa Junction Road in the City of American Canyon. The project would be expected to generate an average of 1,583 new trips per day, including 105 trips during the weekday a.m. peak hour and 128 trips during the p.m. peak hour.

The project would be expected to have a *less-than-significant* transportation impact on vehicle miles traveled (VMT) with implementation of TDM measures identified in this report such as unbundled parking, transit passes, secure bicycle parking, and educational materials.

The study area for the operational analysis includes the intersections of Napa Junction Road/Theresa Avenue, Napa Junction Road/Lombard Road, Eucalyptus Drive/Theresa Avenue, and SR 29/Napa Junction Road. Analysis indicates that these intersections operate acceptably under Existing Conditions and would continue to do so under Future Conditions and upon the addition of project-related traffic volumes. While SR 29/Napa Junction Road would operate at LOS F under Future Conditions without or with the project, this operation was considered acceptable since the intersection is exempt from the City's LOS standard and Caltrans has no operational standard. As required by the City, the project should pay a fee toward the cost of the planned future improvements to SR 29 to address cumulative effects of project traffic.

As proposed, the project site would be accessible from two new connections to Napa Junction Road, one approximately 200 feet west of Hess Road and the other from the cul-de-sac at the western terminus of the roadway. With the project, a new section of Napa Junction Road would be constructed between the two disconnected segments east and west of Hess Road. All interior drive aisles and parking stalls as well as the new section of roadway should be designed to comply with City design standards and on-site circulation and site access is therefore expected to function acceptably for emergency response vehicles. The new connection of Napa Junction Road would result in a more direct route to the project site from SR 29 and other areas of the City so emergency response times to the section of Napa Junction Road west of Hess Road would be improved over existing conditions wherein vehicles have to loop around the little league fields using Lombard Road and Hess Road.

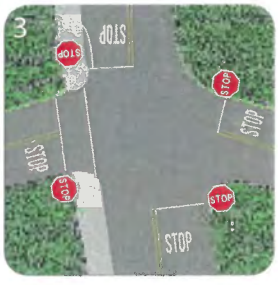
Access for pedestrians is not currently adequate as a sidewalk is missing along the project frontage with Napa Junction Road. The project would include construction of sidewalk along the project frontage and it is recommended that a connection be made to the existing sidewalk on the south side of Napa Junction Road near the school crossing. Transit facilities serving the site will be adequate with completion of the sidewalk connection so that a dedicated path of travel is provided between the site and the transit stops near City Hall. Bicycle facilities serving the project site are generally adequate, though space should be provided for bicycles to be stored on-site.

Introduction

This report presents an analysis of the potential traffic impacts that would be associated with development of a proposed multifamily housing project to be located at the terminus of Napa Junction Road in the City of American Canyon. The traffic study was completed in accordance with the criteria established by the City of American Canyon, reflects a scope of work approved by City staff, and is consistent with standard traffic engineering techniques.

Prelude

The purpose of a traffic impact study is to provide City staff and policy makers with data that they can use to make an informed decision regarding the potential traffic impacts of a proposed project, and any associated improvements that would be required in order to mitigate these impacts to an acceptable level under CEQA, the City's General Plan, or other policies. Impacts relative to access for pedestrians, bicyclists, and to transit are addressed in the context of the CEQA criteria. Consistent with SB 743, the project's transportation impacts were analyzed using VMT. While no longer a part of the CEQA review process, vehicular traffic service levels at key intersections were evaluated for consistency with General Plan policies by determining the number of new trips that the proposed use would be expected to generate, distributing these trips to the surrounding street system based on anticipated travel patterns specific to the proposed project, then analyzing the impact the new traffic would be expected to have on the study intersections.



Project Profile

The proposed project includes multifamily housing to be located near the terminus of Napa Junction Road in the City of American Canyon. As proposed, the project includes 291 one-, two-, and three-bedroom units. As part of the project, the two existing segments of Napa Junction Road east and west of Hess Road would be connected near the southwest corner of the Napa Junction Magnet Elementary School site. The project would be accessed from two new driveways on Napa Junction Road to the west of Hess Road. The location of the project site is shown in Figure 1.

Traffic Impact Study for the Oat Hill Multi-Family Housing Project

Figure 1 – Study Area and Existing Lane Configurations

W-Trans

Transportation Setting

Operational Analysis

Study Area and Periods

The study area, which was selected in consultation with City staff, consists of the section of Napa Junction Road providing access to the project site and the project access points as well as the following intersections:

1. Napa Junction Road/Theresa Avenue
2. Napa Junction Road/Lombard Road
3. Eucalyptus Drive/Theresa Avenue
4. SR 29/Napa Junction Road

Operating conditions during the weekday a.m. and p.m. peak periods were evaluated to capture the highest potential impacts for the proposed project as well as the highest volumes on the local transportation network. The morning peak hour occurs between 7:00 and 9:00 a.m. and reflects conditions during the home to work or school commute, while the p.m. peak hour occurs between 4:00 and 6:00 p.m. and typically reflects the highest level of congestion during the homeward bound commute.

Study Intersections

Napa Junction Road/Theresa Avenue is an all-way stop-controlled four-legged intersection with the Napa Junction Magnet Elementary School's driveway being slightly offset from the intersection as the north leg. There is a crosswalk on the south leg and a marked crossing on Napa Junction Road approximately 100 feet west of the center of the intersection.

Napa Junction Road/Lombard Road is a tee intersection with stop control on the southbound Lombard Road approach. There are no crosswalks.

Eucalyptus Drive/Theresa Avenue is an all-way stop-controlled intersection with a crosswalk on the west leg.

SR 29/Napa Junction Road is a four-legged signalized intersection. Each approach has protected left-turn phasing. There are crosswalks on the east and south legs.

The locations of the study intersections and the existing lane configurations and controls are shown in Figure 1.

Alternative Modes

Pedestrian Facilities

Pedestrian facilities include sidewalks, crosswalks, pedestrian signal phases, curb ramps, curb extensions, and various streetscape amenities such as lighting, benches, etc. In general, sidewalk coverage is limited in the surrounding vicinity, but connectivity to points of interest is provided.

Napa Junction Road – Sidewalk is provided on the south side of the street between SR 29 and about 100 feet west of Theresa Avenue, but there are large gaps in sidewalk coverage on the north side of Napa Junction Road.

Theresa Avenue – Continuous sidewalk is provided on the west side of Theresa Avenue from Eucalyptus Drive to Napa Junction Road. No sidewalk is provided on the east side of the street.

Bicycle Facilities

The *Highway Design Manual*, Caltrans, 2017, classifies bikeways into four categories:

- **Class I Multi-Use Path** – a completely separated right-of-way for the exclusive use of bicycles and pedestrians with cross flows of motorized traffic minimized.
- **Class II Bike Lane** – a striped and signed lane for one-way bike travel on a street or highway.
- **Class III Bike Route** – signing only for shared use with motor vehicles within the same travel lane on a street or highway.
- **Class IV Bikeway** – also known as a separated bikeway, a Class IV Bikeway is for the exclusive use of bicycles and includes a separation between the bikeway and the motor vehicle traffic lane. The separation may include, but is not limited to, grade separation, flexible posts, inflexible physical barriers, or on-street parking.

Bicyclists ride in the roadway and/or on sidewalks along all streets within the project study area as there are no existing dedicated bike facilities, though there are plans to provide numerous facilities in the vicinity including Class I trails and Class II bike lanes. Table 1 summarizes the planned bicycle facilities in the project vicinity, as contained in the *Napa Countywide Bicycle Plan*, Napa Valley Transportation Authority, 2019.

Table 1 – Planned Bicycle Facilities Summary

Facility	Class	Length (miles)	Begin Point	End Point
Bay Area Ridge Trail	I	0.80	Wetlands Edge Rd	Theresa Ave
Vine Trail	I	1.06	Donaldson Way	Paoli Rd
Napa Junction Rd	II	0.35	Theresa Ave	End of Roadway
Lombard Rd	II	0.31	End of Roadway	Napa Junction Rd
Theresa Ave	II	0.30	Napa Junction Rd	Eucalyptus Dr

Source: *Napa Countywide Bicycle Plan*, Napa Valley Transportation Authority, 2019

Transit Facilities

The American Canyon Transit (VINE) provides fixed route bus service in American Canyon. ACT has two morning and afternoon routes that stop at American Canyon City Hall, which would be approximately 0.20 miles from the project site upon the extension of Napa Junction Road. The route that stops at City Hall provides loop service to destinations throughout the City.

Two bicycles can be carried on most VINE buses. Bike rack space is on a first come, first served basis. Additional bicycles are allowed on VINE buses at the discretion of the driver.

Dial-a-ride, also known as paratransit, or door-to-door service, is available for those who are unable to independently use the transit system due to a physical or mental disability. VINE Paratransit is designed to serve the needs of individuals with disabilities within City of American Canyon and the greater City of American Canyon area.

Capacity Analysis

Intersection Level of Service Methodologies

Level of Service (LOS) is used to rank traffic operation on various types of facilities based on traffic volumes and roadway capacity using a series of letter designations ranging from A to F. Generally, Level of Service A represents free flow conditions and Level of Service F represents forced flow or breakdown conditions. A unit of measure that indicates a level of delay generally accompanies the LOS designation.

The study intersections were analyzed using methodologies published in the *Highway Capacity Manual* (HCM), 6th Edition, Transportation Research Board, 2018. This source contains methodologies for various types of intersection control, all of which are related to a measurement of delay in average number of seconds per vehicle.

The Levels of Service for the intersection of Napa Junction Road/Lombard Road, which is stop-controlled on the side-street approach, were analyzed using the "Two-Way Stop-Controlled" intersection capacity method from the HCM. This methodology determines a level of service for each minor turning movement by estimating the level of average delay in seconds per vehicle. Results are presented for individual approaches together with the weighted overall average delay for the intersection.

The study intersections that have stop signs on all approaches and were analyzed using the "All-Way Stop-Controlled" Intersection methodology from the HCM. This methodology evaluates delay for each approach based on turning movements, opposing and conflicting traffic volumes, and the number of lanes. Average vehicle delay is computed for the intersection as a whole and then related to a Level of Service.

The study intersection of SR 29/Napa Junction Road was evaluated using the signalized methodology from the HCM. This methodology is based on factors including traffic volumes, green time for each movement, phasing, whether the signals are coordinated or not, truck traffic, and pedestrian activity. Average stopped delay per vehicle in seconds is used as the basis for evaluation in this LOS methodology. For purposes of this study, delays were calculated using signal timing obtained from Caltrans.

The ranges of delay associated with the various levels of service are indicated in Table 2.

Table 2 – Intersection Level of Service Criteria			
LOS	**Two-Way Stop-Controlled**	**All-Way Stop-Controlled**	**Signalized**
A	Delay of 0 to 10 seconds. Gaps in traffic are readily available for drivers exiting the minor street.	Delay of 0 to 10 seconds. Upon stopping, drivers are immediately able to proceed.	Delay of 0 to 10 seconds. Most vehicles arrive during the green phase, so do not stop at all.
B	Delay of 10 to 15 seconds. Gaps in traffic are somewhat less readily available than with LOS A, but no queuing occurs on the minor street.	Delay of 10 to 15 seconds. Drivers may wait for one or two vehicles to clear the intersection before proceeding from a stop.	Delay of 10 to 20 seconds. More vehicles stop than with LOS A, but many drivers still do not have to stop.
C	Delay of 15 to 25 seconds. Acceptable gaps in traffic are less frequent, and drivers may approach while another vehicle is already waiting to exit the side street.	Delay of 15 to 25 seconds. Drivers will enter a queue of one or two vehicles on the same approach and wait for vehicle to clear from one or more approaches prior to entering the intersection.	Delay of 20 to 35 seconds. The number of vehicles stopping is significant, although many still pass through without stopping.
D	Delay of 25 to 35 seconds. There are fewer acceptable gaps in traffic, and drivers may enter a queue of one or two vehicles on the side street.	Delay of 25 to 35 seconds. Queues of more than two vehicles are encountered on one or more approaches.	Delay of 35 to 55 seconds. The influence of congestion is noticeable, and most vehicles have to stop.
E	Delay of 35 to 50 seconds. Few acceptable gaps in traffic are available, and longer queues may form on the side street.	Delay of 35 to 50 seconds. Longer queues are encountered on more than one approach to the intersection.	Delay of 55 to 80 seconds. Most, if not all, vehicles must stop, and drivers consider the delay excessive.
F	Delay of more than 50 seconds. Drivers may wait for long periods before there is an acceptable gap in traffic for exiting the side streets, creating long queues.	Delay of more than 50 seconds. Drivers enter long queues on all approaches.	Delay of more than 80 seconds. Vehicles may wait through more than one cycle to clear the intersection.

Reference: *Highway Capacity Manual*, 6th Edition, Transportation Research Board, 2018

Traffic Operation Standards

City of American Canyon

The *City of American Canyon General Plan Circulation Element* specifies minimum level-of-service standards for all streets and intersections in the City's jurisdiction. In section 4.1.6, the City establishes the following performance standards for acceptable LOS:

Achieve and maintain a Multimodal LOS D or better for roadways and intersections during peak hours where possible for as long as possible. However, recognizing that LOS D may not be achievable or cannot be maintained upon full buildout of the General Plan, due to traffic generated from sources beyond control of the City, the City Council shall have the discretion to only require feasible mitigation measures that may not achieve LOS D, but will reduce the impact of any development use or VMT planned for in the Land Use Element of the General Plan.

The locations that may not achieve or maintain LOS D are as follows and will be exempt from the LOS D policy:

- State Route 29 through the City
- American Canyon Road from SR 29 to Flosden Road-Newell Drive
- Flosden Road south of American Canyon Road

Caltrans

The study intersection of SR 29/Napa Junction Road is located on the State Transportation Network (STN) and is therefore under jurisdiction of Caltrans, though Caltrans does not have a standard of significance relative to operation as this is no longer a CEQA issue. The new *Vehicle Miles Traveled-Focused Transportation Impact Study Guide* (TISG), published in May 2020, replaced the *Guide for the Preparation of Traffic Impact Studies*, 2002. As indicated in the TISG, the Department is transitioning away from requesting LOS or other vehicle operations analyses of land use projects and will instead focus on Vehicle Miles Traveled (VMT).

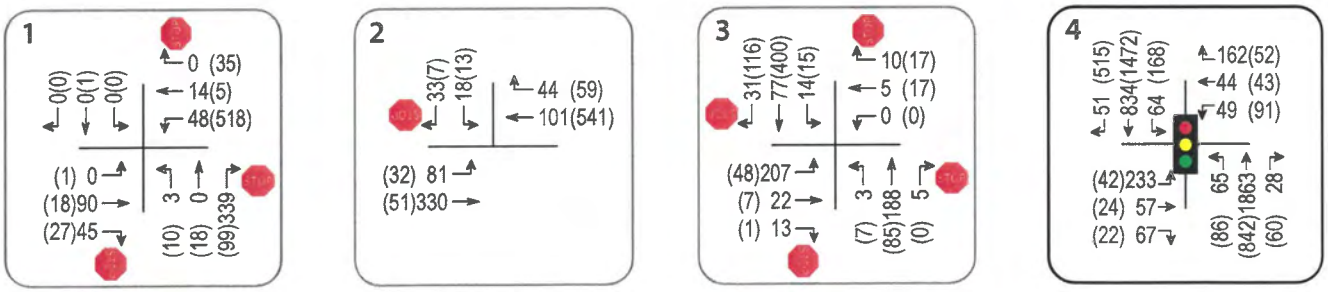
Existing Conditions

The Existing Conditions scenario provides an evaluation of current operation based on existing traffic volumes during the a.m. and p.m. peak periods. This condition does not include project-generated traffic volumes. Volume data was collected on May 29, 2019 during typical traffic conditions while the Napa Junction Magnet Elementary School was in session. It is noted that because this school will be closed in the Fall of 2020 and the students moved to a new school on Eucalyptus Drive, trips associated with movements to and from the school were eliminated from the counts to reflect the pre-project Existing Conditions.

Intersection Levels of Service

Under Existing Conditions, all intersections operate acceptably during both peak periods. A summary of the intersection level of service calculations is contained in Table 3, and copies of the Level of Service calculations for all evaluated scenarios are provided in Appendix A. The Existing traffic volumes are shown in Figure 2.

Table 3 – Existing Peak Hour Intersection Levels of Service



Study Intersection *Approach*	AM Peak		PM Peak	
	Delay	LOS	Delay	LOS
1. Napa Junction Rd/Theresa Ave	9.9	A	17.6	C
2. Napa Junction Rd/Lombard Rd	2.0	A	0.8	A
Southbound (Lombard Rd) Approach	*11.9*	*B*	*14.2*	*B*
3. Eucalyptus Dr/Theresa Ave	10.3	B	13.6	B
4. SR 29/Napa Junction Rd	42.5	D	30.2	C

Notes: Delay is measured in average seconds per vehicle; LOS = Level of Service; Results for minor approaches to two-way stop-controlled intersections are indicated in *italics*

Future Conditions

Future peak hour volumes for the intersection of SR 29/Napa Junction Road were developed based on projections contained in the build-out analysis that was prepared for the *Napa Junction III Transportation Impact Analysis Report*; this scenario represents cumulative traffic conditions that would be expected upon build-out of the land uses identified in the *City of American Canyon General Plan*. Although some of the anticipated development included in this previous effort may already be complete and occupied, to provide a conservative estimate of

Traffic Impact Study for the Oat Hill Multi-Family Housing Project

Figure 2 – Existing Traffic Volumes

W-Trans

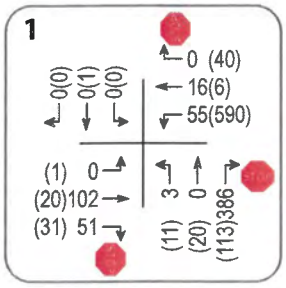
future operations, the incremental increase in trips associated with build-out of the City of American Canyon under its current General Plan was added to existing volumes in order to determine Future operating conditions without the project.

Because the west side of SR 29 is nearly already built out, so would be expected to experience considerably less of an increase in traffic compared to either SR 29 or the northeast part of the City, a growth rate of one-percent per year was used to develop future peak hour volumes for the remaining three study intersections, all of which are located in the west part of the City that is nearly fully developed.

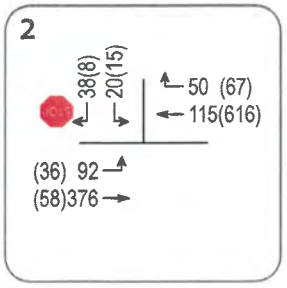
Intersection Levels of Service

Under the anticipated Future volumes, the study intersections are expected to operate at LOS C or better during both peak hours, except for SR 29/Napa Junction Road. Future volumes are shown in Figure 3 and operating conditions are summarized in Table 4.

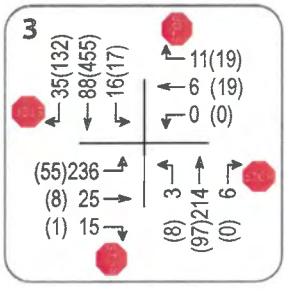
Table 4 – Future Peak Hour Intersection Levels of Service



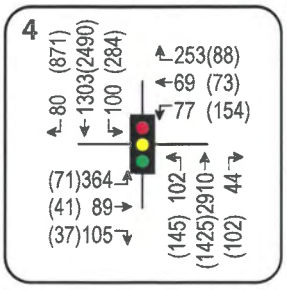
Study Intersection *Approach*	AM Peak		PM Peak	
	Delay	LOS	Delay	LOS
1. Napa Junction Rd/Theresa Ave	9.4	A	19.8	C
2. Napa Junction Rd/Lombard Rd	2.0	A	0.9	A
Southbound (Lombard Rd) Approach	*11.2*	*B*	*14.7*	*B*
3. Theresa Ave/Eucalyptus Dr	10.2	B	14.9	B
4. SR 29/Napa Junction Rd	157.6	F	83.7	F



Notes: Delay is measured in average seconds per vehicle; LOS = Level of Service; Results for minor approaches to two-way stop-controlled intersections are indicated in *italics*



It should be noted that the average delays under Future Conditions are lower than Existing Conditions for all intersections during the a.m. peak hour, except for SR 29/Napa Junction Road. This is because a peak hour factor (PHF) of 0.80 was used in the Existing Conditions scenario to reflect morning traffic generated by Napa Junction Magnet Elementary School while a PHF of 1.0 was used for the Future Conditions scenario as volumes are generally expected to "flatten out" as volumes increase over time and because the traffic associated with the elementary school that caused the low PHF will be going to a different site. The difference between these factors results in analysis volumes (or those derived from application of the PHF) that are higher for Existing Conditions than Future Conditions; therefore, the average delays are lower even though the base Future volumes are higher than the base Existing volumes.



While the intersection of SR 29/Napa Junction Road is projected to operate at LOS F during each peak hour, this operation was considered acceptable since SR 29 is exempt from the City's LOS standard. The *City of American Canyon – Broadway District Specific Plan Draft EIR*, First Carbon Solutions, 2017, states that there are future plans for SR 29 to have three through lanes in each direction through American Canyon. Because funding has not been identified for this capacity enhancement, it was conservatively assumed that the current configuration with only two through lanes in each direction would remain, and this configuration was used for the analysis. The EIR did not include an analysis of future 2040 conditions; however, under near-term projected volumes, even with the additional lanes SR 29/Napa Junction Road is still projected to operate at LOS F.

Traffic Impact Study for the Oat Hill Multi-Family Housing Project

Figure 3 – Future Traffic Volumes

W-Trans

Project Description

The proposed project includes multifamily housing to be located near the terminus of Napa Junction Road in the City of American Canyon. As proposed, the project includes 291 one-, two-, and three-bedroom housing units. The project would be accessed from two driveways on an existing segment of Napa Junction Road west of Hess Road. As part of the project, a new segment of Napa Junction Road would be constructed resulting in a continuous section of roadway running between SR 29 and the existing terminus west of the site. The proposed project site plan is shown in Figure 4.

Trip Generation

The anticipated trip generation for the proposed project was estimated using standard rates published by the Institute of Transportation Engineers (ITE) in *Trip Generation Manual*, 10th Edition, 2017 for "Multifamily Housing (Mid-Rise)" (LU #221) since the residential buildings would be three stories tall. Based on application of these rates, the proposed project would be expected to result in 1,583 daily trips on average, including 105 trips during the weekday a.m. peak hour and 128 trips during the p.m. peak hour; these results are shown in Table 5.

Table 5 – Trip Generation Summary

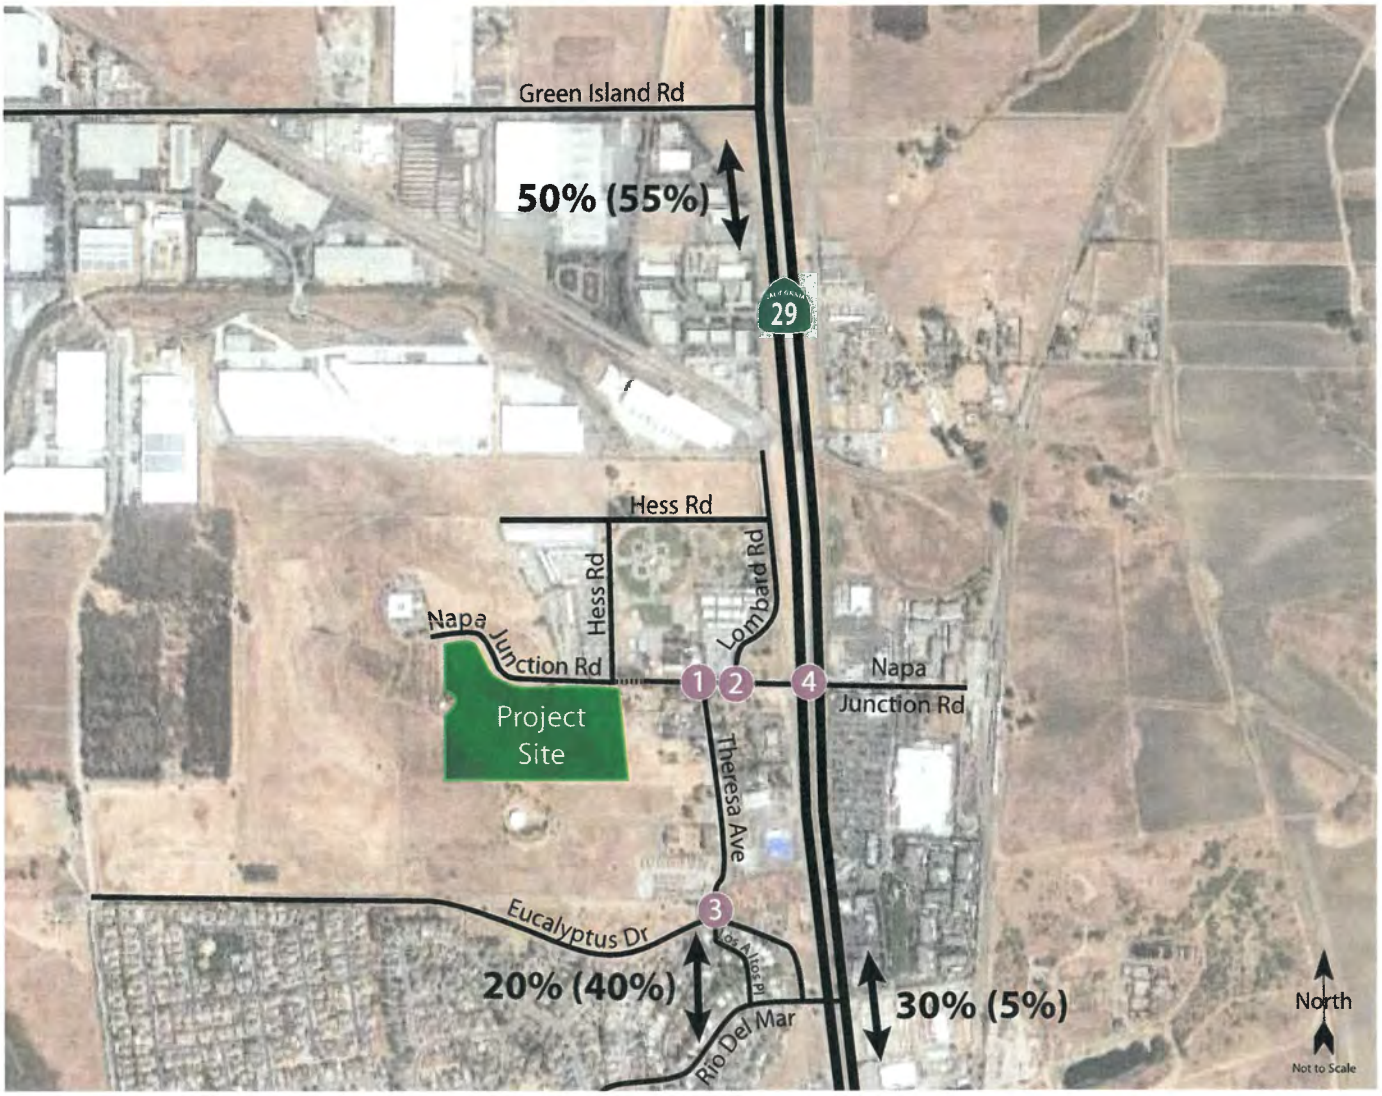
Land Use	Units	Daily		AM Peak Hour				PM Peak Hour			
		Rate	Trips	Rate	Trips	In	Out	Rate	Trips	In	Out
Multifamily Housing (Mid-Rise)	291 du	5.44	1583	0.36	105	27	78	0.44	128	78	50

Note: du = dwelling unit

Trip Distribution

The pattern used to allocate new project trips to the street network was determined based on familiarity with the area and surrounding region as well as likely origins and destinations for residents of the project. It is noted that, as discussed with staff, the distribution of trips along Theresa Drive is higher during the evening peak hour than the morning consistent with existing travel patterns. The applied distribution assumptions and resulting trips are shown in Table 6. Project traffic volumes and trip distribution assumptions are shown in Figure 5.

Table 6 – Trip Distribution Assumptions



Route	AM Peak Hour		PM Peak Hour	
	Percent	Trips	Percent	Trips
To/from North on SR 29	50%	53	55%	71
To/from South on SR 29	30%	31	5%	6
To/From South on Theresa Dr	20%	21	40%	51
TOTAL	**100%**	**105**	**100%**	**128**

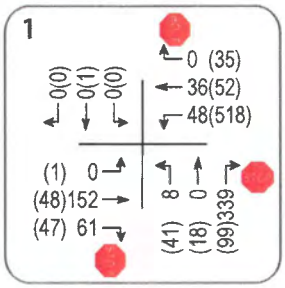
Figure 5 – Project Traffic Volumes and Trip Distribution

Intersection Operation

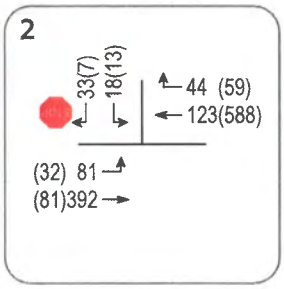
Existing plus Project Conditions

Upon the addition of project-related traffic to the Existing volumes, the study intersections are expected to continue operating at an acceptable LOS during each peak hour. These results are summarized in Table 7 and Existing plus Project traffic volumes are shown in Figure 6.

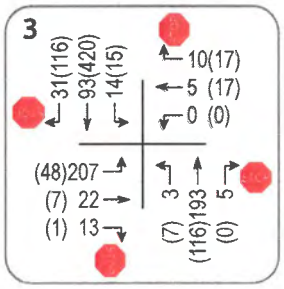
Table 7 – Existing and Existing plus Project Peak Hour Intersection Levels of Service



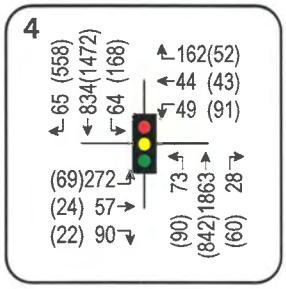
Study Intersection *Approach*	Existing Conditions				Existing plus Project			
	AM Peak		PM Peak		AM Peak		PM Peak	
	Delay	LOS	Delay	LOS	Delay	LOS	Delay	LOS
1. Napa Junction Rd/Theresa Ave	9.9	A	17.6	C	10.5	B	22.7	C
2. Napa Junction Rd/Lombard Rd	2.0	A	0.8	A	1.5	A	0.7	A
Southbound (Lombard Rd) Approach	11.9	B	14.2	B	*12.1*	*B*	*15.1*	*C*
3. Eucalyptus Dr/Theresa Ave	10.3	B	13.6	B	10.5	B	14.5	B
4. SR 29/Napa Junction Rd	42.5	D	30.2	C	50.4	D	30.7	C



Notes: Delay is measured in average seconds per vehicle; LOS = Level of Service; Results for minor approaches to two-way stop-controlled intersections are indicated in *italics*



It should be noted that with the addition of project traffic, average delay at the intersection of Napa Junction Road/Lombard Road decreases slightly during each peak hour. While this is counter-intuitive, this condition occurs when trips are added to movements that are currently underutilized or have delays that are below the intersection average, resulting in a better balance between approaches and lower overall average delay. The proposed project would add traffic solely to the eastbound and westbound through movements at this location, which have virtually no delay, so are below the average for the intersection as a whole, resulting in a slight reduction in the overall average delay. The conclusion could incorrectly be drawn that operation would improve with the project based on this data alone; however, it is more appropriate to conclude that project trips are expected to make use of excess capacity, so drivers will experience little, if any, change in conditions as a result of the project.



Finding – The study intersections are expected to continue operating acceptably upon the addition of project-generated traffic to Existing volumes.

Traffic Impact Study for the Oat Hill Multi-Family Housing Project

Figure 6 – Existing plus Project Traffic Volumes

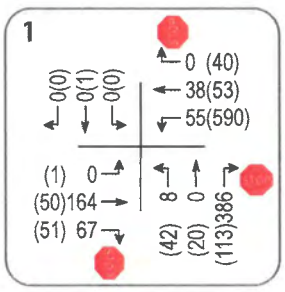
W-Trans

Future plus Project Conditions

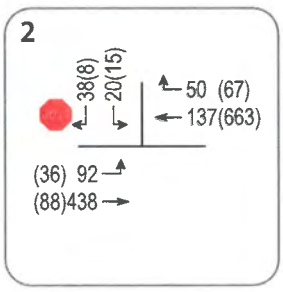
Upon the addition of project-generated traffic to the anticipated Future volumes, the study intersections are expected to continue operating at LOS D or better during both peak hours, except for SR 29/Napa Junction Road which would continue to operate at LOS F. The Future plus Project operating conditions are summarized in Table 8 and shown in Figure 7.

Table 8 – Future and Future plus Project Peak Hour Intersection Levels of Service

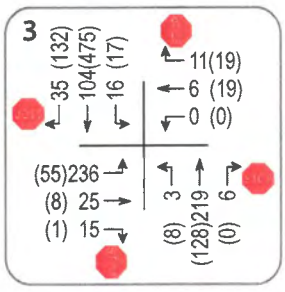
Study Intersection *Approach*	Future Conditions				Future plus Project			
	AM Peak		PM Peak		AM Peak		PM Peak	
	Delay	LOS	Delay	LOS	Delay	LOS	Delay	LOS
1. Napa Junction Rd/Theresa Ave	9.4	A	19.8	C	10.2	B	26.8	D
2. Napa Junction Rd/Lombard Rd	2.0	A	0.9	A	1.8	A	0.8	A
Southbound (Lombard Rd) Approach	*11.2*	*B*	*14.7*	*B*	*11.8*	*B*	*15.7*	*C*
3. Eucalyptus Dr/Theresa Ave	10.2	B	14.9	B	10.3	B	15.9	C
4. SR 29/Napa Junction Rd	157.6	F	83.7	F	167.0	F	86.6	F



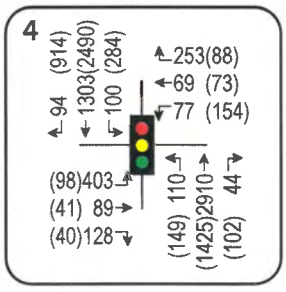
Notes: Delay is measured in average seconds per vehicle; LOS = Level of Service; Results for minor approaches to two-way stop-controlled intersections are indicated in *italics*



As mentioned previously, there are future plans for SR 29 to have three travel lanes in each direction through American Canyon. As required by the City, the project should pay a proportional share fee toward the cost of this planned future infrastructure improvement. The proposed project would be expected to add 77 new trips to SR 29 during the critical evening peak hour. Consequently, the project should pay a fee toward the cost of the planned improvements to SR 29 based on the City's fee schedule.



Finding – The study intersections that have an applicable LOS standard would be expected to continue operating acceptably; SR 29/Napa Junction Road would continue to operate at LOS F, though the project's effect would be considered acceptable since SR 29 is exempt from the City's LOS standard.



Recommendation – As required by the City, the project should pay a fee toward the cost of the planned future improvements to SR 29.

Vehicle Miles Traveled

Senate Bill (SB) 743 established a change in the metric to be applied for determining traffic impacts associated with development projects. Rather than the delay-based criteria associated with a Level of Service analysis, the increase in Vehicle Miles Traveled (VMT) as a result of a project will be the basis for determining impacts once this new metric is fully vetted and adopted. The City of American Canyon has not yet established thresholds of significance related to VMT, and as of the date of the preparation of this report, the Napa County travel demand model was not yet available for VMT analysis. As a result, the project related VMT impacts were qualitatively assessed based on guidance provided by the California Governor's Office of Planning and Research (OPR) in the publication *Transportation Impacts (SB 743) CEQA Guidelines Update and Technical Advisory*, 2018.

The project site is within a walkable distance to commercial, residential, civic, and school land uses, being less than one-quarter mile from Eagle's Nest Preschool, Calvary Baptist Church, and the City of American Canyon City Hall. Also, within that distance is a bus stop at the intersection of SR 29/Napa Junction Road for Vine Transit Route 11, which serves the Vallejo Ferry Terminal. Within one-half mile of the project are a Walmart and other retail businesses. Given the general rural nature of the land use pattern throughout Napa County, it is reasonable to expect the project to have a VMT that is below the countywide average per capita based on the proximity of the project site to other land uses and connectivity to public transit.

To minimize the potential for the project to have an impact on VMT, transportation demand management (TDM) measures can be implemented to further reduce the need for vehicle travel by residents of the proposed project. The VMT associated with a development project is influenced by numerous factors, including proximity to other land uses. The publication *Quantifying Greenhouse Gas Mitigation Measures*, California Air Pollution Control Officers Association (CAPCOA), 2010 includes a review of TDM strategies that can be expected to reduce VMT in comparison with typical development practices in the area. The TDM measures described below are potential measures that would be expected to reduce VMT and are recommended for the proposed project.

Transportation Demand Management (TDM) Measures

The following section describes the recommended resident TDM program. It should be noted that although the great majority of VMT reduction can be achieved by focusing on residents alone, some TDM measures can be used by guests or visitors and can contribute in reducing impacts. Note that the measures below are supported by the Guaranteed Ride Home (GRH) program operated by Napa Valley Transportation Authority (NVTA) as part of its Vcommute platform. The GRH program helps incentivize use of alternative transportation modes for workers or college students by providing free transportation in the event of a family emergency, bicycle theft, or other circumstance which may be problematic in terms of getting home if they are relying on an alternative mode.

Unbundled Parking

Most suburban multi-family residential dwellings are built with parking spaces dedicated to a specific unit. This guarantees reserved parking for its residents, but it also incentivizes the developer to "hide" the cost of parking as part of the unit's rent or sale price and therefore residents are charged for parking whether they own vehicles or not. In addition, many parking spaces go unused in this scenario. Unbundled parking occurs when developers charge for parking separately from the price of the dwelling unit so renters and buyers can choose to opt in or out. This encourages a development with fewer parking spaces being needed to meet demand.

Transit Benefits

Transit Pass program

Vine Transit operates local and express bus service near the project site, covering the area from Napa to regional destinations including the Vallejo Ferry Terminal and the El Cerrito Del Norte BART Station. Vine Transit offers adult ride passes ranging from $29 to $120 per month. The residential management organization can purchase transit passes in bulk for all residents with the understanding that not all will choose to take transit. This encourages residents to use transit and allows the transit provider some comfort that new demand will not be overwhelming. Given the large number of passes that would need to be purchased, Vine Transit may offer a group discount.

Bicycle Benefits

Bicycle Parking and Maintenance Tools

The provision of both short-term and long-term bicycle parking is important. Secure long-term parking (e.g. bike lockers) is a critical component in encouraging residents to bike to nearby employment or recreation destinations; long-term parking areas can also be provisioned with simple tools kept on-site such as a pump and tire patches. Short-term parking (e.g. bike racks) can be used by residents or visitors and is generally an inexpensive way to accommodate travelers.

Tele-Work/Compressed Schedules

There are various terms used to describe non-standard working hours, but they all involve decreasing the number of vehicle trips to and from work. Telework (i.e. working from home) and compressed schedules (i.e. working more than eight hours each day and shortening the work week) are two of the most commonly employed. They are both effective at reducing vehicle trips to work and particularly so during peak commute hours, but it is uncertain whether they decrease the overall number of vehicle trips.

Ride-matching Program

Carpooling is one of the most common and cost-effective alternative modes of transportation and one which commuters can adopt part-time. There are numerous benefits to ridesharing. Carpooling can reduce peak-period vehicle trips and increase commuters' travel choices. It reduces congestion, road and parking facility costs and pollution emissions. Carpooling tends to have the lowest cost per passenger-mile of any motorized mode of transportation, since it makes use of a vehicle seat that would otherwise be empty. Carpooling also provides the consumer financial savings by decreasing fuel and parking costs.

The greatest barrier to carpooling is often simply being able to identify and travel with other nearby commuters. Fortunately, there are many services that can assist in pairing individuals within the same community. The most basic publicly available service is 511.org's free ride-matching service.

Education, Outreach and Marketing

Transportation Coordinator

The presence of a part-time staff person dedicated to overseeing and managing the resident and visitor TDM program will be very helpful in ensuring the ongoing success of these programs. This does not need to be a distinct position but can be a role that is integrated into the on-site manager. The duties can include:

- Create and distribute resident transportation information welcome packets
- Maintain and update the transportation information kiosk board

- Distribute Napa Bicycle Coalition maps
- Monitor bicycle parking to ensure that there is sufficient space
- Assist in selling or distributing transit passes
- Market the TDM program and transit service
- Advertise the unbundled parking program
- Promote 511.org's ride-matching program

Welcome Packet for New Residents

New residents should be provided with a welcome packet containing relevant transportation information. The packet could include maps and information from Vine Transit, the Napa County Bicycle Coalition and material regarding 511.org ride-matching services.

Monitor Performance

It is important to continually monitor the performance of a TDM program and adjust measures as necessary to ensure its success. The resident management organization should conduct mode split and vehicle miles traveled (VMT) surveys each year both to determine if adjustments are needed and to use as marketing material. Resident satisfaction surveys are also an effective way of ensuring a quality TDM program.

Finding – The project could reasonably be expected to have a less-than-significant transportation impact on vehicle miles traveled with implementation of appropriate TDM measures.

Recommendation – The project should incorporate TDM measures identified in this report such as unbundled parking, transit passes, secure bicycle parking, and educational materials.

Alternative Modes

Pedestrian Facilities

Given the proximity of the project site to City Hall, transit, and the commercial uses on the east side of SR 29, it is reasonable to assume that some residents will want to walk, bicycle, and/or use transit for trips from and to the project site. Sidewalks do not currently exist along the project frontage on Napa Junction Road, though would be constructed as part of the project. Additionally, a sidewalk or paved pathway should be provided on the new section of Napa Junction Road between the project site and the existing sidewalk about 100 feet west of the school crossing. With these improvements, the project site would be connected to the surrounding pedestrian network.

Finding – Pedestrian facilities serving the project site are not currently adequate.

Recommendation – The proposed project should include construction of sidewalk or pathway between the project frontage and the existing sidewalk on the south side of Napa Junction Road near the school crossing.

Bicycle Facilities

Shared use of minor streets and sidewalks in the area provide adequate access for bicyclists, though due to the steep slope of the section of Napa Junction Road that provides access to the site bicycle trips are expected to be minimal.

Bicycle Storage

The *American Canyon Municipal Code*, Chapter 19.21.050, bicycle parking does not identify standards for residential uses. The proposed project site plan does not include bicycle parking spaces though it is anticipated that residents would have space to store their bicycles either in the dwelling units or other on-site spaces.

Finding – Bicycle facilities serving the project site are generally adequate, though space should be provided for bicycles to be stored on-site.

Recommendation – Space for bicycle storage should be provided either on balconies or other outside spaces dedicated to each housing unit, in garages or other storage spaces for each unit, or through provision of bike racks.

Transit

Existing transit routes are adequate to accommodate any project-generated transit trips that may occur. With the Napa Junction Road connection, the project site would be within acceptable walking distance of the transit stop at City Hall and this connection would be adequate upon provision of a sidewalk.

Finding – Transit facilities serving the project site will be adequate with the completion of a sidewalk connection.

Access and Circulation

Site Access

The project site would be accessible from two new connections to Napa Junction Road, one approximately 200 feet west of Hess Road and the other from the cul-de-sac at the western terminus of the roadway. With the project, a new section of Napa Junction Road would be constructed between the two disconnected segments east and west of Hess Road.

Emergency Access

An emergency vehicle access connection would link the two parcels so that residents of one parcel would be able to use the other parcel's connection to Napa Junction Road should their driveway be compromised in an emergency situation. All interior drive aisles and parking stalls should be designed to comply with City design standards and on-site circulation is therefore expected to function acceptably for emergency response vehicles. It should also be noted that the new connection of Napa Junction Road would result in a more direct route to the project site from SR 29 and other areas of the City so emergency response times to the section of Napa Junction Road west of Hess Road would be improved over existing conditions wherein vehicles have to loop around the little league fields using Lombard Road and Hess Road.

Finding – Access for emergency vehicles is expected to be adequate.

Recommendation – The parking lot and drive aisles should be designed to comply with City design standards.

CEQA Checklist

This section details discussion and results of the CEQA checklist for potential transportation/traffic impacts. The results are contained in Table 9 below and a discussion of each criterion follows.

Table 9 – XVII. TRANSPORTATION/TRAFFIC				
Would the Project:	**Potentially Significant Impact**	**Less than Significant Impact with Mitigation**	**Less than Significant Impact**	**No Impact**
a) Conflict with a program, plan, ordinance, or policy addressing the circulation system, including transit, roadway, bicycle, and pedestrian facilities?		X		
b) Conflict or be inconsistent with CEQA Guidelines § 15064.3, subdivision (b)?		X		
c) Substantially increase hazards due to a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment)?			X	
d) Result in inadequate emergency access?			X	

Discussion of Results

a. Would the Project conflict with a program, plan, ordinance, or policy addressing the circulation system, including transit, roadway, bicycle, and pedestrian facilities?

According to the *City of American Canyon General Plan*, numerous objectives, policies, and programs have been established supporting the need for all modes of travel to be accommodated by the transportation system. This is demonstrated through General Plan Guiding Policies 1.6, 1.9, 1.11, 2.1, and 3.1

- **Policy 1.6 Achieve and maintain a Multimodal LOS D or better for roadways and intersections during peak hours where possible and as long as possible.** The locations that may not achieve or maintain LOS D are as follows and will be exempt from the LOS D policy: State Route 29 through the City, American Canyon Road from SR 29 to Flosden Road-Newell Drive, and Flosden Road south of American Canyon Road.
- **Policy 1.9 Use of existing facilities.** Make efficient use of existing transportation facilities and improve these facilities as necessary in accordance with the Circulation Map.
- **Policy 1.11 Reduce Vehicle Miles Traveled.** Through layout of land uses, improved alternate modes, and provision of more direct routes, strive to reduce the total vehicle miles traveled by City residents.
- **Policy 2.1 Promote walking and bicycling.** Promote walking and bike riding for transportation,
- recreation, and improvement of public and environmental health.
- **Policy 3.1 Promote safe, efficient, and convenient public transportation.** Promote the use of public transportation for daily trips, including to schools and workplaces, as well as other purposes.

Roadway Facilities

The proposed project would not cause any study intersections to which it applies to operate below the City's standard of LOS D. The project's roadway impacts would therefore be *less than significant*, and no mitigation

measures are required. It should be noted that while SR 29/Napa Junction Road would operate at LOS F under Future Conditions without or with the project, this intersection is exempt from the City's LOS standard and Caltrans no longer has an operational standard.

Pedestrian Facilities

The proposed project includes pedestrian connectivity infrastructure on-site, including the provision of sidewalks that would be constructed along the project frontage. The community loop trail and pedestrian paths provide access to all housing units and promote walking, though a sidewalk gap would exist between the project site and the existing terminus of the sidewalk on the south side of Napa Junction Road near the elementary school crossing. This would restrict pedestrian access to the surrounding civic and commercial uses to the east and would be considered a *significant* impact. Therefore, as mitigation it is recommended that the project include constructing a pedestrian path or sidewalk between the project site and the existing terminus of the sidewalk near the elementary school. With this mitigation measure, pedestrian impacts would be reduced to *less than significant.*

Bicycle Facilities

Shared use of minor streets provides adequate access for bicyclists, though due to the steep slope of the section of Napa Junction Road that provides access to the site bicycle trips are expected to be minimal. In addition, future bicycle facilities near the project site have been identified in City and regional plans, which would improve future circulation for bicyclists. Therefore, bicycle impacts would be *less than significant.*

Transit Facilities

The American Canyon Transit (VINE) provides fixed route bus service in American Canyon. ACT has two morning and afternoon routes that stop at American Canyon City Hall, approximately 0.20 miles from the project site. Existing service is expected to be adequate to accommodate demand and transit impacts would therefore be *less than significant* upon implementation of the pedestrian facility measures identified above.

b. Would the Project conflict or be inconsistent with CEQA Guidelines § 15064.3, subdivision (b)?

CEQA Guidelines §15064.3, Subdivision (b) indicates that land use projects would have a significant impact if the project resulted in vehicle miles traveled (VMT) exceeding an applicable threshold of significance. It further notes that if existing models or methods are not available to estimate the VMT for the project being considered, a lead agency may analyze the project's VMT qualitatively. The City of American Canyon currently has no thresholds of significance related to VMT, and as of the date of the analysis, a regional travel demand model for Napa County is under development but not yet available for VMT analysis so the project was assessed qualitatively and TDM measures were recommended that would be expected to reduce any potential VMT impact to *less than significant.*

Given the general rural nature of the land use pattern throughout Napa County, it is reasonable to expect the project to have a VMT that is below the countywide average per capita based on the proximity of the project site to surrounding commercial and civic land uses and connectivity to public transit. To minimize the potential for the project to have an impact on VMT, the following transportation demand management (TDM) measures are recommended.

- Unbundled Parking
- Free Transit Passes
- Secure Bicycle Parking and Maintenance Tools
- Tele-Work/Compressed Schedules
- Carpooling and Ride-matching Program
- Transportation Coordinator
- Welcome Packet for New Residents

- Monitoring of Program Performance

c. *Would the Project substantially increase hazards due to a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment)?*

As part of the project, a new segment of Napa Junction Road would be constructed resulting in a continuous section of roadway running between SR 29 and the existing terminus west of the project site. The project itself as well as the new segment of roadway would be designed and constructed to meet currently applicable codes and requirements, so would not be expected to result in any increased hazards. The project is therefore expected to have a *less-than-significant* impact regarding geometric design features or incompatible uses.

d. *Would the Project result in inadequate emergency access?*

The project site would have adequate emergency access and would improve emergency access and response times to the section of Napa Junction Road west of Hess Road with the provision of a new street connection; therefore, the project would result in a *less-than-significant* and in fact beneficial impact related to emergency access.

Conclusions and Recommendations

Conclusions

- The proposed project would be expected to generate 1,583 daily trips on average, including 105 trips during the weekday a.m. peak hour and 128 trips during the p.m. peak hour.
- Under Existing Conditions all study intersections operate acceptably and they are expected to continue doing so upon the addition of project-related traffic.
- Under the anticipated Future volumes, the study intersections are expected to operate acceptably without or with the addition of project-related traffic, though SR 29/Napa Junction Road would operate at LOS F which was considered acceptable since SR 29 is exempt from the City's LOS policy.
- The project would be expected to have a *less-than-significant* transportation impact on vehicle miles traveled (VMT) with implementation of TDM measures.
- The shared use of minor streets along with the planned facilities outlined in the *Napa Countywide Bicycle Plan* would provide adequate access for bicyclists, though the project site plan does not identify the provision of bike parking.
- Pedestrian facilities serving the project site are not currently adequate, though would be improved with the provision of a sidewalk along the project frontage.
- Transit facilities serving the project site are adequate.
- Access for emergency response vehicles is expected to be adequate and response times would be improved over existing conditions.

Recommendations

- As required by the City, the project should pay a fee toward the cost of the planned future improvements to SR 29.
- The project should incorporate TDM measures identified in this report such as unbundled parking, transit passes, secure bicycle parking, and educational materials.
- The project should include constructing a sidewalk or pedestrian path along the south side of Napa Junction Road to connect the project site to the existing section of sidewalk near the school crossing.
- Secure bicycle storage should be provided, if not already planned as part of on-site amenities.

Attachment 1, Exhibit A:
ISMND Response to Comments

RESPONSES TO COMMENTS

INTRODUCTION

This Responses to Comments document contains comments received during the public review period of the Oat Hill Project Initial Study/Mitigated Negative Declaration (IS/MND).

According to CEQA Guidelines Sections 15073 and 15074, the lead agency must consider the comments received during consultation and review periods together with the IS/MND. However, unlike with an Environmental Impact Report (EIR), comments received on an IS/MND are not required to be attached to the negative declaration, nor must the lead agency make specific written responses to public comments. Nonetheless, the City of American Canyon, as the lead agency, has chosen to provide responses to those specific public comments that are related to the environmental analysis contained in the IS/MND. Non-environmental comments have been considered by the City as part of the Staff Report.

BACKGROUND

The City of American Canyon used the following methods to solicit public input on the IS/MND: a Notice of Completion of the IS/MND was posted with the State Clearinghouse on February 5, 2021. The IS/MND was distributed to applicable public agencies, responsible agencies, and interested individuals. In addition, electronic copies were available on the City's website, www.cityofamericancanyon.org/home. The public review period ended on March 10, 2021.

LIST OF COMMENTERS

The City of American Canyon received four comment letters during the open comment period on the IS/MND for the proposed project. The comment letters were received from the following representatives and are included in the Responses to Comments section below:

Letter 1 ..... Gregg Erickson, Regional Manager, California Department of Fish and Wildlife
Letter 2 ..... Mark Leong, District Branch Chief, California Department of Transportation
Letter 3 ..... Cassidy Ward
Letter 4 ..... Karen Fritz

RESPONSES TO COMMENTS

The Responses to Comments below includes each comment letter regarding the Oat Hill Project, as well as responses to each comment. Each bracketed comment letter is followed by numbered responses to each bracketed comment. Where revisions to the IS/MND text were made, new text is <u>double underlined</u> and deleted text is ~~struck through~~.

All such revisions to the IS/MND are relatively minor, and do not affect the adequacy of the conclusions presented therein. CEQA Guidelines Section 15073.5 states the following regarding recirculation requirements for negative declarations:

(c) Recirculation is not required under the following circumstances:

(1) Mitigation measures are replaced with equal or more effective measures pursuant to Section 15074.1.

(2) New project revisions are added in response to written or verbal comments on the project's effects identified in the proposed negative declaration which are not new avoidable significant effects.

(3) Measures or conditions of project approval are added after circulation of the negative declaration which are not required by CEQA, which do not create new significant environmental effects and are not necessary to mitigate an avoidable significant effect.

(4) New information is added to the negative declaration which merely clarifies, amplifies, or makes insignificant modifications to the negative declaration.

Based on the above, pursuant to CEQA Guidelines Section 15073.5, recirculation of the IS/MND is not warranted.

Subject: Oat Hill Multi-Family Project, Mitigated Negative Declaration, SCH No. 2021020107, Napa County

Dear Mr. Cooper:

The California Department of Fish and Wildlife (CDFW) reviewed the Mitigated Negative Declaration (MND) for the Oat Hill Multi-Family Project (Project) and is submitting the following comments on the MND to inform the City of American Canyon, as the Lead Agency, of our concerns regarding potentially significant impacts to sensitive resources associated with the proposed Project.

CDFW is a Trustee Agency pursuant to the California Environmental Quality Act (CEQA) and is responsible for the conservation, protection, and management of the State's biological resources (Pub. Resources Code, § 21000 et seq.; Cal. Code Regs., tit. 14, § 15386). CDFW is also considered a Responsible Agency if a project would require discretionary approval, such as a California Endangered Species Act (CESA) Permit, Native Plant Protection Act Permit, Lake and Streambed Alteration (LSA) Agreement, and other provisions of the Fish and Game Code that afford protection to California's (State's) fish and wildlife trust resources.

1-1

PROJECT DESCRIPTION

The proposed Project would develop 291 multi-family residential units on two parcels (Parcels A and B) totaling approximately 20.8 acres. Parcel A would consist of 206 multi-family residential units, a community loop trail, recreation building, outdoor seating area, and a pool. Parcel B would consist of 85 multi-family residential units, a recreation building, a tot lot, and an outdoor lounge and viewing area. Primary access to the site would be provided from an extension of the Napa Junction Road, which would connect to the site through two new driveways.

PROJECT LOCATION AND ENVIRONMENTAL SETTING

The Project site is located immediately southwest of the intersection of Napa Junction Road and Hess Road in the City of American Canyon, Napa County. Approximate Project center coordinates are 38.18418° N, 122.26152° W; and the Assessor's Parcel

Letter 1
Cont'd

DocuSign Envelope ID: D2028882-5A16-4F86-9244-F44466E518A4

1-1 Cont'd

Numbers are 058-380-008 and 058-320-001. The Project site is undeveloped and consists of annual grassland habitat with some shrubs and trees, including eucalyptus and pine. Elevations range from 80 to 185 feet above mean sea level. Surrounding land consists of annual grassland habitat to the south and west, industrial businesses and recreational vehicle storage to the north, a light industrial building to the northwest, Napa Junction Magnet Elementary School to the northeast, and single-family residences to the east.

COMMENTS AND RECOMMENDATIONS

Swainson's hawk (*Buteo swainsoni*)

CDFW is concerned with Mitigation Measures IV-1 and IV-2, and recommends the following revisions to reduce potential impacts to Swainson's hawk, a CESA listed as threatened species, to less-than-significant (added language in ***bold italics***, deleted language in ~~strikethrough~~):

1-2

IV-1. Prior to project initiation, pre-construction surveys shall be conducted ***by a qualified biologist*** *within a* ~~*quarter*~~***0.5****-mile radius around all project activities, including on-site and off-site work, and shall be completed for at least two survey periods* ***prior to starting Project activities****. The survey period timing and methodology shall be conducted in accordance with* ~~*CDFW's*~~ ***the Swainson's Hawk Technical Advisory Committee's*** *Recommended Timing and Methodology for Swainson's Hawk Nesting Surveys in California's Central Valley (****2000****~~CDFG 1994~~), which identifies different survey windows throughout the pre-nesting and nesting season (ranging from January 1 through July 30/post-fledging) that have different survey methodologies and requirements. A letter report summarizing the survey results shall be submitted to* ***CDFW for review and written acceptance prior to starting Project activities. The survey results shall also be submitted to*** *the Community Development Department within 30 days following the final survey. If active Swainson's hawk nests are not identified on or within* ~~*0.25*~~ ***0.5****-mile of the project site within the survey periods, further avoidance and minimization measures for Swainson's hawk nesting habitat are not required.*

IV-2. If Swainson's hawks are found to be nesting on the project site or within ~~*0.25*~~ ***0.5****-mile of the project site,* ***the project proponent shall either, a) delay project activities until all Swainson's hawk nests within 0.5 miles of the Project site are no longer active, as determined by a qualified biologist, b) determine if the 0.5-mile buffer zone may be reduced in consultation with CDFW based on site-specific conditions, or c) if take cannot be avoided, obtain a CESA Incidental Take Permit from CDFW prior to starting project activities*** ~~*consultation with CDFW shall be required. The size of the nest protection buffer shall be determined*~~

Letter 1 Cont'd

DocuSign Envelope ID: D2028882-5A16-4F86-9244-F44466E518A4

1-2 Cont'd

~~*during consultation with CDFW, but at a minimum, shall be a 300 foot non-disturbance buffer around the nest site.*~~

Western burrowing owl (*Athene cunicularia*)

Mitigation Measure IV-3 in the MND would not reduce potential impacts to burrowing owl, a California Species of Special Concern, to less-than-significant because conducting a single survey within 14 days of the start of Project activities would be unlikely to detect burrowing owls. Burrowing owls may use the Project site and adjacent habitat for foraging, overwintering, and/or nesting habitat.

CDFW recommends that Mitigation Measure IV-3 be revised as follows (added language in ***bold italics***, deleted language in ~~strikethrough~~):

1-3

IV-3. Prior to initiation of ground disturbance, a ***qualified biologist shall conduct nesting and/or wintering owl surveys, as appropriate, in accordance with the California Department of Fish and Game (now CDFW) 2012 Staff Report on Burrowing Owl Mitigation survey methodology (see https://wildlife.ca.gov/Conservation/Survey-Protocols#377281284-birds). Surveys shall encompass the project area and a sufficient buffer zone to detect owls nearby that may be impacted. Time lapses between surveys or project activities shall trigger subsequent surveys including but not limited to a final survey within 24 hours prior to ground disturbance before construction equipment mobilizes to the Project area. The qualified biologist shall have a minimum of two years of experience implementing the CDFW 2012 Staff Report survey methodology resulting in detections.*** ~~*pre-construction survey shall be performed within 14 days of construction activities. The pre-construction survey shall occur regardless of the time of year, as burrowing owls may use the project site during the non-nesting season. The survey shall be performed according to the standards set forth by the Staff Report for Burrowing Owl Mitigation (CDFW 2012).*~~ *A letter report summarizing the survey results shall be submitted to the Community Development Department within 30 days following the pre-construction survey. If burrowing owls are not present on-site* ***or adjacent to the site where they may be disturbed*** *during pre-construction surveys, further avoidance and minimization measures for burrowing owl nesting* ***and wintering*** *habitat are not required.*

Mitigation Measure IV-4 would not reduce impacts to a less-than-significant impact because passive relocation is not an adequate avoidance, minimization, and mitigation measure. CDFW recommends that Mitigation Measure IV-4 be revised as follows (added language in ***bold italics***, deleted language in ~~strikethrough~~):

DocuSign Envelope ID: D2028882-5A16-4F86-9244-F44466E518A4

Letter 1
Cont'd

1-3
Cont'd

IV-4. If ~~occupied burrows are encountered on site, the species shall not be disturbed during the nesting season (February 1 through August 31) until juveniles from the occupied burrows are foraging independently and capable of independent survival.~~

~~If occupied burrows are encountered on site during the non-nesting season (1 September to 31 January), and owls must be moved away from the disturbance area, passive relocation techniques shall be used rather than trapping, according to the standards set forth by the Staff Report for Burrowing Owl Mitigation (CDFW 2012). Burrow exclusion is a technique of installing one-way doors in burrow openings during the non-breeding season to temporarily exclude burrowing owls, or permanently exclude burrowing owls and close burrows after verifying burrows are vacant. At least 1 week shall be allowed to verify that the burrows are vacant and allow the owls to acclimate to alternate burrows. Burrowing owls shall not be excluded from burrows unless a Burrowing Owl Exclusion Plan is developed and approved by the applicable local CDFW office.~~ **burrowing owls are detected on or adjacent to the site where they may be disturbed, the following restricted activity dates and setback distances recommended per CDFW's Staff Report (2012) shall be implemented, unless reduced buffers are accepted by CDFW in writing based on site specific conditions:**

- ***From April 1 through October 15, low disturbance and medium disturbance activities shall have a 200-meter buffer while high disturbance activities shall have a 500-meter buffer from occupied nests and wintering sites.***
- ***From October 16 through March 31, low disturbance activities shall have a 50-meter buffer, medium disturbance activities shall have a 100-meter buffer, and high disturbance activities shall have a 500-meter buffer from occupied nests and wintering sites.***
- ***No earth-moving activities or other disturbance should occur within the aforementioned buffer zones of occupied burrows. These buffer zones shall be marked with high visibility fencing or flagging.***

If burrowing owls are present outside of the nesting season, burrowing owls may be passively relocated from the project site and adjacent habitat using CDFW-accepted methods so that construction can proceed. Any required passive relocation of burrowing owls would require CDFW acceptance. If passive relocation of burrowing owls is necessary, a qualified biologist shall prepare a Relocation Plan, including compensatory habitat as described below, for CDFW review and acceptance prior to the start of construction activities.

Letter 1 Cont'd

DocuSign Envelope ID: D2028882-5A16-4F86-9244-F44466E518A4

1-3 Cont'd

If the survey determines that the project site is actively being used by burrowing owl, or any owls are passively relocated as described above, then compensatory habitat mitigation shall be provided. The habitat mitigation/compensation plan shall be submitted to CDFW for review and approval prior to the start of project activities. Habitat compensation acreages shall be approved by CDFW, as the amount depends on site specific conditions, and completed before project construction. It shall also include placement of a conservation easement and preparation and implementation of a long-term management plan. If burrowing owls are observed during surveys, notification shall also be submitted to the California Natural Diversity Database (CNDDB; see https://wildlife.ca.gov/Data/CNDDB/Submitting-Data).

Nesting Birds and Raptors

Mitigation Measure IV-5 would not reduce impacts to a level of less-than-significant because migratory birds and raptors could nest on the site prior to March 1. Furthermore, the survey should be conducted as close to the start of Project activities as possible, to avoid having birds and/or raptors nest on the Project site between the survey and start of work. CDFW recommends that Mitigation Measure IV-5 be revised as follows (added language in ***bold italics***, deleted language in ~~strikethrough~~):

1-4

*IV-5. If project activities must be conducted during the nesting season (~~March~~ **February 15** and September 1), a pre-construction nesting bird survey shall be conducted by a qualified biologist within **7**~~14~~ days of vegetation removal or initial ground disturbance. The survey shall include the project site, any off-site disturbance areas, and **within a minimum 500 feet of all Project areas,** ~~surrounding vicinity~~ to identify the location and status of any nests that could potentially be affected either directly or indirectly by project activities. A letter report summarizing the survey results shall be submitted to the Community Development Department within 30 days following the pre-construction survey. If nesting birds are not present on-site **or within a minimum of 500 feet** during pre-construction surveys, further avoidance and minimization measures for nesting bird habitat are not required.*

If active nests of ~~native~~ nesting bird species are identified during the nesting bird survey, a work exclusion zone shall be established around each nest by the qualified biologist. Established exclusion zones shall remain in place until all young in the nest have fledged or the nest otherwise becomes inactive (e.g., due to predation). Appropriate exclusion zone sizes shall be determined by a qualified biologist. ***The qualified biologist shall be on site daily for the first week during Project activities, and then weekly thereafter until the nest is no longer active, to observe all active bird and raptor nests and to ensure that Project activities do not cause nest disturbance. If the qualified biologist observes birds and/or***

DocuSign Envelope ID: D2028882-5A16-4F86-9244-F44466E518A4

Letter 1 Cont'd

1-4 Cont'd

raptors displaying potential nest disturbance behavior, the qualified biologist shall cease work and consult with CDFW before resuming Project activities. In this event, Project activities shall not resume without CDFW's written permission. *~~and shall vary based on species, nest location, existing visual buffers, noise levels, and other factors. An exclusion zone radius may be as small as 50 feet for common, disturbance-adapted species, or as large as 250 feet or more for raptors. The exclusion zone size shall be reduced from established levels by a qualified biologist if nest monitoring findings indicate that project activities do not adversely impact the nest, and if a reduced exclusion zone would not adversely affect the nest.~~*

FILING FEES

CDFW anticipates that the Project will have an impact on fish and/or wildlife, and assessment of filing fees is necessary (Fish and Game Code, § 711.4; Pub. Resources Code, § 21089). Fees are payable upon filing of the Notice of Determination by the Lead Agency and serve to help defray the cost of environmental review by CDFW.

1-5

CDFW appreciates the opportunity to provide comments on the MND for the proposed Project and is available to meet with you to further discuss our concerns. If you have any questions, please contact Mr. Garrett Allen, Environmental Scientist, at Garrett.Allen@wildlife.ca.gov; or Ms. Melanie Day, Acting Senior Environmental Scientist (Supervisory), at Melanie.Day@wildlife.ca.gov.

Sincerely,

DocuSigned by:

LETTER 1: GREGG ERICKSON, REGIONAL MANAGER CALIFORNIA DEPARTMENT OF FISH AND WILDLIFE

Response to Comment 1-1

The comment is an introductory statement which briefly describes the project location and project components, and does not address the adequacy of the IS/MND.

Response to Comment 1-2

In response to the comment, Mitigation Measure IV-1 and Mitigation Measure IV-2 on page 53 of the IS/MND are hereby revised as follows:

IV-1. *Prior to project initiation, pre-construction surveys shall be conducted by a qualified biologist within a ~~quarter~~ 0.5-mile radius around all project activities, including on-site and off-site work, and shall be completed for at least two survey periods prior to starting Project activities. The survey period timing and methodology shall be conducted in accordance with ~~CDFW's~~ the Swainson's Hawk Technical Advisory Committee's Recommended Timing and Methodology for Swainson's Hawk Nesting Surveys in California's Central Valley (2000 ~~CDFG 1994~~), which identifies different survey windows throughout the pre-nesting and nesting season (ranging from January 1 through July 30/post-fledging) that have different survey methodologies and requirements. A letter report summarizing the survey results shall be submitted to CDFW for review and written acceptance prior to starting Project activities. The survey results shall also be submitted to the Community Development Department within 30 days following the final survey. If active Swainson's hawk nests are not identified on or within ~~0.25~~ 0.5-mile of the project site within the survey periods, further avoidance and minimization measures for Swainson's hawk nesting habitat are not required.*

IV-2. *If Swainson's hawks are found to be nesting on the project site or within ~~0.25~~ 0.5-mile of the project site, the project proponent shall either, a) delay project activities until all Swainson's hawk nests within 0.5-mile of the project site are no longer active, as determined by a qualified biologist, b) determine if the 0.5-mile buffer zone may be reduced in consultation with CDFW based on site-specific conditions, or c) if take cannot be avoided, obtain a CESA Incidental Take Permit from CDFW prior to starting project activities. ~~consultation with CDFW shall be required. The size of the nest protection buffer shall be determined during consultation with CDFW, but at a minimum, shall be a 300-foot non-disturbance buffer around the nest site.~~*

The above changes are for clarification purposes only and do not alter the analysis or conclusions of the IS/MND.

Response to Comment 1-3

In response to the comment, Mitigation Measure IV-3 and Mitigation Measure IV-4 on pages 53 and 54 of the IS/MND are hereby revised as follows:

IV-3. *Prior to initiation of ground disturbance, a qualified biologist shall conduct nesting and/or wintering owl surveys, as appropriate, in accordance with the California Department of Fish and Game (now CDFW) 2012 Staff Report on Burrowing Owl Mitigation survey methodology (see https://wildlife.ca.gov/Conservation/Survey-Protocols#377281284-birds). Surveys shall encompass the project area and a sufficient buffer zone to detect owls nearby that may be impacted. Time lapses between surveys or project activities shall trigger subsequent surveys including but not limited to a final survey within 24 hours prior to ground disturbance before construction equipment mobilizes to the project area. The qualified biologist shall have a minimum of two years-experience implementing the CDFW 2012 Staff Report survey methodology resulting in detections. ~~a pre-construction survey shall be performed within 14 days of construction activities. The pre-construction survey shall occur regardless of the time of year, as burrowing owls may use the project site during the non-nesting season. The survey shall be performed according to the standards set forth by the Staff Report for Burrowing Owl Mitigation (CDFW 2012).~~ A letter report summarizing the survey results shall be submitted to the Community Development Department within 30 days following the pre-construction survey. If burrowing owls are not present on-site or adjacent to the site where they may be disturbed during pre-construction surveys, further avoidance and minimization measures for burrowing owl nesting and wintering habitat are not required.*

IV-4. *If ~~occupied burrows are encountered on site, the species shall not be disturbed during the nesting season (February 1 through August 31) until juveniles from the occupied burrows are foraging independently and capable of independent survival.~~*

~~If occupied burrows are encountered on-site during the non-nesting season (1 September to 31 January), and owls must be moved away from the disturbance area, passive relocation techniques shall be used rather than trapping, according to the standards set forth by the Staff Report for Burrowing Owl Mitigation (CDFW 2012). Burrow exclusion is a technique of installing one-way doors in burrow openings during the non-breeding season to temporarily exclude burrowing owls, or permanently exclude burrowing owls and close burrows after verifying burrows are vacant. At least 1 week shall be allowed to verify that the burrows are vacant and allow the owls to acclimate to alternate burrows. Burrowing owls shall not be excluded from burrows unless a Burrowing Owl Exclusion Plan is developed and approved by the applicable local CDFW office.~~ burrowing owls are detected on or adjacent to the site where they may be disturbed, the following restricted activity dates and setback distances recommended per CDFW's Staff Report (2012) shall be implemented, unless reduced buffers are accepted by CDFW in writing based on site-specific conditions:

- *From April 1 through October 15, low disturbance and medium disturbance activities shall have a 200-meter buffer while high disturbance activities shall have a 500-meter buffer from occupied nests and wintering sites.*

- *From October 16 through March 31, low disturbance activities shall have a 50-meter buffer, medium disturbance activities shall have a 100-meter buffer, and high disturbance activities shall have a 500-meter buffer from occupied nests and wintering sites.*
- *No earth-moving activities or other disturbance should occur within the aforementioned buffer zones of occupied burrows. These buffer zones shall be marked with high visibility fencing or flagging.*

If burrowing owls are present outside of the nesting season, burrowing owls may be passively relocated from the project site and adjacent habitat using CDFW-accepted methods so that construction can proceed. Any required passive relocation of burrowing owls would require CDFW acceptance. If passive relocation of burrowing owls is necessary, a qualified biologist shall prepare a Relocation Plan, including compensatory habitat as described below, for CDFW review and acceptance prior to the start of construction activities.

If the survey determines that the project site is actively being used by burrowing owl, or any owls are passively relocated as described above, then compensatory habitat mitigation shall be provided. The habitat mitigation/compensation plan shall be submitted to CDFW for review and approval prior to the start of project activities. Habitat compensation acreages shall be approved by CDFW, as the amount depends on site specific conditions, and completed before project construction. It shall also include placement of a conservation easement and preparation and implementation of a long-term management plan. If burrowing owls are observed during surveys, notification shall also be submitted to the California Natural Diversity Database (CNDDB; see https://wildlife.ca.gov/Data/CNDDB/Submitting-Data).

The above changes are for clarification purposes only and do not alter the analysis or conclusions of the IS/MND.

Response to Comment 1-4

In response to the comment, Mitigation Measure IV-5 on page 54 of the IS/MND is hereby revised as follows:

IV-5. *If project activities must be conducted during the nesting season (~~March~~ February 15 and September 1), a pre-construction nesting bird survey shall be conducted by a qualified biologist within 7~~14~~ days of vegetation removal or initial ground disturbance. The survey shall include the project site, any off-site disturbance areas, and within a minimum of 500 feet of all project areas, ~~surrounding vicinity~~ to identify the location and status of any nests that could potentially be affected either directly or indirectly by project activities. A letter report summarizing the survey results shall be submitted to the Community Development Department within 30 days following the pre-construction survey. If nesting birds are not present on-site or within a minimum 500 feet of the project site during pre-construction surveys,*

further avoidance and minimization measures for nesting bird habitat are not required.

If active nests of ~~native~~ nesting bird species are identified during the nesting bird survey, a work exclusion zone shall be established around each nest by the qualified biologist. Established exclusion zones shall remain in place until all young in the nest have fledged or the nest otherwise becomes inactive (e.g., due to predation). Appropriate exclusion zone sizes shall be determined by a qualified biologist. The qualified biologist shall be on site daily for the first week during Project activities, and then weekly thereafter until the nest is no longer active, to observe all active bird and raptor nests and to ensure that Project activities do not cause nest disturbance. If the qualified biologist observes birds and/or raptors displaying potential nest disturbance behavior, the qualified biologist shall cease work and consult with CDFW before resuming Project activities. In this event, Project activities shall not resume without CDFW's written permission. ~~and shall vary based on species, nest location, existing visual buffers, noise levels, and other factors. An exclusion zone radius may be as small as 50 feet for common, disturbance-adapted species, or as large as 250 feet or more for raptors. The exclusion zone size shall be reduced from established levels by a qualified biologist if nest monitoring findings indicate that project activities do not adversely impact the nest, and if a reduced exclusion zone would not adversely affect the nest.~~

The above changes are for clarification purposes only and do not alter the analysis or conclusions of the IS/MND.

Response to Comment 1-5

The comment is a concluding statement and does not address the adequacy of the IS/MND.

Re: Oat Hill Multi-Family Project – Initial Study/Mitigated Negative Declaration (IS/MND)

Dear William He:

Thank you for including the California Department of Transportation (Caltrans) in the environmental review process for the Project. We are committed to ensuring that impacts to the State's multimodal transportation system and to our natural environment are identified and mitigated to support a safe, sustainable, integrated and efficient transportation system. The following comments are based on our review of the February 2021 Draft IS/MND.

2-1

Project Understanding
The proposed project would develop a multifamily residential community of 291 multi-family residential units and construct a community loop trail, outdoor seating area, pool and on-site as well as off-site parking spaces. A new sidewalk would be constructed along the project frontage of Napa Junction Road. This project is located within close vicinity of State Route (SR)-29.

2-2

Travel Impact Analysis
With the enactment of Senate Bill (SB) 743, Caltrans is focused on maximizing efficient development patterns, innovative travel demand reduction strategies, and multimodal improvements. For more information on how Caltrans uses Vehicle Miles Travelled (VMT) to assess Transportation Impact Studies, please review Caltrans' Transportation Impact Study Guide. Caltrans commends the lead agency in proposing mitigation measures to reduce the project's potentially significant VMT impact to a less-than-significant level. The proposed

Letter 2
Cont'd

2-2 Cont'd mitigation measures identified in the IS/MND should be documented with annual monitoring reports to demonstrate effectiveness.

2-3 In addition, the SR-29/Napa Junction Road intersection was not considered in the group of intersections analyzed in the Traffic Impact Study (TIS). Please explain why this intersection was not included as part of the TIS.

Construction-Related Impacts

2-4 Project work that requires movement of oversized or excessive load vehicles on state roadways requires a transportation permit that is issued by Caltrans. To apply, visit: https://dot.ca.gov/programs/traffic-operations/transportation-permits. Prior to construction, coordination may be required with Caltrans to develop a Transportation Management Plan (TMP) to reduce construction traffic impacts to SR-29.

Lead Agency

2-5 As the Lead Agency, the City of American Canyon is responsible for all project mitigation, including any needed improvements to SR-29. The project's fair share contribution, financing, scheduling, implementation responsibilities and lead agency monitoring should be fully discussed for all proposed mitigation measures.

Encroachment Permit

2-6 Please be advised that any permanent work or temporary traffic control that encroaches onto the State Right of Way (ROW) requires a Caltrans-issued encroachment permit. If any Caltrans facilities are impacted by the project, those facilities must meet American Disabilities Act (ADA) Standards after project completion. As part of the encroachment permit submittal process, you may be asked by the Office of Encroachment Permits to submit a completed encroachment permit application package, digital set of plans clearly delineating the State ROW, digital copy of signed, dated and stamped (include stamp expiration date) traffic control plans, this comment letter, your response to the comment letter, and where applicable, the following items: new or amended Maintenance Agreement (MA), approved Design Standard Decision Document (DSDD), approved encroachment exception request, and/or airspace lease agreement. Your application package may be emailed to D4Permits@dot.ca.gov.

To download the permit application and to obtain more information on all required documentation, visit https://dot.ca.gov/programs/traffic-operations/ep/applications.

Thank you again for including Caltrans in the environmental review process. Should you have any questions regarding this letter, please contact Yunsheng Luo at Yunsheng.Luo@dot.ca.gov. Additionally, for future notifications and requests for review of new projects, please contact LDIGR-D4@dot.ca.gov.

2-7

Sincerely,

MARK LEONG
District Branch Chief
Local Development - Intergovernmental Review

c: State Clearinghouse

LETTER 2: MARK LEONG, DISTRICT BRANCH CHIEF CALIFORNIA DEPARTMENT OF TRANSPORTATION

Response to Comment 2-1
The comment is an introductory statement which briefly describes the project components, and does not address the adequacy of the IS/MND.

Response to Comment 2-2
As noted in the comment, the potential vehicle miles travelled (VMT) impact is reduced to a less-than-significant level with mitigation. The request for annual monitoring will be considered by the City. However, monitoring would not change the adequacy of the analysis, mitigation, or conclusions presented in the IS/MND. The comment has been forwarded to the decision-makers for their consideration.

Response to Comment 2-3
The comment does not specifically address the adequacy of the IS/MND; however, a Memorandum of Assumptions for the Oat Hill Apartment Project was prepared for the proposed project on June 19, 2020 outlining the proposed study area of the Traffic Impact Analysis (TIA). The study area proposed in the memorandum did not include the Napa Junction Road/SR-29 intersection. City staff confirmed the scope and approach of the memorandum as consistent with Institute of Transportation Engineers (ITE) standards and City requirements. Therefore, the TIA did not include the Napa Junction Road/SR-29 intersection.

Subsequent to publication of the IS/MND, a final TIA for the proposed project was prepared which included a Level of Service (LOS) analysis of the Napa Junction Road/SR 29 intersection (see Attachment A). As noted in the final TIA, the Napa Junction Road/SR 29 intersection would operate at LOS F under Future Conditions with or without the proposed project. This operation was considered acceptable because the Napa Junction Road/SR 29 intersection is exempt from the City's LOS standard, and the California Department of Transportation (Caltrans) does not provide an operational standard. Therefore, the findings of the final TIA would not change the adequacy of the analysis, mitigation, or conclusions presented in the IS/MND.

Response to Comment 2-4
The comment does not address the adequacy of the IS/MND, but has been forwarded to the applicant and they are aware of the Caltrans requirement.

Response to Comment 2-5
The comment does not specifically address the adequacy of the IS/MND. However, it should be noted that page 112 of the IS/MND describes several multimodal improvements to SR 29 and parallel capacity improvements that would take place throughout the City of American Canyon to further improve circulation along the SR 29 corridor. As noted in the IS/MND and mandated by the City, the project applicant would be required to pay a proportional share fee toward the cost of planned future infrastructure improvement to the SR 29 corridor.

Response to Comment 2-6
The comment presents information regarding encroachment permit requirements, but does not address the adequacy of the IS/MND. The comment has been forwarded to the applicant and they are aware of the Caltrans requirement.

Response to Comment 2-7

The comment is a concluding statement and does not address the adequacy of the IS/MND.

Letter 3

Proposed Oat Hill Multi- Family Project

March 11, 2021

City of American Canyon City Council
4381 Broadway Street, Suite 201
American Canyon, Ca. 94503

Mayor, Vice Mayor and City Councilmembers,

3-1 I have recently reviewed Mr. Hess' proposed Multi-Family development to be located off Napa Junction Road at Oat Hill. As the property owner at 100 Napa Junction Road, we would like to express our support for the proposed project. Thank you for your consideration.

Respectfully submitted,

Cassidy Ward

Cassidy Ward

LETTER 3: CASSIDY WARD

Response to Comment 3-1

The comment expresses support for the proposed project, but does not address the adequacy of the IS/MND. The comment has been forwarded to the decision-makers for their consideration.

Letter 4

From: Karen Fritz <gmafritz@comcast.net>
Date: March 10, 2021 at 5:33:50 PM PST
To: twong@cityofamericancanyon.org
Subject: Oat Hiil

HI Tammy,

This is one concern about this development, on page 103 it states that there is no impact on our schools. I think this should be reevaluated because currently our Middle school is severely overcrowded. I believe there is somewhere around 400 kids over the amount the school was built for currently. I was told at one time that parents had to staggered start times for their children due to over crowding. When we are not dealing with a pandemic many parents have to alter their work times to accommodate the school. Not everyone has the luxury to do that.

4-1

Traffic is another problem with this. More housing means more traffic not sure how anyone can say it doesn't.

4-2

Thank you
Karen Fritz

LETTER 4: KAREN FRITZ

Response to Comment 4-1

As noted on page 104 of the IS/MND, the Napa Valley Unified School District (NVUSD) reports that the district's enrollment numbers have been steadily declining over the last decade and are anticipated to continue dropping. Furthermore, the project applicant would be required to pay the current residential development fee of $4.08 per square foot for dwelling units, which would go toward the cost of improvements and/or upgrades to school facilities, including American Canyon Middle School. According to Government Code Section 65995 et. seq. and Education Code Section 17620 et. seq., payment of applicable development fees is sufficient under CEQA to reduce impacts associated with an increase in students from the proposed project.

Response to Comment 4-2

The TIA prepared for the proposed project determined that the proposed project would generate approximately 1,583 daily vehicle trips, including 105 AM peak hour and 128 PM peak hour trips. Although the proposed project would generate an increase in traffic, the addition of project traffic would slightly decrease average peak hour delay at the Napa Junction Road/Lombard Road intersection. As noted in the IS/MND, while a reduction in peak hour delay appears counterintuitive in light of the addition of project traffic, this reduction in delay occurs when trips are added to underutilized movements or when current delays are below the intersection average, thus resulting in a better balance between approaches and lower overall average delay. The proposed project would add traffic solely to the eastbound and westbound through movements at this location, rather than the southbound through movements. The eastbound and westbound approaches do not have delays and are therefore below average for the intersection as a whole, which results in a slight reduction in the overall average delay. Project trips are expected to make use of excess capacity; thus, motorists would experience little, if any, change in conditions as a result of the proposed project. In addition, all of the study intersections analyzed as part of the TIA (which included the intersections of Napa Junction Road/Theresa Avenue; Napa Junction Road/Lombard Road; and Eucalyptus Drive/Theresa Avenue), were found to operate at an acceptable Level of Service (LOS) under Future Plus Project Conditions.

Attachment A
Traffic Impact Study for the Oat Hill Multi-Family Housing Project

Oat Hill Multi-Family Project
Mitigation Monitoring and Reporting Program

March 2021

The California Environmental Quality Act (CEQA) and CEQA Guidelines require Lead Agencies to adopt a program for monitoring the mitigation measures required to avoid the significant environmental impacts of a project. The Mitigation Monitoring and Reporting Program (MMRP) ensures that mitigation measures imposed by the City are completed at the appropriate time in the development process.

The mitigation measures identified in the Initial Study/Mitigated Negative Declaration for the Oat Hill Multi-Family Project are listed in the MMRP along with the party responsible for monitoring implementation of the mitigation measure, the milestones for implementation and monitoring, and a sign-off that the mitigation measure has been implemented.

MITIGATION MONITORING AND REPORTING PROGRAM OAT HILL MULTI-FAMILY PROJECT			
Mitigation Measure	**Implementation Schedule**	**Monitoring Agency**	**Sign-Off**
Aesthetics			
I-1. Prior to issuance of building permits, the applicant shall prepare and submit a detailed lighting plan for review and approval by the Community Development Department. The plan shall show conformance with City performance standards for street lighting and glare, including shielding of all on-site lighting so that light is directed within the project site and does not illuminate adjacent properties, and indicate the location and design of proposed lighting and lighted signs. The applicant shall implement the final plan as approved by the City.	Prior to issuance of building permits	City of American Canyon Community Development Department	
Air Quality			
III-3. Prior to the issuance of a grading permit, the project applicant shall indicate via notation on project construction plans that all off-road construction equipment used for the roadway extension along Napa Junction Road, including owned, leased, and subcontractor vehicles, shall meet the California Air Resources Board's (CARB's) Tier 4 emissions standards. The construction plans shall be submitted for review and approval to the City of American Canyon Community Development Department.	Prior to issuance of a grading permit	City of American Canyon Community Development Department	
Biological Resources			
Swainson's Hawk *IV-1. Prior to project initiation, pre-construction surveys shall be conducted by a qualified biologist within a 0.5-mile radius around all project activities, including on-site and off-site work, and shall be completed for at least two survey periods prior to starting Project activities. The survey period timing and methodology shall be conducted in accordance with the Swainson's Hawk Technical Advisory Committee's Recommended Timing and Methodology for Swainson's Hawk Nesting Surveys in California's Central Valley (2000), which identifies different survey windows throughout the pre-nesting and nesting season (ranging from January 1 through July 30/post-fledging) that have different survey methodologies and requirements. A letter report summarizing the survey results shall be submitted to CDFW for review and written acceptance prior to starting Project activities. The survey results shall also be submitted to the Community*	Prior to the initiation of ground disturbance	CDFW City of American Canyon Community Development Department	

MITIGATION MONITORING AND REPORTING PROGRAM OAT HILL MULTI-FAMILY PROJECT			
Mitigation Measure	**Implementation Schedule**	**Monitoring Agency**	**Sign-Off**
Development Department within 30 days following the final survey. If active Swainson's hawk nests are not identified on or within 0.5-mile of the project site within the survey periods, further avoidance and minimization measures for Swainson's hawk nesting habitat are not required. *IV-2. If Swainson's hawks are found to be nesting on the project site or within 0.5-mile of the project site, the project proponent shall either, a) delay project activities until all Swainson's hawk nests within 0.5-mile of the project site are no longer active, as determined by a qualified biologist, b) determine if the 0.5-mile buffer zone may be reduced in consultation with CDFW based on site-specific conditions, or c) if take cannot be avoided, obtain a CESA Incidental Take Permit from CDFW prior to starting project activities.*	After pre-construction surveys listed in Mitigation Measure IV-1 above are completed, and Swainson's hawk nests are detected	CDFW	
Burrowing Owl *IV-3. Prior to initiation of ground disturbance, a qualified biologist shall conduct nesting and/or wintering owl surveys, as appropriate, in accordance with the California Department of Fish and Game (now CDFW) 2012 Staff Report on Burrowing Owl Mitigation survey methodology (see https://wildlife.ca.gov/Conservation/Survey-Protocols#377281284-birds). Surveys shall encompass the project area and a sufficient buffer zone to detect owls nearby that may be impacted. Time lapses between surveys or project activities shall trigger subsequent surveys including but not limited to a final survey within 24 hours prior to ground disturbance before construction equipment mobilizes to the project area. The qualified biologist shall have a minimum of two years-experience implementing the CDFW 2012 Staff Report survey methodology resulting in detections. A letter report summarizing the survey results shall be submitted to the Community Development Department within 30 days following the pre-construction survey. If burrowing owls are not present on-site or adjacent to the site where they may be disturbed during pre-construction surveys, further avoidance and minimization*	Prior to the initiation of ground disturbance	City of American Canyon Community Development Department	

MITIGATION MONITORING AND REPORTING PROGRAM OAT HILL MULTI-FAMILY PROJECT				
	Mitigation Measure	**Implementation Schedule**	**Monitoring Agency**	**Sign-Off**
	measures for burrowing owl nesting and wintering habitat are not required.			
IV-4.	*If burrowing owls are detected on or adjacent to the site where they may be disturbed, the following restricted activity dates and setback distances recommended per CDFW's Staff Report (2012) shall be implemented, unless reduced buffers are accepted by CDFW in writing based on site-specific conditions:* • *From April 1 through October 15, low disturbance and medium disturbance activities shall have a 200-meter buffer while high disturbance activities shall have a 500-meter buffer from occupied nests and wintering sites.* • *From October 16 through March 31, low disturbance activities shall have a 50-meter buffer, medium disturbance activities shall have a 100-meter buffer, and high disturbance activities shall have a 500-meter buffer from occupied nests and wintering sites.* • *No earth-moving activities or other disturbance should occur within the aforementioned buffer zones of occupied burrows. These buffer zones shall be marked with high visibility fencing or flagging.* *If burrowing owls are present outside of the nesting season, burrowing owls may be passively relocated from the project site and adjacent habitat using CDFW-accepted methods so that construction can proceed. Any required passive relocation of burrowing owls would require CDFW acceptance. If passive relocation of burrowing owls is necessary, a qualified biologist shall prepare a Relocation Plan, including compensatory habitat as described below, for CDFW review and acceptance prior to the start of construction activities.* *If the survey determines that the project site is actively being used by burrowing owl, or any owls are passively relocated as described above, then compensatory habitat mitigation shall be provided. The habitat mitigation/compensation plan shall be*	After preconstruction surveys, if burrowing owls are detected	City of American Canyon Community Development Department CDFW	

MITIGATION MONITORING AND REPORTING PROGRAM OAT HILL MULTI-FAMILY PROJECT			
Mitigation Measure	**Implementation Schedule**	**Monitoring Agency**	**Sign-Off**
submitted to CDFW for review and approval prior to the start of project activities. Habitat compensation acreages shall be approved by CDFW, as the amount depends on site specific conditions, and completed before project construction. It shall also include placement of a conservation easement and preparation and implementation of a long-term management plan. If burrowing owls are observed during surveys, notification shall also be submitted to the California Natural Diversity Database (CNDDB; see https://wildlife.ca.gov/Data/CNDDB/Submitting-Data).			
White-tailed Kite, Northern Harrier, and Common Nesting Birds *IV-5. If project activities must be conducted during the nesting season (February 15 and September 1), a pre-construction nesting bird survey shall be conducted by a qualified biologist within 7 days of vegetation removal or initial ground disturbance. The survey shall include the project site, any off-site disturbance areas, and within a minimum of 500 feet of all project areas, to identify the location and status of any nests that could potentially be affected either directly or indirectly by project activities. A letter report summarizing the survey results shall be submitted to the Community Development Department within 30 days following the pre-construction survey. If nesting birds are not present on-site or within a minimum 500 feet of the project site during pre-construction surveys, further avoidance and minimization measures for nesting bird habitat are not required.* *If active nests of nesting bird species are identified during the nesting bird survey, a work exclusion zone shall be established around each nest by the qualified biologist. Established exclusion zones shall remain in place until all young in the nest have fledged or the nest otherwise becomes inactive (e.g., due to predation). Appropriate exclusion zone sizes shall be determined by a qualified biologist. The qualified biologist shall be on site daily for the first week during Project activities, and then weekly thereafter until the nest is no longer active, to observe all active bird and raptor nests and to ensure that Project activities do not*	Within 7 days prior to vegetation removal or initial ground disturbance	City of American Canyon Community Development Department CFDW	

MITIGATION MONITORING AND REPORTING PROGRAM OAT HILL MULTI-FAMILY PROJECT				
	Mitigation Measure	**Implementation Schedule**	**Monitoring Agency**	**Sign-Off**
	cause nest disturbance. If the qualified biologist observes birds and/or raptors displaying potential nest disturbance behavior, the qualified biologist shall cease work and consult with CDFW before resuming Project activities. In this event, Project activities shall not resume without CDFW's written permission.			
	Cultural Resources			
V-1.	*Prior to grading permit issuance, the applicant shall submit plans to the Community Development Department for review and approval which indicate (via notation on the improvement plans) that if historic and/or cultural resources are encountered during site grading or other site work or off-site work, all such work shall be halted immediately within 100 feet and the applicant shall immediately notify the Community Development Department of the discovery. In such case, the applicant shall be required, at their own expense, to retain the services of a qualified archaeologist meeting the Secretary of the Interior's Professional Qualification Standards for prehistoric and historic archaeologist for the purpose of recording, protecting, or curating the discovery as appropriate. The archaeologist shall be required to submit to the Community Development Department for review and approval a report of the findings and method of curation or protection of the resources. Further grading or site work within the area of discovery shall not be allowed until the preceding work has occurred.*	Prior to the issuance of a grading permit	City of American Canyon Community Development Department	
V-2.	*If human remains, or remains that are potentially human, are found during construction, a professional archeologist shall ensure reasonable protection measures are taken to protect the discovery from disturbance. The archaeologist shall notify the Napa County Coroner (per §7050.5 of the State Health and Safety Code). The provisions of §7050.5 of the California Health and Safety Code, §5097.98 of the California Public Resources Code, and Assembly Bill 2641 will be implemented. If the Coroner determines the remains are Native American and not the result of a crime scene, then the Coroner will notify the Native American Heritage Commission (NAHC), which then will designate a Native American Most Likely Descendant (MLD) for the project (§5097.98 of the Public Resources Code). The designated MLD*	During ground-disturbing activities	Napa County Coroner Native American Heritage Commission Professional Archeologist	

MITIGATION MONITORING AND REPORTING PROGRAM OAT HILL MULTI-FAMILY PROJECT				
	Mitigation Measure	**Implementation Schedule**	**Monitoring Agency**	**Sign-Off**
	will have 48 hours from the time access to the property is granted to make recommendations concerning treatment of the remains. If the applicant does not agree with the recommendations of the MLD, the NAHC can mediate (§5097.94 of the Public Resources Code). If an agreement is not reached, the qualified archaeologist or most likely descendent must rebury the remains where they will not be further disturbed (§5097.98 of the Public Resources Code). This will also include either recording the site with the NAHC or the appropriate Information Center, using an open space or conservation zoning designation or easement, or recording a reinternment document with the county in which the property is located (AB 2641). Work cannot resume within the no-work radius until the lead agencies, through consultation as appropriate, determine that the treatment measures have been completed to their satisfaction.			
	Geology and Soils			
VII-1.	*Prior to approval of any building permits, the project Civil Engineer shall show on the project plans that the project design would adhere to all engineering recommendations provided in the site-specific Geologic Hazards and Preliminary Geotechnical Investigation prepared by Giblin Associates and the Soil Investigation prepared by Reese & Associates. The project plans shall include, but would not be limited to, the use of mat slabs, post-tensioned slabs on-grade, imported non-expansive fill under conventional floor slabs, appropriate setbacks from fault zones, stabilization of potential landslide areas, and structural design in accordance with Site Class C of the CBSC Ground Motion Parameters. Project plans shall be subject to review and approval by the City Engineering Division.*	Prior to approval of any building permits	City of American Canyon Engineering Division	
VII-2.	*Implement Mitigation Measure VII-1.*	See Mitigation Measure VII-1	See Mitigation Measure VII-1	
VII-3.	*Prior to the issuance of a grading permit, the project applicant shall prepare to the satisfaction of the Community Development Department, an erosion control plan that utilizes standard construction practices to limit the erosion effects during construction of the proposed project. Actions should include, but are not limited to, the following:*	Prior to the issuance of a grading permit	City of American Canyon Community Development Department	

MITIGATION MONITORING AND REPORTING PROGRAM OAT HILL MULTI-FAMILY PROJECT			
Mitigation Measure	**Implementation Schedule**	**Monitoring Agency**	**Sign-Off**
• *Hydro-seeding;* • *Placement of erosion control measures within drainage ways and ahead of drop inlets;* • *The temporary lining (during construction activities) of drop inlets with "filter fabric";* • *The placement of straw wattles along slope contours;* • *Use of a designated equipment and vehicle "wash-out" location;* • *Use of siltation fences;* • *Use of on-site rock/gravel road at construction access points; and* • *Use of sediment basins and dust palliatives*			
VII-4. Implement Mitigation Measure VII-1.	See Mitigation Measure VII-1	See Mitigation Measure VII-1	
VII-5. Implement Mitigation Measures V-1 and V-2.	See Mitigation Measures V-1 and V-2	See Mitigation Measures V-1 and V-2	
Greenhouse Gas Emissions			

VIII-1. Prior to issuance of building permits, the applicant shall submit proof to the Community Development Department for review and approval which indicate project compliance with the Tier 1 Energy Efficiency division of the Title 24 standards. Tier 1 Energy Efficiency for low-rise multifamily developments require the following measures:
 	
• *Total Energy Design Rating (Total EDR) and Energy Efficiency Design Rating (Efficiency EDR) for the Proposed Design Building is included in the Certificate of Compliance documentation.*
• *Quality Insulation Installation procedures specified in the Building Energy Efficiency Standards Reference Appendices RA3.5 are completed.*
• *One of the following options is required:*
  • *A4.203.1.2.1 − Roof deck insulation or ducts in conditioned space.*
  • *A4.203.1.2.2 − High performance walls.*
	Prior to the issuance of building permits	City of American Canyon Community Development Department	

MITIGATION MONITORING AND REPORTING PROGRAM OAT HILL MULTI-FAMILY PROJECT			
Mitigation Measure	**Implementation Schedule**	**Monitoring Agency**	**Sign-Off**
• *A4.203.1.2.3 − HERS-verified compact hot water distribution system.* • *A4.203.1.2.4 − HERS-verified drain water heat recovery.* • *Buildings complying with the first level of advanced energy efficiency shall have additional integrated efficiency and onsite renewable energy generation sufficient to achieve a Total EDR of the Tier 1 value indicated by Table A4.203.1.1.1 or lower as calculated by Title 24, Part 6 Compliance Software approved by the Energy Commission. This Total EDR is in addition to meeting the Efficiency EDR.* • *Local jurisdictions adopting Tier 1 or Tier 2, or considering community shared solar or storage options as specified, shall consult with the local electric service for acceptance.*			
Noise			
XIII-1. Prior to the approval of grading permits, the City shall establish the following related to the use of construction equipment: • *Construction activities (excluding activities that would result in a safety concern to the public or constructions workers) shall be limited to between the daytime hours of 7:00 AM and 7:00 PM daily; Construction equipment shall be properly maintained and equipped with noise-reduction intake and exhaust mufflers and engine shrouds, in accordance with manufacturers recommendations;* • *Equipment engine shrouds shall be closed during equipment operation;* • *When not in use, motorized construction equipment shall not be left idling for more than five minutes; and* • *Stationary equipment (power generators, compressors, etc.) shall be located at the furthest practical distance from nearby noise-sensitive land uses or sufficiently shielded to reduce noise-related impacts.*	Prior to the approval of grading permits	City of American Canyon Community Development Department	

Transportation			
XVII-1. Prior to issuance of grading permits, the project applicant shall submit Improvement Plans that reflect the recommendations included in the Traffic Impact Study prepared by W-Trans. Specifically, the Improvement Plans shall reflect a pedestrian path or sidewalk between the project site and the existing terminus of the sidewalk on the south side of Napa Junction Road near the elementary school crossing. The Improvement Plans shall also reflect space for bicycle storage provided either on balconies or other outside spaces dedicated to each housing unit, in garages or other storage spaces for each unit, or through provision of bike racks. The recommendations made by W-Trans shall be confirmed by the City's Public Works Department and/or the City Engineer prior to issuance of grading permits.	Prior to approval of Improvement Plans and issuance of grading permits	City of American Canyon Public Works Department City Engineer	
XVII-2. Prior to the first residential occupancy, the applicant shall implement the following TDM measures, as described in the TIS: • *Unbundled Parking;* • *Free Transit Passes;* • *Secure Bicycle Parking and Maintenance Tools;* • *Tele-Work/Compressed Schedules;* • *Carpooling and Ride-Matching Program;* • *Transportation Coordinator;* • *Welcome Packet for New Residents; and* • *Monitoring of Program Performance.* *Proof of implementation of the TDM measures shall be submitted to the City's Community Development Department for review and approval.*	Prior to the first residential occupancy	City of American Canyon Community Development Department	
Tribal Cultural Resources			
XVIII-1. Implement Mitigation Measures V-1 and V-2.	See Mitigation Measures V-1 and V-2	See Mitigation Measures V-1 and V-2	

Utilities and Service Systems			
XIX-1. The project applicant shall demonstrate compliance with the City's Zero Water Footprint Policy by mitigating all new potable water demands with "wet-water" offsets by one or more of the following options to ensure the proposed project results in a net zero increase in demand for potable water: • *Reducing existing potable water demands on-site;* • *Funding programs or constructing projects that would conserve an equivalent amount of water elsewhere within the water service area;* • *Funding of and/or constructing projects that would increase an equivalent amount of recycled water use elsewhere within the water service area where potable water is currently used; and/or* • *Purchasing new water supplies from other water providers.*	Prior to the issuance of a building permit	City of American Canyon Department of Public Works	
XIX-2. The project shall be designed and constructed with purple irrigation pipe so that reclaimed water may be used for landscape irrigation purposes. The project shall use recycled water for irrigation in the event recycled water becomes available at the site.	During project design and construction	City of American Canyon Engineering Division	
XIX -3. At the time of issuance of building permits, the project applicant shall pay all updated water capacity and impact fees in effect, to the extent they are not subject to applicable fee credits, to provide funding for the City to acquire additional long-term water resources and improve and develop its treatment and distribution system. The fees will permit the City to exercise additional options for potable water capacity from the City of Vallejo and/or other sources, and will also provide for implementation of the recycled water system.	At the time of issuance of building permits	City of American Canyon Engineering Division	
XIX-4. The project applicant shall pay to the City a monthly service charge to adequately cover the project's costs associated with City supplying water through the City's connection to the City of Vallejo, as determined by the Public Works Director.	Monthly	City of American Canyon Department of Public Works	
XIX-5. Prior to issuance of building permits, the project shall be reviewed by the Community Development Department for consistency with the Water Conservation Guidelines. The project applicant shall incorporate water conservation Best Management Practices into the project.	Prior to the issuance of building permits	City of American Canyon Community Development Department	

XIX-6.	*Should additional project water be required, the proposed project shall comply with the City's ordinances and regulations in effect at the time of authorization for additional water use. In addition, such changes in project use would trigger a new City Discretionary Review process, which would trigger re-evaluation of the proposed project's water supply impacts.*	At the time of authorization for additional water use, if additional project water is required	City of American Canyon Engineering Division	

XIX-7.	*Prior to issuance of building permits, the project applicant shall submit landscaping plans to the City of American Canyon for review and approval demonstrating that the proposed landscaping would comply with the requirements in the City's Model Water Efficient Landscape Ordinance (AB 1881). The landscaping plan shall identify outdoor irrigation water conservation measures, such as, but not limited to:*
	• *Drought-resistant vegetation;*
	• *Irrigation systems employing the following features:*
	  • *drip irrigation;*
	  • *low-precipitation-rate sprinklers;*
	  • *bubbler/soaker systems;*
	  • *programmable irrigation controllers with an automatic rain shutoff sensors and flow sensing capabilities (ET Smart Controller);*
	• *Matched precipitation rate nozzles that maximize the uniformity of the water distribution characteristics of the irrigation system;*
	• *Conservative sprinkler spacings that minimize overspray onto paved surfaces;*
	• *Hydrozones that keep plants with similar water needs in the same irrigation zone;*
	• *Minimally or gently sloped landscaped areas to minimize runoff and maximize infiltration; and*
	• *Organic topdressing in non-turf areas to decrease evaporation and increase water retention.*
		Prior to the issuance of building permits	City of American Canyon Community Development Department	

COVID-19 Hazards			
XXI-1. The project applicant shall prepare a COVID-19 Exposure Control Plan which shall be included in the project construction site safety plan. The COVID-19 Exposure Control Plan shall comply with all regional and statewide orders related to the operation of construction sites and essential businesses during the COVID-19 pandemic, including but not limited to: social distancing requirements, masks for all workers, daily worker screening for potential symptoms, disinfecting protocols for all shared surfaces, avoidance of tool sharing, and provision of sufficient hand sanitizer for all workers. The COVID-19 Exposure Control Plan shall be submitted to the City of American Canyon Planning Department for review and approval prior to the issuance of grading permits.	Prior to the issuance of grading permits	City of American Canyon Community Development Department	

Attachment 1, Exhibit C: Affordable Housing In-Lieu Fee Analysis

MEMORANDUM

To: Richard W. Hess

From: Darin Smith and Snow Zhu

Subject: In-Lieu Fee Analysis for Oat Hill Apartments; EPS #211013

Date: February 9, 2021

The Economics of Land Use

Economic & Planning Systems, Inc. (EPS) has been requested by Richard W. Hess (Client/Developer) to provide a peer review of the Inclusionary Housing Analysis submitted by the Client on January 8, 2021 to the City of American Canyon (City) as part of the submittal process for the Oat Hill Apartments Project (Project).

The Project as proposed includes 291 units, ranging from one-bedroom to three-bedroom. According to the City's Municipal Code 19.28.040, 15 percent of the project's units are required to be affordable (44 units). Alternatives to satisfying the requirement, including the payment of an in-lieu nexus fee, are outlined in the City's Municipal Code 19.28.050.

This memorandum provides a summary of EPS's peer review findings regarding the financial impact of complying with the City's inclusionary housing requirements with on-site affordable units versus paying the in-lieu fee. EPS includes an evaluation of key assumptions, comparable market data, and a yield-on-cost analysis as part of the review.

Key Findings

- The cost and revenue assumptions provided in the Developer's Inclusionary Housing Analysis are reasonable and comparable to current market conditions, based on EPS research and industry experience.

- A return-on-cost analysis conducted by EPS finds that the Project faces feasibility challenges but is much more feasible and likely to attract investor interest through payment of the in-lieu affordable housing fee rather than constructing the required number of on-site inclusionary housing units.

Summary of Developer Assumptions

Development Cost

The Developer has indicated an all-in development cost of $435 per net building square foot. EPS assumes this figure reflect hard costs (labor and materials), soft costs (design, financing, fees, etc.), and land acquisition costs. In EPS's recent experience, the all-in cost of $435 per square foot used by the Developer appears reasonable for a wood frame multifamily project with surface parking (no podium or underground parking). EPS has consulted on similar projects in the Bay Area with all-in costs higher than the $435 per square foot estimate provided by the Developer. A higher construction cost would increase the overall costs associated with building the Project and potentially result in a less feasible project. EPS agrees that the $435 per square foot cost estimate is a reasonable and even aggressive assumption to use but notes that construction costs tend to increase over time.

Vacancy Rate

The Developer assumes a 5 percent vacancy rate which EPS has found to be a standard assumption for multifamily buildings similar to the Project. There are cases where the vacancy rate may be higher; for example, when a project is newly constructed. Indeed, American Canyon's current apartment supply has a significantly higher vacancy rate, reflecting a current economic downturn as well as relatively recent construction that has not yet stabilized. In taking a long-term view, EPS concludes that a 5 percent vacancy rate is a reasonable assumption for the Project at stabilization.

Operating Expenses

The Developer estimates annual operating expenses to be $10,500 per unit which is within the same range as EPS's estimates. EPS typically assumes operating expenses as 35 percent of gross revenue. Applying this methodology to the Developer's assumptions on gross revenue per market-rate unit results in an annual operating expense of approximately $11,000 per unit. EPS's results are slightly higher but within the same range as the Developer's assumption of $10,500 per unit. Accordingly, EPS concludes that these operating expense assumptions are reasonable and perhaps aggressive.

Affordable Rents

EPS reviewed the City of American Canyon and County of Napa's affordable housing definitions and rent limits. The definitions compiled by EPS as shown in **Table 1** are the same as those provided in the Developer's analysis. Additionally, the affordable housing rent limits on **Table 2** from the 2020 County of Napa Annual Income Limits and Affordable Rental Limits match the Developer's rent assumptions.

Table 1 Affordable Housing Income Definitions

Income Category	Percentage Required[1]	Definition[1]	Income Level Used in Analysis[2]
Very Low	5%	≤ 50% AMI	50%
Low	5%	> 50% and ≤ 80% AMI	65%
Moderate	5%	> 80 and ≤ 120% AMI	100%
Total	**15%**		

[1] As defined by City of American Canyon Municipal Code 19.28.040.

[2] For Very Low, the maximum income limit is used in the analysis. For Low and Moderate, the midpoint of the income range is used.

Table 2 Napa County Affordable Housing Rent Limits (2020)

Unit Size	Very Low	Low	Moderate
1-Bedroom	$1,084	$1,415	$2,184
2-Bedroom	$1,219	$1,592	$2,458
3-Bedroom	$1,354	$1,768	$2,730

Source: City of American Canyon; Napa County; Economic & Planning Systems, Inc.

Market-Rate Rents

EPS researched market rents for recently constructed multifamily buildings in the area surrounding the City. Rents for each unit size are within the same range as the comparable rents used in the Developer's analysis. As shown on **Table 3**, rents have been stable in the past few years. Thus, EPS concludes that the rent assumptions used in the Developer's analysis are representative of market rate rents in the area.

Table 3 Market-Rate Rent Comparisons

	EPS Market Research			Developer Analysis[1]
Unit Size	2019	2020	Jan. 2021	Jan. 2021
1-Bedroom	$2,266	$2,265	$2,208	$2,275
2-Bedroom	$2,705	$2,719	$2,640	$2,719
3-Bedroom	$3,156	$3,211	$3,206	$3,073

Capitalization Rate

The Developer assumes a capitalization rate of 4.5 percent when calculating affordable housing values. The value is calculated by dividing the annual Net Operating Income (NOI) of the unit – total achievable rents less vacancy losses and operating expenses – by the capitalization rate. For example, a building yielding an NOI of $1.0 million would be worth $10 million if a 10 percent capitalization rate is applied, and $20 million if a 5 percent capitalization rate applies. In EPS's opinion, 4.5 percent is an aggressive capitalization rate to apply to multifamily projects in Napa County, as it is lower than is reported for the Northern California markets in a national survey of capitalization rates prepared by Integra Realty Resources in 2021. That source suggests that the capitalization rates for suburban multifamily development are 4.75 percent in the San Francisco market area, 6.00 percent in Oakland, and 6.50 percent in Sacramento. Using any of these higher published capitalization rates would lower the value of the Project's affordable housing units, relative to the Developer's analysis.

Developer Analysis Conclusions

Using the assumptions described, the Developer calculates a "loss in value" of $8.2 million to illustrate the infeasibility of constructing affordable housing units on-site. EPS agrees that the value of the affordable units is likely to fall short of the costs of those same units by a magnitude of at least $8.2 million, and possibly greater if a higher capitalization rate were applied, as appears to be justified.

EPS Return-on-Cost Analysis

In the case of this Project, as with many others subject to inclusionary requirements throughout California, the cost of producing an affordable housing unit is greater than the revenue it brings in. However, this result does not necessarily mean that the entire project is infeasible. Most projects that provide inclusionary affordable units would make a similar claim regarding the lower value of and implicit subsidy for the affordable units, yet many proceed to financing and development nonetheless because the value of the market-rate units can offset that implicit subsidy for affordable units.

To more broadly evaluate the Project's feasibility, EPS has conducted a return-on-cost analysis for constructing the Project with payment of the in-lieu affordable housing fee versus building on-site inclusionary housing. Using the assumptions verified in the prior section, EPS calculated the total costs associated with Project construction as well as the net operating income (NOI), taking into account operating costs and vacancy. These factors determine the "return-on-cost," calculated as the amount of net operating income in a stabilized year of operation as a percentage of the total costs of the project.

Return-on-cost is a standard metric used by developers and investors to determine whether the expected financial returns on a new development project are worth the risks inherent in new construction, including the potential for cost overruns and market downturns. The return-on-cost expectations also account for alternative investment opportunities, such as purchasing an existing residential project that has already been constructed and is producing revenue. The Terner Center at UC Berkeley has published an analysis of housing development economics that concludes that "a minimum spread of between 1.0 percent and 1.5 percent (between capitalization rates and return-on-cost rates) is needed in the (Bay Area)." Applying this premium "spread" to the capitalization rates published by Integra Realty Resources would suggest that the minimum return-on-cost metric for suburban multifamily in Northern California would be 5.75 percent to

indicate project feasibility (4.75 percent capitalization rate in the San Francisco market plus 1.00 percent "minimum spread").

As shown on **Tables 4 and 5,** the resulting return-on-cost for the Project is estimated to be 4.7 percent when on-site inclusionary housing is constructed and 5.1 percent when the in-lieu fee option is made available and the fee costs are added to the development costs. Both of these return metrics fall short of what might be expected for projects to proceed. Though a 4.7 percent return-on-cost may appear very close to 5.1 percent, it actually reflects a roughly 8 percent difference in the financial returns – more than enough to shift a project from feasible to infeasible in the perspective of investors.

Put another way, the annual net operating income of the Project is roughly $500,000 more if the Developer pays the in-lieu fees and rents all units at market rates, compared to the NOI with 44 income-restricted units. This difference would remain and likely grow over the 55-year period of the affordability restrictions, resulting in a cumulative difference of roughly $27 million in revenues over the period.

EPS concludes that, while the Project appears to face some feasibility challenges in either case, the Project is much more likely to be considered feasible by investors if it is allowed to pay the in-lieu fees rather than providing on-site affordable units. The City will need to consider whether the Project is meritorious enough for policy reasons to justify an action to enhance its feasibility, including whether receipt of the in-lieu fees may yield advantages that exceed the provision of on-site units, such as the ability to leverage other funds to deliver more affordable units and/or lower price points.

October 5, 2020

Hi Mr. Williams,

My name is Rick Hess. My family has owned “Oat Hill” since 1978. For the last 40 years we have operated our construction company together with the RV Park on a portion of our approximately 40 acres of land. Our properties are accessed off Lombard Rd. to Hess Rd. which turns into Napa Junction Rd. as it goes up Oat Hill. We have been working with the City of American Canyon since 2004 to develop our properties into a Residential Development. In January of this year the City Council adopted a “Resolution” which determined that 30 of our approximate 40 acres highest and best use was for Residential Development.

We have recently submitted our Application to the City to construct 206 units of Condominiums on the top 13 acres together with 85 units of Condominiums on the bottom 7 acres of the South side of the hill relative to Napa Junction Road. It is anticipated that Napa Junction Rd. would be improved and connected through the school owned property and would provide direct access from highway 29 straight up the hill.

The Development will provide much needed housing in the City of American Canyon at a time when housing options are limited in the city and Statewide. The Development will provide great views for its residents as well as a walking trail and public lookouts so that the citizens of American Canyon can enjoy breathtaking views of Mt. Tamalpais, the Wetlands, up the Napa Valley, and on a clear day even buildings in San Francisco. I have enclosed a Photo Simulation of what it will look like once the project is complete. Please review and call me with any questions you may have.

If you support the development of this property, I would appreciate you signing the enclosed “Letter of Support” and return in the self-address, stamped envelope provided. I look forward to hearing from you.

Thank you for your time and consideration,

Rick Hess

Proposed Oat Hill Multi- Family Project

October 5, 2020

City of American Canyon City Council

4381 Broadway Street, Suite 201

American Canyon, Ca. 94503

Mayor, Vice Mayor and City Councilmembers,

I have recently reviewed Mr. Hess' proposed Multi-Family development to be located off Napa Junction Road at Oat Hill. As a nearby property owner located at property APN #058-040-020 in American Canyon, I would like to express my support for the proposed project. Thank you for your consideration.

Respectfully submitted,

David Williams

PC RESOLUTION NO. 2021-05

A RESOLUTION OF THE PLANNING COMMISSION OF THE CITY OF AMERICAN CANYON, CALIFORNIA, RECOMMENDING THE CITY COUNCIL OF THE CITY OF AMERICAN CANYON APPROVE A GENERAL PLAN AMENDMENT TO CONVERT A VACANT 13.6-ACRE PARCEL (PARCEL A) ON THE EAST SIDE OF OAT HILL SOUTH OF NAPA JUNCTION ROAD FROM LIGHT INDUSTRIAL WITH SPECIALTY COMMERCIAL OVERLAY (CS) AND ESTATE RESIDENTIAL (RE) TO HIGH DENSITY RESIDENTIAL (RH-1), ASSESSOR'S PARCEL NUMBER 058-380-008 (FILE NO. PL20-0024)

WHEREAS, pursuant to Section 65300 of the State Planning and Zoning Law, the City of American Canyon (City) has adopted a General Plan to provide comprehensive long-range planning and a blueprint of the City's future form, including land use and circulation maps that specify the roadway network and the distribution of types and intensities of land; and

WHEREAS, on August 14, 2020, RH Hess Development Company submitted a General Plan Amendment and Zone Change application to allow 206 dwelling units on approximately 13.6 acres on the east side of Oat Hill south of Napa Junction Road APN 058-380-008 (File No. PL20-0024); and

WHEREAS, on August 14, 2020, RH Hess Development Company submitted a Tentative Subdivision Map to create 206 dwelling units on 13.6 acres located at Oat Hill with access from Napa Junction Road, Assessor's Parcel Number 058-380-008 (File No. PL20-0025); and

WHEREAS, on November 2, 2021, RH Hess Development submitted a Lot Line Adjustment (File No. PL20-0039) to convert the two parcels APN 058-380-008 and 058-320-001 from 11.3-acres and 9.5-acres to 13.6-acres and 7.2-acres, respectively; and

WHEREAS, there is a critical shortage of residential housing for all levels of affordability in California; and

WHEREAS, the State of California Department of Housing and Community Development (HCD) and the Association of Bay Area Governments (ABAG) will soon commence the process to establish regional housing needs allocations (RHNA) for the greater San Francisco Bay Area; and

WHEREAS, in light of the State's housing shortage, HCD and ABAG is expected to increase significantly the obligation of the City of American Canyon ("City") to plan for additional housing within its municipal boundaries; and

WHEREAS, on January 21, 2020, the City Council declared residential uses are the best use of the Rick Hess property on Oat Hill (Resolution 2020-06); and

WHEREAS, the RH Development Company has represented that it will use its best efforts to facilitate the actual construction of affordable housing units within the City; and

WHEREAS, pursuant to the California Environmental Quality Act (CEQA), a Mitigated Negative Declaration (MND) report was prepared for the Oat Hill Project, which included the proposed Tentative Subdivision Map, having analyzed the actions contemplated by the MND and includes required mitigation measures and a Mitigation Monitoring and Reporting Program (MMRP); and

DocuSign Envelope ID: 7AAFD2FD-43DC-48EA-AB7F-988EE094E281

WHEREAS, a duly-noticed public hearing was held by the City of American Canyon Planning Commission on March 25, 2021 on the subject application, at which time all those in attendance were given the opportunity to speak on this proposal and to submit comments.

NOW, THEREFORE, BE IT RESOLVED that the Planning Commission of the City of American Canyon, having considered all the evidence, including any submitted by member of the public, hereby recommends the City Council of the City of American Canyon approve the General Plan Amendment for Oat Hill Parcel-A Project from Industrial with a Specialty Commercial Overlay (CS) and Estate Residential (RE) to High Density Residential (RH-1), (PL20-0024) based on the findings and depicted on Exhibit A and attached hereto.

SECTION 1. Find, based on the following evidence and as required by State Law on General Plan Amendments:

a. The proposed amendment is deemed to be in the public interest.

   The State of California Department of Housing and Community Development (HCD) and the Association of Bay Area Governments (ABAG) recognize there is a critical shortage of residential housing for all levels of affordability in California. These agencies will soon establish regional housing needs allocations (RHNA) for the greater San Francisco Bay Area. In light of the State's housing shortage, HCD and ABAG is expected to increase significantly the obligation of the City of American Canyon ("City") to plan for additional housing within its municipal boundaries. The Oat Hill multifamily residential project will contribute to accommodating the City's anticipated RHNA obligation.

b. The proposed amendment is consistent and compatible with the rest of the General Plan and any implementation programs that may be affected.

   Because there is a critical shortage of residential housing for all levels of affordability in California, the proposed Oat Hill Multi-Family Residential general plan amendment will designate additional land to provide needed housing. Replacement of Light Industrial with a Specialty Commercial Overlay (LI:CS) zoning with High Density Residential (RH-1) zoning is in keeping with the following General Plan Goals that promote additional housing in American Canyon:

   • *Goal 2A: "Provide sufficient residential land with adequate infrastructure to accommodate the City's fair share of projected growth, and to facilitate mobility within the ownership and rental markets."*

   • *Goal 2B: "Provide a range of housing types within the community to accommodate a variety of incomes and lifestyles, and to enable residents to remain in American Canyon throughout their lives."*

   • *Goal 2E: "Address the housing needs of all economic segments of the existing and future community, including the City's fair share of the regional housing need." The applicant proposes to address housing affordable to lower income residents by providing in-lieu impact fees, pursuant to the Inclusionary Housing Ordinance (ACMC Chapter 19.28).*

   The project satisfies the following Land Use Element policies:

   • *Goal 1E: "Ensure the development of residential neighborhoods that provide a range of housing opportunities to meet the physical, economic, and social needs of the population, are designed to*

DocuSign Envelope ID: 7AAFD2FD-43DC-48EA-AB7F-988EE094E281

exhibit a high quality and character, contain appropriate supporting services, and reflect their environmental setting." The design permit application associated with this property ensures that the development will exhibit a high quality and character. The project reflects its environmental setting by providing public access to locally-important views across the project site.

• Policy 1.27.2: "Review all applications for new development, expansion of existing uses, and re-use within Napa County Airport Compatibility Zones "A" through "E" for compliance with the appropriate use and development conditions." A portion of Parcel A is located in Napa County Airport Compatibility Zone "D". Zone D restricts development to industrial or other non-residential uses. As noted in the Napa County Airport Terminal Area Redevelopment IS/MND, substantial evidence exists to conclude the 65 decibel (dB) Community Noise Equivalent Level (CNEL) boundary (also known as the "Noise Annoyance Zone" or "Zone 'D'") is contained entirely within the Airport property under existing and future conditions. Thus, as noted in the Oat Hill Multi-family Project MND, the project is not located within the regular flight-path/overflight for normal airport operations, nor would the project result in buildings that would obstruct established flight paths. Development within the project site would not conflict with Napa County Airport noise contours or any of the "three established sources of guidance on safety compatibility" for Zone D. The project is also subject to an avigation easement, which is included in the Project Approvals.

c. The potential impacts of the proposed amendment in the land use designation have been assessed and have been determined not to be detrimental to the public health, safety, or welfare.

The proposed General Plan Amendment has been evaluated in a Mitigated Negative Declaration (SCH# 2021020107). The report evaluated the project consistent with the California Environmental Quality Act and concluded the project will result in no significant impacts to the environment. Furthermore, the project is subject to conditions of approval and engineering design standards that will ensure safe site preparation, infrastructure and utilities as well as applicable current Building and Fire codes for emergency access and structural improvements.

With respect to the portion of Parcel A located in Napa County Airport Compatibility Zone "D", as noted in the Napa County Airport Terminal Area Redevelopment IS/MND, substantial evidence exists to conclude the 65 decibel (dB) Community Noise Equivalent Level (CNEL) boundary (also known as the "Noise Annoyance Zone" or "Zone 'D'") is contained entirely within the Airport property under existing and future conditions. Thus, as noted in the Oat Hill Multi-family Project MND, the project is not located within the regular flight-path/overflight for normal airport operations, nor would the project result in buildings that would obstruct established flight paths. Development within the project site would not conflict with Napa County Airport noise contours or any of the "three established sources of guidance on safety compatibility" for Zone D.

d. The proposed amendment has been processed in accordance with the applicable provisions of the California Government Code and the California Environmental Quality Act (CEQA).

The proposed General Plan Amendment has been evaluated in a Mitigated Negative Declaration (SCH# 2021020107). The report evaluated the project consistent with the California Environmental Quality Act and concluded the project will result in no significant impacts to the environment.

PC RESOLUTION NO. 2021-06

A RESOLUTION OF THE PLANNING COMMISSION OF THE CITY OF AMERICAN CANYON, CALIFORNIA, RECOMMENDING THE CITY COUNCIL OF THE CITY OF AMERICAN CANYON, APPROVE A CHANGE TO THE ZONING MAP TO CONVERT A VACANT 13.6-ACRE PARCEL ON THE EAST SIDE OF OAT HILL SOUTH OF NAPA JUNCTION ROAD (PARCEL A) FROM LIGHT INDUSTRIAL WITH SPECIALTY COMMERCIAL OVERLAY (LI:CS) AND ESTATE RESIDENTIAL (RE) TO HIGH DENSITY RESIDENTIAL (RH-1), ASSESSOR'S PARCEL NUMBER 058-380-008 (FILE NO. PL20-0024)

WHEREAS, pursuant to Section 65300 of the State Planning and Zoning Law, the City of American Canyon (City) has adopted a General Plan to provide comprehensive long-range planning and a blueprint of the City's future form, including land use and circulation maps that specify the roadway network and the distribution of types and intensities of land; and

WHEREAS, on August 14, 2020, Oat Hill Properties, II, LLC (Rick Hess) submitted a General Plan Amendment and Zone Change application to allow 206 dwelling units on approximately 13.6 acres on the east side of Oat Hill south of Napa Junction Road (APN 058-380-008 and portion of 058-320-001) (File No. PL20-0024); and

WHEREAS, on August 14, 2020, RH Hess Development Company submitted a Tentative Subdivision Map to create 206 dwelling units on 13.6 acres located at Oat Hill (Parcel A) with access from Napa Junction Road, (APN 058-380-008 and portion of 058-320-001) (File No. PL20-0025); and

WHEREAS, an application was filed by RH Hess Development for a Lot Line Adjustment (File No. PL20-0039) to convert the two parcels APN 058-380-008 and 058-320-001 from 11.3-acres and 9.5-acres to 13.6-acres and 7.2-acres, respectively; and

WHEREAS, there is a critical shortage of residential housing for all levels of affordability in California; and

WHEREAS, the State of California Department of Housing and Community Development (HCD) and the Association of Bay Area Governments (ABAG) will soon commence the process to establish regional housing needs allocations (RHNA) for the greater San Francisco Bay Area; and

WHEREAS, in light of the State's housing shortage, HCD and ABAG is expected to increase significantly the obligation of the City of American Canyon ("City") to plan for additional housing within its municipal boundaries; and

WHEREAS, on January 21, 2020, the City Council declared residential uses are the best use of the Rick Hess property on Oat Hill (Resolution 2020-06); and

WHEREAS, pursuant to the California Environmental Quality Act (CEQA), a Mitigated Negative Declaration (MND) report was prepared for the Oat Hill Multifamily Project, which included the proposed Zone Change application, having analyzed the actions contemplated by the MND and includes required mitigation measures and a Mitigation Monitoring and Reporting Program (MMRP); and

WHEREAS, a duly-noticed public hearing was held by the City of American Canyon Planning Commission on March 25, 2021 on the subject application, at which time all those in attendance were given the opportunity to speak on this proposal and to submit comments.

DocuSign Envelope ID: 7AAFD2FD-43DC-48EA-AB7F-988EE094E281

SECTION 1. **FINDINGS.** Based on the following evidence and as required by Zoning Ordinance Section 19.48.040 C, the Planning Commission recommends the City Council finds that:

a. The amendment is consistent with the goals and policies of the general plan.

Because there is a critical shortage of residential housing for all levels of affordability in California, the Oat Hill Multi-Family Residential project will help provide needed housing. Replacement of Light Industrial with a Specialty Commercial Overlay (LI:CS) zoning with High Density Residential (RH-1) zoning is in keeping with the following General Plan Goals that promote additional housing in American Canyon:

- *Goal 2A: "Provide sufficient residential land with adequate infrastructure to accommodate the City's fair share of projected growth, and to facilitate mobility within the ownership and rental markets."*
- *Goal 2B: "Provide a range of housing types within the community to accommodate a variety of incomes and lifestyles, and to enable residents to remain in American Canyon throughout their lives."*
- *Goal 2E: "Address the housing needs of all economic segments of the existing and future community, including the City's fair share of the regional housing need." The applicant proposes to address housing affordable to lower income residents by providing in-lieu impact fees, pursuant to the Inclusionary Housing Ordinance (ACMC Chapter 19.28).*

The project satisfies the following Land Use Element policies:

- *Goal 1E: "Ensure the development of residential neighborhoods that provide a range of housing opportunities to meet the physical, economic, and social needs of the population, are designed to exhibit a high quality and character, contain appropriate supporting services, and reflect their environmental setting." The design permit application associated with this property ensures that the development will exhibit a high quality and character. The project reflects its environmental setting by providing public access to locally-important views across the project site.*
- *Policy 1.27.2: "Review all applications for new development, expansion of existing uses, and re-use within Napa County Airport Compatibility Zones "A" through "E" for compliance with the appropriate use and development conditions." A portion of Parcel A is located in Napa County Airport Compatibility Zone "D". Zone D restricts development to industrial or other non-residential uses. As noted in the Napa County Airport Terminal Area Redevelopment IS/MND, substantial evidence exists to conclude the 65 decibel (dB) Community Noise Equivalent Level (CNEL) boundary (also known as the "Noise Annoyance Zone" or "Zone 'D'") is contained entirely within the Airport property under existing and future conditions. Thus, as noted in the Oat Hill Multi-family Project MND, the project is not located within the regular flight-path/overflight for normal airport operations, nor would the project result in buildings that would obstruct established flight paths. Development within the project site would not conflict with Napa County Airport noise contours or any of the "three established sources of guidance on safety compatibility" for Zone D.*

b. The amendment is consistent with the purposes of this title, as set forth in Chapter 19.01, Authority, Purposes and Effects of the Zoning Ordinance.

The amendment is consistent with the purpose of the Zoning Ordinance to protect and promote the public health, safety, peace, comfort, convenience, aesthetics, prosperity, and general welfare

DocuSign Envelope ID: 7AAFD2FD-43DC-48EA-AB7F-988EE094E281

as the project represents a logical extension of residential uses within the adjacent Broadway District Specific Plan. The amendment also meets design and development guidelines and standards of the General Plan.

NOW, THEREFORE, BE IT RESOLVED that the Planning Commission of the City of American Canyon, having considered all the evidence, including any submitted by member of the public, hereby recommends the City Council of the City of American Canyon approve the Zone Change for Oat Hill (Parcel A) from Light Industrial with a Specialty Commercial Overlay (LI:CS) and Residential Estate (RE) to High Density Residential (RH-1), (APN 058-380-008 and portion of 058-320-001) (File No. PL20-0024) as depicted in Exhibit A attached hereto.

PC RESOLUTION 2021-07

A RESOLUTION OF THE PLANNING COMMISSION OF THE CITY OF AMERICAN CANYON RECOMMEND THE CITY COUNCIL OF THE CITY OF AMERICAN CANYON, CALIFORNIA, APPROVE A TENTATIVE SUBDIVISION MAP TO PERMIT THE FUTURE SUBDIVISION OF THE OAT HILL PARCEL A BUILDINGS INTO 206 CONDOMINIUM UNITS AT THE VACANT 13.6-ACRE PARCEL LOCATED ON THE EAST SIDE OF OAT HILL SOUTH OF NAPA JUNCTION ROAD, APN 058-380-008 (FILE NO. PL20-0025)

WHEREAS, on August 14, 2020, RH Hess Development Company submitted an application for a Tentative Map for Condominium Purposes to permit the subdivision of 13 buildings into 206 separate ownership units on a 13.6-acre parcel in the High Density Residential (RH-1) zoning district at APN 058-380-008 (File no. PL20-0025); and

WHEREAS, on August 14, 2020, RH Hess Development Company submitted a General Plan Amendment and Zone Change application to allow 206 dwelling units on approximately 13.6 acres on the east side of Oat Hill south of Napa Junction Road APN 058-380-008 (File No. PL20-0024); and

WHEREAS, on November 2, 2021, RH Hess Development submitted a Lot Line Adjustment (File No. PL20-0039) to convert the two parcels APN 058-380-008 and 058-320-001 from 11.3-acres and 9.5-acres to 13.6-acres and 7.2-acres, respectively; and

WHEREAS, pursuant to Section 65300 of the State Planning and Zoning Law, the City of American Canyon (City) has adopted a General Plan to provide comprehensive long-range planning and a blueprint of the City's future form, including land use and circulation maps that specify the roadway network and the distribution of types and intensities of land; and

WHEREAS, there is a critical shortage of residential housing for all levels of affordability in California; and

WHEREAS, the State of California Department of Housing and Community Development (HCD) and the Association of Bay Area Governments (ABAG) will soon commence the process to establish regional housing needs allocations (RHNA) for the greater San Francisco Bay Area; and

WHEREAS, in light of the State's housing shortage, HCD and ABAG is expected to increase significantly the obligation of the City of American Canyon ("City") to plan for additional housing within its municipal boundaries; and

WHEREAS, on January 21, 2020, the City Council declared residential uses are the best use of the Rick Hess property on Oat Hill (Resolution 2020-06); and

WHEREAS, pursuant to the California Environmental Quality Act, an Initial Study was prepared for the project which concluded that no significant adverse environmental impacts would occur as a result of the project, and a Mitigated Negative Declaration was prepared; and

WHEREAS, the proposed map is consistent with the City of American Canyon General Plan and the Municipal Code; and

DocuSign Envelope ID: 7AAFD2FD-43DC-48EA-AB7F-988EE094E281

WHEREAS, a duly-noticed public hearing held on March 25, 2021, the Planning Commission recommended to the City Council to adopt the Initial Study and Mitigated Negative Declaration for the Oat Hill Project; and

WHEREAS, the Planning Commission has considered all of the written and oral testimony presented at the public hearing in making its decision; and

NOW, THEREFORE, BE IT RESOLVED that the American Canyon Planning Commission recommends to the City Council of the City of American Canyon approval of a Tentative Subdivision Map for Parcel A (PL20-0025) based on the findings contained in Section 1, and the conditions of approval contained in Section 2.

SECTION 1: Tentative Parcel Map Findings

A. The Oat Hill Project requires the following findings for the Tentative Map. As stated in Chapter 18.20.055 ACMC, the Planning Commission shall not approve a tentative parcel map if it makes any of the following findings:

1. That the design or improvement of the proposed subdivision is not consistent with the city's general plan or its elements or any other applicable plans;

   The proposed Tentative Parcel is consistent with the General Plan, and the lot sizes meet the minimum parcel size in the High Density Residential (RH-1) zoning district.

   Because there is a critical shortage of residential housing for all levels of affordability in California, the proposed Oat Hill Multi-Family Residential general plan amendment will designate additional land to provide needed housing. Replacement of Light Industrial with a Specialty Commercial Overlay (LI:CS) zoning with High Density Residential (RH-1) zoning is in keeping with the following General Plan Goals that promote additional housing in American Canyon:

   - *Goal 2A: "Provide sufficient residential land with adequate infrastructure to accommodate the City's fair share of projected growth, and to facilitate mobility within the ownership and rental markets."*

   - *Goal 2B: "Provide a range of housing types within the community to accommodate a variety of incomes and lifestyles, and to enable residents to remain in American Canyon throughout their lives."*

   - *Goal 2E: "Address the housing needs of all economic segments of the existing and future community, including the City's fair share of the regional housing need." The applicant proposes to address housing affordable to lower income residents by providing in-lieu impact fees, pursuant to the Inclusionary Housing Ordinance (ACMC Chapter 19.28).*

   The project satisfies the following Land Use Element policies:

   - *Goal 1E: "Ensure the development of residential neighborhoods that provide a range of housing opportunities to meet the physical, economic, and social needs of the population, are designed to exhibit a high quality and character, contain appropriate supporting services, and reflect their environmental setting." The design permit application associated with this property*

DocuSign Envelope ID: 7AAFD2FD-43DC-48EA-AB7F-988EE094E281

ensures that the development will exhibit a high quality and character. The project reflects its environmental setting by providing public access to locally-important views across the project site.

- *Policy 1.27.2: "Review all applications for new development, expansion of existing uses, and re-use within Napa County Airport Compatibility Zones "A" through "E" for compliance with the appropriate use and development conditions." A portion of Parcel A is located in Napa County Airport Compatibility Zone "D". Zone D restricts development to industrial or other non-residential uses. As noted in the Napa County Airport Terminal Area Redevelopment IS/MND, substantial evidence exists to conclude the 65 decibel (dB) Community Noise Equivalent Level (CNEL) boundary (also known as the "Noise Annoyance Zone" or "Zone 'D'") is contained entirely within the Airport property under existing and future conditions. Thus, as noted in the Oat Hill Multi-family Project MND, the project is not located within the regular flight-path/overflight for normal airport operations, nor would the project result in buildings that would obstruct established flight paths. Development within the project site would not conflict with Napa County Airport noise contours or any of the "three established sources of guidance on safety compatibility" for Zone D. The project is also subject to an avigation easement, which is included in the Project Approvals.*

2. That the site is not physically suitable for the type of development proposed;

The site will be graded so that it is flat and physically suited for the residential buildings. The tentative subdivision map has been evaluated in a Mitigated Negative Declaration (SCH# 2021020107). The report evaluated the project consistent with the California Environmental Quality Act and concluded the project will result in no significant impacts to the environment. Furthermore, the project is subject to conditions of approval and engineering design standards that will ensure safe site preparation, infrastructure and utilities as well as applicable current Building and Fire codes for emergency access and structural improvements.

3. That the site is not physically suitable for the proposed density of development proposed;

The site will be changed from Light Industrial with Specialty Commercial (LI:CS) and Residential Estate (RE) to High Density Residential (RH) through a General Plan Amendment and Zone Change. The proposed 206 units on 13.6-acre equates to a density of 15.1 dwelling units per acre, which complies with the RH-1 zone.

4. That the design of the subdivision or the proposed improvements are likely to cause substantial environmental damage or substantially and avoidably injure fish or wildlife or their habitat;

The Initial Study/Mitigated Negative Declaration concludes that no unavoidable significant impacts to the environment will occur as long as mitigation measures are incorporated. Mitigation measures are included to address potential impacts to burrowing owls, Swainson's hawk, tree or ground nesting raptors, and nesting passerine birds. The applicant conducted a biological resource study and no wetland areas were identified.

5. That the design of the subdivision or the type of improvements is likely to cause serious public health problems;

No evidence of serious public health problems has been identified.

6. That the design of the subdivision or the type of improvements will conflict with easements, acquired by the public at large, for access through or use of, property within the proposed

DocuSign Envelope ID: 7AAFD2FD-43DC-48EA-AB7F-988EE094E281

subdivision. In this connection, the Planning Commission may approve a tentative parcel map if it finds that alternate easements, for access or for use, will be provided and that these will be substantially equivalent to one previously acquired by the public.

No conflicts to public easements have been identified.

7. This subsection shall apply only to easements of record or to easements established by judgment of a court of competent jurisdiction and no authority is granted to the Planning Commission to determine that the public at large has acquired easements for access through or use of property within the proposed subdivision.

Not applicable to the Oat Hill Project.

8. That the discharge of waste water, including sewage and stormwater runoff, from the proposed subdivision would result in a violation of existing water quality requirements prescribed by the regional water quality control board.

The site will be served by public sewer. Stormwater detention facilities are provided to meet City and Regional Water Quality Control Board standards.

SECTION 2. CONDITIONS OF APPROVAL

General

1. The Tentative Subdivision Map approval is granted for development of 206 dwelling units on 13 apartment buildings on a 13.6-acre parcel in the High Density Residential (RH) zoning district. The site will be supported with 451 parking spaces and approximately 94,000 square feet of landscaping at the vacant parcel, APN 058-380-008 (file no. PL20-0025), which shall be substantially shown on file in the Community Development Department, except as modified by conditions contained in this approval. Exhibit A includes the following:
    a. Architectural Plans prepared by William Hezmalhalch Architects (WHA) from San Ramon, CA, consisting of 20 sheets showing the proposed building elevations, floor plans, and roof plans, dated October 19, 2020.
    b. Site Plans prepared by Carlson, Barbee, and Gibson (CBG) from San Ramon, CA, consisting of 7 sheets showing the site plan, preliminary grading and drainage plan, and cross sections, dated February of 2021.
    c. Landscaping Plans prepared by Vander Toolen Associates from Sacramento, CA, consisting of 6 sheets showing the proposed landscaping plans, dated October of 2020.

2. The applicant shall defend, indemnify, and hold harmless the City of American Canyon ("City"), its elected officials, officers, employees, attorneys, representatives, boards, commissions, consultants, volunteers and agents from and against all claims, actions, including actions to arbitrate or mediate, damages, losses, judgments, liabilities, expenses and other costs, or proceedings against the City, its elected officials, officers, employees, attorneys, representatives, boards, commissions, volunteers, or agents to attack, modify, set aside, void, or annul an approval, conditional approval, permit, entitlement, environmental document, environmental clearance, mitigation plan, or any other document or any of the proceedings, acts, or determinations taken, done, or made prior to granting of such approval, conditional approval, permit, entitlement, environmental clearance, environmental document, mitigation plan, or

DocuSign Envelope ID: 7AAFD2FD-43DC-48EA-AB7F-988EE094E281

other documents, by the City, including, without limitation, an action against an advisory agency, appeal board, or legislative body within the applicable limitation period.

The obligation to defend, indemnify and hold the City harmless shall include the payment of all legal costs and attorney's fees (including a third party award of attorney's fees), arising out of, resulting from, or in connection with the City's act or acts leading up to and including approval of any environmental document or mitigation plan granting approvals to the applicant, incurred on behalf of, or by, the City, its elected officials, officers, employees, representatives, attorneys, boards, commissions, volunteers and agents in connection with the defense of any claim, action, or proceeding challenging the entire or a portion of an approval, conditional approval, permit, entitlement or any other document of any related claim.

The obligation to defend, indemnify, and hold the City harmless shall include, but not be limited to, the cost of preparation of any administrative record by the City, staff time, copying costs, court costs, or attorney's fees arising out of a suit or challenge contesting the adequacy of a permit, approval, conditional approval, entitlement, environmental document, mitigation plan, environmental clearance, or any other document or approval related to the applicant's project. The City will promptly notify the applicant of any claim, action, or proceeding and will cooperate fully in the defense. If the City fails to promptly notify the applicant of any claim, action, or proceeding, or the City fails to cooperate fully in the defense, the applicant shall not be responsible to defend, indemnify, or hold harmless the City.

In the event a legal challenge to a City permit, approval, conditional approval, environmental document, environmental clearance, mitigation plan, entitlement or any other document, proceeding, determination, or action related to the applicant's project is successful, and an award of attorneys' fees is granted against the City, the applicant shall be responsible to timely pay the full amount of such an award.

3. Appeal. The approval shall become effective on the expiration of the appeal period, ten calendar days following the decision, unless an appeal to the City Council is filed. An appeal may be filed with the Community Development Director by filling out an Appeal Form accompanied by a fee of $703. This approval is also subject to return of the "Applicant Confirmation of Conditions of Approval" form signed by the property owner. Should an appeal period end on a Saturday, Sunday or holiday, the final day for filing an appeal shall be the following Monday, or the next business day following a holiday. If there is no appeal, this approval will be final on April 5, 2021.

4. The applicant is responsible for paying all charges related to the processing of this discretionary case application within 30 days of the issuance of the final invoice or prior to the issuance of building permits for this project, whichever occurs first. Failure to pay all charges shall result in delays in the issuance of required permits or the revocation of the approval of this application.

5. The date upon which the approval is final shall be considered the day of the imposition of the fees, dedications, reservations and exactions required by these conditions approval for the purposes of protesting the imposition pursuant to California Government Code Section 66020.

6. Expiration of this Approval. If no construction permits have been issued and construction commenced within one year of the date upon which this approval is final, the approval shall become null and void and of no effect. An extension of time may be granted by the Community

DocuSign Envelope ID: 7AAFD2FD-43DC-48EA-AB7F-988EE094E281

Development Director upon the written request by a responsible party before the expiration of the one-year period, provided that the Director can make the findings that there have been no substantial changes in the approved plans, and that there has been no change of circumstances which would prevent any of the required findings of approval being made.

7. All plans submitted for review and approval and all development shall be in substantial conformance with the approved exhibits, except where modified by a condition of approval. The Community Development Director or designee may approve minor changes to the project as approved by the Planning Commission on the plans submitted for the construction permits with a determination that the changes are in substantial compliance with the representation of the project as reviewed by the Planning Commission and City Council, that the proposed change will be in compliance with the required development standards, and the change will not materially affect adjacent private or public property.

8. The conditions of this Permit shall be printed on the first sheet of each plan set submitted for a building permit pursuant to this Tentative Subdivision Map, under the title "Tentative Subdivsion Map Conditions". The second sheet may also be used if the first sheet is not of sufficient size to list all of the conditions. The sheet(s) containing the conditions shall be of the same size as those sheets containing the construction drawings; 8-1/2" by 11" sheets are not acceptable.

Planning

9. All new roof top equipment is required to be screened. The parapet shall be opaque and equal in height of the top of the rooftop mechanical equipment.

10. All ground mounted air conditioning and heating equipment facing Napa Junction Road shall be screened. The screen shall be made of wood and painted to be weather resistant.

11. Prior to the issuance of the site improvement plan, the applicant shall identify 10 bicycle parking spots for Parcel A. The bicycle parking spots shall be evenly distributed amongst the buildings.

12. The subdivision ordinance requires new projects to dedicate parkland on the basis of 5 acres per 1,000 population (ACMC Chapter 18.44). Based on the current project proposal of 206 dwelling units @ 3.49 persons per unit, the project generates a population of 719 people. This equates to a park dedication standard of 3.595 acres. The Subdivision Ordinance has provisions for a combination of park dedication and payment of a fee in-lieu of park dedication.

13. Prior to the issuance of the first building permit, the applicant is required to pay all applicable impact fees. For your information, the following table identifies the fees and their rates. Please note that the City fees are subject to change and the applicant is required to pay the updated fee at the time of building permit issuance. The applicant is required to pay Fire Mitigation fees separately at the Fire District.

Fee	Rate	Calculation	Cost
Affordable Housing Nexus	$3.82 per SF	286,554 SF per plans	$ 1,094,636.28
Parks and Recreation Fee	$5806.38 per unit	206 units per plans	$ 1,196,114.28
Civic Facility Fee	$1685.61 per unit	206 units per plans	$ 347,235.66

DocuSign Envelope ID: 7AAFD2FD-43DC-48EA-AB7F-988EE094E281

General Plan Update Fee	$89.59 per unit	206 units per plans	$ 18,455.54
Traffic Impact Fee	$618.18 per trip	1121 trips per traffic report	$ 692,979.78
Water Capacity Fee (Estimated)	$11,599 per unit plus $26.25 per gpd	206 units per plans plus clubhouse/pool and irrigation demand in gpd	$2,410,919.00
Wastewater Capacity Fee (Estimated)	$6,952.00 per unit plus $35.66 per gpd	206 units per plans plus clubhouse/pool demand in gpd	$1,446,733.00
		Impact Fees Subtotal	**$ 7,207,073.54**

14. Prior to the issuance of the first building permit, the applicant shall provide proof of payment or exemption for Napa Valley Unified School District (NVUSD) developer fees. For more information, see their website here: https://www.nvusd.k12.ca.us/developerfees .

15. Prior to the issuance of the first building permit or the recordation of the final map, whichever occurs first, an Avigation Easement shall be recorded. The Avigation Easement shall cover all portions of the property and include:
    a. Right-of-flight at any altitude above an easement surface elevation, established based on either Part 77 of the Federal Aviation Regulations or FAA Terminal Instrument Procedures Standards (TERPS), whichever is controlling (glide slope in approach is the controlling factor).
    b. Right to cause noise, vibration, fumes, dust, and fuel particle emissions.
    c. Right to prevent erection or growth of all objects above the easement surface.
    d. Right to prohibit creation of electrical interference, unusual light sources, and other hazards to aircraft flight.

