# REGULAR CITY COUNCIL MEETING AGENDA

City Hall - Council Chambers
4381 Broadway St., Suite 201, American Canyon
**November 19, 2024**
**6:30 PM**

**Mayor:** Leon Garcia
**Vice Mayor:** David Oro
**Councilmembers:** Mariam Aboudamous, Mark Joseph, Pierre Washington

**Tonight's meeting is a limited public forum. American Canyon promotes respectful and responsible behavior among its meeting participants, whether they are present in person or remotely. Using offensive language or remarks that promote, foster, or perpetuate discrimination based on race, creed, color, age, religion, gender marital status, status regarding public assistance, national origin, physical or mental disability or sexual orientation/gender identification, as well as any other category protected by federal, state or local laws will not be tolerated. In the case of an occurrence, the speaker will be immediately disconnected from the microphone.**

## PUBLIC PARTICIPATION

City Council and other public meetings will be conducted in person. This meeting is also available via Zoom, is broadcast live to residents on Napa Valley TV, on our website and on YouTube.

**Zoom Link:** Click here. **Webinar ID:** 849 9699 3806; Passcode: 12345. **Phone in to Zoom:** 408-638-0968

**Oral comments, during the meeting:** Oral comments can be made in person during Open and Closed Session or through Zoom in Open Session only. On Zoom use the "raise your hand" tool during any public comment period. To avoid confusion, hands raised outside of Public Comment periods will be lowered.

**Written comments:** Submit written comments by the eComments link, located on the Meetings & Agendas page of our website. eComments are available to council members in real time. To allow for Council review of comments, eComments will close at 3:00 pm on the day of the meeting.

The above identified measures exceed all legal requirements for participation in public comment, including those imposed by the Ralph M. Brown Act. For more information, please call the Office of the City Clerk at (707) 647-4369 or email cityclerk@americancanyon.gov.

**AGENDA MATERIALS:** City Council agenda materials are published 72 hours prior to the mee-ng and are available to the public via the City's website at www.americancanyon.gov.

**AMERICANS WITH DISABILITIES ACT:** The City Council will provide materials in appropriate alternative formats to comply with the Americans with Disabilities Act. Please send a written request to City Clerk at 4381 Broadway, Suite 201, American Canyon, CA 94503 or by email to cityclerk@americancanyon.gov. Include your name, address, phone number and brief description of the requested materials, as well as your preferred alternative format or auxiliary aid, at least three calendar days before the meeting.

## 5:30 P.M. – CLOSED SESSION

*The mayor will call the meeting to order and conduct roll call. Council will immediately convene into Closed Session after hearing any public comment on Closed Session items. At 6:30 p.m. the Council will reconvene into Open Session and then resume Closed Session at the end of the meeting to address outstanding items, if necessary.*

# CITY OF AMERICAN CANYON
# PROCLAMATION

## Honoring Councilmember Mariam Aboudamous for 8 Years Of Dedicated Service to the City of American Canyon

**WHEREAS,** Mariam Aboudamous has demonstrated outstanding leadership and dedication to the community as a member of the American Canyon City Council, tirelessly working to improve the quality of life for all residents of American Canyon; and

**WHEREAS,** Councilmember Aboudamous has consistently advocated for equity, sustainability, and inclusivity, championing the values of diversity and ensuring that all voices within our community are heard and valued, including her efforts to recognize the Muslim holiday of Ramadan and her support for the American Canyon Juneteenth Celebration; and

**WHEREAS,** Councilmember Aboudamous has worked diligently on initiatives to enhance economic development, environmental stewardship, and community well-being, strengthening the city's commitment to a thriving and resilient future, which has included the prohibition of new fossil fuel fueling stations and the restriction of smoking in apartments; and

**WHEREAS,** her contributions to local policy, community outreach, and public service have positively impacted the lives of countless residents, inspiring others with her unwavering dedication to public service; and

**WHEREAS,** Councilmember Aboudamous is a committed advocate for youth engagement, affordable housing, public safety, and environmental sustainability, aligning her efforts with the needs and aspirations of the people she serves; and

**WHEREAS,** her commitment to transparency, community engagement, and collaboration with fellow councilmembers has earned her the respect and admiration of her colleagues, city staff, and the citizens of American Canyon.

**NOW, THEREFORE, I,** Mayor Leon Garcia, on behalf of the City Council and the people of American Canyon, do hereby recognize and commend Councilmember Mariam Aboudamous for her extraordinary service, leadership, and dedication to the betterment of our community. Her tireless efforts are deeply appreciated, and we are grateful for the positive impact she has made in our city. We extend our heartfelt thanks for her continued service and commitment to the residents of American Canyon.

Dated: November 19, 2024

Leon Garcia, Mayor

# CITY OF AMERICAN CANYON
# PROCLAMATION

## Honoring Mayor Leon Garcia for 22 Years of Leadership and Service to the City of American Canyon

**WHEREAS,** Mayor Leon Garcia began his journey in American Canyon in the year 2000, quickly becoming an integral part of the community he now calls home; and

**WHEREAS,** On December 5, 2002, Garcia was sworn in as a City Council member for a four-year term, marking the beginning of his long and impactful public service to American Canyon; and

**WHEREAS,** On December 7, 2006, Garcia became the City's first directly elected mayor, and what began as a two-year term evolved into a historic tenure, as he continued to earn the trust of the community through re-elections in 2008, 2010, 2012, 2016, and 2020, making him the longest-serving mayor in American Canyon's history; and

**WHEREAS,** Mayor Garcia's 22 years of service, including 19 years as mayor, are marked by his steadfast dedication to the community and his ability to foster trust and unity among residents; and

**WHEREAS,** Mayor Garcia has been a passionate advocate for the City's Broadway District Specific Plan, which has transformed the vision for American Canyon by transitioning Highway 29 from an auto-oriented area to a pedestrian-friendly town center since 2017; and

**WHEREAS,** Under Mayor Garcia's leadership, the City has expanded public amenities, including accessible wetlands trail access, providing spaces for residents to connect with nature and each other; and

**WHEREAS,** Mayor Garcia has represented American Canyon on various local, regional, and statewide boards, such as the Napa Valley Waste Management Authority, Napa County Flood and Water Conservation District, Napa Valley Transportation Authority, and the League of California Cities North Bay Division, ensuring that the community's voice is heard across the state; and

**WHEREAS,** Mayor Garcia's volunteerism includes contributions to organizations such as Community Action of Napa Valley, Kiwanis Club of American Canyon, and the Community

Emergency Response Team, reflecting his deep commitment to community safety and well-being; and

**WHEREAS,** Prior to his public service career, Mayor Garcia dedicated 35 years to the medical field as a registered nurse, serving Napa State Hospital and Yountville Veterans Home, where his compassion and commitment to helping others became core to his leadership style; and

**WHEREAS,** Mayor Garcia is a family man, sharing his life and passion for service with his wife, Eva, their six adult children, and three beloved grandchildren; and

**NOW, THEREFORE,** the City Council of American Canyon hereby honors Mayor Leon Garcia for his 22 years of extraordinary service to American Canyon, his leadership, dedication, and the lasting impact he has made on the city and its future; and express our sincere gratitude to Mayor Garcia for his selfless dedication, commend his achievements, and wish him continued success and happiness in all future endeavors.

***VIA E-MAIL***
The Honorable Leon Garcia, Mayor
and Members of the City Council
City of American Canyon
4381 Broadway, Suite 201
American Canyon, CA 94503

Re: Report Upon Return from Closed Session; Regular City Council Closed Session Meeting of the American Canyon City Council of October 15, 2024

Dear Mayor Garcia and Members of the City Council:

This communication sets forth reportable action, if any, of the City Council ("Council") of the City of American Canyon ("City"), consistent with provisions of the Ralph M. Brown Opening Meeting Act (Government Code Section 54950, *et seq*.) resulting from the Closed Session of the Regular City Council Closed Session Meeting of October 15, 2024, consistent with Government Code Section 54957.1.

Vice Mayor Oro convened the Council[1] in Open Session at 5:30 p.m. and after ascertained that there were no public comments on the matters agendized for Closed Session consideration and adjourned to Closed Session at 5:30 p.m.

There were two matters agendized for City Closed Session consideration:

1. Conference with Legal Counsel – Anticipated Litigation
   Authorized Pursuant to Government Code Section 54956.9(d)(2)
   Three (3) Matters

2. Conference with Legal Counsel – Existing Litigation
   Authorized Pursuant to Government Code Section 54956.9(d)(1)

   a. *City of American Canyon v. City of Vallejo, et al.* (Sacramento Superior Court Case No. 34-2022-00327471);

1 Vice Mayor Oro and Council Members Washington and Joseph being present. Mayor Garcia and Council Member Aboudamous were excused.

b. *City of Vallejo v. City of American Canyon et al.* (Third District Court of Appeal Case No. C102070; formerly Napa County Superior Court Case No. 23WM000055) [Giovannoni Project];

c. *City of Vallejo v. City of American Canyon et al.* (Sacramento County Superior Court Case No. 24WM000078) [Paoli/Watson Lane Annexation].

d. *City of Vallejo v. City of American Canyon et al.* (Marin County Superior Court Case No. CV0003752) [Measure K].

With respect to the two (2) of the three (3) matters considered under Closed Session Agenda Item No. 1., there was no reportable action under the common law attorney-client privilege and that provided by Government Code Section 54956.9(d)(2).

With respect to one (1) of the matters considered under Closed Session Agenda Item No. 1., there was reportable action in the form of Council direction (3-0) to request a continuance of consideration of the draft Airport Land Use Commission Plan ("ALUCP") from the scheduled November 6, 2024 meeting of the Airport Land Use Commission

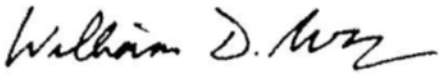
With respect to Closed Session Agenda Item No. 2.a., there was no reportable action under the common law attorney-client privilege and that provided by Government Code Section 54956.9(d)(1).

With respect to Closed Session Agenda Item No. 2.b., there was no reportable action under the common law attorney-client privilege and that provided by Government Code Section 54956.9(d)(1).

With respect to Closed Session Agenda Item No. 2.c., there was no reportable action under the common law attorney-client privilege and that provided by Government Code Section 54956.9(d)(1).

With respect to Closed Session Agenda Item No. 2.d., there was reportable action in the form of Council direction (3-0) to agree by Stipulation with all parties to consolidate all motions for consideration by the Court at the scheduled October 22, 2024 Case Management Conference. Except as indicated, there was no other reportable action under the common law attorney-client privilege and that provided by Government Code Section 54956.9(d)(1).

Your Council concluded the Closed Session at 6:23 p.m.



In Open Session, it was indicated that a written report upon return from Closed Session

consistent with Government Code Section 54957.1, would be prepared concerning the matters agendized for Closed Session.

This communication should be reviewed under the Consent portion of the Agenda of your next Regular or Special City Council Meeting.

Should you have questions concerning this Report, it may be taken off the Consent calendar when agendized in the future, or our office may be contacted in the interim.

Very truly yours,

William D. Ross
City Attorney

Maria Ojeda, Assistant City Manager
Taresa Geilfuss, City Clerk

## TITLE

Annual Impact Fee Inflation Adjustment

## RECOMMENDATION

Adopt a Resolution approving the 2025 annual Inflation-adjustment to the Traffic Impact Fee, Water Capacity Fee, Wastewater Capacity Fee, Parks and Recreation Fee, Civic Facilities Fee, General Plan Update Fee, and Affordable Housing Nexus Fee.

## CONTACT

Brent Cooper, AICP, Community Development Director

## BACKGROUND & ANALYSIS

American Canyon collects "Impact Fees" before issuing a building permit to fund infrastructure required to serve new development. The City's impact fees consist of a Traffic Impact Fee, Water and Wastewater Capacity Fee, Parks and Recreation Fee, Civic Facilities Fee, General Plan Update Fee, and an Affordable Housing Nexus Fee.

Over time, inflation erodes the "buying power" of impact fees. Thus, the ordinance implementing each impact fee allows an annual adjustment according to a specific inflation cost index. The impact fee and its associated inflation cost index is listed below:

| Impact Fee | Inflation Index |
|---|---|
| Traffic Impact Fee | Engineering News Record 20-City Construction Cost Index |
| Water Capacity Fee | Engineering News Record City Construction Cost Index for San Francisco |
| Wastewater Capacity Fee | Engineering News Record 20-City Construction Cost Index |
| Parks and Recreation Fee | Engineering News Record 20-City Construction Cost Index |
| Civic Facilities Fee | Engineering News Record 20-City Construction Cost Index |
| General Plan Update Fee | Engineering News Record 20-City Construction Cost Index |
| Affordable Housing Nexus Fee | California Consumer Price Index |

Although we experienced historically high inflation over the past few years, today's inflation rates are much lower. In fact, the Engineering News Record Construction Cost Index for the San Francisco region, which is used to adjust the Water Capacity impact fee, declined 0.23 percent from October 2023 to 2024. Each cost index and the benchmark month inflation rate is included as Attachment 2.

The Council's most recent impact fee adjustment was approved on November 7, 2023. To ensure buying power is sustained over time, an annual inflation adjustment for each impact fee is presented each year as a housekeeping matter. The proposed Impact Fees are included as Attachment 3.

**Citywide Impact Fees**

*Traffic Impact Fee*
The Traffic Impact Fee (TIF) funds transportation improvements identified in the Circulation Element pursuant to ACMC 15.12.050.

*Water and Wastewater Capacity Fees*
Water and Wastewater capacity fees are collected for the purpose of constructing and/or improving water, recycled water, and wastewater facilities necessary to meet the demand of new development, pursuant to ACMC 13.06.090 and ACMC 14.06.060 respectively. In accordance with State Law, Accessory Dwelling Units are exempt from Water and Wastewater capacity fees.

*Parks & Recreation, Civic Facility, and General Plan Update Fee*
These fees are collected for the purpose of constructing new park, recreation, civic facilities and general plan update funds necessary to meet the demand of new development, pursuant to ACMC 15.08.050. Unlike the Civic Facility and General Plan Update Fees, the Parks & Recreation impact fee only applies to new residential development.

*Affordable Housing Nexus Fee (ACMC 19.28)*
This fee is collected for the purpose of constructing new housing that is affordable to lower income residents and is a key implementation policy of the City's General Plan Housing Element. Accessory dwelling units and affordable housing is exempt from the Affordable Housing Nexus fee.

## COUNCIL PRIORITY PROGRAMS AND PROJECTS

Organizational Effectiveness: "Deliver exemplary government services."

## FISCAL IMPACT

The Recommended Action will have no direct impact on the General Fund because the proposed adjustments were contemplated in the Fiscal Year 2024-2025 Budget.

## ENVIRONMENTAL REVIEW

The proposed impact fee inflation adjustment is not subject to the California Environmental Quality Act ("CEQA") pursuant to Section 15060(c)(2) because the activity will not result in a direct or reasonably foreseeable indirect physical change in the environment; and Section 15060(c)(3) because the activity is not a project as defined in Section 15378 of the CEQA Guidelines, California Code of Regulations, Title 14, Chapter 3 because it has no potential for resulting in physical change to the environment, directly or indirectly. In addition, the impact fee inflation adjustment is not a

project under CEQA Guidelines Section 15061(b)(3) because it has no potential for causing a significant effect on the environment. Moreover, the inflation adjustment is exempt from environmental review under CEQA Guidelines Section 15378(b)(4) because it is a government funding mechanism that does not involve any commitment to any specific project which may result in a potentially significant physical impact on the environment.

**RESOLUTION NO. 2024- ___**

**A RESOLUTION ADOPTING THE 2025 ANNUAL INFLATION-ADJUSTMENT TO THE TRAFFIC IMPACT FEE; WATER CAPACITY FEE; WASTEWATER CAPACITY FEE; PARKS AND RECREATION FEE; CIVIC FACILITIES FEE; GENERAL PLAN UPDATE FEE; AND AFFORDABLE HOUSING NEXUS FEE**

**WHEREAS,** the City collects "Impact Fees" to mitigate the impact of new development; and

**WHEREAS,** the City's impact fees are: Traffic Impact Fee, Water Capacity Fee, Wastewater Capacity Fee, Parks and Recreation Fee, Civic Facilities Fee, General Plan Update Fee, and the Affordable Housing Nexus Fees; and

**WHEREAS**, over time, inflation erodes the buying power of impact fees; and

**WHEREAS**, impact fees are adjusted each year to ensure buying power is sustained over time; and

**WHEREAS**, the City's impact fees were last adjusted on November 7, 2023 (Resolution 2023-82); and

**WHEREAS**, the applicable inflation factors, amount of inflation since the previous update, and Municipal Code inflation factor index reference is shown on the table below; and

| Impact Fee | Inflation Factor Index | Inflation Factor | | Percentage Index Change | Municipal Code Location |
|---|---|---|---|---|---|
| | | Prior Index Date | Current Index Date | | |
| Traffic | Engineering News Record 20-City Construction Cost Index | Oct-23 | Oct-24 | 1.00% | Section 15.12.050 |
| Water Capacity Fee | Engineering News Record Construction Cost Index for the San Francisco region (BCI) | Oct-23 | Oct-24 | -0.23% | Section 13.060.090.E |
| Wastewater Capacity Fee | Engineering News Record 20-City Construction Cost Index | Oct-23 | Oct-24 | 1.00% | Section 14.04.100.A |
| Parks and Recreation, Civic Facilities, General Plan Update | Engineering News Record 20-City Construction Cost Index | Oct-23 | Oct-24 | 1.00% | Section 15.08.050 |
| Affordable Housing Nexus fee | California Consumer Price Index, or 2% whichever is less | Aug-23 | Aug-24 | ~~2.72%~~ 2% Max | Resolution 2016-15 |

**WHEREAS,** the City Council considered all of the written and oral testimony presented at the public meeting on November 19, 2024 in making its decision.

**NOW, THEREFORE, BE IT RESOLVED** that the City Council of the City of American Canyon hereby adjusts these impact fees as follows:

**SECTION 1:** The 2025 Traffic Impact Fees as shown on the table below:

**2025 Traffic Impact Fee**

| Land Use | Traffic Impact Fee |
|---|---|
| All | $735.69 Per Net New Daily Trip |
| ADU | $1,277.18 Per ADU |

**SECTION 2:** The 2025 Water Capacity Fees as shown on the table below:

**2025 Water Capacity Fee**

| Land Use | Units | EDU | Water Capacity Fee |
|---|---|---|---|
| Accessory Dwelling Unit | each | 0.00 | $0.00 |
| Single Family | each | 1.00 | $23,266 |
| Multi-Family | unit | 0.65 | $15,123 |
| Commercial/Industrial | gpd | n/a | $35.65 |

**SECTION 3:** The 2025 Wastewater Capacity Fees as shown on the table below:

**2025 Wastewater Capacity Fee**

| Land Use | Units | EDU | Wastewater Capacity Fee |
|---|---|---|---|
| Accessory Dwelling Unit | each | 0.00 | $0.00 |
| Single Family | each | 1.00 | $12,729 |
| Multi-Family | unit | 0.65 | $8,274 |
| Commercial/Industrial | gpd | n/a | $42.44 |

**SECTION 4:** The 2025 Parks & Recreation Fees as shown on the table below:

**2025 Parks & Recreation Fee**

| Parks and Recreation | Fee Per Dwelling Unit |
|---|---|
| Parkland Acquisition | $2,569.61 |
| Parkland Development | $2,921.77 |
| Community Gym | $1,006.32 |
| Aquatic Center/Pool | $340.76 |
| Aquatic Center/Slide | $71.58 |
| **Total Per Dwelling Unit** | **$6,910.04** |
| **Total Per ADU** | **$1,893.83** |

**SECTION 5:** The 2025 Civic Facility Fees as shown on the table below:

**2025 Civic Facility Fee**

| Civic Facilities | Civic Facility Fee Per Residential Unit | Civic Facility Fee Per Accessory Dwelling Unit | Civic Facility Fee Per Commercial Sqft | Civic Facility Fee Per Office Sqft | Civic Facility Fee Per Industrial Sqft |
|---|---|---|---|---|---|
| City Hall Expansion | $333.69 | $91.64 | $0.176 | $0.341 | $0.124 |
| Police Station | $101.05 | $27.68 | $0.041 | $0.103 | $0.052 |
| Aquatic Center Offices | $309.75 | $85.06 | $0.041 | $0.073 | $0.010 |
| Construction - City Library | $1,169.79 | $320.90 | $0.176 | $0.280 | $0.103 |
| Corp Yard Expansion and offsite improvements | $91.73 | $25.91 | $0.010 | $0.050 | $0.010 |
| **Total - Civic Facilities** | **$2,006.02** | **$551.20** | **$0.44** | **$0.85** | **$0.30** |

**SECTION 6:** The 2025 General Plan Update Fees as shown on the table below:

**2025 General Plan Update Fee**

| Land Use | Units | General Plan Update Fee |
|---|---|---|
| Residential | Per DU | $106.62 |
| Accessory Dwelling Unit | Per DU | $29.49 |
| Commercial, Office, Industrial | Per Sqft | $0.0135 |

**SECTION 7:** The 2025 Affordable Housing Nexus Fee as shown on the table below:

**2025 Affordable Housing Nexus Fee**

| Type of Use | Affordable Housing Nexus Fee Per Gross Sqft |
|---|---|
| Residential, Single Family, Townhouse | $3.57 |
| Residential, Stacked Flats, Apartment | $4.14 |
| Accessory Dwelling Unit (ADU) | $0.00 |
| Office | $0.91 |
| Hotel | $0.91 |
| Retail | $0.91 |
| Warehouse | $0.59 |
| Industrial | $0.59 |
| All Other Nonresidential | $0.91 |

**SECTION 8:** The 2025 annual impact fee inflation-adjustment schedule shall become effective 60 days following approval by the City Council. The effective date for the updated impact fees shall occur on the 18th day of January, 2025.

**NOW, THEREFORE, BE IT FURTHER RESOLVED** that the City Council of the City of American Canyon hereby determines the proposed impact fee inflation adjustment is not subject to the California Environmental Quality Act ("CEQA") pursuant to Section 15060(c)(2) because the activity will not result in a direct or reasonably foreseeable indirect physical change in the environment; and Section 15060(c)(3) because the activity is not a project as defined in Section 15378 of the CEQA Guidelines, California Code of Regulations, Title 14, Chapter 3 because it has no potential for resulting in physical change to the environment, directly or indirectly. In addition, the impact fee inflation adjustment is not a project under CEQA Guidelines Section 15061(b)(3) because it has no potential for causing a significant effect on the environment. Moreover, the inflation adjustment is exempt from environmental review under CEQA Guidelines Section 15378(b)(4) because it is a government funding mechanism that does not involve any commitment to any specific project which may result in a potentially significant physical impact on the environment.

**PASSED, APPROVED** and **ADOPTED** at a regularly scheduled meeting of the City Council of the City of American Canyon held on the 19th day of November, 2024, by the following vote:

## TITLE

Quarterly Investment Report for City and Fire District for Fiscal Year 2024-25 Quarter 1

## RECOMMENDATION

Receive and file the City and Fire District's Treasurer's Report for the quarter ended September 30, 2024.

## CONTACT

Juan Gomez, Finance Director

## BACKGROUND & ANALYSIS

The City's Investment Policy requires; the Treasurer to submit a quarterly investment report to the City Council. The report (Attachment 1) for the quarter ended September 30, 2024, includes investment transactions for both the City and Fire District. The report shows the City's cash and investment book balance, including debt reserves and unspent proceeds, was $78,453,127. The Fire District's book balance was $4,113,283.

- The City's diversified portfolio includes $25.0 million invested in the California State Treasurer's Office Local Agency Investment Fund (LAIF), $25.5 million invested in the California Asset Management Program and $24.7 million managed by Chandler Asset Management. The funds managed by Chandler are invested in U.S. Treasury Notes, Federal Agency Securities, Asset Backed Securities, U.S. Corporate Notes, Supranational Securities, and FDIC insured Corporate Notes. This quarter reflects a higher market value to book value, meaning the value of investments held is higher than the cost. This is an unrealized number, since the City normally holds investments to maturity.

- The Fire District maintains cash and investment accounts separately from the City. The book value of the District's total portfolio is $4.11 million. All cash not needed to meet the current operational requirements of the Fire District is invested with Local Agency Investment Fund (LAIF).

## COUNCIL PRIORITY PROGRAMS AND PROJECTS

Organizational Effectiveness: "Deliver exemplary government services."

## FISCAL IMPACT

The recommended action will have no impact on the city's budget.

## TITLE

City Council Code of Conduct and Governance Protocols Ordinance Second Reading

## RECOMMENDATION

Waive reading, read by title only, and adopt Ordinance 2024-08 modifying American Canyon Municipal Code Chapter 2.04.050 "Adoption of Procedures." to establish a City Council Code of Conduct and Governance Protocols.

## CONTACT

Jason Holley, City Manager
Taresa Geilfuss, City Clerk
Mark Joseph, Governance Ad-Hoc Subcommittee Member
David Oro, Governance Ad-Hoc Subcommittee Member

## BACKGROUND & ANALYSIS

The City Council Code of Conduct and Governance Protocol was first established in 2007 and most recently updated in 2021.

The City Council appointed an Ad-Hoc Committee (Oro/Joseph) to prepare a new version of the document. The Council reviewed draft versions of the document at your September 3 and October 1 meetings. Based on Council input, an updated version is included as Attachment 1, Ex. A.

The Code and Protocol is designed to establish standards of behavior and operational procedures for council members, ensuring transparency, accountability, and ethical governance. Its primary purpose is to foster a professional and respectful environment, guiding council members in their interactions with each other, city staff, and the public.

The Code and Protocol outlines expectations for ethical conduct, including integrity, impartiality, and adherence to legal and procedural norms. Governance protocols cover meeting procedures, decision-making processes, and public engagement strategies, aiming to enhance the efficiency and effectiveness of municipal operations. By setting clear standards and procedures, it helps maintain public trust and promotes a collaborative and responsible approach to local government.

The main document provides a summary of issues, while several lengthy and substantive appendices

issue by 3rd parties such as the FPPC, CalCities, etc. provide more detailed information.

Staff recommends adoption of the Ordinance shown in Attachment 1. Future changes to the Code and Protocol may occur by minute order, resolution or ordinance, depending upon the nature of the change.

Lastly, although Members will consider matters related to the former American Canyon County Water District ("Water District") from time to time, they will cease to receive additional compensation. The City Manager and City Attorney will bring a separate Ordinance for City Council review to implement this policy decision.

On October 15, 2024, at a regularly scheduled meeting of the City Council, a first reading of the Ordinance was held.

## COUNCIL PRIORITY PROGRAMS AND PROJECTS

Organizational Effectiveness: "Deliver exemplary government services."

## FISCAL IMPACT

Not applicable

## ENVIRONMENTAL REVIEW

15378(b) - The action is not a "Project" subject to the California Environmental Quality Act ("CEQA") because it does not qualify as a "Project" under Public Resources Code Sections 21065 and 21080 and in Section 15378(b) of Title 14 of the California Code of Regulations.

## ATTACHMENTS:

1. Ordinance
2. Exhibit A - Code and Protocols with Appendices

**ORDINANCE NO. 2024 -____**

**AN ORDINANCE OF THE CITY COUNCIL OF THE CITY OF AMERICAN CANYON REPEALING AND REPLACING AMERICAN CANYON MUNICIPAL CODE CHAPTER 2.04.050 AND ESTABLISHING A CITY COUNCIL CODE OF CONDUCT AND GOVERNANCE PROTOCOL**

**WHEREAS,** the City Council Code of Conduct and Governance Protocol (Code and Protocol) was first established in 2007 and most recently updated in 2021; and

**WHEREAS,** the Code and Protocol is designed to establish standards of behavior and operational procedures for council members, ensuring transparency, accountability, and ethical governance. Its primary purpose is to foster a professional and respectful environment, guiding council members in their interactions with each other, city staff, and the public; and

**WHEREAS,** the Code and Protocol outlines expectations for ethical conduct, including integrity, impartiality, and adherence to legal and procedural norms; and

**WHEREAS,** the Code and Protocol outlines meeting procedures, decision-making processes, and public engagement strategies, aiming to enhance the efficiency and effectiveness of municipal operations

**WHEREAS,** the Code and Protocol maintains the public trust and promotes a collaborative and responsible approach to local government.

**NOW, THEREFORE THE CITY COUNCIL OF THE CITY OF AMERICAN CANYON DOES HEREBY ORDAIN AS FOLLOWS:**

## PREFACE

As this Code of Conduct and Governance Protocols (Code and Protocols) is read, it is hoped that a general philosophy of governance emerges: the public good is best served when the City Council and staff work together as a team; when they understand their roles and responsibilities; and when all sides understand that there is rarely a single right answer—often there is a continuum of options, from one extreme to the other. The City Council's job, with input from staff, stakeholders and the public, is to decide where to land on that continuum.

This Code and Protocols is intended to apply to elected officials (i.e. City Council Members) as well as all City Council-appointees to boards, commissions and committees. The term "Council Member" or "Member" as used herein shall be construed to apply individually to Council Members and City Council-appointees. The term "City Council" as used herein shall be construed to apply collectively to the City Council and City boards, commissions and committees, as appropriate.

As the American Canyon Fire Protection District Board is a separate and distinct legal entity, this governance protocol does not apply to the Fire District Board.

## INTRODUCTION

### Purpose

This Code of Conduct and Governance Protocols (Code and Protocols) serves four specific and important goals:

***Reflect Governance Philosophy***. Articulate the City Council's philosophy on governance, including its code of conduct, roles, responsibilities, and relationships, and how it conducts its business.

***Commitment to Transparency***. Ensure that the public can easily review and compare the City Council's actions with its stated protocols and policies, demonstrating a commitment to transparency.

***Training and Guidance***. Serve as a training tool and guidance for new Council Members and serve as a reference document for the entire City Council when deliberating on current issues.

***Basis for Review and Revision***. Provide for future review and revisions, allowing future City Councils to examine these protocols and adapt them to evolving conditions.

### Relationship between "Code and Protocols" and City Council "Policies".

The Code and Protocols detail how the City Council governs and performs its duties as elected officials – essentially, "how the City Council *collectively* conducts business" and "how Council Members *individually* conduct themselves."

In contrast, City Council "Policies" outline the entire City Council's positions on various issues, from finance to customer service to economic development. An example list of common Policies is shown in the Appendix.

While the Code and Protocols are expected to remain consistent over time, they can be amended as necessary. City Council Policies, however, are expected to evolve more regularly in response to changing circumstances.

City Council Policies are further distinguished from Administrative Policies and Procedures which are proffered by the City Manager and not subject to City Council approval, provided they are consistent with the City Council's protocols and policies.

### Future Changes

The Code and Protocols are adopted by Ordinance and incorporated into the American Canyon Municipal Code (ACMC). They may be modified according to the process established by the Ordinance.

## SECTION ONE: AMERICAN CANYON'S VISION, MISSION, AND VALUES

American Canyon's Vision, Mission and Values listed below were adopted by the City Council in 2013, after two years of community engagement. The City Council reconfirmed the Mission, Vision and Values in 2022 and 2023. The Community will change as it grows, and every 5-10 years, the City Council should re-examine the Vision, Mission and Values.

### Our Vision.

The Vision Statement expresses future desire. It reflects what the Community wants to become. This Vision drives the work the City of American Canyon does, guides how business is done, and informs the priorities pursued.

### Our Mission.

The Mission Statement expresses the purpose of the primary organization supporting the Community's Vision, namely the City of American Canyon. It fundamentally defines what the organization stands for and what we do.

The following core and strategic values express how the Community expects to be served by the City of American Canyon.

## Our Core Values – How We Do Business

Fiscal Responsibility**.** We manage our resources wisely to ensure long-term financial stability and sustainability. Our decisions are driven by careful planning and prudent management to achieve optimal outcomes for our stakeholders.

Professional Excellence**.** We strive for the highest standards in our work, continuously improving our skills and knowledge. Our commitment to excellence ensures that we deliver superior results in every endeavor.

Transparency & Accountability**.** We operate with openness, providing clear and honest communication. We hold ourselves accountable for our actions, ensuring that our stakeholders can trust our processes and outcomes.

Customer Focus**.** Our customers are at the heart of everything we do. We are dedicated to understanding their needs and exceeding their expectations through exceptional service and innovative solutions.

Integrity. We conduct our business with the utmost honesty and ethical standards. Integrity guides our decisions and actions, fostering trust and respect with our clients, partners, and community.

## Our Strategic Values – How We Get Things Done

Creativity and Innovation**.** We encourage creative thinking and embrace innovative solutions to stay ahead in a dynamic environment. Our culture of innovation drives us to explore new possibilities and improve our services continually.

Collaboration and Teamwork. We believe in the power of working together. By fostering a collaborative environment, we leverage diverse perspectives and talents to achieve our goals and deliver exceptional results.

Leadership. We lead by example, inspiring others through our actions and decisions. Our leadership is characterized by vision, courage, and a commitment to doing what is right.

Community Engagement. We actively engage with our community, building strong relationships and contributing positively to society. Our community involvement reflects our dedication to social responsibility and collective progress.

Results Oriented. We focus on delivering tangible results that drive success. Our approach is disciplined and goal-driven, ensuring that we achieve our objectives efficiently and effectively.

## SECTION TWO: CODE OF CONDUCT

### Code of Conduct

To promote equitable, principled, and responsible governance at the local level, the City of American Canyon adopts the following Code of Conduct for Council Members:

1) Comply with the Law – City Council Members shall adhere to the legal requirements of the United States of America, the State of California, and the City of American Canyon while carrying out their official responsibilities. These requirements encompass, among other things, the United States and California Constitutions, laws and regulations pertaining to conflicts of interest, election campaigns, financial disclosures, employer obligations, and transparent government processes as well as city ordinances and policies. Members shall comply with both the explicit rules and the underlying principles of governmental operations.

2) Act in the Public Interest - The foremost responsibility of individuals representing American Canyon is the public interest. City Council Members shall prioritize the collective welfare of the community over any personal or private concerns. They will ensure equitable and impartial treatment for all individuals, claims, and matters presented to the City Council.

3) Personal Conduct – City Council Members must maintain the highest standards of professional and personal conduct, steering clear of any actions that might be seen as improper. They should abstain from engaging in abusive behavior, making personal accusations, or launching verbal assaults on the character or intentions of fellow Members, staff, or the public. As esteemed community representatives, Members are expected to exhibit a personal and professional demeanor that enhances the reputation of the legislative body and reflects positively on the entire City. Public office shall be used for the betterment of the community, rather than personal enrichment.

4) Respect for Process – City Council Members will perform their duties in accordance with the processes and rules of order established by the City Council governing the deliberation of public policy issues, meaningful involvement of the public, and implementation of policy decisions by City staff. The City Council acts as a collaborative decision-making body. Once the City Council, acting as a body, has reached a decision, individual Members will respect and support the collective decision, regardless of their individual vote on the matter.

5) Conduct During Public Meetings – City Council Members are prepared, listen courteously and attentively to all public discussions before the body, and focus on the business at hand. Members shall refrain from interrupting other speakers, making personal comments not germane to the business of the body, or otherwise interfering with the orderly conduct of meetings. Public discussions and procedures shall be conducted transparently in an atmosphere of respect and courtesy. Members shall keep an open mind and consider all written and public testimony first, before making a decision.

6) Ethics Training – City Council Members shall participate in ethics training promptly after assuming office and periodic thereafter as prescribed by law. Members shall provide the certificate of completion to the City Clerk.

7) Policy Role of City Council – City Council Members will respect and adhere to the Council-Manager form of government. The City Council determines City policies with the advice, information, and analysis provided by the public, boards, commissions, committees and staff. Members provide direction to the City Manager. The City Manager then determines the administrative functions of the City or the professional duties of City staff.

8) Independence of Boards, Commissions and Committees - City Council members will preserve the essential autonomy of boards, commissions, and committees in providing unbiased advice during the public decision-making process. City Council Members shall refrain from using their positions to inappropriately sway the deliberations or outcomes of board, commission, and committee proceedings and shall exhibit independence, impartiality, and fairness in their decisions and behaviors.

9) Positive Work-Place Environment – City Council Members will support the maintenance of a positive and constructive work-place environment for City employees and for members of the public and businesses dealing with the City.

10) Staff Relations - All requests of City staff should be directed to the City Manager. All concerns or complaints regarding staff should be directed to the City Manager, unless the complaint relates to the City Manager. In this instance, the concern should be directed to the City Attorney for review.

11) Religious Invocations, Displays, and Attire. – The City Council acknowledges the City's diverse religious and ethnic backgrounds and the importance of citizen's rights to freedom of religion, while also recognizing constitutional limitations imposed by Federal and State laws on such expression in governmental settings.
    a) Invocations, not in the form of prayer, are allowed at the beginning of Council Meetings to emphasize the seriousness of the occasion. An invocation cannot advance or disparage one religious faith over another, nor invoke one religious deity over another. Invocations *must* remain non-sectarian in content and may not proselytize or use language that may be interpreted as an attempt to convert. Prayer by a Council Member or the City Council during a Council Meeting is prohibited.
    b) Religious displays are permitted on City property provided they are educational in nature and do not advance, nor disparage one religion over another.
    c) City officials may wear religious attire associated with their beliefs but should be mindful of when such displays may trigger or encourage conduct that distracts from the purpose of governmental conduct.

12) Conflict of Interest – City Council Members shall refrain from acting upon conflicts of interest and in a manner prescribed by law, which generally requires Members:
    a) Disclose their financial investments, real property holdings, income sources, and gifts.
    b) Refrain from leveraging their official positions to influence decisions involving financial interests or personal relationships.
    c) Not accept any gift, grant or contract contingent upon a specific action by the City Council.
    d) Refrain from any investment or monetary interest in any contract with the City.
    e) Seek advice from the City Attorney prior to any conduct that may be inconsistent with this provision.

13) Incompatible Employment – City Council Members are prohibited from any private employment, or rendering services for private interest, when such employment or service is incompatible with proper discharge of their official duties or would tend to impair their independence of judgment or action in the performance of those duties.

14) Disclosure of Confidential Information – City Council Members are prohibited from disclosing confidential information nor shall they use such information to advance their financial interests.

15) *Ex-Parte* Communications – *Ex-parte* communications are direct or indirect communications between a Member and a party/person regarding a matter before the Council, without giving all parties notice or the opportunity to participate. City Council Members are expected to openly disclose substantive and pertinent information - including all *ex-parte* communications - they may have acquired from external sources unrelated to the public decision-making process.

16) Political Participation and Advocacy – City Council Members may engage in political activities. However, if a Member chooses to adopt a stance on a political matter, they must proactively ensure the public is aware of the clear differentiation between their personal opinions and the City Council's positions. While Members may use their title while engaging in political activities, they must explicitly state that they are not representing the City nor the City Council. Moreover, Members will publicly respect collective City Council decisions, regardless of their individual vote or individual political stance on the matter. Members shall represent the official policies or positions of the City Council to the best of their ability when designated as delegates for this purpose.

17) Use of Public Resources - Members are prohibited from utilizing public resources, such as City staff time, equipment, supplies, or facilities, for personal or political gain, or to support campaign activities for candidates or ballot measures, unless those resources are available to the public. Moreover, they are not permitted to use the City's name or logo to endorse any political candidate or business.

## Implementation, Compliance and Enforcement

The Code of Conduct outlines standards of ethical conduct expected for City Council Members and is intended to be self-enforcing. Members are expected to have a thorough understanding of it and adhere to its provisions. Members bear the primary responsibility for ensuring these ethical standards are understood and upheld. The Code of Conduct will be integrated into the standard orientations for City Council candidates, applicants seeking positions on boards, commissions, and committees, as well as newly elected and appointed officials.

The Mayor, in consultation with the City Manager and City Attorney, will be responsible for addressing a City Council Member who violates the Code of Conduct. The Vice Mayor will be responsible for addressing the Mayor in the event of a violation of any of the above provisions.

If an informal discussion does not resolve the issue, a more formal approach may be considered. Any City Council Member may seek to have another Member censured at a regular City Council meeting. The City Council may impose sanctions on a Member(s) whose conduct does not comply with the Code and Protocols, such as reprimand, formal censure, loss of seniority, or committee assignment. Prior to the imposition of any sanctions the City Council shall follow applicable due process procedures with respect to the affected Member.

## Statement of Commitment

Members of the American Canyon City Council and the Council's appointees to various commissioners and boards shall sign a Statement of Commitment, agreeing to uphold the Code of Conduct.

_____

Name, Position Date

## SECTION THREE: ROLES, RESPONSIBILITIES AND RELATIONSHIPS

### City Council Roles and Responsibilities

Vision and Strategy. Effective organizations are proactive and anticipate issues before they escalate into crises. Organizational leaders must be able to see "the Big Picture." The City Council's primary role is to create a vision for the future and develop strategies to achieve it. In this capacity, City Council should rely on the technical expertise of staff and the input of the community. The City's General Plan is the appropriate document for articulating this vision and strategy.

Leadership and Service. Leadership and service are traditional roles of any elected body. Community service and staying engaged with the public are critical elements. Symbolic gestures, such as proclamations or attendance at annual events, are important parts of the job. Equally important is leading by example. The public's perception of city government is often a reflection of its elected officials; City Council Members need to reflect this in their actions and statements.

Policies and Priorities. The City Council's primary role is to establish policies and set priorities for city services and functions. This is often challenging due to limited funding, which makes it difficult to meet all goals.

In making decisions, the City Council relies on having various options to consider. Staff provide analysis and alternatives for deliberation, while input from the community and stakeholders ensures that decisions reflect community values. It's also essential to weigh opportunity costs, as allocating resources to one priority limits funding for others.

Accountability and Oversight. The goal of accountability is to ensure success, rather than punish failure. The City Council needs to set standards and deadlines, define what success looks like, and hold staff accountable for achieving those standards and deadlines. Regular status reports are critical to track progress and develop strategies to correct any shortcomings.

Effective oversight requires a strong understanding of city services and the issues surrounding their delivery. City Council Members are expected to learn as much as they can about city programs and receive at least an annual report from the various City Departments.

The use of outside experts is encouraged. These technical experts can serve as a "second set of eyes" and may be effective in evaluating large or complex projects, potential legal conflicts, and other circumstances as warranted.

Ethical and Fiduciary Responsibilities. Ethical standards go beyond mere compliance with the law. The City Council needs to conduct itself in a manner that is above reproach. Additionally, the City Council must recognize its financial responsibility to the community. Residents, visitors, and businesses pay taxes and fees, often without the right to decline; therefore, ensuring that these funds are spent in the most efficient, productive, and equitable manner possible is one of the City Council's main responsibilities.

Mayor's Role. The Mayor is directly elected by the voters to serve as the head of the City Council. The Mayor chairs the City Council meetings, is involved in setting the agenda with the City Manager, and often acts as the ceremonial leader of the community. Additionally, the Mayor may take on a leadership role beyond ceremonial duties, such as delivering an annual State of the City address or outlining the city's priorities for the upcoming year. In this capacity, the Mayor should collaborate with the rest of the City Council to set these priorities.

Vice-Mayor's Role. The Vice-Mayor is selected by the rest of the City Council and generally serves for a 12-month period. The Vice-Mayor's primary role is to fulfill the duties of the Mayor in their absence. The Vice-Mayor is responsible for scheduling regular performance reviews of the City Manager and other officials reporting directly to the Council.

## City Council Relationships

City Council and the City Manager. The relationship between the City Council and the City Manager is the most critical, insofar as the City Council's direction is achieved primarily through the City Manager. While the City Council sets policy and staff administer it, the distinction can often blur. For example, the City Council relies on staff for policy analysis and alternatives; the quality of this analysis influences the City Council deliberation and action. Similarly, the City Council needs a basic understanding of how city services and programs are implemented to provide proper oversight and ensure successful policy implementation.

The City Manager is the Chief Executive Officer of the City, responsible for overseeing the day-to-day operations and implementing the policies set by the City Council. The City Manager acts as a bridge between the City Council and staff, ensuring City Council directives are effectively executed and that City services run smoothly. Key responsibilities include:

*Administration of City Departments:* The City Manager supervises all city departments and staff, aside from the City Attorney's office, ensuring that they operate efficiently and deliver services effectively. This involves managing budgets, overseeing personnel, and coordinating activities across different departments.

*Policy Implementation:* The City Manager translates the policies and goals established by the City Council into actionable plans. This includes preparing detailed reports, recommending policy initiatives, and ensuring that City Council decisions are executed in accordance with legal and procedural requirements.

*Budget Preparation and Management:* The City Manager is responsible for preparing the City's budget, working with finance staff to develop a financial plan that reflects the priorities of the City Council. This includes monitoring revenue and expenditures, ensuring fiscal responsibility, and making recommendations for budget adjustments as needed.

*Advisory Role:* The City Manager provides the City Council with expert advice and information to aid in decision-making. This involves conducting research, analyzing data, and offering recommendations on a wide range of issues affecting the City.

*Community Relations:* Acting as a representative of the City, the City Manager engages with residents, businesses, and other stakeholders to address concerns, provide information, and foster positive relationships within the community.

*Crisis Management:* In times of emergency or crisis, the City Manager plays a key role in coordinating response efforts, managing resources, and communicating with the public and other agencies to ensure effective and timely resolution.

City Council and the City Attorney. The City Attorney is directly supervised by the City Council and provides legal counsel and representation for the City government. This position is essential for ensuring that the City's operations and policies comply with legal standards and that the City is protected from legal risks. Key responsibilities include:

*Legal Advice and Counsel:* The City Attorney provides legal guidance to the City Council, City Manager, and various city departments on a wide range of issues such as municipal regulations, contracts, land use, and employment matters, ensuring that the City's actions and decisions adhere to the law.

*Drafting and Reviewing Legal Documents:* The City Attorney is responsible for drafting and reviewing legal documents, including ordinances, resolutions, contracts, and agreements. This ensures that these documents are legally sound and protect the City's interests.

*Representation in Legal Matters:* The City Attorney represents the City in legal proceedings, including lawsuits and administrative hearings. This involves preparing legal arguments, presenting cases, and negotiating settlements to safeguard the City's legal and financial interests.

*Compliance and Risk Management:* The City Attorney helps the City comply with federal, state, and local laws, regulations, and ordinances. They also identify and mitigate potential legal risks, providing advice on how to avoid or address legal issues that may arise.

*Training and Education:* The City Attorney provides training and educational sessions to City officials and staff on legal issues relevant to their roles. This helps ensure that City employees are aware of legal requirements and best practices.

*Public Records and Transparency:* The City Attorney works with the City Clerk to ensure compliance with public records laws and transparency requirements, helping the City manage requests for public records and maintain open communication with the public.

*Ethics and Conduct:* The City Attorney provides guidance on ethical issues and conduct standards, helping to maintain integrity within City operations and addressing any allegations of misconduct.

City Council and Commissions. Commissions exist to help distribute the workload that would otherwise fall to the City Council. They are advisory to the City Council, which should rely on Commissions to study matters within their purview and make recommendations. Staff provide administrative and technical support to the Commissions as needed.

At least one joint meeting between the City Council and each Commission should be scheduled annually, focusing on broad policy issues and working relationships rather than specific action items. Other joint meetings can be convened to address specific topics.

The City Council shall follow solicit candidates for Boards and Commissions in a manner consistent with State law ("Maddie Act"). Candidates who have participated in the leadership programs such as Citizen's Academy and Leadership Napa Valley are preferred. Candidates will be screened by the City Council through a process that may be established and modified as appropriate. Individuals selected will serve at the City Council's pleasure, with the possibility of reappointment at the end of their terms.

City Council and the General Public. The City Council represents the best interests of the public, requiring active and engaged participation in the community. This also means that City Council actions may sometimes be unpopular, particularly regarding fiscal matters or land use decisions. The City Council must provide a clear and consistent rationale for its decisions, ensure transparency in its actions and the data relied upon, and offer ample opportunity for public debate.

City Council and Outside Jurisdictions/Agencies. City Council Members serve on several outside agencies, generally commissions or committees that are countywide in nature. In these cases, City Council Members are expected to represent the best interests of the community, not their own self-interests. Members are responsible for reporting on the actions of the outside bodies on which they serve. Depending on the issue, a Member may request that a topic be scheduled for the full City Council to consider.

The City Council's goal is to establish positive and cooperative relationships with other jurisdictions. Either individually or collectively, the City Council should be involved in regional bodies such as the Association of Bay Area Governments (ABAG) and the League of California Cities (CalCities).

## SECTION FOUR: GOVERNANCE

Ensuring that the City is well run and addresses issues before they become problems is the essential responsibility of the City Council and staff. This is best accomplished by setting goals, strategies and key initiatives; efficiently allocating scarce resources; and tracking progress towards accomplishing those goals. In addition, City Council can delegate its responsibilities to committees and commissions.

### Goals, Strategies and Key Initiatives

Setting Goals and Strategies is a primary City Council function. Goals represent actionable expressions in support of Community's Vision, Mission and Values, while Strategies are concrete ideas to support the City Council's Goals.

The image below expresses the hierarchy between the Community's Vision, Mission, Values, the City Council's Goals and Strategies, and the Key Initiatives and day-to-day tasks undertaken by staff.

### Our Goals

**Community and Sense of Place**
*Build on the strength of our local community to develop a clear 'sense of place' and establish our unique identity.*

**Economic Development & Vitality**
*Attract and expand diverse business and employment opportunities.*

**Infrastructure**
*Develop and maintain infrastructure resources to support sustainable growth.*

**Organizational Effectiveness**
*Deliver exemplary government services.*

**Outdoors and Recreation**
*Expand opportunities for use of outdoor recreation and an active and healthy lifestyle.*

**Public Safety**
*Ensure American Canyon remains a safe community.*

**Sustainability**
*Demonstrate leadership in environmental sustainability.*

**Transportation**
*Improve the transportation network within the City to alleviate congestion and enhance the quality of life for the community.*

Goals. The City Council has the following goals, which are given equal weight and priority:

- ***Public Safety**: Ensure that American Canyon remains a safe community.*
- ***Community and Sense of Place**: Build on the strength of our local community to develop a clear sense of place and establish our unique identity.*
- ***Economic Development and Vitality**: Attract and expand diverse business and employment opportunities.*
- ***Outdoors and Recreation**: Expand opportunities for use of outdoor recreation and an active lifestyle.*
- ***Transportation**: Improve the City's transportation network to mitigate traffic and enhance the quality of life for the community.*
- ***Infrastructure:** Develop and upgrade infrastructure resources to support sustainable growth.*
- ***Quality Services & Organizational Effectiveness**: Deliver exemplary government.*
- ***Environmental Sustainability**: Demonstrate leadership in environmental sustainability.*

Strategies. Strategies are not measurable and do not have a finite conclusion but should have a 3 to 5-year horizon. Each goal should have between 2 and 5 strategies. Strategy development is coordinated between the City Council and staff.

Key Initiatives. Key Initiatives are specific actions achievable within a 12-to-24-month timeframe. They have an identifiable start and finish, and in some instances, may be led by 3rd parties. Staff proposes a set of initiatives as part of a recurring process each year, and then tracks their implementation throughout the year, reporting back to City Council as necessary.

Although not expressly identified in the Protocols, the Strategies and Key Initiatives can be found in the "Strategic Work Plan" which is updated every 12 to 24 months.

## Budgeting with Limited Resources

City resources will always be limited, so setting priorities is essential. The City Council should solicit input from the public, staff and other stakeholders in determining these priorities. Once priorities are set, the City Council should adopt a budget with sufficient staffing and resources. Lower priorities can be deferred until later or when additional resources become available. This process ensures that priorities are more likely to be accomplished and helps avoid overloading staff with too many priorities. If a more critical issue arises, the City Council can adjust its priorities and timelines accordingly.

## Ensure Accountability and Tracking Progress

As the Chief Executive Officer, the City Manager's effectiveness is central to achieving Council goals and priorities. As such, evaluating the Manager's performance (along with any other City Officials reporting directly to the City Council) is perhaps the single most important task of the City Council.

Annual Performance Reviews. The City Council reviews the performance of all City Officials reporting to the Council (City Manager and City Attorney) annually. Regular "check-ins" should also be scheduled to ensure ongoing performance and alignment with goals. The review process should evolve over time, reflecting the incumbent's experience in their position. Initial reviews aim to confirm that the employee possesses the necessary skills, knowledge, and abilities. Subsequent reviews should focus on the accomplishment of projects and priorities set during the previous review. The performance review process begins with a written review which is presented to the employee, followed by a general discussion between the City Council and the City Official.

A review document that ranks specific attributes based on general categories should be used. This document will include an overall ranking and space for comments, allowing Members to provide examples supporting their rankings. Each Member will complete their own review, which will then be consolidated and presented to the employee.

The annual review should serve as the basis for determining the employee's compensation. Salary increases will be based on the employees' success in achieving their goals. Employees covered by an employment contract will follow these guidelines. However, if a conflict arises between the employment contract and these guidelines, the terms of the contract will prevail.

Monitoring Progress. The City Council should meet at least annually with staff to review the previous year's progress, adjust priorities as needed, and improve working relationships between City Council Members and between the City Council and staff. Part of this strategic planning should involve identifying the milestones of key initiatives in the upcoming year and a schedule to review their progress more frequently.

In addition, regular reports on key initiatives and capital projects should be added to the City Council Agenda, to provide both the City Council and the general public updates on progress made and issues that may need to be addressed by City Council action.

## Council Committees

City Council Standing Committees. Standing Committees are comprised of two (2) City Council Members who make specific recommendations to the full City Council. Committee Members are responsible for reporting their ongoing activities during City Council meetings. Standing Committee meetings are coordinated by the City Manager and may be called by either Member assigned to the committee. The City Manager assigns staff to support Standing Committees. Standing Committees are subject to public meeting requirements.

City Council Ad Hoc Committees. Ad Hoc Committees are comprised of two (2) City Council Members who make specific recommendations to the full City Council. Ad Hoc Committees are formed by the City Council on an "as needed" basis with a clearly defined purpose and term. Ad Hoc Committees are single-purpose, and meetings are held as needed. Once the Ad Hoc Committee has completed its work, it is disbanded. Committee Members are responsible for

reporting their activities during City Council meetings. Ad Hoc Committee meetings are coordinated by the City Manager and may be called by either Member assigned to the committee. The City Manager assigns staff to support Ad Hoc Committees. Ad-Hoc Committees are not subject to public meeting requirements.

City Council and Citizen Advisory Bodies. The City Council may appoint one or more "citizen advisory bodies". These boards, commissions and committees exist to help distribute the workload that would otherwise fall to the Council. They are advisory to the City Council, which should rely on these bodies to study matters within their purview and make recommendations. Staff provide administrative and technical support to these bodies as needed. The City Manager will schedule regular "joint meetings" between the City Council and these bodies to focus on broad policy issues, work plans, and working relationships. The City Clerk will solicit candidates for these bodies, who will be screened by the City Council. Individuals selected on these bodies serve at the City Council's pleasure and may be removed at any time for any reason – including but not limited to - violations of the Code and Protocols.

## SECTION FIVE: MEETINGS

State law requires the City Council to conduct business and make decisions together as a group, rather than as individuals. Generally, the group is required to meet in a manner that is "open to the public" instead of "behind closed doors". These "Public Meeting" requirements generally apply to citizen advisory bodies too, regardless of whether they are decision-making or advisory in nature.

### What is a "Public Meeting" (aka the "Brown Act")?

When a majority of the City Council gathers to hear, discuss or deliberate topics, a "meeting" occurs – regardless of whether the Members intended upon having a meeting. The City Council may only conduct lawful meetings and to be lawful, a meeting must be noticed, have an agenda, include public participation, and follow other procedural rules.

Importantly, meetings need not occur at the same time or place. For example, a private email from one City Council Member to the entire Council might (inadvertently) become a "meeting" if two other Members respond at a later time and date. However, since the procedural rules about notice and participation cannot be followed, this (email) meeting would not be lawful. This standard applies for all scenarios by which a majority of Members uses any communication technology (telephone, text message, e-mail, blog, social media, etc.) to hear, discuss or deliberate topics within the City Council's purview.

In addition, interaction between individual City Council Members can (inadvertently) become meetings too. For example, a private email exchange from one Member to another could later become a meeting if one of the Members then forwards the email exchange to a 3rd Council Member, who then initiates a response and exchange back with that Council Member. In this case, a "serial meeting" can occur. Serial meetings are unlawful because there is no way to notice such meetings or to provide for public participation.

Something as simple as pressing "Reply All" to an email sent by City staff to all Members can inadvertently trigger such a serial meeting violation. For example, if your "Reply All" message tries to convince other Members to join your point of view on an issue could become unlawful because Members are considering an issue outside of the public's view.

State law also prohibits Members from using social media platforms to hold meetings. You may not respond to another Member's social media posts regarding items in Council, this prohibition includes a thumbs up response or emoji indicating agreement or disagreement.

Although Members may attend a purely social gathering or attend conferences or seminars, they must take care <u>not</u> to discuss City business among themselves.

Persons with matters pending before City Council may approach individual Members to discuss matters in private. It is up to that Members' sole discretion whether to honor the request, but Members must remember they are acting in an official capacity if they do and <u>must</u> disclose the

occurrence of all private discussions to ensure the City Council has access to all resulting information.

There are civil remedies and criminal misdemeanor penalties for violations of the Brown Act. The civil remedies include injunctions against further violations, orders nullifying any unlawful action and orders determining the validity of any rule to penalize or discourage the expression of a Member. Criminal penalties may result if a person is found guilty of a wrongful or deliberate intent to deprive the public of information to which it is entitled under the Brown Act.

The most effective approach to prevent these penalties is to hold the City Council's meetings in a public forum, stick to the agenda items, and consult the City Attorney, City Manager or City Clerk if you have any uncertainties regarding whether an action might violate the Brown Act.

## City Council Meetings

The purpose of City Council Meetings is to conduct City business. Matters not on the Agenda are not discussed. City Council Members prepare for City Council Meetings by reviewing the *entire* Agenda Packet and informing the City Manager of any questions, comments or concerns prior to the City Council Meeting. While City Council Meetings follow parliamentary procedures, they also maintain a natural, respectful flow, allowing for public input and reasonable deliberations.

Regular City Council Meetings. Regular meetings are held on the first (1st) and third (3rd) Tuesdays of the month. Closed Session starts at 5:30 PM, with Open Session beginning at 6:30 PM. Meetings are adjourned by 10:00 PM unless extended by a majority vote.

Special City Council Meetings. Special meetings may be held at any date or time following a 24-hour notice by the Mayor or a majority of City Council Members. Only the matters in the notice may be considered.

Meeting Calendar. A calendar of next year's Regular City Council Meetings is adopted by the City Council at the end of each calendar year. Additional Special City Council Meetings may be scheduled as needed throughout the year.

Attendance. City Council Members are expected to attend all Regular and Special City Council Meetings. Attendance is defined as being marked "present" during Roll Call and remaining present until the meeting is adjourned. Members who do not attend a City Council Meeting are deemed "absent". The City Clerk is responsible for tracking Member attendance.

Excused Absences. To be eligible for an "Excused Absence" from a Regular City Council Meeting, the requesting City Council Member must notify the Mayor and City Manager at least 24 hours prior to Roll Call. To be eligible for an "Excused Absence" from a Special City Council Meeting, the requesting Member must notify the Mayor and City Manager prior to Roll Call. Assuming requisite prior notification occurs, the Mayor shall grant an Excused Absence without further inquiry. However, the Mayor may not grant more than four (4) Excused Absences per calendar year (per Member). After the fourth Excused Absence, the City Council must determine whether

reasonable circumstances exist to grant any Member a fifth (5th) (or more) Excused Absence. Upon being granted an Excused Absence, the requesting Member will be compensated in the usual manner provided they have been briefed by the Mayor or City Manager on the matters discussed during the Excused Absence.

Unexcused Absences. City Council Members who do not attend a City Council Meeting or fail to provide the required notice are deemed to be "Unexcused". City Council Members are ineligible for compensation after three (3) or more Unexcused Absences in any calendar year. Compensation will be withheld on a pro-rata basis each month the Council Member is deemed to have four (4) or more Unexcused Absences in a Calendar Year. In addition to withholding compensation after three (3) or more Unexcused Absences, the Member may also be sanctioned by the City Council for violation of the Code and Protocols.

Teleconferencing. City Council Members are expected to attend all Regular and Special City Council Meetings in person. Notwithstanding this expectation, there may be instances where a Member chooses to attend a City Council Meeting remotely by phone or video conference (ie. "teleconferencing"). Attending a City Council Meeting remotely can impose a burden on staff and the City Council. Instances of teleconferencing are expected to be limited and a Member's desire to attend planned out well in advance of the meeting. Procedures for remote City Council Meeting attendance are prescribed by State law and it is the remote-attending Member's responsibility to ensure compliance with State law.

Quorum and Voting**.** A minimum of three (3) affirmative votes is required for the City Council to act, there are exceptions where disqualifications may occur, in which case the City Attorney would advise as to how the Council can achieve the required number of Council members necessary to consider, advance, or approve a matter.

Participation and Voting Required. A Member in attendance at a City Council meeting is required to participate in each agenda item and then vote when called upon by the City Clerk. If the Member believes they have a disqualifying conflict of interest, they must publicly explain the nature of their conflict and then remove themselves from the City Council Chambers prior to the item being considered so they will be considered to have abstained from voting. A detailed list of disqualifying conflicts of interest is shown in the Appendix. Importantly, having to make a difficult or unpopular decision is not a disqualifying conflict of interest or basis for abstention.

Rule of Necessity ("Legally Required Participation"). If a majority of the City Council shall be disqualified to vote on a matter by reason of actual or apparent conflict of interest, the City Council shall select by lot or other means of random selection, or by such other impartial and equitable means as the City Council shall determine, that number of its disqualified Members which, when added to the Members eligible to vote, shall constitute a quorum. Those Members may vote but not discuss.

Minutes. "Action minutes" prepared by the City Clerk's Office represent the official summary of the City Council's actions. Video recordings supplement the minutes. However, when City

Council action is not taken but direction to staff is provided, the specific direction is included in the minutes to avoid misunderstandings and ensure the direction is implemented.

Agenda-Setting Process. The City Clerk maintains a twelve-month rolling calendar of future agenda items for which the City Manager is generally responsible for coordinating and assigning the respective dates for those items. This calendar is available for review by City Council Members by request to the City Manager. Each City Council Meeting Agenda also includes a list of notable future items.

City Council-Requested Items. Members may request future agenda items. This first should be requested informally through consultation with the City Manager and then, if necessary, based on formal consensus of the Council.

Agenda Packet Preparation & Delivery. The agenda contains topics for consideration. The City Clerk, in consultation with staff, prepares a "packet" of information containing all the supporting documents for each agenda item (Agenda Packet). The Agenda Packet is delivered electronically to Members no later than 5:00 p.m. on Friday preceding the Tuesday meeting to which it pertains. The Agenda Packet is only provided in an electronic format. The Agenda Packet is distributed to the Members at the same time it is made available to the public.

Agenda Posting. The City Clerk is responsible for posting regular meeting agendas at least 72 hours prior to the meeting. Agendas shall be physically posted on the bulletin board outside of City Hall and electronically posted at the Virtual City Hall. Agendas are also electronically delivered to those who have registered to receive them.

Agenda Order. The Mayor conducts the meeting in the order shown on the agenda or as otherwise modified by the City Council.

Meeting Decorum. To ensure proper decorum, the City Council enforces measures to minimize interruptions, such as requiring cellular phones and pagers to be turned off or set to vibrate. Public input is time-limited and should occur prior to Council Member comment or deliberation. Council Members are encouraged to be concise in their remarks. While at a City Council meeting, be mindful of electronic devices, such as smart phones, laptops and tablets. Do not use such devices to communicate with other Members, commissioners, Members of the public, or undertake ad hoc research while the City Council is considering a matter. Doing so results in parts of the decision-making process occurring outside of the public's view (and implicates due process concerns for some City Council decisions).

Parliamentary Procedure. The City Council follows Rosenberg's Rules of Order. The purpose of the rules of parliamentary procedure is to establish a framework for the orderly conduct of meetings. The Rules should be clear and user-friendly. Simple rules lead to wider understanding and participation. Complex rules create two classes: those who understand and participate; and those who do not fully understand and do not fully participate. So, the rules must be simple enough that the public is invited into the body and feels that it has participated in the process.

Also, the Rules should enforce the will of the majority while protecting the rights of the minority. The ultimate purpose of rules of procedure is to encourage discussion and to facilitate decision making by the body. In a democracy, the majority rules. The rules must enable the majority to express itself and fashion a result, while permitting the minority to also express itself, but not dominate, while fully participating in the process.

## Closed Session

All City Council Meetings are open to the public. However, the City Council may hold "closed sessions", from which the public may be excluded. Topics that may be discussed are limited to the following: personnel matters, property negotiations, labor negotiations, existing litigation, anticipated litigation and other topics allowed by law.

Closed Session attendees consist of the City Manager, City Attorney, City Council and any other person deemed necessary by the participants to further the discussion of the items for consideration. Each Closed Session participant must independently determine for themselves whether their participation in Closed Session is appropriate or lawful, and reliance upon the advice of others can be insufficient justification for inappropriate participation.

Call to Order. The Mayor (or Vice-Mayor) calls the Closed Session to order at the appointed time. In the absence of both, the meeting shall be called to order by the City Manager and those Council Members present shall proceed to select a "temporary presiding officer".

Roll Call. Immediately after Call to Order, the City Clerk conducts a "roll call" of the Members present whose names that are recorded as "present" (i.e. in attendance.).

Public Comments. This time is reserved for the public to address the City Council on Closed Session items only. Comments are time-limited, typically 3 minutes.

Personnel Matters. The City Council may consider the appointment, employment, or dismissal of a public employee or to hear complaints or charges brought against such a person or employee. The Council may also review the performance of City Officials reporting directly to the City Council.

Property Negotiations. The City Council may discuss the terms and conditions under which real property may be acquired or sold but the actual purchase agreement or contract must be approved in an open session.

Labor Negotiations. The City Council may discuss the terms and conditions for meeting the City's obligations of negotiating in good faith with represented employees regarding wages, benefits, and working conditions.

Existing Litigation. The City Council may discuss existing legal matters to which the City is an actual party.

Anticipated Litigation. The City Council may discuss legal matters in which the City *could* become a party; however, this exception must be narrowly construed to apply only to matters with existing specific facts or circumstances, and not those based on future or hypothetical facts or circumstances.

Threats Against the City. The City Council may discuss threats to the security of public buildings, essential public services - including water, drinking water, wastewater treatment, natural gas service, and electric service - or a threat to the public's right of access to public services or facilities.

Confidentiality. Matters discussed in Closed Session shall not be discussed outside of the Closed Session by any City Council Member or City Official attending the meeting. Members who violate this policy are subject to sanctions by the City Council. Sanctions may include, but are not limited to, removal of the City Council Member from other boards and commissions where the Member represents the City. This policy ensures that the City Council conducts sensitive discussions appropriately while maintaining transparency and accountability to the public where required.

## Open Session

Call to Order. The Mayor (or Vice-Mayor) calls the meeting to order at the appointed time. In the absence of both, the meeting shall be called to order by the City Manager and those City Council Members present shall proceed to select a "temporary presiding officer".

Pledge of Allegiance. The Mayor leads the Pledge of Allegiance.

Open Session Roll Call. Immediately after the Pledge, the City Clerk conducts a "roll call" of the Members present whose names are recorded as "present" (i.e. in attendance.)

Report on Closed Session/Confirmation of Reportable Action. The City Attorney announces any reportable action taken by City Council during Closed Session.

Proclamations. The City Council issues proclamations to recognize, honor and/or celebrate various community interests. The City Council generally takes a photo with recipients immediately after presenting the proclamation. A calendar of next year's Proclamations is adopted by the City Council at the end of each calendar year. Additional Proclamations may be scheduled as needed throughout the year.

Presentations. The City Council receives pertinent information from 3rd parties generally related to an area of interest.

Public Comments. City Council meetings are a *limited* public forum. Any person may address the City Council on any subject pertaining to City business, and which is not listed on the regular or closed session agendas. Generally, each person will be allowed up to three (3) minutes of time to address the City Council. One two-minute extension may be granted by the mayor at their discretion.

American Canyon promotes respectful and responsible behavior among its meeting participants, whether they are present in person or remotely. Using offensive language or remarks that promote, foster, or perpetuate discrimination based on race, creed, color, age, religion, gender marital status, status regarding public assistance, national origin, physical or mental disability or sexual orientation/gender identification, as well as any other category protected by federal, state or local laws is discouraged. In the event that offensive language or remarks cause a disturbance of the meeting, a warning to the disrupter will be given and if the disruption continues, all meeting attendees may be required to vacate the Council Chambers with the meeting proceeding after a recess without in-person public attendance.

Agenda Review and Changes. The City Council may vote to modify the order of the agenda, to expedite the business of the City or to accommodate Members of the audience.

Consent Calendar. Items of a routine or non-controversial nature shall be placed on the Consent Calendar. A brief description of the item and/or the action to be taken shall be included to provide a better understanding of the issue. Item on the Consent Calendar are approved as a group, with single motion, second and vote. Typical items include:

- Prior meeting minutes.
- Monthly or informational reports.
- Routine purchases or awards of contracts of an item already budgeted.
- Actions approved in concept at a prior meeting.

Public Hearings. Generally, for legal purposes, certain items are heard as a public hearing, rather than as a Business Item. Public hearings will follow the noticing requirements as stipulated by applicable law. Public hearings are conducted in the following order:

1. Council Member *Ex Parte* disclosure
2. Staff review
3. Questions of staff by Council
4. Hearing opened by the mayor
5. Testimony from the applicant (if appropriate)
6. Testimony from the public
7. If desired, hearing closed.
8. Discussion by Council
9. Council action

Quasi-judicial hearings (such as when the Council is considering an appeal of a land use decision by the Planning Commission) shall be conducted in accordance with the principles of due process, and the City Attorney shall advise the City Council in this regard.

At any public hearing before the City Council, testimony of witnesses under oath may be requested by the City Council.

Business Items. Business Items are less formal than Public Hearings and will be introduced and summarized by the City staff. The appropriate departmental representative will be available to answer questions that may be asked by Members or the public. Business items are conducted in the following order:

1. Staff review
2. Questions of Staff by Council
3. Testimony from the Applicant (if appropriate)
4. Public comment period is opened.
5. When finished, public comment period is closed.
6. Discussion by Council
7. Action by Council by roll call vote

Management and Staff Oral Reports. Staff present Informational reports not requiring formal action.

Mayor/City Council Comments and Committee Reports. Members are encouraged to submit a written report to the City Clerk for inclusion in the meeting packet. Alternatively, an oral update can be provided at this time.

Future Agenda Items. Future agenda items are reviewed and considered. New "Council-requested" items are proposed by Member(s) through a motion and affirmative vote by the City Council majority. A log of future items will be maintained by the City Clerk and displayed on the agenda. The dates and prioritization of future agenda items is proposed by the City Manager subject to modification by direction of the City Council majority.

## SECTION SIX: COMPENSATION

City Council Members receive a variety of forms of compensation more particularly described in the appendix.

Salary. City Council Members receive a salary as stipulated by State law which may be adjusted from time to time by the Legislature.

Cost of Living Increase. Beginning January 2026 and annually thereafter, City Council Members will receive a cost-of-living increase equivalent to the California Consumer Price Index of the prior 12 months up to maximum of 10%, provided however this increase shall not exceed the amount of cost-of-living increase received by City employees in the General Bargaining Unit. Any cost-of-living increase must be approved by the City Council, with this typically occurring the prior June of each year in conjunction with the annual budget process.

Payment Schedule. City Council Members are paid on the same schedule as employees.

Additional Payment. City Council Members sit *defacto* as the American Canyon Fire Protection District Board of Directors (Fire District) and receive compensation separately and directly from the Fire District. Although Members will consider matters related to the former American Canyon County Water District ("Water District") from time to time, they will receive no additional compensation.

Retirement Benefit. City Council Members are eligible for retirement benefits.

Medical Benefit. City Council Members are eligible for medical benefits. If a Member is vested in the City's retirement program, they will be eligible for retiree medical insurance benefits.

Dental and Vision. City Council Members are eligible for dental and vision care benefits.

Deferred Compensation. City Council Members are eligible to participate in the City's Section 457 Deferred Compensation program.

No "Cash in Lieu" of Benefits. City Council Members are not eligible for "cash-in lieu of" any benefits they have declined.

Stipends. City Council Members are eligible to receive various stipends available to employees.

## SECTION SEVEN: ADMINISTRATIVE SUPPORT

**General**. The City Manager will ensure that routine matters, such as distributing City Council mail and providing clerical support, are handled as needed. Customized stationery will be provided for each City Council Member, recognizing that individual Members do not represent the full City Council. City resources, including funds, equipment (e.g., cell phone, laptop personal computer, small file storage), supplies (including letterhead), and staff time must only be used for authorized City of American Canyon activities and purposes. When in doubt, Members should contact the City Manager for advice before making any commitments.

Master Calendar. A calendar of events, functions, and meetings will be maintained and kept current by the City Clerk. This calendar will include functions, events, and regularly scheduled meetings attended by individual Council Members and will be distributed to the full City Council.

Request for Information. City Council Members may request information or research from the City Manager if the request can be completed in less than an hour. Often, the City Manager will delegate this request to staff. Requests anticipated to take more than one hour should be directed to the City Council during a City Council meeting under "Future Council Item." Requests for new information or policy direction will be brought to the full City Council at a Regular Meeting for consideration. All written reports will be copied to the full City Council. This subsection does not apply to requests for information made to the City Attorney's office.

Tickets to City Events. One ticket for each City Council Member will be provided for events hosted by the City or in which the City is a Member. Departments hosting City events will coordinate ticket distribution with the City Manager's Office. The availability of tickets for events hosted by other organizations will be at the discretion of the organizing agency. When the City is a major sponsor of an event, staff will endeavor to include ticket availability in the sponsorship agreement or contract.

City Council Notification of Significant Incidents. The City Manager's Office, in conjunction with the City's public safety departments, will coordinate notifications to the City Council in conjunction with the City Communication Policy. Notifications will occur in the event of a natural disaster, riots, large-scale evacuation, gang activity involving murder, injury and hospitalization of a city employee while on the job, an officer-involved shooting, or a financial issue that could result in controversy or disgrace for the City of American Canyon. This will be done via email and/or telephone.

Business Cards and Name Tags. Members will be issued business cards to be used in the duties and functions of the office. Name tags will be issued to wear during meetings, events, or at any function where Members are representing the City in their role as a City Council Member. At the conclusion of a term, name tags and unused business cards shall be returned to the City Clerk.

Travel and Training. City Council Members follow the same policies as staff for travel for official business or for training and educational purposes. Members are responsible for making their own

travel arrangements and accommodation and avoid unnecessary expenditures and negative public perception.

Technology. Each City Council Member is provided with a City-issued electronic tablet to facilitate their City Council work. The tablet is a valuable tool that will assist Members in staying connected and contribute to the success of their role, and the organization's goals. The tablet will be returned to the City Clerk upon the end of the Member's service on the City Council.

# I. The Basic Prohibition

Government Code Section 87100 of the Political Reform Act (the "Act")[1] prohibits a public official at any level of state or local government from making, participating in making, or attempting to use the official's position to influence a governmental decision in which the official knows or has reason to know the official has a financial interest. Government Code Section 87103 provides that an official has a "financial interest" within the meaning of Section 87100 if it is reasonably foreseeable that the decision will have a material financial effect on one or more of the official's interests as identified and distinguishable from the decision's effect on the public generally.

Taken together, these provisions of the Act prohibit an official from taking part in a decision if it is reasonably foreseeable that the decision would have a material financial effect on one or more of the official's financial interests identified in Section 87103 distinguishable from the decision's effect on the public generally.

# II. Making, Participating in Making, or Attempting to Influence a Decision

Regulation 18704 defines "making a decision," "participating in a decision," and "using official position to attempt to influence a decision" for purposes of the Act's conflict of interest provisions. If an official has a disqualifying conflict of interest under Section 87100, the official is prohibited from making, participating in making, or attempting in any way to use the official's official position to influence the decision.

## A. General Definitions

**Making a Decision:** An official makes a decision if the official authorizes or directs any action, votes, appoints a person, obligates or commits the official's agency to any course of action, or enters into any contractual agreement on behalf of the agency. (Regulation 18704(a).)

**Participating in a Decision:** An official participates in a decision if the official provides information, an opinion, or a recommendation for the purpose of affecting the decision without significant intervening substantive review. (Regulation 18704(b).)

**Using Official Position to Attempt to Influence a Decision:** An official uses an official position to influence a decision if the official contacts or appears before: (1) any official in the official's agency, or in an agency subject to the authority or budgetary control of the official's agency, for the purpose of affecting a decision; or (2) any official in any other government agency for the purpose of affecting a decision, and the official purports to act within the official's authority or on behalf of the official's agency in making the contact. (Regulation 18704(c).)

## B. Exceptions

Regulation 18704(d) provides that "making, participating in, or using official position to influence a decision" do not include any of the following:

**Ministerial:** Actions that are solely ministerial, secretarial, or clerical. (Regulation 18704(d)(1).)

**Appearances as a Member of the General Public:** An appearance by an official as a member of the general public before an agency in the course of its prescribed governmental function if the official is appearing on matters related solely to the official's personal interests, including interests in:

- Real property owned entirely by the official, members of the official's immediate family, or the official and members of the official's immediate family;
- A business owned entirely by the official, members of the official's immediate family, or the official and members of the official's immediate family; or
- A business over which the official, members of the official's immediate family, or the official and members of the official's immediate family solely or jointly exercise full direction and control. (Regulation 18704(d)(2).)

**Terms of Employment:** Actions by an official relating to the official's compensation or the terms or conditions of the official's employment or consulting contract. However, an official may not make a decision to appoint, hire, fire, promote, demote, or suspend without pay or take disciplinary action with financial sanction against the official or the official's immediate family, or set a salary for the official or the official's immediate family different from salaries paid to other employees of the agency in the same job classification or position. (Regulation 18704(d)(3).)

**Public Speaking:** Communications by an official to the general public or media. (Regulation 18704(d)(4).)

**Academic Decisions:** Teaching decisions, including an instructor's selection of books or other educational materials at the official's own school or institution, or other similar decisions incidental to teaching; or decisions by an official who has teaching or research responsibilities at an institution of higher education relating to the official's professional responsibilities, including applying for funds, allocating resources, and all decisions relating to the manner or methodology with which the official's academic study or research will be conducted. (Regulation 18704(d)(5).) However, this exception does not apply to an official who has institution-wide administrative responsibilities as to the approval or review of academic study or research at the institution unrelated to the official's own work. (*Ibid*.)

**Architectural and Engineering Documents:** Drawings or submissions of an architectural, engineering, or similar nature prepared by an official for a client to submit in a proceeding before the official's agency if: (i) the work is performed pursuant to the official's profession; and (ii) the official does not make any contact with the agency other

than contact with agency staff concerning the process or evaluation of the documents prepared by the official. (Regulation 18704(d)(6)(A).)

Also, an official's appearance before a design or architectural review committee or similar body of which the official is a member to present drawings or submissions of an architectural, engineering, or similar nature prepared for a client if: (i) the committee's sole function is to review architectural designs or engineering plans and to make recommendations to a planning commission or other agency; (ii) the committee is required by law to include architects, engineers, or persons in related professions, and the official was appointed to the body to fulfill this requirement; and (iii) the official is a sole practitioner. (Regulation 18704(d)(6)(B).)

**Additional Consulting Services:** Recommendations by a consultant regarding additional services for which the consultant or consultant's employer would receive additional income if the agency has already contracted with the consultant, for an agreed upon price, to make recommendations concerning services of the type offered by the consultant or the consultant's employer, and the consultant does not have any other economic interest, other than in the firm, that would be foreseeably and materially affected by the decision. (Regulation 18704(d)(7).)

# III. Financial Interests

The first step in determining whether an official has a disqualifying conflict of interest under the Act is identifying the official's financial interests with respect to the decision at issue. Section 87103 identifies the following financial interests which may give rise to an official's disqualifying conflict of interest under the Act:

- A business entity in which the official has a direct or indirect investment worth $2,000 or more (Section 87103(a)); or in which the official is a director, officer, partner, trustee, employee, or holds any position of management (Section 87103(d)).
- Real property in which the official has an interest worth $2,000 or more. (Section 87103(b).)
- A source of income totaling $500 or more in value provided or promised to, or received by, the official within the 12 months prior to the time when the decision is made. (Section 87103(c).)
- A giver of a gift or gifts totaling $500[2] or more in value provided or promised to, or received by, the official within the 12 months prior to the time when the decision is made. (Section 87103(e).)
- The official's personal finances and those of "immediate family," defined in Section 82029 as the spouse and dependent children. (Section 87103.)

# IV. Foreseeability of Financial Effect

## A. Explicitly Involved

A financial effect on a financial interest is presumed to be reasonably foreseeable if the financial interest is explicitly involved in the decision. (Regulation (18701(a).) An official's financial interest is "explicitly involved" in a decision if the interest is a "named party in, or the subject of," the decision, and an interest is the "subject of a proceeding" if the decision involves the issuance, renewal, denial, or revocation of any license, permit, other entitlement to, or contract with, the interest.[3] Additionally, an official's real property interest is explicitly involved in any decision affecting the real property as described in Regulation 18702.2(a)(1) through (6), discussed further below. (*Ibid*.)

## B. Not Explicitly Involved

When an official's financial interest is not explicitly involved in a decision, the financial effect of the decision is reasonably foreseeable if the effect can be recognized as a realistic possibility and more than hypothetical or theoretical. The effect need not be likely to be reasonably foreseeable. (Regulation 18701(b).)

Factors to be considered when determining if a decision's effect on an official's not explicitly involved interest is reasonably foreseeable include, but are not limited to, the following:

- The extent to which the occurrence of the effect is contingent upon intervening events (other than future governmental decisions by the official's agency or an agency subject to the budgetary control of the official's agency). (Regulation 18701(b)(1).)
- Whether the official should anticipate a financial effect on the financial interests at issue as a potential outcome under normal circumstances when using appropriate due diligence and care. (Regulation 18701(b)(2).)
- Whether the official has an interest of the type that would typically be affected by the terms of the decision. (Regulation 18701(b)(3).)
- Whether the decision is of the type that would be expected to have a financial effect on businesses and individuals similarly situated to those businesses and individuals in which the official has a financial interest. (*Ibid*.)
- Whether a reasonable inference can be made that the financial effects of the decision on the official's financial interest might compromise an official's ability to fulfill their duty to act in the best interests of the public. (Regulation 18701(b)(4).)
- Whether the decision will provide or deny an opportunity, or create an advantage for one of the official's financial interests. (Regulation 18701(b)(5).)

- Whether the official has the type of financial interest that would cause a similarly situated person to weigh the advantages and disadvantages of the decision on the official's financial interest in formulating a position. (Regulation 18701(b)(6).)

# V. Materiality Standards

Regulation 18702(a) provides that the next step in the analysis is to determine if the decision's reasonably foreseeable financial effect on the official's financial interest is material. If the official's interest is in:

- A business entity, then apply the materiality standards of Regulation 18702.1. (Regulation 18702(a)(1).)
- A real property, then apply the materiality standards of Regulation 18702.2. (Regulation 18702(a)(2).)
- A source of income, then apply the materiality standards of Regulation 18702.3. (Regulation 18702(a)(3).)
- A source of a gift or gifts, then apply the materiality standards of 18702.4. (Regulation 18702(a)(4).)
- Their personal finances or those of immediate family, then apply materiality standard of 18702.5. (Regulation 18702(a)(5).)

## A. Business Entity Interests

Regulation 18702.1 sets forth the materiality standards applicable to a decision's reasonably foreseeable financial effect on a business in which an official has an interest, and provides that the effect is material if any of the following standards is met:

- The business is explicitly involved in the decision, meaning that the business is "a named party in, or the subject of, the decision, including any decision in which the business:
  - Initiates the proceeding by filing an application, claim, appeal, or other request for action concerning the business with the official's agency. (Regulation 18702.1(a)(1)(A).)
  - Offers to sell a product or service to the official's agency. (Regulation 18702.1(a)(1)(B).)
  - Bids on, or enters into, a contract with the official's agency, or is identified as a subcontractor on a bid or contract with the agency. (Regulation 18702.1(a)(1)(C).)
  - Is the named or intended manufacturer or vendor of any products to be purchased by the official's agency with an aggregate cost of $1,000 in any 12-month period. (Regulation 18702.1(a)(1)(D).)

- Applies for a permit, license, grant, tax credit, exception, variance, or other entitlement from the official's agency. (Regulation 18702.1(a)(1)(E).)
- Is the subject of any inspection, action, or proceeding under the regulatory authority of the official's agency. (Regulation 18702.1(a)(1)(F).)
- Is subject to an action taken by the official's agency that is directed at the entity. (Regulation 18702.1(a)(1)(G).)

- The decision may result in an increase or decrease of the business's annual gross revenues, or the value of its assets and liabilities, in an amount equal to or more than:
  - $1,000,000; or
  - Five percent of the business's annual gross revenues, and the increase or decrease is $10,000 or more. (Regulation 18702.1(a)(2).)
- The decision may cause the business to incur or avoid additional expenses or to reduce or eliminate expenses in amount equal to or more than:
  - $250,000; or
  - One percent of the business's annual gross revenues, and the increase or decrease is at least $2,500. (Regulation 18702.1(a)(3).)
- The official knows or has reason to know that business has an interest in real property and:
  - The property is a named party in, or the subject of, the decision under Regulations 18701(a) and 18702.2(a)(1) through (6); or
  - There is clear and convincing evidence the decision would have a substantial effect on the property. (Regulation 18702.1(a)(4).)

Thus, if the decision's reasonably foreseeable financial effect on an official's business interest meets any of the four standards above, that effect is material, and the official is disqualified from taking part in the decision.

**Small Shareholder Exception:** Regulation 18702.1(b) sets forth the "Small Shareholder Exception," which provides that a decision's reasonably foreseeable financial effect on an official's financial interest in a business is not material under Regulation 18702.1(a)(1) or (a)(4)(A) if both:

- The official's only financial interest in the business is an "investment interest" under Section 87103(a) valued at $25,000 or less; and
- The official's interest in the business is less than one percent of the business's shares.

If the Small Shareholder Exception applies, the official is not disqualified.

## B. Real Property Interests

Regulation 18702.2 provides the materiality standards applicable to a decision's reasonably foreseeable financial effect on real property in which an official has an interest as either an owner or lessee.

**Explicitly Involved Real Property Interest:** It is reasonably foreseeable a decision will have a material financial effect on an official's interest in real property any time the interest is explicitly involved in the decision. Therefore, the decision's reasonably foreseeable effect is material in any of the types of decisions described in Regulation 18702.2(a)(1) to (6), including a decision that:

- Involves the adoption of or amendment to a development plan or criteria applying to the property. (Regulation 18702.2(a)(1).)
- Determines the property's zoning or rezoning, other than a zoning decision applicable to all properties designated in that category; annexation or de-annexation; inclusion in or exclusion from any city, county, district, or local government subdivision or other boundaries, other than elective district boundaries. (Regulation 18702.2(a)(2).)
- Would impose, repeal, or modify any taxes, fees, or assessments that apply to the property. (Regulation 18702.2(a)(3).)
- Authorizes the sale, purchase, or lease of the property. (Regulation 18702.2(a)(4).)
- Involves the issuance, denial or revocation of a license, permit or other land use entitlement authorizing a specific use of or improvement to the property or any variance that changes the permitted use of, or restrictions placed on, the property. (Regulation 18702.2(a)(5).)
- Involves construction of, or improvements to, streets, water, sewer, storm drainage or similar facilities, and the property will receive new or improved services that provide a benefit or detriment disproportionate to other properties receiving the services. (Regulation 18702.2(a)(6).)

**Not Explicitly Involved Real Property Interest:** A decision's reasonably foreseeable financial effect on an official's interest in real property is material if it is of a type described in Regulation 18702.2(a)(7) through (8), (b) or (c), including a decision that:

- Involves property located 500 feet or less from the official's property unless there is clear and convincing evidence that the decision will not have any measurable impact on the official's property. (Regulation 18702.2(a)(7).)
- Involves property located more than 500 feet but less than 1,000 feet from the official's property, and the decision would change the official's property's: development potential; income producing potential; highest and best use; character by substantially altering traffic levels, intensity of use, parking, view, privacy, noise levels, or air quality; or market value (Regulation 18702.2(a)(8)(A) through (E).)

- Involves property located 1,000 feet or more from the property line of the official's property if there is clear and convincing evidence the decision would have a substantial effect on the official's property. (Regulation 18702.2(b).)
- Involves property leased by the official and the decision will:
  - Change the termination date of the lease;
  - Increase or decrease the potential rental value of the property;
  - Change the official's actual or legally allowable use of the property; or
  - Change the official's use and enjoyment of the property. (Regulation 18702.2(c)(1) through (4).)

**Real Property Interest 1,000 Feet or More from Property Involved in Decision:** As mentioned above, Regulation 18702.2(b) sets forth a presumption that the financial effect of a decision involving property located 1,000 feet or more from the property line of the official's property is not material. That presumption, however, may be rebutted with clear and convincing evidence the decision would have a substantial effect on the official's real property interest.

**Exceptions for Planning Objectives or Policy:** A decision's reasonably foreseeable financial effect on an official's real property interest is not material, and therefore the official is not disqualified from the decision, if the decision solely concerns:

- Repairs, replacement or maintenance of existing streets, water, sewer, storm drainage or similar facilities. (Regulation 18702.2(d)(1).)
- Adoption or amendment of a general plan, as defined in Regulation 18702.2(e)(2), if certain specified conditions are met. (See Regulation 18702.2(d)(2).)

**Common Area Exception to the Definition of Interest in Real Property:** Regulation 18702.2(e)(4) provides that an "interest in real property," as defined in Section 82033, does not include "any common area as part of the official's ownership interest in a common interest development as defined in the Davis-Stirling Common Interest Development Act (Civil Code Sections 4000 et seq.)"

## C. Source of Income Interests

Regulation 18702.3 sets forth the materiality standards applicable to a decision's reasonably foreseeable financial effect on a source of income to an official, and provides that the effect is material if any of the following criteria is met:

- The source is explicitly involved in the decision because it is "a named party in, or the subject of, the decision," including a claimant, applicant, respondent, or contracting party. (Regulation 18702.3(a)(1).)
- The source is an individual and any of the following applies:

- The decision may affect the individual's income, investments, or other assets or liabilities by $1,000 or more (excluding an interest in a business entity or real property). (Regulation 18702.3(a)(2)(A).)
- The official knows or has reason to know that the individual has an interest in a business entity that will be financially affected under the materiality standards applicable to a business set forth in Regulation 18702.1. (Regulation 18702.3(a)(2)(B).)
- The official knows or has reason to know that the individual: (i) has a real property interest and the property is explicitly involved in the decision; or (ii) there is clear and convincing evidence the decision would have a substantial effect on the property. (Regulation 18702.3(a)(2)(C).)

- The source is a nonprofit organization and any of the following applies:
  - The decision may result in an increase or decrease of the organization's annual gross receipts, or the value of the organization's assets or liabilities, in an amount equal to or more than: (i) $1,000,000; or (ii) five percent of the organization's annual gross receipts and the increase or decrease is equal to or greater than $10,000. (Regulation 18702.3(a)(3)(A).)
  - The decision may cause the organization to incur or avoid additional expenses or to reduce or eliminate expenses in an amount equal to or more than: (i) $250,000; or (ii) one percent of the organization's annual gross receipts and the change in expenses is equal to or greater than $2,500. (Regulation 18702.3(a)(3)(B).)
  - The official knows or has reason to know that the organization has a real property interest and: (i) the property is explicitly involved in the decision; (ii) there is clear and convincing evidence the decision would have a substantial effect on the property. (Regulation 18702.3(a)(3)(C).)
- The source is a business that will be financially affected under the materiality standards applicable to a business set forth in Regulation 18702.1 (Regulation 18702.3(a)(4).)
- If there is a nexus between the decision and income received by the official or official's spouse. Otherwise referred to as the nexus test, any reasonably foreseeable financial effect on an official's source of income interest is material if the decision "will achieve, defeat, aid, or hinder a purpose or goal of the source and the official or the official's spouse receive or is promised the income for achieving the purpose or goal. (Regulation 18702.3(b).)

**Exception for Retail Sales:** Section 87103.5(a) provides that a retail customer of a business engaged in retail sales of good or services to the public generally is not a source of income to an official who owns a 10-percent or greater interest in the business if: the retail customers of the business constitute a significant segment of the public generally, and the amount of income received from an individual customer is not distinguishable from the amount of income received from its other customers.

Section 87103.5(b) sets forth a similar retail sales exception for a jurisdiction with a population of 10,000 or less that is located within a county with 350 or fewer retail businesses.

For purposes of applying Section 87103.5, Regulation 18702.3(c) provides that the retail customers of a business entity constitute a significant segment of the public generally if the business is open to the public and provides goods or services to customers that comprise a broad base of persons representative of the jurisdiction. (Regulation 18702.3(c)(1).)

Income from an individual customer is not distinguishable from the amount of income received from other customers when the official is unable to recognize a significant monetary difference between the business provided by the individual customer and the other customers of the business. (Regulation 18702.3(c)(2).) An official is unable to recognize a significant monetary difference when the business:

- Is of the type that sales to any one customer will not have a significant impact on the business's annual net sales; or
- Has no records that distinguish customers by amount of sales, and the official has no other information that the customer provides significantly more income to the business than an average customer. (*Ibid*.)

**Income from a Government Entity:** The materiality standards of Regulation 18702.3 do not apply where a government entity qualifies as a source of income as defined in Section 82030, including where an official is paid by the entity as a consultant or contractor. (Regulation 18702.3(d).) Under Regulation 18703(e)(7), an official with an interest in such an entity is disqualified from taking part in a decision only if there is a unique effect on the official. (*Ibid*.)

## D. Source of Gift Interests

Regulation 18702.4 provides the materiality standards applicable to a decision's reasonably foreseeable financial effect on the source of a gift to an official, and provides that the decision's effect is material if:

- The source is explicitly involved in the decision because the source "is named or otherwise identified as the subject of the proceeding," including a claimant, applicant, respondent, or contracting party. (Regulation 18702.4(a).)
- The source is an individual that will be financially affected under the materiality standard applicable to a decision's reasonably foreseeable financial effect on an official's personal finances set forth in Regulation 18702.5 or the official knows or has reason to know that the individual has an interest in a business or real property that will be financially affected under the materiality standards provided in Regulation 18702.1 or 18702.2, respectively. (Regulation 18702.4(b))

- The source is a nonprofit organization that will receive a measurable financial benefit or loss as a result of the decision or the official knows or has reason to know that the nonprofit has an interest in real property that will be financially affected under the materiality standards in Regulation 18702.2. (Regulation 18702.4(c).)
- The source is a business that will be financially affected under the materiality standards in Regulation 18702.1. (Regulation 18702.4(d).)

## E. Interest in Personal Finances

Regulation 18702.5(a) provides the materiality standard applicable to a decision's reasonably foreseeable financial effect on an official's personal finances, including those of immediate family. Also known as the personal financial effect rule, a reasonably foreseeable effect on the official' personal finances is material if the decision may result in the official or the official's immediate family receiving a financial benefit or loss of $500 or more in any 12-month period due to the decision.

**Exceptions:** Under Regulation 18702.5(b), however, a decision's effect on an official's personal finances and those of immediate family is not material if the decision would:

- Affect only the salary, per diem, or reimbursement for expenses the official or their immediate family member receives from a federal, state, or local government agency, unless the decision is:
  - To appoint (except as specified), hire, fire, promote, demote, suspend without pay or otherwise take disciplinary action with financial sanction against the official or their immediate family; or
  - To set a salary for the official or a member of their immediate family which is different from salaries paid to other employees of the government agency in the same job classification or position, or when the member of the official's immediate family is the only person in the job classification or position. (Regulation 18702.5(b)(1).)
- Appoint the official to be a member of any group or body created by law or formed by the official's agency for a special purpose. However, if the official will receive a stipend for attending meeting of the group or body aggregating $500 or more in any 12-month period, the effect is material unless the appointing body posts all of the following on its website:
  - A list of each appointed position and its term. (Regulation 18702.5(b)(2)(A).)
  - The amount of the stipend for each appointed position. (Regulation 18702.5(b)(2)(B).)
  - The name of the official who has been appointed to the position. (Regulation 18702.5(b)(2)(C).)

- The name of any official who has been appointed to be an alternate for the position. (Regulation 18702.5(b)(2)(D).)

- Appoint the official to be an officer of the governing body of which the official is already a member (such as a decision to appoint a city councilmember to be the city's mayor.) (Regulation 18702.5(b)(3).)
- Establish or change the benefits or retirement plan of the official or the official's immediate family member, and the decision applies equally to all employees or retirees in the same bargaining unit or other representative group. (Regulation 18702.5(b)(4).)
- Result in the payment of any travel expenses incurred by the official or their immediate family while attending a meeting as an authorized representative of an agency. (Regulation 18702.5(b)(5).)
- Permit the official's use of any government property, including automobiles or other modes of transportation, mobile communication devices, or other agency-provided equipment for carrying out the official's duties, including any nominal, incidental, negligible, or inconsequential personal use while on duty. (Regulation 18702.5(b)(6).)
- Result in the official's receipt of any personal reward from their use of a personal charge card or participation in any other membership rewards program, so long as the reward is associated with the official's approved travel expenses and is no different from the reward offered to the public. (Regulation 18702.5(b)(7).)

**Effect on Personal Finances and a Business or Real Property Interest:** If a decision would have a reasonably foreseeable financial effect on a business or real property interest of an official, any related effect on the official's personal finances is not considered separately, and the effect is only analyzed under the respective materiality standards for business and real property interests, i.e. Regulations 18702.1 and 18702.2. (Regulation 18702.5(c).)

# VI. The Public Generally Exception

Under Section 87103, if a decision's financial effect on an official's financial interest is indistinguishable from the decision's effect on the public generally, the official is not disqualified from taking part in the decision. Regulation 18703 sets forth the "Public Generally Exception."

**The General Rule:** A decision's financial effect on an official's financial interest is indistinguishable from its effect on the public generally if the official establishes that a "significant segment" of the public is affected and the "effect on the official's interest is not unique" compared to the effect on the significant segment. (Regulation 18703(a).)

A "significant segment" of the public is defined as:

- At least 25 percent of:
  - All businesses or nonprofit entities within the official's jurisdiction;
  - All real property, commercial real property, or residential real property within the official's jurisdiction; or
  - All individuals within the official's jurisdiction. (Regulation 18703(b)(1).)
- At least 15 percent of residential real property within the official's jurisdiction if the only interest the official has in the decision is the official's primary residence. (Regulation 18703(b)(2).)

A unique effect on an official's financial interest includes a disproportionate effect on:

- The development potential or use of the official's real property, or the income producing potential of the official's real property or business;
- An official's business or real property resulting from the proximity of a project that is the subject of a decision;
- An official's interests in business entities or real properties resulting from the cumulative effect of the official's multiple interests in similar entities or properties that is substantially greater than the effect on a single interest;
- An official's interest in a business or real property resulting from the official's substantially greater business volume or larger real property size when a decision affects all interests by the same or similar rate or percentage;
- A person's income, investments, assets or liabilities, or real property if the person is a source of income or gifts to the official; and
- An official's personal finances or those of immediate family. (Regulation 18703(c)(1)-(6).)

"Jurisdiction" means:

- The jurisdiction of the state or local government agency as defined in Section 82035;
- The designated geographical area the official was elected to represent; or
- The area to which the official's authority and duties are limited if not elected. (Regulation 18703(d).)

**Specific Rules for Special Circumstances:** Regulation 18703(e) also provides seven Specific Rules for Special Circumstances which govern the Public Generally Exception's applicability in those special circumstances. Under these rules, a decision's financial effect is deemed indistinguishable from its effect on the public generally if there is no unique effect on the official's interest and the official establishes:

- **Public Services and Utilities:** The decision sets or adjusts the amount of an assessment, tax, fee, or rate for water, utility, or other similar public services that is applied equally, proportionally, or by the same percentage to the official's interest and other businesses, properties, or individuals subject to the assessment, tax, fee, or rate. However, an official is not permitted to take part in a decision that would impose the assessment, tax, or fee, or determine the boundaries of a property or who is subject to the assessment, tax, or fee. An official is only permitted to take part in setting or adjusting the assessment, tax, or fee amount, once other related decisions have already been made. (Regulation 18703(e)(1).)

- **General Use or Licensing Fees:** The decision affects the official's personal finances as a result of an increase or decrease to a general fee or charge, such as parking rates, permits, license fees, application fees, or any general fee that applies to the entire jurisdiction. (Regulation 18703(e)(2).)

- **Limited Neighborhood Effects:** The decision affects residential real property limited to a specific location, encompassing more than 50, or five percent, of the residential real properties in the official's jurisdiction, and the decision establishes, amends, or eliminates ordinances that restrict on-street parking, impose traffic controls, deter vagrancy, reduce nuisance or improve public safety, provided the body making the decision gathers sufficient evidence to support the need for the action at a specific location. (Regulation 18703(e)(3).)

- **Rental Properties:** The decision is limited to establishing, eliminating, amending, or otherwise affecting the respective rights or liabilities of tenants and owners of residential rental property, including a decision regarding a rent control ordinance or tenant protection measures, provided all of the following criteria are met:

  - The decision applies to all residential rental properties within the official's jurisdiction other than those excepted by the Costa-Hawkins Rental Housing Act (Civil Code Sections 1954.50, et seq.). (Regulation 18703(e)(4)(A).)

  - The official owns three or fewer residential rental units. (Regulation 18703(e)(4)(B).)

  - Only interests resulting from the official's leasehold interest as a lessor of residential real property and the lessee or owner of the official's primary residence are affected by the decision. (Regulation 18703(e)(4)(C).)

- **Required Representative Interest:** The decision is made by a board or commission and the law that establishes the board or commission requires certain appointees have a representative interest in a particular industry, trade, or profession or other identified interest, and the public official is an appointed member representing that interest. This provision applies only if the effect is on the industry, trade, or profession or other identified interest represented. (Regulation 18703(e)(5).)

- **State of Emergency:** The decision is made pursuant to an official proclamation of a state of emergency when required to mitigate against the effects directly arising out of the emergency. (Regulation 18703(e)(6).)
- **Governmental Entities:** The decision affects a federal, state, or local government entity in which the official has an interest. (Regulation 18703(e)(7).)

# VII. Legally Required Participation

Section 87101 provides that the prohibition of Section 87100 does not prevent an official from making or participating in the making of a decision to the extent the official's participation is legally required for the action or decision to be made. However, the existence of a tied vote does not make the disqualified official's participation legally required.

**No Alternative Source of Decision:** Regulation 18705(a) provides that an official who is financially interested in a decision may establish that the official is legally required to make or to participate in the making of a decision within the meaning of Section 87101 only if there exists no alternative source of decision consistent with the purposes and terms of the statute authorizing the decision.

**"Quorum" Defined:** Regulation 18705(d) provides that a "quorum" is the minimum number of members required to conduct business. When the vote of a supermajority is required to adopt an item, a "quorum" is the minimum number of members needed to adopt the item.

**Narrowly Construed:** Regulation 18705(c) requires the regulation be narrowly construed, and specifically provides that the regulation shall not to be construed:

- To permit an official who is otherwise disqualified under Section 87100 to vote to break a tie. (Regulation 18705(c)(1).)
- To allow a member of any agency who is otherwise disqualified under Section 87100 to vote if a quorum can be convened of other members of the agency who are not disqualified, whether or not those other members are actually present at the time of the disqualification. (Regulation 18705(c)(2).)

**Random Means of Selection:** Regulation 18705(c)(3) requires participation by the smallest number of officials with a conflict that are "legally required" for the decision to be made under Section 87101 and permits a "random means of selection" (e.g. drawing straws) to be used to select only the number of officials necessary to make the decision. When an official is selected, that official is selected for the duration of the proceedings in all related matters until their participation is no longer legally required, or the need for invoking the exception no longer exists. (Regulation 18705(c)(3).)

**Public Identification of an Otherwise Disqualified Official's Financial Interests in a Decision:** Regulation 18705(b) provides that when an official who has a financial interest in a decision is legally required to make or participate in making that decision, the official must state the existence of the potential conflict as follows:

- The official must disclose the existence of the conflict of interest and describe with particularity the nature of the official's disqualifying financial interest or interests. This requirement is satisfied if the official discloses:
  - The type of financial interest or interests involved in the decision, and;
  - Other specified information identifying the interest depending on the type of interest at issue.
- The official or another officer or employee of the agency must summarize the circumstances under which the conflict may arise.
- The official or another officer or employee of the agency must disclose the legal basis for the determination that there is no alternative source of decision.

**Manner of Disclosure:** The disclosures required by Regulation 18705(b) must be disclosed as follows:

- If the decision is made during an open session of a public meeting, the disclosures must be made orally before the decision is made;
- If the decision is made during a closed session of a public meeting, the disclosures must be made orally during open session either before the body goes into closed session or immediately thereafter;
- If the decision takes place outside of a public meeting, the disclosures must be made in writing; and
- In all three circumstances immediately above, the disclosures must be made part of the public record, as specified. (Regulation 18705(b)(4).)

# VIII. Segmentation

Under the Act's conflict of interest provisions, each governmental decision must be analyzed independently to determine if the decision will have a disqualifying effect on an official's financial interest. (*In re Owen* (1976) 2 FPPC Ops. 77.) Accordingly, an agency may segment a decision in which an official has a disqualifying conflict of interest to allow the official to participate in associated decisions which would not have a disqualifying effect on the official's interests under Regulation 18706.

**Required Conditions for Segmentation:** Regulation 18706(a) provides that an agency may segment a decision in which an official is financially interested, to allow the official

to participate in associated decisions in which the official is not financially interested, provided all the following conditions are met:

- The decision in which the official is financially interested can be broken down into separate decisions that are not inextricably interrelated to the decision in which the official has a disqualifying financial interest;
- The decision in which the official is financially interested is segmented from the other decisions;
- The decision in which the official is financially interested is considered first and a final decision is reached by the agency without the disqualified official's participation in any way; and
- Once the decision in which the official is financially interested has been made, the official's participation in associated decisions does not result in a reopening of, or otherwise financially affect, the decision from which the official was disqualified.

**"Inextricably Interrelated":** Regulation 18706(b) provides that decisions are "inextricably interrelated" when the result of one decision will effectively determine, affirm, nullify, or alter the result of another decision.

**Budget and General Plan Decisions Affecting Entire Jurisdiction:** Regulation 18706(c) provides that once all separate decisions related to a budget or general plan affecting the entire jurisdiction have been finalized, the official may participate in the final vote to adopt or reject the agency's budget or general plan.

# IX. Disqualification Requirements

Section 87105 governs the recusal of a public official specified in Section 87200 from a decision from which the official has been disqualified. Subdivisions (a)(1)-(3) of that section require the disqualified official to: identify the potential conflict of interest to publicly identify the official's financial interest or interests at issue; recuse from voting, discussing or attempting to influence the matter; and leave the room until after the matter is concluded. Subdivision (a)(4) excludes members of the Legislature from these recusal requirements.

Regulation 18707 provides further direction and guidance on the recusal requirements applicable to a public official specified in Section 87200 who is disqualified from a decision relating to an agenda item noticed for consideration at a public meeting subject to open meeting laws (i.e. the Bagley-Keene Act (Section 11120 et seq.) or the Brown Act (Section 54950 et seq.)).

**Form and Content of Public Identification:** The disqualified official must publicly identify each type of financial interest, identified in Section 87103, held by the official

that gives rise to the disqualifying conflict of interest. (Regulation 18707(a)(1).) The identification must be oral and part of the public record (Regulation 18707(a)(1)(B)), and provide the following information, as applicable:

- For a business interest: the name of the business, a general description of its activities, and any position held by the official. (Regulation 18707(a)(1)(A)(i).)
- For a real property interest: the property's address, assessor's number, or identification that the property is the official's personal residence. (Regulation 18707(a)(1)(A)(ii).)
- For a source of income interest: the name of the source of income. (Regulation 18707(a)(1)(A)(iii).)
- For a source of gift interest: the name of the source of gift. (Regulation 18707(a)(1)(A)(iv).)
- For all interests: the nature of the expense, liability, asset, or income affected. (Regulation 18707(a)(1)(A)(v).)

**Timing:** The public identification required by Regulation 18707(a)(1) must be made immediately prior to consideration of the agenda item. (Regulation 18707(a)(2).)

- Partial absence from a meeting does not excuse the disqualified official's public identification requirement. (*Ibid*.)
- If the official leaves a meeting in advance of an agenda item from which the official is disqualified, the official must provide the public identification required by Regulation 18707(a)(1) prior to leaving the meeting. (Regulation 18707(a)(2).)
- If the official first joins a meeting after consideration of the agenda item, the official must provide the public identification immediately upon joining the meeting. (*Ibid*.)

**Recusal and Leaving the Room:** The disqualified official must recuse, leave the room after the public identification required by Regulation 18707(a)(1), and refrain from participation in the decision. (Regulation 18707(a)(3).) The disqualified official does not count toward achieving a quorum while the item is discussed. (*Ibid*.)

- For an agenda item on a consent calendar (uncontested items), the official may remain in the room during the consent calendar. (Regulation 18707(a)(3)(A).)
- If the official has a "personal interest" in the agenda item, as defined in Regulation 18704(d)(2) and wishes to speak or appear as a member of the general public, the official may leave the dais and speak or observe from the area reserved for members of the public after making the public identification required by Regulation 18707(a)(1) and recusing. (Regulation 18707(a)(3)(B).)

**Special Rules for Closed Session:** The public identification required by Regulation 18707(a)(1) must be made orally during the open session before the body goes into

closed session and may be limited to a declaration that the official's recusal is because of a conflict of interest under Section 87100. (Regulation 18707(a)(4).) The declaration must be made part of the official public record. (*Ibid*.) The official must not be present when the decision is considered in closed session or knowingly obtain or review a recording or any other non-public information regarding the decision. (*Ibid*.)

**Other Decisions:** For a decision other than an agenda item involving a public official specified in Section 87200 (governed by Regulation 18707(a)), Regulation 18707(b) provides the following:

- If the official determines not to act because of a financial interest, the official's determination may be accompanied by an oral or written disclosure of the interest.
- The official's presence will not be counted toward achieving a quorum.
- During a closed meeting of the agency, a disqualified official must not be present when the decision is considered, or knowingly obtain or review a recording or any other nonpublic information regarding the decision.
- An agency may adopt a local rule requiring the official to step down from the dais or leave the chambers.

**Confidential Information:** Regulation 18707(c) expressly provides that nothing in Regulation 18707 is intended to cause any disclosure that would reveal the confidences of a closed session or any other privileged information contemplated by law, including privileged information under Regulation 18740.

The regulations of the Fair Political Practices Commission (the "Commission") are contained in Sections 18110 through 18997 of Title 2 of the California Code of Regulations. All regulatory references are to Title 2, Division 6 of the California Code of Regulations, unless otherwise indicated.

[2] We note that the annual gift limit is adjusted biennially. The current gift limit is prescribed in Regulation 18940.2. The adjusted annual gift limit amount in effect for the period January 1, 2021, to December 31, 2022, is $520.

[3] For an official's interest in a business entity or real property, Regulation 18702.1(a) and Regulation 18702.2(a)(1)-(6), provide additional guidance for determining if the interest is explicitly involved.

Fair Political Practices Commission

# Contribution Limits: City and County Candidates[1]

## Introduction

Pursuant to Assembly Bill 571 (Stats. 2019, Ch. 556, AB 571 Mullin), beginning January 1, 2021 a state campaign contribution limit will by default apply to city and county candidates when the city or county has not already enacted a contribution limit on such candidates. Along with the new campaign contribution limit, there are also other related provisions that formerly applied only to state level candidates that will now apply to city and county candidates. Please note that none of the provisions of AB 571 discussed in this fact sheet apply to candidates in cities or counties for which the city or county has enacted campaign contribution limits.

## Current State Contribution Limit

The contribution limit that will now apply to city and county candidates pursuant to AB 571 is updated biennially for inflation. Contribution limits can be found in Regulation 18545(a)[2] and on the FPPC website's FPPC Regulations page. The default limit for contributions to city and county candidates subject to AB 571 for 2023-2024 is set at $5,500 per election.

## Other Provisions Affecting City and County Candidates

Several other provisions will now apply to city and county candidates in jurisdictions that have not enacted campaign contribution limits, including the following:

- A candidate may not make a contribution over the AB 571 limit to another candidate in jurisdictions subject to the AB 571 limit with limited exceptions related to recall elections, legal defense funds and candidate-controlled ballot measure committees. (See Regulation 18535 for more information.)

- A candidate that has qualified as a committee must establish a separate controlled committee and campaign bank account for each specific office. Candidates may not redesignate a committee for one election for another election.

- Candidates may transfer non-surplus campaign funds from one candidate-controlled committee to another committee controlled by the same candidate for a **different** office if the committee receiving the transfer is for an elective state, county or city office. However, contributions transferred must be attributed and transferred using the "last in, first out" or "first in, first out" accounting method and

shall not exceed the applicable contribution limit per contributor. If a candidate is seeking to transfer campaign funds from one controlled committee to another for the **same** office a candidate may carry over non-surplus campaign funds raised in connection with one election to pay for campaign expenditures incurred in connection with a subsequent election for the **same** office without attributing or using the "last in, first out" or "first in, first out" accounting method. (See Regulation 18536 for more information on the transfer and attribution of contributions and See Regulation 18537.1 for more information on carryover of contributions.)[1]

- Candidates may not personally loan to a candidate's campaign an amount for which the outstanding balance exceeds $100,000. "Campaign" includes both the primary and general, or special and special runoff, elections. However, a candidate may loan each committee for a different office or term of office up to $100,000. A candidate may not charge interest on any such loan the candidate made to the candidate's campaign. (See Regulation 18530.8 for more information.)

- Candidates may establish a committee to oppose the qualification of a recall measure and the recall election when the candidate receives a notice of intent to recall. Campaign funds raised to oppose the qualification of a recall measure and/or the recall election would not be subject to any campaign contribution limit under the Act. (See Regulation 18531.5 for more information.)

- A candidate for local office may open a candidate-controlled general purpose ballot measure committee to oppose or support a measure being voted on. The committee must identify on its campaign statements and reports each measure for which an expenditure of $100 or more is made. (See Regulations 18421.8 and 18521.5 for more information.)

- Contributions after the date of the election may be accepted to the extent contributions do not exceed net debts outstanding from the election, and contributions do not otherwise exceed applicable contribution limits for that election. (See Regulation 18531.64 for more information.)

---

[1] This fact sheet is informational only and contains only highlights of selected provisions of the law. It does not carry the weight of the law. For further information, consult the Political Reform Act and its corresponding regulations, advice letters, and opinions.

[2] The Political Reform Act is contained in Government Code Sections 81000 through 91014. All statutory references are to the Government Code, unless otherwise indicated. The regulations of the Fair Political Practices Commission are contained in Sections 18110 through 18997 of Title 2 of the California Code of Regulations. All regulatory references are to Title 2, Division 6 of the California Code of Regulations, unless otherwise indicated.[1]

- Candidates are permitted to raise contributions for a general election before the primary election and may establish separate campaign contribution accounts for the primary and general so long as candidates set aside contributions and use them for the general or special general election as raised. If the candidate is defeated in the primary election or otherwise withdraws from the general election, the general election funds must be refunded to contributors on a pro rata basis less any expenses associated with the raising and administration of the general election contributions. (See Regulation 18531.2 for more information.)

- Candidates that are currently in office that are running for reelection to the same seat in an election after January 1, 2021 may carry over campaign funds without attribution as mentioned above. Candidates running for a different office also do not need to do LIFO FIFO or attribution for the election immediately subsequent to the election prior to 2021 for which the money was raised.

- Candidates must disclose cumulative totals of contributions received or made for each election on campaign statements. (See Regulation 18421.4 for more information.)

**FAQs**

**A. If a city or county does not currently have contribution limits set within their ordinance would the state contribution limit be the default?**

Yes. The state contribution limit stated above would be the default contribution limit if the city or county ordinance is silent on whether there are contribution limits within that jurisdiction or if there is no city or county ordinance in place.

**B. Is there a way for a city or county to adopt "no" contribution limits for city or county elective city and county offices?**

Yes. A city or county may elect to have "no" contribution limits. To do so, it must explicitly state in the city or county ordinance that there are no limits on contributions. If it is explicit that the city or county has implemented "no" contribution limits, the state contribution limit will not apply as a default for that jurisdiction.

**C. Can a city or county ordinance be less restrictive than the AB 571 limit (e.g., the city or county limit is set higher than the state limit)?**

Yes. A city or county can set contribution limits higher than the default state limit.

**D. If a city or county imposes contribution limits, is the Commission responsible for enforcing those limits?**

No. The Commission will not regulate the administration or enforcement of the penalties. Cities or counties with existing limits or that adopt their own limits are not subject to the state limit and may impose their own penalties for violations.

**E. If a city or county has voluntary contribution limits, but no mandatory contribution limits will the state limit be applicable?**

Yes. A city or county must enact mandatory contribution limits to avoid the state limit applying to elective city and county offices.

**F. Does the default contribution limit also include judicial candidates?**

No. Elective city and county offices do not include judicial offices.

**G. If a city or county has imposed contribution limits for particular city or county offices (e.g., Board of Supervisors), do those limits also apply to other positions such as the District Attorney or would the default state limit apply if a particular position is not specifically addressed by the city or county?**

The default state limit would apply to other positions for which the city or county has not set contribution limits. A city or county ordinance must explicitly state the city or county contribution limits and for which elective offices those limits will apply. A city or county may adopt a general provision implementing a contribution limit for all elective city and county offices in that jurisdiction. As noted above, a city or county may also adopt an ordinance that states the city or county is adopting no contribution limits for any offices to avoid the default state limit applying.

**H. Does AB 571 apply to special district or school district elections?**

No. AB 571 applies only to city and county elections for offices that a city or county has not implemented its own contribution limit.

**I. Does AB 571 apply to the office of County Superintendent of Schools or the office of County Board of Education?**

AB 571 does apply to the office of County Superintendent of Schools because it is considered a “county” office. However, the office of County Board of Education is not subject to AB 571 because it’s not considered a “county” position.

**J. Can candidates that are subject to the AB 571 contribution limit open an officeholder committee?**

No. Officeholder committees are not permitted for candidates subject to the AB

571 contribution limit. However, a candidate may use a committee for the officeholder's future election for officeholder expenses. A candidate may also use existing funds in the election committee for current office for officeholder expenses.

**K. Does the AB 571 contribution limit apply to debt retirement for the 2020 election?**

No. For purposes of retiring debt, the contribution limit is the one that was applicable to that election. The Act did not impose a contribution limit on city and county candidates in 2020.

**L. If a contribution was received for an election occurring after January 1, 2021, PRIOR to January 1, 2021, does this contribution count towards the new AB 571 contribution limit after January 1, 2021?**

No. The Commission adopted a formal opinion on April 15, 2021 that states contributions made prior to the effective date of AB 571 are not aggregated with contributions made on or after the effective date of AB 571 for purposes of the new contribution limit. Therefore, if someone contributed up to or above the current limit to an AB 571 committee prior to January 1, 2021 the same person can give additional contributions to the same committee up to the AB 571 contribution limit on or after January 1, 2021.

**M. If a contributor gave $10,000 in 2020 (prior to the AB 571 limit going into effect) to a committee for a 2022 primary election, what happens?**

The AB 571 contribution limit does not apply to contributions made prior to January 1, 2021 so a contribution of this amount is permissible.

**N. Does the AB 571 contribution limit apply to political party committees and small contributor committees making contributions to candidates subject to the AB 571 limit?**

Yes. Political parties and small contributor committees are only permitted to give contributions to candidates subject to the AB 571 in amounts up to the applicable AB 571 contribution limit for that candidate.

**O. Does the AB 571 limit apply to county central committee candidates?**

No. AB 571 imposes a contribution limit on city and county elective offices when a local jurisdiction has not already done so. Local jurisdictions are prohibited from placing contribution limits on county central committee candidates; therefore, AB 571 is not applicable to those offices.

**P. If an election was held in November 2023, but resulted in the need for a run-off election to be held in February 2024, how would the contributions be treated under AB 571?**

The run-off election is considered a new election. If a contributor gave any amount to an AB 571 candidate for the November 2023 election, the same contributor would still be permitted to contribute up to $5,500 (the AB 571 limit) to the same candidate for the February 2024 run-off election.

**Q. An AB 571 candidate for city council would like to send out a request for contributions to their constituents. Do they need to include anything specific in the request?**

Yes. A candidate that is subject to AB 571 must have the following information in the solicitation: the name of the controlled committee soliciting contributions, and the specific office for which those contributions will be used.

**R. If an AB 571 candidate is the subject of a recall, is their committee to oppose the recall subject to contribution limits?**

No. There are no contribution limits for a committee controlled by a candidate that is the subject of a recall that is formed to oppose the recall.

**S. An AB 571 candidate has debts for an election held after January 1, 2021, may the candidate terminate their committee?**

No. If a candidate-controlled committee has outstanding debts for an election held after January 1, 2021, they may not terminate without resolving or paying off the debt. When the committee has no net debts outstanding, the committee must be terminated within 24 months after the earliest of the date the candidate is defeated, leaves office, or the term of office for which the committee was formed ends, or, for withdrawn candidates no later than 24 months after the election from which the candidate withdrew. Please see Regulation 18404.1 for more on termination requirements for committees subject to AB 571.

**T. If a local jurisdiction, which is subject to AB 571, passes a local campaign contribution ordinance, are the candidates still subject to AB 571?**

No. They would no longer be subject to AB 571.

# Who Must File

**1. Officials and Candidates Specified in Gov. Code Section 87200 and Members of Boards and Commissions of Newly Created Agencies**

The Act requires the following individuals to fully disclose their personal assets and income described in Form 700, Statement of Economic Interests:

State Offices
- Governor
- Lieutenant Governor
- Attorney General
- Controller
- Insurance Commissioner
- Secretary of State
- Treasurer
- Members of the State Legislature
- Superintendent of Public Instruction
- State Board of Equalization Members
- Public Utilities Commissioners
- State Energy Resources Conservation and Development Commissioners
- State Coastal Commissioners
- Fair Political Practices Commissioners
- State public officials (including employees and consultants) who manage public investments
- Elected members of and candidates for the Board of Administration of the California Public Employees' Retirement System
- Elected members of and candidates for the Teachers' Retirement Board
- Members of the High Speed Rail Authority

Other officials and employees of state boards, commissions, agencies, and departments file Form 700 as described in Part 2 on this page.

Judicial Offices
- Supreme, Appellate, and Superior Court Judges
- Court Commissioners
- Retired Judges, Pro-Tem Judges, and part-time Court Commissioners who serve or expect to serve 30 days or more in a calendar year

County and City Offices
- Members of Boards of Supervisors
- Mayors and Members of City Councils
- Chief Administrative Officers
- District Attorneys
- County Counsels
- City Attorneys
- City Managers
- Planning Commissioners
- County and City Treasurers
- County and city public officials (including employees and consultants) who manage public investments

Members of Newly Created Boards and Commissions
Generally, such a member must file an assuming office statement within 30 days as well as subsequent statements until the member's position is designated in a conflict of interest code. See Regulation 18754.

**2. State and Local Officials, Employees, Candidates, and Consultants Designated in a Conflict of Interest Code ("Code Filers")**

The Act requires every state and local government agency to adopt a unique conflict of interest code. The code lists each position within the agency filled by individuals who make or participate in making governmental decisions that could affect their personal economic interests.

The code requires individuals holding those positions to periodically file Form 700 disclosing certain personal economic interests as determined by the code's "disclosure categories." These individuals are called "designated employees" or "code filers."

Obtain your disclosure categories from your agency – they are not contained in the Form 700. Persons with broad decisionmaking authority must disclose more interests than those in positions with limited discretion. For example, you may be required to disclose only investments and business positions in or income (including loans, gifts, and travel payments) from businesses of the type that contract with your agency, or you may not be required to disclose real property interests.

In addition, certain consultants to public agencies may qualify as public officials because they make, participate in making, or act in a staff capacity for governmental decisions. Agencies determine who is a consultant and the level of disclosure and may use Form 805.

Note: An official who holds a position specified in Gov. Code Section 87200 is not required to file statements under the conflict of interest code of any agency that has the same or a smaller jurisdiction (for example, a state legislator who also sits on a state or local board or commission).

Employees in Newly Created Positions of Existing Agencies
An individual hired for a position not yet covered under an agency's conflict of interest code must file Form 700 if the individual serves in a position that makes or participates in making governmental decisions. These individuals must file under the agency's broadest disclosure category until the code is amended to include the new position unless the agency has provided in writing a limited disclosure requirement. The Form 804 may be used to satisfy this requirement.

# Types of Form 700 Filings

### Assuming Office Statement:

If you are a newly appointed official or are newly employed in a position designated, or that will be designated, in a state or local agency's conflict of interest code, your assuming office date is the date you were sworn in or otherwise authorized to serve in the position. If you are a newly elected official, your assuming office date is the date you were sworn in.

- Report: Investments, interests in real property, and business positions held on the date you assumed the office or position must be reported. In addition, income (including loans, gifts, and travel payments) received during the 12 months prior to the date you assumed the office or position.

For positions subject to confirmation by the State Senate or the Commission on Judicial Appointments, your assuming office date is the date you were appointed or nominated to the position.

- Example: Maria Lopez was nominated by the Governor to serve on a state agency board that is subject to state Senate confirmation. The assuming office date is the date Maria's nomination is submitted to the Senate. Maria must report investments, interests in real property, and business positions she holds on that date, and income (including loans, gifts, and travel payments) received during the 12 months prior to that date.

If your office or position has been added to a newly adopted or newly amended conflict of interest code, use the effective date of the code or amendment, whichever is applicable.

- Report: Investments, interests in real property, and business positions held on the effective date of the code or amendment must be reported. In addition, income (including loans, gifts, and travel payments) received during the 12 months prior to the effective date of the code or amendment.

### Annual Statement:

Generally, the period covered is January 1, 2023, through December 31, 2023. If the period covered by the statement is different than January 1, 2023, through December 31, 2023, (for example, you assumed office between October 1, 2022, and December 31, 2022 or you are combining statements), you must specify the period covered.

- Investments, interests in real property, business positions held, and income (including loans, gifts, and travel payments) received during the period covered by the statement must be reported. Do not change the preprinted dates on Schedules A-1, A-2, and B unless you are required to report the acquisition or disposition of an interest that did not occur in 2023.
- If your disclosure category changes during a reporting period, disclose under the old category until the effective date of the conflict of interest code amendment and disclose under the new disclosure category through the end of the reporting period.

### Leaving Office Statement:

Generally, the period covered is January 1, 2023, through the date you stopped performing the duties of your position. If the period covered differs from January 1, 2023, through the date you stopped performing the duties of your position (for example, you assumed office between October 1, 2022, and December 31, 2022, or you are combining statements), the period covered must be specified. The reporting period can cover parts of two calendar years.

- Report: Investments, interests in real property, business positions held, and income (including loans, gifts, and travel payments) received during the period covered by the statement. Do not change the preprinted dates on Schedules A-1, A-2, and B unless you are required to report the acquisition or disposition of an interest that did not occur in 2023.

### Candidate Statement:

If you are filing a statement in connection with your candidacy for state or local office, investments, interests in real property, and business positions held on the date of filing your declaration of candidacy must be reported. In addition, income (including loans, gifts, and travel payments) received during the 12 months prior to the date of filing your declaration of candidacy is reportable. Do not change the preprinted dates on Schedules A-1, A-2, and B.

Candidates running for local elective offices (e.g., county sheriffs, city clerks, school board trustees, or water district board members) must file candidate statements, as required by the conflict of interest code for the elected position. The code may be obtained from the agency of the elected position.

### Amendments:

If you discover errors or omissions on any statement, file an amendment as soon as possible. You are only required to amend the schedule that needs to be revised; it is not necessary to refile the entire form. The amended schedule(s) is attached to your original filed statement. Obtain amendment schedules from the FPPC website at *www.fppc.ca.gov.*

# Where to File

### 1. Officials Specified in Gov. Code Section 87200 (See Reference Pamphlet, page 3):

In most cases, the filing officials listed below will retain a copy of your statement and forward the original to the FPPC.

| Filers | Where to File |
|---|---|
| **87200 Filers** | |
| State offices | Your agency |
| Judicial offices | The clerk of your court |
| Retired Judges | Directly with FPPC |
| County offices | Your county filing official |
| City offices | Your city clerk |
| Multi-County offices | Your agency |
| **87200 Candidates** | |
| State offices<br>Judicial offices<br>Multi-County offices | County elections official with whom you file your declaration of candidacy |
| County offices | County elections official |
| City offices | City Clerk |
| Public Employees' Retirement System (CalPERS) | CalPERS |
| State Teachers' Retirement Board (CalSTRS) | CalSTRS |

**Note:** Individuals that invest public funds for a city or county agency must file Form 700 with the agency. Unlike most other 87200 filers, the original statement will **not** be forwarded to the FPPC pursuant to Regulation 18753.

### 2. Code Filers — State and Local Officials, Employees, Candidates, and Consultants Designated in a Conflict of interest Code:

File with your agency, board, or commission unless otherwise specified in your agency's conflict of interest code. In most cases, the agency, board, or commission will retain the statements.

Candidates for local elective offices designated in a conflict of interest code file with the elections office where the declaration of candidacy or other nomination documents are filed.

### 3. Members of Newly Created Boards and Commissions:

File with your agency or with your agency's code reviewing body. See Regulation 18754.

State Senate and Assembly staff members file statements directly with the FPPC.

Exceptions:

- Elected state officers are not required to file statements under any agency's conflict of interest code.
- Filers listed in Section 87200 are not required to file statements under any agency's conflict of interest code in the same jurisdiction. For example, a county supervisor who is appointed to serve in an agency with jurisdiction in the same county has no additional filing obligations.

### 4. Positions Not Yet Covered Under a Conflict of interest Code

An individual hired for a position not yet covered under an agency's conflict of interest code must file Form 700 if the individual serves in a position that makes or participates in making governmental decisions. These individuals must file under the broadest disclosure category until the code is amended to include the new position unless the agency has provided in writing a limited disclosure requirement. Agencies may use FPPC Form 804 for this disclosure. Such individuals are referred to as "code filers." See Regulation 18734.

# When to File

### Assuming Office Statements:

| Filer | Deadline |
|---|---|
| Elected officials | **30 days** after assuming office |
| Appointed positions specified in Gov. Code Section 87200<br>**or**<br>Members of newly created boards and commissions not covered by a conflict of interest code | **30 days** after assuming office<br>**or**<br>**10 days** after appointment or nomination if subject to Senate or judicial confirmation |
| Other appointed positions (including those held by newly-hired employees) that are or will be designated in a conflict of interest code | **30 days** after assuming office (30 days after appointment or nomination if subject to Senate confirmation) |
| Positions newly added to a new or amended conflict of interest code | **30 days** after the effective date of the code or code amendment |

Exceptions:

- Elected state officers who assume office in December or January are not required to file an assuming office statement, but will file the next annual statement due.
- If you complete a term of office and, within 30 days, begin a new term of the same office (for example, you are reelected or reappointed), you are not required to file an assuming office statement. Instead, you will simply file the next annual statement due.
- If you leave an office specified in Gov. Code Section 87200 and, within 45 days, you assume another office or position specified in Section 87200 that has the same jurisdiction (for example, a city planning commissioner elected as mayor), you are not required to file an assuming office statement. Instead, you will simply file the next annual statement due.
- If you transfer from one designated position to another designated position within the same agency, contact your filing officer or the FPPC to determine your filing obligations.
- If a due date falls on a weekend or an official state holiday, the due date is the next regular business day.

**Late statements are subject to a late fine of $10 per day per position up to $100 for each day the statement is late.**

### Annual Statements:

1. Elected state officers (including members of the state legislature, members elected to the Board of Administration of the California Public Employees' Retirement System and members elected to the Teachers' Retirement Board);
   Judges and court commissioners; and
   Members of state boards and commissions specified in Gov. Code Section 87200:
   File no later than **Friday, March 1, 2024.**
2. County and city officials specified in Gov. Code Section 87200:
   File no later than **Tuesday, April 2, 2024.**
3. Multi-County officials:
   File no later than **Tuesday, April 2, 2024.**
4. State and local officials and employees designated in a conflict of interest code:
   File on the date prescribed in the code (April 2 for most filers).

Exception:

If you assumed office between October 1, 2023, and December 31, 2023, and filed an assuming office statement, you are not required to file an annual statement until March 1, 2025, or April 1, 2025, whichever is applicable. The annual statement will cover the day you assumed office through December 31, 2024.

Incumbent officeholders who file candidate statements also must file annual statements by the specified deadlines.

# When to File - (continued)

### Leaving Office Statements:

Leaving office statements must be filed no later than 30 days after leaving the office or position.

Exceptions:

- If you complete a term of office and, within 30 days, begin a new term of the same office (for example, you are reelected or reappointed), you are not required to file a leaving office statement. Instead, you will simply file the next annual statement due.
- If you leave an office specified in Gov. Code Section 87200 and, within 45 days, you assume another office or position specified in Section 87200 that has the same jurisdiction (for example, a city planning commissioner elected as mayor), you are not required to file a leaving office statement. Instead, you will simply file the next annual statement due.
- If you transfer from one designated position to another designated position within the same agency, contact your filing officer or the FPPC to determine your filing obligations.

### Candidate Statements:

All candidates (including incumbents) for offices specified in Gov. Code Section 87200 must file statements no later than the final filing date for their declaration of candidacy.

Candidates seeking a position designated in a conflict of interest code must file no later than the final filing date for the declaration of candidacy or other nomination documents.

Exception:

A candidate statement is not required if you filed an assuming office or annual statement for the same jurisdiction **within 60 days** before filing a declaration of candidacy or other nomination documents.

### Late Statements:

Late statements should be submitted as soon as possible after the filing deadline, in the same manner and place as a timely filed statement.

The filing officer who retains originally-signed or electronically filed statements of economic interests may impose on an individual a fine for any statement that is filed late. The fine is $10 per day up to a maximum of $100. Late filing penalties may be reduced or waived under certain circumstances.

Persons who fail to timely file their Form 700 may be referred to the FPPC's Enforcement Division (and, in some cases, to the Attorney General or District Attorney) for investigation and possible prosecution. In addition to the late filing penalties from the filing officer, a fine of up to $5,000 per violation may be imposed.

# Terms & Definitions

The instructions located on the back of each schedule describe the types of interests that must be reported. The purpose of this section is to explain other terms used in Form 700 that are not defined in the instructions to the schedules or elsewhere.

**Blind Trust:** See Trusts, Reference Pamphlet, page 16.

**Business Entity**: Any organization or enterprise operated for profit, including a proprietorship, partnership, firm, business trust, joint venture, syndicate, corporation, or association. This would include a business for which you take business deductions for tax purposes (for example, a small business operated in your home). When reporting a business entity on the Form 700, do not use acronyms for the name of entity, unless it is one that is commonly understood by the public.

**Code Filer:** An individual who has been designated in a state or local agency's conflict of interest code to file statements of economic interests.

An individual hired on or after January 1, 2023 for a position not yet covered under an agency's conflict of interest code must file Form 700 if the individual serves in a position that makes or participates in making governmental decisions. These individuals must file under the broadest disclosure category until the code is amended to include the new position unless the agency has provided in writing a limited disclosure requirement. Agencies may use FPPC Form 804 for such disclosure. See Regulation 18734.

**Commission Income:** "Commission income" means gross payments of $500 or more received during the period covered by the statement as a broker, agent, or salesperson, including insurance brokers or agents, real estate brokers or agents, travel agents or salespersons, stockbrokers, and retail or wholesale salespersons, among others.

In addition, you may be required to disclose the names of sources of commission income if your pro rata share of the gross income was $10,000 or more from a single source during the reporting period. If your spouse or registered domestic partner received commission income, you would disclose your community property share (50%) of that income (that is, the names of sources of $20,000 or more in gross commission income received by your spouse or registered domestic partner).

Report commission income as follows:

- If the income was received through a business entity in which you and your spouse or registered domestic partner had a 10% or greater ownership interest (or if you receive commission income on a regular basis as an independent contractor or agent), use Schedule A-2.
- If the income was received through a business entity in which you or your spouse or registered domestic partner did not receive commission income on a regular basis or you had a less than 10% ownership interest, use Schedule C.

The "source" of commission income generally includes all parties to a transaction, and each is attributed the full value of the commission.

Examples:

- You are a partner in Jameson and Mulligan Insurance Company and have a 50% ownership interest in the company. You sold two American Insurance Company policies to XYZ Company during the reporting period. You received commission income of $5,000 from the first transaction and $6,000 from the second. On Schedule A-2, report your partnership interest in and income received from Jameson and Mulligan Insurance Company in Parts 1 and 2. In Part 3, list both American Insurance Company and XYZ Company as sources of $10,000 or more in commission income.
- You are a stockbroker for Prince Investments, but you have no ownership interest in the firm. You receive commission income on a regular basis through the sale of stock to clients. Your total gross income from your employment with Prince Investments was over $100,000 during the reporting period. On Schedule A-2, report your name as the name of the business entity in Part 1 and the gross income you have received in Part 2. (Because you are an employee of Prince Investments, you do not need to complete the information in the box in Part 1 indicating the general description of business activity, fair market value, or nature of investment.) In Part 3, list Prince Investments and the names of any clients who were sources of $10,000 or more in commission income to you.
- You are a real estate agent and an independent contractor under Super Realty. On Schedule A-2, Part 1, in addition to your name or business name, complete the business entity description box. In Part 2, identify your gross income. In Part 3, for each transaction that resulted in commission income to you of $10,000 or more, you must identify the brokerage entity, each person you represented, and any person who received a finder's or other referral fee for referring a party to the transaction to the broker.

Note: If your pro rata share of commission income from a single source is $500 or more, you may be required to disqualify yourself from decisions affecting that source of income, even though you are not required to report the income. *(See Reference Pamphlet, page 12.)*

# Terms & Definitions - (continued)

**Conflict of Interest:** A public official or employee has a conflict of interest under the Act when all of the following occur:

- The official makes, participates in making, or uses their official position to influence a governmental decision;
- It is reasonably foreseeable that the decision will affect the official's economic interest;
- The effect of the decision on the official's economic interest will be material; and
- The effect of the decision on the official's economic interest will be different than its effect on the public generally.

**Conflict of Interest Code:** The Act requires every state and local government agency to adopt a conflict of interest code. The code may be contained in a regulation, policy statement, or a city or county ordinance, resolution, or other document.

An agency's conflict of interest code must designate all officials and employees of, and consultants to, the agency who make or participate in making governmental decisions that could cause conflicts of interest. These individuals are required by the code to file statements of economic interests and to disqualify themselves when conflicts of interest occur.

The disclosure required under a conflict of interest code for a particular designated official or employee should include only the kinds of personal economic interests they could significantly affect through the exercise of their official duties. For example, an employee whose duties are limited to reviewing contracts for supplies, equipment, materials, or services provided to the agency should be required to report only those interests they hold that are likely to be affected by the agency's contracts for supplies, equipment, materials, or services.

**Consultant:** An individual who contracts with or whose employer contracts with state or local government agencies and who makes, participates in making, or acts in a staff capacity for making governmental decisions. The agency determines who is a consultant. Consultants may be required to file Form 700. Such consultants would file under full disclosure unless the agency provides in writing a limited disclosure requirement. Agencies may use FPPC Form 805 to assign such disclosure. The obligation to file Form 700 is always imposed on the individual who is providing services to the agency, not on the business or firm that employs the individual.

FPPC Regulation 18700.3 defines "consultant" as an individual who makes a governmental decision whether to:

- Approve a rate, rule, or regulation
- Adopt or enforce a law
- Issue, deny, suspend, or revoke any permit, license, application, certificate, approval, order, or similar authorization or entitlement
- Authorize the agency to enter into, modify, or renew a contract provided it is the type of contract that requires agency approval
- Grant agency approval to a contract that requires agency approval and to which the agency is a party, or to the specifications for such a contract
- Grant agency approval to a plan, design, report, study, or similar item
- Adopt, or grant agency approval of, policies, standards, or guidelines for the agency or for any of its subdivisions

A consultant also is an individual who serves in a staff capacity with the agency and:

- participates in making a governmental decision; or
- performs the same or substantially all the same duties for the agency that would otherwise be performed by an individual holding a position specified in the agency's conflict of interest code.

**Designated Employee:** An official or employee of a state or local government agency whose position has been designated in the agency's conflict of interest code to file statements of economic interests or whose position has not yet been listed in the code but makes or participates in making governmental decisions. Individuals who contract with government agencies (consultants) may also be designated in a conflict of interest code.

A federal officer or employee serving in an official federal capacity on a state or local government agency is not a designated employee.

**Digital Signature:** Under the Act and Commission regulations, the Form 700s may be filed with a "digital signature," which may be used to sign documents electronically, if permitted by the filing officer. A digital signature is a type of certificate-based electronic signature that offers increased security to ensure the identity of the signer and prevent the alteration of documents after signing. For more information on how to use a digital signature, please refer to the Filing with a Digital Signature Fact Sheet on the FPPC's website.

For filing officers required to forward original statements filed via digital signature to the FPPC, the filing officer must verify the signature on the statement, and forward the statement via email to the FPPC at Form700@fppc.ca.gov. Do not mail the FPPC a copy of a Form 700 with a digital signature affixed.

# Terms & Definitions - (continued)

**Disclosure Categories:** The section of an agency's conflict of interest code that specifies the types of personal economic interests officials and employees of the agency must disclose on their statements of economic interests. Disclosure categories are usually contained in an appendix or attachment to the conflict of interest code. Contact your agency to obtain a copy of your disclosure categories.

**Diversified Mutual Fund:** Diversified portfolios of stocks, bonds, or money market instruments that are managed by investment companies whose business is pooling the money of many individuals and investing it to seek a common investment goal. Mutual funds are managed by trained professionals who buy and sell securities. A typical mutual fund will own between 75 to 100 separate securities at any given time so they also provide instant diversification. *Only diversified mutual funds registered with the Securities and Exchange Commission under the Investment Company Act of 1940 are exempt from disclosure.* In addition, Regulation 18237 provides an exception from reporting other funds that are similar to diversified mutual funds. (See Reference Pamphlet, page 13.)

**Elected State Officer:** Elected state officers include the Governor, Lieutenant Governor, Attorney General, Insurance Commissioner, State Controller, Secretary of State, State Treasurer, Superintendent of Public Instruction, members of the State Legislature, members of the State Board of Equalization, elected members of the Board of Administration of the California Public Employees' Retirement System and members elected to the Teachers' Retirement Board.

**Enforcement:** The FPPC investigates suspected violations of the Act. Other law enforcement agencies (the Attorney General or district attorney) also may initiate investigations under certain circumstances. If violations are found, the Commission may initiate administrative enforcement proceedings that could result in fines of up to $5,000 per violation.

Instead of administrative prosecution, a civil action may be brought for negligent or intentional violations by the appropriate civil prosecutor (the Commission, Attorney General, or district attorney), or a private party residing within the jurisdiction. In civil actions, the measure of damages is up to the amount or value not properly reported.

Persons who violate the conflict of interest disclosure provisions of the Act also may be subject to agency discipline, including dismissal.

Finally, a knowing or willful violation of any provision of the Act is a misdemeanor. Persons convicted of a misdemeanor may be disqualified for four years from the date of the conviction from serving as a lobbyist or running for elective office, in addition to other penalties that may be imposed. The Act also provides for numerous civil penalties, including monetary penalties and damages, and injunctive relief from the courts.

**Expanded Statement:** In some circumstances, an official or an employee who holds multiple positions subject to filing obligations (for example, a city council member who also holds a designated position with a county agency, board, or commission) may complete one expanded statement for all those positions. The expanded statement must disclose all reportable interests for all jurisdictions and list all positions for which it is filed. The rules and processes governing the filing of an expanded statement are set forth in Regulation 18723.1.

**Fair Market Value:** When reporting the value of an investment, interest in real property, or gift, you must disclose the fair market value – the price at which the item would sell for on the open market. This is particularly important when valuing gifts, because the fair market value of a gift may be different from the amount it cost the donor to provide the gift. For example, the wholesale cost of a bouquet of flowers may be $10, but the fair market value may be $25 or more. In addition, there are special rules for valuing free tickets and passes. Call or email the FPPC for assistance.

## Gift and Honoraria Prohibitions

**Gifts:**

State and local officials who are listed in Gov. Code Section 87200 (except judges – see below), candidates for these elective offices (including judicial candidates), and officials and employees of state and local government agencies who are designated in a conflict of interest code were prohibited from accepting a gift or gifts totaling more than $590 in a calendar year from a single source in 2023-2024.

In addition, elected state officers, candidates for elective state offices, and officials and employees of state agencies are subject to a $10 per calendar month limit on gifts from lobbyists and lobbying firms registered with the Secretary of State.

# Terms & Definitions - (continued)

**Honoraria:**

State and local officials who are listed in Gov. Code Section 87200 (except judges – see below), candidates for these elective offices (including judicial candidates), and employees of state and local government agencies who are designated in a conflict of interest code are prohibited from accepting honoraria for any speech given, article published, or attendance at any public or private conference, convention, meeting, social event, meal, or like gathering.

Exceptions:

- Some gifts are not reportable or subject to the gift and honoraria prohibitions, and other gifts may not be subject to the prohibitions, but are reportable. For detailed information, see the FPPC fact sheet entitled "Limitations and Restrictions on Gifts, Honoraria, Travel, and Loans," which can be obtained from your filing officer or the FPPC website (*www.fppc.ca.gov).*
- The gift limit and the honorarium prohibitions do not apply to a part-time member of the governing board of a public institution of higher education, unless the member is also an elected official.
- If you are designated in a state or local government agency's conflict of interest code, the gift limit and honorarium prohibition are applicable only to sources you would otherwise be required to report on your statement of economic interests. However, this exception is not applicable if you also hold a position listed in Gov. Code Section 87200 (See Reference Pamphlet, page 3.)
- For state agency officials and employees, the $10 lobbyist/lobbying firm gift limit is applicable only to lobbyists and lobbying firms registered to lobby your agency. This exception is not applicable if you are an elected state officer or a member or employee of the State Legislature.
- Payments for articles published as part of the practice of a bona fide business, trade, or profession, such as teaching, are not considered honoraria. A payment for an "article published" that is customarily provided in connection with teaching includes text book royalties and payments for academic tenure review letters. An official is presumed to be engaged in the bona fide profession of teaching if they are employed to teach at an accredited university.

Judges:

Section 170.9 of the Code of Civil Procedure imposes gift limits on judges and prohibits judges from accepting any honorarium. Section 170.9 is enforced by the Commission on Judicial Performance. The FPPC has no authority to interpret or enforce the Code of Civil Procedure. Court commissioners are subject to the gift limit under the Political Reform Act.

**Income Reporting:** Reporting income under the Act is different than reporting income for tax purposes. The Act requires **gross** income (the amount received before deducting losses, expenses, or taxes, as well as income reinvested in a business entity) to be reported.

Pro Rata Share: The instructions for reporting income refer to your pro rata share of the income received. Your pro rata share is normally based on your ownership interest in the entity or property. For example, if you are a sole proprietor, you must disclose 100% of the gross income to the business entity on Schedule A-2. If you own 25% of a piece of rental property, you must report 25% of the gross rental income received. When reporting your community property interest in your spouse's or registered domestic partner's income, your pro rata share is 50% of their income. You must also report the name of your spouse's or registered domestic partner's employer as the source of income, not the name of spouse or registered domestic partner.

Separate Property Agreement: Generally, a public official is required to disclose their community property share of their spouse's income. But, when a public official and their spouse have a legally separate property agreement (e.g., prenuptial agreement), the official is not required to report the spouse's community property share of income, unless the funds are commingled with community funds or used to pay for community expenses or to produce or enhance the separate income of the official.

***Note:*** This reporting exception does not apply to investments and interests in real property. Even if a public official and their spouse have a separate property agreement, the spouse's investments and interests in real property must still be disclosed because the definitions of reportable investments and interests in real property include those held by the official's immediate family (spouse, registered domestic partner, and dependent children). These definitions are not dependent on community property law.

Income to a Business Entity: When you are required to report sources of income to a business entity, sources of rental income, or sources of commission income, you are only required to disclose individual sources of income of $10,000 or more. However, you may be required to **disqualify** yourself from decisions affecting sources of $500 or more in income, even though you are not required to report them.

Examples:

- Alice Ruiz is a partner in a business entity. Alice has a 25% interest. On Schedule A-2, Alice must disclose 25% of the fair market value of the business entity; 25% of the gross income to the business entity (even though all of the income received was reinvested in

the business and Alice did not personally receive any income from the business); and the name of each source of $40,000 or more to the business.

- Pat and Mark Johnson, a married couple, own Classic Autos. Income to this business was $200,000. In determining the amount to report for income on Schedule A-2, Part 2, Mark must include Mark's 50% share ($100,000) and 50% of Mark's spouse's share ($50,000). Thus, Mark's reportable income would be $150,000 and Mark will check the box indicating $100,001-$1,000,000. (See Reference Pamphlet, page 13, for an example of how to calculate the value of this investment and interest in real property.)
- Renee Smith is an employee of a private company. Renee's employer offers the option of receiving a stipend in lieu of healthcare insurance provided by the employer. Since Renee Smith receives payments from their employer instead of healthcare insurance, Renee is required to report the gross income from the stipend payments. Renee would aggregate and report the total gross income received from both their stipend and salary on Schedule C.

**You are <u>not</u> required to report:**

- Salary, reimbursement for expenses or per diem, social security, disability, or other similar benefit payments received by you or your spouse or registered domestic partner from a federal, state, or local government agency
- A travel payment that was received from a nonprofit entity exempt from taxation under Internal Revenue Code Section 501(c)(3) for which you provided equal or greater consideration, such as reimbursement for travel on business for a 501(c)(3) organization for which you are a board member.
- Campaign contributions
- A cash bequest or cash inheritance
- Returns on a security registered with the Securities and Exchange Commission, including dividends, interest, or proceeds from a sale of stocks or bonds unless the purchaser can be identified.
- Redemption of a mutual fund
- Payments received under an insurance policy, such as life insurance policy payments, including an annuity
- Interest, dividends, or premiums on a time or demand deposit in a financial institution, shares in a credit union, an insurance policy, or a bond or other debt instrument issued by a government agency
- Your spouse's or registered domestic partner's income that is legally "separate" income so long as the funds are not commingled with community funds or used to pay community expenses
- Income of dependent children
- Automobile trade-in allowances from dealers
- Loans and loan repayments received from your spouse or registered domestic partner, child, parent, grandparent, grandchild, brother, sister, parent-in-law, brother-in-law, sister-in-law, nephew, niece, aunt, uncle, or first cousin unless they were acting as an intermediary or agent for any person not covered by this provision
- Alimony or child support payments
- Payments received under a defined benefit pension plan qualified under Internal Revenue Code Section 401(a)
- Any loan from a commercial lending institution made in the lender's regular course of business on terms available to the public without regard to your official status
- Any retail installment or credit card debts incurred in the creditor's regular course of business on terms available to the public without regard to your official status
- Loans made to others. However, repayments may be reportable on Schedule C
- A loan you co-signed for another person unless you made payments on the loan during the reporting period

**Incentive Compensation:** "Incentive compensation" means income over and above salary that is either ongoing or cumulative, or both, as sales or purchases of goods or services accumulate. Incentive compensation is calculated by a predetermined formula set by the official's employer which correlates to the conduct of the purchaser in direct response to the effort of the official.

Incentive compensation does not include:

- Salary
- Commission income *(For information regarding disclosure of "commission income," see Reference Pamphlet, page 8.)*
- Bonuses for activity not related to sales or marketing, the amount of which is based solely on merit or hours worked over and above a predetermined minimum
- Executive incentive plans based on company performance, provided that the formula for determining the amount of the executive's incentive income does not include a correlation between that amount and increased profits derived from increased business with specific and identifiable clients or customers of the company
- Payments for personal services which are not marketing or sales

# Terms & Definitions - (continued)

The purchaser is a source of income to the official if all three of the following apply:

- the official's employment responsibilities include directing sales or marketing activity toward the purchaser; and
- there is direct personal contact between the official and the purchaser intended by the official to generate sales or business; and
- there is a direct relationship between the purchasing activity of the purchaser and the amount of the incentive compensation received by the official.

Report incentive compensation as follows:

- In addition to salary, reimbursement of expenses, and other income received from your employer, separately report on Schedule C the name of each person who purchased products or services sold, marketed or represented by you if you received incentive compensation of $500 or more attributable to the purchaser during the period covered by the statement.
- If incentive compensation is paid by your employer in a lump sum, without allocation of amounts to specific customers, you must determine the amount of incentive compensation attributable to each of your customers. This may be based on the volume of sales to those customers.

(See Regulations 18700.1 and 18728.5 for more information.)

**Investment Funds:** The term "investment" no longer includes certain exchange traded funds, closed-end funds, or funds held in an Internal Revenue Code qualified plan. These non-reportable investment funds (1) must be bona fide investment funds that pool money from more than 100 investors, (2) must hold securities of more than 15 issuers, and (3) cannot have a stated policy of concentrating their holdings in the same industry or business ("sector funds"). In addition, the filer may not influence or control the decision to purchase or sell the specific fund on behalf of their agency during the reporting period or influence or control the selection of any specific investment purchased or sold by the fund. (See Regulation 18237.)

**Investments and Interests in Real Property:** When disclosing investments on Schedules A-1 or A-2 and interests in real property on Schedules A-2 or B, you must include investments and interests in real property held by your spouse or registered domestic partner, and those held by your dependent children, as if you held them directly.

Examples:

- Julia Pearson, spouse, and two dependent children each own $600 in stock in General Motors. Because the total value of their holdings is $2,400, Julia must disclose the stock as an investment on Schedule A-1.
- Pat and Mark Johnson, a married couple, jointly own Classic Autos. Mark must disclose Classic Autos as an investment on Schedule A-2. To determine the reportable value of the investment, Mark will aggregate the value of each of their 50% interest. Thus, if the total value of the business entity is $150,000, Mark will check the box $100,001 - $1,000,000 in Part 1 of Schedule A-2. (Also see Reference Pamphlet, page 12, for an example of how to calculate reportable income.)

  The Johnsons also own the property where Classic Autos is located. To determine the reportable value of the real property, Mark will again aggregate the value of each of their 50% interest to determine the amount to report in Part 4 of Schedule A-2.
- Katie Lee rents out a room in their home. Katie receives $6,000 a year in rental income. Katie will report the fair market value of the rental portion of the residence and the income received on Schedule B.

**Jurisdiction:** Report disclosable investments and sources of income (including loans, gifts, and travel payments) that are either located in or doing business in your agency's jurisdiction, are planning to do business in your agency's jurisdiction, or have done business during the previous two years in your agency's jurisdiction, and interests in real property located in your agency's jurisdiction.

A business entity is doing business in your agency's jurisdiction if the entity has business contacts on a regular or substantial basis with a person who maintains a physical presence in your jurisdiction.

Business contacts include, but are not limited to, manufacturing, distributing, selling, purchasing, or providing services or goods. Business contacts do not include marketing via the Internet, telephone, television, radio, or printed media.

The same criteria are used to determine whether an individual, organization, or other entity is doing business in your jurisdiction.

Exception:

Gifts are reportable regardless of the location of the donor. For example, a state agency official with full disclosure must report gifts from sources located outside of California. (Designated employees/code filers should consult their disclosure categories to determine if the donor of a gift is of the type that must be disclosed.)

When reporting interests in real property, if your jurisdiction is the state, you must disclose real property located within the state of California unless your agency's conflict of interest code specifies otherwise.

# Terms & Definitions - (continued)

For local agencies, an interest in real property is located in your jurisdiction if any part of the property is located in, or within two miles of, the region, city, county, district, or other geographical area in which the agency has jurisdiction, or if the property is located within two miles of any land owned or used by the agency.

See the following explanations to determine what your jurisdiction is:

State Offices and All Courts: Your jurisdiction is the state if you are an elected state officer, a state legislator, or a candidate for one of these offices. Judges, judicial candidates, and court commissioners also have statewide jurisdiction. (*In re Baty* (1979) 5 FPPC Ops. 10) If you are an official or employee of, or a consultant to, a state board, commission, or agency, or of any court or the State Legislature, your jurisdiction is the state.

County Offices: Your jurisdiction is the county if you are an elected county officer, a candidate for county office, or if you are an official or employee of, or a consultant to, a county agency or any agency with jurisdiction solely within a single county.

City Offices: Your jurisdiction is the city if you are an elected city officer, a candidate for city office, or you are an official or employee of, or a consultant to, a city agency or any agency with jurisdiction solely within a single city.

Multi-County Offices: If you are an elected officer, candidate, official or employee of, or a consultant to a multi-county agency, your jurisdiction is the region, district, or other geographical area in which the agency has jurisdiction. (Example: A water district has jurisdiction in a portion of two counties. Members of the board are only required to report interests located or doing business in that portion of each county in which the agency has jurisdiction.)

Other (for example, school districts, special districts and JPAs): If you are an elected officer, candidate, official or employee of, or a consultant to an agency not covered above, your jurisdiction is the region, district, or other geographical area in which the agency has jurisdiction. See the multi-county example above.

**Leasehold Interest:** The term "interest in real property" includes leasehold interests. An interest in a lease on real property is reportable if the value of the leasehold interest is $2,000 or more. The value of the interest is the total amount of rent owed by you during the reporting period or, for a candidate or assuming office statement, during the prior 12 months.

You are not required to disclose a leasehold interest with a value of less than $2,000 or a month-to-month tenancy.

**Loan Reporting:** Filers are not required to report loans from commercial lending institutions or any indebtedness created as part of retail installment or credit card transactions that are made in the lender's regular course of business, without regard to official status, on terms available to members of the public.

**Loan Restrictions:** State and local elected and appointed public officials are prohibited from receiving any personal loan totaling more than $250 from an official, employee, or consultant of their government agencies or any government agency over which the official or the official's agency has direction or control. In addition, loans of more than $250 from any person who has a contract with the official's agency or an agency under the official's control are prohibited unless the loan is from a commercial lending institution or part of a retail installment or credit card transaction made in the regular course of business on terms available to members of the public.

State and local elected officials are also prohibited from receiving any personal loan of $500 or more unless the loan agreement is in writing and clearly states the terms of the loan, including the parties to the loan agreement, the date, amount, and term of the loan, the date or dates when payments are due, the amount of the payments, and the interest rate on the loan.

Campaign loans and loans from family members are not subject to the $250 and $500 loan prohibitions.

A personal loan made to a public official that is not being repaid or is being repaid below certain amounts will become a gift to the official under certain circumstances. Contact the FPPC for further information, or see the FPPC fact sheet entitled "Limitations and Restrictions on Gifts, Honoraria, Travel, and Loans," which can be obtained from your filing officer or the FPPC website *(www.fppc.ca.gov).*

**Original Statement:** A statement containing either a handwritten "wet" signature or a "secure electronic signature" signed under the penalty of perjury and verified by the filer pursuant to Gov. Code Section 81004. A "secure electronic signature" means either (1) a signature submitted using an approved electronic filing system or (2) if permitted by the filing officer, a digital signature submitted via the filer's agency email address. (See Regulations 18104 and 18757.)

**Privileged Information:** FPPC Regulation 18740 sets out specific procedures that must be followed in order to withhold the name of a source of income. Under this regulation, you are not required to disclose on Schedule A-2, Part 3, the name of a person who paid fees or made payments to a business entity if disclosure of the name would violate a legally recognized privilege under California

or Federal law. However, you must provide an explanation for nondisclosure, separately stating for each undisclosed person: the legal basis for the assertion of the privilege, facts demonstrating why the privilege is applicable, and that to the best of your knowledge you have not and will not make, participate in making, or use your official position to influence a governmental decision affecting the undisclosed person in violation of Government Code Section 87100. This explanation may be included with, or attached to, the public official's Form 700.

We note that the name of a source of income is privileged only to a limited extent under California law. For example, a name is protected by attorney-client privilege only when facts concerning an attorney's representation of an anonymous client are not publicly known and those facts, when coupled with disclosure of the client's identity, might expose the client to an official investigation or to civil or criminal liability. A patient's name is protected by physician-patient privilege only when disclosure of the patient's name would also reveal the nature of the treatment received by the patient. A patient's name is also protected if the disclosure of the patient's name would constitute a violation by an entity covered under the Federal Health Insurance Portability and Accountability Act (also known as HIPAA).

**Public Officials Who Manage Public Investments:** Individuals who invest public funds in revenue-producing programs must file Form 700. This includes individuals who direct or approve investment transactions, formulate or approve investment policies, and establish guidelines for asset allocations. FPPC Regulation 18700.3 defines "public officials who manage public investments" to include the following:

- Members of boards and commissions, including pension and retirement boards or commissions, and committees thereof, who exercise responsibility for the management of public investments;
- High-level officers and employees of public agencies who exercise primary responsibility for the management of public investments (for example, chief or principal investment officers or chief financial managers); and
- Individuals who, pursuant to a contract with a state or local government agency, perform the same or substantially all the same functions described above.

**Registered Domestic Partners:** Filers must report investments and interests in real property held by, and sources of income to, registered domestic partners. (See Regulation 18229.)

**Retirement Accounts (for example, deferred compensation and individual retirement accounts (IRAs)):** Assets held in retirement accounts must be disclosed if the assets are reportable items, such as common stock (investments) or real estate (interests in real property). For help in determining whether your investments and real property are reportable, see the instructions to Schedules A-1, A-2, and B.

If your retirement account holds reportable assets, disclose only the assets held in the account, not the account itself. You may have to contact your account manager to determine the assets contained in your account.

Schedule A-1: Report any business entity in which the value of your investment interest was $2,000 or more during the reporting period. (Use Schedule A-2 if you have a 10% or greater ownership interest in the business entity.)

Schedule B: Report any piece of real property in which the value of your interest was $2,000 or more during the reporting period.

Examples:

- Anaya Tiwari deposits $500 per month into the employer's deferred compensation program. Anaya has chosen to purchase shares in two diversified mutual funds registered with the Securities and Exchange Commission. Because Anaya's funds are invested solely in non-reportable mutual funds (see Schedule A-1 instructions), Anaya has no disclosure requirements with regard to the deferred compensation program.
- Earl James Jones has $6,000 in an individual retirement account with an investment firm. The account contains stock in several companies doing business in his jurisdiction. One of the stock holdings, Misac Computers, reached a value of $2,500 during the reporting period. The value of the investment in each of the other companies was less than $2,000. Earl must report Misac Computers as an investment on Schedule A-1 because the value of the stock in that company was $2,000 or more.
- Adriane Fisher has $5,000 in a retirement fund that invests in real property located in Adriane's jurisdiction. The value of Adriane's interest in each piece of real property held in the fund was less than $2,000 during the reporting period. Although this retirement fund holds reportable assets, there is no disclosure requirement because it did not have a $2,000 or greater interest in any single piece of real property. If, in the future, the value of Adriane's interest in a single piece of real property reaches or exceeds $2,000, it will be required to be disclosed on Schedule B for that reporting period.