16. Prior to the Certificate of Occupancy, the applicant shall complete the public access trail that meanders from the site entry, traversing all the identified look-out points, and reaches the northwest side of the site.

Landscaping

17. The applicant shall agree to a licensing agreement that requires them to maintain the landscaping within the right-of-way along the project frontage. Prior to final inspection of the building permit, the applicant shall amend their facilities operation and maintenance plan (O&M plan) to include this activity.

18. Prior to the issuance of the Building Permit, the applicant shall submit a final landscaping plan. The landscape plan shall comply with the requirements of the California Government Code 65591 et. seq. known as the Water Conservation in Landscaping Act as set out in the model water efficient landscape ordinance adopted by the California Department of Water Resources and amended in 2015. All plant material shall be served by a city-approved automatic irrigation system.

DocuSign Envelope ID: 7AAFD2FD-43DC-48EA-AB7F-988EE094E281

19. Prior to the issuance of a certificate of occupancy, all landscaping shall be completed and the project's landscape architect shall provide a written certification that all plant materials have been installed in accordance with the approved landscape plan.

20. All planting shall be maintained in good growing condition. Such maintenance shall include, where appropriate, pruning, mowing, weeding, cleaning of debris and trash, fertilizing and regular watering. Whenever necessary, planting shall be replaced with other plant materials to insure continued compliance with applicable landscaping requirements. Required irrigation systems shall be fully maintained in sound operating condition with heads periodically cleaned and replaced when missing to insure continued regular watering of landscape areas, and health and vitality of landscape materials.

21. All tree stakes and ties shall be removed within one year following installation or as soon as trees are able to stand erect without support.

22. Clear sight triangles shall be maintained at all driveways. Low-lying plantings and other site fixtures, including signs, shall be no taller than 30 inches within the site's vision triangles.

Building and Safety

23. The applicant shall have the detailed building and site plans reviewed by a Certified Accessibility Specialist to verify that the proposed construction will comply with accessibility requirements. Each application for site construction or building permit shall be accompanied by a written report from a Certified Accessibility Specialist verifying that the site and building design as shown on the submitted plans comply with all accessibility requirements.

24. Prior to the issuance of a certificate of occupancy, the applicant shall submit a letter of certification to the Building Official from the project architect and civil engineer certifying that all improvements have been constructed in accordance with the approved building plans. Determination of consistency shall be subject to the review and approval of the Building Official.

25. Site Improvement plans shall show slopes of all sidewalks and walkways and paths of travel to use site facilities including trash/recycling facilities. The applicant shall have the detailed building and site plans reviewed by a Certified Accessibility Specialist to verify that the proposed construction will comply with accessibility requirements. Each application for site construction or building permit shall be accompanied by a written report from a Certified Accessibility Specialist verifying that the site and building design as shown on the submitted plans comply with all accessibility requirements.

26. Recycling of Construction and Demolition Debris: Prior to issuance of a building permit the applicant shall submit a plan for the diversion of at least 70 percent of the debris from the building demolition and construction. The plan shall include the qualified recycler that will be used, the methods of managing diversion of construction materials on site, and the proposed documentation that will be submitted to confirm that the diversion goal has been met.

Fire District

General Fire District Conditions

DocuSign Envelope ID: 7AAFD2FD-43DC-48EA-AB7F-988EE094E281

27. In accordance with the standard mitigation measures and conditions of approval set forth by the City of American Canyon, the developer shall pay the Fire Impact Fees (see current Standard Fees and Charges adopted by resolution), prior to the issuance of any building permits.

28. Buildings in excess of two stories shall pay Aerial Apparatus mitigation fees prior to the issuance of any building permits. (see current Standard Fees and Chares adopted by resolution).

29. The project will require an annual fire and life-safety inspection under the "R (Residential) Occupancy Inspection Program". The R Occupancy Inspection Program has been developed to allow Fire District to meet requirements set forth by the State of California. The California Health and Safety Code, Section 13146.2 (a) mandates that inspections be completed at all "R occupancies" annually. California Health and Safety Code Section 13146.2 (b) provides the Fire District legal authority to charge property owners to recover reasonable costs for providing these inspections.

30. New buildings and additions to existing buildings shall conform to requirements set forth in the currently adopted editions of the California Building Code, California Fire Code, City of American Canyon standards and Nationally Recognized Standards.

31. There shall be no deferred submittals for fire protection equipment and related utilities. Fire protection plans shall not be attached to or bound with the building plan submittal package. This includes but is not limited to Automatic Fire Sprinkler, Fire Alarm, Fixed Fire Protection and Civil plans.

32. All Fire related underground piping and fire appurtenances shall be shown on the Civil plan submittal. In addition to the Civil plan submittal, at least (1) plan set under separate cover shall be submitted to American Canyon Building Division for routing to the American Canyon Fire Protection District detailing all underground piping and related fire appurtenances including but not limited to underground piping, underground sweep detail, underground trench details showing depth of burial, type of backfill, manufacturer's specifications of piping, valves joints, fittings and calculated size and locations of thrust blocks, hydrants locations (designate public or private), gate shut-off valves, PIV's, FDC's, fire pumps, fire pump and/or riser rooms.

33. Underground utility contractor, architect and fire sprinkler contractor shall coordinate the location of risers and control valves prior to the issuance of a building permit.

34. Fire District plan review shall be based on the information submitted at the time of permit application. Any changes to the approved/permitted scope of work including additions, alterations, demolition, repair or a change in occupancy/use may impact the project requirements, including but not limited to the installation of additional fire protection systems or components.

Fire Protection

35. An approved water supply capable of supplying the required fire flow for fire protection systems shall be provided to all premises upon which facilities or buildings are hereby constructed or moved into or within the City. Required fire flow and hydrant distribution shall be in accordance with Appendix B and C of the California Fire Code. Applicant shall demonstrate on plan submittal; square footage of each building on plan and provide the required fire flow information. Applicant shall demonstrate that the number and spacing of onsite fire hydrants meets with requirements

DocuSign Envelope ID: 7AAFD2FD-43DC-48EA-AB7F-988EE094E281

of the California Fire Code. ***See sample below regarding fire flow and hydrant detail information needed.***

BUILDING FIRE FLOW REQUIREMENTS – CFC TABLES B105.2 & B105.1(2)
INFORMATION BELOW IS A SAMPLE AND FOR REFERENCE ONLY

Table B105.1(2) – Building size = 129, 600 square feet
Construction type = Type IIA
FF = 5,250 gpm at 20 psi
Duration = 4 hours

Table B105.2 – Fire sprinkler allowance = - 50%
5,250 – 2,625 = 2,625 gpm
FF = 2,625 gpm @ 20 psi
Duration = 2 hours

Table CC105.1 – Approximate number of hydrants = 3
Average spacing = 400 feet + 25% allowable increase = 500
Maximum distance from street or frontage = 225 feet = 50% allowable increase = 337.5

36. Fire Protection systems shall be installed in accordance with provisions set forth in the California Fire Code as amended by the City of Napa and the applicable National Fire Protection Association Standard.

37. The fire protection equipment shall be located within an interior room having an approved exterior access door or in an exterior enclosure attached to the building, specifically, for the purpose of housing such equipment.

38. The City of American Canyon requires that a fire hydrant be in service within 250 feet of the furthest point of construction prior to the stockpiling of combustible materials for the beginning of construction.

39. Fire District Connections (FDC) shall be located not more than 100 ft. from the nearest fire hydrant.

Fire District Access

40. Fire Apparatus Access Roads shall be designed in accordance with provisions set forth in the California Fire Code Chapter 5 and Appendix D as amended by the City of American Canyon and the applicable Public Works Standard.

41. Fire apparatus access roads shall have an unobstructed minimum width of 20 feet (curb to curb) and a minimum unobstructed vertical clearance of 13' 6". They shall have an all-weather paved surface capable of supporting a GVW of 71,000 pounds.

42. Access roads shall be completed with all-weather surfaces prior to the stockpiling of combustible materials or beginning combustible construction. Fire apparatus access shall be provided to within 150 feet of the most remote portions of all building from an approved exterior route. If this cannot be achieved fire apparatus turn arounds will be needed.

DocuSign Envelope ID: 7AAFD2FD-43DC-48EA-AB7F-988EE094E281

43. Fire apparatus access roads shall not be obstructed in any manner, including the parking of vehicles. Vertical traffic calming in the form of speed pumps, humps or dips are prohibited along fire access roads without prior approval of the fire Code Official. The minimum width and clearances established in Section 503.2.1 shall be maintained at all times.

44. When required by the Fire Chief, fire apparatus access roads shall be designated as Fire Lanes and appropriate signs and/or markings installed in accordance with the California Vehicle Code and approved City standards.

45. Where applicable improvement plan submittals for permit shall include locations of fire lane red curbing and fire lane signage. Please refer to and include City Public Works Standard FP-2A & 2B with plan submittals for permitting.

Public Works General Conditions of Approval

46. The Applicant shall be responsible for all City plan check, map check and inspection costs. The Applicant shall establish a Developer Deposit Account with the City upon the initiation of plan check services. The amount of the initial deposit shall be determined by the City Engineer. Additional funds may be required based upon actual costs.

47. All improvements shall be designed in accordance with the American Canyon Municipal Code (ACMC), City of American Canyon Engineering Standard Plans and Specifications for Public Improvements (City Standards), except as specifically noted otherwise in these conditions.

48. All new utilities to serve the project, shall be placed underground. Exceptions may be allowed for surface mounted transformers, pedestal mounted terminal boxes and meter cabinets.

49. Unless otherwise explicitly permitted, all existing wells, septic tanks and/or underground fuel storage tanks shall be abandoned under permit and inspection of Napa County Department of Environmental Services or other designated agency. If there are none, the project engineer shall provide a letter describing the scope of the search done to make this determination.

50. A detailed Soils Investigation/Geotechnical Report shall be prepared and submitted for review. The report shall address, at a minimum, potential for liquefaction, R-values, expansive soils and seismic risk. The improvement plans shall incorporate all design and construction criteria recommended in the Geotechnical Report.

51. A drainage report prepared by a California Registered Civil Engineer shall be submitted for review with the initial submittal of the Improvement Plans. The report shall include detailed hydrologic and hydraulic calculations to support the design and sizing of all public and private drainage facilities including storm drains and detention facilities. The report shall include an analysis of the capacity of existing downstream storm drain facilities and hydraulic conditions which may impact the design of proposed facilities and improvements.

52. A final detailed post-construction Stormwater Control Plan (SWCP) that identifies and sizes all permanent post-construction stormwater treatment BMPs shall be prepared and submitted for review and approval. The SWCP shall be prepared in accordance with the latest edition of the Bay

DocuSign Envelope ID: 7AAFD2FD-43DC-48EA-AB7F-988EE094E281

Area Stormwater Management Agencies Association (BASMAA) Post-Construction Manual and the requirements of the State Water Resources Control Board Phase II Municipal Separate Storm Water System (MS4) General Permit (Order 2013-0001 DWQ). It is the City's discretion whether to accept alternative treatment facilities other than bioretention.

53. A Post Construction Stormwater Operations and Maintenance Plan that includes a plan sheet showing all storm drain and water quality infrastructure that is to be maintained, along with detailed instructions and schedules for the ongoing maintenance and operation of all post-construction stormwater BMPs shall be submitted for review and approval by the City Engineer. Once approved, the property owner(s) shall enter into an agreement with the City that provides the terms, conditions, and security associated with the ongoing requirements of the post-construction Stormwater Best Management Practices.

54. A Final Map, as defined in the Subdivision Map Act, shall be prepared by a licensed surveyor or civil engineer. The Final Map shall show all parcels, rights-of-way, and easement(s), and shall be submitted to the City Engineer for review. The Final Map shall be in substantial conformance with the approved Tentative Map and all applicable conditions of approval. The Final Map is not valid until it has been approved by the City and recorded. Closure calculations shall be provided at the time of initial Final Map submittal. All calculated points within the map shall be based upon one common set of coordinates. All information shown on the Final Map shall be directly verifiable by information shown on the closure calculation printout. The point(s) of beginning shall be clearly defined. All lot acreages shall be shown on the Final Map and shall be verifiable from information shown on the closure calculation printout. A current title report (within past 30 days) shall be submitted at the time of initial Final Map submittal.

55. Subject to the terms of Condition 56, the Applicant shall secure all necessary rights-of-way and public and private easements for both onsite and offsite improvements. The Applicant shall prepare all necessary legal descriptions and deeds.

56. To the extent any offsite public improvements require the acquisition of property not currently owned by the Applicant or the City, the Applicant shall first make a good-faith effort to acquire the necessary property rights, however if the Applicant makes such an effort and is unable to acquire such rights, then the Applicant may request the City acquire the necessary property rights through the exercise of eminent domain provided that the Applicant enters first into an agreement with the City to pay for all costs incurred by the City to acquire such rights and if the City does not acquire the rights necessary to allow the offsite public improvements to be completed by the Applicant within statutory timeline provided by law, then the Applicant shall be relieved of the obligation to construct those off-site improvements only to the extent they require property not currently owned by the Applicant or the City. The Applicant shall make a good-faith effort to identify and acquire the necessary property rights at the earliest opportunity. A good faith offer includes identification of property rights needed (permanent and temporary), appraisal of the value of the highest and best use of the property, and a bonafide offer to pay this amount at the close of escrow.

57. The Applicant shall submit site Improvement Plans, prepared by a registered Civil Engineer, for review and approval of the City's Public Works Department. Please be aware that this is separate submittal from the building permit application. The final plan set shall include all civil, landscape and joint trench drawings under a single cover sheet. No final grading or other construction shall

DocuSign Envelope ID: 7AAFD2FD-43DC-48EA-AB7F-988EE094E281

be performed until the Improvement Plans have been approved. The Applicant shall not begin clearing, grubbing, or rough grading at the site prior to approval of the Improvement Plans, unless explicitly approved by the City of American Canyon through the standard grading and utilities only permit process. An Encroachment Permit is required for any work within City right of way. Encroachment Permits will not be issued prior to the approval of the Improvement Plans.

58. Cathodic protection shall be provided for all water valves, fittings, hydrants, meters, backflow devices, ductile iron pipe, and other metal appurtenances, regardless of the findings of any soils corrosivity analysis.

59. The Applicant shall keep adjoining public and private streets free and clean of project dirt, mud, materials, and debris during the construction period in accordance with an approved SWPPP and Erosion and Sediment Control Plan using appropriate BMPs and as is found necessary by the City Engineer.

60. If any hazardous material is encountered during the construction of this project, all work shall be immediately stopped and the Fire District, Napa County Department of Environmental Services or other designated agency, and the City Inspector shall be notified immediately. Work shall not proceed until clearance has been issued by all of these agencies.

61. Prior to final preparation of the subgrade and placement of base materials, all underground utilities shall be installed and service connections stubbed out behind the sidewalk. Public utilities, Cable TV, sanitary sewers, and water lines shall be installed in a manner that will not disturb the street pavement, curb, gutter and sidewalk, when future service connections or extensions are made.

62. Where soil or geologic conditions encountered in grading operations are different from that anticipated in the soil and/or geologic investigation report, or where such conditions warrant changes to the recommendations contained in the original soil investigation, a revised soil or geologic report shall be submitted for approval by the City Engineer. Additionally, if field conditions warrant installation of any subdrains, the location, size and construction details must be provided to the City for review and approval prior to construction.

63. All new fire hydrants shall be covered with burlap sacks until the hydrants have been tested and found to be in conformance with City flow requirements. No storage of combustible materials or construction of building shall be permitted until all hydrants meet City flow requirements.

64. Prior to placing the final lift of asphalt, all public storm drains and sanitary sewer lines shall be video inspected at the Applicant's expense. All video media (CD, DVD, or portable hard drive) shall be submitted to the City. If any inadequacies are found, they shall be repaired prior to the placement of the final lift of asphalt.

65. All streets, curbs, gutters, sidewalks or other public facilities damaged in the course of construction associated with this Project shall be the responsibility of the Applicant and shall be repaired to the satisfaction of the City at the Applicant's expense.

DocuSign Envelope ID: 7AAFD2FD-43DC-48EA-AB7F-988EE094E281

66. After all of the new underground utilities within existing public streets have been installed, the entire affected areas shall be milled and repaved to present a neat finished pavement area. Multiple trench patches are not acceptable.

67. All construction stormwater pollution prevention best management practices (BMP's) shall be installed as the first order of work and in accordance with the State Water Resources Control Board's General Construction Permit for Stormwater Discharges Associated with Construction and Land Disturbance Activities (Order 2009-0009-DWQ, as amended), the Applicant's Storm Water Pollution Prevention Plan (SWPPP), and the City's Erosion and Sediment Control Plan in accordance with the City's MS4 Permit. All stormwater BMP's shall be maintained to the satisfaction of the Qualified SWPPP Developer (QSD), Qualified SWPPP Practitioner (QSP), and the City Engineer.

68. With the exception of water used for loading and testing of potable water lines, all construction water used for the project shall be obtained from a source other than American Canyon potable water sources. The Applicant shall provide verification that an outside source of construction water, e.g., recycled water, has been established and will be available for the duration of the project construction.

69. The development shall comply with the City's Zero Water Footprint policy.

70. All landscaping irrigation systems shall include an ET/SMART controller.

Public Works Special Conditions of Approval

71. The Applicant shall submit Improvement Plans prepared by a registered Civil Engineer (Engineer of Record) in substantial conformance with the preliminary civil plans titled "Design Review Oat Hill Multi-Family – Parcel A" prepared by Carson, Barbee & Gibson Civil Engineers, dated February 2021 (Preliminary Plans), except as modified by these conditions.

72. Improvement Plans shall be tied to the State of California coordinate system.

73. The Applicant shall design and construct all of the Public Improvements as generally described below and in accordance with the project's Fee Credit/Fee Reimbursement Agreement, as applicable.

    a. Napa Junction Road Improvements:

        i. Construct an approximately 300-foot segment of Napa Junction Road between the Hess Road/Napa Junction Road intersection and the existing roadway fronting Napa Junction Magnet Elementary School. The preliminary roadway shall have a curb-to-curb with of 40-feet with 5-foot wide (includes curb width) attached sidewalks on both sides. The final roadway section shall be as determined by the City Engineer. The extent of the roadway construction may be extended as necessary to meet City roadway geometric standards.

        ii. Construct a new 5-foot wide (includes curb width) attached sidewalk along the south side of Napa Junction Road between the east end of the new road segment

DocuSign Envelope ID: 7AAFD2FD-43DC-48EA-AB7F-988EE094E281

described above to the existing sidewalk approximately 100-feet west of Theresa Avenue.

iii. Construct a new 5-foot wide attached sidewalk along the south side of Napa Junction Road between its intersection with Hess Road and the west end of Parcel A's frontage.

iv. The cost of these improvements will qualify for a credit against the project's Traffic Impact Fee.

b. Water Main Replacement in Napa Junction Road:
Replace approximately 590 linear feet of the existing 6-inch water main in Napa Junction Road with a new 12-inch water main between the intersection with Theresa Avenue to the intersection with Hess Road, connecting to the existing water mains in those intersections. The cost of these improvements will qualify for a credit against the project's Water Capacity Fee.

c. Sanitary Sewer Main Replacement in Napa Junction Road and Theresa Avenue:
Replace approximately 1,800 linear feet of the existing 6-inch sanitary sewer mains in Napa Junction Road between Hess Road and Theresa Avenue and in Theresa Avenue from Napa Junction Road to a point approximately 1,200 linear feet south thereof with new 8-inch and 10-inch sanitary sewer mains. The Engineer of Record shall conduct a capacity analysis for the new sanitary sewers to determine where it should upsize from 8-inch to 10-inch. The cost of these improvements will qualify for a credit against the project's Wastewater Capacity Fee.

d. Recycled Water Main in Lombard Road and Hess Road:
Install approximately 1,300 linear feet of a new 8-inch recycled water main in Lombard Road between the cul-de-sac at its northern terminus and Hess Drive and in Hess Drive between Lombard Road and the Little League fields. This recycled water main will be assumed to provide a sufficient potable water demand offset to comply with the City's Zero Water Footprint policy for both the Oat Hill Parcel A and Oat Hill Parcel B projects.

e. Fire Flow Demand:
Install public water system improvements sufficient to meet the domestic and fire flow demands of the project. Although the Preliminary Plans show a private onsite water pump station, Public Works and the American Canyon Fire Protection District do not support this due to concerns over the ongoing maintenance of a private pump station.

The Engineer of Record shall conduct further analysis to determine whether domestic and fire flow requirements could be met by creating a looped water connection (connecting to both the 12" and 16" water mains) or by upgrading the City's existing Oat Hill Pump Station that feeds Oat Hill Tank #2 from Oat Hill Tank #1. In the event that this is determined to be infeasible, then the Applicant shall install a public water pump station onsite at a location close to the public right of way or at a location as otherwise approved by the City Engineer.

DocuSign Envelope ID: 7AAFD2FD-43DC-48EA-AB7F-988EE094E281

Note that the Tentative Map for Oat Hill Parcel B is subject to conditions of approval to construct the same Public Improvement described above, except 73.e. In the event that any of those public improvements are constructed in conjunction with the development of Oat Hill Parcel B prior to the development of Oat Hill Parcel A, then the corresponding condition of approval for Oat Hill Parcel A will be considered to have been met.

74. The Applicant shall construct all of the on-site private drive isles, parking spaces, walks, water, recycled water, sanitary sewer, storm drainage and stormwater quality and landscaping **"Private Improvements"** generally shown on the Preliminary Plans and more specifically described below. All private drive isles, parking spaces, walks, water, sewer, storm drainage and stormwater quality improvements shall be designed in accordance with the City of American Canyon Engineering Standard Plans and Specifications for Public Improvements (City Standards), except as specifically noted otherwise in these conditions.

    a. Storm Drain Facilities:
    Construct private on-site drainage facilities, detention facilities, and other appurtenances to collect and convey all surface drainage to an approved private storm drain facility or outfall. Onsite drainage facilities shall provide for the positive drainage of all adjacent upstream or upgrade properties to prevent ponding. Existing run-on from adjacent properties shall not be obstructed and shall be conveyed onsite. Off-site peak storm water discharge shall not exceed 90% of the undeveloped peak flow from the 24-hour, 100-year event. The storm drains and detention facilities shall be substantially consistent with the Preliminary Plans. However, the sizing of all storm drains and detention facilities shall be determined by the approved final drainage report.

    b. Stormwater Quality Facilities:
    Permanent on-site private post-construction stormwater treatment BMPs shall be designed and constructed in accordance with the approved final SWCP. Runoff from all roof drains shall be conveyed to the onsite stormwater treatment facilities.

    c. Emergency Vehicle Access Road
    Construct a 20-foot wide paved vehicle road on Oat Hill Parcel A and across Oat Hill Parcel B connecting to Napa Junction Road.

75. Prior to SUBMITTAL OF THE IMPROVEMENT PLANS, the Applicant shall:
    a. Submit the City's "Improvement Plan Checklist".

    b. Pay an initial cash deposit for City plan check services in amount to be determined by the City prior to the time of submittal. The Project engineer shall contact City staff to discuss submittal details to determine initial deposit amount.

    c. Provide the following:
        i. Public Street Repair Plan
        ii. Utility Plan and Joint Trench Plan
        iii. Construction Storm Water Pollution Prevention Plan (SWPPP) and a City Erosion and Sediment Control Plan (ESCP)
        iv. Drainage Report
        v. Post-Construction Stormwater Control Plan (SWCP)

DocuSign Envelope ID: 7AAFD2FD-43DC-48EA-AB7F-988EE094E281

vi. Geotechnical Report
vii. Construction Traffic Control Plan.

d. Pothole and physically determine (by way of a survey performed by the Engineer of record) the actual horizontal location and vertical depth of all existing underground utilities throughout the proposed areas of work and provide the design of all new utility installations required to serve the project including a schedule for implementation of such work as to prevent disrupting of utility service to adjacent properties.

76. Prior to APPROVAL OF THE IMPROVEMENT PLANS, the Applicant shall:

a. Provide written acknowledgment by the Geotechnical Engineer of Record that the Plans incorporate all design and construction criteria specified in the Geotechnical Report.

b. Subject to the terms of Condition 56, acquire the public right-of-way and all rights of entry and/or temporary and permanent easements necessary for the construction of the Napa Junction Road improvements described above. Applicant shall prepare the legal descriptions, plats and deeds and submit them to the City for review. The location of all such rights on the Plans.

c. Record a City approved lot line adjustment between Oat Hill Parcel A and Oat Hill Parcel B as shown on the Tentative Map and Preliminary Plans.

d. Furnish proof that all permits that may be required by the California Department of Fish & Game, State and Regional Water Quality Control Board, US Army Corps of Engineers and any other regulatory agencies with jurisdiction over the proposed construction have been obtained.

e. Complete and submit the City's Erosion and Sediment Control Plan (ESCP) Template. Applicant may refer to a SWPPP, as appropriate, by referencing page number within the SWPPP that addresses the requirements of the ESCP.

f. Submit a copy of the Notice of Intent and WDID# for coverage under the State Water Resources Control Board' General Construction Permit for Stormwater Discharges Associated with Construction and Land Disturbance Activities (Order 2009-0009-DWQ).

77. Prior to COMMENCEMENT OF CONSTRUCTION ACTIVITIES, the Applicant shall:

a. Pay off all current account balances with the City of American Canyon.

b. Pay an inspection fee in amount to be determined at the time of commencement for the City's inspection of the Public Improvements.

c. Conduct a pre-construction meeting with representatives of the City whereby the Applicant, the Legally Responsible Party (LRP), Qualified SWPPP Practitioner (QSP), Qualified SWPPP Developer (QSD), and/or the Contractor provides the following:

i. Six (6) full-size bond copies of the approved Improvement Plans for the City's use.

DocuSign Envelope ID: 7AAFD2FD-43DC-48EA-AB7F-988EE094E281

ii. One (1) job-site copy of the latest edition of the City Standards for the Contractor use.
iii. One (1) job-site copy of the SWPPP for use by the LRP, QSP, QSD, and Contractor.
iv. Electronic copies of Improvement Plans and SWPPP

78. Prior to RECORDATION OF THE FINAL MAP, the Applicant shall:

a. Construct all of the Public and Private Improvements to the satisfaction of the City. Alternatively, the Applicant may enter into a Subdivision Improvement Agreement with the City agreeing to complete all of the Public and Private Improvements prior to Occupancy of the first unit. Such an Agreement will require the Applicant to provide bonds, proof of workers compensation insurance, and general liability insurance in the forms and amounts as deemed satisfactory to the City.

b. Establish a Homeowner's Association (HOA) in accordance with State law with recorded Codes, Covenants, & Restrictions (CC&Rs) that are satisfactory to the City Engineer and City Attorney to provide long-term and ongoing maintenance of all of the Private Improvements identified above. Specifically, the HOA will be responsible for the long-term and ongoing maintenance of the private streets, sidewalks, streetlights, domestic water facilities including the water booster pump station, sewers, storm drain facilities and stormwater quality facilities within the limits of the subdivision. The City will have enforcement authority over the HOA's maintenance obligations and the obligation to review and approved proposed changes amendments to the CC&R's. The CC&R's shall require the HOA to create and maintain a separate maintenance reserve fund in the amount of a percentage of the cost of constructing the HOA maintained improvements listed above. Said percentage will be determined by the City prior to recordation of the CC&Rs.

c. Establish a Shared Maintenance Agreement or such similar agreement between the owners of Oat Hill Parcel A and Oat Hill Parcel B for the long term and ongoing maintenance and operation of all shared private improvements. Specifically, the parcel owners shall be responsible for the ongoing maintenance and operation of all onsite stormwater quality facilities, shared storm drains and the shared emergency vehicle access road. The Shared Maintenance Agreement shall be prepared to run with the land of each parcel. The Shared Maintenance Agreement shall be submitted to the City for review and approval prior to recordation.

d. Generally, in substantial conformance with that which is shown on the approved Tentative Map, convey all easements and dedications, public and private, for the construction, use and/or maintenance of roads or other access, drainage facilities, utilities and post-construction storm water management facilities on the Final Map or by separate instruments. All dedications to the City shall be irrevocable offers of dedication. Specific public conveyances include:
    i. A public utility easement (PUE) 5-foot in width along the south side of Napa Junction Road across the frontage of Oat Hill Parcel A.
    ii. A strip of public street right-of-way of varying width and having an area of approximately 4,150 square feet as shown on the Tentative Map for Condominium Purposes Oat Hill Multi-family Parcel B.

DocuSign Envelope ID: 7AAFD2FD-43DC-48EA-AB7F-988EE094E281

e. Furnish documentation that the existing PG&E pole line easements (Book 1061 Page 114 and Book 1355 Page 779 O.R.) have been quit claimed.

f. Obtain all necessary easements over Oat Hill Parcel B including easements for emergency vehicle access and storm water conveyance and detention facilities through recorded separate instruments.

g. Furnish proof of the payment of the mapping service fee as required by Napa County Board of Supervisors Resolution No. 92-119.

79. Prior to APPROVAL OF A BUILDING PERMIT, the Applicant shall:

a. Pay all account balances and current City and American Canyon Fire Protection District fees (Mitigation and Capacity) shown in Condition 13.

80. Prior to ACCEPTANCE OF IMPROVEMENTS, the Applicant shall:

a. Restore all adjacent off-site road surfaces to pre-project conditions.

b. Submit a certification by the Geotechnical Engineer of Record that all the work has been completed in substantial conformance with the recommendations in Soils Investigation/Geotechnical Report.

c. Provide a mylar and digital copy of the Improvement Plans that include all as-built or field changes, in digital AutoCAD (.dwg) and (.pdf) format (void of any AutoCAD block formats preventing full editing capabilities of the drawings), compatible with the City's current version, and tied to the NAD83 (California Zone 2, feet) coordinate system.

d. Provide a letter stating that all of the Developer's Conditions of Approval have been met.

e. Provide a letter from the Civil Engineer of Record certifying that all the site improvements were constructed and inspected in substantial conformance with the approved plans and City Standards.

f. Enter into and record a post-construction Stormwater Operations and Maintenance Agreement with the City.

Oat Hill Parcel A – Mitigation Measures

The following are the applicable mitigation measures from the certified Mitigated Negative Declaration report. The following mitigation measures shall be complied with in accordance with the adopted Mitigation Monitoring and Reporting Program (MMRP) by the City Council.

81. **AES I-1.** Prior to issuance of building permits, the applicant shall prepare and submit a detailed lighting plan for review and approval by the Community Development Department. The plan shall show conformance with City performance standards for street lighting and glare, including shielding of all on-site lighting so that light is directed within the project site and does not

DocuSign Envelope ID: 7AAFD2FD-43DC-48EA-AB7F-988EE094E281

illuminate adjacent properties, and indicate the location and design of proposed lighting and lighted signs. The applicant shall implement the final plan as approved by the City.

82. **AQ III-3.** Prior to the issuance of a grading permit, the project applicant shall indicate via notation on project construction plans that all off-road construction equipment used for the roadway extension along Napa Junction Road, including owned, leased, and subcontractor vehicles, shall meet the California Air Resources Board's (CARB's) Tier 4 emissions standards. The construction plans shall be submitted for review and approval to the City of American Canyon Community Development Department.

83. **BIO IV-1.** Prior to project initiation, pre-construction surveys shall be conducted by a qualified biologist within a 0.5-mile radius around all project activities, including on-site and off-site work, and shall be completed for at least two survey periods prior to starting Project activities. The survey period timing and methodology shall be conducted in accordance with the Swainson's Hawk Technical Advisory Committee's Recommended Timing and Methodology for Swainson's Hawk Nesting Surveys in California's Central Valley (2000), which identifies different survey windows throughout the pre-nesting and nesting season (ranging from January 1 through July 30/post-fledging) that have different survey methodologies and requirements. A letter report summarizing the survey results shall be submitted to CDFW for review and written acceptance prior to starting Project activities. The survey results shall also be submitted to the Community Development Department within 30 days following the final survey. If active Swainson's hawk nests are not identified on or within 0.5-mile of the project site within the survey periods, further avoidance and minimization measures for Swainson's hawk nesting habitat are not required

84. **BIO IV-2.** If Swainson's hawks are found to be nesting on the project site or within 0.5-mile of the project site, the project proponent shall either, a) delay project activities until all Swainson's hawk nests within 0.5-mile of the project site are no longer active, as determined by a qualified biologist, b) determine if the 0.5-mile buffer zone may be reduced in consultation with CDFW based on site-specific conditions, or c) if take cannot be avoided, obtain a CESA Incidental Take Permit from CDFW prior to starting project activities.

85. **BIO IV-3.** Prior to initiation of ground disturbance, a qualified biologist shall conduct nesting and/or wintering owl surveys, as appropriate, in accordance with the California Department of Fish and Game (now CDFW) 2012 Staff Report on Burrowing Owl Mitigation survey methodology (see https://wildlife.ca.gov/Conservation/Survey-Protocols#377281284-birds). Surveys shall encompass the project area and a sufficient buffer zone to detect owls nearby that may be impacted. Time lapses between surveys or project activities shall trigger subsequent surveys including but not limited to a final survey within 24 hours prior to ground disturbance before construction equipment mobilizes to the project area. The qualified biologist shall have a minimum of two years-experience implementing the CDFW 2012 Staff Report survey methodology resulting in detections. A letter report summarizing the survey results shall be submitted to the Community Development Department within 30 days following the pre-construction survey. If burrowing owls are not present on-site or adjacent to the site where they may be disturbed during pre-construction surveys, further avoidance and minimization measures for burrowing owl nesting and wintering habitat are not required.

86. **BIO IV-4.** If burrowing owls are detected on or adjacent to the site where they may be disturbed, the following restricted activity dates and setback distances recommended per CDFW's Staff

DocuSign Envelope ID: 7AAFD2FD-43DC-48EA-AB7F-988EE094E281

Report (2012) shall be implemented, unless reduced buffers are accepted by CDFW in writing based on site-specific conditions:

- From April 1 through October 15, low disturbance and medium disturbance activities shall have a 200-meter buffer while high disturbance activities shall have a 500-meter buffer from occupied nests and wintering sites.
- From October 16 through March 31, low disturbance activities shall have a 50-meter buffer, medium disturbance activities shall have a 100-meter buffer, and high disturbance activities shall have a 500-meter buffer from occupied nests and wintering sites.
- No earth-moving activities or other disturbance should occur within the aforementioned buffer zones of occupied burrows. These buffer zones shall be marked with high visibility fencing or flagging.

If burrowing owls are present outside of the nesting season, burrowing owls may be passively relocated from the project site and adjacent habitat using CDFW-accepted methods so that construction can proceed. Any required passive relocation of burrowing owls would require CDFW acceptance. If passive relocation of burrowing owls is necessary, a qualified biologist shall prepare a Relocation Plan, including compensatory habitat as described below, for CDFW review and acceptance prior to the start of construction activities.

If the survey determines that the project site is actively being used by burrowing owl, or any owls are passively relocated as described above, then compensatory habitat mitigation shall be provided. The habitat mitigation/compensation plan shall be submitted to CDFW for review and approval prior to the start of project activities. Habitat compensation acreages shall be approved by CDFW, as the amount depends on site specific conditions, and completed before project construction. It shall also include placement of a conservation easement and preparation and implementation of a long-term management plan. If burrowing owls are observed during surveys, notification shall also be submitted to the California Natural Diversity Database (CNDDB; see https://wildlife.ca.gov/Data/CNDDB/Submitting-Data).

87. **BIO IV-5.** If project activities must be conducted during the nesting season (February 15 and September 1), a pre-construction nesting bird survey shall be conducted by a qualified biologist within 714 days of vegetation removal or initial ground disturbance. The survey shall include the project site, any off-site disturbance areas, and within a minimum of 500 feet of all project areas, surrounding vicinity to identify the location and status of any nests that could potentially be affected either directly or indirectly by project activities. A letter report summarizing the survey results shall be submitted to the Community Development Department within 30 days following the pre-construction survey. If nesting birds are not present on-site or within a minimum 500 feet of the project site during pre-construction surveys, further avoidance and minimization measures for nesting bird habitat are not required.

If active nests of native nesting bird species are identified during the nesting bird survey, a work exclusion zone shall be established around each nest by the qualified biologist. Established exclusion zones shall remain in place until all young in the nest have fledged or the nest otherwise becomes inactive (e.g., due to predation). Appropriate exclusion zone sizes shall be determined by a qualified biologist. The qualified biologist shall be on site daily for the first week during Project activities, and then weekly thereafter until the nest is no longer active, to observe all active bird

DocuSign Envelope ID: 7AAFD2FD-43DC-48EA-AB7F-988EE094E281

and raptor nests and to ensure that Project activities do not cause nest disturbance. If the qualified biologist observes birds and/or raptors displaying potential nest disturbance behavior, the qualified biologist shall cease work and consult with CDFW before resuming Project activities. In this event, Project activities shall not resume without CDFW's written permission.

88. **CUL V-1.** Prior to grading permit issuance, the applicant shall submit plans to the Community Development Department for review and approval which indicate (via notation on the improvement plans) that if historic and/or cultural resources are encountered during site grading or other site work or off-site work, all such work shall be halted immediately within 100 feet and the applicant shall immediately notify the Community Development Department of the discovery. In such case, the applicant shall be required, at their own expense, to retain the services of a qualified archaeologist meeting the Secretary of the Interior's Professional Qualification Standards for prehistoric and historic archaeologist for the purpose of recording, protecting, or curating the discovery as appropriate. The archaeologist shall be required to submit to the Community Development Department for review and approval a report of the findings and method of curation or protection of the resources. Further grading or site work within the area of discovery shall not be allowed until the preceding work has occurred.

89. **CUL V-2.** If human remains, or remains that are potentially human, are found during construction, a professional archeologist shall ensure reasonable protection measures are taken to protect the discovery from disturbance. The archaeologist shall notify the Napa County Coroner (per §7050.5 of the State Health and Safety Code). The provisions of §7050.5 of the California Health and Safety Code, §5097.98 of the California Public Resources Code, and Assembly Bill 2641 will be implemented. If the Coroner determines the remains are Native American and not the result of a crime scene, then the Coroner will notify the Native American Heritage Commission (NAHC), which then will designate a Native American Most Likely Descendant (MLD) for the project (§5097.98 of the Public Resources Code). The designated MLD will have 48 hours from the time access to the property is granted to make recommendations concerning treatment of the remains. If the applicant does not agree with the recommendations of the MLD, the NAHC can mediate (§5097.94 of the Public Resources Code). If an agreement is not reached, the qualified archaeologist or most likely descendent must rebury the remains where they will not be further disturbed (§5097.98 of the Public Resources Code). This will also include either recording the site with the NAHC or the appropriate Information Center, using an open space or conservation zoning designation or easement, or recording a reinternment document with the county in which the property is located (AB 2641). Work cannot resume within the no-work radius until the lead agencies, through consultation as appropriate, determine that the treatment measures have been completed to their satisfaction.

90. **GEO VII-1, VII-2, VII-4, and VII-5**. Prior to approval of any building permits, the project Civil Engineer shall show on the project plans that the project design would adhere to all engineering recommendations provided in the site-specific Geologic Hazards and Preliminary Geotechnical Investigation prepared by Giblin Associates and the Soil Investigation prepared by Reese & Associates. The project plans shall include, but would not be limited to, the use of mat slabs, post-tensioned slabs on-grade, imported non-expansive fill under conventional floor slabs, appropriate setbacks from fault zones, stabilization of potential landslide areas, and structural design in accordance with Site Class C of the CBSC Ground Motion Parameters. Project plans shall be subject to review and approval by the City Engineering Division.

DocuSign Envelope ID: 7AAFD2FD-43DC-48EA-AB7F-988EE094E281

91. **GEO VII-3.** Prior to the issuance of a grading permit, the project applicant shall prepare to the satisfaction of the Community Development Department, an erosion control plan that utilizes standard construction practices to limit the erosion effects during construction of the proposed project. Actions should include, but are not limited to, the following:
    a. Hydro-seeding;
    b. Placement of erosion control measures within drainage ways and ahead of drop inlets;
    c. The temporary lining (during construction activities) of drop inlets with "filter fabric";
    d. The placement of straw wattles along slope contours;
    e. Use of a designated equipment and vehicle "wash-out" location;
    f. Use of siltation fences;
    g. Use of on-site rock/gravel road at construction access points; and
    h. Use of sediment basins and dust palliatives.

92. **GHG VIII-1.** Prior to issuance of building permits, the applicant shall submit proof to the Community Development Department for review and approval which indicate project compliance with the Tier 1 Energy Efficiency division of the Title 24 standards. Tier 1 Energy Efficiency for low-rise multifamily developments require the following measures:
    a. Total Energy Design Rating (Total EDR) and Energy Efficiency Design Rating (Efficiency EDR) for the Proposed Design Building is included in the Certificate of Compliance documentation.
    b. Quality Insulation Installation procedures specified in the Building Energy Efficiency Standards Reference Appendices RA3.5 are completed.
    c. One of the following options is required:
        i. A4.203.1.2.1 – Roof deck insulation or ducts in conditioned space.
        ii. A4.203.1.2.2 – High performance walls.
        iii. A4.203.1.2.3 – HERS-verified compact hot water distribution system.
        iv. A4.203.1.2.4 – HERS-verified drain water heat recovery.
    d. Buildings complying with the first level of advanced energy efficiency shall have additional integrated efficiency and onsite renewable energy generation sufficient to achieve a Total EDR of the Tier 1 value indicated by Table A4.203.1.1.1 or lower as calculated by Title 24, Part 6 Compliance Software approved by the Energy Commission. This Total EDR is in addition to meeting the Efficiency EDR.
    e. Local jurisdictions adopting Tier 1 or Tier 2, or considering community shared solar or storage options as specified, shall consult with the local electric service for acceptance.

93. **NOI XIII-1.** Prior to the approval of grading permits, the City shall establish the following related to the use of construction equipment:
    a. Construction activities (excluding activities that would result in a safety concern to the public or constructions workers) shall be limited to between the daytime hours of 7:00 AM and 7:00 PM daily;
    b. Construction equipment shall be properly maintained and equipped with noise-reduction intake and exhaust mufflers and engine shrouds, in accordance with manufacturers recommendations;
    c. Equipment engine shrouds shall be closed during equipment operation;
    d. When not in use, motorized construction equipment shall not be left idling for more than five minutes; and

DocuSign Envelope ID: 7AAFD2FD-43DC-48EA-AB7F-988EE094E281

e. Stationary equipment (power generators, compressors, etc.) shall be located at the furthest practical distance from nearby noise-sensitive land uses or sufficiently shielded to reduce noise-related impacts.

94. **TRANS XVII-1.** Prior to issuance of grading permits, the project applicant shall submit Improvement Plans that reflect the recommendations included in the Traffic Impact Study prepared by W-Trans. Specifically, the Improvement Plans shall reflect a pedestrian path or sidewalk between the project site and the existing terminus of the sidewalk on the south side of Napa Junction Road near the elementary school crossing. The Improvement Plans shall also reflect space for bicycle storage provided either on balconies or other outside spaces dedicated to each housing unit, in garages or other storage spaces for each unit, or through provision of bike racks. The recommendations made by W-Trans shall be confirmed by the City's Public Works Department and/or the City Engineer prior to issuance of grading permits.

95. **TRANS XVII-2.** Prior to the first residential occupancy, the applicant shall implement the following TDM measures, as described in the TIS:
    a. Unbundled Parking;
    b. Free Transit Passes;
    c. Secure Bicycle Parking and Maintenance Tools;
    d. Tele-Work/Compressed Schedules;
    e. Carpooling and Ride-Matching Program;
    f. Transportation Coordinator;
    g. Welcome Packet for New Residents; and
    h. Monitoring of Program Performance.

    Proof of implementation of the TDM measures shall be submitted to the City's Community Development Department for review and approval.

96. **UTIL XIX-1.** The project applicant shall demonstrate compliance with the City's Zero Water Footprint Policy by mitigating all new potable water demands with "wet-water" offsets by one or more of the following options to ensure the proposed project results in a net zero increase in demand for potable water:
    a. Reducing existing potable water demands on-site;
    b. Funding programs or constructing projects that would conserve an equivalent amount of water elsewhere within the water service area;
    c. Funding of and/or constructing projects that would increase an equivalent amount of recycled water use elsewhere within the water service area where potable water is currently used; and/or
    d. Purchasing new water supplies from other water providers.

    Compliance with the Zero Water Footprint Policy shall be ensured by submission of a "Will-Serve" Water Application to the City's Public Works Department for review and approval. Project plans shall demonstrate the applicant's inclusion of the selected wet-water offsets.

97. **UTIL XIX-2.** The project shall be designed and constructed with purple irrigation pipe so that reclaimed water may be used for landscape irrigation purposes. The project shall use recycled water for irrigation in the event recycled water becomes available at the site.

98. **UTIL XIX-3.** At the time of issuance of building permits, the project applicant shall pay all updated water capacity and impact fees in effect, to the extent they are not subject to applicable fee

DocuSign Envelope ID: 7AAFD2FD-43DC-48EA-AB7F-988EE094E281

credits, to provide funding for the City to acquire additional long-term water resources and improve and develop its treatment and distribution system. The fees will permit the City to exercise additional options for potable water capacity from the City of Vallejo and/or other sources, and will also provide for implementation of the recycled water system.

99. **UTIL XIX-4.** The project applicant shall pay to the City a monthly service charge to adequately cover the project's costs associated with City supplying water through the City's connection to the City of Vallejo, as determined by the Public Works Director.

100. **UTIL XIX-5.** Prior to issuance of building permits, the project shall be reviewed by the Community Development Department for consistency with the Water Conservation Guidelines. The project applicant shall incorporate water conservation Best Management Practices into the project.

101. **UTIL XIX-6.** Should additional project water be required, the proposed project shall comply with the City's ordinances and regulations in effect at the time of authorization for additional water use. In addition, such changes in project use would trigger a new City Discretionary Review process, which would trigger re-evaluation of the proposed project's water supply impacts.

102. **UTIL XIX-7.** Prior to issuance of building permits, the project applicant shall submit landscaping plans to the City of American Canyon for review and approval demonstrating that the proposed landscaping would comply with the requirements in the City's Model Water Efficient Landscape Ordinance (AB 1881). The landscaping plan shall identify outdoor irrigation water conservation
measures, such as, but not limited to:

a. Drought-resistant vegetation;
b. Irrigation systems employing the following features:
    i. drip irrigation;
    ii. low-precipitation-rate sprinklers;
    iii. bubbler/soaker systems;
    iv. programmable irrigation controllers with an automatic rain shutoff sensors and flow sensing capabilities (ET Smart Controller);
    v. Matched precipitation rate nozzles that maximize the uniformity of the water distribution characteristics of the irrigation system;
    vi. Conservative sprinkler spacings that minimize overspray onto paved surfaces; and
    vii. Hydrozones that keep plants with similar water needs in the same irrigation zone
c. Minimally or gently sloped landscaped areas to minimize runoff and maximize infiltration; and
d. Organic topdressing in non-turf areas to decrease evaporation and increase water retention.

103. **COVID19 XXI-1.** The project applicant shall prepare a COVID-19 Exposure Control Plan which shall be included in the project construction site safety plan. The COVID-19 Exposure Control Plan shall comply with all regional and statewide orders related to the operation of construction sites and essential businesses during the COVID-19 pandemic, including but not limited to: social distancing requirements, masks for all workers, daily worker screening for

DocuSign Envelope ID: 7AAFD2FD-43DC-48EA-AB7F-988EE094E281

potential symptoms, disinfecting protocols for all shared surfaces, avoidance of tool sharing, and provision of sufficient hand sanitizer for all workers. The COVID-19 Exposure Control Plan shall be submitted to the City of American Canyon Planning Department for review and approval prior to the issuance of grading permits.

PASSED, APPROVED and **ADOPTED** at a regularly scheduled meeting of the Planning Commission of the City of American Canyon held on the 25th day of March, 2021, by the following vote:

AYES: Commissioners Altman, Wong, Vice Chair Mallare, Chair Navarro

PC RESOLUTION 2021-08

A RESOLUTION OF THE PLANNING COMMISSION OF THE CITY OF AMERICAN CANYON RECOMMENDING THE CITY COUNCIL OF THE CITY OF AMERICAN CANYON, CALIFORNIA, APPROVE A DESIGN PERMIT FOR THE OAT HILL MULTI-FAMILY PROJECT (PARCEL A), CONSISTING OF 206 MULTI-FAMILY DWELLING UNITS, A RECREATION BUILDING WITH LEASING OFFICE, 451 PARKING SPACES, AND APPROXIMATELY 94,000 SQUARE FEET OF LANDSCAPING AT THE VACANT 13.6-ACRE PARCEL LOCATED ON THE EAST SIDE OF OAT HILL SOUTH OF NAPA JUNCTION ROAD, APN 058-380-008 (FILE NO. PL20-0022)

WHEREAS, a Design Permit application was filed by Rick Hess Development Company for 206 dwelling units, a recreation building with leasing office, 451 parking spaces, and approximately 94,000 square feet of landscaping at the vacant 13.6-acre parcel located on the northern terminus of Napa Junction Road, APN 058-380-008 (File No. PL20-0022); and

WHEREAS, on August 14, 2020, Oat Hill Properties, II, LLC submitted a General Plan Amendment and Zone Change application to allow 206 dwelling units on approximately 13.6 acres on the east side of Oat Hill south of Napa Junction Road (APN 058-380-008 and portion of 058-320-001) (File No. PL20-0024); and

WHEREAS, on August 14, 2020, RH Hess Development Company submitted a Tentative Subdivision Map to create 206 dwelling units on 13.6 acres located at Oat Hill (Parcel A) with access from Napa Junction Road, (APN 058-380-008 and portion of 058-320-001) (File No. PL20-0025); and

WHEREAS, on November 2, 2021, RH Hess Development submitted a Lot Line Adjustment (File No. PL20-0039) to convert the two parcels APN 058-380-008 and 058-320-001 from 11.3-acres and 9.5-acres to 13.6-acres and 7.2-acres, respectively; and

WHEREAS, pursuant to Section 65300 of the State Planning and Zoning Law, the City of American Canyon (City) has adopted a General Plan to provide comprehensive long-range planning and a blueprint of the City's future form, including land use and circulation maps that specify the roadway network and the distribution of types and intensities of land; and

WHEREAS, there is a critical shortage of residential housing for all levels of affordability in California; and

WHEREAS, the State of California Department of Housing and Community Development (HCD) and the Association of Bay Area Governments (ABAG) will soon commence the process to establish regional housing needs allocations (RHNA) for the greater San Francisco Bay Area; and

WHEREAS, in light of the State's housing shortage, HCD and ABAG is expected to increase significantly the obligation of the City of American Canyon ("City") to plan for additional housing within its municipal boundaries; and

WHEREAS, on January 21, 2020, the City Council declared residential uses are the best use of the Rick Hess property on Oat Hill (Resolution 2020-06); and

WHEREAS, the Planning Commission adopted Resolution 2021-XX recommending the City Council of the City of American Canyon approve a Mitigated Negative Declaration and Mitigation Monitoring and Reporting Program for the project; and

DocuSign Envelope ID: 7AAFD2FD-43DC-48EA-AB7F-988EE094E281

WHEREAS, the Planning Commission has considered all of the written and oral testimony presented at the public hearing in making its decision; and

NOW, THEREFORE, BE IT RESOLVED that the American Canyon Planning Commission recommends the City Council approval of a Design Permit for the Oat Hill Project Parcel A (PL20-0025) based on the findings contained in Section 1, and the conditions of approval contained in Section 2.

SECTION 1: Design Permit Findings

A. The Oat Hill Project requires the following findings for the Design Permit. As stated in Chapter 19.41.050 ACMC, approval of a design permit application may be granted by the appropriate decision making authority only if all of the following findings are made:

1. The project complies with all applicable provisions of this title and any applicable approvals granted for the project by any decision making authority.

The project complies with all applicable provisions of this title.

2. The project and its design comply with any applicable design guidelines.

The project complies with all design guidelines and criteria of the High Density Residential (RH-1) zoning district.

3. The project and its design comply with all applicable general plan policies.

The project proposes a General Plan Amendment and Zone Change to convert the parcel from Light Industrial with Specialty Commercial (LI:CS) to High Density Residential (RH-1). The proposed use is consistent with the RH-1 designation in the General Plan in that multifamily residential uses are permitted by right.

Because there is a critical shortage of residential housing for all levels of affordability in California, the proposed Oat Hill Multi-Family Residential general plan amendment will designate additional land to provide needed housing. Replacement of Light Industrial with a Specialty Commercial Overlay (LI:CS) zoning with High Density Residential (RH-1) zoning is in keeping with the following General Plan Goals that promote additional housing in American Canyon:

- *Goal 2A: "Provide sufficient residential land with adequate infrastructure to accommodate the City's fair share of projected growth, and to facilitate mobility within the ownership and rental markets."*

- *Goal 2B: "Provide a range of housing types within the community to accommodate a variety of incomes and lifestyles, and to enable residents to remain in American Canyon throughout their lives."*

- *Goal 2E: "Address the housing needs of all economic segments of the existing and future community, including the City's fair share of the regional housing need." The applicant proposes to address housing affordable to lower income residents by providing in-lieu impact fees, pursuant to the Inclusionary Housing Ordinance (ACMC Chapter 19.28).*

DocuSign Envelope ID: 7AAFD2FD-43DC-48EA-AB7F-988EE094E281

The project satisfies the following Land Use Element policies:

- *Goal 1E: "Ensure the development of residential neighborhoods that provide a range of housing opportunities to meet the physical, economic, and social needs of the population, are designed to exhibit a high quality and character, contain appropriate supporting services, and reflect their environmental setting." The design permit application associated with this property ensures that the development will exhibit a high quality and character. The project reflects its environmental setting by providing public access to locally-important views across the project site.*

- *Policy 1.27.2: "Review all applications for new development, expansion of existing uses, and re-use within Napa County Airport Compatibility Zones "A" through "E" for compliance with the appropriate use and development conditions." A portion of Parcel A is located in Napa County Airport Compatibility Zone "D". Zone D restricts development to industrial or other non-residential uses. As noted in the Napa County Airport Terminal Area Redevelopment IS/MND, substantial evidence exists to conclude the 65 decibel (dB) Community Noise Equivalent Level (CNEL) boundary (also known as the "Noise Annoyance Zone" or "Zone 'D'") is contained entirely within the Airport property under existing and future conditions. Thus, as noted in the Oat Hill Multi-family Project MND, the project is not located within the regular flight-path/overflight for normal airport operations, nor would the project result in buildings that would obstruct established flight paths. Development within the project site would not conflict with Napa County Airport noise contours or any of the "three established sources of guidance on safety compatibility" for Zone D. The project is also subject to an avigation easement, which is included in the Project Approvals.*

4. The project complies with applicable policies of the Napa County Airport land use compatibility plan.

Three buildings (Building #K, L, and M) are within Zone D as described in the Napa County Airport Land Use Compatibility Plan (ALUCP), which consists of 51 residential units. The applicant conducted a peer-reviewed noise study, prepared by Saxelby Acoustics (Sept 10, 2020) and concluded that the Oat Hill project would not conflict with the noise contours or any of the "three established sources of guidance on safety compatibility" for Zone D. As an added precaution and a condition of approval, the applicant will agree to record an avigation easement in favor of the Napa County Airport to indemnify them from noise complaints. The applicant also scheduled to file an application with the Napa County Airport Land Use Commission (ALUC) to request approval of their project in Zone D.

5. The project's quality and character are compatible with the surrounding area, unless physically deteriorated or blighted, and will not be materially detrimental to existing development.

The project proposes high quality residential buildings that enhances the landscape of Oat Hill. The applicant conducted viewing studies to ensure the residential buildings take advantage of the view sheds from Oat Hill and are also providing a new public walking trail with the project. The applicant also provided photo simulations that show the residential buildings blend in harmoniously with the Oat Hill setting.

6. The proposed design is compatible with existing development in the area in terms of scale, height, bulk, proportion, materials, cohesiveness, color, and the preservation of privacy.

DocuSign Envelope ID: 7AAFD2FD-43DC-48EA-AB7F-988EE094E281

The project design complies to the RH-1 design standards and is compatible to existing development.

7. The design improves the community's appearance by avoiding both excessive variety and monotonous repetition.

The design of the residential buildings is high quality and avoids excessive variety and repetition. They feature a hip roof, articulated entrances, functional balconies, separations in color, and recessed windows. The site also takes advantage of landscaping in the setbacks, common areas, and parking areas.

8. The proposed design promotes a harmonious transition in terms of scale and character between areas of different general plan land use designations and zoning districts.

The Oat Hill project provides an appropriate transition between lower density housing, located to the south and west of Oat Hill, and commercial and retail uses surrounding Highway 29. The development of housing on Oat Hill also would be compatible with the Broadway Specific Plan (BDSP). Although Parcels A and B are not within the boundaries of the BDSP, that plan designates land adjacent to the parcels as "Medium Density Residential," which permits 12 units/acre and is intended to foster a high-density residential community that is compatible with the existing older single-family residences in this area. Re-designating Parcels A and B to RH-1 and RM would allow for residential densities similar to those permitted in the Medium Density Residential area of the Broadway Plan, and it would further establish a residential community that is compatible with surrounding uses.

9. The proposed design provides for adequate and safe on-site vehicular and pedestrian circulation.

The site will be graded for safe and adequate on-site circulation. A new section of Napa Junction Road would be constructed between two disconnected segments east and west of Hess Road. The new roadway and pedestrian connections would result in a more direct route to the project site from SR 29 and other areas of the City.

B. The Oat Hill Project requires the following additional findings related to design. General Plan Land Use Policy 1.8.4 requires that multi-family residential projects be designed to convey a high level of quality and distinctive neighborhood character in conformance with the following:

1. Treatment of building elevations to convey the visual character of individual units rather than a singular building mass and volume.

The building elevation is separated by three complimentary colors and supporting accents. The building has functional balconies, recessed windows, and defined main entries that reduce the building mass and volume.

2. Location of the elevation of the first occupiable floor at or in proximity to the predominant grade elevation, limiting the visibility of subterranean parking facilities from the street frontage.

The first floor of each building is accessible from ground level and parking facilities are accessible from the street level. The site will have clearly marked accessible paths of travel.

DocuSign Envelope ID: 7AAFD2FD-43DC-48EA-AB7F-988EE094E281

3. Inclusion of separate and well-defined entries to convey the visual character of individual identity for each residential unit, which may be developed as seen from exterior facades, interior courtyards, and/or common areas.

The buildings have defined entries that convey individual identity. Each building has two main entries that are recessed and doors facing the front elevation are painted in a light leather brown color. The covered garages of the units are hidden in the rear.

4. Siting and design of parking areas and facilities to be integrated with and not dominate the architectural character of the structure.

The site parking areas are integrated with the buildings and open spaces. The site is also facilitated with landscaping in the setbacks so that parking is not the dominant architectural feature.

5. Use of an adequate setback along the street frontage containing landscape, which provides physical and visual continuity with abutting sidewalks.

The applicant provided a preliminary landscaping plan that identified landscaped setbacks for street frontages. The landscaping consists of native trees, shrubs, and groundcover that will be supported with drip irrigation systems. The final landscaping plan shall comply with the City water efficient landscaping ordinance.

6. Provision of useable and functional private open spaces, including ground level patios where appropriate or enclosed balconies of adequate size for use.

The buildings include ground level patios and enclosed balconies with a minimum depth of 6 feet, which is consistent with medium density residential buildings in the neighboring Broadway District Specific Plan area.

7. Provides of sense of openness and unit separation while providing attractive locations for functional activities such as children's outdoor play, preferably within sight of each residential unit.

The site includes functional activity areas such as a courtyard between Buildings K and L, a courtyard between Buildings E and F, a picnic area north of Building A, a swimming pool and recreation building at the site center, and a community loop walkway.

SECTION 2. CONDITIONS OF APPROVAL

General

1. The Design Permit approval is granted for development of 206 dwelling units on 13 multi-family buildings on a 13.6-acre parcel in the High Density Residential (RH) zoning district. The site will be supported with 451 parking spaces and approximately 94,000 square feet of landscaping at the vacant parcel, APN 058-380-008 (File No. PL20-0022), which shall be substantially shown on file in the Community Development Department, except as modified by conditions contained in this approval. Exhibit A includes the following:
    a. Architectural Plans prepared by William Hezmalhalch Architects (WHA) from San Ramon, CA, consisting of 20 sheets showing the proposed building elevations, floor plans, and roof plans, dated October 19, 2020.

DocuSign Envelope ID: 7AAFD2FD-43DC-48EA-AB7F-988EE094E281

b. Site Plans prepared by Carlson, Barbee, and Gibson (CBG) from San Ramon, CA, consisting of 7 sheets showing the site plan, preliminary grading and drainage plan, and cross sections, dated February of 2021.
c. Landscaping Plans prepared by Vander Toolen Associates from Sacramento, CA, consisting of 6 sheets showing the proposed landscaping plans, dated October of 2020.

2. The applicant shall defend, indemnify, and hold harmless the City of American Canyon ("City"), its elected officials, officers, employees, attorneys, representatives, boards, commissions, consultants, volunteers and agents from and against all claims, actions, including actions to arbitrate or mediate, damages, losses, judgments, liabilities, expenses and other costs, or proceedings against the City, its elected officials, officers, employees, attorneys, representatives, boards, commissions, volunteers, or agents to attack, modify, set aside, void, or annul an approval, conditional approval, permit, entitlement, environmental document, environmental clearance, mitigation plan, or any other document or any of the proceedings, acts, or determinations taken, done, or made prior to granting of such approval, conditional approval, permit, entitlement, environmental clearance, environmental document, mitigation plan, or other documents, by the City, including, without limitation, an action against an advisory agency, appeal board, or legislative body within the applicable limitation period.

   The obligation to defend, indemnify and hold the City harmless shall include the payment of all legal costs and attorney's fees (including a third party award of attorney's fees), arising out of, resulting from, or in connection with the City's act or acts leading up to and including approval of any environmental document or mitigation plan granting approvals to the applicant, incurred on behalf of, or by, the City, its elected officials, officers, employees, representatives, attorneys, boards, commissions, volunteers and agents in connection with the defense of any claim, action, or proceeding challenging the entire or a portion of an approval, conditional approval, permit, entitlement or any other document of any related claim.

   The obligation to defend, indemnify, and hold the City harmless shall include, but not be limited to, the cost of preparation of any administrative record by the City, staff time, copying costs, court costs, or attorney's fees arising out of a suit or challenge contesting the adequacy of a permit, approval, conditional approval, entitlement, environmental document, mitigation plan, environmental clearance, or any other document or approval related to the applicant's project. The City will promptly notify the applicant of any claim, action, or proceeding and will cooperate fully in the defense. If the City fails to promptly notify the applicant of any claim, action, or proceeding, or the City fails to cooperate fully in the defense, the applicant shall not be responsible to defend, indemnify, or hold harmless the City.

   In the event a legal challenge to a City permit, approval, conditional approval, environmental document, environmental clearance, mitigation plan, entitlement or any other document, proceeding, determination, or action related to the applicant's project is successful, and an award of attorneys' fees is granted against the City, the applicant shall be responsible to timely pay the full amount of such an award.

3. Appeal. The approval shall become effective on the expiration of the appeal period, ten calendar days following the decision, unless an appeal to the City Council is filed. An appeal may be filed with the Community Development Director by filling out an Appeal Form accompanied by a fee of $703. This approval is also subject to return of the "Applicant Confirmation of Conditions of

DocuSign Envelope ID: 7AAFD2FD-43DC-48EA-AB7F-988EE094E281

Approval" form signed by the property owner. Should an appeal period end on a Saturday, Sunday or holiday, the final day for filing an appeal shall be the following Monday, or the next business day following a holiday. If there is no appeal, this approval will be final on April 5, 2021.

4. The applicant is responsible for paying all charges related to the processing of this discretionary case application within 30 days of the issuance of the final invoice or prior to the issuance of building permits for this project, whichever occurs first. Failure to pay all charges shall result in delays in the issuance of required permits or the revocation of the approval of this application.

5. The date upon which the approval is final shall be considered the day of the imposition of the fees, dedications, reservations and exactions required by these conditions approval for the purposes of protesting the imposition pursuant to California Government Code Section 66020.

6. Expiration of this Approval. If no construction permits have been issued and construction commenced within one year of the date upon which this approval is final, the approval shall become null and void and of no effect. An extension of time may be granted by the Community Development Director upon the written request by a responsible party before the expiration of the one-year period, provided that the Director can make the findings that there have been no substantial changes in the approved plans, and that there has been no change of circumstances which would prevent any of the required findings of approval being made.

7. All plans submitted for review and approval and all development shall be in substantial conformance with the approved exhibits, except where modified by a condition of approval. The Community Development Director or designee may approve minor changes to the project as approved by the Planning Commission on the plans submitted for the construction permits with a determination that the changes are in substantial compliance with the representation of the project as reviewed by the Planning Commission and City Council, that the proposed change will be in compliance with the required development standards, and the change will not materially affect adjacent private or public property.

8. The conditions of this Permit shall be printed on the first sheet of each plan set submitted for a building permit pursuant to this Design Permit, under the title "Design Permit Conditions". The second sheet may also be used if the first sheet is not of sufficient size to list all of the conditions. The sheet(s) containing the conditions shall be of the same size as those sheets containing the construction drawings; 8-1/2" by 11" sheets are not acceptable.

Planning

9. All new roof top equipment is required to be screened. The parapet shall be opaque and equal in height of the top of the rooftop mechanical equipment.

10. All ground mounted air conditioning and heating equipment facing Napa Junction Road shall be screened. The screen shall be made of wood and painted or stained to be weather resistant.

11. Prior to the issuance of the site improvement plan, the applicant shall identify 10 bicycle parking spots for Parcel A. The bicycle parking spots shall be evenly distributed amongst the buildings.

DocuSign Envelope ID: 7AAFD2FD-43DC-48EA-AB7F-988EE094E281

12. The subdivision ordinance requires new projects to dedicate parkland on the basis of 5 acres per 1,000 population (ACMC Chapter 18.44). Based on the current project proposal of 206 dwelling units @ 3.49 persons per unit, the project generates a population of 719 people. This equates to a park dedication standard of 3.595 acres. The Subdivision Ordinance has provisions for a combination of park dedication and payment of a fee in-lieu of park dedication.

13. Prior to the issuance of the first building permit, the applicant is required to pay all applicable impact fees. For your information, the following table identifies the fees and their rates. Please note that the City fees are subject to change and the applicant is required to pay the updated fee at the time of building permit issuance. The applicant is required to pay Fire Mitigation fees separately at the Fire District.

Fee	Rate	Calculation	Cost
Affordable Housing Nexus	$3.82 per SF	286,554 SF per plans	$ 1,094,636.28
Parks and Recreation Fee	$5806.38 per unit	206 units per plans	$ 1,196,114.28
Civic Facility Fee	$1685.61 per unit	206 units per plans	$ 347,235.66
General Plan Update Fee	$89.59 per unit	206 units per plans	$ 18,455.54
Traffic Impact Fee	$618.18 per trip	1121 trips per traffic report	$ 692,979.78
Water Capacity Fee (Estimated)	$11,599 per unit plus $26.25 per gpd	206 units per plans plus clubhouse/pool and irrigation demand in gpd	$2,410,919.00
Wastewater Capacity Fee (Estimated)	$6,952.00 per unit plus $35.66 per gpd	206 units per plans plus clubhouse/pool demand in gpd	$1,446,733.00
		Impact Fees Subtotal	**$ 7,207,073.54**

14. Prior to the issuance of the first building permit, the applicant shall provide proof of payment or exemption for Napa Valley Unified School District (NVUSD) developer fees. For more information, see their website here: https://www.nvusd.k12.ca.us/developerfees .

15. Prior to the issuance of the first building permit or the recordation of the final map, whichever occurs first, an Avigation Easement shall be recorded. The Avigation Easement shall cover all portions of the property and include:
    a. Right-of-flight at any altitude above an easement surface elevation, established based on either Part 77 of the Federal Aviation Regulations or FAA Terminal Instrument Procedures Standards (TERPS), whichever is controlling (glide slope in approach is the controlling factor).
    b. Right to cause noise, vibration, fumes, dust, and fuel particle emissions.
    c. Right to prevent erection or growth of all objects above the easement surface.
    d. Right to prohibit creation of electrical interference, unusual light sources, and other hazards to aircraft flight.

DocuSign Envelope ID: 7AAFD2FD-43DC-48EA-AB7F-988EE094E281

16. Prior to the Certificate of Occupancy, the applicant shall complete the public access trail that meanders from the site entry, traversing all the identified look-out points, and reaches the northwest side of the site.

Landscaping

17. The applicant shall agree to a licensing agreement that requires them to maintain the landscaping within the right-of-way along the project frontage. Prior to final inspection of the building permit, the applicant shall amend their facilities operation and maintenance plan (O&M plan) to include this activity.

18. Prior to the issuance of the Building Permit, the applicant shall submit a final landscaping plan. The landscape plan shall comply with the requirements of the California Government Code 65591 et. seq. known as the Water Conservation in Landscaping Act as set out in the model water efficient landscape ordinance adopted by the California Department of Water Resources and amended in 2015. All plant material shall be served by a city-approved automatic irrigation system.

19. Prior to the issuance of a certificate of occupancy, all landscaping shall be completed and the project's landscape architect shall provide a written certification that all plant materials have been installed in accordance with the approved landscape plan.

20. All planting shall be maintained in good growing condition. Such maintenance shall include, where appropriate, pruning, mowing, weeding, cleaning of debris and trash, fertilizing and regular watering. Whenever necessary, planting shall be replaced with other plant materials to insure continued compliance with applicable landscaping requirements. Required irrigation systems shall be fully maintained in sound operating condition with heads periodically cleaned and replaced when missing to insure continued regular watering of landscape areas, and health and vitality of landscape materials.

21. All tree stakes and ties shall be removed within one year following installation or as soon as trees are able to stand erect without support.

22. Clear sight triangles shall be maintained at all driveways. Low-lying plantings and other site fixtures, including signs, shall be no taller than 30 inches within the site's vision triangles.

Building and Safety

23. The applicant shall have the detailed building and site plans reviewed by a Certified Accessibility Specialist to verify that the proposed construction will comply with accessibility requirements. Each application for site construction or building permit shall be accompanied by a written report from a Certified Accessibility Specialist verifying that the site and building design as shown on the submitted plans comply with all accessibility requirements.

24. Prior to the issuance of a certificate of occupancy, the applicant shall submit a letter of certification to the Building Official from the project architect and civil engineer certifying that all improvements have been constructed in accordance with the approved building plans. Determination of consistency shall be subject to the review and approval of the Building Official.

DocuSign Envelope ID: 7AAFD2FD-43DC-48EA-AB7F-988EE094E281

25. Site Improvement plans shall show slopes of all sidewalks and walkways and paths of travel to use site facilities including trash/recycling facilities. The applicant shall have the detailed building and site plans reviewed by a Certified Accessibility Specialist to verify that the proposed construction will comply with accessibility requirements. Each application for site construction or building permit shall be accompanied by a written report from a Certified Accessibility Specialist verifying that the site and building design as shown on the submitted plans comply with all accessibility requirements.

26. Recycling of Construction and Demolition Debris: Prior to issuance of a building permit the applicant shall submit a plan for the diversion of at least 70 percent of the debris from the building demolition and construction. The plan shall include the qualified recycler that will be used, the methods of managing diversion of construction materials on site, and the proposed documentation that will be submitted to confirm that the diversion goal has been met.

Fire District

General Fire District Conditions

27. In accordance with the standard mitigation measures and conditions of approval set forth by the City of American Canyon, the developer shall pay the Fire Impact Fees (see current Standard Fees and Charges adopted by resolution), prior to the issuance of any building permits.

28. Buildings in excess of two stories shall pay Aerial Apparatus mitigation fees prior to the issuance of any building permits. (see current Standard Fees and Chares adopted by resolution).

29. The project will require an annual fire and life-safety inspection under the "R (Residential) Occupancy Inspection Program". The R Occupancy Inspection Program has been developed to allow Fire District to meet requirements set forth by the State of California. The California Health and Safety Code, Section 13146.2 (a) mandates that inspections be completed at all "R occupancies" annually. California Health and Safety Code Section 13146.2 (b) provides the Fire District legal authority to charge property owners to recover reasonable costs for providing these inspections.

30. New buildings and additions to existing buildings shall conform to requirements set forth in the currently adopted editions of the California Building Code, California Fire Code, City of American Canyon standards and Nationally Recognized Standards.

31. There shall be no deferred submittals for fire protection equipment and related utilities. Fire protection plans shall not be attached to or bound with the building plan submittal package. This includes but is not limited to Automatic Fire Sprinkler, Fire Alarm, Fixed Fire Protection and Civil plans.

32. All Fire related underground piping and fire appurtenances shall be shown on the Civil plan submittal. In addition to the Civil plan submittal, at least (1) plan set under separate cover shall be submitted to American Canyon Building Division for routing to the American Canyon Fire Protection District detailing all underground piping and related fire appurtenances including but not limited to underground piping, underground sweep detail, underground trench details showing depth of burial, type of backfill, manufacturer's specifications of piping, valves joints, fittings and calculated size and locations of thrust blocks, hydrants locations (designate public or private), gate shut-off valves, PIV's, FDC's, fire pumps, fire pump and/or riser rooms.

DocuSign Envelope ID: 7AAFD2FD-43DC-48EA-AB7F-988EE094E281

33. Underground utility contractor, architect and fire sprinkler contractor shall coordinate the location of risers and control valves prior to the issuance of a building permit.

34. Fire District plan review shall be based on the information submitted at the time of permit application. Any changes to the approved/permitted scope of work including additions, alterations, demolition, repair or a change in occupancy/use may impact the project requirements, including but not limited to the installation of additional fire protection systems or components.

Fire Protection

35. An approved water supply capable of supplying the required fire flow for fire protection systems shall be provided to all premises upon which facilities or buildings are hereby constructed or moved into or within the City. Required fire flow and hydrant distribution shall be in accordance with Appendix B and C of the California Fire Code. Applicant shall demonstrate on plan submittal; square footage of each building on plan and provide the required fire flow information. Applicant shall demonstrate that the number and spacing of onsite fire hydrants meets with requirements of the California Fire Code. ***See sample below regarding fire flow and hydrant detail information needed***.

BUILDING FIRE FLOW REQUIREMENTS – CFC TABLES B105.2 & B105.1(2)
INFORMATION BELOW IS A SAMPLE AND FOR REFERENCE ONLY

Table B105.1(2) – Building size = 129, 600 square feet
Construction type = Type IIA
FF = 5,250 gpm at 20 psi
Duration = 4 hours

Table B105.2 – Fire sprinkler allowance = - 50%
5,250 – 2,625 = 2,625 gpm
FF = 2,625 gpm @ 20 psi
Duration = 2 hours

Table CC105.1 – Approximate number of hydrants = 3
Average spacing = 400 feet + 25% allowable increase = 500
Maximum distance from street or frontage = 225 feet = 50% allowable increase = 337.5

36. Fire Protection systems shall be installed in accordance with provisions set forth in the California Fire Code as amended by the City of Napa and the applicable National Fire Protection Association Standard.

37. The fire protection equipment shall be located within an interior room having an approved exterior access door or in an exterior enclosure attached to the building, specifically, for the purpose of housing such equipment.

DocuSign Envelope ID: 7AAFD2FD-43DC-48EA-AB7F-988EE094E281

38. The City of American Canyon requires that a fire hydrant be in service within 250 feet of the furthest point of construction prior to the stockpiling of combustible materials for the beginning of construction.

39. Fire District Connections (FDC) shall be located not more than 100 ft. from the nearest fire hydrant.

Fire District Access

40. Fire Apparatus Access Roads shall be designed in accordance with provisions set forth in the California Fire Code Chapter 5 and Appendix D as amended by the City of American Canyon and the applicable Public Works Standard.

41. Fire apparatus access roads shall have an unobstructed minimum width of 20 feet (curb to curb) and a minimum unobstructed vertical clearance of 13' 6". They shall have an all-weather paved surface capable of supporting a GVW of 71,000 pounds.

42. Access roads shall be completed with all-weather surfaces prior to the stockpiling of combustible materials or beginning combustible construction. Fire apparatus access shall be provided to within 150 feet of the most remote portions of all building from an approved exterior route. If this cannot be achieved fire apparatus turn arounds will be needed.

43. Fire apparatus access roads shall not be obstructed in any manner, including the parking of vehicles. Vertical traffic calming in the form of speed pumps, humps or dips are prohibited along fire access roads without prior approval of the fire Code Official. The minimum width and clearances established in Section 503.2.1 shall be maintained at all times.

44. When required by the Fire Chief, fire apparatus access roads shall be designated as Fire Lanes and appropriate signs and/or markings installed in accordance with the California Vehicle Code and approved City standards.

45. Where applicable improvement plan submittals for permit shall include locations of fire lane red curbing and fire lane signage. Please refer to and include City Public Works Standard FP-2A & 2B with plan submittals for permitting.

Public Works General Conditions of Approval

46. The Applicant shall be responsible for all City plan check, map check and inspection costs. The Applicant shall establish a Developer Deposit Account with the City upon the initiation of plan check services. The amount of the initial deposit shall be determined by the City Engineer. Additional funds may be required based upon actual costs.

47. All improvements shall be designed in accordance with the American Canyon Municipal Code (ACMC), City of American Canyon Engineering Standard Plans and Specifications for Public Improvements (City Standards), except as specifically noted otherwise in these conditions.

48. All new utilities to serve the project, shall be placed underground. Exceptions may be allowed for surface mounted transformers, pedestal mounted terminal boxes and meter cabinets.

DocuSign Envelope ID: 7AAFD2FD-43DC-48EA-AB7F-988EE094E281

49. Unless otherwise explicitly permitted, all existing wells, septic tanks and/or underground fuel storage tanks shall be abandoned under permit and inspection of Napa County Department of Environmental Services or other designated agency. If there are none, the project engineer shall provide a letter describing the scope of the search done to make this determination.

50. A detailed Soils Investigation/Geotechnical Report shall be prepared and submitted for review. The report shall address, at a minimum, potential for liquefaction, R-values, expansive soils and seismic risk. The improvement plans shall incorporate all design and construction criteria recommended in the Geotechnical Report.

51. A drainage report prepared by a California Registered Civil Engineer shall be submitted for review with the initial submittal of the Improvement Plans. The report shall include detailed hydrologic and hydraulic calculations to support the design and sizing of all public and private drainage facilities including storm drains and detention facilities. The report shall include an analysis of the capacity of existing downstream storm drain facilities and hydraulic conditions which may impact the design of proposed facilities and improvements.

52. A final detailed post-construction Stormwater Control Plan (SWCP) that identifies and sizes all permanent post-construction stormwater treatment BMPs shall be prepared and submitted for review and approval. The SWCP shall be prepared in accordance with the latest edition of the Bay Area Stormwater Management Agencies Association (BASMAA) Post-Construction Manual and the requirements of the State Water Resources Control Board Phase II Municipal Separate Storm Water System (MS4) General Permit (Order 2013-0001 DWQ). It is the City's discretion whether to accept alternative treatment facilities other than bioretention.

53. A Post Construction Stormwater Operations and Maintenance Plan that includes a plan sheet showing all storm drain and water quality infrastructure that is to be maintained, along with detailed instructions and schedules for the ongoing maintenance and operation of all post-construction stormwater BMPs shall be submitted for review and approval by the City Engineer. Once approved, the property owner(s) shall enter into an agreement with the City that provides the terms, conditions, and security associated with the ongoing requirements of the post-construction Stormwater Best Management Practices.

54. A Final Map, as defined in the Subdivision Map Act, shall be prepared by a licensed surveyor or civil engineer. The Final Map shall show all parcels, rights-of-way, and easement(s), and shall be submitted to the City Engineer for review. The Final Map shall be in substantial conformance with the approved Tentative Map and all applicable conditions of approval. The Final Map is not valid until it has been approved by the City and recorded. Closure calculations shall be provided at the time of initial Final Map submittal. All calculated points within the map shall be based upon one common set of coordinates. All information shown on the Final Map shall be directly verifiable by information shown on the closure calculation printout. The point(s) of beginning shall be clearly defined. All lot acreages shall be shown on the Final Map and shall be verifiable from information shown on the closure calculation printout. A current title report (within past 30 days) shall be submitted at the time of initial Final Map submittal.

55. Subject to the terms of Condition 56, the Applicant shall secure all necessary rights-of-way and public and private easements for both onsite and offsite improvements. The Applicant shall prepare all necessary legal descriptions and deeds.

DocuSign Envelope ID: 7AAFD2FD-43DC-48EA-AB7F-988EE094E281

56. To the extent any offsite public improvements require the acquisition of property not currently owned by the Applicant or the City, the Applicant shall first make a good-faith effort to acquire the necessary property rights, however if the Applicant makes such an effort and is unable to acquire such rights, then the Applicant may request the City acquire the necessary property rights through the exercise of eminent domain provided that the Applicant enters first into an agreement with the City to pay for all costs incurred by the City to acquire such rights and if the City does not acquire the rights necessary to allow the offsite public improvements to be completed by the Applicant within statutory timeline provided by law, then the Applicant shall be relieved of the obligation to construct those off-site improvements only to the extent they require property not currently owned by the Applicant or the City. The Applicant shall make a good-faith effort to identify and acquire the necessary property rights at the earliest opportunity. A good faith offer includes identification of property rights needed (permanent and temporary), appraisal of the value of the highest and best use of the property, and a bonafide offer to pay this amount at the close of escrow.

57. The Applicant shall submit site Improvement Plans, prepared by a registered Civil Engineer, for review and approval of the City's Public Works Department. Please be aware that this is separate submittal from the building permit application. The final plan set shall include all civil, landscape and joint trench drawings under a single cover sheet. No final grading or other construction shall be performed until the Improvement Plans have been approved. The Applicant shall not begin clearing, grubbing, or rough grading at the site prior to approval of the Improvement Plans, unless explicitly approved by the City of American Canyon through the standard grading and utilities only permit process. An Encroachment Permit is required for any work within City right of way. Encroachment Permits will not be issued prior to the approval of the Improvement Plans.

58. Cathodic protection shall be provided for all water valves, fittings, hydrants, meters, backflow devices, ductile iron pipe, and other metal appurtenances, regardless of the findings of any soils corrosivity analysis.

59. The Applicant shall keep adjoining public and private streets free and clean of project dirt, mud, materials, and debris during the construction period in accordance with an approved SWPPP and Erosion and Sediment Control Plan using appropriate BMPs and as is found necessary by the City Engineer.

60. If any hazardous material is encountered during the construction of this project, all work shall be immediately stopped and the Fire District, Napa County Department of Environmental Services or other designated agency, and the City Inspector shall be notified immediately. Work shall not proceed until clearance has been issued by all of these agencies.

61. Prior to final preparation of the subgrade and placement of base materials, all underground utilities shall be installed and service connections stubbed out behind the sidewalk. Public utilities, Cable TV, sanitary sewers, and water lines shall be installed in a manner that will not disturb the street pavement, curb, gutter and sidewalk, when future service connections or extensions are made.

62. Where soil or geologic conditions encountered in grading operations are different from that anticipated in the soil and/or geologic investigation report, or where such conditions warrant

DocuSign Envelope ID: 7AAFD2FD-43DC-48EA-AB7F-988EE094E281

changes to the recommendations contained in the original soil investigation, a revised soil or geologic report shall be submitted for approval by the City Engineer. Additionally, if field conditions warrant installation of any subdrains, the location, size and construction details must be provided to the City for review and approval prior to construction.

63. All new fire hydrants shall be covered with burlap sacks until the hydrants have been tested and found to be in conformance with City flow requirements. No storage of combustible materials or construction of building shall be permitted until all hydrants meet City flow requirements.

64. Prior to placing the final lift of asphalt, all public storm drains and sanitary sewer lines shall be video inspected at the Applicant's expense. All video media (CD, DVD, or portable hard drive) shall be submitted to the City. If any inadequacies are found, they shall be repaired prior to the placement of the final lift of asphalt.

65. All streets, curbs, gutters, sidewalks or other public facilities damaged in the course of construction associated with this Project shall be the responsibility of the Applicant and shall be repaired to the satisfaction of the City at the Applicant's expense.

66. After all of the new underground utilities within existing public streets have been installed, the entire affected areas shall be milled and repaved to present a neat finished pavement area. Multiple trench patches are not acceptable.

67. All construction stormwater pollution prevention best management practices (BMP's) shall be installed as the first order of work and in accordance with the State Water Resources Control Board's General Construction Permit for Stormwater Discharges Associated with Construction and Land Disturbance Activities (Order 2009-0009-DWQ, as amended), the Applicant's Storm Water Pollution Prevention Plan (SWPPP), and the City's Erosion and Sediment Control Plan in accordance with the City's MS4 Permit. All stormwater BMP's shall be maintained to the satisfaction of the Qualified SWPPP Developer (QSD), Qualified SWPPP Practitioner (QSP), and the City Engineer.

68. With the exception of water used for loading and testing of potable water lines, all construction water used for the project shall be obtained from a source other than American Canyon potable water sources. The Applicant shall provide verification that an outside source of construction water, e.g., recycled water, has been established and will be available for the duration of the project construction.

69. The development shall comply with the City's Zero Water Footprint policy.

70. All landscaping irrigation systems shall include an ET/SMART controller.

Public Works Special Conditions of Approval

71. The Applicant shall submit Improvement Plans prepared by a registered Civil Engineer (Engineer of Record) in substantial conformance with the preliminary civil plans titled "Design Review Oat Hill Multi-Family – Parcel A" prepared by Carson, Barbee & Gibson Civil Engineers, dated February 2021 (Preliminary Plans), except as modified by these conditions.

DocuSign Envelope ID: 7AAFD2FD-43DC-48EA-AB7F-988EE094E281

72. Improvement Plans shall be tied to the State of California coordinate system.

73. The Applicant shall design and construct all of the Public Improvements as generally described below and in accordance with the project's Fee Credit/ Fee Reimbursement Agreement, as applicable.

    a. Napa Junction Road Improvements:
        i. Construct an approximately 300-foot segment of Napa Junction Road between the Hess Road/Napa Junction Road intersection and the existing roadway fronting Napa Junction Magnet Elementary School. The preliminary roadway shall have a curb-to-curb with of 40-feet with 5-foot wide (includes curb width) attached sidewalks on both sides. The final roadway section shall be as determined by the City Engineer. The extent of the roadway construction may be extended as necessary to meet City roadway geometric standards.

        ii. Construct a new 5-foot wide (includes curb width) attached sidewalk along the south side of Napa Junction Road between the east end of the new road segment described above to the existing sidewalk approximately 100-feet west of Theresa Avenue.

        iii. Construct a new 5-foot wide attached sidewalk along the south side of Napa Junction Road between its intersection with Hess Road and the west end of Parcel A's frontage.

        iv. The cost of these improvements will qualify for a credit against the project's Traffic Impact Fee.

    b. Water Main Replacement in Napa Junction Road:
    Replace approximately 590 linear feet of the existing 6-inch water main in Napa Junction Road with a new 12-inch water main between the intersection with Theresa Avenue to the intersection with Hess Road, connecting to the existing water mains in those intersections. The cost of these improvements will qualify for a credit against the project's Water Capacity Fee.

    c. Sanitary Sewer Main Replacement in Napa Junction Road and Theresa Avenue:
    Replace approximately 1,800 linear feet of the existing 6-inch sanitary sewer mains in Napa Junction Road between Hess Road and Theresa Avenue and in Theresa Avenue from Napa Junction Road to a point approximately 1,200 linear feet south thereof with new 8-inch and 10-inch sanitary sewer mains. The Engineer of Record shall conduct a capacity analysis for the new sanitary sewers to determine where it should upsize from 8-inch to 10-inch. The cost of these improvements will qualify for a credit against the project's Wastewater Capacity Fee.

    d. Recycled Water Main in Lombard Road and Hess Road:
    Install approximately 1,300 linear feet of a new 8-inch recycled water main in Lombard Road between the cul-de-sac at its northern terminus and Hess Drive and in Hess Drive between Lombard Road and the Little League fields. This recycled water main will be

DocuSign Envelope ID: 7AAFD2FD-43DC-48EA-AB7F-988EE094E281

assumed to provide a sufficient potable water demand offset to comply with the City's Zero Water Footprint policy for both the Oat Hill Parcel A and Oat Hill Parcel B projects.

e. Fire Flow Demand:
Install public water system improvements sufficient to meet the domestic and fire flow demands of the project. Although the Preliminary Plans show a private onsite water pump station, Public Works and the American Canyon Fire Protection District do not support this due to concerns over the ongoing maintenance of a private pump station.

The Engineer of Record shall conduct further analysis to determine whether domestic and fire flow requirements could be met by creating a looped water connection (connecting to both the 12" and 16" water mains) or by upgrading the City's existing Oat Hill Pump Station that feeds Oat Hill Tank #2 from Oat Hill Tank #1. In the event that this is determined to be infeasible, then the Applicant shall install a public water pump station onsite at a location close to the public right of way or at a location as otherwise approved by the City Engineer.

Note that the Tentative Map for Oat Hill Parcel B is subject to conditions of approval to construct the same Public Improvement described above, except 73.e. In the event that any of those public improvements are constructed in conjunction with the development of Oat Hill Parcel B prior to the development of Oat Hill Parcel A, then the corresponding condition of approval for Oat Hill Parcel A will be considered to have been met.

74. The Applicant shall construct all of the on-site private drive isles, parking spaces, walks, water, recycled water, sanitary sewer, storm drainage and stormwater quality and landscaping **"Private Improvements"** generally shown on the Preliminary Plans and more specifically described below. All private drive isles, parking spaces, walks, water, sewer, storm drainage and stormwater quality improvements shall be designed in accordance with the City of American Canyon Engineering Standard Plans and Specifications for Public Improvements (City Standards), except as specifically noted otherwise in these conditions.

a. Storm Drain Facilities:
Construct private on-site drainage facilities, detention facilities, and other appurtenances to collect and convey all surface drainage to an approved private storm drain facility or outfall. Onsite drainage facilities shall provide for the positive drainage of all adjacent upstream or upgrade properties to prevent ponding. Existing run-on from adjacent properties shall not be obstructed and shall be conveyed onsite. Off-site peak storm water discharge shall not exceed 90% of the undeveloped peak flow from the 24-hour, 100-year event. The storm drains and detention facilities shall be substantially consistent with the Preliminary Plans. However, the sizing of all storm drains and detention facilities shall be determined by the approved final drainage report.

b. Stormwater Quality Facilities:
Permanent on-site private post-construction stormwater treatment BMPs shall be designed and constructed in accordance with the approved final SWCP. Runoff from all roof drains shall be conveyed to the onsite stormwater treatment facilities.

c. Emergency Vehicle Access Road

DocuSign Envelope ID: 7AAFD2FD-43DC-48EA-AB7F-988EE094E281

Construct a 20-foot wide paved vehicle road on Oat Hill Parcel A and across Oat Hill Parcel B connecting to Napa Junction Road.

75. Prior to SUBMITTAL OF THE IMPROVEMENT PLANS, the Applicant shall:
    a. Submit the City's "Improvement Plan Checklist".

    b. Pay an initial cash deposit for City plan check services in amount to be determined by the City prior to the time of submittal. The Project engineer shall contact City staff to discuss submittal details to determine initial deposit amount.

    c. Provide the following:
        i. Public Street Repair Plan
        ii. Utility Plan and Joint Trench Plan
        iii. Construction Storm Water Pollution Prevention Plan (SWPPP) and a City Erosion and Sediment Control Plan (ESCP)
        iv. Drainage Report
        v. Post-Construction Stormwater Control Plan (SWCP)
        vi. Geotechnical Report
        vii. Construction Traffic Control Plan.

    d. Pothole and physically determine (by way of a survey performed by the Engineer of record) the actual horizontal location and vertical depth of all existing underground utilities throughout the proposed areas of work and provide the design of all new utility installations required to serve the project including a schedule for implementation of such work as to prevent disrupting of utility service to adjacent properties.

76. Prior to APPROVAL OF THE IMPROVEMENT PLANS, the Applicant shall:

    a. Provide written acknowledgment by the Geotechnical Engineer of Record that the Plans incorporate all design and construction criteria specified in the Geotechnical Report.

    b. Subject to the terms of Condition 56, acquire the public right-of-way and all rights of entry and/or temporary and permanent easements necessary for the construction of the Napa Junction Road improvements described above. Applicant shall prepare the legal descriptions, plats and deeds and submit them to the City for review. The location of all such rights on the Plans.

    c. Record a City approved lot line adjustment between Oat Hill Parcel A and Oat Hill Parcel B as shown on the Tentative Map and Preliminary Plans.

    d. Furnish proof that all permits that may be required by the California Department of Fish & Game, State and Regional Water Quality Control Board, US Army Corps of Engineers and any other regulatory agencies with jurisdiction over the proposed construction have been obtained.

    e. Complete and submit the City's Erosion and Sediment Control Plan (ESCP) Template. Applicant may refer to a SWPPP, as appropriate, by referencing page number within the SWPPP that addresses the requirements of the ESCP.

DocuSign Envelope ID: 7AAFD2FD-43DC-48EA-AB7F-988EE094E281

f. Submit a copy of the Notice of Intent and WDID# for coverage under the State Water Resources Control Board' General Construction Permit for Stormwater Discharges Associated with Construction and Land Disturbance Activities (Order 2009-0009-DWQ).

77. Prior to COMMENCEMENT OF CONSTRUCTION ACTIVITIES, the Applicant shall:

a. Pay off all current account balances with the City of American Canyon.

b. Pay an inspection fee in amount to be determined at the time of commencement for the City's inspection of the Public Improvements.

c. Conduct a pre-construction meeting with representatives of the City whereby the Applicant, the Legally Responsible Party (LRP), Qualified SWPPP Practitioner (QSP), Qualified SWPPP Developer (QSD), and/or the Contractor provides the following:

i. Six (6) full-size bond copies of the approved Improvement Plans for the City's use.
ii. One (1) job-site copy of the latest edition of the City Standards for the Contractor use.
iii. One (1) job-site copy of the SWPPP for use by the LRP, QSP, QSD, and Contractor.
iv. Electronic copies of Improvement Plans and SWPPP

78. Prior to RECORDATION OF THE FINAL MAP, the Applicant shall:

a. Construct all of the Public and Private Improvements to the satisfaction of the City. Alternatively, the Applicant may enter into a Subdivision Improvement Agreement with the City agreeing to complete all of the Public and Private Improvements prior to Occupancy of the first unit. Such an Agreement will require the Applicant to provide bonds, proof of workers compensation insurance, and general liability insurance in the forms and amounts as deemed satisfactory to the City.

b. Establish a Homeowner's Association (HOA) in accordance with State law with recorded Codes, Covenants, & Restrictions (CC&Rs) that are satisfactory to the City Engineer and City Attorney to provide long-term and ongoing maintenance of all of the Private Improvements identified above. Specifically, the HOA will be responsible for the long-term and ongoing maintenance of the private streets, sidewalks, streetlights, domestic water facilities including the water booster pump station, sewers, storm drain facilities and stormwater quality facilities within the limits of the subdivision. The City will have enforcement authority over the HOA's maintenance obligations and the obligation to review and approved proposed changes amendments to the CC&R's. The CC&R's shall require the HOA to create and maintain a separate maintenance reserve fund in the amount of a percentage of the cost of constructing the HOA maintained improvements listed above. Said percentage will be determined by the City prior to recordation of the CC&Rs.

c. Establish a Shared Maintenance Agreement or such similar agreement between the owners of Oat Hill Parcel A and Oat Hill Parcel B for the long term and ongoing maintenance and operation of all shared private improvements. Specifically, the parcel

DocuSign Envelope ID: 7AAFD2FD-43DC-48EA-AB7F-988EE094E281

owners shall be responsible for the ongoing maintenance and operation of all onsite stormwater quality facilities, shared storm drains and the shared emergency vehicle access road. The Shared Maintenance Agreement shall be prepared to run with the land of each parcel. The Shared Maintenance Agreement shall be submitted to the City for review and approval prior to recordation.

d. Generally, in substantial conformance with that which is shown on the approved Tentative Map, convey all easements and dedications, public and private, for the construction, use and/or maintenance of roads or other access, drainage facilities, utilities and post-construction storm water management facilities on the Final Map or by separate instruments. All dedications to the City shall be irrevocable offers of dedication. Specific public conveyances include:
    i. A public utility easement (PUE) 5-foot in width along the south side of Napa Junction Road across the frontage of Oat Hill Parcel A.
    ii. A strip of public street right-of-way of varying width and having an area of approximately 4,150 square feet as shown on the Tentative Map for Condominium Purposes Oat Hill Multi-family Parcel B.

e. Furnish documentation that the existing PG&E pole line easements (Book 1061 Page 114 and Book 1355 Page 779 O.R.) have been quit claimed.

f. Obtain all necessary easements over Oat Hill Parcel B including easements for emergency vehicle access and storm water conveyance and detention facilities through recorded separate instruments.

g. Furnish proof of the payment of the mapping service fee as required by Napa County Board of Supervisors Resolution No. 92-119.

79. Prior to APPROVAL OF A BUILDING PERMIT, the Applicant shall:

a. Pay all account balances and current City and American Canyon Fire Protection District fees (Mitigation and Capacity) shown in Condition 13.

80. Prior to ACCEPTANCE OF IMPROVEMENTS, the Applicant shall:

a. Restore all adjacent off-site road surfaces to pre-project conditions.

b. Submit a certification by the Geotechnical Engineer of Record that all the work has been completed in substantial conformance with the recommendations in Soils Investigation/Geotechnical Report.

c. Provide a mylar and digital copy of the Improvement Plans that include all as-built or field changes, in digital AutoCAD (.dwg) and (.pdf) format (void of any AutoCAD block formats preventing full editing capabilities of the drawings), compatible with the City's current version, and tied to the NAD83 (California Zone 2, feet) coordinate system.

d. Provide a letter stating that all of the Developer's Conditions of Approval have been met.

DocuSign Envelope ID: 7AAFD2FD-43DC-48EA-AB7F-988EE094E281

e. Provide a letter from the Civil Engineer of Record certifying that all the site improvements were constructed and inspected in substantial conformance with the approved plans and City Standards.

f. Enter into and record a post-construction Stormwater Operations and Maintenance Agreement with the City.

Oat Hill Parcel A – Mitigation Measures

The following are the applicable mitigation measures from the certified Mitigated Negative Declaration report. The following mitigation measures shall be complied with in accordance with the adopted Mitigation Monitoring and Reporting Program (MMRP) by the City Council.

81. **AES I-1.** Prior to issuance of building permits, the applicant shall prepare and submit a detailed lighting plan for review and approval by the Community Development Department. The plan shall show conformance with City performance standards for street lighting and glare, including shielding of all on-site lighting so that light is directed within the project site and does not illuminate adjacent properties, and indicate the location and design of proposed lighting and lighted signs. The applicant shall implement the final plan as approved by the City.

82. **AQ III-3.** Prior to the issuance of a grading permit, the project applicant shall indicate via notation on project construction plans that all off-road construction equipment used for the roadway extension along Napa Junction Road, including owned, leased, and subcontractor vehicles, shall meet the California Air Resources Board's (CARB's) Tier 4 emissions standards. The construction plans shall be submitted for review and approval to the City of American Canyon Community Development Department.

83. **BIO IV-1.** Prior to project initiation, pre-construction surveys shall be conducted by a qualified biologist within a 0.5-mile radius around all project activities, including on-site and off-site work, and shall be completed for at least two survey periods prior to starting Project activities. The survey period timing and methodology shall be conducted in accordance with the Swainson's Hawk Technical Advisory Committee's Recommended Timing and Methodology for Swainson's Hawk Nesting Surveys in California's Central Valley (2000), which identifies different survey windows throughout the pre-nesting and nesting season (ranging from January 1 through July 30/post-fledging) that have different survey methodologies and requirements. A letter report summarizing the survey results shall be submitted to CDFW for review and written acceptance prior to starting Project activities. The survey results shall also be submitted to the Community Development Department within 30 days following the final survey. If active Swainson's hawk nests are not identified on or within 0.5-mile of the project site within the survey periods, further avoidance and minimization measures for Swainson's hawk nesting habitat are not required

84. **BIO IV-2.** If Swainson's hawks are found to be nesting on the project site or within 0.5-mile of the project site, the project proponent shall either, a) delay project activities until all Swainson's hawk nests within 0.5-mile of the project site are no longer active, as determined by a qualified biologist, b) determine if the 0.5-mile buffer zone may be reduced in consultation with CDFW based on site-specific conditions, or c) if take cannot be avoided, obtain a CESA Incidental Take Permit from CDFW prior to starting project activities.

DocuSign Envelope ID: 7AAFD2FD-43DC-48EA-AB7F-988EE094E281

85. **BIO IV-3.** Prior to initiation of ground disturbance, a qualified biologist shall conduct nesting and/or wintering owl surveys, as appropriate, in accordance with the California Department of Fish and Game (now CDFW) 2012 Staff Report on Burrowing Owl Mitigation survey methodology (see https://wildlife.ca.gov/Conservation/Survey-Protocols#377281284-birds). Surveys shall encompass the project area and a sufficient buffer zone to detect owls nearby that may be impacted. Time lapses between surveys or project activities shall trigger subsequent surveys including but not limited to a final survey within 24 hours prior to ground disturbance before construction equipment mobilizes to the project area. The qualified biologist shall have a minimum of two years-experience implementing the CDFW 2012 Staff Report survey methodology resulting in detections. A letter report summarizing the survey results shall be submitted to the Community Development Department within 30 days following the pre-construction survey. If burrowing owls are not present on-site or adjacent to the site where they may be disturbed during pre-construction surveys, further avoidance and minimization measures for burrowing owl nesting and wintering habitat are not required.

86. **BIO IV-4.** If burrowing owls are detected on or adjacent to the site where they may be disturbed, the following restricted activity dates and setback distances recommended per CDFW's Staff Report (2012) shall be implemented, unless reduced buffers are accepted by CDFW in writing based on site-specific conditions:

    - From April 1 through October 15, low disturbance and medium disturbance activities shall have a 200-meter buffer while high disturbance activities shall have a 500-meter buffer from occupied nests and wintering sites.
    - From October 16 through March 31, low disturbance activities shall have a 50-meter buffer, medium disturbance activities shall have a 100-meter buffer, and high disturbance activities shall have a 500-meter buffer from occupied nests and wintering sites.
    - No earth-moving activities or other disturbance should occur within the aforementioned buffer zones of occupied burrows. These buffer zones shall be marked with high visibility fencing or flagging.

    If burrowing owls are present outside of the nesting season, burrowing owls may be passively relocated from the project site and adjacent habitat using CDFW-accepted methods so that construction can proceed. Any required passive relocation of burrowing owls would require CDFW acceptance. If passive relocation of burrowing owls is necessary, a qualified biologist shall prepare a Relocation Plan, including compensatory habitat as described below, for CDFW review and acceptance prior to the start of construction activities.

    If the survey determines that the project site is actively being used by burrowing owl, or any owls are passively relocated as described above, then compensatory habitat mitigation shall be provided. The habitat mitigation/compensation plan shall be submitted to CDFW for review and approval prior to the start of project activities. Habitat compensation acreages shall be approved by CDFW, as the amount depends on site specific conditions, and completed before project construction. It shall also include placement of a conservation easement and preparation and implementation of a long-term management plan. If burrowing owls are observed during surveys, notification shall also be submitted to the California Natural Diversity Database (CNDDB; see https://wildlife.ca.gov/Data/CNDDB/Submitting-Data).

DocuSign Envelope ID: 7AAFD2FD-43DC-48EA-AB7F-988EE094E281

87. **BIO IV-5.** If project activities must be conducted during the nesting season (February 15 and September 1), a pre-construction nesting bird survey shall be conducted by a qualified biologist within 714 days of vegetation removal or initial ground disturbance. The survey shall include the project site, any off-site disturbance areas, and within a minimum of 500 feet of all project areas, surrounding vicinity to identify the location and status of any nests that could potentially be affected either directly or indirectly by project activities. A letter report summarizing the survey results shall be submitted to the Community Development Department within 30 days following the pre-construction survey. If nesting birds are not present on-site or within a minimum 500 feet of the project site during pre-construction surveys, further avoidance and minimization measures for nesting bird habitat are not required.

    If active nests of native nesting bird species are identified during the nesting bird survey, a work exclusion zone shall be established around each nest by the qualified biologist. Established exclusion zones shall remain in place until all young in the nest have fledged or the nest otherwise becomes inactive (e.g., due to predation). Appropriate exclusion zone sizes shall be determined by a qualified biologist. The qualified biologist shall be on site daily for the first week during Project activities, and then weekly thereafter until the nest is no longer active, to observe all active bird and raptor nests and to ensure that Project activities do not cause nest disturbance. If the qualified biologist observes birds and/or raptors displaying potential nest disturbance behavior, the qualified biologist shall cease work and consult with CDFW before resuming Project activities. In this event, Project activities shall not resume without CDFW's written permission.

88. **CUL V-1.** Prior to grading permit issuance, the applicant shall submit plans to the Community Development Department for review and approval which indicate (via notation on the improvement plans) that if historic and/or cultural resources are encountered during site grading or other site work or off-site work, all such work shall be halted immediately within 100 feet and the applicant shall immediately notify the Community Development Department of the discovery. In such case, the applicant shall be required, at their own expense, to retain the services of a qualified archaeologist meeting the Secretary of the Interior's Professional Qualification Standards for prehistoric and historic archaeologist for the purpose of recording, protecting, or curating the discovery as appropriate. The archaeologist shall be required to submit to the Community Development Department for review and approval a report of the findings and method of curation or protection of the resources. Further grading or site work within the area of discovery shall not be allowed until the preceding work has occurred.

89. **CUL V-2.** If human remains, or remains that are potentially human, are found during construction, a professional archeologist shall ensure reasonable protection measures are taken to protect the discovery from disturbance. The archaeologist shall notify the Napa County Coroner (per §7050.5 of the State Health and Safety Code). The provisions of §7050.5 of the California Health and Safety Code, §5097.98 of the California Public Resources Code, and Assembly Bill 2641 will be implemented. If the Coroner determines the remains are Native American and not the result of a crime scene, then the Coroner will notify the Native American Heritage Commission (NAHC), which then will designate a Native American Most Likely Descendant (MLD) for the project (§5097.98 of the Public Resources Code). The designated MLD will have 48 hours from the time access to the property is granted to make recommendations concerning treatment of the remains. If the applicant does not agree with the recommendations of the MLD, the NAHC can mediate (§5097.94 of the Public Resources Code). If an agreement is not reached, the qualified

DocuSign Envelope ID: 7AAFD2FD-43DC-48EA-AB7F-988EE094E281

archaeologist or most likely descendent must rebury the remains where they will not be further disturbed (§5097.98 of the Public Resources Code). This will also include either recording the site with the NAHC or the appropriate Information Center, using an open space or conservation zoning designation or easement, or recording a reinternment document with the county in which the property is located (AB 2641). Work cannot resume within the no-work radius until the lead agencies, through consultation as appropriate, determine that the treatment measures have been completed to their satisfaction.

90. **GEO VII-1, VII-2, VII-4, and VII-5**. Prior to approval of any building permits, the project Civil Engineer shall show on the project plans that the project design would adhere to all engineering recommendations provided in the site-specific Geologic Hazards and Preliminary Geotechnical Investigation prepared by Giblin Associates and the Soil Investigation prepared by Reese & Associates. The project plans shall include, but would not be limited to, the use of mat slabs, post-tensioned slabs on-grade, imported non-expansive fill under conventional floor slabs, appropriate setbacks from fault zones, stabilization of potential landslide areas, and structural design in accordance with Site Class C of the CBSC Ground Motion Parameters. Project plans shall be subject to review and approval by the City Engineering Division.

91. **GEO VII-3.** Prior to the issuance of a grading permit, the project applicant shall prepare to the satisfaction of the Community Development Department, an erosion control plan that utilizes standard construction practices to limit the erosion effects during construction of the proposed project. Actions should include, but are not limited to, the following:
    a. Hydro-seeding;
    b. Placement of erosion control measures within drainage ways and ahead of drop inlets;
    c. The temporary lining (during construction activities) of drop inlets with "filter fabric";
    d. The placement of straw wattles along slope contours;
    e. Use of a designated equipment and vehicle "wash-out" location;
    f. Use of siltation fences;
    g. Use of on-site rock/gravel road at construction access points; and
    h. Use of sediment basins and dust palliatives.

92. **GHG VIII-1.** Prior to issuance of building permits, the applicant shall submit proof to the Community Development Department for review and approval which indicate project compliance with the Tier 1 Energy Efficiency division of the Title 24 standards. Tier 1 Energy Efficiency for low-rise multifamily developments require the following measures:
    a. Total Energy Design Rating (Total EDR) and Energy Efficiency Design Rating (Efficiency EDR) for the Proposed Design Building is included in the Certificate of Compliance documentation.
    b. Quality Insulation Installation procedures specified in the Building Energy Efficiency Standards Reference Appendices RA3.5 are completed.
    c. One of the following options is required:
        i. A4.203.1.2.1 – Roof deck insulation or ducts in conditioned space.
        ii. A4.203.1.2.2 – High performance walls.
        iii. A4.203.1.2.3 – HERS-verified compact hot water distribution system.
        iv. A4.203.1.2.4 – HERS-verified drain water heat recovery.
    d. Buildings complying with the first level of advanced energy efficiency shall have additional integrated efficiency and onsite renewable energy generation sufficient to achieve a Total EDR of the Tier 1 value indicated by Table A4.203.1.1.1 or lower as calculated by Title 24,

DocuSign Envelope ID: 7AAFD2FD-43DC-48EA-AB7F-988EE094E281

Part 6 Compliance Software approved by the Energy Commission. This Total EDR is in addition to meeting the Efficiency EDR.

e. Local jurisdictions adopting Tier 1 or Tier 2, or considering community shared solar or storage options as specified, shall consult with the local electric service for acceptance.

93. **NOI XIII-1.** Prior to the approval of grading permits, the City shall establish the following related to the use of construction equipment:
    a. Construction activities (excluding activities that would result in a safety concern to the public or constructions workers) shall be limited to between the daytime hours of 7:00 AM and 7:00 PM daily;
    b. Construction equipment shall be properly maintained and equipped with noise-reduction intake and exhaust mufflers and engine shrouds, in accordance with manufacturers recommendations;
    c. Equipment engine shrouds shall be closed during equipment operation;
    d. When not in use, motorized construction equipment shall not be left idling for more than five minutes; and
    e. Stationary equipment (power generators, compressors, etc.) shall be located at the furthest practical distance from nearby noise-sensitive land uses or sufficiently shielded to reduce noise-related impacts.

94. **TRANS XVII-1.** Prior to issuance of grading permits, the project applicant shall submit Improvement Plans that reflect the recommendations included in the Traffic Impact Study prepared by W-Trans. Specifically, the Improvement Plans shall reflect a pedestrian path or sidewalk between the project site and the existing terminus of the sidewalk on the south side of Napa Junction Road near the elementary school crossing. The Improvement Plans shall also reflect space for bicycle storage provided either on balconies or other outside spaces dedicated to each housing unit, in garages or other storage spaces for each unit, or through provision of bike racks. The recommendations made by W-Trans shall be confirmed by the City's Public Works Department and/or the City Engineer prior to issuance of grading permits.

95. **TRANS XVII-2.** Prior to the first residential occupancy, the applicant shall implement the following TDM measures, as described in the TIS:
    a. Unbundled Parking;
    b. Free Transit Passes;
    c. Secure Bicycle Parking and Maintenance Tools;
    d. Tele-Work/Compressed Schedules;
    e. Carpooling and Ride-Matching Program;
    f. Transportation Coordinator;
    g. Welcome Packet for New Residents; and
    h. Monitoring of Program Performance.

    Proof of implementation of the TDM measures shall be submitted to the City's Community Development Department for review and approval.

96. **UTIL XIX-1.** The project applicant shall demonstrate compliance with the City's Zero Water Footprint Policy by mitigating all new potable water demands with "wet-water" offsets by one or more of the following options to ensure the proposed project results in a net zero increase in demand for potable water:
    a. Reducing existing potable water demands on-site;

DocuSign Envelope ID: 7AAFD2FD-43DC-48EA-AB7F-988EE094E281

b. Funding programs or constructing projects that would conserve an equivalent amount of water elsewhere within the water service area;
c. Funding of and/or constructing projects that would increase an equivalent amount of recycled water use elsewhere within the water service area where potable water is currently used; and/or
d. Purchasing new water supplies from other water providers.

Compliance with the Zero Water Footprint Policy shall be ensured by submission of a "Will-Serve" Water Application to the City's Public Works Department for review and approval. Project plans shall demonstrate the applicant's inclusion of the selected wet-water offsets.

97. **UTIL XIX-2.** The project shall be designed and constructed with purple irrigation pipe so that reclaimed water may be used for landscape irrigation purposes. The project shall use recycled water for irrigation in the event recycled water becomes available at the site.

98. **UTIL XIX-3.** At the time of issuance of building permits, the project applicant shall pay all updated water capacity and impact fees in effect, to the extent they are not subject to applicable fee credits, to provide funding for the City to acquire additional long-term water resources and improve and develop its treatment and distribution system. The fees will permit the City to exercise additional options for potable water capacity from the City of Vallejo and/or other sources, and will also provide for implementation of the recycled water system.

99. **UTIL XIX-4.** The project applicant shall pay to the City a monthly service charge to adequately cover the project's costs associated with City supplying water through the City's connection to the City of Vallejo, as determined by the Public Works Director.

100. **UTIL XIX-5.** Prior to issuance of building permits, the project shall be reviewed by the Community Development Department for consistency with the Water Conservation Guidelines. The project applicant shall incorporate water conservation Best Management Practices into the project.

101. **UTIL XIX-6.** Should additional project water be required, the proposed project shall comply with the City's ordinances and regulations in effect at the time of authorization for additional water use. In addition, such changes in project use would trigger a new City Discretionary Review process, which would trigger re-evaluation of the proposed project's water supply impacts.

102. **UTIL XIX-7.** Prior to issuance of building permits, the project applicant shall submit landscaping plans to the City of American Canyon for review and approval demonstrating that the proposed landscaping would comply with the requirements in the City's Model Water Efficient Landscape Ordinance (AB 1881). The landscaping plan shall identify outdoor irrigation water conservation
measures, such as, but not limited to:

a. Drought-resistant vegetation;
b. Irrigation systems employing the following features:
    i. drip irrigation;
    ii. low-precipitation-rate sprinklers;
    iii. bubbler/soaker systems;

DocuSign Envelope ID: 7AAFD2FD-43DC-48EA-AB7F-988EE094E281

iv. programmable irrigation controllers with an automatic rain shutoff sensors and flow sensing capabilities (ET Smart Controller);
v. Matched precipitation rate nozzles that maximize the uniformity of the water distribution characteristics of the irrigation system;
vi. Conservative sprinkler spacings that minimize overspray onto paved surfaces; and
vii. Hydrozones that keep plants with similar water needs in the same irrigation zone

c. Minimally or gently sloped landscaped areas to minimize runoff and maximize infiltration; and
d. Organic topdressing in non-turf areas to decrease evaporation and increase water retention.

103. **COVID19 XXI-1.** The project applicant shall prepare a COVID-19 Exposure Control Plan which shall be included in the project construction site safety plan. The COVID-19 Exposure Control Plan shall comply with all regional and statewide orders related to the operation of construction sites and essential businesses during the COVID-19 pandemic, including but not limited to: social distancing requirements, masks for all workers, daily worker screening for potential symptoms, disinfecting protocols for all shared surfaces, avoidance of tool sharing, and provision of sufficient hand sanitizer for all workers. The COVID-19 Exposure Control Plan shall be submitted to the City of American Canyon Planning Department for review and approval prior to the issuance of grading permits.

PASSED, APPROVED and **ADOPTED** at a regularly scheduled meeting of the Planning Commission of the City of American Canyon held on the 25th day of March, 2021, by the following vote:

AYES: Commissioners Altman, Wong, Vice Chair Mallare, Chair Navarro

EARTHWORK SUMMARY

DESCRIPTION	CUT (C.Y.)	FILL (C.Y.)
ROUGH GRADING	15,000	15,000

EARTHWORK NOTES:

1. CONTRACTOR IS RESPONSIBLE TO COORDINATE WITH UTILITY CONTRACTOR TO DETERMINE STREET UNDERCUT AND TO BALANCE SITE AS NEEDED. UTILITY CONTRACTOR TO DETERMINE ANTICIPATED SPOILS BASED ON CONSTRUCTION METHOD.
2. CONTRACTOR TO DETERMINE EARTHWORK QUANTITIES AND SHALL NOTIFY ENGINEER AND OWNER PRIOR TO STARTING CONSTRUCTION.
3. ADDITIONAL MATERIALS MAY BE REQUIRED TO BALANCE.
4. EARTHWORK QUANTITIES DO NOT INCLUDE ANY REMEDIAL GRADING AND/OR OVER-EXCAVATION THAT MAY BE NECESSARY.
5. EARTHWORK QUANTITIES ASSUME THAT SITE WILL BE PREVIOUSLY MASS GRADED.

NOTES:

1. ALL STREET ELEVATIONS ARE PAVEMENT GRADES UNLESS NOTED OTHERWISE.
2. ALL EXISTING TREES AND/OR VEGETATION WITHIN GRADING LIMITS TO BE REMOVED.
3. THE ROOF DRAINS WILL DISCHARGE EITHER DIRECTLY TO A PAVED SURFACE OR TO THRU-THE-CURB DRAINS. FINAL ROOF DRAIN LOCATIONS TO BE DETERMINED WITH FINAL DESIGN.
4. DRIVE ISLES WILL HAVE A CROSS SLOPE BETWEEN 1% AND 4%.
5. THE PROJECT IS NOT LOCATED WITHIN A FEMA FLOODPLAIN.
6. SEE SHEET C-6 FOR GRADING CROSS SECTIONS

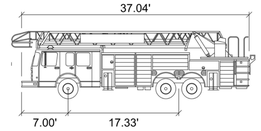
FIRE PROTECTION NOTES:



1. FIRE PROTECTION SYSTEMS SHALL BE INSTALLED IN ACCORDANCE WITH PROVISIONS SET FORTH IN THE CALIFORNIA FIRE CODE AS AMENDED BY THE CITY OF NAPA AND THE APPLICABLE NATIONAL FIRE PROTECTION ASSOCIATION STANDARD.
2. THE FIRE PROTECTION EQUIPMENT SHALL BE LOCATED WITHIN AN INTERIOR ROOM HAVING AN APPROVED EXTERIOR ACCESS DOOR OR IN AN EXTERIOR ENCLOSURE ATTACHED TO THE BUILDING, SPECIFICALLY, FOR THE PURPOSE OF HOUSING SUCH EQUIPMENT.
3. THE CITY OF AMERICAN CANYON REQUIRES THAT A FIRE HYDRANT BE IN SERVICE WITHIN 250 FEET OF THE FURTHEST POINT OF CONSTRUCTION PRIOR TO THE STOCKPILING OF COMBUSTIBLE MATERIALS FOR THE BEGINNING OF CONSTRUCTION.
4. FIRE DEPARTMENT CONNECTIONS (FDC) SHALL BE LOCATED NOT MORE THAN 100 FT. FROM THE NEAREST FIRE HYDRANT.
5. FIRE APPARATUS ACCESS ROADS SHALL BE DESIGNED IN ACCORDANCE WITH PROVISIONS SET FORTH IN THE CALIFORNIA FIRE CODE CHAPTER 5 AND APPENDIX D AS AMENDED BY THE CITY OF AMERICAN CANYON AND THE APPLICABLE PUBLIC WORKS STANDARD.
6. FIRE APPARATUS ACCESS ROADS SHALL HAVE AN UNOBSTRUCTED MINIMUM WIDTH OF 20 FEET (CURB TO CURB) AND A MINIMUM UNOBSTRUCTED VERTICAL CLEARANCE OF 13' 6". THEY SHALL HAVE AN ALL-WEATHER PAVED SURFACE CAPABLE OF SUPPORTING A GVW OF 71,000 POUNDS.
7. ACCESS ROADS SHALL BE COMPLETED WITH ALL-WEATHER SURFACES PRIOR TO THE STOCKPILING OF COMBUSTIBLE MATERIALS OR BEGINNING COMBUSTIBLE CONSTRUCTION. FIRE APPARATUS ACCESS SHALL BE PROVIDED TO WITHIN 150 FEET OF THE MOST REMOTE PORTIONS OF ALL BUILDING FROM AN APPROVED EXTERIOR ROUTE. IF THIS CANNOT BE ACHIEVED FIRE APPARATUS TURN AROUND WILL BE NEEDED.
8. FIRE APPARATUS ACCESS ROADS SHALL NOT BE OBSTRUCTED IN ANY MANNER, INCLUDING THE PARKING OF VEHICLES. VERTICAL TRAFFIC CALMING IN THE FORM OF SPEED PUMPS, HUMPS OR DIPS ARE PROHIBITED ALONG FIRE ACCESS ROADS WITHOUT PRIOR APPROVAL OF THE FIRE CODE OFFICIAL. THE MINIMUM WIDTH AND CLEARANCES ESTABLISHED IN SECTION 503.2.1 SHALL BE MAINTAINED AT ALL TIMES.
9. WHEN REQUIRED BY THE FIRE CHIEF, FIRE APPARATUS ACCESS ROADS SHALL BE DESIGNATED AS FIRE LANES AND APPROPRIATE SIGNS AND/OR MARKINGS INSTALLED IN ACCORDANCE WITH THE CALIFORNIA VEHICLE CODE AND APPROVED CITY STANDARDS.

Project Summary

Parcel A

Gross Site Area: ± 13.6 Acres

Total Units: 206 Homes
- (52) 1 Bdrm Units
- (108) 2 Bdrm Units
- (46) 3 Bdrm Units

Density: 15.1 DU per Gross Acre

Parking:

Required: 438 Spaces
- (52) 1 Bedroom x 1.5 Spaces =78 Spaces
- (154) 2 or more Bedroom x 2 Spaces =308 Spaces
- (206) Guest x 0.25 Spaces =52 Spaces
- 5 Handicapped + 2 Van Required

Provided: 454 On-site & Off-site Spaces

431 On-site Spaces
- Garage: 157 Spaces
- Carports: 49 Spaces
- Head In: 225 Spaces

23 Off-site Spaces

Open Space
- Common Open Space: 52,245 SF
- Hillside Slope Area: 140,718 SF

KEY MAP
N.T.S

Notes:
1. Site plan must be reviewed by planning, building, and fire departments for code compliance.
2. Base information per civil engineer.
3. Civil engineer to verify all setbacks and grading information
4. Please refer to landscape plan for final landscape details.
5. Building setbacks are measured from property lines to building foundation lines.

PC RESOLUTION NO. 2021-09

A RESOLUTION OF THE PLANNING COMMISSION OF THE CITY OF AMERICAN CANYON, CALIFORNIA, RECOMMENDING THE CITY COUNCIL OF THE CITY OF AMERICAN CANYON, APPROVE A GENERAL PLAN AMENDMENT TO CONVERT A VACANT 7.2-ACRE PARCEL (PARCEL B) ON THE EAST SIDE OF OAT HILL SOUTH OF NAPA JUNCTION ROAD FROM ESTATE RESIDENTIAL (RE) TO MEDIUM DENSITY RESIDENTIAL (RM), ASSESSOR'S PARCEL NUMBER 058-320-001 (FILE NO. PL20-0026)

WHEREAS, pursuant to Section 65300 of the State Planning and Zoning Law, the City of American Canyon (City) has adopted a General Plan to provide comprehensive long-range planning and a blueprint of the City's future form, including land use and circulation maps that specify the roadway network and the distribution of types and intensities of land; and

WHEREAS, on August 14, 2020, RH Hess Development Company submitted a General Plan Amendment and Zone Change application to allow 85 dwelling units on approximately 7.2 acres on the east side of Oat Hill south of Napa Junction Road APN 058-320-001 (File No. PL20-0026); and

WHEREAS, on August 14, 2020, RH Hess Development Company submitted a Tentative Subdivision Map to create 85 dwelling units on 7.2 acres located at Oat Hill with access from Napa Junction Road, Assessor's Parcel Number 058-320-001 (File No. PL20-0027); and

WHEREAS, on November 2, 2021, RH Hess Development submitted a Lot Line Adjustment (File No. PL20-0039) to convert the two parcels APN 058-380-008 and 058-320-001 from 11.3-acres and 9.5-acres to 13.6-acres and 7.2-acres, respectively; and

WHEREAS, there is a critical shortage of residential housing for all levels of affordability in California; and

WHEREAS, the State of California Department of Housing and Community Development (HCD) and the Association of Bay Area Governments (ABAG) will soon commence the process to establish regional housing needs allocations (RHNA) for the greater San Francisco Bay Area; and

WHEREAS, in light of the State's housing shortage, HCD and ABAG is expected to increase significantly the obligation of the City of American Canyon ("City") to plan for additional housing within its municipal boundaries; and

WHEREAS, on January 21, 2020, the City Council declared residential uses are the best use of the Rick Hess property on Oat Hill (Resolution 2020-06); and

WHEREAS, the RH Development Company has represented that it will use its best efforts to facilitate the actual construction of affordable housing units within the City; and

WHEREAS, pursuant to the California Environmental Quality Act (CEQA), a Mitigated Negative Declaration (MND) report was prepared for the Oat Hill Project, which included the proposed Tentative Subdivision Map, having analyzed the actions contemplated by the MND and includes required mitigation measures and a Mitigation Monitoring and Reporting Program (MMRP); and

DocuSign Envelope ID: 7AAFD2FD-43DC-48EA-AB7F-988EE094E281

WHEREAS, a duly-noticed public hearing was held by the City of American Canyon Planning Commission on March 25, 2021 on the subject application, at which time all those in attendance were given the opportunity to speak on this proposal and to submit comments.

NOW, THEREFORE, BE IT RESOLVED that the Planning Commission of the City of American Canyon, having considered all the evidence, including any submitted by member of the public, hereby recommends the City Council of the City of American Canyon approve the General Plan Amendment for the Oat Hill Multi-Family Project (Parcel B) from Estate Residential (RE) to Medium Density Residential (RM) (PL20-0026) based on the findings and depicted on Exhibit A and attached hereto.

SECTION 1. Find, based on the following evidence and as required by State Law on General Plan Amendments:

a. The proposed amendment is deemed to be in the public interest.

The State of California Department of Housing and Community Development (HCD) and the Association of Bay Area Governments (ABAG) recognize there is a critical shortage of residential housing for all levels of affordability in California. These agencies will soon establish regional housing needs allocations (RHNA) for the greater San Francisco Bay Area. In light of the State's housing shortage, HCD and ABAG is expected to increase significantly the obligation of the City of American Canyon ("City") to plan for additional housing within its municipal boundaries. The Oat Hill multifamily residential project will contribute to accommodating the City's anticipated RHNA obligation.

b. The proposed amendment is consistent and compatible with the rest of the General Plan and any implementation programs that may be affected.

Because there is a critical shortage of residential housing for all levels of affordability in California, the proposed Oat Hill Multi-Family Residential general plan amendment will designate additional land to provide needed housing. Replacement of Light Industrial with a Specialty Commercial Overlay (LI:CS) zoning with High Density Residential (RH-1) zoning is in keeping with the following General Plan Goals that promote additional housing in American Canyon:

- *Goal 2A: "Provide sufficient residential land with adequate infrastructure to accommodate the City's fair share of projected growth, and to facilitate mobility within the ownership and rental markets."*

- *Goal 2B: "Provide a range of housing types within the community to accommodate a variety of incomes and lifestyles, and to enable residents to remain in American Canyon throughout their lives."*

- *Goal 2E: "Address the housing needs of all economic segments of the existing and future community, including the City's fair share of the regional housing need." The applicant proposes to address housing affordable to lower income residents by providing in-lieu impact fees, pursuant to the Inclusionary Housing Ordinance (ACMC Chapter 19.28).*

The project satisfies the following Land Use Element policies:

- *Goal 1E: "Ensure the development of residential neighborhoods that provide a range of housing opportunities to meet the physical, economic, and social needs of the population, are designed to exhibit a high quality and character, contain appropriate supporting services, and reflect their*

DocuSign Envelope ID: 7AAFD2FD-43DC-48EA-AB7F-988EE094E281

environmental setting." The design permit application associated with this property ensures that the development will exhibit a high quality and character. The project reflects its environmental setting by providing public access to locally-important views across the project site.

• Policy 1.27.2: "Review all applications for new development, expansion of existing uses, and re-use within Napa County Airport Compatibility Zones "A" through "E" for compliance with the appropriate use and development conditions." A small portion of the northwest corner of Parcel B is located in Napa County Airport Compatibility Zone "D". The remaining property is located in Zone "E". Zone E permits multifamily development with approval of an avigation easement. The project approval requires an avigation easement. Therefore, there is no potential inconsistency between the General Plan Amendment and the Napa County Airport Compatibility Land Use Plan.

c. The potential impacts of the proposed amendment in the land use designation have been assessed and have been determined not to be detrimental to the public health, safety, or welfare.

The proposed General Plan Amendment has been evaluated in a Mitigated Negative Declaration (SCH# 2021020107). The report evaluated the project consistent with the California Environmental Quality Act and concluded the project will result in no significant impacts to the environment. Furthermore, the project is subject to conditions of approval and engineering design standards that will ensure safe site preparation, infrastructure and utilities as well as applicable current Building and Fire codes for emergency access and structural improvements.

With respect to the small northwest corner of Parcel B located in Napa County Airport Compatibility Zone "D, the remaining property is located in Zone "E". Zone E permits multifamily development with approval of an avigation easement. The project approval requires an avigation easement. Therefore, there is no potential inconsistency between the General Plan Amendment and the Napa County Airport Compatibility Land Use Plan.

d. The proposed amendment has been processed in accordance with the applicable provisions of the California Government Code and the California Environmental Quality Act (CEQA).

The proposed General Plan Amendment has been evaluated in a Mitigated Negative Declaration (SCH# 2021020107). The report evaluated the project consistent with the California Environmental Quality Act and concluded the project will result in no significant impacts to the environment.

PC RESOLUTION NO. 2021-10

A RESOLUTION OF THE PLANNING COMMISSION OF THE CITY OF AMERICAN CANYON, CALIFORNIA, RECOMMENDING THE CITY COUNCIL OF THE CITY OF AMERICAN CANYON, APPROVE A CHANGE TO THE ZONING MAP TO CONVERT THE VACANT 7.2-ACRE PARCEL AT ON THE EAST SIDE OF OAT HILL SOUTH OF NAPA JUNCTION ROAD (PARCEL B) FROM ESTATE RESIDENTIAL (RE) TO MEDIUM DENSITY RESIDENTIAL (RM), ASSESSOR'S PARCEL NUMBER 058-320-001 (FILE NO. PL20-0026)

WHEREAS, pursuant to Section 65300 of the State Planning and Zoning Law, the City of American Canyon (City) has adopted a General Plan to provide comprehensive long-range planning and a blueprint of the City's future form, including land use and circulation maps that specify the roadway network and the distribution of types and intensities of land; and

WHEREAS, on August 14, 2020, RH Hess Development Company submitted a General Plan Amendment and Zone Change application to allow 85 dwelling units on approximately 7.2 acres on the east side of Oat Hill south of Napa Junction Road APN 058-320-001 (File No. PL20-0026); and

WHEREAS, on August 14, 2020, RH Hess Development Company submitted a Tentative Subdivision Map to create 85 dwelling units on 7.2 acres located at Oat Hill with access from Napa Junction Road, Assessor's Parcel Number 058-320-001 (File No. PL20-0027); and

WHEREAS, on November 2, 2021, RH Hess Development submitted a Lot Line Adjustment (File No. PL20-0039) to convert the two parcels APN 058-380-008 and 058-320-001 from 11.3-acres and 9.5-acres to 13.6-acres and 7.2-acres, respectively; and

WHEREAS, there is a critical shortage of residential housing for all levels of affordability in California; and

WHEREAS, the State of California Department of Housing and Community Development (HCD) and the Association of Bay Area Governments (ABAG) will soon commence the process to establish regional housing needs allocations (RHNA) for the greater San Francisco Bay Area; and

WHEREAS, in light of the State's housing shortage, HCD and ABAG is expected to increase significantly the obligation of the City of American Canyon ("City") to plan for additional housing within its municipal boundaries; and

WHEREAS, on January 21, 2020, the City Council declared residential uses are the best use of the Rick Hess property on Oat Hill (Resolution 2020-06); and

WHEREAS, pursuant to the California Environmental Quality Act (CEQA), a Mitigated Negative Declaration (MND) report was prepared for the Oat Hill Multifamily Project, which includes the proposed Zone Change application, having analyzed the actions contemplated by the MND and includes required mitigation measures and a Mitigation Monitoring and Reporting Program (MMRP); and

WHEREAS, a duly-noticed public hearing was held by the City of American Canyon Planning Commission on March 25, 2021 on the subject application, at which time all those in attendance were given the opportunity to speak on this proposal and to submit comments.

DocuSign Envelope ID: 7AAFD2FD-43DC-48EA-AB7F-988EE094E281

NOW, THEREFORE, BE IT RESOLVED that the Planning Commission of the City of American Canyon, having considered all the evidence, including any submitted by member of the public, hereby recommends the City Council of the City of American Canyon approve the Zone Change for Oat Hill Multi-Family Project (Parcel B) from Estate Residential (RE) to Medium Density Residential (RM) (PL20-0026) as depicted in Exhibit A and attached hereto.

PASSED, APPROVED and ADOPTED at a regularly scheduled meeting of the Planning Commission of the City of American Canyon held on the 25TH day of March, 2021, by the following vote:

AYES: Commissioners Altman, Wong, Vice Chair Mallare, Chair Navarro

PC RESOLUTION 2021-11

A RESOLUTION OF THE PLANNING COMMISSION OF THE CITY OF AMERICAN CANYON RECOMMENDING THE CITY COUNCIL OF THE CITY OF AMERICAN CANYON, CALIFORNIA, APPROVE A TENTATIVE SUBDIVISION MAP TO PERMIT THE SUBDIVISION OF OAT HILL PARCEL B INTO 85 CONDOMINIUM UNITS ON A 7.2-ACRE PARCEL LOCATED ON THE EAST SIDE OF OAT HILL SOUTH OF NAPA JUNCTION ROAD, APN 058-320-001 (FILE NO. PL20-0027)

WHEREAS, on August 14, 2020, RH Hess Development Company submitted an application for a Tentative Map for Condominium Purposes to permit the subdivision of 5 buildings into 85 separate ownership units on a 7.2-acre parcel in the Medium Density Residential (RM) zoning district at APN 058-320-001 (File no. PL20-0027); and

WHEREAS, on August 14, 2020, RH Hess Development Company submitted a General Plan Amendment and Zone Change application to allow 85 dwelling units on approximately 7.2 acres on the east side of Oat Hill south of Napa Junction Road, APN 058-320-001 (File No. PL20-0026); and

WHEREAS, on November 2, 2021, RH Hess Development submitted a Lot Line Adjustment (File No. PL20-0039) to convert the two parcels APN 058-380-008 and 058-320-001 from 11.3-acres and 9.5-acres to 13.6-acres and 7.2-acres, respectively; and

WHEREAS, pursuant to Section 65300 of the State Planning and Zoning Law, the City of American Canyon (City) has adopted a General Plan to provide comprehensive long-range planning and a blueprint of the City's future form, including land use and circulation maps that specify the roadway network and the distribution of types and intensities of land; and

WHEREAS, there is a critical shortage of residential housing for all levels of affordability in California; and

WHEREAS, the State of California Department of Housing and Community Development (HCD) and the Association of Bay Area Governments (ABAG) will soon commence the process to establish regional housing needs allocations (RHNA) for the greater San Francisco Bay Area; and

WHEREAS, in light of the State's housing shortage, HCD and ABAG is expected to increase significantly the obligation of the City of American Canyon ("City") to plan for additional housing within its municipal boundaries; and

WHEREAS, on January 21, 2020, the City Council declared residential uses are the best use of the Rick Hess property on Oat Hill (Resolution 2020-06); and

WHEREAS, pursuant to the California Environmental Quality Act, an Initial Study was prepared for the project which concluded that no significant adverse environmental impacts would occur as a result of the project, and a Mitigated Negative Declaration was prepared; and

WHEREAS, the proposed map is consistent with the City of American Canyon General Plan and the Municipal Code; and

DocuSign Envelope ID: 7AAFD2FD-43DC-48EA-AB7F-988EE094E281

WHEREAS, a duly-noticed public hearing held on March 25, 2021, the Planning Commission recommended to the City Council to adopt the Initial Study and Mitigated Negative Declaration for the Oat Hill Project; and

WHEREAS, the Planning Commission has considered all of the written and oral testimony presented at the public hearing in making its decision; and

NOW, THEREFORE, BE IT RESOLVED that the American Canyon Planning Commission recommends to the City Council of the City of American Canyon approval of a Tentative Subdivision Map (PL20-0027) based on the findings contained in Section 1, and the conditions of approval contained in Section 2.

SECTION 1: Tentative Parcel Map Findings

A. The Oat Hill Project requires the following findings for the Tentative Map. As stated in Chapter 18.20.055 ACMC, the Planning Commission shall not approve a tentative parcel map if it makes any of the following findings:

1. That the design or improvement of the proposed subdivision is not consistent with the city's general plan or its elements or any other applicable plans;

The proposed Tentative Parcel is consistent with the General Plan, and the lot sizes meet the minimum parcel size in the Medium Density Residential (RM) zoning district.

Because there is a critical shortage of residential housing for all levels of affordability in California, the proposed Oat Hill Multi-Family Residential general plan amendment will designate additional land to provide needed housing. Replacement of Light Industrial with a Specialty Commercial Overlay (LI:CS) zoning with High Density Residential (RH-1) zoning is in keeping with the following General Plan Goals that promote additional housing in American Canyon:

- *Goal 2A: "Provide sufficient residential land with adequate infrastructure to accommodate the City's fair share of projected growth, and to facilitate mobility within the ownership and rental markets."*
- *Goal 2B: "Provide a range of housing types within the community to accommodate a variety of incomes and lifestyles, and to enable residents to remain in American Canyon throughout their lives."*
- *Goal 2E: "Address the housing needs of all economic segments of the existing and future community, including the City's fair share of the regional housing need." The applicant proposes to address housing affordable to lower income residents by providing in-lieu impact fees, pursuant to the Inclusionary Housing Ordinance (ACMC Chapter 19.28).*

The project satisfies the following Land Use Element policies:

- *Goal 1E: "Ensure the development of residential neighborhoods that provide a range of housing opportunities to meet the physical, economic, and social needs of the population, are designed to exhibit a high quality and character, contain appropriate supporting services, and reflect their environmental setting." The design permit application associated with this property ensures that the development will exhibit a high quality and character. The project reflects its environmental setting by providing public access to locally-important views across the project site.*
- *Policy 1.27.2: "Review all applications for new development, expansion of existing uses, and re-use within Napa County Airport Compatibility Zones "A" through "E" for compliance with the appropriate use and development conditions." A small portion of the northwest corner of*

DocuSign Envelope ID: 7AAFD2FD-43DC-48EA-AB7F-988EE094E281

Parcel B is located in Napa County Airport Compatibility Zone "D". The remaining property is located in Zone "E". Zone E permits multifamily development with approval of an avigation easement. The project approval requires an avigation easement. Therefore, there is no potential inconsistency between the General Plan Amendment and the Napa County Airport Compatibility Land Use Plan.

2. That the site is not physically suitable for the type of development proposed;

The site will be graded so that it is flat and physically suited for the residential buildings.

3. That the site is not physically suitable for the proposed density of development proposed;

The site will be changed from Residential Estate (RE) to Medium Density Residential (RM) through a General Plan Amendment and Zone Change. The proposed 85 units on 7.2-acre equates to a density of 11.8 dwelling units per acre, which complies with the RM zone.

4. That the design of the subdivision or the proposed improvements are likely to cause substantial environmental damage or substantially and avoidably injure fish or wildlife or their habitat;

The Initial Study/Mitigated Negative Declaration concludes that no unavoidable significant impacts to the environment will occur as long as mitigation measures are incorporated. Mitigation measures are included to address potential impacts to burrowing owls, Swainson's hawk, tree or ground nesting raptors, and nesting passerine birds. The applicant conducted a biological resource study and no wetland areas were identified.

5. That the design of the subdivision or the type of improvements is likely to cause serious public health problems;

No evidence of serious public health problems has been identified.

6. That the design of the subdivision or the type of improvements will conflict with easements, acquired by the public at large, for access through or use of, property within the proposed subdivision. In this connection, the Planning Commission may approve a tentative parcel map if it finds that alternate easements, for access or for use, will be provided and that these will be substantially equivalent to one previously acquired by the public.

No conflicts to public easements have been identified.

7. This subsection shall apply only to easements of record or to easements established by judgment of a court of competent jurisdiction and no authority is granted to the Planning Commission to determine that the public at large has acquired easements for access through or use of property within the proposed subdivision.

Not applicable to the Oat Hill Project.

8. That the discharge of waste water, including sewage and stormwater runoff, from the proposed subdivision would result in a violation of existing water quality requirements prescribed by the regional water quality control board.

The site will be served by public sewer. Stormwater detention facilities are provided to meet City and Regional Water Quality Control Board standards.

DocuSign Envelope ID: 7AAFD2FD-43DC-48EA-AB7F-988EE094E281

SECTION 2. CONDITIONS OF APPROVAL

General

1. The Tentative Subdivision Map approval is granted for development of 85 dwelling units on 5 apartment buildings on a 7.2-acre parcel in the Medium Density Residential (RM) zoning district. The site will be supported with 183 parking spaces and approximately 94,000 square feet of landscaping at the vacant parcel, APN 058-320-001 (file no. PL20-0023), which shall be substantially shown on file in the Community Development Department, except as modified by conditions contained in this approval. Exhibit A includes the following:
    a. Architectural Plans prepared by William Hezmalhalch Architects (WHA) from San Ramon, CA, consisting of 20 sheets showing the proposed building elevations, floor plans, and roof plans, dated October 19, 2020.
    b. Site Plans prepared by Carlson, Barbee, and Gibson (CBG) from San Ramon, CA, consisting of 7 sheets showing the site plan, preliminary grading and drainage plan, and cross sections, dated February of 2021.
    c. Landscaping Plans prepared by Vander Toolen Associates from Sacramento, CA, consisting of 6 sheets showing the proposed landscaping plans, dated October of 2020.

2. The applicant shall defend, indemnify, and hold harmless the City of American Canyon ("City"), its elected officials, officers, employees, attorneys, representatives, boards, commissions, consultants, volunteers and agents from and against all claims, actions, including actions to arbitrate or mediate, damages, losses, judgments, liabilities, expenses and other costs, or proceedings against the City, its elected officials, officers, employees, attorneys, representatives, boards, commissions, volunteers, or agents to attack, modify, set aside, void, or annul an approval, conditional approval, permit, entitlement, environmental document, environmental clearance, mitigation plan, or any other document or any of the proceedings, acts, or determinations taken, done, or made prior to granting of such approval, conditional approval, permit, entitlement, environmental clearance, environmental document, mitigation plan, or other documents, by the City, including, without limitation, an action against an advisory agency, appeal board, or legislative body within the applicable limitation period.

    The obligation to defend, indemnify and hold the City harmless shall include the payment of all legal costs and attorney's fees (including a third party award of attorney's fees), arising out of, resulting from, or in connection with the City's act or acts leading up to and including approval of any environmental document or mitigation plan granting approvals to the applicant, incurred on behalf of, or by, the City, its elected officials, officers, employees, representatives, attorneys, boards, commissions, volunteers and agents in connection with the defense of any claim, action, or proceeding challenging the entire or a portion of an approval, conditional approval, permit, entitlement or any other document of any related claim.

    The obligation to defend, indemnify, and hold the City harmless shall include, but not be limited to, the cost of preparation of any administrative record by the City, staff time, copying costs, court costs, or attorney's fees arising out of a suit or challenge contesting the adequacy of a permit, approval, conditional approval, entitlement, environmental document, mitigation plan, environmental clearance, or any other document or approval related to the applicant's project. The City will promptly notify the applicant of any claim, action, or proceeding and will cooperate fully in the defense. If the City fails to promptly notify the applicant of any claim, action, or

DocuSign Envelope ID: 7AAFD2FD-43DC-48EA-AB7F-988EE094E281

proceeding, or the City fails to cooperate fully in the defense, the applicant shall not be responsible to defend, indemnify, or hold harmless the City.

In the event a legal challenge to a City permit, approval, conditional approval, environmental document, environmental clearance, mitigation plan, entitlement or any other document, proceeding, determination, or action related to the applicant's project is successful, and an award of attorneys' fees is granted against the City, the applicant shall be responsible to timely pay the full amount of such an award.

3. Appeal. The approval shall become effective on the expiration of the appeal period, ten calendar days following the decision, unless an appeal to the City Council is filed. An appeal may be filed with the Community Development Director by filling out an Appeal Form accompanied by a fee of $703. This approval is also subject to return of the "Applicant Confirmation of Conditions of Approval" form signed by the property owner. Should an appeal period end on a Saturday, Sunday or holiday, the final day for filing an appeal shall be the following Monday, or the next business day following a holiday. If there is no appeal, this approval will be final on April 5, 2021.

4. The applicant is responsible for paying all charges related to the processing of this discretionary case application within 30 days of the issuance of the final invoice or prior to the issuance of building permits for this project, whichever occurs first. Failure to pay all charges shall result in delays in the issuance of required permits or the revocation of the approval of this application.

5. The date upon which the approval is final shall be considered the day of the imposition of the fees, dedications, reservations and exactions required by these conditions approval for the purposes of protesting the imposition pursuant to California Government Code Section 66020.

6. Expiration of this Approval. If no construction permits have been issued and construction commenced within one year of the date upon which this approval is final, the approval shall become null and void and of no effect. An extension of time may be granted by the Community Development Director upon the written request by a responsible party before the expiration of the one-year period, provided that the Director can make the findings that there have been no substantial changes in the approved plans, and that there has been no change of circumstances which would prevent any of the required findings of approval being made.

7. All plans submitted for review and approval and all development shall be in substantial conformance with the approved exhibits, except where modified by a condition of approval. The Community Development Director or designee may approve minor changes to the project as approved by the Planning Commission on the plans submitted for the construction permits with a determination that the changes are in substantial compliance with the representation of the project as reviewed by the Planning Commission and City Council, that the proposed change will be in compliance with the required development standards, and the change will not materially affect adjacent private or public property.

8. The conditions of this Permit shall be printed on the first sheet of each plan set submitted for a building permit pursuant to this Tentative Subdivision Map, under the title "Tentative Subdivision Map Conditions". The second sheet may also be used if the first sheet is not of sufficient size to list all of the conditions. The sheet(s) containing the conditions shall be of the same size as those sheets containing the construction drawings; 8-1/2" by 11" sheets are not acceptable.

DocuSign Envelope ID: 7AAFD2FD-43DC-48EA-AB7F-988EE094E281

Planning

9. All new roof top equipment is required to be screened. The parapet shall be opaque and equal in height of the top of the rooftop mechanical equipment.

10. All ground mounted air conditioning and heating equipment facing Napa Junction Road shall be screened. The screen shall be made of wood and painted to be weather resistant.

11. Prior to the issuance of the site improvement plan, the applicant shall identify 10 bicycle parking spots for Parcel B. The bicycle parking spots shall be evenly distributed amongst the buildings.

12. The subdivision ordinance requires new projects to dedicate parkland on the basis of 5 acres per 1,000 population (ACMC Chapter 18.44). Based on the current project proposal of 85 dwelling units @ 3.49 persons per unit, the project generates a population of 297 people. This equates to a park dedication standard of 1.48 acres. The Subdivision Ordinance has provisions for a combination of park dedication and payment of a fee in-lieu of park dedication.

13. Prior to the issuance of the first building permit, the applicant is required to pay all applicable impact fees. For your information, the following table identifies the fees and their rates. Please note that the City fees are subject to change and the applicant is required to pay the updated fee at the time of building permit issuance. The applicant is required to pay Fire Mitigation fees separately at the Fire District.

Parcel B Fee	Rate	Calculation	Cost
Affordable Housing Nexus	$3.82 per SF	118,560 SF per plans	$ 452,899.20
Parks and Recreation Fee	$5806.38 per unit	85 units per plans	$ 493,542.30
Civic Facility Fee	$1685.61 per unit	85 units per plans	$ 143,276.85
General Plan Update Fee	$89.59 per unit	85 units per plans	$ 7,615.15
Traffic Impact Fee	$618.18 per trip	462 trips estimated	$ 285,599.16
Water Capacity Fee (Estimated)	$11,599 per unit plus $26.25 per gpd	85 units per plans plus irrigation demand in gpd	$985,915.00
Wastewater Capacity Fee (Estimated)	$6,952.00 per unit	85 units per plans	$590,920.00
		Impact Fees Subtotal	**$ 2,959,767.66**

14. Prior to the issuance of the first building permit, the applicant shall provide proof of payment or exemption for Napa Valley Unified School District (NVUSD) developer fees. For more information, see their website here: https://www.nvusd.k12.ca.us/developerfees .