# Terms & Definitions - (continued)

**Trusts:** Investments and interests in real property held and income received by a trust (including a living trust) are reported on Schedule A-2 if you, your spouse or registered domestic partner, and your dependent children together had a 10% or greater interest in the trust and your pro rata share of a single investment or interest in real property was $2,000 or more.

You have an interest in a trust if you are a trustor and:

- Can revoke or terminate the trust;
- Have retained or reserved any rights to the income or principal of the trust or retained any reversionary or remainder interest; or
- Have retained any power of appointment, including the power to change the trustee or the beneficiaries.

Or you are a beneficiary and:

- Presently receive income (see Gov. Code Section 82030); or
- Have an irrevocable future right to receive income or principal. (See FPPC Regulation 18234 for more information.)

Examples:

- Sarah Murphy has set up a living trust that holds Sarah's principal residence, stock in several companies that do business in the jurisdiction, and a rental home in the agency's jurisdiction. Since Sarah is the trustor and can revoke or terminate the trust, Sarah must disclose any stock worth $2,000 or more and the rental home on Schedule A-2. Sarah's residence is not reportable because it is used exclusively as a personal residence.
- Chao Yee is listed as a beneficiary in a family's trust. However, Chao does not presently receive income from the trust, nor an irrevocable future right to receive income or principal. Therefore, Chao is not required to disclose any assets contained in the family trust.

**Blind Trusts:**

A blind trust is a trust managed by a disinterested trustee who has complete discretion to purchase and sell assets held by the trust. If you have a direct, indirect, or beneficial interest in a blind trust, you may not be required to disclose your pro rata share of the trust's assets or income. However, the trust must meet the standards set out in FPPC Regulation 18235, and you must disclose reportable assets originally transferred into the blind trust and income from those original assets on Schedule A-2 until they have been disposed of by the trustee.

**Trustees:**

If you are only a trustee, you do not have a reportable interest in the trust. However, you may be required to report the income you received from the trust for performing trustee services.

**Wedding Gifts:** Wedding gifts must be disclosed if they were received from a reportable source during the period covered by the statement. Gifts valued at $50 or more are reportable; however, a wedding gift is considered a gift to both spouses equally. Therefore, you would count one-half of the value of a wedding gift to determine if it is reportable and need only report individual gifts with a total value of $100 or more.

For example, you receive a place setting of china valued at $150 from a reportable source as a wedding gift. Because the value to you is $50 or more, you must report the gift on Schedule D, but may state its value as $75.

Wedding gifts are not subject to the $590 gift limit ($590 in 2023-2024), but they are subject to the $10 lobbyist/ lobbying firm gift limit for state officials.

## Privacy Information Notice

Information requested on all FPPC forms is used by the FPPC to administer and enforce the Political Reform Act (Gov. # APPENDIX B - ETHICS (AB 1234)

# AB 1234 Self-Study Materials

## Part I: Financial Interests and Perks

AB 1234 requires elected and appointed officials to take *two hours* of ethics training if they receive compensation for their service or are reimbursed for their expenses.[1] The ethics training requirement may also apply to agency employees designated by the agency's legislative body.[2]

There are many ways to satisfy this requirement, including in-person training and self-study activities. Moreover, like all ethics laws, AB 1234 is a floor, not a ceiling. Local officials can demonstrate their commitment to ethics in public service by going beyond AB 1234's minimum requirements.

This self-study exercise is eligible for *one hour* of AB 1234 self-study credit (or half of the minimum requirement). To claim self-study credit, log on to www.ca-ilg.org/AB1234selfstudy, print out and take the test, mail it to the address indicated with the $37.50 processing fee. This fee covers grading the test, providing the correct answers (and explanations) and your proof of participation certificate.

### Scope of This Self-Study Exercise

These materials cover the first two areas of ethics training required by AB 1234:

- Laws relating to personal financial gain by public officials (including bribery and conflict of interest laws); and
- Laws relating to office-holder perks, including gifts and travel restrictions, personal and political use of public resources and prohibitions against gifts of public funds.[3]

It also covers ethics principles related to these laws and ethics in public service in general.

Self-study materials that cover governmental transparency and fair process laws may be found here: www.ca-ilg.org/post/ab-1234-self-study.

Note that public service ethics laws are extraordinarily complex. The learning objective of both self-study and in-person AB 1234 training courses is to familiarize local officials with when they need to consult agency counsel, the Attorney General or the Fair Political Practices Commission about a given situation or course of action.

Moreover, the ethics laws and training requirements of AB 1234 are both *minimum* standards. Just because a course of action is legal doesn't mean that it is ethical or that the public or media will perceive it to be so. Local officials are strongly encouraged to go beyond the minimum standards set forth in the law and participate in additional educational activities relating to their legal and ethical obligations as public servants.

### Financial Gain

***Key Concepts***

The principle underlying the financial gain laws is that the possibility of personal financial gain or loss cannot be a factor in your decisions as a public official. The laws in this area are designed to promote the general

ethical values of *responsibility* and *trustworthiness*. Public servants have a responsibility to act always in the public's interest, and the public needs to be able to trust that they will.

***Key Laws***

The following laws are designed to avoid both the reality and the appearance of personal financial gain influencing public servants' actions.

- **Bribery.** Requesting, receiving or agreeing to receive money in exchange for an official action is a crime. Under the state's criminal laws, a "bribe" includes anything of value; it also includes receiving "advantages." [4]The advantage can be a future one and need not involve the payment of money.[5]
- **Disqualification Based on Financial Interests.** A public official may not make, participate in or influence a governmental decision that will have a foreseeable and material financial effect on the official, the official's immediate family or any of the official's economic interests.[6] Note the breadth of the prohibition: it does not just apply to voting, but the entire process leading up to voting.
- **Interests in Contracts Prohibited.** A public official may not have a financial interest in any contract made by the board or body of which the official is a member.[7] The law is very strict on this point. Such contracts are void—meaning that the public agency will not have to pay the official for the benefits provided to the agency under the contract.[8] Under most circumstances, the prohibition cannot be avoided by disqualifying oneself from participating in the decision on the contract.
- **Helping Prospective Employers.** A public official may not influence agency decisions when the interests of a prospective employer are at stake.[9] This situation arises when someone is negotiating or has "any arrangement" concerning prospective employment with someone with business before the agency.
- **Revolving Door.** Elected officials and top-level managers cannot represent individuals or entities before their agencies for one-year after leaving office.[10]

*Note that some local agencies have adopted even more restrictive prohibitions.*

### The "Leave the Room" Requirement

If you are disqualified from participating on a specific agenda item under the conflict of interest rules established by the Political Reform Act, you must:[11]

- At the meeting, publicly identify the financial interest or potential conflict of interest in sufficient detail to be understood by the public.
- Not attempt to influence the decision in any way (this includes pre-meeting discussions with staff or colleagues).
- Refrain from discussing or voting on the matter (you should ask the item to be considered separately if it is on the consent calendar).
- Leave the room until after the discussion, vote and any other disposition of the matter, unless the matter is on the consent calendar.

There are limited exceptions that allow a disqualified official to remain in the room and participate in the discussion as a member of the public when one's "personal interests" are at stake. Consult with your agency attorney about what kinds of personal interests qualify.

## Consequences of Missteps

The consequences of violating these requirements can be severe. They include criminal felony or misdemeanor prosecutions. Conviction can involve substantial fines, jail time and loss of office. Civil fines can also add up. For example, the administrative penalty for violation of the Political Reform Act is a fine of up to $5,000 per violation. In most instances, officials targeted for civil enforcement actions will pay tens of thousands of dollars in defense costs, significantly more in criminal cases.

There can also be other kinds of negative consequences. For example, if an official violates proscriptions against self-dealing relating to contracts, the official may have to refund amounts paid under the contract. If a decision is tainted by the participation of someone who should have disqualified him or herself, the decision is subject to invalidation.

## Financial Interests Affected by an Agency Decision:

***When to Seek an Attorney's Advice***

Talk with your agency attorney when 1) an action by your public agency 2) may affect (positively or negatively 3) any of the following:

**Income.** Any source of income of $500 or more (including promised income) during the prior 12 months for you or spouse/domestic partner.

**Real Property.** A direct or indirect interest in real property of $2,000 or more that you or your immediate family (spouse/domestic partner and dependent children) have, including such interests as ownership, leaseholds (but not month-to-month tenancies) and options to purchase, especially when any of these are located within 500 feet of the subject of your decision.

**Personal Finances.** Your or your immediate family's (spouse/domestic partner and dependent children) personal expenses, income, assets, or liabilities.

**Gift Giver.** A giver of a gift of $520 (for 2021-22) or more to you in the prior 12 months, including promised gifts.

**Lender/Guarantor.** A source of a loan (including a loan guarantor) to you.

**Contract.** You or a member of your family would have an interest (direct or indirect) in a contract with the agency.

**Business Management or** Employment**.** An entity for which you serve as a director, officer, partner, trustee, employee, or manager.

**Business Investment.** An interest in a business in which you or your immediate family (spouse/domestic partner and dependent children) have a direct or indirect investment worth $2,000 or more.

**Related Business Entity.** An interest a business that is the parent, subsidiary or is otherwise related to a business if you:

- Have a direct or indirect investment worth $2,000 or more; or
- Are a director, officer, partner, trustee, employee, or manager.

**Business Entity Owning Property.** A direct or indirect ownership interest in a business entity or trust of yours that owns real property.

**Campaign Contributor.** A campaign contributor of yours (if you are sitting on an appointed decision-making body).

**Other Personal Interests and Biases.** You have important, but non-financial, personal interests or biases (positive or negative) about the facts or the parties that could prevent you from making a fair decision.

**What Will Happen Next?** Agency counsel will advise you whether 1) you can participate in the decision and, 2) if a contract is involved, whether the agency can enter into the contract at all. Counsel may suggest asking either the Fair Political Practices Commission or the State Attorney General to weigh in. Keep in mind the attorney's duty is to promote compliance with the ethics laws, not try to find ways around them.

## Personal Advantages and Perks

***Key Concepts***

The principle underlying the "no perks" laws is that one's status as a public servant and one's access to public resources should not afford special privileges. There are two categories of "no perk" laws. One relates to perks that others provide public officials (for example, gifts). The other involves advantages that officeholders provide themselves (for example, use of public resources).

The laws in this area are designed to promote the general ethical values of *fairness, responsibility* and *trustworthiness*. For example, receipt of perks from others undermines the public's trust that decision-makers are treating everyone who comes before them fairly and making decisions solely in the public's interests.

When officeholders give themselves perks, the public's trust that these officeholders are being careful and public-minded stewards of taxpayer resources is undermined. To the extent that some of these perks involve political advantages, they undermine the fairness of campaigns and elections.

## Key Laws

Generally speaking, the "no perks" laws bar some transactions and require disclosure of others. The laws are complex and the following will help you "spot" the issue so you can consult agency counsel for further information about the rules in a given instance.

- **Loans.** Officials cannot receive loans from those within the agency[12] or with whom the agency contracts (except for bank or credit card indebtedness made in the regular course of the company's business).[13] Personal loans over $500 from others must meet certain requirements (for example, be in writing, clearly state the date, amounts and interest payable).[14]
- **Gifts.** With certain exceptions, a public official must disclose most gifts of $50 or more on his or her Statement of Economic Interests and may not receive gifts from any one source that totals over $520 in a single year (for 2021-22).[15] Gifts include meals, certain kinds of travel payments, and rebates or discounts to public officials not offered to others in the usual course of business.[16]
- **Travel Expenses from Non-Transportation Companies.** Gifts of travel expenses (for example, airfare, lodging, meals and entertainment) from non-transportation companies are generally subject to the gift rules and must be reported on one's Statement of Economic Interests as such.
- **Travel Passes from Transportation Companies.** State law strictly forbids elected and appointed public officials from accepting free or discounted travel from transportation companies.[17] The penalty for violating the prohibition against accepting travel passes from transportation companies is severe--an immediate forfeiture of office.[18]
- **Receiving Gratuities or Rewards.** It is a crime to receive any kind of gratuity or reward for performing one's duties.[19]
- **Honoraria.** State law regulates the degree to which public officials may receive payments for giving a speech, writing an article or attending a public or private conference, convention, meeting, social event, meal or similar gathering.[20] Generally such payments—which are known as honoraria--are prohibited. The notion is such communications are part of a public official's service.

- **Personal Use of Public Resources.** State law forbids public officials from using public resources for personal purposes.[21] "Public resources" include such things as 1) staff time, 2) office equipment (telephones, fax machines, photocopiers, and computers), and 3) office supplies (stationery, stamps, and other items). "Personal" use of public resources includes activities that are for personal enjoyment, private gain or advantage.[22] For example, asking a staff member to pick up your laundry or kids from daycare would be a violation. "Use" means the use of public resources that is substantial enough to result in a gain or advantage for the user and a loss to the local agency that can be estimated as a monetary value.[23]
- **Expense Reimbursement.** The general rule is that local agency officials may only be reimbursed for actual and necessary expenses.[24] Cities, counties, and special districts that reimburse their elected and appointed officials must adopt expense reimbursement policies that specify the kinds of activities that will be reimbursable.[25] Local agencies must use expense report forms and all expenses must be documented with receipts.[26] These documents are public records subject to disclosure.[27]
- **Limits on Public Official Compensation.** Typically, there is a legal limit on elected public official compensation levels, either in state or local law public officials, particularly elected ones, may only collect and retain such compensation that the law allows.[28] As protectors of the public purse, courts generally take a strict approach to public official compensation limits.[29]

  City and county officials typically receive a monthly salary for their service. Special district directors tend to be compensated by a daily stipend. With certain exceptions, this stipend compensates such directors for:

  - A meeting of any "legislative body" as defined by the Brown Act
  - A meeting of an advisory body
  - Conference attendance or educational activities, including ethics training[30]

  Agencies may compensate officials for attendance at other events as specified in a written policy adopted in a public meeting.[31]
- **Use of Public Resources for Political Purposes.** The same statutes that prohibit the use of public resources for personal benefit also prohibit the use of such resources for campaign purposes.[32] The prohibition applies to campaigns to elect candidates and campaigns in support of or opposition to ballot measures.
- **Mass Mailings at Public Expense.** State law forbids sending mass mailings at public expense.[33] State law defines "mass mailings" as including mailings that "feature an elected officer" by including their photograph or signature, or by singling out the officer by a manner in which their name appears in the document.[34]
- **Gifts of Public Resources or Funds.** California's constitution forbids gifts of public funds. This prohibits, for example, paying for spouses, partners or family members to accompany public officials.[35] It can also be an issue when a public agency contemplates charitable contributions.[36]

- **Soliciting Political Support from Agency Employees.** Soliciting campaign funds from agency officers or employees is also unlawful,[37] as is conditioning employment decisions on support of a person's candidacy.[38] Compensation decisions may not be tied to political support.[39]
- Speak with your agency counsel about the specifics of these requirements as they may apply to your situation.

## Consequences of Missteps

The consequences of violating the "no-perk" laws can also be severe. For example, the prohibitions against the personal use of public resources are punishable by a $1,000 per day fine plus three times the value of the resource used.[40] Criminal penalties include a two to four year prison term and disqualification from office.[41] Prosecution under the federal income tax evasion laws is also a possibility.[42] Again, this does not include the costs of hiring defense lawyers, which can add up to tens of thousands of dollars, if not more.

### Beyond the Minimum in Understanding Public Service Ethics

Like all ethics laws, AB 1234 sets minimum standards. The enforcement mechanism for complying with AB 1234's requirements relies on public scrutiny and media attention. Records of officials' compliance with AB 1234 (proof of participation certificates) are public records and must be maintained for at least five years.[43]

In addition to maintaining records on compliance with the minimum standards imposed by AB 1234, local agencies may also want to maintain records of any training and study local agency officials engaged in above and beyond AB 1234's minimum requirements. This will enable those inquiring to ascertain the agency's and individual's full scope of commitment to understanding the ethical and legal obligations associated with public service.

## Beyond the Law

Understanding and complying with public service ethics laws is a challenge. But the public expects even more of its public servants. Rather than making decisions purely on the fly, how can public officials maximize the likelihood that they will meet or exceed the public's expectations for ethical conduct?

To be considered successful as a public servant, one is encouraged to think in terms of ethical values not minimum standards. Some key values relating to public service include responsibility, trustworthiness, respect and fairness. Assess decisions you have to make against these standards.

In addition, you can ask yourself these kinds of questions:

- What decision, behavior or course of action will best promote the public's trust in my leadership and that of my agency?

- Would I want to read about a certain course of action on the front page of my local newspaper?
- How do I want to be remembered as a public official? What would make my family and parents proud as a legacy?

For example, even if you are not legally required to disqualify yourself from participating in a decision, you may want to voluntarily abstain from participating if you believe the public could reasonably question whether you could put personal relationships and interests aside in making a given decision.

## Conclusion

Former British Prime Minister Benjamin Disraeli once observed "...that all power is a trust; that we are accountable for its exercise." As extensive and complicated as they are, the above rules relating to public service ethics are a reflection of that overarching quest for accountability and trust.

For more information on these rules, go to www.ca-ilg.org/ethicslaws. For more information on ethics principles, please visit www.ca-ilg.org/ethicsprinciples.

# AB 1234 Self-Study Materials

## Part II: Governmental Transparency and Fair Processes

AB 1234 requires elected and appointed officials to take two hours of ethics training if they receive compensation for their service or are reimbursed for their expenses.[1] The ethics training requirement may also apply to agency employees designated by the agency's legislative body.[2]

There are many ways to satisfy this requirement, including in-person training and self-study activities. Moreover, like all ethics laws, AB 1234 is a floor, not a ceiling. Local officials can demonstrate their commitment to ethics in public service by going beyond AB 1234's minimum requirements.

As a special service, the Institute for Local Government is offering this article for one hour of AB 1234 self-study credit (or half of the minimum requirement). To claim self-study credit, log on to www.ca-ilg.org/AB1234selfstudy, print out and take the test, mail it to the address indicated with the $37.50 processing fee. This fee covers grading the test, providing the correct answers (and explanations) and your proof of participation certificate; it also supports the Institute's work in the public service ethics area.

### Scope of This Self-Study Exercise

This article covers half of the required areas of ethics, including:[3]

- Governmental transparency laws, including financial disclosure laws and laws protecting the public's right to participate in meetings and access public records (the Brown Act and Public Records Act); and
- Laws relating to fair processes, including common law bias, due process, incompatible offices, competitive bidding requirements for public contracts and disqualification from participation in decisions involving family members.

The self-study materials covering the other half of the areas of ethics training required by AB 1234 may be found here: www.ca-ilg.org/post/ab-1234-self-study.

Note that public service ethics laws are extraordinarily complex. The learning objective of both self-study and in-person AB 1234 training courses is to familiarize local officials with when they need to consult agency counsel, the attorney general or the Fair Political Practices Commission about a given situation or course of action.

### Transparency Laws

The principle underlying governmental transparency laws is that the public trusts what it can observe. Transparency law is intended to promote participatory democracy, moreover, the prospect that actions will be publicly known can be a deterrent against actions that might undermine public trust. Thus, the laws in this area are designed to promote the general ethical values of trustworthiness and responsibility.

There are two basic categories of transparency laws. One relates to activities of the individual official. For example, these laws require specified officials to periodically disclose their personal financial interests (so the public can assess whether those interests played a role in the official's decisions). They also require officials to disclose campaign and charitable fundraising activities.

The other kind of transparency laws requires governmental processes to be transparent to the public. These laws require that governmental decisions be made in public and that the public have the opportunity to weigh in on those decisions. They also require that most public records be open to public inspection.

This self-study exercise discusses both kinds of transparency laws.

## Financial Disclosure Laws

There is an adage about one's life being an open book. Nowhere is this truer than for public officials and their finances. The bottom line is that when you become a public official, the public gets to learn a great deal about your financial life. The voters created these disclosure requirements when they approved the Political Reform Act in 1974.[4]

The disclosure requirements apply to nearly every local elected official and department head. Members of commissions, boards, committees and other local agency bodies with significant decision-making authority are also subject to disclosure requirements. An agency may require additional staff positions to disclose their economic interests under the agency's local conflict of interest code. Such employees are known as "designated employees."

The following kinds of economic interests must be disclosed if they meet certain minimum thresholds:[5]

- Sources of income;
- Interests in real property;
- Investments;
- Business positions; and
- Gifts

This disclosure is made on forms called both "Statements of Economic Interests" and "Form 700s." Copies of these forms are generally provided by one's agency. Interactive versions of the forms are available from the Fair Political Practices Commission website: www.fppc.ca.gov.

These forms must be completed 1) upon assuming office 2) on an annual basis while in office and 3) upon leaving office.

## Charitable Fundraising

The disclosure laws are not limited to an official's personal financial interests. There are extensive disclosure requirements relating to an official's campaign fundraising activities.[6] However, a sometimes-overlooked disclosure obligation relates to an official's charitable fundraising activities. The theory is that the public has a right to know who is contributing to an elected official's favorite charities and other causes.

The trigger occurs when an elected official gets someone to contribute $5,000 or more to a legislative, governmental or charitable cause during a calendar year, known as a behested payment.[7] Within 30 days of reaching the $5,000 threshold, the elected official must file a report with the official's agency (typically with the filing officer).

## Conducting the Public's Business in Public

California's open meeting laws[8] provide legal minimums for local governmental transparency in decision-making. Decision-making bodies--which include the governing board as well as many committees and advisory bodies--must conduct their business in an open and public meeting to assure the public is fully informed about local decisions.[9]

The following are some key things to keep in mind:

- **Meetings.** A "meeting" is any situation involving a majority of the governing body in which business is transacted or discussed.[10] In other words, a majority of the governing body cannot talk privately about an issue before the body no matter how the conversation occurs, whether by telephone or e-mail or at a local coffee shop.[11]
- **Serial Meetings.** One thing to watch for is unintentionally creating a "serial" meeting—a series of communications that result in a majority of governing body members having conferred on an issue. For example, if two members of a five-member governing body consult outside of a public meeting (which is not in and of itself a violation) and then one of those individuals consults with a third member on the same issue, a majority of the body has consulted on the same issue. Note the communication does not need to be in person and can occur through a third party. For example, sending or forwarding e-mail can be sufficient to create a serial meeting, as can a staff member polling governing body members in a way that reveals the members' positions to one another.[12]
- **Permissible Gatherings.** Not every gathering of governing body members is a problem. For example, a majority of the governing body may attend the same educational conference or a community meeting not organized by the local agency.[13] Nor is attendance at a social or ceremonial event in and of itself a violation.[14] The key rule to keep in mind is a majority of the governing body members cannot meet and discuss agency business except at an open and fully noticed public meeting.
- **Closed Sessions.** The open meeting laws include provisions for closed discussions under very limited circumstances.[15] Because of the complexity of the open meeting laws, close consultation with an agency's legal advisor is necessary to ensure that the requirements relating to and the limitations on closed sessions are observed.

## The Public's Right to Participate in Meetings

Another element of open meeting laws is the public's right to address the governing body. A public official's role is to both hear and evaluate these concerns. There are a number of basic rules that govern this right.

- **Posting and Following the Agenda.** The open meeting laws require that the public be informed of the time of and location and the issues to be addressed at each meeting.[16]
- **Agenda Descriptions.** Each agenda item shall provide a description of the item sufficient enough to inform the community as to whether they should want to participate and/or be heard on the item.
- **The Public's Right to be Heard.** Generally, every agenda must provide an opportunity for the public to address the governing body on any item of interest to the public within the body's jurisdiction.[17] If the

issue of concern is one pending before the legislative body, the opportunity must be provided before or during the body's consideration of that issue.[18]

- **Reasonable Time Limits May Be Imposed.** Local agencies may adopt reasonable regulations to ensure everyone has an opportunity to be heard in an orderly manner.[19]

## The Public's Right to Access Records

Copies of the agenda materials and other documents distributed to the governing body must also be available to the public.[20] The public has the right to see any materials that are created as part of the conduct of the people's business.[21] These materials include any writing that was prepared, owned, used or retained by a public agency.[22] They include documents, computer data, e-mails, facsimiles and photographs.[23] The public may even have a right to access records such as texts and email messages on private devices and accounts used by a public official.[24]

Although there are exceptions to a public agency's duty to disclose records, the safe assumption is virtually all materials involved in one's service on the governing body--including e-mails--are public records subject to disclosure.

## Fair Process Laws

Not surprisingly, fair process laws promote the ethical value of fairness. This is the notion that everyone has a right to be treated fairly by governmental processes, irrespective of who they are or whom they know. The public's perception that decisions are made fairly is a key element of the public's confidence and trust in government and individual public officials.

## The Obligation to be a Fair and Unbiased Decision-Maker

Although California statutes largely determine when public officials must disqualify themselves from participating in decisions, common law (judge-made) and some constitutional principles still require a public official to exercise his or her powers free from personal bias-including biases that have nothing to do with financial gain or losses.

In addition, constitutional due process principles require a decision-maker to be fair and impartial when the decision-making body is sitting in what is known as a "quasi-judicial" capacity. Quasi-judicial matters include variances, use permits, annexation protests, personnel disciplinary actions and licenses. Quasi-judicial proceedings tend to involve the application of generally adopted standards to specific situations, much as a judge applies the law to a particular set of facts.

For example, a court overturned a planning commission's decision on due process grounds, concluding that a planning commissioner's authorship of an article hostile to a project before the commission gave rise to an unacceptable probability of bias against the project, and that the commissioner should have disqualified himself from participating in the decision.[25]

Typically, having the official who may have exhibited bias disqualify himself or herself solves the problem.[26] If the problem is not addressed though, the agency's decision will be at risk of being overturned by the courts.[27] The agency will have to conduct new proceedings free of the influence of the biased decision-maker.[28] If the

violation rises to the level of a denial of due process under constitutional law, the affected individual(s) may seek damages, costs and attorney fees.[29]

Finally, community relations—and the public's views of an official's responsiveness—are seriously undermined when it appears an official is not listening to the input being provided by the public. Even if you disagree with the views being offered, treat the speaker with the same respect you would like to be treated with if the roles were reversed. Moreover, at least one court has ruled that officials' perceived inattentiveness during a hearing violated due process principles.[30]

## Campaign Contributions and Bias

Generally, the ethics laws with respect to campaign contributions emphasize disclosure rather than disqualification. The emphasis on disclosure enables the public to assess for itself the degree an official could be influenced by campaign contributors who appear before the agency. Both financial and in-kind support must be disclosed.

However, under limited (and sometimes counterintuitive) circumstances, certain local agency officials must disqualify themselves from participating in proceedings regarding licenses, permits and other entitlements for use if the official has received campaign contributions of more than $250 during the previous twelve months from any party or participant.[31] The restrictions apply if the official is sitting on an appointed (as opposed to elected) body.[32]

In addition, these officials are prohibited from receiving, soliciting or directing a campaign contribution of more than $250 from any party or participant in a license, permit or entitlement proceeding while the proceeding is pending and for three months after the contribution.[33]

## Holding Multiple Public Offices

There is such a thing as too much public service; the law limits the degree to which public officials can hold multiple public offices. The reason is that, when one assumes a public office, one takes on responsibility to the constituents of that agency to put their interests first. When one occupies multiple offices in multiple agencies (for example, membership on the city council and serving on the board of another local agency), that job becomes more complicated, both legally and ethically, because of the possibility of conflicting loyalties.[34]

Offices are incompatible if there is a potential for any significant clash of duties or loyalties between the offices, or either officer exercises a supervisory, auditory or removal power over the other. The prohibition against the simultaneous holding of incompatible offices does not require the existence of an actual conflict between the offices. A potential for a significant clash between the two offices is sufficient to trigger the prohibition.[35] Note there can be specific legislative exceptions to incompatible office rules.

## Competitive Bidding Processes for Public Contracts

Public contracting laws—including those adopted at the local level—are designed to give all interested parties the opportunity to do business with the government on an equal basis. This keeps contracts from being steered to businesses or individuals because of political connections, friendship, favoritism, corruption or other factors.

It also assures that the public receives the best value for its money by promoting competition among businesses so the public can receive the best deal.[36]

Many competitive bidding requirements are locally imposed, for example, by charter cities as part of their municipal affairs authority.[37] State law also authorizes local agencies to adopt procedures for acquisition of supplies and equipment.[38] Most of these purchasing ordinances require competitive bids for contracts in excess of designated dollar amounts.

For public works projects, state law defines when general law cities and counties must use competitive bidding. For general law cities, public works projects over $5,000 are subject to the state's competitive bidding requirements.[39] For county projects, the threshold is based on population: $6,500 (counties with populations of 500,000 or over), $50,000 (counties with populations of 2 million or over) and $4,000 (all other counties).[40] Note that it is a misdemeanor to split projects to avoid competitive bidding requirements.[41]

In order to give all interested parties an opportunity to do business with the agency and get the best price for the public, the agency has to publicize the opportunity. This is typically accomplished by publishing a notice inviting bids in a newspaper of general circulation that is printed or published in the jurisdiction, or if there is none, posting the notice in at least three public places in the jurisdiction.[42] Trade publications can also be a helpful way to reach a wide segment of the contracting industry.

## Decisions Involving Family Members

The Political Reform Act requires public officials to disqualify themselves from participating in decisions that will increase or decrease their immediate family's expenses, income, assets or liabilities.[43] "Immediate family" includes one's spouse or domestic partner and dependent children.[44] The notion is that it is very difficult for any person to be fair and unbiased when one's family's interests are concerned; it is, of course, also difficult for the public to perceive the official to be fair and unbiased about close family members.

Because of this, some jurisdictions have adopted additional restrictions on the hiring or appointing of relatives of public officials. These are known as anti-nepotism policies. It can be wise to avoid questions about family relationship by voluntarily not participating in decisions that affect family members, even if the law or local agency regulations allow you to participate.

## Beyond the Law

At some point in your service as a public official, you will likely face two common types of ethical dilemmas:

- **Personal Cost Ethical Dilemmas.** This involves situations in which doing the right thing may or will come at a significant personal cost to you or your public agency. These also can be known as "moral courage" ethical dilemmas.[45]
- **Right-versus-Right Ethical Dilemmas.** This type of ethical dilemma involves those situations in which there are two conflicting sets of "right" values.[46]

Of course, some dilemmas are a combination of both: a conflict between competing sets of "right" values (right-versus-right) and a situation in which doing the right thing involves personal or political costs.

## Personal Cost Ethical Dilemmas

With these kinds of dilemmas, the costs can be political - such as the loss of political support or perhaps even one's prospects for reelection. Or, the cost can be financial, for example a missed opportunity for financial gain or material benefits. Issues relating to the proper use of public resources fall into the "personal cost" type of ethical dilemma, in as much as these dilemmas typically involve whether one is going to forgo a tempting political or personal benefit. Finally, the cost can be more directly personal, as when one fears a particular course of action may jeopardize a friendship. In these situations, the answer is relatively simple. *The bottom line is that being ethical means doing the right thing regardless of personal costs.*

## Right-versus-Right Ethical Dilemmas

Right-versus-right ethical dilemmas can be more difficult to resolve. An easy example, however, is when a political supporter urges you to do something that conflicts with your own best sense of what will serve your community's interests. In this dilemma, there is a conflict between your *responsibility* to do what is in the public's best interest and your *loyalty* to your political supporter. Responsibility and loyalty are both bona fide ethical values.

The key is, as a public servant, the ethical value of responsibility (and the responsibility to do what is in the public's best interest) trumps the ethical value of loyalty. This is when thinking about the public's perception of the right thing to do can be a useful dilemma-resolution strategy.

## Conclusion

In politics, there is a great temptation to engage in ends/means thinking in which one is tempted to conclude that good or desirable ends justify the means. As both Dr. Martin Luther King, Jr. and Gandhi have observed, the means *are* the end in a democracy and good ends cannot come from questionable means.

Public officials are stewards of the public's trust in both their institutions and their leaders. Central to that trust is a fair and open process. Conscientious attention to laws and principles of fair and open government will help you as a leader pursue both good means and good ends.

# Chapter 1

## IT IS THE PEOPLE'S BUSINESS

### The right of access

Two key parts of the Brown Act have not changed since its adoption in 1953. One is the act's initial section, declaring the Legislature's intent:

*"In enacting this chapter, the Legislature finds and declares that the public commissions, boards and councils and the other public agencies in this State exist to aid in the conduct of the people's business. It is the intent of the law that their actions be taken openly and that their deliberations be conducted openly.*

*"The people of this State do not yield their sovereignty to the agencies which serve them. The people, in delegating authority, do not give their public servants the right to decide what is good for the people to know and what is not good for them to know. The people insist on remaining informed so that they may retain control over the instruments they have created."*[1]

The people reconfirmed that intent 50 years later in the November 2004 election by adopting Proposition 59, amending the California Constitution to include a public right of access to government information:

> *"The people have the right of access to information concerning the conduct of the people's business, and, therefore, the meetings of public bodies and the writings of public officials and agencies shall be open to public scrutiny."*[2]

**PRACTICE TIP:** The key to the Brown Act is a single sentence. In summary, all meetings shall be **open and public** except when the Brown Act authorizes otherwise.

The Brown Act's other unchanged provision is a single sentence:

> *"All meetings of the legislative body of a local agency shall be open and public, and all persons shall be permitted to attend any meeting of the legislative body of a local agency, except as otherwise provided in this chapter."*[3]

That one sentence is by far the most important of the entire Brown Act. If the opening is the soul, that sentence is the heart of the Brown Act.

### Broad coverage

The Brown Act covers members of virtually every type of local government body, elected or appointed, decision-making or advisory. Some types of private organizations are covered, as are newly elected members of a legislative body, even before they take office.

Similarly, meetings subject to the Brown Act are not limited to face-to-face gatherings. They also include any communication medium or device through which a majority of a legislative body discusses, deliberates, or takes action on an item of business outside of a noticed meeting. They include meetings held from remote locations by teleconference or videoconference.

New communication technologies present new Brown Act challenges. For example, common email practices of forwarding or replying to messages can easily lead to a serial meeting prohibited by the Brown Act, as can participation by members of a legislative body in an internet chatroom or blog dialogue. Social Media posts, comments, and "likes" can result in a Brown Act violation. Communicating during meetings using electronic technology (such as laptop computers, tablets, or smart phones) may create the perception that private communications are influencing the outcome of decisions, and some state legislatures have banned the practice. On the other hand, widespread video streaming and videoconferencing of meetings has greatly expanded public access to the decision-making process.

## Narrow exemptions

The express purpose of the Brown Act is to ensure that local government agencies conduct the public's business openly and publicly. Courts and the California Attorney General usually broadly construe the Brown Act in favor of greater public access and narrowly construe exemptions to its general rules.[4]

Generally, public officials should think of themselves as living in glass houses, and that they may only draw the curtains when it is in the public interest to preserve confidentiality. Closed sessions may be held only as specifically authorized by the provisions of the Brown Act itself.

The Brown Act, however, is limited to meetings among a majority of the members of multimember government bodies when the subject relates to local agency business. It does not apply to independent conduct of individual decision-makers. It does not apply to social, ceremonial, educational, and other gatherings as long as a majority of the members of a body do not discuss issues related to their local agency's business. Meetings of temporary advisory committees — as distinguished from standing committees — made up solely of less than a quorum of a legislative body are not subject to the Brown Act.

The law does not apply to local agency staff or employees, but they may facilitate a violation by acting as a conduit for discussion, deliberation, or action by the legislative body. [5]

The law, on the one hand, recognizes the need of individual local officials to meet and discuss matters with their constituents and staff. On the other hand, it requires — with certain specific exceptions to protect the community and preserve individual rights — that the decision-making process be public. Sometimes the boundary between the two is not easy to draw.

**PRACTICE TIP:** Think of the government's house as being made of glass. The curtains may be drawn only to further the public's interest. A local policy on the use of laptop computers, tablets, and smart phones during Brown Act meetings may help avoid problems.

## Public participation in meetings

In addition to requiring the public's business to be conducted in open, noticed meetings, the Brown Act also extends to the public the right to participate in meetings. Individuals, lobbyists, and members of the news media possess the right to attend, record, broadcast, and participate in public meetings. The public's participation is further enhanced by the Brown Act's requirement that a meaningful agenda be posted in advance of meetings, by limiting discussion and action to matters listed on the agenda, and by requiring that meeting materials be made available.

Legislative bodies may, however, adopt reasonable regulations on public testimony and the conduct of public meetings, including measures to address disruptive conduct and limits on the time allotted to each speaker. For more information, see chapter 4.

## Controversy

Not surprisingly, the Brown Act has been a source of confusion and controversy since its inception. News media and government watchdogs often argue the law is toothless, pointing out that there has never been a single criminal conviction for a violation. They often suspect that closed sessions are being misused.

Some public officials complain that the Brown Act makes it difficult to respond to constituents and requires public discussions of items better discussed privately, such as why a particular person should not be appointed to a board or commission. Many elected officials find the Brown Act inconsistent with their private business experiences. Closed meetings can be more efficient; they eliminate grandstanding and promote candor. The techniques that serve well in business — the working lunch, the sharing of information through a series of phone calls or emails, the backroom conversations and compromises — are often not possible under the Brown Act.

As a matter of public policy, California (along with many other states) has concluded that there is more to be gained than lost by conducting public business in the open. Government behind closed doors may well be efficient and businesslike, but it may be perceived as unresponsive and untrustworthy.

**PRACTICE TIP:** Transparency is a foundational value for ethical government practices. The Brown Act is a floor, not a ceiling, for conduct.

## Beyond the law — good business practices

Violations of the Brown Act can lead to invalidation of an agency's action, payment of a challenger's attorney fees, public embarrassment, even criminal prosecution. But the Brown Act is a floor, not a ceiling, for conduct of public officials. This guide is focused not only on the Brown Act as a minimum standard, but also on meeting practices or activities that, legal or not, are likely to create controversy. Problems may crop up, for example, when agenda descriptions are too brief or vague, when an informal get-together takes on the appearance of a meeting, when an agency conducts too much of its business in closed session or discusses matters in closed session that are beyond the authorized scope, or when controversial issues arise that are not on the agenda.

The Brown Act allows a legislative body to adopt practices and requirements for greater access to meetings for itself and its subordinate committees and bodies that are more stringent than the law itself requires.[6] Rather than simply restate the basic requirements of the Brown Act, local open meeting policies should strive to anticipate and prevent problems in areas where the Brown Act does not provide full guidance. As with the adoption of any other significant policy, public comment should be solicited.

A local policy could build on these basic Brown Act goals:

- A legislative body's need to get its business done smoothly.
- The public's right to participate meaningfully in meetings, and to review documents used in decision-making at a relevant point in time.

- A local agency's right to confidentially address certain negotiations, personnel matters, claims, and litigation.
- The right of the press to fully understand and communicate public agency decision-making.

A detailed and comprehensive public meeting and information policy, especially if reviewed periodically, can be an important element in maintaining or improving public relations. Such a policy exceeds the absolute requirements of the law — but if the law were enough, this guide would be unnecessary. A narrow legalistic approach will not avoid or resolve potential controversies. An agency should consider going beyond the law and look at its unique circumstances to determine if there is a better way to prevent potential problems and promote public trust. At the very least, local agencies need to think about how their agendas are structured in order to make Brown Act compliance easier. They need to plan carefully to make sure public participation fits smoothly into the process.

**PRACTICE TIP:** The Brown Act should be viewed as a tool to facilitate the business of local government agencies. Local policies that go beyond the minimum requirements of law may help instill public confidence and avoid problems.

## Achieving balance

The Brown Act should be neither an excuse for hiding the ball nor a mechanism for hindering efficient and orderly meetings. The Brown Act represents a balance among the interests of constituencies whose interests do not always coincide. It calls for openness in local government, yet should allow government to function responsively and productively.

There must be both adequate notice of what discussion and action are to occur during a meeting as well as a normal degree of spontaneity in the dialogue between elected officials and their constituents.

The ability of an elected official to confer with constituents or colleagues must be balanced against the important public policy prohibiting decision-making outside of public meetings.

In the end, implementation of the Brown Act must ensure full participation of the public and preserve the integrity of the decision-making process, yet not stifle government officials and impede the effective and natural operation of government.

## Historical note

In late 1951, *San Francisco Chronicle* reporter Mike Harris spent six weeks looking into the way local agencies conducted meetings. State law had long required that business be done in public, but Harris discovered secret meetings or caucuses were common. He wrote a 10-part series titled "Your Secret Government" that ran in May and June 1952.

Out of the series came a decision to push for a new state open-meeting law. Harris and Richard (Bud) Carpenter, legal counsel for the League of California Cities, drafted such a bill and Assembly Member Ralph M. Brown agreed to carry it. The Legislature passed the bill, and Governor Earl Warren signed it into law in 1953.

The Ralph M. Brown Act, known as the Brown Act, has evolved under a series of amendments and court decisions, and has been the model for other open-meeting laws, such as the Bagley-Keene Act, enacted in 1967 to cover state agencies.

Assembly Member Brown is best known for the open-meeting law that carries his name. He was elected to the Assembly in 1942 and served 19 years, including the last three years as Speaker. He then became an appellate court justice.

Updates to this publication responding to changes in the Brown Act or new court interpretations are available at **https://www.calcities.org/home/resources/open-government2**. A current version of the Brown Act may be found at **https://leginfor.legislature.ca.gov**.

## ENDNOTES

# Chapter 2

## LEGISLATIVE BODIES

What is a "legislative body" of a local agency? ..... 12

What is not a "legislative body" for purposes of the Brown Act? ..... 14

# Chapter 2

## LEGISLATIVE BODIES

*The Brown Act applies to the legislative bodies of local agencies. It defines "legislative body" broadly to include just about every type of decision-making body of a local agency.*[1]

### What is a "legislative body" of a local agency?

A "legislative body" includes the following:

- The **"governing body** of a local agency" and certain of its subsidiary bodies; "or any other local body created by state or federal statute."[2] This includes city councils, boards of supervisors, school boards, and boards of trustees of special districts. A "local agency" is any city, county, city and county, school district, municipal corporation, successor agency to a redevelopment agency, district, political subdivision, or other local public agency.[3] A housing authority is a local agency under the Brown Act even though it is created by and is an agent of the state.[4] The California Attorney General has opined that air pollution control districts and regional open space districts are also covered.[5] Entities created pursuant to joint powers agreements are also local agencies within the meaning of the Brown Act.[6]
- **Newly elected members** of a legislative body who have not yet assumed office must conform to the requirements of the Brown Act as if already in office.[7] Thus, meetings between incumbents and newly elected members of a legislative body, such as a meeting between two outgoing members and a member-elect of a five-member body, could violate the Brown Act.

**PRACTICE TIP:** The prudent presumption is that an advisory committee or task force is subject to the Brown Act. Even if one clearly is not, it may want to comply with the Brown Act. Public meetings may reduce the possibility of misunderstandings and controversy.

**Q.** On the morning following the election to a five-member legislative body of a local agency, two successful candidates, neither an incumbent, meet with an incumbent member of the legislative body for a celebratory breakfast. Does this violate the Brown Act?

**A.** *It might, and absolutely would if the conversation turns to agency business. Even though the candidates-elect have not officially been sworn in, the Brown Act applies. If purely a social event, there is no violation, but it would be preferable if others were invited to attend to avoid the appearance of impropriety.*

- **Appointed bodies** — whether permanent or temporary, decision-making or advisory — including planning commissions, civil service commissions, and other subsidiary committees, boards, and bodies. Volunteer groups, executive search committees, task forces, and blue ribbon committees created by formal action of the governing body are legislative bodies. When the members of two or more legislative bodies are appointed to serve on an entirely separate advisory group, the resulting body may be subject to the Brown Act. In one reported case, a city council created a committee of two members of the city council and two members of the city planning commission to review qualifications of prospective planning commissioners and make recommendations to the council. The court held that their joint mission made them a legislative body subject to the Brown Act. Had the two committees remained separate and met only to exchange information and report back to their respective boards, they would have been exempt from the Brown Act.[8]
- **Standing committees** of a legislative body, irrespective of their composition, which have either (1) a continuing subject matter jurisdiction or (2) a meeting schedule fixed by charter, ordinance, resolution, or formal action of a legislative body.[9] Even if it comprises less than a quorum of the governing body, a standing committee is subject to the Brown Act. For example, if a governing body creates committees on budget and finance or on public safety that are not limited in duration or scope, those are standing committees subject to the Brown Act. Further, according to the California Attorney General, function over form controls. For example, a statement by the legislative body that the advisory committee "shall not exercise continuing subject matter jurisdiction" or the fact that the committee does not have a fixed meeting schedule is not determinative.[10] "Formal action" by a legislative body includes authorization given to the agency's executive officer to appoint an advisory committee pursuant to agency-adopted policy.[11] A majority of the members of a legislative body may attend an open and public meeting of a standing committee of that body, provided the members who are not part of the standing committee only observe.[12] For more information, see chapter 3.
- The governing body of any **private organization** either (1) created by the legislative body in order to exercise authority that may lawfully be delegated by such body to a private corporation, limited liability company, or other entity or (2) that receives agency funding and whose governing board includes a member of the legislative body of the local agency appointed by the legislative body as a full voting member of the private entity's governing board.[13] These include some nonprofit corporations created by local agencies.[14] If a local agency contracts with a private firm for a service (for example, payroll, janitorial, or food services), the private firm is not covered by the Brown Act.[15] When a member of a legislative body sits on a board of a private organization as a private person and is not appointed by the legislative body, the board will not be subject to the Brown Act. Similarly, when the legislative body appoints someone other than one of its own members to such boards, the Brown Act does not apply. Nor does it apply when a private organization merely receives agency funding.[16]

**PRACTICE TIP:** It can be difficult to determine whether a subcommittee of a body falls into the category of a standing committee or an exempt temporary committee. Suppose a committee is created to explore the renewal of a franchise or a topic of similarly limited scope and duration. Is it an exempt temporary committee or a nonexempt standing committee? The answer may depend on factors such as how meeting schedules are determined, the scope of the committee's charge, or whether the committee exists long enough to have "continuing jurisdiction."

**Q.** The local chamber of commerce is funded in part by the city. The mayor sits on the chamber's board of directors. Is the chamber board a legislative body subject to the Brown Act?

**A.** *Maybe. If the chamber's governing documents require the mayor to be on the board and the city council appoints the mayor to that position, the board is a legislative body. If, however, the chamber board independently appoints the mayor to its board, or the mayor attends chamber board meetings in a purely advisory capacity, it is not.*

**Q.** If a community college district board creates an auxiliary organization to operate a campus bookstore or cafeteria, is the board of the organization a legislative body?

**A.** *Yes. But if the district instead contracts with a private firm to operate the bookstore or cafeteria, the Brown Act would not apply to the private firm.*

- **Certain types of hospital operators.** A lessee of a hospital (or portion of a hospital) first leased under Health and Safety Code subsection 32121(p) after Jan. 1, 1994, which exercises "material authority" delegated to it by a local agency, whether or not such lessee is organized and operated by the agency or by a delegated authority.[17]

## What is not a "legislative body" for purposes of the Brown Act?

- A temporary advisory committee composed **solely of less than a quorum** of the legislative body that serves a limited or single purpose, that is not perpetual, and that will be dissolved once its specific task is completed is not subject to the Brown Act.[18] Temporary committees are sometimes called *ad hoc* committees, a term not used in the Brown Act. Examples include an advisory committee composed of less than a quorum created to interview candidates for a vacant position or to meet with representatives of other entities to exchange information on a matter of concern to the agency, such as traffic congestion.[19]
- Groups advisory to a single decision-maker or appointed by staff are not covered. The Brown Act applies only to committees created by formal action of the legislative body and not to committees created by others. A committee advising a superintendent of schools would not be covered by the Brown Act. However, the same committee, if created by formal action of the school board, would be covered.[20]

**Q.** A member of the legislative body of a local agency informally establishes an advisory committee of five residents to advise her on issues as they arise. Does the Brown Act apply to this committee?

**A.** *No, because the committee has not been established by formal action of the legislative body.*

**Q.** During a meeting of the city council, the council directs the city manager to form an advisory committee of residents to develop recommendations for a new ordinance. The city manager forms the committee and appoints its members; the committee is instructed to direct its recommendations to the city manager. Does the Brown Act apply to this committee?

**A.** *Possibly, because the direction from the city council might be regarded as a formal action of the body, notwithstanding that the city manager controls the committee.*

- Individual decision-makers who are not elected or appointed members of a legislative body are not covered by the Brown Act. For example, a disciplinary hearing presided over by a department head or a meeting of agency department heads is not subject to the Brown Act since such assemblies are not those of a legislative body.[21]
- Public employees, each acting individually and not engaging in collective deliberation on a specific issue, such as the drafting and review of an agreement, do not constitute a legislative body under the Brown Act, even if the drafting and review process was established by a legislative body.[22]
- County central committees of political parties are also not Brown Act bodies.[23]

Legal counsel for a governing body is not a member of the governing body, therefore, the Brown Act does not apply to them. But counsel should take care not to facilitate Brown Act violations by members of the governing body.[24]

# Chapter 3

## MEETINGS

The Brown Act only applies to meetings of local legislative bodies. It defines a meeting as "any congregation of a majority of the members of a legislative body at the same time and location, including teleconference location as permitted by Section 54953, to hear, discuss, deliberate, or take any action on any item that is within the subject matter jurisdiction of the legislative body."[1] The term *meeting* is not limited to gatherings at which action is taken but includes deliberative gatherings as well. A hearing before an individual hearing officer is not a meeting under the Brown Act because it is not a hearing before a legislative body.[2]

### Brown Act meetings

Brown Act meetings include a legislative body's regular meetings, special meetings, emergency meetings, and adjourned meetings.

- **"Regular meetings"** are meetings occurring at the dates, times, and location set by resolution, ordinance, or other formal action by the legislative body and are subject to 72-hour posting requirements.[3]
- **"Special meetings"** are meetings called by the presiding officer or majority of the legislative body to discuss only discrete items on the agenda under the Brown Act's notice requirements for special meetings and are subject to 24-hour posting requirements.[4]
- **"Emergency meetings"** are a limited class of meetings held when prompt action is needed due to actual or threatened disruption of public facilities and are held on little notice.[5]
- **"Adjourned meetings"** are regular or special meetings that have been adjourned or re-adjourned to a time and place specified in the order of adjournment, with no agenda required for regular meetings adjourned for less than five calendar days as long as no additional business is transacted.[6]

### Six exceptions to the meeting definition

The Brown Act creates six exceptions to the meeting definition:[7]

#### *Individual contacts*

The first exception involves individual contacts between a member of the legislative body and any other person. The Brown Act does not limit a legislative body member acting on their own. This exception recognizes the right to confer with constituents, advocates, consultants, news reporters, local agency staff, or a colleague.

Individual contacts, however, cannot be used to do in stages what would be prohibited in one step. For example, a series of individual contacts that leads to discussion, deliberation, or action among a majority of the members of a legislative body is prohibited. Such serial meetings are discussed below.

### *Conferences*

The second exception allows a legislative body majority to attend a conference or similar gathering open to the public that addresses issues of general interest to the public or to public agencies of the type represented by the legislative body.

Among other things, this exception permits legislative body members to attend annual association conferences of city, county, school, community college, and other local agency officials, as long as those meetings are open to the public. However, a majority of members cannot discuss among themselves, other than as part of the scheduled program, business of a specific nature that is within their local agency's subject matter jurisdiction.

### *Community meetings*

The third exception allows a legislative body majority to attend an open and publicized meeting held by another organization to address a topic of local community concern. A majority cannot discuss among themselves, other than as part of the scheduled program, business of a specific nature that is within the legislative body's subject matter jurisdiction. Under this exception, a legislative body majority may attend a local service club meeting or a local candidates' night if the meetings are open to the public.

> **"I see we have four distinguished members of the city council at our meeting tonight," said the chair of the Environmental Action Coalition. "I wonder if they have anything to say about the controversy over enacting a slow growth ordinance?"**
>
> *The Brown Act permits a majority of a legislative body to attend and speak at an open and publicized meeting conducted by another organization. The Brown Act may nevertheless be violated if a majority discusses, deliberates, or takes action on an item during the meeting of the other organization. There is a fine line between what is permitted and what is not; hence, members should exercise caution when participating in these types of events.*

**Q.** The local chamber of commerce sponsors an open and public candidate debate during an election campaign. Three of the five agency members are up for reelection and all three participate. All of the candidates are asked their views on a controversial project scheduled for a meeting to occur just after the election. May the three incumbents answer the question?

**A.** *Yes, because the chamber of commerce, not the city, is organizing the debate. The city should not sponsor the event or assign city staff to help organize or run the event. Also, the Brown Act does not constrain the incumbents from expressing their views regarding important matters facing the local agency as part of the political process the same as any other candidates. Finally, incumbents participating in the event should take care to limit their remarks to the program set by the chamber and safeguard due process by indicating they will keep an open mind regarding specific applications that might come before the council.*

**Q.** May the three incumbents accept an invitation from the editorial board of a local paper to all candidates to meet as a group and answer questions about and/or debate city issues?

**A.** *No, unlike the chamber of commerce event, this would not be allowed under the Brown Act because it is not an open and publicized meeting.*

### *Other legislative bodies*

The fourth exception allows a majority of a legislative body to attend an open and publicized meeting of (1) another body of the local agency and (2) a legislative body of another local agency.[8] Again, the majority cannot discuss among themselves, other than as part of the scheduled meeting, business of a specific nature that is within their subject matter jurisdiction. This exception allows, for example, a city council or a majority of a board of supervisors to attend a controversial meeting of the planning commission.

Nothing in the Brown Act prevents the majority of a legislative body from sitting together at such a meeting. They may choose not to, however, to preclude any possibility of improperly discussing local agency business and to avoid the appearance of a Brown Act violation. Further, aside from the Brown Act, there may be other reasons, such as due process considerations, why the members should avoid giving public testimony, trying to influence the outcome of proceedings before a subordinate body, or discussing the merits with interested parties.

**Q.** The entire legislative body intends to testify against a bill before the Senate Local Government Committee in Sacramento. Must this activity be noticed as a meeting of the body?

**A.** *No, because the members are attending and participating in an open meeting of another governmental body that the public may attend.*

**Q.** The members then proceed upstairs to the office of their local assembly member to discuss issues of local interest. Must this session be noticed as a meeting and be open to the public?

**A.** *Yes, because the entire body may not meet behind closed doors except for proper closed sessions. The same answer applies to a private lunch or dinner with the assembly member.*

### *Standing committees*

The fifth exception authorizes the attendance of a majority at an open and noticed meeting of a standing committee of the legislative body, provided that the legislative body members who are not members of the standing committee attend only as observers (meaning that they cannot speak or otherwise participate in the meeting, and they must sit where members of the public sit).[9]

**Q.** The legislative body establishes a standing committee of two of its five members that meets monthly. A third member of the legislative body wants to attend these meetings and participate. May she?

**A.** *She may attend, but only as an observer; she may not participate.*

**Q.** Can the legislative body establish multiple standing committees with partially overlapping jurisdiction?

**A.** *Yes. One result of this overlap in jurisdiction may be that three or more of the members of the legislative body ultimately end up discussing an issue as part of a standing committee meeting. This is allowed under the Brown Act provided each standing committee meeting is publicly noticed and no more than two of the five members discuss the issue at any given standing committee meeting.*

### *Social or ceremonial events*

The final exception permits a majority of a legislative body to attend a purely social or ceremonial occasion. Once again, a majority cannot discuss business among themselves of a specific nature that is within the subject matter jurisdiction of the legislative body.

Nothing in the Brown Act prevents a majority of members from attending the same football game, party, wedding, funeral, reception, or farewell. The test is not whether a majority of a legislative body attend the function, but whether business of a specific nature within the subject matter jurisdiction of the body is discussed. As long as no such business is discussed, there is no violation of the Brown Act.

### *Grand Jury Testimony*

In addition, members of a legislative body, either individually or collectively, may give testimony in private before a grand jury.[10] This is the equivalent of a seventh exception to the Brown Act's definition of a "meeting."

## Collective briefings

None of these exceptions permits a majority of a legislative body to meet together with staff in advance of a meeting for a collective briefing. Any such briefings that involve a majority of the body in the same place and time must be open to the public and satisfy Brown Act meeting notice and agenda requirements. Staff may provide written briefings (e.g., staff updates, emails from the city manager, confidential memos from the city attorney) to the full legislative body, but apart from privileged memos, the written materials may be subject to disclosure as public records as discussed in chapter 4.

## Retreats, trainings, and workshops of legislative bodies

Gatherings by a majority of legislative body members at the legislative body's retreats, study sessions, trainings, or workshops are subject to the requirements of the Brown Act. This is the case whether the gathering focuses on long-range agency planning, discussion of critical local issues, satisfying state-mandated ethics training requirements, or team building and group dynamics.[11]

**Q.** The legislative body wants to hold a team-building session to improve relations among its members. May such a session be conducted behind closed doors?

**A.** *No, this is not a proper subject for a closed session, and there is no other basis to exclude the public. Council relations are a matter of public business.*

## Serial meetings

One of the most frequently asked questions about the Brown Act involves serial meetings. At any one time, such meetings include only a portion of a legislative body, but eventually they comprise a majority. The Brown Act provides that "[a] majority of the members of a legislative body shall not, outside a meeting … use a series of communications of any kind, directly or through intermediaries, to discuss, deliberate, or take action on any item of business that is within the subject matter jurisdiction of the legislative body."[12] The problem with serial meetings is the process, which deprives the public of an opportunity for meaningful observation of and participation in legislative body decision-making.

*Photo credit: Courtesy of the City of West Hollywood. Photo by Jon Viscott.*

The serial meeting may occur by either a "daisy chain" or a "hub and spoke" sequence. In the daisy chain scenario, Member A contacts Member B, Member B contacts Member C, Member C contacts Member D, and so on until a quorum has discussed, deliberated, or taken action on an item within the legislative body's subject matter jurisdiction. The hub and spoke process involves at least two scenarios. In the first scenario, Member A (the hub) sequentially contacts Members B, C, D, and so on (the spokes) until a quorum has been contacted. In the second scenario, a staff member (the hub), functioning as an intermediary for the legislative body or one of its members, communicates with a majority of members (the spokes) one by one for discussion, deliberation, or a decision on a proposed action.[13] Another example of a serial meeting is when a chief executive officer (the hub) briefs a majority of members (the spokes) prior to a formal meeting and, in the process, information about the members' respective views is revealed. Each of these scenarios violates the Brown Act.

A legislative body member has the right, if not the duty, to meet with constituents to address their concerns. That member also has the right to confer with a colleague (but not with a majority of the body, counting the member) or appropriate staff about local agency business. An employee or official of a local agency may engage in separate conversations or communications outside of an open and noticed meeting "with members of a legislative body in order to answer questions or provide information regarding a matter that is within the subject matter jurisdiction of the local agency if that person does not communicate to members of the legislative body the comments or position of any other member or members of the legislative body."[14]

The Brown Act is violated, however, if several one-on-one meetings or conferences lead to a discussion, deliberation, or action by a majority. In one case, a violation occurred when a quorum

of a city council, by a letter that had been circulated among members outside of a formal meeting, directed staff to take action in an eminent domain proceeding.[15]

A unilateral written communication to the legislative body, such as an informational or advisory memorandum, does not violate the Brown Act.[16] Such a memo, however, may be a public record.[17]

> **The phone call was from a lobbyist. "Say, I need your vote for that project in the south area. How about it?"**
>
> **"Well, I don't know," replied Board Member Aletto. "That's kind of a sticky proposition. You sure you need my vote?"**
>
> **"Well, I've got Bradley and Cohen lined up and another vote leaning. With you, I'd be over the top."**
>
> **Moments later, the phone rings again. "Hey, I've been hearing some rumbles on that south area project," said the newspaper reporter. "I'm counting noses. How are you voting on it?"**

*The lobbyist and the reporter are facilitating a violation of the Brown Act. The board member may have violated the Brown Act by hearing about the positions of other board members and indeed coaxing the lobbyist to reveal the other board members' positions by asking, "You sure you need my vote?" The prudent course is to avoid such leading conversations and to caution lobbyists, staff, and news media against revealing such positions of others.*

> **The mayor sat down across from the city manager. "From now on," he declared, "I want you to provide individual briefings on upcoming agenda items. Some of this material is very technical, and the council members don't want to sound like idiots asking about it in public. Besides that, briefings will speed up the meeting."**

*Agency employees or officials may have separate conversations or communications outside of an open and noticed meeting "with members of a legislative body in order to answer questions or provide information regarding a matter that is within the subject matter jurisdiction of the local agency if that person does not communicate to members of the legislative body the comments or position of any other member or members of the legislative body."[18] Members should always be vigilant when discussing local agency business with anyone to avoid conversations that could lead to a discussion, deliberation, or action taken among the majority of the legislative body.*

> **"Thanks for the information," said Council Member Kim. "These zoning changes can be tricky, and now I think I'm better equipped to make the right decision."**
>
> **"Glad to be of assistance," replied the planning director. "I'm sure Council Member Jones is OK with these changes. How are you leaning?"**
>
> **"Well," said Council Member Kim, "I'm leaning toward approval. I know that two of my colleagues definitely favor approval."**

**PRACTICE TIP:** When briefing legislative body members, staff must exercise care not to disclose other members' views and positions.

*The planning director should not disclose Jones' prospective vote, and Kim should not disclose the prospective votes of two colleagues. Under these facts, there likely has been a serial meeting in violation of the Brown Act.*

**Q.** Various social media platforms and websites include forums where agency employees and officials can discuss issues of local agency business. Members of the legislative body participate regularly. Does this scenario present a potential for violation of the Brown Act?

**A.** *Yes, because it is a technological device that may serve to allow for a majority of members to discuss, deliberate, or take action on matters of agency business.*

**Q.** A member of a legislative body contacts two other members on a five-member body relative to scheduling a special meeting. Is this an illegal serial meeting?

**A.** *No, the Brown Act expressly allows a majority of a body to call a special meeting, though the members should avoid discussing the merits of what is to be taken up at the meeting.*

Particular care should be exercised when staff briefings of legislative body members occur by email because of the ease of using the "reply all" option that may inadvertently result in a Brown Act violation. Staff should consider using the "bcc" (blind carbon copy) option when addressing an email to multiple members of the legislative body and remind recipients not to "reply all."

Social media should also be used with care. A member of the legislative body cannot respond directly to any communication on an internet-based social media platform that is made, posted, or shared by any other member of the legislative body. This applies to matters within the subject matter jurisdiction of the legislative body. For example, if one member of a legislative body "likes" a social media post of one other member of the same body, that could violate the Brown Act, depending on the nature of the post.[19]

Finally, electronic communications (such as text messaging) among members of a legislative body during a public meeting should be discouraged. If such communications are sent to a majority of members of the body, either directly or through an intermediary, on a matter on the meeting agenda, that could violate the Brown Act. Electronic communications sent to less than a majority of members of the body during a quasi-judicial proceeding could potentially raise due process concerns, even if not per se prohibited by the Brown Act. Additionally, some legislative bodies have rules governing electronic communications during meetings of the legislative body and how their members should proceed if they receive a communication on an agenda item that is not part of the record or not part of an agenda packet.

## Informal gatherings

Members of legislative bodies are often tempted to mix business with pleasure — for example, by holding a post-meeting gathering. Informal gatherings at which local agency business is discussed or transacted violate the law if they are not conducted in conformance with the Brown Act.[20] A gathering at which a quorum of the legislative body discusses matters within their jurisdiction violates the Brown Act even if that gathering occurs in a public place. The Brown Act is not satisfied by public visibility alone. It also requires public notice and an opportunity to attend, hear, and participate.

**Thursday at 11:30 a.m., as they did every week, the board of directors of the Dry Gulch Irrigation District trooped into Pop's Donut Shoppe for an hour of talk and fellowship. They sat at the corner window, fronting on Main and Broadway, to show they had nothing to hide. Whenever he could, the managing editor of the weekly newspaper down the street hurried over to join the board.**

*A gathering like this would not violate the Brown Act if board members scrupulously avoided talking about irrigation district issues — which might be difficult. This kind of situation should be avoided. The public is unlikely to believe the board members could meet regularly without discussing public business. A newspaper executive's presence does not lessen the potential for a violation of the Brown Act.*

## Technological conferencing

*Photo credit: Courtesy of the City of West Hollywood. Photo by Jon Viscott.*

Except for certain non-substantive purposes, such as scheduling a special meeting, a conference call including a majority of the members of a legislative body is an unlawful meeting. But in an effort to keep up with modern technologies, the Brown Act specifically allows a legislative body to use any type of teleconferencing to meet, receive public comment and testimony, deliberate, or conduct a closed session.[21] While the Brown Act contains specific requirements for conducting a teleconference, the decision to use teleconferencing is entirely discretionary with the body. No person has a right under the Brown Act to have a meeting by teleconference.

Teleconference is defined as "a meeting of a legislative body, the members of which are in different locations, connected by electronic means, through either audio or video, or both."[22] In addition to the specific requirements relating to teleconferencing, the meeting must comply with all provisions of the Brown Act otherwise applicable. The Brown Act contains the following teleconferencing requirements:[23]

- Teleconferencing may be used for all purposes during any meeting.
- At least a quorum of the legislative body must participate from locations within the local agency's jurisdiction.
- Additional teleconference locations may be made available for the public.
- Each teleconference location must be specifically identified in the notice and agenda of the meeting, including a full address and room number, as may be applicable.
- Agendas must be posted at each teleconference location, even if a hotel room or a residence.
- Each teleconference location, including a hotel room or residence, must be accessible to the public and have technology, such as a speakerphone, to enable the public to participate
- The agenda must provide the opportunity for the public to address the legislative body directly at each teleconference location.
- All votes must be by roll call.

**Q.** A member on vacation wants to participate in a meeting of the legislative body and vote by cellular phone from her car while driving from Washington, D.C., to New York. May she?

**A.** *She may not participate or vote because she is not in an open, noticed, and posted teleconference location.*

Until Jan. 1, 2026, teleconferencing may also be used on a limited basis where a member indicates their need to participate remotely for "just cause" (e.g., childcare or a contagious illness) or due to "emergency circumstances" (e.g., a physical or family medical emergency). This teleconferencing option has extremely detailed requirements, and careful review is needed. If the City experiences a technical issue that prevents members of the public from viewing the meeting and/or offering comments virtually, then no further action can be taken until the technical issue is resolved.[24]

The use of teleconferencing to conduct a legislative body meeting presents a variety of issues beyond the scope of this guide to discuss in detail. Therefore, before teleconferencing a meeting, legal counsel for the local agency should be consulted.

## Location of meetings

The Brown Act generally requires all regular and special meetings of a legislative body, including retreats and workshops, to be held within the boundaries of the territory over which the local agency exercises jurisdiction.[25]

An open and publicized meeting of a legislative body may be held outside of agency boundaries if the purpose of the meeting is one of the following:[26]

- Comply with state or federal law or a court order, or attend a judicial conference or administrative proceeding in which the local agency is a party.
- Inspect real or personal property that cannot be conveniently brought into the local agency's territory, provided the meeting is limited to items relating to that real or personal property.

**Q.** The agency is considering approving a major retail mall. The developer has built other similar malls and invites the entire legislative body to visit a mall outside the jurisdiction. May the entire body go?

**A.** *Yes, the Brown Act permits meetings outside the boundaries of the agency for specified reasons and inspection of property is one such reason. The field trip must be treated as a meeting and the public must be allowed to attend.*

- Participate in multiagency meetings or discussions; however, such meetings must be held within the boundaries of one of the participating agencies, and all of those agencies must give proper notice.
- Meet in the closest meeting facility if the local agency has no meeting facility within its boundaries, or meet at its principal office if that office is located outside the territory over which the agency has jurisdiction.

- Meet with elected or appointed federal or California officials when a local meeting would be impractical, solely to discuss a legislative or regulatory issue affecting the local agency and over which the federal or state officials have jurisdiction.
- Meet in or nearby a facility owned by the agency, provided that the topic of the meeting is limited to items directly related to the facility.
- Visit the office of its legal counsel for a closed session on pending litigation when to do so would reduce legal fees or costs.[27]

In addition, the governing board of a school or community college district may hold meetings outside of its boundaries to attend a conference on nonadversarial collective bargaining techniques, interview candidates for school district superintendent, or interview a potential employee from another district.[28] A school board may also interview members of the public residing in another district if the board is considering employing that district's superintendent.

Similarly, meetings of a joint powers authority can occur within the territory of at least one of its member agencies, and a joint powers authority with members throughout the state may meet anywhere in the state.[29]

Finally, if a fire, flood, earthquake, or other emergency makes the usual meeting place unsafe, the presiding officer can designate another meeting place for the duration of the emergency. News media that have requested notice of meetings must be notified of the designation by the most rapid means of communication available.[30] State law has also allowed for virtual meetings under certain emergency situations.[31]

# Chapter 4

## AGENDAS, NOTICES, AND PUBLIC PARTICIPATION

Effective notice is essential for an open and public meeting. Whether a meeting is open or how the public may participate in that meeting is academic if nobody knows about the meeting.

### Agendas for regular meetings

Every regular meeting of a legislative body of a local agency — including advisory committees, commissions, or boards, as well as standing committees of legislative bodies — must be preceded by a posted agenda that advises the public of the meeting and the matters to be transacted or discussed.

The agenda must be posted at least 72 hours before the regular meeting in a location "freely accessible to members of the public."[1] The courts have not definitively interpreted the "freely accessible" requirement. The California Attorney General has interpreted this provision to require posting in a location open and accessible to the public 24 hours a day during the 72-hour period, but any of the 72 hours may fall on a weekend.[2] This provision may be satisfied by posting on a touch screen electronic kiosk accessible without charge to the public 24 hours a day during the 72-hour period.[3] While posting an agenda on an agency's internet website will not, by itself, satisfy the "freely accessible" requirement since there is no universal access to the internet, an agency has a supplemental obligation to post the agenda on its website if (1) the local agency has a website and (2) the legislative body whose meeting is the subject of the agenda is either (a) a governing body or (b) has members that are compensated, with one or more members that are also members of a governing body.[4]

**Q.** May the meeting of a governing body go forward if its agenda was either inadvertently not posted on the city's website or if the website was not operational during part or all of the 72-hour period preceding the meeting?

**A.** *At a minimum, the Brown Act calls for "substantial compliance" with all agenda posting requirements, including posting to the agency website.[5] Should website technical difficulties arise, seek a legal opinion from your agency attorney. The California Attorney General has opined that technical difficulties that cause the website agenda to become inaccessible for a portion of the 72 hours preceding a meeting do not automatically or inevitably lead to a Brown Act violation, provided the agency can demonstrate substantial compliance.[6] This inquiry requires a fact-specific examination of whether the agency or its legislative body made "reasonably effective efforts to notify interested persons of a public meeting" through online posting and other available means.[7] The Attorney General's opinion suggests that this examination would include an evaluation of how long a technical problem persisted, the efforts made to correct the problem or otherwise ensure that the public was informed, and the actual effect the problem had on public*

*awareness, among other factors.[8] For these reasons, obvious website technical difficulties might not require cancellation of a meeting, provided that the agency meets all other Brown Act posting requirements and the agenda is available on the website once the technical difficulties are resolved.*

The agenda must state the meeting time and place and must contain "a brief general description of each item of business to be transacted or discussed at the meeting, including items to be discussed in closed session."[9] For a discussion of descriptions for open and closed-session agenda items, see chapter 5. Special care should be made to describe on the agenda each distinct action to be taken by the legislative body, while an overbroad description of a "project" must be avoided if the "project" is actually a set of distinct actions, in which case each action must be listed separately on the agenda.[10] For example, the listing of an "initiative measure" alone on an agenda was found insufficient where the agency was also deciding whether to accept a gift from the measure proponent to pay for the election.[11]

**PRACTICE TIP:** Putting together a meeting agenda requires careful thought.

**Q.** The agenda for a regular meeting contains the following items of business:

- Consideration of a report regarding traffic on Eighth Street.
- Consideration of a contract with ABC Consulting.

Are these descriptions adequate?

**A.** *If the first is, it is barely adequate. A better description would provide the reader with some idea of what the report is about and what is being recommended. The second is not adequate. A better description might read, "Consideration of a contract with ABC Consulting in the amount of $50,000 for traffic engineering services regarding traffic on Eighth Street."*

**Q.** The agenda includes an item entitled City Manager's Report, during which time the city manager provides a brief report on notable topics of interest, none of which is listed on the agenda.

Is this permissible?

**A.** *Yes, as long as it does not result in extended discussion or action by the body.*

A brief general description may not be sufficient for closed-session agenda items. The Brown Act provides safe harbor language for the various types of permissible closed sessions.[12] Substantial compliance with the safe harbor language is recommended to protect legislative bodies and elected officials from legal challenges.

## Mailed agenda upon written request

The legislative body, or its designee, must mail a copy of the agenda or, if requested, the entire agenda packet, to any person who has filed a written request for such materials. These copies shall be mailed at the time the agenda is posted or upon distribution to all, or a majority of all, of the members of the legislative body, whichever occurs first. If the local agency has an internet website, this requirement can be satisfied by emailing a copy of, or website link to, the agenda or agenda packet if the person making the request asks for it to be emailed. Further, if requested, these materials must be made available in appropriate alternative formats to persons with disabilities.

A request for notice is valid for one calendar year and renewal requests must be filed following January 1 of each year. The legislative body may establish a fee to recover the cost of providing the service. Failure of the requesting person to receive the agenda does not constitute grounds for invalidation of actions taken at the meeting.[13]

## Notice requirements for special meetings

There is no express agenda requirement for special meetings, but the notice of the special meeting effectively serves as the agenda and limits the business that may be transacted or discussed. Written notice must be sent to each member of the legislative body (unless waived in writing by that member) and to each local newspaper of general circulation and each radio and television station that has requested such notice in writing. This notice must be delivered at least 24 hours before the time of the meeting by personal delivery or any other means that ensures receipt.

The notice must state the time and place of the meeting as well as all business to be transacted or discussed. It is recommended that the business to be transacted or discussed be described in the same manner that an item for a regular meeting would be described on the agenda, that is, with a brief general description. Some items must appear on a regular, not special, meeting agenda (e.g., general law city adoption of an ordinance or consideration of local agency executive compensation).[14]

As noted above, closed session items should be described in accordance with the Brown Act's safe harbor provisions to protect legislative bodies and elected officials from challenges of noncompliance with notice requirements.

The special meeting notice must also be posted at least 24 hours prior to the special meeting using the same methods as posting an agenda for a regular meeting: at a site that is freely accessible to the public, and on the agency's website if (1) the local agency has a website and (2) the legislative body whose meeting is the subject of the agenda is either (a) a governing body or (b) has members that are compensated, with one or more members that are also members of a governing body.[15]

## Notices and agendas for adjourned and continued meetings and hearings

A regular or special meeting can be adjourned and re-adjourned to a time and place specified in the order of adjournment.[16] If no time is stated, the meeting is continued to the hour for regular meetings. Whoever is present (even if they are less than a quorum) may so adjourn a meeting; if no member of the legislative body is present, the clerk or secretary may adjourn the meeting. If a meeting is adjourned for less than five calendar days, no new agenda need be posted so long as a new item of business is not introduced.[17] A copy of the order of adjournment must be posted within 24 hours after the adjournment, at or near the door of the place where the meeting was held.

A hearing can be continued to a subsequent meeting. The process is the same as for continuing adjourned meetings, except that if the hearing is continued to a time less than 24 hours away, a copy of the order or notice of continuance must be posted immediately following the meeting.[18]

## Notice requirements for emergency meetings

The special meeting notice provisions apply to emergency meetings, except for the 24-hour notice.[19] News media that have requested written notice of special meetings must be notified by telephone at least one hour in advance of an emergency meeting, and all telephone numbers provided in that written request must be tried. If telephones are not working, the notice requirements are deemed waived. However, the news media must be notified as soon as possible of the meeting and any action taken.

News media may make a practice of having written requests on file for notification of special or emergency meetings. Absent such a request, a local agency has no legal obligation to notify news media of special or emergency meetings — although notification may be advisable in any event to avoid controversy.

## Notice of compensation for simultaneous or serial meetings

A legislative body that has convened a meeting and whose membership constitutes a quorum of another legislative body, may convene a simultaneous or serial meeting of the other legislative body only after a clerk or member of the convened legislative body orally announces (1) the amount of compensation or stipend, if any, that each member will be entitled to receive as a result of convening the meeting of the other legislative body; and (2) that the compensation or stipend is provided as a result of convening the meeting of that body.[20]

No oral disclosure of the amount of the compensation is required if the entire amount of such compensation is prescribed by statute and no additional compensation has been authorized by the local agency. Further, no disclosure is required with respect to reimbursements for actual and necessary expenses incurred in the performance of the member's official duties, such as for travel, meals, and lodging.

## Educational agency meetings

The Education Code contains some special agenda and special meeting provisions.[21] However, they are generally consistent with the Brown Act. An item is probably void if not posted.[22] A school district board must also adopt regulations to make sure the public can place matters affecting the district's business on meeting agendas and can address the board on those items.[23]

## Notice requirements for tax or assessment meetings and hearings

The Brown Act prescribes specific procedures for adoption by a city, county, special district, or joint powers authority of any new or increased tax or assessment imposed on businesses.[24] Although written broadly, these Brown Act provisions do not apply to new or increased real property taxes or assessments, as those are governed by the California Constitution, Article XIIIC or XIIID, enacted by Proposition 218. At least one public meeting must be held to allow public testimony on the tax or assessment. In addition, there must also be at least 45 days notice of a public hearing at which the legislative body proposes to enact or increase the tax or assessment. Notice of the public meeting and public hearing must be provided at the same time and in the same document. The public notice relating to general taxes must be provided by newspaper publication. The public notice relating to new or increased business assessments must be provided through a

mailing to all business owners proposed to be subject to the new or increased assessment. The agency may recover the reasonable costs of the public meetings, hearings, and notice.

The Brown Act exempts certain fees, standby or availability charges, recurring assessments, and new or increased assessments that are subject to the notice and hearing requirements of the Constitution.[25] As a practical matter, the Constitution's notice requirements have preempted this section of the Brown Act.

## Non-agenda items

The Brown Act generally prohibits any action or discussion of items not on the posted agenda. However, there are three specific situations in which a legislative body can act on an item not on the agenda:[26]

- When a majority decides there is an "emergency situation" (as defined for emergency meetings).
- When two-thirds of the members present (or all members if less than two-thirds are present) determine there is a need for immediate action, and the need to take action "came to the attention of the local agency subsequent to the agenda being posted." This exception requires a degree of urgency. Further, an item cannot be considered under this provision if the legislative body or the staff knew about the need to take immediate action before the agenda was posted. A new need does not arise because staff forgot to put an item on the agenda or because an applicant missed a deadline.
- When an item appeared on the agenda of, and was continued from, a meeting held not more than five days earlier.

**PRACTICE TIP:** Subject to very limited exceptions, the Brown Act prohibits any action or discussion of an item not on the posted agenda.

The exceptions are narrow, as indicated by this list. The first two require a specific determination by the legislative body. That determination can be challenged in court and, if unsubstantiated, can lead to invalidation of an action.

> **"I'd like a two-thirds vote of the board so we can go ahead and authorize commencement of phase two of the East Area Project," said Chair Lopez.**
>
> **"It's not on the agenda. But we learned two days ago that we finished phase one ahead of schedule — believe it or not — and I'd like to keep it that way. Do I hear a motion?"**

*The desire to stay ahead of schedule generally would not satisfy "a need for immediate action." Too casual an action could invite a court challenge by a disgruntled resident. The prudent course is to place an item on the agenda for the next meeting and not risk invalidation.*

> **"We learned this morning of an opportunity for a state grant," said the chief engineer at the regular board meeting, "but our application has to be submitted in two days. We'd like the board to give us the go-ahead tonight, even though it's not on the agenda."**

*A legitimate immediate need can be acted upon even though not on the posted agenda by following a two-step process:*

- First, make two determinations: (1) that there is an immediate need to take action
  and (2) that the need arose after the posting of the agenda. The matter is then
  placed on the agenda.
- Second, discuss and act on the added agenda item.

## Responding to the public

The public can talk about anything within the jurisdiction of the legislative body, but the legislative body generally cannot act on or discuss an item not on the agenda. What happens when a member of the public raises a subject not on the agenda?

While the Brown Act does not allow discussion or action on items not on the agenda, it does allow members of the legislative body, or its staff, to "briefly respond" to comments or questions from members of the public, provide a reference to staff or other resources for factual information, or direct staff to place the issue on a future agenda. In addition, even without a comment from the public, a legislative body member or a staff member may ask for information, request a report back, request to place a matter on the agenda for a subsequent meeting (subject to the body's rules or procedures), ask a question for clarification, make a brief announcement, or briefly report on their own activities.[27] However, caution should be used to avoid any discussion or action on such items.

> **Council Member Jefferson: I would like staff to respond to Resident Joe's complaints during public comment about the repaving project on Elm Street. Are there problems with this project?**
>
> **City Manager Frank: The public works director has prepared a 45-minute PowerPoint presentation for you on the status of this project and will give it right now.**
>
> **Council Member Brown: Take all the time you need; we need to get to the bottom of this. Our residents are unhappy.**

*It is clear from this dialogue that the Elm Street project was not on the council's agenda but was raised during the public comment period for items not on the agenda. Council Member Jefferson properly asked staff to respond; the city manager should have given at most a brief response. If a lengthy report from the public works director was warranted, the city manager should have stated that it would be placed on the agenda for the next meeting. Otherwise, both the long report and the likely discussion afterward will improperly embroil the council in a matter that is not listed on the agenda.*

## The right to attend and observe meetings

A number of Brown Act provisions protect the public's right to attend, observe, and participate in meetings.

Members of the public cannot be required to register their names, provide other information, complete a questionnaire, or otherwise "fulfill any condition precedent" to attending a meeting. Any attendance list, questionnaire, or similar document posted at or near the entrance to the meeting room or circulated at a meeting must clearly state that its completion is voluntary and that all persons may attend whether or not they fill it out.[28]

No meeting can be held in a facility that prohibits attendance based on race, religion, color, national origin, ethnic group identification, age, sex, sexual orientation, or disability, or that is inaccessible to the disabled. Nor can a meeting be held where the public must make a payment or purchase in order to be present.[29] This does not mean, however, that the public is entitled to free entry to a conference attended by a majority of the legislative body.[30]

While a legislative body may use teleconferencing in connection with a meeting, the public must be given notice of and access to the teleconference location. Members of the public must be able to address the legislative body from the teleconference location.[31]

Action by secret ballot, whether preliminary or final, is flatly prohibited.[32]

All actions taken by the legislative body in open session, and the vote of each member thereon, must be disclosed to the public at the time the action is taken.[33]

**Q.** The agenda calls for election of the legislative body's officers. Members of the legislative body want to cast unsigned written ballots that would be tallied by the clerk, who would announce the results. Is this voting process permissible?

**A.** *No. The possibility that a public vote might cause hurt feelings among members of the legislative body or might be awkward — or even counterproductive — does not justify a secret ballot.*

The legislative body may remove persons from a meeting who willfully interrupt or disrupt proceedings.[34] Ejection is justified only when audience members actually disrupt the proceedings,[35] or, alternatively, if the presiding member of the legislative body warns a person that their behavior is disruptive and that continued disruption may result in their removal (but no prior warning is required if there is a use of force or true threat of force).[36] If order cannot be restored after ejecting disruptive persons, the meeting room may be cleared. Members of the news media who have not participated in the disturbance must be allowed to continue to attend the meeting. The legislative body may establish a procedure to readmit an individual or individuals not responsible for the disturbance.[37]

## Records and recordings

The public has the right to review agendas and other writings distributed by any person to a majority of the legislative body in connection with a matter subject to discussion or consideration at a meeting. Except for privileged documents, those materials are public records and must be made available upon request without delay.[38] A fee or deposit as permitted by the California Public Records Act may be charged for a copy of a public record.[39]

**Q.** In connection with an upcoming hearing on a discretionary use permit, counsel for the legislative body transmits a memorandum to all members of the body outlining the litigation risks in granting or denying the permit. Must this memorandum be included in the packet of agenda materials available to the public?

**A.** *No. The memorandum is a privileged attorney-client communication.*

**Q.** In connection with an agenda item calling for the legislative body to approve a contract, staff submits to all members of the body a financial analysis explaining why the terms of the contract favor the local agency. Must this memorandum be included in the packet of agenda materials available to the public?

**A.** *Yes. The memorandum has been distributed to the majority of the legislative body, relates to the subject matter of a meeting, and is not a privileged communication.*

A legislative body may discuss or act on some matters without considering written materials. But if writings are distributed to a majority of a legislative body in connection with an agenda item, they must also be available to the public. A nonexempt or otherwise non-privileged writing distributed to a majority of the legislative body less than 72 hours before the meeting must be made available for inspection at the time of distribution at a public office or location designated for that purpose, and the agendas for all meetings of the legislative body must include the address of this office or location.[40] The location designated for public inspection must be open to the public, not a locked or closed office. Alternatively, the documents can be posted on the city's website for public review if statutory requirements are met.[41]

A writing distributed during a meeting must be made public:

- At the meeting if prepared by the local agency or a member of its legislative body.
- After the meeting if prepared by some other person.[42]

This requirement does not prevent assessing a fee or deposit for providing a copy of a public record pursuant to the California Public Records Act except where required to accommodate persons with disabilities.[43]

Any tape or film record of an open and public meeting made for whatever purpose by or at the direction of the local agency is subject to the California Public Records Act; however, it may be erased or destroyed 30 days after the taping or recording. Any inspection of a video or tape recording is to be provided without charge on a video or tape player made available by the local agency.[44] The agency may impose its ordinary charge for copies that is consistent with the California Public Records Act.[45]

In addition, the public is specifically allowed to use audio or videotape recorders or still or motion picture cameras at a meeting to record meetings of legislative bodies, absent a reasonable finding by the body that noise, illumination, or obstruction of view caused by recorders or cameras would persistently disrupt the proceedings.[46]

Similarly, a legislative body cannot prohibit or restrict the public broadcast of its open and public meetings without making a reasonable finding that the noise, illumination, or obstruction of view would persistently disrupt the proceedings.[47]

**PRACTICE TIP:** Public speakers cannot be compelled to give their name or address as a condition of speaking. The clerk or presiding officer may request speakers to complete a speaker card or identify themselves for the record but must respect a speaker's desire for anonymity.

## The public's right to speak during a meeting

Every agenda for a regular meeting must allow members of the public to speak on any item of interest, as long as the item is within the subject matter jurisdiction of the legislative body. Further, the public must be allowed to speak on a specific item of business before or during the legislative body's consideration of it.[48]

**Q.** Must the legislative body allow members of the public to show videos or make a PowerPoint presentation during the public comment part of the agenda, as long as the subject matter is relevant to the agency and is within the established time limit?

**A.** *Probably, although the agency is under no obligation to provide equipment.*

Moreover, the Brown Act, as well as case law, prevents legislative bodies from prohibiting public criticism of policies, procedures, programs, or services of the agency or the acts or omissions of the legislative body itself.[49] However, this prohibition does not provide immunity for defamatory statements.[50]

**Q.** May the presiding officer prohibit a member of the audience from publicly criticizing an agency employee by name during public comments?

**A.** *No, as long as the criticism pertains to job performance.*

**Q.** During the public comment period of a regular meeting of the legislative body, a resident urges the public to support and vote for a candidate vying for election to the body. May the presiding officer gavel the speaker out of order for engaging in political campaign speech?

**A.** *There is no case law on this subject. Some would argue that purely campaign issues are outside the subject matter jurisdiction of the body within the meaning of Section 54954.3(a). Others take the view that the speech must be allowed under paragraph (c) of that section where relevant to the governing of the agency and an implicit criticism of the incumbents' performance of city business.*

The legislative body may adopt reasonable regulations, including a limit on the total time permitted for public comment and a limit on the time permitted per speaker.[51] Such regulations should be enforced fairly and without regard to speakers' viewpoints. The legislative body has discretion to modify its regulations regarding time limits on public comment if necessary. For example, the time limit could be shortened to accommodate a lengthy agenda or lengthened to allow additional time for discussion on a complicated matter.[52]

The public does not need to be given an opportunity to speak on an item that has already been considered by a committee made up exclusively of members of the legislative body at a regular (but not special) public meeting if all interested members of the public had the opportunity to

speak on the item before or during its consideration, and if the item has not been substantially changed.[53]

Notices and agendas for special meetings must also give members of the public the opportunity to speak before or during consideration of an item on the agenda but need not allow members of the public an opportunity to speak on other matters within the jurisdiction of the legislative body.[54]

# Chapter 5

## CLOSED SESSIONS

A closed session is a meeting of a legislative body conducted in private without the attendance of the public or press. A legislative body is authorized to meet in closed session only to the extent expressly authorized by the Brown Act.[1]

As summarized in chapter 1 of this guide, it is clear that the Brown Act must be interpreted liberally in favor of open meetings, and exceptions that limit public access (including the exceptions for closed session meetings) must be narrowly construed.[2] The most common purposes of the closed session provisions in the Brown Act are to avoid revealing confidential information (e.g., prejudicing the city's position in litigation or compromising the privacy interests of employees). Closed sessions should be conducted keeping those narrow purposes in mind. It is not enough that a subject is sensitive, embarrassing, or controversial. Without specific authority in the Brown Act for a closed session, a matter to be considered by a legislative body must be discussed in public. However, there is no prohibition in putting overlapping exceptions on an agenda in order to provide an opportunity for more robust closed session discussions. As an example, a city council cannot give direction to the city manager about a property negotiation during a performance evaluation exception. However, if both real property negotiation and performance evaluation exceptions are on the agenda, those discussions might be conducted. Similarly, a board of police commissioners cannot meet in closed session to provide general policy guidance to a police chief, even though some matters are sensitive and the commission considers their disclosure contrary to the public interest.[3]

**PRACTICE TIP:** Some problems over closed sessions arise because secrecy itself breeds distrust. The Brown Act does not require closed sessions and legislative bodies may do well to resist the tendency to call a closed session simply because it may be permitted. A better practice is to go into closed session only when necessary.

In this chapter, the grounds for convening a closed session are called "exceptions" because they are exceptions to the general rule that meetings must be conducted openly. In some circumstances, none of the closed session exceptions applies to an issue or information the legislative body wishes to discuss privately. In these cases, it is not proper to convene a closed session, even to protect confidential information. For example, although the Brown Act does authorize closed sessions related to specified types of contracts (e.g., specified provisions of real property agreements, employee labor agreements, and litigation settlement agreements),[4] the Brown Act does not authorize closed sessions for other contract negotiations.

### Agendas and reports

Closed session items must be briefly described on the posted agenda, and the description must state the specific statutory exemption.[5] An item that appears on the open meeting portion of the agenda may not be taken into closed session until it has been properly put on the agenda as a

closed session item or unless it is properly added as a closed-session item by a two-thirds vote of the body after making the appropriate urgency findings.[6]

The Brown Act supplies a series of fill-in-the-blank sample agenda descriptions for various types of authorized closed sessions that provide a "safe harbor" from legal attacks. These sample agenda descriptions cover license and permit determinations, real property negotiations, existing or anticipated litigation, liability claims, threats to security, public employee appointments, evaluations and discipline, labor negotiations, multijurisdictional law enforcement cases, hospital boards of directors, medical quality assurance committees, joint powers agencies, and audits by the California State Auditor's Office.[7]

If the legislative body intends to convene in closed session, it must include the section of the Brown Act authorizing the closed session in advance on the agenda, and it must make a public announcement prior to the closed session discussion. In most cases, the announcement may simply be a reference to the agenda item.[8] The legislative body must take public comment on the closed session item before convening in a closed session.

**PRACTICE TIP:** Pay close attention to closed session agenda descriptions. Using the wrong label can lead to invalidation of an action taken in closed session if not substantially compliant.

Following a closed session, the legislative body must provide an oral or written report on certain actions taken and the vote of every elected member present. The timing and content of the report vary according to the reason for the closed session and the action taken.[9] The announcements may be made at the site of the closed session, as long as the public is allowed to be present to hear them.

If there is a standing or written request for documentation, any copies of contracts, settlement agreements, or other documents finally approved or adopted in closed session must be provided to the requestor(s) after the closed session if final approval of such documents does not rest with any other party to the contract or settlement. If substantive amendments to a contract or settlement agreement approved by all parties requires retyping, such documents may be held until retyping is completed during normal business hours, but the substance of the changes must be summarized for any person inquiring about them.[10]

The Brown Act does not require minutes, including minutes of closed sessions. However, a legislative body may adopt an ordinance or resolution to authorize a confidential "minute book" be kept to record actions taken at closed sessions.[11] If one is kept, it must be made available to members of the legislative body, provided that the member asking to review minutes of a particular meeting was not disqualified from attending the meeting due to a conflict of interest.[12] A court may order the disclosure of minute books for the court's review if a lawsuit makes sufficient claims of an open meeting violation.

## Litigation

The Brown Act expressly authorizes closed sessions to discuss what is considered pending litigation.[13] The rules that apply to holding a litigation closed session involve complex, technical definitions and procedures. Essentially, a closed session can be held by the body to confer with, or receive advice from, its legal counsel when open discussion would prejudice the position of the local agency in litigation in which the agency is, or could become, a party.[14] The litigation exception under the Brown Act is narrowly construed and does not permit activities beyond a legislative body's conferring with its own legal counsel and required support staff.[15] For example, it is not permissible to hold a closed session in which settlement negotiations take place between a legislative body, a representative of an adverse party, and a mediator.[16]

The California Attorney General has opined that if the agency's attorney is not a participant, a litigation closed session cannot be held.[17] In any event, local agency officials should always consult the agency's attorney before placing this type of closed session on the agenda in order to be certain that it is being done properly.

Before holding a closed session under the pending litigation exception, the legislative body must publicly state the basis for the closed session by identifying one of the following three types of matters: existing litigation, anticipated exposure to litigation, or anticipated initiation of litigation.[18]

### *Existing litigation*

**Q.** May the legislative body agree to settle a lawsuit in a properly noticed closed session without placing the settlement agreement on an open session agenda for public approval?

**A.** *Yes, but the settlement agreement is a public document and must be disclosed on request. Furthermore, a settlement agreement cannot commit the agency to matters that are required to have public hearings.*[19]

Existing litigation includes any adjudicatory proceedings before a court, administrative body exercising its adjudicatory authority, hearing officer, or arbitrator. The clearest situation in which a closed session is authorized is when the local agency meets with its legal counsel to discuss a pending matter that has been filed in a court or with an administrative agency and names the local agency as a party. The legislative body may meet under these circumstances to receive updates on the case from attorneys, participate in developing strategy as the case develops, or consider alternatives for resolution of the case. Generally, an agreement to settle litigation may be approved in closed session. However, an agreement to settle litigation cannot be approved in closed session if it commits the city to take an action that is required to have a public hearing.[20]

### *Anticipated exposure to litigation against the local agency*

Closed sessions are authorized for legal counsel to inform the legislative body of a significant exposure to litigation against the local agency, but only if based on "existing facts and circumstances" as defined by the Brown Act.[21] The legislative body may also meet under this exception to determine whether a closed session is authorized based on information provided by legal counsel or staff. In general, the "existing facts and circumstances" must be publicly disclosed unless they are privileged written communications or not yet known to a potential plaintiff. If an agency receives a documented threat of litigation, and intends to discuss that matter in closed session, the record of a litigation threat must be included in the body's agenda packet.[22]

### *Anticipated initiation of litigation by the local agency*

A closed session may be held under the exception for the anticipated initiation of litigation when the legislative body seeks legal advice on whether to protect the agency's rights and interests by initiating litigation.

Certain actions must be reported in open session at the same meeting following the closed session. Other actions, such as when final approval rests with another party or the court, may be announced when they become final and upon inquiry of any person.[23] Each agency attorney should be aware of and make the disclosures that are required by the particular circumstances.

## Real estate negotiations

A legislative body may meet in closed session with its negotiator to discuss the purchase, sale, exchange, or lease of real property by or for the local agency. A "lease" includes a lease renewal or renegotiation. The purpose is to grant authority to the legislative body's negotiator on price and terms of payment.[24] Caution should be exercised to limit discussion to price and terms of payment without straying to other related issues, such as site design, architecture, or other aspects of the project for which the transaction is contemplated.[25]

**Q.** May other terms of a real estate transaction, aside from price and terms of payment, be addressed in closed session?

**A.** *No. However, there are differing opinions over the scope of the phrase "price and terms of payment" in connection with real estate closed sessions. Many agency attorneys argue that any term that directly affects the economic value of the transaction falls within the ambit of "price and terms of payment." Others take a narrower, more literal view of the phrase.*

The agency's negotiator may be a member of the legislative body itself. Prior to the closed session, or on the agenda, the legislative body must identify its negotiators, the real property that the negotiations may concern,[26] and the names of the parties with whom its negotiator may negotiate.[27]

After real estate negotiations are concluded, the approval and substance of the agreement must be publicly reported. If its own approval makes the agreement final, the body must report in open session at the public meeting during which the closed session is held. If final approval rests with another party, the local agency must report the approval and the substance of the agreement upon inquiry by any person as soon as the agency is informed of it.[28]

**"Our population is exploding, and we have to think about new school sites," said Board Member Jefferson.**

**"Not only that," interjected Board Member Tanaka, "we need to get rid of a couple of our older facilities."**

**"Well, obviously the place to do that is in a closed session," said Board Member O'Reilly. "Otherwise we're going to set off land speculation. And if we even mention closing a school, parents are going to be in an uproar."**

*A closed session to discuss potential sites is not authorized by the Brown Act. The exception is limited to meeting with its negotiator over specific sites — which must be identified at an open and public meeting.*

**PRACTICE TIP:** Discussions of who to appoint to an advisory body and whether or not to censure a fellow member of the legislative body must be held in the open.

## Public employment

The Brown Act authorizes a closed session "to consider the appointment, employment, evaluation of performance, discipline, or dismissal of a public employee or to hear complaints or charges brought against the employee."[29] The purpose of this exception — commonly referred to as the "personnel exception" — is to avoid undue publicity or embarrassment for an employee or applicant for employment and to allow full and candid discussion by the legislative body; thus, it is restricted to discussing individuals, not general personnel policies.[30] The body must possess the power to appoint, evaluate, or dismiss the employee to hold a closed session under this exception.[31] That authority may be delegated to a subsidiary appointed body.[32]

An employee must be given at least 24 hours' notice of any closed session convened to hear specific complaints or charges against them. This occurs when the legislative body is reviewing evidence, which could include live testimony, and adjudicating conflicting testimony offered as evidence. A legislative body may examine (or exclude) witnesses,[33] and the California Attorney General has opined that, when an affected employee and advocate have an official or essential role to play, they may be permitted to participate in the closed session.[34] The employee has the right to have the specific complaints and charges discussed in a public session rather than closed session.[35] If the employee is not given the 24-hour prior notice, any disciplinary action is null and void.[36]

However, an employee is not entitled to notice and a hearing where the purpose of the closed session is to consider a performance evaluation. The Attorney General and the courts have determined that personnel performance evaluations do not constitute complaints and charges, which are more akin to accusations made against a person.[37]

**Q.** Must 24 hours' notice be given to an employee whose negative performance evaluation is to be considered by the legislative body in closed session?

**A.** *No, the notice is reserved for situations where the body is to hear complaints and charges from witnesses.*

Correct labeling of the closed session on the agenda is critical. A closed session agenda that identified discussion of an employment contract was not sufficient to allow dismissal of an employee.[38] An incorrect agenda description can result in invalidation of an action and much embarrassment.

For purposes of the personnel exception, "employee" specifically includes an officer or an independent contractor who functions as an officer or an employee. Examples of the former include a city manager, district general manager, or superintendent. Examples of the latter include a legal counsel or engineer hired on contract to act as local agency attorney or chief engineer.

Elected officials, appointees to the governing body or subsidiary bodies, and independent contractors other than those discussed above are not employees for purposes of the personnel exception.[39] Action on individuals who are not "employees" must also be public — including discussing and voting on appointees to committees, debating the merits of independent contractors, or considering a complaint against a member of the legislative body itself.

The personnel exception specifically prohibits discussion or action on proposed compensation in closed session except for a disciplinary reduction in pay. That means, among other things, there can be no personnel closed sessions on a salary change (other than a disciplinary reduction) between any unrepresented individual and the legislative body. However, a legislative body may address the compensation of an unrepresented individual, such as a city manager, in a closed session as part of a labor negotiation (discussed later in this chapter), yet another example of the importance of using correct agenda descriptions.

Reclassification of a job must be public, but an employee's ability to fill that job may be considered in closed session.

Any closed session action to appoint, employ, dismiss, accept the resignation of, or otherwise affect the employment status of a public employee must be reported at the public meeting during which the closed session is held. That report must identify the title of the position, but not the names of all persons considered for an employment position.[40] However, a report on a dismissal or non-renewal of an employment contract must be deferred until administrative remedies, if any, are exhausted.[41]

> **"I have some important news to announce," said Mayor Garcia. "We've decided to terminate the contract of the city manager effective immediately. The council has met in closed session, and we've negotiated six months' severance pay."**
>
> **"Unfortunately, that has some serious budget consequences, so we've had to delay phase two of the East Area Project."**
>
> *This may be an improper use of the personnel closed session if the council agenda described the item as the city manager's evaluation. In addition, other than labor negotiations, any action on individual compensation must be taken in open session. Caution must be exercised not to discuss in closed session issues, such as budget impacts in this hypothetical, beyond the scope of the posted closed session notice.*

**PRACTICE TIP:** The personnel exception specifically prohibits discussion or action on proposed compensation in closed session except for a disciplinary reduction in pay.

## Labor negotiations

The Brown Act allows closed sessions for some aspects of labor negotiations. Different provisions (discussed below) apply to school and community college districts.

A legislative body may meet in closed session to instruct its bargaining representatives, which may be one or more of its members,[42] on employee salaries and fringe benefits for both represented ("union") and unrepresented employees. For represented employees, it may also consider working conditions that by law require negotiation. For the purpose of labor negotiation closed sessions, an "employee" includes an officer or an independent contractor who functions as an officer or an employee, but independent contractors who do not serve in the capacity of an officer or employee are not covered by this closed session exception.[43]

**PRACTICE TIP:** Prior to the closed session, the legislative body must hold an open and public session in which it identifies its designated representatives.

These closed sessions may take place before or during negotiations with employee representatives. Prior to the closed session, the legislative body must hold an open and public session in which it identifies its designated representatives.

During its discussions with representatives on salaries and fringe benefits, the legislative body may discuss available funds and funding priorities, but only to instruct its representative. The body may also meet in closed session with a conciliator who has intervened in negotiations.[44]

The approval of an agreement concluding labor negotiations with represented employees must be reported after the agreement is final and has been accepted or ratified by the other party. The report must identify the item approved and the other party or parties to the negotiation.[45] The labor closed sessions specifically cannot include final action on proposed compensation of one or more unrepresented employees.

## Labor negotiations — school and community college districts

Employee relations for school districts and community college districts are governed by the Rodda Act, where different meeting and special notice provisions apply. The entire board, for example, may negotiate in closed sessions.

Four types of meetings are exempted from compliance with the Rodda Act:

1. A negotiating session with a recognized or certified employee organization.
2. A meeting of a mediator with either side.
3. A hearing or meeting held by a fact finder or arbitrator.
4. A session between the board and its bargaining agent, or the board alone, to discuss its position regarding employee working conditions and instruct its agent.[46]

Public participation under the Rodda Act also takes another form.[47] All initial proposals of both sides must be presented at public meetings and are public records. The public must be given reasonable time to inform itself and to express its views before the district may adopt its initial proposal. In addition, new topics of negotiations must be made public within 24 hours. Any votes on such a topic must be followed within 24 hours by public disclosure of the vote of each member.[48] The final vote must be in public.

## Other Education Code exceptions

The Education Code governs student disciplinary meetings by boards of school districts and community college districts. District boards may hold a closed session to consider the suspension or discipline of a student if a public hearing would reveal personal, disciplinary, or academic information about the student contrary to state and federal pupil privacy law. The student's parent or guardian may request an open meeting.[49]

**PRACTICE TIP:** Attendance by the entire legislative body before a grand jury would not constitute a closed session meeting under the Brown Act.

Community college districts may also hold closed sessions to discuss some student disciplinary matters, awarding of honorary degrees, or gifts from donors who prefer to remain anonymous.[50] Kindergarten through 12th grade districts may also meet in closed session to review the contents of the statewide assessment instrument.[51]

## Joint powers authorities

The legislative body of a joint powers authority may adopt a policy regarding limitations on disclosure of confidential information obtained in closed session, and may meet in closed session to discuss information that is subject to the policy.[52]

## License applicants with criminal records

A closed session is permitted when an applicant who has a criminal record applies for a license or license renewal and the legislative body wishes to discuss whether the applicant is sufficiently rehabilitated to receive the license. The applicant and the applicant's attorney are authorized to attend the closed session meeting. If the body decides to deny the license, the applicant may withdraw the application. If the applicant does not withdraw it, the body must deny the license in public, either immediately or at its next meeting. No information from the closed session can be revealed without consent of the applicant, unless the applicant takes action to challenge the denial.[53]

## Public security

Legislative bodies may meet in closed session to discuss matters posing a threat to the security of public buildings; essential public services, including water, sewer, gas, or electric service; or to the public's right of access to public services or facilities over which the legislative body has jurisdiction. Closed session meetings for these purposes must be held with designated security or law enforcement officials, including the Governor, Attorney General, district attorney, agency attorney, sheriff or chief of police, or their deputies or agency security consultant or security operations manager.[54] Action taken in closed session with respect to such public security issues is not reportable action.

## Multijurisdictional law enforcement agency

A joint powers agency formed to provide law enforcement services (involving drugs; gangs; sex crimes; firearms trafficking; felony possession of a firearm; high technology, computer, or identity theft; human trafficking; or vehicle theft) to multiple jurisdictions may hold closed sessions to discuss case records of an ongoing criminal investigation, to hear testimony from persons involved in the investigation, and to discuss courses of action in particular cases.[55]

The exception applies to the legislative body of the joint powers agency and to any body advisory to it. The purpose is to prevent impairment of investigations, to protect witnesses and informants, and to permit discussion of effective courses of action.[56]

## Hospital peer review and trade secrets

Two specific kinds of closed sessions are allowed for district hospitals and municipal hospitals under other provisions of law:[57]

1. A meeting to hear reports of hospital medical audit or quality assurance committees or for related deliberations. However, an applicant or medical staff member whose staff privileges are the direct subject of a hearing may request a public hearing.
2. A meeting to discuss "reports involving trade secrets" — provided no action is taken.

A "trade secret" is defined as information that is not generally known to the public or competitors and that (1) "derives independent economic value, actual or potential" by virtue of its restricted knowledge; (2) is necessary to initiate a new hospital service or program or facility; and (3) would, if prematurely disclosed, create a substantial probability of depriving the hospital of a substantial economic benefit.

The provision prohibits use of closed sessions to discuss transitions in ownership or management, or the district's dissolution.[58]

## Other legislative bases for closed session

Since any closed session meeting of a legislative body must be authorized by the Legislature, it is important to review the Brown Act carefully to determine if there is a provision that authorizes a closed session for a particular subject matter. There are some less frequently encountered topics that are authorized to be discussed by a legislative body in closed session under the Brown Act, including a response to a confidential final draft audit report from the Bureau of State Audits,[59] consideration of the purchase or sale of particular pension fund investments by a legislative body of a local agency that invests pension funds,[60] hearing a charge or complaint from a member enrolled in a health plan by a legislative body of a local agency that provides Medi-Cal services,[61] discussions by a county board of supervisors that governs a health plan licensed pursuant to the Knox-Keene Health Care Services Plan Act related to trade secrets or contract negotiations concerning rates of payment,[62] and discussions by an insurance pooling joint powers agency related to a claim filed against, or liability of, the agency or a member of the agency.[63]

**PRACTICE TIP:** Meetings are either open or closed. There is nothing "in between."[64]

## Who may attend closed sessions

Meetings of a legislative body are either fully open or fully closed; there is nothing in between. Therefore, local agency officials and employees must pay particular attention to the authorized attendees for the particular type of closed session. As summarized above, the authorized attendees may differ based on the topic of the closed session. Closed sessions may involve only the members of the legislative body and only agency counsel, management and support staff, and consultants necessary for consideration of the matter that is the subject of closed session, with very limited exceptions for adversaries or witnesses with official roles in particular types of hearings (e.g., personnel disciplinary hearings and license hearings). In any case, individuals who do not have an official or essential role in the closed session subject matters must be excluded from closed sessions.[65]

**Q.** May the lawyer for someone suing the agency attend a closed session in order to explain to the legislative body why it should accept a settlement offer?

**A.** *No, attendance in closed sessions is reserved exclusively for the agency's advisors.*

## The confidentiality of closed session discussions

The Brown Act explicitly prohibits the unauthorized disclosure of confidential information acquired in a closed session by any person present, and offers various remedies to address breaches of confidentiality.[66] It is incumbent upon all those attending lawful closed sessions to protect the confidentiality of those discussions. One court has held that members of a legislative body cannot be compelled to divulge the content of closed session discussions through the discovery process.[67] Only the legislative body acting as a body may agree to divulge confidential closed session information. With regard to attorney-client privileged communications, the entire body is the holder of the privilege, and only the entire body can decide to waive the privilege.[68]

**PRACTICE TIP:** There is a strong interest in protecting the confidentiality of proper and lawful closed sessions.

Before adoption of the Brown Act provision specifically prohibiting disclosure of closed session communications, agency attorneys and the Attorney General long opined that officials have a fiduciary duty to protect the confidentiality of closed session discussions. The Attorney General issued an opinion that it is "improper" for officials to disclose information regarding pending litigation that was received during a closed session,[69] though the Attorney General has also concluded that a local agency is preempted from adopting an ordinance criminalizing public disclosure of closed session discussions.[70] In any event, in 2002, the Brown Act was amended to prescribe particular remedies for breaches of confidentiality. These remedies include injunctive relief and, if the breach is a willful disclosure of confidential information, disciplinary action against an employee and referral of a member of the legislative body to the grand jury.[71]

The duty of maintaining confidentiality, of course, must give way to the responsibility to disclose improper matters or discussions that may come up in closed sessions. In recognition of this public policy, under the Brown Act, a local agency may not penalize a disclosure of information learned during a closed session if the disclosure (1) is made in confidence to the district attorney or the grand jury due to a perceived violation of law; (2) is an expression of opinion concerning the propriety or legality of actions taken in closed session, including disclosure of the nature and extent of the illegal action; or (3) is information that is not confidential.[72]

The interplay between these possible sanctions and an official's First Amendment rights is complex and beyond the scope of this guide. Suffice it to say that this is a matter of great sensitivity and controversy.

> **"I want the press to know that I voted in closed session against filing the eminent domain action," said Council Member Chang.**
>
> **"Don't settle too soon," reveals Council Member Watson to the property owner, over coffee. "The city's offer coming your way is not our bottom line."**
>
> *The first comment to the press may be appropriate if it is a part of an action taken by the city council in closed session that must be reported publicly.[73] The second comment to the property owner is not. Disclosure of confidential information acquired in closed session is expressly prohibited and harmful to the agency.*

# Chapter 6

## REMEDIES

A violation of the Brown Act can lead to invalidation of the agency's action, payment of a challenger's attorney fees, public embarrassment, and even criminal prosecution. As explained below, a legislative body often has an opportunity to correct a violation prior to the filing of a lawsuit. Compliance ultimately results from regular training and a good measure of self-regulation on the part of public officials. This chapter discusses the remedies available to the public when that self-regulation is ineffective.

### Invalidation of action taken

Any interested person, including the district attorney, may seek to invalidate certain actions of a legislative body on the grounds that they violate the Brown Act.[1] The following actions cannot be invalidated:

- Those taken in substantial compliance with the law. No Brown Act violation is found when the given notice substantially complies with the Brown Act, even when the notice erroneously cites the wrong Brown Act section but adequately advises the public that the legislative body will meet with legal counsel to discuss potential litigation in closed session.[2]
- Those involving the sale or issuance of notes, bonds, or other indebtedness, or any related contracts or agreements.[3]
- Those creating a contractual obligation, including a contract awarded by competitive bid for other than compensation for professional services, upon which a party has in good faith relied to its detriment.[4]
- Those connected with the collection of any tax.[5]
- Those in which the complaining party had actual notice at least 72 hours prior to the regular meeting or 24 hours prior to the special meeting, as the case may be, at which the action is taken.[6]

Before filing a court action seeking invalidation, a person who believes that a violation has occurred must send a written "cure or correct" demand to the legislative body. This demand must clearly describe the challenged action and the nature of the claimed violation. This demand must be sent within 90 days of the alleged violation, or within 30 days if the action was taken in open session but in violation of Section 54954.2, which requires (subject to specific exceptions) that a legislative body may act only on items posted on the agenda.[7] The legislative body then has up to 30 days to cure and correct its action.[8] The purpose of this requirement is to offer the body an opportunity to consider whether a violation has occurred and, if so, consider correcting the action to avoid the costs of litigation. If the legislative body does not act, any lawsuit must be filed within the next 15 days.[9]

Although just about anyone has standing to bring an action for invalidation,[10] the challenger must show prejudice as a result of the alleged violation.[11] An action to invalidate fails to state a cause of action against the agency if the body deliberated but did not take an action.[12]

## Declaratory relief to determine whether past action violated the act

Any interested person, including the district attorney, may file a civil action to determine whether a past action of a legislative body constitutes a violation of the Brown Act and is subject to a mandamus, injunction, or declaratory relief action.[13] Before filing an action, the interested person must, within nine months of the alleged violation of the Brown Act, submit a "cease and desist" letter to the legislative body clearly describing the past action and the nature of the alleged violation.[14] The legislative body has 30 days after receipt of the letter to provide an unconditional commitment to cease and desist from the past action.[15] If the body fails to take any action within the 30-day period or takes an action other than an unconditional commitment, the interested person has 60 days to file an action.[16]

The legislative body's unconditional commitment must be approved at a regular or special meeting as a separate item of business and not on the consent calendar.[17] The unconditional commitment must be substantially in the form set forth in the Brown Act.[18] No legal action may thereafter be commenced regarding the past action.[19] However, an action of the legislative body in violation of its unconditional commitment constitutes an independent violation of the Brown Act, and a legal action consequently may be commenced without following the procedural requirements for challenging past actions.[20]

The legislative body may rescind its prior unconditional commitment by a majority vote of its membership at a regular meeting as a separate item of business not on the consent calendar. At least 30 days written notice of the intended rescission must be given to each person to whom the unconditional commitment was made and to the district attorney. Upon rescission, any interested person may commence a legal action regarding the past actions without following the procedural requirements for challenging past actions.[21]

## Civil action to prevent future violations

The district attorney or any interested person can file a civil action asking the court to do the following:

- Stop or prevent violations or threatened violations of the Brown Act by members of the legislative body.
- Determine the applicability of the Brown Act to actions or threatened future action of the legislative body.
- Determine whether any rule or action by the legislative body to penalize or otherwise discourage the expression of one or more of its members is valid under state or federal law.
- Compel the legislative body to audio-record its closed sessions.[22]

**PRACTICE TIP:** A lawsuit to invalidate must be preceded by a demand to cure and correct the challenged action in order to give the legislative body an opportunity to consider its options. The Brown Act does not specify how to cure or correct a violation; the best method is to rescind the action being complained of and start over, or reaffirm the action if the local agency relied on the action and rescinding the action would prejudice the local agency.

It is not necessary for a challenger to prove a past pattern or practice of violations by the local agency in order to obtain injunctive relief. A court may presume when issuing an injunction that a single violation will continue in the future when the public agency refuses to admit to the alleged violation or to renounce or curtail the practice.[23] A court may not compel elected officials to disclose their recollections of what transpired in a closed session.[24]

Upon finding a violation of the Brown Act pertaining to closed sessions, a court may compel the legislative body to audio record its future closed sessions.[25] In a subsequent lawsuit to enforce the Brown Act alleging a violation occurring in closed session, a court may upon motion of the plaintiff review the audio recording if it finds there is good cause to think the Brown Act has been violated and make public a certified transcript of the relevant portion of the closed session recording.[26]

## Costs and attorney's fees

A plaintiff who successfully invalidates an action taken in violation of the Brown Act or who successfully enforces one of the Brown Act's civil remedies may seek court costs and reasonable attorney's fees. Courts have held that attorney's fees must be awarded to a successful plaintiff unless special circumstances exist that would make a fee award against the public agency unjust.[27] When evaluating how to respond to assertions that the Brown Act has been violated, elected officials and their lawyers should assume that attorney's fees will be awarded against the agency if a violation of the Brown Act is proven.

An attorney's fee award may only be directed against the local agency and not the individual members of the legislative body. If the local agency prevails, it may be awarded court costs and attorney's fees if the court finds the lawsuit was clearly frivolous and lacking in merit.[28]

## Misdemeanor penalties

A violation of the Brown Act is a misdemeanor if (1) a member of the legislative body attends a meeting where action is taken in violation of the Brown Act, and (2) the member intends to deprive the public of information that the member knows or has reason to know the public is entitled to.[29]

**PRACTICE TIP:** Attorney's fees will likely be awarded if a violation of the Brown Act is proven.

"Action taken" is not only an actual vote but also a collective decision, commitment, or promise by a majority of the legislative body to make a positive or negative decision.[30] If the meeting involves mere deliberation without the taking of action, there can be no misdemeanor penalty.

A violation occurs for a tentative as well as final decision.[31] In fact, criminal liability is triggered by a member's participation in a meeting in violation of the Brown Act — not whether that member has voted with the majority or minority, or has voted at all.

As with other misdemeanors, the filing of a complaint is up to the district attorney. Although criminal prosecutions of the Brown Act are uncommon, district attorneys in some counties aggressively monitor public agencies' adherence to the requirements of the law.

Some attorneys and district attorneys take the position that a Brown Act violation may be pursued criminally under Government Code section 1222.[32] There is no case law to support this view. If anything, the existence of an express criminal remedy within the Brown Act would suggest otherwise.[33]

## Voluntary resolution

Successful enforcement actions for violations of the Brown Act can be costly to local agencies. The district attorney or even the grand jury occasionally becomes involved. Publicity surrounding alleged violations of the Brown Act can result in a loss of confidence by constituents in the legislative body and its members. It is in the agency's interest to consider re-noticing and rehearing, rather than litigating, an item of significant public interest, particularly when there is any doubt about whether the open meeting requirements were satisfied.

Overall, agencies that regularly train their officials and pay close attention to the requirements of the Brown Act will have little reason to worry about enforcement.

### ENDNOTES

1 Cal. Gov. Code, § 54960.1. Invalidation is limited to actions that violate the following sections of the Brown Act: section 54953 (the basic open meeting provision), sections 54954.2 and 54954.5 (notice and agenda requirements for regular meetings and closed sessions), 54954.6 (tax hearings), 54956 (special meetings), and 54596.5 (emergency situations). Violations of sections not listed above cannot give rise to invalidation actions, but they are subject to the other remedies listed in section 54960.1.

28 Cal. Gov. Code, § 54960.5.

29 Cal. Gov. Code, § 54959. A misdemeanor is punishable by a fine of up to $1,000 or up to six months in county jail, or both (California Penal Code section 19). Employees of the agency who participate in violations of the Brown Act cannot be punished criminally under section 54959. However, at least one district attorney instituted criminal action against employees based on the theory that they criminally conspired with the members of the legislative body to commit a crime under section 54949.

30 Cal. Gov. Code, § 54952.6.

31 61 Ops.Cal.Atty.Gen. 283 (1978).

32 California Government Code section 1222 provides that "[e]very wilful omission to perform any duty enjoined by law upon any public officer, or person holding any public trust or employment, where no special provision is made for the punishment of such delinquency, is punishable as a misdemeanor."

33 The principle of statutory construction known as *expressio unius est exclusio alterius* supports the view that section 54959 is the exclusive basis for criminal liability under the Brown Act.

**RE:** AB 2449 Refresher – Brown Act Procedures for Teleconferencing

---

This is an attorney-client privileged communication which supplements our November 1, 2022 memorandum to the City Council, summarizing changes in state law that modified the Brown Act's teleconferencing procedures.

On February 28, 2023, Governor Newsom rescinded the COVID-19 state of emergency that had been in effect for nearly three years. Because of this, the City of American Canyon (City) and other public agencies can no longer utilize the AB 361 teleconferencing procedures that were used during the pandemic.

AB 361 provided broad authority for public agencies to use video conferencing platforms, like Zoom or Microsoft Teams, to conduct public meetings where members of the public and the agency's legislative/advisory councils and commissions could meet either *entirely or partially* remotely. However, AB 361 *requires* an ongoing state of emergency as declared by the Governor, so will therefore not be available unless or until a future state of emergency affecting the City is declared (*i.e.*, pandemic, flood, wildfire, *etc.*).

However, beginning January 1, 2023, newly enacted legislation, AB 2449 became effective providing a more rigid/restrictive than AB 361, but is still more flexible than the Brown Act's "traditional" rules on teleconferencing. Stated differently, AB 2449 is a "middle ground" between the traditional rules and AB 361. AB 2449 will be in effect until January 1, 2026, and may be extended by future legislation.

AB 2449's procedures, outlined below, can be used by any and all of the City's legislative and advisory bodies when they hold public meetings, including the City Council, Planning Commission, Parks and Community Services Commission, and the Open Space, Active Transportation and Sustainability Commission, as well as the Board of Directors for the American Canyon Fire Protection District.

**Traditional Teleconferencing Rules**

The Brown Act's traditional teleconferencing rules remain in effect, and are still an option.

The traditional (pre-COVID) Brown Act teleconferencing rules for public meetings requires: (1) at least a quorum to meet physically in-person within the City's boundaries; (2) that location available to public to physically attend; (3) *and* that any member who participates remotely must have the address of their remote location listed on the Agenda *and allow in-person public access at that remote location.*

Because the traditional rules require listing any member's remote location on the agenda and making it available to the public, it is not well equipped for unexpected events arising after the agenda is posted that may necessitate a member's remote attendance.

**Requirements and Limits of AB 2449**

As stated above, AB 2449 marks a partial move back towards the traditional teleconferencing rules, while still giving a degree of flexibility for remote attendance. AB 2449 adds new teleconferencing procedures that do *not* require a state of emergency. (Government Code Section 54953(f)).[1]

AB 2449 requires at least a quorum of members to participate in person from a single, publicly available location that is identified on the meeting agenda. (Section 54953(f)(1)). A member may no longer participate from a remote location within the City and cannot count as a part of the quorum.

If the physical quorum requirement is met, AB 2449 permits any absent member to attend virtually under two situations: **(1)** for "just cause;" and, **(2)** due to "emergency circumstances."

***1. Virtual Attendance for "Just Cause"***

*Grounds for "Just Cause"* - AB 2449 lists specific grounds that are considered "just cause."

- There is a childcare or caregiving need (for a child, parent, grandparent, grandchild, sibling, spouse, or domestic partner) that requires the member to participate remotely;
- A contagious illness prevents the member from attending in person;

[1] Unless otherwise noted, all section references are to the Government Code.

- There is a need related to a defined physical or mental disability that is not otherwise accommodated for; or
- Traveling while on official City business or for another state or local agency.

(Section 54953(j)(2)).

*Notification* - For "just cause" remote attendance, a member must **(1)** notify the legislative/advisory body at the earliest opportunity of the need for remote participation, **and (2)** provide a general description of the circumstances justifying their virtual attendance. (Section 54953(f)(2)(A)(i)). This notification can be made as late as the start of a regular meeting. (*Id*.)

*No Vote or Approval Necessary* – The legislative/advisory body does not need to vote on or approve a notification for "just cause" remote attendance. The member's remote attendance, however, should be noted on the record and in the Meeting Minutes.

*Limited to two (2) Annual Uses* - A member can only utilize the "just cause" authorization twice per calendar year. (Section 54953(f)(2)(A)(i)).

***2. Virtual Attendance Due to "Emergency Circumstances"***

*"Emergency Circumstance" Defined* - AB 2449 defines "emergency circumstances" as "a physical or family medical emergency that prevents a member from attending the meeting in person." (Section 54953(j)(1)).

*Timing and Procedure*: Unlike remote attendance for "just cause," remote attendance due to "emergency circumstances" is not granted as a matter of course – instead it requires the remote member to submit a request and that a vote be conducted by the legislative/advisory body to approve or deny the request. That vote should be conducted at the start of the meeting. (Section 54953(f)(2)(A)(ii).

The member must further provide a general description of the emergency circumstance justifying such attendance. (Section 54953(f)(2)(A)(ii)). However, the member is not required to disclose any medical diagnosis, disability, or personal medical information. (Section 54953 (f)(2)(A)(ii)).

The request to participate remotely must be made "as soon as possible." (Section 54953(f)(2)(A)(ii)(I)). However, if the request does not allow enough time for it to be placed on the agenda, the legislative body may still take action on the request. (Section 54954.2(b)(4)). If the legislative body votes not to accept the member's basis for virtual attendance, then that member may only participate as a general member of the public and *cannot* vote on any agenda item.

### *3. Additional Requirements for Remote Participation under AB 2449*

In addition to requiring justification as either "just cause" or an "emergency circumstance" for remote appearance, AB 2449 imposes the following additional requirements:

- *Quorum:* As stated above, at least a quorum must participate from the same physical location that is available to the public.

- *Noted for the Record*: The request for remote attendance should be stated on the record at the beginning of each public meeting. Staff should keep a record of how many times each member has appeared remotely and the grounds for appearing remotely.

- *Disclosure of other Individuals Present*: Before any action is taken during the meeting, the remote member must publicly disclose whether any other individuals 18 years of age or older are present in the room at the remote location with the member, and describe the general nature of the member's relationship with any such individuals.

- *Audio AND Visual Required:* The member participating remotely must participate through *both* audio and visual technology. That is, appearance by telephone without video is not authorized, and a member should not turn off their camera during the meeting.

- *Limited Number of Uses*: Each member's *total* remote participation *cannot be for more than three (3) consecutive months, **nor** 20 percent of the regular meetings* within a calendar year. For legislative bodies that have less than 10 regular meetings in a calendar year, a member cannot participate remotely for more than two (2) meetings.

- *Each Meeting Treated Separately*: A notification (for just cause grounds) or request (for emergency grounds) is required for *each* meeting a member remotely attends. That is, a single notification/request cannot be made for multiple meeting dates.

- *No Resolution Required*. Unlike AB 361, which required monthly Resolutions of the City Council, AB 2449 contains no such requirement.

  (*See*, Section 54953(f))

### *4. Technological Requirements and Agenda Posting*

AB 2449 requires that the public have audio *and* visual access to the meeting. This can be accomplished *either* by a two-way audiovisual program (such as Zoom) *or* a two-way telephonic service combined with live webcasting (for example, members of the public calling a conference line for audio participation while accessing the live video feed on YouTube). That is, the public must be able to remotely hear, observe, and address the legislative body in real time during the meeting. (Section 54953(f)(1)(A).

Importantly, when AB 2449 is being utilized, in the event that the City experiences a disruption in streaming the meeting (such as a power or internet outage), *then no action may be taken on any* agenda item until the public's access has been restored. For this reason, having alternative/redundant methods of access may be beneficial to avoid the need to halt a meeting. As mentioned above, this could be accomplished by Zoom, while also having a phone line paired with a live video feed on YouTube or a local public television station as a backup option.[2]

As with all public meetings, the City must timely post the agenda and issue all necessary meeting notices. Such materials should indicate how the public may access the meeting and how public comment may be given. (Section 54953(f)(1)(B)).

Under AB 2449, the agenda does *not* need to be posted at all teleconferencing locations (54953(f)(1)), only the physical location at which a quorum of the legislative body will conduct the meeting needs to be made available to the public. (*Id*). The agenda and advisory meeting notices do *not* need to list the individual locations of the members who are participating remotely, and those locations do *not* need to be made open to the public. For example, if a member participates remotely from their home or any other remote location, then their address does *not* need to be disclosed, nor does their location need to be made open to the public.

## Conclusion

AB 2449's procedures represent a partial shift back toward the more restrictive, pre-COVID teleconferencing procedures, but nonetheless allow some flexibility for members to attend remotely on a case-by-case basis.

[2] We are informed that, like many agencies, the City will continue to allow the public to access meetings by Zoom, even when all members of a body are present. Even in scenarios where AB 2449 is not being used (*i.e.*, all members are physically present at the meeting location) it is still advisable to have redundant/backup means of access, in case Zoom connectivity is lost.

We will continue to monitor updates to AB 2449 as well as practical “best practice” that evolve as public agencies familiarize themselves with the new procedures.

In the meantime, please contact our office if you have any questions.

WDR/DPS

## AB 2449 – Teleconferencing Requirements

NOTE: The traditional Brown Act Teleconference option is still in place for an advanced publicly noticed teleconference location which is accessible to the public. Please see Brown Act Teleconference Options Memo for more information. AB 2449 provides these additional options:

| **"Just Cause"** | **"Emergency Circumstances"** |
|---|---|
| *Timing and Procedure*<br><br>The member notifies the legislative body at the earliest opportunity possible (can be as late as the start of a regular meeting) of their need to participate remotely for "just cause," including a general description of the circumstances justifying their need to appear remotely.<br><br>*Qualifying Reason*<br><br>"Just cause" means any of the following:<br><br>• A childcare or caregiving need of a child, parent, grandparent, grandchild, sibling, spouse, or domestic partner that requires them to participate remotely<br>• A contagious illness that prevents a member from attending in person<br>• A need related to a physical or mental disability not otherwise accommodated for<br>• Travel while on official business of the legislative body or another state or local agency<br><br>Note: A member is limited to two virtual attendances based on "just cause" per calendar year. | *Timing and Procedure*<br><br>The member requests the legislative body as soon as possible to allow them to participate in the meeting remotely due to "emergency circumstances" and provides a general description of the circumstances justifying their need to appear remotely.<br><br>*and*<br><br>The legislative body takes action to approve the request. If the request does not allow sufficient time to place proposed action on such a request on the posted agenda for the meeting for which the request is made, the legislative body may take action at the beginning of the meeting in accordance with existing Brown Act provisions to add an item to the agenda.<br><br>*Qualifying Reason*<br><br>"Emergency circumstances" means a physical or family medical emergency that prevents a member from attending in person (does not require disclosure of any medical diagnosis or disability, or any personal medical information that is already exempt under existing law).<br><br>Note: The member must make a separate request for each meeting in which they seek to participate remotely. |

**Other Requirements**

Under either "just cause" or "emergency circumstances":

- The member must publicly disclose at the meeting, before any action is taken, whether any other individuals 18 years of age or older are present in the room at the remote location with the member, and the general nature of the member's relationship with any such individual(s).
- The member must participate through *both* audio and visual technology (cannot turn off camera).
- Teleconferencing by a member may not be for a period of
  - more than three consecutive months or 20 percent of the regular meetings for the local agency within a calendar year, *or*
  - more than two meetings if the legislative body regularly meets fewer than 10 times per calendar year
- The public must be able to participate remotely through either:
  - A two-way audiovisual platform (defined to mean an online platform that provides participants with the ability to participate in a meeting via both an interactive video conference and a two-way telephonic function); and/or
  - A two-way telephonic service *and* a live webcasting of the meeting (defined to mean a telephone service that does not require internet access, is not provided as part of a two-way audiovisual platform, and allows participants to dial a telephone number to listen and verbally participate.
- All votes must be by roll call.

# FOREWORD

The goal of this publication is to provide a comprehensive overview of the California Public Records Act for local government officials and employees, the public and the news media. This guide offers practical advice to assist local agencies in complying with the requirements of the Act and other related state laws. The guide is focused on settled law and is not intended to resolve emerging and unresolved legal issues.

The League thanks the following organizations representing diverse views and constituencies that reviewed, or were given the opportunity to review, this publication:

Association of California Water Agencies
California Association of Sanitation Agencies
California Attorney General's Office
California Common Cause
California District Attorneys Association
California First Amendment Coalition
California Newspaper Publishers Association
California Redevelopment Association
California School Boards Association
California Special Districts Association
California State Association of Counties
Californians Aware
City Clerks Association of California
Community College League of California
First Amendment Project
League of Women Voters of California

This publication is current as of March, 2008. Updates to the publication responding to changes in the Public Records Act and related laws including court interpretations are available at www.cacities.org/opengov.

As used in this guide, "local agency" means all public agencies to which the Public Records Act applies. This publication is not intended to provide legal advice. A local agency's legal counsel is responsible for advising its governing body and staff, and should always be consulted when legal issues arise.

Additional copies of this publication as well as an individual table of "Frequently Requested Information and Records" may be purchased by visiting CityBooks online at www.cacities.org/store.

## INTRODUCTION AND OVERVIEW

FUNDAMENTAL RIGHT OF ACCESS TO INFORMATION

FUNDAMENTAL RIGHT OF PRIVACY AND NEED FOR EFFICIENT AND EFFECTIVE GOVERNMENT

ACHIEVING BALANCE

PROPOSITION 59

BEYOND THE LAW

# CHAPTER 1:
## INTRODUCTION AND OVERVIEW

### FUNDAMENTAL RIGHT OF ACCESS TO INFORMATION

**The California Public Records Act**[1] (the "Act") is an indispensable component of California's commitment to open government. The purpose of the Act is to give the public access to information that enables them to monitor the functioning of their government.[2] The Act's fundamental precept is that governmental records shall be disclosed to the public, upon request, unless there is a legal basis not to do so.

***Practice Tip:***

Express legal authority is required to justify denial of access to public records. The perception that disclosure of a record could lead to potential embarrassment of the local agency, alone, is not a legal basis for denying access.

The Act provides for two types of access. One is a right to inspect public records:

> "Public records are open to inspection at all times during the office hours of the state or local agency and every person has a right to inspect any public record, except as hereafter provided."[3]

The other is a right to prompt availability of copies of those records:

> "Except with respect to public records exempt from disclosure by express provisions of law, each state or local agency, upon a request for a copy of records that reasonably describes an identifiable record or records, shall make the records promptly available to any person upon payment of fees covering direct costs of duplication, or a statutory fee if applicable. Upon request, an exact copy shall be provided unless impracticable to do so."[4]

These rights of access are by no means unlimited and do not extend to records that are exempt from disclosure. In fact, the Act was the culmination of a 15-year effort by the Legislature to create a comprehensive general records law that attempted to accumulate all the exemptions in one location. Previously, one was required to look at the law governing the specific type of record in question in order to determine its disclosability. The Act now expressly states or references other laws that are the sources of legal authority permitting records to be withheld.[5]

## FUNDAMENTAL RIGHT OF PRIVACY AND NEED FOR EFFICIENT AND EFFECTIVE GOVERNMENT

Two recurring interests underlie many of the exemptions from disclosure. First, many exemptions under the Act are based on protecting an individual's fundamental right to privacy and permit withholding of, for example, certain personnel or medical records.[6] If personal information is required from a person (for example, a government employee or appointee, or an applicant for government employment/appointment, as a precondition for the employment or appointment), a court would likely recognize a privacy interest in such information.[7] However, if information is provided voluntarily in order to acquire a benefit, the information relates to serious wrongdoing, or the information is associated with an applicant's qualifications, a court is less likely to recognize a privacy right.[8]

Second, a number of exemptions are based on the government's need to perform its assigned functions in a reasonably efficient and effective manner, such as maintaining confidentiality of investigative records, official information, pending litigation records, and preliminary drafts. In addition, a record may be withheld whenever the public interest in nondisclosure clearly outweighs the public interest in disclosure.[9] The deliberative process privilege combines these two interests in affording a measure of privacy to decision makers and concurrently aiding in the efficiency and effectiveness of government.[10]

## ACHIEVING BALANCE

In enacting the California Public Records Act, the Legislature struck a balance between two competing, fundamental interests. The legislative findings declare that access to information concerning the conduct of the people's business is a fundamental and necessary right for every person in the state and that the Legislature is "mindful of the right of individuals to privacy."[11] The Act balances these competing interests by preserving an "island of privacy upon the broad sea of enforced disclosure."[12] For the past forty years, courts have also balanced these competing interests in deciding whether to order disclosure of records.[13] In administering the provisions of the Act, agencies must often balance the right of public access against the right of privacy and the need for governmental efficiency and effectiveness.

## PROPOSITION 59

In November 2004, the voters approved Proposition 59, amending the California Constitution to include the public's right to access public records. "The people have the right of access to information concerning the conduct of the people's business, and, therefore, the meetings of public bodies and the writings of public officials and agencies shall be open to public scrutiny."[14]

Proposition 59 expressly states that "[t]his subdivision does not repeal or nullify, expressly or by implication, any constitutional or statutory exception to the right of access to public records…that is in effect on the effective date of this subdivision, including, but not limited to, any statute protecting the confidentiality of law enforcement and prosecution records."[15] The courts have not yet squarely ruled whether Proposition 59 provides the public with a greater right of access than is provided under the Act.

## BEYOND THE LAW

The Act itself provides that "except as otherwise prohibited by law, a state or local agency may adopt requirements for itself that allow for faster, more efficient, or greater access to records than prescribed by the minimum standards set forth in this chapter."[16] A number of local agencies have gone beyond the mandates of the Act by adopting their own "sunshine ordinances" to afford greater public access.

To encourage local agencies' compliance, the Act provides for a mandatory award of court costs and attorney's fees to a prevailing plaintiff. A plaintiff need not obtain all of the requested records in order to be the prevailing party in litigation. A plaintiff is also considered the prevailing party if the lawsuit ultimately motivated the agency to provide the requested records.[17]

This publication is intended to help local agencies navigate the Act, comply with the spirit and intent of the Act, and interpret the Act in furtherance of open government. This publication is further intended to help members of the public understand their rights of access to public information, as well as the limitations on those rights.

# CHAPTER 2:
## THE BASICS

AGENCIES COVERED

WHAT ARE PUBLIC RECORDS?

WHO CAN REQUEST RECORDS?

# CHAPTER 2:
## THE BASICS

### AGENCIES COVERED

The Act applies to state and local agencies. For purposes of the Act, a state agency is defined to mean "every state office, officer, department, division, bureau, board and commission or other state body or agency."[1] A local agency includes a county, city (whether general law or chartered), city and county, school district, municipal corporation, special district, community college district or political subdivision.[2] This encompasses any committees, boards, commissions or departments of those entities as well. Nonprofit entities that are legislative bodies under the Brown Act are also subject to the Act. Private nonprofit entities that are delegated legal authority to carry out public functions are also subject to the Act if they are funded with public money.[3]

The Act does not apply to the Legislature or the judicial branch.[4] The Legislative Open Records Act covers the Legislature.[5] Most court records are disclosable as a matter of public right of access to courts under the First Amendment of the United States Constitution.[6]

### WHAT ARE PUBLIC RECORDS?

The Act defines "public records" as "any writing containing information relating to the conduct of the public's business prepared, owned, used, or retained by any state or local agency regardless of physical form or characteristics."[7] A writing is defined as "any handwriting, typewriting, printing, photostating, photographing, photocopying, transmitting by electronic mail or facsimile, and every other means of recording upon any tangible thing any form of communication or representation, including letters, words, pictures, sounds, or symbols, or combinations thereof, and any record thereby created, regardless of the manner in which the record has been stored."[8]

The definition of a public record is quite broad and is intended to encompass much more than written or printed documents. A public record is subject to disclosure under the Act "regardless of its physical form or characteristics."[9] For example, email messages and other electronic information are public records if they otherwise meet the statutory definition.

Over the years the courts have both broadened and limited the scope of the definition of a "public record." First, it is clear that the term "public records" encompasses more than simply those documents that public officials are required by law to keep as official records. Courts have held that a public record is one that is "necessary or convenient to the discharge of [an] official duty" such as a status memorandum provided to the City Manager on a pending project.[10] Second, courts have observed that merely because the writing is in the possession of the local agency, it is not automatically a public record. It must relate to the conduct of the public's business.[11] For example, records containing purely personal information unrelated to the conduct of the people's business, such as an employee's personal address list or grocery list, are considered outside the scope of the Act.[12]

## WHO CAN REQUEST RECORDS?

All "persons" have the right to inspect and copy disclosable public records. A "person" need not be a resident of California or a citizen of the United States to make use of the Act.[13] "Persons" include corporations, partnerships, limited liability companies, firms or associations.[14] Often requesters include persons who have filed claims or lawsuits against the government, or who are investigating the possibility of doing so, or who just want to know what their government officials are up to. Local agencies and their officials are entitled to access public records on the same basis as any other person.[15] Further, local agency officials may access public records of their own agency that are otherwise exempt when authorized to do so as part of their official duties.[16] With certain exceptions, neither the media nor a person who is the subject of a public record has any greater right of access to public records than any other person.[17]

# CHAPTER 3:
## RESPONDING TO A PUBLIC RECORDS REQUEST

### TYPES OF REQUESTS

There are two ways to gain access to a public record – inspecting the record at the local agency's offices, or obtaining a copy from the local agency. The local agency may not dictate to the requester which option must be used. That is the requester's decision. Indeed, a requester does not have to choose between inspection and copying but instead can choose both options. For example, a requester may first inspect a set of records, and then, based on that review, decide which records should be copied.

***Practice Tip:***

If the public records request does not make clear whether the requester wants to inspect or obtain a copy of the record or records being sought, the local agency should seek clarification from the requester without delaying the process of searching for, collecting, and redacting or "whiting out" exempt information in the records.

A requester may inspect public records during the local agency's regular office hours.[1] This does not mean that a requester has a right to demand to see a record and immediately gain access to it. The right to inspect is constrained by an implied rule of reason to protect records against theft, mutilation, or accidental damage, prevent interference with the orderly functioning of the office, and generally avoid chaos in record archives.[2] Moreover, the agency's time to respond to an inspection request is governed by the deadlines set forth below, which give the agency a reasonable opportunity to search for, collect, and, if necessary, redact exempt information prior to the records being disclosed in an inspection.[3]

If a copy of a record has been requested, the local agency generally must provide an exact copy except where it is "impracticable" to do so.[4] The term "impracticable" does not necessarily mean that compliance with the public records request would be inconvenient or time-consuming to the local agency. Rather, it means that the agency must provide the best or most complete copy of the requested record that is reasonably possible.[5] As with the right to inspect public records, the same rule of reasonableness applies to the right to obtain copies of records. Thus, the custodian may impose reasonable restrictions on general requests for copies of voluminous classes of documents.[6]

The Act does not provide for a standing or continuing request for documents that may be generated in the future. However, the Brown Act provides that a person may make a request to receive a mailed copy of the agenda, or all documents constituting the agenda packet for any meeting of the legislative body. This request shall be valid for the calendar year in which it is filed.[7]

## FORM OF THE REQUEST

A public records request may be made in writing or orally, in person or by phone.[8] Further, a written request may be made in paper or electronic form and may be mailed, emailed, faxed, or personally delivered. A local agency may ask, but not require, that the requester put an oral request in writing. In general, a written request is preferable to an oral request because it provides a record of when the request was made and what was requested, and helps the agency respond in a more timely and thorough manner.

### *Practice Tip:*

A public records request is different than a question or series of questions posed to local agency officials or employees. The Act creates no duty to answer written or oral questions submitted by members of the public. But if an existing and readily available record contains information that would directly answer a question, from a customer service standpoint, it is advisable to either answer the question or provide the record in response to the question.

## CONTENT OF THE REQUEST

A public records request must reasonably describe an identifiable record or records.[9] It must be focused and specific[10] and clear enough so that the agency can decipher what record or records are being sought.[11] A request that is so open-ended that it amounts to asking for all of a department's files is not reasonable. If a request is not clear or is overly broad, the local agency still has a duty to assist the requester in reformulating the request to make it more clear or less broad.[12]

A request does not need to precisely identify the record or records being sought. For example, a requester may not know the exact date of a record or its title or author, but if the request is descriptive enough for the local agency to understand which records fall within its scope, the request is reasonable. Requests may identify writings somewhat generally by their content.[13]

No magic words need be used to trigger the local agency's obligation to respond to a request for records. The content of the request must simply indicate that a public record is being sought. Occasionally, a requester may incorrectly refer to the federal Freedom of Information Act ("FOIA") as the legal basis for the request. This does not excuse the agency from responding if the request seeks public records. A public records request need not state its purpose or the use to which the record will be put by the requester.[14] A requester does not have to justify or explain the reason for exercising a fundamental right.[15]

## THE DUTY TO RESPOND

Under no circumstances should a local agency simply not respond to a public records request. Even if the request does not reasonably describe an identifiable record, the requested record does not exist, or the record is exempt from disclosure, the agency must respond.[16]

### *Practice Tip:*

Though not legally required, a local agency may find it convenient to use a written form for public records requests, particularly for those instances when a requester "drops in" to an office and asks for one or more records. The local agency cannot require the requester to use a particular form, but having the form and even having agency staff assist with filling out the form may help agencies better identify the information sought, follow up with the requester using the contact information provided, and provide more effective assistance to the requester.

## TIMING OF THE RESPONSE

Time is critical in responding to public records requests. A local agency must respond promptly, but no later than ten calendar days from receipt of the request, to notify the requester whether records will be disclosed.[17] If the request is received after business hours or on a weekend or holiday, the next business day may be considered the date of receipt. The ten-day response period starts with the first calendar day after the date of receipt.[18] If the tenth day falls on a weekend or holiday, the next business day is considered the deadline for responding to the request.[19] The time limit for responding to a public records request is not necessarily the same as the time within which the records must be disclosed to the requester.[20]

## EXTENDING THE RESPONSE TIME

A local agency may extend the ten-day response period for up to 14 additional calendar days because of the need:

- To search for and collect the requested records from field facilities or other establishments separate from the office processing the request;
- To search for, collect, and appropriately examine a voluminous amount of separate and distinct records demanded in a single request;

### *Practice Tip:*

If a local agency is having difficulty responding to a public records request within the 10-day response period, and there are not grounds to extend the response period for an additional 14 days, the agency may obtain an extension by consent of the requester. Often a requester will cooperate with the agency, particularly if the requester believes the agency is acting reasonably and conscientiously in processing the request. It is also advisable to document in writing any extension agreed to by the requester.

- To consult with another agency having substantial interest in the request (such as a state agency), or among two or more components of the local agency (such as two city departments) with substantial interest in the request; and/or
- In the case of electronic records, to compile data, write programming language or a computer program, or to construct a computer report to extract data.[21]

No other reasons justify an extension of time to respond to a public records request. For example, a local agency may not extend the time on the basis that it has other pressing business, or that the employee most knowledgeable about the records sought is on vacation or otherwise unavailable.

If a local agency exercises its right to extend the response time beyond the ten-day period, it must do so in writing, stating the reasons for the extension and the anticipated date of the response within the 14-day extension period.[22] The agency does not need the consent of the requester to extend the time for response.

## ■ ASSISTING THE REQUESTER

Local agencies must provide assistance to requesters who are having difficulty making a focused and effective request.[23] To the extent reasonable under the circumstances, a local agency must:

- Assist the requester in identifying records that are responsive to the request or the purpose of the request, if stated;
- Describe the information technology and physical location in which the records exist; and
- Provide suggestions for overcoming any practical basis for denying access to records.[24]

Alternatively, the local agency may satisfy its duty to assist the requester if it gives the requester an index of records.[25] Ordinarily an inquiry into a requester's purpose in seeking access to a public record is inappropriate,[26] but such an inquiry may be proper if it will help assist the requester in making a focused request that reasonably describes identifiable records.[27]

## ■ LOCATING RECORDS

A local agency must make a reasonable effort to search for and locate the record or records that have been requested.[28] No bright-line test exists to determine whether an effort is reasonable. That determination will depend on the facts and circumstances surrounding each request. In general, upon the local agency's receipt of a public records request, those persons or offices within the agency that would most likely be in possession of responsive records should be consulted in an effort to locate such records.

The right to access public records is not without limits. A local agency is not required to perform a "needle in a haystack" search to locate the record or records sought by the requester.[29] Nor is it compelled to undergo a search that will produce a "huge volume" of material in response to the request.[30] On the other hand, an agency typically will endure some burden – at times, a significant burden – in its records search. Usually that burden alone will be insufficient to justify noncompliance with the request.[31] Nevertheless, if the request imposes a substantial enough burden, an agency may decide to withhold the requested records on the basis that the public interest in nondisclosure clearly outweighs the public interest in disclosure.[32]

## REDACTING RECORDS

Some records contain information that must be disclosed, along with information that is exempt from disclosure. A local agency has a duty to provide such a record to the requester in redacted form if the nonexempt information is "reasonably segregable" from that which is exempt,[33] unless the burden of redacting the record becomes too great.[34] What is reasonably segregable will depend on the circumstances. If exempt information is inextricably intertwined with nonexempt information, the record may be withheld in its entirety.[35]

### *Practice Tip:*

Care should be taken in deciding whether to disclose, withhold, or redact a record. When a public records request presents novel or complicated issues or implicates policy concerns or third party rights, it is advisable to consult with the local agency's legal counsel before making this decision.

## TYPES OF RESPONSES

After conducting a reasonable search for requested records, a local agency has only a limited number of possible responses. If a search yields no responsive records, the agency must inform the requester. If the agency locates a responsive record, it must decide whether to:

- Disclose the record;
- Withhold the record; or
- Disclose the record in redacted form.

In responding to a written public records request, if the local agency does not have the record or has decided to withhold it, or if the requested record is disclosed in redacted form, the agency's response must be in writing, and must identify by name and title each person responsible for the decision.[36]

If the record is withheld in its entirety or provided to the requester in redacted form, the local agency must state the legal basis under the Act for its decision not to comply fully with the request.[37] Statements like "we don't give up those types of records" or "our policy is to keep such records confidential" will not suffice.

## WAIVER

Generally, whenever a local agency discloses an otherwise exempt public record to any member of the public, the disclosure constitutes a waiver of most of the exemptions contained in the Act for all future requests for the same information.[38] There are a number of statutory exceptions to the waiver provisions, including disclosures made through discovery or other legal proceedings and disclosures to another governmental agency that agrees to treat the disclosed material as confidential.[39]

### *Practice Tip:*

A local agency should always document that it is supplying the record to the requester. The fact and sufficiency of the response may become points of dispute with the requester. Any response that denies in whole or in part an oral public records request should be put in writing.

## NO DUTY TO CREATE A RECORD OR TO CREATE A PRIVILEGE LOG

A local agency has no duty to create a record that does not exist at the time of the request.[40] There is also no duty to reconstruct a record that was lawfully discarded prior to receipt of the request.

The Act does not require a local agency to create a "privilege log" or list that identifies the specific records being withheld.[41] The response only needs to identify the legal grounds for nondisclosure. If the agency creates a privilege log for its own use, however, that document may be considered a public record and may be subject to disclosure in response to a later public records request.

## TIMING OF DISCLOSURE

Although the law precisely defines the time for responding to a public records request, it is less precise in defining the deadline for disclosing records. The Act simply states that copies of records must be provided "promptly."[42] As for when a requester must be given access to inspect records, the Act is silent, but it is generally assumed that the same standard of promptness applies. Further, the Act states that nothing therein "shall be construed to permit an agency to delay or obstruct the inspection or copying of public records,"[43] which signals the importance of promptly disclosing records to the requester.

***Practice Tip:***

The local agency may wish to maintain a separate file for copies of records that have been withheld and those produced (including redacted versions) in the event there is a legal challenge to the decision regarding the disclosure.

Neither the ten-day response period nor the additional fourteen-day extension may be used to delay or obstruct the inspection or copying of public records.[44] For example, requests for commonly disclosed records that are held in a manner that allows for prompt disclosure should not be withheld because of the statutory response period.

As a practical matter, records often are disclosed at the same time the local agency responds to the request. But in some cases, that time frame for disclosure is not feasible because of the volume of records encompassed by the request.

## FEES

***Practice Tip:***

When faced with a voluminous public records request, a local agency has numerous options – for example, asking the requester to narrow the request, asking the requester to consent to a later deadline for responding to the request, and providing responsive records (whether redacted or not) on a "rolling" basis, rather than in one complete package. It is sometimes possible for the agency and requester to work cooperatively to streamline a public records request, with the result that the requester obtains the records or information the requester truly wants, while the burdens on the agency in complying with the request are reduced.

The public records process is in many respects cost-free to the requester. No fees may be charged to reimburse the local agency's costs incurred to search for a record, review a record, redact a record, assist a requester in formulating a request, or respond to a request. Nor may the local agency charge a fee for the requester's inspection of a record, even if staff time is expended in the inspection. For example, if concern for the security of records requires that an agency employee sit with the requester during the inspection, or if a record must be redacted before it can be inspected, the agency may not bill the requester for this expenditure of staff time.

The local agency may charge a fee for the direct costs of duplicating a record when the requester is seeking a copy,[45] or it may charge a statutory fee, if applicable.[46] Direct costs of duplication include costs of reproduction, and conceivably the cost of staff time expended in making a copy of the record.[47] An agency may require payment in advance before providing the requested copies;[48] however, no payment can be required merely to look at a record where copies are not sought.

Although permitted to charge a fee for duplication costs, a local agency may choose to reduce or waive that fee.[49] For example, the agency might waive the fee in a particular case because the requester is indigent; or it might generally choose to waive fees below a certain dollar threshold because the administrative costs of collecting the fee would exceed the revenue to be collected. An agency may also set a customary copying fee for all requests that is below the amount that reflects actual duplication costs.

- Taxpayer Information
- Trade Secrets and Other Proprietary Information
- Utility Customer Information

PUBLIC INTEREST EXEMPTION

EFFECT OF PROPOSITION 59 ON EXEMPTIONS

# CHAPTER 4:
## EXEMPTIONS

## OVERVIEW OF EXEMPTIONS

The underlying purpose of the Act is to assure broad access to public records. Any grounds for denying access to public records must be found in the enumerated exemptions of the Act.[1] The Act's general policy of disclosure can only be accomplished if the exemptions are narrowly construed. As a result, courts—both as a matter of statutory interpretation and now by constitutional mandate—construe exemptions under the Act narrowly.[2]

This means that in responding to a record request, the local agency must allow access to the record unless it can identify an exemption within the Act that would justify nondisclosure of the information. Moreover, in circumstances where a record may contain some information that is subject to an exemption and other information that is not, the local agency must produce the record, but may redact the information that is exempt.

As discussed below, many of the exemptions are very specific and pertain to particular types of public records such as certain personnel, police, or medical records. Two exemptions, however, have a broader scope and may apply even if a record does not fall within any other exemption contained in the Act. First, the Act exempts records that are otherwise exempt from disclosure under other statutes.[3] Second, the Act's "public interest" or "catchall" provision allows nondisclosure where the local agency demonstrates on the facts of a particular case that the public interest in nondisclosure clearly outweighs the public interest in disclosure.[4]

***Practice Tip:***

When evaluating a record for purposes of determining whether it falls within any exemption under the Act, a local agency should always bear in mind that it might also be subject to nondisclosure under other statutes such as the Evidence Code or Penal Code.[5]

## ■ SPECIFIC EXEMPTIONS

### *Architectural and Official Building Plans*

Certain of the materials submitted by third parties to local agencies may qualify for federal copyright protection.[6] In addition, local agencies may claim a copyright in many of their own records.

The Act exempts records, "the disclosure of which is exempted or prohibited pursuant to federal or state law…."[7] Federal copyright law defines "architectural work" as the "design of a building as embodied in any tangible medium of expression, including building, architectural plans, or drawings."[8] The law includes architectural plans as "original works of authorship" which have an automatic federal copyright protection.[9] Architectural plans are therefore protected under the federal copyright law and may be inspected, but cannot be copied without the permission of the owner. "Fair use of copyrighted materials" does not require disclosure or the right to copy architectural plans. The Fair Use rule is a defense to a copyright infringement action; it is not proper to use the Fair Use rule offensively in order to obtain copyrighted materials.[10]

State law addresses inspection and duplication of building plans and authorizes inspection of the plans by the public.[11] The official copy of building plans maintained by a local agency's building department may be inspected, but may not be copied without first requesting the written permission of the licensed or registered professional who signed the document and the original or current property owner. A request for written permission from the professional must be accompanied by a statutorily prescribed affidavit signed by the person requesting to make copies, attesting that the copy of the plans shall only be used for the maintenance, operation and use of the building, that the drawings are instruments of professional service and are incomplete without the interpretation of the certified, licensed or registered professional of record, and that a licensed architect who signs and stamps plans, specifications, reports, or documents shall not be responsible for damage caused by subsequent unauthorized changes to or uses of those plans.[12] After receiving this required information, the professional cannot unreasonably withhold written permission to make copies of the plans.[13]

Additionally, the California Attorney General has determined that interim grading documents, including geology, compaction, and soils reports are public records.[14]

***Practice Tip:***

These statutory requirements do not prohibit duplication of reduced copies of plans that have been distributed to local agency decision-making bodies as part of the agenda materials for a public meeting.

### *Attorney Client Communications and Attorney Work Product*

The Act specifically exempts from disclosure "records, the disclosure of which is exempted or prohibited pursuant to federal or state law, including, but not limited to, the provisions of the Evidence Code relating to privilege."[15] The Act's exemptions protect attorney client privileged communications and attorney work product, as well as, more broadly, other work product prepared for use in pending litigation or claims.[16]

Even after litigation is concluded, an attorney's billing entries remain exempt from disclosure under the attorney client privilege or attorney work product doctrine insofar as they describe an attorney's impressions, conclusions, opinions, legal research or strategy.[17] Similarly, retainer agreements between a local agency and its attorneys may constitute confidential communications that fall within the attorney client privilege.[18] A local agency may waive the privilege and elect to produce the agreements.[19] Only the local agency's governing board may waive the privilege.[20]

## *Code Enforcement Records*

Local agencies may pursue code enforcement through administrative or criminal proceedings, or a combination of both. Records of code enforcement cases for which criminal sanctions are sought may be subject to the same disclosure rules as police and other law enforcement records, including the rules for investigatory records and files, as long as there is a concrete and definite prospect of criminal enforcement.[21] Records of code enforcement cases being prosecuted administratively do not qualify as law enforcement records.[22] However, some administrative code enforcement information, such as names and contact information of complainants, may be exempt from disclosure under the official information privilege, the identity of informant privilege, or the public interest exemption.[23]

## *Drafts*

The Act exempts from disclosure "[p]reliminary drafts, notes, or interagency or intra-agency memoranda that are not retained by the public agency in the ordinary course of business, if the public interest in withholding those records clearly outweighs the public interest in disclosure."[24] The purpose of the "drafts" exemption is to provide a measure of privacy for writings concerning pending agency action. The exemption was adapted from the federal Freedom of Information Act ("FOIA"), which exempts from disclosure "inter-agency or intra-agency memorandums or letters which would not be available by law to a party other than an agency in litigation with the agency."[25] The California Supreme Court has observed that the FOIA "memorandums" exemption is based on the policy of protecting the decision making processes of government agencies, and in particular the frank discussion of legal or policy matters that might be inhibited if subjected to public scrutiny.[26]

***Practice Tip:***

By adopting written policies or developing consistent practices of discarding preliminary deliberative writings, local agencies may facilitate candid internal policy debate. Such policies and practices may exempt from disclosure even preliminary drafts that have not yet been discarded, so long as the drafts are not maintained by the local agency in the ordinary course of business, and the public interest in nondisclosure clearly outweighs the public interest in disclosure.

The courts have held that the "drafts" exemption in the Act has essentially the same purpose as the "memorandums" exemption in the FOIA, and that the "drafts" exemption protects deliberative materials produced in the process of making agency decisions, but not factual materials.[27] Some courts have distinguished between pre-decisional advisory opinions, recommendations and policy deliberations, which are exempt, and memoranda of factual material or purely factual material contained in and severable from deliberative memoranda.[28] However, in discussing the closely-related deliberative process privilege, which is also based on the FOIA "memorandums" exemption, the California Supreme Court has observed that the fact/opinion distinction may be misleading because even purely factual material may expose the deliberative process. According to the California Supreme Court, the key question under the FOIA "memorandums" exemption is whether the disclosure of materials would expose an agency's decision making process in such a way as to discourage candid discussion within the agency and thereby undermine the agency's ability to perform its functions.[29]

To qualify for the "drafts" exemption:

- the record must be a preliminary draft, note, or memorandum;
- that is not retained by the local agency in the ordinary course of business; and
- the public interest in withholding the record must clearly outweigh the public interest in disclosure.[30]

The courts have observed that preliminary materials that are not customarily discarded or that have not in fact been discarded pursuant to policy or custom must be disclosed.[31] What distinguishes the "drafts" exemption from the deliberative process privilege is a focus on whether the records containing deliberative information are normally retained by the local agency. If the records are normally retained, they do not qualify for the exemption. This is in keeping with the purpose of the FOIA "memorandums" exemption of prohibiting the "secret law" that would result from confidential memos retained by local agencies to guide their decision-making.

## *Election Information*

### Voter Registration Information

Voter registration information, including the home street address, telephone number, email address, precinct number, or other number given by the Secretary of State, is confidential and cannot be disclosed except as specified in the Elections Code. Similarly, the signature of the voter shown on the voter registration card is confidential and shall not be disclosed to any person, except as provided in the Elections Code.[32] Voter registration information may be provided to any candidate for federal, state, or local office; any committee for or against an initiative or referendum measure for which legal publication is made; and to any person for election, scholarly, journalistic or political purposes, or for governmental purposes as determined by the Secretary of State.[33]

Identifying information contained in voter registration records including a California Driver's License, California ID card, or other unique identifier used by the State of California is confidential and shall not be disclosed to any person (including those entitled to voter registration information).[34]

When a person's vote is challenged, the voter's home address or signature may be released to the challenger, elections officials, and other persons as necessary to make, defend or adjudicate a challenge.[35]

The elections official shall permit a person to view the signature of a voter for the purpose of determining whether the signature matches a signature on an affidavit of registration or a petition. The signature cannot be copied.[36]

Information or data compiled by public officers or employees that reveals the identity of persons who have requested bilingual ballots or ballot pamphlets is not a public record and shall not be provided to any person other than those public officers or employees who are responsible for receiving and processing those requests.[37]

### Initiative, Recall, and Referendum Petitions

Any petition to which a voter has affixed his or her signature for a statewide, county, city, and/or district initiative, referendum, recall or matters submitted under the Education Code is not a public record and is not open to inspection except by the public officers and/or employees whose duty it is to receive, examine or preserve the petitions. This prohibition extends to all memoranda prepared by county elections officials in the examination of the petitions indicating which voters have signed particular petitions.[38]

If a petition is found to be insufficient, the proponents and their representatives may inspect the memoranda of insufficiency to determine which signatures were disqualified and the reasons for the disqualification.[39]

## *Identity of Informants*

A local agency has a privilege to refuse to disclose and to prevent another from disclosing the identity of a person who has furnished information in confidence to a law enforcement officer or representative of a local agency charged with administration or enforcement of a law. This privilege applies where the information purports to disclose a violation of a law of the United States, the State of California or another public entity, and where the disclosure is forbidden by state or federal law. It also applies where the disclosure of the identity of the informant is against the public interest because there is a necessity for

preserving the confidentiality of the informant's identity that outweighs the necessity for disclosure in the interest of justice.[40] This privilege extends to disclosure of the contents of the informant's communication if the disclosure would tend to disclose the identity of the informant.[41]

## *Law Enforcement Records*

### Overview

Law enforcement records are generally exempt from disclosure except for certain specific types of information that must be disclosed.[42] The actual investigation files and records are themselves exempt from disclosure, but the Act requires the local agency to disclose certain information derived from them.[43]

The type of information that must be disclosed differs depending upon whether it relates to, for example, calls to the police department for assistance, the identity of an arrestee, information relating to a traffic accident, or certain types of crimes, including, for example, car theft, burglary, or arson. The identities of victims of certain types of crimes, including minors and victims of sexual assault, are required to be withheld if requested by the victim, or the victim's guardian if the victim is a minor.[44] Those portions of any file that reflect the analysis and conclusions of the investigating officers may also be withheld.[45] Certain information that may be required to be released may be withheld where the disclosure would endanger a witness or interfere with the successful completion of the investigation. The disclosure exemption extends indefinitely, even after the investigation is closed.[46]

Release practices vary by local agency. Some local agencies provide a written summary of information being disclosed, some release only specific information upon request, while others release reports with certain matters redacted. Other local agencies release reports upon request with no redactions except as mandated by statute. Some local agencies also release 911 tapes[47] and booking photos, although this is not required under the Act.[48]

If it is your local agency's policy to release police reports upon request, it is helpful to establish an internal process to control the release of the identity of minors or victims of certain types of crimes; or to ensure that releasing the report would not endanger the safety of a person involved in an investigation or endanger the completion of the investigation.