15. Prior to the issuance of the first building permit or the recordation of the final map, whichever occurs first, an Avigation Easement shall be recorded. The Avigation Easement shall cover all portions of the property and include:
    a. Right-of-flight at any altitude above an easement surface elevation, established based on either Part 77 of the Federal Aviation Regulations or FAA Terminal Instrument Procedures

DocuSign Envelope ID: 7AAFD2FD-43DC-48EA-AB7F-988EE094E281

Standards (TERPS), whichever is controlling (glide slope in approach is the controlling factor).

b. Right to cause noise, vibration, fumes, dust, and fuel particle emissions.
c. Right to prevent erection or growth of all objects above the easement surface.
d. Right to prohibit creation of electrical interference, unusual light sources, and other hazards to aircraft flight.

16. Prior to the Certificate of Occupancy, the applicant shall complete the public access trail that meanders from the site entry, traversing all the identified look-out points, and reaches the northwest side of the site.

Landscaping

17. The applicant shall agree to a licensing agreement that requires them to maintain the landscaping within the right-of-way along the project frontage. Prior to final inspection of the building permit, the applicant shall amend their facilities operation and maintenance plan (O&M plan) to include this activity.

18. Prior to the issuance of the Building Permit, the applicant shall submit a final landscaping plan. The landscape plan shall comply with the requirements of the California Government Code 65591 et. seq. known as the Water Conservation in Landscaping Act as set out in the model water efficient landscape ordinance adopted by the California Department of Water Resources and amended in 2015. All plant material shall be served by a city-approved automatic irrigation system.

19. Prior to the issuance of a certificate of occupancy, all landscaping shall be completed and the project's landscape architect shall provide a written certification that all plant materials have been installed in accordance with the approved landscape plan.

20. All planting shall be maintained in good growing condition. Such maintenance shall include, where appropriate, pruning, mowing, weeding, cleaning of debris and trash, fertilizing and regular watering. Whenever necessary, planting shall be replaced with other plant materials to insure continued compliance with applicable landscaping requirements. Required irrigation systems shall be fully maintained in sound operating condition with heads periodically cleaned and replaced when missing to insure continued regular watering of landscape areas, and health and vitality of landscape materials.

21. All tree stakes and ties shall be removed within one year following installation or as soon as trees are able to stand erect without support.

22. Clear sight triangles shall be maintained at all driveways. Low-lying plantings and other site fixtures, including signs, shall be no taller than 30 inches within the site's vision triangles.

Building and Safety

23. The applicant shall have the detailed building and site plans reviewed by a Certified Accessibility Specialist to verify that the proposed construction will comply with accessibility requirements. Each application for site construction or building permit shall be accompanied by a written report

DocuSign Envelope ID: 7AAFD2FD-43DC-48EA-AB7F-988EE094E281

from a Certified Accessibility Specialist verifying that the site and building design as shown on the submitted plans comply with all accessibility requirements.

24. Prior to the issuance of a certificate of occupancy, the applicant shall submit a letter of certification to the Building Official from the project architect and civil engineer certifying that all improvements have been constructed in accordance with the approved building plans. Determination of consistency shall be subject to the review and approval of the Building Official.

25. Site Improvement plans shall show slopes of all sidewalks and walkways and paths of travel to use site facilities including trash/recycling facilities. The applicant shall have the detailed building and site plans reviewed by a Certified Accessibility Specialist to verify that the proposed construction will comply with accessibility requirements. Each application for site construction or building permit shall be accompanied by a written report from a Certified Accessibility Specialist verifying that the site and building design as shown on the submitted plans comply with all accessibility requirements.

26. Recycling of Construction and Demolition Debris: Prior to issuance of a building permit the applicant shall submit a plan for the diversion of at least 70 percent of the debris from the building demolition and construction. The plan shall include the qualified recycler that will be used, the methods of managing diversion of construction materials on site, and the proposed documentation that will be submitted to confirm that the diversion goal has been met.

Fire District

General Fire District Conditions

27. In accordance with the standard mitigation measures and conditions of approval set forth by the City of American Canyon, the developer shall pay the Fire Impact Fees (see current Standard Fees and Charges adopted by resolution), prior to the issuance of any building permits.

28. Buildings in excess of two stories shall pay Aerial Apparatus mitigation fees prior to the issuance of any building permits. (see current Standard Fees and Chares adopted by resolution).

29. The project will require an annual fire and life-safety inspection under the "R (Residential) Occupancy Inspection Program". The R Occupancy Inspection Program has been developed to allow Fire District to meet requirements set forth by the State of California. The California Health and Safety Code, Section 13146.2 (a) mandates that inspections be completed at all "R occupancies" annually. California Health and Safety Code Section 13146.2 (b) provides the Fire District legal authority to charge property owners to recover reasonable costs for providing these inspections.

30. New buildings and additions to existing buildings shall conform to requirements set forth in the currently adopted editions of the California Building Code, California Fire Code, City of American Canyon standards and Nationally Recognized Standards.

31. There shall be no deferred submittals for fire protection equipment and related utilities. Fire protection plans shall not be attached to or bound with the building plan submittal package. This includes but is not limited to Automatic Fire Sprinkler, Fire Alarm, Fixed Fire Protection and Civil plans.

DocuSign Envelope ID: 7AAFD2FD-43DC-48EA-AB7F-988EE094E281

32. All Fire related underground piping and fire appurtenances shall be shown on the Civil plan submittal. In addition to the Civil plan submittal, at least (1) plan set under separate cover shall be submitted to American Canyon Building Division for routing to the American Canyon Fire Protection District detailing all underground piping and related fire appurtenances including but not limited to underground piping, underground sweep detail, underground trench details showing depth of burial, type of backfill, manufacturer's specifications of piping, valves joints, fittings and calculated size and locations of thrust blocks, hydrants locations (designate public or private), gate shut-off valves, PIV's, FDC's, fire pumps, fire pump and/or riser rooms.

33. Underground utility contractor, architect and fire sprinkler contractor shall coordinate the location of risers and control valves prior to the issuance of a building permit.

34. Fire District plan review shall be based on the information submitted at the time of permit application. Any changes to the approved/permitted scope of work including additions, alterations, demolition, repair or a change in occupancy/use may impact the project requirements, including but not limited to the installation of additional fire protection systems or components.

Fire Protection

35. An approved water supply capable of supplying the required fire flow for fire protection systems shall be provided to all premises upon which facilities or buildings are hereby constructed or moved into or within the City. Required fire flow and hydrant distribution shall be in accordance with Appendix B and C of the California Fire Code. Applicant shall demonstrate on plan submittal; square footage of each building on plan and provide the required fire flow information. Applicant shall demonstrate that the number and spacing of onsite fire hydrants meets with requirements of the California Fire Code. ***See sample below regarding fire flow and hydrant detail information needed***.

BUILDING FIRE FLOW REQUIREMENTS – CFC TABLES B105.2 & B105.1(2)

INFORMATION BELOW IS A SAMPLE AND FOR REFERENCE ONLY

Table B105.1(2) – Building size = 129, 600 square feet
Construction type = Type IIA
FF = 5,250 gpm at 20 psi
Duration = 4 hours

Table B105.2 – Fire sprinkler allowance = - 50%
5,250 – 2,625 = 2,625 gpm
FF = 2,625 gpm @ 20 psi
Duration = 2 hours

Table CC105.1 – Approximate number of hydrants = 3
Average spacing = 400 feet + 25% allowable increase = 500
Maximum distance from street or frontage = 225 feet = 50% allowable increase = 337.5

36. Fire Protection systems shall be installed in accordance with provisions set forth in the California Fire Code as amended by the City of Napa and the applicable National Fire Protection Association Standard.

DocuSign Envelope ID: 7AAFD2FD-43DC-48EA-AB7F-988EE094E281

37. The fire protection equipment shall be located within an interior room having an approved exterior access door or in an exterior enclosure attached to the building, specifically, for the purpose of housing such equipment.

38. The City of American Canyon requires that a fire hydrant be in service within 250 feet of the furthest point of construction prior to the stockpiling of combustible materials for the beginning of construction.

39. Fire District Connections (FDC) shall be located not more than 100 ft. from the nearest fire hydrant.

Fire District Access

40. Fire Apparatus Access Roads shall be designed in accordance with provisions set forth in the California Fire Code Chapter 5 and Appendix D as amended by the City of American Canyon and the applicable Public Works Standard.

41. Fire apparatus access roads shall have an unobstructed minimum width of 20 feet (curb to curb) and a minimum unobstructed vertical clearance of 13' 6". They shall have an all-weather paved surface capable of supporting a GVW of 71,000 pounds.

42. Access roads shall be completed with all-weather surfaces prior to the stockpiling of combustible materials or beginning combustible construction. Fire apparatus access shall be provided to within 150 feet of the most remote portions of all building from an approved exterior route. If this cannot be achieved fire apparatus turn arounds will be needed.

43. Fire apparatus access roads shall not be obstructed in any manner, including the parking of vehicles. Vertical traffic calming in the form of speed pumps, humps or dips are prohibited along fire access roads without prior approval of the fire Code Official. The minimum width and clearances established in Section 503.2.1 shall be maintained at all times.

44. When required by the Fire Chief, fire apparatus access roads shall be designated as Fire Lanes and appropriate signs and/or markings installed in accordance with the California Vehicle Code and approved City standards.

45. Where applicable improvement plan submittals for permit shall include locations of fire lane red curbing and fire lane signage. Please refer to and include City Public Works Standard FP-2A & 2B with plan submittals for permitting.

Public Works General Conditions of Approval

46. The Applicant shall be responsible for all City plan check, map check and inspection costs. The Applicant shall establish a Developer Deposit Account with the City upon the initiation of plan check services. The amount of the initial deposit shall be determined by the City Engineer. Additional funds may be required based upon actual costs.

DocuSign Envelope ID: 7AAFD2FD-43DC-48EA-AB7F-988EE094E281

47. All improvements shall be designed in accordance with the American Canyon Municipal Code (ACMC), City of American Canyon Engineering Standard Plans and Specifications for Public Improvements (City Standards), except as specifically noted otherwise in these conditions.

48. All new utilities to serve the project, shall be placed underground. Exceptions may be allowed for surface mounted transformers, pedestal mounted terminal boxes and meter cabinets.

49. Unless otherwise explicitly permitted, all existing wells, septic tanks and/or underground fuel storage tanks shall be abandoned under permit and inspection of Napa County Department of Environmental Services or other designated agency. If there are none, the project engineer shall provide a letter describing the scope of the search done to make this determination.

50. A detailed Soils Investigation/Geotechnical Report shall be prepared and submitted for review. The report shall address, at a minimum, potential for liquefaction, R-values, expansive soils and seismic risk. The improvement plans shall incorporate all design and construction criteria recommended in the Geotechnical Report.

51. A drainage report prepared by a California Registered Civil Engineer shall be submitted for review with the initial submittal of the Improvement Plans. The report shall include detailed hydrologic and hydraulic calculations to support the design and sizing of all public and private drainage facilities including storm drains and detention facilities. The report shall include an analysis of the capacity of existing downstream storm drain facilities and hydraulic conditions which may impact the design of proposed facilities and improvements.

52. A final detailed post-construction Stormwater Control Plan (SWCP) that identifies and sizes all permanent post-construction stormwater treatment BMPs shall be prepared and submitted for review and approval. The SWCP shall be prepared in accordance with the latest edition of the Bay Area Stormwater Management Agencies Association (BASMAA) Post-Construction Manual and the requirements of the State Water Resources Control Board Phase II Municipal Separate Storm Water System (MS4) General Permit (Order 2013-0001 DWQ). It is the City's discretion whether to accept alternative treatment facilities other than bioretention.

53. A Post Construction Stormwater Operations and Maintenance Plan that includes a plan sheet showing all storm drain and water quality infrastructure that is to be maintained, along with detailed instructions and schedules for the ongoing maintenance and operation of all post-construction stormwater BMPs shall be submitted for review and approval by the City Engineer. Once approved, the property owner(s) shall enter into an agreement with the City that provides the terms, conditions, and security associated with the ongoing requirements of the post-construction Stormwater Best Management Practices.

54. A Final Map, as defined in the Subdivision Map Act, shall be prepared by a licensed surveyor or civil engineer. The Final Map shall show all parcels, rights-of-way, and easement(s), and shall be submitted to the City Engineer for review. The Final Map shall be in substantial conformance with the approved Tentative Map and all applicable conditions of approval. The Final Map is not valid until it has been approved by the City and recorded. Closure calculations shall be provided at the time of initial Final Map submittal. All calculated points within the map shall be based upon one common set of coordinates. All information shown on the Final Map shall be directly verifiable by information shown on the closure calculation printout. The point(s) of beginning shall be clearly

DocuSign Envelope ID: 7AAFD2FD-43DC-48EA-AB7F-988EE094E281

defined. All lot acreages shall be shown on the Final Map and shall be verifiable from information shown on the closure calculation printout. A current title report (within past 30 days) shall be submitted at the time of initial Final Map submittal.

55. Subject to the terms of Condition 56, the Applicant shall secure all necessary rights-of-way and public and private easements for both onsite and offsite improvements. The Applicant shall prepare all necessary legal descriptions and deeds.

56. To the extent any offsite public improvements require the acquisition of property not currently owned by the Applicant or the City, the Applicant shall first make a good-faith effort to acquire the necessary property rights, however if the Applicant makes such an effort and is unable to acquire such rights, then the Applicant may request the City acquire the necessary property rights through the exercise of eminent domain provided that the Applicant enters first into an agreement with the City to pay for all costs incurred by the City to acquire such rights and if the City does not acquire the rights necessary to allow the offsite public improvements to be completed by the Applicant within statutory timeline provided by law, then the Applicant shall be relieved of the obligation to construct those off-site improvements only to the extent they require property not currently owned by the Applicant or the City. The Applicant shall make a good-faith effort to identify and acquire the necessary property rights at the earliest opportunity. A good faith offer includes identification of property rights needed (permanent and temporary), appraisal of the value of the highest and best use of the property, and a bonafide offer to pay this amount at the close of escrow.

57. The Applicant shall submit site Improvement Plans, prepared by a registered Civil Engineer, for review and approval of the City's Public Works Department. **Please be aware that this is separate submittal from the building permit application.** The final plan set shall include all civil, landscape and joint trench drawings under a single cover sheet. No final grading or other construction shall be performed until the Improvement Plans have been approved. The Applicant shall not begin clearing, grubbing, or rough grading at the site prior to approval of the Improvement Plans, unless explicitly approved by the City of American Canyon through the standard grading and utilities only permit process. An Encroachment Permit is required for any work within City right of way. Encroachment Permits will not be issued prior to the approval of the Improvement Plans.

58. Cathodic protection shall be provided for all water valves, fittings, hydrants, meters, backflow devices, ductile iron pipe, and other metal appurtenances, regardless of the findings of any soils corrosivity analysis.

59. The Applicant shall keep adjoining public and private streets free and clean of project dirt, mud, materials, and debris during the construction period in accordance with an approved SWPPP and Erosion and Sediment Control Plan using appropriate BMPs and as is found necessary by the City Engineer.

60. If any hazardous material is encountered during the construction of this project, all work shall be immediately stopped and the Fire District, Napa County Department of Environmental Services or other designated agency, and the City Inspector shall be notified immediately. Work shall not proceed until clearance has been issued by all of these agencies.

DocuSign Envelope ID: 7AAFD2FD-43DC-48EA-AB7F-988EE094E281

61. Prior to final preparation of the subgrade and placement of base materials, all underground utilities shall be installed and service connections stubbed out behind the sidewalk. Public utilities, Cable TV, sanitary sewers, and water lines shall be installed in a manner that will not disturb the street pavement, curb, gutter and sidewalk, when future service connections or extensions are made.

62. Where soil or geologic conditions encountered in grading operations are different from that anticipated in the soil and/or geologic investigation report, or where such conditions warrant changes to the recommendations contained in the original soil investigation, a revised soil or geologic report shall be submitted for approval by the City Engineer. Additionally, if field conditions warrant installation of any subdrains, the location, size and construction details must be provided to the City for review and approval prior to construction.

63. All new fire hydrants shall be covered with burlap sacks until the hydrants have been tested and found to be in conformance with City flow requirements. No storage of combustible materials or construction of building shall be permitted until all hydrants meet City flow requirements.

64. Prior to placing the final lift of asphalt, all public storm drains and sanitary sewer lines shall be video inspected at the Applicant's expense. All video media (CD, DVD, or portable hard drive) shall be submitted to the City. If any inadequacies are found, they shall be repaired prior to the placement of the final lift of asphalt.

65. All streets, curbs, gutters, sidewalks or other public facilities damaged in the course of construction associated with this Project shall be the responsibility of the Applicant and shall be repaired to the satisfaction of the City at the Applicant's expense.

66. After all of the new underground utilities within existing public streets have been installed, the entire affected areas shall be milled and repaved to present a neat finished pavement area. Multiple trench patches are not acceptable.

67. All construction stormwater pollution prevention best management practices (BMP's) shall be installed as the first order of work and in accordance with the State Water Resources Control Board's General Construction Permit for Stormwater Discharges Associated with Construction and Land Disturbance Activities (Order 2009-0009-DWQ, as amended), the Applicant's Storm Water Pollution Prevention Plan (SWPPP), and the City's Erosion and Sediment Control Plan in accordance with the City's MS4 Permit. All stormwater BMP's shall be maintained to the satisfaction of the Qualified SWPPP Developer (QSD), Qualified SWPPP Practitioner (QSP), and the City Engineer.

68. With the exception of water used for loading and testing of potable water lines, all construction water used for the project shall be obtained from a source other than American Canyon potable water sources. The Applicant shall provide verification that an outside source of construction water, e.g., recycled water, has been established and will be available for the duration of the project construction.

69. The development shall comply with the City's Zero Water Footprint policy.

70. All landscaping irrigation systems shall include an ET/SMART controller.

DocuSign Envelope ID: 7AAFD2FD-43DC-48EA-AB7F-988EE094E281

Public Works Special Conditions of Approval

71. The Applicant shall submit Improvement Plans prepared by a registered Civil Engineer (Engineer of Record) in substantial conformance with the preliminary civil plans titled "Design Review Oat Hill Multi-Family – Parcel B" prepared by Carson, Barbee & Gibson Civil Engineers, dated February 2021 (Preliminary Plans), except as modified by these conditions.

72. Improvement Plans shall be tied to the State of California coordinate system.

73. The Applicant shall design and construct all of the Public Improvements as generally described below and in accordance with the project's Fee Credit/ Fee Reimbursement Agreement, as applicable.

    a. Napa Junction Road Improvements:
        i. Construct an approximately 300-foot segment of Napa Junction Road between the Hess Road/Napa Junction Road intersection and the existing roadway fronting Napa Junction Magnet Elementary School. The preliminary roadway shall have a curb-to-curb with of 40-feet with 5-foot wide (includes curb width) attached sidewalks on both sides. The final roadway section shall be as determined by the City Engineer. The extent of the roadway construction may be extended as necessary to meet City roadway geometric standards.

        ii. Construct a new 5-foot wide (includes curb width) attached sidewalk along the south side of Napa Junction Road between the east end of the new road segment described above to the existing sidewalk approximately 100-feet west of Theresa Avenue.

        iii. Construct a new 5-foot wide attached sidewalk along the south side of Napa Junction Road between its intersection with Hess Road and the west end of Parcel A's frontage.

        iv. The cost of these improvements will qualify for a credit against the project's Traffic Impact Fee.

    b. Water Main Replacement in Napa Junction Road:
    Replace approximately 590 linear feet of the existing 6-inch water main in Napa Junction Road with a new 12-inch water main between the intersection with Theresa Avenue to the intersection with Hess Road, connecting to the existing water mains in those intersections. The cost of these improvements will qualify for a credit against the project's Water Capacity Fee.

    c. Sanitary Sewer Main Replacement in Napa Junction Road and Theresa Avenue:
    Replace approximately 1,800 linear feet of the existing 6-inch sanitary sewer mains in Napa Junction Road between Hess Road and Theresa Avenue and in Theresa Avenue from Napa Junction Road to a point approximately 1,200 linear feet south thereof with new 8-inch and 10-inch sanitary sewer mains. The Engineer of Record shall conduct a capacity analysis for the new sanitary sewers to determine where it should upsize from 8-inch to

DocuSign Envelope ID: 7AAFD2FD-43DC-48EA-AB7F-988EE094E281

10-inch. The cost of these improvements will qualify for a credit against the project's Wastewater Capacity Fee.

d. Recycled Water Main in Lombard Road and Hess Road:
Install approximately 1,300 linear feet of a new 8-inch recycled water main in Lombard Road between the cul-de-sac at its northern terminus and Hess Drive and in Hess Drive between Lombard Road and the Little League fields. This recycled water main will be assumed to provide a sufficient potable water demand offset to comply with the City's Zero Water Footprint policy for both the Oat Hill Parcel A and Oat Hill Parcel B projects.

Note that the Tentative Map for Oat Hill Parcel B is subject to conditions of approval to construct the same Public Improvement described above. In the event that any of those public improvements are constructed in conjunction with the development of Oat Hill Parcel B prior to the development of Oat Hill Parcel A, then the corresponding condition of approval for Oat Hill Parcel A will be considered to have been met.

74. The Applicant shall construct all of the on-site private drive isles, parking spaces, walks, water, recycled water, sanitary sewer, storm drainage and stormwater quality and landscaping **"Private Improvements"** generally shown on the Preliminary Plans and more specifically described below. All private drive isles, parking spaces, walks, water, sewer, storm drainage and stormwater quality improvements shall be designed in accordance with the City of American Canyon Engineering Standard Plans and Specifications for Public Improvements (City Standards), except as specifically noted otherwise in these conditions.

a. Storm Drain Facilities:
Construct private on-site drainage facilities, detention facilities, and other appurtenances to collect and convey all surface drainage to an approved private storm drain facility or outfall. Onsite drainage facilities shall provide for the positive drainage of all adjacent upstream or upgrade properties to prevent ponding. Existing run-on from adjacent properties shall not be obstructed and shall be conveyed onsite. Off-site peak storm water discharge shall not exceed 90% of the undeveloped peak flow from the 24-hour, 100-year event. The storm drains and detention facilities shall be substantially consistent with the Preliminary Plans. However, the sizing of all storm drains and detention facilities shall be determined by the approved final drainage report.

b. Stormwater Quality Facilities:
Permanent on-site private post-construction stormwater treatment BMPs shall be designed and constructed in accordance with the approved final SWCP. Runoff from all roof drains shall be conveyed to the onsite stormwater treatment facilities.

c. Emergency Vehicle Access Road
Construct a 20-foot wide paved vehicle road on Oat Hill Parcel A and across Oat Hill Parcel B connecting to Napa Junction Road.

75. Prior to SUBMITTAL OF THE IMPROVEMENT PLANS, the Applicant shall:
a. Submit the City's "Improvement Plan Checklist".

DocuSign Envelope ID: 7AAFD2FD-43DC-48EA-AB7F-988EE094E281

b. Pay an initial cash deposit for City plan check services in amount to be determined by the City prior to the time of submittal. The Project engineer shall contact City staff to discuss submittal details to determine initial deposit amount.

c. Provide the following:
   i. Public Street Repair Plan
   ii. Utility Plan and Joint Trench Plan
   iii. Construction Storm Water Pollution Prevention Plan (SWPPP) and a City Erosion and Sediment Control Plan (ESCP)
   iv. Drainage Report
   v. Post-Construction Stormwater Control Plan (SWCP)
   vi. Geotechnical Report
   vii. Construction Traffic Control Plan.

d. Pothole and physically determine (by way of a survey performed by the Engineer of record) the actual horizontal location and vertical depth of all existing underground utilities throughout the proposed areas of work and provide the design of all new utility installations required to serve the project including a schedule for implementation of such work as to prevent disrupting of utility service to adjacent properties.

76. Prior to APPROVAL OF THE IMPROVEMENT PLANS, the Applicant shall:

a. Provide written acknowledgment by the Geotechnical Engineer of Record that the Plans incorporate all design and construction criteria specified in the Geotechnical Report.

b. Subject to the terms of Condition 56, acquire the public right-of-way and all rights of entry and/or temporary and permanent easements necessary for the construction of the Napa Junction Road improvements described above. Applicant shall prepare the legal descriptions, plats and deeds and submit them to the City for review. The location of all such rights on the Plans.

c. Record a City approved lot line adjustment between Oat Hill Parcel A and Oat Hill Parcel B as shown on the Tentative Map and Preliminary Plans.

d. Furnish proof that all permits that may be required by the California Department of Fish & Game, State and Regional Water Quality Control Board, US Army Corps of Engineers and any other regulatory agencies with jurisdiction over the proposed construction have been obtained.

e. Complete and submit the City's Erosion and Sediment Control Plan (ESCP) Template. Applicant may refer to a SWPPP, as appropriate, by referencing page number within the SWPPP that addresses the requirements of the ESCP.

f. Submit a copy of the Notice of Intent and WDID# for coverage under the State Water Resources Control Board' General Construction Permit for Stormwater Discharges Associated with Construction and Land Disturbance Activities (Order 2009-0009-DWQ).

77. Prior to COMMENCEMENT OF CONSTRUCTION ACTIVITIES, the Applicant shall:

DocuSign Envelope ID: 7AAFD2FD-43DC-48EA-AB7F-988EE094E281

a. Pay off all current account balances with the City of American Canyon.

b. Pay an inspection fee in amount to be determined at the time of commencement for the City's inspection of the Public Improvements.

c. Conduct a pre-construction meeting with representatives of the City whereby the Applicant, the Legally Responsible Party (LRP), Qualified SWPPP Practitioner (QSP), Qualified SWPPP Developer (QSD), and/or the Contractor provides the following:

   i. Six (6) full-size bond copies of the approved Improvement Plans for the City's use.
   ii. One (1) job-site copy of the latest edition of the City Standards for the Contractor use.
   iii. One (1) job-site copy of the SWPPP for use by the LRP, QSP, QSD, and Contractor.
   iv. Electronic copies of Improvement Plans and SWPPP

78. Prior to RECORDATION OF THE FINAL MAP, the Applicant shall:

a. Construct all of the Public and Private Improvements to the satisfaction of the City. Alternatively, the Applicant may enter into a Subdivision Improvement Agreement with the City agreeing to complete all of the Public and Private Improvements prior to Occupancy of the first unit. Such an Agreement will require the Applicant to provide bonds, proof of workers compensation insurance, and general liability insurance in the forms and amounts as deemed satisfactory to the City.

b. Establish a Homeowner's Association (HOA) in accordance with State law with recorded Codes, Covenants, & Restrictions (CC&Rs) that are satisfactory to the City Engineer and City Attorney to provide long-term and ongoing maintenance of all of the Private Improvements identified above. Specifically, the HOA will be responsible for the long-term and ongoing maintenance of the private streets, sidewalks, streetlights, domestic water facilities including the water booster pump station, sewers, storm drain facilities and stormwater quality facilities within the limits of the subdivision. The City will have enforcement authority over the HOA's maintenance obligations and the obligation to review and approved proposed changes amendments to the CC&R's. The CC&R's shall require the HOA to create and maintain a separate maintenance reserve fund in the amount of a percentage of the cost of constructing the HOA maintained improvements listed above. Said percentage will be determined by the City prior to recordation of the CC&Rs.

c. Establish a Shared Maintenance Agreement or such similar agreement between the owners of Oat Hill Parcel A and Oat Hill Parcel B for the long term and ongoing maintenance and operation of all shared private improvements. Specifically, the parcel owners shall be responsible for the ongoing maintenance and operation of all onsite stormwater quality facilities, shared storm drains and the shared emergency vehicle access road. The Shared Maintenance Agreement shall be prepared to run with the land of each parcel. The Shared Maintenance Agreement shall be submitted to the City for review and approval prior to recordation.

DocuSign Envelope ID: 7AAFD2FD-43DC-48EA-AB7F-988EE094E281

d. Generally, in substantial conformance with that which is shown on the approved Tentative Map, convey all easements and dedications, public and private, for the construction, use and/or maintenance of roads or other access, drainage facilities, utilities and post-construction storm water management facilities on the Final Map or by separate instruments. All dedications to the City shall be irrevocable offers of dedication. Specific public conveyances include:
    i. A public utility easement (PUE) 5-foot in width along the south side of Napa Junction Road across the frontage of Oat Hill Parcel B.
    ii. A strip of public street right-of-way of varying width and having an area of approximately 4,150 square feet as shown on the Tentative Map for Condominium Purposes Oat Hill Multi-family Parcel B.

e. Furnish documentation that the existing PG&E pole line easements (Book 1061 Page 114 and Book 1355 Page 779 O.R.) have been quit claimed.

f. Obtain all necessary easements over Oat Hill Parcel B including easements for emergency vehicle access and storm water conveyance and detention facilities through recorded separate instruments.

g. Furnish proof of the payment of the mapping service fee as required by Napa County Board of Supervisors Resolution No. 92-119.

79. Prior to APPROVAL OF A BUILDING PERMIT, the Applicant shall:

a. Pay all account balances and current City and American Canyon Fire Protection District fees (Mitigation and Capacity) shown in Condition 13.

80. Prior to ACCEPTANCE OF IMPROVEMENTS, the Applicant shall:

a. Restore all adjacent off-site road surfaces to pre-project conditions.

b. Submit a certification by the Geotechnical Engineer of Record that all the work has been completed in substantial conformance with the recommendations in Soils Investigation/Geotechnical Report.

c. Provide a mylar and digital copy of the Improvement Plans that include all as-built or field changes, in digital AutoCAD (.dwg) and (.pdf) format (void of any AutoCAD block formats preventing full editing capabilities of the drawings), compatible with the City's current version, and tied to the NAD83 (California Zone 2, feet) coordinate system.

d. Provide a letter stating that all of the Developer's Conditions of Approval have been met.

e. Provide a letter from the Civil Engineer of Record certifying that all the site improvements were constructed and inspected in substantial conformance with the approved plans and City Standards.

f. Enter into and record a post-construction Stormwater Operations and Maintenance Agreement with the City.

DocuSign Envelope ID: 7AAFD2FD-43DC-48EA-AB7F-988EE094E281

Oat Hill Parcel B – Mitigation Measures

The following are the applicable mitigation measures from the certified Mitigated Negative Declaration report. The following mitigation measures shall be complied with in accordance with the adopted Mitigation Monitoring and Reporting Program (MMRP) by the City Council.

81. **AES I-1.** Prior to issuance of building permits, the applicant shall prepare and submit a detailed lighting plan for review and approval by the Community Development Department. The plan shall show conformance with City performance standards for street lighting and glare, including shielding of all on-site lighting so that light is directed within the project site and does not illuminate adjacent properties, and indicate the location and design of proposed lighting and lighted signs. The applicant shall implement the final plan as approved by the City.

82. **AQ III-3.** Prior to the issuance of a grading permit, the project applicant shall indicate via notation on project construction plans that all off-road construction equipment used for the roadway extension along Napa Junction Road, including owned, leased, and subcontractor vehicles, shall meet the California Air Resources Board's (CARB's) Tier 4 emissions standards. The construction plans shall be submitted for review and approval to the City of American Canyon Community Development Department.

83. **BIO IV-1.** Prior to project initiation, pre-construction surveys shall be conducted by a qualified biologist within a 0.5-mile radius around all project activities, including on-site and off-site work, and shall be completed for at least two survey periods prior to starting Project activities. The survey period timing and methodology shall be conducted in accordance with the Swainson's Hawk Technical Advisory Committee's Recommended Timing and Methodology for Swainson's Hawk Nesting Surveys in California's Central Valley (2000), which identifies different survey windows throughout the pre-nesting and nesting season (ranging from January 1 through July 30/post-fledging) that have different survey methodologies and requirements. A letter report summarizing the survey results shall be submitted to CDFW for review and written acceptance prior to starting Project activities. The survey results shall also be submitted to the Community Development Department within 30 days following the final survey. If active Swainson's hawk nests are not identified on or within 0.5-mile of the project site within the survey periods, further avoidance and minimization measures for Swainson's hawk nesting habitat are not required

84. **BIO IV-2.** If Swainson's hawks are found to be nesting on the project site or within 0.5-mile of the project site, the project proponent shall either, a) delay project activities until all Swainson's hawk nests within 0.5-mile of the project site are no longer active, as determined by a qualified biologist, b) determine if the 0.5-mile buffer zone may be reduced in consultation with CDFW based on site-specific conditions, or c) if take cannot be avoided, obtain a CESA Incidental Take Permit from CDFW prior to starting project activities.

85. **BIO IV-3.** Prior to initiation of ground disturbance, a qualified biologist shall conduct nesting and/or wintering owl surveys, as appropriate, in accordance with the California Department of Fish and Game (now CDFW) 2012 Staff Report on Burrowing Owl Mitigation survey methodology (see https://wildlife.ca.gov/Conservation/Survey-Protocols#377281284-birds). Surveys shall encompass the project area and a sufficient buffer zone to detect owls nearby that may be impacted. Time lapses between surveys or project activities shall trigger subsequent surveys

DocuSign Envelope ID: 7AAFD2FD-43DC-48EA-AB7F-988EE094E281

including but not limited to a final survey within 24 hours prior to ground disturbance before construction equipment mobilizes to the project area. The qualified biologist shall have a minimum of two years-experience implementing the CDFW 2012 Staff Report survey methodology resulting in detections. A letter report summarizing the survey results shall be submitted to the Community Development Department within 30 days following the pre-construction survey. If burrowing owls are not present on-site or adjacent to the site where they may be disturbed during pre-construction surveys, further avoidance and minimization measures for burrowing owl nesting and wintering habitat are not required.

86. **BIO IV-4.** If burrowing owls are detected on or adjacent to the site where they may be disturbed, the following restricted activity dates and setback distances recommended per CDFW's Staff Report (2012) shall be implemented, unless reduced buffers are accepted by CDFW in writing based on site-specific conditions:

    - From April 1 through October 15, low disturbance and medium disturbance activities shall have a 200-meter buffer while high disturbance activities shall have a 500-meter buffer from occupied nests and wintering sites.
    - From October 16 through March 31, low disturbance activities shall have a 50-meter buffer, medium disturbance activities shall have a 100-meter buffer, and high disturbance activities shall have a 500-meter buffer from occupied nests and wintering sites.
    - No earth-moving activities or other disturbance should occur within the aforementioned buffer zones of occupied burrows. These buffer zones shall be marked with high visibility fencing or flagging.

    If burrowing owls are present outside of the nesting season, burrowing owls may be passively relocated from the project site and adjacent habitat using CDFW-accepted methods so that construction can proceed. Any required passive relocation of burrowing owls would require CDFW acceptance. If passive relocation of burrowing owls is necessary, a qualified biologist shall prepare a Relocation Plan, including compensatory habitat as described below, for CDFW review and acceptance prior to the start of construction activities.

    If the survey determines that the project site is actively being used by burrowing owl, or any owls are passively relocated as described above, then compensatory habitat mitigation shall be provided. The habitat mitigation/compensation plan shall be submitted to CDFW for review and approval prior to the start of project activities. Habitat compensation acreages shall be approved by CDFW, as the amount depends on site specific conditions, and completed before project construction. It shall also include placement of a conservation easement and preparation and implementation of a long-term management plan. If burrowing owls are observed during surveys, notification shall also be submitted to the California Natural Diversity Database (CNDDB; see https://wildlife.ca.gov/Data/CNDDB/Submitting-Data).

87. **BIO IV-5.** If project activities must be conducted during the nesting season (February 15 and September 1), a pre-construction nesting bird survey shall be conducted by a qualified biologist within 714 days of vegetation removal or initial ground disturbance. The survey shall include the project site, any off-site disturbance areas, and within a minimum of 500 feet of all project areas, surrounding vicinity to identify the location and status of any nests that could potentially be affected either directly or indirectly by project activities. A letter report summarizing the survey results shall be submitted to the Community Development Department within 30 days following

DocuSign Envelope ID: 7AAFD2FD-43DC-48EA-AB7F-988EE094E281

the pre-construction survey. If nesting birds are not present on-site or within a minimum 500 feet of the project site during pre-construction surveys, further avoidance and minimization measures for nesting bird habitat are not required.

If active nests of native nesting bird species are identified during the nesting bird survey, a work exclusion zone shall be established around each nest by the qualified biologist. Established exclusion zones shall remain in place until all young in the nest have fledged or the nest otherwise becomes inactive (e.g., due to predation). Appropriate exclusion zone sizes shall be determined by a qualified biologist. The qualified biologist shall be on site daily for the first week during Project activities, and then weekly thereafter until the nest is no longer active, to observe all active bird and raptor nests and to ensure that Project activities do not cause nest disturbance. If the qualified biologist observes birds and/or raptors displaying potential nest disturbance behavior, the qualified biologist shall cease work and consult with CDFW before resuming Project activities. In this event, Project activities shall not resume without CDFW's written permission.

88. **CUL V-1.** Prior to grading permit issuance, the applicant shall submit plans to the Community Development Department for review and approval which indicate (via notation on the improvement plans) that if historic and/or cultural resources are encountered during site grading or other site work or off-site work, all such work shall be halted immediately within 100 feet and the applicant shall immediately notify the Community Development Department of the discovery. In such case, the applicant shall be required, at their own expense, to retain the services of a qualified archaeologist meeting the Secretary of the Interior's Professional Qualification Standards for prehistoric and historic archaeologist for the purpose of recording, protecting, or curating the discovery as appropriate. The archaeologist shall be required to submit to the Community Development Department for review and approval a report of the findings and method of curation or protection of the resources. Further grading or site work within the area of discovery shall not be allowed until the preceding work has occurred.

89. **CUL V-2.** If human remains, or remains that are potentially human, are found during construction, a professional archeologist shall ensure reasonable protection measures are taken to protect the discovery from disturbance. The archaeologist shall notify the Napa County Coroner (per §7050.5 of the State Health and Safety Code). The provisions of §7050.5 of the California Health and Safety Code, §5097.98 of the California Public Resources Code, and Assembly Bill 2641 will be implemented. If the Coroner determines the remains are Native American and not the result of a crime scene, then the Coroner will notify the Native American Heritage Commission (NAHC), which then will designate a Native American Most Likely Descendant (MLD) for the project (§5097.98 of the Public Resources Code). The designated MLD will have 48 hours from the time access to the property is granted to make recommendations concerning treatment of the remains. If the applicant does not agree with the recommendations of the MLD, the NAHC can mediate (§5097.94 of the Public Resources Code). If an agreement is not reached, the qualified archaeologist or most likely descendent must rebury the remains where they will not be further disturbed (§5097.98 of the Public Resources Code). This will also include either recording the site with the NAHC or the appropriate Information Center, using an open space or conservation zoning designation or easement, or recording a reinternment document with the county in which the property is located (AB 2641). Work cannot resume within the no-work radius until the lead agencies, through consultation as appropriate, determine that the treatment measures have been completed to their satisfaction.

DocuSign Envelope ID: 7AAFD2FD-43DC-48EA-AB7F-988EE094E281

90. **GEO VII-1, VII-2, VII-4, and VII-5**. Prior to approval of any building permits, the project Civil Engineer shall show on the project plans that the project design would adhere to all engineering recommendations provided in the site-specific Geologic Hazards and Preliminary Geotechnical Investigation prepared by Giblin Associates and the Soil Investigation prepared by Reese & Associates. The project plans shall include, but would not be limited to, the use of mat slabs, post-tensioned slabs on-grade, imported non-expansive fill under conventional floor slabs, appropriate setbacks from fault zones, stabilization of potential landslide areas, and structural design in accordance with Site Class C of the CBSC Ground Motion Parameters. Project plans shall be subject to review and approval by the City Engineering Division.

91. **GEO VII-3.** Prior to the issuance of a grading permit, the project applicant shall prepare to the satisfaction of the Community Development Department, an erosion control plan that utilizes standard construction practices to limit the erosion effects during construction of the proposed project. Actions should include, but are not limited to, the following:
    a. Hydro-seeding;
    b. Placement of erosion control measures within drainage ways and ahead of drop inlets;
    c. The temporary lining (during construction activities) of drop inlets with "filter fabric";
    d. The placement of straw wattles along slope contours;
    e. Use of a designated equipment and vehicle "wash-out" location;
    f. Use of siltation fences;
    g. Use of on-site rock/gravel road at construction access points; and
    h. Use of sediment basins and dust palliatives.

92. **GHG VIII-1.** Prior to issuance of building permits, the applicant shall submit proof to the Community Development Department for review and approval which indicate project compliance with the Tier 1 Energy Efficiency division of the Title 24 standards. Tier 1 Energy Efficiency for low-rise multifamily developments require the following measures:
    a. Total Energy Design Rating (Total EDR) and Energy Efficiency Design Rating (Efficiency EDR) for the Proposed Design Building is included in the Certificate of Compliance documentation.
    b. Quality Insulation Installation procedures specified in the Building Energy Efficiency Standards Reference Appendices RA3.5 are completed.
    c. One of the following options is required:
        i. A4.203.1.2.1 – Roof deck insulation or ducts in conditioned space.
        ii. A4.203.1.2.2 – High performance walls.
        iii. A4.203.1.2.3 – HERS-verified compact hot water distribution system.
        iv. A4.203.1.2.4 – HERS-verified drain water heat recovery.
    d. Buildings complying with the first level of advanced energy efficiency shall have additional integrated efficiency and onsite renewable energy generation sufficient to achieve a Total EDR of the Tier 1 value indicated by Table A4.203.1.1.1 or lower as calculated by Title 24, Part 6 Compliance Software approved by the Energy Commission. This Total EDR is in addition to meeting the Efficiency EDR.
    e. Local jurisdictions adopting Tier 1 or Tier 2, or considering community shared solar or storage options as specified, shall consult with the local electric service for acceptance.

93. **NOI XIII-1.** Prior to the approval of grading permits, the City shall establish the following related to the use of construction equipment:

DocuSign Envelope ID: 7AAFD2FD-43DC-48EA-AB7F-988EE094E281

a. Construction activities (excluding activities that would result in a safety concern to the public or constructions workers) shall be limited to between the daytime hours of 7:00 AM and 7:00 PM daily;
b. Construction equipment shall be properly maintained and equipped with noise-reduction intake and exhaust mufflers and engine shrouds, in accordance with manufacturers recommendations;
c. Equipment engine shrouds shall be closed during equipment operation;
d. When not in use, motorized construction equipment shall not be left idling for more than five minutes; and
e. Stationary equipment (power generators, compressors, etc.) shall be located at the furthest practical distance from nearby noise-sensitive land uses or sufficiently shielded to reduce noise-related impacts.

94. **TRANS XVII-1.** Prior to issuance of grading permits, the project applicant shall submit Improvement Plans that reflect the recommendations included in the Traffic Impact Study prepared by W-Trans. Specifically, the Improvement Plans shall reflect a pedestrian path or sidewalk between the project site and the existing terminus of the sidewalk on the south side of Napa Junction Road near the elementary school crossing. The Improvement Plans shall also reflect space for bicycle storage provided either on balconies or other outside spaces dedicated to each housing unit, in garages or other storage spaces for each unit, or through provision of bike racks. The recommendations made by W-Trans shall be confirmed by the City's Public Works Department and/or the City Engineer prior to issuance of grading permits.

95. **TRANS XVII-2.** Prior to the first residential occupancy, the applicant shall implement the following TDM measures, as described in the TIS:
    a. Unbundled Parking;
    b. Free Transit Passes;
    c. Secure Bicycle Parking and Maintenance Tools;
    d. Tele-Work/Compressed Schedules;
    e. Carpooling and Ride-Matching Program;
    f. Transportation Coordinator;
    g. Welcome Packet for New Residents; and
    h. Monitoring of Program Performance.

    Proof of implementation of the TDM measures shall be submitted to the City's Community Development Department for review and approval.

96. **UTIL XIX-1.** The project applicant shall demonstrate compliance with the City's Zero Water Footprint Policy by mitigating all new potable water demands with "wet-water" offsets by one or more of the following options to ensure the proposed project results in a net zero increase in demand for potable water:
    a. Reducing existing potable water demands on-site;
    b. Funding programs or constructing projects that would conserve an equivalent amount of water elsewhere within the water service area;
    c. Funding of and/or constructing projects that would increase an equivalent amount of recycled water use elsewhere within the water service area where potable water is currently used; and/or
    d. Purchasing new water supplies from other water providers.

DocuSign Envelope ID: 7AAFD2FD-43DC-48EA-AB7F-988EE094E281

Compliance with the Zero Water Footprint Policy shall be ensured by submission of a "Will-Serve" Water Application to the City's Public Works Department for review and approval. Project plans shall demonstrate the applicant's inclusion of the selected wet-water offsets.

97. **UTIL XIX-2.** The project shall be designed and constructed with purple irrigation pipe so that reclaimed water may be used for landscape irrigation purposes. The project shall use recycled water for irrigation in the event recycled water becomes available at the site.

98. **UTIL XIX-3.** At the time of issuance of building permits, the project applicant shall pay all updated water capacity and impact fees in effect, to the extent they are not subject to applicable fee credits, to provide funding for the City to acquire additional long-term water resources and improve and develop its treatment and distribution system. The fees will permit the City to exercise additional options for potable water capacity from the City of Vallejo and/or other sources, and will also provide for implementation of the recycled water system.

99. **UTIL XIX-4.** The project applicant shall pay to the City a monthly service charge to adequately cover the project's costs associated with City supplying water through the City's connection to the City of Vallejo, as determined by the Public Works Director.

100. **UTIL XIX-5.** Prior to issuance of building permits, the project shall be reviewed by the Community Development Department for consistency with the Water Conservation Guidelines. The project applicant shall incorporate water conservation Best Management Practices into the project.

101. **UTIL XIX-6.** Should additional project water be required, the proposed project shall comply with the City's ordinances and regulations in effect at the time of authorization for additional water use. In addition, such changes in project use would trigger a new City Discretionary Review process, which would trigger re-evaluation of the proposed project's water supply impacts.

102. **UTIL XIX-7.** Prior to issuance of building permits, the project applicant shall submit landscaping plans to the City of American Canyon for review and approval demonstrating that the proposed landscaping would comply with the requirements in the City's Model Water Efficient Landscape Ordinance (AB 1881). The landscaping plan shall identify outdoor irrigation water conservation
measures, such as, but not limited to:

a. Drought-resistant vegetation;
b. Irrigation systems employing the following features:
    i. drip irrigation;
    ii. low-precipitation-rate sprinklers;
    iii. bubbler/soaker systems;
    iv. programmable irrigation controllers with an automatic rain shutoff sensors and flow sensing capabilities (ET Smart Controller);
    v. Matched precipitation rate nozzles that maximize the uniformity of the water distribution characteristics of the irrigation system;
    vi. Conservative sprinkler spacings that minimize overspray onto paved surfaces; and
    vii. Hydrozones that keep plants with similar water needs in the same irrigation zone

DocuSign Envelope ID: 7AAFD2FD-43DC-48EA-AB7F-988EE094E281

c. Minimally or gently sloped landscaped areas to minimize runoff and maximize infiltration; and
d. Organic topdressing in non-turf areas to decrease evaporation and increase water retention.

103. **COVID19 XXI-1.** The project applicant shall prepare a COVID-19 Exposure Control Plan which shall be included in the project construction site safety plan. The COVID-19 Exposure Control Plan shall comply with all regional and statewide orders related to the operation of construction sites and essential businesses during the COVID-19 pandemic, including but not limited to: social distancing requirements, masks for all workers, daily worker screening for potential symptoms, disinfecting protocols for all shared surfaces, avoidance of tool sharing, and provision of sufficient hand sanitizer for all workers. The COVID-19 Exposure Control Plan shall be submitted to the City of American Canyon Planning Department for review and approval prior to the issuance of grading permits.

PASSED, APPROVED and **ADOPTED** at a regularly scheduled meeting of the Planning Commission of the City of American Canyon held on the 25th day of March, 2021, by the following vote:

PC RESOLUTION 2021-12

A RESOLUTION OF THE PLANNING COMMISSION OF THE CITY OF AMERICAN CANYON RECOMMEND THE CITY COUNCIL OF THE CITY OF AMERICAN CANYON, CALIFORNIA, APPROVE A DESIGN PERMIT FOR THE OAT HILL MULTI-FAMILY PROJECT (PARCEL B), CONSISTING OF 85 DWELLING UNITS, A RECREATION BUILDING WITH LEASING OFFICE, 183 PARKING SPACES, AND APPROXIMATELY 47,000 SQUARE FEET OF LANDSCAPING ON A 7.2-ACRE PARCEL LOCATED ON THE EAST SIDE OF OAT HILL SOUTH OF NAPA JUNCTION ROAD, APN 058-320-001 (FILE NO. PL20-0023)

WHEREAS, on August 14, 2020, a Design Permit application was filed by Rick Hess Development Company for 85 dwelling units, a recreation building with leasing office, 183 parking spaces, and approximately 47,000 square feet of landscaping at the vacant 7.2-acre parcel located on east side of Oat Hill south of Napa Junction Road, APN 058-320-001 (File No. PL20-0023); and

WHEREAS, on August 14, 2020, RH Hess Development Company submitted a General Plan Amendment and Zone Change application to allow 85 dwelling units on approximately 7.2 acres on the east side of Oat Hill south of Napa Junction Road, APN 058-320-001 (File No. PL20-0026); and

WHEREAS, on August 14, 2020, RH Hess Development Company submitted a Tentative Subdivision Map to permit a subdivision of 85 multi-family condominium units on 7.2 acres located at Oat Hill (Parcel B), APN 058-380-008 (File No. PL20-0027); and

WHEREAS, on November 2, 2021, RH Hess Development submitted a Lot Line Adjustment (File No. PL20-0039) to convert the two parcels APN 058-380-008 and 058-320-001 from 11.3-acres and 9.5-acres to 13.6-acres and 7.2-acres, respectively; and

WHEREAS, pursuant to Section 65300 of the State Planning and Zoning Law, the City of American Canyon (City) has adopted a General Plan to provide comprehensive long-range planning and a blueprint of the City's future form, including land use and circulation maps that specify the roadway network and the distribution of types and intensities of land; and

WHEREAS, there is a critical shortage of residential housing for all levels of affordability in California; and

WHEREAS, the State of California Department of Housing and Community Development (HCD) and the Association of Bay Area Governments (ABAG) will soon commence the process to establish regional housing needs allocations (RHNA) for the greater San Francisco Bay Area; and

WHEREAS, in light of the State's housing shortage, HCD and ABAG is expected to increase significantly the obligation of the City of American Canyon ("City") to plan for additional housing within its municipal boundaries; and

WHEREAS, on January 21, 2020, the City Council declared residential uses are the best use of the Rick Hess property on Oat Hill (Resolution 2020-06); and

DocuSign Envelope ID: 7AAFD2FD-43DC-48EA-AB7F-988EE094E281

WHEREAS, the Planning Commission adopted Resolution 2021-XX recommending the City Council of the City of American Canyon to approve a Mitigated Negative Declaration and approval of the Mitigation Monitoring and Reporting Program for the project; and

WHEREAS, the Planning Commission has considered all of the written and oral testimony presented at the public hearing in making its decision; and

NOW, THEREFORE, BE IT RESOLVED that the American Canyon Planning Commission recommends the City Council approval of a Design Permit for the Oat Hill Project Parcel B (PL20-0023) based on the findings contained in Section 1, and the conditions of approval contained in Section 2.

SECTION 1: Design Permit Findings

A. The Oat Hill Project requires the following findings for the Design Permit. As stated in Chapter 19.41.050 ACMC, approval of a design permit application may be granted by the appropriate decision making authority only if all of the following findings are made:

1. The project complies with all applicable provisions of this title and any applicable approvals granted for the project by any decision making authority.

The project complies with all applicable provisions of this title.

2. The project and its design complies with any applicable design guidelines.

The project complies with all design guidelines and criteria of the Medium Density Residential (RM) zoning district.

3. The project and its design complies with all applicable general plan policies.
4.

The project proposes a General Plan Amendment and Zone Change to convert the parcel from Residential Estate (RE) to Medium Density Residential (RM). The proposed use is consistent with the RM designation in the General Plan in that multifamily residential uses are permitted by right. Because there is a critical shortage of residential housing for all levels of affordability in California, the proposed Oat Hill Multi-Family Residential general plan amendment will designate additional land to provide needed housing. Replacement of Light Industrial with a Specialty Commercial Overlay (LI:CS) zoning with High Density Residential (RH-1) zoning is in keeping with the following General Plan Goals that promote additional housing in American Canyon:

- *Goal 2A: "Provide sufficient residential land with adequate infrastructure to accommodate the City's fair share of projected growth, and to facilitate mobility within the ownership and rental markets."*
- *Goal 2B: "Provide a range of housing types within the community to accommodate a variety of incomes and lifestyles, and to enable residents to remain in American Canyon throughout their lives."*
- *Goal 2E: "Address the housing needs of all economic segments of the existing and future community, including the City's fair share of the regional housing need." The applicant proposes to address housing affordable to lower income residents by providing in-lieu impact fees, pursuant to the Inclusionary Housing Ordinance (ACMC Chapter 19.28).*

The project satisfies the following Land Use Element policies:

- *Goal 1E: "Ensure the development of residential neighborhoods that provide a range of housing opportunities to meet the physical, economic, and social needs of the population, are*

DocuSign Envelope ID: 7AAFD2FD-43DC-48EA-AB7F-988EE094E281

designed to exhibit a high quality and character, contain appropriate supporting services, and reflect their environmental setting." The design permit application associated with this property ensures that the development will exhibit a high quality and character. The project reflects its environmental setting by providing public access to locally-important views across the project site.

- *Policy 1.27.2: "Review all applications for new development, expansion of existing uses, and re-use within Napa County Airport Compatibility Zones "A" through "E" for compliance with the appropriate use and development conditions." A small portion of the northwest corner of Parcel B is located in Napa County Airport Compatibility Zone "D". The remaining property is located in Zone "E". Zone E permits multifamily development with approval of an avigation easement. The project approval requires an avigation easement. Therefore, there is no potential inconsistency between the General Plan Amendment and the Napa County Airport Compatibility Land Use Plan.*

5. The project complies with applicable policies of the Napa County Airport land use compatibility plan.

The Parcel B site is within the Napa County Airport Land Use Compatibility Plan (ALUCP) E-Zone, which does not conflict with residential use. As an added precaution and a condition of approval, the applicant will agree to record an avigation easement in favor of the Napa County Airport to indemnify them from noise complaints.

6. The project's quality and character are compatible with the surrounding area, unless physically deteriorated or blighted, and will not be materially detrimental to existing development.

The project proposes high quality residential buildings that enhances the landscape of Oat Hill. The applicant conducted viewing studies to ensure the residential buildings take advantage of the view sheds from Oat Hill and are also providing a new public walking trail with the project. The applicant also provided photo simulations that show the residential buildings blend in harmoniously with the Oat Hill setting.

7. The proposed design is compatible with existing development in the area in terms of scale, height, bulk, proportion, materials, cohesiveness, color, and the preservation of privacy.

The project design complies to the RM zoning district design standards and is compatible to existing development.

8. The design improves the community's appearance by avoiding both excessive variety and monotonous repetition.

The design of the residential buildings are of high quality and avoids excessive variety and repetition. They feature a hip roof, articulated entrances, functional balconies, separations in color, and recessed windows. The site also takes advantage of landscaping in the setbacks, common areas, and parking areas.

9. The proposed design promotes a harmonious transition in terms of scale and character between areas of different general plan land use designations and zoning districts.

The Oat Hill project provides an appropriate transition between lower density housing, located to the south and west of Oat Hill, and commercial and retail uses surrounding Highway 29. The development of housing on Oat Hill also would be compatible with the Broadway Specific Plan (BDSP). Although Parcels A and B are not within the boundaries of the BDSP, that plan designates land adjacent to the parcels as "Medium Density Residential," which permits 12 units/acre and is intended to foster a high-density residential community that is compatible with the existing older single-family residences in this area. Re-designating Parcels A and B to RH-1 and RM would allow for residential densities similar to those permitted in the Medium Density Residential area of the

DocuSign Envelope ID: 7AAFD2FD-43DC-48EA-AB7F-988EE094E281

Broadway Plan, and it would further establish a residential community that is compatible with surrounding uses.

10. The proposed design provides for adequate and safe on-site vehicular and pedestrian circulation.

The site will be graded for safe and adequate on-site circulation. A new section of Napa Junction Road would be constructed between two disconnected segments east and west of Hess Road. The new roadway and pedestrian connections would result in a more direct route to the project site from SR 29 and other areas of the City.

B. The Oat Hill Project requires the following additional findings related to design. General Plan Land Use Policy 1.8.4 requires that multi-family residential projects be designed to convey a high level of quality and distinctive neighborhood character in conformance with the following:

1. Treatment of building elevations to convey the visual character of individual units rather than a singular building mass and volume.

The building elevation is separated by three complimentary colors and supporting accents. The building has functional balconies, recessed windows, and defined main entries that reduce the building mass and volume.

2. Location of the elevation of the first occupiable floor at or in proximity to the predominant grade elevation, limiting the visibility of subterranean parking facilities from the street frontage.

The first floor of each building is accessible from ground level and parking facilities are accessible from the street level. The site will have clearly marked accessible paths of travel.

3. Inclusion of separate and well-defined entries to convey the visual character of individual identity for each residential unit, which may be developed as seen from exterior facades, interior courtyards, and/or common areas.

The buildings have defined entries that convey individual identity. Each building has two main entries that are recessed and doors facing the front elevation are painted in a light leather brown color. The covered garages of the units are hidden in the rear.

4. Siting and design of parking areas and facilities to be integrated with and not dominate the architectural character of the structure.

The site parking areas are integrated with the buildings and open spaces. The site is also facilitated with landscaping in the setbacks so that parking is not the dominant architectural feature.

5. Use of an adequate setback along the street frontage containing landscape, which provides physical and visual continuity with abutting sidewalks.

The applicant provided a preliminary landscaping plan that identified landscaped setbacks for street frontages. The landscaping consists of native trees, shrubs, and groundcover that will be supported with drip irrigation systems. The final landscaping plan shall comply with the City water efficient landscaping ordinance.

6. Provision of useable and functional private open spaces, including ground level patios where appropriate or enclosed balconies of adequate size for use.

The buildings include ground level patios and enclosed balconies with a minimum depth of 6 feet, which is consistent with medium density residential buildings in the neighboring Broadway District Specific Plan area.

7. Provides of sense of openness and unit separation while providing attractive locations for functional activities such as children's outdoor play, preferably within sight of each residential unit.

DocuSign Envelope ID: 7AAFD2FD-43DC-48EA-AB7F-988EE094E281

The site includes functional activity areas such as a courtyard between Buildings A and B, an open space area in front of Building C, an open space and pet area north of Building D, a recreation building, and a community loop walkway on the southern perimeter of the site.

SECTION 2. CONDITIONS OF APPROVAL

General

1. The Design Permit approval is granted for development of 85 dwelling units on 5 apartment buildings on a 7.2-acre parcel in the Medium Density Residential (RM) zoning district. The site will be supported with 183 parking spaces and approximately 94,000 square feet of landscaping at the vacant parcel, APN 058-320-001 (File No. PL20-0023), which shall be substantially shown on file in the Community Development Department, except as modified by conditions contained in this approval. Exhibit A includes the following:
    a. Architectural Plans prepared by William Hezmalhalch Architects (WHA) from San Ramon, CA, consisting of 20 sheets showing the proposed building elevations, floor plans, and roof plans, dated October 19, 2020.
    b. Site Plans prepared by Carlson, Barbee, and Gibson (CBG) from San Ramon, CA, consisting of 7 sheets showing the site plan, preliminary grading and drainage plan, and cross sections, dated February of 2021.
    c. Landscaping Plans prepared by Vander Toolen Associates from Sacramento, CA, consisting of 6 sheets showing the proposed landscaping plans, dated October of 2020.

2. The applicant shall defend, indemnify, and hold harmless the City of American Canyon ("City"), its elected officials, officers, employees, attorneys, representatives, boards, commissions, consultants, volunteers and agents from and against all claims, actions, including actions to arbitrate or mediate, damages, losses, judgments, liabilities, expenses and other costs, or proceedings against the City, its elected officials, officers, employees, attorneys, representatives, boards, commissions, volunteers, or agents to attack, modify, set aside, void, or annul an approval, conditional approval, permit, entitlement, environmental document, environmental clearance, mitigation plan, or any other document or any of the proceedings, acts, or determinations taken, done, or made prior to granting of such approval, conditional approval, permit, entitlement, environmental clearance, environmental document, mitigation plan, or other documents, by the City, including, without limitation, an action against an advisory agency, appeal board, or legislative body within the applicable limitation period.

    The obligation to defend, indemnify and hold the City harmless shall include the payment of all legal costs and attorney's fees (including a third party award of attorney's fees), arising out of, resulting from, or in connection with the City's act or acts leading up to and including approval of any environmental document or mitigation plan granting approvals to the applicant, incurred on behalf of, or by, the City, its elected officials, officers, employees, representatives, attorneys, boards, commissions, volunteers and agents in connection with the defense of any claim, action, or proceeding challenging the entire or a portion of an approval, conditional approval, permit, entitlement or any other document of any related claim.

    The obligation to defend, indemnify, and hold the City harmless shall include, but not be limited to, the cost of preparation of any administrative record by the City, staff time, copying costs, court costs, or attorney's fees arising out of a suit or challenge contesting the adequacy of a permit,

DocuSign Envelope ID: 7AAFD2FD-43DC-48EA-AB7F-988EE094E281

approval, conditional approval, entitlement, environmental document, mitigation plan, environmental clearance, or any other document or approval related to the applicant's project. The City will promptly notify the applicant of any claim, action, or proceeding and will cooperate fully in the defense. If the City fails to promptly notify the applicant of any claim, action, or proceeding, or the City fails to cooperate fully in the defense, the applicant shall not be responsible to defend, indemnify, or hold harmless the City.

In the event a legal challenge to a City permit, approval, conditional approval, environmental document, environmental clearance, mitigation plan, entitlement or any other document, proceeding, determination, or action related to the applicant's project is successful, and an award of attorneys' fees is granted against the City, the applicant shall be responsible to timely pay the full amount of such an award.

3. Appeal. The approval shall become effective on the expiration of the appeal period, ten calendar days following the decision, unless an appeal to the City Council is filed. An appeal may be filed with the Community Development Director by filling out an Appeal Form accompanied by a fee of $703. This approval is also subject to return of the "Applicant Confirmation of Conditions of Approval" form signed by the property owner. Should an appeal period end on a Saturday, Sunday or holiday, the final day for filing an appeal shall be the following Monday, or the next business day following a holiday. If there is no appeal, this approval will be final on April 5, 2021.

4. The applicant is responsible for paying all charges related to the processing of this discretionary case application within 30 days of the issuance of the final invoice or prior to the issuance of building permits for this project, whichever occurs first. Failure to pay all charges shall result in delays in the issuance of required permits or the revocation of the approval of this application.

5. The date upon which the approval is final shall be considered the day of the imposition of the fees, dedications, reservations and exactions required by these conditions approval for the purposes of protesting the imposition pursuant to California Government Code Section 66020.

6. Expiration of this Approval. If no construction permits have been issued and construction commenced within one year of the date upon which this approval is final, the approval shall become null and void and of no effect. An extension of time may be granted by the Community Development Director upon the written request by a responsible party before the expiration of the one-year period, provided that the Director can make the findings that there have been no substantial changes in the approved plans, and that there has been no change of circumstances which would prevent any of the required findings of approval being made.

7. All plans submitted for review and approval and all development shall be in substantial conformance with the approved exhibits, except where modified by a condition of approval. The Community Development Director or designee may approve minor changes to the project as approved by the Planning Commission on the plans submitted for the construction permits with a determination that the changes are in substantial compliance with the representation of the project as reviewed by the Planning Commission and City Council, that the proposed change will be in compliance with the required development standards, and the change will not materially affect adjacent private or public property.

DocuSign Envelope ID: 7AAFD2FD-43DC-48EA-AB7F-988EE094E281

8. The conditions of this Permit shall be printed on the first sheet of each plan set submitted for a building permit pursuant to this Design Permit, under the title "Design Permit Conditions". The second sheet may also be used if the first sheet is not of sufficient size to list all of the conditions. The sheet(s) containing the conditions shall be of the same size as those sheets containing the construction drawings; 8-1/2" by 11" sheets are not acceptable.

Planning

9. All new roof top equipment is required to be screened. The parapet shall be opaque and equal in height of the top of the rooftop mechanical equipment.

10. All ground mounted air conditioning and heating equipment facing Napa Junction Road shall be screened. The screen shall be made of wood and painted to be weather resistant.

11. Prior to the issuance of the site improvement plan, the applicant shall identify 10 bicycle parking spots for Parcel B. The bicycle parking spots shall be evenly distributed amongst the buildings.

12. The subdivision ordinance requires new projects to dedicate parkland on the basis of 5 acres per 1,000 population (ACMC Chapter 18.44). Based on the current project proposal of 85 dwelling units @ 3.49 persons per unit, the project generates a population of 297 people. This equates to a park dedication standard of 1.48 acres. The Subdivision Ordinance has provisions for a combination of park dedication and payment of a fee in-lieu of park dedication.

13. Prior to the issuance of the first building permit, the applicant is required to pay all applicable impact fees. For your information, the following table identifies the fees and their rates. Please note that the City fees are subject to change and the applicant is required to pay the updated fee at the time of building permit issuance. The applicant is required to pay Fire Mitigation fees separately at the Fire District.

Parcel B Fee	Rate	Calculation	Cost
Affordable Housing Nexus	$3.82 per SF	118,560 SF per plans	$ 452,899.20
Parks and Recreation Fee	$5806.38 per unit	85 units per plans	$ 493,542.30
Civic Facility Fee	$1685.61 per unit	85 units per plans	$ 143,276.85
General Plan Update Fee	$89.59 per unit	85 units per plans	$ 7,615.15
Traffic Impact Fee	$618.18 per trip	462 trips estimated	$ 285,599.16
Water Capacity Fee (Estimated)	$11,599 per unit plus $26.25 per gpd	85 units per plans plus irrigation demand in gpd	$985,915.00
Wastewater Capacity Fee (Estimated)	$6,952.00 per unit	85 units per plans	$590,920.00
		Impact Fees Subtotal	**$ 2,959,767.66**

14. Prior to the issuance of the first building permit, the applicant shall provide proof of payment or exemption for Napa Valley Unified School District (NVUSD) developer fees. For more information, see their website here: https://www.nvusd.k12.ca.us/developerfees .

DocuSign Envelope ID: 7AAFD2FD-43DC-48EA-AB7F-988EE094E281

15. Prior to the issuance of the first building permit or the recordation of the final map, whichever occurs first, an Avigation Easement shall be recorded. The Avigation Easement shall cover all portions of the property and include:
    a. Right-of-flight at any altitude above an easement surface elevation, established based on either Part 77 of the Federal Aviation Regulations or FAA Terminal Instrument Procedures Standards (TERPS), whichever is controlling (glide slope in approach is the controlling factor).
    b. Right to cause noise, vibration, fumes, dust, and fuel particle emissions.
    c. Right to prevent erection or growth of all objects above the easement surface.
    d. Right to prohibit creation of electrical interference, unusual light sources, and other hazards to aircraft flight.

16. Prior to the Certificate of Occupancy, the applicant shall complete the public access trail that meanders from the site entry, traversing all the identified look-out points, and reaches the northwest side of the site.

Landscaping

17. The applicant shall agree to a licensing agreement that requires them to maintain the landscaping within the right-of-way along the project frontage. Prior to final inspection of the building permit, the applicant shall amend their facilities operation and maintenance plan (O&M plan) to include this activity.

18. Prior to the issuance of the Building Permit, the applicant shall submit a final landscaping plan. The landscape plan shall comply with the requirements of the California Government Code 65591 et. seq. known as the Water Conservation in Landscaping Act as set out in the model water efficient landscape ordinance adopted by the California Department of Water Resources and amended in 2015. All plant material shall be served by a city-approved automatic irrigation system.

19. Prior to the issuance of a certificate of occupancy, all landscaping shall be completed and the project's landscape architect shall provide a written certification that all plant materials have been installed in accordance with the approved landscape plan.
20. All planting shall be maintained in good growing condition. Such maintenance shall include, where appropriate, pruning, mowing, weeding, cleaning of debris and trash, fertilizing and regular watering. Whenever necessary, planting shall be replaced with other plant materials to insure continued compliance with applicable landscaping requirements. Required irrigation systems shall be fully maintained in sound operating condition with heads periodically cleaned and replaced when missing to insure continued regular watering of landscape areas, and health and vitality of landscape materials.

21. All tree stakes and ties shall be removed within one year following installation or as soon as trees are able to stand erect without support.

22. Clear sight triangles shall be maintained at all driveways. Low-lying plantings and other site fixtures, including signs, shall be no taller than 30 inches within the site's vision triangles.

Building and Safety

DocuSign Envelope ID: 7AAFD2FD-43DC-48EA-AB7F-988EE094E281

23. The applicant shall have the detailed building and site plans reviewed by a Certified Accessibility Specialist to verify that the proposed construction will comply with accessibility requirements. Each application for site construction or building permit shall be accompanied by a written report from a Certified Accessibility Specialist verifying that the site and building design as shown on the submitted plans comply with all accessibility requirements.

24. Prior to the issuance of a certificate of occupancy, the applicant shall submit a letter of certification to the Building Official from the project architect and civil engineer certifying that all improvements have been constructed in accordance with the approved building plans. Determination of consistency shall be subject to the review and approval of the Building Official.

25. Site Improvement plans shall show slopes of all sidewalks and walkways and paths of travel to use site facilities including trash/recycling facilities. The applicant shall have the detailed building and site plans reviewed by a Certified Accessibility Specialist to verify that the proposed construction will comply with accessibility requirements. Each application for site construction or building permit shall be accompanied by a written report from a Certified Accessibility Specialist verifying that the site and building design as shown on the submitted plans comply with all accessibility requirements.

26. Recycling of Construction and Demolition Debris: Prior to issuance of a building permit the applicant shall submit a plan for the diversion of at least 70 percent of the debris from the building demolition and construction. The plan shall include the qualified recycler that will be used, the methods of managing diversion of construction materials on site, and the proposed documentation that will be submitted to confirm that the diversion goal has been met.

Fire District

General Fire District Conditions

27. In accordance with the standard mitigation measures and conditions of approval set forth by the City of American Canyon, the developer shall pay the Fire Impact Fees (see current Standard Fees and Charges adopted by resolution), prior to the issuance of any building permits.

28. Buildings in excess of two stories shall pay Aerial Apparatus mitigation fees prior to the issuance of any building permits. (see current Standard Fees and Chares adopted by resolution).

29. The project will require an annual fire and life-safety inspection under the "R (Residential) Occupancy Inspection Program". The R Occupancy Inspection Program has been developed to allow Fire District to meet requirements set forth by the State of California. The California Health and Safety Code, Section 13146.2 (a) mandates that inspections be completed at all "R occupancies" annually. California Health and Safety Code Section 13146.2 (b) provides the Fire District legal authority to charge property owners to recover reasonable costs for providing these inspections.

30. New buildings and additions to existing buildings shall conform to requirements set forth in the currently adopted editions of the California Building Code, California Fire Code, City of American Canyon standards and Nationally Recognized Standards.

DocuSign Envelope ID: 7AAFD2FD-43DC-48EA-AB7F-988EE094E281

31. There shall be no deferred submittals for fire protection equipment and related utilities. Fire protection plans shall not be attached to or bound with the building plan submittal package. This includes but is not limited to Automatic Fire Sprinkler, Fire Alarm, Fixed Fire Protection and Civil plans.

32. All Fire related underground piping and fire appurtenances shall be shown on the Civil plan submittal. In addition to the Civil plan submittal, at least (1) plan set under separate cover shall be submitted to American Canyon Building Division for routing to the American Canyon Fire Protection District detailing all underground piping and related fire appurtenances including but not limited to underground piping, underground sweep detail, underground trench details showing depth of burial, type of backfill, manufacturer's specifications of piping, valves joints, fittings and calculated size and locations of thrust blocks, hydrants locations (designate public or private), gate shut-off valves, PIV's, FDC's, fire pumps, fire pump and/or riser rooms.

33. Underground utility contractor, architect and fire sprinkler contractor shall coordinate the location of risers and control valves prior to the issuance of a building permit.

34. Fire District plan review shall be based on the information submitted at the time of permit application. Any changes to the approved/permitted scope of work including additions, alterations, demolition, repair or a change in occupancy/use may impact the project requirements, including but not limited to the installation of additional fire protection systems or components.

Fire Protection

35. An approved water supply capable of supplying the required fire flow for fire protection systems shall be provided to all premises upon which facilities or buildings are hereby constructed or moved into or within the City. Required fire flow and hydrant distribution shall be in accordance with Appendix B and C of the California Fire Code. Applicant shall demonstrate on plan submittal; square footage of each building on plan and provide the required fire flow information. Applicant shall demonstrate that the number and spacing of onsite fire hydrants meets with requirements of the California Fire Code. ***See sample below regarding fire flow and hydrant detail information needed***.

BUILDING FIRE FLOW REQUIREMENTS – CFC TABLES B105.2 & B105.1(2)

INFORMATION BELOW IS A SAMPLE AND FOR REFERENCE ONLY

Table B105.1(2) – Building size = 129, 600 square feet
Construction type = Type IIA
FF = 5,250 gpm at 20 psi
Duration = 4 hours

Table B105.2 – Fire sprinkler allowance = - 50%
5,250 – 2,625 = 2,625 gpm
FF = 2,625 gpm @ 20 psi
Duration = 2 hours

Table CC105.1 – Approximate number of hydrants = 3

DocuSign Envelope ID: 7AAFD2FD-43DC-48EA-AB7F-988EE094E281

Average spacing = 400 feet + 25% allowable increase = 500
Maximum distance from street or frontage = 225 feet = 50% allowable increase = 337.5

36. Fire Protection systems shall be installed in accordance with provisions set forth in the California Fire Code as amended by the City of Napa and the applicable National Fire Protection Association Standard.

37. The fire protection equipment shall be located within an interior room having an approved exterior access door or in an exterior enclosure attached to the building, specifically, for the purpose of housing such equipment.

38. The City of American Canyon requires that a fire hydrant be in service within 250 feet of the furthest point of construction prior to the stockpiling of combustible materials for the beginning of construction.

39. Fire District Connections (FDC) shall be located not more than 100 ft. from the nearest fire hydrant.

Fire District Access

40. Fire Apparatus Access Roads shall be designed in accordance with provisions set forth in the California Fire Code Chapter 5 and Appendix D as amended by the City of American Canyon and the applicable Public Works Standard.

41. Fire apparatus access roads shall have an unobstructed minimum width of 20 feet (curb to curb) and a minimum unobstructed vertical clearance of 13' 6". They shall have an all-weather paved surface capable of supporting a GVW of 71,000 pounds.

42. Access roads shall be completed with all-weather surfaces prior to the stockpiling of combustible materials or beginning combustible construction. Fire apparatus access shall be provided to within 150 feet of the most remote portions of all building from an approved exterior route. If this cannot be achieved fire apparatus turn arounds will be needed.

43. Fire apparatus access roads shall not be obstructed in any manner, including the parking of vehicles. Vertical traffic calming in the form of speed pumps, humps or dips are prohibited along fire access roads without prior approval of the fire Code Official. The minimum width and clearances established in Section 503.2.1 shall be maintained at all times.

44. When required by the Fire Chief, fire apparatus access roads shall be designated as Fire Lanes and appropriate signs and/or markings installed in accordance with the California Vehicle Code and approved City standards.

45. Where applicable improvement plan submittals for permit shall include locations of fire lane red curbing and fire lane signage. Please refer to and include City Public Works Standard FP-2A & 2B with plan submittals for permitting.

Public Works General Conditions of Approval

DocuSign Envelope ID: 7AAFD2FD-43DC-48EA-AB7F-988EE094E281

46. The Applicant shall be responsible for all City plan check, map check and inspection costs. The Applicant shall establish a Developer Deposit Account with the City upon the initiation of plan check services. The amount of the initial deposit shall be determined by the City Engineer. Additional funds may be required based upon actual costs.

47. All improvements shall be designed in accordance with the American Canyon Municipal Code (ACMC), City of American Canyon Engineering Standard Plans and Specifications for Public Improvements (City Standards), except as specifically noted otherwise in these conditions.

48. All new utilities to serve the project, shall be placed underground. Exceptions may be allowed for surface mounted transformers, pedestal mounted terminal boxes and meter cabinets.

49. Unless otherwise explicitly permitted, all existing wells, septic tanks and/or underground fuel storage tanks shall be abandoned under permit and inspection of Napa County Department of Environmental Services or other designated agency. If there are none, the project engineer shall provide a letter describing the scope of the search done to make this determination.

50. A detailed Soils Investigation/Geotechnical Report shall be prepared and submitted for review. The report shall address, at a minimum, potential for liquefaction, R-values, expansive soils and seismic risk. The improvement plans shall incorporate all design and construction criteria recommended in the Geotechnical Report.

51. A drainage report prepared by a California Registered Civil Engineer shall be submitted for review with the initial submittal of the Improvement Plans. The report shall include detailed hydrologic and hydraulic calculations to support the design and sizing of all public and private drainage facilities including storm drains and detention facilities. The report shall include an analysis of the capacity of existing downstream storm drain facilities and hydraulic conditions which may impact the design of proposed facilities and improvements.

52. A final detailed post-construction Stormwater Control Plan (SWCP) that identifies and sizes all permanent post-construction stormwater treatment BMPs shall be prepared and submitted for review and approval. The SWCP shall be prepared in accordance with the latest edition of the Bay Area Stormwater Management Agencies Association (BASMAA) Post-Construction Manual and the requirements of the State Water Resources Control Board Phase II Municipal Separate Storm Water System (MS4) General Permit (Order 2013-0001 DWQ). It is the City's discretion whether to accept alternative treatment facilities other than bioretention.

53. A Post Construction Stormwater Operations and Maintenance Plan that includes a plan sheet showing all storm drain and water quality infrastructure that is to be maintained, along with detailed instructions and schedules for the ongoing maintenance and operation of all post-construction stormwater BMPs shall be submitted for review and approval by the City Engineer. Once approved, the property owner(s) shall enter into an agreement with the City that provides the terms, conditions, and security associated with the ongoing requirements of the post-construction Stormwater Best Management Practices.

54. A Final Map, as defined in the Subdivision Map Act, shall be prepared by a licensed surveyor or civil engineer. The Final Map shall show all parcels, rights-of-way, and easement(s), and shall be

DocuSign Envelope ID: 7AAFD2FD-43DC-48EA-AB7F-988EE094E281

submitted to the City Engineer for review. The Final Map shall be in substantial conformance with the approved Tentative Map and all applicable conditions of approval. The Final Map is not valid until it has been approved by the City and recorded. Closure calculations shall be provided at the time of initial Final Map submittal. All calculated points within the map shall be based upon one common set of coordinates. All information shown on the Final Map shall be directly verifiable by information shown on the closure calculation printout. The point(s) of beginning shall be clearly defined. All lot acreages shall be shown on the Final Map and shall be verifiable from information shown on the closure calculation printout. A current title report (within past 30 days) shall be submitted at the time of initial Final Map submittal.

55. Subject to the terms of Condition 56, the Applicant shall secure all necessary rights-of-way and public and private easements for both onsite and offsite improvements. The Applicant shall prepare all necessary legal descriptions and deeds.

56. To the extent any offsite public improvements require the acquisition of property not currently owned by the Applicant or the City, the Applicant shall first make a good-faith effort to acquire the necessary property rights, however if the Applicant makes such an effort and is unable to acquire such rights, then the Applicant may request the City acquire the necessary property rights through the exercise of eminent domain provided that the Applicant enters first into an agreement with the City to pay for all costs incurred by the City to acquire such rights and if the City does not acquire the rights necessary to allow the offsite public improvements to be completed by the Applicant within statutory timeline provided by law, then the Applicant shall be relieved of the obligation to construct those off-site improvements only to the extent they require property not currently owned by the Applicant or the City. The Applicant shall make a good-faith effort to identify and acquire the necessary property rights at the earliest opportunity. A good faith offer includes identification of property rights needed (permanent and temporary), appraisal of the value of the highest and best use of the property, and a bonafide offer to pay this amount at the close of escrow.

57. The Applicant shall submit site Improvement Plans, prepared by a registered Civil Engineer, for review and approval of the City's Public Works Department. **Please be aware that this is separate submittal from the building permit application.** The final plan set shall include all civil, landscape and joint trench drawings under a single cover sheet. No final grading or other construction shall be performed until the Improvement Plans have been approved. The Applicant shall not begin clearing, grubbing, or rough grading at the site prior to approval of the Improvement Plans, unless explicitly approved by the City of American Canyon through the standard grading and utilities only permit process. An Encroachment Permit is required for any work within City right of way. Encroachment Permits will not be issued prior to the approval of the Improvement Plans.

58. Cathodic protection shall be provided for all water valves, fittings, hydrants, meters, backflow devices, ductile iron pipe, and other metal appurtenances, regardless of the findings of any soils corrosivity analysis.

59. The Applicant shall keep adjoining public and private streets free and clean of project dirt, mud, materials, and debris during the construction period in accordance with an approved SWPPP and Erosion and Sediment Control Plan using appropriate BMPs and as is found necessary by the City Engineer.

DocuSign Envelope ID: 7AAFD2FD-43DC-48EA-AB7F-988EE094E281

60. If any hazardous material is encountered during the construction of this project, all work shall be immediately stopped and the Fire District, Napa County Department of Environmental Services or other designated agency, and the City Inspector shall be notified immediately. Work shall not proceed until clearance has been issued by all of these agencies.

61. Prior to final preparation of the subgrade and placement of base materials, all underground utilities shall be installed and service connections stubbed out behind the sidewalk. Public utilities, Cable TV, sanitary sewers, and water lines shall be installed in a manner that will not disturb the street pavement, curb, gutter and sidewalk, when future service connections or extensions are made.

62. Where soil or geologic conditions encountered in grading operations are different from that anticipated in the soil and/or geologic investigation report, or where such conditions warrant changes to the recommendations contained in the original soil investigation, a revised soil or geologic report shall be submitted for approval by the City Engineer. Additionally, if field conditions warrant installation of any subdrains, the location, size and construction details must be provided to the City for review and approval prior to construction.

63. All new fire hydrants shall be covered with burlap sacks until the hydrants have been tested and found to be in conformance with City flow requirements. No storage of combustible materials or construction of building shall be permitted until all hydrants meet City flow requirements.

64. Prior to placing the final lift of asphalt, all public storm drains and sanitary sewer lines shall be video inspected at the Applicant's expense. All video media (CD, DVD, or portable hard drive) shall be submitted to the City. If any inadequacies are found, they shall be repaired prior to the placement of the final lift of asphalt.

65. All streets, curbs, gutters, sidewalks or other public facilities damaged in the course of construction associated with this Project shall be the responsibility of the Applicant and shall be repaired to the satisfaction of the City at the Applicant's expense.

66. After all of the new underground utilities within existing public streets have been installed, the entire affected areas shall be milled and repaved to present a neat finished pavement area. Multiple trench patches are not acceptable.

67. All construction stormwater pollution prevention best management practices (BMP's) shall be installed as the first order of work and in accordance with the State Water Resources Control Board's General Construction Permit for Stormwater Discharges Associated with Construction and Land Disturbance Activities (Order 2009-0009-DWQ, as amended), the Applicant's Storm Water Pollution Prevention Plan (SWPPP), and the City's Erosion and Sediment Control Plan in accordance with the City's MS4 Permit. All stormwater BMP's shall be maintained to the satisfaction of the Qualified SWPPP Developer (QSD), Qualified SWPPP Practitioner (QSP), and the City Engineer.

68. With the exception of water used for loading and testing of potable water lines, all construction water used for the project shall be obtained from a source other than American Canyon potable water sources. The Applicant shall provide verification that an outside source of construction

DocuSign Envelope ID: 7AAFD2FD-43DC-48EA-AB7F-988EE094E281

water, e.g., recycled water, has been established and will be available for the duration of the project construction.

69. The development shall comply with the City's Zero Water Footprint policy.

70. All landscaping irrigation systems shall include an ET/SMART controller.

Public Works Special Conditions of Approval

71. The Applicant shall submit Improvement Plans prepared by a registered Civil Engineer (Engineer of Record) in substantial conformance with the preliminary civil plans titled "Design Review Oat Hill Multi-Family – Parcel A" prepared by Carson, Barbee & Gibson Civil Engineers, dated February 2021 (Preliminary Plans), except as modified by these conditions.

72. Improvement Plans shall be tied to the State of California coordinate system.

73. The Applicant shall design and construct all of the Public Improvements as generally described below and in accordance with the project's Fee Credit/ Fee Reimbursement Agreement, as applicable.

    a. Napa Junction Road Improvements:
        i. Construct an approximately 300-foot segment of Napa Junction Road between the Hess Road/Napa Junction Road intersection and the existing roadway fronting Napa Junction Magnet Elementary School. The preliminary roadway shall have a curb-to-curb with of 40-feet with 5-foot wide (includes curb width) attached sidewalks on both sides. The final roadway section shall be as determined by the City Engineer. The extent of the roadway construction may be extended as necessary to meet City roadway geometric standards.

        ii. Construct a new 5-foot wide (includes curb width) attached sidewalk along the south side of Napa Junction Road between the east end of the new road segment described above to the existing sidewalk approximately 100-feet west of Theresa Avenue.

        iii. Construct a new 5-foot wide attached sidewalk along the south side of Napa Junction Road between its intersection with Hess Road and the west end of Parcel A's frontage.

        iv. The cost of these improvements will qualify for a credit against the project's Traffic Impact Fee.

    b. Water Main Replacement in Napa Junction Road:
    Replace approximately 590 linear feet of the existing 6-inch water main in Napa Junction Road with a new 12-inch water main between the intersection with Theresa Avenue to the intersection with Hess Road, connecting to the existing water mains in those intersections. The cost of these improvements will qualify for a credit against the project's Water Capacity Fee.

DocuSign Envelope ID: 7AAFD2FD-43DC-48EA-AB7F-988EE094E281

c. Sanitary Sewer Main Replacement in Napa Junction Road and Theresa Avenue:
Replace approximately 1,800 linear feet of the existing 6-inch sanitary sewer mains in Napa Junction Road between Hess Road and Theresa Avenue and in Theresa Avenue from Napa Junction Road to a point approximately 1,200 linear feet south thereof with new 8-inch and 10-inch sanitary sewer mains. The Engineer of Record shall conduct a capacity analysis for the new sanitary sewers to determine where it should upsize from 8-inch to 10-inch. The cost of these improvements will qualify for a credit against the project's Wastewater Capacity Fee.

d. Recycled Water Main in Lombard Road and Hess Road:
Install approximately 1,300 linear feet of a new 8-inch recycled water main in Lombard Road between the cul-de-sac at its northern terminus and Hess Drive and in Hess Drive between Lombard Road and the Little League fields. This recycled water main will be assumed to provide a sufficient potable water demand offset to comply with the City's Zero Water Footprint policy for both the Oat Hill Parcel A and Oat Hill Parcel B projects.

Note that the Tentative Map for Oat Hill Parcel B is subject to conditions of approval to construct the same Public Improvement described above. In the event that any of those public improvements are constructed in conjunction with the development of Oat Hill Parcel B prior to the development of Oat Hill Parcel A, then the corresponding condition of approval for Oat Hill Parcel A will be considered to have been met.

74. The Applicant shall construct all of the on-site private drive isles, parking spaces, walks, water, recycled water, sanitary sewer, storm drainage and stormwater quality and landscaping **"Private Improvements"** generally shown on the Preliminary Plans and more specifically described below. All private drive isles, parking spaces, walks, water, sewer, storm drainage and stormwater quality improvements shall be designed in accordance with the City of American Canyon Engineering Standard Plans and Specifications for Public Improvements (City Standards), except as specifically noted otherwise in these conditions.

a. Storm Drain Facilities:
Construct private on-site drainage facilities, detention facilities, and other appurtenances to collect and convey all surface drainage to an approved private storm drain facility or outfall. Onsite drainage facilities shall provide for the positive drainage of all adjacent upstream or upgrade properties to prevent ponding. Existing run-on from adjacent properties shall not be obstructed and shall be conveyed onsite. Off-site peak storm water discharge shall not exceed 90% of the undeveloped peak flow from the 24-hour, 100-year event. The storm drains and detention facilities shall be substantially consistent with the Preliminary Plans. However, the sizing of all storm drains and detention facilities shall be determined by the approved final drainage report.

b. Stormwater Quality Facilities:
Permanent on-site private post-construction stormwater treatment BMPs shall be designed and constructed in accordance with the approved final SWCP. Runoff from all roof drains shall be conveyed to the onsite stormwater treatment facilities.

c. Emergency Vehicle Access Road

DocuSign Envelope ID: 7AAFD2FD-43DC-48EA-AB7F-988EE094E281

Construct a 20-foot wide paved vehicle road on Oat Hill Parcel A and across Oat Hill Parcel B connecting to Napa Junction Road.

75. Prior to SUBMITTAL OF THE IMPROVEMENT PLANS, the Applicant shall:
    a. Submit the City's "Improvement Plan Checklist".

    b. Pay an initial cash deposit for City plan check services in amount to be determined by the City prior to the time of submittal. The Project engineer shall contact City staff to discuss submittal details to determine initial deposit amount.

    c. Provide the following:
        i. Public Street Repair Plan
        ii. Utility Plan and Joint Trench Plan
        iii. Construction Storm Water Pollution Prevention Plan (SWPPP) and a City Erosion and Sediment Control Plan (ESCP)
        iv. Drainage Report
        v. Post-Construction Stormwater Control Plan (SWCP)
        vi. Geotechnical Report
        vii. Construction Traffic Control Plan.

    d. Pothole and physically determine (by way of a survey performed by the Engineer of record) the actual horizontal location and vertical depth of all existing underground utilities throughout the proposed areas of work and provide the design of all new utility installations required to serve the project including a schedule for implementation of such work as to prevent disrupting of utility service to adjacent properties.

76. Prior to APPROVAL OF THE IMPROVEMENT PLANS, the Applicant shall:

    a. Provide written acknowledgment by the Geotechnical Engineer of Record that the Plans incorporate all design and construction criteria specified in the Geotechnical Report.

    b. Subject to the terms of Condition 56, acquire the public right-of-way and all rights of entry and/or temporary and permanent easements necessary for the construction of the Napa Junction Road improvements described above. Applicant shall prepare the legal descriptions, plats and deeds and submit them to the City for review. The location of all such rights on the Plans.

    c. Record a City approved lot line adjustment between Oat Hill Parcel A and Oat Hill Parcel B as shown on the Tentative Map and Preliminary Plans.

    d. Furnish proof that all permits that may be required by the California Department of Fish & Game, State and Regional Water Quality Control Board, US Army Corps of Engineers and any other regulatory agencies with jurisdiction over the proposed construction have been obtained.

    e. Complete and submit the City's Erosion and Sediment Control Plan (ESCP) Template. Applicant may refer to a SWPPP, as appropriate, by referencing page number within the SWPPP that addresses the requirements of the ESCP.

DocuSign Envelope ID: 7AAFD2FD-43DC-48EA-AB7F-988EE094E281

f. Submit a copy of the Notice of Intent and WDID# for coverage under the State Water Resources Control Board' General Construction Permit for Stormwater Discharges Associated with Construction and Land Disturbance Activities (Order 2009-0009-DWQ).

77. Prior to COMMENCEMENT OF CONSTRUCTION ACTIVITIES, the Applicant shall:

a. Pay off all current account balances with the City of American Canyon.

b. Pay an inspection fee in amount to be determined at the time of commencement for the City's inspection of the Public Improvements.

c. Conduct a pre-construction meeting with representatives of the City whereby the Applicant, the Legally Responsible Party (LRP), Qualified SWPPP Practitioner (QSP), Qualified SWPPP Developer (QSD), and/or the Contractor provides the following:

i. Six (6) full-size bond copies of the approved Improvement Plans for the City's use.
ii. One (1) job-site copy of the latest edition of the City Standards for the Contractor use.
iii. One (1) job-site copy of the SWPPP for use by the LRP, QSP, QSD, and Contractor.
iv. Electronic copies of Improvement Plans and SWPPP

78. Prior to RECORDATION OF THE FINAL MAP, the Applicant shall:

a. Construct all of the Public and Private Improvements to the satisfaction of the City. Alternatively, the Applicant may enter into a Subdivision Improvement Agreement with the City agreeing to complete all of the Public and Private Improvements prior to Occupancy of the first unit. Such an Agreement will require the Applicant to provide bonds, proof of workers compensation insurance, and general liability insurance in the forms and amounts as deemed satisfactory to the City.

b. Establish a Homeowner's Association (HOA) in accordance with State law with recorded Codes, Covenants, & Restrictions (CC&Rs) that are satisfactory to the City Engineer and City Attorney to provide long-term and ongoing maintenance of all of the Private Improvements identified above. Specifically, the HOA will be responsible for the long-term and ongoing maintenance of the private streets, sidewalks, streetlights, domestic water facilities including the water booster pump station, sewers, storm drain facilities and stormwater quality facilities within the limits of the subdivision. The City will have enforcement authority over the HOA's maintenance obligations and the obligation to review and approved proposed changes amendments to the CC&R's. The CC&R's shall require the HOA to create and maintain a separate maintenance reserve fund in the amount of a percentage of the cost of constructing the HOA maintained improvements listed above. Said percentage will be determined by the City prior to recordation of the CC&Rs.

c. Establish a Shared Maintenance Agreement or such similar agreement between the owners of Oat Hill Parcel A and Oat Hill Parcel B for the long term and ongoing maintenance and operation of all shared private improvements. Specifically, the parcel

DocuSign Envelope ID: 7AAFD2FD-43DC-48EA-AB7F-988EE094E281

owners shall be responsible for the ongoing maintenance and operation of all onsite stormwater quality facilities, shared storm drains and the shared emergency vehicle access road. The Shared Maintenance Agreement shall be prepared to run with the land of each parcel. The Shared Maintenance Agreement shall be submitted to the City for review and approval prior to recordation.

d. Generally, in substantial conformance with that which is shown on the approved Tentative Map, convey all easements and dedications, public and private, for the construction, use and/or maintenance of roads or other access, drainage facilities, utilities and post-construction storm water management facilities on the Final Map or by separate instruments. All dedications to the City shall be irrevocable offers of dedication. Specific public conveyances include:
    i. A public utility easement (PUE) 5-foot in width along the south side of Napa Junction Road across the frontage of Oat Hill Parcel B.
    ii. A strip of public street right-of-way of varying width and having an area of approximately 4,150 square feet as shown on the Tentative Map for Condominium Purposes Oat Hill Multi-family Parcel B.

e. Furnish documentation that the existing PG&E pole line easements (Book 1061 Page 114 and Book 1355 Page 779 O.R.) have been quit claimed.

f. Obtain all necessary easements over Oat Hill Parcel B including easements for emergency vehicle access and storm water conveyance and detention facilities through recorded separate instruments.

g. Furnish proof of the payment of the mapping service fee as required by Napa County Board of Supervisors Resolution No. 92-119.

79. Prior to APPROVAL OF A BUILDING PERMIT, the Applicant shall:

a. Pay all account balances and current City and American Canyon Fire Protection District fees (Mitigation and Capacity) shown in Condition 13.

80. Prior to ACCEPTANCE OF IMPROVEMENTS, the Applicant shall:

a. Restore all adjacent off-site road surfaces to pre-project conditions.

b. Submit a certification by the Geotechnical Engineer of Record that all the work has been completed in substantial conformance with the recommendations in Soils Investigation/Geotechnical Report.

c. Provide a mylar and digital copy of the Improvement Plans that include all as-built or field changes, in digital AutoCAD (.dwg) and (.pdf) format (void of any AutoCAD block formats preventing full editing capabilities of the drawings), compatible with the City's current version, and tied to the NAD83 (California Zone 2, feet) coordinate system.

d. Provide a letter stating that all of the Developer's Conditions of Approval have been met.

DocuSign Envelope ID: 7AAFD2FD-43DC-48EA-AB7F-988EE094E281

e. Provide a letter from the Civil Engineer of Record certifying that all the site improvements were constructed and inspected in substantial conformance with the approved plans and City Standards.

f. Enter into and record a post-construction Stormwater Operations and Maintenance Agreement with the City.

Oat Hill Parcel B – Mitigation Measures

The following are the applicable mitigation measures from the certified Mitigated Negative Declaration report. The following mitigation measures shall be complied with in accordance with the adopted Mitigation Monitoring and Reporting Program (MMRP) by the City Council.

81. **AES I-1.** Prior to issuance of building permits, the applicant shall prepare and submit a detailed lighting plan for review and approval by the Community Development Department. The plan shall show conformance with City performance standards for street lighting and glare, including shielding of all on-site lighting so that light is directed within the project site and does not illuminate adjacent properties, and indicate the location and design of proposed lighting and lighted signs. The applicant shall implement the final plan as approved by the City.

82. **AQ III-3.** Prior to the issuance of a grading permit, the project applicant shall indicate via notation on project construction plans that all off-road construction equipment used for the roadway extension along Napa Junction Road, including owned, leased, and subcontractor vehicles, shall meet the California Air Resources Board's (CARB's) Tier 4 emissions standards. The construction plans shall be submitted for review and approval to the City of American Canyon Community Development Department.

83. **BIO IV-1.** Prior to project initiation, pre-construction surveys shall be conducted by a qualified biologist within a 0.5-mile radius around all project activities, including on-site and off-site work, and shall be completed for at least two survey periods prior to starting Project activities. The survey period timing and methodology shall be conducted in accordance with the Swainson's Hawk Technical Advisory Committee's Recommended Timing and Methodology for Swainson's Hawk Nesting Surveys in California's Central Valley (2000), which identifies different survey windows throughout the pre-nesting and nesting season (ranging from January 1 through July 30/post-fledging) that have different survey methodologies and requirements. A letter report summarizing the survey results shall be submitted to CDFW for review and written acceptance prior to starting Project activities. The survey results shall also be submitted to the Community Development Department within 30 days following the final survey. If active Swainson's hawk nests are not identified on or within 0.5-mile of the project site within the survey periods, further avoidance and minimization measures for Swainson's hawk nesting habitat are not required

84. **BIO IV-2.** If Swainson's hawks are found to be nesting on the project site or within 0.5-mile of the project site, the project proponent shall either, a) delay project activities until all Swainson's hawk nests within 0.5-mile of the project site are no longer active, as determined by a qualified biologist, b) determine if the 0.5-mile buffer zone may be reduced in consultation with CDFW based on site-specific conditions, or c) if take cannot be avoided, obtain a CESA Incidental Take Permit from CDFW prior to starting project activities.

DocuSign Envelope ID: 7AAFD2FD-43DC-48EA-AB7F-988EE094E281

85. **BIO IV-3.** Prior to initiation of ground disturbance, a qualified biologist shall conduct nesting and/or wintering owl surveys, as appropriate, in accordance with the California Department of Fish and Game (now CDFW) 2012 Staff Report on Burrowing Owl Mitigation survey methodology (see https://wildlife.ca.gov/Conservation/Survey-Protocols#377281284-birds). Surveys shall encompass the project area and a sufficient buffer zone to detect owls nearby that may be impacted. Time lapses between surveys or project activities shall trigger subsequent surveys including but not limited to a final survey within 24 hours prior to ground disturbance before construction equipment mobilizes to the project area. The qualified biologist shall have a minimum of two years-experience implementing the CDFW 2012 Staff Report survey methodology resulting in detections. A letter report summarizing the survey results shall be submitted to the Community Development Department within 30 days following the pre-construction survey. If burrowing owls are not present on-site or adjacent to the site where they may be disturbed during pre-construction surveys, further avoidance and minimization measures for burrowing owl nesting and wintering habitat are not required.

86. **BIO IV-4.** If burrowing owls are detected on or adjacent to the site where they may be disturbed, the following restricted activity dates and setback distances recommended per CDFW's Staff Report (2012) shall be implemented, unless reduced buffers are accepted by CDFW in writing based on site-specific conditions:

    - From April 1 through October 15, low disturbance and medium disturbance activities shall have a 200-meter buffer while high disturbance activities shall have a 500-meter buffer from occupied nests and wintering sites.
    - From October 16 through March 31, low disturbance activities shall have a 50-meter buffer, medium disturbance activities shall have a 100-meter buffer, and high disturbance activities shall have a 500-meter buffer from occupied nests and wintering sites.
    - No earth-moving activities or other disturbance should occur within the aforementioned buffer zones of occupied burrows. These buffer zones shall be marked with high visibility fencing or flagging.

    If burrowing owls are present outside of the nesting season, burrowing owls may be passively relocated from the project site and adjacent habitat using CDFW-accepted methods so that construction can proceed. Any required passive relocation of burrowing owls would require CDFW acceptance. If passive relocation of burrowing owls is necessary, a qualified biologist shall prepare a Relocation Plan, including compensatory habitat as described below, for CDFW review and acceptance prior to the start of construction activities.

    If the survey determines that the project site is actively being used by burrowing owl, or any owls are passively relocated as described above, then compensatory habitat mitigation shall be provided. The habitat mitigation/compensation plan shall be submitted to CDFW for review and approval prior to the start of project activities. Habitat compensation acreages shall be approved by CDFW, as the amount depends on site specific conditions, and completed before project construction. It shall also include placement of a conservation easement and preparation and implementation of a long-term management plan. If burrowing owls are observed during surveys, notification shall also be submitted to the California Natural Diversity Database (CNDDB; see https://wildlife.ca.gov/Data/CNDDB/Submitting-Data).

DocuSign Envelope ID: 7AAFD2FD-43DC-48EA-AB7F-988EE094E281

87. **BIO IV-5.** If project activities must be conducted during the nesting season (February 15 and September 1), a pre-construction nesting bird survey shall be conducted by a qualified biologist within 714 days of vegetation removal or initial ground disturbance. The survey shall include the project site, any off-site disturbance areas, and within a minimum of 500 feet of all project areas, surrounding vicinity to identify the location and status of any nests that could potentially be affected either directly or indirectly by project activities. A letter report summarizing the survey results shall be submitted to the Community Development Department within 30 days following the pre-construction survey. If nesting birds are not present on-site or within a minimum 500 feet of the project site during pre-construction surveys, further avoidance and minimization measures for nesting bird habitat are not required.
    If active nests of native nesting bird species are identified during the nesting bird survey, a work exclusion zone shall be established around each nest by the qualified biologist. Established exclusion zones shall remain in place until all young in the nest have fledged or the nest otherwise becomes inactive (e.g., due to predation). Appropriate exclusion zone sizes shall be determined by a qualified biologist. The qualified biologist shall be on site daily for the first week during Project activities, and then weekly thereafter until the nest is no longer active, to observe all active bird and raptor nests and to ensure that Project activities do not cause nest disturbance. If the qualified biologist observes birds and/or raptors displaying potential nest disturbance behavior, the qualified biologist shall cease work and consult with CDFW before resuming Project activities. In this event, Project activities shall not resume without CDFW's written permission.

88. **CUL V-1.** Prior to grading permit issuance, the applicant shall submit plans to the Community Development Department for review and approval which indicate (via notation on the improvement plans) that if historic and/or cultural resources are encountered during site grading or other site work or off-site work, all such work shall be halted immediately within 100 feet and the applicant shall immediately notify the Community Development Department of the discovery. In such case, the applicant shall be required, at their own expense, to retain the services of a qualified archaeologist meeting the Secretary of the Interior's Professional Qualification Standards for prehistoric and historic archaeologist for the purpose of recording, protecting, or curating the discovery as appropriate. The archaeologist shall be required to submit to the Community Development Department for review and approval a report of the findings and method of curation or protection of the resources. Further grading or site work within the area of discovery shall not be allowed until the preceding work has occurred.

89. **CUL V-2.** If human remains, or remains that are potentially human, are found during construction, a professional archeologist shall ensure reasonable protection measures are taken to protect the discovery from disturbance. The archaeologist shall notify the Napa County Coroner (per §7050.5 of the State Health and Safety Code). The provisions of §7050.5 of the California Health and Safety Code, §5097.98 of the California Public Resources Code, and Assembly Bill 2641 will be implemented. If the Coroner determines the remains are Native American and not the result of a crime scene, then the Coroner will notify the Native American Heritage Commission (NAHC), which then will designate a Native American Most Likely Descendant (MLD) for the project (§5097.98 of the Public Resources Code). The designated MLD will have 48 hours from the time access to the property is granted to make recommendations concerning treatment of the remains. If the applicant does not agree with the recommendations of the MLD, the NAHC can mediate (§5097.94 of the Public Resources Code). If an agreement is not reached, the qualified archaeologist or most likely descendent must rebury the remains where they will not be further disturbed (§5097.98 of the Public Resources Code). This will also include either recording the site

DocuSign Envelope ID: 7AAFD2FD-43DC-48EA-AB7F-988EE094E281

with the NAHC or the appropriate Information Center, using an open space or conservation zoning designation or easement, or recording a reinternment document with the county in which the property is located (AB 2641). Work cannot resume within the no-work radius until the lead agencies, through consultation as appropriate, determine that the treatment measures have been completed to their satisfaction.

90. **GEO VII-1, VII-2, VII-4, and VII-5**. Prior to approval of any building permits, the project Civil Engineer shall show on the project plans that the project design would adhere to all engineering recommendations provided in the site-specific Geologic Hazards and Preliminary Geotechnical Investigation prepared by Giblin Associates and the Soil Investigation prepared by Reese & Associates. The project plans shall include, but would not be limited to, the use of mat slabs, post-tensioned slabs on-grade, imported non-expansive fill under conventional floor slabs, appropriate setbacks from fault zones, stabilization of potential landslide areas, and structural design in accordance with Site Class C of the CBSC Ground Motion Parameters. Project plans shall be subject to review and approval by the City Engineering Division.

91. **GEO VII-3.** Prior to the issuance of a grading permit, the project applicant shall prepare to the satisfaction of the Community Development Department, an erosion control plan that utilizes standard construction practices to limit the erosion effects during construction of the proposed project. Actions should include, but are not limited to, the following:
    a. Hydro-seeding;
    b. Placement of erosion control measures within drainage ways and ahead of drop inlets;
    c. The temporary lining (during construction activities) of drop inlets with "filter fabric";
    d. The placement of straw wattles along slope contours;
    e. Use of a designated equipment and vehicle "wash-out" location;
    f. Use of siltation fences;
    g. Use of on-site rock/gravel road at construction access points; and
    h. Use of sediment basins and dust palliatives.

92. **GHG VIII-1.** Prior to issuance of building permits, the applicant shall submit proof to the Community Development Department for review and approval which indicate project compliance with the Tier 1 Energy Efficiency division of the Title 24 standards. Tier 1 Energy Efficiency for low-rise multifamily developments require the following measures:
    a. Total Energy Design Rating (Total EDR) and Energy Efficiency Design Rating (Efficiency EDR) for the Proposed Design Building is included in the Certificate of Compliance documentation.
    b. Quality Insulation Installation procedures specified in the Building Energy Efficiency Standards Reference Appendices RA3.5 are completed.
    c. One of the following options is required:
        i. A4.203.1.2.1 – Roof deck insulation or ducts in conditioned space.
        ii. A4.203.1.2.2 – High performance walls.
        iii. A4.203.1.2.3 – HERS-verified compact hot water distribution system.
        iv. A4.203.1.2.4 – HERS-verified drain water heat recovery.
    d. Buildings complying with the first level of advanced energy efficiency shall have additional integrated efficiency and onsite renewable energy generation sufficient to achieve a Total EDR of the Tier 1 value indicated by Table A4.203.1.1.1 or lower as calculated by Title 24, Part 6 Compliance Software approved by the Energy Commission. This Total EDR is in addition to meeting the Efficiency EDR.

DocuSign Envelope ID: 7AAFD2FD-43DC-48EA-AB7F-988EE094E281

e. Local jurisdictions adopting Tier 1 or Tier 2, or considering community shared solar or storage options as specified, shall consult with the local electric service for acceptance.

93. **NOI XIII-1.** Prior to the approval of grading permits, the City shall establish the following related to the use of construction equipment:
    a. Construction activities (excluding activities that would result in a safety concern to the public or constructions workers) shall be limited to between the daytime hours of 7:00 AM and 7:00 PM daily;
    b. Construction equipment shall be properly maintained and equipped with noise-reduction intake and exhaust mufflers and engine shrouds, in accordance with manufacturers recommendations;
    c. Equipment engine shrouds shall be closed during equipment operation;
    d. When not in use, motorized construction equipment shall not be left idling for more than five minutes; and
    e. Stationary equipment (power generators, compressors, etc.) shall be located at the furthest practical distance from nearby noise-sensitive land uses or sufficiently shielded to reduce noise-related impacts.

94. **TRANS XVII-1.** Prior to issuance of grading permits, the project applicant shall submit Improvement Plans that reflect the recommendations included in the Traffic Impact Study prepared by W-Trans. Specifically, the Improvement Plans shall reflect a pedestrian path or sidewalk between the project site and the existing terminus of the sidewalk on the south side of Napa Junction Road near the elementary school crossing. The Improvement Plans shall also reflect space for bicycle storage provided either on balconies or other outside spaces dedicated to each housing unit, in garages or other storage spaces for each unit, or through provision of bike racks. The recommendations made by W-Trans shall be confirmed by the City's Public Works Department and/or the City Engineer prior to issuance of grading permits.

95. **TRANS XVII-2.** Prior to the first residential occupancy, the applicant shall implement the following TDM measures, as described in the TIS:
    a. Unbundled Parking;
    b. Free Transit Passes;
    c. Secure Bicycle Parking and Maintenance Tools;
    d. Tele-Work/Compressed Schedules;
    e. Carpooling and Ride-Matching Program;
    f. Transportation Coordinator;
    g. Welcome Packet for New Residents; and
    h. Monitoring of Program Performance.

    Proof of implementation of the TDM measures shall be submitted to the City's Community Development Department for review and approval.

96. **UTIL XIX-1.** The project applicant shall demonstrate compliance with the City's Zero Water Footprint Policy by mitigating all new potable water demands with "wet-water" offsets by one or more of the following options to ensure the proposed project results in a net zero increase in demand for potable water:
    a. Reducing existing potable water demands on-site;
    b. Funding programs or constructing projects that would conserve an equivalent amount of water elsewhere within the water service area;

DocuSign Envelope ID: 7AAFD2FD-43DC-48EA-AB7F-988EE094E281

c. Funding of and/or constructing projects that would increase an equivalent amount of recycled water use elsewhere within the water service area where potable water is currently used; and/or
d. Purchasing new water supplies from other water providers.

Compliance with the Zero Water Footprint Policy shall be ensured by submission of a "Will-Serve" Water Application to the City's Public Works Department for review and approval. Project plans shall demonstrate the applicant's inclusion of the selected wet-water offsets.

97. **UTIL XIX-2.** The project shall be designed and constructed with purple irrigation pipe so that reclaimed water may be used for landscape irrigation purposes. The project shall use recycled water for irrigation in the event recycled water becomes available at the site.

98. **UTIL XIX-3.** At the time of issuance of building permits, the project applicant shall pay all updated water capacity and impact fees in effect, to the extent they are not subject to applicable fee credits, to provide funding for the City to acquire additional long-term water resources and improve and develop its treatment and distribution system. The fees will permit the City to exercise additional options for potable water capacity from the City of Vallejo and/or other sources, and will also provide for implementation of the recycled water system.

99. **UTIL XIX-4.** The project applicant shall pay to the City a monthly service charge to adequately cover the project's costs associated with City supplying water through the City's connection to the City of Vallejo, as determined by the Public Works Director.

100. **UTIL XIX-5.** Prior to issuance of building permits, the project shall be reviewed by the Community Development Department for consistency with the Water Conservation Guidelines. The project applicant shall incorporate water conservation Best Management Practices into the project.

101. **UTIL XIX-6.** Should additional project water be required, the proposed project shall comply with the City's ordinances and regulations in effect at the time of authorization for additional water use. In addition, such changes in project use would trigger a new City Discretionary Review process, which would trigger re-evaluation of the proposed project's water supply impacts.

102. **UTIL XIX-7.** Prior to issuance of building permits, the project applicant shall submit landscaping plans to the City of American Canyon for review and approval demonstrating that the proposed landscaping would comply with the requirements in the City's Model Water Efficient Landscape Ordinance (AB 1881). The landscaping plan shall identify outdoor irrigation water conservation

measures, such as, but not limited to:

a. Drought-resistant vegetation;
b. Irrigation systems employing the following features:
    i. drip irrigation;
    ii. low-precipitation-rate sprinklers;
    iii. bubbler/soaker systems;
    iv. programmable irrigation controllers with an automatic rain shutoff sensors and flow sensing capabilities (ET Smart Controller);

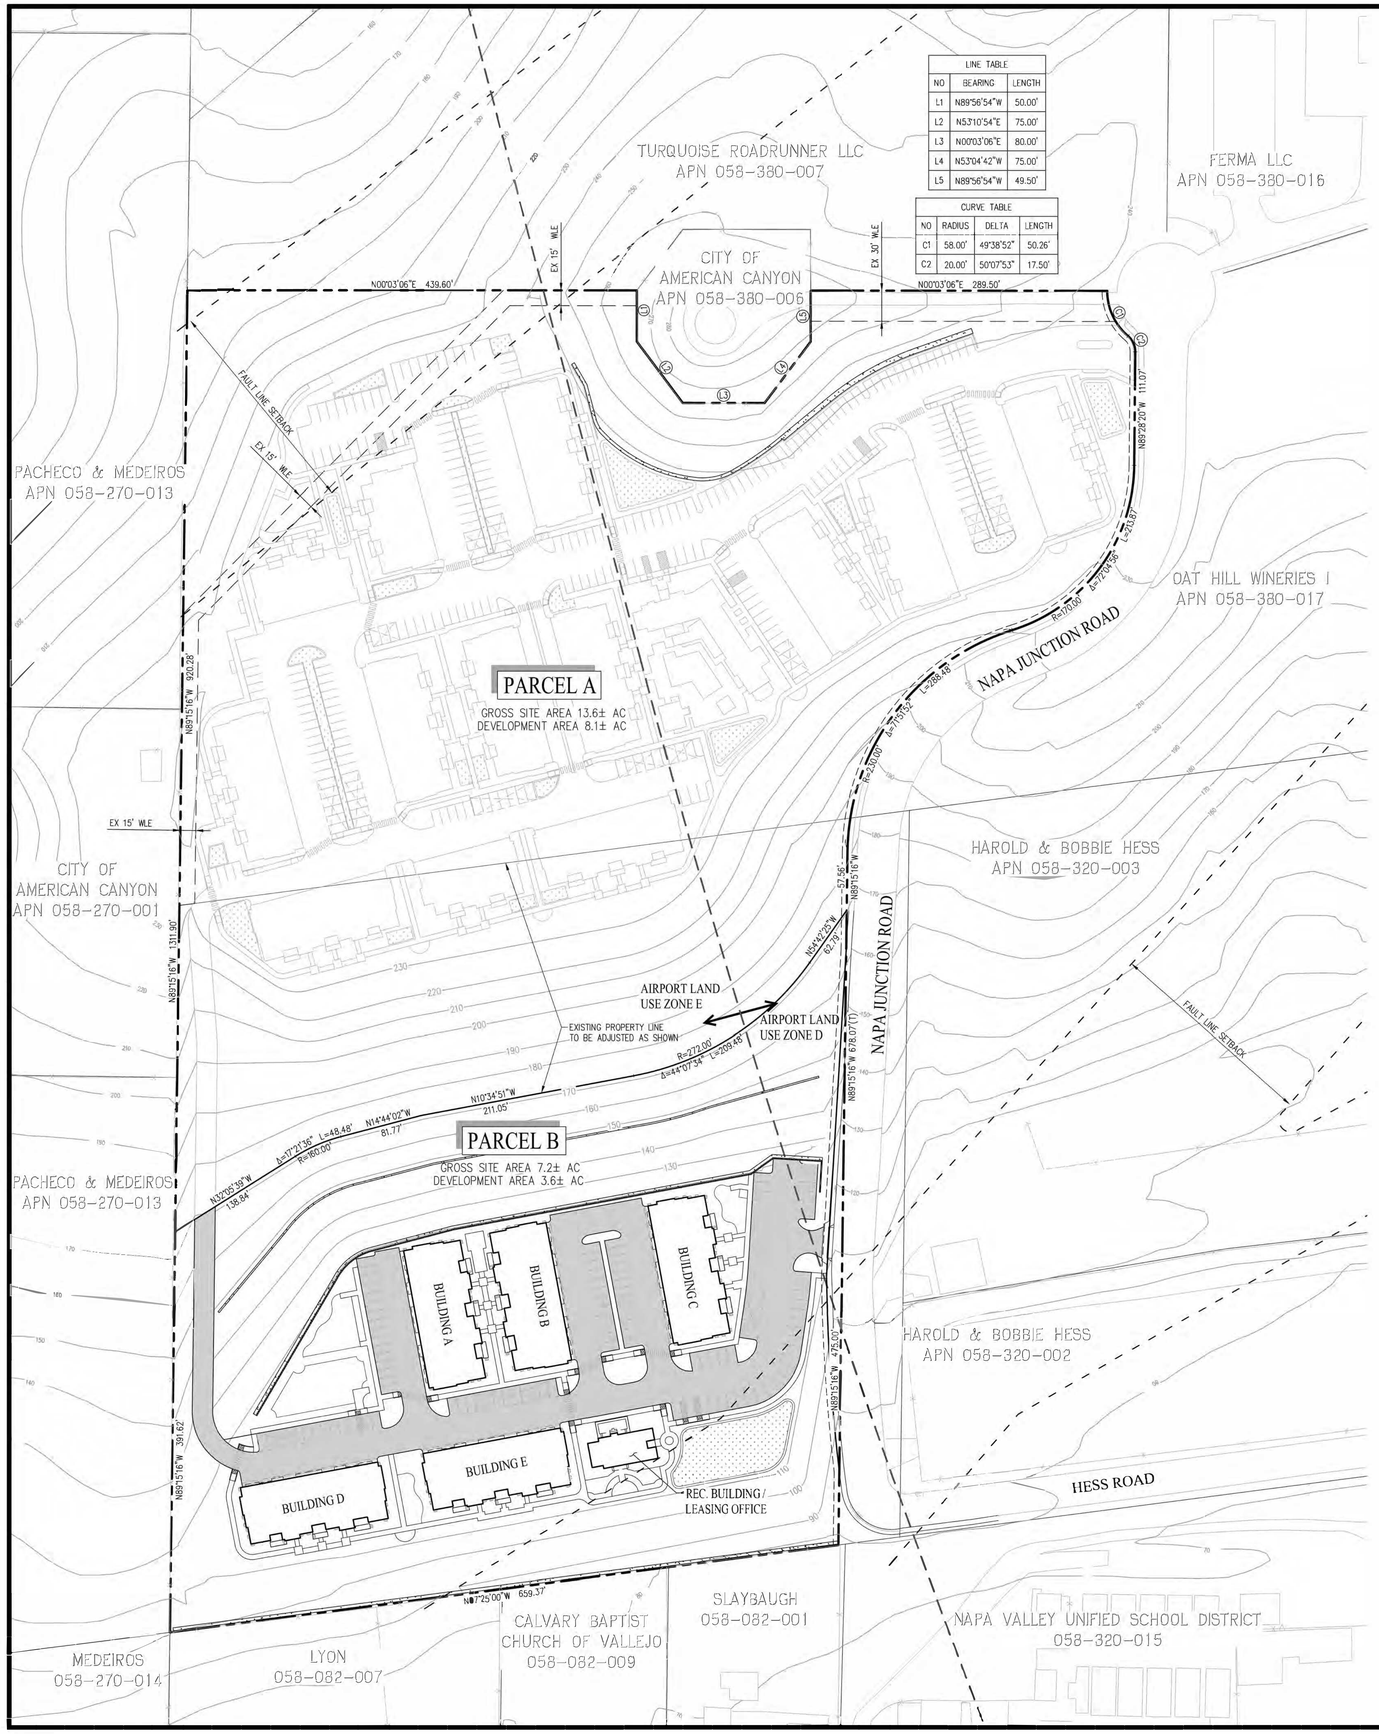
DocuSign Envelope ID: 7AAFD2FD-43DC-48EA-AB7F-988EE094E281

v. Matched precipitation rate nozzles that maximize the uniformity of the water distribution characteristics of the irrigation system;
vi. Conservative sprinkler spacings that minimize overspray onto paved surfaces; and
vii. Hydrozones that keep plants with similar water needs in the same irrigation zone

c. Minimally or gently sloped landscaped areas to minimize runoff and maximize infiltration; and
d. Organic topdressing in non-turf areas to decrease evaporation and increase water retention.

103. **COVID19 XXI-1.** The project applicant shall prepare a COVID-19 Exposure Control Plan which shall be included in the project construction site safety plan. The COVID-19 Exposure Control Plan shall comply with all regional and statewide orders related to the operation of construction sites and essential businesses during the COVID-19 pandemic, including but not limited to: social distancing requirements, masks for all workers, daily worker screening for potential symptoms, disinfecting protocols for all shared surfaces, avoidance of tool sharing, and provision of sufficient hand sanitizer for all workers. The COVID-19 Exposure Control Plan shall be submitted to the City of American Canyon Planning Department for review and approval prior to the issuance of grading permits.

PASSED, APPROVED and **ADOPTED** at a regularly scheduled meeting of the Planning Commission of the City of American Canyon held on the 25th day of March, 2021, by the following vote:



AYES: Commissioners Altman, Wong, Vice Chair Mallare, Chair Navarro
NOES: None
ABSTAIN: None

FG	FINISHED GRADE
FL	FLOW LINE
TC	TOP OF CURB
HP	HIGH POINT
INV	INVERT
LP	LOW POINT

NOTES:

1. ALL STREET ELEVATIONS ARE PAVEMENT GRADES UNLESS NOTED OTHERWISE.
2. ALL EXISTING TREES AND/OR VEGETATION WITHIN GRADING LIMITS TO BE REMOVED.
3. THE ROOF DRAINS WILL DISCHARGE EITHER DIRECTLY TO A PAVED SURFACE OR TO THRU–THE–CURB DRAINS. FINAL ROOF DRAIN LOCATIONS TO BE DETERMINED WITH FINAL DESIGN.
4. DRIVE ISLES WILL HAVE A CROSS SLOPE BETWEEN 1% AND 4%.
5. THE PROJECT IS NOT LOCATED WITHIN A FEMA FLOODPLAIN.
6. SEE SHEET C–6 FOR GRADING CROSS SECTIONS.

EARTHWORK SUMMARY

DESCRIPTION	CUT (C.Y.)	FILL (C.Y.)
ROUGH GRADING	6,000	6,000

EARTHWORK NOTES:

1. CONTRACTOR IS RESPONSIBLE TO COORDINATE WITH UTILITY CONTRACTOR TO DETERMINE STREET UNDERCUT AND TO BALANCE SITE AS NEEDED. UTILITY CONTRACTOR TO DETERMINE ANTICIPATED SPOILS BASED ON CONSTRUCTION METHOD.
2. CONTRACTOR TO DETERMINE EARTHWORK QUANTITIES AND SHALL NOTIFY ENGINEER AND OWNER PRIOR TO STARTING CONSTRUCTION.
3. ADDITIONAL MATERIALS MAY BE REQUIRED TO BALANCE.
4. EARTHWORK QUANTITIES DO NOT INCLUDE ANY REMEDIAL GRADING AND/OR OVER–EXCAVATION THAT MAY BE NECESSARY.
5. EARTHWORK QUANTITIES ASSUME THAT SITE WILL BE PREVIOUSLY MASS GRADED.

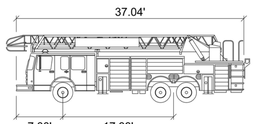
FIRE PROTECTION NOTES:

1. FIRE PROTECTION SYSTEMS SHALL BE INSTALLED IN ACCORDANCE WITH PROVISIONS SET FORTH IN THE CALIFORNIA FIRE CODE AS AMENDED BY THE CITY OF NAPA AND THE APPLICABLE NATIONAL FIRE PROTECTION ASSOCIATION STANDARD.
2. THE FIRE PROTECTION EQUIPMENT SHALL BE LOCATED WITHIN AN INTERIOR ROOM HAVING AN APPROVED EXTERIOR ACCESS DOOR OR IN AN EXTERIOR ENCLOSURE ATTACHED TO THE BUILDING, SPECIFICALLY, FOR THE PURPOSE OF HOUSING SUCH EQUIPMENT.
3. THE CITY OF AMERICAN CANYON REQUIRES THAT A FIRE HYDRANT BE IN SERVICE WITHIN 250 FEET OF THE FURTHEST POINT OF CONSTRUCTION PRIOR TO THE STOCKPILING OF COMBUSTIBLE MATERIALS FOR THE BEGINNING OF CONSTRUCTION.
4. FIRE DEPARTMENT CONNECTIONS (FDC) SHALL BE LOCATED NOT MORE THAN 100 FT. FROM THE NEAREST FIRE HYDRANT.
5. FIRE APPARATUS ACCESS ROADS SHALL BE DESIGNED IN ACCORDANCE WITH PROVISIONS SET FORTH IN THE CALIFORNIA FIRE CODE CHAPTER 5 AND APPENDIX D AS AMENDED BY THE CITY OF AMERICAN CANYON AND THE APPLICABLE PUBLIC WORKS STANDARD.
6. FIRE APPARATUS ACCESS ROADS SHALL HAVE AN UNOBSTRUCTED MINIMUM WIDTH OF 20 FEET (CURB TO CURB) AND A MINIMUM UNOBSTRUCTED VERTICAL CLEARANCE OF 13' 6". THEY SHALL HAVE AN ALL-WEATHER PAVED SURFACE CAPABLE OF SUPPORTING A GVW OF 71,000 POUNDS.
7. ACCESS ROADS SHALL BE COMPLETED WITH ALL-WEATHER SURFACES PRIOR TO THE STOCKPILING OF COMBUSTIBLE MATERIALS OR BEGINNING COMBUSTIBLE CONSTRUCTION. FIRE APPARATUS ACCESS SHALL BE PROVIDED TO WITHIN 150 FEET OF THE MOST REMOTE PORTIONS OF ALL BUILDING FROM AN APPROVED EXTERIOR ROUTE. IF THIS CANNOT BE ACHIEVED FIRE APPARATUS TURN AROUND WILL BE NEEDED.
8. FIRE APPARATUS ACCESS ROADS SHALL NOT BE OBSTRUCTED IN ANY MANNER, INCLUDING THE PARKING OF VEHICLES. VERTICAL TRAFFIC CALMING IN THE FORM OF SPEED PUMPS, HUMPS OR DIPS ARE PROHIBITED ALONG FIRE ACCESS ROADS WITHOUT PRIOR APPROVAL OF THE FIRE CODE OFFICIAL. THE MINIMUM WIDTH AND CLEARANCES ESTABLISHED IN SECTION 503.2.1 SHALL BE MAINTAINED AT ALL TIMES.
9. WHEN REQUIRED BY THE FIRE CHIEF, FIRE APPARATUS ACCESS ROADS SHALL BE DESIGNATED AS FIRE LANES AND APPROPRIATE SIGNS AND/OR MARKINGS INSTALLED IN ACCORDANCE WITH THE CALIFORNIA VEHICLE CODE AND APPROVED CITY STANDARDS.



FIRE FLOW NOTES:

1.	BUILDING CONSTRUCTION TYPE:	TYPE VA
2.	MAXIMUM BUILDING SQUARE FOOTAGE:	23,712 SF
3.	REQUIRED FIRE FLOW PER CFC, APPENDIX B: FULLY SPRINKLERED*:	2,750 GPM 1,500 GPM
4.	AVAILABLE FIRE FLOW AT PROJECT SITE:	TBD
5.	MINIMUM NUMBER OF HYDRANTS:	1
6.	AVERAGE HYDRANT SPACING:	500 FEET
7.	PROJECT TO PROVIDE INCREASED NUMBER OF FIRE SPRINKLER HEADS OR OTHER APPROVED ALTERNATIVE.	

* CANNOT BE REDUCED TO LESS THAN 1,500 GPM

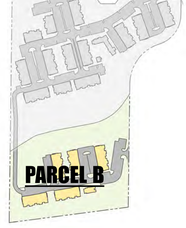
Project Summary

Parcel B

Gross Site Area: ± 7.2 Acres

Total Units: 85 Units
- (20) 1 Bdrm Units
- (45) 2 Bdrm Units
- (20) 3 Bdrm Units



Density: 11.8 DU per Gross Area

Parking:

Required: 182 Spaces
- (20) 1 Bedroom x 1.5 Spaces =30 Spaces
- (45) 2 or more Bedroom x 2 Spaces =130 Spaces
- (85) Guest x 0.25 Spaces =22 Spaces
- 4 Handicapped + 1 Van Required

Provided: 182 Spaces
- Garage: 65 Spaces
- Carports: 20 Spaces
- Head In: 97 Spaces (9' x 18')

Open Space
- Common Open Space: 27,647 SF
- Hillside Slope Area: 257,004 SF

KEY MAP
N.T.S

Notes:
1. Site plan must be reviewed by planning, building, and fire departments for code compliance.
2. Base information per civil engineer.
3. Civil engineer to verify all setbacks and grading information
4. Please refer to landscape plan for final landscape details.
5. Building setbacks are measured from property lines to building foundation lines.

PART I

Introduction

1

Introduction

PURPOSE

This document sets forth the policies and criteria which the Napa County Airport Land Use Commission (ALUC) will use in evaluating land use plans and proposed development in the vicinity of the public-use airports located within Napa County. Figure 1A illustrates the location of the three public-use airports covered by this Compatibility Plan. It is the Commission's duty to assist local agencies in the determination of compatible land uses in the vicinity of airports and to coordinate planning at the state, regional, and local levels so as to provide for the orderly development of air transportation while at the same time protecting the public health, safety, and welfare.

The primary function of the Airport Land Use Compatibility Plan is to provide guidance to the Airport Land Use Commission in reviewing the land use plans and zoning regulations of the affected local jurisdictions to ensure that future development in the airports' environs is compatible with airport activities. The Commission has no authority over existing land uses, even if such uses are considered incompatible. Also, the Commission has no authority over the operation of any airport. The following summarizes the Airport Land Use Commission's authority and review procedures as outlined in state law. A complete copy of the enabling legislation is included as Appendix A.

ROLE

The fundamental relationships between an Airport Land Use Commission and local jurisdictions is set by state law. Although the Commission functions under the general auspices of County government, it is not controlled by the County. In this regard, the Airport Land Use Commission's role is similar to that of the Local Agency Formation Commission (LAFCO). Within the bounds provided by state law, the decisions of the Commission — including the adoption of a comprehensive land use compatibility plan — are final. Other than through its larger representation on the Commission, the County does not have any greater legal authority over the Commission than do the individual cities in the County.

Napa County Airport Land Use Commission

In accordance with provisions of the State Aeronautics Act, the Napa County Planning Commission has been designated by the Board of Supervisors to assume the responsibilities of the Airport Land Use Commission with two additional members appointed to represent the aviation community. The Airport Land Use Commission meets regularly to review project referrals as required by recent legislation.

AUTHORITY

The statutory authority for the establishment of airport land use commissions is provided in the California Public Utilities Code, Sections 21670 et seq. (Chapter 4, Article 3.5 of the State Aeronautics Act). Every county in which there is located a public-use airport is required to have an Airport Land Use Commission. The Commission's charge is expressly stated as being:

> *. . . to protect public health, safety, and welfare by ensuring the orderly expansion of airports and the adoption of land use measures that minimize the public's exposure to excessive noise and safety hazards within areas around public airports to the extent that these areas are not already devoted to incompatible uses.*

A primary responsibility of the Commission is to formulate a comprehensive land use plan intended to achieve the above purpose. The plan must address each public-use airport within the Commission's jurisdiction and must reflect the anticipated growth of the airport during at least the next 20 years. The State Division of Aeronautics in an interpretation of state law has determined that special-use airports, such as the Calistoga Gliderport, fall under the definition of "public-use" airports for the purpose of land use planning. The plan may include height restrictions, specify land uses, and determine building standards.

RELATIONSHIP TO LOCAL PLANS

The primary purpose of the Airport Land Use Compatibility Plan is to establish policies and guidelines for land use compatibility to local jurisdictions affected by airport activities. Provisions of state law require that the ALUC review the local general plans and specific plans of each of the affected jurisdictions to determine consistency with the ALUC's policies within 180 days of adoption of the Airport Land Use Compatibility Plan.

If the local plans are determined to be inconsistent with the Airport Land Use Compatibility Plan, each affected local agency must hold a public hearing to consider amending its general plan and any applicable specific plans and zoning ordinances for consistency or otherwise take specific steps to override the Commission.

Until each affected local agency amends its General Plan and any applicable specific plans for consistency with the ALUC policies or otherwise overrides the ALUC determination, all actions, regulations, or permits within the planning areas must be referred for a consistency determination.

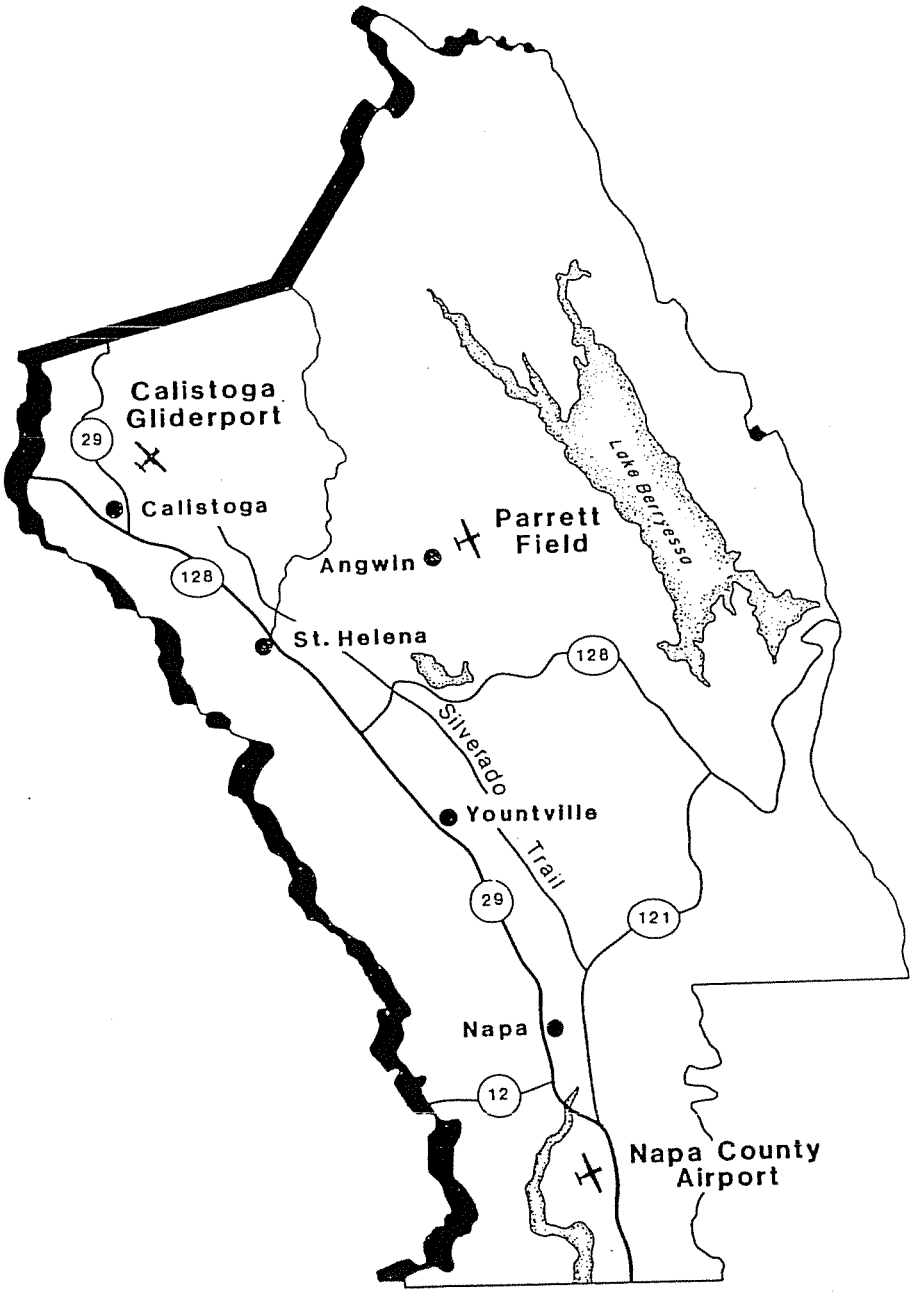

Figure 1A

Airport Locations

Napa County

Once consistency with ALUC policies is achieved, only certain types of actions (i.e., general plan or specific plan amendments) need be referred for a consistency determination, unless the local agency and the Commission agree that other types of actions or individual projects should be reviewed by the ALUC.

Overruling

The governing body of a local jurisdiction may overrule the Airport Land Use Commission's determination by taking the following actions:

- Hold a public hearing to reconsider the proposed action.
- Make a finding that the proposed action is consistent with the intent of the State Aeronautics Act.
- The motion to override must be passed by a two-thirds vote.

GENERAL APPROACH

The structure and design of the Airport Land Use Compatibility Plan is intended to simplify its implementation. A composite set of Compatibility Criteria has been assembled which incorporates three of the four airport/land use compatibility concerns – noise, safety, and overflight. Airspace protection remains as a separate set of criteria using federal aviation regulations to establish maximum height limitations. The intent is to simplify the review process by eliminating the need to consider several different compatibility tables and associated maps. Supporting policies are provided which further define the Compatibility Criteria.

The criteria in this Plan are performance oriented, rather than list oriented. That is, the criteria contain standards which are to be achieved (e.g., occupancy limits), rather than a list of specific uses which are permitted in each zone. This format directly relates the concern (e.g., safety) to the criteria (e.g., occupancy limits). The local governments which have the implementing authority for land use must then interpret these criteria in terms of their land use plans and zoning ordinances.

The policies and criteria presented in this Plan are directly derived from well established sources. Among the specific sources utilized are:

- Federal Aviation Regulations Part 77, "Objects Affecting Navigable Airspace".
- Federal Aviation Administration Advisory Circular 150/5020-1, "Noise Control and Compatibility Planning for Airports".
- California State Aeronautics Law.
- California Division of Aeronautics Noise Regulations.
- California Division of Aeronautics *Airport Land Use Planning Handbook.*

- Oregon Division of Aeronautics *Airport Compatibility Guidelines*.
- Previously adopted local plans and policies.

ORGANIZATION OF THE PLAN

This Plan is organized in three parts. Part I consists of this introductory chapter and an overview of airport compatibility issues presented in Chapter 2. The primary policies and compatibility plans for each airport are contained in Part II of this document. Review requirements, compatibility policies, plans, and criteria for each airport's planning area are contained in Chapter 3. Chapter 4 includes a discussion of implementation strategies that local agencies may utilize to achieve consistency with the Airport Land Use Compatibility Plan. Specific information relative to each airport's master plan, impact assessment, land use issues, and consistency with local plans is provided in Part III (Chapters 5, 6 and 7). A glossary of terms and reference materials to assist in the review of project referrals are included in the Appendices.

A technical supplement to this Compatibility Plan entitled "ALUC Handbook" contains a detailed description and analysis of noise and safety concerns as they relate to airport compatibility planning. The Handbook is incorporated by reference herein and provides the background and justification for the policies contained in the Airport Land Use Compatibility Plan. A master plan for Napa County Airport, updated in 1989, provides the basis for compatibility planning and establishment of the ALUC planning area. Long-term facility plans for the two privately-owned airfields were developed as part of this plan and reflect coordination with the airport owners, local jurisdictions, and the appropriate state and federal agencies.

2

Compatibility Concerns

The principal land use impacts and compatibility considerations associated with airport activities fall into four categories.

- **Noise** - Usually perceived as the most significant adverse impact of airport activity because of its routine, everyday occurrence. Human sensitivity to noise varies considerably depending upon the circumstances in which the noise occurs.

- **Hazards to Flight** – To protect the navigable airspace by preventing physical obstructions and other land use characteristics that could affect flight safety.

- **Safety on the Ground** – Limiting people's exposure to risks of injury or damage to property in the event of an aircraft accident. These risks are difficult to address because of the low probabilities involved.

- **Overflights** - Annoyance associated with regular aircraft overflight. Commonly thought to result from a combination of single-event noise impacts and individuals' concern that an aircraft accident may occur. Highly variable among individuals due to the subjective nature of the perceived impact.

NOISE IMPACTS

Assessment of Airport Impacts

Airport noise is particularly complex to measure because of the widely varying characteristics of the individual sounds and the intermittent nature of their occurrence. In an attempt to provide an appropriate measure of airport noise impacts, various composite noise level descriptors have been devised. The descriptor used in California to measure cumulative noise impact is the Community Noise Equivalent Level (CNEL). CNEL values are calculated using a complex set of equations based upon several factors:

- The single-event noise exposure levels for each type of aircraft.
- The volume of activity and mode of operation by aircraft type.
- Runway utilization and flight patterns.
- The time of day when the operations occur.

Because noise is considered more intrusive at night, a weighting or penalty is included in the calculation of CNEL values for all evening and nighttime operations. That is, evening operations (7 p.m. to 10 p.m.) are weighted three times normal daytime operations and nighttime operations (10 p.m. to 7 a.m.) are weighted ten times. These adjustments correlate to the drop in background noise levels which studies have found occurs between daytime and nighttime in a typical community. CNEL contours for each airport are illustrated in Chapter 5.

Noise Compatibility Concepts

The basic approach to enhancing noise compatibility is to minimize the extent to which noise impacts disrupt human activities or otherwise create an annoyance. Among the factors in this analysis:

- The absolute loudness of the noises people hear.
- The relative loudness compared to background noise levels.
- The frequency with which the noise events occur.
- The types of activity affected.

Various studies have been done to ascertain the relationships among these factors. Typically, the results are formulated in terms of the composite noise levels acceptable or unacceptable for specific types of land uses. Table 2-1 provides a comparison of the recommended compatibility guidelines for various land uses.

California State Aeronautics law establishes a CNEL of 65 dBA as the maximum acceptable noise exposure for residential land uses near commercial airports in urban areas. Part 150 of the Federal Aviation Regulations has a similar residential limit of 65 Ldn. (Refer to the Glossary of Terms in Appendix F for definition of Ldn and CNEL). This criteria is primarily based upon the "Levels" report prepared by the U.S. Environmental Protection Agency in 1974 (*Information on Levels of Environmental Noise Requisite to Protect Public Health and Welfare with an Adequate Margin of Safety*).

In the "Levels" report, the EPA recommends adjusting the 65 CNEL standard to account for ambient noise levels and other variables. The use of a normalized standard is also recommended in the California guidelines for preparation of Noise Elements and in the California *Airport Land Use Planning Handbook*. For residential uses in quiet suburban settings, a CNEL standard of 60 dBA is suggested. In more rural areas, a level as low as 55 dBA may be appropriate.

Table 2-1

Noise Compatibility Guidelines

LAND USE CATEGORY	CNEL, dBA 50-55	55-60	60-65	65-70	70-75
Residential					
Single family, nursing homes, mobile homes	+	o	–	—

golf courses, riding stables, water recreation	++	++	+	o	o
outdoor spectator sports	++	+	+	o	–
amphitheaters	+	o	–	—	—

LAND USE AVAILABILITY		INTERPRETATION/COMMENTS
++	Clearly Acceptable	The activities associated with the specified land use can be carried out with essentially no interference from the noise exposure.
+	Normally Acceptable	Noise is a factor to be considered in that slight interference with outdoor activities may occur. Conventional construction methods will eliminate most noise intrusions upon indoor activities.
o	Marginally Acceptable	The indicated noise exposure will cause moderate interference with outdoor activities and with indoor activities when windows are open. The land use is acceptable on the conditions that outdoor activities are minimal and construction features which provide sufficient noise attenuation are used (e.g., installation of air conditioning so that windows can be kept closed). Under other circumstances, the land use should be discouraged.
–	Normally Unacceptable	Noise will create substantial interference with both outdoor and indoor activities. Noise intrusion upon indoor activities can be mitigated by requiring special noise insulation construction. Land uses which have conventionally constructed structures and/or involve outdoor activities which would be disrupted by noise should generally be avoided.
—	Clearly Unacceptable	Unacceptable noise intrusion upon land use activities will occur. Adequate structural noise insulation is not practical under most circumstances. The indicated land use should be avoided unless strong overriding factors prevail and it should be prohibited if outdoor activities are involved.

other measures that can be utilized to mitigate potential noise impacts on noise-sensitive uses (such as schools, libraries, and theaters) including requiring additional noise attenuation measures be incorporated into the design of the building. Noise attenuation measures and criteria for their application are provided in Appendix C.

FLIGHT HAZARDS

Assessing Hazards to Flight

The intent of the airport/land use safety compatibility criteria is to minimize the risks associated with the operation of aircraft to and from an airport. Two types of potential hazards to flight are of concern: physical obstructions within navigable airspace and other land use characteristics that can affect flight safety.

Airspace Obstructions

Minimum standards for the maximum allowable height of objects around airports are set forth in Federal Aviation Regulations Part 77, "Objecting Affecting Navigable Airspace". The regulations require that the Federal Aviation Administration be notified regarding the proposed establishment of any object that would exceed specified heights. An Airspace Plan which graphically illustrates the areas affected by height limitations in accordance with federal regulations (Part 77) has been prepared for each airport and is included in the impact assessment (Part III).

Other Flight Hazards

Other land use characteristics can also affect flight safety. These characteristics can be visual, electronic, or physical in nature. Visual hazards include distracting lights, glare, and sources of smoke. Electronic hazards include any uses which interfere with aircraft instruments or radio communication. The principal physical hazards, other than the height of structures, are bird strikes. Any land use which can attract large flocks of birds should be avoided, but those which are artificial attractors are particularly inappropriate because they generally need not be located near airports. Sanitary landfills are a prime example of such land uses.

Limiting Flight Hazards

FAA standards for height limitations reflect, with an adequate margin of safety, the lowest altitudes at which an aircraft might reasonably be flown while approaching or departing an airport. A local jurisdiction can adopt more restrictive criteria if it chooses. Adoption of zoning ordinances which specifically limits the height of structures and objects in an airport's vicinity and which prohibits other land use characteristics

which may create flight hazards is a primary means of protecting the safety of the airspace. Additional measures include the required dedication of avigation easements which enable the airport authority to remove, mark, or light an obstruction or hazard with adequate notice to the landowner.

SAFETY

Assessing Safety Impacts

In 1993, the Institute of Transportation Studies, at the University of California at Berkeley, developed a database of general aviation accidents derived from accident reports prepared by the National Transportation Safety Bureau. This accident data was documented in Caltrans' Airport Land Use Planning Handbook. This data indicates that, for arrival accidents, the area of highest risk is along the extended centerline of the runway within one mile of the runway end. By comparison, departure accident risks are concentrated closer to the runway end, but spread farther from the runway centerline.

Low flight altitudes present greater risks because they offer pilots less opportunity to recover from unexpected occurrences or choice of where to make an emergency landing. At altitudes less than 500 feet above the ground, only moderate turns are advisable and the choice of emergency landing area is essentially limited to what lies ahead. Above this altitude, recovery, or at least a fairly wide discretion in choice of emergency landing sites, is possible. An emergency landing on the runway normally can be accomplished when the aircraft is flying in the traffic pattern at the typical traffic pattern altitude (1,000 feet above the airport).

Based upon the accident location data presented in the Airport Land Use Planning Handbook, the issue of safety is most critical within the approach/departure zones. These zones were sized to correspond to the future approach surfaces for each runway end. A visual approach with a much steeper approach angle has a smaller approach zone than instrument approaches where aircraft are approaching at much lower altitudes under conditions of poor visibility. Therefore, runways with only visual approaches have smaller approach/departure zones than those with instrument approaches.

Beyond the approach/departure zones, safety concerns are significantly reduced. Moderate safety concerns exist in the common traffic pattern where aircraft are below traffic pattern altitude. This will commonly occur where aircraft make their turn to the base leg of an approach or when using a circle-to-land instrument approach. Safety concerns are low where aircraft are at a pattern altitude and are further reduced where aircraft are at higher altitudes.

Limiting Risks of Injury or Damage

The objective in providing an acceptable level of safety on the ground is to reduce the risks of damage to property or injury to persons in the event of an aircraft accident. The greater the predicted risk, the more

restrictive land use controls are necessary. Limiting the density of development and providing open areas for emergency landings are two basic approaches to ensuring compatibility.

The concept behind limiting the density of land uses near an airport is to limit the number of people who might be affected by an aircraft accident. The larger the aircraft which use an airport, the greater the potential for a high number of injuries, should an accident occur. Limiting residential densities and maximum occupancy levels is the principal means of providing acceptable levels of safety on the ground.

High concentrations of people, such as occur in theaters and similar uses, should be avoided in areas most susceptible to aircraft accidents. Uses in which the occupants have low effective mobility, such as hospitals, nursing homes, elementary and secondary schools, etc., also pose higher risks. These uses are undesirable within the airport environs and are prohibited within the approach/departure zones.

Clustering of development and providing open land areas that can be utilized as emergency landing sites are other land use control measures that limit the risks of injury. An open area does not have to be very large to enable a successful emergency landing. The objective is for the occupants to survive the accident without serious injury. Damage to the aircraft is irrelevant in these circumstances. An area as small as 75 feet by 300 feet (about one-half acre - the size of a football field) can be adequate for a survivable emergency landing in a small plane. The area should be relatively free of objects such as overhead power lines and large trees and poles that could send a plane out of control at the last moment.

Because the pilot's discretion in selecting an emergency landing site is reduced when the aircraft is at low altitude, open areas preferably should be larger and spaced more closely in those locations overflown at low altitude (inner approach zones). The chance of a pilot seeing and successfully landing in a small open space also would be increased if there are more such spots from which to choose. This is particularly important for airports used by a high percentage of transient pilots who are unfamiliar with the airport vicinity.

The Compatibility Plans for each airport provide criteria which restricts the concentrations of people within the most critical areas and certain types of land uses which are most susceptible to safety risks. Clustering of development is encouraged, while limiting the maximum number of persons concentrated in any given area. Specific policies which identify the critical areas for open land are provided to ensure that community plans maintain open space in an airport's vicinity.

OVERFLIGHT IMPACTS

Assessing Overflight Impacts

Communities have become increasingly sensitive to overflight impacts. Areas underlying common flight tracks that are well outside of typically defined noise contours are increasingly becoming sources of complaints, and political and legal action. As these areas are commonly outside of areas classified as having a "noise problem", the impact is usually referred to as overflight annoyance.

Compared to cumulative noise compatibility considerations, the annoyance factor of overflight activity is more subtle and subjective. The degree of perceived annoyance varies widely from individual to individual, even though the definable impacts may be similar. The level of annoyance appears to be influenced by several factors related to the individuals affected - their attitudes toward aviation and the importance of a particular activity; their understanding of how airplanes fly; their knowledge of the airport's operational characteristics, as well as by the actual noise levels, frequency of overflights, altitude of the aircraft, and terrain conditions.

One explanation for the annoyance of overflights is that they result from a combination of single-event noise impacts, coupled with an individual's concern that an aircraft accident could occur on his/her property. The frequency of aircraft overflights is thus an important measure of the impact. Terrain conditions have also been noted to affect the level of annoyance experienced in certain areas. High terrain, or canyon areas will intensify the noise of aircraft overflights. In determining the sensitivity of an area to aircraft overflights, consideration should be given to the frequency of overflights, the single-event noise levels of the aircraft, as well as the underlying terrain conditions.

Overflight impacts primarily affect residential and noise-sensitive land uses and are generally concentrated along the flight paths. They also occur, to a lesser degree, elsewhere in the airport vicinity where aircraft fly at or below traffic pattern altitude while departing or approaching the runway. Typical flight patterns for each airport are depicted in the assessment of airport impacts contained in Part III of this Plan (Chapters 5, 6, and 7).

Overflight Compatibility Concepts

Preventing overflight impacts is often difficult because the area subject to overflights is large and it is impossible to predict precisely where in the area individuals will be sensitive. However, there is currently very limited residential or other noise-sensitive development in the vicinity of Napa County Airport and Parrett Field. This lack of significant amounts of existing noise-sensitive uses makes it possible for the ALUC's plan to offer significant protection to these airports, since the vicinities of these airports are not already filled with incompatible uses. It is for this reason that new residences and other sensitive uses are excluded from the traffic pattern, approach/departure, and runway protection zones.

PART II

Policies, Plans, and Criteria

3
Policies

1 SCOPE OF REVIEW

1.1 Geographic Area of Concern

The Airport Land Use Commission's planning area encompasses:

1.1.1 All lands on which the uses could be negatively affected by present or future aircraft operations at the following airports in the County. The specific limits of the planning area for each airport are depicted on the respective *Compatibility Map* for that airport as presented in Chapter 3.

(a) Napa County Airport

(b) Parrett Field

1.1.2 Those lands, regardless of their location in the County, on which the uses could adversely affect the safety of flight in the County. The specific uses of concern are identified in paragraph 1.2.

1.1.3 The site and environs of any proposed new airport or heliport anywhere in the County.

1.2 Types of Airport Impacts

The Commission is concerned only with the potential impacts related to aircraft noise, land use safety (with respect both to people on the ground and the occupants of aircraft), airspace protection, and aircraft overflights. Other impacts sometimes created by airports (e.g., air pollution, automobile traffic, etc.) are beyond the scope of this plan. They are within the authority of other local, state, and federal agencies and addressed within the environmental review procedures for airport development.

1.3 Types of Actions Reviewed

1.3.1 *General Plan Consistency Review* - The Commission shall review the local general plans and specific plans of the affected jurisdictions to determine consistency with the Airport Land Use Commission's policies within 180 days of adoption of the Airport Land Use Compatibility Plan. Until such time as the Commission finds that the local general plan or specific plan is consistent with the Airport Land Use Commission Plan; or the local agency has overruled the Commission's determination, all actions, regulations, and permits shall be referred to the Commission for a consistency determination (Section 21676.5 (a)).

1.3.2 *Statutory Requirements* - As required by state law, the following types of actions shall be referred to the Airport Land Use Commission for determination of consistency with the Commission's plan *prior to their approval* by the local jurisdiction:

(a) The adoption or approval of any amendment to a general or specific plan affecting the Commission's geographic area of concern as indicated in paragraph 1.1 (Section 21676 (b)).

(b) The adoption or approval of a zoning ordinance or building regulation which (1) affects the Commission's geographic area of concern as indicated in paragraph 1.1 and (2) involves the types of airport impact concerns listed in paragraph 1.2 (Section 21676 (b)).

(c) Adoption or modification of the master plan for an existing public-use airport (Section 21676 (c)).

(d) Any proposal for a new airport or heliport whether for public or private use (Section 21661.5).

1.3.3 *Other Project Review* - Other types of actions which may involve a question of compatibility with airport activities should also be referred to the Airport Land Use Commission through voluntary agreements with the local government agencies (Section 21676.5 (b)). The Commission shall review the following types of actions:

(a) Any proposed expansion of a city's or an urban service district's sphere of influence within an airport's planning area.

(b) Any proposed residential rezoning or planned unit development consisting of five or more dwelling units within an airport's planning area.

(c) Any request for variance from a local agency's height limitation ordinance within an airport's planning area.

(d) Any proposal for construction or alteration of a structure (including antennas) taller than 150 feet above the ground anywhere within the County.

(e) Any major capital improvements (e.g., water, sewer, or roads) that would promote urban development.

(f) Proposed land acquisition by a government entity (especially, acquisition of a school site).

(g) Any other proposed land use action, as determined by the local planning agency, involving a question of compatibility with airport activities.

(h) Any proposal requiring notification to the Federal Aviation Administration under Federal Aviation Regulations Part 77, Subchapter B, regardless of the location in the County.

1.4 Review Process

1.4.1 Proposed actions listed in paragraph 1.3.1 must be submitted to the Commission for review prior to approval by the local government entity. All projects should be referred to the Commission at the earliest reasonable point in time so that the Commission's review can be duly considered by the local jurisdiction prior to formalizing its actions.

1.4.2 When reviewing a land use proposal, the Airport Land Use Commission has a choice of either of two actions: (1) find the project *consistent* with the Airport Land Use Compatibility Plan; or (2) find the project *inconsistent* with the Plan. In making a finding of inconsistency, the Commission may note the conditions under which the project would be consistent with the Plan. The Commission cannot, however, find a project consistent with the Plan subject to the inclusion of certain conditions in the project.

1.4.3 Once a project has been found consistent with the Airport Land Use Compatibility Plan, it need not be referred for review at subsequent stages of the planning process (e.g., for a general plan amendment and again for a zoning change) unless: (1) major changes to the project are made during subsequent review and consideration by the local jurisdiction; or (2) the local jurisdiction agrees that further review is warranted.

1.4.4 The Airport Land Use Commission must respond to a local agency's request for a consistency determination on a project within 60 days of referral. If the Commission fails to make the determination within that period, the proposed action shall be deemed consistent with the Airport Land Use Compatibility Plan.

1.4.5 When reviewing airport master plans for existing airports, the Commission has three action choices:

(a) Find the airport master plan consistent with the Airport Land Use Compatibility Plan.

(b) Disapprove the airport master plan on the basis that it is inconsistent with the Commission's plan.

(c) Modify the Airport Land Use Compatibility Plan (after duly noticed public hearing) to reflect the assumptions and proposals in the airport master plan.

1.4.6 When reviewing proposals for new airports or heliports, the Commission's choices of action are:

(a) Approve the proposal as being consistent with the specific review policies listed in Section 2.3 below.

(b) Approve the proposal and adopt a Compatibility Plan for that facility. Adoption of such a plan is required if the airport or heliport will be a public-use facility.

(c) Disapprove the proposal on the basis that the noise and safety impacts it would have on surrounding land uses are not adequately mitigated.

2 PRIMARY REVIEW POLICIES

2.1 Land Use Actions

2.1.1 The compatibility of land uses in the vicinity of the airports covered by this plan shall primarily be evaluated in terms of: (1) the Compatibility Criteria (Table 2) and accompanying notes; (2) the Compatibility Plan for each airport; and (3) specific policies established for individual airports.

2.1.2 Additional evaluation criteria are provided in the Supporting Policies which follow (Section 3). The Commission may refer to these additional policies to clarify or supplement its review.

2.1.3 Where an *existing* incompatible development has been partially or fully destroyed, it may be rebuilt to a density and intensity not exceeding that of the original construction. This exception does not apply within the inner approach/departure zones (Compatibility Zones A and B).

2.1.4 Where substantial incompatible development already exists, additional infill development of similar land uses may be allowed to occur even if such land uses are to be prohibited elsewhere in the zone. This exception does not apply within the approach/departure corridors (Compatibility Zones A and B). Projects can be considered "infill" if they meet *all* of the following criteria:

(a) The Airport Land Use Commission has determined that "substantial development" already exists.

(b) The project site is surrounded by uses similar to those proposed.

(c) The proposed project would not extend the perimeter of the area developed with incompatible uses.

(d) The proposal does not otherwise increase the intensity and/or incompatibility of use through use permits, density transfers or other strategy.

2.1.5 Local jurisdictions should identify infill areas when submitting their general plans and specific plans for a consistency determination by the Airport Land Use Commission.

2.1.6 Where a property is affected by more than one compatibility zone, the Commission shall endeavor to ensure than an equivalent degree of compatibility within each zone is maintained through site planning.

(a) In order to make a consistency determination for areas located within 100 feet of an approach surface, proposed development plans and/or subdivision maps must depict the lot configurations, building envelopes, and approach surfaces. Proposal statements should identify potential uses allowable under the applicable general plan/zoning designations for determination of consistency with the density criteria contained in Table 3-2.

2.1.7 Referrals to the ALUC shall be in writing directed to: ALUC Executive Officer, Napa County Airport Land Use Commission, 1195 Third Street, Room 210, Napa, California 94559 and shall be accompanied by each of the following:

(a) A cover letter describing the name of the local agency making the referral and the name, address, and telephone number of the contact person at the local agency;

(b) The specific section of the Public Utilities Code pursuant to which the matter is being referred to the ALUC for review;

(c) A statement that the ALUC's failure to act on the referral within 60 days of the date of receipt of the referral shall result in the proposed action being deemed consistent by operation of law;

(d) At least ten (10) copies of the plan, ordinance, or regulation being referred;

(e) A locally-generated mailing list with labels of the names and addresses of all persons who have participated in hearings held by the local agency on the referred plan, ordinance, or regulation; and

(f) An analysis prepared by or on behalf of the local planning agency which demonstrates consistency between the proposed plan, ordinance, or regulation being referred and the policies, standards, and criteria contained in the ALUC's adopted Airport Land Use Plan.

2.1.8 The ALUC shall not accept any plan, ordinance, or regulation for review until the referring local agency has held at least one substantive local hearing or other public meeting on the proposed matter. In the case of adoption or amendment of a general or specific plan, the

plan shall not be referred to the ALUC for review until the local planning commission has completed all hearings and rendered its final advisory decision on the plan. If a plan or any amendment thereto is referred to the ALUC prior to conclusion of the planning commission hearings and decision, the ALUC in its discretion may either reject the plan or any amendment thereto as premature or may preliminarily review the plan and issue preliminary comments provided, however, that the ALUC's preliminary review of a premature plan shall not be considered or construed as final action or a formal determination of consistency or inconsistency.

2.1.9 Referral to the ALUC shall occur prior to a local governing body's final action to adopt or intention to adopt the plan, ordinance, or regulation. In the event the local agency formalizes its intention to adopt, or adopts the plan, ordinance, or regulation that is already pending before the ALUC, the 60-day review period shall be deemed to commence as of the last date the local governing body took action on the plan, ordinance, or regulation.

2.1.10 A finding of consistency or inconsistency rendered by the ALUC shall apply only to that particular version of the plan, ordinance, or regulation referred to the ALUC. If the local planning commission or governing body proposes any revision to the plan, ordinance, or regulation, one copy of the revised plan, ordinance, or regulation shall be submitted to the ALUC for a determination as to whether re-referral is necessary. Re-referral pursuant to statute and this plan will be required for any change to the plan, ordinance, or regulation which affects whether the proposed action is consistent with the adopted ALUP.

2.2 Review of Airport Plans

2.2.1 When reviewing airport master plans, the Commission shall determine whether the activity forecasts or proposed facility development identified in the proposed master plan differs substantially from the forecasts and development assumed for that airport in the Airport Land Use Compatibility Plan. Attention should specifically focus on:

(a) Activity forecasts that are: (1) significantly higher than those in the Airport Land Use Compatibility Plan; or which (2) include a significantly higher proportion of larger or noisier aircraft.

(b) Proposals to: (1) construct a new runway or helicopter takeoff and landing area; (2) change the length, width, or landing threshold location of an existing runway; or (3) establish an instrument approach procedure.

2.2.2 The Commission shall determine whether the proposed airport master plan is consistent with the Airport Land Use Compatibility Plan. The Commission shall base their determination of consistency on findings that the forecasts and development of the airport would not result in greater noise, overflight, and safety impacts or height restrictions on surrounding land uses than are presently assumed in the Airport Land Use Compatibility Plan.

(a) The Commission may determine that revision of the Airport Land Use Compatibility Plan is warranted based on their review of a proposed airport master plan. If the Commission finds that such a revision to the Airport Land Use Compatibility Plan should be initiated, then the Commission shall notify the local jurisdiction of this finding.

2.3 Plans for New Airports or Heliports

2.3.1 In reviewing proposals for new airports and heliports, the Commission shall focus on the noise, safety, overflight, and height limit impacts upon surrounding land uses.

(a) Other types of environmental impacts (e.g., air quality, water quality, natural habitats, vehicle traffic, etc.) are not within the scope of review for the Commission.

(b) The Commission shall evaluate the adequacy of the facility design to the extent that it affects surrounding land use.

(c) The Commission shall base its review on the proposed airfield design.

2.3.2 The review shall examine the relationships between existing and planned land uses in the vicinity of the proposed airport or heliport and the impacts that the proposed facility would have upon these land uses. Questions to be considered should include:

(a) Would the existing or planned land uses be considered incompatible with the airport or heliport if the latter were already in existence?

(b) What measures are included in the airport or heliport proposal to mitigate the noise, safety, overflight, and height restriction impacts on surrounding land uses? Such measures might include: (1) location of flight tracks so as to minimize the impacts; (2) other operational procedures to minimize impacts; (3) acquisition of property interests (fee title or easements) on the impacted land.

2.3.3 When submitted to the Commission, a proposal for a new airport or heliport shall contain sufficient information to enable the Commission to adequately review the noise, safety, overflight, and height restriction impacts upon surrounding land uses. Information to be submitted shall include:

(a) A layout plan drawing of the proposed facility showing the location of: (1) property boundaries; (2) runways or helicopter takeoff and landing areas; and (3) runway protection zones or helicopter approach/departure zones.

(b) Airspace surfaces in accordance with Federal Aviation Regulations, Part 77.

(c) Activity forecasts, including the number of operations by each type of aircraft proposed to use the facility.

(d) Noise contours or other relevant noise impact data.

(e) A map showing existing and planned land uses in the vicinity of the proposed airport or heliport.

(f) Identification and proposed mitigation of impacts on surrounding land uses.

3 SUPPORTING COMPATIBILITY POLICIES

3.1 Noise

3.1.1 The evaluation of airport/land use noise compatibility shall consider the *future* Community Noise Equivalent Level (CNEL) contours of each airport. These contours are calculated based upon aircraft activity forecasts which are set forth in adopted airport master plans or which are considered by the Commission to be plausible (refer to Part II for noise exposure maps).

3.1.2 The locations of CNEL contours are one of the factors used to define compatibility zone boundaries and criteria. Noise compatibility criteria should be applied at the general plan or specific plan level. Because of the inherent variability of flight paths, the depicted contour boundaries are not absolute determinants of the compatibility or incompatibility of a given land use. For this reason, noise contours should **not** be used as site design criteria. Noise contours can only quantify noise impacts in a general manner. Site conditions, terrain, and actual flight patterns and frequency should also be evaluated.

3.1.3 The maximum CNEL considered normally acceptable for most residential uses in the vicinity of the airports covered by this plan is 55 dBA. This standard is appropriate for areas with low ambient noise levels. In areas with higher ambient noise levels, the maximum CNEL considered normally acceptable for residential uses shall be 60 dBA. Factors which determine whether to apply the higher standard include the presence of: major highways, large concentration of residences, or large-scale commercial and industrial uses.

3.1.4 Noise level standards for compatibility with other types of land uses shall be applied in the same manner as the above residential noise level criteria. Examples of acceptable noise levels for other land uses in an airport's vicinity are presented in Table 2 - 1.

3.1.5 The extent of outdoor activity associated with a particular land use is an important factor to be considered in evaluating its compatibility with airport noise. In most locations, noise level reduction measures are only effective in reducing interior noise levels. Also, source reduction measures implemented by airport authorities are not within the scope of this plan.

3.1.6 Single-event noise levels should be addressed when evaluating the compatibility of highly noise-sensitive land uses such as schools, libraries, and outdoor theaters. Single-event noise

levels are particularly important in areas which are regularly overflown by aircraft, but which do not produce significant CNEL contours. Flight patterns for each airport (illustrated in Part II) should be considered in the review process for such uses. Noise attenuation measures may be required based upon the criteria contained in Appendix C.

3.2 Safety

3.2.1 The intent of land use safety compatibility criteria is to minimize the risks associated with an off-airport aircraft accident or emergency landing.

(a) Risks both to people and property in the vicinity of an airport and to people on board the aircraft shall be considered.

(b) More stringent land use controls shall be applied to the areas with greater potential risk.

3.2.2 The principal means of reducing risks to people on the ground is to restrict land uses so as to limit the number of people permitted to occupy a given area. Methods for determining the concentration of people for various land uses is provided in Appendix D.

(a) Greater restrictions shall be placed upon the number of people permitted in a building than upon the number within an open area because of the greater difficulty of evacuating a building in the event of its involvement in an aircraft accident.

3.2.3 Land uses of particular concern are ones in which the occupants have reduced effective mobility or are unable to respond to emergency situations. Schools, hospitals, nursing homes, and other uses in which the majority of occupants are children, the elderly, and the handicapped shall be prohibited within the approaches to an airport (Compatibility Zones A, B, and C). These types of uses should be carefully evaluated in Zone D to determine their proximity to traffic pattern, turning movements, and the frequency of overflights.

3.2.4 Any use involving the potential for aboveground explosion or the release of toxic or corrosive materials shall be prohibited in the approaches to an airport (Compatibility Zones A, B, and C).

3.2.5 In the event that an aircraft is forced to land away from an airport, the risks to people on board aircraft and damage to property can best be minimized by providing as much open land area as possible within the airport vicinity. This concept is based upon the fact that the large majority of aircraft accidents occurring away from an airport runway are controlled emergency landings in which the pilot has reasonable opportunity to select the landing site.

(a) For purposes of this Plan, "open land" shall be defined as an area that is typically: (1) free of structures and other major obstacles such as walls, large trees, and overhead wires; and (2) have minimum dimensions of at least 75 feet wide, and at least 300 feet or more in length. Certain roads are acceptable as open land areas if they meet the preceding criteria.

(b) The most critical areas for preserving open land are within the approach zones and beneath the traffic pattern (Zones A, B, C, and D). Within an airport's traffic areas, lands presently designated for open space uses (i.e., agricultural lands, golf courses, etc.) should be preserved as open land areas to the maximum extent feasible. The following criteria should be used to retain/preserve open land areas within proposed development.

(1) Within the approach/departure zones (Zones A, B, C and), buildings should be set back from the extended runway centerline to the maximum extent feasible.

(2) Within the traffic pattern areas (Zone D), open land areas at the periphery of the traffic pattern areas should be preserved.

(c) Clustering of development and providing contiguous landscaped and parking areas is encouraged as a means of maximizing open land and providing continuity of open land areas between developments.

(d) In order to establish the open land areas available in critical areas and make a consistency determination, building envelopes and the approach zones should be indicated on all development plans and subdivision maps for all proposed development within 100 feet of an approach zone.

3.3 Airspace Protection

3.3.1 The criteria for limiting the height of structures, trees, and other objects in the vicinity of an airport shall be set in accordance with Part 77, Subpart C, of the Federal Aviation Regulations and with the United States Standard for Terminal Instrument Procedures (TERPS). Airspace plans for each airport which depict the critical areas for airspace protection are provided in Part III. TERPS height limitations are only applicable at Napa County Airport where an instrument approach has been established. The private airfield has only visual approaches.

3.3.2 Within the approaches to a public airport, the owner of any property proposed for development should be required to dedicate an avigation easement to the jurisdiction owning the airport. In the case of a private airport, a height-limit easement should be dedicated to the jurisdiction controlling the land use. Examples of these easements are provided in Appendix E.

(a) The avigation easement shall: (1) provide the right of flight in the airspace above the property; (2) allow the generation of noise and other impacts associated with aircraft overflight; (3) restrict the height of structures, trees, and other objects; (4) permit access to the property with proper notice for the removal or aeronautical marking of objects exceeding the established height limit; and (5) prohibit electrical interference, glare, and other potential hazards to flight from being created on the property.

(b) Within the approach/departure zones, height restrictions of less than 35 feet may be required.

3.3.3 Other than within the approach/departure zones, (Compatibility Zones A, B, and C), height restrictions may allow up to 35 feet above the level of the ground on which they are located, or as similarly provided by local ordinance.

(a) In locations where the terrain, structure, or any object (including clearances over roads and railroads) penetrates Federal Aviation Regulations Part 77 surfaces, an avigation easement shall be required in accordance with Paragraph 3.3.2 which limits the height to 35 feet above the ground and enables the marking or lighting of any potential hazard to air navigation. Trees and other natural materials may exceed the height limitation provided that the avigation easement allows for removal, marking, or lighting of potential aircraft hazards.

3.3.4 Proponents of a project which may exceed a Part 77 surface must notify the Federal Aviation Administration as required by FAR Part 77, Subpart B, and by the California State Public Utilities Code Sections 21658 and 21659. (Notification to the Federal Aviation Administration under FAR Part 77, Subpart B, is required even for certain proposed construction that does not exceed the height limits allowed by Subpart C of the regulations. Refer to Appendix B for the specific Federal Aviation Administration notification requirements.)

(a) Local jurisdictions shall inform project proponents of the requirements for notification to the Federal Aviation Administration.

(b) The requirement for notification to the Federal Aviation Administration shall not necessarily trigger review of an individual project by the Airport Land Use Commission if the project is otherwise in conformance with the compatibility criteria established in the Airport Land Use Plan.

(c) Any project coming before the Airport Land Use Commission for reason of height-limit issues shall include a copy of FAR Part 77 notification to the Federal Aviation Administration.

3.3.5 Land uses which may produce hazards to aircraft in flight shall not be permitted within any airport's planning area. Specific characteristics to be avoided include: (1) glare or distracting lights which could be mistaken for airport lights; (2) sources of dust, steam, or smoke which may impair pilot visibility; (3) sources of electrical interference with aircraft communications or navigation; and (4) any use which may attract large flocks of birds, especially landfills and certain agricultural uses.

3.4 Overflight

3.4.1 All locations within an airport's planning area are regarded as potentially subject to routine aircraft overflight. Although sensitivity to aircraft overflights varies from individual to individual, overflight sensitivity is particularly important with respect to residential land uses.

(a) Local jurisdictions shall establish some method of providing notification to prospective buyers of new residential uses within an airport's planning area (all compatibility zones). Appropriate measures may include requiring the dedication of avigation or overflight easements, deed noticing, or real estate disclosure statements. Regardless of the method chosen, the notification shall: (1) note that the property is subject to routine overflight by aircraft at low altitudes; and (2) provide positive assurance that a prospective buyer has received this information. Refer to Appendix E for sample easements and deed notices.

(b) Local jurisdictions are encouraged to extend the above or similar buyer awareness program to existing residential uses within the airport planning areas.

3.4.2 The compatibility of uses in the airport planning areas shall be preserved to the maximum feasible extent. There is presently a high degree of land use compatibility among the existing and planned land uses in the vicinity of airports within Napa County, primarily because no residential land uses are designated within the traffic areas. The proposed conversion of land to residential use within any airport's traffic area (Compatibility Zones A, B, C, and D) shall be deemed inconsistent with this Airport Land Use Compatibility Plan.

3.4.3 The conversion of land **designated** for agricultural use (in respective general plans) to residential use beneath the common flight paths shall be discouraged. Consideration should be given to specific terrain conditions and actual flight patterns in determining the compatibility of proposed uses in these areas. Clustering of development away from common flight paths is encouraged.

Table 3-1

Compatibility Zone Definitions

ZONE A	Runway Protection Zone: Dimensioned to encompass the future Runway Protection Zones of the respective runways for each airport as presented on the Airport Layout Plans contained in Part III of this document. Also includes areas lateral to the runway. These areas are regularly overflown by aircraft below 50 feet above the ground. For this reason, these areas are considered high risk with regard to accident potential and any structures, buildings, trees or obstacles may create a flight hazard. These areas are also affected by high noise levels.
ZONE B	Approach/Departure Zone: This zone is defined as the areas where aircraft will be below 100 feet above ground level as determined by the type of approach anticipated for that runway in the future. Future approach slopes are designated on the respective Airport Layout Plans and Airspace Plans for each airport in Part III. These areas are affected by substantial risk of accident potential due to the frequency of overflights at low altitudes. Noise levels are generally high with frequent loud single-events.
ZONE C	Extended Approach/Departure Zone: This zone is defined as the area where aircraft will be below 300 feet above ground level as determined by the type of approach. The low altitude of aircraft in these areas indicates moderate to high risk of accident potential. Properties in this zone will be affected by substantial noise.
ZONE D	Common Traffic Pattern: This area is defined by the flight pattern for each airport and illustrated in the respective "Airport Impact Areas" figures contained in Part III. These areas are routinely overflown by aircraft operating to and from the airport with frequent single-event noise intrusion. Overflights in these areas can range from near the traffic pattern altitude (about 1,000 feet above the ground) to as low as 300 feet above the ground. Accident risk varies from low to moderate. Areas where aircraft are near pattern altitude (e.g., downwind leg) have the lowest risk. In areas where aircraft are at lower altitudes (especially on circle-to-land instrument approaches) a moderate level of risk exists.
ZONE E	Other Airport Environs: An airport's influence area often extends beyond the typically defined compatibility zones during busy traffic hours and when larger aircraft are in the pattern. Aircraft overflights can occur anywhere in these areas when aircraft are departing or approaching an airport. Overflight annoyance is the primary impact element in these areas. The risk of accident is very low.

ZONE	LOCATION	IMPACT ELEMENTS	MAXIMUM DENSITIES [8]		
			Residential [1]	Other Uses (people/ac) [2]	
				In Structures	Total in and out of Structures
A [9]	Runway Protection Zone and Primary Surface	- High risk - High noise levels - Low overflights below 50' AGL	0	0	10
B	Inner Approach/Departure Zone	- Substantial risk - High noise levels - Low overflights below 100' AGL	0	10	25
C	Approach/Departure Zone	- Moderate risk - Substantial noise - Low overflight below 300' AGL	0	50	75
D	Common Traffic Pattern	- Moderate risk - Frequent noise intrusion - Routine overflights below 1,000' AGL	0	100	150
E	Other Airport Environs	- Low risk - Overflight annoyance	See Note 7		

1. Residential land use and zoning designations are considered incompatible uses within the traffic pattern area (Zones A, B, C, and D) where aircraft overflights are frequent and at low altitude. The residential restrictions do not apply to residential uses allowable under agricultural land use and zoning designations.

2. The use should not attract more than the indicated number of persons per **net** acre. Net acreage is the total site area inclusive of parking areas and landscaping, less the area dedicated for streets. These densities are intended as general planning guidelines to aid in determining the acceptability of proposed land uses. Clustering of development within the density parameters should be encouraged to protect and provide open land/safety areas. However, in Zones A, B, and C the density on any one acre of a parcel should not exceed twice the indicated number of people per acre.

3. Dedication of an avigation or overflight easement or deed notice is required as a condition for new development within all zones. Also, height limit restrictions are applicable to structures and trees in all zones in accordance with Federal Aviation Regulation Part 77 and local ordinances. Uses which may be hazardous to flight are prohibited in all zones.

4. These uses typically can be designed to meet the density requirements and other development conditions listed.

5. These uses typically do not meet the density requirements and other development conditions listed. They should be allowed only if a major community objective is served by their location in this zone and if mitigation measures (i.e., noise attenuation) are incorporated that will minimize potential conflicts.

6. NLR = Noise Level Reduction; i.e., the attenuation of sound level from outside to inside provided by the structure. Noise level reduction measures may be required in areas with high single-event noise levels and where noise-sensitive users (schools, libraries, etc.) are proposed. Refer to Appendix C for criteria and noise attenuation measures.

7. Maximum residential densities in accordance with local adopted General Plans and zoning designations. Consideration should be given to the proximity of flight patterns, frequency of overflight, terrain conditions, and type of aircraft in determining acceptable location of residential uses. Referral to the ALUC for review of development plans prior to approval is recommended.

8. The purpose of these criteria is to provide a basis for determining those land uses which are compatible with airport activities. Specific land uses will be allowed only if they are also consistent with applicable General Plan policies and zoning ordinances.

9. All lands in Zone A are either within the Airport's boundaries or designated for acquisition in the Airport Master Plan.

10. Includes objects that penetrate FAR Part 77 surfaces, uses that would attract large numbers of birds (e.g., landfills), and uses that would create smoke, glare, distracting lights, or electronic interference.

11. Avigation easements will be required in lieu of overflight easements or deed notices where there is an appropriate public agency to review them.

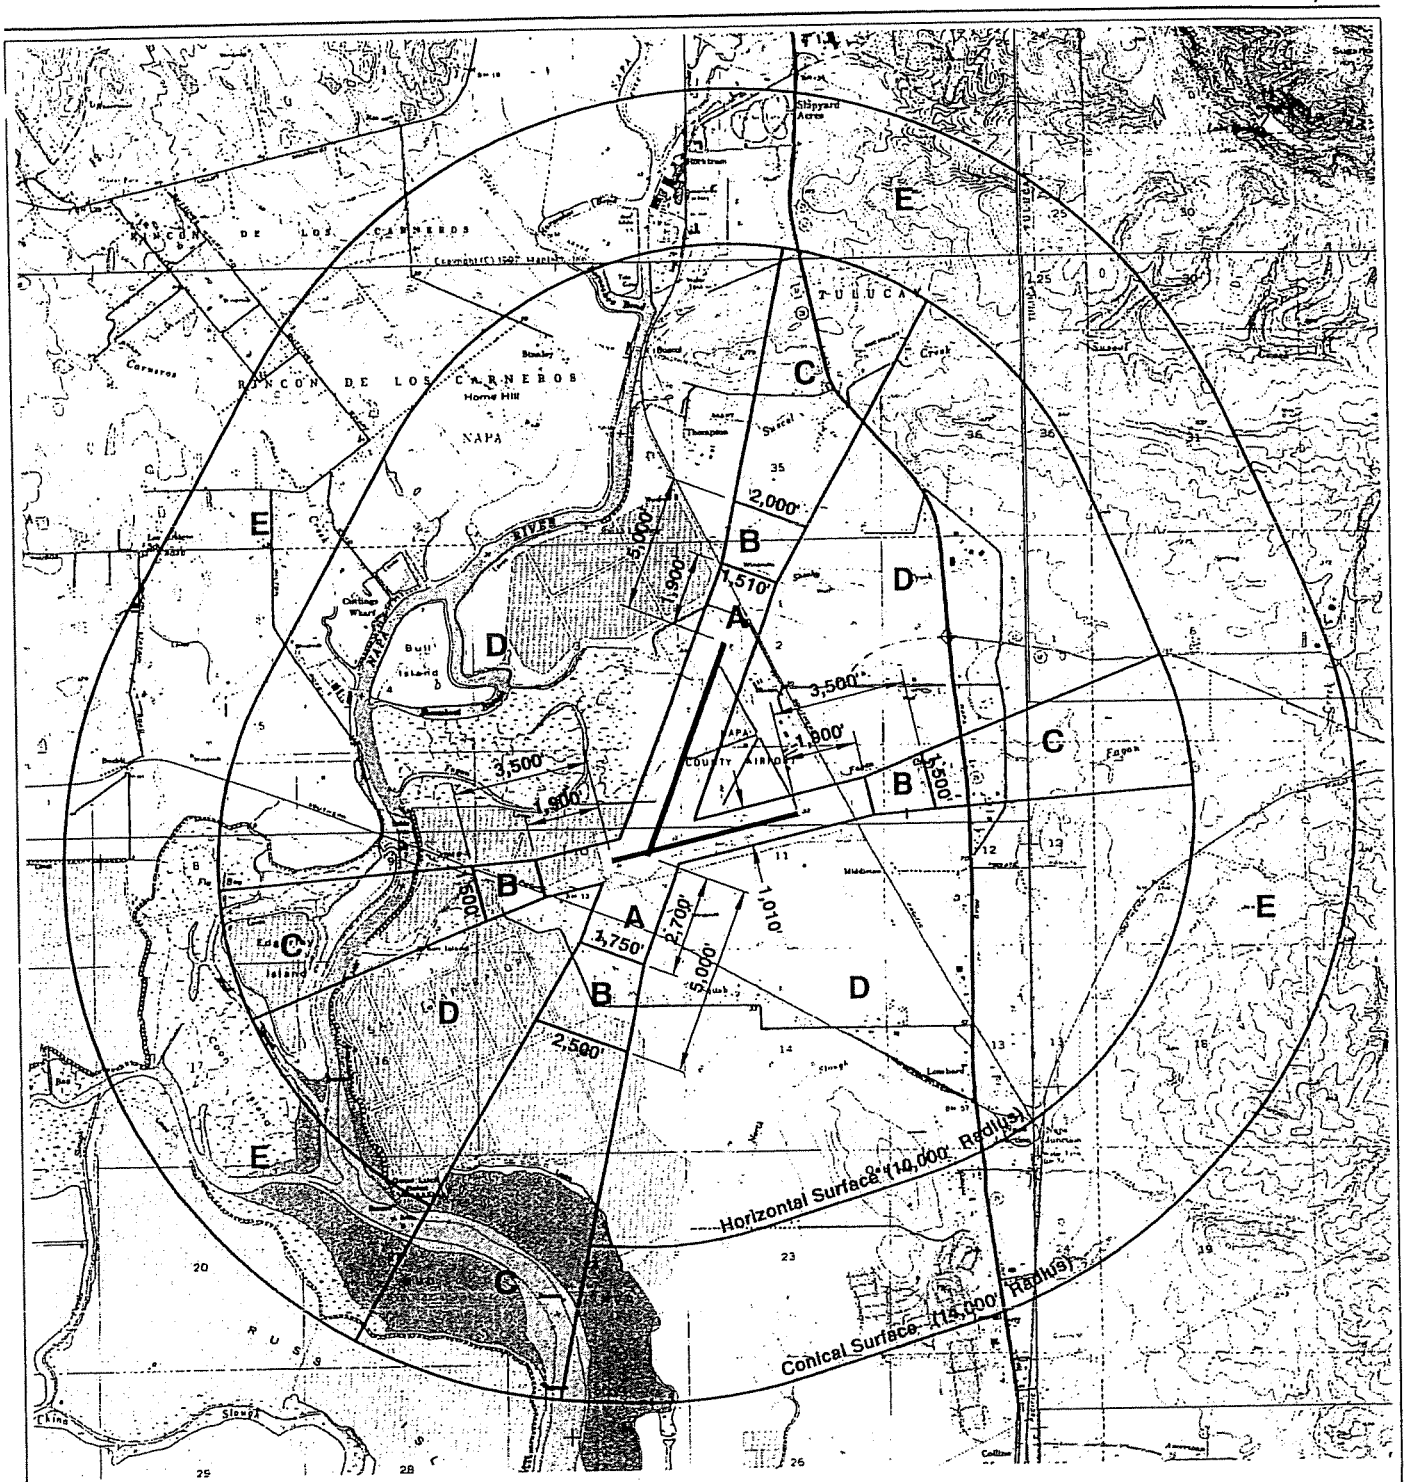

Table 3-2

Airport Vicinity Land Use Compatibility Criteria

Napa County Airport

ZONE[1]	PROHIBITED USES	OTHER DEVELOPMENT[3] CONDITIONS	EXAMPLES OF NORMALLY ACCEPTABLE USES[4]	EXAMPLES OF USES NOT NORMALLY ACCEPTABLE[5]
A	- All residential uses - Any assemblage of people - Any new structure which exceeds height limits - Noise sensitive uses - Uses hazardous to flight[10]	- Avigation easement required	- Pasture, open space - Aircraft tiedowns - Auto parking - Most agricultural uses	- Heavy poles, signs, large trees, etc. - Ponds
B	- All residential uses - Any noise-sensitive uses - Schools, libraries, hospitals, nursing homes, daycare centers - Uses hazardous to flight[10]	- Avigation easement required - Structures to be as far as possible from extended runway centerline - Clustering is encouraged to maximize open land areas - Minimum NLR of 25 dBA in office buildings[6] - Building envelopes and approach surfaces required on all subdivision maps and development plans	- All uses from Zone A - Parks with low-intensity uses, golf courses - Nurseries - Mini-storage	- Retail uses - Office uses (except as accessory uses - Hotels, motels, resorts - Theaters, assembly halls, and conference centers - Ponds
C	- All residential uses - Schools, libraries, hospitals, nursing homes, daycare centers - Uses hazardous to flight[10]	- Avigation easement required - Structures to be set back as far as possible from extended centerline - Clustering is encouraged to maximize open land areas - Building envelopes and approach surfaces required on all subdivision maps - NLR measures may be required for noise-sensitive uses (offices)	- All uses from Zone B - Warehousing and low-intensity light industrial - Small retail uses - Outdoor recreation uses; marina, ballpark - Office uses	- Large retail buildings - Hotels, motels, resorts, health club - Restaurants, bars - Multi-story buildings - Theaters, assembly halls, and conference centers - Ponds
D	- All residential uses - Uses hazardous to flight[10]	- Overflight easement or deed notice required[11] - Building envelopes and approach surfaces required on all development plans within 100' of approach zones - Clustering is encouraged to maximize open land areas - NLR measures may be required for noise-sensitive uses[6]	- All uses from Zone C - Most non-residential uses - Accessory day care centers	- Schools, libraries, hospitals, nursing homes - Large shopping malls - Amphitheaters - Ponds
E	- Noise-sensitive outdoor uses	- Overflight easement or deed notice required[11]	- Any permitted use	- Amphitheaters - Landfills - Ponds

Implementation Strategies

Local land use plans, ordinances, and policies are the principal means used to ensure land use compatibility in the vicinity of an airport. This section discusses the various types of land use control measures available to the local jurisdictions in implementing the policies of the Airport Land Use Compatibility Plan.

NOISE AND SAFETY

Land Use Policies

Local general plans and specific plans should include goals and policies to promote land use compatibility within an airport's vicinity. In addition, an airport combining zone is recommended to implement the policies and further guide the type and intensity of development in an airport's planning area. For a consistency determination, affected jurisdictions should incorporate specific policies addressing compatibility concerns in their respective General Plans which reflect the ALUC's compatibility plans, policies, and criteria. Specific policies addressing the following issues should be clearly referenced in the General Plan:

- Policies which recognize the role of the ALUC, the Airport's Planning/Referral Area and the type of actions to be referred for ALUC review.

- Policies regarding airspace protection which specify the height-limits in accordance with FAR Part 77 and which clarify the use of avigation easements within the approaches and in areas where terrain may penetrate the airspace.

- Policies which prohibit certain land uses which pose greater risks (i.e., low mobility, noise sensitivity) or may produce flight hazards.

- Policies which apply the maximum density criteria to development in the Airport's vicinity. Approach surfaces should be indicated on all development plans.

- Policies which ensure that open land is preserved in critical areas, such as requiring building envelopes, contiguous parking and landscaped areas, and larger setbacks from certain geographic features (i.e., creeks, roads etc).

- Policies with regard to overflight impacts and the need to prevent encroachment of residential uses into the Airport's traffic area.

- Policies requiring the dedication of overflight easements and/or deed notices for all residential uses within an airport's planning referral area.

Land Use Designations

The designation of land uses consistent with the Airport Land Use Commission's policies is the primary means of assuring airport land use compatibility. The adoption of appropriate land use designations within the various impact zones should minimize the public's exposure and risks associated with airport activities (e.g., limiting and/or prohibiting residential uses and other noise-sensitive land uses in an airport's vicinity). However, for airport compatibility planning, land use designations as the only form of land use control has important limitations:

- **Non-aviation Orientation** – The basic land use categories employed throughout the community do not address the specific issues of compatibility with airport activities. Additional conditions need to be established to assure that land uses normally compatible within an airport's vicinity do not include incompatible characteristics.

- **Ease of Change** – Nothing permanently locks in a land use designation. If pressured by landowners to allow less restricted development, future local legislative bodies can change the established designations. Such changes especially occur if the land changes jurisdiction (e.g., as a result of annexation). However, proposed land use changes must be reviewed by the ALUC for consistency and specific findings are required in order for local jurisdictions to override the ALUC determination.

- **Restrictiveness** – Land use designations must not eliminate all reasonable economic use of private property without being considered an unfair taking. Other methods of land use control, such as the acquisition of land, purchase of development rights, or restrictive easements may also be needed to achieve the desired degree of land use control.

Noise Compatibility Standards

In order to limit the public's exposure to excessive noise impacts, each jurisdiction has adopted noise compatibility guidelines for various land uses. These guidelines are contained in the noise element of the general plans for each jurisdiction. The guidelines establish criteria for both exterior noise exposure levels and interior noise levels and must include an evaluation of airport noise. The adopted noise standards should be consistent with ALUC policies but may be more restrictive than those indicated in the Airport Land Use Compatibility Plan.

State law requires each element of the general plan to be consistent. Thus, the land use designations must reflect the adopted noise standards for each jurisdiction. State law requires a finding of consistency with the adopted general plan for project approval. These existing land use control measures have been principally used to ensure land use compatibility throughout the community.

Development Restrictions

Development restrictions with regard to population density, building coverage, building height, and noise insulation measures are often used by local governments to ensure land use compatibility with airports. These restrictions can be implemented by:

- The adoption of specific policies in the local general plan, specific plan, or area plan.
- The adoption of a local ordinance establishing an airport combining zone for a specific area.
- The establishment of restrictions and/or conditions upon the approval of a specific project.

The land use policies and compatibility criteria contained in the Airport Land Use Compatibility Plan are designed so that local jurisdictions can incorporate appropriate policies and establish reasonable conditions on the approval of developments in an airport's vicinity.

Projects should meet the maximum densities specified in the Compatibility Criteria. Other development conditions which may be appropriate include:

- The establishment of height-limitations through the dedication of avigation easements within the approach/departure zones and where existing terrain may penetrate the airspace defined by federal regulations.
- The dedication of overflight easements and/or deed notices for residential uses within an airport's planning area.
- Prohibit certain uses which may be hazardous to flight or which pose greater risk or sensitivity to airport activities.
- Establishment of maximum lot coverage and appropriate setbacks to insure open land is preserved in critical areas.
- Designation of building envelopes and approach/departure surfaces on proposed development plans within the approaches to determine the amount and configuration of open land in these critical areas.

Airport Combining Zone

The recommended method for implementation of this Compatibility Plan is the establishment of an airport combining or overlay zone. The basic concept of a combining zone is to establish requirements in addition to those of the underlying land use district. The principal zoning classification continues to define most of the use and site design parameters. The combining zone then serves to modify the primary classification in a few, very specific ways. The specific modifications should include limitations on building height, lot coverage, population density, and flight hazards (smoke, glare, electrical interference, etc.), as well as provisions for site design criteria and buyer notification.

There are several benefits to using an airport combining zone. A combining zone provides a mechanism for implementation of restrictions and conditions that may apply to only a few types of land uses within a given land use category or zoning district. It permits the continued utilization of the majority of the design and use guidelines contained in the existing zoning code. This avoids the need for a large number of discrete new zoning districts in an airport's vicinity. It also enables the local jurisdictions to use the performance standards provided in the Airport Land Use Compatibility Plan directly, rather than redefining the existing zoning code. In addition, zoning is a commonly disclosed source of information for prospective buyers and can be utilized as an element of a comprehensive buyer awareness program.

OBSTRUCTIONS AND HAZARDS TO FLIGHT

FAA Notification and Referral

Project proponents must be informed of the notification and filing requirements of Federal Aviation Regulation Part 77, Subpart B (refer to Appendix B). Notice to the FAA using Form 7460-1, "Notice of Proposed Construction or Alteration" should be filed for any proposed structure which would penetrate imaginary slopes extending from the nearest point of an airport's runway. The slope of the imaginary surface and the radius of the referral area are specified in relation to the length of the runway. This referral requirement differs substantially from the height-limitations also specified under Part 77.

The purpose of the FAA referral would be to determine if the proposed construction would constitute a potential hazard or obstruction to flight. Proposed structures in developed areas that would be shielded by existing structures or by natural terrain of equal or greater height, where it is obvious that the proposal would not adversely affect air safety, do not require FAA referral.

Height Limitation and Safety Ordinance

As a means of implementing the height restrictions of Federal Aviation Regulations Part 77, a height limitation ordinance is appropriate. The purpose of the ordinance would be to prevent the creation of flight hazards and obstructions in order to protect the utility of the airport. The ordinance will generally define the minimum slopes for the approaches to each runway and the various imaginary surfaces which establish the maximum height of objects in the airport's vicinity.

Provisions in the ordinance should also prohibit/limit the creation of other hazards to air navigation, such as the production of excessive smoke, glare, light, and electrical interference and uses which may attract birds, such as landfills.

Easements

The use of easements is another land use control measure available to local jurisdictions. Easements have historically been used to establish height limitations, prevent flight hazards, as well as ensure that prospec-

tive buyers are notified of potential overflights. The dedication of an easement is generally required as a condition of development approval or other land use entitlement. An easement will only apply to the specific property to which it is attached and is binding on all subsequent owners. There are three types of easements generally associated with compatibility planning.

- **Height-limit easements** are often required as a condition of approval for projects that are within an airport's approach/departure zone or other areas where height restrictions are of critical concern (i.e., areas where high terrain is close to or penetrates Part 77 imaginary surfaces). The advantage of an easement is that it generally conveys the right to enter the property and remove, mark, or light any potential obstructions. Height-limit easements also include provisions which prohibit other flight hazards, such as excessive smoke, glare, electrical interference, and uses which may attract birds.

- **Overflight easements** simply establish a right-of-way through the airspace over the property. The right to subject the property to noise, vibration, fumes, dust, and fuel emissions associated with airport activities is generally included. One limitation of overflight easements is that they do not address flight hazards or obstructions. They are generally used in areas that are subject to aircraft overflights where height limitations and safety are not significant concerns.

- **Avigation easements** are generally broader in scope than either height-limits easement or overflight easements in that they include both provisions enabling access to the property to remove, mark, or light potential obstructions or flight hazards and the right of overflight. The dedication of an avigation easement is often required by local jurisdictions as a condition of approval for development of property where noise, safety, or potential flight hazards are significant concerns.

  Although the rights associated with most avigation easements may be established in other forms (e.g., Federal Aviation Regulations and height-limit zoning), an avigation easement clearly conveys these rights to the airport owner. It also serves to notify all future owners of affected property of the airport's influence and specific restrictions. An avigation easement normally conveys the following rights and restrictions:

  - A right-of-way for free and unobstructed passage of aircraft through the airspace over the property at any altitude above a surface specified in the easement (set in accordance with Federal Aviation Regulations Part 77 and/or criteria for terminal instrument approaches).

  - A right to subject the property to noise, vibration, fumes, dust, and fuel particle emissions associated with normal airport activity.

  - Prohibits the construction or growth of any structure, tree, or other object that would enter the acquired airspace.

  - A right-of-entry onto the property, with appropriate advance notice, for the purpose of removing, marking, or lighting any structure or other object that enters the acquired airspace.

  - Prohibit electrical interference, glare, misleading light sources, visual impairments, and other hazards to aircraft from being created on the property.

OVERFLIGHTS

Buyer Awareness Programs

The objective of a buyer awareness program is to ensure that the prospective buyers of property in the vicinity of an airport are informed about the airport's potential overflight impacts. Buyer awareness measures are intended to enable people who are particularly sensitive to aircraft overflights to avoid moving to the principally affected areas. Generally, there are three types of measures that can be utilized to establish a buyer awareness program: overflight easements, deed notices, and real estate disclosure statements.

Overflight Easements

Overflight easements as described above are generally used as a condition of approval for residential land uses in areas subject to aircraft overflights. The primary purpose of an overflight easement is not to protect the airspace, but rather to notify prospective buyers of the overflights.

Deed Noticing

Deed noticing is similar to an overflight easement in that it is attached to the title to a specific property. The distinguishing difference between a deed notice and an overflight easement is that the deed notice only serves as a disclosure of potential overflights, whereas an easement conveys a "right-of-way" to the airspace over a property. The filing of deed notices is recommended as a condition of approval for new residential uses within the planning areas of the privately owned airports in the County. A sample of language for deed noticing is included in Appendix E.

Real Estate Disclosure Statements

A more comprehensive form of buyer awareness program is to require the disclosure of information about an airport's influence area along to prospective buyers of property prior to the transfer of title. The advantage of this type of program is that it applies equally to all properties, including existing land uses.

This type of buyer awareness program could be implemented through the adoption of a local ordinance requiring real estate disclosure upon the transfer of title or established in conjunction with the adoption of an airport combining zone. Notification describing the zone and discussing its significance could be formally sent to all local real estate brokers and title companies. Having received this information, the brokers would be obligated by state law to pass it along to prospective buyers.

PART III

Airport Plans and Impact Assessment

5

Napa County Airport Plans and Impact Assessment

NAPA COUNTY AIRPORT

Setting

Napa County Airport is situated at the southern entrance to Napa Valley near the intersection of State Highway 29 and State Highway 12, approximately 2 miles south of the City of Napa and 3 miles north of the City of Vallejo and the Solano County Line.

Most of the land surrounding the Airport is, as yet, undeveloped, providing a high degree of land use compatibility between the Airport and its environs. The Airport is bounded on the west by marshland of the Napa River, and on east by the Southern Pacific Railroad. Other uses adjoining the Airport include the salt evaporation ponds to the south and west, and the Napa Sanitation District's lands used for storage and irrigation of wastewater to the north.

Existing urban development in the area includes scattered industrial and commercial uses located along State Highway 29, Tower Road, and Green Island Road. The nearest residential development includes an estimated 150 homes along the west bank of the Napa River located directly west of the airfield. Other residential land uses are concentrated in the unincorporated American Canyon area located approximately two miles south of the Airport. A description of the he Airport's environs are is summarized in Table 5 - 1.

Affected Jurisdictions

Land within the Airport's influence area falls under the jurisdiction of two local agencies: the County of Napa and the City of Napa. Figure 5A illustrates the jurisdictional boundaries and respective land use designations in the Airport's vicinity.

Table 5-1

Airport Environs

Napa County Airport

AIRPORT LOCATION AND ACCESS

- Located south of the City of Napa approximately 1 mile from the city limits.
- Situated 2 miles north of the unincorporated community of American Canyon.
- Access 1 mile west on Airport Road from the intersection of State Highways 12 and 29.
- Airport property and adjoining lands within the jurisdiction of the County.
- Southern Pacific Railroad adjoins Airport on the east and traverses Airport property to the south.
- Airport property adjoins Green Island Road to the south.

LOCAL LAND USE PLANS AND ZONING

- *Napa County General Plan* adopted 1983
- *Napa County Airport Industrial Area Specific Plan* adopted 1986
- *City of Napa General Plan*
- City sphere of influence extends within 1 mile northwest of Airport.
- *Napa Valley Corporate Park Specific Plan* 1983.

PLANNED LAND USE DEVELOPMENT IN AIRPORT AREA

- Future industrial business park planned for adjoining areas north, east and south.
- Potential mixed use planned development for area northwest of airport within the City of Napa.
- Agricultural and open space uses designated at periphery of planning area.

ESTABLISHED APPROACH PROTECTION MEASURES

- Airport owns fee title or has established easements over the majority land within runway protection zones.
- Napa County *Airport Safety Ordinance* establishes height limitations and prohibits flight hazards in the airport planning area.
- Standard avigation easement is required for development approval on all projects within the airport planning area.
- Airport Master Plan recommends acquisition of additional lands/easements for approach protection.

EXISTING AIRPORT AREA LAND USES

General Character

- Airport is situated in a developing industrial/business park area
- Surrounded by predominantly agricultural and industrial uses.
- Airport property is bounded on the west by tidal salt evaporation ponds, marsh and the Napa River.
- Napa Sanitation District lands adjoins Airport to the north.
- Scattered industrial uses to the east and south

Runway Approaches

- Runway 18R and 18L (north) Approaches – Sewage treatment plant and irrigation lands close-in; industrial uses within two miles.
- Runway 24 (east) Approach – Industrial uses located within one mile of runway end; Chardonnay Golf Course located beneath the outer approach
- Runway 36L and 36 R (south) Approaches – Scattered industrial uses located close-in; salt evaporation ponds, Napa River and baylands beyond.
- Runway 6 (west) Approach – Salt evaporation ponds, Napa River and residential uses along the west bank of the Napa River.

Traffic Patterns

- Traffic patterns located on east, west and south sides of the airfield.
- Residential uses along Napa River and undeveloped land within the City of Napa located beneath westside traffic pattern to primary runway 18R-36L.
- Developing business park, industrial uses and sanitation district lands lie beneath the eastside traffic pattern to the general aviation runway.
- Predominantly undeveloped lands and scattered industrial uses to the south along Green Island Road, designated for future industrial park lie beneath the traffic pattern for the crosswind runway 6-24.

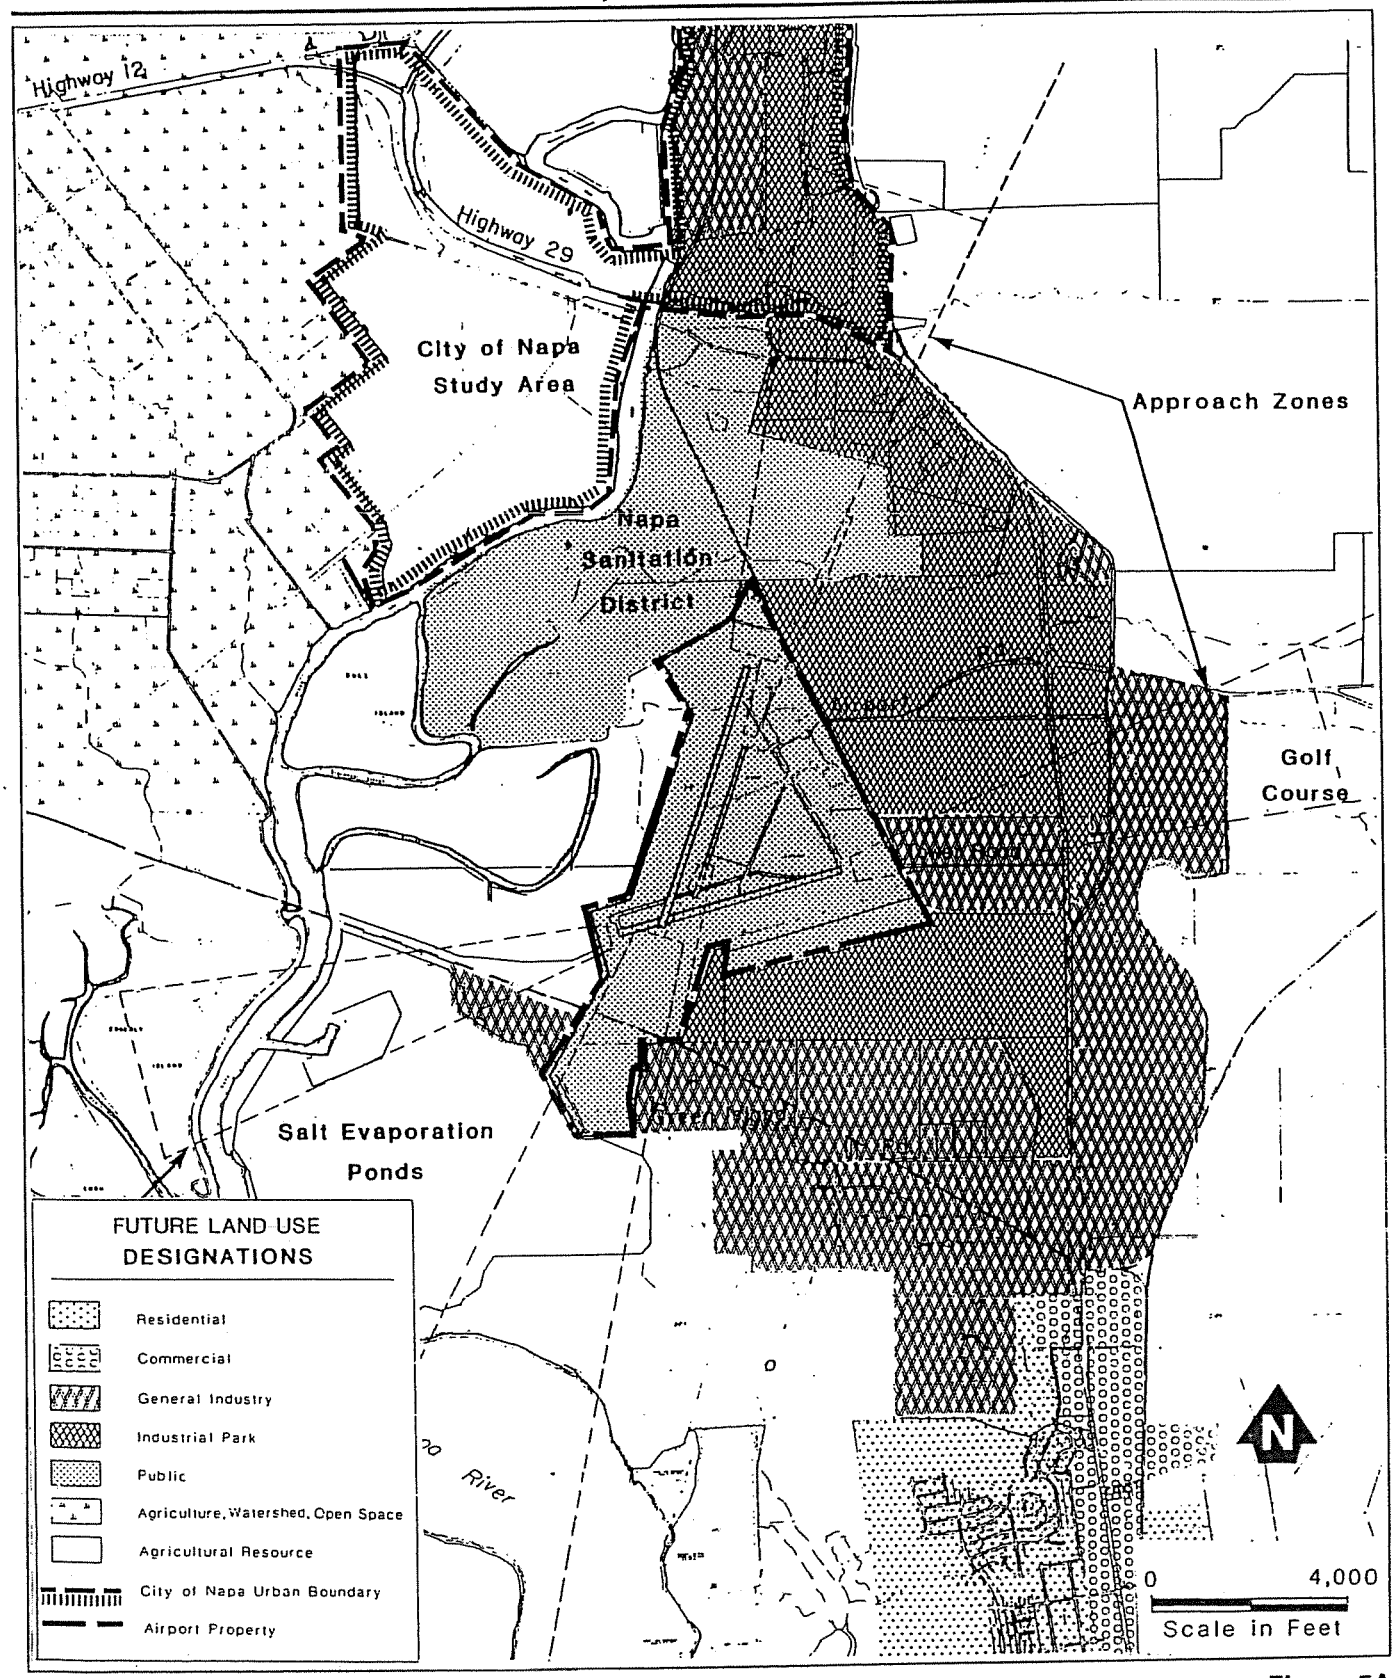

Figure 5A

Jurisdictional Boundaries and Future Land Use

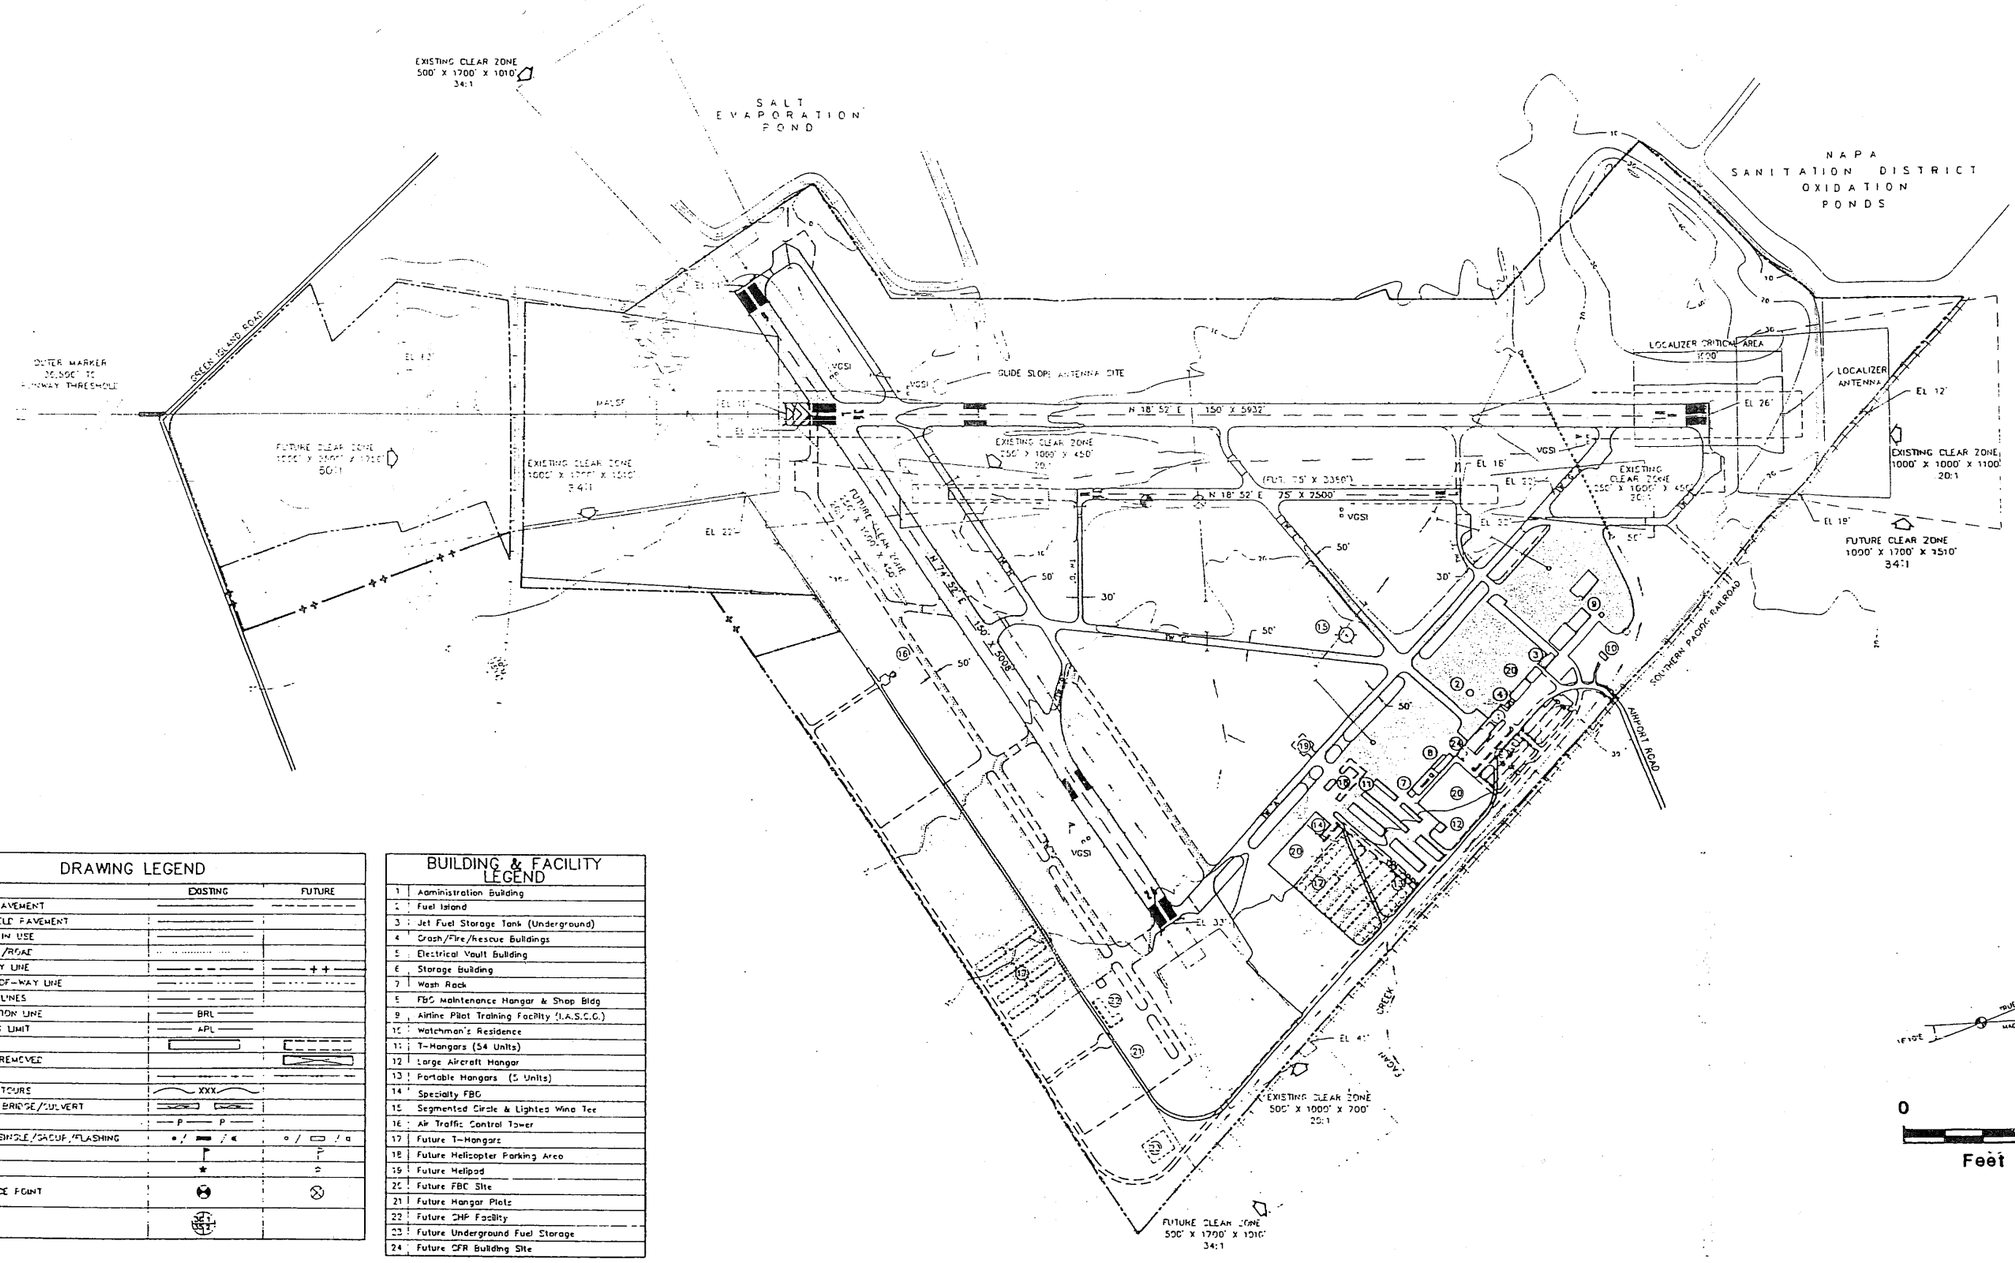
Napa County Airport

The airport property and most of the land surrounding the Airport is within the jurisdiction of the County of Napa. Lands adjoining the Airport to the east and south are designated for industrial park development. The outlying areas within the Airport's vicinity are designated for agricultural use.

The City of Napa's southernmost boundary extends within two miles north of the Airport, encompassing a partially developed industrial park. Northwest of the airfield is a large undeveloped area within the City Limits with potential for residential development. Both of these areas lie beneath the traffic pattern for the primary runway.

Airport Development

The Napa County Airport was originally constructed in 1942 by the Army Corps of Engineers on land owned by the County. The purpose of the construction, to establish an air base for national defense, was never fulfilled and the airport facilities were conveyed to the County for civilian use in 1945. There have been 25 federally funded development projects to enhance the Airport's safety and capacity. Previous airport improvement projects have included the construction of a parallel general aviation runway, extension of the primary runway, additional taxiways, parking aprons, and the acquisition of land for runway protection zones. A profile of airport features is provided in Table 5 – 2.



Airport Role

Napa County Airport is expected to continue as primarily a general aviation facility with an emphasis in flight training activities. The existing airline pilot training facility located at the Airport is the single largest generator of aircraft activity, comprising an estimated 50% of all operations. The Airport is also designated as a reliever airport in the *National Plan of Integrated Airport Systems* which serves as a site for pilots from more congested areas to train and maintain their flight proficiency. The Airport is considered an important transportation link, supporting the growing business and industrial sectors of the community, as well as a recreational resource for local pilots.

Airport Master Plan and Projected Activity

An update of the Airport's Master Plan was completed in 1989 and forms the basis for the Compatibility Plan. The focus of the Master Plan is on improving the operational safety of the Airport and mitigating potential impacts.

Of particular relevance for land use planning is the proposed extension of the general aviation runway to accommodate training (touch-and-go) flights. This project will enable a significant number of flights to be shifted to the eastside traffic pattern, thus avoiding the residential area located along the west bank of the Napa River. Other major features of the Master Plan are shown on the Airport Layout Plan (Figure 5B).

Airport Features

Napa County Airport

AIRPORT PROPERTY

Ownership – County of Napa
Acreage – 800 acres
Elevation – 33 feet MSL

AIRPORT PLANNING

Adopted Plans

- Airport Master Plan updated 1989

Planned Improvements

- Extension of general aviation Runway 18L-36R to accommodate training activities
- Additional aircraft storage hangars
- Public helipad and helicopter parking area
- Relocation of Airport Tower Road to southernmost property line.
- New access road from entrance to hangars

Major Facilities

- Terminal Building with administrative offices and restaurant
- Fixed base operator hangar/office
- Specialty fixed base operator hangar
- Airline pilot training facility school, offices, and hangar
- California Highway Patrol Air Support Unit
- Air Traffic Control Tower

RUNWAY SYSTEM

Primary Runway 18R-36L
Critical Aircraft – Gulfstream III
Classification – General Utility Stage II.
Dimensions – 5,932 feet long x 150 feet wide.
Pavement Strength - 50,000 lbs. dual wheel
Lighting – Medium intensity edge lights;

Crosswind Runway 6-24
Critical Aircraft – Gulfstream III
Classification – General Utility Stage II.
Dimensions – 5,008 feet long x 150 feet wide.
Pavement Strength - 70,000 lbs. dual-wheel
Lighting – Medium intensity edge lights.

General Aviation Runway 18L-36R
Critical Aircraft – Piper Arrow
Classification – Basic Utility (Stage I existing; Stage II proposed)
Dimensions – 2,500' x 75' existing; 3,400' x 75' proposed.
Pavement Strength - 12,500 lbs. single-wheel
Lighting – None existing; medium intensity edge lights proposed

RUNWAY APPROACHES

Primay Runway 18R
Approach Type – Existing visual (also circling VOR instrument approach); Future non-precision instrument
Approach Slope Required - Existing 20:1; Future 34:1
Runway Protection Zone – Majority on airport property; portion under conservation easement.

Primary Runway 36L
Approach Type – Existing Nonprecision instrument; Future precision instrument
Approach Slope Required - Existing 34:1; Future 50:1
Runway Protection Zone – All on airport property; portion of future runway protection zone recommended for acquisition

Crosswind Runway 6
Approach Type – Existing non-precision instrument approach;
Approach Slope Required – 34:1
Runway Protection Zone – Under avigation easement.

Crosswind Runway 24
Approach Type – Existing visual; Future non-precision instrument
Approach Slope Required - Existing 20:1; Future 34:1
Runway Protection Zone – All on airport property; portion of future runway protection zone recommended for acquisition

General Aviation Runway 18L
Approach Type – Visual
Approach Slope Required - 20:1
Runway Protection Zone – All on airport property

General Runway 36L
Approach Type – Visual
Approach Slope Required – 20:1
Runway Protection Zone – All on airport property

NOTES

[a] 1988/89 activity levels as indicated in *Airport Master Plan.*

[b] *Airport Master Plan* projections for 2008.

Forecasts of activity (summarized in Table 5 - 3) project an increase from the current level of 163,000 annual operations to 210,000 annual operations in 2008. This level of activity remains below the peak levels achieved in the late 1970's.

IMPACT ASSESSMENT

An analysis of the Napa County Airport's potential impact area provides the basis for evaluating future land use compatibility. The following summarizes the impact analysis. Projected noise contours, overflight areas, flight patterns, and approach surfaces are illustrated in Figure 5C.

Noise Contours

An analysis of the underlying land use designations, noise compatibility criteria, and the projected noise contours indicates that noise exposure levels will not present a significant problem with respect to land use compatibility in the Airport's environs. The projected 65 CNEL contour does not extend beyond airport property. The projected 55 CNEL contour extends south over the salt ponds, west over the Napa River, north over the sanitation district's lands, and to the east over the industrial lands on Tower Road. The types of land uses within these areas are consistent with local, state, and federal guidelines for noise compatibility.

Overflight

Overflight impacts are expected to be a more significant concern than composite noise exposure levels around Napa County Airport. The most sensitive areas are those beneath the common traffic pattern. Standard traffic patterns at Napa County Airport tend to be larger than usual for a general aviation facility, primarily because the airline training program requires a larger pattern. The size of the traffic pattern is also dependent upon the number of aircraft in the pattern, the size of the aircraft, and the skill of the pilot in judging distances. Napa County Airport has busy-hour traffic counts of six to seven aircraft in the pattern. Additionally, the Airport serves a wide range of multi-engine and jet aircraft which require a larger pattern.

Of particular concern for land use compatibility planning is the potential conversion of land to residential use within the Airport's traffic areas. Currently, residential uses are limited to a narrow strip of homes along the west bank of the Napa River. The County's General Plan and Airport Area Specific Plan does not provide for any new residential uses within the Airport's traffic area. Northwest of the Napa County Airport is an area designated as a Study Area in the City of Napa General Plan (known as the Stanly Ranch). Development on this site may include some residential uses. The site lies in the D and E zones; the D zone does not permit new residential uses, while the E zone does. As an approved site plan does not yet exist for the property, it is not possible to know how development of the property will affect compatibility in the Napa County Airport's environs.

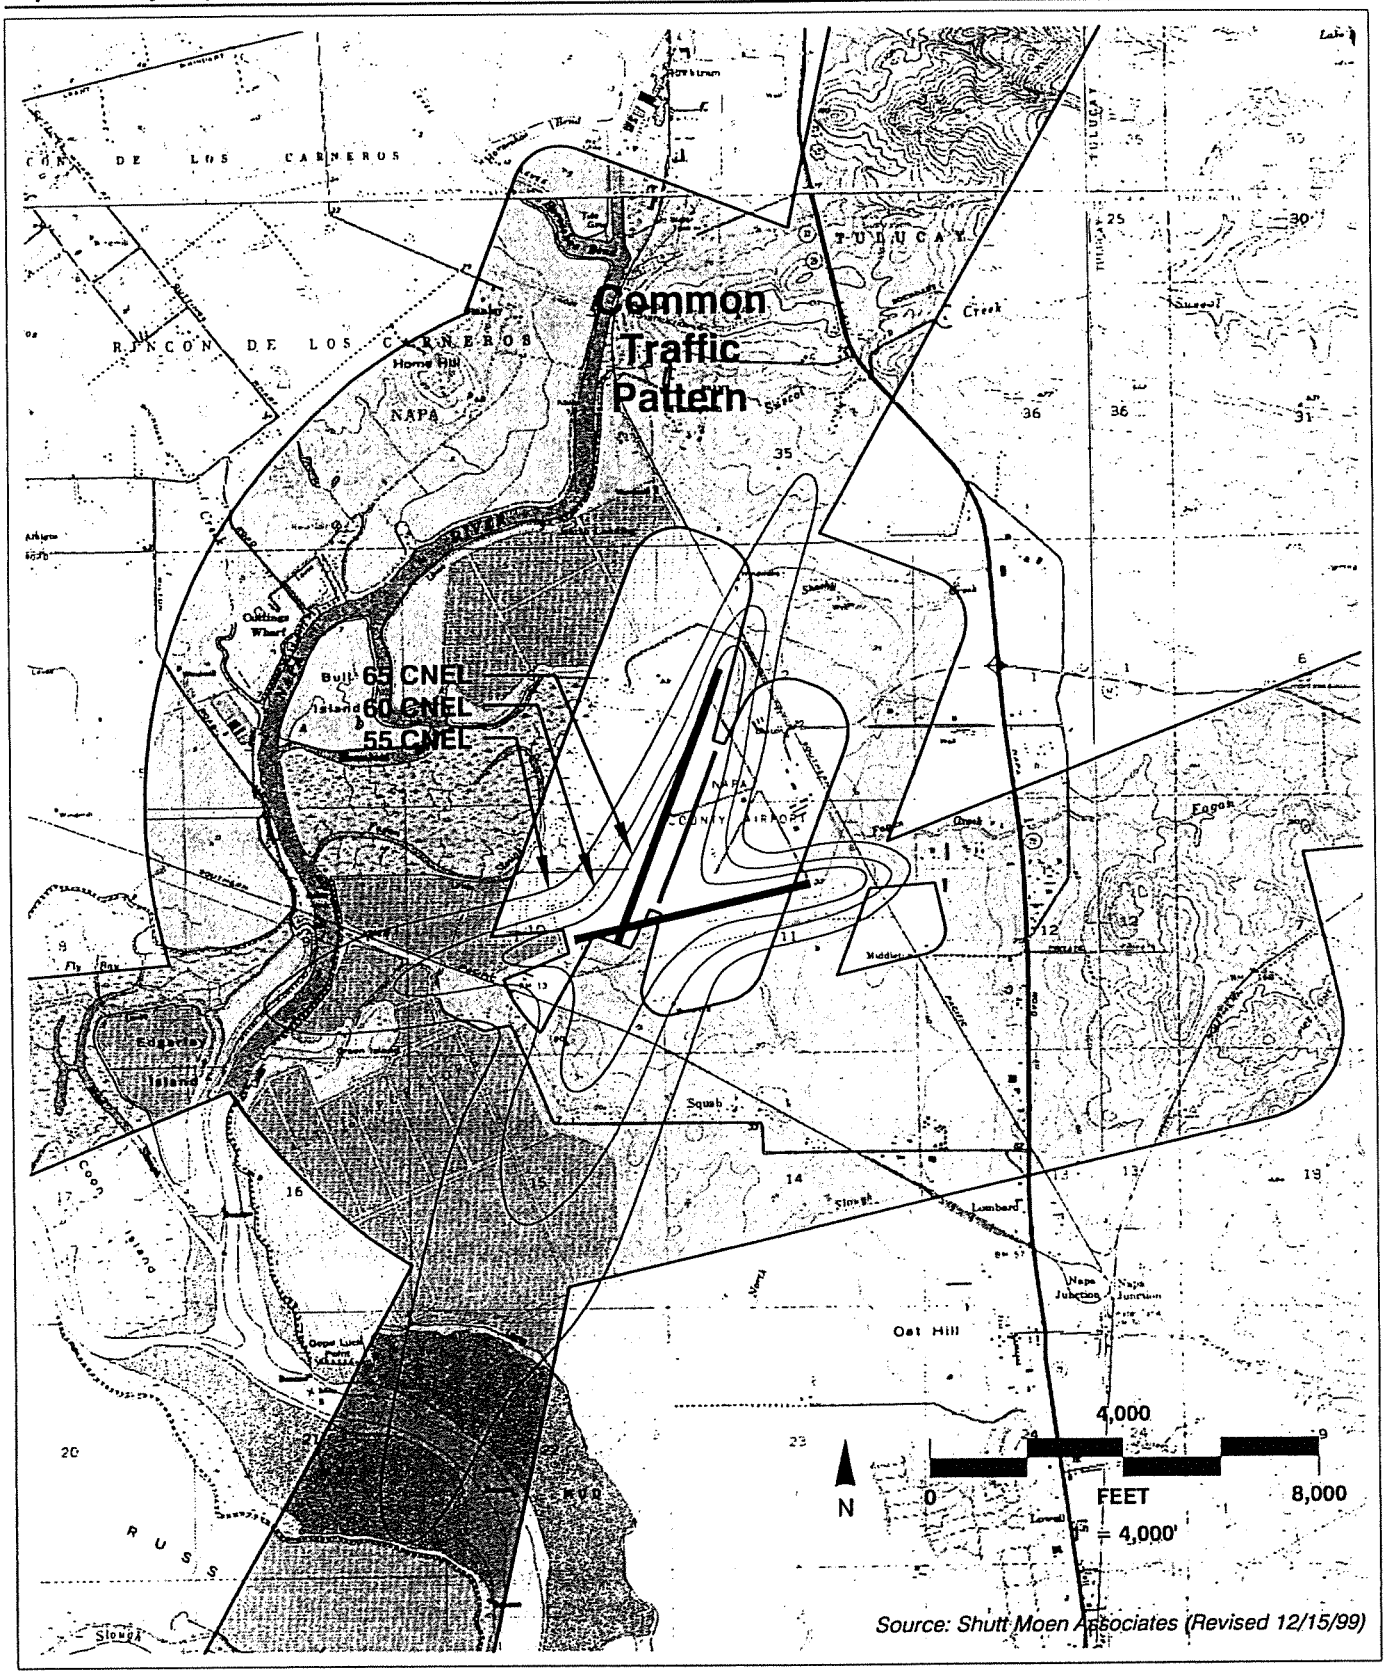

Figure 5C

Airport Impact Areas

Napa County Airport

Safety

Safety is also a significant concern at Napa County Airport because of the emphasis on flight training and the type of aircraft that use the facility. Although most of the aircraft are light single-engine planes, the Airport is also utilized by multi-engine and jet aircraft which are more difficult to control in the event of an emergency. Safety concerns are most significant with respect to the developing industrial area where compatible land use designations alone are not adequate to limit the exposure to risks. The areas of greater potential risk are beneath the approach/departure zones and the traffic pattern. A review of accident histories at the Airport reveals three off-airport accidents over the past 12 years. One accident involving a fatality, occurred in the approach to Runway 24. A summary of the accident history over the past 10 years is provided in the Napa County Airport Master Plan Report.

Flight Hazards

Potential obstructions and hazards to flight are another significant concern at Napa County Airport. An airspace plan depicting the critical areas for height limitations under federal regulations (FAR Part 77) is provided in Figure 5D. The County's existing Airport Safety Ordinance is more restrictive than federal regulations (crosswind runway approach surface is defined as 40:1 under the ordinance compared to 34:1 under FAR Part 77). Although the general aviation runway is not depicted in the ordinance, the approach surfaces for the primary runway encompass those for the parallel runway and are the controlling surfaces. If duly enforced, the ordinance should provide adequate protection from flight hazards.

COMPATIBILITY ISSUES

The primary issue confronting the Napa County Airport is the need to maintain compatibility while allowing for an acceptable degree of development in the Airport's vicinity. The key issues can be defined in terms of:

- Preventing the encroachment of incompatible development.
- Limiting the exposure to risks or flight hazards.

Encroachment of Incompatible Development

City of Napa

The area within the City of Napa's jurisdiction, located northwest of the Airport (known as the "Stanly Ranch") is an area of concern with respect to future land use compatibility. This area (designated as a Study Area in the City of Napa's General Plan and zoned as Planned Development), is expected to develop with

residential uses. As this area will continue to be affected by aircraft overflights, two specific land use compatibility measures are recommended:

1) Residential development is limited to areas outside of the common traffic pattern. That is, residential uses are only permitted in Zone E.

   and

2) Buyer notification should be required (i.e., dedication of overflight easements).

In accordance with ALUC policies for project referrals, future development proposals and specific plans for this area should be referred to the Airport Land Use Commission for a consistency determination.

County Lands

The potential conversion of agricultural lands to residential uses in the Airport's planning area is another concern which could undermine the relatively high degree of land use compatibility that now exists. Of particular concern are the areas lying beneath the approaches and common flight paths to Runway 18R and Runway 24. These areas are currently designated as Agricultural, Watershed, and Open Space in the Napa County General Plan. However, the conversion to residential use in these areas may be contemplated in the future.

As these areas are and will continue to be impacted by frequent aircraft overflights, the conversion of lands designated for agricultural use to residential uses within the Airport's planning area should be avoided. Preserving agricultural uses in the Airport's planning area would minimize the potential for future land use conflicts and ensure open land areas are maintained in the Airport's vicinity.

Exposure to Risk and Flight Hazards

There are two primary objectives with regard to safety in the vicinity of Napa County Airport:

- Limiting the exposure to risks by restricting the maximum densities of uses in the Airport's vicinity.

- Maintaining open land areas that can be utilized for emergency landings within the approaches and traffic pattern areas.

Maximum Densities

Of particular concern is the area within the approach/departure zones for the Primary Runway 18R and the Crosswind Runway 24. Most of the land within these areas is under the jurisdiction of the County of Napa. A portion of the Bedford Industrial Park, located within the Napa City Limits, lies beneath the approach and

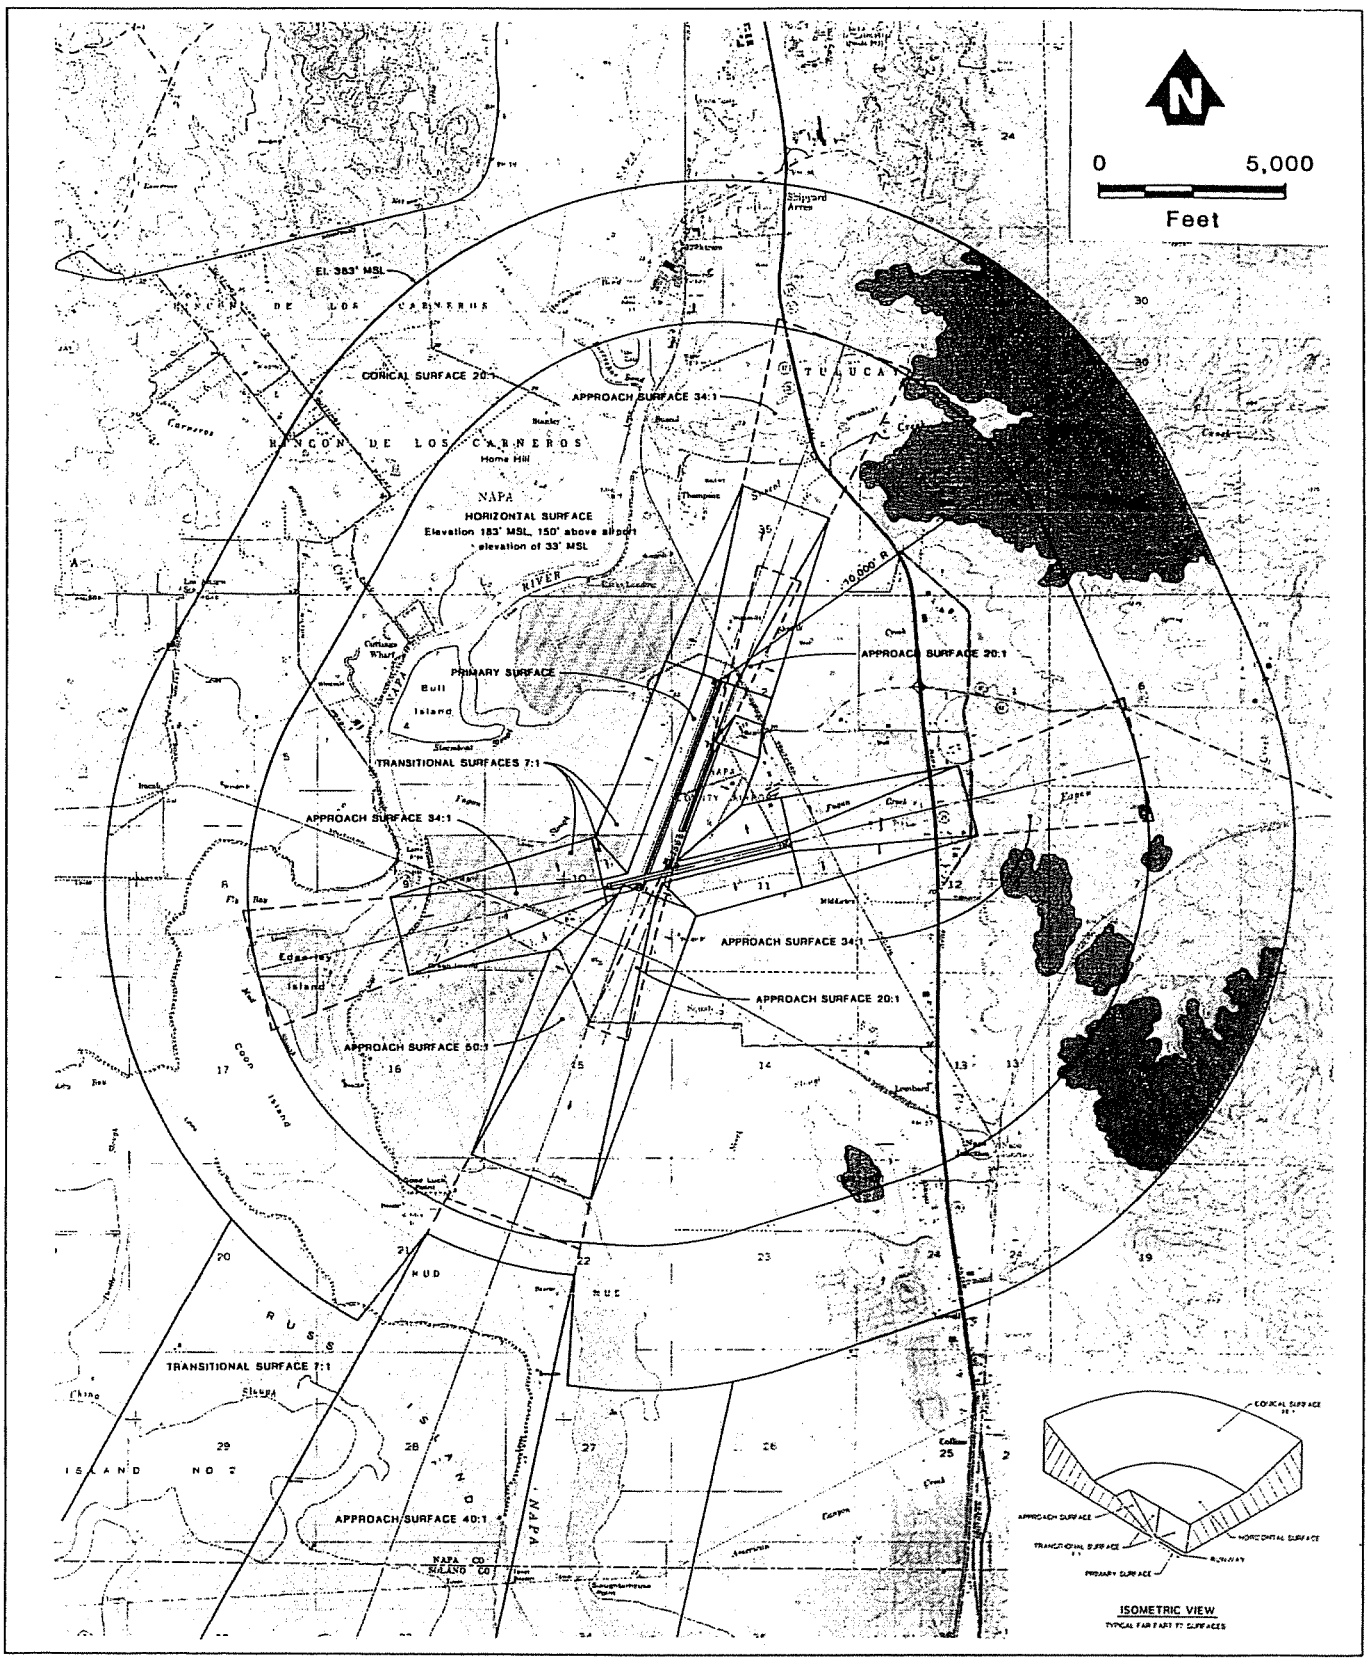

Figure 5D

Airspace Plan

Napa County Airport

traffic area for the primary runway. These areas are partially developed with primarily industrial uses; however, more intensive uses can be anticipated in the future.

Although industrial uses are considered compatible with airport activities, development of uses with high occupancies, limited mobility, or which include potential flight hazards should be avoided. The Compatibility Criteria contained in Table 3 - 2 establishes maximum densities in critical areas and prohibits certain land uses considered clearly incompatible.

Open Land Requirements

Maintaining open land areas that can be utilized in the event of an emergency landing is another important element of the Compatibility Plan for Napa County Airport. The intent of this Plan is to preserve to the extent feasible the existing open space uses (i.e., agricultural lands or golf course use) in the Airport's vicinity. Some mechanism must be established that ensures open land areas are preserved as the area develops. Of critical concern are those open land areas that lie beneath the approaches (Zones A, B, and C) and at the periphery of the traffic pattern area (Zone D). It is recommended that the local jurisdictions revise their General Plans to identify the critical open land areas that should be preserved for public safety.

Requiring larger setbacks from creeks or roads within the Airport's vicinity is one method of maintaining open land (i.e. requiring a 75' to 100' setback from the bank of Fagan Creek along the approach to Runway 24). Clustering of development and providing contiguous parking and landscaped areas is also encouraged. Building envelopes and approach surfaces should be required on all development plans within or near the approach zones.

City of Napa Plans and Policies

The City of Napa's General Plan is currently in the process of being updated and prior to adoption, must be sent to the ALUC for a consistency determination. The current General Plan does not include any specific policies relative to airport compatibility. The underlying land use designations within the Airport's vicinity appear consistent with the Compatibility Plan, provided that the City recognizes and incorporates the policy statements as described in Chapter 4.

County of Napa Plans and Policies

Land use designations in the Napa County General Plan and the Airport Industrial Area Specific Plan are for the most part consistent with the Compatibility Plan. Although the Specific Plan includes policies with regard to airport compatibility, this plan only applies to a portion of the Airport's planning area.

Established County policies (contained in the Airport Industrial Area Specific Plan) limiting employment densities and lot coverage in the Airport's vicinity apply only to the approaches to the primary runway 18R-36L. These policies do not fully address the safety concerns and overflight impacts within the approaches to the

crosswind runway and the broader airport planning area. Also, the local General Plan and Specific Plan do not fully reflect the ALUC requirements for open land and maximum densities.

Of particular concern is the industrial area lying beneath the approach to the crosswind Runway 24. The Specific Plan provides a minimum lot size of 20,000 square feet which would enable more intense development than now exists. In order to meet the compatibility criteria for maximum occupancies and open land requirements, larger minimum lot sizes are recommended (e.g., five-acre minimum lot sizes).

OTHER COMPATIBILITY MEASURES

Other measures used to ensure land use compatibility include operating restrictions and noise abatement procedures implemented by the airport authorities. The airline pilot training facility currently operates under an agreement with the County which limits the nighttime (after 10 p.m.) training operations. In addition, they have agreed to conduct training activities outside Napa Valley and to avoid overflights of the City of Napa.

The size of the aircraft that may use Napa County Airport is currently limited by the strength of the runway pavements to aircraft under 50,000 pounds (dual-wheel). This limitation was emphasized in a voter-approved referendum regarding the extension of the primary runway in 1974. The 50,000-pound limitation effectively limits the types of activities that could potentially locate at the Airport. By limiting the strength and length of the runway system, the County also limits the impact of airport activities on surrounding land uses.

Parrett Field Plans and Impact Assessment

PARRETT FIELD

Setting

Parrett Field is part of the campus of Pacific Union College, located within the unincorporated community of Angwin. The airfield is situated on a ridgetop with predominantly undeveloped and heavily wooded land surrounding the airfield to the north, east, and south. The community of Angwin and the college facilities are situated west of the Airport. Table 7 — 1 provides a summary of the planning context.

Affected Jurisdictions

Land within the influence area for Parrett Field falls within the jurisdiction of the County of Napa. Figure 7A illustrates the parcelization and respective zoning designations in the vicinity of the Airport.

Airport Operation and Development

Parrett Field, developed as a private landing strip, is owned and operated by Pacific Union College. The college is affiliated with the Seventh Day Adventist Church, and as such, commercial business activities are prohibited on Saturdays, the Church's Sabbath.

The Airport is open to the public and has a full-service fixed-base operator which provides fueling, maintenance, flight training, and rentals. The airfield has low intensity lighting, but no beacon that would enable transient pilots to locate the airfield at night. Consequently, the level of evening and night operations is expected to be very limited.

Table 7-1

Airport Environs

Parrett Field

AIRPORT LOCATION AND ACCESS

- Airport situated on a ridgetop within the campus of Pacific Union College
- Lands surrounding the Airport and within the community of Angwin are in the jurisdiction of the County of Napa

EXISTING AIRPORT AREA LAND USES

General Character

- Pacific Union College adjoins airport to the west
- Undeveloped, heavily wooded land to the north and east
- Few rural residential uses to the south
- Unincorporated community of Angwin is located west of the airfield

Runway Approaches

- Undeveloped lands to the north and south under approach/departure zones

Traffic Pattern

- Standard traffic pattern on eastside of the airfield only to avoid overflying Angwin

LOCAL LAND USE PLANS

- *Napa County General Plan*, adopted 1983
- Surrounding lands are within County's jurisdiction

PLANNED DEVELOPMENT IN AIRPORT AREA

- Pacific Union College Land Use Plan includes development of residential and commercial uses

ESTABLISHED COMPATIBILITY MEASURES

- Airport traffic pattern avoids overflying Angwin
- Limited night-time operations
- Adjacent lands owned by Airport proprietor

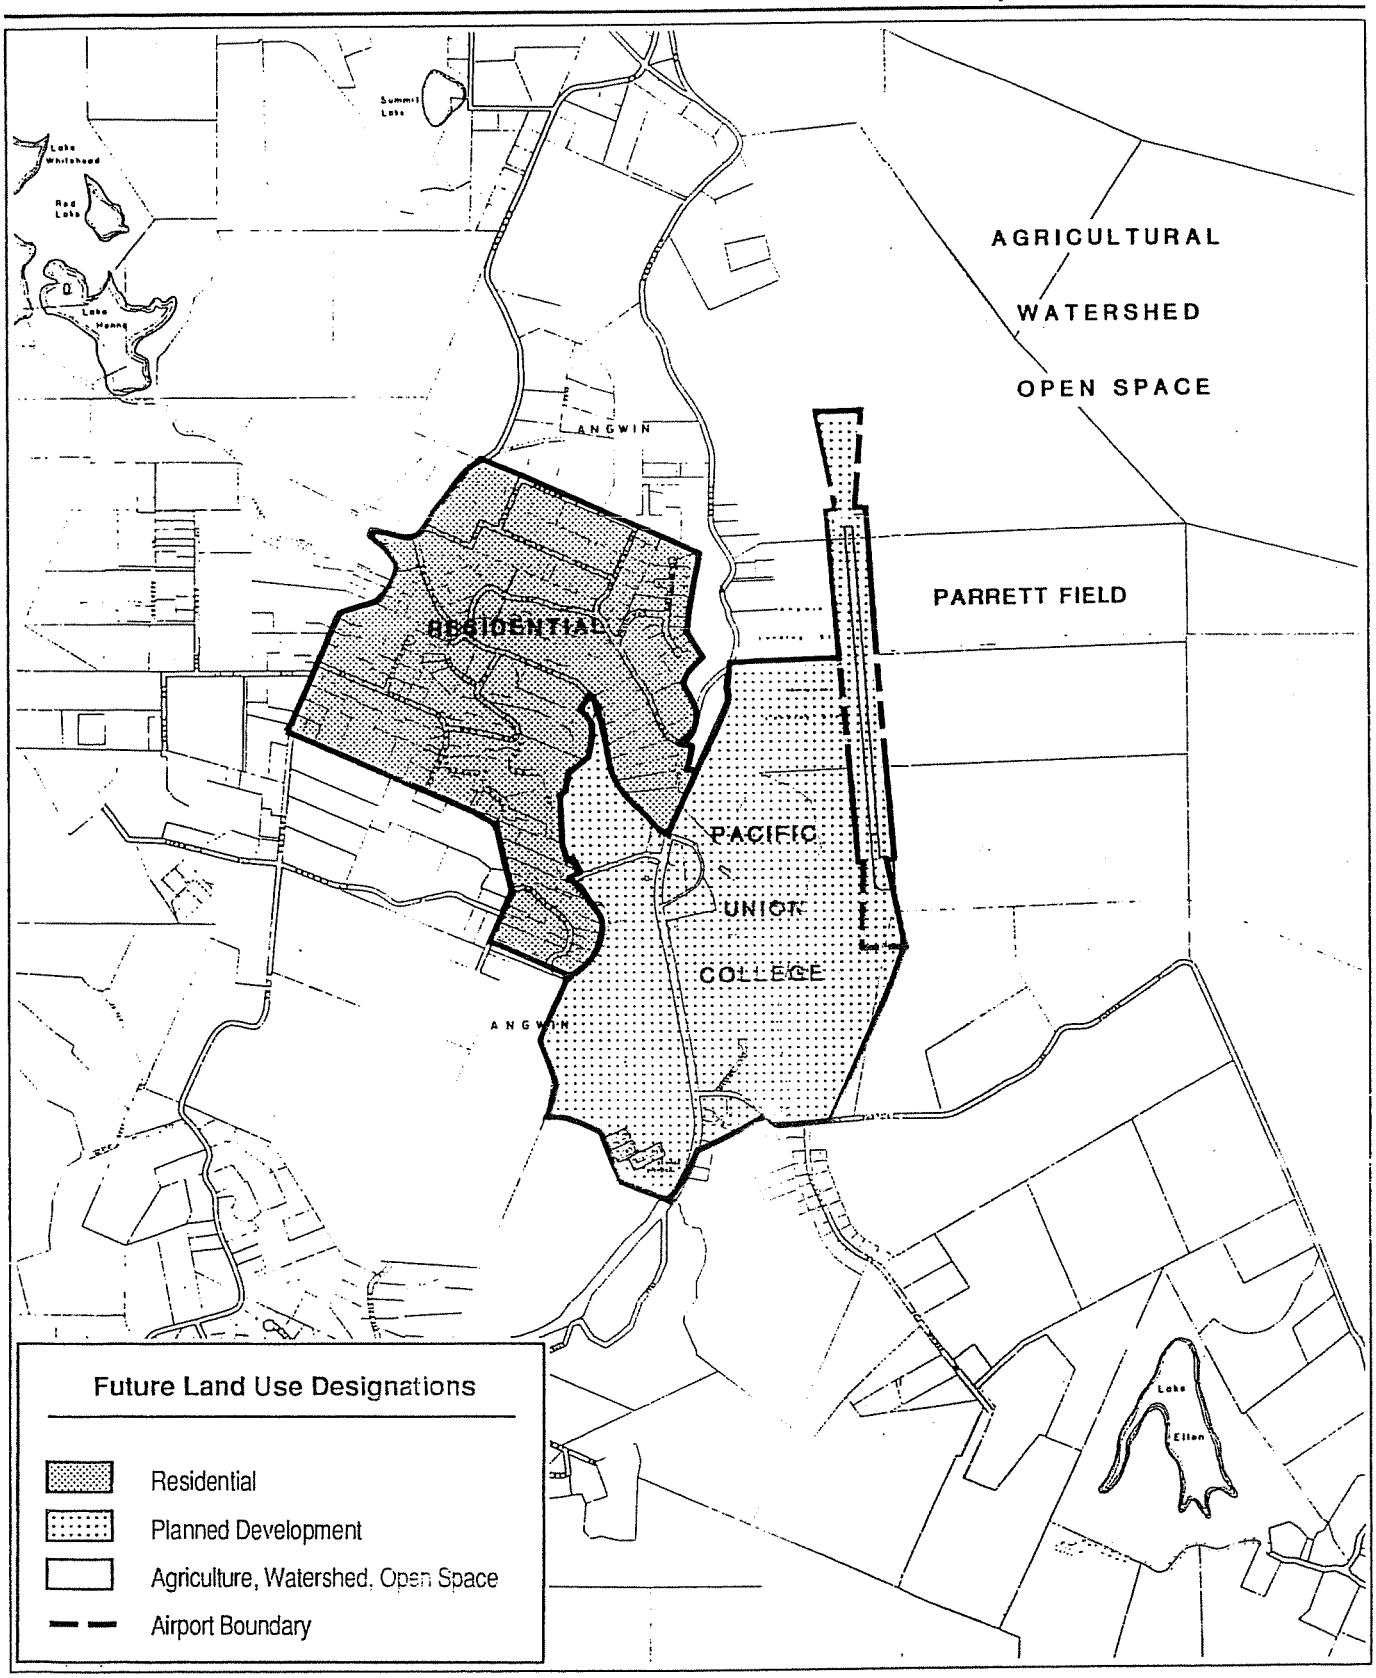

Figure 7A

Land Use Designations

Parrett Field

There are standard traffic patterns to both runway ends (left traffic to Runway 16; right traffic to Runway 34). Traffic is limited to the east side only in order to avoid overflying the community of Angwin. Runway utilization is evenly divided between the north and south.

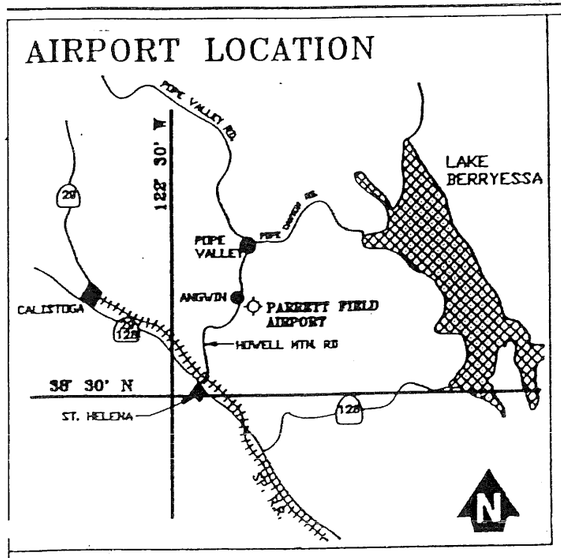
Airport Layout Plan

Parrett Field does not have a formal master plan. However, the college does have facility plans which reflect the potential build-out of the airfield's building area with the addition of 14 hangars. An analysis of the existing runway length and FAA standards indicate that the existing 3,217-foot runway is sufficient to accommodate the type of aircraft expected to use Parrett Field over the 20-year planning period. The configuration of the airfield and existing topographic features also present a natural constraint to lengthening the runway. This information has been compiled into an Airport Layout Plan for the purpose of this plan as shown in Figure 7B. Major airport features are summarized in Table 7 – 2.

Projected Activity

Forecasts of activity at Parrett Field were developed by the California Department of Transportation for the *California Aviation System Plan* (CASP). These figures, summarized in Table 7 – 3 reflect a relatively low level of activity over the 20-year planning period. There are currently 40 aircraft based at Parrett Field. An additional 20 aircraft are forecast over the 20-year planning period. Annual aircraft operations are projected to increase from 12,000 in 1990 to 20,000 by 2010.

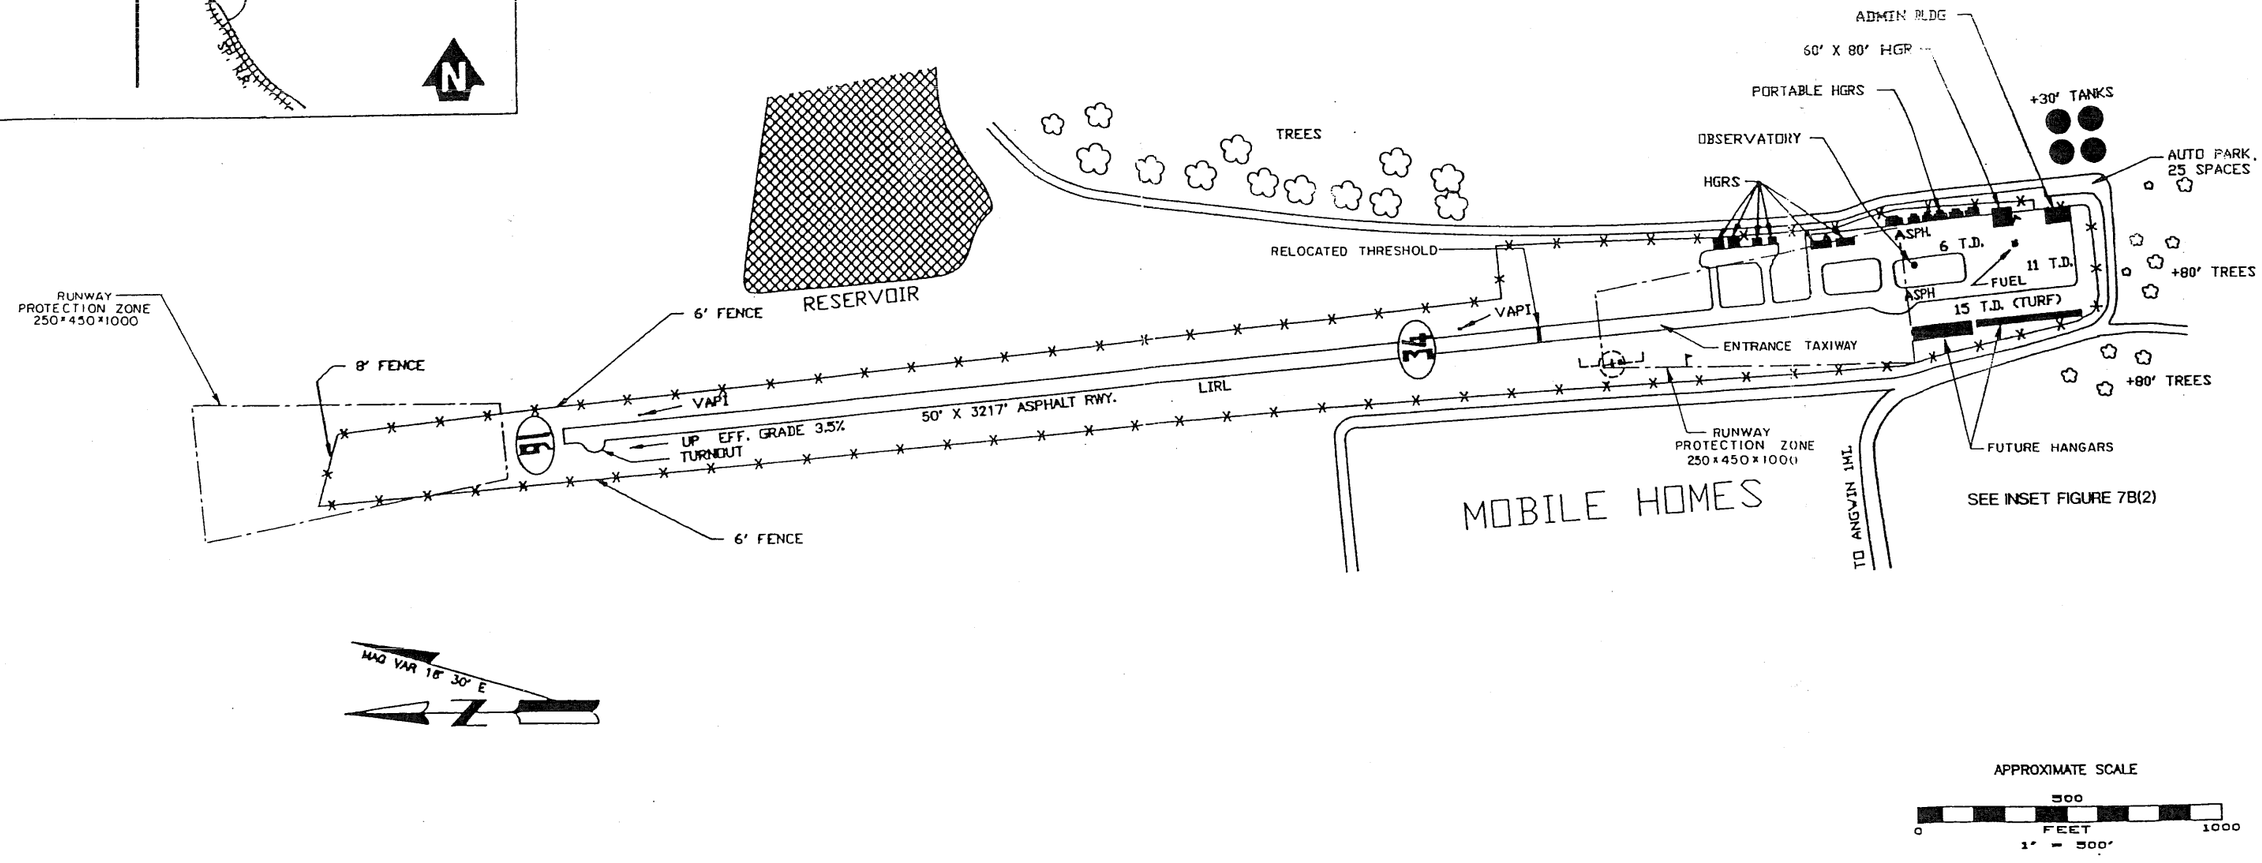
IMPACT ASSESSMENT



An analysis and summary of the potential impact area for Parrett Field is summarized below. Projected noise contours, overflight areas, flight patterns, and approach surfaces are illustrated in Figure 7C.

Noise

An analysis of the projected noise contours indicates that noise exposure levels will primarily affect the close-in properties adjoining the airfield. Because the airfield is situated above the community and college facilities, noise is not expected to present a significant concern.



Overflight

Because the traffic pattern is limited to the east side of the airfield which is essentially undeveloped, the potential for overflight annoyance is limited. The future potential for development on the east side of the airfield is severely constrained by the heavily wooded and steep terrain. One area where overflights are of particular concern is south of the airfield within the approach to Runway

34. This area (along Cold Springs Road) is situated in a canyon area off the end of the runway which intensifies the noise of aircraft on departures to the south.

Safety and Flight Hazards

Safety is primarily a concern within the approaches to the Airport where densities are already low due to the nature of the terrain. Because the Airport is situated on a ridgetop, the Airport has clear approaches and there are no terrain penetrations of the imaginary surfaces. An airspace plan for Parrett Field is depicted in Figure 7D.

COMPATIBILITY ISSUES

Presently, there exists a relatively high degree of land use compatibility due to the airfield's ridgetop setting; eastside traffic pattern over undeveloped areas; and the low level of activity. Lands primarily affected by activities at Parrett Field are those within the college campus itself, creating a somewhat self-correcting situation, in that if a problem occurs, the college administrator can deal with it directly, rather than looking to local land use controls. Recommended policies with respect to Parrett Field primarily focus on 1) preserving open space/agricultural uses within the approaches; 2) preventing residential development beneath the traffic pattern; and 3) requiring buyer notification for residential uses in the Airport's vicinity. Figure 3C presents the recommended Compatibility Plan for Parrett Field.

AIRPORT COMPATIBILITY MEASURES

Airport-sponsored compatibility measures include:

1. Limited nighttime operations (lack of airfield beacon).

2. Right turns required on departure from Runway 34 to avoid overflying community.

Napa County Airport Initial Study and Negative Declaration (1991) and Notice of Exemption (1999)

DRAFT
NEGATIVE DECLARATION

The Executive Director of the Napa County Airport Land Use Commission has tentatively determined that the following project would not have a significant effect on the environment. Documentation supporting this determination is on file for public inspection at the Napa County Airport Land Use Commission Office, 1195 Third St., Room 210, Napa, California 94559. For further information call (707) 253-4416.

NAPA COUNTY AIRPORT LAND USE COMPATIBILITY PLAN

(Project Description)
The criteria and policies which the Napa County Airport Land Use Commission will use in evaluating the compatibility of land uses around Napa County Airport. (See Project Description contained in the attached Initial Study, incorporated by reference).

WRITTEN COMMENT PERIOD:
April 1, 1991 to April 21, 1991

DATE: April 1, 1991

BY THE ORDER OF

JEFFREY REDDING
Director
Napa County Conservation, Development and Planning Department

COUNTY OF NAPA

1195 Third Street, Rm. 210
Napa, California, 94559
(707) 253-4416

INITIAL STUDY

PROJECT NAME: NAPA COUNTY AIRPORT LAND USE COMPATIBILITY PLAN
FILE NO:

PROJECT DESCRIPTION: The Napa County Airport Land Use Compatibility Plan (the Plan) sets forth the criteria and policies which the Napa County Airport Land Use Commission (the Commission) will use in evaluating the compatibility of land uses around Napa County Airport (the Airport). The statutory requirement for the establishment of the Commission and the adoption of the Plan is set forth in the State Aeronautics Act, Article 3.5, Chapter 4, Section 21670 of the Public Utilities Code (the Act).

The recommended Planning Area for Napa County Airport is the area encompassed by the outer conical surface as defined under Part 77 of Federal Aviation Regulations (established by a 14,000-foot radius from each runway's primary surface, refer to Figure 3A). A detailed discussion and assessment of the Airport's impact area is included in Chapter 5 of the Plan. Figure 3A of the Plan and Tables 3-1 and 3-2 summarize the areas of concern and the Commission's criteria and policies for Napa County Airport, which are further defined in Chapter 3 of the Plan. If implemented, the primary policies of the Plan would:

1) Prohibit any use that may be hazardous to flight, including uses which produce excessive glare, light, smoke, steam, emissions, electronic interference, or may attract large flocks of birds.

2) Establish height limitations in accordance with Part 77 of Federal Aviation Regulations and require the dedication of avigation easements within the approaches and critical areas of high terrain to prevent obstructions to the navigable airspace.

3) Require local jurisdictions to identify and preserve open space within the approaches and at the periphery of the traffic pattern area to provide open land areas that can be utilized in an emergency landing.

4) Preclude uses in which the occupants have low-mobility (e.g. nursing homes, schools, etc.) from locating in areas with high to moderate accident potential within the approach/departures zones or the traffic pattern areas (Zones A, B, C, DA and D).

5) Require noise attenuation measures for noise-sensitive uses in areas that are subject to frequent noise intrusion (including single-event noise) within the approaches and traffic pattern area (Zones A, B, C, DA and D).

5) Require the dedication of overflight easements within the Airport's Planning Area to ensure notification to potential buyers of the Airport's influence.

6) Establish density limitations (as shown in Table 3-2) that would effectively:

   a) Preclude the conversion of land to residential use within the areas subject to frequent noise intrusion within the approach/departure zones and traffic pattern areas (Zones A, B, C, DA and D). The Plan maintains residential densities in these areas at 1 unit per 40 acres in accordance with the present land use designations of the underlying general plan.

   b) Preclude high-occupancy uses from locating in areas with high to moderate accident potential within the approach/departure zones and traffic pattern areas (Zones A, B, C, DA and D).

ALTERNATIVES TO THE PLAN

During the development of the Plan, various alternative zone configurations and density restrictions were proposed, evaluated, and modified in response to input from staff, the community, and the Commission. As proposed, the Plan identifies residential land use as incompatible within the approach/departure zones and the traffic pattern areas (Zones A, B, C, DA and D). This policy, if implemented, would **avoid** the single-event noise and overflight annoyance impacts associated with residential uses.

Recently, much discussion has centered over the policy that would preclude residential use within the outer approach zone to Runways 18R. An alternative which would **NOT** preclude residential use within the outer approaches to runways 18R and 24 has been developed for consideration by the Commission. The outer approach zones have been designated as "Zone DA" (depicted on Exhibit A) for the purposes of evaluating the distinction between the traffic pattern areas affected by single and twin engine aircraft approaching the airport and the outer approach which is affected by jet aircraft as well.

Specific policies for this zone have been developed for both the Plan as proposed and the residential alternative. These policies are summarized in the attached Exhibits B entitled "Recommended Revisions" and Exhibit C entitled "Residential Alternative" for inclusion/revision to the draft Plan by the Commission. The impact discussion addresses issues relative to both the Recommended Plan and the Residential Alternative where there are no distinguishable differences. The potential differences in relative impacts between the alternatives is discussed separately in the appropriate sections: Noise (Items #17), Public Health impacts (Items #44, 45, 46, & 47); Fiscal (Items #52) and Growth Inducement (Item #53).

Responsible (R) and Trustee (T) Agencies

County of Napa (R)
City of Napa (R)

Other Agencies Contacted

Federal Aviation Administration
State Division of Aeronautics

The affected jurisdictions within Napa County Airport's Planning Area include the County of Napa and the City of Napa. Refer to Figure 5A of the Compatibility Plan for an illustration of the jurisdictional boundaries and the present land use designations in the vicinity of the Airport.

The adoption of the Plan by the Commission will have no **direct** effect on land use because the Commission has no direct authority over land use. The Plan only serves to provide guidance to the local jurisdictions in determining the compatibility of land uses with airport activities. However, due to the conformance provisions contained in the enabling legislation, the Plan will have an indirect effect on land use, in that local jurisdictions must bring their general plans and specific plans into conformance with the Compatibility Plan or otherwise provide findings that meet the intent of the Act to override the Commission's determination. The Commission must review the local general plans and specific plans for consistency within 180 days of the adoption of the Plan. The statutory authority and role of the Commission and the relationship to local plans is further described in Chapter 1 of the Compatibility Plan.

An initial review of the underlying land use designations contained in the local general plans and specific plans indicates that, presently, the existing **land use designations** within Napa County Airport's Planning Area are consistent with the Compatibility Plan. However, in order for the Commission to make a determination of consistency with the Compatibility Plan, the affected jurisdictions must revise their plans to incorporate **specific policies** relative to airport compatibility which:

1) recognize the Airport's Planning Area;

2) agree to the types of actions to be referred to the Commission; and

3) reflect the density criteria, mitigation measures, and other conditions listed (i.e. height limitations, use restrictions, overflight easements, etc).

Implementation strategies are further described in Chapter 4 of the Compatibility Plan.

Discussion of Effect on Land Use Plans

Because implementation of the Compatibility Plan is essentially a subsequent action to be taken by the affected jurisdictions and because provisions of the Act allow for local jurisdictions to override the Commission's determination, an assessment of the potential effect of this Plan is difficult to predict. Therefore, this Initial Study is based upon the assumption that the criteria, policies, and land use restrictions set forth in this Plan will be adopted by the affected agencies as recommended. Subsequent actions by the local jurisdictions required by the Plan (i.e. general plan revisions) which differ from the recommendations in this Plan may require additional environmental review.

Since the Plan addresses land use compatibility issues related to potential noise and safety impacts resulting from airport activities, the adoption of the Plan itself is a mitigation measure of potential airport impacts. The Plan establishes maximum densities for all land uses and identifies additional mitigation measures addressing noise and safety impacts. A fundamental policy of the plan focuses on preventing the encroachment of incompatible uses (primarily residential uses) into traffic areas.

Even though the Plan is considered to be a mitigation of potential impacts and thus not likely to have any significant adverse environmental effects, the Plan would preclude the conversion of land to residential use within the approach/departures zones and traffic pattern areas (Zones A, B, C, DA and D). Thus, a potential adverse effect of the Plan, would be on the future availability of land for housing in the Airport's Planning Area. However, the effect of the policies precluding residential use on the future availability of housing is considered not significant under the California Environmental Quality Act for two primary reasons:

1) Residential land use is not presently designated in the approach zones or the traffic pattern areas (Zones A, B, C, DA and D) in the adopted general plans and specific plans of the affected jurisdictions (with the exception of a narrow strip of land along the west bank of the Napa River, that is already developed with residential use). Since these areas have not been designated by the local jurisdictions for residential use, it can be determined that these areas are not needed nor expected to meet the long-term housing needs of the community over the 20-year timeframe of the Plan.

2) The policies precluding residential land use encompass a limited geographic area within the Airport's approach/departure zones and the traffic pattern areas (Zones A, B, C, DA and D). In other areas of the Airport's Planning Area (Zones E and F) residential use is considered compatible with mitigation measures that provide buyer notification of the Airport's influence. There is an extensive area within the Airport's Planning Area (Zones E and F) that remains available for future residential use.

For these reasons, it is determined that no impact on housing availability or affordability (such as the relocation of an unmet housing need or removal of a site designated for future residential use) would result from adoption and implementation of the Compatibility Plan for Napa County Airport.

ENVIRONMENTAL SETTING

Napa County Airport is located in the southern part of the Napa River flood plain at elevation 33 MSL, within the unincorporated County of Napa. The Planning area is traversed (n-s) by the Napa River and (e-w) by its tributaries Suscol, Sheehy, and Fagan Creeks. The Airport Planning Area lies geographically south of the narrow Napa Valley, and north of the expanse of San Francisco/San Pablo Bay. The Planning Area is traversed from northwest to southeast, and from southwest to southeast by trunk lines of the Southern Pacific Railroad, and from north to south by State Highway 29. State Highway 12 joins Highway 29 from the east near the Airport.

A developing industrial area is located to the north and east of the Airport, undeveloped open land lies to the immediate south, and wetlands associated with the Napa River lie to the west. Within the Planning Area, but more than one mile from the Airport, are located (north) a portion of an industrial park in the City of Napa and the sloping terrain of Suscol Ridge and the "Southern Crossing", a high level bridge and fill across the Napa River about 7,200 feet north of the Airport, (east) vineyards and the east-west trending Jameson Canyon, (south) the topographic protrusion of Oat Hill and the northern fringes of the urbanized but unincorporated community of American Canyon, and (west) a part of the Carneros agricultural district, which also contains marine-oriented residential uses on the Napa River and an undeveloped portion of the City of Napa.

The Airport and most of the adjoining areas on the east, south, and west are composed of quaternary alluvial deposits and bay muds. Suscol Ridge, north of the Airport, is at the southwestern edge of a mountainous area formed of Sonoma volcanics. The southern flank of Jameson Canyon, southeast of the Airport, is geologically in the foothills of Mt. George, and is composed of Briones sandstones. Oat Hill is thought to be a remnant of the Great Valley sequence. The active West Napa Fault has been traced from just north of the Airport, through the Planning Area towards the south-southeast. Soils in the Planning Area consist largely of loams, clay loams, and clays of the Haire, Clear Lake and Reyes series. Most are highly suitable for agricultural use (Class II through IV).

Most of the Planning Area lies within a grassland habitat. A substantial area west of the Airport remains in a natural riparian system of the Napa River, and thus contains riparian habitats and permanently and seasonally flooded wetlands. Many of the grassland areas have been altered by salt ponds, vineyard cultivation, hay production, livestock grazing, and urban development. Tree stands consist primarily of native oaks on the hillsides and eucalyptus windrows.

ENVIRONMENTAL EFFECTS:
Normally Significant Individual Impacts

YES	NO		
		(Geology)

° Cumulatively Significant Only

IMPACT DISCUSSION

Because no physical construction project(s) would result from the adoption of the Compatibility Plan, nor from the subsequent implementation of the land use restrictions and policies by the affected jurisdictions, the following areas of potential effect related to construction/alteration of the natural environment on the Initial Study Checklist have been checked "NO".

Geology	Items #1, 2 and 3
Meteorology	Item #4
Hydrology	Items #5, 6, 7, 8, 9
Water Quality	Items #10, 11, 12
Air Quality	Items #13, 14, 15, 16
Noise	Item #19
Ecosystem	Items #21, 22, 23, 24, 25
Aesthetic	Items #28, 30

IMPACT DISCUSSION (continued)

The following items in the Initial Study Checklist have also been checked "NO" but relate directly to land use that is potentially affected by the Plan and therefore warrants further explanation.

Noise

Item #17:

The adoption and implementation of the Plan would not increase noise levels. The Plan does, however, recognize future noise levels from airport activities projected over a 20-year period. The projected impact elements and specific areas are discussed in Chapter 5 of the Compatibility Plan and depicted in Figure 5C. Projected noise contours as described by the Community Noise Equivalent Level (CNEL) indicate that aircraft noise from Napa County Airport would not present a health hazard. This is primarily because all areas within the 55 CNEL contour are either dedicated

health hazard. This is primarily because all areas within the 55 CNEL contour are either dedicated to open space uses or designated for industrial or agricultural use considered compatible with the anticipated noise levels. A greater concern and impact element surrounding Napa County Airport is related to single-event noise levels from aircraft overflights.

Implementation of the Recommended Plan would preclude residential land uses and require noise attenuation measures for other noise-sensitive land uses within the approach/departure zones and beneath the traffic pattern areas where frequent single-event noise intrusion can be expected. If implemented, the Plan would limit the exposure of future residents to airport noise. The policy that would preclude residential use within the Airport's traffic areas would **avoid** potential noise impacts from present and future airport activities. In avoiding the potential for single-event noise intrusion on residential uses in high traffic areas, the Plan also **avoids** the potential for overflight annoyance. Overflight annoyance has the potential to impact Airport activities by requiring noise monitoring programs, noise abatement procedures and/or operating restrictions.

In other areas within the Airport's Planning Area (Zones E and F) aircraft overflights are expected to occur, but not at such low altitudes or as frequently as expected in the approach and traffic pattern areas. In these outlying areas, the Plan requires overflight easements for all residential uses to provide notification to prospective buyers that the area is subject to overflights from aircraft operating to and from the Airport, thus enabling those who may be sensitive to aircraft noise to avoid moving to the affected areas.

If adopted and implemented, the Compatibility Plan would avoid potential noise impacts in the most affected areas (beneath the approaches and traffic pattern) and would mitigate potential noise impacts to new site users in those outlying areas potentially affected by airport activities. No new noise impacts would be created and no additional mitigation measures are required.

Residential Alternative (within Zones DA)

Since the outer approaches (Zone DA) are outside of the projected noise contours for Napa County Airport, future residents are not expected to be subject to health hazards related to excessive noise exposures. However, the outer approach zone will be subject to frequent overflights and single-event noise intrusion from aircraft on approach to the primary runway (18R) as well as the crosswind runway (24). In addition to the typical single-engine aircraft, these runways are also utilized by larger aircraft and business jets with single-event noise levels ranging from 70 dBA to 90 dBA on approach in these areas.

Departures, which are generally noisier, would occur relatively infrequently in these areas (approximately 5% of all operations) due to the prevailing wind conditions at Napa County Airport. Approximately 80 percent of all aircraft departures are to the south over baylands another 15 percent depart to the west over salt ponds/marsh and agricultural preserves. Therefore, departure noise levels are not considered a significant effect because of their relatively low freqency over developable areas.

The frequency of overflights on approach are projected to average 230 per day to the primary Runway 18R with an estimated 8 to 9 business jets per day as summarized in Table 1. The number of jets overflying these areas could double if jet training activities were re-instated at Napa County

Airport. It should be noted that jets will approach the airport on a straight-in approach because of their speed, placing all jet overflights within the outer approach zone. Larger aircraft and busy-hour traffic would require a larger and longer pattern that would extend over the outer approaches (Zone DA).

The Airport Master Plan, prepared in 1989 indicated that jet training activities at Napa County Airport had been discontinued. However, recent discussions with the local training instructors indicated that jet training activities may be re-instated at the airline training facility in the future. Currently students are advanced through multi-engine training on King Air turboprop aircraft at Napa County Airport. Upon completion the students are relocated to another facility in Washington to train on 747 aircraft. The transition from a King Air weighing less than 10,000 lbs. to a Boeing 747 which weighs well over 500,000 lbs. is seen as a difficult one by the flight instructors. The type of aircraft that would be used as an "interim jet trainer" would be similar to those business jets which frequent the Airport. A list of typical aircraft at Napa County Airport and their maximum noise levels as measured under FAR Part 36 is included in Table 2.

Table 3 presents typical noise levels relative to the line of sight for three types of representative aircraft that are expected to use Napa County Airport. Figure 1 provides a profile of the altitude of aircraft on approach to Napa County Airport with terrain elevations and both the existing approach and the future approach slopes indicated. As noted in the figures, aircraft will overfly the outer approaches less than 500 feet above the ground. The Airport Master Plan recommends that instrument approaches be established in the future for both Runway 18R and Runway 24. With an instrument approach procedure aircraft can be expected to fly even lower (340' minimums already established for a circle to land approach to runway 18R) in the outer approach.

The type of aircraft (jets with high single-event noise levels) and the low altitude of the aircraft, coupled with the frequency of overflights in the outer approaches present the potential for significant single-event noise impacts on future residents.

Recommended Mitigation Measures:

The Residential Alternative would not preclude residential use in the outer approaches based upon the following recommended mitigation measures:

1. Overall residential densities should be limited to a low density classification (1 unit per 5 acres is recommended) in order to limit the total number of residences that would be exposed to aircraft noise and overflight annoyance, thus limiting the potential of these neighborhoods to adversely impact airport activities.

2. An open space component should be incorporated into the project design and oriented along the extended runway centerline. Residences should be clustered and setback as far as possible from the extended runway centerline. Although the open space component is intended to address safety issues, it may also serve to increase the sight-distance to aircraft for residences. To the extent that the sight-distance would be increased, single-event noise levels experienced on-site may be reduced.

3. Accoustical studies should be required to identify noise attenuation measures incorporated into the building design that would provide a maximum interior noise level of 45 dBA based upon

the typical single-event noise levels for jet aircraft overflights on approach. This measure would mitigate single-event noise intrusion for **interior** noise levels.

4. However, exterior noise levels cannot be effectively reduced through noise attenuation measures. Given the temperate climate of the area, residents can be expected to enjoy outdoor living spaces and thus would be subject to aircraft noise. The dedication of an overflight easement as required in the Plan, which also specifies the potential for increased jet activities, could potentially mitigate the impact by notifying prospective buyers of the Airport's influence so that those who may be sensitive to jet aircraft noise could avoid moving to these areas.

Even with the mitigations noted above, annoyance associated with jet overflights could occur and may result in a potential impact to Napa County Airport. Operating restrictions, noise monitoring programs, noise abatement procedures, and land acquisitions are potential impacts experienced at other general aviation airports where residential uses have been allowed to encroach into the approach zones or traffic pattern areas. If residential uses were developed within the approaches to Napa County Airport, the subsequent use of the facility for jet training may also require restrictions on the training program to mitigate the potential impact on these areas (i.e. the type of jets allowed, the time of day, runway utilization etc).

Item #18:

Pursuant to provisions of the enabling legislation, the Commission's jurisdiction does not extend to existing land uses. Existing noise-sensitive uses in the Airport's Planning Area includes approximately 150 homes along the west bank of the Napa River (within Zone E) and a approximately 15 homes located northeast of the Airport off of Kelly Road (within Zones D and E). These areas are well outside of the projected 55 CNEL noise contour considered acceptable for residential uses and therefore would not create a health hazard for existing residents. Infill development of new residential uses and/or expansion of these existing uses may be allowed to occur in Zone D and residential use is considered compatible in Zone E. The dedication of an overflight easement would be required for new or expanded residential uses (see discussion below).

Item #20:

Although the Plan does not apply to existing land uses, it would require the dedication of an overflight easement for the expansion of an existing use to ensure buyer notification of the potential for aircraft overflights, thus enabling those who would be particularly annoyed to avoid moving into the affected areas. This would mitigate the potential for annoyance from aircraft noise in areas beneath the common flight paths and other areas in the Airport's environs (Zones E and F). It should be noted that the frequency of overflights within Zones E and F is much lower than the traffic pattern areas (Zones A through D) and the altitude of the aircraft is expected to remain above 1,000 feet, thus minimizing the single-event noise levels resulting from aircraft overflights. No potential impacts from adoption of the Plan is anticipated and no further mitigation measures are needed.

Social

Items #26 and 27:

Since the Planning Area for Napa County Airport is primarily undeveloped at the time of Plan adoption, the potential to disrupt or divide an established community or displace a large number of people does not exist. The Plan includes density limitations which would preclude the development of high-occupancy uses (large assemblies) within those areas with high to moderate potential for aircraft accidents. This policy avoids any potential to disrupt or displace any use which would involve a large number of people in the event of an aircraft accident.

Aesthetic

Item #29:

The Plan would require the dedication of avigation easements within the approach/departure zones and in areas where high terrain penetrates the airspace. The purpose of the avigation easement would be to prevent obstructions to the navigable airspace through the establishment of height limitations, and to allow for the marking or lighting of aircraft hazards by the airport authorities. The potential lighting of tall objects in the Airport's vicinity is not expected to create excessive glare or light. These effects could be readily mitigated by the property owner(s) in coordination with the airport authorities should they prove to be a problem. The impact is therefore deemed insignificant and no mitigation measures are required.

Cultural

Item #33:

The Plan would not eliminate or conflict with established recreational, educational, religious, or scientific uses since the Plan does not apply to any existing uses in the Airport's Planning Area. A primary objective of the Plan is to preserve the operating environment of the Airport. Since the Airport's emphasis in on training activities and is considered a recreational resource by many local pilots, the Plan is expected to have a beneficial impact on the established recreational and educational use of the Airport. Other established recreational, educational, religious, or scientific uses in the airport's planning area include: the Chardonnay Golf Course located within the approach to Runway 24; Fagan Creek Marsh adjacent to the Airport to the west; and, a church facility located just beyond the approach to Runway 18R. These uses would be considered compatible uses under the Compatibility Plan.

Traffic

Items #36, 37, and 38:

To the extent that the Plan limits the potential for large assemblages of people and other high-occupancy uses from locating in the area, the Plan would reduce the potential for increased traffic

loads and congestion on area roadways. No significant impact is identified and no mitigations are required.

Public Health

Item #44, 45, 46, and 47:

The Compatibility Plan addresses potential hazards to flight, as well as the safety of persons and property on the ground by the following measures:

1. Restricting allowable densities in critical areas to limit the exposure of people and property on the ground to risks associated with potential aircraft accidents (including the potential for fire).

2. Establishing height limitations and requiring avigation easements to prevent obstructions to the navigable airspace, thus limiting the potential for aircraft accidents in the Airport's vicinity.

3. Prohibition of certain uses which have characteristics that may create an aircraft hazard (i.e., smoke, glare, electrical interference or attraction of large flocks of birds.)

4. Requiring that local jurisdictions maintain open space uses in areas with high to moderate accident potential (Zones A, B, C, DA and D). The provision of open space in an Airport's vicinity would provide an opportunity for controlled emergency landings and/or crash sites. This increases the potential survivability of an off-airport accident for the airport users and limits the exposure of persons and property on the ground from potential hazards (including fire) in the event of an aircraft accident.

5. The Plan requires buildings within the approach zones to be setback to the maximum extent feasible from the extended runway centerline. The Plan further encourages clustering of buildings to maximize open land areas. Subdivision maps and development plans within 100 feet of the approach zones are required to indicate building envelopes and approach surfaces in order to determine conformance with the open land requirements.

These measures are expected to minimize the potential exposure of area occupants and airport users to hazards related to potential aircraft accidents. The adoption of the Plan itself is a mitigation of these potential impacts; therefore, no other mitigation measures are necessary.

Residential Alternative (Zone DA)

The alternative which allows residential development in the outer approaches could expose new residents to the potential for an aircraft accident since these areas are frequently overflown at low altitudes (between 400 and 800 feet above ground level). The potential for an uncontrolled stall-spin accident occurs at the turning points in the aircraft approach pattern. The turn "on base to final approach" generally occurs along the extended runway centerline.

Recommended Mitigation Measures:

1. Because residential land use is typically scattered across a broad area, a policy statement which requires clustering of the residential units to provide an open space component oriented along the extended runway centerline is recommended. Since buildings in the approach are required to be setback from the extended runway centerline to the maximum extent feasible, the open space component would provide this setback from the areas with high to moderate accident potential. This would mitigate the safety concerns with respect to the potential for a stall-spin accident in the outer approaches (Zone DA).

Community Services

Item #49:

The effect of the proposed land use restrictions would be to limit or preclude the establishment of high-occupancy uses that could create a substantial demand on community services. To the extent that the Plan would limit the allowable density of uses within the Airport's Planning Area, the demand for community services would also be limited. The adoption of the Plan reduces the potential to create a substantial increase in demand for community services within the Airport's Planning Area. No impacts are identified and no mitigation measures are needed.

Commercial Resources

Item #50:

The Plan would not restrict the development of aggregate, rock product, or mineral resources in the Planning Area since these uses generally do not involve characteristics which may create a hazard to flight. An avigation easement which enables marking or lighting of tall objects used for extraction may be required if the use were located within an approach/departure zone.

Item # 51:

The Plan identifies agricultural or grazing land as a compatible use in all compatibility zones and therefore would not remove any land from current or potential production. The Plan does require the local jurisdictions to maintain open space uses in critical areas and thus is expected to have a beneficial effect on the preservation of agricultural lands in the Airport's Planning Area.

Fiscal

Item # 52:

The adoption of the Plan would not involve any project development, but rather establishes criteria for evaluating land use compatibility in the Airport's Planning Area. To the extent that the Plan limits the intensity and density of uses, it may have a minor indirect effect on the cost of providing

public services to certain areas. The most restrictive density criteria are applied to a very limited geographic area within the approach/departure zones (Zones A, B and C). Except for Zone A (which is recognized as an airport acquisition area pursuant to the Airport's Master Plan) the density restrictions are not expected to reduce the taxable base to any significant or measurable extent and would therefore have a negligible effect on the cost to the community of providing services.

Since residential land uses generally do not return enough taxes to cover the cost of providing services, the policies which preclude the conversion of land to residential use may reduce the potential to create development which would cost the community more to provide services than it would return in taxes.

Residential Alternative (Zone DA)

Under this alternative, residential use would be considered compatible within the outer approaches to Runways 18R and 24. Since the adoption and implementation of the Plan would not involve development approval or entitlement for use, the potential to create development would not apply. However indirectly, this alternative has the potential to **encourage** residential development proposals which may cost the community more to provide services than it would return.

Recommended Mitigation Measures:

The fiscal impact could be mitigated through Community Development Fees and/or other user and municipal fees which may reduce the cost of services to an appropriate level. This type of mitigation measure is outside of the jurisdiction of the Commission.

Growth Inducement

Item # 53:

The adoption of the Plan would limit growth in the Airport's Planning Area to the extent that it would preclude the conversion of land to residential use and maintain open space within the approaches and traffic pattern areas. Since the primary effect of the Plan is growth-limiting, the adoption of the Plan and its implementation would not be growth-inducing.

Residential Alternative Zone DA

The potential to develop residential use within the outer approaches to Runways 18 and 24 could be viewed as growth-inducing, since it may **encourage** residential development proposals in areas not presently designated for residential use. However, the potential growth-inducing effect is considered not significant for two reasons:

1) The adoption of the Plan would not involve any development approval or entitlement for use.

2) The conversion of land to residential use is not necessary or anticipated for implementation or conformance by the local jurisdictions.

Thus, the growth-inducing effect of any proposed change in land use would need to be addressed in the context of the environmental review process required for the general plan amendment process. The Compatibility Plan only provides guidance to the Commission and the local jurisdiction's in evaluating the compatibility of such land use changes with airport activities.

MITIGATION MEASURES:

X None Required for "Recommended Plan".
X Identified By This Study for "Residential Alternative"
___ Included By Applicant As Part of Project
___ Recommended For Inclusion As Part of Public Project

BASIS OF CONCLUSIONS:

The conclusions and recommendations contained herein are professional opinions derived in accordance with current standards of professional practice. They are based on a review of the Napa County Environmental Sensitivity Maps, the other sources of information listed in the file, and the comments received, conversations with knowledgeable individuals; the preparer's personal knowledge of the area; and, where necessary, a visit to the site. For further information, see the Environmental Background Information form contained in the permanent file on this project.

PERSONS PARTICIPATING IN THE INITIAL STUDY

Resource Evaluation:	Mike Miller, Napa County Planning	Date: 3-29-91
Site Review:	Jennifer Barrett, Hodges & Shutt	Date: 3-30-91
Planning/Zoning Review:	Jennifer Barrett, Hodges & Shutt	Date: 3-30-91

PRELIMINARY DETERMINATION

X No reasonable possibility of environmental effect has been identified, and a Negative Declaration should be prepared.

___ A Negative Declaration cannot be prepared unless all identifiable impacts are reduced to a level of insignificance or avoided.

DATE: 4-1-91 BY: Michael Miller

DATE: 3-30-91 BY: Jennifer Barrett

FINAL DETERMINATION

On the basis of this preliminary evaluation:

X I find that the project COULD NOT have a significant effect on the environment, and a NEGATIVE DECLARATION should be approved.

___ I find that although the proposed project could have a significant effect on the environment, there will not be a significant effect on this case because the mitigation measures described on the attached sheet have been added to the project. A NEGATIVE DECLARATION should therefore be approved.

___ I find the proposed project MAY have a significant effect on the environment, and an ENVIRONMENTAL IMPACT REPORT would be required.

___ Mitigation measures to reduce all impacts to levels of insignificance or to avoid such impacts have been identified and may be adopted as part of the project.

___ A previously-certified Environmental Impact Report will fully address he impacts of the project, supplemented as necessary for public projects by additional mitigation recommended as part of the project.

___ A new, Subsequent or Supplemental Environmental Impact Report is appropriate for the project.

Table 1

Projected 2008 Frequency of Overflights on Approach to Napa County Airport

210,000 projected annual operations

or

105,000 annual approaches

or

288 daily overflights on approach

	Average Daily Distribution[1]	Average Daily Approaches[2]	Average Daily Business Jets	With Jet Training[3]
Runway 18R	80%	230	9	18
Runway 18L	20%	58	0	0
TOTALS	100%	288	9	18

Notes:

1) Average daily distribution is calculated for the typical day when winds are from the south and all approaches are to 18R or 18L. During certain times of the year (summer afternoons), wind conditions will shift out of the west, in which all approaches would be directed to the crosswind Runway 24. Rarely (5% of total annual operations), wind conditions would require approaches from the south to Runway 36L or 36R.