***Practice Tip:***

Many departments that choose not to release entire reports develop a form that can be filled out with the requisite public information.

### Exempt Records

The Act generally exempts most law enforcement records from disclosure, including:

- Complaints to or investigations conducted by a local or state police agency
- Records of intelligence information or security procedures of a local or state police agency
- Any investigatory or security files compiled by any other local or state police agency
- Customer lists provided to a local police agency by an alarm or security company
- Any investigatory or security files compiled by any state or local agency for correctional, law enforcement or licensing purposes.[49]

### Information that Must be Disclosed

There are three general categories of information contained in law enforcement investigatory files that must be disclosed: information that must be disclosed to victims, their authorized representatives and insurance carriers; information relating to arrestees; and information relating to complaints or requests for assistance.

### *Disclosure to Victims, Authorized Representatives, Insurance Carriers:*

Except where disclosure would endanger the successful completion of an investigation, or a related investigation, or endanger the safety of a witness, certain information relating to specific listed crimes must be disclosed upon request to:

- A victim
- The victim's authorized representative
- An insurance carrier against which a claim has been or might be made
- Any person suffering bodily injury, or property damage or loss.

The type of crimes listed to which this requirement applies include arson, burglary, fire, explosion, larceny, robbery, carjacking, vandalism, vehicle theft, or a crime defined by statute.[50]

The type of information that must be disclosed (except where it endangers safety of witnesses or the investigation itself) includes:

- Name and address of persons involved in or witnesses to incident (other than confidential informants)
- Description of property involved
- Date, time and location of incident
- All diagrams; statements of the parties to the incident
- Statements of all witnesses (other than confidential informants).[51]

### *Information Regarding Arrestees*

The Act mandates that the following information be released pertaining to every individual arrested by the local law enforcement agency except where releasing the information would endanger the safety of persons involved in an investigation or endanger the successful completion of the investigation or a related investigation:

- Full name and occupation of the arrestee
- Physical description including date of birth, color of eyes and hair, sex, height and weight
- Time, date and location of arrest
- Time and date of booking
- Factual circumstances surrounding arrest
- Amount of bail set
- Time and manner of release or location where arrestee is being held
- All charges, including outstanding warrants, parole or probation holds, that the arrestee is being held on.[53]

### *Complaints or Requests for Assistance*

The Act provides that the following information must be disclosed relative to complaints or requests for assistance received by the law enforcement agency — subject to the restrictions imposed by the Penal Code:

- Time and nature of the response
- To the extent the crime alleged or committed or any other incident is recorded, the time, date and location of occurrence, and the time and date of report
- Factual circumstances surrounding crime/incident

**Practice Tip:**

The release of traffic accident information is covered under the Vehicle Code, which requires the law enforcement agency to disclose the entire contents of a traffic accident report to persons who have a "proper interest" in the information, including the driver or authorized representative, guardian, conservator or parent of a minor driver, injured person, owners of vehicles or property damaged by the accident, persons who may be liable for breach of warranty and an attorney who declares under penalty of perjury that he or she represents any such person.[52]

**Practice Tip:**

Most police departments have some form of daily desk or press log that contains all or most of arrestee information. The Act does not require a local agency to grant a single requester to be given access on a subscription basis to records that may be created in the future. It applies only to records existing at the time of the request.[54] Further, there is no obligation to provide the information in the format requested if that is not the format used by the local agency to store the information or to create copies for its own use.[55]

- General description of injuries, property or weapons involved
- Names and ages of victims shall be disclosed, except the names of victims of certain listed crimes may be withheld upon request of victim or parent of minor victim. These listed crimes include various Penal Code sections which relate to topics such as sexual abuse, child abuse, hate crimes and stalking.[56]

The Penal Code provides that except as required by criminal discovery provisions, no law enforcement officer or employee of a law enforcement agency shall disclose to any arrested person, or to any person who may be a defendant in a criminal action, the address or telephone number of any person who is a victim of or witness to the alleged offense.[57]

### Requests for Journalistic or Scholarly Purposes

Where a request states, under penalty of perjury, that it is made for a scholarly, journalistic, political or governmental purpose, or for an investigative purpose by a licensed private investigator, and that it will not be used directly or indirectly or furnished to another to sell a product or service to any individual or group of individuals, the Act requires the disclosure of the name and address of every individual arrested by the local agency and the current address of the victim of a crime, except for specified crimes.[58] Any address information furnished pursuant to this authorization may not be used directly or indirectly, or furnished to another to sell a product or service and is subject to statutory restrictions that preclude the furnishing of this information to an arrested person or a defendant in a criminal action.[59]

***Practice Tip:***

Law enforcement information such as complaint or incident information that may otherwise be subject to disclosure is confidential to the extent it includes reports of suspected child or elder abuse or neglect, or information contained in reports of suspected abuse or neglect. To avoid potential criminal liability, local agencies should only disclose reports of suspected child or elder abuse or neglect or information contained in such reports as permitted by state law.

### Mental Health Detention Information

All information and records obtained in the course of providing services to a mentally disordered individual who is gravely disabled and/or a danger to others or himself, and who is detained (often referred to as a "detainee") and taken into custody by a peace officer, are confidential and may only be disclosed to enumerated recipients and for purposes specified in state law.[60] Willful, knowing release of confidential mental health detention information can create liability for civil damages.[61]

### Elder Abuse Records

Reports of suspected abuse or neglect of an elder or dependent adult, and information contained in such reports, are confidential and may only be disclosed as permitted by state law.[62] The prohibition against unauthorized disclosure applies regardless of whether a report of suspected elder abuse or neglect is from someone who is a "mandated reporter" (any person that has assumed full or intermittent responsibility for the care or custody of an elder or dependent adult, whether or not for compensation) or from someone else.[63] Unauthorized disclosure of suspected elder abuse or neglect information is a misdemeanor.[64]

### Juvenile Records

#### *Police and Court Records*

Records or information gathered by law enforcement agencies relating to the detention of or taking a minor into custody or temporary custody are confidential and subject to release only in certain circumstances and by certain specified persons and entities.[65] Juvenile court case files are subject to inspection only by specific listed persons and are governed by both statute and state court rules.[66]

***Practice Tip:***

Some local courts have their own rules regarding inspection of juvenile records, which may differ from county to county and may change from time to time. Care should be taken to periodically review the rules as the presiding judge of each juvenile court makes their own rules.

Different provisions apply to dissemination of information gathered by a law enforcement agency relating to the taking of a minor into custody where it is provided to another law enforcement agency, including a school district police or security department or other agency or person who has a legitimate need for information for purposes of official disposition of a case.[67] A law enforcement agency shall release the name of and descriptive information relating to any juvenile who has escaped from a secure detention facility.[68]

### *Child Abuse Reports*

Reports of suspected child abuse or neglect, including reports from those who are "mandated reporters" (for example, teachers and public school employees and officials, physicians, children's organizations, community care facilities, etc.), and child abuse and neglect investigative reports that result in a summary report being filed with the Department of Justice are confidential and may only be disclosed to the persons and agencies listed in state law.[69] Unauthorized disclosure of confidential child abuse or neglect information is a misdemeanor.[70]

## *Library Circulation Records*

Library circulation records that are kept to identify the borrowers, and library and museum materials presented solely for reference or exhibition purposes, are exempt from disclosure.[71] Further, all registration and circulation records of any library that is in whole or in part supported by public funds are confidential. Such records remain confidential and shall not be disclosed except to persons acting within the scope of their duties within the administration of the library, pursuant to written authorization by the individual to whom the records pertain, or by superior court order.[72] The confidentiality of library circulation records does not extend to statistical reports of registration and circulation, or to records of fines collected by the library.[73]

## *Licensee Financial Information*

When a local agency requires that applicants for licenses, certificates or permits submit personal financial data, that information is exempt from disclosure.[74] One frequent example of this is the submittal of sales or income information under a business license tax requirement. However, this exemption does not apply to financial information filed by an existing licensee or franchisee to justify a rate increase, presumably because those affected by the increase have a right to know its basis.[75]

## *Medical Privacy Laws*

State and federal medical privacy laws that may apply to records of local agencies include the physician/patient privilege, the Confidentiality of Medical Information Act, and the Health Insurance Portability and Accountability Act.[76] The exemptions from and prohibitions against disclosure contained in these laws are incorporated into the Act.[77]

Local agencies that receive or maintain individually identifiable health information may comply with the requirements of the physician/patient privilege, the Confidentiality of Medical Information Act, and the Health Insurance Portability and Accountability Act by citing appropriate sections of the Act, as well as applicable medical privacy laws and regulations, in declining to disclose protected, individually identifiable health information.[78]

### Physician/Patient Privilege

State law gives patients a privilege to refuse to disclose, and to prevent others from disclosing, confidential communications between patients and their physicians.[79] The privilege extends to confidential patient/physician communications that are disclosed to third parties where reasonably necessary to accomplish the purpose for which the physician was consulted.[80] Patient information in the possession of a local agency may be subject to the privilege.

### Confidentiality of Medical Information Act

State law prohibits providers of health care, health care service plans and contractors, as these terms are defined in the law, from disclosing individually identifiable medical information of a patient, enrollee or subscriber without first obtaining authorization, subject to certain exceptions.[81] State law also obligates employers to establish appropriate procedures to ensure the confidentiality of individually identifiable medical information, and prohibits employers from disclosing or permitting the disclosure or use of individually identifiable medical information without first obtaining authorization, subject to certain exceptions.[82] Local agencies that are not providers of health care, health care service plans or contractors as defined in state law may possess individually identifiable medical information protected under state law that originated with providers of health care, health care service plans or contractors.[83]

***Practice Tip:***

Patient medical information provided to local agency emergency medical personnel to assist in providing emergency medical care may be subject to the physician/patient privilege if providing the privileged information is reasonably necessary to accomplish the purpose for which the physician was consulted.

Local agencies are also obligated as employers to protect individually identifiable medical information protected under state law. Patients whose individually identifiable medical information is used or disclosed in violation of the state law may recover compensatory damages, limited punitive damages, limited attorneys' fees and their litigation costs.[84] Violations of state law that result in economic loss or personal injury of patients are subject to criminal penalties, and damages are available for negligent release of protected records.[85] Persons and entities that negligently disclose records protected under state law may be liable for administrative fines or civil penalties.[86] Knowingly and willfully obtaining, using, or disclosing information protected under state law is subject to substantial administrative fines or civil penalties.[87]

### Health Insurance Portability and Accountability Act

Congress enacted the Health Insurance Portability and Accountability Act in 1996 to improve portability and continuity of health insurance coverage and to combat waste, fraud and abuse in health insurance and health care delivery through the development of a health information system and establishment of standards and requirements for the electronic transmission of certain health information.[88] The Secretary of the U.S. Department of Health and Human Services has issued privacy regulations governing use and disclosure of individually identifiable health information.[89] Persons that knowingly and in violation of federal law use or cause to be used a unique health identifier, obtain individually identifiable health information relating to an individual, or disclose individually identifiable health information to another person are subject to substantial fines and imprisonment of not more than one year, or both, and to increased fines and imprisonment for violations under false pretenses or with the intent to use individually identifiable health information for commercial advantage, personal gain, or malicious harm.[90] Federal law also permits the Health and Human Services Secretary to impose civil penalties.[91]

### Workers' Compensation Benefits

A local agency may not release records pertaining to the workers' compensation benefits for an individually identified employee because they are exempt from disclosure as "personnel, medical, or similar files, the disclosure of which would constitute an unwarranted invasion of privacy."[92] The Act further prohibits the disclosure of records otherwise exempt or prohibited from disclosure pursuant to federal and state law.[93]

In addition, state law prohibits a person or public or private entity who is not a party to a claim for workers' compensation benefits from obtaining individually identifiable information obtained or maintained by the Division of Workers' Compensation on that claim.[94] "[I]ndividually identifiable information" means "any

data concerning an injury or claim that is linked to a uniquely identifiable employee, employer, claims administrator, or any other person or entity."[95] If a public records request falls within this broad definition as a request for "data concerning an injury or claim" that is linked to a local agency employee or other uniquely identifiable individual, then the record(s) may not be disclosed.

Once an application for adjudication has been filed, certain information may be subject to disclosure;[96] however, some of the personal information may still be protected under the Act.[97] Requests for such information after adjudication must identify the requester and state the reason for the request. If the purpose of such a request is related to pre-employment screening, the administrative director must notify the person about whom the information is requested and include a warning about discrimination against persons who have filed claims for workers' compensation benefits. Further, a residence address shall not be disclosed except to law enforcement agencies, the district attorney, other governmental agencies or for journalistic purposes. Individually identifiable information is not subject to subpoena in a civil proceeding without notice and a hearing at which the court is required to balance the respective interests—privacy and public disclosure. Individually identifiable information may be used for certain types of statistical research by specifically listed persons and entities.[98]

## *Official Information Privilege*

A local agency has a privilege to refuse to disclose official information.[99] "Official Information" includes:

- Information that is protected by a state or federal statutory privilege or; and
- Information, the disclosure of which is against the public interest, due to necessity for preserving the confidentiality of the information that outweighs the necessity for disclosure in the interest of justice.[100]

The local agency has the right to assert the privilege both to refuse to disclose and to prevent another from disclosing official information.[101] Where the disclosure is prohibited by state or federal statute, the privilege is absolute. In all other respects, it is conditional and requires a judge to weigh the necessity for preserving the confidentiality of information against the necessity for disclosure in the interest of justice. (This is similar to the weighing process provided for in the Act—allowing nondisclosure when the public interest served by not disclosing the record clearly outweighs the public interest served by disclosure.)[102] This is typically done through confidential judicial review.[103] As part of the weighing process a court will look at the consequences to the public, including the effect of the disclosure on the integrity of public processes and procedures.[104]

There are a number of cases arising out of this statute.[105] While many of the cases interpreting this privilege involve law enforcement records, other cases arise out of licensing and accreditation-type activities. The courts address these types of cases on an individualized basis and further legal research should be done within the context of particular facts. The statute defines "official information" as "information acquired in confidence by a public employee in the course of his or her duty and not open, or officially disclosed, to the public prior to the time the claim of privilege is made."[106] However, the courts have somewhat expanded on the statutory definition by determining that certain types of information, such as police investigative files and medical information, are "by [their] nature confidential and widely treated as such" and thus protected from disclosure by the privilege.[107] Although there is no case law directly on point, this privilege, along with the informant privilege, may be asserted to protect the identities of code enforcement complainants and whistleblowers.

## *Pending Litigation or Claims*

The Act exempts from disclosure "(r)ecords pertaining to pending litigation to which the public agency is a party, or to claims made pursuant to [the California Government Claims Act] until the pending litigation or claim has been finally adjudicated or otherwise settled."[108] Although the phrase "pertaining to" pending litigation or claims might seem broad, the courts nevertheless have construed the exemption narrowly, consistent with the underlying policy of the Act to promote access to public records. The exemption applies only to documents specifically prepared by, or at the direction of, the local agency for use in litigation. This includes records prepared not simply for an ongoing case, but those specifically prepared in anticipation of a future lawsuit, such as an incident report.[109]

It may sometimes be difficult to determine whether a particular record was prepared specifically for use in litigation or for other purposes related to the underlying incident. For example, an incident report may be prepared either in anticipation of defending a potential claim, or simply for risk management purposes. In order for the exemption to apply in those circumstances, the local agency would have to prove that the dominant purpose of the record was to be used in defense of litigation.[110]

It is important to remember that even members of the public that have sued a local agency are entitled to use the Act to obtain documents that may be relevant to the litigation, so long as the documents were not specifically prepared by the local agency for use in anticipated or pending litigation, and do not fall within some other exemption under the Act or other statute. The mere fact that the litigant might also be able to obtain the documents in discovery is not a ground for rejecting the request under the Act.[111]

The pending litigation exemption does not prevent members of the public from obtaining records submitted to the local entity by litigants, such as a claim for monetary damages filed prior to a lawsuit. This is because the document has been prepared by the litigant and not by the local agency.[112]

Once litigation has concluded and is no longer "pending," records previously shielded from disclosure by the exemption must be produced, unless covered by another exemption or statutory privilege. The public may therefore obtain copies of depositions from closed cases.[113] Documents concerning settlement of a claim, whether prepared by a litigant or the local agency, such as medical records, payment warrants, minutes of a claims settlement committee meeting, or investigative reports, must be produced unless shielded from disclosure by other exemptions of the Act or other statutes.[114]

***Practice Tip:***

In responding to a request for documents concerning settlement of a particular matter, it is critical to pay close attention to potential application of other exemptions under the Act or other statutory privileges. It is recommended that you seek the advice of your local agency counsel.

While medical records are subject to a constitutional right of privacy, and generally exempt from production under the Act and other statutes,[115] the litigant may be deemed to have waived the right to confidentiality by submitting them to the public entity in order to obtain a settlement.[116] Similarly, investigative reports in claims involving law enforcement activity may fall within specific exemptions for law enforcement reports[117] or reports prepared in anticipation of litigation may fall within the attorney client privilege.[118] Particular records or information relevant to settlement of a closed case may also be subject to nondisclosure under the public interest exemption to the extent the local agency can show that the public interest in nondisclosure clearly outweighs the public interest in disclosure.[119]

There is considerable overlap between the pending litigation exemption and both the attorney client privilege[120] and attorney work product protection.[121] However, the exemption for pending litigation is not limited solely to documents that fall within either the attorney client privilege or work product protection.[122] Moreover, while the exemption for pending litigation expires once the litigation is no longer pending, the attorney client privilege and work product protection are ongoing.[123]

The attorney client privilege may come into play simultaneously with specific exemptions under the Act or other statutory privileges that could require a court to undertake confidential inspection of documents in order to determine application of the exemptions. The Act specifically references an Evidence Code provision that provides a court may not review privileged attorney client communications in camera for purposes of determining whether the privilege is established.[124] Thus, in a writ of mandate proceeding a local agency may have to submit other documents for inspection to allow the court to determine whether a particular exemption applies, such as evaluating whether the public interest in nondisclosure clearly outweighs the public interest in disclosure under the public interest exemption. But the court cannot conduct an in camera review of documents that the local agency contends are subject to the attorney client privilege.

***Practice Tip:***

It is important to separate potential attorney client communications from other records and make certain that privileged attorney client communications are not unintentionally submitted to the court for inspection.

## *Personal Contact Information*

Court decisions have ruled that individuals have a substantial privacy interest in their personal contact information. However, a fact-specific analysis must be conducted to determine whether the public interest exemption protects this information from disclosure, that is, whether the public interest in nondisclosure clearly outweighs the public interest in disclosure.[125] Application of this balancing test has yielded varying results, depending on the circumstances of the case.

For example, courts have allowed nondisclosure of the names, addresses and telephone numbers of airport noise complainants.[126] In that instance, the anticipated chilling effect on future citizen complaints weighed heavily in the court's decision.

In other situations, courts have ordered disclosure of personal information contained in applications for licenses to carry concealed weapons,[127] the names and addresses of residential water customers who exceeded their water allocation under a rationing ordinance,[128] and the names of donors to a university-affiliated foundation, even though those donors had requested anonymity.[129]

***Practice Tip:***

In situations where personal contact information clearly cannot be kept confidential, inform the affected members of the public that their personal contact information is subject to disclosure pursuant to the Act.

### Posting Personal Information of Elected/Appointed Officials on the Internet

The Act prohibits a state or local agency from posting on the Internet the home address or telephone number of any elected or appointed officials without first obtaining their written permission.[130] This section also prohibits someone from knowingly posting on the Internet the home address or telephone number of any elected or appointed official or the official's "residing spouse" or child, and either threatening or intending to cause imminent great bodily harm. It also prohibits a person, business or association from publicly posting or displaying on the Internet the home address or telephone number of any elected or appointed official where the official has made a written demand not to disclose his address or phone number. If an official makes such a written demand, it must include a statement describing a threat or fear for the safety of the official or any person residing at the official's home address. The written demand is effective for four years, regardless of the length of the official's term of office. Remedies include injunctive or declarative relief, misdemeanor or felony prosecution, and treble damages of not less than $4,000.[131]

## *Personnel Records*

"Personnel, medical, or similar files, the disclosure of which would constitute an unwarranted invasion of personal privacy" are exempt from disclosure.[132] The express policy declaration at the beginning of the Act "bespeaks legislative concern for individual privacy as well as disclosure."[133] Courts have continued to recognize that public employees have a constitutionally protected interest in their personnel files; however, recent decisions from the California Supreme Court have determined that public employees do not have a reasonable expectation of privacy in their names and salary information and their dates of employment. This interpretation also applies to police officers absent unique, individual circumstances.[134]

In addition, the public interest exemption may protect certain personnel records from disclosure.[135] In determining whether to allow access to personnel files, the courts have determined that the tests are essentially the same. The extent of the employee's privacy interest in certain information and the harm from its unwarranted disclosure is weighed against the public interest in disclosure. The public interest in disclosure will be considered in the context of the extent to which the disclosure of the information will shed light on the local agency's performance of its duties.[136]

Concerning allegations of non-law enforcement public employee misconduct, courts have upheld the public interest against disclosure of "trivial or groundless charges." When "the charges are found true, or discipline is imposed," the public interest favors disclosure. In addition, "where there is reasonable cause to believe the complaint to be well founded, the right of public access to related public records exists."[137]

***Practice Tip:***

California courts continue to look for guidance to provisions of the Federal Freedom of Information Act (FOIA), on which the Act was modeled, as well as federal cases interpreting the FOIA relative to personnel records.[138]

### Peace Officer Personnel Records

Peace officer personnel records fall within the category of records, "the disclosure of which is exempted or prohibited pursuant to federal or state law...." These records are confidential and privileged.[139]

The discovery and disclosure of the personnel records of peace officers are governed exclusively by statutory provisions contained in the Evidence Code and Penal Code. Peace officer personnel records and records of citizen complaints ". . . or information obtained from these records . . ." are confidential and "shall not" be disclosed in any criminal or civil proceeding except by discovery pursuant to statutorily prescribed procedures.[140]

***Practice Tip:***

The appropriate procedure for obtaining information in protected peace officer personnel files is to file a motion commonly known as a "Pitchess" motion, which by statute entails a two-part process involving first a determination by the court regarding good cause for disclosure and materiality of the information sought, and a subsequent confidential review by the court of the files, where warranted.[145]

Peace officer "personnel records" include personal data, medical history, appraisals and discipline, complaints and investigations relating to events perceived by the officer or relating to the manner in which his or her duties were performed, and any other information the disclosure of which would constitute an unwarranted invasion of privacy.[141] The names, salary information and employment dates and departments of peace officers have been determined to be disclosable records.[142]

While the Penal and Evidence Code privileges are not per se applicable in federal court, federal common law recognizes a qualified privilege for "official information" and considers government personnel files to be "official information."[143] Such a qualified privilege in federal court results in a very similar weighing of the potential benefits of disclosure against potential disadvantages.[144]

### Employment Contracts and Employee Salaries

Every employment contract between a state or local agency and any public official or public employee is a public record that is not exempt under either the personnel or public interest exemption.[146] Thus, for example, one court has held that two letters in a city firefighter's personnel file were part of his employment contract and could not be withheld under either the employee's right to privacy in his personnel file or the public interest exemption.[147]

With or without an employment contract, the names and salaries (including performance bonuses and overtime) of public employees, including peace officers, are subject to disclosure under the Act.[148] Public employees do not have a reasonable expectation that their salaries will remain a private matter. In addition, there is a strong public interest in knowing how the government spends its money. Therefore, absent unusual circumstances, the names and salaries of public employees are not subject to either the personnel exemption or the public interest exemption. Similarly, peace officer salary information is not exempted from disclosure under the Act. Thus, absent unique, individual circumstances such as where a peace officer's anonymity is essential to his or her safety, the names and salaries of peace officers are subject to disclosure under the Act.[149]

### Contractor Payroll Records

State law establishes requirements for maintaining and disclosing certified payroll records for workers employed on public works projects subject to payment of prevailing wages.[150] State law requires contractors to make certified copies of payroll records available to employees and their representatives, representatives of the awarding body, the Department of Industrial Relations, and the public.[151] Requests are to be made through the awarding agency or the Department of Industrial Relations, and the requesting party is required to reimburse the cost of preparation to the contractor, subcontractors, and the agency through which the request is made prior to being provided the records.[152] Contractors are required to file certified copies of the requested records with the requesting entity within ten days of receipt of a written request.[153]

However, state law also limits access to contractor payroll records. Employee names, addresses and social security numbers must be redacted from certified payroll copies provided to the public or any local agency by the awarding body or the Department of Industrial Relations.[154] Only the name and social security number are to be redacted from certified payroll copies provided to joint labor-management committees established pursuant to the federal Labor Management Cooperation Act of 1978.[155] The name and address of the contractor or subcontractor may not be redacted.[156]

The Director of the Department of Industrial Relations has adopted regulations governing release of certified payroll records and applicable fees.[157] Such regulations require that requests for certified payroll records be in writing and contain certain specified information regarding the awarding body, the contract and the contractor; require awarding agency acknowledgement of requests; specify required contents of awarding agency requests to contractors for payroll records; and set fees to be paid in advance by persons seeking payroll records.[158]

### Test Questions and Other Examination Data

The Act exempts from disclosure test questions, scoring keys and other examination data used to administer a licensing examination, examination for employment, or academic examination, except as provided in the portions of the Education Code that relate to standardized tests.[159] Thus, for example, a local agency is not required to disclose the test questions it uses for its employment examinations. State law provides that standardized test subjects may, within 90 days of the release of test results to the test subject, have limited access to test questions and answers upon request to the test sponsor.[160] This limited access may be either through an in-person examination or by release of certain information to the test subject.[161] The Education Code also requires that test sponsors prepare and submit certain reports regarding standardized tests and test results to the California Postsecondary Education Commission.[162] All such reports and information submitted to the Commission are public records subject to disclosure under the Act.[163]

## *Public Contracting Documents*

Final contracts with local agencies are generally disclosable public records due to the public's right to determine whether public resources are being spent for the benefit of the community as a whole or the benefit of only a limited few.[164] When the bids or proposals leading up to those final contracts become disclosable depends largely upon the types of contracts involved.

For example, local agency contracts for construction of public works, and procurement of goods and non-professional services are typically awarded to the lowest responsive, responsible bidder through a competitive bidding process.[165] Bids for these contracts are usually submitted to local agencies under seal

and then publicly opened at a designated time and place. These bids are public records and disclosable as soon as they are opened.

Other local agency contracts for acquisition of professional services or disposition of property are awarded to the successful proposer through a competitive proposal process. As part of this process, interested parties submit proposals that are evaluated by the local agency and are used to negotiate with the winning proposer.

***Practice Tip:***

Local agencies should clearly advise bidders and proposers in their Requests for Bids and Requests for Proposals what bid and proposal documents will be disclosable public records and when they will be disclosable to the public.

While the public has a strong interest in scrutinizing the process leading to the selection of the winning proposer, the local agency's interest in keeping these proposals confidential frequently outweighs the public's interest in disclosure until negotiations with the winning proposer are complete.[166] If a winning proposer has access to the specific details of other competing proposals, then the local agency is greatly impaired in its ability to secure the best possible deal on its constituents' behalf.

Some local agencies pre-qualify prospective bidders through a request for qualifications process. The pre-qualification packages submitted, including questionnaire answers and financial statements, are exempt public records and are not open to public inspection.[167] Nevertheless, documents containing the names of contractors applying for pre-qualification status are public records and must be disclosed. In addition, the contents of pre-qualification packages may be disclosed to third parties during the verification process, in an investigation of substantial allegations or at an appeal hearing.

## *Real Estate Appraisals and Engineering Evaluations*

The Act requires the disclosure of the contents of real estate appraisals or engineering or feasibility estimates and evaluations made for or by the state or a local agency relative to the acquisition of property, or to prospective public supply and construction contracts, but only when all of the property has been acquired or when all of the contract agreement obtained.[168] By its plain terms, this exemption only applies while the acquisition or prospective contract is pending. Once all the property is acquired or all of the contract agreement obtained, the exemption will not apply. In addition, this exemption is not intended to supersede the law of eminent domain.[169] Thus, for example, this exemption would not apply to appraisals of owner-occupied residential property of four units or less, where disclosure of such appraisals is required by the Eminent Domain Law or related laws such as the California Relocation Assistance Act.[170]

## *Recipients of Public Services*

Disclosure of information regarding food stamp recipients is prohibited.[171] Subject to certain exceptions, disclosure of confidential information pertaining to applicants for or recipients of public social services for any purpose unconnected with the administration of the welfare department also is prohibited.[172] This latter prohibition does not create a privilege.[173]

### Housing Authority Tenants

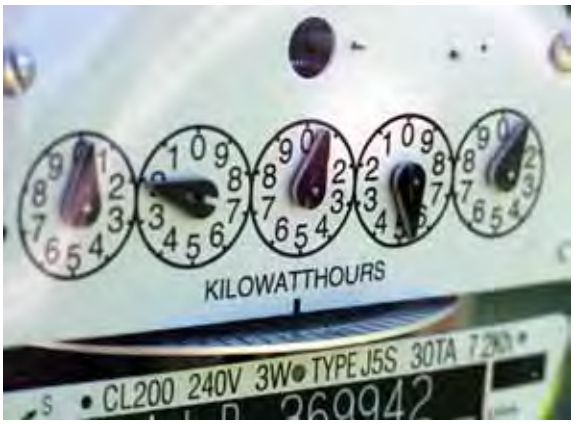
Leases and lists or rosters of tenants of the Housing Authority are confidential and shall not be open to inspection by the public, but shall be supplied to the respective governing body on request.[174] A Housing Authority has a duty to make available public documents and records of the Authority for inspection, except any applications for eligibility and occupancy that are submitted by prospective or current tenants of the Authority.[175]

The Act exempts from disclosure records that are the residence address of any person contained in the records of the Department of Housing and Community Development, if the person has requested confidentiality of that information in accordance with section 18081 of the Health and Safety Code.[176]

## *Taxpayer Information*

Where information that is required from any taxpayer in connection with the collection of local taxes is received in confidence and where the disclosure of that information would result in an unfair competitive disadvantage to the person supplying the information, the information is exempt from disclosure.[177] Sales and use tax records may be used only for tax administration. Unauthorized disclosure or use of confidential information contained in these records can give rise to criminal liability.[178]

## *Trade Secrets and Other Proprietary Information*



As part of the award and administration of public contracts, businesses will often give local agencies information that the businesses would normally consider to be proprietary. There are three exemptions that businesses often use to attempt to protect this proprietary information – the official information privilege, the trade secret privilege, and the public interest exemption.[179]

However, California's strong public policy in favor of disclosure of public records precludes local agencies from protecting most business information. Both the official information privilege and the public interest exemption require that the public interest in nondisclosure clearly outweighs the public interest in disclosure. While these provisions were designed to protect legitimate privacy interests, California courts have consistently held that when individuals or businesses voluntarily enter into the public sphere, they diminish their privacy interests.[180] Courts have further concluded that the public interest in disclosure overrides alleged privacy interests. For example, a court ordered a university to release the names of anonymous contributors who received license agreements for luxury suites at the school's sports arena. Another court ordered a local agency to release a waste disposal contractor's private financial statements used by the local agency to approve a rate increase.[181]

The trade secret privilege is for information, including a formula, pattern, compilation, program, device, method, technique or process, that: (1) derives independent economic value, actual or potential, from not being generally known to the public or to other persons who can obtain economic value from its disclosure or use; and (2) is the subject of efforts that are reasonable under the circumstances to maintain its secrecy.[182]

However, even when records contain trade secrets, local agencies must determine whether disclosing the information is in the public interest. When businesses give local agencies proprietary information, courts will examine whether disclosure of that information serves the public interest.[183]

The Act contains several exemptions that address specific types of information that may constitute a trade secret — pesticide safety and efficacy information,[184] air pollution data,[185] and corporate siting information.[186] Other exemptions cover types of information that could include but are not limited to trade secrets — for example, certain information on plant production, utility systems development data, and market or crop reports.[187]

## *Utility Customer Information*

Personal information expressly protected from disclosure under the Act includes names, credit histories, usage data, home addresses and telephone numbers of local agencies' utility customers.[188] This exception is not absolute, and customers' names, utility usage data and home addresses may be disclosable in certain situations. For example, disclosure is required when requested either by a customer's agent or authorized family member,[189] an officer or employee of another governmental agency when necessary for performance of official duties,[190] by court

order or request of a law enforcement agency relative to an ongoing investigation,[191] when the local agency determines the customer used utility services in violation of utility policies,[192] or if the local agency determines the public interest in disclosure clearly outweighs the public interest in nondisclosure.[193]

Utility customers who are local agency officials with authority to determine their agency's utilities usage policies have lesser protection of their personal information because their names and usage data are disclosable upon request.[194]

## PUBLIC INTEREST EXEMPTION

The Act establishes a "public interest" or "catchall" exemption that permits local agencies to withhold a record if the agency can demonstrate that on the facts of the particular case the public interest served by not making the record public clearly outweighs the public interest served by disclosure of the record.[195] Weighing the public interest in nondisclosure and the public interest in disclosure under the public interest exemption is often described as a balancing test.[196] The Act does not specifically identify the public interests that might be served by not making the record public, but the nature of those interests may be inferred from specific exemptions contained in the Act. The scope of the public interest exemption is not limited to specific categories of information or established exemptions or privileges. Each request for records must be considered on the facts of the particular case in light of the competing public interests.[197]

***Practice Tip:***

The public interest exemption balancing test weighs only public interests—the public interest in disclosure and the public interest in nondisclosure. Agency interests or requester interests that are not also public interests are not considered.[199]

The records and situations to which the public interest exemption may apply are open-ended, and when it applies, the public interest exemption alone is sufficient to justify nondisclosure of local agency records. The courts have relied exclusively on the public interest exemption to uphold nondisclosure of local agency records containing names, addresses and phone numbers of airport noise complainants, proposals to lease airport land prior to conclusion of lease negotiations, and information kept in a public defender's database about police officers.[198]

The public interest exemption is versatile and flexible, in keeping with its purpose of addressing circumstances not foreseen by the Legislature. For example, in one case, the court held local agencies could properly consider the burden of segregating exempt from nonexempt records when applying the balancing test under the public interest exemption.[200] In that case, the court held that the substantial burden of redacting exempt information from law enforcement intelligence records outweighed the marginal and speculative benefit of disclosing the remaining nonexempt information. In another case, the court applied the balancing test to the time of disclosure to hold that public disclosure of competing proposals for leasing city airport property could properly await conclusion of the negotiation process.[201]

The requirement that the public interest in nondisclosure must "clearly outweigh" the public interest in disclosure for records to qualify as exempt under the public interest exemption is important and emphasized by the courts. Justifying nondisclosure under the public interest exemption demands a clear overbalance on the side of confidentiality.[202] Close calls usually do not qualify for an exemption. There are a number of examples of cases where a clear overbalance was not present to support nondisclosure under the public interest exemption. The courts have held that the following are all subject to disclosure under the public interest exemption balancing test: the identities of individuals granted criminal conviction exemptions to work in licensed day care facilities and the facilities employing them; records relating to unpaid state warrants; court records of a settlement between the insurer for a school district and a minor sexual assault victim; applications for concealed weapons permits; letters appointing then rescinding an appointment to a local agency position; and the identities and license agreements of purchasers of luxury suites in a university arena.[203]

### *Deliberative Process Privilege*

The public interest exemption incorporates the deliberative process privilege.[204] Like the "drafts" exemption, the deliberative process privilege derives from the FOIA "memorandums" exemption and its implementation of the executive or deliberative process privilege.[205] Congress' main concern in enacting the "memorandums" exemption was that frank discussion of legal or policy matters might be inhibited if subject to public scrutiny, and that efficiency of government would be greatly hampered if, with respect to such matters, local agencies were forced to operate in a fishbowl.[206]

**Practice Tip:**

The main difference between the deliberative process privilege and the closely related "drafts" exemption is that the deliberative process privilege may exempt from disclosure records that an agency normally retains.

The deliberative process privilege is based on the policy of protecting the decision-making processes of government agencies, and the notion that access to a broad array of opinions and the freedom to seek all points of view, to exchange ideas, and to discuss policies in confidence are essential to effective governance in a representative democracy. The deliberative process privilege is similar to the common law privilege protecting against the disclosure of the mental processes of legislators. To prevent injury to the quality of executive decisions, the courts have focused on protecting communications to the decision maker before the decision is made. Courts have treated communications subsequent to the legislative decision as outside of the recognized privilege.[207]

The California Supreme Court has acknowledged that even purely factually material may be exempt from disclosure because it exposes the deliberative process. In applying the deliberative process privilege, courts focus more on the effect of the records' release and less on the nature of the records sought. The key question is whether the disclosure of materials would expose an agency's decision making process in such a way as to discourage candid discussion within the agency and thereby undermine the agency's ability to perform its functions.[208]

The California Supreme Court has applied this analysis to uphold nondisclosure of the Governor's calendars concerning both past and future meetings. California appellate courts have relied on the deliberative process privilege to uphold nondisclosure of the names and qualifications of applicants for temporary appointment to a local board of supervisors, names and background information about applicants for a county supervisor's seat, and the telephone numbers of calls made and received by local agency council members from cellular phones and second phones in home offices.[209]

## ■ EFFECT OF PROPOSITION 59 ON EXEMPTIONS

At the November 2, 2004 general election, the voters of California passed Proposition 59 which amended the California Constitution to include a public right of access to public records. The Constitution specifically provides: "The people have the right of access to information concerning the conduct of the people's business, and therefore the meetings of public bodies and the writings of public officials and agencies shall be open to public scrutiny."[210] Thus, after enactment of Proposition 59, the right of public access to documents is not simply statutory, but a basic right under the Constitution. In furtherance of that goal, the constitutional provision states that a "statute, court rule, or other authority, including, those in effect on the effective date of this subdivision, shall be broadly construed if it furthers the people's right of access, and narrowly construed if it limits the right of access."[211] It also provides that any statute enacted after its effective date that limits the right of access must be adopted with findings identifying the interest protected by the limitation and the need for protecting that interest.[212]

Although Proposition 59 elevated the right of access to public records to constitutional stature, it appears to be simply declarative of existing law in terms of existing statutory exemptions. For example, while the Constitution states that an existing exemption must be narrowly construed,[213] this is consistent with longstanding case authority.[214] Moreover, the Constitution states that "[t]his subdivision does not repeal or nullify, expressly or by implication, any constitutional or statutory exception to the right of access to public records or meetings of public bodies that is in effect on the effective date of this subdivision, including, but not limited to, any statute protecting the confidentiality of law enforcement and prosecution records."[215]

No published opinion has extensively analyzed the impact of Proposition 59 on the exemptions in the Act. However, one court summarily noted that as to construction of the specific exemptions under the Act, it was simply declarative of existing law.[216] In addition, in three separate opinions, the California Attorney General has concluded that Proposition 59 did not alter the application of exemptions under the Act that existed at the time of its enactment.[217] Enactment of Proposition 59 underscores the general principle that public access to records is the rule, and nondisclosure the exception, only to be invoked in narrow circumstances after careful consideration.[218]

182 Civ. Code, § 3426.1, subd. (d). This trade secret definition is set forth in the Uniform Trade Secrets Act ("UTSA") at Civil Code section 3426.1, subdivision (d). However, Civil Code section 3426.7, subdivision (c) states that any determination as to whether disclosure of a record under the Act constitutes a misappropriation of a trade secret shall be made pursuant to the law in effect before the operative date of the UTSA. At that time, California used the Restatement definition of a trade secret, which was lengthy. See *Uribe v. Howie* (1971) 19 Cal.App.3d 194. Accordingly, it is not clear that the trade secret definition that applies generally under the UTSA is the trade secret definition that applies in the context of a public records request.

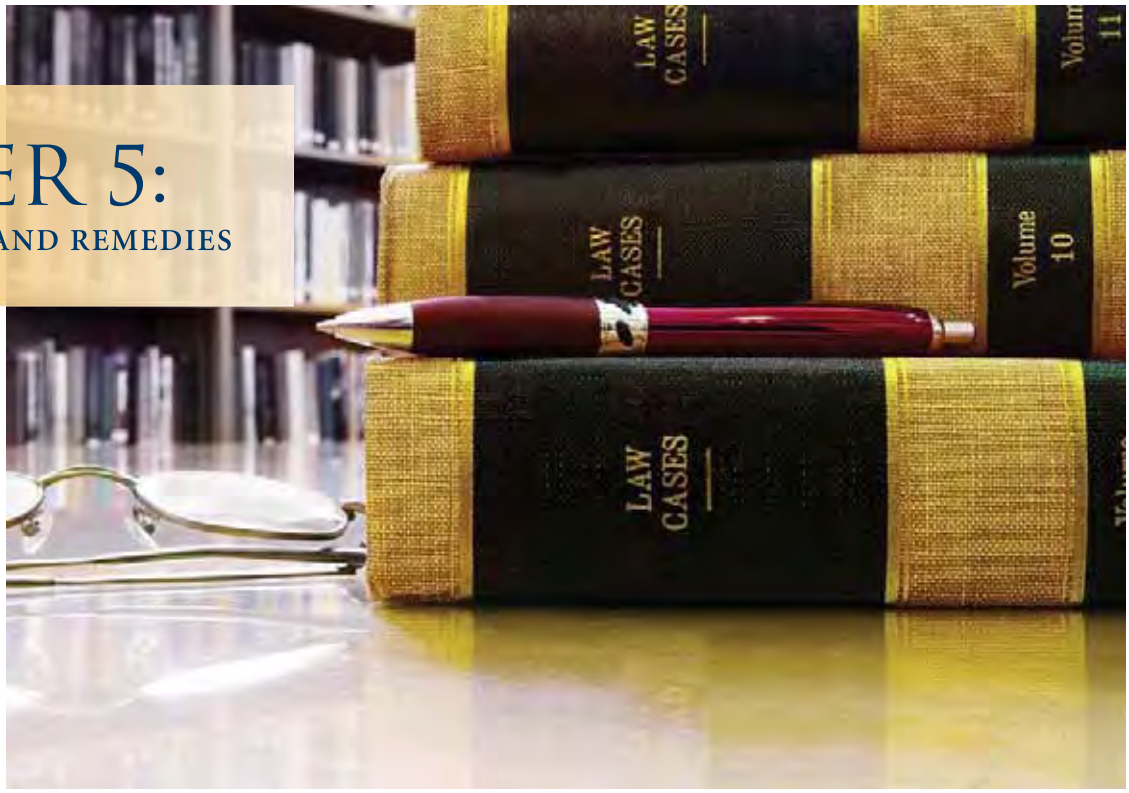
# CHAPTER 5:
## JUDICIAL REVIEW AND REMEDIES



OVERVIEW

THE TRIAL COURT PROCESS AND DECISION

APPELLATE REVIEW

ATTORNEY FEES AND COSTS

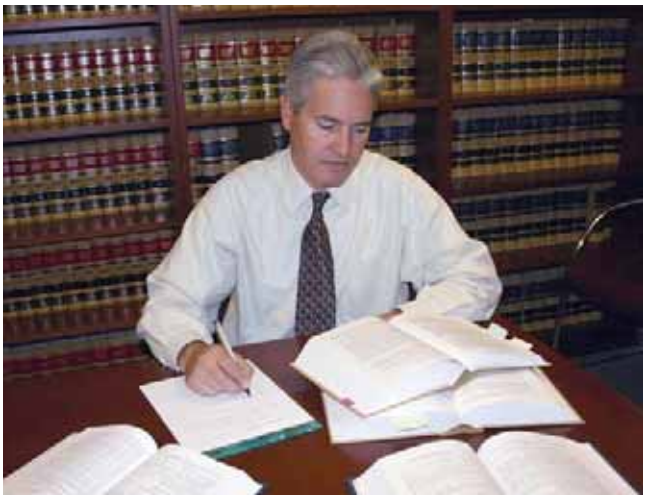
# CHAPTER 5:
## JUDICIAL REVIEW AND REMEDIES

### OVERVIEW

The Act establishes a special, expedited judicial process to resolve disputes over the public's right to inspect or receive copies of public records.[1] In contrast to other governmental transparency laws such as the Ralph M. Brown Act,[2] the Act contains no criminal penalties for a local agency's failure to comply with the Act. Rather, the Act is enforced through an expedited civil judicial process in which any person may ask a judge to compel a public agency to disclose a public record or a class of public records.[3] A person who successfully enforces his or her rights under the Act is entitled to receive reasonable attorney fees and court costs.[4] This chapter discusses the special rules that apply to lawsuits brought to enforce the Act.

***Practice Tip:***

Although the Act does not contain criminal penalties, violations of the Act can lead to public criticism of both the local agency and the individuals involved, payment of attorney fees by the local agency, and other non-criminal sanctions. Certain local agencies may also have local "sunshine" ordinance policies that make violations of the Act grounds for discipline of employees or officials.



### THE TRIAL COURT PROCESS AND DECISION

Any person may file a civil action for injunctive or declaratory relief or writ of mandate to enforce his or her right to inspect or receive a copy of any public record under the Act.[5] The action may be filed in any court of competent jurisdiction, which typically is the superior court in the county where the records or some part of them are maintained.[6] The Act does not contain a specific time period in which the action must be filed. Therefore, such action must be filed in a manner consistent with traditional actions for injunctive or declaratory relief or writ of mandate and would be subject to any limitations periods or equitable concepts such as laches applicable to such actions.

A local agency may not commence an action for declaratory relief to determine the agency's obligation to disclose records to a member of the public under the Act.[7] Allowing a local agency to seek declaratory relief to determine whether it must disclose records to a member of the public would frustrate the Legislature's purpose of furthering the fundamental right of every person in the state to have prompt access to information in the possession of local agencies. However, a local agency is a "person" under the Act and may maintain an action to compel the disclosure of records under the Act.[8]

A lawsuit brought to enforce the Act is not subject to the normal time periods that apply to other civil actions. The judge in each case will establish the times for responsive pleadings and for hearings with the object of securing a decision at the earliest possible time.[9] If the judge determines, based upon a verified petition, that certain public records are being improperly withheld from a member of the public, the judge will order the officer or person withholding the records to disclose the public record or show cause why he or she should not do so.[10]

In a typical action under the Act, the parties will file written arguments with the court to explain why the records should be disclosed or withheld. The court will also hold a hearing to give the parties an opportunity to argue the case. If permitted by the rules of evidence.[11] The judge may examine the record or records at issue in camera, that is, in the judge's chambers and out of the presence and hearing of others, to help decide the case.[12] The judge must decide the case based on a review of the record or records (if such review is permitted), the papers filed by the parties, any oral argument, and additional evidence as the court may allow.[13]

If the court finds that the public official's decision to refuse disclosure is not justified under the Act, the judge shall order the public official to make the record public.[14] If the judge determines that the public official was justified in refusing to make the record public, he or she shall return the item to the public official without disclosing its content with an order supporting the decision refusing disclosure.[15] The court may also order some of the records to be disclosed while upholding the decision to withhold other records. In addition, the court may order that portions of the records be redacted and compel the disclosure of the remaining portions of the records.

A local agency must disclose the public records pursuant to the trial court's order unless a party obtains a stay of the order or judgment through a petition to the appellate court. Absent a stay, any person who fails to obey the order of the court shall be ordered to show cause why he or she is not in contempt of court.[16]

## APPELLATE REVIEW

As part of the expedited judicial review process established by the Act, a trial court's order is not considered to be a final judgment subject to the normal and often lengthy appeal process. In place of a normal appeal, such orders are subject to immediate review through the filing of a petition to the appellate court for the issuance of an extraordinary writ.[17] This manner of providing for appellate review through an extraordinary writ procedure rather than a normal appeal has been held to be constitutional.[18]

A party seeking review of a trial court's order must file a petition for review with the appellate court within 20 days after he or she is served with a written notice of entry of the order, or within such further time not exceeding an additional 20 days as the trial court may for good cause allow. If the written notice of entry of the order is served by mail, the period within which to file the petition is increased by five days.[19]

If a party wishes to prevent the disclosure of public records pending appellate review of the trial court's decision, that party must ask the appellate court for a stay of the order or judgment. The appellate court shall not grant such a stay unless the petitioning party demonstrates both that it will sustain irreparable damage because of the disclosure and that it is probable that the party will succeed on the merits of the case in the appellate court.[20]

Because the trial court's decision is not a final judgment for which there is an absolute right of appeal, the appellate court may decline to review the case without a hearing or without issuance of a detailed written opinion. However, since the intent of substituting writ review for the normal appeal process is to provide for speedier appellate review, not to provide for less appellate review, an appellate court may not deny an apparently meritorious writ petition that is timely presented and procedurally sufficient merely because the petition presents no important issue of law or because the court considers the case less worthy of its attention than other matters.[21]

Once a court of appeal accepts a petition for review, the appellate process proceeds in much the same fashion as a normal appeal. The appellate court will establish a briefing schedule and set the matter for a hearing once briefing is complete. The scope of review is equivalent to the scope of review on appeal, and an appellate court will consider the merits of a trial court's order as if the case were on appeal.[22] The appellate court will conduct an independent review of the trial court's ruling, with the factual findings made by the trial court being upheld if based on substantial evidence.[23]

The decision of the appellate court, whether to deny review or on the merits of the case, is subject to discretionary review by the California Supreme Court through a petition for review.

While the trial court's decision regarding disclosure of records is not subject to the normal appeal process, other decisions of the trial court related to a lawsuit under the Act are subject to appeal. Thus, a trial court's decision to deny attorney fees and costs under the Act is subject to appeal and is not subject to the extraordinary writ process.[24] Similarly, an award of sanctions in a public records case is subject to appeal rather than a petition for an extraordinary writ.[25]

## ■ ATTORNEY FEES AND COSTS

If the plaintiff prevails in the litigation, the judge must award court costs and reasonable attorney fees to the plaintiff.[26] A plaintiff will be considered the prevailing party if the lawsuit results in the disclosure of some or all of the requested records. This means that the plaintiff will likely be considered the prevailing party even when he or she has only achieved a partial victory in the lawsuit.[27] In addition, a plaintiff may be considered the prevailing party when the local agency discloses some or all of the records after the lawsuit is filed but prior to a court order requiring such disclosure, if the agency's disclosure was the result of or prompted by the lawsuit.[28] On the other hand, if the local agency did not decline to provide the records but, acting diligently, was only able to disclose them after the filing of the lawsuit, the plaintiff will likely not be considered the prevailing party because the lawsuit did not result in or prompt the disclosure.[29]

A member of the public may be entitled to an award of attorney fees and costs even when he or she is not denominated as the "plaintiff" in the action.[30] If the party is the functional equivalent of a plaintiff in a Public Records Act lawsuit—that is, if the party's intent to invoke the Act prompted the litigation—that party may be considered the prevailing plaintiff under the Act.

The local agency, not the public official who made the decision, must pay any award of costs and fees. The award does not become a personal liability of the public official who made the decision not to disclose the public records.[31]

The successful local agency defendant may seek an award of attorney fees and court costs against an unsuccessful plaintiff, but the agency will only obtain such an award in very limited circumstances. Only when the court finds that the plaintiff's case is clearly frivolous may it award court costs and reasonable attorney fees to the local agency.[32]

# CHAPTER 6:
## RECORDS MANAGEMENT

PUBLIC MEETING RECORDS

ELECTRONIC RECORDS

ELECTRONIC DISCOVERY

RECORDS RETENTION AND DESTRUCTION LAWS

# CHAPTER 6:
## RECORDS MANAGEMENT

### ■ PUBLIC MEETING RECORDS

Any person may request to receive a copy of a local agency meeting agenda or agenda packet by mail.[1] If requested, the agenda material must be made available in appropriate alternative formats to persons with disabilities.[2] If a local agency receives a written request to send agenda materials by mail, the materials must be mailed when the agenda is posted or distributed to a majority of the agency's legislative body, whichever occurs first.[3] Requests for mailed copies of agendas or agenda packets are valid for the calendar year in which they are filed, but must be renewed after January 1 of each subsequent year.[4] Local agency legislative bodies may establish a fee for mailing agenda materials.[5] The fee may not exceed the cost of providing the service.[6] Failure of a requester to receive agenda material is not a basis for invalidating action taken at the meeting for which agenda material was not received.[7]

Writings that are distributed to all or a majority of all members of a legislative body in connection with a matter subject to discussion or consideration at a public meeting of the body are public records (subject to the exemptions in the Act) and must be made available upon request without delay.[8] Where such nonexempt writings are distributed during a public meeting, in addition to making them available for public inspection at the meeting (if prepared by the agency or member of its legislative body) or after the meeting (if prepared by another person), they must be made available in appropriate alternative formats upon request by a person with a disability.[9] The agency may charge a fee for a copy of this record; however, no surcharge may be imposed on persons with disabilities.[10] Records pertaining to agenda items must be made available for public inspection at a location listed in the meeting agenda if the records are distributed less than 72 hours prior to the meeting.[11]

***Practice Tip:***

Some agencies have found it useful to adopt electronic records policies governing such issues as: what electronic records (for example, emails) are considered "retained in the ordinary course of business" for purposes of the Act; whether personal electronic devices (like computers, personal data assistants, cell phones, etc.) may be used to store or send electronic communications concerning the agency, or whether agency devices must be used; etc.

## ELECTRONIC RECORDS

"Public records" subject to the Act include "any writing containing information relating to the conduct of the public's business prepared, owned, used or retained by any state or local agency regardless of physical form or characteristics."[12] Therefore, records subject to the Act include records in any media, including electronic media, in which government agencies may possess records. This is underscored by the definition of "writings" treated as public records, which includes any "transmitting by electronic mail or facsimile, and every other means of recording upon any tangible thing any form of communication or representation, including letters, words, pictures, sounds, or symbols or combinations thereof, and any record thereby created, regardless of the manner in which the record has been stored."[13] Some provisions of the Act deal explicitly with electronic records.

***Practice Tip:***

Local agencies should consult with legal counsel concerning disclosure of metadata or GIS information.

The Act obligates agencies to provide electronic copies of existing, nonexempt records that are requested in an electronic format that the agency has already used for itself or transmission to another agency, unless doing so would compromise the security or integrity of the original record, or any proprietary software in which it is maintained, or unless otherwise prohibited by law.[14] Duplication costs of electronic records are limited to the direct cost of producing the electronic copy.[15] However, requesters may be required to bear additional costs of producing the electronic copy, such as programming and computer services costs, if the records are only produced at regularly scheduled intervals, or production of the record would require data compilation, extraction or programming.[16] Agencies are not required to reconstruct electronic copies of records no longer available to the agency in electronic format.[17]

Electronic records may include "metadata," or data about data contained in a record that is not visible in the text. For example, metadata may describe how, when or by whom particular data was collected, and contain information about document authors, other documents, or commentary or notes. No provision of the Act expressly addresses metadata, and no reported court opinions have considered whether or the extent to which metadata is subject to disclosure. Nor does the Act or its case law provide guidance on whether agencies have a duty to disclose electronic public records that contain exempt metadata if the agency is unable to electronically remove the metadata.

Electronic records maintained by local agencies may also include geographic information system (GIS) records and GIS technology that permits storage, processing and display of geographical information. Many local agencies use GIS programs and databases for a broad range of purposes, including the creation and editing of maps depicting property and facilities of importance to the agency and the public. As with metadata, the Act does not expressly address, and no published cases discuss, GIS information disclosure.

The Act permits government agencies to develop and commercialize computer software and to benefit from copyright protections for agency-developed software. Computer software developed by state or local agencies, including computer mapping systems, computer programs, and computer graphics systems, is not a public record subject to the Act.[18] As a result, public agencies are not required to provide copies of agency-developed software pursuant to the Act. The Act authorizes state and local agencies to sell, lease, or license agency-developed software for commercial or noncommercial use.[19] The exception for agency-developed software does not affect other public agency electronic records.[20]

***Practice Tip:***

The definition of "public records" for purposes of the Act and state records retention laws are different, and because local agency officials retain some discretion under the Act and state records retention laws concerning what records an agency retains, the fact that a particular type of public record is subject to disclosure under the Act does not necessarily mean that local agencies must retain such records.

## ■ ELECTRONIC DISCOVERY

The importance of maintaining a written document retention policy is evident by revisions to Rule 26 of the Federal Rules of Civil Procedure, which took effect December 1, 2006. Rule 26 requires parties in federal court litigation to address the production and preservation of electronic records. These rule changes do not require a local agency to alter its routine management or storage of electronic information. They do, however, illustrate the importance of having formal document retention policies.

In general, once federal court litigation begins, a local agency has a duty to preserve information for discovery. In some cases, the local agency may have to suspend the routine operation of its information systems in order to preserve information relevant to the litigation.

## ■ RECORDS RETENTION AND DESTRUCTION LAWS

The Act is not a records retention statute. The Act does not prescribe what type of information a public agency may gather or keep, or provide a method for correcting records.[21] Its sole function is to provide for disclosure.[22] Other provisions of state law govern retention of public records.

Local agencies generally must retain public records for a minimum of two years, although some records may be destroyed sooner.[23] For example, duplicate records that are less than two years old may be destroyed if no longer required.[24] State law does not permit destruction of records affecting title to or liens on real property, court records, records required to be kept by statute, and the minutes, ordinances, or resolutions of the legislative body or city board or commission.[25] Most local agencies adopt records retention schedules as a key element of a records management system. The Secretary of State has provided local governments with records management guidelines.[26]

However, there is no definition of the "public records" subject to state records retention statutes.[27] The Attorney General has opined that the definition of "public records" for purposes of the records retention statutes is "a thing which constitutes an objective lasting indication of a writing, event or other information, which is in the custody of a public officer and is kept either (1) because a law requires it to be kept or (2) because it is necessary or convenient to the discharge of the public officer's duties and was made or retained for the purpose of preserving its informational content for future reference."[28] Under this definition, local agency officials retain some discretion concerning what agency records must be kept pursuant to state records retention laws. Similarly, the Act allows for local agency discretion concerning what preliminary drafts, notes or interagency or intra-agency memoranda are retained in the ordinary course of business.[29]

## Frequently Requested Information and Records

*This table is intended as a general guide on the applicable law and is not intended to provide legal advice. The facts and circumstances of each request should be carefully considered in light of the applicable law. A local agency's legal counsel should always be consulted when legal issues arise.*

| Information/Records Requested | Must the Information/Record Generally Be Disclosed? | Applicable Authority |
|---|---|---|
| **Agenda materials distributed to a legislative body relating to an open session item** | Yes | Gov. Code, § 54957.5. *For additional information, see p. 50 of "The People's Business: A Guide to the California Public Records Act," hereafter referred to as "the Guide".* |
| **Calendars of Elected Officials** | Probably not, but note that there is no published appellate court decision on this issue post- Prop. 59.[1] | *Times Mirror Co. v. Superior Court (1991) 53 Cal.3d. 1325 and Rogers v. Superior Court* (1993) 19 Cal.App.4th 469 for a discussion of the deliberative process privilege. See also, 87 Ops.Cal.Atty.Gen. 181 (2004); 88 Ops.Cal. Atty.Gen. 16 (2005); 89 Ops.Cal.Atty.Gen. 204 (2006), as to scope of Prop. 59. *For additional information, see p. 35 of the Guide.* |
| **Contact information – Names, addresses, and phone numbers of crime victims or witnesses** | No | Gov. Code, § 6254(f)(2). *For additional information, see p. 29 of the Guide.* |
| **Citizen complaints against peace officers – annual summary report to AG** | Yes | Pen. Code, § 832.7(c). *For additional information, see p. 30 of the Guide.* |
| **Citizen complaint information – names, addresses, and telephone numbers** | No | *City of San Jose v. San Jose Mercury News* (1999) 74 Cal. App.4th 1008. *For additional information, see p. 30 of the Guide.* |
| **Claims for damages** | Yes | *Poway Unified School District v. Superior Court* (1998) 62 Cal.App.4th 1496. |
| **Election petitions *(initiative, referendum and recall petitions)*** | No, except to proponents if petition found to be insufficient. | Gov. Code, § 6253.5; Elec. Code, §§ 17200, 17400, and 18650; Evid. Code, § 1050. *For additional information, see p. 21 of the Guide.* |
| **Emails between government staff** | It depends. | Generally, emails are deleted by administrative policy and are not retained in the ordinary course of business. (*See* § 6254(a)). See also *Times Mirror v. Superior Court* (1991) 53 Cal.3d 1325; *Rogers v. Superior Court* (1993) 19 Cal.App.4th 469 for a discussion of the deliberative process privilege. *For additional information, see p. 35 of the Guide.* |

1 *The analysis with respect to elected officials may not necessarily apply to executive officers such as City Managers or Chief Administrative Officers, and there is no case law directly addressing this issue.*

## Frequently Requested Information and Records, Continued

| Information/Records Requested | Must the Information/Record Generally Be Disclosed? | Applicable Authority |
|---|---|---|
| **Employment Agreements/ Contracts** | Yes | Gov. Code, §§ 6254.8 and 53262(b). *For additional information, see p. 30 of the Guide.* |
| **Form 700 (Statement of Economic Interests) and Campaign Statements** | Yes[2] | Gov. Code, § 81008 |
| **Grading documents including geology reports, compaction reports, and soils reports submitted in conjunction with an application for a building permit** | Yes | 89 Ops.Cal.Atty.Gen. 39 (2006); but see Gov. Code, § 6254(e). *For additional information, see p. 19 of the Guide.* |
| **Juvenile Court Records** | No | *T.N.G. v. Superior Court* (1971) 4 Cal.3d. 767; Welf. & Inst. Code, §§ 827 and 828. *For additional information, see p. 24 of the Guide.* |
| **Legal billing statements** | Generally, yes, as to amount billed. No, as to any billing detail which reflects an attorney's impressions, conclusions, opinions or legal research or strategy. | Gov. Code, § 6254(k); Evid. Code, § 950, et seq.; *Smith v. Laguna Sun Villas Community Assoc.* (2000) 79 Cal.App.4th 639; *United States v. Amlani,* 169 F.3d 1189 (9th Cir. 1999); *Clarke v. American Commerce National Bank*, 974 F.2d. 127 (9th Cir. 1992); but see Gov. Code, § 6254(b) as to the disclosure of billing amounts reflecting legal strategy in pending litigation. *For additional information, see p. 19, 28 of the Guide.* |
| **Library Circulation Records** | No | Gov. Code, § 6254(j) and 6267. *For additional information, see p. 25 of the Guide.* |
| **Medical Records** | No | Gov. Code, § 6254(c). *For additional information, see p. 25 of the Guide.* |
| **Mental Health detentions** *(5150 reports)* | No | Welf. & Inst. Code, § 5328. *For additional information, see p. 24 of the Guide.* |
| **Minutes of Closed Sessions** | No | Gov. Code, § 54957.2(a). *For additional information, see p. 19, 34, 35 of the Guide.* |
| **Notices/Orders to property owner re: housing/building code, violations** | Yes | Gov. Code, § 6254.7(c). *For additional information, see p. 20 of the Guide.* |
| **Official Building Plans** *(architectural drawings and plans)* | Inspection only. Copies provided under certain circumstances. | Health & Saf. Code, § 19851; see also 17 U.S.C. §§101 and 102. *For additional information, see p. 19 of the Guide.* |
| **Personal Financial Records** | No | Gov. Code, § 7470, 7471, 7473; see also Gov. Code, § 6254(n). *For additional information, see p. 25 of the Guide.* |

2 *It should be noted that these statements must be made available for inspection and copying not later than the second business day following the day on which the request was received.*

# APPENDIX E - PUBLIC FACING COMMUNICATIONS, COUNCIL NOTIFICATIONS AND SOCIAL MEDIA POLICY

CITY OF AMERICAN CANYON

# Public and Media Communications Policy

**Policy Statement:**

The City of American Canyon encourages the positive exchange of accurate and timely information among City Council Members, City staff, representatives of the media, community groups, citizens, and other interested parties. The City Manager and department directors are charged with providing an "objective playing field" for the legislative process and distribution of public information for the media.

The City endeavors to keep citizens apprised of pertinent information concerning community issues, policies, activities, services and events to create greater awareness of local government and to facilitate the community's participation in the local government decision-making process.

The City follows all regulations and policies related to use of public funds for any purpose other than those related to City administration, operations, and services. In no case shall City resources be used for any promotional purposes including, but not limited to, promotion of a political position or individual running for, or maintaining a political office.

**Policy:**

## I. Public Communications

A. Letters and opinion surveys designed for mass distribution shall be reviewed and coordinated with the City Manager's Office for purpose, content, format analysis, and for placement strategies.

B. All printed materials (fliers, posters, signs, pamphlets, brochures, advertisements, maps, presentation materials, etc.) designed for distribution to and/or viewing by the public shall be reviewed by the City Manager or his/her designee prior to printing, copying, or uploading.

C. Requests from the public or from community groups for the involvement of City officials, employees, or other City resources in events, photo opportunities, or for other purposes shall be made through the City Manager or his/her designee to determine the appropriateness and legality of the involvement. Criteria for granting such a request shall be approved by the City Council (see Table 1).

## II. State Regulation for Newsletters, Mass Mailings, and other Media

All mass-distributed documents and other media prepared at "taxpayers' expense shall comply with all FPPC rules and regulations regarding all printed and photographical materials, video productions, and other media-related features. (The latest FPPC rules and regulations can be found at www.fppc.ca.gov)

## III. Use of Public Funds for Political Purposes

Use of any City resources such as equipment, supplies, employee time, and/or City symbols (any symbol or insignia of the City that would create a nexus with the public entity and a political purpose/office) is expressly prohibited unless approved by the governing body and/or the City Manager. Public funds cannot be extended for any political purposes such as the promotion of a political position or office. It is generally prohibited because it could reasonably be interpreted or construed as implying the City's connection, approval, or endorsement of the involved political issue, office, or function. As stated in # I above, requests for such City involvement shall be made through the City Manager or his/her designee to determine the appropriateness and legality of such involvement and if approval by the governing body is required.

## IV. Media Response Philosophy

City staff shall be timely, accurate and concise in their responses to the media. The City encourages and promotes accurate press coverage of programs, events, and decisions which could be of interest to a significant segment of the community. Inquiries from the news media are to be given a high priority and shall be responded to as quickly, efficiently, and professionally as possible. Every effort shall be made to meet media deadlines and to ensure that all information released is accurate, concise, and well organized.

When responding to the media, City staff shall represent the official position of the City and shall limit their comments to stating the facts and circumstances, without personal opinions or conclusions.

Council Members speaking to the media, who are not representing the official position of the City, or Council, shall clearly identify that they are responding on their own behalf and do not represent the Cit, or the Council in their comments on that specific issue.

## V. Press Releases

City press releases constitute written or verbal communications to the media regarding official City business.

A. Responsibility – All media releases relative to major citywide policies and actions shall be prepared and distributed by the City Manager's Office or his/her designee. Each department shall prepare and distribute releases related to their specific department. However, those releases need to be approved by the City Manager prior to release. In addition, the City Manager shall be notified prior to the release of information to the media in cases which are significant or controversial except those circumstances in public safety that would make this impracticable. In those situations, the department involved needs to notify the City Manager as soon as possible after the release of significant information

B. Release Preparation and Format – Press releases shall be prepared according to the City's established format. The City Clerk will maintain a file of all press releases.

## VI. Release of Information Pertaining to Significant/Controversial Issues and Events

Definition of Issues: It is the responsibility of department directors to notify the City Manager of significant events or issues which occur within their departments or that have had a public airing resulting in a conflict or public agitation. Such event or issue may be of major interest to the City Council, general public or the media. Such issues/events include, but are not limited to:

1. An event/issue in a department or program that could have financial, labor, or environmental consequences resulting in controversy and aggravation (eg. sewer spill).
2. Injury or death of a City employee while on or off official duty.
3. Major malfunctions of a City facility that could impact the general welfare of the public or environment.
4. An unexpected work stoppage or inability to provide a critical City service.
5. The arrest or conviction of a City employee, which may impact that individual's ability in successfully carrying out his/her professional duty or that may attract significant public attention due to the nature of the arrest or conviction.
6. Major police or fire activities

## VII. Reporting Procedure

The City Manager will determine if it is necessary to contact the City Council or other department directors. However, the Police Department may notify and inform the entire City Council on a significant event after there has been an attempt to notify the City Manager. When possible, the City Manager shall notify the City Council prior to communicating to the media on those issues believed to be controversial or of major concern.

## VIII. Back-up Procedure

If the City Manager is unavailable, the department director shall determine if it is necessary to contact the City Council or other department directors. The department director should use his/her own judgment in releasing information to the press or the public regarding significant events or issues.

## IX. Media Responders

A. Spokesperson – The City Manager will respond directly or designate a media spokesperson to respond to an issue of major public significance to ensure that the information is disseminated quickly and accurately to all interested media sources. The City Manager will then notify all appropriate department directors to forward all media inquiries regarding the particular issue to the appointed spokesperson. It is essential that a spokesperson is kept abreast and briefed on the status of the event as it occurs. It is important to note that the chain of command can be modified to expedite the release of crucial information.

B. Media Contacts to Staff – Employees shall refer media inquires to their department directors. A department director may delegate an employee to respond to an inquiry because of her/his involvement with an event or issue. In such cases, the staff member should work with their department director before the interview to develop appropriate responses to anticipated questions. The department director may want to contact the City Manager's Office for assistance in such matters.

C. City Council – Council Members are encouraged to notify the City Manager when they are approached by the media, especially when they are responding to controversial issues. Council Members are encouraged to review such issues with the City Manager for assistance in formulating their response.

D. Emergency Operations –Emergency Operations Center procedures will take precedent during a disaster.

E. Police Issues – Whenever there is a significant event involving a major police activity, the first media contact is the Police Chief or his/her designee, followed by the City Manager.

## X. How to Respond to Press Inquiries

All media inquiries received by staff should be given a high priority and responded to as quickly as possible. Every effort should be made to meet media deadlines and to ensure that all information that is released is accurate. Clerical staff should be instructed to give priority to media calls by alerting their respective department director.

A. It is important to determine a reporter's focus for a story as well as the specific information being requested. A reporter may unintentionally present the particular facts in a manner that might cause a misunderstanding of the facts surrounding specific City issues. By knowing the reporter's intentions, one can attempt to respond more accurately and in a manner that captures the full range of the issues and facts involved and within the larger context that the issue exists.

B. Any staff member (management or non-management) who responds to a media inquiry, provides an interview, appears on a radio or television program, etc., shall notify his/her immediate supervisor, the department director, and the City Manager either by phone, email, or written memo detailing the nature and possible implications of the media inquiry.

C. Regarding controversial matters *only* (see Section VI), the City Manager must be consulted before conducting the interview. This should provide the spokesperson an opportunity to review anticipated questions and to formulate and properly position appropriate responses. This notification process is only necessary for those significant issues facing a particular department and should not include routine interviews that are conducted on a regular basis by a specific department, the only exception being an urgent public safety issue that requires an immediate response.

## XI. **Media Etiquette**

City staff shall maintain and strengthen the relations between the City and the media.

A. Responding to Council Actions – Staff shall not publicly make judgmental comments regarding individual Council Members, Council actions, City Administration or official City policy when responding to media inquiries. Staff shall refrain from anticipating an action or position which has not been formally taken by the City Council or City. Any inquiry regarding "why" an individual Council Member voted in a particular manner shall be forwarded to that Council Member.

B. Scope of Response – Staff members shall not respond to media inquiries that are not directly related to their professional responsibilities. Staff members should assist the media in receiving the needed information by referring them to an appropriate department director.

C. Inaccurate Information – The media shall not be intentionally misled or provided inaccurate information by a staff member regarding any City policy or event.

## XII. **Public and Confidential Information**

Most City records and official City meetings are open to the public and media. The media are no more or less privileged than the general public in being provided access to the City Council meetings and City records. In situations where there is a discrepancy or uncertainty on the part of a City employee regarding the release of an official record to the media, the City Attorney's Office should be contacted to make the final determination.

Attendance at Public Meetings - The media and public may attend and report on actions taken at Council meetings, study sessions, as well as regularly scheduled Commission meetings.

Closed Sessions – Public and media attendance is not allowed at closed Council sessions.

Public Records – The media and the general public have access to all records or proceedings pursuant to the provisions of the State of California Public Records Act (Government Code Sections 6250 it seq.). However, the Public Records Act does exempt specific categories of records. A Public Records Request Form is required for all public records requests (copies of form are available in the City Clerk's Office).

Not for Public Disclosure – Media inquiries regarding the specifics of pending litigation, policy or administrative drafts, matters involving a significant exposure to litigation and certain personnel-related information that would constitute an unwarranted invasion of individual privacy are usually exempt from public disclosure.

Litigation Issues – Staff members shall not respond to media inquiries on behalf of the City involving City litigation, policies, or activities without first contacting the City Attorney's Office. The City Attorney's Office should serve as the point of contact regarding clarification before responding to a media inquiry. The Manager may provide an official City position regarding City litigation issues after first consulting with the City Attorney's Office.

**TABLE 1 - CRITERIA FOR GRANTING CITY PARTICIPATION REQUESTS THAT MAY RESULT IN MEDIA EXPOSURE**

The following are the criteria to use for addressing requests from the public or from community groups for the involvement of City officials, employees, or other City resources (See Section IC in policy):

- The City Manager shall notify all Council Members of the event.
- The community group must provide services/assistance to the community members of the City of American Canyon.
- The City Council has adopted within the past twenty-four (24) months a resolution endorsing the event or activity.
- All Members of the City Council Board will be invited to observe the use of City resources (equipment, personnel, etc.) being utilized in the actual event, including but not limited to, addressing the group, participating in conversations during the event, and any action to document the City's endorsement on use of the City resources.
- The City Manager is given ten (10) working days' notice of the request. (Note: the City Manager may waive this criterion under extraordinary circumstances or if there has been a history of City Manager-approved participation in the past.)

Most City records and official City meetings are open to the public and media. The media are no more or less privileged than the general public in being provided access to the City Council meetings and City records. In situations where there is a discrepancy or uncertainty on the part of a City employee regarding the release of an official record to the media, the City Attorney's Office should be contacted to make the final determination.

Attendance at Public Meetings - The media and public may attend and report on actions taken at Council meetings, study sessions, as well as regularly scheduled Commission meetings.

Closed Sessions – Public and media attendance is not allowed at closed Council sessions.

Public Records – The media and the general public have access to all records or proceedings pursuant to the provisions of the State of California Public Records Act (Government Code Sections 6250 it seq.). However, the Public Records Act does exempt specific categories of records. A Public Records Request Form is required for all public records requests (copies of form are available in the City Clerk's Office).

Not for Public Disclosure – Media inquiries regarding the specifics of pending litigation, policy or administrative drafts, matters involving a significant exposure to litigation and certain personnel-related information that would constitute an unwarranted invasion of individual privacy are usually exempt from public disclosure.

Litigation Issues – Staff members shall not respond to media inquiries on behalf of the City involving City litigation, policies, or activities without first contacting the City Attorney's Office. The City Attorney's Office should serve as the point of contact regarding clarification before responding to a media inquiry. The Manager may provide an official City position regarding City litigation issues after first consulting with the City Attorney's Office.

## TABLE 1 - CRITERIA FOR GRANTING CITY PARTICIPATION REQUESTS THAT MAY RESULT IN MEDIA EXPOSURE

The following are the criteria to use for addressing requests from the public or from community groups for the involvement of City officials, employees, or other City resources (See Section IC in policy):

- The City Manager shall notify all Council Members of the event.
- The community group must provide services/assistance to the community members of the City of American Canyon.
- The City Council has adopted within the past twenty-four (24) months a resolution endorsing the event or activity.
- All Members of the City Council Board will be invited to observe the use of City resources (equipment, personnel, etc.) being utilized in the actual event, including but not limited to, addressing the group, participating in conversations during the event, and any action to document the City's endorsement on use of the City resources.
- The City Manager is given ten (10) working days' notice of the request. (Note: the City Manager may waive this criterion under extraordinary circumstances or if there has been a history of City Manager-approved participation in the past.)

# APPENDIX F - TRAVEL POLICY

# CITY OF AMERICAN CANYON
# TRAVEL POLICY

**PURPOSE**

To establish a uniform policy for City employees, City elected officials, City appointed officials, and City commissioners hereafter known as "employees" for travel and business expenses. This policy establishes procedures for pre-travel authorization and reimbursement of expenses incurred by employees when traveling on official City business or attending approved training programs. The governing rule for all City travel expenses shall be budget, availability, economy, convenience, and propriety.

**GENERAL PROVISIONS**

It is the policy of the City of American Canyon that all travel expenses and business expenses incurred meet the following criteria:

1. The expense incurred is of direct benefit to the City.
2. The amount of the expense is reasonable in terms of the event or activity involved.
3. The expenses incurred are within the department's budget and are approved by the department head. The department heads have approval authority for employees traveling within the state.
4. The City Manager or designee will approve travel and business expenses incurred by employees for all out of state and international travel, regardless of funding source or reimbursement by an outside agency. City Manger travel shall be approved by Mayor or designee.
5. Elected Officials must have approval of the City Council for travel expenses expected to exceed $500 per trip for meetings/conferences, unless Council members are voting delegates of organizations (i.e., Cal-Cities), in which case no prior City Council approval is required regardless of amount.

**RESPONSIBILITY**

Every employee who travels on official business on behalf of the City is responsible for knowing and complying with the Travel Policy. Department heads are responsible for reviewing and approving or denying all travel requests for compliance within this policy.

**PROCEDURAL GUIDELINES**

All employees must complete and have approved the *Advanced Travel Authorization Form* before traveling or incurring any expenses. Event brochures/agendas (if available) must accompany the form along with all anticipated expenses outlined in it. **No expenses should be incurred without prior approval via the *Advanced Travel Authorization Form*.**

After travel is completed, employees must fill out the *Travel Expense Claim Form* to accompany the *Advanced Travel Authorization Form*, with actual costs incurred. These forms must be included with every request for payment, including Cal Card receipts and Payment Requests (to vendors or employees). Detailed, itemized receipts for expenses shall be attached to the Travel Expense Claim Form for all reimbursement purposes. Receipts that are not itemized are not acceptable. Receipts are not required

for per diem meals and incidental expenses.

**TRAVEL POLICY**

This policy is based upon the following policies, guidelines, and protocols:

a) Human Resources Policies and Practices Manual, Section 6.1(f), Travel Time.
b) Human Resources Policies and Practices Manual, Section 9.5, Reimbursement of Expenses.
c) Human Resources Policies and Practices Manual, Section 9.6, Travel.
d) City/Fire District Governance Handbook, Section 14.2, Authorized Expenses.

Except in the case of MOU language, or specific employment agreement language, the language in this policy shall take precedence when there is any conflict between this policy and any other City policy, guidelines, and/or protocols.

The City shall provide reimbursement for expenses directly related to attendance of approved conferences, seminars, meetings, and other official functions/purposes.

Official travel should be planned, approved, budgeted, and controlled at the department level. Elected officials are subject to the guideline established in the Governance Protocol Handbook.

Generally, the number of staff attendees should be limited to the minimum necessary to accomplish the travel's purpose. However, this will not preclude any travel or other expenses associated with required or recommended training for any City employees. Such training is subject to availability of funds and approval by the appropriate department head and/or City Manager.

In the event a scheduled trip is canceled, it is the employee's responsibility to make sure all necessary arrangements have been made to cancel reservations and receive all available refunds. Failure to do so may result in directly charging the employee for the expenses incurred by the City. The City does not pay for travel insurance.

**Travel Expense Categories:**

**Meals**

1. Meals and Incidentals are combined into one rate hereby referred to as per diem. The term "incidental expenses" typically includes fees and tips given to people such as porters, baggage carriers, bellhops, hotel housekeepers, waiters, or other food service.
2. During travel, meal and incidental expenses are paid on a per diem basis. The City's rate for Meals and Incidental Expenses (M&IE) shall be equal to the U.S. General Services Administration's (GSA) M&IE rates (https://www.gsa.gov/travel/plan-book/per-diem-rates) based on the location of travel. For international travel, M&IE rates are set by the U.S. Department of State https://aoprals.state.gov/web920/per_diem.asp
3. For days that are exclusive to travel, employees are paid 75% of the applicable per diem rate.
4. Meals and/or Incidental Expenses **shall not** be purchased using the Cal Card.

**Lodging**

1. Lodging is allowed for out-of-town conferences and meetings. Out-of-town is defined as a location greater than one and one half (1.5) hours' drive in addition to normal commute time. Due to the frequent selection of Sacramento, CA as a conference location for many statewide organizations, Sacramento, CA is an approved destination for lodging regardless of commute time. It is the City policy to provide adequate lodging for its employees while they are out of town on approved travel. Lodging is an allowable expense for the evening preceding or following a training, meeting, or conference, when necessary, as determined by the department head. Employees must submit an itemized hotel check-out receipt to obtain reimbursement or as supporting documentation if paid with a Cal Card.
2. Lodging charges are based on standard single occupancy rates. Reimbursement will not be provided for additional lodging expenses incurred by family members when an employee's family accompanies them, or for any charges above the single occupancy rate if the hotel charges more for additional guests in the same room.
3. If lodging is in connection with a conference, lodging expenses must not exceed the group rate published by the conference sponsor for the event, or the rate for government employees on official business. If the group or government rate is not available, lodging at comparable rates to the group rate, which do not substantially increase transportation costs or interfere with an employee's duties, are presumed to be reasonable and reimbursable.
4. If an employee extends their stay for personal reasons, they are responsible for all associated costs that exceed approved business travel. These extended travel expenses may not be charged to the Cal Card. Documentation shall be maintained to separate the business and personal travel expenses.

**Transportation**

1. The most economical mode of transportation, reasonably consistent with scheduling and cargo space requirements should be used, using the most direct and time-efficient route. Rail, bus, taxi, ridesharing, and airfare will be reimbursed at actual cost. Only the most economic form of travel will be authorized. All travel arrangements should be made in advance. If any employee chooses to drive instead of fly, the reimbursement shall be computed for the lesser, round-trip airfare or the actual mileage.
    a. Airfare: Only economy and coach airfare will be authorized. Reasonable baggage fees may be reimbursed. Airline early check-in fees, seat upgrades, travel insurance and other premium fees are not reimbursable. If the employee extends or modifies their travel for personal reasons, such as staying over a weekend before or after, and the cost of the airfare is greater than the necessary travel airfare, the employee is responsible for paying the difference.
    b. Rental Vehicles: Rental vehicles will only be allowed for business reasons in a situation where the hotel location is not within walking distance of the event location and a shuttle service or other means of ground transportation are not available, impractical, or too costly. Rental vehicles are only allowed as a business necessity, not for personal convenience. Rental vehicle agreements should be limited to economy, compact or

subcompact cars. Rental Car insurance must be purchased, and at the minimum level. If a portion of the trip includes personal use, such as staying over a weekend, then the employee shall pay the pro-rata cost of the rental car. Vans and other large vehicles may be rented if there is a group of employees traveling together.

c. Automobiles: Mileage expenses will be reimbursed at the actual miles traveled times the federal mileage rate when an employee uses their own vehicle for travel. The federal mileage rates are designed to compensate the driver for gasoline, insurance, maintenance, and other expenses associated with operating a vehicle. For employees who receive an auto allowance, mileage reimbursement will only be made in excess of 50 miles, each way of a trip.

2. When an employee operates a motor vehicle for authorized travel purposes, minimum insurance limits must be on file with Human Resources prior to travel. The driver of the vehicle is required to have the following amounts and types of insurance:
    - $100,000 Bodily Injury
    - $300,000 Each Occurrence
    - $50,000 Property Damage
3. Local/Short Distance Travel

    For local/short distance travel, City vehicles shall be used whenever practical. However, the following are instances where it is not appropriate to use a City vehicle:

    a) For trips that are in close mileage of an employee's normal commute. If the travel is more than an employee normal home-to-work commute, then the reimbursement will be for mileage that exceeds that at the IRS rate in effect at the time of travel. An exception would be if the employee is reporting to/from the work location.
    b) For those employees/officials who receive an auto allowance, if the trip is 50 miles or less each way.
    c) For trips that will take the City vehicle out of commission/use by others for more than one full day. The exception is for employees serving on standby duty and preapproved to keep a City vehicle overnight and/or emergency vehicles on official assignments.
    d) To park at an airport while the employee uses air travel to a destination.

**Other Expenses**

Personal expenses, including entertainment and travel insurance, are examples of items not eligible for reimbursement. All necessary expenses should be anticipated and detailed on the *Advanced Travel Authorization Form*. The following types of additional expenses are reimbursable, provided they are necessary for official business and detailed receipts are obtained:

- Baggage Charges
- Telecommunications Expenses (i.e., hotel internet)
- Toll
- Parking or Garage Fees (airport parking should be equal or less than long term rates)
- Taxis, Rideshare, or Shuttles, including a maximum 15 percent gratuity

**PRE-PAID TRAVEL EXPENSES**
100% of confirmed airfare, lodging, registration expense shall be paid in advance using the Cal Card or by check after the *Advanced Travel Authorization Form* has been approved. In no case shall petty cash be used for any travel advance.

**POST TRAVEL REIMBURSEMENT**
Employees are required to complete the Travel Expense Claim Form within 45 days of travel with detailed receipts. After 120 days, expenses paid by the City/District where receipts have not been provided shall be reported on the employee's W-2 at the end of the year, per IRS Publication 463.

**TRAVEL TIME**
Employees are compensated at their normal hourly rate for time committed to work-related travel, which is called travel time, as defined further in Human Resources Policies and Procedures Manual Section 6.1(f). Travel time in this policy is only applicable to employees covered by the Fair Labor Standards Act (FLSA).

For all FLSA non-exempt employees, common travel time situations are described with the following scenarios:

- Travel to and from different work or job sites.
- Travel for single day training or other activities that do not require an overnight stay.
- Time spent in meetings and/or training during approved conferences and events are considered active work time.
- If the employee is expected to work before, during or after travel, all time is compensable.
- If travel time falls on a non-working day, holiday or weekend, only travel time to and from the destination is compensated.
- Personal time spent taking breaks from travel to eat, sleep or engage in personal activities, such as sightseeing, must be excluded from travel time.
- If travel occurs on a normal scheduled workday and is less than the regular work shift, compensation is provided at a minimum of a regular work shift. Employees are expected to be available to work once settled in.
- Employees who decline to use public transportation and request permission to drive their personal vehicle instead will only be compensated for hours that would have been used for the public transportation method.

Employees who are FLSA exempt should coordinate their time appropriately with their Department Head; however, they are not eligible for compensatory time or overtime.

**CITY MANAGER DISCRETIONARY EXCEPTIONS**
The City Manager can make exceptions to this policy on a case-by-case basis as recommended by the department head for unusual or extenuating circumstances. Exceptions must be explained on the Advance Travel Authorization Form and signed by the City Manager.

# APPENDIX G – COUNCIL COMPENSATION

# BENEFITS SUMMARY FOR CITY COUNCIL MEMBERS (2025)

City Council Members, including the Mayor, receive salary and benefits as described in this Code of Conduct and Governance Protocols, and further defined below.

**Salary**

- $950 per month
- Bi-weekly (26 annual pay periods)

**Retirement**

- "Optional Member" under the City's CalPERS retirement contract.
    - If a Council Member opts out of CalPERS retirement, then enrollment in PARS Alternative Plan is required.
- Eligible to participate in the City's 457 Deferred Compensation Plans.

**Health and Wellness Benefits**

- The City contributes a monthly payment equal to 90% of the Kaiser HMO premium rates at each level of coverage (Employee only, Employee plus One Dependent, and Family).
- City provides Employee-only coverage for Dental and Vision insurance. Council Members may acquire coverage for eligible dependents at the same rates available to City employees.
- City provides Employee-only coverage for Life Insurance and Accidental Death and Dismemberment. Council Members may acquire supplemental coverage at the same rates available to City employees.
- Council Members vested in the City's retirement program are eligible for retiree medical insurance benefits with same benefit levels as described in the Unrepresented Compensation Program.

**Vehicle Stipend**

- $500 per month

**Telephone Stipend**

- $50 per month

**Technology Stipend**

- $35 per month

**Electronic Tablet Policy**

- Council Members are issued electronic tablets to conduct City business during term in office.

**Computer Tablet Acquisition Policy**

- Eligible to participate in tablet purchase program at the same rates available to City employees.

**Computer Revolving Loan Program**

- Eligible to participate in computer loan program at the same rates available to City employees.

# APPENDIX H -LIST OF COUNCIL POLICIES

**Example City Council Policies**

Fiscal and Budgetary Policies

- Basis of Accounting/Operating Budget
- Accounting, Auditing, and Financial Reporting
- Reserves, Unallocated Funds, and Capital Set-Aside
- Revenue Management
- Expenditure Control
- Investments and Cash Management
- Asset Management
- Debt Management
- Internal Controls
- Travel Policy
- Capital Set-Aside

Capital Improvement Program Policies

- Complete Streets
- Pavement Condition Index

Private Development and Economic Development Policies

- Economic Analysis of New Development
- Public Improvement Requirements & Nexus Fees
- Public Notice/Engagement
- Economic Incentives

Risk Management Policies

- Claims Review & Acceptance
- Claims Avoidance
- Insurance Requirements
- Use of Risk Pools

General

- Religious expression
- Political expression at City Events
- Flag Display at City Facilities

## TITLE

Design of the South Kelly and SR-29 Intersection Project

## RECOMMENDATION

Adopt a Resolution amending the FY2024-25 Capital Budget, authorizing the City Manager to 1) enter into an agreement with BKF Engineers for design services for an amount not to exceed $241,000; and 2) execute a reimbursement agreement between the City of American Canyon and the County of Napa to complete the design of the Project for an amount not to exceed $124,013, in conjunction with the South Kelly-Highway 29 Intersection Project (TR23-0200).

## CONTACT

Erica Ahmann Smithies, P.E., Public Works Director
Ronald Ranada, P.E., Senior Civil Engineer

## BACKGROUND & ANALYSIS

South Kelly Road is a two-lane collector that provides access to the Napa Valley Business Park and Napa Logistics Park from SR-12 and SR-29. It is heavily used and carries a substantial number of heavy vehicles including trucks. As a result, it shows significant wear and tear, with evidence of asphalt-concrete failure in numerous places throughout. Generally, the eastbound lane(s) fall under the jurisdiction of the City of American Canyon, while the westbound lane(s) fall under the jurisdiction of Napa County.

In 2015, an Environmental Impact Report (EIR) was completed for the development of Napa Logistics Park Phase 2 (NLP2), which was projected to create 2.27 million square feet of building area less than a mile from South Kelly Road. The EIR considered several circulation improvements to accommodate the new development, including the intersection of SR-29 and South Kelly Road.

City Council Resolution 2015-107 approved a Conditional Use Permit (CUP) for the development of NLP2, which included a condition for the developer to construct public improvements to be dedicated to and maintained by the City and Caltrans. The improvements included South Kelly Road between SR-29 and Devlin Road, the intersection of SR-29 and South Kelly Road, and the intersection of Devlin Road and South Kelly Road ("South Kelly Improvements").

The City and NLP2 developer first entered into a Subdivision Improvement and Reimbursement

Agreement in 2018 to establish certain improvement requirements for the NLP2 development, which included construction of the South Kelly and SR-29 Improvements. The 2018 agreement was amended in 2022 by Resolution 2022-67, to modify the CUP condition and reduce the scope of work on South Kelly Road and SR-29 based on the June 2022 EIR Addendum prepared by First Carbon Solutions. In addition, the developer's obligation was modified from building the project to making a fair share payment to the City for the construction of said improvements. The developer provided preliminary improvement plans, cost estimates, and their fair share payment for the completion of the South Kelly Improvements by the City. The South Kelly-Highway 29 Intersection Project (TR23-0200; "Project") is in the adopted FY24-25 Capital Improvement Program.

Given the shared jurisdiction over South Kelly Road, the City of American Canyon must necessarily partner with Napa County on the Project. To maximize efficiency and benefit from economies of scale, Napa County has further requested the City's partnership to expand the scope of improvements to be delivered with a request to deliver improvements to Napa County's Tower Road. Tower Road is a 2,700 linear foot road that is located about a quarter mile north of, and parallel to, South Kelly Road. It is an urban local roadway that provides access to several businesses in the industrial area from SR-29 and Devlin Road. Similar to South Kelly Road, there is also a substantial amount of truck traffic resulting in the current poor condition of the roadway, hence the County's desire to rehabilitate it. With the City taking the lead in the delivery of the Project, City and County staff have collaborated on a Project-specific reimbursement agreement, which is provided as Exhibit A herein. City staff recommends the City Council authorize the execution of the agreement.

To move forward with the Project's delivery, City staff determined the need to engage a design consultant due to limited bandwidth to proceed with the Project in-house. Staff turned to the 2023 City Council-approved on-call professional services agreement list to request design proposals specific for the Project. On August 16, 2024, the City received 3 design proposals. City and County staff reviewed and rated the proposals, and selected BKF Engineers based on their detailed scope of work, personnel experience and qualifications, proposed schedule, and fee to complete the work. BKF Engineers has successfully delivered projects similar in nature in other municipalities such as City of San Rafael, City of Petaluma, and City of Calistoga. BKF Engineers' proposal, with a noted fee of $241,000, is provided as Exhibit B herein. Staff recommends the City Council authorize a Professional Services Agreement for Engineering Design with BKF Engineers.

## COUNCIL PRIORITY PROGRAMS AND PROJECTS

Infrastructure: "Develop and maintain infrastructure resources to support sustainable growth."

## FISCAL IMPACT

The NLP2 developer has provided their fair share payment to the City, in the amount of $1,001,354.12, per the amended Subdivision Improvement and Reimbursement effective August 2, 2022.

The South Kelly and SR-29 Intersection Project currently has $200,000 appropriated in the FY2024-25

Capital Budget. Due to the joint nature of the project, the cost for design is more than initially anticipated. An additional $75,000 needs to be appropriated to cover the Consultant fee and staff time costs. Therefore, staff recommends amending the FY2024-25 Capital Budget as follows:

| Source | Current Amount | New Amount |
|---|---|---|
| Fund 350, Revenue from Development | $200,000 | $275,000 |

Napa County will be reimbursing the City for the cost of the consultant design services proportional to the work to be done on County infrastructure, in an amount not to exceed $124,013. This estimate includes anticipated City administrative and staff time costs.

The Project has a current total budget of $1,145,000 and will be refined further as design is completed.

## ENVIRONMENTAL REVIEW

South Kelly Road and SR-29

The project improvements to South Kelly Road and SR-29 were first identified in a 2015 EIR prepared by First Carbon Solutions that was then amended in June 2022. The 2022 Initial Study/Addendum determined that there was no potential for new or more severe significant environmental impacts, and no subsequent EIR was required to complete the project.

Tower Road

The Tower Road reconstruction is Categorically Exempt from CEQA per CEQA Guidelines Sections 15301(c) (Existing Facilities) and 15302 (Replacement or Reconstruction).

## ATTACHMENTS:

1. Resolution
2. Exhibit A - Reimbursement Agreement
3. Exhibit B - BKF Proposal

**RESOLUTION NO. 2024-_____**

**A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF AMERICAN CANYON AMENDING THE FY2024-25 CAPITAL BUDGET, AUTHORIZING THE CITY MANAGER TO ENTER INTO AN AGREEMENT WITH BKF ENGINEERS FOR DESIGN SERVICES FOR AN AMOUNT NOT TO EXCEED $241,000, AND EXECUTE A REIMBURSEMENT AGREEMENT BETWEEN THE CITY OF AMERICAN CANYON AND THE COUNTY OF NAPA TO COMPLETE THE DESIGN OF THE PROJECT FOR AN AMOUNT NOT TO EXCEED $124,013, IN CONJUCTION WITH THE SOUTH KELLY-HIGHWAY 29 INTERSECTION PROJECT (TR23-0200)**

**WHEREAS,** the Napa Logistics Park Phase 2 (NLP2) Project Conditional Use Permit (Resolution 2015-107) required the developer to construct public improvements to accommodate the new development, including improvements to South Kelly Road between SR-29 and Devlin Road, the intersection of SR-29 and South Kelly Road, and the intersection of Devlin Road and South Kelly Road; and

**WHEREAS,** the developer has provided the City with preliminary street improvement plans, cost estimates, and fair-share funds for the completion of the conditioned improvements; and

**WHEREAS,** the South Kelly-Highway 29 Intersection Project (TR23-0200) has been incorporated into the adopted FY24-25 CIP Budget for the purpose of delivering the aforementioned improvements; and

**WHEREAS,** the City of American Canyon (City) and Napa County (County) each have jurisdiction over discrete portions of South Kelly Road, and both agencies jointly desire to partner for the overall improvement of the road in whole; and

**WHEREAS,** Napa County staff is amenable to, and has requested that the City of American Canyon oversee the delivery of the desired improvements to South Kelly Road; and

**WHEREAS,** to maximize efficiency and benefit from economies of scale, Napa County has further requested the Project improvements include the pavement rehabilitation of Tower Road in unincorporated Napa County; and

**WHEREAS,** due to limited City staff capacity to deliver the Project in-house, City staff utilized the 2023 City Council approved on-call professional services agreement list to request design service proposals for the Project; and

**WHEREAS,** City and County staff received and evaluated three proposals, and selected BKF Engineers for their detailed scope of work, personnel experience and qualifications, schedule, and fee to complete the work; and

**WHEREAS,** BKF Engineers' fee proposal for the necessary design scope is for an amount not to exceed $240,357; and

**WHEREAS,** the cost for design is greater than initially estimated due to the expanded scope of the Project to delivery County improvements; and

**WHEREAS**, there are sufficient funds in the Project Budget to cover the design fee; and

**WHEREAS,** the City and County have negotiated a reimbursement agreement to facilitate the County's payment for its share of the design services, including City administration and staff costs.

**NOW, THEREFORE, BE IT RESOLVED** that the City Council of the City of American Canyon hereby amends the FY2024-25 Capital Budget as follows:

| Source | Current Amount | New Amount |
|---|---|---|
| Fund 350, Revenue from Development | $200,000 | $275,000 |

**NOW, THEREFORE, BE IT FURTHER RESOLVED** that the City Council of the City of American Canyon hereby authorizes the City Manager to enter into an agreement with BKF Engineers for the design of the South Kelly-Highway 29 Intersection Project (TR23-0200) for an amount not to exceed $241,000; and

**NOW, THEREFORE, BE IT FURTHER RESOLVED** that the City Council of the City of American Canyon hereby authorizes the City Manager to execute a reimbursement agreement with the County of Napa to complete the design of the County's portion of the Project for an amount not to exceed $124,013.

**PASSED, APPROVED** and **ADOPTED** at a regularly scheduled meeting of the City Council of the City of American Canyon held on the 19th day of November, 2024 by the following vote:

AYES:
NOES:
ABSTAIN:
ABSENT:

_____
Leon Garcia, Mayor

ATTEST:

Taresa Geilfuss, CMC, City Clerk

APPROVE AS TO FORM:

_____
William D. Ross, City Attorney

**CITY AGREEMENT NO. 2024- _____**

**NAPA COUNTY AGREEMENT NO. _____**

# AGREEMENT BETWEEN CITY OF AMERICAN CANYON AND NAPA COUNTY REGARDING THE SOUTH KELLY & SR-29 INTERSECTION PROJECT (TR23-0200)

This Agreement ("AGREEMENT") is entered into and effective as of _____, by and between Napa County, a political subdivision of the state of California ("COUNTY") and the City of American Canyon, a California general law city ("CITY") (each a "PARTY" and collectively, the "PARTIES").

## RECITALS

**WHEREAS**, CITY plans to provide the design and specifications ("ENGINEERING SERVICES") for constructing roadway improvements, including, but not limited to, full depth reclamation (FDR), new asphalt surface, striping, and associated storm drain improvements on COUNTY-owned assets ("COUNTY WORK") within the COUNTY's jurisdiction ("COUNTY ASSETS") as part of the South Kelly & SR-29 Intersection Project (TR23-0200) (the "CITY PROJECT"). Plans, specifications, and the AutoCAD file will be provided to the COUNTY as part of the services outlined in this AGREEMENT. A tabulated cost summary for ENGINEERING SERVICES is provided in Exhibit "A" attached hereto and incorporated herein; and

**WHEREAS**, the COUNTY ASSETS that are part of the COUNTY WORK and located within the project area will be owned and maintained by the COUNTY; and

**WHEREAS**, the CITY has agreed to provide ENGINEERING SERVICES for COUNTY WORK as part of the scope of work for the CITY PROJECT, and COUNTY has agreed to reimburse the CITY for costs incurred by the CITY to perform the aforementioned service to the COUNTY; and

**WHEREAS**, the PARTIES wish to memorialize the terms and conditions of the COUNTY'S agreement to reimburse the CITY for costs associated with the COUNTY WORK.

## TERMS

**NOW, THEREFORE**, CITY and COUNTY, for the mutual consideration described herein, agree as follows:

1. **Scope of COUNTY WORK.** For the CITY PROJECT, the CITY shall provide ENGINEERING SERVICES for work to be performed in the COUNTY for COUNTY WORK as terms of this AGREEMENT.

**2. Project Cost, Payments, and Compensation.**

A. *Project Cost Paid by COUNTY*. COUNTY agrees to pay CITY for the actual cost of work associated with the time spent to provide ENGINEERING SERVICES for COUNTY WORK in accordance with the terms of this AGREEMENT. This AGREEMENT authorizes the

COUNTY to pay all CITY PROJECT scope expenses as defined above in accordance with the maximums and procedures in this Section 2. The scope of work under this AGREEMENT is estimated to cost as set forth below ("Estimated Cost"):

| | |
|---|---|
| $107,837 | Consultant Design Engineering Services |
| $ 16,176 | City Staff – Project Management & Administration Services (15%) |
| $124,013 | Total |

B. *Advance Payment and Invoices*. In accordance with Section 2(A), COUNTY shall pay the CITY for ENGINEERING SERVICES provided to the COUNTY. Payment for COUNTY WORK is based on the actual costs incurred by the CITY to provide ENGINEERING SERVICES as indicated in (2.A).

*3.* **Access to Records / Document Retention.** CITY will provide Plans, Specifications, and the AutoCAD file and other information, upon request, regarding the COUNTY WORK. Financial records and the aforementioned documents associated with CITY PROJECT shall be maintained at least five (5) fiscal years after COUNTY payment for CITY services. COUNTY or the duly authorized representatives of the COUNTY, shall have access to any books, documents, papers, and records of CITY which are directly pertinent to the subject matter of this AGREEMENT for the purpose of making audit, examination, excerpts, and transcriptions. Except where longer retention is required by any federal or state law, CITY shall maintain all required records for at least seven (7) years after COUNTY makes final payment for any of the COUNTY and all pending matters are closed, whichever is later.

4. **Term of this AGREEMENT.** The term of this AGREEMENT shall commence on November 19, 2024 and shall continue in effect until payment in Paragraph 2(A) has been made to CITY; except that the obligations of the PARTIES under Paragraph 3 (Access to Records / Document Retention), 5 (Insurance), and 6 (Indemnification) shall continue in full force and effect after said expiration date or early termination in relation to acts or omissions occurring prior to such dates during the term of this AGREEMENT.

5. **Insurance.** The CITY shall obtain and maintain in full force and effect throughout the term of this AGREEMENT, the following insurance coverage and shall provide evidence of such coverage to the COUNTY upon request:

A. *Workers' Compensation Insurance*. Workers' compensation insurance for the performance of any of duties under this AGREEMENT, including but not limited to, coverage for workers' compensation and employer's liability and a waiver of subrogation.

B. *Liability Insurance*.

(1) *General Liability*. Commercial or comprehensive general liability insurance coverage (personal injury and property damage) of not less than ONE MILLION DOLLARS ($1,000,000) combined single limit per occurrence, either issued by a company admitted to do business in the State of California and having an A.M. Best Rating of no less than A:VII or by self-insurance satisfactory to other PARTY's risk manager or employee designated by that PARTY to perform such function, or by a combination thereof, covering liability for any personal injury, including death, to any person and/or damage to the property of any person arising from the acts or omissions of that PARTY under this AGREEMENT. If the coverage

includes an aggregate limit, the aggregate limit shall be no less than twice the per occurrence limit.

(2) *Comprehensive Automobile Liability Insurance*. A comprehensive automobile liability insurance policy (Bodily Injury and Property Damage) on owned, hired, leased, and non-owned vehicles used in conjunction with that PARTY's activities under this AGREEMENT of not less than ONE MILLION DOLLARS ($1,000,000) combined single limit per occurrence.

C. *Certificates of Coverage*. Insurance coverages referenced in Section 5(B), above, shall be evidenced by one or more certificates of coverage or, by other evidence of coverage acceptable to the COUNTY's Risk Manager, which shall be available upon request.

(1) The certificate(s) or other evidence of coverage shall reference this AGREEMENT by the COUNTY or CITY number or title and department; shall be kept current during the term of this AGREEMENT; shall provide that the other PARTY shall be given no less than thirty (30) days prior written notice of any non-renewal, cancellation, other termination, or material change, except that only ten (10) days prior written notice shall be required where the cause of non-renewal or cancellation is non-payment of premium; and shall provide that the inclusion of more than one insured shall not operate to impair the rights of one insured against another insured, the coverage afforded applying as though separate policies had been issued to each insured, but the inclusion of more than one insured shall not operate to increase the limits of the company's liability.

(2) Waiver of Subrogation and Additional Insured Endorsements. For the commercial general liability insurance coverage referenced in Section 5(B)(1) and, for the comprehensive automobile liability insurance coverage referenced in Section 5(B)(2) where the vehicles are covered by a commercial policy rather than a personal policy, each PARTY shall also file with the evidence of coverage an endorsement from the insurance provider naming the other PARTY, its officers, employees, agents, and volunteers as additional insureds and waiving subrogation. For the Workers Compensation insurance coverage, each PARTY shall file with the evidence of coverage an endorsement waiving subrogation.

(3) The certificate or other evidence of coverage shall provide that if the same policy applies to activities of a PARTY not covered by this AGREEMENT, then the limits in the applicable certificate relating to the additional insured coverage of the other PARTY shall pertain only to liability for activities of the insured PARTY under this AGREEMENT, and that the insurance provided is primary coverage with respect to any insurance or self-insurance programs maintained by the other PARTY. The additional insured endorsements for the general liability coverage shall use Insurance Services Office (ISO) Form No. CG 20 09 11 85 or CG 20 10 11 85, or equivalent, including (if used together) CG 2010 10 01 and CG 2037 10 01; but shall not use the following forms: CG 20 10 10 93 or 03 94.

(4) Upon request, each PARTY shall provide, or arrange for the insurer to provide, to the other PARTY within thirty (30) days of the request, certified copies of the actual insurance policies or relevant portions thereof.

D. *Inclusion in Subcontracts*. CITY shall cause all contractors and subcontractors and any other entity or person who is involved in providing services under this AGREEMENT to comply

with the insurance requirements set forth in this Paragraph 5. CITY shall additionally require any consultant hired to provide design engineering services on any COUNTY ASSET to obtain and maintain in full force and effect throughout the term of this AGREEMENT, the following insurance coverage and shall provide evidence of such coverage to the COUNTY upon request:

(1) *Professional Liability/Errors and Omissions*. Professional liability [or errors and omissions] insurance for all activities of CONSULTANT arising out of or in connection with the South Kelly & SR-29 Intersection Project (TR23-0200) in an amount not less than TWO MILLION DOLLARS ($2,000,000) per claim. If the coverage includes an aggregate limit the aggregate limit shall be no less than twice the per occurrence limit.

6. **Indemnification.**

A. *By COUNTY*. COUNTY, shall defend, indemnify, and hold harmless CITY and the officers, agents, and employees of CITY from any claim, loss, or liability including without limitation, those for personal injury (including death) or damage to property (collectively, "Liability"), arising out of or connected with COUNTY's performance of its obligations under this AGREEMENT. Consistent with Civil Code section 2782, COUNTY will not be obligated to indemnify CITY for the proportionate share of the Liability caused by the CITY's active negligence, sole negligence, or willful misconduct.

B. *By CITY*. CITY shall, and shall cause all who perform work in connection with this AGREEMENT, defend, indemnify, and hold harmless COUNTY and the elected and appointed officers, agents, and employees of COUNTY from any Liability arising out of or connected with any aspect of the performance by CITY or its officers, agents, or employees, of obligations required of CITY under this AGREEMENT. Consistent with Civil Code section 2782, CITY will not be obligated to indemnify COUNTY for the proportionate share of the Liability caused by the COUNTY's active negligence, sole negligence, or willful misconduct.

C. Each PARTY shall notify the other PARTY immediately in writing of any claim or damage related to activities performed under this AGREEMENT. The PARTIES shall cooperate with each other in the investigation and disposition of any claim arising out of the activities under this AGREEMENT, provided that nothing shall require either PARTY to disclose any documents, records or communications that are protected under peer review privilege, attorney-client privilege, or attorney work product privilege.

7. **Ongoing Duties and Responsibilities.** In addition to the PARTIES' duties and responsibilities as described in other sections of this AGREEMENT, the PARTIES acknowledge and agree to perform the following on an ongoing basis during the time that the CITY PROJECT is under construction:

A. *Regular Staff Meetings*. The respective staffs of CITY and COUNTY, and their retained consultants or contractors, will meet as needed to address matters contained in this AGREEMENT.

B. *Commitment of Staff and Resources*. To provide sufficient staff and/or resources to this process to efficiently meet the goals and tasks set forth in this AGREEMENT.

8. **Warranty of Legal Authority.** Each PARTY warrants and covenants that it has the present legal authority to enter into this AGREEMENT and to perform the acts required of it hereunder. If any PARTY is found to lack the authority to perform the acts required of it hereunder or is prevented from performing the acts by a court of competent jurisdiction, this AGREEMENT shall be void.

9. **Severability.** If any provision of this AGREEMENT, or any portion thereof, is found by any court of competent jurisdiction to be unenforceable or invalid for any reason, such provision shall be severable and shall not in any way impair the enforceability of any other provision of this AGREEMENT.

10. **Attorneys' Fees.** In the event that either PARTY commences legal action of any kind or character to enforce the provisions of this Agreement or to obtain damages for breach thereof, the prevailing PARTY in such litigation shall be entitled to all costs and reasonable attorney's fees incurred in connection with such action.

11. **No Waiver.** The waiver by either PARTY of any breach or violation of any requirement of this Agreement shall not be deemed to be a waiver of any such breach in the future, or of the breach of any other requirement of this Agreement.

12. **Notices.** All notices required or authorized by this Agreement shall be in writing and shall be delivered in person or by deposit in the United States mail, by certified mail, postage prepaid, return receipt requested. Any mailed notice, demand, request, consent, approval, or communication that either PARTY desires to give the other PARTY shall be addressed to the other PARTY at the address set forth below. Any notice sent by mail in the manner prescribed by this paragraph shall be deemed to have been received on the date noted on the return receipt or five days following the date of deposit, whichever is earlier. The PARTIES further agree to send supplemental notice by email as identified below.

***City of American Canyon*:**
Director of Public Works
4381 Broadway Street
American Canyon, CA 94503

Email: esmithies@americancanyon.gov; rranada@americancanyon.gov; kdelossantos@americancanyon.gov

***County of Napa*:**
Director of Public Works
1195 Third Street, Suite 101
Napa, CA 94559

Email: steve.lederer@countyofnapa.org; juan.arias@countyofnapa.org

Changes may be made to the addresses where notices are to be delivered by giving notice pursuant to this provision.

13. **Entire Agreement.** This AGREEMENT, including any documents expressly incorporated by reference whether or not attached hereto, constitutes the entire agreement between the PARTIES relating to the subject of this AGREEMENT and supersedes all previous agreements, promises, representations, understandings, and negotiations, whether written or oral, among the PARTIES with respect to the subject matter hereof.

14. **Amendment / Modification**. Except as specifically provided herein, this AGREEMENT may be modified or amended only in a writing signed by both PARTIES. In particular, only COUNTY in the form of a written amendment of this AGREEMENT, may authorize extra and/or changed work if beyond the scope of COUNTY WORK described in Section 1 above. Failure of CITY to secure such authorization in writing in advance of performing any of the extra or changed work shall constitute a waiver of any and all rights to adjustment in the contract price or contract time and no compensation shall be paid for such extra work.

15. **Recitals Adopted.** The PARTIES hereby agree to and adopt the AGREEMENT recitals as portions of this AGREEMENT.

16. **Termination.** The termination shall be effective upon the COUNTY's payment to CITY of any amounts owed by COUNTY hereunder.

17. **Governing Law, Jurisdiction, and Venue**. The interpretation, validity, and enforcement of this AGREEMENT will be governed and interpreted in accordance with the laws of the State of California. Any suit, claim, or legal proceeding of any kind related to this AGREEMENT will be filed and heard in a court of competent jurisdiction in the County of Napa.

18. **Counterparts**. This AGREEMENT may be executed in counterparts, each one of which is deemed an original, but all of which together constitute a single instrument.

19. **Signatures**. The individuals executing this AGREEMENT represent and warrant that they have the right, power, legal capacity, and authority to enter into and to execute this AGREEMENT on behalf of the respective legal entities of the COUNTY and the CITY.

20. **Electronic Signatures.** Each Party agrees that the electronic signatures, whether digital or encrypted, of the Parties included in this Agreement, are intended to authenticate this writing and to have the same force and effect as manual signatures. The term "electronic signature" means any electronic sound, symbol, or process attached to or logically associated with a record and executed and adopted by a party with the intent to sign such record, including facsimile or email electronic signatures. Without limiting the generality of the foregoing, delivery of an executed counterpart's signature page of this Agreement, by facsimile, electronic mail in portable document format (.pdf) or by any other electronic means intended to preserve the original graphic and pictorial appearance of a document, has the same effect as delivery of an executed original of this Agreement.

**IN WITNESS WHEREOF**, this AGREEMENT was executed by the PARTIES hereto as of the date first above written.

## TITLE

Napa Valley Tourism Improvement District (NVTID) Renewal

## RECOMMENDATION

Adopt a Resolution granting consent to the County of Napa to renew the Napa Valley Tourism Improvement District (NVTID) and include the City of American Canyon in the renewed NVTID.

## CONTACT

Jason Holley, City Manager

## BACKGROUND & ANALYSIS

The NVTID is a benefit assessment district proposed to continue a revenue source to help fund destination sales and marketing promotions for Napa Valley lodging businesses. This approach has been used successfully in other destination areas throughout the state to improve tourism and drive additional room nights to assessed lodging businesses. The renewed NVTID includes all lodging businesses, existing and in the future, available for public occupancy located within the boundaries of the cities of American Canyon, Calistoga, Napa, St. Helena, and the Town of Yountville and the unincorporated area of Napa County. Because the renewed NVTID will include the City of American Canyon, consent must be granted by the City Council of American Canyon in order for the City of American Canyon to be included in the creation, operation and future renewals of the NVTID.

Lodging business owners decided to pursue renewal of the NVTID in order to continue a revenue source devoted to marketing Napa Valley as a tourist, meeting and event destination. If renewed, the NVTID would generate approximately $11,000,000 on an annual basis for promotion of travel and tourism specific to Napa Valley.

### TOURISM IMPROVEMENT DISTRICTS

Tourism Improvement Districts (TIDs) utilize the efficiencies of private sector operation in the market-based promotion of tourism. These special assessment districts allow assessed business owners to organize their efforts to increase tourism. Business owners within the TID fund the TID, and those funds are used to provide services that are desired by and benefit the assessed businesses within the TID.

TID benefits:

- Funds cannot be diverted for other government programs.
- They are customized to fit the needs of each destination.
- They allow for a wide range of services, including destination marketing, tourism promotion, and sales lead generation.
- They are designed, created and governed by those who will pay the assessment.
- They provide a stable funding source for tourism promotion.

In California, TIDs are primarily formed pursuant to the Property and Business Improvement District Law of 1994 (94 Law). This law allows for the creation of special benefit assessment districts to raise funds within a specific geographic area. The key difference between TIDs and other special benefit assessment districts is that funds raised are returned to the private non-profit corporation governing the TID.

**MANAGEMENT DISTRICT PLAN**

The Management District Plan includes the proposed boundary of the NVTID, a service plan and budget and a proposed means of governance. The NVTID will include all lodging businesses, existing and in the future, available for public occupancy within the boundaries of the cities of American Canyon, Calistoga, Napa, St. Helena, and the Town of Yountville and the unincorporated area of Napa County.

The annual assessment rate is two percent (2%) of gross short-term (30 days or less) sleeping room rental revenue. In years three (3), six (6) and nine (9) of the NVTID's term, the assessment rate may be recommended to be increased by the Visit Napa Valley (VNV) Board of Directors and then brought to the Napa Valley Tourism Corporation (NVTC) Board for final approval. The maximum increase in years three (3), six (6) and nine (9) shall be one half of one percent (0.5%).

The total assessment rate may not exceed three percent (3%) of gross short-term (30 days or less) sleeping room rental revenue. Based on the benefit received, assessments will not be collected on stays of more than thirty (30) consecutive days. Stays by government employees on government business shall not be subject to assessment. "Government employee" shall mean foreign or domestic government employees subject to exemption from transient occupancy tax pursuant to each municipality's municipal/county code.

The renewed NVTID will have a ten (10) year term, beginning June 26, 2025, or as soon as possible thereafter, and ending ten (10) years from its start date. Once per year beginning on the anniversary of NVTID renewal there is a thirty (30) day period in which business owners paying fifty percent (50%) or more of the assessment may protest and begin proceedings to terminate the NVTID.

Each jurisdiction will be responsible for collecting the assessment on a basis that mirrors the collection of transient occupancy tax from each lodging business located in the NVTID boundaries. Each jurisdiction shall forward the assessments to the County of Napa ("County") to be forwarded to Napa Valley Tourism Corporation, which will have the responsibility of managing NVTID programs

as provided in the Management District Plan. Each jurisdiction tax collector will retain a fee of up to one percent (1%) of the amount of the assessment collected prior to remitting funds to the County, within their respective jurisdictions, to cover their costs of collection and administration.

## COUNCIL PRIORITY PROGRAMS AND PROJECTS

Not applicable.

## FISCAL IMPACT

None immediately. The City of American Canyon shall be paid a fee equal to 1% of the amount of assessment collected to cover its costs of administration. Because the NVTID programs are intended to increase visitation to the City of American Canyon, there may be an increase in transient occupancy tax and sales tax collections.

## ENVIRONMENTAL REVIEW

None.

## ATTACHMENTS:

1. Resolution - NVTID Renewal
2. Napa County Reso 2024-112 Requesting Renewal of NVTID

**RESOLUTION NO. 2024-**

**RESOLUTION OF THE CITY COUNCIL OF THE CITY OF AMERICAN CANYON GRANTING CONSENT TO THE COUNTY OF NAPA TO RENEW THE NAPA VALLEY TOURISM IMPROVEMENT DISTRICT (NVTID) AND INCLUDE THE CITY OF AMERICAN CANYON IN THE RENEWED NVTID**

**WHEREAS,** the Napa Valley Tourism Improvement District (NVTID) was established by the County of Napa ("County") in 2010 for a five-year period, with consent from the Cities of American Canyon, Calistoga, Napa, and St. Helena, and the Town of Yountville, pursuant to the Property and Business Improvement District Law of 1994, Streets and Highways Code section 36600 et seq., to promote lodging businesses in Napa Valley; and

**WHEREAS,** the NVTID was subsequently renewed on June 10, 2014, by the County, with consent from the Cities of American Canyon, Calistoga, Napa, and St. Helena, and the Town of Yountville, by Resolution No. 2014-64 for a ten (10) year term which ends on June 15, 2025; and

**WHEREAS**, the County is beginning the process to renew the NVTID pursuant to the Property and Business Improvement District Law of 1994; and

**WHEREAS**, the County has requested consent to renew the NVTID in the City of American Canyon with adoption of Napa County Board of Supervisors Resolution No. 2024-112, dated October 15, 2024.

**NOW, THEREFORE, BE IT RESOLVED**, by the City Council of the City of American Canyon, that:

Section 1: Napa County is hereby granted consent to include the City of American Canyon in the in the NVTID, for the renewal of the NVTID and future renewals.

Section 2: The Clerk of the City of American Canyon is hereby directed to transmit a certified copy of this Resolution to the Clerk of the County of Napa.

Section 3: This Resolution is effective upon its adoption.

**PASSED, APPROVED AND ADOPTED** at a regularly scheduled meeting of the City Council of the City of American Canyon, held on this 19th day of November 2024 by the following vote:

AYES:
NOES:
ABSTAIN:
ABSENT:

_____
Leon Garcia, Mayor

ATTEST:

# RESOLUTION NO. 2024 - 112

## RESOLUTION REQUESTING CONSENT OF THE CITIES OF AMERICAN CANYON, CALISTOGA, NAPA, AND ST. HELENA AND THE TOWN OF YOUNTVILLE TO RENEW THE NAPA VALLEY TOURISM IMPROVEMENT DISTRICT

**WHEREAS**, the Board of Supervisors (the "Board") of the County of Napa (the "County") desires to begin proceedings to renew the Napa Valley Tourism Improvement District ("NVTID"); and

**WHEREAS**, certain lodging business owners have requested that the Board renew the NVTID; and

**WHEREAS**, a portion of the territory proposed to be included in the NVTID lies within the boundaries of the cities of American Canyon, Calistoga, Napa, and St. Helena, and the Town of Yountville (the "cities and town"), as shown on the map attached hereto as Exhibit A and incorporated herein by such attachment; and

**WHEREAS**, the area of the cities and town which lies within the boundaries of the proposed NVTID will, in the opinion of the Board, be benefited by the improvements and activities, and the purpose sought to be accomplished by the work can best be accomplished be a single comprehensive scheme of work.

**NOW, THEREFORE, BE IT RESOLVED** by the Board of the County that:

Section 1: The above recitals are true and correct.

Section 2: Consent of the cities and town, through their respective City Councils and Town Council, is hereby requested to renew the NVTID, and to grant to the Board jurisdiction for all the purposes in connection with creation, operation, and future renewals of the proposed NVTID.

Section 3: The Clerk of the Board is hereby directed to transmit a certified copy of this Resolution to the City Clerk of the cities of American Canyon, Calistoga, Napa, and St. Helena, and the Town Clerk of the Town of Yountville.

**THE FOREGOING RESOLUTION WAS DULY AND REGULARLY ADOPTED** by the Napa County Board of Supervisors, State of California, at a regular meeting of the Board held on the 15th day of October, 2024, by the following vote:

## TITLE

Update Pay Rates for Part-time Temporary Staff

## RECOMMENDATION

Updating the Salary Schedule and Compensation Plan for FY 2024/2025 by adopting a Resolution Approving Part-Time Temporary Staff

## CONTACT

Juan Gomez, Interim Assistant City Manager
Scott Corey, Human Resources Officer II

## BACKGROUND & ANALYSIS

California State Labor Code section 1182.12(c)(1) requires an annual adjustment to the minimum wage based on the Consumer Price Index. In August, the California Department of Finance determined the minimum wage would be $16.50 per hour for all employers starting January 1, 2025, an increase of 3.18%.

Since 2018, the City Council annually adopted and approved a resolution establishing a “pay philosophy” for part-time temporary staff to establish a five-step salary range and ratios between various part-time, temporary job classifications. Consistent with state law, the philosophy adjusts with the minimum wage each year and ties positions in similar families together to ensure internal alignment.

Proposed changes to the Salary Schedule and Compensation Plan Exhibit B will be effective December 21, 2024, which is the beginning of the pay period containing January 1, 2025.

The proposed changes to the Salary Schedule and Compensation Plan Exhibit A will be effective December 7, 2024.

## COUNCIL PRIORITY PROGRAMS AND PROJECTS

Organizational Effectiveness: "Deliver exemplary government services."

## FISCAL IMPACT

Adoption of the proposed resolution will have no fiscal impact because these pay rate increases were budgeted in the City's FY 2024/2025 Budget.

## ENVIRONMENTAL REVIEW

**RESOLUTION NO. 2024-__**

**A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF AMERICAN CANYON APPROVING PART-TIME TEMPORARY STAFF, AND UPDATING THE SALARY SCHEDULE AND COMPENSATION PLAN FOR FY 2024/2025**

**WHEREAS,** each year since 2018, the City Council has adopted a resolution establishing a part-time temporary pay philosophy that maintains internal alignment and adjusts each year with the state mandated minimum wage increase; and

**WHEREAS,** on January 1, 2025, the State of California's minimum wage will increase to $16.50 per hour; and

**WHEREAS,** the FY2024/2025 Salary Schedule must be updated to comply with the state minimum wage and to ensure the City can competitively recruit and retain qualified staff; and

**WHEREAS**, the following pay philosophy and hourly salary ranges are established for part-time temporary positions tied to the minimum wage:

| 2025 Min Wage / hour | $16.50 | **2025 Proposed** | | | | | **Salary Philosophy** |
|---|---|---|---|---|---|---|---|
| | | A | B | C | D | E | *Positions tied to Min Wage are tied at Step A |
| **Lifeguard (Temp)** | Hourly | 17.33 | 18.19 | 19.11 | 20.07 | 21.07 | (+) 5% to rec leader |
| **Lifeguard (WSI) (Temp)** | Hourly | 17.76 | 18.65 | 19.58 | 20.56 | 21.59 | (+) 2.5% to lifeguard |
| **Program Coord. (Temp)** | Hourly | 24.90 | 26.15 | 27.46 | 28.83 | 30.27 | (+) 25% to sr lifeguard |
| **Recreation Leader (Temp)** | Hourly | 16.50 | 17.33 | 18.19 | 19.11 | 20.07 | (+) 0% to min wage |
| **Cashier (Temp)** | Hourly | 16.50 | 17.33 | 18.19 | 19.11 | 20.07 | (+) 0% to min wage |
| **Sr. Lifeguard (WSI) (Temp)** | Hourly | 19.92 | 20.92 | 21.97 | 23.06 | 24.22 | (+) 15% to lifeguard |
| | | Minimum | | | | Maximum | |
| **Student Intern (Temp)** | Hourly | 16.50 | | | | 30.27 | (+) 0% to min wage |
| **Sr Recreation Leader (Temp)** | Hourly | 18.98 | 19.92 | 20.92 | 21.97 | 23.06 | (+) 15% to rec leader |

**NOW, THEREFORE, BE IT RESOLVED** that the City Council of the City of American Canyon does hereby approve Salary Schedule Exhibit A effective December 7, 2024, and Salary Schedule Exhibit B effective December 21, 2024, as attached hereto as Exhibit "A."

**PASSED, APPROVED** and **ADOPTED** at a regularly scheduled meeting of the City Council of the City of American Canyon held on the 19th day of November 2024, by the following vote:

| 5606 | **Service Worker (Temporary)** | Hourly | 22.32 | 23.44 | 24.61 | 25.84 | 27.13 |
| 5401 | **Student Intern (Temporary)** | Hourly | Minimum 16.50 | | | | Maximum 30.28 |

**DEFINITIONS:**

Part-time, temporary and extra help positions are limited to 980 hours per calendar & fiscal years. Salaries for PERS retired annuitants must meet PERS requirements and are limited to 960 hours per calendar & fiscal years. If a PERS retired annuitant is performing part-time services for a position identified on the City's Salary Schedule for full-time positions, the City pays the employee an hourly rate based on the Salary Schedule for full-time positions. Consult Human Resources for assistance in determining the appropriate hourly rates for part-time, extra-help or retired annuitants.

**Fiscal Year 24/25 Modifications**

1. Apply 3.8% wage Increase for Bus Driver, Office Assistant and Service Worker classifications, which are indexed to similar Regular classifications, effective July 6, 2024.

2. Amend compensation plan to add classification of Recreation Specialist, which is indexed to Regular classification of Recreation Coordinator.

2. Increased the Minimum Wage and adjusted classes tied to it: Cashier, Lifeguard, Lifeguard (WSI), Program Coordinator, Recreation Leader, Senior Lifeguard, Senior Recreation Leader and Student Intern, effective January 1, 2025.

**Fiscal Year 23/24 Modifications**

1. Apply 4.2% wage Increase for Bus Driver, Office Assistant and Service Worker classifications, which are indexed to similar Regular classifications effective July 8, 2023.

2. Increased the Minimum Wage and adjusted classes tied to it: Cashier, Lifeguard, Lifeguard (WSI), Program Coordinator, Recreation Leader, Senior Lifeguard, Senior Recreation Leader and Student Intern, effective January 1, 2024.

**Fiscal Year 22/23 Modifications**

1. Created separate Salary Schedule for classifications that can be filled on a part-time, temporary, seasonal, extra help and/or limited duration basis.

2. Increased the Minimum Wage and adjusted classes tied to it: Cashier, Lifeguard, Lifeguard (WSI), Program Coordinator, Recreation Leader, Senior Lifeguard, Senior Recreation Leader and Student Intern.

## TITLE

Water Treatment Plant Membrane Replacement

## RECOMMENDATION

Adopt a Resolution approving Amendment #1 to Agreement 2024-A128 with Zenon Environmental Corporation in the amount of $37,163 for a total amount not to exceed $1,140,940 in conjunction with the purchase of ultra-membrane filters for the Water Treatment Plant.

## CONTACT

Erica Ahmann Smithies, P.E., Public Works Director
Norman Woods, M.B.A., Assistant Public Works Director
Dominic Patrick, Water Systems Manager

## BACKGROUND & ANALYSIS

On September 9, 2024, the City Council approved Agreement #2024-A128 with Zenon Environmental Corporation for the purchase of ultra-membrane filters in the amount of $1,103,777.

The manufacturer recommends refurbishment of the twelve existing cassettes that will be receiving new membrane modules. Cassette refurbishment service allows the membrane plant to be fully reconditioned and costs less than purchasing all new cassettes. Refurbished cassettes include the following: removal of all existing plastic parts and associated hardwater and return the cassette and modules to initial factory slack position.

There is an additional cost to the original proposal in the amount of $37,163 to install cassette refurbishment components in existing cassettes. Staff has evaluated the proposal scope and fee, finds the proposal agreeable, and recommends the Council approve the total contract amount not to exceed $1,140,940, in conjunction with the Agreement #2024-A128 for the purchase of ultra-membrane filters.

## COUNCIL PRIORITY PROGRAMS AND PROJECTS

Infrastructure: "Develop and maintain infrastructure resources to support sustainable growth."

## FISCAL IMPACT

Sufficient funds are available in the Water Operating Fund (510-50-560-46130 - Major Equipment) to cover the additional purchase amount of $37,163.

## ENVIRONMENTAL REVIEW

15301 - The Project is exempt from review under the California Environmental Quality Act ("CEQA") under the Class 1 exemption of existing facilities of Section 15301 of Title 14 of the California Code of Regulations and said exemption is not negated by any exception under Section 15300.2 of said Regulations.

**RESOLUTION NO. 2024-**

**ADOPTING A RESOLUTION APPROVING AMENDMENT #1 TO AGREEMENT 2024-A128 WITH ZENON ENVIRONMENTAL CORPORATION IN THE AMOUNT OF $37,163, FOR A TOTAL CONTRACT AMOUNT NOT TO EXCEED $1,140,940, IN CONJUNCTION WITH THE PURCHASE OF ULTRA-MEMBRANE FILTERS FOR THE WATER TREATMENT PLANT.**

**WHEREAS,** on September 9, 2024, the City Council approved Agreement #2024-A128 with Zenon Environmental Corporation for the purchase of ultra-membrane filters in the amount of $1,103,777; and

**WHEREAS,** the City Water Treatment Plant (WTP) utilizes an ultra-membrane filtration process to treat City water; and

**WHEREAS,** the manufacturer recommends refurbishment of the twelve existing cassettes that will be receiving new membrane modules. Cassette refurbishment service allows the membrane plant to be fully reconditioned and costs less than purchasing all new cassettes; and

**WHEREAS,** there is an additional cost to refurbish the existing cassettes in the amount of $37,163 which will increase the agreement to $1,140,490; and

**WHEREAS,** sufficient funds are available in the Public Works Department's Water Division Fund 510-50-560-46130 for Major Equipment to cover the membrane purchase of $1,140,940.

**NOW, THEREFORE, BE IT RESOLVED** that the City Council of the City of American Canyon hereby authorizes the Public Works Director to execute Amendment #1 to Agreement 2024-A128 with Zenon Environmental Corporation, in the amount of $37,163, for a total contract amount not to exceed $1,140,940, in conjunction with the purchase of ultra-membrane filters.

**PASSED, APPROVED** and **ADOPTED** at a regularly scheduled meeting of the City Council of the City of American Canyon held on the 19th day of November, 2024, by the following vote:

AYES:
NOES:
ABSTAIN:
ABSENT:

_____
Leon Garcia, Mayor

## Proposal Provisos

This proposal has been issued based on the information provided by the customer and on information currently available to Veolia Water Technologies & Solutions at the time of proposal issuance. Any changes or discrepancies in site conditions, including but not limited to changes in system influent water characteristics, changes in environmental health and safety (EH&S) conditions, changes in the reissued state/provincial disposal system permit, changes in buyer financial standing, buyer requirements, or any other relevant change or discrepancy in the factual basis upon which this proposal was created may lead to changes in the offering, including but not limited to changes in pricing, guarantees, quoted specifications, or terms and conditions.

## Confidential and Proprietary Information

The enclosed materials are considered proprietary property of Veolia Water Technologies & Solutions (Veolia). No assignments, either implied or expressed, of intellectual property rights, data, know how, trade secrets or licenses of use thereof are given. All information is provided exclusively to the addressee and agents of the addressee for the purposes of evaluation and is not to be reproduced or divulged to other parties, nor used for manufacture or other means, without the express written consent of Veolia. The acceptance of this document will be construed as an acceptance of the foregoing.

# 1 Introduction

Veolia Water Technologies & Solutions is pleased to present this proposal at the request of the City of American Canyon for membrane replacement and expansion at the American Canyon Water Treatment Plant (WTP).

Veolia will provide 240 x ZW500D 440ft$^2$ membranes to replace the existing full plant, plus 3 x 20/20M cassettes populated with ZW500D 440ft$^2$ membranes to populate current spare cassette spaces.

Veolia will provide components and on-site support for refurbishment of the 12 existing ZW500D 20M cassettes.

Veolia is a proven leader in delivering tangible value to our clients over the life of the plant. Our measure of success is how well we deliver **solutions** that help our clients meet their critical business objectives.

Through long-acquired technical experience, Veolia has clearly distinguished itself from other membrane manufacturers. A mature service culture and deep technical expertise are ready to serve and support American Canyon through this next membrane lifecycle.

*Veolia would like to note that under the current exceptional circumstances across global supply chains and logistics networks, Veolia may not be in a position to guarantee and comply with the planned schedule for product / project delivery or performance. Veolia reserves the right to modify the schedule / contract accordingly. Veolia will promptly inform you of any changes which may impact the contract or the project.*

# 2 Veolia Scope & Price

Veolia's scope includes the material and services outlined in the table below. The sections that follow provide additional detail regarding each scope item.

| Item Description | Part # | Quantity | Price |
|---|---|---|---|
| ZW500D 20/20M cassettes populated with 440ft$^2$ membranes, section 3.1 | 3148809 | 3 | 908,845 |
| ZW500D 440ft$^2$ membranes in 30M shipping frames, section 3.1 | 3136098[1] | 240 | |
| 2-year full replacement membrane warranty, section 10 | | Incl. | |
| Components for refurbishment of 12 x existing 20M cassettes, section 3.3 | | 12 | |
| Cassette hardware, section 3.2 | | Lot | |
| *Estimated applicable tax on materials only (7.75%)*[2] | | *Incl.* | *70,436* |
| **Materials, including estimated applicable tax** | | | **979,281** |
| Off-site support, project management, section 4.1 | | Incl. | 24,580 |
| International shipment, fees, and duties, section 5 | | Incl. | 86,039 |
| Freight, DDP project site, section 5 | 3095534 | Incl. | |
| **Off-site labor, delivery** | | **Sub-total** | **110,619** |
| **Materials, off-site labor, delivery** | | **Sub-total** | **1,089,900** |
| On-site support, 2 x FSRs, each on-site for 10 x 10-hour days plus travel & living, section 4.2 | 135491 | 1 visit | 51,040 |
| **On-site support** | | **Sub-total** | **51,040** |
| **All figures are in USD. Please make purchase order to ZENON Environmental Corporation.**<br>**Estimated taxes have been included, but tax rates applicable at time of invoicing will be used.** | | **Total Price** | **1,140,940** |

*Note 1: 240 membrane modules are expected to arrive on site in 30M shipping frames (product #3136098).

*Note 2: Sales tax estimated at current rate of 7.750% for American Canyon, CA on materials as per https://www.cdtfa.ca.gov/taxes-and-fees/rates.aspx Actual tax rate at time of invoicing will be added on all invoices.

| Invoicing Schedule | Approximate % of Sub-Total | Invoice Value Excluding Tax |
|---|---|---|
| An invoice will be issued upon acceptance by Veolia of customer purchase order. Approximate percent calculation based on the **materials, and off-site labor, delivery sub-totals** of the purchase order. Shipment of membranes is contingent on receipt of this initial milestone payment. | 30% | 305,840 |
| An invoice for the balance of the **materials, and off-site labor, delivery sub-totals** will be issued when membrane module shipping documents are supplied to the carrier. | 70% | 713,624 |
| A final invoice for the **on-site support sub-total** will be issued upon completion of installation. | 100% | 51,040 |
| | | **1,070,504** |

# 3 Material Description

The following materials are provided within Veolia's scope of supply.

## 3.1 Membrane Modules

Veolia will provide the following ZW500D 440ft² drinking water membrane modules:

- Qty of 240 – to replace the existing full plant of membranes;
- Qty of 60 – populated in 3 x 20/20M operational cassettes for installation in the 3 empty cassette spaces.

## 3.2 Hardware

- 10 x #118 EPDM permeate spigot o-rings – 3033690;
- 4 x ZW500D element end cap keys – 3040447;
- 3 x blank header sets – 3111171;
- Permeate and aeration connections for all existing and new cassettes*;
- Hanger arms, including associated installation equipment, for 4 x new ZW500D 20M cassettes*;
- 1 x set safety hoist rings (4) for the 20M cassettes – 3111838;
- 1 x ZW fiber repair kit – 3080827;
- 1 x o-ring lubricant (food grade) – 3089920;
- 1 x anti-seize lubricant (food grade) – 3158322.

*A total of 4 sets of hanging arms are required to install the 4 new cassettes provided for in combination with this offer and Veolia proposal #544482-3. Veolia proposal #544482-3 did

not include pricing for hanger arms for the single cassette provided therein, so it has been included in the price for this offer.

## 3.3 Cassette Refurbishment

Veolia will supply components for refurbishment of 12 x ZW500D 20/20M cassettes, including spares.

Cassette refurbishment service allows you to fully recondition your cassettes at less cost than purchasing new cassettes. Cassettes will be refurbished at the American Canyon facility. Cassette refurbishment includes the following:

- Removal of all existing plastic parts and associated hardware;
- If slack adjustment has been completed on cassettes, return the cassette to the initial factory membrane slack position;
- Installation of all new, current design parts (module mountings, securing mechanisms), and all associated hardware;
- On-site cassette refurbishment service by trained Veolia field service representatives – details provided in sections 4.2 and 7.2.

# 4 Veolia Support

## 4.1 Off-Site Support

**Controls**

Provide system controls programming adjustments as required for the new membranes including adjustment of set points for permeate and air flow.

If there is a requirement for the EEPROM (Electrically Erasable Programmable Read-Only Memory) to be stored, a period of plant shutdown must be arranged by American Canyon.

**Documentation**

The base level of documentation updates will include:

- Programmer's table of code changes (change description recorded by tag with one distinct marker bit per change);
- **P&IDs** - Update the process (piping) & instrumentation drawings and reissue electronically;
- **Controls documents –** Update control narrative (CN), controls logic sequence chart (CLSC, also known as CSC) and the operation sequence chart (OSC).

These updates should be filed in the O&M manual as interim documentation.

Due to the very high cost of comprehensive updating of plant documentation with each system upgrade, Veolia recommends planning a complete documentation update every 1-4 years to coincide with a selected system upgrade.

Veolia will be pleased to develop a documentation update price quotation on request which may include some or all of the following scope according to its relevance:

- **O&M manual** - Provide a fully updated version of the operation & maintenance manual that indicates the changes made with this membrane replacement/expansion upgrade;
- **Electrical drawings** – Update the electrical drawings and reissue electronically.

**Project Management**

Provide planning and off-site assistance during the membrane replacement & expansion project.

## 4.2 On-Site Technical Services

The proposal includes a provision for technical services during installation and commissioning process to support American Canyon's staff as outlined in section 2. Please see section 7.2 for recommendations on the plant staff necessary to perform the work.

Installation and commissioning of membranes will be executed in a manner that minimizes down-time and returns the system to beneficial use in a timely manner.

The following activities will be completed by Veolia with plant staff assistance:

- Remove existing membranes/cassettes;
- Install cassette refurbishment components in existing cassettes;
- Install the new membrane modules and return cassettes to the system;
- Install the new expansion cassettes in the system;
- Upload required revisions to the PLC program with adjusted set-points;
- Perform bubble test where applicable to test membrane integrity and review trans membrane pressure (TMP) on the installed membranes and compare to expected values for new membranes; complete repairs/adjustments necessary to provide new membrane performance.

**Operating Responsibility** - American Canyon retains control of the work site and retains final responsibility for the installation and commissioning process.

Veolia will perform the services specified in the scope section of this document, but Veolia will not operate the system. For the purposes of this agreement, the term "operate the system" shall mean to run or control the functioning of the equipment or to otherwise conduct or manage the affairs of any aspect of water or wastewater treatment or other functions at American Canyon's site, and shall include functions such as providing operators or laborers to adjust or control water treatment ("WT") equipment, wastewater

treatment (“WWT”) equipment or sludge management facilities (“SMF”), providing program oversight or directing on-site or contract operators/laborers to adjust or control WWT or SMF, providing personnel responsible for or providing oversight of water treatment residual quality, wastewater effluent quality, sludge quality, waste characterization, or waste disposal activities, or providing personnel with continual or daily operational responsibilities with respect to water or wastewater treatment, influent or effluent compliance monitoring, process monitoring, government reporting or notification, or permit compliance.

**Waiting Time** - Any overtime or waiting times required due to unforeseen site events outside the control of Veolia will be invoiced according to the prevailing Veolia service labor rates sheet, available on request.

**Reporting** - Before leaving site, Veolia will record observations and discuss with operators concerning the condition of the equipment, tasks accomplished during the visit, and key operating and maintenance issues requiring further attention. Veolia will provide a copy of a written report before leaving site and/or provide a service visit report to the plant operator within a reasonable timeframe of the Veolia service representative’s return to the office. In any case, American Canyon will be asked to sign a work order that describes the hours on site and tasks accomplished.

**Veolia Duties for On-Site Services**

- Veolia will coordinate its work under this agreement in a reasonable manner with the operating staff of the facility.
- Veolia will maintain public liability and property damage insurance covering all operations undertaken by Veolia and its sub-contractors with a limit of $5,000,000 inclusive for any one accident or occurrence. If for any reason additional insurance coverage (e.g. general construction/erection all risk, general liability) is required above and beyond Veolia’s standard insurance terms for on-site commissioning supervision, American Canyon must inform Veolia in writing 60 days prior to work commencement at site. American Canyon will be billed for all additional insurance costs and processing fees.
- Veolia will maintain workers compensation and employers’ liability coverage as per statutory requirements.

# 5 Delivery

- **Freight**
  - **DDP -** Delivery will be by standard ocean/ground on the basis of DDP American Canyon WTP, or other named place of destination; Incoterms 2020. DDP = delivery duty paid. Partial shipments will be acceptable unless otherwise specified. Where delivery cannot be accepted at this destination, American Canyon shall specify an alternate, equivalent destination without delay.

Due to varying origins and availability, non-membrane items included in this proposal may be shipped separately from the membranes. Should separate shipments be required, where possible, Veolia will strive to provide these items on or before the delivery of the membranes.

- **Title & Risk** - Title and risk of loss or damage to membrane modules, shipping frames, cassette frames, cassette refurbishment components, hardware and crating shall pass to American Canyon upon delivery at the named place of destination.

- **International Shipment, Fees, and Duties**
  - **Origin** - Delivery of ZeeWeed membranes originates from the Veolia Water Technologies & Solutions, ZENON Membrane Products (ZEM), Bláthy Ottó u 4, Oroszlány, 2840 Hungary facility. Costs to transport membranes into North America are included in Veolia's quoted price.
  - **Export Documents** - All ZeeWeed membrane module shipments into the USA require clearance documentation from the EPA. Veolia will prepare and provide the required EPA documentation to the Carrier.
  - **MPF** - Merchandise processing fee is a fee assessed for formal custom entries based on 0.35% of the invoice value, with a minimum of USD $25 per formal entry and a maximum of USD $485. On the basis of DDP terms, this fee will be paid by Veolia within the quoted price.
  - **Duty** - A US Customs duty of 3.9% applies to all ZeeWeed membranes shipped individually or in shipping frames; not in operational cassette frames. On the basis of DDP terms, this duty will be paid by Veolia within the quoted price for all modules included with this offer that are not installed in operational cassettes. Any new duty imposed after the date of this proposal is the responsibility of American Canyon.
- **Taxes** - All applicable local, state, or federal taxes are the responsibility of American Canyon.
- **Temperature** - UF membranes cannot be allowed to freeze or overheat and may require temperature-controlled freight and handling according to the season and the planned routing. If required, the price of temperature control will be included within the firm quote on freight by Veolia.
- **Packaging** – Membranes will be provided in a combination of factory-installed in operational cassettes & shipping frames, and individually bagged, boxed and crated.
- **Unloading -** may require one of or a combination of a loading dock, extended forks and an experienced forklift driver at delivery destination. Please consult with Veolia at the time of purchase order (PO) preparation on this.

Shipping crate information (estimated)

| Qty | Description | Dimensions (in) | Weight (lb) |
|---|---|---|---|
| 3 | ZW500D 20M cassette crate | L=107 x W=35 x H=80 | 1,700 |
| 8 | ZW500D 30M shipping frame | L=37 x W=89 x H=94 | 2,286 |

Notes:

- Only crates for membrane/cassette transport have been shown above to identify the largest and heaviest items that will need to be unloaded;
- Smaller crates/skids will be used for hardware items (hanger arms, spool connection components, cassette refurbishment components, etc.).

- **Handling** – ZW500D 20M membrane cassette frames are shipped and will arrive on-site on their sides. An eye bolt kit, included in this proposal, should be used to safely turn the cassette(s) upright. Adequate work area and height and equipment will also be needed to be available to safely turn the cassettes upright for installation.

- **Availability** - Delivery of membrane modules and cassette refurbishment components is typically 10-20 weeks after receipt of order. With current global logistics and freight delays we are experiencing significantly increased lead times.

  In coordination with the City, Veolia has planned production for planned delivery in November 2024 – which will be confirmed upon receipt of purchase order from American Canyon and issue of purchase order acknowledgement by Veolia.

# 6 ZeeWeed Configuration

| Configuration Data | Units | Existing Plant Configuration | Proposed Configuration After Replacement & Expansion |
|---|---|---|---|
| Number of trains, plant | | | |
| Number of trains as configured | | 2 | 2 |

# 7 Scope - American Canyon

## 7.1 Installation Preparation

- Receive, off-load, handle and provide temperature-controlled storage of the equipment and materials required for Seller to perform the duties outlined in the Seller's scope of supply. Prior to off-loading, Buyer to confirm temperature indicators have not been tripped.
- Membranes must be stored in a sheltered area, protected from freezing, direct sunlight or extreme heat, and sealed as shipped until ready for use. Storage should be in a dark, dry, level area at a temperature of 5-30°C (41-86°F). Membranes have a shelf life of 1 year before requiring re-preservation and should not be stored longer than necessary prior to installation. American Canyon is responsible for risk of loss of Seller's parts while in storage at the customer's plant.
- Inspect, evaluate and make repairs as required for the membrane tanks, mounting brackets, hoses and all connections prior to Veolia arriving at site.
- Provide all access structures (such as scaffolding) and mechanical lifting equipment including cranes, forklifts and scissor lifts.
- Assure availability of a copy of the operating manual, all process and instrumentation drawings, and all electrical drawings on site and accessible for reference.
- Maintain adequate insurance coverage for the risks of fire, theft, vandalism, floods and personal injury to authorized or unauthorized visitors.

## 7.2 Installation

- Provide at least 1 plant staff person to work continuously for the full duration of the Veolia site visit during installation and commissioning of the modules. Veolia recommends that the personnel be experienced with the ZeeWeed system.
- American Canyon will afford Seller's personnel free access and egress of the facility for all authorized work. American Canyon will provide reasonable access to workshop facilities with standard workshop tools and equipment as is necessary to meet any repair and maintenance requirements of the system during installation. American Canyon will provide Seller's personnel reasonable access to the facility amenities, including washrooms and break rooms.
- Provide adequate illumination and emergency lighting for all areas in which the Seller will be executing the scope of supply. Provide all site utilities such as raw water, instrument quality air, potable water and power required for operation of the proposed equipment included in this scope of supply. Assure that adequate quantities of membrane cleaning and neutralizing chemicals are on hand for wash procedures including sodium hypochlorite, sodium bisulphite, citric acid and sodium

hydroxide. Supply telephone/fax/modem access while Seller's staff members are on-site.

- American Canyon will provide assistance to:
  - Remove cassettes from the system as required;
  - Install cassette refurbishment components;
  - Place new replacement modules into each cassette;
  - Return the replaced cassettes to the system;
  - Install 3 x new 20M cassettes into the system, including hanger arms, and permeate and aeration connections.
- American Canyon will:
  - Dispose of membrane module preservative as well as all retired membrane modules and cassette components;
  - Dispose of shipping and packaging materials unless specifically requested not to do so by Veolia;
  - Prepare shipping frames for return to Veolia, see section 7.3;
  - Load shipping frames onto the truck for return to Veolia – Veolia will be responsible for organizing the logistics of delivery back to Veolia.

## 7.3 Empty Shipping Frame Preparation

All shipping frames returning to Veolia must be well cleaned and packaged appropriately for trans-oceanic transport in shipping containers. Shipping frames should be cleaned using high pressure washers and mounted on wood skids to facilitate moving them in and out of the freight containers. Veolia will provide American Canyon offsite assistance to facilitate the return of shipping frames.

All wooden packaging material used for international shipments must conform to current phytosanitary standards to reduce the risk of introduction and spread of quarantine pest species associated with the movement in international trade of wood packaging material made from raw wood.

All wood packaging material used to transport shipping frames internationally, must comply with ISPM15 which is the standard for phytosanitary measures and be properly stamped indicating compliance with the standard. Failure to comply with the standard may lead to shipment refusal and subsequent project delays. For detailed information on ISPM15 please visit the *ISPM15* website.

Whenever possible, save and re-use the wooden skids that the shipping frames arrived on for return freight purposes.

# 8 Solution Design Notes

## 8.1 Permits

### Regulatory Requirements

American Canyon is responsible to review and report to the permit granting agency on the impact of any of the proposed changes on the regulatory permit. Veolia will provide the necessary manufacturer's technical support on regulatory issues. No provision is made in the price proposed for the cost of control code changes to update the LRV for the plant following the installation of the membranes and any changes in membrane integrity testing methods would be at additional cost.

***Please speak with your regional lifecycle manager (RLM) if there are any regulatory requirements or concerns.***

### Utilization

Veolia understands that 240 of the modules included with this offer are required as replacements for currently installed modules and will not be used to provide expanded flow beyond the current plant flow rating.

Veolia understands that the 60 x ZW500D 440ft$^2$ expansion modules provided in 3 x 20M operational cassettes can be used to expand the capacity of the existing treatment plant. However, verification of the capacity of other equipment and systems, including but not limited to permeate pumps, reject pumps, blowers, piping etc., has not been considered. Veolia makes no guarantees, implied or otherwise as to the performance of these modules in any other capacity than what is limited by the system's hydraulic capacity and will work with American Canyon to modify the system capacity when all cassettes are in service. Full membrane capacity utilization may require additional equipment modifications or replacement.

### Production Interruption

During installation of the ZeeWeed cassettes, trains will be shut down which will affect American Canyon treatment capacity. After the purchase order is acknowledged, Veolia's project manager for the installation will consult with American Canyon to jointly develop the installation plan and work schedule with due regard for membrane delivery to the plant and plant preparation.

## 8.2 Maintenance Notes for Replacement Membranes

At the time of any full plant membrane replacement, it is recommended to evaluate whether it is the right time to address any tank coating repairs which may be required.

### Preferential Flow

Mixing a small proportion of new modules in trains with large amounts of older modules is not recommended as it creates a risk of over-fluxing of new modules which can shorten their lives. Veolia recommends that American Canyon plan membrane module replacement

on a complete cassette and complete train basis wherever possible to achieve both optimal performance and best value from the new membrane modules. In this case, by replacing all membrane modules in the plant, this risk has been neutralized.

### Membrane Slack

Veolia's membranes are supplied and shipped with an initial factory fiber slack designed to optimize membrane air scouring during operation as well as accommodate a degree of shrinkage. Membranes shrink in length early in their lifecycle when exposed to higher temperature water. The pace of shrinkage slows with age. With the installation of new membranes, the requirements for slack adjustment start a new cycle.

Due to the wide variety of operating environments in which our products can be utilized, it is difficult to generally predict the rate of shrinkage. If membranes operate in a condition of insufficient slack for an extended period of time, irreversible damage to the fiber-urethane bond may occur. Please refer below to the recommended inspection frequencies based on your plant's membrane tank operating temperature. Visual inspections should begin during the membrane installation and be repeated over time on the same cassette. Digital pictures will allow for comparative analysis of the fiber slack over time.

| Maximum Operating Temperature | Recommended Slack Inspection Frequency |
|---|---|
| 0-24 °C / 32-76 °F | every 2 years |
| 25-30 °C / 77-86 °F | once per year |
| >30 °C / > 86 °F | twice per year |

### Membrane Repairs

All new modules are factory tested at our manufacturing facilities and are in good working order as they are packaged and crated for shipment. On occasion, a limited number of modules arriving at site may require repairs due to uncontrollable factors during shipping and receiving, in particular with multi-modal shipments. This membrane replacement proposal includes a provision for one fiber repair kit for drinking water modules and 3 blank header sets for use as membrane substitutes, allowing the cassette to be placed back in operation as modules are repaired.

## 8.3 Technical

### Pumps

The range of capacity increase for the pump has been assumed to be adequate for this upgrade. Veolia will work with American Canyon to determine the pump capacities and target flow rates for the new plant configuration.

### Blowers

For the purposes of this proposal, the range of capacity increase for the blower has been assumed to be adequate for this upgrade. Should resheaving parts be required they will be supplied by Veolia at additional cost to American Canyon.

Mechanical and electrical adjustments required to meet new air flow will be completed by American Canyon or their 3rd party designate. Veolia will assist American Canyon in determining correct air flow requirements for the new plant configuration.

**Pre-Screen**

To ensure effective operation and to maximize membrane life, Veolia recommends operation of a pre-treatment screen, upstream of the pretreatment process, with mesh or punched-hole openings less than or equal to 0.5 mm and with no possibility of bypass or carryover. All processes after this screening must be covered and protected from outside elements such that no leaves, twigs or any foreign material can enter the membrane tank.

# 9 Health & Safety

**American Canyon**

- American Canyon will provide orientation to Seller's personnel to ensure site-specific safety protocols are known. American Canyon will identify and inform Seller's personnel of any site-specific hazards present in the workplace that could impact the delivery of Seller's scope of supply and agrees to work with Seller to remove, monitor, and control the hazards to a practical level.
- American Canyon will provide any site-specific or standard company operating procedures and practices for Seller's personnel to perform work on site, if required by American Canyon's policies. Such programs may include, but are not limited to, general environmental health & safety (EHS), HAZOP, fire protection, drug testing, incident notice, site conduct, standard first aid, chemical receiving, electrical safety, etc. American Canyon will provide a certificate of program completion for Seller's personnel. This program will be fully documented, training materials will be provided, and attendance list will be kept.
- If any type of lifting devices will be used on site, American Canyon will provide proof of its maintenance, inspection and certification documentation upon request and will assist the Veolia service representative to complete a safety inspection checklist.
- Where confined space entry may be required, American Canyon will provide early notice and will collaborate with Veolia in planning adequate staffing and in advising the local fire/rescue department as required.
- No time or cost provision has been made for preparations such as safety record clearances, drug testing, insurance confirmations or pre-job-training in excess of 1 hour. Prior to finalizing the Purchase Order and the work schedule, American Canyon will advise Veolia of any pre-job or pre-mobilization requirements. Where these requirements exceed 1 hour, this time will be charged to American Canyon at rates set out in the prevailing Veolia labor rate sheet.

- Where certain short duration activities require two people for safety and the Veolia Service representative is alone at site, American Canyon will cooperate as required to assure that correct safety precautions are taken.
- American Canyon is responsible for the following environmental provisions:
  - Environmental use and discharge permits for all chemicals at American Canyon's facility either listed in this document or proposed for use at a later date;
  - Any special permits required for Seller's or American Canyon's employees to perform work related to the water treatment system at the facility;
  - All site testing, including soil, ground and surface water, air emissions, etc.;
  - Disposal of all solid and liquid waste from the Seller's system including waste materials generated during construction, start up and operation.
- American Canyon is responsible for provision of health and safety facilities to Seller's field service representatives to the same extent that they are provided to American Canyon's own employees, including provision of:
  - Eyewash and safety showers in the water treatment area;
  - Chemical spill response;
  - Security and fire protection systems per local codes.

**Veolia**

- All work on site will be performed in accordance with applicable law and will be performed reasonably, in a clean and safe manner. The Veolia service representative will abide by the more stringent of the applicable health, safety and environmental policies and procedures of either American Canyon or Veolia.
- Veolia will provide all applicable safety training required by Veolia policies or by state or national health and safety regulations. The Veolia service representative will have undergone workplace hazardous material information system (WHMIS) training and will come equipped with necessary personal protective equipment (PPE).
- Emergencies - In emergencies affecting the safety of persons, work or property at the site and adjacent thereto, Veolia will act, without previous instructions from American Canyon, as the situation warrants. Veolia will notify American Canyon immediately thereafter.

# 10 ZeeWeed Membrane Module Standard Warranty

This schedule sets out the warranty with respect to ZeeWeed membrane modules (“membrane modules”). No other warranties, expressed or implied are made in connection with the sale of these products, including, without limitation, warranties as to fitness for any purpose or use or merchantability of these products. The warranty provided herein will be the exclusive and sole remedy of Buyer. This warranty is not transferable.

### 1. Definitions

The follow terms shall have the meaning set forth below when used in the warranty document:

a. “Buyer” means the party purchasing the ZeeWeed Modules from the Seller

b. “Seller” means a business component of, or legal entity within the Veolia Water Technologies & Solutions business which is selling the ZeeWeed membranes.

### 2. Warranty Product

This warranty applies to only the membrane modules supplied under the contract of sale. Membrane module means the hollow fiber ultrafiltration membranes and the potted plastic headers. This warranty does not cover air piping to the membrane module, permeate piping from the membrane module, piping connection fittings, connecting hardware and cassette frames with their associated components including but not limited to spacers, aerator tubes, aerator assemblies, screen, module dummies or module blanks.

### 3. Scope of Warranty

The Seller warrants that its membrane module(s) will be free of defects due to faulty materials or errors in manufacturing workmanship.

Regular membrane module inspection and normal fiber repair shall be the responsibility of Buyer.

All replacement membrane modules will be shipped on the basis of INCOTERMS 2020 FCA Veolia manufacturing facility.

All ancillary costs including but not limited to bagging, boxing, crating, freight, freight insurance, applicable taxes, import duties, certifications, brokerage, receiving, forklift services, storage at site, reattachment hardware, hose/clamp/camlock replacement, crane services, installation, fiber repair materials, glycerin flushing, commissioning and waste disposal are the responsibility of Buyer.

### 4. Warranty Start Date

Membrane warranty will start on the earlier of:

a. The date that installation of the original membrane module(s) has been substantially completed, or

b. Three (3) months from the date of delivery of the original membrane module(s) to Buyer.

### 5. Warranty Duration

**Total Warranty Duration:** a total of **24** months of full replacement warranty coverage.

## 6. Notification Of Claim

All claims filed under this warranty shall be made in writing by Buyer within 30 days of identifying a defect.

Buyer shall provide the following information:

a. A description of the defect giving rise to the claim;

b. Photographs showing the manufacturing defect;

c. The serial number(s) of the membrane module(s) which is (are) the subject of the warranty claim; and

d. Operating data and repair history for the life of membrane modules which are the subject of a warranty claim.

## 7. Verification of Claim

After receipt of written notification of a defect, the Seller will promptly undertake such investigations as, in the Seller's opinion, are necessary to verify whether a defect exists. The Seller reserves the right to require additional data as necessary to validate claims. Buyer may, in the course of these investigations, be requested to return membrane module(s) to the Seller for examination (see item 11). The Seller may also conduct reasonable tests and inspections at Buyer's plant or premises. If the results of the investigation do not validate the defect claimed, Buyer will reimburse the Seller for all reasonable expenses associated with said investigation, including expenses for all tests, inspections, and associated travel.

## 8. Satisfaction of Claims

The Seller will have the right to satisfy claims under this warranty in a flexible manner. Such flexibility may include the repair of existing membrane modules or changes in operating protocols or membrane module replacement or by upgrading failed membrane modules with newer membrane module(s) that may embody design and efficiency improvements. Buyer consents to the supply of replacement membrane modules which may be of a different design than original membrane modules.

## 9. Operating Information

To maintain the membrane module warranty, membrane system operation records from initial start-up date until claim must be maintained by Buyer and made available to the Seller upon request. Records must be provided in sufficient detail as applicable to verify the subject of a warranty claim and can include but is not limited to, operation data including information on feed water quality, temperatures, flows, trans-membrane pressures, aeration rates, permeate quality, cleaning intervals, cleaning chemical concentrations, elapsed time since start-up, relevant analytical data and reporting of any screen bypass events.

Buyer shall maintain and share access to a single reference copy in electronic form of a membrane module map containing the history of activity by membrane module and the serial number for each module. Buyer shall log its procedures performed related to a membrane module including relocation of membrane modules, repairs, replacements and any other noteworthy events.

Buyer authorizes the Seller to conduct any reasonable review of operation and maintenance records or to inspect facilities where membrane modules are installed, upon reasonable notice to

Buyer. Such reviews and/or inspections are intended to also assist the Seller and Buyer in detection of membrane system faults and to optimize the care and operation of the membrane modules.

## 10. Limitation of Warranties

Occurrence of any of the following as reasonably determined by the Seller will void this warranty:

a. A material failure to operate the membrane system in accordance with Seller's operations and maintenance manual supplied to Buyer as part of the contract, including material failure to adhere to the Seller's specified membrane module cleaning procedures and the use of anything other than Seller-approved membrane module cleaning agents.

b. Failure to adhere to the preventive maintenance program as presented in the Seller's operations and maintenance manual, in published product manuals and in specifications.

c. Failure to adhere to all transportation and storage requirements. ZeeWeed membrane modules may be stored up to 12 months from date of receipt and must be transported and stored in original intact packaging out of direct sunlight in ambient temperatures between 5-35 Degrees Celsius. Storage beyond 12 months from date of receipt requires a written request to Veolia to maintain membrane module warranties.

d. Introduction of destructive foreign materials and chemical agents into the membrane module.

e. Failure to maintain and provide system operating data and repair history for the life of membrane modules which are the subject of a warranty claim.

f. Physical abuse or misuse, incorrect removal or installation of membrane modules by non-Seller personnel including fiber damage caused by operator error in handling of membrane modules or cassettes.

g. Unauthorized alteration of any components or parts originally supplied by the Seller.

h. Intentional damage.

## 11. Return Procedure

In the event that the return of a membrane module is required pursuant to this warranty, Buyer will first obtain a Return Goods Authorization (RGA) number from the Seller. Membrane module(s) shipped to the Seller for warranty examination must be shipped freight prepaid in environmentally controlled freight and storage with ambient air temperature between 5-35 degree Celsius. If Buyer desires temporary replacement membrane module(s) to replace those alleged to be defective and returned to the Seller for warranty examination, Buyer shall be responsible for the cost associated with any such replacements until examination of the returned membrane modules pursuant to this warranty is complete. Any membrane module examined by Seller as part of a warranty claim where the membrane module is subsequently found to be performing as warranted or where a membrane module failure is not covered under the warranty will be returned to Buyer, freight collect or disposed of by Seller and the cost associated with any membrane analysis and diagnostic work will be levied against the Buyer based on Veolia standard labor rates.

### 12. Disclaimer and Limitation on Liability

To the maximum extent permitted by law, in no event shall Seller be liable for any loss of profit or revenues, loss of production, loss of use of equipment or services or any associated equipment, interruption of business, cost of capital, cost of replacement water or power, downtime costs, increased operating costs, claims of Buyer's customers for such damages, or for any special, consequential, incidental, indirect, punitive or exemplary damages arising out of or relating to the performance or actual or alleged breach of the agreement, regardless of whether a claim is based in contract (including warranty or indemnity), extra-contractual liability, tort (including negligence or strict liability), statute, equity or any other legal theory.

# 11 Terms and Conditions of Sale

### A - Specific Terms and Conditions of Sale

These terms take precedence over the general terms and conditions of sale.

### 1 Legal Entity for Contracting

**ZENON Environmental Corporation** is the name of the Seller, and means a business component of, or legal entity within the Veolia Water Technologies & Solutions business (Veolia).

Please advise us if this Veolia entity is not set up in your purchasing system as a vendor and you do have another Veolia entity set up. We are keen to make the purchase process as convenient as possible for American Canyon.

**short form:** Where a short reference is required in this document, for convenience, we are called simply **Veolia**.

### 2 Payment

Veolia prefers to receive payment by wire transfer and will also accept payment by courier check.

| **Wire transfer information for ZENON Environmental Corporation**<br>send details to: SHD WATS REMIT-NAM *vtc.vwts.remit-nam.all@veolia.com* | |
|---|---|
| Bank of America Merrill Lynch<br>C/O ZENON Environmental Corporation<br>901 Main Street Dallas, TX 75202 | ACCT# 4426318136<br>ABA# 026009593<br>SWIFT# BOFAUS3N<br>ACH# 111000012 |

### 3 Payment Terms

**On approved credit,** payment terms are **net 30 days** from customer receipt of invoice. Please see the invoicing schedule in the price section. In the event an invoice is issued on shipment of goods from a Veolia Hungarian production facility, payment terms will be extended by an additional 45 days to account for the additional transit time to the delivery location.

### 4 Proposal Validity

Prices quoted and proposal terms are valid up to **sixty (60) days** after the date of issue of this proposal unless confirmed with a purchase order.

### 5 Bonds

Performance or payment bonds are not included in the price. These can be purchased on request but will be at an additional cost.

## 6 Assignment of Membrane Warranty

The Buyer will be entitled to assign to a subsequent owner of the membranes the warranties of the Seller under this Agreement, provided that a prior written notification is sent to the Seller and the assignment agreement contains terms and conditions which provide the Seller with the protections of the warranties and limitations on liability contained in the Agreement. Subject to Buyer's compliance with the foregoing requirement, such warranty rights are expressly assignable by the Buyer to a subsequent owner of the membranes. Except as provided herein, Buyer is not entitled to extend or transfer this warranty to any other party.

## 7 Flight Booking

Prices quoted for installation which include airfare are either based on timely confirmation of a visit schedule or based on receipt of a purchase order in time to book any flights seven days in advance. Additional airfare charges related to late arrival of a purchase order will be extra and billed through to American Canyon without mark-up.

## 8 Warranty on Programming

Veolia warrants that the PLC program will conform to the specifications in the relevant sections of the CLSC and OSC (revised for the project) and will be free from defects in workmanship when operated at all times in accordance with Veolia's written instructions. If any defects are found and reported by American Canyon within a period not exceeding twelve (12) months beyond the completion of the site acceptance test, Veolia will make modifications to the PLC code as deemed necessary. Any changes requested by American Canyon after this period will be at the customer's expense.

## 9 Purchase Order Guidelines

Please confirm that your purchase order has covered the following points. This will ensure accurate and prompt order entry, product delivery, invoicing and accounts receivables processing and will prevent administrative delays for all parties.

- **Documentation –** Our strong preference is to receive a hard or digital copy of your purchase order (PO) rather than a PO number alone. Your PO can be sent by email to nam.service.pocentral@veolia.com. If you are not able to provide a PO, please contact us for alternatives.
- **Veolia legal entity –** Please be sure your purchase order is issued in the name of the specific Veolia legal entity outlined in the quote. We will be glad to work with your purchasing department to set this entity up as an approved supplier/vendor. Please advise us if this Veolia entity is not set up in your purchasing system as a vendor and you do have another Veolia entity set up.
- **Quotation Number –** Please reference the quotation number in your PO.
- **Product –** Please note which product(s) you wish to purchase along with the quoted price, particularly if quantities or scope differ from the quotation.
- **Taxes –** Please provide any required tax exemption certificates. Please indicate if taxes have been added in your PO.
- **Payment Terms –** Please acknowledge the payment terms included with the quotation.
- **Bill-to Address –** Please include contact information for your accounts payable.
- **Ship-to Address –** Please clearly define the delivery location and the receiver's email & telephone. Please specify receiving hours and any special off-loading requirements.
- **Delivery Date –** Please include your requested delivery date.

### B – General Terms and Conditions of Sale

The sale of products and services included with this offer will be governed by the CITY OF AMERICAN CANYON STANDARD AGREEMENT FOR INDEPENDENT CONTRACTOR SERVICES NO. 2022-A187 as entered into between the City of American Canyon and ZENON Environmental Corporation on December 12, 2022.

# 12 Signed Agreement

Through the issue of this proposal, Veolia signals their intent to enter into an agreement with American Canyon. American Canyon and Veolia acknowledge that they have read and understood this agreement and agree to be bound by the terms and conditions specified in it.

| | | | |
|---|---|---|---|
| **Offered by Legal Entity:** | ZENON Environmental Corporation, also known as Veolia or Seller | **Accepted by Legal Entity:** | City of American Canyon, also known as American Canyon or Buyer |

# Attachment A ZENON W9 Form

Form **W-9**
(Rev. October 2018)
Department of the Treasury
Internal Revenue Service

**Request for Taxpayer Identification Number and Certification**

► Go to *www.irs.gov/FormW9* for instructions and the latest information.

**Give Form to the requester. Do not send to the IRS.**

1 Name (as shown on your income tax return). Name is required on this line; do not leave this line blank.
Zenon Environmental Corporation

2 Business name/disregarded entity name, if different from above

Print or type. See Specific Instructions on page 3.

3 Check appropriate box for federal tax classification of the person whose name is entered on line 1. Check only **one** of the following seven boxes.

☐ Individual/sole proprietor or single-member LLC ☑ C Corporation ☐ S Corporation ☐ Partnership ☐ Trust/estate

☐ Limited liability company. Enter the tax classification (C=C corporation, S=S corporation, P=Partnership) ► _____

**Note:** Check the appropriate box in the line above for the tax classification of the single-member owner. Do not check LLC if the LLC is classified as a single-member LLC that is disregarded from the owner unless the owner of the LLC is another LLC that is **not** disregarded from the owner for U.S. federal tax purposes. Otherwise, a single-member LLC that is disregarded from the owner should check the appropriate box for the tax classification of its owner.

☐ Other (see instructions) ►

4 Exemptions (codes apply only to certain entities, not individuals; see instructions on page 3):

Exempt payee code (if any) 5

Exemption from FATCA reporting code (if any) _____

*(Applies to accounts maintained outside the U.S.)*

5 Address (number, street, and apt. or suite no.) See instructions.
3600 Horizon Blvd.

Requester's name and address (optional)

6 City, state, and ZIP code
Trevose, PA 19053

7 List account number(s) here (optional)

**Part I Taxpayer Identification Number (TIN)**

Enter your TIN in the appropriate box. The TIN provided must match the name given on line 1 to avoid backup withholding. For individuals, this is generally your social security number (SSN). However, for a resident alien, sole proprietor, or disregarded entity, see the instructions for Part I, later. For other entities, it is your employer identification number (EIN). If you do not have a number, see *How to get a TIN*, later.

**Note:** If the account is in more than one name, see the instructions for line 1. Also see *What Name and Number To Give the Requester* for guidelines on whose number to enter.

**Social security number**
___ - ___ - ____

or

**Employer identification number**
38 - 2549326

**Part II Certification**

Under penalties of perjury, I certify that:

1. The number shown on this form is my correct taxpayer identification number (or I am waiting for a number to be issued to me); and
2. I am not subject to backup withholding because: (a) I am exempt from backup withholding, or (b) I have not been notified by the Internal Revenue Service (IRS) that I am subject to backup withholding as a result of a failure to report all interest or dividends, or (c) the IRS has notified me that I am no longer subject to backup withholding; and
3. I am a U.S. citizen or other U.S. person (defined below); and
4. The FATCA code(s) entered on this form (if any) indicating that I am exempt from FATCA reporting is correct.

**Certification instructions.** You must cross out item 2 above if you have been notified by the IRS that you are currently subject to backup withholding because you have failed to report all interest and dividends on your tax return. For real estate transactions, item 2 does not apply. For mortgage interest paid, acquisition or abandonment of secured property, cancellation of debt, contributions to an individual retirement arrangement (IRA), and generally, payments other than interest and dividends, you are not required to sign the certification, but you must provide your correct TIN. See the instructions for Part II, later.

**Sign Here** Signature of U.S. person ► [signature] Date ► 02/02/2024

## General Instructions

Section references are to the Internal Revenue Code unless otherwise noted.

**Future developments.** For the latest information about developments related to Form W-9 and its instructions, such as legislation enacted after they were published, go to *www.irs.gov/FormW9*.

## Purpose of Form

An individual or entity (Form W-9 requester) who is required to file an information return with the IRS must obtain your correct taxpayer identification number (TIN) which may be your social security number (SSN), individual taxpayer identification number (ITIN), adoption taxpayer identification number (ATIN), or employer identification number (EIN), to report on an information return the amount paid to you, or other amount reportable on an information return. Examples of information returns include, but are not limited to, the following.

- Form 1099-INT (interest earned or paid)
- Form 1099-DIV (dividends, including those from stocks or mutual funds)
- Form 1099-MISC (various types of income, prizes, awards, or gross proceeds)
- Form 1099-B (stock or mutual fund sales and certain other transactions by brokers)
- Form 1099-S (proceeds from real estate transactions)
- Form 1099-K (merchant card and third party network transactions)
- Form 1098 (home mortgage interest), 1098-E (student loan interest), 1098-T (tuition)
- Form 1099-C (canceled debt)
- Form 1099-A (acquisition or abandonment of secured property)

Use Form W-9 only if you are a U.S. person (including a resident alien), to provide your correct TIN.

August 19, 2024

Dear Mr. Patrick:

This letter is provided to confirm that a Sole Source Purchase from ZENON Environmental Corporation will be required to procure parts and/or services for ZeeWeed® hollow fiber immersed ultrafiltration membrane systems. The membrane systems are a proprietary technology developed by ZENON Environmental Corporation, a wholly owned business of Veolia Water Technologies & Solutions, subject to multiple patents.

Research and Development work by Veolia Water Technologies & Solutions is regularly producing process and technology upgrade options. At the point where system upgrades are required, Veolia will work closely with each client to select the best options specific for your plant.

Veolia Water Technologies & Solutions has structured the after-purchase support of our ZeeWeed® clients to assure access to a very high level of service and product support. Veolia has a service team with extensive experience and the capabilities to provide technical and engineering services distinctive to maintaining a high level of performance from the ZeeWeed® hollow fiber, ultrafiltration membranes. Veolia offers these unique services:

1. Insight™ Remote Process Monitoring
2. 24/7 Emergency Telephone Technical Support
3. On-Site Service Visits
4. Membrane Maintenance services & system upgrades
5. Membrane Replacement Planning
6. Entire system Recommended spare parts

If you have any questions, please do not hesitate to contact me.

Sincerely,

Jason Diamond, P.Eng.
Regional Lifecycle Manager - Veolia Water Technologies & Solutions

## TITLE

State Water Project Carryover Water Transfer

## RECOMMENDATION

Adopt a Resolution authorizing the American Canyon Director of Public Works to agree to the attached draft term sheets with Tulare Lake Basin WSD and Westside Districts for a total transfer of 800 AF of Carryover Water.

## CONTACT

Erica Ahmann Smithies, P.E., Public Works Director
Norman Woods, M.B.A., Assistant Public Works Director
Dominic Patrick, Water Systems Manager

## BACKGROUND & ANALYSIS

Background:

The City of American Canyon is a sub-contractor to the Napa County Flood Control and Water Conservation District (NCFCWCD) for the contract with the State of California for the water received from the State Water Project (SWP) via the North Bay Aqueduct. The terms of the agreement with NCFCWCD are specified in City Agreement No. 423, and subsequent Amendment No. 18, on April 5, 2022. The NCFCWCD is a member of the State Water Contractors Association, which is comprised of the 29 contractors for State Water Project water.

The City of American Canyon has invested in SWP Water Supplies since June 15, 1992, when it purchased its original entitlements for the State Water Project known as Table A water. The City of American Canyon has 5,200 Acre-Feet (AF) of annual Table A SWP Entitlements. Each calendar year the California Department of Water Resources (DWR) assesses the reservoir levels, snowpack, and overall state of the water supply in the SWP system and establishes a percent allocation of Table A entitlements each calendar year that can be delivered.

In select years, if the City does not consume all its Table A entitlements, and San Luis Reservoir does not spill, the unused water is reclassified as Article 56 water (c), or carryover water, which can be used the following calendar years. Carryover is additive year over year if Table A, South of Delta entitlement is not consumed by American Canyon has a yearly maximum of 50 percent of the Table A allocation. If San Luis Reservoir spills, there is a formula to which carryover is depleted. However,

historically Article 56 (c) stored water has been lost in its entirety during a spill event, and all carryover water is lost.

Analysis:

In 2023, the State Water Project (SWP) allocation for North of Delta contractors was 100%, which allowed the City of American Canyon to receive its full Table A allocation of 5,200 acre-feet (AF) and carry over 2,600 AF (50% of Table A maximum) into 2024. For 2024, the SWP allocation for North of Delta contractors is 65%, providing American Canyon with a Table A allocation of 3,380 AF.

Under the water exchange formula with South of Delta (SOD) contractors, 40% of the total SWP allocation (2,080 AF) is available for transfer. After subtracting American Canyon's 2024 Table A use, this will impact the amount of carryover water available in 2025. Staff projects that 800 AF of unused Table A water in 2024 will carry over but will be lost in 2025. Regardless of whether the water is sold or not, the City will still receive 2,600 AF in 2025, as carryover is capped at 50% of the Table A allocation. As a result, American Canyon is expected to carry over a total of 3,400 AF into 2025 (2,600 AF from 2024 and 800 AF from unused water), but only 2,600 AF can be officially carried over into 2025, consistent with the 50% carryover limit.

DWR has indicated that they plan to have San Luis Reservoir spill in 2025, meaning American Canyon will lose the projected 3,400 AF of Carryover Water. DWR controls water levels in San Luis Reservoir by pumping water out of the San Joaquin-Sacramento River Delta, upstream from O'Neill Forebay. NCFCWCD has found two agencies who are currently interested in a water transfer totaling 800 AF of American Canyon's carryover water. Westside and Tulare will pay American Canyon for the water transfer separately at $250/AF to $300/AF respectively.

NCFCWCD has created the attached draft term sheets for the two agencies to transfer water between agencies. NCFCWC draft terms include transfer of water from all three sub-contractors (City of Napa, City of American Canyon, and City of Calistoga) with the total exchange being: 1,000 AF to Tulare and 5,000 AF to Westside. American Canyon would transfer subject to the attached draft term sheets and the California Department of Water Resources (DWR) water transfer criteria, if draft terms are adopted by all agencies.

American Canyon will be able to reliably meet normal annual demands of ~2,500 AF over the next two years while making normal withdrawals from Carryover 2,600 AF, Permit Water delivered to Cordelia Forebay 500 AF, and assuming SWP Table-A allocations are only 15% allocation levels 780 AF.

The SWP supply has the following additional water sources:

- Article 21 water that has averaged about 100 AF over the last four years for American Canyon
- Dry Year Transfer and Yuba Accord water purchases, as available
- Advanced Table A water of 5,200 AF for American Canyon

In addition, if there is a severe drought staff will be requesting the council adopt additional

mandatory conservation stages that typically reduce demand by another 10% to 20%.

## COUNCIL PRIORITY PROGRAMS AND PROJECTS

Infrastructure: "Develop and maintain infrastructure resources to support sustainable growth."

## FISCAL IMPACT

There is no financial cost but only revenue potential. The amount of projected carryover water that will be lost in 2025 is 800 AF, however, if it is all transferred the revenue would be approximately $200,000 and go into Account No. 510-80-810-36390 (North Bay Aqueduct). NCFCWCD has only identified two interested agencies from the SOD: Westside and Tulare.

## ENVIRONMENTAL REVIEW

This action is exempt from CEQA (Section 15301) in accordance with the Notice of Exemption filed by the Napa County Flood Control Water Conservation District.

2. Term Sheet for Water Purchase Turlare Lake Basin Water Storage District
3. Term Sheet for Water Purchase Westside Districts

**RESOLUTION NO. 2024-**

**A RESOLUTION AUTHORIZING THE AMERICAN CANYON DIRECTOR OF PUBLIC WORKS TO AGREE TO THE ATTACHED DRAFT TERM SHEETS WITH TULARE LAKE BASIN WSD AND WESTSIDE DISTRICTS FOR A TOTAL TRANSFER OF 800 AF OF CARRYOVER WATER**

**WHEREAS,** the City of American Canyon is a sub-contractor to the Napa County Flood Control and Water Conservation District (NCFCWCD) for the contract with the State of California for the water received from the State Water Project (SWP) via the North Bay Aqueduct; and

**WHEREAS,** the City of American Canyon, terms of the agreement with NCFCWCD are specified in City Agreement No. 423, and subsequent Amendment No. 18, on April 5, 2022, when it purchased its original entitlements of the State Water Project know as Table A water; and

**WHEREAS,** the City of American Canyon has 5,200 Acre-Feet (AF) of annual Table A SWP Entitlements that each calendar year are allocated by the California Department of Water Resources (DWR) based on reservoir levels, snowpack, and overall state of the water supply in the SWP system and establishes a percent allocation of Table A entitlements that will be delivered; and

**WHEREAS,** in select years, if the city does not consume all its Table A entitlements, and San Luis Reservoir does not spill, the unused water is reclassified as Article 56 water, or carryover water, that can be used the following calendar year; and

**WHEREAS,** if San Luis Reservoir spills, all carryover water is lost; and

**WHEREAS,** American Canyon is projected to have 800 AF of carryover in 2025 and DWR has indicated they plan to have San Luis Reservoir spill in 2025, meaning American Canyon will lose the projected 800 AF of Carryover Water; and

**WHEREAS,** NCFCWCD has identified two agencies who are currently interested in a water transfer totaling 800 AF of American Canyon's carryover water. Westside Districts and Tulare Lake Basin WSD will pay American Canyon for the water transfer separately at $250/AF to $300/AF respectively; and

**WHEREAS,** staff would like the ability to transfer this water since this may be a last-minute opportunity, right before San Luis Reservoir spills to at least get some revenue before the water is lost; and

**WHEREAS,** there is no financial cost and only the potential of approximately $200,000 in revenue that would go into Account No. 510-80-810-43320 (North Bay Aqueduct); and

**WHEREAS,** this action is exempt from CEQA (Section 15301) in accordance with the Notice of Exemption filed by the Napa County Flood Control Water Conservation District.

**NOW, THEREFORE, BE IT RESOLVED** that the City Council of the City of American Canyon hereby authorizes the City of American Canyon, Director of Public Works to agree to attached draft term sheets with Tulare Lake Basin WSD and Westside Districts totaling a sale of 800 AF of American Canyon's Carryover Water.

**PASSED, APPROVED** and **ADOPTED** at a regularly scheduled meeting of the City Council of the City of American Canyon held on the 19th day of November, 2024, by the following vote:

# TERM SHEET FOR WATER PURCHASE FROM NAPA COUNTY FLOOD CONTROL AND WATER CONSERVATION DISTRICT (NAPA) TO TULARE LAKE BASIN WATER STORAGE DISTRICT (TULARE)

1. **General:** Napa shall make available for transfer 1,000 acre-feet of Article 56(c) State Water Project Carryover Water (Transfer Water) to Tulare, subject to the terms and conditions of this Term Sheet and the California Department of Water Resources (DWR) water transfer criteria.

2. **Term:** This Term Sheet shall become effective on October 22, 2024 or the nearest time after that date that the Department of Water Resources approves the transfer contemplated herein and shall terminate on December 31, 2024.

3. **Conveyance to Tulare:**
   a) Transfer of Napa's Article 56 Carryover Water to Tulare will occur as soon as the agreement between Tulare, Napa, and DWR is executed; the point of transfer is San Luis Reservoir, and the transfer will occur by means of a recalculation of Napa's and Tulare's respective Article 56 Carryover Water storage balances in San Luis Reservoir .
   b) Tulare shall be responsible for the SWP delivery costs for the water delivered from San Luis Reservoir to Tulare.

4. **Payment:**
   a) Tulare shall pay Napa $300 per AF for water made available by Napa.
   b) Napa shall invoice Tulare after DWR transfer agreement has been fully executed by all parties. Napa's invoice shall be due and payable within 45 days of receipt by Tulare. Napa shall send all invoices to the following email address:

      Tulare Lake Basin Water Storage District
      Jacob Westra: jwestra@tlbwsd.com and,
      accounting@tlbwsd.com

5. **Approvals:**
   a) Tulare and Napa shall work together to obtain approval for the transfer contemplated herein from DWR. Napa will author the transfer request to DWR after coordination with Tulare on key components of the "SWP Agreement – Request Form."

DRAFT

b) Napa and Tulare anticipate that a Notice of Exemption will be required to comply with CEQA. The parties shall work together to obtain CEQA compliance, and in doing so, Napa shall be the "lead agency" and Tulare shall be a "responsible agency."

c) Napa and Tulare shall be responsible for their own internal costs, transaction costs, and other costs (including conveyance and administration) associated with the transfer contemplated herein.

**6. Complete Agreement**

a) This Term Sheet represents the complete agreement between the parties. No oral or written document or representation other than this Term Sheet represents the parties' intent in entering this agreement.

b) The parties may, however, modify this Term Sheet with a written modification signed by both parties.

**7. Signatures**

a) The signatories below confirm that they have the authority to execute this Term Sheet on behalf of the agencies they represent and abide by this Term Sheet's conditions.

| Tulare Lake Basin Water Storage District | Napa County Flood Control and Water Conservation District |

DRAFT

# TERM SHEET FOR WATER PURCHASE BETWEEN NAPA[1] AND THE WESTSIDE DISTRICTS[2]

1. **General:** NAPA shall make available for transfer to the Westside Districts up to 4,000 acre-feet (AF) of Article 56(c) of State Water Project (SWP) water (Transferred Water), subject to the terms and conditions of this Term Sheet.

2. **Term:** The Term of this Term Sheet shall begin on the date the Department of Water Resources (DWR) approves the transfer contemplated herein or April 1, 2024, which occurs first, and shall terminate on December 31, 2024.

3. **Conveyance to Westside Districts:**

    a. The Point of Delivery shall be Reach 1, the Delta of the California Aqueduct. Both parties may agree in writing to an alternate point of delivery location. NAPA shall be responsible for all charges associated with the conveyance of Transferred Water to the Point of Delivery. The Westside Districts shall take possession of the Transferred Water at the Point of Delivery and be responsible for all charges associated with conveyance of the Transferred Water downstream from the Point of Delivery.

    b. Conveyance of Transferred Water is subject to any capacity limitations imposed by DWR.

    c. Capacity for the delivery of Transferred Water to the Westside Districts is on an “as available” basis, subject to higher priority deliveries of the Westside Districts. Such higher priorities include SWP water (Table A, Article 21) & Local Supplies[3] allocated to the Westside Districts and other

[1] Napa County Flood Control and Water Conservation District

[2] Westside Districts consist of Dudley Ridge Water District and four member units of the Kern County Water Agency (Belridge Water Storage District, Berrenda Mesa Water District, Lost Hills Water District, and Wheeler Ridge – Maricopa Water Storage District)

[3] Kern River Water, KCWA Member Unit Table A

transfers/exchanges to the Westside Districts with more favorable terms than the Transferred Water.

d. The Westside Districts shall determine amongst themselves the allocation of the Transferred Water. Water transferred under this Term Sheet can be requested and scheduled in multiple blocks and throughout the Term, subject to available water volumes as per section 3(d).

**4. Payment:**

a. The Westside Districts shall pay NAPA $250 per AF for all Transferred Water delivered to the Point of Delivery by NAPA.

It should be noted that this Term Sheet identifies the ***maximum amount*** of SWP water that may be transferred by NAPA to the Westside Districts. Actual delivery of SWP water by NAPA to the Westside Districts, however, may vary due to those conditions set forth in sections 3(b), 3(c), and 3(d).

The Westside Districts and NAPA make no guarantees that any or all the Transferred Water will be requested for delivery or delivered to the Point of Delivery. The Westside Districts shall not be responsible for any amount of SWP water not requested for delivery to the Point of Delivery.

b. Once the final volume of Transferred Water is known and reconciled by the parties, NAPA shall invoice the Westside Districts for the reconciled amount of Transferred Water that was delivered to the Point of Delivery by NAPA. All NAPA invoices shall be due and payable within 45 days of receipt. NAPA shall send all invoices to the following address in electronic format:

Westside Districts
Jamie Marquez
jmarquez@westsidewa.org

**5. Approvals:**

a. The Westside Districts (through Dudley Ridge Water District (DRWD) and Kern County Water Agency (KCWA)) and NAPA shall work together to obtain approval for the transfer contemplated herein from DWR. As NAPA's water is to be transferred, the request to DWR shall come from NAPA after coordination with DRWD and KCWA.

b. NAPA and the Westside Districts anticipate that a Notice of Exemption will be required to comply with CEQA. The parties shall work together to obtain CEQA compliance, and in doing so, NAPA shall be the “lead agency” and each of the Westside Districts, KCWA, and DWR shall be “responsible agencies.”

c. NAPA and the Westside Districts shall be responsible for their own internal and/or transaction costs associated with the transfer contemplated herein.

# COOPERATIVE JOINT POWERS AGREEMENT TO FUND AND ADMINISTER THE NAPA COUNTYWIDE CLIMATE ACTION PROGRAM

**THIS COOPERATIVE JOINT POWERS AGREEMENT** ("Agreement") is entered into as of this 20th day of April, 2021, by and between the CITY OF AMERICAN CANYON, a municipal corporation of the State of California, hereinafter referred to as "American Canyon," CITY OF CALISTOGA, a municipal corporation of the State of California, hereinafter referred to as "Calistoga," CITY OF NAPA, a municipal corporation of the State of California, hereinafter referred to as "Napa," the CITY OF ST. HELENA, a municipal corporation of the State of California, hereinafter referred to as "St. Helena," TOWN OF YOUNTVILLE, a municipal corporation of the State of California, hereinafter referred to as "Yountville," and COUNTY OF NAPA, a political subdivision of the State of California, hereinafter referred to as "County" (hereinafter collectively referred to as "Member Agencies" or "Parties").

## RECITALS

**WHEREAS,** as public agencies, Parties are authorized by Chapter 5 of Division 7 of Title I of the California Government Code (commencing with Section 6500) to enter into a joint exercise of powers agreement for the funding and performance of joint actions related to regional climate change which each agency is individually authorized to conduct within its own jurisdiction; and

**WHEREAS,** on October 8, 2018, the Intergovernmental Panel on Climate Change (IPCC) released a report, "Global Warming of 1.5°C," which states that "Limiting global warming to 1.5°C would require rapid, far-reaching and unprecedented changes in all aspects of society," and projected that the earth could reach and exceed this temperature threshold by as early as 2030, far earlier than previously anticipated; and

**WHEREAS,** climate modeling shows that it is not possible to stabilize global mean temperature rise at or below 1.5°C without undertaking additional pre-2030 climate mitigation and restoration actions focused on reducing radiative forcing levels associated with excess trapped heat. These urgent actions are additional and complementary to current efforts to reduce greenhouse gas emissions being undertaken by the State; and

**WHEREAS,** the State of California as a whole, and the Parties, residents, economy, and environment have already experienced adverse effects associated with climate change, such as a prolonged wildfire season and firestorms, rising temperatures, mudslides, severe droughts, property destruction and damage to infrastructure, and recognize that climate change represents a

growing danger to human health, safety, economic prosperity, basic services, and natural resources; and

**WHEREAS,** the Member Agencies recognize that climate change is a global problem, that decisive near-term action is needed to prevent further global warming, and that we must work together with other jurisdictions, because the most practical and cost-effective solutions to climate change which can directly benefit local residents require broad participation and coordination; and

**WHEREAS,** in June 2019, the Member Agencies all adopted Resolutions regarding the "Countywide Commitment to Address Climate Change" to do the following: (1) address climate change in their respective General Plans, consistent with State guidelines; (2) form a committee to identify countywide goals and strategies for addressing climate change, including an updated greenhouse gas (GHG) inventory, countywide GHG goal and timeline, and common GHG reduction standards for each jurisdiction to adopt independently; and (3) identify potential threats and funding to improve community resiliency; and

**WHEREAS,** since September 2019 the Parties have supported and participated in the Climate Action Committee ("CAC") to share information on climate change strategies and coordinate on regional policies and actions; and

**WHEREAS,** the Parties agree to share the costs of administering the CAC and any future joint actions related to regional climate change including a greenhouse gas inventory; and

**WHEREAS,** the Parties desire to enter into an agreement for the purpose of addressing climate change through a regional effort and to seek out funding opportunities to assist in achieving common greenhouse gas reduction goals and strategies, as agreed to by the individual Member Agencies.

## TERMS

**NOW, THEREFORE,** Napa County, American Canyon, Napa, St. Helena, Calistoga, and Yountville agree to the terms and conditions as follows:

**1. Term of the Agreement.**

This Agreement shall become effective upon the execution of all of the Parties hereto and shall continue in full force and effect until terminated in the manner provided in this Agreement. The inclusion of additional members to this Agreement or the withdrawal of some, but not all, of the Parties to this Agreement shall not be deemed dissolution or termination of this Agreement. The Agreement shall continue in full force and effect so long as there shall be at least two Member Agencies to this Agreement.

**2. Designation of Administering Agency.**

The Member Agencies hereby designate Napa County as the Administering Agency for purposes of administering this Agreement (the "Administering Agency") pursuant to Government Code Section 6506.

**3. Purpose of Agreement.**

The purpose of this Agreement is to establish a collaborative framework to allow the Member Agencies to work with each other and with community organizations, businesses, schools, and regional partners and jurisdictions on coordinated actions to reduce greenhouse gas emissions and limit the adverse effects of future climate change.

**4. Administration.**

The Administering Agency will be advised in the implementation of its duties under this Agreement by the CAC, a standing body consisting of 12 elected officials, with two (2) representatives from each of the Member Agencies. The CAC shall adopt by-laws to govern its conduct and shall comply with the Ralph M. Brown Act, Government Code 54950 et seq. The CAC shall act as a community round table or forum for the sharing of information, providing public education, promoting events and grants relevant to climate change, developing a regional greenhouse gas inventory, and identifying mutually agreed upon climate goals and action items for consideration by the individual Member Agencies.

**5. Staffing.**

Staffing and support for the CAC shall be provided by the Administering Agency, at the discretion of the County Executive Officer. A working group made up of staff from each Member Agency shall assist the CAC in working on the greenhouse gas inventory, developing draft mutual goals and action items, preparing joint draft ordinances or policies for consideration by individual Member Agencies, and supporting regional sustainability efforts.

**6. Legal Counsel.**

The Administering Agency will designate Napa County Counsel to serve as legal counsel for the purposes of this Agreement and will enter into a contract with Napa County Counsel to provide legal advice to the CAC, which will set forth the job responsibilities and duties of legal counsel. A majority of the CAC can change the legal counsel for any reason.

**7. Party's Proportional Cost Reimbursement Obligations.**

(a) **Payment Schedule.** The Parties shall establish an estimated amount ("Estimated Amount") each fiscal year for the provision of services by the Administering Agency hereunder. The Administering Agency shall submit the Estimated Amount for each fiscal year to all Parties by March 1st of each year. The Estimated Amount will be developed based on the services described in Exhibit A. The Parties shall use reasonable efforts to have the Estimated Amount approved by their respective governing bodies or by designee authorized by the Party by July 1st of each year. The Estimated Amount for Fiscal Year 2021-2022 is attached hereto as Exhibit B. In the event of any delay in the adoption of the Estimated Amount pursuant to this provision, the Administering Agency is authorized to continue providing services in accordance with Exhibit A. Cities and Town shall continue to pay the Administering Agency all direct and indirect costs for services rendered pursuant to this Agreement.

(b) **Payment Apportionment.** During the term of this Agreement, Parties shall reimburse the Administering Agency for the proportional costs of supporting the CAC, providing public education, promoting events and grants relevant to climate change, administering grants, developing a regional greenhouse gas inventory, and identifying mutually agreed upon climate

goals and action items for consideration by the individual Member Agencies. The costs for these services shall be determined in accordance with the method described in Exhibit C, attached hereto and hereby incorporated by reference. The Parties have agreed upon a methodology for payment of the cost of services provided by the Administering Agency that are attributable to each Party for the following:

(1) **Program Administration.** Services to be provided by the Administering Agency, also herein referred to as Category 1 items, which will constitute a baseline of program costs to be shared amongst all of the Cities, Town, and Administering Agency.

(2) **Optional Services.** Services to be provided by the Administering Agency at the request by one or more of the Member Agencies, also herein referred to as Category 2 items, will be an additional cost beyond the baseline Program Administration to be borne only by those Parties who expressly request in writing such services.

(c) **Method and Timing of Reimbursement.** The Administering Agency shall provide for strict accountability of all receipt and disbursement of funds under this Agreement. The Administering Agency shall report all receipts and disbursements upon a Party's request. Each Party to this Agreement shall be invoiced regularly by the Administering Agency for the proportional costs described in Section 7 hereof. Payment by each Party of the invoice shall be made and received in the Administering Agency's administrative offices on or before the close of business within 45 calendar days of the date of the invoice. The due date shown on the invoice shall not be less than 30 calendar days after the date of issuance of the invoice.

**8. Insurance.**

(a) **Liability Insurance.** Each Party shall obtain and maintain in full force and effect during the term of this Agreement the following liability insurance coverages, issued by a company admitted to do business in California and having an A.M. Best rating of A:VII or better or equivalent self-insurance.

(1) **General Liability.** Each Party shall obtain and maintain in full force and effect during the term of this Agreement commercial or comprehensive general liability insurance coverage (personal injury and property damage) of not less than ONE MILLION DOLLARS ($1,000,000) combined single limit per occurrence, either issued by a company admitted to do business in the State of California and having and A.M. Best Rating of no less than A:VII or by self-insurance satisfactory to the other Party's risk manager or employee designated by the Party to perform such function, or by a combination thereof, covering liability for any personal injury, including death, to any person and/or damage to the property of any person arising from the acts or omissions of that Party under this Agreement except for acts or omissions performed in strict compliance with express direction of the other Parties' governing boards, officers, or personnel. If the coverage includes an aggregate limit, the aggregate limit shall be no less than twice the per occurrence limit.

(2) **Comprehensive Automobile Liability Insurance.** Each Party shall obtain and maintain in full force and effect during the term of the Agreement a comprehensive automobile liability insurance policy (Bodily Injury and Property Damage) on owned, hired, leased and non-owned vehicles used in conjunction with that Party's activities under this Agreement of not less than THREE HUNDRED THOUSAND DOLLARS ($300,000) combined single limit per occurrence.

(b) **Certificates of Coverage.** When the foregoing coverages are provided by insurance rather than by self-insurance (written proof of which shall be provided to the other

Parties), the coverages shall be evidenced by one or more certificates of coverage which shall be filed with the Administering Agency's Secretary or Clerk prior to payment for performance of any of the Parties' duties under this Agreement; shall name the other Parties, their officers, employees, and agents as additional insureds; shall be kept current during the term of this Agreement; and shall provide that the other Parties shall be given no less than thirty (30) days prior written notice of any non-renewal, cancellation, other termination, or material change. Upon written request by the other Parties, the Party shall provide or arrange for the insurer to provide the other Parties with certified copies of the actual insurance policies or relevant portions thereof within thirty (30) days of the request.

**9. Hold Harmless/Defense/Indemnification.**

Upon written demand, each Party shall defend, release, indemnify, and hold harmless the other Parties as well as their respective officers, agents, and employees from any claim, loss, liability penalty, demand, or expense including without limitation, those for personal injury (including death), damage to property or for costs of remediation or other actions needed to correct or abate any violation of federal, state, or local law, or regulation arising out of, or connected with, any acts or omissions of that Party or its officers, agents, or employees when performing any obligations or exercising any rights under this Agreement.

**10. Termination for Cause and Non-Appropriation.**

(a) **Termination for Cause.** If any Party shall fail to fulfill in a timely and proper manner that Party's obligations under this Agreement, including each Party's Proportional Cost Reimbursement Obligation, or otherwise breach this Agreement, and fail to cure such failure or breach within thirty (30) days of receipt of written notice from the Administering Agency describing the nature of the failure or breach, any of the non-defaulting Parties may, in addition to any other remedies they may have, terminate this Agreement as to the defaulting Party by giving thirty (30) days written notice to the defaulting Party in the manner set forth in Paragraph 12 (Notices).

(b) **Termination for Non-Appropriation.** This Agreement may be terminated by any of the CITIES, TOWN, or by COUNTY as to that Party only if despite that Party's best efforts, that Party is unable to appropriate sufficient funds in any fiscal year to meet its financial obligations under this Agreement. Termination under this paragraph shall be effective only after the terminating Party has given no less than thirty (30) days written notice of such termination to all other Parties specifying the effective date thereof. Upon termination by any Party, that Party's share of the administrative costs borne by the Administering Agency shall be shared by the remaining Parties pursuant to the formula described in Exhibit C and the terminating Party shall only be responsible for payment of administrative costs already previously appropriated by the terminating Party.

**11. No Waiver.**

The waiver by any Party of any breach or violation of any requirement of this Agreement shall not be deemed to be a waiver of any such breach in the future, or of the breach of any other requirement of this Agreement.

**12. Notices.**

All notices required or authorized by this Agreement shall be in writing and shall be delivered in person or by deposit in the United States mail, by certified mail, postage prepaid, return receipt requested. Any mailed notice, demand, request, consent, approval, or communication that any Party desires to give the other Parties shall be addressed to the other Parties at the address set forth below. Any Party may change its address by notifying the other Parties in writing of the change of address. Any notice sent by mail in the manner prescribed by this paragraph shall be deemed to have been received on the date noted on the return receipt or five days following the date of deposit, whichever is earlier.

**NAPA COUNTY**

**13. Independent Entities.**

Although this Agreement is a Joint Powers Agreement as authorized by California Government Code Section 65000 et seq., Member Agencies are independent entities, and they and their respective officers, agents, and employees of Member Agencies are not, and shall not be deemed, employees of the other Parties for any purpose including but not limited to worker's compensation and employee benefits.

**14. Privileges, Immunities, and other Benefits.**

In accordance with California Government Code Section 6513, all of the privileges and immunities from liability, all exemptions from laws, ordinances and rules, and all pension, relief, disability, worker's compensation, and other benefits that apply to the activity of the trustees, officers, employees, or agents of the Parties when performing their functions within the territorial limits of their respective public agencies, shall apply to them to the same degree and extent while engaged in the performance of any of their functions and duties associated with performance of this Agreement.

**15. Interpretation; Venue.**

(a) **Interpretation.** The headings used herein are for reference only. The terms of the Agreement are set out in the text under the headings. This Agreement shall be governed by the laws of the State of California without regard to the choice of law or conflicts.

(b) **Venue.** This agreement is made in Napa County, California. The venue for any legal action in state court filed by a Party to this Agreement for the purpose of interpreting or enforcing any provision of this Agreement shall be in the Superior Court of California, County of Napa, a unified court. The venue for any legal action in federal court filed by a Party to this Agreement lying within the jurisdiction of the federal courts shall be the Northern District of California. The appropriate venue for arbitration, mediation, or similar legal proceedings under this Agreement shall be Napa County, California; however nothing in this sentence shall obligate a Party to submit to mediation or arbitration any dispute arising under this Agreement.

**16. Authority to Contract.**

Each Party warrants hereby that it is legally permitted and otherwise has the authority to enter into and perform pursuant to this Agreement.

**17. Conflict of Interest.**

Each Party covenants that it presently has no interest and shall not acquire any interest, direct or indirect, which would conflict in any manner or degree with the performance of its services hereunder. Each Party further covenants that in the performance of its services pursuant to this Agreement, no person having any such interest shall be employed.

**18. Non-Solicitation of Employees.**

Except with the written permission of the other affected Parties, each Party agrees not to solicit for employment the employees of the other Parties who were directly involved in the performance of the services hereunder for the term of this Agreement and a period of six (6) months after termination of this Agreement. Nothing in this paragraph shall preclude any Party from publishing or otherwise distributing applications and information regarding the Party's job openings where such publication or distribution is directed to the general public.

**19. Third Party Beneficiaries.**

Nothing contained in this Agreement shall be construed to create any rights in third Parties and the Parties do not intend to create such third-party rights.

**20. Attorney's Fees.**

In the event that a Party commences legal action of any kind or character to either enforce the provisions of this Agreement or to obtain damages for breach thereof, the prevailing Party in such litigation shall be entitled to all costs and reasonable attorney's fees incurred in connection with such action.

**21. Severability.**

If any provision of this Agreement, or any portion thereof, is found by any court of competent jurisdiction to be unenforceable or invalid for any reason, such provision shall be severable and shall not in any way impair the enforceability of any other provision of this Agreement.

**22. Entirety of Contract.**

This Agreement constitutes the entire agreement between the Parties relating to the subject of this Agreement and supersedes all previous agreements, promises, representations, understandings, and negotiations, whether written or oral, among the Parties with respect to the subject matter hereof.

**23. Execution by Counterparts.**

This Agreement may be executed in several counterparts, each of which shall be deemed an original and all of which shall constitute one and the same instrument, and shall become effective when counterparts have been signed by each of the Member Agencies and delivered to the Administering Agency; it being understood that all Member Agencies need not sign the same counterparts.

**24. Amendments/Modifications.**

This Agreement may only be amended or modified by the written consent of all Parties hereto.

**25. Cooperation.**

Each Party commits to fully cooperate with the other Party to accomplish the purposes of this Agreement.

DocuSign Envelope ID: BBC61D0E-FB0B-4DA2-9DC8-1EA02F2B30E7

**26. Successors.**

No Member Agency shall assign any interest in this Agreement without the prior written consent of the other Member Agencies. This Agreement shall be binding upon and shall inure to the benefit of any successors to or assigns of the Parties.

**27. Compliance with Laws.**

Each of the Parties hereto shall comply with all applicable federal and state laws.

**28. Withdrawal.**

Any Party to this Agreement may withdraw from the Agreement, except that no Party may withdraw if such withdrawal would adversely affect any grant to such an extent that the Administering Agency would be rendered incapable of meeting its then-existing grant requirements and/or would lose funding. In such a circumstance, the Party seeking to withdraw would be permitted to withdraw on the condition that the above-described grant requirements were met and/or funding or liability requirements stabilized. Any member wishing to withdraw may do so only on July 1 of any such year, and shall provide the Administering Agency with at least 180 days' notice in writing of its intent to withdraw. Upon withdrawal, any member retains its financial obligations for current contracts executed to fulfill this Agreement, and assumes that responsibility at its own expense.

**IN WITNESS WHEREOF,** this Agreement was executed by the Parties hereto as of the date first above written.

## EXHIBIT A

**Countywide Climate Action Program**

Administration, Planning, and Funding

The Countywide Climate Action Program (CCAP) refers to the Countywide and Local Programs implemented by Napa County; Cities of American Canyon, Napa, Calistoga, and St. Helena, and the Town of Yountville (collectively, the "CCAP Parties"). Each CCAP Party is implementing a Local Program and contributes financial and in-kind support to the countywide Program. The CCAP Parties have entered into a Joint Powers Agreement (JPA) to fund the Countywide Program based on the CCAP Parties' population size/assessed value.

## COUNTYWIDE PROGRAM

Program Administration

The COUNTY will be the lead agency responsible for administering the CCAP. Administrative duties include staffing and supporting the Climate Action Committee (CAC) to identify countywide goals and strategies for addressing climate change; applying for, administering, and implementing grants to prepare an updated greenhouse gas (GHG) inventory; developing GHG goals and timelines, as well as common GHG reduction actions, for each Party to consider and adopt independently; providing a forum for Parties to share information as they address climate change in their respective General Plans; and identifying potential threats and funding to improve community resiliency.

COUNTY Staffing

The County has a Planning, Building, and Environmental Services (PBES) Director or designee and Environmental Resources Specialist on staff, as well as planners and support staff (office assistants, GIS, accounting, etc.) to administer, coordinate, and implement the CCAP.

COUNTY Staff Duties

Specific administrative and planning functions of the CCAP are more particularly described as follows:

- Coordinate with Local Programs through the CAC. The CAC includes representatives from all Parties who meet monthly to discuss common issues and identify solutions.
- Manage and implement the Joint Powers Agreement regarding those tasks to be performed at a countywide level by the CCAP and coordinate with Parties regarding tasks to be performed on an individual municipal level.
- Develop and manage annual budgets and budget forecasts for work performed at the CCAP level.
- Develop supporting scopes of work for activities performed at the countywide level by the CCAP.

- Develop and manage contracts for activities performed at the countywide level by outside contractors and consultants. Oversee contractors; facilitate review of deliverables by permittees; approve final deliverables; and review and approve invoices.
- Track CCAP expenditures throughout the year and provide mid-year and end of year actual expenditures' accounting.
- Facilitate CAC meetings (work groups, sub-committees), prepare agendas and minutes, and staff and broadcast meetings.
- Disseminate information (e.g., training and/or workshop announcements), schedule presenters, and develop materials (e.g., brochures and/or electronic media) at the countywide level to the Parties and public.
- Make presentations to municipal city and town councils, as requested.
- Facilitate and encourage municipal implementation of plans and projects developed at the countywide level by the CCAP.
- Coordinate with other city, county, regional, and state agencies to stay informed of changes in State climate action policies and regulations, and/or recent court decisions, and provide regular updates to the CAC on this information.
- Track progress on CCAP measurable goals.

Countywide Program Structure

The Countywide Program shall be responsible for facilitating the development of common regional climate action goals and standards for adoption by each Party.

Parties shall be responsible for implementing climate action policies and tasks specifically required of them to comply with State climate action requirements.

## EXHIBIT B

## ESTIMATED AMOUNT FOR FISCAL YEAR 2021 – 2022

In accordance with Section 7.(a) of this Agreement, the Administering Agency has provided the Estimated Amount for the Fiscal Year (FY) 2021-2022 to all Parties. The Estimated Amount was developed based on the services described in Exhibit A, and includes: agenda, staff report writing, and staff to support monthly meetings of the CAC; administration of the Bay Area Air Quality Management District grant; contracting and management of the consultant hired to prepare the greenhouse gas inventory pursuant to the grant; coordinating the Parties' staff working group; drafting CAC bylaws; and other administrative support. If the CAC directs additional actions or efforts, this Estimated Amount may be supplemented with the approval of all Parties.

The Estimated Amount for FY 2021-2022 is $59,080, calculated as follows. Hourly rates quoted are weighted labor rates.

Environmental Resource Specialist: 224 hours at $98/hour = $21,952
Director of Planning, Building, and Environmental Services Department: 112 hours at $209/hour = $23,408
Deputy County Counsel IV: 56 hours at $245/hour = $13,720

## EXHIBIT C

## COST REIMBURSEMENT

**CCAP PROGRAM ADMINISTRATION COSTS**
The COUNTY shall contribute 33.0% of the actual costs of the CCAP Program Administration costs, from the PBES budget.

**COST-SHARE FOR REMAINING BALANCE**
CITIES and TOWN shall each reimburse COUNTY for the remaining Category 1, Program Administration, costs for COUNTY's administration of the CCAP according to a formula that allocates costs based on fifty percent (50%) equal shares and fifty percent (50%) proportional share of population exclusive of the unincorporated area population, more specifically as follows:

American Canyon: 12.8%
Calistoga: 8.3%
Napa: 29.9%
St. Helena: 8.5%
Yountville: 7.5%

**CATEGORY 2 OPTIONAL SERVICES**
CITIES and TOWN shall each reimburse COUNTY for the actual costs of any optional services expressly requested in writing by a Party.

## TITLE

Watson Ranch Specific Plan Lot 7 Tentative Subdivision Map

## RECOMMENDATION

Adopt a Resolution approving a Vesting Tentative Subdivision Map for Watson Ranch Lot 7 to create 136 single-family home lots on 12.86 acres within the Watson Ranch Specific Plan Medium Density Residential-16 zoning district located west of Marcus Road, Assessor's Parcel Number 059-430-045 (File No. PL24-0012).

## CONTACT

William He, AICP, Senior Planner

## BACKGROUND & ANALYSIS

**Table 1: Site Information**

| | |
|---|---|
| General Plan Designation | WRSP MDR-16 |
| Zoning District | WRSP MDR-16 |
| Site Size | 12.86 acres |
| Present Use | Undeveloped lot |
| Surrounding Zoning and Uses | North: WRSP Open Space (OS) / Vacant lot<br>South: WRSP High Density Residential (HDR) / Lemos Pointe Apts.<br>East: WRSP MDR-16 / Harvest Subdivision<br>West: Rail road parcel / rail road |
| Access | Site Access is provided from Marcus Rd |

History The project site is part of the Watson Ranch Specific Plan (WRSP) approved by the City Council in November 2018. The WRSP consists of 309 acres north of the Vintage Ranch subdivision and east of the Napa Junction shopping center. The specific plan includes 1,253 dwelling units, approximately 50 acres of parks, and a new hotel. Within the WRSP, 252 acres are owned by American Canyon I, LLC and 57 acres are owned by the Newell Family interests. The Watson Ranch Lot 7 Subdivision (Project) is proposed by KB Homes (Applicant). A Lot 7 location map is included as Attachment 5.

Proposed Development On June 25, 2024, KB Homes (Applicant) submitted a Design Permit and a Vesting Tentative Subdivision Map application for development of 136 single-family homes on a 12.86-acre site in the Medium Density Residential 16 (MDR16) zoning district in Watson Ranch. The project consists of 66 alley loaded plans and 70 traditional plans with front-facing garages. The two-story homes range from 1,412 SF to 2,160 SF with three to five bedrooms and include a two-car garage. The site is west of the Marcus Road and Cartier Street intersection and accessible by Marcus Rd.

The Vesting Tentative Subdivision Map (VTM) would create 136 single-family lots, 4 streets, 2 private alleys, 7 private driveways, and 6 non-residential parcels on Lot 7 of Watson Ranch. The 4 streets (A, B, C, and D) will be dedicated to the City for public use. The "traditional" home lots have a minimum size of 38' x 75' and the "alley loaded" home lots have a minimum size of 32' x 68'. The landscape lots will be managed by the Watson Ranch Lot 7 homeowners association (HOA). A condition of approval will require the applicant to provide an address plan for review and approval prior to map recordation.

The Fire Code for a project of this size requires two main fire-fighting vehicle access points. One access is provided by the project entrance. A second access is provided by a 20-foot wide emergency vehicle access lane (EVA) that begins off Marcus Road, north of the Lemos Pointe apartments, and continues along the east side of a large detention basin located at the southwest of the project. The EVA will also serve as an off-street bicycle lane maintained by the HOA that extends through the subdivision.

The Watson Ranch Lot 7 VTM Resolution, conditions of approval, and preliminary civil plans are available as Attachments 1 to 4. The Planning Commission conducted a public hearing for this project on October 24, 2024. At that meeting, the Planning Commission approved the Design Permit and recommends the City Council approve the Vesting Tentative Subdivision map.

Off-street Bicycle Trail

According to WRSP Figure 7.5, an off-street bicycle and pedestrian trail is required along the south, west, and north perimeter of Watson Ranch Lot 7. The project proposes to modify the trail so that the western portion of the trail does not travel adjacent to the railroads. The proposed trail will enter from Marcus road and turn at the EVA east of the stormwater basin and go northward pass Street D and turn out back to Marcus Road. The width of the EVA is 20' and the width of Street D will be 38.5', with 8.5' of sidewalk on the west side. A stretch of the trail between the EVA and Street B/Alley E will have sharrows and appropriate signage. A map of the WRSP trails is available as Attachment 6.

The trail modification was proposed because the landform grade levels along the west property line is very steep, which would require expensive retaining walls to accommodate a bicycle trail. Furthermore, a trail along this alignment is adjacent to an active railroad which can be unpleasant. Finally, relocating the bicycle lane to the east side of the detention basin allows residents to enjoy a

20’ walking path and bicycle lane.

Standard Conditions

There has been a significant effort in planning and entitling Watson Ranch. These entitlements include: a General Plan Amendment, Watson Ranch Specific Plan (and related Zoning), Large Lot Vesting Tentative Map, and Development Agreement. The project is subject to the American Canyon Municipal Code, the WRSP policies and mitigation measures, the WRSP Development Agreement, and the AC-1 Master Conditions of Approval.

Given the significant analysis already completed, Standard Conditions for the AC-1 portion of Watson Ranch provides a standardized method to ensure each development project will construct its share of physical improvements and environmental mitigation from the Watson Ranch Program Environmental Impact Report. A copy of the AC-1 Master resolution and conditions of approval are available in VTM Exhibit B, Attachment 3.

Public Outreach

City outreach occurred between July 14, 2024, and November 15, 2024. A copy of the public notification addresses and map is included in Attachment 7. Specific events are outlined below:

Jul. 14. 2024 – Project posted on website
Jul. 15, 2024 – Neighborhood letters to introduce the project sent within 500 feet
Oct. 11, 2024 – Public Notice of Planning Commission Meeting Posted on Bulletin Board at City Hall and at Public Safety Building.
Oct. 12, 2024 – Public Hearing Notice mailed to property owners and residents within 500 feet
Oct. 12, 2024 – GovDelivery Notice of Public Hearing Bulletin sent to email subscribers list (4,340 + people)
Oct. 12, 2024 – Public Notice of Planning Commission Meeting published in newspaper.
Oct. 18, 2024 – Staff report published and GovDelivery Notice of public review workshop sent to e-mail subscribers list (4,340 +/-)
Oct. 23, 2024 – GovDelivery Notice Reminder of Planning Commission meeting sent to email subscribers list (4,340 +/-)
Oct. 24, 2024 – Planning Commission Meeting
Nov. 9, 2024 – Public Notice of City Council Meeting published in newspaper.
Nov. 15, 2024 – Staff report published and GovDelivery Notice of public review workshop sent to e-mail subscribers list (4,340 +/-)
Nov. 18, 2024 – GovDelivery Notice Reminder of Planning Commission meeting sent to email subscribers list (4,340 +/-)

The public comments and responses are included in Attachment 8.

## FISCAL IMPACT

The Watson Ranch Lot 7 Subdivision Map required a developer's deposit for review and processing, so there is no fiscal impact for staff's time. If the City Council approves the project, the City will gain 136 single-family homes, which provides additional tax revenue.

## ENVIRONMENTAL REVIEW

The environmental impacts of the Watson Ranch Specific Plan (WRSP) Project, which includes the proposed Watson Ranch Lot 7 Subdivision, were adequately considered in the certified Final EIR for the Watson Ranch Specific Plan Project (State Clearinghouse No. 2015022030) which includes findings, a Mitigation Monitoring and Reporting Program, and a Statement of Overriding Considerations for the Project. Approval of the proposed Tentative Subdivision Map is based on the Final EIR and complies with CEQA. Under CEQA, the Watson Ranch Specific Plan Project FEIR is a program EIR and is generally assumed to be used at a "development level." See, e.g., CEQA Guidelines § 15168. There is no substantial evidence of changed circumstances under CEQA Guidelines section 15162 requiring further CEQA review as the whole of the approvals sought are contemplated under the Project FEIR analysis.

## ATTACHMENTS:

1. Resolution - WR Lot 7 Subdivision
2. Exhibit A VTM Specific Conditions
3. Exhibit B AC1 Master Conditions
4. Exhibit C VTM Plans
5. WR Lot 7 location Map
6. WR Trail Map

**RESOLUTION NO. 2024-XX**

**A RESOLUTION APPROVING A VESTING TENTATIVE SUBDIVISION MAP FOR WATSON RANCH LOT 7 TO CREATE 136 SINGLE FAMILY HOME LOTS ON 12.86 ACRES WITHIN THE WATSON RANCH SPECIFIC PLAN MEDIUM DENSITY RESIDENTIAL-16 ZONING DISTRICT LOCATED WEST OF MARCUS ROAD, ASSESSOR'S PARCEL NUMBERS 059-430-045 (FILE NO. PL24-0012)**

**WHEREAS,** pursuant to Section 65300 of the State Planning and Zoning Law, the City of American Canyon (City) has adopted a General Plan to provide comprehensive long-range planning and a blueprint of the City's future form, including land use and circulation maps that specify the roadway network and the distribution of types and intensities of land; and

**WHEREAS,** the City of American Canyon General Plan land use and zoning designation for the property known as the Watson Ranch Specific Plan property is Town Center, which requires the approval of a specific plan to designate the land uses, range of residential and nonresidential densities and unified design standards within the Watson Ranch Specific Plan property; and

**WHEREAS,** on November 6, 2018, the City Council of the City of American Canyon adopted an Ordinance approving the Watson Ranch Specific Plan that provides for the development of the approximately 309-acre Watson Ranch Specific Plan site with a mixed use community component including a mixed use town center (Napa Valley Ruins and Garden), 1,253 residential units, approximately 23 acres of improved parks, an additional 30 acres of parks, trails and open space, a 10-acre school site, roads and supporting water, wastewater, recycled water and storm drainage infrastructure; and

**WHEREAS**, on June 18, 2019, the City Council approved the Watson Ranch Specific Plan Development Agreement (Ordinance 2019-06, Agreement 2019-A107); and

**WHEREAS,** on June 25, 2024, KB Homes "Applicant" submitted the Watson Ranch Lot 7 Vesting Tentative Subdivision Map "Project" for development of 136 single-family home lots, 4 streets, 2 private alleys, 7 private drives, and 6 non-residential parcels on a 12.86-acre site located west of Marcus Rd, Accessor's Parcel Number 059-430-045 (PL24-0012); and

**WHEREAS,** Chapter 18.22.055 of the Municipal Code sets forth findings required for approval of a tentative subdivision map; and

**WHEREAS,** the proposed map is consistent with the City of American Canyon General Plan, Municipal Code and the Watson Ranch Specific Plan; and

**WHEREAS,** pursuant to the California Environmental Quality Act (CEQA), a final environmental impact report (Final EIR) was prepared for the Watson Ranch Specific Plan, which included the proposed Vesting Tentative Map (VTM), having analyzed the actions contemplated by the VTM and includes required mitigation measures, a Statement of Overriding Considerations and a Mitigation Monitoring and Reporting Program; and

**WHEREAS,** the City of American Canyon Planning Commission conducted a public hearing on October 24, 2024 on the subject application, and unanimously recommended City Council approval; and

**WHEREAS,** a duly-noticed public hearing was held by the City of American Canyon City Council on November 19, 2024 on the subject application, at which time all those in attendance were given the opportunity to speak on this proposal and to submit comments.

**NOW, THEREFORE, BE IT RESOLVED** that the City Council of the City of American Canyon, having considered all the evidence, including any submitted by member of the public, hereby approves the Watson Ranch Lot 7 Vesting Tentative Subdivision Map (PL24-0012), subject to the following Findings and Conditions of Approval.

**SECTION 1: Findings Regarding Environmental Review pursuant to the California Environmental Quality Act (CEQA)**

1. The City of American Canyon makes the following findings and determinations based on substantial evidence in the record as a whole pursuant to the California Environmental Quality Act (Pub. Res. Code §§ 21000 *et seq*.) and its Guidelines (California Code of Regulations, Title 14 §§ 15000, *et seq*.), as each is amended from time to time ("CEQA").

2. Pursuant to CEQA, an Environmental Impact Report (EIR) was prepared, supplemented, and certified for the Watson Ranch Project ("Project EIR"). The Project EIR considered and analyzed the significant adverse environmental impacts of, related mitigation measures for, and reasonable alternatives to, the planning, development, construction, operation, and maintenance of the proposed uses of the Property implemented through the "Project Approvals" of the "Project," including without limitation, the General Plan Amendment, Watson Ranch Specific Plan (and related Zoning), Large Lot Vesting Tentative Map, and Development Agreement. In accordance with CEQA, City certified as legally adequate and complete the Project EIR, and approved the development allowed and approved by said existing and future Project Approvals contemplated by the Project EIR and the Development Agreement.

3. The proposed Vesting Tentative Map for that Watson Ranch Lot 7 is a contemplated "Project Approval" under the Project EIR and the Development Agreement. Under CEQA, a Specific Plan EIR, like the Watson Ranch Specific Plan Project EIR, is generally assumed to be used at a "development level." *See, e.g.,* CEQA Guidelines § 15168. Under controlling CEQA law, particularly CEQA Guidelines section 15162, the legal question is whether the Project EIR, itself, needs updating (through a Subsequent or Supplemental EIR) before the City can consider and approve the Watson Ranch Lot 7 VTM, or whether the Project EIR provides the appropriate CEQA compliance work for the City's consideration and approval of the Watson Ranch Lot 7 VTM. For the following reasons and findings, by law, no such Subsequent or Supplemental EIR can be required by the City, and the Project EIR provides the appropriate CEQA compliance work for the City's consideration and approval of the Watson Ranch Lot 7 VTM.

   First, CEQA Guidelines section 15162 provides as follows [*City responses to the issues raised by Section 15162 are provided in bracketed, italicized text below*]:

   (a) When an EIR has been certified . . . for a project, no subsequent EIR shall be prepared for that project unless the lead agency determines, on the basis of substantial evidence in the light of the whole record, one or more of the following:

   (1) Substantial changes are proposed in the project which will require major revisions of the previous EIR or negative declaration due to the involvement of new significant environmental

effects or a substantial increase in the severity of previously identified significant effects; *There is no substantial evidence in the light of the whole record revealing any changes proposed in the Project, let alone changes that will involve involvement of new significant environmental effects or a substantial increase in the severity of previously identified significant effects. The Watson Ranch Lot 7 VTM implements the Watson Ranch Specific Plan Project, and no new significant environmental effects or substantial increase in the severity of previously identified significant effects not already addressed by the Project EIR will result from that implementation.*

(2) Substantial changes occur with respect to the circumstances under which the project is undertaken which will require major revisions of the previous EIR . . . due to the involvement of new significant environmental effects or a substantial increase in the severity of previously identified significant effects; *There is no substantial evidence in the light of the whole record revealing circumstances under which the Project is undertaken which require major revisions to the Project EIR due to the involvement of new significant environmental effects or a substantial increase in the severity of previously identified significant effects: the Watson Ranch Lot 7 VTM is anticipated by, and is the implementation of, the Watson Ranch Specific Plan Project (and Project Approvals), and no new significant environmental effects or a substantial increase in the severity of previously identified significant effects not already addressed by the Project EIR will result from that implementation*; or

(3) New information of substantial importance, which was not known and could not have been known with the exercise of reasonable diligence at the time the previous EIR was certified as complete or the negative declaration was adopted, shows any of the following [*There is no substantial evidence in the light of the whole record revealing any such new information of any kind has been presented*]:

(A) The project will have one or more significant effects not discussed in the previous EIR .*There is no substantial evidence in the light of the whole record revealing that the Watson Ranch Lot 7 VTM will have one or more significant effects not discussed in the Project EIR: Instead, the Watson Ranch Lot 7 VTM is anticipated by, and are the implementation of, the Watson Ranch Specific Plan Project as fully analyzed by the Project EIR*;

(B) Significant effects previously examined will be substantially more severe than shown in the previous EIR. *There is no substantial evidence in the light of the whole record revealing that the Watson Ranch Lot 7 VTM will result in a situation where significant effects previously examined in the Project EIR will be substantially more severe than shown and discussed in the Project EIR: Instead, the Watson Ranch Lot 7 VTM are anticipated by, and are the implementation of, the Watson Ranch Specific Plan Project as fully analyzed by the Project EIR*;

(C) Mitigation measures or alternatives previously found not to be feasible would in fact be feasible and would substantially reduce one or more significant effects of the project, but the project proponents decline to adopt the mitigation measure or alternative. *There is no substantial evidence in the light of the whole record supporting a determination that mitigation measures or alternatives previously found not to be feasible would in fact be feasible and would substantially reduce one or more significant effects of the Project, but the project proponents decline to adopt the mitigation measure or alternative*; or

(D) Mitigation measures or alternatives which are considerably different from those analyzed in the previous EIR would substantially reduce one or more significant effects on the environment, but the project proponents decline to adopt the mitigation measure or alternative. *There is no substantial evidence in the light of the whole record supporting a determination that mitigation measures or alternatives which are considerably different from those analyzed in the Project EIR would substantially reduce one or more significant effects on the environment, but the project proponents decline to adopt the mitigation measure or alternative. No such mitigation measure nor alternatives have been proposed, nor are warranted, and no rejection of such mitigation measure or alternative by the project applicant has taken place*.

Because there is no substantial evidence in the record to support any of the findings set forth in CEQA Guidelines section 15162, as a matter of law, no additional CEQA work can be required by the City relating to the City's consideration and approval of the Watson Ranch Lot 7 VTM.

Second, similar to CEQA Guidelines section 15162, CEQA Guidelines section 15163 provides that a public agency may choose to prepare a "Supplement" to an EIR - rather than a "Subsequent" EIR - only if (1) any of the findings described in Section 15162 (above) would require the preparation of a Subsequent EIR, yet (2) only minor additions or changes would be necessary to make the Project EIR adequately apply to the changed situation. As stated above, because there is no substantial evidence in the record to support any of the findings set forth in CEQA Guidelines section 15162, then, as a matter of law, no finding can be made under CEQA Guidelines section 15163. Therefore, no additional CEQA work for the Watson Ranch Lot 7 VTM can be required by the City.

Third, and lastly, under the Development Agreement, "to the extent permitted or required by CEQA, City shall use . . . existing environmental assessments, declarations, reports and studies as adequately addressing the environmental impacts of the Project and its Subsequent Approvals without requiring new or supplemental environmental documentation." Development Agreement § 2.04(k). Because CEQA prohibits the City from requiring additional CEQA compliance work for the Watson Ranch Lot 7 VTM approval, for the reasons discussed above, the Development Agreement likewise enforces that CEQA requirement and prohibits additional "new or supplemental environmental documentation." Development Agreement § 2.04(k).

Therefore, the City finds and determines that the Project EIR provides the appropriate CEQA compliance documentation for the City's consideration and approval of the proposed Watson Ranch Lot 7 VTM.

**SECTION 2. FINDINGS**

American Canyon Municipal Code (ACMC) Section 18.22.055 provides that the planning commission shall not recommend approval and the city council shall not approve a tentative subdivision map if any of the following findings are made:

A. That the proposed tentative subdivision map is not consistent with the city's general plan or its elements or other applicable plans.

*The proposed map is consistent with the General Plan because it will provide individual lots with adequate access and utility services to be developed with single family homes. The subdivision proposed to delineate parcels that reflect the proposed land uses and street layout of the Watson Ranch Specific Plan.*

B. That the design or improvement of the proposed subdivision is not consistent with the city's general plan or its elements or any other applicable plans.

*The proposed improvements for the subdivision are consistent with the City's General Plan, Watson Ranch Specific Plan, and the Watson Ranch Development Agreement, including the size of individual lots, as analyzed in the staff report for this project.*

C. That the site is not physically suitable for the type of development proposed.

*The subdivision site is physically suitable for the type of development because it is relatively flat and has space to accommodate the proposed 70 single-family home lots and 66 alley-loaded home lots.*

D. That the site is not physically suitable for the proposed density of development proposed.

*The site is physically suitable for the proposed density of development because the density of development will comply with the limits set out in the Watson Ranch Specific Plan and can be improved and provided with necessary utilities to serve the future development.*

E. That the design of the subdivision or the proposed improvements are likely to cause substantial environmental damage or substantially and avoidably injure fish or wildlife or their habitat.

*The subdivision and related improvements would not adversely affect wildlife habitat areas, as described in the Watson Ranch Environmental Impact Report (SCH # 2015022030), approved by the City Council on November 6, 2018.*

F. That the design of the subdivision or the type of improvements is likely to cause serious public health problems.

*The subdivision improvements are consistent with the improvements provided for other development in the City and are not likely to cause serious health problems. In addition to typical improvements, the applicant is required to provide a bicycle lane along their frontage adjacent to Marcus Rd. The bicycle lane will extend the bicycle lane north, which runs parallel to the Napa Valley Vine Trail.*

G. That the design of the subdivision or the type of improvements will conflict with easements, acquired by the public at large, for access through or use of, property within the proposed subdivision. In this connection, the city council may approve a tentative subdivision map if it finds that alternate easements, for access or for use, will be provided, and that these will be substantially equivalent to one previously acquired by the public. This subsection shall apply only to easements of record or to easements established by judgment of a court of competent jurisdiction and no authority is granted to the city council to determine that the public at large has acquired easements for access through or use of property within the proposed subdivision.

*The project poses no conflicts with easements. The project will be required to dedicate Streets A, B, C, and D for public use.*

H. That the discharge of wastewater, including sewage and stormwater runoff, from the proposed subdivision would result in a violation of existing water quality requirements prescribed by the regional water quality control board.

*All wet utilities are already constructed (stubbed) along Marcus Road. There will be no conflicts with the regional water quality board.*

The Watson Ranch Lot 7 Vesting Tentative Subdivision Map (PL24-0012) is approved because none of the findings to disapprove the proposed subdivision can be made, subject to the following conditions.

**SECTION 3: CONDITIONS OF APPROVAL**

The Watson Ranch Lot 7 VTM incorporates specific conditions of approval included as Exhibit A, and the adopted Master Conditions of Approval for the AC-1 Portion of Watson Ranch (Resolution No. 2020-106) as Exhibit B to this Resolution.

**PASSED, APPROVED** and **ADOPTED** at a regularly scheduled meeting of the City Council of the City of American Canyon held on the 19th day of November, 2024, by the following vote:

AYES:
NOES:
ABSTAIN:
ABSENT:

_____
Leon Garcia, Mayor

ATTEST:

_____
Taresa Geilfuss, CMC, City Clerk

APPROVED AS TO FORM:

_____
William D. Ross, City Attorney

EXHIBITS:

**APPROVAL, EXHIBITS, AND EXPIRATION**

**Planning Conditions**

| ***Specific Condition*** | ***Developer Obligations*** | ***Mechanism*** | ***Implementation*** | ***Status*** |
|---|---|---|---|---|
| 1. | The Vesting Tentative Subdivision Map for Watson Ranch Phase Lot 7 (PL24-0012; APN 059-430-045) (sometimes referred to herein as "Watson Ranch Lot 7 VTM" and sometimes referred to herein as the "Project") to subdivide Large Lot 7 (approximately 12.86-acres) into 136 single-family house lots, 4 streets, 2 private alleys, 7 private drives, and 6 non-residential parcels, is approved as shown on the Vesting Tentative Map for Watson Ranch Lot 7 prepared by Carlson, Barbee & Gibson, revised through September, 2024, consisting of multiple sheets, marked "Exhibit C" to the Resolution approving Watson Ranch Lot 7 VTM, and on file in the Community Development Department. The final map for Watson Ranch Lot 7 VTM is referred to herein as the "Final Map." | Watson Ranch Lot 7 VTM | Final Map Recordation | Applicable |
| 2. | The Master Conditions adopted for the AC-1 Portion of the Watson Ranch Specific Plan are attached hereto and incorporated herein by this reference as if set forth herein in full, and shall apply to the Project where relevant, i.e., where such Master Conditions set general principles applicable to all Parcels comprising the AC-1 portion of the Watson Ranch Specific Plan, and/or where such Master Conditions set specific requirements relating to Lot 7, which Lot 7 comprises the land within the Watson Ranch Lot 7 VTM. | SIA (Site Improvement Agreement) | Execution of SIA | Applicable |
| 3. | Development of the subdivision and the individual lots comprising Watson Ranch Lot 7 VTM shall be subject to the Watson Ranch Lot 7 Residential Design Guidelines, on file in the Community Development Department. | Design Guidelines | Building Permit | Applicable |
| 4. | WATSON RANCH LOT 7 VTM shall have that life set forth in the Watson Ranch Specific Plan Development Agreement (Development Agreement). | Development Agreement | Final Map | Applicable |
| 5. | Applicant shall defend, indemnify, and hold harmless the City of American Canyon, its elected and appointed officials, employees, volunteers, and legal counsel, as set forth in the Development Agreement. | Development Agreement | Final Map | Applicable |
| 6. | Applicant shall be responsible for paying for charges related to the processing of WATSON RANCH LOT 7 VTM as set forth in the Development Agreement. | Development Agreement | Final Map | Applicable |

| | | | | |
|---|---|---|---|---|
| 7. | Compliance of the Project with City's Inclusionary Housing Requirements is as set forth in the Development Agreement. | Development Agreement | Sale of Parcel 24 (Lemos Pointe Apartments) | Completed |
| 8. | Applicant shall make all public dedications shown on WATSON RANCH LOT 7 VTM through the Final Map, and City shall accept those public dedications. | Final Map | Recordation | Applicable |
| 9. | According to the Watson Ranch Specific Plan Section A.4.2.2, equal concern should be given to side elevations on corner lots and rear elevations where visible to the public. Enhanced aesthetic wrapping shall be provided for the side and rear of homes visible to the public located on Lot 1, 16, 17, 32, 33, 49, 50, 66, 67, 78, 79, 90, 91, 92, 93, 94, 96, 97, 99, 100, 102, 103, 105, 106, 108, 109, 110, 111, 114, 119, 122, 123, 127, 130, 131, 133, 134, and 136. | WRSP | Building Permit Issuance | Applicable |
| 10. | Prior to the issuance of the first building permit, the applicant shall provide a landscaping plan for non-residential Parcels A, B, C, and D. | City Standards | Building Permit Issuance | Applicable |

**Public Works Conditions**

**GENERAL CONDITIONS OF APPROVAL**

| ***Specific Condition*** | ***Developer Obligations*** | ***Mechanism*** | ***Implementation*** | ***Status*** |
|---|---|---|---|---|
| 11. | The Applicant shall be responsible fees an costs relating to Final Map check, Improvement Plans check, inspections and all other related City acts shall be set forth in the Development Agreement. | Development Agreement | Relevant City Act | Applicable |
| 12. | All improvements shall be designed in accordance with the American Canyon Municipal Code (ACMC), City of American Canyon Engineering Standard Plans and Specifications for Public Improvements (City Standards), except as specifically noted otherwise in these conditions. | Specific Conditions | Relevant SIA, Building Permits, Certificate of Occupancy | Applicable |
| 13. | All existing overhead utilities, both on-site and along project frontages, and all new utilities to serve the project, shall be placed underground. Exceptions may be allowed for surface mounted transformers, pedestal mounted terminal boxes and meter cabinets. | Specific Conditions | SIA | Applicable |
| 14. | Unless otherwise explicitly permitted by the Development Agreement, all existing wells, septic tanks and/or underground fuel storage tanks shall be abandoned under permit and inspection of Napa County | Development Agreement | Relevant Permit | Applicable |

| | | | | |
|---|---|---|---|---|
| | Department of Environmental Services or other designated agency. If there are none, the Project engineer shall provide a letter describing the scope of the search done to make this determination. | | | |
| 15. | A detailed Soils Investigation/Geotechnical Report shall be prepared and submitted for review. The report shall address, at a minimum, potential for liquefaction, R-values, expansive soils and seismic risk. The improvement plans shall incorporate all design and construction criteria recommended in the Geotechnical Report. | Specific Conditions | Improvement Plans Submittal | Applicable |
| 16. | A Drainage Report prepared by a California Registered Civil Engineer shall be submitted for review with the initial submittal of the Improvement Plans. The Drainage Report shall include hydrologic and hydraulic calculations to support the design and sizing of all public and private drainage facilities including storm drains, detention facilities, and weirs. The report shall include hydraulic grade line profiles for all proposed storm drains for the 10-year, 25-year and 100-year storm events. | Specific Conditions | Improvement Plans Submittal | Applicable |
| 17. | A final detailed post-construction Stormwater Control Plan (SWCP) that identifies and sizes all permanent post-construction stormwater treatment BMPs shall be prepared and submitted for review and approval. The SWCP shall be prepared in accordance with the latest edition of the *Bay Area Stormwater Management Agencies Association (BASMAA) Post-Construction Manual* and the requirements of the State Water Resources Control Board Phase II Municipal Separate Storm Water System (MS4) General Permit (Order 2013-0001 DWQ). It is the City's discretion whether to accept alternative treatment facilities other than bioretention. | Specific Conditions | Improvement Plans Submittal | Applicable |
| 18. | A Post Construction Stormwater Operations and Maintenance Plan that includes a plan sheet showing all storm drain and water quality infrastructure that is to be maintained, along with detailed instructions and schedules for the ongoing maintenance and operation of all post-construction stormwater BMPs shall be submitted for review and approval by the City Engineer. Once approved, the Applicant shall enter into an agreement (transferrable to future Homeowner's Association) with the City that provides the terms, conditions, and security associated with the ongoing | Specific Conditions | Improvement Plans Submittal | Applicable |

| | | | | |
|---|---|---|---|---|
| | requirements of the Post Construction Stormwater Best Management Practices. | | | |
| 19. | Final Maps, as defined in the Subdivision Map Act, shall be prepared by a licensed surveyor or civil engineer. Final Maps shall show all lots, parcels, rights-of-way, and easement(s), and shall be submitted to the City Engineer for review. Final Maps shall be in substantial conformance with the approved Tentative Map and all applicable conditions of approval. Final Maps are not valid until they have been approved by the City and recorded. Closure calculations shall be provided at the time of each initial Final Map submittal. All calculated points within the maps shall be based upon one common set of coordinates. All information shown on the Final Maps shall be directly verifiable by information shown on the closure calculation printout. The point(s) of beginning shall be clearly defined. All lot acreages shall be shown on the Final Maps and shall be verifiable from information shown on the closure calculation printout. A current title report (within past 30 days) shall be submitted at the time of each initial Final Map submittal. | Specific Conditions | Final Map<br>Approval and Recordation | Applicable |
| 20. | Where relevant, Applicant shall secure all necessary rights-of-way and public and private easements for both onsite and offsite Public Improvements. Public rights-of-way and easements shall be dedicated to the City on the Final Map or granted by separate instrument, all pursuant to the Development Agreement. If granted by separate instrument, Applicant shall prepare all necessary legal descriptions and deeds. | Specific Conditions | Final Map Dedication and Recordation | Applicable |
| 21. | To the extent any offsite public improvements require the acquisition of property not currently owned by the Applicant or the City, the Development Agreement shall apply, and if the Development Agreement does not address the issue, the California Subdivision Map Act shall apply. | Specific Conditions | Final Map<br>Submittal | Applicable |
| 22. | The Applicant shall submit all site Improvement Plans, prepared by a registered Civil Engineer, for review and approval of the City's Public Works Department. Please be aware that this is separate submittal from the building permit application. The final plan set shall include all civil, landscape and joint trench drawings under a single cover sheet. The Applicant shall submit a Rough Grading Plan for all phases for review and approval of the City. Rough grading Plan approval and site grading may commence prior to Improvement Plan | Specific Conditions | Improvement Plans Submittal | Applicable |

| | | | | |
|---|---|---|---|---|
| | and Final Map approval. An Encroachment Permit shall be required for any work within City right of way, unless explicitly not required by the City | | | |
| 23. | All Public Improvements, including without limitation street, water mains, sewer mains, recycled water facilities, and storm drains shall be clearly labeled as Public" on the Improvement Plans, along with clear demarcation points where they become Public. Likewise, all Private Improvements, including without limitation, alleys, drives, streetlights and storm drains, shall be clearly labeled as Private " on the Improvement Plans, along with clear demarcation points. | Specific Conditions | Improvement Plans Submittal | Applicable |
| 24. | All public water service laterals or services (domestic, recycled and fire water) shall include approved backflow prevention devices. | Specific Conditions | During Construction | Applicable |
| 25. | Cathodic protection shall be provided for all water valves, fittings, hydrants, meters, backflow devices, ductile iron pipe, and other metal appurtenances, regardless of the findings of any soils corrosivity analysis. Cathodic Protection Details shall be included in the Improvement Plans. | City Standards | During Construction | Applicable |
| 26. | The Applicant shall keep adjoining public and private streets free and clean of project dirt, mud, materials, and debris during the construction period in accordance with an approved SWPPP and Erosion and Sediment Control Plan using appropriate BMPs and as is found necessary by the City Engineer. | Specific Conditions | During Construction | Applicable |
| 27. | If any hazardous material is encountered during the construction of this project, all work shall be immediately stopped and the Fire Department, Napa County Department of Environmental Services or other designated agency, and the City Inspector shall be notified immediately. Work shall not proceed until clearance has been issued by all of these agencies. | Specific Conditions | During Construction | Applicable |
| 28. | Prior to final preparation of the subgrade and placement of base materials, all underground utilities shall be installed and service connections stubbed out behind the sidewalk. Public utilities, Cable TV, sanitary sewers, and water lines shall be installed in a manner that will not disturb the street pavement, curb, gutter and sidewalk, when future service connections or extensions are made. | Specific Conditions | During Construction | Applicable |

| | | | | |
|---|---|---|---|---|
| 29. | Where soil or geologic conditions encountered in grading operations are different from that anticipated in the soil and/or geologic investigation report, or where such conditions warrant changes to the recommendations contained in the original soil investigation, a revised soil or geologic report shall be submitted for approval by the City Engineer. Additionally, if field conditions warrant installation of any subdrains, the location, size and construction details must be provided to the City for review and approval prior to construction. | Specific Conditions | During Construction | Applicable |
| 30. | All new fire hydrants shall be covered with burlap sacks until the hydrants have been tested and found to be in conformance with City flow requirements. No storage of combustible materials or construction of building shall be permitted until all hydrants meet City flow requirements, or until alternative fire protection measures are in place, as determined by the City. | Specific Conditions | Pre- and during construction | Applicable |
| 31. | Prior to placing the final lift of asphalt, all public storm drains and sanitary sewer lines shall be video inspected at the Applicant's expense. All video media (CD, DVD, or portable hard drive) shall be submitted to the City. If any inadequacies are found, they shall be repaired prior to the placement of the final lift of asphalt. | Specific Conditions | Prior to placing the final lift of asphalt | Applicable |
| 32. | All streets, curbs, gutters, sidewalks or other public facilities damaged in the course of construction associated with this Project shall be the responsibility of the Applicant and shall be repaired to the satisfaction of the City at the Applicant's expense. | Specific Conditions | During and post Construction | Applicable |
| 33. | After all of the new underground utilities within existing public streets have been installed, the entire affected areas shall be milled and repaved to present a neat finished pavement area. Multiple trench patches are not acceptable. | Specific Conditions | during construction | Applicable |
| 34. | All construction stormwater pollution prevention best management practices (BMP's) shall be installed as the first order of work and in accordance with the *State Water Resources Control Board's General Permit for Stormwater Discharges Associated with Construction and Land Disturbance Activities (Order 2022-0057-DWQ, as amended)*, the Applicant's Storm Water Pollution Prevention Plan (SWPPP), and the City's Erosion and Sediment Control Plan in accordance with the City's MS4 Permit. All stormwater BMP's shall be maintained to the satisfaction of the Qualified SWPPP Developer (QSD), | Specific Conditions | Pre-Construction | Applicable |

| | | | | |
|---|---|---|---|---|
| | Qualified SWPPP Practitioner (QSP), and the City Engineer. | | | |
| 35. | Construction and grading activities on the site shall be limited to the hours between 7:00 a.m. and 6:00 p.m., Monday through Friday, and 9:00 a.m. and 5:00 p.m. on Saturday. Work on Sunday and holidays shall require approval from the City Engineer. If Sunday and/ or holiday work is approved, construction and grading activities on the site shall be limited to the hours between 10:00 a.m. and 6:00 p.m. on Sundays and State and Federal holidays. | Specific Conditions | Any Construction and Grading Activity | Applicable |
| 36. | In accordance with the Development Agreement, City shall execute any and all Will- Serve Letter( s) and Water Supply Report( s) that will quantify the new potable water demand for the proposed development and will identify the necessary mitigation for the development's demands with " wet-water" offsets with one or more of the options set forth in the Development Agreement. | Specific Conditions | Relevant Permit | Applicable |
| 37. | With the exception of water used for loading and testing of potable water lines, all construction water used for the project shall be obtained from a source other than American Canyon potable water sources. The Applicant shall provide verification that an outside source of construction water, e.g., recycled water, has been established and will be available for the duration of the project construction. | Specific Conditions | During Construction | Applicable |
| 38. | All Public Improvement landscaping shall be designed to use recycled water for irrigation. Recycled water landscaping shall be designed to comply with California Code of Regulations Title 22 and shall include design details to prevent runoff of recycled water. The irrigation system shall include an ET/SMART controller. | Specific Conditions | Improvement Plans Submittal | Applicable |

**SPECIAL CONDITIONS OF APPROVAL**

| ***Specific Condition*** | ***Developer Obligation*** | ***Mechanism*** | ***Implementation*** | ***Status*** |
|---|---|---|---|---|
| 39. | The Applicant shall submit Improvement Plans prepared by a registered Civil Engineer (Engineer of Record) in substantial conformance with the preliminary civil plans titled "Vesting Tentative Map, Watson Ranch – Lot 7" prepared by CBG Engineers, dated September 27, 2024, except as modified by these conditions. This shall be a | Specific Conditions | Improvement Plans Submittal | Applicable |

| | | | | |
|---|---|---|---|---|
| | single set of improvement plans for all of the improvements in all phases. | | | |
| 40. | Improvement Plans shall be tied to the State of California coordinate system. | Specific Condition | Improvement Plans Submittal | Applicable |
| 41. | The Applicant shall design and construct all the **Public Improvements** as shown on the Vesting Tentative Map, Watson Ranch – Lot 7, except as modified below:<br>a. Provide a gate at the entrance to the EVA/Trail at the intersection of Street A.<br>b. Provide a safety barrier at the edge of the trail/pedestrian access east side of Basin D.<br>c. The open end of all storm drainage pipes shall be designed and equipped with a barrier that will prevent a person, pets or wild animals from entering the storm drainage system. | Specific Condition | Relevant Approval | Applicable |
| 42. | The Applicant shall design and construct all the Private Improvements as shown on the Vesting Tentative Map, Watson Ranch - Lot 7, noted below:<br>a. All Drives and Alleys<br>b. Streetlights within drives and alleys.<br>c. Storm drain facility collecting drainage from Drives and Alleys. | Specific Conditions | Relevant Approval | Applicable |
| 43. | Prior to SUBMITTAL OF THE IMPROVEMENT PLANS, the Applicant shall:<br>a. Submit the City's "Improvement Plan Checklist".<br>b. Pay an initial cash deposit for City plan check services in amount to be determined by the City prior to the time of submittal. The Project engineer shall contact City staff to discuss submittal details to determine initial deposit amount.<br>c. Provide the following:<br>(1) Public Street Repair Plan<br>(2) Utility Plan and Joint Trench Plan<br>(3) Construction Storm Water Pollution Prevention Plan (SWPPP) and a City Erosion and Sediment Control Plan (ESCP)<br>(4) Drainage Report<br>(5) Post-Construction Stormwater Control Plan (SWCP)<br>(6) Geotechnical Report | Specific Conditions | Prior to the Submittal of any Improvement Plans | Applicable |

| | | | | |
|---|---|---|---|---|
| | (7) Construction Traffic Control Plan.<br><br>d. Submit a water and sewer Will Serve application. | | | |
| 44. | Prior to APPROVAL OF THE IMPROVEMENT PLANS, the Applicant shall:<br><br>a. Provide written acknowledgment by the Geotechnical Engineer of Record that the Plans incorporate all design and construction criteria specified in the Geotechnical Report.<br><br>b. Provide documentation demonstrating that the existing PG&E pole line easements (1463 OR 766) has been quitclaimed or otherwise vacated.<br><br>c. Provide documentation demonstrating that the existing roadway easement in favor of Richard J. Falls (Book L, Deeds page 170) has been quitclaimed or otherwise vacated.<br><br>d. Furnish proof that all permits that may be required by the California Department of Fish & Game, State and Regional Water Quality Control Board, US Army Corps of Engineers and any other regulatory agencies with jurisdiction over the proposed construction have been obtained.<br><br>e. Complete and submit the City's Erosion and Sediment Control Plan (ESCP) Template. Applicant may refer to a SWPPP, as appropriate, by referencing page number within the SWPPP that addresses the requirements of the ESCP.<br><br>f. Submit a copy of the Notice of Intent and WDID# for coverage under the State Water Resources Control Board's General Permit for Stormwater Discharges Associated with Construction and Land Disturbance Activities (Order 2022-0057-DWQ). | Specific Conditions | Prior to approval of improvement plans | Applicable |
| 45. | Prior to COMMENCEMENT OF CONSTRUCTION ACTIVITIES, the Applicant shall:<br><br>a. Pay off all current account balances with the City of American Canyon. | Specific Conditions | Prior to Commencement of Construction | Applicable |

| | | | | |
|---|---|---|---|---|
| | b. Pay an inspection fee in amount to be determined at the time of commencement for the City's inspection of the Public Improvements.<br><br>c. Conduct a pre-construction meeting with representatives of the City whereby the Applicant, the Legally Responsible Party (LRP), Qualified SWPPP Practitioner (QSP), Qualified SWPPP Developer (QSD), and/or the Contractor provides the following:<br><br>(1) Six (6) full-size bond copies of the approved Improvement Plans for the City's use.<br>(2) One (1) job-site copy of the latest edition of the City Standards for the Contractor use.<br>(3) One (1) job-site copy of the SWPPP for use by the LRP, QSP, QSD, and Contractor.<br>(4) Electronic copies of Improvement Plans and SWPPP | | | |
| 46a. | Prior to RECORDATION OF EACH FINAL MAP, the applicant shall:<br><br>a. Construct all of the Public and Private Improvements to the satisfaction of the City. Alternatively, the Applicant may enter into a Subdivision Improvement Agreement with the City agreeing to complete all of the Public and Private improvements within that final map phase prior to Occupancy of the first unit on that final map. Such Agreements will require the Applicant to provide bonds, proof of workers compensation insurance, and general liability insurance in the forms and amounts as deemed satisfactory to the City. | Specific Conditions | Prior to Recordation of Final Maps | Applicable |
| 46b. | b. Establish a Homeowner's Association (HOA) in accordance with State law with recorded Codes, Covenants, & Restrictions (CC&Rs) that are satisfactory to the City Engineer and City Attorney to provide long-term and ongoing maintenance of all of the Private Improvements identified above. Specifically, the HOA will be responsible for | Specific Conditions | Prior to Recordation of Final Maps | Applicable |

| | | | | |
|---|---|---|---|---|
| | the long-term and ongoing maintenance of the trails within the limits of the subdivision and the pavement of the emergency vehicle access/trail east of Basin D. The City will have enforcement authority over the HOA's maintenance obligations and the obligation to review and approved proposed changes amendments to the CC&R's. The CC&R's shall require the HOA to create and maintain a separate maintenance reserve fund in the amount of a percentage of the cost of constructing the HOA maintained improvements listed above. Said percentage will be determined by the City prior to recordation of the CC&Rs. | | | |
| 46c. | c. Generally, in substantial conformity with that which is shown on the Watson Ranch – Lot 7 Vesting Tentative Map, convey all easements and dedications, public and private, for the construction, use and/or maintenance of roads or other access, drainage facilities, parks, utilities, and post-construction storm water management facilities in within each Final Map on said Final Map or by separate instruments. All dedications to the City shall be irrevocable offers of dedication. Specific public offers of dedication include:<br><br>i. Streets A, B, C and D in fee for public road and utility purposes.<br>ii. An easement over Parcel C for public utility purposes.<br>iii. An easement over Alley E, Alley F and Drives G through M for public utility purposes.<br>iv. Dedication of public access easements over Parcels A and O.<br>v. Provide dedication of approximately 792 SF of public right-of-way by separate instrument from the owner(s) of the Adjusted Parcel B (APN 059-430-046)<br>vi. Furnish proof of payment of the mapping service fee as required by Napa County Board of Supervisors Resolution No. 92-119. | Specific Conditions | Prior to Recordation of Final Maps | Applicable |

| | | | | |
|---|---|---|---|---|
| 47. | Parcels A, B, C and N shall be reserved by the owner and granted in fee to the Homeowners Association as common areas. | Specific Conditions | Prior to Recordation of Final Maps | Applicable |
| 48. | Alley E, Alley F and Drives G through M shall be reserved by the owner and granted in fee to the Homeowners Association as private streets. | Specific Conditions | Prior to Recordation of Final Maps | Applicable |
| 49. | Prior to APPROVAL OF A BUILDING PERMIT, the Applicant shall:<br><br>a. Pay all account balances and current City and American Canyon Fire District fees (Mitigation & Capacity) based on the rates in effect at the time of permit issuance. These fees include, but may not be limited to the following: Traffic Mitigation, General Plan Update, Civic Facilities, Fire District, Water Capacity, Zero Water Footprint Mitigation and Wastewater Capacity. | | Prior to Approval of Building Permit | |
| 50. | Prior to acceptance of any public improvements of release of Project Bonds, the Applicant shall:<br><br>a. Submit an inspector's punch list indicating that all of the public improvements are constructed in substantial conformance with the approved improvement plans and to the satisfaction of the City Engineer.<br><br>b. Restore all adjacent off-site road surfaces to pre-project conditions.<br><br>c. Submit a certification by the Geotechnical Engineer of Record that all the work has been completed in substantial conformance with the recommendations in Soils Investigation/Geotechnical Report.<br><br>d. Provide digital copy of the Improvement Plans that include all as-built or field changes, in digital (.pdf) and AutoCAD Civil 3D (.dwg) format (void of any AutoCAD block formats preventing full editing capabilities of the drawings), compatible with the City's current AutoCAD Civil 3D version, and tied to the NAD83 (California Zone 2, feet) coordinate system. | Specific Conditions | Prior to release of Bonds | Applicable |

| | | | | |
|---|---|---|---|---|
| | e. Provide proof that all relevant Conditions of Approval have been satisfied.<br><br>f. Provide a letter stating that all of the Developer's Conditions of Approval have been met.<br><br>g. Provide a letter from the Civil Engineer of Record and Landscape Architect of Record certifying that all the site improvements were constructed and inspected in substantial conformance with the approved improvement plans and City Standards.<br><br>h. Provide proof from the Architect of Record, Structural Engineer of Record, and/or other design professionals who signed the building permit plan submittal indicating that all building improvements have been constructed in substantial conformance with approved plans.<br><br>i. Execute a post-construction Stormwater Operations and Maintenance Agreement with the City. | | | |

**Fire District Conditions**

**GENERAL - FIRE**

| ***Specific Condition*** | ***Developer Obligation*** | ***Mechanism*** | ***Implementation*** | ***Status*** |
|---|---|---|---|---|
| 51. | In accordance with the standard mitigation measures and conditions of approval set forth by the City of American Canyon, the developer shall pay the Fire Impact Fees (see current Standard Fees and Charges adopted by resolution), prior to the issuance of any building permits. | Specific Condition | Issuance of Building Permit | Applicable |
| 52. | New buildings and additions to existing buildings shall conform to requirements set forth in the currently adopted editions of the California Residential Code, California Fire Code, City of American Canyon amendments, and Nationally Recognized Standards. | Specific Condition | Relevant Permit | Applicable |

| | | | | |
|---|---|---|---|---|
| 53. | Buildings in excess of two stories shall pay Aerial Apparatus mitigation fees prior to the issuance of any building permits. (see current Standard Fees and Charges adopted by resolution). | Specific Condition | Relevant Permit | Applicable |
| 54. | All new residential homes are required to be provided with fire sprinklers. Fire sprinkler plans, calculations, and material cut sheets shall be submitted for review and approval for each of the model homes. After that, each lot shall require an individual fire sprinkler permit. Fees shall be charged in accordance with the adopted fee schedule and paid prior to release of individual permits. | Specific Condition | Relevant Permit | Applicable |
| 55. | All Fire related underground piping and fire appurtenances shall be shown on the Civil plan submittal. In addition to the Civil plan submittal, at least (1) plan set under separate cover shall be submitted to American Canyon Building Division for routing to the American Canyon Fire Protection District detailing all underground piping and related fire appurtenances including but not limited to underground piping, underground sweep detail, underground trench details showing depth of burial, type of backfill, manufacturer's specifications of piping, valves joints, fittings and calculated size and locations of thrust blocks, hydrants locations (designate public or private), gate shut-off valves, PIV's, FDC's, fire pumps, fire pump and/or riser rooms. | Specific Condition | Relevant Permit | Applicable |
| 56. | Underground utility contractor, architect and fire sprinkler contractor shall coordinate the location of risers and control valves prior to the issuance of a building permit. | Specific Condition | Relevant Permit | Applicable |
| 57. | Fire Department plan review shall be based on the information submitted at the time of permit application. Any changes to the approved/permitted scope of work including additions, alterations, demolition, repair or a change in occupancy/use may impact the project requirements, including but not limited to the installation of additional fire protection systems or components shall be submitted as revision. Revisions shall be approved prior to inspections being completed. | Specific Condition | Relevant Permit | Applicable |
| 58. | An approved water supply capable of supplying the required fire flow for fire protection systems shall be provided to all premises upon which facilities or buildings are hereby constructed or moved into or within the City. Required fire flow and hydrant distribution shall be in accordance with Appendix B and C of the California Fire Code. Applicant shall demonstrate on plan submittal; square footage of each building on plan and provide the required fire flow information. Applicant shall demonstrate that the number and spacing of onsite fire hydrants meets with requirements of the California Fire Code. | Specific Condition | Relevant Permit | Applicable |

| | | | | |
|---|---|---|---|---|
| 59. | Fire Protection systems shall be installed in accordance with provisions set forth in the California Fire Code as amended by the American Canyon Fire Protection District and the applicable National Fire Protection Association Standard. | Specific Condition | Relevant Permit | Applicable |
| 60. | Fire Apparatus Access Roads shall be designed in accordance with provisions set forth in the California Fire Code Chapter 5 and Appendix D as amended by the American Canyon Fire Protection District and the applicable Public Works Standard. | Specific Condition | Relevant Permit | Applicable |
| 61. | Fire apparatus access roads shall have an unobstructed minimum width of 20 feet (curb to curb) and a minimum unobstructed vertical clearance of 13' 6". They shall have an all-weather paved surface capable of supporting a GVW of 71,000 pounds. | Specific Condition | Relevant Permit | Applicable |
| 62. | Access roads shall be completed with all-weather surfaces prior to the stockpiling of combustible materials or beginning combustible construction. Fire apparatus access shall be provided to within 150 feet of the most remote portions of all building from an approved exterior route. If this cannot be achieved fire apparatus turn arounds will be needed. | Specific Condition | Relevant Permit | Applicable |
| 63. | Fire apparatus access roads shall not be obstructed in any manner, including the parking of vehicles. Vertical traffic calming in the form of speed pumps, humps or dips are prohibited along fire access roads without prior approval of the fire Code Official. The minimum width and clearances established in Section 503.2.1 shall be maintained at all times. | Specific Condition | Relevant Permit | Applicable |
| 64. | When required by the Fire Chief, fire apparatus access roads shall be designated as Fire Lanes and appropriate signs and/or markings installed in accordance with the California Vehicle Code and approved City standards. | Specific Condition | Relevant Permit | Applicable |
| 65. | Parking shall not be permitted on roads / alleys less than 26-feet in width. Parking on one side of the street is permitted when the road is between 27-feet and 35-feet. | Specific Condition | Relevant Permit | Applicable |
| 66. | Where applicable improvement plan submittals for permit shall include locations of fire lane red curbing and fire lane signage. Please refer to and include City Public Works Standard FP-2A & 2B with plan submittals for permitting. | Specific Condition | Relevant Permit | Applicable |
| 67. | The City of American Canyon requires that a fire hydrant be in service within 250 feet of the furthest point of construction prior to the stockpiling of combustible materials for the beginning of construction. | Specific Condition | Relevant Permit | Applicable |

**APPLICABLE MITIGATION MEASURES FROM THE WATSON RANCH PROGRAM EIR**

Mitigation Measures with strikethrough text do not apply.

| Mitigation Measures | Method of Verification | Timing of Verification | Responsible for Verification | Verification of Completion | |
|---|---|---|---|---|---|
| | | | | Date | Initial |
| **Section 4.1: Aesthetics** | | | | | |
| ~~**Mitigation Measure 4.1-1: *Water Tank Visibility*.** As required by the 2004 *Proposed Water Tanks (2) Mitigated Negative Declaration*, construction plans for the Zone 3 water tank shall incorporate the following mitigation:~~<br>~~1. A landscaped earthen berm shall be constructed around the tank site to eliminate direct views of the water tank as much as feasible from the areas surrounding the tank site. The earthen berm shall be landscaped with trees and other vegetation suitable to the City, such as evergreen trees, to screen the water tank from surrounding areas, reduce soil erosion, and blend the berm with the surrounding vegetation.~~<br>~~2. The water tank shall be painted a neutral color deemed appropriate by the City so the tank blends with the surrounding hillside vegetation as much as possible.~~ | ~~Approval of water tank plans~~ | ~~Prior to issuance of grading permit~~ | ~~City of American Canyon~~ | | |
| **Mitigation Measure 4.1-3: *Lighting Plan*.** Prior to any site disturbance activities, the Project Applicant shall submit a construction lighting plan to the City for approval. The construction lighting plan shall ensure that the minimum amount of lighting is used to meet safety requirements and to ensure that limited spillover occurs to nearby sensitive uses. All lighting shall be directed downward and away from surrounding land uses. | Approval of construction lighting plan | Prior to any site disturbance activities | City of American Canyon | | |

| Section 4.2: Air Quality and Greenhouse Gas Emissions | | | | | |
|---|---|---|---|---|---|
| **Mitigation Measure 4.2-1: *Construction Fugitive Dust Emissions*.** The following Bay Area Air Quality Management District (BAAQMD) Best Management Practices (BMPs) and additional mitigation measures for fugitive dust control shall be required for all construction activities within the project area. These measures would reduce fugitive dust emissions primarily during soil movement and grading, but also during vehicle and equipment movement on unpaved project sites.<br>*Basic BMPs that Apply to All Construction Sites*<br>1. All exposed surfaces (e.g., parking areas, staging areas, soil piles, graded areas, and unpaved access roads) shall be watered two times per day.<br>2. All haul trucks transporting soil, sand, or other loose material off site shall be covered.<br>3. All visible mud or dirt track-out onto adjacent public roads shall be removed using wet power vacuum street sweepers at least once per day. The use of dry power sweeping is prohibited.<br>4. All vehicle speeds on unpaved roads shall be limited to 15 miles per hour (mph).<br>5. All streets, driveways, and sidewalks to be paved shall be completed as soon as possible. Building pads shall be laid as soon as possible after grading unless seeding or soil binders are used.<br>6. Idling times shall be minimized either by shutting equipment off when not in use or reducing the maximum idling time to five minutes (as required by the California airborne toxics control measure Title 13, Section 2485 of CCR). Clear signage shall be provided for construction workers at all access points.<br>7. All construction equipment shall be maintained and properly tuned in accordance with manufacturer's specifications. All equipment shall be checked by a certified mechanic and determined to be running in proper condition prior to operation. | Notes on construction plans; site inspections to verify BMPs are implemented | During construction activities | City of American Canyon | | |

| Mitigation Measures | Method of Verification | Timing of Verification | Responsible for Verification | Verification of Completion | |
|---|---|---|---|---|---|
| | | | | Date | Initial |
| 8. A publicly visible sign shall be posted with the telephone number and person to contact regarding dust complaints. This person shall respond and take corrective action, if necessary, within 48 hours. BAAQMD's phone number shall also be visible to ensure compliance with applicable regulations.<br>*Additional BMPs that Apply to All Construction Sites*<br>1. All exposed surfaces shall be watered at a frequency adequate to maintain minimum soil moisture of 12 percent. Moisture content may be verified by lab samples or moisture probe.<br>2. All excavation, grading, and/or demolition activities shall be suspended when average wind speeds exceed 20 mph.<br>3. Wind breaks (e.g., trees, fences) shall be installed on the windward side(s) of actively disturbed areas of construction. Wind breaks shall have at maximum 50 percent air porosity.<br>4. For areas that are to remain open space (e.g., not a road, building, or otherwise structurally covered area), vegetative ground cover (e.g., fast-germinating native grass seed) shall be planted in disturbed areas as soon as possible and watered appropriately until vegetation is established.<br>5. All trucks and equipment, including their tires, shall be washed off prior to leaving the site.<br>6. Site accesses to a distance of 100 feet from the paved road shall be treated with a 6- to 12-inch compacted layer of wood chips, mulch, or gravel.<br>7. Sandbags or other erosion control measures shall be installed to prevent silt runoff to public roadways from sites with a slope greater than 1 percent.<br>Before starting on-site construction activities, the contractor or Project Applicant shall submit a site-specific dust control plan (Plan) to the American Canyon Planning Division for review and approval. The Project Applicant shall ensure that all applicable requirements of the Plan have been incorporated into the contract specifications. The Plan shall state, in reasonable detail, how the Contractor shall meet the requirements above. The Plan shall include a certification statement that the Contractor agrees to comply fully with the Plan. | | | | | |

| | | | | | |
|---|---|---|---|---|---|
| **Mitigation Measure 4.2-2: *Operational Emissions Reductions*.** The total reduction in ROG and $NO_X$ emissions that would be achieved from implementation of Mitigation Measure 4.2-2a, the TDM program, and Mitigation Measure 4.2-2b, the CAP mitigation strategies, would be calculated at the time the final TDM program and CAP strategies are determined. If the ROG and $NO_X$ emissions reduction from implementation of Mitigation Measures 4.2-2a and 4.2-2b are determined by a qualified air quality expert to reduce the project's emissions to below the BAAQMD operational thresholds contained in the 2017 BAAQMD CEQA Air Quality Guidelines, no further mitigation would be required. If the ROG and $NO_X$ emissions reduction from implementation of Mitigation Measures 4.2-2a and 4.2-2b do not reduce the project's emissions to below the BAAQMD operational thresholds identified in the 2017 BAAQMD CEQA Air Quality Guidelines, Mitigation Measure 4.2-2c, purchase of emission offsets, would be pursued. | | | | | |

| Mitigation Measures | Method of Verification | Timing of Verification | Responsible for Verification | Verification of Completion | |
|---|---|---|---|---|---|
| | | | | Date | Initial |
| ~~**Mitigation Measure 4.2-2a (same as Mitigation Measure 4.12-3a in Section 4.12, *Transportation and Traffic*): *Transportation Demand Management (TDM) Program*.** Prior to issuance of the first building permit for the non-residential use areas (i.e., Napa Valley Ruins & Gardens [NVR&G] and hotel), the Project Applicant shall develop a TDM program for the non-residential use areas (i.e., NVR&G and hotel) and shall submit the TDM program to the City Department of Public Works for review and approval. A qualified air quality expert shall prepare a calculation of the ROG and $NO_X$ emissions reductions that would result from implementation of the TDM program. The Project Applicant shall be responsible for funding and overseeing the delivery of trip reduction/TDM proposed programs and strategies, which may include, but are not limited to, the following:~~<br>1. ~~Establishment of carpool, buspool, or vanpool programs;~~<br>2. ~~Vanpool purchase incentives;~~<br>3. ~~Cash allowances, passes or other public transit subsidies and purchase incentives;~~<br>4. ~~Preferential parking locations for ridesharing vehicles;~~ | ~~Approval of TDM Program~~ | ~~Prior to issuance of first building permit for the nonresidential use area (i.e., NVR&G and hotel)~~ | ~~City of American Canyon~~ | | |

| | | | | | |
|---|---|---|---|---|---|
| 5. ~~Computerized commuter rideshare matching services;~~<br>6. ~~Guaranteed ride-home program for ridesharing;~~<br>7. ~~Bicycle programs including bike purchase incentives, storage, and maintenance programs;~~<br>8. ~~On-site car share and bike share service;~~<br>9. ~~Preparation of a Parking Management Plan to address parking accommodations for large events; 10. Designation of an on-site transportation coordinator for the project;~~<br>11. ~~Transit and trip planning resources such as commute information kiosk;~~<br>12. ~~Employer-provided showers, changing rooms, and clothing lockers for office employees that commute via active transportation;~~<br>13. ~~Bicycle route mapping resources;~~<br>14. ~~Participation in future citywide Transportation Management Association (TMA); and~~<br>15. ~~Submit annual reports to the City regarding TDM activities.~~ | | | | | |
| **Mitigation Measure 4.2-2b:** ***Operational Emissions Reduction Strategies*****.** To reduce ROG and $NO_X$ emissions within the project site, the project shall include feasible operational emissions reduction strategies as part of its final design. The specific strategies may include, but are not limited to, the measures described below; however, other measures may be implemented:<br>o Prior to issuance of the first building permit for each phase of the project, the Project Applicant shall develop operational emissions reduction strategies, which could include the mitigation strategies identified in **Table 4.2-8, Summary of Operational CAP Mitigation Strategies**, to provide options for reducing ROG and $NO_X$ emissions from operation of the project. The operational emissions reduction strategies shall be submitted to and approved by the City, prepared by a qualified air quality technical expert, and evaluate the emissions reduction strategies in relation to the project's emissions. | Recommendations from Air Quality Technical Report that identify updated project emissions calculations and feasible operational emissions reduction strategies | Prior to issuance of the first building permit for the project | City of American Canyon | | |

| Mitigation Measures | Method of Verification | Timing of Verification | Responsible for Verification | Verification of Completion | |

| | | | | Date | Initial |

**Table 4.2-8 Summary of Operational CAP Mitigation Strategies**

| Description | Approximate CAP Reduction (lb/day)[a] ROG | $NO_X$ |
|---|---|---|
| Exceed 2016 Title 24 (15%) | 0.19 | 1.67 |
| Solar Water Heating | 0.15 | 1.31 |
| Residential Electric Vehicles | 0.09 | 0.49 |
| Non-Residential EV Charging (5% of spaces) | 0.17 | 0.93 |
| Preferential parking locations for ridesharing vehicles; Computerized commuter rideshare matching services; and/or Guaranteed ride-home program for ridesharing | 0.44 | 3.01 |
| On-site car share and bike share service | 0.08 | 0.46 |
| Unbundled parking; shared parking; eliminate on-street parking | 0.13 | 0.93 |
| Bicycle and pedestrian network | 0.13 | 0.91 |
| Reduce distance to major transit stop | 0.52 | 3.57 |
| Expand transit coverage | 0.06 | 0.40 |
| Other Traffic Reductions (every additional 1%) | 0.20 | 1.15 |
| Smart Traffic Signals (or Traffic Signal Synchronization) | 0.60 | 3.44 |
| Solar swimming pool heating | 0.03 | 0.25 |
| Electrify landscaping equipment | 0.15 | 0.06 |

SOURCE: Refer to Tables Ops-7 through Ops-13, in EIR Appendix B2.

NOTE:

a. Measures are not all additive. See detailed assumptions and magnitudes assumed for each measure in source above.

| Mitigation Measures | Method of Verification | Timing of Verification | Responsible for Verification | Verification of Completion | |
|---|---|---|---|---|---|
| | | | | Date | Initial |
| **Mitigation Measure 4.2-2c: *Purchase Emission Offsets*.** Prior to the issuance of the final Certificate of Occupancy for Phase 1 or prior to the issuance of the first residential building permit in Phase 2, whichever occurs first, the Project Applicant would, partially or wholly, purchase offset credits if determined to be feasible based on information available at the time implementation would be required. To reduce ROG and $NO_X$ emissions depending on the reductions achieved through Mitigation Measure 4.2-2a and Mitigation Measure 4.2-2b, and if this mitigation is implemented.<br>o The Project Applicant or its designee shall pay a mitigation offset fee to the BAAQMD Bay Area Clean Air Foundation (Foundation)[1] in an amount to be determined at the time of the impact. The fee would offset emissions that exceed the threshold of significance after implementation of Project- Level Reduction Strategies and the TDM Program described above to the extent feasible.<br>o The Project Applicant would implement Mitigation Measure 4.2-2c through payment of a mitigation offset fee to the BAAQMD's Foundation in an amount not to exceed $30,000 per weighted ton per year of ozone precursors per year requiring emissions offsets plus a 5 percent administrative fee to fund one or more emissions reduction projects within the San Francisco Bay Area Air Basin (SFBAAB). The fee shall be determined by the City of American Canyon Planning Division in consultation with the Project Applicant and be based on the type of projects available at the time of the payment. The offset fee is calculated to be "roughly proportional" to the operational air quality impacts. Documentation of payment shall be provided to the City of American Canyon or its designated representative.<br>The current process for payment of offset fees is detailed above. As required by this mitigation measure, payment of offset fees would proceed according to BAAQMD procedures when initiated. The Project Applicant or its designee would enter into a memorandum of understanding (MOU) with the BAAQMD's Foundation. The MOU would include details regarding the funds to be paid, the administrative fee, and the timing of the emissions reduction project. Acceptance of this fee by the BAAQMD shall serve as an | Bay Area Air Quality Management District Memorandum of Understanding | Prior to the issuance of the final Certificate of Occupancy for Phase 1 or prior to the issuance of the first residential building permit in Phase 2, whichever occurs first | City of American Canyon | | |

[1] More information on the Bay Area Clean Air Foundation can be found at Bay Area Air Quality Management District (BAAQMD), Bay Area Clean Air Foundation, 2015, available at http://www.baaqmd.gov/about-the-air-district/bay-area-clean-air-foundation.

| | | | | | |
|---|---|---|---|---|---|
| acknowledgment and commitment by the BAAQMD to (1) implement an emissions reduction project(s) within a timeframe to be determined based on the type of project(s) selected and after receipt of the mitigation fee to achieve the emission reduction objectives specified above, and (2) provide documentation to City of American Canyon or its designated representative and to the Project Applicant describing the amount of and the project(s) funded by the mitigation fee, including the amount of emissions of ROG and $NO_X$ reduced (tons per year) within SFBAAB from the emissions reduction project(s). If there is any remaining unspent portion of the mitigation offset fee following implementation of the emission reduction project(s), the Project Applicant shall be entitled to a refund in that amount from the BAAQMD. To qualify under this mitigation measure, the specific emissions retrofit project must result in emission reductions within SFBAAB that would not otherwise be achieved through compliance with existing regulatory requirements. | | | | | |

| Mitigation Measures | Method of Verification | Timing of Verification | Responsible for Verification | Verification of Completion | |
|---|---|---|---|---|---|
| | | | | Date | Initial |
| **Mitigation Measure 4.2-3a: *Architectural Coatings*.** The applicant shall use low-VOC architectural coatings during construction for all buildings, which shall have VOC content that is more stringent than local requirements prescribed in Bay Area Air Quality Management District (BAAQMD) Regulation 8 Organic Compounds, Rule 3 Architectural Coatings as revised on July 1, 2009. Coatings that meet the "super-compliant" VOC standard of less than 10 grams of VOC per liter of paint would qualify. | Notes on construction plans indicating the use of low-VOC architectural coatings during construction of all buildings | Prior to issuance of building permits | City of American Canyon | | |

| | | | | | |
|---|---|---|---|---|---|
| **Mitigation Measure 4.2-3b: *Tier 4 Construction Equipment*.** To reduce construction emissions to below the 2017 BAAQMD CEQA Air Quality Guidelines, prior to start of construction activities after the occupancy of Phase 1, the Project Applicant shall submit to the City either:<br>• Documentation showing that all off-road construction equipment used prior to the start of construction activities after the occupancy of Phase 1 with greater than 25 hp and operating for more than 20 hours total over the entire duration of construction activities shall have engines that meet or exceed either U.S. Environmental Protection Agency (USEPA) or California Air Resources Board (CARB) Tier 4 off-road emission standards.<br>or,<br>• Provide supplemental analysis prepared by a qualified air quality specialist to show that emissions of ROG and $NO_X$ would not exceed the thresholds from the 2017 BAAQMD CEQA Air Quality Guidelines using other methods. | Documentation of compliance with the 2017 BAAQMD CEQA Air Quality Guidelines based on the type of construction equipment used or supplemental analysis prepared by a qualified air quality specialist | Prior to the start of construction activities after the occupancy of Phase 1 | City of American Canyon | | |
| **Mitigation Measure 4.2-5: *Construction Emissions Minimization*.** To reduce construction emissions to below the thresholds identified in the 2017 BAAQMD CEQA Air Quality Guidelines, prior to the start of construction of each of the following—Phase 1 area south of the NVR&G and the off-site Rio Del Mar roadway improvements and Phase 4—the Project Applicant shall submit to the City either:<br>• Documentation showing that all off-road construction equipment used in the southwestern portion of Phase 1 of construction (located directly south of Napa Valley Ruins & Gardens), the entirety of Phase 4 of construction, and the off-site Rio Del Mar roadway improvements with greater than 25 hp and operating for more than 20 hours total over the entire duration of construction activities shall have engines that meet or exceed either U.S. Environmental Protection Agency (USEPA) or California Air Resources Board (CARB) Tier 2 off-road emission standards and have been retrofitted with an CARB Level 3 Verified Diesel Emissions Control Strategy. Equipment with engines meeting Tier 4 Interim or Tier 4 Final off-road emission standards automatically meet this requirement.<br>or,<br>• Provide supplemental analysis prepared by a qualified air quality specialist to show health risks at on- and off-site sensitive receptors would not exceed the thresholds from the 2017 BAAQMD CEQA Air Quality Guidelines using other methods. | Documentation of compliance with the 2017 BAAQMD CEQA Air Quality Guidelines based on the type of construction equipment used or supplemental analysis prepared by a qualified air quality specialist | Prior to the start of construction of the Phase 1 area south of the NVR&G and the off-site Rio Del Mar roadway improvements and Phase 4 | City of American Canyon | | |

| Mitigation Measures | Method of Verification | Timing of Verification | Responsible for Verification | Verification of Completion | |
|---|---|---|---|---|---|
| | | | | Date | Initial |
| **Mitigation Measure 4.2-7: *GHG Emissions Reductions*.** The total reduction in GHG emissions that would be achieved from implementation of Mitigation Measure 4.2-2a, the TDM program, and Mitigation Measure 4.2-7a, the GHG reduction strategies, would be calculated at the time the final TDM program and GHG reduction strategies are determined. If the GHG emissions reduction from implementation of Mitigation Measures 4.2-2a and 4.2-7a are determined by a qualified air quality expert to reduce the project's emissions to below the operational thresholds of 2.67 MT $CO_2e$ per service population per year, no further mitigation would be required. If the GHG emissions reduction from implementation of Mitigation Measures 4.2-2a and 4.2-7a do not reduce the project's emissions to below this threshold, Mitigation Measure 4.2-7b, purchase of GHG emission offsets, would be pursued. | | | | | |

**Mitigation Measure 4.2-7a: *GHG Reduction Strategies*.** To reduce greenhouse gas (GHG) emissions within the project site and to maximize the project's ability to achieve the GHG operational threshold of 2.67 MT $CO_2e$ per service population per year, the project shall include feasible operational GHG emissions reduction strategies as part of its final design. The specific strategies of the program may include, but are not limited to, the measures described below; however, other measures may be implemented:

- All development shall, at a minimum, meet the Title 24, Part 6 (2016), standards, or the most current Title 24, Part 6, standard, whichever is more conservative. All residences shall meet the anticipated 2019 Title 24 Standards to achieve Zero Net Electricity. The GHG emissions benefit from residential Zero Net Electricity was included in the unmitigated inventory.
- Prior to issuance of the first building permit for each phase of the project, the Project Applicant shall identify operational GHG emissions reduction strategies that could include the strategies identified in **Table 4.2-14, Summary of Operational GHG Mitigation Strategies**, which provides options for reducing GHG emissions from project operation. The operational GHG emissions reduction strategies shall be submitted to and approved by the City, developed by a qualified air quality technical expert, and evaluate the emissions reduction strategies in relation to the project's emissions.

**Table 4.2-14 Summary of Operational GHG Mitigation Strategies**

| Description | Approximate Reduction MT $CO_2e$/year[a] |
|---|---|
| Exceed 2016 Title 24 (15%) | 354 |
| Exceed 2016 Title 24 (15%, electricity only, non-residential only) | 27 |
| High-efficiency lighting | 126 |
| Purchase 100% renewable electricity (non-residential benefit only, as residences assumed to achieve zero net electricity) | 709 |
| Zero net electricity—non-residential | 709 |
| Solar water heating | 317 |
| Solar panels | 484 |

| **Mitigation Measure 4.2-7b: *Purchase GHG Emission Offsets*.** In order to determine whether or to what extent the purchase of GHG emissions offsets is necessary to reduce greenhouse gas (GHG) emissions for each year that the GHG emissions exceed the threshold of 2.67 MT $CO_2e$ per service population per year for the lifetime of the project (assumed to be 30 years), the operational GHG emissions reduction program described above in Mitigation Measure 4.2-7a will include a plan for the purchase of GHG offsets. The amount of offsets needed will take into account the GHG emissions reductions associated with the TDM program and the operational GHG emissions reduction program. Additionally, the feasibility of offsets shall be evaluated at the time implementation would be required. If feasible, the plan shall include:<br>○ The plan for the purchase of GHG offsets shall include timing requirements, which take into account calculations showing actual emissions of the project, which could take into account phase-in of occupancy, reductions in vehicle emissions, as well as other factors that affect emissions.<br>○ GHG emission offsets could include any of the following sources: (1) the California Air Resources Board (CARB) quarterly allowance auctions held as part of its Cap-and-Trade Program; (2) the Greenhouse Gas Reduction Exchange (GHG Rx); or (3) Approved Registries recognized by the State of California, which currently include the Climate Action Reserve (CAR), American Carbon Registry (ACR), and Verra (formerly Verified Carbon Standard).<br>○ The amount of offsets purchased shall depend on the cost per annual metric ton of $CO_2e$ reductions, the overall cost feasibility of this measure, which shall be determined based on information available at the time implementation would be required, and the on-site GHG reduction measures.<br>○ To demonstrate compliance, the Project Applicant or its designee would provide the following documentary evidence to City's Planning Division: An attestation from an Approved Registry or other source described above that the Project Applicant or its designee has retired a given quantity of carbon offsets. Offsets from the approved | Calculations from a GHG technical expert based on specific strategies incorporated into the project and, if necessary and feasible, attestation from an Approved Registry or other source described above regarding the purchase of required carbon offsets | Evaluated prior to issuance of building permits for each phase | City of American Canyon | | |

| | | | | | |
|---|---|---|---|---|---|
| sources above satisfy defined standards and incorporate principles of GHG emissions reduction accounting. These principles ensure the offsets use relevant methodologies and assumptions, represent additional reductions that would not otherwise be achieved by law, do not double count reductions, and are enforceable. | | | | | |

| **Section 4.3: Biological Resources** | | | | | |
| ~~**Mitigation Measure 4.3-1a:** ***Protocol-Level Surveys***. Prior to issuance of a grading permit, written proof shall be submitted that a qualified botanist conducted preconstruction CDFW protocol-level surveys during the appropriate blooming periods for the 19 special-status plants (listed above in Table 4.3-1, Special Status Species Potentially Occurring in the Study area) within the WRSP site, off-site water improvement area (OSWA) and other off-site areas.~~<br>~~The qualified botanist shall conduct surveys to following performance standards. Typically, two surveys are required to capture the blooming periods of all the species. These surveys would be conducted in early spring between March and April and in summer between June and August to capture the flowering times of all species. Individual flowering times for these 19 species are included in the species accounts above. These surveys should be performed in compliance with CDFW (2018b) and USFWS (2002) published survey guidelines. A technical report prepared by the botanist describing the results of the survey shall be provided to the City for review and approval prior to issuance of a grading permit.~~<br>~~If no special-status plants are found during focused surveys, then these plants would be assumed to be absent from the WRSP site, OSWA, and other off-site areas. The botanist would document the findings in a technical memorandum to the lead agency, as appropriate, and no further mitigation would be required. If special-status plants are found during focused surveys, Mitigation Measure 4.3-1b shall be implemented.~~ | ~~Submittal of technical memorandum~~ | ~~Prior to issuance of a grading permit~~ | ~~City of American Canyon~~ | | |
| ~~**Mitigation Measure 4.3-1b:** ***Measures to Implement if Special-Status Plants Are Found.*** If special-status plants are found during focused surveys, prior to issuance of a grading permit, written proof shall be submitted that the following measures were implemented:~~ | ~~Issuance of a Biology Report and~~ | ~~Prior to issuance of grading permit~~ | ~~City of American Canyon,~~ | | |

| | | | | | |
|---|---|---|---|---|---|
| a. ~~Information regarding the special-status plant populations shall be reported to the California Natural Diversity Database (CNDDB).~~<br>b. ~~The Project Applicant in consultation with City, CDFW, and/or the USFWS (as appropriate) shall assess if any individual or population can be avoided during project implementation. If any viable populations can be avoided, the avoided areas shall be clearly marked in the field by a qualified botanist and avoided during construction activities. Construction activities shall be set back a minimum of 100 feet or further in accordance with the recommendation of the qualified botanist. A qualified botanist shall monitor the avoided areas throughout the time that construction activities occur adjacent to the avoided areas where special-status plants occur and document the successful avoidance in a report to the City, and CDFW and/or the USFWS as appropriate. Before ground clearing or ground disturbance, all on-site construction personnel shall be instructed as to the species' presence and the importance of avoiding impacts to this species and its habitat.~~<br>c. ~~If special-status plant populations are present and cannot be avoided or are found to have been impacted by project construction and operation activities, resulting in their mortality despite implementing the avoidance measures under the preceding Item b, consultations with the CDFW and/or the USFWS shall be required. A mitigation plan to compensate for the loss of special-status plant species shall be prepared and submitted for review and approval of the CDFW or the USFWS, as applicable. This plan shall be developed by a qualified botanist in consultation with the appropriate agencies, prior to the start of local construction activities in the area where the special-status plant populations are found. The mitigation plan shall conform to the following specific performance standards. The plan shall detail appropriate replacement ratios, which shall be a minimum of 1:1 based on area and number of plants and may be increased based on the recommendation of the botanist or the relevant resource agency to achieve no net~~ | ~~Mitigation Plan, if necessary~~ | | ~~CDFW, and/or USFWS, as necessary~~ | | |

| Mitigation Measures | Method of Verification | Timing of Verification | Responsible for Verification | Verification of Completion | |
|---|---|---|---|---|---|
| | | | | Date | Initial |
| ~~loss of habitat. The plan shall describe the location of the mitigation site, methods for implementation (e.g., construction techniques, timing and sequencing, watering, soil properties, and other necessary specifications), success criteria (e.g., minimum 75 percent plant survival after 5 years, 75 percent vegetative cover by desirable species or comparable to existing conditions, and a viable, self-sustaining plant community), monitoring and reporting protocols, and contingency measures that shall be implemented if the initial mitigation fails. The mitigation plan may include the collection of seeds, propagules, and top soils under the supervision of a qualified botanist from the WRSP site for installation at the mitigation site. The mitigation site may be located on the WRSP site or in close proximity to the WRSP site. If on-site options are not available, off-site areas may be considered if the qualified biologist in consultation and the agencies agree that potentially impacted plants can be planted and/or propagated successfully. The mitigation plan shall be submitted to the City for approval prior to the issuance of permits that would affect the special-status plant population(s).~~<br>~~d. If mitigation is required for loss of special-status plant populations, the Project Applicant shall establish, maintain, and monitor the mitigation area identified in the plan for 5 years following the completion of construction and restoration activities. Annual monitoring reports shall be submitted to the City and, if required, the resource agencies at the completion of restoration and for 5 years following restoration implementation. Monitoring reports shall include photo-documentation, planting specifications, a site layout map, descriptions of materials used, and justification for any deviations from the mitigation plan.~~ | | | | | |
| ~~**Mitigation Measure 4.3-1c:** ***Biological Resources Awareness Training Program.*** A USFWS-approved biologist shall conduct a biological resources awareness training session for all construction personnel prior to any ground-disturbing activities such as grading or vegetation removal. The performance standards for the training shall include a description of special-status species and their habitats, their status and regulatory protection, general protection measures to be implemented to protect special-status species and minimize take, and a delineation of limits of the work area as established by an approved biologist. General protection from project permits shall be included, to include construction speed limits, trash~~ | ~~Completion of a biological resources awareness training session~~ | ~~Prior to any ground disturbing activities~~ | ~~City of American Canyon~~ | | |

| | | | | | |
|---|---|---|---|---|---|
| ~~containment and removal, restriction of pets and firearms, and fueling setbacks from sensitive habitats.~~ | | | | | |
| ~~**Mitigation Measure 4.3-1d:** ***Preconstruction Surveys for California Red-Legged Frogs*****.** Preconstruction surveys for California red-legged frogs shall be conducted prior to grading or earth-moving activities within the WRSP site and within the OSWA to ensure project activities do not result in direct take of dispersing or entrapped California red-legged frog individuals. The performance standards for the preconstruction survey are as follows. USFWS-approved biologist shall conduct preconstruction surveys at least 24 hours prior to any grading or earth-moving activities within the WRSP site and within the OSWA. Any California red-legged frogs that are found during these surveys shall be salvaged and relocated by a USFWS-approved biologist under an incidental take permit issued by the USFWS to suitable California redlegged frog habitat as determined in coordination with USFWS and CDFW. The nearby California redlegged frog preserve, also known as the NVUSD Open Space, located to the southeast of the study area, can serve as suitable relocation habitat. All observed and relocated California red-legged frogs shall be reported to USFWS and CDFW within 5 days, and records of any special-status species or natural communities detected should be entered into the California Natural Diversity Database (CNDDB).~~ | ~~Submittal of documentation to verify surveys were completed and frogs relocated, if found~~ | ~~Prior to any ground disturbing activities~~ | ~~City of American Canyon, CDFW, and/or USFWS, as necessary~~ | | |

|---|---|---|---|---|---|
| | | | | Date | Initial |
| **Mitigation Measure 4.3-1e:** ***Procedures if California Red-Legged Frogs Are Identified*****.** If individual California red-legged frogs are identified during construction activities within the WRSP or OSWA, all work within 200 feet of the frog shall immediately stop and a biologist approved by the USFWS to relocate California red-legged frogs shall be consulted immediately (see Mitigation Measure 4.3-1g for additional requirements). Work shall not commence within 200 feet of the frog's location until an approved biologist has cleared the area of California red-legged frogs. | Submittal of documentation from a qualified biologist regarding work stoppage and relocation efforts, as necessary | During construction activities | City of American Canyon and/or USFWS, as necessary | | |

| | | | | | |
|---|---|---|---|---|---|
| ~~**Mitigation Measure 4.3-1f:** ***California Red-Legged Frog and Western Pond Turtle Exclusion Fencing.*** Prior to any ground-disturbance activities, suitable exclusion fencing shall be installed along the outside edge of the off-site water storage tank and connecting pipeline and roadway construction footprint to ensure that western pond turtles and migrating California red-legged frogs are precluded from being able to move into designated work areas. A USFWS-approved biologist shall delineate the fence line and be present during initial installation to ensure that California red-legged frogs and western pond turtles are not trapped within the fence. This fence shall remain in good condition throughout the duration of construction activities and be checked by a USFWS-approved biological monitor. Exclusion fencing shall consist of a 3-foot wall of 0.25-inch mesh and be attached by welded galvanized wire (or equivalent USFWS-approved fencing such as Ertek™ fencing). The fence shall be buried along the bottom margin for 4 inches into the ground, or if soils are not stable, shall be landscape stapled with 7-inch staples every 3 inches along the bottom of the fence. The approximate 3 feet of fencing above the ground should be anchored to metal T-posts installed every 8 feet along the length of the fence.~~ | ~~Submittal of documentation verifying that exclusion fencing was installed and other mitigation requirements were met~~ | ~~Documentation shall be submitted prior to any ground disturbing activities within off-site water improvement area; site inspections shall occur during construction~~ | ~~City of American Canyon and/or USFWS, as necessary~~ | | |

|---|---|---|---|---|---|
| | | | | Date | Initial |
| **~~Mitigation Measure 4.3-1g:~~** ***~~Construction Monitoring for California Red-Legged Frog.~~*** ~~A USFWS-approved biologist shall monitor all construction activities within designated California red-legged frog critical habitat, which includes the entire off-site water improvement area. The following measures shall be implemented to avoid and minimize impacts to California red-legged frogs:~~<br>~~a. During site grading and construction of the off-site water storage tank and pipeline, a biological monitor shall be on site at all times during ground-disturbing activities;~~<br>~~b. A biologist approved by USFWS to relocate frogs shall be available for consultation as needed;~~<br>~~c. If a California red-legged frog individual is identified, all work within 200 feet of the frog shall stop and the on-site biological monitor shall observe the frog until it has been relocated off site by a USFWS-approved biologist; relocation habitat shall be determined in coordination with USWFS;~~<br>~~d. In the event that red-legged frogs are identified and must be relocated, the following performance standards shall apply:~~<br>~~1. Capture and relocation of California red-legged frogs may only be authorized pursuant to an incidental take authorization issued by the USFWS. Project applicants shall provide the City with proof of incidental take authorization prior to any relocation of California red-legged frogs.~~<br>~~2. Individuals shall only be relocated into USFWS-approved locations where habitat has a full complement of existing and/or expanded habitat features that are required for the species' life history (i.e., foraging habitat, burrows, aquatic habitat, etc.);~~<br>~~3. Releasing individuals into habitats, where mortality is higher than reproduction, shall be avoided; and~~<br>~~4. Prevalence of disease or competition by non-native species (e.g., chytrid fungus presence in aquatic California red-legged frog habitat) shall be evaluated before animals are relocated.~~<br>~~e. All observed and relocated California red-legged frogs shall be reported to USFWS within 5 days.~~ | ~~Submittal of documentation to verify monitoring occurred and other mitigation requirements were met~~ | ~~During construction within off-site water improvement area~~ | ~~City of American Canyon and/or USFWS, as necessary~~ | | |
| **~~Mitigation Measure 4.3-1h: Mitigation for the California Red-Legged Frog.~~** ~~The Project Applicant shall mitigate for all permanent and temporary impacts to California red-legged~~ | ~~Compensation agreement with~~ | ~~Prior to any ground~~ | ~~City of American~~ | | |

| | | | | | |
|---|---|---|---|---|---|
| ~~frog habitat in compliance with the following minimum performance standards. For the permanent loss of California red-legged frog habitat, the Project Applicant shall provide compensation with an equivalent amount of acreage at a minimum ratio of 1:1 (estimated at 309 acres), through the preservation of suitable mitigation lands approved by the USFWS and the City. The habitat mitigation may be achieved through (1) establishment of a permittee responsible habitat management lands (see discussion on AC-1's proposed Mitigation Area, Draft EIR pp. 4.3-49 and 4.3-50) or (2) purchase of credits from a USFWS-approved conservation bank such as the Ridgetop Conservation Bank near Benicia. Areas that are temporarily disturbed in the OSWA shall be reestablished to similar topographic conditions and replanted with native vegetation to mitigate temporary impacts to California red-legged frog habitat.~~<br>~~Any permittee-responsible mitigation property shall be protected in perpetuity under a conservation easement (CE), management plan, habitat establishment plans, and funding mechanism approved by the City and USFWS. Funding for management shall include direct costs for initial establishment of the site, interim management, and establishment of a non-depleting endowment for the long-term maintenance, management, and monitoring of the CE.~~ | ~~USFWS, including compensatory mitigation and replanting for temporary disturbance~~ | ~~disturbing activities on the WRSP or off-site water improvement area sites~~ | ~~Canyon and/or USFWS, as necessary~~ | | |

|---|---|---|---|---|---|
| | | | | Date | Initial |
| **Mitigation Measure 4.3-1i: *Preconstruction Surveys for Western Pond Turtle*.**<br>a. ~~The Project Applicant shall enlist the services of a qualified biologist to conduct preconstruction surveys 14 days before and 24 hours prior to any ground-disturbing activities within 300 feet of the quarry pond or within 300 feet of drainages within the off-site water improvement area to ensure these activities do not result in direct take of western pond turtles. If western pond turtles are identified within work areas, the California Department of Fish and Wildlife (CDFW) shall be notified regarding the presence of the western pond turtles and all work shall stop until additional exclusion measures have been defined and authorization to proceed is obtained from CDFW. In general, the exclusion fencing described under Mitigation Measure 4.3-1f will provide appropriate exclusion.~~<br>b. ~~No person shall handle or otherwise harass any individual western pond turtle encountered during construction, with the exception of handling by the qualified biologist. If western pond turtles or their nests are observed during pre-construction surveys, a qualified biologist shall be on site to monitor construction in suitable western pond turtle habitat. Any western pond turtles found within the construction area shall be allowed to leave of its own volition, or if authorized by CDFW, western pond turtles shall be captured by a qualified biologist and relocated out of harm's way to the approved relocation sites. A plan shall be developed in consultation with and approved by CDFW to relocate the western pond turtle individuals to the nearest protected suitable pond turtle habitat. If a nest is located within a work area (typically nesting occurs between mid-June and mid-July), a qualified biologist shall delineate a 300-foot no-disturbance buffer between the nest and any areas of potential disturbance. Buffers shall be clearly marked with temporary fencing. Construction shall not be allowed to commence in the exclusion area until hatchlings have emerged from the nest, or the nest is deemed inactive by a qualified biologist. If a nest cannot be avoided, CDFW approval shall be needed to gather eggs, house them at a suitable facility for incubation, and release hatchlings into the pond or nearby creek system (Newell Creek or American Canyon Creek) as determined in coordination with CDFW.~~<br>c. ~~In the event that western pond turtles are identified and must be relocated, the following protocols and performance standards shall be addressed in the relocation plan:~~ | ~~Submittal of documentation to verify surveys were completed and turtles were relocated, if found~~ | ~~Prior to any ground disturbing activities near the quarry pond or drainages within the off-site water improvement area~~ | ~~City of American Canyon and/or CDFW, as necessary~~ | | |

| | | | | | |
|---|---|---|---|---|---|
| 1. ~~Individuals shall only be relocated into habitat that has a full complement of existing and/or expanded habitat features that are required for the species' life history (i.e., foraging habitat, aquatic habitat, basking structures, etc.);~~<br>2. ~~Releasing individuals into habitats, where mortality is higher than reproduction, would be avoided; and~~<br>3. ~~Prevalence of disease or competition by non-native species (e.g., red-eared slider [*Trachemys scripta elegans*] presence in western pond turtle habitat) shall be evaluated before animals are relocated.~~<br>d. ~~Information regarding western pond turtle occurrences shall be reported to the CNDDB.~~ | | | | | |
| **Mitigation Measure 4.3-1j:** ***Preconstruction Surveys for Breeding Birds, Including Raptors and Tricolored Blackbird.*** The following performance standards shall be followed:<br>1. For construction activities that occur between February 1 and August 31, preconstruction breeding bird surveys shall be conducted by a qualified biologist familiar with bird behavior and knowledge of nest types prior to and within 10 days of any initial ground-disturbance activities. Surveys shall be conducted within all suitable nesting habitat within 250 feet for passerines and 0.5 mile for raptors (see additional detailed performance standards for special-status raptors in Mitigation Measures 4.3-1k and 4.3-1l, | Submittal of documentation to verify that survey(s) have been conducted and other mitigation | Prior to construction activities that occur between February 1 and August 31; recurring for time | City of American Canyon, CDFW, and/or USFWS, as necessary | | |

| | Mitigation Measures | Method of Verification | Timing of Verification | Responsible for Verification | Verification of Completion | |
|---|---|---|---|---|---|---|
| | | | | | Date | Initial |
| 2. | below), to the extent land is accessible. Raptor surveys shall include a ground survey for nesting golden eagles following USFWS guidelines.[2] The survey also shall include searching for ground nesting raptors, such as short-eared owl and Northern harrier, following CDFW recommendations. | requirements were met | lapses greater than 14 days between project activities | | | |
| 3. | If nesting raptors are detected, the qualified biologist shall establish buffers around nests that are sufficient to ensure that breeding is not likely to be disrupted or adversely impacted by construction. Buffers around active raptor nests shall be 500 feet for non-listed raptors, unless the qualified biologist determines that larger or smaller buffers are necessary to avoid impacts to nesting raptors. Factors to be considered for determining buffer size shall include the presence of natural buffers provided by vegetation or topography; nest height; locations of foraging territory; and baseline levels of noise and human activity. Buffers shall be maintained until the qualified biologist has determined | | | | | |
| 4. | that young have fledged and are no longer reliant upon the nest or parental care for survival. | | | | | |
| 5. | If known nesting trees (used for raptor nesting within the last 5 years) or tricolored blackbird colony nest sites are to be removed during construction activities, removal shall take place outside of the nesting season or until the nest or colony has been determined to be inactive. The Project Applicant in consultation with the CDFW shall develop a plan to replace known nest trees at a ratio of 3:1. If replacement planting is implemented, monitoring shall be conducted annually for 5 years to assess the mitigation's effectiveness. The performance standard for the mitigation shall be 65 percent survival of all replacement plantings. | | | | | |
| | Construction activity, including vegetation removal within designated buffer zones, shall occur only outside the typical breeding season for raptors (September 16 to December 31), if raptors are determined to be present. | | | | | |
| | The following considerations apply to this mitigation measure: | | | | | |

[2] Pagel, J.E., D.M. Whittington, and G.T. Allen. 2010. Interim Golden Eagle inventory and monitoring protocols; and other recommendations. Division of Migratory Bird Management, U.S. Fish and Wildlife Service.