2) Daily distribution percentages are different than the annual distribution. Annual distribution figures are used to identify runway utilization patterns pursuant to local weather patterns over the course of the entire year. Average daily distribution reflects the typical day as indicated by interviews with FAA tower personnel.

3) If jet training were re-instated at Napa County Airport in the future, the number of jet operations would double. All jets use Runway 18R or 24 and fly "straight-in" approaches.

Table 2

Estimated Maximum A-Weighted Sound Levels Measured in Accordance with FAA Part 36 Procedures

MANUFACTURER	AIRCRAFT	APPROACH dBA[1]
SINGLE-ENGINE		
Piper	PA-28-200	61.0
Cessna	172 Skyhawk	62.0
Cessna	150	59.0
Beech	Bonanza	64.0
TURBOPROPS		
Beech	C90	75.0
Beech	Super Kingair 200	77.0
Cessna	310	73.7
Shorts	3-60	80.1
Piper	Cheyenne	77.1
JETS		
Gulfstream	Gulfstream III	82.5
IAI	Westwind	84.0
Learjet	Learjet 35	83.1
Canadair	Challenger 600	81.7
Cessna	Citation III	81.4
Sabreliner	Sabre 40A	92.0
Dassault	Falcon 20	93.1

Notes:

1. Approach noise levels are measured at a point 6,562 feet (2,000 meters) from the threshold of the extended runway centerline.

2. Departure noise levels are measured at a point 21,325 feet (6,500 meters) from the start of the takeoff roll. (At Napa County Airport, this would be 15,393 feet from the nearest runway end).

Table 3

Typical Single-Event Noise Levels from Aircraft Departures

Aircraft Type	Line of Sight (Distance)	Typical Maximum Noise Level (dBA)
Single-engine propeller	500 ft. 1,200 ft.	75 65
Twin-engine propeller	800 ft. 1,500 ft.	75 65
Turbojet (Falcon)	2,000 ft. 4,000 ft.	76 65

Exhibit B
Airport Vicinity Land Use Compatibility Criteria

ZONE	LOCATION	IMPACT ELEMENTS	MAXIMUM DENSITIES		
			Residential[2]	Other Uses (people/ac)[2]	
				In Structures	Total in and out of Structures
A[9]	Runway Protection Zone and Primary Surface	- High risk - High noise levels - Low overflights below 50' AGL	0	0	10
B	Inner Approach/Departure Zone	- Substantial risk - High noise levels - Low overflights below 100' AGL	1 du/40 ac	10	25
C	Approach/ Departure Zone	- Moderate risk - Substantial noise - Low overflight below 300' AGL	1 du/40 ac	50	75
DA	Outer Approach	- Moderate risk (turning movements) - Frequent noise intrusion (jets) - Routine overflights below 800' AGL	1 du/40 ac	75	100
D	Traffic Pattern	- Moderate risk - Frequent noise intrusion - Routine overflights below 1,000' AGL	1 du/40 ac	100	150
E	Common Flight Paths	- Limited risk - Frequent noise intrusion - Overflight annoyance	_[7]	150	300
F	Other Airport Environs	- Low risk - Overflight annoyance	See Note 7		

1. Residential land use and zoning designations are considered incompatible uses within the traffic pattern area (Zones A, B, C, and D) where aircraft overflights are frequent and at low altitude. The residential restrictions do not apply to residential uses allowable under agricultural land use and zoning designations.

2. The use should not attract more than the indicated number of persons per net acre. Net acreage is the total site area inclusive of parking areas and landscaping, less the area dedicated for streets. These densities are intended as general planning guidelines to aid in determining the acceptability of proposed land uses. Clustering of development within the density parameters should be encouraged to protect and provide open land/safety areas.

3. Dedication of an avigation or overflight easement or deed notice is required as a condition for new development within all zones. Also, height limit restrictions are applicable to structures and trees in all zones in accordance with Federal Aviation Regulation Part 77 and local ordinances. Uses which may be hazardous to flight are prohibited in all zones.

4. These uses typically can be designed to meet the density requirements and other development conditions listed.

5. These uses typically do not meet the density requirements and other development conditions listed. They should be allowed only if a major community objectiveis served by their location in this zone and if mitigation measures (i.e., noise attenuation) are incorporated that will minimize potential conflicts.

6. NLR = Noise Level Reduction; i.e., the attenuation of sound level from outside to inside provided by the structure. Noise level reduction measures may be required in areas with high single-event noise levels and where noise-sensitive users (schools, libraries, etc.) are proposed. Refer to Appendix C for criteria and noise attenuation measures.

7. Maximum residential densities in accordance with local adopted General Plans and zoning designations. Consideration should be given to the proximity of flight patterns, frequency of overflight, terrain conditions, and type of aircraft in determining acceptable location of residential uses. Referral to the ALUC for review of development plans prior to approval is recommended.

8. The purposed of this criteria is to provide a basis for determining those land uses which are compatible with airport activities. Specific land uses will be allowed only if they are also consistent with applicable General Plan policies and zoning ordinances.

9. All lands in Zone A are either within the Airport's boundaries or designated for acquisition in the Airport Master Plan.

Exhibit B Continued

ZONE	PROHIBITED USES	OTHER DEVELOPMENT CONDITIONS[3]	EXAMPLES OF NORMALLY ACCEPTABLE USES[4]	EXAMPLES OF USES NOT NORMALLY ACCEPTABLE[5]
A	- All residential uses - Any assemblage of people - Any new structure which exceeds height limits - Noise sensitive uses - Uses hazardous to flight	- Avigation easement required	- Pasture, open space - Aircraft tiedowns - Auto parking - Most agricultural uses	- Heavy poles, signs, large trees, etc.
B	- All residential uses - Any noise-sensitive uses - Schools, libraries, hospitals, nursing homes, daycare centers - Uses hazardous to flight (e.g., landfills)	- Avigation easement required - Structures to be as far as possible from extended runway centerline - Clustering is encouraged to maximize open land areas - Minimum NLR of 25 dBA in office buildings[6] - Building envelopes and approach surfaces required on all subdivision maps and development plans	- All uses from Zone A - Parks with low-intensity uses, golf courses - Nurseries - Mini-storage	- Retail uses - Office uses (except as accessory uses - Hotels, motels, resorts - Theaters, assembly halls, and conference centers
C	- All residential uses - Schools, libraries, hospitals, nursing homes, daycare centers - Uses hazardous to flight (e.g., landfills) - Landfills	- Avigation easement required - Structures to be set back as far as possible from extended centerline - Clustering is encouraged to maximize open land areas - Building envelopes and approach surfaces required on all subdivision maps - NLR measures may be required for noise-sensitive uses (offices)	- All uses from Zone B - Warehousing and low-intensity light industrial - Small retail uses - Outdoor recreation uses; marina, ball-park - Office uses	- Large retail buildings - Hotels, motels, resorts, health club - Restaurants, bars - Multi-story buildings - Theaters, assembly halls, and conference centers
DA	- All residential uses - Uses hazardous to flight	- Avigation easement required - Structures to be set back as far as possible from extended runway centerline - Building envelopes and approach surfaces required on all subdivision maps and development plans - NLR measures/acoustical studies may be required for noise-sensitive uses	- All use from Zone C - Most non-residential uses	- Schools, libraries, hospitals, nursing homes - Large shopping malls - Amphitheaters
D	- All residential uses - Uses hazardous to flight (e.g., landfills)	- Overflight easement or deed notice required - Building envelopes and approach surfaces required on all development plans within 100' of approach zones - Clustering is encouraged to maximize open land areas - NLR measures may be required for noise-sensitive uses[6]	- All uses from Zone DA - Most non-residential uses - Accessory day care centers	- Schools, libraries, hospitals, nursing homes - Large shopping malls - Amphitheaters
E	- Large assemblages of people under flight path - Noise-sensitive outdoor uses - Uses hazardous to flight (e.g., landfills)	- Overflight easement or deed notice required - Clustering of development away from flight path is encouraged	- Any permitted use	- Schools, libraries, hospitals, nursing homes - Amphitheaters - Landfills
F	- Noise-sensitive outdoor uses	- Overflight easement or deed notice required	- Any permitted use	- Amphitheaters - Landfills

Residental Alternative
Exhibit C
Compatibility Criteria

ZONE	LOCATION	IMPACT ELEMENTS	MAXIMUM DENSITIES		
			Residential[2]	Other Uses (people/ac)[2]	
				In Structures	Total in and out of Structures
DA[9]	Outer Approach/Extended Traffic Pattern	- Moderate risk (turning movements) - Frequent noise intrusion (jets) - Routine overflights below 800' AGL	Low density (1 unit/5 acres)	75	100

* Note: Residential land uses with an overall gross density of no more than 1 unit/5 acres MAY be considered compatible within the Approach Pattern area (Zone DA) under certain conditions listed, provided that such use incorporates a substantial open space component and other mitigation measures are included which address the noise, safety, and overflight annoyance impacts.

ZONE	PROHIBITED USES	OTHER DEVELOPMENT[3] CONDITIONS	EXAMPLES OF NORMALLY ACCEPTABLE USES[4]	EXAMPLES OF USES NOT NORMALLY ACCEPTABLE[5]
DA	- Highly noise-sensitive uses - Uses hazardous to flight - Landfills	- Open space component is required - To be oriented along extended runway centerline - Buildings should be set back from centerline to the maximum extent feasible - Acoustical studies/NLR that provide maximum interior noise level of 45 dBA based upon single-event jet aircraft overflights on approach. - Avigation easement must also disclose potential for increased jet activities at Napa County Airport	- All uses from Zone C - Most non-residential uses - Apartments, multi-family units clustered to meet density criteria	- Schools, libraries, hospitals, nursing homes - Large shopping malls - Amphitheaters

1. Residential land use and zoning designations are considered incompatible uses within the traffic pattern area (Zones A, B, C, and D) where aircraft overflights are frequent and at low altitude. The residential restrictions do not apply to residential uses allowable under agricultural land use and zoning designations.

2. The use should not attract more than the indicated number of persons per **net** acre. Net acreage is the total site area inclusive of parking areas and landscaping, less the area dedicated for streets. These densities are intended as general planning guidelines to aid in determining the acceptability of proposed land uses. Clustering of development within the density parameters should be encouraged to protect and provide open land/safety areas.

3. Dedication of an avigation or overflight easement or deed notice is required as a condition for new development within all zones. Also, height limit restrictions are applicable to structures and trees in all zones in accordance with Federal Aviation Regulation Part 77 and local ordinances. Uses which may be hazardous to flight are prohibited in all zones.

4. These uses typically can be designed to meet the density requirements and other development conditions listed.

5. These uses typically do not meet the density requirements and other development conditions listed. They should be allowed only if a major community objective is served by their location in this zone and if mitigation measures (i.e., noise attenuation) are incorporated that will minimize potential conflicts.

6. NLR = Noise Level Reduction; i.e., the attenuation of sound level from outside to inside provided by the structure. Noise level reduction measures may be required in areas with high single-event noise levels and where noise-sensitive users (schools, libraries, etc.) are proposed. Refer to Appendix C for criteria and noise attenuation measures.

7. Maximum residential densities in accordance with local adopted General Plans and zoning designations. Consideration should be given to the proximity of flight patterns, frequency of overflight, terrain conditions, and type of aircraft in determining acceptable location of residential uses. Referral to the ALUC for review of development plans prior to approval is recommended.

8. The purposed of this criteria is to provide a basis for determining those land uses which are compatible with airport activities. Specific land uses will be allowed only if they are also consistent with applicable General Plan policies and zoning ordinances.

9. All lands in Zone A are either within the Airport's boundaries or designated for acquisition in the Airport Master Plan.

Notice of Exemption

99-0113

ENDORSED

DEC 22 1999

JOHN TUTEUR
Napa County Recorder- County Clerk
By L. EVANS
DEPUTY RECORDER - CLERK

[PUBLIC PROJECT EXEMPT FROM FILING FEES C.G.C. § 6103]

To: ☐ Office of Planning and Research
1400 Tenth Street, Room 121
Sacramento, CA 95814

From: (Public Agency) Napa County Airport Land Use Commission
1195 Third St, Rm 210
Napa, CA 94559

☐ County Clerk
County of Napa

Project Title: 1999 ALUCP Amendment (Napa County Airport)

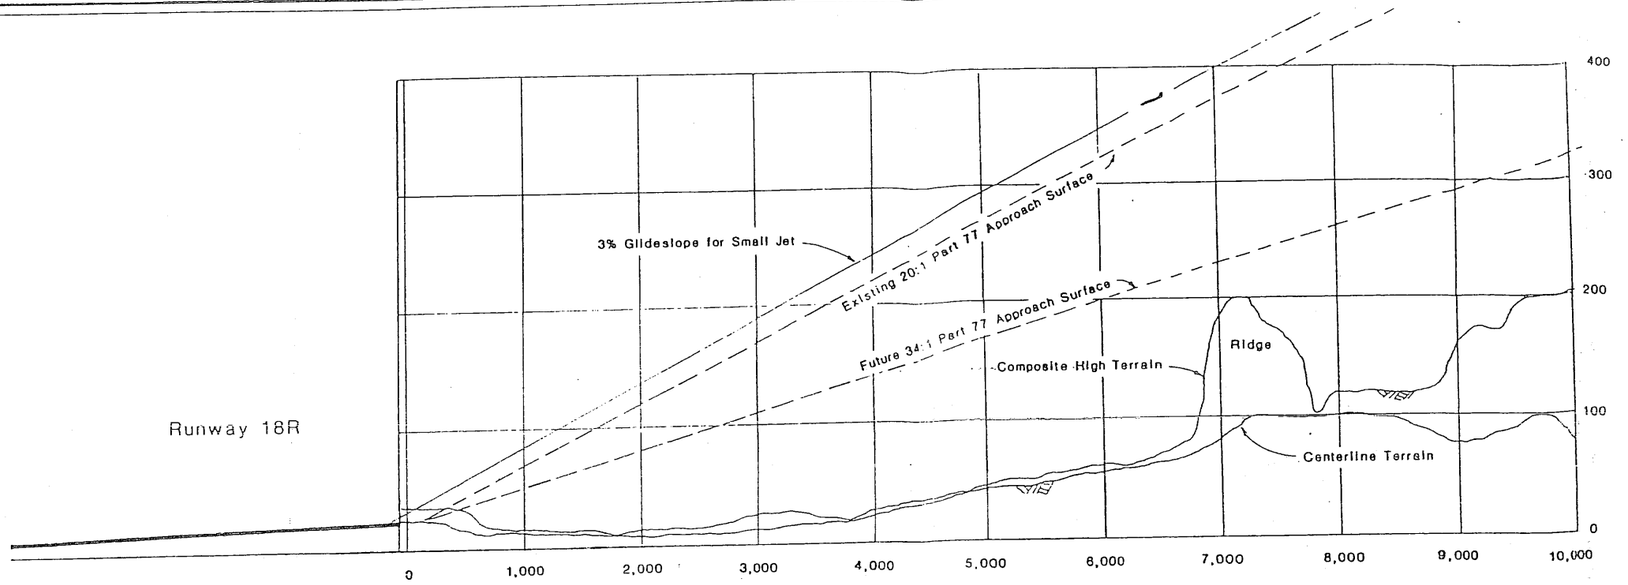
Project Location - Specific: 14,000 ft. radius Planning Area for the Napa County Airport Land Use Plan, centered on this public airport located on unincorporated lands west of State Highway 29 and east of the Napa River, south of the city of Napa and north of the City of American Canyon.

Project Location - City: Napa, American Canyon, and unincorporated County: Napa

Description of Project:: Revisions of Napa County Airport Land Use Plan for the County Airport. The amendment would revise Chapter 2 (Compatibility Concerns) regarding safety and overflights; revise Chapter 3 (Policies) regarding compatibility zone designations and referral procedures including revisions of Table 3-1 (Compatibility Zone Definitions) and Table 3-2 (Compatibility Criteria) and Figure 3A (Compatibility Plan Map); and revise Chapter 5 (Napa County Airport Plans and Impact Assessment) for consistency and designation of Common Traffic Pattern, including revision of Figure 5C (Airport Impact Areas – Napa County Airport).

Name of Public Agency Approving Project:: Napa County Airport Land Use Commission

Name of Person or Agency Carrying Out Project: Napa County Airport Land Use Commission



Exempt Status: General Rule Section 15061(b)(3)

Reasons why project is exempt: The General Rule applies "where it can be seen with certainty that there is no possibility that the activity in question may have a significant effect on the environment." Pursuant to state law, the ALUCP operates to establish policies, with which either local general plans, zoning and development projects must be **made consistent**, or on a case-by-case basis **overruled by the local governing body with findings**. Thus whether a project (plan, zoning or development) actually may have an environmental impact is dependent both on that project itself, and on how the local government chooses to deal with the existence of the ALUCP. Negative Declarations were prepared and adopted in 1991 demonstrating that the ALUCP for each of the airports in Napa County would have no potential environmental impact. Amendments to the ALUCPs have no independent authority, and can therefore be seen with certainty to have no potential environmental effect.

Virgil O. Parrett Field Initial Study and Negative Declaration

DRAFT
NEGATIVE DECLARATION

The Executive Director of the Napa County Airport Land Use Commission has tentatively determined that the following project would not have a significant effect on the environment. Documentation supporting this determination is on file for public inspection at the Napa County Airport Land Use Commission Office, 1195 Third St., Room 210, Napa, California 94559. For further information call (707) 253-4416.

PARRETT FIELD AIRPORT LAND USE COMPATIBILITY PLAN

(Project Description)
The criteria and policies which the Napa County Airport Land Use Commission will use in evaluating the compatibility of land uses around Virgil O. Parrett Field (Angwin Airport). (See Project Description contained in the attached Initial Study, incorporated by reference).

WRITTEN COMMENT PERIOD:
April 1, 1991 to April 21, 1991

DATE: April 1, 1991

BY THE ORDER OF

JEFFREY REDDING
Director
Napa County Conservation, Development and Planning Department

COUNTY OF NAPA
CONSERVATION, DEVELOPMENT AND PLANNING DEPARTMENT

INITIAL STUDY

PROJECT NAME: PARRETT FIELD AIRPORT LAND USE COMPATIBILITY PLAN
FILE NO:

PROJECT DESCRIPTION: The Parrett Field Airport Land Use Compatibility Plan (the Plan) sets forth the criteria and policies which the Napa County Airport Land Use Commission (the Commission) will use in evaluating the compatibility of land uses around Parrett Field (the Airport). The statutory requirement for the establishment of the Commission and the adoption of the Plan is set forth in the State Aeronautics Act, Article 3.5, Chapter 4, Section 21670 of the Public Utilities Code (the Act).

The recommended planning area for Parrett Field is entirely within the area encompassed by the outer conical surface as defined under Part 77 of Federal Aviation Regulations (established by a 5,000-foot radius from the runway's primary surface); and would be further limited on the west side (outside the airport traffic pattern) by Howell Mountain Drive and Falls Road (refer to Figure 3C of the Plan). A detailed discussion and assessment of the airport's impact area is included in Chapter 7 of the Plan. Figure 3C and Tables 3-1 and 3-2 of the Plan summarize the areas of concern and the Commission's criteria and policies for Parrett Field which are further defined in Chapter 3 of the Plan. The primary policies would:

1) Prohibit any use that may be hazardous to flight, including uses which produce excessive glare, light, smoke, steam, emissions, electronic interference or may attract large flocks of birds.

2) Establish height limitations in accordance with Part 77 of Federal Aviation Regulations and require the dedication of height-limit easements to the County of Napa within the approaches to prevent obstructions to the navigable airspace.

3) Require the local government to identify and preserve open space within the approaches and traffic pattern area to reduce the risks to life and property of aircraft emergencies.

4) Preclude uses in which the occupants have low mobility (*e.g.* nursing homes, grade schools, etc.) from locating in areas with high to moderate accident potential within the approach/departure zones or the traffic pattern areas (Zones A,B,C, and D).

5) Preclude noise-sensitive uses from locating in the areas that are subject to frequent noise intrusion (including single-event noise) within the approaches and traffic pattern area (Zones A,B,C and D).

6) Require the recordation of airport operational/overflight notices to ensure notification to potential buyers of the airport's influence.

7) Establish density limitations (as shown in Table 3-2) that would effectively:

   a) Preclude the conversion of land to residential use within the areas subject to frequent noise intrusion within the approach/departure zones and traffic pattern areas (Zones A,B,C and D). The Plan maintains residential densities in these areas at 1 unit per 40 acres in accordance with the present land use designations of the underlying general plan.

   b) Preclude high-occupancy uses from locating in areas with high to moderate accident potential within the approach/departure zones and traffic pattern areas (Zones A,B,C and D).

JURISDICTIONAL BACKGROUND:
Public Plans and Policies

Based on an initial review, the following findings have been made for the purpose of the Initial Study and do not constitute a final finding by the County in regard to the question of consistency.

	YES	NO	N/A
Is the project consistent with:			
a) Regional and Subregional Plans and Policies?	X	—	—
b) LAFCOM Plans and Policies?	—	—	X
c) The County General Plan? (see discussion below)	—	—	X
d) Appropriate City General Plans?	—	—	X
e) Adopted Environmental Plans and Goals of the Community?	—	—	X
f) Pertinent Zoning? (see discussion below)	—	—	X

* Mitigable (see Mitigation Measures below)
° Cumulatively Significant Only

Responsible (R) and Trustee (T) Agencies	Other Agencies Contacted
County of Napa (R)	Federal Aviation Administration State Division of Aeronautics

The adoption of the Plan by the Commission will have no direct effect on land use because the Commission has no direct authority over land use. The Plan only serves to provide guidance to the local jurisdictions in determining the compatibility of land uses with airport activities. However, due to conformance provisions contained in the enabling legislation, the Plan will have an indirect effect on land use, in that local jurisdictions must bring their general plans and specific plans into conformance with the Plan or otherwise provide findings that meet the intent of the Act to override the Commission's determination. The Commission must review the local general plan within 180 days of the adoption of the Plan. The statutory authority and role of the Commission and the relationship to local plans is further described in Chapter 1 of the Plan.

An initial review of the underlying local general plan indicates that the existing land use designations within the Parrett Field Planning Area are presently consistent with the Plan. However, in order for the Commission to make a determination of consistency with the Plan, the County must revise its plan to incorporate specific policies relative to airport compatibility which:

1) Recognize the airport's planning area;

2) Agree to the types of actions to be referred to the Commission; and

3) Reflect the density criteria, mitigation measures and other conditions listed (*i.e.* height limitations, use restrictions, notification requirements, etc.)

:ussion of Effect on Local Land Use Plan

Because implementation of the Plan is essentially a subsequent action to be taken by the County, and because provisions of the Act allow for local jurisdictions to override the Commission's determinations, an assessment of the potential effect of the Plan is difficult to predict. Therefore, this Initial Study is based on the assumption that the criteria, policies, and land use restrictions set forth in this Plan will be adopted by the local agency as recommended. Subsequent actions by the local jurisdiction required by the Plan (general plan revision) which differ from the recommendations in this Plan may require additional environmental review. Since the Plan addresses land use compatibility issues related to potential noise and safety impacts resulting from airport activities, the adoption of the Plan itself is a mitigation measure for potential airport impacts. The Plan establishes performance criteria for land use densities, identifies specific mitigation measures, and seeks to prevent the encroachment of incompatible uses (principally noise-sensitive uses such as residential) into aircraft traffic areas.

Even though the Plan is a mitigation of potential impacts and consequently not likely to have any significant adverse environmental effects of its own, the Plan precludes the conversion of land to higher densities of residential use than 1 unit/40 acres within the approach/departure zones and traffic pattern areas (Zones A,B,C and D). Thus, a potential adverse effect of the Plan would be to restrict the future availability of land for housing within the Airport's Planning Area. However, this impact is insignificant because no residential density higher than 1 unit/40 acres is presently designated in these areas in the local general plan, and is thus not regarded as necessary to meet the housing needs of the community over the 20-year time frame of the Plan.

ENVIRONMENTAL SETTING: Parrett Field is located on top of Howell Mountain at elevation ± 1850 feet immediately east of the ± 1½ square mile unincorporated community of Angwin, and is an integral part of Pacific Union College. The College forms the eastern side of the urbanized area begun in the 1860's as a resort. The airfield occupies a ridgetop formed of Sonoma volcanics; Howell Mountain forms a divide between the Conn Creek/Napa River watershed and the Maxwell Creek/Lake Berryessa watershed. Surrounding terrain drops away from the airfield almost immediately to the north, south, and east, and after a somewhat gently-sloping (2-15%) tableland to the west. The hilly environment consists of climax and successional Douglas fir woodland, but the ridgetop, including the airport, is clear of vegetation, and the urbanized community to the west has also significantly altered the vegetation. The Howell Mountain ridge has no mapped landslides, but an area of faulting is located southeast of the ridge at the head of Chiles Valley. Winds are generally light, except in September when high winds from the northeast occur. Air quality is excellent year-round, with the airport lying above the average inversion layer elevation. Soils throughout the airport planning area are composed of stony loams of the Aiken, Butte, and Konocti series.

ENVIRONMENTAL EFFECTS:
Normally Significant Individual Impacts

YES	NO		
		(Geology)	
__	X	1.	Exposure of new site users to substantial life and/or property hazards from geologic processes (*e.g.*, severe settlement, sliding, faulting, intense seismically induced ground shaking, seismically-induced ground failures, etc.).
__	X	2.	Exposure of existing area occupants to substantially increased life and/or property hazards from geologic processes.
__	X	3.	Damage, destruction or burial of any unique or scientifically important geologic or geomorphologic feature.
		(Meteorology)	
__	X	4.	Substantial modification of climatic or microclimatic conditions (*e.g.*, temperature, rainfall, wind, shadow patterns, etc.).
		(Hydrology)	
__	X	5.	Exposure of new site users to substantial life and/or property hazards from flooding (*e.g.*, stream flooding, tsunamis, seiches, dam or levee failure, etc.).
__	X	6.	Exposure of existing area occupants to substantially increased life and/or property hazards from flooding.
__	X	7.	Substantial temporary construction period increase in erosion and/or sedimentation.
__	X	8.	Substantial permanent increase in erosion and/or sedimentation.
__	X	9.	Substantial depletion of groundwater resources or significant interference with groundwater recharge.
		(Water Quality)	
__	X	10.	Substantial degradation of the quality of waters present in a stream, lake, or pond.
__	X	11.	Substantial degradation of the quality of groundwater supplies.
__	X	12.	Substantial contamination of a public or private water supply.
		(Air Quality)	
__	X	13.	Exposure of new site users to substantial health hazards from breathing polluted air.
__	X	14.	Exposure of existing area occupants to substantially increased health hazards from breathing polluted air.
__	X	15.	Substantial degradation of local or regional air quality.
__	X	16.	Exposure of new site users or existing area occupants to annoyance from dust and/or highly objectionable odors.
		(Noise)	
__	X	17.	Exposure of new site users to health hazards from noise levels in excess of those recognized as necessary to protect public health and welfare. (See Discussion)
__	X	18.	Exposure of existing area occupants to health hazards from noise levels in excess of those recognized as necessary to protect public health and welfare.
__	X	19.	Exposure of people to high construction noise levels for substantial periods of time.
__	X	20.	Exposure of existing area occupants to annoyance from substantially increased ambient noise levels.

* Mitigable (see Mitigation Measures below)
° Cumulatively Significant Only

YES	NO		
		(Ecosystem)	
_	X	21.	Substantial reduction in the number of a rare or endangered species of plant or animal or damage or restriction of the habitat of such a species.
_	X	22.	Destruction of or substantial damage to a unique, scarce, or particularly productive biological area (*e.g.*, marshes, riparian galleries, vernal pools, etc.).
_	X	23.	Substantial reduction in habitat for plants, fish, and/or wildlife.
_	X	24.	Substantial modification in the number or diversity of plant or animal species present.
_	X	25.	Substantial interference with the movement of a resident or migratory fish or wildlife species.
		(Social)	
_	X	26.	Disruption or division of an established community.
_	X	27.	Displacement of a large number of people.
		(Aesthetic)	
_	X	28.	Blockage or substantial degradation of important public or private views.
_	X	29.	Exposure of new site users or existing area occupants to annoyance from increased nighttime light levels or glare. (See Discussion)
_	X	30.	Creation of a litter problem.
		(Cultural)	
_	X	31.	Destruction of or substantial damage to a recognized archaeological site.
_	X	32.	Destruction of or substantial damage to the historical character of a recognized historical structure, facility, or feature.
	X	33.	Elimination of or conflict with the established recreational, educational, religious, or scientific uses of the project site or surrounding properties.
		(Traffic)	
_	X	34.	Exposure of new site users to substantial life and/or property hazards from traffic accidents.
_	X	35.	Exposure of the existing users of the roads providing access to the project site to substantially increased life and/or property hazards from traffic accidents.
_	X	36.	Exposure of the users of the roadways providing access to the project site to annoyance from noticeably increased traffic congestion.
_	X	37.	Increase in traffic on the roadways providing access to the project site which is substantial in relation to the existing traffic load and capacity of the street system.
_	X	38.	Creation of a substantial local parking problem.
		(Energy)	
_	X	39.	Increase in the demand for energy which is substantial in relation to the existing energy demands of the area.
_	X	40.	Creation of a facility or development which will use fuel or energy in a wasteful manner.
_	X	41.	Creation of a facility or development which will use substantially higher than average amounts of fuel or energy for transportation purposes.
		(Public Health)	
_	X	42.	Exposure of new site users to substantial health hazards from contaminated drinking water, inadequately treated sewage and/or insect or rodent pests.
_	X	43.	Exposure of existing area occupants to substantially increased health hazards from contaminated drinking water, inadequately treated sewage and/or insect or rodent pests.
	X	44.	Exposure of new site users to substantial life and/or property hazards from fire.
	X	45.	Exposure of existing area occupants to substantially increased life and/or property hazards from fire.

* Mitigable (see Mitigation Measures below)
° Cumulatively Significant Only

YES	NO		
		(Public Health)	
__	X	46.	Exposure of new site users to substantial life and/or property hazards from air crashes.
__	X	47.	Exposure of existing area occupants and/or existing air or heliport users to substantially increased life and/or property hazards from air crashes. **(See Discussion)**
__	X	48.	Exposure of new site users or existing area occupants to substantial annoyance from insect or rodent pests.
		(Community Services)	
__	X	49.	Increase in the demand for a community service (*e.g.*, sewer, water, fire protection, schools, etc.) which is substantial in relation to the currently existing uncommitted capacity of the agency involved to provide such a service.
		(Commercial Resources)	
__	X	50.	Preclusion of the development of aggregate, rock product, or mineral resources of current or potential importance.
__	X	51.	Removal of a substantial amount of agricultural or grazing land from current or potential production.
		(Fiscal)	
__	X	52.	Creation of a development to which it would cost the community substantially more to provide services than it would return in taxes.
		(Growth Inducement)	
__	X	53.	Inducement of substantial residential, commercial, or industrial development.

Mandatory Findings of Significance

Does the project:	YES	NO
a) Have the potential to degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community reduce the number or restrict the range of a rare or endangered plant or animal or eliminate important examples of the major periods of California history or prehistory?	__	X
b) Have the potential to achieve short-term, to the disadvantage of long-term, environmental goals?	__	X
c) Have possible environmental effects which are individually limited but cumulatively considerable?	__	X
d) Have environmental effects which will cause substantial adverse effects on human beings, either directly or indirectly?	__	X

* Mitigable (see Mitigation Measures below)
° Cumulatively Significant Only

Impact Discussion

[All items checked above "YES", "YES, mitigable", or "YES, cumulatively significant" must be discussed below.]

The following items were checked above "NO," but require additional explanation:

Item #17: The Plan will not increase noise levels. By requiring that the new owners and residents of the area subject to generally higher noise levels of normal aircraft operations be notified of the source of such noise, the Plan is expected to have a beneficial effect on the number of noise-exposure incidents and complaints.

Item #29: The Plan will not increase the sources of light or glare. The potential effect from the Plan to encourage additional lighting of aircraft hazards not presently marked is not a significant effect.

Item #47: The Plan would have a beneficial effect in potentially reducing the number of people subject to air crash hazards.

MITIGATION MEASURES:

_X_ None Required
___ Identified By This Study - Unadopted (see attached Draft Project Revision Statement)
___ Included By Applicant As Part of Project (see attached Project Revision Statement)
___ Recommended For Inclusion As Part of Public Project (see attached Recommended Mitigation Measure List)

BASIS OF CONCLUSIONS:

The conclusions and recommendations contained herein are professional opinions derived in accordance with current standards of professional practice. They are based on a review of the Napa County Environmental Sensitivity Maps, the other sources of information listed in the file, and the comments received, conversations with knowledgeable individuals; the preparer's personal knowledge of the area; and, where necessary, a visit to the site. For further information, see the Environmental Background Information Form contained in the permanent file on this project.

AGENCY STAFF PARTICIPATING IN THE INITIAL STUDY:

Resource Evaluation:	Michael Miller & Jennifer Barrett (consultant)	Date: March 15, 1991
Site Review:	Jennifer Barrett	Date: March 26, 1991
Planning/Zoning Review:	Michael Miller & Jennifer Barrett	Date: March 26, 1991

PRELIMINARY DETERMINATION:

X No reasonable possibility of environmental effect has been identified, and a Negative Declaration should be prepared.

___ A Negative Declaration cannot be prepared unless all identified impacts are reduced to a level of insignificance or avoided.

DATE: March 26, 1991 BY: Michael Miller

FINAL DETERMINATION:

On the basis of this preliminary evaluation:

X I find that the project COULD NOT have a significant effect on the environment, and a NEGATIVE DECLARATION should be approved.

___ I find that although the proposed project could have a significant effect on the environment, there will not be a significant effect in this case because the mitigation measures described on an attached sheet have been added to the project. A NEGATIVE DECLARATION should therefore be approved.

___ I find the proposed project MAY have a significant effect on the environment, and an ENVIRONMENTAL IMPACT REPORT would be required:

___ Mitigation measures to reduce all impacts to levels of insignificance or to avoid such impacts have been identified and may be adopted as part of the project.

___ A previously-certified Environmental Impact Report will fully address the impacts of the project, supplemented as necessary for public projects by additional mitigation recommended as part of the project.

___ A new, Subsequent or Supplemental Environmental Impact Report is appropriate for the project.

DATE: 3-27-91 BY: Jeffrey Reddick

APPENDICES

AERONAUTICS LAW
STATE AERONAUTICS ACT

Public Utilities Code
Chapter 4, Article 3.5

AIRPORT LAND USE COMMISSION

Creation; Membership; Selection

21670. (a) The Legislature hereby finds and declares that:

(1) It is in the public interest to provide for the orderly development of each public use airport in this state and the area surrounding these airports so as to promote the overall goals and objectives of the California airport noise standards adopted pursuant to Section 21669 and to prevent the creation of new noise and safety problems.

(2) It is the purpose of this article to protect public health, safety, and welfare by ensuring the orderly expansion of airports and the adoption of land use measures that minimize the public's exposure to excessive noise and safety hazards within areas around public airports to the extent that these areas are not already devoted to incompatible uses.

(b) In order to achieve the purposes of this article, every county in which there is located an airport which is served by a scheduled airline shall establish an airport land use commission. Every county, in which there is located an airport which is not served by a scheduled airline, but is operated for the benefit of the general public, shall establish an airport land use commission, except that the board of supervisors for the county may, after consultation with the appropriate airport operators and affected local entities and after a public hearing, adopt a resolution finding that there are no noise, public safety, or land use issues affecting any airport in the county which require the creation of a commission and declaring the county exempt from that requirement. The board shall, in this event, transmit a copy of the resolution to the Director of Transportation. For purposes of this section, "commission" means an airport land use commission. Each commission shall consist of seven members to be selected as follows:

(1) Two representing the cities in the county, appointed by a city selection committee comprised of the mayors of all the cities within that county, except that if there are any cities contiguous or adjacent to the qualifying airport, at least one representative shall be appointed therefrom. If there are no cities within a county, the number of representatives provided for by subdivisions (b) and (c) shall each be increased by one.

(2) Two representing the county, appointed by the board of supervisors.

(3) Two having expertise in aviation, appointed by a selection committee comprised of the managers of all the public airports within that county.

(4) One representing the general public, appointed by the other six members of the commission.

(c) Public officers, whether elected or appointed, may be appointed and serve as members of the commission during their terms of public office.

(d) Each member shall promptly appoint a single proxy to represent the member in commission affairs and to vote on all matters when the member is not in attendance. The proxy shall be designated in a signed written instrument which shall be kept on file at the commission offices, and the proxy shall serve at the pleasure of the appointing member. A vacancy in the office of proxy shall be filled promptly by appointment of a new proxy.

(e) A person having an "expertise in aviation": means a person who, by way of education, training, business, experience, vocation, or avocation has acquired and possesses particular knowledge of, and familiarity with, the function, operation, and role of airports, or is an elected official of a local agency which owns or operates an airport. The commission shall be constituted pursuant to this section on and after March 1, 1988.

Action by Designated Body Instead of Commission

21670.1 (a) Notwithstanding any provisions of this article, if the board of supervisors and the city selection committee of mayors in any county each makes a determination by a majority vote that proper land use planning can be accomplished through the actions of an appropriate designated body, then such body shall assume the planning responsibilities of an airport land use commission as provided for in this article, and a commission need not be formed in that county.

(b) A body designated pursuant to subdivision (a) which does not include among its membership at least two members having an expertise in aviation, as defined in subdivision (e) of Section 21670, shall, when acting in the capacity of an airport land use commission, be augmented so that the body, as augmented, will have at least two members having that expertise. The commission shall be constituted pursuant to this section on and after March 1, 1988.

Applicability to Counties Having Over 4 Million Population

21670.2. (a) Sections 21670 and 21670.1 do not apply to counties of more than 4 million population. In such counties, the county regional planning commission has the responsibility of coordinating the airport planning of public agencies within the county. In instances where impasses result relative to this planning, an appeal may be made to the county regional planning commission by any public agency involved. The action taken by the county regional planning commission on such an appeal may be overruled by a four-fifths vote of the governing body of a public agency whose planning led to the appeal.

(b) By January 1, 1992, the county regional planning commission shall adopt the comprehensive land use plans required pursuant to Section 21675.

Airports Owned by a City, District, or County; Appointment of Certain Members by Cities and Counties

21671. In any county where there is an airport operated for the general public which is owned by a city or district in another county or by another county, one of the representatives provided by paragraph (1) of subdivision (a) of Section 21670 shall be appointed by the city selection committee of mayors of the cities of the county in which the owner of that airport is located, and one of the representatives provided by paragraph (2) subdivision (a) of Section 21670 shall be appointed by the board of supervisors of the county in which the owner of that airport is located.

Term of Office; Removal of Members; Vacancies; Compensation; Staff Assistance; Meetings

21671.5 (a) Except for the terms of office of the members of the first commission, the term of office for each member shall be four years and until the appointment and qualification of his or her successor. The members of the first commission shall classify themselves by lot so that the term of office of one member is one year, of two members is two years, of two members is three years, and of two members if four years. The body which originally appointed a member whose term has expired shall appoint his or her successor for a full term of four years. Any member may be removed at any time and without cause by the body appointing him or her. The expiration date of the term of office of each member shall be the first Monday in May in the year in which his or her term is to expire. Any vacancy in the membership of the commission shall be filled for the unexpired term by appointment by the body which originally appointed the member whose office has become vacant. The chairperson of the commission shall be selected by the members thereof.

(b) Compensation, if any, shall be determined by the board of supervisors.

(c) Staff assistance, including the mailing of notices and the keeping of minutes, and necessary quarters, equipment, and supplies shall be provided by the county. The usual and necessary expenses of the commission shall be a county charge.

(d) Notwithstanding any other provisions of this article, the commission shall not employ any personnel either as employees or independent contractors without the prior approval of the board of supervisors.

(e) The commission shall meet at the call of the commission chairperson or at the request of the majority of the commission members. A majority of the commission members shall constitute a quorum for the transaction of business. No action shall be taken by the commission except by the recorded vote of a majority of the full membership.

(f) The commission may establish a schedule of fees for reviewing and processing proposals and for providing copies of land use plans, as required by subdivision (d) of Section 21675. Those fees shall be charged to the proponents of actions, regulations, or permits, shall not exceed the estimated reasonable cost of providing the service, and shall be imposed pursuant to Chapter 13 (commencing with Section 54990) of Part 1 of Division 2 of Title 5 of the Government Code. After June 30, 1991, a commission which has not adopted the comprehensive land use plan required by Section 21675 shall not charge fees pursuant to this subdivision until the commission adopts the plan.

Rules and Regulations

21672. Each commission shall adopt rules and regulations with respect to the temporary disqualification of its members from participating in the review or adoption of a proposal because of conflict of interest and with respect to appointment of substitute members in such cases.

Initiation of Proceedings for Creation by Owner of Airport

21673. In any county not having a commission or a body designated to carry out the responsibilities of a commission, any owner of a public airport may initiate proceedings for the creation of a commission by presenting a request to the board of supervisors that a commission be created and showing the need therefor to the satisfaction of the board of supervisors.

Powers and Duties

21674. The commission has the following powers and duties, subject to the limitations upon its jurisdiction set forth in Section 21676:

(a) To assist local agencies in ensuring compatible land uses in the vicinity of all new airports and in the vicinity of existing airports to the extent that the land in the vicinity of those airports is not already devoted to incompatible uses.

(b) To coordinate planning at the state, regional, and local levels so as to provide for the orderly development of air transportation, while at the same time protecting the public health, safety, and welfare.

(c) To prepare and adopt an airport land use plan pursuant to Section 21675.

(d) To review the plans, regulations, and other actions of local agencies and airport operators pursuant to Section 21676.

(e) The powers of the commission shall in no way be construed to give the commission jurisdiction over the operation of any airport.

(f) In order to carry out its responsibilities, the commission may adopt rules and regulations consistent with this article.

Staff Training and Development

21674.5 (a) The Department of Transportation shall develop and implement a program or programs to assist in the training and development of the staff or airport land use commissions, after consulting with airport land use commissions, cities, counties, and other appropriate public entities.

(b) The training and development program or programs are intended to assist the staff of airport land use commissions in addressing high priority needs, and may include, but need not be limited to, the following:

(1) The establishment of a process for the development and adoption of comprehensive land use plans.

(2) The development of criteria for determining airport land use planning boundaries.

(3) The identification of essential elements which should be included in the comprehensive plans.

(4) Appropriate criteria and procedures for reviewing proposed developments and determining whether proposed developments are compatible with the airport use.

(5) Any other organizational, operational, procedural, or technical responsibilities and functions which the department determines to be appropriate to provide the commission staff and for which it determines there is a need for staff training and development.

(c) The department may provide training and development programs for airport land commission staff pursuant to this section by any means it deems appropriate. Those programs may be presented in any of the following ways:

(1) By offering formal courses or training programs.

(2) By sponsoring or assisting in the organization and sponsorship of conferences, seminars, or other similar events.

(3) By producing and making available written information.

(4) Any other feasible method of providing information and assisting in the training and development of airport land use commission staff.

SEC 2. The sum of one hundred thousand dollars ($100,000) is hereby appropriated from the Aeronautics Account in the State Transportation Fund to the Department of Transportation for the purposes of this act.

SEC 3. This act is an urgency statute necessary for the immediate preservation of the public peace, health, or safety within the meaning of Article IV of the Constitution and shall go into immediate effect. The facts constituting the necessity are:

In order to assist airport land use commissions to comply with state law requiring the development and adoption of comprehensive land use plans for each public airport in California, and in order to provide for the orderly development of public airports and to provide adequate protection from incompatible land uses in the vicinity of public use airports at the earliest possible time, it is necessary that this act take effect immediately.

Land Use Plan

21675. (a) Each commission shall formulate a comprehensive land use plan that will provide for the orderly growth of each public airport and the area surrounding the airport within the jurisdiction of the commission, and will safeguard the general welfare of the inhabitants within the vicinity of the airport and the public in general. The commission plan shall include and shall be based on a long-range master plan or an airport layout plan, as determined by the Division of Aeronautics of the Department of Transportation, that reflects the anticipated growth of the airport during at least the next 20 years. In formulating a land use plan, the commission may develop height restrictions on buildings, specify use of land, and determine building standards, including soundproofing adjacent to airports, within the planning area. The comprehensive land use plan shall be reviewed as often as necessary in order to accomplish its purposes, but shall not be amended more than once in any calendar year.

(b) The commission may include, within its plan formulated pursuant to subdivision (a), the area within the jurisdiction of the commission surrounding any federal military airport for all the purpose specified in subdivision (a). This subdivision does not give the commission any jurisdiction or authority over the territory or operations of any military airport.

(c) The planning boundaries shall be established by the commission after hearing and consultation with the involved agencies.

(d) The commission shall submit to the Division of Aeronautics of the department one copy of the plan and each amendment to the plan.

(e) If a comprehensive land use plan does not include the matters required to be included pursuant to this article, the Division of Aeronautics of the department shall notify the commission responsible for the plan.

Date of Adoption; Review of Actions; Approval or Disapproval

21675.1 (a) By June 30, 1991, each commission shall adopt the comprehensive land use plan required pursuant to Section 21675.

(b) Until a commission adopts a comprehensive land use plan, a city or county shall first submit all actions, regulations, and permits within the vicinity of a public airport to the commission for review and approval. Before the commission approves or disapproves any actions, regulations, or permits, the commission shall give the public notice in the same manner as the city or county is required to give for those actions, regulations, or permits. As used in this section, "vicinity" means land which will be included or reasonably could be included within the plan. If the

commission has not designated a study area for the plan, then "vicinity" means land within two miles of the boundary of a public airport.

(c) The commission may approve an action, regulation, or permit if it finds, based on substantial evidence in the record, all of the following:

(1) The commission is making substantial progress toward the completion of the plan.

(2) There is a reasonable probability that the action, regulation, or permit will be consistent with the plan being prepared by the commission.

(3) There is little or no probability of substantial detriment to or interference with the future adopted plan if the action, regulation, or permit is ultimately inconsistent with the plan.

(d) If the commission disapproves an action, regulation, or permit, the commission shall notify the city or county. The city or county may overrule the commission, by a two-thirds vote of its governing body, if it makes specific findings that the proposed action, regulation, or permit is consistent with the purposes of this article, as stated in Section 21670.

(e) If a city or county overrules the commission pursuant to subdivision (d), that action shall not relieve the city or county from further compliance with this article after the commission adopts the plan.

(f) If a city or county overrules the commission pursuant to subdivision (d) with respect to a publicly owned airport that the city or county does not operate, the operator of the airport shall be immune from liability for damages to property or personal injury from the city's or county's decision to proceed with the action, regulation, or permit.

(g) A commission may adopt rules and regulations which exempt any ministerial permit for single-family dwellings from the requirements of subdivision (b) if it makes the findings required pursuant to subdivision (c) for the proposed rules and regulations, except that the rules and regulations may not exempt either of the following:

(1) More than two single-family dwellings by the same applicant within a subdivision prior to June 30, 1991.

(2) Single-family dwellings in a subdivision where 25 percent or more of the parcels are undeveloped.

Failure to Approve or Disapprove

21675.2 (a) If a commission fails to act to approve or disapprove any actions, regulations, or permits within 60 days of receiving the request pursuant to Section 21675.1, the applicant or his or her representative may file an action pursuant to Section 1094.5 of the Code of Civil Procedure to compel the commission to act, and the court shall give the proceedings preference over all other actions or proceedings, except previously filed pending matters of the same character.

(b) The action, regulation, or permit shall be deemed approved only if the public notice required by this subdivision has occurred. If the applicant has provided seven days advance notice to the commission of the intent to provide public notice pursuant to this subdivision, then, not earlier than the date of the expiration the time limit established by Section 21675.1, an applicant may provide the required public notice. If the applicant chooses to provide public notice, that notice shall include a description of the proposed action, regulation, or permit substantially similar to the descriptions which are commonly used in public notices by the commission, the name and address of the commission, and a statement that the action, regulation, or permit shall be deemed approved if the commission has not acted within 60 days. If the applicant has provided the public notice specified in this subdivision, the time limit for action by the commission shall be extended to 60 days after the public notice is provided. If the applicant provides notice pursuant to

this section, the commission shall refund to the applicant any fees which were collected for providing notice and which were not used for that purpose.

(c) Failure of an applicant to submit complete or adequate information pursuant to Sections 65943 to 65946, inclusive, of the Government Code, may constitute grounds for disapproval of actions, regulations, or permits.

(d) Nothing in this section diminishes the commission's legal responsibility to provide, where applicable, public notice and hearing before acting on an action, regulation, or permit.

Review of Local General Plans

21676. (a) Each local agency whose general plan includes areas covered by an airport land use commission plan shall, by July 1, 1983, submit a copy of its plan or specific plans to the airport land use commission. The commission shall determine by August 31, 1983, whether the plan or plans are consistent or inconsistent with the commission's plan. If the plan or plans are inconsistent with the commission's plan, the local agency shall be notified and that local agency shall have another hearing to reconsider its plans. The local agency may overrule the commission after such a hearing by a two-thirds vote of its governing body if it makes specific findings that the proposed action is consistent with the purposes of this article stated in Section 21670.

(b) Prior to the amendment of a general plan or specific plan, or the addition or approval of a zoning ordinance or building regulation within the planning boundary established by the airport land use commission pursuant to Section 21675, the local agency shall first refer the proposed action to the commission. If the commission determines that the proposed action is inconsistent with the commission's plan, the referring agency shall be notified. The local agency may, after a public hearing, overrule the commission by a two-thirds vote of its governing body if it makes specific findings that the proposed action is consistent with the purposes of this article stated in Section 21670.

(c) Each public agency owning any airport within the boundaries of an airport land use commission plan shall, prior to modification of its airport master plan, refer such proposed change to the airport land use commission. If the commission determines that the proposed action is inconsistent with the commission's plan, the referring agency shall be notified. The public agency may, after a public hearing, overrule the commission by a two-thirds vote of its governing body if it makes specific findings that the proposed action is consistent with the purposes of this article stated in Section 21670.

(d) Each commission determination pursuant to subdivision (b) or (c) shall be made within 60 days from the date of referral of the proposed action. If a commission fails to make the determination within that period, the proposed action shall be deemed consistent with the commission's plan.

Review of Local Plans

21676.5. (a) If the commission finds that a local agency has not revised its general plan or specific plan or overruled the commission by a two-thirds vote of its governing body after making specific findings that the proposed action is consistent with the purposes of this article as stated in Section 21670, the commission may require the local agency submit all subsequent actions, regulations, and permits to the commission for review until its general plan or specific plan is revised or the specific findings are made. If, in the determination of the commission, an action,

regulation, or permit of the local agency is inconsistent with the commission plan, the local agency shall be notified and that local agency shall hold a hearing to reconsider its plan. The local agency may overrule the commission after hearing by a two-thirds vote of its governing body if it makes specific findings that the proposed action is consistent with the purposes of this article as stated in Section 21670.

(b) Whenever the local agency has revised its general plan or specific plan or has overruled the commission pursuant to subdivision (a), the proposed action of the local agency shall not be subject to further commission review, unless the commission and the local agency agree that the individual projects shall be reviewed by the commission.

Marin County Override Provisions

21677. Notwithstanding Section 21676, any public agency in the County of Marin may overrule the Marin County Airport Land Use Commission by a majority vote of its governing body.

Airport Owner's Immunity

21678. With respect to a publicly owned airport that a public agency does not operate, if the public agency pursuant to Section 21676 or 21676.5 overrides a commission's action or recommendation, the operator of the airport shall be immune from liability for damages to property or personal injury caused by or resulting directly or indirectly from the public agency's decision to override the commission's action or recommendation.

Court Review

21679. (a) In any county in which there is no airport land use commission or other body designated to assume the responsibilities of an airport land use commission, or in which the commission or other designated body has not adopted an airport land use plan, an interested party may initiate proceedings in a court of competent jurisdiction to postpone the effective date of a zoning change, a zoning variance, the issuance of a permit, or the adoption of a regulation by a local agency, which directly affects the use of land one mile of the boundary of a public airport within the county.

(b) The court may issue an injunction which postpones the effective date of the zoning change, zoning variance, permit, or regulation until the governing body of the local agency which took the action does one of the following:

(1) In the case of an action which is a legislative act, adopts a resolution declaring that the proposed action is consistent with the purposes of this article stated in Section 21670.

(2) In the case of an action which is not a legislative act, adopts a resolution declaring that the proposed action is consistent with the purposes of this article stated in Section 21670.

(3) Rescinds the action.

(4) Amends its action to make it consistent with the purposes of this article stated in Section 21670, and complies with either paragraph (1) or (2) of this subdivision, whichever is applicable.

(c) The court shall not issue an injunction pursuant to subdivision (b) if the local agency which took the action demonstrates that the general plan and any applicable specific plan of the agency accomplishes the purposes of an airport land use plan as provided in Section 21675.

(d) An action brought pursuant to subdivision (a) shall be commenced within 30 days of the decision or within the appropriate time periods set by Section 21167 of the Public

Resources Code, whichever is longer.

(e) If the governing body of the local agency adopts a resolution pursuant to subdivision (b) with respect to a publicly owned airport that the local agency does not operate, the operator of the airport shall be immune from liability for damages to property or personal injury from the local agency's decision to proceed with the zoning change, zoning variance, permit, or regulation.

(f) As used in this section, "interested party" means any owner of land within two miles of the boundary of the airport or any organization with a demonstrated interest in airport safety and efficiency.

Action to Postpone Effective Date of Zoning Change, Etc.

21679.5 (a) Until June 30, 1991, no action pursuant to Section 21679 to postpone the effective date of a zoning change, a zoning variance, the issuance of a permit, or the adoption of a regulation by a local agency, directly affecting the use of land within one mile of the boundary or a public airport, shall be commenced in any county in which the commission or other designated body has not adopted an airport land use plan, but is making substantial progress toward the completion of the plan.

(b) If a commission has been prevented from adopting the comprehensive land use plan by June 30, 1991, or if the adopted plan could not become effective, because of a lawsuit involving the adoption of the plan, the June 30, 1991 date in subdivision (a) shall be extended by the period of time during which the lawsuit was pending in a court of competent jurisdiction.

(c) Any action pursuant to Section 21679 commenced prior to January 1, 1990, in a county in which the commission or other designated body has not adopted an airport land use plan, but is making substantial progress toward the completion of the plan, which has not proceeded to final judgment, shall be held in abeyance until June 30, 1991. If the commission or other designated body does not adopt an airport land use plan on or before June 30, 1991, the plaintiff or plaintiffs may proceed with the action.

(d) An action to postpone the effective date of a zoning change, a zoning variance, the issuance of a permit, or the adoption of a regulation by a local agency, directly affecting the use of land within one mile of the boundary of a public airport for which an airport land use plan has not been adopted by June 30, 1991, shall be commenced within 30 days of June 30, 1991, or within 30 days of the decision by the local agency, or within the appropriate time periods set by Section 21167 of the Public Resources Code, whichever date is later.

Excerpts from Federal Aviation Regulations

Part 77—Objects Affecting Navigable Airspace

Subpart A—General

§ 77.1 Scope.

This Part—

(a) Establishes standards for determining obstructions in navigable airspace;

(b) Sets forth the requirements for notice to the Administrator of certain proposed construction or alteration;

(c) Provides for aeronautical studies of obstructions to air navigation, to determine their effect on the safe and efficient use of airspace;

(d) Provides for public hearings on the hazardous effect of proposed construction or alteration on air navigation; and

(e) Provides for establishing antenna farm areas.

§ 77.2 Definition of terms.

For the purpose of this Part:

"Airport available for public use" means an airport that is open to the general public with or without a prior request to use the airport.

"A seaplane base" is considered to be an airport only if its sea lanes are outlined by visual markers.

"Nonprecision instrument runway" means a runway having an existing instrument approach procedure utilizing air navigation facilities with only horizontal guidance, or area type navigation equipment, for which a straight-in nonprecision instrument approach procedure has been approved, or planned, and for which no precision approach facilities are planned, or indicated on an FAA planning document or military service military airport planning document.

"Precision instrument runway" means a runway having an existing instrument approach procedure utilizing an Instrument Landing System (ILS), or a Precision Approach Radar (PAR). It also means a runway for which a precision approach system is planned and is so indicated by an FAA approved airport layout plan; a military service approved military airport layout plan; any other FAA planning document, or military service military airport planning document.

"Utility runway" means a runway that is constructed for and intended to be used by propeller driven aircraft of 12,500 pounds maximum gross weight and less.

"Visual runway" means a runway intended solely for the operation of aircraft using visual approach procedures, with no straight-in instrument approach procedure and no instrument designation indicated on an FAA approved airport layout plan, a military service approved military airport layout plan, or by any planning document submitted to the FAA by competent authority.

§ 77.3 Standards.

(a) The standards established in this Part for determining obstructions to air navigation are used by the Administrator in—

(1) Administering the Federal-aid Airport Program and the Surplus Airport Program;

(2) Transferring property of the United States under Section 16 of the Federal Airport Act;

(3) Developing technical standards and guidance in the design and construction of airports; and

(4) Imposing requirements for public notice of the construction or alteration of any structure where notice will promote air safety.

(b) The standards used by the Administrator in the establishment of flight procedures and aircraft operational limitations are not set forth in this Part but are contained in other publications of the Administrator.

§ 77.5 Kinds of objects affected.

This Part applies to—

(a) Any object of natural growth, terrain, or permanent or temporary construction or alteration, including equipment or materials used therein, and apparatus of a permanent or temporary character; and

(b) Alteration of any permanent or temporary existing structure by a change in its height (including appurtenances), or lateral dimensions, including equipment or materials used therein.

Subpart B—Notice of Construction or Alteration

§ 77.11 Scope.

(a) This subpart requires each person proposing any kind of construction or alteration described in § 77.13(a) of this chapter to give adequate notice to the Administrator. It specifies the locations and dimensions of the construction or alteration for which notice is required and prescribes the form and manner of the notice. It also requires supplemental notices 48 hours before the start and upon the completion of certain construction or alteration that was the subject of a notice under § 77.13(a).

(b) Notices received under this subpart provide a basis for—

(1) Evaluating the effect of the construction or alteration on operational procedures and proposed operational procedures;

(2) Determinations of the possible hazardous effect of the proposed construction or alteration on air navigation;

(3) Recommendations for identifying the construction or alteration in accordance with the current Federal Aviation Administration Advisory Circular AC 70/7460-1 entitled "Obstruction Marking and Lighting," which is available without charge from the Department of Transportation, Distribution Unit, TAD 484.3, Washington, D.C. 20590;

(4) Determining other appropriate measures to be applied for continued safety of air navigation; and

(5) Charting and other notification to airmen of the construction or alteration.

§ 77.13 Construction or alteration requiring notice.

(a) Except as provided in § 77.15, each sponsor who proposes any of the following construction or alteration shall notify the Administrator in the form and manner prescribed in § 77.17:

(1) Any construction or alteration of more than 200 feet in height above the ground level at its site.

(2) Any construction or alteration of greater height than an imaginary surface extending outward and upward at one of the following slopes:

(i) 100 to 1 for a horizontal distance of 20,000 feet from the nearest point of the nearest runway of each airport specified in subparagraph (5) of this paragraph with at least one runway more than 3,200 feet in actual length, excluding heliports.

(ii) 50 to 1 for a horizontal distance of 10,000 feet from the nearest point of the nearest runway of each airport specified in subparagraph (5) of this paragraph with its longest runway no more than 3,200 feet in actual length, excluding heliports.

(iii) 25 to 1 for a horizontal distance of 5,000 feet from the nearest point of the nearest landing and takeoff area of each heliport specified in subparagraph (5) of this paragraph.

(3) Any highway, railroad, or other traverse way for mobile objects, of a height which, if adjusted upward 17 feet for an Interstate Highway that is part of the National System of Military and Interstate Highways where overcrossings are designed for a minimum of 17 feet vertical distance, 15 feet for any other public roadway, 10 feet or the height of the highest mobile object that would normally traverse the road, whichever is greater, for a private road, 23 feet for a railroad, and for a waterway or any other traverse way not previously mentioned, an amount equal to the height of the highest mobile object that would normally

traverse it, would exceed a standard of subparagraph (1) or (2) of this paragraph.

(4) When requested by the FAA, any construction or alteration that would be in an instrument approach area (defined in the FAA standards governing instrument approach procedures) and available information indicates it might exceed a standard of Subpart C of this part.

(5) Any construction or alteration on any of the following airports (including heliports):

(i) An airport that is available for public use and is listed in the Airport Directory of the current Airman's Information Manual or in either the Alaska or Pacific Airman's Guide and Chart Supplement.

(ii) An airport under construction, that is the subject of a notice or proposal on file with the Federal Aviation Administration, and except for military airports, it is clearly indicated that that airport will be available for public use.

(iii) An airport that is operated by an armed force of the United States.

(b) Each sponsor who proposes construction or alteration that is the subject of a notice under paragraph (a) of this section and is advised by an FAA regional office that a supplemental notice is required shall submit that notice on a prescribed form to be received by the FAA regional office at least 48 hours before the start of the construction or alteration.

(c) Each sponsor who undertakes construction or alteration that is the subject of a notice under paragraph (a) of this section shall, within 5 days after that construction or alteration reaches its greatest height, submit a supplemental notice on a prescribed form to the FAA regional office having jurisdiction over the area involved, if—

(1) The construction or alteration is more than 200 feet above the surface level of its site; or

(2) An FAA regional office advises him that submission of the form is required.

§ 77.15 Construction or alteration not requiring notice.

No person is required to notify the Administrator for any of the following construction or alteration:

(a) Any object that would be shielded by existing structures of a permanent and substantial character or by natural terrain or topographic features of equal or greater height, and would be located in the congested area of a city, town, or settlement where it is evident beyond all reasonable doubt that the structure so shielded will not adversely affect safety in air navigation.

(b) Any antenna structure of 20 feet or less in height except one that would increase the height of another antenna structure.

(c) Any air navigation facility, airport visual approach or landing aid, aircraft arresting device, or meteorological device, of a type approved by the Administrator, or an appropriate military service on military airports, the location and height of which is fixed by its functional purpose.

(d) Any construction or alteration for which notice is required by any other FAA regulation.

§ 77.17 Form and time of notice.

(a) Each person who is required to notify the Administrator under § 77.13(a) shall send one executed form set (four copies) of FAA Form 7460–1, Notice of Proposed Construction or Alteration, to the Chief, Air Traffic Division, FAA Regional Office having jurisdiction over the area within which the construction or alteration will be located. Copies of FAA Form 7460–1 may be obtained from the headquarters of the Federal Aviation Administration and the regional offices.

(b) The notice required under § 77.13(a)(1) through (4) must be submitted at least 30 days before the earlier of the following dates—

(1) The date the proposed construction or alteration is to begin.

(2) The date an application for a construction permit is to be filed.

However, a notice relating to proposed construction or alteration that is subject to the licensing requirements of the Federal Communications Act may be sent to the FAA at the same time the application for construction is filed with the Federal Communications Commission, or at any time before that filing.

(c) A proposed structure or an alteration to an existing structure that exceeds 2,000 feet in height above the ground will be presumed to be a hazard to air navigation and to result in an inefficient utilization of airspace and the applicant has the burden of overcoming that presumption. Each notice submitted under the pertinent provisions of Part 77 proposing a structure in excess of 2,000 feet aboveground, or an alteration that will make an existing structure exceed that height, must contain a detailed showing, directed to meeting this burden. Only in exceptional cases, where the FAA concludes that a clear and compelling showing has been made that it would not result in an inefficient utilization of the airspace and would not result in a hazard to air navigation, will a determination of no hazard be issued.

(d) In the case of an emergency involving essential public services, public health, or public safety, that requires immediate construction or alteration, the 30-day requirement in paragraph (b) of this section does not apply and the notice may be sent by telephone, telegraph, or other expeditious means, with an executed FAA Form 7460-1 submitted within five days thereafter. Outside normal business hours, emergency notices by telephone or telegraph may be submitted to the nearest FAA Flight Service Station.

(e) Each person who is required to notify the Administrator by paragraph (b) or (c) of § 77.13, or both, shall send an executed copy of FAA Form 117-1, Notice of Progress of Construction or Alteration, to the Chief, Air Traffic Division, FAA Regional Office having jurisdiction over the area involved.

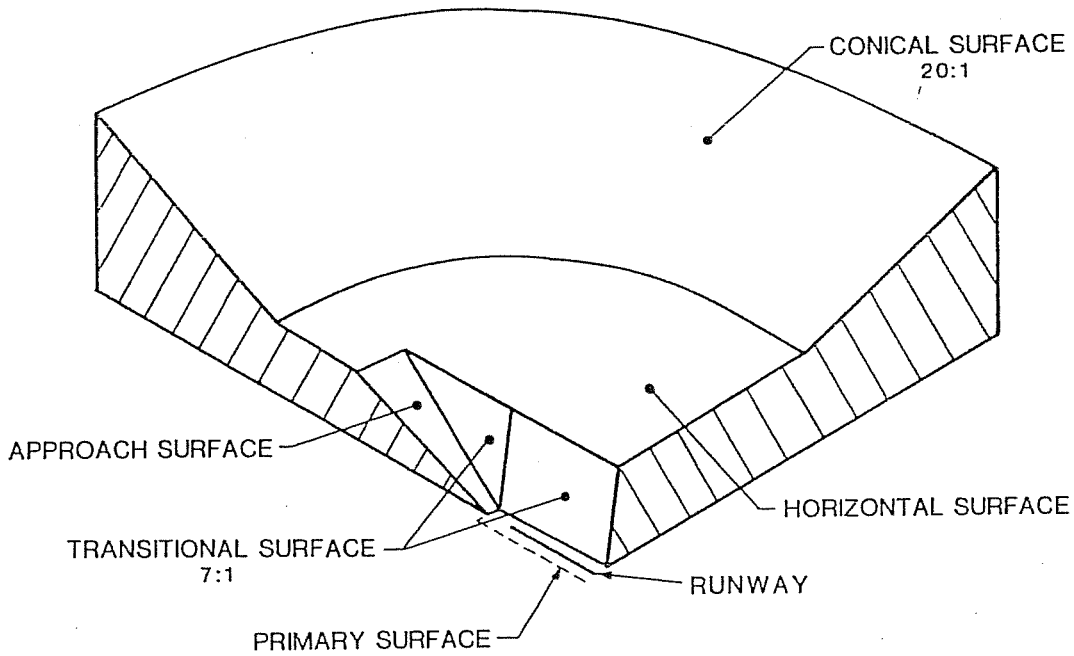
§ 77.19 Acknowledgment of notice.

(a) The FAA acknowledges in writing the receipt of each notice submitted under § 77.13 (a).

(b) If the construction or alteration proposed in a notice is one for which lighting or marking standards are prescribed in the FAA Advisory Circular AC 70/7460-1 entitled "Obstruction Marking and Lighting," the acknowledgment contains a statement to that effect and information on how the structure should be marked and lighted in accordance with the Advisory Circular.

(c) The acknowledgment states that an aeronautical study of the proposed construction or alteration has resulted in a determination that the construction or alteration—

(1) Would not exceed any standard of Subpart C and would not be a hazard to air navigation;

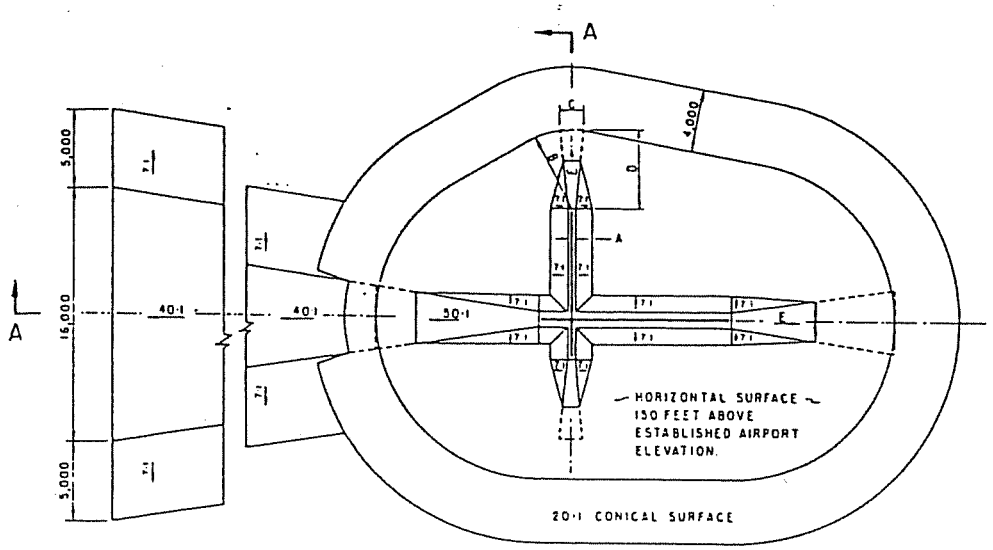


(2) Would exceed a standard of Subpart C but would not be a hazard to air navigation; or

(3) Would exceed a standard of Subpart C and further aeronautical study is necessary to determine whether it would be a hazard to air navigation, that the sponsor may request within 30 days that further study, and that, pending completion of any further study, it is presumed the construction or alteration would be a hazard to air navigation.

Subpart C—Obstruction Standards

§ 77.21 Scope.



(a) This subpart establishes standards for determining obstructions to air navigation. It applies to existing and proposed manmade objects, objects of natural growth, and terrain. The standards apply to the use of navigable airspace by aircraft and to existing air navigation facilities, such as an air navigation aid, airport, Federal airway, instrument approach or departure procedure, or approved off-airway route. Additionally, they apply to a planned facility or use, or a change in an existing facility or use, if a proposal therefor is on file with the Federal Aviation Administration or an appropriate military service on the date the notice required by § 77.13(a) is filed.

Notice is required by Part 77 of the Federal Aviation Regulations (14 C.F.R. Part 77) pursuant to Section 1101 of the Federal Aviation Act of 1958, as amended (49 U.S.C. 1101). Persons who knowingly and willingly violate the Notice requirements of Part 77 are subject to a fine (criminal penalty) of not more than $500 for the first offense and not more than $2,000 for subsequent offenses, pursuant to Section 902(a) of the Federal Aviation Act of 1958, as amended (49 U.S.C. 1472(a)).

I HEREBY CERTIFY that all of the above statements made by me are true, complete, and correct to the best of my knowledge. In addition, I agree to obstruction mark and/or light the structure in accordance with established marking & lighting standards if necessary.

Date	Typed Name/Title of Person Filing Notice	Signature

FAA will either return this form or issue a separate acknowledgement.

FOR FAA USE ONLY

The Proposal:

- ☐ Does not require a notice to FAA.
- ☐ Is not identified as an obstruction under any standard of FAR, Part 77, Subpart C, and would not be a hazard to air navigation.
- ☐ Is identified as an obstruction under the standards of FAR, Part 77, Subpart C, but would not be a hazard to air navigation.
- ☐ Should be obstruction ☐ marked, ☐ lighted per FAA Advisory Circular 70/7460-1, Chapter(s) _____
- ☐ Obstruction marking and lighting are not necessary.

emarks:

Supplemental Notice of Construction FAA Form 7460-2 is required any time the project is abandoned, or

- ☐ At least 48 hours before the start of construction.
- ☐ Within five days after the construction reaches its greatest height.

This determination expires on _____ unless:

(a) extended, revised or terminated by the issuing office;
(b) the construction is subject to the licensing authority of the Federal Communications Commission and an application for a construction permit is made to the FCC on or before the above expiration date. In such case the determination expires on the date prescribed by the FCC for completion of construction, or on the date the FCC denies the application.

NOTE: Request for extension of the effective period of this determination must be postmarked or delivered to the issuing office at least 15 days prior to the expiration date.

If the structure is subject to the licensing authority of the FCC, a copy of this determination will be sent to that Agency.

TABLE 4

GENERAL CONSTRUCTION METHODS TO ACHIEVE
THE INDICATED EXTERIOR NOISE REDUCTION

Required Overall Bldg. Noise Reduction (dBA)	FLOOR	EXTERIOR WALLS	EXTERIOR DOORS	WINDOWS	CEILING, ROOF
30	No special provisions	No special provisions, except eliminate penetrations of wall air conditioning units, mail boxes, etc. Fireplaces should have glass type closable screen & well fitted damper	STC 33**. Solid core, weatherstripping, combined door and window area less than 20% of floor area.	STC 31. Seal	Generally, no special provisions.
40	a. Slab on grade-no special provisions b. If raised floor, one or more of the following: 1. baffle air vent 2. attach gypboard to underside of floor joists	Eliminate penetrations of wall air conditioning units, mail boxes, etc. Operational vented fire places should be avoided.	STC 43. Sound doors, sound seals, combined door and window area less than 20% of floor area.	STC 43. Double glazing, sealed windows.	a. Attic System 1. vent baffling 2. sound absorption between joists. b. If beam ceiling: 1. provide sound absorption between beams 2. provide gypboard on resilient clips to underside of beams.

TABLE 4 (CONT.)

Required Overall Bldg. Noise Reduction (dBA)	FLOOR	EXTERIOR WALLS	EXTERIOR DOORS	WINDOWS	CEILING, ROOF
50	a. Slab on grade-no special provisions b. If raised floor: 1. baffle air vent 2. provide sound absorption between floor joists 3. add gypboard to underside of floor joists	a. Wood framing staggered studs with sound absorption in cavity. Stucco on outside, 2 layers gypboard on inside. b. 8 in. concrete block with sealed exterior and interior surfaces. c. 4 in. dense concrete	STC 50. Special sound doors with acoustical seals.	STC 49. Double glazing, sealed windows, minimum 4 in. airspace.	a. Attic System 1. vent sound traps 2. independently framed ceiling and roof system. 3. sound absorption in attic space. b. Built-up roof over 4 in. concrete slab with suspended ceiling.
60	a. Slab on grade-no special provisions b. If raised floor: similar to NR-50 requirement except more effective vent baffling and attach gypboard to floor joists by resilient clips.	a. Wood or steel stud framing-double studs with multi-layer gypboard on both sides, exterior stucco or sheathing. Sound absorption in air cavity. b. 12 in. dense concrete c. 4 in. concrete with seperate furred multi-layer gypboard wall. Sound absorption in air cavity.	Two solid core weatherstripped doors with sound lock.	Barely practical. Minimize window area. Double glazing with acoustical glass and 8 in. airspace. Avoid windows on noise exposure side. Arrange windows on interior enclosed court., etc.	a. Attic System, similar to NR-50 requirement but more mass. b. 4 in. concrete slab with vibration isolated ceiling

Table 4 (CONT.)

* All noise reductions are for buildings with windows closed. Mechanical ventilation may be required. All ventilation ducts to the outside should consist of 10' of lined duct (except for kitchen exhaust) with at least one 90° bend. Kitchen exhaust ducts should have baffle plate at the duct discharge. The table assumes that construction is generally airtight. All joints and penetrations need to be sealed.

** Sound Transmission Class (STC)--A single-figure rating designed to give an estimate of the sound insulation properties of a partition. Numerically, STC represents the number of decibels of speech sound reduction from one side of the partition to the other.

METHODS FOR DETERMINING CONCENTRATIONS OF PEOPLE

One criteria used in the Airport Land Use Compatibility Plan is the maximum number of persons per acre that can be present in a given area at any one time. If a proposed use exceeds the maximum density, it will be considered inconsistent with ALUC policies. This appendix provides some guidance on how to make the persons-per-acre determination.

The most difficult part of making a persons-per-acre determination is estimating the number of people likely to use a particular facility. There are several methods that can be utilized, depending upon the nature of the proposed use:

- **Parking Ordinance** – The number of persons present in a given area can be calculated based upon the number of parking spaces provided. Some assumption regarding the number of persons per vehicle needs to be developed to calculate the number of persons on-site. The number of persons per acre can then be calculated by dividing the number of persons on-site by the size of the parcel in acres. This approach is appropriate where the use is expected to be dependent upon access by vehicles.

- **Maximum Occupancy** – The Uniform Building Code can be used as a standard for determining the maximum occupancy of certain uses. The chart provided as Exhibit A is taken from the 1976 edition of the UBC (Table 33-A) and indicates the required number of square feet per occupant. The number of persons on the site can be calculated by dividing the total floor area of a proposed use by the minimum square foot per occupant requirement listed in the table. The maximum occupancy can then be divided by the size of the parcel in acres to determine the persons per acre.

  Surveys of actual occupancy levels conducted by the City of Sacramento have indicated that many retail and office uses are generally occupied at 50% of their maximum occupany levels, even at the busiest times of day. Therefore, the number of persons calculated for office and retail uses should be adjusted (50%) to reflect the actual occupancy levels before making the final persons-per-acre determination.

  Some uses will have short peaks in occupancy levels, but otherwise remain relatively low during the majority of the time. In these cases, it is appropriate to use an average occupany level over an 8-hour period for making the determination. The reasoning behind this approach is to allow for short peaks in occupancy that may exceed the limit, but overall occupancy levels are below the maximum indicated by the Compatibility Plan.

- **Survey of Similar Uses** – Certain uses may require an estimate based upon a survey of similar uses. This approach is more difficult, but is appropriate for uses which, because of the nature of the use, cannot be reasonably estimated based upon parking or square footage.

Exhibit A

Use	Minimum Square Feet per Occupant
1. Aircraft Hangars (No Repair)	500
2. Auction Room	7
3 Assembly Areas, Concentrated Use (without fixed seats) Auditoriums Bowling Alleys (assembly areas) Churches and Chapels Dance Floors Lodge Rooms Reviewing Stands Stadiums	7
4. Assembly Areas, Less Concentrated Use Conference Rooms Dining Rooms Drinking Establishments Exhibit Rooms Gymnasiums Lounges Skating Rinks Stages	15
5. Children's Homes and Homes for the Aged	80
6. Classrooms	20
7. Dormitories	50
8. Dwellings	300
9. Garage, Parking	200
10. Hospitals and Sanitariums – Nursing Homes	80
11. Hotels and Apartments	200
12. Kitchen – Commercial	200
13. Library Reading Room	50
14. Locker Rooms	50
15. Mechanical Equipment Room	300
16. Nurseries for Children (Day-care)	50
17. Offices	100
18. School Shops and Vocational Rooms	50
19. Stores – Retail Sales Rooms	
Basement	20
Ground Floor	30
Upper Floors	50
20. Warehouses	300
21. All Others	100

Examples:

A. The proposal is for a 60,000-square-foot two-story office building on 4 net acres (exclusive of roads). The local parking ordinance requires one parking space for every 250 square feet of commercial space. Assuming that the use would generate one person per vehicle, the following calculations would derive the number of persons per acre.

Steps:

1) 60,000 sq. ft. ÷ 250 persons per vehicle/sq. ft. = 240 (persons expected at any one time).
2) 240 persons ÷ 4 acres = 60 persons per acre.

Under this example, the use would be estimated to generate 60 persons per acre. In zones with limits of 100 persons-per-acre, the use would be considered compatible assuming all other conditions were met.

B. The proposal is for a 12,000-square-foot store on a 63,000-square-foot parcel. Using the maximum occupancy table from the Uniform Building Code (Exhibit A) and applying the assumption that the building is occupied at 50 percent of maximum nets results in the following calculations:

Steps:

1) 63,000 sq. ft. ÷ 43,560 sq. ft. (in an acre) = 1.45 acre.
2) 12,000 sq. ft. ÷ 30 sq. ft./occupant = 400 (max. building occupancy).
3) 400 max. bldg. occup. x 50% = 200 (persons expected at any one time).
4) 200 persons ÷ 1.45 acre = 138 persons per acre.

Under this example, 138 persons per acre would represent a reasonable estimate. In zones with limitations of 100 persons-per-acre or less, the use would be considered incompatible.

C. The proposal is for a 3,000-square-foot office on a 16,500-square-foot parcel. Again using the table in Exhibit A but assuming the actual occupancy level is 50% of the maximum indicated by the UBC code provides the following result:

Steps:

1) 16,500 sq. ft. ÷ 43,560 sq. ft. (acre) = .38 acre.
2) 3,000 sq. ft. ÷ 100 sq. ft./occupant = 30 (max. building occupancy).
3) 30 persons maximum building occupancy x 50% (actual occupancy) = 15 persons in the building at any one time
3) 15 persons ÷ .38 acres = 39 persons per acre.

Under this example, the use would be estimated to generate 39 persons per acre. In zones with occupancy limits of 100, the use would be considered compatible assuming all other conditions were met.

Exhibit B

TYPICAL AVIGATION EASEMENT

This indenture made this _____ day of _____, 19 __, between

_____

hereinafter referred to as Grantor, and the [Insert County or City name], a political subdivision in the State of California, hereinafter referred to as Grantee.

The Grantor, for good and valuable consideration, the receipt and sufficiency of which are hereby acknowledged, does hereby grant tot he Grantee, its successors and assigns, a perpetual and assignable easement over the following described parcel of land in which the Grantor holds a fee simple estate. The property which is subject to this easement is depicted as _____ _____ on "Exhibit A" attached and is more particularly described as follows:

[Insert legal description of real property]

The easement applies to the Airspace above an imaginary plane over the real property. The plane is described as follows:

> The imaginary plane above the hereinbefore described real property, as such plane is defined by Part 77 of the Federal Aviation Regulations, and consists of a plane [describe approach, transition, or horizontal surface]; the elevation of said plane being based upon the ____ _____ Airport official runway end elevation of _____ feet Above Mean Sea Level (AMSL), as determined by [Insert name and Date of Survey or Airport Layout Plan that determines the elevation] the approximate dimensions of which said plane are described and shown on Exhibit A attached hereto and incorporated herein by reference.

The aforesaid easement and right-of-way includes, but is not limited to:

(1) For the use and benefit of the public, the easement and continuing right to fly, or cause or permit the flight by any and all persons, or any aircraft, of any and all kinds now or hereafter known, in, through, across, or about any portion of the Airspace hereinabove described; and

(2) The easement and right to cause or create, or permit or allow to be caused or created within all space above the existing surface of the hereinabove described real property and any and all Airspace laterally adjacent to said real property, such noise, vibration, currents and other effects of air, illumination and fuel consumption as may be inherent in, or may arise or occur from or during the operation of aircraft of any and all kinds, now or hereafter known or used, for navigation of or flight in air; and

(3) A continuing right to clear and keep clear from the Airspace any portions of buildings, structures, or improvements of any kinds, and of trees or other objects, including the right to remove or demolish those portions of such buildings, structures, improvements, trees, or other things which extend into or above said Airspace, and the right to cut to the ground level and remove, any trees which extend into or above the Airspace; and

(4) The right to mark and light, or cause or require to be marked or lighted, as obstructions to air navigation, any and all buildings, structures, or other improvements, and trees or other objects, which extend into or above the Airspace; and

(5) The right of ingress to, passage within, and egress from the hereinabove described real property, for the purposes described in subparagraphs (3) and (4) above at reasonable times and after reasonable notice.

For and behalf of itself, its successors and assigns, the Grantor hereby covenants with the [Insert County or City name], for the direct benefit of the real property constituting the _____ Airport hereinafter described, that neither the Grantor, nor its successors in interest or assigns will construct, install, erect, place or grow in or upon the hereinabove described real property, nor will they permit to allow, any building structure, improvement, tree or other object which extends into or above the Airspace, or which constitutes an obstruction to air navigation, or which obstructs or interferes with the use of the easement and rights-of-way herein granted.

The easements and rights-of-way herein granted shall be deemed both appurtenant to and for the direct benefit of that real property which constitutes the _____ Airport, int he [Insert County or City name], State of California; and shall further be deemed in gross, being conveyed to the Grantee for the benefit of the Grantee and any and all members of the general public who may use said easement or right-of-way, in landing at, taking off from or operating such aircraft in or about the _____ Airport, or in otherwise flying through said Airspace.

This grant of easement shall not operate to deprive the Grantor, its successors or assigns, of any rights which may from time to time have against any air carrier or private operator for negligent or unlawful operation of aircraft.

These covenants and agreements run with the land and are binding upon the heirs, administrators, executors, successors and assigns of the Grantor, and, for the purpose of this instrument, the real property firstly hereinabove described is the servient tenement and said _____ Airport is the dominant tenement.

DATED: _____ _____

SAMPLE DEED NOTICE, OVERFLIGHT AND AVIGATION EASEMENTS

The Napa County Airport Land Use Compatibility Plan requires the dedication of avigation easements in certain areas and requires some form of buyer notification for all projects within the planning areas of the public-use airports in the County. There are three measures which have different applications under various circumstances. Examples of these are included in the attached exhibits and their application is briefly described below.

Exhibit A — **Avigation Easement** - Within the approach/departure zones to an airport and in areas where terrain penetrates the specified imaginary surfaces of the airspace plans for each airport, an avigation easement is required. The avigation easement provides the right of overflight, prohibits certain flight hazards, specifies height limitations and also includes provisions which enables the airport authorities to remove, mark or light any objects which create an obstruction to flight.

Exhibit B — **Overflight Easement** - In areas where height limitations are not a significant concern, an overflight easement is an appropriate means of providing notification to prospective buyers of the airports influence. Overflight easements provide the right of overflight and include limitations on certain land use characteristics which may constitute a hazard to flight.

Exhibit C — **Deed Notice** - In areas subject to overflights from privately-owned or operated airports, a deed notice is an appropriate means of providing buyer notification. The deed notice should be recorded on the deed to the subject property and on any subdivision map.

Exhibit C

SAMPLE DEED NOTICE

The following statement should be included on the deed for the subject property and recorded in by the County. This statement should also be included on any parcel map, tentative map or final map for subdivision approval.

THIS PROPERTY IS IN THE AREA SUBJECT TO OVERFLIGHTS BY AIRCRAFT USING (AIRPORT), AND AS A RESULT, RESIDENTS MAY EXPERIENCE INCONVENIENCE, ANNOYANCE OR DISCOMFORT ARISING FROM THE NOISE OF SUCH OPERATIONS. STATE LAW (PUBLIC UTILITIES CODE SECTION 21670 ET. SEQ.) ESTABLISHES THE IMPORTANCE OF PUBLIC USE AIRPORTS TO PROTECTION OF THE PUBLIC INTEREST OF THE PEOPLE OF THE STATE OF CALIFORNIA. RESIDENTS OF PROPERTY NEAR A PUBLIC USE AIRPORT SHOULD THEREFORE BE PREPARED TO ACCEPT SUCH INCONVENIENCE, ANNOYANCE OR DISCOMFORT FROM NORMAL AIRCRAFT OPERATIONS. ANY SUBSEQUENT DEED CONVEYING PARCELS OR LOTS SHALL CONTAIN A STATEMENT IN SUBSTANTIALLY THE FORM STATED ABOVE.

Exhibit B

RECORDING REQUESTED BY:

WHEN RECORDED MAIL TO:

_____ SPACE ABOVE THIS LINE FOR _____
RECORDER'S USE

TYPICAL OVERFLIGHT EASEMENT

GRANTOR hereby grants to the _____ located in _____, its successors or assigns, as owners of the [Name of Airport] _____, California, an overflight easement for the following purposes and granting the following rights:

1. For the use and benefit of the public, and to the extent and in the manner consistent with safe operating procedures as provided under applicable governmental regulations, the right to make flights, and the noise inherent thereto, in airspace over the property described in Exhibit A (attached) in connection with landings, takeoffs, and general operation of the [Name of Airport] _____.

2. The right to regulate or prohibit the release into the air of any substance which would impair the visibility or otherwise interfere with the operations of aircraft such as, but not limited to, steam, dust, and smoke.

3. The right to regulate or prohibit light emissions, either direct or indirect (reflective), which might interfere with pilot vision.

4. The right to prohibit electrical emissions which would interfere with aircraft communication systems or aircraft navigational equipment.

This easement shall be effective from this date and run with the land until such time as the [Name of Airport] _____ is no longer used as an airport.

The real property subject to this overflight easement is described as follows:

See Attachment "A"

DATED: _____

GRANTOR: _____

By: _____

GLOSSARY

ABOVE GROUND LEVEL (AGL): An elevation datum given in feet above ground level.

AIRPORT TRAFFIC CONTROL TOWER (ATCT): A terminal facility that uses air/ground communications, visual signaling, and other devices to provide ATC services to aircraft operating in the vicinity of an airport or on the movement area. (AIM)

AIRCRAFT ACCIDENT: An occurrence associated with the operation of an aircraft which takes place between the time any person boards the aircraft with the intention of flight until such time as all such persons have disembarked, and in which any person suffers death or serious injury as a result of being in or upon the aircraft or by direct contact with the aircraft or anything attached thereto, or in which the aircraft receives substantial damage. (NTSB)

AIRCRAFT OPERATION: The airborne movement of aircraft in controlled or noncontrolled airport terminal areas and about given en route fixes or at other points where counts can be made. There are two types of operations – local and itinerant. An operation is counted for each landing and each departure, such that a touch-and-go flight is counted as two operations. (FAA Stats)

AIRCRAFT PARKING LINE LIMIT (APL): A line established by the airport authorities beyond which no part of a parked aircraft should protrude. (Airport Design AC)

AIRPORT: An area of land or water that is used or intended to be used for the landing and taking off of aircraft, and includes its buildings and facilities, if any. (FAR 1)

AIRPORT ELEVATION: The highest point of an airport's usable runways, measured in feet above mean sea level. (AIM)

AIRPORT LAYOUT PLAN (ALP): A scale drawing of existing and proposed airport facilities, their location on the airport, and the pertinent clearance and dimensional information required to demonstrate conformance with applicable standards.

AIRPORT REFERENCE CODE (ARC): A coding system used to relate airport design criteria to the operational and physical characteristics of the airplanes intended to operate at the airport. (Airport Design AC)

ALUC: Airport Land Use Commission established under provisions of California Public Utilities Code, Sections 12670 et seq. (Chapter 4, Article 3.5 of State Aeronautics Act)

AMBIENT NOISE LEVEL: Background noise level, the normal or existing level of environmental noise at a given location.

APPROACH LIGHT SYSTEM (ALS): An airport lighting system which provides visual guidance enabling a pilot to align the aircraft with the extended runway centerline during a final approach to landing. Among the specific types of systems are:

- LDIN – Sequenced Flashing Lead-in Lights.
- ODALS – Omnidirectional Approach Light System, a combination of LDIN and REILS.
- SSALR – Simplified Short Approach Light System with Sequenced Flashing Lights. (AIM)

APPROACH SPEED: The recommended speed contained in aircraft manuals used by pilots when making an approach to landing. This speed will vary for different segments of an approach as well as for aircraft weight and configuration. (AIM)

AVIGATION EASEMENT: A type of easement that includes the following rights or restrictions: (1) the right of overflight above the property at any altitude above a surface specified in the easement. (2) A right to subject the property to noise, vibrations, fumes, dust, emissions associated with airport activities. (3) Prohibits the erection or growth of any object, tree or structure that would penetrate the defined airspace. (4) A right of entry to the property, with proper notice to the owner for the purpose fo removing, marking, or lighting any structure or other object that may constitute a hazard or obstruction. (5) Prohibits certain land use characteristics that may create flight hazards, including electrical interference, glare, misleading light sources, smoke, steam, dust or other visual impairments and uses which may attract large flocks of birds.

BASED AIRCRAFT: Aircraft stationed at an airport on a long-term basis.

CEILING: Height above the earth's surface to the lowest layer of clouds or obscuring phenomena. (AIM)

CIRCLING APPROACH/CIRCLE-TO-LAND MANEUVER: A maneuver initiated by the pilot to align the aircraft with a runway for landing when a straight-in landing from an instrument approach is not possible or not desirable. (AIM)

COMMERCIAL OPERATOR: A person who, for compensation or hire, engages in the carriage by aircraft in air commerce of persons or property, other than as an air carrier. (FAR 1)

COMMUNITY NOISE EQUIVALENT LEVEL (CNEL): The noise measure adopted by the State of California for evaluating airport noise. It represents the composite noise levels of aircraft operations during an average annual 24-hour day. CNEL is measured in dBA and evening and nighttime operations are weighted to reflect a community's greater sensitivity to noise during these hours and to account for quieter ambient levels.

COMMUTER AIR CARRIER: An air taxi operator which performs at least five round trips per week between two or more points and publishes flight schedules which specify the times, days of the week and places between which such flights are performed. (FAA Census)

CONTROL ZONE: Controlled airspace surrounding one or more airports, normally a circular area. Having a radius of five statute miles plus extensions to include instrument arrival and departure paths. Most control zones surround airports with air traffic control towers and are in effect only for the hours the tower is operational.

CONTROLLED AIRSPACE: Any of several types of airspace within which some or all aircraft may be subject to air traffic control. (FAR 1)

dBA: Noise level adjusted to account for the perception range of the human ear.

DAY-NIGHT AVERAGE SOUND LEVEL (Ldn): The noise descriptor adopted by the U.S. Environmental Protection Agency for measurement of environmental noise. It represents the average daytime noise level during a 24-hour day, measured in decibels and adjusted to account for the lower tolerance of people to noise during nighttime periods.

DEED NOTICE: A deed notice is a formal statement which is added to the legal description of the deed for a property and on any subdivision map which states that the property is subject to aircraft overflights. Deed notices are used as a form of buyer notification as a means of ensuring that those who are particularly sensitive to aircraft overflights can avoid moving to the affected areas. (Refer to overflight easement.)

DISPLACED THRESHOLD: A landing threshold that is located at a point on the runway other than the designated beginning of the runway. (See Threshold) (AIM)

FEDERAL AVIATION REGULATIONS (FAR): Regulations issued by the FAA to regulate air commerce; issued as separate "Parts", e.g., Part 77.

FAR PART 77: The part of the Federal Aviation Regulations which deals with objects affecting navigable airspace.

FAR PART 77 SURFACES: Imaginary surfaces established with relation to each runway of an airport. There are five types of surfaces: (1) primary; (2) approach; (3) transitional; (4) horizontal; and (5) conical.

FEDERAL AVIATION ADMINISTRATION (FAA): The United States government agency which is responsible for insuring the safe and efficient use of the nation's airspace.

FIXED BASE OPERATOR (FBO): A business operating at an airport that provides aircraft services to the general public, including but not limited to sale of fuel and oil; aircraft sales, rental, maintenance, and repair; parking and tiedown or storage of aircraft; flight training; air taxi/charter operations; and specialty services, such as instrument and avionics maintenance, painting, overhaul, aerial application, aerial photography, aerial hoists, or pipeline patrol.

GENERAL AVIATION: That portion of civil aviation which encompasses all facets of aviation except air carriers. (FAA Stats)

GLIDE SLOPE: An electronic signal radiated by a component of an ILS to provide descent path guidance to approaching aircraft.

HELIPAD: A small, designated area, usually with a prepared surface, on a heliport, airport, landing/takeoff area, apron/ramp, or movement area used for takeoff, landing, or parking of helicopters. (AIM)

INSTRUMENT APPROACH PROCEDURE: A series of predetermined maneuvers for the orderly transfer of an aircraft under instrument flight conditions from the beginning of the initial approach to a landing or to a point from which a landing may be made visually. It is prescribed and approved for a specific airport by competent authority. Refer to nonprecision and precision approach procedures. (AIM)

INSTRUMENT FLIGHT RULES (IFR): Rules governing the procedures for conducting instrument flight. Generally, IFR applies when meteorological conditions with a ceiling below 1,000 feet and visibility less than 3 miles prevail. (AIM)

INSTRUMENT LANDING SYSTEM (ILS): A precision instrument approach system which normally consists of the following electronic components and visual aids: (1) Localizer; (2) Glide Slope; (3) Outer Marker; (4) Middle Marker; (5) Approach Lights. (AIM)

INSTRUMENT OPERATION: An aircraft operation in accordance with an IFR flight plan or an operation where IFR separation between aircraft is provided by a terminal control facility. (FAA ATA)

INSTRUMENT RUNWAY: A runway equipped with electronic and visual navigation aids for which a precision or nonprecision approach procedure having straight-in landing minimums has been approved. (AIM)

ITINERANT OPERATION: An arrival or departure performed by an aircraft from or to a point beyond the local airport area.

LARGE AIRCRAFT: An aircraft of more than 12,500 pounds maximum certificated takeoff weight. (FAR 1)

LOCALIZER (LOC): The component of an ILS which provides course guidance to the runway. (AIM)

LOCALIZER TYPE DIRECTIONAL AID (LDA): A NAVAID used for nonprecision instrument approaches with utility and accuracy comparable to a localizer but which is no a part of a complete ILS and is not aligned with the runway. (AIM)

LOCAL OPERATION: An arrival or departure performed by an aircraft: (1) operating in the traffic pattern, (2) known to be departing or arriving from flight in local practice areas, or (3) executing practice instrument approaches at the airport. (FAA ATA)

MEAN SEA LEVEL (MSL): An elevation datum given in feet above mean sea level.

MICROWAVE LANDING SYSTEM (MLS): A precision instrument approach system providing a function similar to an ILS, but operating in the microwave spectrum. It normally consists of three components: azimuth station, elevation station, and precision distance measuring equipment.

MINIMUM DESCENT ALTITUDE (MDA): The lowest altitude, expressed in feet above mean sea level, to which descent is authorized on final approach or during circle-to-land maneuvering in execution of a standard instrument approach procedure where no electronic glide slope is provided. (FAR 1)

MISSED APPROACH: A maneuver conducted by a pilot when an instrument approach cannot be completed to a landing. (AIM)

NAVIGATIONAL AID/NAVAID: Any visual or electronic device airborne or on the surface which provides point-to-point guidance information or position data to aircraft in flight. (AIM)

NOISE CONTOURS: Lines drawn about a noise source indicating constant energy levels of noise exposure. CNEL and Ldn are the measures used to describe community exposure to noise.

NONPRECISION APPROACH PROCEDURE: A standard instrument approach procedure in which no electronic glide slope is provided. (FAR 1)

NONPRECISION INSTRUMENT RUNWAY: A runway with an instrument approach procedure utilizing air navigation facilities, with only horizontal guidance, or area-type navigation equipment for which a straight-in nonprecision instrument approach procedure has been approved or planned, and no precision approach facility or procedure is planned. (Airport Design AC)

OBJECT FREE AREA (OFA): A two-dimensional ground area surrounding runways, taxiways, and taxilanes which is clear of objects except for objects whose location is fixed by function. (Airport Design AC)

OBSTRUCTION: Any object of natural growth, terrain, or permanent or temporary construction or alteration, including equipment or materials used therein the height of which exceeds the obstruction standards of subpart C of FAR Part 77 "Objects Affecting Navigable Airspace".

OBSTACLE FREE ZONE (OFZ): The airspace defined by the runway OFZ and, as appropriate, the inner-approach OFZ and the inner-transitional OFZ, which is clear of object penetrations other than frangible NAVAIDs.

OBSTRUCTION: An object, including a mobile object, which penetrates an imaginary surface described in FAR Part 77.

OUTER MARKER: A marker beacon at or near the glide slope intercept position of an ILS approach. (AIM)

OVERFLIGHT EASEMENT: An easement which describes the right to overfly the property above a specified surface and includes the right to subject the property to noise, vibrations, fumes and emissions. An overflight easement is used primarily as a form of buyer notification.

OVERFLIGHT ZONE: The area(s) where aircraft are maneuvering to enter or leave the traffic pattern, typically defined by the FAR Part 77 horizontal surface.

OVERLAY ZONING: Establishes development standards in areas of special concern over an above the standards applicable to basic underlying zoning districts.

PLANNING BOUNDARY: The area designated by the ALUC surrounding each airport pursuant to Section 21675 (c) of the Public Utilities Code in which the ALUC plan applies.

PRECISION APPROACH PATH INDICATOR (PAPI): An airport landing aid similar to a VASI, but which has light units installed in a single row rather than two rows.

PRECISION APPROACH PROCEDURE: A standard instrument approach procedure in which an electronic glide slope is provided. (FAR 1)

PRECISION INSTRUMENT RUNWAY: A runway with an instrument approach procedure utilizing an instrument landing system (ILS), microwave landing system (MLS), or precision approach radar (PAR). (Airport Design AC)

PUBLIC USE AIRPORT: Publicly or privately owned airport that offers the use of its facilities to the public without prior notice or special invitation or clearance, and that has been issued a California Airport Permit by the Division of Aeronautics of the California Department of Transportation. For purposes of the ALUC plan, the State Division of Aeronautics has interpreted "public use" to include special-use airports in which commercial operators offer service to the public.

REFERRAL AREA: The area around an airport defined by the planning boundary adopted by the ALUC within which certain land use proposals are to be referred to the ALUC for review.

RUNWAY EDGE LIGHTS: Lights used to define the lateral limits of a runway. Specific types include:

- HIRL – High-Intensity Runway Lights.
- MIRL – Medium-Intensity Runway Lights.

RUNWAY END IDENTIFIER LIGHTS (REIL): Two synchronized flashing lights, one on each side of the runway threshold, which provide a pilot with a rapid and positive visual identification of the approach end of a particular runway. (AIM)

RUNWAY PROTECTION ZONE (RPZ): An area (formerly the clear zone) used to enhance the safety of aircraft operations. It is at ground level beyond the runway end. (Airport Design AC)

RUNWAY SAFETY AREA (RSA): A defined surface surrounding the runway prepared or suitable for reducing the risk of damage to airplanes in the event of an undershoot, overshoot, or excursion from the runway. (Airport Design AC)

SAFETY ZONE(S): For the purposes of this Plan, a safety zone is an area near an airport in which land use restrictions are established to protect the safety of the public from potential aircraft accidents.

SINGLE-EVENT NOISE: As used in this report, it refers to the noise from an individual aircraft operation or overflight.

SINGLE EVENT NOISE EXPOSURE LEVEL (SENEL) OR (SEL): The A-weighted sound level of a single noise event, such as an aircraft overflight, measured over the time interval for which the sound exceeds a threshold level and normalized to a reference duration of one second. SENEL and SEL values are identical: SENEL is used in California, SEL is adopted by the EPA and FAA.

The SENEL or SEL expresses the level of a continuous one-second signal that contains the same amount of energy as the entire noise event. This value is not equal to the maximum A-level occuring during the noise event. Aircraft noise events last more than one second. SENEL/SEL values will be higher than the maximum A-level for the same events.

SMALL AIRCRAFT: An aircraft of 12,500 pounds or less maximum certificated takeoff weight. (FAR 1)

STANDARD INSTRUMENT DEPARTURE (SID): A preplanned instrument flight rules (IFR) air traffic control departure procedure printed for pilot use in graphic and/or textual form. SID's provide transition from the terminal to the appropriate en route structure. (AIM)

STANDARD TERMINAL ARRIVAL ROUTE (STAR): A preplanned instrument flight rule (IFR) air traffic control arrival route published for pilot use in graphic and/or textual form. STARs provide transition from the en route structure to an outer fix or an instrument approach fix/arrival waypoint in the terminal area. (AIM)

STOPWAY: An area beyond the takeoff runway, no less wide than the runway and centered upon the extended centerline of the runway, able to support the airplane during an aborted takeoff, without causing structural damage to the airplane, and designated by the airport authorities for use in decelerating the airplane during an aborted takeoff. (FAR 1)

STRAIGHT-IN INSTRUMENT APPROACH: An instrument approach wherein final approach is begun without first having executed a procedure turn; it is not necessarily completed with a straight-in landing or made to straight-in landing weather minimums. (AIM)

TAXILANE: The portion of the aircraft parking area used for access between taxiways, aircraft parking positions, hangars, storage facilities, etc. (Airport Design AC)

TAXIWAY: A defined path, from one part of an airport to another, selected or prepared for the taxiing of aircraft. (Airport Design AC)

TERMINAL INSTRUMENT PROCEDURES (TERPS): Procedures for instrument approach and departure of aircraft to and from civil and military airports. There are four types of terminal instrument procedures: precision approach, nonprecision approach, circling, and departure.

TERMINAL RADAR SERVICE AREA (TRSA): Airspace surrounding designated airports wherein ATC provides radar vectoring, sequencing, and separation on a full-time basis for all IFR and participating VFR aircraft. (AIM)

THRESHOLD: The beginning of that portion of the runway usable for landing. (AIM) (Also see Displaced Threshold)

TOUCH-AND-GO: A practice maneuver consisting of a landing and a takeoff performed in one continuous movement. A touch-and-go is defined as two operations.

TRAFFIC PATTERN: The traffic flow that is prescribed for aircraft landing at, taxiing on, or taking off from an airport. The components of a typical traffic pattern are upwind leg, crosswind leg, downwind leg, base leg, and final approach. (AIM)

TRANSIENT AIRCRAFT: Aircraft not based at the airport.

UNICOM (Aeronautical Advisory Station): A nongovernment air/ground radio communication facility which may provide airport information at certain airports. (AIM)

UTILITY AIRPORT: An airport designed, constructed, and maintained to serve airplanes having approach speeds less than 121 knots. (Airport Design AC)

VISUAL APPROACH: An approach where the pilot must use visual reference to the runway for landing under VFR conditions.

VISUAL APPROACH SLOPE INDICATOR (VASI): An airport landing aid which provides a pilot with visual descent (approach slope) guidance while on approach to landing. Also see PAPI.

VISUAL FLIGHT RULES (VFR): Rules that govern the procedures for conducting flight under visual conditions. VFR applies when meteorological conditions are equal to or greater than the specified minimum – generally, a 1,000-foot ceiling and 3-mile visibility.

VISUAL GLIDE SLOPE INDICATOR (VGSI): A generic term for the group of airport visual landing aids which includes Visual Approach Slope Indicators (VASI), Precision Approach Path Indicators (PAPI), and Pulsed Light Approach Slope Indicators (PLASI). When FAA funding pays for this equipment, whichever type received the lowest bid price will be installed unless the airport owner wishes to pay the difference for a more expensive unit.

VISUAL RUNWAY: A runway intended solely for the operation of aircraft using visual approach procedures, with no straight-in instrument approach procedure and no instrument designation indicated on an FAA-approved airport layout plan. (Airport Design AC)

WIND SHEER: A condition typified by rapid changes in wind velocity and duration with altitude.

Figure 3A

Compatibility Plan
Napa County Airport

ZONE	LOCATION	IMPACT ELEMENTS	MAXIMUM DENSITIES[6]		
			Residential[1]	Other Uses (people/ac)[2]	
				In Structures	Total in and out of Structures
A[9]	Runway Protection Zone and Primary Surface	- High risk - High noise levels - Low overflights below 50' AGL	0	0	10
B	Inner Approach/Departure Zone	- Substantial risk - High noise levels - Low overflights below 100' AGL	0	10	25
C	Approach/Departure Zone	- Moderate risk - Substantial noise - Low overflight below 300' AGL	0	50	75
D	Common Traffic Pattern	- Moderate risk - Frequent noise intrusion - Routine overflights below 1,000' AGL	0	100	150
E	Other Airport Environs	- Low risk - Overflight annoyance	See Note 7		

1. Residential land use and zoning designations are considered incompatible uses within the traffic pattern area (Zones A, B, C, and D) where aircraft overflights are frequent and at low altitude. The residential restrictions do not apply to residential uses allowable under agricultural land use and zoning designations.

2. The use should not attract more than the indicated number of persons per **net** acre. Net acreage is the total site area inclusive of parking areas and landscaping, less the area dedicated for streets. These densities are intended as general planning guidelines to aid in determining the acceptability of proposed land uses. Clustering of development within the density parameters should be encouraged to protect and provide open land/safety areas. However, in Zones A, B, and C the density on any one acre of a parcel should not exceed twice the indicated number of people per acre.

3. Dedication of an avigation or overflight easement or deed notice is required as a condition for new development within all zones. Also, height limit restrictions are applicable to structures and trees in all zones in accordance with Federal Aviation Regulation Part 77 and local ordinances. Uses which may be hazardous to flight are prohibited in all zones.

4. These uses typically can be designed to meet the density requirements and other development conditions listed.

5. These uses typically do not meet the density requirements and other development conditions listed. They should be allowed only if a major community objective is served by their location in this zone and if mitigation measures (i.e., noise attenuation) are incorporated that will minimize potential conflicts.

6. NLR = Noise Level Reduction; i.e., the attenuation of sound level from outside to inside provided by the structure. Noise level reduction measures may be required in areas with high single-event noise levels and where noise-sensitive users (schools, libraries, etc.) are proposed. Refer to Appendix C for criteria and noise attenuation measures.

7. Maximum residential densities in accordance with local adopted General Plans and zoning designations. Consideration should be given to the proximity of flight patterns, frequency of overflight, terrain conditions, and type of aircraft in determining acceptable location of residential uses. Referral to the ALUC for review of development plans prior to approval is recommended.

8. The purpose of these criteria is to provide a basis for determining those land uses which are compatible with airport activities. Specific land uses will be allowed only if they are also consistent with applicable General Plan policies and zoning ordinances.

9. All lands in Zone A are either within the Airport's boundaries or designated for acquisition in the Airport Master Plan.

10. Includes objects that penetrate FAR Part 77 surfaces, uses that would attract large numbers of birds (e.g., landfills), and uses that would create smoke, glare, distracting lights, or electronic interference.

11. Avigation easements will be required in lieu of overflight easements or deed notices where there is an appropriate public agency to review them.

Table 3-2

Airport Vicinity Land Use Compatibility Criteria

Napa County Airport

ZONE	PROHIBITED USES	OTHER DEVELOPMENT CONDITIONS	EXAMPLES OF NORMALLY ACCEPTABLE USES[4]	EXAMPLES OF USES NOT NORMALLY ACCEPTABLE[5]
A	- All residential uses - Any assemblage of people - Any new structure which exceeds height limits - Noise sensitive uses - Uses hazardous to flight[10]	- Avigation easement required	- Pasture, open space - Aircraft tiedowns - Auto parking - Most agricultural uses	- Heavy poles, signs, large trees, etc. - Ponds
B	- All residential uses - Any noise-sensitive uses - Schools, libraries, hospitals, nursing homes, daycare centers - Uses hazardous to flight[10]	- Avigation easement required - Structures to be as far as possible from extended runway centerline - Clustering is encouraged to maximize open land areas - Minimum NLR of 25 dBA in office buildings[6] - Building envelopes and approach surfaces required on all subdivision maps and development plans	- All uses from Zone A - Parks with low-intensity uses, golf courses - Nurseries - Mini-storage	- Retail uses - Office uses (except as accessory uses - Hotels, motels, resorts - Theaters, assembly halls, and conference centers - Ponds
C	- All residential uses - Schools, libraries, hospitals, nursing homes, daycare centers - Uses hazardous to flight[10]	- Avigation easement required - Structures to be set back as far as possible from extended centerline - Clustering is encouraged to maximize open land areas - Building envelopes and approach surfaces required on all subdivision maps - NLR measures may be required for noise-sensitive uses (offices)	- All uses from Zone B - Warehousing and low-intensity light industrial - Small retail uses - Outdoor recreation uses; marina, ballpark - Office uses	- Large retail buildings - Hotels, motels, resorts, health club - Restaurants, bars - Multi-story buildings - Theaters, assembly halls, and conference centers - Ponds
D	- All residential uses - Uses hazardous to flight[10]	- Overflight easement or deed notice required[11] - Building envelopes and approach surfaces required on all development plans within 100' of approach zones - Clustering is encouraged to maximize open land areas - NLR measures may be required for noise-sensitive uses[6]	- All uses from Zone C - Most non-residential uses - Accessory day care centers	- Schools, libraries, hospitals, nursing homes - Large shopping malls - Amphitheaters - Ponds
E	- Noise-sensitive outdoor uses	- Overflight easement or deed notice required[11]	- Any permitted use	- Amphitheaters - Landfills - Ponds

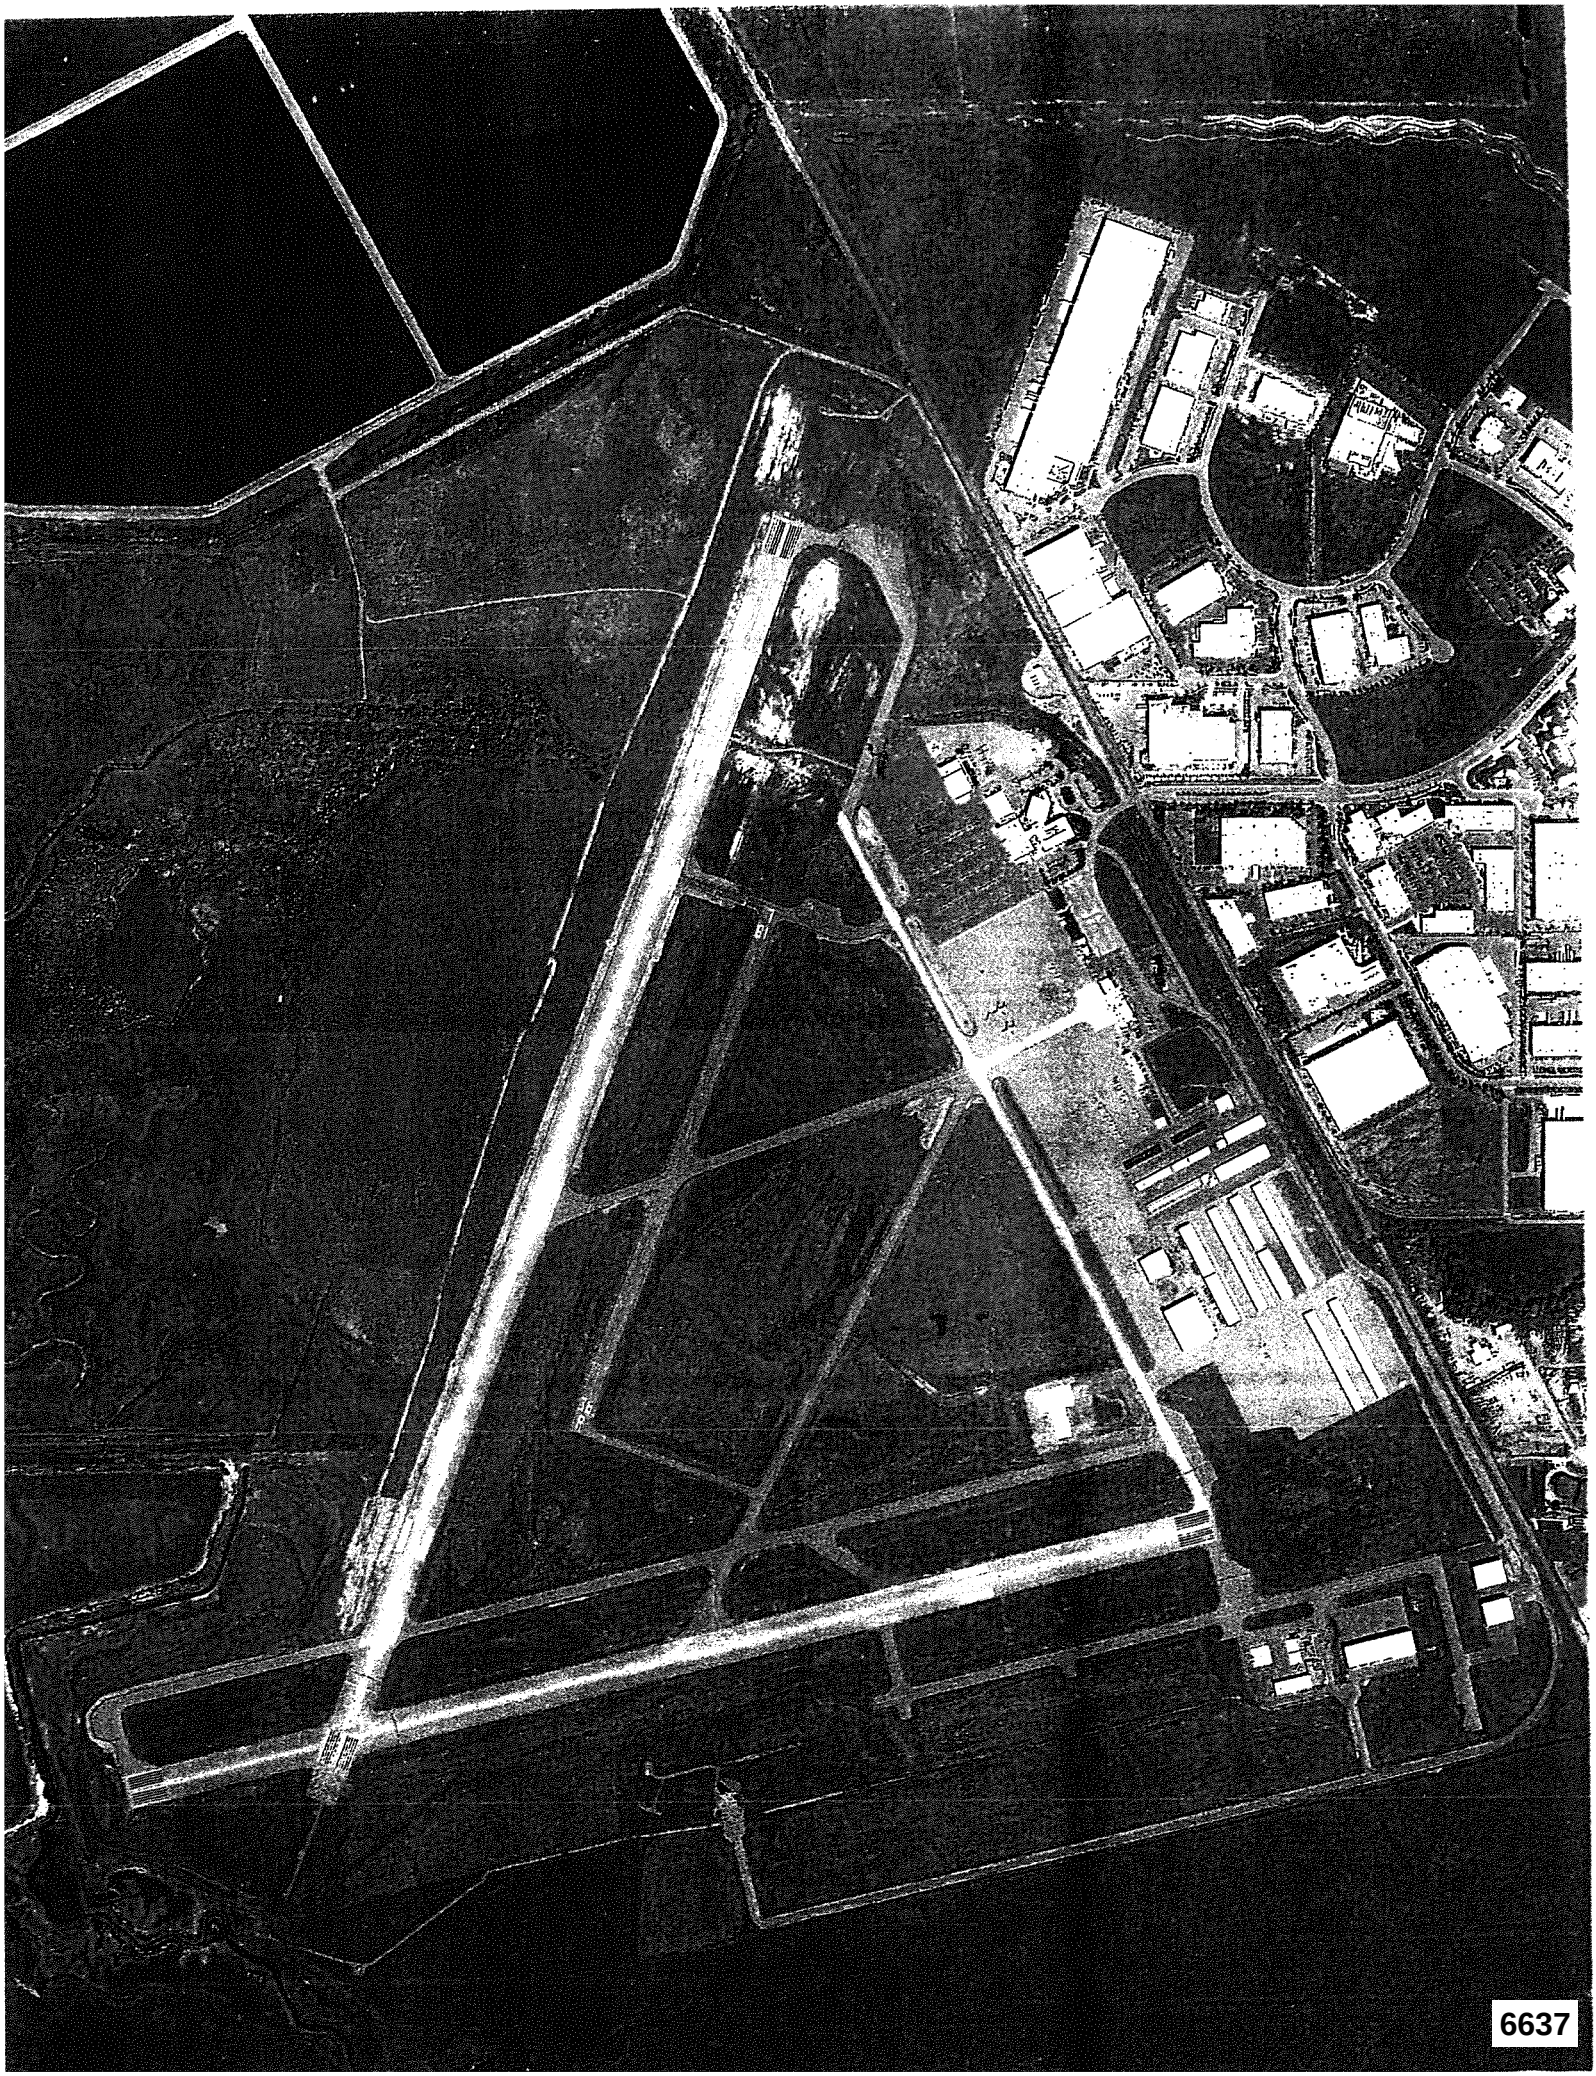

Table 3-2, Continued

Table 3-1

Compatibility Zone Definitions

ZONE A	Runway Protection Zone: Dimensioned to encompass the future Runway Protection Zones of the respective runways for each airport as presented on the Airport Layout Plans contained in Part III of this document. Also includes areas lateral to the runway. These areas are regularly overflown by aircraft below 50 feet above the ground. For this reason, these areas are considered high risk with regard to accident potential and any structures, buildings, trees or obstacles may create a flight hazard. These areas are also affected by high noise levels.
ZONE B	Approach/Departure Zone: This zone is defined as the areas where aircraft will be below 100 feet above ground level as determined by the type of approach anticipated for that runway in the future. Future approach slopes are designated on the respective Airport Layout Plans and Airspace Plans for each airport in Part III. These areas are affected by substantial risk of accident potential due to the frequency of overflights at low altitudes. Noise levels are generally high with frequent loud single-events.
ZONE C	Extended Approach/Departure Zone: This zone is defined as the area where aircraft will be below 300 feet above ground level as determined by the type of approach. The low altitude of aircraft in these areas indicates moderate to high risk of accident potential. Properties in this zone will be affected by substantial noise.
ZONE D	Common Traffic Pattern: This area is defined by the flight pattern for each airport and illustrated in the respective "Airport Impact Areas" figures contained in Part III. These areas are routinely overflown by aircraft operating to and from the airport with frequent single-event noise intrusion. Overflights in these areas can range from near the traffic pattern altitude (about 1,000 feet above the ground) to as low as 300 feet above the ground. Accident risk varies from low to moderate. Areas where aircraft are near pattern altitude (e.g., downwind leg) have the lowest risk. In areas where aircraft are at lower altitudes (especially on circle-to-land instrument approaches) a moderate level of risk exists.
ZONE E	Other Airport Environs: An airport's influence area often extends beyond the typically defined compatibility zones during busy traffic hours and when larger aircraft are in the pattern. Aircraft overflights can occur anywhere in these areas when aircraft are departing or approaching an airport. Overflight annoyance is the primary impact element in these areas. The risk of accident is very low.

Revised 12/15/99

6637

ORDINANCE NO. 1242

AN ORDINANCE OF THE BOARD OF SUPERVISORS OF THE COUNTY OF NAPA, STATE OF CALIFORNIA, AMENDING SECTIONS 18.08.460, 18.120.010(A) AND 18.120.010(B) OF THE NAPA COUNTY CODE REGARDING PERSONAL USE AIRPORTS AND HELIPORTS, AND HELICOPTER LANDING SITES IN SUPPORT OF AGRICULTURAL PRODUCTION IN THE UNINCORPORATED PORTIONS OF NAPA COUNTY

The Board of Supervisors of the County of Napa, State of California, ordains as follows:

SECTION 1. Section 18.08.460 (Private airport) of Chapter 18.08 (Definitions) of the Napa County Code is amended to read in full as follows:

18.08.460 Personal use airport and heliport.

"Personal use airport and heliport" means an airport or heliport limited to the noncommercial activities of an individual owner or family and occasional invited guests.

SECTION 2. Section 18.120.010 (Exceptions to use limitations) of Chapter 18.120 (Exceptions) of the Napa County Code is amended to read in full as follows:

18.120.010 Exceptions to use limitations.

A. The following uses, in addition to those hereinbefore set forth, shall be allowed without a use permit in any zoning district:

1. Category 1 and 1A temporary events, as defined in Section 5.36.010;

2. Category 2A, 2B, 3 and 4 temporary events as defined in Section 5.36.010 and conducted in accordance with a temporary event license obtained in accordance with Chapter 5.36; and special events as defined in Section 10.24.010 and conducted in accordance with a special events permit obtained in accordance with Chapter 10.24;

3. Commercial excavation or extraction of natural materials including, without limitation, geothermal, oil and gas resources so long as a surface mining permit has been issued pursuant to the provisions of Chapter 16.12 for those operations involving surface mining;

4. Distribution lines installed to convey gas and/or electricity locally to individual services or to another such line;

5. Cable television lines, and telephone lines other than long distance cables;

6. Cultivation of gardens;

7. Temporary sheds for the retail sale of agricultural products lawfully produced on the premises;

8. Hand-held, vehicular, or other portable transmitters or transceivers, including, but not limited to, cellular phones, CB radios, emergency services radio, and other similar devices;

9. Helicopter emergency use facility landing sites; and

10. Helicopter landings solely in support of direct agricultural production activities such as aerial spraying and frost protection.

B. The following uses may be permitted in any zoning district (or where restricted to certain zoning districts, in accordance with such restrictions) upon the grant of a use permit in each case:

1. (Reserved);

2. Personal use airports and heliports, and emergency medical services landing sites, provided, that such use permit is not effective unless and until any required permits, licenses, or other approvals from other federal, state, and local agencies (including the airport land use commission) have been obtained;

3. Commercial excavation or extraction of natural materials including, without limitation, geothermal, oil and gas resources;

4. Timber harvesting;

5. Sanitation treatment plants and oxidation ponds;

6. Electric transmission lines designed to carry large blocks of electric energy at a voltage of thirty-three kv or above from generating stations, between points of interchange, between transmission substations, to distribution stations or to large individual customers;

7. Gas transmission lines installed for the purpose of transmitting gas from a source or sources of supply to one or more distribution centers or to one or more large volume customers or to interconnect sources of supply;

8. Other public utility uses including, without limitation, warehouses, storage yards, gas holders, substations, electric generating plants, reservoirs, storage tanks, pumping stations and communication equipment buildings;

9. Other public and quasi-public uses not included elsewhere in this section other than telecommunication facilities;

10. Other provisions of this section to the contrary notwithstanding, the undergrounding of any electric, gas or telephone line shall require a use permit except:

a. Where the entire length of the line to be underground is covered by an encroachment permit, or

b. The entire length of the line to be undergrounded lies between a distribution line on a street and an individual service connection;

11. Churches;

12. Cemeteries;

13. Child day care center in existing structures developed for public assembly (i.e., churches, meeting halls, public and private schools) and in existing nonconforming commercial buildings;

14. Temporary real estate offices for the sale of properties developed pursuant to a development plan for the site;

15. Provided that the property to be developed is located within a railroad right-of-way in existence as of January 1, 1988, and notwithstanding any other provision of this code, tourist and excursion transportation facilities may be permitted, subject to the issuance of a conditional use permit pursuant to Sections 18.124.010 18.124.080.

C. Minimum lot area regulations applicable to any zoning district may be waived by the commission in connection with issuance by it of a use permit for any use set forth in subsections (B)(7) and (8) of this section.

D. The following uses shall be allowed in any zoning district upon issuance of an administrative permit in accordance with Chapter 18.126:

1. A home occupation; provided however, that notwithstanding Section 18.08.310, a bed and breakfast shall not be considered a home occupation;

2. Directional, identification, temporary off-site and agricultural signs;

3. A temporary trailer; and

4. An application for an extension of time for a previously issued administrative permit for a temporary trailer.

SECTION 3. If any section, subsection, sentence, clause, phrase or word of this chapter is for any reason held to be invalid by a court of competent jurisdiction, such decision shall not affect the validity of the remaining portions of this ordinance. The Board of Supervisors of the County of Napa hereby declares it would have passed and adopted this ordinance and each and all provisions hereof irrespective of the fact that any one or more of said provisions be declared invalid.

SECTION 4. This ordinance shall be effective thirty (30) days from and after the date of its passage.

SECTION 5. A summary of this ordinance shall be published at least once 5 days before adoption and at least once before the expiration of 15 days after its passage in the Napa Valley Register, a newspaper of general circulation published in the County of Napa, together with the names of members voting for and against the same.

The foregoing ordinance was first introduced and read at a regular meeting of the Conservation Development and Planning Commission, held on the 5th day of May, 2004, and passed at a regular meeting of the Board of Supervisors of the County of Napa, State of

California, held on the 20th day of July, 2004, by the following vote:

AYES:	SUPERVISORS	WAGENKNECHT, DILLON, DODD, RIPPEY and LUCE

TO:	Airport Land Use Commission
FROM:	John McDowell for David Morrison - Director Planning, Building and Environmental Services
REPORT BY:	John McDowell, Supervising Planner - 299-1354
SUBJECT:	Oat Hill Residential Project # P21-00056-ALUC

RECOMMENDATION

OAT HILL RESIDENTIAL PROJECT / CITY OF AMERICAN CANYON / RH HESS DEVELOPMENT COMPANY - AIRPORT LAND USE CONSISTENCY DETERMINATION #P21-00056-ALUC

Request: Airport Land Use Compatibility Plan Consistency Determination for the City of American Canyon regarding a proposal from RH Hess Development Company to construct a 291 dwelling unit condominium project, including a General Plan Amendment and Rezoning, on two parcels totaling approximately 20.8 acres. Parcel A includes 206 dwelling units on 13.6 acres. Parcel B includes 85 dwelling units on 7.2 acres. The property is located on the land feature commonly known at Oat Hill, which is located within the City of American Canyon on Hess Drive approximately 0.25 miles west of the intersection of State Routes 29 and Napa Junction Road within Napa County Airport Compatibility Zones D and E (Assessor's Parcel Numbers 058-380-008, and 058-320-001).

Staff Recommendation: Find the project inconsistent with the Airport Land Use Compatibility Plan, and provide direction to City of American on actions to achieve consistency.

Staff Contact: John McDowell, (707) 299-1354 or john.mcdowell@countyofnapa.org

Applicant Representative: William He, City of American Canyon, (707) 647-4360 or whe@cityofamericancanyon.org

EXECUTIVE SUMMARY

Proposed Action:

1. That the Airport Land Use Commission find the Oat Hill Residential Project (P21-00056-ALUC) inconsistent

with the Napa County Airport Land Use Compatibility Plan, and direct ALUC Staff to provide comments to the City of American Canyon on actions to achieve consistency.

Discussion:

As required by State Aeronautic Act and the Napa County Airport Land Use Compatibility Plan (ALUCP), the Airport Land Use Commission (ALUC) is responsible for making an Airport Land Use Consistency Determination on the proposed 291 residential condominium project. The project includes a General Plan Amendment and Rezoning to designate two parcels totaling 20.8 acres located within the City of American Canyon generally 1.75 miles south of the Napa County Airport. Parcel A consists of a 13.2 site with 206 proposed dwelling units, or which 51 units are located within Compatibility Zone D which prohibits residential units. The remaining 155 units are located within Compatibility Zone E which normally allows residential units, however Parcel A's hilltop location penetrates navigable airspace requiring scrutiny to ensure the project does not result in significant hazards to aircraft and persons on the ground. Parcel B, comprising 7.2 acres and 85 dwelling units, is located within Compatibility Zone E and below navigable airspace where residential uses are normally acceptable.

Based on the current design of the project, and the deficiencies in the review of potential impacts conducted by the City of American Canyon, ALUC Staff are recommending that the project be found inconsistent with the ALUCP. The project contains 51 residential dwelling units located within Compatibility Zone D where residential units are prohibited. This is inconsistent with both the ALUCP and the City of American Canyon's General Plan.

Furthermore, hazard evaluation for the new structures on Parcel A located within navigable airspace has not yet occurred and the project's noise analysis does not address potential for single-event overflight noise impacts. Therefore it is premature for the City to have issued a draft Mitigated Negative Declaration, and the City has not demonstrated that the project conforms to ALUCP policies addressing noise, safety/hazards and overflight compatibility. As noted in the background section of this project, there are other aspect of the City's review which should be updated before ALUC Staff would be in a position to recommend the project be found consistent with the ALUCP.

In summary, consistency can be achieved by redesigning the project to eliminate residences from Zone D, and potential for noise and hazard evaluations need to occur and project design adjusted accordingly, if necessary. In addition, the City's processing documents should be updated to ensure internal consistency of the City General Plan and zoning. ALUC Staff has offered to work with the City on revising the project such that ALUC could support a revised proposal, but City representatives expressed that they would like the matter to be brought forward to the ALUC for action as currently proposed. ALUC Staff see no way for the ALUC to find the project consistent given the items noted above and ALUCP Policy 3.4.2 which mandates that any proposal for residential uses within Zones A, B, C and D shall be found inconsistent with the ALUCP.

FISCAL & STRATEGIC PLAN IMPACT

Is there a Fiscal Impact? No

County Strategic Plan pillar addressed:

ENVIRONMENTAL IMPACT

The City of American Canyon is the Lead Agency responsible for implementing the project and has prepared a draft Mitigated Negative Declaration. The draft document is inadequate in its evaluation of potential for aviation

related noise impacts and aviation-related hazards. See Background Section below regarding action necessary to achieve consistency with the ALUCP, including recommendations update CEQA analysis.

BACKGROUND AND DISCUSSION

Airport Land Use Compatibility Factors:

1. Location –The 20.8 acre project site is located on the land feature commonly known as Oat Hill about a quarter mile west of State Route 29 (Broadway) and Napa Junction Road. The site ranges from approximately 9,400 feet to 10,800 feet south of the Napa County Airport. Development will occur on two parcels. Parcel A is 13.6 acres and located on the upper reaches of Oat Hill, and would contain 206 residential units of which 51 units fall within Compatibility Zone D, and the remaining 155 units lie within Compatibility Zone E. Parcel B, which is located at the eastern base of Oat Hill contains 85 dwelling units that are entirely within Compatibility Zone E although the northern portions of the parcel lie under Zone D.

Zone D represents the Common Traffic Pattern, which is an area of common overlight at elevations typically ranging from 300 ft. to 1,000 ft. above ground level. Zone E is the Outer Airport Environ where overflights more commonly consist of aircraft entering or existing airport approach and departure paths. Typical overflights of the project site consist of aircraft departures from the main runways (Runway 1L and 1R) for traffic heading southeast or east, and downwind circling to land approach traffic to Runway 6/24, which is the less frequently used crosswind runway.

Oat Hill is a natural feature that penetrates navigable airspace. Navigable airspace within 10,000 ft of the runways is defined as a horizontal surface 150 ft. above the height of the runways, or in this case 183 ft. above Mean Sea Level (MSL). Beyond 10,000 ft. is the conical surface where navigable airspace rises by 1 ft. for every 20 ft. beyond the 10,000 foot arc. The runways have a defined MSL of 33 feet. Structures are allowed on such natural features that penetrate navigable airspace but the Federal Aviation Administration (FAA) regulations requires evaluation of structures for hazards and determines if structures must be marked as an obstruction.

2. Land Use – The project site lies within Compatibility Zones D and E. Zone D prohibits residential uses, whereas residential uses are "normally acceptable" within Zone E. It should be noted that normally acceptable uses does not mean that the land use is automatically consistent. A normally acceptable use may still be inconsistent with airport operations based on the nature of the proposal and its location in relation to airport operations. Oat Hill, given its penetration of navigable airspace and relationship to overflights, is an area that warrants thoughtful attention and substantive evidentiary support to conclude that residential uses are suitable within those portions of the site that are within the Zone E environ.

In 2010, the ALUC found the City of American Canyon General Plan consistent with the ALUCP. The Land Use and Noise Elements of that plan contain policies, figures, and tables referencing and tiering in the ALUCP, which formed the basis for the ALUC to find the General Plan consistent with the ALUCP. The proposed project directly conflicts with several of the City's requirements addressing airport land use compatibility as follows. See attachments F and G for the relevant sections of the City's General Plan.

City of American Canyon Genera Plan Land Use Element:

Objective 1.27 - This objective calls for the City to ensure that development protects citizens from noise and operational impacts of the airport while not adversely constraining the Napa County Airport. The City has prepared a Mitigated Negative Declaration concluding the project has no potential for its citizens to be impacted by aviation, but as noted in this report, aviation related noise and hazard evaluations are incomplete or have not yet been conducted.

Policy 1.27.1 - This policy requires the development to comply with City General Plan Tables 1-1, 1-2 and Figure 1-3. These tables and figure match the ALUCP and state that residential uses are prohibited within Zone D. The project results in residential units within Zone D.

Policy 1.27.7 - This policy calls for the City to recognize the importance of the Napa County Airport to City residents and ensure land use decisions do not negatively impact Airport operations. This policy appears to have not been addressed as all potential for aviation-related noise and hazard impacts have not been conducted, and residential land uses are proposed in a location where the ALUCP and City General Plan prohibit the use.

Figure 1-3 - This figure depicts the Napa County Airport Land Use Compatibility Zones matching those contained in the ALUCP. The Oat Hill project plans filed by the City of American reflect that the project site lies within both Zones D and E.

Table 1-1 - This tables states the definitions of the Compatibility Zones matching those definitions contained in the ALUCP. The City's General Plan states that areas meeting the definition of Zone D as shown in Figure 1-3 constitute the Common Traffic Pattern where residential uses are a prohibited use. Subsequent ALUC application materials (City Attorney letter date May 7, 2021) assert that the Oat Hill should be found consistent by the ALUC because there is evidence in the record that the Zone D boundary line should be changed. However, that boundary has not changed in either the ALUCP or City General Plan.

Table 1-2 - This table states the Airport Vicinity Land Use Compatibility Criteria matching those criteria contained in the ALUCP. The criteria state that residential uses are prohibited in Zone D.

City of American Canyon General Plan Noise Element:

Figure 11-1 - This figure depicts the Napa County Airport Land Use Compatibility Zones matching those contained in the ALUCP. The Oat Hill project plans filed by the City of American reflect that the project site lies within both Zones D and E.

Table 11-1 - This tables states the definitions of the Compatibility Zones matching those definitions contained in the ALUCP, and as noted for Table 1-1, the boundary has not changed so assertions from the City that the boundary should be changed are not relevant to the consistency of the proposal to the currently adopted ALUCP and City General Plan. The City is not proposing to change Tables 1-1 or 11-1, or Figures 11-1 and 1-3 as part of the project submitted to the ALUC for a consistency determination.

Table 11-2 - This table states the Airport Vicinity Land Use Compatibility Criteria matching those criteria contained in the ALUCP. Residential uses are prohibited in Zone D.

Policy 11.1.1 - This policy calls for the implementation of the noise standards identified in Figure 11-2 for design of new developments. This figure states in three locations that all residential land uses are prohibited in Zone D.

Objective 11.4 - This objective seeks to minimize adverse impacts of aircraft noise on residential uses. Allowing residences closer to an airport than City General Plan and ALUCP policies permitconflict with this objective.

Policy 11.4.2 - This policy requires new development to comply with the noise standards of the ALUCP. The noise standards of the ALUCP prohibit residential uses within Zone D due to the inherent conflicts between residential uses and airport operations.

Policy 11.4.3 - This policy calls for the City to work closely with the Napa County Airport to ensure that airport operations do not cause adverse noise conditions in the City. No evidence has been presented to the ALUC that

the City has worked with the Napa County Airport regarding this project. The project could result adverse aviation related noise impacts upon the future residents of the project resulting in placing homes closer to the airport than what the City General Plan and ALUCP allow.

3. Lighting and Glare – The City of American Canyon will impose conditions of approval that specify that all exterior lighting, including landscape lighting, shall be shielded so as not to create offside glare which is consistent with airport compatibility requirements. Night-time lighting should not result in light and glare impacts to airport operations.

4. Communications – No electronic equipment is proposed as part of this facility that could interfere with airport communication.

5. Building Materials – Proposed structures will feature a wide variety of common muted building materials including concrete last and metal roofing, and stucco and cement board and batten siding. These materials are non-reflective and comply with the Airport Land Use Commission's requirements. The project building materials are compatible with airport operations.

6. Caltrans Aeronautics – It is unknown if the City referred the application to Caltrans Division of Aeronautics. In the event the ALUC finds the project inconsistent with the ALUCP and the City moves forward to override/overrule the ALUC, the City is obligate to under State Aeronautic Act to provide the ALUC and Division of Aeronautics a copy of the proposed decision and their findings in advance of considering the override.

7. Processing – ALUCP Policy 2.1.9 requires referral of a project to the ALUC prior to the local governing body's final action to allow the local jurisdiction to consider the ALUC's finding prior to acting on a project. The project was reviewed by the City of American Canyon Planning Commission in March, 2021, and on March 26, 2021 an incomplete referral application to the ALUC was filed by the City of American Canyon. ALUC issued a formal application status letter on April 23, 2021 listing items necessary for a complete submittal. On May 6 and 7, 2021, the City of American Canyon filed responses to the April 23, 2021 ALUC letter, which did not provide all of the information requested. On May 21, 2021, ALUC Staff issued a second application status letter requesting required information be provided and setting a June 23, 2021 ALUC hearing date. Due to the lack of essential information in the incomplete referral, ALUC Staff was unable to fully review the Project for consistency with the ALUCP. ALUC Staff offered to assist the City in providing the necessary information, but the City requested that the ALUC consider the referral as submitted.

After the ALUC's action, the American Canyon City Council will consider the project. If the City chooses to revise the project to address recommended actions to achieve consistency, a new ALUC referral application will need to be filed. ALUCP Policy 1.4.2 requires the ALUC to make its consistency finding on the project as it has been proposed. The ALUC does not have the ability to require changes to the project, offer conditional approval, or modify proposed conditions of approval. The ALUC's range of decision making options are limited to either finding the project consistent or inconsistent with the ALUCP.

8. Airport Land Use Compatibility Plan Policies - Listed below are the noise, safety, airspace protection and overflight criteria from Chapter 3 of the Airport Land Use Compatibility that shall be considered when evaluating projects for consistency. These policies are considered in concert with Tables 3.1 and 3.2 which are Airport Vicinity Land Use Compatibility Criteria. Following each Policy is ALUC Staff's consistency finding recommendation, as well as recommendations on actions to achieve consistency for those policies where the project results in conflicts. When finding a project inconsistent with the ALUCP, Policy 1,4,2 directs that that ALUC may provide direction to the local agency on the steps that can be taken to achieve consistency.

3.1 Noise

3.1.1 The evaluation of airport/land use noise compatibility shall consider the future Community Noise Equivalent Level (CNEL) contours of each airport. These contours are calculated based upon aircraft activity forecasts which are set forth in adopted airport master plans or which are considered by the Commission to be plausible (refer to Part II for noise exposure maps).

Finding: Consistent – The noise analysis prepared for the project relies upon the CNEL contours depicted in the ALUCP and airport master plan.

3.1.2 The locations of CNEL contours are one of the factors used to define compatibility zone boundaries and criteria. Noise compatibility criteria should be applied at the general plan or specific plan level. Because of the inherent variability of flight paths, the depicted contour boundaries are not absolute determinants of the compatibility or incompatibility of a given land use. For this reason, noise contours should not be used as site design criteria. Noise contours can only quantify noise impacts in a general manner. Site conditions, terrain, and actual flight patterns and frequency should also be evaluated.

Finding: Inconsistent – The City's environmental impact evaluation of aviation related noise impacts is incomplete as it relies solely on the CNEL contours and does not consider potential overflight noise impacts relating to the site's conditions, terrain and elevation relative to flight patterns. The project site is elevated on a hill directly under common flight paths. Noise levels from aircraft overflights are often more noticeable in hillside and hill top properties. On several occasions ALUC Staff has requested that the City conduct a complete noise analysis, and the City has responded that the CNEL contour analysis was sufficient. Therefore, the City's conclusion that the project results in no potential noise impacts is based on an incomplete analysis.

Further, the proposal is inconsistent with the City's Noise Element and Land Use Element, which were previously found by the ALUC to be consistent with the ALUCP in 2010. The City's Land Use and Noise Elements contain the same Airport Vicinity Land Use Compatibility Criteria (Tables 3.1, 3.2, and Figure 3A) as contained in the Napa County ALUCP (See City General Plan Figures 1-3 and 11-1, and Tables 1-1 and 1-2 attached). The City's General Plan Figures 1-3 and 11-1 also depict Airport Land Use Compatibility Zones (A through E) matching those contained the ALUCP, and thus the ALUC was able to find the documents consistent with the ALUCP.

City General Plan Table 1-1 states that the maximum allowable residential density within Compatibility Zone D is zero persons per acre, which correlates with City General Plan Table 1-2 that states that all residential uses are prohibited in Zone D, which again aligns with the ALUCP. Residential uses are prohibited within Compatibility Zone D due in part to the inherent conflict between residential uses and aviation overflights and noise. However, this proposed General Plan Amendment and Rezoning changes the City's Land Use and Zoning Map boundaries to allow residential in an area where the City's General Plan (Tables 1-1, 1-2, and 11.1) clearly indicates that the residential uses are prohibited. This is not only inconsistent with ALUCP, but inconsistent with State Planning and Zoning Law, which require a city/county General Plan to be internally consistent (Gov. Code § 65300.5; *Sierra Club v. Board of Supervisors of Kern County (1981) 126 Cal.App.3d 698*), and requires a zoning ordinance to be consistent with the General Plan.

Actions to Achieve Consistency: The project should be re-designed such that no residential units are located within Compatibility Zone D. For the remaining residential uses within Zone E, the draft Mitigated Negative Declaration and supporting noise analysis should be updated to address potential for significant noise impacts resulting from single-event overflights and any potential for CNEL noise impacts resulting from unique site/terrain characteristics.

3.1.3 The maximum CNEL considered normally acceptable for most residential uses in the vicinity of the airports covered by this plan is 55 dBA. This standard is appropriate for areas with low ambient noise levels. In areas with higher ambient noise levels, the maximum CNEL considered normally acceptable for residential uses shall be 60 dBA. Factors which determine whether to apply the higher standard include the presence of: major highways, large concentrations of residences, or large-scale commercial and industrial uses.

Finding: Partially consistent – The noise analysis for this project is inadequate in addressing potential for aviation related noise impact. The City's draft Mitigated Negative Declaration dedicates a paragraph to the topic, and bases its conclusion of less-than-significant impacts solely on the CNEL contour exhibit. This information is partially correct, but it falls short of capturing the full range of potential aviation related noise impacts. The aviation analysis does not account for site conditions, most notably the elevated terrain (for Parcel A), where CNEL noise levels can be higher. The analysis also does not address nighttime aviation noise impacts to proposed residential uses. Lastly, the Land Use and Planning Impact Section of the Mitigated Negative Declaration (Section XI.b) fails to acknowledge the direct conflicts the project has with both the ALUCP and the City's General Plan Land Use and Noise Elements pertaining the airport land use compatibility. The direct conflict (i.e. - residences proposed where they are expressly prohibited) is a significant impact.

Actions to Achieve Consistency: The City should prepare a comprehensive evaluation of aviation-related noise impacts including a CNEL evaluation that is updated to address site conditions and terrain. The City's CEQA document should be updated to fully disclose the requirements of Tables 1-1, 1-2, and 11-1, and note the direct conflict between adopted land use regulations and the proposed project.

3.1.4 This policy does not apply because it relates to non-residential land uses.

3.1.5 The extent of outdoor activity associated with a particular land use is an important factor to be considered in evaluating its compatibility with airport noise. In most locations, noise level reduction measures are only effective in reducing interior noise levels. Also, source reduction measures implemented by airport authorities are not within the scope of this plan.

Finding: Inconsistent – The noise analysis does not address potential noise impacts to project residents when located outside of their homes.

Actions to Achieve Consistency: The noise analysis should be updated to address potential for aviation related noise to impact project inhabitants when they are not within their residences.

3.1.6 Single-event noise levels should be addressed when evaluating the compatibility of highly noise-sensitive land uses such as schools, libraries, and outdoor theaters. Single-event noise levels are particularly important in areas which are regularly overflown by aircraft, but which do not produce significant CNEL contours. Flight patterns for each airport (illustrated in Part II) should be considered in the review process for such uses. Noise attenuation measures may be required based upon the criteria contained in Appendix C.

Finding: Inconsistent – Potential for single-event noise impacts has not been addressed. City responses to ALUC Staff's request that this be addressed are attached and simply reiterate the City's view that potential for noise impacts are limited to CNEL contours. CNEL is a form of noise measurement that looks at the composite noise levels over a 24 hour period of time. It is quite different than a Single Event Noise Exposure Level (SENEL) evaluation, which captures the sound level of a single noise event, such as an aircraft overflight, measured over the time interval for which the sound exceeds a designated threshold, which is 55 dBA in relation to indoor/outdoor residential uses, and 50 dBA for sleeping quarters. The City has not conducted a SENEL evaluation. Frequent single event noise intrusions upon residents of projects in proximity to an airport are a significant factor that can result in erosion of compatibility between airports and nearby land uses.

Residential uses are considered a highly noise-sensitive land use, especially in relation to an airport that is open 24 hours a day. Single-event overflights can occur at any point in the day or night. Aircraft departing from the main runways (Runway 1R and 1L) regularly overfly the property on southeastern and eastern departure paths. Approach traffic over the site also occurs for aircraft circling to land on Runway 24, although this is a less frequently used pattern due to prevailing wind conditions at the airport. Departure overflight noise tends to be significantly louder than overflight noise for aircraft on approach, because engines are operating at higher intensity as the aircraft

climbs.

Actions to Achieve Consistency: The project should be re-designed such that no residential units are located within Compatibility Zone D. The draft Mitigated Negative Declaration and supporting noise analysis should be updated to address potential for significant noise impacts resulting from single-event overflights. This analysis should factor in the site's conditions, terrain and actual flight patterns.

3.2 Safety

3.2.1 The intent of land use safety compatibility criteria is to minimize the risks with an off-airport aircraft accident or emergency landing. (a) Risks both to people and property in the vicinity of an airport and to people on board the aircraft shall be considered. (b) More stringent land use controls shall be applied to the areas with greater potential risk.

Finding: Inconsistent – A large portion of the project site lies upon a land feature that penetrates navigable airspace. Generally all areas of the project site that are above 183 ft. and ranging to approximately 200 ft. MSL, which corresponds roughly to the 206 units on the upper 13.6 acre Parcel A, fall within this sensitive area. Construction is generally permissible within these areas, however, pursuant to FAA regulations an evaluation of obstruction hazards to aircraft needs to be performed and the project designed so as not to result in hazards to persons on the ground or aircraft. Obstruction hazards increase potential for aircraft accidents, and thus increase risks to people and property. That required analysis has not been performed nor addressed in the City's CEQA document. Instead, the City is requesting conditional approval from the ALUC based on the analysis being conducted at a later date. The City's last correspondence indicated that the applicant has prepared this information and submitted it to the FAA but that documentation was not provided to ALUC Staff.

This approach is not permissible under ALUCP Policy 1.4.2, and is inconsistent with State Aeronautic Law, FAA Regulations and CEQA. The City has a responsibility to conduct a meaningful and adequate analysis of all potential environmental impacts prior to project approval. Policy 1.4.2 expressly states that ALUC cannot find a project conditionally consistent subject to inclusion of certain conditions. The ALUC's action choices are to find the project, as submitted, either consistent or inconsistent with the ALUCP.

Actions to Achieve Consistency: The obstruction hazard evaluation needs to be conducted, and the project design and supporting CEQA document updated accordingly based on the outcome of the obstruction hazard evaluation.

3.2.2 The principal means of reducing risks to people on the ground is to restrict land uses so as to limit the number of people permitted to occupy a given area. Methods for determining the concentration of people for various land uses is provided in Appendix D. (a) Greater restrictions shall be placed upon the number of people permitted in a building than upon the number within an open area because of the greater difficulty of evacuating a building in the event of its involvement in an aircraft accident.

Finding: Inconsistent – The portion of the proposed project that lies within Compatibility Zone D exceeds the allowable density. Zone D sets a maximum residential density of zero persons per acre (residential uses are prohibited). The project will result in 52.9 persons per acre on Parcel A where the encroachment into Zone D occurs. As noted in Policy 3.2.1, the upper portion of the project site also lies within navigable airspace, and required FAA obstruction hazard analysis has not occurred. Residential densities within the portions of the site lying within Compatibility Zone E and within navigable airport may also require limitations, but that cannot be determined until the required review occurs. Potential for an off airport aircraft incident has not been addressed in the Mitigated Negative Declaration as well.

Actions to Achieve Consistency: The project should be re-designed such that no residential units are located within Compatibility Zone D. The required FAA obstruction analysis should be conducted and any hazards should be

addressed in the re-design.

3.2.3 This Policy does not apply because it relates to land uses with occupants that have reduced effective mobility.

3.2.4 This Policy does not apply because relates to land uses with potential for aboveground explosions.

3.2.5 In the event that an aircraft is forced to land away from an airport, the risks to people on board aircraft and damage to property can best be minimized by providing as much open land area as possible within the airport vicinity. This concept is based upon the fact that the large majority of aircraft accidents occurring away from an airport runway are controlled emergency landings in which the pilot has reasonable opportunity to select the landing site. (a) For purposes of this Plan, "open land" shall be defined as an area that is typically: (1) free of structures and other major obstacles such as walls, large trees, and overhead wires; and (2) have minimum dimensions of at least 75 feet wide, and at least 300 feet or more in length. Certain roads are acceptable as open land areas if they meet the preceding criteria.

Finding: Consistent – The overall project site contains a large open area meeting the criteria, which is located generally between lower and upper portions of the development.

3.2.5(b) The most critical areas for preserving open land are within the approach zones and beneath the traffic pattern (Zones A, B, C, and D). Within an airport's traffic areas, land presently designated for open space uses (i.e., agricultural lands, golf courses, etc.) should be preserved as open land areas to the maximum extent feasible. The following criteria should be used to retain/preserve open land areas within proposed development. (1) Within the approach/departure zones (Zones A, B, C and [D}), buildings should be set back from the extended runway centerline to the maximum extent feasible. (2) Within the traffic pattern areas (Zone D), open land areas at the periphery of the traffic pattern areas should be preserved.

Finding: Consistent – The project is not located within extended runway centerline areas. It is located within outer departure and approach paths, and contains substantial consolidated open land area located generally on the hillside located between the upper and lower portions of the development.

3.2.5(c) Clustering of development and providing contiguous landscaped and parking areas is encouraged as a means of maximizing open land and providing continuity of open land areas between developments.

Finding: Partially Consistent – As noted in the finding for Policy 3.2.5(b), the project contains a large open land area between the upper and lower portions of the development that maximizes open land area. The project represents clustered development, except that the location of clusters should be adjusted to remove prohibited residential units from the portion of the project site that falls within Compatibility Zone D.

Actions to Achieve Consistency: Project redesign should be undertaken to eliminate residential units from Compatibility Zone D. This could be achieved by either eliminating the residential units within Zone D from the project or shifting those units to portions of the site within Zone E, or some combination of both. There is sufficient open land area between the upper and lower portions should reductions of these areas be necessary to accommodate units shifted into Zone E, although it is recognized that the property contains slopes that may pose challenges for increasing densities in those areas.

3.2.5(d) This Policy does not apply as it pertains to projects within 100 ft. of an approach zone.

3.3 Airspace Protection

3.3.1 The criteria for limiting the height of structures, trees, and other objects in the vicinity of an airport shall be set

in accordance with Part 77, Subpart C, of the Federal Aviation Regulations and within the United States Standard for Terminal Instrument Procedures (TERPS). Airspace plans for each airport which depict the critical area for airspace protection are provided in Part III. TERPS height limitation are only applicable at Napa County Airport where an instrument approach has been established. The private airfield has only visual approaches.

Finding: Inconsistent – The project submitted for ALUC review did not address compliance with FAA FAR Part 77, Subpart C standards or TERPS.

Action to Achieve Consistency: The evaluation needs to be conducted, and the project redesigned if conflicts result.

3.3.2 With the approaches to a public airport, the owner of any property proposed for development should be required to dedicate an avigation easement to the jurisdiction owning the airport. In the case of a private airport, a height-limit easement should be dedicated to the jurisdiction controlling the land use. Examples of these easements are provided in Appendix E.

Finding: Consistent – The project's proposed conditions of approval require the dedication of an easement to Napa County airport prior to commencing construction. However, see Policy 3.3.3 discussion below because application of the standard overflight easement does not fully address those portions of the site that penetrate navigable airspace.

3.3.3 Other than within the approach/departure zones, Compatibility Zones A, B and C, height restrictions may allow up to 35 feet above the level of the ground on which are located, or as similarly provided by local ordinance. (a) In locations where terrain, structure, or any object (including clearances over roads and railroads) penetrate Federal Aviation Regulations Part 77 surfaces, an avigation easement shall be required in accordance with Policy 3.3.2 which limits the height to 35 feet above the ground and enables the marking or lighting of any potential hazard to air navigation. Trees or other natural material may exceed the height limitation provided that the avigation easement allows for removal, making, or lighting of potential aircraft hazards.

Finding: Inconsistent – The proposed project conditions of approval do not require an avigation (aviation) easement that limits structure height to 35ft as required by 3.3.3(a), nor addresses marking or lighting of any potential hazards to air navigation. As currently proposed, apartment buildings exceed the 35 ft. height limit. Furthermore, an assessment of the project's potential to result in hazards to air navigation has not occurred as previously noted.

Actions to Achieve Consistency: The required FAA FAR Part 77 evaluation needs to occur and the project needs to be redesigned if necessary to avoid the need for marking, lighting and/or special flight procedures. In addition, project conditions of approval should be amended to reflect that the required avigation easement limits buildings to 35 ft. in height, and that enables the Napa County Airport to mark or light any potential hazard to air navigation within the portions of the site penetrating navigable airspace.

3.3.4 Proponents of a project which may exceed a Part 77 Surface must notify the Federal Aviation Administration as required by FAA Part 77, Subpart B, and by the California State Public Utilities Code 21658 and 21659. (Notification to the Federal Aviation Administration under FAR Part 77, Subpart B, is required even for certain proposed construction that does not exceed the height limits allowed by Subpart C of the regulations. Refer to Appendix B for the specific Federal Aviation Administration notification requirements.)

Finding: Inconsistent – The required FAA FAR Part 77 notification and analysis has not occurred. The City proposes that such review occur after ALUC review occurs.

Actions to Achieve Consistency: The required FAA FAR Part 77 evaluation needs to occur and the project

redesigned if necessary to avoid the need for marking, lighting and/or special flight procedures.

3.3.4(a) Local jurisdictions shall inform project proponents of the requirements for notification to the Federal Aviation Administration.

Finding: Possibly Inconsistent – ALUC Staff informed the City and applicant that this requirement had not been accomplished, and requested it be addressed. City responses, attached, incorrectly assert that the review can be deferred until after ALUC review, and that the ALUC can grant a conditional endorsement of the project, which is inconsistent with ALUCP Policy 1.4.2 and State Aeronautics Act. The City's May 5, 2021 letter indicates that the project proponent has moved forward with the FAA documentation, but that information has not been provided to the ALUC nor addressed in the City's processing documents.

Actions to Achieve Consistency: The City should require the review to be performed, and then update the project, project conditions of approval, and CEQA document based on the results of the evaluation. Upon completion of those tasks, the project should be referred back to the ALUC to enable the ALUC to conduct on evaluation on a complete application submittal.

3.3.4(b) The requirement for notification to the Federal Aviation Administration shall not necessarily trigger review of an individual property by the Airport Land Use Commission if the project is otherwise in conformance with the compatibility criteria established in the Airport Land Use Plan.

Finding: Not applicable – State Law mandates that any General Plan Amendment and Rezoning within an Airport Influence Area is subject to ALUC review, and therefore this Policy, which calls for ALUC review of projects subject to FAA evaluation that are not otherwise required to be reviewed, is not applicable. The project is subject to ALUC review with or without the FAA FAR Part 77 requirement.

3.3.4(c) – Any project coming before the Airport Land Use Commission for reason of height-limit issues shall include a copy of FAR Part 77 notification to the Federal Aviation Administration.

Finding: Inconsistent – The upper portion of the site generally above 183 ft. MSL lies within navigable airspace as noted previously. Policy 3.3.3 limits building heights to 35 ft. in these areas. The proposed buildings have a total height of 38 ft. 2 in., exceeding the maximum height by 3 ft. 2 inches. The required FAR Part 77 review has not occurred, but apparently was started on May 10, 2021. Therefore, the ALUC cannot determine that the project is consistent with this Policy until the required documentation has been prepared and submitted.

Actions to Achieve Consistency: The required FAA FAR Part 77 evaluation needs to occur and the project must be redesigned if necessary to avoid the need for marking, lighting and/or special flight procedures, and the evaluation and project should be re-referred to the ALUC for review.

3.3.5 Land uses which may produce hazards to aircraft in flight shall not be permitted within any airport's planning area. Specific characteristics to be avoided include: (1) glare or distracting lights which could be mistaken for airport lights; (2) sources of dust, steam, or smoke which may impair pilot visibility; (3) sources of electrical interference with aircraft communications or navigation; and (4) any use which may attract large flocks of birds, especially landfills and certain agricultural uses.

Finding: Partially Consistent – The project does not include aspects that would cause substantial glare, distracting lights, dust, steam, smoke, electrical or communication interference, or potential to attract large flocks of birds. The project is consistent as it pertains to these aspects. However, as noted previously, the required FAA FAR Part 77 hazard/obstruction analysis has not occurred, so it is unknown if the project will produce hazards to aircraft in flight.

Actions to Achieve Consistency: The required FAA FAR Part 77 evaluation needs to occur and the project redesigned if necessary to avoid the need for marking, lighting and/or special flight procedures.

3.4 Overflight

3.4.1 All locations within an airport's planning area are regarded as potentially subject to routine aircraft overflight. Although sensitivity to aircraft overflights varies from individual to individual, overflight sensitivity is particularly important with respect to residential land uses. (a) Local jurisdictions shall establish some method of providing notification to prospective buyers of new residential uses within an airport's planning area (all compatibility zones). Appropriate measures may include requiring the dedication of avigation or overflight easements, deed noticing, or real estate disclosure statements. Regardless of the method chosen, the notification shall: (1) note that the property is subject to routine overflight by aircraft at low altitudes; and (2) provide positive assurance that a prospective buyer has received this information. Refer to Appendix E for sample easements and deed notices. (b) Local jurisdictions are encouraged to extend the above or similar buyer awareness program to existing residential uses within the airport planning areas.

Finding: Partially Consistent - The proposed conditions of approval require standard overflight easement requirements which serves as an adequate buyer awareness measure for properties where there is not an inherent conflict with ALUCP. Parcel B represents one of these typical properties where the residential uses are located in an area that normally allows these uses, and the project design on Parcel B contains no conflicts with ALUCP Policies. As noted earlier, standard overflight easement requirements are inadequate for Parcel A due to the site's penetration of navigable airspace, and the project design that involves placement of residential units within an area where they are prohibited. Recordation of a standard overflight easement does not ameliorate those issues.

Action to Achieve Consistency: The project should be redesigned to eliminate residential units from Zone D, and project conditions of approval updated to require recordation of an avigation easement for all condominiums located within that portion of Zone E that penetrates navigable airspace to provide Napa County Airport the ability to mark and/or light hazards.

3.4.2 The compatibility of uses in the airport planning areas shall be preserved to the maximum feasible extent. There is presently a high degree of land use compatibility among the existing and planned land uses in the vicinity of airports within Napa County, primarily because no residential land uses are designated within the traffic area. The proposed conversion of land to residential use within any airport's traffic area (Compatibility Zones A, B, C and D) shall be deemed inconsistent with the Airport Land Use Compatibility Plan.

Finding: Inconsistent – This project includes conversion of property within Compatibility Zone D to residential use, which is prohibited. The policy mandates that any proposal to convert land within Zones A through D to residential use shall be deemed inconsistent.

Actions to Achieve Consistency: The project must be redesigned to eliminate residential units from that portion of the site that lies within Compatibility Zone D.

3.4.3 This Policy is not applicable because it pertains to proposals to convert agricultural land to residential use within Airport Influence Areas, and this project does not involve conversion of agricultural lands.

Attachments to this Report

Listed below are attachments containing City of American Canyon submittal materials and documents related to airport land use compatibility review. Additional application materials from the City of American, which appear to be a complete accounting of the project's overall administrative record at the time of application submittal to the ALUC

including traffic, geologic, biological studies, technical appendices to those studies, public comments, etc. can be accessed from this County ALUC link: Oat Hill Residential project

The City of American Canyon's Oat Hill Project webpage containing all project documents is accessible from this link: Oat Hill Multifamily PL20-0022 (cityofamericancanyon.org)

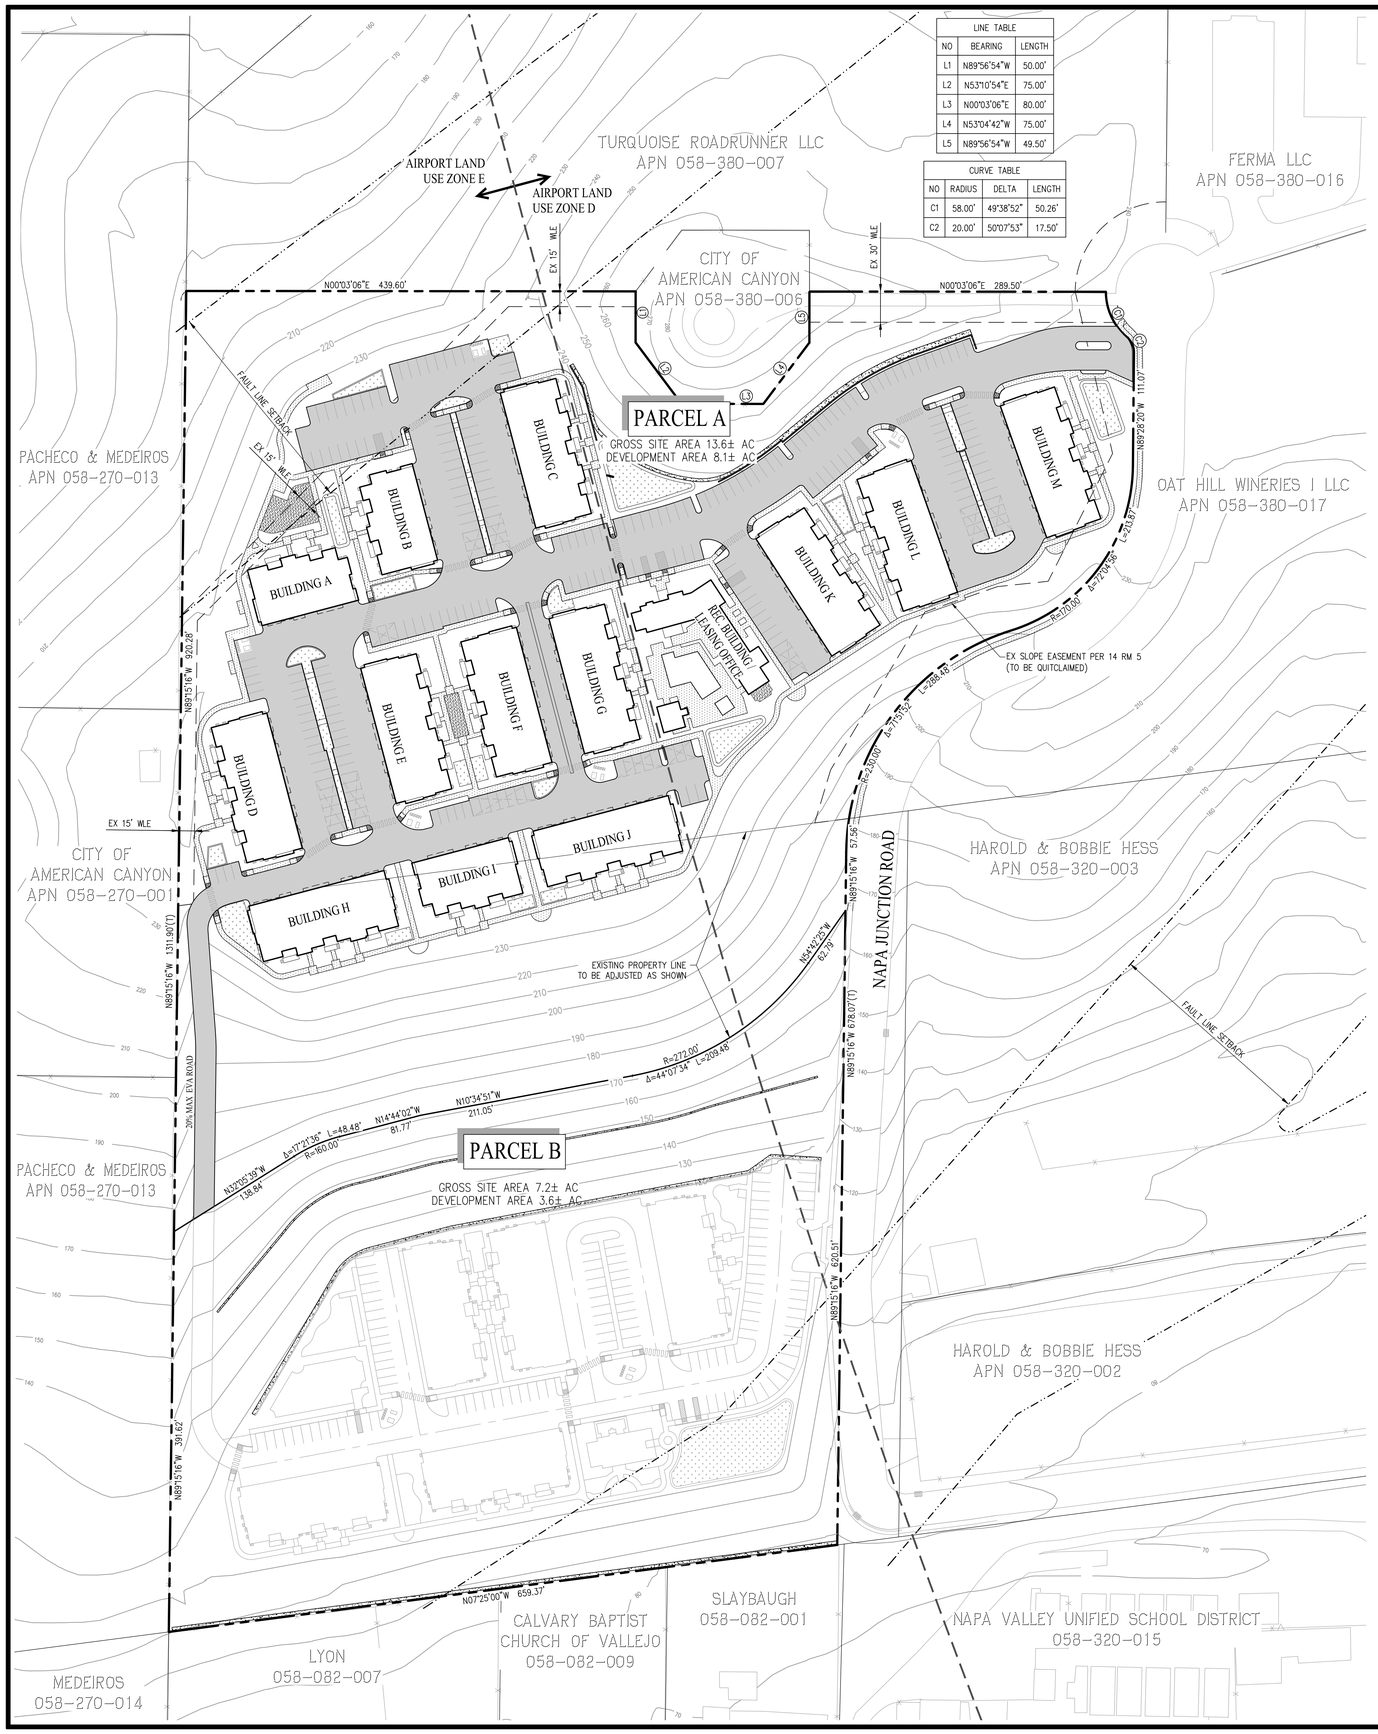
Subject: Oat Hill Project Application for the Napa County Airport Land Use Commission

Dear Mr. McDowell,

The City of American Canyon received an application from RH Hess Development Company for development of apartment units on Oat Hill. The Oat Hill Project is located on the east side of Oat Hill south of Napa Junction Rd and consists of two Parcels, A and B. Parcel A includes 206 dwelling units on a 13.6-acre parcel and Parcel B includes 85 dwelling units on 7.2-acres. Three residential buildings in Parcel A (buildings #K, L, and M) are located in the Napa County Airport Land Use Compatibility Plan. The applicant requests the earliest available ALUC meeting for consideration of approval of the project. Please see the attached files for the submittal of the Oat Hill Project for the Napa County Airport Land Use Commission.

All submittal items are available in the March 25, 2021 Planning Commission Packet, item #4.1, link here: https://cityofamericancanyon.civicweb.net/Portal/MeetingInformation.aspx?Id=789 . The following items are submitted in accordance with the application:

1. Project Description
2. Identification of specific potential aircraft hazards – N/A, the project did not identify any potential aircraft hazards.
3. Copy of local planning agency staff report
4. Copy of Initial Study / Mitigated Negative Declaration
5. Avigation Easement – The applicant will agree to recording an avigation easement in favor of the Napa County Airport, see Parcel A/B Tentative Map condition of approval #15.
6. Site Plans
7. Plan Sets – Items #1 to 6 has been printed for submittal
8. Address labels
9. Submittal Fee – Check for $4,994.56



Sincerely,

William He, AICP
Associate Planner, Community Development Department

FIRE PROTECTION NOTES:

1. FIRE PROTECTION SYSTEMS SHALL BE INSTALLED IN ACCORDANCE WITH PROVISIONS SET FORTH IN THE CALIFORNIA FIRE CODE AS AMENDED BY THE CITY OF NAPA AND THE APPLICABLE NATIONAL FIRE PROTECTION ASSOCIATION STANDARD.
2. THE FIRE PROTECTION EQUIPMENT SHALL BE LOCATED WITHIN AN INTERIOR ROOM HAVING AN APPROVED EXTERIOR ACCESS DOOR OR IN AN EXTERIOR ENCLOSURE ATTACHED TO THE BUILDING, SPECIFICALLY, FOR THE PURPOSE OF HOUSING SUCH EQUIPMENT.
3. THE CITY OF AMERICAN CANYON REQUIRES THAT A FIRE HYDRANT BE IN SERVICE WITHIN 250 FEET OF THE FURTHEST POINT OF CONSTRUCTION PRIOR TO THE STOCKPILING OF COMBUSTIBLE MATERIALS FOR THE BEGINNING OF CONSTRUCTION.
4. FIRE DEPARTMENT CONNECTIONS (FDC) SHALL BE LOCATED NOT MORE THAN 100 FT. FROM THE NEAREST FIRE HYDRANT.
5. FIRE APPARATUS ACCESS ROADS SHALL BE DESIGNED IN ACCORDANCE WITH PROVISIONS SET FORTH IN THE CALIFORNIA FIRE CODE CHAPTER 5 AND APPENDIX D AS AMENDED BY THE CITY OF AMERICAN CANYON AND THE APPLICABLE PUBLIC WORKS STANDARD.
6. FIRE APPARATUS ACCESS ROADS SHALL HAVE AN UNOBSTRUCTED MINIMUM WIDTH OF 20 FEET (CURB TO CURB) AND A MINIMUM UNOBSTRUCTED VERTICAL CLEARANCE OF 13' 6". THEY SHALL HAVE AN ALL-WEATHER PAVED SURFACE CAPABLE OF SUPPORTING A GVW OF 71,000 POUNDS.
7. ACCESS ROADS SHALL BE COMPLETED WITH ALL-WEATHER SURFACES PRIOR TO THE STOCKPILING OF COMBUSTIBLE MATERIALS OR BEGINNING COMBUSTIBLE CONSTRUCTION. FIRE APPARATUS ACCESS SHALL BE PROVIDED TO WITHIN 150 FEET OF THE MOST REMOTE PORTIONS OF ALL BUILDING FROM AN APPROVED EXTERIOR ROUTE. IF THIS CANNOT BE ACHIEVED FIRE APPARATUS TURN AROUND WILL BE NEEDED.
8. FIRE APPARATUS ACCESS ROADS SHALL NOT BE OBSTRUCTED IN ANY MANNER, INCLUDING THE PARKING OF VEHICLES. VERTICAL TRAFFIC CALMING IN THE FORM OF SPEED PUMPS, HUMPS OR DIPS ARE PROHIBITED ALONG FIRE ACCESS ROADS WITHOUT PRIOR APPROVAL OF THE FIRE CODE OFFICIAL. THE MINIMUM WIDTH AND CLEARANCES ESTABLISHED IN SECTION 503.2.1 SHALL BE MAINTAINED AT ALL TIMES.
9. WHEN REQUIRED BY THE FIRE CHIEF, FIRE APPARATUS ACCESS ROADS SHALL BE DESIGNATED AS FIRE LANES AND APPROPRIATE SIGNS AND/OR MARKINGS INSTALLED IN ACCORDANCE WITH THE CALIFORNIA VEHICLE CODE AND APPROVED CITY STANDARDS.

FIRE FLOW NOTES:

1.	BUILDING CONSTRUCTION TYPE:	TYPE VA
2.	MAXIMUM BUILDING SQUARE FOOTAGE:	23,712 SF

Project Summary

Parcel A

Gross Site Area: ± 13.6 Acres

Total Units: 206 Homes
- (52) 1 Bdrm Units
- (108) 2 Bdrm Units
- (46) 3 Bdrm Units

Density: 15.1 DU per Gross Acre

Parking:

Required: 438 Spaces
- (52) 1 Bedroom x 1.5 Spaces =78 Spaces
- (154) 2 or more Bedroom x 2 Spaces =308 Spaces
- (206) Guest x 0.25 Spaces =52 Spaces
- 5 Handicapped + 2 Van Required

Provided: 454 On-site & Off-site Spaces

431 On-site Spaces
- Garage: 157 Spaces
- Carports: 49 Spaces
- Head In: 225 Spaces

23 Off-site Spaces

Open Space
- Common Open Space: 52,245 SF
- Hillside Slope Area: 140,718 SF

KEY MAP
N.T.S

Notes:
1. Site plan must be reviewed by planning, building, and fire departments for code compliance.
2. Base information per civil engineer.
3. Civil engineer to verify all setbacks and grading information
4. Please refer to landscape plan for final landscape details.
5. Building setbacks are measured from property lines to building foundation lines.

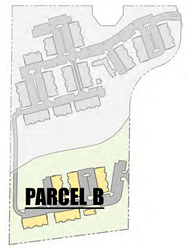
Project Summary

Parcel B

Gross Site Area: ± 7.2 Acres

Total Units: 85 Units
- (20) 1 Bdrm Units
- (45) 2 Bdrm Units
- (20) 3 Bdrm Units



Density: 11.8 DU per Gross Area

Parking:

Required: 182 Spaces
- (20) 1 Bedroom x 1.5 Spaces =30 Spaces
- (45) 2 or more Bedroom x 2 Spaces =130 Spaces
- (85) Guest x 0.25 Spaces =22 Spaces
- 4 Handicapped + 1 Van Required

Provided: 182 Spaces
- Garage: 65 Spaces
- Carports: 20 Spaces
- Head In: 97 Spaces (9' x 18')

Open Space
- Common Open Space: 27,647 SF
- Hillside Slope Area: 257,004 SF

KEY MAP
N.T.S

Notes:
1. Site plan must be reviewed by planning, building, and fire departments for code compliance.
2. Base information per civil engineer.
3. Civil engineer to verify all setbacks and grading information
4. Please refer to landscape plan for final landscape details.
5. Building setbacks are measured from property lines to building foundation lines.

Napa County Airport Land Use Commission Staff
Napa County Planning, Building and Environmental Services Department
1195 Third St – Suite 210
Napa, CA 94559

Subject: Oat Hill Project Application (P21-00056) for the Napa County Airport Land Use Commission – 2nd Response

Dear Mr. McDowell,

Staff received the incompleteness letter for the Oat Hill Project dated April 23, 2021. Please see the following for responses.

1. Please provide the Land Use and Noise Element of the current City of American Canyon General Plan, either by publicly accessible link to the City's webpages or as a PDF document. In addition, please verify that the proposed General Plan Amendment for the project is limited to a land use map change with no corresponding changes to current General Plan's airport compatibility related policies, exhibits and tables which indicate residential uses as prohibited within Airport Land Use Compatibility Zone D.

Response #1: Electronic copies of the Land Use and Noise Elements of the current American Canyon General Plan was provided to Mr. John McDowell by sharefile on April 26, 2021. Staff confirms that the Oat Hill project is limited to a land use map change with no corresponding changes to the City's General Plan airport compatibility related policies, exhibits, and tables.

2. Please provide the ordinance and City Council staff report for the City's previous action rescinding the Airport Compatibility Overlay Zoning District, which once applied to all City parcels located within the Airport Influence Area for Napa County Airport including the subject property for this proposal.

Response #2: To be provided separately by the City Attorney.

3. The upper portion of the project site penetrates navigable airspace generally above 183 ft. in elevation which triggers FAA (FAR Part 77) aircraft hazard obstruction review, and as set forth in

ALUCP Policy 3.3.4. Please provide documentation of compliance with the FAA (FAR Part 77) notice of proposed construction process.

Response #3: To be provided separately by the Applicant's CEQA consultant.

4. Please provide copies, preferably as a PDF, of the Mead & Hunt (2005) and Walter Gillfilland and Associates (2005) studies and the City's September 18, 2020 comment letter titled *Item 9A – Comments on the Initial Study/Mitigated Negative Declaration for the Terminal Area Redevelopment (IS/MND)* cited in your documents as supporting conversion of this project site to residential uses.

Response #4: Applicant's CEQA consultant will provide the Mead & Hunt (2005) and Gillfilland (2005) studies. See attached file for the City's comment letter on the ISMND for the Terminal Area Redevelopment.

5. Please update the noise impact analysis to address potential for noise impacts resulting from single event aircraft overflight.

Response #5: To be provided separately by the Applicant's CEQA consultant.

6. Please provide building and site densities (persons per acre) calculations.

Response #6: Please see the table below for density and other site related information. For persons per acre, staff used ACMC Chapter 18.44, which estimates population at 3.49 persons per dwelling unit.

Table 1 – Parcel A (206 units) Development Standards

Development Standard (RH-1 Zone)	**Required**	**Provided**
Minimum Lot Size	20,000 SF	13.6 acres
Max Density (dwelling units per acre)	16 DU/AC	15.1 DU/AC
Persons per acre (estimated at 719 people)	N/A	52.9 persons / AC
Minimum Width	100 feet	600+ feet
Minimum Depth	100 feet	900+ feet
Max Lot Coverage	50%	17.6%
Max Building Height	42 feet	40 feet

Table 2 – Parcel B (85 units) Development Standards

Development Standard (RM Zone)	**Required**	**Provided**
Minimum Lot Size	20,000 SF	7.2 acres
Max Density	12 DU/AC	11.8 DU/AC
Persons per acre (estimated at 297 people)	N/A	41.2 persons / AC
Minimum Width	100 feet	600+ feet
Minimum Depth	100 feet	300+ feet
Max Lot Coverage	50%	13%
Max Building Height	42 feet	40 feet

Sincerely,

William He, AICP
Associate Planner, Community Development Department

Steve Lederer, Public Works Director

RE: Item 9A – Comments on the *Initial Study/Mitigated Negative Declaration for the Terminal Area Redevelopment (IS/MND)*

As Napa County's largest aviation asset, the City of American Canyon recognizes the importance of the Napa County Airport and supports efforts to chart a course for its long-term economic sustainability. Given the fervent pace of technological innovation occurring in the Personal Aerial Vehicle space and its location proximate to potential future extension of Sonoma-Marin Area Rail Transit (SMART) to Solano County[1], it is exciting to consider the future of a re-imagined Napa County Airport from a regional context and the City applauds the Board of Supervisor's desire to invest in South County transportation infrastructure.

Notwithstanding the excitement of future expansion of the Airport, the City submits the following comments regarding the *Initial Study/Mitigated Negative Declaration for the Terminal Area Redevelopment (IS/MND).* Specifically, our comments relate to the following issues: water and noise.

As the potable water purveyor to the Airport, the City is unable to determine the amount of water needed by the future uses based on the information provided in the IS/MND. While the IS/MND analyzes the amount of *solid* waste generated by the land use increase (Table 26), it does not analyze the amount potable water needed. Thus, the statement that the potential impact is "Less Than Significant" is not supported by substantial evidence.

While consistency with the City's Zero Water Footprint Policy (ZWF Policy) is a perquisite for the issuance of a Will-Serve Letter, without sufficient analysis of water demand, it is not possible to determine whether this reasonably achievable. Importantly, consistency with the City's ZWF Policy is not also identified as a Mitigation Measure. The City respectfully suggests a different approach to environmental review on this topic – namely, the IS/MND should identify the impact as "Less than Significant with Mitigation Incorporated" and identify a Mitigation Measure requiring consistency with American Canyon's ZWF Policy.

[1] https://scta.ca.gov/wp-content/uploads/2019/09/SMART-Passenger-Rail-Service-Novato-to-Suisun-City-Report_reduced.pdf

Regarding potential noise impacts, it is noted residential uses are considered "noise-sensitive" and there are several existing residences south of the Airport. The IS/MND demonstrates the 65 decibel (dB) Community Noise Equivalent Level (CNEL) boundary (also known as the "Noise Annoyance Zone" or "Zone 'D'") is contained entirely within the Airport property under existing and future conditions. The IS/MND concludes that in areas where the 65 CNEL threshold is exceeded, noise-sensitive land uses are compatible only if specified noise level reductions are secured, but further concludes all types of land uses are acceptable in areas outside the Noise Annoyance Zone (ie. below the 65 CNEL threshold)[2]. It is worth noting the Airport Land Use Compatibility Plan includes a significantly larger boundary for Zone D – including lands within American Canyon - that are well below the 65 CNEL threshold.

The City is in the process of considering residential development on a portion of these lands. The City agrees the IS/MND contains the substantial evidence to support a reduced "Zone D" and notes this evidence forms the basis for "Impact Analysis XIV.(a-b): No Impact"[3]. Likewise, this evidence provides the basis for subsequently accurately depicting a reduced Zone D through revisions to the Airport Land Use Compatibility Plan – albeit by separate action at a later date by the Board.

Thank you for the opportunity to provide comment on the IS/MND and best of luck in your pursuant of a second Fixed Base Operator.

Regards,

Jason B. Holley, City Manager

[2] 14 CFR 150, Airport Noise Compatibility Planning.

[3] *"…… The proposed Project is Non-Residential in nature and will provide facilities for up to two FBOs. It will not cause displacement of existing community members or housing, nor will it necessitate the construction of temporary housing*

Re: Supplement to May 6, 2021 Letter of William He Re: Oat Hill Project Application (P21-00056) for the Napa County Airport Land Use Commission - 2nd Response

Dear Mr. McDowell:

This communication supplements and incorporates the May 6, 2021 communication from William He, Associate Planner, Community Development Department of the City of American Canyon ("City"), specifically responding to questions from your April 23, 2021 communication related the referral to the Napa County Airport Land Use Commission ("ALUC") of the Oat Hill Multi-Family Project ("Project") for a consistency determination with the Napa County Airport Land Use Compatibility Plan ("ALUCP").

SCOPE OF ALUC REVIEW

The Public Utilities Code ("PUC"), specifically the State Aeronautics Act gives the ALUC the ability to review local land use decisions such as the Project.

Under PUC Section 21676(b), prior to the amendment of its general plan related to a project within the vicinity of the Napa Airport identified in the ALUCP, the City must refer the proposed action to the ALUC. As part of this referral, the City must provide analysis of project consistency with the ALUCP.

PUC Section 21670 provides that the intent of the Aeronautics Act is to prevent the creation of new noise and safety problems and to protect public health, safety, and welfare by ensuring the adoption of land use measures that minimize the public's exposure to excessive noise and safety hazards.

The ALUC thus reviews proposed projects for consistency; it does not approve or deny the projects.

SUPPLEMENT TO RESPONSES

The following are responses 2, 3, 4, and 5 referenced in the He communication:

2. Please provide the ordinance and City Council staff report for the City's previous action rescinding the Airport Compatibility Overlay Zoning District, which once applied to all City parcels located within the Airport Influence Area for Napa County Airport including the subject property for this proposal.

Response 2: There are no official records of a City action rescinding the Airport Compatibility Overlay Zoning District.

The General Plan and Zoning Code was brought into conformance with the ALUCP back in 2010. Attached as Exhibit A are the General Plan Amendment and Zoning Ordinance that brought about the conformance. There is no action creating the Airport Compatibility Overlay Zoning District.

Prior to Council adoption but after Planning Commission review, per ALUC policy, the ALUC considered these changes and deemed them consistent with the ALUCP on February 3, 2010. Attached as Exhibit B is a copy of the confirming ALUC letter.

On January 21, 2020 the City Council adopted a resolution (Resolution 2020-06) declaring that residential uses are the best use of the Rick Hess property on Oat Hill. In that resolution the City noted the next steps that require a full project approval process be followed to allow for any proposed change of use. The request for an ALUC consistency determination is part of that process. Attached as Exhibit C is a copy of the January 21, 2020 resolution.

3. The upper portion of the project site penetrates navigable airspace generally above 183 ft. in elevation which triggers FAA (FAR Part 77) aircraft hazard obstruction review, and as set forth in ALUCP Policy 3.3.4. Please provide documentation of compliance with the FAA (FAR Part 77) notice of proposed construction process.

Response 3: The applicant will be conditioned by the City to submit FAA Form 7460-1, Notice of Proposed Construction or Alteration and to receive an FAA Determination of No Hazard to Air Navigation, prior to receiving any permits associated with the Project. The applicant has indicated that they will be submitting the FAA Form 7460-1 for the project in the coming week and will provide the FAA Aeronautical Study numbers for each of these cases as information to the ALUC. While it is unlikely that the FAA Determination of No Hazard will be received by the June 16, 2021 ALUC hearing on the

Project, the City would accept a conditionally consistent determination from the ALUC reiterating the City's requirement for an FAA Determination of No Hazard to Air Navigation.

> *4. Please provide copies, preferably as a PDF, of the Mead & Hunt (2005) and Walter Gillfilland and Associates (2005) studies and the City's September 18, 2020 comment letter titled Item 9A - Comments on the Initial Study/Mitigated Negative Declaration for the Terminal Area Redevelopment (IS/MND) cited in your documents as supporting conversion of this project site to residential uses.*

Response 4. Attached as Exhibits D and F are the referenced Mead & Hunt and Gillfilland studies and supporting communications. The IS/MND for the Terminal Area Redevelopment was provided in the referenced communication by Mr. He.

> *5. Please update the noise impact analysis to address potential for noise impacts resulting from single event aircraft overflight.*

Response 5. There is no new updated analysis regarding noise impacts resulting from single event aircraft overflight.

As previously furnished to the ALUC Staff, a portion of the Oat Hill Project Parcel A is located in Napa County Airport Compatibility Zone "D". Zone D restricts development to industrial or other non-residential uses.[1] Noise and safety criteria were analyzed in the IS/MND prepared for the Project that determined that, based on the IS/MND recently prepared for the Napa County Airport Terminal Area Redevelopment project ("Terminal IS/MND"), the Airport's 65 decibel (dB) Community Noise Equivalent Level (CNEL) boundary is located entirely within the Airport property and does not cover any area of the Oat Hill Project.[2]

Stated differently, evidence exists to conclude the 65 decibel (dB) Community Noise Equivalent Level (CNEL) boundary (also known as the "Noise Annoyance Zone" or "Zone 'D'") is contained entirely within the Airport property under existing and future conditions. Thus, as noted in the Oat Hill Multi-family Project MND, the project is not located within the regular flight-path/overflight for normal airport operations, nor would the project result in buildings that would obstruct established flight paths. Development within the Project site would not conflict with Napa County Airport noise contours or any of the "three established sources of guidance on safety compatibility" for Zone D.

[1] ALUCP, Table 3-2, p. 46.

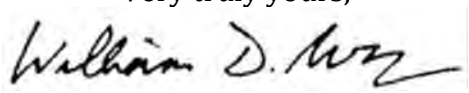
[2] Neither the ALUC nor ALUC Staff commented on the Project MND, during the public review period, and the City was entitled to assume that the ALUC Staff silence indicated it had no comment. *Cf. Cleary v. County of Stanislaus,* 118 Cal.App.3d 348, 355 (1981).

As previously indicated, the City Manager pointed this out in a September 20, 2020 comment to on the Draft Terminal IS/MND[3] for the Napa County Terminal Area Redevelopment project:

> Regarding potential noise impacts, it is noted residential uses are considered "noise-sensitive" and there are several existing residences south of the Airport. The IS/MND demonstrates the 65 decibel (dB) Community Noise Equivalent Level (CNEL) boundary (also known as the "Noise Annoyance Zone" or "Zone 'D'") is contained entirely within the Airport property under *existing* and future conditions. *The IS/MND concludes that in areas where the 65 CNEL threshold is exceeded, noise-sensitive land uses are compatible only if specified noise level reductions are secured, but further concludes all types of land uses are acceptable in areas outside the Noise Annoyance Zone (i.e., below the 65 CNEL threshold)*[4]. It is worth noting the Airport Land Use Compatibility Plan includes a significantly larger boundary for Zone D – including lands within American Canyon - that are well below the 65 CNEL threshold. (Emphasis added).

Anticipating the City need for new housing consistent with its current Housing Element, the City Manager pointed out that the existing ALUCP Zone D was acknowledged by the Terminal IS/MND to provide substantial evidence supporting a reduced Zone D:

> The City is in the process of considering residential development on a portion of these lands. The City agrees the IS/MND contains the substantial evidence to support a reduced "Zone D" and notes this evidence forms the basis for "Impact Analysis XIV.(a-b): No Impact". Likewise, this evidence provides the basis for subsequently accurately depicting a reduced Zone D through revisions to the Airport Land Use Compatibility Plan – albeit by separate action at a later date by the Board.



Further, a noise report prepared for the Project by Saxelby Acoustics demonstrates that the exterior noise levels within the Project would not exceed 65 dBA for outdoor activity areas, nor would interior noise levels within both parcels exceed the 45 dBA standards for interior noise exposure levels. Thus, noise impacts typically associated with Zone D *do not impact the Project*. The Saxelby Acoustics report is part of the Project MND which was furnished to the ALUC Staff on February 8, 2021.

[3] The City Comment Letter was provided in the communication by Mr. He.

[4] This footnote from the quoted text references 14 CFR 150, Airport Noise Compatibility Planning.

If there are any additional questions prior to the June 16, 2021 ALUC review, please contact any of the City or applicant representatives.

Very truly yours,

William D. Ross
City Attorney

RESOLUTION # 2010-47

A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF AMERICAN CANYON APPROVING GENERAL PLAN AMENDMENT GP10-0001 TO ACHIEVE CONSISTENCY WITH THE NAPA COUNTY AIRPORT LAND USE COMPATIBILITY PLAN

WHEREAS, pursuant to Section 65300 of the State Planning and Zoning Law, the City of American Canyon has adopted a General Plan to provide comprehensive long-range planning and a blueprint of the city's future form, including land use and circulation maps that specify the roadway network and the distribution of types and intensities of land; and

WHEREAS, Section 65358 of the State Planning and Zoning Law provides that the City Council may amend all or part of the General Plan if it deems the amendment to be in the public interest; and

WHEREAS, the City's General Plan is inconsistent with the County's Airport Land Use Compatibility Plan as revised in 1999, requiring the revision and addition of policies related to Airport Land Use Compatibility; and

WHEREAS, pursuant to the California Environmental Quality Act, the proposed General Plan Amendments are exempt per CEQA Guidelines Section 15320, Changes in Organization of Local Agencies; and

WHEREAS, the City of American Canyon Planning Commission unanimously recommended adoption of General Plan Amendment GP-10-0001 on December 17, 2009; and

WHEREAS, the Napa County Airport Land Use Commission unanimously deemed General Plan Amendment GP-10-0001 consistent with the Napa County Airport Land Use Compatibility Plan on May 3, 2010; and

WHEREAS, a duly-noticed public hearing was held by the City of American Canyon City Council on May 18, 2010, at which time all those in attendance were given the opportunity to speak on the proposal; and

WHEREAS, the City Council considered all of the written and oral testimony presented at the public hearing in making its decision.

NOW, THEREFORE, BE IT RESOLVED that the City Council does hereby:

1. Find, based on the following evidence and as required by State Law on General Plan Amendments:
   a. The proposed amendment is deemed to be in the public interest.

      The proposed amendment is in the public interest, as it will render the General Plan consistent with state law concerning airport compatibility, and county polices and regulations of the Airport Land Use Commission and the Airport Land Use Compatibility Plan.

   b. The proposed amendment is consistent and compatible with the rest of the General Plan and any implementation programs that may be affected.

      Objective 1.27 states: "Ensure that lands in American Canyon are developed in a manner which protects them from the noise and operational impacts of and does not adversely constrain the Napa County Airport." The revisions to the General Plan make the plan consistent with currently applicable policies and regulations within areas affected by the airport. The amendments are compatible with and there are no conflicts with the rest of the General Plan.

   c. The potential impacts of the proposed amendment in the land use designation have been assessed, and have been determined not to be detrimental to the public health, safety, or

welfare.

There are no changes to the land use designations of the General Plan. When the amendment is adopted, the plan will be consistent with state law and current county regulations for the Airport Compatibility Zones. Potential impacts will not be detrimental to the public health, safety, or welfare.

d. The proposed amendment has been processed in accordance with the applicable provisions of the California Government Code and the California Environmental Quality Act (CEQA).

The amendment has been processed in accordance with CEQA. The project is exempt per CEQA Guidelines Section 15320, Changes in Organization of Local Agencies, as the authority for reviewing land use compatibility for discretionary applications is moving from the County to the City as a result of this amendment making the General Plan consistent with the County Airport Land Use Compatibility Plan.

2. Adopt the following General Plan Amendment (GP10-0001):

Land Use Element:

CITYWIDE LAND USE POLICY: KEY ISSUES

The following prescribes goals, objectives, and policies applicable to development in general, regardless of type, density, or location. Pertinent policies must be considered for any land use or development activity.

AIRPORT COMPATIBILITY

Goal

1N **Ensure the compatibility of development within American Canyon with the Napa County Airport.**

Objective

1.27 Ensure that lands in American Canyon are developed in a manner which protects them from the hazards, noise and operational impacts of, and does not adversely constrain, the Napa County Airport.

Policies

1.27.1 Require that development comply with the land use and development conditions stipulated in the Napa County Airport Land Use Compatibility Plan (ALUCP) and **Tables 1-1** and **1-2** for areas within the jurisdiction of the Napa County Airport Land Use Commission (ALUC), as depicted on **Figure 1-3**. (*I 1.1, I 1.4, I 1.5, I 1.8,* and *I 1.11*)

1.27.2 Review all discretionary applications for new development, expansion of existing uses, and re-use within Napa County Airport Compatibility Zones "A" through "E" for compliance with the appropriate compatibility policies, use, density and design criteria provided in the ALUCP through Design Permit and/or Conditional Use Permit reviews. (*I 1.11*)

1.27.3 Require the dedication of avigation or overflight easements and/or deed restrictions and real estate disclosure notifications, consistent with the requirements of the ALUCP, when new development or subdivisions are permitted on property within the jurisdiction of the Napa County Airport Land Use Commission (ALUC).

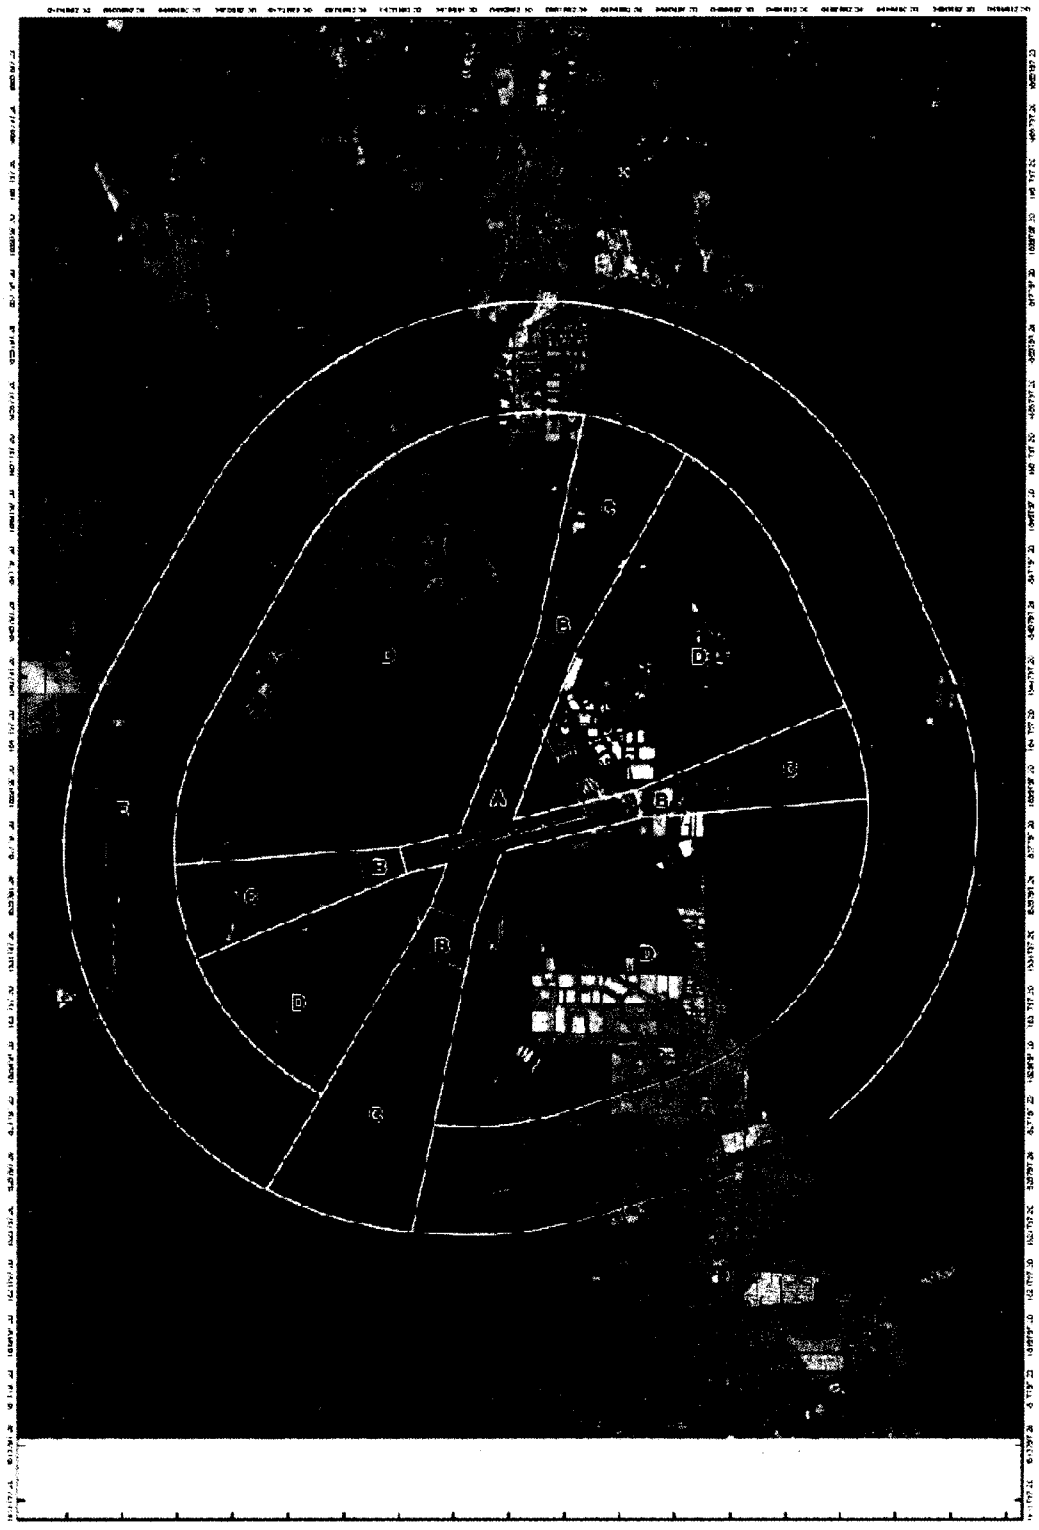
1.27.4 Limit building heights for airspace protection in accordance with Federal Aviation Regulations (FAR) Part 77.

1.27.5 To the extent feasible, development in Zones C and D shall be clustered to preserve open land for safety purposes in accordance with the ALUCP.

1.27.6 Give consideration to the proximity of flight patterns, frequency of overflight, terrain conditions, and type of aircraft in determining the acceptable locations for residential uses in Zone E.

1.27.7 Refer helipad proposals anywhere within the City's Planning Area to the ALUC for a consistency determination.

1.27.8 Refer all General Plan, Zoning Ordinance, Subdivision Ordinance, Specific Plan and building regulation amendments that affect areas within the ALUCP zones to the ALUC for a consistency determination.



1.27.9 Coordinate with the Napa County Airport Land Use Commission (ALUC) to ensure that onsite ground activities of the Airport do not adversely impact (e.g., noise, vibration, air emissions, or other pollution) businesses or residents of the City of American Canyon. (*I 1.22*)

1.27.10 Work with the ALUC to ensure that airport vehicular access does not adversely impact the City of American Canyon. (*I 1.22*)

1.27.11 Coordinate with the ALUC to ensure that any expanded operations of the Airport do not adversely impact existing land uses and development in the City of American Canyon. (*I 1.22*)

1.27.12 Work with the ALUC and other appropriate agencies to ensure that emergency preparedness plans are maintained to protect American Canyon residents and development. (*I 1.22*)

1.27.13 Recognize the importance of the Napa County Airport to City residents, including the economic, transportation and recreational benefits, and ensure that land use decisions rendered for this area do not negatively impact Airport operations (*I 1.22*).

Napa County Airport
Land Use Compatibility Zones

FIGURE 1-3

TABLE 1-1
Compatibility Zone Definitions

ZONE A	Runway Protection Zone: Dimensioned to encompass the current and future Runway Protection Zones for the runways of the Napa County Airport, as defined under FAA regulations and shown on Figure 3. The zones also include areas lateral to the runway. These areas are regularly overflown by aircraft below 50 feet above the ground. For this reason, these areas are considered high risk with regard to accident potential and any structures, buildings, trees or obstacles may create a flight hazard. These areas are also affected by high noise levels.
ZONE B	Approach/Departure Zone: This zone is defined as the areas where aircraft will be below 100 feet above ground level as determined by the type of approach anticipated for that runway. Approach slopes are designated on the Airport Compatibility Zones map, Figure 1-3. These areas are affected by substantial risk of accident potential due to the frequency of overflights at low altitudes. Noise levels are generally high with frequent loud single-events.
ZONE C	Extended Approach/Departure Zone: This zone is defined as the area where aircraft will be below 300 feet above ground level as determined by the type of approach. The low altitude of aircraft in these areas indicates moderate to high risk of accident potential. Properties in this zone will be affected by substantial noise.
ZONE D	Common Traffic Pattern: This area is defined by the flight pattern for the Napa County Airport as illustrated on Figure 1-3. These areas are routinely overflown by aircraft operating to and from the airport with frequent single-event noise intrusion. Overflights in these areas can range from near the traffic pattern altitude (about 1,000 feet above the ground) to as low as 300 above the ground. Accident risk varies from low to moderate. Areas where aircraft are near pattern altitude (e.g., downwind leg) have the lowest risk. In areas where aircraft are at lower altitudes (especially on circle-to-land instrument approaches) a moderate level of risk exists.
ZONE E	Other Airport Environs: An airport's influence area often extends beyond the typically defined compatibility zones during busy traffic hours and when larger aircraft are in the pattern. Aircraft overflights can occur anywhere in these areas when aircraft are departing or approaching an airport. Overflight annoyance is the primary impact element in these areas. The risk of accident is very low.

TABLE 1-2

Airport Vicinity Land Use Compatibility Criteria

ZONE	LOCATION	IMPACT ELEMENTS	MAXIMUM DENSITIES[8]		
			Residential[1]	Other Users (people/ac)[2]	
				In Structures	Total in and out of Structures
A[9]	Runway Protection Zone and Primary Surface	• High Risk • High noise levels • Low overflights below 50' AGL	0	0	10
B	Inner Approach/ Departure Zone	• Substantial risk • High noise levels • Low overflights below 100' AGL	0	10	25
C	Approach/Departure Zone	• Moderate risk • Substantial noise • Low overflights below 300' AGL	0	50	75
D	Common Traffic Pattern	• Moderate risk • Frequent noise intrusion • Routine overflights below 1000' AGL	0	100	150
E	Other Airport Environs	• Low risk • Overflight annoyance	See Note 7		

1. Residential land use and zoning designations are considered incompatible uses within the traffic pattern area (Zones A, B, C, and D) where aircraft overflights are frequent and at low altitude. The residential restrictions do not apply to residential uses allowable under agricultural land use and zoning designations.
2. The use should not attract more than the indicated number of persons per **net** acre. Net acreage is the total site area inclusive of parking areas and landscaping, less the area dedicated for streets. These densities are intended as general planning guidelines to aid in determining the acceptability of proposed land uses. Clustering of development within the density parameters should be encouraged to protect and provide open land/safety areas. However, in Zones A, B, and C the density on any one acre of a parcel should not exceed twice the indicated number of people per acre.
3. Dedication of an avigation or overflight easement or deed notice is required as a condition for new development within all zones. Also, height limit restrictions are applicable to structures and trees in all zones in accordance with Federal Aviation Regulation Part 77 and local ordinances. Uses which may be hazardous to flight are prohibited in all zones.
4. These uses typically can be designed to meet the density requirements and other development conditions listed.
5. These uses typically do not meet the density requirements and other development conditions listed. They should be allowed only if a major community objective is served by their location in this zone and if mitigation measures (i.e., noise attenuation) are incorporated that will minimize potential conflicts.
6. NLR = Noise Level Reduction; i.e., the attenuation of sound level from outside to inside provided by the structure. Noise level reduction measures may be required in areas with high single-event noise levels and where noise-sensitive uses (schools, libraries, etc.) are proposed. Refer to Appendix C for criteria and noise attenuation measures.
7. Maximum residential densities in accordance with local adopted General Plans and zoning designations. Consideration should be given to the proximity of flight patterns, frequency of overflight, terrain conditions, and type of aircraft in determining acceptable locations of residential uses. Referral to the ALUC for review of development plans prior to approval is recommended.
8. The purpose of these criteria is to provide a basis for determining those land uses which are compatible with airport activities. Specific land uses will be allowed only if they are also consistent with applicable General Plan policies and zoning ordinances.
9. All lands in Zone A are either within the Airport's boundaries or are designated for acquisition in the Airport Master Plan.
10. Includes objects that penetrate FAR Part 77 surfaces, uses that would attract large numbers of birds (e.g. landfills), and uses that would create smoke, glare, distracting lights, or electronic interference.
11. Avigation easements will be required in lieu of overflight easements or deed notices where there is an appropriate public agency to review them.

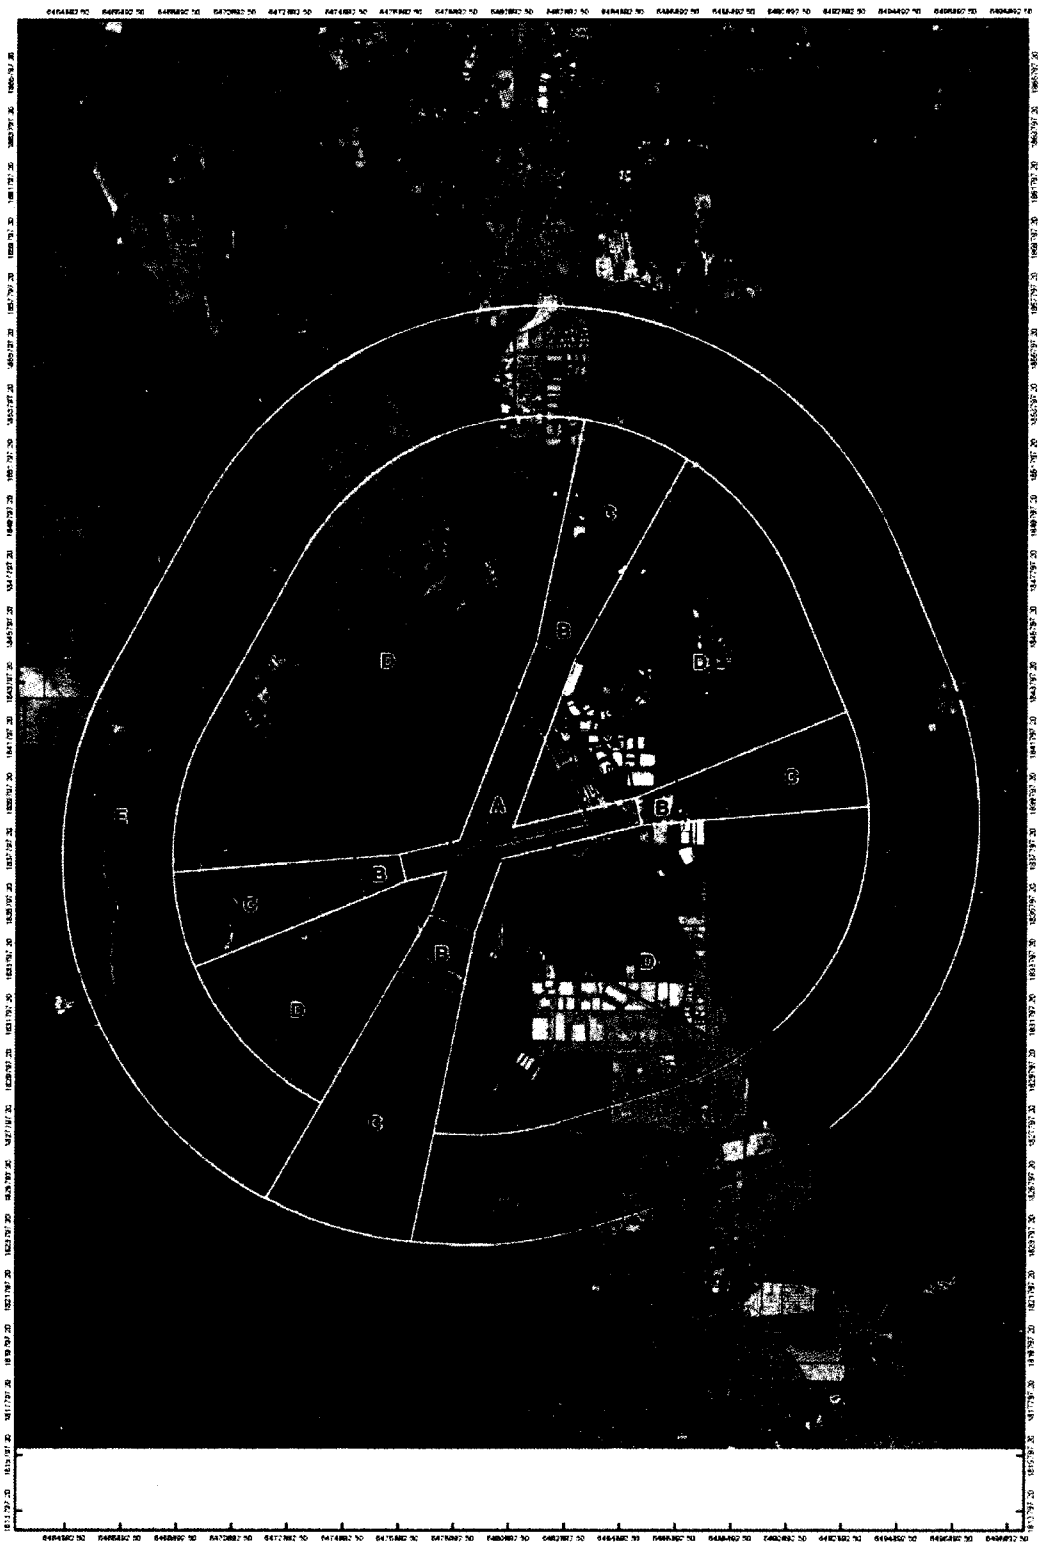


TABLE 1-2 (cont.)

Zone	Prohibited Uses	Other Development Conditions[3]	Examples of Normally Acceptable Uses[4]	Examples of Uses not Normally Acceptable[5]
A	• All residential uses • Any assemblage of people • Any new structure which exceeds height limits • Noise-sensitive uses • Uses hazardous to flight[10]	• Avigation easement required	• Pasture, open space • Aircraft tiedowns • Auto parking • Most agricultural uses	• Heavy poles, signs, large trees, etc. • Ponds
B	• All residential uses • Any noise-sensitive uses •Schools, libraries, hospitals, nursing homes, daycare centers • Uses hazardous to flight[10]	• Avigation easement required • Structures to be as far as possible from extended runway centerline • Clustering is encouraged to maximize open land areas • Minimum NLR of 25 dBA in office buildings[6] • Building envelopes and approach surfaces required on all subdivision maps and development plans	• All uses from Zone A • Parks with low-intensity uses, golf courses • Nurseries • Mini-storage	• Retail uses • Office uses (except as accessory uses) • Hotels, motels, resorts • Theaters, assembly halls, and conference centers • Ponds
C	• All residential uses • Schools, libraries, hospitals, nursing homes, daycare centers • Uses hazardous to flight[10] • Landfills	• Avigation easement required • Structures to be set back as far as possible from extended centerline • Clustering is encouraged to maximize open land areas • Building envelopes and approach surfaces required on all subdivision maps • NLR measures may be required for noise-sensitive uses (offices)[6]	• All uses from Zone B • Warehousing and low-intensity light industrial • Small retail uses • Outdoor recreation uses; marina, ballpark • Office uses	• Large retail buildings • Hotels, motels, resorts, health clubs • Restaurants, bars • Multi-story buildings • Theaters, assembly halls, and conference centers • Ponds
D	• All residential uses • Uses hazardous to flight[10]	• Overflight easement or deed notice required[11] • Building envelopes and approach surfaces required on all development plans within 100 feet of approach zones • Clustering is encouraged to maximize open land areas • NLR measures may be required for noise-sensitive uses[6]	• All uses from Zone C • Most nonresidential uses • Accessory daycare centers	• Schools, libraries, hospitals, nursing homes • Large shopping malls • Amphitheaters • Ponds
E	• Noise-sensitive outdoor uses	• Overflight easement or deed notice required[11]	• Any permitted use	• Amphitheaters • Landfills • Ponds

AIRCRAFT-RELATED NOISE IMPACTS

Objective

11.4 Minimize the adverse impacts of aircraft generated noise on residential and other "noise-sensitive" uses.

Policies

11.4.1 Restrict the development of uses located within the 65 CNEL contour of Napa Airport to industrial, agricultural, or open space uses (see **Figure 11-5**). (*I 11.23*)

11.4.2 Require that development in the vicinity of Napa Airport comply with the noise standards contained in the Napa County Airport Land Use Compatibility Plan (ALUCP). (*I 11.24*)

11.4.3 Work closely with the Napa County Airport to ensure that the airport's operations do not generate adverse noise conditions in the City of American Canyon. (*I 11.21*)

[No changes to remaining sections of Noise Element.]

PASSED, APPROVED AND ADOPTED at a regular meeting of the City Council of the City of American Canyon on the 18th day of May, 2010, by the following vote:

AYES: Council Members Bennett, Callison, Coffey, Vice Mayor West & Mayor Garcia

ORDINANCE #2010-03

AN ORDINANCE OF THE CITY COUNCIL OF THE CITY OF AMERICAN CANYON APPROVING ZONING ORDINANCE AMENDMENT PL09-0035 TO ACHIEVE CONSISTENCY WITH THE NAPA COUNTY AIRPORT COMPATIBILITY PLAN

WHEREAS, pursuant to Section 65850 of the State Planning and Zoning Law, the City of American Canyon adopted a Zoning Ordinance in 1996 to implement the General Plan and regulate the use of land, buildings and structures, the size and use of lots; the intensity of land uses; and to establish other requirements to provide a clear and concise guide for the physical development of the City and to protect and promote the public health, safety, peace, comfort, convenience, aesthetics, prosperity, and general welfare; and

WHEREAS, Zoning Ordinance Chapter 19.48 provides that the City Council may amend the Zoning Ordinance after the amendment is referred to the Planning Commission for review and recommendation to the City Council; and

WHEREAS, minor revisions are being proposed to the Zoning Ordinance to meet state and county requirements for airport land use compatibility; and

WHEREAS, pursuant to the California Environmental Quality Act, the proposed Zoning Ordinance Amendments are exempt per CEQA Guidelines Section 15320, Changes in Organization of Local Agencies; and

WHEREAS, the City of American Canyon Planning Commission unanimously recommended City Council approval of the draft ordinance on April 22, 2010; and

WHEREAS, the Napa County Airport Land Use Commission unanimously found the draft ordinance consistent with the Napa County Airport Land Use Compatibility Plan on May 5, 2010; and

WHEREAS, a duly-noticed public hearing was held by the City of American Canyon City Council on May 18, 2010, at which time all those in attendance were given the opportunity to speak on the proposal; and

WHEREAS, the City Council considered all of the written and oral testimony presented at the public hearing in making its decision.

NOW, THEREFORE, BE IT ORDAINED that the City Council does hereby approve and adopt Zoning Ordinance Amendment PL09-0035 based on the following:

SECTION 1: Compliance with California Environmental Quality Act
The City Council finds that this Ordinance is not subject to the California Environmental Quality Act ("CEQA") pursuant to CEQA Guidelines Section 15320, Changes in Organization of Local Agencies.

SECTION 2: Findings. The City Council finds, based on the following evidence and as required by Zoning Ordinance Section 19.48.040 C, that:

1. The amendments are consistent with the goals and policies of the General Plan.

   The proposed amendment complies with the goals and policies of the General Plan, including Goal 1N, to "Ensure the compatibility of development within American Canyon with the Napa County Airport," and Policy 1.27.2, to "Review all applications for new development, expansion of existing uses, and re-use within Napa County Airport Compatibility Zones "A" through "F" for compliance with the appropriate use and development conditions."

2. The amendments are consistent with the purposes of the Zoning Ordinance, as set forth in Chapter 19.01, *Authority, Purposes, and Effects of the Zoning Ordinance.*

The amendment is consistent with the purpose of the Zoning Ordinance to protect and promote the public health, safety, peace, comfort, convenience, aesthetics, prosperity, and general welfare. More specifically, the amendments serve to establish clear, understandable and applicable land use regulations that comply with state law.

SECTION 3: Zoning Amendment. The City Council of the City of American Canyon hereby amends the Zoning Ordinance as follows:

1. **Chapter 19.10 Residential Districts**

19.10.040 Permitted uses.

Table 19.10.040 of this section sets forth the permitted and conditionally permitted uses for each residential district. A "P" designates a permitted use. A "C" indicates a conditionally permitted use subject to approval of a use permit by the planning commission. An "M" indicates a minor use permit is required pursuant to Chapter 19.42. If no letter is found opposite a particular use, it is not permitted in that district.

Restrictions may include the requirement for recordation of overflight or avigation easements.

6. **Chapter 19.16: Planned Community District**

19.16.050 Permitted uses.

There shall be no principally permitted uses other than those approved under a conceptual master plan and approved planned community development permit or modification thereof. (Ord. 2001-02 § 1 (part), 2001)

NOTE: Permitted and conditionally permitted uses on parcels located within a designated Napa County Airport Compatibility Zone may be restricted or prohibited subject to the requirements of the policies related to airport compatibility in the American Canyon General Plan and the Napa County Airport Land Use Compatibility Plan. Restrictions may include the requirement for recordation of overflight or avigation easements.

7. **Chapter 19.19: Specialty Commercial Overlay District**

19.19.020 Allowable uses.

A. Property in the CS overlay district may be used either for industrial purposes, consistent with the permitted and conditionally-permitted uses allowed by this title for the underlying LI base zone district, or for specialty commercial purposes[1].

B. Should the owner of property in the CS overlay district decide to use the property for the purpose set forth in Section 19.19.010, the following uses as defined in use classifications, may be permitted[1]:

1. Public and quasi-public uses:
   a. Public information center,
   b. Public parking,
   c. Utilities, minor;
2. Commercial Uses:
   a. Bank, savings and loan, including walk-up service
   b. Entertainment, indoor,
   c. Lodging services,
   d. Personal services,
   e. Restaurant,
   f. Retail sales, visitor-oriented.

C. Should the owner of property in the CS overlay district decide to use the property for the purpose set forth in Section 19.19.010, the following uses as defined in use classifications, may be permitted subject to a conditional use permit[1]:

1. Public and quasi-public uses:
   a. Charitable uses;

2. Commercial uses:
   a. Entertainment, indoor; amusement center,
   b. Lodging services adjacent to a residential district,
   c. On-premises liquor consumption, tasting room,
   d. Liquor store;
3. Temporary uses:
   a. Commercial filming,
   b. Live entertainment,
   c. Mobile structure (subject to Chapter 19.30),
   d. Tent;
4. Public and quasi-public uses:
   a. Antenna, commercial,
   b. Antenna exceeding height limitations;
5. Commercial uses:
   a. Entertainment, indoor, gaming,
   b. On-premises liquor consumption,
   c. Restaurant, night use adjacent to residential district,
   d. Restaurant, take-out; night use adjacent to residential district.

[1]NOTE: Permitted and conditionally permitted uses on parcels located within a designated Napa County Airport Compatibility Zone may be restricted or prohibited subject to the requirements of the policies related to airport compatibility in the American Canyon General Plan and the Napa County Airport Land Use Compatibility Plan. Restrictions may include the requirement for recordation of overflight or avigation easements.

8. **Chapter 19.41 Design Permits**

19.41.050 Required Findings.

Approval of a design permit application may be granted by the appropriate decision-making authority only if all of the following findings are made:

A. The project complies with all applicable provisions of this Title and any applicable approvals granted for the project by any decision-making authority.
B. The project and its design complies with any applicable design guidelines.
C. The project and its design complies with all applicable General Plan policies.
D. The project complies with applicable policies of the Napa County Airport Land Use Compatibility Plan.
E. The project's quality and character are compatible with the surrounding area, unless physically deteriorated or blighted, and will not be materially detrimental to existing development.
F. The proposed design is compatible with existing development in the area in terms of scale, height, bulk, proportion, materials, cohesiveness, color, and the preservation of privacy.
G. The design improves the community's appearance by avoiding both excessive variety and monotonous repetition.
H. The proposed design promotes a harmonious transition in terms of scale and character between areas of different General Plan land use designations and zoning districts.
I. The proposed design provides for adequate and safe on-site vehicular and pedestrian circulation.

9. **Chapter 19.42 Conditional Use Permits**

19.42.020 Review and Approval Procedures.

D. Required Findings. The Planning Commission may approve or conditionally-approve an application for a conditional use permit or minor use permit if it makes all of the following findings:

   1. The proposed use is consistent with the policies and programs of the General Plan and any applicable master or specific plan.

2. The proposed use is consistent with the purpose(s) and standards of the applicable zoning district(s).
3. The proposed use complies with applicable policies of the Napa County Airport Land Use Compatibility Plan.
4. The project site is physically suitable for the type and intensity of land use being proposed.
5. The proposed use will not be a nuisance or materially detrimental to the general health, safety, and welfare of the public or to property and residents in the vicinity.
6. The site for the proposed use has adequate access, and meets parking and circulation standards and criteria.
7. There are adequate provisions for water and sanitary services, and other public utilities to ensure that the proposed use would not be detrimental to public health and safety.

10. **Chapter 19.43 Variances**

19.43.030 Review and Approval Procedures.

C. Required Findings. The Planning Commission may approve or conditionally approve a variance application if it makes all of the following findings:

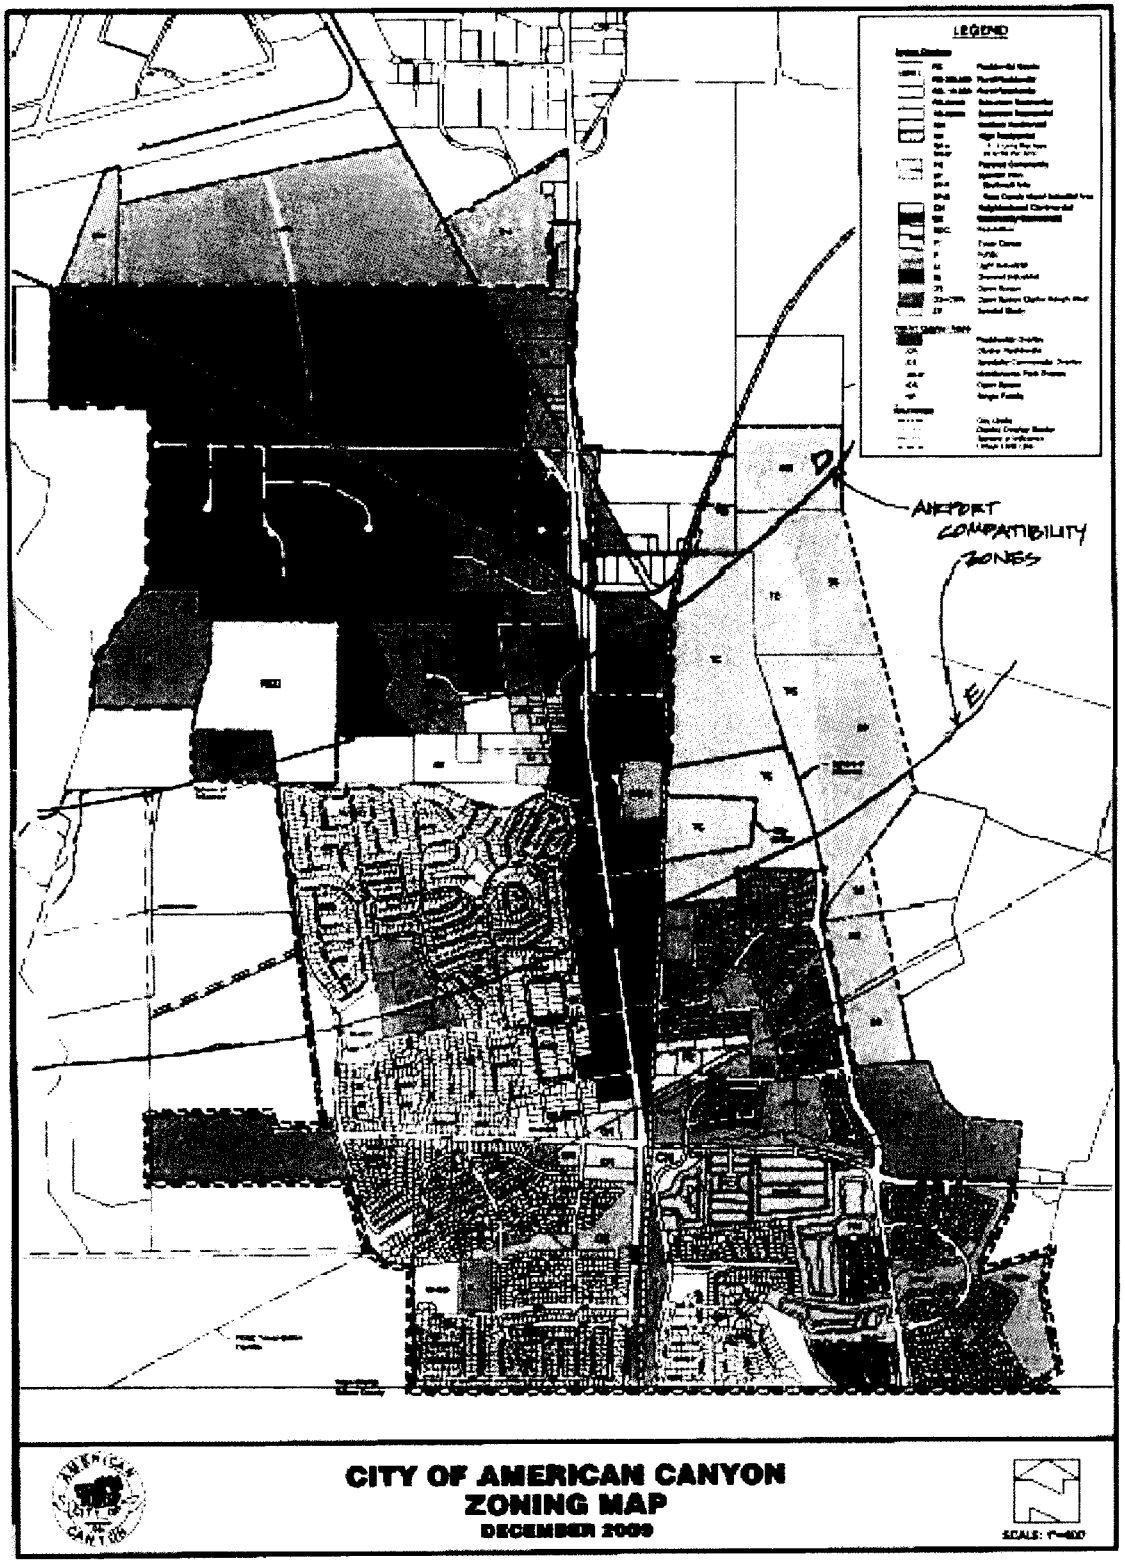
1. Special circumstances exist applicable to the subject property, including size, shape, topography, location, existing improvements, or surroundings, such that the strict application of this Title deprives such property of privileges enjoyed by other property in the vicinity and in the same zoning district(s).
2. Granting of the variance does not constitute a grant a special privileges inconsistent with the limitations upon other properties in the vicinity and zoning district(s) in which such property is located.
3. Granting of the variance will not be materially detrimental to the public health, safety, or welfare or to property or residents in the vicinity.
4. Granting of the variance does not allow a use or activity that is not otherwise expressly authorized by the regulations governing the subject parcel.
5. Granting of the variance will not result in an inconsistency with the General Plan, including policies related to airport compatibility.

11. **Chapter 19.46 Zoning Clearances and Certificates of Occupancy**

19.46.030 Review and Approval Procedures.

A. Zoning Clearances.

1. Prior to the issuance of a business license or building permit for any establishment of use or construction of a building or structure, a zoning clearance shall be issued by the Planning Director, certifying that the business license or building permit complies with all provisions of this Title and any discretionary approvals, and with the Napa County Airport Compatibility Plan policies and regulations where applicable.
2. Prior to the issuance of a zoning clearance, the applicant shall provide evidence to the Director of approval from any appropriate agencies and city departments.



B. Certificates of Occupancy. A certificate of occupancy shall state that the building or proposed use of a building or land complies with all of the provisions of the Municipal Code and all other building codes applicable to occupancies within the City. A record of all certificates shall be kept on file at the City offices and copies shall be furnished on request to any person having a proprietary or tenancy interest in the affected building or land.

1. Building certificates of occupancy. A certificate of occupancy for a new building or the alteration of an existing building shall be applied for concurrently with the application for a final inspection permit. The certificate shall be issued after final

inspection has been completed and it has been determined that construction conforms to the Municipal Code's building regulations, as well as to the provisions of this Title.

2. Use certificates of occupancy. A certificate of occupancy for a change in the use of a building or structure shall be applied for concurrently with an application for a business license before any such new use commences. The certificate shall be issued within 10 days after the application has been made, provided that such use is in conformity with the provisions of this Title and with the Napa County Airport Compatibility Plan policies and regulations where applicable.

Zoning Map with graphic "indicator" lines showing airport zones D & E added:

SECTION 4: Severability

The City Council hereby declares that if any section, subsection, sentence, clause or phrase of this Ordinance is, for any reason, held to be invalid or unconstitutional such decision shall not affect the validity or constitutionality of the remaining portions of this Ordinance. The City Council hereby declares that it would have passed this Ordinance, and each section, subsection, clause or phrase hereof, irrespective of the fact that any one or more sections, subsections, sentences, clauses or phrases may be declared invalid or unconstitutional.

PASSED, APPROVED AND ADOPTED at a regular meeting of the City Council of the City of American Canyon on June 1, 2010, by the following vote:

City of American Canyon General Plan and Zoning Consistency Determination
Airport Land Use Consistency Determination # P109-0002-ALUC
City of American Canyon Files # PL 09-0035; GP 09-0002

Dear Mr. Cooper,

The Napa County Airport Land Use Commission (ALUC) considered the referral of the City of American Canyon General Plan and Zoning Consistency Determination at a public hearing on May 5, 2010, pursuant to the requirements of Section 21676.5 of the California Public Utilities Code.

The project amends and updates the City of American Canyon General Plan to bring it into compliance with the Napa County Airport Land Use Compatibility Plan (ALUCP). Included are concurrent Zoning Amendments to implement ALUCP policies. These changes affect all parcels located in approximately the north half of the City that are located within Napa County Airport Influence Areas Zone D, the Common Traffic Pattern, and Zone E, Other Airport Environs. Zone D extends approximately 1.9 miles (10,000 feet) south of the centerline of Runway 6/24 and 2.0 miles southeast of the centerline of Runway 18/36. Zone E extends an additional 4,000 feet beyond the Zone D boundary.

Please be advised that the Commission, by a unanimous vote (5-0-2 excused), found the proposed project to be **CONSISTENT** with the Napa County Airport Land Use Compatibility Plan (ALUCP). This finding of consistency with the ALUCP is limited to the specific project reviewed by the ALUC on May 5, 2010. Any variation in the plans, elevations, or other aspects of the project could affect ALUCP consistency.

Should you or the project proponent have any questions regarding compatibility for any project changes, please feel free to contact me or ALUC staff, Ronald Gee, at (707) 299-1351 or ronald.gee@countyofnapa.org.

Very truly yours,

John McDowell
Deputy Executive Officer

Martin Pehl, Napa County Airport Manager
Susan McGuigan, ALUC Counsel

EXHIBIT C

RESOLUTION NO. 2020-06

A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF AMERICAN CANYON DECLARING THAT RESIDENTIAL USES ARE THE BEST USE OF THE RICK HESS PROPERTY ON OAT HILL

WHEREAS, there is a critical shortage of residential housing for all levels of affordability in California; and,

WHEREAS, the State of California Department of Housing and Community Development (HCD) and the Association of Bay Area Governments (ABAG) will soon commence the process to establish Regional Housing Needs Allocations ("RHNA") for the greater San Francisco Bay Area and possibly Napa County as a Subregion; and,

WHEREAS, in light of the State's housing shortage, HCD and ABAG are expected to continue to emphasize the need for residential housing in Napa County and in the City of American Canyon ("City") within its municipal boundaries; and,

WHEREAS, at least since 2005, the City has considered the possibility of designating and rezoning the Hess Property and certain surrounding properties for residential uses but, to date, has not yet completed an evaluation of such an action; and,

WHEREAS, on August 20, 2019, the City Council considered the possibility of designating and rezoning approximately 30 acres on the east side of Oat Hill south of Napa Junction Road (the "Hess Property") for residential uses; and

WHEREAS, the City has commenced an update of the General Plan which could potentially accommodate residential uses on the Hess Property but could take approximately two (2) years to complete; and

WHEREAS, the General Plan update process timeframe is longer than Applicant and Owner, Mr. Hess, is willing to make his property available for residential development; and

WHEREAS, also on August 20, 2019, the Council concluded that residential uses are the best use for the Hess Property and directed Staff to work with Mr. Hess to identify means by which the City might evaluate and consider a residential development proposal for the Hess Property while providing Mr. Hess some certainty that his investment in a planning and California Environmental Quality Act (Pub. Res. Code § 21000 *et seq.*, "CEQA") review process would be brought to completion; and

WHEREAS, on November 6, 2019, Oat Hill Properties II, LLC (Rick Hess) submitted a General Plan Text Amendment and Zoning Code Overlay Study Amendment application which would allow for the filing of a subsequent General Plan Amendment and consistent Zoning Ordinance, which authorize residential development consistent with State law; and

WHEREAS, after consideration of the need for further study of residential development of the Hess Property compatibility with the Napa County Airport Land Compatibility Plan, on January 14, 2020, Mr. Hess transmitted a communication to the City Attorney, City Manager, and City Community Development Director stating that he could be provided with the assurance that he needs to proceed with residential development on the Hess Property if the Council confirms that direction by Resolution rather than General Plan Text Amendment and Zoning Overlay; and

WHEREAS, the Resolution will provide Mr. Hess with the certainty he requested on August 20, 2019 and January 14, 2020; and

WHEREAS, the proposed Resolution is exempt from CEQA. The Resolution does not reclassify or rezone the Hess Property for specific residential uses, but is rather a reflection of the Council's determination that the best use of the Hess Property is for residential uses. For these reasons, the action is not a project under CEQA and is exempt from CEQA review as it has no present potential impact on the physical environment. CEQA Guidelines §§ 15060(b)(3c), 15378(b); and

WHEREAS, the City Council has considered all of the written and oral testimony presented at this public hearing and its prior actions in considering this Resolution.

NOW, THEREFORE, BE IT RESOLVED by the City Council of the City of American Canyon that:

1. All recitals herein are incorporated and deemed true and correct;

2. The Council declares that residential uses are the best use of the Hess Property on Oat Hill, subject to consideration for General Plan Amendment.

PASSED, APPROVED and **ADOPTED** at a regularly scheduled meeting of the City Council of the City of American Canyon held on the 21st day of January 2020, by the following vote:

AYES:	Council Members Aboudamous, Joseph, Leary, Vice Mayor Oro, Mayor Garcia
NOES:	None

5 Flight Tracks 8
6 Flight Track Segments 9
7 Airspace Plan 12

Location

The Oat Hill properties are located southeast of the Napa County Airport. The site is on the northern edge of the City of American Canyon, west of Highway 29. At its closest point, the project site is about 7,500 feet from the nearest runway (Runway 6-24) at the Napa County Airport (Figures 1 and 2). The project would consist of a variety of housing types, expansion of an existing school site, and possibly some commercial uses.

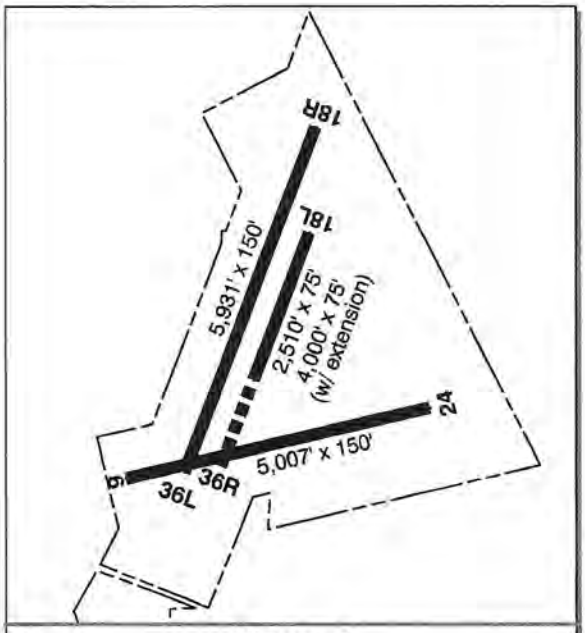

Figure 1

Analytical Task

The Napa County Airport Land Use Commission (ALUC) charged Mead & Hunt with assessing the compatibility of the proposed Oat Hill development with operations at the Napa County Airport. The assessment was to evaluate compatibility based upon:

- Safety
- Noise
- Overflight
- Airspace

Assessment of each of these factors is to be based upon the 2002 *California Airport Land Use Planning Handbook* and current aviation industry practice. The purpose of the analysis is to determine whether the boundaries of compatibility zone "D" should be modified. The boundary of the D Zone passes through the Oat Hill site. Napa County ALUC policies do not permit new residential uses within this zone.

Sources of Data

Data for this analysis came from a variety of sources. Noise contours and airspace surfaces were taken from the draft Napa County Airport Master Plan which was released in June 2004. The 2004 draft *Master Plan* is conceptually identical to the master plan adopted in 1990. Both plans included only one change to the runways at Napa County Airport: extension of the parallel runway (Runway 18L-36R) to accommodate Japan Air Lines (JAL) training operations. The 1990 and 2004 plans differ in the length that the runway would be extended. Under the 1990 plan the parallel runway would be extended to 3,380 feet, under the 2004 plan the length would be increased to 4,000 feet. The greater length is required because the aircraft types and operating requirements used for JAL training have changed. The 2004 version has been used in this analysis because its adoption is expected to occur within a few months. Environmental documentation for the runway extension and other projects is being prepared.

Safety factors were taken from the California Airport Land Use Planning Handbook. Detailed flight tracks developed to assess overflight impacts were developed from interviews with knowledgeable individuals associated with the Napa County Airport on the dates noted, including:

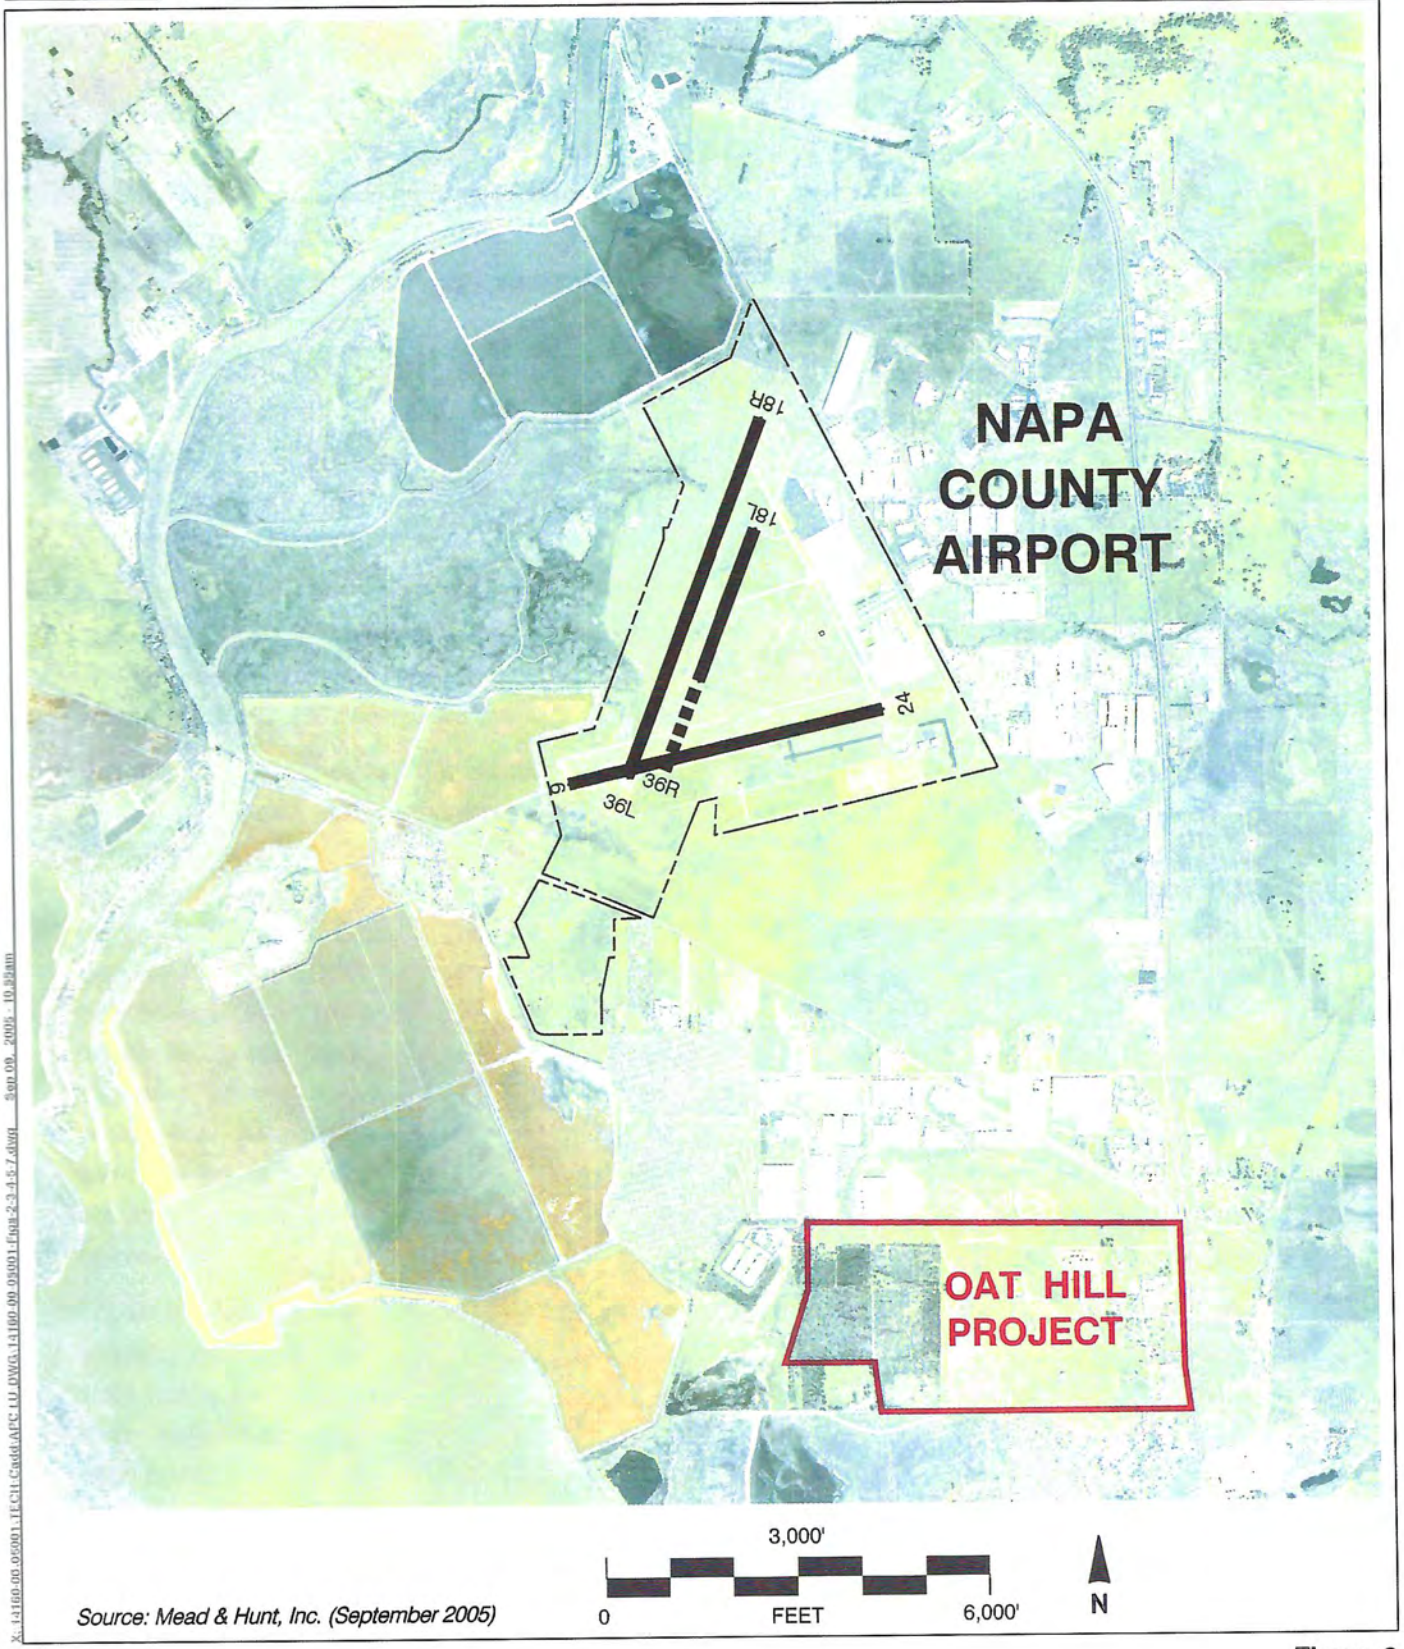

Figure 2

Location Map
Napa County Airport

- Tom Shannon, Air Traffic Manager, Napa Airport Traffic Control Tower, Federal Aviation Administration and his staff (June 20, 2005)
- Bob Berthold, JAL Chief Flight Instructor, IASCO (June 6, 2005)
- Susan Chambers, Chief Flight Instructor, Bridgeford Flying Services (June 6, 2005)
- Wayne Lackey, President, Wine County Helicopters (June 6, 2005 at Airport Advisory Commission meeting)
- Napa County Airport Advisory Commission (at its public meeting on June 6, 2005)
- Members of the Napa Area Pilots Association (June 6, 2005)

The individuals interviewed are aviation professionals with direct, daily experience with flight operations at Napa County Airport. The two chief flight instructors oversee most flight training operations at the airport. The Napa County Airport Advisory Commission was used as a forum for public input. Members of the Napa Area Pilots Association were invited to contribute their insight on flight operations.

Those interviewed were asked to define common flight tracks based upon their experience. In each case, a scaled aerial photograph of the Napa County Airport environs was provided as an aid. In many cases those interviewed sketched the flight tracks on the drawing. Mr. Shannon, Air Traffic Manager was interviewed last. As the air traffic controllers now have radar displays in the tower, they were asked to review the flight tracks suggested by others.

Assessment

Safety

Safety is in many respects a more difficult concern to address in airport land use compatibility policies than noise. A major reason for this difference is that safety policies address uncertain events which may occur with occasional aircraft operations, whereas noise policies deal with known, more or less predictable events which do occur with every aircraft operation. Because aircraft accidents rarely happen and the time, place, and consequences of their occurrence cannot be predicted, the concept of risk is central to the assessment of safety compatibility.

Safety criteria are currently defined in three ways. The Federal Aviation Administration's Airport Design advisory circular (AC 150/5300-13) contains land use policies for runway protection zones. Runway protection zones are areas beyond runway ends in which residences and places of public assembly are prohibited. Under this definition, places of public assembly include churches, schools, hospitals, office buildings, shopping centers, and other uses with similar concentrations of people. The Federal Aviation Administration recommends that airports acquire the property within their runway protection zones.

The runway protection zones closest to the Oat Hill project are those for Runways 36L, 36R, and 24. Of these, the future runway protection zone for Runway 36L lies nearest to the project. However, it is over 4,500 feet from this runway protection zone to the project site.

The safety compatibility zones described in the California Airport Land Use Planning Handbook are the next source of guidance on safety policies. In Chapter 9, the Handbook provides examples of various configurations of safety compatibility zones and recommended policies for each zone. Of the five examples provided for general aviation airports (i.e., one without scheduled passenger service), Example 3 in Table 9K best fits the characteristics for Runway 36L. That is, it is a long runway at a general aviation airport with a precision instrument approach. The compatibility policies for this runway would be the most restrictive on the Oat Hill property. If these policies were applied, a portion of the Oat Hill property would lie within the traffic pattern zone (Figure 3). Within the traffic pattern zone, the Handbook would allow residential uses and most nonresidential uses. Uses to avoid include schools, hospitals, and outdoor uses with high occupancy levels.

An emerging trend in California compatibility plans is to directly use national accident data to create accident risk intensity contours. Similar in concept to noise contours, accident risk intensity contours define areas with similar probabilities of an aircraft accident. These zones vary in size based upon various factors. For a busy runway serving both large and small general aviation aircraft, these zones will extend about one mile from the runway end. The outermost accident risk intensity contour for Runway 36L (which would come closest) would be over 3,500 feet from the nearest corner of the Oat Hill project site.

Safety Conclusion: The proposed Oat Hill project would not conflict with any of the three established sources of guidance on safety compatibility.

Noise

Noise is one of the most basic airport land use compatibility concerns. Moreover, at major airline airports, many busy general aviation airports, and most military airfields, noise is usually the most geographically extensive form of airport impact.

For the purposes of airport land use compatibility planning, noise generated by the operation of aircraft to, from, and around an airport is primarily measured in terms of the cumulative noise levels of all aircraft operations. In California, the cumulative noise level metric established by state regulations, including for airport noise, is the Community Noise Equivalent Level (CNEL). This metric provides a single measure of the average sound level in decibels (dB) to which any point near an airport is exposed. To reflect assumed greater community sensitivity to nighttime and evening noise, events during these periods are counted as being louder than actually measured. Cumulative noise levels are usually illustrated on airport area maps as contour lines connecting points of equal noise exposure. Mapped noise contours primarily show areas of significant noise exposures — ones affected by high concentrations of aircraft takeoffs and landings.

Single-event noise metrics are sometimes used in evaluating impacts of proposed airport modifications. They are rarely used as a means of defining land use compatibility policies.

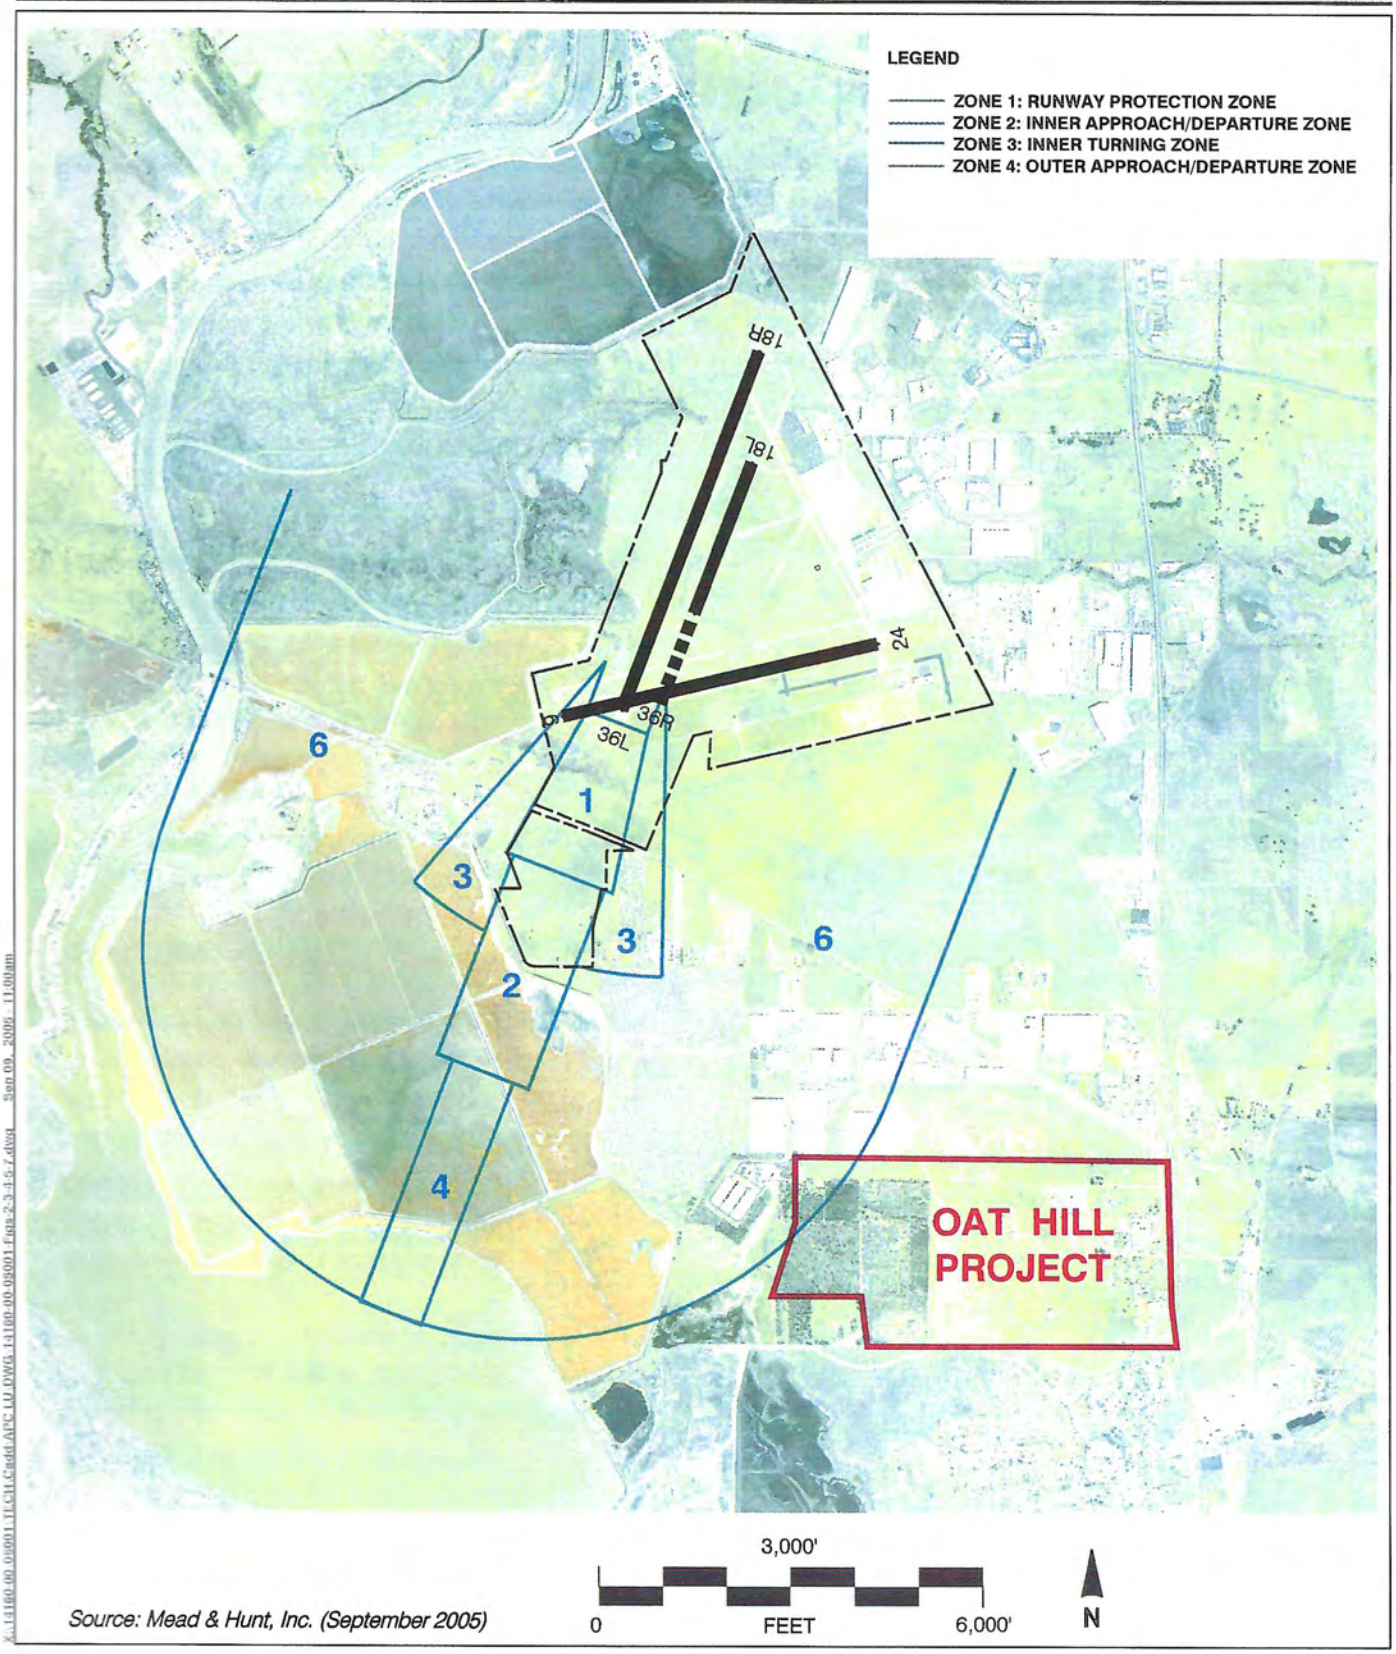

Figure 3

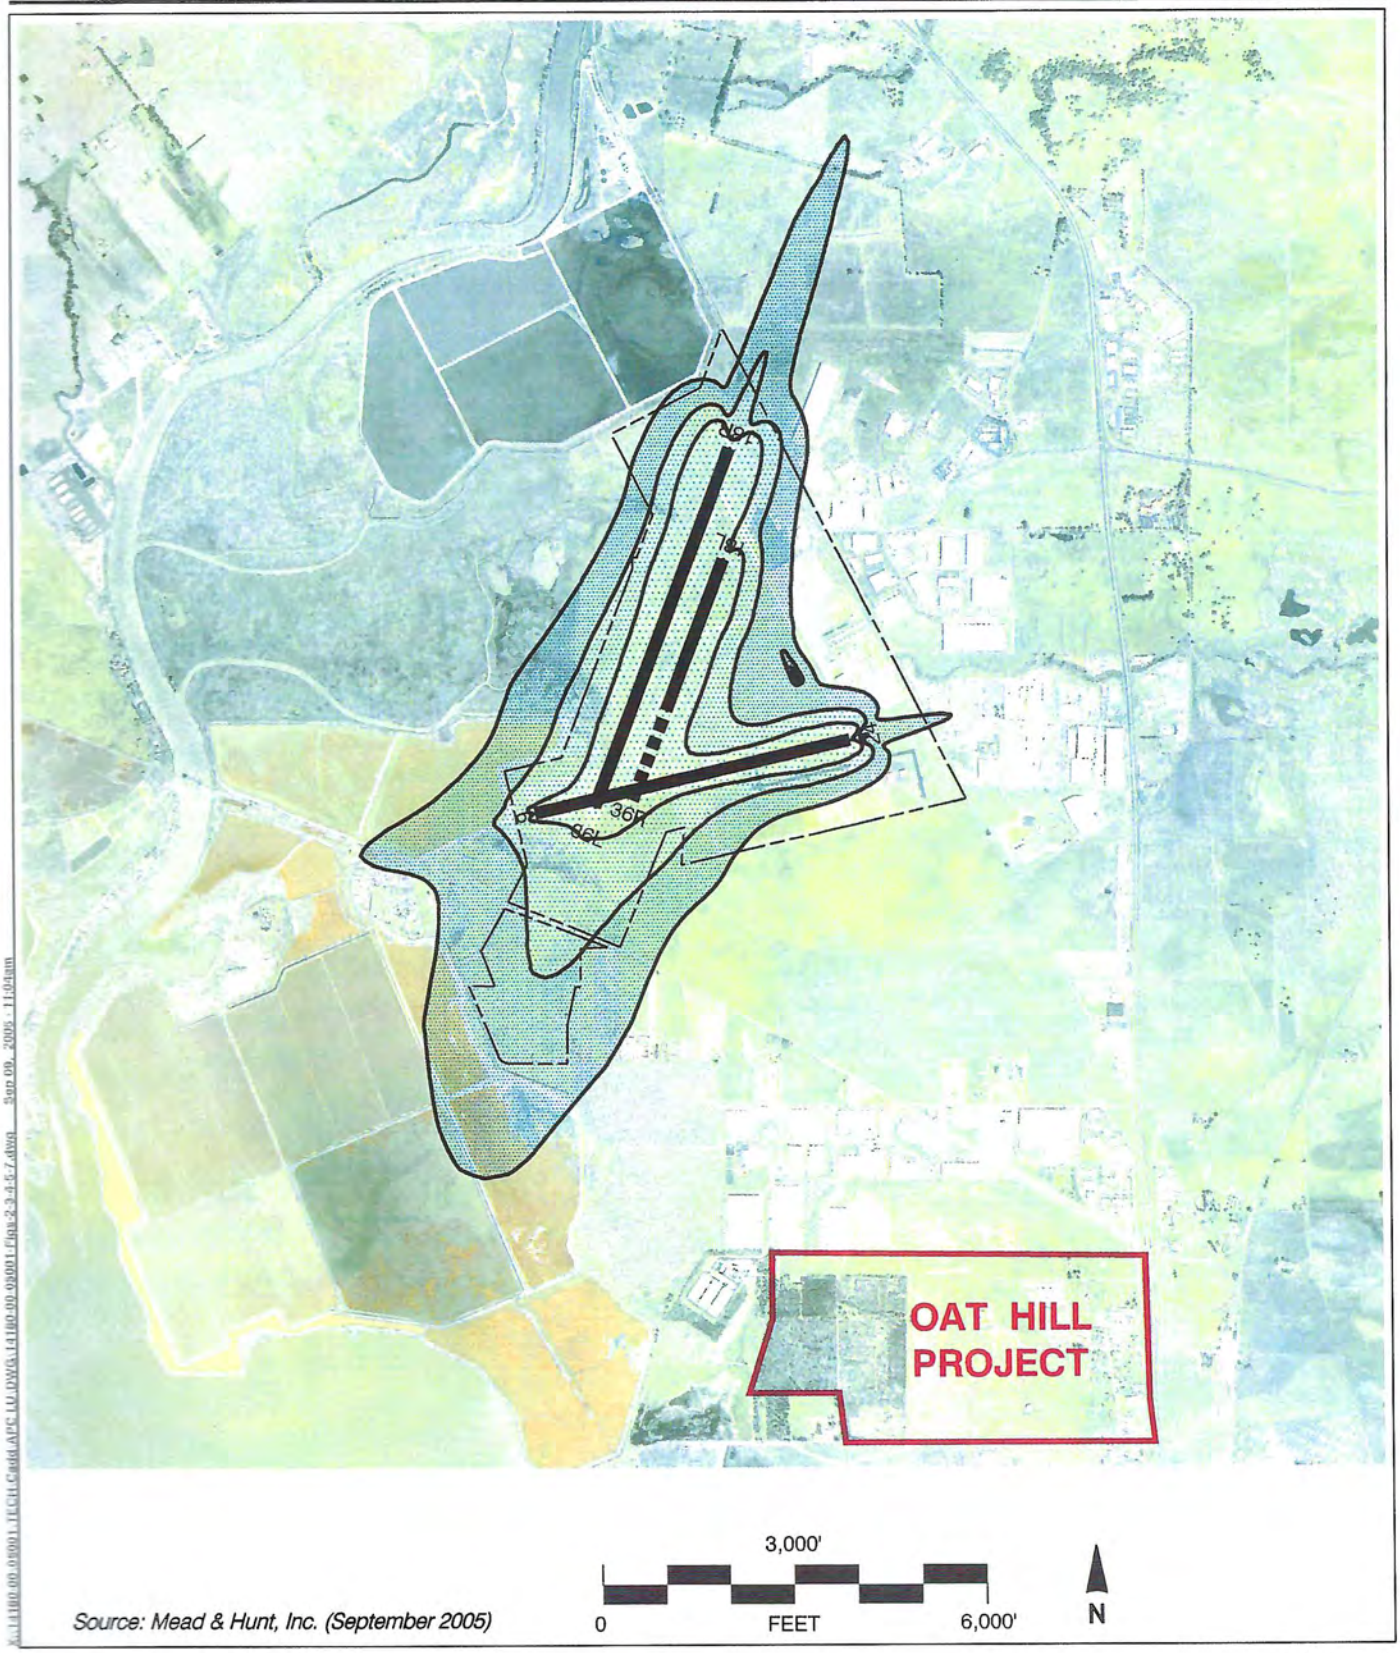
Caltrans Handbook Safety Zones

Napa County Airport

For general aviation airports in rural settings, the 55 CNEL noise contour is commonly used as the threshold for allowing residential uses. In suburban settings, the 60 CNEL contour is typically used. These thresholds are recommended in both the California Airport Land Use Planning Handbook and are consistent with current aviation industry practice. The Federal Aviation Administration generally limits concerns over residential uses to within the 65 CNEL contour. However, the Federal Aviation Administration has supported policies to restrict new residential uses out to the 60 CNEL contour. The nearest edge of the Oak Hill property is over 4,000 feet from the nearest point on the current 55 CNEL contour and about 3,500 feet from the 55 CNEL contour forecast for 2022 (Figure 4).

Noise Conclusion: The proposed uses in the Oat Hill site are compatible with the existing and forecast aviation noise contours.

Overflight



Experience at many airports has shown that noise-related concerns do not stop at the boundary of the outermost mapped CNEL contour. Many people are sensitive to the frequent presence of aircraft overhead even at noise low levels. These reactions can mostly be expressed in the form of annoyance.

At many airports, complaints often come from locations beyond any of the defined noise contours. Areas that underlie common flight patterns are likely places for this to occur. The basis for such complaints may be a desire and expectation that outside noise sources not be intrusive — or, in some circumstances, even distinctly audible — above background noise levels. The limited numbers of complaints that have been received at Napa County Airport have been almost exclusively from outside the noise contours.

The *Handbook* discusses overflight impacts in terms of both single-event noise impacts (e.g., speech interference or sleep disturbance) and annoyance. The *Handbook* does not recommend specific policies for areas affected by overflights. It mentions excluding residential uses, insulation of residences and schools, and relying upon notification of potential buyers as possible strategies for addressing overflight effects.

Recent industry practice has been to select one of two strategies depending upon the current pattern of development. Where an airport's environs are largely free of sensitive uses (e.g., residences) and not already committed to this type of development, compatibility policies will favor retention of the non-sensitive uses (e.g., agriculture, industrial). Where the areas subject to overflights are already largely developed or are committed to sensitive uses, compatibility policies will favor a high-low strategy. A high-low strategy is based upon the premise that overflight annoyance is less likely to occur in residential areas with higher densities due to higher ambient noise levels. Therefore, in areas subject of overflight impacts can be either at rural densities (e.g., 40 acre parcels) or high densities (e.g., apartments or common-wall residences). The high-low strategy results in either a small pool of potentially annoyed residents (low density) or a large number of residents (high density), but lower likelihood of annoyance occurring.

Current and anticipated flight tracks were mapped using data collected though the interviews described above. Common flight tracks and the most commonly overflown areas associated with Napa County Airport operations are depicted on Figure 5.

Source: Mead & Hunt, Inc. (September 2005)

Figure 4

Noise Contours: 2022

Napa County Airport

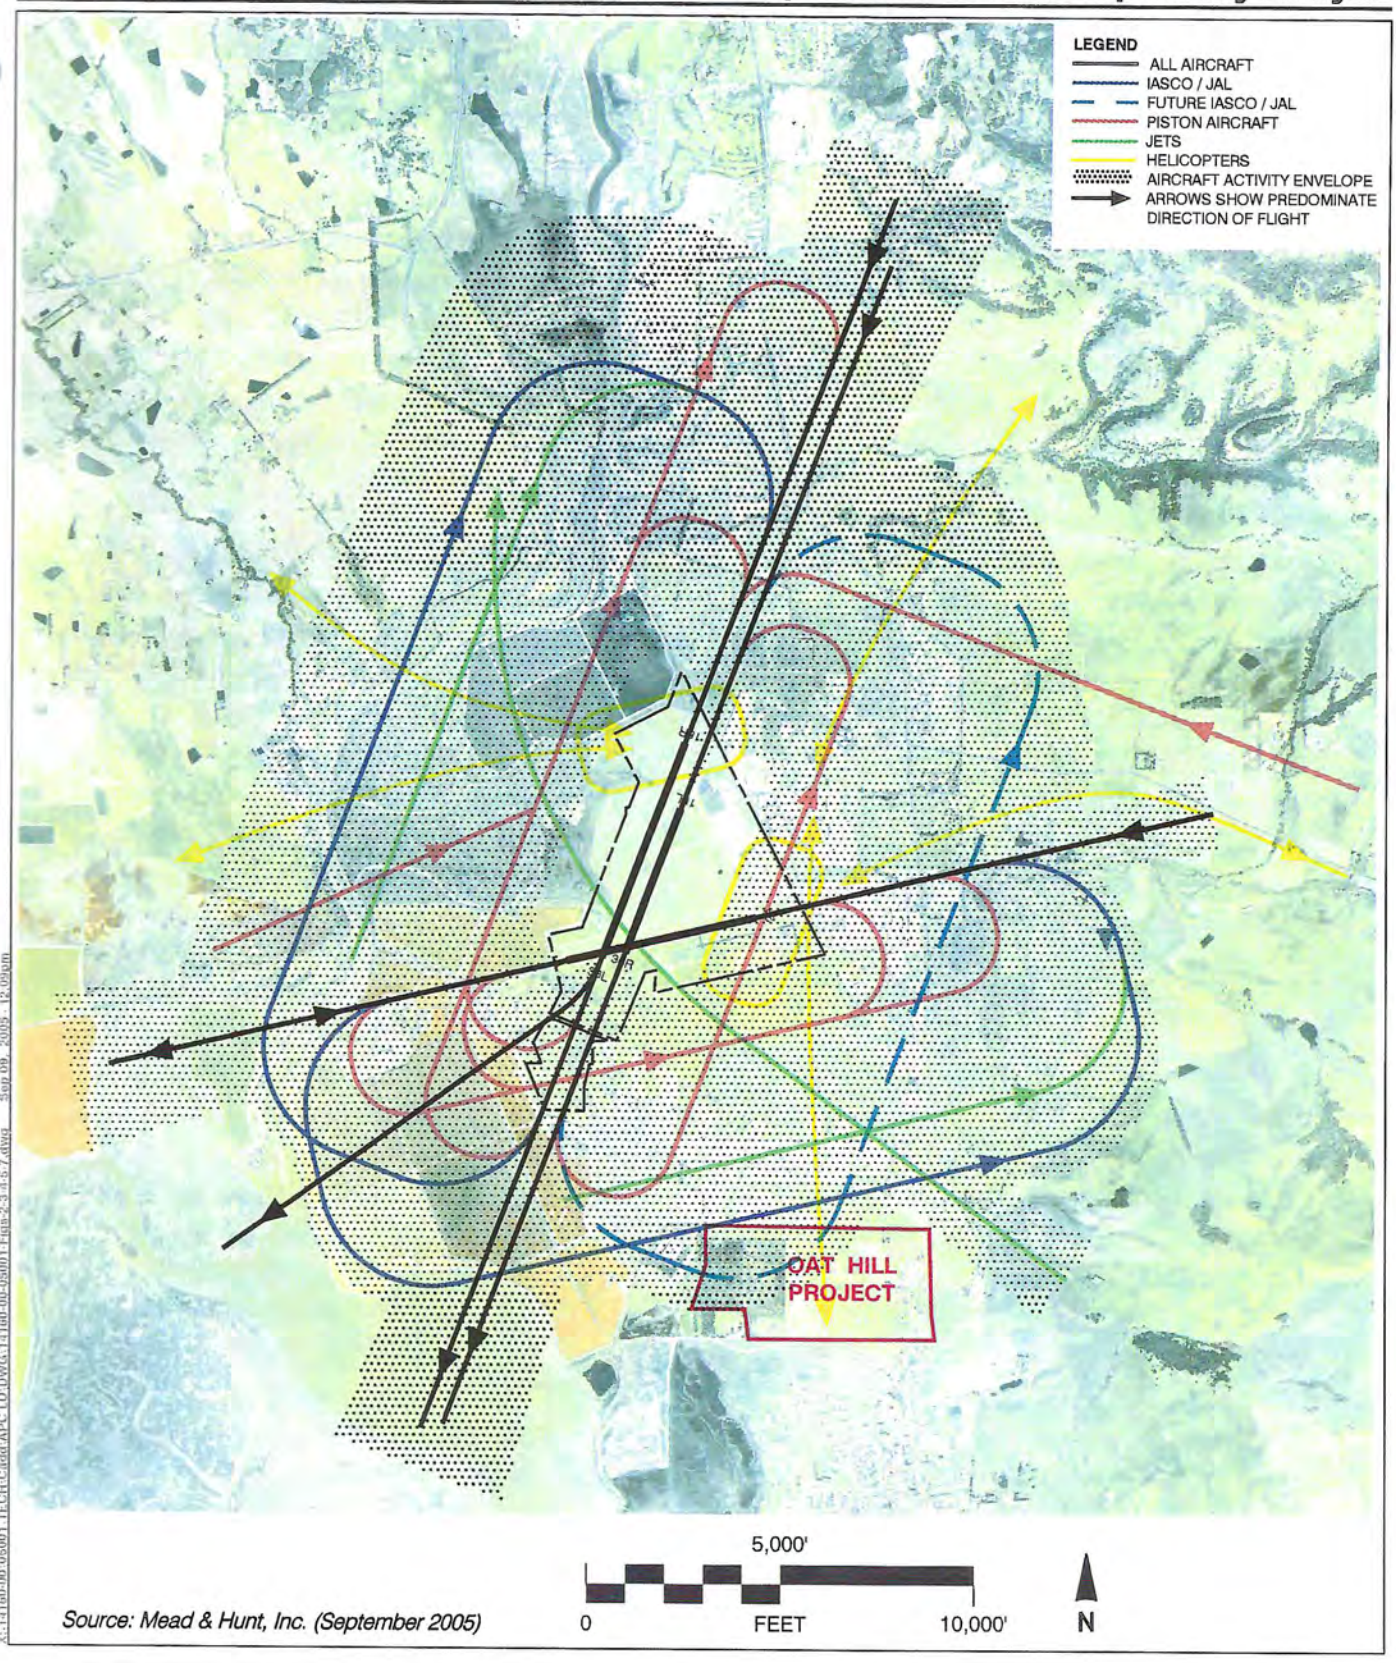


Figure 5

Common Flight Tracks

Napa County Airport

It is important to realize the variability in the flight tracks. Everywhere within five miles of the airport will be overflown in an average year. The graphic depicts only those areas that are commonly overflown near traffic pattern altitude. Typically traffic pattern altitude for small aircraft is 1,000 feet above airport elevation, for large aircraft 1,500 feet above airport elevation. Touch-and-go flight tracks have greater predictability than arrival and departure tracks.

The Oat Hill site is currently overflown during several distinct types of operations. A significant addition in overflights will occur when the parallel runway (Runway 18R-36L) is extended. An extension of this runway is included in both the 1990 and 2004 plans. The extension is expected to be operational in 3 to 5 years. Each operation that commonly overflies the Oat Hill site is discussed below. The standard names for flight track segments used in the discussion are identified in Figure 6.

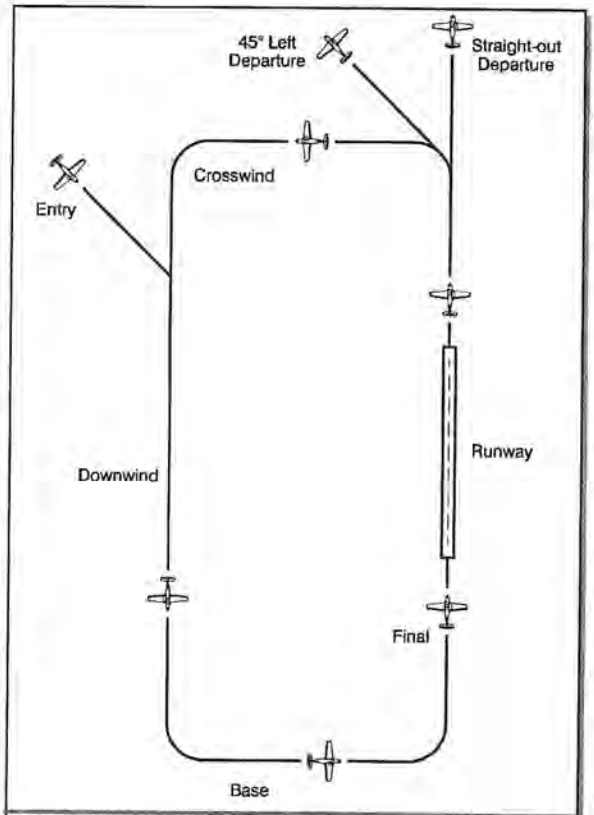

Figure 6

The highest volume of overflights occurs when winds favor the use of Runway 24 (the east-west runway). This occurs regularly during the spring and early summer. It will also occur sporadically during the fall and winter during the passage of storm fronts. When winds favor the use of Runway 24, all classes of aircraft will conduct landings on Runway 24. Tough-and-go operations will also fly a pattern with repeated landings and takeoffs on Runway 24. Most piston aircraft not associated with the JAL training program will fly their downwind leg about one-half nautical mile south of Runway 6-24. Larger turboprops and jets will fly the downwind leg from one to three miles south of the runway. Because of the requirements of its training program, JAL training flights will occur about one and a quarter nautical miles south of the runway. There will typically be several JAL training aircraft in the pattern at the same time.

When winds favor Runways 18L and 18R (the wind condition most commonly experienced), jets arriving from the southeast will overfly the area in and around the Oat Hill site. The flight track shown in Figure 1 is suggestive of the general orientation of these operations. However, the individual flight tracks will vary widely from the generic track shown.

Helicopter air taxi operations to Oakland International Airport commonly overfly the western portion of the Oat Hill site at or below traffic pattern altitude during both arrivals and departures. This track is set by destination not by wind patterns. Helicopter operations by the California Highway Patrol are regularly conducted south of Napa County Airport. However, because their tracks vary greatly, they are not shown in Figure 1.

Runway 18L-36R is planned to be extended to 4,000 feet. An extension to accommodate JAL training flights has been planned since 1990. The 2004 draft master plan changes the length,

but not the purpose. Environmental review is currently being completed to support the extension. When this runway is extended, it is anticipated to be regularly used JAL training flights. Staff with IASCO, that provides the instructors for the JAL flights, indicated that lengthening Runway 18L-36R would make it usable for their tough-and-go operations. There are a couple important benefits. One, it would increase the ease with which larger aircraft could use the main runway (Runway 18R-36L). Second, it would reduce the complexity for air traffic control staff in sequencing aircraft operations on the main runway. As shown in Figure 1, these future JAL operations would overfly the northwestern third of the Oat Hill property.

Overflight Conclusion: The Oat Hill property is subject to regular overflight by a variety of aircraft types. JAL's single-engine piston aircraft will overfly the site during training flights from Runways 18R-16L and 18L-36R when they are flying the pattern east of the airport. JAL training aircraft will also overfly the site when the wind favors the use of Runway 6-24. The noise level of individual aircraft will comparable to a power lawnmower in a neighbor's yard. There will normally be several aircraft training at the same time. This would mean an overflight could occur about every 45 seconds. The site is overflown by helicopters traveling to or from Oakland International Airport (or other destinations south of the airport). At most these would occur a couple of times per day. Jets arriving from the southeast will sometimes overfly the Oat Hill site. Both the flight tracks and altitude will vary significantly. Noise levels will be at or above the levels of piston training aircraft. The volume of overflights is expected to increase in the near future. The extension of Runway 18L-36R is expected to occur within 3 to 5 years. Once operational, the number of JAL training flights east of the airport is expected to increase significantly. Development of the Oat Hill property with residential uses (or other sensitive uses) could be expected to create conflicts with the Napa County Airport that do not now exist.

Airspace

Relatively few aircraft accidents are caused by land use conditions which are hazards to flight. The potential exists, however, and protecting against it is essential to airport land use safety compatibility. Because airspace protection is in effect a safety factor, its objective can likewise be thought of in terms of risk. Specifically, the objective is to avoid development of land use conditions which, by posing hazards to flight, can increase the risk of an accident occurring. The particular hazards of concern are:

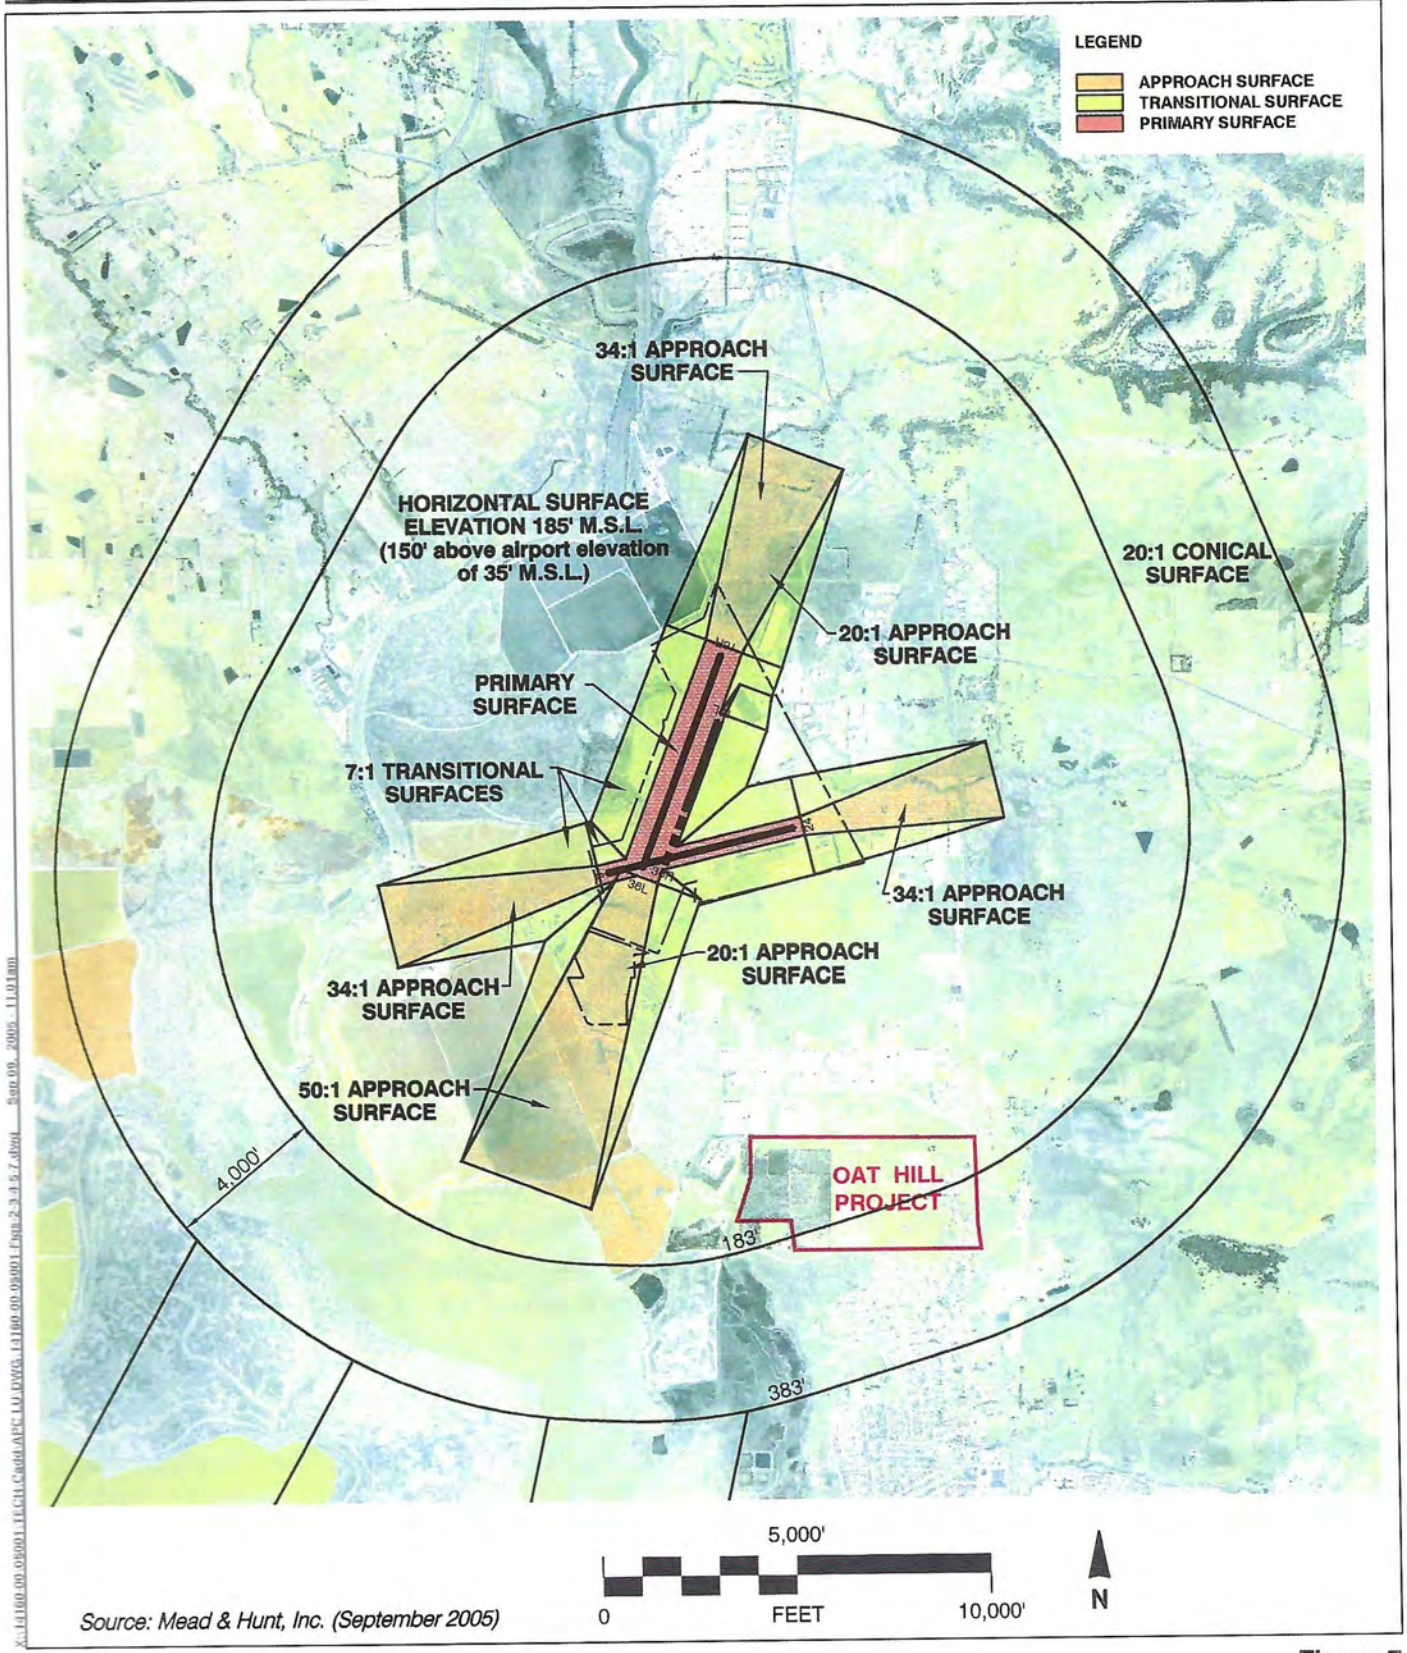
- Airspace obstructions;
- Wildlife hazards, particularly bird strikes; and
- Land use characteristics which pose other potential hazards to flight by creating visual or electronic interference with air navigation.

Whether a particular object constitutes an airspace obstruction depends upon the height of the object relative to the runway elevation and its proximity to the airport. The acceptable height of objects near an airport is most commonly determined by application of standards set forth in Part 77 of the Federal Aviation Regulations. These regulations establish a three-dimensional space in the air above an airport. Any object which penetrates this volume of airspace is considered to be an obstruction and may affect the aeronautical use of the airspace. Obstructions are evaluated using guidance contained in *United States Standards for Terminal Instrument Procedures* (called "TERPS" for historical reasons).

The significance of other potential hazards to flight is principally measured in terms of the

hazards' specific characteristics and their distance from the airport and/or its normal traffic patterns. At an airport that regularly receives use by jet aircraft, as Napa County Airport does, hazards are of most concern within 10,000 feet of runways used by jets.

Oat Hill penetrates the horizontal surface for Napa County Airport (Figure 7). This surface overlies the airport 150 feet above the airport's elevation. As the airport's elevation is 35 feet above mean sea level, the top 85 feet of Oat Hill extends past the horizontal surface.



Although a formal site design does not yet exist for the Oat Hill properties, the development team indicated that estate type single-family homes might be planned for portions of this hill. Constructing homes on the hill that extend past the horizontal surface has the potential to affect the instrument approaches to Napa County Airport. A cursory examination using TERPS criteria, suggest that it is likely that a two-story home would not affect the soon-to-be-activated ILS approach to Runway 36L. It is also not likely that a home on the hill would impact the minimums for circle-to-land approaches. However, this can only authoritatively be answered by a formal analysis by the Federal Aviation Administration.

The uses for the Oat Hill property have not been formally defined. Residential uses appear likely to be the dominant use. No uses likely to be significant wildlife attractants (e.g., golf courses or landfills) have been proposed. The project does not appear likely to create sources of visual or electronic interference. An unequivocal conclusion cannot be made until the details of the proposed development are known. Even then, specific future uses might need independent review if they have unusual characteristics that might cause these forms of interference.