| | | | | | | |
|---|---|---|---|---|---|---|
| | a) Survey results are valid for 14 days from the survey date. Should ground disturbance commence later than 14 days from the survey date, surveys shall be repeated. If no breeding birds are encountered, then work may proceed as planned.<br>b) After commencement of work, if there is a period of no work activity of 14 days or longer during the bird breeding season, surveys shall be repeated to ensure birds have not established nests during inactivity. If new nests are encountered, buffers shall be established.<br>c) Exclusion buffers sizes may vary, depending on habitat characteristics, project disturbance levels, and species, and are generally larger for raptors and colonial nesting birds. Exclusion buffers may be adjusted by a qualified biologist in coordination with USFWS and CDFW. Each exclusion buffer shall remain in place until the nest has successfully fledged or is otherwise inactive as determined by a qualified biologist.<br>d) If birds establish nesting sites during work activities, it is assumed those birds are habituated to project disturbances and exclusion buffers may be adjusted by a qualified biologist. Disturbance activities within a minimum of 50 feet of the nest shall be postponed until a qualified biologist can determine to reduce the exclusion zone or the nest has successfully fledged. | | | | | |

| Mitigation Measures | Method of Verification | Timing of Verification | Responsible for Verification | Verification of Completion | |
|---|---|---|---|---|---|
| | | | | Date | Initial |

| | | | | | |
|---|---|---|---|---|---|
| **Mitigation Measure 4.3-1k: *Preconstruction Surveys for Swainson's Hawk, Golden Eagle, and White-Tailed Kite*.** The following performance standards shall be followed:<br>1. If construction activities occur between February 1 and August 31, the Project Applicant shall retain a qualified biologist to conduct surveys for Swainson's hawk, golden eagle, and white-tailed kite in accordance with the Swainson's Hawk Technical Advisory Committee 2000 guidelines (SHTAC 2000), or current species specific guidance. Surveys shall cover a minimum of a 0.5-mile radius around the construction area. If nesting Swainson's hawks, golden eagle, or white-tailed kites are detected, the qualified biologist shall establish a 0.5-mile no-disturbance buffer, although buffer widths may be adjusted, consistent with the performance standards in Mitigation Measure 4.3-1j, Item 5.c. Buffers shall be maintained until the qualified biologist has determined that the young have fledged and are no longer reliant upon the nest or parental care for survival.<br>2. If known nesting trees are to be removed during construction activities, removal shall take place outside of Swainson's hawk, golden eagle, and white tailed kite nesting season and the Project Applicant shall develop a plan to replace known nest trees at a ratio of 3:1. If replacement planting is implemented, monitoring shall be conducted annually for 5 years to assess the mitigation's effectiveness. The performance standard for the mitigation shall be 65 percent survival of all replacement plantings.<br>3. In addition, the following mitigation measures shall be required to mitigate for the loss of raptor foraging habitat. The replacement ratios shall be consistent with the performance standards for Swainson's Hawk foraging habitat, identified in the CDFW staff report Regarding Mitigation for Impacts to Swainson's Hawk (*Buteo swainsoni*) in the Central Valley of California (1994):<br>a. Construction activity, including vegetation removal, shall only occur outside the typical breeding season for raptors (September 16 to December 31), if nesting raptors are determined to be present.<br>b. For projects within 1 mile of an active nest tree (the Swainson's Hawk Staff report defines an active nest tree as used during one or more of the last 5 years), the Project Applicant shall provide 1 acre of preserved Swainson's hawk foraging habitat for each acre of development authorized (1:1 ratio).<br>c.For projects within 5 miles of an active nest tree, but greater than 1 mile from the nest tree, the Project Applicant shall provide 0.75 acre of preserved Swainson's hawk foraging habitat for each acre of development authorized (0.75:1 ratio).<br>For projects within 10 miles of an active nest tree, but greater than 5 miles from the nest tree, the Project Applicant shall provide 0.5 acre of preserved Swainson's hawk foraging habitat for each acre of development authorized (0.5:1 ratio). | Submittal of documentation to verify that survey(s) have been conducted and other mitigation requirements were met | Prior to ground disturbing activities that occur between February 1 and August 31 | City of American Canyon and/or CDFW, as necessary | | |

| | | | | | |
|---|---|---|---|---|---|
| Mitigation lands shall be protected in perpetuity under a conservation easement and include an endowment fund for long-term resource management for raptor habitat. Preservation and management of Swainson's hawk foraging habitat under this criterion will also serve to mitigate the reduction of foraging habitat for golden eagle, white-tailed kite, and other grassland-associated raptors. The AC-1 proposed mitigation site for the California red-legged frog at the 321-acre Jaeger Conservation Area provides suitable foraging habitat mitigation (see Applicant Proposed Mitigation Area discussion above). | | | | | |
| **Mitigation Measure 4.3-1l:** ***Preconstruction Surveys for Burrowing Owls*****.** Burrowing owl Take Avoidance<br>Surveys shall be conducted according to the methodologies and performance standards prescribed by the CDFW in the 2012 *Staff Report on Burrowing Owl Mitigation* (CDFW 2012). Take Avoidance Surveys shall be conducted 14 days prior or less to initiating ground disturbance. As burrowing owls may recolonize a site after only a few days, time lapses greater than 14 days between project activities require subsequent | Submittal of documentation to verify that survey(s) have been conducted | Prior to any ground disturbing activities; recurring for time lapses greater than | City of American Canyon and/or | | |

| | Mitigation Measures | Method of Verification | Timing of Verification | Responsible for Verification | Verification of Completion | |
|---|---|---|---|---|---|---|
| | | | | | Date | Initial |
| a. | surveys including but not limited to a final survey conducted within 24 hours prior to ground disturbance to ensure absence. The following guidelines pertain to burrowing owl surveys: | and other mitigation requirements were met | 14 days between project activities | CDFW, as necessary | | |
| b. | Burrowing owl Take Avoidance Surveys shall be conducted by walking the entire WRSP site and (where possible) in accessible areas within 660 feet of the project disturbance footprint. The 660-foot buffer zone is surveyed to identify burrows and owls outside of the study area, which may be impacted by factors such as noise and vibration (heavy equipment) during project construction. Pedestrian survey transects shall be spaced to allow 100 percent visual coverage of the ground surface. The distance between transect center lines shall be 20 feet to 65 feet and shall be reduced to account for differences in terrain, vegetation density, and ground surface visibility. Poor weather may affect the surveyor's ability to detect burrowing owls thus, avoid conducting surveys when wind speed is greater than 20 kilometers per hour and there is precipitation or dense fog. To avoid impacts to owls from surveyors, owls and/or occupied burrows shall be avoided by a minimum of 160 feet wherever practical to avoid flushing owls from occupied burrows. Disturbance to occupied burrows shall be avoided during all seasons. | | | | | |
| c. | If burrowing owls are detected on the site, the following restricted activity dates and setback distances derived from the 2012 Staff Report on Burrowing Owl Mitigation (CDFW 2012), or as otherwise coordinated with the CDFW:<br>o Occupied burrows shall not be disturbed during the nesting season, from February 1 through August 31; | | | | | |
| d. | o No disturbance shall occur within 50 meters (approximately 160 feet) of occupied burrows during October 16 through March 31 or within 200 meters (approximately 660 feet) April 1 through October 15;<br>o No earth-moving activities or other disturbance shall occur within the aforementioned buffer zones of occupied burrows. These buffer zones shall be well-marked or fenced as well. If burrowing owls were found in the study area, a qualified biologist shall also delineate the extent of burrowing owl habitat on the site; and | | | | | |

| | | | | | | |
|---|---|---|---|---|---|---|
| | ○ Buffers may be modified by a qualified western burrowing owl biologist that is knowledgeable enough to establish buffer sizes that are commensurate with the acclimation of western burrowing owls to disturbance. These buffers if modified over that prescribed above, shall be coordinated with the CDFW.<br>Finally, in accordance with the 2012 Staff Report, if burrowing owls were found nesting on site and must be passively removed in the non-nesting season (October 1 to February 1) to accommodate the project, suitable artificial burrows shall be established within appropriate habitat for western burrowing owls to minimize the potential for mortality of burrowing owls due to stress, lack of resources, or predation. The habitat enhancement plan shall be developed in coordination with the CDFW and the City of American Canyon.<br>Information regarding the occurrence of burrowing owls at the WRSP site shall be reported to the CNDDB. | | | | | |

| ~~**Mitigation Measure 4.3-1m:** ***Preconstruction Surveys for Callippe Silverspot Butterfly Host Plant (Johnny Jump Up).*** Prior to construction a qualified botanist shall survey the off-site water improvement area (OSWA) for the host plant of the Callippe silverspot butterfly (Johnny jump up [*Viola pedunculata*]) during the plants blooming period of February to April in accordance with the performance standards provided in Mitigation Measures 4.3-1m through 4.3-1o. A qualified botanist is a person who has at least an undergraduate degree in entomology or a related field, has a minimum of 2 years' field experience, and is knowledgeable of identification of adult, egg, and larval life stages of butterflies. The botanist shall clearly demarcate the boundary of Johnny jump ups where this species occurs within the proposed OSWA on project plan maps. The Project Applicant shall avoid removal and disturbance to all identified Johnny jump ups and install orange construction fencing between any identified plant populations and construction activities to ensure that construction activities do not impact any host plants and/or life stages of the Callippe~~ | ~~Submittal of documentation to verify that survey(s) have been conducted and other mitigation requirements were met~~ | ~~Prior to construction activities in the offsite water improvement area that occur between February and April~~ | ~~City of American Canyon~~ | | |

| | | | | | |
|---|---|---|---|---|---|
| ~~silverspot butterfly. If Johnny jump up plants are not identified within the OSWA or all identified Johnny jump up plants shall be avoided and protected from project disturbance, breeding Callippe silverspot butterflies will not be impacted, and further mitigation is not needed.~~ | | | | | |
| ~~**Mitigation Measure 4.3-1n:** ***Presence Surveys for Callippe Silverspot Butterfly.*** If Johnny jump ups are found in the area of disturbance and cannot be avoided, presence surveys for Callippe silverspot shall be conducted three times during the peak flight season in May and June the year prior to site disturbance by a qualified biologist. A qualified biologist is a person with at least an undergraduate degree in entomology or a related field with a minimum of 2 years' field experience and who is knowledgeable of identification of adult, egg, and larval life stages of butterflies. Walking transects spaced to allow 100 percent coverage of the off-site water improvement area (OSWA) area shall be conducted during the last week of May, second week of June, and last week of June. Surveys shall be conducted during times of warm, calm weather when butterflies are most active and shall not occur during precipitation, heavy fog, or wind speeds greater than 10 mph. If any life stage of Callippe silverspot butterfly is not identified during presence surveys, it is expected the survey area does not support breeding butterflies and Johnny jump up plants may be removed by hand from construction areas within the OSWA and further mitigation is not needed.~~ | ~~Submittal of documentation to verify that survey(s) have been conducted and other mitigation requirements were met~~ | ~~During May and June the year prior to any ground disturbing activities in the off-site water improvement area (if Johnny jump ups are found)~~ | ~~City of American Canyon~~ | | |

| ~~**Mitigation Measure 4.3-1o:** ***Protocols if Callippe Silverspot Butterflies Are Found.*** If any life stage of Callippe silverspot butterfly is found during presence surveys, it is expected the survey area does support breeding butterflies. Prior to issuance of a grading permit, the Project Applicant shall submit written proof that the following measures were implemented:~~<br>a. ~~Information regarding the Callippe silverspot sightings shall be reported to the CNDDB.~~<br>b. ~~If federally listed species are present, consultation with the USFWS shall be required to determine the need for an incidental take permit and coordinate mitigation (see Item d, below). The applicant/entity constructing the facilities in the OSWA shall provide proof to the City prior to any ground disturbance that an incidental take permit has been obtained or written correspondence from the USFWS that no incidental take permit is required.~~<br>c. ~~If any individual Johnny jump up plant or population can be avoided during project implementation, it shall be clearly marked in the field by a qualified botanist and avoided during construction activities. Before ground clearing or ground disturbance, all on-site construction personnel shall be instructed as to Callippe silverspot identification, this species' host plant presence and the importance of avoiding impacts to this species and its habitat.~~<br>d. ~~If occupied breeding habitat or nectar food sources for Callippe silverspot butterfly would be directly impacted by the project, a mitigation plan shall be developed by a qualified biologist in consultation with the USFWS prior to the start of local construction activities. The plan shall detail appropriate habitat replacement ratios, which shall be a minimum of 1:1 based on breeding habitat area and anticipated number of host plants and 3:1 for native nectar plants, location of the mitigation site, methods for implementation, success criteria, monitoring and reporting protocols, and contingency measures that shall be implemented if the initial mitigation fails. The mitigation site may be located on the WRSP site or in occupied habitat in proximity to the WRSP site. If on-site options are not available, off-site areas may be considered (e.g., Jaeger Conservation Area). The success criteria and monitoring requirements for Callippe silverspot butterfly mitigation areas shall be as described in Mitigation Measure 4.3-1b, Item c. The mitigation~~ | ~~Submittal of documentation to verify that survey(s) have been conducted and other mitigation requirements were met~~ | ~~Prior to issuance of grading permit for the off-site water improvement area~~ | ~~City of American Canyon~~ | | |

| | | | | | |
|---|---|---|---|---|---|
| ~~plan shall include continuing presence surveys, seeding or plantings of Callippe silverspot host and nectar plants, and invasive plant species removal to enhance butterfly habitat.~~<br>e. ~~If mitigation is required for incidental take of Callippe silverspot butterflies or their habitat, the Project Applicant shall establish, maintain, and monitor the mitigation area identified in the plan for 5 years following the completion of construction and restoration activities. Monitoring reports shall be submitted to the USFWS at the completion of restoration and for 5 years following restoration implementation. Monitoring reports shall include photo-documentation, a site layout map, presence survey results, and justification for any deviations from the mitigation plan.~~<br>f. ~~In lieu of the above prescribed mitigation, requirements may be satisfied via the purchase of qualified mitigation credits or the preservation of off-site habitat in coordination with the USFWS, as appropriate.~~ | | | | | |

| | | | | Date | Initial |
| ~~**Mitigation Measure 4.3-1p:** ***Preconstruction Surveys and Avoidance Measures for the American Badger.*** Performance standards for preconstruction surveys and avoidance measures for badger are:~~<br>~~a. Preconstruction surveys shall be conducted for the American badger within 7 days prior to ground-disturbing activities in grassland habitats within the study area and off-site water improvement area (OSWA). Surveys shall be conducted by a qualified wildlife biologist with experience and knowledge in identifying badger burrows and include walking parallel transects looking for badger burrows and sign. Any badger burrows identified shall be mark and mapped on WRSP site maps.~~<br>~~b. If active badger dens are identified within the study are or OSWA a no-work buffer of 200 feet shall be established around the den and associated occupied areas. If avoidance is not feasible, a biologist shall determine if the burrow is being used as an active maternity den through utilization of remote cameras. If young are determined to be present, the burrow shall be avoided until the young have vacated the burrow as determined by a qualified biologist. If the burrow is determined not to be an active maternity den and young are not present, in coordination with the CDFW (CDFW), a one-way eviction door shall be installed between September 1 and January 1 to passively relocate the badger and to avoid impacts during the breeding season. If the badger digs back into the burrow, CDFW staff may allow the use of live traps to relocate badgers to suitable habitat away from the area of project impact.~~<br>~~c. If capture/active or passive relocation of American badgers is determined to be necessary in consultation with CDFW, the Applicant shall prepare a relocation plan for review and approval by CDFW and the City prior to any relocation. The Relocation Plan shall address measure to minimize potential for mortality due to stress, predation, or lack of available burrows. If active relocation is deemed appropriate and approved by CDFW, the relocation plan shall address the following protocols:~~<br>~~1. Individuals shall only be actively relocated into habitat that has a full complement of existing and/or expanded habitat features that are required for the species' life history (i.e., foraging habitat, burrows, aquatic habitat, etc.);~~<br>~~2. Finally, prevalence of disease or competition by non-native species shall be evaluated before animals are actively relocated; and~~ | ~~Submittal of documentation that surveys have been conducted, and burrows have been avoided, or badgers have been relocated in coordination with CDFW~~ | ~~Prior to ground disturbing activities in grassland habitats within the WRSP site and the off-site water improvement area~~ | ~~City of American Canyon and/or CDFW, as necessary~~ | | |

| | | | | | |
|---|---|---|---|---|---|
| 3. Prevalence of disease or competition by non-native species shall be evaluated before animals are actively relocated. | | | | | |
| **Mitigation Measure 4.3-2a: *CDFW Streambed Alteration Agreement*.** The Project Applicant shall be required to obtain a Lake and Streambed Alteration Agreement (LSAA) from the California Department of Fish and Wildlife (CDFW). Subject to the final terms of the LSAA, the following performance standards shall be implemented:<br>• Construction activities and equipment staging shall be designed to avoid and minimize direct and indirect impacts to wetlands and riparian habitat;<br>• Construction occurring in the vicinity of riparian areas shall be delimited with a minimum 20-foot setback to avoid intrusion of construction activities into sensitive habitat;<br>• Construction areas within 500 feet of riparian habitat shall be subject to best management practices under the General National Pollutant Discharge Elimination System Permit; and<br>• To offset temporary and permanent impacts to riparian habitats, mitigation at a minimum ratio of 1:1 shall be provided, or as required by the LSAA. | Submittal of documentation, including copy of LSAA, verifying permit has been obtained and mitigation measures have been implemented | Prior to construction activities | City of American Canyon and CDFW | | |

| Mitigation Measures | Method of Verification | Timing of Verification | Responsible for Verification | Verification of Completion | |
|---|---|---|---|---|---|
| | | | | Date | Initial |
| **Mitigation Measure 4.3-2b: *Protocol-Level Surveys*.** Prior to issuance of a grading permit, the Project Applicant shall submit written proof that a qualified biologist conducted preconstruction CDFW protocol-level surveys during the appropriate blooming periods for occurrence of sensitive natural communities, especially purple needlegrass grasslands) within the footprint of the construction activities at the WRSP site, off-site water improvement area (OSWA), and other off-site project features. These surveys should be performed in compliance with the most recent CDFW survey protocol, currently 2018. If no sensitive vegetation communities are found during focused surveys of the project footprint, then sensitive vegetation communities would be assumed to be absent from OSWA. The botanist shall document the findings in a technical memorandum to the lead agency, as appropriate, and no further mitigation would be required. If sensitive vegetation communities are found | Submittal of documentation to verify that survey(s) have been conducted and other mitigation requirements were met | Prior to issuance of a grading permit for the off-site water improvement area | City of American Canyon and/or CDFW, as necessary | | |

| | | | | | |
|---|---|---|---|---|---|
| within the footprint of the project activities during focused surveys, Mitigation Measure 4.3-2c shall be implemented. | | | | | |
| **Mitigation Measure 4.3-2c:** ***Measures to Implement if Sensitive Natural Vegetation Communities Are Found.*** If a sensitive vegetation community is found during focused surveys, prior to issuance of a grading permit, the Project Applicant shall submit written proof that the following measures were implemented in compliance with the following performance standards:<br>a. Information regarding the sensitive vegetation community shall be reported to the CNDDB.<br>b. If any sensitive vegetation community can be avoided during project implementation, it shall be clearly marked in the field by a qualified botanist and avoided during construction activities. Before ground clearing or ground disturbance, all on-site construction personnel shall be instructed as to the community's presence and the importance of avoiding impacts to this sensitive vegetation community.<br>c. If sensitive vegetation communities are present and cannot be avoided, consultations with the CDFW and/or the USFWS shall be required. A mitigation plan to compensate for the loss of the sensitive vegetation community could be required. This plan may be developed by a qualified botanist in consultation with the appropriate agencies prior to the start of local construction activities. The plan shall detail appropriate replacement ratios, which shall be a minimum of 1:1 based on area and number of plants and may be increased based on the recommendation of the botanist or the relevant resource agency to achieve no net loss of habitat. The plan shall describe the location of the mitigation site, methods for implementation (e.g., construction techniques, timing and sequencing, watering, soil properties, and other necessary specifications), success criteria (e.g., minimum 75 percent plant survival after 5 years, 75 percent vegetative cover by desirable species or comparable to existing conditions, and a viable, self-sustaining plant community), monitoring and reporting protocols, and contingency measures that shall be implemented if the initial mitigation fails. The mitigation plan may include the collection of seeds, propagules, and top soils under the supervision of a qualified botanist from the WRSP site for installation at the mitigation site. The mitigation site may be located on the WRSP site, such as within the pipeline disturbance corridor, or | Submittal of documentation to verify that survey(s) have been conducted and other mitigation requirements were met | Prior to issuance of a grading permit | City of American Canyon and/or CDFW, as necessary | | |

| | | | | | |
|---|---|---|---|---|---|
| ~~in close proximity to the WRSP site. If on-site options are not available, off-site areas may be considered. The mitigation plan shall be submitted to the City for approval prior to the issuance of permits that would affect the respective sensitive vegetation communities.~~<br>d. ~~If mitigation is required for loss of sensitive vegetation communities, the Project Applicant shall establish, maintain, and monitor the mitigation area identified in the plan for 5 years following the completion of construction and restoration activities. Annual monitoring reports shall be submitted to the City and the resource agencies at the completion of restoration and for 5 years following restoration implementation. Monitoring reports shall include photo-documentation, planting specifications, a site layout map, descriptions of materials used, and justification for any deviations from the mitigation plan.~~ | | | | | |

| | | | | | |
|---|---|---|---|---|---|
| ~~**Mitigation Measure 4.3-3a: *Wetlands and Other Waters Avoidance and Minimization Effects.*** Final project design shall avoid and minimize the fill of wetlands and other waters to the greatest practicable extent. Areas that are avoided shall be subject to best management practices under the National Pollutant Discharge Elimination System Permit Construction General Permit, as described in Mitigation Measure 4.7-1. To minimize indirect effects, the Project Applicant shall design and implement a wetland management plan and stormwater management system to maintain a minimum normal inflow equivalent (roughly equivalent to the 2-year storm event) to the into each avoided wetland system. Any stormwater from impervious surfaces shall be pretreated prior discharge into the avoided wetlands. The management plan shall include a minimum 5-year monitoring plan to document performance and conditions in the avoided wetlands. The minimum performance standard shall be no reduction in avoided wetland acreage. If the project fails to achieve performance standards, remedial actions to correct deficiencies shall be implemented and additional mitigation shall be provided to offset temporal losses. The Plan shall be developed in consultation with the U.S. Army Corps of Engineers and San Francisco Bay Regional Water Quality Control Board and approved by the City.~~ | ~~Preparation and implementation of a Wetland Management Plan and Stormwater Management System~~ | ~~Prior to construction activities in areas near wetlands and other waters~~ | ~~City of American Canyon, U.S. Army Corps of Engineers, and/or San Francisco Bay Regional Water Quality Control Board, as necessary~~ | | |
| **Mitigation Measure 4.3-3b: *Invasive Species Management*.** Where perennial or seasonal water features are maintained outside of the quarry pond, invasive species, such as non-native fish, bullfrogs, and plants, could cause significant adverse impacts to populations of special-status species utilizing adjacent habitats and downstream reaches. To reduce these potentially significant impacts, an invasive species management plan shall be developed for seasonal wetlands, ditches, and detention basins. This plan shall include intermittent surveys | Preparation and implementation of an Invasive Species Management Plan | Implementation of an Invasive Specific Management Plan | City of American Canyon | | |

| | | | | | |
|---|---|---|---|---|---|
| for invasive species and potential actions to manage these species, such as draining basins or actively capturing bullfrogs. The plan shall also include adaptive measures to be implemented should the above actions fail to adequately manage bullfrogs and other non-native invasive species. Note: This mitigation measure does not apply to Quarry Pond, which cannot be effectively drained and cannot be effectively managed to remove invasive fish and bullfrogs without other potential significant effects. | | | | | |

| Mitigation Measures | Method of Verification | Timing of Verification | Responsible for Verification | Verification of Completion | |
|---|---|---|---|---|---|
| | | | | Date | Initial |
| ~~**Mitigation Measure 4.3-3c:** ***Mitigation for Wetlands and Other Waters.*** Where jurisdictional wetlands and other waters cannot be avoided, to offset temporary and permanent impacts that would occur as a result of the project, mitigation for preservation, restoration, and creation shall be provided through the following mechanisms and subject to the following performance standards:~~<br>1. ~~Purchase or dedication of land to provide wetland preservation, restoration or creation. If restoration is available and feasible, then a ratio of at least 2:1 shall be used. Where practical and feasible, on-site mitigation shall be implemented whenever possible.~~<br>2. ~~If on-site mitigation is used, a wetland mitigation and monitoring plan shall be developed by a qualified biologist in coordination with the California Department of Fish and Wildlife, U.S. Army Corps of Engineers, and/or Regional Water Quality Control Board that details mitigation and monitoring obligations for temporary and permanent impacts to wetlands and other waters as a result of construction activities. The plan shall quantify the total acreage lost to jurisdictional areas and describe mitigation ratios for lost habitat. The plan shall also include:~~<br>a. ~~Annual success criteria, including plant survivorship and vigor to be determined by counting individuals of each species and comparing the counts to the numbers originally planted for that species. A minimum survival rate of 75 percent of installed plants is required for all years including at least 2 years' post-irrigation;~~<br>b. ~~Means for controlling invasive species near plantings; and~~ | ~~Submittal of documents verifying restoration and compensatory mitigation has been implemented, if needed~~ | ~~Prior to construction activities in areas near wetlands and other waters~~ | ~~City of American Canyon, CDFW, U.S. Army Corps of Engineers, and/or San Francisco Regional Water quality Control Board, as necessary~~ | | |

| | | | | | |
|---|---|---|---|---|---|
| c. ~~A description of mitigation areas and monitoring and reporting requirements.~~<br>3. ~~The mitigation and monitoring plan shall be submitted to the appropriate regulatory agencies for approval.~~<br>~~If monitoring suggests that the performance standards outlined above are not being met, corrective actions shall be implemented. Possible contingency measures include, but are not limited to:~~<br>4. ~~Replanting of native trees and shrubs;~~<br>5. ~~Adjusting the quantity and timing of irrigation to develop a schedule that better meets the characteristics of the site and the needs of the plants;~~<br>6. ~~Installing additional protective wire cages around plants to minimize damage from wildlife or other sources;~~<br>7. ~~Incorporating additional monitoring events in an attempt to address site deficiencies proactively; or~~<br>8. ~~Adjusting the weed maintenance methods or schedule to address specific problems that arise.~~ | | | | | |

| | | | | Date | Initial |
| ~~**Mitigation Measure 4.3-4:** ***Preconstruction Surveys for Bats.*** A qualified biologist shall conduct a passive habitat assessment for bat use and habitat a minimum of 6 months prior to project construction activities in known or potential bat roosting habitat in the ruins and trees in the WRSP area which shall conform to the performance standards below. If the habitat assessment reveals bat activity, then a qualified bat biologist shall conduct a presence absence survey during peak activity periods. Survey methods, timing, duration, and species shall be provided for review and approval by the lead agency prior to habitat disturbance. Human intrusion into an active roost could be damaging to a population, particularly during the maternity season, March 15 through September 15, when females are aggregated and rearing defenseless young. To reduce potentially significant impacts to sensitive bat species during surveys by the qualified biologist, the following shall be verified:~~<br>a. ~~Qualifications to determine adequate knowledge and experiences with the particular species for which they are surveying; and~~<br>b. ~~Demonstrable experience with bat surveys in specific roost types for project-specific conditions. Should bat species be confirmed on site either through the habitat assessment or during surveys, then at minimum the following shall be implemented:~~<br>a. ~~Species-specific avoidance methods to avoid disturbance;~~<br>b. ~~Evaluate the impact, including the length of time of disturbance, equipment noise, and the type of habitat present within the project footprint;~~<br>c. ~~Develop work windows for building demolition, tree trimming, or tree removal (typically August 31 through October 15 when young would be self-sufficiently volant and prior to hibernation and March 1 to April 15 to avoid hibernating or maternity colonies);~~<br>d. ~~Identify appropriate buffers outside of this work window;~~<br>e. ~~Outline specific timing of building demolition, renovation, or tree trimming or removal; and~~<br>f. ~~Incorporate and implement mitigation measures to offset any impacts to bat roosts on site through bat-friendly design and integrated bat roost construction. When designing new or renovated buildings, architects can include safe and attractive roosting opportunities for bats such as wall cavities in buildings. This includes the construction of~~ | ~~Submittal of documentation to verify that survey(s) have been conducted and other mitigation requirements were met~~ | ~~Within six month of the demolition of onsite structures~~ | ~~City of American Canyon~~ | | |

| | | | | | |
|---|---|---|---|---|---|
| ~~connected bat boxes or design of other artificial bat roost habitat in remodeled structures (see Erickson et al. 2002) to enhance roosting opportunities on structures.~~ | | | | | |

| **Section 4.4: Cultural Resources** | | | | | |
| **Mitigation Measure 4.4-2: *Unanticipated Discovery of Archaeological Resources*.** If prehistoric or historic-era archaeological resources are encountered by construction personnel during project implementation, all construction activities within 100 feet shall halt and the contractor shall notify the City of American Canyon. Prehistoric archaeological materials might include obsidian and chert flaked-stone tools (e.g., projectile points, knives, scrapers) or toolmaking debris; culturally darkened soil ("midden") containing heat-affected rocks, artifacts, or shellfish remains; and stone milling equipment (e.g., mortars, pestles, handstones, or milling slabs); battered stone tools, such as hammerstones and pitted stones. Historic-era materials might include stone, concrete, or adobe footings and walls; filled wells or privies; and deposits of metal, glass, and/or ceramic refuse.<br>The Project Applicant shall retain a Secretary of the Interior-qualified archaeologist to inspect the findings within 24 hours of discovery and inform the City of American Canyon If it is determined that the project may damage a historical resource or a unique archaeological resource (as defined pursuant to CEQA and the CEQA Guidelines), construction shall cease in an area determined by the archaeologist until a mitigation plan has been prepared in accordance with PRC § 21083.2 and CEQA Guidelines § 15126.4; approved by the City; and implemented to the satisfaction of the archaeologist. In consultation with the City, the archaeologist shall determine when construction may commence.<br>Consistent with § 15126.4(b)(3), the mitigation plan shall recommend preservation in place, as a preference, or, if preservation in place is not feasible, data recovery through excavation. If preservation in place is feasible, this may be accomplished through one of the following means: (1) modifying the construction plan to avoid the resource; (2) incorporating the resource within open space; (3) capping and covering the resource before | Submit documentation of findings and mitigation plan, if resources are encountered | During grading activities | City of American Canyon | | |

| | | | | | |
|---|---|---|---|---|---|
| building appropriate facilities on the resource site; or (4) deeding resource site into a permanent conservation easement. If preservation in place is not feasible, a qualified archaeologist shall prepare and implement a detailed treatment plan to recover the scientifically consequential information from and about the resource, which shall be reviewed and approved by the City prior to any excavation at the resource site. Treatment of archaeological resources shall follow the requirements of PRC § 21083.2. Treatment for most resources shall consist of (but would not necessarily be not limited to) sample excavation, artifact collection, site documentation, and historical research, with the aim to target the recovery of important scientific data contained in the portion(s) of the significant resource to be impacted by the project. The treatment plan shall include provisions for analysis of data in a regional context, reporting of results within a timely manner, curation of artifacts and data at an approved facility, and dissemination of reports to local and state repositories, libraries, and interested professionals. | | | | | |
| **Mitigation Measure 4.4-3: *Unanticipated Discovery of Paleontological Resources*.** If paleontological resources, such as fossilized bone, teeth, shell, tracks, trails, casts, molds, or impressions are encountered by construction personnel during project implementation, all construction activities within 100 feet shall halt and the contractor shall notify the City of American Canyon. The Project Applicant shall retain a qualified paleontologist to inspect the findings within 24 hours of discovery. The paleontologist shall assess the nature and importance of the find and, if necessary, develop appropriate treatment measures in conformance with Society of Vertebrate Paleontology standards, and in consultation with the City of American Canyon. The Project Applicant shall implement the final treatment measures. | Submit documentation of findings and verification of treatment measures, if resources are encountered | During grading activities | City of American Canyon | | |

| **Mitigation Measure 4.4-4: *Unanticipated Discovery of Human Remains*.** If human remains are encountered by construction personnel during project implementation, all construction activities within 100 feet shall halt and the contractor shall notify the City of American Canyon. The City shall contact the Napa County Coroner to affirmatively indicate to the City that no investigation of the cause of death is required. The Native American Heritage Commission (NAHC) shall be contacted within 24 hours if the Coroner determines that the remains are Native American. The NAHC shall then identify the person or persons it believes to be the most likely descendant from the deceased Native American (PRC § 5097.98), who in turn shall make recommendations to the City of American Canyon for the appropriate means of treating the human remains and any associated funerary objects (CEQA Guidelines § 15064.5(d)). | Submit documentation of findings and treatment measures, if remains are encountered | During grading activities | City of American Canyon | | |
| **Section 4.5: Geology, Soils, and Seismicity** | | | | | |
| ~~**Mitigation Measure 4.5-4: *Geotechnical Requirements for the Quarry Pond*.** Prior to issuance of any building permits, the Project Applicant shall submit to the City plans that are consistent with the geotechnical recommendations of a minimum setback of 3:1 (horizontal:vertical) from the toe of the existing quarry pond bank. Any proposed plans inside of the 3:1 setback, shall be the subject of a detailed slope stability analysis by a current California registered Geotechnical Engineer or Engineering Geologist where proposed slopes must meet minimum factor of safety requirements as determined by the most recent California Building Code for both static and dynamic (earthquake) conditions. Graded cut-and-fill slopes over 15 feet shall be no steeper than 3:1 with slopes up to 15 feet no steeper than 2:1. Other measures, such as use of retaining walls and geogrid reinforcement or corrective grading, shall be implemented as necessary in accordance with the specific geotechnical recommendation informed by the aforementioned detailed slope stability analysis and outlined in the design level geotechnical report.~~ | ~~Submit grading plans for Quarry Lake Pond~~ | ~~Prior to issuance building permits~~ | ~~City of American Canyon~~ | | |
| **Section 4.6: Hazards and Hazardous Materials** | | | | | |
| ~~**Mitigation Measure 4.6-1a: *Evaluation for Lead-Based Paint or Coatings, Asbestos-Containing Materials, or Polychlorinated Biphenyls*.** The Project Applicant shall submit documentation to the City to verify that all proposed areas for demolition or modification have been assessed by California state licensed contractors for the potential presence of~~ | ~~Submit documentation of findings~~ | ~~Prior to demolition activities~~ | ~~City of American Canyon~~ | | |

| | | | | | |
|---|---|---|---|---|---|
| ~~lead-based paint or coatings, asbestos containing materials, and polychlorinated biphenyl-containing equipment prior to issuance of a demolition permit.~~ | | | | | |
| **Mitigation Measure 4.6-1b:** ***Health and Safety Plan*****.** If the assessment required by Mitigation Measure 4.6-1a finds presence of lead-based paint, asbestos, and/or polychlorinated biphenyls, prior to any construction or demolition activities on the project site, the Project Applicant shall submit to the City for approval and shall implement a health and safety plan to protect workers from risks associated with hazardous materials during abatement, demolition or renovation of affected structures. | Submit and receive approval of Health and Safety Plan | Prior to demolition of structures containing lead-based paint, asbestos, and/or polychlorinated biphenyls | City of American Canyon | | |

| ~~**Mitigation Measure 4.6-2a:** ***Phase I Recommendations.*** Prior to commencement of construction, the Project Applicant shall contract a qualified environmental consulting firm with state registered professionals (Professional Engineers or Geologists) to carry out the recommendations contained in the April 14, 2015, Phase I Environmental Site Assessment report by ENGEO Incorporated pertaining to the potential environmental concerns. The Phase I report included recommendations for collection of surface soil samples for laboratory analysis and oversight of other earthwork activities. The findings of the soil sampling effort shall be submitted to the Napa County Environmental Health Division (NCEHD) prior to initiating any earthwork activities on the project site for direction on whether any further sampling or remediation may be necessary.~~ | ~~Submit documentation that recommendations of the Phase I Environmental Site Assessment have been implemented, as necessary~~ | ~~Prior to commencement of construction~~ | ~~City of American Canyon~~ | | |
| ~~**Mitigation Measure 4.6-2b:** ***Soil Management Plan.*** The project shall submit and obtain approval of a Soil Management Plan from the Napa County Environmental Health Division (NCEHD) prior to initiating any earthwork activities on the project site. During construction, the contractor shall cease any earthwork activities upon discovery of any suspect soils or groundwater (e.g., petroleum odor and/or discoloration) during construction in accordance with a Soil Management Plan prepared for the project by a qualified environmental consultant and approved by the NCEHD. The contractor shall notify the NCEHD upon discovery of suspect soils or groundwater and retain a qualified environmental firm to collect soil samples to confirm the level of contamination that may be present. If contamination is found to be present, any further proposed groundbreaking activities within areas of identified or suspected contamination shall be conducted according to a site specific health and safety plan, prepared by a California state licensed professional. The contractor shall follow all procedural direction given by NCEHD and in accordance with the Soil Management Plan prepared for the site to ensure that suspect soils are isolated, protected from runoff, and disposed of in accordance with transportation laws and the requirements of the licensed receiving facility.~~ | ~~Submit NCEHD-approved Soil Management Plan and Health and Safety Plan, as necessary~~ | ~~Prior to grading and during construction~~ | ~~City of American Canyon and/or Napa County Environmental Health Division, as necessary~~ | | |

| | | | | | |
|---|---|---|---|---|---|
| **Mitigation Measure 4.6-2c:** ***Removal of Contaminated Soil or Groundwater*****.** If contaminated soil or groundwater is encountered and identified constituents exceed human health risk levels, the Project Applicant shall submit documentation to the City to verify that it has been delineated, removed, and disposed of off site in compliance with the receiving facilities' requirements prior to construction of any building foundation. | Submit documentation of removal of contaminated soil or groundwater, if encountered | Prior to construction of any building foundation | City of American Canyon | | |
| **Mitigation Measure 4.6-4:** ***Development within 50 Feet of the Pacific Gas & Electric (PG&E) Pipeline/Easement*****.** Prior to issuance of building or grading permits, Project Applicant shall submit documentation to the City to verify that development plans located within 50 feet of the existing PG&E pipeline/easement, including utilities that may intersect the existing PG&E pipeline, have been submitted to PG&E Gas Transmission Integrity Management and PG&E Land Development for review and approval. Project Applicant plans for all proposed improvements located within this zone shall adhere to the requirements of PG&E Gas Transmission Integrity Management and PG&E Land Development, including without limitation, setback requirements, depth of cover over pipeline, location of trees and maintenance requirements, minimum separation of crossing utilities, trail location, as well as any relocation requirements, if applicable. | Submit development plans for any activities within 50 feet of the existing PG&E pipeline/easement | Prior to issuance of building or grading permits for any activities within 50 feet of the existing PG&E pipeline/easement. | City of American Canyon and/or PG&E, as necessary | | |

| Mitigation Measures | Method of Verification | Timing of Verification | Responsible for Verification | Verification of Completion | |
|---|---|---|---|---|---|
| | | | | Date | Initial |
| **Section 4.7: Hydrology and Water Quality** | | | | | |
| **Mitigation Measure 4.7-1: *Stormwater Pollution Prevention Plan (SWPPP)*.** Prior to issuance of grading permits for the project, the Project Applicant shall submit documentation to the City to verify that a Storm Water Pollution Prevention Plan (SWPPP) has been prepared in accordance with the requirements of the statewide National Pollutant Discharge Elimination System (NPDES) Construction General Permit. The SWPPP shall be designed, without limitation, to address the following objectives: (1) all pollutants and their sources, including sources of sediment associated with construction, construction site erosion, and all other activities associated with construction activity are controlled; (2) where not otherwise required to be under a Regional Water Quality Control Board permit, all non-stormwater discharges are identified and either eliminated, controlled, or treated; (3) site best management practices (BMPs) are effective and result in the reduction or elimination of pollutants in stormwater discharges and authorized non-stormwater discharges from construction activity; and (4) stabilization BMPs are installed to reduce or eliminate pollutants after construction is completed. The SWPPP shall be prepared by a qualified SWPPP developer and included as part of construction specifications. The SWPPP shall include the minimum BMPs required for the identified Risk Level in accordance with NPDES Construction General Permit requirements. BMPs could include, but are not necessarily limited to the use of straw bales, silt fences, fiber rolls, hydroseeding, preservation of existing vegetation, straw mulch, washing of truck tires prior to exiting site, protection of existing storm drain inlets, dedicated refueling areas with secondary containment, and on-site storage of spill prevention kits. BMP implementation shall be consistent with the BMP requirements in the most recent version of the California Stormwater Quality Association Stormwater Best Management Handbook-Construction or the Caltrans *Stormwater Quality Handbook Construction Site BMPs Manual*. | Submit Stormwater Pollution Prevention Plan | Prior to issuance of grading permits | City of American Canyon | | |

| | | | | | |
|---|---|---|---|---|---|
| **Mitigation Measure 4.7-2: *Water Discharge Requirements for Dewatering*.** For areas that may encounter groundwater during excavation activities, the Project Applicant shall incorporate San Francisco Regional Water Quality Control Board (SFRWQCB) discharge requirements into construction specifications for any dewatering activities that may be necessary. The Project Applicant shall provide all requested plans and protocols and incorporate any SFRWQCB additional comments or requests into project specifications for construction activities. Dewatering plans shall include, without limitation, an assessment of water quality, protocols for containment, and thresholds for discharge. No discharge of pumped water for dewatering shall occur prior to approval from SFRWQCB. | Submittal of dewatering plans | During excavation and grading activities | City of American Canyon | | |

| Mitigation Measures | Method of Verification | Timing of Verification | Responsible for Verification | Verification of Completion | |
|---|---|---|---|---|---|
| | | | | Date | Initial |
| **Mitigation Measure 4.7-3a: *Post-Construction Stormwater Controls*.** Prior to approval of tentative maps or issuance of building permits for the project, the Project Applicant shall submit documentation to the City to verify that post-construction stormwater controls have been included in the site design in accordance with the requirements of the National Pollutant Discharge Elimination System (NPDES) Phase II Small Municipal Separate Storm Sewer Systems (MS4) Permit and the Bay Area Stormwater Management Agencies Association (BASMAA) Post-Construction Manual. The Project Applicant shall prepare the final Stormwater Control Plan (SCP) and any necessary changes by the City or the SFRWQCB shall be incorporated into project design plans to ensure the required controls are in place and adhere to the requirements of the NPDES Phase II Small MS4 Permit and consistent with the BASMAA manual. At a minimum, the SCP shall demonstrate how the following measures shall be incorporated into the project:<br>• Low-impact development (LID) site design principles (e.g., preserving natural drainage channels, treating stormwater runoff at its source rather than in downstream centralized controls);<br>• Source control best management practices (BMPs) in the form of design standards and structural features for all proposed areas of development;<br>• Source control BMPs for landscaped areas shall be documented in the form of a Landscape<br>Management Plan that relies on Integrated Pest Management and also includes pesticide and fertilizer application guidelines designed to minimize any off-site discharge; and<br>• Treatment control measures (e.g., bioretention, porous pavement, vegetated swales) targeting any potential pollutants such as sediment, pathogens, metals, nutrients (nitrogen and phosphorus compounds), oxygen-demanding substances, organic compounds (e.g., PCBs, pesticides), oil and grease, and trash and debris. The SCP shall demonstrate that the project has the land area available to support the proposed BMP facilities sized per the required water quality design storm. | Submit documentation of compliance with the NPDES Phase II Small Municipal Separate Storm Sewer Systems Permit and the Bay Area Stormwater management Agencies Association Postconstruction Manual | Prior to approval of tentative maps or issuance of building permits | City of American Canyon | | |

| | | | | | |
|---|---|---|---|---|---|
| **Mitigation Measure 4.7-3b: *Compliance with the MS4 Permit*.** Prior to issuance of any building permits, the Project Applicant shall submit documentation to the City to demonstrate adherence to Provision E.12.h of the Municipal Separate Storm Sewer Systems (MS4) Permit, which requires that an Operation and Maintenance Program is implemented for post-construction stormwater management features. Responsible parties and funding for long-term maintenance of all Best Management Practices (BMPs) must be specified within the Operation and Maintenance Plan. This Plan shall specify a regular inspection schedule of stormwater treatment facilities in accordance with the requirements of the National Pollutant Discharge Elimination System (NPDES) MS4 Permit. Reports documenting inspections and any remedial action conducted shall be submitted regularly to the City for review and approval. | Submit documentation that an Operation and Maintenance Program has been implemented for post-construction stormwater management features | Prior to issuance of building permits | City of American Canyon | | |

| Mitigation Measures | Method of Verification | Timing of Verification | Responsible for Verification | Verification of Completion | |
|---|---|---|---|---|---|
| | | | | Date | Initial |
| **Section 4.9: Noise** | | | | | |
| **Mitigation Measure 4.9-1: *Construction Noise*.** To reduce the potential for noise impacts due to construction of the project, the Project Applicant shall require construction contractors to implement the following measures:<br>• Stationary construction noise sources shall not be located within 200 feet of residence. If necessary to locate this equipment within 200 of existing residences, stationary equipment shall be shielded by temporary noise barriers or acoustic enclosures that are long and tall enough to break line of sight.<br>• Noise barriers or shielding shall be erected for construction work associated with on-site construction activities that involves heavy construction equipment and occurs within 200 feet of residences for an extended period of time (i.e., more than 2 weeks). The barriers shall be long enough to break line of sight and at least 8 feet in height. | Submit documentation verifying implementation of mitigation implementation, including construction Noise Management Plan | During construction activities | City of American Canyon | | |

| | | | | | |
|---|---|---|---|---|---|
| • Equipment warm up areas and equipment storage areas shall not be located closer than 500 feet of adjacent residences.<br>• All heavy construction equipment and all stationary noise sources (such as diesel generators) shall have properly functioning manufacturer-installed mufflers.<br>• Stationary noise sources, such as temporary generators and pumps, shall be positioned as far from nearby receivers as possible, within temporary enclosures and shielded by barriers (which could reduce construction noise by as much as 5 dB), or other measures, to the extent feasible.<br>• Use "quiet" models of air compressors and other stationary equipment where such technology exists. ● Prohibit unnecessary idling of internal combustion engines.<br>• To further reduce the potential for impacts, a Construction Noise Management Plan shall be prepared and shall include the following:<br>○ A process by which to provide a minimum of 2 weeks' advance notice to all residences located within 200 feet of construction activities that are expected to occur for a period of 2 weeks or longer within a defined area, including the approximate start and end dates of such activities.<br>○ Signs shall be posted at all project entrances upon commencement of construction for the purposes of informing all contractors/subcontractors, their employees, agents, material haulers, and all other persons at the project of the basic requirements of Mitigation Measure 4.9-1.<br>○ Publicly visible signs shall be posted on security fencing at multiple locations around the perimeter of the project construction boundary that include:<br>■ Permitted construction days and hours.<br>■ A telephone number and designated person to contact for registering noise complaints. The designated person shall be available to respond to, and if necessary through complaint verification, take corrective action to ensure that noise emissions from the offending equipment or activity is addressed. Corrective action shall be applied immediately if feasible, and within no later than 48 hours after receipt of the noise complaint. The designated person shall track complaints and corrective actions taken to resolve noise complaint issues. | | | | | |

| **Section 4.12: Transportation and Traffic** | | | | | |
| ~~**Mitigation Measure 4.12-3a (same as Mitigation Measure 4.2-2a in Section 4.2, *Air Quality and Greenhouse Gas Emissions*): *Transportation Demand Management (TDM) Program*.** Prior to issuance of the first building permit for the non-residential use areas (i.e., Napa Valley Ruins & Gardens [NVR&G] and hotel), the Project Applicant shall develop a TDM program for the non-residential use areas (i.e., NVR&G and hotel) and shall submit the TDM program to the City Department of Public Works for review and approval. The Project Applicant shall be responsible for funding and overseeing the delivery of trip reduction/TDM proposed programs and strategies, which may include, but are not limited to, the following:~~<br>1. ~~Establishment of carpool, buspool, or vanpool programs;~~<br>2. ~~Vanpool purchase incentives;~~<br>3. ~~Cash allowances, passes or other public transit subsidies and purchase incentives;~~<br>4. ~~Preferential parking locations for ridesharing vehicles;~~<br>5. ~~Computerized commuter rideshare matching services;~~<br>6. ~~Guaranteed ride-home program for ridesharing;~~<br>7. ~~Bicycle programs including bike purchase incentives, storage, and maintenance programs;~~<br>8. ~~On-site car share and bike share service;~~<br>9. ~~Preparation of a Parking Management Plan to address parking accommodations for large events;~~<br>10. ~~Designation of an on-site transportation coordinator for the project;~~<br>11. ~~Transit and trip planning resources such as commute information kiosk;~~<br>12. ~~Employer-provided showers, changing rooms, and clothing lockers for office employees that commute via active transportation;~~<br>13. ~~Bicycle route mapping resources;~~<br>14. ~~Participation in future citywide Transportation Management Association (TMA); and~~<br>15. ~~Submit annual reports to the City regarding TDM activities.~~ | ~~Approval of TDM program~~ | ~~Prior to issuance of first building permit for the nonresidential use area (i.e., NVR&G and hotel)~~ | ~~City of American Canyon~~ | | |

Attachment 3: Exhibit B
AC1 Master Conditions of Approval

**RESOLUTION NO. 2020-106**

**A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF AMERICAN CANYON APPROVING THE MASTER CONDITIONS OF APPROVAL FOR AC-1 PORTION OF WATSON RANCH**

**WHEREAS,** pursuant to Section 65300 of the State Planning and Zoning Law, the City of American Canyon (City) has adopted a General Plan to provide comprehensive long-range planning and a blueprint of the City's future form, including land use and circulation maps that specify the roadway network and the distribution of types and intensities of land; and

**WHEREAS,** the City of American Canyon General Plan land use and zoning designation for the property known as the Watson Ranch Specific Plan property is Town Center, which requires the approval of a specific plan to designate the land uses, range of residential and nonresidential densities and unified design standards within the Watson Ranch Specific Plan property; and

**WHEREAS,** on November 6, 2018, the City Council of the City of American Canyon adopted an Ordinance approving the Watson Ranch Specific Plan that provides for the development of the approximately 309-acre Watson Ranch Specific Plan site with a mixed use community component including a mixed use town center (NVRG), 1253 residential units, approximately 23 acres of improved parks, an additional 30 acres of parks, trails and open space, a 10 acre school site, roads and supporting water, wastewater, recycled water and storm drainage infrastructure; and

**WHEREAS**, on June 18, 2019, the City Council approved the Watson Ranch Specific Plan Development Agreement (Ordinance 2019-06, Agreement 2019-A107); and

**WHEREAS**, pursuant to the California Environmental Quality Act (CEQA), a final environmental impact report (Final EIR) was prepared for the Watson Ranch Specific Plan, and includes required Mitigation Measures; and

**WHEREAS,** on November 19, 2020, the City of American Canyon Planning Commission conducted a duly-noticed public hearing and unanimously recommended City Council approval of the Master Conditions of Approval for AC-1 Portion of Watson Ranch; and

**WHEREAS,** a duly-noticed public hearing was held by the City Council of the City of American Canyon on December 15, 2020 on the subject application, at which time all those in attendance were given the opportunity to speak on this proposal and to submit comments.

**NOW, THEREFORE, BE IT RESOLVED** that the City Council of the City of American Canyon, having considered all the evidence, including any submitted by member of the public, hereby approves the Master Conditions of Approval for AC-1 Portion of Watson Ranch as attached hereto as Exhibit A.

**NOW, THEREFORE, BE IT FURTHER RESOLVED** that the City Council of the City of American Canyon, having considered all the evidence, including any submitted by member of the public, hereby makes the following findings consistent with the California Environmental Quality Act (CEQA).

**SECTION 1: Findings Regarding Environmental Review pursuant to the California Environmental Quality Act (CEQA).**

1. The City of American Canyon makes the following findings and determinations based on substantial evidence in the record as a whole pursuant to the California Environmental Quality Act (Pub. Res. Code §§ 21000 *et seq.*) and its Guidelines (California Code of Regulations, Title 14 §§ 15000, *et seq.*), as each is amended from time to time ("CEQA").

2. Pursuant to CEQA, an Environmental Impact Report was prepared, supplemented, and certified for the Watson Ranch Project ("Project EIR"). The Project EIR considered and analyzed the significant adverse environmental impacts of, related mitigation measures for, and reasonable alternatives to, the planning, development, construction, operation, and maintenance of the proposed uses of the Property implemented through the "Project Approvals" of the "Project," including without limitation, the General Plan Amendment, Watson Ranch Specific Plan (and related Zoning), Large Lot Vesting Tentative Map, and Development Agreement. In accordance with CEQA, City certified as legally adequate and complete the Project EIR, and approved the development allowed and approved by said existing and future Project Approvals contemplated by the Project EIR and the Development Agreement.

3. The proposed Master Conditions of Approval for AC-1 Portion of Watson Ranch is a contemplated "Project Approval" under the Project EIR and the Development Agreement. Under CEQA, a Specific Plan EIR, like the Watson Ranch Specific Plan Project EIR, is generally assumed to be used at a "development level." *See, e.g.,* CEQA Guidelines § 15168. Under controlling CEQA law, particularly CEQA Guidelines section 15162, the legal question is whether the Project EIR, itself, needs updating (through a Subsequent or Supplemental EIR) before the City can consider and approve the Master Conditions of Approval for AC-1 Portion of Watson Ranch, or whether the Project EIR provides the appropriate CEQA compliance work for the City's consideration and approval of the Master Conditions of Approval for AC-1 Portion of Watson Ranch. For the following reasons and findings, by law, no such Subsequent or Supplemental EIR can be required by the City, and the Project EIR provides the appropriate CEQA compliance work for the City's consideration and approval of the Master Conditions of Approval for AC-1 Portion of Watson Ranch.

   First, CEQA Guidelines section 15162 provides as follows [*City responses to the issues raised by Section 15162 are provided in bracketed, italicized text below*]:

   (a) When an EIR has been certified . . . for a project, no subsequent EIR shall be prepared for that project unless the lead agency determines, on the basis of substantial evidence in the light of the whole record, one or more of the following:

   (1) Substantial changes are proposed in the project which will require major revisions of the previous EIR or negative declaration due to the involvement of new significant environmental effects or a substantial increase in the severity of previously identified significant effects; [*There is no substantial evidence in the light of the whole record revealing any changes proposed in the Project, let alone changes that will involve involvement of new significant environmental effects or a substantial increase in the severity of previously identified significant effects. The Master Conditions of Approval for AC-1 Portion of Watson Ranch implement the Watson Ranch Specific Plan Project, and no new significant environmental effects or substantial increase in the severity of previously identified significant effects not already addressed by the Project EIR will result from that implementation.*]

   (2) Substantial changes occur with respect to the circumstances under which the project is undertaken which will require major revisions of the previous EIR . . . due to the involvement of

new significant environmental effects or a substantial increase in the severity of previously identified significant effects. [*There is no substantial evidence in the light of the whole record revealing circumstances under which the Project is undertaken which require major revisions to the Project EIR due to the involvement of new significant environmental effects or a substantial increase in the severity of previously identified significant effects: the Master Conditions of Approval for AC-1 Portion of Watson Ranch are anticipated by, and are the implementation of, the Watson Ranch Specific Plan Project (and Project Approvals), and no new significant environmental effects or a substantial increase in the severity of previously identified significant effects not already addressed by the Project EIR will result from that implementation.*]; or

(3) New information of substantial importance, which was not known and could not have been known with the exercise of reasonable diligence at the time the previous EIR was certified as complete or the negative declaration was adopted, shows any of the following [*There is no substantial evidence in the light of the whole record revealing any such new information of any kind has been presented*]:

(A) The project will have one or more significant effects not discussed in the previous EIR . . . [*There is no substantial evidence in the light of the whole record revealing that the Master Conditions of Approval for AC-1 Portion of Watson Ranch will have one or more significant effects not discussed in the Project EIR: Instead, the Master Conditions of Approval for AC-1 Portion of Watson Ranch are anticipated by, and are the implementation of, the Watson Ranch Specific Plan Project as fully analyzed by the Project EIR*];

(B) Significant effects previously examined will be substantially more severe than shown in the previous EIR [*There is no substantial evidence in the light of the whole record revealing that the Master Conditions of Approval for AC-1 Portion of Watson Ranch will result in a situation where significant effects previously examined in the Project EIR will be substantially more severe than shown and discussed in the Project EIR: Instead, the Master Conditions of Approval for AC-1 Portion of Watson Ranch are anticipated by, and are the implementation of, the Watson Ranch Specific Plan Project as fully analyzed by the Project EIR*];

(C) Mitigation measures or alternatives previously found not to be feasible would in fact be feasible and would substantially reduce one or more significant effects of the project, but the project proponents decline to adopt the mitigation measure or alternative [*There is no substantial evidence in the light of the whole record supporting a determination that mitigation measures or alternatives previously found not to be feasible would in fact be feasible and would substantially reduce one or more significant effects of the Project, but the project proponents decline to adopt the mitigation measure or alternative.* ]; or

(D) Mitigation measures or alternatives which are considerably different from those analyzed in the previous EIR would substantially reduce one or more significant effects on the environment, but the project proponents decline to adopt the mitigation measure or alternative. [*There is no substantial evidence in the light of the whole record supporting a determination that mitigation measures or alternatives which are considerably different from those analyzed in the Project EIR would substantially reduce one or more significant effects on the environment, but the project proponents decline to adopt the mitigation measure or alternative. No such mitigation measure nor alternatives have been proposed,*

*nor are warranted, and no rejection of such mitigation measure or alternative by the project applicant has taken place.*]

Because there is no substantial evidence in the record to support any of the findings set forth in CEQA Guidelines section 15162, as a matter of law, no additional CEQA work can be required by the City relating to the City's consideration and approval of the Master Conditions of Approval for AC-1 Portion of Watson Ranch.

Second, similar to CEQA Guidelines section 15162, CEQA Guidelines section 15163 provides that a public agency may choose to prepare a "Supplement" to an EIR - rather than a "Subsequent" EIR - only if (1) any of the findings described in Section 15162 (above) would require the preparation of a Subsequent EIR, yet (2) only minor additions or changes would be necessary to make the Project EIR adequately apply to the changed situation. As stated above, because there is no substantial evidence in the record to support any of the findings set forth in CEQA Guidelines section 15162, then, as a matter of law, no finding can be made under CEQA Guidelines section 15163. Therefore, no additional CEQA work for the Master Conditions of Approval for AC-1 Portion of Watson Ranch can be required by the City.

Third; and lastly, under the Development Agreement, "to the extent permitted or required by CEQA, City shall use . . . existing environmental assessments, declarations, reports and studies as adequately addressing the environmental impacts of the Project and its Subsequent Approvals without requiring new or supplemental environmental documentation." Development Agreement § 2.04(k). Because CEQA prohibits the City from requiring additional CEQA compliance work for the Master Conditions of Approval for AC-1 Portion of Watson Ranch approvals, for the reasons discussed above, the Development Agreement likewise enforces that CEQA requirement and prohibits additional "new or supplemental environmental documentation." Development Agreement § 2.04(k).

Therefore, the City finds and determines that the Project EIR provides the appropriate CEQA compliance documentation for the City's consideration and approval of the proposed Master Conditions of Approval for AC-1 Portion of Watson Ranch.

**PASSED, APPROVED** and **ADOPTED** at a regularly scheduled meeting of the City Council of the City of American Canyon held on the 15th day of December, 2020, by the following vote:

A. Master Conditions of Approval for AC-1 Portion of Watson Ranch

**MASTER CONDITIONS OF APPROVAL**
**FOR AC-1 PORTION OF WATSON RANCH**

# A. MASTER CONDITIONS - GENERALLY

| *Master COA #* | *Developer Obligations* | *Mechanism* | *Implementation; Parcel #* | *Status* |
|---|---|---|---|---|
| 1. . | These Master Conditions of Approval ("Master Conditions") adopted by the City of American Canyon ("City") relate only to the American Canyon I, LLC portion of the City's Watson Ranch project ("Project"). American Canyon I, LLC shall also be referred to herein as "AC-1," "Master Developer," "Developer," and/or "Applicant," and shall include successors, as explained and controlled by the Development Agreement between the City and AC-1 ("Development Agreement"). Unless otherwise defined in these Master Conditions, terms and phrases used in these Master Conditions shall have that meaning set forth in the Development Agreement. The Development Agreement, as amended over time, shall control over these Master Conditions and any subsequent "Specific Conditions," as described herein. These Master Conditions provide certain provisions of the Development Agreement. However, regardless of whether present or not in these Master Conditions, the entire Development Agreement, as amended over time, shall apply to, and control over, these Master Conditions. | Relevant Subsequent Approvals | Pre-Final Map, Grading Permit, Construction Permit, Building Permit, Occupancy Permit | Applicable or Satisfied |
| 2. | The Project's "Large Lot Vesting Tentative Map" was approved and later recorded as the "Large Lot Final Map," producing twenty four (24) lots/parcels ("Large Lot Parcels"). Each of those Large Lot Parcels will be further subdivided over time creating additional lots/parcels. These Master Conditions apply to the Project, the large Lot Parcels, and all such subsequent subdivision map approvals. The idea behind these Master Conditions is to establish a consistent set of "rules" (Conditions of Approval) that can be used throughout the implementation of the Project, thereby ensuring certainty and efficiency. | Relevant Subsequent Approvals | Pre-Final Map, Grading Permit, Construction Permit, Building Permit, Occupancy Permit | Applicable |
| 3. | These Master Conditions also express certain requirements from the Watson Ranch Specific Plan. | Relevant Subsequent Approvals | Pre-Final Map, Grading Permit, Construction Permit, Building Permit, Occupancy Permit | Applicable |
| 4. | These Master Conditions also contain the relevant Mitigation Measures relating to the Project, including without limitation, the EIR's Mitigation Monitoring and Reporting Program, as clarified, updated and refined by these Master Conditions to reflect implementation progress. | Relevant Subsequent Approvals | Pre-Final Map, Grading Permit, Construction Permit, Building Permit, Occupancy Permit | Applicable |
| 5. | These Master Conditions also contain requirements from the City's standard Subdivision Improvement Agreement ("SIA") in order to streamline the future SIA process. Subsequent subdividing of the Project will involve SIAs, which SIAs will employ these Master Conditions. | SIA | Pre-Final Map, Grading Permit, Construction Permit, Building Permit, Occupancy Permit | Applicable |

Copyright © 2020 by Michael Patrick Durkee. All rights reserved. No portion of these Master Conditions may be reproduced, stored for retrieval or used or reused in any form or by any means, electronic, mechanical or otherwise, without the prior written consent of Michael Patrick Durkee.

| | | | | |
|---|---|---|---|---|
| 6. | In addition to these Master Conditions, "Specific Conditions of Approval" (also referred to as "Specific Conditions) resulting from the subsequent subdivision map approvals, Design Permit/Guidelines approvals, and/or other development approvals may be drafted and imposed on a Large Lot Parcel's subsequent development. Such Specific Conditions may stand alone and be imposed in addition to these Master Conditions, and/or may be added to these Master Conditions over time. Any and all such Specific Conditions shall be subject to and controlled by these Master Conditions, which Master Conditions shall be be subject to, and controlled by, the Development Agreement. If a conflict arises between these Master Conditions, and/or any Specific Conditions and the express and/or implied provisions of the Development Agreement, as amended over time, the Development Agreement shall control.<br><br>Where possible, these Master Conditions describe the "Mechanism" for satisfying the Master Condition (for example, subdivision map approval, adopted Design Guidelines, etc.), the "Implementation" timing of the Master Condition (for example, Building Permit issuance), and the "Status" of such Master Condition performance (whether the requirement is still "Applicable, whether it has been "Completed," etc.). Additionally, through subsequent "mapping" of a particular Large Lot Parcel pursuant to the Subdivision Map Act, listed Master Conditions applicable to that Parcel may be further organized into relevant Phases (phased final maps) of that Parcel, if applicable.<br><br>As used in these Master Conditions, a reference to "All" or "All Parcels" shall mean that the Master Condition is setting a general rule that applies to the development of any and all Large Lot Parcels. When these Master Conditions provide that the Master Condition in question shall apply to "Applicable Parcels," that means that each Parcel over which the Master Backbone Infrastructure (MBI) in question lies and/or abuts (and therefore the Parcel is responsible for the "Parcel's MBI Portion") is one of the "Applicable Parcels." | Relevant Subsequent Approvals | Pre-Final Map, Grading Permit, Construction Permit, Building Permit, Occupancy Permit | Applicable |
| 7. | As used in these Master Conditions, the following definitions shall apply. "SIA" shall mean the relevant/applicable "Subdivision Improvement Agreement." "Major Backbone Infrastructure" work or "MBI" shall have that meaning provided by the Development Agreement. "Public Improvements" work shall mean infrastructure improvements to be constructed by Developer, and then dedicated to, accepted by, and opertated and maintained by, City. "Private Improvements" shall mean infrastructure improvements that shall be constructed by Developer and not be dedicated to, accepted by, and opertated and maintained by, City. "Improvement Plans" shall mean those improvement plans and specifications relating to MBI, Public Improvements, and/or Private Improvements. Developer shall obtain City approval of all Improvement Plans for the relevant MBI, Public Improvements, and/or Private Improvements work. All work on the relevant MBI, Public Improvements, and/or Private Improvements shall be performed by Developer at the places, at the grades, with the materials, and in the manner as shown on the City-approved Improvement Plans. Additionally, the phrase: "Pre-Final Map, Final Map Recordation, Grading Permit, Construction Permit, Building Permit, Occupancy Permit" shall mean that the timing of performance of the particular Master Condition will be satisfied at one of those performance events, as will be determined by the Subsequent Approval. | Relevant Subsequent Approvals | Pre-Final Map, Grading Permit, Construction Permit, Building Permit, Occupancy Permit | Applicable |

Copyright © 2020 by Michael Patrick Durkee. All rights reserved. No portion of these Master Conditions may be reproduced, stored for retrieval or used or reused in any form or by any means, electronic, mechanical or otherwise, without the prior written consent of Michael Patrick Durkee.

| | | | | |
|---|---|---|---|---|
| 8. | Unless otherwise set forth in these Master Conditions, or unless otherwise agreed to by City and Developer, each Parcel shall be responsible for the entirety of the design and construction of the "Master Backbone Infrastructure" (also "MBI") of the Public Improvement for the geographic distance of the Parcel's entire frontage on such MBI, and/or the entire geographic distance that such MBI traverses such Parcel ("Parcel's MBI Portion"). For example, if the MBI in question is Rio Del Mar, then the Parcel in question shall be responsible for the design and construction of all of that portion of Rio Del Mar that traverses and/or abuts such Parcel, i.e., the "Parcel's MBI Portion." Such Parcel MBI Portion design and construction shall be to the "ultimate design" of the MBI in question, including without limitation, ultimate width, depth, curb, gutter, sidewalk, street lighting, landscaping, etc. City, Developer, and the owner/builder of the relevant Parcel (if different than Developer) may by mutual agreement refine the requirements of this Master Condition. Therefore, if the Master Conditions provide that the Master Condition in question shall apply to "Applicable Parcels," that means that each Parcel over which the MBI in question lies and/or abuts (and therefore the Parcel is responsible for the "Parcel's MBI Portion") is one of the "Applicable Parcels." If the MBI in question traverse and/or abuts more than one Parcel, then the responsibility of each such Parcels shall be determined ("Proportional Share") and the first Parcel (of such Parcels) to develop shall be responsible for the design and construction of all of that portion of MBI and that traverses and/or abuts such first Parcel (i.e., the "Parcel's MBI Portion") and such first Parcel shall have the right to secure a Reimbursement Agreement from the City so that such first Parcel is reimbursed by such other Parcels for such other Parcels' Proportional Share at such time when such other Parcel(s) would have otherwise been responsible to provide such MBI, or at such other time/or by such means as is mutually agreed to by City and Developer. | Applicable Parcels<br><br>Parcel's MBI Portion<br><br>Reimburse | Pre-Final Map, final map recordation, Grading Permit, Construction Permit, Building Permit, Occupancy Permit | Applicable |
| 9. | When Parcel-necessary infrastructure has not yet been brought to the physical (geographic) location of the Parcel in question to be developed (the "Relevant Parcel"), then the development of such Relevant Parcel shall require (unless otherwise agreed between City and Developer) that such Relevant Parcel shall provide and construct all of the MBI otherwise required of other Parcels (the Parcel MBI Portion of all such other Large Lot Parcels) over which the MBI is needed to traverse and/or abut in order to access the Relevant Parcel and bring and provide such Parcel-necessary infrastructure to the Relevant Parcel. In such a case, the Relevant Parcel shall have the right to secure a Reimbursement Agreement from the City so that the costs of such additional provision and construction by the Relevant Parcel of the MBI otherwise required of such other Parcels is reimbursed to the Relevant Parcel at such time as such other Parcel(s) would have otherwise been responsible to provide such infrastructure, or at such other time/or by such means as is mutually agreed to by City and Master Developer. | Relevant Parcels<br><br>Parcel's MBI Portion<br><br>Reimburse | Pre-Final Map, Grading Permit, Construction Permit, Building Permit, Occupancy Permit | Applicable |
| 10. | When a Large Lot Parcel is further subdivided, it shall have its own separate SIA and attached Exhibit(s) containing relevant Master Conditions and any other Specific Conditions, as described herein. | SIA | Pre-Final Map, Grading Permit, Construction Permit, Building Permit, Occupancy Permit | Applicable |

|---|---|---|---|---|---|
| 13. | | The entire Development Agreement, as amended, shall apply. Any reference in these Master Conditions to "Development Agreement" shall mean the Development Agreement by and between AC-1 and City, as amended over time. The following Master Conditions provide certain terms and conditions set forth in the Development Agreement, and shall automatically be amended as the Development Agreement is amended over time. Not all Development Agreement terms and conditions are set forth below; however, all terms and conditions of the Development Agreement, as amended over time, shall nonetheless apply to the Project, the Project Approvals, these Master Conditions, and any Specific Conditions, regardless of whether or not set forth herein. | Relevant Subsequent Approvals | Pre-Final Map, Grading Permit, Construction Permit, Building Permit, Occupancy Permit | Applicable |
| 14. | §§ 2.06 through 2.07<br>Page 32 | As more particularly described in the Development Agreement, if chosen by Master Developer in its sole and exclusive discretion, Master Developer shall be responsible for the design and construction of the "Phase 1 Newell Drive Initial Access." The Phase 1 Newell Drive Initial Access shall begin (commence) from the existing terminus of Newell Drive, | Relevant Subsequent Approvals<br>Certain proceeds | As set forth in Development Agreement (e.g., Pre-Final Map, | Applicable |

|---|---|---|---|---|---|
| 26. | § 2.07(h)(1)(E)<br><br>Page 40 | If at Developer's planned commencement of Watson Ranch Specific Plan's Phase 4 of residential development, the City Precursors are not fully satisfied and in place, then Developer may commence development of the Watson Ranch Specific Plan's Phase 4 of residential development and shall no longer be responsible for Developer's Newell Drive Obligation. The status of the City Precursors shall be addressed in the Annual Review of the Development Agreement in order to keep the Parties apprised of status. | Applicable Parcels | Pre-Final Map, SIA, Grading Permit, Construction Permit, Building Permit, Occupancy Permit | Applicable |
| 27. | § 2.07(h)(2)<br><br>Page 40 | Regarding Rio Del Mar With an At-Grade Railroad Crossing. A railroad crossing at Rio Del Mar is anticipated for the Project by the General Plan and Specific Plan. The Parties generally desire that the railroad crossing at Rio Del Mar be an "at-grade" crossing. However, the Parties also recognize that time, money, and the authority of others, including without limitation governmental agencies such as the California Public Utilities Commission ("PUC"), have influence and authority over such at-grade crossing options. Further, the Parties recognize that time savings, certain Developer financial obligation reductions, and other factors may make a grade-separated crossing at Rio Del Mar more attractive and achievable. Lastly, the Parties recognize that should an at-grade or grade-separated railroad crossing at Rio Del Mar prove unsuccessful, there exists a private at-grade railroad crossing at South Napa Junction that is the subject of a previous settlement agreement. Therefore, which railroad crossing to pursue will be an evolving analysis by the Parties as they work through the many issues. At any time period during which an at-grade railroad crossing is being pursued, Developer, exercising its sole and exclusive discretion, shall have the right to assert to City that such an at-grade application should be abandoned and/or otherwise put aside and that a grade-separated railroad crossing at Rio Del Mar shall be pursued. If such an assertion is made, then such at-grade application will be abandoned and/or otherwise put aside and a grade-separated railroad crossing at Rio Del Mar shall be pursued by the Parties. | Applicable Parcels | Pre-Final Map, SIA, Grading Permit, Construction Permit, Building Permit, Occupancy Permit | Applicable |
| 28. | § 2.07(h)(2)(C)<br><br>Pages 42-43 | When Developer or City is required by the Development Agreement (below) to construct (or cause the financing and/or construction of) At-Grade Rio Del Mar improvements, such improvements shall be constructed and improved at such time as set forth in the Project s relevant subdivision map approval. That being stated, general construction and improvement obligations regarding At-Grade Rio Del Mar are as follows:<br><br>i. Developer shall be responsible for the construction and improvement of At-Grade Rio Del Mar Segment | Applicable Parcels | Pre-Final Map, SIA, Grading Permit, Construction Permit, Building Permit, | Applicable |

# D. MASTER CONDITIONS – SUBDIVISION IMPROVEMENT AGREEMENTS

| *Master COA #* | *Developer Obligations* | *Mechanism* | *Implement.* | *Status* |
|---|---|---|---|---|
| 46. | At Developer's expense, in a good and workmanlike manner, Developer shall furnish all required materials and labor for all of the relevant MBI, Public Improvements, and/or Private Improvements work shown on all Improvement Plans prepared by Developer's engineer of record, and submitted to and approved by City. | SIA | SIA | Applicable |
| 47. | Developer shall do all work and furnish all materials necessary to complete the relevant MBI, Public Improvements, and/or Private Improvements work in accordance with the approved Improvement Plans for the relevant MBI, Public Improvements, and/or Private Improvements work, or with any changes required or ordered by said City's Engineer for the relevant MBI, Public Improvements, and/or Private Improvements work, which, in his/ her reasonable opinion, are necessary or required to complete the relevant MBI, Public Improvements, and/or Private Improvements work. All construction work on the relevant MBI, Public Improvements, and/or Private Improvements work must be performed solely by licensed contractors, and the word "Developer" when used in this Agreement shall mean and include all such licensed contractors performing such construction on Developer's behalf or account. | SIA | SIA | Applicable |
| 48. | Completion of the relevant MBI, Public Improvements, and/or Private Improvements work shall be accomplished within 24 months of the execution of the relevant SIA, subject to the Developer protections provided by the Development Agreement, and subject to extensions granted by City-. Additionally, to the extent greater than the Developer protections provided by the Development Agreement, City shall extend the relevant SIA, as needed, in the event "good cause" is shown by Developer. | SIA | SIA | Applicable |
| 49. | Developer shall replace or have replaced, repair or have repaired, as the case may be, or pay to the City, the entire cost of replacements or repairs, of any and all public and/or private (non-Developer) property damaged or destroyed by reason of any work done on the relevant MBI, Public Improvements, and/or Private Improvements work under the relevant SIA, whether such public property be owned by the United States or any agency thereof, or the State of California, or any agency or political subdivision thereof, or by the City or by any public or private corporation, partnership or association, or by any person whomsoever, or by any combination of such owners. Such replacement and/or repair cost shall not exceed the cost of such property damage or destruction suffered. | SIA | SIA | Applicable |

|---|---|---|---|---|
| 67. | The acquisition price and costs and all other expenses of obtaining all easements required for the Public Improvementsshall be, paid by Developer. All necessary easements for the Public Improvements to be dedicated to City, if not already conveyed to City, shall be granted to City concurrently with the inspection and acceptance by the City of the relevant MBI, an/or Public Improvements. | SIA | SIA | Applicable |
| 68. | All service connection charges for the Public Improvementsto be constructed to serve said parcel(s) of real property shall be the amounts described in the Development Agreement. | SIA | SIA | Applicable |
| 69. | Upon the provision of reasonable notice, the City, its officers, agents, and employees and the Surety upon any bond shall have the right from and after the date of the execution of the relevant SIA to enter upon said parcel of real property and any property where appurtenant easements are located for purposes of inspection and investigation at any and all reasonable times. | SIA | SIA | Applicable |
| 70. | When relevant to the MBI and/or Public Improvements work, Developer shall retain and pay the cost of the Geotechnical Engineer of Record to perform all testing and reporting of items including but not limited to, rough grading, sub-grade preparation and compaction, concrete testing, and asphalt testing and compaction. Such reports shall be made available to City upon City's request. | SIA | SIA | Applicable |
| 81. | Developer shall retain and pay the cost of the Engineer of Record to certify the Private Improvements are constructed to their satisfaction and at the places, at the grades, with the materials and in the manner shown upon the plans and specifications therefor approved by the City' s Engineer. | SIA | SIA | Applicable |

# E. MASTER CONDITIONS – MITIGATION MEASURES

| ***Master COA #*** | ***Mitigation Measures*** | ***Method of Verification Timing; Parcel #*** | ***Status*** |
|---|---|---|---|
| 82. | **Mitigation Measure 4.1-1:** ***Water Tank Visibility.*** As required by the 2004 *Proposed Water Tanks (2) Mitigated Negative Declaration*, construction plans for the Zone 3 water tank shall incorporate the following mitigation:<br>1. A landscaped earthen berm shall be constructed around the tank site to eliminate direct views of the water tank as much as feasible from the areas surrounding the tank site. The earthen berm shall be landscaped with trees and other vegetation suitable to the City, such as evergreen trees, to screen the water tank from surrounding areas, reduce soil erosion, and blend the berm with the surrounding vegetation.<br>2. The water tank shall be painted a neutral color deemed appropriate by the City so the tank blends with the surrounding hillside vegetation as much as possible. | Approval of water tank plans | Prior to issuance of grading permit |
| 83. | **Mitigation Measure 4.1-3:** ***Lighting Plan.*** Prior to any site disturbance activities, the Project Applicant shall submit a construction lighting plan to the City for approval. The construction lighting plan shall ensure that the minimum amount of lighting is used to meet safety requirements and to ensure that limited spillover occurs to nearby sensitive uses. All lighting shall be directed downward and away from surrounding land uses. | Design Guidelines | Complete upon Design Guidelines approval |
| 84. | **Mitigation Measure 4.2-1:** ***Construction Fugitive Dust Emissions.*** The following Bay Area Air Quality Management District (BAAQMD) Best Management Practices (BMPs) | Notes on construction plans; site | During constructio n activities |

Copyright © 2020 by Michael Patrick Durkee. All rights reserved. No portion of these Master Conditions may be reproduced, stored for retrieval or used or reused in any form or by any means, electronic, mechanical or otherwise, without the prior written consent of Michael Patrick Durkee.

| | | | |
|---|---|---|---|
| | and additional mitigation measures for fugitive dust control shall be required for all construction activities within the project area. These measures would reduce fugitive dust emissions primarily during soil movement and grading, but also during vehicle and equipment movement on unpaved project sites.<br>*Basic BMPs that Apply to All Construction Sites*<br>1. All exposed surfaces (e.g., parking areas, staging areas, soil piles, graded areas, and unpaved access roads) shall be watered two times per day.<br>2. All haul trucks transporting soil, sand, or other loose material off site shall be covered.<br>3. All visible mud or dirt track-out onto adjacent public roads shall be removed using wet power vacuum street sweepers at least once per day. The use of dry power sweeping is prohibited.<br>4. All vehicle speeds on unpaved roads shall be limited to 15 miles per hour (mph).<br>5. All streets, driveways, and sidewalks to be paved shall be completed as soon as possible. Building pads shall be laid as soon as possible after grading unless seeding or soil binders are used.<br>6. Idling times shall be minimized either by shutting equipment off when not in use or reducing the maximum idling time to five minutes (as required by the California airborne toxics control measure Title 13, Section 2485 of CCR). Clear signage shall be provided for construction workers at all access points.<br>7. All construction equipment shall be maintained and properly tuned in accordance with manufacturer's specifications. All equipment shall be checked by a certified mechanic and determined to be running in proper condition prior to operation.<br>8. A publicly visible sign shall be posted with the telephone number and person to contact regarding dust complaints. This person shall respond and take corrective action, if necessary, within 48 hours. BAAQMD's phone number shall also be visible to ensure compliance with applicable regulations.<br>*Additional BMPs that Apply to All Construction Sites*<br>1. All exposed surfaces shall be watered at a frequency adequate to maintain minimum soil moisture of 12 percent. Moisture content may be verified by lab samples or moisture probe.<br>2. All excavation, grading, and/or demolition activities shall be suspended when average wind speeds exceed 20 mph.<br>3. Wind breaks (e.g., trees, fences) shall be installed on the windward side(s) of actively disturbed areas of construction. Wind breaks shall have at maximum 50 percent air porosity.<br>4. For areas that are to remain open space (e.g., not a road, building, or otherwise structurally covered area), vegetative ground cover (e.g., fast-germinating native grass seed) shall be planted in disturbed areas as soon as possible and watered appropriately until vegetation is established.<br>5. All trucks and equipment, including their tires, shall be washed off prior to leaving the site.<br>6. Site accesses to a distance of 100 feet from the paved road shall be treated with a 6- to 12-inch compacted layer of wood chips, mulch, or gravel.<br>7. Sandbags or other erosion control measures shall be installed to prevent silt runoff to public roadways from sites with a slope greater than 1 percent.<br>Before starting on-site construction activities, the contractor or Project Applicant shall submit a site-specific dust control plan (Plan) to the American Canyon Planning Division for review and approval. The Project Applicant shall ensure that all applicable requirements of the Plan have been incorporated into the contract specifications. The Plan shall state, in | inspections to verify BMPs are implemented | |

| | | | |
|---|---|---|---|
| | reasonable detail, how the Contractor shall meet the requirements above. The Plan shall include a certification statement that the Contractor agrees to comply fully with the Plan. | | |
| 85. | **Mitigation Measure 4.2-2:** ***Operational Emissions Reductions.*** The total reduction in ROG and $NO_X$ emissions that would be achieved from implementation of Mitigation Measure 4.2-2a, the TDM program, and Mitigation Measure 4.2-2b, the CAP mitigation strategies, would be calculated at the time the final TDM program and CAP strategies are determined. If the ROG and $NO_X$ emissions reduction from implementation of Mitigation Measures 4.2-2a and 4.2-2b are determined by a qualified air quality expert to reduce the project's emissions to below the BAAQMD operational thresholds contained in the 2017 BAAQMD CEQA Air Quality Guidelines, no further mitigation would be required. If the ROG and $NO_X$ emissions reduction from implementation of Mitigation Measures 4.2-2a and 4.2-2b do not reduce the project's emissions to below the BAAQMD operational thresholds identified in the 2017 BAAQMD CEQA Air Quality Guidelines, Mitigation Measure 4.2-2c, purchase of emission offsets, would be pursued. | Contingent on future conditions. | Applicable |
| 86. | **Mitigation Measure 4.2-2a (same as Mitigation Measure 4.12-3a in Section 4.12,** ***Transportation and Traffic*****): *Transportation Demand Management (TDM) Program*.** Prior to issuance of the first building permit for the non-residential use areas (i.e., Napa Valley Ruins & Gardens ("NVRG") and hotel), the Project Applicant shall develop a TDM program for the non-residential use areas (i.e., NVRG and hotel) and shall submit the TDM program to the City Department of Public Works for review and approval. A qualified air quality expert shall prepare a calculation of the ROG and $NO_X$ emissions reductions that would result from implementation of the TDM program. The Project Applicant shall be responsible for funding and overseeing the delivery of trip reduction/TDM proposed programs and strategies, which may include, but are not limited to, the following:<br>1. Establishment of carpool, buspool, or vanpool programs;<br>2. Vanpool purchase incentives;<br>3. Cash allowances, passes or other public transit subsidies and purchase incentives;<br>4. Preferential parking locations for ridesharing vehicles;<br>5. Computerized commuter rideshare matching services;<br>6. Guaranteed ride-home program for ridesharing;<br>7. Bicycle programs including bike purchase incentives, storage, and maintenance programs;<br>8. On-site car share and bike share service;<br>9. Preparation of a Parking Management Plan to address parking accommodations for large events;<br>10. Designation of an on-site transportation coordinator for the project;<br>11. Transit and trip planning resources such as commute information kiosk;<br>12. Employer-provided showers, changing rooms, and clothing lockers for office employees that commute via active transportation;<br>13. Bicycle route mapping resources;<br>14. Participation in future citywide Transportation Management Association (TMA); and<br>15. Submit annual reports to the City regarding TDM activities. | Approval of TDM Program | Prior to issuance of first building permit for the non-residential use area (i.e., NVR&G and hotel) |
| 87. | **Mitigation Measure 4.2-2b:** ***Operational Emissions Reduction Strategies.*** To reduce ROG and $NO_X$ emissions within the Project Site, the Project shall include feasible operational emissions reduction strategies as part of its final design. The specific strategies may include, but are not limited to, the measures described below; however, other measures may be implemented: | Recommendations from Air Quality Technical Report that identify updated project emissions | Prior to issuance of the first building |

Copyright © 2020 by Michael Patrick Durkee. All rights reserved. No portion of these Master Conditions may be reproduced, stored for retrieval or used or reused in any form or by any means, electronic, mechanical or otherwise, without the prior written consent of Michael Patrick Durkee.

| | | | |
|---|---|---|---|
| | ○ Prior to issuance of the first building permit for each phase of the Project, the Applicant shall develop operational emissions reduction strategies, which could include the mitigation strategies identified in **Table 4.2-8, Summary of Operational CAP Mitigation Strategies**, to provide options for reducing ROG and $NO_X$ emissions from operation of the project. The operational emissions reduction strategies shall be submitted to and approved by the City, prepared by a qualified air quality technical expert, and evaluate the emissions reduction strategies in relation to the project's emissions. | calculations and feasible operational emissions reduction strategies | permit for the project |
| 88. | **Mitigation Measure 4.2-2c:** ***Purchase Emission Offsets.*** Prior to the issuance of the final Certificate of Occupancy for Phase 1 or prior to the issuance of the first residential building permit in Phase 2, whichever occurs first, the Applicant would, partially or wholly, purchase offset credits if determined to be feasible based on information available at the time implementation would be required. To reduce ROG and $NO_X$ emissions depending on the reductions achieved through Mitigation Measure 4.2-2a and Mitigation Measure 4.2-2b, and if this mitigation is implemented.<br>○ The Applicant or its designee shall pay a mitigation offset fee to the BAAQMD Bay Area Clean Air Foundation (Foundation)[1] in an amount to be determined at the time of the impact. The fee would offset emissions that exceed the threshold of significance after implementation of Project-Level Reduction Strategies and the TDM Program described above to the extent feasible.<br>○ The Project Applicant would implement Mitigation Measure 4.2-2c through payment of a mitigation offset fee to the BAAQMD's Foundation in an amount not to exceed $30,000 per weighted ton per year of ozone precursors per year requiring emissions offset. The fee shall be determined by the City of American Canyon Planning Division in consultation with the Applicant and be based on the type of projects available at the time of the payment. The offset fee is calculated to be "roughly proportional" to the operational air quality impacts. Documentation of payment shall be provided to the City of American Canyon or its designated representative.<br>The current process for payment of offset fees is detailed above. As required by this mitigation measure, payment of offset fees would proceed according to BAAQMD procedures when initiated. The Applicant or its designee would enter into a memorandum of understanding (MOU) with the BAAQMD's Foundation. The MOU would include details regarding the funds to be paid, the administrative fee, and the timing of the emissions reduction project. Acceptance of this fee by the BAAQMD shall serve as an acknowledgment and commitment by the BAAQMD to (1) implement an emissions reduction project(s) within a timeframe to be determined based on the type of project(s) selected and after receipt of the mitigation fee to achieve the emission reduction objectives specified above, and (2) provide documentation to City of American Canyon or its designated representative and to the Project Applicant describing the amount of and the project(s) funded by the mitigation fee, including the amount of emissions of ROG and $NO_X$ reduced (tons per year) within SFBAAB from the emissions reduction project(s). If there is any remaining unspent portion of the mitigation offset fee following implementation of the emission reduction project(s), the Project Applicant shall be entitled to a refund in that amount from the BAAQMD. To qualify under this mitigation measure, the specific emissions retrofit project must result in emission reductions within SFBAAB that would not otherwise be achieved through compliance with existing regulatory requirements. | Bay Area Air Quality Management District Memorandum of Understanding | Prior to the issuance of the final Certificate of Occupancy for Phase 1 or prior to the issuance of the first residential building permit in Phase 2, whichever occurs first |

[1] More information on the Bay Area Clean Air Foundation can be found at Bay Area Air Quality Management District (BAAQMD), Bay Area Clean Air Foundation, 2015, available at http://www.baaqmd.gov/about-the-air-district/bay-area-clean-air-foundation.

| | | | |
|---|---|---|---|
| 89. | **Mitigation Measure 4.2-3a:** ***Architectural Coatings.*** The applicant shall use low-VOC architectural coatings during construction for all buildings, which shall have VOC content that is more stringent than local requirements prescribed in Bay Area Air Quality Management District (BAAQMD) Regulation 8 Organic Compounds, Rule 3 Architectural Coatings as revised on July 1, 2009. Coatings that meet the "super-compliant" VOC standard of less than 10 grams of VOC per liter of paint would qualify. | Notes on construction plans indicating use of low-VOC architectural coatings during construction of all buildings | Prior to issuance of building permits |
| 90. | **Mitigation Measure 4.2-3b:** ***Tier 4 Construction Equipment.*** To reduce construction emissions to below the 2017 BAAQMD CEQA Air Quality Guidelines, prior to start of construction activities after the occupancy of Phase 1, the Project Applicant shall submit to the City either:<br>● Documentation showing that all off-road construction equipment used prior to the start of construction activities after the occupancy of Phase 1 with greater than 25 hp and operating for more than 20 hours total over the entire duration of construction activities shall have engines that meet or exceed either U.S. Environmental Protection Agency (USEPA) or California Air Resources Board (CARB) Tier 4 off-road emission standards.<br>or,<br>• Provide supplemental analysis prepared by a qualified air quality specialist to show that emissions of ROG and $NO_X$ would not exceed the thresholds from the 2017 BAAQMD CEQA Air Quality Guidelines using other methods. | Documentation of compliance with the 2017 BAAQMD CEQA Air Quality Guidelines based on the type of construction equipment used or supplemental analysis prepared by a qualified air quality specialist | Prior to the start of construction activities after the occupancy of Phase 1 |
| 91. | **Mitigation Measure 4.2-5:** ***Construction Emissions Minimization.*** To reduce construction emissions to below the thresholds identified in the 2017 BAAQMD CEQA Air Quality Guidelines, prior to the start of construction of each of the following—Phase 1 area south of the NVRG and the off-site Rio Del Mar roadway improvements and Phase 4—the Project Applicant shall submit to the City either:<br>● Documentation showing that all off-road construction equipment used in the southwestern portion of Phase 1 of construction (located directly south of Napa Valley Ruins & Gardens), the entirety of Phase 4 of construction, and the off-site Rio Del Mar roadway improvements with greater than 25 hp and operating for more than 20 hours total over the entire duration of construction activities shall have engines that meet or exceed either U.S. Environmental Protection Agency (USEPA) or California Air Resources Board (CARB) Tier 2 off-road emission standards and have been retrofitted with an CARB Level 3 Verified Diesel Emissions Control Strategy. Equipment with engines meeting Tier 4 Interim or Tier 4 Final off-road emission standards automatically meet this requirement.<br>or,<br>• Provide supplemental analysis prepared by a qualified air quality specialist to show health risks at on- and off-site sensitive receptors would not exceed the thresholds from the 2017 BAAQMD CEQA Air Quality Guidelines using other methods. | Documentation of compliance with the 2017 BAAQMD CEQA Air Quality Guidelines based on the type of construction equipment used or supplemental analysis prepared by a qualified air quality specialist | Prior to the start of construction of the Phase 1 area south of the NVR&G and the off-site Rio Del Mar roadway improvements and Phase 4 |
| 92. | **Mitigation Measure 4.2-7:** ***GHG Emissions Reductions.*** The total reduction in GHG emissions that would be achieved from implementation of Mitigation Measure 4.2-2a, the TDM program, and Mitigation Measure 4.2-7a, the GHG reduction strategies, would be calculated at the time the final TDM program and GHG reduction strategies are determined. If the GHG emissions reduction from implementation of Mitigation Measures 4.2-2a and 4.2-7a are determined by a qualified air quality expert to reduce the project's emissions to below the operational thresholds of 2.67 MT $CO_2e$ per service population per year, no further mitigation would be required. If the GHG emissions reduction from implementation of Mitigation Measures 4.2-2a and 4.2-7a do not reduce the project's | Contingent | Applicable |

Copyright © 2020 by Michael Patrick Durkee. All rights reserved. No portion of these Master Conditions may be reproduced, stored for retrieval or used or reused in any form or by any means, electronic, mechanical or otherwise, without the prior written consent of Michael Patrick Durkee.

| | | | |
|---|---|---|---|
| | emissions to below this threshold, Mitigation Measure 4.2-7b, purchase of GHG emission offsets, would be pursued. | | |
| 93. | **Mitigation Measure 4.2-7a:** ***GHG Reduction Strategies.*** To reduce greenhouse gas (GHG) emissions within the project site and to maximize the Project's ability to achieve the GHG operational threshold of 2.67 MT $CO_2e$ per service population per year, the project shall include feasible operational GHG emissions reduction strategies as part of its final design. The specific strategies of the program may include, but are not limited to, the measures described below; however, other measures may be implemented:<br>○ All development shall, at a minimum, meet the Title 24, Part 6 (2016), standards, or the most current Title 24, Part 6, standard, whichever is more conservative. All residences shall meet the anticipated 2019 Title 24 Standards to achieve Zero Net Electricity. The GHG emissions benefit from residential Zero Net Electricity was included in the unmitigated inventory.<br>○ Prior to issuance of the first building permit for each phase of the project, the Project Applicant shall identify operational GHG emissions reduction strategies that could include the strategies identified in **Table 4.2-14, Summary of Operational GHG Mitigation Strategies**, which provides options for reducing GHG emissions from project operation. The operational GHG emissions reduction strategies shall be submitted to and approved by the City, developed by a qualified air quality technical expert, and evaluate the emissions reduction strategies in relation to the project's emissions. | Calculations from a GHG technical expert based on specific strategies incorporated into the project | Prior to issuance of building permits for each phase |
| 94. | **Mitigation Measure 4.2-7b:** ***Purchase GHG Emission Offsets.*** In order to determine whether or to what extent the purchase of GHG emissions offsets is necessary to reduce greenhouse gas (GHG) emissions for each year that the GHG emissions exceed the threshold of 2.67 MT $CO_2e$ per service population per year for the lifetime of the project (assumed to be 30 years), the operational GHG emissions reduction program described above in Mitigation Measure 4.2-7a will include a plan for the purchase of GHG offsets. The amount of offsets needed will take into account the GHG emissions reductions associated with the TDM program and the operational GHG emissions reduction program. Additionally, the feasibility of offsets shall be evaluated at the time implementation would be required. If feasible, the plan shall include:<br>○ The plan for the purchase of GHG offsets shall include timing requirements, which take into account calculations showing actual emissions of the project, which could take into account phase-in of occupancy, reductions in vehicle emissions, as well as other factors that affect emissions.<br>○ GHG emission offsets could include any of the following sources: (1) the California Air Resources Board (CARB) quarterly allowance auctions held as part of its Cap-and-Trade Program; (2) the Greenhouse Gas Reduction Exchange (GHG Rx); or (3) Approved Registries recognized by the State of California, which currently include the Climate Action Reserve (CAR), American Carbon Registry (ACR), and Verra (formerly Verified Carbon Standard).<br>○ The amount of offsets purchased shall depend on the cost per annual metric ton of $CO_2e$ reductions, the overall cost feasibility of this measure, which shall be determined based on information available at the time implementation would be required, and the on-site GHG reduction measures.<br>To demonstrate compliance, the Project Applicant or its designee would provide the following documentary evidence to City's Planning Division: An attestation from an Approved Registry or other source described above that the Project Applicant or its designee has retired a given quantity of carbon offsets. Offsets from the approved sources | Calculations from a GHG technical expert based on specific strategies incorporated into the project and, if necessary and feasible, attestation from an Approved Registry or other source described above regarding the purchase of required carbon offsets | Evaluated prior to issuance of building permits for each phase |

Copyright © 2020 by Michael Patrick Durkee. All rights reserved. No portion of these Master Conditions may be reproduced, stored for retrieval or used or reused in any form or by any means, electronic, mechanical or otherwise, without the prior written consent of Michael Patrick Durkee.

| | | | |
|---|---|---|---|
| | above satisfy defined standards and incorporate principles of GHG emissions reduction accounting. These principles ensure the offsets use relevant methodologies and assumptions, represent additional reductions that would not otherwise be achieved by law, do not double count reductions, and are enforceable. | | |
| 95. | **Mitigation Measure 4.3-1a through Mitigation Measure 4.3-41c:** ***Special-Status Plants, California Red-Legged Frogs, Western Pond Turtle, Breeding Birds, Including Raptors and Tri-colored Blackbird, Swainson's Hawk, Golden Eagle, and White-Tailed Kite, Burrowing Owls, Callippe Silverspot Butterfly Host Plant (Johnny Jump Up), Callippe Silverspot Butterfly, American Badger, CDFW Streambed Alteration Agreement, Wetlands and Other Waters, Bats.*** Developer shall be responsible for conducting all applicable studies, and obtaining any and all permits required by any and all State and/or Federal agencies. If such permits require the Developer to provide studies, reports, mitigation or other actions or measures, then the Developer shall provide such reports, mitigation or other actions or measures to the satisfaction of such governing State and/or Federal agencies. When requested by City, Developer shall send a letter to the City explaining such Developer compliance, and shall send City copies of compliance permits, letters, and/or other authorizations received by Developer from any such State and/or Federal agencies. | Compliance prior to issuance of applicable permit | Satisfied |
| 96. | **Mitigation Measure 4.4-2:** ***Unanticipated Discovery of Archaeological Resources.*** If prehistoric or historic-era archaeological resources are encountered by construction personnel during project implementation, all construction activities within 100 feet shall halt and the contractor shall notify the City of American Canyon. Prehistoric archaeological materials might include obsidian and chert flaked-stone tools (e.g., projectile points, knives, scrapers) or toolmaking debris; culturally darkened soil ("midden") containing heat-affected rocks, artifacts, or shellfish remains; and stone milling equipment (e.g., mortars, pestles, handstones, or milling slabs); battered stone tools, such as hammerstones and pitted stones. Historic-era materials might include stone, concrete, or adobe footings and walls; filled wells or privies; and deposits of metal, glass, and/or ceramic refuse.<br>The Project Applicant shall retain a Secretary of the Interior-qualified archaeologist to inspect the findings within 24 hours of discovery and inform the City of American Canyon If it is determined that the project may damage a historical resource or a unique archaeological resource (as defined pursuant to CEQA and the CEQA Guidelines), construction shall cease in an area determined by the archaeologist until a mitigation plan has been prepared in accordance with PRC § 21083.2 and CEQA Guidelines § 15126.4; approved by the City; and implemented to the satisfaction of the archaeologist. In consultation with the City, the archaeologist shall determine when construction may commence.<br>Consistent with § 15126.4(b)(3), the mitigation plan shall recommend preservation in place, as a preference, or, if preservation in place is not feasible, data recovery through excavation. If preservation in place is feasible, this may be accomplished through one of the following means: (1) modifying the construction plan to avoid the resource; (2) incorporating the resource within open space; (3) capping and covering the resource before building appropriate facilities on the resource site; or (4) deeding resource site into a permanent conservation easement. If preservation in place is not feasible, a qualified archaeologist shall prepare and implement a detailed treatment plan to recover the scientifically consequential information from and about the resource, which shall be reviewed and approved by the City prior to any excavation at the resource site. Treatment of archaeological resources shall follow the requirements of PRC § 21083.2. Treatment for most resources shall consist of (but would not necessarily be not limited to) sample excavation, artifact collection, site documentation, and historical research, with the aim to target the recovery of important scientific data contained in the portion(s) of the | Submit documentation of findings and mitigation plan, if resources are encountered | During grading activities |

Copyright © 2020 by Michael Patrick Durkee. All rights reserved. No portion of these Master Conditions may be reproduced, stored for retrieval or used or reused in any form or by any means, electronic, mechanical or otherwise, without the prior written consent of Michael Patrick Durkee.

| | | | |
|---|---|---|---|
| | significant resource to be impacted by the project. The treatment plan shall include provisions for analysis of data in a regional context, reporting of results within a timely manner, curation of artifacts and data at an approved facility, and dissemination of reports to local and state repositories, libraries, and interested professionals. | | |
| 97. | **Mitigation Measure 4.4-3:** ***Unanticipated Discovery of Paleontological Resources.*** If paleontological resources, such as fossilized bone, teeth, shell, tracks, trails, casts, molds, or impressions are encountered by construction personnel during project implementation, all construction activities within 100 feet shall halt and the contractor shall notify the City of American Canyon. The Project Applicant shall retain a qualified paleontologist to inspect the findings within 24 hours of discovery. The paleontologist shall assess the nature and importance of the find and, if necessary, develop appropriate treatment measures in conformance with Society of Vertebrate Paleontology standards, and in consultation with the City of American Canyon. The Project Applicant shall implement the final treatment measures. | Submit documentation of findings and verification of treatment measures, if resources are encountered | During grading activities |
| 98. | **Mitigation Measure 4.4-4:** ***Unanticipated Discovery of Human Remains.*** If human remains are encountered by construction personnel during project implementation, all construction activities within 100 feet shall halt and the contractor shall notify the City of American Canyon. The City shall contact the Napa County Coroner to affirmatively indicate to the City that no investigation of the cause of death is required. The Native American Heritage Commission (NAHC) shall be contacted within 24 hours if the Coroner determines that the remains are Native American. The NAHC shall then identify the person or persons it believes to be the most likely descendant from the deceased Native American (PRC § 5097.98), who in turn shall make recommendations to the City of American Canyon for the appropriate means of treating the human remains and any associated funerary objects (CEQA Guidelines § 15064.5(d)). | Submit documentation of findings and treatment measures, if remains are encountered | During grading activities |
| 99. | **Mitigation Measure 4.5-4:** ***Geotechnical Requirements for the Quarry Pond.*** Prior to issuance of any building permits, the Project Applicant shall submit to the City plans that are consistent with the geotechnical recommendations of a minimum setback of 3:1 (horizontal:vertical) from the toe of the existing quarry pond bank. Any proposed plans inside of the 3:1 setback, shall be the subject of a detailed slope stability analysis by a current California registered Geotechnical Engineer or Engineering Geologist where proposed slopes must meet minimum factor of safety requirements as determined by the most recent California Building Code for both static and dynamic (earthquake) conditions. Graded cut-and-fill slopes over 15 feet shall be no steeper than 3:1 with slopes up to 15 feet no steeper than 2:1. Other measures, such as use of retaining walls and geogrid reinforcement or corrective grading, shall be implemented as necessary in accordance with the specific geotechnical recommendation informed by the aforementioned detailed slope stability analysis and outlined in the design level geotechnical report. | Submit grading plans for Quarry Lake Pond | Prior to issuance building permits |
| 100. | **Mitigation Measure 4.6-1a:** ***Evaluation for Lead-Based Paint or Coatings, Asbestos-Containing Materials, or Polychlorinated Biphenyls.*** The Project Applicant shall submit documentation to the City to verify that all proposed areas for demolition or modification have been assessed by California state licensed contractors for the potential presence of lead-based paint or coatings, asbestos containing materials, and polychlorinated biphenyl-containing equipment prior to issuance of a demolition permit. | Submit documentation of findings | Prior to demolition activities |
| 101. | **Mitigation Measure 4.6-1b:** ***Health and Safety Plan.*** If the assessment required by Mitigation Measure 4.6-1a finds presence of lead-based paint, asbestos, and/or polychlorinated biphenyls, prior to any construction or demolition activities on the project site, the Project Applicant shall submit to the City for approval and shall implement a health and safety plan to protect workers from risks associated with hazardous materials during abatement, demolition or renovation of affected structures. | Submit and receive approval of Health and Safety Plan | Prior to demolition of structures containing lead-based paint, asbestos, and/or |

| | | | |
|---|---|---|---|
| | | | polychlorinated biphenyls |
| 102. | **Mitigation Measure 4.6-1c:** ***Lead-Based Paint Removal Plan.*** If the assessment required by Mitigation Measure 4.6-1a finds presence of lead-based paint, prior to any demolition of structures containing lead based paint, the Project Applicant shall submit to the City for approval and shall implement a lead-based paint removal plan in accordance with City and California Code of Regulations Title 8, §§ 1532.1 et seq., requirements. The plan shall specify, but not be limited to, the following elements for implementation:<br>● Develop a removal specification approved by a Certified Lead Project Designer;[2]<br>● Ensure that all removal workers are properly trained;<br>● Contain all work areas to prohibit off-site migration of paint chip debris;<br>● Remove all peeling and stratified lead-based paint on building and non-building surfaces to the degree necessary to safely and properly complete demolition activities according to recommendations of the survey. The demolition contractor shall be responsible for the proper containment and disposal of intact lead-based paint on all equipment to be cut and/or removed during the demolition;<br>● Provide on-site personnel and area air monitoring during all removal activities to ensure that workers and the environment are adequately protected by the control measures used;<br>● Clean up and/or vacuum paint chips with a high efficiency particulate air (HEPA) filter;<br>● Collect, segregate, and profile waste for disposal determination; or<br>● Properly dispose of all waste. | Submit and receive approval of Lead-Based Paint Removal Plan | Prior to demolition of structures containing lead-based paint |
| 103. | **Mitigation Measure 4.6-1d:** ***Asbestos Abatement.*** If the assessment required by Mitigation Measure 4.6-1a finds asbestos, prior to undertaking demolition or construction activities involving asbestos disturbance, the Project Applicant shall, demonstrate to the City that asbestos abatement shall be conducted by a California state licensed contractor prior to building demolition. Abatement of known or suspected asbestos-containing materials shall occur prior to demolition or construction activities that would disturb those materials. Pursuant to an asbestos abatement plan developed by a state-certified asbestos consultant and approved by the City, all asbestos-containing materials shall be removed and appropriately disposed of by a state certified asbestos contractor in accordance with Caltrans transportation requirements and any requirements of the receiving facility. | Submit documentation that abatement has been completed | Prior to demolition of structures containing asbestos |
| 104. | **Mitigation Measure 4.6-1e:** ***Polychlorinated Biphenyl Abatement.*** If the assessment required by Mitigation Measure 4.6-1a finds polychlorinated biphenyls (PCBs), prior to undertaking demolition or construction activities that could disturb potential PCBs, the Project Applicant shall ensure that PCB abatement shall be conducted prior to building demolition or renovation. The Project Applicant shall demonstrate to the satisfaction of the City that PCBs shall be removed by a qualified contractor and transported in accordance with Caltrans requirements. | Submit documentation of PCB abatement | Prior to demolition of structures containing PCBs |
| 105. | **Mitigation Measure 4.6-2a:** ***Phase I Recommendations.*** Prior to commencement of construction, the Project Applicant shall contract a qualified environmental consulting firm with state registered professionals (Professional Engineers or Geologists) to carry out the recommendations contained in the April 14, 2015, Phase I Environmental Site Assessment report by ENGEO Incorporated pertaining to the potential environmental concerns. The Phase I report included recommendations for collection of surface soil samples for laboratory analysis and oversight of other earthwork activities. The findings of the soil sampling effort shall be submitted to the Napa County Environmental Health | Submit documentation that recommendations of the Phase I Environmental Site Assessment have been | Prior to commencement of construction |

| | | | |
|---|---|---|---|
| | Division (NCEHD) prior to initiating any earthwork activities on the project site for direction on whether any further sampling or remediation may be necessary. | implemented, as necessary | |
| 106. | **Mitigation Measure 4.6-2b:** ***Soil Management Plan*****.** The project shall submit and obtain approval of a Soil Management Plan from the Napa County Environmental Health Division (NCEHD) prior to initiating any earthwork activities on the project site. During construction, the contractor shall cease any earthwork activities upon discovery of any suspect soils or groundwater (e.g., petroleum odor and/or discoloration) during construction in accordance with a Soil Management Plan prepared for the project by a qualified environmental consultant and approved by the NCEHD. The contractor shall notify the NCEHD upon discovery of suspect soils or groundwater and retain a qualified environmental firm to collect soil samples to confirm the level of contamination that may be present. If contamination is found to be present, any further proposed groundbreaking activities within areas of identified or suspected contamination shall be conducted according to a site specific health and safety plan, prepared by a California state licensed professional. The contractor shall follow all procedural direction given by NCEHD and in accordance with the Soil Management Plan prepared for the site to ensure that suspect soils are isolated, protected from runoff, and disposed of in accordance with transportation laws and the requirements of the licensed receiving facility. | Submit NCEHD-approved Soil Management Plan and Health and Safety Plan, as necessary | Prior to grading and during constructio n |
| 107. | **Mitigation Measure 4.6-2c:** ***Removal of Contaminated Soil or Groundwater*****.** If contaminated soil or groundwater is encountered and identified constituents exceed human health risk levels, the Project Applicant shall submit documentation to the City to verify that it has been delineated, removed, and disposed of off site in compliance with the receiving facilities' requirements prior to construction of any building foundation. | Submit documentation of removal of contaminated soil or groundwater, if encountered | Prior to constructio n of any building foundation |
| 108. | **Mitigation Measure 4.6-4:** ***Development within 50 Feet of the Pacific Gas & Electric (PG&E) Pipeline/Easement*****.** Prior to issuance of building or grading permits, Project Applicant shall submit documentation to the City to verify that development plans located within 50 feet of the existing PG&E pipeline/easement, including utilities that may intersect the existing PG&E pipeline, have been submitted to PG&E Gas Transmission Integrity Management and PG&E Land Development for review and approval. Project Applicant plans for all proposed improvements located within this zone shall adhere to the requirements of PG&E Gas Transmission Integrity Management and PG&E Land Development, including without limitation, setback requirements, depth of cover over pipeline, location of trees and maintenance requirements, minimum separation of crossing utilities, trail location, as well as any relocation requirements, if applicable. | Submit development plans for any activities within 50 feet of the existing PG&E pipeline/easemen t | Prior to issuance of building or grading permits for any activities within 50 feet of the existing PG&E pipeline/ea sement. |
| 109. | **Mitigation Measure 4.7-1:** ***Stormwater Pollution Prevention Plan (SWPPP)*****.** Prior to issuance of grading permits for the project, the Project Applicant shall submit documentation to the City to verify that a Storm Water Pollution Prevention Plan (SWPPP) has been prepared in accordance with the requirements of the statewide National Pollutant Discharge Elimination System (NPDES) Construction General Permit. The SWPPP shall be designed, without limitation, to address the following objectives: (1) all pollutants and their sources, including sources of sediment associated with construction, construction site erosion, and all other activities associated with construction activity are controlled; (2) where not otherwise required to be under a Regional Water Quality Control Board permit, all non-stormwater discharges are identified and either eliminated, controlled, or treated; (3) site best management practices (BMPs) are effective and result in the reduction or elimination of pollutants in stormwater discharges and authorized non-stormwater discharges from construction activity; and (4) stabilization BMPs are installed to reduce or eliminate pollutants after construction is completed. The SWPPP shall be prepared by a qualified SWPPP developer and included as part of | Submit Stormwater Pollution Prevention Plan | Prior to issuance of grading permits |

Copyright © 2020 by Michael Patrick Durkee. All rights reserved. No portion of these Master Conditions may be reproduced, stored for retrieval or used or reused in any form or by any means, electronic, mechanical or otherwise, without the prior written consent of Michael Patrick Durkee.

| | | | |
|---|---|---|---|
| | construction specifications. The SWPPP shall include the minimum BMPs required for the identified Risk Level in accordance with NPDES Construction General Permit requirements. BMPs could include, but are not necessarily limited to the use of straw bales, silt fences, fiber rolls, hydroseeding, preservation of existing vegetation, straw mulch, washing of truck tires prior to exiting site, protection of existing storm drain inlets, dedicated refueling areas with secondary containment, and on-site storage of spill prevention kits. BMP implementation shall be consistent with the BMP requirements in the most recent version of the California Stormwater Quality Association Stormwater Best Management Handbook-Construction or the Caltrans *Stormwater Quality Handbook Construction Site BMPs Manual*. | | |
| 110. | **Mitigation Measure 4.7-2: *Water Discharge Requirements for Dewatering*.** For areas that may encounter groundwater during excavation activities, the Project Applicant shall incorporate San Francisco Regional Water Quality Control Board (SFRWQCB) discharge requirements into construction specifications for any dewatering activities that may be necessary. The Project Applicant shall provide all requested plans and protocols and incorporate any SFRWQCB additional comments or requests into project specifications for construction activities. Dewatering plans shall include, without limitation, an assessment of water quality, protocols for containment, and thresholds for discharge. No discharge of pumped water for dewatering shall occur prior to approval from SFRWQCB. | Submittal of dewatering plans | During excavation and grading activities |
| 111. | **Mitigation Measure 4.7-3a: *Post-Construction Stormwater Controls*.** Prior to approval of tentative maps or issuance of building permits for the project, the Project Applicant shall submit documentation to the City to verify that post-construction stormwater controls have been included in the site design in accordance with the requirements of the National Pollutant Discharge Elimination System (NPDES) Phase II Small Municipal Separate Storm Sewer Systems (MS4) Permit and the Bay Area Stormwater Management Agencies Association (BASMAA) Post-Construction Manual. The Project Applicant shall prepare the final Stormwater Control Plan (SCP) and any necessary changes by the City or the SFRWQCB shall be incorporated into project design plans to ensure the required controls are in place and adhere to the requirements of the NPDES Phase II Small MS4 Permit and consistent with the BASMAA manual. At a minimum, the SCP shall demonstrate how the following measures shall be incorporated into the project:<br>● Low-impact development (LID) site design principles (e.g., preserving natural drainage channels, treating stormwater runoff at its source rather than in downstream centralized controls);<br>● Source control best management practices (BMPs) in the form of design standards and structural features for all proposed areas of development;<br>● Source control BMPs for landscaped areas shall be documented in the form of a Landscape Management Plan that relies on Integrated Pest Management and also includes pesticide and fertilizer application guidelines designed to minimize any off-site discharge; and<br>● Treatment control measures (e.g., bioretention, porous pavement, vegetated swales) targeting any potential pollutants such as sediment, pathogens, metals, nutrients (nitrogen and phosphorus compounds), oxygen-demanding substances, organic compounds (e.g., PCBs, pesticides), oil and grease, and trash and debris. The SCP shall demonstrate that the project has the land area available to support the proposed BMP facilities sized per the required water quality design storm. | Submit documentation of compliance with the NPDES Phase II Small Municipal Separate Storm Sewer Systems Permit and the Bay Area Stormwater management Agencies Association Post-construction Manual | Prior to approval of tentative maps or issuance of building permits |
| 112. | **Mitigation Measure 4.7-3b: *Compliance with the MS4 Permit*.** Prior to issuance of any building permits, the Project Applicant shall submit documentation to the City to demonstrate adherence to Provision E.12.h of the Municipal Separate Storm Sewer Systems (MS4) Permit, which requires that an Operation and Maintenance Program is implemented for post-construction stormwater management features. Responsible parties and funding for long-term maintenance of all Best Management Practices (BMPs) must be | Submit documentation that an Operation and Maintenance Program has been | Prior to issuance of building permits |

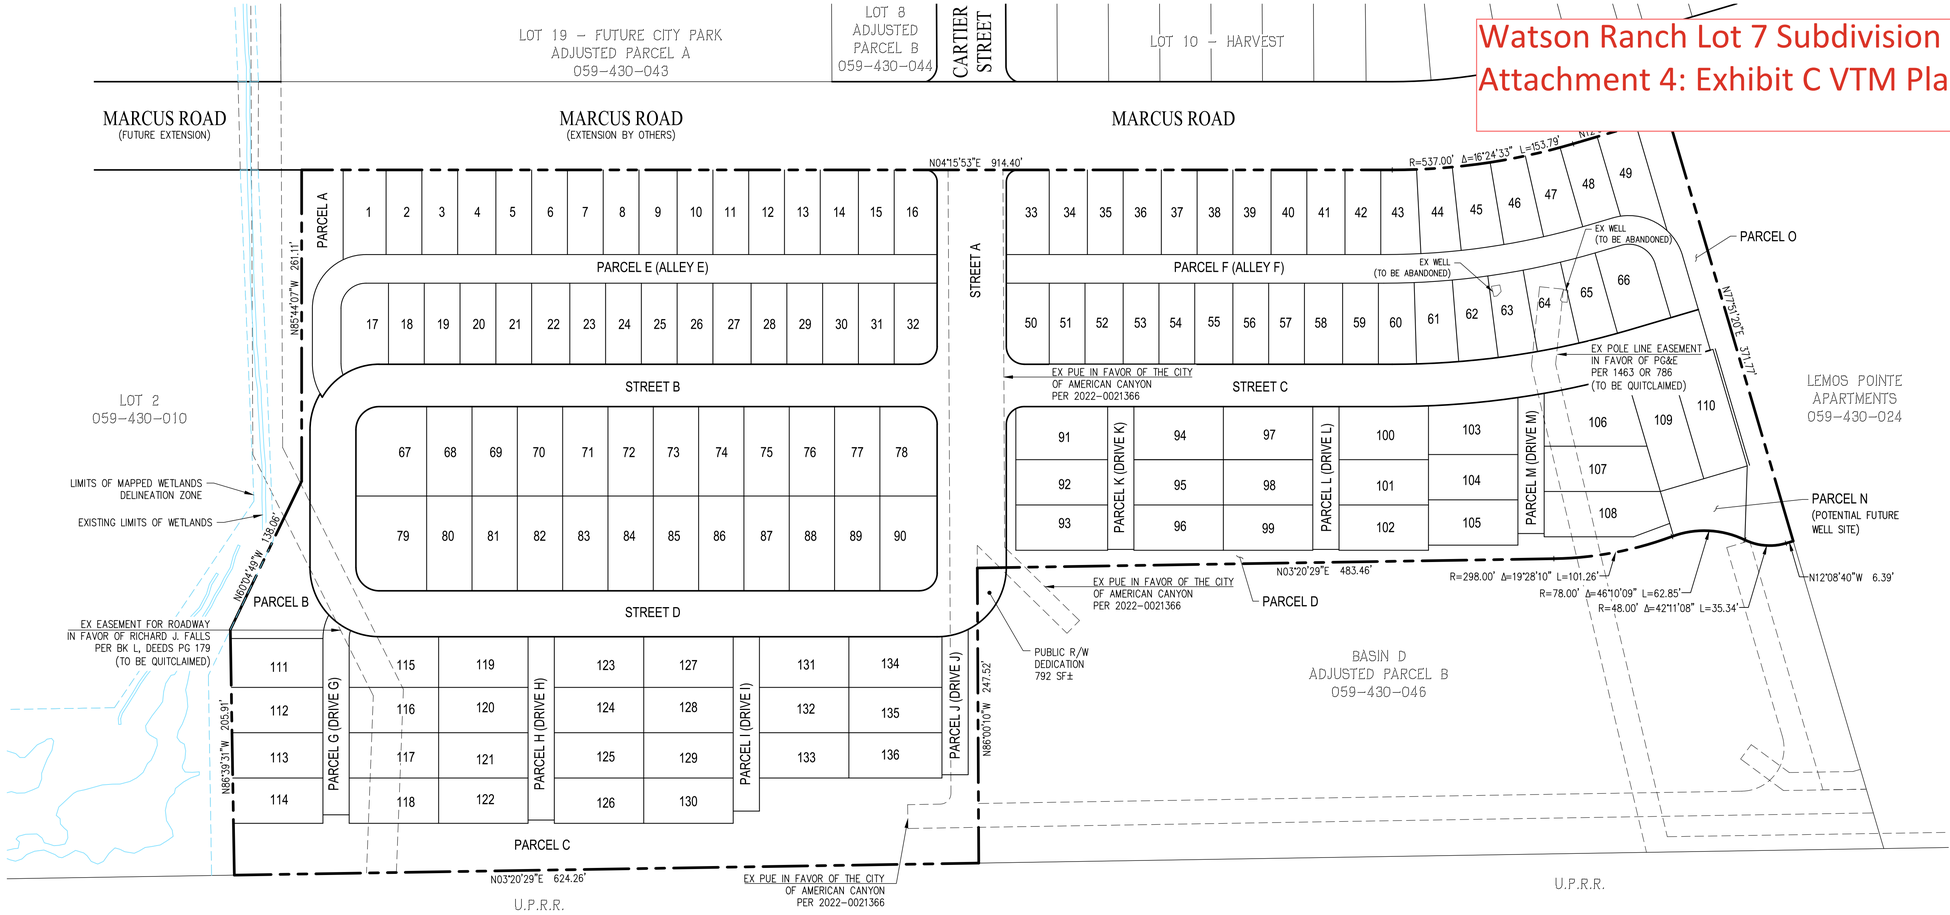
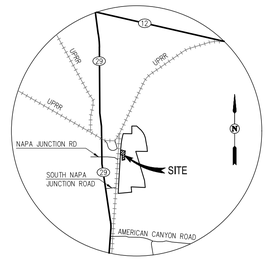
| | | | |
|---|---|---|---|
| | specified within the Operation and Maintenance Plan. This Plan shall specify a regular inspection schedule of stormwater treatment facilities in accordance with the requirements of the National Pollutant Discharge Elimination System (NPDES) MS4 Permit. Reports documenting inspections and any remedial action conducted shall be submitted regularly to the City for review and approval. | implemented for post-construction stormwater management features | |
| 113. | **Mitigation Measure 4.9-1: *Construction Noise.*** To reduce the potential for noise impacts due to construction of the project, the Project Applicant shall require construction contractors to implement the following measures:<br>● Stationary construction noise sources shall not be located within 200 feet of residence. If necessary to locate this equipment within 200 of existing residences, stationary equipment shall be shielded by temporary noise barriers or acoustic enclosures that are long and tall enough to break line of sight.<br>● Noise barriers or shielding shall be erected for construction work associated with on-site construction activities that involves heavy construction equipment and occurs within 200 feet of residences for an extended period of time (i.e., more than 2 weeks). The barriers shall be long enough to break line of sight and at least 8 feet in height.<br>● Equipment warm up areas and equipment storage areas shall not be located closer than 500 feet of adjacent residences.<br>● All heavy construction equipment and all stationary noise sources (such as diesel generators) shall have properly functioning manufacturer-installed mufflers.<br>● Stationary noise sources, such as temporary generators and pumps, shall be positioned as far from nearby receivers as possible, within temporary enclosures and shielded by barriers (which could reduce construction noise by as much as 5 dB), or other measures, to the extent feasible.<br>● Use "quiet" models of air compressors and other stationary equipment where such technology exists.<br>● Prohibit unnecessary idling of internal combustion engines.<br>● To further reduce the potential for impacts, a Construction Noise Management Plan shall be prepared and shall include the following:<br>○ A process by which to provide a minimum of 2 weeks' advance notice to all residences located within 200 feet of construction activities that are expected to occur for a period of 2 weeks or longer within a defined area, including the approximate start and end dates of such activities.<br>○ Signs shall be posted at all project entrances upon commencement of construction for the purposes of informing all contractors/subcontractors, their employees, agents, material haulers, and all other persons at the project of the basic requirements of Mitigation Measure 4.9-1.<br>○ Publicly visible signs shall be posted on security fencing at multiple locations around the perimeter of the project construction boundary that include:<br>■ Permitted construction days and hours.<br>■ A telephone number and designated person to contact for registering noise complaints. The designated person shall be available to respond to, and if necessary through complaint verification, take corrective action to ensure that noise emissions from the offending equipment or activity is addressed. Corrective action shall be applied immediately if feasible, and within no later than 48 hours after receipt of the noise complaint. The designated person shall track complaints and corrective actions taken to resolve noise complaint issues. | Submit documentation verifying implementation of mitigation implementation, including construction Noise Management Plan | During construction activities |
| 114. | **Mitigation Measure 4.12-3a (same as Mitigation Measure 4.2-2a in Section 4.2, *Air Quality and Greenhouse Gas Emissions*): *Transportation Demand Management (TDM) Program*.** Prior to issuance of the first building permit for the non-residential use areas (i.e., | TDM program | Prior to issuance of first |



Copyright © 2020 by Michael Patrick Durkee. All rights reserved. No portion of these Master Conditions may be reproduced, stored for retrieval or used or reused in any form or by any means, electronic, mechanical or otherwise, without the prior written consent of Michael Patrick Durkee.



| | | | |
|---|---|---|---|
| | Napa Valley Ruins & Gardens [NVR&G] and hotel), the Project Applicant shall develop a TDM program for the non-residential use areas (i.e., NVR&G and hotel) and shall submit the TDM program to the City Department of Public Works for review and approval. The Project Applicant shall be responsible for funding and overseeing the delivery of trip reduction/TDM proposed programs and strategies, which may include, but are not limited to, the following:<br>1. Establishment of carpool, buspool, or vanpool programs;<br>2. Vanpool purchase incentives;<br>3. Cash allowances, passes or other public transit subsidies and purchase incentives;<br>4. Preferential parking locations for ridesharing vehicles;<br>5. Computerized commuter rideshare matching services;<br>6. Guaranteed ride-home program for ridesharing;<br>7. Bicycle programs including bike purchase incentives, storage, and maintenance programs;<br>8. On-site car share and bike share service;<br>9. Preparation of a Parking Management Plan to address parking accommodations for large events;<br>10. Designation of an on-site transportation coordinator for the project;<br>11. Transit and trip planning resources such as commute information kiosk;<br>12. Employer-provided showers, changing rooms, and clothing lockers for office employees that commute via active transportation;<br>13. Bicycle route mapping resources;<br>14. Participation in future citywide Transportation Management Association (TMA); and<br>15. Submit annual reports to the City regarding TDM activities. | | building permit for the non-residential use area (i.e., NVR&G and hotel) |
| 115. | **Mitigation Measure 4.12-9: *Construction Management Plan*.** The Project Applicant shall develop and submit a Construction Management Plan (CMP) to the City of American Canyon prior to commencement of any construction activities, including construction activities associated with the transportation mitigation measures. The provisions of a CMP shall specifically address the characteristics of construction-related traffic associated with development. Such plans identify construction phasing and the level and type of construction-related traffic. The CMP shall identify construction truck routes to access the WRSP site, lane closures on existing public streets (if needed) including a plan for any necessary traffic control measures, and on-site staging requirements, and other information as required by the City.<br>Once the construction truck routes have been approved, but before construction has started, the Project Applicant shall conduct a survey of existing conditions of pavement along the approved truck routes and submit documentation of the results to the City. When construction has been substantially completed such that there would be no further construction truck trips, the Project Applicant shall re-survey the construction truck routes. The Project Applicant shall be responsible for repairing damage to roadways used for construction vehicle access to the site and attributable to the project so that the roadway conditions are returned to their pre-construction conditions (or better) as documented in the pre-construction survey along the truck routes following the construction of the project. | Construction Management Plan | Prior to construction activities |

## PRELIMINARY EARTHWORK SUMMARY

| DESCRIPTION | CUT (±CY) | FILL (±CY) |
|---|---|---|
| ROUGH GRADING | 10,000 | 18,500 |
| STORM DRAIN SPOILS | 1,900 | |
| SANITARY SEWER SPOILS | 600 | |
| DOMESTIC WATER SPOILS | 500 | |
| BUILDING SPOILS | 2,720 | |
| JOINT TRENCH SPOILS | 900 | |
| WALL SPOILS | 1,880 | |
| SUB–TOTAL | 18,500 | 18,500 |
| NET (BALANCE) | 0 | – |

NOTES:

1. ASSUMES A STREET SECTION OF 3.5" AC/ 13" AB (WITH T.I. OF 6.0). FINAL STREET STRUCTURAL SECTION TO BE VERIFIED WITH FINAL DESIGN.
2. MASS GRADE QUANTITIES ARE MEASURED TO STREET SUBGRADE.
3. SPOILS QUANTITIES ARE PRELIMINARY. IT IS ASSUMED THAT TRENCH BACKFILL CAN BE NATIVE. CITY OF AMERICAN CANYON TO VERIFY TRENCH BACKFILL MATERIAL. CONTRACTOR'S FINAL QUANTITIES TO BE BASED ON APPROVED TRENCH SECTION. SPOIL QUANTITIES EXCLUDE SPOILS FOR LANDSCAPE ELEMENTS AND TREES.
4. NO ADJUSTMENTS WERE MADE FOR SOIL SHRINKAGE OR EXPANSION.
5. EARTHWORK QUANTITIES DO NOT INCLUDE ANY SOIL REMEDIATION OR GEOTECHNICAL WORK. IT IS ASSUMED ALL REMEDIAL GRADING HAS ALREADY OCCURRED.
6. ASSUMES 20 CY OF SPOILS PER LOT.

## PRELIMINARY PAVEMENT DESIGN CHART

| | TI | PCC | AC | AB |
|---|---|---|---|---|
| STREETS A–D | 6 | – | 0.35' (4") | 1.10' (13") |
| ALLEY E–F, DRIVE G–M (PRIVATE) | 5 | – | 0.25' (3") | 0.83' (10") |
| SIDEWALK | – | 0.35' (4") | – | 0.35" (4") |

NOTES:

1. ALL GRADES ARE PRELIMINARY AND SUBJECT TO FINAL DESIGN.
2. STORM DRAIN SIZING IS PRELIMINARY AND SUBJECT TO FINAL DESIGN.
3. ALL ELEVATIONS SHOWN ON THIS PLAN ARE BASED ON THE NGVD29 DATUM.
4. SEE SHEET TM–7 FOR PRELIMINARY GRADING CROSS SECTIONS.
5. RETAINING WALLS ARE NOT PROPOSED FOR PAD SPLITS OF 1.0' OR LESS. PADS WILL PICK–UP 1' OF GRADE DIFFERENCE IN THE FENCE KICKERBOARD.

Watson Ranch Lot 7
Attachment 7: Public Notice Package

**CITY OF AMERICAN CANYON CITY COUNCIL**

**NOTICE OF PUBLIC HEARING**

On **Tuesday, November 19, 2024,** at the hour of 6:30 p.m., at **4381 Broadway, Suite 201** (in the American Canyon City Council Chambers), a public hearing will be held by the City Council of the City of American Canyon to consider the following application:

| | |
|---|---|
| **APPLICATION:** | The City Council will consider a Resolution to approve a Vesting Tentative Subdivision Map for development of 136 single-family detached homes on a 12.86-acre site in the Watson Ranch Specific Plan Medium Density Residential 16 (WRSP MDR16) Zone, APN 059-430-045 (File No. PL24-0012) |
| **PROJECT DESCRIPTION:** | The Planning Commission reviewed the project on October 24, 2024 and recommended City Council Approval. The applicant proposes to develop the Watson Ranch Lot 7 Subdivision consisting of 136 single-family lots, 4 public streets, 9 private drives, and 6 non-residential parcels. The project site is west of the Marcus Rd and Cartier Street intersection and accessible by Marcus Rd. |
| **ENVIRONMENTAL REVIEW:** | The proposed Watson Ranch Lot 7 Subdivision Map was contemplated "Project Approvals" analyzed under the Project FEIR and the Watson Ranch Specific Plan Development Agreement. Under CEQA, the Watson Ranch Specific Plan Project FEIR is a program EIR and is generally assumed to be used at a "development level." See, e.g., CEQA Guidelines § 15168. There is no substantial evidence of changed circumstances under CEQA Guidelines section 15162 requiring further CEQA review as the whole of the approvals sought are contemplated under the Project FEIR analysis. |
| **PROJECT LOCATION:** | Vacant lot west of Marcus Rd and Cartier Street; APN 059-430-045 |
| **APPLICANT:** | KB Homes |

All interested persons are invited to attend the meeting and be heard on this matter. Copies of all documents that relate to the above-described project may be examined at the Community Development Department office prior to the hearing. The meeting will be conducted in person and by teleconference via a Zoom connection where the City Council and staff will participate with both audio and video presence. The meeting will be accessible for all members of the public to attend via the City's website, YouTube, and Cable TV Channel 28 and public comments enabled via email and phone.

Written comments may be submitted to Taresa Geilfuss, CMC, City Clerk by email at cityclerk@americancanyon.gov. Hardcopy comments may be delivered to City Hall at 4381 Broadway, Suite 201, American Canyon, CA 94503, prior to the public hearing or to the City Council meeting. Electronic

comments may be submitted up to 3 pm on the day of the hearing on our website at this link: https://www.americancanyon.gov/Work/Local-Government/City-Hall/City-Clerk/Meetings-Agendas.

If you challenge the particular proceedings in court, you may be limited to raising only those issues you or someone else raised at the public hearing described in this notice, or in written correspondence delivered to the City prior to the public hearing.

Public meetings/events sponsored or conducted by the City of American Canyon are held in accessible sites. Requests for accommodations may be made by calling (707) 647-5310 (voice) or 711 for the California Relay Service or by e-mailing the ADA Coordinator at cityclerk@americancanyon.gov at least 72 hours in advance of the event. Copies of documents distributed at the meeting are available in alternative formats upon request.

_____

Taresa Geilfuss, CMC City Clerk

If comments are being provided through the upload of a document, please indicate so.

I was talking with a person who claimed that he was working on the Watson ranch project and he told me that PGE refused to address the aging gas pipeline that is under the site. He said his supervisor said this could be the next San Bruno. This is alarming. What is being done about this gas line?

Hi Greg,

Thank you for submitting your comment regarding a PG&E pipeline in Watson Ranch. We have forwarded your question to Mark Van Gorder, PG&E correspondent for the North Bay, copied on this e-mail.

Kind regards,

## TITLE

SDG 220 Warehouse EIR and CUP

## RECOMMENDATION

Adopt a Resolution to (i) certify the Final Environmental Impact Report (SCH #2023100842), and (ii) adopting CEQA Findings of Fact, (iii) adopting a Statement of Overriding Conditions, and (iv) adopt a Mitigation Monitoring and Reporting Program for the SDG Commerce 220 Distribution Center Project located at 1055 Commerce Court, APN 058-030-069 (File Number PL23-0017); and

Adopt a Resolution approving the SDG Commerce 220 Distribution Center Conditional Use Permit for development of a 219,834 square foot wine warehouse on a 10.45-acre site located at 1055 Commerce Court, APN 058-030-069 (File number PL23-0017).

## CONTACT

William He, AICP, Senior Planner

## BACKGROUND & ANALYSIS

**Table 1: Site Information**

| | |
|---|---|
| General Plan Designation | Commercial Recreation (CR) |
| Zoning District | Recreation and Open Space (REC) |
| Site Size | 10.45 acres |
| Present Use | Vacant Site |
| Surrounding Zoning and Uses | North: REC / SDG Commerce 217 Distribution Center<br>South: REC / SDG Commerce 330 Distribution Center<br>East: REC / A residence and the Paintball Jungle amongst a eucalyptus grove<br>West: REC / North Slough, undeveloped eucalyptus grove |
| Access | Commerce Court by way of Green Island Road |
| Commerce Court Setback | Required: 15 feet  Provided: 70 feet plus |

**I. Background**

Project Description

SDG Commerce 220, LLC (Applicant) proposes to develop a 219,834 square-foot wine storage and distribution center on the 10.45-acre parcel at 1055 Commerce Ct in the recreation (REC) zone. The warehouse includes 23 truck doors and approximately 4,400 square feet of office space.

The one-story building would have a maximum height of 35 feet. The site includes 134 passenger vehicle parking spaces, 23 truck parking stalls, and 12 bicycle parking spaces. The project will be supported with approximately 40,800 square feet of landscaping.

According to the applicant, the typical hours of operation for wine distribution and storage are 6:00 am to 6:00 pm on Monday through Friday, and 6:00 am to 12:00 am Monday through Friday on peak months. The project would employ approximately 35 full-time employees.

- A Regional Location map is included as Attachment 20.
- A Vicinity Map is included as Attachment 21.
- Photographs of the site are included as Attachment 22.
- The site plan is available as Attachment 23.
- The warehouse building photosimulation and elevations are available as Attachment 24.
- A list of important Environmental Impact Report milestones is available as Attachment 25.
- The project plans are available as Attachment 18.

Project Objectives

The purpose of the Project is to develop land in Recreation Zone to the highest and best use. The objectives of the proposed project are to:

1. Positively contribute to the local economy through new capital investment, the creation of new jobs, and the expansion of the tax base.
2. Develop land to its highest and best use.
3. Continue the buildout of the City of American Canyon in accordance with the General Plan.
4. Meet regional demand for wine warehousing by adding to the inventory of this space.
5. Develop nonresidential uses on the project site that are compatible with the City of American Canyon's Water Reclamation Facility and the Napa County Airport.
6. Maximize the efficient use of land by developing an industrial project at the upper end of the allowable Floor Area Ratio range.
7. Complete the buildout of the SDG Commerce development.
8. Protect North Slough by employing stormwater pollution prevention measures during construction and operation.
9. Provide development fees to the American Canyon Fire Protection District to fund the development of a new fire station.

The project includes two entitlements, an Environmental Impact Report (EIR) and a Conditional Use

Permit (CUP). The EIR evaluates the CUP project on 10.45 acres. The CUP consists of the 220,000 square foot warehouse and circulation areas.

History

The project site is part of a previously larger 35.85-acre site. The larger site was subdivided into three lots (SDG Commerce 217, 220, and 330) through a parcel map in February 2019. The southern parcel (SDG Commerce 330) was developed in 2020. The Northern parcel (SDG Commerce 217) was entitled in 2021 and under construction. The central parcel (SDG Commerce 220) is the project site evaluated in this DEIR.

Existing Conditions

The site at 1055 Commerce Court is vacant and was graded as part of a previous environmental review. Vehicle access is available from Commerce Court by Green Island Road to the north. Access to the south is limited to a pedestrian and bike path. There is no vehicle access from the south to Wetlands Edge.

There are approximately 0.65-acres of wetlands on-site consisting of 0.04 acres of a linear wetland area and 0.02 acres of seasonal wetlands. The wetlands have a 25-foot buffer with fencing.

Environmental Impact Report

An Environmental Impact Report (EIR) was prepared for the SDG Commerce 220 Distribution Center (Proposed Project) according to the California Environmental Quality Act (CEQA) (State Clearinghouse No. 2023100842). An EIR is an informational document for the agency decision-makers and the public to understand potential environmental impacts associated with the Proposed Project.

EIR Milestones

The EIR was circulated for public review for 52 days from June 11, 2024 to August 2, 2024. During the public review period, the Draft EIR, including the technical appendices, is available for review at the City of American Canyon Community Development Department offices and the American Canyon Library. A copy of the Draft EIR is included as Attachment 1. The EIR is also available as Attachments 2 through 16 and on the City's website at this link: https://portal.laserfiche.com/Portal/Browse.aspx?id=154541&repo=r-f53bdda4.

The City received ten comment letters on the Draft EIR. A response to each comment was prepared and sent to the authors ten days prior to the Planning Commission hearing on October 24, 2024. Together, the Draft EIR, Final EIR, Mitigation Measures and Reporting Program (MMRP), and all appendices are available in Attachments 2 to 16, Exhibits B to O.

**II. Analysis of the EIR**

EIR Overview

Consistent with the California Environmental Quality Act (CEQA), the City determined the proposed SDG Commerce 220 project has the potential for significant environmental impacts. For this reason, an Environmental Impact Report (EIR) is required to fully describe and analyze those impacts.

FirstCarbon Solutions (FCS) prepared the Draft EIR, Responses to Draft EIR, and MMRP. The Draft EIR provides a project-level analysis for the proposed project. The City of American Canyon is the lead agency for the proposed project and has discretionary authority over the proposed project and project approvals. The Draft EIR was intended to address all public infrastructure improvements and all future development within the parameters of the proposed project.

Public comment on the Draft EIR was invited for a 52-day period from June 11, 2024, through August 2, 2024. The City, as lead agency, has added seven more days to the required 45-day review period due to a request from CDFW. Throughout the Draft EIR comment period staff received 5 public comments. All public comments were assembled and staff and the EIR consultant prepared a written response to each comment. This document is called the Response to Comments (RTC). The Final EIR is made up of the Draft EIR together with the RTC. The RTC was released on October 11, 2024, at least ten days before the Planning Commission, holds a public hearing on the Final EIR.

1. Environmental Issues Determined not to be Significant

The Draft EIR identifies topical areas that were determined not to be significant. An explanation of the reasons why each area is determined not to be significant is provided in Draft EIR Chapter 4, Effects Found not to be Significant. These topical areas are as follows:

- Agricultural and Forest Resources
- Mineral Resources
- Recreation
- Wildfire

In addition, certain subjects with various topical areas were determined not to be significant. Other potentially significant issues are analyzed in these topical areas; however, the following issues are not analyzed:

- Scenic Vistas
- State Scenic Highways
- Loss of Important Farmland
- Williamson Act Contracts or Agricultural Zoning
- Forest Zoning
- Loss of Forest Land
- Pressures to Convert Surrounding Agricultural Land or Forest Land
- Sensitive Natural Communities or Riparian Habitat
- Conservation Plans
- Septic or Alternative Wastewater Disposal Systems

- Wildfires
- 100-year Flood Hazards
- Levee or Dam Failure
- Seiches, Tsunamis, or Mudflows
- Division of an Established Community
- Loss of Mineral Resources of Statewide or Local Importance
- Growth Inducement
- Displacement or Persons or Housing
- Schools
- Parks
- Other Public Facilities
- Emergency Evacuation
- Wildfire Risks
- Fire Infrastructure
- Post-fire Hazards

2. Project Impacts that are Less than Significant

The Draft EIR indicated that the following topical areas may contain potentially significant environmental issues that will require further analysis in the EIR. Changes to the project and/or feasible mitigation measures lessen the impact to "Less Than Significant". These sections are as follows:

- Aesthetics, Light, and Glare
- Air Quality
- Biological Resources
- Cultural Resources/Tribal Cultural Resources
- Geology, Soils, and Seismicity
- Greenhouse Gas Emissions/Energy
- Hazards and Hazardous Materials
- Hydrology and Water Quality
- Land Use
- Noise
- Public Services
- Transportation
- Utilities and Service Systems

*2.1 Summary of Mitigation Measures*

CEQA Guidelines Section 15126.4(a) requires lead agencies to consider feasible mitigation measures to avoid or substantially reduce a project's significant environmental impacts. The MMRP is available in Attachment 15.

3. Significant Unavoidable Adverse Impacts

The proposed project would result in the following significant unavoidable impacts:

- Inconsistency with CEQA Guidelines Section 15064.3, subdivision (b): The proposed project's Vehicle Miles Traveled (VMT) was evaluated in accordance with the City's adopted VMT policy. For the project's VMT impact to be less than significant, the VMT per employee would need to be reduced by at least 19 percent below current levels. However, according to the 2021 California Air Pollution Control Officers Association (CAPCOA) Handbook for Analyzing Greenhouse Gas Emission Reductions, Assessing Climate Vulnerabilities, and Advancing Health and Equity (CAPCOA Handbook), a reduction in VMT of 15 percent is generally considered the maximum feasible mitigation for suburban environments such as that of the proposed project. If this level of trip reduction could be achieved, that would mitigate most of the project's VMT impact, although not to a level that would be less than significant (19 percent); however, given the lack of transit services within an acceptable walking distance of the proposed project, achieving this level of mitigation is considered infeasible. Even with implementation of a TDM Plan as required by MM TRANS-2, the impact would remain significant and unavoidable.
- Cumulative Transportation: Impact TRANS-2 concluded that the proposed project would have a significant and unavoidable impact on VMT because the proposed project would be required to reduce VMT by a minimum of 19 percent below the citywide average, which would be challenging given the project's location and lack of access to high-quality transit. MM TRANS-2 would reduce project-related VMT but not to a level below significance. As such, the proposed project would also have a cumulatively considerable contribution on VMT.

4. Summary of Project Alternatives

According to CEQA, an EIR must describe a reasonable range of alternatives to a proposed project that could feasibly attain most of the basic project objectives, and would avoid or substantially lessen any of the proposed project's significant effects. Additionally, a "No Project" alternative must be analyzed (Section 15126.6 of the CEQA Guidelines). Listed below are the Project Alternatives for this Draft EIR:

- Alternative 1: No Project Alternative The project site would remain undeveloped for the foreseeable future and no development would occur.
- Alternative 2: Reduced Density Alternative A 164,875-square-foot wine warehouse would be developed on the project site, which represents a 25 percent reduction in square footage.

According to the Draft EIR, the *No Project Alternative* would avoid the proposed significant and unavoidable impacts of the project and would avoid any potential impacts related to all environmental topical areas. However, this alternative would not advance any of the project objectives, including those related to facilitating the development of land to its highest and best use; positively contributing to the local economy; and meeting regional demand for wine warehouse uses.

The *Reduced Density Alternative* would lessen the severity of, but would not avoid, the significant and unavoidable transportation impacts associated with the proposed project. According to FCS, the proposed Project would generate 372 net daily trips and the reduced density alternative would generate 279, which equates to a reduction in 93 trips. The reduction of net daily trips results in a 4% reduction of VMT, which would still not meet the required 19% reduction of VMT to consider the transportation impact insignificant.

5. Areas of Controversy and Potentially Controversial Issues

Pursuant to CEQA Guidelines Section 15123(b), a summary section must address areas of controversy known to the lead agency, including issues raised by agencies and the public, and it must also address issues to be resolved, including the choice among alternatives and whether or how to mitigate the significant effects.

A Notice of Preparation (NOP) for the proposed project was issued on October 27, 2023. The NOP describing the original concept for the proposed project and issues to be addressed in the EIR was distributed to the State Clearinghouse, responsible agencies, and other interested parties for a 30-day public review period extending from October 27, 2023, through November 27, 2023. The NOP public comments and responses are available in the Draft EIR Appendix A, in Attachment 3. The NOP identified the potential for significant impacts on the environment related to the following topical areas:

- Aesthetics, Light, and Glare
- Air Quality
- Biological Resources
- Cultural Resources and Tribal Cultural Resources
- Energy
- Geology, Soils, and Seismicity
- Greenhouse Gas Emissions
- Hazards and Hazardous Materials
- Hydrology and Water Quality
- Land Use
- Noise
- Public Services
- Transportation
- Utilities and Service Systems

*5.1 Disagreement Among Experts*

This Draft EIR contains substantial evidence to support all the conclusions presented herein. It is possible that there will be disagreement among various parties regarding these conclusions, although the City of American Canyon is not aware of any disputed conclusions at the time of this writing. Both the CEQA Guidelines and case law clearly provide standards for treating disagreement among experts. Where evidence and opinions conflict on an issue concerning the environment, and

the lead agency knows of these controversies in advance, the EIR must acknowledge the controversies, summarize the conflicting opinions of the experts, and include sufficient information to allow the public and decision-makers to make an informed judgment about the environmental consequences of the proposed project.

*5.2 Potentially Controversial Issues*

Below is a list of potentially controversial issues that may be raised during the public review and hearing process of this Draft EIR:

- Health effects on communities from diesel emissions
- Traffic and Circulation
- Land Use Compatibility
- Impacts on wetlands
- Climate change

It is also possible that evidence will be presented during the 45-day, in this case 52-day, statutory Draft EIR public review period that may create disagreement. Decision-makers would consider this evidence during the public hearing process.

6. AB 98 State Warehouse Legislation

Beginning January 1, 2026, Assembly Bill 98 would prescribe various statewide warehouse design and build standards for any proposed new or expanded logistics use developments, as specified, including, among other things, standards for building design and location, parking, truck loading bays, landscaping buffers, entry gates, and signage. The bill would except from those design and build standards certain existing logistics use developments, proposed expansions of a logistics use development, and property currently in a local entitlement process to become a logistics use, under prescribed conditions. The bill would require a facility operator, prior to the issuance of a certificate of occupancy, to establish and submit for approval by a city, county, or city and county a truck routing plan to and from the state highway system based on the latest truck route map of the city, county, or city and county, as prescribed. The bill would require a facility operator to enforce the plan.

SDG Commerce 220 is exempt per the referenced State Law. Further, the legislation indicates that projects that are approved before January 1, 2025, will be exempt from AB 98. However, if “no development activity” occurs within five years of approval of all entitlements, the exemption expires.

7. EIR Conclusion

The SDG Commerce 220 Project Draft EIR identified environmental topic areas that had no significant impacts, impacts that are less than significant with mitigation measures, unavoidable impacts, and project alternatives. With the Planning Commission’s review and approval, staff and FCS will begin working on a Statement of Findings, which will be presented to the City Council for

consideration.

**III. Analysis of the Conditional Use Permit**

Project Description

SDG Commerce 220, LLC (Applicant) proposes to develop a 219,834 square-foot wine storage and distribution center on the 10.45-acre parcel at 1055 Commerce Ct in the recreation (REC) zone. The warehouse includes 23 truck doors and approximately 4,400 square feet of office space. The building would be one-story and have a maximum height of 35 feet.

1. Zoning Standards Table

The following table shows the REC development standards (ACMC Section 19.15.030) and how the SDG Commerce 220 Project meets the standards.

**Table 2: REC Zone Development Standards**

| Development Standard | Required | Provided | Compliance |
|---|---|---|---|
| Min. Size | 10 acres | 10.17 acres | Yes |
| Site Coverage | 50% | 49.6% | Yes |
| Building Height | 35 ft. | 35 ft. | Yes |
| Front Setback (from local streets) | 15 ft. | 71 ft. | Yes |
| Side setback | 35 ft. | 63 ft. | Yes |
| Rear setback | 35 ft. | 156 ft. | Yes |

2. Architecture

The building architecture meets the design and development principles described in the General Plan (Policy 1.22.4 and 1.22). The warehouse includes detailing around windows, building corners, metal awnings, and large windows at the entrance. The building will be designed with earth-tone colors and comprised of concrete tilt wall panels, with a load-bearing structural frame with parapet roofs. The building includes various recessed panels and canopies around offices and corners of the buildings to provide sufficient modulation.

The parapet wall panels vary in height from 33’ to 37’ high. The parapet will fully screen rooftop equipment. Additionally, a condition of approval requires adequate rooftop equipment screening verified at the time of building permit issuance and occupancy.

3. Lighting and Landscaping

Exterior lighting for the proposed project will include lighting on the building and on parking lot poles on the north side of the property. Parking lot lighting will be consistent with that which is required by the City of American Canyon. The lights will be “shoebox” fixtures, with a height of 30 feet, dimmable LED fixtures which are designed to direct the light towards the ground and reduce glare to surrounding properties. A photometric study has been prepared to analyze the light pole

spacing to maximize light coverage and minimize excessive light spillage off-site.

The site will be well landscaped, including trees in the north, west, and east setback areas, the parking areas, and around the wetland areas. The tree species include Crape Myrtle, Sweet Bay, London Plane, and California Sycamore. The trees will be supported by shrubs, grasses, and groundcover. The site includes clearly marked pedestrian routes leading to the office suites. There is no landscaping in the south because it will be a circulation area between SDG Commerce 220 Project (1055 Commerce Ct) and the SDG Commerce 330 Project (1005 Commerce Ct).

4. Parking and Bicycle Parking

The site includes 134 passenger vehicle parking spaces, 23 truck parking stalls, and 12 bicycle parking spaces. Of the 134 passenger vehicles, 5 will provide electric vehicle supply equipment (EVSE) stalls, one van accessible EVSE, and 19 EV capable stalls. The 12 bicycle parking consists of six bicycle lockers that will accommodate 2 bikes each.

5. Site Specific Issues

*5.1 Access*

Access to the site is available from Commerce Court via Green Island Road. Because the main building is placed lower than the elevation at Commerce Court, an ADA accessible ramp is designed to accommodate wheelchair users. This feature was also included in the SDG Commerce 217 project. Vehicle access to the south is not available, so the neighborhoods south of Commerce Court will not be impacted by vehicle traffic. Instead, a pedestrian/ bicycle path is installed that connects Wetlands Edge Road through Commerce Court and leads up to Green Island Road.

*5.2. Sustainability Features*

The proposed project would incorporate a variety of sustainable materials and construction practices including:

- Natural Cooling. The building would be insulated and refrigerated at approximately 58 degrees Fahrenheit, making it suitable for storage of wine and related products. The amount of refrigeration necessary would be reduced through the use of automatic intake louvers and fans, which would allow cool night air to be utilized.
- Bicycle Lockers. According to ACMC Section19.14.090, this project would require five bicycle parking spaces. The project would provide six long-term bicycle lockers, where each would accommodate up to four bicycles, for a total of 12 bicycle parking spaces. The lockers would be located adjacent to each office area. Short-term bicycle parking would also be similarly located.
- EV Charging. According to the CBC Cal Green Standards (Title 24, Part 11, Chapter 5.106.5.3.1), the project would require 17 EV capable spaces. The project would provide five electric vehicle supply equipment (EVSE) stalls, one van accessible EVSE stall, and 19 EV capable stalls.
- Solar PV. Solar would be installed on the building rooftop and produce an estimated 235,000

(kWh) per year. The intent of the solar PV system is to supplement the power consumed by items such as exterior lighting, parking lot lights, interior warehouse lighting and a portion of the building's refrigeration system.

- Stormwater Prevention. A stormwater pollution prevention plan to minimize contamination, erosion, and dust pollution during construction. All stormwater runoff from impervious surfaces (roofs and paving) will be routed through a specially designed water quality detention and treatment basin. Additionally, on-site detention will be provided to meet the City of American Canyon standards.
- Light pollution reduction. The development will include light standards that point their lights downward to reduce light pollution.
- Recycled water for irrigation. The project will use recycled water for landscaping irrigation to reduce the use of potable water.

*5.3 Napa County Airport Land Use Compatibility Plan*

The project is located in the Napa County Airport Land Use Compatibility Plan (ALUCP) Zone D. According to the plan, new warehouse development is required to record an avigation and hazard easement deed. The property owner completed the recordation for all three parcels of 1075, 1055, and 1005 Commerce Court on July 26, 2019.

6. CUP Conclusion

The SDG Commerce 220 Distribution CUP project complies with the design standards outlined in the REC Zone. The winery use class is a permitted use with CUP in the REC zone. The project provides sustainability features that reduce GHG emissions. Additionally, the project completed a Draft EIR that identifies mitigation measures for the project. The mitigation measures have been added as conditions of approval.

**IV. Public Outreach:**

Project outreach occurred between August 21, 2023, and November 18, 2024. A copy of the public notification addresses and map is included in Attachment 26. Specific events are outlined below:

Aug. 21, 2023 – Project Posted on website
Aug. 23, 2023 – Project Information Announcement to GovDelivery Recipients (4,150+/-)
Aug. 23, 2023 – Neighborhood letters to introduce the project sent within 500 feet
Oct. 27, 2023 – Notice of Preparation (NOP) issued, 30-day review period begins
Oct. 27, 2023 – GovDelivery Notice of NOP sent to email subscribers list (4,150+/-)
Nov. 17, 2023 – NOP Scoping Meeting held at City Hall and virtually by Zoom.
Nov. 27, 2023 – NOP review period closed.
Jun. 6, 2024 – DEIR with NOA (Notice of Availability) submitted to CEQA.net
Jun. 10, 2024 – DEIR NOA posted and DEIR printed copy made available at City Hall (4381 Broadway St), the American Canyon Library (300 Crawford Way), and the Active Adults Center (2185 Elliot Dr).
Jun. 10, 2024 – DEIR NOA sent to property owners within 500 feet

Jun. 11, 2024 – GovDelivery Notice of DEIR NOA sent to email subscribers list (4,150 +/-)
Jun. 11, 2024 – DEIR Review period begins.
Jun. 24, 2024 – Applicant installed a physical public sign on site.
Jul. 15, 2024 – Revised DEIR NOA sent to property owners within 500 feet.
Jul. 16, 2024 – GovDelivery Notice of Revised DEIR NOA sent to email subscribers list (4,150 +/-)
Jul. 19, 2024 – Staff report published and GovDelivery Notice of public review workshop sent to e-mail subscribers list (4,150 +/-)
Oct. 9, 2024 - FEIR posted and FEIR printed copy made available at City Hall (4381 Broadway St), the American Canyon Library (300 Crawford Way), and the Active Adults Center (2185 Elliot Dr).
Oct. 10, 2024 – Planning Commission public notice sent to property owners within 500 feet.
Oct. 11, 2024 – GovDelivery Notice of EIR and CUP Planning Commission Meeting sent to email subscribers list (4,150 +/-).
Oct. 11, 2024 – Public Notice of Planning Commission Meeting Posted on Bulletin Board at City Hall and at Public Safety Building.
Oct. 12, 2024 – Public Notice of Planning Commission Meeting published in newspaper.
Oct. 18, 2024 – Staff report published and GovDelivery Notice of public review workshop sent to e-mail subscribers list (4,150 +/-)
Oct. 23, 2024 – GovDelivery Notice Reminder of Planning Commission meeting sent to email subscribers list (4,150 +/-)
Oct. 24, 2024 – Planning Commission Meeting
Nov. 4, 2024 – City Council public notice sent to property owners within 500 feet.
Nov. 8, 2024 – GovDelivery Notice of EIR and CUP City Council Meeting sent to email subscribers list (4,150 +/-).
Nov. 8, 2024 – Public Notice of City Council Meeting Posted on Bulletin Board at City Hall and at Public Safety Building.
Nov. 8, 2024 – Public Notice of City Council Meeting published in newspaper.
Nov. 15, 2024 – Staff report published and GovDelivery Notice of public review workshop sent to e-mail subscribers list (4,150 +/-)
Nov. 18, 2024 – GovDelivery Notice Reminder of City Council meeting sent to email subscribers list (4,150 +/-)
Nov. 19, 2024 – City Council Meeting

The public comments to the October 24, 2024 Planning Commission meeting are included as Attachment 28.

## COUNCIL PRIORITY PROGRAMS AND PROJECTS

Economic Development and Vitality: "Attract and expand diverse business and employment opportunities."

## FISCAL IMPACT

The SDG Commerce 220 EIR and CUP project required a developer deposit for review and processing, so there is no fiscal impact for staff time.

## ENVIRONMENTAL REVIEW

Consistent with the California Environmental Quality Act (CEQA), an Environmental Impact Report (EIR) was prepared for the proposed SDG Commerce 220 Distribution Center project to fully describe and analyze environmental impacts.

**RESOLUTION NO. 2024-XX**

**A RESOLUTION (i) CERTIFYING THE FINAL ENVIRONMENTAL IMPACT REPORT (SCH #2023100842), (ii) ADOPTING CEQA FINDINGS OF FACT, (iii) ADOPTING A STATEMENT OF OVERRIDING CONSIDERATIONS, AND (iv) ADOPTING A MITIGATION MONITORING AND REPORTING PROGRAM FOR THE SDG COMMERCE 220 DISTRIBUTION CENTER PROJECT LOCATED AT 1055 COMMERCE COURT, APN 058-030-069 (FILE NUMBER PL23-0017)**

**WHEREAS,** on August 3, 2023, SDG Commerce 220, LLC (Applicant) submitted a Conditional Use Permit (CUP) for development of a 220,000 square feet wine distribution warehouse at 1055 Commerce Ct; and

**WHEREAS,** the objectives of the SDG Commerce 220 Distribution Center are to:

1. Positively contribute to the local economy through new capital investment, the creation of new jobs, and the expansion of the tax base;
2. Develop land to its highest and best use;
3. Continue the buildout of the City of American Canyon in accordance with the General Plan;
4. Meet original demand for wine warehousing by adding the inventory of this space;
5. Develop nonresidential uses on the project site that are compatible with the City of American Canyon's Water Reclamation Facility and the Napa County Airport;
6. Maximize the efficient use of land by developing an industrial project at the upper end of the allowable Floor Area Ratio range;
7. Complete the buildout of the SDG Commerce development;
8. Protect the North Slough by employing stormwater pollution prevention measures during construction and operation;
9. Provide development fees to the American Canyon fire Protection District to fund the development of a new fire station; and

**WHERAS,** for purposes of the California Environmental Quality Act (Public Resources Code, Sections 21000 et seq.) and the CEQA Guidelines (Cal. Code Regs., tit. 14, § 15000 et seq.), ("CEQA") the City is the lead agency for the Project; and

**WHEREAS,** the City released the Draft Environmental Impact Report (EIR) for public comment for a 52-day review period to commence on June 11, 2024, and to end at 5:00 PM August 2, 2024; and

**WHEREAS,** on July 30, 2024, the Planning Commission conducted a publicly-noticed workshop to discuss the SDG Commerce 220 Distribution Center Draft EIR; and

**WHEREAS,** CEQA Guidelines section 15090 requires that, prior to approving a proposed project for which a final EIR has been prepared, a lead agency's decision making body must certify that: (1) the final EIR has been completed in compliance with CEQA; (2) the final EIR was presented to the decision-making body of the lead agency, and the decision-making body reviewed and considered the information contained in the final EIR prior to approving the project; and (3) the final EIR reflects the lead agency's independent judgment and analysis; and

**WHEREAS,** prior to approving a project that requires the adoption of feasible mitigation measures to substantially lessen or avoid significant environmental effects, a lead agency's decision-making body is required by Public Resources Code section 21081.6, subdivision (a), to adopt a mitigation monitoring and reporting program to ensure that the mitigation measures adopted by the lead agency are carried out; and

**WHEREAS,** the City of American Canyon Planning Commission conducted a public hearing on October 24, 2024 on the subject application, and a majority recommended City Council approval; and

**WHEREAS,** a duly-noticed public hearing was held by the City of American Canyon City Council on November 19, 2024 to evaluate the SDG Commerce 220 Distribution Center Project and Final EIR and determined that based on all of the evidence presented, including, but not limited to, written and oral testimony given at meetings, it is appropriate to recommend that the City Council certify the Final EIR as adequate to address environmental impacts associated with the SDG Commerce 220 Distribution Project, and adopt the Mitigation Monitoring and Reporting Program (MMRP).

**NOW, THEREFORE, BE IT RESOLVED** that the foregoing recitals are true and correct and are included herein by reference as findings.

**NOW, THEREFORE, BE IT RESOLVED** that the City Council of the City of American Canyon makes three findings necessary to certify that the Final EIR reflects the independent judgement and analysis of the City and thoroughly as adequate to addresses the potentially significant environmental impacts associated with implementation of the SDG Commerce 220 Distribution Center Project. The Final EIR consists of the Draft EIR (Exhibit A to this Resolution) and Appendices (Exhibit B to this Resolution), and the Final EIR, which includes a list of persons, organizations, and agencies that provided comments on the Draft EIR, responses to the comments received regarding the Draft EIR, and errata or revisions to the Draft EIR (Exhibit C to this Resolution).

**NOW, THEREFORE, BE IT FURTHER RESOLVED** that the City Council of the City of American Canyon adopts the Mitigation Monitoring and Reporting Plan for the SDG Commerce 220 Distribution Center Project (Exhibit E to this Resolution).

**PASSED, APPROVED and ADOPTED** at a regularly scheduled meeting of the City Council of the City of American Canyon held on the 19th day of November, 2024, by the following vote:

# Table of Contents

**Acronyms and Abbreviations** ..... ix

**Executive Summary** ..... ES-1
Purpose ..... ES-1
Project Summary ..... ES-1
Significant Unavoidable Adverse Impacts ..... ES-1
Summary of Project Alternatives ..... ES-2
Areas of Controversy ..... ES-2
Public Review of the Draft EIR ..... ES-3
Executive Summary Matrix ..... ES-4

**Chapter 1: Introduction** ..... 1-1
1.1 - Overview of the CEQA Process ..... 1-1
1.2 - Scope of the Draft EIR ..... 1-2
1.3 - Organization of the EIR ..... 1-4
1.4 - Documents Incorporated by Reference ..... 1-6
1.5 - Documents Prepared for the Proposed Project ..... 1-6
1.6 - Review of the Draft EIR ..... 1-6

**Chapter 2: Project Description** ..... 2-1
2.1 - Project Location and Setting ..... 2-1
2.2 - Project History ..... 2-9
2.3 - Project Characteristics ..... 2-10
2.4 - Project Objectives ..... 2-22
2.5 - Intended Uses of this Draft EIR ..... 2-22

**Chapter 3: Environmental Impact Analysis** ..... 3-1
Organization of Issue Areas ..... 3-1
Issues Addressed in this EIR ..... 3-1
Level of Significance ..... 3-1
Impact Analysis and Mitigation Measure Format ..... 3-1
3.1 - Aesthetics, Light, and Glare ..... 3.1-1
3.2 - Air Quality ..... 3.2-1
3.3 - Biological Resources ..... 3.3-1
3.4 - Cultural Resources and Tribal Cultural Resources ..... 3.4-1
3.5 - Energy ..... 3.5-1
3.6 - Geology, Soils, and Seismicity ..... 3.6-1
3.7 - Greenhouse Gas Emissions ..... 3.7-1
3.8 - Hazards and Hazardous Materials ..... 3.8-1
3.9 - Hydrology and Water Quality ..... 3.9-1
3.10 - Land Use ..... 3.10-1
3.11 - Noise ..... 3.11-1
3.12 - Public Services ..... 3.12-1
3.13 - Transportation ..... 3.13-1
3.14 - Utilities and Service Systems ..... 3.14-1

**Chapter 4: Effects Found not to be Significant** ..... 4-1
4.1 - Introduction ..... 4-1
4.2 - Environmental Effects Found not to be Significant ..... 4-1

**Chapter 5: Other CEQA Considerations ..... 5-1**
5.1 - Significant Unavoidable Impacts ..... 5-1
5.2 - Growth-inducing Impacts ..... 5-1
5.3 - Mandatory Findings of Significance ..... 5-3

**Chapter 6: Alternatives to the Proposed Project ..... 6-1**
6.1 - Introduction ..... 6-1
6.2 - Project Objectives ..... 6-2
6.3 - Alternative 1—No Project Alternative ..... 6-3
6.4 - Alternative 2—Reduced Density Alternative ..... 6-3
6.5 - Environmentally Superior Alternative ..... 6-7
6.6 - Alternatives Rejected From Further Consideration ..... 6-9

**Chapter 7: Persons and Organizations Consulted/List of Preparers ..... 7-1**
7.1 - Persons and Organizations Consulted ..... 7-1
7.2 - List of Preparers ..... 7-2

## List of Appendices

**Appendix A: Notice of Preparation/Comments**

**Appendix B: Air Quality and Greenhouse Gas Emissions Supporting Information**

**Appendix C: Biological Resources Supporting Information**
C.1 - Biological Resources Assessment
C.2 - Commerce 217 Documents
C.3 - Commerce 220 Documents

**Appendix D: Cultural Resources Supporting Information**
D.1 - Native American Heritage Commission and Tribal Correspondence
D.2 - Northwest Information Center

**Appendix E: Geotechnical Report**

**Appendix F: Phase I Environmental Site Assessment**

**Appendix G: Hydrology Report**

**Appendix H: Noise Supporting Information**

**Appendix I: Transportation Supporting Information**
I.1 - Transportation Memorandum
I.2 - Vehicle Miles Traveled Analysis

# EXECUTIVE SUMMARY

## Purpose

This Draft Environmental Impact Report (Draft EIR) is prepared in accordance with the California Environmental Quality Act (CEQA) to evaluate the potential environmental impacts associated with the implementation of the SDG Commerce 220 Project (State Clearinghouse No. 2023100842). This document is prepared in conformance with CEQA (Public Resources Code [PRC] § 21000, *et seq*.) and the CEQA Guidelines (California Code of Regulations [CCR], Title 14, § 15000, *et se*q.).

The purpose of this Draft EIR is to inform decision-makers, representatives of affected and responsible agencies, the public, and other interested parties of the potential environmental effects that may result from implementation of the proposed project. This Draft EIR describes potential impacts relating to a wide variety of environmental issues and methods by which these impacts can be mitigated or avoided.

## Project Summary

### Project Location

The project site is located at 1055 Commerce Court in the City of American Canyon, in Napa County, California. The project site consists of Assessor's Parcel Number (APN) 058-030-069 (10.17 acres) plus small additional improvement areas (consisting primarily of parking lot improvements and connections to adjoining land uses) for a total of 10.45 acres. The rectangular project site is bounded by a eucalyptus grove and North Slough (west), a parcel entitled for a wine distribution warehouse known as SDG Commerce 217 currently under construction (north), Commerce Court beyond which is a paintball recreation area (east), and a wine distribution warehouse known as SDG Commerce 330 (south). The project site is located on the *Cuttings Wharf, California*, United States Geological Survey (USGS) 7.5-minute Topographic Quadrangle Map, Township 4 North, Range 4 West, Section 14 (Latitude 38° 11' 22" North; Longitude 122° 16' 19" West).

### Project Description

The applicant, SDG Commerce 220, LLC proposes to develop a 219,834-square-foot wine storage and distribution center on the 443,005-square-foot project site. The warehouse would provide 23 truck doors and approximately 4,400 square feet of office space. It would have perimeter concrete tilt wall panels with varying parapet heights and accent spandrel glass/metal canopy features around offices and corners of the building. The average roof height would be approximately 35 feet; portions of the building exterior walls would have various heights to provide architectural relief. The building would be insulated and refrigerated at approximately 58°F (degrees Fahrenheit), making it suitable for storage of wine and related products. The amount of refrigeration necessary would be reduced through the use of intake louvers and fans, which would allow cool night air to be utilized.

### Project Objectives

The objectives of the proposed project are to:

1. Positively contribute to the local economy through new capital investment, the creation of new jobs, and the expansion of the tax base.
2. Develop land to its highest and best use.
3. Continue the buildout of the City of American Canyon in accordance with the General Plan.
4. Meet regional demand for wine warehousing by adding to the inventory of this space.
5. Develop nonresidential uses on the project site that are compatible with the City of American Canyon's Water Reclamation Facility and the Napa County Airport.
6. Maximize the efficient use of land by developing an industrial project at the upper end of the allowable Floor Area Ratio range.
7. Complete the buildout of the SDG Commerce development.
8. Protect North Slough by employing stormwater pollution prevention measures during construction and operation.
9. Provide development fees to the American Canyon Fire Protection District to fund the development of a new fire station.

## Significant Unavoidable Adverse Impacts

The proposed project would result in the following significant unavoidable impacts:

- **Inconsistency with CEQA Guidelines Section 15064.3, subdivision (b):** The proposed project's Vehicle Miles Traveled (VMT) was evaluated in accordance with the City's adopted VMT policy. For the project's VMT impact to be less than significant, the VMT per employee would need to be reduced by at least 19 percent below current levels. However, according to the 2021 California Air Pollution Control Officers Association (CAPCOA) Handbook for Analyzing Greenhouse Gas Emission Reductions, Assessing Climate Vulnerabilities, and Advancing Health and Equity (CAPCOA Handbook), a reduction in the VMT of 15 percent is generally considered the maximum feasible mitigation for suburban environments such as that of the proposed project. If this level of trip reduction could be achieved, that would mitigate most of the project's VMT impact, although not to a level that would be less than significant (19 percent); however, given the lack of transit services within an acceptable walking distance of the proposed project, achieving this level of mitigation is considered infeasible. Even with implementation of a TDM Plan as required by MM TRANS-2, the impact would remain significant and unavoidable.
- **Cumulative Transportation:** Impact TRANS-2 concluded that the proposed project would have a significant and unavoidable impact on VMT because the proposed project would be required to reduce VMT by a minimum of 19 percent below the citywide average, which would be challenging given the project's location and lack of access to high-quality transit. MM TRANS-2 would reduce project-related VMT but not to a level below significance. As such, the proposed project would also have a cumulatively considerable contribution on VMT.

## Summary of Project Alternatives

Below is a summary of the alternatives to the proposed project considered in Section 5, Alternatives to the proposed project.

### No Project Alternative

The project site would remain undeveloped for the foreseeable future and no development would occur.

### Reduced Density Alternative

A 164,875-square-foot wine warehouse would be developed on the project site, which represents a 25 percent reduction in square footage.

## Areas of Controversy

Pursuant to CEQA Guidelines Section 15123(b), a summary section must address areas of controversy known to the lead agency, including issues raised by agencies and the public, and it must also address issues to be resolved, including the choice among alternatives and whether or how to mitigate the significant effects.

A Notice of Preparation (NOP) for the proposed project was issued on October 27, 2023. The NOP describing the original concept for the proposed project and issues to be addressed in the EIR was distributed to the State Clearinghouse, responsible agencies, and other interested parties for a 30-day public review period extending from October 27, 2023 through November 27, 2023. The NOP identified the potential for significant impacts on the environment related to the following topical areas:

- Aesthetics, Light, and Glare
- Air Quality
- Biological Resources
- Cultural Resources and Tribal Cultural Resources
- Energy
- Geology, Soils, and Seismicity
- Greenhouse Gas Emissions
- Hazards and Hazardous Materials
- Hydrology and Water Quality
- Land Use
- Noise
- Public Services
- Transportation
- Utilities and Service Systems

### Disagreement Among Experts

This Draft EIR contains substantial evidence to support all the conclusions presented herein. It is possible that there will be disagreement among various parties regarding these conclusions, although the City of American Canyon is not aware of any disputed conclusions at the time of this writing. Both the CEQA Guidelines and case law clearly provide standards for treating disagreement among experts. Where evidence and opinions conflict on an issue concerning the environment, and the lead agency knows of these controversies in advance, the EIR must acknowledge the controversies, summarize the conflicting opinions of the experts, and include sufficient information

to allow the public and decision-makers to make an informed judgment about the environmental consequences of the proposed project.

### Potentially Controversial Issues

Below is a list of potentially controversial issues that may be raised during the public review and hearing process of this Draft EIR:

- Health effects on communities from diesel emissions
- Traffic and Circulation
- Land Use Compatibility
- Impacts on wetlands
- Climate change

It is also possible that evidence will be presented during the 45-day, statutory Draft EIR public review period that may create disagreement. Decision-makers would consider this evidence during the public hearing process.

In rendering a decision on a project where there is disagreement among experts, the decision-makers are not obligated to select the most environmentally preferable viewpoint. Decision-makers are vested with the ability to choose whatever viewpoint is preferable and need not resolve a dispute among experts. In their proceedings, decision-makers must consider comments received concerning the adequacy of the Draft EIR and address any objections raised in these comments. However, decision-makers are not obligated to follow any directives, recommendations, or suggestions presented in comments on the Draft EIR, and can certify the Final EIR without needing to resolve disagreements among experts.

## Public Review of the Draft EIR

Upon completion of the Draft EIR, the City of American Canyon filed a Notice of Completion (NOC) with the State Office of Planning and Research to begin the public review period (PRC § 21161). Concurrent with the NOC, this Draft EIR has been distributed to responsible and trustee agencies, other affected agencies, surrounding cities, and interested parties, as well as all parties requesting a copy of the Draft EIR in accordance with Public Resources Code 21092(b)(3). During the public review period, the Draft EIR, including the technical appendices, is available for review at the following locations:

American Canyon City Hall
4381 Broadway Street, Suite 201
American Canyon, CA 94503
Hours: Monday-Friday: 8:00 a.m. to 5:00 p.m.
Saturday–Sunday: Closed

Active Adults Center
2185 Elliot Drive
American Canyon, CA 94503
Hours: Monday - Friday 9:00 a.m. to 2:00 p.m.
Saturday–Sunday: Closed

American Canyon Library
300 Crawford Way
Hours: Monday, Tuesday, and Thursday–Saturday: 10:00 a.m. to 6:00 p.m.
Wednesday: 12:00 p.m. to 8:00 p.m.
Sunday: Closed

The Draft EIR is also available for review at the following website: https://www.cityofamericancanyon.org/government/community-development/development-projects

Agencies, organizations, and interested parties have the opportunity to comment on the Draft EIR during the 45-day public review period. Written comments on this Draft EIR may be submitted electronically at this website link: https://cityofamcan.org/SDG220.

Hardcopy written comments on this Draft EIR should be addressed to:

SDG Commerce 220 Project
City of American Canyon
4381 Broadway Street, Suite 201
American Canyon, CA 94503

Submittal of electronic comments in Microsoft Word or Adobe PDF format is encouraged. Upon completion of the public review period, written responses to all significant environmental issues raised during the comment period will be prepared and made available for review by the commenting agencies at least 10 days prior to the public hearing before the City of American Canyon on the proposed project, at which the certification of the Final EIR will be considered. Comments received and the responses to comments will be included as part of the record for consideration by decision-makers for the proposed project.

## Executive Summary Matrix

Table ES-1 below summarizes the impacts, mitigation measures, and resulting level of significance after mitigation for the relevant environmental issue areas evaluated for the proposed project. The table is intended to provide an overview; narrative discussions for the issue areas are included in the corresponding section of this EIR. Table ES-1 is included in the EIR as required by CEQA Guidelines Section 15123(b)(1).