It is appropriate to describe the Federal Aviation Administration's (FAA) role in reviewing the Oat Hill development. FAA's only formal role is to review the project for airspace conflicts. Developers of the Oat Hill property are required by federal statutes to have proposed development reviewed if it would penetrate the imaginary surfaces defined in Federal Aviation Regulations Part 77. Structures on Oat Hill or unusually tall structures elsewhere on the property are likely to need review. The review process is started with submission of FAA Form 7460. If the FAA concludes that the proposed development would not be a hazard to aviation, a "no objection" letter will be issued. Alternatively, the FAA can indicate that a red obstruction light is needed or that specific elements of the project would be a hazard.

The FAA does not have any direct enforcement mechanism; as a federal agency it does not have authority over local land use decisions. However, if FAA recommendations in the airspace review are not followed, operations at Napa County Airport could be directly affected. For example, visibility minimums could be raised on an existing instrument approach, existing instrument procedures could be eliminated, or proposed instrument procedures could be prohibited. All of these measures would reduce the utility of the airport.

Airspace Conclusion: Portions of the Oat Hill property penetrate the horizontal surface. A Federal Aviation Administration airspace review should be conducted if any structures would penetrate this horizontal surface. No uses that would likely be wildlife attractants, or would cause visual or electronic interference have been identified. However, a final project description is needed before a conclusion on this topic could be reached.

Airspace Plan

Napa County Airport

Implications for the Zone D Boundary

California statutes state that the purpose of airport land use compatibility plans is to "...protect public health, safety, and welfare by ensuring the orderly expansion of airports and the adoption of land use measures that minimize the public's exposure to excessive noise and safety hazards within areas around public airports to the extent that these areas are not already devoted to incompatible uses." Compatibility plans must be guided by airport plans and documentation of each airports noise and safety impacts.

The Napa County Airport has generally enjoyed a high degree of compatibility with adjacent land uses. In fact, the airport is often used as a rare example of a busy metropolitan airport that is largely free from incompatible uses. In part this was due to the luck of the airport being sited in what had been a rural area. Good planning has limited new development near the airport to compatible commercial and industrial uses. As development continues to occur in the vicinity of the Napa County Airport, the challenge will be to prevent the introduction of incompatible uses.

This analysis provides more detailed documentation of the impacts of air operations at Napa County Airport than has been previously available. This information was designed to support a determination of whether the boundaries of compatibility zone "D" should be modified near the Oat Hill property.

Based upon the earlier analysis, safety and noise do not appear to be significant concerns for the proposed uses. Airspace is of modest concern, but it has the potential to effect only structures on Oat Hill itself. On the majority of the property airspace is not a concern. Given what is known of the project's elements, neither wildlife attractants, nor visual or electronic interference are expected to be a concern. However, overflight effects are a compatibility concern today, and are expected to increase. It would be inappropriate to permit introduction of residential uses where overflight impacts are a concern. Therefore, we conclude that there are no grounds to shift Zone D.

Napa, California 94559

Re: Mead & Hunt Land Use Compatibility Report

Dear Members of the Commission:

I write to you on behalf of the City of American Canyon ("the City"). We submit these written comments for consideration at your November 2, 2005 meeting, when the Commission will consider the *Oat Hill Development Land Use Compatibility Analysis* prepared by the firm of Mead & Hunt ("the M&H Report"). The City will submit additional comments at the November 2, 2005 meeting, that we will want the Commission to also consider.

As the Commission may recall, the M&H Report was initiated in response to a joint request from the County of Napa and the City, to review the boundary of Compatibility Zones D and E in the Oat Hill area of the City, as described in the current Airport Land Use Compatibility Plan of the Commission.

The City agrees with much of the analysis in the M&H Report. The City, however, does not agree with the conclusion of the M&H Report, since we believe that there are grounds to move the boundary line between Zones D and E in the Oat Hill area.

We believe that a review of pertinent historical information will help the Commission in its review of the M&H Report.

HISTORICAL CHRONOLOGY

April 22, 1991	Napa County ALUC adopts its Airport Land Use Compatibility Plan ("the Plan") for the Napa County Airport. The Plan established Compatibility Zones A through F, with development restrictions for each zone. Residential uses are significantly restricted in Zones A through D. The boundary line between Zones D and E in the Oat Hill area runs along Green Island Road, with land north of Green Island Road in Zone D, and land south of Green Island Road in Zones E and F. The Oat Hill area was included within Zones E and F. The development of

	residential uses within Zones E and F was allowed in accordance with the adopted general plan for the local jurisdiction.
May 28, 1991	Napa County adopts an update to the Airport Master Plan, for development at the Napa County Airport. The Master Plan proposes an extension of Parallel (General Aviation) Runway 18L-36R from a current length of 2,500 feet to a total length of 3,380 feet.
1992	The City is incorporated.
December 15, 1999	The ALUC amends the Plan ("the 1999 Amendment"). The 1999 Amendment establishes Compatibility Zones A through E. New residential uses are determined to be non-compatible uses in Zones A through D. The Impact Assessment for the 1999 Amendment considers noise, overflight, safety, and flight hazards. The major change is to the location of the boundary line between Zones D and E. As a result, a significant portion of the Oat Hill area is included within Zone D.
January 2002	CalTrans amends its Airport Land Use Planning Handbook ("the 2002 Handbook"). The 2002 Handbook considers risk assessment and determination of risk acceptability as key components in establishing the compatibility zones.
October 2003	Napa County, the City of Napa and the City execute a Memorandum of Agreement ("the Housing MOU"). Relevant portions of the Housing MOU are enclosed with this letter. The Housing MOU provides, in relevant part, that the City will accept a portion of the County's housing allocation to assist the County in meeting its Regional Housing Needs Determination, the City will undertake a planning effort on the Oat Hill area, and the City and the County will conduct a joint study to determine the

	appropriate boundaries for Zones D and E as they affect Oat Hill.
February 2004	Napa County LAFCO approves amendment to the Sphere of Influence boundary for the City, to include the Eucalyptus Grove (which is part of the Oat Hill area) within the Sphere of Influence for the City.
March 2004	The City initiates the Oat Hill planning effort.
June 2004	The City retains Walter Gillfillan as an airport consultant and Gillfillan submits a report ("the Gillfillan Report 1") evaluating the Zone D and E compatibility boundaries as they affect the Oat Hill area. A copy of the Gillfillan Report 1 is enclosed with this letter. The Gillfillan Report 1 concludes that safety, air space intrusion, noise, and overflight considerations would not preclude residential development in the Oat Hill area.
June 2004	Napa County releases a draft amendment to the Napa County Airport Master Plan ("the 2004 Airport Plan"). The 2004 Airport Plan proposes an extension of Parallel (General Aviation) Runway 18L-36R from an approved (but yet to be constructed) length of 3,380 feet to 4,000 feet
March 2005	The ALUC commissions a study on the boundaries of Zones D and E in the Oat Hill area. The study is paid for by Napa County, the City, and the Stakeholders interested in developing the Oat Hill area.
September 2005	The M&H Report is released. The M&H Report indicates that as a result of using the 2002 Handbook criteria, development in the Oat Hill area would not be precluded because of safety, air space intrusion, or noise considerations. The M&H Report concludes, however, that because of potential of overflight resulting from possible future extension of Parallel

	(General Aviation) Runway 18L-36R from 2,500 feet to a total length of 4,000 linear feet, as suggested in the 2004 Airport Plan, there is no basis for moving the Zone D and E boundary line.
September 2005	Walter Gillfillan reviews the M&H Report ("the Gillfillan Report 2"). A copy of the Gillfillan Report 2 is enclosed with this letter. The Gillfillan Report 1 and the Gillfillan Report 2 will collectively be referred to as "the Gillfillan Report".
October 2005	Wanda Kennedy, Napa County Airport Manager, in a meeting with the County Board of Supervisors, indicates that there are no plans to lengthen runways or expand the airport facility.

CRITICAL FACTORS TO CONSIDER

The City is proceeding with a general plan study for the Oat Hill area. This study was contemplated by the City and the County of Napa in the Housing MOU. The City is in the process of conducting environmental analysis of at least two alternative plans. A copy of the two alternative plans is enclosed with this letter.

The 1999 Amendment evaluated the general plans for Napa County and the City of Napa, but did not evaluate the general plan for the City. This omission is significant, since the 1999 Amendment substantially changed the Plan, and its impact on local development.

The 1999 Amendment was primarily concerned with proposed development at Stanly Ranch. No consideration was given to the Oat Hill area or the City. The 1999 Amendment significantly increased the area within which no new residential development would occur. This expanded area covered the Stanly Ranch, and brought the new restrictions to the Oat Hill area. Unfortunately, in addressing the impacts that Stanly Ranch could have on the airport, the 1999 Amendment established policies that significantly impact the City, and will impact the County under the Housing MOU.

The 1999 Amendment was adopted prior to the 2002 Handbook. The 2002 Handbook is now the criterion by which compatibility plans should be based. This point was recognized by Mead & Hunt in the M&H Report, which specifically used the 2002 Handbook in its analysis.

The M&H Report and the Gillfillan Report agree that development in the Oat Hill

area would not be precluded because of safety, noise, and air space intrusion considerations applying the 2002 Handbook criteria and analysis. Orderly residential development of the Oat Hill area would not conflict with airport operations.

Development of Oat Hill would not conflict with any of the established sources of guidance on safety compatibility. The M&H Report acknowledges that the 2002 Handbook would allow residential uses in the Oat Hill area.

Development of Oat Hill would be compatible with existing and forecast aviation noise contours. The Oat Hill area is more than 4,000 feet from the 55 CNEL contour for existing operations, and more than 3,500 feet from the 55 CNEL contour forecast for the year 2022. The 55 CNEL contour is used to determine noise impacts on new residential development.

A portion of the Oat Hill development may penetrate the horizontal surface of the airport. Ultimately, the FAA has jurisdiction on this issue.

The M&H Report focuses on overflight. Overflight impacts are highly subjective. The Plan has taken the position that to avoid any complaints, there should be no new residential development in areas where overflight may occur. Applying this criteria to the Oat Hill area is not appropriate or reasonable.

The M&H Report acknowledges that the recent industry practice in areas that are largely developed is to use a high-low strategy. Areas subject to overflight could be limited to rural densities (one unit for 40 acres) or higher density development (apartments, common-wall developments). The higher density development brings with it higher ambient noise levels, thus making the overflight noise less noticeable and intrusive. Consequently, the overflight becomes less a significant concern with higher density development.

The M&H Report relies upon a proposed extension of Parallel (General Aviation) Runway 18L-36R, as described in the yet to be adopted 2004 Airport Plan, to conclude that overflight would occur with greater frequency. The M&H Report presumes that residential development in Oat Hill would create more conflicts. As a result, on the basis of overflight considerations alone, the M&H Report concludes that there are no grounds to move the Zone D and E boundaries.

The Gillfillan Report notes that overflight considerations would not preclude residential development of the Oat Hill area. New residential uses in areas where overflights will occur are recognized as a compatible use in the 2002 Handbook.

The lesser significance of overflight is further emphasized by the fact it is now accepted practice in preparation of environmental documents for runway extensions that overflights over existing residential areas are **not** a consideration. Rather, the analysis is based upon the 65 CNEL contour. As the M&H Report notes, the Oat Hill area is far from the boundaries of the 65 CNEL contour.

The overflight issue becomes a consideration solely because of the possible extension of the Parallel (General Aviation) Runway 18L-36R from its current length of 2,500 feet to 4,000 feet. This proposed extension is contained in the 2004 Airport Plan. As of this date, however, the 2004 Airport Plan has not completed environmental review, and has not been adopted.

The 1991 Airport Master Plan called for extension of Parallel (General Aviation) Runway 18L-36R from 2,500 feet to 3,380 feet. Fourteen years after this plan was adopted the runway is still only 2,500 feet in length.

The Airport Manager, as recently as October 12, 2005, indicated to the County Board of Supervisors that there are no plans to lengthen runways. These remarks, and the fact no action has been taken to implement the 1991 Airport Master Plan, put into serious question the statements in the M&H Report that the extension of Parallel (General Aviation) Runway 18L-36R would occur within the next 3-5 years.

The adopted 1991 Airport Master Plan proposed increasing the length of Parallel Runway (General Aviation) 18L-36R to shift noise associated with the JAL training flights to the other side of the airport. The training pattern was not as large as that shown in the M&H Report.

Airport activity has not increased significantly since 1975. There is no reason to believe that an expanded overflight area is needed to protect the airport.

The Plan takes the most conservative position possible relative to land use compatibility. The Plan states that **no** new residential development should occur in areas which are subject to overflight, regardless of the frequency, the noise level or surrounding land development patterns. This position disregards provisions of the Plan and the 2002 Handbook that provide for avigation or overflight easements and recorded deed notices as a means of dealing with the overflight issue. The Plan and the M&H Report do not further the orderly development of the Oat Hill area or the City.

The Plan is to provide for the orderly growth of the airport and the surrounding area. The Plan should safeguard the general welfare of the inhabitants within the airport area and the public in general. The Plan can accomplish these goals without an a prohibition of residential development in the Oat Hill area.

State law requires that the ALUC review the Plan in relation to **adopted** plans. The adopted Airport Master Plan calls for expansion of the Parallel (General Aviation) Runway 18-L-36R to a total length of 3,380 feet. This expansion would not cause the overflight problem. Only when looking beyond the guidance set forth in State law and using a proposed unadopted plan is there any arguable basis for maintaining the Zone D and E boundaries in their existing location.

The M&H Report fails to recognize that the Oat Hill Master Plan project is an

infill development. The Oat Hill area is bounded on three sides by development. A graphic depiction of the Oat Hill area, in relation to other development, is enclosed with this letter.

The Zone D development restrictions are designed to prevent incompatible residential uses in rural, undeveloped areas. Application of the Zone D restrictions to the Oat Hill area would be inconsistent with, and would not further, this intent. Residential uses are developed south of Oat Hill. Industrial uses are established directly to the north. There is no rural character in Oat Hill to protect or preserve.

Oat Hill is unique in its location to the airport, and the topography of the area. The Oat Hill area is not in line with the runways. The Oat Hill area is nearly 10,000 feet from the airport. Noise, safety, and airspace intrusion would not preclude development. Oat Hill is an infill development that would not promote urban development into agricultural areas.

The Napa Vallejo Waste Management Authority is one of the major property owners in the Oat Hill area. The Zone D development restrictions on the Authority's property will have significant financial impacts on all County residents.

Development of the Oat Hill area is vital to the growth of the City. The Oat Hill area is the remaining undeveloped area with the City. The Oat Hill area has a variety of existing uses and underutilized land. The City has an opportunity to provide needed resources, including housing, to its residents. The Zone D development restrictions would preclude the orderly growth of the City.

The Board of Supervisors clearly expressed its policy toward housing when it approved and entered into the Housing MOU. Napa County cannot meet its Regional Housing Needs Determination without assistance from the City. The Housing MOU recognizes that development of the Oat Hill area will enhance housing opportunities for all income groups. The Zone D development restrictions, however, would frustrate the County's housing policy.

The M&H Report, if adopted by the ALUC, would substantially preclude the City from accepting the allocation of housing units from Napa County, as is provided in the Housing MOU. There are no other areas within the City where significant residential development can occur. Thus, the M&H Report makes it much more problematic that Napa County could meet its unmet housing needs.

The City believes that the boundary line between Zones D and E in the Oat Hill area should be moved, and that residential development in the Oat Hill area should be permitted. Residential development in the Oat Hill area would not implicate safety, noise, and airspace intrusion considerations.

Furthermore, overflight concerns are not sufficient to keep the Zone D and E boundaries in their present location. The unique location of Oat Hill, the fact that Oat

Hill is an infill development project and not a development in a rural area, the fact that development of the Oat Hill area was contemplated in the Housing MOU, and the fact that higher density residential development is proposed for that portion of the Oat Hill area closest to the airport all indicate that overflight issues in Oat Hill are not significant.

When all the factors are considered, the ALUC should find that there are grounds to move the Zone D and E boundaries around the Oat Hill area. Residential development of Oat Hill will not create compatibility problems associated with safety, noise, airspace intrusion, or overflight. Amending the Plan and moving the Zone D and E boundaries around the Oat Hill area will promote orderly growth, and will provide for the general welfare, while maintaining protection for the airport.

The Zone D and E boundary line should be relocated. The boundary line should be returned to the location prior to the 1999 Amendment, or the boundary line should be moved to the north and west of the Oat Hill area.

Thank you for the opportunity to present this information to you. We look forward to discussing this with you further on November 2, 2005.

Very truly yours,

City of American Canyon

MEMORANDUM

September 26, 2005

TO: Kristie Wheeler

FROM: Walter Gillfillan

SUBJECT: Initial review of the Mead & Hunt report

Per your request, I have completed an initial review of the Oat Hill Development Land Use Compatibility Analysis report prepared by Mead & Hunt date September 2005. It is important to note that the stated purpose of the Mead & Hunt report is multifaceted. It requires, (1) an assessment the compatibility of the proposed Oat Hill development with operations at the Napa County Airport base on safety, noise, overflight and airspace using the 2002 California Airport Land Use Planning Hand book and (2) a determination whether the boundary of the ALUC compatibility zone "D" should be modified.

ASSESSMENT OF THE COMPATIBILITY

The assessment considered four factors related to land use compatibility - safety, noise, overflight and airspace. The following conclusions were reached in the assessment of these factors:

- **Safety** – "The proposed Oat Hill project would not conflict with any of the three established sources of guidance on safety compatibility".
- **Noise** – "The proposed uses in the Oat Hill site are compatible with the existing and forecast aviation noise contours".
- **Overflight** – "Development of the Oat Hill property with residential uses (or other sensitive uses) could be expected to create conflicts with the Napa county Airport that do not now exist".
- **Airspace** – "Portions of the Oat Hill property penetrate the horizontal surface".

This assessment identifies two factors that are possible issues – overflight and airspace. The following are points to consider that relate to these two factors:

Overflight

- As noted in the Handbook, overflight is an annoyance issue. There are no metrics or criteria that help define the extent of the problem, except that experience suggests that it is related to frequent, low-altitude aircraft overflight. That activity

can result in noise complaints from residential areas outside of the noise contour boundaries. Aircraft noise is always considered in airport environmental impact evaluations. However, because there are no "levels of significance" for overflight noise, the effect of proposed airport expansion proposals on existing residential land uses is not commonly considered in environmental analysis.

- There is a significant change proposed in the Airport Master Plan now being considered by the County. Runway 18L-36R is currently 2,510 feet in length. The existing, adopted 1990 Master Plan provides for an extension of 870 feet to 3,380 feet of runway length. The Master Plan currently under consideration would provide for an additional extension of 1,490 feet to a length of 4,000 feet. According to the Public Utilities Code, Section 21675, the ALUC is required to base its Land Use Plan on the airport long-range master plan or Airport Layout Plan. In this case, the currently adopted master plan.
- This 60% increase in the length of Runway 18L-36R allows for the shifting of some JAL training flights to Runway 18L-36R, thereby significantly enlarging the traffic pattern on the south side of the airport to accommodate these aircraft. This enlarged traffic pattern will cause some overflight of the proposed Oat Hill project area under certain conditions, by some aircraft types.
- The traffic pattern for piston-powered aircraft would not overfly the Oat Hill project area with either of the runway extensions proposed for Runway 18L-36R.
- Air traffic using Runway 6-24 provides no overflight by piston-powered or jet aircraft, but does have some near-by flights by the JAL training operations.

Airspace

Because the actual finding of compliance with the provisions of Part 77 is a responsibility of the FAA, only the FAA can make a final finding of hazard or non-hazard. The following are important considerations:

- The Airspace Plan developed for the Napa County Airport by the ALUC does note that a portion of natural terrain of Oat Hill extends about 80 feet into the Horizontal Surface as defined by the FAA.
- The elevation of the imaginary Horizontal Surface is 150 feet above the airport elevation, or 183 feet msl. A very small portion of the hill also extends into the Conical Surface, as defined by Part 77. It should be noted that an existing water tank on Oat Hill has a top elevation of approximately 313 feet.
- This obstruction as defined by Part 77 is remote from any of the runway approaches and away from the common traffic pattern areas. As a result, this terrain feature is not likely to affect any of the existing aircraft operations. Proposed structures on the side of the hill are not likely to be found to be an obstruction, since the hill itself is the controlling obstruction in the area.
- However, structures on top of the hill could be a concern if higher that the existing terrain or water tank.
- While the principal focus of Part 77 is on the height of structures/vegetation, there is another element that should be noted. A review of the proposed project must determine that it does not create (*i*) electromagnetic interference with air navigation facilities, nor (*ii*) lighting effects, nor (*iii*) smoke that would interfere with aircraft in flight.

BOUNDARY OF THE ALUC COMPATIBILITY ZONE "D"

The report concludes, ..."that there are no grounds to shift Zone D". This is based principally on the factor of overflight and the annoyance that can result from frequent, low-flying aircraft. Included in the discussion are the following points:

- The preservation of the rural character of the areas surrounding the airport to minimize the public's exposure.
- The Napa County Airport is a rare example of a busy airport that is largely free from incompatible land uses.
- Compatibility plans must be guided by airport plans
- The challenge is to prevent the introduction of incompatible land uses
- It would be inappropriate to permit the introduction of residential uses where overflight impacts are a concern.

December 10, 2005

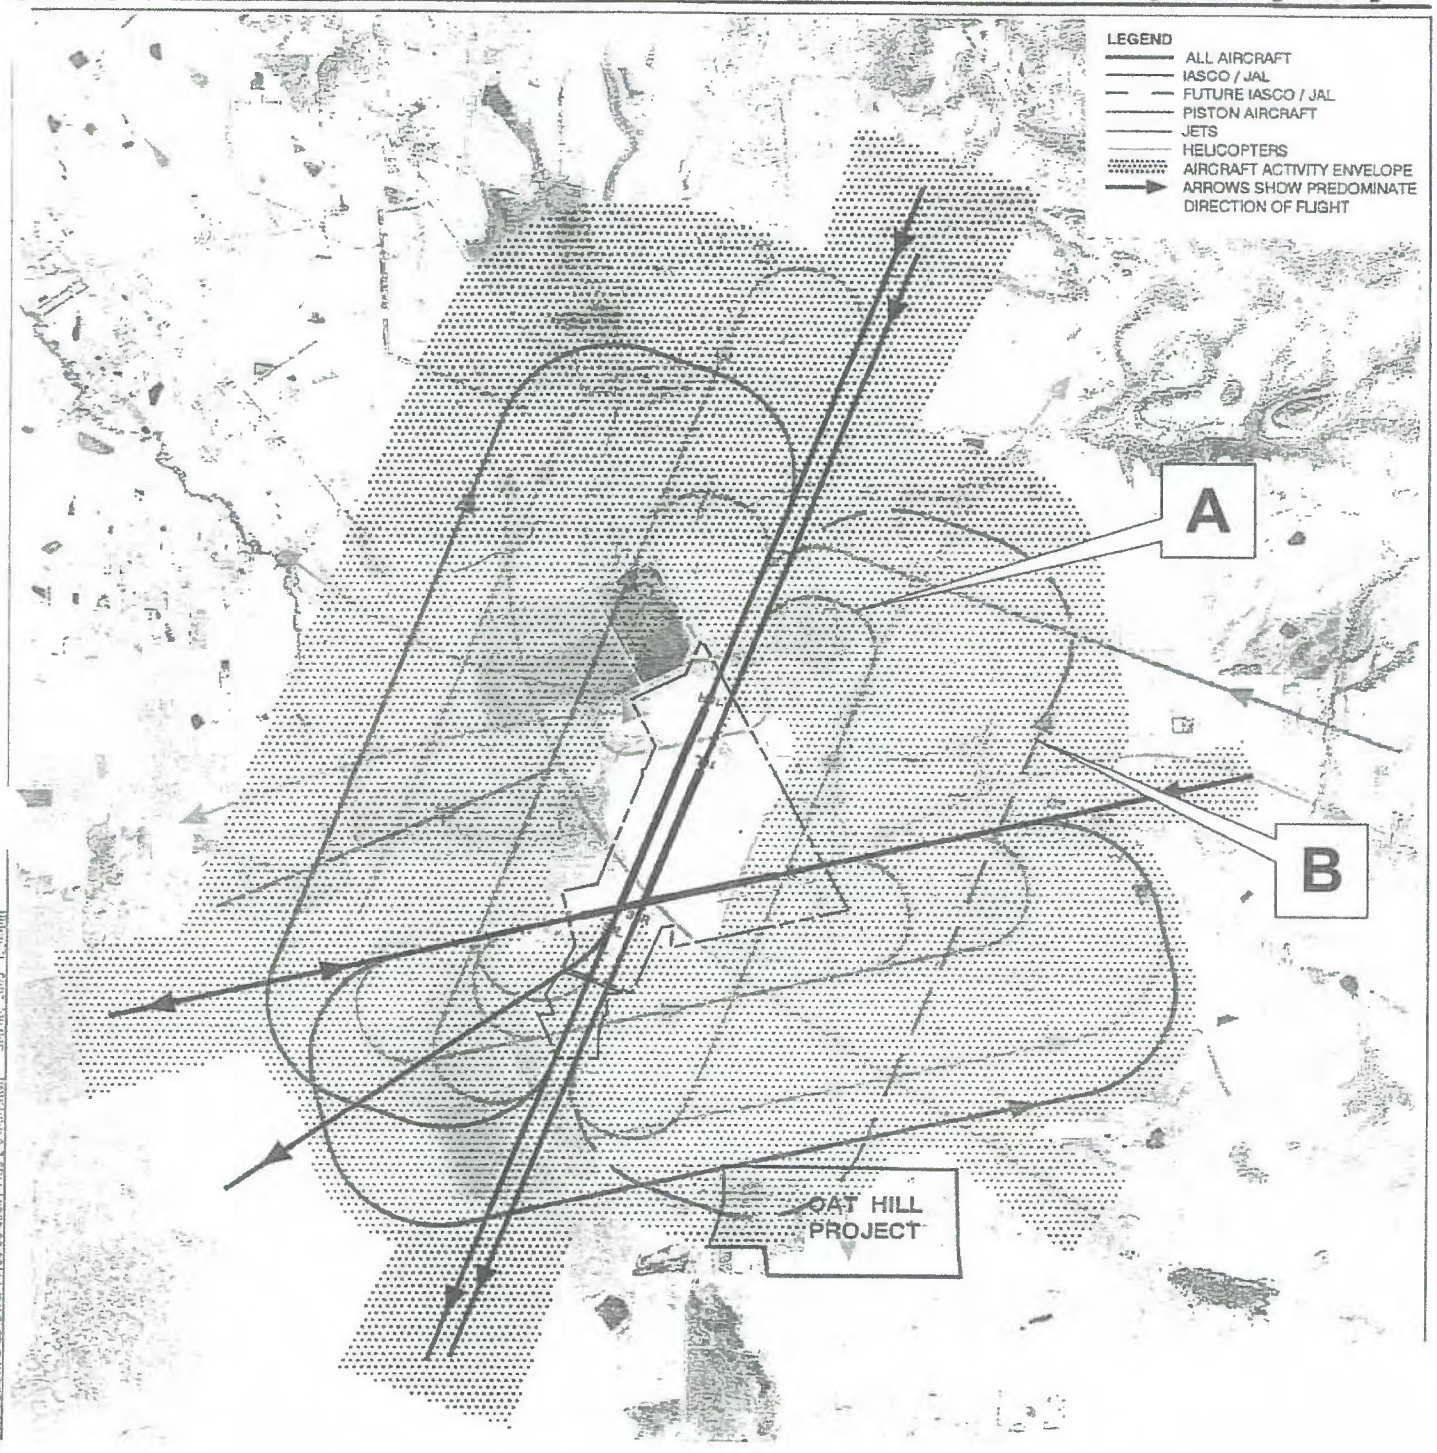
To: Lisa Mochizuki

FROM: Walter Gillfillan

SUBJECT: Graphical depiction of Runway 18L-36R traffic pattern issue

Per your request, I have developed a graphical display to highlight the effect of the proposed Runway 18L-36R extension, and proposed traffic pattern changes, would have on the proposed Oat Hill project.

In doing this, I have used information contained in several documents:



- Hodges& Shutt. Napa County Airport Master Plan Report, Adopted May 1991
- Mead & Hunt. Napa County Airport Master Plan. Revised Draft Report, June 2004
- Mead & Hunt. Oat Hill Development Land Use Compatibility Analysis. September 2005

It is important to note that there is a difference in proposed runway length between the Oat Hill Development Land Use Compatibility Analysis report and the Revised Draft Napa County Airport Master Plan report. The Oat Hill analysis assumed an extension to 4,000 ft. The Revised Draft Master Plan report indicates an extension to 3,380 ft.

Attachment I is Figure 5 from the Oat Hill Development Land Use Compatibility Analysis with notations added to identify the two traffic patterns A and B that are relevant to the proposed Oat Hill project.

Attachment II is a narrative presenting the issues associated with the proposed extension of Runway 18L-36R and the proposed future IASCO/JAL training pattern.

Oat Hill Development Land Use Compatibility Analysis

DESCRIPTION OF TRAFFIC PATTERN ISSUES
Runway 18L-36R

Runway 18L-36R Lengthened

- The source for these comments is Figure 5 from the Oat Hill Development Land Use Compatibility Analysis report.
- The Oat Hill Development Land Use Compatibility Analysis report indicates a runway extension from the present 2510 ft. to 4,000 ft.
- The Revised Draft Napa County Airport Master Plan report indicates an extension to 3,380 ft.

A - Traffic pattern for piston-powered aircraft

- Pattern is located 3,000 ft. from the runway centerline
- Closest point to the Oat Hill project approximately 1,700 ft.; 2,200 ft. if the runway length were 3,380 ft.
- There is no overflight of the Oat Hill project by these aircraft

B - Traffic pattern for future IASCO/JAL

- Pattern is located 7,500 ft. from the runway centerline to simulate large aircraft operations
- This pattern extends approximately 1,500 ft. in to the northwestern portion of the Oat Hill project; approximately 800 ft. if the extension to 3,380 ft. is used.
- The pattern and the aircraft activity envelop would affect approximately one-half of the Oat Hill project area
- There would be IASCO/JAL training overflights of the Oat Hill project. The number or proportion is not evident from the available material.

Runway 18L-36R Unchanged

A - Traffic pattern for piston-powered aircraft

- The current runway length is 2,510 ft.
-
- Closest point to the Oat Hill project approximately 3,200 ft.
- There is no overflight of the Oat Hill project by these aircraft

B - Traffic pattern for future IASCO/JAL

- The shorter length would exclude the IASCO/JAL training pattern
- There is no overflight of the Oat Hill project

Location

The Oat Hill properties are located southeast of the Napa County Airport. The site is on the northern edge of the City of American Canyon, west of Highway 29. At its closest point, the project site is about 7,500 feet from the nearest runway (Runway 6-24) at the Napa County Airport (Figures 1 and 2). The project would consist of a variety of housing types, expansion of an existing school site, and possibly some commercial uses.

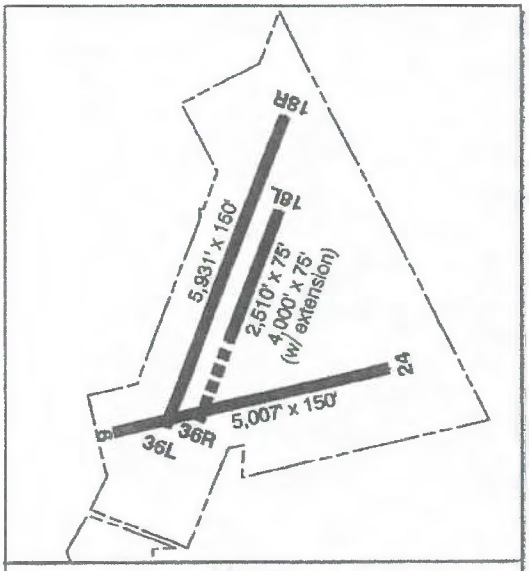


Figure 1

Analytical Task

The Napa County Airport Land Use Commission (ALUC) charged Mead & Hunt with assessing the compatibility of the proposed Oat Hill development with operations at the Napa County Airport. The assessment was to evaluate compatibility based upon:

- Safety
- Noise
- Overflight
- Airspace

Assessment of each of these factors is to be based upon the 2002 *California Airport Land Use Planning Handbook* and current aviation industry practice. The purpose of the analysis is to determine whether the boundaries of compatibility zone "D" should be modified. The boundary of the D Zone passes through the Oat Hill site. Napa County ALUC policies do not permit new residential uses within this zone.

Sources of Data

Data for this analysis came from a variety of sources. Noise contours and airspace surfaces were taken from the draft Napa County Airport Master Plan which was released in June 2004. The 2004 draft *Master Plan* is conceptually identical to the master plan adopted in 1990. Both plans included only one change to the runways at Napa County Airport: extension of the parallel runway (Runway 18L-36R) to accommodate Japan Air Lines (JAL) training operations. The 1990 and 2004 plans differ in the length that the runway would be extended. Under the 1990 plan the parallel runway would be extended to 3,380 feet, under the 2004 plan the length would be increased to 4,000 feet. The greater length is required because the aircraft types and operating requirements used for JAL training have changed. The 2004 version has been used in this analysis because its adoption is expected to occur within a few months. Environmental documentation for the runway extension and other projects is being prepared.

Safety factors were taken from the California Airport Land Use Planning Handbook. Detailed flight tracks developed to assess overflight impacts were developed from interviews with knowledgeable individuals associated with the Napa County Airport on the dates noted, including:

Napa County Airport

- Tom Shannon, Air Traffic Manager, Napa Airport Traffic Control Tower, Federal Aviation Administration and his staff (June 20, 2005)
- Bob Berthold, JAL Chief Flight Instructor, IASCO (June 6, 2005)
- Susan Chambers, Chief Flight Instructor, Bridgeford Flying Services (June 6, 2005)
- Wayne Lackey, President, Wine County Helicopters (June 6, 2005 at Airport Advisory Commission meeting)
- Napa County Airport Advisory Commission (at its public meeting on June 6, 2005)
- Members of the Napa Area Pilots Association (June 6, 2005)

The individuals interviewed are aviation professionals with direct, daily experience with flight operations at Napa County Airport. The two chief flight instructors oversee most flight training operations at the airport. The Napa County Airport Advisory Commission was used as a forum for public input. Members of the Napa Area Pilots Association were invited to contribute their insight on flight operations.

Those interviewed were asked to define common flight tracks based upon their experience. In each case, a scaled aerial photograph of the Napa County Airport environs was provided as an aid. In many cases those interviewed sketched the flight tracks on the drawing. Mr. Shannon, Air Traffic Manager was interviewed last. As the air traffic controllers now have radar displays in the tower, they were asked to review the flight tracks suggested by others.

Assessment

Safety

Safety is in many respects a more difficult concern to address in airport land use compatibility policies than noise. A major reason for this difference is that safety policies address uncertain events which may occur with occasional aircraft operations, whereas noise policies deal with known, more or less predictable events which do occur with every aircraft operation. Because aircraft accidents rarely happen and the time, place, and consequences of their occurrence cannot be predicted, the concept of risk is central to the assessment of safety compatibility.

Safety criteria are currently defined in three ways. The Federal Aviation Administration's Airport Design advisory circular (AC 150/5300-13) contains land use policies for runway protection zones. Runway protection zones are areas beyond runway ends in which residences and places of public assembly are prohibited. Under this definition, places of public assembly include churches, schools, hospitals, office buildings, shopping centers, and other uses with similar concentrations of people. The Federal Aviation Administration recommends that airports acquire the property within their runway protection zones.

6774

The runway protection zones closest to the Oat Hill project are those for Runways 36L, 36R, and 24. Of these, the future runway protection zone for Runway 36L lies nearest to the project. However, it is over 4,500 feet from this runway protection zone to the project site.

The safety compatibility zones described in the California Airport Land Use Planning Handbook are the next source of guidance on safety policies. In Chapter 9, the Handbook provides examples of various configurations of safety compatibility zones and recommended policies for each zone. Of the five examples provided for general aviation airports (i.e., one without scheduled passenger service), Example 3 in Table 9K best fits the characteristics for Runway 36L. That is, it is a long runway at a general aviation airport with a precision instrument approach. The compatibility policies for this runway would be the most restrictive on the Oat Hill property. If these policies were applied, a portion of the Oat Hill property would lie within the traffic pattern zone (Figure 3). Within the traffic pattern zone, the Handbook would allow residential uses and most nonresidential uses. Uses to avoid include schools, hospitals, and outdoor uses with high occupancy levels.

An emerging trend in California compatibility plans is to directly use national accident data to create accident risk intensity contours. Similar in concept to noise contours, accident risk intensity contours define areas with similar probabilities of an aircraft accident. These zones vary in size based upon various factors. For a busy runway serving both large and small general aviation aircraft, these zones will extend about one mile from the runway end. The outermost accident risk intensity contour for Runway 36L (which would come closest) would be over 3,500 feet from the nearest corner of the Oat Hill project site.

Safety Conclusion: The proposed Oat Hill project would not conflict with any of the three established sources of guidance on safety compatibility.

Noise

Noise is one of the most basic airport land use compatibility concerns. Moreover, at major airline airports, many busy general aviation airports, and most military airfields, noise is usually the most geographically extensive form of airport impact.

For the purposes of airport land use compatibility planning, noise generated by the operation of aircraft to, from, and around an airport is primarily measured in terms of the cumulative noise levels of all aircraft operations. In California, the cumulative noise level metric established by state regulations, including for airport noise, is the Community Noise Equivalent Level (CNEL). This metric provides a single measure of the average sound level in decibels (dB) to which any point near an airport is exposed. To reflect assumed greater community sensitivity to nighttime and evening noise, events during these periods are counted as being louder than actually measured. Cumulative noise levels are usually illustrated on airport area maps as contour lines connecting points of equal noise exposure. Mapped noise contours primarily show areas of significant noise exposures — ones affected by high concentrations of aircraft takeoffs and landings.

Single-event noise metrics are sometimes used in evaluating impacts of proposed airport modifications. They are rarely used as a means of defining land use compatibility policies.

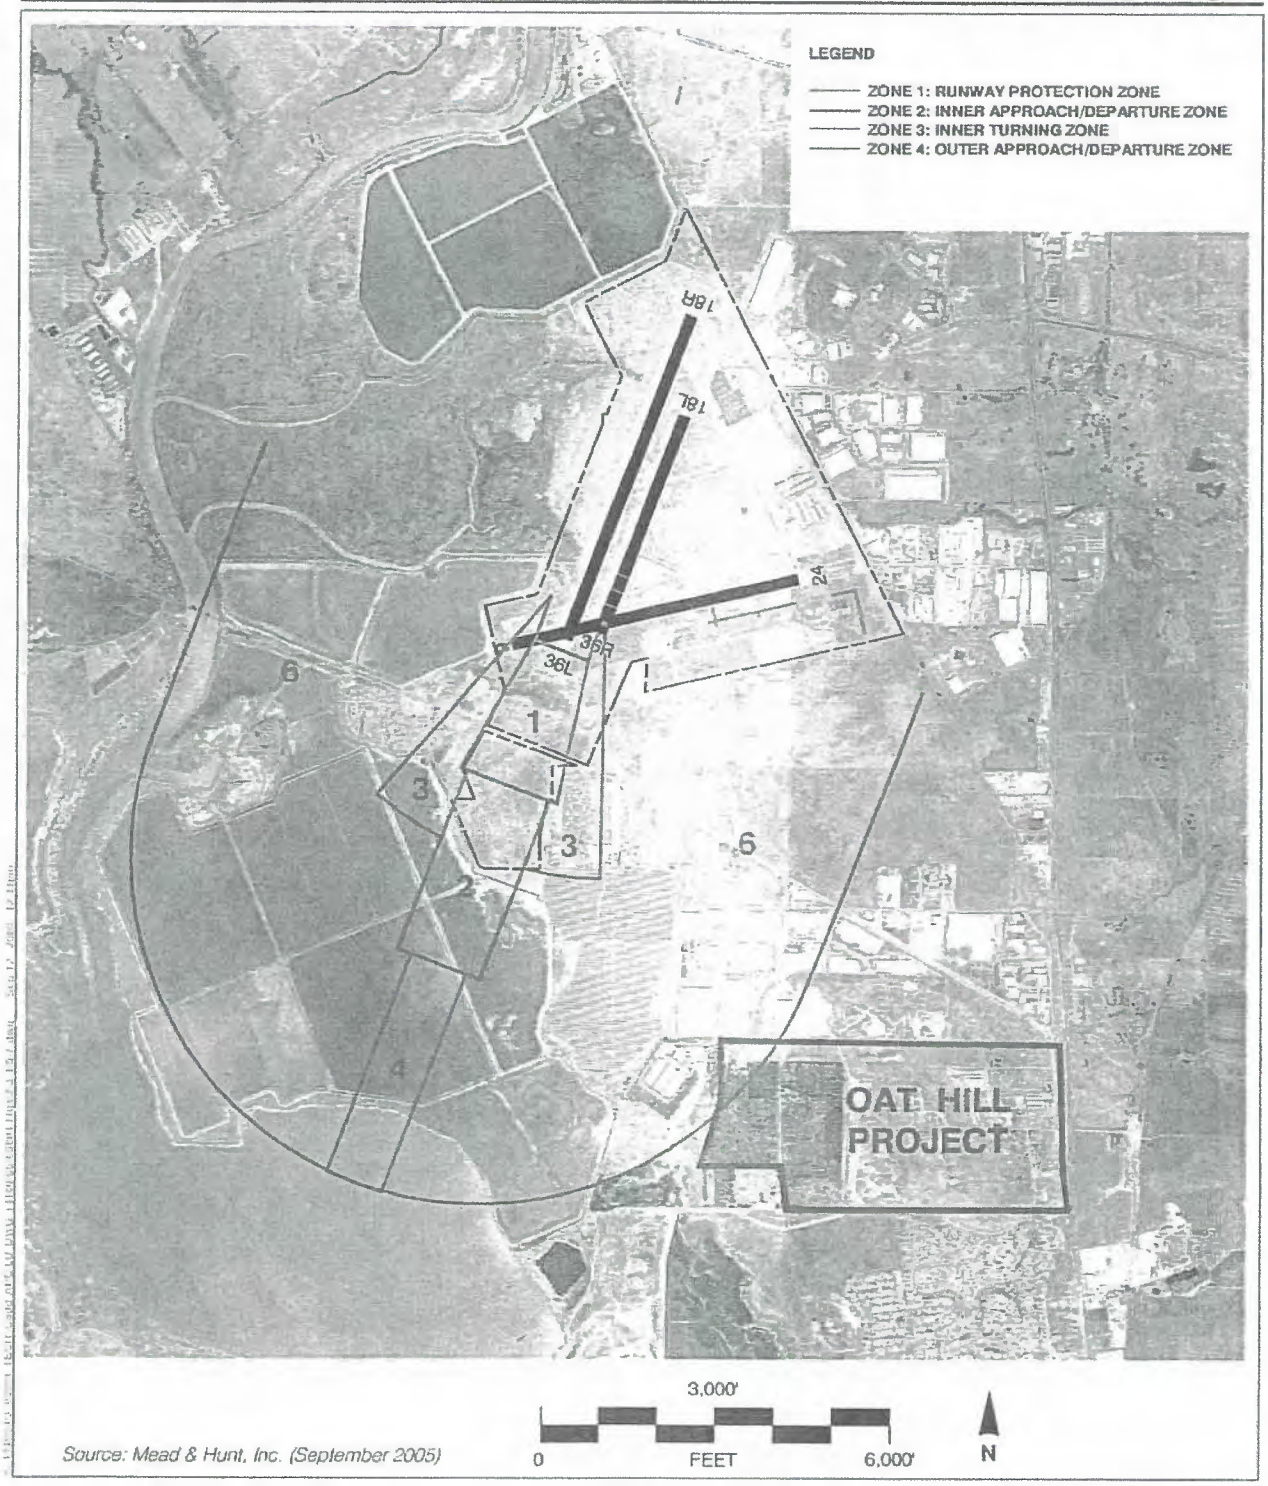

Figure 3

Caltrans Handbook Safety Zones

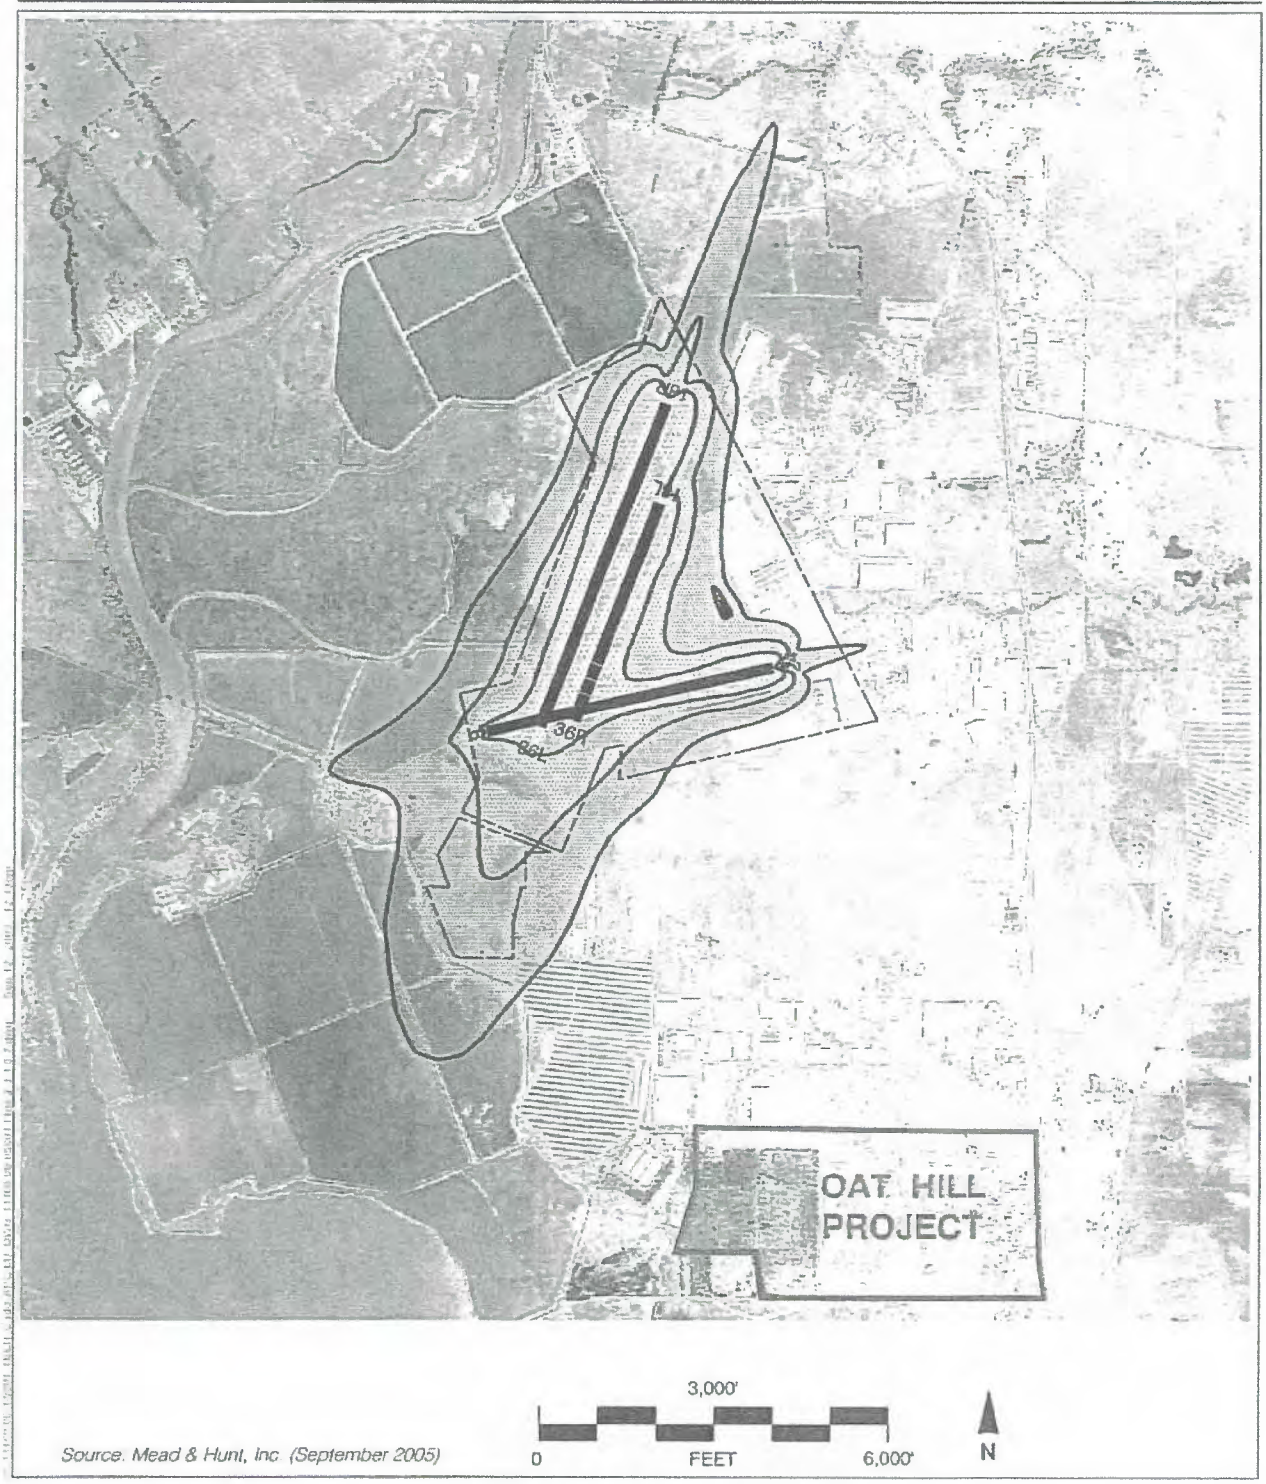
Napa County Airport

6776

For general aviation airports in rural settings, the 55 CNEL noise contour is commonly used as the threshold for allowing residential uses. In suburban settings, the 60 CNEL contour is typically used. These thresholds are recommended in both the California Airport Land Use Planning Handbook and are consistent with current aviation industry practice. The Federal Aviation Administration generally limits concerns over residential uses to within the 65 CNEL contour. However, the Federal Aviation Administration has supported policies to restrict new residential uses out to the 60 CNEL contour. The nearest edge of the Oak Hill property is over 4,000 feet from the nearest point on the current 55 CNEL contour and about 3,500 feet from the 55 CNEL contour forecast for 2022 (Figure 4).

Noise Conclusion: The proposed uses in the Oat Hill site are compatible with the existing and forecast aviation noise contours.

Overflight



Experience at many airports has shown that noise-related concerns do not stop at the boundary of the outermost mapped CNEL contour. Many people are sensitive to the frequent presence of aircraft overhead even at noise low levels. These reactions can mostly be expressed in the form of annoyance.

At many airports, complaints often come from locations beyond any of the defined noise contours. Areas that underlie common flight patterns are likely places for this to occur. The basis for such complaints may be a desire and expectation that outside noise sources not be intrusive — or, in some circumstances, even distinctly audible — above background noise levels. The limited numbers of complaints that have been received at Napa County Airport have been almost exclusively from outside the noise contours.

The *Handbook* discusses overflight impacts in terms of both single-event noise impacts (e.g., speech interference or sleep disturbance) and annoyance. The *Handbook* does not recommend specific policies for areas affected by overflights. It mentions excluding residential uses, insulation of residences and schools, and relying upon notification of potential buyers as possible strategies for addressing overflight effects.

Recent industry practice has been to select one of two strategies depending upon the current pattern of development. Where an airport's environs are largely free of sensitive uses (e.g., residences) and not already committed to this type of development, compatibility policies will favor retention of the non-sensitive uses (e.g., agriculture, industrial). Where the areas subject to overflights are already largely developed or are committed to sensitive uses, compatibility policies will favor a high-low strategy. A high-low strategy is based upon the premise that overflight annoyance is less likely to occur in residential areas with higher densities due to higher ambient noise levels. Therefore, in areas subject of overflight impacts can be either at rural densities (e.g., 40 acre parcels) or high densities (e.g., apartments or common-wall residences). The high-low strategy results in either a small pool of potentially annoyed residents (low density) or a large number of residents (high density), but lower likelihood of annoyance occurring.

Current and anticipated flight tracks were mapped using data collected though the interviews described above. Common flight tracks and the most commonly overflown areas associated with Napa County Airport operations are depicted on Figure 5.

Source: Mead & Hunt, Inc. (September 2005)

Figure 4

Noise Contours: 2022

Napa County Airport

It is important to realize the variability in the flight tracks. Everywhere within five miles of the airport will be overflown in an average year. The graphic depicts only those areas that are commonly overflown near traffic pattern altitude. Typically traffic pattern altitude for small aircraft is 1,000 feet above airport elevation, for large aircraft 1,500 feet above airport elevation. Touch-and-go flight tracks have greater predictability than arrival and departure tracks.

The Oat Hill site is currently overflown during several distinct types of operations. A significant addition in overflights will occur when the parallel runway (Runway 18R-36L) is extended. An extension of this runway is included in both the 1990 and 2004 plans. The extension is expected to be operational in 3 to 5 years. Each operation that commonly overflies the Oat Hill site is discussed below. The standard names for flight track segments used in the discussion are identified in Figure 6.

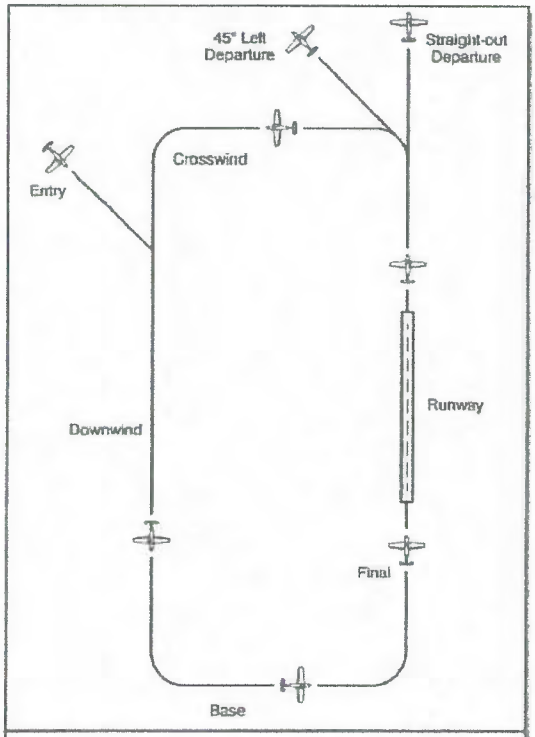


Figure 6

The highest volume of overflights occurs when winds favor the use of Runway 24 (the east-west runway). This occurs regularly during the spring and early summer. It will also occur sporadically during the fall and winter during the passage of storm fronts. When winds favor the use of Runway 24, all classes of aircraft will conduct landings on Runway 24. Tough-and-go operations will also fly a pattern with repeated landings and takeoffs on Runway 24. Most piston aircraft not associated with the JAL training program will fly their downwind leg about one-half nautical mile south of Runway 6-24. Larger turboprops and jets will fly the downwind leg from one to three miles south of the runway. Because of the requirements of its training program, JAL training flights will occur about one and a quarter nautical miles south of the runway. There will typically be several JAL training aircraft in the pattern at the same time.

When winds favor Runways 18L and 18R (the wind condition most commonly experienced), jets arriving from the southeast will overfly the area in and around the Oat Hill site. The flight track shown in Figure 1 is suggestive of the general orientation of these operations. However, the individual flight tracks will vary widely from the generic track shown.

Helicopter air taxi operations to Oakland International Airport commonly overfly the western portion of the Oat Hill site at or below traffic pattern altitude during both arrivals and departures. This track is set by destination not by wind patterns. Helicopter operations by the California Highway Patrol are regularly conducted south of Napa County Airport. However, because their tracks vary greatly, they are not shown in Figure 1.

Runway 18L-36R is planned to be extended to 4,000 feet. An extension to accommodate JAL training flights has been planned since 1990. The 2004 draft master plan changes the length,

6779

but not the purpose. Environmental review is currently being completed to support the extension. When this runway is extended, it is anticipated to be regularly used JAL training flights. Staff with IASCO, that provides the instructors for the JAL flights, indicated that lengthening Runway 18L-36R would make it usable for their tough-and-go operations. There are a couple important benefits. One, it would increase the ease with which larger aircraft could use the main runway (Runway 18R-36L). Second, it would reduce the complexity for air traffic control staff in sequencing aircraft operations on the main runway. As shown in Figure 1, these future JAL operations would overfly the northwestern third of the Oat Hill property.

Overflight Conclusion: The Oat Hill property is subject to regular overflight by a variety of aircraft types. JAL's single-engine piston aircraft will overfly the site during training flights from Runways 18R-16L and 18L-36R when they are flying the pattern east of the airport. JAL training aircraft will also overfly the site when the wind favors the use of Runway 6-24. The noise level of individual aircraft will comparable to a power lawnmower in a neighbor's yard. There will normally be several aircraft training at the same time. This would mean an overflight could occur about every 45 seconds. The site is overflown by helicopters traveling to or from Oakland International Airport (or other destinations south of the airport). At most these would occur a couple of times per day. Jets arriving from the southeast will sometimes overfly the Oat Hill site. Both the flight tracks and altitude will vary significantly. Development of the Oat Hill property with residential uses (or other sensitive uses) could be expected to create conflicts with the Napa County Airport that do not now exist.

Airspace

Relatively few aircraft accidents are caused by land use conditions which are hazards to flight. The potential exists, however, and protecting against it is essential to airport land use safety compatibility. Because airspace protection is in effect a safety factor, its objective can likewise be thought of in terms of risk. Specifically, the objective is to avoid development of land use conditions which, by posing hazards to flight, can increase the risk of an accident occurring. The particular hazards of concern are:

- Airspace obstructions;
- Wildlife hazards, particularly bird strikes; and
- Land use characteristics which pose other potential hazards to flight by creating visual or electronic interference with air navigation.

Whether a particular object constitutes an airspace obstruction depends upon the height of the object relative to the runway elevation and its proximity to the airport. The acceptable height of objects near an airport is most commonly determined by application of standards set forth in Part 77 of the Federal Aviation Regulations. These regulations establish a three-dimensional space in the air above an airport. Any object which penetrates this volume of airspace is considered to be an obstruction and may affect the aeronautical use of the airspace.

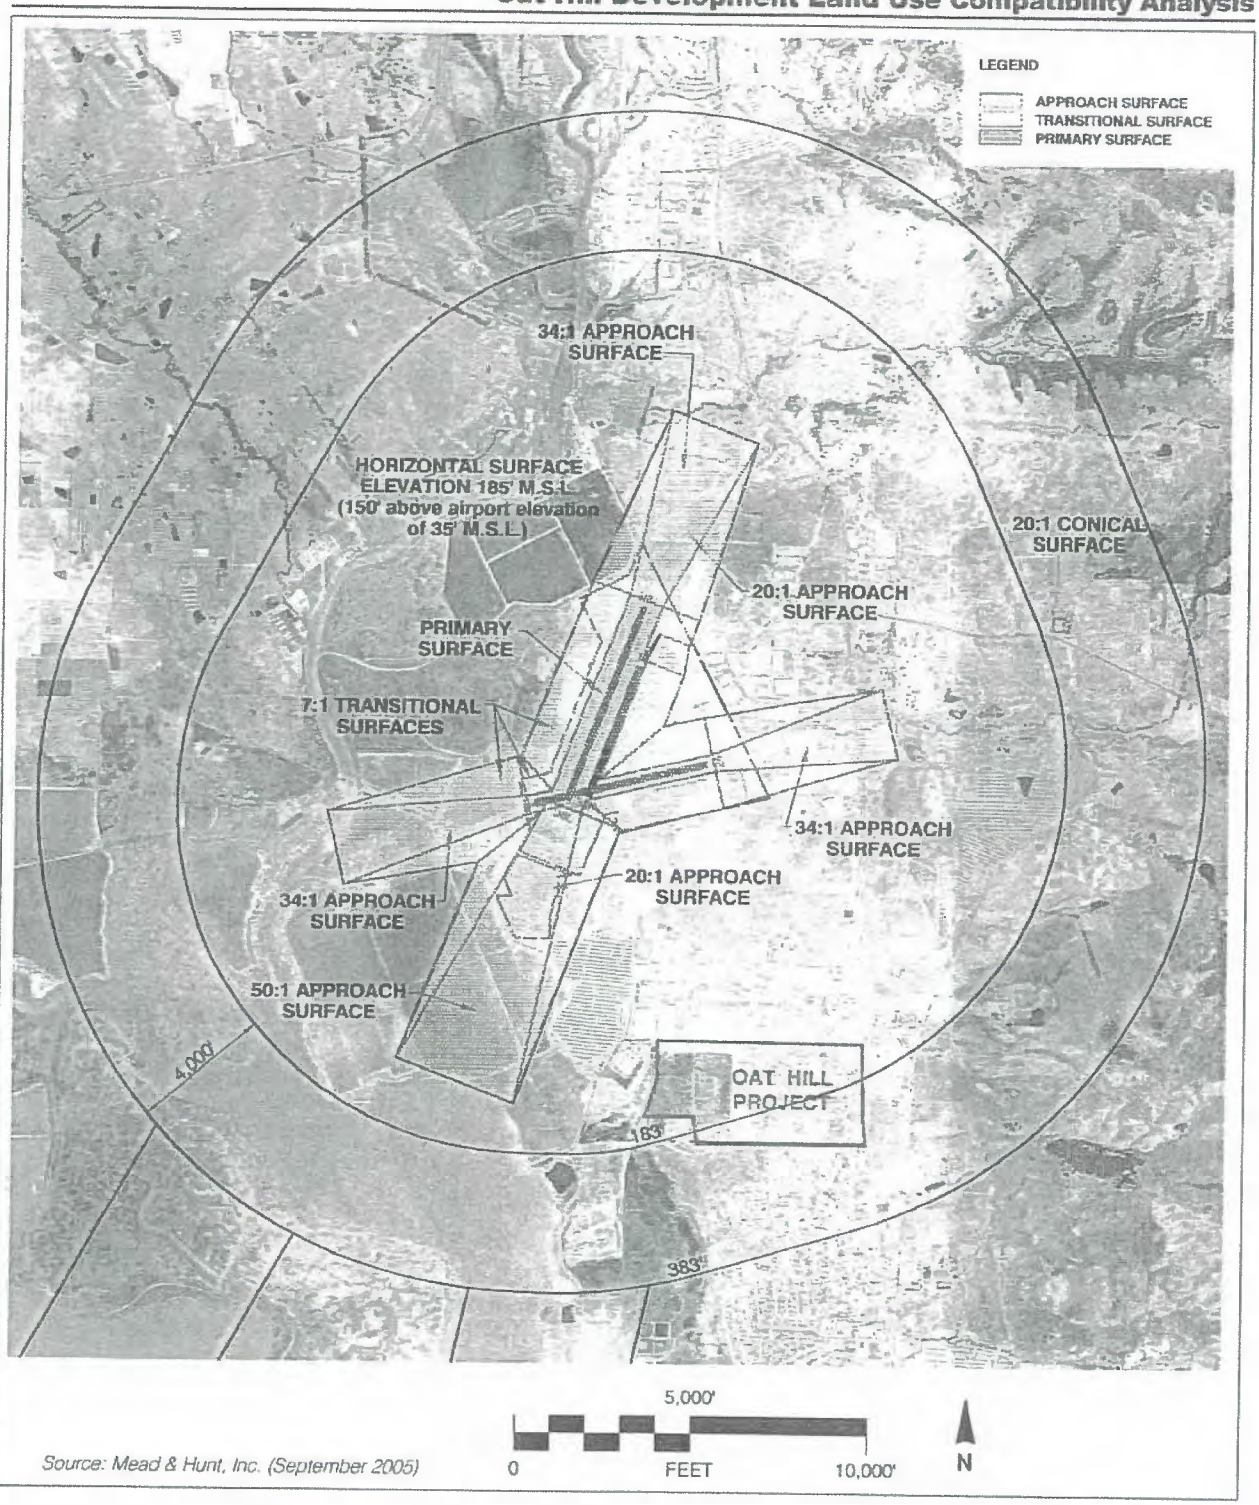

Figure 7

Airspace Plan
Napa County Airport

Implications for the Zone D Boundary

California statutes state that the purpose of airport land use compatibility plans is to "...protect public health, safety, and welfare by ensuring the orderly expansion of airports and the adoption of land use measures that minimize the public's exposure to excessive noise and safety hazards within areas around public airports to the extent that these areas are not already devoted to incompatible uses." Compatibility plans must be guided by airport plans and documentation of each airports noise and safety impacts.

The Napa County Airport has generally enjoyed a high degree of compatibility with adjacent land uses. In fact, the airport is often used as a rare example of a busy metropolitan airport that is largely free from incompatible uses. In part this was due to the luck of the airport being sited in what had been a rural area. Good planning has limited new development near the airport to compatible commercial and industrial uses. As development continues to occur in the vicinity of the Napa County Airport, the challenge will be to prevent the introduction of incompatible uses.

This analysis provides more detailed documentation of the impacts of air operations at Napa County Airport than has been previously available. This information was designed to support a determination of whether the boundaries of compatibility zone "D" should be modified near the Oat Hill property.

Based upon the earlier analysis, safety and noise do not appear to be significant concerns for the proposed uses. Airspace is of modest concern, but it has the potential to effect only structures on Oat Hill itself. On the majority of the property airspace is not a concern. Given what is known of the project's elements, neither wildlife attractants, nor visual or electronic interference are expected to be a concern. However, overflight effects are a compatibility concern today, and are expected to increase. It would be inappropriate to permit introduction of residential uses where overflight impacts are a concern. Therefore, we conclude that there are no grounds to shift Zone D.

CITY OF AMERICAN CANYON

PLANNING COMMISSION
STAFF REPORT

March 25, 2021
Public Hearing

SUBJECT

Conduct a Public Hearing to consider Resolutions to Recommend City Council approval of:

(1) The *Oat Hill Multi-Family Residential Mitigated Negative Declaration*;
(2) A General Plan Amendment on a 13.6-acre Oat Hill Parcel A from Industrial with a Specialty Commercial (CS) overlay and Estate Residential (RE) to High Density Residential (RH-1), (APN 058-380-008 and portion of 058-320-001), (File No. PL20-0024);
(3) A General Plan Amendment on a 7.2-acre Oat Hill Parcel B from Estate Density Residential to Medium Density Residential (portion of APN 058-320-001); (File No. PL20-0026);
(4) A Zone Change from on a 13.6-acre Oat Hill Parcel A from Light Industrial with a Specialty Commercial (LI:CS) overlay and Estate Residential (RE) to Medium Density Residential (APN 058-380-008 and portion of 058-320-001), (File No. PL20-0024);
(5) A Zone Change on a 7.2-acre Oat Hill Parcel B from Estate Density Residential to Medium Density Residential (RM); (portion of APN 058-320-001), (File No. PL20-0026);
(6) A Tentative Subdivision Map for 206 condominium residential units on a 13.6-acre Oat Hill Parcel A; (APN 058-380-008 and portion of 058-320-001), (File No. PL20-0025);
(7) A Tentative Subdivision Map for 85 condominium residential units on a 7.2-acre Oat Hill Parcel B; (portion of APN 058-320-001); (File No. PL20-0027);
(8) A Design Permit for condominium 206 residential units on a 13.6-acre Oat Hill Parcel A; (APN 058-380-008 and portion of 058-320-001), (File No. PL20-0022); and
(9) A Design Permit Map for 85 condominium residential units on a 7.2-acre Oat Hill Parcel B; (portion of APN 058-320-001); (File No. PL20-0023).

PROJECT LOCATION	Oat Hill (Assessor Parcel Numbers 058-380-008, 058-320-001)
APPLICANT/OWNER	RH Hess Development Company
ENVIRONMENTAL REVIEW	The City of American Canyon has prepared an Initial Study Checklist and Mitigated Negative Declaration in accordance with the California Environmental Quality Act (CEQA). The basis for a Mitigated Negative Declaration (MND) is the finding that the proposed project will not have a significant effect on the environment because mitigation measures that reduce the impacts to less than significant are part of the project conditions. The MND includes mitigation measures for Biological Resources, Cultural Resources, Geology/Soils, Hazards and Hazardous Materials, Hydrology/Water Quality, Noise, Transportation/Traffic, and Utilities.
STAFF CONTACT	William He, AICP, Associate Planner

REQUESTED ACTIONS

1. Receive staff report.
2. Reopen Public Hearing.
3. Receive public testimony.
4. Close Public Hearing.
5. Commission comments and questions.
6. Adopt the following Resolutions:
   a. The *Oat Hill Multi-Family Residential Mitigated Negative Declaration*;
   b. A General Plan Amendment on a 13.6-acre Oat Hill Parcel A from Industrial with a Specialty Commercial (CS) overlay and Estate Residential (RE) to High Density Residential (RH-1), (APN 058-380-008 and portion of 058-320-001), (File No. PL20-0024);
   c. A General Plan Amendment on a 7.2-acre Oat Hill Parcel B from Estate Density Residential to Medium Density Residential (portion of APN 058-320-001); (File No. PL20-0026);
   d. A Zone Change from on a 13.6-acre Oat Hill Parcel A from Light Industrial with a Specialty Commercial (LI:CS) overlay and Estate Residential (RE) to Medium Density Residential (APN 058-380-008 and portion of 058-320-001), (File No. PL20-0024);
   e. A Zone Change on a 7.2-acre Oat Hill Parcel B from Estate Density Residential to Medium Density Residential (RM); (portion of APN 058-320-001), (File No. PL20-0026);
   f. A Tentative Subdivision Map for 206 condominium residential units on a 13.6-acre Oat Hill Parcel A; (APN 058-380-008 and portion of 058-320-001), (File No. PL20-0025);
   g. A Tentative Subdivision Map for 85 condominium residential units on a 7.2-acre Oat Hill Parcel B; (portion of APN 058-320-001); (File No. PL20-0027);
   h. A Design Permit for condominium 206 residential units on a 13.6-acre Oat Hill Parcel A; (APN 058-380-008 and portion of 058-320-001), (File No. PL20-0022); and
   i. A Design Permit Map for 85 condominium residential units on a 7.2-acre Oat Hill Parcel B; (portion of APN 058-320-001); (File No. PL20-0023).

Site Information

General Plan Designation	Parcel A is Industrial with Specialty Commercial overlay (CS) and Residential Estate (RE) Parcel B is Residential Estate (RE)
Zoning District	Parcel A is Light Industrial with Specialty Commercial overlay (LI:CS); Parcel B is Residential Estate (RE)
Site Size	20.08 acres (Parcel A is 13.6 acres and Parcel B is 7.2 acres)
Present Use	Vacant
Surrounding Zoning and Uses	North: Light Industrial; winery and a vacant parcel South: Residential Estate; vacant East: Medium Density Residential; single-family homes West: Light Industrial; vacant parcel
Access	Site access is provided from Napa Junction Road

Figure 1: View of Oat Hill from SR-29@ Railroad Bridge

Figure 2: Vicinity Map

Background and Discussion

The Oat Hill property is located between Hess Road and the western terminus of Napa Junction Road. The proposed residential uses on Oat Hill would require a General Plan Amendment and a Zone Change.

A General Plan Amendment and Zone Change is a Legislative Act. Thus the Planning Commission, in its advisory role to the City Council as City residents with appointed authority, has complete discretion to approve, modify or deny such a request.

Proposed Development:
The Project Site topography is characterized by two generally flat terraces connected by a steep hillside, with elevations ranging approximately 80 to 185 feet above mean sea level. Parcel A (the upper parcel) and Parcel B (the lower parcel) are separated by a steep landscaped hillside. An emergency vehicle access (EVA) road will connect the two parcels.

The applicant submitted a Lot Line Adjustment (LLA) to reconfigure Parcel A from 11.3 acres to 13.6 acres and Parcel B from 9.5 acres to 7.2 acres (File No PL20-0039). An LLA is an administrative (staff approval) application. On March 11, 2021, staff informed the applicant the Lot Line Adjustment is technically correct and may be recorded.

History
In August 20, 2019, the applicant requested a workshop with the City Council for the consideration of residential uses on Oat Hill project. At that time, Parcel A was proposed for single family homes and Parcel B was proposed for apartment units.

In January 21, 2020, the City Council approved a resolution declaring that residential uses are the best use of the property on Oat Hill (Resolution 2020-06). The Resolution endorsed residential uses, but not a specific residential density.

In August 14, 2020, the applicant submitted the proposed Oat Hill Multifamily residential project. On December 4, 2020, the applicant submitted the first draft of the Initial Study and Mitigated Negative Declaration (ISMND) report.

On March 3, 2021, the Open Space Advisory Committee reviewed the project for consistency with public access requirements in the Parks Master Plan. Public access issues are considered later in this report.

Project Description
The overall project consists of 291 multi-family dwelling units. The Parcel A development consists of 206 dwelling units in 13 3-story multifamily buildings and a recreation building with leasing office. The density is 15.1 dwelling units per acre. The site will be supported with 451 parking spaces and approximately 2.2-acres of landscaping. The 206 multi-family residential units consists of 52 one-bedroom units, 108 two-bedroom units, and 46 three-bedroom units. Parcel A includes 1.2-acres of common open space and 3.2-acres of hillside slope area.

The Parcel B development consists of 85 dwelling units in five 3-story multifamily buildings and a recreation building with leasing office. The density is 11.8 dwelling units per acre. The 85 multi-family units comprise, 20 one-bedroom units, 45 two-bedroom units, and 20 three-bedroom units. The site will be supported with 183 parking spaces and 1.1-acres of landscaping. Parcel B includes 0.63-acres of common space and 5.9-acres of landscaped hillside slope.

As described in the “Subject Title” of the report, Parcel A and B are subject to the following entitlements:

- Mitigated Negative Declaration
- General Plan Amendment

- Zone change to amend the Zoning Map
- Tentative Subdivision Map, and
- Design Permit.

General Plan Amendment (GPA).

The Parcel A GPA changes the land use designation from Industrial with Specialty Commercial (I:CS) and Estate Residential to High Density Residential (RH-1). Estate Density Residential allows 1 dwelling unit per acres. High Density Residential allows a maximum of 16 dwelling units per acre. The graphic below depicts the "Current" and "Proposed" General Plan designations for Parcel A.

Existing General Plan Parcel A

Proposed General Plan Parcel A

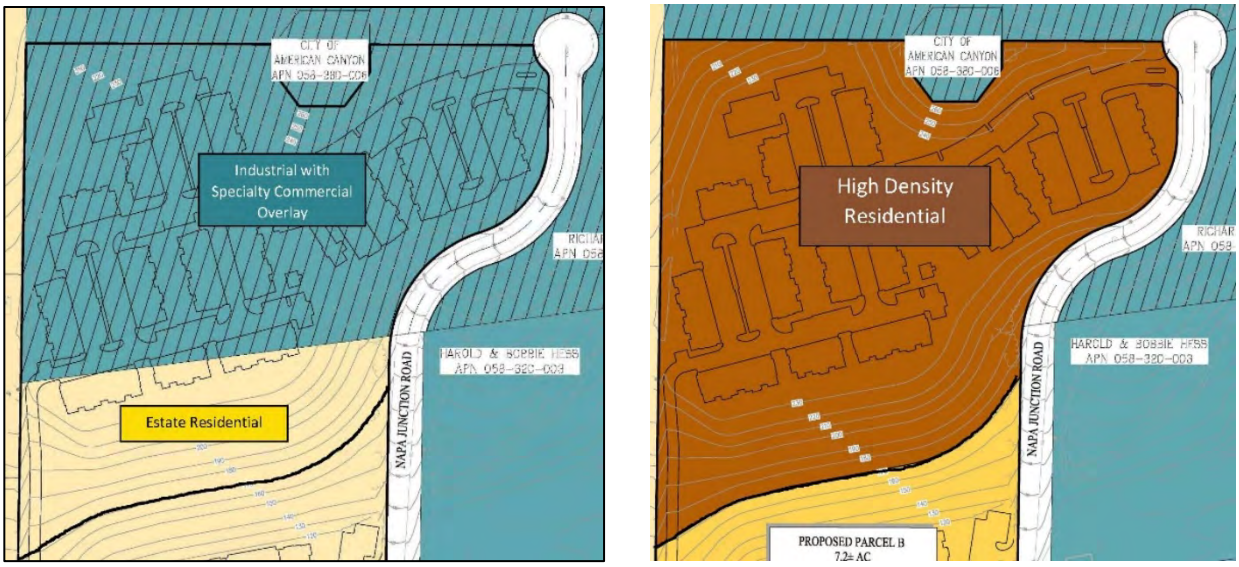

Figure 3: Existing and Proposed Parcel A General Plan Amendment

The Parcel B GPA changes the land use designation from Residential Estate (RE) to Medium Density Residential (RM). The graphic below depicts the "Current" and "Proposed" General Plan designations for Parcel B.

Existing General Plan Parcel B

Proposed General Plan Parcel B

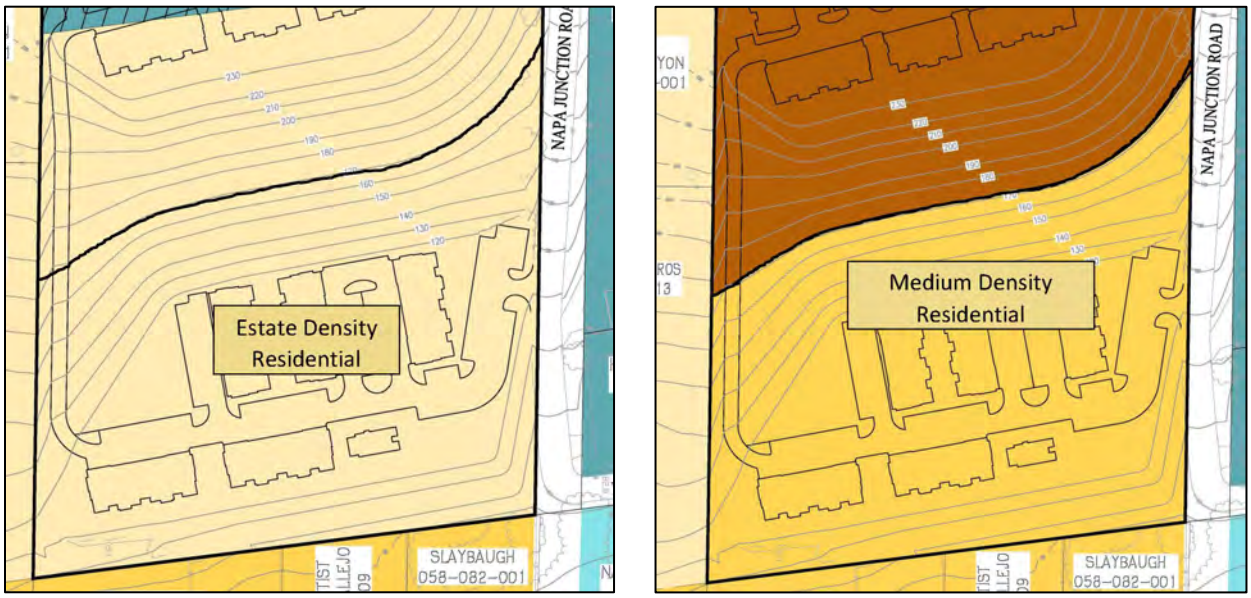

Figure 4 - Existing and Proposed Parcel B General Plan Designation

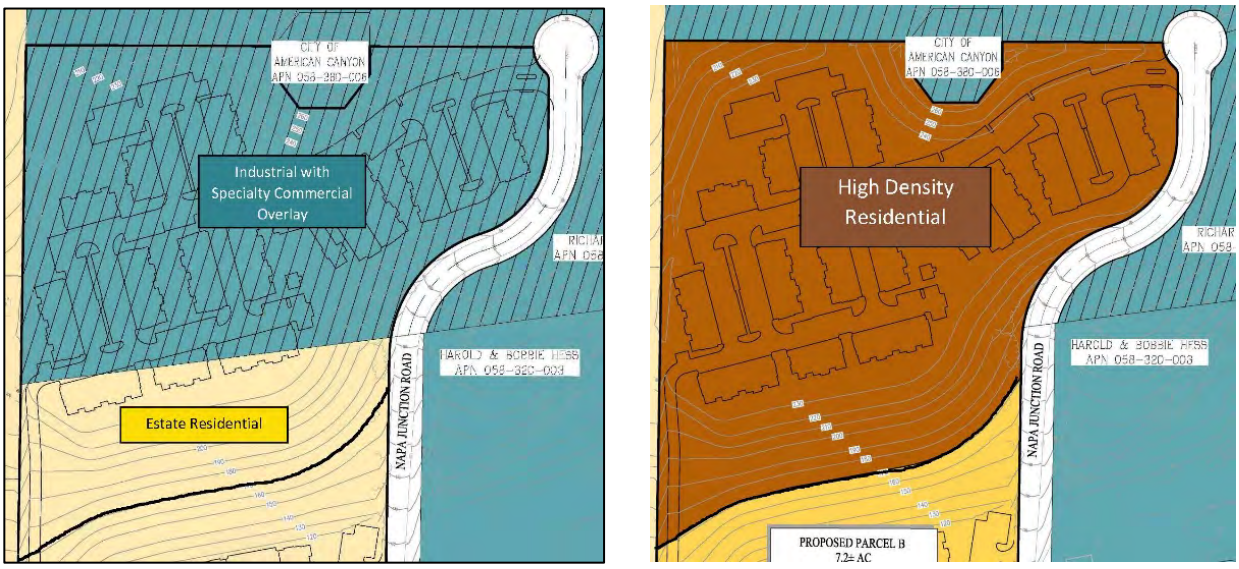
Zone Change Amendments (ZC).

Consistent with the General Plan revision, the Parcel A ZC amendments will change the zoning from Industrial with Specialty Commercial (I:CS) and Estate Residential to High Density Residential (RH-1). The graphic below depicts the "Current" and "Proposed" Zoning designations for Parcel A.

Existing Zoning Parcel A

Proposed Zoning Parcel A



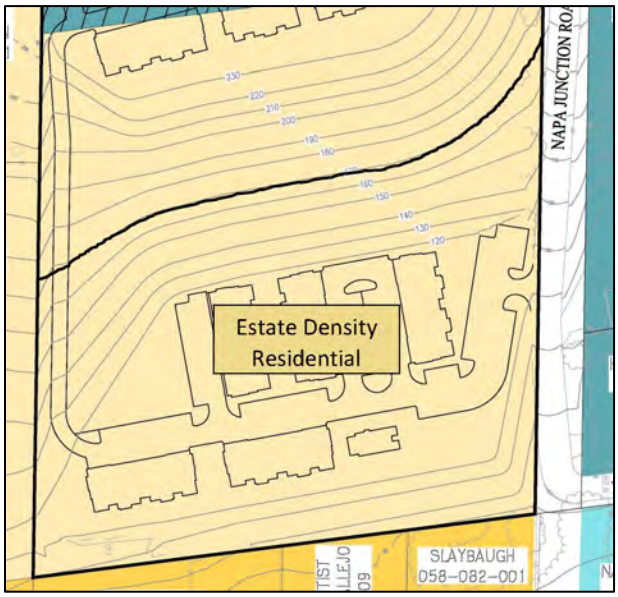


Figure 5 - Existing and Proposed Parcel A Zone Change Designations

The Parcel B ZC amendments will change the zoning from Residential Estate (RE) to Medium Density Residential (RM). The graphic below depicts the "Current" and "Proposed" Zoning designations for Parcel B.

Existing Zoning Parcel B

Proposed Zoning Parcel B

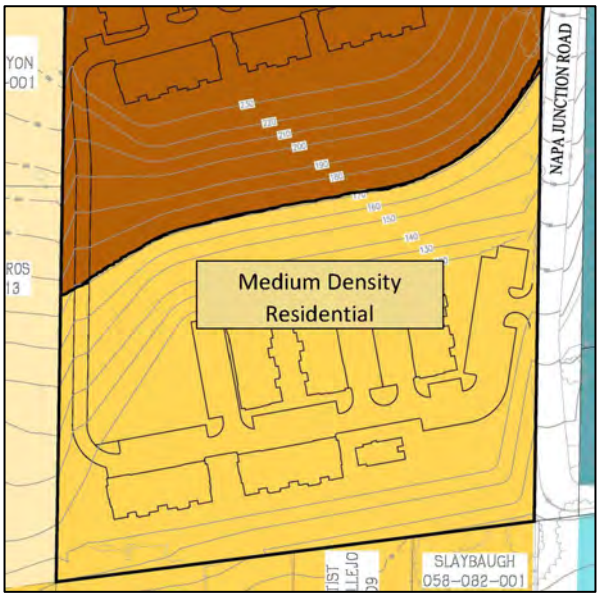

Figure 6 - Existing and Proposed Parcel B Zoning Designation

Tentative Subdivision Map

The applicant submitted a subdivision map for Parcel A and B. The subdivision maps provides flexibility to rent the dwelling units as apartments or sell them as ownership condominiums.

Parcel A Tentative Subdivision Map The Parcel A tentative subdivision map consists of 206 dwelling units in 13 3-story multifamily buildings and a recreation building with leasing office. The interior roads and recreation areas would be privately owned and maintained. The density is 15.1 dwelling units per acre which is within the 16 maximum dwelling units per acre per the High-Density zoning district.

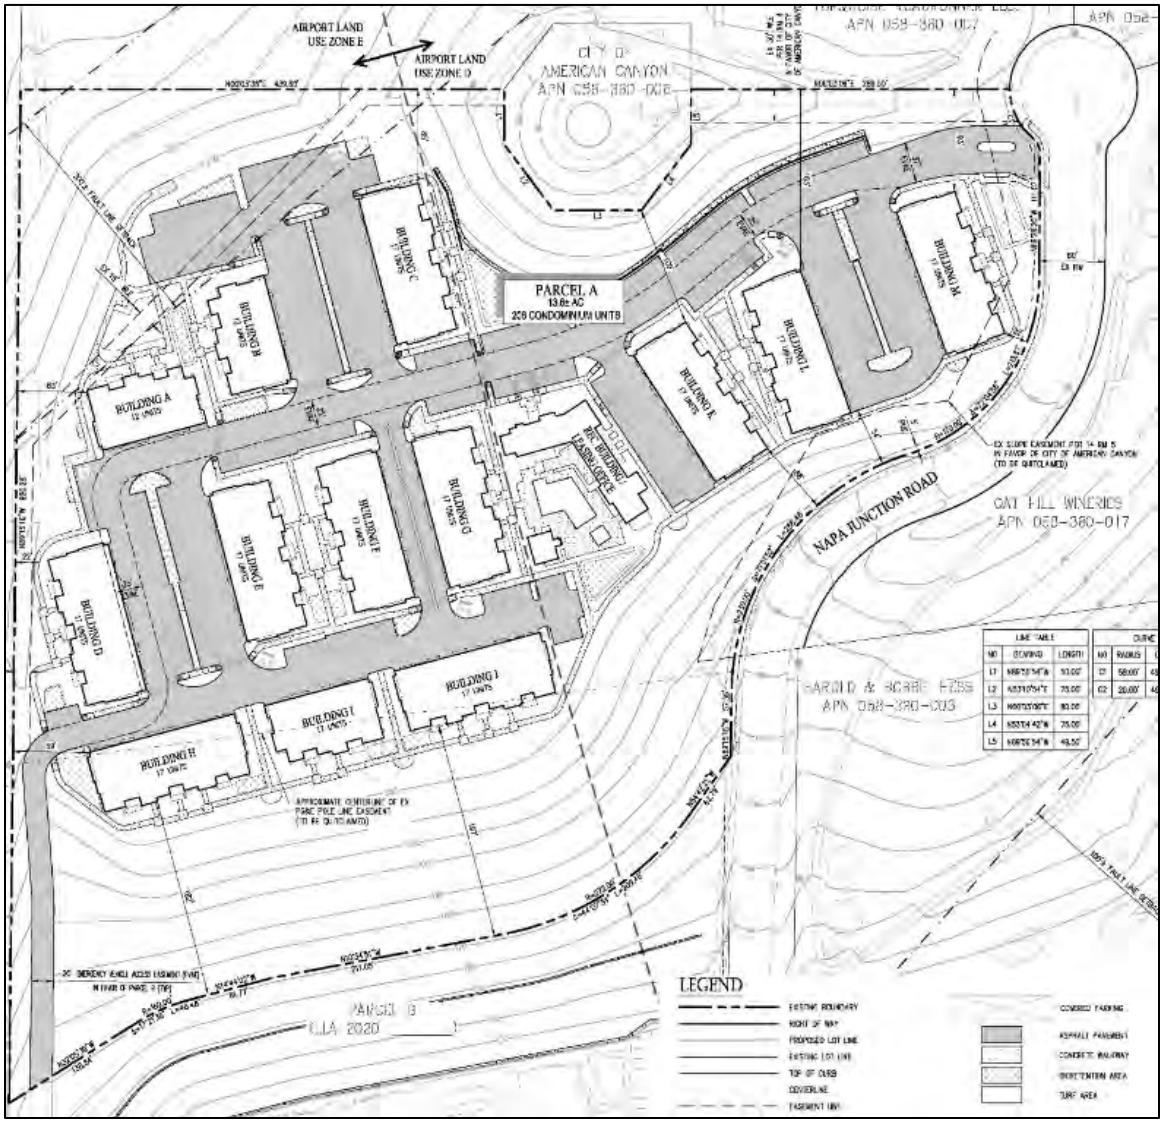

Figure 7 - Proposed Parcel A Tentative Subdivision Map

Parcel B Tentative Subdivision Map The Parcel B tentative subdivision map consists of 85 dwelling units in 5 3-story multifamily buildings and a recreation building with leasing office. The interior roads and recreation areas would be privately owned and maintained. The density is 11.8 dwelling units per acre which is within the 12 maximum dwelling units per acre per the Medium-Density zoning district.

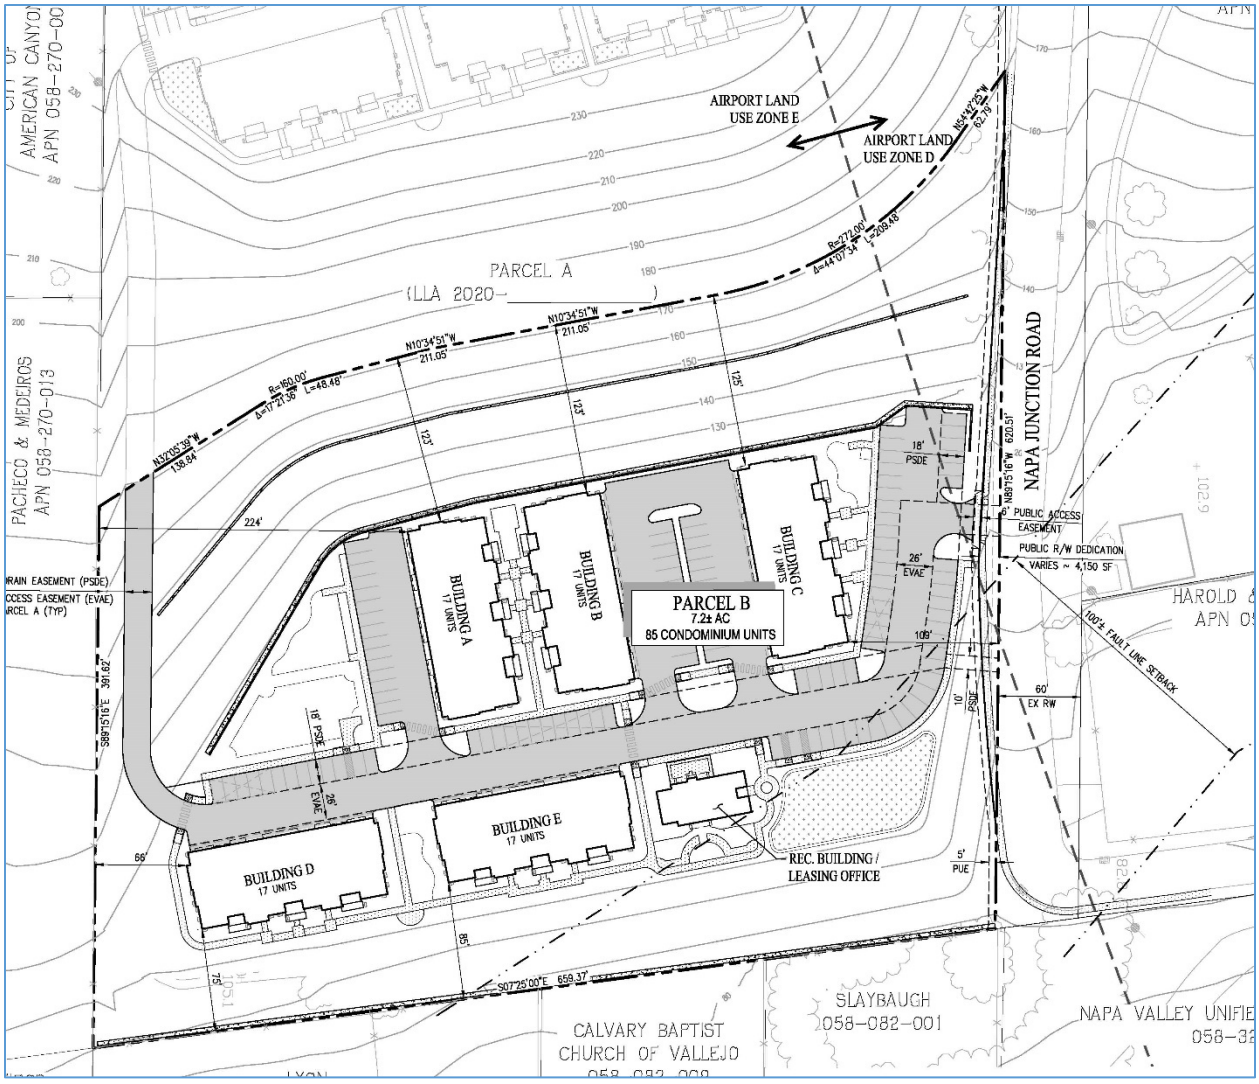

Figure 8 - Proposed Parcel A Tentative Subdivision Map

Analysis of the Proposed Project

The Conditional Use Permit application analysis includes:

1. Project Consistency with the General Plan
2. Project Consistency with the Zoning Ordinance
3. Specific Project Issues
4. Public Comments

1. Consistency with the General Plan

Approval of a General Plan Amendment for Parcel A and B supports several policies related to enhancing housing opportunities in the City. These policies are discussed below:

Because there is a critical shortage of residential housing for all levels of affordability in California, the proposed Oat Hill Multi-Family Residential general plan amendment will designate additional land to provide needed housing. Replacement of Light Industrial with a Specialty Commercial

Overlay (LI:CS) zoning with High Density Residential (RH-1) zoning is in keeping with the following General Plan Goals that promote additional housing in American Canyon:

Goal 2A: "Provide sufficient residential land with adequate infrastructure to accommodate the City's fair share of projected growth, and to facilitate mobility within the ownership and rental markets."

Goal 2B: "Provide a range of housing types within the community to accommodate a variety of incomes and lifestyles, and to enable residents to remain in American Canyon throughout their lives."

Goal 2E: "Address the housing needs of all economic segments of the existing and future community, including the City's fair share of the regional housing need." The applicant proposes to address housing affordable to lower income residents by providing in-lieu impact fees, pursuant to the Inclusionary Housing Ordinance (ACMC Chapter 19.28).

The project satisfies the following Land Use Element policies:

Goal 1E: "Ensure the development of residential neighborhoods that provide a range of housing opportunities to meet the physical, economic, and social needs of the population, are designed to exhibit a high quality and character, contain appropriate supporting services, and reflect their environmental setting." The design permit application associated with this property ensures that the development will exhibit a high quality and character. The project reflects its environmental setting by providing public access to locally-important views across the project site.

Policy 1.8 specifies that the intent of multifamily residential is to provide high quality residential at 5 to 12 dwellings per unit for the RM zone and 12 to 16 dwelling units for the RH zone.

Policy 1.8.4 call for special architectural treatment, the incorporation of arcades and other recesses, articulation and differentiation of building entrances and floors, and the use of landscaping.

Policy 1.17 specifies the zone should, "provide for development of uses that capitalize on and attract visitors due to their unique view sheds of the Napa River, San Francisco Bay, and Napa Valley, site topography, and other natural characteristics".

The Oat Hill Parcel A and B developments are consistent with these policies. The development takes advantage of the Oat Hill view by providing units with bay windows and balconies facing the south, southeast, and southwest. According to their preliminary architectural designs, the apartment buildings are of Modern Farmhouse design. They feature a hip roof, articulated entrances, functional balconies, separations in color, and recessed windows. The site also takes advantage of landscaping in the setbacks, common areas, and parking areas. The development complies with the Design Permit development standards for the RH-1 and RM zoning districts and proposes buildings of high quality that meets the General Plan Land Use goals.

Figure 9: Elevation of 17-unit apartment for Oat Hill Apartments

Figure 10: Front elevation of 12-unit apartment for Oat Hill Apartments

The development of housing on Oat Hill also would be compatible with the Broadway Specific Plan (the "Broadway Plan"). Although Parcels A and B are not within the boundaries of the Broadway Plan, that plan designates land adjacent to the parcels as "Medium Density Residential," which permits 12 units/acre and is intended to foster a high-density residential community that is compatible with the existing older single-family residences in this area. Re-designating Parcels A and B to RH-1 and RM would allow for residential densities similar to those permitted in the Medium Density Residential area of the Broadway Plan, and it would further establish a residential community that is compatible with surrounding uses.

Re-designating and rezoning Parcels A and B for medium- and high-density residential would be consistent with other development principles and strategies identified in the Broadway Plan. For example, the Broadway Plan has identified properties west of Theresa Avenue between Napa Junction and Eucalyptus Road West End as suitable for residential uses to facilitate the development of additional housing. Further, the Broadway Plan seeks to increase the number and type of housing opportunities in the Broadway area and encourages variety in the scale and design of new development. Re-designation of Parcels A and B directly furthers these goals.

Finally, the parcels are located near areas designated as "Business Park" under the Broadway Plan. The Business Park designation is designed to encourage professional office uses, as well as retail and service commercial uses that are oriented to the day-to-day needs of the local residents. Oat Hill's location west

of this area and the downtown core makes it an ideal location for new residences that are close to services and transit.

2. Consistency with Zoning Ordinance

According to the American Canyon Municipal Code (ACMC) multifamily projects within the High Density Residential (RH-1) and Medium Density Residential (RM) zoning districts are permitted uses. The project meets the required development standards as follows:

Table 1 – Parcel A Development Standards

Development Standard (RH-1 Zone)	Required	Provided
Minimum Lot Size	20,000 SF	13.6 acres
Max Density (dwelling units per acre)	16 DU/AC	15.1 DU/AC
Minimum Width	100 feet	600+ feet
Minimum Depth	100 feet	900+ feet
Max Lot Coverage	50%	17.6%
Max Building Height	42 feet	40 feet
Required Setbacks Front Yard Side (Interior) Rear First Story Second Story	 20 feet 5 feet 10 feet 5 feet 10 feet	 30 feet 20+ feet 20+ feet 20+ feet 20+ feet
Maximum # of stories	3 stories	3 stories
Parking: Unit with 1 bedroom requires 1 covered, plus .5 uncovered spaces; Unit with 2 or more bedrooms requires 1 covered space plus 1 uncovered space; Plus 1 guest space per 4 units	438	451 (23 offsite)
Bicycle Parking	10 stalls	10 stalls*

* The applicant shall identify the location of the bicycle parking prior to the issuance of building permits.

Table 2 – Parcel B Development Standards

Development Standard (RM Zone)	Required	Provided
Minimum Lot Size	20,000 SF	7.2 acres
Max Density	12 DU/AC	11.8 DU/AC

Bicycle Parking	7 stalls	7 stalls*

* The applicant shall identify the location of the bicycle parking prior to the issuance of building permits.

3. Specific Project Issues

a. Airport Land Use

A portion of the site lies within the Napa County Airport Land Use Compatibility Plan (ALUCP). Four buildings, K, L, M and the recreation office, are within the D-Zone, and consists of 51 units. The ALUCP defines the D-Zone as one that does not normally permit residential uses. The applicant conducted a peer-reviewed noise study, prepared by Saxelby Acoustics (Sept 10, 2020) and concluded that the Oat Hill project would not conflict with the noise contours or any of the "three established sources of guidance on safety compatibility" for Zone D. As an added precaution and a condition of approval, the applicant will agree to record an avigation easement in favor of the Napa County Airport to indemnify them from noise complaints. The applicant also scheduled to file an application with the Napa County Airport Land Use Commission (ALUC) to request approval of their project in the D-Zone. The applicant plans to attend their May 1, 2021 meeting to present their project.

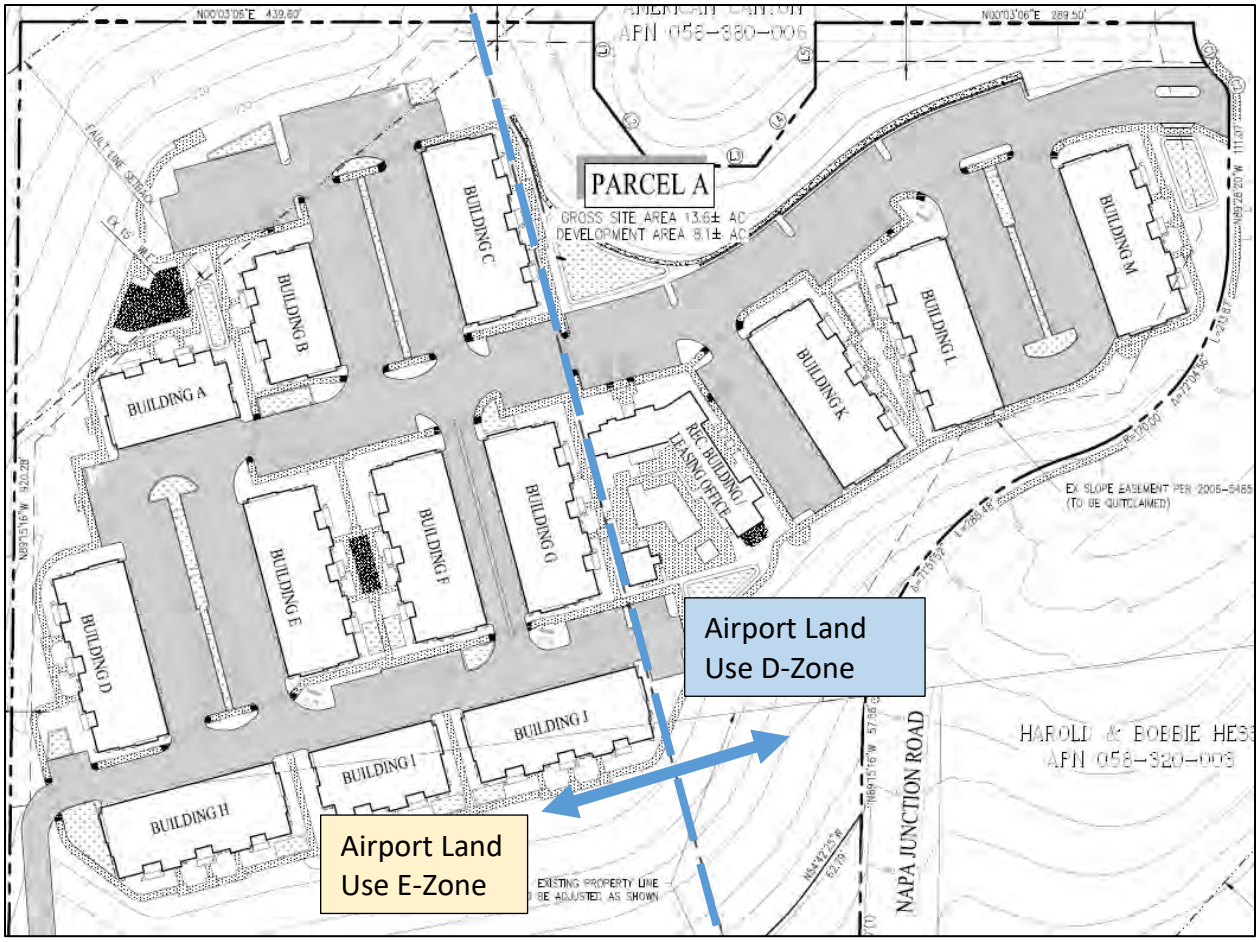

Figure 11: Buildings K, L, and M are within the D-Zone for the Airport Land Use Plan. All other units are not affected.

b. Affordable Housing

In accordance to the Municipal Code, new apartment developments that exceed five units are subject to inclusionary housing. The Code requires housing developments to provide 15% of the units, at 5% for very-low, 5% for low-income, and 5% for moderate income housing. For the 291 proposed units at the Oat Hill project, the applicant is required to provide 44 affordable units.

The applicant requested to provide an affordable housing nexus fee in-lieu of the 44 affordable units. The applicant provided a marketing study which explained that it was financially infeasible for the project to proceed without the in-lieu fee. The current affordable housing nexus fee is $3.82 per square feet, which is due prior to building permit issuance, and the marketing study is available in Attachment 1, Exhibit C.

c. Napa Junction Road

Primary access to both Parcels A and B will be from Napa Junction Road. A new sidewalk would be constructed along the frontage on Napa Junction Road. A new section of Napa Junction Road would be constructed between two disconnected segments east and west of Hess Road. The new roadway and pedestrian connections would result in a more direct route to the project site from SR 29 and other areas of the City and would require the removal of several existing trees located adjacent to Parcel B.

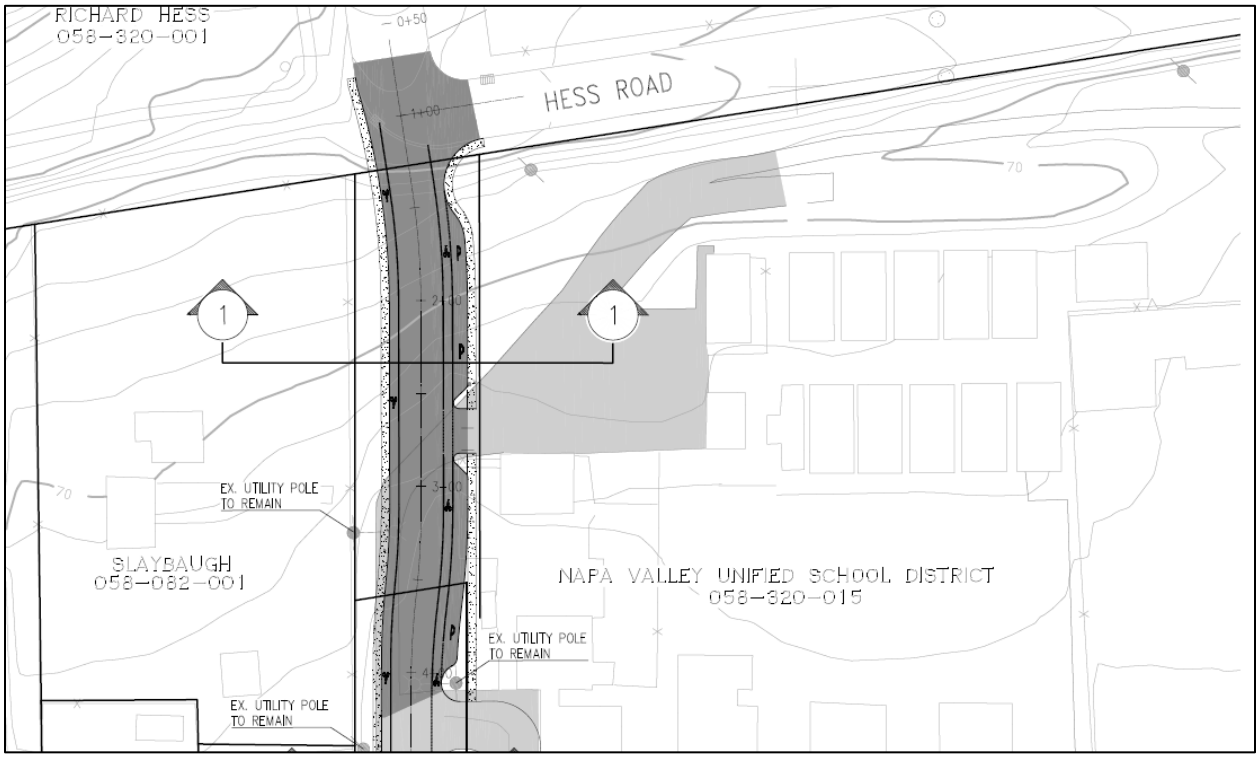

Figure 12: Napa Junction Road Extension proposed to be completed by the project will bring access and mobility to Oat Hill.

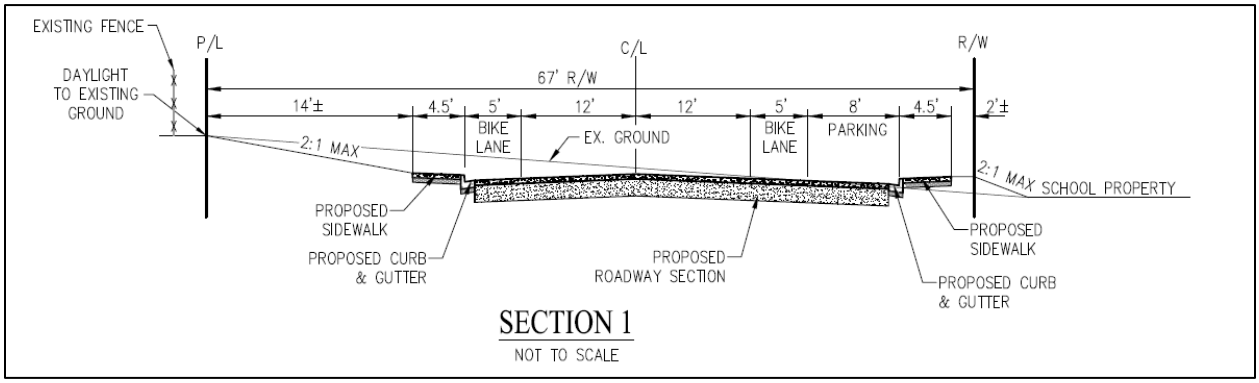

Figure 13: Preliminary cross-section drawing of the Napa Junction extension will include two travel lanes, bike lanes, sidewalks, and a single parking lane.

Part of the Napa Junction extension is owned by the Napa Valley Unified School District (NVUSD) and the applicant is required to make a good faith offer to NVUSD. This would include identification of property rights needed (permanent and temporary), appraisal of the value of the highest and best use of the property, and offer to pay this amount. The obligation is identified as a condition of approval.

d. Oat Hill Views and Public Access Trail

For many years, the City considered views from Oat Hill to be an important public resource. In 1994, the General Plan designated Oat Hill with a Specialty Commercial overlay that highlights the unique views from Oat Hill. According to the General Plan Land Use Policy 1.17.3, [The City shall] *Require that development be sited and designed to emphasize the unique character of its setting and intended functions*

(e.g., maintenance of viewsheds) and convey a high level of quality in accordance with Policies 1.18.1 to 1.18.4. Additionally, in accordance to ACMC Section 19.19.030(B)(3), *projects using the specialty commercial overlay zoning that require approval of a design permit shall incorporate into the site plan a public pedestrian easement to the site with potential connections to adjacent properties that provides access to the site's unique views.*

The Parcel B application is lower in elevation and the views are not significant. The Parcel A application being higher on Oat Hill offers the best views. Recognizing the City's Oat Hill view policy, the Parcel A site plan includes a pedestrian path that takes advantage of the views. Figures 4, 5 and 6 depict the views from the upper pad. The path, shown in yellow highlight in Figure below, generally follows the edge of the development pad with no structures in the way to block the view.

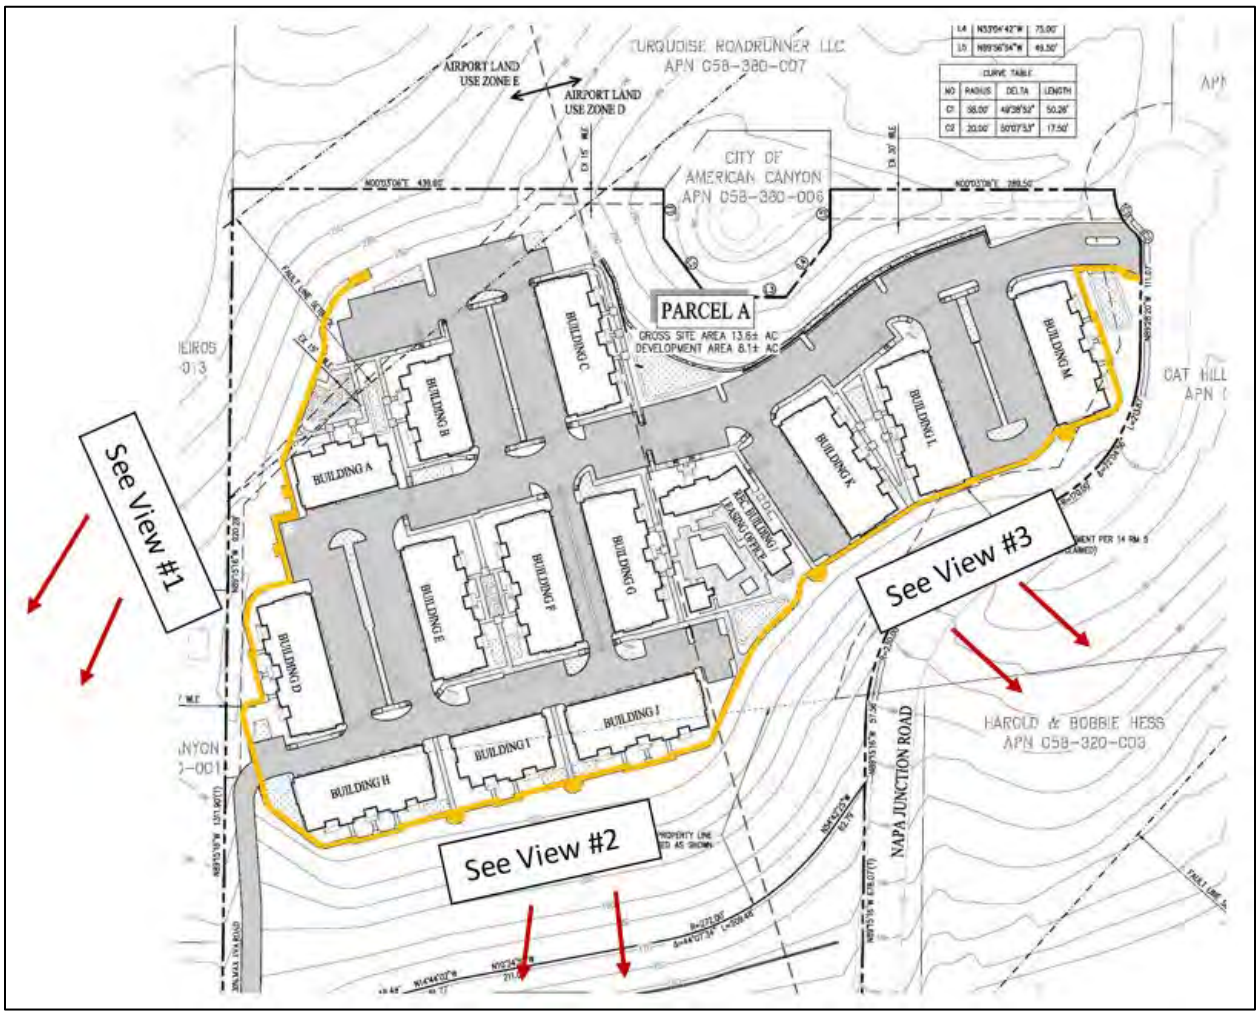

Figure 14: Proposed pedestrian view path shown in yellow.

Figure 15: View 1 – Southeast View

Figure 16: View #2 – East View

Figure 17: View #3 – Northeast View

The applicant attended an Open Space Advisory Committee (OSAC) meeting on March 3, 2021 and discussed the project with the committee. Mr. Hess explained that the pedestrian path, which he refers to as the "Community Loop Walkway", will be open to the public and maintained by the property-owner. The walkway is closest to the buildings where there are no apartment windows (i.e.: no privacy issue) and farther where it passes apartment unit front door entries. Mr. Hess explained that separating the path from the apartment buildings is constrained by the edge of Parcel A. The walkway will be at least 4 feet wide and contains look-out areas and benches to take advantage of Oat Hill views. Visitor parking will be

limited on site, but street parking along Napa Junction Road will be available as a first-come, first-serve basis.

e. Public Comments

A 30-day Notice of Intent was sent to the State Clearinghouse and published on February 5, 2021. Staff received three comments.

California Department of Fish and Wildlife. A California Department of Fish and Wildlife letter recommended revisions to the proposed Biological Resources mitigation measures. The revisions suggest expanding the size of pre-construction bird survey radiuses, and establishing tighter buffer zones. The biology consultant WRA Environmental Consultants reviewed the requests and is scheduled to updated Mitigation Measures BIO-1 to BIO-5 in the biology section.

Caltrans. A Department of Transportation letter recommended the applicant conduct annual monitoring reports, and inquired why the SR-29 / Napa Junction Road intersection was not considered in the group of analyzed areas in the traffic impact study. The letter also provided guidance on how to submit an encroachment permit application. The applicant's CEQA consultant, Raney Environmental, reviewed the requests and explained that subsequent to the publication of the IS/MND, a final traffic impact analysis (TIA) was prepared for the project. The final TIA, from February of 2021, includes the SR-29/Napa Junction Rd intersection. As noted in the final TIA, the Napa Junction Road/SR 29 intersection would operate at LOS F under Future Conditions with or without the proposed project. This operation was considered acceptable because the Napa Junction Road/SR 29 intersection is exempt from the City's LOS standard, and the California Department of Transportation (Caltrans) does not provide an operational standard. Therefore, the findings of the final TIA would not change the adequacy of the analysis, mitigation, or conclusions presented in the IS/MND. The final TIA is available in the Attachment 1, Exhibit A.

Resident. A resident of American Canyon inquired about why the IS/MND stated that there is no impact to our school system. The letter also stated that more housing would lead to increased traffic. The applicant's CEQA consultant reviewed the letter and will provide an explanation in the final IS/MND report. The applicant's CEQA consultant, Raney Environmental, reviewed the comment and responded. Raney explained that the applicant is required to pay a facilities fee to the Napa Valley Unified School District (NVUSD), which goes towards the cost of improvements and/or upgrades to school facilities. In regards to traffic, Raney explained that according to the TIA, the Oat Hill project would add traffic solely to the eastbound and westbound through movements in the Napa Junction / Lombard intersection, which do not have delays and are below average for the intersection as a whole. Project trips are expected to make use of the excess capacity, thus motorists would experience little, if any, change in conditions as a result of this project. See response to comments in Attachment 1, Exhibit A.

Property Owner. A property owner in a neighboring property provided a letter of support for the project. The comment does not address the adequacy of the IS/MND.

Public Outreach Efforts. The applicant conducted a public outreach study from September 18 to October 6 of 2020. The outreach area consisted of all property owners within 300 feet of the site and a few select neighbors beyond that proximity. The applicant met with neighbors in person, provided copies of the plans, and photo simulations. Several property owners provided letters of support as a result of these outreach efforts, see Attachment 1 Exhibit D.

CEQA Review

The City of American Canyon prepared an Initial Study Checklist and Mitigated Negative Declaration in accordance with the California Environmental Quality Act (CEQA). The basis for the Mitigated Negative Declaration (MND) is the finding that the proposed Project will not have a significant effect on the environment because mitigation measures that reduce the impacts to less than significant are being approved as part of project conditions. The MND includes mitigation measures for Biological Resources, Cultural Resources, Geology/Soils, Hydrology/Water Quality, Noise, Transportation/Traffic, and Utilities.

The MND was circulated to the public for 30 days starting February 5, 2021. In response to the notice, the City received one letter. The letters are included as with the final Initial Study MND in Attachment 1 Exhibit A.

Staff Recommendation

Consider Resolutions to Recommend City Council approval of:

(1) The *Oat Hill Multi-Family Residential Mitigated Negative Declaration*;
(2) A General Plan Amendment on a 13.6-acre Oat Hill Parcel A from Industrial with a Specialty Commercial (CS) overlay and Estate Residential (RE) to High Density Residential (RH-1), (APN 058-380-008 and portion of 058-320-001), (File No. PL20-0024);
(3) A General Plan Amendment on a 7.2-acre Oat Hill Parcel B from Estate Density Residential to Medium Density Residential (portion of APN 058-320-001); (File No. PL20-0026);
(4) A Zone Change from on a 13.6-acre Oat Hill Parcel A from Light Industrial with a Specialty Commercial (LI:CS) overlay and Estate Residential (RE) to Medium Density Residential (APN 058-380-008 and portion of 058-320-001), (File No. PL20-0024);
(5) A Zone Change on a 7.2-acre Oat Hill Parcel B from Estate Density Residential to Medium Density Residential (RM); (portion of APN 058-320-001), (File No. PL20-0026);
(6) A Tentative Subdivision Map for 206 condominium residential units on a 13.6-acre Oat Hill Parcel A; (APN 058-380-008 and portion of 058-320-001), (File No. PL20-0025);
(7) A Tentative Subdivision Map for 85 condominium residential units on a 7.2-acre Oat Hill Parcel B; (portion of APN 058-320-001); (File No. PL20-0027);
(8) A Design Permit for condominium 206 residential units on a 13.6-acre Oat Hill Parcel A; (APN 058-380-008 and portion of 058-320-001), (File No. PL20-0022); and
(9) A Design Permit Map for 85 condominium residential units on a 7.2-acre Oat Hill Parcel B; (portion of APN 058-320-001); (File No. PL20-0023).

XI. LAND USE AND PLANNING. *Would the project:*		Potentially Significant Impact	Less-Than-Significant with Mitigation Incorporated	Less-Than-Significant Impact	No Impact
a.	Physically divide an established community?	☐	☐	✖	☐
b.	Cause a significant environmental impact due to a conflict with any land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect?	☐	☐	✖	☐

Discussion

a. **Parcel A and Parcel B**

A project risks dividing an established community if the project introduces infrastructure, alters land use conditions in the surrounding community, or isolates an existing land use. Currently, the project site is undeveloped and consists of vacant land with ruderal vegetation and limited trees. Surrounding development in the project vicinity includes industrial businesses, such as RLM Enterprises, and a recreational vehicle (RV) park to the north, an office building to the northwest, Napa Junction Magnet Elementary School to the northeast, single-family residences, a Baptist Church, and American Canyon City Hall to the east, and undeveloped land to the south and west. The proposed residences would be compatible with the existing development in the project area. The proposed project involves construction on a vacant site. Therefore, the project would not divide an established community. In fact, the proposed Napa Junction Road extension would improve connectivity between the proposed residences and surrounding uses in the project area, which include schools, parks, and commercial uses. As such, the proposed project would not physically divide an established community and a ***less-than-significant*** impact would occur.

b. **Parcel A**

According to the City's General Plan, Parcel A is designated as I:CS and zoned LI:CS. The proposed project includes a request for a General Plan Amendment from I:CS to RH-1, as well as a rezone from LI:CS to RH-1. Upon approval of both entitlements, the proposed project would develop 206 multi-family residential units on Parcel A, and the current designations would be amended to reflect the characteristics of the proposed project. Although the City has not anticipated residential uses on the project site, the proposed project would not conflict with City policies and regulations adopted for the purpose of avoiding or mitigating an environmental effect. For example, because the project would introduce new residents and increase the demand for recreational facilities, the project applicant would be required to pay the City's parks and recreation impact fees or donate parkland and/or improvements to the City. In addition, in compliance with the Section 18.40.100 of the City's Municipal Code, the proposed project would be required to include replacement trees for any that are removed within Parcel A. Implementation of the mitigation measures included within this IS/MND would ensure all environmental impacts of the proposed project have been reduced to a less-than-significant level.

Parcel B

According to the City's General Plan, Parcel B is designated as RE and zoned RE. The proposed project includes a request for a General Plan Amendment from RE to RM, as well as a rezone from RE to RM. Upon approval of both entitlements, the proposed project would develop 85 multi-family residential units on Parcel B. Similar to the discussion above for Parcel A, the current designations would be amended to reflect the characteristics of the proposed project. In addition, although the City has not anticipated residential uses on the project site, the proposed project

would not conflict with City policies and regulations adopted for the purpose of avoiding or mitigating an environmental effect. For example, because the project would introduce new residents and increase the demand for recreational facilities, the project applicant would be required to pay the City's parks and recreation impact fees or donate parkland and/or improvements to the City. Tree removal associated with the extension of Napa Junction Road would similarly require compliance with Section 18.40.110 of the City's Municipal Code. Therefore, implementation of the mitigation measures included within this IS/MND would ensure all environmental impacts of the proposed project have been reduced to a less-than-significant level.

Conclusion

Implementation of the mitigation measures included within this IS/MND would ensure all potential environmental impacts associated with development within Parcel A and Parcel B have been reduced to a less-than-significant level. Based on the above, the proposed project would not cause a significant environmental impact due to a conflict with any land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect, and thus, a ***less-than-significant*** impact would occur.

XIII. NOISE. *Would the project result in:*	Potentially Significant Impact	Less-Than-Significant with Mitigation Incorporated	Less-Than-Significant Impact	No Impact
a. Generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?	☐	✖	☐	☐
b. Generation of excessive groundborne vibration or groundborne noise levels?	☐	☐	✖	☐
c. For a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise levels?	☐	☐	✖	☐

Discussion

The following discussion is based primarily on an Environmental Noise Assessment prepared for the proposed project by Saxelby Acoustics (see Appendix F).[25] The Environmental Noise Assessment included consideration of development of both Parcel A and Parcel B.

a. The following sections present information regarding sensitive noise receptors in proximity to the project site, the existing noise environment, and the potential for the proposed project to result in impacts during project construction and operation. The following terms are referenced in the sections below:

- Decibel (dB): A unit of sound energy intensity. An A-weighted decibel (dBA) is a decibel corrected for the variation in frequency response to the typical human ear at commonly encountered noise levels. All references to decibels (dB) in this report will be A-weighted unless noted otherwise.
- Average, or equivalent, sound level (L_{eq}): The L_{eq} corresponds to a steady-state A weighted sound level containing the same total energy as a time varying signal over a given time period (usually one hour).
- Day-Night Average Level (Ldn): The average sound level over a 24-hour day, with a +10 decibel weighing applied to noise occurring during nighttime (10:00 PM to 7:00 AM) hours.

Sensitive Noise Receptors

Some land uses are considered more sensitive to noise than others, and, thus, are referred to as sensitive noise receptors. Land uses often associated with sensitive noise receptors generally include residences, schools, libraries, hospitals and passive recreational areas. Noise sensitive land uses are typically given special attention in order to achieve protection from excessive noise.

[25] Saxelby Acoustics. *Environmental Noise Assessment, Oat Hill Apartments, City of American Canyon, California.* September 10, 2020.

In the vicinity of the project site, sensitive land uses include Napa Junction Magnet Elementary School to the northeast and single-family residences and a Baptist Church to the east.

Existing Noise Environment

The existing noise environment in the project area is primarily defined by traffic on SR 29. Other noise sources include airplane flyovers to and from the Napa County Airport, transportation noise from the Union Pacific Railroad line to the north of the project site and operational noise originating from a lumber processing facility to the southwest.

To quantify the existing ambient noise environment in the project vicinity, Saxelby Acoustics conducted two continuous noise level measurements in the vicinity of the project site. Noise measurement locations are shown in Figure 18, and a summary of the noise level measurement survey results is provided in Table 16.

Table 16
Summary of Existing Background Noise Measurement Data

Site	Date	L_{dn}	Average Measured Hourly Noise Levels (dBA)					
			Daytime (7 AM to 10 PM)			Nighttime (10 PM to 7 AM)		
			L_{eq}	L_{50}	L_{max}	L_{eq}	L_{50}	L_{max}
LT-1	08/05/20 – 08/06/20	55	51	49	64	48	46	60
LT-2	08/05/20 – 08/06/20	55	49	47	66	48	46	61

Source: Saxelby Acoustics, 2020.

Standards of Significance

The City of American Canyon establishes an exterior noise level criterion of 65 dB L_{dn} or less within outdoor activity areas of residential land uses. Additionally, the City requires that cumulative noise exposure from exterior noise sources within noise-sensitive dwellings not exceed 45 dB L_{dn}.

The American Canyon Municipal Code establishes maximum noise limits for construction activities. Specifically, Section 8.12.080 limits construction noise at residential receptors to a maximum of 75 dBA between the hours of 7:00 AM and 7:00 PM and 60 dBA between 7:00 PM and 7:00 AM every day of the week.

Impact Analysis

The following sections provide an analysis of potential noise impacts associated with construction and operation of the proposed project.

Construction Noise – Parcel A and Parcel B

During construction of the proposed project, heavy-duty equipment would be used for demolition, grading, excavation, paving, and building construction, which would result in temporary noise level increases. Noise levels would vary depending on the type of equipment used, how the equipment is operated, and how well the equipment is maintained. In addition, noise exposure at any single point outside the project site would vary depending on proximity of construction activities to that point. Standard construction equipment, such as backhoes, dozers, and dump trucks would be used on-site.

Figure 18
Noise Measurement Locations

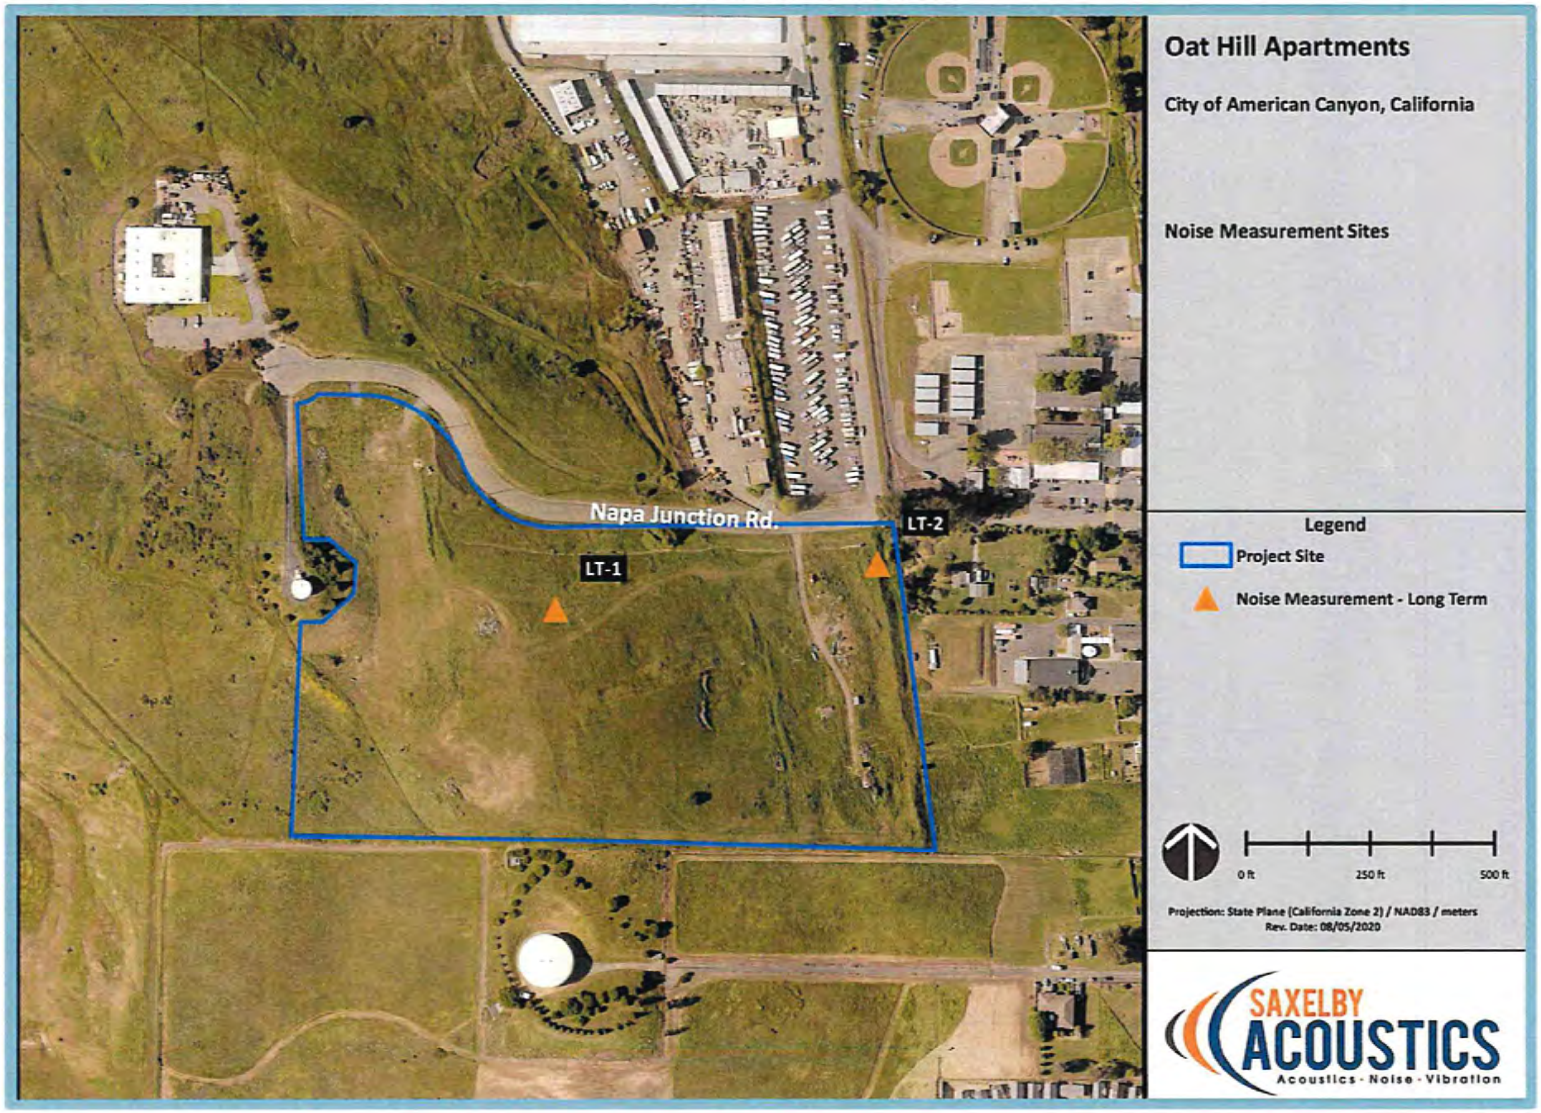

Table 17 shows predicted construction noise levels for development of the proposed project. Based on the table, typical construction activities would generate maximum noise levels up to 90 dB at a distance of 50 feet. Construction activities would be temporary and occur during normal daytime hours.

Table 17
Construction Equipment Noise

Type of Equipment	Maximum Level, dB at 50 feet
Auger Drill Rig	84
Backhoe	78
Compactor	83
Compressor (air)	78
Concrete Saw	90
Dozer	82
Dump Truck	76
Excavator	81
Generator	81
Jackhammer	89
Pneumatic Tools	85

Source: ***Federal Highway Administration, Roadway Construction Noise Model User's Guide, January 2006.***

Noise would also be generated during the construction phase by increased truck traffic on area roadways, including truck traffic associated with heavy material and equipment transport to and from the construction site. Noise increases from truck traffic related to the material movement would be short duration, and likely occur during daytime hours.

The City of American Canyon establishes maximum noise limits for construction activities of 75 dBA between the hours of 7:00 AM and 7:00 PM and 60 dBA between 7:00 PM and 7:00 AM. The nearest residential uses are located approximately 320 feet to the east, as measured from the center of Parcel B. At 320 feet, the maximum construction noise levels would range 60 dBA to 74 dBA L_{max} in the backyards of the nearest residential uses. Construction in Parcel A is farther from the nearest sensitive receptor, and, thus, the Parcel A construction noise experienced by the nearest receptor would be less intense than the noise experienced from Parcel B development. Therefore, noise generated from on-site construction would not significantly impact noise levels in the surrounding environment.

In addition to construction activities within the on-site parcels, off-site improvements would include the Napa Junction Road extension. Construction of the Napa Junction Road extension would occur over a much shorter time and subject to the same maximum noise limits than the residential development. Although off-site improvements would take place near Napa Junction Elementary School, the school is in the process of being relocated due to concerns regarding seismicity in the project region. However, construction of the roadway extension would take place approximately 80 feet north of the nearest residential building. At 80 feet from the nearest sensitive receptor, the maximum construction noise levels associated with the roadway extension may exceed the City's 75 dBA noise limit. Therefore, mitigation would be required to ensure that roadway extension construction activities would not adversely affect noise levels in the surrounding environment.

Although construction activities are temporary in nature and would likely occur during normal daytime working hours, on-site and off-site construction-related noise may disturb sleep at existing noise-sensitive land uses in the vicinity of the project if construction activities were to occur outside the normal daytime hours. Therefore, substantial temporary or permanent ambient noise level impacts in the vicinity of the project that exceed general plan or noise ordinance standards could be considered significant.

Project Operational Noise – Parcel A and Parcel B

The proposed project would primarily generate traffic noise on nearby roadways. Transportation related noise within the project area and at sensitive receptors is discussed in further detail below.

Traffic Noise Increases

As further discussed in Section XVII. Transportation/Traffic, of this IS/MND, the proposed project would increase vehicle trips and noise on local roadways. For the purposes of this analysis, where existing traffic noise levels are less than 60 dB L_{dn} at the outdoor activity areas of noise-sensitive uses, a 5.0 dB L_{dn} increase in roadway noise levels would be considered significant. Table 18 summarizes the modeled traffic noise levels at the nearest sensitive receptors along each roadway segment in the project vicinity.

Table 18
Predicted Traffic Noise Level and Traffic Noise Level Increases

Roadway	Segment	Predicted Exterior Noise Level					
		Existing No Project	Existing Plus Project	Change	Future No Project	Future Plus Project	Change
Napa Junction Road	West of Theresa Avenue	47.3	52.2	4.9	47.8	52.4	4.6
Theresa Avenue	South of Napa Junction Road	60.2	60.5	0.3	60.7	61.0	0.3
Napa Junction Road	East of Theresa Avenue	60.6	61.1	0.5	61.1	61.6	0.4
Theresa Avenue	North of Eucalyptus Drive	62.5	62.8	0.3	63.1	63.4	0.3

Note: All noise levels are predicted at closest sensitive receptors in terms of dBA, L_{dn}.

Source: Saxelby Acoustics, 2020

As shown in Table 18, the maximum traffic noise increase would be approximately 4.9 dB along Napa Junction Road on the segment west of Theresa Avenue. Considering the proposed project would not increase traffic noise by 5.0 dB, the proposed project would not substantially increase traffic noise in the project vicinity.

Traffic Noise at New Sensitive Receptors

Recent rulings by the California Supreme Court have clarified that environmental analyses prepared under CEQA are intended to analyze a project's impact on the environment, rather than the potential impact of the environment on the project. In the case of the proposed project,

potential impacts related to future traffic noise on new sensitive receptors within the project site, such as the proposed residences, would be an example of impacts of the environment on the project. Consequently, impacts of noise on future on-site receptors would not typically be considered a required topic of analysis under CEQA. Nevertheless, the City has elected to prepare an analysis of potential noise-related impacts on future residences within the project site to ensure that the proposed project complies with all City regulations intended to protect the health and welfare of the citizens of American Canyon.

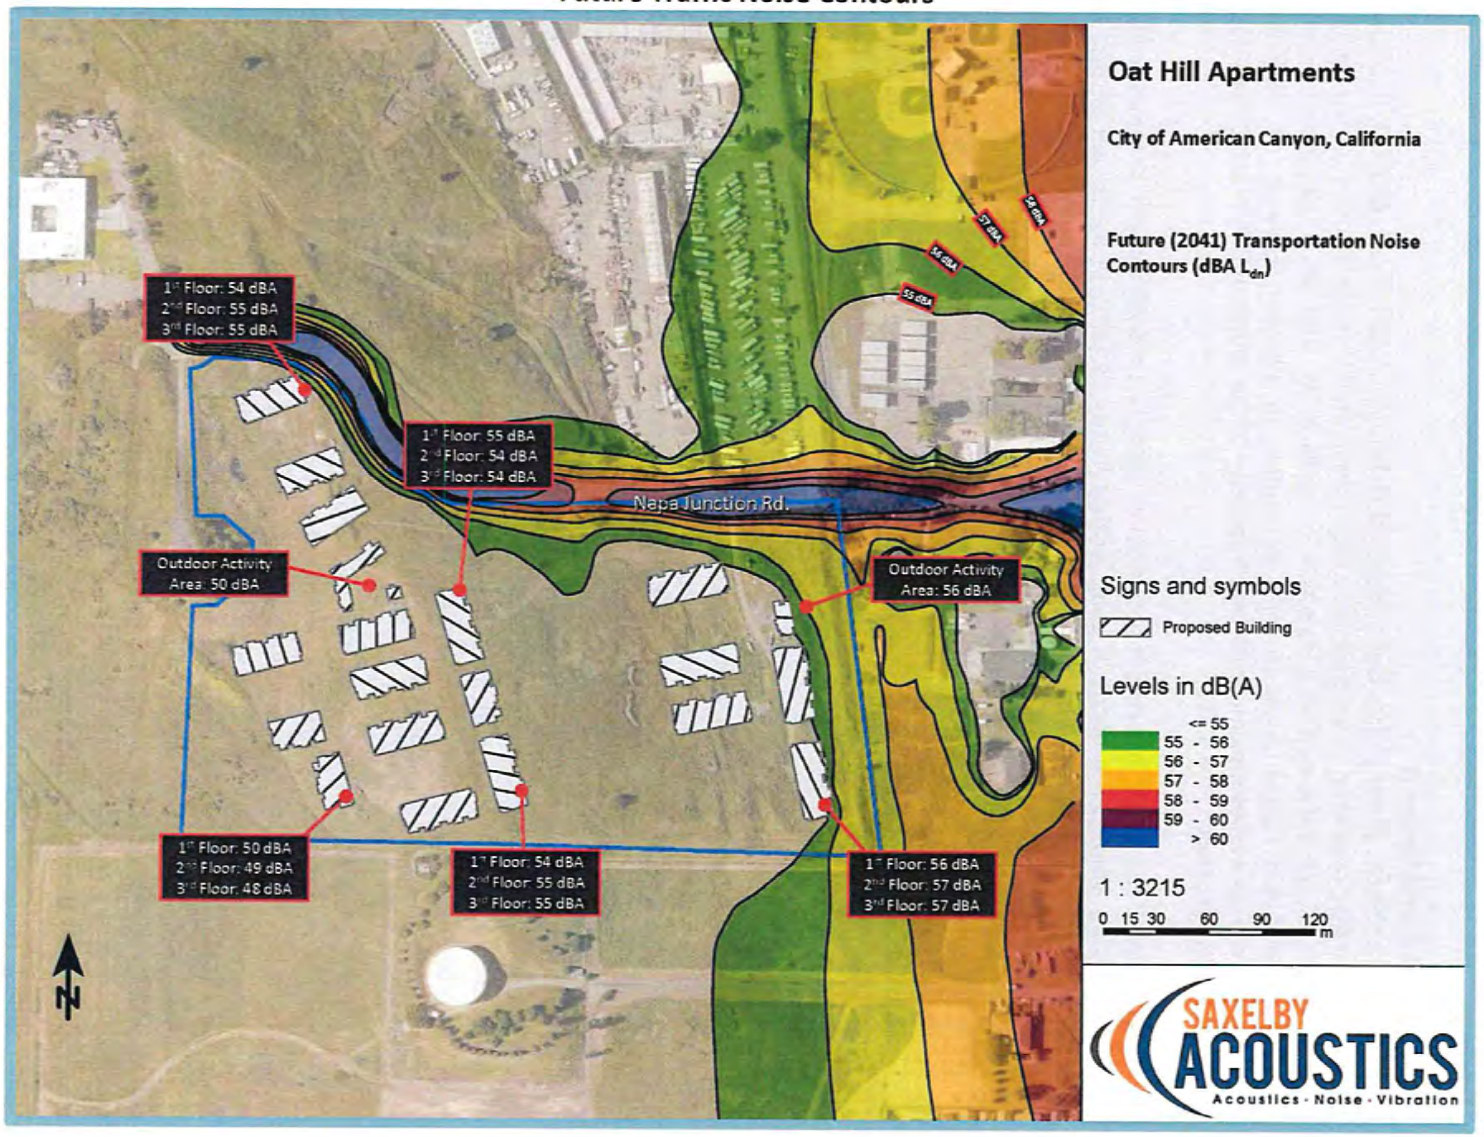
As shown in Figure 19, the proposed project would be exposed to transportation noise levels of up to 56 dB at the outdoor activity area within Parcel B and 50 dB at the outdoor activity area within Parcel A. Therefore, new sensitive receptors would not be exposed to noise levels above the City of American Canyon General Plan standard of 65 dB for outdoor activity areas.

The City of American Canyon General Plan requires that interior noise levels of new residential units be 45 dB or less. Standard residential construction practices typically reduce interior noise 25 dB below the exterior noise. The proposed residences would be exposed to noise levels up to 57 dB within Parcel B and 55 dB within Parcel A. Based on a 25 dB reduction, the interior noise level would be approximately 22 dB within Parcel B and 20 dB within Parcel A. Therefore, interior traffic noise levels would be considered less than significant.

Conclusion

Based on the above, operation of the proposed project would not result in a substantial permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the City's General Plan and the Municipal Code. However, considering temporary construction noise levels in the project area exceed general plan or noise ordinance, or applicable standards of other agencies standards, a ***potentially significant*** impact could occur.

Mitigation Measure(s)



Implementation of the following mitigation measures would reduce the above potential impact to a *less-than-significant* level.

Parcel A and Parcel B

XIII-1. *Prior to the approval of grading permits, the City shall establish the following related to the use of construction equipment:*

- *Construction activities (excluding activities that would result in a safety concern to the public or constructions workers) shall be limited to between the daytime hours of 7:00 AM and 7:00 PM daily;*
  Construction equipment shall be properly maintained and equipped with noise-reduction intake and exhaust mufflers and engine shrouds, in accordance with manufacturers recommendations
- *Equipment engine shrouds shall be closed during equipment operation;*
- *When not in use, motorized construction equipment shall not be left idling for more than five minutes; and*
- *Stationary equipment (power generators, compressors, etc.) shall be located at the furthest practical distance from nearby noise-sensitive land uses or sufficiently shielded to reduce noise-related impacts.*

Figure 19
Future Traffic Noise Contours

Construction noise BMPs shall be included in the grading plans and project improvement plans submitted by the applicant for review and approval by the Community Development Department.

b. **Parcel A and Parcel B**

Similar to noise, vibration involves a source, a transmission path, and a receiver. However, noise is generally considered to be pressure waves transmitted through air, whereas vibration usually consists of the excitation of a structure or surface. As with noise, vibration consists of an amplitude and frequency. A person's perception to vibration depends on their individual sensitivity, as well as the amplitude and frequency of the source and the response of the system which is vibrating.

Vibration is measured in terms of acceleration, velocity, or displacement. A common practice is to monitor vibration in terms of peak particle velocities (PPV) in inches per second (in/sec). Standards pertaining to perception as well as damage to structures have been developed for vibration levels defined in terms of PPV. Human and structural response to different vibration levels is influenced by a number of factors, including ground type, distance between source and receptor, duration, and the number of perceived vibration events. Table 19, which was developed by the California Department of Transportation (Caltrans), shows the vibration levels that would normally be required to result in damage to structures. As shown in the table, the threshold for architectural damage to structures is 0.20 in/sec PPV and continuous vibrations of 0.10 in/sec PPV, or greater, would likely cause annoyance to sensitive receptors.

The primary vibration-generating activities associated with the proposed project would occur during construction when activities such as grading, utilities placement, and paving occur. Table 20 shows the typical vibration levels produced by construction equipment at various distances. The most substantial source of groundborne vibrations associated with project construction would be the use of vibratory compactors. Use of vibratory compactors/rollers could be required during construction of the proposed project. The proposed project would only cause elevated vibration levels during construction, as the proposed project would not involve any uses or operations that would generate substantial groundborne vibration. Although noise and vibration associated with the construction phases of the project would add to the noise and vibration environment in the immediate project vicinity, construction activities would be temporary in nature and are anticipated to occur during normal daytime working hours.