## Table ES-1: Executive Summary Matrix

| Impacts | Mitigation Measures | Level of Significance After Mitigation |
|---|---|---|
| **Section 3.1—Aesthetics, Light, and Glare** | | |
| **Impact AES-1:** The proposed project, located in a non-urbanized area, would not substantially degrade the existing visual character or the quality of public views of the site and its surroundings. (Public views are those that are experienced from a publicly-accessible vantage point.) | No mitigation is necessary. | Less than significant impact. |
| **Impact AES-2:** The proposed project may create a new source of substantial light or glare which could adversely affect day or nighttime views in the area. | No mitigation is necessary. | Less than significant impact. |
| **Cumulative Impact** | No mitigation is necessary. | Less than significant impact. |
| **Section 3.2—Air Quality** | | |
| **Impact AIR-1:** The proposed project could conflict with or obstruct implementation of the applicable air quality plan. | **MM AIR-1: Implement BAAQMD Best Management Practices to Control Dust During Construction**<br>The following dust control measures, as recommended by the Bay Area Air Quality Management District (BAAQMD), shall be included in the design of the proposed project and implemented during construction:<br>• All exposed non-paved surfaces (e.g., parking areas, staging areas, soil piles, graded areas, and access roads) shall be watered at least two times per day and/or non-toxic soil stabilizers shall be applied to exposed non-paved surfaces.<br>• All haul trucks transporting soil, sand, or other loose material off-site shall be covered and/or shall maintain at least 2 feet of freeboard.<br>• All visible mud or dirt tracked out onto adjacent public roads shall be removed using wet power vacuum street sweepers at least once per day. the use of dry power sweeping is prohibited.<br>• All vehicle speeds on unpaved roads shall be limited to 15 miles per hour.<br>• All roadways, driveways, and sidewalks to be paved shall be completed as soon as possible. building pads shall be laid as soon as possible after grading unless seeding or soil binders are used. idling times shall be minimized either by shutting equipment off when not in use or reducing | Less than significant impact with mitigation incorporated. |

| Impacts | Mitigation Measures | Level of Significance After Mitigation |
|---|---|---|
| | the maximum idling time to 5 minutes, as required by the California airborne toxics control measure (ACTM) Title 13, Section 2485 of California Code of Regulations. clear signage regarding idling restrictions shall be provided for construction workers at all access points.<br>• All construction equipment shall be maintained and properly tuned in accordance with the manufacturer's specifications. all equipment shall be checked by a certified mechanic and determined to be running in proper condition prior to operation.<br>• The prime construction contractor shall post a publicly visible sign with the telephone number and person to contact regarding dust complaints. the construction contractor shall take corrective action within 48 hours. the BAAQMD's and the City's phone numbers shall also be visible to ensure compliance with applicable regulations. | |
| **Impact AIR-2:** The proposed project would result in a cumulatively considerable net increase of any criteria pollutant for which the project region is nonattainment under an applicable federal or State ambient air quality standard. | Implement MM AIR-1. | Less than significant impact with mitigation incorporated. |
| **Impact AIR-3:** The proposed project would not expose sensitive receptors to substantial pollutant concentrations. | No mitigation is necessary. | Less than significant impact. |
| **Impact AIR-4:** The proposed project would not result in other emissions (such as those leading to odors) adversely affecting a substantial number of people. | No mitigation is necessary. | Less than significant impact. |
| **Cumulative Impact** | No mitigation is necessary. | Less than significant impact. |
| **Section 3.3—Biological Resources** | | |
| **Impact BIO-1:** The proposed project could have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special-status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Wildlife or United States Fish and Wildlife Service. | **MM BIO-1a: Pre-construction Surveys for Swainson's Hawk**<br>Prior to ground disturbance that occurs during the nesting season for Swainson's hawk (generally March 20 to July 20), a qualified Biologist shall conduct Swainson's hawk nesting surveys within a 0.5-mile radius of the project site to determine whether nests are occupied. Occupancy shall be determined through observation of all accessible areas, including from | Less than significant impact with mitigation incorporated. |

| Impacts | Mitigation Measures | Level of Significance After Mitigation |
|---|---|---|
| | public roads or other publicly accessible observation areas of Swainson's hawk activity (e.g., foraging) on and near the project site.<br><br>The qualified Biologist shall follow the survey protocol outlined in the California Department of Fish and Wildlife (CDFW) *Recommended Timing and Methodology for Swainson's Hawk Nesting Surveys in California's Central Valley*, which recommends surveys according to the following survey periods:<br>**I. January–March 20:** Conduct one survey total.<br>**II. March 20–April 5:** Conduct three surveys total. Surveys shall be conducted between sunrise to 10:00 a.m. and/or 4:00 p.m. to sunset.<br>**III. April 5–April 20:** Conduct three surveys total. Surveys shall be conducted between sunrise to 12:00 p.m. and/or 4:30 p.m. to sunset.<br>**IV. April 21–June 10:** Initiating surveys are not recommended. Monitoring of known nest sites only.<br>**V. June 10–July 30:** (post-fledging) Conduct three surveys total. Surveys shall be conducted between sunrise to 12:00 p.m. and/or 4:00 p.m. to sunset.<br><br>Pre-construction surveys shall be completed for at least the two survey periods immediately prior to a project's initiation.<br><br>**MM BIO-1b: Swainson's Hawk Avoidance and Minimization and Construction Monitoring**<br>Following the implementation of MM BIO-1a, if nests are located and determined to be occupied, minimization measures must be implemented, and construction monitoring conducted as follows:<br>1. Construction activities shall be prohibited within 600 feet of an active and occupied Swainson's hawk nest, or within 600 feet of nests under construction, to prevent nest abandonment.<br>2. Notwithstanding the foregoing, if site-specific conditions or the nature of the construction activity (e.g., other nearby development, limited activities) indicate that a smaller buffer, or no buffer at all, could be used, the project applicant may seek approval from the qualified Biologist who in coordination with the California Department of Fish and Wildlife (CDFW) shall determine the appropriate buffer size, which, once approved, shall govern. | |

| Impacts | Mitigation Measures | Level of Significance After Mitigation |
|---|---|---|
| | 3. No tree containing an active Swainson's hawk nest shall be removed.<br><br>**MM BIO-1c: Pre-construction Surveys for Burrowing Owl (includes avoidance and passive relocation if found)**<br>A qualified Biologist shall conduct a habitat assessment for wintering burrowing owl, and surveys if habitat is present. The qualified Biologist shall follow the California Department of Fish and Wildlife (CDFW) 2012 Staff Report on Burrowing Owl Mitigation habitat assessment and survey methodology prior to project activities occurring during the burrowing owl wintering season from September 1 to January 31. The habitat assessment and surveys shall encompass a sufficient buffer zone to detect owls nearby that may be impacted, which shall be a minimum of 1,640 feet unless otherwise approved in writing by the CDFW. Surveys shall include four nonbreeding season surveys spread evenly throughout the nonbreeding season pursuant to the CDFW 2012 Staff Report. Time lapses between surveys or project activities shall trigger subsequent surveys, as determined by a qualified Biologist, including but not limited to a final survey within 24 hours prior to ground disturbance and before construction equipment mobilizes to the project area. The qualified Biologist shall have a minimum of 2 years of experience implementing the CDFW 2012 Staff Report survey methodology resulting in detections.<br><br>Detected burrowing owls shall be avoided pursuant to the buffer zone prescribed in the CDFW 2012 Staff Report, unless otherwise approved in writing by CDFW, and any eviction plan shall be subject to CDFW review. Please be advised that CDFW does not consider eviction of burrowing owls (i.e., passive removal of an owl from its burrow or other shelter) as a "take" avoidance, minimization, or mitigation measure; therefore, off-site habitat compensation shall be included in the eviction plan. Habitat compensation acreages shall be approved by CDFW, as the amount depends on-site-specific conditions and must be completed before project construction unless otherwise approved in writing by CDFW. Habitat compensation shall also include placement of a conservation easement and preparation and implementation of a long-term management plan prior to project construction. | |

| | | |
|---|---|---|
| | **MM BIO-1d: Protection of Active Bird Nests (includes pre-construction survey and implementation of avoidance buffer, if found).**<br>1. If the proposed project requires vegetation to be removed during the nesting season (February 1 to August 31), pre-construction surveys shall be conducted no more than 7 days prior to the start of ground or vegetation disturbance (including tree removal) to determine whether or not active nests are present within the project site and buffer area as appropriate.<br>2. If an active nest is located during pre-construction surveys, a qualified Biologist shall determine an appropriately sized avoidance buffer based on the species and anticipated disturbance level. (The California Department of Fish and Wildlife [CDFW] recommends a minimum no-disturbance buffer of 250 feet around active nests of non-listed bird species and a 500-foot no-disturbance buffer around active nests of non-listed raptors.) A qualified Biologist shall delineate the avoidance buffer using Environmentally Sensitive Area (ESA) fencing, pin flags, and/or yellow caution tape. The buffer zone shall be maintained around the active nest site(s) until the young have fledged and are foraging independently. No construction activities or construction foot traffic is allowed to occur within the avoidance buffer(s).<br>3. The qualified Biologist shall monitor the active nest during construction activities and modify the protection zone accordingly to prevent project-related nest disturbance, until the young have fledged.<br><br>**MM BIO-1e: Roosting Bat Pre-construction Survey and Avoidance**<br>A qualified Biologist with relevant roosting bat experience shall conduct a survey for special-status bats during the appropriate time of day to maximize detectability to determine whether bat species are roosting near the work area no less than 7 days and no more than 14 days prior to beginning ground disturbance and/or construction. Survey methodology may include visual surveys of bats (e.g., observation of bats during foraging period), inspection for suitable habitat, bat sign (e.g., guano), or use of ultrasonic detectors (Anabat, etc.) within 250 feet of project construction activities (where accessible).<br><br>If the Biologist determines or presumes bats are present, the Biologist shall exclude the bats from suitable spaces by installing one-way exclusion devices. After the bats vacate the space, the Biologist shall close off the | |

| Impacts | Mitigation Measures | Level of Significance After Mitigation |
|---|---|---|
| | space to prevent recolonization. Grading shall only commence after the Biologist verifies 7 to 10 days later that the exclusion methods have successfully prevented bats from returning. To avoid impacts on non-volant (i.e., nonflying) bats, the Biologist shall only conduct bat exclusion and eviction from May 1 through October 1. Exclusion efforts may be restricted during periods of sensitive activity (e.g., during hibernation or while females in maternity colonies are nursing young).<br><br>**MM BIO-1f: Protection of Western Pond Turtles**<br>A qualified Biologist (i.e., a Biologist with at least 2 years of experience conducting surveys for western pond turtle detections) shall submit a wildlife exclusion fencing plan to the California Department of Fish and Wildlife (CDFW) for review and approval prior to starting construction. Exclusion fencing shall be installed along the western perimeter of the project site to prevent the species from traveling from North Slough onto the project site during construction. A qualified Biologist shall survey the project site and adjacent habitat within 72 hours of the start of project activities to determine whether western pond turtle or their nests are present and guide the installation of the exclusion fence. If western pond turtles are discovered, a qualified Biologist with experience handling and relocating the species shall move the species to the nearest suitable habitat outside of the project area and exclusion fencing. If western pond turtle nests are found, CDFW shall be notified prior to starting project activities, and the nest site plus a 50-foot buffer around the nest site shall be fenced with orange construction fence until eggs hatch and young turtles disperse to the adjacent North Slough. In addition, if nest(s) are located during surveys, moth balls (naphthalene) shall be sprinkled around the vicinity of the nest (no closer than 5 feet) to mask human scent and discourage predators. Grading within the nest site's 50-foot buffer area shall be delayed until the young leave the nest as determined by a qualified Biologist. If the CDFW allows translocation of any nestling pond turtles this shall be completed by a qualified Biologist under the direction of the CDFW.<br><br>**MM BIO-1g: Protection of Overwintering Monarch Butterfly**<br>Activities such as vegetation removal, grading, or initial ground-disturbing activities shall be conducted between November 1 and July 31 (outside of the overwintering season) to the extent feasible. If such activities must be | |

| Impacts | Mitigation Measures | Level of Significance After Mitigation |
|---|---|---|
| | initiated during the overwintering season (August 1 through October 31), a pre-construction overwintering survey shall be conducted by a qualified Biologist no more than 7 days prior to vegetation removal, grading, or initial ground disturbance. The survey shall include the disturbance area and surrounding 250 feet to identify the location and status of any colonies that could potentially be affected either directly or indirectly by project activities. If no colonies are present, then project activities can commence as scheduled. If a colony is present, project construction shall cease immediately to avoid all direct and indirect impacts and report the presence of the colony to the United States Fish and Wildlife Service (USFWS) and California Department of Fish and Wildlife (CDFW) and follow all recommendations provided by USFWS and CDFW. | |
| **Impact BIO-2:** The proposed project could have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, and regulations or by the California Department of Fish and Wildlife or United States Fish and Wildlife Service. | No mitigation required. | Less than significant impact. |
| **Impact BIO-3:** The proposed project could have a substantial adverse effect on State or federally protected wetlands (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means. | Implementation of MM BIO-1a through MM BIO-1e. | Less than significant impact with mitigation incorporated. |
| **Impact BIO-4:** The proposed project could interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of wildlife nursery sites. | No mitigation required. | Less thank significant. |
| **Cumulative Impact** | Implementation of MM BIO-1a through MM BIO-1g. | Less than significant impact with mitigation incorporated. |

| Impacts | Mitigation Measures | Level of Significance After Mitigation |
|---|---|---|
| **Section 3.4—Cultural Resources and Tribal Cultural Resources** | | |
| **Impact CUL-1:** The proposed project would not cause a substantial adverse change in the significance of a historical resource pursuant to Section 15064.5. | **MM CUL-1a:** All construction personnel directly involved with project-related ground disturbance shall attend a "tailgate" Worker Environmental Awareness Program (WEAP) training for archaeological resources. The training shall include visual aids, a discussion of applicable laws and statutes relating to archaeological resources, types of resources that may found within the project site, and procedures to be followed in the event such resources are encountered. The training shall be conducted by an Archaeologist who meets the Secretary of the Interior's Professional Qualification Standards for archaeology.<br><br>**MM CUL-1b:** An Archaeological Monitor reporting to the qualified Archaeologist, shall be present during the clearing, grading, and trenching phases of the proposed project to check for the inadvertent discovery of archaeological resources or human remains. Over the course of the proposed project, should the Archaeologist determine that the probability of inadvertent discovery is low, they may make a recommendation to the lead agency that monitoring be reduced to regular periodic or "spot-check" monitoring, or that monitoring may cease altogether.<br><br>**MM CUL-1c:** If buried cultural resources are discovered during construction, operations shall stop in the immediate vicinity of the find and a qualified Archaeologist shall be consulted to determine whether the resource requires further study. The qualified Archaeologist shall make recommendations to the lead agency on the measures that shall be implemented to protect the discovered resources, including but not limited to excavation of the finds and evaluation of the finds in accordance with Section 15064.5 of the CEQA Guidelines. Potentially significant cultural resources consist of, but are not limited to, stone, bone, fossils, wood, or shell artifacts or features, including hearths, structural remains, or historic dumpsites. Any previously undiscovered resources found during construction within the Master Plan area should be recorded on appropriate California Department of Parks and Recreation (DPR) forms and evaluated for significance in terms of CEQA Guidelines.<br><br>If the resources are determined to be unique historic resources as defined under Section 15064.5 of the CEQA Guidelines, mitigation measures shall be | Less than significant Impact with mitigation incorporated |

| Impacts | Mitigation Measures | Level of Significance After Mitigation |
|---|---|---|
| | identified by the monitor and recommended to the lead agency. Appropriate mitigation measures for significant resources could include avoidance or capping, incorporation of the site in green space, parks, or open space, or data recovery excavations of the finds.<br><br>No further grading shall occur in the area of the discovery until the lead agency approves the measures to protect these resources. Any archaeological artifacts recovered as a result of mitigation shall be donated to a qualified scientific institution approved by the lead agency where they would be afforded long-term preservation to allow future scientific study. | |
| **Impact CUL-2:** The proposed project could cause a substantial adverse change in the significance of an archaeological resource pursuant to Section 15064.5. | Implementation of MM CUL-1a, MM CUL-1b, and MM CUL-1c. | Less than significant impact with mitigation incorporated. |
| **Impact CUL-3:** The proposed project could disturb human remains, including those interred outside of formal cemeteries. | **MM CUL-3:** In the event of the accidental discovery or recognition of any human remains, CEQA Guidelines Section 15064.5, Health and Safety Code Section 7050.5, and Public Resources Code Sections 5097.94 and Section 5097.98 shall be followed. If during project construction, there is accidental discovery or recognition of any human remains, the following steps shall be taken:<br>1. There shall be no further excavation or disturbance within 100 feet of the remains until the County Coroner is contacted to determine whether the remains are Native American and if an investigation of the cause of death is required. If the Coroner determines the remains to be Native American, the Coroner shall contact the Native American Heritage Commission (NAHC) within 24 hours, and the NAHC shall identify the person or persons it believes to be the Most Likely Descendant (MLD) of the deceased Native American. The MLD may make recommendations to the landowner or the person responsible for the excavation work within 48 hours, for means of treating or disposing of, with appropriate dignity, the human remains, and any associated grave goods as provided in Public Resource Code Section 5097.98.<br>2. Where the following conditions occur, the landowner or authorized representative shall rebury the Native American human remains and associated grave goods with appropriate dignity either in accordance | Less than significant impact with mitigation incorporated. |

| Impacts | Mitigation Measures | Level of Significance After Mitigation |
|---|---|---|
| | with the recommendations of the MLD or on the project site in a location not subject to further subsurface disturbance:<br>• The NAHC is unable to identify an MLD or the MLD failed to make a recommendation within 48 hours after being notified by the commission.<br>• The descendant identified fails to make a recommendation.<br>• The landowner or authorized representative rejects the recommendation of the descendant, and mediation by the NAHC fails to provide measures acceptable to the landowner.<br><br>Additionally, California Public Resources Code Section 15064.5 requires the following relative to Native American Remains:<br>• When an initial study identifies the existence of, or the probable likelihood of, Native American Remains within a project, a lead agency shall work with the appropriate Native Americans as identified by the NAHC as provided in Public Resources Code Section 5097.98. The applicant may develop a plan with respect to their respective individual development proposals for treating or disposing of, with appropriate dignity, the human remains, and any items associated with Native American Burials with the appropriate Native Americans as identified by the NAHC. | |
| **Impact CUL-4:** The proposed project may cause a substantial adverse change in the significance of a Tribal Cultural Resource. | MM CUL-1a, MM CUL-1b, MM CUL-1c, and MM CUL-3. | Less than significant impact with mitigation incorporated. |
| **Impact CUL-5:** The proposed project may cause a substantial adverse change in the significance of a tribal cultural resource. | MM CUL-1a, MM CUL-1b, MM CUL-1c, and MM CUL-3. | Less than significant impact with mitigation incorporated. |
| **Cumulative Impact** | MM CUL-1a, MM CUL-1b, MM CUL-1c, and MM CUL-3. | Less than significant impact with mitigation incorporated. |
| **Section 3.5—Energy** | | |
| **Impact ENER-1:** The proposed project would not result in a potentially significant environmental impact due to wasteful, inefficient, or unnecessary consumption of | No mitigation is necessary. | Less than significant impact. |

| Impacts | Mitigation Measures | Level of Significance After Mitigation |
|---|---|---|
| energy resources, during project construction or operation. | | |
| **Impact ENER-2:** The proposed project would not conflict with or obstruct a State or local plan for renewable energy or energy efficiency. | No mitigation is necessary. | Less than significant impact. |
| **Cumulative Impact** | No mitigation is necessary. | Less than significant impact. |
| **Section 3.6—Geology and Soils** | | |
| **Impact GEO-1:** The proposed project may expose people or structures to potential substantial adverse effects associated with seismic hazards. | **MM GEO-1:** Prior to the issuance of the building permit, recommendations from the Geotechnical Engineering Investigation prepared by Krazan & Associates (Environmental Impact Report [EIR] Appendix E) shall be incorporated into all project plans and applicable construction-related permits and submitted to the City of American Canyon for review and approval. | Less than significant impact with mitigation incorporated. |
| **Impact GEO-2:** The proposed project may result in substantial soil erosion or the loss of topsoil. | **MM HYD-1:** Prior to the issuance of grading permits or building permits (whichever occurs first), the project applicant shall obtain coverage under the National Pollutant Discharge Elimination System (NPDES) General Permit for Stormwater Discharges Associated with Construction and Land Disturbance Activities (General Permit) (Order WQ 2022-0057-DWQ, NPDES No. CAS000002) by preparing a Storm Water Pollution Prevention Plan (SWPPP) and submitting it, along with a Notice of Intent (NOI), to the San Francisco Bay Regional Water Quality Control Board (San Francisco Bay RWQCB). The City of American Canyon shall confirm that the applicant has prepared a SWPPP and obtained coverage under the General Permit prior to issuance of grading or building permits. The SWPPP shall identify a practical sequence for Best Management Practice (BMP) implementation and maintenance, site restoration, contingency measures, responsible parties, and agency contacts. The SWPPP shall address both the project site and adjacent parcel where soil stockpiles would be removed and the borrow pit would be created to provide fill for the project site. The SWPPP shall include but not be limited to the following elements:<br>• Temporary erosion control measures shall be employed for disturbed areas. | Less than significant impact with mitigation incorporated. |

| Impacts | Mitigation Measures | Level of Significance After Mitigation |
|---|---|---|
| | • No disturbed surfaces shall be left without erosion control measures in place during the winter and spring months. disturbed areas shall be covered with soil stabilizers, mulch, fiber rolls, or temporary vegetation.<br>• Sediment shall be retained on-site by a system of sediment basins, traps, or other appropriate measures. drop inlets shall be lined with filter fabric/geotextile.<br>• Discharge from the stormwater system shall be diffused in such a way as to mimic existing overland flow conditions.<br>• The construction contractor shall prepare standard operating procedures for the handling of hazardous materials on the construction site to eliminate or reduce discharge of materials to storm drains. this may include locating construction-related equipment and processes that contain or generate pollutants in a secure way, away from storm drains, gutters, and wetlands; parking, fueling, and cleaning all vehicles and equipment in the secure area; designating concrete washout areas; and preventing or containing potential leakage or spilling from sanitary facilities.<br>• BMP performance and effectiveness shall be determined either by visual means where applicable (e.g., observation of above-normal sediment release), or by actual water sampling in cases where verification of contaminant reduction or elimination (such as inadvertent petroleum release) is required by the RWQCB to determine adequacy of the measure.<br>• In the event of significant construction delays or delays in final landscape installation, native grasses or other appropriate vegetative cover shall be established on the construction site as soon as possible after disturbance as an interim erosion control measure throughout the wet season.<br><br>Prior to issuance of grading permits for the proposed project, the applicant shall submit to the City of American Canyon for review and approval a SWPPP in accordance with the requirements of the Statewide General Permit. The SWPPP shall be implemented during construction. | |
| **Impact GEO-3:** The proposed project would not be located on a geologic unit or soil that would become unstable as a result of the project, and potentially result | No mitigation is necessary. | Less than significant impact. |

| Impacts | Mitigation Measures | Level of Significance After Mitigation |
|---|---|---|
| in on- or off-site landslide, lateral spreading, subsidence, liquefaction or collapse. | | |
| **Impact GEO-4:** The proposed project may create substantial risks to life or property as a result of expansive soil conditions on the project site. | Implement Mitigation Measure GEO-1. | Less than significant impact with mitigation incorporated. |
| **Impact GEO-5:** The proposed project may directly or indirectly destroy a unique paleontological resource or site or unique geologic feature. | **MM GEO-5:** Although extremely unlikely, should any significant paleontological resources (e.g., bones, teeth, well-preserved plant elements) be unearthed by the construction crew, their activities shall be diverted at least 15 feet from the find until a professional Paleontologist has assessed it and, if deemed significant, salvaged in a timely manner. Collected fossils shall be deposited in an appropriate repository, such as the University of California Museum of Paleontology (UCMP), where they shall be properly curated and made available for future research. | Less than significant impact with mitigation incorporated. |
| **Cumulative Impact** | Implement Mitigation Measure GEO-1, MM HYD-1, and MM GEO-5. | Less than significant impact with mitigation incorporated. |
| **Section 3.7—Greenhouse Gas Emissions** | | |
| **Impact GHG-1:** The proposed project would not generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment. | No mitigation is necessary. | Less than significant impact. |
| **Impact GHG-2:** The proposed project would not conflict with any applicable plan, policy or regulation of an agency adopted for the purpose of reducing the emissions of greenhouse gases. | No mitigation is necessary. | Less than significant impact. |
| **Cumulative Impact** | No mitigation is necessary. | Less than significant impact. |
| **Section 3.8—Hazards and Hazardous Materials** | | |
| **Impact HAZ-1:** Buildout of the proposed project would not create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials and would not create a significant hazard to the public or the environment | No mitigation is necessary. | Less than significant impact. |

| Impacts | Mitigation Measures | Level of Significance After Mitigation |
|---|---|---|
| through reasonably foreseeable upset and accident conditions involving the likely release of hazardous materials into the environment. | | |
| **Impact HAZ-2:** The proposed project would not emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school. | No mitigation is necessary. | Less than significant impact. |
| **Impact HAZ-3:** The proposed project would not be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, would not create a significant hazard to the public or the environment. | No mitigation is necessary. | Less than significant impact. |
| **Impact HAZ-4:** The proposed project would not create aviation safety hazards for persons residing or working within 2 miles of the Napa County Airport. | Less than significant impact. | No mitigation is necessary. |
| **Impact HAZ-5:** The proposed project would not impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan. | Less than significant impact. | No mitigation is necessary. |
| **Cumulative Impact** | Less than significant impact. | No mitigation is necessary. |
| **Section 3.09—Hydrology and Water Quality** | | |
| **Impact HYD-1:** The proposed project could violate any water quality standards or waste discharge requirements or otherwise substantially degrade surface or groundwater quality. | **MM HYD-1:** Prior to the issuance of grading permits or building permits (whichever occurs first), the project applicant shall obtain coverage under the National Pollutant Discharge Elimination System (NPDES) General Permit for Stormwater Discharges Associated with Construction and Land Disturbance Activities (General Permit) (Order WQ 2022-0057-DWQ, NPDES No. CAS000002) by preparing a Storm Water Pollution Prevention Plan (SWPPP) and submitting it, along with a Notice of Intent (NOI), to the San Francisco Bay Regional Water Quality Control Board (San Francisco Bay RWQCB). The City of American Canyon shall confirm that the applicant has prepared a SWPPP and obtained coverage under the General Permit prior to issuance of grading or building permits. The SWPPP shall identify a | Less than significant impact with mitigation incorporated. |

| Impacts | Mitigation Measures | Level of Significance After Mitigation |
|---|---|---|
| | practical sequence for Best Management Practice (BMP) implementation and maintenance, site restoration, contingency measures, responsible parties, and agency contacts. The SWPPP shall address both the project site and adjacent parcel where soil stockpiles would be removed and the borrow pit would be created to provide fill for the project site. The SWPPP shall include but not be limited to the following elements:<br>• Temporary erosion control measures shall be employed for disturbed areas.<br>• No disturbed surfaces shall be left without erosion control measures in place during the winter and spring months.<br>• Disturbed areas shall be covered with soil stabilizers, mulch, fiber rolls, or temporary vegetation.<br>• Sediment shall be retained on-site by a system of sediment basins, traps, or other appropriate measures. drop inlets shall be lined with filter fabric/geotextile.<br>• Discharge from the stormwater system shall be diffused in such a way as to mimic existing overland flow conditions.<br>• The construction contractor shall prepare standard operating procedures for the handling of hazardous materials on the construction site to eliminate or reduce discharge of materials to storm drains. this may include locating construction-related equipment and processes that contain or generate pollutants in a secure way, away from storm drains, gutters, and wetlands; parking, fueling, and cleaning all vehicles and equipment in the secure area; designating concrete washout areas; and preventing or containing potential leakage or spilling from sanitary facilities.<br>• BMP performance and effectiveness shall be determined either by visual means where applicable (e.g., observation of above-normal sediment release), or by actual water sampling in cases where verification of contaminant reduction or elimination (such as inadvertent petroleum release) is required by the RWQCB to determine adequacy of the measure.<br>• In the event of significant construction delays or delays in final landscape installation, native grasses or other appropriate vegetative cover shall be established on the construction site as soon as possible after disturbance as an interim erosion control measure throughout the wet season. | |

| Impacts | Mitigation Measures | Level of Significance After Mitigation |
|---|---|---|
| | Prior to issuance of grading permits for the proposed project, the applicant shall submit to the City of American Canyon for review and approval a SWPPP in accordance with the requirements of the Statewide General Permit. The SWPPP shall be implemented during construction. | |
| **Impact HYD-2:** The proposed project would not substantially decrease groundwater supplies or interfere substantially with groundwater recharge such that the project may impede sustainable groundwater management of the basin. | No mitigation is necessary. | Less than significant impact. |
| **Impact HYD-3:** The proposed project would not substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river or through the addition of impervious surfaces, in a manner which would: (i) result in substantial erosion or siltation on- or off-site; (ii) substantially increase the rate or amount of surface runoff in a manner which would result in flooding on- or off-site; (iii) create or contribute runoff water which would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff; or (iv) impede or redirect flood flows. | No mitigation is necessary. | Less than significant impact. |
| **Cumulative Impact** | Implementation of MM HYD-1 | Less than significant impact with mitigation incorporated. |
| **Section 3.10—Land Use and Planning** | | |
| **Impact LU-1:** The proposed project would not conflict with the applicable provisions of the City of American Canyon General Plan. | No mitigation is necessary. | Less than significant impact. |
| **Impact LU-2:** The proposed project would not conflict with the applicable provisions of the American Canyon Municipal Code. | No mitigation is necessary. | Less than significant impact. |

| Impacts | Mitigation Measures | Level of Significance After Mitigation |
|---|---|---|
| **Impact LU-3:** The proposed project would not conflict with the applicable provisions of the Napa County Airport Land Use Compatibility Plan. | No mitigation is necessary. | Less than significant impact. |
| **Cumulative Impact** | No mitigation is necessary. | Less than significant impact. |
| **Section 3.11—Noise** | | |
| **Impact NOI-1:** The proposed project would not generate a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies. | No mitigation is necessary. | Less than significant impact. |
| **Impact NOI-2:** The proposed project would not result in generation of excessive groundborne vibration or groundborne noise levels. | No mitigation is necessary. | Less than significant impact. |
| **Impact NOI-3:** The proposed project would not expose people residing or working in the project area to excessive noise levels for a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport. | No mitigation is necessary. | Less than significant impact. |
| **Cumulative Impact** | No mitigation is necessary. | Less than significant impact. |
| **Section 3.12—Public Services** | | |
| **Impact PUB-1:** The proposed project would not result in a need for new or expanded fire protection facilities that may have physical impacts on the environment. | No mitigation is necessary. | Less than significant impact. |
| **Impact PUB-2:** The proposed project would not result in a need for new or expanded police protection facilities that may have physical impacts on the environment. | No mitigation is necessary. | Less than significant impact. |
| **Cumulative Impact** | No mitigation is necessary. | Less than significant impact. |

| Impacts | Mitigation Measures | Level of Significance After Mitigation |
|---|---|---|
| **Section 3.13—Transportation and Traffic** | | |
| **Impact TRANS-1:** The proposed project would not conflict with a program plan, ordinance or policy of the circulation system, including transit, roadway, bicycle and pedestrian facilities. | No mitigation is required. | Less than significant impact. |
| **Impact TRANS-2:** The proposed project would conflict or be inconsistent with CEQA Guidelines Section 15064.3, subdivision (b). | **MM TRANS-2: Transportation Demand Management Program** The proposed project shall develop a Transportation Demand Management (TDM) program to encourage employees to choose non-personal vehicle modes of transportation for commuting. This includes a commute trip reduction marketing initiative, through which the employer would disseminate information about available transportation options. Strategies would include encouraging ride sharing among project employees and linking them to resources to find rideshare partners working nearby, such as through the Napa Valley Transportation Authority (NVTA) V-Commute program or the regional 511.org program. Marketing materials can also inform employees of resources such as the Guaranteed Ride Home Program, which provides free rides home in emergency situations for employees using non-personal vehicle transportation modes. | Significant and unavoidable impact. |
| **Impact TRANS-3:** The proposed project would not substantially increase hazards due to a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment). | No mitigation is required. | Less than significant impact. |
| Impact TRANS-4: The proposed project would not result in inadequate emergency access. | No mitigation is required. | Less than significant impact. |
| **Cumulative Impact** | Implementation of MM TRANS-2 | Significant and unavoidable impact. |
| **Section 3.14—Utilities** | | |
| **Impact UTIL-1:** The proposed project would not require or result in the relocation or construction of new or expanded water, wastewater treatment or stormwater drainage, electric power, natural gas, or telecommunications facilities, the construction or | No mitigation is necessary. | Less than significant impact. |

| Impacts | Mitigation Measures | Level of Significance After Mitigation |
|---|---|---|
| relocation of which could cause significant environmental effects. | | |
| **Impact UTIL-2:** The proposed project would have sufficient water supplies available to serve the project and reasonably foreseeable future development during normal, dry and multiple dry years. | No mitigation is necessary. | Less than significant impact. |
| **Impact UTIL-3:** The proposed project would not result in a determination by the wastewater treatment provider which serves or may serve the project that it has adequate capacity to serve the project's projected demand in addition to the provider's existing commitments. | No mitigation is necessary. | Less than significant impact. |
| **Impact UTIL-4:** The proposed project would not generate solid waste in excess of State or local standards, or in excess of the capacity of local infrastructure, or otherwise impair the attainment of solid waste reduction goals. | No mitigation is necessary. | Less than significant impact. |
| **Cumulative Impact** | No mitigation is necessary. | Less than significant impact. |

# CHAPTER 1: INTRODUCTION

## 1.1 - Overview of the CEQA Process

This Draft Environmental Impact Report (Draft EIR) is prepared in accordance with the California Environmental Quality Act (CEQA) to evaluate the potential environmental impacts associated with the implementation of the SDG Commerce 220 Project (State Clearinghouse No. 2023100842). This document is prepared in conformance with CEQA (California Public Resources Code [PRC], § 21000, *et seq*.) and the CEQA Guidelines (California Code of Regulations [CCR], Title 14, § 15000, *et seq*.). This Draft EIR is intended to serve as an informational document for the public agency decision-makers and the public regarding the proposed project.

### 1.1.1 - Overview

The proposed project consists of the development of a 219,834-square-foot wine warehouse on the 10.45-acre project site. Chapter 2, Project Description provides a complete description of the proposed project.

### 1.1.2 - Purpose and Authority

This Draft EIR provides a project-level analysis of the environmental effects of the SDG Commerce 220 Project. The environmental impacts of the proposed project are analyzed in the EIR to the degree of specificity appropriate, in accordance with CEQA Guidelines Section 15146. This document addresses the potentially significant adverse environmental impacts that may be associated with the planning, construction, or operation of the project. It also identifies appropriate and feasible mitigation measures and alternatives that may be adopted to significantly reduce or avoid these impacts.

CEQA requires that an EIR contain, at a minimum, certain specific elements. These elements are contained in this Draft EIR and include:

- Table of Contents
- Introduction
- Executive Summary
- Project Description
- Environmental Setting, Significant Environmental Impacts, and Mitigation Measures
- Cumulative Impacts
- Significant Unavoidable Adverse Impacts
- Alternatives to the Proposed Project
- Growth-Inducing Impacts
- Effects Found not to be Significant
- Areas of Known Controversy

### 1.1.3 - Lead Agency Determination

The City of American Canyon is designated as the lead agency for the proposed project. CEQA Guidelines Section 15367 defines the lead agency as ". . . the public agency, which has the principal responsibility for carrying out or approving a project." Other public agencies may use this Draft EIR in the decision-making or permit process and consider the information in this Draft EIR along with other information that may be presented during the CEQA process.

This Draft EIR was prepared by FirstCarbon Solutions (FCS), an environmental consultant. Prior to public review, it was extensively reviewed and evaluated by the City of American Canyon. This Draft EIR reflects the independent judgment and analysis of the City of American Canyon as required by CEQA. Lists of organizations and persons consulted and the report preparation personnel are provided in Chapter 7 of this Draft EIR.

## 1.2 - Scope of the Draft EIR

This Draft EIR addresses the potential environmental effects of the proposed project. The City of American Canyon issued a Notice of Preparation (NOP) for the proposed project on October 27, 2023, which circulated between October 27, 2023, and November 27, 2023, for the statutory 30-day public review period. The scope of this Draft EIR includes the potential environmental impacts identified in the NOP and issues raised by agencies and the public in response to the NOP. The NOP is contained in Appendix A of this Draft EIR.

Seven comment letters were received in response to the NOP. They are listed in Table 1-1 and provided in Appendix A of this Draft EIR.

**Table 1-1: NOP Comment Letter Summary**

| Affiliation | Signatory(ies) | Date |
|---|---|---|
| **Public Agencies** | | |
| Caltrans | Yunsheng Luo | November 27, 2023 |
| CDFW | Erin Chappell | November 17, 2023 |
| Department of Justice | Christie Vosburg | November 7, 2023 |
| NAHC | Cameron Vela | October 31, 2023 |
| **Private Parties** | | |
| — | Yvonne Baginski | November 21, 2023 |
| — | Jeannette Goyetche | November 21, 2023 |
| — | Jerry Hoffman | November 25, 2023 |

Notes:
Caltrans = California Department of Transportation
CDFW = California Department of Fish and Wildlife
NAHC = Native American Heritage Commission
Source: Compiled by FirstCarbon Solutions (FCS). 2023.

### 1.2.1 - Environmental Issues Determined not to be Significant

The NOP identified topical areas that were determined not to be significant. An explanation of why each area is determined not to be significant is provided in Chapter 4, Effects Found not to be Significant. These topical areas are as follows:

- Agricultural and Forest Resources
- Mineral Resources
- Recreation
- Wildfire

In addition, certain subjects within various topical areas were determined not to be significant. Other potentially significant issues are analyzed in these topical areas; however, the following issues are not analyzed:

- Scenic Vistas
- State Scenic Highways
- Loss of Important Farmland
- Williamson Act Contracts or Agricultural Zoning
- Forest Zoning
- Loss of Forest Land
- Pressures to Convert Surrounding Agricultural Land or Forest Land
- Sensitive Natural Communities or Riparian Habitat
- Conservation Plans
- Septic or Alternative Wastewater Disposal Systems
- Wildfires
- 100-year Flood Hazards
- Levee or Dam Failure
- Seiches, Tsunamis, or Mudflows
- Division of an Established Community
- Loss of Mineral Resources of Statewide or Local Importance
- Growth Inducement
- Displacement or Persons or Housing
- Schools
- Parks
- Other Public Facilities
- Emergency Evacuation

An explanation of why each issue is determined not to be significant is provided in Chapter 4, Effects Found not to be Significant.

### 1.2.2 - Potentially Significant Environmental Issues

The NOP indicated that the following topical areas may contain potentially significant environmental issues that will require further analysis in the EIR. These sections are as follows:

- Aesthetics, Light, and Glare
- Air Quality
- Biological Resources
- Cultural Resources/Tribal Cultural Resources
- Geology, Soils, and Seismicity
- Greenhouse Gas Emissions/Energy
- Hazards and Hazardous Materials
- Hydrology and Water Quality
- Land Use
- Noise
- Public Services
- Transportation
- Utilities and Service Systems

## 1.3 - Organization of the EIR

This Draft EIR is organized into the following main sections:

- **Chapter ES: Executive Summary.** This chapter includes a summary of the proposed project and alternatives addressed in the Draft EIR. A brief description of the areas of controversy and issues to be resolved and a table that summarizes the impacts, mitigation measures, and level of significance after mitigation are also included in this section.
- **Chapter 1: Introduction.** This chapter provides an introduction and overview describing the purpose of this Draft EIR, its scope and components, and its review and certification process.
- **Chapter 2: Project Description.** This chapter includes a detailed description of the proposed project, including its location, site, and project characteristics. It also includes a discussion of the project objectives, intended uses of the Draft EIR, responsible agencies, and approvals that are needed for the proposed project.
- **Chapter 3: Environmental Impact Analysis.** This chapter analyzes the environmental impacts of the proposed project. Impacts are organized into major topic areas. Each topic area includes a description of the environmental setting, methodology, significance criteria, impacts, mitigation measures, and significance after mitigation. The specific environmental topics that are addressed within Chapter 3 are as follows:
  - Section 3.1—Aesthetics, Light, and Glare: Addresses the potential visual impacts of the proposed project and the overall increase in illumination produced by the proposed project.
  - Section 3.2—Air Quality: Addresses potential air quality impacts associated with project implementation and emissions of criteria pollutants. In addition, the section also evaluates project emissions of toxic air contaminants.

- Section 3.3—Biological Resources: Addresses potential impacts on habitat, vegetation, and wildlife; the potential degradation or elimination of important habitat; and impacts on listed, proposed, and candidate threatened and endangered species.
- Section 3.4—Cultural Resources and Tribal Cultural Resources: Addresses potential impacts on historical resources, archaeological resources, paleontological resources, and burial sites. Additionally addresses potential project impacts related to tribal cultural resources.
- Section 3.5—Energy: Address the potential impacts related to energy that could result from implementation of the proposed project.
- Section 3.6—Geology, Soils, and Seismicity: Addresses the potential impacts the proposed project may have on soils and assesses the effects of project development in relation to geologic and seismic conditions.
- Section 3.7—Greenhouse Gas Emissions: Addresses potential project emissions of greenhouse gases.
- Section 3.8—Hazards and Hazardous Materials: Addresses potential for presence of hazardous materials or conditions on the project site and in the project area that may have the potential to impact human health.
- Section 3.9—Hydrology and Water Quality: Addresses the potential impacts of the project on local hydrological conditions, including drainage areas, and changes in the flow rates.
- Section 3.10—Land Use: Addresses consistency with the City of American Canyon General Plan, American Canyon Municipal Code, and Napa County Airport Land Use Compatibility Plan.
- Section 3.11—Noise: Addresses potential noise impacts during construction and at project buildout from mobile and stationary sources. The section also addresses the impact of noise generation on neighboring uses.
- Section 3.12—Public Services: Addresses potential impacts upon public services, including fire protection, law enforcement, schools, parks, and recreational facilities.
- Section 3.13—Transportation: Addresses potential impacts related to the local and regional roadway system and public transportation, bicycle, and pedestrian access.
- Section 3.14—Utilities and Services Systems: Addresses potential impacts related to service providers, including fire protection, law enforcement, water supply, wastewater, solid waste, and energy providers.

- **Chapter 4: Effects Found not to be Significant.** This chapter contains analysis of the topical sections and CEQA Appendix G checklist questions not addressed in Chapter 3.
- **Chapter 5: Other CEQA Considerations.** This chapter provides a summary of significant unavoidable environmental impacts and growth-inducing impacts.
- **Chapter 6: Alternatives to the Proposed Project.** This chapter compares the impacts of the proposed project with three land use project alternatives: No Project Alternative and Reduced Project Alternative. An environmentally superior alternative has been identified. In addition, alternatives initially considered but rejected from further consideration are discussed.
- **Chapter 7: Persons and Organizations Consulted/List of Preparers.** This chapter contains a full list of persons and organizations that were consulted during the preparation of this Draft

EIR. This chapter also contains a full list of the authors who assisted in the preparation of the Draft EIR, by name and affiliation.

- **Appendices.** The Draft EIR appendices includes all notices and other procedural documents pertinent to the Draft EIR as well as all technical material prepared to support the analysis.

## 1.4 - Documents Incorporated by Reference

As permitted by CEQA Guidelines Section 15150, this Draft EIR has referenced several technical studies, analyses, and previously certified environmental documentation. Information from the documents, which have been incorporated by reference, has been briefly summarized in the appropriate section(s). The relationship between the incorporated part of the referenced document and the Draft EIR has also been described. The documents and other sources that have been used in the preparation of this Draft EIR include but are not limited to:

- City of American Canyon General Plan
- American Canyon Municipal Code
- Napa County Airport Land Use Compatibility Plan
- City of American Canyon Urban Water Management Plan

In accordance with CEQA Guidelines Section 15150(b), the General Plan, the referenced documents and other sources used in the preparation of the Draft EIR are available for review at the American Canyon City Hall at the address shown in Section 1.6 below.

## 1.5 - Documents Prepared for the Proposed Project

The following technical studies and analyses were prepared for the proposed project:

- Biological Resources Assessment, prepared by FirstCarbon Solutions (Appendix C)
- Geotechnical Engineering Investigation, prepared by Krazan & Associates (Appendix E)
- Phase I Environmental Site Assessment, prepared by Cameron-Cole (Appendix F)
- Hydrology Report, prepared by RSA$^+$ (Appendix G)
- Hydraulic Calculations, prepared by RSA$^+$ (Appendix G)
- Stormwater Control Plan, prepared by RSA$^+$ (Appendix G)

## 1.6 - Review of the Draft EIR

Upon completion of the Draft EIR, the City of American Canyon filed a Notice of Completion (NOC) with the State Office of Planning and Research to begin the public review period (PRC § 21161). Concurrent with the NOC, this Draft EIR has been distributed to responsible and trustee agencies, other affected agencies, surrounding cities, and interested parties, as well as all parties requesting a copy of the Draft EIR in accordance with Public Resources Code 21092(b)(3). During the public review period, the Draft EIR, including the technical appendices, is available for review at the following locations:

City of American Canyon City Hall
4381 Broadway Street, Suite 201
American Canyon, CA 94503
Hours:
Monday–Friday: 8:00 a.m. to 5:00 p.m.
Saturday–Sunday: Closed

Active Adults Center
2185 Elliot Drive
American Canyon, CA 94503
Hours: Monday - Friday 9:00 a.m. to 2:00 p.m.
Saturday–Sunday: Closed

American Canyon Library
300 Crawford Way
American Canyon, CA 94503
Hours: Monday, Tuesday, and Thursday–Saturday: 10:00 a.m. to 6:00 p.m.
Wednesday: 12:00 p.m. to 8:00 p.m.
Sunday: Closed

The Draft EIR is also available for review at the following website: https://www.cityofamericancanyon.org/government/community-development/development-projects

Agencies, organizations, and interested parties have the opportunity to comment on the Draft EIR during the 45-day public review period. Written comments on this Draft EIR may be submitted electronically at this website link: https://cityofamcan.org/SDG220.

Hardcopy written comments on this Draft EIR should be addressed to:

SDG Commerce 220 Project
City of American Canyon
4381 Broadway Street, Suite 201
American Canyon, CA 94503

Submittal of electronic comments in Microsoft Word or Adobe PDF format is encouraged. Upon completion of the public review period, written responses to all significant environmental issues raised will be prepared and made available for review by the commenting agencies at least 10 days prior to the public hearing before the American Canyon Planning Commission on the proposed project. Following a recommendation by the Planning Commission, the City Council will consider certifying the Final EIR at a regularly scheduled Council meeting. Comments received and the responses to comments will be included as part of the record for consideration by decision-makers for the proposed project.

THIS PAGE INTENTIONALLY LEFT BLANK

# CHAPTER 2: PROJECT DESCRIPTION

This Draft Environmental Impact Report (Draft EIR) analyzes the potential environmental effects of the proposed SDG Commerce 220 Distribution Center Project (proposed project) in the City of American Canyon.

## 2.1 - Project Location and Setting

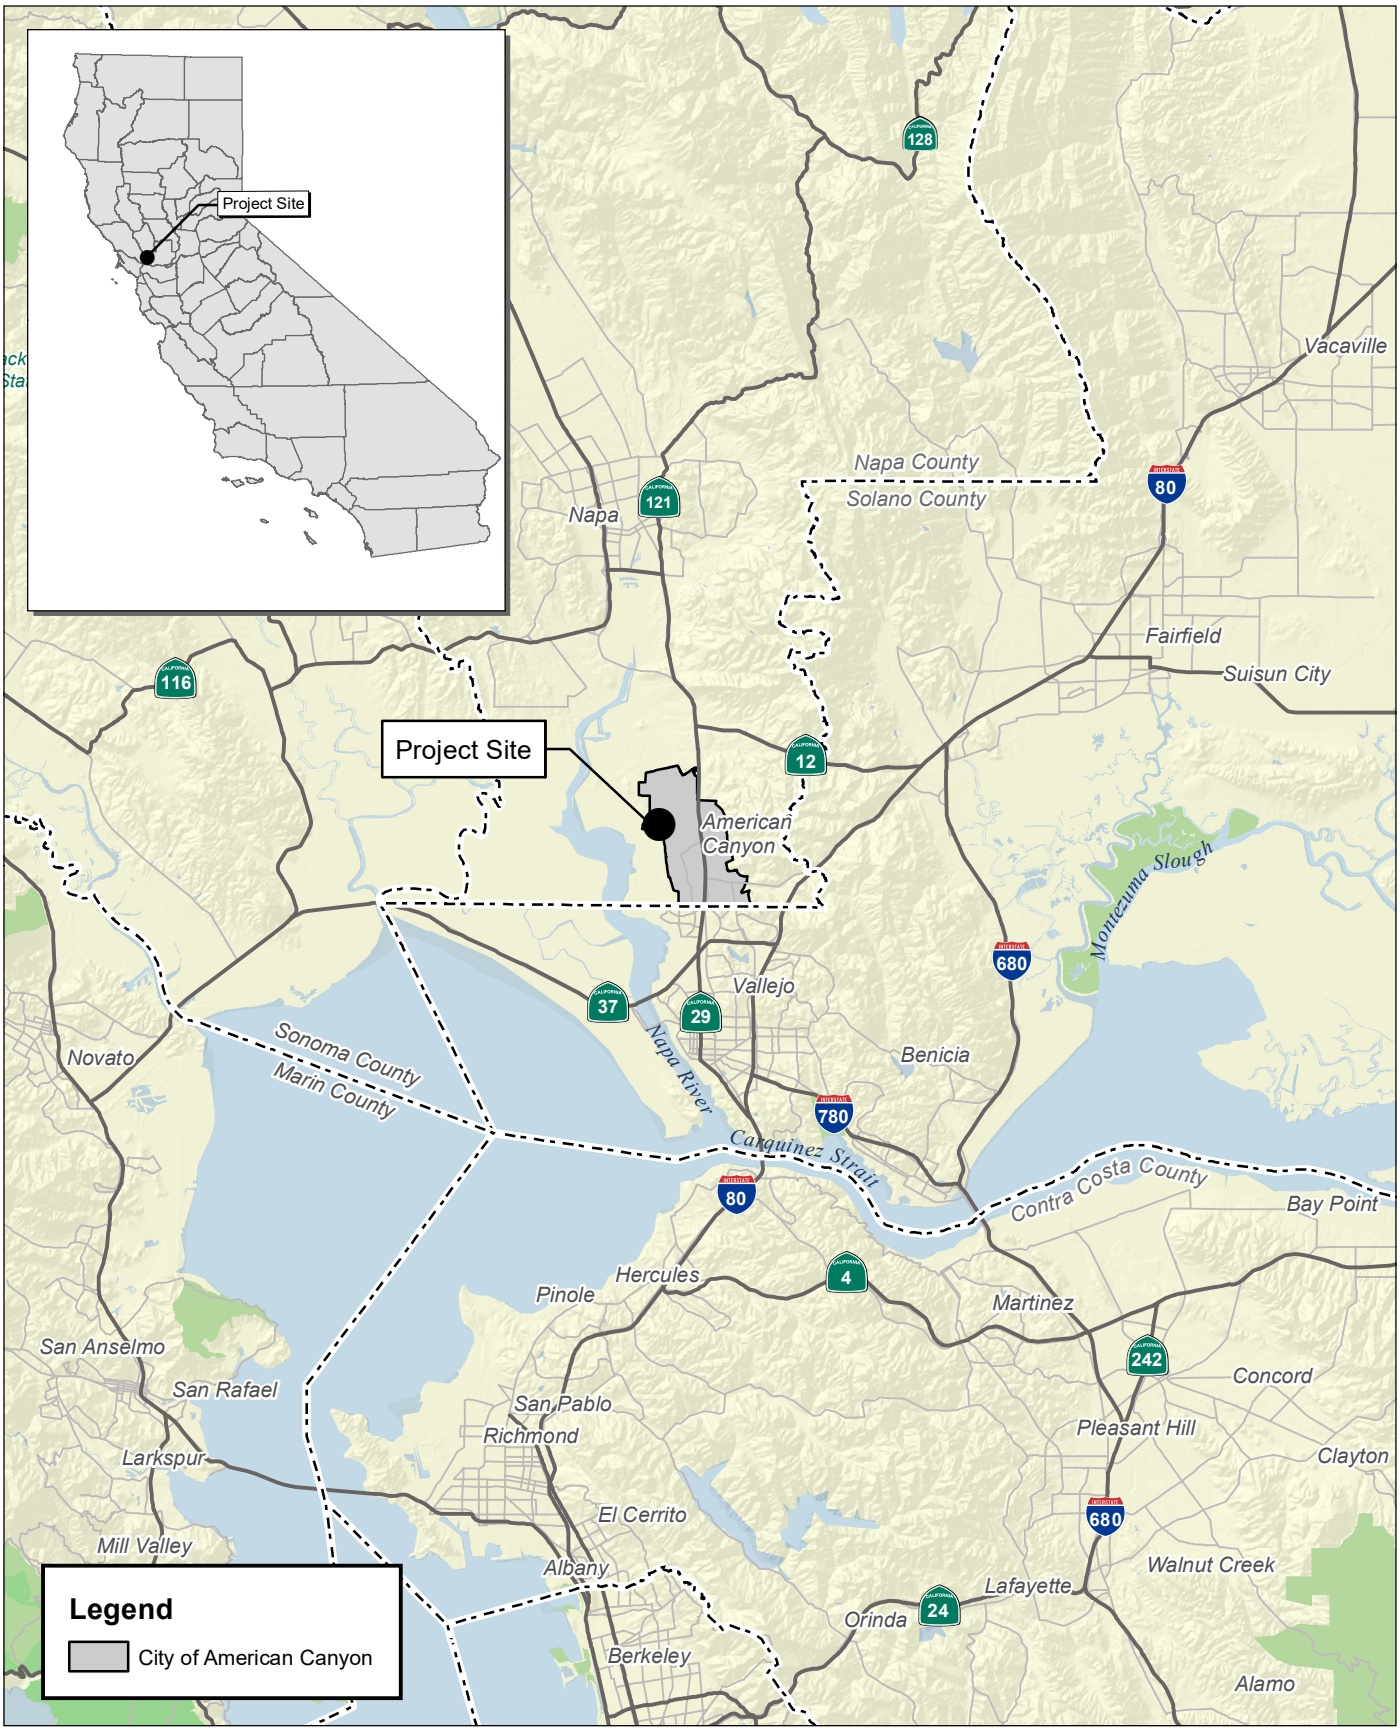
### 2.1.1 - Location

The project site is located at 1055 Commerce Court in the City of American Canyon, in Napa County, California; refer to Exhibit 2-1. The project site consists of Assessor's Parcel Number (APN) 058-030-069 (10.17 acres) plus small additional improvement areas (consisting primarily of parking lot improvements and connections to adjoining land uses) for a total of 10.45 acres. The rectangular project site is bounded by a eucalyptus grove and North Slough (west), a parcel entitled for a wine distribution warehouse known as SDG Commerce 217 currently under construction (north), Commerce Court beyond which is a paintball recreation area (east), and a wine distribution warehouse known as SDG Commerce 330 (south); refer to Exhibit 2-2. The project site is located on the *Cuttings Wharf, California*, United States Geological Survey (USGS) 7.5-minute Topographic Quadrangle Map, Township 4 North, Range 4 West, Section 14 (Latitude 38° 11' 22" North; Longitude 122° 16' 19" West).

### 2.1.2 - Existing Land Use Activities

The project site contains undeveloped land. The project site gently slopes from east to west and is approximately 13 to 25 feet above mean sea level. A linear wetland and three isolated wetlands are located within the northern portion of the property. The southern portion of the project site contains several soil stockpiles that are intended for use at the SDG Commerce 217 property. A young eucalyptus tree is located near Commerce Court. The project frontage with Commerce Court is improved with curb, gutter, and sidewalk. Exhibit 2-3 provides photographs of the project site.

### 2.1.3 - Surrounding Land Uses



#### North

A wine distribution warehouse known as SDG Commerce 217 is being constructed to the north of the project site at the time of this writing. This parcel totals 10.39 acres. The area further to the north consists of multiple industrial warehouses and other industrial type land uses.

#### East

Commerce Court, a two-lane undivided roadway, forms the eastern boundary of the project site. A 68-foot-wide City Public Access and Utility easement is located within Commerce Court with underground sewer, water, reclaimed water, sewer force main and underground power. A eucalyptus grove is located east of Commerce Court. A residence, dirt/gravel roads, and various accessory structures are located throughout this eucalyptus grove as well as Paint Jungle, a paintball recreation area.

### South

A wine distribution warehouse known as SDG Commerce 330 is located south of the project site. This parcel totals 15.24 acres. The area further to the south consists of an equestrian center (SpiritHorse Therapeutic Riding Center), the American Canyon 4-H Service Club, and the Napa Junction Magnet Elementary School.

### West

An 11.23-acre parcel containing a eucalyptus grove and North Slough are located west of the project site. The American Canyon Water Reclamation Facility is located west of North Slough. Further west is the Napa River and associated wetlands.

## 2.1.4 - Land Use Designations

The project site is designated Commercial Recreation (CR) by the City of American Canyon General Plan and zoned Recreation (REC). A Recreation Zoning District Code Amendment (Ordinance No. 2018-01) was adopted by the City Council on January 16, 2018. The Ordinance allows wine-related warehousing and distribution facilities as a conditionally permitted use within the REC zoning district.

The project site is within Compatibility Zone D (Common Traffic Pattern) of the Napa County Airport's Land Use Compatibility Plan.

# 2.2 - Project History

The project site is part of what was previously a larger 35.85-acre site (Exhibit 2-4a). The site was subdivided into three lots (SDG Commerce 217, SDG Commerce 220, and SDG Commerce 330) via a tentative parcel map in February 2019. The southern parcel (SDG Commerce 330) was developed in 2020. The northern parcel (SDG Commerce 217) was entitled in 2021 and at the time of this writing is currently being developed. The central parcel (SDG Commerce 220) is the project site evaluated in this Draft EIR. Exhibit 2-2 shows the relationship of the three parcels to each other. The following narrative provides background on the entire 35.85-acre site.

Aerial photography dating to 1937 indicates that the entire site was occupied by a planted crop of trees; between then and the late 1950s, a eucalyptus grove was planted. From the 1950s until 2001 the site remained relatively unchanged. From 2001 until circa 2012, the northwest corner of the site was used as a paintball field (Sherwood Forest Paintball Area) with the eucalyptus trees remaining in place.

In 2004, a warehouse was built to the north of the site (as shown in Exhibit 2-2), and its development also included construction of Commerce Court cul-de-sac road improvements which terminated at the northeast corner of the SDG Commerce 217 site. Also in 2004, the City of American Canyon installed underground utilities and an access road through the middle of the eucalyptus grove adjacent to the east side of this site. This work also included installation of a sanitary sewer force main that crosses the northern portion of the site (i.e., the 217 SDG Commerce parcel). In 2012 the entire 35.85-acre site was cleared and grubbed of eucalyptus trees and shrubs.

# 2.3 - Project Characteristics

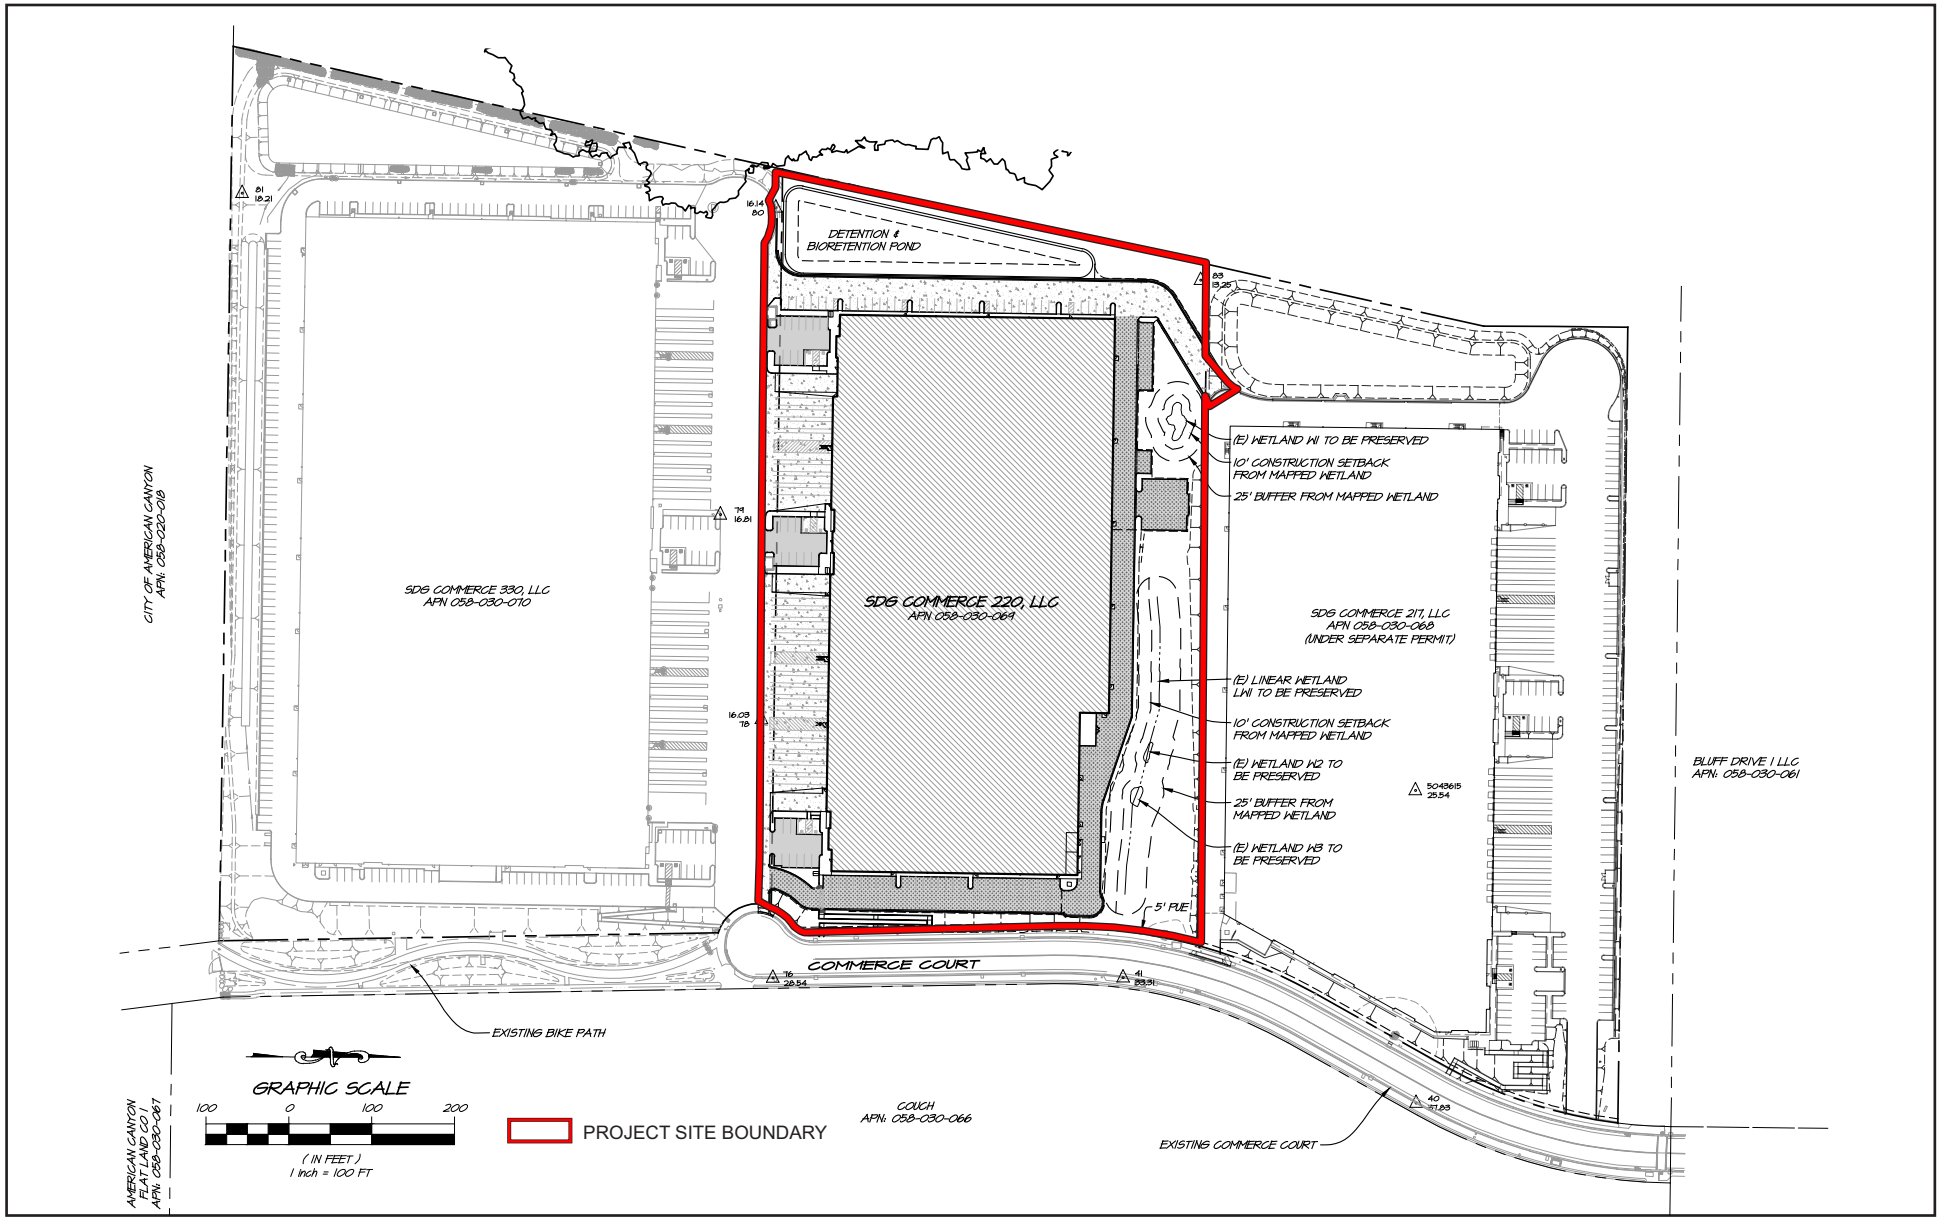
## 2.3.1 - Project Summary

The applicant, SDG Commerce 220, LLC proposes to develop a 219,834-square-foot wine storage and distribution center on the 443,005-square-foot project site. The warehouse would provide 23 truck doors and approximately 4,400 square feet of office space. It would have perimeter concrete tilt wall panels with varying parapet heights and accent spandrel glass/metal canopy features around offices and corners of the building. The average roof height would be approximately 35 feet high and portions of the building exterior walls would have various heights to provide architectural relief. The building would be insulated and refrigerated at approximately 58°F (degrees Fahrenheit), making it suitable for storage of wine and related products. The amount of refrigeration necessary would be reduced through the use of intake louvers and fans, which would allow cool night air to be utilized. Table 2-1 summarizes the project characteristics. Exhibit 2-4a depicts the site plan within the greater 35.85-acre site. Exhibit 2-4b provides the project-specific site plan. Exhibit 2-5 provides a conceptual illustration of the proposed project.

**Table 2-1: SDG Commerce 220 Project Summary**

| Acres | Building Square Feet | Floor Area Ratio | Building Height | End Use/Characteristics |
|---|---|---|---|---|
| 10.45[1] | 219,834 | 0.5 | 35 feet | Wine Distribution Warehouse/23 truck doors |

[1] Project site consists of APN 058-030-069 (10.17 acres) plus small additional improvement areas for a total of 10.45 acres.
Source: SDG Commerce 220, LLC. 2022.



### Operation and Employment

The building would be designed to accommodate approximately three tenants. Typical hours of operation for wine distribution and storage are 6:00 a.m. to 6:00 p.m., Monday through Friday and 6:00 a.m. to 12:00 a.m., Monday through Friday during peak seasonal months, typically June through November. It is anticipated that the project would employ approximately 35 full-time employees and 20 part-time employees working in up to three overlapping shifts.

Warehousing and storage of wine and other wine-related industries are not labor intensive, and the proposed uses for the building do not demand frequent client or user trips to the site. It is estimated that the proposed project would generate approximately 2 to 4 client or visitor trips per day, likely during off-peak season and during normal working hours. Forklifts used within the building would be electrically powered.

### Site Access, Circulation, and Parking

Vehicular and truck access would be taken from one driveway on Commerce Court that would be shared with the SDG Commerce 330 project. Drive aisles would be provided around the full perimeter of the building to support emergency ingress and egress.

Exhibit 2-5
Conceptual Illustration

THIS PAGE INTENTIONALLY LEFT BLANK

A total of 134 car spaces and 23 truck parking stalls would be provided. Of these parking stalls, five would be designated for handicap access and one would be a compact space. There would be five electric vehicle supply equipment (EVSE) stalls, one van accessible EVSE stall, and 19 electric vehicle (EV) capable stalls. Per the 2022 California Green Building Standards Code (CALGreen), nonresidential developments with 101–150 parking spaces must provide at least 17 EV capable spaces and at least four EV capable spaces provided with EVSE (Title 24, Part 11, Chapter 5, Table 5.106.5.3.1). The proposed project would meet these requirements.

Pedestrian circulation throughout the project site would be provided in accordance with the California Disabled Accessibility Guidebook (CalDAG) and Americans with Disabilities Act (ADA) recommendations and standards Short and long-term bicycle parking would be provided in accordance with current CALGreen codes. The proposed project would provide three, long-term bicycle lockers, each of which would accommodate up to four bicycles, for a total of 12 bicycle parking spaces (located adjacent to each office area). Short-term bicycle parking would also be similarly located. The proposed 12 bicycle parking spaces would be five more than required per the City's Zoning Ordinance Chapter 19.14.090 (A), Bicycle Parking Requirements.

### Lighting

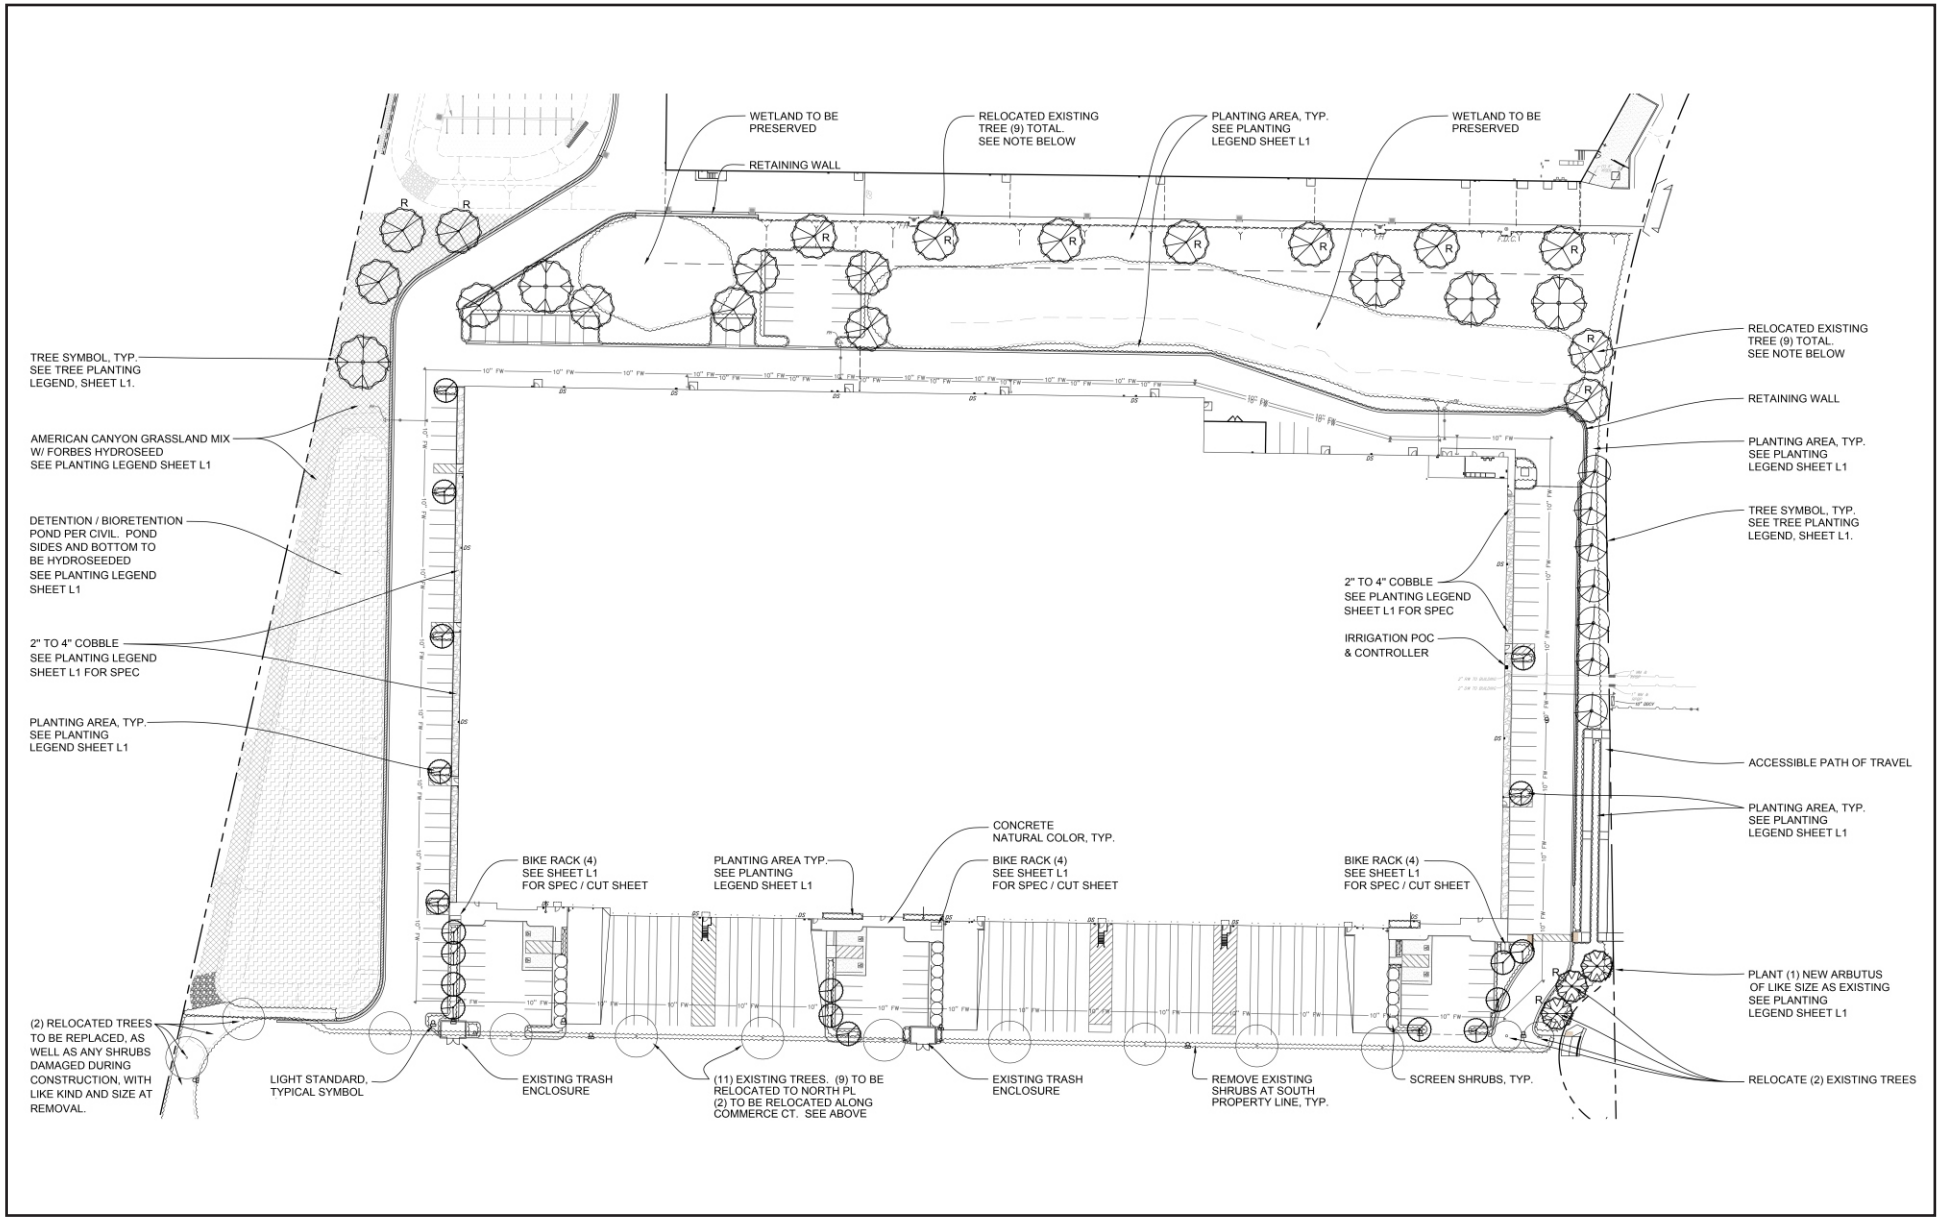
The proposed project would include exterior lighting on the building and parking lot poles on the north side of the property. Parking lot lighting would be consistent with City of American Canyon municipal code requirements Section 19.21.030(M). The 30-foot-tall lights would be "shoebox" dimmable light-emitting diode (LED) fixtures designed to be dark-sky friendly by directing the light toward the ground to prevent glare to surrounding properties.

### Signage

One monument sign is proposed, (approximately 8 feet wide by 5 feet tall) located at the entry to the site from Commerce Court.

### Landscaping

Landscaping would be provided around the site perimeter on the east, north and partial west sides and within parking islands throughout (Exhibit 2-6). Mechanical equipment would be placed on the north side of the building behind a 6-foot-high color slatted chain-link fence. The irrigation system would be connected to the City's reclaimed water system, thus eliminating the use of the City's potable water for landscape purposes. In addition, the warehouse would be dual plumbed with recycled water for toilet flushing inside the warehouse building.



### Storm Drainage

Stormwater runoff would be directed via an on-site storm drain system into a detention/bioretention pond located on the western side of the site. Roof drainage would be connected to the proposed detention/bioretention pond via the on-site storm drain system surrounding the building by way of down spouts on the exterior of the building, which would be painted to blend-in with the building façade.

### Wetland Areas

The two existing, on-site wetland areas would be preserved in place (see Exhibit 2-4b).

THIS PAGE INTENTIONALLY LEFT BLANK

## Utilities

### *Water*

The City of American Canyon would provide potable and recycled water service to the proposed project. Potable and recycled water infrastructure currently exists within Commerce Court. Service laterals would extend from the Commerce Court water lines to project building.

### *Wastewater*

The City of American Canyon would provide wastewater collection and treatment service to the proposed project. Sewer infrastructure currently exists within Commerce Court. Connection back to the existing City sewer infrastructure in Commerce Court would be made through the existing sanitary sewer system and lift station that was previously designed and constructed on the Commerce 330 site for future shared use with the proposed project.

### *Electricity*

Pacific Gas and Electric Company (PG&E) would deliver electricity to the proposed project. Electric infrastructure currently exists within Commerce Court. Service laterals would extend from the Commerce Court facilities to project buildings. No natural gas would be used. Solar would be installed on the building roof top and would produce an estimated 235,000 kilowatt-hour (kWh) per year. The intent of the solar system is to supplement the power consumed by items such as exterior lighting, parking lot lights, interior warehouse lighting and a portion of the building's refrigeration system.

### *Telecommunications Services*

Telephone service provided by AT&T would be extended from the existing underground infrastructure in the Commerce Court right-of-way to the electrical room located in the northeast corner of the building.

## Off-site Improvements

A small portion of the development extends beyond the parcel boundaries to the north and south of the project site in order to provide parking lot and circulation connectivity. The properties to the north and south of the project site are under related ownership as the proposed project and the potential impacts associated with development and site disturbance on those parcels was analyzed in previous California Environmental Quality Act (CEQA) documentation.[1,2]

## Construction

Construction would occur in a single phase, lasting approximately 11 months. For this analysis, construction is assumed to start in September 2024. During the construction phase, 12 to 24 workers would be at the site, with a maximum near to 80 and a minimum of one. Construction hours would be from 7:00 a.m. to 6:00 p.m. Monday through Friday. Construction of the concrete building slab,

[1] City of American Canyon. 2021. Commerce 217 Distribution Center Project Initial Study/Mitigated Negative Declaration. Website: https://ceqanet.opr.ca.gov/2020120302/2. Accessed August 16, 2023.
[2] City of American Canyon. 2018. SDG 330 Wine Warehouse Project Initial Study/Mitigated Negative Declaration. Website: https://ceqanet.opr.ca.gov/2018112067. Accessed August 16, 2023.

wall panels and large concrete paving pours would be required to be performed during nighttime hours starting no earlier than 12:00 a.m. Pre-notification of these night pour dates and times would be provided to the City and property owners in the vicinity. Typical construction equipment that would be used at the site would include self-loading dirt scraper, bulldozer, motor grader, compactor, roller, water truck, backhoe, excavator, trencher, drilling auger, front end loader, paving machine, laser screed, concrete finishing trowels, tractor, crane, forklift, generator, man lift, scissor lift, welding machine, and light tower. Less than 1,000 cubic yards of imported soil would be required for grading.

## 2.4 - Project Objectives

The objectives of the proposed project are to:

1. Positively contribute to the local economy through new capital investment, the creation of new jobs, and the expansion of the tax base.
2. Develop land to its highest and best use.
3. Continue the buildout of the City of American Canyon in accordance with the General Plan.
4. Meet regional demand for wine warehousing by adding to the inventory of this space.
5. Develop nonresidential uses on the project site that are compatible with the City of American Canyon's Water Reclamation Facility and the Napa County Airport.
6. Maximize the efficient use of land by developing an industrial project at the upper end of the allowable Floor Area Ratio range.
7. Complete the buildout of the SDG Commerce development.
8. Protect North Slough by employing stormwater pollution prevention measures during construction and operation.
9. Provide development fees to the American Canyon Fire Protection District to fund the development of a new fire station.

## 2.5 - Intended Uses of this Draft EIR

This Draft EIR is being prepared by the City of American Canyon to assess the potential environmental impacts that may arise in connection with actions related to implementation of the proposed project. Pursuant to CEQA Guidelines Section 15367, the City of American Canyon is the lead agency for the proposed project and has discretionary authority over the proposed project and project approvals. The Draft EIR is intended to address all public infrastructure improvements and all future development proposals that are within the parameters of the proposed project.

### 2.5.1 - Discretionary and Ministerial Actions

Discretionary approvals and permits are required by the City of American Canyon for implementation of the proposed project. The proposed project would require the following discretionary approvals and actions, including:

- Conditional Use Permit

Subsequent ministerial actions would be required for the implementation of the proposed project including issuance of grading and building permits.

### 2.5.2 - Responsible and Trustee Agencies

A number of other agencies in addition to the City of American Canyon will serve as Responsible and Trustee Agencies, pursuant to CEQA Guidelines Section 15381 and Section 15386, respectively. This Draft EIR will provide environmental information to these agencies and other public agencies, which may be required to grant approvals or coordinate with other agencies, as part of project implementation. These agencies may include, but are not limited to, the following:

- United States Army Corps of Engineers (USACE)
- California Department of Fish and Wildlife (CDFW)
- San Francisco Bay Regional Water Quality Board (San Francisco Bay RWQCB)
- County of Napa
- Napa County Airport Land Use Commission (ALUC)
- Napa Valley Unified School District (NVUSD)

THIS PAGE INTENTIONALLY LEFT BLANK

# CHAPTER 3: ENVIRONMENTAL IMPACT ANALYSIS

## Organization of Issue Areas

This Draft Environmental Impact Report (Draft EIR) provides analysis of impacts for those environmental topics where it was determined in the Notice of Preparation (NOP), or through subsequent analysis, that the proposed project would result in "potentially significant impacts." Sections 3.1 through 3.14 discuss the environmental impacts that may result with approval and implementation of the proposed project.

## Issues Addressed in this EIR

The following environmental issues are addressed in Chapter 3:

- Aesthetics, Light, and Glare
- Air Quality
- Biological Resources
- Cultural Resources and Tribal Cultural Resources
- Energy
- Geology, Soils, and Seismicity
- Greenhouse Gas Emissions
- Hazards and Hazardous Materials
- Hydrology and Water Quality
- Land Use
- Noise
- Public Services
- Transportation
- Utilities and Service Systems

## Level of Significance

Determining the severity of project impacts is fundamental to achieving the objectives of the California Environmental Quality Act (CEQA). CEQA Guidelines Section 15091 requires that decision makers mitigate, as completely as is feasible, the significant impacts identified in the Draft EIR. If the EIR identifies any significant unmitigated impacts, CEQA Guidelines Section 15093 requires decision makers in approving a project to adopt a statement of overriding considerations that explains why the benefits of the project outweigh the adverse environmental consequences identified in the EIR.

The level of significance for each impact examined in this Draft EIR was determined by considering the predicted magnitude of the impact against the applicable threshold. Thresholds were developed using criteria from the CEQA Guidelines and checklist; State, federal, and local regulatory schemes; local/regional plans and ordinances; accepted practice; consultation with recognized experts; and other professional opinions.

## Impact Analysis and Mitigation Measure Format

The format adopted in this Draft EIR to present the evaluation of impacts is described and illustrated below.

## Summary Heading of Impact

**Impact AES-1:** **An impact summary heading appears immediately preceding the impact description (Summary Heading of Impact in this example). The impact number identifies the section of the report (AES for Aesthetics, Light, and Glare in this example) and the sequential order of the impact (1 in this example) within that section. To the right of the impact number is the impact statement, which identifies the potential impact.**

### *Impact Analysis*

A narrative analysis follows the impact statement.

### *Level of Significance Before Mitigation*

This section identifies the level of significance of the impact before any mitigation is proposed.

### *Mitigation Measures*

In some cases, following the impact discussion, reference is made to State and federal regulations and agency policies that would fully or partially mitigate the impact. In addition, policies and programs from applicable local land use plans that partially or fully mitigate the impact may be cited.

Project-specific mitigation measures, beyond those contained in other documents, are set off with a summary heading and described using the format presented below:

**MM AES-1** Project-specific mitigation is identified that would reduce the impact to the lowest degree feasible. The mitigation number links the particular mitigation to the impact it is associated with (**AES-1** in this example); mitigation measures are numbered sequentially.

### *Level of Significance After Mitigation*

This section identifies the resulting level of significance of the impact following mitigation.

Abbreviations used in the mitigation measure numbering are:

| Code | Environmental Issue |
|---|---|
| AES | Aesthetics, Light, and Glare |
| AIR | Air Quality |
| BIO | Biological Resources |
| CUL | Cultural Resources and Tribal Cultural Resources |
| ENER | Energy |
| GEO | Geology, Soils, and Seismicity |
| GHG | Greenhouse Gas Emissions |

| Code | Environmental Issue |
|---|---|
| HAZ | Hazards and Hazardous Materials |
| HYD | Hydrology and Water Quality |
| LU | Land Use |
| NOI | Noise |
| PUB | Public Services |
| TRANS | Transportation |
| UTIL | Utilities and Service Systems |

## Cumulative Impacts

The discussion of cumulative impacts in this subsection analyzes the cumulative impacts of the proposed project, taken together with other past, present, and reasonably foreseeable future projects producing related impacts. The goal of this analysis is to determine whether the overall long-term impacts of all such projects would be cumulatively significant and to determine whether the project itself would cause a "cumulatively considerable" incremental contribution to any such cumulatively significant impacts. To determine whether the overall long-term impacts of all such projects would be cumulatively significant, the analysis generally considers the following:

- The area in which impacts of the proposed project would be experienced.
- The impacts of the proposed project that are expected in the area.
- Other past, proposed, and reasonably foreseeable projects that have had or are expected to have impacts in the same area.
- The impacts or expected impacts of these other projects.
- The overall impact that can be expected if the individual impacts from each project are allowed to accumulate.

"Cumulative impacts" refers to two or more individual impacts that, when considered together, are considerable, or that compound or increase other environmental impacts (CEQA Guidelines § 15355). Cumulative impacts can result from individually minor but collectively significant impacts taking place over time (40 Code of Federal Regulations [CFR] 1508.7). If the analysis determines that the potential exists for the project, taken together with other past, present, and reasonably foreseeable future projects, to result in a significant or adverse cumulative impact, the analysis then determines whether the project's incremental contribution to any significant cumulative impact is itself significant (i.e., "cumulatively considerable"). The cumulative impact analysis for each individual resource topic is presented in each resource section of this Chapter immediately after the description of the direct project impacts and identified mitigation measures.

The cumulative impact analysis is guided by the requirements of CEQA Guidelines Section 15130. Key principles established by this section include:

- A cumulative impact only occurs from impacts caused by the proposed project together with other projects. An EIR should not discuss impacts that do not result from the proposed project.
- When the combined cumulative impact from the increment associated with the proposed project and other projects is not significant, an EIR need only briefly explain why the impact is not significant; detailed explanation is not required.
- An EIR may determine that a project's contribution to a cumulative effect impact would be rendered less than cumulatively considerable if a project is required to implement or fund its fair share of mitigation intended to alleviate the cumulative impact.

The cumulative impact analysis relies on these principles as the basis for determining the significance of the proposed project's cumulative contribution to various impacts.

Table 3-1 lists the relevant cumulative projects considered for the environmental analysis.

**Table 3-1: Cumulative Projects**

| Jurisdiction | Project | Location | Characteristics | Status |
|---|---|---|---|---|
| City of American Canyon | Giovannoni Logistics Center | Green Island Road/Devlin Road | 2.4 million square-foot logistics center | Approved; not constructed |
| | SDG Commerce 217 | 1075 Commerce Court | 217,294 square-foot wine warehouse | Approved; under construction |
| | Pacific Gas and Electric Company (PG&E) Napa Regional Center | 500 Boone Road | 99,503 square-foot maintenance and operations center on 24.5 acres | Approved; under construction |
| | Green Island Road Widening | Green Island Road between State Route (SR) 29 and a cul-de-sac | Reconstruction of roadway; addition of a two-way left-turn lane, curb, gutter, sidewalks; construction of the Napa Valley Vine Trail | Approved; not constructed |
| | Napa-Vallejo Waste Management Authority Construction and Demolition Debris Recycling Facility | South Kelly Road/Devlin Road (southwest quadrant) | Enclosed construction and demolition debris recycling facility on 9 acres | Awaiting application |
| | Napa Airport Corporate Center | South Kelly Road/Devlin Road (southeast quadrant) | 300,000 square-foot business park on 35 acres | Approved; not constructed |
| | | | | |

| Jurisdiction | Project | Location | Characteristics | Status |
|---|---|---|---|---|
| | Watson Ranch Specific Plan | East of Napa Junction | 1,253 market rate dwelling units; 186 affordable housing units; 50 live/work units; 93,500-square-feet commercial; 100-room hotel | Approved; under construction |
| | Broadway District Specific Plan | SR-29 corridor from the southern city limit to Green Island Road | 1,200 dwelling units; 840,000 square feet of nonresidential uses within 300 acres | Approved; under Construction |
| **Napa County** | Sentinels of Freedom Property | West Napa Logistics; South of Napa County Airport | Two warehouses (224,593 square feet and 217,294 square feet) on 20.56 acres | Awaiting application |
| | Hess Collection/Laird Family General Plan Amendment and Rezoning | East of SR-29 from S. Kelly Road to Paoli Loop Road | 4.5 million square feet industrial project on 279 acres | Application in process |
| Source: City of American Canyon. 2024. | | | | |

THIS PAGE INTENTIONALLY LEFT BLANK

# 3.1 - Aesthetics, Light, and Glare

## 3.1.1 - Introduction

This section describes the existing aesthetics, light, and glare setting and potential effects from project implementation on visual resources and the site and its surroundings. Descriptions and analysis in this section are based on-site reconnaissance conducted by FirstCarbon Solutions (FCS), as well as review of the City of American Canyon General Plan.

No public comments pertaining to aesthetics, light, and glare were received in response to the Notice of Preparation (NOP).

## 3.1.2 - Environmental Setting

### Regional Setting

American Canyon is located in southern Napa County between the east bank of the Napa River and the Sulfur Springs Mountains foothills. State Route (SR) 29—known locally as Broadway Street—bisects the City from north to south and serves as the primary commercial corridor. Residential uses are generally located in the southern portion of the City, with commercial and industrial uses located in the northern portion near the Napa County Airport. American Canyon is characterized by a contemporary, low-rise, suburban appearance, with most development having occurred within the last 50 years.

### Project Site

The project site contains undeveloped land (Exhibit 2-3). The project site gently slopes downward from east to west and is approximately 13 to 25 feet above mean sea level. A linear wetland and another isolated wetland are located within the northern portion of the property. The project frontage with Commerce Court is improved with curb, gutter, and sidewalk. The southern portion of the project site contains several soil stockpiles that are intended for use at the SDG Commerce 217 property during construction of that site's entitled wine distribution warehouse.

### Surrounding Land Uses

#### *West*

A Eucalyptus grove and North Slough are located west of the project site. The American Canyon Water Reclamation Facility is located west of North Slough.

#### *North*

An undeveloped parcel entitled for a wine distribution warehouse known as SDG Commerce 217 is located north of the project site. This parcel totals 10.39 acres.

#### *East*

Commerce Court, a two-lane undivided roadway, forms the eastern boundary of the project site. A Eucalyptus grove is located east of Commerce Court.

### *South*

A wine distribution warehouse known as SDG Commerce 330 is located south of the project site. This parcel totals 15.24 acres. The Napa Junction Magnet Elementary School, Wetlands Edge Park, and residential uses are located to the south and are accessed from Eucalyptus Drive.

### Light and Glare

The project site does not currently contain any sources of light and glare. Parking lot lights that employ full cut-off fixtures are present at the adjoining Commerce SDG 330 warehouse. Street lighting is present along Commerce Court.

## 3.1.3 - Regulatory Framework

### Local

#### *City of American Canyon*

*General Plan*

The City of American Canyon General Plan sets forth the following goals, objectives, and policies relevant to aesthetics, light, and glare:

**Goal 1B** Provide for the orderly development of American Canyon that maintains its distinctive character.

**Goal 1C** Create a pattern and character of land use development that establishes American Canyon as a distinct "place" differentiated from adjacent urban areas, maintains a semi-rural character, and respects the environmental setting.

**Objective 1.4** Provide for a pattern of development that (a) establishes distinct neighborhoods, districts, places of community activity and culture and open spaces that are interlinked and promote a cohesive image, (b) locates jobs, commerce, recreation, and other places of community activity within close proximity to all housing units, minimizing the need for vehicular use, (c) achieves a balance of uses to serve both sides of Highway 29, and (d) establishes an overall compact urban form surrounded by open space.

**Objective 1.5** Maintain the character and quality of the natural environmental resources of the City and protect the population and development from the adverse impacts of environmental hazards.

**Policy 1.22.4** Require that development be designed to achieve a high level of quality and compatibility with existing uses including the consideration of the following:

a. Architectural treatment of all building elevations;
b. Use of extensive landscape along the primary street frontages and parking lots; and

c. Enclosure of storage areas visible from principal highways (including Highway 29) and peripheral residential and commercial districts with decorative screening or other elements.

**Policy 1.22.5** Require that industrial areas developed as research and development and office-oriented business parks be designed to convey a unified character by consideration of Policy 1.22.4 and the following:

a. Inclusion of pedestrian walkways, arcades, and/or other visual elements to interconnect individual buildings;
b. Differentiation of building façades by materials, color, architectural details and modulation of building volumes;
c. Incorporation of extensive landscape in parking areas, along building frontages, and other public areas;
d. Use of consistent and well-designed public and informational signage; and
e. Installation of elements that define the key entries to the industrial district.

*Municipal Code 19.21.020(M), Lighting*

Municipal Code Section 19.21.020(M), Lighting, requires that public parking with three or more vehicle parking spots shall have lighting facilities capable of providing sufficient illumination at every point of the parking area and that a lighting study may be required by the community development director. Further, all parking area illumination, including security lighting, shall be designed to reflect away from adjoining properties and right-of-way.

*Municipal Code 19.41, Design Permits*

A design permit application must be approved by the community development director or planning commission prior to building construction or alteration, including commercial structures and industrial structures. The purpose of the design permit is to provide for a review process that promotes excellence in site planning and architectural design, consistent with General Plan design policies, encourages the harmonious appearance of buildings and sites, ensures that new and modified uses and development are compatible with existing and potential uses in the surrounding area, and produce an environment of stable, desirable character.

*Municipal Code 19.42, Conditional Use Permits*

A conditional use permit application shall incorporate concurrent applications, such as a design permit application when applicable. The Planning Commission is the approval authority for a conditional use permit application unless the application is subject to Municipal Code 19.01(C,D), Relationship to other Regulations and Requirements.

*Municipal Code 19.01(C,D), Relationship to other Regulations and Requirements*

A discretionary application that is subject to a CEQA environmental review that requires a statement of overriding considerations shall be approved by the City Council.

## 3.1.4 - Methodology

FCS evaluated potential aesthetics, light, and glare impacts through site reconnaissance conducted in November 2022, as well as review of the City of American Canyon General Plan and project plans.

## 3.1.5 - Thresholds of Significance

The lead agency utilizes the criteria in the California Environmental Quality Act (CEQA) Guidelines Appendix G Environmental Checklist to determine whether impacts to aesthetics are significant environmental effects. Except as provided in Public Resources Code Section 21099, would the project:

a) Have a substantial adverse effect on a scenic vista? (Refer to Section 7, Effects Found not to be Significant).

b) Substantially damage scenic resources, including, but not limited to, trees, rock outcroppings, and historic building within a State Scenic Highway? (Refer to Section 7, Effects Found not to be Significant).

c) In non-urbanized areas, substantially degrade the existing visual character or quality of public views of the site and its surroundings? (Public views are those that are experienced from publicly accessible vantage point). If the project is in an urbanized area, would the project conflict with applicable zoning and other regulations governing scenic quality?

d) Create a new source of substantial light or glare which would adversely affect day or nighttime views in the area?

## 3.1.6 - Project Impacts and Mitigation Measures

This section discusses potential impacts associated with the development of the project and provides mitigation measures where appropriate.

### Visual Character

| | |
|---|---|
| **Impact AES-1:** | **The proposed project, located in a non-urbanized area, would not substantially degrade the existing visual character or the quality of public views of the site and its surroundings. (Public views are those that are experienced from a publicly-accessible vantage point.)** |

#### *Impact Analysis*

Per Public Resources Code Section 21071, an urbanized area includes an incorporated city that has a population of at least 100,000 persons. The project site is located within the City of American Canyon, which has a population of 21,338 as of January 1, 2023[1] and is therefore not considered an urbanized area. Public views of the site are limited to those as seen from Commerce Court and partially obscured views as seen from portions of Napa Junction Magnet Elementary School.

The project site is undeveloped and slopes gently downward from east to west. Site elevation ranges from 13 to 25 feet above mean sea level. The southern portion of the project site contains a large

[1] California Department of Finance. 2023. Report E-1: Population Estimates for Cities, Counties, and the State, January 1, 2022 and 2023. Website: https://dof.ca.gov/forecasting/demographics/estimates-e1/. Accessed November 6, 2023.

soil mound that is intended for use on the SDG Commerce 217 property during construction of that site's entitled wine distribution warehouse. A linear wetland and another isolated wetland are located within the northern portion of the property. The project frontage with Commerce Court is improved with curb, gutter, and sidewalk.

The project vicinity is characterized by industrial development and eucalyptus groves. The industrial development is primarily warehouses. The project is bounded on the north by the SDG Commerce 217 Wine Storage and Distribution Center currently under construction. To the west is an 11.23-acre parcel which remains unimproved with a eucalyptus tree grove and a wire fence; to the south is the SDG Commerce 330 Distribution Center; to the east is a 68-foot-wide City Public Access and Utility Easement within the Commerce Court Extension; to the east of this easement is a 40-acre parcel that is improved with a mobile home, dirt/gravel roads, and a Paintball Jungle recreational business consisting of various sheds and lean-to structures and wire fences.

The proposed project consists of the development of a 219,834-square foot wine warehouse. The proposed project would have a floor area ratio (FAR) of 0.496 (Exhibit 2-5 and Exhibit 3.1-1).

Construction of the project would temporarily employ construction-related equipment. Because construction is a temporary activity it is not expected to significantly impact visual character or quality of the site and its surroundings.

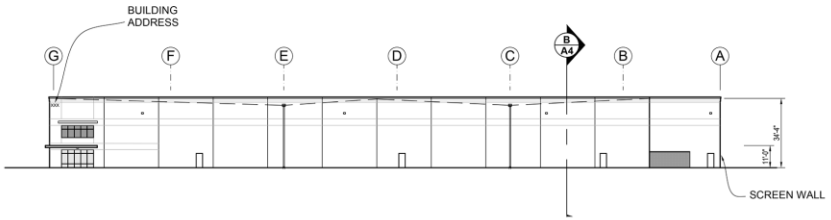
The proposed warehouse would be similar in appearance to other similar structures in the Green Island Business Park, particularly the adjacent SDG Commerce 330 building to the south and the future SDG Commerce 217 building to the north. The proposed warehouse would employ earth-tone colors and would have perimeter concrete tilt wall panels with varying parapet heights, as well as accent spandrel glass/metal canopy features around corners of the buildings to provide additional modulation. The average roof height of the building would be approximately 35 feet and portions of the building's exterior walls would have varying heights to provide architectural relief. The proposed use would be consistent with the City of American Canyon General Plan land use designation of "Commercial Recreation" and zoning designation of "Recreation" for the project site and would be similar to and compatible with surrounding wine distribution warehouse uses (See Section 3.9, Land Use and Planning for further discussion). Furthermore, approval by the community development director or planning commission of a design permit for the project is required by Municipal Code 19.41.030, which requires, among other things, review of site plans and architectural design, General Plan consistency, and compatibility with existing and potential uses in the surrounding area. Therefore, the proposed project would not substantially degrade the existing visual character or the quality of public views of the site and its surroundings. Impacts would be less than significant.

### *Level of Significance Before Mitigation*

Less than significant impact.

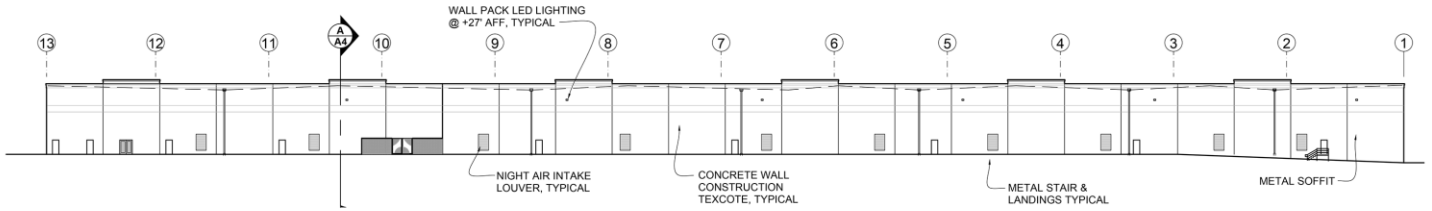
### *Mitigation Measures*

No mitigation is necessary.



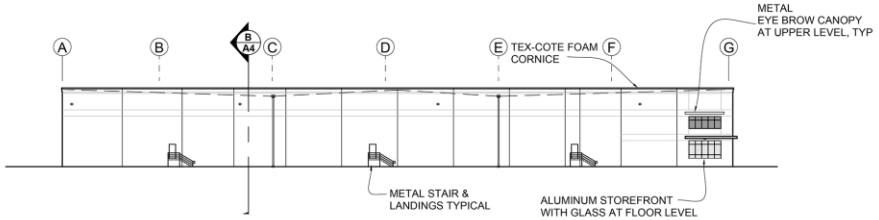
## Light and Glare

**Impact AES-2: The proposed project would not create a new source of substantial light or glare which could adversely affect day or nighttime views in the area.**

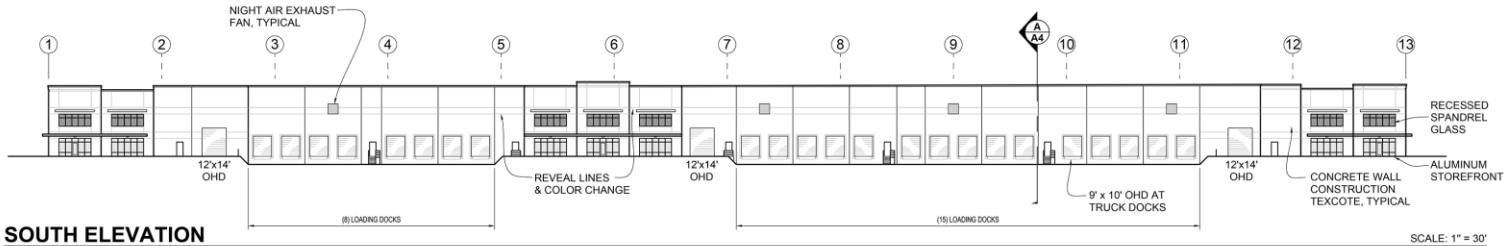


### *Impact Analysis*

The project site does not currently contain any existing sources of light and glare. The adjacent SDG Commerce 330 property contains parking lot lights that employ full cut-off fixtures.



The development of the proposed project would result in the installation of new sources of light and glare on the project site during both construction and operation. Construction lighting would be minimal and temporary; operational exterior lighting would include building mounted light fixtures and pole-mounted light fixtures within parking areas surrounding the building.



**EAST ELEVATION** SCALE: 1" = 30'

**NORTH ELEVATION** SCALE: 1" = 30'

FIRSTCARBON SOLUTIONS™

# Exhibit 3.1-1
# Conceptual Building Elevations

THIS PAGE INTENTIONALLY LEFT BLANK

Parking lot lighting would be consistent with requirements of the City of American Canyon Municipal Code 19.21.020(M), including direction of lighting away from adjoining properties and right-of-way. The lights would be "shoebox" fixtures, typically 30 feet in height, which are designed with dimmable light-emitting diode (LED) fixtures that direct light toward the ground to reduce glare to surrounding properties. A photometric study would be prepared to analyze the light pole spacing to maximize light coverage while minimizing excessive light spillage off-site. Illuminated signage may also be employed.

A conditional use permit application submittal and approval would be required per Municipal Code Section 19.05.020. The conditional use permit application would be reviewed per the procedures and general standards outlined in Municipal Code Chapter 19.42, which include consistency with the standards of the General Plan and applicable zoning district as well as compliance with applicable policies of the Napa County Airport Land Use Compatibility Plan. With the compulsory implementation of applicable municipal codes, including, but not limited to design permit approval, impacts related to light and glare would be less than significant.

### *Level of Significance Before Mitigation*

Less than significant impact.

### *Mitigation Measures*

No mitigation is necessary.

## 3.1.7 - Cumulative Impacts

The geographic scope of the cumulative aesthetics, light, and glare analysis is the 0.25-mile radius surrounding the project site. This is the area within view of the project site and, therefore, the area most likely to experience cumulative changes in visual character or experience cumulative light and glare impacts.

Several of the projects listed in Table 4-1 are immediately adjacent to or within 0.25 mile of the project site (e.g., SDG Commerce 217).

The project site and the surrounding area have long been planned to accommodate industrial uses and are isolated and separate from the residential areas of the City. The existing surrounding uses are large industrial uses. The City of American Canyon General Plan designates the project site as "Commercial Recreation," and the American Canyon Zoning Ordinance zones the project site as "Recreation." Both land use designations permit the types of end uses envisioned by the proposed project. Other existing, approved, and reasonably foreseeable future developments would similarly be required to comply with applicable land use and zoning.

The project as proposed would be compatible with surrounding industrial uses and would be consistent with the City of American Canyon General Plan land use designation and zoning for the project site. A Design Permit would be required from the City to approve the specific building and site design, including building height. Other past projects, present projects under construction, and reasonably foreseeable projects in the surrounding area would be subject to similar landscaping and design requirements. Therefore, the proposed project, in conjunction with other past, present, and

reasonably foreseeable projects, would not result in cumulatively significant visual character impacts.

The past, present, and reasonably foreseeable developments near the project site have contributed to—and will continue to contribute to—ambient light and glare in the project vicinity. The proposed project would install new sources of light and glare on the project site from exterior building lighting, security lighting, and lights and glare associated with vehicles accessing the project site. Compulsory compliance with Municipal Code lighting and design permit requirements would ensure that light and glare would be minimized to the extent feasible. Other past, present, and reasonably foreseeable future developments in the project vicinity that involve the installation of new exterior lighting fixtures have been and would be required to implement similar standard measures to prevent light spillage. Therefore, the proposed project, in conjunction with other past, present, and reasonably foreseeable projects in the applicable geographic area, would not have a cumulatively significant impact related to light and glare.

### *Level of Cumulative Significance Before Mitigation*

Less than significant impact.

### *Mitigation Measures*

No mitigation is necessary.

# 3.2 - Air Quality

This section describes existing air quality conditions regionally and locally as well as the relevant regulatory framework. This section also evaluates the possible impacts related to air quality that could result from implementation of the project. Information included in this section is based on project-specific air quality modeling results utilizing California Emissions Estimator Model (CalEEMod) Version 2022.1 and the United States Environmental Protection Agency (EPA) American Meteorological Society Regulatory Model (AERMOD) air dispersion model (Version 22112). Complete modeling output is provided in Appendix B.

The following public comments were received during the Environmental Impact Report (EIR) scoping period related to air quality.

- Requests that the Department of Justice best practices and mitigation measures for warehouses[1] be incorporated into the proposed project.
- Concern regarding the project's diesel truck emissions and associated health impacts.

## 3.2.1 - Environmental Setting

### Regional Geography and Climate

Air quality is affected by the rate and location of pollutant emissions and by climatic conditions that influence the movement and dispersion of pollutants. Atmospheric conditions, such as wind speed, wind direction, and air temperature gradients, along with local and regional topography, influence the relationship between air pollutant emissions and air quality.

The project site is in the San Francisco Bay Area Air Basin (SFBAAB), which consists of Alameda, Contra Costa, Marin, Napa, San Francisco, San Mateo, Santa Clara, southwestern Solano, and southern Sonoma Counties. SFBAAB covers approximately 5,540 square miles of complex terrain, consisting of coastal mountain ranges, inland valleys, and the San Francisco Bay. The SFBAAB is generally bounded on the west by the Pacific Ocean, on the north by the Coast Ranges, and on the east and south by the Diablo Range.

The climate within the SFBAAB is dominated by a strong, semi-permanent, subtropical high-pressure cell over the northeastern Pacific Ocean. Climate is also affected by the adjacent oceanic heat reservoir's moderating effects. Mild summers and winters, moderate rainfall and humidity, and daytime onshore breezes characterize regional climatic conditions in the San Francisco Bay Area (Bay Area). In summer, when the high-pressure cell is strongest and farthest north, fog forms in the morning and temperatures are mild. In winter, when the high-pressure cell is weakest and farthest south, occasional rainstorms occur.

[1] California Department of Justice. Warehouse Projects: Best Practices and Mitigation Measures to Comply with the California Environmental Quality Act. Website: https://oag.ca.gov/system/files/media/warehouse-best-practices.pdf. Accessed November 28, 2023.

Winter daytime temperatures in the SFBAAB typically average in the mid-50°F (degrees Fahrenheit), with nighttime temperatures averaging in the low 40°F. Summer daytime temperatures typically average in the 70°F, with nighttime temperatures averaging in the 50°F. Precipitation varies in the region, but in general, annual rainfall is lowest in the coastal plain and inland valley, higher in the foothills, and highest in the mountains.

## Air Pollutant Types, Sources, and Effects

### *Criteria Air Pollutants*

Concentrations of criteria air pollutants are used as indicators of air quality conditions. Air pollutants are termed criteria air pollutants if they are regulated by developing specific public health- and welfare-based criteria as the basis for setting permissible levels. According to the EPA, criteria air pollutants are ozone, particulate matter ($PM_{10}$ and $PM_{2.5}$), nitrogen dioxide ($NO_2$), carbon monoxide (CO), lead, and sulfur dioxide ($SO_2$). Table 3.2-1 provides a summary of the types, sources, and effects of criteria air pollutants.

**Table 3.2-1: Description of Criteria Pollutants of National and California Concern**

| Criteria Pollutant | Physical Description and Properties | Sources | Most Relevant Effects from Pollutant Exposure |
|---|---|---|---|
| Ozone | Ozone is a photochemical pollutant as it is not emitted directly into the atmosphere, but is formed by a complex series of chemical reactions between volatile organic compounds (VOC), nitrous oxides ($NO_X$), and sunlight. Ozone is a regional pollutant that is generated over a large area and is transported and spread by the wind. | Ozone is a secondary pollutant; thus, it is not emitted directly into the lower level of the atmosphere. The primary sources of ozone precursors (VOC and $NO_X$) are mobile sources (on-road and off-road vehicle exhaust). | Irritate respiratory system; reduce lung function; breathing pattern changes; reduction of breathing capacity; inflame and damage cells that line the lungs; make lungs more susceptible to infection; aggravate asthma; aggravate other chronic lung diseases; cause permanent lung damage; some immunological changes; increased mortality risk; vegetation and property damage. |
| Particulate matter ($PM_{10}$)<br>Particulate matter ($PM_{2.5}$) | Suspended particulate matter is a mixture of small particles that consist of dry solid fragments, droplets of water, or solid cores with liquid coatings. The particles vary in shape, size, and composition. $PM_{10}$ refers to particulate matter that is between 2.5 and 10 microns in diameter, (one micron is one-millionth of a meter). $PM_{2.5}$ refers to particulate matter that is 2.5 microns or less in diameter, about one-thirtieth the size of the average human hair. | Stationary sources include fuel or wood combustion for electrical utilities, residential space heating, and industrial processes; construction and demolition; metals, minerals, and petrochemicals; wood products processing; mills and elevators used in agriculture; erosion from tilled lands; waste disposal, and recycling. Mobile or transportation-related sources are from | • Short-term exposure (hours/days): irritation of the eyes, nose, throat; coughing; phlegm; chest tightness; shortness of breath; aggravate existing lung disease, causing asthma attacks and acute bronchitis; those with heart disease can suffer heart attacks and arrhythmias.<br>• Long-term exposure: reduced lung function; chronic bronchitis; changes in lung morphology; death. |

| Criteria Pollutant | Physical Description and Properties | Sources | Most Relevant Effects from Pollutant Exposure |
|---|---|---|---|
| | | vehicle exhaust and road dust. Secondary particles form from reactions in the atmosphere. | |
| Nitrogen dioxide ($NO_2$) | During combustion of fossil fuels, oxygen reacts with nitrogen to produce nitrogen oxides—$NO_X$ (NO, $NO_2$, $NO_3$, $N_2O$, $N_2O_3$, $N_2O_4$, and $N_2O_5$). $NO_X$ is a precursor to ozone, $PM_{10}$, and $PM_{2.5}$ formation. $NO_X$ can react with compounds to form nitric acid and related small particles and result in particulate matter (PM) related health effects. | $NO_X$ is produced in motor vehicle internal combustion engines and fossil fuel-fired electric utility and industrial boilers. Nitrogen dioxide forms quickly from $NO_X$ emissions. $NO_2$ concentrations near major roads can be 30 to 100 percent higher than those at monitoring stations. | Potential to aggravate chronic respiratory disease and respiratory symptoms in sensitive groups; risk to public health implied by pulmonary and extra-pulmonary biochemical and cellular changes and pulmonary structural changes; contributions to atmospheric discoloration; increased visits to hospital for respiratory illnesses. |
| Carbon monoxide (CO) | CO is a colorless, odorless, toxic gas. CO is somewhat soluble in water; therefore, rainfall and fog can suppress CO conditions. CO enters the body through the lungs, dissolves in the blood, replaces oxygen as an attachment to hemoglobin, and reduces available oxygen in the blood. | CO is produced by incomplete combustion of carbon-containing fuels (e.g., gasoline, diesel fuel, and biomass). Sources include motor vehicle exhaust, industrial processes (metals processing and chemical manufacturing), residential wood-burning, and natural sources. | Ranges depending on exposure: slight headaches; nausea; aggravation of angina pectoris (chest pain) and other aspects of coronary heart disease; decreased exercise tolerance in persons with peripheral vascular disease and lung disease; impairment of central nervous system functions; possible increased risk to fetuses; death. |
| Sulfur dioxide ($SO_2$) | Sulfur dioxide is a colorless, pungent gas. At levels greater than 0.5 parts per million (ppm), the gas has a strong odor, similar to rotten eggs. Sulfur oxides ($SO_X$) include sulfur dioxide and sulfur trioxide. Sulfuric acid is formed from sulfur dioxide, which can lead to acid deposition and can harm natural resources and materials. Although sulfur dioxide concentrations have been reduced to levels well below State and federal standards, further reductions are desirable because sulfur dioxide is a precursor to sulfate and $PM_{10}$. | Human caused sources include fossil fuel combustion, mineral ore processing, and chemical manufacturing. Volcanic emissions are a natural source of sulfur dioxide. The gas can also be produced in the air by dimethyl sulfide and hydrogen sulfide. Sulfur dioxide is removed from the air by dissolution in water, chemical reactions, and transfer to soils and ice caps. The sulfur dioxide levels in the State are well | Bronchoconstriction accompanied by symptoms which may include wheezing, shortness of breath and chest tightness, during exercise or physical activity in persons with asthma. Some population-based studies indicate that the mortality and morbidity effects associated with fine particles show a similar association with ambient sulfur dioxide levels. It is not clear whether the two pollutants act synergistically or one pollutant alone is the predominant factor. |

| Criteria Pollutant | Physical Description and Properties | Sources | Most Relevant Effects from Pollutant Exposure |
|---|---|---|---|
| | | below the maximum standards. | |
| Lead (Pb) | Lead is a solid heavy metal that can exist in air pollution as an aerosol particle component. Leaded gasoline was used in motor vehicles until around 1970. Lead concentrations have not exceeded State or federal standards at any monitoring station since 1982. | Lead ore crushing, lead ore smelting, and battery manufacturing are currently the largest sources of lead in the atmosphere in the United States. Other sources include dust from soils contaminated with lead-based paint, solid waste disposal, and crustal physical weathering. | Lead accumulates in bones, soft tissue, and blood and can affect the kidneys, liver, and nervous system. It can cause impairment of blood formation and nerve conduction, behavior disorders, mental retardation, neurological impairment, learning deficiencies, and low IQs. |

### *Toxic Air Contaminants*

Toxic air contaminants (TACs) are a diverse group of air pollutants that may cause or contribute to an increase in deaths or serious illness, or that may pose a present or potential hazard to human health. TACs include both organic and inorganic chemical substances that may be emitted from a variety of common sources, including gasoline stations, motor vehicles, dry cleaners, industrial operations,

painting operations, and research and teaching facilities. One of the main sources of TACs in California is diesel engine exhaust that contains solid material known as diesel particulate matter (DPM). More than 90 percent of DPM is less than one micron in diameter (about 1/70 the diameter of a human hair) and thus is a subset of PM with aerodynamic diameters equal to or less than 2.5 microns ($PM_{2.5}$). Because of their extremely small size, these particles can be inhaled and eventually trapped in the bronchial and alveolar regions of the lungs.[2]

TACs are different from criteria pollutants because ambient air quality standards have not been established for TACs. TACs occurring at extremely low levels may still cause health effects and it is typically difficult to identify levels of exposure that do not produce adverse health effects. TAC impacts are described by carcinogenic risk and by chronic (i.e., long duration) and acute (i.e., severe but of short duration) adverse effects on human health.

TACs include both organic and inorganic chemical substances. While DPM is a main source, TACs may be emitted from a variety of common sources, including gasoline stations, motor vehicles, dry cleaners, industrial operations, painting operations, and research and teaching facilities. People exposed to toxic air pollutants at sufficient concentrations and durations may have an increased chance of developing cancer or experiencing other serious health effects. These health effects can include damage to the immune system, as well as neurological, reproductive (e.g., reduced fertility), developmental, respiratory, and other health problems.[3]

## Air Quality

Air quality is a function of both the rate and location of pollutant emissions under the influence of meteorological conditions and topographic features. Atmospheric conditions such as wind speed, wind direction, and air temperature inversions interact with the physical features of the landscape to determine the movement and dispersal of air pollutant emissions and, consequently, their effect on air quality.

### *Regional Air Quality*

The Bay Area Air Quality Management District (BAAQMD) is the regional agency regulating air quality within the nine-county SFBAAB.

*Air Pollutant Standards and Attainment Designations*

Air pollutant standards have been adopted by the EPA and the California Air Resources Board (ARB) for the following six criteria air pollutants that affect ambient air quality: ozone, $NO_2$, CO, $SO_2$, lead, and PM, which is subdivided into two classes based on particle size: $PM_{10}$ and $PM_{2.5}$. These air pollutants are called “criteria air pollutants” because they are regulated by developing specific public health- and welfare-based criteria as the basis for setting permissible levels. California has also established standards for TACs such as visibility-reducing particles, sulfates, hydrogen sulfide ($H_2S$), and vinyl chloride. $H_2S$ is regulated as a nuisance based on its odor detection level. If the standard were based on adverse health effects, it would be set at a much higher level. Vinyl chloride is a TAC

[2] California Air Resources Board (ARB). Inhalable Particulate Matter and Health ($PM_{2.5}$ and $PM_{10}$). Website: https://ww2.arb.ca.gov/resources/inhalable-particulate-matter-and-health. Accessed November 29, 2023.

[3] United States Environmental Protection Agency (EPA). Health and Environmental Effects of Hazardous Air Pollutants. Website: https://www.epa.gov/haps/health-and-environmental-effects-hazardous-air-pollutants. Accessed November 29, 2023.

and currently regulated as one, but California established a need to regulate it with a health-based "criteria" prior to the establishment of their toxics programs. Table 3.2-2, below, shows the federal and State air quality standards for various components.

**Table 3.2-2: Federal and State Air Quality Standards in the SFBAAB**

| Air Pollutant | Averaging Time | California Standard | Federal Standard[a] |
|---|---|---|---|
| Ozone | 1 Hour | 0.09 ppm | — |
| | 8 Hour | 0.070 ppm | 0.070 ppm[f] |
| Nitrogen dioxide[b] ($NO_2$) | 1 Hour | 0.18 ppm | 0.100 ppm |
| | Annual | 0.030 ppm | 0.053 ppm |
| Carbon monoxide (CO) | 1 Hour | 20 ppm | 35 ppm |
| | 8 Hour | 9.0 ppm | 9 ppm |
| Sulfur dioxide[c] ($SO_2$) | 1 Hour | 0.25 ppm | 0.075 ppm |
| | 3 Hour | — | 0.5 ppm |
| | 24 Hour | 0.04 ppm | 0.14 (for certain areas) |
| | Annual | — | 0.030 ppm (for certain areas) |
| Lead[e] | 30-day | 1.5 µg/m$^3$ | — |
| | Quarter | — | 1.5 µg/m$^3$ |
| | Rolling 3-month average | — | 0.15 µg/m$^3$ |
| Particulate matter ($PM_{10}$) | 24 Hour | 50 µg/m$^3$ | 150 µg/m$^3$ |
| | Mean | 20 µg/m$^3$ | — |
| Particulate matter ($PM_{2.5}$) | 24 Hour | — | 35 µg/m$^3$ |
| | Annual | 12 µg/m$^3$ | 12.0 µg/m$^3$ |
| Visibility-reducing particles | 8 Hour | See note below[d] | |
| Sulfates | 24 Hour | 25 µg/m$^3$ | — |
| Hydrogen sulfide | 1 Hour | 0.03 ppm | — |
| Vinyl chloride[e] | 24 Hour | 0.01 ppm | — |

Notes:
µg/m$^3$ = micrograms per cubic meter
30-day = 30-day average
Annual = Annual Arithmetic Mean
ppm = parts per million (concentration)
Quarter = Calendar quarter

[a] Federal standard refers to the primary national ambient air quality standard, or the levels of air quality necessary, with an adequate margin of safety to protect public health. All standards listed are primary standards except for 3-hour $SO_2$, which is a secondary standard. A secondary standard is the level of air quality necessary to protect the public welfare from any known or anticipated adverse effects of a pollutant.

[b] To attain the 1-hour nitrogen dioxide national standard, the 3-year average of the annual 98th percentile of the 1-hour daily maximum concentrations at each site must not exceed 100 parts per billion (0.100 ppm).

| Air Pollutant | Averaging Time | California Standard | Federal Standarda |
|---|---|---|---|

[c] On June 2, 2010, a new 1-hour $SO_2$ standard was established, and the existing 24-hour and annual primary standards were revoked. To attain the 1-hour national standard, the 3-year average of the annual 99th percentile of the 1-hour daily maximum concentrations at each site must not exceed 75 parts per billion (ppb). The 1971 $SO_2$ national standards (24-hour and annual) remain in effect until one year after an area is designated for the 2010 standard, except that in areas designated nonattainment for the 1971 standards, the 1971 standards remain in effect until implementation plans to attain or maintain the 2010 standards are approved.

[d] Visibility-reducing particles: In 1989, the ARB converted both the general Statewide 10-mile visibility standard and the Lake Tahoe 30-mile visibility standard to instrumental equivalents, which are "extinction of 0.23 per kilometer" and "extinction of 0.07 per kilometer" for the Statewide and Lake Tahoe Air Basin standards, respectively.

[e] The ARB has identified lead and vinyl chloride as "toxic air contaminants" with no threshold level of exposure for adverse health effects determined. These actions allow for implementing control measures at levels below the ambient concentrations specified for these pollutants.

[f] The EPA Administrator approved a revised 8-hour ozone standard of 0.07 ppb on October 1, 2015. The new standard went into effect 60 days after publication the Final Rule in the Federal Register. The Final Rule was published in the Federal Register on October 26, 2015, and became effective on December 28, 2015.

Source: California Air Resources Board (ARB). California Ambient Air Quality Standards. Website: https://ww2.arb.ca.gov/resources/california-ambient-air-quality-standards. Accessed November 29, 2023.

California Air Resources Board (ARB). National Ambient Air Quality Standards. Website: https://ww2.arb.ca.gov/resources/national-ambient-air-quality-standards. Accessed November 29, 2023.

Air quality monitoring stations operated by the ARB and BAAQMD measure ambient air pollutant concentrations in the SFBAAB. In general, the SFBAAB experiences low concentrations of most pollutants compared to federal or State standards.

Both the EPA and ARB use ambient air quality monitoring data to designate areas according to their attainment status for criteria air pollutants. These designations identify the areas with air quality problems and initiate planning efforts for improvement. The three basic designation categories are nonattainment, attainment, and unclassified. "Attainment" status refers to those regions that are meeting federal and/or State standards for a specified criteria pollutant. "Nonattainment" refers to regions that do not meet federal and/or State standards for a specified criteria pollutant. "Unclassified" refers to regions with insufficient data to determine the region's attainment status for a specified criteria air pollutant. Each standard has a different definition, or "form" of what constitutes attainment, based on specific air quality statistics. For example, the federal 8-hour CO standard is not to be exceeded more than once per year; therefore, an area is in attainment of the CO standard if no more than one 8-hour ambient air monitoring values exceeds the threshold per year. In contrast, the federal annual $PM_{2.5}$ standard is met if the 3-year average of the annual average $PM_{2.5}$ concentration is less than or equal to the standard.

*Air Pollutant Standards and Attainment Designations*

Table 3.2-3 shows the current attainment designations for the SFBAAB. The SFBAAB is designated as nonattainment for the State ozone, $PM_{10}$, and $PM_{2.5}$ standards and the national ozone and $PM_{2.5}$ standards. Ozone and fine particle pollution, or $PM_{2.5}$, are the major regional air pollutants of concern in the San Francisco Bay Area. Ozone is primarily a problem in the summer, and fine particle pollution in the winter.

**Table 3.2-3: Attainment Status**

| Pollutant | State Status | National Status |
|---|---|---|
| Ozone | Nonattainment | Nonattainment |
| CO | Attainment | Attainment |
| $NO_2$ | Attainment | Attainment |
| $SO_2$ | Attainment | N/A |
| $PM_{10}$ | Nonattainment | Unclassified |
| $PM_{2.5}$ | Nonattainment | Nonattainment |
| Sulfates | Attainment | N/A |
| Hydrogen Sulfates | Unclassified | N/A |
| Visibility-reducing Particles | Unclassified | N/A |
| Lead | N/A | Attainment |

Notes:
CO = carbon monoxide
N/A = information not available
$NO_2$ = nitrogen dioxide
$PM_{10}$ = particulate matter, including dust, 10 micrometers or less in diameter
$PM_{2.5}$ = particulate matter including dust, 2.5 micrometers or less in diameter
$SO_2$ = sulfur dioxide
Source: Bay Area Air Quality Management District (BAAQMD). 2017. Air Quality Standards and Attainment Status. January 5. Website: http://www.baaqmd.gov/research-and-data/air-quality-standards-and-attainment-status. Accessed November 29, 2023.

### *Local Air Quality*

The local air quality can be evaluated by reviewing relevant air pollution concentrations near the project area. The air quality monitoring station closest to the project site is the Vallejo – 304 Tuolumne Street Air Monitoring Station, located approximately six miles south of the project site. All data, with the exception of data on $PM_{2.5,}$ are taken from this monitoring station. $PM_{2.5}$ data are available at and taken from Napa Valley College Air Monitoring Station, located approximately six miles north of the project site.

Table 3.2-4 summarizes the recorded ambient air data at the representative monitoring stations for the years 2020 through 2022, which is the most current data available at the time of this analysis. Monitoring results for CO and $SO_2$ are not included on the table since no recent monitoring data for Napa County or the SFBAAB was available for these pollutants. Generally, monitoring is not conducted for pollutants that are no longer likely to exceed ambient air quality standards.

**Table 3.2-4: Air Quality Monitoring Summary**

| Air Pollutant | Averaging Time | Item | 2020 | 2021 | 2022 |
|---|---|---|---|---|---|
| Ozone | 1 Hour | Maximum 1 Hour (ppm) | **0.096** | **0.099** | 0.066 |
| | | Days > State Standard (0.09 ppm) | **1** | **1** | 0 |

| Air Pollutant | Averaging Time | Item | 2020 | 2021 | 2022 |
|---|---|---|---|---|---|
| | 8 Hour | Maximum 8 Hour (ppm) | **0.078** | **0.072** | 0.058 |
| | | Days > State Standard (0.07 ppm) | **1** | **1** | 0 |
| | | Days > National Standard (0.070 ppm) | **1** | **1** | 0 |
| $NO_2$ | Annual | Annual Average (ppm) | 0.007 | ID | 0.006 |
| | 1 Hour | Maximum 1 Hour (ppm) | 0.048 | 0.041 | 0.044 |
| | | Days > State Standard (0.18 ppm) | 0 | 0 | 0 |
| Inhalable coarse particles ($PM_{10}$) | Annual | Annual Average (µg/$m^3$) | 18.6 | 9.9 | ID |
| | 24 Hour | Maximum 24 Hour (µg/$m^3$) | **125** | 22.9 | ID |
| | | Days > State Standard (50 µg/$m^3$) | **2** | 0 | ID |
| | | Days > National Standard (150 µg/$m^3$) | 0 | 0 | ID |
| Fine particulate matter ($PM_{2.5}$) | Annual | Annual Average (µg/$m^3$) | 12.1 | 8.8 | 8.2 |
| | 24 Hour | Maximum 24 Hour (µg/$m^3$) | **152.7** | 32 | 21 |
| | | Days > National Standard (35 µg/$m^3$) | **12** | 0 | 0 |

Notes:
µg/$m^3$ = micrograms per cubic meter
**Bold** = exceedance
ID = insufficient data
National Standard = National Ambient Air Quality Standard
ND = no data
$NO_2$ = nitrogen dioxide
$PM_{10}$ = particulate matter, including dust, 10 micrometers or less in diameter
$PM_{2.5}$ = particulate matter including dust, 2.5 micrometers or less in diameter
ppm = parts per million
State Standard = California Ambient Air Quality Standard (CAAQS)

## Air Pollution Sensitive Receptors

Air pollution does not affect every individual in the population in the same way, and some groups are more sensitive to adverse health effects than others. Residences, schools, day care centers, hospitals, nursing and convalescent homes, and parks are often identified as “sensitive receptors” since their occupants are sensitive to poor air quality. The groups identified with these land uses may have increased susceptibility to respiratory distress or, as in the case of residential receptors, their exposure time is greater than that for other land uses. BAAQMD defines sensitive receptors as children, adults, and seniors occupying or residing in residential dwellings, schools, day care centers, hospitals, and senior-care facilities.

### *Project Vicinity*

The closest off-site air pollution sensitive receptors near the project site include:

- A single-family residence approximately 850 feet east of the project site.

- A neighborhood approximately 1,600 feet south of the project site.
- Napa Junction Magnet Elementary School, approximately 1,200 feet south of the project site.

#### *Project Site*

The project site is vacant and no sensitive receptors currently exist on the project site.

### Existing Air Pollutant Emissions

#### *Project Site Vicinity*

The primary sources of air pollutants (both criteria air pollutant and TACs) in the project site vicinity include the various other surrounding industrial properties, building-related energy use, and motor-related vehicle trips associated with the local business uses. The project site shares a driveway with a neighboring industrial warehouse immediately to the south. The project site is located approximately 4,800 feet west of State Route (SR) 29 and approximately 1.57 miles southeast of Napa County Airport. Other activities that result in emissions include space and water heating, landscape maintenance, and any surrounding industrial uses that can store, produce, decommission, or otherwise handle hazardous materials.

#### *Project Site*

The project site itself is currently vacant and does not produce any air pollutants.

## 3.2.2 - Regulatory Framework

### Federal

#### *Clean Air Act*

Congress established much of the basic structure of the Clean Air Act (CAA) in 1970 and made major revisions in 1977 and 1990. Six common air pollutants (also known as criteria pollutants) are addressed in the CAA. These are particulate matter, ground level ozone, CO, sulfur oxides, nitrogen oxides, and lead. The EPA calls these pollutants criteria air pollutants because it regulates them by developing human health-based and/or environmentally based criteria (science-based guidelines) for setting permissible levels. The set of limits based on human health are called primary standards. Another set of limits intended to prevent environmental and property damage are called secondary standards.[4] The federal standards are called National Ambient Air Quality Standards (NAAQS). The air quality standards provide benchmarks for determining whether air quality is healthy at specific locations and whether development activities will cause or contribute to a violation of the standards. The criteria pollutants are:

- Ozone
- Nitrogen dioxide ($NO_2$)
- Lead
- Particulate matter ($PM_{10}$ and $PM_{2.5}$)
- Carbon monoxide (CO)
- Sulfur dioxide

[4] United States Environmental Protection Agency (EPA). 2014. Clean Air Act Requirements and History. Website: https://www.epa.gov/clean-air-act-overview/clean-air-act-requirements-and-history. Accessed November 29, 2023.

The federal standards were set to protect public health, including that of sensitive individuals; thus, the EPA is tasked with updating the standards as more medical research is available regarding the health effects of the criteria pollutants. Primary federal standards are the levels of air quality necessary, with an adequate margin of safety, to protect the public health.

The CAA also requires each state to prepare an air quality control plan referred to as a State Implementation Plan (SIP). The federal CAA amendments of 1990 added requirements for states with nonattainment areas to revise their SIPs to incorporate additional control measures to reduce air pollution. The SIP is periodically modified to reflect the latest emissions inventories, planning documents, and rules and regulations of the air basins, as reported by their jurisdictional agencies.

### *EPA Emission Standards for New Off-Road Equipment*

Before 1994, there were no standards to limit the amount of emissions from off-road equipment. In 1994, the EPA established emission standards for hydrocarbons, $NO_X$, CO, and PM to regulate new pieces of off-road equipment. These emission standards came to be known as Tier 1. Since that time, increasingly more stringent Tier 2, Tier 3, and Tier 4 (interim and final) standards were adopted by the EPA, as well as by the ARB. Each adopted emission standard was phased in over time. New engines built in and after 2015 across all horsepower sizes must meet Tier 4 final emission standards. In other words, new manufactured engines cannot exceed the emissions established for Tier 4 final emissions standards.

## State

### *California Air Quality Control Plan (State Implementation Plan)*

An SIP is a document prepared by each state describing existing air quality conditions and measures that will be followed to attain and maintain federal standards. The SIP for the State of California is administered by the ARB, which has overall responsibility for Statewide air quality maintenance and air pollution prevention. California's SIP incorporates individual federal attainment plans for regional air districts—an air district prepares their federal attainment plan, which is sent to the ARB to be approved and incorporated into the California SIP. Federal attainment plans include the technical foundation for understanding air quality (e.g., emission inventories and air quality monitoring), control measures and strategies, and enforcement mechanisms for attaining and maintaining air quality standards.

Areas designated nonattainment must develop air quality plans and regulations to achieve standards by specified dates, depending on the severity of the exceedances. For much of the country, implementation of federal motor vehicle standards and compliance with federal permitting requirements for industrial sources are adequate to attain air quality standards on schedule. For many areas of California, however, additional State and local regulation is required to achieve the standards. Local air districts and other agencies prepare SIP elements and submit them to the ARB for review and approval. The ARB will then forward SIP revisions to the EPA for approval and publication in the Federal Register. The BAAQMD 2017 Clean Air Plan is the SIP for the SFBAAB. The 2017 Clean Air Plan accommodates growth by projecting the growth in emissions based on different indicators. For example, population forecasts adopted by the Association of Bay Area Governments (ABAG) are used

to forecast population-related emissions. Through the planning process, emissions growth is offset by basin-wide controls on stationary, area, and transportation sources of air pollution.

### *California Clean Air Act*

The California Legislature enacted the California Clean Air Act (CCAA) in 1988 to address air quality issues of concern not adequately addressed by the federal CAA at the time. California's air quality problems were and continue to be some of the most severe in the nation, and required additional actions beyond the federal mandates. The ARB administers the California Ambient Air Quality Standards (CAAQS) for the 10 air pollutants designated in the CCAA. The 10 State air pollutants are the six federal standards listed above as well as visibility-reducing particulates, hydrogen sulfide, sulfates, and vinyl chloride. The EPA authorized California to adopt its own regulations for motor vehicles and other sources that are more stringent than similar federal regulations implementing the CAA. Generally, the planning requirements of the CCAA are more stringent than the federal CAA; therefore, consistency with the CCAA will also demonstrate consistency with the CAA.

Other ARB responsibilities include but are not limited to overseeing local air district compliance with California and federal laws; approving local air quality plans; submitting SIPs to the EPA; monitoring air quality; determining and updating area designations and maps; conducting basic research aimed at providing a better understanding between emissions and public well-being, and setting emissions standards for new mobile sources, consumer products, small utility engines, off-road vehicles, and fuels.

### *California Health and Safety Code Section 39655 and California Code of Regulations Title 17 Section 93000 (Substances Identified as Toxic Air Contaminants)*

The ARB identifies substances as TACs as defined in Health and Safety Code Section 39655 and listed in Title 17, Section 93000 of the California Code of Regulations, "Substances Identified As Toxic Air Contaminants." A TAC is defined as an air pollutant that may cause or contribute to an increase in mortality or serious illness, or that may pose a hazard to human health. TACs are usually present in minute quantities in the ambient air; however, their high toxicity or health risk may pose a threat to public health even at low concentrations. In general, for those TACs that may cause cancer, there are thresholds set by regulatory agencies below which adverse health impacts are not expected to occur. This contrasts with the criteria pollutants for which acceptable levels of exposure can be determined and for which the State and federal governments have set ambient air quality standards. According to the California Almanac of Emissions and Air Quality, the majority of the estimated health risk from TACs for the State of California can be attributed to relatively few compounds, the most important of which is DPM from diesel-fueled engines.

### *California Low Emission Vehicle Program*

The ARB first adopted Low Emission Vehicle (LEV) program standards in 1990. These first LEV standards ran from 1994 through 2003. LEV II regulations, running from 2004 through 2010, represent continuing progress in emission reductions. As the State's passenger vehicle fleet continues to grow and more sport utility vehicles and pickup trucks are used as passenger cars rather than work vehicles, the more stringent LEV II standards were adopted to provide reductions necessary for California to meet federally mandated clean air goals outlined in the 1994 SIP. In 2012,

the ARB adopted the LEV III amendments to California's LEV regulations. These amendments, also known as the Advanced Clean Car Program, include more stringent emission standards for model years 2017 through 2025 for both criteria pollutants and greenhouse gas (GHG) emissions for new passenger vehicles.[5]

The most recent amendments in 2022, the Advanced Clean Cars II Regulations, apply to light-duty passenger car, truck and SUV emissions starting with the 2026 model year through 2035. It will take augmenting the State's already growing Zero-Emission Vehicle (ZEV) market and robust motor vehicle emission control rules to meet more aggressive tailpipe emissions standards and ramp up to 100 percent ZEVs. By 2035, all new passenger cars, trucks and SUVs sold in California will be zero emissions.

### *California On-Road Heavy-Duty Vehicle Program*

The ARB has adopted standards for emissions from various types of new on-road heavy-duty vehicles. Section 1956.8, Title 13, California Code of Regulations contains California's emission standards for on-road heavy-duty engines and vehicles, and test procedures. The ARB has also adopted programs to reduce emissions from in-use heavy-duty vehicles including the Heavy-Duty Diesel Vehicle Idling Reduction Program, the Heavy-Duty Diesel In-Use Compliance Program, the Public Bus Fleet Rule and Engine Standards, and the School Bus Program and others.[6]

The Truck and Bus regulation (California Code of Regulations [CCR] § 2025) and amendments requires diesel trucks and buses that operate in California to be upgraded to reduce emissions. The regulation applies to diesel-fueled trucks and buses with a gross vehicle weight of greater than 14,000 pounds to upgrade to 2010 or newer model year engines.

The California "Omnibus" regulation follows the completion of the Truck and Bus regulation with continued reduction of $NO_X$ and PM emissions from heavy-duty gasoline and diesel on-road vehicles. This regulation updated standards, testing and compliance mechanisms for $NO_X$ and PM emissions from heavy-duty on-road vehicles for model year 2024 through 2031. The rule will be implemented in phases with the standards becoming more stringent in 2027.

The Advanced Clean Truck Regulation and recently approved Advanced Clean Fleets (ACF) regulation are part of a holistic approach to accelerate a large-scale transition of zero-emission medium and heavy-duty vehicles. Together, these regulations will transition California's truck fleet to ZEV by 2045. The regulation has a manufacturer sales requirement; by 2035, zero-emission truck/chassis sales would need to be 55 percent of Class 2b–3 truck sales, 75 percent of class 4–8 straight truck sales, and 40 percent of truck tractor sales. The rule also has a company and fleet requirement that gathers information about shipments and shuttle services. This information will help identify future strategies to ensure that fleets purchase available zero-emission trucks and place them in service where suitable to meet their needs.

[5] California Air Resources Board (ARB). 2013. Clean Car Standards—Pavley, Assembly Bill 1493. Website: http://www.arb.ca.gov/cc/ccms/ccms.htm. Accessed November 29, 2023.

[6] California Air Resources Board (ARB). 2013. The California Almanac of Air Quality and Emissions—2013 Edition. Website: http://www.arb.ca.gov/aqd/almanac/almanac13/almanac13.htm. Accessed November 29, 2023.

The Heavy-Duty Inspection and Maintenance regulation was approved on December 9, 2021, with implementation to be phased in starting January 2023.[7] Its goal is to ensure that vehicles' emissions control systems are properly functioning when traveling on California's roadways. Trucks registered in other states would have to comply with the Clean Truck Check (HD I/M) regulation if they drive on California's roadways. HD I/M implements a program combining periodic vehicle testing requirements with other emissions monitoring techniques and expanded enforcement strategies. This will ensure that vehicles in need of emissions-related repairs are identified and will ensure that any needed repairs are performed. When fully implemented, the program will provide significant reductions in smog-forming and carcinogenic toxic air pollution necessary to achieve federal air quality mandates and healthy air in California's communities.

### *California In-Use Off-Road Diesel Vehicle Regulation*

The In-Use Off-Road Diesel-Fueled Fleets (Off-Road Regulation) was enacted to accelerate retirement of older, higher-emitting engines, and increase purchases of newer, cleaner engines. It applies to all off-road, diesel, self-propelled equipment over 25 hp used in California that is not exempted under agricultural or cargo handling equipment provisions. This includes construction equipment such as excavators, loaders, backhoes, cranes, forklifts, oil-drilling rigs, and aircraft towing equipment.

The rule applies to fleets of construction equipment and establishes a 5-minute idling limit for off-road vehicles at construction sites as well as emission limits that become increasingly more stringent each year. These limits may be met by replacing older tier equipment with newer tiers or by installing exhaust retrofits (also known as Verified Diesel Emission Control Strategies [VDECS]). Recent 2022 amendments[8] require the use of R99 or R100 renewable diesel in off-road diesel vehicles at the beginning of 2024. Starting in 2023, older tiers are banned and only Tier 3 or higher engines may be added to any fleet. A recent requirement requires that prime contractors and public works awarding bodies obtain and retain a fleet's valid Certificate of Reported Compliance prior to awarding a contract or hiring a fleet.

### *Small Off-Road Engine Regulation*

Small off-road engines (SORE) are spark-ignition engines with rated power at or below 19 kilowatts (25 horsepower). The SORE regulations require new engines to be certified and labeled to meet emission standards and other requirements. Typical equipment types that use SORE include lawn and garden equipment, portable generators, and pressure washers. Recent amendments to the SORE regulation will require most landscaping equipment to be zero emissions beginning in 2024. Despite their small size, these engines are highly polluting. The volume of smog-forming emissions from this type of equipment has surpassed emissions from light-duty passenger cars and is projected to be nearly twice those of passenger cars by 2031. Portable generators, including those in recreational vehicles, would be required to meet more stringent standards in 2024 and meet zero-

[7] California Air Resources Board (ARB). 2023. Clean Truck Check (HD I/M). Website: https://ww2.arb.ca.gov/our-work/programs/heavy-duty-inspection-and-maintenance-program. Accessed December 8, 2023.

[8] California Air Resources Board (ARB). 2023. Website: https://ww2.arb.ca.gov/news/carb-approves-amendments-road-regulation-further-reduce-emissions. Accessed November 21, 2023.

emission standards starting in 2028.[9] Engines that use diesel fuel and engines that are used in stationary equipment, including standby generators, are not subject to the SORE regulations.

### *Large Spark Ignition Regulation*

The Large Spark Ignition (LSI) Fleet Rule and Amendments, commonly referred to as the "Forklift Rule" applies to forklifts, sweeper/scrubbers, industrial tow tractors, and airport ground support equipment. It applies to fleets (four or more vehicles) and includes off-road gasoline, propane, liquefied petroleum gas (LPG), compressed natural gas, and electric forklifts ≥25 hp.[10] The regulation sets fleet average emission level requirements that decreases each year to encourage the use of electric vehicle (EV) and low-emissions engines.

### *Zero-Emission Forklifts*

ARB is currently working on a zero-emission forklift regulation[11] that would drive greater deployment of zero-emission forklifts within fleets throughout the State. This regulation, currently in draft format, is one of several near-term actions intended to facilitate further zero-emission equipment penetration in the off-road sector and is scheduled for Board consideration in June 2024.

### *California Airborne Toxic Control Measures*

As of December 2022, the ARB had developed 26 mobile and stationary source Airborne Toxic Control Measures (ATCMs).[12] The following summarizes the ATCMs that are potentially applicable for land use development projects such as logistics, warehouse, residential, mixed use, and retail development. Source and industry-specific requirements apply to industrial projects, gas stations, dry cleaners, and other types of facilities which are significant sources of TACs.

#### *Transport Refrigeration Unit ATCM*

Transport Refrigeration Units (TRUs) are refrigeration systems powered by small diesel-fueled engines (typically only 9-36 hp) designed to refrigerate or heat perishable products that are transported in various containers, including truck vans, semi-truck trailers, shipping containers, and railcars. TRUs typically operate at refrigerated warehouses or distribution centers, grocery stores, seaport facilities, intermodal railyards, and other locations that are often near sensitive receptors, and often in overburdened disadvantaged communities. TRUs can be found in different sizes and locations depending on the type of transport carrying the goods. Truck TRUs that are used to refrigerate insulated cargo vans are mounted on the frames of straight trucks, while trailer TRUs that refrigerate insulated trailers are mounted on semitrailers.

The ATCM for In-Use Diesel-Fueled TRUs and TRU Generator Sets and Facilities Where TRUs Operate establishes stringent emission standards to lower DPM emissions from all truck-mounted TRUs that operate in California, regardless of where the vehicle is registered. The regulation applies to

[9] California Air Resources Board (ARB). 2021. Website: https://ww2.arb.ca.gov/news/carb-approves-updated-regulations-requiring-most-new-small-road-engines-be-zero-emission-2024. Accessed November 25, 2023.
[10] California Air Resources Board (ARB). 2023. Large Spark-Ignition Fleet Regulation Overview. Website: https://ww2.arb.ca.gov/sites/default/files/offroadzone/landing/lsi.html. Accessed November 25, 2023.
[11] California Air Resources Board (ARB). 2023. Zero-Emission Forklifts. Website: https://ww2.arb.ca.gov/our-work/programs/zero-emission-forklifts. Accessed November 16, 2023.
[12] California Air Resources Board (ARB). 2023. Website: https://ww2.arb.ca.gov/resources/documents/airborne-toxic-control-measures. Accessed November 16, 2023.

refrigerated warehouse facilities (20,000 square feet or greater) and has phase-in requirements for conversion to zero-emission technology from 2024–2029. TRU owners shall turnover at least 15 percent of their truck TRU fleet (defined as truck TRUs operating in California) to ZEV technology each year (for 7 years). By 2030, all truck TRUs operating in California will be ZE, eliminating all $NO_X$ and DPM emissions from these sources.

The current TRU ATCM amendments do not apply to trailer-mounted (semi-trailer) TRUs or railcar TRUs. The ARB will assess zero-emission options for trailer TRUs and the remaining TRU categories as part of an additional rulemaking for Board consideration in the 2025 timeframe.[13]

*Asbestos ATCM*

In July 2001, ARB approved an ATCM for construction, grading, quarrying, and surface mining operations to minimize emissions of naturally occurring asbestos. The regulation requires application of Best Management Practices (BMPs) to control fugitive dust in areas known to have naturally occurring asbestos and requires notification to the local air district prior to commencement of ground-disturbing activities. The measure establishes specific testing, notification, and engineering controls prior to grading, quarrying, or surface mining in construction zones where naturally occurring asbestos is located on projects of any size. There are additional notification and engineering controls at work sites larger than 1 acre. These projects require the submittal of a "Dust Mitigation Plan" and approval by the ARB prior to the start of a project.

Asbestos is also found in a natural state, known as naturally occurring asbestos. Exposure and disturbance of rock and soil that naturally contain asbestos can result in the release of fibers into the air and consequent exposure to the public. Asbestos most commonly occurs in ultramafic rock that has undergone partial or complete alteration to serpentine rock (serpentinite) and often contains chrysotile asbestos. In addition, another form of asbestos, tremolite, can be found associated with ultramafic rock, particularly near faults. Sources of asbestos emissions include unpaved roads or driveways surfaced with ultramafic rock, construction activities in ultramafic rock deposits, or rock quarrying activities where ultramafic rock is present.

Areas are subject to the regulation if they are identified on maps published by the Department of Conservation as ultramafic rock units or if the Air Pollution Control Officer or owner/operator has knowledge of the presence of ultramafic rock, serpentine, or naturally occurring asbestos on the site. The measure also applies if ultramafic rock, serpentine, or asbestos is discovered during any operation or activity. Review of the Department of Conservation maps indicates that no ultramafic rock has been found near the project site.[14]

Website: https://www.usgs.gov/data/reported-historic-asbestos-mines-historic-asbestos-prospects-and-other-natural-occurrences. Accessed November 25, 2023.

*Portable Equipment Registration Program ATCM*

Owners or operators of portable engines and other types of equipment which meet the qualifications of the ATCM can register their equipment to operate throughout California.[15] Permits issued under the Portable Equipment Registration Program (PERP) must be honored by all air districts throughout California. However, owners and operators of portable engines which meet the qualifications of this ATCM who do not register their equipment under the PERP must obtain individual permits from local air districts.

*Non-Vehicular Source ATCMs*

The ARB has also adopted ATCM for non-vehicular sources[16] in Title 17, Section 93100. These ATCMs are implemented by local Air Pollution Districts through their local regulations for stationary sources. They include 13 separate ATCM regulations detailed in Section 93101 through 93113 which address a variety of stationary and area sources of toxics emissions. The ATCMs most relevant to land use development include the Asbestos rule (for Construction and Grading Operations described above), the benzene ATCM for retail service stations, the ATCM for stationary compression-ignition engines (e.g., diesel generators and pumps), and the ATCM for DPM from portable engines rated 50 hp and greater.

### *California Significant New Alternatives Policy*

As part of California's effort to reduce emissions of Short-Lived California Climate Pollutants under Senate Bill (SB) 1383, California is required to reduce hydrofluorocarbon (HFC) emissions 40 percent below 2013 levels by 2030. HFCs have a powerful impact on climate as they trap heat in the atmosphere at a rate thousands of times that of carbon dioxide.

The ARB was originally relying on EPA Significant New Alternatives Policy (SNAP) Rules to meet a large portion of HFC emission reductions required by SB 1383. However, on August 8, 2017, in *Mexichem Fluor v. U.S. EPA*, the D.C. District Circuit Court significantly limited the EPA's ability to regulate high global warming potential (GWP) HFCs under the federal SNAP Program Rules.[17] As a result, in 2018, California adopted a new ARB HFC regulation and additional legislation under SB 1013, referred to as the California Cooling Act. The regulation and the Senate Bill together are referred to as California SNAP and cover all end-use specific HFC prohibitions except motor vehicle air conditioning systems. In 2020, the ARB amended the regulation to adopt GWP limits for new refrigeration and air conditioning equipment, which ensures that industry not only shifts away from the highest GWP refrigerants but swiftly transitions to technologies with the lowest GWP that are technologically and commercially feasible. The rule applies to air conditioning systems, household refrigerators and freezers, chillers, retail food facilities, retail refrigeration, cold storage facilities, and even vending machines.

[15] California Air Resources Board (ARB). 2023. Portable Equipment Registration Program. Website: https://ww2.arb.ca.gov/our-work/programs/portable-equipment-registration-program-perp. Accessed November 25, 2023.

[16] California Air Resources Board (ARB). 2023. Air Toxic Control Measures: Mobile and Stationary Sources. Website: https://ww2.arb.ca.gov/resources/documents/airborne-toxic-control-measures. Accessed November 25, 2023.

[17] California Air Resources Board (ARB). 2023. California Significant New Alternatives Policy (SNAP). Website: https://ww2.arb.ca.gov/our-work/programs/california-significant-new-alternatives-policy-snap/about. Accessed November 25, 2023.

New cold storage facilities containing more than 50 pounds of refrigerants are subject to the GWP limit Section 95374(c) Table 3 and to the requirements under Section 95475 (c), which includes exceptions, and labeling and recordkeeping requirements. Cold Storage Warehouses are prohibited from using refrigerants with GWP of 150 or greater as of January 1, 2022.[18]

### *Verified Diesel Emission Control Strategies*

The EPA and the ARB tiered off-road emission standards only apply to new engines, and off-road equipment can last several years. The ARB has developed VDECS, which are devices, systems, or strategies used to achieve the highest level of pollution control from existing off-road vehicles, to help reduce emissions from existing engines. VDECS are designed primarily for the reduction of DPM emissions and have been verified by the ARB. There are three levels of VDECS, the most effective of which is the Level 3 VDECS. Tier 4 engines are not required to install VDECS because they already meet the emissions standards for lower tiered equipment with installed controls.

### *Tanner Air Toxics Act and Air Toxics Hot Spots Information and Assessment Act*

TACs in California are primarily regulated through the Tanner Air Toxics Act (Assembly Bill [AB] 1807) and the Air Toxics Hot Spots Information and Assessment Act of 1987 (AB 2588), also known as the Hot Spots Act. To date, the ARB has identified more than 21 TACs, and has adopted the EPA's list of Hazardous Air Pollutants (HAPs) as TACs.

## Regional

### *BAAQMD California Environmental Quality Act Air Quality Guidelines*

The BAAQMD is the primary agency responsible for ensuring that air quality standards (NAAQS and CAAQS) are attained and maintained in the SFBAAB through comprehensive planning, regulation, enforcement, technical innovation, and promotion of the understanding of air quality issues. The BAAQMD prepares plans to attain ambient air quality standards in the SFBAAB and prepares ozone attainment plans for the national ozone standard, clean air plans for the California standard, and PM plans to fulfill federal air quality planning requirements. The BAAQMD also inspects stationary sources of air pollution; responds to citizen complaints; monitors ambient air quality and meteorological conditions; and implements programs and regulations required by the CAA and the CCAA.

In April 2023, BAAQMD updated the California Environmental Quality Act (CEQA) Guidelines that supersede the previous guidance. BAAQMD's CEQA Guidelines for implementation of the thresholds are for informational purposes only, to assist local agencies.

### *BAAQMD Particulate Matter Plan*

To fulfill federal air quality planning requirements, the BAAQMD adopted a $PM_{2.5}$ emissions inventory for the year 2010 at a public hearing on November 7, 2012. The Bay Area Clean Air Plan also included several measures for reducing PM emissions from stationary sources and wood-burning. In 2013, the EPA issued a final rule determining that the Bay Area has attained the 24-hour $PM_{2.5}$

[18] California Air Resources Board (ARB). 2023. Cold Storage. Website: https://ww2.arb.ca.gov/our-work/programs/california-significant-new-alternatives-policy-snap/cold-storage. Accessed November 25, 2023.

NAAQS, suspending federal SIP planning requirements for the SFBAAB.[19] Despite this EPA action, the SFBAAB will continue to be designated as nonattainment for the national 24-hour $PM_{2.5}$ standard until the BAAQMD submits a redesignation request and a maintenance plan to the EPA and the EPA approves the proposed redesignation.

The Air Basin is designated nonattainment for the State $PM_{10}$ and $PM_{2.5}$ standards, but the Air Basin is currently unclassified for the federal $PM_{10}$ standard and nonattainment for federal $PM_{2.5}$ standards. The EPA lowered the 24-hour $PM_{2.5}$ standard from 65 µg/m$^3$ to 35 µg/m$^3$ in 2006 and designated the Air Basin as nonattainment for the new $PM_{2.5}$ standard effective December 14, 2009.

BAAQMD believes that it would be premature to submit a redesignation request and $PM_{2.5}$ maintenance plan at this time. Therefore, BAAQMD will prepare a "clean data" SIP to address the required elements, including:

- An emission inventory for primary $PM_{2.5}$, as well as precursors to secondary PM formation; and
- Amendments to the BAAQMD's New Source Review regulation to address $PM_{2.5}$.

The Air Basin will continue to be designated as nonattainment for the 24-hour $PM_{2.5}$ NAAQS until the Air District elects to submit, and the EPA approves, a redesignation request and maintenance plan. At this time, BAAQMD does not have an applicable SIP with which the proposed project would be required to comply. However, development facilitated by the proposed project would be subject to the Bay Area Clean Air Plan, in addition to regulations set forth by BAAQMD.

### *BAAQMD 2017 Clean Air Plan*

In May 2017, the BAAQMD adopted the final Bay Area 2017 Clean Air Plan. The BAAQMD prepared the 2017 Clean Air Plan in cooperation with the Metropolitan Transportation Commission (MTC) and ABAG. The goals of the 2017 Clean Air Plan are to reduce regional air pollutants and climate pollutants to improve the health of Bay Area residents for the next decades. The 2017 Clean Air Plan aims to lead the region into a post-carbon economy, continue progress toward attaining all State and federal air quality standards, and eliminate health risk disparities from air pollution exposure in Bay Area communities. The Plan includes 85 distinct control measures to help the region reduce air pollutants and has a long-term strategic vision that forecasts what a clean air Bay Area will look like in the year 2050. The 2017 Clean Air Plan envisions a future whereby the year 2050:

- Buildings will be energy efficient—heated, cooled and powered by renewable energy.
- Transportation will be a combination of EVs, both shared and privately owned, and autonomous public transit fleets, with a large share of trips by bicycling, walking, and transit.

[19] United States Environmental Protection Agency (EPA). 2013. Determination of Attainment for the San Francisco Bay Area Nonattainment Area for the 2006 Fine Particle Standard; California; Determination Regarding Applicability of Clean Air Act Requirements. January 9. Website: https://www.govinfo.gov/content/pkg/FR-2013-01-09/pdf/2013-00170.pdf. Accessed November 25, 2023.

- The Bay Area will be powered by clean, renewable electricity and will be a leading incubator and producer of clean energy technologies leading the world in the carbon-efficiency of our products.
- Bay Area residents will have developed a low carbon lifestyle by driving electric vehicles, living in zero-net-energy homes, eating low carbon foods, and purchasing goods and services with low carbon content.
- Waste will be greatly reduced, waste products will be re-used or recycled, and all organic waste will be composted and put to productive use.

The focus of control measures includes aggressively targeting the largest source of GHG, ozone pollutants, and PM emissions: transportation. This includes more incentives for electric vehicle infrastructure, off-road electrification projects such as Caltrain and shore power at ports, and reducing emissions from trucks, school buses, marine vessels, locomotives, and off-road equipment. Additionally, the BAAQMD will continue to work with regional and local governments to reduce Vehicle Miles Traveled (VMT) through the further funding of rideshare, bike and shuttle programs.

### *BAAQMD Regulations*

*Regulation 2, Rule 1 (Permits–General Requirements)*

The BAAQMD regulates new sources of air pollution and the modification and operation of existing sources through the issuance of authorities to construct and permits to operate. Regulation 2, Rule 1 provides an orderly procedure with which the project would be required to comply to receive authorities to construct or permits to operate from the BAAQMD for new sources of air pollutants, as applicable.

*Regulation 2, Rule 5 (New Source Review Permitting)*

The BAAQMD regulates backup emergency generators, fire pumps, and other sources of TACs through its New Source Review (Regulation 2, Rule 5) permitting process.[20] Although emergency generators are intended for use only during periods of power outages, monthly testing of each generator is required; however, the BAAQMD limits testing to no more than 50 hours per year. Each emergency generator installed is assumed to meet a minimum of Tier 2 emission standards (before control measures). As part of the permitting process, the BAAQMD limits the excess cancer risk from any facility to no more than 10 per 1 million population for any permits that are applied for within a 2-year period and would require any source that would result in an excess cancer risk greater than 1 per 1 million to install Best Available Control Technology (BACT) for Toxics.

*Regulation 6, Rule 1 (Particulate Matter–General Requirements)*

The BAAQMD regulates PM emissions through Regulation 6 by means of establishing limitations on emission rates, emissions concentrations, and emission visibility and opacity. Regulation 6, Rule 1 provides existing standards for PM emissions that could result during project construction or operation that the project would be required to comply with, as applicable, such as the prohibition

[20] Bay Area Air Quality Management District (BAAQMD). 2016. New Source Review Permitting Guidance. Website: http://www.baaqmd.gov/permits/permitting-manuals/nsr-permitting-guidance. Accessed November 25, 2023.

of emissions from any source for a period or aggregate periods of more than 3 minutes in any hour which are equal to or greater than 20 percent opacity.

*Regulation 6, Rule 6, (Particulate Matter–Prohibition of Trackout)*

One rule by which the BAAQMD regulates PM includes Regulation 6, Rule 6, which prohibits PM trackout during project construction and operation. Regulation 6, Rule 6 requires the prevention or timely cleanup of trackout of solid materials onto paved public roads outside the boundaries of large bulk material sites, large construction sites, and large disturbed surface sites such as landfills.

*Regulation 8, Rule 3 (Architectural Coatings)*

This rule governs the manufacture, distribution, and sale of architectural coatings and limits the reactive organic gases (ROG) content in paints and paint solvents. Although this rule does not directly apply to the proposed project, it does dictate the ROG content of paint available for use during the construction.

*Regulation 8, Rule 15 (Emulsified and Liquid Asphalts)*

Although this rule does not directly apply to the proposed project, it does dictate the reactive organic gases content of asphalt available for use during construction through regulating the sale and use of asphalt and limits the ROG content in asphalt.

*Regulation 9, Rule 8 (Inorganic Gaseous Pollutants–Nitrogen Oxides and Carbon Monoxide from Stationary Internal Combustion Engines)*

Under Regulation 9, Rule 8, the BAAQMD regulates the emissions of nitrogen oxides and carbon monoxide from stationary internal combustion engines with an output rated by the manufacturer at more than 50 brake horsepower. As such, any proposed stationary source equipment (e.g., backup generators, fire pumps) which would be greater than 50 horsepower would require a BAAQMD permit under Regulation 9, Rule 8 to operate.

*Regulation 11, Rule 2 (Hazardous Pollutants–Asbestos Demolition, Renovation, and Manufacturing)*

Under Regulation 11, Rule 2, the BAAQMD regulates emissions of asbestos to the atmosphere during demolition, renovation, milling, and manufacturing and establishes appropriate waste disposal procedures. Any of these activities which pose the potential to generate emissions of airborne asbestos are required to comply with the appropriate provisions of this regulation.

*Regulation 1, Rule 301 (Odorous Emissions)*

The BAAQMD is responsible for investigating and controlling odor complaints in the Bay Area. The agency enforces odor control by helping the public to document a public nuisance. Upon receipt of a complaint, the BAAQMD sends an investigator to interview the complainant and to locate the odor source if possible. The BAAQMD typically brings a public nuisance court action when there are a substantial number of confirmed odor events within a 24-hour period. An odor source with five or more confirmed complaints per year, averaged over 3 years, is considered to have a substantial effect on receptors.

Several BAAQMD regulations and rules apply to odorous emissions. Regulation 1, Rule 301 is the nuisance provision that states that sources cannot emit air contaminants that cause nuisance to

several people. Regulation 7 specifies limits for the discharge of odorous substances where the BAAQMD receives complaints from 10 or more complainants within a 90-day period. Among other things, Regulation 7 precludes discharge of an odorous substance that causes the ambient air at or beyond the property line to be odorous after dilution with four parts of odor-free air and specifies maximum limits on the emission of certain odorous compounds.

Lastly, the BAAQMD enforces the PERP ATCM on behalf of the ARB. Under the PERP, owners or operators of portable engines and other types of equipment which meet the qualifications of the ATCM can register their equipment to operate throughout California. However, owners and operators of portable engines which meet the qualifications of this ATCM who do not register their equipment under the PERP must obtain individual permits from local air districts. Permits issued under the PERP must be honored by all air districts throughout California.

### *Plan Bay Area*

The Regional Transportation Plan and Sustainable Community Strategy (RTP/SCS) for the San Francisco Bay Area, named Plan Bay Area 2050 was jointly produced and adopted by the MTC and ABAG.[21] On October 2021, the MTC approved Plan Bay Area 2050. Plan Bay Area includes integrated land use and transportation strategies for the region and was developed through OneBayArea, a joint initiative between ABAG, BAAQMD, MTC, and the San Francisco Bay Conservation and Development Commission. Plan Bay Area is also considered the ABAG/MTC Regional Transportation Plan/Sustainable Communities Strategy (RTP/SCS). In accordance with SB 743, Plan Bay Area included elements designed to encourage the type of land use development to meet three primary objectives. First, Roadway Level of Service (LOS) could not be considered an environmental impact under CEQA. Second, it introduced changes to VMT per capita as a determinant of environmental impact. Third, the use of VMT as an environmental impact in CEQA is considered a mechanism for achieving State and regional GHG reduction goals. As a regional land use plan, Plan Bay Area aims to reduce per capita GHG emissions through the promotion of more compact, mixed-use residential and commercial neighborhoods located near transit.