Vibratory compactors/rollers may be used during on-site parking areas and Napa Junction Road extension construction. However, such activity would occur more than 26 feet north and south from the nearest existing structures and the proposed roadway alignment. A 26 foot or greater separation between existing structures and the groundborne vibration source, would be less than 0.2 in/sec PPV, and, thus, would not cause physical damage to structures or annoy nearby sensitive receptors. Therefore, the proposed project would not expose people to or generate excessive groundborne vibration or groundborne noise levels, and no impact would occur.

Based on the above, the proposed project would not expose people to or generate excessive groundborne vibration or groundborne noise levels and a ***less-than-significant*** impact would occur.

Table 19
Effects of Vibration on People and Buildings

PPV		Human Reaction	Effect on Buildings
mm/sec	in/sec		
0.15 to 0.30	0.006 to 0.019	Threshold of perception; possibility of intrusion	Vibrations unlikely to cause damage of any type
2.0	0.08	Vibrations readily perceptible	Recommended upper level of the vibration to which ruins and ancient monuments should be subjected
2.5	0.10	Level at which continuous vibrations begin to annoy people	Virtually no risk of "architectural" damage to normal buildings
5.0	0.20	Vibrations annoying to people in buildings (this agrees with the levels established for people standing on bridges and subjected to relative short periods of vibrations)	Threshold at which there is a risk of "architectural" damage to normal dwelling - houses with plastered walls and ceilings. Special types of finish such as lining of walls, flexible ceiling treatment, etc., would minimize "architectural" damage
10 to 15	0.4 to 0.6	Vibrations considered unpleasant by people subjected to continuous vibrations and unacceptable to some people walking on bridges	Vibrations at a greater level than normally expected from traffic, but would cause "architectural" damage and possibly minor structural damage

c. **Parcel A and Parcel B**

The nearest airport to the site is the Napa County Airport, located approximately 1.75 miles north of the site. The site is included in the Napa County Airport Land Use Compatibility Plan. As shown in Figure 20, the project is located approximately 1.4 miles outside of the estimated 55 dB CNEL noise contour. In addition, according to Table 2-1 of the Napa County Airport Land Use Compatibility Plan, multi-family residential land uses exposed to noise levels less than 55 dB CNEL are "Clearly Acceptable." Therefore, the proposed project would not expose people residing or working in the project area to excessive noise levels associated with airports. Thus, ***less-than-significant*** impact would occur.

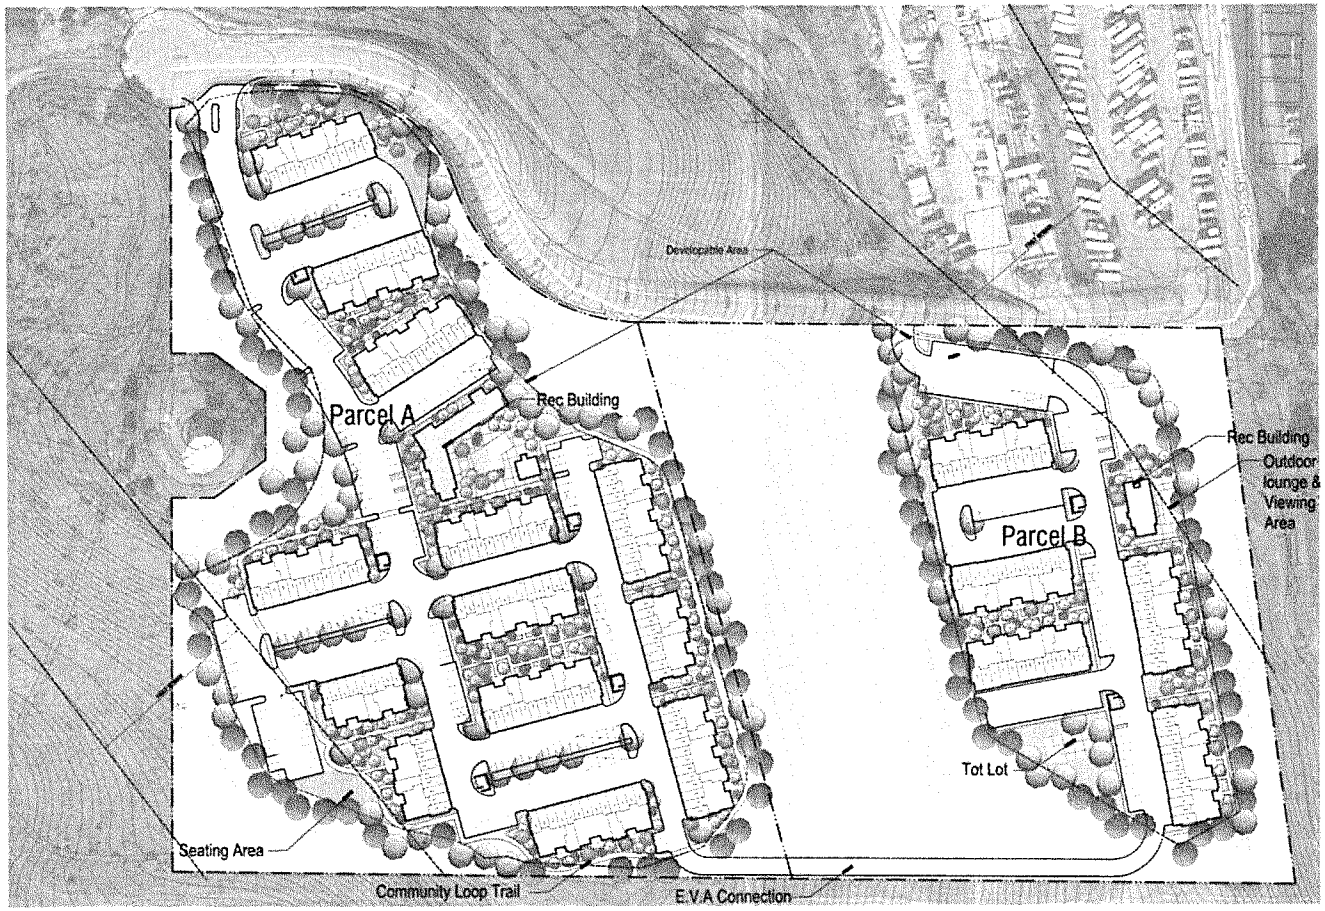
INTRODUCTION

The Oat Hill Apartments residential project is located along the south of Napa Junction Road and west of Highway 29 in the City of American Canyon, California. The project consists of the construction of 17 separate buildings on two combined parcels containing 291 residential units.

Figure 1 shows the project site plan. **Figure 2** shows an aerial photo of the project site.

ENVIRONMENTAL SETTING

BACKGROUND INFORMATION ON NOISE



Fundamentals of Acoustics

Acoustics is the science of sound. Sound may be thought of as mechanical energy of a vibrating object transmitted by pressure waves through a medium to human (or animal) ears. If the pressure variations occur frequently enough (at least 20 times per second), then they can be heard and are called sound. The number of pressure variations per second is called the frequency of sound, and is expressed as cycles per second or Hertz (Hz).

Noise is a subjective reaction to different types of sounds. Noise is typically defined as (airborne) sound that is loud, unpleasant, unexpected or undesired, and may therefore be classified as a more specific group of sounds. Perceptions of sound and noise are highly subjective from person to person.

Measuring sound directly in terms of pressure would require a very large and awkward range of numbers. To avoid this, the decibel scale was devised. The decibel scale uses the hearing threshold (20 micropascals), as a point of reference, defined as 0 dB. Other sound pressures are then compared to this reference pressure, and the logarithm is taken to keep the numbers in a practical range. The decibel scale allows a million-fold increase in pressure to be expressed as 120 dB, and changes in levels (dB) correspond closely to human perception of relative loudness.

The perceived loudness of sounds is dependent upon many factors, including sound pressure level and frequency content. However, within the usual range of environmental noise levels, perception of loudness is relatively predictable, and can be approximated by A-weighted sound levels. There is a strong correlation between A-weighted sound levels (expressed as dBA) and the way the human ear perceives sound. For this reason, the A-weighted sound level has become the standard tool of environmental noise assessment.

The decibel scale is logarithmic, not linear. In other words, two sound levels 10-dB apart differ in acoustic energy by a factor of 10. When the standard logarithmic decibel is A-weighted, an increase of 10-dBA is generally perceived as a doubling in loudness. For example, a 70-dBA sound is half as loud as an 80-dBA sound, and twice as loud as a 60 dBA sound.

Community noise is commonly described in terms of the ambient noise level, which is defined as the all-encompassing noise level associated with a given environment. A common statistical tool is the average, or equivalent, sound level (L_{eq}), which corresponds to a steady-state A weighted sound level containing the same total energy as a time varying signal over a given time period (usually one hour). The L_{eq} is the foundation of the composite noise descriptor, L_{dn}, and shows very good correlation with community response to noise.

The day/night average level (DNL or L_{dn}) is based upon the average noise level over a 24-hour day, with a +10-decibel weighing applied to noise occurring during nighttime (10:00 p.m. to 7:00 a.m.) hours. The nighttime penalty is based upon the assumption that people react to nighttime noise exposures as though they were twice as loud as daytime exposures. Because L_{dn} represents a 24-hour average, it tends to disguise short-term variations in the noise environment.

Table 1 lists several examples of the noise levels associated with common situations. **Appendix A** provides a summary of acoustical terms used in this report.

TABLE 1: TYPICAL NOISE LEVELS

Common Outdoor Activities	Noise Level (dBA)	Common Indoor Activities
	--110--	Rock Band
Jet Fly-over at 300 m (1,000 ft.)	--100--	
Gas Lawn Mower at 1 m (3 ft.)	--90--	
Diesel Truck at 15 m (50 ft.), at 80 km/hr. (50 mph)	--80--	Food Blender at 1 m (3 ft.) Garbage Disposal at 1 m (3 ft.)
Noisy Urban Area, Daytime Gas Lawn Mower, 30 m (100 ft.)	--70--	Vacuum Cleaner at 3 m (10 ft.)
Commercial Area Heavy Traffic at 90 m (300 ft.)	--60--	Normal Speech at 1 m (3 ft.)

Effects of Noise on People

The effects of noise on people can be placed in three categories:

- Subjective effects of annoyance, nuisance, and dissatisfaction
- Interference with activities such as speech, sleep, and learning
- Physiological effects such as hearing loss or sudden startling

Environmental noise typically produces effects in the first two categories. Workers in industrial plants can experience noise in the last category. There is no completely satisfactory way to measure the subjective effects of noise or the corresponding reactions of annoyance and dissatisfaction. A wide variation in individual thresholds of annoyance exists and different tolerances to noise tend to develop based on an individual's past experiences with noise.

Thus, an important way of predicting a human reaction to a new noise environment is the way it compares to the existing environment to which one has adapted: the so-called ambient noise level. In general, the more a new noise exceeds the previously existing ambient noise level, the less acceptable the new noise will be judged by those hearing it.

With regard to increases in A-weighted noise level, the following relationships occur:

- Except in carefully controlled laboratory experiments, a change of 1-dBA cannot be perceived;
- Outside of the laboratory, a 3-dBA change is considered a just-perceivable difference;
- A change in level of at least 5-dBA is required before any noticeable change in human response would be expected; and
- A 10-dBA change is subjectively heard as approximately a doubling in loudness, and can cause an adverse response.

Stationary point sources of noise – including stationary mobile sources such as idling vehicles – attenuate (lessen) at a rate of approximately 6-dB per doubling of distance from the source, depending on environmental conditions (i.e. atmospheric conditions and either vegetative or manufactured noise barriers, etc.). Widely distributed noises, such as a large industrial facility spread over many acres, or a street with moving vehicles, would typically attenuate at a lower rate.

EXISTING NOISE AND VIBRATION ENVIRONMENTS

EXISTING NOISE RECEPTORS

Some land uses are considered more sensitive to noise than others. Land uses often associated with sensitive receptors generally include residences, schools, libraries, hospitals, and passive recreational areas. Sensitive noise receptors may also include threatened or endangered noise sensitive biological species, although many jurisdictions have not adopted noise standards for wildlife areas. Noise sensitive land uses are typically given special attention in order to achieve protection from excessive noise.

Sensitivity is a function of noise exposure (in terms of both exposure duration and insulation from noise) and the types of activities involved. In the vicinity of the project site, sensitive land uses include existing single-family residential uses and Calvary Baptist Church located east of the project site and Napa Junction Magnet Elementary School located northeast of the project site.

EXISTING GENERAL AMBIENT NOISE LEVELS

The existing noise environment in the project area is primarily defined by traffic on the Napa Vallejo Highway (Highway 29). Other noise sources include airplane flyovers to and from the Napa County Airport, transportation noise from the Union Pacific Rail Road line to the north of the project, and operational noise originating from a lumber processing facility to the southwest.

To quantify the existing ambient noise environment in the project vicinity, Saxelby Acoustics conducted continuous (24-hr.) noise level measurements at two locations on the project site. Noise measurement locations are shown on **Figure 2**. A summary of the noise level measurement survey results is provided in **Table 2**. **Appendix B** contains the complete results of the noise monitoring.

The sound level meters were programmed to record the maximum, median, and average noise levels at each site during the survey. The maximum value, denoted L_{max}, represents the highest noise level measured. The average value, denoted L_{eq}, represents the energy average of all the noise received by the sound level meter microphone during the monitoring period. The median value, denoted L_{50}, represents the sound level exceeded 50 percent of the time during the monitoring period.

Larson Davis Laboratories (LDL) model 812 and 820 precision integrating sound level meters were used for the ambient noise level measurement survey. The meters were calibrated before and after use with a B&K Model 4230 acoustical calibrator to ensure the accuracy of the measurements. The equipment used meets all pertinent specifications of the American National Standards Institute for Type 1 sound level meters (ANSI S1.4).

TABLE 2: SUMMARY OF EXISTING BACKGROUND NOISE MEASUREMENT DATA

Site	Location	Date	L_{dn}	Daytime L_{eq}	Daytime L_{50}	Daytime L_{max}	Nighttime L_{eq}	Nighttime L_{50}	Nighttime L_{max}

FUTURE TRAFFIC NOISE ENVIRONMENT AT OFF-SITE RECEPTORS

Off-Site Traffic Noise Impact Assessment Methodology

To assess noise impacts due to project-related traffic increases on the local roadway network, traffic noise levels are predicted at sensitive receptors for existing and future, project and no-project conditions.

Existing and Future noise levels due to traffic are calculated using the Federal Highway Administration Highway Traffic Noise Prediction Model (FHWA RD-77-108). The model is based upon the Calveno reference noise factors for automobiles, medium trucks and heavy trucks, with consideration given to vehicle volume, speed, roadway configuration, distance to the receiver, and the acoustical characteristics of the site.

The FHWA model was developed to predict hourly L_{eq} values for free-flowing traffic conditions. To predict traffic noise levels in terms of L_{dn}, it is necessary to adjust the input volume to account for the day/night distribution of traffic.

Project trip generation volumes were provided by the project traffic engineer (W-Trans), truck usage and vehicle speeds on the local area roadways were estimated from field observations. The predicted increases in traffic noise levels on the local roadway network for Existing and Future conditions which would result from the project are provided in terms of L_{dn}.

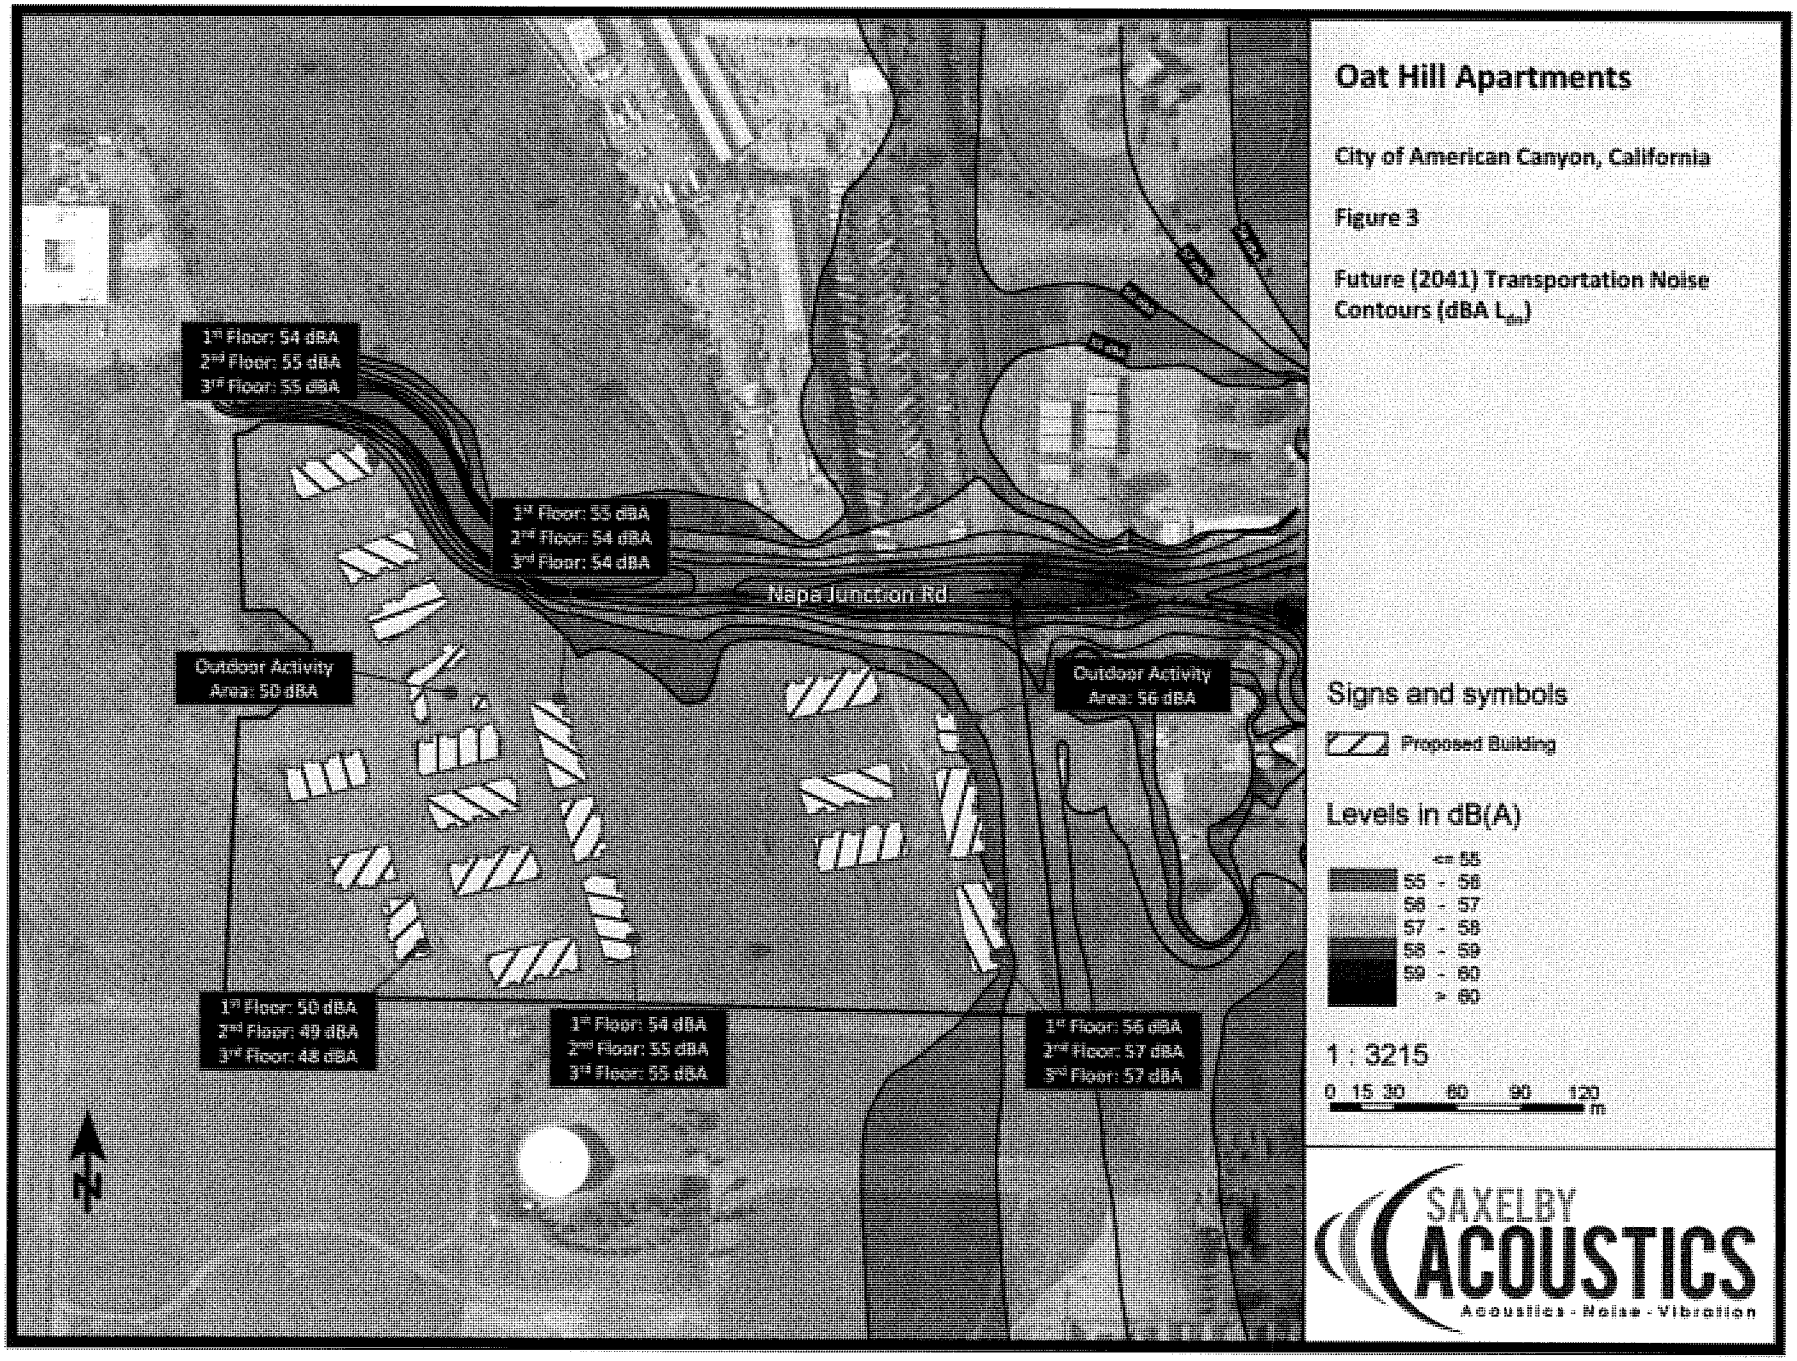
Traffic noise levels are predicted at the sensitive receptors located at the closest typical setback distance along each project-area roadway segment. In some locations sensitive receptors may not receive full shielding from noise barriers, or may be located at distances which vary from the assumed calculation distance.

Table 3 summarizes the modeled traffic noise levels at the nearest sensitive receptors along each roadway segment in the Project area. **Appendix C** provides the complete inputs and results of the FHWA traffic modeling.

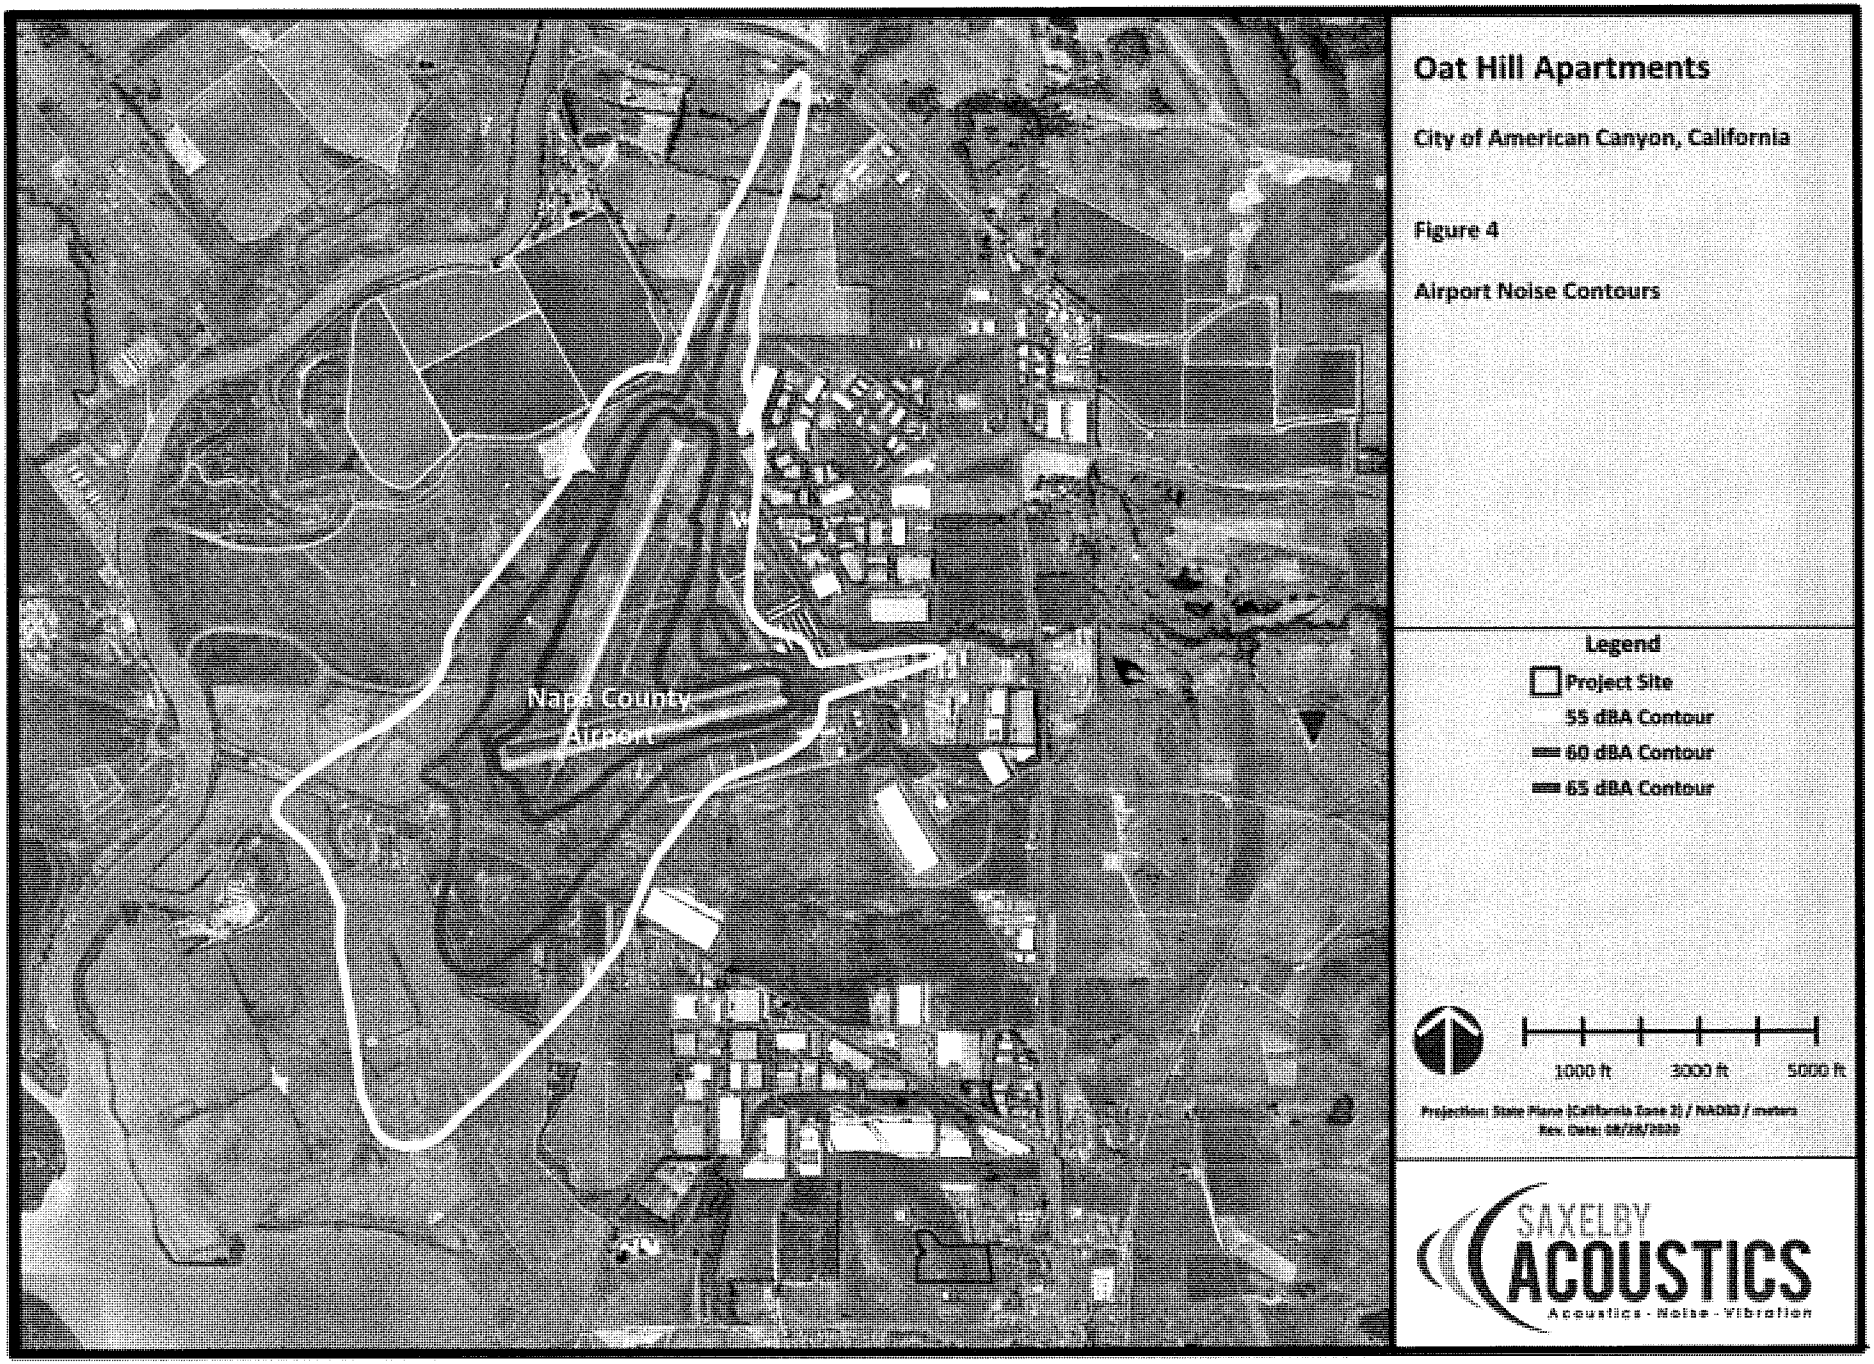
TABLE 3: PREDICTED TRAFFIC NOISE LEVEL AND PROJECT-RELATED TRAFFIC NOISE LEVEL INCREASES

Roadway	Segment	Existing No Project	Existing + Project	Change	Future No Project	Future + Project	Change
Napa Junction Rd.	West of Theresa Ave.	47.3	52.2	4.9	47.8	52.4	4.6
Theresa Ave.	South of Napa Junction Rd.	60.2	60.5	0.3	60.7	61.0	0.3
Napa Junction Rd.	East of Theresa Ave.	60.6	61.1	0.5	61.1	61.6	0.4
Theresa Ave.	North of Eucalyptus Dr.	62.5	62.8	0.3	63.1	63.4	0.3

Note: All noise levels are predicted at closest sensitive receptors in terms of dBA, L_{dn}.



EVALUATION OF TRANSPORTATION NOISE SOURCES ON THE PROJECT SITE



On-Site Transportation Noise Prediction Methodology

Saxelby Acoustics used the SoundPLAN noise model to calculate traffic noise levels at the proposed residential uses due to traffic on Highway 29 and Napa Junction Road. The proposed project buildings and surrounding structures were input into the SoundPLAN model to determine the traffic noise exposure on the project site. Future (2041) traffic noise levels for Highway 29 were calculated by assuming a 1% per year increase in traffic volumes. Future traffic noise levels for Napa Junction Road were calculated using the Federal Highway Administration Highway Traffic Noise Prediction Model (FHWA RD-77-108). The results of this analysis are shown graphically on **Figure 3**.

NAPA COUNTY AIRPORT NOISE

The Napa County Airport is located approximately 1.8 miles west of the project site and aircraft overflights were observed during visits to the project site. **Figure 4** shows the noise contours for the airport as published in the City of American Canyon General Plan.

CONSTRUCTION NOISE ENVIRONMENT

During the construction of the proposed project noise from construction activities would temporarily add to the noise environment in the project vicinity. As shown in **Table 4**, activities involved in construction would generate maximum noise levels ranging from 76 to 90 dB at a distance of 50 feet.

TABLE 4: CONSTRUCTION EQUIPMENT NOISE

REGULATORY CONTEXT

FEDERAL

There are no federal regulations related to noise that apply to the Proposed Project.

STATE

The State Building Code, Title 24, Part 2 of the State of California Code of Regulations, establishes uniform minimum noise insulation performance standards to protect persons within new buildings which house people, including hotels, motels, dormitories, apartment houses, and dwellings other than single-family dwellings. Title 24 mandates that interior noise levels attributable to exterior sources shall not exceed 45 dB L_{dn} or CNEL in any habitable room. Title 24 also mandates that for structures containing noise-sensitive uses to be located where the L_{dn} or CNEL exceeds 60 dB, an acoustical analysis must be prepared to identify mechanisms for limiting exterior noise to the prescribed allowable interior levels. If the interior allowable noise levels are met by requiring that windows be kept closed, the design for the structure must also specify a ventilation or air conditioning system to provide a habitable interior environment.

LOCAL

City of American Canyon General Plan

The City of American Canyon General Plan sets forth the following goals, objectives, and policies relevant to noise that are applicable to the proposed project:

- **Goal 11:** Ensure that American Canyon's existing and future residents, employees and employers, as well as visitors to the City, are protected from the adverse human health and environmental impacts of excessive noise levels created by stationary and ambient (intrusive) noise sources and conditions. Take all necessary and appropriate action to avoid or mitigate the detrimental effects of such excessive noise on the community.
- **Objective 11.1:** Control both ambient and stationary (intrusive) noise conditions and impacts that may occur in American Canyon. Maintain base line information regarding ambient and stationary noise sources within the community.
- **Policy 11.1.1:** Promote noise-compatible land use relationships by implementing the noise standards identified in Figure 11-2 [of the General Plan], to be utilized for design purposes in new development and for establishing a program to attenuate existing noise problems.
- **Policy 11.1.2:** Monitor and update available data regarding the community's ambient and stationary noise levels.
- **Objective 11.2:** Protect residents, employees, and visitors to the community from

excessive noise exposure. If possible, mitigate the adverse impacts of existing or unavoidableexcessive noise on these same groups.

- **Policy 11.2.1:** Require that new development for locations in which the exterior or interior noise levels indicated in Figure 11-2 [of the General Plan] are likely to be exceeded, submit a noise attenuation study prepared by a qualified acoustical engineer in order to determine appropriate mitigation measures.
- **Policy 11.2.4:** Require that new industrial, commercial and related land uses, or the expansion of these existing land uses, demonstrate that they would not directly cause ambient noise levels to exceed an exterior Ldn of 65 dB(A) in areas containing housing, schools, health care facilities, or other "noise-sensitive" land uses. Additionally, require that potentially significant noise generators, including uses such as night clubs that cause sporadic noise intensities, submit noise analyses prepared by an acoustical expert that include specific recommendations for mitigation when: a) the project is located in close proximity to noise-sensitive land uses or land that is planned for noise-sensitive land uses, or b) the proposed noise source could violate the noise provisions of the General Plan or City Noise ordinance.
- **Objective 11.3:** Minimize the adverse impacts of traffic-generated noise on residential and other "noise-sensitive" uses as depicted on Figure 11-5 [of the General Plan].
- **Policy 11.3.1:** Minimize motor vehicle noise impacts from streets and highways through proper route location and sensitive roadway design by employing the following strategies:
  a. Consider the impacts of truck routes, the effects of a variety of truck traffic, and future motor vehicle volumes on noise levels adjacent to master planned roadways when improvements to the circulation system are planned.
  b. Mitigate traffic volumes and vehicle speed through residential neighborhoods.
  c. Work closely with the State of California Department of Transportation (Caltrans) in the early stages of highway improvements and design modifications to ensure that proper consideration is given to potential noise impacts on the City.
- **Policy 11.3.2:** Require that all new nonresidential development design and configure on-site ingress and egress points to divert traffic (and its resultant noise) away from "noise-sensitive" land uses to the greatest degree practicable.
- **Policy 11.4.1:** Restrict the development of uses located within the 65 CNEL contour of Napa Airport to industrial, agricultural, or other open space uses (see Figure 11-5 [of the General Plan]).
- **Policy 11.4.1:** Require that development in the vicinity of Napa Airport comply with the noise standards contained in the Airport Land Use Compatibility Plan (ALUP).

- **Objective 11.5:** Minimize noise spillover or encroachment from commercial and industrial land uses into adjoining residential neighborhoods or "noise-sensitive" uses.
- **Objective 11.7:** Minimize the impacts of construction noise on adjacent uses.

The City of American Canyon General Plan establishes an exterior noise level criterion of 65 dB L_{dn} (or CNEL) or less within outdoor activity areas of residential land uses. Additionally, the City requires that cumulative noise exposure from exterior noise sources within noise-sensitive dwellings not exceed 45 dB L_{dn} (or CNEL).

City of American Canyon Municipal Code

Municipal Code Chapter 8.12.080 establishes maximum noise limits for construction activities. Where economically and technically feasible, construction noise at residential receptors is limited to no more than 75 dBA between the hours of 7:00 a.m. and 7:00 p.m. and 60 dBA between 7:00 p.m. and 7:00 a.m.

County of Napa

The Airport Land Use Compatibility Plan governs land use around the Napa County Airport and sets forth noise compatibility standards for new development land use activities. Table 2-1 of the Airport Land Use Compatibility Plan identifies acceptable aviation noise levels by land use. For multifamily residential uses, aviation noise levels of 50-55 dBA Community Noise Equivalent Level (CNEL) are listed as "clearly acceptable."

Figure 5 shows the Napa County Airport Land Use Compatibility Plan Noise Compatibility Guidelines.

parks, playgrounds, zoos	++	+	+	o	–
golf courses, riding stables, water recreation	++	++	+	o	o
outdoor spectator sports	++	+	+	o	–
amphitheaters	+	o	–	–	—

LAND USE AVAILABILITY		INTERPRETATION/COMMENTS
++	Clearly Acceptable	The activities associated with the specified land use can be carried out with essentially no interference from the noise exposure.
+	Normally Acceptable	Noise is a factor to be considered in that slight interference with outdoor activities may occur. Conventional construction methods will eliminate most noise intrusions upon indoor activities.
o	Marginally Acceptable	The indicated noise exposure will cause moderate interference with outdoor activities and with indoor activities when windows are open. The land use is acceptable on the conditions that outdoor activities are minimal and construction features which provide sufficient noise attenuation are used (e.g., installation of air conditioning so that windows can be kept closed). Under other circumstances, the land use should be discouraged.
–	Normally Unacceptable	Noise will create substantial interference with both outdoor and indoor activities. Noise intrusion upon indoor activities can be mitigated by requiring special noise insulation construction. Land uses which have conventionally constructed structures and/or involve outdoor activities which would be disrupted by noise should generally be avoided.
—	Clearly Unacceptable	Unacceptable noise intrusion upon land use activities will occur. Adequate structural noise insulation is not practical under most circumstances. The indicated land use should be avoided unless strong overriding factors prevail and it should be prohibited if outdoor activities are involved.

Criteria for Acceptable Vibration

Vibration is like noise in that it involves a source, a transmission path, and a receiver. While vibration is related to noise, it differs in that in that noise is generally considered to be pressure waves transmitted through air, whereas vibration usually consists of the excitation of a structure or surface. As with noise, vibration consists of an amplitude and frequency. A person's perception to the vibration will depend on their individual sensitivity to vibration, as well as the amplitude and frequency of the source and the response of the system which is vibrating.

Vibration can be measured in terms of acceleration, velocity, or displacement. A common practice is to monitor vibration measures in terms of peak particle velocities in inches per second. Standards pertaining to perception as well as damage to structures have been developed for vibration levels defined in terms of peak particle velocities.

Human and structural response to different vibration levels is influenced by a number of factors, including ground type, distance between source and receptor, duration, and the number of perceived vibration events. **Table 6** which was developed by Caltrans, shows the vibration levels which would normally be required to result in damage to structures. The vibration levels are presented in terms of peak particle velocity in inches per second.

Table 6 indicates that the threshold for architectural damage to structures is 0.20 in/sec p.p.v. A threshold of 0.20 in/sec p.p.v. is considered to be a reasonable threshold for short-term construction projects.

TABLE 6: EFFECTS OF VIBRATION ON PEOPLE AND BUILDINGS

Peak Particle Velocity		Human Reaction	Effect on Buildings
mm/second	in/second		
0.15-0.30	0.006-0.019	Threshold of perception; possibility of intrusion	Vibrations unlikely to cause damage of any type
2.0	0.08	Vibrations readily perceptible	Recommended upper level of the vibration to which ruins and ancient monuments should be subjected
2.5	0.10	Level at which continuous vibrations begin to annoy people	Virtually no risk of "architectural" damage to normal buildings
5.0	0.20	Vibrations annoying to people in buildings (this agrees with the levels established for people standing on bridges and subjected to relative short periods of vibrations)	Threshold at which there is a risk of "architectural" damage to normal dwelling - houses with plastered walls and ceilings. Special types of finish such as lining of walls, flexible ceiling treatment, etc., would minimize "architectural" damage
10-15	0.4-0.6	Vibrations considered unpleasant by people subjected to continuous vibrations and unacceptable to some people walking on bridges	Vibrations at a greater level than normally expected from traffic, but would cause "architectural" damage and possibly minor structural damage

IMPACTS AND MITIGATION MEASURES

THRESHOLDS OF SIGNIFICANCE

Appendix G of the CEQA Guidelines states that a project would normally be considered to result in significant noise impacts if noise levels conflict with adopted environmental standards or plans or if noise generated by the project would substantially increase existing noise levels at sensitive receivers on a permanent or temporary basis. Significance criteria for noise impacts are drawn from CEQA Guidelines Appendix G (Items XI [a-c]).

Would the project:

a. Generate a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?

b. Generate excessive groundborne vibration or groundborne noise levels?

c. For a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise levels?

Noise Level Increase Criteria for Long-Term Project-Related Noise Level Increases

The California Environmental Quality Act (CEQA) guidelines define a significant impact of a project if it "increases substantially the ambient noise levels for adjoining areas." Generally, a project may have a significant effect on the environment if it will substantially increase the ambient noise levels for adjoining areas or expose people to severe noise levels. In practice, more specific professional standards have been developed. These standards state that a noise impact may be considered significant if it would generate noise that would conflict with local project criteria or ordinances, or substantially increase noise levels at noise sensitive land uses. The potential increase in traffic noise from the project is a factor in determining significance. Research into the human perception of changes in sound level indicates the following:

- A 3-dB change is barely perceptible,
- A 5-dB change is clearly perceptible, and
- A 10-dB change is perceived as being twice or half as loud.

A limitation of using a single noise level increase value to evaluate noise impacts is that it fails to account for pre-project-noise conditions. **Table 7** is based upon recommendations made by the Federal Interagency Committee on Noise (FICON) to provide guidance in the assessment of changes

in ambient noise levels resulting from aircraft operations. The recommendations are based upon studies that relate aircraft noise levels to the percentage of persons highly annoyed by the noise. Although the FICON recommendations were specifically developed to assess aircraft noise impacts, it has been accepted that they are applicable to all sources of noise described in terms of cumulative noise exposure metrics such as the L_{dn}.

TABLE 7: SIGNIFICANCE OF CHANGES IN NOISE EXPOSURE

Ambient Noise Level Without Project, Ldn	Increase Required for Significant Impact
<60 dB	+5.0 dB or more
60-65 dB	+3.0 dB or more
>65 dB	+1.5 dB or more

Source: Federal Interagency Committee on Noise (FICON)

Based on the **Table 7** data, an increase in the traffic noise level of 5 dB or more would be significant where the pre-project noise levels are less than 60 dB Ldn, or 3 dB or more where existing noise levels are between 60 to 65 dB Ldn. Extending this concept to higher noise levels, an increase in the traffic noise level of 1.5 dB or more may be significant where the pre-project traffic noise level exceeds 65 dB Ldn. The rationale for the **Table 7** criteria is that, as ambient noise levels increase, a smaller increase in noise resulting from a project is sufficient to cause annoyance.

PROJECT-SPECIFIC IMPACTS AND MITIGATION MEASURES

IMPACT 1: WOULD THE PROJECT GENERATE A SUBSTANTIAL TEMPORARY OR PERMANENT INCREASE IN AMBIENT NOISE LEVELS IN THE VICINITY OF THE PROJECT IN EXCESS OF STANDARDS ESTABLISHED IN THE LOCAL GENERAL PLAN OR NOISE ORDINANCE, OR APPLICABLE STANDARDS OF OTHER AGENCIES?

Exterior noise at New Sensitive Receptors

As shown in **Figure 3**, the proposed project is predicted to be exposed to transportation noise levels of up to 56 dBA at the eastern outdoor activity area and 50 dBA at the western outdoor activity area. This complies with the City of American Canyon existing General Plan standard of 65 dBA L_{dn} for outdoor activity areas.

The City of American Canyon General Plan requires that interior noise levels of new residential uses must be 45 dBA L_{dn} or less. Standard construction methods typically yield a 25 dBA noise reduction. The proposed project buildings are predicted to be exposed to noise levels of up to 57 dBA L_{dn}. Based upon a 25 dB reduction, the interior noise level would be 22 dBA L_{dn}. This complies with City of

American Canyon allowable transportation noise exposure limits.

This is a **less-than-significant** impact and no mitigation is required.

Traffic Noise Increases

The CEQA guidelines specify criteria to determine the significance of traffic noise impacts. Where existing traffic noise levels are less than 60 dB L_{dn} at the outdoor activity areas of noise-sensitive uses, a +5.0 dB L_{dn} increase in roadway noise levels will be considered significant. As shown in **Table 3**, the maximum increase due to traffic noise is +4.9 dBA along Napa Junction Rd. on the segment west of Theresa Ave. The existing noise level due to traffic noise on this segment is 47.3 dBA and the future no-project noise level is predicted to be 47.8 dBA. All other increases are below +1.5 dBA.

Therefore, impacts resulting from increased traffic noise would be considered ***less-than-significant.***

Construction Noise

During the construction phases of the project, noise from construction activities would add to the noise environment in the immediate project vicinity. As indicated in **Table 4**, activities involved in construction would generate maximum noise levels ranging from 76 to 90 dBA L_{max} at a distance of 50 feet. Construction activities would also be temporary in nature and are anticipated to occur during normal daytime working hours.

The City of American Canyon Municipal Code establishes maximum noise limits for construction activities of 75 dBA between the hours of 7:00 a.m. and 7:00 p.m. and 60 dBA between 7:00 p.m. and 7:00 a.m. The nearest residential uses are located approximately 320 feet to the east, as measured from the center of the eastern housing site. At this distance, maximum construction noise levels would be in the range of 60-74 dBA L_{max} in the backyards of the nearest residential uses.

Noise would also be generated during the construction phase by increased truck traffic on area roadways. A project-generated noise source would be truck traffic associated with transport of heavy materials and equipment to and from the construction site. This noise increase would be of short duration and would occur during daytime hours.

Although construction activities are temporary in nature and would occur during normal daytime working hours, construction-related noise could result in sleep interference at existing noise-sensitive land uses in the vicinity of the construction if construction activities were to occur outside the normal daytime hours. Therefore, impacts resulting from noise levels temporarily exceeding the threshold of significance due to construction would be considered ***potentially significant***.

Mitigation Measure

1(a) The City shall establish the following as conditions of approval for any permit that results in the use of construction equipment:

- Construction activities (excluding activities that would result in a safety concern to the public or construction workers) shall be limited to between the daytime hours of 7 AM and 7 PM daily.
- Construction equipment shall be properly maintained and equipped with noise-reduction intake and exhaust mufflers and engine shrouds, in accordance with manufacturers' recommendations. Equipment engine shrouds shall be closed during equipment operation.
- When not in use, motorized construction equipment shall not be left idling for more than 5 minutes.
- Stationary equipment (power generators, compressors, etc.) shall be located at the furthest practical distance from nearby noise-sensitive land uses or sufficiently shielded to reduce noise-related impacts.

Timing/Implementation: Implemented prior to approval of grading and/or building permits
Enforcement/Monitoring: City of American Canyon Community Development Services Department

Implementation of mitigation measure 1(a) would help to reduce construction-generated noise levels. With mitigation, this impact would be considered ***less-than-significant***.

IMPACT 2: WOULD THE PROJECT GENERATE EXCESSIVE GROUNDBORNE VIBRATION OR GROUNDBORNE NOISE LEVELS?

Construction vibration impacts include human annoyance and building structural damage. Human annoyance occurs when construction vibration rises significantly above the threshold of perception. Building damage can take the form of cosmetic or structural.

The **Table 5** data indicate that construction vibration levels anticipated for the project are less than the 0.2 in/sec threshold at distances of 26 feet. Sensitive receptors which could be impacted by construction related vibrations, especially vibratory compactors/rollers, are located approximately 26 feet, or further, from typical construction activities. At these distances construction vibrations are not predicted to exceed acceptable levels. Additionally, construction activities would be temporary in nature and would likely occur during normal daytime working hours.

This is a **less-than-significant** impact and no mitigation is required.

IMPACT 3: **FOR A PROJECT LOCATED WITHIN THE VICINITY OF A PRIVATE AIRSTRIP OR AN AIRPORT LAND USE PLAN OR, WHERE SUCH A PLAN HAS NOT BEEN ADOPTED, WITHIN TWO MILES OF A PUBLIC AIRPORT OR PUBLIC USE AIRPORT, WOULD THE PROJECT EXPOSE PEOPLE RESIDING OR WORKING IN THE PROJECT AREA TO EXCESSIVE NOISE LEVELS?**

Based upon **Figure 4**, the proposed project is located approximately 1.4 miles outside of the predicted 55 dBA CNEL noise contour. According to Table 2-1 (**Figure 5**) of the Napa County Airport Land Use Compatibility Plan, multi-family residential land uses exposed to noise levels less than 55 dBA CNEL are "Clearly Acceptable." Land use may be carried out with essentially no interference from the noise exposure.

This is a **less-than-significant** impact and no mitigation is required.

American Canyon

GENERAL PLAN

Land Use Element

Adopted November 3, 1994
As amended through October 2018

CITYWIDE LAND USE POLICY: KEY ISSUES

The following prescribes goals, objectives, and policies applicable to development in general, regardless of type, density, or location. Pertinent policies must be considered for any land use or development activity.

AIRPORT COMPATIBILITY

Goal

1N **Ensure the compatibility of development within American Canyon with the Napa County Airport.**

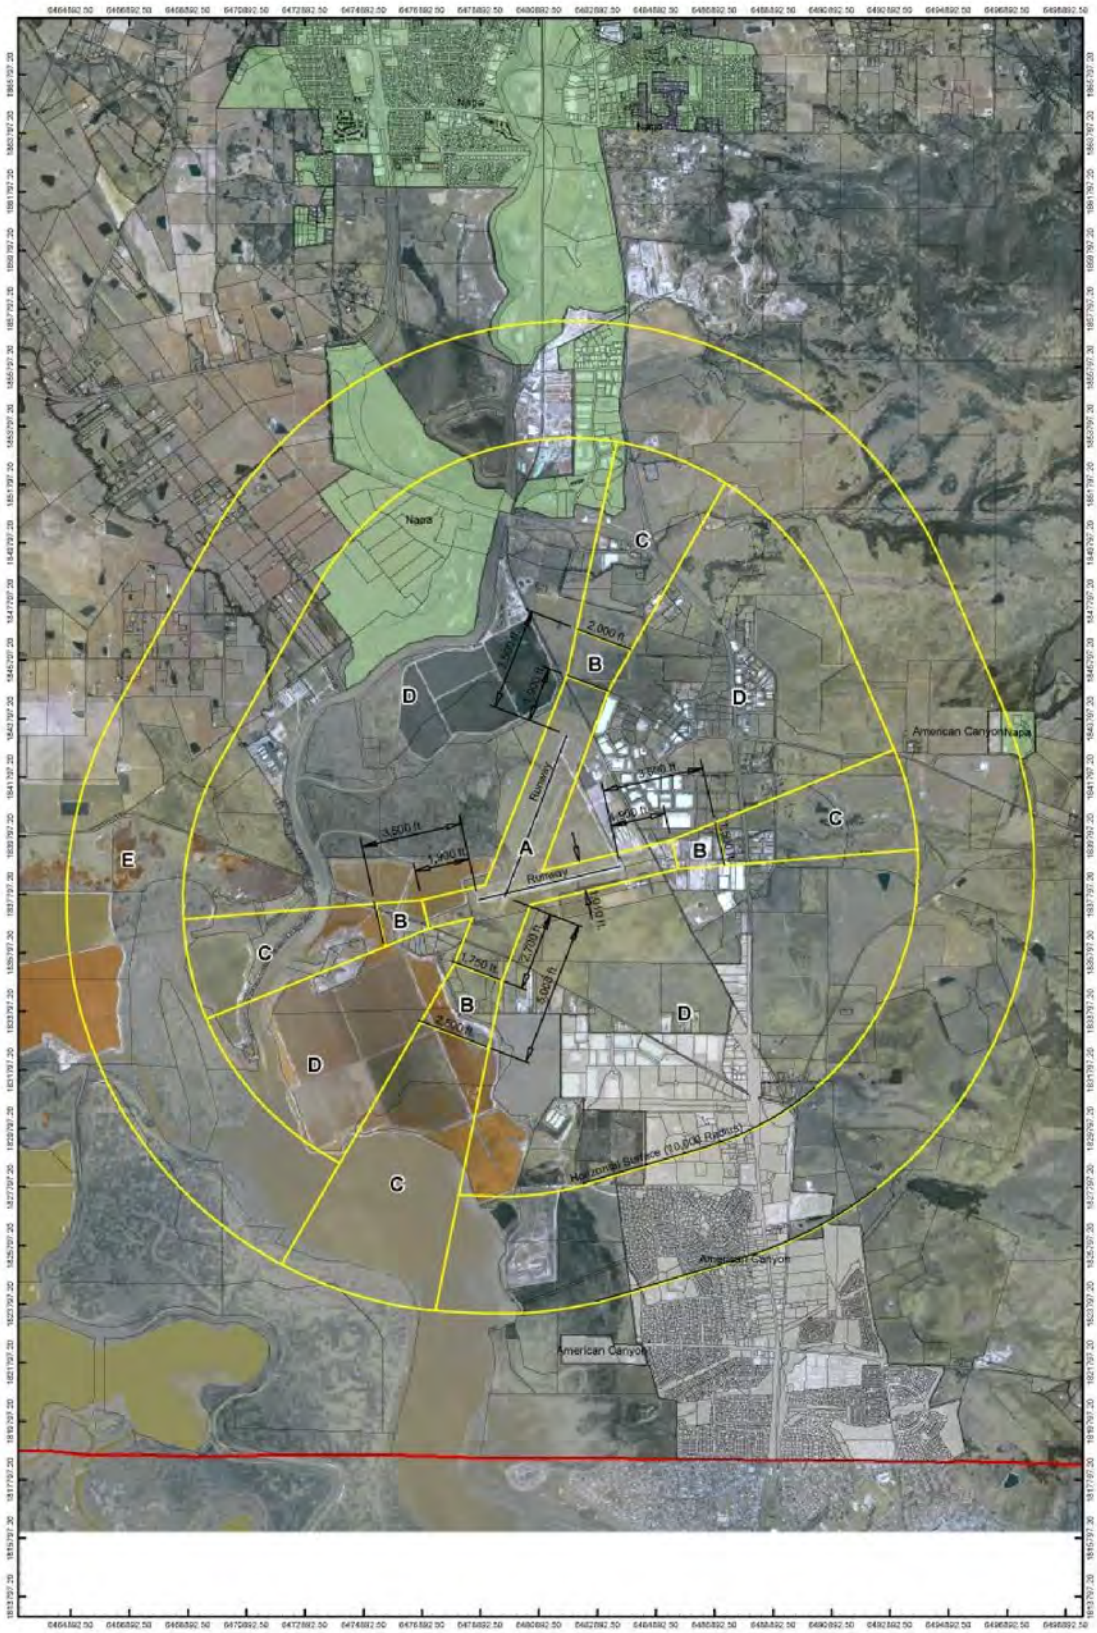
Objective

1.27 Ensure that lands in American Canyon are developed in a manner which protects them from the noise and operational impacts of, and does not adversely constrain, the Napa County Airport.

Policies

1.27.1 Require that development comply with the land use and development conditions stipulated in **Tables 1-1** and **1-2** for areas depicted on **Figure 1-3**. (*I 1.1, I 1.4, I 1.5, I 1.8,* and *I 1.11*)

1.27.2 Review all applications for new development, expansion of existing uses, and re-use within Napa County Airport Compatibility Zones "A" through "E" for compliance with the appropriate use and development conditions. (*I 1.11*)



1.27.3 Work with the Napa County Airport Authority to ensure that onsite ground activities of the Airport do not adversely impact (e.g., noise, vibration, air emissions, or other pollution) the City of American Canyon. (*I 1.22*)

1.27.4 Work with the Napa County Airport Authority to ensure that airport vehicular access does not adversely impact the City of American Canyon. (*I 1.22*)

1.27.5 Work with the Napa County Airport Authority to ensure that any expanded operations of the Airport do not adversely impact existing land uses and development in the City of American Canyon. (*I 1.22*)

1.27.6 Work with the Napa County Airport Authority and other appropriate agencies to ensure that emergency preparedness plans are maintained to protect American Canyon residents and development. (*I 1.22*)

1.27.7 Recognize the importance of the Napa County Airport to City residents, including the economic, transportation and recreational benefits, and ensure that land use decisions rendered for this area do not negatively impact Airport operations (*I 1.22*).

Napa County Airport
Land Use Compatibility Zones

FIGURE 1-3

TABLE 1-1
Compatibility Zone Definitions

ZONE A	Runway Protection Zone: Dimensioned to encompass the current and future Runway Protection Zones for the runways of the Napa County Airport, as defined under FAA regulations and shown on Figure 3. The zones also include areas lateral to the runway. These areas are regularly overflown by aircraft below 50 feet above the ground. For this reason, these areas are considered high risk with regard to accident potential and any structures, buildings, trees or obstacles may create a flight hazard. These areas are also affected by high noise levels.
ZONE B	Approach/Departure Zone: This zone is defined as the areas where aircraft will be below 100 feet above ground level as determined by the type of approach anticipated for that runway. Approach slopes are designated on the Airport Compatibility Zones map, Figure 1-3. These areas are affected by substantial risk of accident potential due to the frequency of overflights at low altitudes. Noise levels are generally high with frequent loud single-events.
ZONE C	Extended Approach/Departure Zone: This zone is defined as the area where aircraft will be below 300 feet above ground level as determined by the type of approach. The low altitude of aircraft in these areas indicates moderate to high risk of accident potential. Properties in this zone will be affected by substantial noise.
ZONE D	Common Traffic Pattern: This area is defined by the flight pattern for the Napa County Airport as illustrated on Figure 1-3. These areas are routinely overflown by aircraft operating to and from the airport with frequent single-event noise intrusion. Overflights in these areas can range from near the traffic pattern altitude (about 1,000 feet above the ground) to as low as 300 above the ground. Accident risk varies from low to moderate. Areas where aircraft are near pattern altitude (e.g., downwind leg) have the lowest risk. In areas where aircraft are at lower altitudes (especially on circle-to-land instrument approaches) a moderate level of risk exists.
ZONE E	Other Airport Environs: An airport's influence area often extends beyond the typically defined compatibility zones during busy traffic hours and when larger aircraft are in the pattern. Aircraft overflights can occur anywhere in these areas when aircraft are departing or approaching an airport. Overflight annoyance is the primary impact element in these areas. The risk of accident is very low.

TABLE 1-2

Airport Vicinity Land Use Compatibility Criteria

ZONE	LOCATION	IMPACT ELEMENTS	MAXIMUM DENSITIES[8]		
			Residential [1]	Other Users (people/ac)[2]	
				In Structures	Total in and out of Structures
A[9]	Runway Protection Zone and Primary Surface	• High Risk • High noise levels • Low overflights below 50' AGL	0	0	10
B	Inner Approach/ Departure Zone	• Substantial risk • High noise levels • Low overflights below 100' AGL	0	10	25
C	Approach/Departure Zone	• Moderate risk • Substantial noise • Low overflights below 300' AGL	0	50	75
D	Common Traffic Pattern	• Moderate risk • Frequent noise intrusion • Routine overflights below 1000' AGL	0	100	150
E	Other Airport Environs	• Low risk • Overflight annoyance	See Note 7		

1. Residential land use and zoning designations are considered incompatible uses within the traffic pattern area (Zones A, B, C, and D) where aircraft overflights are frequent and at low altitude. The residential restrictions do not apply to residential uses allowable under agricultural land use and zoning designations.

2. The use should not attract more than the indicated number of persons per **net** acre. Net acreage is the total site area inclusive of parking areas and landscaping, less the area dedicated for streets. These densities are intended as general planning guidelines to aid in determining the acceptability of proposed land uses. Clustering of development within the density parameters should be encouraged to protect and provide open land/safety areas. However, in Zones A, B, and C the density on any one acre of a parcel should not exceed twice the indicated number of people per acre.

3. Dedication of an avigation or overflight easement or deed notice is required as a condition for new development within all zones. Also, height limit restrictions are applicable to structures and trees in all zones in accordance with Federal Aviation Regulation Part 77 and local ordinances. Uses which may be hazardous to flight are prohibited in all zones.

4. These uses typically can be designed to meet the density requirements and other development conditions listed.

5. These uses typically do not meet the density requirements and other development conditions listed. They should be allowed only if a major community objective is served by their location in this zone and if mitigation measures (i.e., noise attenuation) are incorporated that will minimize potential conflicts.

6. NLR = Noise Level Reduction; i.e., the attenuation of sound level from outside to inside provided by the structure. Noise Level Reduction; i.e., the attenuation of sound level from outside to inside provided by the structure. Noise level reduction measures may be required in areas with high single-event noise levels and where noise-sensitive uses (schools, libraries, etc.) are proposed. Refer to Appendix C for criteria and noise attenuation measures.

7. Maximum residential densities in accordance with local adopted General Plans and zoning designations. Consideration should be given to the proximity of flight patterns, frequency of overflight, terrain conditions, and type of aircraft in determining acceptable locations of residential uses. Referral to the ALUC for review of development plans prior to approval is recommended.

8. The purpose of these criteria is to provide a basis for determining those land uses which are compatible with airport activities. Specific land uses will be allowed only if they are also consistent with applicable General Plan policies and zoning ordinances.

9. All lands in Zone A are either within the Airport's boundaries or are designated for acquisition in the Airport Master Plan.

10. Includes objects that penetrate FAR Part && surfaces, uses that would attract large numbers of birds (e.g. landfills), and uses that would create smoke, glare, distracting lights, or electronic interference.

11. Avigation easements will be required in lieu of overflight easements or deed notices where there is an appropriate public agency to review them.

TABLE 1-2 (cont.)

Zone	Prohibited Uses	Other Development Conditions[3]	Examples of Normally Acceptable Uses4	Examples of Uses not Normally Acceptable[5]
A	• All residential uses • Any assemblage of people • Any new structure which exceeds height limits • Noise-sensitive uses • Uses hazardous to flight[10]	• Avigation easement required	• Pasture, open space • Aircraft tiedowns • Auto parking • Most agricultural uses	• Heavy poles, signs, large trees, etc. • Ponds
B	• All residential uses • Any noise-sensitive uses •Schools, libraries, hospitals, nursing homes, daycare centers • Uses hazardous to flight[10]	• Avigation easement required • Structures to be as far as possible from extended runway centerline • Clustering is encouraged to maximize open land areas • Minimum NLR of 25 dBA in office buildings[6] • Building envelopes and approach surfaces required on all subdivision maps and development plans	• All uses from Zone A • Parks with low-intensity uses, golf courses • Nurseries • Mini-storage	• Retail uses • Office uses (except as accessory uses) • Hotels, motels, resorts • Theaters, assembly halls, and conference centers • Ponds
C	• All residential uses • Schools, libraries, hospitals, nursing homes, daycare centers • Uses hazardous to flight[10] • Landfills	• Avigation easement required • Structures to be set back as far as possible form extended centerline • Clustering is encouraged to maximize open land areas • Building envelopes and approach surfaces required on all subdivision maps • NLR measures may be required for noise-sensitive uses (offices)	• All uses from Zone B • Warehousing and low-intensity light industrial • Small retail uses • Outdoor recreation uses; marina, ballpark • Office uses	• Large retail buildings • Hotels, motels, resorts, health clubs • Restaurants, bars • Multi-story buildings • Theaters, assembly halls, and conference centers • Ponds
D	• All residential uses • Uses hazardous to flight[10]	• Overflight easement or deed notice required[11] • Building envelopes and approach surfaces required on all development plans within 100 feet of approach zones • Clustering is encouraged to maximize open land areas • NLR measures may be required for noise-sensitive uses[6]	• All uses from Zone C • Most nonresidential uses • Accessory daycare centers	• Schools, libraries, hospitals, nursing homes • Large shopping malls • Amphitheaters • Ponds
E	• Noise-sensitive outdoor uses	• Overflight easement or deed notice required[11]	• Any permitted use	• Amphitheaters • Landfills • Ponds

NOISE ELEMENT

STATUTORY REQUIREMENTS

Government Code Section 65302(f) states the following:

> *The General Plan shall include a noise element which shall identify and appraise noise problems in the community. The noise element shall recognize the guidelines adopted by the Office of Noise Control in the State Department of Health Services and shall analyze and quantify to the extent practicable, as determined by the legislative body, current and projected noise levels for all of the following sources:*
>
> *1) Highways and freeways*
>
> *2) Primary arterials and major local streets*
>
> *3) Passenger and freight on-line railroad operations and ground rapid transit systems*
>
> *4) Aviation and airport related operations*
>
> *5) Local industrial plants*
>
> *6) Other ground stationary noise sources contributing to community noise environment*

A local noise element should accurately reflect the noise environment, the stationary sources of noise, and the impacts of noise on local residents.

OPPORTUNITIES AND CONSTRAINTS (ISSUES)

1. Some residential, commercial, and institutional land uses in the City of American Canyon, particularly along Highway 29, are impacted by vehicular noise levels that exceed the Napa County noise standards currently used by the City.

2. Increased development within the City of American Canyon and Napa and Solano Counties will subsequently increase the number of vehicle trips along State Route 29 (SR 29). This will likely result in increased noise exposure to the properties along this major highway.

3. New development within American Canyon's Planning Area will increase traffic, and thus noise, along the existing road network.

4. Napa County Airport may be used for additional jet flight operations in the future. If residential development occurs within Airport Compatibility Zone E (see **Figure 11-1**) without noise attenuation requirements, proposed projects may be exposed to elevated noise levels.

5. Continued development in the region will likely lead to additional freight operations and possibly passenger rail service traveling through American Canyon. As a result of increased rail traffic, development along the two rail branches may be exposed to unacceptable noise levels.

Compatibility Zone Definitions

ZONE A	Runway Protection Zone: Dimensioned to encompass the current and future Runway Protection Zones for the runways of the Napa County Airport, as defined under FAA regulations and shown on Figure 3. The zones also include areas lateral to the runway. These areas are regularly overflown by aircraft below 50 feet above the ground. For this reason, these areas are considered high risk with regard to accident potential and any structures, buildings, trees or obstacles may create a flight hazard. These areas are also affected by high noise levels.
ZONE B	Approach/Departure Zone: This zone is defined as the areas where aircraft will be below 100 feet above ground level as determined by the type of approach anticipated for that runway. Approach slopes are designated on the Airport Compatibility Zones map, Figure 1-3. These areas are affected by substantial risk of accident potential due to the frequency of overflights at low altitudes. Noise levels are generally high with frequent loud single-events.
ZONE C	Extended Approach/Departure Zone: This zone is defined as the area where aircraft will be below 300 feet above ground level as determined by the type of approach. The low altitude of aircraft in these areas indicates moderate to high risk of accident potential. Properties in this zone will be affected by substantial noise.
ZONE D	Common Traffic Pattern: This area is defined by the flight pattern for the Napa County Airport as illustrated on Figure 1-3. These areas are routinely overflown by aircraft operating to and from the airport with frequent single-event noise intrusion. Overflights in these areas can range from near the traffic pattern altitude (about 1,000 feet above the ground) to as low as 300 above the ground. Accident risk varies from low to moderate. Areas where aircraft are near pattern altitude (e.g., downwind leg) have the lowest risk. In areas where aircraft are at lower altitudes (especially on circle-to-land instrument approaches) a moderate level of risk exists.
ZONE E	Other Airport Environs: An airport's influence area often extends beyond the typically defined compatibility zones during busy traffic hours and when larger aircraft are in the pattern. Aircraft overflights can occur anywhere in these areas when aircraft are departing or approaching an airport. Overflight annoyance is the primary impact element in these areas. The risk of accident is very low.

OVERVIEW OF NOISE POLICIES

The policies found within this element of American Canyon's General Plan address the following topics:

1. Adopting and enforcing legally adequate noise regulations and guidelines.
2. Preventing and mitigating excessive noise exposure impacts on the community.
3. Minimizing noise impacts in mixed-use structures.
4. Minimizing construction noise on adjacent uses.
5. Ensuring that adverse noise impacts among differing uses or tenants are prevented.
6. Minimizing spillover noise impacts from entertainment and restaurant/bar establishments onto "noise-sensitive" uses.
7. Ensuring that the noise impacts of rail and air transport services on sensitive land uses are minimized.
8. Ensuring that a proper acoustical analysis of any potentially significant noise generator is conducted.

GOALS, OBJECTIVES AND POLICIES

The following section presents the goals, objectives, and policies related to both overall (ambient) and stationary (fixed-source) source noise conditions and impacts in the City of American Canyon. Implementing programs are referenced at the conclusion of each policy by an "*I*" and a number in parentheses and are described in the last subsection of the element.

Goal

11 **Ensure that American Canyon's existing and future residents, employees and employers, as well as visitors to the City, are protected from the adverse human health and environmental impacts of excessive noise levels created by stationary and ambient (intrusive) noise sources and conditions. Take all necessary and appropriate action to avoid or mitigate the detrimental affects of such excessive noise on the community.**

NOISE ORDINANCES, REGULATIONS, AND GUIDELINES

Objective

11.1 Control both ambient and stationary (intrusive) noise conditions and impacts that may occur in American Canyon. Maintain base line information regarding ambient and stationary noise sources within the community.

Policies

11.1.1 Promote noise compatible land use relationships by implementing the noise standards identified in **Figure 11-2**, to be utilized for design purposes in new development and for establishing a program to attenuate existing noise problems. (*I 11.14* and *I 11.15*)

11.1.2 Monitor and update available data regarding the community's ambient and stationary noise levels (see **Figures 11-3**, **11-4**, **11-4A** and **11-5**). (*I 11.2*)

11.1.3 Modify and update all local noise ordinances, regulations and guidelines as required by new state standards and guidelines. (*I 11.1*)

AMBIENT NOISE IMPACTS ON THE COMMUNITY

Objective

11.2 Protect residents, employees, and visitors to the community from excessive noise exposure. If possible, mitigate the adverse impacts of existing or unavoidable excessive noise on these same groups.

Figure 11-2

ZONE	LOCATION	IMPACT ELEMENTS	MAXIMUM DENSITIES (8)		
			Residential (1)	Other Structures (people/acre) (2)	
				In Structures	Total in and out of Structures
A (9)	Runway Protection Zone and Primary Surface	•High risk •High Noise Levels •Low overflights below 50' AGL	0	0	10
B	Inner Approach / Departure Zone	•Substantial risk •High Noise Levels •Low overflights below 100' AGL	0	10	25
C	Approach / Departure Zone	•Moderate risk •Substantial Noise •Low overflights below 300' AGL	0	50	75
D	Common Traffic Pattern	•Moderatel risk •Frequent Noise Intrusion •Low overflights below 1,000' AGL	0	100	150
E	Other Airport Environs	•Low risk •Overflight annoyance	See Note 7		

1. Residential land use and zoning designations are considered incompatible uses within the traffic pattern area (Zones A, B, C, and D) where aircraft overflights are frequent and at low altitude. The residential restrictions do not apply to residential uses allowable under agricultural land use and zoning designations.
2. The use should not attract more than the indicated number of persons per **net** acre. Net acreage is the total site area inclusive of parking areas and landscaping, less the area dedicated for streets. These densities are intended as general planning guidelines to aid in determining the acceptability of proposed land uses. Clustering of development within the density parameters should be encouraged to protect and provide open land/safety areas. However, in Zones A, B, and C the density on any one acre of a parcel should not exceed twice the indicated number of people per acre.
3. Dedication of an avigation or overflight easement or deed notice is required as a condition for new development within all zones. Also, height limit restrictions are applicable to structures and trees in all zones in accordance with Federal Aviation Regulation Part 77 and local ordinances. Uses which may be hazardous to flight are prohibited in all zones.
4. These uses typically can be designed to meet the density requirements and other development conditions listed.
5. These uses typically do not meet the density requirements and other development conditions listed. They should be allowed only if a major community objective is served by their location in this zone and if mitigation measures (i.e., noise attenuation) are incorporated that will minimize potential conflicts.
6. NLR = Noise Level Reduction; i.e., the attenuation of sound level from outside to inside provided by the structure. Noise level reduction measures may be required in areas with high single-event noise levels and where noise-sensitive uses (schools, libraries, etc.) are proposed. Refer to Appendix C for criteria and noise attenuation measures.
7. Maximum residential densities in accordance with local adopted General Plans and zoning designations. Consideration should be given to the proximity of flight patterns, frequency of overflight, terrain conditions, and type of aircraft in determining acceptable locations of residential uses. Referral to the ALUC for review of development plans prior to approval is recommended.
8. The purpose of these criteria is to provide a basis for determining those land uses which are compatible with airport activities. Specific land uses will be allowed only if they are also consistent with applicable General Plan policies and zoning ordinances.
9. All lands in Zone A are either within the Airport's boundaries or are designated for acquisition in the Airport Master Plan.
10. Includes objects that penetrate FAR Part 77 surfaces, uses that would attract large numbers of birds (e.g. landfills), and uses that would create smoke, glare, distracting lights, or electronic interference.
11. Avigation easements will be required in lieu of overflight easements or deed notices where there is an appropriate public agency to review them.

Figure 11-2 (cont.)

Zone	Prohibited Uses	Other Development Conditions[3]	Examples of Normally Acceptable ses[4]	Examples of Uses not Normally Acceptable[5]
A	• All residential uses • Any assemblage of people • Any new structure which exceeds height limits • Noise-sensitive uses • Uses hazardous to flight[10]	• Avigation easement required	• Pasture, open space • Aircraft tiedowns • Auto parking • Most agricultural uses	• Heavy poles, signs, large trees, etc. • Ponds
B	• All residential uses • Any noise-sensitive uses •Schools, libraries, hospitals, nursing homes, daycare centers • Uses hazardous to flight[10]	• Avigation easement required • Structures to be as far as possible from extended runway centerline • Clustering is encouraged to maximize open land areas • Minimum NLR of 25 dBA in office buildings[6] • Building envelopes and approach surfaces required on all subdivision maps and development plans	• All uses from Zone A • Parks with low-intensity uses, golf courses • Nurseries • Mini-storage	• Retail uses • Office uses (except as accessory uses) • Hotels, motels, resorts • Theaters, assembly halls, and conference centers • Ponds
C	• All residential uses • Schools, libraries, hospitals, nursing homes, daycare centers • Uses hazardous to flight[10] • Landfills	• Avigation easement required • Structures to be set back as far as possible from extended centerline • Clustering is encouraged to maximize open land areas • Building envelopes and approach surfaces required on all subdivision maps • NLR measures may be required for noise-sensitive uses (offices)[6]	• All uses from Zone B • Warehousing and low-intensity light industrial • Small retail uses • Outdoor recreation uses; marina, ballpark • Office uses	• Large retail buildings • Hotels, motels, resorts, health clubs • Restaurants, bars • Multi-story buildings • Theaters, assembly halls, and conference centers • Ponds
D	• All residential uses • Uses hazardous to flight[10]	• Overflight easement or deed notice required[11] • Building envelopes and approach surfaces required on all development plans within 100 feet of approach zones • Clustering is encouraged to maximize open land areas • NLR measures may be required for noise-sensitive uses[6]	• All uses from Zone C • Most nonresidential uses • Accessory daycare centers	• Schools, libraries, hospitals, nursing homes • Large shopping malls • Amphitheaters • Ponds
E	• Noise-sensitive outdoor uses	• Overflight easement or deed notice required[11]	• Any permitted use	• Amphitheaters • Landfills • Ponds

Policies

11.2.1 Require that new development for locations in which the exterior or interior noise levels indicated in **Figure 11-2** are likely to be exceeded, submit a noise attenuation study prepared by a qualified acoustical engineer in order to determine appropriate mitigation measures. (*I 11.3*, *I 11.14,* and *I 11.15*)

11.2.2 Enforce the California Noise Insulation Standards (Title 25, California Administrative Code) that apply to new multiple family, hotel, motel, dormitory, and long-term care developments with a Ldn of 60 dB(A) noise contour adjacent to roads, transit lines, and manufacturing areas to ensure that the units have been designed to limit interior noise levels in habitable rooms to a Ldn of 45 dB(A) with doors and windows closed. (*I 11.3, I 11.14,* and *I 11.15*)

11.2.3 Require that air conditioning units and pool equipment within residential areas be designed and sited in a manner that does not intrude upon the peace and quiet of adjacent noise-sensitive uses. (*I 11.14* and *I 11.15*)

11.2.4 Require that new industrial, commercial and related land uses, or the expansion of these existing land uses, demonstrate that they would not directly cause ambient noise levels to exceed an exterior Ldn of 65 dB(A) in areas containing housing, schools, health care facilities, or other "noise-sensitive" land uses. Additionally, require that potentially significant noise generators, including uses such as night clubs that cause sporadic noise intensities, submit noise analyses prepared by an acoustical expert that include specific recommendations for mitigation when: a) the project is located in close proximity to noise-sensitive land uses or land that is planned for noise-sensitive land uses, or b) the proposed noise source could violate the noise provisions of the General Plan or City Noise ordinance. (*I 11.3, I 11.4, I 11.14,* and *I 11.15*)

11.2.5 Require that new commercial structures located adjacent to existing residential areas shield their HVAC units so as to limit the units adverse noise impacts to the greatest extent possible. (*I 11.14* and *I 11.15*)

11.2.6 Require that parking lots associated with new commercial structures be designed so as to buffer adjacent residential uses from vehicular noise. (*I 11.14* and *I 11.15*)

11.2.7 Encourage "noise-sensitive" uses, including schools, libraries, health care facilities, and residential developments, to incorporate fences, walls, landscaping, and/or other noise buffers and barriers to mitigate noise impacts where appropriate and feasible. (*I 11.3* and *I 11.14*)

11.2.8 Consider alternate land uses or mitigation measures if large walls or other physical barriers are required to mitigate noise impacts that will affect or be caused by a proposed development project. (*I 11.4, I 11.14*, and *I 11.15*)

11.2.9 Require the utilization of site and architectural design features in conjunction with noise barriers to mitigate impacts on sensitive land uses. Design techniques capable of mitigating potential noise impacts include:

a. Site Design

- Using building setbacks and dedicating noise easements to increase the distance between the noise source and receiver;
- Locating uses and orienting buildings that are compatible with higher noise levels adjacent to noise generators or in clusters to shield more noise-sensitive areas and uses;
- Placing noise tolerant land uses, such as parking areas, between noise sources and receivers;
- Using noise tolerant structures, such as garages or carports, to shield noise-sensitive areas; and
- Clustering office, commercial, or multiple family residential structures to reduce interior open space noise levels.

b. Architectural Design

- Using dense building materials and tight fitting doors;
- Employing double glazed and double pane windows;
- Placing unopenable windows on the side of the structure facing a major roadway and entry doors on the side of the building facing away from the major roadway; and
- Avoiding balconies and patio areas facing major transportation routes. (*I 11.1, I 11.16,* and *I 11.17*)

TRAFFIC-RELATED NOISE IMPACTS

Objective

11.3 Minimize the adverse impacts of traffic-generated noise on residential and other "noise-sensitive" uses as depicted on **Figure 11-5**.

Policies

11.3.1 Minimize motor vehicle noise impacts from streets and highways through proper route location and sensitive roadway design by employing the following strategies:

a. Consider the impacts of truck routes, the effects of a variety of truck traffic, and future motor vehicle volumes on noise levels adjacent to master planned roadways when improvements to the circulation system are planned.

b. Mitigate traffic volumes and vehicle speed through residential neighborhoods.

c. Work closely with the State of California Department of Transportation (Caltrans) in the early stages of highway improvements and design modifications to ensure that proper consideration is given to potential noise impacts on the City. (*I 11.4*, *I 11.15* and *I 11.16*)

11.3.2 Require that all new nonresidential development design and configure onsite ingress and egress points to divert traffic (and its resultant noise) away from "noise-sensitive" land uses to the greatest degree practicable. (*I 11.16*)

11.3.3 Actively enforce existing applicable sections of the California Vehicle Code related to vehicle or equipment mufflers and modified exhaust systems. (*I 11.22*)

11.3.4 Require that any municipal vehicles or noise-generating mechanical equipment purchased or used by the City of American Canyon comply with noise performance standards consistent with the best available noise reduction technology. (*I 11.25*)

11.3.5 Encourage local and regional public transit providers to ensure that the equipment they use and operate does not create excessive noise impacts on the community. (*I 11.19*)

11.3.6 Encourage Caltrans to install and maintain mitigation and/or landscaping elements along highways under their jurisdiction that are adjacent to existing residential subdivisions or noise-sensitive uses in order to reduce their adverse noise impacts. (*I 11.18*)

11.3.7 Provide for the development of alternate transportation modes, such as bicycle paths and pedestrian walkways, to minimize the number of noise generating automobile trips. (*I 11.5*)

11.3.8 Reduce noise impacts of vehicular travel by implementing Transportation Management Policies 4.6.1 through 4.6.5. (*I 4.8, I 4.10, I 4.11,* and *I 4.13*)

AIRCRAFT-RELATED NOISE IMPACTS

Objective

11.4 Minimize the adverse impacts of aircraft generated noise on residential and other "noise-sensitive" uses.

Policies

11.4.1 Restrict the development of uses located within the 65 CNEL contour of Napa Airport to industrial, agricultural, or other open space uses (see **Figure 11-5**). (*I 11.23*)

11.4.2 Require that development in the vicinity of Napa Airport comply with the noise standards contained in the Airport Land Use Compatibility Plan (ALUP). (*I 11.24*)

11.4.3 Work closely with the Napa County Airport to ensure that the airport's operations do not generate adverse noise conditions in the City of American Canyon. (*I 11.21*)

NOISE IMPACTS OF COMMERCIAL AND INDUSTRIAL LAND USES

Objective

11.5 Minimize noise spillover or encroachment from commercial and industrial land uses into adjoining residential neighborhoods or "noise-sensitive" uses.

Policies

11.5.1 Require that automobile and truck access to commercial or industrial land uses abutting residential parcels be located at the maximum practical distance from the residential parcels. (*I 11.4*)

11.5.2 Prohibit the siting of loading and shipping facilities for commercial and industrial land uses adjacent to residential parcels, thereby minimizing the potential noise impacts upon those parcels to the greatest degree practicable. (*I 11.4*)

11.5.3 Require that parking areas for commercial and industrial land uses be set back from adjacent residential areas to the maximum extent feasible or be buffered and shielded by walls, fences, berms, and/or adequate landscaping. (*I 11.4*)

11.5.4 Require that parking structures serving commercial or industrial land uses be designed to minimize the potential noise impacts of vehicles using these facilities both on site and on adjacent land uses or properties. The design measures may include: (a) the use of materials that mitigate sound transmission; and (b) the configuration of interior spaces to minimize sound amplification and transmission. (*I 11.4*)

11.5.5 Limit the hours of operation and/or the use of leaf blowers, parking lot sweepers, or other high noise-generating commercial/industrial equipment to reduce the potentially adverse noise impacts of such equipment upon adjacent residential areas. (*I 11.6*)

11.5.6 Require that the hours of truck deliveries to commercial or industrial land uses abutting residential uses be limited (within a reasonable period) unless there are no feasible alternatives or there are overriding transportation benefits by scheduling deliveries at other hours. (*I 11.6*)

NOISE IMPACTS OF MIXED-USE STRUCTURES

Objective

11.6 Minimize the potentially adverse noise impacts associated with the development of mixed-use structures in which residential units are located above ground floor commercial uses.

Policies

11.6.1 Require that the commercial component of a mixed-use project not generate excessive noise. (*I 11.9*)

11.6.2 Require that mixed-use structures incorporating both commercial and residential land uses minimize to the greatest degree practicable (through design and construction techniques) the transfer or transmission of noise and vibration from the commercial land use to the residential land use. (*I 11.9*)

CONSTRUCTION NOISE IMPACTS

Objective

11.7 Minimize the impacts of construction noise on adjacent uses.

Policies

11.7.1 Limit non-emergency construction activities adjacent to existing noise-sensitive uses to daylight hours between 6:30 AM and 8:00 PM. (*I 11.7*)

11.7.2 Require construction activities to employ practical techniques and practices that minimize the generation of adverse and/or excessive noise impacts on adjacent land uses. (*I 11.7*)

NOISE IMPACTS/ENCROACHMENT WITHIN MULTI-OCCUPANT STRUCTURES

Objective

11.8 Ensure that buildings are constructed soundly to prevent adverse noise transmission between differing uses or tenants located in the same commercial structure, and individual dwelling units in multi-family residential structures.

Policy

11.8.1 Rigorously enforce the applicable provisions of the Uniform Building Code and City of American Canyon Municipal Code, which prevent the transmission of excessive and unacceptable noise levels between individual tenants and businesses in commercial structures and between individual dwelling units in multi-family residential structures. (*I 11.10*)

NOISE IMPACTS OF ENTERTAINMENT AND RESTAURANT/BAR LAND USES

Objective

11.9 Minimize excessive noise generated by entertainment and restaurant/bar establishments and limit noise spillover from these uses into adjacent residential or other "noise-sensitive" land uses.

Policies

11.9.1 Require that entertainment and restaurant/bar uses take appropriate steps to control the activities of their patrons onsite, as well as within a reasonable and legally justified distance from the place of business, to minimize potential noise-related impacts on adjacent residential neighborhoods. (*I 11.11*)

11.9.2 Discourage the development of new nightclubs, discotheques, and other high noise-generating entertainment uses directly adjacent to any residential neighborhoods, residential dwelling units, schools, health care facilities, or other "noise-sensitive" land uses, unless it is demonstrated that adequate measures can be installed and employed by these establishments to adequately mitigate the potential impacts of onsite operations and/or offsite customer activities upon these areas. (*I 11.8*)

11.9.3 Prohibit the location of uses characterized by excessive noise, such as fast food restaurants with drive-through speakers, adjacent to residential neighborhoods. (*I 11.6*)

NOISE IMPACTS OF RAILROAD USES

Objective

11.10 Minimize the noise impacts created by railroad transit (freight and passenger) on residential uses and other "noise-sensitive" land uses.

Policy

11.10.1 Work with railroad operators using facilities that cross through the City of American Canyon to install noise mitigation features where operations impact existing adjacent residential or other "noise-sensitive" uses. (*I 11.20*)

ANALYSIS AND MITIGATION OF CITYWIDE STATIONARY (FIXED-SOURCE) NOISE IMPACTS

Objective

11.11 Ensure that the noise impacts of stationary sources are adequately mitigated.

Policies

11.11.1 Require the completion of detailed and independent acoustical analyses on any new or renovated land uses or structures determined by the City to be potential major stationary noise sources. Such studies will be completed and reviewed, with recommended mitigation measures successfully implemented and tested, prior to the issuance of a Certificate of Occupancy for said land use or structure. (*I 11.12*)

11.11.2 Encourage major stationary noise generating sources throughout the City of American Canyon to voluntarily install additional noise buffering or reduction mechanisms within their facilities to reduce noise generation levels to the lowest extent practicable. (*I 11.13*)

11.11.3 Require the installation of noise buffering or reduction mechanisms within major stationary noise generating sources located throughout the City prior to the renewal of Conditional Use Permits or prior to the approval and/or issuance of new Conditional Use Permits for said facilities, in order to reduce their noise generation levels to the lowest extent practicable. (*I 11.13*)

IMPLEMENTATION PROGRAMS

The following programs implement the noise policies contained in the preceding subsection of the Plan. The capital "I" and number preceding each program are referenced by the policies that they implement.

NOISE ORDINANCES, REGULATIONS, AND GUIDELINES

I 11.1 Continue to enforce an appropriate and legally adequate local Noise Ordinance to comply with the State's Noise Insulation Standards. Said ordinance shall contain policies and regulations addressing both overall (ambient) and stationary source (intrusive) noise impacts.

Responsibility: City of American Canyon Planning Department
Funding Source: City of American Canyon General Fund and/or penalty fees collected from code violations
Schedule: As necessary or as funding permits

I 11.2 Record changes that occur in the community's noise environment by reviewing available technical and acoustical data and studies conducted for proposed projects. The existing local noise map shall be updated as new information about the community's noise environment becomes available, to ensure accuracy in land use compatibility planning and the mitigation of noise impacts.

Responsibility: City of American Canyon Planning Department
Funding Source: City of American Canyon General Fund, development application fees, and/or available funding sources approved by the City
Schedule: Document changes in the City=s noise environment as they occur and update the noise map annually or as funding permits

I 11.3 Include provisions within the American Canyon local Noise Ordinance which require that, prior to the issuance of Certificates of Occupancy and/or Certification of Completion, habitable areas in "noise-sensitive" uses exhibiting noise levels of 60 dB(A) Ldn or greater demonstrate that interior noise levels will not exceed a Ldn of 45 dB(A). Facilities failing to meet this requirement shall be required to install mitigation measures that reduce interior noise levels to within a 45 dB(A) Ldn level, prior to the issuance of any certificates.

Responsibility: City of American Canyon Planning Department
Funding Source: Administration: City of American Canyon General Fund and/or development application fees
Technical Report: Development applicant.
Schedule: As development projects are submitted or as funding permits

I 11.4 Modify the City's industrial and commercial zoning development standards to require that proposed projects be designed in a sensitive manner to minimize potential noise impacts on adjacent residential and "noise-sensitive" uses. Zoning modifications should include:

- The requirement that vehicle access points be located and oriented away from residential and/or noise-sensitive parcels.
- The requirement that loading and shipping facilities be located and oriented away from adjacent noise-sensitive uses.
- The requirement that fences, walls, landscaping and other noise buffers and barriers be incorporated between incompatible uses.
- The requirement that structural building materials, which mitigate sound transmission, be incorporated into new commercial and industrial developments.
- The requirement that interior spaces be configured to minimize sound amplification and transmission.

Responsibility: City of American Canyon Planning Department
Funding Source: City of American Canyon General Fund and/or development application fees
Schedule: Within 18 months of the General Plan's adoption in concert with the preparation of the revised zoning ordinance, or as funding permits

I 11.5 Implement policies and programs of the General Plan's **Land Use and Circulation Elements** relating to the further development and use of alternative modes of travel, such as bicycles and walking, to reduce noise producing auto trips generated by new development projects in American Canyon.

Responsibility: City of American Canyon Planning Department
Funding Source: City of American Canyon General Fund and/or development application fees
Schedule: As development projects are submitted or as funding permits

I 11.6 Revise the City of American Canyon's Noise Ordinance so that it contains provisions that specifically address and sufficiently regulate or limit:

- the use of leaf blowers, parking lot sweepers, and other high noise generating equipment.
- the hours of truck deliveries to commercial or industrial land uses abutting residential and other "noise-sensitive" uses.

Responsibility: City of American Canyon Planning Department
Funding Source: City of American Canyon General Fund and/or development application fees

Schedule: Within 18 months of the General Plan's adoption in concert with the preparation of the revised zoning ordinance, or as funding permits

I 11.7 Revise the American Canyon Noise Ordinance so that it specifically addresses the following:

- the regulation and limitation of the hours of construction activities (particularly those occurring near residences).
- the requirement that construction contractors and their employees utilize operational techniques and practices that minimize the generation of adverse and/or excessive noise on adjacent land uses.

Responsibility: City of American Canyon Planning Department
Funding Source: City of American Canyon General Fund and/or development application fees
Schedule: Within 18 months of the General Plan=s adoption in concert with the preparation of the revised zoning ordinance, or as funding permits

I 11.8 Revise the American Canyon Noise Ordinance so that it contains provisions that specifically require all new and existing entertainment and restaurant/bar land uses to either go through a discretionary development approval process or a renewal of conditional use permit process. The ordinance will include measures that require said land uses to limit ambient noise levels emanating from the establishment at a distance of 50 feet, or within ten feet of any dwelling unit (whichever is more restrictive). Through these processes, locating such facilities adjacent to "noise-sensitive" land uses shall be discouraged or prohibited, unless it can be demonstrated that the potential noise-related impacts of the project can be mitigated to a level of insignificance.

Responsibility: City of American Canyon Planning Department
Funding Source: City of American Canyon General Fund and/or development application fees
Schedule: Within 18 months of the General Plan's adoption in concert with the preparation of the revised zoning ordinance, or as funding permits

DEVELOPMENT REVIEW

I 11.9 Utilize the local planning, design and environmental review process to ensure that proposed commercial land uses are located below residential uses within mixed-use structures and are not overly noise-intensive. Additionally, require that the transfer of noise and vibration from the commercial uses to residential uses are minimized to the greatest extent practicable through innovative design and construction measures.

Responsibility: City of American Canyon Planning Department
Funding Source: City of American Canyon General Fund and/or development application fees
Schedule: As development projects are submitted or as funding permits

I 11.10 Utilize the local planning, design, and environmental review process as well as the existing local building inspection process to ensure that all applicable provisions of the Uniform Building Code and the American Canyon Municipal Code, which prevent and mitigate the transmission of excessive and unacceptable noise levels between tenants and businesses in commercial structures and between individual dwelling units within multi-family residential structures, are adequately enforced.

Responsibility: City of American Canyon Planning Department
Funding Source: City of American Canyon General Fund and/or development application fees
Schedule: As development projects are submitted

I 11.11 Utilize the discretionary review process through conditions of approval and police enforcement to require that all local entertainment and restaurant/bar land uses appropriately control and limit the activities and noise of patrons in and around their facilities to reduce potential noise-related impacts on surrounding local residences.

Responsibility: City of American Canyon Planning Department
Funding Source: City of American Canyon General Fund development application fees and/or penalty fees collected from code violators
Schedule: As development projects are submitted

I 11.12 New and expanded projects that are determined to be a potential major stationary noise source (based on the results of the local initial study and environmental checklist) shall fund and complete a specific acoustical analysis to identify, determine, and analyze potential impacts and propose appropriate mitigation measures. Said mitigation measures must be installed and tested prior to the issuance of a Certificate of Occupancy for the structure (such an analysis shall be similar to the environmental review process to assure the independence and objectivity of the findings).

Responsibility: City of American Canyon Planning Department
Funding Source: Administration: City of American Canyon General Fund and/or development application fees
Technical Report: Development applicant funds
Schedule: As development projects are submitted or as funding permits

I 11.13 Utilize the local planning, design and environmental review process and existing building inspection process to encourage major stationary noise generators to install additional noise buffering or reduction techniques that reduce noise generation levels in and around their facilities. Installation of such measures shall be required prior to the renewal or issuance of a Conditional Use Permit.

Responsibility: City of American Canyon Planning Department
Funding Source: City of American Canyon General Fund, development application

fees, and/or available funding sources approved by the City
Schedule: Ongoing, as funding permits

I 11.14 Utilize the development and environmental review process to ensure that noise impacts are adequately addressed and sufficiently mitigated and that adverse conditions will not arise as a result of new development (in accordance with the California insulation standards of the State Building Code and the policies set forth in the Noise Element of the General Plan).

Responsibility: City of American Canyon Planning Department
Funding Source: City of American Canyon General Fund and/or development application fees
Schedule: As development projects are submitted or as funding permits

I 11.15 Require a noise evaluation for all projects as part of the planning and environmental review process to determine if unacceptable noise levels will be created or experienced. Should noise abatement be necessary, a required technical report containing a detailed evaluation of existing and/or projected noise impacts and effective mitigation measures shall be submitted. This report shall also propose alternate land uses if it is determined that the mitigation measures required to address the project's excessive noise levels necessarily entail the construction of unusually large physical barriers.

Responsibility: City of American Canyon Planning Department
Funding Source: Administration: City of American Canyon General Fund and/or development application fees.
Technical Report: Development applicant
Schedule: As development projects are submitted or as funding permits

I 11.16 Utilize the development review process to ensure that nonresidential developments design and configure their street grids and access points in such a way as to avoid impacting adjacent residential or "noise-sensitive" uses.

Responsibility: City of American Canyon Planning Department
Funding Source: Administration: City of American Canyon General Fund and/or development application fees.
Technical Report: Development applicant funds
Schedule: As development projects are submitted or as funding permits

I 11.17 Utilize the development review process to ensure that new projects in American Canyon incorporate site and architectural design features that mitigate noise impacts on sensitive land uses.

Responsibility: City of American Canyon Planning Department
Funding Source: City of American Canyon General Fund
Schedule: As necessary and as funding permits

AGENCY COORDINATION

I 11.18 Coordinate meetings with the California Department of Transportation (Caltrans) to encourage the State agency to operate in a manner consistent with community noise standards and implement measures to reduce excessive noise impacts on the community.

Responsibility: City of American Canyon Public Works Department in coordination with Caltrans
Funding Source: City of American Canyon General Fund and/or any other funding sources approved by the City
Schedule: As necessary or as funding permits

I 11.19 Meet with representatives of the Napa County Transit District, the Napa County Airport Authority, and other local and regional transportation providers to discuss their vehicles' impacts on local noise conditions as well as feasible mitigation measures, which shall be implemented to reduce such impacts.

Responsibility: City of American Canyon Planning Department
Funding Source: City of American Canyon General Fund and/or any other funding sources approved by the City
Schedule: Meetings shall occur annually or more frequently if the need arises and funding permits

I 11.20 Review local railroad procedures and operations to determine their potential noise-related impacts on the community. As necessary, staff shall meet with railroad officials to discuss and/or suggest noise mitigation measures that could reduce railroad noise-related impacts on the community.

Responsibility: City of American Canyon Public Works Department
Funding Source: City of American Canyon General Fund and/or any other funding sources approved by the City
Schedule: Ongoing, as funding permits

I 11.21 Coordinate with the Napa County Airport to ensure that the routing of aircraft do not adversely affect residential areas of the City.

Responsibility: City of American Canyon Community Development Department in cooperation with the Napa County Airport
Funding Source: City of American Canyon General Fund and/or any other funding sources approved by the City
Schedule: Ongoing, as funding permits

CODE ENFORCEMENT

I 11.22 Enforce a City Noise Ordinance that supports applicable sections of the California Vehicle Code related to vehicle or equipment mufflers and modified exhaust systems and provides for the regulation and limitation of high noise-generating vehicles, equipment and construction activities to reduce their potential impacts on local "noise-sensitive" uses.

Responsibility: City of American Canyon Community Development Department
Funding Source: City of American Canyon General Fund and/or penalty fees collected from code violations
Schedule: As necessary and as funding permits

I 11.23 Enforce the City's zoning codes that only allow industrial, agricultural, or other open space uses within the 65 CNEL contour of the Napa Airport.

Responsibility: City of American Canyon Community Development Department
Funding Source: City of American Canyon General Fund
Schedule: As necessary and as funding permits

I 11.24 Enforce the noise standards contained in the Airport Land Use Compatibility Plan (ALUP) for development located in the vicinity of Napa Airport.

Responsibility: City of American Canyon Community Development Department
Funding Source: City of American Canyon General Fund
Schedule: As necessary and as funding permits

CITY VEHICLE/EQUIPMENT NOISE PROGRAM

I 11.25 Purchase vehicles and other noise generating mechanical equipment that comply with and conform to the latest available noise standards and requirements. Existing City owned vehicles and noise generating equipment shall be upgraded/retrofitted to achieve the same goal.

Responsibility: City of American Canyon Public Works
Funding Source: City of American Canyon General Fund and/or any other funding sources approved by the City
Schedule: As budgetary and operational conditions permit

June 22, 2021

VIA E-MAIL

The Honorable Dave Whitmer, Chairperson
and Members of the Napa County
Airport Land Use Commission
Napa County
1195 Third Street, Suite 301
Napa, CA 94559

Re: June 23, 2021 Special Meeting; Napa County Airport Land Use Commission; Oat Hill Project Application [P21-00056] for the Napa County Airport Land Use Commission – Comments of City of American Canyon

Dear Chair Whitmer and Commission Members,

The City of American Canyon ("City") is in receipt of and has reviewed the report prepared by staff to the Airport Land Use Commission ("ALUC") regarding RH Hess Development's proposed residential project (the "Project") in the Oat Hill area of the City of American Canyon (ALUC Project No. P21-00056-ALUC). Though we appreciate your scheduling of a Special Meeting of the Napa County ALUC for June 23, 2021, to consider the Project's consistency with the Napa County Airport Land Use Compatibility Plan ("ALUCP"), we do not believe the staff report accurately characterized the consistency review process or the relevant substantive standards and their applicability to the Project. Moreover, the report analyzes issues outside of the ALUC's jurisdiction.

First, under Public Utilities Code section 21676(d), the ALUC had 60 days from the date the Project was referred to the ALUC to make a consistency determination. The City referred the Project to the ALUC on March 26, 2021.[1] The ALUC therefore had until May 25, 2021, to complete its consistency review, which it failed to do. The ALUC had all the necessary information for the review since at least February 2021, when the City provided notice of completion of the Initial

[1] The Project was considered by the City Planning Commission on March 25, 2021, which unanimously recommended approval to the City Council. Accordingly, the Project was referred to the ALUC consistent with ALUCP Policy 2.1.8. The Agenda Staff Report containing detailed Project Description and related analysis is available at https://cityofamericancanyon.civicweb.net/Portal/MeetingInformation.aspx?Org=Cal&Id=789.

Study/Mitigated Negative Declaration[2] prepared for the Project.[3] The City further provided supplemental information on May 6 and May 7, 2021, in response to the ALUC's April 23, 2021 letter. The City's March 26 referral and May 6 and May 7 submittals are incorporated herein by reference.[4] These submittals provided the ALUC with more than adequate information to assess the Project, yet the ALUC failed to complete its review within the required statutory timeline. Therefore, the City reserves the right to deem the Project and related entitlements as consistent with the ALUCP by law.

Second, the ALUC's consistency review need not, and should not, address the City CEQA review of the Project. The consistency review is limited to whether the Project is consistent with the State Aeronautics Act and, to the extent the ALUCP complies with state law, the ALUCP's policies on noise and safety.[5] Had the ALUC wished to comment on the Project's CEQA analysis, it could have done so during the public review period. The ALUC chose not to comment. By doing so now, the report appears improperly to conflate the role of the ALUC's consistency review and questions that are relevant only to a responsible agency, a role that is not possessed by the ALUC in this context.

Third, interpretation of the City's General Plan is well-beyond the ALUC's jurisdiction, and the consistency review should not include a purported interpretation of the City's land use planning policies as if it were relevant to questions regarding consistency with the ALUCP. As noted, the Project's consistency review is limited to whether the Project is consistent with the State Aeronautics Act. The City retains ultimate authority to interpret its General Plan and to regulate land use within its boundaries, including within the airport land use area.

---

[2] Neither the ALUC, nor ALUC Staff, commented on the Project Draft Mitigated Negative Declaration under the California Environmental Quality Act (Public Resources Code § 21000, *et seq.*, "CEQA") ("Project MND"), during the public review period, and the City was entitled to assume that the ALUC Staff silence indicated it had no comment. *Cf. Cleary v. County of Stanislaus,* 118 Cal.App.3d 348, 355 (1981)*; see also, Corona-Norco Unified School Dist. v. City of Corona,* 17 Cal.App.4th 985, 997-998 (1993) (School district failing to substantially comment on proposed negative declaration during public comment period and planning commission hearing precluded from challenging project on CEQA grounds after).

[3] Consistent with the provisions of the Napa County Airport Land Use Plan Regulations, the Project Plans *as well as* the Project MND were furnished to the ALUC Staff on February 8, 2021. ALUCP Policy 2.1.7. The ALUC policies are part of the ALUCP, available at https://www.countyofnapa.org/DocumentCenter/View/1980.

[4] On June 1, 2021, the City sent an additional letter to the ALUC following the ALUC's May 19 and 21, 2021 correspondence. The City's June 1 letter reserved the right to deem the Project and related entitlements as consistent with the ALUCP by law, and further highlighted that the Project had submitted all necessary information to the FAA for its review and would be subject to an avigation easement in accordance with Caltrans guidance. The City's June 1 letter is incorporated herein by reference.

[5] Under Public Utilities Code section 21670 the purpose of the Aeronautics Act is to prevent the creation of new noise and safety problems and to protect public health, safety, and welfare by ensuring the adoption of land use measures that minimize the public's exposure to excessive noise and safety hazards. Thus, the focus on Project compatibility analysis is on noise and safety.

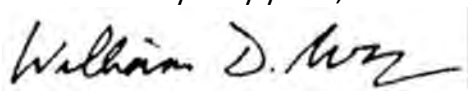
Finally, the County's ALUCP is out of date and does not reflect current guidance established by the California Department of Transportation ("Caltrans"). The County adopted the ALUCP in 1991 and revised the plan in 1999. Since that time, Caltrans has issued *two* substantial updates to its Airport Land Use Planning Handbook, first in 2002 and then in 2011. The ALUCP has not been revised to incorporate these updates and is inconsistent with various Caltrans guidance regarding safety, noise, and overflight. State law further requires that the County's ALUCP be based on the long-term plans for its airports and utilize noise information based upon those plans. Napa County Airport updated its master plan in 2007 and submitted its Airport Layout Plan to the FAA for approval in 2016. *Neither* of these plans *nor* their updated operations forecasts and subsequent environmental analyses, including updated noise contours, have been incorporated into the ALUCP. Thus, the staff report's consistency review applies inappropriate and outdated standards and information in recommending the ALUC find the Project inconsistent with the ALUCP.

As previously provided, the Project *would not* result in any noise or safety hazards with respect to the Napa County Airport. The Project also would not result in overflight impacts or impacts to navigable airspace.

- *Noise*: The Project is well outside the airport's 65 decibel (dB) Community Noise Equivalent Level (CNEL) boundary, as provided in the County's own documents;

- *Safety*: Zone D of the ALUCP most closely corresponds to "Zone 6: Traffic Pattern Zone" under the Caltrans Handbook; Zone 6 does *not* prohibit residential uses, and instead provides *no limit* on residential density;

- *Overflight*: Though the Project may experience some overflight, the Project would be constructed in accordance with California building regulations, which require that interior noise levels attributable to exterior sources not exceed 45 dB CNEL; these interior noise levels are "clearly acceptable" under the ALUCP. Further, the Project will be subject to an avigation easement, in accordance with Caltrans guidance;



- *Airspace Protection*: Whether the Project would result in a hazard to air navigation is a determination for the FAA, not the ALUC. The Project applicant has submitted the required information to the FAA, and the City anticipates the Project will soon receive Determinations of No Hazard to Air Navigation, as the maximum height of the Project would be below the height of the existing water tank on Oat Hill.

Information provided by the City demonstrates that the Project is consistent with the State Aeronautics Act's standards on safety and noise and is consistent with the ALUCP's polices on safety, noise, airspace protection, and overflight. The ALUCP, including the boundaries of Zone D, are outdated and have not been revised to incorporate updated standards from Caltrans. We therefore request the ALUC consider the Project in accordance with state law and relevant state

administrative implementation. The City further reserves the right to consider the Project as consistent with the ALUCP pursuant to Public Utilities Code section 21676(d), and to override the ALUC's determination in accordance with state law.

Thank you for your review and consideration of the matters advanced in this communication.

Very truly yours,

William D. Ross
City Attorney

TITLE

Declaration of a Drought Emergency Stage 2 (Mandatory Compliance—Water Alert)

RECOMMENDATION

Receive and file a report on water supply and demand in the City of American Canyon Water Service Area as of June 2021 and adopt a Resolution declaring a Drought Emergency Stage 2 (Mandatory Compliance—Water Alert) calling for a 20% reduction of water use by all customers.

CONTACT

Felix Hernandez, III, Maintenance and Utilities Director

BACKGROUND & ANALYSIS

Drought conditions persist locally because precipitation statewide was historically low this past winter.

On May 4, 2021, the City Council received an update on historical water demand (2018-2020) ranging between 2,603 AFY to 2,890 AFY. Of note, demand in 2020 (2,884 AF) was nearly identical to demand in 2015 (2,890 AF) – the last year of state-wide drought. Based on demands through June, staff estimates demand for 2021 will be approximately 2,900 AF.

The City started 2021 with a total amount of 1,552 AF of regular supplies available. Thus, the City is facing a deficit of approximately 1,348 AF this year.

The City has other water sources available, including “Emergency Vallejo Permit Water”, “Yuba Accord Water”, “Dry- Year Transfer Program Water”, and "Advanced Table A Water". Staff is also vigorously trying to reinstate approximately 557 AF of "Table A Carryover Water" erroneously reclassified by Department of Water Resources in 2020 as a result of transfers between State Water Project Contractors on the City's behalf.

The amount of additional supplies available matches the anticipate deficit, but with little margin for error and would provide no supplies to be carried over into 2022. Although prior Council action provides the Mayor and City Manager authority to carry out transactions to procure additional supplies, reducing customer demand is a key strategy for 2021. Such action is consistent with Governor Newsome's May 10, 2021 Declaration of Drought Emergency for Napa County (and

elsewhere) (Attachment 2).

On June 1, 2021, the City Council adopted Resolution 2021-36 declaring a Stage 1 Drought Emergency and calling for a voluntary 10% reduction in water use by all City customers. All customers (residential, commercial/industrial, and governmental) are subject to the same request for a 10% reduction in use. Generally, a 10% reduction can be achieved by residential customers by implementing one or more of the following best practices:

1. Reduce the number days per week for irrigating landscaping - especially turf lawns - and do so only during the late evening and early morning hours (between 6:00 p.m. to 6:00 a.m.).
2. Inspect all irrigation systems, repair leaks, and adjust spray heads to provide optimum coverage and eliminate avoidable over-spray.
3. Reduce minutes of run-time for each irrigation cycle if water begins to run-off to gutters or shutting off the irrigation system altogether completely if and when rainfall occurs.
4. Utilize water conservation incentive and rebate programs to replace plumbing fixtures and appliances with water efficient models.
5. Limit the duration of showers to 5 minutes or less, turning off the faucet when brushing teeth and flushing toilets only when necessary each day.

Unfortunately, demand since May has not achieved the desired outcome. Although residential customers have achieved a 5% reduction when compared to last year, commercial customers have increased demand by 10%. Simply put the trend is not decreasing enough and further action is needed. For the remainder of 2021, a 20% reduction in demand is needed to counteract the underwhelming response.

It is important to distinguish a hierarchy of types of water use. Categories such as "health and safety", "commercial/economic" and "decorative" are applicable.

Examples of "health and safety use" would be for drinking, cooking, and bathing - its worth noting the State has set a standard of 55 gallons per person per day for this purpose. For American Canyon (population 20,800), that would equate to approximately 1,300 AF per year. The remaining 1,500 AF is either commercial/economic or decorative.

Examples of "commercial/economic use" would be businesses - particularly those who utilize water in their production. Economic/commercial water serves a purpose by contributing employment and economic activity to the community. Examples of "decorative use" would be outdoor landscaping, fountains, swimming pools, etc. Decorative use is water that does not fit the other categories.

In general, health and safety is the priority followed by commercial/economic, and then decorative uses. At this time, a drastic reduction/elimination of decorative uses is needed.

Of note, irrigation of turf is the single largest decorative use that is being targeted for elimination. Moreover, there is a distinction between decorative use of water for commercial/industrial

properties vs. residential properties. Namely, the former contributes only a minuscule amount to the value of the business enterprise whereas the latter can play a larger in determining "curb appeal" and can bear a relationship to salability. In short, the call for action for the business community to eliminate all outdoor turf potable irrigation while the call for action for residents to reduce outdoor turf irrigation and otherwise mindfully use water.

Procedurally, the simplest way for the City to realize the 20% savings through the end of 2021 would be for the Council to declare a Drought Emergency Stage 2 (ACMC 13.14.070 Mandatory Compliance - Water Alert). However, staff recommends delaying the implementation of certain provisions of ACMC Section 13.14 – namely enforcement of mandatory 20% reductions and Drought Surcharges – until a future date. The primary reason is that staff believes it will be more effective to work cooperatively with our customers to reduce demands rather than to implement punitive measure such as fines and surcharges. Furthermore, there are practical and logistical utility billing challenges that must be overcome before the surcharges can be implemented appropriately.

Implementing these practices now will hopefully forestall punitive measure and subsequent stages mandating reductions, including Stage 3 - 30% reduction (mandatory), and Stage 4 reduction - 50% (mandatory).

Additionally, the Drought Strike Team continues to identify City facilities where consumption may be reduced. For example, Kimberly Park has been changed to recycled water for irrigation which will result in moderate water saving, and switching to water-free urinals at various City facilities conserves up to 240,000 gallons of water each year. The Team is generally focused on operations (both potable and recycled water supply), facilities (parks and buildings), enforcement and public outreach. In addition to updates to the City’s website and the City Manager’s recent email updates, ongoing outreach activities include inserts in monthly utility bills and more information will be provided during tonight's presentation.

COUNCIL PRIORITY PROGRAMS AND PROJECTS

Infrastructure: "Develop and maintain infrastructure resources to support sustainable growth."

FISCAL IMPACT

Reducing demand will decrease revenue received from selling the treated water. In the short run, the Water Fund FY21-22 Budget has sufficient funds to withstand a short-term increase in cost to acquire additional supplies while experiencing a decrease in revenue due reduced sales. Impending purchases include Dry-Year Transfer Program ($665/AF), Yuba Accord Water ($435/AF) and Vallejo Emergency Permit Water ($1,270/AF).

Nevertheless, if the Fund endures a prolonged period of reduced revenue, it is likely the current water rates will have to be reviewed and/or adjusted to reflect the increased cost of providing this service. Staff is currently preparing a request for proposal for a Utility Rate Study, which will review water rates along with sewer and recycled water rates.

ALTERNATIVES

Although not part of the Recommended Action tonight, the Council could direct staff to bring an item to its next meeting (August 3) to declare a Stage 2 Drought Emergency and take further steps to impose *mandatory* demand reductions and impose fines and surcharges.

ENVIRONMENTAL REVIEW

Providing the Water Demand and Supply Report is not a "project" under the California Environmental Quality Act ("CEQA"). Further, the item is categorically exempt from CEQA review as an action by an agency for the protection of natural resources (pursuant to CEQA Guidelines section 15307) and for the protection of the environment (pursuant to CEQA Guidelines section 15308).

ATTACHMENTS:

1. Resolution - Declaring a Stage 2 Drought Emergency
2. Governor's Proclamation of State of Emergency

RESOLUTION 2021-

A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF AMERICAN CANYON, STATE OF CALIFORNIA, DECLARING A DROUGHT EMERGENCY STAGE 2 (MANDATORY COMPLIANCE – WATER ALERT) WATER SHORTAGE AND CALLING FOR A 20% REDUCTION OF WATER USE BY ALL CUSTOMERS

WHEREAS, the City Council of the City of American Canyon, on February 17, 2009, adopted Ordinance 2009-03 establishing a Water Conservation Plan; and

WHEREAS, on May 4, 2021, the American Canyon City Council declared a Water Conservation Stage 1 Water Shortage and called for a 10% voluntary reduction of water use by all residential and commercial customers; and

WHEREAS, on May 10, 2021, in response to historic drought conditions state-wide, Governor Gavin Newsom proclaimed a State of Emergency due to the drought and under Government Code Section 8558(b), did find that the conditions caused by the drought conditions, by reason of their magnitude, are or are likely to be beyond the control of the services, personnel, equipment, and facilities of any single local government and require the combined forces of a mutual aid region or regions to appropriately respond; and

WHEREAS on June 15, 2021, the State Water Resources Control Board (SWRCB) issued an indefinite Curtailment Notice to all junior appropriative water right holders of the Sacramento River, including the City of Vallejo, reducing the availability of their permit water of which under normal situations, the City of American Canyon receives up to 500 acre-feet annually; and

WHEREAS, conservation efforts by City customers to date have resulted in a reduction of approximately 8% when compared to the start of the year and assuming these efforts continue, the City expects total demand for 2021 to be approximately 2,900 acre-feet; and

WHEREAS, the City has identified water supplies totaling 2,900 acre-feet of which any unused surplus will carried over into 2022 and depending upon weather conditions, should be sufficient to meet projected demands through the end of the year; and

WHEREAS, there is no guarantee that winter precipitation will alleviate the drought conditions and even more severe impacts could occur across the state if the drought wears on; and

WHEREAS, when dry conditions prevail, the general welfare requires that the City's available water resources be put to the maximum beneficial use to every extent possible; and

WHEREAS, it is in the interest of the SWRCB and City of American Canyon to prevent the waste, unreasonable use, unreasonable method of use, or unreasonable method of diversion, of water, to promote water recycling or water conservation, to require curtailment of diversions when water is not available under the diverter's priority of right, or in furtherance of any of the foregoing, to require reporting of diversion or use or the preparation of monitoring reports; and

WHEREAS, water conservation is the easiest, most efficient and most cost-effective way to quickly reduce water demand and extend supplies into the next year, providing flexibility for all California communities, including the City of American Canyon; and.

WHEREAS, water saved this summer is water available next year, giving water suppliers, including the City of American Canyon, the flexibility to manage their systems efficiently; and

WHEREAS, the more water that is conserved now, the less likely it is that the City of American Canyon will experience such dire circumstances that water rationing is required; and

WHEREAS, American Canyon Municipal Code Section 13.14.070 "Water Conservation Stages" contains various levels of mandatory conservation including subsection (B) "Stage 2 Mandatory Compliance – Water Alert" which contains similar prohibitions along requiring with other water conservation best practices such as prohibiting the use of water for the purposes of gardening, landscape irrigation, washing of vehicles or equipment between the hours of 12:00 noon and 6:00 PM and prohibiting irrigation at any time if conducted in a manner such as to result in runoff in a gutter or other drainage conveyance system.

NOW, THEREFORE, BE IT RESOLVED that the City Council of the City of American Canyon hereby declares a Drought Emergency and Water Conservation Stage 2 (Mandatory Compliance – Water Alert) and calls for all water customers to reduce their consumption by 20%; and

BE IT FURTHER RESOLVED that the City Council shall postpone implementation of drought surcharges until a future date and but shall order that all of the other measures called for in Stage 2 of the City of American Canyon's Water Conservation Plan be implemented in accordance with the applicable provisions of Ordinance 2009-03.

PASSED, APPROVED and **ADOPTED** at a regularly scheduled meeting of the City Council of the City of American Canyon held on the 20th day of July, 2021, by the following vote:

AYES:
NOES:
ABSTAIN:
ABSENT:

_____
Leon Garcia, Mayor

ATTEST:

William D. Ross, City Attorney

EXECUTIVE DEPARTMENT
STATE OF CALIFORNIA

PROCLAMATION OF A STATE OF EMERGENCY

WHEREAS climate change is intensifying the impacts of droughts on our communities, environment, and economy, and California is in a second consecutive year of dry conditions, resulting in drought or near-drought throughout many portions of the State; and

WHEREAS recent warm temperatures and extremely dry soils have further depleted the expected runoff water from the Sierra-Cascade snowpack, resulting in a historic and unanticipated estimated reduction of 500,000 acre feet of water – or the equivalent of supplying water for up to one million households for one year – from reservoirs and stream systems, especially in the Klamath River, Sacramento-San Joaquin Delta, and Tulare Lake Watersheds; and

WHEREAS the extreme drought conditions through much of the State present urgent challenges, including the risk of water shortages in communities, greatly increased wildfire activity, diminished water for agricultural production, degraded habitat for many fish and wildlife species, threat of saltwater contamination of large fresh water supplies conveyed through the Sacramento-San Joaquin Delta, and additional water scarcity if drought conditions continue into next year; and

WHEREAS Californians have saved water through conservation efforts, with urban water use approximately 16% below where it was at the start of the last drought years, and I encourage all Californians to undertake actions to further eliminate wasteful water practices and conserve water; and

WHEREAS on April 21, 2021, I issued a proclamation directing state agencies to take immediate action to bolster drought resilience and prepare for impacts on communities, businesses, and ecosystems, and proclaiming a State of Emergency to exist in Mendocino and Sonoma counties due to severe drought conditions in the Russian River Watershed; and

WHEREAS additional expedited actions are now needed in the Klamath River, Sacramento-San Joaquin Delta, and Tulare Lake Watersheds; and

WHEREAS it is necessary to expeditiously mitigate the effects of the drought conditions within the Klamath River Watershed Counties (Del Norte, Humboldt, Modoc, Siskiyou, and Trinity counties), the Sacramento-San Joaquin Delta Watershed Counties (Alameda, Alpine, Amador, Butte, Calaveras, Colusa, Contra Costa, El Dorado, Fresno, Glenn, Lake, Lassen, Madera, Mariposa, Merced, Modoc, Napa, Nevada, Placer, Plumas, Sacramento, San Benito, San Joaquin, Shasta, Sierra, Siskiyou, Solano, Stanislaus, Sutter, Tehama, Trinity, Tuolumne, Yolo, and Yuba counties), and the Tulare Lake Watershed Counties (Fresno, Kern, Kings, and Tulare counties) to ensure the protection of health, safety, and the environment; and

WHEREAS under Government Code Section 8558(b), I find that the conditions caused by the drought conditions, by reason of their magnitude, are or are likely to be beyond the control of the services, personnel, equipment, and facilities of any single local government and require the combined forces of a mutual aid region or regions to appropriately respond; and

WHEREAS under Government Code Section 8625(c), I find that local authority is inadequate to cope with the drought conditions; and

WHEREAS to protect public health and safety, it is critical the State take certain immediate actions without undue delay to prepare for and mitigate the effects of, the drought conditions statewide, and under Government Code Section 8571, I find that strict compliance with various statutes and regulations specified in this proclamation would prevent, hinder, or delay the mitigation of the effects of the drought conditions in the Klamath River, Sacramento-San Joaquin Delta, and Tulare Lake Watershed Counties.

NOW THEREFORE, I, GAVIN NEWSOM, Governor of the State of California, in accordance with the authority vested in me by the State Constitution and statutes, including the California Emergency Services Act, and in particular, Section 8625, **HEREBY PROCLAIM A STATE OF EMERGENCY** to exist in the Klamath River, Sacramento-San Joaquin Delta, and Tulare Lake Watershed Counties due to drought.

IT IS HEREBY ORDERED THAT:

1. The orders and provisions contained in my April 21, 2021 Proclamation remain in full force and effect, except as modified. State agencies shall continue to implement all directions from that proclamation and accelerate implementation where feasible.

2. To ensure that equipment and services necessary for drought response can be procured quickly, the provisions of the Government Code and the Public Contract Code applicable to procurement, state contracts, and fleet assets, including, but not limited to, advertising and competitive bidding requirements, are hereby suspended to the extent necessary to address the effects of the drought in the Klamath River, Sacramento-San Joaquin Delta, and Tulare Lake Watershed Counties. Approval of the Department of Finance is required prior to the execution of any contract entered into pursuant to this provision.

3. To support voluntary approaches where hydrology and other conditions allow, the Department of Water Resources and the State Water Resources Control Board (Water Board) shall expeditiously consider requests to move water, where appropriate, to areas of need, including requests involving voluntary water transfers, forbearance agreements, water exchanges, or other means. Specifically, the Department of Water Resources and Water Board shall prioritize transfers that retain a higher percentage of water in upstream reservoirs on the Sacramento, Feather, and American Rivers for release later in the year. If necessary, the Department of Water Resources shall request that the Water Board consider changes to water rights permits to enable such voluntary movements of water. For actions taken in the Klamath River and Sacramento-San Joaquin Delta Watershed Counties pursuant to this paragraph, the following requirements of the Water Code are suspended:

    a. Section 1726(d) requirements for written notice and newspaper publication, provided that the Water Board shall post notice on its website and provide notice through electronic subscription services where interested persons can request information about temporary changes; and

b. Section 1726(f) requirement of a 30-day comment period, provided that the Water Board shall afford a 15-day comment period.

4. To ensure adequate, minimal water supplies for purposes of health, safety, and the environment, the Water Board shall consider modifying requirements for reservoir releases or diversion limitations—including where existing requirements were established to implement a water quality control plan—to conserve water upstream later in the year in order to protect cold water pools for salmon and steelhead, improve water quality, protect carry over storage, or ensure minimum health and safety water supplies. The Water Board shall require monitoring and evaluation of any such changes to inform future actions. For actions taken in the Sacramento-San Joaquin Delta Watershed Counties pursuant to this paragraph, Water Code Section 13247 is suspended.

5. To ensure protection of water needed for health, safety, and the environment in the Klamath River and Sacramento-San Joaquin Delta Watershed Counties, the Water Board shall consider emergency regulations to curtail water diversions when water is not available at water right holders' priority of right or to protect releases of stored water. The Department of Water Resources shall provide technical assistance to the Water Board that may be needed to develop appropriate water accounting for these purposes in the Sacramento-San Joaquin Delta Watershed.

6. To ensure critical instream flows for species protection in the Klamath River and Sacramento-San Joaquin Delta Watersheds, the Water Board and Department of Fish and Wildlife shall evaluate the minimum instream flows and other actions needed to protect salmon, steelhead, and other native fishes in critical streams systems in the State and work with water users and other parties on voluntary measures to implement those actions. To the extent voluntary actions are not sufficient, the Water Board, in coordination with the Department of Fish and Wildlife, shall consider emergency regulations to establish minimum drought instream flows.

7. Operative paragraph 4 of my April 21, 2021 Proclamation is withdrawn and superseded by the following, which shall apply to the Russian River Watershed identified in my April 21, 2021 Proclamation as well as the Klamath River, Sacramento-San Joaquin Delta, and Tulare Lake Watershed Counties:

   To prioritize drought response and preparedness resources, the Department of Water Resources, the Water Board, the Department of Fish and Wildlife, and the Department of Food and Agriculture, in consultation with the Department of Finance, shall:

   a. Accelerate funding for water supply enhancement, water conservation, or species conservation projects.
   b. Identify unspent funds that can be repurposed to enable projects to address drought impacts to people, ecosystems, and economic activities.
   c. Recommend additional financial support for groundwater substitution pumping to support Pacific flyway habitat needs in the lower Sacramento River and Feather River portions of the Central Valley in the Fall of 2021.

8. Consistent with operative paragraph 13 of my April 21, 2021 Proclamation, the Department of Water Resources shall take actions, if necessary, to implement plans that address potential Delta salinity issues. Such actions may include, among other things, the installation and removal of, Emergency Drought Salinity Barriers at locations within the Sacramento-San Joaquin Delta Estuary. These barriers shall be designed to conserve water for use later in the year to meet state and federal Endangered Species Act requirements, preserve to the extent possible water quality in the Delta, and retain water supply for human health and safety uses. The Water Board and the Department of Fish and Wildlife shall immediately consider any necessary regulatory approvals needed to install Emergency Drought Salinity Barriers. For actions taken pursuant to this paragraph, Section 13247 and the provisions of Chapter 3 (commencing with Section 85225) of Part 3 of Division 35 of the Water Code are suspended.

9. To support the movement of water from areas of relative plenty to areas of relative scarcity in the Sacramento-San Joaquin Delta and Tulare Lake Watershed Counties, the Department of Water Resources shall expedite the consideration and, where appropriate, the implementation of pump-back delivery of water through the State Water Project on behalf of local water agencies.

10. To proactively prevent situations where a community runs out of drinking water, the Water Board, the Department of Water Resources, the Office of Emergency Services, and the Office of Planning and Research shall assist local agencies in identifying acute drinking water shortages in domestic water supplies, and shall work with local agencies in implementing solutions to those water shortages.

11. For purposes of carrying out or approving any actions contemplated by the directives in operative paragraphs 3, 4, 5, 6, 8, and 9, the environmental review by state agencies required by the California Environmental Quality Act in Public Resources Code, Division 13 (commencing with Section 21000) and regulations adopted pursuant to that Division are hereby suspended to the extent necessary to address the impacts of the drought in the Klamath River, Sacramento-San Joaquin Delta and Tulare Lake Watershed Counties. For purposes of carrying out the directive in operative paragraph 10, for any (a) actions taken by the listed state agencies pursuant to that directive, (b) actions taken by a local agency where the Office of Planning and Research concurs that local action is required, and (c) permits necessary to carry out actions under (a) or (b), Public Resources Code, Division 13 (commencing with Section 21000) and regulations adopted pursuant to that Division are hereby suspended to the extent necessary to address the impacts of the drought in counties where the Governor has proclaimed a drought state of emergency. The entities implementing these directives shall maintain on their websites a list of all activities or approvals for which these provisions are suspended.

12. To ensure transparency in state agency actions, the Water Board and Department of Water Resources will maintain on their websites a list of the activities or approvals by their agencies for which provisions of the Water Code are suspended under operative paragraphs 3, 4, or 8 of this proclamation.

13. To ensure that posting and dissemination of information related to drought emergency activities is not delayed while accessible versions of that information are being created, Government Code Sections 7405 and 11546.7 are hereby suspended as they pertain to the posting of materials on state agency websites as part of responding to the drought emergency, provided that any state agencies failing to satisfy these code sections shall make and post an accessible version on their websites as soon as practicable.

This proclamation is not intended to, and does not, create any rights or benefits, substantive or procedural, enforceable at law or in equity, against the State of California, its agencies, departments, entities, officers, employees, or any other person.

I FURTHER DIRECT that as soon as hereafter possible, this proclamation be filed in the Office of the Secretary of State and that widespread publicity and notice be given of this proclamation.

IN WITNESS WHEREOF I have hereunto set my hand and caused the Great Seal of the State of California to be affixed this 10th day of May 2021.

GAVIN NEWSOM
Governor of California

ATTEST:

SHIRLEY N. WEBER, PH.D.
Secretary of State

City Council Committee Report

Meeting Date: July 20, 2021 Submitted By: Leon Garcia, Mayor

Committee & City Related Reports:

Napa County Flood Board: June 22, The Bord approved contracts for services related to Napa River/Napa Creek Flood Protection, Storm Water Discharge projects and stream maintenance.

American Canyon City Council: June 28, The Council discussed with city staff and telecommunication providers the technology needed to improved improve public access to city meetings. The Council also discussed and approved exploring a hybrid model of in person and telecommunication to support public participation.

Napa Vallejo Waste Management Authority: July, The Board approved the Napa-Vallejo Waste Management Quarterly Internal Audit and FY 2021 Budget Adjustment for Transfer Station and Disposal Operations Professional Services Appropriations by $115,000 and $80,000 respectively, due to continuing increases in received and transported tonnage for FY 2020-2021.

Community Events:

North Bay Urgent Care: June 23, Ground Breaking. This clinic will provide urgent care needs for local residents.

Infinity Bottling: June 23, Tour of automated production line in operation. This facility fills and packages thousands of bottles a day.

COAD Education and Outreach Committee: June 23; Emergency preparedness, Mapping Your Neighborhood training for community members to assess resources and special needs of neighbors in the event of a local emergency.

Montessori School: June25, Graduation ceremony class of 2021 was a family celebration of accomplishments and aspiration for the future.

North Bay Amateur Radio Association: June 26, Local ham radio operators compete in making most contacts with other ham radios throughout the world. Extra points given for attendance by local elected officials

Pista Sa Nyon: June 27, Vallejo celebration Filipino culture with traditional food, performance of martial arts, and cultural dances. Many of the performers live in American Canyon.

American Canyon Pride Celebration: June 27, The first Pride Celebration in American Canyon was well attended by community and neighbors gathered for music, volleyball, and fun.

4th of July: it was a great evening of celebration. The turnout reflected energy that was very upbeat in being able to get back to gather after the restrictions of COVID have begun to ease. The fireworks show capped off a celebration of Independence Day.

Meet Me In The Street: July 7, American Chamber of Commerce sponsored this first time event of venders and food trucks was a huge success. Future events will be August 4th and September 1st.

Watson Ranch round Breaking: Seventeen years in the making is launched and attended by Congressman Mike Thompson, representative of Cecilia Aguiar-Curry, American Canyon City Council and many commissioners and leaders of community organizations. First projects are 186 unit apartments and 98 homes.

CITY COUNCIL COMMITTEE REPORT

Meeting Date: **July 20,2021** Submitted By: **Mark Joseph, Council member**

Committee Name: **Governmental Affairs Committee (Chamber)**

We now meet quarterly. The two topics were the future direction of the Committee (focus on CalChamber legislative recommendations; and organize 2-3 gov't/business events each year); and an update on the City's General Plan process, including some current GP amendments.

Committee Name: **SR29 Project Initiation Document (PID) meeting**

Mayor Garcia and I met with NVTA staff, along with the City Manager, to go over the details of the proposed PID to upgrade the 29 Corridor. There should be some funds from Caltrans to enhance the safety & aesthetics of the Corridor—bike lanes, sidewalks, underground utilities, and some landscaping. Major modifications to the intersections may take place over several years, based on funding availability. We're looking at potential roundabouts at some of the major intersections, or at least some improvements to the current layout (longer turn pockets, for example). Six lanes may not be an option, but we shouldn't discount the real improvements that we will receive.

Committee Name: **NVTA Transportation Board meeting**

Two main topics were an update on Vine Transit service (mostly improvements to the Fixed Route in Napa City); and a presentation on a bike safety survey relating to Safe Routes to Schools. The bottom line: most parents would love to have their kids walk/bike to school if they felt it was safe. This suggests the need for Class 1 bike lanes and/or crossing guards. If we can reduce the number of car trips to and from school, this could help us achieve our goal of 10% of our trips by bike or walking. Currently, we're around 5%.

Committee Name: **Climate Action Committee**

We provided feedback on the Call For Proposals to update our Greenhouse Gas inventory. The big issue centered around tracking methane and "black carbon" (particulates). These items aren't part of the current methodology, but everyone acknowledges they need to be tracked, including the funding source for our grant (Bay Area Air Quality)! We ended up agreeing to stick with the current methodology but include some language to allow further discussion with the ultimate consultant (for example, we may become a test site and get additional grant funds; or we may find it isn't as difficult to monitor as we thought). We also heard a variation on the same Bike Survey noted above and finalized changes to our Bylaws: we added language regarding requesting special meetings and establishing ad hoc/standing committees. We then got stuck on a discussion about weighted voting—Napa City wants extra votes, similar to NVTA, due to their size; but we already agreed to discount their financial contributions, to avoid overcharging, due to their size, so it was hard to understand their concerns. We will hopefully approve the Bylaws at the next meeting.

CITY COUNCIL COMMITTEE REPORT

Committee Name: **City Events/Activities**

I attended the ***Middle School*** and ***Napa Junction elementary graduation*** ceremonies; met with Rich Peterson about affordable housing and community engagement processes; attended the ribbon-cutting for the ***new Story Walk amenity at Shenandoah Park***; went to the ground-breaking for the ***North Bay Urgent Care facility*** at Napa Junction 3; the ***Gay Pride picnic*** on June 27 (a busy day—also went to the ***Ham Radio Operators*** open house and Vallejo's ***Pista Sa Nayon*** event); had a conference call with ***potential affordable housing developers*** (indirectly associated with the Oat Hill apartment project); and went to the ***Tenants Eviction protection meeting*** (received an update on the Rental Eviction extension and the potential of 100% reimbursement of lost rents). And last but not least, attended the ***Fourth of July festivities*** with my son and his family! It was great—music and fireworks (missed the parade, though)

Committee Name: **Community Events/Activities**

Invited to the ***4H Club's annual BBQ***; attended the ***June & July Napa County Democratic Central Committee meetings***; attended the ***Napa Dem's presentation on the Water Drought***; worked on presenting a ***panel discussion on Climate Change for the American Canyon Democratic Club*** (AC/DC); attended the ***groundbreaking (really a ribbon-cutting) for the Watson Ranch project***—this has been over 30 years in the making, and I was happy for Terry McGrath. Despite our differences, I support this project and believe he is the right person to pull it off! As a member of ***Kiwanis***, attended the monthly Membership meeting and the board meetings, and received online training in my role as Treasurer. For the ***Arts Foundation***, attended the board meeting (in person!), helped process insurance and payments for the music at the Fourth of July, and prepared a grant to fund a Hispanic Heritage Celebration, as part of the September version of ***"Meet Me in the Street."*** And speaking of Street Fairs, I was there, and it was great!! We probably had at least 1000 people, including food providers, business & community booths; and patrons. I hope we have figured out the right combination (site, frequency and activities) to make this a success—we've been at it for about 25 years!!

City Council Committee Report

Meeting Date: June 25, 2021 Submitted By: David Oro

Committee Name: **Association Bay Area of Area Governments - General Assembly**

Topics of Discussion:

General Assembly
Discussed Regional Housing Needs Allocation - Focused on Appeals for local jurisdictions.
Heard informational talks on:

- Regional Early Action Program (REAP) and Regional Housing Technical Assistance Program
- Bay Area Housing Finance Authority (BAHFA) and Expanded Regional Housing Portfolio
- Regional Action Plan (RAP) to Address homelessnewss

Business Meeting

- Approved minutes, adopted FY 21-22 budget
- Listened to report from ABAG Executive Director Therese McMillian

Meeting Date: June 24, 2021

Committee Name: **Napa Valley Tourism Corporation - Board Meeting**

Topics of Discussion:

Finally met, without masks, in person at the Napa Valley Visitors Center on First Street in Napa. That was nice.

Reviewed and approved budgets, marketing plans and status of operations. Some key notes:

Countywide

- Weekend traffic and room rates are high. If you have not booked a room for the weekend between now and October, good luck getting one.
- Hiring remains a challenge

American Canyon

- Provided updates that mirrored Countywide sentiment - weekends are fully booked, midweek is picking up as well. Staffing continues to be a challenge.
- Provided updates on City: North Bay Medical groundbreaking, Watson Ranch groundbreaking, AC Chamber Meet on the Streets event.

Community Events and Other Activities

AC Chamber Meet on the Streets Event
Meeting Date: July 7, 2021
In a recent guest essay for the New York Times Dr. Adam Grant , an organizational psychologist at Wharton focuses on how people find motivation and meaning in daily life, penned a piece entitled "There's a Specific Kind of Joy We've Been Missing." He writes that peak happiness lies mostly in collective activity and we find our greatest bliss in moments of collective effervescence, a term to describe the sense of energy and harmony people feel when they come together in a group around a shared purpose. Collective effervescence is what the community experienced at this event. Congratulations and thanks go to Valerie Zizak-Morais at the American Canyon Chamber of Commerce and to City Staff who helped make sure it went smoothly. Let's do it again.

Watson Ranch Groundbreaking
Meeting Date: July 8, 2021
Finally! Attended the event with about 100 others. Great day for the City and what I believe will positively change the character of not only the City but of the region. The Napa Valley Register covers the story here https://bit.ly/3kdnnXv

Fourth of July Activities
Meeting Date: July 4, 2021
I'm glad we did this. Again, collective effervescence!

HAM Radio Field Day
Meeting Date: June 26, 2021
Field Day is ham radio's open house. Every June, more than 40,000 hams throughout North America set up temporary transmitting stations in public places to demonstrate ham radio's science, skill and service to our communities and our nation. It combines public service, emergency preparedness, community outreach, and technical skills all in a single event. Field Day has been an annual event since 1933, and remains the most popular event in ham radio.

Our event was held on Oat Hill at the Johnny on The Spot property where eight area local teams participated, including Beth Marcus and Powell and Mary Helms. I learned a lot and know that HAM radio played an important role during recent disasters. Glad to have these dedicated volunteers in the community.

LGBTQ Connection - Pop Up Event
Meeting Date: June 27, 2021
Attended with my family. Congratulations to the organizers of the LGBTQ+ Connection American Canyon for a wonderful event at the park. Glad to finally meet Jade Diwa of American Canyon who is showing leadership in the community on LGBTQ issues.

Vallejo Pista Sa Nayon
Meeting Date: June 27, 2021
Attended Pista Sa Nayon in Vallejo, the largest free Filipino event on the West Coast. This year was a hybrid, online and in person. It is a celebration of Filipino heritage timed with the country's Independence Day, an annual national holiday in the Philippines observed on June 12, commemorating the declaration of Philippine independence from Spain in 1898.
https://www.vallejopistasanayon.com/

Meet Sheriff Oscar Ortiz Event
Meeting Date: June 27, 2021
Attended the first of what I'm sure will be many Meet and Greet events for Napa County Sheriff Oscar Ortiz's campaign in downtown Napa.

American Canyon Community and Parks Foundation - Storywalk Ceremony
Meeting Date: June 18, 2021
Such a great and creative addition to the community. It was great to reconnect with everyone now that we can safely gather.

4H Club Open House
Meeting Date: June 12, 2021
Toured the facilities and met members of the American Canyon 4H Club. What a great asset to the City.

City Council Committee Report

Meeting Date: **July 5, 2021** Submitted By: **Councilmember Pierre Washington**

Committee Name: **Climate Action Committee CAC**

Topics of Discussion: **Napa Safe Routes, State Water Resource**

On 6/25/2021 at 1:00pm I attended the Climate Action Committee/CAC with Vice Mayor Mark Joseph.

Topics:

- Napa County Safe Routes to Schools: Parents Perception Research
- Staff recommends that the Climate Action Committee, (CAC) review and provide direction regarding proposal draft By-Laws.
- State Water Resource Control Board Drought Emergenct Updates separate
- Status of Trends for fish water and emergent contaminates.
- Drought Emergency Updates

The following is a brief summary from the Climate Action Committee meeting on June 26, 2021.

- Received a presentation from Patrick Band and Carlotta Sainato, Napa County Bicycle Coalition. The presentation is attached.
- Reviewed the draft Bylaws to be adopted at the next Climate Action Committee meeting. Staff will add the following options
    - Option to create an ad hoc and/or standing committee
    - Process to agendize future agenda items
        - Require 50% vote of members present
        - Other
    - Add in options on weighted voting as follows
        - Equal vote for all CAC members
        - Weighted vote for all matters
            - Weighted vote by population
            - City and County of Napa members received two votes
        - Weighted vote for budgetary items and equal vote for programmatic items by subject matter (financial votes only)
- The CAC provided direction regarding the draft scope of work for a Countywide Greenhouse Gas (GHG) Inventory. Staff will release the RFP next week and will include
    - An optional task where the consultant works with the BAAQMD and County to quantify or estimate black carbon and short lived climate pollutants
    - An optional task for the consultant to evaluate the potential for carbon sequestration

Committee Name: **Climate Action NOW**

Topics of Discussion: **Reusable Food ware and Waste Reduction Ordinance.**

On 6/23/2021 I met with a Climate Action NOW group, led Bob Figoni and supported by Naama Brenner-Abramovitch and Margaret Smetana.

SUMMARY

The goal of the ordinance is to migrate from disposables to reusable. This draft ordinance:

* requires reusable food ware in dine-in restaurants
* switches to compostable disposable take-out food ware by request only
* eliminates plastic and polystyrene disposable food ware.

The draft ordinance contains five key features including:

1. **Reusable Food ware--**
    a. Dining In--Reusable food ware (plates, bowls, cups, trays, utensils, etc.) must be used if a customer is dining in at a restaurant.
    b. Take-out--Customers can provide their own food ware for take-out beverage and food service.

2. **Disposable Food ware--**
    a. All takeout disposable food ware (plates, bowls, cups, trays, utensils, etc.) must be made of natural-fiber compostable material.
    b. Must be BPI certified. The Biodegradable Product Institute (BPI) is a third-party testing laboratory that certifies products free of harmful chemicals.
    c. Accessory food ware items shall be provided only upon request by the customer or at self-serve stations.
    d. Aluminum and glass are allowed.

3. **Charges and Discounts--**
    a. Disposable Cup Charge--A $0.25 charge for each disposable cup
        i. Maximum $1.00 charge per order for all disposables.
    b. Other Disposable Food ware Charge--A $0.25 per order charge for requested accessory food ware items.
        i. Includes natural fiber compostable items such as napkins, cup sleeves, Stirrers, straws, utensils, as well as condiments.
        ii. Maximum $1.00 charge per order for all disposables.
    c. Income--Businesses retain any income generated from these charges.
    d. Exemptions available for Cal Fresh/SNAP and WIC customers.
    e. Reusable Discount--A $0.25 discount per order for bringing your own food ware.

4. **Plastic and Polystyrene--**
    a. Plastic and polystyrene food ware are not allowed for prepared foods, even for take-out.
    b. Applies to City facilities.

5. **Plastic Bottles--**
    a. Plastic beverage bottles are prohibited for events held on City property and in City vending machines.

Committee Name: **Community Events**

June 18, 2021 **AC Summer Kick Off Celebration/Story Walk Ribbon cutting**: ACCPF, Janelle Sellick sponsored event at Shenandoah Park

June 19, 2021 **Juneteenth Celebration Event in Vallejo**: Attending to gather information and make contacts for future Juneteenth event in AC

June 21, 2021 **Juneteenth Proclamation/Dedication** in front of City Hall. Reading of letter on behalf of Congressman Mike Thompson

June 22, 2021 **Veterans of Foreign Wars, (VFW**) monthly meeting, (virtual)

June 23, 2021 **AC Lions Club** meeting occurred at ReMax Planning for the July 7th Chamber of Commerce Community event.

June 28, 2021 **Public Meeting technology Interest**: Along with Mayor Garcia we met with the newly formed committee to address City Technology Solutions.

July 7, 2021 **Chamber of Commerce**: Meet In the Streets Lions Club Tent. Excellent turnout AWESOME job Valerie!!!

July 8, 2021 **Watson Ranch Gound Breaking Ceremony**:

Committee Name: **Community 1:1's**

Ken Leary: Spoke about community involvement and traffic/speeding on major thoroughfares. We discuss future celebration ceremonies for Juneteenth.

Janelle Selleck, ACCPF Director. To discuss the Summer Kickoff Celebration & Story Walk Ribbon cutting at Shenandoah Park. Also discussed An Evening at the Ruins fundraising event for 2021.

Chris James & Tammy Wong, AC Residents Discussed the Westside Connector and the WSC Committees role and future roles.

Barry Christian: Met to discuss the Newell preserves and the "non-productive grapes." Fire protection boarding Newell and the new Canyon Estates custom home project east of Newell Rd.

Jeanette Tongson: To discuss unauthorized and unsafe parking on Silver Oaks Trail near new Apartments (The Village @ Vintage Ranch)

Lisa Chu; NVUSD Trustee; Follow-up on Donaldson Way upgrade approvals and discussed NVUSD properties and future 2X2 meetings.

Rabinder "Rob" Mangewala: Meet & Greet to discuss NVUSD and City of American Canyon's relations and future collaborative goals.

Buzz Butler: Spoke with him about supporting Brenda Knight on the 2022 Juneteenth celebration and event.

Brenda Knight: Met with Brenda to go over coordinating the Juneteenth event at Main Street Park. Brenda has already establish key note speakers, musicians, and security and food vendors.

Jim Wilson, Napa Climate Now to discuss the mission of S4CA and supporting the youth's efforts for climate Change.

Brad Wagenknecht, Napa County Supervisor; Meet & Greet spoke about Climate Action Committee, public office relationships, and roles and responsibilities of an elected official.

Steve Hazelton, AC Resident: Meet about City Ordinances and the unauthorized use of Fire Works within the city

Dick Ohlant , (Senior and Junior) , Dicks Campers: Meet & Greet with local business owner had coffee and chatted about the city's development plans, (Watson Ranch, Canyon Estates, WSC, Oat hill and NVUSD).