## Local

### *City of American Canyon General Plan*

The City of American Canyon adopted its General Plan in 1994, which contains objectives and policies that help address air quality and reduce the community's vulnerability to air pollution. The following objectives and policies from the City's General Plan are relevant to air quality and apply to the proposed project:[22]

**Goal 8F** Reduce consumption of nonrenewable energy sources and support the development and utilization of new energy sources.

**Objective 8.22** Minimize transportation-related energy consumption.

[21] Association of Bay Area Government (ABAG). 2021. Plan Bay Area 2050. Website: https://www.planbayarea.org/finalplan2050. Accessed November 28, 2023.

[22] City of American Canyon. 2020. General Plan. Website: https://www.cityofamericancanyon.org/government/community-development/planning-zoning/general-plan-update. Accessed November 25, 2023.

**Policy 8.22.1** Encourage the development of mixed use, pedestrian friendly employment/residential centers that help minimize vehicle trips in American Canyon and contribute to a reduction in energy consumption.

**Policy 8.22.3** Require that Development Plans provide for linkages between bicycle and pedestrian circulation systems and transit and employment centers, in accordance with established areawide plans.

**Policy 8.22.4** Maintain a system of traffic signals and controls that minimizes waiting time and vehicle speed changes through routes.

**Policy 8.22.5** Require that Development Plans provide for High-Occupancy Vehicles (HOV) and public transportation, where feasible, through the provision of appropriate transit areas and park-and-ride locations along public transportation routes.

**Objective 8.23** Reduce Energy consumption in buildings.

**Policy 8.23.1** Require that developers employ energy-efficient subdivision and site planning methods as well as building design. Measures to be considered include building orientation and shading, landscaping, building reflectance, use of active and passive solar heating and hot water system, etc. In establishing these energy related design requirements, the City shall balance energy-efficient design with good planning principles.

**Objective 1.37** Consider initiatives to reduce direct and indirect greenhouse gas (GHG) emissions from transportation sources, and from new, renovated, and existing development in the City.

**Policy 1.37.6** Reduce vehicle engine idling in American Canyon by educating the broader community (i.e., businesses, commuters, residents) on the greenhouse gas impacts caused by engine idling, and implementing feasible commercial vehicle regulations.

### *City of American Canyon Municipal Code*

*19.01.061, Industrial Use Greenhouse Gas Standards (Ordinance No. 2024-014)*

A. Every Industrial Use Land Use Proposal for which the City of American Canyon is the Lead Agency shall use the following threshold to evaluate the significance of greenhouse gas (GHG) impact under the California Environmental Quality Act (CEQA):

1) **TIER 1.** Determine if CEQA categorical exemptions are applicable. If not, move to Tier 2.

2) **Tier 2.** Consider whether the proposed project is consistent with a locally adopted GHG reduction plan that has gone through public hearing and CEQA review, that has an approved inventory, includes monitoring, *etc.* If not, move to Tier 3.

3) **Tier 3.** Consider whether the project includes, at a minimum, the following project design elements:

**i. Buildings**

1. The project will not include natural gas appliances or natural gas plumbing (in both residential and nonresidential development).
2. The project will not result in any wasteful, inefficient, or unnecessary energy use as determined by the analysis required under CEQA Section 21100(b}(3) and Section 15126.2(b) of the State CEQA Guidelines.

**ii. Transportation**

1. The project will achieve a reduction in project-generated vehicle miles traveled ("VMT") below the regional average consistent with the current version of the California Climate Change Scoping Plan (currently 15 percent).
2. The project will achieve compliance with off-street electric vehicle requirements in the most recently adopted version of CALGreen Tier 2. If the project does not include the above project design elements, the Project has a significant GHG impact. If it does include the above project design elements, move to Tier 4.

4) **Tier 4.** Consider whether the project generates GHG emissions in excess of the South Coast Air Quality Management District's 10,000 MT CO2e per year screening threshold for industrial uses and stationary projects. If so, the project has a significant GHG impact.

*Chapter 19.09, Industrial Commerce Centers Sustainability Standards (Ordinance No. 2024-013)*

Chapter 19.09 of the Municipal Code is applicable to all warehousing, logistics and distribution facilities throughout the City for which an NOP is issued after March 1, 2024 under the implementing Guidelines of the CEQA. The NOP for the proposed project was issued on October 27, 2023. As such, the proposed project is not subject to Chapter 19.09 of the Municipal Code (Ordinance No. 2024-013). However, for informational purposes, the extent to which the project complies is addressed in Section 3.7.7.

A warehousing, logistics or distribution facility means facilities used for the storage and/or consolidation of manufactured goods (and to a lesser extent, raw materials and excludes bulk storage of materials, which are flammable, explosive, or create hazardous or commonly recognized offensive conditions) before their distribution to retail locations or other warehouses. The facilities are generally greater than 200,000 square feet in size, with a land coverage ratio of approximately 50 to 80 percent, and a dock-high loading door ratio of approximately 1:5,000-8,000 square feet. They are characterized by dock high loading doors, could be on opposing sides of the building (cross dock facility); significant movement and storage of products, materials, or

equipment; truck activities frequently outside of the peak hour of the adjacent street system; and freeway access, including:

- Freight yards/forwarding terminals;
- Warehousing distribution/high cube distribution centers;
- Moving agencies;
- Parcel delivery terminals;
- Railroad freight stations;
- Shipping/receiving yards; and
- Truck terminals.

The following sections shall supersede any existing requirements in the Municipal Code and Specific Plans:

1. On-site motorized operational equipment, including but not limited to forklifts, yard trucks, and pallet jacks, shall be ZE (zero emission). This includes electrical hook ups to the power grid, rather than diesel-fueled generators, for contractors' electric construction tools, such as saws, drills and compressors.
2. All outdoor cargo handling equipment (including yard trucks, hostlers, yard goats, pallet jacks, forklifts, and landscaping equipment) shall be zero-emission vehicles. Each building shall include the necessary charging stations or other necessary infrastructure for zero-emission cargo handling equipment.
3. Prior to issuance of a business license, the City shall ensure rooftop solar panels are installed and can be operated in such a manner that they will supply 100% of the power needed to operate all non-refrigerated portions of the facility including the parking areas.
4. Unless the owner of the facility records a covenant on the title of the underlying property ensuring that the property cannot be used to provide chilled, cooled, or freezer warehouse space, a conduit shall be installed during construction of the building shell from the electrical room to 100% of the loading dock doors that have potential to serve the refrigerated space. When tenant improvement building permits are issued for any refrigerated warehouse space, electric plug-in units shall be installed at every dock door servicing the refrigerated space to allow transport refrigeration units (TRUs) to plug in. Truck operators with TRUs shall be required to utilize electric plug-in units when at loading docks.
5. All generators, and all diesel-fueled off-road construction equipment greater than 75 horsepower, will be zero-emissions or equipped with CARB Tier IV-compliant engines (as set forth in Section 2423 of Title 13 of the California Code of Regulations, and Part 89 of Title 40 of the Code of Federal Regulations) or better by including this requirement in applicable bid documents, purchase orders, and contracts with successful contractors. After either (1) the completion of grading or, (2) the completion of an electrical hookup at the site, whichever is first, require all generators and all diesel-fueled off-road construction equipment, to be zero-emissions or equipped with CARB Tier IV-compliant

engines (as set forth in Section 2423 of Title 13 of the California Code of Regulations, and Part 89 of Title 40 of the Code of Federal Regulations) or better by including this requirement in applicable bid documents, purchase orders, and contracts with successful contractors. An exemption from these requirements may be granted by the City in the event that the applicant documents that equipment with the required tier is not reasonably available and corresponding reductions in criteria air pollutant emissions are achieved from other construction equipment.

6. Prior to certificate of occupancy, install conduit and infrastructure for Level 2 (or faster) electric vehicle charging stations on-site for employees for the percentage of employee parking spaces commensurate with Title 24 requirements in effect at the time of building permit issuance plus additional charging stations equal to 5% of the total employee parking spaces in the building permit, whichever is greater. By 2030 install Level 2 (or faster) electric vehicle charging stations for 25% of the employee parking spaces required.
7. Install HVAC and/or HEPA air filtration systems in all warehouse facilities.

## 3.2.3 - Methodology

### Model Selection and Guidance

Regional air pollutant emissions are composed of those on-site construction and operational emissions generated from all facets of the proposed project. Air pollutant emissions can be estimated by using emission factors and a level of activity. Emission factors represent the emission rate of a pollutant over a given time or activity, for example, grams of $NO_X$ per vehicle mile traveled or grams of $NO_X$ per horsepower hour of equipment operation. The activity factor is a measure of how active a piece of equipment is and can be represented as the amount of material processed, elapsed time that a piece of equipment is in operation, horsepower of a piece of equipment used, the amount of fuel consumed in a given amount of time, or VMT per day. The ARB has published emission factors for on-road mobile vehicles/trucks in the Emission Factor (EMFAC) mobile source emissions model and emission factors for off-road equipment and vehicles in the OFFROAD emissions model. An air emissions model (or calculator) combines the emission factors and the levels of activity and outputs the emissions for the various pieces of equipment.

The current version of the California Emissions Estimator Model (CalEEMod), Version 2022.1.1.21, was released on May 27, 2022, as part of a coordinated development effort between the California Air Pollution Control Officers Association (CAPCOA) and the California Air Districts. Regional construction and operational emissions reported in this analysis were modeled using CalEEMod Version 2022.1.1.21.

### Criteria Pollutants Assessed

The following air pollutants are assessed in this analysis:

- Reactive organic gases (ROG)
- Nitrogen oxides ($NO_X$)
- Carbon monoxide (CO)

- Sulfur oxides ($SO_X$)
- Particulate matter less than 10 microns in diameter ($PM_{10}$)
- Particulate matter less than 2.5 microns in diameter ($PM_{2.5}$)

Note that the proposed project would emit ozone precursors ROG and $NO_X$. However, the proposed project would not directly emit ozone since it is formed in the atmosphere during the photochemical reaction of ozone precursors.

The proposed project would emit ultrafine particles. However, there is currently no standard separate from the $PM_{2.5}$ standards for ultrafine particles and there is no accepted methodology to quantify or assess the significance of such particles.

### Modeling Assumptions–Construction

Construction emissions can vary substantially from day to day, depending on the level of activity, the specific type of operation, and prevailing weather conditions. Construction emissions result from on-site and off-site activities. On-site emissions principally consist of exhaust emissions from the activity levels of heavy-duty construction equipment, motor vehicle operation, and fugitive dust (mainly $PM_{10}$) from disturbed soil. Additionally, paving operations and application of architectural coatings would release VOC emissions. Off-site emissions are caused by motor vehicle exhaust from delivery vehicles, worker traffic, and road dust ($PM_{10}$ and $PM_{2.5}$).

Construction activities occurring on the 10.45-acre project site would consist of site preparation, grading, building construction, paving, and architectural coating of the inside and outside of the building. A conceptual construction schedule is provided in Table 3.2-5 that presents the duration for each construction activity. Table 3.2-6 presents the number of assumed construction equipment along with hours of operation per day, horsepower, and load factor. Where project-specific information was not available or unknown, default assumptions were used to complete emissions modeling. The activity for construction equipment is based on the horsepower and load factors of the equipment. In general, the horsepower is the power of an engine—the greater the horsepower, the greater the power. The load factor is the average power of a given piece of equipment while in operation compared with its maximum rated horsepower. A load factor of 1.0 indicates that a piece of equipment continually operates at its maximum operating capacity. This analysis uses the CalEEMod default load factors for off-road equipment.

The anticipated construction schedule, as shown in Table 3.2-5, reflects the construction start date and construction phase durations assumed for the purposes of this environmental analysis. Based on applicant-provided information, construction would start September 2024 and would take approximately 11 months. The construction schedule used in the analysis represents a “worst-case” analysis scenario since emission factors for construction equipment decrease as the analysis year increases, due to improvements in technology and compliance with more stringent regulatory requirements. Therefore, construction emissions would decrease if the construction schedule moved to later years. The duration of construction activity and associated equipment represent a reasonable approximation of the expected construction fleet as required by State CEQA Guidelines.

**Table 3.2-5: Construction Schedule**

| Construction Activity | Conceptual Construction Schedule | | Working Days per Week | Working Days |
|---|---|---|---|---|
| | Start Date | End Date | | |
| Site Preparation | 9/2/2024 | 9/13/2024 | 5 | 10 |
| Grading | 9/14/2024 | 10/11/2024 | 5 | 20 |
| Building Construction | 10/12/2024 | 7/18/2025 | 5 | 200 |
| Paving | 7/19/2025 | 8/15/2025 | 5 | 20 |
| Architectural Coating | 7/19/2025 | 8/15/2025 | 5 | 20 |
| Source: CalEEMod Output (Appendix B). | | | | |

A summary of the on-site, off-road construction equipment usage assumptions used to estimate emissions is presented in Table 3.2-6.

**Table 3.2-6: Project Construction Equipment Assumptions**

| Phase Name | Equipment Type | Number per Day | Hours Per Day | Horsepower | Load Factor |
|---|---|---|---|---|---|
| Site Preparation | Rubber Tired Bulldozers | 3 | 8 | 367 | 0.4 |
| | Tractors/Loaders/Backhoes | 4 | 8 | 84 | 0.37 |
| Grading | Excavators | 2 | 8 | 158 | 0.38 |
| | Graders | 1 | 8 | 148 | 0.41 |
| | Rubber Tired Bulldozers | 1 | 8 | 367 | 0.4 |
| | Scrapers | 2 | 8 | 423 | 0.48 |
| | Tractors/Loaders/Backhoes | 2 | 8 | 84 | 0.37 |
| Building Construction | Cranes | 1 | 7 | 367 | 0.29 |
| | Forklifts | 3 | 8 | 82 | 0.2 |
| | Generator Sets | 1 | 8 | 14 | 0.74 |
| | Tractors/Loaders/Backhoes | 3 | 7 | 84 | 0.37 |
| | Welders | 1 | 8 | 46 | 0.45 |
| Paving | Pavers | 2 | 8 | 81 | 0.42 |
| | Paving Equipment | 2 | 8 | 89 | 0.36 |
| | Rollers | 2 | 8 | 36 | 0.38 |
| Architectural Coating | Air Compressors | 1 | 6 | 37 | 0.48 |
| Source: CalEEMod Output (Appendix B). | | | | | |

A summary of the construction-related vehicle trips is shown in Table 3.2-7. Based on applicant-provided information, grading would require approximately 1,000 cubic yards (cy) of import soil.[23] CalEEMod default values for trip lengths and vehicle fleets were used. Note that the total number of off-site construction vehicle trips would not necessarily occur on the same day since construction activities would vary each day during the construction period.

**Table 3.2-7: Construction Off-site Trips**

| Construction Activity | Worker (Trips per day) | Vendor (Trips per day) | Haul (Total Trips) |
|---|---|---|---|
| Site Preparation | 18 | 0 | 0 |
| Grading | 20 | 0 | 31 |
| Building Construction | 141 | 55 | 0 |
| Paving | 15 | 0 | 4 |
| Architectural Coating | 28 | 0 | 0 |
| Source: CalEEMod Output (Appendix A). | | | |

### *Fugitive Dust*

During grading activities, fugitive dust can be generated from the movement of dirt on the project site. CalEEMod estimates dust from bulldozers moving dirt around, from graders or other construction equipment leveling the land, and from loading or unloading dirt into haul trucks. Every project within the BAAQMD's jurisdiction is required to comply with the requirements of BAAQMD Regulation 6 and BMPs to reduce emissions of fugitive dust. As shown in Appendix B, the BMPs are accounted for in CalEEMod through selection of the appropriate measures in CalEEMod ("water unpaved roads twice daily" and "limit vehicle speeds on unpaved roads to 25 miles per hour [mph]"). Development of the proposed project would include design features which would reduce fugitive dust compared to default values.

## Modeling Assumptions–Operation

The major sources of operational emissions that would occur over the long-term operations of the proposed project are summarized below.

### *Motor Vehicles*

Motor vehicle emissions refer to exhaust and road dust emissions from the motor vehicles that would travel to and from and within the project site. The regional emissions from the proposed project's mobile sources were estimated using CalEEMod and the daily trips estimated by the traffic consultant for the proposed project. The proposed project would generate passenger vehicle trips from employees and visitors traveling to and from the project site; additionally, the proposed project

[23] At the time of analysis, the amount of soil import was assumed to be 5,000 cubic yards. Therefore, a conservative analysis is presented here since it evaluated a higher amount of soil import and associated haul trips.

would also be served with daily truck deliveries. The number of vehicle trips that the proposed project would generate is presented in Table 3.2-8.

**Table 3.2-8: Vehicle Trip Generation During Operations (Daily)**

| Vehicle Type | Daily Vehicle Trips |
|---|---|
| Passenger Cars | 244 |
| Trucks | 128 |
| Total Project Trips | 372 |
| Source: W-Trans. 2023. 1055 Commerce Court Memorandum of Assumptions. April. (Appendix I) | |

As shown in Table 3.2-8, trips from passenger cars would account for 244 of the 372 total daily trips generated by the proposed project, while trucks would account for 128 of the total daily trips generated by the proposed project.

Industrial land use projects, including warehouse projects, can be expected to have longer than average truck trip lengths compared to the default trip length in CalEEMod (5.0 miles to 12.8 miles for Napa County). To estimate mobile source emissions from trucks during project operations, a one-way truck trip length of 35.6 miles was assumed based on a study of industrial warehouse travel behavior in American Canyon.[24] The truck trips are assigned to "refrigerated warehouse-no rail" land use and passenger vehicle trips are assigned to a "user defined industrial" land use so that different trip lengths can be assigned to the truck and passenger vehicle trips. The CalEEMod model output can be found in Appendix B.

Table 3.2-9 shows the adjusted fleet mixes applied in the operational portion of each CalEEMod run. The fleet mix for the operational passenger-vehicles-only CalEEMod run used the light-duty automobile (LDA), light-duty one-axle truck (LDT1), light-duty two-axle truck (LDT2), and medium-duty vehicle (MDV) classes to represent a reasonable assumption that employees would use light-duty vehicles, medium-duty vehicles, and pickup trucks as their personal vehicles. The trucks are modeled as a combination of medium heavy and heavy heavy-duty (HHD) categories based on the previously mentioned industrial warehouse travel study.[25]

**Table 3.2-9: Vehicle Type Classification**

| CalEEMod Run | Classification | Fleet Mix Applied in Modeling |
|---|---|---|
| Passenger Vehicles (employee trips) | LDA | 51.6% |
| | LDT1 | 5.6% |
| | LDT2 | 24.9% |
| | MDV | 17.9% |

[24] Fehr and Peers. 2022. American Canyon Industrial Warehouse Travel Behavior Data. June.
[25] Fehr and Peers. 2022. American Canyon Industrial Warehouse Travel Behavior Data. June.

| CalEEMod Run | Classification | Fleet Mix Applied in Modeling |
|---|---|---|
| | Passenger Vehicle Mix Total | 100% |
| Trucks | HHD | 85.1% |
| | MHD | 14.9% |
| | Heavy-Duty Truck Mix Total | 100% |

Notes:
HHD = heavy heavy-duty
LDA = light-duty automobile
LDT1 = light-duty one-axle truck
MHD = medium heavy-duty
MDV = medium-duty vehicle
Source: Appendix B.

The proposed warehouse is designed to accommodate wine storage. However, no TRU would be used while trucks are on-site. Based on similar uses nearby, most inbound trailers would not have TRUs as they would only be hauling directly from the winery. Outbound long-haul trailers would not be running the refrigeration units while at the loading dock as they would initially be loaded. No trucks would be at the loading dock longer than 30 minutes. These assumptions are input into the modeling accordingly.

### *Other Emission Sources*

*Area Sources*

In addition to typical mobile- and energy-source emissions, long-term operational emissions also include area source emissions. Area source emissions include occasional architectural coating activities for repainting and maintenance of the warehouse building associated with the proposed project. CalEEMod assumes that repainting occurs at a rate of 10 percent of the buildings per year. Therefore, on average, it is assumed that the building would be fully repainted every 10 years.

Other area source emissions include consumer products that involve solvents that emit VOCs during use. CalEEMod includes default consumer product use rates based on building square footage. The default emission factors developed for CalEEMod were used for consumer products associated with parking uses. Electric forklifts would be used during project operation. Lastly, CalEEMod default emission factors for landscape maintenance equipment were used in this analysis.

*Water/Wastewater*

GHG emissions from this sector are associated with the embodied energy used to supply treat and distribute water, and then treat wastewater and fugitive GHG emissions from wastewater treatment. Indoor water consumption is based on applicant-provided information.

*Energy*

As discussed in the project description, the proposed project would not include natural gas plumbing or appliances. Emissions from this sector are principally from use of electricity for space and water

heating at the proposed buildings. The estimated energy consumption is based on consumption rate of the adjacent use[26] and extrapolated by project square footage.[27]

*Indirect Emissions*

For GHG emissions, CalEEMod contains calculations to estimate indirect GHG emissions. Indirect emissions are emissions where the location of consumption or activity is different from where actual emissions are generated. For example, electricity would be consumed at the proposed project site; however, emissions associated with producing that electricity are generated off-site at a power plant.

CalEEMod includes calculations for indirect GHG emissions for electricity consumption, water consumption, and solid waste disposal. For water consumption, CalEEMod calculates embedded energy (e.g., treatment, conveyance, distribution) associated with providing each gallon of potable water to the project site. For solid waste disposal, CalEEMod calculates GHG emissions generated as solid waste generated by the proposed project decomposes in a landfill. For electricity-related emissions, CalEEMod contains default electricity intensity factors for various utilities throughout California. Pacific Gas and Electric Company (PG&E) 2021 intensity factors[28] were used for the facility operations starting with the 2025 buildout year conservatively assuming the base plan.

*Refrigerants*

During operation, there may be leakages of refrigerants (hydrofluorocarbons) from air conditioners and any refrigeration systems. Hydrofluorocarbons are typically used for refrigerants, which are long-lived GHGs. The type of refrigerant may vary depending on regulations in place at the time and emissions are based on leakage rates and other variables. CalEEMod defaults were used for these estimates. This presents a conservative estimate as recent GHG regulations are phasing in refrigerants with lower GWP.

*Vegetation*

The project site is currently undeveloped and contains small areas of wetland and some vegetation. Therefore, there is currently some carbon sequestration occurring on-site. The project applicant proposes to plant trees and integrate landscaping into the proposed design, which would provide carbon sequestration. However, the number of trees to be planted is unknown and data are insufficient to accurately determine the impact that the existing landscaping has on carbon sequestration. For this analysis, it was assumed that the loss and addition of carbon sequestration that are due to the proposed project would be balanced; therefore, emissions due to carbon sequestration were not included.

[26] City of American Canyon. Final Initial Study for SDG Commerce 217 Distribution Center Project (PL20-0008).

[27] The proposed project would take advantage of cool night air and would include solar improvements, which would result in some reduction in energy use. These features were not quantified as to represent a conservative analysis.

[28] California Energy Commission. 2023. Power Source Disclosure Program: Annual Power Content Labels for 2021. Website: https://www.energy.ca.gov/programs-and-topics/programs/power-source-disclosure/power-content-label/annual-power-content-2. Accessed December 10, 2023.

## Dispersion Modeling

An air dispersion model is a mathematical formulation used to estimate air quality impacts at specific locations (receptors) surrounding a source of emissions given the rate of emissions and prevailing meteorological conditions. The air dispersion model applied in this assessment was the AERMOD Version 22112. Specifically, the AERMOD model was used to estimate levels of air emissions at sensitive receptor locations from project construction $PM_{10}$ exhaust emissions. The AERMOD model provides a refined methodology for estimating localized construction and operational impacts by utilizing long-term, measured representative meteorological data for the project site and representative construction and operational schedules.

Terrain elevations were obtained for the project site using United Stated Geology Survey (USGS) 1/3 arc-second Digital Elevation Models (DEMs) DEMS processed by the EPA Terrain Preprocessor (AERMAP) model, the AERMOD terrain data pre-processor. The rural dispersion option was used to describe air dispersion in the local vicinity of the project. The air dispersion model assessment utilized 5 years (2013-2017) of BAAQMD-preprocessed meteorological data for the Napa County Airport Station (KAPC 23155) which is located approximately 1.8 miles north of the project site.

The AERMOD model was used to estimate levels of air emissions at sensitive receptor locations from project construction $PM_{10}$ exhaust and on-road diesel truck exhaust. Receptors within the AERMOD model were placed at locations up to 1,500 meters from the project site in a nested risk-grid with a spacing of 25 meters up to 250 meters and then receptors of 100 meters spacing up to 1,000 meters from the project site. Discrete residential receptors were placed on residences in the neighborhood to the southeast as well as the single closest residence located 850 feet to the east of the project site. All receptors were placed conservatively at ground level.

### *Air Dispersion Modeling Assumptions–Construction*

Each construction emission source to be evaluated requires geometrical and emission release specifications for use in the air dispersion model. The emission source configurations applied in this assessment are shown in Table 3.2-10.

The on-site construction area sources were assumed to cover the entire project site. Emissions from the on-site construction exhaust sources were assumed to be emitted at 5 meters above ground to account for the top of equipment exhaust stacks where emissions are released to the atmosphere and the increase in emission height due to its heated exhaust. The off-site (on-road) construction vehicle emissions were represented in the AERMOD model as line volume sources with a release height of 11.2 feet (3.4 meters) for diesel vehicles.

**Table 3.2-10: Summary of Construction Diesel Emission Source Configurations**

| Emission Source Type | Configuration | Relevant Assumptions |
|---|---|---|
| Off-Road Construction Equipment | Area Source (Sitewide) | • Area Source of height 5 meters to account for plume rise from exhaust.<br>• Emission factors: CalEEMod |

| Emission Source Type | Configuration | Relevant Assumptions |
|---|---|---|
| Heavy-Duty Haul Truck Traffic | Line Volume Sources | • Truck travel was estimated for project-generated off-site travel extending on Commerce Boulevard within 1,000 feet of the project site<br>• Emission factors: CalEEMod (EMFAC2021) |
| Source: Appendix B. | | |

The construction emissions were assumed to be distributed over the project area with a working schedule of up to 8 hours per day and five days per week. Emissions were adjusted by a factor of 4.2 in AERMOD "Variable Emission" Option to convert 8-hour, 5 day per week construction emissions for use with a 24 hours per day, 365 days per year averaging period.

### Health Risk Assessment

The primary TAC of concern for the proposed project would be diesel exhaust, characterized by the emissions of DPM as a surrogate, emitted both during construction and operation. The emissions of potential DPM associated with construction activities would be transient, temporary, and occur in varying locations within the project site. The exposure assessment for construction is limited to emissions over the time that construction is expected to occur (i.e., less than 1 year).

Exhaust emissions of DPM (as $PM_{10}$ exhaust) were obtained from the CalEEMod Version 2022.1 for the unmitigated emissions construction scenarios utilized for the criteria pollutant analysis (Appendix A). DPM emissions to be evaluated include on-site diesel exhaust from construction equipment and from diesel vendor and haul trucks along Commerce Boulevard. Air dispersion modeling (described above) was utilized to determine the concentration of DPM at different locations off-site from the proposed project. Receptors included off-site workers, residents and identified school receptors within the area of impact.

The concentration output files from AERMOD were postprocessed in the Hotspots Analysis and Reporting Program (HARP) Air Dispersion Modeling and Risk Tool (ADMRT) to determine the concentration of DPM at off-site receptors for the modeled emission scenarios. The HARP ADMRT program uses the concentrations, along with equations from the Air Toxics Hot Spots Program Guidance Manual for Preparation of Health Risk Assessments,[29] to estimate the project's cancer and non-cancer chronic health risks. For DPM, the only exposure pathway is inhalation, and the HARP ADMRT tool evaluates exposure from this single pathway.[30] The risk assessment was carried out using recommend ARB/CAPCOA Risk Management Policy assumptions.

[29] Office of Environmental Health Hazard Assessment (OEHHA). 2015. Air Toxics Hot Spots Program. Risk Assessment Guidelines–Guidance Manal for Preparation of Health Risk Assessments. February. Website: https://oehha.ca.gov/media/downloads/crnr/2015guidancemanual.pdf. Accessed November 28, 2023.

[30] California Air Resources Board (ARB) and California Air Pollution Control Officers Association (CAPCOA). 2015. Risk Management Guidance for Stationary Sources of Air Toxics. Website: https://ww2.arb.ca.gov/sites/default/files/classic/toxics/rma/rmgssat.pdf. Accessed November 13, 2023.

The Health Risk Assessment (HRA) evaluates cancer and chronic hazard risks for construction at the Maximally Exposed Individual Resident (MEIR), Maximally Exposed Individual Worker (MEIW), and at other sensitive receptors of interest, such as schools.

## Estimation of Cancer Risks

Cancer risks are estimated as the upper-bound incremental probability that an individual would develop cancer as a direct result of exposure to potential carcinogens over a specified exposure duration. The cancer risk attributed to a chemical is calculated by multiplying the chemical intake or dose at the human exchange boundaries (e.g., lungs) by the chemical-specific cancer potency factor (CPF). Cancer risk is expressed in terms of risk per million exposed individuals. A risk level of 10 in a million implies a likelihood (or risk) that up to 10 persons out of one million equally exposed people would contract cancer if exposed continuously (24 hours per day) to the levels of TACs over a specified duration of time. This risk would be an excess cancer risk that is in addition to any environmental cancer risk borne by a person not exposed to these TACs.

The health risks associated with the exposure to these concentrations are then calculated for each individual receptor based on dose and response parameters. Factors such as an individual's age and body weight and breathing rate determine the dose. Individuals also have varying responses due to a number of factors, with children being more susceptible to health effects due to development. OEHHAs Risk assessment procedures were modified in 2015[31] to account for early childhood health effects and age sensitivity factors are applied to the cancer health risk values. An age sensitivity factor of 10 is applied for infants with exposure starting in the third trimester until age 2. Children from ages 2 to 16 are assumed to be 3 times more sensitive than adults. No adjustments are made for adult exposure for ages greater than 16. OEHHA Health Risk assessment protocols specify HRAs for residential exposure should start with exposure starting at third trimester and this approach is used for both the Construction and Operational HRA for the proposed project.

The analysis utilized the Risk Management Guidance for evaluating an individual receptor based on a 30-year residential exposure over a 70-year averaging period.[32] Specifically, the policy recommends using the 95th percentile breathing rate for age groups less than 2 years old and the 80th percentile breathing rate for age groups that are greater than or equal to 2 years old. The construction exposure period is less than two years and as per OEHHA guidance, exposure was evaluated starting in the third trimester and conservatively evaluated exposure for ages less than 2 years based on the 95th percentile breathing rate.

## Residential Cancer Risk

Residents less than 16 years of age are assumed to be exposed continuously 24 hours per day, 7 days per week and represent the maximally exposed sensitive receptor. The Construction HRA considers exposure starting in third trimester of pregnancy for 11 months.

[31] Office of Environmental Health Hazard Assessment (OEHHA). 2015. Risk Assessment Guidelines Guidance Manual for Preparation of Health Risk Assessments. February. Website: https://oehha.ca.gov/media/downloads/crnr/2015guidancemanual.pdf. Accessed November 15, 2023.

[32] California Air Resources Board (ARB). 2015. Risk Management Guidance for Stationary Sources of Air Toxics. May. Website: https://ww2.arb.ca.gov/sites/default/files/classic/toxics/rma/rma_guidancedraft052715.pdf. Accessed December 8, 2023.

### Off-site Worker Cancer Risk

Workers are assumed to have exposure 8 hours per day, 250 days per year and therefore experience a lower dose than residents at the same location. In addition, workers are assumed to be 16 years of age or older and age sensitivity factors are not applied to the risk values. Worker inhalation rates are specified to account for moderate activity. Finally, because AERMOD calculates a concentration based on a 365 day per year, 24-hour averages, receptors such as workers may experience higher than estimated coincident exposures when the source emits only when the receptor is present. One of the methods to address the higher exposure is to apply a worker adjustment factor (WAF) in HARP2 to align the worker hours with the times when the source is emitting. It should be noted that this method can be applied for adjusting the cancer risk for workers or students but not for residents. The WAF is estimated by first adjusting for the hours that a source is emitted and then making a corresponding adjustment accounting for the hours when a receptor would be present at the site: A worker adjustment factor of 4.2 is used in this analysis to properly evaluate the risks to off-site workers. The factor adjusts the AERMOD 24 -hour, 7 day a week average to the concentrations coincident with the 5-day, 8-hour week construction schedule when DPM is emitted.

### School Cancer Risk

Similarly, students would be present less than 24 hours per day and utilizing exposure times of less than 24 hours. AERMOD long-term concentrations may underestimate student risk. The use of the residential cancer risk to evaluate maximum risk at student locations would provide a conservative estimate since it would assume students are exposed to the entirety of the source emissions. It would also encompass all student age ranges since the exposure for residential risk starts at the third trimester of pregnancy.

### Estimation of Chronic Non-Cancer Hazards

An evaluation of potential non-cancer effects of chronic chemical exposures was also conducted.

Risk characterization for non-cancer health hazards from TACs is expressed as a hazard index (HI). The HI is a ratio of the predicted concentration of the project's emissions to a concentration considered acceptable to public health professionals, termed the Reference Exposure Level (REL). The HI assumes that chronic exposures to TACs adversely affect a specific organ or organ system (toxicological endpoint) of the body. For each discrete chemical exposure, target organs presented in regulatory guidance were used. To calculate the HI, each chemical concentration or dose is divided by the appropriate toxicity REL. For compounds affecting the same toxicological endpoint, this ratio is added together. Where the total equals or exceeds 1, a health hazard is presumed to exist.

To quantify non-carcinogenic impacts, the chronic HI is derived by using the annual average concentration of TAC as derived from the air dispersion model ($\mu g/m^3$). This value is then compared to the REL above which a significant impact is assumed to occur ($\mu g/m^3$).

OEHHA has defined a REL for Diesel Exhaust of 5 $\mu g/m^3$. The principal toxicological endpoint assumed in this assessment was the respiratory system via the inhalation exposure pathway. DPM does not have any identified short-term or acute RELs.

### Estimation of Acute Non-Cancer Hazards

The project's non-cancer acute health risks were not estimated because OEHHA has not established an acute REL for DPM and there are no acute non-cancer risk values associated with DPM.

## 3.2.4 - Thresholds of Significance

Appendix G to the State CEQA Guidelines is a sample Initial Study Checklist that includes questions for determining whether impacts to air quality are significant. These questions reflect the input of planning and environmental professionals at the Governor's Office of Planning and Research and the California Natural Resources Agency, based on input from stakeholder groups and experts in various other governmental agencies, nonprofits, and leading environmental consulting firms. On the subject of air quality, Appendix G states that, "[w]here available, the significance criteria established by the applicable air quality management or air pollution control district may be relied upon to make the following determinations." As a result, many lead agencies derive their significance criteria from the questions posed in Appendix G and input from relevant air districts. The City has chosen to do so for this project.

Additional guidance on the significance of air quality impacts is found in State CEQA Guidelines Section 15065, subdivision (a)(4), which provides that a lead agency shall find that a project may have a significant effect on the environment if "the environmental effects of a project will cause substantial adverse effects on human beings, either directly or indirectly." According to the California Supreme Court, this "mandatory finding of significance" applies to potential effects on public health from environmental impacts such as those associated with air pollutant emissions from projects. (*California Business Industry Association v. Bay Area Air Quality Management District* (2015) 62 Cal.4th 369, 386-392.)

In light of the foregoing, the proposed project would have a significant effect related to air quality if the project would:

a) Conflict with or obstruct implementation of the applicable air quality plan;

b) Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is nonattainment under an applicable federal or State ambient air quality standard;

c) Expose sensitive receptors to substantial pollutant concentrations (and thereby possibly cause substantial adverse effects on human beings, directly or indirectly); or

d) Result in other emissions (such as those leading to odors) adversely affecting a substantial number of people.

### Significance Criteria

The preceding thresholds of significance are stated in general terms. It is therefore desirable to formulate additional, more precise thresholds based on guidance from the BAAQMD, as is encouraged in Appendix G to the State CEQA Guidelines. As explained earlier, BAAQMD's 2022 CEQA Air Quality Guidelines were prepared to assist in evaluating air quality impacts of projects and plans

proposed within the Bay Area. The guidelines provide recommended procedures for evaluating potential air quality impacts during the environmental review process, consistent with CEQA requirements, and include recommended thresholds of significance, mitigation measures, and background air quality information. They also include recommended assessment methodologies for air toxics, odors, and GHGs. The analysis below was prepared using these BAAQMD CEQA Guidelines.

### *Regional Significance Criteria*

Table 3.2-11: shows the BAAQMD's criteria for regional significance for project construction and operations.

**Table 3.2-11: BAAQMD Regional (Mass Emissions) Air Pollutant Significance Thresholds**

| Pollutant | Construction Phase | Operational Phase | |
|---|---|---|---|
| | Average DailyEmissions (pounds/day) | Average DailyEmissions (pounds/day) | Maximum Annual Emissions (tons/year) |
| ROG | 54 | 54 | 10 |
| $NO_X$ | 54 | 54 | 10 |
| $PM_{10}$ | 82 (Exhaust) | 82 | 15 |
| $PM_{2.5}$ | 54 (Exhaust) | 54 | 10 |
| $PM_{10}$ and $PM_{2.5}$ Fugitive Dust | Best Management Practices | None | None |

Notes:
$NO_X$ = oxides of nitrogen
$PM_{10}$ = particulate matter, including dust, 10 micrometers or less in diameter
$PM_{2.5}$ = particulate matter, including dust, 2.5 micrometers or less in diameter
ROG = reactive organic gas
Source: Bay Area Air Quality Management District (BAAQMD). 2022. April. California Environmental Quality Act Air Quality Guidelines.

In developing the above significance thresholds, the BAAQMD considers the emission levels for which a project's individual emissions would be cumulatively considerable. If a project were to exceed the emission thresholds in Table 3.2-11:, that project's emissions would be cumulatively considerable, resulting in significant adverse air quality impacts to the region's existing air quality conditions. Known health effects related to ozone include worsening of bronchitis, asthma, and emphysema and a decrease in lung function. Health effects associated with PM include premature death of people with heart or lung disease, nonfatal heart attacks, irregular heartbeat, decreased lung function, and increased respiratory symptoms. Reducing emissions would further contribute to reducing possible health effects related to criteria air pollutants. However, for projects that exceed the emissions thresholds shown in Table 3.2-11:, it is speculative to determine how exceeding regional thresholds would affect the number of days the region is in nonattainment—as mass emissions are not linearly correlated with concentrations of emissions—or how many additional individuals in the Air Basin would be affected by the health effects cited above.

In *Sierra Club v. County of Fresno (Friant Ranch, LP)* (2018) 6 Cal.5th 502, 510, 517-522*,* the California Supreme Court held generally that an EIR should "make a reasonable effort to substantively connect a project's air quality impacts to likely health consequences." A possible example of such a connection would be to calculate a project's "impact on the days of nonattainment per year" (*Id*. at pp. 521). But the court recognized that there might be scientific limitations on an agency's ability to make the connection between air pollutant emissions and public health consequences in a credible fashion, given limitations in technical methodologies (*Id*. at pp. 520-521). Thus, the court acknowledged that another option for an agency preparing an EIR might be "to explain why it was not feasible to provide an analysis that connected the air quality effects to human health consequences" (*Id*. at p. 522).

For Napa County where the project is located, the BAAQMD is the primary agency responsible for ensuring the health and welfare of sensitive individuals to elevated concentrations of emissions in the Air Basin. At present, the BAAQMD has not provided any methodology to assist local governments in reasonably and accurately assessing the specific connection between mass emissions of ozone precursors (e.g., ROG and $NO_X$) and other pollutants of concern on a regional basis and any specific effects on public health or regional air quality concentrations that might result from such mass emissions. The City has therefore concluded that it is not feasible to predict how mass emissions of pollutants of regional concern from the proposed project could lead to specific public health consequences, changes in pollutant concentrations, or changes in the number of days for which the SFBAAB will be in nonattainment for regional pollutants.

Ozone concentrations, for instance, depend upon various complex factors, including the presence of sunlight and precursor pollutants, natural topography, nearby structures that cause building downwash, atmospheric stability, and wind patterns. Because of the complexities of predicting ground level ozone concentrations related to the NAAQS and CAAQS, it is not possible to link health risks to the magnitude of emissions exceeding the significance thresholds. To achieve the health-based standards established by the EPA, the air districts prepare air quality management plans that detail regional programs to attain the Ambient Air Quality Standards (AAQS). However, if a project within the BAAQMD exceeds the regional significance thresholds, the proposed project could contribute to an increase in health effects in the basin until the attainment standards are met in the Air Basin.

On the other hand, it is technically feasible to predict with reasonable accuracy the potential localized health consequences of localized pollutants such as TACs and $PM_{2.5}$. As discussed below, a HRA has been prepared that addresses the potential for additional incidences of cancer resulting from both the construction-related emissions and the operational emissions of the proposed project.

### *Consistency with Air Quality Plan*

The applicable air quality plan is BAAQMD's 2017 Bay Area Clean Air Plan, which identifies measures to:

- Reduce emissions and reduce ambient concentrations of air pollutants;

- Safeguard public health by reducing exposure to the air pollutants that pose the greatest health risk, with an emphasis on protecting the communities most heavily affected by air pollution; and
- Reduce GHG emissions to protect the climate.

A project would be determined to conflict with or obstruct implementation of an applicable air quality plan if it would result in substantial new regional emissions not foreseen in the air quality planning process.

### *Local CO Hotspots*

Congested intersections have the potential to create elevated concentrations of CO, referred to as CO hotspots. The significance criteria for CO hotspots are based on the CAAQS for CO, which is 9.0 ppm (8-hour average) and 20.0 ppm (1-hour average). However, with the turnover of older vehicles, the introduction of cleaner fuels, and implementation of control technology, the SFBAAB is in attainment of the CAAQS and NAAQS, and CO concentrations in the SFBAAB have steadily declined. Because CO concentrations have improved, the BAAQMD does not require a CO hotspot analysis if all the following criteria are met:

- The project is consistent with an applicable congestion management program established by the County Congestion Management Agency for designated roads or highways, the regional transportation plan, and local congestion management agency plans; and
- The project would not increase traffic volumes at affected intersections to more than 44,000 vehicles per hour; and
- The project traffic would not increase traffic volumes at affected intersection to more than 24,000 vehicles per hour where vertical and/or horizontal mixing is substantially limited (e.g., tunnel, parking garage, bridge underpass, natural or urban street canyon, below-grade roadway).[33]

### *Community Risk and Hazards*

The BAAQMD's significance thresholds for local community risk and hazard impacts apply to both the siting of a new source and to the siting of a new receptor. Local community risk and hazard impacts are associated with TACs and $PM_{2.5}$ because emissions of these pollutants can have significant health impacts at the local level.

- The proposed project would generate TACs and $PM_{2.5}$ during construction activities that could elevate concentrations of air pollutants at the nearby school and residential sensitive receptors. The thresholds for construction-related local community risk and hazard impacts are the same as for project operations. Construction-related TAC and $PM_{2.5}$ impacts should be

[33] Bay Area Air Quality Management District (BAAQMD). 2022. California Environmental Quality Act Air Quality Guidelines. April. Website: https://www.baaqmd.gov/~/media/files/planning-and-research/ceqa/ceqa-guidelines-2022/ceqa-guidelines-chapter-4-screening_final-pdf.pdf?rev=ac551d35a52d479dad475e7d4c57afa6&sc_lang=en. Accessed November 29, 2023.

addressed on a case-by-case basis, considering each project's specific construction-related characteristics and proximity to off-site receptors, as applicable.[34]

- The proposed project involves the construction of new warehouse facilities and would be a source of operational TACs and $PM_{2.5}$ from trucking activity. The BAAQMD thresholds related to siting new sources of TACs and $PM_{2.5}$ near existing or planned sensitive receptors are applicable.

Since the City of American Canyon does not have a qualified risk reduction plan, a site-specific analysis of TACs and $PM_{2.5}$ impacts on sensitive receptors was conducted. The thresholds identified below are applied to the proposed project's construction and operational phases.

*Community Risk and Hazards: Project*

Project-level emissions of TACs or $PM_{2.5}$ from individual sources that exceed any of the thresholds listed below are considered a potentially significant community health risk:

- An excess cancer risk level of more than 10 in one million, or a non-cancer (i.e., chronic or acute)HI greater than 1.0 would be a significant cumulatively considerable contribution.
- An incremental increase of greater than 0.3 micrograms per cubic meter ($\mu g/m^3$) annual average $PM_{2.5}$ from a single source would be a significant cumulatively considerable contribution.

*Community Risk and Hazards: Cumulative*

Cumulative sources represent the combined total risk values of each of the individual sources within the 1,000-foot evaluation zone. A project would have a cumulatively considerable impact if the aggregate total of all past, present, and foreseeable future sources within a 1,000-foot radius from the fence line of a source or location of a receptor, plus the contribution from the proposed project, meets any of these conditions:

- Has excess cancer risk levels of more than 100 in one million or a chronic non-cancer HI (from all local sources) greater than 10.0.
- Exceeds 0.8 $\mu g/m^3$ annual average $PM_{2.5}$.

In February 2015, the California Office of Environmental Health Hazard Assessment (OEHHA) adopted additional HRA guidance that includes several efforts to be more protective of children's health. These updated procedures include age sensitivity factors to account for the higher sensitivity of infants and young children to cancer-causing chemicals, and age-specific breathing rates.[35]

[34] Bay Area Air Quality Management District (BAAQMD). 2022. California Environmental Quality Act Air Quality Guidelines. April. Website: https://www.baaqmd.gov/plans-and-climate/california-environmental-quality-act-ceqa/updated-ceqa-guidelines. Accessed November 29, 2023.

### *Odors*

The BAAQMD thresholds for odors are qualitative based on BAAQMD Regulation 7, Odorous Substances. This rule places general limitations on odorous substances and specific emission limitations on certain odorous compounds. Odors are also regulated under BAAQMD Regulation 1, Rule 1-301, Public Nuisance, which states that no person shall discharge from any source whatsoever such quantities of air contaminants or other material which cause injury, detriment, nuisance, or annoyance to any considerable number of persons or the public; or which endangers the comfort, repose, health, or safety of any such persons or the public; or which causes, or has a natural tendency to cause, injury, or damage to business or property. Under BAAQMD Rule 1-301, the BAAQMD has established odor screening thresholds for land uses that have the potential to generate substantial odor complaints, including wastewater treatment plants, landfills or transfer stations, composting facilities, confined animal facilities, food manufacturing, and chemical plants. Table 3.2-12 shows the screening distances for various land uses that are considered to have objectionable odors.[36]

**Table 3.2-12: BAAQMD Odor Screening-level Distances Thresholds**

| Land Use/Type of Operation | Project Screening Distance |
|---|---|
| Wastewater Treatment Plant | 2 miles |
| Wastewater Pumping Facilities | 1 mile |
| Sanitary Landfill | 2 miles |
| Transfer Station | 1 mile |
| Composting Facility | 1 mile |
| Petroleum Refinery | 2 miles |
| Asphalt Batch Plant | 2 miles |
| Chemical Manufacturing | 2 miles |
| Fiberglass Manufacturing | 1 mile |
| Painting/Coating Operations | 1 mile |
| Rendering Plant | 2 miles |
| Coffee Roaster | 1 mile |
| Food Processing Facility | 1 mile |
| Confined Animal Facility/Feed Lot/Dairy | 1 mile |
| Green Waste and Recycling Operations | 1 mile |
| Metal Smelting Plants | 2 miles |
| Source: Bay Area Air Quality Management District (BAAQMD). 2022. | |

[36] Bay Area Air Quality Management District (BAAQMD). 2022. California Environmental Quality Act Air Quality Guidelines. April. Website: https://www.baaqmd.gov/plans-and-climate/california-environmental-quality-act-ceqa/updated-ceqa-guidelines. Accessed June 2, 2023.

## 3.2.5 - Project Impacts and Mitigation Measures

This section discusses potential impacts associated with the development of the proposed project and provides mitigation measures where appropriate.

### Consistency with Air Quality Management Plan

| | |
|---|---|
| **Impact AIR-1:** | **The proposed project could conflict with or obstruct implementation of the applicable air quality plan.** |

#### *Impact Analysis*

The BAAQMD is responsible for reducing emissions from area, stationary, and mobile sources in the SFBAAB to achieve National and California AAQS. The BAAQMD 2017 Clean Air Plan is a regional and multiagency effort to reduce air pollution in the Air Basin. A consistency determination with the Air Quality Management Plan (AQMP) plays an important role in local agency project review by linking local planning and individual projects to the 2017 Clean Air Plan. It fulfills the CEQA goal of informing decision-makers of the proposed project's environmental effects under consideration early enough to ensure that air quality concerns are fully addressed. It also provides the local agency with ongoing information as to whether they are contributing to the clean air goals in the 2017 Clean Air Plan.

The BAAQMD compiles the regional emissions inventory for the SFBAAB. In part, the regional population, housing, and employment projections developed by the ABAG are based on cities' general plan land use designations. These projections form the foundation for the emissions inventory of the 2017 Clean Air Plan. These demographic trends are incorporated into Plan Bay Area, compiled by ABAG and the MTC, to determine priority transportation projects and VMT in the Bay Area. Projects consistent with the local general plan are considered consistent with the regional air quality plan.

The proposed project would build a 219,834-square-foot warehouse on approximately 10.45 acres. As previously described, demographic trends such as employment and population growth were estimated in ABAG's Plan Bay Area 2040 based on local general plan land use patterns, which the BAAQMD utilized in part to inform the emissions inventory and projections contained in the 2017 Clean Air Plan.

The project site is designated Commercial Recreation (CR) by the City of American Canyon General Plan and zoned Recreation (REC). A Recreation Zoning District Code Amendment (Ordinance No. 2018-01) was adopted by the City Council on January 16, 2018. The Ordinance allows wine-related warehousing and distribution facilities as a conditionally permitted use within the REC zoning district.

It is unclear whether ABAG's projections account for the possible conditional uses allowed under certain land use designations. As such, the proposed project would not automatically be considered consistent with employment and VMT growth projections identified in local plans, upon which applicable ambient Air Quality Plans (AQPs) are based. Therefore, further analysis is needed to determine whether the proposed project would conflict with or obstruct implementation of the applicable air quality plan.

With respect to local air quality plans, the City has adopted Ordinance No. 2024-014 which establishes thresholds to evaluate the significance of GHG impact for industrial land use projects. The industrial project is analyzed against four tiers (whether the project is exempt, whether the project would be consistent with a qualified adopted GHG reduction plan, whether the project incorporates the necessary design elements, and whether the project meets a numeric GHG emissions threshold) to determine its GHG impact significance. As discussed in Section 3.7, Greenhouse Gas Emissions, the proposed project would meet Tier 4 of the City's GHG threshold and therefore would not conflict with the City's GHG threshold.

The analysis below evaluates whether the proposed project would conflict with the Clean Air Plan based on the project's emissions inventory and incorporation of relevant clean air measures contained in the Clean Air Plan.

As noted in Impact AIR-2 below, project-generated emissions would not exceed BAAQMD's project-level significance thresholds and impacts would be less than significant.

Table 3.2-13 identifies the project-applicable control measures in the 2017 Clean Air Plan required by BAAQMD to reduce emissions for a wide range of stationary and mobile sources and the project's consistency analysis with these control measures. As shown in Table 3.2-13, the proposed project would not conflict with the control measures of the 2017 Clean Air Plan.

**Table 3.2-13: Consistency With 2017 Clean Air Plan Control Measures**

| Type | Measure Number/Title | Consistency Analysis |
|---|---|---|
| Stationary Source Control Measure | **SS18: Basin-Wide Combustion Strategy.** Stabilize and then reduce emissions of GHGs, criteria air pollutant and toxic emissions from stationary combustion sources throughout the Air District by first establishing carbon intensity caps on major GHG sources, and then adopting new rules to (1) reduce fuel use on a source-type by source-type basis, and (2) evaluate alternatives to decarbonize abatement devices.<br><br>**SS21: New Source Review for Air Toxics.** Propose revisions to Air District Rule 2-5, New Source Review of Toxic Air Contaminants, based on OEHHA's 2015 Health Risk Assessment Guidelines and ARB/CAPCOA's 2015 Risk Management Guidance. Revise the Air District's Health Risk Assessment trigger levels for each toxic air contaminant using the 2015 Guidelines and most recent health effects values. | **Consistent**. Stationary sources are regulated directly by the BAAQMD, which routinely adopts/revises rules or regulations to implement the Stationary Source (SS) control measures to reduce stationary source emissions. Therefore, any new stationary sources associated with the proposed project would be required to comply with BAAQMD's regulations. Based on the proposed warehousing use for the project site, it is not anticipated that the proposed project would result in any new major stationary source emissions. Additionally, in the event stationary equipment is installed on-site, it is anticipated that the equipment would be small-quantity emitters and would require review by BAAQMD for permitted sources of air which would ensure consistency with the 2017 Clean Air Plan. |
| | **SS 36: PM from Trackout.** | **Consistent with mitigation.** BAAQMD's recommended mitigation measures for |

| Type | Measure Number/Title | Consistency Analysis |
|---|---|---|
| | Develop new Air District rule to prevent mud/dirt and other solid trackout from construction, landfills, quarries and other bulk material sites. | construction fugitive dust control, incorporated as MM AIR-1 for this project, would be implemented to reduce fugitive dust and trackout during project construction. In addition, mud and dirt that may be tracked out onto the nearby public roads during construction activities shall be removed promptly by the contractor based on BAAQMD's requirements. |
| | **SS 37: PM from Asphalt Operations.** Develop an Air District rule to require abatement/control of blue smoke emissions related to asphalt delivery to roadway paving projects. | **Consistent.** Asphalt application during the construction of the proposed project would be subject to BAAQMD Regulation 8, Rule 15-Emulsified and Liquid Asphalts. |
| Transportation Control Measures | **TR 2: Trip Reduction Programs.** Implement the regional Commuter Benefits Program (Rule 14-1) that requires employers with 50 or more Bay Area employees to provide commuter benefits. Encourage trip reduction policies and programs in local plans, e.g., general and specific plans while providing grants to support trip reduction efforts. Encourage local governments to require mitigation of vehicle travel as part of new development approval, to adopt transit benefits ordinances in order to reduce transit costs to employees, and to develop innovative ways to encourage rideshare, transit, cycling, and walking for work trips. Fund various employer-based trip reduction programs. | **Consistent**. Transportation (TR) control measures are strategies to reduce vehicle trips, vehicle use, VMT, vehicle idling, and traffic congestion to reduce motor vehicle emissions. Although most of the TR control measures are implemented at the regional level—that is, by MTC or California Department of Transportation (Caltrans)—the 2017 Clean Air Plan relies on local communities to assist with the implementation of some measures.<br><br>The proposed project would also be subject to the Bay Area's Commuter Benefits Program, which requires all employers in BAAQMD's jurisdiction that have 50 or more full-time employees to offer commuter benefits to their employees. Therefore, the proposed project is consistent with this measure.<br><br>In addition, MM TRANS-2 requires the project applicant to develop and implement a Transportation Demand Management (TDM) program to encourage employees to choose non-personal vehicle models of transportation for commuting. MM TRANS-2 would further support the measure's trip reduction goals. |
| | **TR 9: Bicycle and Pedestrian Access and Facilities.** Encourage planning for bicycle and pedestrian facilities in local plans, e.g., general and specific | **Consistent**. The proposed project would provide pedestrian circulation throughout the project site in accordance with California Disabled |

| Type | Measure Number/Title | Consistency Analysis |
|---|---|---|
| | plans, fund bike lanes, routes, paths and bicycle parking facilities. | Accessibility Guidebook (CalDAG) and Americans with Disabilities Act (ADA) recommendations and standards. The proposed project would also provide three bicycle lockers, each of which would accommodate up to four bicycles, for a total of 12 bicycle parking spaces. The proposed 12 bicycle parking spaces would be five more than required per the City's Zoning Ordinance Chapter 19.14.090 (A), Bicycle Parking Requirements. |
| | **TR 19: Medium and Heavy-Duty Trucks.** Directly provide, and encourage other organizations to provide, incentives for the purchase of (1) new trucks with engines that exceed ARB's 2010 $NO_X$ emission standards for heavy-duty engines, (2) new hybrid trucks, and (3) new zero-emission trucks. The Air District will work with truck owners, industry, ARB, the California Energy Commission, and others to demonstrate additional battery-electric and hydrogen fuel cell zero-emission trucks. | **Consistent.** The truck fleet used for the proposed project is required to comply with the State's rigorous on-road heavy-duty vehicle programs aimed to transition truck fleets from diesel to Zero-Emission Vehicle (ZEV). Relevant regulations include the "omnibus" regulation, Advanced Clean Truck and Advance Clean Fleets regulations, and TRU Arborne Toxics Control Measure (ACTM), all discussed above in Section 3.2.2-Regulatory Framework. |
| Energy and Climate Control Measures | **EN1: Decarbonize Electricity Production.** Engage with PG&E, municipal electric utilities and CCAs to maximize the amount of renewable energy contributing to the production of electricity within the Bay Area as well as electricity imported into the region. Work with local governments to implement local renewable energy programs. Engage with stakeholders including dairy farms, forest managers, water treatment facilities, food processors, public works agencies and waste management to increase use of biomass in electricity production.<br><br>**EN2: Decrease Electricity Demand.** Work with local governments to adopt additional energy efficiency policies and programs. Support local government energy efficiency program via best practices, model ordinances, and technical support. Work with partners to develop messaging to decrease electricity demand during peak times. | **Consistent**. The Energy and Climate (EN) control measures are intended to reduce energy use as a means of reducing adverse air quality emissions. Solar would be installed on the project's building roof top and would produce an estimated 235,000 kilowatt-hour (kWh) per year. |
| Buildings Control Measures | **BL2: Decarbonize Buildings.** Explore potential Air District rulemaking options regarding the sale of fossil fuel-based space and water heating systems for both | **Consistent**. The proposed project would not include natural gas plumbing or appliances and is therefore consistent with this measure. |

| Type | Measure Number/Title | Consistency Analysis |
|---|---|---|
| | residential and commercial use. Explore incentives for property owners to replace their furnace, water heater or natural gas powered appliances with zero-carbon alternatives. Update Air District guidance documents to recommend that commercial and multi-family developments install ground source heat pumps and solar hot water heaters. | |
| Natural and WorkingLands Control Measures | **NW 3–Carbon Sequestration in Wetlands.** Identify federal, State, and regional agencies, and collaborative working groups that the Air District can assist with technical expertise, research or incentive funds to enhance carbon sequestration in wetlands around the Bay Area. Assist agencies and organizations that are working to secure the protection and restoration of wetlands in the San Francisco Bay. | **Consistent**. The control measure focuses on increasing carbon sequestration on wetlands. The proposed project would preserve the on-site wetlands and would include the planting of various ornamental and shade trees throughout the project site. These actions would support the State's working lands and would therefore make the proposed project consistent with this measure. |
| Waste Management Control Measures | **WA 4–Recycling and Waste Reduction.** Develop model policies to facilitate local adoption of ordinances and programs to reduce the amount of green waste going to landfills. | **Consistent**. The control measure includes strategies to increase waste diversion rates through efforts to reduce, reuse, and recycle. The proposed project would comply with Assembly Bill (AB) 341, which requires mandatory commercial recycling for businesses that generate four cubic yards or more of commercial solid waste per week. Additionally, the proposed project would be required to reduce construction waste by 75 percent and use 30 percent recycled content during the construction of the proposed facility. Therefore, the proposed project would not conflict with these WA control measures. |
| Water Control Measures | **WR 2–Support Water Conservation.** Develop a list of best practices that reduce water consumption and increase on-site water recycling in new and existing buildings; incorporate into local planning guidance. | **Consistent.** The 2017 Clean Air Plan includes measures to reduce water use. The proposed project would include water efficiency measures required under CALGreen. In addition, the proposed project would include water-efficient indoor fixtures consistent with the requirements of CALGreen and water-efficient landscaping outdoors. |
| Super GHG ControlMeasures | **SL 1–Short-Lived Climate Pollutants.** Reduce methane from landfills and farming activities through various control measures listed under waste and agriculture sectors. | **Consistent**. Super-GHGs include methane, black carbon, and fluorinated gases. These compounds are sometimes referred to as short-lived climate |

| Type | Measure Number/Title | Consistency Analysis |
|---|---|---|
| | Develop a rule to reduce methane emissions from natural gas pipelines and processing operations, and amend regulations to reduce emissions of methane and other organic gases from equipment leaks at oil refineries. Enforce applicable regulations on the servicing of existing air conditioning units in motor vehicles, support the adoption of more stringent regulations by the ARB and/or EPA, and encourage better HFC disposal practices. | pollutants because their lifetime in the atmosphere is generally fairly short. Measures to reduce super-GHGs are addressed on a sector-by-sector basis in the 2017 Clean Air Plan. The proposed project would comply with AB 341, which mandates commercial recycling for businesses that generate four cubic yards or more of commercial solid waste per week, which could contribute to reducing methane by diverting waste from landfills. |

Source: Bay Area Air Quality Management District (BAAQMD). 2017, April 19. Final 2017 Clean Air Plan, Spare the Air, Cool the Climate: A Blueprint for Clean Air and Climate Protection in the Bay Area. Website: https://www.baaqmd.gov/~/media/files/planning-and-research/plans/2017-clean-air-plan/attachment-a_-proposed-final-cap-vol-1-pdf.pdf?la=en. Accessed November 30, 2023.

As shown in Table 3.2-13, the proposed project would not conflict with the relevant clean air measures contained in the Clean Air Plan after mitigation. Nonetheless, the BAAQMD's CEQA Air Quality Guidelines further recommend determining a project's consistency with the 2017 Clean Air Plan, in part, by determining a project's consistency with the regional significance thresholds presented in Table 3.2-11.[37] As discussed under Impact AIR-2, the proposed project's emissions are below BAAQMD's significance thresholds and would be considered less than significant.

The BAAQMD does not have a bright-line emissions threshold for determining potentially significant impacts related to construction fugitive dust. Instead, the BAAQMD determines a project to result in a potentially significant impact if that project were not to implement construction BMPs to minimize the extent of fugitive dust emissions, such as soil erosion, sediment migration, roadway dust re-entrainment, and soil trackout, during project construction. In the absence of specific information related to the proposed project's intended implementation of construction BMPs to minimize fugitive dust emissions, the proposed project is assumed to not include any construction BMPs.

[37] Bay Area Air Quality Management District (BAAQMD). 2017. California Environmental Quality Act Air Quality Guidelines. Website: https://www.baaqmd.gov/~/media/files/planning-and-research/ceqa/ceqa_guidelines_may2017-pdf.pdf?la=en. Accessed June 2, 2023.

Therefore, Mitigation Measure (MM) AIR-1 would be required to ensure implementation of construction BMPs recommended by the BAAQMD.

Consequently, implementation of MM AIR-1 would sufficiently maintain project construction emissions at less than significant levels. As previously discussed, the BAAQMD's CEQA Air Quality Guidelines recommend determining a project's consistency with the 2017 Clean Air Plan, in part, by determining a project's consistency with the BAAQMD significance thresholds. As discussed under Impact AIR-2, the proposed project would not generate emissions which would exceed the BAAQMD's significance thresholds. Therefore, the proposed project would not conflict with the applicable air quality plan and impacts would be less than significant with mitigation.

### *Level of Significance Before Mitigation*

Potentially significant impact.

### *Mitigation Measures*

**MM AIR-1 Implement BAAQMD Best Management Practices to Control Dust During Construction**

The following dust control measures, as recommended by the Bay Area Air Quality Management District (BAAQMD), shall be included in the design of the proposed project and implemented during construction:

- All exposed non-paved surfaces (e.g., parking areas, staging areas, soil piles, graded areas, and access roads) shall be watered at least two times per day and/or non-toxic soil stabilizers shall be applied to exposed non-paved surfaces.
- All haul trucks transporting soil, sand, or other loose material off-site shall be covered and/or shall maintain at least 2 feet of freeboard.
- All visible mud or dirt tracked out onto adjacent public roads shall be removed using wet power vacuum street sweepers at least once per day. The use of dry power sweeping is prohibited.
- All vehicle speeds on unpaved roads shall be limited to 15 miles per hour.
- All roadways, driveways, and sidewalks to be paved shall be completed as soon as possible. Building pads shall be laid as soon as possible after grading unless seeding or soil binders are used.
- Idling times shall be minimized either by shutting equipment off when not in use or reducing the maximum idling time to 5 minutes, as required by the California Airborne Toxics Control Measure (ACTM) Title 13, Section 2485 of California Code of Regulations. Clear signage regarding idling restrictions shall be provided for construction workers at all access points.
- All construction equipment shall be maintained and properly tuned in accordance with the manufacturer's specifications. All equipment shall be checked by a certified mechanic and determined to be running in proper condition prior to operation.
- The prime construction contractor shall post a publicly visible sign with the telephone number and person to contact regarding dust complaints. The construction contractor shall take corrective action within 48 hours. The

BAAQMD's and the City's phone numbers shall also be visible to ensure compliance with applicable regulations.

### *Level of Significance After Mitigation*

Le*s*s than significant impact with mitigation incorporated.

## Cumulative Criteria Pollutant Emissions Impacts

**Impact AIR-2:** **The proposed project could result in a cumulatively considerable net increase of any criteria pollutant for which the project region is nonattainment under an applicable federal or State ambient air quality standard.**

### *Impact Analysis*

This impact is related to the cumulative effect of a project's regional criteria pollutant emissions. By its nature, air pollution is largely a cumulative impact resulting from emissions generated over a large geographic region. The nonattainment status of regional pollutants results from past and present development within the Air Basin, and this regional impact is a cumulative impact. Therefore, new development projects (such as the proposed project) within the Air Basin would contribute to this impact only on a cumulative basis. No single project would be sufficient in size, by itself, to result in nonattainment of regional air quality standards. Instead, a project's emissions may be individually limited, but cumulatively considerable when evaluated in combination with past, present, and future development projects.

As discussed above, BAAQMD sets emission thresholds for $NO_x$, $PM_{10}$, $PM_{2.5}$, CO, and ROG. $NO_X$ emissions are of concern because of potential health impacts from exposure to $NO_X$ emissions during both construction and operation and as a precursor in the formation of airborne ozone. $PM_{10}$ and $PM_{2.5}$ are of concern during construction because of the potential to emit exhaust emissions from the operation of off-road construction equipment and fugitive dust during earth-disturbing activities (construction fugitive dust). CO emissions are of concern during project operation because operational CO hotspots are related to increases in on-road vehicle congestion and potential health effects. ROG emissions are also important because of their participation in the formation of ground level ozone. Ozone is a respiratory irritant and an oxidant that increases susceptibility to respiratory infections and can cause substantial damage to vegetation and other materials. Elevated ozone concentrations result in reduced lung function, particularly during vigorous physical activity. This health problem is particularly acute in sensitive receptors such as the sick, elderly, and young children.

The cumulative analysis focuses on whether a specific project would result in cumulatively considerable emissions. According to Section 15064(h)(4) of the State CEQA Guidelines, the existence of significant cumulative impacts caused by other projects alone does not constitute substantial evidence that the project's incremental effects would be cumulatively considerable. Rather, the determination of cumulative air quality impacts for construction and operational emissions is based on whether the proposed project would result in regional emissions that exceed the BAAQMD regional thresholds of significance for construction and operations on a project level. The significance thresholds represent the allowable amount of emissions each project can generate without generating a cumulatively considerable contribution to regional air quality impacts.

Therefore, a project that would not exceed the BAAQMD thresholds of significance on the project level also would not be considered to result in a cumulatively considerable contribution to these regional air quality impacts. Construction and operational emissions are discussed separately below.

*Construction*

During construction, fugitive dust would be generated from site grading and other earthmoving activities. The majority of this fugitive dust would remain localized and deposited near the project site; however, fugitive dust's potential impacts exist unless control measures are implemented to reduce this source's emissions. Exhaust emissions would also be generated from the operation of the off-road construction equipment and on-road construction vehicles.

**Construction Fugitive Dust**

The BAAQMD does not recommend a numerical threshold for fugitive dust PM emissions. Instead, the BAAQMD bases the determination of significance for fugitive dust on the consideration of the control measures to be implemented, referred to as BMPs. If all appropriate emissions control measures are implemented for a project as recommended by the BAAQMD, then fugitive dust emissions during construction are not considered significant. Therefore, the BAAQMD determines a project to result in a potentially significant impact if that project were not to implement construction BMPs to minimize the extent of fugitive dust emissions, such as soil erosion, sediment migration, roadway dust re-entrainment, and soil trackout, during project construction. In the absence of specific information related to the proposed project's intended implementation of construction BMPs to minimize fugitive dust emissions, the proposed project is assumed to not include any construction BMPs. Therefore, MM AIR-1 would be required to ensure implementation of construction BMPs recommended by the BAAQMD irrespective of the emissions reductions achieved by those BMPs. With the incorporation of this mitigation, short-term construction impacts associated with violating an air quality standard or contributing substantially to an existing or projected air quality violation would be less than significant for fugitive dust.

**Construction Air Pollutant Emissions: ROG, $NO_X$, $PM_{10}$, $PM_{2.5}$**

CalEEMod, Version 2022.1, was used to estimate the proposed project's construction emissions. CalEEMod provides a consistent platform for estimating construction and operational emissions from various land use projects and is the model recommended by the BAAQMD for estimating project emissions. Estimated construction emissions are compared with the applicable thresholds of significance established by the BAAQMD to assess ROG, $NO_X$, exhaust $PM_{10}$, and exhaust $PM_{2.5}$ construction emissions to determine significance for this impact.

At the time of this analysis, the construction of the proposed project was anticipated to begin in the third quarter of 2024 and be completed 11 months later. If the construction schedule moves to later years, construction emissions would likely decrease because of improvements in technology and more stringent regulatory requirements.

Construction activities such as grading, excavation, and travel on unpaved surfaces would generate dust and lead to elevated concentrations of $PM_{10}$ and $PM_{2.5}$. According to the project site plans and applicant-provided information, an estimated 1,000 cubic yards of soil are anticipated to be imported during site grading activities. The operation of construction equipment results in exhaust

emissions, which include ROG and $NO_X$. Table 3.2-14 presents construction-period emissions that would result from the development of the proposed project. As shown in Table 3.2-14, construction-related criteria pollutant emissions would not exceed BAAQMD thresholds.

**Table 3.2-14: Unmitigated Construction Emissions**

| Construction Activity | Criteria Pollutant Emissions (Tons) | | | |
|---|---|---|---|---|
| | ROG | $NO_X$ | $PM_{10}$ (Exhaust) | $PM_{2.5}$ (Exhaust) |
| Site Preparation (2024) | 0.019 | 0.180 | 0.008 | 0.007 |
| Grading (2024) | 0.038 | 0.387 | 0.016 | 0.014 |
| Building Construction (2024) | 0.053 | 0.405 | 0.015 | 0.014 |
| Building Construction (2025) | 0.123 | 0.930 | 0.032 | 0.030 |
| Paving (2025) | 0.012 | 0.079 | 0.004 | 0.003 |
| Architectural Coating (2025) | 0.277 | 0.010 | 0.000 | 0.000 |
| **Total Construction Emissions (Tons)** | **0.522** | **1.992** | **0.075** | **0.069** |
| **Average Daily Emissions** | | | | |
| Total Construction Emissions (Pounds) | 1,044 | 3,984 | 149 | 137 |
| **Average Daily Construction Emissions (Pounds/Day)** | **4.2** | **15.9** | **0.60** | **0.55** |
| BAAQMD Significance Thresholds | 54 | 54 | 82 | 54 |
| **Significant Impact?** | **No** | **No** | **No** | **No** |

Notes:
This analysis relies on a 250-day construction schedule, consistent with the construction schedule and modeling results contained in Appendix A.
BAAQMD = Bay Area Air Quality Management District
NOx = nitrogen oxides
$PM_{10}$ = particulate matter, including dust, 10 micrometers or less in diameter
$PM_{2.5}$ = particulate matter, including dust, 2.5 micrometers or less in diameter
ROG = reactive organic gases
Source: Appendix A.

*Operation*

**Operational Air Pollutant Emissions: ROG, $NO_X$, $PM_{10}$, and $PM_{2.5}$**

Operational emissions would include area, energy, and mobile sources. Area sources would include emissions from architectural coatings, consumer products, and landscape equipment. Energy sources include emissions from the combustion of natural gas for water heaters and other heat sources. Mobile sources include exhaust and road dust emissions from the automobiles that would travel to and from the project site. Pollutants of concern include ROG, $NO_X$, $PM_{10}$, and $PM_{2.5}$.

Project operations were analyzed at full buildout immediately following the completion of construction in August 2025 as a conservative estimate of operational emissions beginning in the earliest year of full operation. During full operation, the proposed project is expected to generate

1.69 trips per 1,000 square feet or an estimated 372 daily trips.[38] A recent American Canyon industrial warehouse travel collection study[39] was used to apportion the trips between passenger vehicles (244 daily) and medium-duty (19 daily) and heavy-duty truck (109 daily) trips. An average truck trip length of 35.6 miles was also assumed, based on eight existing Napa County industrial warehousing sites in full operation.[40]

Operational emission estimates for the proposed project are contained in Table 3.2-15. For detailed assumptions used to estimate emissions, see Appendix B.

**Table 3.2-15: Unmitigated Operational Emissions**

| Emissions Source | ROG | $NO_X$ | $PM_{10}$ Total | $PM_{2.5}$ Total |
|---|---|---|---|---|
| | Tons per Year | | | |
| Area | 1.10 | 0.01 | 0.002 | 0.002 |

[40] Ibid.

Table 3.2-15 indicates that the proposed project would result in operational-related criteria air pollutants or ozone precursors below the BAAQMD's thresholds of significance for all criteria pollutants.

**Operational Carbon Monoxide Hotspot**

The CO emissions from traffic generated by the proposed project are a concern at the local level. Congested intersections can result in high, localized concentrations of CO.

The BAAQMD recommends a screening analysis to determine whether a project has the potential to contribute to a CO hotspot. The screening criteria identify when site-specific CO dispersion modeling is necessary. The proposed project would result in a less than significant impact to air quality for local CO if all the following screening criteria are met:

1. The project is consistent with an applicable congestion management program established by the county congestion management agency for designated roads or highways, regional transportation plan, and local congestion management agency plans; and
2. The project traffic would not increase traffic volumes at affected intersections to more than 44,000 vehicles per hour; and
3. The project traffic would not increase traffic volumes at affected intersections to more than 24,000 vehicles per hour where vertical and/or horizontal mixing is substantially limited (e.g., tunnel, parking garage, bridge underpass, natural or urban street canyon, below-grade roadway).

SR-29, located approximately 4,800 feet east of the project site, would experience the most traffic volume as compared to other roadways in the vicinity. The segment of SR-29 near the project site has a peak-hour traffic volume of 2,900 vehicle trips as of 2021.[41,42] Therefore, the proposed project would not result in any nearby intersection having peak-hour traffic volumes exceeding 44,000 vehicles per hour.

Nonetheless, CO hotspots can occur when a transportation facility's design or orientation prevents the adequate dispersion of CO emissions from vehicles, resulting in the accumulation of local CO concentrations. The design or orientation of a transportation facility that may prevent the dispersion of CO emissions include tunnels, parking garages, bridge underpasses, natural or urban canyons, below-grade roadways, or other features where vertical or horizontal atmospheric mixing is substantially limited. Adjacent roadways that would receive new vehicle trips generated by the proposed project do not include roadway segments where vertical or horizontal atmospheric mixing is substantially limited.

Finally, the proposed project would not conflict with a program, plan, ordinance, or policy of the circulation system, including transit, roadway, bicycle, and pedestrian facilities. As discussed in

[41] California Department of Transportation (Caltrans). 2021. Traffic Volumes for All Vehicles on CA State Highways. Website: https://dot.ca.gov/programs/traffic-operations/census. Accessed November 30, 2023.
[42] Postmile of the nearest SR-29 segment is obtained from Caltrans Postmile Services. Website: https://postmile.dot.ca.gov/PMQT/PostmileQueryTool.html?. Accessed November 20, 2023.

Section 3.13, Transportation, General Plan Policy 4.6 indicates that industrial uses should be located in the City's north industrial area to minimize the impacts of truck traffic on residential neighborhoods. The proposed project is located adjacent to similar warehouse projects, and with the redesign of Commerce Court as a cul-de-sac, the roadway connection to the residential neighborhood to south of the project is not available, and truck traffic would be required to access the site via Green Island Road. As the proposed project would minimize truck traffic impacts on residential neighborhoods, the proposed project would not conflict with this policy.

Therefore, based on the above criteria, the proposed project would not exceed the CO screening criteria and would have a less than significant impact related to CO.

The proposed project would generate criteria pollutant and ozone precursor emissions during construction and operation; however, as previously indicated, emissions would be below BAAQMD thresholds and therefore would have less than significant effects in this respect.

The proposed project would generate construction fugitive dust. The BAAQMD does not have a bright-line emissions threshold for determining potentially significant impacts related to construction fugitive dust. Instead, the BAAQMD determines a project to result in a potentially significant impact if that project were not to implement construction BMPs to minimize the extent of fugitive dust emissions, such as soil erosion, sediment migration, roadway dust re-entrainment, and soil trackout, during project construction. In the absence of specific information related to the proposed project's intended implementation of construction BMPs to minimize fugitive dust emissions, the proposed project is assumed to not include any construction BMPs. Therefore, MM AIR-1, discussed above, would be required to ensure implementation of construction BMPs recommended by the BAAQMD irrespective of the emissions reductions achieved by those BMPs.

Consequently, implementation of MM AIR-1 would sufficiently reduce project construction emissions to less than significant levels.

### *Level of Significance Before Mitigation*

Potentially significant impact.

### *Mitigation Measures*

Implement MM AIR-1.

### *Level of Significance After Mitigation*

Le***s***s than significant impact with mitigation incorporated.

## Sensitive Receptors Exposure to Pollutant Concentrations

| | |
|---|---|
| **Impact AIR-3:** | **The proposed project would not expose sensitive receptors to substantial pollutant concentrations.** |

### *Impact Analysis*

The proposed project could expose sensitive receptors to elevated pollutant concentrations if it causes or contributes significantly to elevated pollutant concentration levels. As described in Section 3.2.1,

Environmental Setting, beneath Table 3.2-4, the closest sensitive receptors include a single-family residence located approximately 850 feet east of the project site, Napa Junction Magnet Elementary School located approximately 1,200 feet south of the project site, and a neighborhood located approximately 1,600 feet south of the project site. Unlike regional emissions, localized emissions are typically evaluated in terms of air concentration rather than mass so they can be more readily correlated to potential health effects. As the proposed project would constitute the development of 219,834 square feet of industrial warehouse space and the operation of heavy-duty trucking fleets, a construction and operational HRA was prepared for the proposed project and is contained in Appendix B. The results of the HRA are summarized below.

*Construction*

Table 3.2-16 presents a summary of the results of the HRA prepared for the proposed project during project construction. The HRA analyzes the proposed project's construction emissions over a period of 11 months consistent with the BAAQMD's Health Risk Assessment Guidelines.[43] The HRA also analyzes the proposed project's impacts at the maximally impacted receptor, which is a residence, the closest off-site worker receptor and the school receptor exposure at the Napa Junction Magnet Elementary School.

As shown in Table 3.2-16, health risks resulting from the construction of the proposed project were found to be less than the BAAQMD's project-level significance thresholds.

**Table 3.2-16: Summary of Construction Health Risks at the Maximum Impacted Receptor**

| Impact Scenario | UTM E | UTM N | Cancer Risk[1] (risk per million) | Chronic Non-Cancer Hazard Index[2] | TAC Concentration[3] (µg/m³) |
|---|---|---|---|---|---|
| Residential MIR Impact | 563979 | 4226674 | 0.8 | 0.001 | 0.0044 |
| Worker MIR Impact | 563625 | 4226775 | 1.0 | 0.019 | 0.0925 |
| School MIR Impact | 563877 | 4226209 | 0.2 | 0.002 | 0.00112 |
| **Thresholds of Significance** | | | **10** | **1** | **0.3** |
| **Exceeds Individual Source Threshold?** | | | **No** | **No** | **No** |

Notes:
DPM = diesel particulate matter
MIR = Maximally Impacted Sensitive Receptor
REL = Reference Exposure Level
TAC = toxic air contaminants
µg/m³ = micrograms per cubic meter
[1] Cancer risk is identified by multiplying the risk sum from HARP2 by 1,000,000.
[2] Chronic non-cancer hazard index was estimated by dividing the annual DPM concentration (as $PM_{2.5}$ exhaust) by the DPM REL of 5 µg/m³.
[3] TAC concentration taken from AERMOD is always at the MIR identified from the project air dispersion models. The school MIR was identified as the Napa Junction Elementary School.
Emissions Source: Appendix B.
Thresholds Source: Bay Area Air Quality Management District (BAAQMD). 2022. California Environmental Quality Act Air Quality Guidelines. April. Website: https://www.baaqmd.gov/plans-and-climate/california-environmental-quality-act-ceqa/updated-ceqa-guidelines. Accessed November 30, 2023.

[43] Bay Area Air Quality Management District (BAAQMD). 2016. BAAQMD Air Toxics NSR Program Health Risk Assessment Guidelines. December. Website: https://www.baaqmd.gov/~/media/files/planning-and-research/permit-modeling/hra_guidelines_12_7_2016_clean-pdf.pdf?la=en. Accessed September 16, 2023.

*Community Health Risk Assessment*

A community HRA was conducted for construction in accordance with BAAQMD recommendations. The cumulative health risk values were determined by adding the health risk values from refined modeling of the proposed project construction to the screening-level health risk values from each individual stationary and mobile source within a 1,000-foot radius of the site. The HRA revealed that the main sources of health risks come from existing sources (i.e., roadways) rather than the proposed project. The analysis results presented in the HRA, contained in Appendix B, are shown in Table 3.2-17. As shown therein, health risks to nearby sensitive receptors would not exceed the BAAQMD community health risk significance thresholds. As the proposed project did not result in an exceedance of project-level BAAQMD significance thresholds, the proposed project would not result in a potentially significant impact and the proposed project's impacts would not be cumulatively considerable. Therefore, this impact would be less than significant.

**Table 3.2-17: Summary of Construction Health Risks at the Maximum Impacted Receptor**

| Source | Source Type | Distance from MIR[1] (feet) | Cancer Risk (per million) | Chronic HI | $PM_{2.5}$ Concentration ($\mu g/m^3$) |
|---|---|---|---|---|---|
| **Project** | | | | | |
| Residential MIR | Diesel Construction Equipment, Trucking Fleets, and Passenger Vehicles | — | 0.8 | 0.001 | 0.0044 |
| Roadways | | — | 1.19 | 0.003 | 0.025 |
| **Cumulative Health Risks** | | | | | |
| **Cumulative Maximum with Project DPM Emissions** | | | **2** | **0.004** | **0.029** |
| **BAAQMD's Cumulative Thresholds of Significance** | | | **100** | **10** | **0.8** |
| **Threshold Exceedance?** | | | **No** | **No** | **No** |

Notes:
BAAQMD = Bay Area Air Quality Management District
DPM = diesel particulate matter
HI = health index
MIR = Maximally Impacted Sensitive Receptor
ND = No Data
$PM_{2.5}$ = particulate matter, including dust, 2.5 micrometers or less in diameter
$\mu g/m^3$ = micrograms per cubic meter
[1] The residential MIR located at 563979 UTM E 4226674 UTM N was identified as the primary MIR here as it would experience the greatest health impact between residential and school receptors.
[2] Assumes emissions remain constant with time. Values represent the greatest identified among all MIRs presented in this analysis, including the two previously identified residences and the previously identified school.
Source: Appendix A.

*Toxic Air Contaminant Operational Analysis*

For project operation, potential TAC emissions would be from the exhaust of the trucks entering, exiting, and idling on the site. Diesel exhaust particulate emissions from on-road heavy-duty trucks are substantially less than those from off-road construction equipment and are dispersed over a larger linear roadway path. Projects with the potential for health risk from DPM are those with high level of truck traffic or sites where trucks with TRUs (small diesel engines used to run refrigeration devices on trucks) idle for a significant amount of time. The ARB's Air Quality and Land Use Handbook provides guidance on levels of activity that could result in a potential impact:[44]

> *Avoid siting new sensitive land uses within 1,000 feet of a distribution center (that accommodates more than 100 trucks per day, more than 40 trucks with operating transport refrigeration units [TRUs] per day, or where TRU unit operations exceed 300 hours per week).*

The traffic analysis estimates the daily HHD truck trips accessing the project site would be 128 trips, which is 64 HHD trucks per day. Since these project HHD truck trips are less than the 100-truck advisory threshold in the Air Quality and Land Use Handbook, an operational HRA is not necessary and therefore not analyzed in this study. As previously discussed, no TRUs would be operated while on-site. Therefore, risks due to DPM from this level of truck traffic would be less than significant.

*Best Management Practices for Warehouses*

The California Attorney General published a list of best practices for warehouse development that aim to reduce air quality emissions and health risks to sensitive receptors.[45] The ARB Concept Paper for the Freight Handbook also provides best practices for warehouse projects.[46] The design of the proposed project considered and is consistent with many of these best practices.

The proposed project includes the following design features and best management strategies, to minimize and reduce air quality and health risk impacts:

- As discussed in Chapter 2, Project Description, the proposed project would provide adequate amounts of on-site parking to prevent trucks and other vehicles from parking or idling on public streets and to reduce demand for off-site truck yards.
- As shown in Exhibit 2-4a, facility entry and exit points from the public street were placed away from sensitive receptors south and east of the project.
- Rooftop Solar Photovoltaic system with Battery Storage would be provided as required by Title 24 Part 6 Section 140.10(a).
- Heat pump for space Conditioning in Single-Zoned Office Spaces would be provided as required by Title 24 Part 6 Section 140.4(a).2.

Website: http://www.aqmd.gov/docs/default-source/ceqa/handbook/california-air-resources-board-air-quality-and-land-use-handbook-a-community-health-perspective.pdf. Accessed November 16, 2023.

[45] California Office of the Attorney General. 2022. Warehouse Projects: Best Practices and Mitigation Measures to Comply with the California Environmental Quality Act. Website: https://oag.ca.gov/system/files/media/warehouse-best-practices.pdf. Accessed November 14, 2023.

[46] California Air Resources Board (ARB). 2020. California Sustainable Freight Initiative: Concept Paper for the Freight Handbook. Website: https://ww2.arb.ca.gov/resources/documents/concept-paper-freight-handbook. Accessed November 14, 2023.

- The proposed project would provide electrical Infrastructure ready to support future ZEV medium heavy-duty trucks (MHDT) and heavy heavy-duty trucks (HHDT), as required by California Building Standards Code (CBC) 5.106.5.4.1 Electric vehicle charging readiness requirements for warehouses with planned off-street loading spaces.
- Water-efficient landscaping would be provided in accordance with Municipal Code Chapter 16.14 Water-Efficient Landscaping.
- Low-flow water fixtures would be provided per CALGreen Building Code Section 4.303.1.
- Energy-efficient light-emitting diode (LED) lighting would be provided per the California Energy Code.
- The proposed project would use compliant low-GWP refrigerants per ARB HFC regulation.

As shown above, the proposed project incorporates many best practices for warehouse development. It is worth noting that one of the best practices is to site warehouse facilities at least 1,000 feet from the nearest sensitive receptors. Although the proposed project is within 1,000 feet of residential uses, the above health risk impact analysis demonstrates that the proposed project would not have significant impacts on the nearest receptors.

*Carbon Monoxide Hotspot*

As discussed in Impact AIR-2, the proposed project would not generate sufficient vehicle traffic during project operation to substantiate creating a CO hotspot. Therefore, this impact would be less than significant with regard to exposing sensitive receptors to substantial concentrations of CO emissions. As such, the proposed project would result in less than significant impacts related to exposing sensitive receptors to substantial pollutant concentrations.

### *Level of Significance*

Less than significant impact.

### *Mitigation Measures*

No mitigation is necessary.

## *Objectionable Odors Exposure*

| | |
|---|---|
| **Impact AIR-4:** | **The proposed project would not result in other emissions (such as those leading to odors) adversely affecting a substantial number of people.** |

### *Impact Analysis*

*Construction*

During construction activities, construction equipment exhaust and application of asphalt and architectural coatings would temporarily generate odors. Any construction-related odor emissions would be temporary and intermittent. Additionally, noxious odors would be confined to the immediate vicinity of the construction equipment. It is anticipated that by the time such emissions reach any sensitive receptor sites, they would be diluted to well below any air quality or odor concern level. Therefore, construction odor impacts would be less than significant.

*Operation*

The proposed project would construct and operate a wine storage warehouse and distribution center. Operation of this type of project would likely not generate objectionable odors that may affect a substantial number of nearby receptors. The types of uses that are considered to have objectionable odors include wastewater treatments plants, compost facilities, landfills, solid waste transfer stations, fiberglass manufacturing facilities, paint/coating operations (e.g., auto body shops), dairy farms, petroleum refineries, asphalt batch plants, chemical manufacturing, and food manufacturing facilities.

Minor sources of odors that would be generated by the proposed project, such as exhaust from mobile sources, are not typically associated with numerous odor complaints, but are known to have temporary and less concentrated odors. The nearest sensitive receptor is a single-family residence located approximately 850 feet east of the project site. Because of distance from this sensitive receptor, operation of the proposed project would not have an impact related to odors.

### *Level of Significance*

Less than significant impact.

### *Mitigation Measures*

No mitigation is necessary.

## 3.2.6 - Cumulative Impacts

The geographic scope of the cumulative air quality analysis is the SFBAAB, which covers all or portions of the counties of Alameda, Contra Costa, Marin, Napa, San Francisco, San Mateo, Santa Clara, Sonoma, and Solano. Air quality is impacted by topography, dominant air flows, atmospheric inversions, location, and season; therefore, using the Air Basin represents the area most likely to be impacted by air emissions. The BAAQMD CEQA Guidelines cumulative significance criteria are used in the cumulative analysis of air quality.

In developing thresholds of significance for air pollutants, BAAQMD established numerical thresholds for determining when a project's individual contributions would be cumulatively considerable. If a project does not exceed the identified significance thresholds, its emissions would not be cumulatively considerable, resulting in less than significant air quality impacts to the region's existing air quality conditions.

### Criteria Pollutants

By its nature, air pollution is largely a cumulative impact resulting from emissions generated over a large geographic region. The nonattainment status of regional pollutants is a result of past and present development within an air basin, and this regional impact is a cumulative impact. In other words, new development projects (such as the project) within the SFBAAB would contribute to this impact only on a cumulative basis. No single project would be sufficient in size, by itself, to result in nonattainment of regional air quality standards. Instead, a project's emissions may be individually limited but cumulatively considerable when taken in combination with past, present, and future

development projects. All new development that would result in an increase in air pollutant emissions above those assumed in regional AQPs would contribute to cumulative air quality impacts.

The cumulative analysis focuses on whether the proposed project would result in cumulatively considerable emissions. According to Section 15064(h)(4) of the State CEQA Guidelines, the existence of significant cumulative impacts caused by other projects alone does not constitute substantial evidence that a project's incremental effects would be cumulatively considerable. Rather, the determination of cumulative air quality impacts for construction and operational emissions is based on whether a project would result in regional emissions that exceed the BAAQMD regional thresholds of significance. Projects, such as the proposed project, that generate emissions below the significance thresholds would be considered consistent with regional air quality planning efforts and would not generate cumulatively considerable emissions. Therefore, the proposed project would not have a cumulative impact related to construction or operation criteria pollutants.

### Toxic Air Contaminants

#### *Construction and Operational Emissions at the Site and Maximum Impacted Receptor*

As discussed previously, localized risks are primarily associated with exposure to TAC emissions. Operation of the proposed project would not contribute to significant operational TAC emissions. Potential cumulative sources of TAC emissions could occur during construction or operation impacting the nearby Maximally Impacted Sensitive Receptor. Sensitive receptors could be impacted by new stationary sources in the vicinity of the site (e.g., dry cleaners, diesel backup generators, and gasoline stations) or by the construction or operation of other developments. Any proposed new stationary source of TAC emissions would be subject to BAAQMD permit requirements, which involves New Source Review for air toxics and an evaluation of health risks.[47] Freeways, major roadways and railroads are also significant sources of TAC emissions of diesel particulate; however, land use and zoning restrictions preclude these from becoming new significant sources of TAC exposure in the project area and they do not figure into cumulative considerations. The final potential sources of TACs for a cumulative risk would be diesel exhaust exposure from off-road sources such as construction equipment from other land use development. New construction from other development projects are a potential additional source of TAC emissions and risk to sensitive receptors; however, the CEQA process and current BAAQMD thresholds for cumulative community risk would consider these impacts. In these cases, sensitive receptors for other cumulative projects would be considered in their environmental planning analysis under BAAQMD risk thresholds. This would ensure that there are no significant impacts to these sensitive receptors and risks would be less than significant.

#### *Level of Cumulative Significance Before Mitigation*

Less than significant impact.

#### *Mitigation Measures*

No mitigation is necessary.

# 3.3 - Biological Resources

## 3.3.1 - Introduction

This section describes the existing biological setting and potential effects from implementation of the proposed project on the project site and the surrounding area. This section also identifies mitigation measures to reduce these potential effects to less than significant levels where applicable. Descriptions and analysis in this section are based, in part, on a Biological Resources Assessment (BRA) prepared by First Carbon Solutions (FCS), including field and focused surveys. Additional information used for analysis includes wildlife and floristic rare plant surveys, conducted by Pinecrest Research Corporation (Pinecrest); Jurisdictional Determination Reverification and previous field surveys, conducted by Monk & Associates (M&A); and analyses completed for the adjacent Commerce 217 project. All supporting documents are contained in Appendix C of this Draft EIR. Within Appendix C are three subfolders: Appendix C.1 contains the Commerce Court 220 BRA; Appendix C.2 contains Commerce Court 217 supporting documents; and Appendix C.3 contains Commerce Court 220 supporting documents.

The following public comments pertaining to biological resources were received in response to the Notic of Preparation (NOP):

- The Draft EIR should evaluate environmental impacts given that the project site has already been cleared of vegetation and graded.
- The Draft EIR should evaluate the ability of animals to utilize the wetland and provide recommendations.
- The Draft EIR should ensure that the wetland is monitored and protected.
- The Draft EIR should evaluate the effect of lighting and noise from the warehouses on birds and wildlife.
- The Draft EIR must evaluate impacts on California Endangered Species Act (CESA) species in order to receive an Incidental Take Permit (ITP).
- The Draft EIR must evaluate impacts on nesting birds pursuant to the Migratory Bird Treaty Act.
- The Draft EIR should provide sufficient information regarding the environmental setting or “baseline” for habitats of special-status plant, fish, and wildlife species located and potentially located within the project site.
- The Draft EIR should describe aquatic habitats, such as wetlands, as well as any sensitive natural communities occurring on or adjacent to the project site.
- The Draft EIR should describe City regulations regarding wetland set back distances.
- The Draft EIR should include habitat descriptions and the potential for species occurrences from multiple sources, such as aerial imagery, historical and recent survey data, field reconnaissance, scientific literature, databases from relevant agencies, etc.

- The Draft EIR should include surveys for special-status species and rare plants and recommended protocols.
- The Draft EIR should describe direct and indirect impacts related to the loss or modification of breeding, nesting, dispersal and foraging habitat as well as the obstruction of movement corridors.
- The Draft EIR should describe direct and indirect impacts related to permanent and temporary habitat disturbances associated with ground disturbance, noise, lighting, reflection, air pollution, traffic, etc.
- The Draft EIR should describe cumulative impacts to biological resources.

## 3.3.2 - Project History

The project site is a portion of a larger, 35.85-acre site that was subsequently subdivided into three lots in February 2021 (SDG Commerce 217, SDG Commerce 220, and SDG Commerce 330). The southern parcel (SDG Commerce 330) was developed in 2020. The northern parcel (SDG Commerce 217) was entitled in 2021 and at the time of this writing is currently being developed. The central parcel (SDG Commerce 220) is the project site evaluated in this analysis.

While the BRA site boundary includes a total of 10.17 acres, project site boundaries were subsequently increased to 10.45 acres to include adjacent, off-site improvement areas. However, field surveys for the BRA and additional supporting studies did include the entire 10.45-acre project site, as these areas were located within original survey buffer areas. Please see Section 2.0 (Project Description) for further details regarding project site boundaries.

It should be noted that as part of the SDG Commerce 217 development (located directly north of the project site), much of the SDG Commerce 220 project site was graded between May 29 and July 2, 2023, to procure existing, stockpiled soil for use as clean fill material for the SDG Commerce 217 site (Appendix C.2: *BRA for SDG 217 ISMND*). As a part of the SDG Commerce 217 project, M&A authored an *Addendum Letter to CEQA Biology Report Discussing Proposed Borrow Site* in September 2020 which analyzed grading impacts (Appendix C.2: *Addendum to Biological Constraints*). Additionally, an approved grading plan was issued by the City of American Canyon in March 2023 (Appendix C.2: *Borrow Site Grading Plan*).

## 3.3.3 - Environmental Setting

The project site is located in the City of American Canyon, which is part of the greater north San Francisco Bay Area (Exhibit 2-1). The project site is located within the *Cuttings Wharf, California,* United States Geological Survey (USGS) 7.5-Minute Topographic Quadrangle Map.

The project area is generally located in the northern portion of the City of American Canyon, where commercial development is the dominant land use. The project site is bordered by a eucalyptus grove and North Slough beyond which is the Napa River (west), a parcel entitled for a wine distribution warehouse known as SDG Commerce 217 (north), Commerce Court, beyond which is a

paintball recreation area (east), and a wine distribution warehouse known as SDG Commerce 330 (south); refer to Exhibit 2-2.

## Soils, Typography, and Hydrology

The project area experiences a Mediterranean climate characterized by warm, dry summers and cool, wet winters. The project area typically exhibits annual low/high temperatures between 40-80°F (degrees Fahrenheit) and an annual average rainfall of approximately 20 inches.

Soil survey information for the project site was obtained from the National Resources Conservation Service (NRCS) Web Soil Survey.[1] The NRCS Web Soil Survey (WSS) depicts one soil type within the project site (Exhibit 3.3-1); Haire clay loam (148), 2 to 9 percent slopes. Haire Clay Loam is characterized as alluvium, derived from sedimentary rock. These soils are moderately well drained and non-saline to very slightly saline.

The 10.45-acre project site is currently undeveloped land. A linear wetland (LW1) and three isolated wetlands (W1, W2, and W3) are located within the northern portion of the property. The location and extent of each wetland is shown on Exhibit 3.3-2, *Vegetation Communities and Land Cover Types*. The project site is relatively flat with elevations ranging from 13 to 25 feet above sea level. The ground is undulating due to past land use disturbances including eucalyptus tree removal in 2012. The site slopes gently to the west toward the North Slough and the Napa River.

In 2023, M&A reverified a 0.023 acre of seasonal wetlands and 0.042 acre of linear wetlands within the delineation survey area (Exhibit 3.3-2). These wetlands have surface hydrologic connectivity to North Slough, which flows to the Napa River to the west. The Napa River is a traditional navigable water.

## Vegetation Communities and Land Cover Types

Vegetation communities are assemblages of plant species growing in an area of similar biological and environmental factors. The following section describes the vegetation communities and land cover types present in the project area. The location and extent of each vegetation community is shown on Exhibit 3.3-2.

### *Non-native Annual Grassland–Avena spp.–Bromus spp. Herbaceous Semi-Natural Alliance*

This vegetation type is typically described by being dominated by non-native annual grasses and annual or perennial forbs from dense to sparse cover with less than 10 percent tree or shrub cover. With a few exceptions, the plants are dead through the summer and fall dry season, persisting as seeds. This community usually occurs below 3,000 feet and is the most common herbaceous vegetation type of the region. This vegetation type is classified by the Manual of California Vegetation (MCV) as *Avena spp.–Bromus spp.* Herbaceous Semi-Natural Alliance, which has broad membership rules, but is dominated by a non-native annual grass species. The herb layer in this alliance is generally less than 1.2 meters and vegetation cover ranges from open to continuous.

# Exhibit 3.3-2
# Vegetation Communities and Land Cover Types

THIS PAGE INTENTIONALLY LEFT BLANK

Trees and shrubs may be present at low cover. This community is found on various substrates including foothills, waste spaces, rangelands, and openings in woods.

The vast majority of the project site is generally considered non-native annual grassland, with a species composition that trends strongly toward ruderal. Individual scattered shrubs (including coyote brush [*Baccharis pilularis*]) and eucalyptus saplings and resprouts are not considered their own vegetation type due to small patch size, but rather a component of the grassland matrix (see membership rules, below).

The most predominant grass species within the project site included wild oats (*Avena sp*), canary-grass (*Phalaris aquatica)*, medusahead (*Taeniatherum caput-medusae*), and wall barley (*Hordeum murinum*), but equally dominant are ruderal species including mustard (*Hirschfeldia incana)*, stinkwort (*Dittrichia graveolens*), Italian rye grass (*Festuca perennis*), ripgut brome (*Bromus diandrus*), soft chess (*Bromus hordeaceus*), slender wild oat (*Avena barbata*), common vetch (*Vicia sativa*), red-stem filaree (*Erodium cicutarium*), bull thistle (*Cirsium vulgare*), Italian thistle (*Carduus pycnocephalus*), bristly ox-tongue (*Helminthotheca echioides*), California burclover (*Medicago polymorpha*), and cut-leaf geranium (*Geranium dissectum*).

As previously noted, large areas of this vegetation type were graded between May 29 and July 2, 2023 (see Appendix C.2: *Borrow Site Grading Plan*; and *Addendum to Biological Constraints*). The grading did not encroach into the wetlands features or associated wetland buffer areas. The grading effectively eliminated the non-native grassland throughout much of the site.

### *Seasonal Wetland*

Seasonal wetland habitat is present on the project site (Exhibit 3.3-2), reflecting current conditions. Over the past 12 years, the United States Army Corps of Engineers (USACE) has twice verified its jurisdiction via delineations, as explained below.

In 2011, the USACE confirmed 0.049-acre of wetlands and 0.004-acre of "other waters" adjacent to the former gravel road on the eastern edge of the project site. On December 6, 2011, the USACE confirmed the extent of its jurisdiction on the project site (USACE File Number 2011-00322N). This determination expired on January 31, 2017, so M&A conducted a reverification wetland delineation of the project site on November 16, 2016. The map was field confirmed by the USACE on May 18, 2017, and an approved jurisdictional determination (AJD) was issued on May 16, 2018. It should be noted that the 2018 AJD included one isolated wetland that is no longer part of the project site.

In 2023, M&A reverified and mapped 0.023 acre of seasonal wetlands (W1-W3) and 0.042 acre of linear wetlands (LW1) within the project site. On August 30, 2023, the USACE issued a Preliminary Jurisdictional Determination (PJD) (Appendix C.3: *Preliminary Jurisdictional Determination Map, SDG Commerce 220 Project Site*).

Vegetation observed within the seasonal wetlands included non-native and native species. Non-native species included spiny-fruit buttercup (*Ranunculus muricatus;* facultative wetland [FACW]) and Italian ryegrass (*Festuca perennis;* facultative [FAC]). Native species included creeping spikerush (*Eleocharis macrostachya;* obligate wetland species [OBL]), brown-headed rush (*Juncus*

*phaeocephalus;* FACW) and spreading rush (*Juncus patens;* FACW). Mapped wetlands on the project site remain inundated and/or saturated seasonally for sufficient duration to satisfy wetland hydrology criteria. Hydrological indicators in the mapped wetlands include the presence of oxidized rhizosphere (a "primary" hydrological indicator) as well as biotic crust. Soil matrix colors in the wetland area identified in the field were noted as 10YR 3/2 with redoximorphic features. Soil matrix colors in areas mapped as non-hydric soils were noted as 10YR 3/3 and 10YR 3/2, with insufficient redoximorphic features. These wetland features were not impacted during the grading that occurred within upland portions of the project site between May 29 and July 2, 2023.

### *Developed*

While not a natural habitat type, urban/developed areas typically consist of buildings, hardscape such as asphalt or concrete, and other human-caused structures. Such areas typically provide little habitat value to most wildlife species. On-site, this landcover type can be found within the southeastern corner in the form of a construction trailer, a staging area, and a paved road that allows access into the site via Commerce Boulevard. The paved road runs half the length of the southern border of the project site (Exhibit 3.3-2).

## Sensitive Natural Communities

The California Department of Fish and Wildlife (CDFW) maintains a list of natural communities that classifies vegetation types found within the State of California and ranks them based on rarity. Communities ranked S1-S3 are considered sensitive natural communities.[2] Wetlands and riparian habitats are also typically considered sensitive natural communities and are addressed below.

### *Seasonal Wetland Community*

Vegetation observed within the seasonal wetlands included non-native and native species. As indicated in subsection 3.3.3, Seasonal Wetland, non-native species included spiny-fruit buttercup (*Ranunculus muricatus*) and Italian ryegrass (*Festuca perennis*). Native species included creeping spikerush (*Eleocharis macrostachya*), brown-headed rush (*Juncus phaeocephalus*) and spreading rush (*Juncus patens*). Naturally occurring seasonal wetland vegetation communities can be considered sensitive natural communities. However, due to the nature of these wetlands, presence of non-native species, and lack of special-status plant species, the seasonal wetlands on-site would not be considered a sensitive natural community. Additionally, the proposed project would avoid all wetland features through the implementation of a wetland buffer avoidance area (Exhibit 3.3-4).

## Common Wildlife

The vegetation community and land cover types discussed above provide habitat for numerous wildlife species. Wildlife activity during the 2023 field surveys consisted primarily of avian species, including Say's phoebe (*Sayornis saya*), American crow (*Corvus brachyrhynchos*), western bluebird (*Sialia mexicana*), Anna's hummingbird (*Calypte anna*), lesser goldfinch (*Spinus psaltria*), yellow-rumped warbler (*Setophaga coronate*), turkey vulture (*Cathartes aura*), red-shouldered hawk (*Buteo lineatus*), and California towhee (*Melozone crissalis*). Additionally, Botta's pocket gopher (*Thomomys*

[2] California Department of Fish and Wildlife (CDFW). 2023. Natural Communities List, Sacramento: California Department of Fish and Wildlife. Website: https://wildlife.ca.gov/Data/VegCAMP/Natural-Communities#sensitive%20natural%20communities. Accessed August 21, 2023.

*bottae*) burrows, black-tailed jackrabbit (Lepus californicus), and Columbian black-tailed deer (*Odocoileus hemionus ssp. columbianus*) were observed. Notably, no signs of current or past presence of California ground squirrel (*Otospermophilus beecheyi*) burrows were observed on-site during the 2023 surveys.

In general, FCS and Pinecrest field surveys found that the conditions related to wildlife habitat are consistent with the results presented in the March 2020 M&A BRA which lists the following common wildlife species as observed on or near the project site: wild turkey (*Meleagris gallopavo*), house finch (*Haemorhous mexicanus*), black phoebe (*Sayornis nigricans*), Say's phoebe, American crow, mourning dove (*Zenaida macroura*), black-tailed jackrabbit, California meadow vole (*Microtus californicus*), Botta's pocket gopher, and mule deer (*Odocoileus hemionus* ), among others, all of which have been observed on the project site. Red-shouldered hawk, tree swallows (*Tachycineta bicolor*), Nuttall's woodpecker (*Picoides nuttallii*), and northern flicker (*Colaptes auratus*), among others, likely nest in the eucalyptus trees that surround the project site. Chestnut-backed chickadee (*Poecile rufescens*), brown creeper (*Certhia americana*), American robin (*Turdus migratorius*), northern mockingbird (*Mimus polyglottos*), spotted towhee (Pipilo maculatus), California towhee (*Pipilo crissalis*), dark-eyed junco (*Junco hyemalis*), Bullock's oriole (*Icterus bullockii*) and western gray squirrel (*Sciurus griseus*) were also observed in the immediate project vicinity.

Wildlife use is expected to have decreased since M&A's surveys because these surveys were conducted prior the construction of the warehouse to the south (SDG Commerce 330) and before the current construction began on the warehouse to the north (SDG Commerce 217). A comprehensive list of wildlife and plant species observed by FCS and Pinecrest can be found in Appendix C.3: *220 Commerce Animal Survey Report*, and *220 Commerce Plant Survey Report*.

## Special-status Species

Special-status species include those species listed by the federal and state governments as endangered, threatened, or rare or candidate species for these lists. Endangered or threatened species are protected by the federal Endangered Species Act of 1973 as amended, the California Native Plant Protection Act of 1977, and the California Endangered Species Act of 1970. The California Environmental Quality Act (CEQA) provides additional protection for unlisted species that meet the "rare" or "endangered" criteria defined in Title 14, California Code of Regulations Section 15380. Special-status species also include those species listed by the CDFW as Species of Concern which face extirpation in California if current population and habitat trends continue, those identified as Fully Protected in the California Fish and Game Code (a designation that provides additional protection to those animals that are rare or face possible extinction), and bird species designated as Bird Species of Conservation Concern by the United States Fish and Wildlife Service (USFWS). These State and federal Species of Concern must be evaluated in the context of evaluation under CEQA. Under Title 14, California Code of Regulations Section 15380, mentioned above, many Biologists and the lead agencies for whom they work evaluate impacts to plant species on California Native Plant Society (CNPS) Lists 1 and 2. Special-status species included in CEQA review also include bat species that have been designated with conservation priority by the Western Bat Working Group.

The CDFW maintains records for the distribution and known occurrences of special-status species and sensitive habitats in the California Natural Diversity Database (CNDDB). The CNDDB is organized into map areas based on 7.5-minute topographic quadrangle maps produced by the United States Geologic Survey (USGS). All known occurrences of special-status species are mapped onto quadrangle maps maintained by the CNDDB. The database gives further detailed information on each occurrence, including specific location of the individual, population, or habitat (if possible) and the presumed current state of the population or habitat.

### *Special-status Plant Species*

The CNDDB and CNPS list 45 special-status or sensitive plant species that have been recorded within the *Cuttings Wharf, California,* USGS Topographic Quadrangle Map and the eight surrounding quadrangles (Appendix C.1: *SDG Commerce Court 220 BRA* [Appendix C: Database Searches]).[3,4,5] The CNDDB occurrences within the vicinity of the project site are shown on Exhibit 3.3-3. A list of all plant species recorded on-site during the protocol-level floristic surveys is included in Appendix C.3: *220 Commerce Plant Survey Report*. No rare or special-status plant species were observed during the appropriately timed protocol-level floristic surveys and are therefore determined to be absent from the site.

### *Special-Status Wildlife Species*

The CNDDB identifies 43 federal and State-listed threatened and/or endangered wildlife species and State Species of Special Concern that have been recorded within the *Cuttings Wharf, California,* USGS Topographic Quadrangle Map and the eight surrounding quadrangles (Appendix C.1: *SDG Commerce Court 220 BRA* [Appendix C: Database Searches]).[6,7] The CNDDB occurrences within the vicinity of the project site are shown on Exhibit 3.3-3. Thirty-five of these species are unlikely to occur on-site, as discussed in the *Special-status Wildlife Species Habitat Value Evaluation Table* (Appendix C.1: *SDG Commerce Court 220 BRA* [Appendix B: Special-Status Species Tables, Table 2]).

The remaining eight species (and functional groups like nesting birds and roosting bats that include special-status species) could have at least theoretical potential to occur on-site, perhaps as vagrant, dispersing, or foraging individuals, and are therefore discussed in more detail below.

CNDDB version 08/2023. Please Note:
The occurrences shown on this map represent the known locations of the species listed here as of the date of this version. There may be additional occurrences or additional species within this area which have not yet been surveyed and/or mapped. Lack of information in the CNDDB about a species or an area can never be used as proof that no special status species occur in an area.

THIS PAGE INTENTIONALLY LEFT BLANK

Swainson's hawk inhabits open to semi-open areas at low to middle elevations in valleys, dry meadows, foothills, and level uplands. It nests almost exclusively in trees and will nest in almost any tree species that is at least 10 feet tall.

Foraging habitats include grasslands, alfalfa fields, fallow fields, beet, tomato, and other low growing row or field crops, dry-land and irrigated pasture, and rice land when not flooded. Swainson's hawk generally forages in open habitats with short vegetation containing small mammals, reptiles, birds, and insects. Its primary prey in the Central Valley is California meadow vole. Agricultural areas are often preferred over more natural grassland habitats due to larger prey populations. During the nesting season Swainson's hawk usually forage within 2 miles of the nest.

Swainson's hawk does not require habitats that contain many perches because it most often searches for prey aerially, therefore it can occupy habitats with few or no perches except the nest tree. Swainson's hawks are regular summer visitors and breeders throughout the western states. In the fall months, most Swainson's hawks migrate to Argentina before returning to the United States to breed in the late spring (typically April). For decades, Argentina farmers were spraying insecticides over habitats that included gregarious night roosts of the Swainson's hawk, killing many thousands of these hawks. This practice was halted in the last 10 years and the Swainson's hawk population appears to be dramatically responding in California. While in the 1970s through 1990s there were only two relatively small populations of Swainson's hawks that remained resident in California year-round in the Davis area and in the Sacramento River Delta, resident and migrant populations of the Swainson's hawks are now dramatically expanding their nesting distribution in California since insecticide use over Argentinian wintering grounds was halted. For example, Swainson's hawks were never recorded nesting in the Napa County area until relatively recently.[8]

The closest known record for nesting Swainson's hawk is 1.5 miles north of the project site (CNDDB Occurrence No. 2839). No individual Swainson's hawk or nests have been observed on the project site or in the vicinity of the project site during the 11 surveys conducted by Pinecrest on the SDG Commerce 220 site or the seven surveys conducted by FCS on the adjacent SDG Commerce 217 site between January and July 2023. However, the eucalyptus trees growing adjacent to the project site could provide suitable nesting habitat. Therefore, there is the possibility that Swainson's hawks could nest near this project site in future years.

*Western Burrowing Owl*

The western burrowing owl (*Athene cunicularia*) is a California Species of Special Concern. Its nest, eggs, and young are also protected under California Fish and Game Code (FGC §§ 3503, 3503.5, and 3800). The burrowing owl is also protected from direct take under the MBTA (50 Code of Federal Regulations [CFR] 10.13).

Burrowing owl occurs in open, dry annual or perennial grasslands, deserts, and scrublands characterized by low-growing vegetation. This species utilizes, modifies, and nests in burrows

[8] Monk & Associates (M&A). 2020. Revised Biological Resource Analysis SDG Commerce 217 Distribution Center. March 2, 2020.

created by other species, most notably the California ground squirrel. They may also on occasion dig their own burrows or use human-caused objects such as concrete culverts or rip-rap piles for cover.

The closest CNDDB record within the last 10 years was documented 2.7 miles north of the project site (CNDDB Occurrence No. 935). No evidence of burrowing owl activity was observed during the 11 surveys conducted by Pinecrest on the SDG Commerce 220 site, or the seven surveys conducted by FCS on the adjacent SDG Commerce 217 site between January and July 2023. Furthermore, no California ground squirrel burrows were observed, and no other burrows, dens, or human-caused objects were observed that would provide suitable nesting habitat for burrowing owl. However, it cannot be ruled out entirely that a vagrant burrowing owl may visit the site under unlikely circumstances before the start of construction.

*Northern Harrier*

The northern harrier (*Circus hudsonius*) is a California Species of Special Concern. This raptor is protected under California Fish and Game Code Section 3503.5 that protects nesting raptors and their eggs/young and is also protected from direct take under the MBTA (50 CFR 10.13). Northern harriers build grass-lined nests on the ground within dense, low-lying vegetation in a variety of habitats, though they are typically found nesting in grassland or marsh habitats. They usually nest on level to near level ground. This species is particularly vulnerable to ground predators such as coyotes (*Canis latrans*), red fox (*Vulpes vulpes*), and various snake species.[9]

The closest CNDDB record was documented 2.8 miles west of the project site (CNDDB Occurrence No. 29). No individual northern harriers or nests have been observed on the site or in the vicinity of the project site during the 11 surveys conducted by Pinecrest on the SDG Commerce 220 site or the seven surveys conducted by FCS on the adjacent SDG Commerce 217 site between January and July 2023. Northern harriers have the potential to nest in the open ruderal habitats on-site that provide marginal nesting habitat for this species. However, it should be noted that due to the recent grading on the project site large areas of this vegetation type were graded between May 29 and July 2, 2023 (see Appendix C.2: Borrow Site Grading Plan; and Addendum to Biological Constraints). The grading effectively eliminated the non-native grassland throughout much of the site. Although there is the possibility that northern harriers could nest on or near this project site in the future, site conditions due to recent grading would reduce the potential for northern harrier to occur on-site.

*Golden Eagle*

The golden eagle is a migratory California resident that resides in rolling foothills, mountain areas, sage-juniper flats, and deserts from sea level to 11,500 feet (3,833 meters). It feeds mostly on lagomorphs and rodents, and occasionally other mammals, birds, reptiles, and some carrion. The golden eagle hunts in open terrain including grasslands, deserts, savannas, and early successional stages of forest and shrub habitats. It is known to hunt in pairs and pirate food from other predators. This species nests in large trees in open areas on cliffs. The breeding season for the golden eagle ranges from January through August, with a peak in March through July.

[9] Monk & Associates (M&A). 2020. Revised Biological Resource Analysis SDG Commerce 217 Distribution Center. March 2, 2020.

The closest CNDDB record was documented 4.5 miles southeast of the project site (CNDDB Occurrence No. 40). No individual golden eagles or nests have been observed on the site or in the vicinity of the project site during the 11 surveys conducted by Pinecrest on the SDG Commerce 220 site or the seven surveys conducted by FCS on the adjacent SDG Commerce 217 site between January and July 2023. Regardless, the eucalyptus trees growing adjacent to the project site could provide suitable nesting habitat. Therefore, it cannot be ruled out that golden eagles could nest near this project site in the future.

*White-tailed Kite*

The white-tailed kite (*Elanus leucurus*) is a whitish falcon-shaped raptor. This sensitive bird is designated by CDFW as a Fully Protected Species (FGC § 3511). Fully protected animal species may not be taken or possessed at any time and no licenses or permits may be issued for their take except for collecting these species for necessary scientific research and relocation of the bird species for the protection of livestock.

Nesting white-tailed kite habitat consists mainly of oak and sycamore woodlands, but the birds also use mature willows. White-tailed kite nests have been documented in a variety of tree species, including oak (*Quercus sp*.), cottonwood (*Populus sp*.), willow (*Salix sp*.), California sycamore (*Platanus racemosa*), and elder (*Acer sp.).*[10] Nests are placed near the top of dense oak, willow, or other tree stand approximately 20-100 feet above ground.[11] Nest trees have a dense canopy or are within a dense group of trees, such as riparian forest or oak woodland. Adjacent to their nesting woodland must be open foraging grasslands, where the birds can find their small mammal prey.[12]

White-tail kites forage in undisturbed, open grasslands, meadows, emergent wetlands, farmlands, crops, pastures, and other cultivated habitats. The white-tailed kite preys mostly on voles, but also takes other small, diurnal mammals, and occasionally birds, insects, reptiles, and amphibians.

The closest CNDDB record was documented 5.3 miles north of the project site (CNDDB Occurrence No. 181). Several white-tailed kite individuals were observed foraging over the site or in the vicinity of the project site during the 11 surveys conducted by Pinecrest on the SDG Commerce 220 site and the seven surveys conducted by FCS on the adjacent SDG Commerce 217 site between January and July 2023. This species was observed on the following dates during 2023 surveys: March 20, April 4, April 5, April 6, April 7, April 24, April 28, and July 2. These individuals were observed to be continually harassed by several crows who were observed loitering around the eucalyptus grove. After continued interactions with the crows, white-tailed kite individuals flew off to the southwest out of sight and the location of their nest could not be determined.

The eucalyptus trees growing adjacent to the project site could provide suitable nesting habitat. Therefore, it cannot be ruled out that white-tailed kite could nest within relevant disturbance distance.

[10] Science Applications International Corporation (SAIC). 2007. Draft Ecological Baseline Report for the Butte Regional Habitat Conservation Plan/Natural Community Conservation Plan. Prepared for the Butte County Association of Governments. May 2007.
[11] California Department of Fish and Wildlife (CDFW). 1988. California's Wildlife, Volume II: Birds. State of California Resources Agency. Sacramento, California.
[12] Gallagher, Sylvia. 1997. Atlas of Breeding Birds, Orange County, California. Sea and Sage Audubon Press, Irvine, CA.

*Protected Nesting Birds (Including All Special-status Bird Species)*

In addition to the specific special-status bird species discussed in more detail above, the active nests of most resident and migratory (game and non-game) birds (including the nests of additional special-status bird on-site) are protected by the MBTA and/or Fish and Game Code; and are therefore categorized as "special-status" wildlife functional group during this time. While a juvenile, red-shouldered hawk was observed perched off-site within a large eucalyptus tree to the north of the SDG Commerce 217 site during the 2023 surveys, no active nests were observed.

The project site is adjacent to eucalyptus groves which provide nesting opportunities for different taxa of birds, and the site itself contains the potential for ground nesters. Although the site has been significantly disturbed in the past, the grassland on-site may provide marginal foraging opportunities to support nesting and rearing habitat. Therefore, it cannot be ruled out that protected bird nests are present on or within the disturbance distance of the project site during the nesting season (typically considered to last from February 1 to August 31 for most species).

*Bats (Including Special-status Bats)*

The project site is adjacent to eucalyptus groves which offer potentially viable roosting habitat for bat species. There is a CNDDB recorded presence of bat species 5.2 miles northwest of the project site (CNDDB Occurrence No. 44). Bats could potentially use cavities in trees to roost and forage over the grassland and shrubland. Of the special-status bat species that have potential to occur in the region, the pallid bat (*Antrozous pallidus*) would be more likely to roost in natural features, such as the adjacent eucalyptus grove rather than artificial structures.

Roosts are used during the daytime to seek refuge; at night between foraging excursions to rest, digest prey, seek refuge from predators or poor weather conditions, or for social purposes; and in winter for hibernation. Adult females and their young use some particularly secure roosts as maternity roosts. The number of bats occupying a given roost can vary from a solitary individual to a large colony, depending on the species. Roosting sites are very sensitive to human disturbance, especially when bats are hibernating or rearing young.

At dusk, bats leave their roosts to forage for insects in nearby ponds or riparian habitats. Bats generally prey on insect species that are locally abundant near water bodies. Ecotone areas (areas of transition between habitats) are also used as foraging areas. The grassland habitat of the project site and eucalyptus grove adjacent has foraging and roosting potential for bat species. Therefore, it cannot be ruled out that bat roosts are within disturbance distance of the project site.

*Western Pond Turtle*

The western pond turtle (*Actinemys marmorata*) is a California Species of Special Concern. This species feeds on aquatic plant material (including pond lilies), beetles, fishes, frogs, and a variety of invertebrate species. Pond turtles require basking sites such as partially submerged logs, rocks, mats of floating vegetation, or open mud banks. Turtles slip from basking sites to underwater retreats at the approach of humans or potential predators. In colder areas, this species hibernates underwater in bottom mud.

The closest CNDDB record was documented 0.4 mile northeast of the project site (CNDDB Occurrence No. 552). No western pond turtle individuals or nests have been observed on the site or in the vicinity of the project site during the 11 surveys conducted by Pinecrest on the SDG Commerce 220 site or the seven surveys conducted by FCS on the adjacent SDG Commerce 217 site between January and July 2023. While there are seasonal wetland features present on-site, there are no ponds or streams on-site that would be suitable for foraging or breeding. It cannot be ruled out entirely that a vagrant western pond turtle may be present on-site under unlikely circumstances before start of construction and could potentially be impacted by the project.

*Monarch Butterfly*

The monarch butterfly (*Danaus plexippus*) is listed as Candidate under the Endangered Species Act, and wintering roosts are protected under the Fish and Game Code.

Preferred monarch habitat is filled with diverse nectar sources which support monarchs and native bees. Native milkweeds (*Asclepias* spp.) and other nectar sources provide monarchs with breeding habitat, resting, and refueling stops during migration, and food at overwintering sites.

Overwintering habitats consist of tree groves that typically occur within 1.5 miles of the Pacific coastline, or within the San Francisco Bay Area, where the proximity to large water bodies moderate temperature fluctuations. Overwintering begins in September or October. Suitable grove conditions include temperatures above freezing, high humidity, dappled sunlight, access to water and nectar, and protection from high winds and storms. Monarchs will select the native Monterey pine, Monterey cypress, western sycamore, and other native tree species when they are available, but will also utilize non-native eucalyptus species if other optimal habitat conditions are met. During breeding season in the late spring and summer, female monarch butterflies will lay their eggs on the underside of young leaves or flower buds of milkweeds. Caterpillars then hatch within 3-5 days and begin to feed on milkweed leaves that provide energy and protective toxic compounds that protect the caterpillars from predation. Within a month, the caterpillars will grow, produce a chrysalis, and emerge as fully formed adult butterflies.

While no milkweed has been recorded on-site as confirmed through protocol-level rare plant surveys, see Appendix C.3: *220 Commerce Plant Survey Report.* The project site is bounded by dense stands of eucalyptus trees, potentially suitable for overwintering monarchs. Overwintering colonies have been documented on Mare Island, approximately 7 miles to the south. For these reasons, the presence of overwintering monarchs within disturbance distance cannot be ruled out.

## State or Federally Protected Waters and Wetlands

There are four wetlands features present within the project site as shown on Exhibit 3.3-2, and in Appendix C.3: *Preliminary Jurisdictional Determination Map, SDG Commerce 220 Project Site*.[13] The USACE issued a PJD on August 30, 2023, which includes 0.023 acre of seasonal wetlands and 0.042 acre of linear wetlands mapped within the project site. These wetlands have surface hydrologic connectivity to North Slough, which flows to the Napa River. The Napa River is a traditional navigable

[13] Monk & Associates (M&A). 2023. Request for Reverification of Jurisdictional Determination and a PJD SDG Commerce 220 Project Site; USACE File Number: 2011-00322N American Canyon, California. May 31, 2023.

water. Consequently, the seasonal wetlands identified within the project site would likely be subject to USACE and Regional Water Quality Control Board (RWQCB) jurisdiction.

### Wildlife Movement Corridors and Nursery Sites

A wildlife corridor is an area of habitat connecting wildlife populations that can be separated by natural and anthropogenic dispersal barriers, including rugged terrain, changes in vegetation, development, or human disturbance. Wildlife corridors allow an exchange of individuals between populations, which may help prevent the negative effects of inbreeding and reduced genetic diversity (via genetic drift) that often occur within isolated populations. The project site and adjacent areas are not identified by CDFW (The Critical Linkages: Bay Area and Beyond project; BIOS 6)[14] as critical linkages. CDFW describes critical linkages as essential to maintain or restore functional connectivity among wildlands for all species or ecological processes of interest in the California Bay Area. Critical linkages are a vital adaptation strategy to conserve biodiversity during climate change.

The project site has been subject to decades of varying degrees of anthropogenic disturbances. More recently, adjacent developments include the construction of SDG Commerce 330 to the south and the current construction of SDG Commerce 217 to the north. Dense industrial developments are located north of the project site while a school and single-family residences are found to the south. Therefore, non-volant wildlife movement through the site is limited, and the site does not connect habitats suitable for sustainable wildlife populations. Wildlife may utilize the off-site eucalyptus grove and aquatic habitats (e.g., North Slough and Napa River) to the west for dispersal; however, the proposed project would be set back from the eucalyptus grove and aquatic habitats.

There are no native wildlife nursery sites present within the project site.

## 3.3.4 - Regulatory Framework

### Federal

#### *Clean Water Act–Section 404*

The USACE administers Section 404 of the federal Clean Water Act (CWA), which regulates the discharge of dredge and fill material into waters of the United States.

As of the preparation of this report on October 26, 2023, the final "Revised Definition of Waters of the United States" rule was published in the Federal Register on January 18, 2023, and took effect on March 20, 2023. However, the final rule is not currently operative in certain states and for certain parties due to litigation. Moreover, the United States Environmental Protection Agency (EPA) and USACE (hereafter known as the agencies) are in receipt of the U.S. Supreme Court's May 25, 2023, decision in the case of *Sackett v. Environmental Protection Agency*. On August 29, 2023, the U.S. EPA and Department of the Army issued a final rule to amend the final "Revised Definition of 'Waters of the United States'" rule, published on January 18, 2023. This final rule conforms the definition of "waters of the United States" to the U.S. Supreme Court's May 25, 2023, decision in the case of *Sackett v. Environmental Protection Agency*. In light of this decision, the agencies will interpret the

[14] California Department of Fish and Wildlife (CDFW). 2022. Biogeographic Information and Observation System (BIOS 6): The Critical Linkages: Bay Area & Beyond project. Website: https://map.dfg.ca.gov/bios/. Accessed September 14, 2023.

phrase "waters of the United States" consistent with the Supreme Court's decision in *Sackett*.[15] As a result of ongoing litigation, the agencies are interpreting "waters of the United States" consistent with the pre-2015 regulatory regime until further notice.

Therefore, since the agencies are interpreting "waters of the United States" consistent with the pre-2015 regulatory regime until further notice, our analysis follows 40 Code of Federal Regulations 230.3(s) in effect under the pre-2015 regulatory regime, which defines "waters of the United States" as follows:

1. All waters which are currently used, or were used in the past, or may be susceptible to use in interstate or foreign commerce, including all waters which are subject to the ebb and flow of the tide.
2. All interstate waters including interstate wetlands.
3. All other waters such as intrastate lakes, rivers, streams (including intermittent streams), mudflats, sandflats, wetlands, sloughs, prairie potholes, wet meadows, playa lakes, or natural ponds, the use, degradation, or destruction of which could affect interstate or foreign commerce including any such waters:
   a) Which are or could be used by interstate or foreign travelers for recreational or other purposes; or
   b) From which fish or shellfish are or could be taken and sold in interstate or foreign commerce; or
   c) Which are used or could be used for industrial purposes by industries in interstate commerce.
4. All impoundments of waters otherwise defined as waters of the United States under this definition.
5. Tributaries of waters identified in paragraphs(s) (1) through (4) of this section.
6. The territorial sea.
7. Wetlands adjacent to waters (other than waters that are themselves wetlands) identified in paragraphs(s) (1) through (6) of this section; waste treatment systems, including treatment ponds or lagoons designed to meet the requirements of the CWA (other than cooling ponds as defined in 40 Code of Federal Regulations 423.11(m) which also meet the criteria of this definition) are not waters of the United States.

### *Clean Water Act–National Pollution Discharge Elimination System Requirements*

In 1972, the CWA was amended to provide that the discharge of pollutants to waters of the United States from any point source is unlawful unless the discharge is in compliance with a National Pollutant Discharge Elimination System (NPDES) permit. The 1987 amendments established a framework for regulating municipal, industrial, and construction-related stormwater discharges under the NPDES Program. On November 16, 1990, the EPA published final regulations that establish stormwater permit application requirements for specified categories of industries. The regulations

[15] United States Environmental Protection Agency (EPA). 2023. Website: https://www.epa.gov/wotus/current-implementation-waters-united-states. Accessed September 14, 2023.

provide that discharges of stormwater from construction projects that encompass one or more acres of soil disturbance are effectively prohibited unless the discharge is in compliance with an NPDES permit.

The State Water Board has developed a general construction stormwater permit to implement the requirements for the federal NPDES permit. The permit requires submittal of a Notice of Intent (NOI) to comply, fees, and the implementation of a Storm Water Pollution Prevention Plan (SWPPP) that specifies Best Management Practices (BMPs) that would prevent construction pollutants from entering stormwater and keep products of erosion from migrating off-site into downstream receiving waters. The Construction General Permit includes post-construction requirements that include no increase in overall site runoff or the concentration of drainage pollutants and requires implementation of Low Impact Development (LID) design features. The Construction General Permit is implemented and enforced by California's nine RWQCBs.

The RWQCBs have also adopted requirements for NPDES stormwater permits for medium and large municipalities, and the State Water Board has adopted a General Permit for the discharge of stormwater from small municipal storm sewer systems. This General Permit requires projects to develop and implement a post-construction Storm Water Management Plan (SWMP) to reduce the discharge of pollutants to the maximum extent practicable.

### *Federal Endangered Species Act*

The United States Congress passed the Endangered Species Act in 1973 to protect those species that are endangered or threatened with extinction. The Endangered Species Act is intended to operate in conjunction with the National Environmental Policy Act (NEPA) to help protect the ecosystems upon which endangered and threatened species depend. The Endangered Species Act establishes an official listing process for plants and animals considered in danger of extinction, requires development of specific plans of action for the recovery of listed species, and restricts activities perceived to harm or kill listed species or affect critical habitat (16 USC 1532 and 1536).

The Endangered Species Act prohibits the "take" of endangered or threatened wildlife species. "Take" is defined as harassing, harming, pursuing, hunting, shooting, wounding, killing, trapping, capturing, or collecting wildlife species, or any attempt to engage in such conduct (16 USC 1532). Taking can result in civil or criminal penalties. Federal regulation 50 Code of Federal Regulations 17.3 further defines the term "harm" in the take definition to mean any act that actually kills or injures a federally listed species, including significant habitat modification or degradation. Therefore, the Endangered Species Act is invoked when the property contains a federally listed threatened or endangered species that may be affected by a permit decision.

In the event that listed species are involved and a USACE permit is required for impacts to jurisdictional waters, the USACE must initiate consultation with the USFWS or the National Marine Fisheries Service (NOAA Fisheries) pursuant to Section 7 of the Endangered Species Act (16 USC 1536; 40 CFR § 402). Section 7 of the Endangered Species Act requires federal agencies to ensure that their actions do not jeopardize the continued existence of listed species or adversely modify critical habitat (16 USC 1536). In the regulations found at 50 Code of Federal Regulations 402.2, destruction or adverse modification is defined as a "direct or indirect alteration that appreciably

diminishes the value of critical habitat for both the survival and recovery of a listed species." Critical habitat is defined in Endangered Species Act Section 3(5)(A) as specific areas within the geographical range occupied by a species where physical or biological features "essential to the conservation of the species" are found and that "may require special management considerations or protection." Critical habitat may also include areas outside the current geographical area occupied by the species that are nonetheless "essential for the conservation of the species." Critical habitat designations identify, with the best available knowledge, those biological and physical features (primary constituent elements) which provide for the life history processes essential to the conservation of the species.

If formal consultation is required, USFWS or NOAA Fisheries will issue a Biological Opinion stating whether the permit action is likely to jeopardize the continued existence of the listed species, recommending reasonable and prudent measures to ensure the continued existence of the species, establishing terms and conditions under which the proposed project may proceed, and authorizing incidental take of the species.

For discretionary permit actions by non-federal entities, Section 10 of the Endangered Species Act provides a mechanism for obtaining take authorization through submittal and approval of a Habitat Conservation Plan that details species impacts, measures to minimize or mitigate such impacts, and funding mechanisms to implement mitigation requirements.

### *Migratory Bird Treaty Act*

The MBTA implements international treaties devised to protect migratory birds and any of their parts, eggs, and nests from activities such as hunting, pursuing, capturing, killing, selling, and shipping, unless expressly authorized in the regulations or by permit. The regulations governing migratory bird permits are in 50 Code of Federal Regulations Part 13 General Permit Procedures and 50 Code of Federal Regulations Part 21 Migratory Bird Permits. Most bird species within California fall under the provisions of the MBTA. Excluded species include non-native species such as house sparrow, starling, and ring-necked pheasant and native game species such as quail.

On December 22, 2017, the United States Department of Interior's Office of the Solicitor issued Memorandum M-37050, which states an interpretation that the MBTA does not prohibit the accidental or "incidental" taking or killing of migratory birds. In response to the Trump administration's attempted changes to the MBTA, eight states, including California, filed suit in September of 2018, arguing that the new interpretation inappropriately narrows the MBTA and should be vacated. On August 11, 2020, the Southern District of New York ruled in favor of the long-standing interpretation of the MBTA to protect migratory birds, reinstating the historical ban on incidental take. Just days before leaving office, the Trump administration finalized its pullback of MBTA regulations, despite the ruling of the federal court. On his first day in office, President Biden placed Trump's changes to the MBTA on hold, pending further review.

## State

### *CEQA Guidelines*

The California Environmental Quality Act (CEQA) requires public agencies to evaluate potential impacts to special-status species and their habitat. The following CEQA Guidelines Appendix G checklist questions serve as thresholds of significance when evaluating the potential impacts of a proposed project on biological resources. Impacts are considered significant if a project would:

- Have a substantial adverse effect, either directly or through habitat modifications, on any species identified as being a Candidate, Sensitive, or Special-status in local or regional plans, policies, or regulations, or by the CDFW or USFWS.
- Have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, or regulations, or by the CDFW or USFWS.
- Have a substantial adverse effect on federally and State-protected wetlands as defined by Section 404 of the CWA (including but not limited to marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means.
- Interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors or impede the use of native wildlife nursery sites.
- Conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance.
- Conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or State Habitat Conservation Plan.

*Oak Woodlands Conservation Act*

California Senate Bill (SB) 1334, the Oak Woodlands Conservation Act, became law on January 1, 2005, and was added to the CEQA statutes as 21083.4. This statute requires that a county must determine whether or not a project will result in a significant impact on oak woodlands and, if it is determined that a project may result in a significant impact on oak woodlands then the county shall require one or more of the following mitigation measures:

- Conserve oak woodlands through the use of conservation easements.
- Plant an appropriate number of trees, including maintenance of plantings and replacement of failed plantings.
- Contribute funds to the Oak Woodlands Conservation Fund for the purpose of purchasing oak woodlands conservation easements.
- Other mitigation measures developed by the county.

### *Section 401 of the Federal Clean Water Act/Porter-Cologne Water Quality Control Act*

As stated in Section 401 of the CWA, "any applicant for a federal permit for activities that involve a discharge to waters of the State, shall provide the federal permitting agency a certification from the

State in which the discharge is proposed that states that the discharge will comply with the applicable provisions under the Federal Clean Water Act." Therefore, before the USACE will issue a Section 404 permit, applicants must apply for and receive a Section 401 Water Quality Certification from the RWQCB.

### *California Endangered Species Act*

The State of California enacted CESA in 1984. The CESA is similar to the Endangered Species Act but pertains to State-listed endangered and threatened species. CESA requires State agencies to consult with the CDFW when preparing CEQA documents. CESA generally prohibits the taking of State-listed endangered or threatened plant and wildlife species; however, for projects resulting in impacts to State-listed species, the CDFW may authorize take through issuance of an ITP pursuant to Section 2081 of the California Fish and Game Code. Section 2081 requires preparation of mitigation plans in accordance with published guidelines that require, among other things, measures to fully mitigate impacts to State-listed species. The CDFW exercises authority over mitigation projects involving State-listed species, including those resulting from CEQA mitigation requirements. No authorization of take under Section 2081 is permitted for species listed in State statutes as Fully Protected Species. Where Fully Protected Species are involved, projects must be designed to avoid all take of the species. The CDFW cannot issue an ITP until the CEQA Lead Agency has provided documentation in the form of a Notice of Determination that the proposed project has complied with CEQA.

### *California Department of Fish and Wildlife–Lake and Streambed Alteration Agreement*

Section 1602 of the California Fish and Game Code requires any person, governmental agency, or public utility proposing any activity that will divert or obstruct the natural flow or change the bed, channel or bank of any river, stream, or lake, or proposing to use any material from a streambed, to first notify the CDFW of such proposed activity. Based on the information contained in the notification form and a possible field inspection, the CDFW may propose reasonable modifications in the proposed construction as would allow for the protection of fish and wildlife resources. Upon request, the parties may meet to discuss the modifications. If the parties cannot agree and execute a Lake and Streambed Alteration Agreement, then the matter may be referred to arbitration. The CDFW cannot issue a Streambed Alteration Agreement until CEQA compliance has been achieved, usually through the CEQA Lead Agency providing documentation in the form of a Notice of Determination that the Lead Agency has complied with CEQA by preparing a negative declaration or Environmental Impact Report (EIR).

CDFW's regulations implementing the Fish and Game Code define the relevant rivers, streams, and lakes over which the agency has jurisdiction to constitute "all rivers, streams, lakes, and streambeds in the State of California, including all rivers, streams and streambeds which have intermittent flows of water" (Title 14 California Code of Regulations [CCR] § 720). The CDFW takes jurisdiction under its Lake and Streambed Alteration Agreement Program for any work undertaken in or near a river, stream, or lake that flows at least intermittently through a bed or channel. The CDFW does not have a methodology for the identification and delineation of the jurisdictional limits of streams except for the general guidance provided in *A Field Guide to Lake and Streambed Alteration Agreements, Section 1600-1607 California Fish and Game Code*.[9] In making jurisdictional determinations, the CDFW staff typically rely on field observation of physical features that provide evidence of water

flow through a bed and channel such as observed flowing water, sediment deposits and drift deposits and that the stream supports fish or other aquatic life. Riparian habitat is not specifically mentioned in the Fish and Game Code provisions governing Lake and Streambed Alteration Agreement, but the CDFW often asserts jurisdiction over areas within the flood plain of a body of water where the vegetation (grass, sedges, rushes, forbs, shrubs, and trees) is supported by the surface or subsurface flow.

### *California Department of Fish and Wildlife–Fish and Game Code Section 3503, 3503.5, and 3513.*

The State of California also incorporates the protection of non-game birds and birds of prey, including their nests, in Sections 3503, 3503.5, and 3513 of the California Fish and Game Code. Under Fish and Game Code Section 3503.5, it is unlawful to take, possess, or needlessly destroy the nests or eggs of any bird. Fish and Game Code Section 3503.5 makes it unlawful to take or possess birds of prey (hawks, eagles, vultures, owls) or destroy their nests or eggs. In December of 2018, California issued new guidance specifying that State law includes "a prohibition on incidental take of migratory birds, notwithstanding any federal reinterpretation of the Migratory Bird Treaty Act" by the Department of Interior.

### *California Department of Fish and Wildlife – Swainson's Hawk Nesting Survey Guidelines*

For locating nesting Swainson's hawks, CDFW recommends using the "*Recommended Timing and Methodology for Swainson's Hawk Nesting Surveys in California's Central Valley*" dated May 31, 2000. This set of survey recommendations was developed by the Swainson's Hawk Technical Advisory Committee to maximize the potential for locating nesting Swainson's hawks, and thus reducing the potential for nest failures as a result of project activities/disturbances. In summary, surveys should be conducted in a manner that maximizes the potential to observe the adult Swainson's hawks, as well as the nest/chicks. To meet the CDFW recommendations for mitigation and protection of Swainson's hawks, surveys should be conducted for a 0.5-mile radius around all project activities, and if active nesting is identified within the 0.5-mile radius, consultation with CDFW to determine nesting buffers is required under these guidelines. The guidelines provide specific recommendations regarding the number of surveys based on when the project is scheduled to begin and the time of year the surveys are conducted.

### *California Department of Fish and Wildlife – Special-status Native Plant Survey Protocol*

For conducting botanical surveys to detect special-status plant species, CDFW developed survey protocols identified in "*Protocols for Surveying and Evaluating Impacts to Special-Status Native Plant Populations and Sensitive Natural Communities*" dated March 20, 2018. Botanical field surveys provide information used to determine the potential environmental effects of proposed projects on special-status plants as required by law (e.g., CEQA, CESA, federal Endangered Species Act). According to the protocol, botanical field surveys should be conducted in a manner which maximizes the likelihood of locating special-status plants and sensitive natural communities that may be present. Botanical field surveys should be floristic in nature, meaning that every plant taxon that occurs in the project area is identified to the taxonomic level necessary to determine rarity and listing status. "Focused surveys" that are limited to habitats known to support special-status plants or that are restricted to lists of likely potential special-status plants are not considered floristic in

nature and are not adequate to identify all plants in a project area to the level necessary to determine whether they are special-status plants.

### *California Department of Fish and Wildlife – Staff Report on Burrowing Owl Mitigation*

CDFW issued survey protocols for conducting burrowing owl breeding and nonbreeding season surveys and pre-construction surveys in the *Staff Report on Burrowing Owl Mitigation* dated March 7, 2012.

In summary, for breeding season surveys, a minimum of four survey visits shall be conducted: 1) at least one site visit between February 15 and April 15, and 2) a minimum of three survey visits, at least three weeks apart, between April 15 and July 15, with at least one visit after June 15. The survey shall be conducted in all portions of the project site that fit the description of habitat in Appendix A of the staff report. Surveys shall be walked in straight-line transects spaced 7 meters (m) to 20 m apart, adjusting for vegetation height and density. At the start of each transect and at least every 100 m, the surveyor shall scan the entire visible project area for burrowing owls using binoculars and record all potential burrows used by burrowing owls as determined by the presence of one or more burrowing owls, pellets, prey remains, whitewash, or decoration. For nonbreeding season surveys, the methods described above for breeding season surveys are followed, but at least four visits, spread evenly, are conducted throughout the nonbreeding season.

Pre-construction surveys, referred to as "take avoidance surveys" in the staff report, are intended to detect the presence of burrowing owls on a project site at a fixed period in time and inform necessary take avoidance actions. Take avoidance surveys may detect changes in owl presence such as colonizing owls that have recently moved onto the site, migrating owls, resident burrowing owls changing burrow use, or young of the year that are still present and have not dispersed. In summary, survey methodology for pre-construction surveys should be conducted no less than 14 days prior to initiating ground disturbance activities.

### *California Native Plant Society*

The CNPS, a nongovernmental organization, has no regulatory authority but provides information that is often used by regulatory bodies. The CNPS maintains a list of plant species native to California that have low numbers, limited distribution, or are otherwise threatened with extinction. This information is published in the Inventory of Rare and Endangered Plants of California. Potential impacts to populations of CNPS-listed plants receive consideration under CEQA review, especially for those plant species included in Lists 1 and 2. The following identifies the definitions of the CNPS listings:

- **Rank 1A:** Plants presumed extirpated in California and either rare or extinct elsewhere.
- **Rank 1B:** Plants Rare, Threatened, or Endangered in California and elsewhere.
- **Rank 2A:** Plants presumed extirpated in California but more common elsewhere.
- **Rank 2B:** Plants Rare, Threatened, or Endangered in California, but more common elsewhere.
- **Rank 3:** Plants about which more information is needed.
- **Rank 4:** Watch List: Plants of limited distribution.

## Local

### *City of American Canyon*

*General Plan*

The City of American Canyon General Plan sets forth the following goals, objectives, and policies relevant to biological resources on the project site:

**Goal 8** Protect and preserve the significant habitats, plants and wildlife that exist in the City and its Planning Area.

**Objective 8.1** Maintain data and information regarding areas of significant biological value within the Planning Area to facilitate resource conservation and the appropriate management of development.

**Policy 8.1.1** Acquire and maintain the most current information available regarding the status and location of sensitive biological elements (species and natural communities) within the City and, as appropriate, within the Sphere of Influence and Urban Limit Line.

**Policy 8.1.4** Regularly monitor and review developments proposed within the City's Planning Area to assess their impacts on local biological resources and to recommend appropriate mitigation measures that the developer and/or government agency can implement.

**Objective 8.2** Balance the preservation of natural habitat areas, including coastal saltmarsh, mixed hardwood forest, oak savanna, and wetland and riparian habitats, with new development in the City.

**Policy 8.2.1** Land use applications for developments located within sensitive habitats, including coastal saltmarsh, mixed hardwood forest, oak savanna, and riparian habitats (see Figure 8-1) [General Plan], or with areas potentially occupied by vernal pools (see Figure 8-2) [General Plan] shall be accompanied by sufficient technical background data to enable an adequate assessment of the potential for impacts on these resources, and possible measures to reduce any identifiable impacts. In addition to examining Figure 8-1 [General Plan] for information on these sensitive habitats, an on-site assessment shall be conducted by a City approved qualified Biologist to determine whether sensitive habitats exist on-site, in instances where the potential for significant impacts exists, the applicant must submit a Biological Assessment Report prepared by a qualified professional.

**Objective 8.3** Protect natural drainages and riparian corridors within the American Canyon Planning Area.

**Policy 8.3.1** Review proposed developments in wetlands and riparian habitats to evaluate their conformance with the following policies and standards:

a. The development plan shall fully consider the nature of existing biological resources and all reasonable measures shall be taken to avoid significant impacts, including retention of sufficient natural open space and undeveloped buffer zones.
b. Development shall be designed and sited to preserve watercourses, riparian habitat, vernal pools, and wetlands in their natural condition, unless these actions result in an unfeasible project, in which case habitat shall be replaced in accord with subsection "g" (below).
c. Where riparian corridors are retained, they shall be protected by an adequate buffer with a minimum 100-foot protection zone from the edge of the tree, shrub, or herb canopy . . .
d. Development shall incorporate habitat linkages (wildlife corridors) to adjacent open spaces, where appropriate and feasible.
e. Development shall incorporate fences, walls, vegetative cover, or other measures to adequately buffer habitat areas, linkages, or corridors from built environment.
f. Roads and utilities shall be located and designed such that conflicts with biological resources, habitat areas, linkages or corridors are avoided where feasible.
g. Future development shall utilize appropriate open space or conservation easements in order to protect sensitive species or their habitats.
h. Future development shall mitigate unavoidable adverse impacts to waters of the United States, wetlands, and riparian habitats (pursuant to the federal Clean Water Act and the California Fish and Game Code, Section 1600 *et seq*.) by replacement on an in-kind basis. Furthermore, replacement shall be based on a ratio determined by the California Department of Fish and Wildlife and/or United States Army Corps of Engineers in order to account for the potentially diminished habitat values of replacement habitat. Such replacement should occur on the original development site, whenever possible. Alternatively, replacement can be affected, subject to State and federal regulatory approval, by creation or restoration of replacement habitats elsewhere (off-site but preferably within the City's Planning Area), protected in perpetuity by provision for an appropriate conservation easement or dedication.

**Policy 8.3.5** Establish a network of open spaces along the City's natural drainages and riparian corridors and link significant biological habitats. Any recreational use of these areas shall be designed to avoid damaging sensitive habitat areas.

**Policy 8.3.6** Preserve and integrate the City's natural drainages in new development, as opposed to their channelization or undergrounding, emphasizing opportunities for the development of pedestrian paths and greenbelts along their lengths throughout the City.

**Objective 8.4** Protect local vernal pools as well as the habitats of endangered species living within American Canyon's Planning Area.

**Policy 8.4.1** Require that development plans incorporate all reasonable mitigation measures to avoid significantly impacting vernal pools for projects located within American Canyon's Planning Area.

**Policy 8.4.2** Preserve, where possible, the habitat of several in-fact endangered species, including those shown on Figure 8-2 and listed in Table 8-1, as well as those that may be considered by the City in the future.

**Policy 8.4.3** Encourage activities that improve the biological value and integrity of the City's natural resources through vegetation restoration, control of alien plants and animals, and landscape buffering.

*Municipal Code*

Municipal Code Chapter 18.40.110 sets forth the City's Tree Ordinance. The ordinance states that existing trees shall be preserved on the site unless otherwise approved by the City Council as a part of the site development plans. Additionally, unless specifically approved by the City Council, any tree removed shall be replaced on the site. Replacement trees shall be a minimum size of a 24-inch box of the same species unless specifically approved by the City Council.

## 3.3.5 - Methodology

### Literature Review

A literature review was conducted to analyze existing documentation regarding biological resources and habitat conditions within the project site and vicinity and is summarized below.

#### *Existing Documentation*

As part of the literature review, an FCS Biologist compiled and analyzed existing environmental documentation for the project site and relevant areas in its vicinity. This documentation included literature pertaining to the habitat requirements of special-status species with the potential to occur in the project vicinity and federal register listings, protocols, and species data provided by the USFWS, CDFW, and CNPS. Additionally, FCS reviewed and evaluated all available supporting documentation provided by the applicant, including a finalized USACE jurisdictional determination, and species-specific studies and habitat assessments. These documents are attached to this BRA (Appendix C.2: Commerce Court 217 supporting documents; and Appendix C.3: Commerce Court 220 supporting documents), and include the following:

*SDG Commerce 217 Documents*

- Monk & Associates (M&A). 2020. Revised Biological Resource Analysis SDG Commerce 217 Distribution Center. City of American Canyon, California. March 2020.
- Monk & Associates (M&A). 2020. Addendum Letter to CEQA Biology Report Discussing Proposed Borrow Site SDG Commerce 217 Distribution Center. September 2020.

### *Topographic Maps and Aerial Photographs*

An FCS Biologist reviewed current USGS 7.5-minute topographic quadrangle map(s) and aerial photographs as a preliminary analysis of the existing conditions within the project site and immediate vicinity.[16] Information obtained from the topographic maps included elevation, general watershed information, and potential drainage feature locations using Google Earth in conjunction with the EPA Watershed Assessment, Tracking, and Environmental Results System (WATERS).[17] Aerial photographs provided a perspective of the current site conditions relative to on-site and off-site land use, vegetation community locations, and potential locations of wildlife movement corridors.

### *Soil Surveys*

The United States Department of Agriculture (USDA) has published soil surveys that describe the soil series (i.e., group of soils with similar profiles) occurring within a particular area.[18] These profiles include major horizons with similar thickness, arrangement, and other important characteristics. These series are further subdivided into soil mapping units that provide specific information regarding soil characteristics. Many special-status plant species have a limited distribution based exclusively on soil type. Therefore, pertinent USDA soil survey maps were reviewed to determine the existing soil mapping units within the project site and to inform whether the soil conditions on-site are potentially suitable for any special-status plant species. However, NRCS soil maps utilize an approximately 1.4-acre minimum mapping unit, and line placement may not be accurate on a large (i.e., parcel-level) scale.

### *Special-status Species Database Search*

An FCS Biologist compiled a list of threatened, endangered, and otherwise special-status species previously recorded within the project vicinity based on a search of the USFWS Information for Planning and Consultation (IPaC) database,[19] the CNDDB, and the CNPS Electronic Inventory (CNPSEI)

of Rare and Endangered Vascular Plants of California for the Cuttings Wharf, California USGS 7.5-minute Topographic Quadrangle Map, and the eight surrounding quadrangles.[20,21] The CNDDB Biogeographic Information and Observation System (BIOS 6) was used to determine the distance between the known occurrences of special-status species and the project site.[22]

## Field Surveys and Focused Surveys

FCS Biologists familiar with the biological resources of the region conducted field surveys on December 2, 2022, and March 17, 2023. The objective of the field surveys was to ascertain general site conditions, wildlife use, and identify whether existing vegetation communities provide suitable habitat for special-status plant or wildlife species. Potentially sensitive areas identified during the literature review were ground-truthed during the field survey for mapping accuracy. Special attention was paid to sensitive habitats and areas potentially supporting special-status floral and faunal species.

Wildlife species detected during the reconnaissance-level surveys by sight, calls, tracks, scat, or other signs were recorded. Notations were made regarding suitable habitat for those special-status species determined to have the potential to occur within the project site.[23] Appropriate field guides were used to assist in species identification during surveys, such as Peterson, Reid, and Stebbins.[24,25,26] Online resources such as eBird and California Herps were also consulted, as necessary. [27,28]

M&A performed 10 field surveys on the greater 35-acre project site before it was subdivided into three lots (SDG Commerce 217, SDG Commerce 220, and SDG Commerce 330). Consequently, the SDG Commerce 220 project site was included in these surveys which were conducted on March 1 and April 27, 2006; June 14, 2011; February 14, March 21, and June 12, 2012; May 18, 2017; March 30, 2018; December 19 and December 27, 2019. Additional details concerning these surveys can be found in Appendix C.1 [Appendix D.1] of this document.

### *Pre-construction Surveys for SDG Commerce 217*

Seven pre-construction surveys were conducted by FCS between January 18 and April 7, 2023, for a total of approximately 30 survey hours. Surveys were conducted for the entirety of the Commerce 217 project site and relevant adjacent areas (which included the adjacent SDG Commerce 220 site). Surveys were conducted pursuant to the January 2021 Mitigation, Monitoring, and Reporting Program (MMRP) for the Commerce 217 Warehouse Project. Surveys included nesting birds

(including Swainson's hawk) and burrowing owl detection. Surveys for western pond turtle adults and nests were also performed simultaneously while walking the site. Survey methods followed established procedures and applicable protocols, including the *Recommended Timing and Methodology for Swainson's Hawk Nesting Surveys in California's Central Valley (Protocol) and the Staff Report on Burrowing Owl Mitigation*.[29,30] Survey equipment included high-quality binoculars and a high-quality spotting scope. Surveys were conducted during the appropriate times of day (including peak bird detection periods between sunrise and 10:00 a.m.). Additional details concerning these surveys can be found in Appendix C.1: *SDG Commerce Court 220 BRA* [Appendix D.1: SDG Commerce Site 217 Documents].

### *Special-status Animal Surveys for SDG Commerce 220*

Eleven special-status animal surveys were conducted between January 18 and July 2, 2023, by Pinecrest for the entirety of the Commerce 220 project site. Surveys were conducted by Dr. Christopher DiVittorio to determine the presence or absence of several special-status species, including burrowing owl, Swainson's hawk, nesting raptors, nesting passerine birds, and western pond turtle. Survey methods followed established procedures and applicable protocols, including the R*ecommended Timing and Methodology for Swainson's Hawk Nesting Surveys in California's Central Valley*, and the *Staff Report on Burrowing Owl Mitigation.*[31,32] Survey equipment included high-quality binoculars and a high-quality spotting scope. Surveys were conducted during the appropriate times of day (including peak bird detection periods between sunrise and 10:00 a.m.). Additional details concerning these surveys can be found in Appendix C.1: *SDG Commerce Court 220 BRA* [Appendix D.2: SDG Commerce Site 220 Documents] of this document.

### *Protocol-level Rare Plant Surveys for SDG Commerce 220*

Protocol-level rare plant surveys were conducted by Pinecrest during the growing season of 2023. An early-season site visit was performed on March 20. Mid-season site visits were performed on April 6, April 7, and May 29. A late-season site visit was also performed on July 2. Between the mid-season and late-season site visits, the majority of the site was graded; thus, the late-season site visit focused on remaining vegetation surrounding the areas of disturbance. Rare plants recorded and mapped in the field, if present, include all plants that are federal or State-listed as Rare, Threatened, or Endangered, all federal and State candidates for listing, all plants included in Lists 1 through 4 of the CNPS Inventory, and plants that qualify under the definition of "rare" in CEQA Guidelines Section 15380.

Botanical surveys were performed by Dr. Christopher DiVittorio, with secondary identification on voucher and photograph specimens made by Dr. Zoya Akulova. During the site visit, Dr. DiVittorio surveyed the entirety of the project area using methods as specified in the CDFW publication titled Protocols for Surveying and Evaluating Impacts to Special-Status Native Plant Populations and

[29] Swainson's Hawk Technical Advisory Committee. 2000. Recommended Timing and Methodology for Swainson's Hawk Nesting Surveys in California's Central Valley. California Department of Fish and Wildlife, May 31, 2000.

[31] Swainson's Hawk Technical Advisory Committee. 2000. Recommended Timing and Methodology for Swainson's Hawk Nesting Surveys in California's Central Valley. California Department of Fish and Wildlife, May 31, 2000.
[32] California Department of Fish and Wildlife (CDFW). 2012. Staff Report on Burrowing Owl Mitigation. State of California Natural Resource Agency Department of Fish and Game. March 7, 2012.

Sensitive Natural Communities.[33] Surveys were conducted by walking the entire project area on foot in parallel lines approximately 15 feet apart, identifying every species that was flowering, and making note of any species that were past flowering or that had not yet flowered. Voucher specimens were taken of any species that required identification in the laboratory. All terminology follows currently accepted nomenclature as described in The Jepson Manual. Additional details concerning these surveys can be found in Appendix C.1: *SDG Commerce Court 220 BRA, Section 3: Methods,* of this document.

### Wildlife Movement Corridors

Wildlife movement corridors link areas of suitable wildlife habitat that are otherwise separated by natural and anthropogenic dispersal barriers, including rugged terrain, changes in vegetation, development, or human disturbance. Urbanization and the resulting fragmentation of open space areas create isolated "islands" of wildlife habitat, forming separated populations. Corridors act as an effective link between populations.

The project site was evaluated for evidence of a wildlife movement corridor during the reconnaissance-level survey and review of aerial photographs, and CDFW's BIOS 6 information on Bay Area Linkages. The focus of this study was to determine whether a change in land use at the project site could have significant impacts on the regional movement of wildlife. Conclusions are based on the information compiled during the literature review, aerial photographs, USGS topographic maps and resource maps for the vicinity; the field survey; and professional experience with the desired topography, habitat, and resource requirements of the special-status species potentially utilizing the project site and vicinity.

## 3.3.6 - Thresholds of Significance

Appendix G to the CEQA Guidelines is a sample Initial Study checklist that includes questions for determining whether impacts to biological resources are significant. These questions reflect the input of planning and environmental professionals at the Governor's Office of Planning and Research (OPR) and the California Natural Resources Agency, based on input from stakeholder groups and experts in various other governmental agencies, nonprofits, and leading environmental consulting firms. They also reflect the requirements of laws other than CEQA that protect biological resources (e.g., the federal CWA, the Porter-Cologne Water Quality Control Act, the Endangered Species Act and CESA, and the Natural Community Conservation Planning Act). As a result, many lead agencies derive their significance criteria from the questions posed in Appendix G. The City has chosen to do so for this project.

Additional guidance on the significance of biological resource impacts is found in CEQA Guidelines Section 15065, subdivision (a)(1), which provides that a lead agency shall find that a project may have a significant effect on the environment if "[t]he project has the potential to: . . . substantially reduce the habitat of a fish or wildlife species; cause a fish or wildlife population to drop below self-sustaining levels; threaten to eliminate a plant or animal community; [or]substantially reduce the number or

[33] California Department of Fish and Wildlife (CDFW). 2018. Protocols for Surveying and Evaluating Impacts to Special-Status Native Plant Populations and Sensitive Natural Communities. March 20, 2018.

restrict the range of an endangered, rare or threatened species[.]" The "mandatory findings of significance" are also found in the Appendix G sample Initial Study checklist, though near the end.

In light of the foregoing, the proposed project would have a significant effect related to biological resources if the proposed project would:

a) Have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special-status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Wildlife or United States Fish and Wildlife Service.

b) Have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, and regulations or by the California Department of Fish and Wildlife or United States Fish and Wildlife Service. (Refer to Section 7, Effects Found not to be Significant)

c) Have a substantial adverse effect on State or federally protected wetlands (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means.

d) Interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of wildlife nursery sites.

e) Conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance.

f) Conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or State Habitat Conservation Plan. (Refer to Section 4, Effects Found not to be Significant)

g) Substantially reduce the habitat of a fish or wildlife species.

h) Cause a fish or wildlife population to drop below self-sustaining levels.

i) Threaten to eliminate a plant or animal community. (Refer to Section 4, Effects Found not to be Significant)

j) Substantially reduce the number or restrict the range of an endangered, rare or threatened species.

## 3.3.7 - Project Impacts and Mitigation Measures

This section discusses potential impacts associated with the development of the project and provides mitigation measures where appropriate.

## Special-status Species

**Impact BIO-1:** **The proposed project could have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special-status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Wildlife or United States Fish and Wildlife Service.**

### *Impact Analysis*

This impact analysis addresses thresholds a), g), and h).

*Special-status Plant Species*

No rare or special-status plant species were observed during the appropriately timed protocol-level floristic surveys (see Section 3.3.3, *Special-status Plant Species*) and are therefore determined to be absent from the site. This result is also supported by M&A's March 2020 BRA, which additionally states that in the recent past, blue gum eucalyptus trees covered most of the project site dating back for several decades; these trees emit allelopathic (growth inhibiting) chemicals from their leaves, acorns and bark that prevent other plants from growing under them.[34] Therefore, no impacts on special-status or rare plant species are expected to occur due to project construction or operation.

*Special-status Wildlife Species*

**Swainson's Hawk**

Potentially suitable Swainson's hawk nesting trees are located adjacent to the project site. If a Swainson's hawk nest is active near the project site during construction, the proposed project could cause indirect harm to the species through the noise, light and other human-caused disturbances resulting from project construction, which may result in this species abandoning its nests.

No Swainson hawks or nests were observed during the 18 field surveys conducted by FCS and Pinecrest in 2023. Out of an abundance of caution, FCS proposes that the project applicant implement the mitigation measures (MM) BIO-1a and BIO-1b, which require pre-construction surveys and the implementation of avoidance and minimization measures, if needed, to avoid indirect impacts on Swainson's hawk nesting habitat and to establish adequate nest protection zones to conform with CDFW Guidelines.[35]

**Western Burrowing Owl**

No western burrowing owls have been observed on the project site during the 18 field surveys conducted by FCS and Pinecrest in 2023. Additionally, no suitable burrows or ground squirrels were observed on-site during the surveys. Therefore, the likelihood of presence on the project site is considered to be low. Since the western burrowing owl is a mobile species that could move onto the project site prior to development, pre-construction surveys are recommended out of an abundance of caution. If burrowing owl are present on-site before grading, the proposed project may result in impacts to the western burrowing owl, considered a potentially significant impact pursuant to CEQA.

[34] Monk & Associates (M&A). 2020. Revised Biological Resource Analysis SDG Commerce 217 Distribution Center. March 2, 2020.
[35] California Department of Fish and Wildlife (CDFW). 2000. Recommended Timing and Methodology for Swainson's Hawk Nesting Surveys in California's Central Valley. Swainson's Hawk Technical Advisory Committee. Sacramento, California. May 31, 2000.

However, MM BIO-1c is designed to detect, avoid, and passively relocate owls, and therefore, any potential significant impacts on this species would be reduced to less than significant.

**Other Protected Nesting Birds (including northern harrier, golden eagle, white-tailed kite and others)**

Areas adjacent to the project site provide suitable nesting habitat for a variety of species of nesting birds, including special-status bird species such as northern harrier, golden eagle, white-tailed kite, and others. Disturbed grassland and barren areas provide potential nesting opportunities for ground nesting birds. Construction activities that occur during the avian nesting season (generally February 1 to August 31) could disturb protected nesting sites within the construction footprint and within disturbance distance. Grading and the removal of vegetation during the nesting season could result in direct harm to nesting birds, while noise, light, and other construction-related disturbances may cause nesting birds adjacent to the vegetation removal areas to abandon their nests.

No active raptor nests were observed within the project site during the 2023 field surveys conducted by FCS and Pinecrest; however white-tail kite individuals were observed foraging over the project site. Additionally, a juvenile, red-shouldered hawk was observed perched off-site within a large eucalyptus tree to the north of the SDG Commerce 217 site. Although no active nests have been observed on-site, it cannot be ruled out that avian species may nest within disturbance distance of the project site. With implementation of MM BIO-1d, requiring pre-construction nesting bird surveys and avoidance of direct and indirect impacts on nests, potential project-related impacts on protected bird nests can be reduced to a less than significant level under CEQA.

**Roosting Bats (including Pallid Bat)**

The project site is adjacent to trees that could provide suitable bat roosting habitat, including for special-status bats such as pallid bat. Potential indirect impacts could occur to roosting bats due to the proximity to disturbance distance during project construction. These activities could potentially subject bats to risk of injury or disturbance, and they are likely to avoid using the area until such construction activities have dissipated or ceased. Relocation, in turn, could cause hunger or stress among individual bats by displacing them into adjacent territories belonging to other individuals. With implementation of MM BIO-1e, requiring pre-construction roosting bat surveys and avoidance of indirect impacts on active bat roosts, potential project-related impacts on protected roosting bats can be reduced to a less than significant level under CEQA.

**Western Pond Turtle**

No western pond turtles or nests were observed during the 2023 surveys conducted by FCS and Pinecrest. While the site appears to be unlikely to support western pond turtle, it cannot be ruled out entirely that a vagrant western pond turtle may be present on-site under unlikely circumstances before start of construction and could potentially be impacted by the project. Impacts to western pond turtle from the proposed project are considered potentially significant. MM BIO-1f would reduce this impact to a less than significant level through avoidance and minimization measures outlined below.

**Monarch Butterfly**

There is a potential for the monarch butterfly to overwinter in the eucalyptus woodland adjacent to the site. Construction activities, including dust, noise, and vibration adjacent to overwintering

colonies could result in loss of overwintering monarch butterflies. Therefore, MM BIO-1g which includes a pre-construction survey and, if found, avoidance in coordination with USFWS and CDFW are recommended to reduce any potential impacts on monarch butterfly to less than significant.

### *Level of Significance Before Mitigation*

Potentially significant impact.

### *Mitigation Measures*

**MM BIO-1a Pre-construction Surveys for Swainson's Hawk**

Prior to ground disturbance that occurs during the nesting season for Swainson's hawk (generally March 20 to July 20), a qualified Biologist shall conduct Swainson's hawk nesting surveys within a 0.5-mile radius of the project site to determine whether nests are occupied. Occupancy shall be determined through observation of all accessible areas, including from public roads or other publicly accessible observation areas of Swainson's hawk activity (e.g., foraging) on and near the project site.

The qualified Biologist shall follow the survey protocol outlined in the California Department of Fish and Wildlife (CDFW) *Recommended Timing and Methodology for Swainson's Hawk Nesting Surveys in California's Central Valley*, which recommends surveys according to the following survey periods:

I. **January–March 20:** Conduct one survey total.
II. **March 20–April 5:** Conduct three surveys total. Surveys shall be conducted between sunrise to 10:00 a.m. and/or 4:00 p.m. to sunset.
III. **April 5–April 20:** Conduct three surveys total. Surveys shall be conducted between sunrise to 12:00 p.m. and/or 4:30 p.m. to sunset.
IV. **April 21–June 10:** Initiating surveys are not recommended. Monitoring of known nest sites only.
V. **June 10–July 30:** (post-fledging) Conduct three surveys total. Surveys shall be conducted between sunrise to 12:00 p.m. and/or 4:00 p.m. to sunset.

Pre-construction surveys shall be completed for at least the two survey periods immediately prior to a project's initiation.

**MM BIO-1b Swainson's Hawk Avoidance and Minimization and Construction Monitoring**

Following the implementation of MM BIO-1a, if nests are located and determined to be occupied, minimization measures must be implemented, and construction monitoring conducted as follows:

1. Construction activities shall be prohibited within 600 feet of an active and occupied Swainson's hawk nest, or within 600 feet of nests under construction, to prevent nest abandonment.

2. Notwithstanding the foregoing, if site-specific conditions or the nature of the construction activity (e.g., other nearby development, limited activities) indicate that a smaller buffer, or no buffer at all, could be used, the project applicant may seek approval from the qualified Biologist who in coordination with the California Department of Fish and Wildlife (CDFW) shall determine the appropriate buffer size, which, once approved, shall govern.
3. No tree containing an active Swainson's hawk nest shall be removed.

**MM BIO-1c Pre-construction Surveys for Burrowing Owl (includes avoidance and passive relocation if found)**

A qualified Biologist shall conduct a habitat assessment for wintering burrowing owl, and surveys if habitat is present. The qualified Biologist shall follow the California Department of Fish and Wildlife (CDFW) 2012 Staff Report on Burrowing Owl Mitigation habitat assessment and survey methodology prior to project activities occurring during the burrowing owl wintering season from September 1 to January 31. The habitat assessment and surveys shall encompass a sufficient buffer zone to detect owls nearby that may be impacted, which shall be a minimum of 1,640 feet unless otherwise approved in writing by the CDFW. Surveys shall include four nonbreeding season surveys spread evenly throughout the nonbreeding season pursuant to the CDFW 2012 Staff Report. Time lapses between surveys or project activities shall trigger subsequent surveys, as determined by a qualified Biologist, including but not limited to a final survey within 24 hours prior to ground disturbance and before construction equipment mobilizes to the project area. The qualified Biologist shall have a minimum of 2 years of experience implementing the CDFW 2012 Staff Report survey methodology resulting in detections.

Detected burrowing owls shall be avoided pursuant to the buffer zone prescribed in the CDFW 2012 Staff Report, unless otherwise approved in writing by CDFW, and any eviction plan shall be subject to CDFW review. Please be advised that CDFW does not consider eviction of burrowing owls (i.e., passive removal of an owl from its burrow or other shelter) as a "take" avoidance, minimization, or mitigation measure; therefore, off-site habitat compensation shall be included in the eviction plan. Habitat compensation acreages shall be approved by CDFW, as the amount depends on-site-specific conditions and must be completed before project construction unless otherwise approved in writing by CDFW. Habitat compensation shall also include placement of a conservation easement and preparation and implementation of a long-term management plan prior to project construction.

**MM BIO-1d Protection of Active Bird Nests (includes pre-construction survey and implementation of avoidance buffer, if found).**

1. If the proposed project requires vegetation to be removed during the nesting season (February 1 to August 31), pre-construction surveys shall be conducted no more than 7 days prior to the start of ground or vegetation disturbance (including

tree removal) to determine whether or not active nests are present within the project site and buffer area as appropriate.

2. If an active nest is located during pre-construction surveys, a qualified Biologist shall determine an appropriately sized avoidance buffer based on the species and anticipated disturbance level. (The California Department of Fish and Wildlife [CDFW] recommends a minimum no-disturbance buffer of 250 feet around active nests of non-listed bird species and a 500-foot no-disturbance buffer around active nests of non-listed raptors.) A qualified Biologist shall delineate the avoidance buffer using Environmentally Sensitive Area (ESA) fencing, pin flags, and/or yellow caution tape. The buffer zone shall be maintained around the active nest site(s) until the young have fledged and are foraging independently. No construction activities or construction foot traffic is allowed to occur within the avoidance buffer(s).
3. The qualified Biologist shall monitor the active nest during construction activities and modify the protection zone accordingly to prevent project-related nest disturbance, until the young have fledged.

**MM BIO-1e Roosting Bat Pre-construction Survey and Avoidance**

A qualified Biologist with relevant roosting bat experience shall conduct a survey for special-status bats during the appropriate time of day to maximize detectability to determine whether bat species are roosting near the work area no less than 7 days and no more than 14 days prior to beginning ground disturbance and/or construction. Survey methodology may include visual surveys of bats (e.g., observation of bats during foraging period), inspection for suitable habitat, bat sign (e.g., guano), or use of ultrasonic detectors (Anabat, etc.) within 250 feet of project construction activities (where accessible).

If the Biologist determines or presumes bats are present, the Biologist shall exclude the bats from suitable spaces by installing one-way exclusion devices. After the bats vacate the space, the Biologist shall close off the space to prevent recolonization. Grading shall only commence after the Biologist verifies 7 to 10 days later that the exclusion methods have successfully prevented bats from returning. To avoid impacts on non-volant (i.e., nonflying) bats, the Biologist shall only conduct bat exclusion and eviction from May 1 through October 1. Exclusion efforts may be restricted during periods of sensitive activity (e.g., during hibernation or while females in maternity colonies are nursing young).

**MM BIO-1f Protection of Western Pond Turtles**

A qualified Biologist (i.e., a Biologist with at least 2 years of experience conducting surveys for western pond turtle detections) shall submit a wildlife exclusion fencing plan to the California Department of Fish and Wildlife (CDFW) for review and approval prior to starting construction. Exclusion fencing shall be installed along the western perimeter of the project site to prevent the species from traveling from

North Slough onto the project site during construction. A qualified Biologist shall survey the project site and adjacent habitat within 72 hours of the start of project activities to determine whether western pond turtle or their nests are present and guide the installation of the exclusion fence. If western pond turtles are discovered, a qualified Biologist with experience handling and relocating the species shall move the species to the nearest suitable habitat outside of the project area and exclusion fencing. If western pond turtle nests are found, CDFW shall be notified prior to starting project activities, and the nest site plus a 50-foot buffer around the nest site shall be fenced with orange construction fence until eggs hatch and young turtles disperse to the adjacent North Slough. In addition, if nest(s) are located during surveys, moth balls (naphthalene) shall be sprinkled around the vicinity of the nest (no closer than 5 feet) to mask human scent and discourage predators. Grading within the nest site's 50-foot buffer area shall be delayed until the young leave the nest as determined by a qualified Biologist. If the CDFW allows translocation of any nestling pond turtles this shall be completed by a qualified Biologist under the direction of the CDFW.

**MM BIO-1g Protection of Overwintering Monarch Butterfly**

Activities such as vegetation removal, grading, or initial ground-disturbing activities shall be conducted between November 1 and July 31 (outside of the overwintering season) to the extent feasible. If such activities must be initiated during the overwintering season (August 1 through October 31), a pre-construction overwintering survey shall be conducted by a qualified Biologist no more than 7 days prior to vegetation removal, grading, or initial ground disturbance. The survey shall include the disturbance area and surrounding 250 feet to identify the location and status of any colonies that could potentially be affected either directly or indirectly by project activities. If no colonies are present, then project activities can commence as scheduled. If a colony is present, project construction shall cease immediately to avoid all direct and indirect impacts and report the presence of the colony to the United States Fish and Wildlife Service (USFWS) and California Department of Fish and Wildlife (CDFW) and follow all recommendations provided by USFWS and CDFW.

### *Level of Significance After Mitigation*

Le***s***s than significant impact with mitigation incorporated.

## Wetlands and Jurisdictional Features

| | |
|---|---|
| **Impact BIO-2:** | **The proposed project would not have a substantial adverse effect on State or federally protected wetlands (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means.** |

### *Impact Analysis*

This impact analysis addresses threshold c).

The proposed project would avoid all impacts on potential jurisdictional wetland features through the implementation of a wetland buffer avoidance area (Exhibit 3.3-4). The wetland buffer avoidance area would ensure that construction activities do not impact the on-site jurisdictional wetland features. Upon operation, the project's stormwater would be directed away from the features. Additionally, the proposed project would be required to comply with applicable laws and regulations related to jurisdictional waters and wetlands (see Section 3.3.4, Regulatory Framework). These generally applicable laws and regulations are designed to avoid any net loss of area and function. With implementation of the wetland buffer avoidance area and the application of laws and regulations, potential indirect or residual impacts would be reduced to less than significant under CEQA.

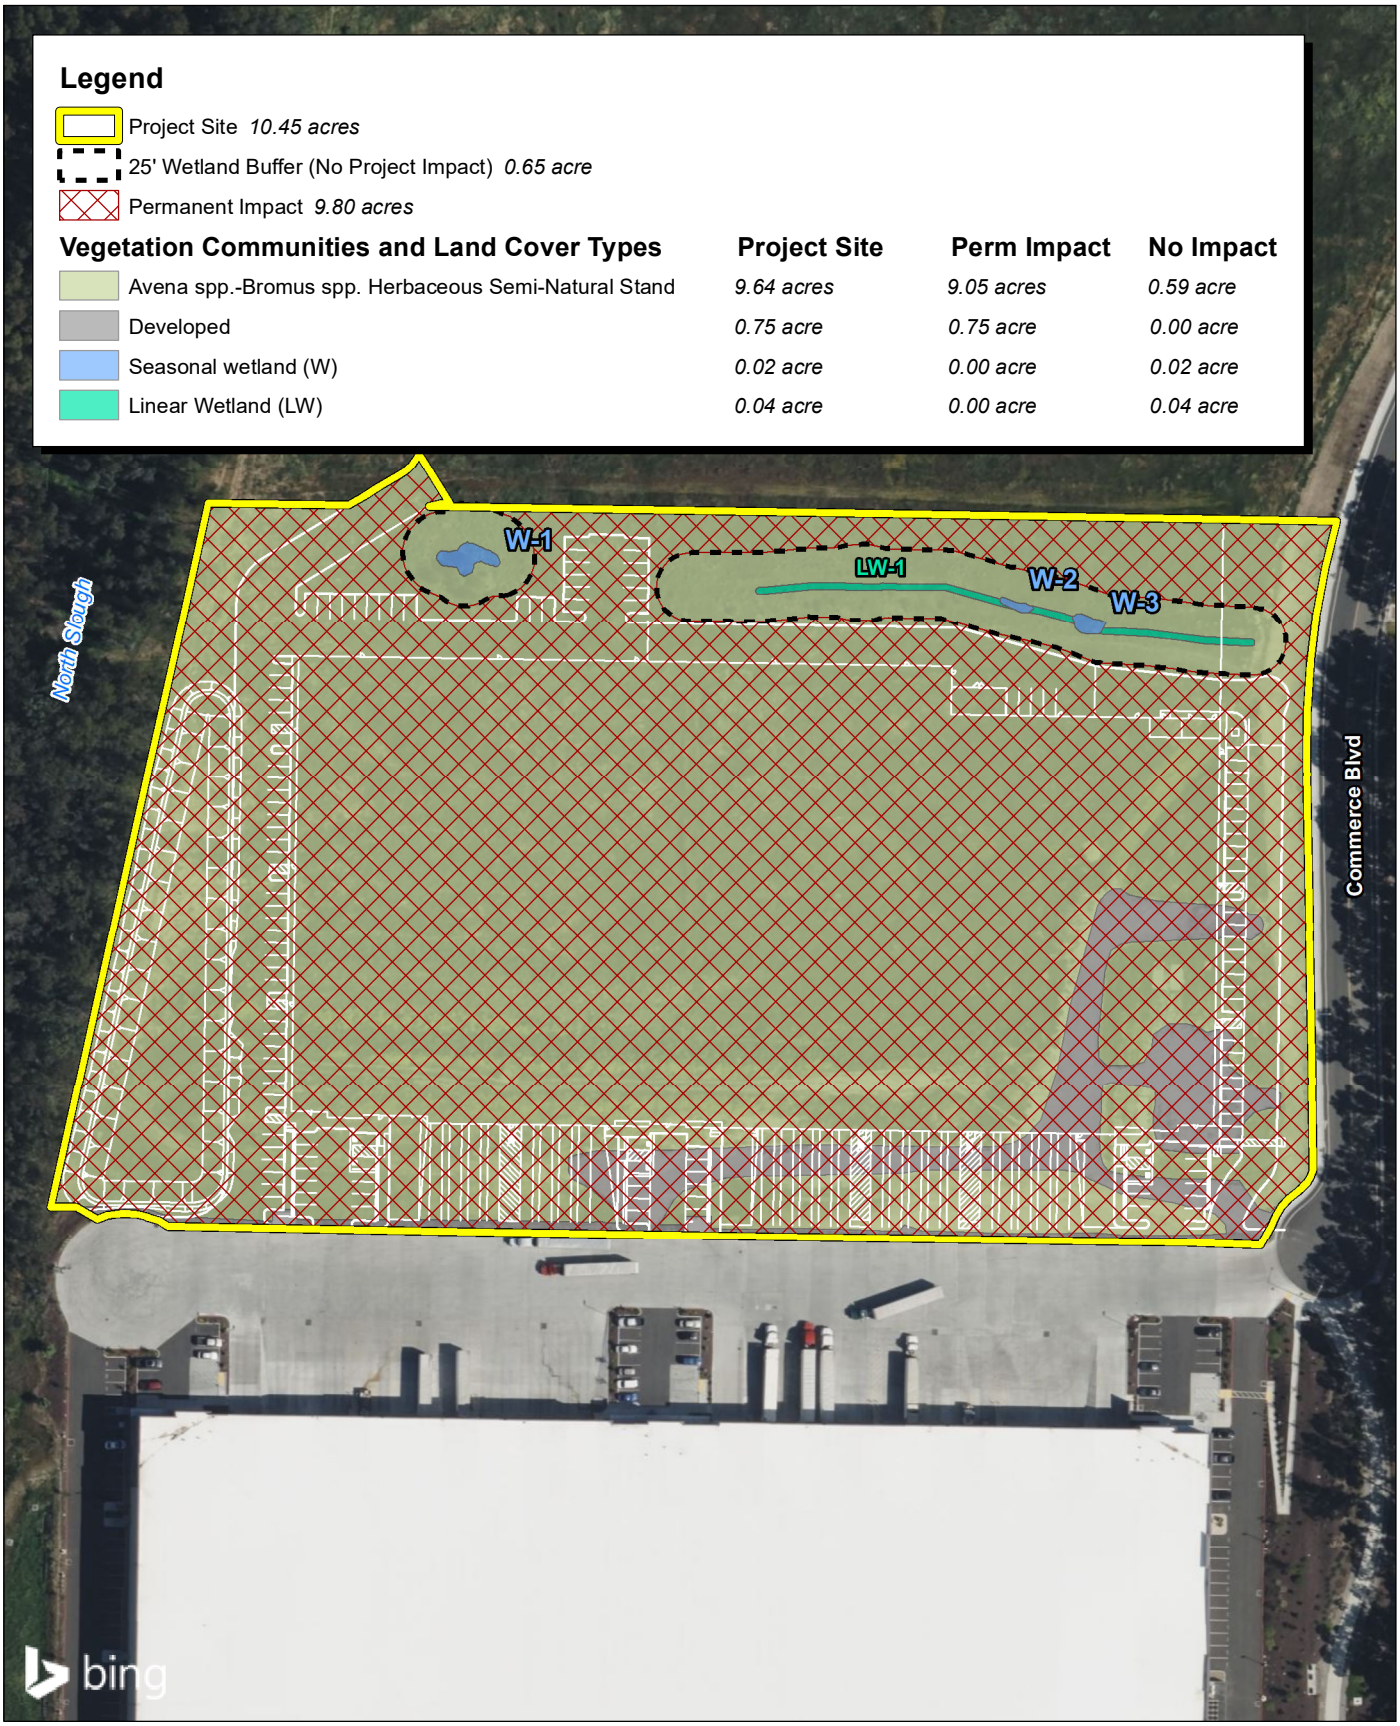
### *Level of Significance Before Mitigation*

Less than significant impact.

### *Mitigation Measures*

None required.

## Fish and Wildlife Movement Corridors



| | |
|---|---|
| **Impact BIO-3:** | **The proposed project could interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of wildlife nursery sites.** |

### *Impact Analysis*

This impact analysis addresses thresholds d) and j).

The site does not function as a critical wildlife movement corridor, as discussed in Section 3.3.3, *Wildlife Movement Corridors and Nursery Sites*, above. This result is consistent with M&A's March 2020 BRA (Appendix C.2: *BRA for CDG 217 ISMND*). Certain common wildlife may move within or cross the site; however, it does not function to connect valuable habitats together, but rather it currently funnels wildlife east into a pocket of land generally surrounded with dense developments, including State Route (SR) 29 to the east, commercial and industrial areas to the north, and dense residential subdivision to the south, potentially constituting a population sink. Therefore, potential project-related impacts on wildlife movement are less than significant.

No substantial wildlife nursery sites, including breeding or nesting colonies, breeding ponds, or dens are present on-site. However, individual nesting birds and roosting bats have the potential of being present within disturbance distances seasonally. Potential impacts to individual nesting birds and roosting bats are addressed through the implementation of MM BIO-1a through MM BIO-1e (see above for details). As such, impacts to nursery sites would be less than significant.

THIS PAGE INTENTIONALLY LEFT BLANK

### *Level of Significance Before Mitigation*

Potentially significant impact.

### *Mitigation Measures*

MM BIO-1a through MM BIO-1e.

### *Level of Significance After Mitigation*

Le***s***s than significant impact with mitigation incorporated.

## Local Policies or Ordinances

| | |
|---|---|
| **Impact BIO-4:** | **The proposed project would not conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance.** |

### *Impact Analysis*

This impact analysis addresses threshold e).

The proposed project would not remove any trees as there are no trees located within the project site. Therefore, the proposed project would not remove any City-protected trees and no conflicts or impacts would occur.

All work for the proposed project would take place consistent with biological requirements of the General Plan and Zoning Ordinance of the City of American Canyon. The project site is designated "Commercial Recreational" by the City of American Canyon General Plan and zoned "Recreation." The Biological Resources Report provides the detailed assessment of biological resources required by General Plan Policies 8.1.1 and 8.1.4. Studies of sensitive biological resources have been either conducted by FCS and/or Pinecrest as part of the attached Biological Resources Report or were conducted by other consultants and independently reviewed and incorporated into the Biological Resources Report, consistent with General Plan Policy 8.2.1.

Botanical surveys were performed by Dr. Christopher DiVittorio, with secondary identification on voucher and photograph specimens made by Dr. Zoya Akulova during the 2023 flowering season. The proposed project would construct a wetland buffer avoidance area that would ensure that construction activities do not impact the on-site jurisdictional wetland features. Upon operation, the project's stormwater would be directed away from the features. These wetland buffer areas are consistent with General Plan Policy 8.3.1.a, which requires the development plan to consider the nature of existing biological resources and all reasonable measures to avoid significant impacts, including retention of sufficient natural open space and undeveloped buffer zones; and General Plan Policy 8.4.3, which encourages activities that improve the biological value and integrity of the City's natural resources through vegetation restoration, control of alien plants and animals, and landscape buffering. As such, impacts would be less than significant.

### *Level of Significance Before Mitigation*

Less than significant impact.

### *Mitigation Measures*

No mitigation necessary.

## 3.3.8 - Cumulative Impacts

The geographic scope of the cumulative biological resources analysis is the project vicinity as the project activity would only affect the surrounding project area. Cumulative projects in the geographic scope of the biological resources analysis consist of developed and undeveloped lands primarily near the edge of existing urban development.

This analysis evaluates whether the impacts of the proposed project, together with the impacts of cumulative development, could result in a cumulatively significant impact with respect to biological resources. This analysis also considers whether incremental contribution of impacts associated with the implementation of the proposed project would be significant. Both conditions must apply for a project's cumulative effects to rise to the level of a significant impact. If there is no impact associated with respect to a particular CEQA threshold, discussion of cumulative impacts is not required. Accordingly, this cumulative discussion is limited to the potential impacts discussed above.

### Special-Status Species

Cumulative projects listed in Chapter 3, Environmental Impact Analysis, Table 3-1 are predominantly located in areas within or adjacent to urban development with limited potential to support special-status species. As described in the Regulatory Section herein, numerous laws and regulations are in place to protect biological resource within the cumulative project area, including, but not limited to CESA, federal Endangered Species Act, CWA, and applicable General Plan and Municipal Code requirements. Future projects within the cumulative geographic context would be required to comply with applicable federal, State, and local laws, regulations and policies and all applicable permitting requirements of the regulatory and oversight agencies intended to address potential impacts on biological resources. Standard pre-construction surveys and, if necessary, avoidance procedures would be required for cumulative projects with the potential to impact special-status species. Because cumulative development has limited potential to support special-status species and would be required to comply with the above requirements, cumulative impacts related to special-status species would be less than significant.

The proposed project's incremental contribution to these less than significant cumulative impacts would not be significant with adherence to the mitigation measures related to special-status species identified above (see MM BIO1a through MM BIO-1g) and compliance with other applicable standards and requirements under the comprehensive regulatory framework. Therefore, the proposed project's contribution to cumulative impacts related to special-status species would be less than significant.

### Wetland and Jurisdictional Features

The cumulative project area contains undeveloped areas that may support wetland and jurisdictional features. In addition, the Napa River, related tidal lands, and North Slough are located to the south. Any future development that occurs within the cumulative analysis area would have to take into

account the potential impacts to wetlands and jurisdictional features and mitigate as required under applicable laws and regulations. As such, cumulative impacts to wetland and jurisdictional features would be less than significant.

As indicated under Impact BIO-2, the proposed project would avoid all impacts on potential jurisdictional wetland features through the implementation of a wetland buffer avoidance area (Exhibit 3.3.-4). As such, the proposed project would not combine with other reasonably foreseeable projects and would have a less than significant contribution to the related impacts. Therefore, the proposed project's contribution to the less than significant cumulative impact related to wetlands and jurisdictional features would not be cumulatively considerable.

### Fish and Wildlife Movement Corridors

The larger geographic scope for cumulative projects contains various areas that may provide movement corridors for fish and wildlife, primarily the Napa River, related tidal lands and North Slough to the south. However, none of the identified cumulative projects include wildlife corridors that connect to the proposed project site. Other areas surrounding the project site consist primarily of urban development or undeveloped land significantly surrounded by urban development. Any future development that occurs within the cumulative analysis area would have to take into account the potential impacts to these corridors and mitigate as required under applicable laws and regulations. The cumulative projects are primarily located in urban or commercially developed areas and therefore are not likely to significantly impact wildlife movement corridors. Therefore, it can be reasonably assumed that there would be no cumulative impacts to fish and wildlife movement corridors.

As discussed under Impact BIO-3, the site does not function as a critical wildlife movement corridor, is not connected to any corridors present on cumulative project sites and does not otherwise connect valuable habitats together; accordingly, there would be no impacts to wildlife movement corridors. Therefore, the proposed project's contribution to cumulative impacts related to fish and wildlife movement would not be cumulatively considerable.

### Local Policies and Ordinances

Projects listed in Table 3-1 are all located within the City of American Canyon and therefore would be required to abide by applicable local policies and ordinances, such as the City's Tree Ordinance for subdivisions contained in Municipal Code Section 18.40.110. Consistency with the General Plan and other regulations of the Municipal Code would also be required. Compulsory adherence to these regulations related to biological resources would ensure that impacts would be less than significant in this regard.

As discussed under Impact BIO-4, the proposed project would not remove any City-protected trees and would be consistent with the General Plan and Zoning Ordinance designations. Furthermore, the project is consistent with applicable General Plan policies regarding biological resources including assessment of such resources and wetland avoidance and buffer. Therefore, the proposed project's contribution to the less than significant cumulative impact related to local policies and ordinances would not be cumulatively considerable.

### *Level of Cumulative Significance Before Mitigation*

Potentially significant impact.

### *Mitigation Measures*

Implementation of MM BIO-1a through MM BIO-1g.

### *Level of Cumulative Significance After Mitigation*

Le***s***s than significant impact with mitigation incorporated.

# 3.4 - Cultural Resources and Tribal Cultural Resources

## 3.4.1 - Introduction

This section describes the existing cultural and Tribal Cultural Resources (TCRs) setting and potential effects that may result from project implementation on the site and its surrounding area. The descriptions and analysis in this section are based on information provided by the Native American Heritage Commission (NAHC), a records search conducted at the Northwest Information Center (NWIC), archival research, and a pedestrian survey, as presented in the Phase I Cultural Resource Assessment (Phase I CRA) prepared for the proposed project are included in confidential Appendix D. Recommendations provided in the Phase I CRA pertaining to mitigation of potential impacts are incorporated into this section.

The following public comments pertaining to cultural resources were received in response to the Notice of Preparation (NOP):

- The Draft Environmental Impact Report (Draft EIR) should analyze the proposed project's consistency with Assembly Bill (AB) 52 and Senate Bill (SB) 18.
- The lead agency should consult with applicable California Native American tribes.
- A Cultural Resources Assessment should include applicable record searches, a field survey, and measures for inadvertent discovery of cultural and tribal cultural resources.

## 3.4.2 - Environmental Setting

### Overview

The term "cultural resources" encompasses historic resources, archaeological resources, and burial sites, which are generally defined as follows:

- **Historic Resources:** Historic resources are associated with the recent past. In California, historic resources are typically associated with the Spanish, Mexican, and American periods in the State's history and are generally less than 200 years old. Historic resources often take the form of buildings, structures, and other elements of the built environment.
- **Archaeological Resources:** Archaeology is the study of artifacts and material culture with the aim of understanding human activities and cultures in the past. Archaeological resources may be associated with prehistoric indigenous cultures as well as later historic periods.
- **Tribal Cultural Resources:** TCRs include sites, features, places, or objects that are of cultural value to one or more California Native American Tribes.
- **Burial Sites and Cemeteries:** Burial sites and cemeteries are formal or informal locations where human remains have been interred. Burial sites may be associated with precontact indigenous cultures as well as later historic periods.

More specifically, cultural resources may be understood as resources that have been formally recognized by a lead agency and/or are listed or determined eligible for listing on the California

Register of Historical Resources (CRHR) (Public Resources Code [PRC] § 5024.1, Title 14 California Code of Regulations [CCR] § 4852). However, the fact that a resource is not yet identified as a historical resource or found eligible for the CRHR does not preclude a lead agency from determining that said resource is a historical resource pursuant to Public Resources Code Sections 5020.1(j) or 5024.1. Under the California Environmental Quality Act (CEQA), a substantial adverse change in the significance of a historical resource would constitute a significant effect on the environment.

## Cultural Setting

Following is a brief overview of the prehistory, ethnography, and historic background, providing a context in which to understand the background and relevance of sites found in the general project area. This section is not intended to be a comprehensive review of the current academic resources available; rather, it serves as a general overview. Unless otherwise stated, information contained in this section is drawn directly from the Phase I CRA conducted by FirstCarbon Solutions (FCS).

### *Prehistoric Background*

In general, archaeological research in the greater San Francisco Bay Area has focused on coastal areas, where large shellmounds were relatively easily identified on the landscape. This research and its chronological framework, however, is relevant to and has a bearing on our understanding of prehistory in areas north of the San Francisco Bay, including modern American Canyon, Napa County.

Like many California cultural chronologies, the greater San Francisco Bay Area has a complex history. As synthesized by Milliken et al., three major chronologic frameworks exist for the Bay Area: an Archaic-Emergent temporal structure; the Central California Taxonomic System (CCTS) and a “hybrid system” that is utilized using the overarching CCTS scheme, while further demarcating time depth/period changes regionally, as used in the Archaic-Emergent temporal structure. Specifically, regional cultural patterns and phases are further defined within the San Francisco Bay Area by Dating Scheme D, which utilizes dated Olivella shell bead horizons. Milliken et al. used the term “bead horizons” to define the passage of short periods of time by the shifts in the trade of specific bead types throughout the Bay Area. This builds on Fredrickson, who proposed a chronology for the broader San Francisco Bay Area region. Fredrickson’s chronology is based on material patterns and includes the Windmiller Pattern (4500-3500 Before Present [BP]), Berkeley Pattern (3500-1500 BP) and the Augustine Pattern (1500-250 BP). The Windmiller Pattern is typified by a hunter-gatherer subsistence pattern, which included the exploitation of wild plants, game, and fish. Typical artifacts include clay balls, fishing hooks, fishing spears and ground stone tools. Artifacts from the Berkeley Pattern era reflect an increasing reliance on acorns, as mortars and pestles become more prolific. The Augustine Period was a period of increasing social complexity. Acorns continued to be the dominant food source and settlement patterns reflected an increasing sedentary lifestyle.

The Lower Archaic, 10,000 to 5500 BP, is typified in the Bay Area by a forager and gatherer lifestyle, as evidenced by the prevalence of milling slabs, hand stones, and large, wide-stemmed and leaf-shaped projectile points. The Middle Archaic, 5500 to 2500 BP, saw an increase in the presence of ground stone and cut shell beads, indicating that groups in the Bay Area were transitioning to a more sedentary lifestyle; interregional trade was increasing, and as the beads were found in mortuary contexts, that symbolism was becoming a regional identifier. The Early Upper Archaic, 2500 to 1570

BP, saw a shift away from cut beads to Olivella beads, and along the Bay, a new emphasis on Haliotis ornaments and bone tools, with net sinkers largely disappearing from assemblages. The Late Upper Archaic, 1570 to 950 BP, further defined by the bead phases M1–M4, is another time of transition, as saucer-shaped Olivella beads disappear from the record and Olivella saddle beads became dominant. The appearance of the saddle shaped Olivella beads coincides with the appearance and increase in Meganos complex dorsal extended burials. The Lower Emergent Period, 950 to 450 BP, is characterized by increasing complexity as beads were being produced for collectors as opposed to being produced primarily as mortuary items. Sedentism and increasing social stratification is evidenced by settlement patterns and mortuary practices. The Terminal Late Period saw change in the North Bay, as clamshell disk beads became prevalent, along with the toggle harpoon, hopper mortar, plain corner-notched arrow-sized projectile points, and magnesite tube beads; however, this was not the case in the South Bay. By 1650, only Olivella-lipped and spire-lopped beads were present.

Settlement patterns north of San Francisco Bay have varied over time. The currently accepted understanding of settlement patterns in this area is that a foraging and hunter-gatherer lifestyle centering on lacustrine resources remained dominant in the region until the Lower to Middle Archaic. At this point, there was a shift from foraging lacustrine resources to developing semi-permanent villages near marshes and grasslands, in order to gather those specific resources. This was followed by a shift to foragers residing in residential camps, with more consistent settlement occurring in "collector villages" during the Upper Archaic. By the Emergent Period, collectors were living in semi-permanent villages in oak woodlands, in which residential camps were now located along marshes.

### *Ethnographic Background*

*The Patwin*

At the time of European contact, the project vicinity was primarily occupied by the Patwin Tribe of California Native Americans. The Patwin occupied the southwest Sacramento Valley from the town of Princeton, north of Colusa, south to San Pablo and Suisun bays, and from the lower hills of the eastern North Coast Ranges to the Sacramento River. Patwin territory extended approximately 40 miles east to west and 90 miles north to south. Based primarily on linguistic variation, the Patwin are the most southern division of the Wintuan population, who are members of the Penutian linguistic stock. Distinction is made between the Hill and River Patwin. Hill Patwin had villages located in valleys along the hills of the Vaca Mountains and Coast Ranges with populations concentrated in Indian, Bear, Capay, Cortina, Long, and Napa valleys. In general, the River Patwin occupied the west banks of the lower Sacramento River below the Feather River as well as the lower reaches of Cache and Putah creeks in the Sacramento Valley. The Hill Patwin villages of Napato and Tulukai lie in close proximity to the project area, and their place names remain part of the regional landscape to this day.

Patwin political organization was centered on the tribelet, which consisted of a primary village with smaller satellite villages governed by a head chief. Tribelets were autonomous and differed from each other with minor cultural variations. The economic and ceremonial activities of each village were administered by a chief whose position was typically passed on patrilineally although some

chiefs were chosen by village elders. The chief administered subsistence ventures, such as hunting and gathering expeditions, and served as the primary resource distributor.

The Patwin subsistence base varied with the seasons and included gathering seeds and plant resources on the plains, netting migratory waterfowl in the tule marshes, and netting salmon and other fish in the rivers and streams. Acorns were a staple in the Patwin diet and were obtained from communally owned hill and valley oak groves. The Patwin stored acorns in granaries as insurance against famine in poor harvest years. Ethnographic reports indicate the Patwin obtained large game such as deer, tule elk, and antelope by using nets or shooting with bows and arrows. Fish resources were of particular importance to the River Patwin and included perch, sturgeon, salmon, sucker, trout, pike, and other riverine species such as mussels and turtles, which were caught with bone fishhooks, nets, weirs, and seines.

The Patwin trade system included various resources that were exchanged with the Wappo, Nomlake, Southeastern Pomo, and Hill Patwin. The River Patwin obtained obsidian from sources to the west and east. Initially, finished shell beads were obtained from coastal tribes, but later, the River Patwin traded for whole shells from the Pacific Coast and produced the beads themselves. Relationships with nearby tribes and other Patwin tribelets were not always friendly. Patwin relations with Napa Valley groups were strained by provocations primarily incited by poaching; subsequent retaliations resulted in organized battles between individuals or groups or surprise attacks on villages.

Patwin dwellings, sweathouses and dance houses were all semi-subterranean, earth-covered structures. Mortuary practices included burials in cemeteries located at one end of the village, in which the possessions of the deceased were buried with them; at some locations, property was burned near the grave. Typically, only people who died or were killed away from the village were cremated. According to a Hill Patwin informant, “the River people [Patwin] set a corpse upright, then pushed the head down, broke the back, wrapped the body in a skin, and put it in the grave.” In addition, long burial ropes constructed of hemp were wrapped around the deceased, and the River Patwin utilized temporary containers made of tule reeds.

*The Southern Wappo*

The project site is also in close proximity to the ethnographic territory of the Southern Wappo. The Wappo language belongs to a small family of four languages, including Yuki, Coastal Yuki, and Huchnom. It is divided into five dialects distributed across two major territorial divisions. The smaller area included lands along the southern edge of Clear Lake; the larger ranged from just north of Napa, south to Geyserville and Middletown in the north. The Wappo were known to adopt words from other languages spoken in their vicinity, including Spanish names of objects with which they came into contact as a result of missionization. Of the 100 or known Wappo place names, at least one, cho*nóma, (meaning “abandoned camp”), remains in use as the probable Wappo name for the town of Sonoma. Like their Pomo neighbors, the basic sociopolitical unit was the village, which was usually located on a creek or other water source. Villages included one or two sweathouses as well as houses of varying size. One of the last remaining traditional Wappo villages observed in 1870 consisted of 11 grass houses serving 21 families totaling 92 people. Each house was made of grass thatch over a framework of bent poles and had a separate entrance and smoke-hole for each family inhabiting it.

Basic tools consisted of wedges, axes, and fire-drills made from stones, sticks, shells, and plants. Like the Pomo, the Wappo had a tradition of creating intricately woven baskets that were both functional and decorative. This tradition, along with several surviving songs and dances attributed to the Wappo, were primary forms of artistic expression. Imported clamshell beads and magnesite cylinders served as units of exchange and items of personal adornment. Food sources included a variety of plants and creatures, including acorns, buckeye, clover, abalone, clams, turtles, salmon, ducks, rabbits, and deer.

The Wappo had at least seven villages in the Geyserville area alone and estimates of their total population range from 5,000 to 8,000. Village chiefs might be elected or appointed, based on the organization of the individual village. Both men and women could occupy the role of chief, and some villages even had multiple chiefs, each with different spheres of influence, including trade, ceremonial roles, and warfare. The Wappo were generally regarded as a peaceful people, except during the Wappo-Pomo War in the early nineteenth century. The Wappo apparently attacked and killed members of the Alexander Valley Pomo who had carried away some Wappo supplies of acorns. The Pomo sought peace, which was granted immediately; however, the Pomo never returned to their Alexander Valley villages north of Healdsburg. The Wappo also tried to resist Spanish incursions and colonial expansion into their territories, but like the Pomo, their numbers were decimated by smallpox, hostility from the Mexican Army, and later by Euro-American settlements in the 1850s.

## Historic Background

### *The Spanish Period (1769–1821)*

Spanish exploration into Suisun Bay and into the Central Valley dates back to the late 1700s. Spanish mission records indicate that by 1800, Patwin inhabitants at Aguastos, the south-central area, and other villages were being taken to Mission Dolores (San Francisco de Asis), and that Mission Sonoma (San Francisco Solano), built in 1823, was baptizing Patwin tribal members until secularization of the missions in 1832-1836. Many Native Americans were not willing to convert. There are numerous accounts of neophytes fleeing the missions, and a series of “Indian Wars” broke out when the Spanish tried to return them to the missions.

### *The Mexican Period (1821–1848)*

With the declaration of Mexican independence in 1821, Spanish control of Alta California ended, although little change actually occurred. Political change did not take place until mission secularization in 1834, when Native Americans were released from missionary control and the mission lands were granted to private individuals. Mission secularization removed the social protection and support on which Native Americans had come to rely. It exposed them to further exploitation by outside interests, often forcing them into a marginal existence as laborers for large ranchos. Following mission secularization, the Mexican population grew as the native population continued to decline. Anglo-American settlers began to arrive in Alta California during this period and often married into Mexican families, becoming Mexican citizens, which made them eligible to receive land grants. In 1846, on the eve of the U.S.-Mexican War (1846 to 1848), the estimated population of Alta California was 8,000 non-natives and 10,000 natives. However, these estimates have been debated. Cook suggests the Native American population was 100,000 in 1850; the U.S. Census of 1880 reports the Native American population as 20,385.

During this period, General Mariano Guadalupe Vallejo assumed authority of Sonoma Mission and established a friendly relationship with the Native Americans who were living there. In particular, Vallejo worked closely with Chief Solano, a Patwin who served as Vallejo's spokesperson when problems with Native American tribes arose. In 1843, Governor Manuel Micheltorena gave General Vallejo the 84,000-acre Soscoe land grant of Rancho Suscolto, which included the present-day Vallejo.

### *The American Period (1848–Contemporary)*

During this period, and prior, Native American populations were declining rapidly because of an influx of Euro-American diseases. In 1832, a party of trappers from the Hudson's Bay Company, led by John Work, traveled down the Sacramento River, unintentionally spreading a malaria epidemic to Native Californians. Four years later, a smallpox epidemic decimated local populations, and it is estimated that up to 75 percent of the native population died.

After the upheaval of the Bear Flag Revolt in 1846, and the result of the Treaty of Guadalupe Hidalgo in 1848, California became a United States territory. In 1848, James W. Marshall discovered gold at Coloma in modern-day El Dorado County, which started the California Gold Rush into the region that forever altered the course of California's history. The arrival of thousands of gold seekers in the territory contributed to the exploration and settlement of the entire State. By late 1848, approximately 4 out of 5 men in California were gold miners.

By 1864, California's Gold Rush had essentially ended. The rich surface and river placers were largely exhausted and the miners either returned to their homelands or stayed to start new lives in California. After the gold rush, people in towns such as Jackson, Placerville, and Sonora turned to other means of commerce, such as ranching, agriculture, and timber production. With the decline of gold mining, agriculture and ranching came to the forefront in the State's economy. California's natural resources and moderate climate proved well suited for cultivation of a variety of fruits, nuts, vegetables, and grains.

### *Local History Napa County*

European settlement in the Napa area began with the 1820 establishment of the Sonoma Mission and General Mariano Vallejo's 1838 reception of a land grant that included the Napa and Sonoma valleys. By 1848, the American population in the area had grown, and farmer Nathan Coombs laid out a town plat for Nappa City (the spelling changed to Napa by the 1870s), which served as the County seat when Napa became one of the original 27 counties of California in 1850.

During the mid-1850s, Napa County began to grow. While gold was being prospected in other areas of the State, Napa County became a center for silver and quicksilver mining. The County's population began to swell as pioneers, prospectors, and entrepreneurs moved in and set up residence. Two of those entrepreneurs were Edward Turner Bale and Samuel Brannan. Bale completed building the Bale Grist Mill a few miles north of Saint Helena in 1846. Brannan purchased land in the northern end of the valley at the foot of Mount Saint Helena and founded Calistoga. He began developing it as a resort town, taking advantage of the area's numerous mineral hot springs. He also founded the Napa Valley Railroad Company in 1864 to bring tourists to Calistoga from the San Francisco

ferryboats that docked in Vallejo. Other settlers turned to agriculture for their livelihood, primarily raising cattle, grain, and fruit crops.

Orchards and wheat gradually displaced cattle ranching as settlers' primary source of income, and the first Downtown Napa winery opened in the 1870s. While settlers initially relied on Native labor, Chinese immigrants became a more important source of labor as the Native populations declined in the later decades of the nineteenth century. Napa had a substantial Chinatown by 1886. In 1875, the State of California built the Napa State Hospital for the Insane at the southern edge of town; the City had competed with others around the State for the privilege of hosting the asylum, which brought considerable economic benefit with it in terms of public funding.

The Phylloxera louse infested Napa Valley and killed thousands of grapevines, seriously threatening the local wine industry. Many farmers replaced their grapevines with fruit trees. As discrimination against Chinese immigration climbed throughout the country in the late nineteenth century, Napa's Chinese population shrank, and farmers began to turn to Italian immigrants as a labor source.

The pattern of economic and population growth established during the war continued through the end of the 1950s. Blue-collar union jobs supported the local economy; by 1960, nearly 2,600 people were employed at Basalt Rock/Kaiser Steel and Napa's smaller manufacturing plants. Residential construction remained strong; between 1950 and 1957, nearly 5,000 dwelling units were constructed in Napa County, most of which were single-family houses in or near the Napa city limits. The downtown area remained the seat of County/City government and the commercial center of Napa during the postwar period through the mid-1960s.

The City's gradual development of a new City Hall, Police Station, and Fire Station at the Downtown Civic Center represented the most significant change to Downtown Napa's built environment during this era. By 1946, the City was discussing creation of a civic center, initially identifying the former Chinatown at First Street and the Napa River as a potential site. In 1948, the City Council began planning the new City Hall and selected the location along School Street between First Street and Second Street. Between 1951 and 1962, City Hall, the Police Station, and Fire Station No. 1 were constructed at their current locations.

In the 1960s, the local economy began a gradual shift away from its industrial roots. Tourism began to replace manufacturing as an engine of the local economy, but tourists passed through the City of Napa en route to wineries rather than arriving as a destination. State Route (SR) 29, which historically passed through the downtown area on Third Street, was rerouted to the west when a portion of SR-29 became a freeway in the late 1960s. This exacerbated downtown Napa's commercial decline, along with competition from malls and strip development. The City Council established a Redevelopment Agency in 1968, which was responsible for the destruction of many of Napa's historic commercial buildings in the early 1970s. Redevelopment efforts failed to re-establish Napa as the commercial heart of Napa County and the downtown area continued to suffer high turnover vacancy rates through the 1990s. This trend was reversed after 2005, when successful flood control measures made investment in the downtown area more attractive. Currently, downtown Napa is a hub of the local hospitality industry, featuring a concentration of hotels, restaurants, and wine tasting rooms.

### *The City of American Canyon*

Located in southern Napa County, the City of American Canyon was incorporated as a city in 1992. The history of the City of American Canyon and its economy, growth, and development has been tied to the larger Napa region as a whole. The California Gold Rush brought many settlers to the region but American Canyon itself was largely devoid of gold deposits. Instead, the area was both rich in limestone and ideally suited for farming. In 1852, Simpson Thompson and his two sons established a large farm consisting of 475 acres of orchards and farmland as well as 300 acres of meadowlands for cattle grazing. In the early 1900s, the discovery of rich deposits of limestone led to the development of quarries that could produce over 2,000 barrels of cement per day. However, the exploitation of usable limestone and clay meant that by the 1930s, mining became economically untenable in the region. The economy of the region pivoted toward agriculture, particularly fruit orchards and the farming of wheat.

However, the City's economy would shift following the Paris Wine Tasting of 1976, better known as the Judgment of Paris. In a blind tasting, a panel of expert sommeliers scored wines from Napa estates such as Heitz Cellars or Stag's Leap higher than estates that produced First Growth Bordeaux wines. Their judgment sent shockwaves around the wine industry and established Napa as a world-class wine-growing region. While the region of Calistoga and St. Helena in Napa has been focused on producing top-tier wines and attracting high-end clientele, their success could not exist without the logistic support of the warehouses and distribution centers that grew up in American Canyon. These centers developed in subsequent years following the 1976 Judgment of Paris and provide the backbone for the distribution of domestic and imported wines both in the Bay Area and overseas today.

## 3.4.3 - Regulatory Framework

### Federal

### *National Historic Preservation Act*

The National Historic Preservation Act of 1966 (NHPA), as amended, established the National Register of Historic Places (NRHP), which contains an inventory of the nation's significant prehistoric and historic properties. Under 36 Code of Federal Regulations 60, a property is recommended for possible inclusion on the NRHP if it is at least 50 years old, has integrity, and meets one of the following criteria:

- It is associated with significant events in history, or broad patterns of events.
- It is associated with significant people in the past.
- It embodies the distinctive characteristics of an architectural type, period, or method of construction; or it is the work of a master or possesses high artistic value; or it represents a significant and distinguishable entity whose components may lack individual distinction.
- It has yielded, or may yield, information important in history or prehistory.

Certain types of properties are usually excluded from consideration for listing in the NRHP, but they can be considered if they meet special requirements in addition to meeting the criteria listed above.

Such properties include religious sites, relocated properties, graves and cemeteries, reconstructed properties, commemorative properties, and properties that have achieved significance within the past 50 years.

### *Archaeological Resources Protection Act*

The Archaeological Resources Protection Act (ARPA) amended the Antiquities Act of 1906 (16 United States Code [USC] 431–433) and set a broad policy that archaeological resources are important to the nation and should be protected, and required special permits before the excavation or removal of archaeological resources from public or Indian lands. The purpose of the ARPA was to secure, for the present and future benefit of the American people, the protection of archaeological resources and sites that are on public lands and Indian lands, and to foster increased cooperation and exchange of information between governmental authorities, the professional archaeological community, and private individuals having collections of archaeological resources and data that were obtained before October 31, 1979.

### *American Indian Religious Freedom Act*

The American Indian Religious Freedom Act (AIRFA) established federal policy to protect and preserve the inherent rights of freedom for Native groups to believe, express, and exercise their traditional religions. These rights include, but are not limited to, access to sites, use and possession of sacred objects, and freedom to worship through ceremonials and traditional rites.

### *Native American Graves Protection and Repatriation Act*

The Native American Graves Protection and Repatriation Act of 1990 sets provisions for the intentional removal and inadvertent discovery of human remains and other cultural items from federal and tribal lands. It clarifies the ownership of human remains and sets forth a process for repatriation of human remains and associated funerary objects and sacred religious objects to the Native American groups claiming to be lineal descendants or culturally affiliated with the remains or objects. It requires any federally-funded institution housing Native American Remains or artifacts to compile an inventory of all cultural items within the museum or with its agency and to provide a summary to any Native American tribe claiming affiliation.

## State

### *CEQA Guidelines Section 15064.5(a)—CEQA Definition of Historical Resources*

California Environmental Quality Act (CEQA) Guidelines Section 15064.5(a), in Title 14 of the California Code of Regulations, defines a “historical resource” as:

(1) A resource listed in, or determined to be eligible by the State Historical Resources Commission, for listing in the California Register of Historical Resources.

(2) A resource included in a local register of historical resources, as defined in Section 5020.1(k) of the Public Resources Code or identified as significant in a historical resource survey meeting the requirements of Section 5024.1(g) of the Public Resources Code, shall be presumed to be historically or culturally significant. Public agencies must treat any such

resource as significant unless the preponderance of evidence demonstrates that it is not historically or culturally significant.

(3) Any object, building, structure, site, area, place, record, or manuscript which a lead agency determines to be historically significant or significant in the architectural, engineering, scientific, economic, agricultural, educational, social, political, military, or cultural annals of California may be considered a historical resource, provided the lead agency's determination is supported by substantial evidence in light of the whole record. Generally, a resource shall be considered by the lead agency to be "historically significant" if the resource meets the criteria for listing on the California Register of Historical Resources.

(4) The fact that a resource is not listed in, or determined to be eligible for listing in the California Register of Historical Resources, not included in a local register of historical resources (pursuant to Section 5020.1(k) of the Public Resources Code), or identified in a historical resources survey (meeting the criteria in Section 5024.1(g) of the Public Resources Code) does not preclude a lead agency from determining that the resource may be a historical resource as defined in Public Resources Code Sections 5020.1(j) or 5024.1.

Therefore, under the CEQA Guidelines, even if a resource is not included on any local, State, or federal register, or identified in a qualifying historical resources survey, a lead agency may still determine that any resource is a historical resource for the purposes of CEQA if there is substantial evidence supporting such a determination. A lead agency must consider a resource to be historically significant if it finds that the resource meets the criteria for listing in the CRHR.

Archaeological and historical sites are protected pursuant to a wide variety of State policies and regulations, as enumerated in Public Resources Code Section 5024.1. Cultural resources are recognized as nonrenewable resources and receive additional protection under the Public Resources Code and CEQA.

### *Public Resources Code 5024.1(c)—Definition of a Historic Resource*

CEQA Guidelines Section 15064.5(a), in Title 14 of the California Code of Regulations, defines a "historical resource" as a resource that:

1. Is associated with events that have made a significant contribution to the broad patterns of California's history and cultural heritage.
2. Is associated with the lives of persons important in our past.
3. Embodies the distinctive characteristics of a type, period, region, or method of construction, or represents the work of an important creative individual, or possesses high artistic values.
4. Has yielded, or may be likely to yield, information important in prehistory or history.

### *CEQA Guidelines Section 15064.5(a)(3)—California Register of Historical Resources Criteria*

As defined by CEQA Guidelines, Section 15064.5(a)(3)(A-D), a resource shall be considered historically significant if the resource meets the criteria for listing on the CRHR. The CRHR and many local preservation ordinances have employed the criteria for eligibility to the NRHP as a model (see

criteria described above under the description of the NHPA), since the NHPA provides the highest standard for evaluating the significance of historic resources. A resource that meets NRHP criteria is clearly significant. In addition, a resource that does not meet NRHP standards may still be considered historically significant at a local or State level.

### *CEQA Guidelines 15064.5(c)—Effects on Archaeological Resources*

CEQA Guidelines state that a resource need not be listed on any register to be found historically significant. CEQA Guidelines direct lead agencies to evaluate archaeological sites to determine whether they meet the criteria for listing in the CRHR. If an archaeological site is a historical resource, in that it is listed or eligible for listing in the CRHR, potential adverse impacts to it must be considered. If an archaeological site is considered not to be a historical resource but meets the definition of a "unique archaeological resource" as defined in Public Resources Code Section 21083.2, then it would be treated in accordance with the provisions of that section.

### *CEQA Guidelines Section 15064.5(d)—Effects on Human Remains*

Native American human remains and associated burial items may be significant to descendant communities and/or may be scientifically important for their informational value. They may be significant to descendant communities for patrimonial, cultural, lineage, and religious reasons. Human remains may also be important to the scientific community, such as prehistorians, epidemiologists, and physical anthropologists. The specific stake of some descendant groups in ancestral burials is a matter of law for some groups, such as Native Americans (CEQA Guidelines § 15064.5(d); PRC § 5097.98). CEQA and other State regulations regarding Native American human remains provide the following procedural requirements to assist in avoiding potential adverse effects on human remains within the contexts of their value to both descendant communities and the scientific community:

- When an initial study identifies the existence or probable likelihood that a project would affect Native American human remains, the lead agency is to contact and work with the appropriate Native American representatives identified through the NAHC to develop an agreement for the treatment and disposal of the human remains and any associated burial items (CEQA Guidelines § 15064.5(d); PRC § 5097.98).
- If human remains are accidentally discovered, the County Coroner must be contacted. If the County Coroner determines that the human remains are Native American, the Coroner must contact the NAHC within 24 hours. The NAHC must identify the Most Likely Descendant (MLD) to provide for the opportunity to make recommendations for the treatment and disposal of the human remains and associated burial items.
- If the MLD fails to make recommendations within 24 hours of notification or the project applicant rejects the recommendations of the MLD, the Native American human remains and associated burial items must be reburied in a location not subject to future disturbance within the project site (PRC § 5097.98).
- If potentially affected human remains or a burial site may have scientific significance, whether or not it has significance to Native Americans or other descendant communities, then under CEQA, the appropriate mitigation of effect may require the recovery of the scientific

information of the remains/burial through identification, evaluation, data recovery, analysis, and interpretation (CEQA Guidelines § 15064.5(c)(2)).

### *Health and Safety Code Section 7050.5*

Section 7050.5 of the Health and Safety code sets forth provisions related to the treatment of human remains. As the code states, "every person who knowingly mutilates or disinters, wantonly disturbs, or willfully removes any human remains in or from any location other than a dedicated cemetery without authority of law is guilty of a misdemeanor" except under circumstances as provided in Section 5097.99 of the Public Resource Code. The regulations also provide guidelines for the treatment of human remains found in locations other than a dedicated cemetery including responsibilities of the Coroner.

### *Public Resources Code Section 5097.98*

Section 5097.98 provides protocol for the discovery of human remains. It states that "when the commission receives notification of a discovery of Native American human remains from a County Coroner pursuant to subdivision (c) of Section 7050.5 of the Health and Safety Code, it shall immediately notify persons believed to be most likely descended from the deceased Native American." It also sets forth provisions for descendants' preferences for treatment of the human remains and what should be done if the commission is unable to identify a descendant.

### *California Public Resources Code Section 5097.91—Native American Heritage Commission*

Section 5097.91 of the Public Resources Code established the NAHC, whose duties include the inventory of places of religious or social significance to Native Americans and the identification of known graves and cemeteries of Native Americans on private lands. Under Section 5097.91 of the Public Resources Code, a State policy of noninterference with the free expression or exercise of Native American religion was articulated along with a prohibition of severe or irreparable damage to Native American sanctified cemeteries, places of worship, religious or ceremonial sites or sacred shrines located on public property. Section 5097.98 of the Public Resources Code specifies a protocol to be followed when the NAHC receives notification of a discovery of Native American human remains from a County Coroner. Section 5097.5 defines the unauthorized disturbance or removal of archaeological, historic, or paleontological resources located on public lands as a misdemeanor.

### *California Senate Bill 18—Protection of Tribal Cultural Places*

SB 18 (California Government Code § 65352.3) incorporates the protection of California traditional tribal cultural places into land use planning for cities, counties, and agencies by establishing responsibilities for local governments to contact, refer plans to, and consult with California Native American Tribes as part of the adoption or amendment of any general or specific plan proposed on or after March 1, 2005. SB 18 requires public notice to be sent to tribes listed on the NAHC SB 18 Tribal Consultation list within the geographical areas affected by the proposed changes. Tribes must respond to a local government notice within 90 days (unless a shorter time frame has been agreed upon by the tribe), indicating whether or not they want to consult with the local government. Consultations are for the purpose of preserving or mitigating impacts to places, features, and objects described in Sections 5097.9 and 5097.993 of the Public Resources Code that may be affected by the proposed adoption or amendment to a general or specific plan.

### *California Assembly Bill 52—Effects on Tribal Cultural Resources*

AB 52 was signed into law on September 25, 2014, and provides that any public or private "project with an effect that may cause a substantial adverse change in the significance of a Tribal Cultural Resource (TCR) is a project that may have a significant effect on the environment." TCRs include "[s]ites, features, places, cultural landscapes, sacred places, and objects with cultural value to a California Native American tribe that are eligible for inclusion in the CRHR or included in a local register of historical resources." Under prior law, TCRs were typically addressed under the umbrella of "cultural resources," as discussed above. AB 52 formally added the category of "tribal cultural resources" to CEQA and extends the consultation and confidentiality requirements to all projects, rather than just projects subject to SB 18 as previously discussed.

The parties must consult in good faith, and consultation is deemed concluded when either: (1) the parties agree to measures to mitigate or avoid a significant effect on a TCR (if such a significant effect exists); or (2) when a party concludes that mutual agreement cannot be reached. Mitigation measures agreed upon during consultation must be recommended for inclusion in the environmental document. AB 52 also identifies mitigation measures that may be considered to avoid significant impacts if there is no agreement on appropriate mitigation. Recommended measures include:

- Preservation in place.
- Protecting the cultural character and integrity of the resource.
- Protecting the traditional use of the resource.
- Protecting the confidentiality of the resource.
- Permanent conservation easements with culturally appropriate management criteria.

### *California Public Resources Code Section 21074—Effects on Tribal Cultural Resources*

AB 52 amended the CEQA statute to identify an additional category of resource to be considered under CEQA, called "tribal cultural resources." It added Public Resources Code Section 21074, which defines "tribal cultural resources" as follows:

(a) "Tribal cultural resources" are either of the following:

(1) Sites, features, places, cultural landscapes, sacred places, and objects with cultural value to a California Native American tribe that are either of the following:

A) Included or determined to be eligible for inclusion in the CRHR.
B) Included in a local register of historical resources as defined in subdivision (k) of Section 5020.1.

(2) A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Section 5024.1. In applying the criteria set forth in subdivision (c) of Section 5024.1 for the purposes of this paragraph, the lead agency shall consider the significance of the resource to a California Native American tribe.

## Local

### *City of American Canyon*

*General Plan*

To promote the preservation and restoration of the sites, structures and districts that have architectural, historical, archaeological and/or cultural significance to the City of American Canyon.

**Objective 8.19** Ensure that the City's historically and archaeologically significant resources are protected in a manner that preserves and/or enhances the resources' inherent historic value.

**Policy 8.19.1** Conduct a comprehensive survey of archaeological and cultural resources and historic vegetation that is based on established criteria and encompasses the entire City and its Sphere of Influence.

**Policy 8.19.2** Adopt a Preservation Ordinance that will authorize the City to designate appropriate vegetation or archaeological sites deemed to be of historic, archaeological, or cultural significance an American Canyon City Historic Point, Site or District. Such an ordinance shall conform to State and federal criteria for establishing a preservation ordinance.

**Policy 8.19.3** Explore various methods for the future preservation of historic vegetation and archaeological and cultural resources. For example, consider establishing " receiver site" and "adopt a building" programs to preserve historic structures that must be removed from their sites. Additionally, consider utilizing the Secretary of the Interior Standards for Historic Rehabilitation and standards and guidelines prescribed by the State Office of Historic Preservation as the architectural and landscape design standards for rehabilitation, alteration, or additions to sites containing historic resources in order to preserve these structures in a manner consistent with the sites' architectural and historic integrity.

## 3.4.4 - Methodology

### Records Searches and Pedestrian Survey to Identify Existing Cultural Resources

The information in this section is based on the Phase I CRA prepared for this project by FCS on March 13, 2023. The Phase I CRA used the following methods to analyze the potential impacts of project implementation:

### *Northwest Information Center*

On November 29, 2022, a records search for the project site and a 0.50-mile radius beyond the project boundaries was conducted at the NWIC located at Sonoma State University in Rohnert Park, California. To identify any historic properties or resources, the current inventories of the NRHP, the CRHR, the California Historic Landmarks list, the California Points of Historical Interest list, and the California Built Environment Resource Directory (BERD) for Napa County were reviewed to determine the existence of previously documented local historical resources.

Results from the NWIC indicate that two resources have been recorded within the 0.5-mile radius (historic resource P-28-000602 and prehistoric resource 483A-001), none of which are located within the project boundaries (Table 3.4-1). In addition, 21 area-specific survey reports are on file within the 0.5-mile radius, one of which (S-000153) linearly transects the project boundary (Table 3.4-2). This indicates that the project site has been partially surveyed for cultural resources.

**Table 3.4-1: Cultural Resources within 0.5-mile Radius of the Project Site**

| Resource No. | Resource Description | Date Recorded |
|---|---|---|
| P-28-000602 | CA-NAP-727H Fogarty; AH03 Landscaping/orchard; AH05. Wells/cisterns; AH11. Walls/fences; AH15. Standing structures; AH16. Other | 2007 |
| 483A-001 | No name; AP02 Lithic scatter | No year |

Notes:
Report listed in **Bold** transects the project site.
Source: Northwest Information Center (NWIC) Records Search. November 29, 2022.

### *Historic Aerials*

A review of 16 historical aerial photographs from 1948 to 2020 indicate that, from the earliest aerial in 1948 through 1993, the project site was a wooded, undeveloped field. Between 1993 and 2005, industrial and residential development gradually began to occur north and southeast of the project.

From 2005 to 2020, there was very little development or expansion in the area surrounding the project. The project site itself remains undeveloped.

### *Native American Heritage Commission*

On November 21, 2022, FCS sent a letter to the NAHC in an effort to determine whether any sacred sites are listed on its Sacred Lands File (SLF) for the Area of Potential Effect (APE). A response was received on December 16, 2022, indicating that the SLF search produced a positive result for Native American cultural resources within the project site. The NAHC included a list of 11 tribal representatives available for consultation. To ensure that all Native American knowledge and concerns over potential TCRs that may be affected by implementation of the proposed project are addressed, a letter containing project information and requesting additional information was sent to each tribal representative on January 2, 2023. No responses have been received to date.

**Table 3.4-3: Tribal Consultation**

### *Cultural Resources Pedestrian Survey*

On January 6, 2023, FCS Senior Archaeologist Dr. Dana DePietro, PhD, and FCS Archaeologist and Historian Ti Ngo conducted a pedestrian survey for unrecorded cultural resources in the project site.

The project site is rectangular-shaped and is bounded by Commerce Court to the east, an industrial warehouse to the south, North Slough to the west, and undeveloped land (entitled for development as a wine distribution warehouse) to the north.

The survey began in the southeast corner of the project site and moved west and north, using east–west transects spaced at 15-meter intervals. All areas of the project site were closely inspected for culturally modified soils or other indicators of potential historic or prehistoric resources. Because of a high level of vegetation, visibility of native soils was approximately 5 percent across the project site. Visible soils consisted of dark brown alluvial clay (Munsell 7.5 YR 3/2) with inclusions of granite, quartz, and schist stones ranging from 2-5 centimeters. The soil in the southern boundary of the project site contained a mixture of imported fill from adjacent construction.

Survey conditions were documented using digital photographs and field notes. During the survey, the team examined all areas of the exposed ground surface for prehistoric artifacts (e.g., fire-affected rock, milling tools, flaked stone tools, toolmaking debris, ceramics), soil discoloration and depressions that might indicate the presence of a cultural midden, faunal and human osteological remains, features indicative of the former presence of structures or buildings (e.g., postholes, standing exterior walls, foundations), or historic debris (e.g., glass, metal, ceramics).

No indication of historic or prehistoric archaeological resources were found over the course of the pedestrian survey.

## 3.4.5 - Buried Site Potential

In addition to the pedestrian survey, the potential for yet identified cultural resources in the vicinity was reviewed against geologic and topographic geographic information system data for the general area and information from other nearby projects. The proposed project was evaluated against a set of criteria identified by a geoarchaeological overview of the Central Valley that was prepared for the California Department of Transportation (Caltrans) Districts 6 and 9.[1] This study mapped the "archaeological sensitivity," or potential to support the presence of buried prehistoric archaeological deposits, throughout the Central Valley based on geology and environmental parameters including distance to water and landform slope. The methodology used in the study is applicable to other parts of California, and concluded that sites consisting of flat, Holocene-era deposits in close proximity to water resources had a moderate to high probability of containing subsurface archaeological deposits when compared to earlier Pleistocene deposits situated on slopes or further away from drainages, lakes, and rivers.

[1] Meyer, J., D. Craig Young, and Jeffrey S. Rosenthal. 2010. Volume I: A Geoarchaeological Overview and Assessment of Caltrans District 6 and 9, Cultural Resources Inventory of Caltrans District 6/9 Rural Conventional Highways. Submitted to Central California Department of Transportation, District 6.

The project site is flat and situated in close proximity to the Napa River with the Northern Slough along the western portion of the property. According to the geological map of the area by Wagner and Gutierrez, the surface of the project site consists almost entirely of Quaternary alluvial fan deposits, containing Holocene soils.[2] Applying the criteria set forth in Meyer et al. 2010, all Holocene-era deposits have the potential to contain archaeological deposits, which increases with the ease of the slope and proximity to water resources. This, coupled with the presence of a known precontact archaeological resource 1.2 mile to the north of the project footprint, indicates a moderate potential for unanticipated buried cultural resources to be impacted by project construction.

## 3.4.6 - Thresholds of Significance

According to Appendix G, Environmental Checklist, of the CEQA Guidelines, cultural resources impacts resulting from the implementation of the proposed project would be considered significant if the project would:

a) Cause a substantial adverse change in the significance of a historical resource as pursuant to Section 15064.5?

b) Cause a substantial adverse change in the significance of an archaeological resource pursuant to Section 15064.5?

c) Disturb any human remains, including those interred outside of formal cemeteries?

d) Cause a substantial adverse change in the significance of a tribal cultural resource, defined in Public Resources Code Section 21074 as either a site, feature, place, cultural landscape that is geographically defined in terms of the size and scope of the landscape, sacred place, or object with cultural value to a California Native American tribe, and that is listed or eligible for listing in the California Register of Historical Resources, or in a local register of historical resources as defined in Public Resources Code Section 5020.1(k)?

e) Cause a substantial adverse change in the significance of a tribal cultural resource, defined in Public Resources Code Section 21074 as either a site, feature, place, cultural landscape that is geographically defined in terms of the size and scope of the landscape, sacred place, or object with cultural value to a California Native American tribe, and that is a resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Public Resources Code Section 5024.1?

f) Cause a substantial adverse change in the significance of a tribal cultural resource, defined in Public Resources Code Section 21074 as either a site, feature, place, cultural landscape that is geographically defined in terms of the size and scope of the landscape, sacred place, or object with cultural value to a California Native American tribe, and that is:
    i. Listed or eligible for listing in the California Register of Historical Resources, or in a local register of historical resources as defined in Public Resources Code Section 5020.1(k), or

[2] Wagner, D.L., and Gutierrez, C.I., 2017, Preliminary geologic map of the Napa and Bodega Bay 30' x 60' quadrangles, California. California Geological Survey, Preliminary Geologic Maps PGM-17-04, Scale 1:100.000.

ii. A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Public Resources Code Section 5024.1.

## 3.4.7 - Project Impacts and Mitigation Measures

This section discusses potential impacts associated with the development of the project and provides mitigation measures where appropriate.

### Historic Resources

**Impact CUL-1: The proposed project could cause a substantial adverse change in the significance of a historical resource pursuant to Section 15064.5.**

#### *Impact Analysis*

Historic resources in this context refer to the built environment, mainly buildings and structures over 45 years in age that may be eligible for inclusion on the CRHR or NRHP. Record search results conducted at the NWIC did not identify any historic resources within the project site, but identified one historic resource (P-28-000602) within a 0.5-mile records search radius. The project site's proximity to the nearby Napa River, the Northern Slough waterway along its western boundary, and the lack of visibility of native soils due to high level of vegetation indicates a moderate potential for unanticipated cultural resources to be found during subsurface construction. FCS considers the potential for the proposed project to have an adverse effect on historic cultural resources to be moderate, creating a potentially significant impact.

Additionally, there is always a possibility that construction-related ground disturbance may uncover previously undiscovered historic cultural resources. As such, FCS recommends Worker Environmental Awareness Program (WEAP) training for archaeological resources for all construction personnel directly involved with project-related ground disturbance. The WEAP training shall be conducted by an Archaeologist who meets the Secretary of the Interior's Professional Qualification Standards for archaeology. This is included as Mitigation Measure (MM) CUL-1a. Furthermore, FCS recommends archaeological monitoring during ground-disturbing activities, as outlined in MM CUL-1b below. Lastly, MM CUL-1c outlines procedures for inadvertent discovery of cultural resources. With incorporation of MM CUL-1a, MM CUL-1b, and MM CUL-1c impacts would be less than significant.

#### *Level of Significance Before Mitigation*

Potentially significant impact.

#### *Mitigation Measures*

**MM CUL-1a** All construction personnel directly involved with project-related ground disturbance shall attend a "tailgate" Worker Environmental Awareness Program (WEAP) training for archaeological resources. The training shall include visual aids, a discussion of applicable laws and statutes relating to archaeological resources, types of resources that may found within the project site, and procedures to be followed in the event such resources are encountered. The training shall be conducted by an Archaeologist

who meets the Secretary of the Interior's Professional Qualification Standards for archaeology.

**MM CUL-1b** An Archaeological Monitor reporting to the qualified Archaeologist, shall be present during the clearing, grading, and trenching phases of the proposed project to check for the inadvertent discovery of archaeological resources or human remains. Over the course of the proposed project, should the Archaeologist determine that the probability of inadvertent discovery is low, they may make a recommendation to the lead agency that monitoring be reduced to regular periodic or "spot-check" monitoring, or that monitoring may cease altogether.

**MM CUL-1c** If buried cultural resources are discovered during construction, operations shall stop in the immediate vicinity of the find and a qualified Archaeologist shall be consulted to determine whether the resource requires further study. The qualified Archaeologist shall make recommendations to the lead agency on the measures that shall be implemented to protect the discovered resources, including but not limited to excavation of the finds and evaluation of the finds in accordance with Section 15064.5 of the CEQA Guidelines. Potentially significant cultural resources consist of, but are not limited to, stone, bone, fossils, wood, or shell artifacts or features, including hearths, structural remains, or historic dumpsites. Any previously undiscovered resources found during construction within the Master Plan area should be recorded on appropriate California Department of Parks and Recreation (DPR) forms and evaluated for significance in terms of CEQA Guidelines.

If the resources are determined to be unique historic resources as defined under Section 15064.5 of the CEQA Guidelines, mitigation measures shall be identified by the monitor and recommended to the lead agency. Appropriate mitigation measures for significant resources could include avoidance or capping, incorporation of the site in green space, parks, or open space, or data recovery excavations of the finds.

No further grading shall occur in the area of the discovery until the lead agency approves the measures to protect these resources. Any archaeological artifacts recovered as a result of mitigation shall be donated to a qualified scientific institution approved by the lead agency where they would be afforded long-term preservation to allow future scientific study.

### *Level of Significance After Mitigation*

Le***s***s than significant impact with mitigation incorporated.

## Archaeological Resources

| | |
|---|---|
| **Impact CUL-2:** | **The proposed project could cause a substantial adverse change in the significance of an archaeological resource pursuant to Section 15064.5.** |

### *Impact Analysis*

The results of the records search from the NWIC identified one prehistoric archaeological resource (483A-001) located within the 0.5-mile records search radius. Additionally, the SLF search conducted by the NAHC came back positive for TCRs within the project site. No additional archaeological resources were encountered during the pedestrian field survey; however, this may have been due to poor soil visibility at the project site. Furthermore, FCS evaluated the potential for buried sites at the project site. The project site is located on relatively flat terrain and is situated in close proximity to wetlands, the Napa River, and the Northern Slough waterway on its western boundary. There is also a known precontact archaeological site 1 mile to the north of the project site. The combination of these factors suggests a moderate potential for unanticipated buried cultural resources to be impacted by project construction. This potentially significant impact would be reduced to a less than significant level through implementation of MM CUL-1a, MM CUL-1b, and MM CUL-1c.

### *Level of Significance Before Mitigation*

Potentially significant impact.

### *Mitigation Measures*

Implementation of MM CUL-1a, MM CUL-1b, and MM CUL-1c.

### *Level of Significance After Mitigation*

Le*s*s than significant impact with mitigation incorporated.

## Human Remains

| | |
|---|---|
| **Impact CUL-3:** | **The proposed project could disturb human remains, including those interred outside of formal cemeteries.** |

### *Impact Analysis*

While no formal cemeteries or areas containing human remains are known to be in the project vicinity, the possibility always exists that construction-related ground disturbance may uncover previously undiscovered human remains. In the unlikely event such a discovery is made, CEQA Guidelines Section 15064.5, Health and Safety Code Section 7050.5, and Public Resources Code Sections 5097.94 and Section 5097.98 must be followed. Implementation of MM CUL-3, which details inadvertent discovery procedures, would reduce potential impacts to previously undiscovered human remains to a less than significant level.

### *Level of Significance Before Mitigation*

Potentially significant impact.

### *Mitigation Measures*

**MM CUL-3** In the event of the accidental discovery or recognition of any human remains, CEQA Guidelines Section 15064.5, Health and Safety Code Section 7050.5, and Public Resources Code Sections 5097.94 and Section 5097.98 shall be followed. If during project construction, there is accidental discovery or recognition of any human remains, the following steps shall be taken:

1. There shall be no further excavation or disturbance within 100 feet of the remains until the County Coroner is contacted to determine whether the remains are Native American and if an investigation of the cause of death is required. If the Coroner determines the remains to be Native American, the Coroner shall contact the Native American Heritage Commission (NAHC) within 24 hours, and the NAHC shall identify the person or persons it believes to be the Most Likely Descendant (MLD) of the deceased Native American. The MLD may make recommendations to the landowner or the person responsible for the excavation work within 48 hours, for means of treating or disposing of, with appropriate dignity, the human remains, and any associated grave goods as provided in Public Resource Code Section 5097.98.
2. Where the following conditions occur, the landowner or authorized representative shall rebury the Native American human remains and associated grave goods with appropriate dignity either in accordance with the recommendations of the MLD or on the project site in a location not subject to further subsurface disturbance:
   - The NAHC is unable to identify an MLD or the MLD failed to make a recommendation within 48 hours after being notified by the commission.
   - The descendant identified fails to make a recommendation.
   - The landowner or authorized representative rejects the recommendation of the descendant, and mediation by the NAHC fails to provide measures acceptable to the landowner.

Additionally, California Public Resources Code Section 15064.5 requires the following relative to Native American Remains:

- When an initial study identifies the existence of, or the probable likelihood of, Native American Remains within a project, a lead agency shall work with the appropriate Native Americans as identified by the NAHC as provided in Public Resources Code Section 5097.98. The applicant may develop a plan with respect to their respective individual development proposals for treating or disposing of, with appropriate dignity, the human remains, and any items associated with Native American Burials with the appropriate Native Americans as identified by the NAHC.

### *Level of Significance After Mitigation*

Le***s***s than significant impact with mitigation incorporated.

## Listed or Eligible Tribal Cultural Resources

| | |
|---|---|
| **Impact CUL-4:** | **The proposed project could cause a substantial adverse change in the significance of a Tribal Cultural Resource, defined in Public Resources Code Section 21074 as either a site, feature, place, cultural landscape that is geographically defined in terms of the size and scope of the landscape, sacred place, or object with cultural value to a California Native American tribe, and that is listed or eligible for listing in the California Register of Historical Resources, or in a local register of historical resources as defined in Public Resources Code Section 5020.1(k).** |

### *Impact Analysis*

Record search results from the NWIC indicate that there is one prehistoric resource located within a 0.5-mile radius of the project site, and a review of the NAHC SLF was positive for recorded TCRs being located within the project site. On January 2, 2023, FCS sent a letter containing project information to 11 tribal representatives recommended by the NAHC and requesting additional information about TCRs at the project site. No responses have been received to date. However, because the SLF search was positive, impacts are potentially significant. However, implementation of MM CUL-1a, MM CUL-1b, MM CUL-1c, and MM CUL-3 would reduce potentially significant impacts to TCRs to a less than significant level.

### *Level of Significance Before Mitigation*

Potentially significant impact.

### *Mitigation Measures*

MM CUL-1a, MM CUL-1b, MM CUL-1c, and MM CUL-3.

### *Level of Significance After Mitigation*

Le***s***s than significant impact with mitigation incorporated.

## Lead Agency Determined Tribal Cultural Resources

**Impact CUL-5: The proposed project could cause a substantial adverse change in the significance of a Tribal Cultural Resource, defined in Public Resources Code Section 21074 as either a site, feature, place, cultural landscape that is geographically defined in terms of the size and scope of the landscape, sacred place, or object with cultural value to a California Native American tribe, and that is a resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Public Resources Code Section 5024.1.**

### *Construction*

Record search results from the NWIC indicate that there is one prehistoric resource located within a 0.5-mile radius of the project site, and a review of the NAHC SLF was positive for recorded TCRs being located within the project site. On December 1, 2023, in compliance with AB 52, the City of American Canyon sent a letter containing project information to 11 tribal representatives recommended by the NAHC and requesting additional information about TCRs at the project site (Appendix D). No responses have been received to date. Even so, because the SLF search was positive, impacts are potentially significant. However, implementation of MM CUL-1a, MM CUL-1b, MM CUL-1c, and MM CUL-3 would reduce potentially significant impacts to TCRs to a less than significant level.

### *Level of Significance Before Mitigation*

Less than significant impact with mitigation incorporated.

### *Mitigation Measures*

MM CUL-1a, MM CUL-1b, MM CUL-1c, and MM CUL-3. Less than significant impact with mitigation incorporated.

## 3.4.8 - Cumulative Impacts

The geographic scope of the cumulative cultural resources analysis is a 0.5-mile radius of the project site. Cultural resource impacts tend to be localized because the integrity of any given resource depends on what occurs only in the immediate vicinity around that resource, such as disruption of soils; therefore, in addition to the project site (including the off-site construction areas), the area near the project site would be the area most affected by project activities (generally within a 500-foot radius). The results of the cultural resources assessment and tribal consultation indicate that the project will not have a direct impact on any known historic resources, archaeological resources, human remains, or TCRs.

Construction activities associated with development projects in the project vicinity may have the potential to encounter undiscovered cultural resources. These projects would be required to mitigate for impacts through compliance with applicable federal and State laws governing cultural resources. Although there is the possibility that previously undiscovered resources could be encountered by subsurface earthwork activities associated with the cumulative projects, the implementation of construction mitigation measures would ensure that undiscovered cultural resources are not adversely affected by cumulative project-related construction activities, which would prevent the destruction or degradation of potentially significant cultural resources. Although there is the possibility that previously undiscovered cultural resources and TCRs could be encountered by subsurface earthwork activities associated with the cumulative projects, the implementation of construction mitigation measures (MM CUL-1a, MM CUL-1b, MM CUL-1c, and MM CUL-3) would ensure that undiscovered TCRs are not adversely affected by cumulative project-related construction activities. Given the standard conditions of approval and mitigation measures that cumulative projects would be required to implement, the proposed project, in conjunction with other planned and approved projects, would result in a less than significant cumulative impact related to TCRs.

With the implementation of MM CUL-1a, MM CUL-1b, MM CUL-1c, and MM CUL-3, the proposed project would not result in a significant cumulative impact to cultural resources in the City of American Canyon or surrounding area.

### *Level of Cumulative Significance Before Mitigation*

Potentially significant impact.

### *Cumulative Mitigation Measures*

Implementation of MM CUL-1a, MM CUL-1b, MM CUL-1c, and MM CUL-3.

### *Level of Cumulative Significance After Mitigation*

Le***s***s than significant impact with mitigation incorporated.

THIS PAGE INTENTIONALLY LEFT BLANK

# 3.5 - Energy

## 3.5.1 - Introduction

This section describes the existing energy setting in the project area as well as the relevant regulatory framework. This section also evaluates the possible impacts related to energy that could result from implementation of the project. Information in this section is based on project-specific energy calculation outputs included in Appendix A. No public comments were received during the Environmental Impact Report (EIR) scoping period related to energy.

## 3.5.2 - Existing Setting

### Energy Basics

Energy is generally transmitted either in the form of electricity, measured in kilowatts (kW)[1] or megawatts (MW),[2] or natural gas measured in British Thermal Units (BTU) or cubic feet.[3] Fuel, such as gasoline or diesel, is measured in gallons or liters.

#### *Electricity*

Electricity is used primarily for lighting, appliances, and other uses associated with the project.

#### *Natural Gas*

Natural gas is used primarily for heating, water heating, and cooking purpose and is typically associated with commercial and residential uses.

#### *Fuel*

Fuel is used primarily for powering off-road equipment, trucks, and passenger vehicles. The typical fuel types used are diesel and gasoline.

### Electricity Generation, Distribution, and Use

#### *State of California*

The State of California generated approximately 203,257 gigawatt-hours (GWh) of electricity in 2022. Approximately 47.8 percent of the energy generated is sourced from thermal energy sources (i.e., coal, natural gas, oil, waste heat/petroleum), with natural gas as the vast majority (47.5 percent of the total generation). Approximately 52.2 percent of the energy generated is sourced from renewable and non-greenhouse gas (GHG) emission sources (i.e., nuclear, hydropower, biomass, geothermal, solar, and wind).[4] Solar energy is the largest source of renewable energy, accounting for 19.9 percent of the total generation.

---

1 1 kW = 1.000 watts; A watt is a derived unit of power that measures rate of energy conversion. 1 watt is equivalent to work being done at a rate of 1 joule of energy per second. In electrical terms, 1 watt is the power dissipated by a current of 1 ampere flowing across a resistance of 1 volt.

2 1 MW = 1 million watts

3 A unit for quantity of heat that equals 100,000 British thermal units. A British thermal unit is the quantity of heat required to raise the temperature of 1 pound of liquid water 1 degree Fahrenheit at a constant pressure of 1 atmosphere.

4 California Energy Commission (CEC). 2022. 2022 Total System Electric Generation. Website: https://www.energy.ca.gov/data-reports/energy-almanac/california-electricity-data/2022-total-system-electric-generation. Accessed November 13, 2023.

In 2019, California ranked second for total energy consumed, but the State's per capita energy consumption was less than all other states except Rhode Island. In 2021, California was ranked as the fourth-largest electricity producer in the country. The same year, California was the top producer of electricity from solar, geothermal, and biomass energy and was the fourth in conventional hydroelectric power generation.[5]

Electricity and natural gas is distributed through the various electric load-serving entities (LSEs) in California. These entities include investor-owned utilities (IOUs), publicly owned LSEs (including publicly owned utilities [POUs]), rural electric cooperatives, community choice aggregators, and electric service providers.[6]

### *County of Napa and City of American Canyon*

Pacific Gas and Electric Company (PG&E) provides electricity to many of the cities throughout Napa County (County). Local community choice aggregations (CCAs) can also provide electricity services alternatives to the region's traditional utility supplier, PG&E. The local CCA for the City of American Canyon (City) is Marin Clean Energy (MCE). With the passing of Senate Bill (SB) 790 in 2011, residential and commercial customers within a local CCA jurisdiction are automatically enrolled in that CCA's electricity service but retain the ability to opt-out and return to their traditional utility supplier.

According to the California Energy Commission (CEC), Napa County's energy consumption was approximately 1,029 GWh in 2022.[7] As Napa County's population in 2021 was an estimated 134,300 people,[8] the County experienced a per capita electricity consumption of an estimated 7,661 kilo-watt hour (kWh) per year.

### *Project Site*

The project site is currently undeveloped and does not consume electricity. MCE would procure, and PG&E would deliver, electricity to the proposed project.

## Natural Gas Generation, Distribution, and Use

### *State of California*

Natural gas is used for everything from generating electricity to cooking and space heating to alternative transportation fuel. Natural gas generation (in kWh) represented 10.7 percent of electric power generation in 1990 and increased over the 32-year period to represent 47.8 percent of electric power generation in 2022.[9]

[9] State of California Energy Commission. 2022. 2022 Total System Electric Generation. Website: https://www.energy.ca.gov/data-reports/energy-almanac/california-electricity-data/2022-total-system-electric-generation. Accessed November 13, 2023.

Natural gas-fired generation has become the dominant source of electricity in California, as it currently fuels approximately 45 percent of electricity consumption.[10] Because natural gas is a dispatchable resource that provides load when the availability of hydroelectric power generation and/or other sources decrease, use varies greatly from year to year. The availability of hydroelectric resources, the emergence of renewable resources for electricity generation, and overall consumer demand are the variables that shape natural gas use in electric generation.

### *County of Napa and City of American Canyon*

PG&E provides natural gas to the Napa County, including the City of American Canyon. In 2021, Napa County's natural gas consumption was approximately 37.7 million U.S. Therms, or approximately 3,769,100 Million Metric British Thermal Units (MMBTU).[11] As Napa County's population in in 2021 was an estimated 134,300 people,[12] the County experienced a per capita natural gas consumption of an estimated 28.1 MMBtu per year.

### *Project Site*

The project site is currently undeveloped and does not consume natural gas.

## Fuel Use

### *State of California*

California is one of the top producers of petroleum in the nation, with drilling operations occurring throughout the State. A network of crude oil pipelines connects production areas to oil refineries in the Los Angeles area, the San Francisco Bay Area, and the Central Valley. California oil refineries also process Alaskan and foreign crude oil received in the ports of Los Angeles, Long Beach, and the San Francisco Bay Area. Crude oil production in California and Alaska is in decline, and California refineries have become increasingly dependent on foreign imports.[13] Since 2012, foreign suppliers, led by Saudi Arabia, have provided over half of the crude oil refined in California.[14,15] According to the United States Energy Information Administration (EIA), California's field production of crude oil has steadily declined since the mid-1980s, totaling approximately 122.3 million barrels in 2022.[16]

[10] California Energy Commission (CEC). 2023. Supply and Demand of Natural Gas in California. Website: https://www.energy.ca.gov/data-reports/energy-almanac/californias-natural-gas-market/supply-and-demand-natural-gas-california. Accessed November 13, 2023.

[16] United States Energy Information Administration (EIA). 2022. California Field Production of Crude Oil. Website: https://www.eia.gov/dnav/pet/hist/LeafHandler.ashx?n=pet&s=mcrfpca2&f=a. Accessed November 13, 2023.

According to the EIA, transportation accounted for approximately 34 percent of California's total energy demand, amounting to approximately 2,355.5 trillion BTU in 2020.[17] California's transportation sector, including rail and aviation, consumed roughly 433 million barrels of petroleum fuels in 2020.[18] The CEC produces the California Annual Retail Fuel Outlet Report, which is a compilation of gasoline and diesel fuel sales data from across the State available at the county level. According to the CEC, California's 2022 fuel sales totaled 11,495 million gallons of gasoline and 1,846 million gallons of diesel.[19] Napa County fuel sales totaled an estimated 49 million gallons of gasoline and an estimated 7 million gallons of diesel in 2022.[20]

### Alternative Fuels

A variety of alternative fuels are used to reduce petroleum-based fuel demand. The use of these fuels is encouraged through various Statewide regulations and plans, such as the Low Carbon Fuel Standard (LCFS) and SB 32. Conventional gasoline and diesel may be replaced, depending on the vehicle's capability, with transportation fuels including hydrogen, biodiesel, and electricity. Currently, public hydrogen refueling stations exist in California; however, none are in the City.[21,22]

## 3.5.3 - Regulatory Framework

### Federal

#### *Energy Policy and Conservation Act*

Enacted in 1975, the Energy Policy and Conservation Act legislation established fuel economy standards for new light-duty vehicles (autos, pickups, vans, and sport-utility vehicles). The law placed responsibility on the National Highway Traffic and Safety Administration (NHTSA), a part of the United States Department of Transportation (USDOT), for establishing and regularly updating vehicle standards. The United States Environmental Protection Agency (EPA) administers the Corporate Average Fuel Economy (CAFE) program, which determines vehicle manufacturers' compliance with existing fuel economy standards.

Since the inception of the program, the average fuel economy for new light-duty vehicles steadily increased from 13.1 miles per gallon (mpg) for the 1975 model year to 30.7 mpg for the 2014 model year and may increase to 54.5 mpg by 2025. On August 2, 2018, the NHTSA and EPA, operating under the direction of the Trump Administration, proposed the Safer Affordable Fuel-Efficient (SAFE) Vehicles Rule. This rule addresses emissions and fuel economy standards for motor vehicles and is separated into two parts as described below.

[17] United States Energy Information Administration (EIA). 2022. Table F33: Total Energy Consumption, Price, and Expenditure Estimates, 2020. Website: https://www.eia.gov/state/seds/sep_fuel/html/pdf/fuel_te.pdf. Accessed November 13, 2023.
[18] United States Energy Information Administration (EIA). 2022. Table F16: Total Petroleum Consumption Estimates, 2020. Website: https://www.eia.gov/state/seds/sep_fuel/html/fuel_use_pa.html f. Accessed November 13, 2023.
[19] California Energy Commission (CEC). 2023. California Retail Fuel Outlet Annual Reporting (CEC-A15) Results. Website: https://www.energy.ca.gov/data-reports/energy-almanac/transportation-energy/california-retail-fuel-outlet-annual-reporting. Accessed November 13, 2023.
[20] Ibid.
[21] United State Department of Energy (DOE). Alternative Fuels Data Center. 2023. Alternative Fueling Station Counts by State. Website: https://afdc.energy.gov/stations/states. Accessed November 13, 2023.
[22] United State Department of Energy (DOE). Alternative Fuels Data Center. 2023. Alternative Fueling Station Locator [Interactive Database]. Website: https://afdc.energy.gov/stations/#/find/nearest?location=American%20Canyon,%20CA. Accessed December 13, 2023.

Part One, "One National Program" (84 Federal Register 51310) revokes a waiver granted by the EPA to the State of California under Section 209 of the Clean Air Act to enforce more stringent emission standards for motor vehicles than those required by the EPA for the explicit purpose of greenhouse gas (GHG) emission reduction and, indirectly, criteria air pollutants and ozone precursor emission reduction. This revocation became effective on November 26, 2019, potentially restricting the ability of the California Air Resources Board (ARB) to enforce more stringent GHG emission standards for new vehicles and set zero-emission vehicle mandates in California.

Part Two addresses CAFE standards for passenger cars and light trucks for model years 2021 to 2026. This rulemaking proposes new CAFE standards for model years 2022 through 2026 and would amend existing CAFE standards for model year 2021. The proposal would retain the model year 2020 standards (specifically, the footprint target curves for passenger cars and light trucks) through model year 2026. The proposal addressing CAFE standards was jointly developed by the NHTSA and EPA, with the EPA simultaneously proposing tailpipe carbon dioxide standards for the same vehicles covered by the same model years. The EPA and NHTSA published final rules to amend and establish national carbon dioxide and fuel economy standards on April 30, 2020 (Part Two of the SAFE Vehicles Rule) (85 Federal Register 24174).

On April 22, 2021, the Biden Administration formally proposed to roll back portions of the SAFE Vehicles Rule, thereby restoring California's right to enforce more stringent fuel efficiency standards.[23] Most recently, on December 21, 2021, the NHTSA finalized rules to repeal the SAFE I Rule. The final rule concludes the SAFE I Vehicles Rule overstepped the agency's legal authority and established overly broad prohibitions that did not account for a variety of important state and local interests. The final rule ensures the SAFE I Vehicles Rule will no longer form an improper barrier to states exploring creative solutions to address their local communities' environmental and public health challenges.[24]

### *Energy Independence and Security Act*

The Energy Independence and Security Act of 2007 was designed to improve vehicle fuel economy and help reduce nationwide dependence on foreign oil. It expands the production of renewable fuels, reducing dependence on oil and confronting global climate change. Specifically, it increases the supply of alternative fuel sources by setting a mandatory Renewable Fuel Standard, requiring fuel producers to use at least 36 billion gallons of biofuel in 2022, and reduces U.S. demand for oil by setting a national fuel economy standard of 35 mpg by 2020. The Act also set energy efficiency standards for lighting (specifically light bulbs) and appliances. The project would be required to install photosensors and energy-efficient lighting fixtures with the requirements of 42 United States Code Section 17001, *et seq.*

[23] National Highway Traffic Safety Administration (NHTSA). 2022. Corporate Average Fuel Economy. Website: https://www.nhtsa.gov/laws-regulations/corporate-average-fuel-economy. Accessed November 23, 2023.
[24] Ibid.

### *U.S. Executive Order 13693 (Energy Independence and Security Act Expansion)*

In March 2015, Executive Order 13693 Planning for Federal Sustainability in the Next Decade was signed into action. The goal of this Executive Order is to expand on the Energy Independence and Security Act.

### *Energy Star Program*

In 1992, the EPA introduced Energy Star© as a voluntary labeling program designed to identify and promote energy-efficient products to reduce GHG emissions. The program applies to major household appliances, lighting, computers, and building components such as windows, doors, roofs, and heating and cooling systems. Under this program, appliances that meet specification for maximum energy use established under the program are certified to display the Energy Star© label. In 1996, the EPA joined with the United State Department of Energy to expand the program, which now also includes qualifying commercial and industrial buildings as well as homes.

## State

### *California Assembly Bill 1493: Pavley Regulations and Fuel Efficiency Standards*

California Assembly Bill (AB) 1493, enacted on July 22, 2002, required the ARB to develop and adopt regulations that reduce GHGs emitted by passenger vehicles and light-duty trucks. Implementation of the regulation was delayed by lawsuits filed by automakers and by the EPA's denial of an implementation waiver. The EPA subsequently granted the requested waiver in 2009, which was upheld by the by the United States District Court for the District of Columbia in 2011.[25] The standards were to be phased in during the 2009 through 2016 model years.[26]

The second phase of the implementation for the Pavley Bill was incorporated into amendments to the Low Emission Vehicle (LEV) Program referred to as LEV III or the Advanced Clean Cars program. The Advanced Clean Car Program combines the control of smog-causing pollutants and GHG emissions into a single coordinated package of requirements for model years 2017 through 2025. The regulation is anticipated to reduce GHGs from new cars by 34 percent from 2016 levels by 2025. The new rules will reduce pollutants from gasoline and diesel-powered cars and deliver increasing numbers of zero-emission technologies, such as full battery electric cars, newly emerging plug-in hybrid electric vehicles (EVs), and hydrogen fuel cell cars. The regulations will also ensure adequate fueling infrastructure is available for the increasing numbers of hydrogen fuel cell vehicles planned for deployment in California.[27]

Advanced Clean Cars II was adopted in November 2022. The Advanced Clean Cars II regulations will rapidly scale down light-duty passenger car, pickup truck, and SUV emissions starting with the 2026 model year through 2035. The regulations are two-pronged. First, they amend the Zero-emission Vehicle Regulation to require an increasing number of zero-emission vehicles and rely on currently available advanced vehicle technologies, including battery-electric, hydrogen fuel cell electric, and

[25] California Air Resources Board (ARB). 2013. Clean Car Standards—Pavley, Assembly Bill 1493. Website: http://www.arb.ca.gov/cc/ccms/ccms.htm. Accessed June 30, 2023.
[26] California Air Resources Board (ARB). Advanced Clean Cars Summary. Website: https://ww2.arb.ca.gov/sites/default/files/2019-12/acc%20summary-final_ac.pdf. Accessed June 30, 2023.
[27] California Air Resources Board (ARB). 2011. Status of Scoping Plan Recommended Measures. Website: https://calcarbondash.org/cc/scopingplan/sp_measures_implementation_timeline.pdf. Accessed June 30, 2023.

plug-in hybrid electric vehicles, to meet air quality and climate change emissions standards. These amendments support Governor Newsom's 2020 Executive Order N-79-20 that requires all new passenger vehicles sold in California to be zero emissions by 2035. Second, the Low-emission Vehicle Regulations were amended to include increasingly stringent standards for gasoline cars and heavier passenger trucks to continue to reduce smog-forming emissions.

In October 2023, ARB launched a new effort to consider potential amendments to the Advanced Clean Cars II regulations, including updates to the tailpipe greenhouse gas emission standard and limited revisions to the Low-emission Vehicle and Zero-emission Vehicle regulations.

These regulations rapidly scale down emissions of light-duty passenger cars, pickup trucks, and SUVs and require an increased number of zero-emission vehicles to meet air quality and climate change emissions goals.

### *California Senate Bill 1078: Renewable Electricity Standards*

First established in 2002 under SB 1078, California Renewables Portfolio Standard (RPS) requires retail sellers of electric services to increase procurement from eligible renewable energy resources to 33 percent by 2020 and 50 percent by 2030.[28] In 2018, SB 100 further increased California's RPS and required retail sellers and local publicly owned electric utilities to procure eligible renewable electricity for 44 percent of retail sales by the end of 2024, 52 percent by the end of 2027, and 60 percent by the end of 2030; and that ARB should plan for 100 percent eligible renewable energy resources and zero-carbon resources by the end of 2045. The California Public Utilities Commission (CPUC) and the CEC jointly implement the RPS program. The CPUC's responsibilities include: (1) determining annual procurement targets and enforcing compliance; (2) reviewing and approving each investor-owned utility's renewable energy procurement plan; (3) reviewing contracts for RPS-eligible energy; and (4) establishing the standard terms and conditions used in contracts for eligible renewable energy.

### *Senate Bills 350, 100, and 1020*

The Clean Energy and Pollution Reduction Act of 2015 (SB 350) requires the amount of electricity generated and sold to retail customers per year from eligible renewable energy resources to be increased to 50 percent by December 31, 2030. This act also requires doubling of the energy efficiency in existing buildings by 2030.

Adopted on September 10, 2018, SB 100 supports the reduction of GHG emissions from the electricity sector by accelerating the State's RPS Program (last updated by SB 350). SB 100 requires electricity providers to increase procurement from eligible renewable energy resources to 33 percent of total retail sales by 2020, 44 percent by 2024, 60 percent by 2030, and 100 percent by 2045.

Senate Bill 1020 (SB 1020), signed into law on September 16, 2022, requires renewable energy and zero-carbon resources to supply 90 percent of all retail electricity sales by 2035, 95 percent by 2040, and 100 percent by 2045. All State agencies' facilities must be served by 100 percent renewable and

[28] California Public Utilities Commission (CPUC). Renewables Portfolio Standard (RPS) Program. Website: https://www.cpuc.ca.gov/rps/. Accessed November 27, 2023.

zero-carbon resources by 2030. SB 1020 also requires the CPUC, CEC, and ARB to issue a joint progress report outlining the reliability of the electrical grid with a focus on summer reliability and challenges and gaps. Additionally, SB 1020 requires the CPUC to define energy affordability and use energy affordability metrics to develop protections, incentives, discounts, or new programs for residential customers facing hardships due to energy or gas bills.

### *California Code of Regulations Title 24*

*Part 6 (Energy Efficiency Standards for Residential and Nonresidential Buildings)*

California Code of Regulations Title 24 Part 6 (California's Energy Efficiency Standards for Residential and Nonresidential Buildings), was first adopted in 1978 in response to a legislative mandate to reduce California's energy consumption. The standards are updated periodically to allow consideration and possible incorporation of new energy efficient technologies and methods. Energy efficient buildings require less electricity; therefore, increased energy efficiency reduces fossil fuel consumption and decreases GHG emissions. The 2019 Building Energy Efficiency Standards went into effect on January 1, 2020. The 2022 Building Energy Efficiency Standards became effective on January 1, 2023.[29]

*Part 11 (California Green Building Standards Code)*

California Code of Regulations Title 24, Part 11, is a comprehensive and uniform regulatory code for all residential, commercial, and school buildings that went in effect January 1, 2011. The Code is updated on a regular basis, with the most recent update consisting of the 2022 California Green Building Code Standards that became effective January 1, 2023.[30] Local jurisdictions are permitted to adopt more stringent requirements, as State Law provides methods for local enhancements. The Code recognizes that many jurisdictions have developed existing construction and demolition ordinances, and defers to them as the ruling guidance provided they provide a minimum 50-percent diversion requirement. The Code also provides exemptions for areas not served by construction and demolition recycling infrastructure. The California Building Code (CBC) provides the minimum standard that buildings need to meet in order to be certified for occupancy, which is generally enforced by the local building official.

### *California Public Utilities Code*

The CPUC regulates privately owned telecommunication, electric, natural gas, water, railroad, rail transit, and passenger transportation companies. It is the responsibility of the CPUC to (1) assure California utility customers safe, reliable utility service at reasonable rates; (2) protect utility customers from fraud; and (3) promote a healthy California economy. The Public Utilities Code, adopted by the legislature, defines the jurisdiction of the CPUC.

[29] California Energy Commission. 2023. Building Energy Efficiency Standards. Website: https://www.energy.ca.gov/programs-and-topics/programs/building-energy-efficiency-standards/2022-building-energy-efficiency. Accessed December 18, 2023.

## Local

### *City of American Canyon*

*City of American Canyon General Plan*

The City of American Canyon adopted its General Plan in 1994, which contains objectives and policies that help address energy use at the local level and improve energy efficiency and conservation:

**Objective 8.22** Minimize transportation-related energy consumption.

**Policy 8.22.1** Encourage the development of mixed use, pedestrian friendly employment/residential centers that help minimize vehicle trips in American Canyon and contribute to a reduction in energy consumption.

**Policy 8.22.2** Encourage the clustering of residential structures.

**Policy 8.22.3** Require that Development Plans provide for linkages between bicycle and pedestrian circulation systems and transit and employment centers, in accordance with established areawide plans.

**Policy 8.22.4** Maintain a system of traffic signals and controls that minimizes waiting time and vehicle speed changes through routes.

**Policy 8.22.5** Require that Development Plans provide for High Occupancy Vehicles (HOV) and public transportation, where feasible, through the provision of appropriate transit areas and park-and-ride locations along public transportation routes.

**Objective 8.23** Reduce Energy consumption in buildings.

**Policy 8.23.1** Require that developers employ energy-efficient subdivision and site planning methods as well as building design. Measures to be considered include building orientation and shading, landscaping, building reflectance, use of active and passive solar heating and hot water system, etc. In establishing these energy related design requirements, the City shall balance energy-efficient design with good planning principles.

**Policy 8.23.2** Require that new City buildings be energy efficient.

**Objective 8.24** Increase public awareness of energy conservation needs and means in order to encourage informed choices about energy conservation by the general public.

**Policy 8.24.1** Cooperate with local utilities to provide energy conservation information to the public.

**Policy 8.24.2** Develop public and/or public-private energy conservation educational programs for City employees and the public.

**Objective 8.25** Increase the energy efficiency of City operations to save energy, reduce municipal costs, and provide an example to the private sector.

**Policy 8.25.1** Introduce concepts of energy efficiency and lifecycle costing to City planning and operating decisions and to the design of all major City facilities.

**Policy 8.25.2** Work with other agencies and utility companies to develop safe, economical and renewable energy resources.

**Policy 8.25.3** Consider participating in energy conservation demonstration projects and promoting the use of treatment technologies that provide for the reuse of waste and water treatment by products, such as sludge and methane gas.

## 3.5.4 - Methodology

The approach to analyzing energy impacts is based on Public Resources Code Section 21100(b)(3), which states an EIR shall include "mitigation measures proposed to minimize significant effects on the environment, including, but not limited to, measures to reduce the wasteful, inefficient, and unnecessary consumption of energy." Guidance for implementing this section is provided in California Environmental Quality Act (CEQA) Guidelines Appendix F (Energy Conservation). CEQA Guidelines Section 15126.2(b) further explains, "This [energy] analysis may be included in related analyses of air quality, GHG emissions, transportation or utilities in the discretion of the lead agency." Consistent with that approach, additional discussion of the physical environmental impacts associated with production of energy is also included in the other resource chapters of this EIR, including but not limited to Section 3.2, Air Quality; Section 3.7, Greenhouse Gas Emissions; Section 3.13, Transportation; and Section 3.14, Utilities and Service Systems.

Energy consumption is analyzed herein in terms of construction and operational energy. Construction energy demand accounts for anticipated energy consumption during construction of development facilitated by the proposed project, such as fuel consumed by construction equipment and construction workers' vehicles traveling to and from the construction site. Operational energy demand accounts for the anticipated energy consumption during operation of the development facilitated by the project, such as fuel consumed by cars and trucks and electricity consumed for building power needs, including but not limited to lighting, water conveyance, and air conditioning.

## 3.5.5 - Thresholds of Significance

The lead agency utilizes the criteria in the CEQA Guidelines Appendix G Environmental Checklist to determine whether impacts related to energy are significant environmental effects. Would the project:

a) Result in potentially significant environmental impact due to wasteful, inefficient, or unnecessary consumption of energy resources, during project construction or operation?

b) Conflict with or obstruct a State or local plan for renewable energy or energy efficiency?

### Significance Criteria

#### *Impact ENER-1: Wasteful, Inefficient, or Unnecessary Energy Consumption*

The methodology employed under Impact ENER-1, which focuses on determining whether the proposed project would result in the wasteful, inefficient, or unnecessary consumption of energy resources, follows the guidance provided in Appendix F of the CEQA Guidelines as well as the analytical precedent set by *League to Save Lake Tahoe Mountain etc. v. County of Placer* (2022) (75 Cal.App.5th 63, 164-168).

According to Appendix F of the CEQA Guidelines, the goal of conserving energy is translated to include decreasing overall per capita energy consumption; decreasing reliance on fossil fuels such as coal, natural gas, and oil; and increasing reliance on renewable energy sources. In *League to Save Lake Tahoe Mountain etc. v. County of Placer*, the Appellate Court concluded that the analysis of wasteful, inefficient, and unnecessary energy consumption was not adequate because it did not consider whether additional renewable energy features can be added to the project.

The proposed project would be considered to result in a potentially significant impact if it would result in wasteful, inefficient, or unnecessary consumption of energy resources. Considering the guidance provided by Appendix F of the CEQA Guidelines and the Appellate Court decision in *League to Save Lake Tahoe Mountain etc. v. County of Placer*, the proposed project would be considered to result in wasteful, inefficient, or unnecessary consumption of energy resources if it would conflict with the following energy conservation goals:

- Decreasing overall per capita energy consumption;
- Decreasing reliance on fossil fuels such as coal, natural gas, or oil; and
- Increasing reliance on renewable energy sources.

#### *Impact ENER-2: Renewable Energy and Energy Efficiency Plan Consistency*

This impact discussion focuses on project consistency with a local plan or policy adopted for the purpose of improving energy efficiency or reliance on renewable energy sources. Impact ENER-2 focuses on project consistency with relevant policies intended to improve energy efficiency and encourage the use of renewable energy sources. As such, the proposed project would be determined to conflict with the applicable energy efficiency or renewable energy plan if it would not adhere to applicable energy consumption related measures included in the City's General Plan.

## 3.5.6 - Project Impacts and Mitigation Measures

This section discusses potential impacts associated with the development of the project and provides mitigation measures where appropriate.

### Energy Use

| | |
|---|---|
| **Impact ENER-1:** | **The proposed project would not result in a potentially significant environmental impact due to wasteful, inefficient, or unnecessary consumption of energy resources, during project construction or operation.** |

### *Impact Analysis*

A discussion of the proposed project's anticipated energy usage is presented below. Energy use consumed by the proposed project was estimated and includes electricity and fuel consumption for project construction and operation. Energy calculations are included as part of Appendix B.

### *Construction Impacts*

For purposes of this analysis, the project construction schedule was assumed to begin in September 2024 and conclude in August 2025. If the construction schedule moves to later years, construction emissions would likely decrease because of improvements in technology and more stringent regulatory requirements as older, less efficient equipment is replaced by newer and cleaner equipment. The proposed project would require site preparation, grading, building construction, architectural coating, and paving. The construction phase would require energy for the manufacture and transportation of building materials, preparation of the site (e.g., grading), and the actual construction of the building. Petroleum-based fuels such as diesel fuel and gasoline would be the primary sources of energy for these tasks.

The types of on-site equipment used during construction of the proposed project could include gasoline- and diesel-powered construction and transportation equipment, including trucks, graders, tractors, and cranes. Construction equipment is estimated to consume a total of approximately 32,838 gallons of diesel fuel over the entire construction duration (Appendix B).

Fuel use associated with construction vehicle trips generated by the proposed project was also estimated; trips include construction worker trips, haul truck trips for material transport, and vendor trips for construction material deliveries. Fuel use from these vehicles traveling to the project site was based on (1) the projected number of trips the proposed project would generate during construction, (2) average trip distances by trip type, and (3) fuel efficiencies estimated in the ARB EMFAC mobile source emission model. The specific parameters used to estimate fuel usage are included in Appendix B. In total, the proposed project is estimated to generate 453,615 VMT and consume 29,325 gallons of combined gasoline and diesel for vehicle travel during construction. In total, project construction is expected to consume 62,162 gallons of combined gasoline and diesel from on-site equipment and construction vehicle trip fuel use.

The overall construction schedule and process is already designed to be efficient in order to avoid excess monetary costs. For example, equipment and fuel are not typically used wastefully due to the added expense associated with renting the equipment, maintaining it, and fueling it. Therefore, the opportunities for future efficiency gains during construction are limited. Therefore, it is anticipated that the construction phase of the proposed project would not result in wasteful, inefficient, and unnecessary consumption of energy. Construction-related energy impacts would be less than significant.

### *Operational Impacts*

The proposed project would consume energy as part of building operations and transportation activities. Project energy consumption is summarized in Table 3.5-1.

**Table 3.5-1: Estimated Annual Project Energy Consumption in 2025**

| Energy Consumption Activity | Annual Consumption |
|---|---|
| Electricity Consumption | 659,500 kWh |
| Building Natural Gas Consumption | 0 kBTU |
| Operational Fuel Consumption-Natural Gas | 13,980 gallons |
| Operational Fuel Consumption-Gasoline | 42,129 gallons |
| Operational Fuel Consumption–Diesel | 249,798 gallons |
| Operational Fuel Consumption–Electricity | 35,233 kWh |
| Notes:<br>kBTU = kilo-British Thermal Unit<br>kWh = kilowatt-hour<br>VMT = Vehicle Miles Traveled<br>Source: Appendix B. | |

Operation of the proposed warehouse would consume an estimated 659,500 kWh of electricity on an annual basis. Natural gas would not be utilized as a building fuel. The proposed project's building would be designed and constructed in accordance with the latest adopted energy efficiency standards, which are based on the State's Building Energy Efficiency Standards. These are widely regarded as the most advanced building energy efficiency standards and compliance would ensure that building energy consumption would not be wasteful, inefficient, or unnecessary. The proposed project would also install solar on the building roof top and would produce an estimated 235,000 kWh per year. Furthermore, the proposed building would be insulated and refrigerated at approximately 58°F (degrees Fahrenheit), making it suitable for storage of wine and related products. The amount of refrigeration necessary would be reduced through the use of intake louvers and fans, which would allow cool night air to be utilized. Furthermore, the proposed project would use electric forklifts.

Project-related vehicle trips would consume an estimated 291,927 gallons of gasoline and diesel annually and would involve activities and travel routes typical of a warehouse-type project. The fossil fuels consumed by the project annually would decrease and shift to electricity consumption as the on-road passenger vehicle and heavy-duty truck fleets shift from gasoline and diesel to zero-emission electric vehicles per compliance with State regulations. Thus, transportation fuel consumption would not be wasteful, inefficient, or unnecessary. Impacts would be less than significant.

### *Level of Significance*

Less than significant impact.

### *Mitigation Measures*

No mitigation is necessary.

## Energy Efficiency and Renewable Energy Standards Consistency

**Impact ENER-2: The proposed project would not conflict with or obstruct a State or local plan for renewable energy or energy efficiency.**

### *Impact Analysis*

The proposed project would be served with electricity provided by PG&E. In 2021, PG&E obtained 47.7 percent of its electricity from renewable energy sources.[31] PG&E also offers a 50 percent and 100 percent solar choice that source 70.9 and 93.9 percent of its power mix from eligible renewable energy sources respectively, as well as a Green Saver option that sources 89.9 percent of its power mix from eligible renewable energy sources.[32] The utility would be required to meet the future objective of 60 percent of electricity from renewable energy sources by 2030. The proposed warehouse building would be designed in accordance with Title 24, California's Energy Efficiency Standards for Nonresidential Buildings. These standards include minimum energy efficiency requirements related to building envelope, mechanical systems (e.g., heating, ventilation, and air conditioning [HVAC] and water heating systems), and indoor and outdoor lighting. The incorporation of the Title 24 standards into the design of the proposed project would ensure that the proposed project would not result in the use of energy in a wasteful manner. In addition, the proposed project would install solar on the building roof top and would produce an estimated 235,000 kWh per year. Furthermore, the proposed building would be insulated and refrigerated at approximately 58°F, making it suitable for storage of wine and related products. The amount of refrigeration necessary would be reduced through the use of intake louvers and fans, which would allow cool night air to be utilized.

The proposed project would comply with existing State energy standards and with energy conservation policies contained in the General Plan. As such, the proposed project would not conflict with State or local renewable or energy efficiency objectives. Impacts would be less than significant.

The proposed project's compliance with Title 24 standards and other applicable regulations, as well as the use of solar panels on the building roof and use of cool night air via intake louvers and fans would ensure that the proposed project would not conflict with any of the General Plan energy conservation policies related to the proposed project's building, mechanical systems, or indoor and outdoor lighting. Therefore, impacts would be less than significant.

### *Level of Significance*

Less than significant impact.

### *Mitigation Measures*

No mitigation is necessary.

[31] California Energy Commission (CEC). 2023. Annual Power Content Labels for 2021. Website: https://www.energy.ca.gov/programs-and-topics/programs/power-source-disclosure/power-content-label/annual-power-content-2. Accessed November 14, 2023.
[32] Ibid.

## 3.5.7 - Cumulative Impacts

Cumulative impacts occur when the incremental effects of a project are significant when combined with similar impacts from other past, present, or reasonably foreseeable projects in a similar geographic area. The geographic scope of the cumulative energy analysis is the portion of PG&E's service area that covers the City. Cumulative projects considered as part of this cumulative analysis include the proposed project, other cumulative projects identified in Section 4 Cumulative Effects of this EIR, and other past, present, and reasonably foreseeable future projects within the PG&E service area that covers the City.

Concerning electricity and natural gas, cumulative projects would be required to comply with applicable provisions of Title 24 Building Energy Efficiency Standards and CALGreen. Specifically, the buildings and other improvements that would be constructed as part of the various cumulative projects would be required to be designed in accordance with Title 24, California's Energy Efficiency Standards for Residential and Nonresidential Buildings as applicable. These standards include minimum energy efficiency requirements related to building envelope, mechanical systems (e.g., HVAC and water heating systems), and indoor and outdoor lighting. Future cumulative development would also be required to meet even more stringent energy efficiency requirements through local and Statewide policy, such as Title 24, Part 6, which would require, for example, that newly constructed residential homes include on-site photovoltaic solar systems, with some exceptions. Furthermore, PG&E—which supplies electricity to the project site and vicinity—would be required by SB 100 to incrementally increase the proportion of renewable electricity generation supplying its in-state retail sales until it reaches 100 percent carbon-free electricity generation by 2045. Electricity would also be consumed during construction of the cumulative projects from the use of construction trailers and any electrically driven equipment, vehicles, or tools. Electricity consumed during construction of the cumulative projects would also be subject to the renewable electricity generation requirements established by SB 100, as PG&E would be the anticipated electricity supplier for the cumulative project areas. The incorporation of these regulations into the design of the cumulative projects would ensure that they would not result in the inefficient, unnecessary, or wasteful consumption of electricity or natural gas, and thus they would not have a significant cumulative impact.

Similarly, the proposed project's energy use would be limited to that which is necessary for the construction and operation of the proposed project. As discussed above, the proposed project would be required to comply with applicable Statewide and local policies and standards pertaining to energy efficiency and can reasonably be assumed to pursue greater energy efficiencies, to the extent commercially practicable in its operation, in the interest of reducing operating costs. In addition, the proposed project be built as all-electric and would not utilize natural gas during construction or operations. As such, the proposed project's incremental contribution to the less than significant cumulative impact would not be considerable with respect to energy consumption in the form of electricity and natural gas. Cumulative projects would be required to comply with California Code of Regulations Title 13, Sections 2449(d)(3) and 2485, that limit idling from both on-road and off-road diesel-powered equipment and are enforced by the ARB. Additionally, various federal and State regulations, including the LCFS, Pavley Clean Car Standards, and LEV Program, would serve to reduce the transportation fuel demand of cumulative projects.

Compliance with the aforementioned regulations by the cumulative projects would ensure that they would not result in the inefficient, unnecessary, or wasteful consumption of fuel and their cumulative impact would be less than significant. As discussed in more detail above, the proposed project would consume vehicle fuel during both construction and operation. As previously discussed, the proposed project would also be required to use fuels which conform to various federal and State regulations, such as the LCFS, Pavley Clean Car Standards, and LEV Program. In addition, the proposed project would consume fuels in an amount necessary to construct and operate the proposed project and would not consume excessive amounts of fuel beyond what is necessary in the interest of avoiding unnecessary construction or operation costs. Therefore, the proposed project's incremental contribution to the less than significant cumulative impact would not be considerable with respect to the wasteful or inefficient use of energy.

Considering the information provided above, the proposed project would not have a cumulatively considerable impact on energy consumption and would not conflict with any renewable energy plans. Cumulative impacts would be less than significant.

### *Level of Significance*

Less than significant impact.

### *Mitigation Measures*

No mitigation is necessary.

# 3.6 - Geology, Soils, and Seismicity

## 3.6.1 - Introduction

This section describes the existing geology, soils, and seismicity setting and potential effects from project implementation on the site and its surrounding area. Descriptions and analysis in this section are based on information from the California Geological Survey, information provided by the Geotechnical Engineering Investigation prepared by Krazan and Associates, Inc., dated July 2023 (Krazan). The report is provided in Appendix E.

No public comments pertaining to geology, soils, and seismicity were received in response to the Notice of Preparation (NOP).

## 3.6.2 - Environmental Setting

### Regional Geology

The site is located in the southern portion of the Napa Valley, which is characterized as a relatively large northwest-trending alluvial valley within the Northern California Coast Range geomorphic province. The valley is at the southernmost end of the Mayacamas Mountains. South of the City of Napa, the hills on the western side of the valley terminate at the marshes bordering the northern end of San Pablo Bay; the hills on the northeast continue to near Sulphur Springs Mountain near the City of Vallejo. The bedrock ridges on each side of the Napa Valley trend northwest, parallel to the general north-northwest structural trend of the North Coast Ranges. Pre-Quaternary bedrock is generally restricted to the foothills, but locally there are low knolls or hills of Tertiary-age bedrock in the central and western parts of the valley. Quaternary alluvial fan deposits shed from the hills on the east, and fluvial deposits associated with the Napa River and its tributary valleys comprise the youngest deposits within the Napa Valley.[1]

Within the region, the San Andreas Fault system distributes shearing across a complex assemblage of primarily right-lateral, strike-slip, parallel, and sub-parallel faults that include the Hayward and Calaveras Faults and others (see the “Faulting” section of this report). The mountainous topography west of Napa Valley resulted from the latest Pliocene and Quaternary uplift associated with the younger structures.

### Local Geology

Geologic mapping indicates that the near-surface deposits at and in the vicinity of the project site are late Pleistocene to Holocene-age fan deposits composed of sand, gravel, silt, and clay that are moderately to poorly sorted and moderately to poorly bedded.[2,3] The project site is on Quaternity alluvial fan (Qf) deposits. The Qf deposits are described as gently sloping, fan-shaped, relatively undissected alluvial surfaces.

## Seismicity

The term *seismicity* describes the effects of seismic waves that are radiated from an earthquake as it ruptures. While most of the energy released during an earthquake results in permanent ground displacement, as much as 10 percent may dissipate immediately in the form of seismic waves.

In 2015, the 2014 Working Group on California Earthquake Probabilities (WGCEP)[4] presented the Third Uniform California Earthquake Rupture Forecast (UCERF3). According to this report, the San Francisco Bay Area has an estimated 72 percent chance of experiencing an earthquake of magnitude (M) 6.7 or higher over the next 30 years (from when the study was conducted in 2014).[5] The UCERF3 also provides estimates for the West Napa Fault (1.9 percent), Hayward-Rodgers Creek (13.3 percent), and Green Valley Fault (4.4 percent), which are in proximity to the project site.[6]

To understand the implications of seismic events, a discussion of faulting and seismic hazards follows.

### *Faulting*

Faults form in rocks when stresses overcome the internal strength of the rock, resulting in a fracture. Large faults develop in response to large, regional stresses operating over a long time, such as those stresses caused by the relative displacement between tectonic plates. According to the elastic rebound theory, these stresses cause strain to build up in the earth's crust until enough strain has built up to exceed the strength along a fault and cause a brittle failure. The slip between the two stuck plates or coherent blocks generates an earthquake. Following an earthquake, strain will build once again until the occurrence of another earthquake. The magnitude of slip is related to the maximum allowable strain that can be built up along a particular fault segment. The greatest build up in strain that is due to the largest relative motion between tectonic plates or fault blocks over the longest period of time will generally produce the largest earthquakes. The distribution of these earthquakes is a study of much interest for both hazard prediction and analysis of active deformation of the earth's crust. Deformation is a complex process, and strain caused by tectonic forces is not only accommodated through faulting but also by folding, uplift, and subsidence, which can be gradual or in direct response to earthquakes.

Faults are mapped to determine earthquake hazards since they occur where earthquakes tend to recur. A historic plane of weakness is more likely to fail under stress and strain than a previously unbroken block of crust. Faults are, therefore, a prime indicator of past seismic activity, and faults with recent activity are presumed to be the best candidates for future earthquakes. However, since slip is not always accommodated by faults that intersect the surface along traces, and since the orientation of stresses and strain in the crust can shift, predicting the location of future earthquakes

[4] Also referred to as WGCEP 2014, this is a working group composed of seismologists from the United States Geological Survey (USGS), California Geological Survey (CGS), Southern California Earthquake Center (SCEC), and California Earthquake Authority (CEA).

[5] Field, E. H., Glenn P. Biasi, Peter Bird, Timothy E. Dawson, Karen R. Felzer, David D. Jackson, Kaj M. Johnson, Thomas H. Jordan, Christopher Madden, Andrew J. Michael, Kevin R. Milner, Morgan T. Page, Tom Parsons, Peter M. Powers, Bruce E. Shaw, Wayne R. Thatcher, Ray J. Weldon II, and Yuehua Zeng (Field et al.). 2015. Long-Term Time-Dependent Probabilities for the Third Uniform California Earthquake Rupture Forecast (UCERF3). Bulletin of the Seismological Society of America, Vol. 105. April 2015.

[6] Ibid.

is complicated. Earthquakes sometimes occur in areas with previously undetected faults or along faults previously thought inactive.

The West Napa, Green Valley, Hayward-Rogers Creek, Mount Diablo Thrust, Calaveras, and San Andreas faults are the closest in proximity to the project site.[7] Predominate faults and their characteristics are summarized in Table 3.6-1**.**

**Table 3.6-1: Fault Summary**

| Fault | Type | Relationship to Project Site | | Maximum Credible Earthquake (magnitude) |
|---|---|---|---|---|
| | | Direction | Distance (miles) | |
| West Napa | Normal-Oblique | West | 0.8 | 6.50 |
| Green Valley | Right-Lateral Strike-Slip | East | 8.0 | 6.50 |
| Hayward-Rogers Creek | Right-Lateral Strike-Slip | West | 11.0 | 7.00 |

Sources: Cornerstone Earth Group. 2017.
Krazan & Associates Inc. 2021. Geotechnical Engineering Investigation Proposed SDG Commerce 224 Distribution Center 1055 Commerce Court American Canyon, California. January 18.

*West Napa Fault*

The West Napa Fault begins under San Pablo Bay and travels north through American Canyon and up the west side of the Napa Valley to the vicinity of Saint Helena. The West Napa Fault is designated an Alquist-Priolo Special Study Area. On August 24, 2014, a magnitude 6.0 earthquake (known as the South Napa Earthquake) occurred on the West Napa Fault. Prior to the 2014 South Napa Earthquake, the last major seismic event on the West Napa Fault was a magnitude 5.2 temblor whose epicenter was near Yountville in September 2000[8].

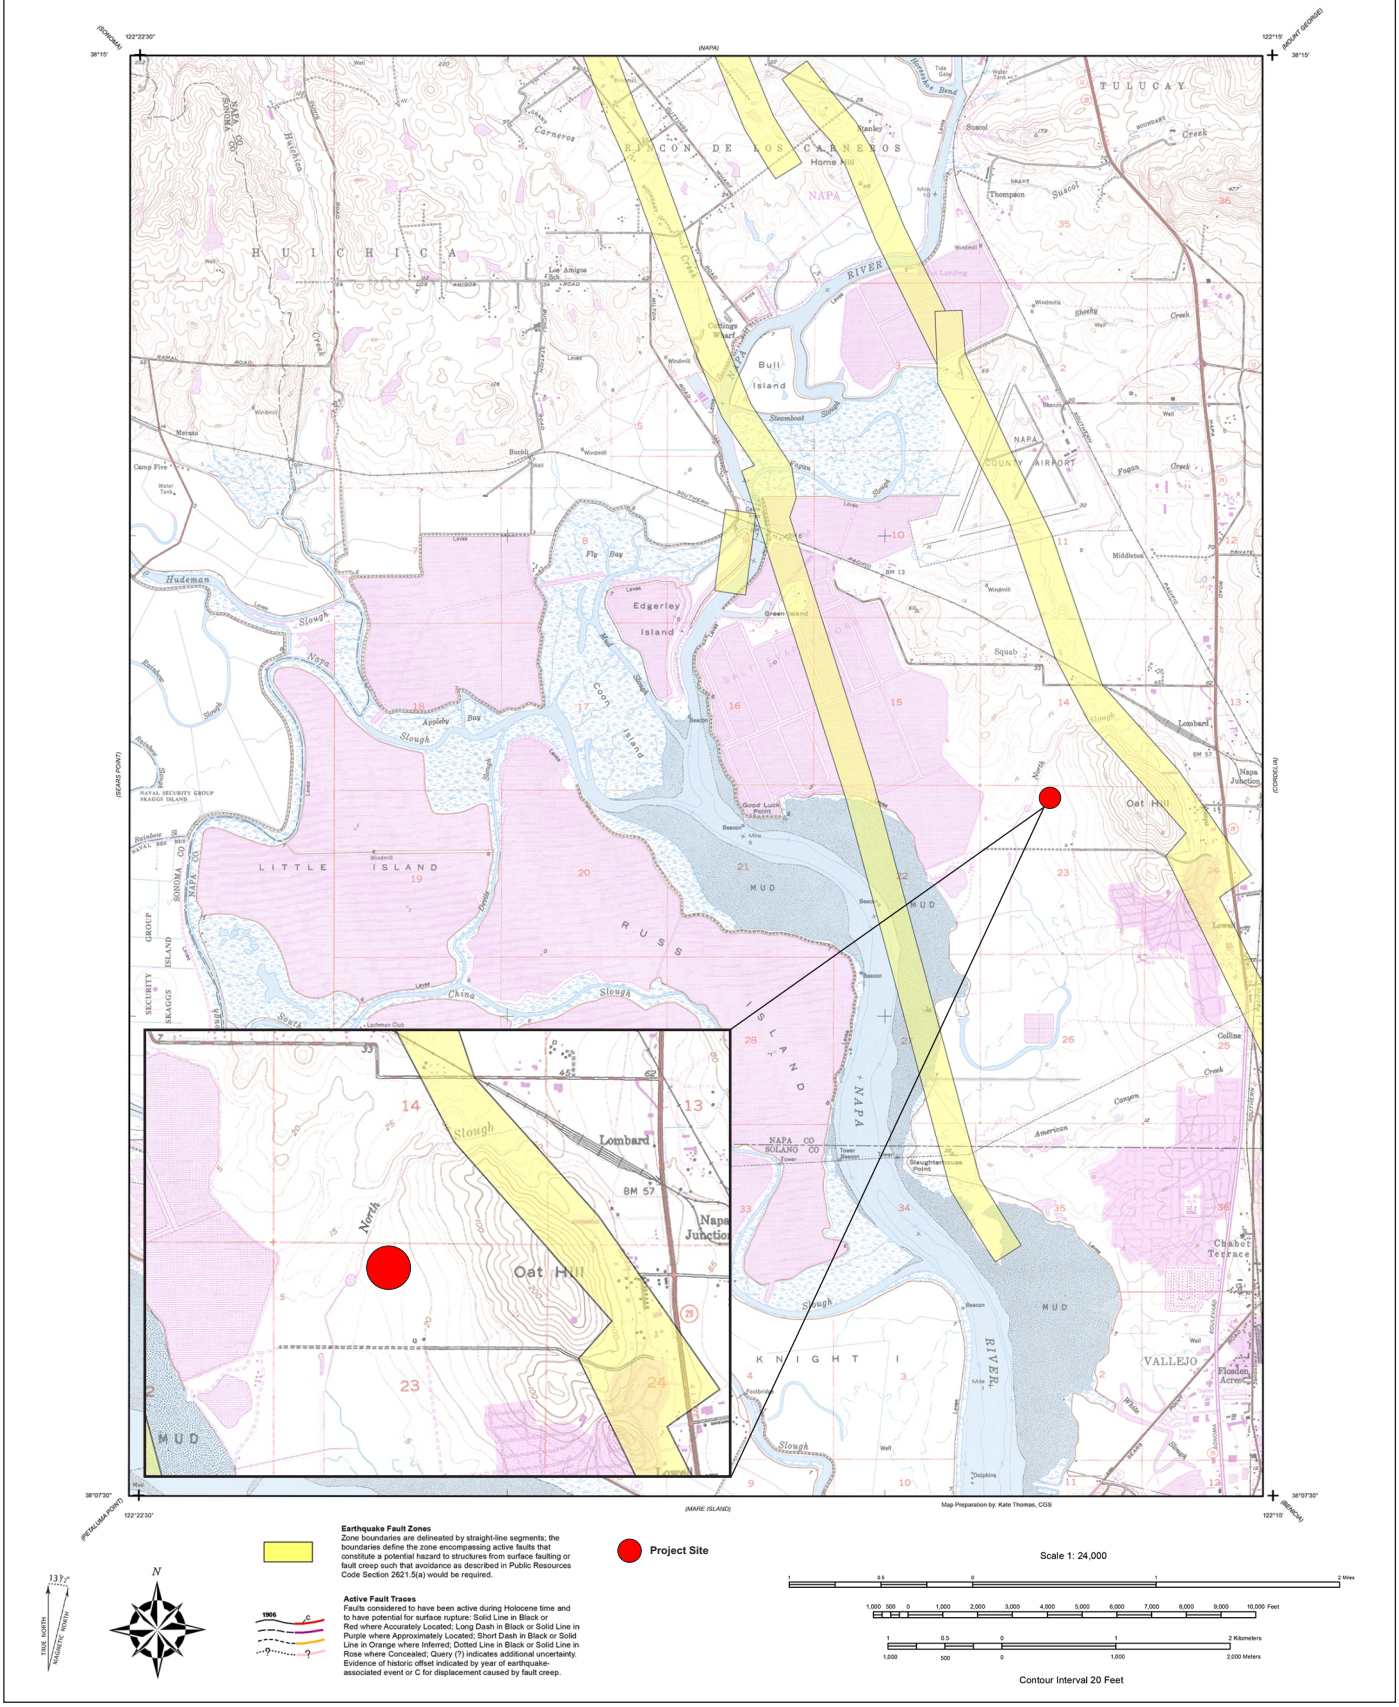

Exhibit 3.6-1 depicts the location of the West Napa Earthquake Fault Zones in relation to the project site. As shown in the exhibit, the project site is not within the West Napa Fault Zone.

### *Seismic Hazards*

Seismic hazards pose a substantial danger to property and human safety and are present because of the risk of naturally occurring geologic events and processes impacting human development. Therefore, the hazard is influenced as much by the conditions of human development as by the frequency and distribution of major geologic events. Seismic hazards present in California include ground rupture along faults, strong seismic shaking, liquefaction, ground failure, landsliding, and slope failure.

# Exhibit 3.6-1
# Earthquake Fault Zone Map

THIS PAGE INTENTIONALLY LEFT BLANK

*Fault Rupture*

Fault rupture is a seismic hazard that affects structures sited above an active fault. The hazard from fault rupture is the movement of the ground surface along a fault during an earthquake. Typically, this movement takes place during the short time of an earthquake, but it also can occur slowly over many years in a process known as creep. Most structures and underground utilities cannot accommodate the surface displacements of several inches to several feet commonly associated with fault rupture or creep.

Following the August 24, 2014, seismic event on the West Napa Fault, fault rupture was observed on two Napa County Airport taxiways and various roadways in Napa County, including State Route (SR) 121 and Old Sonoma Road.

*Ground Shaking*

The severity of ground shaking depends on several variables, such as earthquake magnitude, epicenter distance, local geology, thickness, seismic wave-propagation properties of unconsolidated materials, groundwater conditions, and topographic setting. Ground shaking hazards are most pronounced in areas near faults or with unconsolidated alluvium.

Based on observations of damage from recent earthquakes in California (e.g., San Fernando 1971, Whittier-Narrows 1987, Landers 1992, Northridge 1994), ground shaking is responsible for 70 to 100 percent of all earthquake damage. The most common type of damage from ground shaking is structural damage to buildings, which can range from cosmetic stucco cracks to total collapse. The overall level of structural damage from a nearby large earthquake would likely be moderate to heavy, depending on the characteristics of the earthquake, the type of ground, and the condition of the building. Besides damage to buildings, strong ground shaking can cause severe damage from falling objects or broken utility lines. Fire and explosions are also hazards associated with strong ground shaking.

During the 2014 South Napa Earthquake, the United States Geological Survey (USGS) instrument readings at monitoring sites in Napa and Vallejo reported peak ground acceleration values ranging from 19.8 to 40.7 percent of gravity, which corresponds to “strong” and “very strong” ground shaking. Following the earthquake, more than 200 persons sought treatment at local hospitals, more than 150 buildings were “red tagged,”[9] and numerous utility lines experienced ruptures or leaks that disrupted service.

*Ground Failure*

Ground failure includes liquefaction, the liquefaction-induced phenomena of lateral spreading, and lurching.

Liquefaction is a process by which sediments below the water table temporarily lose strength during an earthquake and behave as a viscous liquid rather than a solid. Liquefaction is restricted to certain geologic and hydrologic environments, primarily recently deposited sand and silt in areas with high groundwater levels. The process of liquefaction involves seismic waves passing through saturated

[9] A red tagged building is considered uninhabitable without further assessment or repair under the California Building Standards Code.

granular layers, distorting the granular structure, and causing the particles to collapse. This causes the granular layer to behave temporarily as a viscous liquid, resulting in liquefaction.

Liquefaction can cause the soil beneath a structure to lose strength, which may result in the loss of foundation-bearing capacity. This loss of strength commonly causes the structure to settle or tip. Loss of bearing strength can also cause light buildings with basements, buried tanks, and foundation piles to rise buoyantly through the liquefied soil.

Lateral spreading is lateral ground movement, with some vertical component, caused by liquefaction. In effect, the soil rides on top of the liquefied layer. Lateral spreading can occur on relatively flat sites with slopes less than 2 percent, under certain circumstances, and can cause ground cracking and settlement.

Lurching is the movement of the ground surface toward an open face when the soil liquefies. An open face could be a graded slope, stream bank, canal face, gully, or other similar feature.

*Landslides and Slope Failure*

Landslides and other forms of slope failure form in response to the long-term geologic cycle of uplift, mass wasting, and disturbance of slopes. Mass wasting refers to a variety of erosional processes from gradual downhill soil creep to mudslides, debris flows, landslides, and rock fall—processes that are commonly triggered by intense precipitation, which varies according to climactic shifts.

Often, various forms of mass wasting are grouped together as landslides, which are generally used to describe the downhill movement of rock and soil.

Geologists classify landslides into several different types that reflect differences in the type of material and type of movement. The four most common types of landslides are translational, rotational, earth flow, and rock fall. Debris flows are another common type of landslide similar to earth flows, except that the soil and rock particles are coarser. Mudslide is a term that appears in non-technical literature to describe a variety of shallow, rapidly moving earth flows.

## Surface Profile/Geomorphology

The project site predominantly consists of vacant land. Surface soils have a loose consistency and contain a moderate amount of grass and weeds. The site gently slopes from east to west.

## Soil Borings and Subsurface Profile

Subsurface soil conditions were explored by Krazan & Associates by drilling 24 borings at the project site to depths ranging from approximately 10 to 50 feet below the existing grade. In addition, three bulk subgrade samples were obtained for testing.[10]

In general, surface soils at the project site consist of approximately 6 to 12 inches of soft silty clay or sandy clary or very loose silty sand. These soils are disturbed, have low strength characteristics, and

[10] Krazan. 2023. Geotechnical Engineering Investigation, Proposed SDG Commerce 220, LLC, Distribution Center, 1055 Commerce Court, American Canyon, California. July 25, 2023

are highly compressible when saturated. Within portions of the site, there is approximately 6 to 12 inches of fill materials. Beneath the loose surface soils and fill material, there is approximately 17.5 feet of stiff to hard sandy clary, silty clay, and medium dense/very stiff clayey sand/sandy clay. These soils are moderately strong and slightly to moderately compressible. The clayey soils have a moderate to high potential for expansion. Below 18.5 feet, there are layers of predominately stiff to very stiff sandy clay and silty clary, and medium dense silty sand/sandy silt were encountered. This soil contained varying amounts of gravel. They are moderately strong and slightly compressible.[11]

### Paleontological Resources

The project site is on Quaternity alluvial fan deposits. The area within a 0.5-mile radius of the project site contains other Holocene deposits, Pleistocene alluvial fan deposits, the Pliocene Huichica Formation, and Cretaceous granitic rocks. Pleistocene alluvial fan deposits have the potential to be fossiliferous; however, the University of California Museum of Paleontology (UCMP) database lists no vertebrate or plant fossils in any of the forementioned geologic units in Napa County. The nearest Pleistocene vertebrate locality is approximately 10 miles southeast of American Canyon, in Solano County.

## 3.6.3 - Regulatory Framework

### Federal

#### *National Earthquake Hazards Reduction Program*

The National Earthquake Hazards Reduction Program (NEHRP) was established by the United States Congress when it passed the Earthquake Hazards Reduction Act of 1977, Public Law 95–124. In establishing the NEHRP, Congress recognized that earthquake-related losses could be reduced through improved design and construction methods and practices, land use controls and redevelopment, prediction techniques and early warning systems, coordinated emergency preparedness plans, and public education and involvement programs. The four basic goals remain unchanged:

- Develop effective practices and policies for earthquake loss reduction and accelerate their implementation.
- Improve techniques for reducing earthquake vulnerabilities of facilities and systems.
- Improve earthquake hazards identification and risk assessment methods and their use.
- Improve the understanding of earthquakes and their effects.

Several key federal agencies contribute to earthquake mitigation efforts. There are four primary NEHRP agencies:

- National Institute of Standards and Technology of the Department of Commerce
- National Science Foundation
- USGS of the Department of the Interior

[11] Krazan. 2023.Geotechnical Engineering Investigation, Proposed SDG Commerce 220, LLC, Distribution Center, 1055 Commerce Court, American Canyon, California. July 25, 2023.

- Federal Emergency Management Agency (FEMA) of the Department of Homeland Security

Implementation of NEHRP priorities is accomplished primarily through original research, publications, and recommendations to assist and guide State, regional, and local agencies in the development of plans and policies to promote safety and emergency planning.

### *National Pollutant Discharge Elimination System*

The National Pollutant Discharge Elimination System (NPDES) permit program, authorized by Section 402(p) of the federal Clean Water Act, controls water pollution by regulating point sources, such as construction sites and industrial operations that discharge pollutants into waters of the United States. A Storm Water Pollution Prevention Plan (SWPPP) is required to control discharges from a project site, including soil erosion, to protect waterways. A SWPPP describes the measures or practices to control discharges during both the construction and operational phases of the project. A SWPPP identifies project design features and structural and nonstructural Best Management Practices (BMPs) that will be used to control, prevent, remove, or reduce stormwater pollution from the site, including sediment from erosion.

## State

### *California Building Standards Code*

The 2022 California Building Code (2022 CBC) is another name for the body of regulations known as the California Code of Regulations, Title 24, Part 2, which is a portion of the California Building Standards Code. The 2022 CBC incorporates by reference the International Building Code requirements with necessary California amendments. Title 24 is assigned to the California Building Standards Commission, which, by law, is responsible for coordinating all building standards.

Compliance with the 2022 CBC requires (with very limited exceptions) that structures for human occupancy be designed and constructed to resist the effects of earthquake motions. The Seismic Design Category for a structure is determined in accordance with either California Building Code Section 1613–Earthquake Loads or the American Society of Civil Engineers Standard No. 7-05, Minimum Design Loads for Buildings and Other Structures. In brief, based on the engineering properties and soil-type of soils at a proposed site, the site is assigned a Site Class ranging from A to F. The Site Class is then combined with Spectral Response (ground acceleration induced by earthquake) information for the location to arrive at a Seismic Design Category ranging from A to D, of which D represents the most severe conditions. The classification of a specific site and related calculations must be determined by a qualified Geotechnical Engineer and are site specific.

Finally, the 2022 CBC requires that a geotechnical investigation be prepared for all new buildings that are 4,000 square feet or larger, as well as for smaller buildings if they meet certain criteria. The geotechnical investigation must be prepared by a California registered Geotechnical Engineer and address the classification and investigation of the soil, including requirements for geotechnical designs necessary to meet standards for reducing exposure to geological hazards.

### *Alquist-Priolo Earthquake Fault Zoning Act*

The Alquist-Priolo Earthquake Fault Zoning Act (Public Resources Code [PRC] Sections 2621 to 2630) was passed in 1972 to provide a Statewide mechanism for reducing the hazard of surface fault rupture to structures used for human occupancy. The main purpose of the Act is to prevent the siting of buildings used for human occupancy across the traces of active faults. It should be noted that the Act addresses the potential hazard of surface fault rupture and is not directed toward other earthquake hazards, such as seismically induced ground shaking or landslides.

The law requires the State Geologist to identify regulatory zones (known as Earthquake Fault Zones or Alquist-Priolo Zones) around the surface traces of active faults and to depict these zones on topographic base maps, typically at a scale of 1 inch to 2,000 feet. Earthquake Fault Zones vary in width, although they are often 0.75 mile wide. Once published, the maps are distributed to the affected cities, counties, and State agencies for their use in planning and controlling new or renewed construction. With the exception of single-family wood frame and steel-frame dwellings that are not part of a larger development (i.e., four units or more), local agencies are required to regulate development within the mapped zones. In general, construction within 50 feet of an active fault zone is prohibited.

### *Seismic Hazards Mapping Act*

The Seismic Hazards Mapping Act (PRC §§ 2690–2699.6), which was passed in 1990, addresses earthquake hazards other than surface fault rupture. These hazards include strong ground shaking, earthquake-induced landslides, liquefaction, or other ground failures. Much like the Alquist-Priolo Earthquake Fault Zoning Act discussed above, these seismic hazard zones are mapped by the State Geologist to assist local government in the land use planning process. The Act states, “it is necessary to identify and map seismic hazard zones in order for cities and counties to adequately prepare the safety element of their general plans and to encourage land use management policies and regulations to reduce and mitigate those hazards to protect public health and safety.” The Act also states, “cities and counties shall require, prior to the approval of a project located in a seismic hazard zone, a geotechnical report defining and delineating any seismic hazard.”

## Local

### *City of American Canyon*

*General Plan*

The City of American Canyon (City) General Plan sets forth the following guiding and implementing policies relevant to geology, soils, and seismicity:

**Goal 9** Reduce the potential level of death, injury, property damage, economic and social dislocation (i.e., business closures and homelessness due to structural damage) and disruption of vital services that could result from earthquake damage.

**Goal 9C** Ensure that seismic, geologic, and soils hazards that might affect areas designated for human use or habitation are properly mitigated or avoided entirely prior to development.

**Objective 9.1** Protect life, ensure public safety, substantially reduce the damage to and ensure the orderly evacuation of building occupants following a seismic event.

**Policy 9.1.1** Promote the collection of relevant data on fault location and the history of fault displacement as a basis for future refinement of fault zone policies and development standards. Particular attention should be paid to the West Napa Fault that is generally depicted in Figure 9-1 and should be evaluated in conjunction with proposed development. Based on predevelopment studies, limitations on new development shall be imposed if necessary in the identified fault areas.

**Policy 9.1.2** Implement mandatory development restrictions and investigation requirements (by the State, under the Alquist-Priolo Act, or by the City) on that portion of the West Napa Fault Zone located within American Canyon and its Planning Area.

**Policy 9.1.3** Require that any building intended to have occupancy be located at least 50 feet from either side of an active or potentially active fault.

**Objective 9.2** Protect health and life safety, and reduce the level of potential property damage from the adverse effects of strong seismic ground shaking by implementing effective, state-of-the-art standards for seismic design of structures in the City.

**Policy 9.2.1** Require that development be designed in accordance with seismic requirements of the Uniform Building Code.

**Objective 9.3** Protect life and essential lifelines (e.g., gas, electricity, water), reduce the risk of property damage due to liquefaction, and promote the collection of more complete information on liquefaction susceptibility throughout the Planning Area.

**Policy 9.3.1** Avoid development in areas with known liquefaction risk. If these areas cannot be avoided, require a qualified geologist, hydrologist, or civil engineer to determine the liquefaction potential at proposed development sites.

**Policy 9.3.2** Require the submittal of liquefaction mitigation plans for proposed developments located in areas determined to have a high level of liquefaction risk.

**Objective 9.4** Protect life, ensure safety, and substantially reduce the potential level of property damage from landslides, mudflows, slope failures and soil hazards. Promote the collection and utilization of more complete information on slope instability potential throughout the City and Planning Area.

**Policy 9.4.5** Review proposals for new development and expansion of existing development in areas that are susceptible to collapsible or expansive soils and require adequate mitigation of these hazards.

*Municipal Code*

American Canyon Municipal Code, Chapter 16.02 adopts the California Building Code; as such, all new construction within the city limits is required to adhere to its seismic safety standards. The City of American Canyon Community Development Department is responsible for the administration and enforcement of the Building Code.

## 3.6.4 - Methodology

This analysis section is based on the Geotechnical Engineering Investigation prepared by Krazan and Associates in July 2023 (Appendix E). FirstCarbon Solutions (FCS) also obtained information about faults and seismic hazards from sources including the USGS, the United States Department of Agriculture, and the City of American Canyon General Plan. FCS also conducted a records search of the UCMP database in June 2023.

## 3.6.5 - Thresholds of Significance

The lead agency utilizes the criteria in the California Environmental Quality Act (CEQA) Guidelines Appendix G Environmental Checklist to determine whether impacts to geology and soils are significant environmental effects. Would the project:

a) Expose people or structures to potential substantial adverse effects, including the risk of loss, injury or death involving:
   i. Rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map issued by the State Geologist for the area or based on other substantial evidence of a known fault? Refer to Division of Mines and Geology Special Publication 42.
   ii. Strong seismic ground shaking?
   iii. Seismic-related ground failure, including liquefaction?
   iv. Landslides?

b) Result in substantial soil erosion or the loss of topsoil?

c) Be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the project, and potentially result in on- or off-site landslide, lateral spreading, subsidence, liquefaction or collapse?

d) Be located on expansive soil, as defined in Table 18-1-B of the Uniform Building Code (1994), creating substantial direct or indirect risks to life or property?

e) Have soils incapable of adequately supporting the use of septic tanks or alternative wastewater disposal systems where sewers are not available for the disposal of wastewater?

f) Directly or indirectly destroy a unique paleontological resource or site or unique geologic feature?

## 3.6.6 - Project Impacts and Mitigation Measures

This section discusses potential impacts associated with the proposed project and provides mitigation measures where necessary.

## Seismic Hazards

**Impact GEO-1: The proposed project may expose people or structures to potential substantial adverse effects associated with seismic hazards.**

### *Impact Analysis*

This impact evaluates potential exposure to seismic hazards, including fault rupture, strong ground shaking, ground failure and liquefaction, and landslides, and addresses whether the project could exacerbate any such hazards. Each issue is discussed separately.

*Fault Rupture*

There are no active earthquake faults within the project site; refer to Exhibit 3.6-1. For these reasons, the proposed project would not be subject to fault rupture during a seismic event nor would it exacerbate exposure to fault rupture hazards. Impacts in this regard would be less than significant.

*Strong Ground Shaking*

The project site is located in a seismically active region of California and is susceptible to strong ground shaking during a seismic event, which constitutes a potentially significant impact. The Geotechnical Engineering Investigation prepared by Krazan & Associates proposes several recommendations that address seismic ground shaking hazards, including seismic provisions from Section 1613.2.2 of the 2019 CBC. These recommendations are included as Mitigation Measure (MM) GEO-1 and updated to 2022 CBC as necessary. The implementation of this mitigation measure would ensure that the proposed project is not exposed to strong ground shaking hazards. Impacts would be less than significant.

*Ground Failure and Liquefaction*

The Geotechnical Engineering Investigation evaluated the potential for soil liquefaction during a seismic event using the LIQUEFYPRO computer program (Version 5.9d) developed by CivilTech Software. Conservative estimates for earthquake magnitude, peak horizontal ground surface acceleration, and groundwater depth were used as inputs. It was determined that soils below a depth of 10 feet have a slight to very low potential for liquefaction under seismic shaking due to predominately medium dense/stiff to very stiff sandy and clayey soils. The analysis also indicates that the total and differential seismic induced settlement is not anticipated to exceed 1 and 2/3 inch, respectively. This level of risk for liquefaction and settlement are not considered significant, and no mitigation is required.

*Landslides*

The project site contains relatively flat relief. There are no slopes near the project site that may be susceptible to landsliding during a seismic event, which precludes the possibility of the proposed project being susceptible to landsliding. Thus, the proposed project would not exacerbate exposure to such hazards. Impacts would be less than significant.

### *Level of Significance Before Mitigation*

Potentially significant impact (ground shaking).

### *Mitigation Measures*

**MM GEO-1** Prior to the issuance of the building permit, recommendations from the Geotechnical Engineering Investigation prepared by Krazan & Associates [Draft EIR Appendix E] shall be incorporated into all project plans and applicable construction-related permits and submitted to the City of American Canyon for review and approval.

### *Level of Significance After Mitigation*

Le***s***s than significant impact with mitigation incorporated.

## Erosion

**Impact GEO-2: The proposed project may result in substantial soil erosion or the loss of topsoil.**

### *Impact Analysis*

The proposed project would involve grading, building construction, paving, and utility installation activities that may cause erosion and sedimentation. This includes construction activities associated with the proposed project. Left unabated, the accumulation of sediment in downstream waterways could result in the blockage of flows, potentially causing increased localized ponding or flooding. As such, MM HYD-1 in Section 3.9, Hydrology and Water Quality, requires the implementation of stormwater quality control measures during construction activities to prevent pollutants from entering downstream waterways. Standard stormwater pollution prevention measures would include implementing structural and nonstructural control measures within and around disturbed areas to prevent soil and pollutants from leaving the project site. With implementation of MM HYD-1, impacts would be less than significant.

Upon project completion, the majority of the site would consist of impermeable surfaces, thereby reducing the risk of erosion on-site. Implementation of the project's Stormwater Control Plan (Appendix F) would ensure that erosion would not occur on-site during operation by implementing Low Impact Development design concepts, including stormwater control measures such as the proposed on-site retention basin.

### *Level of Significance Before Mitigation*

Potentially significant impact.

### *Mitigation Measures*

Implementation of MM HYD-1.

### *Level of Significance After Mitigation*

Le***s***s than significant impact with mitigation incorporated.

## Unstable Geologic Location

**Impact GEO-3: The proposed project would not be located on a geologic unit or soil that would become unstable as a result of the project, and potentially result in on- or off-site landslide, lateral spreading, subsidence, liquefaction or collapse.**

### *Impact Analysis*

The stability of the underlying geologic units and soils are functions of their constituents. For example, soils with high organic or fill content would generally be considered unsuitable to support urban development. Likewise, soils that are composed of well-compacted alluvium would generally be considered suitable to support urban development. As further explained in Impact GEO-1, the project site is not located in an area with significant risks of landslide or liquefaction. The site is underlain by Quaternity alluvial fan deposits and is not susceptible to subsidence or collapse. Impacts would be less than significant.

### *Level of Significance Before Mitigation*

Less than significant impact.

### *Mitigation Measures*

No mitigation is necessary.

## Expansive Soil

**Impact GEO-4: The proposed project may create substantial risks to life or property as a result of expansive soil conditions on the project site.**

### *Impact Analysis*

Beneath 6 to 12 inches of the loose surface soils and fill materials, approximately 17 feet of stiff to hard sandy clay, silty clay, and medium dense/very stiff clayey sand/sandy clay were encountered during the soil borings conducted by Krazan & Associates. Field and laboratory tests suggest that these soils are moderately strong and slightly to moderately compressible. The clayey soils had a moderate to high potential for expansion. The Geotechnical Engineering Investigation proposes several recommendations that address expansive soils, including either recompaction of surface soils with non-expansive engineered fill or lime treatment. These recommendations are required by MM GEO-1. Impacts would be less than significant with mitigation incorporated.

### *Level of Significance Before Mitigation*

Potentially significant impact.

### *Mitigation Measures*

Implement Mitigation Measure GEO-1.

### *Level of Significance After Mitigation*

Le***s***s than significant impact with mitigation incorporated.

### Paleontological Resources

**Impact GEO-5: The proposed project may directly or indirectly destroy a unique paleontological resource or site or unique geologic feature.**

#### *Impact Analysis*

As described above, the project site is located on Quaternity alluvial fan deposits. Pleistocene alluvial fan deposits have the potential to be fossiliferous. However, the UCMP database lists no vertebrate or plant fossils in any of the forementioned geologic units in Napa County. The nearest Pleistocene vertebrate locality is approximately 10 miles southeast of American Canyon, in Solano County. As such, the potential for the proposed project to uncover vertebrate or plant fossils is low. Although it is extremely unlikely, it is always possible for unknown paleontological resources to be discovered during ground-disturbing activities. MM GEO-5 outlines procedures in case of an inadvertent discovery. Impacts would be less than significant with this mitigation incorporated.

#### *Level of Significance Before Mitigation*

Potentially significant impact.

#### *Mitigation Measures*

**MM GEO-5** Although extremely unlikely, should any significant paleontological resources (e.g., bones, teeth, well-preserved plant elements) be unearthed by the construction crew, their activities shall be diverted at least 15 feet from the find until a professional Paleontologist has assessed it and, if deemed significant, salvaged in a timely manner. Collected fossils shall be deposited in an appropriate repository, such as the University of California Museum of Paleontology (UCMP), where they shall be properly curated and made available for future research.

#### *Level of Significance After Mitigation*

Le***s***s than significant impact with mitigation incorporated.

## 3.6.7 - Cumulative Impacts

The geographic scope of the cumulative geology, soils, and seismicity analysis is the project vicinity. Adverse effects associated with geologic, soil, and seismic hazards tend to be site specific, because each project site has its own geologic and soils conditions, and each project has its own design characteristics, localized within the area near the project site most affected by project activities (generally within a 0. 5-mile radius).

Past, present, and future development projects in the project vicinity have the potential to exacerbate exposure to seismic hazards. The project site may be subject to strong ground shaking during an earthquake; thus, MM GEO-1 requires the project applicant to implement all recommendations of the Geotechnical Engineering Investigation, including all California Building Standards Code applicable requirements into project plans. Other nearby past, present, and reasonably foreseeable development projects may exacerbate exposure to similar potential seismic hazards and have been and would be required to comply with the relevant State and local laws designed to mitigate seismic hazards and mitigation measures imposed under CEQA. Therefore, the

proposed project in conjunction with other cumulative development would not expose people or structures to substantial adverse effects, including the risk of loss, injury, or death in the event of a major earthquake; fault rupture; ground shaking; seismic-related ground failure; landslide; or liquefaction.

Regarding soil erosion, development activities could lead to increased erosion rates on-site soils, which could cause unstable ground surfaces and increased sedimentation in nearby streams and drainage channels. MM HYD-1 requires implementation of standard stormwater pollution prevention measures to ensure earthwork activities do not result in substantial erosion off-site. This mitigation, in turn, would have to comply with the NPDES stormwater permitting program, which regulates water quality originating from construction sites. The NPDES program, which governs projects Statewide (and nationwide), requires the preparation and implementation of SWPPPs for construction activities that disturb more than 1 acre and the implementation of BMPs that ensure the reduction of pollutants during stormwater discharges, as well as compliance with all applicable water quality requirements. The proposed project would be required to comply with these regulations, as have and would other nearby past, present, and reasonably foreseeable development projects. Therefore, the proposed project in conjunction with other nearby cumulative development would not have a cumulatively significant impact associated with erosion.

The project site contains native soils that have expansive characteristics, which may exacerbate exposure of project structures to expansive soil hazards. MM GEO-1 requires the project applicant to implement all recommendations of the Geotechnical Engineering Investigation and incorporate them into project plans. Other nearby past, present, and reasonably foreseeable development projects could be exposed to expansive soil hazards and, therefore, have been and would be required to implement similar mitigation measures based on State and local regulations and CEQA requirements. As such, the proposed project, in conjunction with other nearby past, present, and reasonably foreseeable projects, would not have a cumulatively significant impact associated with expansive soils.
